This last does not think different Ornaments and Characters sufficient to constitute a different Order, unless it have a different Height too: Agreeably, therefore, to his Rule of augmenting the Heights of the several Columns by a Series of two Modules in each; he makes the *Composite* 20 Modules, and the *Corinthian* 18; which, it seems, is a Medium between the *Temple of Titus* and the *Temple of Bacchus*. See **PROPORTION**.

For the Parts of the Order, see **COLUMN**, **ENTABLATURE**, **CAPITAL**, **BASE**, &c.

M. Perrault, in his *Vitruvius*, distinguishes between the *Composite* and *Compos'd* Order.

The latter, he says, is any Composition whose Parts and Ornaments are extraordinary and unusual; but have, without somewhat of Beauty; both on account of their Novelty, and in respect of the Manner or Genius of the Architect: So that a *Compos'd* Order is an arbitrary, humourous Composition, whether regular, or irregular.

The same Author adds, that the *Corinthian* Order is the first *Composite* Order, as being compos'd of the *Doric* and *Ionic*; which is the Observation of *Vitruvius* himself, *Lib. 4. cap. 1.*

COMPOSITION, in a Physical Sense, is the uniting or joining of several different Things, so as to form one whole, call'd a *Compound*. See **COMPOUND**.

The Schoolmen distinguish two Kinds of *Composition*; the one *Essentielle*, which is between Things of the same Nature, *e.g. two* or more Drops of Water: the other *Essential*, when Things of different Kinds are join'd, and thus constitute new Things, or *Essences*, different from any of the Parts; and thus, say they, from the Matter and the Form of Wood, arises Wood; whose *Essence* is very different from either of those Ingredients taken separately.

COMPOSITION of Ideas, is an Operation of the Mind, whereby it combines several of its Simple Ideas into Complex ones. See **COMPLEX IDEA**.

Under the same Operation may likewise be reckon'd that of enlarging; whereby we put several Ideas together of the same Kind, as several Unites to make a Dozen.

In this, as in others, Brutes come far short of Men; for they take in and retain several Combinations of Simple Ideas;

Ideas; as, possibly, a Dog does the Shape, Smell, and Voice of his Matter: yet these are rather so many distinct Marks whereby he knows him, than one Complex Idea, made out of those Simple ones.

COMPOSITION, in Grammar, the joining of two Words together; or prefixing a Particle to another Word, to augment, diminish, or change its Signification.

COMPOSITION, in Oratory, the proper Order of the Parts of a Discourse, adhering to each other.

To *Composition* belongs both the artful joining of the Letters whereof the Style is form'd, and whereby it is render'd soft and smooth, gentle and flowing, or full and sonorous; or the contrary. See *STYLE*.

And the *Order*, which requires the Grave to be placed after the Humble, and Things first in Nature and Dignity, before those of inferior Consideration. See *PERSON*.

COMPOSITION, in Painting, includes the Invention and Disposition of the Figures, the Choice of Attitudes, &c. *Composition*, therefore, consists of two Parts; one of which finds out, by means of History, proper Objects for a Picture; and the other disposes 'em to advantage. See *PAINTING*.

COMPOSITION, in Musick, the Art of disposing musical Sounds into Airs, Songs, &c. either in one, or more Parts; to be sung with the Voice, or play'd on Instruments. See *MUSIC*, and *SONG*.

Zarlino defines it the Art of joining and combining Concords together, which are the Matter of Musick: But this Definition is too scanty; in regard, *Discords* are always us'd with Concords in the *Composition* of Parts. See *CONCORD*, and *DISCORD*.

Under *Composition* are comprehended the Rules, first, of *Melody*, or the Art of making a single Part; i. e. of contriving and disposing the simple Sounds, so as that their Succession and Progress may be agreeable. See *MELODY*.

2dly, Of *Harmony*, or the Art of disposing and concerting several single Parts together, that they may make one agreeable Whole. See *HARMONY*.

It may be here observ'd, that *Melody* being chiefly the Business of the Imagination, the Rules of its *Composition* serve only to prescribe certain Limits to it; beyond which, the Imagination, in searching out the Variety and Beauty of Airs, ought not to go: But *Harmony*, being the Work of Judgment, its Rules are more certain, extensive, and more difficult in practice.

In the Variety and Elegancy of the *Melody*, the Invention labours a great deal more than the Judgment; so that Method has but little place: but in *Harmony* 'tis otherwise; the Invention here, has nothing to do; and the *Composition* is conducted from a nice Observation of the Rules of *Harmony*, without any Assistance from the Imagination at all.

COMPOSITION, in Logic, is a Method of reasoning, wherein we proceed from some general self-evident Truth, to particular and singular ones. See *METHOD*.

The Method of *Composition*, call'd also *Synthesis*, is just the reverse of that of *Resolution*, or *Analysis*. See *RESOLUTION*.

Resolution is the Method whereby we ordinarily search after Truth; *Composition*, that whereby a Truth found, is discover'd and demonstrat'd to others: *Resolution* is the Method of Investigation; *Composition* of Demonstration.

The Method of *Composition* is that us'd by *Euclid*, and other Geometricians; *Resolution* that us'd by Algebraists and Philosophers. The two Methods differ, just as the Methods of searching a Genealogy; which are either by descending from the Ancestors to the Posterity, or by ascending from the Posterity to their Ancestors; each have this in common, that their Progression is from a thing known, to another unknown.

The Method of *Composition* is best observ'd by the Mathematicians: The Rules hereof are, 1st, to offer nothing but what is couch'd in clear express Terms; and to that End, to begin with Definition. 2dly, To build only on evident and clear Principles; to that End, to proceed from Axioms or Maxims. 3dly, To prove demonstratively all the Conclusions they draw hence; and to this purpose, to make use of no Arguments or Proofs, but Definitions already laid down, of Axioms already granted, and Propositions already proved; which serve as Principles to Things that follow.

COMPOSITION of Motion, is an Assemblage of several Directions of Motion, resulting from Powers acting in different, tho' not opposite Lines. See *MOTION*.

If a Point move or flow according to one and the same Direction; whether that Motion be equable or not, yet it will still keep the same right Line; the Celerity alone being chang'd, i. e. increas'd, or diminish'd according to the Forces with which it is impell'd.

If the Directions be opposite, as, one, e. g. directly downward, the other upward, &c. yet still the Line of Motion will be the same.

But if the *compounding* Motions be not according to the same Line of Direction, the compound Motion will not be

according to the Line of Direction of either of 'em, but a different one from them both; and this either straight or crooked, according as the Directions or Celerities shall require.

If two *compounding* Motions be each of them equable, the Line of the compound Motion will still be a straight Line; and this, tho' the Motions be neither at right Angles one to another, nor equally swift, nor (each to its self) equable; provided that they be but similar; that is, both accelerated and retarded alike.

Thus, if the Point *a*, (*Tab. Mechanics*, Fig. 4.) be impell'd equally with two Forces; viz. upwards towards *b*, and forwards towards *d*; 'Tis plain, that when it is gone forwards as far as *ae*, it must of necessity be gone upwards as far as *ae*; so that were the Motions both equable, it would always go on in the Diagonal *aec*.

Nay, suppose the Motions unequal as to Celerity, so e. g. as that it move twice as fast upwards as forwards, &c. yet still it must go on in the Diagonal *ac*; because the Triangles *aec*, *aec*, &c. and *aed* will still be similar, being as the Motions are.

But, if the Motions be dissimilar, then the compound Motion must be a Curve. See *CIRCULAR Motion*.

Thus, if a Body, as *b*, (Fig. 5.) be impell'd or drawn by three different Forces, in the three different Directions *ba*, *bc*, and *bd*, so that it yields to none of them, but continues in *Aquilibrium*: then will those three Powers or Forces be to one another, as three right Lines drawn parallel to those Lines, expressing the three different Directions, and terminated by their mutual Concouries.

Let *be* represent the Force by which the Body *b* is impell'd from *b* to *a*, then will the same right Line *be*, represent also the contrary equal Force, by which it is impell'd from *b* to *e*; but by what hath been said before, the Force *be* is resolv'd into the two Forces acting according to the two Directions *bd* and *bc*, to which the other impelling from *b* to *e*, is as *be* to *bd*, and *bc* or *de*, respectively.

So likewise two Forces, acting without the Directions *bd*, *bc*, and being equipollent to the Force acting without the Direction *be*, from *b* to *e*; will be to the Force acting according to the Direction *be*, from *b* to *e*, as *bd*, *bc*, to *bd*; and therefore, the Forces acting in the Directions *bd*, *bc*, and equipollent to the Force acting in the Directions *be*, are to the Force acting in the Direction, as *bd*, *bc*, or *de* to *be*: That is, if a Body be urg'd by three different equipollent Powers in the Directions *ba*, *bd*, and *bc*; these three Forces shall be to one another as *be*, *bd*, and *de*, respectively. Q. E. D.

This Theorem, with its Corollaries, Dr. *Keil* observes, is the Foundation of all the new Mechanics of *M. Varignon*: By help hereof, may the Force of the Muscles be computed, and most of the mechanick Theorems in *Borelli*, de *Motu Animalium*, be immediately deduced.

COMPOSITION of Proportion, signifies the comparing of the Sums of the Antecedent and Consequent, with the Consequent in two equal Ratios. See *RATIO*; see also *COMPOUND Ratio*.

Suppose 4 : 8 :: 5 : 6; by *Composition* of Proportion we say, 12 is to 8 as 9 to 6.

There is, however, a great difference between *Composition* of Proportion by Addition, and by Multiplication: the instance above is of *Composition* by Addition. If it had been 4 x 8, it would have been *Composition* by Multiplication.

In a word, *Composition* of Proportion by Addition, is by Addition of the Indices of the Ratios; but by Multiplication, it is when the Ratios are multiplied into one another.

COMPOSITION, in Pharmacy, the Art, or Act of mixing many Ingredients together into a Medicine; so as they may assist each other's Virtues, supply each others Defects, or correct any ill Qualities thereof. See *PHARMACY*.

COMPOSITION, in Printing, ordinarily call'd *Composing*, is the arranging of several Types, or Letters in the *Composing-Stick*, in order to form a Line; and of several Lines rang'd in order in the *Galley*, to make a Page; and of several of these to make a Form. See *PRINTING*, *PAGE*, *FORM*, &c.

The *Composing-Stick* is made of Iron generally, sometimes Brass, or Wood; of more or less length and depth, according to the Page to be compos'd, or the Composer's Fancy: It hath two sliding Pieces, to be fasten'd by means of a Nut and Screw, which are slipp'd forwards or backwards, at the Pleasure of the Composer, and according to the Space which the Lines, Notes, &c. are to take up.

The *Composing-Stick* ordinarily contains seven or eight Lines of a middle-sized Letter; which, when set, are taken out, by help of a thin slip of Brass, term'd a Rule, and dispos'd in the *Galley*; and others compos'd, till a Page be form'd. The Page being compos'd, is ty'd up, and let by; and the rest of the Pages of the Sheet prepar'd in the same manner: When done, they are carry'd to the *Imposing* or *Correcting* Stone; there rang'd in order, and dispos'd in a *Chase*, or Iron Frame, fitted with wooden Furniture; then, the *Quoins* being strack in, 'tis carried to the *Press* to be printed. See *PRESS*, *CASE*, *CHASE*, &c.

COMPOSITION, in Commerce, a Contract between an insolvent Debtor and his Creditors; whereby the latter agree to accept of a Part of the Debt, in compensation for the Whole, and give a general Acquittance accordingly.

COMPOSSIBLES, *Compossibilia*, in Logic, such Things as are compatible, or capable of subsisting together.

COMPOST, in Agriculture and Gardening, a Compound, or Mixture of Earths, Dungs, &c. applied, by way of Manure, for the meliorating and improving of Soils, and affixing the natural Earth in the Work of Vegetation. See MANURE.

The Gardeners have Magazines, or Layfalls of *Composts*, adapted to the different sorts of Soil. Light loose Land requires a *Compost* of a heavy Nature; such as the fouling of Ditches, Ponds, &c. mix'd with Earth, Dung, &c. A heavy, clayey, or cloddy Land requires a *Compost* of a more sprightly and active Kind, to insinuate into the heavy, lumpy Clods; as Dungs, Sand, Ashes, and natural Mould.

Mr. Bradley prescribes seven different sorts of *Composts*, to forward the growth of Trees; viz. a quantity of stiff Soil, broke, and mix'd with sharp Sand, and Ashes of burnt Fuzes, Weeds, &c. or stiff Soil with Sand and burnt Grass-turf, and rotten Wood; or stiff Soil with Sand and Rape-seed, after the Oil is press'd out, with burnt Turf; or stiff Soil with Sand and Malt-grains; or Sheep's Dung, with Wood Ashes and Loam, or Mother Earth. See SOIL.

The same Author recommends a Mixture or Preparation of Soils answering to Loam, or Mother Earth, as preferable for planting or sowing Forest-Trees in, to any of these richer *Composts*; which, tho they hasten the Growth of the Tree, will not make the Timber near so firm and durable. See TIMBER.

COMPOUND, the Result or Effect of a Composition of different Things; or that which arises therefrom. See COMPOSITION.

Strictly speaking, every new *Composition* does not produce a new natural *Compound*; but only that from which a new Effluence arises. Thus, when one drop of Water is added to another, there does not arise a new physical *Compound*; the Effluence being the same now, as before the Union.

COMPOUND Flowers, call'd also *Compositæ*, and *Aggregate*; are such as consist of many little Flowers, concurring to make up one whole one; each of which hath its Style, Stamina, and adhering Seed, but are all contained within one and the same Calyx, or Perianthium. See FLOWER.

This *compounded Flower* distinguishes a large Genus of Plants, which Mr. Ray divides thus:

Herbs of *compounded or aggregated Flowers*, are, 1st, Such as have a plain-leaf'd Flower naturally, and for the most part full; and having their whole Body milky, (yielding a milky Juice on cutting them;) and these have their Seeds,

First, *Pappous*, or *Winged*; that is, having a little Lappage adhering to each Seed, by which the Wind can easily carry it from place to place: Such as the *Lactuca*, *Tragopogon*, *Scorzonera*, *Ononis Leonis*, *Hieracium*, and the *Pitella*.

Secondly, Such as have a solid Seed, without any *Pappus* or Down upon them; as the *Eringium*, *Lutecum*, *Cicorium*, *Lampfusa*.

3^d, Such as have a *diskous Flower*; i. e. one composed of many short, thick, compressed, small *Florets* (which form, by mistake, call *Stamina*) set together, so as to make one flat, or hollowish Superficies: And these are also either such as have their Seeds,

First, *Pappous*, as the *Tussilago*, *Petasites*, *Carlina*, *Helianthemum*, *Doronicum*, *Coryza*, *Aster*, *Virga Aurea*, *Jacobæ*, *Stachys Citrina*, *Jacea*, *Senecio*, *Eupatorium Avicennæ*, *Cnicus Vulgaris*, *Gnaphalium Marinum*, and *Monopeltismum*.

Secondly, Such whose Seeds are solid, and not pappous; as the *Corymbiferous Herbs*.

COMPOUND Motion, that effected by several concurring Powers. See POWER.

Now, Powers are said to conspire, if the Direction of the one be not directly opposite to that of the other; as when the Radius of a Circle is conceiv'd to revolve about a Centre; and at the same time a Point to move straight along it.

All curvilinear Motion is *compound*.

This is a popular Theorem, in Mechanics; that in an uniform *compound Motion*, the Velocity produc'd by the concurring Powers, is to that of either of the Powers separately, as the Diagonal of a Parallelogram, according to the Direction of whose Sides, they act separately; to either of the Sides. See MOTION, and DIAGONAL.

COMPOUND Pendulum, in Mechanics, that which consists of several Weights constantly keeping the same Distance, both from each other, and from the Centre about which they oscillate. See PENDULUM.

COMPOUND Ratio, or *Proportion*. A Proportion is said to be *compounded* of two or more others, which the *Factum* of two or more Antecedents of Ratios has to the *Factum* of

their Consequents: Thus, 6 to 72 is in a Ratio *compounded* of 2 to 6, and 3 to 12. See PROPORTION.

COMPOUND Quantities, in Algebra, are such as are connected together by the Signs + and -; and are express'd by the same Letters equally or unequally repeated: Thus, $a + b - c$, and $b b - b$ are *compound Quantities*. See QUANTITY.

COMPOUND Numbers, are those which may be measur'd, or exactly divided, by some other Number beside Unity. See NUMBER.

Such is 15; which is measur'd by 3 and also by 5: **COMPOUND Interest**, call'd also *Interest upon Interest*, is that which is reckon'd not only upon the Principal, but upon the Interest it self forborn; which hereby becomes a sort of secondary Principal. See INTEREST.

COMPOUND Machine. See MACHINE.

COMPOUND Rule of Three. See RULE of Three.

COMPREHENSION, in Metaphysics, the Act of the Mind, whereby it apprehends or knows any Object presented to it, on all the Sides whereon it is capable of being apprehended, or known. See APPREHENSION, and KNOWLEDGE.

To *comprehend a thing*, is defined by the Schoolmen, *rem aliquam totam & totaliter cognoscere*: And, in this Sense, 'tis a popular Point of Controversy among the School Divines, whether the Blessed in Heaven comprehend God? The more Orthodox maintain the Negative, by reason such Knowledge must be infinite.

COMPREHENSION, in Rhetoric, a Trope, or Figurè whereby the Name of a Whole is put for a Part; or that of a Part for a Whole: or a definite number of any Thing for an indefinite. See METONYMIA.

COMPRESS, in Chirurgery, a Bolster of linen Cloth, folded in several Doubles, and laid under the Bandages, to prevent a Wound from bleeding or swelling; or to retain the Medicines applied thereto. See WOUND.

Scultetus, in his *Arsenal of Chirurgery*, observes, that the Antients compos'd their *Compresses* of carded Flax, or of Feathers, few'd between two Linens; and called them *Pillows*, or *Plumages*.

The Word comes from *Comprimere*, to press hard.

COMPRESSION, the Act of pressing or squeezing something, so as to set its Parts nearer each other, and make it possess less space. See PRESSION.

Compression differs from *Condensation*, in that the latter is perform'd by the Action of Cold, the former by some external Violence. See CONDENSATION.

Thus, we say, that Pumps, which the Antients imagin'd to act by Suction, do, in reality, act by *Compression*; the *Embolus*, or Sucker, in going and returning in the narrow Pipe, *compresses* the Air inclos'd therein, so as to enable it by the Force of its Elasticity to raise the Valve, and make its escape; upon which, the Balance being destroy'd, the Pressure of the Atmosphere on the stagnant Surface, drives up the Water into the Pipe thus evacuated of its Air. See PUMP.

Water is incapable of *Compression*; after the Air has been putg'd out of it, no Art or Violence is able to bring its Parts closer, or make it take up less compass. In an Experiment made by the Academy de el Cimento, Water, when violently squeez'd, made its way thro' the infinitely fine Pores of a Ball of Gold, rather than undergo *Compression*. See WATER.

The *COMPRESSION of the Air*, by its own weight, is surprisingly great: It appears, by Calculation, that the common Air we breathe, near the Surface of the Earth, is *compress'd* by the Weight of the super-incumbent Atmosphere, into $\frac{1}{1027}$ part of the space it would take up were it at liberty. See ATMOSPHERE.

But the Air may be still further *compress'd* by Art; and it appears from Mr. Boyle's Experiments, that the Space which the Air takes up, when at its utmost Dilatation, is 10 that it takes up when most *compress'd*, as five hundred and fifty thousand to one. See AIR.

This immense *Compression* and Dilatation, Sir Isaac Newton observes, cannot be accounted for from supposing the Particles of the Air clastick and branched, or in form of slender Twigs interwoven into Circles; nor any other way; but by a repelling Force, wherewith they are endued; by virtue wherof, when at liberty, they mutually fly each other. See ATTRACTION.

This repelling Power, he adds, is stronger and more sensible in Air, than in other Bodies; in regard Air is generated out of very fix'd Bodies; but not without great difficulty, and the help of Fermentation: Now those Particles always recede from each other with the greatest violence, and are *compress'd* with the greatest difficulty, which, when contiguous, cohere the most strongly. See LIGHT.

That there is such a *repelling Power*, appears from this; that Flies walk on the Water without wetting their Feet; that the Object-Glasses of Telescopes laid on each other do not touch; that dry Dust is not brought to touch or cohere

without difficulty, *v. g.* unick either liquify'd by Fire, or wcr with Water; and that two polish'd Pieces of Marble, which as often as they touch cohere, are yet very hardly press'd so closely and join'd so aptly as to cohere. See *REPELLING Force*; see also *COHESION*, *DILATATION*, &c.

COMPROMISE, an *Arbitration*, or a Treaty, or Contract, whereby two contending Parties establish one or more *Arbitrators*, to judge of and terminate their Differences in an amicable way. See *ARBITRATOR*.

The regular way of appointing a *Compromise*, is by a Writing, expressing the Names of the Arbitrators, the Power of choosing a Super-Arbitrator in case of need, a Time limited for the Arbitrage, and a Penalty on the Party who does not abide by the Decision.

By the Civil Law, a Slave cannot make a *Compromise* without the Leave of his Master, nor a Pupil without the Authority of his Guardian, or a Wife without that of her Husband. So a Slave, a deaf or dumb Man, a Minor, and the Person who is a Party in the Cause, are incapable of being chosen Arbitrators in a *Compromise*.

The Occasions on which a *Compromise* is not allow'd of, are Restitutions, Marriage Causes, Criminal Affairs, Questions of State; and, generally, any thing wherein the publick Interest is more concern'd than that of private Persons.

In our Law, *Compromise* is not of so much extent; *West* defines it the Faculty, or Power of pronouncing Sentence between Persons at Controversy, given to Arbitrators by the Parties mutual private Consent, without publick Authority.

The Word is also used in Beneficiary Matters; where it signifies an Act, whereby those who have the Right of Election, transfer it to one or more Persons, to elect a Person capable of the Office or Dignity.

Thus, we have seen Members of Parliament elected by *Compromise*; when the Electors, not being able to agree among themselves, give the Power of electing, at least of nominating, to two Persons; obliging them by Oath, or otherwise, to chuse such as they think the most capable, and best dispos'd.

COMPTING, or **COUNTING-HOUSE**, an Office in the Household, under the Direction of the Lord Steward; so called, because the Accounts for all Expences of the King's Household are there taken daily, by the Lord Steward, Comptroller, Cofferer, Master of the Household, the two Clerks of the Green-Cloth, and the two Clerks Comptrollers. See *HOUSEHOLD*.

They also make Provision for the Household, and make Payments, and Orders for the good Government thereof.

In the *Compting-House* is the Board of *Green-Cloth*. See *GREEN-CLOTH*.

COMPULSOR, an Officer under the *Roman* Emperors, dispatch'd from Court into the Provinces, to force the Payments of Taxes, &c. not pay'd within the time prefer'd.

They were charg'd with so many Exactions, under Colour of their Office, that *Honorius* cashier'd 'em by a Law in 412.

The Laws of the *Visigoths* mention Military *Compulsors*; which were Officers among the *Goths*, whose Buissness was to oblige the tardy Soldiers to go into the Fight, to run to an Attack, &c.

Cassian mentions a kind of Monastick *Compulsors*, whose Buissness was to declare the Hours of Canonical Office, and to take care the Monks went to Church at those Hours.

The Word is *Latin*, form'd of the Verb *Compellere*, to oblige, constrain.

COMPUNCTION, in Theology, an inward Grief in the Mind, for having offended God. See *REPENTANCE*.

The *Romanists* own their Confession insignificant, unless attended with *Compunction*, or pricking of Heart. See *CONFESSION*.

Among Spiritualists, *Compunction* carries a more extensive Signification; and implies not only a Grief for having offend'd God, but also a pious Sensation of Grief, Sorrow, and Displeasure on other Motives. Thus, the Miseries of Life, the Danger of being lost in the World, the Blindness of the Wicked, &c. are to pious People Motives of *Compunction*.

The Word comes from *punire*, *compungere*, to prick.

COMPURGATOR, in Law, one that by Oath justifies or clears another's Innocence. See *LAW*, and *OATH*.

COMPUTATION, or *Supputation*, the manner of accounting and estimating Time, Weights, Measures, and Monies. See *TIME*, *WEIGHT*, *MEASURE*, *MONEY*, &c.

The Word is sometimes also used among Mathematicians in the like Sense as *Calculation*. See *CALCULATION*.

COMPUTATION is particularly used in Law, in respect of the true Account or Construction of Time, so understood, as that either Party do wrong to the other, nor the Determination of Time be left at large; so as to be taken otherwise than according to the Judgment and Intention of Law.

If Indentures of Demise be ingrossed, bearing Date 11 *May* 1679, to have and to hold the Land in S. for three Years from henceforth; and the Indentures be deliver'd the 4th of *June* following: In this Case, from henceforth shall

be accounted from the Day of the Delivery, and not from the Date. And if the Indenture be deliver'd at four of the Clock in the Afternoon, the said 4th of *June*, the Lease shall end the third Day of *June* in the third Year: the Law, in such *Computation*, rejecting all Fractions or Divisions of the Day, on account of that uncertainty which is the Mother of Contention.—In Writings order'd by the Stat. 27 *Hou.* VIII. to be inroll'd within six Months; if such Writings have Date, the six Months shall be accounted from the Date, and not from the Delivery: If they want Date, it shall be accounted from the Delivery. *Coke*, Lib. V.

If a Deed be shew'd to a Court at *Westminster*, it shall remain in Court (by Judgment of Law) all the Term in which it is shew'd: for all the Term is but as one Day in Law. *Coke* *Ibid.*—If a Church be void, and the Patron does not present within six Months, the Bishop of the Diocese may collate his Chaplain: But these *six Months* shall be computed according to twenty eight Days of the Month; and not according to the Calendar. See *CALENDAR*.

COMPUTO, a Writ, thus called from its Effect, which is to compel a Bailiff, Chamberlain, or Receiver to yield his Accounts.

The same lyes for Executors of Executors; and against the Guardian in Socage, for Waste made in the Minority of the Heir.

CONARION, or **CONOIDES**, called also *Glandula Pimaleis*, is a small Gland, about the bigness of a Pea, placed in the upper Part of that Hole in the third Ventricle of the Brain, called the *Ansus*; and ty'd by some Fibres to the Nates. See *GLAND*, *BRAIN*, *ANUS*, and *NATES*.

It is composed of the same Substance as the rest of the Brain; and has this peculiar, that it is single; whereas all the other Parts are double: Hence, *Des Cartes* takes occasion to suppose it the immediate Place, or Seat of the Soul. See *PINEAL GLAND*, *SENSORY*, &c.

CONATUS, *Endeavour*, a Term frequently used in Philosophical and Mathematical Writers; and sometimes also called *Nisus*.

The *Conatus* seems to be the same, with respect to Motion, that a Point is with respect to a Line; at least, the two have this in common, that as the Point is inceptive of the Line, or the Term from which it commences; so is the beginning of all Motion call'd the *Conatus*. Add, that as in Mathematical Demonstrations, the Extension of the Point is conceiv'd as if it were nothing at all; so, in the *Conatus* of Motion, there is no regard to the Time wherein, or the length which it advances. See *LAWS OF NATURE*.

Hence, some define a *Conatus* to be a quantity of Motion, not capable of being express'd by any time or length.—Accordingly, all Motion tends precisely the same way wherein the moveable is acted on, or determined by the moving Power. See *MOOTION*.

CONCATENATION, in Philosophy, the connecting of Things, in manner of a Chain, *Catenas*.

The Concatenation of Second Causes, is an Effect of Providence. See *SECOND CAUSE*, *PROVIDENCE*, &c.

CONCAVE, is applied to the inner Surface of a hollow Body; especially if it be circular. See *CONVEX*.

Concave is particularly understood of Mirrors and Lenses: *Concave* Lenses, are either *concave* on both Sides, called *Concavo-Concave*; or *concave* on one side, and Plane on the other, called *Plano-Concave*; or *Concave* on one side, and convex on the other, call'd *Concavo-Convex*, or *Concavo-Convex*, as the one or the other Surface is a Portion of a less Sphere.

The Properties of all *concave* Lenses are, that the Rays of Light, in passing thro' them are deflected, or made to recede from one another; as in *convex* Lenses they are inflected towards each other; and that the more, as the *Concavity* or *Convexity* are Portions of less Circles. See *LENES*.

Hence, parallel Rays, as those of the Sun, by passing thro' a *concave* Lens, become diverging; diverging Rays are made to diverge the more, and converging Rays either made to converge less, or become parallel, or go out diverging. See *RAY*.

Hence, Objects view'd thro' *concave* Lenses, appear diminish'd; and the more so, as they are Portions of less Spheres; and this in oblique, as well as in direct Rays. See *REFRACTION*.

Concave Mirrors have the contrary Effect to Lenses: They reflect the Rays which fall on 'em, so, as to make them approach more to, or recede less from each other than before; and that the more as the *Concavity* is greater, or the Spheres whereof they are Segments, less. See *MIRROR*.

Hence, *Concave* Mirrors magnify Objects presented to them; and that in a greater proportion, as they are Portions of greater Spheres. See *REFLECTION*, *MICROSCOPE*, &c.

Hence also, *Concave* Mirrors have the Effect of burning Objects, when plac'd in their Focus. See *BURNING GLASS*.

CONCEALERS, in Law, such as find out *conceal'd* Lands, *i. e.* Lands kept privily from the King, by common Persons

Persons; having nothing to shew for their Title, or Estate therein.

They are thus called *per Antiphrasim*, à *concelando*; as *Mans* is à *movendo*, &c. My Lord Coke calls 'em *turbidum hominum genus*.

CONCENTRATION, the retiring, or withdrawing of a thing inwards; or driving toward the Centre, the Middle.

Thus, external Cold is said to *concentrate* the Heat within Bodies. After Meals, the natural Warmth retires, and as it were *concentrates*, to promote the Digestion. See HEAT, and COLD.

CONCENTRATION is also used by Dr. Grew for the highest degree of Mixture, *viz.* that wherein two or more Atoms or Particles touch, by a Reception, and Intrusion of the one within the other. See MIXTURE.

This he takes to be the Case of all Fix'd Bodies without Taste or Smell; their Conflitution being so firm, that still the Particles be detach'd from each other by some extraordinary means, they cannot affect those Senses. See SMELL, and TASTE.

CONCENTRIC, in Geometry and Astronomy, something that has the same common Centre with another. See CENTRE.

The Word is principally used in speaking of round Bodies, and Figures, *viz.* Circular, Elliptical ones, &c. but may be likewise used for Polygons, drawn parallel to each other, upon the same Centre. See CIRCLE, POLYGON, &c.

Concentric Rands opposed to *excentric*. See ECCENTRIC, and ECCENTRICITY.

CONCEPTION, in Logicks, the simple Apprehension, Perception, or Idea which we have of any Thing, without proceeding to affirm or deny any thing about it. See PERCEPTION.

The Schoolmen usually make two Kinds of *Conception*; the one *formal*, the other *objective*.

The *first* is defined the immediate and actual Representation of any thing propos'd, to the Mind; on which footing, it should be the same thing to the Understanding, that a Word or Voice is to the Ear: whence some call it *Verbum Mentis*. See NOTION.

The *second* is the Thing it self represented by a formal *Conception*. But others explode the Notion of an *objective Conception*, as being, in reality, no *Conception* at all; excepting where the Mind contemplates its own Acts, &c.

Formal, or *proper Conceptions*, are subdivided into *Univocal*, where several Things are distinctly represented as under some common Ratio, or in the same degree of Perfection; *Analogous*, where several Things are represented as under some proportional Likeness; and *Equivocal*, where they are represented immediately as such, without regard to any common Ratio or Likeness.

CONCEPTION, in Medicine, the first Formation of the Embryo, or *Fetus*, in the Womb. See FERTUS, and EMBRYO.

Conception is no other than such a Concourse and Commixture of the prolific Seed of the Male, with that of the Female, in the Cavity of the Uterus, as immediately produces an Embryo. See EMBRYO.

The Symptoms of *Conception*, or Pregnancy, are, when in a few Days after the Conjugal Act, a small Pain is perceiv'd about the Navel, attended with some gentle Commotions in the bottom of the Abdomen; and within one, two, three, or even four Months, the Menstris cease to flow, or prove in less quantity than usual. Upon the first Failure of this kind, the Woman begins to count the Series of her Weeks, without taking any notice of the Time before elapsed: After this, or between the second and third Months, but generally about the third, the Motions of the Embryo become perceivable to the Mother; who hereupon becomes troubled with a *Nausea*, Vomiting, Loathing, Longing, &c. About this time, the Breasts begin to swell, grow hard and painful, and contain a little Milk; the Nipples also become larger, firmer, and darker colour'd, a livid Circle appearing around 'em: The Eyes seem sunk and hollow. During the two first Months pregnancy, the Woman grows thinner, and slenderer; the Abdomen being also depress'd; tho' it afterwards distends, and grows gradually larger. See GESTATION.

The *Manner* wherein *Conception* is effected, is thus laid down by the modern Writers: In the Superficies of the Ovaries of Women, are found little pellucid Spherules, consisting of two concentric Membranes, fill'd with a lymphatic Humour, and connected to the Surface of the Ovaria, underneath the Tegument, by a thick Calix, contiguous to the Extremities of the minute Ramifications of the Fallopian Tubes. See OVARY.

These Spherules, by the use of Venery, grow, swell, raise, and dilate the Membrane of the Ovary into the form of *Papillæ*; till, the Head propending from the Stalk, it is at length separated from it; leaving behind it a hollow Cicatrix, in the broken Membrane of the Ovary; which, however soon grows up again.

Now, in these Spherules, while still adhering to the Ovary, *Fetus*'s have been frequently found: whence it appears, that these are a kind of *Ova*, or Eggs, deriving their Structure from the Vessels of the Ovary, and their Liqueur from the Humours prepar'd therein. See EGG.

Hence, also, it appears, that the Fallopian Tubes being swell'd, and stiffen'd by the Act of Venery, with their muscular *Fimbriae*, like Fingers, may embrace the Ovaries, compress 'em, and by that Compression expand their own Mouths: And thus the Eggs, now mature, and detach'd as before, may be forced into their Cavities; and thence convey'd into the Cavity of the Uterus; where they may either be cherish'd and retain'd, as when they meet with the Male Seed; or, if they want that, again expell'd. See FALLOPIAN Tube.

Hence the Phenomena of *falsæ Conceptionis*, *Abortion*, *Fetus*'s found in the Cavity of the Abdomen, the Fallopian Tubes, &c. See ABORTION, &c.

For, in Coition, the Male Seed, abounding with living *Animalcules*, agitated with a great Force, a brisk Heat, and, probably, with a great quantity of Animal Spirits, is violently impell'd thro' the Mouth of the Uterus, which on this occasion is open; and thro' the Valves of the Neck of the Uterus, which on this occasion are laxer than ordinary, into the Uterus; which now, in like manner, becomes more active, turgid, hot, inflam'd, moisten'd with the Flux of its Lymph and Spirits, by means of the Titillation excited in the nervous *Papillæ* by the Attrition against the *Ridge* of the *Vagina*. See SEED.

The Semen thus dispos'd in the Uterus, is retain'd, heated, agitated by the convulsive Constriction of the Uterus it self; till meeting with the *Ova*, the finest and most animated Part enters thro' the dilated Pores of the *Membrana* of the *Ovum*, now become glandulous, is there retain'd, nourish'd, dilated, grows to its *Unbilicus*, or Navel; assimilates the other less lively *Animalcules*: and thus is *Conception* effected.

Hence, it appears, that *Conception* may happen in any Part where the Semen meets with an *Ovum*: Thus, whether it be carried thro' the Fallopian Tube to the Ovary, and there cast upon the *Ovum*; or whether it meet in some recess of the Tube it self; or, lastly, whether it join it in the Cavity of the Uterus, it may still have the same Effect; as it appears from Observation it actually has. But 'tis probable that *Conception* is then most perfect, when the two, *viz.* the Semen and *Ovum*, are carried at the same time into the Uterus, and there mix'd, &c.

Other Anatomists chuse to suppose the Male Seed taken up, ere it arrive in the Uterus, by the Veins which open into the *Vagina*, &c. and thus mix'd with the Blood; by which, in the Course of Circulation, it is carried, duly prepared, into the Ovary, to impregnate the Eggs. See GENERATION.

For the Progress of the Fetus after Conception, see NUTRITION, CIRCULATION, &c. See also UTERUS, UMBILICAL VESSELS, &c.

CONCEPTION *Immaculate* of the Holy Virgin, is a Feast in honour of the Holy Virgin; particularly with regard to her having been conceiv'd and born *Immaculate*, *i. e.* without Original Sin; held in the *Romish* Church on the 8th of December. *Alletius*, in his *Prologomena* on *Damasceanus*, endeavours to prove this Feast to have been celebrated by several Churches in the East, as early as the VIIIth Century. See FEAST.

The *Immaculate Conception* is the great Head of Controversy between the *Scottish* and *Thomist*; the former maintaining, and the latter impugning it. See SCOTTISH, and THOMIST.

The *Jacobins* espous'd the Party of *S. Thomas*, and held out a long time, in defence of the Virgin's being conceiv'd in Original Sin: They were condemn'd by Pope *Clement VII.* in 1508, at the Professation of the University of *Paris*, and oblig'd to retract.

The Council of *Trent*, Sess. V. in the Decree of *Original Sin*, declares it not to be the Intention of the Council to include the Virgin under it; Her *Conception* it calls *Immaculate*; and appoints the Constitutions of *Sixtus IV.* to be observ'd with regard thereto.

Some Authors have observ'd several Passages dispers'd in the old Editions of *S. Thomas*'s Works, which assert the *Immaculate Conception* in explicit Terms; but many of them are corrupted in the later Editions, say some: tho' others will have the Corruption lie on the side of the old ones.

In the three *Spanish* Military Orders of *S. James* of the *Sword*, *Calatrava*, and *Alcantara*; the Knights take a Vow, at their Admission, to defend the *Immaculate Conception*. This Resolution was first taken in 1652. See CALATRAVA, &c.

Peter d'Alcaz, and *Asborga*, have publish'd 48 huge Volumes in Folio on the Mytheries of the *Conception*.

For Religions of the Order of the CONCEPTION, see THEATRICES.

CONCERT, or CONCERTO, popularly CONSORT, a Number, or Company of Musicians playing, or singing the same Song, or piece of Musick together. See MUSICK.

The Word *Concert* may be applied where the Musick is only Melody, i. e. the Performers are all in Unison; but it is more properly, as well as more usually understood of Harmony, or where the Musick consists of divers Parts; as Bass, Tenor, &c. See MELODY, HARMONY, PART, &c.

CONCESSI, a Term much used in Conveyances, &c. its Effect is to create a Covenant, as *Dedi* does a Warranty. See COVENANT.

CONCESSION, in Rhetorick, a Figure whereby something is granted, or allowed the Adversary, either to prevent being detain'd by unnecessary Incidents, or to make some Advantage of. *I will not contest with you the Reality of the Contract; what I plead for is relief against the Injustice of it.—True, she is fair, but ought she not to show her Acknowledgments to Heaven for the Favour, by making a virtuous use of her Beauty?*

CONCHA, Shell, in Anatomy, a Name given the second, or inward Cavity of the Auricle, or external Ear; reaching to the Entrance of the Auditory Duct. See EAR, and AURICLE.

Some also give the same Name to the first Cavity of the inward Ear, which others call the *Drum*; and others to the *Vestibulum* of the Labyrinth, which is the second Cavity of the internal Ear. See TYMPANUM, and VESTIBULUM.

The Name has its Origin from a resemblance these Cavities bear to a *Concha*, or *Sea-shell*.

CONCHILIS, or CONCHOID, in Geometry, a Curve Line, which always approaches nearer a straight Line to which it is incised, but never meets it. See CURVE.

It is describ'd thus: Draw a right Line BD, (Plate *Analyticks*, Fig. 1.) and another AC, perpendicular to it in E; draw any Number of right Lines, as CM, CM cutting BD in Q; make QM = QN = AE = EE; the Curve where in the Points MM are found, is the *Conchilis*, or *Conchoid prima*; so called by its Inventor *Nicomedes*.

The others, wherein the Points NN are found, is the *Conchoid secunda*; the right Line BD the *Rule*, the Point C the *Pole*.

The Inventor also contriv'd an Instrument, whereby the first *Conchoid* may be describ'd mechanically: Thus, in the Rule A D, (Plate *Analyticks*, Fig. 2.) is a Channel or Groove cut, so as a smooth Nail, firmly fix'd in the moveable Rule CB, in the Point F, may slide freely within it: Into the Rule EG is fix'd another Nail in K, for the moveable Rule CB to slide upon.

If then the Rule BC be so mov'd, as that the Nail F passes along the Canal AD; the Style, or Point in C, will describe the first *Conchoid*.

Now let AP = x, (Fig. 1.) AE = a; PE = MR = a - x; wherefore, as x increases, a - x or MR will decrease; and therefore the Curve continually approaches nearer to the Rule BD.

In the same manner it appears, that the right Line NO must continually decrease; and therefore, the second *Conchoid*, also, must continually approach nearer the Rule.

But inasmuch as between each *Conchoid* and the right Line BD, there will still be the right Line QM or QN, equal to AE; neither of the *Conchoids* can concur with the right Line BD: consequently, B is an Asymptote of each *Conchoid*. See ASYMPTOTE.

There will be other Kinds of *Conchoids* produced, if CE: CQ: QM: AE, or indefinitely, if OE = CQ: 1: QM: AE; wherefore, if CE = b, EA = a, CQ = x, QM = y; then, a b = x y: and for infinite *Conchoids*, a^m b^m = x^m y^m.

CONCINNOUS Intervals, in Musick. Discords are distinguish'd into *Concinuous* and *Inconcinuous* Intervals: The *Concinuous* are such as are fit for Musick, next to, and in Combination with Concords; being neither very agreeable nor disagreeable in themselves; but having a good Effect, as by their opposition they heighten the more essential Principles of Pleasure; or as by their mixture and combination with 'em, they produce a Variety necessary to our being better pleas'd. See HARMONY.

The other Discords, that are never used in Musick, are called *Inconcinuous*. See DISCORD.

Systems are also divided into *Concinuous* and *Inconcinuous*. A System is said to be *concinuous*, or *continuously* divided, when the Parts thereof, consider'd as simple Intervals, are *concinuous*; and are, besides, plac'd in such an Order, between the Extremes, as that the Succession of Sounds from one Extreme to the other, may have an agreeable Effect. See SYSTEM.

Where the simple Intervals are *inconcinuous*, or ill-dispos'd between the Extremes, the System is said to be *inconcinuous*.

CONCLAVE, an Assembly, or Meeting of all the Car-

dinals that are at *Rome*, for the Election of a Pope. See POPE, ELECTION, &c.

The *Conclave* had its rise in the Year 1270, and on this occasion: *Clement IV.* being dead at *Viterbo*, in 1268; the Cardinals were two Years without being able to agree on the Election of a Successor: In effect, things were carried to that pass, that they were upon the Point of breaking up, without coming to any Convocation at all.

The Inhabitants of *Viterbo*, then, being apprisd of their Design, by the Advice of *S. Bonaventura*, then at *Viterbo*, shut the Gates of their City, and lock'd up the Cardinals in the Pontifical Palace adjoining to the Cathedral, till they were brought to a better understanding.

Hence arose the Custom which has since prevail'd, of shutting up the Cardinals in a single Palace, till they have elect'd the Pope. Such was the Origin of the *Conclave*, as related by *Onuph. Pavannus, Ciaconius, and Papebroch*. See CARDINAL.

CONCLAVE is also us'd for the Place wherein the Election of the Pope is perform'd; which is, now, at *St. Peter's* in the Vatican; tho' *Gregory X.* and *Clement V.* appointed it should always be held in the Place where the last Pope should die.

While the Affair is in hand, if it be in Winter, the Walls and Windows are all mured up, excepting a single Pane, to give a little Light: In Summer the Windows are not clos'd, but the great Door of the Hall is secur'd with four Locks, and four Bolts; an Aperture being, however, left, to supply the imprison'd Prelates with Victuals thro'.

In the Hall, which is very ample, there are Cells or Stalls erect'd for as many Cardinals as are to be present at the Election; the Cells being only separated by Deal Boards.

The Cells are mark'd with Letters of the Alphabet, and are distributed to the Cardinals by Lot: Each Cardinal puts his Arms on the Cell that falls to his share. See CELL.

After the Assembly has held three Days, they are only allow'd one Dish for a Meal; after five Days, only Bread and Water: Tho' this Rule is not over-religiously regard'd.

Each Cardinal is allow'd two *Conclavists*, or Servants to attend him, and to be shut up with him.

Mathew Paris says, the Word *Conclave* antiently signify'd the Pope's Wardrobe.

'Tis a popular Proverb in *Italy*, *Chi entra Pope, esce Cardinale*; He who enters Pope, comes out Cardinal; *g. d.* He who according to common Report will be elect'd Pope, ordinarily is not.

CONCLUSION, in Logic, the last Part of an Argument; or the Consequence drawn from something either assumed or proved before.

The *Conclusion* of an Argument contains two Parts; the *Consequent*, which is the Matter of it; and the *Consequence*, which is its Form; and which, of a simple absolute Proposition, renders the *Conclusion* relative to the Premises whence it is drawn. See CONSEQUENT.

The *Question*, and *Conclusion*, say the Schoolmen, are the same Ideas, only consider'd in different Views, or Relations: In the *Question* they are consider'd as doubtful; in the *Conclusion* as void of doubt.

CONCLUSION, in Oratory, consists of two Parts; the *Recapitulation* or *Enumeration*, and the *Passions*. See RHETORICK.

The *Recapitulation* consists in a Repetition of the principal Arguments. See RECAPITULATION; see also PASSION.

CONCOCTION, in Medicine, the Change which the Food undergoes in the Stomach, &c. to become Chyle. See CRYSTALLIZATION.

This Change consists in destroying the Texture and Cohesion of the Parts of the Food; preparing part of it for some particular Service of the animal Frame, and the rest to be carried off as Excrements, by proper Ejectories. See FOON, EXCREMENT, &c.

The Antients gave the Term *Concoction*, to what we now ordinarily call *Digestion*; from a Notion of the Food's being, as it were, boil'd in the Stomach; and its nutritious Juice express'd by the Heat of the adjacent Parts. See DIGESTION.

They assign'd two *Concoctions*, viz. one in the Stomach, and a second in the small Intestines, &c. which latter they attributed to the Admixture of the Bile and pancreatic Juice.

The several *Concoctions* in the Body, with regard to the Propagation of the Species, and the Preservation of the Individual, have been since reduced to five; *Chylifis* for Chyle, *Chymifis* for Chyme, *Hematifis* for Blood, *Pneumatifis* for Spirit, and *Spermatifis* for Seed. See CHYLOSIS, CHYMOSIS, HEMATOSIS, &c. see also COCTION.

CONCOMITANT, in Theology, something that accompanies, or goes along with, another.

Concomitant Grace, is that which God affords us during the Course of our Actions to enable us to perform 'em; and as the *Romish* Schoolmen say, to render 'em meritorious. See GRACE.

Concomitant Grace differs, at least with regard to its Effect, from preventing Grace: the latter is given as to prevent an Action, the former to accompany it.

According to the *Romish* Doctrine, the Blood of Jesus Christ is under the Accidents of Bread, as his Body is under the Accidents of Wine, by *Concomitance*.

CONCORD, in Grammar, that part of Syntax, or Construction, whereby the Words of a Sentence agree among themselves, *i. e.* whereby Nouns are put in the same Case, Number, Gender, &c. and Verbs in the same Number and Person with Nouns and Pronouns. See SYNTAX.

The Rules of *Concord* are generally the same in all Languages, as being of the Nature of what is in use almost every where for the better distinguishing of Discourse.

Thus, the Distinction of the two Numbers Singular and Plural, obliges us to make the Adjective agree with the Substantive in Number; that is, to put the one either in this or that Number, as the other is: For the Substantive being the Thing confusedly, tho' directly mark'd by the Adjective; if the Substantive Word mark several, there are several Subjects of the Form mark'd by the Adjective, and of consequence it should be in the Plural, *Homines Docti*, &c. See NUMBER.

Again, the Distinction of Masculine and Feminine, renders it necessary to put the Substantive and Adjective in the same Degree. See DEGREE.

And Verbs should have a *Concord* or Agreement with Nouns and Pronouns in Number and Person. See PERSON, PRONOUN, &c.

If any thing occur apparently contrary to those Rules, 'tis by a Figure, *i. e.* something is implied, or the Ideas are consider'd more than the Words themselves. See FIGURE.

CONCORD, in Law, is the Agreement between two Parties who intend the levying a Fine of Lands to one another, how and in what manner it shall pass. See FINE.

CONCORD is also an Agreement made upon any 'Trespas committed, (between two, or more) and is divided into *Concord executory*, and *Concord executed*.

Plowden observes, that the first binds not, being imperfect; but the latter is perfect, and binds the Party.

Others are of Opinion, that *Concords executory* are perfect, and bind no less than those executed.

CONCORD, in Music, is the Relation of two Sounds that are always agreeable to the Ear, whether applied in Succession or Consonance. See SOUND.

If two single Sounds be in such a Relation, or have such a difference of Tune, as that being sounded together, they make a Mixture, or compound Sound, which affects the Ear with pleasure; that Relation is called *Concord*: and whatever two Sounds make an agreeable Compound in consonance, those same will always be pleasing, in Succession, or will follow each other agreeably. See TUNE.

The Reverse of a *Concord*, is what we call a *Discord*; which is a Denomination of all the Relations or Differences of Tune that have a displeasing Effect. See DISCORD.

Concord and Harmony are, in effect, the same thing; tho' Custom has applied them differently. As *Concord* expresses the agreeable Effect of two Sounds in Consonance; so Harmony expresses that Agreement in a greater Number of Sounds in Consonance: Add, that Harmony always implies Consonance; but *Concord* is sometimes applied to Succession: tho' never but when the Terms will make an agreeable Consonance: whence it is that Dr. Holder, and some other Writers, use the Word *Consonance* for what we call *Concord*. See CONSONANCE.

Unisonance, then, being the Relation of Equality between the Tunes of two Sounds, all Unisons are *Concords*, and in the first Degree: but an Interval being a Difference of Tune, or a Relation of Inequality between two Sounds, becomes a *Concord* or *Discord*, according to the Circumstances of that particular Relation. Indeed, some restrain *Concord* to Intervals, and make a difference of Tune essential thereto; but that is precarious; and Mr. *Mascolus* thinks, that as the Word implies Agreement, 'tis applicable to Unison in the first degree. See UNISON.

'Tis not easy to assign the Reason or Foundation of *Concordance*: The differences of Tune, we have already observ'd, take their rise from the different Proportions of the Vibrations of the sonorous Body, *i. e.* of the Velocity of those Vibrations in their recourses; the frequenter thereof are, the more acute being the Tune, and *vice versa*. See GRAVITY, &c.

But the essential difference between *Concord* and *Discord* lies deeper: there does not appear any natural Aptitude in the two Sounds of a *Concord*, to determine it to give us a pleasing Sensation, more than in the two Sounds of a *Discord*: These different Effects are merely arbitrary, and must be resolv'd into the divine good Pleasure. See SENSATION.

We know by experience what Proportions and Relations of Tune afford Pleasure, what not; and we know also how to express the Differences of Tune by the Proportion of

Numbers; we know what it is pleases us, tho' we don't know why: We know, *v. g.* that the Ratio of 1 : 2 constitutes *Concord*, and 6 : 7 *Discord*; but on what original Grounds agreeable or disagreeable Ideas are connected with those Relations, and the proper Influence of the one on the other, is above our reach.

By Experience, we know that the following Ratios of the Lengths of Chords are all *Concord*, *viz.* 2 : 1, 3 : 2, 4 : 3, 5 : 4, 6 : 5, 5 : 3, 8 : 5; that is, take any Chord for a Fundamental, which shall be represented by the Number 1, and the following Divisions thereof will be all *Concord* with the whole, *viz.* $\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{4}$, $\frac{1}{5}$, $\frac{1}{6}$, $\frac{1}{8}$. So that the distinguishing Character between *Concords* and *Discords*, must be look'd for in these Numbers, expressing the Intervals of Sound; not abstractedly, and in themselves, but as expressing the Number of Vibrations.

Now, Unisons are in the first Degree of *Concord*, or have the most perfect Likeness or Agreement in Tune; and therefore have something in 'em accessory to that Agreement, which is found, less or more, in every *Concord*: but 'tis not true, that the nearer two Sounds come to an Equality of Tune, the more Agreement they have; therefore, 'tis not in the Equality or Inequality of the Numbers that this Agreement lies.

Further, if we consider the Number of Vibrations made in any given time by two Chords of equal Tune; on the Principle laid down, they are equal: And therefore, the Vibrations of the two Chords coincide, or commence together as frequently as possible, *i. e.* they coincide at every Vibration; in this frequency of which Coincidence, or united Mixture of the Motions of the two Chords, and of the Undulations of the Air occasion'd thereby, it is, that the Difference of *Concord* and *Discord* must be sought.

Now, the nearer the Vibrations of two Strings approach to a Coincidence as frequent as possible, the nearer they should approach the Condition and, consequently, the Agreement of Unisons; which agrees with Experience.

For if we take the natural Series 1, 2, 3, 4, 5, 6, and compare each Number to the next, as expressing the Number of Vibrations in the same time of two Chords, whose Lengths are reciprocally as those Numbers; the Rule will be found exact, for 1 : 2 is best, then 2 : 3; after 6 the Consonance is unfeeling; the Coincidences being too rare: so there are other Ratios that are agreeable, besides those found in that continued Order, *viz.* 3 : 5, and 5 : 8, which, with the preceding five are all the *concording* Intervals within, or less than an Octave, or 1 : 2; that is, whose acute Term is greater than half the Fundamental.

On this Principle, 3 : 5 will be preferable to 4 : 5; because being equal in the number of Vibrations of the acute Term, there is an advantage on the Side of the Fundamental in the Ratio 3 : 5, where the Coincidence is made at every third Vibration of the Fundamental, and every fifth of the acute Term: So also the Ratio 5 : 8 is less perfect than 5 : 6; because, tho' the Vibrations of each Fundamental are equal; yet in the Ratio 5 : 6, the Coincidence is at every sixth of the acute Term, and only at every eighth in the other Case.

Thus, we have a Rule for judging of the Preference of *Concords*, from the Coincidence of their Vibrations: agreeable to which Rule, they are dispos'd into the Order of the following Table; to which the Names of the *Concords* in Practice, the Ratio of their Vibrations, the Lengths of the Chords, and the Number of Coincidences in the same, are express'd.

Table of CONCORDS.

Ratio's, or Vibrations.	Coincid.	
	<i>Grave Acute Term.</i>	<i>Term.</i>
Unison	1	1
Octave, 8ve	2	1
Fifth, 5th	3	2
Fourth, 4th	4	3
Sixth, gr.	5	3
Third, gr.	5	4
Third, lesser	6	5
Sixth, lesser	8	5

Grave Acute Lengths.

Tho' this Order be settled by Reason, yet it is confirm'd by the Ear. On this bottom, *Concords* must still be the more perfect, as they have the greatest Number of Coincidences, with regard to the Number of Vibrations in both Chords; and where the Coincidences are equal, the Preference will fall on that Interval, whose acute Term has fewest Vibrations to each Coincidence; which Rule, however, is in some Cases contrary to Experience; and yet it is the only Rule yet discover'd.

F. *Mercenne*, indeed, after *Kireber*, gives us another Standard for settling the comparative Perfection of Intervals with regard to the Agreement of their Extremes in Tune : And 'tis this.

The Perception of *Concordance*, say they, is nothing but the comparing of two or more different Motions which in the same time affect the auditory Nerve : Now we can't make a certain Judgment of any Concordance, till the Air be as oft struck in the same time by two Chords, as there are Unites in each Member expressing the Ratio of that *Concord*, v. g. we can't perceive a Fifth, till two Vibrations of the one Chord, and three of the other are accomplish'd together ; which Chords are in length as 3 to 2 : The Rule then is, that those *Concords* are the most simple and agreeable, which are generated in the least time ; and those, on the contrary, the most compound and harsh, which are generated in the longest time.

For instance, let 1, 2, 3, be the Lengths of 3 Chords 1 : 2 is an Octave ; 2 : 3 a Fifth ; and 1 : 3 an Octave and Fifth compounded, or a Twelfth. The Vibrations of Chords being reciprocally as their Lengths, the Chord 2 will vibrate once, while the Chord 1 vibrates twice, and then exists an Octave ; but the Twelfth does not yet exist, because the Chord 3 has not vibrated once, nor the Chord 1 thrice, which is necessary to form a Twelfth.

Again, for generating a Fifth, the Chord 2 must vibrate thrice, and the Chord 3 twice ; in which time, the Chord 1 will have vibrated 6 times ; and thus the Octave will be thrice produc'd, while the Twelfth is only produced twice ; the Chord 2 uniting its Vibration sooner with the Chord 1, than with the Chord 3 ; and they being sooner consonant than the Chord 1 or 2 with that 3.

Whence, that Author observes, many of the Mysteries of Harmony, relating to the Performance of Harmonious Intervals and their Succession, are easily deduced.

But this Rule, upon examining it by other Instances, Mr. *Macleod* has shewn defective, as it does not answer in all Positions of the Intervals with respect to each other ; but a certain Order, wherein they are to be taken, being requir'd ; and there being no Rule, with respect to the Order, that will make this Standard answer to Experience in every Case : So that at last we are left to determine the Degrees of *Concord* by Experience and the Ear.

Not that the Degrees of *Concord* depend much on the more or less frequent uniting the Vibrations, and the Ear's being more or less uniformly mov'd, as above ; for that this Mixture or Union of Motion, is the true Principle, or, at least, the chief Ingredient in *Concord*, is evident : But because there seems to be something further in the Proportion of the two Motions, necessary to be known, in order to fix a catholic Rule for determining all the Degrees of *Concord*, agreeable to Sense and Experience.

The Result of the whole Doctrine is summ'd up in this Definition.

Concord is the Result of a frequent Union, or Coincidence of the Vibrations of two sonorous Bodies, and, by consequence, of the undulating Motions of the Air, which, being caus'd by these Vibrations, are like and proportionable to 'em ; which Coincidence, the more frequent it is, with regard to the number of Vibrations of both Bodies, perform'd in the same time, *ceteris paribus*, the more perfect is that *Concord* : till the Rarity of the Coincidence, in respect of one or both the Motions, commence *Discord*. See some of the remarkable Phenomena of Sounds accounted for from this Theory, under the Word UNISON ; see also INTERVAL, &c.

Concords are divided into *simple*, or original, and *compound*.

A *simple*, or original *Concord*, is that whole Extremes are at a Distance less than the Sum of any two other *Concords*.

On the contrary, a *compound Concord* is equal to two or more *Concords*.

Other Musical Writers state the Division thus : An Octave 1 : 2 and all the inferior *Concords* above express'd are all *simple* and original *Concords* : and all greater than an Octave, are called *compound Concords* ; as being compos'd of, and equal to the Sum of one or more Octaves, and some *simple Concord* less than an Octave, and are usually, in practice, denominated from that *simple Concord*.

As to the Composition and Relations of the original *Concords*, by applying to them the Rules of the Addition and Subtraction of Intervals, they will be divided into *simple* and *compound*, according to the first and more general Notion ; as in the following Table.

Simple Concords.	Compound Concords.	
5 : 6 a 5d left.	5th l. } 3d g. and 3d l.	Sve. com. } 5th 4 or pos'd of } 6th g. 3d l. or 3d g. 3d l. 4th.
4 : 5 a 5d gr.	6th l. } 4th 3d l.	
3 : 4 a 4th.	6th g. } 4th 3d g.	

The Octave is not only the first *Concord* in point of Perfection, the Agreement of whose Extremes is greatest, and the nearest to Unison ; inasmuch that when sounded together, 'tis impossible to perceive two different Sounds ; but 'tis also

the greatest Interval of the seven original *Concords* ; and as such, contains all the lesser, which derive their sweetness from it, as they arise more or less directly out of it ; and which decrease gradually, from the Octave to the lesser Sixth, which has but a small degree of *Concord*. See OCTAVE.

What is very remarkable, is the manner wherein these lesser *Concords* are found in the Octave, which shews their mutual Dependencies.

For, by taking both an Harmonical and Arithmetical Mean between the Extremes of the Octave, and then both an Harmonical and Arithmetical Mean betwixt each Extreme, and the most distant of the two Means last found, viz. betwixt the lesser Extreme and the first Arithmetical Mean, and betwixt the greater Extreme and the first Harmonical Mean, we have all the lesser *Concords*.

Thus, if betwixt 360 and 180 the Extremes of Octave, we take an Arithmetical Mean, it is 270 ; and an Harmonical Mean is 240 : then, betwixt 360 the greatest Extreme, and 240 the Harmonical Mean, take an Arithmetical Mean, it is 300 ; and an Harmonical Mean, is 288. Again, betwixt 180 the lesser Extreme of the Octave, and 270 the first Arithmetical Mean, it is 225, and an Harmonical one 216.

Thus have we a Series of all the *Concords*, both ascending towards Acuteness from a common Fundamental, 360 ; and descending towards Gravity from a common acute Term, 180 ; which Series has this Property, that taking the two Extremes, and any other two at equal Distances, the four will be in Geometrical Proportion.

The Octave, by immediate Division, resolves it self into a Fourth and Fifth ; the Fifth, again, by immediate Division, produces the two Thirds ; the two Thirds are therefore found by Division, the not by immediate Division ; and the same is true of the two Sixths. Thus do all the original *Concords* arise out of the Division of the Octave ; the Fifths and Fourths immediately and directly, the Thirds and Sixths mediately.

From the Perfection of the Octave arises this remarkable Property, that it may be doubled, tripled, &c. and yet still perceive a *Concord*, i. e. the Sum of two or more Octaves are *concord* ; tho' the more compound will be gradually less agreeable : But it is not so with any other *Concord* less than Octave ; the Doubles, &c. whereof, are all *Discords*.

Again, whatever Sound is *concord* to one Extreme of the Octave is *concord* to the other also ; and if we add any other *simple Concord* to an Octave, it agrees to both its Extremes ; to the nearest Extreme it is a *simple Concord*, and to the farthest a compound one.

Another thing observable in this System of *Concords*, is, that the greatest Number of Vibrations of the Fundamental cannot exceed five ; or that there is no *Concord* where the Fundamental makes more than five Vibrations, to one Coincidence with the acute Term. It may be added, that this Progress of the *Concords* may be carried on to greater degrees of Composition, even in *infinitum* ; but the more compound, the less agreeable.

So a single Octave is better than a double one, and that than a triple one ; and so of Fifths, and other *Concords*. Three or four Octaves is the greatest length we go in ordinary Practice : The old Scales went but to two ; no Voice or Instrument will well go above four. See TUNING, FOURTH, FIFTH, &c.

CONCORDANCE, a Dictionary or Index to the Bible, wherein, all the Words, used in the Course of the inspir'd Writings, are rang'd alphabetically ; and the various Places where they occur refer'd to ; to assist in finding out Passages, and comparing the several Significations of the same Word.

Cardinal *Hoghs* is said to have employ'd 500 Monks at the same time in compiling a Latin *Concordance* : Beside which, we have several other *Concordances* in the same Language ; one, in particular, called the *Concordance of England*, compiled by *J. Darlington* of the Order of *Prebends* ; another more accurate one, by *Zanora*.

R. *Mardochei Nathan* has furnish'd us with a Hebrew *Concordance*, printed at *Basil* in 1541 ; containing all the Hebrew Roots branch'd into their various Significations, and under each Signification all the Places in Scripture wherein it occurs : But the best and most useful Hebrew *Concordance* is that of *Buxtorf*.

The Greek *Concordances* are only for the New Testament : indeed we have one of *Kireber's* on the Old ; but this is rather a *concordantial* Dictionary than a *Concordance* ; containing all the Hebrew Dictions in an alphabetical Order ; and underneath, all the Interpretations or Senses the Seventy give 'em ; and in each Interpretation, all the Places where they occur in that Version.

Catalfus, an Italian Cordelier, has given us *Concordances* of the Hebrew, Latin, and Greek, in two Columns ; the first, which is Hebrew, is that of R. *Mardochei*, word for word, and according to the Order of the Books and Chapters : On the other Column is a Latin Interpretation of each Passage of Scripture quoted by R. *Mardochei* : This Interpretation is *Catalfus's* own ; but in the Margin he adds that

of the Seventy and the Vulgate, when different from his. The Work is in four Volumes Folio, printed at Rome in 1621.

CONCORDANT *Verbes*, such as have several Words in common; but which, by the addition of other Words, convey an opposite, at least, a different Meaning. Such are those,

Et $\left\{ \begin{array}{l} \text{Casis} \\ \text{L'apost.} \end{array} \right\}$ *in silva* $\left\{ \begin{array}{l} \text{Sensatur} \\ \text{Auritur} \end{array} \right\}$ $\&$ *omnia* $\left\{ \begin{array}{l} \text{S'rona.} \\ \text{Castas.} \end{array} \right\}$

CONCORDAT, in the Canon Law, a Covenant, or Agreement in some beneficiary Matter; as, relating to a Religion, Permutation, or other Ecclesiastical Cause.

The Council of Trent, *Seff. VI. de Reform. Cap. 4.* speaking of *Concordats* made without the Authority and Approbation of the Pope, calls 'em *Concordats que tantum suus obligant Auctores, non Successores.* And the Congregation of Cardinals, who have explained this Decree, declares, that a *Concordat* cannot be real, or descend to the Successors, unless confirm'd by the Pope.

CONCORDAT is us'd, absolutely, among the French, for an Agreement concluded at *Boulogne* in 1516, between Pope Leo I. and Francis I. of France, for regulating the manner of nominating to Benefices.

The *Concordat* serves in lieu of the *Pragmatic Sanction*, which had been abrogated; or, rather, it is the *Pragmatic Sanction* soften'd and reform'd.

There is also a *German Concordat*, made between Pope Nicholas V. and the Emperor Frederick III. and the Princes of Germany, in 1448, relating to Beneficiary Matters.

CONCORDIE *Vafa*. See *VASSES* of *Concord*.

CONCOURSE, or **CONCURRENCE**, the reciprocal Action of divers Persons or Things, co-operating toward the same Effect or End.

Divines generally hold, that the Actions and Operations of all Creatures are continually dependent on the immediate Concurrence of the divine Mind: For second Causes to act, or produce Effects, God himself must concur, and by his Influence give 'em the Efficacy they themselves are destitute of; if they did not need the immediate Concurrence of God to make 'em act, they would have a sort of Independency, which must be injurious to the immediate Creator to suppose. See *CAUSE*.

The Schoolmen distinguish two Kinds of Concurrence, viz. *mediate*, which consists in the giving a Power or Faculty to act; and *immediate*, which is a cotemporary Influence of one Cause along with another, to produce an Effect: Thus, the Grandfather concurs mediately to the Production of a Grandson, as he gives the Power of generating to the Father: but the Father concurs immediately with the Mother to the Production of the same Child. Now 'tis allow'd that God concurs mediately with all his Creatures, to enable them to act: but whether this be sufficient; or whether it be farther requir'd that he concur with 'em immediately by a new Influence, for the Production of every act, in the same manner as the Father concurs with the Mother toward producing the young, is controverted: The generality of Scholastic Writers are for the Affirmative; *Durandus* and his Followers maintain the Negative.

Point of CONCOURSE. See *FOCUS*.

CONCRETE, in the School Philosophy, an Assemblage, or Compound. See *COMPOUND*.

A *Physical Concrete*, or *concrete Body*, may denote any mix'd Body, or Body compos'd of different Principles; and consequently, all sensible Bodies whatever, as all Bodies arise from a Coalition of divers Elements, or at least of divers Principles, Matter and Form. See *BODY*, *ELEMENT*, and *PRINCIPLE*.

But, in strictness, *Concrete* is only us'd for those Compounds wherein the Ingredients still retain their distinct Natures, nor are wholly converted into any new common Nature. See *MIXT*.

Authors distinguish *Natural Concretes* and *Artificial* ones: Thus *Antimony* is a *natural Concrete*, and *Soap* a *fastitious Concrete*.

A *Logical Concrete*, or *concrete Word*, called also *Paronymus*, is that which has a compound kind of Signification; as signifying both the Subject, and some Quantity or Accident of the Subject, which gives it its Denomination: As *Man, learned, white*: for *Man* signifies as much as *having human Nature*; *learned*, as much as *having learning*, &c.

Hence, the Word *Concrete* is chiefly us'd to express the Union of Qualities or Quantities with the Bodies or Subjects, without separating them in Idea. The opposite Term, whereby the Things are separated in Thought, is *Abstract*. *Concrete* properly signifies a Subject with its Form or its Quality; as a *gross Man, hard, white*: *Abstract*, on the contrary, expresses the Form and Quality without the Subject, as, *Piety, Hardness, Whiteness*. See *ABSTRACTION*.

CONCRETE NUMBERS, are those which are applied to express or denote any particular Subject; as, two Men, three Pounds, two thirds of a Shilling, &c.

Whereas, if nothing be connected with a Number, it is taken abstractly or universally: Thus, three signifies only

an aggregate of three Unites; let those Unites be Men, Pounds, or what you please.

CONCRETION, the Act whereby soft Bodies are render'd hard: Or, it is an insensible Motion of the Particles of a Fluid or soft Body, whereby they come to a Confidence.

The Word is us'd indifferently for *Induration*, *Condensation*, *Congelation*, and *Congelation*. See *INDURATION*, *CONDENSATION*, *COAGULATION*, &c.

CONCRETION is also us'd for the Coalition of several little Particles into a sensible Mass, called a *Concrete*; by virtue of which Union, the Body acquires this or that Figure, and these or them Properties. See *CONCRETE*.

CONCUBINAGE, sometimes expresses a criminal or prohibited Commerce between the two Sexes; in which Sense it comprehends *Adultery*, *Incest*, and *simple Fornication*. See *ADULTERY*, *INCEST*, and *FORNICATION*.

In its more restrain'd Sense, *Concubinage* is us'd for a Man and a Maid's cohabiting together in the way of Marriage; without having pass'd the Ceremony thereof. See *CONCUBINE*.

Concubinage was antiently tolerated: The Roman Law calls it an allowed Custom, *licita consuetudo*. When this Expression occurs in the Constitutions of the Christian Emperors, it signifies what we now call a *Marriage in Concubine*.

The *Concubinage* tolerated among the Romans in the Time of the Republick, and of the Heathen Emperors, was that between Persons not capable of contracting Marriage together: Nor did they even refuse to let Inherintances descend to Children sprung from such a tolerated Cohabitation.

Concubinage between such Persons they look'd on as a kind of Marriage, and even allow'd it several Privileges: but then this *Concubinage* was confin'd to a single Person, and was of perpetual Obligation, as Marriage is still.

Hottoman observes, that the Roman Laws had allow'd of *Concubinage* long before *Julius Cæsar* made that Law whereby every one was allow'd to marry as many Wives as he pleas'd. The Emperor *Valentinian*, *Socrates* tells us, allow'd every Man two. See *MARRIAGE*.

CONCUBINE is also us'd for a Marriage perform'd with less Solemnity than the formal Marriage; or a Marriage with a Woman of inferior Condition, and to whom the Husband does not convey his Rank or Quality.

Cujas observes, that the antient Laws allow'd a Man to espouse, under the Title of *Concubines*, certain Persons, such as were esteem'd unequal to 'em, on account of the want of some Qualities requisite to sustain the full Honour of Marriage. He adds, that the *Concubine* was beneath Marriage, both as to Dignity and to Civil Effects; yet was *Concubine* a reputable Title, very different from that of *Mistress* among us.

The Commerce was esteem'd so lawful, that the *Concubine* might be accus'd of *Adultery* in the same manner as a Wife. See *CONCUBINE*.

This kind of *Concubinage* is still in use in some Countries, particularly *Germany*, under the Title of a *Half-Marriage*, or Marriage with the left Hand; alluding to the manner of its being contracted, viz. the Man's giving the Woman his left Hand instead of the right. See *MARRIAGE*.

This is a real Marriage, tho' without Solemnity: the Parties are both bound for ever; tho' the Woman be thus excluded from the common rights of a Wife, for want of Quality or Fortune.

CONCUBINE, a Woman whom a Person takes to cohabit with him, in the manner, and under the Character of a Wife, without being authoris'd thereto by a legal Marriage. See *CONCUBINAGE*.

CONCUBINE is also us'd for a real, legitimate, and only Wife, distinguish'd by no other Circumstance, but a Disparity of Birth or Condition, between her and the Husband.

Du Cange observes, that one may gather from several Passages in the Epistles of the Popes, that they antiently allow'd of such *Concubines*. The XVIIth Canon of the first Council of Toledo, declares, that he who with a faithful Wife, keeps a *Concubine*, is excommunicated; but that if the *Concubine* serv'd him as Wife, so that he had only one Woman, under the Title of *Concubine*, he should not be rejected from Communion: Which shews that there were legitimate Wives under the Title of *Concubines*.

In effect, the Roman Laws did not allow a Man to espouse whom he pleas'd; there was requir'd a kind of parity, or proportion between their Conditions: but a Woman of inferior Condition, who could not be espoused as a Wife, might be kept as a *Concubine*; and the Laws allow'd of it, provided he had no other Wife.

The Children of *Concubines* were not reputed either Legitimate or Bastards, but Natural Children, and were capable only of Donations.

They were deem'd to retain the low Rank of the Mother; and were on this ground unqualifi'd for inheriting the Effects of the Father.

To certain the Patriarchs had a great Number of Wives, and that these did not all hold the same Rank; some being subaltern to the principal Wife; which were what we call *Concubines*, or Half Wives. The *Romans* prohibited a plurality of *Concubines*, and only had regard to the Children issuing from a single *Concubine*, because she might become a legitimate Wife. *Scaliger* bid 700 Wives and 300 *Concubines*: The Emperor of *China* has sometimes two or three thousand *Concubines* in his Palace. *Quartius* observes, that *Darius* was follow'd in his Army by 365 *Concubines*, all in the Equipage of Queens.

CONCUPISCENCE, among Divines, an irregular Desire, Appetite, or Lust after divers Things, inherent in human Nature ever since the Fall.

F. *Melanchthon* defines *Concupiscence*, on his System, to be a natural Effort, which the Traces or Impressions of the Brain make on the Mind, to attach it to sensible Things. The Dominion or Prevalency of *Concupiscence*, according to him, is what we call *Original Sin*. See ORIGINAL SIN.

The Origin of *Concupiscence* he ascribes to those Impressions made on the Brain of our first Parents at their fall; which are still transmitted and continued on those of their Children: For as Animals produce their like, and with like Traces in the Brain; (whence the same Sympathies and Antipathies in the same Kind; and whence the same Conduct on the same Occasions;) So our first Parents, after their fall, receiv'd such deep Traces in the Brain, by the Impression of sensible Objects, that they might well be supposed to communicate them to their Children.

The Schoolmen use the Term *Concupiscible Appetite*, for the Desire we have of enjoying any Good; in opposition to the *Invisible Appetite*, whereby we chew what is Evil. See APPETITE.

CONDEMNATION, the Act of passing or pronouncing Sentence, or giving Judgment against a Man; whereby he is subjected to some Penalty or Punishment; either in respect of Fortune, Reputation, or Life. See SENTENCE, and PUNISHMENT.

CONDENSATION, the Act whereby a Body is render'd more dense, compact, and heavy. See DENSITY, &c.

Condensation consists in bringing the Parts closer to each other, and increasing their Contact: in opposition to *Rarefaction*, which renders the Body lighter and looser, by setting the Parts further asunder, and diminishing their Contact, and of consequence their Cohesion. See RAREFACTION.

Wilkins, and some of the more accurate Writers, restrain the use of the Word *Condensation* to the Action of Cold; what is done by external Application, they call *Compression*. See COMPRESSION.

Air easily *condenses*, either by Cold, or by Art: Water congeals, but never *condenses*; can never be brought into a less Space, but will penetrate the most solid Body, even Gold, rather than lose of its bulk. See WATER.

A Syrup *condenses* in Effulbition.

It was found, in the Observatory of *France*, during the great Cold of the Year 1670, that the hardest Bodies, even Metals, Glass, and Marble it self, were sensibly *condens'd* by the Cold, and became much harder and more brittle than before; till their former State was retriev'd by the ensuing Thaw. See FROST.

Water alone tends to expand by Cold; inasmuch as when congeal'd, the Ice takes up more space than the Water before. But this must be rather owing to the Intromission of some foreign Matter; as the nitrous Particles of the ambient Air, than to proper Rarefaction of the Water by the Cold. See COLD, and FREEZING.

The *Cartesians*, indeed, taking it for granted there is no Vacuum, deny any such thing as proper *Condensation*, or *Rarefaction*. According to them, when a Body takes up more space than it did before, its Parts are distended by the Intuition of a subtil Matter thro' its Pores: And when its bulk, again, is reduced into less Space, this is owing to the Extension or Egress of that Matter thro' the same Pores; by virtue whereof, the Parts of the Body, tho' not the Parts of Matter, come nearer each other. For as Extension and Matter, according to them, are the same thing; a Body can never take up more or less place, any otherwise than by the Accession or Diminution of Matter: And thus they conclude there is no Vacuum.

Now, that, in the Rarefactions of gross Bodies, their Parts are distended by the accession of Air, is frequently manifest; but this does not follow from the Plenitude of the World, but from the fluid and elastic Nature of Air; or from its Gravity and Pressure. See MATTER, VACUUM, &c.

That there is such a thing as *Condensation*, without the Loss of any Matter, is evident from *Galileus's* Experiment: A Cock, being with a female Screw fitted to a hollow brass Ball, or Cylinder, so as a Syringe, by means of a male Screw, may be applied to it; by working the Syringe, the Air will be forc'd into the Ball, and turning the Cock, will be retain'd; inasmuch, that upon the examining the Vessel by the Balance, its weight will be found increas'd. If the Cock be

re-tur'd, the Air will burst out with violence, and the Ball sink to its former weight.

From the Experiment it follows, first, that Air may be crowded into a less Volume and Bulk than it ordinarily takes up, and is therefore compressible. For the Quantity of its *Compression*, see COMPRESSION.

2dly, That from the Recovery of its weight, just so much Air is expell'd as was injected; and that, therefore, compress'd Air returns to its primitive Expansion, if the compressing Force be removed; and has therefore an elastic Force. See ELASTICITY.

3dly, That 'tis a certain Sign of Compression, if, upon opening the Orifice of a Vessel, any portion of Air be observ'd to fly out.

4thly, That since the Weight of the Vessel is increas'd by injecting Air, the aerial Mass must have a *Nistis* downwards, in Lines perpendicular to the Horizon; and is therefore heavy, and presses subject Bodies in Lines perpendicular to the Horizon; according to the Conditions of Gravity. See GRAVITY.

Condens'd Air, has Effects just opposite to those of rarefy'd Air; Birds, &c. appear brisker and more lively therein than in the common Air, &c. See VACUUM, RAREFACTION, &c.

CONDENSER, a pneumatick Engine, whereby an usual quantity of Air may be crowded into a given Space.

They can throw in 3, 4, 5, or 10 Atmospheres into the *Condenser*, i. e. twice, thrice, four, &c. times as much Air as there is in the same compass without the Engine. See CONDENSATION.

CONDERS, or *Huers*, in our Customs, are Persons who stand on high Places near the Sea Coast, in time of Herring-fishing, to make Signs with Boughs, &c. to the Fishers which way the Shoal of Herrings passes: their Course being more discernable to those who stand on high Cliffs, by means of a blue Colour they cause in the Water, than to those aboard the Vessels. See HERRING-FISHERY.

They are also called *Walkers*, *Directors*, &c.

CONDITION, in the Civil Law, an Article of a Treaty, or Contract; or a Clause, Charge, or Obligation, stipulated in a Contract; or added in a Donation, Legacy, Testament, &c.

The Donor does not lose his Donative, if it be charg'd with any dishonest or impossible *Conditions*. The Doctors distinguish three Kinds of *Conditions*, under which a Legacy or Donation may be made: the *Casual*, which depends merely on chance; the *Potestative*, which is absolutely in our Power; and the *Mixed Condition*, which is both Casual and Potestative together.

CONDITION, in Common Law, is a Manner, Quality, or Restriction, annex'd to an Act; qualifying or suspending the same; and making it precarious and uncertain, whether or no it shall it take effect.

In a Lease there may be two sorts of *Conditions*, *Condition collateral*, and *Condition annex'd to the Rent*.

Collateral Condition is that annex'd to a collateral or foreign Act; as, v. g. that the Lessee shall not go to *Paris*.

Condition is also divided into *Condition in Deed*, and *Condition implied*.

Condition in Deed, is that knit and annex'd by express Words to the Feoffment, Lease, or Grant, either in writing or without: As if I infeoff a Man in Lands, reserving a Rent to be paid at such a Feast; upon *Condition*, if the Feoffee fail of payment, it shall be lawful for me to re-enter.

Condition implied, call'd also *Condition in Law*, is when a Man grants to another the Office of a Steward, Bailiff, Keeper of a Park, &c. for Life: tho' there be no *Condition* express'd in the Grant, yet the Law makes one covertly; which is, if the Grantee do not justly execute all Things belonging to his Office, it shall be lawful for the Grantor to discharge him.

A *CONDITION without which, sine qua non*, is used in Philosophy, in speaking of some Accident or Circumstance, which is not essential to the Thing, but is yet necessary to its Production.

Thus, Light is a *Condition without which* a Man can't see Objects, tho' he have good Eyes; and thus Fire, tho' consider'd in it self it may burn without Wood; yet is its Presence a *Condition without which* the Wood can't be burnt.

CONDITIONAL, something not absolute, but subject to Charges and *Conditions*. See CONDITION.

Thus, we say, *Conditional Legacies* are not due till the *Condition* are accomplish'd. The Right of Conquest does not suppose any *conditional* Consent on the Part of the People.

The *Arminian* Divines maintain, that all the Decrees of God, relating to the Salvation and Damnation of Man are *conditional*; and the *Calvinists*, that they are absolute. See DECREE.

In Logick, we say, *Conditional Propositions* admit all kinds of Contradictions, v. g. if my *Transalpin* Male flew; my *Transalpin* Male had Wings.

CONDITIONAL Conjunctions, in Grammar, are those which serve to make Propositions Conditional; as, *if, unless, provided that, in case of, &c.*

CONDITIONAL Propositions, are such as consist of two Parts, connected together by the conditional Particle *if*. See PROPOSITION.

Of these, the first, wherein the Condition lies, is call'd the Antecedent, and the other the Consequent. See ANTECEDENT, and CONSEQUENT.

Thus, if the Soul be spiritual, it is immortal; is a conditional Proposition, wherein, *if the Soul, &c.* is the Antecedent, and *is immortal* the Consequent.

In Theology, we call the Knowledge of Conditionals, *i. e.* of conditional Truths, that Knowledge which God has of Things, consider'd, not according to their Essence, their Nature, or their real Existence; but under a certain Supposition, which imports a Condition never to be accomplish'd.

Thus, when David ask'd of God whether the People of Gilead would deliver him up to his Enemies; God, who knew what would befall in case David should continue at Gilead, told him they would deliver him: which he knew by the Knowledge of Conditionals.

Some of the Schoolmen deny that God has the Knowledge of Conditionals: The Thomists maintain, that God's Knowledge of Conditionals depends on a predetermining Decree: Others deny it.

F. Daniel observes, that the Truths which compose the Knowledge of Conditionals, being very different from those which compose the Knowledge of Intuition, and that of Understanding; a third Class must be added, and the Knowledge of God be divided into *Intuitive, Intellectual, and Conditional*. See KNOWLEDGE.

CONDORMANTES, Religious Sectaries, whereof there have been two Kinds: The first arose in Germany, in the XIIIth Century; their Leader a Native of Toledo. They held their Meetings near Cologne; where they are said to have worship'd an Image of Lucifer, and to have receiv'd Answers and Oracles from him: The Legend adds, that an Ecclesiastic having brought the Eucharist to it, the Idol broke into a thousand Pieces; which put an end to the Worship.

They had their Name from their lying all together, Men and Women, young and old.

The other Species of *Condormantes*, were a Branch of Anabaptists in the XVIIth Century; so called, because they lay, several of both Sexes, in the same Chamber; on pretence of Evangelical Clarity.

SAFE-CONDUCT. See SAFE-CONDUCT.

CONDUCTOR, a Surgeon's Instrument, which being put up into the Bladder, serves to conduct the Knife, in the Operation of cutting for the Stone. See LITHOTOMY.

CONDUIT, a Canal, or Pipe, for the Conveyance of Water, or other fluid Matter. See TUBE, &c.

In the Earth are several subterraneous Conduits, thro' which the Waters pass that form the Sources of Springs; and thro' which also pass the Vapours, which form Metals and Minerals. See SPRING, METAL, &c.

Artificial Conduits for Water, are made of Lead, Stone, cast Iron, Pottery, &c. See PIPE, and PLUMBERY.

In the Province of New Mexico, there is said to be a subterraneous Conduit, in form of a Grotto, extending 600 Miles in length. See DUCT.

CONDYLOMA, in Anatomy, the knitting of the Bones together in a Juncture or Articulation; from the Greek *κωνδύλωμα*, *Juncture, Jointing*.

The Word is particularly us'd for the Junctures of the Fingers, popularly call'd *Knuckles*. See FINGER.

CONDYLOMA, in Medicine, is a soft, painless Tumor, of the Oedematous kind, arising on the internal Coat of the Anus, and the Muscles of that Part, or in the Neck of the Matrix. See OEDEMA.

By long continuance it grows fleshy, and shooting out as from a Stalk, takes the Denomination *Ficus*. See FICUS.

Condylomata are frequently the Effects of Venereal Ailments, and, if neglected, sometimes prove Cancerous: Their Cure depends on Mercurial Unctions, and proper Emetics to consume them; the Extirpation either by Ligature or Incision, if the Nature of the Part will admit, is the most expeditious. A Salivation is often necessary, in order to facilitate and complete the Cure.

The Word comes from the Greek *κωνδύλωμα*, in regard the *Condylomata* has usually *Rings*, or *Wrinkles*, like the Joints of the Body.

CONDYLUS, a Name Anatomists give to a little round Eminence or Protuberance at the Extremity of a Bone. See BONE.

Such is that of the lower Jaw, receiv'd within the Cavity of the *Oss Petrosum*. See MAXILLA.

When this Eminence is large, 'tis call'd the *Head* of the Bone. See BONE.

The Word comes from the Greek *κωνδύλωμα*, *Article, Joint*.
CONE, in Geometry, a solid Body, having a Circle for its Base, and terminated at a top in a Point, or Vertex. See TAB. CONICKS, Fig. 2. see also SOLID.

The Cone is generated by the Motion of a right Line, K L, round an immovable Point K, call'd its *Vertex*, along the Circumference of a Plane, call'd its *Base*, MN; or it may be conceiv'd as generated by the Revolution of the Triangle K L M, about the right Line K L, which is call'd the *Axis* of the Cone; and K M its *Latus*, or Side.

If the Axis be perpendicular to the Base, it is said to be a *right Cone*; and if inclined, or oblique, a *secular Cone*.

Secular Cones are again divided into *obtusely-angled* and *acutely-angled*.

Euclid defines a *Cone* a solid Figure, whose Base is a Circle, as C D, (Fig. 5.) and is produced by the entire Revolution of the Plane of a right-angled Triangle C A B, about the perpendicular Leg A B.

If this Leg, or Axis, be greater than C B, half the Base; the Solid produced is an *acute-angled Cone*: If less, an *obtuse-angled Cone*; and, if equal a *right-angled Cone*.

But, **Euclid's** Definition only extends to a *right Cone*: that is, a *Cone* whose Axis is at right Angles to the Base; and not to oblique ones, whose Axis is not at right Angles to the Base.

For a more general and comprehensive Description of a *Cone*, which may take in both right and oblique ones, Suppose, an immovable Point A, (Fig. 4.) without the Plane of the Circle B D E C; and suppose a right Line A E, drawn thro' that Point, and produced infinitely both ways, to be mov'd quite about the Circumference of the Circle; the two Superficies that will arise from this Motion, are each call'd *Conic Superficies*; but, taken conjunctly, are call'd *Superficies vertically opposite, or only opposite Superficies*: The immovable Point A, common to both the Superficies, is call'd the *Vertex*; the Circle B D E C the *Base*; the right Line A C, drawn thro' the Vertex A and C, the *Centre of the Base*; and if infinitely produced, the *Axis*; and the Solid comprehended under the conical Superficies and the Base, is a *Cone*.

Properties of the CONE.

1. *The Area or Surface of every right Cone, exclusive of its Base, is equal to a Triangle whose Base is the Periphery, and its height the side of the Cone.* See TRIANGLE.

Or, the curve Superficies of a right Cone, is to the Area of its circular Base, as A C, (Fig. 5.) the length of the Hypothesis of the right-angled Triangle describing it, to C B, the Base of the same Triangle; that is, as the slant height of the Cone, to the Semidiameter of the Base.

Hence, the Surface of a right Cone is equal to a Sector of a Circle describ'd on the side of the Cone, as a Radius, whose Arch is equal to the Periphery of the Cone; and has therefore the same Proportion to its Periphery which the Diameter of the Base has to the Sides of the Cone. See CIRCLE.

Coroll. Hence we have a Method of describing a Rete or Cage that shall just cover a Cone.

Thus, with the Diameter of the Base A B, (Plate CONICKS, Fig. 6.) describe a Circle, and produce the Diameter to C, till A C be equal to the side of the Cone. To $\frac{1}{2}$ A C and A B, determin'd in Numbers, and 360° , find a fourth proportional; and with the Radius C A, on the Centre C, describe an Arch D E equal to the Number of Degrees found: the Sector C D E with the Circles A B will be a Rete for the right Cone.

If, then, the side of a truncated Cone be transfer'd from A to F, and an Arch G H be describ'd with the Radius G F; by finding a fourth proportional to 360° , to the number of Degrees of the Arch G H, and to F C; and thence determining the Diameter of the Circle I F, we shall have a Net or Cover for the truncated Cone.

For C D B A E is a Net for the entire Cone; C G F I H for the Cone cut off; therefore, D B E H for the truncated Cone.

2. *Cones and Pyramids, having the same Bases and Altitudes, are equal to each other.*

Now, 'tis shewn, that every triangular Prism may be divided into three equal Pyramids; and therefore, that a triangular Pyramid is one third of a Prism, standing on the same Base, and having the same Altitude.

Hence, since every multangular Body may be resolv'd into triangular ones, and every Pyramid is a third part of a Prism, having the same Base and Altitude; since a Cone may be resolv'd into an infinite-angular Pyramid, and a Cylinder an infinite-angular Prism; a Cone is a third part of a Cylinder, which has the same Base and Altitude.

Coroll. Hence we have a Method of measuring the Surface and Solidity of a Cone and a Cylinder.

Thus, for the Solidity: find the Solidity of a Prism, or Cylinder, having the same Base with a Cone, or Pyramid. See PRISM, and CYLINDER.

Which found, divide by 3; the Quotient will be the Solidity of a Cone, or a Pyramid.

Thus, e.g. if the Solidity of a Cylinder be 605592960, the Solidity of the Cone will be found 201864320.

For the Surfaces; that of a right Cone is had by multiplying the Periphery of the Base into the Side, and adding the Product to the Base.

Suppose, e. gr. the Diameter of the Cone N M, (Fig. 2.) 56, its Periphery will be 17584, and the Base 246176. Suppose the Altitude of the Axis K L, 246; since L M = $\frac{1}{2}$ N M = 28, and K M² = K L² + L M² = 60516 + 784 = 61300, K M = 2474. Consequently, the Superficies of the Cone exclusive of the Base is 42510 = 816,0; and the whole together 455645760.

As to the Measure of the Surface, and Solidity of a truncated Cone, A B C D, (Fig. 7.) Its Altitude C H, and the Diameter of its Bases A B and C D being given, find their Circumferences. To the Square of the Radii A H, add the Square of the Semi-difference of the Radii C H, and from the Aggregate extract the square Root, which will give the side A C: The Semi-sum of the Peripheries, multiplied by that side, gives the Superficies of the truncated Cone.

To find the Solidity: As the difference of the Semi-diameter A H is to the Altitude of the truncated Cone C H, so is the greater Semi-diameter A F, to the Altitude of the entire Cone F E. This found, subtract the Altitude of the truncated Cone G F, which will leave that of the Cone taken off E G.

Find the Solidity of the Cone C E D and A E B; subtract the other from this; the Remainder will be the Solidity of the truncated Cone A C D B.

For the Sections of the Cone, see CONIC SECTION.

For the Ratio of CONES and CYLINDERS, see CYLINDER.

For the Centres of Gravity and of Oscillation of a CONE, see CENTRE.

CONES of the higher Kinds, are those whose Bases are Circles of the higher Kinds; and are generated by supposing a right Line fix'd in a Point, on high, the convex'd capable of being extended more or less, on occasion; and moved or carried round a Circle. See CIRCLE.

CONE of Rays, in Opticks, includes all the several Rays which fall from any Point of an Object, on the Surface of a Glass. See RAY.

CONE, or CONN, in the Sea Language, signifies to guide or conduct a Ship in her right Course. See COURSE.

He that CONNS her, stands aloft with a Compass before him, and gives the Word of Direction to the Man at Helm how to steer. See STEERAGE.

If the Ship go before the Wind, or, as they call it, betwixt the Sheets, the Word is either *Starboard*, or *Port the Helm*; according as the Corder would have the Helm put to the right or left side of the Ship, upon which the Ship always goes the contrary way.

If he says, *Helm a Mid-Ship*, he would have the Ship go right before the Wind, or directly between her two Sheets.

If the Ship sail by a Wind, or on a quarter Wind, the Word is, *Aloof, Keep your Luff, fall not off, Veer so more, Keep her to, Touch the Wind, Have a care of the Lee-Latch*: All which Expressions are of the same import, and imply that the Steerfman should keep the Ship near the Wind.

On the contrary, if he would have her sail more large, or more before the Wind, the Word is, *Ease the Helm, No more, Hear up*.

If he cries *Steady*, it means, keep her from going in and out, or making Yaws, (as they call it) howsoever she falls, whether large by a Wind; and when he would have her go just as she does, he cries, *Keep her thus, thus, &c.*

CONFARRATION, a Ceremony among the antient Romans, used in the Marriage of Persons whose Children were destin'd for the Honour of the Priesthood.

Confarration was the most sacred of the three manners of contracting Marriage among that People; and consisted, according to Servius, in this, that the *Pontifex Maximus* and *Flamen Dialis* join'd and contracted the Man and Woman, by making them eat of the same Cake of salt Bread.

Ulpian says, it consisted in the offering up of pure wheaten Bread; rehearsing, withal, a certain Formula, in presence of ten Witnesses. *Dionysius Halicarnassensis* adds, that the Husband and Wife did eat of the same wheaten Bread, and threw part on the Victims.

CONFECTIO, in Pharmacy, a kind of compound Remedy of the Consistence of a soft Electuary.

There are four Electuaries, which bear the Name of Confections; three whereof, in the Physicians Language, are corroborative, and one purgative.

The corroborative Confections are those of *Alkermes*, of *Hyacinth*, and the *Anacardine*: The purgative one is the Confection *Hameeb*.

The Confection of *Alkermes* has its Name from the principal Ingredient therein; which is the *Kermes*, or *Alkermes*, or *Scarlet-Grain*. See KERMES, &c.

The other Ingredients are Pearls, Musk, Cinnamon, Ambergris, Leaf Gold, Juice of Pippins, and Rose-Water.

It is rank'd among the best Cardiacs, and is frequently

used for the Palpitation of the Heart, or Syncope; sometimes in the Small-Pox and Measles.

The Confection of *Hyacinth* has nearly the same Virtues with that of *Alkermes*; but, beside, is frequently used as an Astringent. It consists of near triple the Number of Drags; whereof the precious Stone, called the *Hyacinth*, is the Base: the chief of the rest are red Coral, Bole Armeniac, *Terra Sigillata*, Myrrh, the Sanna, burnt Hartshorn, Camphire, Sapphire, Emerald, Topaz, and most of the Ingredients of the Confection of *Alkermes*.

The *Anacardine Confection*, now diffus'd in England, is compos'd chiefly of *Anacardines*, whence the Name; the other Drugs are Long Pepper, Black Pepper, most Kinds of Myrobalans, Castoreum, &c. It is used to purge the Blood, and is proper in cold Diseases.

The Confection *Hameeb* takes its Name from that of its Inventor, an Arabian Physician. Its Ingredients are Poly-pody, Myrobalans, Agaric, Senna, Tamarinds, red Rols, Manna, Colocynth, &c. It is applied as a Draffic for the purging of the grosser Humors and Viscidities; 'tis also of some reputation in Vertigoes and Cancers.

CONFECTOR, among the antient Romans, a sort of Gladiator, hired to fight in the Amphitheatre against Beasts; thence also denominat'd *Bestiarum*. See GLADIATOR.

The *Confectores* were thus call'd a *conficiendis bestis*, from their dispatching and killing Beasts. See BESTIARI.

The Greeks call'd 'em *Παρολοισ*, q. d. daring, rash, desperate; whence the Latins borrow'd the Appellations *Parabolani*, and *Parabolarii*. See PARABOLANI.

CONFECTS, or CONITS, a Denomination given to Fruits, Flowers, Herbs, Roots, and Juices, when boil'd and prepar'd with Sugar, or Honey, to dispose them to keep; or render 'em more agreeable to the Taste.

The Antients only confist'd with Honey; at present, Sugar is more frequently us'd.

Confects half sugar'd, are those cover'd with a little Sugar, to leave more of the natural Taste of the Fruit.

Confects are reduced to eight Kinds, viz. *Liquid Confects*, *Marmalades*, *Jellies*, *Dry Confects*, *Conserve*, *Candies*, and *Dragees*.

Liquid Confects, are those whose Fruits, either whole, in pieces, in grains, or in clusters, are confist'd in a fluid transparent Syrup, which takes its colour from that of the Fruits boil'd in it.

There is a good deal of Art in preparing these well; if they be too little sugar'd they turn; and if too much, candy. The most esteem'd of the liquid *Confects* are Plums, especially those call'd *Mirabels*, *Barberries*, *Quinces*, *Apricots*, *Cherries*, *Orange-Flowers*, little green Citrons from *Aledera*, green Cassia from the *Levant*, *Myrobalans*, *Ginger*, *Cloves*, &c.

Marmalades are a kind of Patis, half liquid, made of the Pulp of Fruits, or Flowers, that have some consistence; as *Apricots*, *Apples*, *Pears*, *Plumbs*, *Quinces*, *Orange-Flowers*, and *Ginger*. *Marmalade* of *Ginger* is brought from the *Indies* by way of *Holland*: 'tis esteem'd good to revive the natural Heat in old Men. See MARMALADE.

Jellies are Juices of several Fruits, wherein Sugar has been dissolv'd, and the whole, by boiling, reduced into a pretty thick Consistence; so as, upon cooling, to resemble a kind of thin transparent Glue, or Size. *Jellies* are made of various Kinds of Fruits, especially *Gooseberries*, *Apples*, and *Quinces*: There are other *Jellies*, made of *Fish*, *Fish*, *Hartshorn*, &c. but they are not to be kept, being very subject to corrupt. See JELLY.

Pests are a kind of *Marmalades*, thicken'd to that degree by boiling, as to assume any form, when put into little Molds and dried in the Oven. The most in use are those of *Gooseberries*, *Quinces*, *Apples*, *Apricots*, and *Orange-Flower*: Those of *Pistaches* are much esteem'd; those of *Ginger* are brought from the *Indies*. See PAST.

Dry Confects, are those whose Fruits, after having been boil'd in the Syrup, are taken out again, drain'd, and put to dry in an Oven. *Dry Confects* are made of so many kind of Fruits, that it would be hard to explain 'em all: the most considerable are *Citron* and *Orange-Peel*, *Plumbs*, *Pears*, *Cherries*, *Apricots*, &c.

Conserve are a kind of *Dry Confects*, made with Sugar, and Patis of Flowers or Fruits, &c. the most ordinary are those of *Betony*, *Mallows*, *Rosemary*; of the *Capillary Herbs*; of *Orange-Flowers*, *Violets*, *Jessamin*, *Pistach's*, *Citrons* and *Roses*.

Note, The Apothecaries, under the Title of *Conserve*, comprehend all kind of *Confects*, both dry and liquid; whether of Flowers, Fruits, Seeds, Roots, Barks, Leaves, prepar'd with Sugar or Honey, to preserve, &c. See CONSERVE.

Candies are ordinarily entire Fruits, candied over with Sugar, after having been boil'd in the Syrup; which renders 'em like little Rocks, crystalliz'd; of various Figures and Colours, according to the Fruits inclos'd within 'em.

The best Candies are brought from Italy. See CANDY. *Dragees*, or *Sugar-Plumbs*, are a kind of little dry *Confects*, made

made of small Fruits, or Grains, little Pieces of Bark, or odoriferous and aromatick Roods, &c. inscruated and cover'd over with a very hard Sugar, ordinarily very white.

Of these there are various Kinds, distinguish'd by various Names: Some made of Raspberries, others of Barberries, Melon- Seeds, Filizchoes, Filzberds, Almonds, Cinnamon, Orange Peel, Corianders, Aniseed, Carraways, &c.

CONFEDERACY, an Alliance or League between divers Princes and States. See LEAGUE and ALLIANCE.

CONFEDRACY, in Law, is when two or more Persons combine to do any damage to another, or to commit any unlawful Act.

Confederacy is punishable, the nothing be put in execution: but then it must have these four Incidents; 1st, that it be declared by some matter of Prosecution; as by making of Bonds or Promises to one another: 2d, that it be malicious, as for unjust Revenge; 3d, that it be false, i. e. against the Innocent: and lastly, that it be out of Court, volustary.

CONFESSION, in a Civil Sense, a Declaration, or Acknowledgement of some Truth, tho' against the Interest of the Party who makes it; whether it be in a Court of Justice or out of it.

'Tis a Maxim, that in Civil Matters the *Confession* is never to be divided; but always taken entire. A Criminal is never condemn'd on his simple *Confession*, without other collateral Proofs: nor is a voluntary extrajudicial *Confession* admitted as any Proof. A Person is not admitted to accuse himself, according to that Rule in Law, *non auditur perire colens*.

CONFESSION, in a Theological Sense, is a Declaration of a Person's Sins, made to a Priest, in order to obtain Absolution for the same. See ABSOLUTION.

The *Romish* Church makes *Confession* a part of the Sacrament of Penance. See PENANCE.

Confessio was antiently publick and general, in the Face of the Church; tho' the *Romanists* have since alter'd it, and made it private, and *auricular*.

Confessions are to be buried in eternal silence, under Pain of the last Punishment to the Priest who reveals 'em.

Beilarmin, Valentia, and some other *Romish* Controversy-Writers, endeavour to trace up auricular *Confession* to the earliest Ages; and thus contend for a Point given up by the rest. *M. Fleury* owns that the first Instance of auricular *Confession* he can meet with, is that of *S. Elvi*, who being grown old, made a *Confession* to a Priest of all his Sins from his youth upwards.

The *Indians*, according to *Tavernier*, have a kind of *Confession*: and the same may be said of the *Jews*; these had *Formulas* for those who are not capable of making a Detail of all their Sins: The ordinary Form is in an alphabetical Order, each Letter containing a Capital Sin; this they usually rehearse on Mondays and Thursdays, and on Fast Days and other occasions: some, every Night and Morning. When any of 'em find themselves near Death, he sends for ten Persons, more or less, one of 'em a Rabbi; and in their Presence recites the *Confession*. See *Leon de Modena*.

CONFESSION of Faith, is a List, or Enumeration and Declaration of the several Articles of Belief, in a Church. See FAITH.

The *Angsburg Confession* is that of the *Lutherans*, presented to *Charles V.* in 1530.

In the Council of *Rimini*, the Catholick Bishops found fault with Dates in a *Confession of Faith*, and observ'd that the Church never us'd to date 'em.

CONFESSIONAL, or **CONFESSIONARY**, in Church-History, a Place in Churches, usually under the main Altar, wherein were deposited the Bodies of deceas'd Saints, Martyrs, and Confessors.

Confessionals is also used in the *Romish* Church for a little Bench, or Desk in the Church, where the Confessor takes the Confessions of the Penitent.

CONFESSOR, a Christian who has made a solemn and resolute Profession of the Faith, and has endur'd Torments in its defence.

A simple Saint is call'd a *Confessor*, to distinguish him from the Roll of dignify'd Saints; as, *Apostles, Martyrs, Prelates*, &c. See SAINT, MARTYR, &c.

In Ecclesiastical History, we frequently find the Word *Confessors* used for Martyrs: In after-times, it was confin'd to those, who after having been tormented by the Tyrants, came to live and die in Peace. At last it was also used for those, who after having lived a good Life, died under an Opinion of Sanctity.

According to *S. Cyprian*, he who presented himself to Torture, or even Martyrdom, without being call'd thereto, was not call'd a *Confessor*, but a *Professor*: And if any out of a want of Courage abandon'd his Country, and became a voluntary Exile for the sake of the Faith, he was call'd *Excorris*.

CONFESSION is also a Priest, in the *Romish* Church, who has a Power to hear Sinners in the Sacrament of Penance,

and to give 'em Absolution. The Church calls him in *Latin Confessorius*, to distinguish him from *Confessor*, which is a Name consecrated to Saints.

The *Confessors of the Kings of France*, from the Time of *Henry IV.* have been constantly *Jesuits*: before him, the *Dominicans* and *Cordeliers* had the Office between them. The *Confessors of the House of Austria* have also, ordinarily, been *Dominicans* and *Cordeliers*, but the last Emperors have all taken *Jesuits*.

CONFIGURATION, the exterior Surface, that bounds Bodies, and gives 'em their particular Figure. See FIGURE.

That which makes the specifick Difference between Bodies, is the different *Configuration*, and the different Situation of their Parts. See BODY.

A short, or a long Sight, depend on the different *Configuration* of the Crystalline. See CRYSTALLINE, SIGHT, &c.

CONFIGURATION, or *Aspect of the Planets*, in Astrology, is a certain Distance, or Situation of the Planets in the Zodiac, whereby they are suppos'd to aid, or oppose each other. See ASPERY.

CONFIRMATION, the Act of ratifying, or rendering a Title, Claim, Pretension, Report, or the like, more sure and indisputable.

CONFIRMATION, in Law, is particularly used for the strengthening or homologating an Estate of one already in possession of it by a voidable Title.

Thus, if a Bishop grant his Chancellorship by Patent, for term of the Patentee's Life; this is no void Grant: yet is it voidable by the Bishop's Death, except it be strengthen'd by the Dean and Chapter's Confirmation.

CONFIRMATION, in Rhetoric, is the third Part of an Oration, wherein the Orator undertakes to prove, by Laws, Reasons, Authorities, and other means, the Truth of the Propositions advanc'd in his Narration. See ORATION.

Confirmation is either direct, or indirect; the first confirms what the Orator has to urge for strengthening his own Cause: the second, properly call'd *Confutation*, refutes the opposite arguing of the Adversaries. See COMPUTATION.

The two Parts together are sometimes placed under the Head or Title of *Contention*. See CONTENTION.

The *Confirmation* is, as it were, the Life and Soul of the Oration: In this the main stress of the Argumentation lies. Whence *Aristotle*, properly enough, calls it *viva, fides*.

CONFIRMATION, in Theology, the Ceremony of laying on of Hands, for the Conveyance of the Holy Ghost.

The Ancients call'd it *Crispian* and *Unctio*; among them it was conferr'd immediately after Baptism; and was esteem'd, in some measure, a part thereof: whence the Fathers call it the Accomplishment of Baptism. See CHRISM.

Among the *Greeks*, and throughout the *East*, it still accompanies Baptism; but the *Romanists* make it a distinct independent Sacrament. See SACRAMENT.

It appears that *Confirmation* has all along been ordinarily conferr'd by the Bishop; *S. Cyprian*, and most of the Fathers, speak of it in such Terms as imply it to have been confin'd to the Bishop alone; and *Fleury*, and most of the Moderns, from them, lay it down as a distinguishing Character between the Offices of a Priest or Deacon, and that of a Bishop, that the former might baptize, but the latter alone might anoint and confirm; by virtue of their Succession to the Apostles, to whom it originally belong'd.

But from some Passages in *S. Gregory*, &c. others gather, that the Priests, on occasion, had likewise the Power of *confirming*. 'Tis certain, among the *Greeks*; the Priest who baptizes also confirms: Which Practice, *Lucas Holstenius* shews, is of so old a standing among them, that it is now generally look'd on, as belonging properly and of right to the Priest: tho' some will have it to have been borrow'd by them from the Bishops.

Hence, some of the *Latin* Divines acknowledge that tho' the Bishop be the ordinary Minister of *Confirmation*, yet, that the Priest, in his absence, may also confer it, in quality of Minister Extraordinary.

The Council of *Rouen*, held in 1072, decrees, that *Confirmation* be conferr'd fasting, both on the side of the Giver and Receiver.

CONFISCATE, in Law, is applied to Goods deriv'd to the Exchequer, or publick Treasury. The Word is confin'd from *Fiscus*, a Hamper, Penic, or Basket, wherein the Emperor's Money used to be kept. See FISC.

The Title to those Goods is given by the Law to the King, when they are not claimed by any other. If a Man indicted for stealing the Goods of another, in which Case they become, in effect, the proper Goods of him indicted, be ask'd about 'em in Court, and disclaim 'em; he thereby loses the Goods, tho' he be afterwards acquitted of the Theft, and the King shall have 'em as *Confiscate*: but otherwise, he'd be not disclaim'd them. See CONFISCATION.

CONFISCATION, a Legal Adjudication of Goods or Effects to the *Fisc*, or Treasury. See TREASURY.

Thus, the Bodies and Effects of Criminals, Traitors, &c. and Merchandizes that are contraband, prohibited, or brought

aboard or ashore without paying the Duties, when seiz'd, are *confiscated*.

'Tis an Axiom in Law, that he who *confiscates* the Body *confiscates* the Effects, to the Profits of the King, or the Lord of the Fee; *i. e.* he who is condemn'd to lose his Life, must also lose his Effects: Yet the Widows of Criminals don't lose their Dowries, nor their share in the Goods of the Community, by the Forfeiture of their Husbands.

CONFAGRATION, a general burning of a City, or other considerable Place: In this Sense, we say, *Nero* prosecuted the Christians to be accus'd of the *Confagration*, or burning of *Rome*, which was done by his own order.

But the Word is ordinarily restrain'd to that grand Period, or Catastrophe of our World; wherein the Face of Nature, is to be chang'd by a deluge of Fire, as it was anciently by that of Water. See **DELUGE**.

The ancient *Pythagoreans*, *Platonists*, *Epicureans*, and *Stoicks* appear to have had a Notion of the *Confagration*; to the whence they should derive it, unless from the sacred Books, is difficult to conceive, unless, perhaps, from the *Phoenicians*, who themselves had it from the *Jews*.

Seneca says expressly, *Tempus advenit quo sidera sideribus incurrunt, & omni flagrate materia uno igne, quicquid nunc ex disposito lucet, ardebit*. This general Dissolution the *Stoicks* call *καταστροφή*, *Echyrasis*. Mention of the *Confagration* is also made in the Books of the *Sibyls*, *Sophocles*, *Hylleus*, *Ovid*, *Lucan*, &c.

Dr. Burnet, after *P. Tacbará* and others, relates that the *Sannites* believe that the Earth will at last be parch'd up with heat; the Mountains melted down; the Earth's whole Surface reduc'd to a Level, and then consum'd with Fire. And the *Brahmins* of *Siam* do not only hold that the World shall be destroy'd by Fire; but also, that a new Earth shall be made out of the Cinders of the old.

Various are the Sentiments of Authors on the Subject of *Confagration*; the Cause whence it is to arise, and the Effects it is to produce.

The Divines ordinarily account for it Metaphysically; and will have it take its rise from a Miracle, as a Fire from Heaven.

The Philosophers contend for its being produced from Natural Causes; and will have it effected according to Laws of Mechanics: Some think an Eruption of the central Fire sufficient for the Purpose; and add, that this may be occasion'd several ways, *viz.* either by having its Intention increas'd; which, again, may be effected either by being driven into less Space by the Inroads of the superficial Cold, or an increase of the Inflammability of the Fuel whereon it is fix'd; or by having the Resistance of the imprisoning Earth weaken'd; which may happen, either from the Diminution of its Matter, by the Consumption of its central Parts, or by weakening the Cohesion of the constituent Parts of the Mass by the Excess or the Defect of Moisture.

Others look for the Cause of the *Confagration* in the Atmosphere; and suppose, that some of the Meteors there descend'd in unusual Quantities, and exploded with unusual Vehemence, from the Concurrence of various Circumstances; may effect it, without seeking any further.

The Astrologers account for it from a Conjunction of all the Planets in the Sign *Cancer*; as the Deluge, say they, was occasion'd by their Conjunction in *Capricorn*.

Lastly, Others have recourse to a still more effectual and flaming Machine, and conclude the World is to undergo its *Confagration* from the near approach of a *Comet*, in its return from the Sun.

Those wandering Bodies do indeed seem to menace us a little; being able, both by their transverse Motion across the Earth's way, by the hugeness of their Size, and the intense Fire wherewith they glow in their recess from the Perihelion, to produce the most signal Changes and Revolutions in the System of Things. See **COMET**.

Mr. Whiston has shew'd, that they are extremely well fitted to produce the Phenomena of the Deluge; and has gone a good way towards proving, that the *Comet* of 1668 was the very Body to which that Event was owing; as being then in its approach toward the Sun, and its Atmosphere crouded with the watery Vapours it had gather'd in those inconceivably cold Regions, into which it had fled off in its Aphelion. See **DELUGE**.

This same *Comet*, Sir *I. Newton* has calculated, when in its Perihelion, *December* the 8th, was heated by the Vicinity of the Sun, to a degree 2000 times more hot than red hot Iron: he shew'd, likewise, that it would scarce be cool again in 50000 Years. See **HEAT**.

This same *Comet*, again, *Dr. Halley* observ'd *November* 11, was not above a Semidiameter of the Earth from the Earth's Way: So that had the Earth at that time been in that Part of its Orbit, something very extraordinary might have been apprehended: but whether in the way of Fire or Water, may, perhaps, to some, leave room to doubt: To us 'tis none; it being scarce conceivable the *Comet* should bring any vehement degree of heat, out of those bleak Regions it comes from, whatever heat it might carry thither.

CONFLUENCE, **CONFLUX**, the Place where two Rivers join, and mix their Waters. See **RIVER**.

CONFLUENT, in Medicine, an Epithet added to that Species of Small-Pox wherein the Pustules run into one another. See **SMALL-POX**.

CONFORMATION, the particular Texture and Constitution of the Parts of a Body, and their disposition to make a Whole: Thus, we say, Light of different Colours is reflected from Bodies according to their different *Conformation*; in opposition to the *Cartesians*, who say, that reflected Light becomes of different Colours, according to the different *Conformation* of the Bodies that reflect it. See **LIGHT**, and **COLOUR**.

Again, we say, that the *Conformation* of the Members of an Embrio, is not perfect enough to allow of a Dissolution.

CONFORMATION, in Medicine, is used to express that Make and Construction of the Body which is peculiar to every Individual: Hence, a *mala Conformatio* signifies some Fault in the first Rudiments; whereby a Person comes into the World crook'd, or with some of the *Viscera*, or Cavities unduly proportion'd.

Thus, many are subject to incurable Asthma's, from too small a Capacity of the Thorax, and the like vicious *Conformations*.

CONFORMIST. }
CONFORMITY. }
CONFORMITY.

Occasional CONFORMITY. See **Occasional Conformity**.
CONFORMITY, in the Schools, is the *Congruency*, or Relation of Agreement between one thing and another: as between the Measure and the Thing measur'd; the Object and the Understanding; the Thing and the Conception; the Thing and the Division thereof, &c. See **CONGRUENCE**.

CONFRONTATION, the Action of setting two People in presence of each other, to discover the Truth of some Fact which they relate differently.

The Word is chiefly used in criminal Matters; where, the Witnesses are *confronted* with the Accused; the Accus'd with one another, or the Witnesses with one another.

Confrontation of Witnesses, by the Civil Law, is not to be out of Prison.

CONFUSION, in its Metaphysical Sense, is oppos'd to *Order*; it is a Perturbation whereof, *Confusion* consists, *e. g.* when things prior in Nature do not precede; or posterior do not follow, &c.

In a Logical Sense, *Confusion* is oppos'd to *Distinctness*, or *Pertinuity*; and may happen, either in *Words*, as when miscontriv'd or misapply'd; or in *Ideas*, as when the Idea of any thing presents something along with it, which does not properly belong to that thing. See **IDEA**, and **NOVITAS**.

In a Physical Sense, *Confusion* is a sort of Union, or Mixture by mere Contiguity. Such is that between Fluids of contrary Nature, as Oil and Vinegar, &c.

CONFUTATION, in Rhetoric, &c. a Part of an Oration, wherein the Orator seconds his own Arguments, and strengthens his Cause, by refuting and destroying the opposite Arguments of the Antagonist. See **ORATION**.

Confutation makes a Branch of what we call the *Confirmation*. See **CONFIRMATION**.

The *Confirmation* and *Confutation* are sometimes call'd the Head of *Contention*.

CONGE, a Licence, or Permission, granted by a Superior to an Inferior, which gives him a Dispensation from some Duty to which he was before oblig'd.

Thus, we say, a Woman cannot obligate her self without the *Conge* or Licence of her Husband: A Monk cannot go out of his Convent, without the *Conge* of his Superior.

The Word is *French*: *Menge* derives it from the *Latin Communitatem*, used for *Communitatem*, and *Commone*, often used among ancient Writers: The *Italians* say *Congado*.

CONGE d'Élire, is the King's Permission Royal to a Dean and Chapter, in time of a Vacancy, to chuse a Bishop. See **CHAPTER**, **CANON**, and **COLLATION**.

Gavin observes, that the King of *England*, as Sovereign Patron of all Bishopricks and other Benefices, had anciently the free Appointment of all Ecclesiastical Dignities; investing, first, *per Baculum & Annulum*; See **INVESTITURE**.

And afterwards by Letters Patent.

But that, in process of Time, he made the Election over to others, under certain Forms and Conditions: As, that they should at every Vacancy, ere they chose, demand of the King *Conge d'Élire*, *i. e.* leave to proceed to Election; and after Election to crave his Royal Assent, &c.

He adds, that King *John* was the first who granted this; which was afterwards confirm'd by Stat. *Westm.* and again *Articulis Cleri*.

CONGE, in Architecture, a Moulding either in form of a Quarter-Round, or of a Cavetto; which serves to separate two Members from one another.

Such is that which joins the Shaft of the Column to the Circure, call'd also *Apophyge*; which, in *Greek*, signifies *Flugs*; the Column seeming to arise hence: By the *Latins*

It is called *Scapus*, the Shaft of the Column. See *APORHYGOS*.

CONGELATION, *Freezing*, the Act of fixing the Fluidity of any Liquid, by Cold, or the Application of cold Bodies; in which it differs from Coagulation, which is produced by other Causes. See **COLD**, &c.

Thus, Salt-petre coagels Water in Summer. See **ICE**.

Metals and Minerals are said to be Juices coagel'd in the Veins of the Earth, by their intermixing with ooz another, or with other heterogeneous Bodies, or by the Consumption and Evaporation of their finest Parts. See **METAL**.

Rock Crystal is usually held to be nothing but Water coagel'd in the Mountains. See **CRYSTAL**.

The Bites of Aspsicks are mortal, by the sudden Congelation which they induce on the Blood, which stops its Circulation. See **POISON**, **BLOOD**, &c.

CONGERIES, a Latin Word, sometimes used for a collection, or heap of several Particles, or Bodies, united into one Mass.

CONGESTION, in Medicine, a Mass, or Collection of Humours, crowded together, and harden'd, in any Part of the Body; and there forming preternatural Tumors. See **TUMOR**.

Congestion is effected by little and little; in which it differs from a Defluxion, which is more sudden. See **DEFLEXION**.

CONGIARIUM, **CONGIARY**, among Medalists, a Gift, or Donative represented, on a Medal.

The *Congiary* was properly a Present made by the Emperors to the People of Rome: Those made the Soldiers were not called *Congiaries*, but *Donatives*. See **DONATIVE**.

Tiberius gave a *Congiary* of three hundred Pieces of Money to each Citizen: *Caligula* twice gave three hundred Sesterces a head: *Nero*, whole *Congiaries* are the first that we find represented on Medals, gave four hundred. See **SESTERCE**.

The Legend on Medals representing *Congiaries* is **CONGIARIUM**, or **LIBERALITAS**.

The Word comes from the Latin *Congis*; in regard, the first Presents made the People of Rome consisted in Wine and Oil, which were measur'd out to them in *Congii*.

CONGIUS, an ancient Roman Measure for things Liquid; containing six Sesterces; equal to about a Gallon and a Pint English Measure. See **MEASURE**.

The *Congius* was used in England, as appears by a Charter of King *Edmund* in 946. See **SEXTARY**.

CONGLOBATE Glands, in Anatomy, those Glands whose Substance is not divided, but firm, entire, and continu'd; and their Surface smooth and uniform. See **GLAND**.

They are thus call'd, in opposition to *conglomerate* Glands. See **CONGLOMERATE**.

Conglobate Glands have each of 'em an Artery which brings 'em Blood, a Vein which carries it back again, after the proper Juice has been filtrated; and several excretory Ducts.

Some of 'em have a Cavity in the middle, with Lymphatick Vessels, which discharge themselves into a common Reservoir, or Canal. See **LYMPHATICS**.

CONGLOMERATE Glands, are those which are compos'd of several little ones; or they are glandulous Bodies join'd together under the same common Membrane. See **GLAND**.

Such are the Salival Glands, Lachrymal Glands, the Pancreas, &c. which see.

The *Conglomerate Glands*, besides their Arteries, Veins, and Nerves, are also each furnish'd with an excretory Vessel, ramify'd throughout their own Substance; by means whereof they discharge the Liquors they have filtrated into Reservoirs.

CONGLUTINATION, the Act of *gluing*, or fastening two Bodies together, by the Intervention of some third, whose Parts are unctuous and tenacious, in the Nature of a Glue, *Gluten*; from whence the Word is form'd. See **GLUE**.

Thus, in the Animal Oeconomy, the Parts of the Body are said to be *conglutinated* by means of their natural Moisture; by the help of Bandages, as in several Cases of Surgery; or by the Supply of viscid Particles. In which last Acceptation, *Conglutination* differs little from Accretion, or Nutrition. See **NUTRITION**.

CONGREGATION, an Assembly of several Ecclesiasticks, united so as to constitute a Body.

The Term is principally used for Assemblies of Cardinals, appointed by the Pope, and distributed into several Chambers, to discharge several Offices, or Jurisdictions, after the manner of our Offices, or Courts. See **CARDINAL**.

The first, the *Congregation of the Holy Office*, or the *Inquisition*: The second, the Jurisdiction over *Bishops* and *Regulars*: The third that of *Councils*; this has Power to interpret the Council of *Trent*: The fourth that of *Customs*, *Ceremonies*, *Precedences*, *Canonizations*; call'd the *Congregation of Rites*: The fifth that of *St. Peter's Fabric*; which takes cognizance of all Causes relating to Piety and Charity part whereof, is due to the Church of *St. Peter*: The sixth that of *Waters*, *Rivers*, *Roads*: The seventh of *Fountains*, *Sires*: The eighth that of the *Index*, which

examines the Books to be printed or corrected: The ninth that of the Government of the whole State of the Church: The tenth *de bono Regimine*; of which two last, the Cardinal-Nephew is chief: The eleventh that of *Money*: The twelfth that of *Bishops*; wherein those who are to be promoted to Bishopricks in Italy are examin'd: This is held before the Pope. The thirteenth that of *Confiscatorial Matters*; the Chief whereof is the Cardinal-Dean. There is also a *Congregation of Alms*, which takes care of what relates to the Subsistence of Rome, and the State of the Church.

CONGREGATION is also used for a Company or Society of Religious; call'd out of this or that Order; and making, as it were, an inferior Order, or a Subdivision of the Order it self. See **ORDER**, and **MONASTERY**.

Such are the *Congregations of the Oratory of Cluny*, &c. among the *Benedictines*. See **ORATORY**, **CLUNY**, **BENEDICTINES**, &c.

Also for Assemblies of pious Persons, in manner of Fraternities; frequent among the Jesuits, in honour of the Virgin, &c. See **FRATERNITY**.

CONGREGATION, in Physics, is used by Dr. *Grew* for the least degree of Mixture; or that wherein the Parts of the Mixt do not cohere, or adhere to each other, but only touch in one Point. See **MIXTURE**.

That Author declares himself of Opinion, that the Particles of all Fluids only touch in this manner; or that their Cohesion only amounts to a *Congregation*. See **FLUID**, and **COHESION**.

CONGRESS, *Congressus*, is used for an Assembly of Commissioners, Deputies, Envoys, &c. from several Courts, meeting to concert Matters for their common Good.

The *Congress* at the *Hague*, which held during the Course of the War, terminated in 1697, by the Treaty of *Reswick*, was compos'd of the Envoys of all the Princes in the Confederacy against France.

CONGRESS is also used in an obscene Sense, for an Essay, or Trial, made by Appointment of a Lay or a Spiritual Judge, in the Presence of Chirurgeons and Matrons, to prove whether or no a Man be impotent; in order for the dissolving of a Marriage. See **IMPOTENCE**.

Neither the Civil nor Canon Law make any mention of this Trial of Virility by *Congress*: It had its Origin in France, from the Boldness of a young Fellow, who in open Court, being hard press'd by his Wife, demanded the *Congress*.

The Judge, surpris'd with the Novelty of the Demand, found it could not be deny'd, as being the fairest Evidence the Case could admit of.

In time it became a Branch in their Jurisprudence, and was authoris'd by Decrees and Arrests. It obtain'd for about the Space of 120 Years, and was annull'd by an Arret of Parliament in 1677, as being found preposterous; some having fall'd under the Experiment out of mere Modesty and Shame, which is found to have the same Effect with actual Impotency.

CONGRUITY, or **CONGRUENCY**, in the Schools, a Suitableness or Relation between Things; whereby we come at a Knowledge of what is to come to pass therein.

The System of *Congruity* in Matters of Grace consists in this; that God, who knows perfectly the Nature of Grace, and the Dispositions of the Will in all the Circumstances that shall befall a Man, gives Graces, wherewith, by Virtue of their *Congruity* with the Will of Man, consider'd in those Circumstances, Man will always infallibly, but not necessarily, do, what God would have him do: In regard, the Will, in the Language of the *Congruists*, does always infallibly, the voluntarily, follow what appears best.

CONGRUITY, in Geometry, is applied to Figures, Lines, &c. which exactly correspond when laid over one another; as having the same Terms, or Bounds.

Those Things between which there is a *Congruity*, are equal and similar. See **EQUALITY**, and **SIMILAR**.

Euclid, and by his Example, most other Geometricians, demonstrate all their Elements from the sole Principle of *Congruency*: *M. Leibnitz*, and after him *Wolffius*, substitute the Notion of *Similitude* in lieu of that of *Congruency*. See **SIMILITUDE**.

CONGRUITY, in a lax Sense, is also us'd to express an Aptitude in some Bodies, to unite, or incorporate, from some similitude or fitness of their Figures: as *Incongruity* denotes an Unfitness of their Surfaces for joining together.

Thus, Quicksilver will unite with Gold, and many other Metals, but will roll off from Wood, Stone, Glass, &c. and Water, which will wet Salt and dissolve it, will slip off from Tallow without adhering to it; as also from a dusty Surface, and from the Feathers of Water-Fowl.

Two drops of Water, or of Mercury, will, on contact, immediately join and coalesce; but Oil of Tartar, pour'd upon Quicksilver, and Spirit of Wine and Oil of Turpentine on that, and Air over all, will remain in the same Vessel without any manner of Union, or Mixture with each other.

And the Cause hereof, is, that the Figures of some Bodies will not admit other Bodies near enough to be within their Spheres of Attraction, whence they cannot join, and cohere;

cohere; but where their Fitness of Figure will let them approach near enough to feel each others attractive Power, then they close and hold together. See CONSENSION.

CONIC Section, a curve Line arising from the Section of a Cone. See CONE, and SECTION.

The Conic Sections are three, viz. the Ellipsis, Hyperbola, and Parabola; beside the Circle, which tho' it arise from the Section of a Cone by a Plane parallel to the Base, is not usually consider'd in that Capacity. See CIRCLES.

The Equations, Genesis, and many of the Properties, with the Ratio's, Dimensions, &c. of each of the Conic Sections, be separately given under their respective Articles in this Work, ELLIPSIS, HYPERBOLA, and PARABOLA; yet, to make the Doctrine of Conics, which is so considerable a Part of the higher Geometry, and of such frequent use in the new Astronomy, the Motion of Projectiles, &c. more complete, we shall here put the whole in a new Light, and bring it together into one contracted view.

The common Intersection, then, of any Plane with a Conic Superficies, we observe, is called a Conic Section: And this Section varies, and acquires a different Name, according to the different Inclinations of the cutting Plane. For,

1st, If ABC, (Tab. Conics, Fig. 12.) be a Cone any how cut by a Plane ADE, thro' the Vertex; and again by another Plane parallel to the former Plane ADE: then, the Section BFGH, made in the Superficies thereof, is called an Hyperbola; the Plane of which being produced to meet the opposite Superficies, will make the Section *fhg*; which is likewise call'd an Hyperbola: and both these, conjunctly, are called opposite Sections.

2^{dly}, If thro' the Vertex A of a Cone, a Plane DAE, pass without the Superficies thereof, that is, neither cutting nor touching it; and the Cone be again cut by a Plane parallel to the Plane DAE, the Section FHG made in the Superficies thereof, is called an Ellipsis.

3^{dly}, If a Plane ADE touches the Superficies of a Cone, and the Cone be cut by a Plane, the Section is a Parabola.

But instead of considering these Curves as arising by Section of the Cone it self, their Description, Nature, and Properties, are found more easy of Conception, when consider'd as drawn on a Plane: For which Reason, after *Des Cartes* and most of the later Writers, we shall rather chuse to lay 'em down in this second manner.

Genesis, or Construction of the Ellipsis.

To conceive the Production and Nature of an Ellipsis, then, let H and I, (Fig. 13.) be two Points, Nails, or little Pegs, about which put a Thread BHI, then putting your Finger to the Thread, and keeping the same always in an equal Tension, move the Finger round from the Point B, till you return to the same Point B again.

By this Revolution of the Point B, is describ'd the curve Line, called the Ellipsis; which differs from the Delineation of a Circle only in this, That a Circle hath only one Centre, but the Ellipsis two; which, if the Points H and I should come together, into one, the elliptic Curve would become perfectly circular.

But by how much greater the distance is betwixt those Points, the same length of the Thread still remaining; so much the further is this Figure removed from the Circular. So that according to the diverse Proportion of the Distance HI to the Thread BHI, or to the Line DK, which is equal to the same Thread, divers Species of Ellipses will be describ'd.

But then, if the Length of the Thread be increas'd or diminish'd, in the same Proportion as the Distance of the Points H and I is increas'd, or diminish'd, there will indeed be describ'd divers Ellipses, but all of the same Species: whence it appears, that Ellipses are not only innumerable in Magnitude, but in Species also; and reach from a Circle to a right Line: For, as when the Points H and I meet together, the Ellipsis becomes a Circle; so, when they are removed from each other half the length of the Thread, it becomes a right Line, both sides meeting together.

Whence also it appears, that every Species of Ellipsis is no less different from any other, than the Extremes of them are different on this side from a Circle, and on that from a right Line. It also appears from this Delineation, that if from a Point taken at pleasure in the Elliptick Periphery, as the Point B, you draw two Lines to the two central Points; these two Lines BH and BI, taken together, will be equal to the greatest Diameter DK; and consequently, that the Sum of them is always given.

In the Ellipsis DFKR, (Fig. 14.) the Point C is call'd the Centre, the Points H and I the Foci, DK the greater Axis, or transverse Axis, or the principal Diameter, or *Latus transversum*; and FR is the lesser Axis: All the right Lines passing through the Centre C are *Diameters*; and all right Lines terminated at the Periphery, and divided into two equal Parts by any Diameter, are call'd *Ordinates*. That Part of every Diameter intercepted betwixt the Vertex thereof, and the Ordinate as *M_μ*, is call'd the *Abscissa* thereof. A Line drawn from the Vertex of the Diameter,

parallel to the Ordinates thereof, as *μδ*, is a *Tangent* to the Ellipsis in that Vertex. A Diameter parallel to the Ordinates of another Diameter, is term'd a *Conjugate Diameter*; and the Ordinate to the greater Axis, which passeth thro' either of the Foci, as MA is term'd the *principal Latus Rectum*, or the *Parameter* of the greater Axis. See CENTER, FOCUS, AXIS, DIAMETER, ORDINATE, PARAMETER, &c.

Properties of the Ellipsis.

1. The Ordinates of every Diameter are demonstrat'd to be parallel to each other.

2. The Ordinates of the Diameters or Axes are perpendicular to the Axes themselves; but the Ordinates of the rest of the Diameters are oblique to their Diameters; and in Ellipses of divers Species, so much the more oblique, at equal Distance from the Axis, by how much the Proportion of the greater Axis to the lesser is the greater; but in the same Ellipsis, so much the more oblique, by how much the more remote the Diameters are from the Axes.

3. There are only two Conjugate Diameters, which are equal each to other, viz. those whose Vertices are at equal Distances from the Vertices of the Axes: Thus, the Diameter VT is conjugate, and equal to that other GM; where VF is equal to MF, and VD equal to MK.

4. The obtuse Angle VCM of these two Diameters, which are conjugate and equal, is greater and the acute Angle VCG is less than every other Angle contain'd by the rest of the Diameters that are conjugate to each other.

5. If the Lines μ P and ν B be Semi-ordinates to any Diameter, as MG, the Square of the Semi-ordinate μ F is to the Square of the Semi-ordinate ν B, as is the Rectangle $M\mu \times \mu G$, to the Rectangle $M\nu \times \nu G$; that is, μP is to the Rectangle comprehended under the two Parts, into which the Diameter is divided by the Ordinate KP, as νB is to the Rectangle under the Parts of the Diameter made by the Ordinate AB.

6. The Parameter, or *Latus Rectum* of any Diameter, is a third Proportional to that Diameter and its conjugate: That is, (in Fig. 1.) if the Diameter DK is to its conjugate Diameter EF, as EF is to Y; then Y is the Parameter or *Latus Rectum* of the Diameter DK: whence AM, an Ordinate to the Axis thro' the Focus ν , is, as above, equal to the principal Parameter, and is a third Proportional after the greater and lesser Axis.

7. The Square of every Semi-ordinate, as M1, (Fig. 13.) is less than the Rectangle made of any Abscissa whatever; as IK drawn into the *Latus Rectum* of its own Diameter, or than IK \times y. And in the other Figure, $P\mu q$ is less than the Rectangle made of the Abscissa $N\mu$, and the *Latus Rectum* of MG: From which Defect, or *Excess*, this Section hath its Name.

8. If from any Point, as B in the first Figure, you draw the right Lines BH and BI to the Foci, the Sum of them will be equal to the greater Axis, as was shew'd above: And if the Angle IBH, comprehended by those Lines, be bisected by the right Line δ ν , the Line δ ν is perpendicular to the Tangent VB in the Point B; that is, to the Curve in the Point of Contact.

9. The Distance of a Body turn'd round in an Ellipsis, about the Focus H, from the same Focus, is the greatest of all in the Point K; least of all in the Point D; and mean in the Points E and F; and that mean Distance HF is equal to the greater Half-Axis DC or CK; as is manifest from the Production of the Ellipsis.

10. The vanishing Subtense of the Angle of Contact, parallel to the Distance from the Focus, at an equal perpendicular Interval from that distance, always remains given and unvaried in the same Ellipsis, yea, and in the same Parabola, and Hyperbola too. Thus if δ Z be always given, δ δ also will always remain given in a distance infinitely small.

11. The Area of the Ellipsis is to the Area of the Circle circumscrib'd, as the lesser Axis is to the greater; and so are all correspondent Parts whatsoever among themselves, as M1K, μ 1K: and the Ordinates to the greater Axis, as μ I, are divided by the elliptick Periphery always in the same Proportion, so that M1 is to μ 1 always in the same Proportion; to wit, that of the lesser Axis to the greater. And we are to reason in the same manner concerning a Circle inscrib'd in an Ellipsis.

12. All Parallelograms describ'd about the conjugate Diameters of the Ellipsis, and comprehending the Ellipsis, are equal. Thus, the Parallelogram $\alpha \beta \gamma \delta$ is equal to the other $\zeta \eta \theta \delta$: And thus it is every where.

13. If a right Line always passing thro' one of the Foci be so moved, that the Elliptic Area describ'd by the same, is proportional to the Time; the angular Motion of a right Line drawn from the other Focus to the former Line, will be almost equable: Thus, in the former Figure, if the angular Motion of the Line HB be so attempt'd, that the same being according to the reciprocal proportion of the Distance accelerated or retarded, doth describe the

TAB. CONICKS

Fig. 1 Latus Transversum

Fig. 2 Cone

Fig. 3 & 4 Cone

Fig. 4 Cone

Fig. 5 Sectiones Sequentes

Fig. 5 Curv. Diameter

DHB, proportional to the Time; the angular Motion KIB about the other Focus I, will be almost proportional to the Time, and consequently without any notable Acceleration or Retardation, and nearly equable; that is to say, where the Ellipsis doth not differ much from a Circle.

Genesis of a Parabola.

Let DI be an infinite right Line, and IL another perpendicular to it; (Fig. 15.) Then, taking, in the Line DI, any Point F, let the Line FI be bisected in the Point T; and let there be taken two Threads joined together in the Point T, one TI, the other TF; and let a Pin fixed to the Threads in the Point T be moved to the right and left, in such a manner, that when the Pin is in any other Position, as in P, the Thread TI which here becomes PL, be always perpendicular to IL; or, which is the same thing, parallel to DI, but equal to the Thread TF; which in this case becomes PF, ever passing thro' the Point F.

The Curve thus generated by the Pin, infinitely produced both ways, is a *Parabola*: in which gPi T; R, o, is called the *Periphery*; ID the *Axis*, or *principal Diameter*; F the *Focus*; the Point T the *principal Vertex*.

An *Ordinate* to the Axis thro' the *Focus*, is equal to the *principal Latus Rectum*: all right Lines vi , parallel to the Axis, are *Diameters*, as dividing the Lines P and KT, which are parallel to the Tangents at the Vertices, into two equal Parts; and they are call'd *Diameters* belonging to the Vertices in which they terminate, as *i*.

Properties of a Parabola.

1. Every *Diameter*, or right Line parallel to the Axis, bisects all the Lines within the Figure, which are parallel to the Tangent of the Vertical Point: which bisected Lines are call'd *Ordinates*.

2. The *Ordinates* of the Axis are perpendicular thereto; but the *Ordinates* of the rest of the *Diameters* are oblique to their *Diameters*; and so much the more oblique, by how much the Vertex of the *Diameter* is farther remov'd from the principal Vertex of the *Parabola*.

3. The *Latus Rectum*, or Parameter to every *Diameter*, is a third Geometrical Proportional after any *Abscissa*, and its *Semi-ordinate*; that is, if the *Latus Rectum* of the *Diameter* is in , or that of the Vertex i , be g ; then, as the *Abscissa* iq is to the *Semi-ordinate* qk , so is that *Semi-ordinate* qk to g .

4. The principal *Latus Rectum*, or that belonging to the Axis, is equal to the *Ordinate* bi passing thro' the *Focus*; and quadruple of FT, the least Distance of the *Focus* from the principal Vertex.

5. The *Latus Rectum* belonging to any Vertex or *Diameter*, is also quadruple of the distance of that Vertex from the *Focus*: Thus, the *Latus Rectum* of the Vertex i is quadruple FI, and so it is every where.

6. The Distance of any Vertex or Point in the *Parabola* whatever, from the *Focus*, is equal to the least Distance of the same from the Line LL, which is perpendicular to the Axis; and is distant from the principal Vertex, by a quarter of the principal *Latus Rectum*.

7. The Square of every *Semi-ordinate*, as qk , is equal to a Rectangle made of the *Latus Rectum*, of the same Vertex as Y , and iq the *Abscissa* of the *Diameter* of the Vertex. And from the Equality of the *rectangle*, or Comparison in the Figure, betwixt the Rectangle and the Square of the *Semi-ordinate*, without any Excess or Defect, the Name of the Section is derived.

8. Since therefore the *Latus Rectum* in any *Diameter* is given, the *Abscisses* are as the Squares, or in the duplicate Ratio of the *Semi-ordinates*. Thus, TF is to TG as iq is to gG , and so likewise is iq to ir , as the Square of qT is to the Square of ri ; and thus every where. From whence, also, when the *Abscissa* of the Axis is equal to the principal *Latus Rectum*, or fourfold of the Distance from the Vertex, it will be equal to its *Semi-ordinate*.

9. The Angle, comprehended by any Tangent whatever, and a Line from the *Focus*, is equal to an Angle comprehended by the same Tangent, and any *Diameter*, or the Axis. Thus, the Angles iTF , and pin are equal: whence, by the way, all the Rays of Light which fall on the Concave part of the Surface, produced by the Convolution of the *Parabola* about the Axis; which fall, we say, on the same Parallel to the Axis; will be reflected from a concave paraboloid Figure to the *Focus* F, and there beget a most vehement burning: from which Property, the Point F has the Name *Focus*, and has communicated the same to the like Points in the *Hyperbola* and *Ellipsis*. See *Focus*.

10. A *Parabola*, like an *Hyperbola*, does not inclose a Space, but stretches out in infinitum.

11. A *Parabolic Curve* always tends more and more, in infinitum, to a Parallelism with its *Diameters*; but can never arrive thereto.

12. If two *Parabolas* be described, with the same Axis and Vertex; the *Ordinates* to the common Axis will be cut off by the *Parabola* in a given proportion; and the Areas

comprehended by the same Axis and Ordinate, and the respective Curves, will be in the same given Proportion to one another.

13. Every *Parabolic Space* comprehended betwixt the Curve and the Ordinate, is to the *Parallelogram* made of the same Base and Altitude in a subquadrilateral Proportion; that is, as 2 is to 3; and to the external Space in a duplicate Proportion, or as 2 is to 1: So qT is to qI , as 2 is to 3; and to IT as 2 is to 1. From whence it becomes easy to square the *Parabola*. See *QUADRATURE*.

14. The Distance between the Vertex of the Axis, and the Point where any Tangent intersects it, as I , is equal to the *Abscissa* of the Axis which belongs to the Ordinate applied from the Point of Contact: So TI is equal to TF ; and thus it is every where.

15. All *Parabolas* are like, or of the same Species; and are also all Circles.

16. If a *Diameter* be continu'd thro' the Point of Concourse of two Tangents; this *Diameter* will bisect the Line that joins the *Centres*: which Property of the *Parabola* may likewise be understood of the *Ellipsis*, and *Hyperbolas*.

Genesis of an Hyperbola.

Suppose a Staff or Rule of a sufficient Length, as IB ; (Fig. 16.) let I and H be two central Points, answering to the *Foci* of an *Ellipsis*, in which let Nails be fasten'd; then, there being tied to one end of the Staff, a Rope or Thread as long again as the Staff, let the other end thereof be bor'd thro', and so fix'd upon the Nail I ; and fix the other end of the Rope, by a Knot, upon the other Nail H : which done, laying your Finger on the Point B , where the Rope and Staff are tied together, let your Finger descend so long, till you have thereby applied, and joined the whole Rope to the Staff, or Rule; the Staff having been in the mean while, as it needs must, wheel'd about the Centre I . Thus, with the Point B , the Vertex of the Angle HBI , you will have describ'd a Curve Line XBD , which is part of an *Hyperbola*; the whole consisting of that Curve which will result from the Curve XBD ; which hath added to it the Curve YD , the Produce of the Rule and Work, as turn'd to the other Side.

Further, transferring the Hole, or Knot of the Rope to the Nail I , and fastening the End of the Staff on the Nail H , you will describe another *Hyperbola*, vertically opposite to the former, which is altogether like and equal thereto. But if, without changing any thing in the Rule and Nails, you only apply a longer Rope; you will have an *Hyperbola* of a different Species from the former: and if you still lengthen the Rope, you will have still other sorts of *Hyperbolas*; till at length, making the Rope double the length of the Rule, you will have the *Hyperbola* chang'd into a right Line.

But if you alter the Distance of the Nails, in the very same proportion in which you change the Difference betwixt the Length of the Rope, and that of the Staff; in this Case you will have *Hyperbolas* mark'd out, which are altogether of the same Species, but have their similar Parts differing in magnitude.

Lastly, If the length of the Rope and Rule be equally increas'd, their Difference in the mean while, and the Interval of the Nails remaining the same; not a different *Hyperbola*, either as to Species or Magnitude, will be describ'd, nor any other than a greater Part of the same *Hyperbola*.

It must be own'd, however, that many Properties of an *Hyperbola* are better known from another manner of generating the Figure, which is as follows: Let LL and MM , (Fig. 17.) be infinite right Lines intersecting each other as any Angle whatever, in the Point C : from any Point whatever, as D or e , let $DcDd$ be drawn parallel to the first Lines; or ec, ed ; which, with the Lines first drawn, make the *Parallelograms*, as $DcCd$, or $ecCd$. Now, conceive two sides of the *Parallelogram*, as $DcDd$, or $ecCd$, to be so moved, this way and that way, that they always keep the same Parallelism; and that at the same time the Areas always remain equal; that is to say, that Dc and ec remain always parallel to MM ; and Dd or ed always parallel to LL ; and that the Area of every *Parallelogram* be equal to every other, one Side being increas'd in the same Proportion wherein the other is diminish'd: By this means, the Point D or e will describe a Curve-Line within the Angle comprehended by the first Lines; which is altogether the same as that describ'd above. So also in the Angle vertically opposite will be describ'd a like and equal *Hyperbola*; if the *Parallelogram* $CcKd$, equal to the former, be supposed to be moved, in the same manner as before: which *Hyperbolas* are, as was said before, called opposite Sections, or opposite *Hyperbolas*.

In each Figure, DK is the *transverse Axis*, or *transverse Diameter* of the *Hyperbola* of the opposite Sections; the Point C the Centre; H and I the *Foci*. In the latter Figure, all the Lines passing thro' the Centre C , as ih , are *Diameters*; but if *Hyperbolas* be describ'd in the following Angles, as Kk & k

LCM, MCL, those Sections will be called the following Sections: And if the Distance of the primary Vertex of those Hyperbola's from the common Centre C, as C β , or C γ , be equal to the Semi-tangent K ν or K ω ; at the primary Vertex of these, those Sections are called *conjugate Sections*: And all the Figures together are named the *Hyperbolic System*.

Further, ab the Ordinate to the Axis thro' the Focus, is equal to the principal *Latus Rectum*, or the Parameter of the Axis; and an indeterminate Diameter, which is parallel to the Ordinates of any determinate Diameter, is called the *conjugate Diameter* of the same.

Properties of the Hyperbola.

1. Any Diameter or right Line passing thro' the Centre, bisects all its Ordinates; that is, all the right Lines terminated on both Sides by the Hyperbolic Periphery.

2. The Ordinates of the Axis are perpendicular to the same; but the Ordinates of the rest of the Diameters are oblique to their Diameters: and so much the more in divers Species, at equal Distances from the Axis, by how much the Difference of the Angles including the Hyperbola's is the greater: and in the same Hyperbola, so much the more oblique, by how much the Diameters are remov'd from the Axis.

3. If any Lines, as H b and Q γ , be Semiordinates to any Diameter whatever, as KD; the Square of the Semi-ordinate H b , is to the Square of the Semi-ordinate Q γ , as the Rectangle KHDH is to the Rectangle KQDQ; and so the Square hb is to the Square qk , as the Rectangle ibb is to the Rectangle $isba$: And thus every where.

4. The *Latus Rectum*, or Parameter of every Diameter, is a third Geometrical Proportional, after the Diameter, and the Conjugate thereof, or its Tangent, which is equal to it: That is, if the *Latus Rectum* of any Diameter, as DK, be y ; then, as the Diameter DK is to its conjugate $\beta\gamma$, or its equal $\omega\gamma$; so that Conjugate $\beta\gamma$, or that Tangent $\omega\gamma$ is to y . And as the Ordinate to the Axis thro' the Focus is the principal *Latus Rectum*, so it is more than double of the least Distance of the Focus from the Vertex.

5. The Square of any Semi-ordinate, as Q γ , is greater than a Rectangle made of the Abscissa DQ, drawn into the *Latus Rectum* of its own Diameter, as y : And, in like manner, the Square of the Semi-ordinate bn , is greater than the Rectangle of the Abscissa ib , into the *Latus Rectum* of the Diameter bi . From which *Asymptotes*, or Excess, this Section hath its Name.

6. If from any Point of the Hyperbola, as B, (Fig. 16.) there be drawn right Lines to both the Foci, as BH, BI, the Difference of these Lines will be equal to the Axis DK; as will easily appear from the Delineation it self.

7. If the Angle BHI, comprehended by Lines drawn to the Foci, be bisected by the right Line EB, that right Line will be a Tangent to the Hyperbola in the Point B.

8. The right Lines LL and MM, which include the Hyperbola's, are Asymptotes of the Hyperbola's; that is, they are such, to which, on both sides, the Curve approaches nearer and nearer, but is never able to touch or coincide therewith.

9. The Species of Hyperbola's are various, according to the different Magnitude of the Angle LCM, comprehended by the Asymptotes: but that Angle remaining the same, the Species of the Hyperbola remains unchanged; but according to the different Magnitudes of the Parallelograms, by which Hyperbola's are describ'd, Hyperbola's of divers Magnitudes do arise: If the Angle contained by the Asymptotes be a right Angle, the Hyperbola is called *Equilateral*, or *Rectangular*; and the *Latus Rectum* of all the Diameters will (as in a Circle) be equal to their Diameters. And, lastly, if Hyperbola's be describ'd about the same Axis in divers Angles of the Asymptotes, the right Lines perpendicular to the Axis will be cut off in a given Proportion by them all; and the Spaces likewise included by the right Lines, or Ordinates, the produced Axis, and the Curves, will be in the same given Proportion.

10. If the Distances from the Centre of the Hyperbola, be taken in a Geometrical Proportion in one of the Asymptotes, so that CI, CII, CIII, CIV, CV, CVI, be in continued Geometrical Proportion; and if from those Points there be drawn parallel to the other Asymptote the Lines, I 3, II 2, III 3, IV 4, V 5, VI 6, the Spaces I 2, II 3, III 4, IV 5, V 6, will be equal among themselves. And consequently, if that Asymptote CM be supposed to be divided, according to the Proportion of Numbers exceeding one another in a natural Series, those Spaces will be proportional to the Logarithms of all those Numbers.

Common Properties of all the Conic Sections.

From the whole it may be gather'd, 1st, That the Conic Sections are in themselves a System of regular Curves, allied to each other; and that one is chang'd into another perpetually, when it is either increas'd, or diminish'd, in infinitum.

Thus, the Circle, the Curvature thereof being never so

little increas'd or diminish'd, passeth into an *Ellipsis*; and the Ellipsis, its Centre going away infinitely, and the Curvature being by that means diminish'd, is turn'd into a *Parabola*: And when the Curvature of the Parabola is never so little chang'd, there ariseth the first of the *Hyperbola's*; the Species whereof, which are innumerable, will all of them arise orderly by a gradual Diminution of the Curvature; until the Curvature vanishing away, the last Hyperbola ends in a right Line perpendicular to the Axis. From whence it is manifest, that every regular Curvature, like to that of a Circle, from the Circle it self into a right Line, is a *conical Curvature*, and is distinguish'd with its peculiar Name, according to the divers Degrees of that Curvature.

2^{dly}, That the *Latus Rectum* of a Circle, is double to the Distance from the Vertex: That all the *Latus Recta* of the Ellipses, are in all Proportions to that distance betwixt the Double and Quadruple, according to their different Species: That the *Latus Rectum* of the Parabola is just quadruple to that Distance; and, lastly, that the *Latus Recta* of Hyperbola's are in all Proportions beyond the Quadruple, according to their various Kinds.

3^{dly}, That all Diameters in a Circle and Ellipsis, intersect one another in the Centre of the Figure within the Section: That in the Parabola they are all parallel amongst themselves, and to the Axis; but that in the Hyperbola they intersect one another, but this without the Section, in the common Centre of the opposite Sections.

4^{thly}, That the Curvature, with respect to the Focus, in all these Figures, is increas'd or diminish'd proportionally.

CONICKS, that Part of the higher Geometry, or Geometry of Curves, which considers the Cone, and the several Curve Lines arising from the Sections thereof. See GEOMETRY; see also CONE, and CONIC SECTION.

CONIFEROUS, a Term applied to such Trees, Shrubs, or Herbs, as bear a squamous or scaly Fruit, of a woody Substance, and a Figure approaching to that of a Cone; in which there are many Seeds, and when they are ripe, the several Cells or Partitions in the Cone gape or open, and the Seed drops out: Of this kind are the Firr, the Pine, Beech, and the like. See PLANT.

CONJOINT, *Conjunctus*, is applied in the ancient Music, in the same Sense as *Consonant*, to two or more Sounds. See CONSONANCE.

CONJOINT Degrees, are two Notes which immediately follow each other in the Order of the Scale; as *Ut* and *Re*. See DEGREE.

CONJOINT Tetrachords, are two Tetrachords, where the same Chord is the highest of the one, and the lowest of the other. See CHORD.

CONISOR, or COGNISOR, in Law, is used in the passing of Fines, for him that acknowledges the Fine. See FINE. He to whom the Fine is acknowledg'd, is called the *Cognizee*.

CONJUGATE Diameter, or Axis, in Conicks, or the Sections of the Cone, is a right Line bisecting the transverse Diameter. See DIAMETER, and CONIC SECTION.

CONJUGATE Diameter, or Axis, of an Ellipsis, is the shortest Diameter, or Axis, bisecting the longer, or transverse Axis. See ELLIPSIS.

It's demonstrat'd, 1st, That in an Ellipsis, the Conjugate Axis is a Mean Proportional between the Transverse Axis and the Parameter. 2^{dly}, The Square of the Conjugate Axis, is to that of the Transverse, as the Square of the Semi-ordinate is to the Rectangle of the Segments of the Axis. 3^{dly}, That a right Line drawn from the Focus to the Extremity of the Half-conjugate Axis, is equal to the transverse Semi-axis.

Hence, the Conjugate Axis being given, the Focus is easily determin'd. See FOCUS. And the Ellipsis thence easily describ'd.

CONJUGATE Axis, in an Hyperbola, is a Mean Proportional between the transverse Axis and the Parameter. See HYPERBOLA.

It is thus call'd, because the Conjugate Axis of an Ellipsis has the same Ratio.

In an Hyperbola, the Square of the Conjugate Axis, is to the Square of the Transverse, as the Parameter to the transverse Axis. See PARAMETER.

CONJUGATION, in Grammar, an orderly Distribution of the several Parts of Verbs; or, a different Inflection of Verbs, made according to their different Moods and Tenses, to distinguish 'em from each other. See VERB.

The *Latus* have four Conjugations, distinguish'd by the Terminations of their Infinitive, *are, ere, ere, ire*; and most of the French Grammarians reduce the Conjugations of their Language to the same Number; ending in *er, re, ir, and oir*.

In *English*, where the Verbs have scarce any natural Inflections, but derive all their Variations from additional Particles, Pronouns, &c. we have scarce any such thing as strict Conjugations. See MOOD, TENSE, &c.

CONJUGATION, in Anatomy, is understood of a Pair of Nerves; or two Nerves, arising together, and serving for the same Operation, Sensation, or Motion; there being scarce any Nerve without its fellow. See NERVE.

The ancient Physicians only knew of Seven Pairs, or Conjugations of Nerves; the Moderns have discover'd thirty new ones. See PAIR.

CONJUNCTION, in Astronomy, the Concourse, or Collision of two Stars, or Planets, in the same optical Point of the Heavens, i. e. in the same degree of the Zodiac. See PLANET, PHASIS, &c.

If the two Bodies concur both in the same degree of Longitude and Latitude, a right Line drawn from the Eye thro' the Centre of one of them, passes thro' that of the other; and the Conjunction is said to be true: if the lower hides the upper, the Conjunction is said to be copular; and if the same right Line, continu'd back from the two Centres thro' the Eye, do also pass thro' the Centre of the Earth, the Conjunction is said to be central: If the Line pass wide of the Centre of the Earth, the Conjunction is said to be Partic: And if the Bodies don't meet precisely in the same Degree, but are join'd with some Latitude, the Conjunction is said to be apparent.

Conjunctions are also divided into great and greatest: Great Conjunctions are those which only happen at considerable distances of Time from each other; as that of Saturn and Jupiter, which happens every 20 Years. Greatest, are those which happen in Times very remote; as that Conjunction of the three superior Planets, Mars, Jupiter, and Saturn, which only returns once in 500 Years. But this Division has little place in Astronomy; being founded on the Notion of the particular Influences, &c. of the heavenly Bodies in such and such Aspects.

The Astrologers maintain, that the Deluge was owing to a Conjunction of all the Planets in Capricorn; and that the Conflagration will be occasion'd by their Conjunctions in Cancer: whence they pretend to foretel the End of the World.

The Conjunction is the first, or the principal of all the Aspects; and that whence the other Aspects commence; as Opposition is the last, where they terminate. See ASPECT, and OPPOSITION.

The Moon is in conjunction with the Sun every Month. See MOON.

Her Conjunctions and Oppositions are called by a general Name, Syzygies. See SYZYGIE.

The Eclipses of the Sun never happen, but when there is a Conjunction of the Sun and Moon in the Nodes of the Eclipse. See ECLIPSE.

CONJUNCTION, in Grammar, a Particle which expresses a Relation, or Dependence between Words and Phrases; thus called, because serving to join, or connect the Parts, or Members of a Discourse. See PARTICLE, SENTENCE, &c.

The Conjunction is the sixth of the eight vulgar Parts of Speech. See SYNTAX.

Conjunctions render the Discourse more smooth and fluent; and serve very good Purposes in the Argumentative and Narrative Style: but must ever be omitted where a Person speaks with Emotion; as only serving to weaken and coarvate it. Boileau observes, that nothing gives more heat and motion to a Discourse, than to drop the Conjunctions or Copulatives: A Passion, adds he, embarrass'd with Conjunctions and useless Particles, loses all the Fire and Vehemence it would get in its progress.

Conjunctions are of various Kinds: Copulative or conjunctive Conjunctions, express a Relation of Union, or Comparison between Things; as *and, et; only, tantum*; as *much as, tantum quantum*; in the same manner as, *quasamodum*; neither more nor less, *tantundem*; inas much as, *quippe*; not only, but also, &c. *non modo, sed etiam*, &c. See COPULATIVE.

Conjunctions Disjunctive, express a Relation of Separation or Division; as, *neither, nec; whether, five; or, vel*. See DISJUNCTIVE.

Conjunctions Adversative, express a Restriction, or Contrariety; as, *but, sed; nevertheless, tamen; altho, etiam; si; for, pro, adeo non*.

Conjunctions Conditional, are, *if, si; if not, si minus; on Condition that, ea lege ut; provided that, dummodo; in case of, si vero*. See CONDITION.

Conjunctions Continuative, express a Succession, or Continuation of the Discourse; as, *in effect, recte; even, etiam; whatever it be, quicquid sit*.

Conjunctions Causal, shew that the Reason of something is brought; *for, nam; because, quia; seeing, quippe; the rather, since, eo magis quo; inasmuch as, quatenus*. See CAUSAL.

Conjunctions Dubitative, express some Doubt, or Suspension of Opinion; as, *if, si; that is to say, id est, &c.*

Exceptive Conjunctions, are, *if it be not, nisi si; unless that, nisi, &c.*

Conjunctions Conclusivæ, denote a Consequence drawn; as; *for, quia, ideo, quapropter; but, tamen, atque; of consequence, ideoque; so that, ita ut, &c.*

CONJUNCTIVA Tinnica, or Adnata, in Anatomy, the first Coat, or Membrane of the Eye; so called, because it incloses all the rest; or because it fastens the Eye in its Orbit. See ADNATA, and EYE.

It is very smooth, when found, of a white Colour, like Alabaster; whence it is ordinarily called the *White of the Eye*. It is said to have its rise from the *Pericranium*, and to be only a Continuation or Extension thereof. See PERICRANIUM.

The Conjunction does not invest the Globe of the Eye intire; but terminates at the Edge of the Sclerotics. See SCLEROTICA.

It is cover'd with a Million of fine Veins and Arteries; which never appear, unless when the Motion of the Blood is more than usually rapid, as in Ophthalmia; or when the Vessels are more full and distended than ordinary, as in Drunkenness.

CONJURATION, Magick Words Characters or Ceremonies, whereby evil Spirits, Tempests, &c. are suppos'd to be rais'd, and driven away. See MAGIC.

The Romish Priests pretend to expel Devils, by preparing Holy Water in a particular manner, and sprinkling it over the possess'd, with a number of Conjurations, and Exorcisms. See EXORCISM.

Some Authors make the difference between Conjuratio and Witchcraft to consist in this; that the former effects its Ends by Prayers, and Invocation of God's Name, &c. to compel the Devil to do what is desir'd; so that the Conjurator is suppos'd to be at War with the Devil, and that evil Spirit to act merely out of Constraint: whereas the latter attains its End by an immediate Application to the Devil himself; and the Devil's Complaisance is suppos'd to be the Consequence of some Agreement between 'em: So that the Devil and the Witch have a good Understanding between 'em. See WITCHCRAFT.

Both these, again, differ from *Enchantment and Sorcery*; in that these latter operate secretly, and slowly, by Spells, Charms, &c. without ever calling on the Devil, or having any conference with him. See CHARM, &c.

CONNECTION, or CONNEXION, *binding*, a Relation whereby one thing adheres to, or depends on another.

Euclid's Propositions have such a Connection among themselves, that the latter cannot subsist without the former.

Philosophers are at a loss as to the Manner of the Connection between Soul and Body; between Causes and Effects &c. See SOUL, CAUSE, &c.

CONNECTION, in the Drama, consists in the joining of the several Scenes together. See SCENE.

When the Scenes succeed one another immediately; and are so joined as that the Stage is never left empty, the Connection is said to be observ'd. See TRAGEDY, &c.

CONNIVENTES *Vulvae*, in Anatomy, are Wrinkles, or Corrugations in the inner Coat or Membrane of the two large Intestines, the *Jejunum* and *Ileum*. See INTESTINES.

They are formed as the *Rings* of the Stomach, *vide*. by the inner Coats being larger than the outer. See STOMACH.

These Folds, or Corrugations, some Anatomists imagine in some measure to do the Office of Valves; by straitning the Passages, and consequently impeding the Motion of their Contents: by which means, the Lacteals have the more time to imbibe the Chyle. See LACTEAL, CHYLE, DIGESTION, &c.

CONNOISSEUR, a French Term, of late used in English: It literally denotes a Person well seen and versed in any thing; being form'd of the Verb *Connoître*, to know, understand.

Hence it comes to be used in our Language for a Critick, or a Person who is a thorough Judge or Master in any way; particularly in Matters of Painting, &c.

CONOID, CONOIDES, in Geometry, a solid Body, resembling a Cone, except in this, that instead of a perfect Circle for its Base, it has an Ellipsis, or some other Curve approaching thereto. See CONE.

The Conoid is produced by the entire Circumvolution of a Conic Section about its Axis; and according to the Denomination of the Section from whence it is generated, it is differently denominated: If, v. g. the Solid be produced by the Motion of a Parabola, it is called a *Parabolic Conoid*; if by that of an Hyperbola, an *Hyperbolic Conoid*; and an *Elliptic Conoid*, or a *Spheroid*, when produced by the Rotation of an Ellipsis, around one of its Axes. See HYPERBOLIC, PARABOLIC, &c.

The famous Solid of the least Resistance, Sir J. Newton, M. Fatie, and the Marquis de l'Hopital, have demonstrated to be a Conoid, whose Resistance is only one 67th Part of that of the great Base.

Anatomists also give the Name *Conoid*, or *Conarium*, to a Gland found in the third Ventricle of the Brain, resembling a Pine-

a Pine-Apple; whence M. *Des Cartes* call'd it *Pinealis*, and fix'd there the Seat of the Rational Soul. See *PINEAL Gland*.

CONSANGUINITY, the Relation of *Kinship*, between Persons of the same Blood, or issu'd from the same Root. Marriage is prohibited by the Church to the fourth Degree of *Consanguinity*, inclusive; but by the Law of Nature, *Consanguinity* is no obstacle to Marriage, except in a direct Line. See *AGNATION*, and *COGNATION*.

Consanguinity terminates in the sixth or seventh Degree, excepting in the Succession to the Crown; in which Case, *Consanguinity* is continu'd to infinity.

The Civilians call *Frater Consanguineus*, those born of the same Father; in opposition to *Frater Uterinus*, who are only born of the same Mother. See *BROTHER*.

According to the common Opinion, these, and Brothers-German were not allow'd to complain of an Inofficious Testament, *i. e.* of being disinherited without cause; excepting from the Turpitude of the Person appointed Heir in their place. But *Van Water* endeavours to shew the contrary; and argues, that the *Consanguines* might plead Inofficiosity, even where the Testament was not made in favour of a Person incapable.

CONSCIENCE, *Conscientia*, in Ethics, a secret Testimony or Judgment of the Soul, whereby it gives its Approbation to Things it does that are naturally good; and reproaches it self for those that are evil. See *JUDGMENT*, *GOOD*, and *EVIL*.

Or, *Conscience* is a Dictate of the understanding Power, concerning Moral Actions; consider'd as it has the Knowledge of *Laws*; and consequently as conscious of what is to be done, or not done to the Legislator. See *MORAL*.

In the more popular Sense of the Word, *Conscience* is a Judgment, either true or false, whereby we pronounce a Thing good or evil. This makes what we call the *Inner Forum*, or Tribunal.

Some Divines maintain, that *Conscience* is Infallible; and hold it to be that immutable Law whereby God will judge Men: They deny that the Understanding can be the Source of Errors, and lay 'em all at the door of the Will. A Man, say they, may secure himself from Error, by forbearing to judge of Things till he have a clear and distinct Perception thereof. See *LIBERTY*.

Some of the Schoolmen distinguish between the *Conscience* antecedent to an Action, and that consequent thereto: The first, call'd *antecedent Conscience*, determines what is good and what evil; and consequently prescribes what is to be done, and what avoided. *Consequent Conscience* is a kind of secondary or reflex Judgment, with regard to the Goodness, &c. of Things already done or committed.

The *Rule of Conscience* is the Will of God; so far as it is made known to us, either by the Light of Nature, or by that of Revelation. See *REASON*, and *REVELATION*.

With respect to the Knowledge of this Rule, *Conscience* is said to be *rightly informed*, or *mistaken*; *firm*, or *wavering*, or *scrupulous*, &c.

With respect to the Conformity of our Actions to this Rule when known, *Conscience* is said to be *good*, or *evil*, &c.

The Philosophers, in lieu of the Word *Conscience*, which seems appropriated to Theological Matters, ordinarily use that of *Conscientiosus*; whereby they mean an inner Sentiment of a Thing, whereof one may have a clear and distinct Notion. In this Sense, they say, that we don't know our own Soul, nor are assur'd of the Existence of our own Thoughts, otherwise than by *Self-conscientiosus*. See *EXISTENCE*.

CONSCRIPT, **CONSCRIPTUS**, a popular Term in the Roman History, used in speaking of Senators, who were call'd *Conscripti*-Fathers, *Patres-Conscripti*; in regard their Names were written in the Register, or Catalogue of the Senate. See *SENATOR*.

Pintareo observes, that those only were properly denominated *Conscripti*, whose Names were added to those of the Antients; as being new-created from among the Knights. See *FATHER*.

CONSECRATION, the Action of converting or setting apart any profane or common Thing, to a pious Purpose; with the Ceremonies, Prayers, Benedictions, &c. used therein.

Consecration is the reverse of *Sacrilege*; which consists in the perverting a Thing set apart for a pious Purpose, to a profane and popular one. See *SACRILEGE*.

Thus, we say, the Bishop consecrates a Church, or a Chalice; the Pope consecrates Medals, *Agnus Dei's*, Loaves, Cakes, &c. he grants Indulgences to those who bear 'em about 'em with Devotion.

The *Consecration* or *Dedication* of a Church, is an Episcopal Ceremony, consisting in a great number of Benedictions, with Asperisions, and Unctions of Christ, &c. on the Walls, both within and without. See *CHURCH*.

The Custom of consecrating Persons, Temples, Altars, Vestments, Utensils, &c. is very ancient; and all the Ceremonies thereof are prescrib'd under the Old Law. Under the

New Law, when those *Consecrations* relate to Men, and are perform'd by appointment of Jesus Christ, they are properly call'd *Ordinations*; excepting those perform'd to Bishops and Kings, which still retain the Name of *Consecration*. See *BISHOP*, and *KING*; see also *ORDINATION*.

Those which only consist in a Ceremony instituted by the Church, are more properly call'd *Benedictions*. See *BERNARDIN*.

When they regard Churches, Altars, Vessels, &c. they are strictly call'd *Dedications*. See *DEDICATION*.

Consecration is particularly used for the Benediction of the Elements in the Eucharist.

The *Romanists* define it the Conversion of the Bread and Wine into the real Body and Blood of Jesus Christ; and that this is the Sentiment of that Church, is evident from the Priest's elevating the Host immediately after *Consecration*, for the People to adore it.

There is a great Controversy between the *Latin* and *Greek* Churches, touching the Words of *Consecration*: The common Opinion among the *Romanists*, agreeable to St. *Tomas* and the Schoolmen, is, that the *Consecration* of the Bread and Wine consists in these Words, *This is my Body; this is my Blood*. The *Greeks*, on the contrary, attribute the Change of the Elements to a certain Prayer which they call the *Invocation of the Holy Ghost*, rehears'd after the Words *This is my Body, this is my Blood*, which the *Greeks* maintain are only necessary in the Process of the *Consecration*, as they contain the History of the Institution; not in they contribute any thing to the Change.

Consecration, among Medallists, is the Ceremony of the *Apoteosis* of the Emperors; or their Translation into Heaven, and Reception among the Gods: The Process whereof, see under *APOTHEOSIS*.

On Medals, the *Apoteosis* is thus represented; On one side is the Emperor's Head, crown'd with Laurel, sometimes veil'd, and the Inscription gives him the Title of *Divus*: on the Reverse is a Temple, a *Bustum*, an Altar, or an Eagle taking its Flight towards Heaven, either from the Altar, or from a *Cippus*: At other times the Emperer is seen in the Air, bore up by the Eagle; the Inscription always, *Consecratio*.

These are the usual Symbols: yet on the Reverse of that of *Antoninus*, is the *Antonine Column*.

In the *Apoteosis* of Emperices, instead of an Eagle is a Peacock.

For the Honours render'd them after Death, they were explain'd by the Words *Consecratio, Pater, Divus, and Deus*. Sometimes, around the Temple or Altar are put, *Memoria felix, or Memoria Eterna*: For Princesses, *Eunias, and Sideribus recepta*; on the Side of the Head *Des, or sis*.

CONSECTARY, is a Proposition that follows, or is deduced from some preceding Definitions, *Lemma's*, *Axioms*, *Conclusions*, or the like: Whence some chuse rather to call it a *Consequence*; and others a *Corollary*, &c. See *COROLLARY*, and *CONSEQUENT*.

CONSECUTIVELY, **CONSECUTIVE**, in the School-Philosophy, is sometimes used in opposition to *antecedently*, and sometimes to *effectively*, or *causally*.

Thus, say the Schoolmen, the Corruption of one Thing is the Generation of another, not *effectively*, but *consecutively*: That is, since Matter cannot be without Form, 'tis necessary that the Generation of one Thing follow upon the Corruption of another.

CONSENT OF PARTS, in the Animal Oeconomy, a certain Agreement, or Sympathy, by means whereof, when one Part is immediately affected, another, at a distance, becomes affected in like manner. See *SYMPATHY*.

This mutual Accord, or *Consent*, is doubtless effected by the Commerce of the Nerves, and their artful Distribution and Ramification throughout the Body. See *NERVE*.

The Effect is so sensible, as even to come under the Physicians cognizance: Thus, the Stone in the Bladder, by irritating the Fibres there, will pain and draw them to much into Spasms, as to affect the Coats of the Bowels in the same manner, by the Intermediation of nervous Threads, and make a Cholick there; and also extend their Twitches sometimes so far as the Stomach, and occasion grievous Vomiting: The Remedy therefore, in such Cases, is to regard the Part originally affected, how remote and grievous soever may be the Consequences and Symptoms in other Places.

The fifth Conjunction of Nerves branch'd to the Parts of the Eye, the Ear, those of the Mouth, Cheeks, *Precordia*, and Parts adjacent, &c. are suppos'd by Naturalists to be the Instruments of that extraordinary *Consent* between those Parts: Hence it is, that a favory Thing seen or smelt, excites the Appetite, and affects the Glands and Parts of the Mouth; that a shameful thing seen or heard, affects the Cheeks with Blushes; on the contrary, if it please, it affects the *Precordia*, and excites the Muscles of the Mouth and Face to laughter; if it grieve, affects the Glands of the Eyes, so as to occasion

ocation Tears, and the Muscles of the Face, putting them into an Aspect of crying.

Dr. Willis, quoted by the Reverend Mr. Derham, imputes the Pleasure of Kissing, and its Effects in exciting Love, and even Lechery, to this Pair of Nerves; which being branch'd both to the Lips and the genital Parts, when the former are affected, an Irritation is occasion'd in the latter: And Dr. Sachs judges it to be from the Consent of the *Labia Uteri* with the *Labia Oris*, that a breeding Lady, frighted with the sight of scabby Lips, had Pulules of the like kind broke out in the *Labia Uteri*.

CONSEQUENCE, in Philosophy, the Conclusion of a Reasoning, or Argument. See CONCLUSION.

Thus, we say, two Premises of a Syllogism being granted, the Consequence must also be granted. See SYLLOGISM.

In a more restrain'd Signification, Consequence is used for the Relation or Connection between two Propositions, whereof one follows, or is infer'd from the other. Thus: *It is an Animal, and therefore perceives*.

CONSEQUENT, the last Proposition of an Argument; being something deduced or gather'd from a preceding Argumentation.

An *Enthymeme* only contains two Propositions, the Antecedent, and *Sequela*, or Consequent: If the Antecedent be absurd, the Consequent must be so too. See ENTHYME.

CONSEQUENT, in a more precise Sense, is used for the Proposition which contains the Conclusion, consider'd in it self, and without any regard to the Antecedent: In which Sense, the Consequent may be true, tho' the Consequence be false.

For Instance; Virtue ought to be rewarded; therefore Temperance is a Virtue. See PROPOSITION.

CONSEQUENT of a Ratio, in Arithmetick, the latter of two Terms of a Ratio; or that to which the Antecedent is refer'd. See RATIO, and PROPORTION.

Thus, in $a : b$, or a to b , b is the Consequent, a the Antecedent. See ANTECEDENT.

CONSERVATOR, an Officer establish'd for the Security and Preservation of the Privileges granted some Cities, Bodies, and Communities; or, a Person who has a Commission to judge of and decide the Differences arising among them.

In most Catholick Universities, there are two *Conservators*; the *Conservator* of Royal Privileges, or those granted by Kings; and the *Conservator* of Apollitical Privileges, or those granted by the Pope.

The first takes cognizance of Personal and Mixt Causes, between the Regents, Students, &c. and the latter of Spiritual Matters between Ecclesiasticks.

Antiently, there were appointed *Conservators* of Treaties of Peace between Princes; which *Conservators* became Judges of the Infractions made on a Treaty, and were charg'd with the procuring Satisfaction to be made. These were usually Feudatories of each Prince.

In lieu of *Conservators*, Princes now have recourse to other indifferent Princes to Guarantee the Treaties. See GUARANTEE.

CONSERVATOR of the Peace, in our ancient Customs, was a Person who had an especial Charge, by Virtue of his Office, to see the King's Peace kept. See PEACE.

Till the Erection of Justices of the Peace by King Edward III. there were several Persons, who by Common Law were interested in keeping the same: Some having that Charge as incident to other Offices; others simply, or of itself, called *Custodes*, or *Conservators* of the Peace. See JUSTICE.

The Chamberlain of *Chester* is still a *Conservator* in that County; and Petty Constables are, by the Common Law, *Conservators*, &c. in the first Sense.

CONSERVATORY, in Gardening. See GREEN-HOUSE.

CONSERVE, in Pharmacy and Confectionery, a dry Confect, or Form of Medicine, or Food, contriv'd to preserve the Flowers, Herbs, Roots, Peels, or Fruits of several Simples, as near as possible to what they were when first gather'd; and to give them an agreeable Taste. See CONFECT.

Conserve is made by beating up the Thing to be preserv'd with a quantity of Sugar; viz. a triple Quantity thereof to those which are most moist and corruptible, and a double Quantity to such as are least so.

The Physicians, under the Name of *Conserve*s, commonly comprehend all Kinds of Confects of Flowers, Fruits, Roots, Seeds, Barks, &c. both liquid and dry.

Thus, *e. g.* to make *Conserve* of Roses, Rosemary Flowers, Sage Flowers, or the like; they pound 'em in a stone Mortar, and when pounded, put to 'em fine Sugar, in a Glass close stop'd up.

For Fruits, as Currants, &c. they set 'em on the Fire to make 'em cast their Juice, then drain and strain 'em, and thicken what comes from 'em over the Fire, and add it to the Sugar. See PRESERVE.

CONSIDERATION, in Law, the Material Cause, the *quid pro quo* of any Contract, and without which no Contract binds. See CONTRACT, FACT, &c.

This *Consideration* is either *express'd*; as if a Man bargain to give ten Guineas for a Horse: or *implied*, when the Law it self enforces a *Consideration*; as if a Man coming into an Inn, take Meat, Drink, and Lodging for himself and Horse, the Law presumes he intends to pay for 'em, tho' there be no express Contract between him and his Host; and if he discharge not the House, the Host may stop his Horse. See ASSUMPT.

CONSIGNMENT, or CONSIGNATION, the depositing any Sum in Money, Bills, Papers, or Commodities, in safe Hands; either by order of a Court of Justice, in order to their being deliver'd to the Persons to whom they are adjudg'd; or voluntarily, in order to their being remitted to the Persons they belong to, or sent to the Places they are destin'd for.

CONSIGNMENT of Goods, is the delivering or making them over: Thus, Goods are said to be *consign'd* to a Factor, when they are sent to him to be sold, &c. or when a Factor sends back Goods to his Principal, they are said to be *consign'd* to him. See FACTOR.

CONSISTENCE, a State of Rest, wherein Things capable of Growth, or Decrease, continue for some time at a stand, without either.

The Term is particularly used with regard to Trees, for the Age beyond which they don't grow, and yet at which they don't decline. See TREE, &c.

The *Consistence* of the Age of an Oak, is from 50 to 150 Years: Some, however, hold that their *Consistence* only commences from 100 Years; asserting that they grow till that time, and that they continue in that State of Perfection to 200 Years of Age.

Thus we distinguish three States or Stages of a Tree; its Growth, *Consistence*, and Return: and these are common to all Trees, even Fruit-Trees.

CONSISTENCE, in Physicks, is that State of a Body wherein its component Particles are so connected, or intangled among themselves, as not to separate or recede from each other. See COHESION.

Consistence only differs from Continuity in this, that *Consistence* implies a regard to Motion or Rest, which Continuity does not; it being sufficient to denominate a thing continuous, that its Parts are contiguous to each other. See CONTINUITY.

Consistence is particularly used with regard to Bodies, consider'd as they are more soft or more hard, more liquid or more dry. See HARDNESS, SOFTNESS, FLUIDITY, &c.

Thus, Forms of Medicine, as Electuaries, Lambastives, Bolus's, Syrops, Unguents, &c. differ chiefly in *Consistence*. See ELECTUARY, &c.

CONSISTENT Bodies, is a Term much used by Mr. Boyle for such as we ordinarily call *firm*, or *fix'd* Bodies; in opposition to *fluid* ones. See FIXEDNESS, FIRMNESS, and FLUIDITY.

That Author has a particular Essay of the *Atmosphere* of *Consistent Bodies*; wherein he shews, that all, even solid, hard, ponderous, and fix'd Bodies, do exhale or emit *Efluvia* to a certain Space all around 'em. See ATMOSPHERE, EFFLUVIA, &c.

CONSISTORY, or the Roman CONSISTORY, is the College of Cardinals; or the Pope's Senate, and Council. See POPE.

The *Consistory* is the first Court or Tribunal of Rome: it never meets but when the Pope pleases to convoke it: The Pope presides in it in Person, mounted on a magnificent Throne, and habited in his *Pontificalia*; on the right are the Cardinal-Bishops and Priests, and on the left the Cardinal-Deacons. See CARDINAL.

The Place where it is held, is a large Hall in the Apollitical Palace, where Princes and Embassadors of Kings are receiv'd.

The other Prelates, Protonotaries, Auditors of the *Rota*, and other Officers, are seated on the Steps of the Throne; the Courtiers sit on the Ground; Embassadors on the right, and *Consistorial* and Fical Advocates behind the Cardinals.

Here are pleaded Judiciary Causes before the Pope.

Besides the publick *Consistory*, there is also a private one, held in a retir'd Chamber, call'd the Chamber of *Papegay*; the Pope's Throne here being only rais'd two Steps high.

No Body is here admitted but the Cardinals, whose Opinions are collected, and call'd *Sentences*. Here are first propos'd and pass'd all Bulls for Bishopsricks, Abbies, &c. See BULL.

Hence, *Consistorial* Bishopsricks and Abbies, are said to be *Consistorial Benefices*; in regard, they must be propos'd in the *Consistory*, the Annates be paid to the Pope, and his Bulls taken. See BENEFICE.

Antiently they were Elective; but by the *Concordate*, which abolishes Elections, they are appointed to be collated by the Pope alone, on the Nomination of the Prince. See CONCORDATE.

Du Cange derives the Word from *Consistorium*, i. e. *locus ubi consistitur*; used chiefly for a Vestibule, Gallery, or

Antichamber, where the Courtiers wait for Admission; and called *a confiteſſe multitudine*.

CONSTRUY was alſo the Name of a Court under *Conſtitutio*, where he ſat in Perſon, and heard Cauſes: The Members of this Court were called *Conites*. See **COURT**.

CONSISTORY is alſo uſed among the Reform'd, for a Council or Aſſembly of Miniſters and Elders, to regulate their Affairs, their Diſcipline and Polley.

CONSISTORY, or *Court Chriſtian*, in the *Engliſh* Laws, is a Council-houſe of Eccleſiaſtical Perſons, or the Place of Juſtice in the Eccleſiaſtical or Spiritual Court. See **COURT**.

Every Archbiſhop and Biſhop has a *Conſistory-Court*, held before his Chanceller or Commiſſary, either in his Cathedral, in ſome Chapel, Iſle, or Purſue belonging thereto; or in ſome other convenient Place of his Dioceſs, for Eccleſiaſtical Cauſes. See **ECCLESIASTICAL**.

The Spiritual Court was antiently, in the Time of the Saxons, joined with the County or Hundred Court: And the Original of the *Conſistory* Court, as divided from thoſe Courts, is found in a Law of the Conqueror, quoted by my Lord Coke.

CONSOLATION, is one of the Places in Rhetorick, whereby the Orator endeavours to abate and moderate the Grief or Concern of another. See **PLACE**.

In *Conſolation*, a principal REGARD is to be had to the Circumſtances and Relations of the Parties. *Scaliger* conſiders this exceeding well, *de Arte Poetica*: 'The *Conſolator*, ſays he, is either a Superior, an Inferior, or an Equal; with regard, either to Preſentment, Honour, Wealth, Wiſdom, or Age. Now, *Livia* is to comfort *Ovid*, in a manner very different from that wherein *Ovid* comforts *Livia*. Thus, as to Authority, a Father and Son, *Cicero* and *Pompey* are to conſider their *Conſolations* very differently: So in Wealth; as if a Client ſhould undertake to comfort *Craſſus*: In Wiſdom; as when *Seneca* comforts *Polybius* and his Mother: As to Age, there needs no Examples.

A Superior may interpoſe his Authority, and may even chide: A wife Man may even diſpute; Sentences will become him. An Inferior is to ſhew Reſpect and Affection, and own he had this from ſome wife or learned Perſon: An Equal to appeal to their common Friendſhip.

CONSOLE, in Architecture, or Joinery, a Part or Member projecting in manner of a Bracket, or Shoulder-piece; ſerving to ſupport a Corniſe, Buſt, Vaſe, Beam, little Vault, &c. See **PROJECTURE**.

Theſe are alſo, upon occaſion, call'd *Mutules*, *Modillions*, &c. according to their form. See **MUTULE**, &c.

Some of them are ſtriated, or fluted; others in form of Cartouches; others have Drops, in the manner of Triptychs. *Vitrucius* calls all theſe of Gates *Prothyrides*; of *Thyrs*, Gate. See **PROTHYRIDES**.

Theſe made of the End of a Plank of Wood, cut triangular wiſe, are called *Anceas*. See **ANEO**.

Conſoles are frequently uſed as Keys of Arches, projecting out, to ſupport a Vaſe, or other Ornament. See **KEY**.

The Word is deriv'd from the French *Conſolider*, to reunite, join, &c. agreeable to the Office of this Member.

CONSOLIDATION, in Law, the combining and uniting two Benefices into one. See **BENEFICE**.

The Term is borrow'd from the Civil Law; where it properly ſignifies an Union of the Poſſeſſion Occupation or Profit, with the Property.

Thus, if a Man have by Legacy *uſum-fructum fundi*, and afterwards buy the Property, or Fee-ſimple of the Heir; this is called a *Conſolidation*.

CONSOLIDATION, in Medicine, the Action of uniting ſtrongly the Fractures of broken Bones, or the Lips of a Wound, by means of *conſolidating Remedies*, as they are call'd; which cleaning with a moderate heat and force, raking Corruption out of the Wounds, and preſerving the Temperature of the Parts, cauſe the Nouriſhment to be ſetly applied to the Part affected. See **WOUND**, and **FRACTURE**.

CONSONANCE, in Muſick, is ordinarily uſed in the ſame ſenſe with *Concord*, viz. for the Union or Agreement of two Sounds produced at the ſame time, the one Grave, the other Acute; which mingling in the Air, in a certain Proportion, occaſion an Accord agreeable to the Ear. See **CONCORD**.

Dr. *Holder*, on this Principle, defines *Conſonancy*. 'A Paſſage of ſeveral tunable Sounds thro' the Medium, frequently mixing and uniting in their undulated Motions cauſed by the well-proportion'd commensurate Vibrations of the ſonorous Bodies, and conſequently arriving ſmooth, and ſweet, and pleaſant to the Ear; as, on the contrary, *Diſſonancy*, he maintains to ariſe from diſproportionate Motions of Sounds, not mixing, but jarring and cluſhing as they paſs, and arriving in the Ear grating and offenſive.'

Which Notion of a *Conſonance*, exactly quadrates with that we have already laid down for a *Concord*. Accordingly, moſt Authors conſound the two together: Tho' ſome of the more Accurate diſtinguiſh 'em; making *Conſonance* to be

what the Word implies, a mere ſounding of two or more Notes together, or in the ſame time; in contradiſtinction to the Motion of theſe Sounds in *Succession*, or one after the other. See **SUCCESSION**.

In effect, the two Notions coincide; for two Notes, thus play'd in *conſonance*, conſtitute a Concord; And two Notes that pleaſe the Ear in *Conſonance*, will likewise pleaſe it in *Succession*.

Notes in *Conſonance* conſtitute *Harmony*, as Notes in *Succession* *Melody*. See **HARMONY**, and **MELODY**; ſee alſo **TUNE**.

In the popular Senſe, *Conſonances* are either *Simple*, or *Compound*, &c. The moſt perfect *Conſonance* is *Union*; or the many, both among the Antients and Moderns, diſtinct it from the Number of *Conſonances*; as conceiving *Conſonance* an agreeable Mixture of different Sounds, grave and acute; not a Reiteration of the ſame Sound. See **UNISON**.

The ſecond *Conſonance* is the Octave; then the Fifth, the Fourth, the Third, and the Sixths: The reſt are Multiples, or Reiterations of theſe. See **OCTAVE**, &c.

CONSONANCE, in Grammar, is understood of like Cadences, or Cloſes of Words, Periods, &c.

Conſonances are ordinarily Faults in Diſcourſe, eſpecially in *Engliſh* Proſe: tho' the *Latins* make a Figure of 'em, which they call *quæſiſonum*. Too great a *Conſonance* in the Rhymes has always an ill effect.

CONSONANT, a Letter which produces no Sound alone, or without ſome other Letter either Vowel or *Conſonant*, join'd along with it. See **LETTER**.

And hence the Name *Conſonant*, q. d. *que ſonant cum alia*.

A *Conſonant*, conſidering it philoſophically, is nothing elſe but the Modification of a Sound, produc'd by means of the Organs of the Voice, not a Production of a Sound itſelf: Thus, o. g. the Sounds ſignify'd by the Characters *e, i, i, o, u*, &c. are diſtinctly modify'd when we ſay *ea, au*, then when we ſay *ae or ea, ad or da*; and thoſe Modifications are call'd *Conſonants*.

The Letters of the Alphabet are divided into Vowels and *Conſonants*. See **VOWEL**.

Conſonants, again, are divided into *ſingle*, as *b b n g*, &c. and *double*, as *x* in *auxiliary*, &c. correſponding to the ξ of the *Greeks*.

Again, they are divided into *liquid*, as *l r m n*; and *mute*, as *b, d*, and the reſt, which make no Sound at all without a Vowel. See **LIQUID**, **MUTE**, &c.

But the moſt natural Division of *Conſonants* is that of the *Hebrew* Grammarians; who have been imitated therein by the Grammarians of the other Oriental Languages: Theſe divide the *Conſonants* into five Clafſes, with regard to the five principal Organs of the Voice; which all contrains, 'tis true, but one more notably than the reſt, to certain Modifications, which make five general Kinds of *Conſonants*. Each Kind, or Claſs, comprehends ſeveral *Conſonants*, which reſult from the different Degrees of the ſame Modification, or from the different Motions of the ſame Organs.

Theſe Organs are the *Throat*, *Palate*, *Tongue*, *Teeth*, and *Lips*; whence the five Clafſes of *Conſonants* are determin'd *Guttural*, *Palatal*, *Lingual*, *Dental*, and *Labial*. See **GUTTURAL**, **PALATAL**, &c.

We account ſeventeen *Conſonants* in the *Engliſh* Alphabet, viz. *b, c, d, f, g, h, i, m, n, p, q, r, ſ, t, x, z*; to which there are three others to be added, viz. the *h*, the *j* *Conſonant*, and *v* *Conſonant*, which makes the whole Number of *Conſonants* twenty: one whereof is *Guttural*, viz. the *Alphabetic* *b*; five *Palatal*, viz. *c*, as when pronounced before *a, o*, and *u*, as in *Caverna*, *Cernu*, *Curieſty*; *g*, as in *Genewa*; *j* *Conſonant*, in *Julep*; *k* in *kernel*, and *q* in *query*.

The four *Lingual* *Conſonants* are *d, l, n, t*; the four *Dental*, are *r, s, x, z*, the three laſt whereof are *Hiſſing*; and five *Labial*, *b, f, m, p*, and *v* *Conſonants*.

With regard to which Division, it may be obſerv'd, that tho' the *g* be modify'd in three different manners, as it comes before an *a*, an *o*, or a *u*; yet is it ſtill a *Conſonant* of the *Palate*; that the *j* *Conſonant* differs in nothing but its Figure from the *g* before *e* or *i*; that *k* has the ſame Pronunciation with the *c*; that *x* comprehends the Sound of two Letters in its Sound, viz. *c* or *k*, and *ſ* or another *c*, as in *Alexander*, and *Alexis*, which we pronounce as if we were ſaying *Alexander*, and *Alexis*, or *Alexis*; and that the *c* before an *e* or *i*, is no *Conſonant* of the *Palate*, becauſe in that Caſe it loſes its proper Sound, and aſſumes the hiſſing Sound of the *ſ*.

The Abbot *de Dangeau* thinks the Nature of the Division of the *Hebrew* Grammarians very reaſonable; but does not acquieſce in the Distribution they have made of 'em: To find a natural and juſt Division of the *Conſonants*, he obſerves, no regard muſt be had to the Character that repreſents 'em; nor any thing be conſider'd but their Sound, or the Modification they give the Sound.

On this Principle, the same Author finds five Labial Consonants, *b, p, v, f,* and *m*; five Palatal ones, *d, s, g, k,* *n*; four Sibilants, *i, z, j, c*; two Liquids, *l* and *r*; two that run in and mix with each other, as *h* and *g*; which last, however, is peculiar to the French Language, and the *b* Aspirate.

He adds, 1st, that *m* and *n* are properly two Nasal Consonants; the *m*, a *b* pal'd thro' the Nose, and the *n* a *d*, in like manner, pronounc'd thro' the Nose; and in effect, People in a Cold pronounce *market* for *market*, *dead* for *dead*, &c.

2dly, That among the Consonants, some are weak, others strong; their difference consisting in this, That the former are preceded with a small Emission of the Voice which softens 'em; which the latter have not. The weak are *b, c, d, g, z, i*; the strong, *p, f, t, k, s, ch*.

It may be here observ'd, that when we speak of a Person's talking thro' the Nose; it must be understood in a Sense quite different from what the Words seem naturally to import: Since the Nose in this Case concurs less to the Pronunciation than if he did not speak thro' the Nose; in regard the Air not being able to make its way thro' the Nose, is return'd into the Mouth, where it forms a dull obtuse Sound, call'd *Nasal*. See VOICE.

From the whole we may conclude, that the Excess of Consonants in one Language above another only consists in this, that there are more Modifications of Sound receiv'd and established in the one than the other: For all Men having the same Organs, may form the same Modifications; so that 'tis entirely owing to Custom, nothing to Nature, that the *English* have not the θ of the *Greeks*, the *Ann* and *Herb* of the *Hebrews*, the *ch* of the *Germans*, the *gn* of the *French*, the *ll* of the *Italians*, the *ll* of the *Welsh*, &c.

That the *Chinese* have no *r*, the *Troquois* no Labial Consonants, the *Heros* abundance of Aspirates; and the *Arabs* and *Georgians* abundance of Double Consonants: which last is owing to this, that they make several Organs concur strongly and equally to the Modification of a Sound; whereas, in the rest, only one Organ is moved very strongly and faintly, and the rest weakly.

'Tis hence also visible, that in all Languages the Aspirates, or Guttural Letters, are real Consonants; since the Throat modifies the Sound as much as the Palate, Tongue, or Lips. See ASPIRATE.

Lastly, to find all the Consonants that may be form'd in any Language; there needs nothing but to observe all the Modifications that the Sound of Speech will admit of, by which we shall have all the Consonants practicable.

CONSORT, in Music. See CONCERT.

CONSPIRACY, in Law, is taken for a Combination or Confederacy to do something evil, or illegal: tho' in the original Sense of the Word, and in its use in other Languages, it signifies an Agreement, either for good, bad, or Matters indifferent.

In our Statutes and Law-Books, Conspiracy, in a general Sense, is confounded with Maintenance and Champerty. See MAINTENANCE, and CHAMPARTY.

In its special Signification, it is used for a Confederacy of two, at least, singly to indict one, or procure one to be indicted of Felony. See INDICTMENT.

The Punishment of this Confederacy, at the King's Suit, anciently was: that the Party attainted lose his Frank-Law; to the End that he mayn't be impeach'd on Juries, and the like; that his Lands, Goods, and Chattels be forfeited; his Treas' mis'd, and his Body committed to Prison.

Even Conspiracies in Cases of less moment, as those of Victuallers, touching selling of Victual, shall be grievously punish'd 27 Hen. VIII.

CONSPIRING Powers, in Mechanics, are all such as act in Directions not opposite to one another. See POWERS, and MOTION.

CONSTABLE, or Lord High CONSTABLE, an ancient Officer of the Crown; now disused in England, but still subsisting in France, where the Constable commands the Marshals, and is the first Officer in the Army.

Some derive the Word from the Saxon, and make it originally signify the Stay or Hold of the King. But others, with more probability, derive it from *Comes Stabuli*, the Master of the Stables, or perhaps of the Horse, (see COUNTRY) and suppose that the Dignity which at first was Civil, in time became Military, and the Master of the Stables made General of the Army. See MASTER.

The Function of the Constable of England, consisted in the Care of the common Peace of the Land, in Deeds of Arms, and Matters of War. To the Court of the Constable and that of the Marshals, belong'd the cognizance of Contracts, Deeds of Arms without the Realm, Combats, Blasphemy of Arms, &c. within it. See MARSHAL.

The first Constable of England was created by the Conqueror: The Office continu'd hereditary till the 13th of Henry VIII. when it was laid aside, as being so powerful as

to become troublesome to the King. Since that time, the Constable is only created occasionally.

From those mighty Magistrates, the Constables of *E. glands*, are derived those inferior ones, since call'd the Constables of *Hundredes* and *Franchises*; first ordain'd in the 13th Year of Edward I. by the Statute of *Winchester*; which, for the Conservation of the Peace, and View of Armour, appointed that two Constables should be chose in every Hundred and Franchise. See HUNDRED, and FRANCHISE.

These are what we now call *Constabularii Capitales*, or High Constables; in regard, continuance of Time and increase of People, &c. have occasion'd others of like nature, but inferior Authority, in every Town, call'd *Petty-Constables*, or *Sub-Constabularii*.

The appointing of a Petty Constable belongs to the Lords of divers Mannors, *Ture Feuds*.

Besides these, we have Constables denominated from particular Places, as Constable of the Tower, of Dover Castle, of Windsor-Castle, of the Castle of *Cararocaz*, and many other of the Castles of *Wales*; whose Office is the same with that of the *Castellani*, or Governors of Castles. See TOWER, &c.

CONSTAT, in Law, a Certificate given out of the Court of Exchequer, of all there is upon record relating to any Matter in question.

It is also used for an Exemplification or Copy of the Introduction of Letters Patent.

CONSTELLATION, in Astronomy, an Assemblage or System of several Stars, express'd and represent'd under the Name and Figure of some Animal or other thing; call'd also an *Asterism*. See STAR.

The Antients portion'd out the Firmament into several Parts, or Constellations; reducing a certain number of Stars under the Representation of certain Images, in order to aid the Imagination and the Memory to conceive and retain their Number, Disposition, and even to distinguish the Virtues which they attributed to 'em: In which Sense, a Man is said to be born under a happy Constellation, i. e. under a happy Configuration of the heavenly Bodies.

The Division of the Heavens into Constellations is very ancient; and, for ought appears, as old as Astronomy it self; at least, it was known to the most ancient Authors extant, whether sacred or profane. In the most ancient Book of *Job*, mention is made of the Names of some of 'em; witness that sublime Expostulation, *Canst thou restrain the sweet Influence of the Pleiades, or loose the Bands of Orion?* And the same may be observ'd of the odeist among the Heathen Writers *Homer* and *Hesiod*.

The Division of the Antients only took in the visible Firmament, or so much as came under their notice: Thus they distributed into 48 Constellations; twelve whereof took up the Zodiac: The Names they gave them are *Aries, Taurus, Gemini, Cancer, Leo, Virgo, Lib a, Scorpius, Sagittarius, Aquarius, Capricornus, Pisces*; from whence the Signs of the Ecliptick and Zodiac, take their Names; tho' now no longer contiguous to the Constellations which denominate them. See SIGN.

The other Stars, on the Northern Side of the Zodiac, were dispos'd into 21 Constellations, viz. *Ursa Major and Minor, Draco, Cepheus, Bootes, Corona Septentrionalis, Hercules, Lyra, Cygnus, Cassiopeia, Perseus, Andromeda, Triangulum, Auriga, Pegasus, Equuleus, Delphinus, Sagitta, Aquila, Ophiuchus or Serpentarius and Serpens*: To which have been since added *Antinous*, and *Coma Berenices*.

The Stars on the South Side of the Zodiac, were distributed into fifteen Constellations; their Names, *Cetus, Eridanus, Fluvius, Lepus, Orius, Canis Major and Minor, Argo, Hydra, Crater, Corvus, Centaurus, Lupus, Ara, Corona Meridionalis, and Piscis Australis*: To which have been since added twelve others; viz. *Polaris, Grus, Indus, Pavonis, Piscis Australis, Piscis Volans, Toucan, Hydrus, and Xiphias*. See each Constellation, and the Stars contain'd in it, under its proper Head.

Of these Constellations, the fifteen last, with the greatest Part of *Argo, Navis, Centaurus*, and *Lupus* are not visible in our Horizon.

The other Stars, not comprehended under these Constellations, yet visible to the naked Eye, the Antients call'd *Inferiores*, or *Sporades*, some whereof the modern Astronomers, have since reduced into new Figures, or Constellations. See INFORMES.

Thus, *Howellius*, v. g. between *Leo* and *Ursa Major*, makes *Leo Minor*; and between *Ursa Minor* and *Auriga*, over *Gemini*, makes *Ignis*; under the Tail of *Ursa Major*, *Canis Venatici*, &c.

In these Constellations, the Stars are ordinarily distinguish'd by that Part of the Image wherein they are found. *Boyer* distinguishes 'em further by the Letters of the Greek Alphabet: And many of 'em, again, have peculiar Names, as *Arcturus*, between the Feet of *Bootes*; *Gemini*, or *Ursula*, in the *Corona Septentrionalis*; *Polarium*, in the *Bull's* Eye,

Fly; *Pleiades* in the Back, and *Hyades* in the Forehead of the Bull; *Castor* and *Pollux* in the Heads of *Gemini*; *Capella*, with the *Hedi* in the Shoulder of *Auriga*; *Regulus*, or *Cor Leonis*; *Spica Virginis* in the Hand, and *Vindemiatrix* in the Shoulder of *Virgo*; *Antares*, or *Cor Scorpii*; *Fomalhaut*, in the Mouth of *Piscis Australis*; *Regal*, in the Foot of *Orion*; *Sirius*, in the Mouth of *Canis Major*; and the *Pole Star*, the last in the Tail of *Ursa Minor*.

The Greek and Roman Poets, out of the ancient Theology, give us wild and romantick Fables about the Origin of the Constellations; which may be seen in *Hyginus*, *Natalis Comae*, and *Ricciolus*. Hence, some out of a vain Zeal, rather than any Love for the Science, have been mov'd to alter either the Figures of the Constellations, or at least their Names.

Thus, Venerable *Bede*, instead of the profane Names and Figures of the twelve Constellations of the Zodiac, substituted those of the twelve Apostles; whose Example being follow'd by *Julius Schillerus*, in 1627, he complicated the Reformation, and gave Scripture-Names to all the Constellations in the Heavens.

Thus, *Aries*, or the Ram, became converted into *St. Peter*; *Taurus*, or the Bull, into *St. Andrew*; *Andromeda* into the Sepulchre of *Christ*; *Lyra* into the Manger of *Christ*; *Hercules* into the Magi coming from the East; *Canis Major* into *David*, &c.

Wegelinus, a Professor of Mathematicks in the University of *Jena*, made a new order of Constellations; converting the Firmament into a *Celum Heraldicum*; and introducing the Arms of all the Princes in *Europe*, by way of Constellations.

Thus, *Ursa Major*, he transform'd into the Elephant of the Kingdom of *Denmark*; the *Scorpi* into the *Ruta* with Swords of the House of *Saxony*; *Oppiducubus* into the Cross of *Cologne*; the *Triangle* into the Compasses, which he calls the *Symbol of Artificers*; and the *Pleiades* into the *Abacus Pythagoricus*, which he calls that of *Merchants*, &c.

But the more knowing among Astronomers never approv'd of these Innovations; as serving for no Purpose but to introduce Quarrels and Confusion into Astronomy. The old Constellations, therefore, are still retain'd; both because better could not be substituted, and likewise to keep the greater Correspondence and Uniformity between the old Astronomy and the new. See CATALOGUE.

CONSTIPATION, in Medicine, a hardness of the *Alvus*, or *Belly*, with a difficulty of discharging the same; otherwise call'd *Costiveness*. See COSTIVENESS.

Riding Post, eating of Medlars or Quinces, several Preparations of Milk, hard-roasted Eggs, &c. constipate the *Belly*.

A Constipation of the *Belly*, if it continue long, sometimes degenerates into the *liac Passio*. See *LIAC Passio*.

Molt Persons of a hot and dry Constitution are afflicted with a *Costiveness*, or *Constipation*: But this is seldom attended with any ill Effect.

The proper Remedy for a *Constipation* is a Clyster; if this fail, lenient Catharticks; and when they also fail, we must exhibit others of a more drastic or powerful Effect. See *Clyster*, and *Purgative*.

CONSTITUTION, an Establishment, Ordinance, Decree, Regulation, or Law, made by Authority of a Prince or other Superior, Ecclesiastical or Civil. See *LAW*, &c.

The Constitutions of the *Roman Emperors* make a Part of the *Civil Law*. See *CIVIL LAW*.

The Constitutions of the Church, part of the *Canon Law*. See *CANON LAW*.

Some of the *Papal Constitutions* are in form of *Bulls*, others of *Briefs*. See *BULL*, *BRIEF*, &c.

Apostolical CONSTITUTIONS, are a Collection of Regulations attributed to the Apostles, and supposed to have been collected by *S. Clement*, whose Name they likewise bear.

They are divided into eight Books; consisting of a great Number of Rules and Precepts, relating to the Duties of Christians, and particularly to the Ceremonies and Discipline of the Church.

Authors are divided about their Genuine-ness: The generality hold them spurious, and endeavour to prove them posterior to the Apostolical Age, and maintain they were unknown till the fourth Century; which, if so, shows *S. Clement* had no hand in 'em.

Mr. Whiston has ventur'd to oppose the general Opinion; and with some Reason, much Learning, and more Warmth, asserted the *Apostolical Constitutions* to be one of the Sacred Writings, dictated by the Apostles in their Meetings, written down from their Mouths by *S. Clement*, and intended as a Supplement to the New Testament; or, rather, as a Scheme and System of Christian Faith and Policy. See his *Essay on the Apostolical Constitutions*, and his *Historical Preface*; wherein the several Steps he made in his fancied Discovery are traced.

What makes the *Constitutions* more suspected by the Orthodox, is, that they seem to favour of *Arianism*.

CONSTITUTION, is also used in a physical Sense, for the Temperament of the Body, or that Disposition of the Whole arising from the Quality and Proportion of its Parts. See TEMPERAMENT.

Physicians have consider'd the Constitution, as depending chiefly on the Humors or Juices of the Body; and hence, as this, or that Humour was supposed to predominate, the Bile, e. g. or the Blood, Phlegm, Cholera, or Mercury; the Person was denominated of a *Bilious*, *Sanguine*, *Phlegmatic*, *Choleric*, or *Mercurial* Constitution. See *SANGUINE*, *CHOLERIC*, &c. See also *HUMOUR*, *BILE*, *CHOLEA*, *BLOOD*, &c.

CONSTRUCTION, the Act of binding, or drawing the Parts of a Thing close together. See *CONSTRUCTOR*.

CONSTRUCTOR *Labiarum*, or *Orbicularis*, a Muscle proper to the Lips. See *LIP*.

Its Fibres make a kind of Ring about the Mouth; and serve to constrict and draw up the Lips, as in Kissing, &c. whence some call it *Bastator*.

This, *Verheyen* will not have to be one Muscle, but a Pair, whose Fibres meet and join at both Corners of the Mouth; each acting on one Lip only, tho' concurrently.

Other Authors are unanimous in calling it one Muscle; and will have it of the Sphincter kind; which the *Dr. Drake* thinks improperly: in regard, it is not like the other Sphincters in constant Action, but at the Command of the Will: The distinguishing Mark between a Sphincter and another Muscle. See *SPHINCTER*.

CONSTRUCTOR *Palpebrarum*. See *ORBICULARIS*.

CONSTRUCTOR *Nasii*, a Pair of Muscles common to the *Alve* of the Nose, and the upper Lip. See *NOSE*, &c.

They arise fleshy from the Forepart of the fourth Bone of the upper Jaw; and after a slight ascent, are inserted into the Roots of the *Alve nasii*, and superior Parts of the upper Lip.

Their use is to draw the *Alve* downwards, nearer each other; and at the same time draw the upper Lip also downwards: an Action we use in taking of Snuff, or smelling of any thing.

CONSTRUCTION, in Geometry, the Art or Manner of drawing, or describing a Figure, Scheme, the Lines of a Problem, or the like. See *DESCRIPTION*, *FIGURE*, &c.

The Equality of the Lines of such a Triangle, &c. is demonstrated from their Construction. See *PROBLEM*.

CONSTRUCTION of Equations, is the Method of reducing a known Equation into Lines and Figures; whereby the Truth of the Rule, Canon, or Equation, may be demonstrated geometrically. See *EQUATION*.

This Method of construing Equations is different, according to the Diversity of Equations. For *Simple* and *Quadratic* Equations the Methods shall be here subjoin'd; as to *Cubic* Equations, Geometrical Constructions are of no use, in Practice; their Intent being better answer'd by the Method of extracting Roots by Approximation.

To Construct a simple Equation: The whole Mystery consists in this; that the Fractions, to which the unknown Quantity is equal, be resolv'd into proportional Terms: The Method of which will be better shown by Examples than taught by many Rules.

1. Suppose $x = \frac{a-b}{c}$; then will $c : a :: b : x$, to be determin'd by the Method of finding a fourth Proportional.

2. Suppose $x = \frac{a^2 b c}{d e}$; let $d : a :: b : \frac{b}{d}$. This fourth Proportional found, being call'd g ; $x = \frac{e g}{d}$ which is therefore found as in the former Case.

3. Suppose $x = \frac{a a - b b}{c}$. Since $a a - b b = (a + b)(a - b)$; $c : a + b :: a - b : x$.

4. Suppose $x = \frac{a^2 b - b^2 c}{d}$. By the first Case we find

$g = \frac{a b}{d} = \frac{a^2 b}{d a}$ and $h = \frac{b c}{d}$; Again, by Case 1, $i = \frac{h c}{d}$; and $x = g - i$, the Difference of the Lines g and i .

5. Suppose $x = \frac{a b}{c} + \frac{a d c}{b c}$. Find, as in the preceding

Case, $g = \frac{a b}{c}$, and $f = \frac{a d c}{b c}$. Then will $x = g + f$ be the Sum of the Lines g and f .

6. Suppose $x = \frac{a^2 b + b c d}{a}$. Seek $\frac{c g}{a}$, and let $f + \frac{c g}{a} = b$; then will $a f + c g = a b$; consequently, $x = \frac{a^2 b + b c d}{a b}$. Thus is the present Case brought to the preceding one.

7. Suppose $x = \frac{a^2 b - b a d}{a f + b c}$. Find $\frac{a f}{b}$, and make $\frac{a f}{b} + c = b$; Then will $a f + b c = b b$. Hence, $x = \frac{a^2 b + b a d - a a d}{b b}$. Consequently, $b : a :: a - d : x$.

8. Suppose $x = (a^2 + b^2) : c$. Construct the Triangle *ABC*, (Plate *Algebra*, Fig. 1.) whose Side *AB* = *a*, *BC* = *b*;

$=b$; then will $A C = \sqrt{(a^2 + b^2)}$. Let $A C = m$; then will $a^2 + b^2 = m^2$. And therefore $x = \frac{m^2}{c}$; consequently,

$c : m :: m : x$.

5. Suppose $x = \frac{a^2 - b^2}{c}$. On AB, (Fig. 2.) describe a Semicircle, and therein set off $A C = b$. Since the Triangle ACB is rectangular; $C B = \sqrt{a^2 - b^2}$. Let $C B = m$; then will $x = \frac{m^2}{c}$; consequently, $c : m :: m : x$.

10. Suppose $x = \frac{a^2 + b^2 + c^2}{a^2 + b^2}$. Say, $b : a :: f : \frac{a}{b}$; and let $f + a = b$; Then will $b c + a f = b b$. Hence, $x = \frac{a^2 + b^2 + c^2}{a^2 + b^2} = (a^2 + c^2) : b$. Find per bixit $A C = c$, (Fig. 3.) and $C B = d$, a Mean Proportional $C D = \sqrt{c d}$. Let $C E = s$; then will $D E = V(a^2 - c d)$. Call this m ; then will $x = \frac{m^2}{b}$; consequently, $b : m :: m : x$.

15. *CONSTRUC* a quadratic Equation Geometrically. Since Quadratic Equations may be reduced to simple ones, (See EQUATION) those may likewise be constructed from the Methods already laid down: For if the Equation be pure, $x^2 = a b$; then will $a : x :: x : b$; wherefore, we shall find $x = \sqrt{a b}$; if between $A C = a$, (Fig. 4.) and $B C = b$, we find a Mean Proportional D C. If this Equation be affected, $x^2 + a x = b^2$; Then will $x = \frac{1}{2} a + \sqrt{\frac{1}{4} a^2 + b^2}$; that is, either $x = \frac{1}{2} a + \sqrt{\frac{1}{4} a^2 + b^2}$ or, $x = \sqrt{\frac{1}{4} a^2 + b^2} - \frac{1}{2} a$. The whole Mytery, therefore, of constructing Quadratics comes to this; that the Value of $\sqrt{\frac{1}{4} a^2 + b^2}$, and also the Value of $\sqrt{\frac{1}{4} a^2 - b^2}$ be found; both of which are shown in the preceding Article. For, if in the Rectangular Triangle, (Fig. 1.) $A B = \frac{1}{2} a$ and $B C = b$; then will $A C = \sqrt{\frac{1}{4} a^2 + b^2}$. But if on $A B = \frac{1}{2} a$, (Fig. 2.) be described a Semicircle; and therein applied $A C = b$; $C B = \sqrt{a^2 - b^2}$, as was shown in the Article preceding. See EQUATION.

CONSTRUCTION, or SYNTAX, in Grammar, the arranging and connecting the Words of a Sentence; according to the Rules of the Language. See GRAMMAR, WORD, SENTENCE, SYNTAX, &c.

The Construction is generally more simple, easy, and direct in the modern Tongues than in the ancient; we have very few of those Inversions which occasion so much Embarrass and Obscurity in the Latin; our Thoughts are usually deliver'd in the same Order wherein the Imagination conceives 'em: The Nominative Case, for Instance, always precedes the Verb, and the Verb goes before the oblique Cases it governs.

The Greeks and Latins, M. St. Evremont observes, usually end their Periods, where, in good Sense and Reason, they find have begun; and the Elegance of their Language consists, in some measure, in this capricious Arrangement, or rather in this transposal and disorder of the Words. See LANGUAGE.

Construction is either Simple or Figurative: Simple, is that wherein all the Terms, or Parts of the Discourse are placed in their natural Order.

Figurative Construction, is that wherein we recede from this Simplicity, and use certain Expressions, shorter, and more elegant than Nature affords. See FIGURE.

The Syntax, or Construction of Words, is distinguish'd into two Parts, Concord, and Regimen, or Government. See CONCORD, and REGIMEN.

CONSUALIA, Feasts held among the Ancients, in honour of the God *Consus*, i. e. *Neptune*. See FEAST.

They were introduced with a magnificent Cavalcade, or Procession on Horseback; by reason *Neptune* was reputed to have first taught Men the use of Horses; whence his Surname of *Troicus, Equestris*.

Esander is said to have first instituted this Feast: It was established by *Romulus*, under the Name of *Consus*; in regard it was some God under the Denomination of *Consus*, that suggested to him the Rape of the *Sabines*.

'Tis said, that it was with a View to this Rape, that he made this Establishment. This, however, is certain, that it was to this Feast all his Neighbours were invited; when, taking advantage of the Solemnities and Sacrifices, he seiz'd the Women. To draw the greater Concourse of People, he gave out, that he had found an Altar hid under Ground, which he intended to consecrate, with Sacrifices to the God to whom it had been originally erected.

Those who take on 'em to explain the Mysteries of the Heathen Theology, say, That the Altar hid under Ground is a Symbol of the secret Design of *Romulus* to seize his Neighbour's Wives.

The *Consualia* were of the Number of Feasts call'd Sacred; as being consecrated to a Divinity.

Originally, these Feasts and Games were not distinguish'd from those of the Circus; whence it is, *Valerius Maximus*

says, that the Rape of the *Sabines* was effected at the Games of the Circus. See CIRCUS.

Plutarch observes, that during the Days of this Solemnity, Horses and Asses were left at rest, and were dress'd out with divers Crowns, &c. on account of its being the Feast of *Neptuneus Equestris*. *Festus* says, the Cavalcade was perform'd with Mules; it being an Opinion, that this was the first Animal us'd to draw the Car.

Servius gives us to understand, that the *Consualia* fall on the 15th of August; but *Plutarch* and *Dionysius* place it in the Month of March.

The *Consualia* differ'd from other Feasts of the same Deity, call'd *Neptunalia*. See NEPTUNALIA.

CONSUBSTANTIAL, in Theology, a Term of equal import with *Co-essential*; denoting something of the same Substance with another; See SUBSTANCE.

Thus, the Orthodox believe, the Son of God to be consubstantial with the Father. See TRINITY, FATHER, &c.

The Term *ipsius*, *Consubstantial*, was first adopted by the Fathers of the Council of *Nice*, to express the Orthodox Doctrine the more precisely, and to serve as a Barrier and Precaution against the Errors and Subtilties of the *Arians*; who own'd every thing excepting the *Consubstantiality*.

The *Arians* declared that the Word was God, as having been made God; but denied that he was the same God, and of the same Substance with the Father: Accordingly, they exerted themselves to the utmost to abolish the Use of the Word. The Emperor *Constantine* used all his Authority with the Bishops, to have it expung'd out of the Symbols; but it still maintain'd it self, and is at this Day, as it was then, the distinguishing Criterion between an *Arhanasian* and an *Arian*.

Sandius will have it, the Word *Consubstantial* was unknown till the Time of the Council of *Nice*; but 'tis certain it had been before propos'd to the Council of *Antioch*, wherein *Paulus Samosatensis* had been before condemn'd; tho' it had there the fortune to be rejected. *Council*, on the other hand, maintains, that it was an Innovation in Doctrine in the Council of *Nice*, to admit an Expression, the use whereof had been abolish'd by the Council of *Antioch*.

According to S. *Arhanasius*, the Word *Consubstantial* was only condemn'd in the Council of *Antioch*; inasmuch as it contain'd the Idea of a pre-existent Matter, prior to the Things form'd thereof: Now, in this Sense, 'tis certain, the Father and the Son are not *Consubstantial*, there having been no pre-existent Matter.

CONSUBSTANTIATION, a Tenet of the *Lutheran* Church, with regard to the manner of the Change made in the Bread and Wine in the Eucharist. The Divines of that Profession maintain, that after Consecration, the Body and Blood of our Saviour are substantially present, together with the Substance of the Bread and Wine; which is call'd *Consubstantiation*, or *Impanation*. See IMPANATION, TRANSCONSUBSTANTIATION, LUTHERANISM, &c.

CONSUETUDINIBUS ET SERVITIS, in Law, a Writ of Right, which lies against the Tenant that desoreth his Lord of the Rent or Service due to him.

CONSUL, the chief Magistrate of the *Roman* Commonwealth.

The *Consuls* were the chief of the Senate; they commanded the Armies of the Republick, and were supreme Judges of the Differences between the Citizens. In regard, however, they had made some abuse of this Power, it was allow'd, by the *Valerian Law*, for the Party aggriev'd to appeal from their Tribunal to the People; especially in Cases where the Life of a *Roman* Citizen was concern'd.

In progress of Time, the *Consuls* being too much taken up with the grand Affairs of State, or at the Heads of Armies, there were other Magistrates created for the Distribution of Justice to the People, in lieu of the *Consuls*. See PRÆTOR.

After the *Romans* had expell'd their Kings, they were govern'd by two *Consuls*, establish'd in the Year of *Rome* 240; having their Name à *consulendo*. *Brutus* and *Collatinus* were the first, elect'd by an Assembly of the People: Their Office was to hold a Year; and if either of 'em died in the Course of the Year of their *Consulate*, a new one was elect'd.

To be elect'd *Consul*, it was requir'd that the Candidate should be at least 45 Years old. The Election was held in the Month of *January*, in the *Campus Martius*; afterwards in the Capitol.

Consuls were even continu'd under the Emperors, after the Republick was destroy'd: But the Office of *Consul* was here little else but an honourable Title; which, however, the People were fond of keeping up; as esteeming it some Remnant of their ancient Liberty.

It dwindled for a long time; and at last, became absolutely extinct in the Time of *Justinian*: after whom, no Emperor either created any *Consul*, or assumed the Dignity himself.

Basil is the last in the Consular List, for the Year 541. By this time, the Dignity was depreciated to that degree, that it was confid'd on the meanest Persons: Indeed, *Justinian* endeavour'd to retrieve it 25 Years after, and created himself *Consul*, but without effect.

From the Establishment of the Republick, and the *Consulate* under *L. Jun. Brutus* and *L. Tarq. Collatinus*, to the *Consulate* of *Basil*, i. e. from the Year of *Rome* 244 or 245; 509 Years before *Jesus Christ*; to the Year of *Rome* 1293, the Space of 1049 Years were accounted by the *Consuls*: But from the Time of *Basil*, in the Year of *Christ* 540, we find no mention made of *Consuls* or *Consulates*; but the Time was computed by the Years of the Emperors Reigns, and the Indictions.

Indeed, for some time after the *Consulate* of *Basil*, the Years are mark'd thus; *Pest consulatus Basilii*, 1, 2, 3, &c. See the *Falsi Consulares* of *M. d'Almeida*. That Author reckons 1060 *Consuls*, beside the substitute *Consuls*, *Spesseli*, elected to supply Vacancies by Death; and yet there were but 1049 Years, and consequently only 50 many *Consulates*. See *FESTI*.

The perpetual *Consulates* of the Eastern Emperors, which compose the *Falsi Bizantini*, commenced in the Year of *Christ* 567, and ended in 668, in the last Year of *Constantine*.

Constantine Pogonates would have the *Consulate* inseparable from the Empire; which it continued to be till the Time of *Constantine Porphyrogenetes*.

In this form of Government, the Empire and *Consulate* were to be closely united, that the Emperors *Irene* would needs assume the *Consulate*, when she was only Regent of the Empire.

But the *French Kings*, those of *Italy*, and the *Saracen* Princes who commanded in *Spain*, taking on 'em the Title of *Consuls*, as well as Emperors of *Constantinople*; these last despid'd it, and laid it aside: so that the Name was only continu'd to the Magistrates of some Cities, and certain other Officers, as is shewn by *F. Pagi*.

Under the Emperors there were Ordinary *Consuls*, *Honorary Consuls*, and *Spesseli*; which last were also on foot in the Time of the Republick.

In the middle Age, we find the Word *Consul* used for *Comes*, Count, and *Proconsul* or *Viccount*; as is observ'd by *Spelman*, and *M. de Marca*. See *COUNT*.

CONSUL, at present, is used for an Officer establish'd by virtue of a Commission from the King, and other Princes, in the Ports and *Faictories* of the *Levant*, on the Coasts of *Africa*, *Barbary*, *Spain*, and other foreign Countries of any considerable Trade; to facilitate and dispatch Business, and protect the Merchants of the Nation. See *COMMERCE*, and *FACTORY*.

Their Commissions are never granted to Persons under the Age of 30 Years. When the *Consulate* is vacant, the most ancient of the Deputies of the Nation are to discharge the Function thereof, till the Vacancy be fill'd up by the King.

The *Consuls* are to keep up a Correspondence with the Ministers of *England* residing in the Courts whereon their *Consulates* depend. Their Business is to support the Commerce, and the Interest of the Nation; to dispose of the Sums given, and the Presents made to the Lords and Principals of Places; to obtain their Protection, and prevent the Insults of the Natives on the Merchants of the Nation. See *COMPANY*.

There are *Consuls* of other Nations establish'd in the *Levant*, especially *French* and *Dutch*.

CONSULS are also Judges, elected among Merchants and Dealers, in Ports and trading Towns chiefly in *France*; to terminate, gratis, and on the Spot, without any Process, such Differences and Demands as shall arise relating to their Merchandizes, Bills of Exchange, and other Articles of Commerce.

The first Jurisdiction of *Consuls* establish'd in *France*, is that of *Abbeville*; the Edict of whose Establishment bears date 1549, under the Reign of King *Henry II*. that of *Paris* follow'd fourteen Years afterwards. By degrees, they were establish'd in most of the considerable trading Towns in that Kingdom.

CONSUL, in our Law-Books, signifies an *Earl* or *Count*, *Comes*. See *EARL*, and *COUNT*.

In the Laws of *Edward* the Confessor, Cap. 2. it is express'd, That what we now call a *County*, *Comitatus*, was by the ancient *Britons* nam'd *Consulatus*, *Consulatus*; and those now call'd *Vicounts*, *Vicecomites*, were then call'd *Viceconsuls*.

CONSULTATION, in Law, a Writ whereby a Cause formerly removed by Prohibition from the Ecclesiastical Court to the King's Court, is return'd thither again.

If the Judges of the King's Court, upon comparing the Libel with the Suggestion of the Party; find the Suggestion false, or not prov'd; and therefore the Cause to be wrongfully call'd from the Court Christian: Then, upon such Deliberation, or Consultation, they decree it to be return'd again. And the Writ obtain'd hereon is call'd a *Consultation*.

CONSUMMATION, the End, Period, or Completion of any Work.

Thus, we say, the *Consummation* of all Things; meaning the End of the World. See *CONFLAGRATION*.

By the Incarnation, all the Prophecies are said to be consummated. See *PROPHECY*.

Consummation of a Marriage, is the last Act of Marriage, which makes its Accomplishment; or the most intimate Union between the married Pair. See *MARRIAGE*, *DIVORCE*, &c.

CONSUMPTION, *Tubercles*, in Medicine, a Disease arising from a Defect of Nourishment; or, a preternatural Decay of the Body, and particularly by a gradual waste of muscular Flesh.

It is frequently attended with an *Hectic Fever*; and is divided by Physicians into several Kinds, according to the Variety of its Causes; as *Universal*, or *Scorbatic Consumption*, where it arises from a *Cacoehymia*, or *Scorbatic Habit*; and a *Pulmonic Consumption*, or *Consumption of the Lungs*, where it arises from some Cause in the Lungs, properly call'd a *Phtisis*. See *PHTHISIS*, and *SCORBUTUS*.

A *Consumption* may either be *Accidental*, *Natural*, or *Hereditary*: *Accidental*, which may arise, 1st, from Ulcers, Chalky Stones, or Polypus in the Lungs; caused by something that obstructs the Circulation in the Pulmonary Vessels, or renders the Blood viscid; as a Suppression of any natural Evacuations. 2d, From Intemperance, occasioning either a *Cacoehymia*, or *Plethora*. 3d, From *Peripneumonia*, *Pleuritis*, *Asthma*, *Coughs*, *Cararras*, *Diarrrhas*, *Veneral Disorders*, and Excess of *Venery*. 4th, From Grief, bad Study, &c.

A *Natural Consumption* may arise from the Straitness of the Thorax, or an ill Conformation of the Parts. An *Hereditary* one may be communicated from the Parents, without any other visible Cause.

A *Consumption* usually begins with flying Pains, and Stitches; Pain at the Pit of the Stomach, or in the Diaphragm; frequent Spitting, loss of Appetite, a quick Pulse, a Sweetness or Saltness in the Saliva, Heat and Flushings in the Face and Palms of the Hands after Meals, an *Hectic Fever* toward the Evening, Heaviness, Faintness, Night Sweat; and where the Lungs are first disorder'd, a Cough, *Catarrh*, or *Asthma* usually precede it.

When these Symptoms are violent, 'tis confirm'd; and then comes on an Expectoration of purulent or bloody Matter, and the *Venica Pulmonum*; at length, the Feet swell, the Expectoration stops, a *Diarrhea* comes on; then the *Facies Hippocratica*, and Death.

The Cure of an *Universal*, or *Muscular Consumption*, depends principally upon Removal into a proper Air, and the using of a regular nourishing Diet: the Appetite is to be excited by proper Bitters, and other Stomachics.

In a *Pulmonary Consumption*, or *Phtisis*, Balsamicks, and oleaginous Medicines are to be added. See *PHTHISIS*.

Dr. Whistler, indeed, takes the Particles of oily Medicines to be too gross and viscid to enter the small Orifices of the Lacteals; and thinks, that their Operation or Effect being confin'd to the first Passages, they are not only of no service in the Cure, but are apt to pall the Appetite, occasion Obstruction in the Mouths of the Lacteals, and *Diarrhea*.

But this is contrary to common Experience: That diet Particles are small enough to enter the Lacteals, is evident from the sudden relief Nephritic Persons find in violent Pyroxyms of the Stone, by the Passages being relax'd soon after their Exhibition. That *Diarrhea*, and blunting the Appetite, in some Constitutions, will be the Consequence of their Continuance, or Exhibition in too great Quantities, must be allow'd; but then this is either accidental to some Kinds of Constitutions, or from some Error in using 'em.

As to the Lacteals being obstructed by their use, 'tis a mere Notion, and as much unsupported by Experience as that other Hypothesis, which a late Author, *Dr. Quincy*, has been fond of asserting, viz. that the Use of Butter is apt to foul the Glands. See *HECTIC*.

CONTACT, the relative State of two Things that touch each other, or whose Surfaces join to each other without any Interstice.

Thus, we say, the *Contact* of two spherical Bodies, is only in one Point; and the same holds of the Tangent and the Circle.

Hence, because very few Surfaces are capable of touching in all Points, and the Cohesion of Bodies is in proportion to their *Contacts*, those Bodies will stick fastest together, which are capable of the most *Contact*. See *CONCISION*.

Angle of CONTACT, is the Angle HLM, (Tab. *Geometry*, Fig. 43.) form'd by the Arch of a Circle ML, with the Tangent HL, at the place of their *Contact*.

Euclid demonstrates, that the right Line IL, standing perpendicularly on the Radius CL, cuts the Circle only in one Point: Nor can there be any other right Line drawn between the Tangent and the Circle.

Hence, the Angle of *Contact* is less than any rectilinear one; and the Angle of the Semicircle between the Radius *CL* and the Arch *ML*, greater than any rectilinear acute Angle.

This Paradox of *Euclid* has exercis'd the Wits of Mathematicians: It was the Subject of a long Controversy between *Pelotarius* and *Clauius*; the first of whom maintain'd the Angle of *Contact* heterogeneous to a rectilinear one; as a Line is heterogeneous to a Surface: the latter maintain'd the contrary. *Dr. Wallis* has a formal Treatise on the Angle of *Contact*, and of the Semicircle; where, with other great Mathematicians, he approves of the Opinion of *Pelotarius*.

See *TANGENT*.

CONTAGION, or *Infection*, the communicating or transferring of a Disease from one Body to another. See *DISEASE*.

Contagion, in some Diseases, is only effected by an immediate *Contact*, or Touch: as the Madness of a Dog, which is communicated by biting; and the Venom of the Fox, which is transmitted from the infected Person in the Act of Copulation. See *HYDROPHONIA*, and *VENEREAL Disease*. In others it is convey'd by infected Clothes; as the Itch. See *ITCH*.

In others the *Contagion* is transmitted thro' the Air to a great distance, by means of Streams or Effluvia exproing from the Sick; as in the Plague, and other pestilential Distempers: in which Case, the Air is even said to be *contagious*, i. e. full of *contagious* Particles. See *PLAGUE*, *POISON*, &c.

CONTEMPLATION, an Act of the Mind, whereby it applies it self to consider, reflect on, and admire the wonderful Works of God, Nature, &c.

Contemplation, among the mystick Divines, is defin'd a simple, amorous View of God, as present. This *Contemplation* consists in Acts so simple, so direct, so uniform and peaceful, that there is nothing for the Mind to take hold on, whereby to distinguish it. See *MYSTICS*.

In the *Contemplative* State, the Soul is to be entirely passiv, with regard to God; to be in a continual Repose, without any Reurbation or Motion; free from the Activity of sensual Minds, which must agitate themselves, to have their Operation sensible. Hence, some call *Contemplation* a Prayer of Silence and Quietude.

Contemplation is not a Ravishment, or an extatic Suspension of all the Faculties of the Soul; but 'tis something juster, 'tis Peace and infinite Pleasantness; leaving it perfectly dispos'd to be mov'd by the Divine Impressions of Grace, and the better to follow the Divine Impulse.

Contemplation is the height of Perfection of the mystick Divines.

CONTEMPORARY, or *COTEMPORARY*, a Person, or Thing of the same Time, or that lives in the same Age with another.

Thus we say, *Socrates*, *Plato*, and *Aristophanes* were *Contemporaries*: the best Histories are those of *contemporary* Authors.

CONTENEMENT, a Word in our ancient Law-Books, about whose Signification Authors are not agreed. According to some, it should signify the Countenance, Credit, or Reputation a Person has, with and by reason of his Freehold. And in such Sense it is us'd in the Stat. 1 *Edw. III.* &c. where it stands as synonymous with Countenance.

Others will have it signify what is necessary for the Support and Maintenance of Mon according to their several Qualities, Conditions, or States of Life. Thus, *Spelman*, *Continentum est Assimatio & Conditionis forma qua quis in Republica subsistit*.

CONTENT, a Term frequently us'd for the Capacity of a Vessel, or the Area of a Space; or the Quantity of any Matter or Space included in certain Bounds. See *AREA*; see also *SUPERFICIES*, and *SOLID*.

The *Content* of a Tun of round Timber is 43 solid Feet. A Load of hewn Timber contains 50 Cubic Feet: In a Foot of Timber are contain'd 1728 cubic or square Inches, and as often as 1728 Inches are contain'd in a Piece of Timber, so it round or square; so many Foot of Timber are contain'd in the Piece. See *TIMBER*.

In Gaging, the Gallon for Beer and Ale is allow'd to contain 282 Cubic Inches, and the Wine Gallon 231: the Gallon of dry Measure 272. See *GALLON*; see also *MEASURE*.

Hence, as oft as 282 Cubic Inches are contain'd in any Vessel round or square, so many Gallons of Ale or Beer it holds; and the like may be observ'd of the other Measures.

Multiply, therefore, one side of a Square or Oblong into the other; and divide by one of those Numbers, according to the Quality of the Liquor; the Quotient gives the Area in Gallons, upon an Inch deep.

Tho' the Work may be shorten'd by only multiplying the Sides of Squares, or the Diameters of Rounds into themselves; the Product is the Number of Gallons, and Parts the Vessel contains, upon an Inch in Depth: and when that receives an Augmentation, by being 2, 3, or 4 Inches deep,

it then commences a solid Body, and contains as many Gallons and Parts, as 'tis Inches and Parts deep.

A Cubic Foot contains 6 Gallons, and almost a Pint, of Ale and Beer; and 7 Gallons, 2 Quarts of Wine. A Cubic Foot of dry Measure contains 6 Gallons and a half, and something more. A Bushel of Salt contains 56 Pound Averdupois.

CONTENTIOUS Jurisdiction, in Law, *Forum Contentiosum*, a Court, or Assembly, which has a Power to judge and determine Differences between contending Parties.

The Lords Chief Justices, Judges, &c. have a *Contentious Jurisdiction*: But the Lords of the Treasury, the Commissioners of Customs, &c. have none; being merely Judges of Accidents.

CONTEXT, among Divines and Critics, that Part of Scripture, or other Writing, which lies about the *Text*; before or after it, or both. See *TEXT*.

To take the full Sense of the Text, the *Context* should be regarded.

CONTIGNATION, in the ancient Architecture, the Act of laying Rafters, *igna*, together; and particularly, flooring. See *FLOORING*.

CONTIGUOUS, a Relative Term, understood of Things dispos'd so near each other, that they join their Surfaces, or touch. See *CONTACT*.

The Houses in ancient Rome were not *contiguous* as ours are, but all insulated.

CONTIGUOUS Angles, in Geometry, are such as have one Leg common to each Angle; otherwise called *adjoining Angles*; in contradistinction to those produced by continuing their Legs thro' the Point of *Contact*, which are called *opposite* or *vertical Angles*. See *ANGLE*, &c.

CONTINENT, in Geography, a *Terra firma*, Main-land, or large extent of Country, not interrupted by Seas; in opposition to *Island*, &c. See *EARTH*, *OCEAN*, &c.

Thus, *Sicily* is said to have been antiently torn from the *Continent of Italy*; and 'tis an old Tradition, which some of our Antiquaries have still a regard to, that *Britannia* was antiently a part of the *Continent of France*.

The World is ordinarily divided into two grand *Continents*, the old and the new: The old comprehends *Europe*, *Asia*, and *Africa*; the new the two *Americas*, North and South.

The antient *Continent* is also called the *upper Continent*, from a vulgar Opinion, that it possesses the upper Part of the Globe. See *TERRAQUEOUS Globe*.

'Tis doubted whether *Japan* be an Island, or join'd to the *Continent*; the same may be said of *California*.

Some Authors are of Opinion, the two grand *Continents* are in reality no more than one; imagining the Northern Parts of *Tartary* to run out and meet those of *N. America*.

CONTINENT Cause of a Distemper, is that whereon the Disease depends so immediately, that it continues so long as that remains, and no longer. See *DISEASE*.

Thus, a Stone in the Bladder may be the *Continent Cause* of the Suppression of Urine. See *STONE*, &c.

CONTINENT Fever, is that which goes on to a Crisis without any Intermission, or Remission. See *FEVER*.

CONTINGENT, something casual, or uncertain. See *CHANCE*.

Future CONTINGENT, in Logick, is a conditional Proposition, which may or may not happen, according as Circumstances fall.

The *Stoicins* maintain, that God cannot see *future Contingents*, because depending on the free Motion of the Will.

CONTINGENT is also a Term of Relation for the Quota that falls to any Person upon a Division.

Thus, we say, each Prince of *Germany*, in time of War, is to furnish so many Men, so much Money, and Munition for his *Contingent*. By the new Treaty of *Hanover* it is stipulated, that in case of a Rupture with the Emperor, the Kings of *Great Britain* and *Prussia* may furnish their *Contingents*, as Elects of the Empire, at the same time they are at War therewith.

CONTINGENT Use of Law, is an Use limited in a Conveyance of Land, which may or may not happen to vest, according to the *Contingency* express'd in the Limitation of such Use.

CONTINGENT Line, or *Line of CONTINGENCY*, in Dialling, is a Line that crosses the Substyle at right Angles. See *SUBSTYLE*, and *DIALLING*.

CONTINGENTS is sometimes us'd by the Mathematicians in the same Sense as *Tangents*. See *TANGENT*.

CONTINUAL Claim. See *CONTINUAL CLAIM*.

CONTINUANCE, in Law, the same as *Prærogativa* among the Civilians. See *PRÆROGATIVA*.

CONTINUANCE of a Writ, or *Actio*, is from one Term to another, in a Case where the Sheriff has not return'd or executed a former Writ issued out in the said *Actio*.

CONTINUANCE of Assise. If a Record in the Treasury be alledge'd by one Party, and deny'd by the other; a *Certiorari* shall be sued to the Treasurer and Chamberlain of the Exchequer: who, if they certify not that the said Record is there,

there, or likely to be in the Tower; the King shall send to the Justices, repeating the Certificate, and will them to continue the Assize.

CONTINUANDO, in Law, a Term us'd where a Plaintiff would recover Damages for several Trespasses in the same Action.

For, to avoid multiplicity of Suits, a Man may in one Action of Trespass recover Damages for forty or more Trespasses; laying the first to be done, with a *Continuance* to the whole Time wherein the rest of the Trespasses were done; which is done in this form, *Continuando transgressivum predictam, &c. a predicto die, &c. usque, &c.*

CONTINUED QUANTITY, } **SEC CONTINUUM**, and **CONTINUED BODY**, &c. } **CONTINUITY**.

CONTINUED FEVER, is such an one as does not intermit, or go entirely off, and return again, by Fits. See **FEVER**.

A *continued Fever*, may be defined the *Continuance* of an increase'd Velocity in the Circulation of the Blood, beyond what is natural to the Constitution.

If this Velocity often decreases, and rises again to the same height, it is called a *Continued periodical Fever*.

And if it entirely cease in the Space of a Day, or two, it is call'd an *Ephemeric*. See **EPHEMERIS**.

A *Continued Fever*, then, may remit, or abate and increase again, alternately; but not intermit, which would constitute it an intermitting Fever, or Ague. See **REMITTING**, and **INTERMITTING FEVER**.

CONTINUED, or *Thorough Bass*, in Musick, is that which continues to play, constantly; both during the Recitatives, and to sustain the Choir, or Chorus. See **BASS**.

CONTINUED PROPORTION, in Arithmetick, is that wherein the Consequent of the first Ratio is the same with the Antecedent of the second; as, 3 : 6 :: 6 : 12. See **PROPORTION**.

On the contrary, if the Consequent of the first Ratio be different from the Antecedent of the second, the Proportion is said to be *discrete*; as, 3 : 6 :: 4 : 8. See **DISCRETE**.

CONTINUITY, is usually defined among the Schoolmen, the immediate Cohesion of Parts in the same *Quantum*. Others define it a Mode of Body, whereby its Extremes become one. And others, a State of Body resulting from the mutual Implication of its Parts. See **PART**.

There are two Kinds of *Continuity*, *Mathematical*, and *Physical*: The first is merely imaginary, and fictitious; since it supposes real or physical Parts where there are none.

Physical Continuity, is, strictly, that State of two or more Parts, or Particles, whereby they appear to adhere, or constitute one uninterrupted Quantity, or *Continuum*; or between which we perceive no intermediate Space. See **CONTINUUM**.

The Schoolmen distinguish two other sorts of *Continuity*, viz. *homogeneous* and *heterogeneous*. The first, where our Senses do not perceive the Bounds, or Extremes of the Parts; and this agrees even to Air, Water, &c. The second, where our Senses do indeed perceive the Extremes of certain Parts, yet at the same time observe the same Parts closely link'd to each other; either in virtue of their Situation or Figure, &c. and this is chiefly attributed to the Bodies of Animals and Plants.

The *Continuity of Bodies*, is a State merely relative to our sight and touch: e. g. if the distance of two separate Objects be such, as that the visual Angle they subtend is insensible to the Eye, which it will if less than 16 Seconds; the two separate Bodies will appear *contiguous*.

Now, the Result of several *contiguous* Objects is a *Continuity*; so that any Number of visible Objects, being plac'd so as that their Distances subtend an Angle of less than 16 Seconds, they will appear to form one *Continuum*.

And hence, as we can determine the Distance at which any given Magnitude becomes invisible; 'tis easy finding at what distance any two Bodies, however remote from each other, will appear as contiguous; and several, as forming one *Continuum*. See **CONTIGUOUS**.

For the *Physical Cause* of Continuity, or Cohesion. See **COHESION**.

CONTINUUM, or *Continued Quantity*, in Physicks, a Quantity or Coextension, whose Parts are not divided, but join'd and connect'd together; so as to leave no room to determine where one begins and another ends. See **CONTINUITY**.

'Tis controverted among Philosophers, whether a *Continuum* be infinitely divisible, i. e. divisible into infinite proportionable Parts. See **DIVISIBILITY**.

Mathematicians divide Quantity into *continued* and *discrete*. See **QUANTITY**.

Continued Quantity is that express'd by Lines, and makes the Subject of Geometry. See **LINE**, and **GEOMETRY**.

Discrete Quantities, are those express'd by Numbers, which make the Subject of Arithmetick. See **DISCRETE**; see also **NUMBERS**.

In Medicine and Chirurgery, Wounds, Ulcers, Fractures, &c. are express'd by the Word *Solutio Continui*, or *Solution of Continuity*. See **SOLUTIO**.

In a critical Sense, we say, there is to be a *Continuity*, i. e. a *Connection* between the Parts of a Discourse.

In the *Epopee*, particularly, the Action should have a *Continuity* in the Narration; tho' the Events or Incidents be not continued. As soon as ever the Poet has open'd his Subject, and brought his Persons on the Stage, the Action is to be continu'd to the End: Every Character must be at work; and no such thing as an idle Person to be seen. See **ACTION**.

F. Boffin observes, that by retrenching dull languishing Incidents, and Intervals void of Action, which break the *Continuity*, the Poem acquires a *contin'd Force*, which makes it run equally throughout.

The Antients attributed the Rise of Water in Pumps, to the love of *Continuity*, and the Abhorrence of a Vacuum; in regard the Weight and Pressure of the Air was not then known.

CONTOBADITES, a Sect of Hereticks in the Vith Century.

Their first Leader was Severus of Antioch, who was succeeded by John the Grammarian, firm'd *Phislogoson*, and one *Theodofus*; whence their Followers were called *Aqueotes* and *Theodofians*. See **AGNOTES**.

Part of them, who were willing to receive a Book compos'd by *Theodofus* on the Trinity, made a separate Body, and were call'd *Contobadites*, from I know not what Place, which Nicephorus does not mention, but which must apparently have been the Place where they held their Assemblies.

The *Contobadites* allow'd of no Bishops; which is the only Circumstance that Historians give us of them.

CONTORSION, the Action of twisting, or wresting a Member of the Body out of its natural Situation.

Thus, we see Rope-Dancers accustom themselves to *Contorsions* of their Limbs from their Youth, to render the Fibres of their Articulations lax, and supple to all Kinds of Postures. See **POSTURE**.

CONTORSION is also us'd passively for the State of a Thing, e. g. of a Member that is awry.

The *Contorsion of the Neck*, is occasion'd, according to Nucke, by the Relaxation, or Paralysis of one of the Mastoid Muscles: for hence it happens, that its Antagonist, whose Power is now no longer balanced, contracting with its proper Force, draws the Head towards its side. See **PALSY**.

He adds, that this Disorder cannot be remedied too speedily; and prescribes from the beginning, Liniments capable of relaxing and softening the Fibres; to be us'd, not only to the Muscle in Contraction, but also and principally to the relax'd paralytick Muscle, which is the Seat of the Disorder.

CONTOUR, the *Outline*, or that which terminates and defines a Figure. See **FIGURE**.

A great Part of the Skill of the Painter consists in managing the *Contours* well. See **PAINTING**.

The *Contour* of a Figure, makes what we call the *Drawing*, or *Design*. See **DESIGN**.

The *Contour* of a Face, the Italian Painters ordinarily call the *Lineaments* thereof.

CONTOURNE, in Heraldry, is us'd when a Beast is standing or running with its Face to the sinister-side of the Escutcheon: they being always supposed to look to the Dexter-side, unless it be otherwise express'd.

CONTOURNIATED, a Term us'd among Antiquaries for a kind of Medallions, struck with a certain hollowed all around, which leaves a Circle on each side; and with Figures that have scarce any Relief, in comparison with the true Medallions. See **MEDALLION**.

They have their Name from their Edges, which appear as if turn'd in the Lath.

All we have remaining of these *contourniated* Medals seem to have been made about the same time. F. Hardouin conjectures them to have been struck about the XIIIth Century; other Antiquaries go back as far as the Vth.

The Manner of the Work seems to have had its Origin in Greece; and to have been appropriated to honour the Memories of great Men; principally, those who had bore away the Prize at the Solomon Games: Such are those remaining of Homer, Solon, Euclid, Pythagoras, Socrates, Apollonius Thyaneus, and several Athletes, whose Victories are express'd by Palms and Chariots, either *Bigae* or *Quadrigae*.

CONTRABAND, or **CONTRABANDED COMMODITY**, in Commerce, a *prohibited Commodity*; or a Merchandise bought or sold, imported or exported, in prejudice and contrary to the Laws and Ordonnances of a State, or the publick Prohibitions of the Prince. See **COMMERCE**, **MERCHANT**, &c.

The Word comes from the Italian *Contrabando*, i. e. contrary to Edict, or Publication of Prohibition.

Contraband Goods are not only liable to Confiscation themselves; but do also subject thereto all other allowed Merchandises found with 'em in the same Box, or Bale, together with the Hories, Waggon, &c. which conduct them to the same. See **CONFISCATION**.

CONTRADICTION, in a Legal Sense, a Person who has a Right or a Quality to *contradict*, or gain say: Thus, an Inventory of the Effects of a Minor ought to be made in presence of his Guardian, or Trustee, who is the Legal *Contradictor*: A Decree against a Farmer has no Effect on the Landlord, the first not being the legitimate *Contradictor*.

CONTRADICTIONARY Propositions, are Opposites, one of which imports a mere and naked denial of the other. See **OPPOSITE**.

Of these, therefore, one must be positive, and the other negative; as, sitting, and not sitting; white, and not white.

Contradictory Propositions mutually destroy each other. See **PROPOSITION**.

To have two Propositions truly *contradictory*, they must be opposite both in Quantity and Quality, i. e. one must be universal and the other particular, which makes the Opposition of Quantity; and the one Affirmative and the other Negative, which makes the Opposition in Quality. See **OPPOSITION**.

Thus, *e. g.* All wine of France and Silver is evil; 'tis false: Some wine of France and Silver is not evil; 'tis true.

To this it is necessary that the one deny, and the other affirm the same thing, of the same Subject, consider'd in the same Circumstances; in which Case the Question be about an essential Attribute; and in such Case, no regard is had to Circumstances; every thing having always its own Essence.

This the Logicians express by *Affirmare & negare idem, de eodem, secundum idem*.

There may likewise be *Contradictory Propositions* on a particular Subject, *e. g.* an individual: These are called *single Contradictory Propositions*; as, Peter is just; Peter is not just, or is a Sinner. Now, to have these Propositions *contradictory*, Peter must be consider'd at the same Time; without which they may be both true: since there was a Time wherein Peter was just, and another wherein he was a Sinner.

CONTRA-FISSURE, in Medicine, a Term apply'd to that Species of Fracture in the Skull, where the Side opposite to that where the Blow was receiv'd, is crack'd. See **FISSURE**.

The usual Symptoms attending a *Contra-fissure*, are a Delirium, sometimes a bleeding at the Nose and Mouth, Stupidity, an involuntary passing of the Urine and Excrements, Convulsions, &c.

If these happen, and after search made in the Part where the Injury was receiv'd, no Fracture or Depression of the Skull be found, there is suspicion of a *Contra-fissure*; especially if the Patient be apt to point to that Part.

If the Symptoms be by Intervals, and not to a great degree, or there be reason to believe the Fissure to have reach'd only thro' one of the Tables, 'tis sufficient to denude the Bone, and use a Raspatory; then to fill the Rima, or Crack with proper Powders, of Iris, Gum, Myrrh, Powder of Diapente, &c. and above all apply a Pledget dip'd in Tincture of Euphorbium, or of equal Parts of Spirits of Wine, and Honey of Roses.

If these fail, the Trepan must be had recourse to. See **TREPANING**.

CONTRA-HARMONICAL Proportion, that Relation of three Terms, wherein the Difference of the first and second, is to the Difference of the second and third, as the third is to the first. See **PROPORTION**.

Thus, *e. g.* 3, 5, and 6, are Numbers *contra-harmonically* proportional; for 2 : 1 : 1 : 6 : 3.

To find a Mean *contra-harmonically proportional* to two given Quantities. The Rule is; Divide the Sum of the two squared Numbers by the Sum of the Roots; the Quotient is a *contra-harmonically* mean Proportional between the Roots. See **HARMONICAL Proportion**.

CONTRA-INDICATION, is an Indication which forbids that to be done which the main scope of a Disease points out. See **INDICATION**.

Suppose, *e. g.* in the Cure of a Disease a Vomit were judg'd proper; if the Patient be subject to a vomiting of Blood, 'tis a sufficient *Contra-Indication* as to its Exhibition.

CONTRAMANDATIO Placiti, in our ancient Law-Books, signifies a respiting, or giving the Defendant farther time to answer; or, an Imparance, or countermanding of what was formerly order'd.

Contramandatum is a lawful Excuse, which the Defendant by his Attorney sledged for himself, to shew that the Plaintiff has no cause to complain; *Si dies placiti sit contramandatus*. 11 Hen. 1.

CONTRAMURE, in Building, an Out-wall, built about the Wall of a City. See **WALL**, **RAMPART**, &c.

CONTRAPOSITION, in Logicks, See **CONFUSION**.

CONTRARIETY, that which denominates two Things contrary to each other. See **CONTRARY**.

Contrariety consists in this, that one of 'em imports a Negation of the other, either mediately or immediately; so that *Contrariety* may be said to be the Contrast or Opposition of two Things, one of which implies the absence of the other. See **OPPOSITION**.

CONTRARY Things, or **CONTRARIES**, are positive opposites; which being of the same Kind, or same common Nature, and subsisting by turns in the same Subject, are as remote from each other as possible, and mutually exclude each other. See **OPPOSITE**.

Such are Whiteness and Blackness, Cold and Heat, &c.

Hence, properly speaking, only Qualities can be *Contraries*. *Contrariety* only agrees to Qualities *per se*; to other things it agrees *per accidens*, or *in ordine ad Qualitatem*. See **QUALITY**.

Contrary, however, is often used in a more extensive Signification, *viz.* for any Inconsistence or difference between the Nature and Qualities of Things.

'Tis a popular Maxim in Philosophy, that *contraria in se posse magis elucefcunt*; *Contraries set off one another*.

In this Sense, the Word *Contrary* is used in the Schools; as, An Argument *à contrario*; *e. g.* If Bodies whose Surfaces are ragged don't reflect any Light, polish'd Bodies must, by the Rule of *Contraries*, reflect it.

This Method of proving Things *à contrario*, is much used, and with good Success, by F. Bourdaloue in his Sermons.

The Schools use the Word *Contraries* in a still more precise Signification, as implying two positive Things, which cannot subsist together in the same Subject, but destroy or expel each other; as Heat and Cold, Dryness and Moisture.

CONTRARY, in Rhetorick. F. de Colonia lays down three Kinds of *Contraries* in Rhetorick, *viz.* *Adversatives*, *Privatives*, and *Contradictories*.

Adversatives are those that differ much in the same Thing, as Virtue and Vice, War and Peace: Thus *Zully*, *Si studium fugimus, sapientiam sequamur*; & *bonitatem, si malitiam*. Thus *Quintilian*, *Malerum causa bellum est, et emendatio pacis*. Thus *Draucus* argues in *Virgil*, *Nullo salus bello: pacem te postumus omnes*.

Privatives are Habits, and their Privations. See **PRIVATIVE**.

Contradictories are those, one whereof affirms, and the other denies the same Thing, of the same Subject. See **CONTRADICTIONARY**.

CONTRAST, in Painting and Sculpture, expresses an Opposition, or difference of Position, Attitude, &c. of two or more Figures; contriv'd to make Variety in a Painting. See **DESIGN**.

Thus, when in a Group of three Figures, one is shown before, another behind, and a third sidewise, there is said to be a *Contrast*. See **GROUP**.

M. de Piles defines *Contrast* an Opposition between the Lines which form the Objects; by means whereof they set off one another.

A *Contrast* well manag'd, is one of the greatest Beauties of a Painting.

The *Contrast* is not only to be observ'd in the Position of several Figures, but also in that of the several Members of the same Figure: Thus, if the right Arm advance the farthest, the right Leg is to be hindmost; if the Eye be directed one way, the right Arm to go the contrary way, &c. See **FIGURE**.

The *Contrast* must be pursued even into the Drapery. See **DRAPEARY**.

To **CONTRAST**, in Architecture, is to avoid the Repetition of the same Thing, in order to please by Variety; as is done in the great Gallery of the *Louvre*, where the Pediments are, alternately, arch'd and angular.

The Word comes from the Italian *Contrastare*, to oppose, thwart; and that, according to M. Huert, from the Latin *Contrastatio*.

CONTRAST-WHEEL, in Clock-work. See **WHEEL**; see also **CLOCK**, and **WATCH**.

CONTRAVALLATION, or the *Line of CONTRAVALLATION*, in Fortification, is a Trench guarded with a Parapet; usually cut round about a Place by the Besiegers, to secure themselves on that side, and to stop the Salles of the Garrison. See **LINE**.

It is without Musket-shot of the Town; so that the Army forming a Siege, lies between the Lines of *Circumvallation* and *Contravallation*. See **CIRCUMVALLATION**.

CONTRAVENTION, a Man's failure of performing or discharging his Word, Obligation, Duty, or the Laws and Customs of the Place.

The Penalties imposed in Cases of *Contravention*, only pass for Comminatory.

In a more limited Sense, *Contravention* implies the Non-execution of an Ordinance, or Edict.

Contravention is suppos'd to be a degree below *Prevarication*; and to be only the Effect of Negligence, or Ignorance. See **PREVARICATION**.

CONTRA-YERVA, a Root brought from Peru; it is esteem'd an Alexiterial, and a sovereign Antidote against Poison.

It is said to take its Name from *Yeros*; which in the Spanish signifies white Hellebore, a Plant whose Juice is a violent Poison, used by the *Peruvians* to poison their Arrows.

rows withal; in which Sense, *Contra-verosa* signifies *Counter-poison*.

The Root is smaller than that of the Iris, reddish without and white within, knotty, and fibrous. To be good, it must be new, heavy, and of a dusky red Colour.

In Small it resembles Fig-leaves; its Taste is Aromatic, accompany'd with some Acrimony.

There is an Official Composition which takes its Name from this Root, prepar'd with the Testaceous Powders, call'd *Lapis Contrayerva*. Both the Root and *Lapis Contrayerva* are of great efficacy in the Small Pox, Measles, Fevers, and all Cases where either a Diaphoresis or Perspiration is requir'd; its Success being more to be depended on than the *Scissors Powder*; which, among the more knowing, begins to lose ground.

It is agreed on, by the generality of Writers, that the *Contra-verosa* Root is one of the best Anti-epidemics yet known. Dr. Hodges, in his Treatise of the last *Loudon-Plague*, has a Receipt which he says was attended with great Success, and of which this Root was one of the chief Ingredients. See *PLAGUE*.

There is another Kind of *Contra-verosa*, brought from *Virginia*, more ordinarily call'd *Viperina*, very aromatic & seldom prescribed, the said to have the same Success against Rificos and Venoms with the *Contra-verosa* of *Peru*.

CONTRE-COMPONE.

CONTR-CHANGED,

CONTR-DANDE,

CONTR-BARRE,

CONTR-CHEVRONNI,

CONTR-ERMINE,

CONTR-ESCARTELE, &c.

In Heral-

dry. See

CONTRIBUTION, the Payment of each Person's Quo-
ta, or of the Part he is to bear in some Imposition, or com-
mon Expence.

Contributions are either *Involuntary*, as those of Taxes and Imposts; or *Voluntary*, as those of Expences for carry-
ing on some Undertaking for the Interest of the Community.

In a Military Sense, *Contributions* are particularly us'd for the Conventions between the Governors of the Frontier
Places and the Enemy; in order to secure themselves from
being pillag'd and insulted.

The Protestants till their Ground under the Faith of *Contri-
butions*, as securely as in time of profound Peace.

CONTRIBUTIONE *facienda*, a Writ which lies where
several Persons are jointly bound to the same Thing, and one
or more of 'em refuse to contribute their share.

E. g. If Tenants in Common, or Joint, hold a Mill *pro
indiviso*, and equally share the Profits thereof; the Mill
falling to decay, and one or more of 'em refusing to *contri-
bute* to its Reparation, the rest shall have this Writ to
compel them.

And if there be three Coparceners of Land that owe Suit
to the Lord's Court, and the Eldest performs the whole; &
then may the have this Writ to compel the Refuser to a
Contribution.

CONTRITION, in Theology, a real Sorrow, resulting
from the Thought of having offended God; from the sole
Consideration of his Goodness; without any regard to the
Punishment the Sin is intitled to. See *REPENTANCE*.

Some of the *Remiss* Doctors avow, notwithstanding the
Practice of their Church, that *Contrition* is valid, and car-
ries with it every thing necessary to obtain Pardon, without
the Ceremony, or as they call it, the *Sacrament of Confes-
sion* and Absolution. See *CONFESSION*, and *ABSOLUTION*.

And in this they make the difference between *Contrition*
and *Attrition* to consist. See *ATTRITION*.

This Doctrine was lately maintain'd by F. *Segneus* up-
on S. *Augustin*; but was confut'd by the Faculty of *Paris*.

CONTROL, COMPTROLL, or CONTROLE, is,
properly, a double Register, kept of Acts, Issues, &c. of the
Officers or Commissioners in the Revenue, Army, &c. in
order to perceive the true State thereof, and to assure the
Truth, and the keeping of the Acts subject to that Register-
ment. See *REGISTER*. Hence,

CONTROLLER, or COMPTROLLER, an Officer
establish'd to *control*, or to keep the Register call'd *Con-
trol*; and to certify, on occasion, whether the Things have
been *control'd* or not. Thus, we have,

CONTROLLER of the King's Household, or of the Accounts
of the Board of Grecu-Clot. See *HOUSEHOLD*, and *GREEN-
CLOTH*.

CONTROLLER General of the Customs. See *CUSTOMS*.

CONTROLLER of the Navy. See *NAVY*.

CONTROLLER of the Mint. } See *MINT*.
CONTROLLER of the Excise. } See *EXCISE*.
CONTROLLER of the Account of the Army; of the Cham-
ber, &c. See *CHAMBER*, &c.

CONTROLLER of the Hamper, is an Officer in Chancery,
attending the Lord Chancellor daily in Term and Seal
time. See *CHANCERY*.

This Officer is to take all Things seal'd from the Clerk
of the Hamper, inclos'd in Bags of Leather, and to note the
just Number and Effect of all Things so receiv'd; and to
enter 'em in a Book, with all the Duties belonging to the
King and other Officers for the same, and to charge the
Clerk of the Hamper with 'em. See *HAMPER*.

CONTROLLER of the Pipe, an Officer of the Exchequer,
who writes out Summons twice a Year, to levy the Farms
and Debts of the Pipe. See *PIPE*, and *EXCHEQUER*.

He was antiently call'd the *Duplex Ingressator*.

CONTROLLERS of the Peil, are Officers of the Exchequer,
whereof there are two, viz. two Chamberlains Clerks, who
keep a *Controll* of the Peil, of Receipts, and Goings-out:
Originally they took Notes of other Officers Accounts, in
order to discover if they did amiss. See *PEIL*.

CONTROVER, in Law, he who of his own Head de-
vises or invents false or feign'd News.

CONTROVERSIAL Divinity. See *POLEMICAL Di-
vinity*.

CONTUMACY, in Law, *Contempt*; or a Refusal to ap-
pear in Court when legally summon'd.

The Word is us'd in Civil, as well as Criminal Matters;
but more rarely in the first, wherein the Word *Desist* ordi-
narily supplies its Place: The Refusing of the Charges
of a Defeat judg'd at the hearing is also the Penalty of *Con-
tumacy*.

In a Criminal Sense, the *Contumacious* is condemn'd,
not because the Crime is proved on him, but because he is ob-
stinate. By the *Roman Laws*, there was no Process in case of
Contumacy, during the first Year of absence: they only took
an Inventory of the Goods of the Fugitive, and if he died
in the Year, he died *integri status*; but after the Year was
expir'd he was deem'd culpable.

In *England*, *Contumacy* is prosecuted to Outlawry. See
OUTLAWRY.

In *France*, all *Contumacies* are annull'd, if the Accus'd
make his Appearance in five Years; if he die in that Time,
his Relations are permitted to purge his Memory.

CONTUSION, *Bruiſe*, in Medicine, a Solution of Con-
tinuity, either in Flesh or Bone, occasion'd by a Fall, a Blow,
or a violent Pressure, whereby the Flesh is broke, the Skin
still remaining entire; and an Effusion of Blood ensues, from
several little broken Vessels, so as to discolour the Skin, tho'
it don't make its way thro' the Pores thereof.

Or, *Contusions* may be defin'd a particular sort of Tumors;
attended with a Stagnation of the Blood in the Part affec-
ted; and, generally, with an Inflammation, Discolouration,
and Pain. See *TUMOUR*.

Contusions are either *internal*, or *external*. When from
any external Injury, there proceeds an internal Disorder,
e. g. an Ailthum, spitting of Blood, or the like, the *Contu-
sion* is said to be *internal*. If only external Symptoms ap-
pear, as a Tumour, Blackness, &c. it is term'd *external*.

In case of inward *Contusions*, bleeding the Patient is ne-
cessary, and balsamicks must be given internally, such as
Spermaceti, Powder of *Rhubarb*, *Irish Slate*, oleaginous and
pectoral Medicines, &c. External proper for *Contusions*, are
Liniments or Ointments of Marshmallows, Oil of sweet Al-
monds, Spirit of Wine with Camphire; proper Fomenta-
tions and Strengthening Emplastirs; as that of *Oxyracetum*,
&c. according as the Nature of the *Contusion* and Part *con-
tus'd* requires.

CONVENT, a Monastery of Religious, of the one or
the other Sex. See *MONASTERY*.

The Word comes from the Latin *Conventus*, Meeting, of
Convenire.

CONVENTICLE, a diminutive of *Convent*; denoting,
properly, a Cabal or secret Assembly of a Part of the Monks
of a *Convent*, to make a brigade in the Election of an Abbot.

From the ill Use of these Assemblies, the Word is come
into disrepute; and now stands for any seditious or irregular
Assembly.

F. *Donnein* observes, the Occidentals always citem'd the
Vth General Council an unlawful *Conventicle*.

The Term *Conventicle* is said by some to have been first
attributed, in *England*, to the Schools of *Wickliff*: Now it
is apply'd to the Meetings of Nonconformists.

CONVENTION, a Treaty, Contract or Agreement be-
tween two or more Parties. See *TREATY*, &c.

Every Convention between Men, provided it be not con-
trary to Honesty and good Manners, produces a natural Obliga-
tion, and makes the Performance a Point of Conscience.
See *OBLIGATION*.

Every *Convention* has either a Name, and a Cause or Consideration, or it has none: In the first Case, it obliges civilly and naturally; in the latter only naturally. See *CONTRACT*.

CONVENTION is much used both in ancient and modern Pleadings for an Agreement, or Covenant. See *COVENANT*.

Hence, *Conventio facienda*, a Writ that lies for breach of Covenant in writing.

In the Book of Rolls of the Manor of *Hatfield* in *Torkshire*, we have a Record of a pleasant *Convention*, *Anno 11. Ed. III.* between *Robert de Roderham* and *John de Iben*, the latter of whom sold the Devil in a string for three-pence halfpenny to the former, to be deliver'd on the fourth Day after the *Convention*: when, the Purchaser making his demand, the Seller refus'd to give him livery; to the great Loss (as the Record represents it) of forty Shillings to the Purchaser, &c. But it appearing to the Court that such a Plea does not lie among Christians; the Parties were adjourn'd to Hell for Judgment.

CONVENTION is also the Name given to an extraordinary Assembly of Parliament, or of the States of the Realm, held without the King's Writ. See *PARLIAMENT*.

The *Convention of Estates*, in 1688, after the Retreat of *K. James II.* upon mature Deliberation, came to a Conclusion, that *K. James*, by his Practices here, and his Flight hence, had abdicated the Kingdom; and that the Throne was vacant; and therefore devolv'd upon *King William* and *Queen Mary*. See *ABDICATION*.

Upon this their Assembly expir'd, and a Parliament was summon'd in their stead.

There was a *Convention* of the like kind in *Scotland*, and with the like effect.

CONVENTIONE, in Law, is a Writ which lies for the Breach of any Covenant. See *COVENANT*.

Fitzherbert calls it a Writ of *Covenant*.

CONVENTUAL something belonging to a Convent. See *CONVENT*.

CONVENTUAL, is particularly used for a Religious who actually resides in a Convent; in contradistinction to those who are only Hells, or are entertain'd there, or are in possession of Benefices depending on the House.

Conventual Prior differs from a *Claustal Prior*, in that the former has the full right and Authority of an Abbot; the only difference between 'em being in the Name: Whereas the *Claustal Prior* is a Dependant on the Abbot, and derives all his Authority from him. See *PATOR*, and *ABBOT*.

The *Conventual Prior* is oblig'd to assume the Priesthood in a Year, or at most in two Years, from the Day of his Admission: in default whereof, the Benefice becomes vacant.

Some Priors are actually *Conventual*, i. e. are flock'd with Religious; others are only *Conventual* by habitude, &c. where there have been no Religious during the space of 40 Years: The Continuance of one single Religious, keeps the *Priory Conventual Act*; for in default of one the *Priory* becomes simple.

By a Declaration of the King of *France*, in 1680, 'tis decid'd, that a *Conventuality* never degenerates in any lapse of time, while there are regular Places subsisting in it for twelve Religious, with Revenues for their support. See *PRIORY*.

CONVENTUAL Church. See *PARISH*.

CONVERGING, or *CONVERGENT Lines*, in Geometry, are those which continually approximate, or whose distance becomes continually less and less. See *LINE*.

In opposition to *divergent Lines*, whose distance becomes continually greater. See *DIVERGING*.

Lines that *converge* one way, *diverge* the other.

CONVERGING Rays, in Dioptricks, are those Rays which in their Passage out of one Medium, into another of a different Density, are refracted towards one another; so, as if far enough continu'd, they meet in a Point, or Focus. See *RAY*, *REFRACTION*, &c.

Thus, all convex Lenses make the Rays *converge*, and concave ones to *diverge*, i. e. the one inflects 'em towards a Centre, and the other deflects 'em from it; and the more, as such Lenses are Portions of smaller Spheres. See *CONCAVE*, and *CONVEX*.

On which Properties, all the Effects of Lenses, Microscopes, Telescopes, &c. depend. See *LENS*, *MICROSCOPE*, &c.

Rays coming *converging* out of a denser Medium into a rarer, become more *convergent*, and concave sooner than if they were to continue their Motion thro' the first. See *MEDIUM*.

Rays coming *converging* out of a rarer into a denser Medium, *converge* less, and concave later, than if they had continued their Motion thro' the first.

Parallel Rays, passing from a denser into a rarer Medium, e. g. from Glass into Air, the Surface of the Glass being towards the Air, will become *convergent*, and concave in a Focus. See *PARALLEL*.

Diverging Rays, or Rays coming from a Point, under the same Circumstances, become *converging*, and meet in a

Focus; and as the radiant Point comes nearer, the Focus goes further off: If the Radiant be near, the Focus will be infinitely distant; i. e. the Rays will be parallel: And if the Point be brought nearer still, the Rays will *diverge*. See *DIVERGENT*; see also *CONVEXITY*, *CONCAVITY*, and *PARALLELISM*.

CONVERGING Series, in Mathematicks, a Method of Approximation, or coming still nearer and nearer towards the true Root of any Number, or Equation; even tho' it be impossible to find any such true Roots in Numbers. See *APPROXIMATION*; see also *SERIES*, *QUADRATURE*, &c.

CONVERSE, in Geometry, &c. A Proposition is said to be the *Converse* of another, when, after drawing a Conclusion from something first suppos'd, we proceed to suppose what had been before concluded, and to draw from it what had been suppos'd. See *CONVERSION*.

Thus, 'tis demonstrat'd in Geometry, That if the two Sides of a Triangle be equal, the two Angles opposite to those Sides are equal also: The *Converse* of the Proposition is, That if the two Angles of a Triangle be equal, the two Sides opposite to those Angles are equal also.

In Astrology, *Converse Direction* is used in opposition to *direct Direction*; i. e. by the latter, the Promoter is carried to the Significator, according to the Order of the Signs; by the former it is carried from East to West, and contrary to the Order of the Signs.

CONVERSION, in a moral Sense, a return from Evil to Good; resulting from a Sense, either of the natural Deformity of the one, and Amiability of the other; or of the Advantages and Disadvantages that await the one and the other.

Or, It is a Change of the Heart, with a regard to the Morals, Passions, Desires, Pursuits; and of the Mind, with regard to the Sentiments, &c.

CONVERSION, *CONVERSIO*, in Logicks, a Circumstance, or Affection of Propositions, wherein the Order of the Terms, or Extremes is changed; so that the Subject comes into the Place of the Predicate, and the Predicate into that of the Subject; without any Alteration in the Quality of either.

As, *No Virtue is Vice, No Vice is Virtue*: in which we see the Subject of the former, made the Predicate of the latter, and the Predicate the Subject; yet both true.

Conversion is usually defined a *due Change of the Order of the Extremes*, i. e. under such a Habitudo and Coherencia, with respect to each other, that the one is rightly infer'd from the other. Hence, in every legitimate *Conversion* two Things are requir'd; 1st, A Communication or Reduplication of Terms; not in respect of Words but of Order. 2^d, The Inference of one Proposition out of the other.

Aristotle makes two Kinds of *Conversion*; the one *Simple*, by others call'd *Universal*; wherein nothing is chang'd beside the Order of Extremes, i. e. the Terms are transpos'd, without altering either the Quality or Quantity thereof: As, *No Mind is Body, No Body is Mind*.

The 2^d, *per Accidens*, call'd also *particular*; wherein, beside changing the Places of the Terms, there is a Change of an universal Sign into a particular one: As, *Every good Man studies the Welfare of his Country, Some Men that studies the Welfare of his Country is good*.

To these, some of *Aristotle's* Followers add a third Kind of *Conversion*, call'd by *Contraposition*: As, *Every Man is an Animal, Every no-Animal is no-Man*.

CONVERSION, in Rhetorick, &c. is understood of Arguments which are return'd, retorted, and shewn on opposite Sides, by changing the Subject into the Attribute, and the Attribute into the Subject.

There are *Conversions* of Arguments; from one Figure to another, and from general Propositions to particular ones.

Thus *Cicero* against *Anthony*; *Dolens tres exereitas P. R. interfectos? interfecti Antonianis. Desideratis clarissimos viros? eosque vocis eripuit Antonianis. Autoritas in hoc ordinis afflicta est? afflicta Antonianis*.

CONVERSION, in War, is when the Soldiers are order'd to present their Arms to the Enemy, who attack 'em in Flank, whereas they were before suppos'd to be in Front: The Evolution necessary thereto is call'd *Conversion*, or *Quarter-wheeling*. See *QUARTER-WHEELING*.

CONVERSION of Equations, in Algebra, is when the Quantity sought, or any Part thereof, being in Fractions, the Whole is reduc'd to one common Denomination; and then omitting the Denominators, the Equation continu'd in the Numerators only. See *EQUATION*, and *FRACTION*.

Thus, suppose $a - b = \frac{aa + cc}{b + b}$; multiply all by b , and it will stand thus, $ab - db = aa + cc + db + db$.

In Arithmetick, we use the Term *Proportion by Conversion of Ratio*, for a Comparison of the Antecedent, and Consequent in two equal Ratios. See *RATIO*.

Thus, as there is the same Ratio between 2 and 1, as between 8 and 12; 'tis concluded there is the same Ratio between 2 and 1, as between 8 and 4.

CONVERSIONS. See *CONVERT*.

CONVERT, a Person who has undergone a Conversion.

See CONVERSION.

Converts is chiefly used in respect of Changes from one Religion or Religious Sect to another.

Converts, with relation to the Religion turn'd to; are denominated Apostates, with regard to that they have relinquish'd. See APOSTATE.

The Jews formerly converted to Christianity in England, were called Converts. Henry III. built 'em a House in London, and allow'd 'em a competent Subsidence for their Lives; which House was called *Domus Conversorum*. The Number afterwards increasing, they grew a Burden to the Crown; upon which they were distributed among the Monasteries: and after the Expulsion of the Jews under Edward III. the *Domus Conversorum* was given for Keeping of the Rella. See ROLLS.

Converts, in a Monastick Sense, are *Lay-Friers*, or *Brothers*, admitted for the Service of the House; without Orders, and not allowed to sing in the Choir. See LAY.

Till the 11th Century, the Word was us'd for Persons who embrac'd the Monkish Life at the Age of Discretion, by which they were distinguish'd from those devoted in their Childhood by their Parents, call'd *Oblati*. See OBLATE.

But in the 13th Century, when they began to receive into Monasteries illiterate Persons, incapable of being Clerks, and only desin'd for Bodily Labour; the Signification of the Word was chang'd. P. Mabillon observes, that it was John first Abbot of Vallombrosa, who first introduc'd these *Brothers-Converts*, distinguish'd by their State from the Monks of the Choir, who were then either Clerks, or capable of becoming so.

CONVEX. CONVEX MIRROR. } See CONVEXITY. CONVEX LENS. } LENS.

CONVEXITY, the exterior Surface of a *Convex*, i. e. a gibbous and globular Thing; in opposition to *Concavity*, or the inner Surface, which is hollow or depress'd. See CONCAVITY.

The Word is of particular import in Catoptricks and Dioptricks; where 'tis apply'd to Mirrors and Lenses. See MIRROR, and LENS.

A *Convex Mirror* represents its Images smaller than the Objects; as a concave one represents 'em larger: A *convex* Mirror reflects the Rays from it, diverging; and therefore diffuses and weakens their Effect: as a concave one reflects them converging; so as they concur in a Point, and have their Effect increas'd; and by how much the Mirror is a Partion of a smaller Sphero, by so much does it diminish the Objects, and disperse the Rays the more. See MIRROR.

A *Convex Lens* is either *convex* on both sides, called a *Convex-Convex*; or 'tis plain on one Side and *convex* on the other, call'd a *Plano-Convex*: or concave on one Side and *convex* on the other, call'd a *Concavo-Convex*, or *Convexo-Concave*, as the one or the other Surface prevails; i. e. as this or that is a Partion of a smaller Sphero.

All *Convex Lenses* inflect the Rays of Light in their Passage, i. e. send them out from their *convex* Surface converging; so as that they concur in a Point, or *Focus*. See CONVERGENT.

Hence, all *Convex Lenses* magnify, i. e. represent their Images larger than their Objects; and this the more, as they are Partions of smaller Spheres. See LENS, REFRACTION, &c.

CONVEYANCE, in Law, a Deed, or Instrument, by which Lands, &c. are convey'd, or made over by the Proprietor, or Owner thereof, to some other Person. See DEED.

CONVICT, in Common Law, is one that is found guilty of an Offence, by the Verdict of a Jury. See CRIMINAL, VERDICT, &c.

According to *Crompton*, a Person is also a *Convict*, or said to be *convicted*, when, after having been outlawed, he appears and confesses. See OUTLAWRY.

Convictions and *Attainders* are frequently confounded. See ATTAINER, and ATTAINED.

A *Convict Recusant*, is he who has been legally presented, indicted, and *convict* for refusing to come to Church to hear the Common Prayer, according to the Statutes 1 and 23 Ric. and 3 Jac. 1.

This is commonly understood to be a Popish Recusant; tho' any others that refuse coming to Church on the same Account are as properly denominated Recusants. See RECUSANT.

CONVICTION, in Theology, the first degree of Repentance; wherein the Sinner becomes sensible of his Guilt, of the evil Nature of Sin, and the danger of his own ways. See REPENTANCE.

CONVICTION, in LAW. See CONVICT.

CONVIVUM, *Banquet*, in our ancient Customs and Law-Books, signifies the same Thing among the Laity, as *Procurator* among the Clergy; viz. when the Tenant is oblig'd, in virtue of his Tenure, to provide Meat and Drink for his Lord once or oftner in the Year.

CONVOCACTION, a *National Synod*, or general Assembly of the Clergy; summon'd by the King's Writ to consult of the more weighty Affairs of the Church, as of as a Parliament is *convok'd* to consult of those of the State. See SYNOD, CLERGY, &c.

The King's Writ is dress'd to the Archbishop of each Province, requiring him to summon all Bishops, Deans, Archdeacons, Cathedral and Collegiate Churches, &c.

Upon which, the Archbishop directs his Mandate to his Dean Provincial, first citing him peremptorily; then willing him, in like manner, to cite all the Bishops, Deans, &c. and all the Clergy of his Province; but directing, withal, that one Proctor sent for each Cathedral and Collegiate Church; and two for the Body of the inferior Clergy of each Diocese may suffice: Which the Dean accordingly does.

The Place where the *Convocation* of the Province of *Canterbury* has been usually held is *St. Paul's Church*; whence, of late, they have been prorog'd to *St. Peter's in Westminster*, in the Chapel of *Henry VII.* or the *Jerusalem-Chamber*, were there is an upper and lower House.

The bigger House, in the Province of *Canterbury*, consists of 22 Bishops, whereof the Archbishop is President; all, at the opening of a *Convocation*, in their scarlet Robes and Hoods.

The lower House consists of 22 Deans, 24 Prebendaries, 54 Archdeacons, and 44 Clerks, representing the Diocesan Clergy.

Things are first usually propos'd in the upper House; then communicated to the lower. All the Members of both Houses have the same Privileges for themselves and mental Servants as the Members of Parliament have. See PARLIAMENT.

The Archbishop of *York*, at the same Time, holds a *Convocation* of the Clergy of his Province, after the like manner, as *York*; and, by constant correspondence, debates and concludes of the same Matters as are debated by that of *Canterbury*. Not that the Northern Province is oblig'd to follow what the Southern one does. See PROLOCUTOR.

The English Clergy, antiently, had their Representatives in the lower House of Parliament; as appears by the Record much priz'd by my Lord *Coke*.

CONVOLUTION, a winding or turning Motion, proper to the Trunks of some Plants; as the *Cucurbitule*, or *Bind-weeds*, and the *Climbers* of *Vines*, and *Briary*.

Dr. *Grew* thinks, that all those Plants whose Roots are twist'd, have such a *Convolution*; and he assigns two great efficient Causes of this winding Motion, the Sun and the Moon.

It is very easy to try whether there be any such *Convolution* or not in the Trunks of Plants; which may be done, as he hints, by tying a little bit of Paper to any of the Branches which are exactly North, South, &c. and then seeing whether it will change its Position or not, in respect of the Point of the Compass.

CONVOY, *Escort*, a Sea Term, signifying one or more Vessels of War, intrusted with the Conducting of a Fleet of Merchants; serving as a Watch, and a Shelter from the Insults of the Enemies of the State, or of Pirates. See ESCORT, and CONSERVE.

The Word is also used in speaking of Military Affairs by Land; where it signifies a Body of Forces sent to guard a Supply of Provisions, Arms, Ammunition, or the like, going to a Camp, or the like.

CONUSANCE. } See COGNISANCE. CONUSOR. } COGNISOR.

CONVULSION, *Spasmus*, in Medicine, a continued involuntary Contraction of some Parts of the Body otherwise accustom'd to move according to the Direction of the Will. See SPASMUS.

It owes its Origin to a Contraction of the Muscles of the Part, occasion'd by a too copious and violent influx of the nervous Juice: Of these may be infinite Causes in the Blood, Arteries, Meninges, Brain, Nerves, Muscles, Cranium, &c. See CONTRACTION.

If the *Convulsion* be universal, attended with violent Motions, foaming at the Mouth, and periodical; it is usually call'd the *Epilepsy*. See EPILEPSY.

The usual Evacuations and Medicines proper for the Cure of *Convulsions*, are *Plebotomy*, *Emetics*, *Catharticks*, *Espipasticks*, and proper *Cephalicks*; as *Sal. Volat. Olesif. Spirit of Lavender, Spirit of Hartshorn, Tincture of Castor, Cinabar of Antimony, Cassianna Root, Valerian Root, Volatile Salt of Amber*, &c. given in different forms.

In periodical universal *Convulsions*, a Salivation sometimes answers, after other Courses have fail'd.

Women and Children are particularly liable to *Convulsions*: Women after Delivery; as upon a Stoppage of the *Lactia*, or a violent Extraction of the *Placenta*. See CONVULSIVE.

CONVULSIVE, in Medicine, is apply'd to those Motions which, naturally, should depend on the Will; but which, by some external Cause, become involuntary.

A *Convulsive Motion*, is a Contraction made by Fits and Intervals; wherein it differs from a *Convulsion*, which is a continued Contraction.

Convulsive Motions arise from a Disorder in the Origin of the Nerves. A *Convulsive Tension* of the Solids, is one of the principal Causes which destroy the *Equilibrium* that should obtain between the Solids and the Fluids. *Journ. de Scav.*

CONVULSIVE is also used for any Thing that occasions *Convulsions*, or a *Convulsive Motion*.

Thus, Wounds of Nerves are said to be *Convulsive*; white Hellebore is *Convulsive*.

Children are very liable to *Convulsive Disorders* from various Causes; as Repletion, curdling of the Blood in the Stomach or Intestines, Worms, Denatation, &c. See CHILDREN, WORMS, DENTITION, &c.

The Cramp is a *Convulsive Contraction* of some muscular Part of the Body. See CRAMP.

COOK-ROOM, in a Ship, is where the Cook and the Mate dress and deliver out the Meat, &c.

COOLERS, in Medicine, Remedies so call'd; which may be consider'd under these two Divisions; 1st, Those which produce an immediate Sense of Cold; which are such as have their Parts in less Motion than those of the Organs of Feeling. See COLD.

2^{dly}, Such as by a particular Viscidity, or Grossness of Parts, give a greater Consistency to the Animal Fluids than they had before; whereby they are disabled from moving so fast, and will therefore have less of that intestine Force on which their Heat depends. See CALIDUM.

Of the former Kind are Fruits, and acid Liquors; to the latter belong Cucumbers, and all Substances producing Viscidity.

COOM, a Term for Soot that gathers over an Oven's Mouth; and also for what works out of the Wheels of Carriages.

Soot is sometimes used in Medicine, infus'd in Wine with other Ingredients, as an Antihyperick, and against Palpitations of the Heart, &c. See SOOT.

The Spirit of Soot is also used for the same Intentions, and in Cephalic Cases.

COOMB, or COMB of Corn, is a dry Measure, containing four Bushels, or half a Quarter. See MEASURE; see also BOSHEL, &c.

COORDINATE, something of equal Order, Rank, or Degree with another.

COORDINATION, in respect of Causes, is an Order of Causes, wherein several, of the same Kind, Order, and Tendency, concur to the Production of the same Effect. See CAUSE.

COPAL, a Gum, of an agreeable smell, resembling that of Incense; brought from *New Spain*, where it oozes out from Incisions made in the Bark of a large Tree; much after the manner in which the Vine yields its Water, when cut in the Spring. See GUM.

The *Indians* use it to burn on their Altars: Among the *Egyptians*, it is used in Diseases of the Heart. 'Tis very rare; when good, 'tis of a fine transparent yellow; and melts easily, either in the Mouth or Fire.

In defect of this is brought another Kind from the *Antilles*, which is almost the only one known among the Druggists. Its chief Consumption is in the making of Varnish. See VARNISH.

COPARCENERS, or *Parceners*, *vulgo* COPARTNERS, and *Partners*, are such as have equal Portions in the Inheritance of their Ancestor. See PARCENERS.

Parceners are so either by *Law* or *Custom*. *Parceners by Law*, are the Issue Female; which, in default of a Male Heir, come equally to the Lands of their Ancestor.

Parceners by Custom, are those who by some peculiar Custom of the Country, challenge equal Parts in such Lands; as in *Kent*, by the Custom of *Gavelkind*. See GAVELKIND.

The Crown of *England* is not subject to *Coparceny*. See CROWN.

COPARCENY, or COPARSENY, the Share or Quota of a *Coparcener*. See COPARCENERS.

COPE, an Ecclesiastical Ornament, usually worn by Chantors and Sub-Chantors, when they officiate in Solemnity. See CHANTOR.

'Tis also worn by the *Romish* Bishops and other Ordinaries: It reaches from the Shoulders to the Feet. The Antients called it *Pluvial*.

S. Martin's Cox, was a Relick, formerly in great Esteem among the *French* Kings; and carried with them to War as their Standard. See CHAPEL, and CHAPELAIN.

COPERNICAN System, or *Hypobothetic*, is the System of the World, wherein the Sun is suppos'd at rest in the Centre; and the Planets, with the Earth, to describe Ellipses round him. See SYSTEM.

The Heavens and Stars are here suppos'd at rest; and that diurnal Motion which they appear to have from East

to West, is imputed to the Earth's Motion from West to East. See EARTH, SUN, STAR, &c.

This System was ascribed by many of the Antients; and particularly *Ephorus*, *Seleucus*, *Aristarchus*, *Philolaus*, *Plato*, and *Pythagoras*; from whom it was anciently denominat'd the *Pythagoric System*. See PYTHAGOREAN.

It was also held by *Archimedes*, in his Book de *granibus arena numeris*; but after him it became neglected, and even forgotten, for many Ages; till about 200 Years ago when *N. Copernicus* reviv'd it; from whom it took the Name of the *Copernicus System*.

Nich. Copernicus, now a Name so popular, was born at *Torn*, in *Polish Prussia*, in the Year 1472, according to *Jamnius*, or 1473 according to *Messinus*. After the usual domestic Education, he was sent to the University of *Cra-cow*; where he applied himself to Philosophy and Physick, and at length commenc'd Doctor in Medicin. In the mean time, having a strong Propensity to Mathematics, he diligently attended the Lectures of *Albert Bradacius*, and even learn'd of him at home. After he had here attain'd to the Use of the *Astrælab*, and was entering upon *Astronomy*, he took *Regiomontanus* for his Guide: 'Tho he run thro' all the Mathematicks of the Age, yet he seem'd most taken with *Perpective*; on occasion whereof he learn'd *Ptolemy*, in which he is said to have excell'd. When 23 Years of age, being at *Bologna*, he became acquainted with that eminent Mathematician *Dom. Maria Ferrariensis*; and was admitted to share with him in making of *Astronomical Observations*. Here, in the Year 1497, *Copernicus* first observ'd an Occultation of *Pallidum* by the Moon. Going on to *Rome*, he taught publicly, and made some considerable Observations; and at his return to *Cra-cow*, was made Canon of the Church of *Wormslande*, or *Ermeland*, and at length *Vicar-General*.

The Course he took in profane Astronomy, which has render'd his Name immortal, is as follows: Observing how the Astronomers of those Times were gravell'd to make the Planets move equally in circular Orbits, *viz.* to suppose 'em to move, not about their own Centre, but that of the Equant; and that they could no way make out a tolerably regular System, out of all their Shifts and Hypotheses; He resolv'd to try what he could do. With this View he perus'd the Writings of all the Philosophers and Astronomers extant; and pick'd out of each what appear'd probable and elegant. In this Review he was chiefly taken with two almost similar Opinions; (the one attributed to *Martianus Capella*, the other to *Apollonius Pergensis*;) which give a very good Account of the Motions of *Venus* and *Mercury*; and explain the Cause of their Directions, Stations, and Retrogradations very happily: The latter, withal, performing the same in the three superior Planets. But, then, in both these Hypotheses, the Earth being suppos'd the Centre; *Copernicus* chose rather to adopt the Opinion of the *Pythagoreans*; to remove the Earth out of the Centre of the World, and to give it, not only a diurnal Motion round its own Axis; but also an annual one round the Sun.

On this Footing he began to observe, calculate, compare, &c. and at length, after a long solicitous Disquisition, found himself in a Condition to account for the Phenomena and Motions of all the Planets; and to make an orderly Arrangement, or Disposition of the whole Heavens; wherein nothing could be alter'd, or displac'd, without bringing the last Confusion into the whole.

These Things he began to write down about the Year 1507. He then proceeded to furnish himself with some new Apparatus; particularly a Parallaxick Instrument, and some *Ptolemaic* Rulers, wherewith to observe the Altitude of the Stars, and determine the Periods of the Sun and Moon: And without other Means, compos'd his six Books de *Orbium Cælestium Revolutionibus*; containing the Whole of Astronomy, deliver'd after the Example of *Ptolemy*, in the Geometrical Method. We have already observ'd that he began it in 1507; He finish'd it in 1530. Five Years after he publish'd and improv'd it. He died of a Dysentery, and a Palsy on his right Side, in the Year 1543.

See the Order, and Disposition of the heavenly Bodies, as laid down by him, compar'd with those in the other Systems, under the Head SYSTEM.

COPERNICUS, is the Name of an Astronomical Instrument, contriv'd by *Mr. Whiston*, for the Calculation and Exhibition of Eclipses, and of the Motions of the Planets, both Primary and Secondary, &c.

It was so call'd by the Inventor, as being built on the *Copernicus* System; or as representing the Heavenly Bodies agreeably thereto.

It consists of several concentric Circles of Wood; upon which are inscrib'd Numbers, transfer'd thither from the Astronomical Tables: By the various Disposition of these Circles, which are made so as to slide within each other, Questions are solv'd; and thus long Calculations are sav'd, and the Work of many Hours brought into a few Minutes.

For the Exhibition of Eclipses, there is a peculiar Apparatus, consisting of a terrestrial Globe, so disposed, as that being turn'd round its Axis, the Light of the Sun, or a Candle, is projected thro' a glass Plane, mark'd out into concentric Circles, expressing Digits of the Eclipse; and thus is the Path of the Eclipse, with its Degree or Quantity in every Part of its Path, agreeably and accurately represented. The Instrument not being very common, a particular Description were superfluous. The Author has wrote a Volume to explain it.

COPTI, or COPTI, a Name given to the Christians of Egypt, who are of the Sect of *Jacobines*. See *JACOBINES*.

The Critics are extremely divided about the Origin and Orthography of the Word: some write it *Copti*, and others *Coptes*, *Coptivites*, *Coptites*.

Scaliger derives the Name *Copti* from *Coptis*, an antient celebrated Town of Egypt, the Metropolis of the *Thebais*: *Kireber* refutes this Opinion, and maintains, that the Word originally signifies *cut*, and *circumcised*; and was given these People by the *Mahometans*, by way of Reproach, in regard of their Practice of Circumcising: But *P. Solier*, another Jesuit, refutes this Opinion. *Scaliger* afterwards changed his Opinion, and deriv'd the Word from *AITTOTOS*, the antient Name of Egypt, by retrenching the first Syllable; but this Opinion, too, *P. Solier* disputes. *John de Leo* and others say, that the *Egyptians* antiently called their Country *Echibeb* or *Chibeb*, from *Chibeb* their first King, whence *Coptes*, &c. others say from *Cobrim* second King of Egypt. *Faylet* derives the Word *Copti* from *Copt* Son of *Misram*, Grandson of *Noah*.

All these Etymologies *P. Solier* rejects, on this Principle, that were they true, all the *Egyptians* ought equally to be called *Copti*; whereas, in effect, none but the Christians, and among those none but the *Jacobines* bear the Name; the *Mahometans* not being comprehended under it.

Hence he chuses to derive the Word from the Name *Jacobite*, by retrenching the first Syllable; whence *Cobite*, *Cob-ites*, *Coptes*, and *Coptia*.

As to the Hierarchy of the *Copti*, they have a Patriarch, who resides at *Cairo*, but takes his Title from *Alexandria*: He has no Archbishop under him, but 11 or 12 Bishops. The rest of the Clergy, whether Secular or Regular, is composed of the Orders of *S. Anthony*, *S. Paul*, and *S. Macarius*, who have each their Monasteries.

Beside the Order of Priests, Deacons, and Subdeacons, the *Copti* have likewise *Ignomines*, or *Archimandrites*, the Dignity whereof they confer with all the Prayers and Ceremonies of a strict Ordination.

This makes a considerable Difference among the Priests; and besides the Rank and Authority it gives them with regard to the Religious, comprehends the Degree and Functions of Arch-Priests. By a Custom of 600 Years standing, if a Priest elected Bishop be not already *Archimandrite*, the Dignity must be confer'd on him before Episcopal Ordination.

The second Person among the Clergy, after the Patriarch, is the Titular Patriarch of *Jerusalem*, who also resides at *Cairo*, by reason of the few *Copti* at *Jerusalem*: He is, in effect, little more than Bishop of *Cairo*: only he goes to *Jerusalem* every Easter, and visits some other Places in *Palestine* near *Egypt*, which own his Jurisdiction. To him belongs the Government of the *Coptic* Church, during the Vacancy of the Patriarchal See.

To be elected Patriarch, 'tis necessary the Person have lived all his Life in Continence; and even that he be a Virgin: 'Tis he confers the Bishopricks. To be elected Bishop, the Person must be in the Celibate; or, if he have been married, it must not be above once.

The Priests and inferior Ministers are allow'd to be married before Ordination; but are not oblig'd to it, as *Ludolphus* mistakenly observes. They have an Infinity of Deacons, and even confer the Dignity frequently on Children. None but the lowest Rank among the People commence Ecclesiastics; whence arises that excessive Ignorance found among 'em: Yet the Respect of the Laity towards the Clergy is very extraordinary.

Their Office is longer than the *Roman* Office, and never changes in any thing: They have three Liturgies, which they vary occasionally.

The Monastic Life is of great Esteem among the *Copti*: so be admitted into it, there is requir'd the Consent of the Bishop. The Religious *Copti* make a Vow of perpetual Chastity; renounce the World, and live with great Austerity in Deserts: They are oblig'd to sleep in their Cloths and their Girdle, on a Matt stretch'd on the Ground; and to prostrate themselves every Evening 150 times, with their Face and Breast on the Ground. They are all, both Men and Women, of the Scum of the People; and live on Alms. The Nunsaries are properly Hospitals; and few enter but Widows reduc'd to Beggary.

F. Roderic reduces the Errors and Opinions of the *Copti* to the following Heads: 1st, That they put away their

Wives, and espouse others while the first are living. 2d, That they have seven Sacraments, viz. Baptism, the Eucharist, Confirmation, Ordination, Faith, Fasting, and Prayer. 3d, That they deny the Holy Spirit to proceed from the Son. 4th, That they only allow of three Oecumenical Councils; that of *Nice*, *Constantinople*, and *Ephesus*. 5th, That they only allow of one Nature, Will, and Action in Jesus Christ after the Union of the Humanity with the Divinity.

For their Errors in Discipline, they may be reduced, first, To the Practice of circumcising their Children before Baptism, which has obtain'd among 'em from the XIIIth Century. 2d, To their ordaining Deacons at five Years of Age. 3d, To their allowing of Marriage in the second Degree. 4th, To their forbearing to eat Blood: To which some add their Belief of a Baptism by Fire, which they confer by applying a hot Iron to their Forehead or Cheeks.

Others palliate these Errors, and shew that many of 'em are rather Abuses of particular Persons, than Doctrines of the Sect. This seems to be the Case with regard to their Polygamy, eating of Blood, marrying in the second Degree, and the Baptism of Fire: For Circumcision, it is not practis'd as a Ceremony of Religion; nor as of any divine Appointment, but merely as a Custom which they derive from the *Ismaelites*; and which, perhaps, may have had its Origin from a View to Health and Decency in those hot Countries. See *CIRCUMCISION*.

The *Copti*, in different Times, have made several Reunions with the *Latins*; but always in Appearance only, and under some Necessity of their Affairs. In the Time of Pope *Paul IV.* a *Syrian* was dispatch'd to *Rome* from the Patriarch of *Alexandria*, with Letters to that Pope; wherein he acknowledg'd his Authority, and promis'd Obedience; desiring a Person might be dispatch'd to *Alexandria*, to treat about a Re-union of his Church to that at *Rome*: pursuant to which, *Pius IV.* Successor to *Paul*, chose *F. Roderic*, a Jesuit, whom he dispatch'd in 1561, in Quality of Apostolical Nuncio.

But the Jesuit, upon a Conference with two *Copti* deputed for that Purpose by the Patriarch, was made to know, that the Titles of *Father of Fathers*, *Pastor of Pastors*, and *Master of all Churches*, which the Patriarch had bestow'd on the Pope in his Letters, were mere Matters of Civility and Compliment; and that it was in this manner the Patriarch us'd to write to his Friends: They added, that since the Council of *Chalcedon*, and the Establishment of different Patriarchs independent of one another; each was Chief and Master of his own Church. This was the Answer the Patriarch gave the Pope, after he had receiv'd a Sum of Money remitted to him from *Rome*, by the Hands of the *Venetian* Consul.

COPTIC, or COPTIC Language, the Language of the *Copti*. This is the antient Language of the *Egyptians*, mix'd with a great deal of *Greek*; the Character of it is written in being all *Greek*. See *COPTI*, and *LANGUAGE*.

F. Kireber is the first who publish'd a Grammar and Vocabulary thereof. There is not known any Book extant in the *Coptic*, except Translations of the Holy Scripture, or of Ecclesiastical Offices; or of others that have relation thereto, as Dictionaries, &c. See *BIBLE*.

The antient *Coptic* is now no longer found, but in their Books: The Language they now use throughout the Country is *Arabic*.

The old *Coptic*, which *Kireber* maintains to be a Mother Tongue, and independent of all others, has been much alter'd by the *Greek*: For besides that it retains all its Characters, with a very little Variation, a great number of the Words are pure *Greek*.

Vossius, indeed, asserts that there was no *Coptic* Language till *Egypt* became subject to the *Arabs*. The Language, according to him, is a Mixture of *Greek* and *Arabic*: the very Name thereof not being in the World till after the *Arabs* were Masters of the Country. But this, *M. Simon* observes, proves nothing; except that what was antiently call'd *Egyptian*, has since by the *Arabs* been call'd *Coptic*, by a Corruption of Speech. There are, 'tis true, *Arabic* Words in the *Coptic*; yet this by no means proves but that there was a Language before that time, either *Coptic* or *Egyptian*. *Pierre de la Valle* observes, that the *Copti* have entirely lost their antient Tongue; that 'tis now no longer understood among 'em; that they have nothing extant therein but some sacred Books; and that they still say *Masi* is it, and *solo hanno in esse alcuni libri sacri, dicendo ancora la massa in quella lingua*.

All their other Books have been translated into the *Arabic*, which is their vulgar Tongue; which has occasion'd the Originals to be lost: 'Tis added, that they reabate the Epistles and Gospels in the *Masi* twice; once in *Arabic*, and once in *Coptic*.

Indeed, if we believe *F. Vauflod*, the *Copti* say *Masi* in *Arabic*, all but the Epistles and Gospels, which they rehearse both in that and *Coptic*; *La Massa celebrano in lingua*

gna Arabica, eccetto l'Evangelio & alcune altre cose che s'essano leggere nella lingua Copia & Araba.

COPIA Libelli deliberande, a Writ which lies in Case where a Man cannot get the Copy of a Libel at the Hands of the Ecclesiastical Judge.

COPIATE, under the Western Empire, a *Groove-digger.*

In the first Ages of the Church, there were Clerks destin'd for this Employment. In 357, *Constantine* made a Law in favour of the Priests *Copiates*, i. e. of those who had the Care of Interment; whereby he exempts 'em from the Laical Contribution which all other Traders paid.

It was under him that they first began to be called *Copiates*, q. d. Clerks destin'd for bodily labour, from *copio*, of *uris, fando, cedo, sero*. Before that Time they were called *Decani* and *Lecticarii*; perhaps, because they were divided by Decads or Tens, each whereof had a Bier or Litte for the Carriage of the dead Bodies. See *DECANUS*, and *LECTICARIUS*.

Their Place among the Clerks, was the next in order before the Chantors.

COPING of a Wall, the Top or Cover of a Wall, made sloping to carry off the wet. See *WALL*.

COPING over, in Carpentry, a sort of hanging over, not square to its upright, but bevelling on its under Side till it end in an Edge.

COPIVI, CAPIVI, COPAYBA or CUPAYBA, a Balm or Balsam, oozing out of Incisions made in a Tree of *Brazil*; not taken notice of but by very late Writers; at least, not under this Name. See *BALM*.

It is of a thinner Consistence than common Turpentine, but much more fragrant and detestive. It is extremely quick in passing off by Urine, and mightily cleanseth those Passages; by which it has obtain'd very much in Gonorrhoeas, Seminal Weaknesses, the Whites, and all Obstructions, and Ulcerations of those Parts. It is likewise a powerful Balsmick, and good in many Dilemperers of the Breast, especially Catarrhs, sickling Coughs, spitting of Blood, &c. In Dysenteries and Diarrhoeas of long continuance, where the *Mucus* that lines the Intestines is, by the Acrimony of the Humours abraded, it is of great service in supplying its Place by its balsmick quality. It mixes intimately with the Yolk of an Egg.

The *Jesuits* use it to stop the Flux of Blood after Circumcision.

COPEL, COPEL, or **CUPPEL,** call'd also *Test*, a Vessel used by Refiners and Essayists, to try and purify their Metals.

The *Copel of Essay*, is a little flat Vessel, compos'd of Vine Ashes, and Bones of Sheeps Feet, calcin'd and lixivated, to separate the Salts, which would otherwise make it crackle. At the bottom of the Vessel is a little Cavity fill'd with a kind of white Varnish, compos'd of Hartshorn or of Bones of Pike, calcin'd and dilated in Water: the Use of this Liqueur is, that the Gold or Silver to be essay'd may be more conveniently lodg'd, and that the Bottom of the Essay may be separated the more easily. See *ESSAY*.

Note, The Metals may be tried otherwise than by *Copeling*: and tho' the Touchstone, Graver, &c. are of some service to the Goldsmith in judging of their Purity; yet, 'tis certain, without the *Copel* 'tis difficult, not to say impossible, to know their precise degree of Purity.

The *Refiner's Copel*, is a large Free-stone Vessel, lined within with a kind of Plaster made of Ashes well lixivated, cleans'd, dry'd, beaten and sifted.

In this Kind of *Copel* it is that the Refiners purify their Gold and Silver, by adding Lead to it, and exposing the whole to a violent Fire. See *REFINING*.

COPPER, a hard, dry, heavy, ductile Metal; found in Mines, in several Parts of Europe, but most abundantly in *Srednia*. See *MEYAL*.

Copper is of all Metals the most ductile and malleable after Gold and Silver; and abounds much in Vitriol and Sulphur. See *VITRIOL*, &c.

The Chymists call it *Venus*; as supposing it to have some more intimate Relation to that Planet. See *VENUS*.

By an Analysis it appears compos'd of a Sulphur ill digested, a yellowish Mercury, and a red Salt.

'Tis found both in Duff and in Stones, each of which are first well wash'd, to separate 'em from the Bath wherewith they are mix'd. In this State 'tis call'd *Virgin Copper*.

After washing 'tis melted, and the melted Matter run into a kind of Molds, to form large Blocks, by some call'd *Salmous*, and by others *Pigs of Copper*. This is the ordinary *Copper*.

To render it more pure and beautiful, they melt it again once or twice; some of its coarse earthy Parts being left at each Fusion, and a Quantity of Tin and Antimony added in each. In this State 'tis call'd *Rose Copper*, in Latin *Æs Pelosum*.

Of a Mixture of this and *Lapis Calaminaris*, is form'd *Brass*, which the French call *yellow Copper*, in contradistinction to *Natural Copper*, which they call *red Copper*. See *BRASS*.

Copper melted together with 22 or 23 Pounds of fine Tin per Quintal, makes *Bell Metal*. See *BELL Metal*.

Copper melted with Calamine, quantity for quantity, makes *Brass*. See *CALAMINE*.

Copper and *Brass* melted in equal Quantities, make what the French call *Bronze*, used for Figures, Statues, &c. See *FOUNDRY*.

Copper turns white by an Unction of Spirit of Wine and Orpiment. *Pliny* says there is a *Copper* naturally white, found underneath the Silver Mines.

The Use of *Copper* is very extensive: Among other Works of *Copper* may be reckon'd those of *Brass*, *Bell Metal*, *Pot Metal*, &c. which are all Compositions where *Copper* makes the prevailing Ingredient.

The Chymists call *Saffron of Copper*, or *Crescus venetus*, a Preparation of *Copper* Plates tiratidly with decrepitated Salt, in a Crucible; after having extinguish'd 'em in Water, and scap'd 'em with Iron Brushes. This Saffron is very red, and is used in Emplasters to mundify Wounds and Ulcers. See *CROCUS*.

Some Chymists have pretended that the Spirit of *Venus* was areal Alkabeth, capable of dissolving wholy Pearls, Corals, Crabs Eyes, &c. without any Diminution of its force; but Experience has shewn the contrary. See *ALCANTHUM*.

The Calc of *Brass*, call'd *Æs Ustus*, and sometimes also *Saffron of Venus*, is nothing but *Copper* calcin'd in a violent Fire. See *Æs USTUM*.

Verdigrease is a Rust of *Copper*. See *VERDIGREASE*.

M. Becher observes, that the drinking of acid Liquors, even out of common Silver Plate, is very unwholesom, by reason of the Mixture of *Copper* therein; much more out of Vessels of *Copper*.

The Indian Physicians are said to set a great Value on Talc and yellow *Copper*; which, they say, consumes the most viscous Humours, and removes the most obstinate Obstructions.

COPPERAS, or COPERAS, a Mineral, form'd in *Copper-Mines*, and which is properly a Kind of Vitriol. See *VITRIOL*.

Copperas is purify'd and prepar'd in the same manner as Alum and Salt-petre, by passing thro' several Lixiviums, till it be wholy reduced to Crystal. See *SALT*.

Some make *Copperas* to be the Chalcitis of the Antients. See *CHALCITIS*.

But the more common Opinion is, that 'tis rather a *Calcanthum*, or *Vitriol*. See *CALCANTHEUM*.

There is *Copperas of England*, of *Pisa*, *Germany*, *Cyprus*, *Hungary*, and *Italy*, which only differ from each other in Colour and Perfection; being all the same Mineral.

White Copperas, is the *Copperas of Germany*, calcin'd, laid in Water, thence filtrated, and reduced to Salt; wherof, as it coagulates, they form Cakes of 40 or 50 Pound each: such are those brought from *Goffelar* in *Saxony*. This *Saxony Copperas*, ere it be whiten'd, is of a bluish green, clear and transparent.

The *English Copperas* is of a fine green; that of *Cyprus* and *Hungary* a sky-blue, in Pieces cut like the Point of a Diamond. That of *Pisa* and *Italy* is likewise green; and the last as transparent as Glass.

Copperas is of considerable use in many Preparations; but especially in Dying. The Hatters also use it in their dye; and this and Galls are the Ingredients that compose writing Ink. See *INK*, &c.

The ordinary *English Copperas* is made of a Kind of Stones found on the Sea-shore in *Essex*, *Hampshire*, and in *Wiltward*, ordinarily call'd *Gold Stones*, from their Colour: they abound much with Iron.

To prepare the *Copperas* from them, they are laid in Heaps or Beds under ground. In process of Time they swell and ferment; and, by degrees, a Humour distils out, which draining into a Cistern, and afterwards boil'd, in the boiling shoots into those Crystals we see it in.

The Works at *Depeford* for making it, are known to most People.

Many Chymists dissolve this, and froot it again for the common Salt of Steel.

COPPICE, or COPSE, a little Wood, consisting of Under-woods; and may be rais'd both by sowing and planting. See *WOOD*.

COPULA, in Logick, a Verb that connects any two Terms in a Proposition, either Negative or Affirmative: As *A Rose is sweet*; where *is* is the *Copula*.

COPULATION, See *CORTION*.

COPULATIVE Propositions, are those which include several Subjects, or several Attributes join'd together by an affirmative or negative Conjunction. See *CONJUNCTION*.

Thus, *v. g. Power and Riches don't make a Man happy*. Where *and* is the Conjunction that couples *Power* and *Riches*.

CONJUNCTION COPULATIVE. See *CONJUNCTION*.

COPY, a Minure, Draught, or first Design of an Instrument, to be afterwards put into form.

The Word comes from the Latin *Copia*, which was used for the same thing.

Copy is also used for a Transcript of a Writing or Instrument, made for the Use and Satisfaction of some of the Parties concern'd; or in order to preserve the Memory thereof.

Such a *Copy* was taken from the Original; has been collected with the Original. Ancient Titles do now few of 'em subsist otherwise than in *Copies*.

Copy is also used for an Imitation of any original Work; particularly a Painting, Draught, Figure, &c. See ORIGINAL.

Among Printers, *Copy* is the Manuscript, or Original of a Book given them to print from. In this Sense, they say, The Press stands still for want of *Copy*: Such an Author's *Copy* is good, i. e. fair, legible, orderly, &c. and such another's, otherwise. — In the Bookellers Language, a good *Copy* is that which produces a saleable Book. — To cast off a *Copy*, is to make a Computation of the Number of Sheets a Manuscript will make in print.

COPY-HOLD, is a Tenure for which the Tenant has nothing to show but the *Copy* of the Roll made by the Steward of the Lord's Court. See TENURE.

The Steward of the Court is, among other Things, to enroll and keep a Register of all such Tenants as are admitted to any Parcel of Land, or Tenement belonging to the Manor; and the Transcript is called the *Copy of the Court Roll*, which the Tenant keeps as his own Evidence. See ROLL.

This Tenure is called a *base Tenure*, because the Tenant holds at the Will of the Lord. *Fitzherbert* says, it was formerly called *Tenure in Villenage*; and that *Copy-hold* is but a modern Name.

However, it is not simply at the Lord's Will, but according to the Custom of the Manor; so that if the *Copy-holder* doth not break that Custom, and forfeit his Tenure, he seems not to stand at the Lord's Courtsey.

These Customs are infinite; and varying in one Point or other almost in every Manor. See CUSTOM, and MANOR.

Copy-holders upon admittance pay a Fine to the Lord; which Fines are in some Manors certain, in others not; but yet, if the Lord exceeds two Years Value, the Court of Chancery, King's-Bench, &c. have, in their several Jurisdictions, Power to reduce the Fine. See FINE.

In many Places the *Copy-holds* are a kind of Inheritance, and term'd *Customary*, because the Tenant dying, and the Hold becoming void, the next of Blood paying the customary Fine, as two Shillings an Acre, or the like, may not be denied his Admission.

Some *Copy-holders* have by Custom the Wood growing upon their own Land; some, again, hold by the Verge in ancient Demesne, so that tho' they hold by *Copy*, they are yet accounted a kind of Free-holders: Lastly, some others hold by common Tenure, called *mere Copy-hold*; whose Land, upon Felony committed, escheats to the Lord of the Manor.

This is the Land which the Saxons called *Folkland*, as being held *suo scripto*; in contradistinction to *Bockland*, or Church-Land, *Terra evo scripta*, and now Free-Land. See GRASSER-LAND, and FREE-HOLD.

COPY-HOLDER, is defined by *West* to be a Person admitted Tenant of any Lands or Tenements within a Manor, which, Time out of Mind, by the Use and Custom thereof, have been demisable to such as will take the same by *Copy* of Court Roll, according to the Custom of the said Manor.

COQ. ad Med. Consultant, an Abbreviation among Physicians, signifying that the Thing is to be boil'd till half of it be consumed. — *Coy. in S. R. Ag.* implies it to be boil'd in a sufficient Quantity of Water.

COR, in Anatomy. See HEART.

Cox Hydra, in Astronomy, a Star of the second Magnitude, in the Heart of the Constellation *Hydra*; the 12th in Order in *Praxley's* Catalogue; the 11th in *Tycho's*; and the 25th in the *Britannic*. See STAR.

Its Longitude is 22° 57' 59", its Latitude 22° 24' 32" South. See HYDRA.

Cox Lewis, or *Regulus*, a Fix'd Star of the first Magnitude, in the Constellation *Leo*. See LEO.

Cox Coroli, in Astronomy, an extra-constellated Star in the Northern Hemisphere, situated between the *Coma Berenices* and *Ursa Major*; so call'd by *Dr. Holly* in honour of King *Charles*. See STAR, and CONSTELLATION.

CORACOBRACHIALIS, a Muscle which ariseth from the *Processus Coracoideus* of the *Scapula*, by a tendinous beginning; and passing over the Articulation of the *Humerus*, is inserted into the middle and inner part of that Bone, and with the *Deltoides* and *Supra-spinatus*, lifts the Arm upwards; and also, obliquely outwards.

CARACOHOIDEUS, in Anatomy, a Muscle which hath its Origin from the *Processus Coracoideus* of the *Omo-hyoides*; or rather, according to *Kiell*, from the upper Edge of the *Scapula*, near its Neck; whence ascending obliquely

under the *Mastoides*, it is inserted into the *Oss Hyoides*; which it serves to pull obliquely downwards. See HYOIDES.

It is also called *Digastricus*, as having two Bellies at its two Extremities, and a Tendon in the middle, to give room for the Passage of the Carotid and inner Jugular Artery. See DIGASTRIC.

The Word is form'd from *Caracoides* and *Hyoides*, the two Parts.

CARACOIDEUS, in Anatomy, a Process, so call'd from its resembling a Crow's Bill. See PROCESS.

The *Caracoides* is plac'd in the upper Part of the Neck, and projects over the Head of the Bone of the Arm.

It serves to strengthen the Articulation of the Shoulder; and gives Origin to one of the Muscles of the Arm.

The Word comes from the Greek *καρκα*, *corvus*, and *οιδος*, *imago*.

CORAL, in Natural History, a Production of the Sea, rank'd among the Number of Marine Plants. See PLANT.

This Opinion, which we received from the Ancients, is now so well establish'd, that all other Sentiments seem precluded. *P. Kircher*, that learned Naturalist, supposes certain Fossils of it, at the bottom of the Sea; and *M. Tournefort*, that able Botanist, maintains that it evidently multiplies by Seed; the neither its Flower nor Grain be known.

However, the Count de *Marfigli* has discover'd some Parts therein which seem to serve the Purpose of Grains and Flowers. See SEED, &c.

Coral, then, being establish'd a Plant, has, in that Quality, *Roots*, wherewith it is fasten'd to the Rock whereon it grows; these *Roots* are cover'd with a *Bark*, set with starry Pores, which travel 'em from top to bottom. Above the *Roots* is the ligneous or woody Part of the Plant, if we may so call a Matter that rather seems to resemble Stone than Wood. It is divided into Branches like other Plants; having white Streaks therein, which seem to represent a kind of Fibres. The Extremities of the Plant are soft, and rounded into little Bowls, ordinarily divided into six Cells, fill'd with a Humour somewhat like Milk, fatty, sharp, and stringent.

Lastly, that nothing may be wanting to constitute a real Tree, these Bowls are esteem'd a kind of Pods, or *Capitula*, containing the Seed of the *Coral*. 'Tis even said, that in what Place, or on what Matter soever this Juice be shed, it carries Fecundity with it, and produces a Plant of *Coral*; whence it is, that in the Cabinets of the Curious, we find some of it on dead Mens Skulls, Pieces of Earthen Ware, and other Kinds of solid Bodies, which Chance and the working of the Sea have thrown into some of *P. Kircher's* Forests.

Coral, *M. le Comte de Marfigli* observes, grows chiefly in Grottos, whose Mouth or Aperture is towards the South, and the Vault, or concave Arch nearly parallel to the Surface of the Earth. For its Growth, 'tis necessary the Sea be as quiet as a Pond: it vegetates the contrary way to all other Plants; its Foot adhering to the top of the Grotto, and its Branches extending downwards. The Foot takes the exact form of the Solid it grows to, and even covers it, like a Plate, to a certain extent; which *M. de Marfigli* thinks a Proof that its Substance was originally fluid: And what confirms the Thought, is, that the same Substance shall sometimes line the inside of a Shell, which it could never enter but in form of a Fluid.

Upon a nice Examen of the several Parts of *Coral*, *M. de Marfigli* gathers, that all its Organism, with regard to Vegetation, consists in its Bark, or Surface; that the Tubules of the Bark filtrate a Juice which fills the Cellules, and runs along the Canals as far as the Extremities of the Branches; and that this Juice being petrify'd, both in the Cells encompassing the *Coralline* Substance, and in those of the Extremes of the Branches whose Substance is not yet form'd, makes the Plant grow both in height and bulk. See VEGETATION, &c.

The Ancients believ'd that *Coral* was soft while it continu'd in the bottom of the Water; and that it only became hard and solid by the Impression of the Air. But the Moderns are convinc'd of the contrary from Experience; and know that there was more of Imagination than Truth in the Name *Gorgonium*, which they gave it to shew that *Aeschyus's* Head did not convert Objects into Stone, more surely than *Coral* was convert'd as soon as it appear'd in the Air.

There are, properly, but three Kinds of *Coral*, *red*, *white*, and *black*: The white is the rarest and most esteem'd; but 'tis the red is ordinarily used in Medicine. It must be chosen thick, smooth, and shining, and of a beautiful red, not cover'd with any tartarous Matter.

There is a kind of white *Coral* pierc'd full of holes, and a black *Coral*, named *Antipathes*; appearing of a different Nature from the rest; but these are of no use.

The Chymists draw a magisterial Tincture from *Coral*, and a Salt.

It gives Titic to an Official Composition, call'd *Syrup of Coral*, often prescrib'd by Physicians; as is the Powder of Coral finely ground, and stirr'd with a Marble, and made up into a proper form. But there are few except those who are fond of Medicines with Pearls in 'em that make use herof. By means of its exceeding hardness, it is suspected to take away with it a great deal of the levigating Stone.

The Virtues attributed to Coral and its Preparations, are that it is Cardiac, and therefore of use in Diarrheas, too large Fluxes of the Menstrua, and Floodings; of service in the *Fluxus Albus*, and to prevent Mifcarriages; beside its use in common as a Testaceous Powder in Childrens Diseases, &c. See CHILDRENS Diseases.

Some also attribute to Coral the immediate stopping of Blood, the securing of Houses from Thunderbolts, the keeping away of evil Spirits, and the promoting of Dentition. 'Tis added, that Coral appears redder wore on a Man than on a Woman; that it becomes pale and livid when wore by a sick Person; and that the Changes in the Plant correspond with those in the Disease. But for these, and many more Fancies of the same kind, *Credat Judeus Apella*.—Its chief Use we know of, is in Chaplets, Beads, and other Toys.

CORAL Fishery. The Time for fishing Coral is from April to July: The Places are the *Persian Gulf*, Red Sea, Coasts of Africa towards the *Baſtion of France*, the Isles of *Majorca* and *Corfica*, and the Coasts of *Provence* and *Catalonia*.

The Method of fishing is nearly the same in all Places: That us'd at the *Baſtion of France*, where there is an established Fishery, under the Direction of a Company (see COMPANY) at *Marſailles*, is as follows.

Seven or eight Men go in a Boat, commanded by the Patron or Proprietor; the Caster throws his Net, if we may so call the Machine wherewith he uses to tear up the Coral from the bottom of the Sea; and the other six manage the Boat. The Net is compos'd of two Beams tied across, with a leaden Weight to press 'em down: To the Beams is fasten'd a great quantity of Hemp loosely twisted round, among which they mix some strong Nets.

In this Condition the Machine is let down into the Sea; and when the Coral is pretty strongly embarras'd in the Hemp and the Nets, draw it out by a Rope; which they unwind according to the Depth, and which sometimes requires half a dozen Boats to draw. If the Cord happen to break, the Fishermen are in great danger of drowning.

Before the Fishers go out, they agree on the Price of the Coral, which is ordinarily at the Rate of 4s. 6d. per Pound.

When the Fishery is over, which in a Season usually amounts to 25 Quintals of Coral each Boat; it is divided into 12 Parts; the Patron whereof, or Master *Coralier*, has four, the Caster two, and each of the six Companions one: the 12th being reserv'd for the Company, &c.

Artificial CORAL, is made of Cinnabar well beaten; a Lay whereof is applied on a piece of Wood well dried, and polish'd, first moisten'd with Size: The whole is again polish'd; and for varnish, rubb'd over with the White of an Egg.

CORALLINE, or *Sea Moss*, a Plant found adhering to Rocks, Shells, and even to Coral.

It has no Sperm, but its Branches shoot immediately out of the Root. Its Use in Medicine is not very considerable; yet 'tis suppos'd of some effect to destroy Worms in Children when taken in Powder; and is also used as an Ornament in Rock-work. The best is greenish; the worst ash-colour'd; the red is not much better.

CORAM non Judice, in Law, is when a Cause is brought into a Court where the Judges have no Jurisdiction.

CORBAN, a Scripture Term, signifying an Oblation, or Offering to God on the Altar. See OFFERING, &c.

The Word is Hebrew, קרבן.

CORBAN is also a Ceremony in use among the *Mahometans*; yearly perform'd at the foot of Mount *Arafat* in *Arabia*, near *Mecca*. It consists in slaying a great Number of Sheep, and distributing 'em among the Poor.

CORBELS, in Fortification, little Baskets, about a Foot and an half high, eight Inches broad at the bottom, and twelve at the top; which being fill'd with Earth, are frequently set one against another upon the Parapet, or elsewhere; leaving certain Port-holes, from whence to fire upon the Enemy under cover, without being seen by them.

CORBEL, in Architecture, the Representation of a Basket, sometimes seen on the Heads of *Cariatides*. See *CARIATIDES*.

The Word is also used for the Vase or Tambour of the *Corinthian Column*; so call'd from its resemblance of a Basket; or because it was first form'd on the Model of a Basket. See *CORINTHIAN ORDER*.

CORBELL, **CORBIL**, or **CORBEL**, is also used in Building for a short Piece of Timber plac'd in a Wall, with its End

sticking out six or eight Inches, as occasion serves, in manner of a Shouldering-piece.

The under Part of the End thus sticking out, is sometimes cut into the form of a Boutin; sometimes of an Ogive, and sometimes of a Face, &c. according to the Workman's Fancy; to the upper side being plain and flat.

These Corbels are usually plac'd for Strength immediately under the Semi-girders of a Platform, and sometimes under the Ends of Chamber-Beams: in which latter Case, they are commonly plac'd a Foot or two below the Beam, and have a piece of Timber standing upright close to the Wall from the Corbel to the Beam.

CORBEL is also used by some Architects for the hollow Niches, or hollow left in Walls for Images, Figures, or Statues to stand in. See *NICHE*.

CORD, or **CHORD**, an Assemblage of several Threads of Hemp, cabied or twisted together by means of a Wheel. See *CORDAGE*.

The Word comes from the Greek *χορδή*, which properly signifies an Intertine, or Gat, whereof Cords may be made. See *CHORD*.

CORD of S. Francis, a kind of Rope adorn'd with Knots, wore by the Brothers of the Fraternity instituted in honour of that Saint. See *FRANCISCAN*.

Some, as the Cordeliers, Capuchins, Minorites, and Recollets wear it white; others, as the Pique Pucea, black.

Its design is to commemorate the Bonds wherewith Jesus Christ was bound.

The Society of the **CORD**, includes a great Number of People beſide Religious. To obtain Indulgences, they are only oblig'd to say five *Paters*, five *Ave Marys* and *Gloria Patri's*, and to wear this Rope, which must have been first blest by the Superiors of the Order.

CORD of Wood, a certain Quantity of Wood for burning; so called, because formerly measur'd with a Cord. See *MESASURE*.

'Tis now measur'd between two Stakes of Wood, four Foot high, and eight Foot apart.

CORD-wood, is properly new Wood; and when brought by Water comes aboard a Vessel, in opposition to that which is floated. All burning Wood not exceeding 18 Inches in circumference, is deem'd *Cord-wood*.

CORD, in Geometry, Musick, &c. See *CHORD*.

CORDAGE, in the Sea Language, is used in general for all the Ropes and Cords, big and small, used in the Rigging and fitting out of a Vessel. See *RIGGING*.

The Word is also used for the Art of preparing and manufacturing the Ropes, &c.

The Cordage is said to be *baked*, when having pass'd a Stove or other hot Place, 'tis drain'd of all its Moisture.

White Cordage, is that not yet pitch'd. *Cordage pitch'd in the Stove*, is that which is pitch'd thro' hot Pitch as it comes out of the Stove. Each Quintal of Cordage may take up about 20 Pounds of Pitch. The Cordage is sometimes pitch'd in the Thread.

When a Cordage is said to be of six Inches, 'tis understood of six Inches around, or in Circumference. The Commerce of Cordage is very considerable at *Amsterdam*: That made of *Coringberg* Hemp is valued at 20 per Cent. more than that of *Mingooy* Hemp. They are sold by weight.

The Number of Ropes requir'd in fitting out of a Vessel is almost inconceivable: Each has its particular Name and Use. See *CABLE*, *HAUSER*, &c.

The *Spaniards* make a kind of Shoes of Cordage, which they call *Alpargates*, whereof they use great Quantities at home, and yet drive a very considerable Commerce to the *Indies*; so as to send away whole Ship-loads thereof.

The *Indians* make their Cordage of the Bark of *Cocou*, *Magnay*, and other Trees.

As to the Strength of Ropes or Cordage, M. *Reaumur* takes occasion, in the Memoirs of the *French Academy*, to consider the Question, whether a Rope compos'd of several Twists or Strands interwoven, e. g. ten, have more force to sustain a Weight, than the ten Twists would have separately, plac'd parallel over one another: or, which is the same thing, whether if each Twist be capable of sustaining the weight of a Pound, the whole Cord be able to sustain more than ten?

There, indeed, appears no great difficulty in the Question; the Evidence seems strong on the side of the Affirmative: For, 1st, by Virtue of the Twisting, the Diameter of the Rope is made larger than are those of the ten Twists together; but, 'tis apparently by its thickness that a Rope sustains a Weight or resists a Fracture.

2^d, Twisted Strands have not all, as when parallel, a vertical Direction with regard to the Weight: Several of 'em, and even the greatest Part, have oblique Directions, and of consequence don't bear all the Share of the Burden they would otherwise bear. In effect, they are inclined Places that are only press'd with a part of the Load.

Hence it would follow, that the Surplus of the Strength of the Twists, might be employ'd in raising a larger Weight. On

On the other hand, 'tis true, that in twisting the Strands, some are stretch'd, and others left more loose; and the new Tension given the former, serves to weaken 'em, and has of it self the effect of a Weight: Thus they become less able to sustain one so large. Those more lax, on the contrary, evade in some measure the Action of the Weight. For the Action is distributed equally on the ten suppos'dly equal Twists; and if some, by reason of their particular Disposition, receive less than their Quota, the Weight will act more forcibly on the rest, and will break them first, as being more tense; after which it will easily dispatch the rest, as not being in sufficient Number to oppose it.

This is the Sum of what can be arg'd for and against the twisting. To decide between 'em M. Reasoner had recourse to Experiment. The Result was, that contrary to all Expectation, he still found the twisting diminish'd the Force of the Rope: whence it is easily infer'd, that it diminishes it the more, as the Rope is the thicker: For inasmuch as the twisting diminishes; the more Twisting the more Diminution.

The Resistance or Friction of the Cordage is very considerable; and by all means to be consider'd in calculating the Force of Machines. M. Amontons observes, in the French Memoirs, that a Rope is so much the more difficult to bend, first, as it is stiffer, and more stretch'd by the Weight it draws. 2d, As it is thicker; and, 3d, as it is to be more bent; i. e. as it is to be roll'd, for instance, into a smaller Gyre.

The same Author has thought of ways to prove in what proportion these different Resistances increase: That arising from the Stiffness or Rigidity occasion'd by the Weight which draws the Rope, increases in proportion to the Weight; and that arising from its thickness in proportion to their Diameter. Lastly, that arising from the smallness of the Gyres, or Pulleys about which it is to be wound, is indeed greater for smaller Circumferences than great ones, but does not increase so much as in the Proportion of those Circumferences.

On this footing, the Loss a Machine sustains by the Cordage being estimated in Pounds; becomes, as it were, a new Weight, added to that which the Machine is to raise. This Augmentation of weight will render the Cord's still the more stiff: which excess is to be computed as before.

Thus we shall have different Sums still decreasing; which are to be added together, as in the Article of Friction, and it will be surprizing to see what a Sum they will amount to. See FRICTION.

Where Ropes are us'd in a Machine, all the Resistance resulting from their stiffness is to be put together; and all that occasion'd by the Friction; which will make for considerable an Augmentation to the difficulty of the Motion, that a Power which to raise a Weight of 3000 Pound, by means of a fix'd and a moveable Pulley, needed only 7500 Pound; must, according to M. Amontons have 3942 Pounds, on account of the Frictions, and the Resistance of the Cordage. See RESISTANCE.

CORDED, in Heraldry. A Cross corded, some Authors take for a Cross wound or wrench'd about with Cords: The others, with more probability, take it for a Cross made of two Pieces of Cord. See CROSS.

CORDELLIER, a Franciscan, or Religious of the Order of S. Francis. See FRANCISCAN.

The Cordeliers are cloth'd in thick grey Cloth, with a little Cow, a Chaperon, and Cloak of the same; having a Girdle of Rope or Cord, tied with three Knots, whence the Name. See CORD.

The Cordeliers are otherwise called Minor Friars, their original Name. The Name Cordelier is said to have been first given 'em in the War of S. Louis against the Infidels; wherein the Friars Minor having repuls'd the Barbarians, and that King having enquir'd their Name; it was answer'd they were People corde lies, tied with Ropes.

The Cordeliers are, to a Man, profess'd Scientists. See SCIENTIST.

CORDIAL, *Cardiac*, in Medicine, a comfortable or refreshing Remedy, that gives a sudden Strength and Cheerfulness to the Spirits, by raising them when depress'd by too much Exercise, the Consequence of some Disease, or the like Cause.

Cordials act by giving a Springiness and Force to the Fibres, and by some of their fine Particles directly entering the *Tubuli*, or Pores of the Nerves and fine Vessels, and so mixing directly with the Fluids.

Thus, some of the Particles of the Spirit of Lavender, when dropt into Sugar and taken, are suppos'd to enter the Nerves of the Palate directly. Spirituous Liqueors, as Brandy, Clove-water, &c. are suppos'd also to act immediately on the Palate; but especially on the nervous Coat of the Stomach, and not by the common Current of the Circulation; by which means they often prove an immediate Cordial.

In Paintings, where the Circulation of the Blood is languid, Sal Volatile Oleosum, or Spirit of Hartshorn dropt in

cold Water and drunk immediately, occasion a Contraction of the *Fibrille*, the last by its coldness, and the first by entering the small Vessels; and thus they instantly augment the Circulation, or in other Words, prove Cordial. In Official Compositions, the four Cordial Flowers are *Borage*, *Bugloss*, *Rose*, and *Violet*.

The four Cordial Waters are those of *Borage*, *Bugloss*, *Endeae*, and *Cibotary*; some add those of *Carduus Benedictus* and *Scorzonera*, *Scabiosa*, *Sorrel*, &c.

CORDON, in Fortification, a row of Stones jutting out between the Rampart and the Basis of the Parapet.

The *Cordon* ranges round the whole Fortress; and serves to join the Rampart, which is above, and the Parapet, which is perpendicular, more agreeably together.

In Fortifications rais'd of Earth, this Space is fill'd up with pointed Stakes instead of a *Cordon*.

CORDWAINERS, or CORDINERS, the Term whereby the Statutes denominate *Shoe-makers*; from the French *Cordonnier*, which *Ménage* derives from *Cordon*, a kind of Leather brought from *Cordova*, whereof they formerly made the Upper-leathers of their Shoes.

Others derive it from *Corde*, Rope, because antiently Shoes were made of Cords; as they still are in some Parts of Spain, under the Name of *Alpargates*, vast Quantities whereof they export to America.

But the former Etymology is better warranted: for, in effect, the French Workmen who prepare the *Cordons* are still call'd *Cordonniers*.

In Paris they have two pious Societies, under the Titles of *Feres Cordonniers*, Brothers Shoemakers; establish'd by Authority towards the middle of the XVIIth Century; the one under the Protection of S. *Crispin*, the other of S. *Crispianus*, two Saints who had formerly honour'd the Profession. They live in Community, and under fix'd Statutes and Officers; by which they are directed both in their spiritual and secular Concerns.

The Produce of their Shoes goes into a common Stock, to furnish Necessaries for their support; the rest to be distributed among the Poor.

Benoist Baudouin, a Native of *Amiens*, the Son of a *Cordwainer*, and himself a Workman in his Father's Shop, has among other learned Works publish'd a Treatise de *Calceo antquo & mystico*, to do honour, as he himself owns, to his antient Trade. *John Battista Gallo*, a Shoemaker of Florence, has given some fine Pieces in the Italian Language; and among others, Dialogues in Imitation of *Lucian*.

CORIANDER, the Seed of a Plant of the same Name. See SEED.

Both the Taste and Smell of the Seed is very agreeable; yet both in the Plant extremely noxious. Besides the Confections made of the *Coriander*-Seed, it is of use in Medicine as a Carminative, and a Corrective to some sorts of Cathartics. It is much us'd by the Brewers both in *England* and *Holland*, to give a Flavour to their strongest Beer. The Ancients had a Notion that the Juice of *Coriander* would deprive People of their Senses, and even of Life.

Some derive the Word from *coron*, on account of the stinking Quality of the Leaves; others from *coron*, apple of the Eye, and *andron*, hominum, because it is suppos'd to weaken the Sight.

CORINTHIAN Order, the fourth, or as *Scamozzi*, and M. le Clerc make it the fifth and last of the Orders of Architecture; being the noblest, richest, and most delicate of all others. See ORDER.

The Invention of this Order most of the Moderns, after *Vitruvius*, ascribe to *Callimachus* a *Corinthian* Sculptor, who passing by the Tomb of a young Lady, over which her Nurse had plac'd a Basket with some of her Play-things, and cover'd it up from the Weather with a Tile; the whole having been plac'd on a Root of *Acanthus*; as it sprung up, the Branches encompass'd the Basket, and bending down stop under the Corners of the Tile, form'd a kind of Volutes.

Hence *Callimachus* took his hint: The Basket he imitated in the Vase of his Column; the Leaves in the Volutes; and the Tile in the Abacus of his Order. See ABACUS, ACANTHUS, &c.

Villalpandus treats this Story of *Callimachus* as a Fable; and will have the *Corinthian* Capital to have taken its Origin from an Order in *Solomon's* Temple, the Leaves whereof were those of the Palm-Tree. See LEAVES.

The *Corinthian* Order has several Characters whereby it is distinguish'd from the rest: Its Capital is adorn'd with two Rows of Leaves, between which rise little Snails, or Caulicotes, whereof the Volutes are form'd, which support the Abacus, and which are in Number 16.

It has no Ovolo, nor even Abacus properly speaking; for the Member which goes by that Name is quite different from the Abacus in the other Orders, being cut with a Sweep, in the middle of which is carved a Rose, or other Ornament. See CAPITAL, VOLUTE, ABACUS, CAULICOLE, &c.

Vitruvius observes, that the *Corinthian* Order has no particular Ordinance for its Cornice, or any of the other Ornaments of its Entablature; nor does he give it any other Proportions than those of the *Ionian* Order: So that if it appears higher than the *Ionian*, 'tis purely owing to the Excess of the height of its Capital. See *IONIC*.

He also makes the rest of the Entablature the same; and the *Attic* Base he uses indifferently for the one and the other. See *ATTIC*.

But *Vitruvius* differs widely in this Order from all the Examples now remaining of Antiquity; the most beautiful whereof have a particular Base, and the whole Order 20 Modules high; whereas the *Ionian* has but 18. Again, its Capital is higher than that of *Vitruvius* by one third of a Module; and its Entablature, which has Modillions, and sometimes Dentils together with Modillions, is very different from the *Ionian* Entablature.

Most of the modern Architects for a side *Vitruvius's Corinthian* Ordinance, and follow that of the ancient Buildings; selecting from them according to their several Talents: So that the modern *Corinthian* is a kind of *Composite*; differing from any of the ancient Buildings, and much more from *Vitruvius's* Rules.

Vignola and *M. le Clerc* make the *Corinthian* Order 20 Modules high: yet *Serlio* only makes it 18; and *M. Perrault* 18 $\frac{1}{2}$, retrenching something from the 19 of *Vitruvius*.

The height of the Shaft *M. Perrault* makes less than that of the *Ionian*, by reason of the Excess of its Capital. See COLUMN; see also SHAFT, BASE, and ENTABLATURE.

CORINTHIAN BRASS. See BRASS.

CORK, the Bark of a Tree of the same Name, much resembling the Holm-Tree. See BARK.

Its Leaves are green above, and white underneath; and its Fruit a real Acorn, which feeds much more than that of the Oak. It is found in great abundance in *Spain*, *Italy*, *France*, &c.

To take off the Bark they make an Incision from top to the bottom of the Tree, and at each Extremity another round the Tree, perpendicular to the first. When stripp'd from the Tree, which does not therefore die, 'tis pil'd up in a Pond or Ditch, and loaden with heavy Stones to flatten it, and reduce it into Tables: Hence it is taken, to be dry'd; and when sufficiently dry put in Bales for Carriage.

If care be not taken to strip the Bark, it spins and peels off it self; being pull'd up by another Bark form'd underneath.

The Bark of Cork, as well as the Acorn, are of some use in Medicine; being both reputed Astringents, after being burnt and powder'd, when us'd externally; but the chief employ of the former is to put under Slippers, &c. and to stop Bottles.

The *Spaniards* burn it to make that light kind of black we call *Spanish Black*, used by Painters. See BLACK.

CORN, a Plant, or Genus of Plants, that produce a Grain fit for Bread, the ordinary Food of Man. See BREAD.

Corn is also used for the Grain or Seed of that Plant, separated from the Spica, or Ear.

In the Commerce of *Corn*, they only distinguish three Kinds, viz. *Corn*, properly so called, or *Wheat*; *Rye*, which is a Species very different, and of a Quality far inferior; and a third kind resulting from a Mixture of the two, and called *Maslin*.

The Farmers, indeed, rank among the Number of *Corn* several of the Grains sow'd in *Marob*; as Barley, Oats, and even Pulse, as Peas, Vetches, &c. which, however, they sometimes distinguish by the smaller *Corn*. *Maise* and *Sarsin* are number'd among the *Corn*s; the first call'd *Turkey* and *Indian Corn*, the second *French*, or *black Corn*.

Europe, in every Part of it; *Egypt*, and some other Cantons of *Africa*, particularly the Coasts of *Barbary*; and some Parts of *America* cultivated by the *Europeans*, particularly *New-England*, *New-France*, and *Acadia*, are the Places which produce *Corn*. Other Countries have *Maise* and *Rice* in lieu of it; and some Parts of *America*, both in the Islands and Continents, simple Roots, such as Potatoes, and Manioc.

Egypt was antiently the most fertile of all other Countries in *Corn*; as appears both from sacred and profane History: It furnish'd a good Part of the People subject to the *Roman* Empire, and was call'd the Dry Nurse of *Rome* and *Italy*. *France* and *Poland* seem now in the place of *Egypt*, and with their Superfluities support a good part of *Europe*.

For the first Discovery and Culture of *Corn*, Authors are much divided: The common Opinion is, that in the first Ages Men liv'd on the spontaneous Fruits of the Earth; as Acorns, and the Nut or Mast produced by the Beech, which, they say, took its Name *Fagus* from the Greek *φάγος*, I eat. 'Tis added, that they had not either the Use of *Corn*, nor the Art of preparing or making it stable.

Ceres has the Credit of being the first that shew'd the Use of *Corn*, on which account she was plac'd among the Gods. Others give the Honour to *Tripolemus*: Others

share it between the two; making *Ceres* the first Discoverer, and *Tripolemus* the first Planter and Cultivator of *Corn*.

Diodorus Siculus ascribes the Whole to *Ifis*; in which *Polydore Virgil* observes, he does not differ from the rest; *Ifis* and *Ceres* being the same. The *Athenians* pretend it was among them the Art began, and the *Cretans* or *Cassidors*, *Sicilians*, and *Egyptians* lay claim to the same. Some think the Title of the *Sicilians* best supposed, that being the Country of *Ceres*: and Authors add, she did not teach the Secret to the *Athenians*, till she had first introduc'd her Country-men. Others say, *Ceres* first arriv'd into *Africa*, thence into *Crete*, and last of all into *Sicily*. Many of the Learned, however, maintain it was in *Egypt* the Art of cultivating *Corn* first began; and 'tis certain there was *Corn* in *Egypt* and the East, long before the Time of *Ceres*.

For the Preservation of *Corn*: It must be well dried and clean'd; the Granary have its Openings to the North or East, and Vent-holes a-top. For the first six Months it must be well stirr'd every 15 Days; afterwards it will be sufficient to stir it once per Month: After two Years it beats no more; nor is there any thing to fear, but from the Air and foreign Moisture.

A little time after the Siege of *Mets* under *Henry II.* of *France*, the Duke of *Espernon* laid up vast Stores of *Corn* in the Citadel; which was preserv'd in good plight to the Year 1707, when the *French* King and his Retinue passing that way eat Bread bak'd thereof.

The chief Thing that contributes to the Preservation of *Corn*, is a Crust which forms on its Surface, by the Germination of the Grain underneath, to the thickness of an Inch and half. On that at *Mets* People walk'd, without its giving the least way. At *Sedan* was a Granary cut in a Rock, wherein a heap of *Corn* was preserv'd 110 Years: It was cover'd with a Crust a Foot thick.

At *Chalons* they have Granaries where they fill keep *Corn* 30 or 40 Years: Over the Heap they throw Quicklime, in fine Dust, to the thickness of three Inches; and sprinkle this over with Water, whence arises a Crust. The Grain near the Surface sprouts to the height of a Foot and half: these the Winter kills; and the Heap is left untouched till Necessary obliges 'em to it.

CORNACHINE Powder, a purging Powder, call'd also *Earl of Warwick's Powder*, and *Pulvis de Tribus*.

It is compos'd of equal Parts of *Antimonium Diaphoreticum*, *Diagridium*, and *Cream of Tartar*.

CORNAGE, an ancient Tenure, the Service whereof was to blow a Horn, when any Invasion of the Scots was perceiv'd. See SZAVICK.

This Tenure was very frequent in the Northern Counties, near the *Piells* Wall. But by Stat. 12 *Car. II.* all Tenants are converted into free and common Soccage. See TENURE, and SOCCAGE.

An old Rental calls *Cornage*, *Notgeld*, q. d. *Next gold*. My Lord *Coke* says, in old Books it is call'd *Horngeld*.

CORNEA TUNICA, in Anatomy, the third Coat of the Eye; so call'd from its Substance resembling the Horn of a Lanthorn. See EYE.

It is situated in the Fore-part; and is surrounded by the White. It has a greater Convexity than the rest of the Globe of the Eye, and is compos'd of several parallel Laminae, which are nourish'd by many Blood-Vessels, so fast, as not to hinder even the smallest Rays of Light from entering the Eye. It has a most exquisite Sense, to the end that upon the least Pain, the Tears may be squeez'd out of the Lacrymal Gland, to wash off any Filth, which, by sticking to the *Cornes*, might render it cloudy or dim. See LACRYMAL; see also TEAR, &c.

In the Memoirs of the *French* Academy, *M. Gaultophe* gives us an Instance of Incisions design'dly made in the *Cornes*, to discharge a quantity of Blood fester'd there by a violent Blow on the Eye, by means whereof the Sight had been almost entirely extinguisht.

The extravasated Blood, it seems, was in too great a quantity to be dissipat'd by Topical Medicines; besides that the Process would have been so tedious, that the aqueous Humour would have been in danger of being quite ruin'd in the mean time.

The *Cornes*, therefore, was open'd by three Incisions, all made across; the Blood was discharg'd; the Eye bound up with Compresses steep'd in a Mixture of four Ounces of Plantain Water, and two of Valerian Water. In eight Days the Eye resum'd its natural transparency; and there remain'd no Scar after the Incisions.

After the Cure, the Pupil of that Eye continued dilated much beyond its natural Dimensions.

CORNEA LIME. See LIME CORNEA.

CORNELIAN, otherwise call'd *Sardin*, a precious Stone, ordinarily red, bordering on an Orange. See PEARCIOUS Stone.

It is but little transparent, cuts easily; and we find most of the fine Gravings of Antiquity, whether in relief or indented, on this Stone.

It bears the Fire admirably: The largest Pieces found don't exceed three Inches in height.

The finest *Cornelians* are those brought from near *Babylon*; the next are those of *Sardinia*; the last those of the *River*, *Bohemian*, and *Silesia*.

To give these Stones the greater Lustre, in setting them they lay a piece of Silver Leaf underneath.

The principal use made of *Cornelians* is in Seals; by reason they give well, and take a fine polish. The Author of the Book usually but falsely attributed to *Albertus Magnus*, gives the *Cornelian* Virtues which, were they real, would make it incalculable. See *AGAT*.

The *Cornelian* is otherwise call'd *Corniola* and *Corniola*: The *Italians* call it *Corniolus*; 'tis said from *Cornu*, Horn; on account of the resemblance it bears to Horn.

CORNET, a Horn, or Musical Instrument us'd by the Africans in their Wars. See *MUSICK*.

Vegorius informs us, that the Legions had Trumpets, *Cornets*, and *Buccinae*: that when the *Cornets* sounded, only the *Engines* regarded; none of the Soldiers: that when the *Engines* were to march alone without the Soldiers, the *Cornet* alone was sounded: as, on the contrary, when the Soldiers were to move without the *Engines*, the Trumpets alone were sounded: That the *Cornets* and *Buccinae* founded the Charge and Retreat; and the *Cornets* and Trumpets during the Course of the Battle.

CORNET, in War, an Officer in the Cavalry, who bears the Ensign or Colours of the Company. See *ENSIGN*.

The *Cornet* is the third Officer in the Company, and commands in the Absence of the Captain and Lieutenant. He takes his Title from his Ensign which is square, and is suppos'd to be call'd by that Name, from *Cornu*; because placed on the Wings, which form a kind of Points or Horns of the Army.

Others derive the Name from *Cornet*; it being the ancient Custom for these Officers to wear Coronets or Garlands on their Heads.

CORNICHS, or *CORNICE*, in Architecture, the uppermost Member of the Entablature of a Column; or that which crowns the Order. See *ENTABLATURE*, *CROWNINGS*, &c.

The *Cornice* is the third grand Division of the Trabeation, commencing from the Frieze and ending with the Cymatium.

The Word is form'd from the Latin *Cornis*, a Crowning.

The *Cornice* is different in the different Orders: In the *Tuscan* Order it is the most plain. *Vignola* makes it to consist of an Ovum or Quarter-round, an Astragal or Baguette, the Reglet or Fillet, the Larmier, and the Talon. See *TOSCAN*.

In the *Doric*, he makes Capitals of the Triglyphs of the Frieze with their Bandillettes, a Talon, Mureles or Dentils, a Larmier with its *Gutte* underneath, a Talon, Fillet, Cavetto, and Reglet. See *DORIC*.

In the *Ionic*, the Members are in most respects the same as in the *Doric*; except that they are frequently enrich'd with carving, and there are always Dentils. See *IONIC*.

In the *Composite* there are Dentils; its Mouldings are curv'd, and there are Channels under the Soffit. See *COMPOSITE*.

The *Corinthian Cornice* is the richest; and is distinguish'd by having both Modillions and Dentils: contrary to the Opinion of *Vitruvius*, who looks on those two Ornaments as incompatible; and of *M. le Clerc*, who regards the Dentils as peculiar to the *Ionic*. See *MODILLION*, *DENTIL*, &c. See also *ORDER*.

For the Heights and Projectures of the *Cornices* in the several Orders; *Goldman* makes the Height of the *Tuscan* $1\frac{1}{2}$, and its Projecture $2\frac{1}{2}$ Modules: The Height of the *Doric* $1\frac{1}{2}$, its Projecture $2\frac{1}{2}$; Height of the *Ionic* $1\frac{1}{2}$, its Projecture $2\frac{1}{2}$; Height of the *Composite* $1\frac{1}{2}$, Projecture $2\frac{1}{2}$; Height of the *Corinthian* $1\frac{1}{2}$, Projecture $2\frac{1}{2}$.

CORNICK is us'd in the general for all little Projectures of Machinery or Joinery; even where there are no Columns.

Thus, we say, the *Cornice* of a Chimney, a Buffet, &c. *ARCHITECTURE* *CORNICK*, is that immediately contiguous to the Architecture; the Frieze being retrench'd.

MODILLET CORNICK, is that whose Projecture is cut or interrupted, to the right of the Larmier, or reduced into a Parband with a Cimaise.

CANTALIVER CORNICK, a Term us'd by the Workmen for a *Cornice* that has Cantalivers underneath it. See *CANTALIVER*.

MODILLION CORNICK, a *Cornice* with Modillions under it. See *MODILLION*.

CROWING CORNICK, a *Cornice* which has a great Casement or hollow in it; ordinarily lathed and plaster'd upon Cornices, Sprockets, or Brackets.

CORNICK is also us'd for the Crownings of Pedestals. See *PEDESTAL*.

This *Cornice*, too, is different in the different Orders: In the *Tuscan*, according to *M. Perrault*, it has a Parband which serves as a *Corona*, and a Cavetto with its Fillet: In the

Doric, it has a Cavetto with a Fillet, which bears a Drip crown'd with a Square: In the *Ionic*, a Cavetto with its Fillet above, and a Drip or hanging Square crown'd with an Ogee and its Fillet: In the *Corinthian*, an Ogee with its Fillet, a Cymatium under the *Corona*, which it hollows to make a Drip, a *Corona*, and an Ogee with its Fillet: Lastly, in the *Composite*, a Fillet with a Sweep over the Die, an Astragal, Cyma with its Fillet, *Corona*, and Ogee with its Fillet: See each in its Place.

CORNICK Ring of a Piece of Ordnance, 'is that which lies next the Trunnion Ring; or next from the Muzzle Ring backwards. See *ORDNANCE*.

CORNICULARIS Processus, the Process or Knob of the Shoulder Bone; thus call'd, as resembling the Figure of a Crow's Beak.

CORNICULARIUS, in Antiquity, an Officer in the Roman Army.

His Business was to aid and assist the Military Tribune in the exercise of his Post, in quality of Lieutenant.

The *Cornicularius* went the Rounds in lieu of the Tribune, visited the Watch, and were nearly what the *Aids Major* are in the French Army.

The Name *Cornicularius* was given 'em from a little Horn, call'd *Corniculatus*, which they us'd in giving Orders to the Soldiers: The *Salmastus* derives it from *Corniculatus*, the Crest of an Headpiece; it being an Observation of *Pliny*, that they wore Iron or Brass Horns on their Helmets; and that these were call'd *Cornicula*.

In the *Notitia Imperii*, we find a kind of Secretary or Register of the same Name; his Business was to attend the Judge, and to enter down his Sentences and Decisions.

The Critics derive the Word, in this Sense, from *Corniculatus*, a little Horn to put Ink in.

CORNICULATE Plants, are such as after they have been blown into Flower, produce many distinct and horned Pods, or Seed-Vessels, call'd *Siliques*; For which Reason, the Plants are also denominated *Siliquous Plants*. See *SILIQUOUS*.

Such are the *Sedum* or *Sempervivum*, *Telephium*, *Juncus Floridus*, *Helieborus niger*, *Pennis*, *Caliba Palustris*, *Althea Lutea*, &c. See *PLANT*.

CORNU Ammonis, in Natural History, an extraordinary kind of Stone, which in Vinegar, Juice of Lemons, &c. has a Motion like that of an Animal. See *STONE*.

'Tis rough, knotty, of an Ash-colour, and crooked in manner of a Ram's-horn such as those wherewith the Antients represented *Jupiter Ammon*: whence its Name.

'Tis disputed among Naturalists, whether it be a Fossil, or a *Nautilus*, or a Rock-Plant. *Camerarius* maintains the first, urging that 'tis frequently dug out of the Tops of Mountains; and that 'tis seldom found near the Sea-shore.

Dr. Woodward asserts it a Shell, and of the Number of the *Nautili*, form'd in the Sea, and carried thence by the Waters of the Deluge into the Countries whence 'tis dug. He argues, that if it be rarely found on the Sea-Coasts, 'tis because Shells and other Bodies fasten'd to the bottom of the Sea, as most Kinds of the *Cornea Ammonis* must be, are only to be torn thence and driven ashore by Tempests: but the most violent Tempests never move the Bottom of the Sea, as the Divers have put past doubt; so that 'tis no wonder if none of the *Cornea* be thrown up: But in the overturning of the Earth by the Deluge, these, with a thousand more Productions of the Sea, might be thrown from the bottom of the Waters to the Places where they are now found. See *SHELL*.

The *Cornea Ammonis* are of different thicknesses and lengths; some of 'em weigh about three Pounds. It is found in several Places in *Germany*. From some Experiments that have been made therewith, it's found to contain a little quantity of Gold; which sinks to the bottom upon pounding it small, and stirring it in a running Water, till all the earthy Parts were carried off.

The Stone call'd *Cornea Ammonis* is frequent in the Clay wherein the *Trochites* and *Entrochi* are found: The largest I have is seven Inches in length, and four in circumference at the big End, and two and a half at the smaller; the Tip being broke off. Tracing its Origin, I find some of the first Buddings out of it about the bigness of a young Cock's Spur, and very much like it: I have some in raw Clay; and one growing of a white cawky Stone. They generally become at last a whitish Spar, and some milky-white, as some of the *Trochites* are. See *TROCHITES*.

There are of all intermediate Proportions between these two; tho' the very few of any bigness are to be found entire, but all broken and imperfect Pieces. The Texture of the Stone is thus: Some have a mossy Spar in their insides, which takes up three Parts of the Stone; and then from the sharp top there grows thin flat Cells, or small Pieces of Spar set edgewise one close to the other, which shoot towards the broad End, and appear outwardly like small Ridges or Seams. There are likewise Rings running round it, tending in their growth towards the broad End, as in a Ram's Horn. Most of the lesser Stones have very little mossy

* Spar within 'em, and some none, with Cells coming down inwardly from the top of the Stone, resembling those in the Flowers of Coral, that terminate its Branches. And doublets, if taken from their Beds in a seasonable time, would yield the like milky Juice.' *Mr. Beaumont, ap. Philosph. Transact. N^o 129. See ROCK-PLANT.*

CORNU CERVI, Hartshorn, in Medicine, one of the Testaceous Powders. See TESTACEOUS.

Among Chymists, the same Name is used for the Mouth of an Alembic.

CORNUA Uteri. See UTERUS.

CORNUCOPIA, among the Poets, a Horn out of which proceeded all things in abundance, by a particular Privilege which *Jupiter* granted his Nurse, supposed to be the Goat *Amalthea*.

The real Sense of the Fable is this; that in *Lybia* there is a little Territory shaped not unlike a Bullock's Horn, exceedingly fertile, given by King *Ammon* to his Daughter *Amalthea*, whom the Poets feign to have been *Jupiter's* Nurse.

In Architecture and Sculpture, the *Cornucopia*, or Horn of Plenty, is represented under the Figure of a large Horn, out of which issue Fruits, Flowers, &c.

On Medals, *F. Fabert* observes, the *Cornucopia* is given to all Deities, Genii, and Heroes.

CORNUTUM ARGUMENTUM. See DILEMMA.

CORONA, Crown, or Crowning, in Architecture, a large flat strong Member of the Cornice; so called, because it crowns not only the Cornice, but the Entablature, and the whole Order. See ENTABLATURE.

The French call it the *Larmier*, our Workmen the *Drip*, as serving, by its great Projection, to screen the rest of the Building from the Rain. See LARMIER.

Some Latin Authors call it *Supercilium*; but, as it shou'd seem, by mistake for *Stillicidium*. Some French Authors call it *Mouchette*; some Latin ones *Mentum*, Chin; from its keeping off the Weather from the Parts underneath, as the Chin does the Sweat, &c. out of the Neck.

Some call it absolutely the *Cornice*, as being the principal Member thereof. *Vitruvius* frequently uses the Word *Corona* for the whole Corniche. See CORNICHE.

The *Corona* is it self crown'd or finish'd with a Reglet, or Fillet.

There are sometimes two *Corona's* in a Cornice; as in the *Corinthian* of the *Rosanda*.

CORONA BOREALIS, Northern Crown, in Astronomy, a Constellation of the Northern Hemisphere. See CONSTELLATION.

The Stars in the Constellation of the *Northern Crown*, in *Ptolemy's* Catalogue are 8; in *Tychon's* as many; in the *Britannic Catalogue* 21. The Order, Names, Longitudes, Latitudes, Magnitudes, &c. are as follow.

Stars in the Constellation CORONA BOREALIS.

Names and Situations of the Stars.	Signs	Longitude.	Latitude.	Magni.
That preced. the <i>Corona</i> , withoutside	♈	3 5 16	45 57 52	5 7

CORONA Clericalis. See CROWN; see also COIF.

CORONALE Os, in Anatomy, the Bone of the Forehead; called also *Os Frontis*, *Os Puppis*, and *Verecundum*. See OS FRONTIS.

CORONALIS, the first Suture of the *Cranium*, or Skull. See SUTURE.

The *Coronal Suture* reaches transversely from one Temple to the other; and joins the *Os Frontis* with the *Offa Parietaria*.

It is open, the breadth of a Finger or two in the middle, in young Children, but grows closer with Age: the same

times, by Convulsion-Fits, or a bad Conformation, it not only closes in Children, but the Edges shoot over one another; which is what the Women call *Head-wind-flow*; after which they seldom live long.

CORONARIA Vasa, CORONARY Vessels, the Arteries and Veins which surround the Heart, to nourish and supply it with Blood, &c. See CORONARY ARTERIES.

CORONARY Arteries, are two Arteries springing out of the *Aorta*, ere it leaves the *Pericardium*; and serving to carry the Blood into the Substance of the Heart. See HEART.

At their rise out of the *Aorta*, there is a Valve to hinder the Reflux of the Blood; first discover'd by *Z. Eustachius* a Native of *San Severino*. See VALVE.

They are call'd *Coronary*, because of their spreading into Branches, and encompassing the Basis of the Heart, in manner of a *Crown*, or *Garland*. In their progress, they send out several Branches lengthwise of the Heart; and, as *Ruyssch* observes, to the Arteries, and into the very Substance of the Heart: After encompassing the Basis, and meeting again, they insinuate with each other.

CORONARY Vein, is a Vein diffus'd over the exterior Surface of the Heart: It is form'd from several Branches arising from all Parts of the *Vesica*, and terminates in the *Vena Cava*, whither it conveys the Remains of the Blood brought by the *Coronary Arteries*.

Stomachic CORONARY, is a Vein inserted into the Trunk of the Splenic Vein; which by uniting with the *Mesenteria*, forms the *Vena Porta*.

CORONE, in Anatomy, a sharp pointed Eminence, or Process of a Bone. See BONE.

Of these there are several in the Body, distinguish'd, according to their Figures, by different Names; e.g. one of the *Os Petrosum*, called *Styloides*; as being stop'd like a Bodkin: Another call'd *Mastoides*, from its resembling a Nipple; another of the *Omoipata*, call'd *Coracoides*; as being in the Figure of a Crow's Bill: lastly, another of the *Os Sphenoides*, call'd *Pterigoides*, from its shape, which resembles the Wings of a Bat. See STYLOIDES, CORACOIDES, &c.

CORONER, an Officer, whereof there are two in every County, whose Business is to inquire, by a Jury of twelve Neighbours, how, and by whom any Person came by a violent Death; and to enter the same upon record. This being Matter Criminal, and a Plea of the Crown, 'tis here they are called *Crowners*, or *Coroners*.

They are chosen by the Freeholders of the County, by Virtue of a Writ out of Chancery.

This Officer, by the Statute of *Westminster*, ought to be a Knight; and there is a Writ in the Register *Nisi Jit Miles*, whereby it appears to be a sufficient Cause for removal of a *Coroner* chosen, if he were not a Knight, and had not 100 Shillings per Ann. Freehold. Mention is made of this Officer as early as the Time of King *Abelion*, Anno 925.

The Lord Chief Justice of the King's Bench is the Sovereign *Coroner* of the whole Realm, or wheresoever he abides.

There are also certain *Special Coroners* within divers Liberties, as well as the ordinary Officers in every County; and some Colleges and Corporations are empower'd by their Charters, to appoint their *Coroner* within their own Precincts.

CORPORA Cavernosa, in Anatomy, two spongy Bodies, called also *Corpora Nervosa*, and *Corpora Spongiosa*. See CAVERNOSA CORPORA, &c.

CORPORA Olivaria. See OLIVARIA CORPORA.

CORPORA Pyramidalia, are two Protuberances of the Under-part of the *Cerebellum*, about an Inch long; so called from their Resemblance to a Pyramid. See PYRAMIDALIA.

CORPORA Striata, two Protuberances of the *Cerebrum* of the *Medulla Oblongata*. See MEDULLA OBLONGATA.

CORPORAL, an inferior Officer in a Company of Foot, who hath charge over one of the Divisions; places and relieves Centinels, and keeps good Order in the *Corps de Garde*; receiving, withal, the Word, of the inferior *Mounts* that pass by his *Corps de Garde*.

There are usually three *Corporals* in each Company. See COMPANY.

The Word comes from the Italian *Corporale*, which signifies the same thing; and that from *Capus*, Head, Chief; the *Corporal* being the first of the Company.

CORPORAL of a Ship, is an Officer who hath the Charge of setting the Watch and Centries, and relieving them; and who fees that all the Soldiers and Sailors keep their Arms neat and clean: He also teaches them how to use their Arms, and bath a Mate under him.

CORPORAL Oath. See OATH.

CORPORAL, CORPORALE, is also an ancient Church Term, signifying the Sacred Lincen, spread under the Chalice in the Eucharist and Mass, to receive the Fragments of the Bread, if any chanced to fall.

Some say, it was Pope *Eusebius* who first enjoind the Use of the *Corporal*; others say *S. Silvester*. It was the Custom to carry *Corporals*, with some Solemnity, to Fires, and to pile 'em again'd the Flames, in order to extinguish 'em.

Philip de Comines says, the Pope made *Louis XI.* a Prefect of the *Corporale* wherein my Lord *S. Peter* hung Mass. **CORPORATION**, a Body Politick, or Incorporation; so call'd, because the several Members thereof are form'd into one Body; and are qualify'd to take, purchase, grant, have a common Seal, sue and be sued, &c. in their joint Capacity. A Corporation may be establish'd three ways, viz. by Prescription, by Letters Patent, and by Act of Parliament.

Corporations are either *Ecclesiastical*, or *Lay*. *Ecclesiastical* are either *Regular*, as Abbies, Priors, Churches, &c. or *Secular*, as Bishopsricks, Deaneries, Archdeaconries, Parsonages, &c. Universities, Colleges, Hospitals. See *ARMY*, *PRIORY*, *CHAPYER*, &c. See also *HOSPITALS*, &c.

Lays, as those of Cities, Towns, Mayoralties, Bailiwicks, Companies or Communities of Commerce, &c. See *COMTANT*, &c.

Again, a Corporation is either *sole*, or an aggregate of many; which last is what the Civilians call a *College*. See *COLLEGE*; see also *COMMUNITY*.

CORPORILITY, a School Term. Substance is usually divided into *corporeal* and *spiritual*: Now *Corpority* is the Quality of that which is *Corporeal*, or has Body; or that which constitutes or denominates it such. See *SUBSTANCE*, and *BODY*.

The *Corpority* of God was the capital Error of the *Anthropomorphites*. Some Authors reproach *Tertullian* with admitting a *Corpority* in the Deity; but 'tis manifest, by *Body* he means no more than *Substance*.

The *Malometans* reproach the *Samaritans* at this Day, with a Belief of the *Corpority* of God. Many of the Ancients believ'd the *Corpority* of Angels.

CORPORIFICATION, or *Corporation*, in Chymistry, the Operation of recovering Spirits into the same Body, or at least into a Body nearly the same, with that which they had before their Spiritualization. See *SPIRIT*.

CORPS de Garde, a Post in an Army, sometimes under Coert, sometimes in the open Air, to receive a Body of Soldiers, who are reliev'd from time to time, and who are to watch in their Turns, for the Security of a Quarter, a Camp, Station, &c.

The Word is also used for the Men who watch therein. 'Tis usual to have, beside the *great*, a *little Corps de Garde*, at a good distance before the Lines; to be the more ready servants of the Approach of the Enemy.

CORPS, in Architecture, is a Term borrow'd from the French, signifying any Part that projects or advances beyond the Naked of a Wall; and which serves as a Ground for fine Decoration. See *PROJECTURE*.

CORPS de Bataille, is the main Body of an Army, drawn up for Battle.

CORPULENCY. See *OBESITY*, and *FATNESS*.

CORPUS, and **CORPORA**, *Body, Bodies*, in Anatomy, Terms apply'd to several Parts in the Animal Structure; as the *Corpus Callosum*, *Corpora Striata*, and *Ovaria* of the Brain; the *Corpor Cavernosa* and *Nervosa* of the Penis; *Corpus Glandulosum*, *Corpus Reticulare*, &c. See *CALLOSUM Corpus*, *OLIVARIA Corpora*, &c.

CORPUS is also used in Matters of Learning, for several Works of the same Nature, collected, join'd, and bound together. Thus, *Gratian* made a Collection of the Canons of the Church, called *Corpus Canonum*. See *CANON*.

The *Corpus* of the Civil Law is compos'd of the Digest, Code, and Institutes. See *CIVIL LAW*; see also *CODE*, and *DIGEST*.

We have also a *Corpus* of the Greek Poets; and another of the Latin Poets. See *BODY*.

CORPUS Callosum, is the Upper-part, or covering of the two lateral Ventricles of the Brain, appearing immediately under the Process of the *Dura Mater*, below the Depth of all the Circumvolutions; being form'd by the Union of the Medullary Fibres of each side. See *BRAIN*.

CORPUS Glandulosum. See *PROSTRATE*.

CORPUS Reticulare. See *RETICULARIS Corpus*.

CORPUS cum Causa, in Law, a Writ issuing out of Chancery, to remove both the Body and Record touching the Cause of any Man lying in Execution upon a Judgment for Debt, into the King's-Bench, &c. there to lie till he has satisfy'd the Judgment.

CORPUSCLE, in Physicks, a Diminutive of *Corpus*, us'd to express the minute Parts, or Particles that constitute Natural Bodies. See *PARTICLE*, and *BODY*.

Corpuscles are the same with what the Antients call'd *Atoms*; and differ both from the Elementary and Hypothesized Parts of the Chymists, and the *Materia Subtilis* of the Cartesians. See *ATOM*, *PRINCIPLE*, *SUBTLE*, *MATTER*, &c.

Sic Isaac Newton shews a Method of determining the Sizes of the *Corpuscles* whereof the Particles that compose Natural Bodies consist, from their Colours. See *COLORS*.

CORPUSCULAR or *Atomical Philosophy*, the Scheme or System of Physicks, wherein the Phenomena are accounted for, from the Motion, Rest, Position, Arrangement, &c. of the minute *Corpuscles*, or Atoms, whereof Bodies are compos'd.

The *Corpuscular Philosophy*, which now flourishes under the Title of the *Mechanical Philosophy*, is exceedingly ancient. *Leucippus* and *Democritus* were the first who taught it in Greece; from them *Epicurus* receiv'd it and improv'd it, inasmuch that it came at length to be denominated from him, and was call'd the *Epicurean Philosophy*. See *EPICUREAN*.

Leucippus, again, is said to have receiv'd it from *Mochus* a *Phoenician* Physiologist and Physician, before the Time of the Trojan War, and the first who philosophiz'd about Atoms: Tho' *Gale*, who borrows all Profane Philosophy from the Sacred Philosophy in the Books of *Moses*, is of Opinion he might take the Hint from the *Mosaic* History of the Formation of Man out of the Dust of the Earth.

Indeed, *Cassaubon* takes *Mochus*, or *Μωχου*, to be the Name of a *Tyrian*, who among his own Countrymen was call'd *משח מופה*, or according to the Method of writing which then obtain'd, *Mofes*: whence 'tis conjectur'd that the *Mofche*, or *Mochus* of the *Tyrians*, was, in effect, the *Mofes* of the *Hebrews*.

This appears to be the Sentiment of *Selden*, *Arcerius*, &c. But the Opinion of *Bochart* is the more probable, who from *Postellus* and others, takes *Mochus* for an Inhabitant of *Sidon*, and his Philosophy to be nothing else but a Physiological or Natural History of the Creation.

After *Epicurus*, the *Corpuscular Philosophy* gave way to the *Perrapatetic*, which became the popular System. See *PERRIPATETIC*.

Thus, in lieu of Atoms, were introduc'd Specific and Substantial Forms, Qualities, Sympathies, &c. which amov'd the World till *Gassendus*, *Charlevoix*, *des Cartes*, *Boyle*, *Newton*, and others, retriev'd the old *Corpuscularian* Hypothesis; which is now become the Basis of the Mechanical, and Experimental Philosophy. See *MECHANICAL*, *EXPERIMENTAL*, and *NEWTONIAN*.

Mr. *Boyle* reduces the Principles of the *Corpuscular Philosophy* to the four following Heads:

1st, That there is but one Catholick, or Universal Matter, which is an extended, impenetrable, and divisible Substance, common to all Bodies, and capable of all Forms. See *MATTER*.

This Sir *I. Newton* finely improves on: 'All Things consider'd, says that great Author, it appears probable to me, that God, in the Beginning, created Matter in solid, hard, impenetrable, moveable Particles; of such Sizes and Figures, and with such other Properties, as most conduced to the End for which he form'd 'em: And that these primitive Particles, being Solids, are incomparably harder than any of the sensible porous Bodies compounded of 'em; even so hard as never to wear or break in pieces; so other Power being able to divide what God made one in the first Creation. While these *Corpuscles* remain entire, they may compose Bodies of one and the same Nature and Texture in all Ages: but should they wear away, or break in pieces, the Nature of things depending on 'em would be chang'd: Water and Earth, compos'd of old worn Particles, and Fragments of Particles, would not be of the same Nature and Texture now, with Water and Earth compos'd of entire Particles at the Beginning. And therefore, that Nature may be lasting, the Changes of *Corporeal* Things are to be plac'd only in the various Separations and new Associations of these permanent *Corpuscles*.' *Opticks*.

2^d, That this Matter, in order to form the vast Variety of Natural Bodies, must have Motion, in some or all its assignable Parts; and that this Motion was given to Matter by God the Creator of all Things: and has all manner of Directions and Tendencies.

These *Corpuscles*, says Sir *I. Newton*, have not only a *Vis Inertiae*, accompanied with such passive Laws of Motion as naturally result from that Force; but also are mov'd by certain active Principles; such as that of Gravity, and that which causes Fermentation, and the Cohesion of Bodies.' See *GRAVITY*, *FERMENTATION*, &c.

3^d, That Matter must also be actually divided into Parts, and each of these primitive Particles, Fragments, or Atoms of Matter, must have its proper Magnitude, Figure, and Shape.

4th, That these differently fix'd and shap'd Particles, have different Orders, Positions, Situations, and Postures; from whence all the Variety of Compound Bodies arises.

CORRECTION, in Printing, the Retrenching of the Faults in a Work; or the Reading which the Master, or in his Place the Corrector, give the first Proofs, to point out and correct the Faults, to be adjust'd, in the Forms, by the Compositor. See *PRINTING*.

The *Corrections* are plac'd on the Margin of each Page, right against the Line where the Faults are found. There are different Characters us'd to express different *Corrections*, v. g. *D* or *3* *dote*, for any thing to be effaced, or left out. When any thing is to be inserted, the Place is mark'd in the Line with a Caret *^* and the Insertion added in the Margin. When a Word, Syllable, &c. is to be alter'd, 'tis eras'd out of the Proof, and that to come in its room written in the Margin; always observing, if there be several in the same Line, that they be separated by little Bars or Strokes, |. If a Space be omitted, its Place is mark'd with a Caret, and the Thing express'd on the Margin with *✕*. If a Letter be inverted, 'tis express'd on the Margin with *∩*. If any thing be transpos'd, 'tis mark'd thus; *The Shortest are the Folliet best*; for, *The Shortest Folliet are the best*; and in the Margin is added *tr* in a Circle. If Roman Characters are to be chang'd for *Italic*, or *vice versa*, a Line is drawn under them *thus*, and *Rom.* or *Ital.* added in the Margin. See COMPOSITION.

CORRECTION, in Rhetorick, a Figure, whereby a Person in a Passion fearing he has not express'd a thing fully, or strongly enough, calls it back again, as it were, by a stronger Phrase, and corrects the Error. See FIGURE.

Thus *Cicero pro Caelio*; *O stultitia! stultitiam ne dicam an impudentiam singularera. O Folly! Folly do I call it, or rather Impudence.* And in the first *Catilinarian*; *Quamquam, quid loquor? te, ut illo res frangat; tu, ut unquam te corrigas; tu, ut ullam fugam mediteris.* Thus *Terence*, in the *Hortensianorum*; *Filius unicum adolescentulum habeo: Ab! quid dixi, habere me; imo, habui Chremem; nunc habeam nunc incertum est.*

CORRECTION, in Pharmacy, the Preparation of a Medicine, in order to moderate and qualify the too great Violence of its Action; as when Glafs of Antimony is calcin'd with a little Salt-petre; or, to prevent its giving the Gripes, when Salt of Tartar is dissolv'd in an Infusion of Scum. Hence,

CORRECTORS, in Medicine, such Ingredients in a Composition as guard against, or abate the Force of others.

Thus, the Lixivious Salts prevent the grievous Vellinations of Reddous Purges, by dividing their Particles, and preventing their Adhesions to the insinual Membranes, whereby they sometimes occasion intolerable Gripings: And thus Spices, and carminative Seeds also, assist in the easier Operation of some Cathartics, by dissipating Collections of Wind.

In the making a Medicine, likewise, such Things are called *Correctors*, as destroy or diminish a Quality in it that could not otherwise dispens'd with: Thus, Turpentine may be called the *Corrector* of Quicksilver, by destroying its Fluxility, and making it thereby capable of Mixture: and thus rectified Spirit of Wine breaks off the Points of some Acids, so as to make them become safe and good Remedies, which before were destructive.

CORRELATIVE, something oppos'd to another in any certain Relation. See RELATIVE.

Thus, the Father and the Son are two *Correlatives*; *Pater & Filius sibi mutuo respondent.* Light and Darkness, Motion and Rest, are *correlative*, and opposite Terms.

CORRIDOR, in Fortification, a Road or Way along the Edge of the Ditch, withoutside; encompassing the whole Fortification. See DITCH.

It is also called the *Covert way*; because cover'd with a Glacis, or Esplanade, serving it as a Parapet. See COVERT WAY.

The *Corridor* is ordinarily about 20 Yards broad.

The Word comes from the Italian *Coridore*, or the Spanish *Coridor*.

CORRIDOR is also used in Architecture for a Gallery, or long Isle, around a Building, leading to several Chambers at a distance from each other.

CORRIVAL, a Relative Term, signifying, originally, a Person who drew Water from the same Source or Spring with another; by means of some common Canal, which carried it to both their Lands; and which prov'd the Occasion of frequent Disputes.

Hence the Word came to be used for those who have the same Pretensions; whether to Glory, to Love, or the like; but use has abridg'd the Word; and we now both write and pronounce *Rival*.

CORROBORATIVE, in Medicine, any thing that increases the Strength, or gives a new Force. See STRENGTHNER.

The Word is likewise frequently apply'd to such Medicines as are of use in particular Weaknesses; as the *Finor Albus*, Gonorrhoeas, &c. Such are Terrebints, &c.

All Cardiacs are *Corroborative*. See CARDIAC.

CORROSION, the Action of *corroding*, or gnawing away, by little and little, the Continuity of the Parts of Bodies.

Thus, Acids *corrode* most Natural Bodies; and Arsenic only kills, because it *corrodes* the Bowels with its sharp pointed Particles. See ARSENIC, POISON, with its sharp.

Corrosion is used both in Chymistry, Medicine, and Natural Philology; where it stands for a particular Species of Diffolution, either by an Acid, or a saline Menstruum. See DISSOLUTION.

What *Corrosion* has peculiar to it, is, that 'tis mostly design'd for the Resolution of Bodies the most strongly compacted, as Bones and Metals; so that the Menstruums imply'd require an uncommon Moment, or Force.

Now the *Corrosive Liquors*, whether acid or urinous, are nothing but Salts dissolv'd in a little Phlegm: Therefore, these being solid, and consequently containing a considerable quantity of Matter, do both attract one another the more, and are also more attracted by the Particles of the Body, which is to be dissolv'd. And as their Attractions at equal Distances are proportional to their Bulk, *ceteris paribus*; so when the more solid Bodies are put into saline Menstruums, the Attraction is stronger than other Solutions; and the Motion, which is always proportional to the Attraction, more violent. See ATTRACTION.

Hence we easily conceive how they should drive those Salts, like so many Darts, into the Pores of the Bodies, and open and loosen the Cohesion of them, the ever so firm. See ACID.

Again, we know, the more minute the Particles of the Menstruum are, the sooner they penetrate, and with the greater Force: The Motion produc'd by Attraction, being always greater in the least Corpuscles, next to nothing to the large ones.

Add to this another advantage gain'd by this minuteness of the Particles, viz. that they approach nearer the Body to be dissolv'd; without which, the attractive Force wou'd be insensible. Hence, those very Salts, which dissolv'd in Water will hardly touch Metals, if once turn'd into acid Spirits, easily penetrate: For in Diffillation, not only a greater Quantity of Water remains, but the saline Bodies are so minutely broken, and divided by the Fire, as to make them more readily capable of being mov'd by an attractive Force, and therefore such a dissolv'd Menstruum is much more efficacious than any Solution of Salt made with Water. See MENSTRUUM.

CORRUGATOR Supercilii, or CORRUGENT *Muscle*, a Muscle arising from the great Canthus of the Orbit of the Eye, and terminating in the Skin about the middle of the Eyebrows. See EYEBROWS.

Some reckon this Muscle only a Prolongation of the *Frontales*. Its Name declares its Use; being form'd of *Cou* and *Rugo*, to wrinkle up, and knit the Brows.

CORRUGENT Muscle, the same as *Corrugator Supercilii*. See CORRUGATOR.

CORRUPTIBLE, a Sect of ancient Hereticks, who arose out of the *Eutycheans* in *Egypt*, about the Year 522, under their Chief, *Severus*, the pretended Patriarch of *Alexandria*.

Their distinguishing Doctrine, whence they deriv'd their Name, was, that the Body of Jesus Christ was *corruptible*; that the Father had own'd it; and that to deny it was to deny the Trath of our Saviour's Passion.

On the other hand, *Julian* of *Halicarnassus*, another *Eutychean*, a Refugee as well as *Severus*, in *Alexandria*, maintain'd that the Body of Jesus Christ had been always incorruptible; that to say it was *Corruptible*, was to make a Distinction between Jesus Christ and the Word, and by consequence to make two Natures in Jesus Christ.

The People of *Alexandria* were divided between the two Opinions; and the Partisans of *Severus* were called *Corruptible*, q. d. Worshipers of something *Corruptible*: Sometimes they were denominated *Corruptibiles*; and the Adherents of *Julian* *Incorruptibiles*, or *Phantastastes*.

The Clergy and Secular Powers favour'd the first; the Monks and the People the latter.

CORRUPTION, the Extinction of any thing; or the Action whereby it ceases to be what it was.

Thus, Wood is said to be *corrupted*, when we don't see it remain Wood any longer, but find Fire in its stead. And thus the Egg is *corrupted*, when it ceases to be an Egg, and we find a Chicken in its room.

Hence that Axiom in Philology, *The Corruption of one thing is the Generation of another.*

Corruption, in effect, differs from Generation, as two Contraries differ from each other. See GENERATION.

It differs from Alteration as the Less from a Greater, or a Part from the Whole; a Thing being said to be alter'd, when it is not so far chang'd but it may be known, and still keeps its old Name; both which it loses by *Corruption*. See ALTERATION.

But, as in Generation, nothing of Matter is produced that did not before exist; so in *Corruption*, nothing more is lost, than that particular Modification which was its Form, and made it to be of such a Species. See FORM.

Dr. Drake accounts for *Corruption* in Animal and Vegetable Bodies, thus; 'The Principle of *Corruption* is, perhaps, the same which in a State of Circulation is the Principle of Life; viz. the Air, which is found mix'd in considerable Quantities with all sorts of Fluids; as necessary to Vegetable, as to Animal Life. Now this Air has two Motions, viz. an expansive one, from its natural Elasticity, by means whereof it communicates that intestine Motion which all Juices have, and by which the containing Parts are gradually extended and grow; and a circulatory or progressive Motion, which is not essential to it, but is occasion'd by that Reflexion of the solid Parts of these Bodies, which obliges it to take that Course which is most free and open, which is thro' the Vessels of Animals and Plants.

'Now, this Course being stop'd, the expansive Motion still remains, and continues to act, till by degrees it has so far overcome the including Bodies, as to bring it self to an equal degree of Expansion with the external Air; which it cannot do without destroying the Texture and Continuity, or specific degree of Cohesion of those Solids; which is what we call a *State of Corruption*.

'This expansive or destructive Quality of the Air in Bodies, may be promoted two ways; and therefore *Corruption* accelerated in as many, viz. either by weakening the Tone or Cohesion of the including Parts, and so facilitating the Work of the Air; as is the Case when Fruit is bruis'd, which is found to *corrupt* much sooner there than in any other Part: or by intending the expansive Force of the Air it self, by Heat, or some other cooperating Circumstance; and so helping it to overcome the Resistance the sooner.' See AIR.

CORRUPTION of Blood, in Law, an Infection accruing to Man's State, attain'd of Felony or Treason, and to his Issue. See TREASON, ATTAINED, &c.

For, as he loses all to the Prince, or other Lord of the Fee, so his Issue cannot be Heirs to him, or to any other Assessor by him: and if he were Noble, or a Gentleman, he and his Heirs are thereby ignobled and ungentle'd.

The King's Pardon cleanses the *Corruption of Blood* in such Children born after the Pardon, nor of those born before it; these latter continuing still incapable of inheriting the Land of their Father, purchas'd before the Time of the Pardon.

But now, there are several Offences now made Treason by Act of Parliament which don't *corrupt* the Blood, nor shall the Criminal forfeit any thing thereby beside what he has for Life.

CORSAIR, a Pirate, or Person who scours the Seas, especially the *Mediterranean*, with a Vessel arm'd for War, without Commission from any Prince or Power; to plunder Merchant Vessels. See PIRATE.

The *Corsair* is distinguish'd from a Privateer in this, that the latter does it under a Commission, and only attacks the Vessels of those at War with the State whence his Commission is deriv'd. See PRIVATEER.

The Punishment of a *Corsair* is to be hang'd, without Remission; whereas Privateers are to be treated as Prisoners of War. All *Corsair* Vessels are good Prizes. See PRIZE.

The Word comes from the Italian *Corsaro*, of *Corsis*, or *Corsini*, or *Carsinis*, or *Corycelis*. Menage, &c.

CORSELET, a little *Cuirasse*, according to some, and according to others, a Coat, or Cover for the whole Trunk, antiently wore by the Pikemen, commonly plac'd in the Front and Flanks of the Battle, for the better Resistance of the Enemy's Assaults, and the surer Guard of the Gunners plac'd behind or within them. See CUIRASSE.

Vangelas observes, that the Seamen were antiently arm'd with *Corselets*.

CORSEPRESENT, in our antient Authors, denotes a Mortuary. See MORTUARY.

The Word is form'd of the *French*, *Corps presente*; and the Reason of the Denomination is probably this: that where a Mortuary after any Man's Death became due, the best or second best Beast was offer'd or presented to the Priest, and carried along with the *Corse*.

CORSED Bread, a superstitious manner of Trial, us'd among our Saxon Ancestors, by a piece of Barley-Bread, full execrated by the Priest, then offer'd the suspected Criminal to be swallow'd, by way of Purgation; from an Opinion that a guilty Person could not swallow a piece of Bread so accus'd, or if he did, it would choke him.

The Ceremony was accompanied with a Prayer, beseeching God, 'That the Criminal's Jaws might be shut, his Throat so narrow that he might not swallow, and that he might eat it out of his Mouth.'

CORTES, a Term purely Spanish, properly signifying the Court, i. e. the States, or Assembly of the States in *Madrid*.

The Word is us'd in speaking of the Affairs of Spain.

CORTEX, a *Latin* Name, denoting the Bark, or outer Cover of a Plant, or the like. See BARK.

CORTEX Peruvianus, call'd also *Quinquina*, *Kinkinnah*, *Quinquina*, *Pulvis Patrum*, and popularly the *Jesuit's Bark*; is the Bark of a Tree growing in the *West-Indies*, call'd by the Spaniards *Palo de Colchifuras*, q. d. *Fever-Wood*; by reason of its extraordinary Virtue in removing all Kinds of intermitting Fevers and Agues. See FEVER.

The *Indians* commonly call it the *Fudding Tree*, from the Property it has of intoxicating Fishes, when either its Wood or Bark is beaten, and steep'd in the Water where they are.

The Tree that yields this noble Specific, is only found in *Peru*; in the Province of *Sau Francisco de Quiso*, or *Quimo*, near the City of *Luxe*: the same may 'tis also found in that of *Potosi*; and *F. Labat*, in the Island of *Guadeloupa*.

The Bark, while on the Tree, is streak'd, of a whitish yellow withoutside, and a pale tan-colour within.

'Tis about 70 Years since this noble Febrifuge was first known in *England*. It was first introduc'd into use by the Cardinal de *Lugo*; whence, in *France*, it was first call'd from the Name of that Cardinal. Afterwards it became known by the Name of the *Jesuit's Powder*, and the *Jesuit's Bark*; because sold by the Jesuits, to whom that Cardinal, who had been of their Society, left great Quantities of it.

When first introduc'd, it is said to have been sold for about eight Shillings Sterl. the Dose; which great Price, with the little Effects found from it, by reason of their Ignorance of the manner of preparing and prescribing it, occasion'd its being disus'd, till about the Year 1706, that *Dr. Talbot*, an *English* Physician, brought it into vogue again, by the great Number of Cures wrought about the Court and City of *Paris*, with this Powder, prepar'd after his manner; the Secret whereof was soon after made publick by the Munificence of *Louis XIV.* who rewarded *Talbot* for the Communication.

The *Quinquina* is sold either in Bark or in Powder: those who buy it in the Bark must chuse it very dry and compact; such as has never been moisten'd, and which is not too easily reduc'd into Powder by breaking. The small, fine, blackish Barks, chagrin'd without and reddish within, of a bitter disagreeable Taste, are the most esteem'd. For the Powder, it must be well sifted, and care be taken it be bought of Persons that may be trust'd; it being very easy to sophisticate it, and difficult to find it out.

The *Cortex* is a Bitter, Absorbent, and Astringent or Styptic: From its bitterness, *M. Renoussau* observes, it becomes fit to soften four acrimonious Juices; for a four and a bitter make a sweet. Again, as an Absorbent it blunts the Points of Acids, and prevents their Action; and of consequence keeps up the Fluidity of the Juices, which Acids would coagulate. As a Styptic, it must have earthy Parts to absorb Scrofulas, by which the Parts before moisten'd and relax'd, will contract themselves: and by this means, the *Cortex* augments the Spring and Tension of the Fibres. As a Bitter it heats; and it facilitates Perspiration, by heating and augmenting the Fluidity of the Juices. On these Properties it is that its Medicinal Uses are ascertain'd.

But its chief use is in curing of Agues, and intermitting Fevers; it being us'd for these Purposes in all Ages, and most Constitutions. *Dr. Cockburn* says, it produces this Effect better than any other Medicine of the same Intention, in the Ratio of 565 to 1. It is us'd to give a gentle Emetic of *Ipecacuanha* before the Exhibition of the *Cortex*: by thus preparing the Passages, the *Cortex* has not only more Success, but also is not subject to cause these Indispositions, viz. swelling in the Belly, Nausea, &c. which often arise when neglected.

The *Cortex* must never be exhibited in the Paroxysm of an Ague, or intermitting Fever; but given in such a Quantity at times between the Paroxysms, as to prevent a Return of the Fit.

The *Cortex* exhibited in continual Fevers is dangerous; and care must be taken, that the Remission of a continual Fever be not mistaken for its Intermission: When there is a Remission, it usually happens indifferently at any time; whereas an Intermission happens at particular times.

The *Cortex* is given several ways, viz. in Powder, in forms of Electuary, Bolus's, Infusions, Tinctures, &c. The *Arcana Laboriosa* is about two Ounces of the *Cortex* in Powder, digested in Sand-heat, with about a Quart of red Wine: After Digestion, the Wine must be pour'd off, and two or three Ounces given every three or four Hours between the Paroxysms, till the Intention is answer'd. If the Bark take downward, Venice Treacle, Diacordium, Conserve of Roses, Terra Japonica, Dosis of Laudanum, &c. must be added to its Preparations. When there happens to be an Obstruction of the Menstrues from the Exhibition of the *Cortex*, or to prevent it, it is advisable to add to its Preparations the Black Hellebore, Ethiops Mineral, Cinnamon, &c. The *Cortex* is often us'd for young Children in Agues, by way of Clyster; and also applic'd to the Wrist, and Soles of

the Feet, wrought up into a stiff Mass, with Turpentine, Venice Treacle, &c. which usually answers the Purpose.

Dr. Helvetius, Physician to the King of France about 20 Years ago, wrote a Book entirely upon the Subject of curing Agues by giving the *Cortex* clysterwise: In which he pretends, that this is more safe, and no less certain than the *Cortex* given internally. Dr. Cockburn, in his Treatise of *Sea Diseases*, asserts the contrary; and proves that the *Cortex* given inwardly is as safe, and by much more certain and expeditious; and shews that we know how to remedy all the Inconveniencies the *Cortex* may occasion.

Dr. Sydenham, and after him M. Renussne, and others, have prefer'd it with Success in Melancholic and Hysteric Affections, commonly call'd *Vapours*.

Cortex Winteranus, or *Winteri*, the Bark of a Tree brought from the Straights of Magellan, by Captain Winter, in his Voyage with Sir Francis Drake: *Clusius* calls the Tree, *Magellanica Aromaticæ Arbor*.

The Bark is Aromatic, and found of good use at Sea against the Scurvy: Half a Dram of it, boil'd with other carminative Seeds, sweats, and relieves scorbutic Patients. It has also prov'd an Antidote against a poisonous sort of Seal, call'd a *Sea Lion*, frequent in those Parts.

The Bark sold in the Shops under the Name of *Cortex Winteranus*, or Wild Cinnamon, Dr. Sloane observes, is not the true *Cortex Winteranus*; they grow on different Trees, and in different Countries, and their Appearance is very different; yet are they so like in Taste, that he thinks they may be used as Succedaneums to each other. See *Costus Indicus*.

Cortex Caparis. See *CAPER*.

Cortex Cerebri, the cortical or cineritious Substance of the Brain. See *CORTICAL*, and *BRAIN*.

CORTICAL Substance of the Brain, in Anatomy, the exterior Part of the Brain and *Cerebellum*, or that Part immediately under the *Pia Mater*; so called, because of its investing the inner or medullary Part, as a Bark does a Tree. See *BRAIN*.

The same is also call'd the *Cineritious Substance*, from its greyish or ash-colour. See *CINERITIOUS*.

Archangelo Piñolomini, a *Ferrarese*, first introduc'd this Division of the Brain into *Cortical* or *Cineritious*, and *Medullary* or *Fibrous Substance*. See *MEDULLA*.

The *Cortical Substance* is more soft and moist than the *Medullary*, and follows or attends it thro' all its Prominences and Sinus's. It is form'd, from the minute Branches of the *Cerebral Arteries*, interwove in the Meninges, and thence continued hither in infinitely fine Ramifications. See *MESENCEPHALUS*.

Most Anatomists, after *Malpighi*, agree in its being glandular, and that the medullary Parts are only a Continuation thereof; *Ruyfesh* alone excepted: who, from his admirable Skill in Injections, and the Discoveries he has made thereby, maintains that it has nothing glandular in it. See *BRAIN*, *CEREBELLUM*, and *MEDULLA Oblongata*; see also *GLAND*, *CAROTID*, &c.

CORTIN, in Fortification, signifies the Wall, or Distance, between the Flanks of two Bastions.

CORVET, or *CURVET*, in the Manage, an Air, in which the Horse's Legs are rais'd higher than in the Demi-volt; being a kind of Leap up, and a little forwards, where-in the Horse raiseth both his fore Legs at once, equally advanced, (when he is going straight forward, and not in a Circle;) and as his fore-Legs are falling, he immediately raiseth his hind-Legs, equally advanced, and not one before the other; so that all his four Legs are in the Air at once; and as he lets them down, he marks but twice with them. See *AIR*.

Horses that are very dull, or very fiery, are improper for *Corvets*; this being the most difficult Air they can make, and requiring a great deal of Judgment in the Rider, as well as Patience in the Horse, to perform it.

CORUSCATION, *Glittering*, a Gleam of Light emitted from any thing.

The Term is chiefly us'd for a flash of Lightning simply darting down from the Clouds, in time of Thunder. See *THUNDER*, and *LIGHTNING*.

CORVUS, *Crow*, in Astronomy, a Constellation of the Southern Hemisphere. See *CONSTELLATION*.

The Stars in the Constellation *Corvus*, in *Ptolemy's Catalogue* are 73 in *Tychon's* as many; in the *Britannic Catalogue* 10. The Order, Names, Longitudes, Latitudes, Magnitudes, &c. whereof, are as follow.

Stars in the Constellation *Corvus*.

Names and Situations of the Stars.	Right Ascension.	Longitude.	Latitude South.	Magnitude.
That in the Beak	21	7 55 31	21 44 26	4
In the Neck nigh the Head		7 21 58	19 39 41	4
Small one following this		8 0 16	20 27 40	4
In the preceding Wing		6 25 58	14 29 0	3
In the breast		9 29 58	10 16 48	5

Names and Situations of the Stars.	Right Ascension.	Longitude.	Latitude South.	Magnitude.
<i>Infernis</i> over the Wings	9	54 35	10 21 48	6
		11 16 14	20 23 42	6
Preced. of two in the hind Wing	9	9 13	12 9 47	3
Subseq.	9	32 0	11 39 31	3
In the Foot, common with <i>Hydra</i>	22	13 3 25	18 1 40	3

CORYBANTES, in Antiquity, Priests of *Cybele*, who danced and caper'd to the Sound of Flutes, and Drums.

Catullus, in his Poem call'd *Alys*, gives a beautiful Description of 'em; and representing them as Madmen. Accordingly, *Maximus Tyrinus* lays, that those possess'd with the Spirit of *Corybantus*, as soon as they heard the Sound of a Flute, were seiz'd with an Enthusiasm, and lost the use of their Reason.

Hence, the Greeks use the Word *κωρυβαντισμός*, *Corybantizing*, to signify a Person's being transported, or possess'd with a Devil.

Some say, the *Corybantus* were all Eunuchs; and that 'tis on this account that *Catullus*, in his *Alys*, always uses feminine Epithets and Relatives.

Diodorus Siculus remarks, that *Corybus* Son of *Japhet* and *Cybele*, passing into *Pibyrgia* with his Uncle *Sardanus*, there instituted the Worship of the Mother of the Gods, and gave his own Name to the Priests. *Strabo* relates it as the Opinion of some, that the *Corybantus* are Children of *Jupiter* and *Calliope*, and the same with the *Cabires*. Others say, the Word had its Origin from this, that the *Corybantus* always walk'd dancing. (if the Expression may be allow'd) *quod κωρυβαντισμους*. *Vossius*.

CORYMBIFEROUS Plants, are distinguish'd into such as have a radiate Flower, as the *Flos Solis*, *Calendula*, &c. and such as have a naked Flower, as the *Abrotanum Feminina*, *Eupatorium*, *Artemisia*; to which are added the *Corymbiferous Affines*, or those a-kind hereunto; such as *Scabiosa*, *Dipsacus*, *Carduus*, and the like. See *PLANT*, and *CORYMBUS*.

CORYMBUS, in the general, signifies the Top, or Summit of any thing; but among the ancient Botanists was particularly us'd to express the Bunches or Clusters of Ivy, Berries, &c.

Some also call the Top of the Stalk of a Plant, when so subdivided and adorn'd with Flowers or Fruits, as to make a round spherical Figure, by this Name; as the Tops of Onions, and the like; and others confound the Word with *Umbella*, which expresseth the flowry Tops of such Plants as have their Branches and Flowers spread round, into the Form of what the Women now call an *Umbrella*.

But among the modern Botanists, *Corymbus* is chiefly us'd for a compound discous Flower, whose Seeds are not Pappus, or do not fly away in Down: Such are the Flowers of *Daisies*, common *Marigold*, &c. See *SEED*.

Mr. Ray, therefore, makes one Genus of Plants to be such as have a compound discous Flower, but without any downy Wings to carry off their Seeds; as the *Corymbiferous*. See *CORYMBIFEROUS*.

CORYPHÆUS, in the ancient Tragedy, was the Chief or Leader of the Company that compos'd the Chorus. See *CHORUS*.

The *Coryphæus* spoke for all the rest, whenever the Chorus took part in the Action, in quality of a Person of the Drama, during the Course of the Acts.

Hence, the Term has pass'd into a general Name for the Chief or Principal of any Company, Corporation, Sect, Opinion, &c.

Thus, *Eustachius* of *Antioch* is call'd the *Coryphæus* of the Council of *Nice*; and *Cicero* calls *Zeno* the *Coryphæus* of the *Stoicks*.

The Word in the original Greek signifies *Tip of the Head*. *CORYZA*, in Medicine, a running at the Nose; or a Defluxion of sharp serous Humours from the Glands of the Head, arising upon a diminution of Perpiration, or catching of Cold. See *COLD*.

Proper Evacuations, as Bleeding, Epispasticks, Sternutories, &c. are usual in this Case.

COSCI NOMANCY, or *COSKINOMANCY*, the Art of Divination by means of a Sieve or Riddle. See *DIVINATION*.

The Sieve or Riddle being suspended; after rehearsing a Formula of Words, 'tis taken between two Fingers only; and the Names of the Parties suspected, repeated: He at whose Name the Riddle turns, trembles, or shakes, is reputed guilty of the Evil in question.

This must be a very ancient Practice: *Theophrastus*, in his third *Idyllion*, mentions a Woman very skilful in it. It was sometimes also practis'd by suspending the Riddle by a Thread, or fixing it to the Points of a Pair of Shears, giving it room to turn, and naming, as before, the Parties suspected: In which last manner, *Coscinomancy* is still practis'd in some Parts of *England*.

It appears from *Theoritis*, that it was not only used to find out Persons unknown; but also to discover the Secrets of those that were known.

The Word comes from the Greek *κωστος*, *Riddle*; and *particia*, *Deviation*.

CO SECANT, in Geometry, the Secant of an Arch, which Arch is the Complement of another Arch to 90 Degrees. See SECANT, and COMPLEMENT.

CO-SINE, is the right Sine of an Arch, which is the Complement of another to 90 Degrees. See SINE, and COMPLEMENT.

COSMETIC, a Term in Physick, used for any Medicine, Preparation, or Means used to beautify and embellish the Face, and preserve or improve the Complexion; as Cerufs, and the whole Tribe of Fucus's, Waller, Cold Creams, Lip-Salves, &c.

The *Indians* use the Water of green Cacao-Nuts as a grand *Cosmetic*, which wonderfully improves the Complexion.

COSMICAL, a Greek Term, *cosmos*, of *κόσμος*, *World*; denoting something that refers, or has a relation to the World. Thus, among Astrologists, *Cosmical Aspects*, is the Aspect of a Planet with respect to our Earth.

Cosmical Qualities are used by Mr. Boyle in the same Sense with *Systematical* ones. Tho, in considering the Qualities of Natural Bodies, we usually only take in the Powers any particular one has of acting on, or its Capacity of suffering from the Action of, another, wherewith it is observ'd to have some manifest Commerce, by a Communication of Impressions: yet there may be some Attributes belonging to a particular Body, and several Alterations to which it may be liable, not barely on account of those Qualities presum'd to be evidently inherent in it, nor of the Respects it bears to those other particular Bodies whereto it seems manifestly related; but on account of a System constituted as our World is, of such a Fabrick, that there may be many unheeded Agents, which by unperceiv'd means have great Operations on the Body we consider, and work such Changes in it, and enable it to work such Changes on other Bodies, as are rather to be ascrib'd to some unheeded Agents, than to those other Bodies with which the Body propos'd is observ'd to be concern'd. So that if many Bodies that might be nam'd, were plac'd together in some imaginary Space, beyond the Bounds of our System; tho they would retain many of the Qualities they are now endow'd with, yet they could not possess 'em all; but by being remov'd to their former Places in this World, they would regain a Set of Faculties and Dispositions, depending on some unheeded Relations, and Impressions from the determin'd Fabrick of the grand System, or World, wherof they are Parts. And these are what Mr. Boyle calls *Cosmical* or *Systematical Qualities*.

To account for these *Cosmical Qualities*, the same Author proposes some *Cosmical Suppositions*, as to some unobserv'd Laws and Orders of Nature; and refers 'em principally to the Action of certain Effluvia hitherto unobserv'd. See EFFLUVIA.

COSMICAL is also used in Astronomy, to express one of the Poetical Rifings of a Star.

Thus, a Star is said to rise *Cosmically*, when it rises together with the Sun; or with that degree of the Ecliptic whereto the Sun then abides. See RISING.

So, the *Cosmical Setting* is, when a Star sets and goes down in the West, at the same time the Sun rises in the East. See SETTING.

But, according to Kepler, to rise or set *Cosmically*, is only to ascend above, or descend below the Horizon.

COSMOGRAPHY, the Description of the World; or, the Art which teaches the Construction, Figure, and the Disposition and Relation of all its Parts; with the Manner of representing them on a Plane.

Cosmography consists of two Parts; Astronomy, which shows the Structure of the Heavens and the Disposition of the Stars. See ASTRONOMY.

And Geography, which shows those of the Earth. See GEOGRAPHY.

The Word comes from the Greek *κόσμος*, *Mundus*, *World*, and *γραφία*, *seribō*, I describe.

COSMOLABE, an ancient Mathematical Instrument, serving to measure Distances, both in the Heavens and on the Earth. See DISTANCE.

The *Cosmolaabe* is in great measure the same with the *Astromaabe*. See ASTROLABE.

It is also call'd *Pantocosm*, or *Universal Instrument*, by L. Moerard, in a Treatise expressly thereon, printed in 1612.

COSMOPOLITAN, or **COSMOPOLITE**, a Term sometimes used to signify a Person who has no fix'd living, or Place of abode; or a Man who is a Stranger no-where.

The Word comes from the Greek *κόσμος*, *Mundus*, and *πολις*, *City*.

One of the ancient Philoſophers being interrogated what Countryman he was; answer'd he was a *Cosmopolitan*, i. e. an Inhabitant or Citizen of the World.

COSTAL, in Anatomy. There are eight *Vertebrae* dis-

tinguish'd by the Name of *Costales*, or *Pleuriticae*; because serving to articulate the Ribs, which are liv'd with the *Pleura*. See VERTEBRA.

These *Vertebrae* are the eight which follow the second, call'd the *Axillary*; and are therefore the third, fourth, fifth, and to the tenth inclusive.

COSTAE, in Anatomy. See RIBS.

COSTIVENESS, in Medicine, a preternatural Detention of the Excrements, with an unusual Hardness or Dryness thereof; and, thence, a difficulty of discharging 'em. See EXCREMENT.

This is the opposite to a Diarrhea, or Looseness. See DIARRHEA.

In the *Philosophical Transactions*, we have an uncommon Instance of *Costiveness* by Mr. Sherman: the Patient, one Thomas Philips, for several Years, never went to Stool in less than 19 or 20 Weeks: He generally eat and drank as well as his Neighbours; and did all the while the Office of a labouring Man: yet was not any of the other Evacuations sensibly greater than in other People. He died of it at 23 Years old.

In *Costiveness* the usual Remedies are gentle Preparations of Senna, lenitive Electuaries, Cream of Tartar, Jaxative Clysters, &c.

COSTUS Arabicus, the Root of a Tree resembling Elder, brought from Arabia; whence its Name.

Its chief use in Medicine, is to enter the Composition of Venice Treacle.

The best is heavy, of a cineritious Colour withoutside, a reddish within, difficult to break, of a strong Smell, and an aromatic Taste.

This Root was formerly call'd *Costus Verus*, and was divided into two Kinds, the *sweet* and the *bitter Costus*; both of which are now uncommon. M. Cbaras, and others, are of Opinion there is but one kind of *Costus*, which proves more or less sweet or bitter, according to the Soil where it is s'd.

COSTUS Indicus, an American Root, called also *Costus Blava*, *Costus Corticifus*, *Costus Corticus*, *White Cinnamon*, and *Winter's Bark*. The Islands of *Madagascar* in Africa, of *Domingo* and *Guadaloupa* in America, are the Places where the most and best is found. See CORTEX WINTERANS.

COTTAGE, or **COTTAGE**, a House without Land belonging to it, Stat. 4 Edw. I. By a later Statute, 31 Eliz. no Man may build a House without laying four Acres of Land to it: So that, properly, a *Cottage* now is a House without four Acres of Land to it.

CO-TANGENT, is the Tangent of an Arch, which is the Complement of another Arch to 90 Degrees. See TANGENT.

COTURNUS, *Bushin*, a very high Shoe, or a kind of Patten, rais'd on Soles of Cork; wore by the ancient Actors in Tragedy, to make 'em appear the taller, and the more like the Heroes they represented; most of whom were suppos'd to be Giants. See TRAGEDY.

It cover'd the greatest part of the Leg, and was tied beneath the Knee. *Sophoacles* is said to have invented the *Coturnus*. See BUSHIN.

COTICE, or **COTISE**, in Heraldry, is the fourth Part of the Bend, which, with us, is seldom if ever born but in Couples, with a Bend between them; and whence, probably, the Name: from the French *Coté*, Side; they being born, as it were on the Sides of the Bend.

COTTON, or **COTON**, a sort of Wool, or rather Flax, encompassing the Seed of a Tree of the same Name.

The Tree which produces this useful Merchandise, grows common in several Places of the *Levant*, and of the *East* and *West-Indies*, especially in the *Antilles*. Its Fruit is of an oval form, about the size of a Nut: As it ripens, it grows black withoutside; and by the heat of the Sun opens in several Places, discovering the *Cotton* thro' the Clefts, which is of an admirable Whiteness. In each Fruit are found several little Bolls, which are the Seed of the Tree.

There is another kind of *Cotton* Tree, which creeps along the Ground, as the Vine wou'd do if unsupported; the *Cotton* wherof is the most esteem'd. And the late Relations from the South mention two other Kinds, the one in the *Terra firma* of *Brazil*, the other in the Isle of *S. Catherine*.

The Seed of the *Cotton* being mix'd, in the Fruit, together with the *Cotton* it self, they have invented little Machines, which being play'd by the Motion of a Wheel, the *Cotton* falls on one side, and the Seed on the other; and thus they are separated.

Cotton makes a very considerable Article of Commerce: it is distinguish'd into *Cotton in the Wool*, and *Spy-Cotton*. The first used for various Purposes, as to put between two Stuffs, in Quilts, Night-Gowns, &c. but 'tis the latter is more general; furnishing various Cloths, Mullins, Calicoes, Dimities, and Hangings; besides that 'tis frequently join'd with Silk and Flax, in the Composition of other Stuffs.

The first kind is ordinarily brought from *Cyprus* and *Smyrna*: Near *Smyrna* its Produce is greater than any where else; they sow the Seed in *June*, and gather it in *October*; and

the

the Soil is so favourable that they can have three Crops in a Year. There are ordinarily brought from *Smyrna* 10000 Bales of *Cotton per Annum*; and yet there is, at least, as much more spent in the Manufactures of the Country.

For the *Spun Cottons*, they are distinguished by various Names, the best are those from *Ferusalem*, call'd *Bazas*; and those of *Damascus*, call'd *Cottons of the Onice*; others are *Demi-Bazas*, *Baladins*, *Payas*, *Cottons Joseph*, *Genozum*, &c.

Cotton antiently only grew in *Egypt*, and was us'd by the Priests and Sacrificers for a very singular kind of Gowns, wore by them alone.

Cotton, applied to Wounds in lieu of Linnen, produces an Inflammation: *Leeuwenboeck*, examining into the Reason of this with a Microscope, found its Fibres to have each two flat Sides; whence he concludes, that each of its minute Parts must have two acute Angles, or Edges; which acute Edges being not only thinner and more subtile than the Globules whercof the fleshy Filaments consist, but also more firm and stiff than any of the globular Flesh; it follows, that upon the Application of *Cotton* to a Wound, its Edges must not only hurt and wound the Globules of the Flesh, but also cut incessantly the new Matter brought to 'em to produce new Flesh; and that with the more ease, as this Matter, not having attain'd the Firmness and Consistence of Flesh, is the less able to resist its Attacks: Whereas the Linnen ordinarily used in Wounds, being compos'd of little round Parts, very close to each other, form larger Masses, and are thus incapable of hurting the globular Parts of the Flesh.

Meninge derives the Word from the Latin *Cotonea*, the fine Moss growing on Quinces, which resembles *Cotton*: But *Nicod* says, the *Arabs* call it *Cotane* and *Bombestum*; whence our *COTTON*, and *Bombazone*.

COTYLA, a liquid Measure; in use among the Antients. See **MEASURE**.

Some have computed the *Cotyla* to be equal to a Roman Semi-septary. *Savoy* adds, that the Roman *Cotyla* contain'd twelve Ounces of any Liqueur. Upon which Principle, there must have been as many *Cotyle* as there were Liqueurs ordinarily sold; which is nothing strange, since, in several Countries, we still find Measures of different Capacity, call'd by the same Name, when they contain the same Weights, tho' under different Balcks.

Fannius says, the *Cotyla* was the same thing with the *Hemina*, which was half a Sextary. See *HEMINA*.

At Cotylas, quas, si placeant, dixisse licebit Heminas, recipit Geminas sextarius unus.

Chevrier observes, that the *Cotyla* was us'd as a dry Measure as well as a liquid one; from the Authority of *Thucydides*, who in one place mentions two *Cotyle* of Wine, and in another two *Cotyle* of Bread. The Word comes from the *Greek κωτόν*.

COTYLA, or **COTYLE**, or **COTYLOIDES**, in Anatomy, a Name given the Cavities at the Extremities of large Bones, encompass'd with thick strong Edges, which receive the Heads, or Apophyses of other Bones articulated with them.

Such is the Cavity in the *Isthion*, or Hip-Bone, which receives the Head of the Bone of the Thigh.

It is also call'd *Acetabulum*, i. e. Cap. See **ACETABULUM**.

COTYLEDONES, in Anatomy, little Glands dispers'd throughout the outermost Membrane of the *Fœtus*, call'd *Ghorion*, (See **CHORION**) and suppos'd to separate a nutritious Juice for the Subsistence of the *Fœtus*. But *Cotyledones*, in this Sense of the Word, are only found in Sheep, Goats, and some other Animals; the *Placenta* in the Womb, supplying the Place thereof in Women. See **PLACENTA**.

Other Authors use *Cotyledones* for the Apertures of the Veins in the inner Surface of the Womb. See **MATRIX**.

In *Latin* they are call'd *Acetabula*, from their resemblance of a Cup.

COWARD, in Heraldry. When a *Lion* is born in any Escutcheon, with his Tail doubled or turn'd in between his Legs, they call it a *Lion Coward*.

COUCH, in Painting, is us'd for each Lay or Impression of Colour, whether in Oil or Water, wherewith the Painter covers his Canvas, Wall, Waincoat, or other Matter to be painted. See **PAINTING**.

Thus, we say, a *Painting* has had its last *Couch*, or Lay; a Ceiling has had two *Couches*. There is a great deal of Art in couching the Colours well, one after another.

The Word is also us'd for a Lay or Impression of any thing, to make it more firm and consistent, or to screen it from the Weather.

Thus, *Paintings* are cover'd with a *Couch* of Varnish: A Canvas to be painted, must first have two *Couches* of Size ere the Colours be laid. Two or three *Couches* of white Lead, are laid on Wood ere the *Couch* of Gold be apply'd: The Leather-gilders lay a *Couch* of Water and Whites of Eggs on the Leather, ere they apply the Gold or Silver Leaf.

The Gold Wire-drawers use the Word *Couch* for the Gold or Silver Leaf wherewith they cover the Mafé to be gilded or silver'd, before they draw it thro' the Iron that is to give it its proper thickness. See **WIRE-DRAWING**.

The Gilders use *Couch* for the Quantity of Gold or Silver Leaves apply'd on the Metals in gilding or silvering. Each *Couch* of Gold is but one Leaf, or two at most, and each of Silver three; to gild: If the Gilding be back'd, there are requir'd from eight to twelve *Couches*, and only three or four if it be without hatching. To Silver there are requir'd from four to ten *Couches*, according to the Beauty of the Work. See **GILDING**.

COUCHANT, in Heraldry, is understood of a *Lion* or other Beast, when lying down; but with his Head lifted up; which distinguishes the Posture of *Couchant* from *Dormant*, when he is suppos'd quite stretch'd out and asleep.

COUCHE, in Heraldry, denotes any thing laid all along: Thus, *Chevron Couches*, is a *Chevron* lying sideways with the two Ends on one side of the Shield, which should properly rest on the Base.

COUCHING of *Cataracts*. See **CATARACT**.

COVENANT, the Content of Agreement of two or more Parties, to do or perform the same thing. See **CONVENTION**, and **CONTRACT**.

A *Covenant* seems to be much the same with a *Pactum*, or *Conventum* among the Civilians. See **PACT**.

Covenant is either in *Law*, or in *Fact*.

Covenant in Law, is that which the Law intends to be made, tho' it be not express'd in Terms: As, if the Lessor demise, and grant a Tenement to the Lessee for a certain Term; the Law intends a *Covenant* on the Lessor's Part, that the Lessee shall, during the Term, quietly enjoy the Lease against all lawful Incumbrances.

Covenant in Fact, is that which is expressly agreed between the Parties.

There is also a *Covenant merely Personal*, and a *Covenant Real*. *Fitzherbert* defines a *Covenant Real* to be that whereby a Man ties himself to pass a thing real, as Lands or Tenements, or to levy a Fine on Lands; &c.

Covenant merely Personal, is where a Man covenants with another by Deed to build him a House; or to serve him, &c.

COVERING, in Architecture, one of the principal Parts of a Building. See **ROOFING**.

CO-VERSED Sine, a Term some People use for the remaining Part of the Diameter of a Circle, after the versed Sine is taken from it. See **SINE**.

COVERT, in Law. *Feme Covert* denotes a Woman to be married, and so cover'd by, or under the Protection of, her Husband. See **COVERTURE**.

COVERT Way, in Fortification, a space of Ground level with the Field, on the Edge of the Ditch, ranging quite round the Half-Moons, and other Works on the side of the Country.

It is otherwise call'd *Corridor*, and hath a Parapet rais'd on a Level, together with its *Banquets* and *Glacis*, which form the Height of the Parapet, and ought to follow the Parapet of the Place, till it is insensibly lost in the Field. See **PARAPET**.

One of the greatest Difficulties in a Siege, is to make a Lodgment on the *Covert-Way*; because, usually, the *Retrench* palliade it along the Middle, and undermine it on all Sides. This is sometimes also called the *Counterscarp*, because it is on the Edge of the Scarp. See **COUNTERSCARP**.

COVERTURE, in Law, is particularly apply'd to the State and Condition of a married Woman; who, by the Laws of our Realm, is under *Covert-Baron*, or *sub potestate viri*; and therefore disabled to make Bargains with any, to the Prejudice of her self or her Husband, without his Consent and Privy; or at least without his Allowance and Confirmation: And if the Husband alien the Wife's Lands, during the Marriage, she cannot gain say it during his Life. See **FEME**.

COUGH, in Medicine, &c. See **TUSSIS**.

COVINE, a deceitful Compact, or Agreement between two or more, to deceive or prejudice a third Person.

As, if a Tenant for Life conspire with another, that this other shall recover the Land which the Tenant holds in prejudice of him in Reversion.

Dr. Skinner takes the Word to be a Corruption of the Latin *Conventum*, and therefore writes it *Coven*. See **CONSPIRACY**.

COVING, in Building. When Houses are built projecting over the Ground-plot, and the torn'd Projecture arch'd with Timber, lath'd and plaster'd; the Work is call'd *Coving*. See **ALCOVE**.

Coving Corniche, is a Corniche with a great Caisement, or Hollow therein. See **CORNICH**.

COUL, or **COWL**, a Habit wore by the *Bernardines*, and *Benedictines*.

There are two Kinds of *Couls*; the one white, very large, worn in Ceremony, and when they assist at the Office: The other black, worn on ordinary Occasions, in the Secular, &c.

F. *Mabilion* maintains the *Coul* to be the same thing with the *Scapulary*. The Author of the Apology of the Emperor *Henry IV.* distinguishes two Forms of *Couls*; the one a *Gown* reaching to the Feet, having Sleeves and a Capuchin, used in Ceremonies; the other a kind of Hood to work in, called also *Scapulary*; because it only covers the Head and Shoulders. See *SCAPULARY*.

The Word is form'd from the Latin *Cuculla*, by confounding the two first Syllables into one, as being the same twice repeated. See *Cowls*.

COUNCIL, or **COUNSEL**, an Assembly, or Meeting of divers considerable Persons, or Officers, to consider and concert Measures touching the Administration of publick Affairs, or for the rendering of Justice.

The King's *Privy Council*, is the *Primum Mobile* of the Civil Government of England; and that from which all the inferior Orbs derive their Motion. See *PRIVY-COUNCIL*.

In the French Policy *Councils* are very numerous: They have their *Council of State*, *Council of the Finances*, *Council of Dispatches*, *Council of Directions*, *Grand Council*, *Council of the Regency*, *Council of Conscience*, &c.

COUNCIL, in Church-History and Policy, is a *Synod*, or Assembly of Prelates, and Doctors, met for the regulating of Matters relating to the Doctrine or Discipline of the Church. See *SYNOD*.

A *Provincial Council*, is an Assembly of the Prelates of a Province, under the Metropolitan. See *PROVINCE*.

A *National Council*, is an Assembly of the Prelates of a Nation, under their Primate or Patriarch. See *PRIMATE*.

An *Oecumenical or General Council*, is an Assembly of all the Prelates of Christendom. See *OECUMENICAL*.

Indeed, to constitute a *General Council*, 'tis not requir'd that all the Prelates should be actually present; 'tis sufficient that the *Council* be regularly appointed, and that they may be there, or are call'd there.

General Councils are frequently call'd by Ecclesiastical Authors *Plenary Councils*.

The *Romanists* reckon 18 *General Councils*; whereof only the four first are admitted by the Reformed. The Number is made out thus: two of *Nice*, four of *Constantinople*, one of *Ephesus*, one of *Chalcedon*, five of the *Lateran*, two of *Lyon*, one of *Vienne*, one of *Florence*, and the last of *Trent*, which held from 1545 to 1563.

The *Council of Trent* ordains *Provincial Councils* to be held every three Years; yet the last held in France is that of *Norbeaux*, 100 Years ago.

The Word comes from the Latin *Concilium*, which signifies no more than an Assembly; for we say, *Concilium Deorum*, *Concilium Patrum*, *Concilium Martyrum*, &c.

There have been various Collections of *Councils*, as that of Dr. *Merlin* at *Paris* in 1524; one of *F. Crabe*, a *Franciscan*, in 1536; another of *Surius* in 1567; another at *Vence*, in 1583; another at *Rome* in 1608; one of *Binius* Canon of *Cologne*, in 1606, in 10 Volumes: Another of the *Lore* in 1644, in 37 Volumes: Another of *F. Abbe* and *F. Cysfert*, Jesuits, in 1672, in 17 Volumes, more ample than the rest. Lastly, another is shortly expected from *F. Hardouin*, another Jesuit.

COUNCIL of War, is an Assembly of the principal Officers of an Army, or Fleet, occasionally call'd by the General or Admiral, to consider of the present State of Things, and concert Measures for their Conduct, with regard to *Scopes*, *Retreats*, *Engagements*, &c.

The same Term is sometimes also used for an Assembly of the Officers of a Regiment, or Ship; met to try Soldiers or Sailors accused of any Crime.

COMMON COUNCIL, is a Court or Assembly, wherein are made all By-Laws which bind the Citizens of *London*: It consists, like the Parliament, of two Houses; an upper, consisting of the Lord Mayor and Aldermen; and a lower, of a Number of *Common-Council-Men*, chose by the several Wards, as Representatives of the Body of the Citizens.

COUNT, *Comes*, a Noblesman who possesses a Domain called into a *County*. See *COUNTY*.

English Counts we distinguish by the Title of *Earls*, (see *EARL*.) foreign ones still retain their proper Name.

The Dignity of a *Count*, is a Medium between that of a Duke and a Baron. See *NOBILITY*.

According to the modern use, most Plenipotentiaries and Embassadors assume the Title of *Counts*; tho they have no *County*; as the *Counts d'Avance*, &c.

Antiently, all Generals, Commanders, Judges, and Secretaries of the Cities under *Charlemagne* were call'd *Counts*; the distinguishing Character of a Duke and a *Count* being this, that the latter had but one Town under him, but the former several. See *DUKE*.

A *Count* has a Right to bear on his Arms a Coronet, adorn'd with three precious Stones, and surmounted with

three large Pearls, or a row of Pearls, whereof those in the Middle and Extremities of the *Coronet*, advance above the rest. See *CORONET*.

Counts were originally Lords of the Court, or of the Emperor's Retinue, and had their Name *Comites*, a *Comitatus* or a *Commeatus*: Hence; those who were always in the Palace, or at the Emperor's Side, were call'd *Comiti Palatine*, or *Comites à latere*. See *PALATINE*.

In the Times of the Commonwealth, *Comites*, among the *Romans*, was a general Name for all those who accompany'd the Proconsuls and Proprietors into the Provinces, there to serve the Commonwealth; as the *Tribunes*, *Præfici*, *Scribes*, &c.

Under the Emperors, *Comites* were the Officers of the Palace. The Origin of what we now call *Counts*, seems owing to *Augustus*, who took several Senators to be his *Comites*, as *Dion* observes, i. e. to accompany him in his Voyages and Travels, and to assist him in hearing of Causes; which were here judg'd with the same Authority as in full Senate. *Gallus* seems to have abolish'd this Council, by forbidding the Senators being found in the Armies; and none of his Successors re-establish'd it.

The *Councillors* of the Emperor, were really *Comiti*; *Comites*, i. e. Companions of the Prince; and they sometimes took the Title thereof, but always with the Addition of the Emperor's Name whom they accompany'd: So that it was rather a Mark of their Office, than a Title of Dignity.

Constantius was the first who converted it into a Dignity; and under him it was, that the Name was first given absolutely.

The Name once establish'd, was in a little time indifferently confer'd, not only on those who follow'd the Court, and accompany'd the Emperor, but also to most Kinds of Officers; a long List whereof is given us by *Du Cange*.

Euphrosius tells us, that *Constantine* divided the *Counts* into three Classes; the first bore the Title of *Illustres*, the second that of *Clarissimi*, and afterwards *Speçtabiles*; the third were call'd *Perfectissimi*. See *PERFECTISSIMATE*, &c.

Of the two first Classes was the Senate compos'd; those of the third had no Place in the Senate, but enjoy'd several other of the Privileges of Senators. See *SENATOR*.

There were *Counts* who serv'd on Land, others at Sea; some in a Civil, some a Religious, and some in a Legal Capacity; as, *Comes Ararii*, *Comes Sacrarum Largitionum*, *Comes Sacri Cuastorii*, *Comes Curia*, *Comes Capelle*, *Comes Archiatrorum*, *Comes Comitorum*, *Comes Vestiariorum*, *Comes Horrevorum*, *Comes Opioniorum aut Annona*, *Comes Domestitorum*, *Comes Equorum regiorum*, aut *Comes Stabuli*; *Comes Domorum*, *Comes Excubitorum*, *Comes Notariorum*, *Comes Legum*, seu *Professor in Jure*, *Comes Limitum*, aut *Marcorum*; *Comes Maritimæ*; *Comes Portus Romæ*; *Comes Patrimonii*.

The *Franks*, *Germans*, &c. passing into *Gaul* and *Germany*, did not abolish the Form of the *Roman* Government; and as the Governours of Cities and Provinces were call'd *Comiti*, *Comites*, and *Dukes*, *Duces*, they continued to be call'd so. See *DUKE*.

The *Counts* Governours commanded in time of War; and in time of Peace administer'd Justice. Thus, in the Time of *Charlemagne*, *Counts* were the ordinary Judges and Governours of the Cities, all under one.

The *Counts* of Cities were beneath the *Dukes*, and *Counts* who presid'd over Provinces; the first being constituted in the particular Cities under the Jurisdiction of the latter. The *Counts* of Provinces were in nothing inferior to *Dukes*, who themselves were only Governours of Provinces.

Under the last of the second Race of Kings, they got their Dignity render'd Hereditary; and even usurp'd the Sovereignty when *Hugh Capet* came to the Crown: His Authority was not sufficient to oppose their Encroachments; and hence it is they date the Privilege of wearing Coronets in their Arms: they assum'd it then, as enjoying the Rights of Sovereigns in their particular Districts, or *Countries*. But, by degrees, the *Countries* became reunited to the Crown.

The Quality of *Count* is now become very different from what it was antiently; being now no more than a Title, which a King grants upon erecting a Territory into a *County*, with the Relieve of Jurisdiction and Sovereignty to himself.

At first there was no Clause in the Patent of Erection, intimating the Reversion of the *County* to the Crown in default of Heirs Male; but *Charles IX.* to prevent their being too numerous, ordain'd that Duchies and *Counties*, in default of Heirs Male, should return to the Crown.

The Point of Precedence between *Counts* and *Marquisses*, has been formerly much controverted; the Reason was, that there are *Counts* who are Peers of France, but no *Marquisses*: But the Point is now given up, and *Marquisses* take place; tho antiently, when *Counts* were Governours of Provinces, they were on a Level even with *Dukes*. See *PARA*, and *MARQUISS*.

William the Conqueror, as is observ'd by *Gamben*, gave the Dignity of *Counts* in Fee to his Nobles; annexing it to

this or that County, or Province, and allotting for their Maintenance a certain Proportion of Money, arising from the Prince's Profits in the Picadings and Forfeitures of the Provinces. To this Purpose he quotes an antient Record; thus, *Hon. II. Rex Anglie his verbis Comitum creavit; scilicet non fecisse Hugonem Bigot Comitem de Norf. &c. de tertio Denario de Norwiche & Northfolk sicut aliqui Comes Anglie, &c.* See **RARE**.

The *Germanus* call a *Count, Graf*; which, according to a Modern Critick, properly signifies *Judge*; and is deriv'd from *Gravio*, or *Gravio*, of *γρῆναι*. There are several Kinds of these Counts, or *Grafs*; as *Landgraves, Marchgraves, Burggraves*, and *Palgraves*, or *Counts Palatine*.

These last are of two Kinds; the one are of the Number of Princes, and have the Investiture of a Palatine; the others have only the Title of *Count Palatine*, without the Investiture of any Palatine. See **PALATINATE**.

Some assert, that by publicly professing the Imperial Laws for 20 Years, the Person acquires the Dignity of a *Count Palatine*; and there are Instances of Professors of Law, who have assum'd the Title accordingly; but there there are others who call the Right in doubt.

COUNTY, in Law, the original Declaration in a Real Action; as the Declaration is in a Personal one: The *Libellus* of the Civilian comprehends both.

Yet, *Count* and *Declaration* are sometimes confounded; as, *Count in Debt, Count in Appeal, &c.* See **DECLARATION**.

COUNTY-WHEEL, in Clock-work, a Wheel which moves round in 12 Hours; call'd also the *Locking-Wheel*. See **WHEEL**, and **CLOCK**.

COUNTER, of the *Latin* Preposition *contra*, against; is used in the Composition of divers Words in our Language; and generally implies the Relation of Opposition.

COUNTER-BARRY, or **CONTE-BARRE**, is used by the *French* Heralds, for what we more ordinarily call *Bendy sinister per Bend counterchang'd*. See **BARRY**.

COUNTER-BENDY, or **CONTE-BEND**, in Heraldry, is used by the *French* to express what we more ordinarily call *Bendy of Six per Bend sinister counterchang'd*. See **BENDY**.

COUNTER-CHANG'D, in Heraldry, is when there is a mutual Changing of the Colours of the Field and Charge in an Escutcheon, by means of one or more Lines of Partition.

Thus, in the Coat of the famous *Chaucer*: He beareth, Party per Pale Argent and Gules, a bend counterchang'd; that is, that Part of the Bend, which is in that Side of the Escutcheon which is Argent, is Gules; and that Part of it which is on the other, is Argent.

COUNTER-CHEVRON'D, denotes a Shield *Chevronny*, or parted by some Line of Partition. See **CHEVRON**.

COUNTER-COMPOUND, or **CONTE-COMPOST**, or **CONTE-COMPOST**, in Heraldry, is when a Bordure is compounded of two Ranks of Pales; as in the adjoining Figure. When it consists but of one Rank, it is call'd *Compones*; and when of more than two, *Cheky*. See **CHECKY**, &c.

COUNTER-ERMINE. See **ERMINE**.

COUNTER-PALD, or **CONTE-PALLE**, is when the Escutcheon is divided into twelve Pales parted per Fesse, the two Colours being *counter-chang'd*: so that the upper are of one Colour, or Metal, and the lower of another.

COUNTER-PASSANT, is when two Lions are in a Coat of Arms, and one appears to be passing or walking quite the contrary way from the other. See **PASSANT**.

COUNTER-POINTED, by the *French* call'd *Contre-pointe*, is when two Chevrons in one Escutcheon meet in the Points, the one rising, as usual, from the Base; and the other inverted, falling from the Chief: So that they are *counter*, or opposite to one another in the Points.

They may also be *counter-pointed* the other way; that is, when they are founded on the Sides of the Shield, and the Points meet that way; call'd *Counter-pointed in Fesse*.

COUNTER-POTENT, or **Potent Counter-potent**, by the *French* Heralds call'd *Contre-potence*, is reckon'd a Fur, as well as Vair and Ermine; but compos'd of such Pieces as represent the Tops of Crutches, call'd in *French* *Potences*, and in old *Engliss*, *Potents*. See **FUR**.

COUNTER-QUARTER'D, by the *French* call'd *Contre-estartete*, denotes the Escutcheon, after being quarter'd, to have each quarter divided again into two: So that there are eight Quarters, or Divisions. See **QUARTER**.

COUNTER-SALIENT, is when two Beasts are borne in a Coat of Arms in a Posture of leaping from each other, directly the contrary way. See **SALIENT**.

COUNTER-TRIFFING, is when two Beasts are borne in a Coat of Arms tripping, i. e. in a walking Posture, and the Head of the one to the Tail of the other. See **TRIFFING**.

COUNTER-CHANGE, a mutual Exchange between two Parties. See **EXCHANGE**.

COUNTER-BREAST-WORK, in Fortification, a *Falze-Braye*. See **FALZE BRAYE**.

COUNTER-BOND, is a Bond given to save a Person harmless, who has given his Bond for another. See **BOND**.

This is also call'd *Counter-security*.

COUNTER-CHARGE, is a reciprocal Recrimination, or Charge, brought against an Accuser. See **CHARGE**.

COUNTER-DEED, a secret Writing, or a private Act, either before a Notary, or under a private Seal; which destroys, changes, annuls or alters some more solemn and publick Act.

Counter-Deeds, are rather tolerated than permitted: in many Cases they are actually prohibited; as being usually no better than Frauds.

The Custom of *Paris* annuls all *Counter-Deeds*, contrary to the Tenour of a Marriage.

COUNTER-PLEA, in Law, a Replication to a Prayer.

Thus, when a Tenant by Courtesy, in Dower, or other Real Action, prays the View or Aid of the King, or him in the Reversion, for his better defence; or if a Stranger to the Action begun, desire to be admitted, to say what he can for the Safeguard of his Estate: That which the Demondant alleges against this Request, why it should not be admitted, is call'd a *Counter-Plea*.

COUNTER-SIGNING, the Signing an Order, or Patent of a Superior, in quality of Secretary; to render the Thing more authentick.

Charters, &c. are sign'd by the King, and *counter-sign'd* by a Secretary of State or Ld. Chancelor. See **SIGNATURE**.

COUNTER-CHARM, a Charm or Spell, contriv'd to hinder the Effect of another. See **CHARM**, **SPELL**, **LICATURE**, &c.

COUNTER-FOOL, or **COUNTER-STOCK**, is that Part of a Tally struck in the Exchequer, which is kept by an Officer of the Court. See **TALLY**, and **EXCHEQUER**.

COUNTER-FROG, in Musick, is when the Fugues proceed contrary to one another. See **FROG**.

COUNTER-PART, a Part of something opposite to another Part. See **PART**.

Thus, in Musick, the Bass and Treble are two *Counter-parts*, or opposite Parts.

COUNTER-POINT, in Musick, the Art of composing Harmony; or of disposing and concerting several Parts so together, as that they make an agreeable Whole. See **COMPOSITION**, and **HARMONY**.

Counter-point is divided into *simple*, and *figurative*; agreeably to the Division of Harmony, into the Harmony of Concords, and that of Discords. See **CONCORD**.

Counter-point took its Name hence, when Musick in Parts was first introduc'd, their Harmony being so simple they us'd no Notes of different Time, and mark'd their Consonances by *Points* set against each other. Hence, in regard of the Equality of the Notes of Time, the Parts were made Concord in every Note.

This afterwards became denominat'd *simple* and *plain Counter-point*; to distinguish it from another Kind, wherein Notes of different Value were us'd, and Discords brought in betwixt the Parts, which they call *figurative Counter-point*.

Simple Counter-point, or the Harmony of Concords, consists of the imperfect, as well as the perfect Concords; and may therefore be denominat'd *perfect*, or *imperfect*, according as the Concords are, whereof it is compos'd: Thus, the Harmony arising from a Conjunction of any Note with its Fifth and Octave, is perfect; but with its Third and Sixth imperfect.

Now, to dispose the Concords or the Natural Notes and their Octaves in any Key in a *simple Counterpoint*, observe, with regard to the Distinction into perfect and imperfect Harmony, this general Rule, viz. to the Key *f*, to the 4th *f*, and to the 5th *f*, a perfect Harmony must be join'd; to the 2d *f*, the 3d *f*, and 7th, an imperfect Harmony is indispensable; to the 6th *f*, either an imperfect or perfect Harmony.

In the Composition of two Parts, observe, that the 2d third appears only in the Treble on the Key *f*, the 4th *f*, and the 5th *f*; yet the perfect Harmony of the Fifth, is always suppos'd, and must be supplied in the Accompaniments of the thorough Bass to these fundamental Notes.

More particularly, in the Composition of two Parts, the Rules are, That the Key *f* may either have its Octave, its Third, or its Fifth; the fourth *f* and fifth *f* may have either their respective Thirds or Fifths, and the first may have its Sixth; as, to favour a contrary Motion, the last may have its Octave.

The sixth *f* may have either its 3d, its 5th, or its 6th. The second *f*, third *f*, and seventh *f*, may have either their respective 3ds or 6ths; and the last, on many occasions, its false 5th. Which Rules hold the same both in flat and sharp Keys.

For the Rules of *Counter-point*, with regard to the Succession of Concords; it must be observ'd, That as much as can be in Parts, may proceed by a contrary Motion, i. e. the Bass may ascend when the Treble descends, and vice versa. The Parts moving either upwards or downwards the same way; two Octaves or two Fifths never to follow one another immediately. Two Sixths never to succeed each other

other immediately. Whenever the Octave or Fifth is to be made use of, the Parts must proceed by a contrary Motion, except the Treble move into such Octave or Fifth gradually. If in a Sharp Key, the Bass descend gradually from the 5th *f* to the 4th *f*, the last, in that Case, must never have its proper Harmony applied to it; but the Notes that were Harmony in the preceding 5th *f*, must be continu'd on the 4th *f*. Thirds and Fifths may follow one another as often as one has a mind.

Figurative Counter-point is of two Kinds: In the one, Discords are introduc'd occasionally; serving only as Transitions from Concord to Concord: In the other, the Discord bears a chief part in the Harmony. See *DISCORD*.

For the *first*; nothing but Concoords are ever to be us'd on the accented Parts of the Measure: In the unaccented Parts, Discords may pass transiently, without any Offence to the Ear. This the French call *Supposition*; because the transient Discord always supposes a Concord immediately following it: Which is of infinite Service in Musick. See *SUPPOSITION*.

For the *second*, wherein the Discords are used as a solid and substantial Part of the Harmony; the Discords that have Place are the Fifth when join'd with the Sixth, to which it stands in the Relation of a Discord: the Fourth when join'd with the Fifth; the Ninth, which is in effect the Second; and the Seventh, and the Second and Fourth.

These Discords are introduc'd into the Harmony with due Preparation; and are to be succeeded by Concoords: which is commonly call'd the *Resolution of Discord*.

The Discord is prepar'd by first substituting in the Harmony in quality of a Concord; *i. e.* the same Note which becomes the Discord is first a Concord to the Bass Note immediately preceding that to which it is a Discord. The Discord is resolv'd by being immediately succeeded by a Concord descending from it by the Distance only of Second *5* or Second *4*.

As the Discord makes a substantial Part of the Harmony, so it must always possess an accented Part of the Measure. Now to introduce the Discords into Harmony; it must be consider'd what Concoords may serve for their Preparation and Resolution: The Fifth, then, may be prepar'd, either by being an Octave, Sixth, or Third. It may be resolv'd either into the Sixth, or Third. The Fourth may be prepar'd in all the Concoords, and may be resolv'd into the Sixth, Third, or Octave. The Ninth may be prepar'd in all the Concoords except the Octave; and may be resolv'd into the Sixth, Third, or Octave. The Seventh may be prepar'd in all the Concoords; and resolv'd into the Third, Sixth, and Fifth. The Second and Fourth are used very differently from the rest; being prepar'd and resolv'd into the Bass. See *HARMONY, CONCORD, DISCORD, KEY, CLEF, MODULATION, &c.*

COUNTER-PART, in Musick, denotes a Part to be opposite to some other; as the Bass is the *Counter-part* of the Treble. See *PART*.

COUNTER-TENOR, is one of the mean or middle Parts of Musick; so call'd, as if it were opposite to the Tenor. See *TENOR*.

COUNTER-PART, in Law, is the Duplicate, or Copy of any Indenture, or Deed. See *DUPLICATE*.

COUNTER-PLAT, a Plot, or Intrigue contrived to thwart and overthrow another. See *PLAT*.

COUNTER-ROLL, a *Counter-part*, or Copy of the Rolls relating to Appeals, Inquests, &c. See *ROLL*.

COUNTER-ROUND, a Body of Officers going to visit, and inspect the Rounds, or the Sentinels. See *ROUND*.

COUNTER-SWALLOW-TAIL, an Outwork, in form of a single Tensille, wider at the Gorge than at the Head. See *SWALLOW-TAIL*.

COUNTER-TALLY, one of the two Tallies whereon any thing is scored. See *TALLY*.

COUNTER-LIGHT, or *Counter-jour*, a Window or Light opposite to any thing, which makes it appear to a disadvantage. A single *Counter-light* is sufficient to take away all the Beauty of a fine Painting.

COUNTER-DRAWING, in Painting, &c. the copying a Design or Painting, by means of a fine linen Cloth, an oil'd Paper, or other transparent Matter; whereon the Strokes appearing thro', are follow'd and traced with a Pencil, with or without Colour. See *DRAWING*.

Sometimes they *counterdraw* on Glass, and with Frames or Nets divided into Squares, with Silk or with Thread; and also by means of Instruments invented for the Purpose; as the Parallelogram. See *PARALLELOGRAM*.

COUNTER-PROOF, in Rolling-Press Printing, a Print taken off from another fresh printed; which, by being pass'd thro' the Press, gives the Figure of the former, but inverted. See *PRINTING*.

To *Counter-prove*, is also to pass a Design in black Lead, or red Chalk thro' the Press, after having moisten'd with a sponge, both that, and the Paper on which the *Counter-proof* is to be taken.

COUNTER-APPROACHES, in Fortification, Lines or Works made by the Besieg'd, when their Trenches meet the Lines of Attack of the Besiegers. See *APPROACHES*.

COUNTER-BATTERY, a Battery on the Side opposite to that of the Enemy; especially that which aims to dismount the Enemy's Cannon. See *BATTERY*.

COUNTER-GUARD, in Fortification, a triangular Work, in form of a large Parapet, placed beyond the Ditch, between the Point and Faces of the Bastion.

It differs from the Demi-lune, in that it covers the whole Bastion. The Engineers ordinarily call it the *Enveloppe*. See *ENVELOPPE*.

'Tis chiefly us'd when the Bastion is on an Eminence; and 'tis by means hereof that Bastions may be doubled and tripled. *Counter-guards* are very fit for covering the weak Parts of a Place.

COUNTER-MARCH, in War, a Change of the Face, or Wings of a Battalion; whereby the Men who were in the Front, come to be in the Rear.

This is an Expedient they have recourse to when the Enemy attacks their Rear; or when they change their March for a Direction opposite to that wherein they had begun.

The *Counter-march* is either made by Files, or Ranks; by Files, when the Men in the Front of the Battalion go into the Rear; by Ranks, when the Wings or Flanks of the Battalion change Ground with one another.

The Term is also us'd at Sea, for the like Change of a Squadron.

COUNTER-MINE, in War, a subterraneous Vault, running the whole length of a Wall, three Foot broad, and six deep, with several Holes and Apertures therein; contriv'd to prevent the Effects of Mines, in case the Enemy should make any to blow up the Wall. See *MINE*.

This Kind of *Counter-mine* is now little in use. The modern *Counter-mine* is a Well and a Gallery, sunk on purpose till it meet the Enemy's Mine, and prevent its Effect: it being first pretty well known whereabouts it is.

COUNTER-MURE, or *COUNTER-WALL*, a little Wall built close to another, to fortify and secure it, that it may not receive any Damages from Buildings made contiguous to it.

By the Custom of Paris, if a Stable be erected against a Partition-Wall, there must be a *Counter-Wall* added, eight Inches thick. M. *Boulet* observes, that the *Counter-Wall* ought never to be bound, or connected with the proper Wall.

COUNTER-SCARP, in Fortification, the Slope, or Acclivity of the Ditch, looking towards the Campagne. See *SCARP*.

The Term sometimes also takes in the Covert-way, and the Glacis.

Counter-parps are sometimes made of Stone, and without any Slope.

To be lodg'd on the *Counter-scarp*, is to be lodg'd on the Covert-way, or the Glacis. See *COVERT-WAY*.

COUNTER-TRENCH, in Fortification, a Trench made against the Besiegers, and which, of consequence, has its Parapet turn'd towards 'em. See *TRENCH*.

There are usually a great many Communications between this and the Place, to prevent the Enemy from making any use of it, in case they render themselves Masters thereof.

COUNTER-VALLATION, a *Counter-Line*, or Ditch, made around a Place besieg'd; to prevent the Sallics and Excursions of the Garrison, when it is strong.

Along its Edge, on the Side of the Place, runs a Parapet; and it is flank'd from Space to Space.

COUNTER-WORKING, in the Military Art, the rising of Works, in order to oppose those of the Enemy. See *WORK*.

COUNTER-OAGE, in Carpentry, a Method used to measure the Joins, by transferring, *v. g.* the breadth of a Mortoise to the Place in the Timber where the Tenon is to be, in order to make 'em fit each other.

COUNTER-MARK, a second or third Mark, put on any thing mark'd before.

The Word is us'd in Commerce, for the several Marks put on a Bale of Goods belonging to several Merchants; that it mayn't be open'd but in the Presence of 'em all, or their Agents.

In Goldsmiths Works, &c. the *Counter-Mark* is the Mark or Punction of the Hall, or Company, to shew the Metal is Standard, added to that of the Artificer that made it.

Counter-Mark of a Horse, an Artificial Cavity, which the Jockeys make in the Teeth of Horses that have out-grown the Natural Mark; to disguise their Age, and make 'em appear as if they were not above six Years old. See *MARK*.

Counter-Mark of a Medal, is a Mark added to a Medal, a long time after its being struck. See *MEDAL*.

The *Counter-Mark* appears to be Faults or Flaws in Medals, disguising the Ground, sometimes on the Side of the Head, and sometimes on the Reverse; particularly in the large and middle-size'd Bras: yet are they esteem'd as Beauties among the Curious, who for a particular Value on such Medals,

Medals, in regard they know the several Changes in Value they have undergone; which are express'd by those *Counter-Marks*.

Antiquaries, however, are not well agreed about the Signification of the Characters they find on 'em. On some, N. PROB. on others, N. CAPR. on others CAIR, RM, MT, AUG. SC. Some have for their *Counter-Mark* an Emperor's Head; some several; some a Cornucopia.

Cure must be taken not to confound the Monograms with the *Countermarks*: The Method of distinguishing them is easy. The *Counter-Marks* being struck after the Medal, are dented or sunk in; whereas the Monograms being struck at the same time with the Medals, have rather a little Relief. See MONOGRAM.

COUNTER-POISON, an Antidote, or Remedy, which prevents the Effect of Poison. See ANTIDOTE, and POISON.

Of this Kind are Treacle, Mithridate, and Orvietan. See MITHRIDATE, &c.

Counter-poisons are either general, or specific: General *Counter-poisons* are Angelica, Rice, Cardus Benedictus, the Vinetoxicum, Dittany, Scorzoneria, Citrons, Bezoar, Hartshorn, &c.

The Specifics are those that follow; Citron-Bark, &c. is a *Counter poison* to Nux Vomica; Venice-Treacle to the Bite of a Viper; Oil of Scorpion, to the Bite of Scorpions; Oil of Pine-Apples, to Orpiment; Gentian, to the Clenta, &c.

Vander Linden, in his Treatise of Venues, says, that in every putrid Indisposition, whether arising from the Bite of venomous Beasts, or from an Alcali form'd by Putrefaction, Vinegar drank is sovereign, either simple or dilu'd; either with Honey in form of Oximel, or with Sea-Onion.

COUNTER-ROISE, any thing serving to weigh against another; particularly a piece of Metal, ordinarily Brass or Iron, making a Part of the *Statera Romana*, or Silyard. See STATERA.

It is made to slide along the Beam; and from the Division in which it keeps the Balance in Equilibrio, the Weight of the Body is determin'd. See BALANCE.

It is also call'd the *Pear*, on account of its Figure; and *Assis*, by reason of its Weight.

Rope-Dancers use a Pole by way of *Counter-poise*, to keep their Bodies in Equilibrio.

COUNTERFORTS, *Butresses*, *Spurs*, are Pillars of Masonry, serving to prop or sustain Walls or Terraces, subject to bulge, or be thrown down. See BUTRESS.

These Works are usually bent into Arches, and placed at a distance from each other.

When any thing is built on the Declivity of a Mountain, it must be strengthen'd with *Counterforts* well bound to the Wall, and at the Distance of about twelve Yards from each other.

COUNTERMAND, a Revocation of an Order; or an Excuse for setting aside, or deferring a Consignment.

A *Countermand* differs from an *Essoign*, first, in that in the *Countermand*, the Consignment is propos'd to be deferd to a Day certain, which is not in the *Essoign*. 2d, In the *Essoign*, the Cause of deferring the Consignment is express'd and affirm'd to be true, but in a *Countermand* that Affirmation is not requir'd. See ESSOIGN.

COUNTERMAND, is also where a thing formerly executed is afterward, by some Act or Ceremony, made void by the Party that first did it. As, if a Man make his Last Will, and devise his Land to J. S. and afterwards entests another of the same Land; this Feoffment is a *Countermand* of the Will, and the Will void as to the Disposition of the Land.

COUNTING, or COMPUTING-HOUSE, in the King's Household, an Office wherein account is daily taken of the Expences, &c. of the Household; Provisions made for the same; as also Payments, and Orders for the well-governing of the Servants. See HOUSEHOLD.

The principal Officer hereof, is the Lord Steward; under whom are the Treasurer, Comptroller, Cooker, Master of the Household, Clerks of the Green-Cloth, and Clerks Controllers. See STEWARD, &c.

In the *Counting-House*, is the Board of Green-Cloth, which is a Court of Justice. See GREEN-CLOTH.

COUNTY, originally signifies the Territory of a Count, or Earl. See COUNT.

But now it is used in the same Sense with *Shire*; the one Word coming from the *French*, the other from the *Saxon*. See SHIRE.

In this View, a *County* is a Circuit, or Portion of the Realm, into 52 of which, the whole Land, *England* and *Wales*, is divided, for the better Government thereof, and more easy Administration of Justice therein.

These *Counties* are subdivided into *Rapes*, *Latets*, *Wapentakes*, *Hundreds*; and these again into *Tythings*. See RAPE, WAPENTAKE, HUNDRED, &c.

For the Execution of the Laws in the several *Counties* excepting *Cumberland*, *Westmorland*, and *Durham*, every *Microctimas* Term, Officers are appointed, under the Denomination of *Sheriffs*. See SHERIFF.

This Officer has a double Function; first, *Ministerial*, to execute all Process and Precepts of the Courts of Law directed to him; and secondly, *Judicial*, whereby he has Authority to hold two Courts, the one call'd the *Sheriff's-Turn*, the other the *County-Court*. See TURN, and COUNTY-COURT.

Other Officers of the several *Counties*, are, *Lord Lieutenant*, who has the Command of the Militia of the *County*; *Custodes Rotularum*, *Justices of Peace*, *Bailiffs*, *High Constables*, and *Coroner*. See LORD LIEUTENANT, MILITIA, CUSTOS ROTULARUM, JUSTICE of the Peace, HIGH CONSTABLE, BAILIFF, CORONER, &c.

Of the 52 *Counties*, there are four of special Note, which are therefore term'd *Counties Palatine*; as, *Lancaster*, *Chester*, *Durham*, and *Ely*: *Pembroke* also, and *Hexam* were antiently *Counties Palatine*; which last belong'd to the Archbishop of *York*, and was stripp'd of its Privilege in the Reign of Queen *Elizabeth*, and reduc'd to be a Part of the *County of Northumberland*. See PALATINE.

The Chief Governours of these *Counties Palatine*, heretofore, by a special Charter from the King, sent out all Writs in their own Names; and, touching Justice, did all Things as absolutely as the King himself in other *Counties*; only acknowledging him their Superior and Governour. But in *Henry VIII's* Time, the said Power was much abridg'd.

COUNTY-CORPORATE, is a Title given to several Cities, or antient Boroughs, on which the *English* Monarchs have thought fit to bestow extraordinary Privileges; annexing to them a particular Territory, Land, or Jurisdiction.

The Chief of these is the famous City of *London*; with *Tork*, *Canterbury*, *Bristol*, *Chester*, *Norwich*; the Town of *Kingston upon Hull*, *Newcastle upon Tyne*, *Haverford West in Wales*, &c.

COUNTY-COURT, is a Court of Justice held in each *County* by the Sheriff thereof, every Month. See SHERIFF.

This *County Court* had antiently the Cognizance of Matters of great Moment; but was much abridg'd by *Magna Charta*, and more i *Edw. IV.* but has still the Determination of Debts and Trespasses under forty Shillings.

In effect, till the Courts at *Westminster* were erected, the *County Courts* were the chief Courts of the Kingdom. See COURT.

Among the Laws of *K. Edgar* is this, viz. Let there be two *County Courts* in a Year, and let there be present a Bishop, and an Alderman or Barl; one whereof shall judge according to the Common Law, the other according to the Ecclesiastical Law. The Conjunction of these two Powers to assist each other, is as antient as the *English* Government itself.

They were first separated by *William* the Conqueror, who brought all the Ecclesiastical Business into a Conistory, erected for that Purpose; (see CONSISTORY) and the Law-Business into the King's Bench. See KING'S BENCH.

COUPED, *Coupe*, in Heraldry, expresses a Head, Limb, or other Thing in an Escutcheon which is borne as if cut, clear and even off, from the Trunk; in opposition to its being forcibly torn off, which they call *Erased*. See ERASED.

Thus, the Arms of *Uster*, which all Barons carry, is a Dexter-Hand *couped*, or cut off at the Wrist.

Couped is also used to denote such Crosses, Bars, Bends, Chevrons, &c. as do not touch the Sides of the Escutcheon, but are as it were cut off from 'em.

COUPES, a Motion in Dancing, wherein one Leg is a little bent, and suspended from the Ground; and with the other a Motion is made forwards.

The Word, in the original *French*, signifies a *Cut*.

COUPLE *Cloze*, in Heraldry, the fourth Part of a Chevron. These are never born but in Pales, except a Chevron be between them, such *Guilim*; but the *Bloom* gives an Instance to the contrary. See CHEVRON.

COUPLET, a Division of an Hymn, an Ode, Song, &c. wherein, an equal Number, or an equal Measure of Verses are found in each Part.

In Odes, these Divisions are more ordinarily call'd *Strophes*. See STROPHES.

The Word is form'd from the Latin *Copula*.

By an Abuse, *Couplet* is sometimes us'd to signify a Couple of Verses.

COURANT, a Term us'd to express the present Time; Thus, the Year 1726 is the *Courant* Year; the 15th *Courant*, the 15th Day of the Month now running.

With regard to Commerce, the *Price Courant* of any Merchandize, is the known and ordinary Price accustomed to be given for it.

The Word is also us'd for any thing that has Course, or is receiv'd in Commerce: In which Sense, we say, *Courant* or *Current* Coin, &c. See CURRENT.

COURANT is also a Term in Musick and Dancing; being us'd to express both the Time or Air, and the Dance.

With regard to the fifth, *Courant* or *Current* is a Piece of Musick in triple Time: The Air of the *Courant* is ordinarily noted in Triples of Minims; and the Parts to be repeated twice.

It begins and ends, when he who beats the Measure falls his Hand; in contradistinction from the Saraband, which arbitrarily ends when the Hand is rais'd.

With regard to Dancing, the *Contrant* is the most common of all the Dances practis'd in England: It consists, essentially, of a Time, a Step, a Balance, and a Coupee; tho' it also admits of other Motions.

Formerly they leas'd their Steps; in which Point, the *Contrant* differ'd from the low Dances and Pavades. There are *simple Contrants*, and *figur'd Contrants*, all danc'd by two Persons.

The Term is *French*, and properly signifies *running*. See **CZCZENT**.

COURIER, or **CURRIER**, a Messenger feat Post, or Express, to carry Dispatches. See **POST**.

Antiquity, too, had its *Couriers*; we meet with three Kings, viz. those who ran on foot, call'd by the *Greeks* *Hemerodromoi*, q. d. *Couriers of a Day*. *Pliny*, *Corn. Nepes*, and *Cæsar*, mention some of these, who would run 20, 30, 36, and, in the Circus, even 40 Leagues per Day. And *Riding Couriers*, who chang'd Horses, as the modern *Couriers* do.

Xenophon attributes the first *Couriers* to *Cyrus*. *Herodotus* says, they were very ordinary among the *Persians*, and that there was nothing in the World more swift than these kind of Messengers. 'That Prince, says *Xenophon*, examin'd how far a Horse would go in a Day; built Equeries, or Stables, at such Distances from each other, where he lodg'd Horses, and Persons to take care of 'em; and at each Place kept a Person always ready to take the Packet, or mount a fresh Horse, and forward it to the next Stage; and this quite thro' his Empire.

But it does not appear, that either the *Greeks* or *Romans* had any regular fix'd *Couriers*, till the Time of *Augustus*: Under that Prince they travell'd in Cars; tho' it appears from *Servetus*, they afterwards went on Horseback.

Under the Western Empire, they were call'd *Viatores*; and under that of *Constantinople*, *Courfères*: whence the modern Name.

COURSE, in Navigation, the Point of the Compass, or Part of the Horizon, on which a Ship steers. See **POINT**, and **COMPASS**.

When a Vessel begins its *Course*, the Wind wherewith it is given makes a certain Angle with the Meridian of the Place; and, as 'tis here supposed, the Vessel follows exactly the Direction of the Wind, it makes the same Angle with the Meridian which the Wind makes. See **WIND**.

The Wind is farther supposed always the same; and because each Point or Instant of a *Course* may be regarded as the first; every Moment of the *Course* it makes the same Angle with the Wind.

Now a Wind that is North-East, v. g. here, (and by consequence makes an Angle of 45 Degrees with our Meridian) is North-East wherever it blows, and makes the same Angle of 45 Degrees with all the Meridians it meets.

The *Course* of a Vessel therefore, driven by the same Wind, makes the same Angle with all the Meridians on the Surface of the Globe.

If the Vessel run North and South, it makes an Angle infinitely small with the Meridian, i. e. is parallel to it, or never goes from it: If it run East and West, it cuts all the Meridians at right Angles. In the first Case it describes a great Circle; in the second, either a great Circle, which is the Equator, or a Parallel. But if the *Course* be between the two, it does not then describe a Circle; because a Circle drawn in such a manner, would cut all the Meridians at unequal Angles. It describes, therefore, a Spiral or Curve, the essential Condition whereof, is to cut all the Meridians under the same Angle; call'd the *Loxodromic Curve*, or *Loxodromy*, popularly *Rhumb*. See **RHUMB**.

The Ship's *Course*, therefore, except in the two first Cases, is always a Loxodromic Curve; and the Hypothenuse of a Right-Angle-Triangle; the two other Sides whereof, are the Ship's Way in Latitude and Longitude.

The Latitude is usually had by Observation. See **LATITUDE**.

The *Rhumb*, or Angle of the *Course*, is had by the Compass, together with the one or other of the two Sides; and what remains to be calculated in Sailing, is the Quantity of the Longitude, and of the *Rhumb*, or *Course*. See **SAILING**; see also **CHART**.

Course of a River. See **RIVER**.

Course, in Architecture, a continued Range of Stones, level, or of the same height, throughout the whole length of the Building; without being interrupted by any Aperture. See **BUILDING**, **WALL**, **MASONRY**, &c.

A *Course of Plaster*, is the Continuity of a Plinth of Stone, or Plaster, in the Face of a Building; to mark the Separation of the Stones. See **PLINTH**.

Course, is also us'd for a Collection, or Body of Laws, Customs, or the like. The *Civil Course*, is the Collection of the *Roman* Laws, compiled by Order of *Justinian*. See **CIVIL LAW**.

The *Canonical Course*, is the Collection of the *Canon Law*, made by *Gratian*. See **CANON**.

Course, again, is us'd for the Time ordinarily spent in learning the Principles of a Science, or the usual Points and Questions therein.

Thus, a Student is said to have finish'd his *Course* in the Humanities, in Philosophy, &c.

Hence, *Course* is also us'd for the Elements of an Art exhibited and explain'd, either in Writing, or by actual Experiment: Hence our *Courses* of Philosophy, Anatomy, Chymistry, Mathematics, &c. probably so call'd, as going throughout, or running the whole Length or *Course* of the Art, &c.

COURT, an Appellate to a House, or Habitation; consisting of a piece of Ground inclos'd with Walls, but open upwards. See **HOUSE**.

That before the House is properly call'd the *Avant-Court*; that behind, the *Arriere-Court*: That where Company Affairs, &c. are manag'd, i. e. where Cattel, &c. come, the *Back-Court*.

Nicod derives the Word from the Latin *Cobors*; *Mense* from *Cortis*. See **COURT**.

COURT is also us'd for the Palace, or the Place where a King or Sovereign Prince resides; in which Sense, the Jesuit *Gratian* derives the Word from *Cortis*, or *Curtis*, of *stem, Tent*; whence *Courtesy*, in the Sense of Civility. See **PALACE**.

In the Laws of the *Germans*, there is one Article, *de eo qui in curie Regis furtois commiserit*; and another, *de eo qui in curie ducis homicidium occiderit*. Others derive it from the *Gaulish* *Corts*, form'd of *Cobors*, and *Cobors* from *ycobis*.

COURT, *Curia*, in a Law Sense, is the Place where the Judges distribute Justice, or exercise their Jurisdiction; as also, the Assembly of Judges, Jury, &c. in that Place.

In this Sense, *Courts* are divided into *Sovereign*, or *Superior*, and *Subaltern*, or *Inferior*: And, again, into *Courts of Record*, and *Barre Courts*.

Crompton describes 35 *Courts* in England, most of 'em *Courts of Record*. See **RECORD**.

Again, *Courts* are either such as are held in the King's Name; as all the ordinary *Courts*: or those held by his Authority, where the Precepts are issu'd in the Judge's Name, *Virtute Magistratus sui*; as the *Admiral's Court*.

In England we have four principal *Courts* subsisting; all establish'd by ancient Custom of the Realm, rather than by any Statute; as their Establishments have been from time to time since confirm'd by Acts of Parliament. These are, the *Courts of King's-Bench*, the *Common-Bench* or *Pleas*, the *Exchequer*, and the *Court of Chancery*. See each in its Place, **KING'S-BENCH**, **COMMON-PLEAS**, **EXCHEQUER**, and **CHANCERY**.

COURT of Admiralty, is a Court for the Decision of Maritime Controversies. See **ADMIRALTY COURT**.

COURT of Arches. See **ARCHES COURT**.

COURTS-BARON, are *Courts* that all Lords of Manors, who were anciently call'd *Barons*, have within their respective Precincts. See **BARON**.

This *Court* is twofold; as, if a Man having a Manor in a Town, grants the Inheritance of the Copyholds thereto belonging to another; this Grantee may keep a *Court* for the Customary Tenants, and accept Surrenders to the Use of others, and make both Admittances and Grants.

The other *Court* is of Freeholders, which is properly call'd a *Court-Baron*, wherein the Free-holders are Judges: whereas of the other, the Lord or his Steward is Judge. See **PEER**, **FREEHOLDER**, **STEWARD**, &c.

COURT of Chivalry, or the *Marshal's Court*; a *Court* whereof the Judges are the Lord High Constable, and the Earl Marshal of England. See **CONSTABLE**, and **MARSHAL**.

This *Court* is the Fountain of Martial Law; and the Earl Marshal is not only one of the Judges, but also to see Execution done. See **CHIVALRY**, **MARTIAL**, &c.

COURT of Delegates, is a *Court* where Delegates or Commissioners are appointed by the King's Commission, upon an Appeal to him, to sit in the *Court of Chancery*, or elsewhere. It is granted in three Cases; first, when a Sentence is given in an Ecclesiastical Cause, by the Archbishop, or his Official: Secondly, when a Sentence is given in an Ecclesiastical Cause, in Places exempt: Thirdly, when Sentence is given in the Admiralty Court, in Suits Civil or Marine, by Order of the Civil Law. See **DELEGATES**.

COURT of Peculiarities, is a Spiritual *Court*, held in such Parishes as are exempt from the Jurisdiction of the Bishops, and are peculiarly belonging to the Archbishop of *Canterbury*. See **PECULIARS**.

COURT of Pye-powders. See **PYE-POWDERS**.

COURT of Prerogatives. See **PREROGATIVE COURT**.

COURT of Requests, was a *Court* of Equity, of the same Nature with the *Court of Chancery*, but inferior to it; being principally instituted for the Help of such Petitioners, as in conscientious Cases, deal by Supplication to his Majesty.

Of this *Court* the Lord Privy-Seal was chief Judge; assist'd by the Masters of Requests. It had its Beginning about

9 Hen. VII. according to Sir *Johannes Casar's* Tract on this Subject. *Mich.* 40 and 41 *Edw.* in a Court of Common Pleas, it was adjudg'd, upon solemn Argument, that this Court of Requests, or the *White-Hall*, was no Court that had the Power of Judicature, &c. *Coke Inst.* fol. 97.

It had assum'd to great Power to it self, that it grew burdensome and grievous, and was therefore taken away, with some others, by a Statute made 16 and 17 *Car.* l. cap. 10.

COURT of the Legate, was a Court obtain'd by Cardinal *Wolsey* of Pope *Leo X.* in the ninth Year of *Henry VIII.* wherein he, as Legate of the Pope, had power to prove Wills, and dispence with Offences against the Spiritual Laws, &c. It was but of short continuance. See LEGATE.

COURT-Let, a Court belonging to a Lord of a Manor, in which all Offences under High Treason are inquir'd into. See LET.

COURT-Days, are Days when the Courts of Judicature are open, and Pleas held. See DAY, FASTUS, NEFASTUS, &c.

COURT-Lands, such as the Lord of the Manor keeps in his own Hands, for the Use of his Family, and for Hospitality. See MANOR.

COURT-Roll, a Roll which contains an account of the Number, &c. of Lands, depending on the Lord of the Manor; with the Names of the Tenants, &c. See ROLL.

Tenants holding by Copy of this Roll, are denominated Copy-holders. See COPY-HOLDER.

COURTESY, or CURTESY of *England*, a Tenure, whereby a Man marrying an Inheretrix, a Woman sets'd of Lands of Fee-simple, or Fee-tall general; or feised as Heir of the Tail-special, and getteth a Child by her, who cometh alive into the World, tho both Wife and Child die forthwith; yet, if she were in Possession, he shall keep the Land during his Life, and be called Tenant, by the *Courtesy of England*; this Privilege being not allow'd in any other Country, except *Scotland*, where it is call'd *Coriutialis Scoticæ*.

This Tenure was introduc'd by the Conqueror, and borrow'd by him from his own Country, *Normandy*, where it obtain'd before, under the Name of *Wewett*.

COURTIN, or COURTAINE, in Fortification, the Front of the Wall, or Rampart, lying between two Bastions. See COURTIN.

COURTISAN, a Term of Infamy, given to Women who sell their Persons, and make a Trade of Prostitution. See STREWS.

Lais, the famous *Theban Courtisain*, stands on record for requiring no less than ten thousand Crowns for a single Night. Of all Places in the World, *Veveise* is that where *Courtisains* abound the most: 'Tis now 250 Years since the Senate, which had expell'd 'em, was oblig'd to recall 'em; to provide for the Security of Women of Honour, and to keep the Nobles employ'd, lest they should turn their Heads to make Innovations in the State.

COUSIN, a Term of Relation and Kinship, applied to those who are issu'd from two Brothers, or two Sisters.

In the first Generation they are call'd *Cousin Germanus*, i. e. next Cousins. See GERMAN.

In the second, Issues of Germans, or second Cousins; in the third and fourth, Cousins in the third and fourth Degrees.

In the Primitive Times, it was allow'd Cousins-Germans to marry, to prevent their making Alliances in Heathen Families; but *Troasodorus* the Great prohibited it under Pain of Death; on pretence that they were, in some sort, Brothers and Sisters, with regard to each other.

The Word is ordinarily derived from *Consanguineus*; the *Mevage* brings it from *Congenius*, or *Congenius*, q. d. *ex eodem genere*.

Potential Cousins, are those issu'd from Relations on the Father's side; *Maternal*, those on the Mother's.

COUSIN is also a Title of Honour, which Kings bestow on Peers or Nobles, foreign Princes of the Blood, Cardinals, and the principal Persons of their State; particularly Dukes.

COUSSINET, *Cassion*, in Architecture, the Stone that crowns a Piedroit, or Peer; or that lies immediately over the Capital of the Impost, and under the Swoop. See IMPOST, PIEDROIT, &c.

Its Bod, below, is level, and above, curved; receiving the first Rise or Spring of the Arch, or Vault. See ARCH, &c.

COUSSINERY is also used for the Ornament in the Ionic Capital between the Abacus, and Echinus, or Quarter-Round; and which serves to form the Volutes. See CAPITAL.

It is thus denominated from its representing a Pillow or Cushion, press'd by the Weight over it, and bound with the Strap or Girdle, call'd by *Vitrucvius*, *Balbebus*.

COUSU, in Heraldry, is us'd in the same Sense as *Rembly*, viz. for a Piece of another Colour or Metal, placed on the Ordinary, as if it were sew'd on; which the Word in the *French Language* naturally implies.

This is generally of Colour on Colour, or Metal on Metal, contrary to the general Rule of Heraldry; Whence the Word denotes, that the Piece is not properly on the Field, but in the Nature of a thing sew'd on.

COUTHUTLAUGH, from the Saxon *Coeth*, *Sciens*, Knowing; and *Utlough*, *extens*, Outlaw; is he that wittingly receives a Man outlaw'd, and cherishes or conceals him. See OUTLAW.

In which Case he was, in antient Time, subject to the same Punishment with the Outlaw himself. *Brotton*, l. 3.

COUVERT, in Heraldry, denotes something like a Piece of Hanging, or a Pavilion falling over the Top of a Chief, or other Ordinary; so as not to hide, but only be a Covering thereto.

COWARD, in Heraldry, a Lion borne in an Escutcheon, with his Tail doubled or turn'd in between his Legs, is called a *Lion Coward*.

COWL, or COUL, *Cuculla*, a sort of Hood, worn by certain Monks. See COUL.

COWRING, in Falconry, the quivering of young Hawks, which shake their Wings, in Sign of Obedience to the old ones.

COXE, or COCCIGIS Os, in Anatomy, a Bone join'd to the lower Bone of the *Os Sacrum*; consisting of three or four little Bones and two Cartilages. See SACRUM.

It seem to resemble a little Tail, the lowest Bone growing gradually less and less than the upper, till it end in a cartilaginous Point, which is turn'd upwards for the Convenience of sitting.

These two Bones are but loosely fix'd; especially in Women; in whom, at the Time of Parturition, they easily give way.

The Use of this Bone is to sustain the *Intestinnus Rectum*; It has Muscles in common with the *Anus*, to draw it upwards, or inwards. See COCCIGIS Musculi.

COXA, or COXENDICIS Osse, call'd also *Os Isominatum*, and in *Engl.* the *Hip-Bone*, are two large Bones, situate on either side the *Os Sacrum*.

In Infants, each of these consists of three distinct Bones, separated by Cartilages; which, in Adults, grow up, and constitute one firm, solid Bone; whose Parts, however, retain three distinct Names, according to their former Division, viz. the *Os Ilium*, *Os Ischium*, by some peculiarly call'd *Os Coxendicis*, and *Os Pubis*; which see in their proper Places ILLIUM, ISCHIUM, and PUBIS.

COXA MUSCULUS, according to *Dr. Drake*, a Pair of Muscles arising fleshy from the *Os Ischium*, between the *Musculi Maripubis*, and *Pyrisformis*, and descending obliquely, terminate on each side the *Os Coccygis*, and adjoining Part of the *Os Sacrum*, serving to draw the *Os Coccygis* upwards and inwards; as Antagonists to two Ligaments, springing from the back Part of the *Os Sacrum*, and terminating in the external Surface of the *Os Coccygis*.

CRABS-EYES, *Oculi Cancrorum*, or *Lapides Cancrorum*, in Natural History and Medicine, are little, white, round Stones, ordinarily fix'd; so call'd, because taken out of the Craw-fish, or River Lobster; and the bearing no great resemblance to Eyes, yet resembling them more than any other Part. They are much us'd in Medicine, as a powerful Alkali, or Absorbent. See ABSORBENT, ALCALI, &c.

The most able Naturalists imagine 'em form'd in the Brain of the Animal. *Vanboetel* first found 'em in the Region of the Stomach; *M. Geoffroy* the younger has observ'd the manner of their Formation much more accurately.

According to him, we may lay down one Class of Animals, which have their Bones withoutside; whereas the rest have 'em withinside: Of the first Kind are the Fishes we are speaking of. See SHELL.

Those of the Rivers divers themselves every Year in June of the Bones wherewith they are cover'd and arm'd; a Membrane wherewith the Inside of those Scales is lin'd, takes their Place, and hardens, by degrees, into a new Scale.

Indeed, 'tis much less wonder an Animal should cast its Skin, or Covering; than that it should discharge it self of its Stomach, as the Craw-fish does; and even, as *M. Geoffroy* thinks, of its Intestines too: The exterior Membranes of those *Viscera* taking their place.

There is room to believe, that as they petrify and dissolve, they serve for Food to the Animal; during the Time of the Reformation, the old Stomach is the first Food the new one digests.

'Tis only in this time that the Stones are found, called *Crabs-Eyes*: They begin to be form'd when the ancient Stomach is destroy'd; and are afterwards wrap'd up in the new one, where they decrease by degrees till they disappear entirely. See TESTACEOUS Powder.

CRAFT, a Sea Term, signifying all manner of Lines, Nets, Hooks, which serve for fishing.

Hence, as those that use the Fishing Trade, use small Vessels, such as Ketches, Hoys, Smacks, &c. they call such little Vessels *small Crafts*.

CRAMP, a kind of Numbness, or Convulsion, occasion'd by a thick viscid Vapour, entering the Membranes of the Muscles which contracts or expands the Neck, Arms, Legs, &c. with a violent, but transitory Pain; being usually driven off with Friction alone. See CONVULSION.

The Word comes from the German *Krampf*.
CRAMP-IRON, a Piece of Iron, bent at each Extreme, serving to bind together Pieces of Wood, Stones, or other Things.

Thus, we say, These Stones are bound together by *Cramp-iron* fasten'd in Lead, &c. Some derive the Word, by Corruption, from *Crampen*, or the Italian *Rampone*, which signifies the same thing.

CRAMPONNEE, in Heraldry. A *Cross Cramponnee*, is that which at each End has a *Cramp*, or square Piece coming from it; as in the Figure adjoining. See **CAOSS**.

CRAMPOONS, CRAMPONS, pieces of Iron, hooked at the Ends; for the drawing or pulling up of Timber, Stones, &c.

CRANAGE, a Liberty to use a *Crane*, for drawing up Wares out of a Ship, or Hoy, &c. at a Wharf; and to make Profit thereof.

The Word also signifies the Money taken, or paid for that *Crane*.

CRANE, a Machine used in Building, for the raising large Stones and other Weights.

M. Perrault, in his *Notes* on *Vitruvius*, makes the *Crane* the same with the *Corvus*, *Croce* of the Antients. See **CONVUS**.

The modern *Crane* consists of several Members, or Pieces, the principal whereof is a strong perpendicular Beam, or Arbor, firmly fix'd in the Ground, and sustain'd by eight Arms, coming from the Extremities of four Pieces of Wood laid across, thro' the Middle whereof the Foot of the Beam passes. About the middle of the Arbor the Arms meet, and are mortis'd into it: its Top ends in an Iron Pivert, whereon is bore a transverse Piece, advancing out to a good distance in manner of a *Crane's* Neck; whence the Name.

The Middle and Extremity of this is again sustain'd by Arms from the middle of the Arbor; and over it comes a Rope, or Cable, to one end whereof the Weight is fix'd; the other is wound round the Spindle of a Wheel, which turn'd, draws the Rope, and that heaves up the Weight; to be afterwards applied to any Side or Quarter, by the mobility of the transverse Piece on the Pivert.

CRANE is also a popular Name for a Syphon. See **SYPHON**.

CRANE-LINES, in a Ship, are Lines going from the upper End of the Sprit-fall-top-mast, to the Middle of the Fore-top.

CRANIUM, in Anatomy, an Assemblage of several Bones, which cover and enclose the Brain and *Cerebellum*; popularly call'd the *Skull*. See **BRAIN**, &c.

It is divided into two Tables, or *Lamine*, laid or applied over each other; between which is a thin spongy Substance, made of bony Fibres detach'd from each *Lamina*, and full of little Cells of different Bignesses, call'd *Diploe*, or *Medullinum*. See **DIPLOE**.

The Tables are hard and solid, the Fibres being close to one another; the *Diploe* is soft, in regard of the bony Fibres being at a greater Distance: A Contrivance whereby the Skull is not only made lighter, but less liable to Fractures.

The external *Lamina* is smooth, and cover'd with the *Pericranium*; the internal is likewise smooth, abating the Furrows made by the Pulsation of the Arteries of the *Dura Mater*, ere the *Cranium* be arriv'd at its Consistence.

It has several Holes, thro' which it gives passage to the Spinal Marrow, Nerves, Arteries, and Veins, for the Conveyance and Re-conveyance of the Blood, &c. between the Heart and the Brain.

Its Figure is round, which is an advantage to its Capacity; but a little depress'd, and longish; advancing out behind, and flattened on the two Sides, which form the Temples; which contribute to the Enlargement of the Sight and Hearing.

It is composed of eight Bones, six whereof are *proper*, and two *common*: The *proper* are, the Bone of the Fore-head, *Os Frontis*, that of the back of the Head, *Os Occipitis*, the two *Osse Parietalia*, and the two of the Temples, *Osse Temporium*. See each in its Place, **FRONTIS**, **OC-CIPITIS**, **TEMPORIS**, &c.

In the Eminences of the Bones of the Temples, is contain'd the Organ of Hearing, with the four little Bones belonging thereto, *viz.* the *Malleolus*, *Incus*, *Stapes*, and *Os Orticulare*. See **HEARING**.

The *common* Bones are the *Os Sphenoides*, and *Ethmoides*. See **SPHENOIDES**, &c.

The *Cranium* has three *common* Sutures, which divide it from the Jaw: It has others *proper*, whereof there are three genuine, the *Coronalis*, *Sagittalis*, and *Lambdoides*; the rest figurous, call'd *Synsamosis*, or *Temporales*. See **SUTURE**, &c.

This Division of the *Cranium* into Pieces by Sutures, is of good use, as it makes it less liable to break, gives passage to the Membranes which sustain the *Pericranium*, and affords Vent to the Matter of insensible Perspiration. See **FRACTURE**, &c.

The Word comes from the Greek *κράνη*, *Gales*, *Helmet*; in regard it serves to defend the Brain, like a Head-piece. *Pezron*, again, derives *κράνη* from the Celtic *Crav*, from its roundness.

CRANK, a Contrivance in Machines, in manner of an Elbow, only of a square form; projecting out from an Axis, or Spindle; and serving by its Rotation, to raise and fall the Pistons of Engines for raising Water, &c.

CRANK, in the Sea Language. A Ship is said to be *Crank*, when she cannot bear her Sail, or can bear but a small Part, for fear of overloading. She is also said to be *Crank by the Ground*, when her Floor is so narrow, that she cannot be brought on ground without danger.

CRAPE, a light transparent Stuff, in manner of Gauze; made of raw Silk, gum'm'd and twisted on the Mill; wove without crossing, and much used in Mourning.

Crapes are either *crap'd*, *i. e.* *crisp'd*, or *finest*: the first *double*, expressing a closer Mourning; the latter *single*, used for that more remote. Note, white is reserv'd for young People, or thos' devoted to Virginity.

The Silk dufo'd for the first is more twist'd than that for the second; it being the greater or less degree of twisting, especially of the Warp, which produces the Crispage, given it when taken out of the Loom, steep'd in clear Water, and rubb'd with a piece of Wax for the Purpose.

They are all died raw. The Invention of *Crapes* comes from *Boulogne*: But the chief Manufacture hereof is at *Lyon*.

History tells us, that *S. Bathilda*, Queen of France, made a fine *Crape*, *Crepam*, of Gold and Silver, to lay over the Body of *S. Eloy*. The *Bollandists* own they can't find what this *Crape* was. *Binet* says it was a Frame to cover the Body of the Saint withal: But others, with reason, take it to be a transparent Stuff, thro' which the Body might be seen; and that this was the *Crape* whence our *Crape* is form'd.

CRAPULA, a Surfeit by over-eating and drinking. See **SURFEIT**, and **PLENTITUDE**.

CRASIS, in the Animal Oeconomy, a due Temperament or Constitution of the Blood; wherein the several Principles, *viz.* Salt and Oil, whereof it is composed, are found in their just Proportion and Purity: in contradistinction to a *Discrasis*, which consists in an improper Union of the Principles, or in an unnatural State of some thereof. The chief Discrasies the Blood is susceptible of, whence flow most of the Diseases of the Body, are *Congregation*, *Dissolution*, an Excess of Oil, or of Salt. See **BLOOD**; see also **COAGULATION**, &c.

The Word is Greek, *κρῆσις*, signifying *Mixture*, *Temperament*.

CRASIS, in Grammar, a Figure, whereby we join two Syllables into one; call'd also *Syncretesis*. See **SYNCRETIS**.

Thus, in *Virgil's* fourth *Eclogue*,

Orphei Calliopea lino formosus Apollo.

there is a *Crasis* in the Word *Orphei*, which here only consists of two Syllables.

CRASSAMENTUM, a Term used by some Anatomists, for the Crust of the Blood; or that Part which, upon standing, to cool and separate, forms the *Cogulum*: In opposition to the Serum, or Whey, wherein it swims. See **CAEVO**.

Some Authors have suppos'd the *Crassamentum* to be specifically lighter than the Serum; but *Dr. Jurin* shows the contrary from repeated Experiments. See **BLOOD**.

CRATER, *Cup*, in Astronomy, a Constellation of the Southern Hemisphere. See **CONSTELLATION**.

The Stars in the Constellation *Crater*, in *Ptolemy's* Catalogue are 7; in *Tychon's* 8; in the *Britannic Catalogue* 11. The Order, Names, Longitudes, Latitudes, &c. whereof, are as follow.

Stars in the Constellation CRATER.

Names and Situations of the Stars.	Sign.	Longitude.	Latitude.	Magnit.
That in the Basis	♌	19 26 3	22 42 47	4 3
Preced. of 3 in the Middle of the Cup		22 23 50	17 35 20	4
South, in the Middle of the Cup		25 5 50	20 47 43	4
Preced. in the North Part of the Cup		21 55 59	13 28 38	4
Circumference of the Mouth		24 16 16	19 39 22	4
Middle of 3; in the Middle of the Cup				
Subj. in North Circumf. of the Mouth		23 9 20	14 35 16	6
In the North Handle		24 16 26	11 18 33	4
In the Middle of the Mouth		26 8 52	13 13 16	5
In the South Circumf. of the Mouth		29 45 50	13 17 29	4
In the South Handle		28 1 47	16 4 46	4
	10			
		23 58 41	17 52 53	5 6

CRATER, in Falconry, any Line on which Hawks are fasten'd when reclaimed. See **RECLAIM**.

CRAVEN, or **CRAVENT**, in our ancient Customs, a Trial by Battle, upon a Writ of Right. See **COMBAT**.

The Law was, that the Victory should be proclaim'd, and the Vanquish'd acknowledge his Fault in the Audience of the People; or pronounce the Word *Crasus* in the Name of *Reverentiae*, or *Cowardice*, &c. and, presently, Judgment to be given; and the Recreant, *amittere Legem terra, i. e.* become infamous.

Coke observes, that if the Appellant join Battle, and cry *Crasus*, he is to lose, *liberam Legem*. If the Appellee cry *Crasus*, he is to be hang'd.

CRAYON, a general Name for all colour'd Stones, Earths, or other Minerals; us'd in Designing, or Painting in Pastel; whether they have been beaten and reduced to a Paste, or are us'd in their Consistence of a Stone, after sawing or cutting them into long narrow Slips.

In this last manner are red *Craysons* made, of Blood-stone, or red Chalk; black ones, of Charcoal and black Lead. *Craysons* of all other Colours are Compositions of Earths reduc'd into Paste.

CREAM, the thickest and fattest Part of Milk; being that whereof Butter is made. See MILK.

The Word is deriv'd from the Latin *Cremor*, which signifies the same thing; tho' in the lower *Latin* we find *Crema lactis*.

CREAM of Tartar, in Pharmacy, a Preparation of Tartar, otherwise call'd *Crystal of Tartar*.

It is made by boiling Tartar in Water till it be dissolved, and passing the Dissolution thro' a Straining-Bag; Half the Liquor being evaporated, the Remainder is set in a cool Place; where it shoots into Crystals, Part of it swimming atop, in form of *Cream*.

This latter is properly the *Cream of Tartar*, the rest *Crystal of Tartar*, both of the same Nature and Use.

It is reputed a great Sweetener of the Blood; for which some take it in Whey or Water gruel in the Spring-time, to the Quantity of Half an Ounce every Morning, for three or four Weeks.

Its Operation is by Stool; and, by its saline Particles, pretty much also by Urine. It's generally mix'd with lenitive Electuaries, and other gentle Catharticks, in Nephritic and Antivenereal Cases, where it often proves serviceable.

CREDENTIALS, Letters of Credit and Recommendation; especially such as are given to Embassadors, Plenipotentiaries, &c. sent to foreign Courts. See EMBASSADOR, &c.

CREDIBILITY. See PROBABILITY, VERISIMILITUDE, EVIDENCE, OPINION, &c.

In the *Philosophical Transactions*, we have a Mathematical Computation of the *Credibility* of Human Testimony. See TESTIMONY.

CREDIT, in Commerce, a mutual Loan, of Merchandises or Silver, on the Reputation of the Probity and Solvability of a Negotiant. See LOAN.

Letters of **CREDIT**, are those given to Persons in whom a Merchant, &c. can trust, to take Money of his Correspondent abroad, in case he happens to need it. See LETTER.

Credit is also us'd for the Course which Papers, or Bills, &c. of Commerce, have in the Publick, and among Dealers.

In this Sense, *Credit* is said to *rise*, when in negotiating the Actions of a Company, they are receiv'd and sold at Prices above *Par*, or the Standard of their first Creation.

Discredit is oppos'd to *Credit*, and is us'd where Money, Bills, &c. fall below *Par*. See *PAR*.

CREDIT was also antiently a Right which Lords had over their Vassals; consisting in this, that during a certain time they might oblige 'em to lend them Money.

In this Sense, the Duke of *Brittany* had *Credit* during fifteen Days on his own Subjects, and those of the Bishop of *Nantz*; and the Bishop had the same *Credit* or Right among his Subjects, and those of that Prince.

CREDITOR, a Person to whom any Sum of Money is due, either by Obligation, Promise, or otherwise. See DEBT, and DEBTOR.

The *Laws of the Twelve Tables*, which were the Foundation of the *Roman Jurisprudence*, allow'd the *Creditor* to tear or cut his Debtor to pieces, in case he prov'd insolvable.

CREDITOR, in Book-keeping. See BOOK-KEEPING.

CREED, **CREDO**, *Symbol*, a short, or summary Account of the chief Articles of the Christian Faith; thus call'd from the first Word thereof in Latin, *Credo*, I believe. See SYMBOL.

CREEK, Part of a Haven, where any thing is landed from the Sea. See HARBOUR.

So many Landing-Places as there are in a Harbour or Port, so many *Creeks* there are. See *CRAPS*.

CREMASTERS, in Anatomy, an Epithet given two Muscles, otherwise call'd *Suspensores*; serving to keep the Testicles suspended. See SUSPENSORES.

The Word comes from the Greek *κρεμα*, *suspendere*, to suspend, hang.

CRENATED Leaves, a Term us'd by Botanists, for such Leaves of Plants as are jagg'd, or notch'd. See LEAVES.

CRÉNELLE, or *Imbattée*, in Heraldry, is when any

honourable Ordinary is dened, in resemblance of the Battlements of a Wall. See BATTLEMENT.

The Use hereof is, doubtless, taken from the Figures of such Walls being given, either for having been the first at mounting, or the chief in defending them.

The French Word comes from *Cren*, a Notch or Interval; the English, from its being a Place of Fighting, or Battle.

Upon in Latin call'd *Imbattallum*, a Word forg'd from the English; but most others term it *Pinnatum*, from *Pinnas*, a Battlement.

CREPITATION, that Noise which some Salts make over the Fire in Calcination; call'd also *Detonation*. See DETONATION.

CREPITUS Lupi, in Natural History, a kind of Fungus, popularly call'd *Puff-bell*.

Mr. *Derham* observes, that upon examining the Powder thereof with a Microscope, he found the Seeds to be so many exceeding small Puff-balls, with round Heads, and long, sharp-pointed Stalks; as if made on purpose to prick into the Ground.

The Seeds are intermix'd with much dusty Matter, and become hurtful to the Eyes; probably by their sharp Stalks pricking and wounding it.

CREPUSCULUM, in Astronomy, *Twilight*; or the Time from the first Dawn or Appearance of the Morning, to the rising of the Sun; and, again, between the setting of the Sun, and the last Remains of Day. See DAY, RISING, SETTING, &c.

The *Crepusculum* is usually computed to begin and end when the Sun is about 18 Degrees below the Horizon.

The *Crepuscula* are longer in the Solstices than in the Equinoxes, longer in an oblique, than in a right Sphere.

Peples derives the Word from *Creperus*; which, he says antiently signify'd *uncertain*, *doubtful*, q. d. *a dubious Light*.

The *Crepuscula* are occasion'd by the Sun's Rays refracted in our Atmosphere, and reflected from the Particles thereof, to the Eye.

Demosth. For suppose an Observer in O, (Tab. *Astronomy*, Fig. 41.) the sensible Horizon AB, and the Sun under the Horizon in HK; and let the Ray SE fall in the Atmosphere below the Horizon. Since it passes out of a rarer into a thicker Medium, it will be refracted, (see REFRACTION;) and that towards the Perpendicular, i. e. towards the Semidiameter CE. It will not, therefore, proceed in T, but touching the Earth in D, will fall upon A, the Eastern Part of the sensible Horizon; Nor can any other Ray besides AD, of all those reflected from E, arrive at A.

But now, since the Particles of the Atmosphere reflect the Sun's Rays, (see REFRACTION;) and since the Angle DAC is equal to CAO; the Rays reflected in A will be carried to O, the Place of the Spectator; who will therefore see the Particle A shining in the sensible Horizon, and consequently the beginning of the Morning *Crepusculum*.

And in the same manner might be shewn the Refraction and Reflection of the Sun's Rays in the Atmosphere, in the Evening *Crepusculum*.

Kepler, indeed, assigns another Cause of the *Crepusculum*, viz. the luminous Matter around the Sun; which arising near the Horizon, in a circular Figure, exhibits the *Crepusculum*; in no wise, as he would shew, owing to the Refraction of the Atmosphere.

The Depth of the Sun below the Horizon, at the Beginning of the Morning *Crepusculum*, or End of the Evening one, is determin'd in the same manner as the Arch of Vision; viz. by observing the Moment wherein the Air first begins to shine in the Morning *Crepusculum*, and that wherein it ceases in the Evening; and finding the Sun's Place for that Moment.

Alhazan found it 19 Degrees; *Tychon* 17°; *Rothmannus* 24°; *Stevinius* 18°; *Cassini* 15°; *Riccolini*, in the Equinoxes in the Morning, 16°, in the Evening 20° 30'; in the Summer Solstice in the Morning, 21° 25'; in the Winter Solstice in the Morning 17° 25'.

Nor need we wonder at this Difference among Astronomers; the Cause of the *Crepusculum* being inconstant; For, if the Exhalations in the Atmosphere be either more copious, or higher than ordinary; the Morning *Crepusculum* will begin sooner, and the Evening hold longer than ordinary: For the more copious the Exhalations are, the more Rays will they reflect, consequently the more will they shine; and the higher they are, the sooner they will be illumin'd by the Sun. To this it may be added, that in a denser Air, the Refraction is greater; and that not only the Brightness of the Atmosphere is variable, but also its Height from the Earth.

Hence, when the Difference between the Sun's Declination and the Depth of the Equator is less than 18°, and does not, in effect, exceed 15°, the *Crepusculum* will continue the whole Night.

The Elevation of the Pole P R, (Fig. 42.) and the Sun of Declination being given, to find the Beginning of the Morn-

ing Crepusculum, or *End of the Evening*. Since in the Triangle PSZ the several Sides are given, viz. PZ the Elevation of the Pole, PR and PS the Complement of the Declination, OS and SZ the Aggregate; from the Quadrant ZD, and the Sun's Depth DS, find the Angle ZPS, whose Measure is the Arch AO. See TRIANGLE.

Convert AO into Solar Time: thus have you the Time elaps'd from the Beginning of the Morning *Crepusculum*, to the Period of the Evening one. See TIME.

To find the *Crepusculum* by the Artificial Globe. See GLOBE.

CRESCENT, the *New-Moon*, which, as it begins to recede from the Sun, shews a little Rim of Light, terminating in Points, or Horns, which are still increasing, till it become full, and round in the Opposition. See MOON.

The Term is also us'd for the same Figure of the Moon in its Wane, or Decrease; but improperly: in regard the Points or Horns are then turn'd towards the West, whereas they look to the East in the just *Crescent*.

The *Crescent* is the *Turkish* Symbol; or rather, 'tis that of the City of *Byzantium*, which bore this Device from all Antiquity; as appears from Medals, struck in honour of *Augustus, Trajan, &c.*

The Word comes from the Latin *Crescere*, to increase.

CRESCENT is also a Military Order, instituted by *Renatus of Anjou*, King of *Sicily*, &c. in 1448; so call'd from the Badge, or Symbol thereof, a *Crescent* of gold enamell'd.

What gave occasion to this Establishment, was, that *Renatus* took for his Device a *Crescent*, with the Word *Lux, Præse*; which, in the Style of *Robus*, makes *Lux in Crescent*, q. d. by advancing in Virtue, one merits *Præse*.

CRESCENT, in Heraldry, is a Bearing in form of a Half-Moon.

The *Crescent* is sometimes *Mountant*, i. e. its Points look towards the Top of the Chief, which is its most ordinary Representation: whence some contend, that the *Crescent*, absolutely so call'd, implies that Situation; tho' some Authors blazon it *Mountant*, when the Horns are towards the Dexter-side of the Escutcheon, when others call it *Incrassant*. The *Ottomans* bear Sinople, a *Crescent Mountant*, Argent.

Crescents are said to be *adoss'd*, when their Backs or thickest Parts, are turn'd towards each other; their Points looking to the Side of the Shield.

The *Inverted Crescent*, is that whose Points look towards the bottom: *Turn'd Crescents* are plac'd like those *adoss'd*; the difference is, that all their Points look to the Dexter-side of the Shield: The *Counter'd*, on the contrary, look to the Sinister-side. The *affronted* or *appointed Crescents*, are contrary to the *adoss'd*, the Points looking towards each other.

The *Crescent* is frequently us'd as a Difference in a Coat-Armour, to distinguish it for that of a second Brother, or second Family. See DIFFERENCE.

CREST, in Armoury, the uppermost Part of the defensive Armour of the Head; rising over the rest, in manner of the Comb or Tuft of a Cock; to sustain the Effort of very keen Scimitars, &c.

It has its Name from *Crista*, Cock's Comb. Hence, *Casque*, in Heraldry, the uppermost Part of an Armoury; or that Part over the Casque, or Helmet. See CASE.

Next to the Manele, says *Gentilius*, the *Crest* or *Cognisance* claims the highest Place, being seated on the most eminent Part of the Helmet; yet so, as to admit an Interposition of some Escrol, Wreath, Chapeau, Crown, &c. See COGNISANCE.

The *Crest* of the Arms of *England*, is a Lion Passant Guardant, crown'd with the like; that of *France*, a Flower-de-Lys liguared.

In the ancient Tournaments, the Cavaliers had Plumes of Feathers, especially those of Ostriches and Herons, for their *Crests*; these Tufts of Feathers they call'd *Plumarts*; and were plac'd in Tubes, on the Tops of high Caps, or Bonnets. Some had their *Crests* of Leather; others of Parchment, Fatboard, &c. painted or varnish'd, to keep out the Weather; others of Steel, Wood, &c. on which were sometimes represented a Member or Ordinary of the Coat; as, an Eagle, Flower-de-Lys, &c. but never any of those call'd Honourable Ordinaries, as Pale, Fesse, &c.

The *Crests* were changeable at pleasure; being reputed to other than as an arbitrary Device, or Ornament. See DEVICE.

Herodotus attributes the Rise of *Crests* to the *Coriants*, who first bore Feathers on their Casks, and painted Figures on their Backiers; whence the *Persians* call'd 'em *Cocks*.

The antientest of the Heathen Gods wore *Crests*, even before Arms were made of Iron and Steel: *Jupiter Ammon* bore a Ram's Head for his *Crest*; *Mars* that of a Lion, or a Tyger, calling out Fire at his Mouth and Nostrils. *Alexander the Great* wore for his *Crest* a Ram's Head, to indicate that he was the Son of *Jupiter Ammon*; *Julius Cæsar* sometimes bore a Star, to denote that he was descended from *Venus*; and sometimes the Head of a Bull, or

an Elephant with his Trunk; and sometimes the Wolf that suck'd *Romulus* and *Remus*. The Christians, in their first Religious Wars, were wont to wear a Cross daring forth Rays, for their *Crests*, as well as on their Shields and Banners, as *Prudentius* informs us;

—Clypeorum insignia Christis
Scriptifer, ardebat summis cætere addita Cristis.

The ancient Warriors bore *Crests* to strike Terror in their Enemies, at the Sight of the Spoils of Animals they had kill'd; or to give 'em the more formidable Mien, by making them appear taller, &c.

Plutarch observes, that the *Crest* of *Pyrrhus* was a Bunch of Feathers, with a Stag's Horns; and *Diodorus Siculus*, that of the Kings of *Egypt*, Lion's Heads, Bulls, or Dragons.

The *Crests* have given rise to several Fables: The Ancients, e. g. give *Serapis* the Head of a Sparrow Hawk; this being the *Crest* of that Cavalier. *Geryon* they made a Monster with three Heads, because he bore a triple *Crest*; and feign'd, that *Proteus* chang'd his form every Moment, because, being King of *Egypt*, he frequently chang'd his *Crest*; sometimes bearing that of a Lion, sometimes of a Dragon, &c.

The *Crest* is esteem'd a greater Mark of Nobility, than the Armoury, as being bore at Tournaments; to which none were admitted, till they had given Proof of their Nobility. Sometimes it serves to distinguish the several Branches of a Family. It has serv'd, on occasion, as the distinguishing Badge of Factions.

Sometimes the *Crest* is taken from the Device; but more usually is form'd of some Piece of the Arms: Thus, the Emperor's *Crest* is an Eagle; that of *Gestife* a Castle, &c.

Families that exchange Arms, as have done the Houses of *Brunswick* and *Cologne*, do not change their *Crests*; the first still retain the Hawk, and the latter the Mermaid.

CRAST, among Carvers, an Imagery, or carved Work, to adorn the Head, or Top of any thing; like our modern Cornish. See CORNICHE.

CRIST-FALLEN, of a Horse, is when the upper Part of the Neck, on which the Mane grows, does not stand upright, but hangs either to one Side, or the other.

CREUX, a Term in Sculpture, much us'd by the French; tho' not yet, that we know of, naturaliz'd among us: But the want of a Word of equal import in *English*, as it has frequently put us under a necessity of using this in the Course of the present Work; so it pleads strongly for its Admission into our Language.

The Word originally signifies a *Hollow*, *Cavity*, or *Pit*, out of which something has been scoop'd, or dug: The Term is us'd particularly for that kind of Sculpture and Graving, where the Lines and Figures are cut, and form'd within the Face, or Plan of the Plate or Matter engraven: In which Sense, it stands in opposition to *Relievo*; where the Lines and Figures are emboid'd, and rise prominent above the Face of the Matter. See ENGRAVING, and SCULPTURE.

CRIBRATION, in Pharmacy, a Separation of the finer Parts of a Medicine, whether dry, or humid, from the grosser; the latter by means of a Palping Sieve, the former by a fine Searce.

CRIBROSUM *Os*, or *Os CRIBRIFORME*, in Anatomy, a little Bone at the Top of the Nose, pierced like a Sieve, to let pass several little Fibres, arising from the Mamillary Productions, and terminating in the Membrane that lines the Cavity of the Nostrils; call'd also *Os Ethmoides*. See ETHMOIDES.

CRICOARYTENOIDES, in Anatomy, a Name given two Pair of Muscles, serving to open the Larynx. See LARYNX.

The *Cricovarytenoides* are either *Posterior*, or *Lateral*: The first are the first Pair of Openers of the Larynx; the latter, the second Pair.

The *Lateral* have their Origin in the Edge of the Lateral, and Superior of the Cartilage *Cricoides*, and are inserted into the Lateral and Superior Part of the *Arytenoides*.

The *Posterior* have their Origin in the posterior and lower Part of the *Cricoides*; and hence the Reason and Etymology of the Name is evident.

CRICOIDES, in Anatomy, a Cartilage of the Larynx; so called, q. d. annular, as being round, like a Ring, and encompassing the whole Larynx. See LARYNX.

The *Cricoides* is the second Cartilage of the Larynx; 'tis narrow before, thick behind; and serves as a Base to all the other Cartilages; and is, as it were, let into the *Tyrodies*.

'Tis by means of this that the other Cartilages are join'd to the *Tyrodies*; on which account it is immovable.

The Word is form'd from *crios*, used by Transposition for *crios*, Circle, and *oides*, Form.

CRICOTHYROIDÆUS, in Anatomy, a Name given to the first Pair of Muscles proper to the Larynx. See LARYNX.

Their Name is deriv'd hence, that they have their Origin in the lateral and anterior Part of the *Cricoides*; and are insert'd into the inferior Part of the *Ala Thyroides*.

Their Use is to dilate the Scutiform Cartilage. See SCUTIFORM.

CRIME, a *Breach*, or *Transgression* of a Law; or, an Action contrary to the Tenor of a Law, either Natural or Divine, Civil, or Ecclesiastick; to which a Penalty is annex'd. See LAW.

The *Romans* distinguish'd two Kinds of *Crimes*, viz. *Private Crimes*, which only affected particular Persons; and the Prosecution whereof was not allowed by the Laws to any but those interced'd therein; as *Adultery*, &c. And *Publick Crimes*; the Pursuit whereof was permitted to all Persons, tho' in no wise immediately interced'd.

With us, *Crimes* are distinguish'd into *Capital*, as *Treason*, *Murders*, *Robberies*, &c. and *Common*, as *Perjuries*, &c.

They are again divided into *Crimes* cognizable by the King's Judges; as those abovemention'd; and such as are only cognizable in the Spiritual Courts, as *Simple Fornication*, &c.

The Term *Crime* includes in it the Idea of a Determination, and a Design form'd to do an Injury. It is deriv'd from the Latin *Crimen*, of the Greek *κρῖμα*, *judicio*.

CRIMSON, one of the seven red Colours of the Dyers. See RED.

The Staffs to be dy'd in *Crimson*, after they have been clear'd of their Soap, and strongly allum'd, are put in a Bath of Cochineal, each according to its Colour. See PURPLE.

The Word comes from the *Arabic Kermis*, of *Kermes*, or *Hermes*, red. The *Bollanists* impute, that *Crimson* comes from *Cremora*, and is us'd for *Cremosis*. See KERMES, COCHINEAL, &c.

CRINONES, in Medicine, a sort of Worms, sometimes found under the Skin, in Children; resembling short thick Hairs, or Bristles. See WORMS, and VERMES.

They are also call'd *Comedones*, from the Latin *Comedere*, to eat; by reason they prey on the Substance of the Child, or consume its Nourishment.

CRISIS, in Medicine, a Change, or Turn in acute Diseases; wherein the Morbifick Matter is to alter'd, as determines the Patient either for Recovery or Death. See CRITICAL.

The Cause of such Change is owing to the remaining vital Force's being irritated by the Matter of the Disease for or to condition'd; i. e. fit either to be evacuated, or transfused, or to kill. See DISEASE.

If the Matter be dispos'd for Evacuation or Transfusion, but is not Salubrious, it produces a Change call'd a *Critical Perturbation*, or *Imperfect Crisis*.

If the Change become sensible, they are call'd *Critical Symptoms*, or *Signs of a Crisis*, either future or present.

The Symptoms of the *Crisis* are frequently confounded with those arising from the Causes of the Disease, the Disease it self, or the Matter of the Disease; whence the most unhappy Consequences. See SYMPTOM.

The Differences between these critical Symptoms and morbid ones, are, that the first proceed from the vital Powers prevailing over the Force of the Disease; but the latter from the Disease's prevailing over the vital Faculty; that the first are preceded by a manifest Concoction, but the latter are form'd even in Crudities: that the former happen about the *critical Times*, but the latter at all Times of the Disease, chiefly during its Increase.

The principal Symptoms of an approaching *Crisis*, are, after Digestion, and about the critical Time, a sudden Stupor, Drowsiness, Waking, Delirium, Anxiety, Dyspnoea, Grief, Redness, Tindration, Pricking, Heaviness, Darkness, Light, spontaneous Tears, Nausea, Heat, Thirst, trembling of the lower Lip, &c.

The Symptoms and Effects of a present *Crisis*, are, after the preceding ones, a Vomiting, Salivation, Looseness, thick Sediment in the Urine, bleeding at the Nose, Hemorrhoids, Sweat, Abscesses, Pustules, Tumors, Bubos, Paralis, Apthe, &c.

CRISTA Galli, in Anatomy, an Eminence in the middle of the *Oss Ethmoides*, advancing within the Cavity of the *Cranium*; and to which is fasten'd that Part of the *Dura Mater* which divides the Brain, call'd *Fals*. See BRAIN.

It has its Name from its Figure, which resembles that of a Cock's Comb.

In Adults, this Process appears of a piece with the *Septum Nervinum*. See NOSE, and NOSTRILS.

CRISTÆ is also a Term us'd by Anatomists for certain Excrescences arising about the Fundament, resembling Cocks Combs.

Thole, M. *Dionis* says, are taken off either by Ligature, by Caustification, or Amputation. When these Excrescences have other Figures, they have other Names.

CRISTA is also us'd for a crook'd, twist'd, spiral Eminence, in the middle of the Spine of the *Omphalate*. See OMPHALATE.

CRITERIUM, or **CRITERION**, a Judgment made of the Truth, or Falshood of a Proposition, or the Nature and Qualities of any Effect. See TRUTH.

The Doctrine of *Criteria*, and the Characters and Rules thereof, make the first Part of the *Epicurean Philosophy*. See EPICUREAN.

CRITHOMANCY, a kind of Divination, perform'd by considering the Dough, or Matter of the Cakes offer'd in Sacrifice; and the Meal throw'd over the Victims to be kill'd.

Hence, in regard they ordinarily us'd Barley-Meal in these Ceremonies, this Kind of Divination was call'd *Critibomancy*; from *κρῖν*, *Barley*, and *πορρῖα*, *Divination*.

CRITICAL Days, *Symptoms*, &c. are certain Days, and Symptoms, usually arising in the Course of acute Diseases, as Fevers, Small Pox, &c. which indicate the Patient's State, and determine him either to recover or grow worse. See CRISIS.

The *Crisis* have been frequently observ'd to happen on the 7th, 14th, or 20th Day; whence those have been denominat'd *Critical Days*.

The Word comes from the Greek *κρῖμα*, *judicio*, I judge.

For the *Theory of Crises*, it may be observ'd, that the Concoction of any morbid Matter, and the Humour to be fecer'd, is nothing else but a Change thereof into such a due Magnitude, or Smallness, as it may be carried by the circulating Blood along the Canals, and excretd by Vessels destin'd for that Purpose. But if the morbid Matter cannot be reduc'd to such a Magnitude or Smallness as may correspond to the Offices of the Secretory Vessels; then either an Abscess or a Hemorrhage will follow, if a *Crisis* be begun; for which Reason, Abscesses, &c. are account'd less perfect *Crisis*. But, that the morbid Matter may be reduc'd to a due Magnitude, or Smallness, and its with'd-for Discharge, there is requir'd a considerable Time, if the Quantity of Matter is large; that is, if the Distemper be great and severe: And since there are a great many Causes, and those very constant, which may occasion the Blood, and offending Humours therein, to be of a different Fluidity in the Inhabitants of different Climates; it is impossible but that different Spaces of Time should be requir'd for the finishing Concoction; which makes it impossible to determine the *critical Days* in one Climate, from what they are found to be in another.

The Causes of real *Critical Days*, that is, such on which happens the last Concoction of the morbid Matter, which is always attended with its Expulsion, are all those Things which occasion the Humours to become of such a certain Magnitude or Minuteness, and of a greater or lesser Cohesion; but with any given Power, Bodies unequally large, or unequally cohering, cannot be concocted in an equal Time: Wherefore, it is to be found by the Observations made by all Nations among themselves, which are the usual Causes and Conditions of those Diseases, which require a certain Number of Days to finish such a Concoction in.

CRITICISM, the Art of Judging. See CRISIS, and CRITERION.

Some define the Term more at large, thus; *Criticism* is the Art of judging of the Facts of a History, or of a Work of Genius, with the various Incidents there met with, their Style and their Authors: So that M. *le Clerc* may seem to have given a defective Idea of *Criticism*, when he defines it simply the Art of entering into the Meaning of ancient Authors, and of making a just Discernment of their genuine Works.

We may distinguish divers Sorts, or Branches of this Art: As, *Philosophical Criticism*, or the Art of judging of Opinions and Hypotheses in Philosophy; *Theological Criticism*, the Art of judging of the Explication of *Dogmata*, or Doctrines of Faith, &c. *Political Criticism*, the Art of judging of the Means of governing, acquiring, and preserving States.

But the ordinary use of the Word is restrain'd to *Literary Criticism*; which, however, is of great extent, as it takes in the Art of judging of Facts: a Branch of *Criticism*, which regards not only History, but also the Discernment of the real Works of an Author, the real Author of a Work, the genuine Reading of a Text; and the Art of discovering Supposititious Monuments, Charters, interpolated Passages, &c.

The other Parts of *Literary Criticism*, are, the Art of judging of Works of Genius, their Excellencies and Defects.

We have also *Grammatical Criticism*, or the Art of interpreting and discovering the Words and Meanings of an Author; *Criticism of Antiquities*, which consists in distinguishing genuine Medals, and the different Taste and Spirit found among 'em, according to the different People, the different Country, and the different Times wherein they were struck; the distinguishing between what is cast and what struck; what has been retouch'd, and repair'd or added, from what is really antique; the genuine from the spurious, &c. and to decypher and explain 'em, &c.

Sacred Criticism, in general, is that employ'd in Ecclesiastick Matters, the History of the Church, the Works of the Fathers, Councils, Lives of the Saints, &c. but more particularly

particularly what concerns the Books of the Holy Scriptures, and the Canon thereof.

Aristotle, if we believe *Halicanassens*, is the first Inventor of the Art of *Criticism*. *Aristarchus*, *Halicanassens* himself, *Varro* and *Longinus*, distinguish'd themselves therein in their Days. Among the Christians, *Dionysius Alexandrinus*, *Hefychius*, *Eusebius*, *Tertullianus*, *S. Jerom*, and *Theodoret*, were the greatest Masters in this Art. The Decree of *Pope Gelasius* about the Apocryphal Books, requir'd a good Share of *Criticism*.

But the Art fell with the other Arts; and lay unknown till the Time of *Charlemaign*, when it was re-establish'd under him and his Sons.

The Care which the Religious *Cisterciens* took to correct the Manuscripts of the Bible, shew that the Rules of *Criticism* were not entirely unknown in the XIIIth Century. The Works of *Johannes Sarisburiensis*, *Euphrasius*, and *Yvesius*, make it evident, it was cultivated in the XIIIth. The Manuscripts of the Bible corrected by the *Dominicans of Paris*, and the Doctors of the *Sorbonne* in the XIIIth, shew it was subsisting then. In the following Ages it was still cultivated with more Exactness; especially in the XVIth and XVIIth Centuries, when all the World made it their Study.

From the Whole, it follows, that *Criticism*, does, indeed, suppose an uncommon Stock of Knowledge of the Subject whereon it is employ'd: but *Criticism*, it self, is nothing else but good Sense perfected by Logic.

CROCHES, among Hunters, the little Buds about the Top of a Deer's Horns.

CROCI, among Botanists, the Apices, or small Knobs on the Tops of Flowers. See **APICES**.

CROCIA, a Bishop's or Abbot's *Crozier*, or Pastoral Staff. See **CROZIER**.

CROCODILE, in Rhetorick, a captious and sophistical Kind of Argumentation; dispos'd to seduce the Unwary, and draw 'em speciously into a Snare. See **SOPHISM**.

It has its Name, *Crocodile*, from the following Occasion, invented by the Poets.

A poor Woman begging a *Crocodile* that had caught her Sen walking by the River-side, to spare and restore him; was answer'd, that he wou'd restore, provided she'd give a true Answer to a Question he shou'd propose: The Question was, *Will I restore thy Son or not?* To this the poor Woman, suspecting a Deceit, sorrowfully answer'd, *I'ou will not*: and demanded to have him restor'd, because she had answer'd truly. Thou liest, says the *Crocodile*, for if I restore him thou hast not answer'd truly: I can't therefore restore him, without making thy Answer false. See **DILEMMA**.

Under this Head may be reduc'd the Propositions call'd *Mutantes*, or *Insolubiles*; which destroy themselves. Such is that of the *Cretan Poet*: *Omnes ad unum Cretenses semper veruntur*: All the *Cretans*, to a Man, always lie. Either, then, the *Poet* lies, when he asserts that the *Cretans* all lie; or the *Cretans* don't all lie.

CROCUMAGMA, in Pharmacy, Troches compos'd of Saffron, Myrrh, red Roses, Starch, and Gum-Arabic: Thus call'd from the Greek *κρόκος*, *Saffron*, and *μαγμα*, a *Mark* impos'd on any thing.

CROCUS, a Term us'd for Saffron. See **SAFFRON**.

CROCUS, in Chymistry, is a Name given to several different Preparations; from their red, or saffron Colour.

Crocus Martis, is a Preparation of Iron; and is of two Kinds, viz. *Crocus Martis aperientis*, and *Crocus Martis astringens*. See **SAFFRON of Mars**.

Crocus Martis aperientis, opening *Saffron of Mars*, is a Preparation of Iron Plates, made by first washing them, then exposing 'em to the Dew, till they have contracted a Rust; which Rust is scap'd off, and the Plates expos'd for more. See **MARS**.

Others prepare it by calcining Iron Filings, with an equal Weight of Sulphur. Others by clapping a Bar of Iron, red, or rather white hot, between two Rolls of Brimstone; in which Case, the Iron melts, and runs down into a Vessel of Water below: which some call *Mars cum Sulphure preparatus*. Others have other Preparations.

M. Lemery endeavours to shew, that Iron taken in Substance, is much more salutary and efficacious than when thus prepar'd; the Process tending to strip it of its oily Part, wherein its chief Virtue resides; leaving nothing behind but the more ferruginous Part. See **CHALYBEAT**.

Crocus Martis astringens, binding *Saffron of Iron*, is a Preparation of Iron Filings; wherein they are depriv'd of their more saline Parts, by washing them five or six times in strong Vinegar, and calcining them five or six Hours.

Crocus Metallorum, a Kind of impure, opaque, Glass of Antimony, of a Liver Colour; hence frequently call'd *Liver of Antimony*; made by fusing equal Parts of Powder of Antimony and Salt-petre, well mix'd in an Iron Mortar, cover'd with a Tile. See **ANTIMONY**.

This is kindled by dropping in a Coal of Fire, upon which a great Detonation ensues; and the Mortar is struck, to make

the Matter fall to the bottom. The shining Part is the *Crocus*, or *Liver*, which is to be separated from the *Dross*, and reserv'd for use.

Its chief use is in making the *Vinum Emeticum*, or *Benedictum*, by infusing an Ounce or two of the *Crocus* powder'd, in a Quart of Wine for 24 Hours.

CROFT, *Crofta*, a little Cloft, or Pittle enclosed, near a Dwelling-house, either for Pasture or Tillage.—*Passus ceterius sicuti Monachi de eisdem meritis versus occidentem jacentibus pro se & hominibus suis, includere Croftos, sive pratum juxta pontem specialiter quantum illis placuerit*, Inquit.

In some ancient Deeds, *Crofta* occurs as the Latin Word for a *Croft*; and *cum Testis & Croftis* is most frequent.

Croft is translated by *Abba Floriacensis*, in *pratum*, a *Farm*.

CROISADE, or **CRUZADE**, or **CRUZADO**, a *Holy War*, or an Expedition against Infidels and Heretics; particularly against the *Turks*, for the Recovery of *Palestine*.

People anciently flock'd on these *Croisades* out of Devotion; the Pope's Bulls, and the Preaching of the Priests of those Days, making it appear a Point of Conscience. Hence several Orders of Knighthood took their rise. See **TEMPLARS**, &c.

Those who went to go on this Errand, distinguish'd themselves by Crosses of different Colours, wore on their Clothes; and were thence call'd *Croftes*: The *English* wore 'em white; the *French*, red; the *Flemish*, green; the *German*, black; and the *Italian* yellow. See **COLOURS**.

They reckon eight *Croisades* for the Conquest of the Holy Land: The first undertook in 1095, at the Council of *Clermont*; the second in 1144, under *Louis VII.* the third in 1188, by *Henry II.* of *England*, and *Philip Augustus* of *France*; the fourth in 1205, by *Pope Celestin III.* and the Emperor *Henry VI.* the fifth publish'd in 1208, by Order of *Innocent III.* wherein the *French*, *German*, and *Venetians* engag'd; the sixth under the same Pope, began voluntarily, in 1213, and ended in the Rout of the *Christians*; the seventh resolv'd at the Council of *Lyons* in 1245, undertaken by *S. Louis*; the eighth, which was the second of *S. Louis*, and the last of all, in 1268.

'Tis said, it was the *Cistercian* Monks who first projected the *Croisades*; *Philip Augustus* solicited the Execution thereof with the Holy See; and *Innocent III.* rais'd the first Standard of the Cross.

It was the Council of *Clermont* who order'd that they shou'd bear the Cross in their Banner; and that those who enter'd themselves into the Service, should also wear it on their Clothes.

The Abbot *Justiniqni* makes an Order of Knighthood of the *Croisades*, who serv'd in the *Croisades*.

Towards the middle of the XIIIth Century, there was also a *Croisade* of the *Saxons* against the Pagans of the North; wherein the Archbishop of *Magdeburg*, the Bishops of *Halberstadt*, *Munster*, *Meriburg*, *Brandenburg*, &c. with several Lay-Lords embark'd. And towards the Beginning of the same Century, the Pontificate of *Innocent*, there was also a *Croisade* undertaken against the *Albigenses*; who were become powerful in *Languedoc*, &c. See **ALBIGENSES**.

CROISES, in our ancient Customs, Pilgrims bound for the Holy Land, or who had already been there; so call'd from a Badge which they wore on their Garments, representing a Cross.

The Word *Crozier* is also extended to the Knights of *S. John of Jerusalem*; created for the Defence and Protection of Pilgrims; and all those of the Nobility, Gentry, &c. who in the Reigns of *King Henry II.* *Richard I.* *Henry III.* and *Edward I.* wore *Croze Signati*, i. e. dedicated themselves to the Wars, for the Recovery of the Holy Land. See **CROZIER**.

CROISIERS, *Croze-croize*, or *Crozeigeri*, were a Religious Order, or a Congregation of Regular Canons, so call'd.

There are three Orders which have, or do still bear this Name: one of *Italy*; another in the *Low Countries*; and a third in *Bolonia*.

The first pretend to be deriv'd from *S. Clor*; and add, that *S. Quiricus* the *Jew*, who shew'd *S. Helena* the Place of the true Cross, and was afterwards converted, reform'd them. All we know for certain is, that they subsisted in *Italy* before *Alexander III.* mounted the Chair; for that Pontiff, Aying from *Frederick Barberossa*, found an Asylum in the Monasteries of the *Croisiers*, which he afterwards, in 1169, took under his Protection, giving 'em the Rule of *S. Augustin*, &c.

They were confirm'd by *Pius V.* but the Discipline being much relax'd, they were suppress'd in 1656, by *Alexander VII.*

Matt. Paris says, that the *Croisiers*, bearing Staffs with Crosses at the End, came into *England* in 1244, and presented themselves to a Synod held by the Bishop of *Rocheſter* to be admitted.

Douffrib and *Dugdale* mention two Monasteries of this Order in *England*, the one at *London*, the other at *Rygate*; the first founded in 1245; the latter in 1298: some add a third at *Oxford*, where they were receiv'd in 1249. *M. Allen* and *Lays*, there were fourteen Monasteries of *Crossiers* in *England*; adding, that they came from *Italy*; those of the *Low Countries* disowning 'em.

The *Crossiers* of the *Low Countries* and *France*, were founded in 1211, by *Theodore* de *Celles* Son of *Boson*, who having serv'd in a *Crossade* in *Palestine*, in 1188, and there found some of the *Crossiers* instituted by *S. Clot*, conceiv'd a Design of instituting another Congregation in his own Country. This is certain, that *Theodore*, in his return from *Palestine*, engag'd himself in the Ecclesiastick State; and went in quality of Missionary to the *Crossade* against the *Albigensis*: and that at his return in 1211, the Bishop of *Liege* gave him the Church of *S. Theobald* near *Hay*; where, with four Companions, he laid the Foundation of his Order; which was confirm'd by *Innocent III.* and *Honorius III.* *Theodore* sent his Religious to *Yvolange*, to join those of *S. Dominic*, and combat the *Albigensis*; and the Congregation multiply'd in *France*. The Popes have endeavour'd to bring the *Crossiers* of *Italy* under those of *Flanders*.

The *Crossiers*, or *Port-crois* with a *Star*, in *Bohemia*, derive their Origin from *S. Quiricus*, and say they came from *Palestine* into *Europe*, where they embrac'd the Rule of *S. Augustin*, and built Monasteries. They add, that *S. Agnes* of *Bohemia*, to distinguish 'em from other *Crossiers*, obtain'd of *Innocent IV.* to add a *Star* to their Habit. But the Story of *S. Quiricus* has no Foundation; and it was *Agnes* herself, Daughter of *Primsias* King of *Bohemia*, who instituted the Order at *Prague*, in 1234. They are very numerous; and have, now, two Generals.

CROSSANTEE, in Heraldry, is *Croix Croisante* is a *Cross* crescented; that is, having a *Crescent*, or *Half-Moon*, fix'd on each end thereof. See *CROSS*.

CROSETTE, in Architecture, the Returns in the Corners of *Chambranes*, or *Door-Cases*, or *Window-Frames*; call'd also *Ears*, *Elbows*, *Aucanes*, *Prothyrides*.

Crosette of a *Lutberis*, the *Plaster* or covering near a *Lutern*.

CROSIER, or CROZIER, a *Shepherd's Crook*; a Symbol of *Pastoral Authority*, consisting of a *Gold* or *Silver Staff*, crook'd at-top, carried occasionally before *Bishops* and *Abbots*, and held in the Hand when they give solemn *Benedictions*. See *BISHOP*, and *ANSOR*.

At one End 'tis crook'd, at the other pointed; express'd in the Verse;

Curva trahit mites, pars pungit acuta Rebelles.

The Custom of bearing a *Pastoral Staff* before *Bishops* is very ancient, as appears from the Life of *S. Cesarea* of *Arles*, who lived about the Year 500. Among the *Greeks*, none but the *Patriarchs* had a Right to the *Crosier*. See *PATRIARCH*.

The *Crosiers* were at first no more than simple wooden Staves, in form of a *T*, us'd to rest and bear upon; by degrees they were made longer; and at length arriv'd at the form we now see them.

Regular *Abbots* are allow'd to officiate with a *Mitre* and a *Crosier*. See *ANSOR*, and *MITRE*.

Du Cange observes, that it was antiently call'd *Cambuca*, and *Cambuta*; and the Person who bore it, *Cambucarius*. *Papial* derives the Word *à similitudine Crucis*. Others fetch it from the old Saxon *Canne*, *Crook*.

CROSSER, in Astronomy, four Stars, in form of a *Cross*; by help whereof, those who sail in the Southern Hemisphere find the *Antarick Pole*. See *STAR*, and *CONSTELLATION*.

CROSS, *Cruix*, a piece of *Carpentry*, compos'd of two Pieces of *Wood*, traversing and cutting each other, ordinarily at right Angles.

It was us'd among the *Antients*, as a Punishment for *Malefactors* and *Slaves*; and was planted at several Places, in *terrors*, as our *Gallows*, &c.

Sezenen observes, that it was *Constantine* who by Law first abolish'd the Punishment of the *Cross*; which had obtain'd among the *Romans* till his Time.

Pearson derives the Word *CROSS*, from the Celtic *Cruag*, and *Creat*; tho, perhaps, *Cruag* and *Creat* might with as much Justice be deriv'd from *Cruce*.

As to *Crucifixion*, or the manner wherein the Punishment of the *Cross* was effected, the *Criticks*, both ancient and modern, are exceedingly divided: The Points in dispute, are, Whether the Criminal was fasten'd with three Nails, or with four; whether the Feet were immediately fasten'd to the *Cross*, or whether they rested on a little piece of *Wood*, in manner of a *Step* or *Rest*, *σκαλα*; whether the *Cross* was planted in the Earth before the Patient was nail'd on, fastening him afterwards by means of a *Scaffold* rais'd the height of the Place where the Feet were to be nail'd; or whether he was nail'd ere the *Cross* was rais'd or planted, as the *Painters* represent it: or lastly, whether the Patient

was fasten'd quite naked, or cover'd: Questions that have all been occasion'd by the *Crucifixion* of *Jesus Christ*.

Invention of the *CROSS*, *Inventio Crucis*, is an antient Feast, solemniz'd on the third of *May*, in Memory of *S. Helena's* (the Mother of *Constantine*) finding the true *Cross* of *Jesus Christ* deep in the Ground, on *Mount Calvary*, where she erected a Church for the Preservation of part of it: the rest being brought to *Rome*, and reposit'd in the Church of the *Holy Cross* of *Jerusalem*. See *FEAST*.

Theodore mentions the finding of three *Crosses*, that of *Jesus Christ*, and those of the two Thieves; and that they distinguish'd between 'em by means of a sick Woman, who was immediately heal'd by touching the true *Cross*.

The Place is said to have been indicated to her by *S. Quiricus*, then a *Jew*, afterwards converted and canoniz'd. See on the Invention of the *Cross*, *Theodore*, *Ruffin*, *Socrates*, *Sozom*, *S. Ambrose*, *S. Cyril*, &c.

Elevation of the *CROSS*, an antient Feast, held on the 14th of *September*, in Memory of this, that *Heracles* restor'd to *Mount Calvary* the true *Cross*, which had been carried off 14 Years before, by *Cassius* King of *Perfia*; upon his taking *Jerusalem* from the Emperor *Ptoleus*.

Cross-Bearer, *Porte-crois*, *Cruiger*, in the *Rossich* Church, the Almoner of an Archbishop, or a *Primate*; who bears a *Cross* before him on solemn Occasions.

The Pope has the *Cross* bore before him every where; a *Patriarch* any where out of *Rome*; *Primates*, *Metropolitans*, and those who have a Right to the *Pallium*, throughout their respective Jurisdictions.

Gregory XI. forbid all *Patriarchs* and *Bishops* to have it bore in Presence of *Cardinals*. A *Prelate* bears a single *Cross*, a *Patriarch* a double *Cross*, and the *Pope* a triple one on their Arms.

Order of the *CROSS*, or *CRUSADE*, an Order of *Ladies*, instituted in 1668, by the Empress *Eleanora de Gonzaga*, Wife of the Emperor *Leopold*; on occasion of the miraculous Recovery of a little golden *Cross*, wherein were inclos'd two Pieces of the true *Cross*; out of the Ashes of part of the *Pallace*.

It seems, the Fire had burnt the Case wherein it was inclos'd, and melted the *Cross*; yet the *Wood* remain'd untouch'd.

CROSS, in Botany, is us'd to express the Arrangement of the *Petals* of certain Flowers; call'd *Plante flore Cruciformi*. See *PLANT*, and *FLOWER*.

The Flowers are not to have either more or less than four *Petals*; and their *Calix* only to consist of four Pieces. The *Fittil* generally becomes a *Fruit*, call'd *Siliqua*. See *SILIQUA*.

CROSS, in Heraldry, is defin'd by *Guillim*, an Ordinary compos'd of four-fold Lines; whereof two are perpendicular, and the other two transverse; for so we must conceive of them, tho they be not drawn throughout, but meet by Couples, in four right Angles, near the Fels Point of the *Escutcheon*. See *ORDINARY*.

The Content of a *Cross* is not the same always: For when it is not charg'd, Canton'd, nor Accompany'd, it has only the fifth Part of the Field; but if it be charg'd, it must contain the third Part thereof.

This Bearing was first bestow'd on such as had perform'd, or at least undertaken, some Service for *Christ*, and the *Christian* Profession; and is held, by some, the most honourable Charge in all Heraldry. What brought it into such frequent use, was the antient Expeditions into the *Holy Land*; and the *Holy War* Pilgrims, after their Pilgrimage, taking the *Cross* for their Cognizance; and the *Ensign* of that War being the *Cross*. See *CRUSADE*.

In those Wars, says *Mackenzey*, the *Scots* carry'd *St. Andrew's Cross*; the *French* a *Cross* Argent; the *English* a *Cross* Or; the *Germans* Sable, the *Italians* Azure, the *Spaniards* Gules.

St. George's Cross, or the *Red Cross*, in a Field Argent, is now the Standard in *England*; that Saint being the reputed Patron of this Nation.

Guillim enumerates 39 different sorts of *Crosses* us'd in Heraldry, the several Names whereof here follow; the Descriptions are to be look'd for under proper Articles.

A *Cross* voided, a *Cross* wavy-voided, a *Cross* patee fimbriated, a *Cross* patee fitched on the Foot, a *Cross* patee on three Parts and fitched on the fourth, a *Cross* engrailed, a *Cross* patee, a *Cross* firy, a *Cross* patee voided, a *Cross* avelane, a *Cross* patee lanabeau, a *Cross* furebee, a *Cross* crozier, a *Cross* crozier fitchee at the Point, a *Cross* butone, a *Cross* pomel, a *Cross* urdee, a *Cross* degraded fitchee, a *Cross* potent, a *Cross* potent fitchee, a *Cross* calvary, a *Cross* crozier set in Degrees, a *Cross* patriarchal, a *Cross* anchor'd, a *Cross* moline, a *Cross* echebe, a *Cross* firy, or firy delise, a *Cross* double fitchee, a *Cross* a sixe Points, a *Cross* mitrine, a *Cross* raguled, a *Cross* ported voided, a *Cross* pall, a *Tou*, or *S. Anthony's Cross*, a *Cross* voided and

and danted, a *Croft coup'd pierc'd*, a *Croft moline pierc'd* Lozenge-ways, a *Croft moline quarter-pierc'd*, a *Sal-ture*, or *S. Andrew's Croft*, which must be dilutely spoken of under that Denomination; and so all the others may be found more particularly describ'd under the Names of their several Difference.

Colombiere makes 72 distinct forts of *Croffes*, of which we shall only mention those that differ from such as have been mention'd above; as, *La Croix remply*, which is only one *Croft* charg'd with another: A *Croft party*, that is, one *Croft* of one Colour, and the other of another: A *Croft quarter'd*, that is, the opposite Quarters of several Colours: A *Croft of five Pieces*, that is, of so many Colours; a *Croft swastice*, and *abaisce*; a *Croft barbee*; a *Croft croissantee*, or *croffestee*, that is, having a Crooket at each End: A *Croft fork'd of three Points*; a *Croft pommeter of three Pieces*; a *Croft refervee*; a *Croft pointed*; a *Croft anker'd*, and *swancker'd*; a *Croft anker'd with Snakes Heads*; a *Croft arid*; a *high Croft*; a *Croft reynouant*, or *casting out Rays of Glory*; a *Croft of Malta*; a *Croft of the Holy Ghost*; a *Croft fork'd*, like the antique Relts for Muskets; a *Croft with eight Points*; a *Croft bourdonnee*; a *Croft cramponnee* and *coursee*; a *Croft cable*; a *Croft inclining*; a *Croft pater noster*, that is, made of Beads; a *Croft tresle*; a *Croft benournee*; a *Croft unidee*, *ciecbee*, and *pommeter*; a *Croft ermeillee* and *ballisee*; a *Croft with four Steps to every Arm*; a *Croft rounded*; a *Croft and an half*; a *Croft flake*, or *starways*; a *Croft corded*; a *Croft doubled*, of six Pieces let together; a *double Croft split in Pale*; a *long Croft cut in pieces and dismember'd*; a *Croft coup'd*, or cut thro' in Fess of the two contrary Colours to the Field; a *Chevron surmounted by an half Croft*: Four Talls of Ermin in a *Croft*, the Tops of the Ermins opposite to each other in the middle: Four Pieces of Vair plac'd *croff-wise*, and counterpointing in the Centre: The *Croft* or *band* of *S. James*: *Potence cramponnee* on the dexter upper Arm, and a *Potence* about the middle of the Shaft.

These are the various *Croffes* we find in the aforesaid Authors; which some may think too many, as not being all us'd in *England*: but Heraldry extends to all Countries; and all Terms us'd deserve to be explain'd, that they may be understood. Nor is it only in *Croffes* that the Variety is so great, it will appear in many other Bearings, and particularly in Lions, and the Parts of them; whereof the same *Colombiere* gives us no less than 96 distinct Varieties. *Leigh* mentions but 46 several *Croffes*; *Sylvanus Morgan*, 25; *Upton*, 30; *Johannes de Bado Aureo*, 12; and so others, whom it is needless to mention. The aforesaid *Upton* owns he does not presume to ascertain all the various *Croffes* us'd in Arms, for that they are at present almost innumerable; and therefore he only takes notice of such as he had seen us'd in his own time.

Cross, in Surveying; or, the *Surveying-Croft*, is an Instrument us'd in Surveying; consisting of a brass Circle, divided into four equal Parts, by two Lines cutting each other in the Centre: At each Extremity of either Line is fix'd a Sight, perpendicularly over the Lines; with Holes below each Sight, for the better Discovery of distant Objects.

The *Croft* is mounted on a Staff, or Stand, for use. Sometimes, instead of four Sight there are eight.

The *Surveying Croft* is but little known or us'd among us; abroad it is of more account: The manner of applying it is as follows.

Suppose the Field ABCDE, (Tab. *Surveying*, Fig. 24.) to be survey'd: Plant Poles at all the Angles; measure the Line AC, and the Perpendiculars let fall from the Angles to the Line: Take down the Dimensions of each. Now, to find the Point F, plant Poles at pleasure in the Line AC, and the Foot of the Instrument in the same Line, in such manner, as that thro' two of the opposite Sight you may observe two of the Staffs; and thro' the other two, the Staff E. If in this Station E be'n't thus visible, remove the Instrument backwards or forwards, till the Lines AF, EF make a right Angle in F; by which means, the Plot of the Triangle AFE will be had. After the same manner is the Point H found, where the Perpendicular DH falls; whose length, together with that of GF, is measur'd, to have the Plot of the Trapezium EFHD.

Again, measure HC, making a right Angle with HD, and the Plot of the Triangle DHC will be had. All that now remains, is to find the Point G, where the perpendicular BG falls; which being found after the same manner as the rest, we have the Plot of the whole Field A,B,C,D,E. The Area whereof, is had by adding the Triangles and Trapeziums together. See AREA; see also SURVEYING, CHAIN, PLAIN-Table, &c.

Cross Multiplication, the Method of multiplying Feet and Inches, by Feet and Inches, or the like; so call'd, because the Numbers are multiply'd *croff-wise*. See the Method under MULTIPLICATION.

Cross, in Dialling. See DIAL.

CROSS STAFF, a Mathematical Instrument, otherwise call'd the *Forestaff*. See its Description and Use under FORESTAFF.

CROSSELET, little *Croft*, a Diminutive of *Croft*, us'd in Heraldry, where we frequently see the Shield cover'd with *Crosselets*; Fesses, or other honourable Pieces, charg'd or accompany'd with *Crosselets*. *Crosselets* themselves frequently terminate in *Crosselets*, as in the Figure adjoining. See CROSS.

CROSS-GRAIN'D STUFF, in Joinery. Wood is said to be *croft grain'd*, when a Bough or Branch has shot out of it; for, the Grain of the Branch shooting forward, runs arthwart that of the Trunk. In Wood well grown this Defect is scarce perceptible, except in working; but in Deal-Boards these Boughs make Knots. If the Bough grew up with the young Trunk, instead of a Knot is found a *swarting* in the *Stuff*; very sensible under the Plane.

CROTALUM, a kind of *Castagnetta*, or Musical Instrument found on Medals, in the Hands of the Priests of *Cybele*. See CORYMBANTES.

The *Crotalum* differ'd from the *Sistrum*; the Authors frequently confound the two. It consisted of two little brass Plates, or Rods, which were shook in the Hand, and in striking against each other made a Noise.

It was sometimes also made of a Reed split lengthwise; one Part whereof they struck against the other; and as this made a Noise somewhat like that of a Crane's Bill, they call'd that Bird *Crotalifera*, *Player on Crotala*.

An Antient, in *Pausanias*, says, that *Hercules* did not kill the Birds of the Lake *Symphala*, but that he drove them away by playing on *Crotala*. On this footing, the *Crotala* must be exceedingly antient.

Clemens Alexandrinus attributes the Invention to the *Sicilians*; and forbids the Use thereof to the Christians, because of the indecent Motions and Gestures that accompany it.

CROTAPHYTES, a Muscle of the lower Jaw.

Its Fibres spring severally from the Bones of the Forehead, the *Sinciput*, *Sphenoides*, and *Temporale*; which meeting, and as it were centering under the *Os Hygale*, whence also this Muscle receives some Fibres, they proceed to the *Processus Corone*, into which they are inserted, and draw the lower Jaw upwards. See MAXILLA.

CROTCHET, in Musick, one of the Notes, or Characters of Time, mark'd thus ♪ equal to half a Minim, and

double a Quaver. See NOTE, and CHARACTER.

'Tis not easy to conceive how this Character comes by the Name *Crotchet*: The Word is apparently borrow'd from the French *Crochet*, of *Croc*, a Crook or Hook, us'd by them for what we call the *Quaver*, or *half Crotchet*; by reason of the additional Stroke at bottom, which gives it an Appearance of a Crook. See QUAVER.

A Dot added to the *Crotchet*, thus ♪ increases its Time

by half; that is, makes it equal to a *Crotchet* and an half, or to three *Quavers*. See TIME.

CROTCHET, in Printing, a Term us'd for certain Strokes or Lines, sometimes straight, sometimes wav'd, but always turn'd up at each Extreme; serving to bind or link together several Articles, that are to be read together, ere you proceed to the Subdivisions, plac'd aside of 'em with similar or smaller *Crotchets*; much us'd in Genealogies, Analytical Tables, &c. for facilitating the Division and Subdivision of any thing.

Crotchet is also us'd for two opposite Characters, serving to inclose what we call a *Parenthesis*, or any other Part of a Discourse, to be distinguish'd from the rest of the Work; sometimes in this form [] and sometimes in this (). See CHARACTER.

CROW, in the Sea Language, a Machine with an Iron Hook, for the fastning hold, and grappling with the Enemies Vessel, in an Engagement.

The Name *Crow*, *Corvus*, was antiently given to several Machines of War, us'd in the Defence of Places; one invented by *Diades*; another by the *Tyrrians*, mention'd by *Q. Curtius*; another by *Cn. Octavius*.

Vitruvius calls the first the *Demolishing Crow*, *Corvus demolitor*, and also *depressor*; others call it the *Crane*.

Polybius describes another invented by *C. Duillius* us'd against the *Carthaginian* Fleet.

They were all a kind of Grappling-Hooks; serving to drag Things towards the Engineer. That describ'd by *Q. Curtius* was thrown out of a Ballista.

Crows-Bill, an Instrument us'd by Chirurgians, in their Operations; especially for the drawing Bullets and other foreign Bodies out of Wounds.

It has its Name from its Figure.

CROWS-FERT, in the Military Art, are Irons with four Points, of three or four Inches long; so that which way soever they fall, one Point will be uppermost.

CROWS-FERT, in a Ship, are small Ropes, divided by the Hole of a little Block or Pulley, called the *dead Man's Eye*, into six, ten, or more Parts.

CROWN, *Corona*, a Mark of Regal Dignity; or an Ornament worn on the Head by Kings and Sovereigns, as a Symbol of their Authority. See **KING**, &c.

In the remotest Antiquity, the *Crown* was only given to Gods: *Pliny* says, that *Bacchus* was the first who us'd it: *Pberycides*, cited by *Tertullian de Corona*, says *Saturnus*: *Diodorus* ascribes it to *Jupiter*, after his Victory over the *Titans*: *Q. Fabius Pictor* ascribes the Invention to *Janus*; adding, that it was an Ornament he us'd in Sacrificing: *Leo the Egyptian* says, it was *Istis* who first wore a *Crown*; and that it consisted of Ears of Corn, the Use whereof the first taught Men.

In this, most Authors agree, that the *Crown*, originally, was rather a Religious than a Civil Ornament; rather one of the *Pontificalia*, than the *Regalia*: that it only became common to Kings, as the ancient Kings wore Priests as well as Princes; and that the modern Princes are entitled to it, in their Ecclesiastical Capacity rather than their Temporal.

The first *Crowns* were no more than a *Bandelette*, or Headband, drawn round the Head, and tied behind; as we still see it in *Jupiter's* Heads on Medals, as also in the *Ptolemies*, and the Kings of *Syria*.

Afterwards they consisted of two *Bandelettes*; by degrees they took Branches of different Trees; at length they added Flowers; inasmuch that *Tertullian de Corona*, assures us, (from *Claudius Saurianus*, who had wrote expressly on the Subject) there was not any Plant whereof *Crowns* had not been made.

The Woods and Groves were search'd, to find several *Crowns* for the several Deities: Thus, on Medals, we find *Jupiter's Crown* of Flowers, more frequently of Laurel; *Juno's* of the Vine; that of *Bacchus*, Vine with Grapes, Vine-Leaves, and Branches of Ivy, with Flowers and Berries: Those of *Cæsar*, *Pollux*, and the River Gods, of Balafrushes: That of *Apollo*, sometimes of Laurel, sometimes of Rushes; that of *Saturnus*, new Figs; that of *Hercules*, Poplar; that of *Pan*, Pine or Alder; that of *Lucina*, Dicamnus; that of *the Horse*, the Fruits proper to each Season; that of the *Greeks*, Olive-Branches, as well as that of *Minerva*: That of *Venus*, Roses: of *Ceres*, Ears of Corn, as well as that of *Istis*: That of the *Lares*, Myrtle or Rosemary, &c.

Crowns were not only us'd for the Statues and Images of the Gods, for the Priests in Sacrificing, and for Kings and Emperors; but also for Altars, Temples, Doors of Houses, sacred Vessels, Victims, Ships, &c.

The Poets crown'd those who were Victors in the Solemn Games, Warriors, &c. See **OLYMPIC**, &c.

From some Passages in *Eusebius Cæsariensis*, some Authors conclude, that Bishops had antiently their *Crowns*.

The *Roman Emperors* had four Kinds of *Crowns*, still seen on Medals; viz. a *Crown* of Laurel, a Radiating *Crown*, a *Crown* adorn'd with Pearls and Precious Stones; the fourth a kind of Bonnet, or Cap, something like the Mortier.

The first was that ordinarily us'd from the Time of *Julius Cæsar*: The Right of bearing it was granted him by the Senate; some say, on account of his Baldness; and afterwards continued to his Successors. *Justinian* was the first who took that of the Bonnet-kind.

The *Papal Crown*, is compos'd of a *Tiara*, and a triple *Crown* encompassing the *Tiara*; having two Pendants, like the Bishops Mitres: These three *Crowns* represent the pretended triple Capacity of the Pope, viz. as High Priest, Supreme Judge, and sole Legislator of the Christians. See **POPE**.

The *Imperial Crown* is a Bonnet, or *Tiara*, with a Semi-circle of Gold, supporting a Globe with a Cross a-top.

The *English Crown* is adorn'd with four Crosses, in the manner of those of *Malta*; or between which are Flower-de-Lys's. It is cover'd with four Diadems, which meet at a little Globe supporting a Cross.

The *French Crown* is a Circle of eight Flower-de-Lys's, encompass'd with six Diadems; bearing a-top a double Flower-de-Lys, which is the Crest of *France*.

The *Spanish Crown* is adorn'd with large indented Leaves, cover'd with Diadems, bordering on a Globe, surmounted with a Cross. See **CORONET**.

Among the *Romans*, there were various Kinds of *Crowns*, distributed as Rewards of Military Achievements: The *Oval Crown* was the first, made of Myrtle; and was bestow'd on Generals who had been victorious over Slaves, unworthy of the *Romans* Valour, and who were entitled to the Honours of the lesser Triumph, call'd *Ovation*. See **OVATION**.

The second was the *Naval or Ressel Crown*, consisting of a Circle of Gold, rais'd with Prows and Poops of Ships; given to the Captain who first grappled, or the Soldier who first jump'd aboard, an Enemy's Ship. See **ROSTAL**.

The third call'd *Vallaris*, or *Cæstrensis*, was also a Circle of Gold, rais'd with Piles or Palliades; given him who first leap'd into the Enemies Camp, or forced the Palliades. See **CASTRERIS**.

The fourth, call'd *Mural Crown*, was a Circle of Gold, indented or embattel'd; given him who first mounted the Wall of a Place besieg'd, and there lodg'd a Standard: This *Crown* we also find given, on Medals, to the particular *Genii* and Guardians of Provinces and Places. See **MURAL**.

The fifth the *Civic Crown*; made of a Branch of green Oak; given a Citizen who had sav'd the Life of another Citizen in a Battel or Assault. See **CIVIC**.

The sixth was the *Triumphal Crown*, made of Branches of Laurel, given a General who had gain'd a Battel, or conquer'd a Province. This was afterwards given of Gold. See **TRIPHUM**.

The seventh the *Corona Obsidionalis*, or *Graminea*, made of Grass or Herbs, found on the Ground; given to Generals who had deliver'd a *Roman Army* besieg'd by the Enemy, and oblig'd him to decamp. See **OBSIDIONAL**.

The eighth was also a *Crown* of Laurel, given by the *Greeks* to their *Athletes*; and by the *Romans*, to those who had negotiated, or confirm'd a Peace with an Enemy: This was the least esteem'd.

Besides these, in Antiquity, we meet with *Radial Crowns*, given to Princes at their Translation among the Gods; whether before or after their Death.

Cæsarion says, this *Crown* was peculiar to Deities; yet, 'tis certain *Nero* took it in his Life-time.

Athletic Crowns, were destin'd to crown Victors at the Publick Games.

There are also *Sacerdotal Crowns* for the Priests.

In an Ecclesiastical Sense, *Crown* is also us'd for the Clerical Tonsure; which is the Mark, or Character of the *Royal Ecclesiasticks*. See **TONSURE**.

This is a little Circle of Hair, shav'd off from the *Crown* of the Head; more or less broad, according to the Quality of the Orders receiv'd. See **ORDEX**.

That of a mere Clerk is the smallest; that of Priests and Monks the largest.

The *Clerical Crown*, was antiently a round List of Hair, shav'd off around the Head, representing a real *Crown*: This is easily observ'd in several antient Statues, &c. The Religious of *S. Dominic* and *S. Francis* still use it.

Father *Daniel* says, that *S. Louis* ransom'd the *Crown of Thorns* of our Saviour, which had been pawn'd by *Baldwin* Emperor of *Constantinople*, for an immense Sum of Money; and transported it, with great Ceremony, to *France*: where 'tis still kept in the Holy Chapel. The Author of the History of *S. Louis*, adds, that the *Thorns* were still green in his Days. Some Writers, from *Clementis Alexandrinus*, hold that it was made of Bramble, *ex Rubo*; others of Black-Thorn, *ex Rhosno*; others of White-Thorn. Those who see it in the Chapel, take it to be the *Juncus Marinus*.

Galius derives the Word *Corona*, whence *Crown*, from the Latin *Cornu*, Horn; because the antient *Crowns* were pointed in manner of Horns; which were antiently, both by *Jews* and *Gentiles*, esteem'd as Marks of Power, Strength, Authority, and Empire.

Hence, in the Holy Scripture, Horns are us'd for the Regal Dignity; and accordingly, *Horn* and *Crown*, in the *Hebrew*, are express'd by the same Word.

Ch. Paschal has writt expressly de *Coronis*: *Baudelaet* has made a good Number of curious Observations on the same Subject, that had escap'd *Paschal*. *Du Cange* gives us a curious Dissertation of *Crowns*; and *Schweicell*, a *German*, a Treatise of *Royal Crowns*, both antient and modern.

Crown, in Commerce, is a general Name for Coins, both Foreign or Domestic, of, or near, the Value of five Shillings Sterling. See **MONNY**, and **COIN**.

In its limited Sense, *Crown* is only applicable to that popular *English* Coin which bears that Name, and which is equivalent to 60 *English* Pence, or five Shillings; or to 13 *Livres* 15 *Sols* *French* Money: But, in its extensive Sense, it takes in several others; as the *French Ecu*, which we call the *French Crown*, struck in 1641 for 60 *Sols*, but now risen to 5 *Livres*; the *Patagon*, *Dollar*, *Ducatton*, *Rix-dollar*, and *Piastre* or Piece of Eight. See **ECU**, **DELLAR**, **DUCATTON**, **RIXDOLLAR**, **PIASTRE**, &c.

Crown, in Architecture, the uppermost Member of the Cornice; call'd also *Corona* and *Larmier*. See **CORONA**, and **LARMIER**.

Crown, in Astronomy, one of the Northern Constellations. See **CORONA**.

Crown, or **CORONET**, in Heraldry, is us'd for the Representation of that Ornament, in the Mantling of an Armory; to express the Dignity of the Person who bears it.

The *Crown* here is of more Antiquity even than the *Helmet*; and was us'd as a Symbol of Victory and Triumph. *Radiated*, or *Pointed Crowns*, are those of the antient Emperors, which had 12 Points; representing, as some will have it, the twelve Months of the Year.

Pearl's, or Flower'd Crowns, those with Pearls, or Leaves of Smalage, Parley, &c. such as were antiently almost all *Crowns*, even those of Sovereign Princes: Tho' they were not us'd in their Armories, till about 200 Years ago.

CROWN, in Geometry, a Plane included between two parallel or concentric Perimeters, of unequal Circles; generated by the Motion of some Part of a Right Line round a Centre, the moving Part not being contiguous to the Centre.

The Area of this is had, by multiplying its Breadth by the middle Perimeter; for a Series of Terms in Arithmetick Progression being $n \times \frac{a + o}{2}$; that is, the Sum of the first and last multiply'd by half the Number of Terms, the middle Element must be $\frac{a + o}{2}$; wherefore, that multiply'd by the Breadth or Sum of all, the two Terms will give the *Crown*.

CROWN-OFFICE, a Court or Office so called, because the *Crown* is more immediately concern'd in what is therein transacted. See *CROWN*.

Tho' none of the Officers under the Lord Chief Justice are employ'd in summoning a Parliament; yet, many of them have Business in other Matters, during the sitting of the Parliament: As, in Cases of Error, &c. but more especially on Trials of Peers; wherein the Clerk of the *Crown* is chief Manager.

He hath likewise, out of Parliament, all indictments in the *Crown*, Informations, Recognizances; and a multitude of other Business runs thro' his Hands, as the writing of all Resolutions, Declarations, and other Proceedings upon Records; but the executive Part is left to his Secondary or Deputy.

CROWN-GLASS, the finest sort of Window-Glass. See *GLASS*.

CROWN-POST, in Architecture, a Post which in some Buildings stands upright in the middle, between two principal Rafters. See *POST*.

CROWN-WHEEL of a Watch, is the upper Part next the Balance, that drives it by its Motion. See *WATCH*.

CROWN-WORK, or *CROWNING*, in Fortification, Outworks raising in the *Campagne*, to keep off the Enemy, to gain time till Hill, or advantageous Post, and to cover the other Works of the Place. See *OUTWORK*.

It consists of two Demi-Bastions at the Extremes, and an entire Bastion in the middle, with Counters.

CROWNED HORN-WORK, is a Horn-work with a *Crown-work* before it. See *HORN-WORK*.

CROWNING, is understood, in the general, of any thing that terminates, or finishes a Decoration of Architecture: Thus, a Cornice, a Pediment, Acroteria, &c. are call'd *Crownings*. See *ACROTERIA*, &c.

Thus, also, the Abacus is said to *crowne* the Capital; and thus any Member or Moulding is said to be *crowne'd*, when it has a Fillet over; and a Niche is *crowne'd*, when it is cover'd with a Capital. See *MOULDING*, *NICHE*, &c.

CROUPADE, or *Gravade*, in the Manage, a Leap, higher than the Corvet, wherein the fore and hind Part of a Horse keep an equal height; his Legs being rais'd under his Belly, without stretching 'em out, or shewing his Shins.

CROUPER, or *CRUPPER*, the hind Part of a Horse; comprehended between the Place of the Saddle, and the Tail.

The Word is form'd from the German *Grob*, thick; fat: *Du Cange* derives it from the Italian *Grossa*, Buttock.

CRUCIAL Incision, in Chirurgery, an Incision, or Cut into some fleshy Parts, in form of a Cross.

CRUCIBLE, a little Vessel, ordinarily of Earth, sometimes Iron, without any Handle; us'd by Chymists, Coiners, Goldsmiths, Glasiers, and other Artificers; to melt and calcine Gold, Silver, or other Metals whereon they work. See *FUSION*, *CALCINATION*, &c.

Earthen *Crucibles* are made of glas'd Earth, with Stone Poulders pounded and sifted: They are of various Sizes, but generally of the same Form, which resembles that of an inverted Cone, or Pyramid.

These are chiefly us'd in Coinage, as being the only ones in which Gold will melt without irritating. Iron *Crucibles* are in form of little Pails without Handles, made of Iron well forg'd and beaten: In these they melt Silver, Copper, &c.

There are Earthen *Crucibles* that hold from 100 to 3 or 400 Marks; but those ordinarily us'd are but of 100. The Iron ones are larger; some holding 12 or 1500 Marks: These are not taken off the Furnaces when the Plates are to be run, but the Metal is laden out with an Iron Ladle. 'Tis a Rule never to put as much Metal in the *Crucible* as it will hold. See *COINAGE*.

The *Crucibles* us'd by Goldsmiths and Founders are like those us'd in the Coinage: Those of Chymists, &c. are of all Sizes, according to the Quantity and Quality of the Metal to be put in 'em.

The Word comes from the Hebrew *Keres*, *testa*, *siftile*. *Du Cange* derives it from *Crypsitina*; which, in the lower Latin signifies a little drinking Vessel.

CRUCIFIX, a Cross, whereon the Body of Jesus Christ is fasten'd in Effigy; much us'd by the *Romanists* in their Churches, and other Places, to recognize the Passion of Jesus Christ, and to serve them to direct their Prayers to. See *CROSS*.

There are some Chapters wherein Jesus Christ is the first Canon, and the Fruits of the Prebend go to the Subsistence of the *Crucifix*.

CRUCIFIXION, an ancient Form of Execution; by fastening the Criminal to an erected Cross. See *CROSS*.

CRUDE, something that has not pass'd the Fire, or has not had the degree of *Colloz*, i. e. of Heat, requisite to prepare it for eating, or some other Purpose. See *COCTION*.

Crude or Raw Silk, is that which has not been put in boiling Water, to unwind it from off the Cod; nor boil'd in Water and Soap, to fit it for dyeing. See *SILK*.

In Chymistry, they call *Crude Antimony* that which comes immediately from the Mines, without any Preparation. See *ANTIMONY*.

In Medicine, *Crude Humours* are those which want of that Preparation and Elaboration which they ordinarily receive from Digestion. See *CRUDITY*.

The Retainers to the Doctrine of Trituration, hold that the *Crudity* of the Humours only consists in this; that they are not broke and comminuted so much as they should be by the ordinary Action of the Stomach. See *TRITURATION*.

CRUDITY, in Medicine, the State of a Disease, wherein the morbidick Matter is of such Bulk, Figure, Cohesion, Mobility, or Inactivity, as denominates it *crude*, i. e. as creates or increases the Disease. See *DISEASE*.

A *Crudity* is discover'd, 1st, from the Disease's continuing its degree of Strength, or increasing. 2^d, From a continual Increase of Symptoms. 3^d, From a disorderly Exercise of the Functions. 4th, But chiefly from a Fault in the Quantity or Quality of the Humours; both those still circulating, and those secreted, and evacuated: as of Sweat, Tears, Mucus of the Nose, Saliva, Sputum, the Bile, Urine, Ichor, Pus, Blood, Menstr, Loches, Milk, Aphæ, &c.

That State of the Disease, wherein the *crude* Matter is changed, and render'd less peccant, and laudable, is call'd Digestion, Coction, or Maturation. See *DIGESTION*, *COCTION*, &c.

CRUISE, from the German *Kreis*, a-cross, signified to cross to and fro, to sail up an down for guard of the Seas, &c.

CRUOR, a Term us'd by Anatomists for the red Globules of the Blood; in contradistinction to the limpid or serous Part. See *BLOOD*.

Some Authors, Dr. Keil and Dr. Woodward for instance, suppose these Globules replete with an elastic Aura, or Air; and on this Principle account for some of the Phenomena of the Animal Oeconomy; particularly Muscular Motion, &c. But Dr. *Jarvis* has overturn'd that Supposition. See *MUSCULAR Motion*.

Vauvehus uses the Word *Cruor* for the Blood in the Veins; in contradistinction to the Blood in the Arteries, which he calls *sanguis*. See *VEIN*, and *ARTERY*.

CRURA Clitoridis, in Anatomy. Between the *Corpora Nervosa* of the *Clitoris*, runs a *Septum*, or membranous Partition, from the Glans to its Divarication at the *Os Pubis*; dividing the *Clitoris* into two Parts, call'd the *Crura* of the *Clitoris*.

These are three times as long as the ordinary Trunk of the *Clitoris* it self. See *CLITORIS*.

CRURA of the *Medulla Oblongata*, are two of the four Roots whence the *Medulla Oblongata* springs, in the Brain.

The *Crura* are the larger Roots; the two smaller are call'd *Peduncululi*. See *MEDULLA Oblongata*.

CRURAL, in Anatomy, an Epithet given to the large Artery and Vein of the Thigh. See *THIGH*.

The *Crural Artery* arises from the Iliac Artery; or rather, 'tis the Iliac it self, under another Name; being call'd *Crural*, from the Place of its Entrance into the Thigh. See *ILIAC*.

It conveys Blood thro' all the Part, by means of a great Number of Branches disseminated thro' its Substance.

The *Crural Vein* is form'd of six other Veins, viz. the great and little *Saphenæ*, the *Medulla*, the *Poplitea*, the *Sural*, and the *Saphena*. See *SCIATICA*, &c.

CRUREUS, in Anatomy, a Muscle arising from the fore Part of the Thigh-Bone, between the lesser and greater Trochanter, and lying close upon the Bone, joins its Tendon with three others, which altogether make one broad Tendon, that passes over the *Patella*, and is inserted into the little Tuberosity on the upper and fore Part of the *Tibia*.

'Tis call'd *Crureus*, as being fasten'd in the Thigh-Bone in the same manner as the *Brachæus* to the Arm. Its use is to extend the Leg.

CRUS, among Anatomists, is all that Part of the Body which reacheth from the Buttocks to the Toes; and is divided into *Thigh, Leg, and Foot*. See each in its Place, *Thigh, &c.*

CRUSCA, an Italian Term, signifying *Brus*, or what remains of Meal after the Flower has been sifted out.

It is only in use among us for that celebrated Academy call'd *Della Crusca*, establish'd at Florence, for the Purity and Perfection of the *Tuscan Language*. See ACADEMY.

The Academy took its Name from its Office, and the End propos'd by it; which is, to purify the Language, and as it were to separate it from the Brain. Accordingly, its Device is a Sieve, and its Motto, *Il più bel fior ne coglie*; that is, *It gathers the finest Flower thereof*.

In the Hall or Apartment where the Academy meets, *M. Mononis* informs us, every thing bears an Allusion to the Name and Device: the Seats are in form of a Baker's Basket; their Backs like a Shovel for moving of Corn: the Cushions of gray Satin in form of Sacks, or Wallets; and the Branches where the Lights are dispos'd, likewise resemble Sacks.

The Dictionary *Della Crusca* is an excellent Italian Dictionary, compos'd by this Academy.

CRUSTA *Villosa*, in Anatomy, the fourth Tunic, or Coat, of the Stomach. See STOMACH.

On the inner Surface of this Coat, are seen innumerable *Villi* or *Fibrille*, rising every where perpendicularly from it; which some will have to serve for nothing but a Defensive to the Stomach, to preserve it from acrimonious Humours; but *Dr. Drake* rather takes 'em to be excretory Ducts to the subjacent Glands; which some Authors would have to be that now exploded thing *Pareuchyma*; but which are, indeed, the Organs by which most of that Humour which is discharg'd upon the Stomach, is separated; and these *Villi* the immediate Channels thro' which it is convey'd. See STOMACH.

CRUSTACEOUS *Fishes*, in Natural History, are those cover'd with Shells, consisting of several Pieces, or Scales; as those of Crabs, Lobsters, &c. See FISHES.

These are usually softer than those of the Testaceous kind, which consist of a single piece, usually much thicker and stronger than the former; such as those of the Oyster, Scallop, Cockle, &c. See SHELL.

Dr. Woodward observes, in his Natural History, that of all the Shells and Nautili found in Beds of all the different Matters dug out of the Earth, there are scarce any of the *Crustaceous* Kind: The Reason he gives for it, is, that these being much lighter than the rest, must have floated on the Surface at the time of the Deluge, when all the Strata were form'd; and there have corrupted and perish'd. See DELUGE.

CRUZADO, in Commerce, is a *Portuguese* Coin, struck under *Alphonso V.* about the Year 1457, at the Time when *Pope Calixtus* sent thither the Bull of a *Croizade*, against the Infidels. See COIN.

It had its Name from a Cross, which it bears on one side; the Arms of *Portugal* being on the other. A *Cruzado* is of the Value of 40 *Sols*. See SOL.

CRUZADO, or CROIZADE, an Expedition to the Holy Land. See CROIZADE.

CRYPTA, a subterraneous Place, or a Vault; especially under a Church, for the Interment of particular Families, or Persons. See TOMB.

S. Giampini, describing the Outside of the *Vatican*, speaks of the *Crypta* of *St. Andrew, St. Paul, &c.* See CATA-COMBS.

Vitrucius uses the Word for a Part of a Building, answering nearly to our Cellar; *Juvonal*, for a Cloaca.

Hence, *Crypto-Portico*, a subterraneous Place, arch'd, or vaulted; us'd as an Underwork, or Passage in old Walls. The same is also us'd for the Decoration at the Entry of a Grotto. See GROTTO.

CRYPTA, is also used by some of our antient Writers, for a Chapel, or Oratory under ground: *Egrasso into convosita, accerta abscondit si non est vadit per cryptam. Du Cange.*

The Word is form'd of the Greek *κρυπτα*, *abscondo*, I hide; whence *κρυπτα*, *Crypte*.

CRYPTOGRAPHY, the Art of Secret Writing, or writing in Cipher. See CIPHER, and DECRYPTING.

The Word is compounded of *κρυπτα*, I hide, and *γραφω*, I describe.

CRYSTAL, in Natural History, a Kind of Mineral; or rather, a transparent Stone, white, like a Diamond, but much inferior thereto in Lustre and Hardness; used for Vases, Urns, Mirrors, &c.

The Antients were but little acquainted with the Nature of *Crystal*: *Pliny* speaks of it as harden'd, petrified Water, which was the popular Opinion of those Days; but Experience has shewn us the contrary: for by a Chymical Analysis, instead of resolving into Water, it yields nothing but a Calx, Earth, and Salts.

For the Places where 'tis found, *Pliny* adds, that he has seen it dug from off the highest and roughest Rocks of the

Alps; whence, doubtless, its Name of *Rock-Crystal*. 'Tis sometimes also found in Brooks and Rivers, but not form'd there; only wash'd down thither from off the Mountains by the violent Rains.

Several Mountains of *Europe*, and some of *Asia*, produce *Rock-Crystal*: If we may believe the *French Relation of Madagascar*, that Island yields more than all the World besides.

Its Perfection consists in its Lustre and Transparency; that with Straws, Dull, Clouds, &c. is little valued. It is frequently found Hexagonal; the Edges inimitably fine and accurate.

'Tis cut or engrav'd in the same manner, with the same Instruments, and by the same Workmen as Diamonds. See DIAMOND, and ENGRAVING.

Crystal is of some use in Medicine, being an Astringent; and as such used in Diarrhæas and Dysenteries: 'Tis also used to increase the Milk of Nurses; and, farther, is esteem'd a good Antidote against Arsenic.

The Word comes from the Greek *κρυσταλλος*, *Glacies*; form'd of *κρυω*, *frigius*, and *ελασματος*, *concretesco*, because of its resembling Ice.

The Formation of *CRYSTAL*, is deliver'd by *F. Franciscus Lana* in the *Philosophical Transactions*, to this Effect:

'In the *Vol Sabbia* I observ'd a spacious round of a Mountain, some Parts whereof were bare of all Herbs; whereas, and no where else thereabout, *Crystals* are generated: all Sexangular; both Points terminating in a pyramidal Figure, likewise Sexangular. The Country-people told me, They were produc'd from the Dew; because, first, being gather'd over night, there would others arise, only in a serene and dewy Sky. But having observ'd that there was no mark of any Mine thereabout, I concluded it might be a plenty of Nitrous Steams; which at the same time might hinder the Vegetation of those Places, and coagulate the Dew falling thereon: For Nitre is not only the natural Coagulum of Water, as is manifest in artificial Glaciations, but ever retains the above-said Sexangular Figure; which, by the way, may be the Cause of the Sexangular Figure of Snow.

Since *Crystals* are only found in those narrow Places, 'tis probable, thence are rais'd the Exhalations that concrete the Dew; after the same manner as the Vapor or Exhalation of Lead coagulates Quicksilver.

Robault shews, that *Crystal, Diamond, &c.* must have been originally liquid, from their Figure, which is such as Drops of Water of the same Size must necessarily have; and such as Globules of Meal or Flower, heap'd up and compress'd by their own weight, might have: For as each *Crystal* is encompass'd and clos'd round with six others; so it becomes modell'd into a hexangular Body, consisting of equal and square Sides.

Boerhaave takes *Crystal* to be the proper Matter, or Basis of all Gems or Precious Stones, which assume this or that Colour, &c. from the different Admixture of Mineral and Metalline Fumes, with the primitive *Crystalline Matter*. See STONE, GEM, &c.

CRYSTAL is also used for a scissitious Body, cast in the Glass-Houses; called also *Crystal-Glass*. See GLASS.

It is, in effect, a Glass; but carried, in the Melting, and in the Matter whereof it is compos'd, to a degree of Perfection far beyond the common Glass; tho' it comes far short of the Whiteness and Vivacity of the Natural *Crystal*.

The best Artificial *Crystals* are those made at *Mouras* near *Venice*; call'd *Venice Crystals*.

CRYSTALS, in Chymistry, express Salts, or other Matters, shot, or congel'd in manner of *Crystal*. See CRYSTALLIZATION. Thus,

CRYSTAL of Allum, is Allum purified, and reduced into *Crystal*, in the same manner as Tartar. In like manner are Vitriol, Nitre, and other Salts *crystalliz'd*.

Crystals of Allum are quadrangular, and brilliant like Diamonds; those of Nitre, white, and oblong; those of Vitriol, green, quadrangular, and shining. See SALT.

CRYSTAL, or Cream of Tartar, is that Drug purify'd and dissolv'd, and again coagulated in form of *Crystal*. See TARTAR.

To prepare it, they boil Tartar in Water, skim it, and strain it; when cool, there are form'd little white, shining *Crystals* at the Edges, as also a Pellicle, or Cream swimming a-top.

The Cream and *Crystals* were antiently suppos'd to be different; but are now found the same Thing. See CREAM.

Crystal of Tartar is esteem'd Purgative, and Aperitive; proper in Hypotropical and Asthmatical Cases, and Intermitting Fevers.

CRYSTAL of Tartar chalybeated, is when 'tis impregnated with the most dissoluble Parts of Iron. See CHALYBEAT.

CRYSTAL of Tartar emetic, is when 'tis charg'd with the sulphureous Parts of Antimony, to render it vomitive. See EMETIC.

CRYSTAL Mineral, call'd also *Mineral Antidote*, and *Salt Prunella*, is Salt-petre prepar'd with Sulphur; thus: Put half a Pound of Salt-petre in a Crucible, and let that in a Furnace; and when the Salt-petre is in Fusion, add, at several times, two Drachms of Flower of Sulphur. After the Flame is over, invert the Crucible in a flat Pewter Basin, that the Salt may floor.

This is esteem'd good against the Squinancy, whence its Name of *Salt Prunella*; *Prunus*, or *Prunella*, expressing that Disease. See *PRUNELLA*.

CRYSTALS of Silver, or of *Luna*, is Silver, penetrated and reduced into the form of Salts, by the pointed Acids of Spirit of Nitre. See *SILVER*.

'Tis us'd for making Elixirs, by applying it to any Part: 'tis also us'd internally, in Dropics, and Diseases of the Brain.

CRYSTALS of Mars, call'd also *Salt*, or *Vitriol of Mars*; is Iron reduced into Salts by an acid Liqueur; us'd in Diseases arising from Obstructions. See *MARS*.

CRYSTALS of Venus, call'd also *Vitriol of Venus*; is Copper reduced into the form of Vitriol by the Spirit of Nitre; very caustick, and us'd to cut off proud Flesh. See *VITRIOL*.

Island CRYSTAL, is a transparent flinty Stone, brought from *Iceland*; soft, as *Talc*; clear, as *Rock-Crystal*, and without Colour; famous among optic Writers for its unusual Refractions. See *REFRACTION*.

It bears a red heat without losing its Transparency; and, in a very intense heat, calcines without Fusion; Scorp'd a day or two in Water, it loses its natural polish; rub'd on Cloth it attracts Straws, &c. like Amber. In effect, it appears a kind of *Talc*; and is found in form of oblique *Pentagons* with six parallelogram Sides, and eight solid Angles. See *TALC*.

The Phenomena of this Stone are very remarkable, and have been examin'd with great accuracy by *M. Hugenot* and *Sir I. Newton*: For, first, whereas in other pellucid Bodies there is only one Refraction, in this there are two; so that Objects view'd thro' it appear double.

Secondly, Whereas in other transparent Bodies, a Ray falling perpendicularly on the Surface, passes straight thro', without suffering any Refraction; and an oblique Ray is always divided: In *Island Crystal*, every Ray, whether perpendicular or oblique, becomes divided into two, by means of the double Refraction. One of these Refractions is, according to the ordinary Rule, the Sine of Incidence out of Air into *Crystal*, being to the Sine of Refraction as five to three; but the other is perfectly new. The like double Refraction is also observ'd in *Crystal of the Rock*, tho' much less sensibly.

When an incident Ray is thus divided, and each Moiety strikes at the further Surface; that, refracted in the first Surface after the usual manner, is refracted entirely after the usual manner at the second; and that refracted in the usual manner in the first, is entirely refracted after the like manner in the second: So that each emerges out of the second Surface, parallel to the first incident Ray.

Again, if two pieces of this *Crystal* be plac'd over each other, so as the Surfaces of the one be parallel to the corresponding ones of the other; the Rays refracted in the usual manner in the first Surface of the first, are refracted after the usual manner in all the other Surfaces: And the same Uniformity appears in the Rays refracted after the unusual manner; and this in any Inclination of the Surfaces; provided their Planes of perpendicular Refraction be parallel.

From these Phenomena, *Sir I. Newton* gathers, That there is an original Difference in the Rays of Light; by means whereof some are, here, constantly refracted after the usual manner; and others in the unusual manner. See *RAY*, and *LIGHT*.

Were not the difference original, and did it arise from any new Modifications impress'd on the Rays at their first Refraction, it would be alter'd by new Modifications in the three following ones; whereas, in fact, it suffers no Alteration at all.

Again, he hence takes occasion to suspect, that the Rays of Light have several Sides, endu'd with several original Properties: For, it appears from the Circumstances, that there are not two sorts of Rays differing in their Nature from each other, one constantly, and in all Positions, refracted in the usual, and the other in the unusual manner; the difference in the Experiment mention'd, being only in the Positions of the Sides of the Rays, to the Planes of perpendicular Refraction. For one and the same Ray is refracted sometimes after the usual, and sometimes after the unusual manner, according to the Position of its Sides to the *Crystal*: the Refractions being alike in both, when the Sides of the Rays are posited the same way to both, but different when different.

Every Ray, therefore, may be consider'd as having four Sides, or Quarters; two of which, opposite to each other, dispose the Ray to be refracted after the unusual manner; and the other two in the usual. These Dispositions, being in

the Rays before their Incidence on the second, third, and fourth Surfaces; and suffering no Alterations, for what appears, in their passage thro' 'em; must be original and constant: See *RAY*, and *LIGHT*; see also *REFRACTION*.

CRYSTALLI, among Physicians, are Pultices dispers'd all over the Body; white, and of the bigness of a Lupine.

CRYSTALLINE Humour, is a thick, compact Humour of the Eye, in manner of a starchy convex Lens, fixate in the middle of the Eye; serving to make that Refraction of the Rays of Light, necessary to have 'em meet in the *Retina*, and form an Image thereon, whereby Vision may be perform'd. See *EYE*, *HUMOUR*, *REFRACTION*, *VISION*, *RETINA*, &c.

'Tis the Configuration of the *Crystalline* that occasions Persons to be either *Myopes*, or *Presbytes*, i. e. to be either long or short sighted. See *MYOPE*, and *PRESBYTE*.

The *Crystalline* being of two Consistencies; outwardly, like a Gelly; but toward the Centre as hard as Salt; Hence, some Authors think that its Figure may be varied; which Variation they suppose to be effected by the *Ligamentum Ciliare*. Hence *Dr. Green*, and others, ascribe to the Ciliary Ligament a Power of making the *Crystalline* more convex, as well as of moving it to or from the *Retina*: Accordingly, by the Laws of Opticks, something of this Kind is absolutely necessary to distinct Vision: For, as the Rays from distant Objects diverge less than those from nigh ones; either the *Crystalline Humour* must be capable of being made more convex, or more flat; or else there must be an Elongation of the Eye, or of the Distance between that and the *Retina*. See *Ligamentum CILIARE*, and *SIGHT*.

The *Crystalline Humour*, when dried, appears to consist of a vast Number of thin, spherical *Laminae*, or Scales, lying over one another: *Leewenboeck* reckons there may be 2000 of 'em in one *Crystalline*; each of these, he says, he has discover'd to consist of a single Fibre, or fine Thread wound up in a stupendous manner, this way and that; so as to run several Courses, and meet in as many Centres; and yet not interfere nor cross in any Place. *Philos. Transact.* N^o 165, and 193.

CRYSTALLINE Heavens, in the old Astronomy, two Orbs imagin'd between the *Primum Mobile* and the Firmament, in the *Ptolemaic* System, where the Heavens were supposed solid, and only susceptible of a single Motion. See *HEAVEN*.

King Alfonso of *Arragon* is said to have introduc'd the *Crystalline*, to explain what they call'd the *Motion of Trepidation*, or *Turbation*. See *Ptolemaic* SYSTEM.

The first *Crystalline*, according to *Regiomontanus*, &c. serves to account for the slow Motion of the fix'd Stars; which makes 'em advance a Degree in 70 Years, according to the Order of the Signs, &c. to the East; which occasions the Precession of the Equinox. See *PRECESSION*.

The second serves to account for the Motion of Libration, or Trepidation; whereby the Celestial Sphere is carried from one Pole towards another, occasioning a difference in the Sun's greatest Declination. See *TREPIDATION*.

But the Moderns account for these Motions, in a much more natural and easy manner. See *LIBRATION*, &c.

CRYSTALLIZATION, in Chymistry, a Kind of Congelation, befalling Salts, both essential, fix'd, and volatile; when, being left free from the greatest Part of their Humidity, they are left to harden, dry, and shoot into *Crystals*. See *SALT*.

The ordinary Method of *Crystallization*, is perform'd by dissolving the saline Body in Water, filtering it, and letting it evaporate, till a Film appears at the top; and lastly, letting it stand to shoot. See *DISSOLUTION*, and *EVAPORATION*.

This Shooting is accounted for, on *Sir I. Newton's* Principles, from that attractive Force which is in all Bodies, and particularly in Salt, by reason of its Solidity; whereby, when the Menstruum or Fluid in which such Particles float, is fast enough, or evaporated, (which brings it to the same) so that the saline Particles are within each other's attractive Powers, and can draw one another more than they are drawn by the Fluid, they will run into *Crystals*. See *ATTRACTION*.

This is peculiar to Salts, that let them be ever so much divided, and reduc'd into minute Particles; yet, when they are form'd into *Crystals*, they each of them reassume their proper Shapes: so that one might as easily dissolve and deprive 'em of their Saltness, as their Figure.

This being an immutable and perpetual Law, by knowing the Figure of the *Crystals*, we may understand what the Texture of the Particles ought to be, which can form those *Crystals*: and, on the other hand, by knowing the Texture of the Particles, may be determin'd the Figures of the *Crystals*.

For, since the Figures of the most simple Parts remain always the same, it is evident that the Figures they run into, when compounded and united, must be uniform, and constant: and since the Force of Attraction may be stronger on one side of a Particle than on another; there will constantly be a greater Accretion of Salts upon those Sides which attract more strongly: From which it may easily be

CUBITUS Internus, the first of the *Flexores*, placed along the *Cubitus*, within the Arm. It rises from the internal Extuberance of the *Humerus*, and part of the *Ulna*; upon which it runs all along till passes under the *Ligamentum Annulare*, and is inserted by a strong and short Tendon into the fourth of the first Order of the *Carpus*.

CUBITUS, in Anatomy, a Bone of the Arm, reaching from the Elbow to the Wrist; otherwise called *Ulna*, or the greater *Focula*. See *ULNA*.

Some use the Word for all that Part of the Arm between the Elbow and the Wrist; including the *Ulna*, or *Cubitus*, properly so call'd, and the *Radius*. See *ARM*, and *RADIUS*; see also *FOCUL*.

CUBO-CUBO-CUBUS. See *CUBUS-CUBI*.
CUBO-CUBUS, the Term whereby *Diophantus*, *Vieta*, &c. distinguish the sixth Power; which the *Arabs* call *Quadratum-cubi*. See *POWER*.

CUBOIDES, or *Os CUBIFORME*, in Anatomy, the seventh Bone of the Foot; so called, from its being in form of a *Cube*, or *Die*. See *FOOT*.

Some also call it *Multiforme*: It is situate in the fore-part of the *Calcaneum*, in the same Rank with the *Os Cuneiforme*.

Behind, it is articulated to the *Os Calcis*; before, to the two outer Bones of the *Metatarsus*; and within, it is join'd to the third *Os Cuneiforme*. See *BONE*.

CUBUS-CUBI, a Name whereby the *Arab* Writers, and those who follow 'em, denominate the ninth Power, or a Number multiplied eight times by it self; which *Diophantus*, and after him *Vieta*, *Oughtred*, &c. call *Cubo-cubo-cubus*. See *POWER*.

CUCKING STOOL, or *COKESTOOL*, antiently call'd *Tumbrel*, and *Freubucker*; an Engine for the Punishment of scolds and unquiet Women, by ducking them in the Water.

Kitchin says, 'Every one having View of Frank-Pledge, ought to have a Pillory and a Tumbrel.' This Machine was much in use, even among our *Saxon* Ancestors, who call'd it *Scolding-stole*.

This Punishment was antiently inflicted on Brewers and Bakers, transgressing the Law; who were thereupon, in such a Stool or Chair, to be ducked in *Stewage*, some muddy or stinking Pond. This was antiently written *Gogging-stole*: In *Domesday* it is call'd *Gatbedra Stercoris*.

CUCULLARIS, in Anatomy, a Muscle, so called from the resemblance it is suppos'd to bear to a Monk's Cowl; and *Trapezius*, from its resemblance to a geometrical Figure, call'd a *Trapezium*. See *TRAPEZIUS*.

The Fibres of this Muscle have various Originations and Actions: whence *Dr. Zanke* thinks it may be more properly call'd three, than one Muscle.

The upper Order of Fibres or Muscles, springs from the *Os Occipitis*; the second from the Spine of the *Vertebrae* of the Neck; and the third from the Spines of the eight upper *Vertebrae* of the *Thorax*, or *Back*; and are inserted into the Spine, *Acromium*, and Basis of the *Scapula*, and part of the *Clavicula*.

From the different Dispositions of these Fibres, the *Scapula* is drawn different ways; the first pulling obliquely upwards, the last obliquely downwards, and the middle backwards: When they act all three together, they are said to draw backwards only; i. e. the two Extremes antagonizing, the middle one alone is at liberty to act.

CUCULLATE Flowers, among Botanists, are such as resemble a *Cucullus*, or Monk's Hood, or Helmet. See *FLOWER*.

CUCULLUS, was antiently a kind of Traveller's Cap; call'd also *Cowl*, *Gaul*, or *Gale*: whence the Name pass'd to the Monks, among whom it signify'd their Frock, and Cap. See *COWL*.

The Word arose hence, that antiently they wore their Cloths turn'd up at the Neck and Sleeves, with a kind of Skirt call'd *Gules*, or *Gules*, *Caulies*, and *Cusculies*; from *Cucullinus*, Grain of *Searlet*.

CUCUPHA, an antient Form of Medicine; being a Cap, or Cover for the Head, with *Cephalic* Spices quilted therein; were in many nervous Distempers, and particularly such as more immediately affect the Head: as against *Catarths*, *Deffusions*, &c. It is now almost out of use.

CUCURBITACEOUS Plants, a Kind of Plants, so called from their resemblance to the Gourd, call'd by the Latins *Cucurbita*, which is the Head of this Family. See *PLANT*.

Plants of the *Cucurbitaceous* Kind, send out their Branches every way; which are soft, and generally set with *Urtice*, by means whereof they cling to the Bodies that are near 'em.

Their Flowers are either Sterile, or Fertile: The last knit, and yield fleshy Fruits of various Figures; containing within 'em several flat Seed placed in three or four Lodges, or even a greater Number.

These Seeds have usually a white sweetish Kernel; the greatest part of 'em being of those call'd *Frigide Mares*, or greater Cold Seeds.

The *Pumpion*, *Mushroom*, *Melon*, &c. are of the *Cucurbitaceous* Kind.

CUCURBIT, in Chymistry, an Earthen, or Glass Vessel, call'd also *Body*; wherein are put the Matters to be distill'd. See *DISTILLATION*.

It is sometimes also made of Tin, and sometimes of Brass, tinn'd. When a Distillation is to be made, they fit on to it a glass Head, with an Aperture, and a Neck proportional. See *RETORT*.

CUCURBITULA, in Chirurgery, a Capping-Glass, or Instrument used in the Operation of Cupping. See *CUPPING-Glass*.

CUDDY, in a First Rate Man of War, is a Place lying between the Captain's and the Lieutenant's Cabins, and the Poop; and divided into Partitions, for the Master and Secretary's Officers.

CUE, an Item, or *Innaendo*, given to the Actors on the Stage, what, or when to speak.

CUERPO. *To walk in Cuervo*, is a Spanish Phrase, for going without a Cloke; or without all the Formalities of a full Dress.

CUI ante Divortium, a Writ, which a Woman divorc'd from her Husband, hath, to recover Lands or Tenements from him to whom her Husband had alienated them during Marriage; because, during the Marriage, she could not gainly it.

CUI in Vita, is a Writ of Entry, which a Widow hath against him to whom her Husband alienated her Lands or Tenements in his Life-time; specifying that, during his Life, she could not withstand it.

CUIRASSE, a piece of defensive Armour, made of an Iron Plate well hammer'd; serving to cover the Body, from the Neck to the Girdle, both before and behind.

Hence, *Cuirassiers*, the Cavaliers arm'd with *Cuirasses*. The *Cuirasse* was not brought into use till about the Year 1300. The *French* have still a Regiment of *Cuirassiers*; and a good Part of the *German* Cavalry, are *cuirass'd*.

In the *Roman* Calendar, we find the Name of *S. Dominic the cuirass'd*; a Title given a Saint of the 13th Century, from his constant wearing of an Iron *Cuirasse*, by way of Penance.

Some derive the Word, by Corruption, from *Cuervasse*; because it covers the Body: Others from the *French* *Cuir*, or the Latin *Corium*, Leather; whence *Coriaceus*: by reason defensive Arms were originally made of Leather.

CULINARY, an Epithet frequently added to *Fire*; determining it to be a common Fire, excited in Wood, Coals, or other ordinary Fuel: In contradistinction to Solar Fire, or that rais'd by the Action of a Burning-Glass; to Central Fire; to Animal Fire, &c. See *FIRE*.

Culinary Fire, according to *Boerhaave*, consists of a Portion of pure Elementary, or Sulphur Fire, attracted by the oily, or sulphureous Parts of the Fuel, with such Velocity, as that it moves the same, agitates and whirls 'em violently about, and by degrees breaks and attenuates them; renders 'em volatile, and disperses 'em in Air. See *FUEL*.

The Effect of Air upon this Fire, is to make, as it were, a Vault around it, and by that means, restrain and keep it in, determine it upon the Sulphur, and thus prevent its too hasty Dissipation. See *AIR*.

The Word is form'd from the Latin *Culina*, Kitchen; this being the chief place of such Fires.

CUL de Lamp, a *French* Term, properly signifying the bottom of a Lamp; used in Architecture for several Decorations, both of Masonry and Joinery, found in Vaults and Ceilings, to finish the bottom of Works, and wreath'd somewhat in manner of a *Tetstudo*; particularly a kind of Pendentive in Gothic Vaults.

CUL de Four, a sort of low, spherical Vault, Oven-like. See *VAULT*.

Cul de Four of a Niche, the arch'd Roof of a Niche, on a circular Plan. See *NICHE*.

CULLIAGE, or *CULLAGE*, a Right usurp'd by the ancient Lords, and establish'd by a foolish Custom, which gave 'em the first Night with their Vassals Brides.

'Tis said this Right was establish'd by *Even* King of *Scotland*; and finally abolish'd by *Malcolm III.* a Compensation being settled in its stead; as occasioning frequent Revolts of the Vassals against their Lords.

The Word is form'd from the *French* *Col*, Breach.

CULMIFEROUS, in Botany, a Term applied to such Plants as have a smooth-join'd Stalk, usually hollow; the Stalk wrap'd about, at each Joint, with single, narrow, sharp-pointed Leaves; and the Seeds contain'd in chafy Husks. See *CULMES*, and *PLANT*.

Culmiferous Plants are divided into two Kinds; those with a greater, and those with a smaller Seed.

Those with a larger Seed are call'd *Frustrumaceous*, or *Cereales*; and are again divided into *Sporites*, as *Wheat*, *Rye*, *Spelt*, *Barley*, *Rice*, *Pease*, &c. and *Paniculate* or *Fabae*, as *Oats*, *Scordium*, *Milium*, and *Mais*. See *FRUMENTACEOUS*, &c.

CULMINATION, in Astronomy, the Transit of a Star or Planet over the Meridian; or that Point of its Orbit wherein it is at its greatest Altitude. See STAR, ALTITUDE, ORBIT, &c.

Hence, a Star is said to *culminate*, when it passes the Meridian. See MERIDIAN, and MID-HEAVEN.

To find the Culmination of a Star, or the Time wherein it passes the Meridian. On a Meridian-Line A B, (Tab. Astronomy, Fig. 48) stretch a Thread, DC, perpendicularly; and from D to E another, DE, cutting the Meridian obliquely, at any Angle. The triangular Thread, therefore, DCE, will cut the Plane of the Horizon in the Meridian-Line, at right Angles; and consequently will be in the Plane of the Meridian.

The Eye, therefore, being to be placed as that the Thread DE may cover the Thread DC; wait till the Star be bisected by the Triangle DCE; for then the Eye and the Star will, together with the Triangle DCE, be in the same Plane: Consequently the Star is in the Meridian. See MERIDIAN.

To find the Culmination of a Star by the Globe. See GLOBE.

To find the Time when a Star culminates, from a given right Ascension of the Meridian, the Sun, and the Star. Subtract the right Ascension of the Sun from that of the Star; if that of the latter be the less, add 360° to it, and subtract the former from the Sum; convert the Remainder into Solar Time: (See TIME.) Thus will you have the Time pass'd since the Star's Culmination.

Hence, also, we have the Hour of the Night. See HOUR.

CULMUS, is properly the Stem or Stalk of Corn, or Grass; which in other Plants is call'd *Caulis*. See STEM, and STALK.

Hence, *Culmiferous Plants*, are such as have a smooth-jointed Stalk, and usually hollow; and at each Joint the Stalk is wrap'd about with single, narrow, long, sharp-pointed Leaves, and their Seeds are contain'd in chafy Husks. See CULMIFEROUS.

CULPRIT, a Term us'd by the Clerk of the Arraignments, when a Person is indicted for a criminal Murther. See INDICTMENT.

After the Indictment is read in Court (which is the Crown's Charge) against the Prisoner at the Bar; he is ask'd if Guilty, or Not Guilty?

If he answers *Not Guilty*, there is next a Replication from the Crown, by continuing the Charge of Guilt upon him; which is express'd by pronouncing the Word *Culprit*; *Cul* being an Abbreviation of the Latin Word *Culpabilis*, Guilty, and *prit* (now *pret*) the old French Word for ready.

From these two Assertions, therefore, of the Clerk of the Arraignments, the Prisoner is deem'd guilty of the Crime charg'd on him; and that the Crown is ready to prove it upon him.

That this is the true Explanation of the Term, is evident from the Form of the Entry of the Record of the Trial, when drawn at large.

CULTELLATION, a Term some Authors use for the measuring of Heights, and Distances, by Piecemeal; that is, by Instruments which give us such Heights and Distances by Parts, and not all at one Operation. See MEASURING, ALTIMETRY, DISTANCE, &c.

CULVERIN, a Piece of Ordnance or Artillery, serving to carry a great distance. See ORDNANCE.

Of these there are three Kinds, viz. the *Culverin extraordinary*, the *ordinary*, and the *least* siz'd.

The *Culverin extraordinary* has 5 $\frac{1}{2}$ Inches bore; its length 32 Calibers, or 13 Foot; weighs 4800 Pound; its Load above 12 Pound; carries a Shot 5 Inches $\frac{1}{2}$ Diameter, weighing 20 Pound weight.

The *Ordinary Culverin* is 12 Foot long; carries a Ball of 17 Pound 5 Ounces; Caliber 5 $\frac{1}{2}$ Inches; its weight 4500 Pound.

The *Culverin of the least size*, has its Diameter 5 Inches; is 12 Foot long; weighing about 4000 Pounds; carries a Shot 3 Inches $\frac{1}{2}$ Diameter, weighing 14 Pounds 9 Ounces. See DEMI-CULVERIN.

Ménage derives the Word from the Latin *Colubrina*; others from *Coluber*, Snake; either from the Length of the Piece, or the Ravages it makes.

CUMMIN, the Grain of a Plant of the same Name, much like that of Fennel; growing abundantly in the Isle of Malta, where 'tis sown and cultivated after the manner of Corn.

The French frequently call it *Anis aigre*, sharp or four Anis.

'Tis us'd with Success in the Vertigo, Wind-Colics, Tympanies, &c. 'Tis esteem'd excellent to retrieve the Natural Heat in Horses, Bulls, &c. The Pidgeons are exceedingly fond of it; whence some make use of it to peep the Dove-houses, incorporating it with an Earth naturally saline, or some other Earth that has imbib'd Urine.

This Seed, as well as the common Anis, yields, by Expression, a kind of Oil, esteem'd sovereign in Rheumatism; provided it be us'd with Precaution, and in small Quantities.

CUNETTE, in Fortification, a deep Trench, about three or four Fathom wide, sunk along the middle of a dry Mont, to lead out the Water; or to make the Passage more difficult to the Enemy. See TRENCH.

CUNEUS, one of the Mechanical Powers; more usually, by English Writers, call'd the *Wedge*. See WEDGE.

CUNEIFORME Os, in Anatomy. See SPHENOIDES.

CUNEIFORME Os, the fourth, fifth, and sixth Bones of the Foot; thus called from their wedge-like Shape, being large above, and narrow below.

They lie all three a-side of one another, and are of different Sizes; their upper Side convex, and their under hollow: by which means, the Muscles and Tendons in the bottom of the Foot are not hurt in walking.

At one End they have each a *Sinus*, which receives the *Os Naviculare*; and at the other End are join'd each to one of the three inner Bones of the *Metatarsus*.

CUP, Calyx, a Vessel so call'd, of various Forms and Uses. See CALYX.

In the *Ephebe German*, we have a Description of a *Cup* made of a common Pepper-Corn, by *Offward Nerlioger*; which holds 1200 other Ivory *Cups*, each having its several Handle; all gilt on the Edges, with room for 400 more.

CUPS, among Herbalists, are those thorn Husks in which Flowers grow; some being pointed into two, three, four, five, or six Leaves. See CALYX.

CUPOLA, in Architecture, a spherical Vault; or the round Top of the Dome of a Church, in form of a *Cup* inverted. See DOME.

Some call it a *Lantern*. See LANTHORN.

The Word is *Italian*, form'd of the barbarous Latin *Cypala*; otherwise call'd *Troala*, and *Fornix*.

CUPPEL, CUPPEL, or COUPEL, among Chymists, a Vessel or Utensil, used in the trying and purifying of Gold and Silver; call'd also *Test*. See COUPEL, TEST, PURIFYING, and REFINING; see also ESSAY.

CUPPING, an Operation in Chirurgery, for the Discharge of Blood and other Humours by the Skin.

It is perform'd by collecting the Humours into a Tumor under the Cutis; and letting 'em out thence, by Scarification; i. e. by several incisions made with a Scarificator. See SCARIFICATION.

The Instruments used herein, are the *Cucurbitule*, or *Cupping-Glasses*, and *Scarificator*: The Description of each whereof see under their proper Head.

Cupping is perform'd either *with or without Fire*.

Cupping with Fire, is the more usual Process; and is commonly, among us, thus effectu'd: The Air in the Cavity of the *Cucurbitule* is heated, and so rarefy'd, by the Application of the Flame of a Lamp, or the like; and the Vessel immediately apply'd to the Part to be *cuppd*.

Others, especially the French, proceed thus: A piece of Card is cut round, and a Lamp, or four little Wax Candles affix'd to it: This is placed after the manner of a Candlestick to the Part whereon the Operation is to be perform'd, and cover'd with a *Cucurbitula*, or *Cupping-Glass*.

After the included Air has been well heated and rarefy'd with the Flames of the Candles, it is clasp'd close to the Skin; which it has no sooner touch'd but the Candles are extinguish'd, and the Tumor rais'd.

In *Cupping without Fire*, instead of rarefying the Air included in the *Cupping-Glass* by heat; 'tis done by a Syringe applied to the Neck of the *Cupping-Glass*, fitted with a brass Collar, Cap, and Valve: The *Cupping-Glass* being applied to the Skin, and the Syringe wrought, part of the Air is pump'd out of the *Cucurbitule*; and thus the Tumor rises, as in the former Case. See SYRINGE.

The Reason of the Phenomenon is this: The Air included in the *Cupping-Glass* being rarefied, a great Part of the Load which before press'd it and kept it down, and which still continues to press the rest of the Body, is taken off; upon which the Air, known to be contain'd in the Vessels of the Body, and mix'd with the Blood and Juices, expands itself; and raises a Tumor, carrying with it the Fluids where-with it is mingled.

The Operation is perform'd on the Breasts and Thighs, to stop or promote the Menes; on the Navel for the Cholick.

Cupping is also us'd for Diffusions on the Eyes, for venemous Wounds, and Bubbles; on the Head, for Apoplexies, &c.

CUPPING GLASS, Cucurbitula, in Chirurgery, a Glass Vessel, applied to certain Parts of the Body, to draw the Blood and other Humours from within outwards; to be afterwards discharg'd, thro' several Incisions made with a Scarificator. See CUPPING.

The Vessel is of various Dimensions: Sometimes, instead of Glass, 'tis made of Wood, Horn, Brass, Silver, &c.

When the *Cupping* is to be perform'd with Fire; the Vessel is heated with Candles, Tow, a Torch, Lamp, or the like; and in this State applied close to the Part: The Air

in its Cavity being by this means rarefy'd, and brought near to the Condition of a Vacuum; that Part of the Body cover'd by it being less press'd by the Air than the rest, its Joints are forc'd up with the Cutis, and raise a Bunch in the Cavity of the Vessel: to which the Scarificator being apply'd, and ten or twelve Incisions made at the same time, a plentiful Evacuation is effected.

To Cup without Fire, the Vessel is fitted with a brass Neck; to which a Syringe being apply'd, a Rarefaction is produc'd, by working it to and fro: (See SYRINGE.) The rest as in the former Case.

CURATE, is properly a Parson, or Vicar of a Parish, who hath the Charge or Cure of the Parishioners Souls. See **CURE**, **PARSON**, &c.

Curate is now more generally us'd for a Deputy or Substitute; or one who officiates in the Place of the Incumbent, or Beneficiary.

CURATIVE Indication, among Physicians, a Sign which has relation to the Disease to be cur'd. See **SYMPTOME**, and **INDICATION**.

CURATOR, in the Civil Law, a Trustee, or Person chosen or nominated to take care of the Affairs and Interests of a Person emancipated, or interdicted. See **EMANCIPATION**.

In Countries where the Roman Law prevails, between the Age of 14 and 24 Years, Minors have **Curators** assign'd 'em: Till 14, they have Tutors. See **MINOR**, and **TUTOR**.

CURATOR of an Academy, in the United Provinces, is an elective Office, to which belongs the Direction of the Affairs of the Academy; as, the Administration of the Revenues, the Inspection of the Professors, &c. The **Curators** are chose by the States of each Province: The Academy of Leyden has three; the Bourgeois of the City have a fourth.

CURDLING, the coagulating, or fixing of any fluid Body; particularly Milk. See **COAGULATION**.

Panjanis says, **Aristeus** Son of **Apollo**, and **Cyrene** Daughter of the River **Peneus**, were the first who found the Secret of curdling Milk. See **MILK**.

At **Florence**, they curdle their Milk for the making of Cheese with Artichoke Flowers; in lieu of the Rennet us'd for the same Purpose among us. See **CHEESE**.

The **Bisalties**, a People of Macedonia, **Rochfort** observes, live wholly of curdled Milk, i. e. of Cards. He adds, that Cards is the whole Food of the People of the upper **Auvergne** in France, and Whhey their only drink.

Women newly deliver'd are subject to have their Milk curdled, or converted into little **Grumes** in their Breasts, which occasion violent Pains, with a shivering in the back.

'Tis occasion'd by the want of being suck'd, whence the Method of remedying and preventing it is apparent.

CURE of Souls, a Benefice, the Incumbent whereof has the Charge and Guidance of the Souls of the People within a certain extent of Ground, call'd a **Parish**. See **BENEFICE**, **PARISH**, &c.

Such is a Vicar, a Rector, &c. in contradistinction to a Rector, a Dean, a Chantor, &c. See **VICARAGE**, &c.

CURE, in Falconry, a Remedy which the Falconers give their Birds, in form of little Balls or Pellets, of Hemp, Cotton, or Feathers, to imbibe and dry up their Phlegm.

The best **Cure** is that made of Feathers, or of little Bones of Birds, bruis'd; or of Hares, or Rabbits Feet. That of Cotton burns and consumes the Lungs; especially when given without washing.

From the Condition of the **Cure**, when evacuated, they Judge of the State of the Bird. See **CASTING**.

CURETES, in Antiquity, a sort of People of the Isle of **Crete**; call'd also **Corybantes**. See **CORYBANTES**.

The **Curetes** are said to have been originally of Mount **Ide**, in **Phrygia**; for which reason they were also call'd **Idei Dactyli**. See **DACTYLI**.

The Name **Curetes**, according to **Strabo**, was given 'em by reason of their cutting off the Hair before, to prevent the Enemy's taking hold thereof: the Word being *Greek*, *κῆρυμα*, of *κῆρ*, the Act of cutting off the Hair; of *κῆρ*, *κῆρ*, *κῆρ*. Others derive it from *κῆρυπος*, the feeding or educating of a Child; by reason they are said to have educated **Jupiter**.

Ovid says, they arose from a huge Shower of Rain: **Lutian** and **Diodorus Siculus** represent them as very expert in casting of Darts; the other Authors give 'em no Weapons but Bucklers and Pikes: But all agree in furnishing 'em with Tabours, and Castanets; and relate that they used to dance much to the Noise and clashing thereof.

Some Authors, however, give a different Account of the **Curetes**: According to **Petron**, and others, the **Curetes** were, in the Times of **Saturus**, &c. and in the Countries of **Crete** and **Phrygia**, what the **Druids** and **Bards** were afterwards among the **Gauls**, &c. i. e. they were Priests, and Sacrificers, who took care of what related to Religion, and the Worship of the Gods. See **DAUNIA**.

Hence; as in those Days it was suppos'd there was int Communication with the Gods but by Divinations and Auguries, and the Operations of Magick; the **Curetes** pass'd for Magicians and Enchanters: To these they added the Study of the Stars, of Nature, and Poetry; and so were Philosophers, Astronomers, &c.

Such were the **Curetes**, and after them the **Druids**; with this difference, that the **Curetes**, in the Time of the **Flamens**, went to the Wars; for which reason they were arm'd, and were wonderfully dextrous in dancing, Cap-a-pe, shaking their Bucklers and Javelins: From which Action, **Petron** conjectures, they took their Name, **Curetes**; **Curis**, in the *Celtic*, being the same with the *κῆρ*, of the *Greek*.

According to **Kircher**, the **Curetes** were what the **Spirits** are among the **Cabalists**, the **Poweris** in **Dionysius**, the **Demons** among the **Platonists**, and the **Genii** among the **Egyptians**. See **DEMON**, &c.

Vossius distinguishes three Kinds of **Curetes**, those of **Etolia**, those of **Phrygia**, and those of **Crete**, which were originally derived from the **Phrygians**.

The first, he says, took their Name from *κῆρ*, *κῆρ*, in regard, from the Time of a Combat wherein the Enemy cut off their long Hair, they always kept it cut: Those of **Phrygia** and **Crete**, he supposes were so call'd from *κῆρ*, *κῆρ*, *κῆρ*; in regard they were young; or because they nurs'd **Jupiter** when he was young. See **Idololat.**

CURFEW, or **COURFEU**, q. d. *Coverse-few*, a Signal of Retreat, given in Cities taken in War, &c. to advertise the Inhabitants to go to bed, and not to stir out any more.

The **Curfew-Bell**, wherewith the Signal was given, was sometimes hung up as a Punishment of Sedition. **Paffner** says, it was call'd *Curfew*, and *Garefew*; as being intended to advertise the People to secure themselves from the Robbers and Debauchers of the Night.

The most ancient **Curfew**, was that establish'd in **England**, by **William the Conqueror**; who appointed, under severe Penalties, that at the ringing of a Bell, at eight a Clock in the Evening, every one should put out their Lights, cover, or take up their Fires, and go to bed.

Whence, to this Day, where a Bell is accusom'd to be rang about Bed-time, 'tis call'd **Curfew-Bell**.

CURIA, in our ancient Customs. It was usual for the Kings of **England** to assemble the Bishops, Peers, and great Men of the Kingdom, to some particular Place, at the chief Festivals in the Year; and this Assembly is call'd, by our Historians, **Curia**; because there they consulted about the weighty Affairs of the Nation: whence it was sometimes also call'd, **Solenis Curia**, **Generalis Curia**, **Augustalis Curia**, and **Curia Publica**, &c. See **COURT**.

CURIA advisare unit, in Law, is a Deliberation, which the Court sometimes takes, before they give Judgment in a Cause wherein there seems to be any Point of difficulty.

CURIA Baronum. See **COURT-BARON**.

CURIA Claudenda, is a Writ that lies against him who should fence and enclose Ground, but refuses or defers to do it.

CURIALITAS Anglie. See **COURTSHIP of England**.

CURIA Militum, a Court so call'd; anciently held at **Carisbrook** Castle, in the Isle of **Wight**. *Et idem Dominus Willielmus de insula facere debet festam ad Curiam Domini castri de Carisbroe, de tribus septimanis in tres septimanas, in Curia que vocatur Curia Militum.*

CURIA, among the **Romans**, a Portion or Division of a Tribe. See **TRIBE**.

In the Time of **Romulus**, a Tribe consisted of ten **Curie**, or a thousand Men; each **Curia** being one hundred: That Legislator made the first Division of his People into thirty **Curie**.

Afterwards, the Word **Curia**, **Curies**, or **Domus Curialis**, became us'd for the Place where each **Curia** held its Assemblies: Hence, **Curia** pass'd to the Senate-house; and 'tis hence the Moderns come to use the Word **Curia**, Court, for a Place of Justice, and for the Judges, &c. there assembled. See **COURT**.

Some derive the Word **Curia** from **Crur**; for what Reason we see not. **Farro** brings it from **Curis**, **Curis**, q. d. an Assembly of People, charged with the Care of Publick Affairs. Others will have the Word come from the **Greeks**; maintaining, that at **Athenis** they call'd *κῆρ* the Place where the Magistrate held his Assizes, and the People used to assemble: *κῆρ*, again, may come from *κῆρ*, *κῆρ*, *κῆρ*, *κῆρ*, *κῆρ*; in regard, it was here the Laws were made. Hence also,

CURIO, the Chief, and Priest of a **Curia**. **Romulus**, upon dividing the People into **Curie**, gave each Division a Chief, who was to be Priest of that **Curia**, under the Title of **Curio**, **Curion**, and **Flamens Curialis**.

His Business was to provide and officiate at the Sacrifices of the **Curia**, which were call'd **Curionis**; the **Curia** furnishing him with a Sum of Money on that Consideration: which Pension or Appointment was call'd **Curionium**.

Each Division had the Election of its *Curio*; but all these particular *Curios*, were under the Direction of a Superior, or General, call'd *Curio Maximus*; who was the Head of the Body; and elected by all the *Curios*, assembled in the *Comitia Curiate*.

All these Infiltrations were set a-foot by *Romulus*, and confirm'd by *Numa*, as *Halieornaffens* relates it. *Goodwin* will have two *Curios* in each *Curia*.

CURIOSUS, *Curious*, an Officer of the *Roman* Empire, during the Emperors of the middle Age.

The *Curios* were Persons appointed to have an Eye that there were no Frauds, and Malversations committed; particularly no Abuses in what related to the Posts, the Roads, &c. and to give Intelligence to the Court of what pass'd in the Provinces.

This made them People of Importance; and put 'em in a Condition of doing more harm than they prevented: on which account, *Honorius* cashier'd 'em, at least in some Parts of the Empire, *Anno* 415.

The *Curios* came pretty near to what we call *Controllers*: They had their Name from *Curra*, Care; *Quod Curis agendis & erectionibus cursum publici suspiciendis operam darent.*

CURLING STUFF, in Joinery. See *CROSS-GRAIN'D STUFF*.
CURNOCK, a Measure of Corn, containing four Bushels. See *MEASURE*, and *BUSHEL*.

CURRENTS, a Kind of little Raisins, or dried Grapes, of different Colours; black, white, or red; of the size of ordinary Gooseberries, brought from several Places of the *Archipelago*, and among others, from the Isthmus of *Corinth*; whence their Name.

They must be chosen new, small, and in large Masses; and care be taken that the little *Spanish* *Currents* be not soiled in their room. When made up in Bales, they may keep two or three Years, without stirring, or giving 'em Air.

Their use is in seasoning several Vinsas, and in some medicinal Compositions; where they serve in lieu of Raisins.

Sir George Wheeler's account of these Fruit, and the manner of preparing 'em is very curious.

The Island of *Zant*, he observes, is the chief Place whence the *Currents* are brought: the *Morea*, or the *Isthmus* of *Corinth*, which was antiently the principal Plantation, and whence the *Latins* denominated 'em *Uvae Corinthiaca*, now, produces no more; as having been much neglected: the Jealousy of the *Turks* not allowing large Vessels to enter the Gulf, to take 'em off their Hands.

They don't grow on Bushes, like our Gooseberries, tho that be the common Opinion; but on Vines, like other Grapes; except that the Leaves are somewhat thicker, and the Grapes somewhat smaller: They have no Stone; and, in this Country, are all red, or rather black.

They gather 'em in *August*, dispose 'em in Beds on the Ground till they be dry, clean 'em, and lay 'em up in Magazines, which the *Natives* call *Seraglio's*; pouring them in at a Hole, till the Magazine be full. They cling so fast together by their own weight, that they are forc'd to be dug out with Iron Instruments.

To barrel 'em for sending abroad, they have People who grease their Feet and Legs, and tread 'em close, that they may keep the better. They are sold for about 12 Crowns the thousand Weight; and pay as much Custom to the State of *Venice*.

Zant produces enough yearly to load five or six Vessels; *Cephalonia* three or four; and the other Islands one. The *English* have a Factory at *Zant*; the *Dutch* two or three Merchants, and the *French* one: the *English* consuming more than six times the Quantity that both *France* and *Holland* do together.

Those of *Zant* know but little of the use we make of 'em; being persuaded they only serve in dyeing of Cloth; and being entirely ignorant of the Luxury of Christmas Pies, *Padding*, &c.

CURRENT, or *COURANT Money*, good Money, or that which passes in Commerce from one to another. See *COURANT*.

CURRENT, *Corrente*, a sort of running *French* Dance: Also a Musical Air in triple Time. See *COURANT*.

CURRENT, in Hydrography, a Stream, or Flux of Water in any certain Direction. See *RIVER*, and *WAVE*.

Currents, in the Sea, are either *Natural* and *General*, as arising from the diurnal Rotation of the Earth on its Axis; or *Accidental*, and *Particular*, caus'd by the Waters being driven against Promontories, or into Gulphs and Straights; where, wanting room to spread, they are driven back; and thus disturb the ordinary Flux of the Sea. See *SEA*, *FLUX*, &c.

The *Currents* are so violent under the Equator, where the Motion of the Earth is the greatest, that they carry Vessels very speedily from *Africa* to *America*; but absolutely prevent their return the same way: so that Ships are forc'd to run as far as the 40th Degree of Latitude, to find a Passage into *Europe*.

In the Straights of *Gibraltar*, the *Currents* almost constantly drive to the Eastward, and carry Ships into the *Me-*

diterranean: They are usually, too, found to drive the same way in *St. George's Channel*. The great Violence and dangerousness of the Sea in the Straights of *Mogellan*, is attributed to two contrary *Currents* setting in, one from the South, and the other from the North Sea.

CURRENTS, with respect to Navigation, may be defin'd, certain progressive Motions of the Water of the Sea, in several Places, either quite down to the Bottom, or to a certain determinate depth; by which a Ship may happen to be carry'd forward more swiftly, or retarded in her Course, according to the Direction or Setting of the *Current*, in, with, or against the Course or Way of the Ship. See *NAVIGATION*.

The Business of *Currents* making a considerable Article in Navigation; the way they set, together with their Strength, is to be carefully observ'd: this some do by the Rippings of the Water, and by the driving of the Froth along the Shore, when in sight of it: But the more usual, as well as more accurate way, is thus:

They first fix their Boat, by throwing out a triangular piece of Wood, with a piece of Lead fasten'd to it and to the Stem of the Boat with a Cord; and letting it sink 60 Fathom, or more; or, sometimes, by a Kettle ty'd by the Bowl, and sunk, as the other.

By either of these means, the Boat is brought to ride as at Anchor; which done, the Log is cast over, the Glass turn'd, and as the Log-line veers out, the Drift of the Log is set with the Compass. See *LOG-LINE*.

This shews whether there be any *Current*, or none; and if any, which way it sets, and at what rate it drives: observing, however, to add something to the Drift, for the Boat's Drift; for tho she appear to stand still, yet, in reality, she is found to move. This Addition Experience has thus determin'd; if the Line rise by be 60 Fathom, a third Part of the Drift to be added; if 80 Fathom, a fourth; if 100, a fifth.

If a Ship sail along the Direction of a *Current*, 'tis evident the Velocity of the *Current* must be added to that of the Vessel: if her Course be directly against the *Current*, it must be subtracted; if she sail athwart the *Current*, her Motion will be compounded with that of the *Current*; and her Velocity augmented or retarded, according to the Angle of her Direction, with that of the Direction of the *Current*; i. e. she will proceed in the Diagonal of the two Lines of Direction, and will describe or pass thro' that Diagonal in the same Time wherein she would have describ'd either of the Sides, by the separate Forces. See *COMPOSITION OF MOTION*.

To determine a Ship's Course and Distance, sailing obliquely with, or against a *Current*. Suppose, v. g. she sails N. E. 110 Miles, in a *Current* which sets S. W. 50 Miles in the same Time: To solve the Problem geometrically; set off 4 Points from N towards E, (Tab. Navigation, Fig. 15.) and draw A C equal to 110 Miles; from C draw C B, parallel to the Line N N E, and equal to 50 Miles: Lastly, draw A B, which will be the Ship's true Course and Distance.

To find which *Trigonometrically*. In the Triangle A B C, there are given A C 110, B C 50, and the Angle C, $22^{\circ} 30'$; then, $A C \div A C - B C :: 1, 2 A \div B :: 1, 2 B - A$. That is, as the Sum of A C and B C, viz. 140, is to their Difference 80: so is the Tangent of $78^{\circ} 45'$ to the Tangent of $70^{\circ} 49'$. Hence her true Course appears to be N. E. $70^{\circ} 50'$ Easterly. For her Distance; as the Sine of the Angle A, $79^{\circ} 56'$, is to the Drift of the *Current* B C, 50, so is the Sine of the Angle at C $22^{\circ} 30'$, to the Distance run, 85, two Miles. See *COURSE*.

Under-CURRENTS. *Dr. Halley* makes it highly probable, that in the *Downs*, in the Straights of *Gibraltar*, &c. there is an *Under-Current*, whereby as much Water is carried out, as is brought in by the upper *Current*.

This he argues from the Office between the North and South Foreland, where it runs Tide and Half-Tide, i. e. it is either Ebb or Flood in that Part of the *Downs*, three Hours ere it is so off at Sea: A certain Sign, that tho the Tide of Flood runs aloft, yet the Tide of Ebb runs underfoot, i. e. close by the Ground; and so at the Tide of Ebb it will flow under-foot.

This he confirms by an Experiment in the *Baltic* Sound, which he receiv'd from an able Seaman present at the making it: Being there, then, with one of the King's Frigates, they went with their Pinnace into the Mid-Stream, and were carried violently by the *Current*. Soon after that they sunk a Basket with a large Cannon-Bullet, to a certain depth of Water, which gave check to the Boat's Motion; and sinking it still lower and lower, the Boat was driven a-head to the Windward, against the upper *Current*: the *Current* aloft, not being above four or five Fathom deep. He added, that the lower the Basket was let down, the stronger the *Under-Current* was found.

From this Principle, 'tis easy to account for that vast Draught of Water continually pouring in with the *Current* out of the *Atlantic* into the *Mediterranean*, thro' the Straights of *Gibraltar*; a Passage about 20 Miles broad;

yet without any sensible rising of the Water along the Coasts of Barbary, &c. or any overflowing of the Lands, which there lie very low.

CURRICULUS, in our ancient Writers, the Year, or Course of a Year. See YEAR.

Actum est hoc amomum Dominice incarnationis quatuor quinquagesis & quinquies, quibus Iustrius & tribus curricularibus, i. e. In the Year 1028; for four times fifty makes two hundred, and five times two hundred makes one thousand; five *Lustra* are twenty five Years, and three *Curriculari* are three Years.

CURRYING, or **COURRYING**, a Method of preparing Leather, with Oil or Tallow; which raises on the Hair, or Wood-side, a kind of Grain, not unlike that of Morocco, or Morocco-grain. There is also a Kind of *curried* Leather without Grain. See LEATHER.

Currying is the last Preparation, and puts the Leather in a Condition to be us'd for Shoes, Saddles, Harness, &c. It is equally practis'd on Sheep, Calf, and Cows-Skins.

The Colours given in *Currying*, are, black, white, red, yellow, and green: The other Colours are given by the Skinners; who differ from the *Curriers* in this, That they apply their Colours on the Flesh-side; the *Curriers* on the Hair-side.

Manner of currying in black, with the Grain.

Of Blacks there are four Cases: Either the Skins are put in Tallow on both Sides; or Oil is us'd, in lieu of Tallow, on the Flesh-side; or Tallow is us'd alone on the Hair-side, and nothing on the other; or Tallow is us'd on both Sides, but no Grain rais'd.

The two first are us'd for Cows and Calves Leather; the second is the only way us'd for Sheep; and the two last are us'd occasionally for Cow and Bullock: For Calf and Sheep, they are Sumac on the Flesh-side, which gives an Orange-cast.

For *Neats-Skin* in black; The Skin, coming from the Tanner, is wet several times with a Broom, roll'd and trod under-foot to make it tractable, drain'd, and as much of the remaining Flesh as possible taken off with the Knife; hung in the Air till half dry, then wet and trampled again, and again.

This done, 'tis rub'd over with a Pummel, or Call, having Niches in manner of Teeth, to render it still more pliant; and sing'd with Straw, to prepare it to receive the Tallow; which is applied, boiling hot, on both Sides.

The Skin is then sing'd a second time, laid four Hours in a Vessel of fresh Water, trampled, and work'd a second time with the Pummel on each side, and stoutly drain'd; freer'd over with its first black, made of Galls and Ferailles, boil'd in Beer-agre, or four Beer; half dry'd, stretch'd on a Table, and the Grain beat down with a flat Iron Instrument, drawn over it from place to place.

It now receives its second black, made of Galls, Copperas, and Gum Arabic; when dry, and stretch'd on a Table, 'tis freer'd over with Beer-agre; then folded from Corner to Corner, and the Pummel drawn over it to cut the Grain, first on the Hair-side, then on the Flesh-side; the last with a Pummel of Cork: The Beer hanging in it is taken out with a Hair Torch, boil'd in Harter's Lie; and the Skin stretch'd to the Table, and clean'd with the Iron Instrument above-mention'd, and again wip'd with a piece of worsted Stocking. The Skin is now brighten'd, on the Hair-side, by a Lustré of Barberies, to prepare it to receive its last Grain.

The Grain, we already observ'd, is begun, by folding the Skin, the Hair-side inwards, several ways: to finish it, 'tis again folded, after its first Lustré, two ways; first from Corner to Corner, a little slanting; then *a-crois*, i. e. first directly, or from Eye to Eye, then from Head to Tail.

The Grain thus effected, the last Lustré, which makes its last Preparation, is given; compos'd of Gum Arabic, Garlic, Beer Vinegar, and *Flanders* Size, boil'd together, and applied cold. See LUSTRE.

Calf-Skin, in black, is prepared much after the same manner; tho' begun differently. After wetting, taking off as much of the Flesh remaining as possible, and drying; they pouce the Flesh-side with a hard rough Pounce-stone, which makes it more smooth and gentle; then give the Grain with the Pummel, put in the Tallow; the rest as before.

Sheep-Skins, in black. What these have peculiar in their Preparation, is, that they are first stretch'd on a Table to get off the Houze, or Tan wherewith they are loaden; then wet, trod under-foot, and Tallow added on the Hair-side; they are again wet, again trod, stretch'd on the Table, and the Water squeeze'd out with the Pummel; then black'd, repeat'd under the Pummel on each side, dried, and all the Roughness and Inequality par'd off with a flat, round, cutting Instrument: the rest as before.

Sheep Leather, or that without any Grain, made of Cows and Bulls Leather, differs a little in its Preparation from the former. The Skins being wet, trod, and par'd under the Pummel, the Flesh is taken off; the rest as in the first Article: Observing, that the Tallow be applied on both

Sides as thick as possible: being now steep'd in Water, trod, freer'd, and black'd the first time; the second black is laid on, till the Hair-side be quite smooth. After receiving their two Lustrés, they are press'd between two Tables; without having plaited or folded 'em in any manner during the whole Preparation.

CURSOR, an Officer or Clerk belonging to the Court of Chancery, who maketh out original Writs. See CHANCERY, and WRIT.

These are also call'd *Clerks of the Course*; and are 24 in Number; making a Corporation of themselves. To each of 'em are allotted several Shires; in which Shires they make out such original Writs as are by the Subject requir'd.

CURSOR, a Piece, little Ruler, or Label of Brass, divided like a Line of Sines, and sliding in a Groove, or Notch, along the middle of another Label, or Ruler, representing the Horizon, and always at right Angles to it.

It is us'd in the *Analemma*. See ANALEMMA.

Cursor is also us'd for a Point screw'd on the Beam-Compass; and which may be moved, or slid along the Beam thereof, for the striking of greater or less Circles. See BEAM-COMPASS.

CURTAILING, in the Mange, the *Docking*, or cutting off a Horse's Tail. See DOCKING.

The Practice of *Curtailing* is no where in vogue so much as in England; it being a popular Opinion, that the cutting off the Tail renders the Horse's Chine or Back the stronger, and more able to bear Burdens: which seems warrant'd by Experience.

The Amputation is usually made between the fourth and fifth Joints of the Tail; a Ligature being first ty'd tight about the Place, to prevent the Flux of Blood; and the raw Stump afterwards fear'd up with a hot Iron, till the Extremities of the Vessels be all stop'd.

CURTAIN, or **COURTINE**, in Fortification, that Part of a Wall, or Rampart, which is between two Baillions; or which joins the Flanks thereof. See RAMPART, and BASTION.

It is usually border'd with a Parapet five Foot high; behind which the Soldiers stand to fire upon the Covert Way, and into the Moat.

Besiegers seldom carry on their Attacks against the *Curtain*; because it is the best flank'd of any Part. See FLANK. *Du Gange* derives the Word *Curtain* from the Latin *Curtina*, quasi minor *Curtis*, is a little Country Court, inclos'd with Walls: He says, it was in Imitation hereof, that they gave this Name to the Walls and Parapets of Cities, which inclose 'em like *Courts*: He adds, that the *Curtains* of Beds take their Name from the same Origin; that *Curtis* was the Name of the General's, or Prince's Tent; and that those who guarded it were call'd *Curtinarii* and *Curtisiani*.

CURTATE Distance, in Astronomy, the Distance of a Planet's Place from the Sun, reduced to the Eclipse; or, the Interval between the Sun, and that Point where a Perpendicular let fall from the Planet, meets with the Ecliptic. See PLACE, and DISTANCE.

CURTATION, the Interval between a Planet's Distance from the Sun, and the *Curtate* Distance. See PLANET.

From the preceding Article, 'tis easy to find the *Curtate Distance*; whence the manner of constructing Tables of *Curtations* is obvious.

The Quantity of Inclination, Reduction, and *Curtation* of a Planet, depending on the Argument of the Latitude; *Kepler*, in his *Rhodusolphus Tables*, reduces the Tables of 'em all into one, under the Title of *Tabule Latitudinarie*.

CURTESY. See COURTESY.

CURTICONE, in Geometry, a Cone whose top is cut off by a Plane parallel to its Basis; call'd also *Truncated Cone*. See TRUNCATED.

CURVATURE of a *Line*, is its Bending, or Flexure; whereby it becomes a Curve, of such peculiar Properties. See LINE, and CURVE.

Thus, the *Curvature* of the Circle is such, as that all Points of the Periphery are equally distant from one Point within, call'd the Centre.

The *Curvatures* of different Circles, are to one another reciprocally as their Radii. See CIRCLE.

CURVE, in Geometry, a Line, wherein the several Points it consists of tend several ways, or are posited towards different Quarters. See LINE.

In this Sense, the Word is us'd in opposition to a *strait* Line; whose several Points are posited towards the same Quarter.

Hence, Figures terminated with Lines of the first Property, are call'd *Curvilinear* Figures; in opposition to those terminated with the latter, call'd *Rectilinear* Figure. See RECTILINEAR, and FIGURE.

The Doctrine of *Curves*, and of the Figures and Solids generated from them, contribute what we call the *Higher Geometry*. See GEOMETRY.

In a *Curve*, the Line AD, (Tab. Geometry, Fig. 51.) bisecting the parallel Lines MM, is call'd the *Diameter*; if

If the Lines be equidistant, and it cut 'em at right Angles, it is call'd the *Axis*; and the Point A, whence the Diameter is drawn, is call'd the *Vertex*. See DIAMETER, AXIS, and VERTEX.

The equidistant Lines MM are call'd *Ordinates*, or *Appliques*; and their Halves, PM, *Semiordinates*. See ORDINATES, and SEMIORDINATE.

The Portion of the Diameter AP, between the Vertex, or other fix'd Point, and an Ordinate, is call'd the *Abscisse*. See ABSCISSE.

And the Concourse of all the Diameters, the *Centre*. See CENTRE.

Curves are distinguish'd into *Algebraic*, frequently with *Des Cartes* call'd *Geometrical*; and *Transcendental*, called by the same *Cartes*, &c. *Mechanical Curves*.

Algebraical CURVES, are those wherein the Relation of the Abscisses AP, A P, AP, to the Semiordinates MP, MP, MP, may be express'd by an Algebraical Equation. See EQUATION.

Suppose, v. g. in a Circle, (Fig. 52.) $AB = a$, $AP = x$, $PM = y$; then will $PB = a - x$; consequently, as $PM^2 = AP \cdot PB$, $y^2 = a x - x^2$. Or, suppose $PC = x$, $AC = a$, $PM = y$; then will $MC = a - PC = a - x$; that is, $a^2 - x^2 = y^2$.

Note, These are also call'd *Algebraic Curves*, which are of a determinate Order; so, as that the Equation always continues the same in the several Points of the Curve.

Most Authors, after *Des Cartes*, call Algebraic Curves, *Geometrical ones*; as admitting none else into the Construction of Problems; nor, consequently, into Geometry. But *Wolffius*, from Sir I. Newton, and M. Leibnitz, is of another Opinion; and thinks, that in the Construction of a Problem, one Curve is not to be prefer'd to another, for its being defin'd by a more simple Equation, but for its being more easily describ'd. See PROBLEMS.

A *Transcendental CURVE*, is that which can't be defin'd by an Algebraic Equation.

These Curves, *Des Cartes*, &c. call *Mechanical ones*; and under that Notion exclude 'em out of Geometry; But *Newton* and *Leibnitz*, for the Reason abovemention'd, are of another Opinion. Indeed, *Leibnitz* has found a new Kind of Equations, which he calls *Transcendental Equations*; whereby even *Transcendental Curves*, and those which are not of any determinate Order, i. e. which don't continue the same in all the Points of the Curve, may be defin'd. *Act. Erudit. Leip. A. 1684. p. 134.*

Algebraic CURVES of the same Kind or Order, are those whose Equations rise to the same Dimension. See ORDER.

Geometrical Lines being defined by the Relation between the Ordinates and Abscisses, or (which is the same, by the Number of Points wherein they may be cut by a right Line) are well distinguish'd into two Kinds or Orders: In which view, Lines of the first Order will be right Lines; and those of the second or quadratic Order will be Curves, viz. *Conic Sections*.

Now, a Curve of the first Kind is the same with a Line of the second, (a right Line not being number'd among Curves) and a Curve of the second Kind, the same with a Line of the third. Thus, Curves of the first Kind, are those whose Equation rise to two Dimensions; if they rise to three, the Curves are of the second Kind; if to four, of the third, &c.

Thus, e. g. the Equation for a Circle is, $y^2 = ax - x^2$, or $a^2 - x^2 = y^2$. A Circle, therefore, is a Curve of the first Kind.

Again, a Curve of the first Kind, is that defined by the Equation $ax = y^2$; and a Curve of the second Kind, that defined by the Equation $a^2 x = y^3$. See CIRCLE.

For the various Curves of the first Kind, and their Properties, see CONIC SECTIONS.

For Curves of the second Kind, Sir I. Newton has a distinct Treatise, under the Title of *Enumeratio linearum tertii ordinis*.

Curves of the second and other higher Kinds, he observes, have Parts, and Properties similar to those of the first: Thus, as the Conic Sections have Diameters and Axes; the Lines cut or bisected by these, are call'd *Ordinates*; and the Intersection of the Curve and Diameter, the *Vertex*: So, in Curves of the second Kind, any two parallel right Lines being drawn so as to meet the Curve in three Points; a right Line cutting these Parallels, so, as that the Sum of the two Parts between the Secant and the Curve on one side, is equal to the third Part terminated by the Curve on the other side, will cut, in the same manner, all other right Lines parallel to these, and that meet the Curve in three Points, i. e. so, as that the Sum of the two Parts on one side, will be still equal to the third Part on the other side.

These three Parts, therefore, thus equal, may be call'd *Ordinates*, or *Appliques*; the Secant the *Diameter*; and where it cuts the Ordinates at right Angles, the *Axis*: The Intersection of the Diameter and the Curve, the *Vertex*; and the Concourse of the two Diameters, the *Centre*; and the Concourse of all the Diameters, the *General Centre*.

Again, as a Hyperbola of the first Kind has two Asymptotes; that of the second has three, that of the third four, &c. and as the Parts of any right Line between the Conic Hyperbola and its two Asymptotes are equal on either side; so, in Hyperbolas of the second Kind, any right Line cutting the Curve and its three Asymptotes in three Points; the Sum of the two Parts of that right Line, extended from any two Asymptotes the same way to two Points of the Curve, is equal to the third Part, extended from the third Asymptote, the contrary way to the third Point of the Curve. See ASYMPTOTE, HYPERBOLA, &c.

Again, as in other Conic Sections, not parabolic, the Square of the Ordinate, i. e. the Rectangle of the Ordinates, drawn to contrary Parts of the Diameter, is to the Rectangle of the Parts of the Diameter terminated at the Vertices of an Ellipsis or Hyperbola, as a given Line, call'd the *Latus Rectum*, is to that Part of the Diameter which lies between the Vertices, and is call'd the *Latus Transversum*: So, in Curves of the second Kind, not parabolic, the Parallelogram under the three Ordinates, is to the Parallelogram under the Parts of the Diameter cut off at the Ordinates and the three Vertices of the Figure, in a given Ratio: wherein, if there be taken three right Lines at the three Parts of the Diameter plac'd between the Vertices of the Figure, each to each; then those three right Lines may be call'd the *Latera Recta* of the Figure, and the Parts of the Diameter between the Vertices, the *Latera Transversæ*.

And, as in a Conic Parabola, which has only one Vertex to one and the same Diameter, the Rectangle under the Ordinates, is equal to the Rectangle under the Part of the Diameter cut off at the Ordinates and Vertex, and a given right Line call'd the *Latus Rectum*: So, in Curves of the second Kind, which have only two Vertices to the same Diameter, the Parallelogram under three Ordinates, is equal to the Parallelogram under two Parts of the Diameter cut off at the Ordinates and the two Vertices, and a given right Line, which may therefore be call'd the *Latus Transversum*. See LATIUS; see also PARABOLA.

Further, as in the Conic Sections, where two Parallels terminated on each side by a Curve, are cut by two Parallels, terminated on each side by a Curve; the first by the third, and the second by the fourth: the Rectangle of the Parts of the first, is to the Rectangle of the Parts of the second, as that of the second is to that of the fourth: So, when four such right Lines occur in a Curve of the second Kind, each in three Points; the Parallelogram of the Parts of the first, will be to that of the Parts of the second, as that of the second to the Parts of the fourth. See SECTION.

Lastly, the Legs of Curves, both of the first, second, and higher Kinds, are either of the Parabolic or Hyperbolic Kind: an Hyperbolic Leg, being that which approaches infinitely towards some Asymptote; a Parabolic, that which has no Asymptote. See ASYMPTOTE.

These Legs are best distinguish'd by their Tangents; for, if the Point of Contact go off to an infinite Distance, the Tangent of the Hyperbolic Leg, will coincide with the Asymptote; and that of the Parabolic Leg, recede infinitely, and vanish. The Asymptote, therefore, of any Leg, is found by seeking the Tangent of that Leg to a Point infinitely distant; and the Bearing of an infinite Leg, is found by seeking the Position of a right Line parallel to the Tangent, when the Point of Contact is infinitely remote: for this Line tends the same way towards which the infinite Leg is directed.

Reduction of Curves of the second Kind.

Sir I. Newton reduces all Curves of the second Kind to four Cases of Equation: In the first, the Relation between the Ordinate and Abscissa, making the Abscissa x , and the Ordinate y , assumes this form $xy + cy = ax^2 + bx + cx + d$. In the second Case, the Equation assumes this form $xy = ax^2 + bx^2 + cx + d$. In the third Case, the Equation is $yy = ax^2 + bx^2 + cx + d$. In the fourth, the Equation is of this form, $y = ax^2 + bx^2 + cx + d$.

Enumeration of the Curves of the second Kind.

Under these four Cases, the same Author brings a vast Number of different Forms of Curves, to which he gives different Names.

A Hyperbola lying wholly in the Angle of the Asymptotes, like a Conic Hyperbola, he calls an *Inscribed Hyperbola*; that which cuts the Asymptotes, and contains the Parts cut off within its own Periphery, a *Circumscrib'd Hyperbola*; that, one of whose infinite Legs is inscrib'd, the other circumscrib'd, he calls *Ambiguous*; that whose Legs look towards each other, and are directed the same way, *Converging*; that where they look contrary ways, *Diverging*; that where they are convex different ways, *Cross-leg'd*; that applied to its Asymptote, with a concave Vertex, and diverging Legs, *Concoidal*; that which cuts its Asymptote with contrary Flexures, and is produced each way into contrary Legs, *Anguinous*, or *Snake-like*; that which cuts its

Conjugate a-crofs, *Cruciform*; that which returning around *cus* it self, *Nodated*; that whose two Parts concur in the *cus* of Contact, and there terminate, *Cuspidated*; that whose *Conjugate* is oval, and infinitely small, i. e. a Point, *spined*; and that which from the Impossibility of its two *Roots*, is without either Oval, Node, *Cusp*, or Point *pure*: And in the same manner he denominates a *Parabola*, to be *converging*, *diverging*, *cruciform*, &c. Where the Number of *Hyperbolic Legs*, exceeds that of the *Conic Hyperbola*; he denominates the *Hyperbola redundant*.

Now, the various *Curves* which he enumerates under these four Cases, are in Number 72; whereof nine are *redundant Hyperbolas*, without *Diameters*, having three *Asymptotes* including a *Triangle*.

The first consisting of three *Hyperbolas*, one *inscribed*, another *circumscribed*, another *ambigonal*, with an *Oval*; the second *Nodated*; the third *Cuspidated*; the fourth *spined*; the fifth and sixth *Pure*; the seventh and eighth *Cruciform*; the last *Anguineal*.

There are 12 *redundant Hyperbolas*, having only one *Diameter*: The first *Oval*, the second *Nodated*, the third *Cuspidated*, the fourth *Pointed*, the fifth, sixth, seventh, and eighth, *Pure*; the ninth and tenth *Cruciform*; the eleventh and twelfth *Conoidal*.

Two are *redundant Hyperbolas* with three *Diameters*.

Nine are *redundant Hyperbolas*, with three *Asymptotes* converging to a common Point; the first form'd of the fifth and sixth *redundant Parabolas*, whose *Asymptotes* include a *Triangle*; the second, of the seventh and eighth; the third and fourth, of the ninth; the fifth is form'd of the fifth and seventh of the *redundant Hyperbolas*, with one *Diameter*; the sixth, of the sixth and seventh; the seventh, of the eighth and ninth; the eighth, of the tenth and eleventh; the ninth, of the twelfth and thirteenth: All which *Conversions* are effected, by distinguishing the *Triangle* comprehended between the *Asymptotes*, till it vanish into a Point.

Six are defective *Parabolas*, having no *Diameters*: The first *Oval*, the second *Nodated*, the third *Cuspidated*, the fourth *Pointed*, the fifth *Pure*.

Seven are defective *Hyperbolas*, having *Diameters*: The first and second *Conoidal*, with an *Oval*; the third *Nodated*, the fourth *Cuspidated*, which is the *Cissoid* of the *Anticus*; the fifth and sixth, *Pointed*; the seventh *Pure*.

Seven are *Parabolic Hyperbolas*, having *Diameters*: The first *Oval*, the second *Nodated*, the third *Cuspidated*, the fourth *Pointed*, the fifth *Pure*, the sixth *Cruciform*, the seventh *Anguineous*.

Four are *Parabolic Hyperbolas*. Four are *Hyperbolicisms* of the *Hyperbola*. Three *Hyperbolas* of the *Ellipsis*. Two *Hyperbolicisms* of the *Parabola*.

Five are *diverging Parabolas*: one, a *Trident*; the second *Oval*, the third *Nodated*, the fourth *Pointed*, the fifth *Cuspidated*; (this is *Neal's Parabola*, usually called the *Sonic* *Parabola*;) the sixth, *Pure*.

Lastly, one commonly call'd the *Cubic Parabola*.

Organical Description of these CURVES.

1st, If two Angles given in Magnitude, P A D, P B D, (Tab. *Analysis*, Fig. 53.) revolve round Poles given in position, A and B; and their Legs, A P, B P, with their Point of Concourse, P, pass over another right Line: The other two Legs A D, B D, with their Point of Concourse D, will describe a *Conic Section* passing thro' the Poles A B: Unless that Line happen to pass thro' either of the Poles A or B; or unless the Angles B A D and A B D vanish together: in which Cases, the Point will describe a right Line.

2nd, Now, if the Legs, A P, B P, by their Point of Concourse, P, thus describe a *Conic Section* passing thro' one of the Poles, A; the other two, A D, B D, with their Point of Concourse D, will describe a *Curve of the second Kind*, passing thro' the other Pole B, and having a double Point in the first Pole A: Unless the Angle B A D, A B D, vanish together; in which Case, the Point D will describe another *Conic Section*, passing thro' the Pole A.

3rd, If the *Conic Section* describ'd by the Point P, pass thro' neither of the Poles A B; the Point D will describe a *Curve of the second or third Kind*, having a double Point: which double Point will be found in the Concourse of the describing Legs A D, B D: When the two Angles B A P, A B P, vanish together, the *Curve* describ'd will be of the *second Kind*, when the Angles B A D, A B D, vanish together; otherwise of the *third Kind*, having two other double Points in the Poles A and B.

With regard to *Double Points* of *Curves*: We have observ'd that *Curves* of the second Kind may be cut by a right Line in those Points: Now two of these sometimes coincide, e. g. when the right Line passes thro' an infinitely small *Oval*; or thro' the Concourse of two Parts of a *Curve*, mutually cutting each other, and uniting in a *Cusp*. Sometimes the right Line, even, only cuts the *Curve* in one

Point; as in *Ordinates* of the *Cartesian* and *Cubic Parabola*, &c. In which Case, we must conceive the right Lines passing thro' two other Points of a *Curve*, placed, as it were, at an infinite distance: Now these coincident Intersections, whether at a finite or infinite Distance, make what we call *double Point*.

Genesis of CURVES of the second Order by Shadows.

If the *Shadows* of Figures be projected on an infinite Plane, illumin'd by a lucid Point; the *Shadows* of *Conic Sections* will still be *Conic Sections*; those of *Curves* of the second Kind, will be *Curves* of the second Kind; those of the third Kind, *Curves* of the third Kind, &c.

And as a *Curve*, in projecting a *Shadow*, generates all the *Conic Sections*; so, the five *diverging Parabolas*, with their *Shadows*, generate and exhibit all other *Curves* of the second Kind.

And in this manner may a Train of the *simple Curves* of other Kinds be found, which shall form all the other *Curves* of the same Kind, by their *Shadows* projected from a lucid Point, upon a Plane.

Description of CURVES of the second Order, having double Points.

These are all describ'd from seven given Points, whereof one is the double Point it self: Thus, let there be given any seven Points of the *Curve* to be describ'd; as, v. g. A, B, C, D, E, F, G, (Tab. *Analysis*, Fig. 54.) whereof A is the double Point: join the Point A, and any other two Points, v. g. B and C; and let the Angle C A B of the Triangle A B C, revolve about its Vertex A; and another of the Angles A B C, about its Vertex B. And when the Point of Concourse C, of the Legs A C, B C, is successively applied to the four other Points D, E, F, G, let the Concourse of the remaining Legs A B and B A, fall on the four Points P, Q, R, S.

Thro' those four Points, and the fifth A, describe a *Conic Section*; and let the foremention'd Angles C A B, C B A, so revolve, as that the Point of Concourse of the Legs A B, B A, may pass over that *Conic Section*; and the Concourse of the other Legs A C, B C, will describe the proposed *Curve*.

Use of these CURVES in the Construction of Equations.

The use of *Curves* in Geometry, is by means of the Intersections thereof, to solve Problems. See CONSTRUCTION.

Suppose, v. g. an Equation to be constructed of nine Dimensions, as $x^9 + b x^8 + c x^7 + d x^6 + e x^5 + f x^4 + g x^3 + h x^2 + i x + o = 0$ where $b, c, d, \&c.$ signify any given Quantities affected with the Signs + and -; assume an Equation to a *Cubic Parabola* $x^3 = y$; and the first Equation, writing y for x^3 will come out $y^3 + b y^2 + c y + d x^2 y + e x y + m y + f x^2 + g x + h x + k = 0$; or an Equation to another *Curve* of the second Kind, where m or f may be assum'd or annul'd. And by the Descriptions and Intersections of these *Curves* will be given the *Roots* of the Equation to be constructed. 'Tis sufficient to describe the *Cubic Parabola* once.

If the Equation to be constructed, by omitting the two last Terms $b x$ and k , be reduced to seven Dimensions; the other *Curve*, by expunging m , will have the double Point in the beginning of the *Abscissa*, and may be easily describ'd as above: If it be reduced to six Dimensions, by omitting the three last, taking $g x^2 + h x + k$; the other *Curve*, by expunging f , will become a *Conic Section*: and if, by omitting the three last Terms, the Equation be reduced to three Dimensions, we shall fall on Dr. Wallis's Construction by the *Cubic Parabola* and right Line.

Resolution of a CURVE, is the finding of a right Line equal to a *Curve*. For the Praxis hereof, see RECTIFICATION of CURVES.

Quadrature of a CURVE, the finding of the Area, or Space included by a *Curve*; or the assigning of a Square equal to a *Curvilinear Space*. See QUADRATURE.

Family of CURVES, is an Assemblage of several *Curves* of different Kinds, all defined by the same Equation of an indeterminate Degree; but differently, according to the Diversity of Kind.

E. g. Suppose an Equation of an indeterminate Degree, $a x^m - x = y^m$. If $m = 2$, then will $x x = y^2$; if $m = 3$, then will $x^3 = y^3$; if $m = 4$, then $x^4 = y^4$, &c. All which *Curves* are said to be of the same Family, or Tribe.

The Equations whereby the Families of *Curves* are defined, are not to be confounded with the *Transcendent* ones: For tho, with regard to the whole Family, they be of an indeterminate degree, yet, with respect to each several *Curve* out of the Family, they are determinate; whereas *transcendent Equations* are of an indefinite Degree, with respect to the same *Curve*.

All Algebraic *Curves*, therefore, compose a certain Family, consisting of innumerable others; each whereof comprehends infinite Kinds. For since the Equations whereby the *Curves* are defined cuter the *Entia*, either of the Powers

of the Abcissives and Semiordinates into the given Coefficients, or of the Powers of the Abcissives into the Powers of the Semiordinates, or of the mere given Quantities; and all Equations may be equal to nothing, (v.g. if $a x = y^2$, then $a x - y^2 = 0$); the Equation for all Algebraical Curves will be $a y^m + b x^n + c y^p x^q + d f = 0$.

EXPONENTIAL CURVE, is that defined by an Exponential Equation; that is, by an Equation wherein is an Exponential Quantity, v.g. x^x, a^x . See **EXPONENTIAL**.

The Symptoms, Properties, Geneses, &c. of particular Curves, v. g. Cycloid, Logarithmic Curves, Conchoid, &c. See under their proper Heads, CYCLOID, LOGARITHMIC, CONCHOID, &c.

CURVET, in the Manage. See **COURVET**.

CURVILINEAL Figures, in Geometry, are Spaces bounded by crooked Lines; as the Circle, Ellipsis, Spherical Triangle, &c. See **CURVE**, and **FIGURE**.

CURULE Chair, *Sella Curulis*, in Antiquity, an Ivory Seat, whereon certain of the Roman Magistrates had a Right to sit.

The Curule Magistrates were the Ediles, Prætors, Censors, and Consuls. See **EDILE**, &c.

The Senators who had bore these Charges, were carried to the Senate on *Curule Chairs*; as also those who triumph'd: the Chair being fitted into a kind of Chariot, *CURUS*; whence *Curules*. See **TRIUMPH**.

The Curule Chair is used on Medals, to express a Curule Magistracy: When travell'd by a Hæta, 'tis the Symbol of Fame, and serves to express the Conservation of Princelics.

CUSP, *Cuspis*, properly denotes the Point of a Spear.

It is particularly us'd in Astronomy, to express the Points or Horns of the Moon, or other Luminary. See **MOON**, **CRESCENT**, **ECLIPSE**, &c.

In Astrology, *Cusp* is used for the first Point of the twelve Houses, in a Figure or Scheme of the Heavens.

CUSPIDATED, in Botany, is when the Leaves of a Flower end in a Cusp, or Point, resembling that of a Spear. **CUSPIDATED Hyperbola**, &c. See **HYPERBOLA**.

CUSTODE Admittendo, and **CUSTODE Amovendo**, are Writs for the admitting, or removing of Guardians. See **GUARDIAN**.

CUSTODES Libertatis Angliæ, auctoritate Parliamenti, was the Style or Title in which Writs, and other Judicial Proceedings, did run in the Rump Time; that is, from the Death of King Charles I. till Oliver was declared Protector, &c.

CUSTOM, the Manners, Ceremonies, or Ways of living of a People, which in time have turn'd into Habit, and by Usage, obtain'd the Force of Laws. See **LAW**.

In this Sense, *Custom* implies Things that were at first voluntary, but as become necessary by use: Thus, the Precepts made by Officers at their admission into Poits, are only due because they have paid'd into *Custom*. See **FEE**.

The Word further signifies the doing or not doing certain Things, introduc'd by the greatest Part of the People of a Country, or Province: If there be nothing evil in such *Custom*, it obliges, till it be either abrogated by a contrary *Custom*, or a Law.

For a *Custom* thus establish'd to have the Force of a Law, 'tis necessary, ordinarily, that it be founded on some natural Equity, or some considerable Good; and that it have subsisted *ante trimum*: but, as this is hard to prove, 'tis sufficient if two or more Witnesses depose they heard their Fathers say the same of their Time.

If it be Matter of Record, the Continuance of 100 Years is sufficient. See **RECORD**.

The Effect of a *Custom* thus circumstantiated, is, that it has the same Force and Authority as a Law; making what we call *Lex non scripta*; and that in popular States and limited Monarchies, it serves to interpret the written Laws: for in absolute Monarchies, 'tis the King alone has the Power of interpreting Laws.

Hence, the Word *Custom* is still retain'd, and serves to express the particular Rights and Municipal Laws establish'd by Usage in particular Provinces, &c. after they are reduced into written Laws.

In this Sense, most of the Common Law of England is *Lex non scripta*; being originally no more than the *Customs* of our Forefathers. See **COMMON LAW**.

Lex non scripta, in this Sense, is used in opposition to *Statutes* or *Acts of Parliament*; which commence Laws at once. See **STATUTE**.

Covel distinguishes *Custom* from Prescription, in that the former is more general, and relates to several Persons; whereas the latter is usually confin'd to this or that Man. Five Years time, too, are sufficient for Prescription; whereas for *Custom* there are requir'd 100. See **PRESCRIPTION**.

Customs are real Things, and are included within their Limits or Territories: They are either *Local*, i. e. restrain'd to this or that Place, or *General*.

The *Custom of Paris*, serves as a Rule for all the other Places of France; where they have no Provisions contrary thereto.

The Romans were govern'd by *Customs*, or unwritten Laws, after the Expulsion of their Kings. See **CIVIL LAW**.

Cæsar observes, that the Gauls had their *Customs*, which they constantly retain'd; and that it was impossible for the Romans to govern 'em by any other Laws: So that it was only the Provinces bordering on Italy that receiv'd the Roman Laws.

CUSTOMS, in Commerce, the Duces, Duties, or Tolls, paid by Merchants to the King, for carrying out, and bringing in of Merchandizes. See **EXPORTATION**, and **IMPORTATION**.

The *Customs* of Goods exported and imported, throughout England, amount yearly to 1300000 Pounds; whereof those of the Port of London make a third part. See **COMMERCE**.

The *Customs* in England are very numerous, and very high; beyond what any other trading Nation knows: The principal are Duties of *Tonnage* and *Poundage*, which are very ancient, being the only ones in use before the Time of King Charles II. But that Prince, and his Successors, have introduc'd divers others: At present, the *Customs* on Liquors are, *Tinners*, the *Additional Duty*, the *Duty of Excise*, *Coinage*, *Duty of the old Imposition*, *Duty of the additional Imposition*, *Duty of Orphans Money*, *Duty on French Wines*, *New Subsidy*, & & of *Subsidies*.

For other Merchandizes, the Duties are, *Poundage*, the *additional Duty* on Silks and Lincens, *Excise* of the lime Year, on *foreign Species*, *new Imposition* of *Poundage*, another of $\frac{1}{2}$; a *Duty* of 25 per Cent. on *French Commodities*; the *new Subsidy* of *Poundage*, in 1697; an *additional Subsidy* of $\frac{1}{2}$ of *Poundage*, in 1703; a third in 1704; a *Duty* on *Fish Oils*, another on *Leather*, another on *Paper*, *Sugar*, &c. See these describ'd more at large under the Article **DUTY**.

CUSTOM-HOUSE, an Office establish'd on the Frontiers of a State, or in some chief City, for the Receipt of the *Customs* and Duties of Importation and Exportation; imposed on Merchandizes, by the Authority of the Prince, and regulated by Tariffs, or Books of Rates. See **CUSTOMS**, and **DUTIES**.

There are several *Custom-houses* in the several Ports of England: The most considerable is that of London.

It is under the Direction of seven Commissioners appointed by Patent; who have the Charge and Management of all the *Customs* (the Petty-Farms alow excepted) in all the Ports of England. See **COMMISSIONER**.

Other Officers are, a *Secretary*, *Solicitor*, *Receiver-General*, *Comptroller* of the Issues and Payments of the Receiver-General; *Comptroller-General*; *Inspector* of the Out-Port Collectors Accounts; *Inspector-General* of the Exports and Imports; *Register-General* of all Ships of Great-Britain; *Surveyor-General*; *Surveyor* of the Out-Ports, and *Register* of the Seizures; all holding their Places by Patents: with other inferior Officers, appointed by Warrant from the Lord High Treasurer.

CUSTOMARY Tenants, *Custumarii*, vel *Tenentes per consuetudinem*; are such Tenants as hold by the *Custom* of the Manor as their special Evidence. See **MANOR**.

These were anciently Bondmen, or those that held *Tenens Bondagii*.—*Et omnes illi qui tenentur in Bondagii tenura, solummodo vocari Custumarii.* MS. de *Consuetud. Man. de Sutton Colfield*, de anno 3 Edw. II.

CUSTOS Brevium, a Clerk, belonging to the Court of Common Pleas; whose Office is to receive, and keep all the Writs, and put 'em upon Files; every Return by it self; and at the End of every Term to receive of the Prothonotaries all the Records of the *Nisi prius*, call'd the *Postea*. See **WARRANT**, and **POSTEA**.

The Writs are first brought in by the *Clerks of Assize* of every County to the Prothonotary who enter'd the Issue in that Matter, to enter Judgment. Four Days after the Return, the Prothonotary enters the Verdict, and Judgment thereupon, into the Rolls of the Court; and then delivers them over to the *Custos Brevium*.

He also makes Entry of the Writs of Covenant, and the Concord upon every Fine; and makes Copies and Exemplifications of all Writs and Records in his Office, and of all Fines levied: The Fines, when engrossed, are divided between the *Custos Brevium* and *Chirographer*; the former keeping the Writ of Covenant and the Note, the latter the Concord, and Foot of the Fine. See **CHIROGRAPHUM**.

In the Court of the King's Bench, there is likewise a *Custos Brevium et Rotulorum*, who fileth such Writs as are there used to be filed, and all Warrants of Attorney; and transcribes or makes out Records of *Nisi prius*, &c.

CUSTOS Placitorum Coronæ, in *Bracon*, seems to be the same with him now call'd *Custos Rotulorum*. See **CUSTOS Rotulorum**.

CUSTOS Rotulorum, is he that hath the Custody of the Rolls, or Records of the Sessions of Peace; and some say, of the Commissions of Peace it self. See **PEACE**.

He is always a Justice of Peace, and *Quorum*, in the County where he hath his Office; and by his Office is rather a Minister than a Judge. Because the Commission of the Peace, by express Words, lays this special Charge upon him, *Quod ad dies & loca prædita, brevina, præcepta, processus, & iudicamenta prædita coram te & iudicis sociis tuis venire facias.*

Custos Spirituum, is he who exerciseth Spiritual or Ecclesiastical Jurisdiction in any Diocese, during the Vacancy of the See. See *DIOCESS.*

This, by the Canon Law, belongs to the Dean and Chapter; but in *England*, to the Archbishop of the Province, by Prescription: Tho, divers Deans and Chapters do challenge it by ancient Charters, from Kings of this Land.

Custos Temporalium, is the Person to whose Custody a vacant See was committed by the King, as supreme Lord; who, as a Steward of the Goods and Profits, was to give an account to the Exchequer, and he into the Exchequer.

His Trust continued till the Vacancy was supply'd by a Successor, who obtained the King's Writ de *Restitutioe Temporalium*; which was commonly after *Consecration*, but sometimes before.

In the Canon Law, we meet with a *Custodi nos*, i. e. a Confidential, or Incumbent of a Benefice, who borrows his Name of some other, to collect the Fruits thereof, and is to make a Resignation whenever demanded.

CUT a Feather, in the Sea Language, is when a well-bow'd Ship so swiftly presses the Water, that it seems before her.—To *cut the Sail*, is to unfurl it, and let it fall down.

CUT-WATER, the Sharpness of a Ship, which is under the Beak-head.

CUTANEOUS, something that concerns the Skin; whether in the way of Distemper, or Remedy. See *CURTIS.*

Thus, we say, *Cutaneous Eruptions*; the Itch is a *Cutaneous Disease.*

The Word is form'd of the Latin *Cutis*, Skin.

CUTICULA, *Cuticle*, in Anatomy, a thin pellicul Membrane, void of Sense; serving as a Cover to the *Cutis* or Skin. See *CURTIS.*

The *Cuticula* is that first and outermost Covering of the Body, call'd also *Epidermis*, but more commonly the *Scarfskin*; or that soft Tegument which rises in a Blister upon a Burn, or the Application of a Caustic.

It sticks close to the Surface of the *Cutis*, or true Skin, to which it is also tied by the Vessels that nourish it; tho these are so small as not to be seen.

When examin'd by a Microscope, it appears to consist of several Lays of exceeding small Scales, which cover one another, more or less, according to its different thickness, in the several Parts of the Body; and in the Lips, where the Scales appear plainest because the Skin is thinnest, they do little more than barely touch.

These Scales are either the excretory Ducts of the Glands of the *Cutis*; as is the Case apparently in Fishes: or else the Glands have their Tubes, opening between the Scales. See *MILLIARY Gland.*

Leeuwenboeck reckons, that in one *cuticular* Scale there may be 500 excretory Ducts; and that a Grain of Sand will cover 250 Scales: so that one Grain of Sand will cover 125000 Pores or Orifices, thro' which we daily perspire. See *PERSPIRATION*, and *PORÆ.*

Yet, notwithstanding the exceeding Porosity of the *Cuticula*, it obstructs a great Part of the ferous Humours which would otherwise be evacuated by the Glands of the *Cutis*; as is evident from that plentiful Discharge consequent on the Application of a Blister, or other Accident, whereby the *Cuticula* is remov'd, and the *Cutis* bared. See *VEGETARIUM.*

The Scales are often glia'd together by the grosser Parts of our insensible Transpiration hardening upon 'em by the heat of the Body, which carries off the more volatile Particles; and in this consists that Indisposition we popularly call a *Cold.*

The Humour which is thenceforward separated by the Glands of the Skin, being pent in between the Scales, causeth frequent itching; and where the Matter has been long pent up, small Pimples, and other Pustules: for removing of which, Nature directs to those wholesome Remedies of frequent rubbing, washing, or bathing. See *LEPROSY.*

Some imagine the *Cuticle* form'd from the grosser Parts of the excrementitious ferous Humour, eliminat'd thro' the Pores of the *Cutis*, and condens'd on the Surface; like the Pellicle which appears upon Evaporation on the Surface of the Serum of the Blood: But *Leeuwenboeck*, with more probability, takes it to be from an Expansion of the Excretory Ducts of the Glands of the Skin.

Its use is to defend the Nerves of the *Cutis*, which are the Origin of the Sense of Feeling, from the Injuries of rough and hard Bodies, as well as the Air: for either of those would make too exquisite and painful an Impression on the naked Nerves; or the Air would dry them, so as that they would be less susceptible of the nicer Touches of Pleasure. See *FEELING.*

Riolanus, and several others, maintain that the *Cuticula* of Women has no Pores: *Molinette* argues the contrary from their Sweating; but maintains, withal, that this is true of Dogs and Cats, which never sweat, how much soever fatigued. See *SWEAT.*

CUTIS, in Anatomy, the Skin; a Reticular Plexus, or Body of Vessels, immediately under the *Cuticle*, or Scarf-Skin. See *SKIN*, and *CUTICULA.*

The Vessels of the *Cutis* contain a mucous Liqueur; from the Tincture of which, *Malpighi*, and others, take the Colour of the Skin to be deriv'd; founded on this, that the *Cutis*, as well as *Cuticle* of Blacks is white, and the Blood red, &c. and that the only thing they have peculiar in this Part, is the Colour of this Liqueur. See *NERVO.*

The *Cutis* consists of Fibres of its own; or, according to *Steno*, is form'd out of the Productions of the Tendons of the subjacent Parts; which terminate in an infinite Number of pyramidal *Papillæ*, interwoven with innumerable nervous Fibres, and other Vessels, forming what we call a *Parenchyma*. See *PARENCHYMA.*

'Tis by means hereof that the *Cutis* becomes the Organ of Feeling. See *PYRAMIDALES Papillæ.*

The *Cutis* is generally connected to the subjacent Parts by the *Membrana Adiposa*, and its proper Vessels, the Veins, Arteries, Nerves, &c. Its Use, is to wrap up and cover the whole Body; to be a general Eminentory for the Matter of Perspiration; and to be the Organ of Feeling. See *PERSPIRATION*, *FEELING*, &c.

The Diseases of the *Cuticula* and *Cutis*, are the *Itch*, *Leprosy*, *Small-Pox*, *Measles*, *Scarlet Fever*, and *Erysipelatous Inflammations*. See *ITCH*, *POX*, *LEPROSY*, &c.

CUTTER of the *Tallies*, an Officer of the Exchequer, who provides Wood for the *Tallies*, and cuts the Sum paid upon them. See *TALLY.*

CUTTING, a Term us'd in various Senses, and various Arts; in the general, it implies a Division or Separation.

CUTTING is us'd in Heraldry, where the Shield is divided into two equal Parts, from right to left, parallel to the Horizon, or in the Fesse-way. See *COUPEE.*

The Word is also applied to the Honourable Ordinaries, and even to Animals, and Moveables, when they are divided equally the same way; so, however, as that one Moiety is Colour, the other Metal. The Ordinaries are also said to be *cut, coup'd*, when they come full to the Extremities of the Shield.

CUTTING, Lithotomy, in Chirurgery, the Operation of extracting the Stone out of the Bladder. See *STONE.*

It appears, that *Cutting* was in use for the Stone, even in the Time of *Hippocrates*; tho we are perfectly in the dark as to the manner in which they perform'd it: It was, however, wholly disus'd in the after-Ages; insomuch, that in the beginning of the XVIth Century, there was no body durst practise it. The Faculty of Medicine at *Paris* were oblig'd to address themselves to the Parliament, to obtain Leave to make a Trial on a Criminal condemn'd to Death, who had the Stone in the Bladder: the Operation succeeding, the Practice became popular.

There are three principal Ways of performing the Operation, the *Apparatus minor*, *Apparatus major*, and *Apparatus altus*; or the *low, lateral, and high Operations*. The Method of performing each, see under the Article *LITHOTOMY.*

CUTTING-Glass, in Chirurgery. See *CUPPING-Glass.*

CUTTING, in Coinage. When the *Lamine*, or Plates of the Metal, be it Gold, Silver, or Copper, are brought to the thickness of the Species to be coin'd, pieces are *cut out*, of the Thickness, and nearly of the Weight of the intended Coin; which are now call'd *Planchelets*, till the King's Image have been stamp'd on 'em. See *COINING.*

The Instrument wherewith they *cut*, consists of two pieces of Steel, very sharp, and placed over one another; the lower a little hollow, representing a Mortar, the other a Pestle.

The Metal being put between the two, is *cut out* in the manner describ'd.

Note, Medallions, where the Relievo is to be great, are not *cut*, but cast, or moulded. See *MEDAL.*

CUTTING, in the Manage, is when the Horse's Feet interfere; or when with the Shoe of one Foot he beats off the Skin from the pastern Joint of another Foot. See *INTERFERING.*

This is more frequent in the hind Feet than the fore: The Causes are either Wearis'd, Weakness in the Reins, not knowing how to go, or ill shoeing.

CUTTING, in Painting, the laying one strong lively Colour over another, without any Shade or Softening. See *COLOURING.*

The *Cutting* of Colours has always a disagreeable Effect.

CUTTING in Wood, a particular Kind of Sculpture, or Engraving; denominated from the Matter wherewith it is employ'd. See *ENGRAVING.*

It is us'd for various Purposes; as for initial or figured Letters, Head and Tail-pieces of Books; and even for Schemes

Schemes and other Figures; to save the Expences of engraving on Copper: and for Prints, and Stamps, for Paper, Calicoes, Linsens, &c. See PRINTING.

The Invention of *Cutting in Wood*, as well as that in Copper, is ascribed to a Goldsmith of Florence; but 'tis to *Albert Durer*, and *Lucas*, they are both owing for their Perfection.

One *Hugo de Carpi* invented a manner of *Cutting in Wood*, by means whereof, the Prints appear'd as if painted in Clair-Obfcur: In order to this, he made three Kinds of Stamps for the same Design; which were drawn, after one another, thro' the Press for the same Print: They were so conducted, as that one serv'd for the grand Lights, a second for the Demi-Tints, and a third for the Outlines, and the deep Shadows.

The Art of *Cutting in Wood*, was certainly carried to a very great Pitch about 150 Years ago; and might even vie, for Beauty and Justness, with that of engraving in Copper: At present 'tis in a low Condition, as having been long neglected, and the Application of Artists wholly employ'd on Copper, as the more easy and promising Province: Not but that wooden *Cuts* have the Advantage of those in Copper on many Accounts; chiefly for Figures and Devices in Books; as being printed at the same Time, and in the same Press as the Letters; whereas, for the other, there is requir'd a particular Impression.

The *Cutters in Wood* begin with preparing a Plank or Block, of the size and thickness requir'd, and ever even and smooth on the Side to be cut: for this, they usually take Pear-Tree, or Box; tho' the latter is the best, as being the closest, and least liable to be worm-eaten.

On this Block they make their Design with a Pen, or Pencil, just as they would have it printed. Those who can't make their own Design, as many there are cannot, make use of a Design furnish'd 'em by another; fastening it upon the Block with Paste of Flower and Water, with a little Vinegar; the Strokes or Lines turn'd towards the Wood.

When the Paper is dry, they wash it gently over with a Sponge dip'd in Water; which done, they take off the Paper by little and little, still rubbing it a little first, with the Tip of the Finger; till at length there be nothing left on the Block, but the Strokes of Ink that form the Design, which mark out so much of the Block as is to be spared, or left standing.

The rest they cut off, and take away very curiously with the Points of fine sharp Knives, or little Chisels, or Gravers, according to the Bigness or Delicacy of the Work; for they need no other Instruments.

CUTTINGS, or Slips, in Gardening, the Branches or Sprigs of Trees, or Plants, cut or slipp'd off to set again; which is done in any moist, fine Earth. See PLANTING.

The best Season is from *August* to *April*; but Care is to be taken, when 'tis done, the Sap be not too much in the Top, left it die ere that Part in the Earth have Root enough to support it: nor yet must it be too dry, or scanty; the Sap in the Branches assisting it to take Root.

In providing the *Cuttings*, such Branches as have Joints, Knots, or Burs, are to be cut off two or three Branches beneath them, and the Leaves to be strip'd off so far as they are set in the Earth. Small Top Branches, of two or three Years growth, are fittest for the Operation. See MANURING, GARDENING.

CYCLE, in Chronology, *Circle*; a certain Period, or Series of Numbers, proceeding orderly from first to last, and recurring again from last to first; successively, and without interruption. See PERIOD.

The Origin of *Cycles* was thus: The apparent Revolution of the Sun round the Earth, has been divided, arbitrarily, into 24 Hours; the Basis or Foundation of all our Mensuration of Time. Civil Use knows none but Hours; or rather, Multiples of Hours, as Days, and Years. But neither the annual Motion of the Sun, nor that of the other Heavenly Bodies, can be measur'd exactly, and without any Remainder, by Hours, or their multiples. That of the Sun, v. g. is 365 Days, 5 Hours, 49 Minutes, nearly; that of the Moon 29 Days, 12 Hours, 44 Minutes.

Hence, to swallow up these Fractions in whole Numbers, and yet in Numbers which only express Days, and Years; *Cycles* have been invented: which comprehending several Revolutions of the same Body, replace it, after a certain Number of Years, in the same Points of the Heaven, whence it first departed; or, which is the same thing, in the same Place of the Civil Calendar. See CALENDAR.

Such is the famous *Cycle of 19 Years*, call'd also the *Cycle of the Moon, or Lunar Cycle*, a Period of 19 Lunar Years, and seven Intercalary Months; equivalent to 19 Solar Years: in which Time, the New and Full Moons are suppos'd to return to the same Day of the *Julian Year*. See MOON.

This is also call'd the *Metonic Period*, from its Inventor *Meton*, the *Athenian*; and the *Golden Number*: tho' properly, the *Golden Number* is the particular Number which

shews the Year of the *Lunar Cycle*, any given Year is in.

This *Cycle of the Moon* only holds true for 312 Years: For, tho' the New Moons do return to the same Day after 19 Years; yet not to the same time of the Day, but near an Hour and a half sooner: which Error, in 312 Years, amounts to an entire Day.

Yet, those employ'd in reforming the Calendar, went on a Supposition of the Lunations returning precisely from 19 Years to 19 Years, for ever. See GREGORIAN.

The Use of this *Cycle* in the ancient Calendar, is to shew the New Moon of each Year, and the Time of Easter. See EASTER.

In the new one, it only serves to find the *Epaets*; which shew, in either Calendar, that the New Moons fall 11 Days too late. See EPOCH.

As the Orientals began the Use of this *Cycle* at the Time of the Council of *Nice*; they assum'd, for the first Year of the *Cycle*, the *Paskhal* New Moon to fall on the 13th of *March*: On which foot, the *Lunar Cycle* 3, fell on the 1st of *January*, in the third Year.

The Occidentals, on the contrary, put the Number 1 to the 1st of *January*, which occasion'd a considerable Difference in the Time of *Easter*: Hence, *Dionysius Exiguus*, upon framing a new Calendar, persuad'd the Christians of the *West* to save the Difference, and come into the Practice of the Church of *Alexandria*.

To find the Year of the *Lunar Cycle*, is to find the *Golden Number*. See GOLDEN NUMBER.

CYCLE of Inditions, is a Series of 15 Years, returning constantly around, like the other *Cycles*; and commencing from the third Year before Christ. See INDITION.

When this *Cycle of Inditions* was first set on foot among the *Romans*, and for what End; is much controverted among Chronologers. *Petavius* leaves it as a thing not to be ascertain'd. The most probable Opinion is, that it was receiv'd about the Year 312, after the Time of *Constantine*.

To find the *Cycle of Indition* for any given Year; add 3 to the given Year, and divide the Sum by 15, the Remainder is the *Cycle of Indition*.

If there be no Remainder the *Cycle* is 15.

CYCLE of the Sun, or Solar Cycle, a Revolution of 28 Years; beginning with 1, and ending with 28; which elapsed, the Dominical or Sunday-Letters, and those that express the other Feasts, &c. return into their former Place, and proceed in the same Order as before. See DOMINICAL, &c.

'Tis call'd *Solar Cycle*, not with regard to the Sun's Course, which has nothing to do herein; but from Sunday, anciently call'd *Dies Solis*, the Day of the Sun: in regard, 'tis the Dominical Letter is principally fought for from this Revolution; the Dominical Letters, which are the first in the Alphabet, having been substituted in lieu of the Nundinal Letters of the *Romans*.

The Reformation of the Calendar under *Pope Gregory*, occasion'd a considerable Alteration of the *Cycle*: In the *Gregorian* Calendar, the *Solar Cycle* is not constant and perpetual; in regard, every fourth Secular Year is Common; whereas, in the *Julian* 'tis Bissextile. The Epochs, or Beginning of the *Solar Cycle*, both *Julian* and *Gregorian*, is the 9th Year before Christ.

To find the *Cycle of the Sun* for any given Year; add 9 to the Number given, and divide the Sum by 28; the Number remaining will be the Number of the *Cycle*, and the Quotient the Number of Revolutions since Christ.

If there be no Remainder, it will be the 28th, or last Year of the *Cycle*.

CYCLE of the Sun in the Julian Year.

CYCLE, it may be observ'd, is not only us'd in the general, for all the Numbers that compose the Series; but for each Number in particular: Thus, we compute, that the ordinary Epochs of the Birth of Jesus Christ, had the *Solar Cycle* 10; the *Lunar Cycle*, or the *Golden Number* 2; the Dominical Letter B, and the *Cycle of Indition* 4.

CYCLISCUS, from *κύκλος*, *Circulus*; an Instrument in form of an Half-Moon; us'd by the Surgeons to scrape away Rottensels.

CYCLOID, in Geometry, one of the Mechanical, or, as others term 'em, the Transcendental Curves; called also the *Trochoid*. See CURVE, and TROCHOID.

It is describ'd by the Motion of a Point A, (Tab. *Ana-*lyt. Fig. 53.) in the Periphery of a Circle; while the Circle makes a Revolution along the right Line A P.

Hence, the *Properties of this Curve*, viz. that the right Line A E is equal to the Periphery of the Circle A B C D; and A C to the Semi-periphery; and in any Situation of the generating Circle, the right Line A d is equal to the Arch D d. — Again, a d being parallel to A c; A d is equal to the Arch of the generating Circle d F. — Further, the whole length of the *Cycloid* is four times that of the Diameter of the generating Circle; and the *Cycloidal Space* comprehended between the Curve and the Subtense A E, triple the Area of the generating Circle. — Lastly, any Part estimated from the Vertex, as F I, is every where double the Chord of the Circle F B; and the Tangent thereof G I, perpetually parallel to the same Chord F B.

The *Genesi of the Cycloid*, may be conceiv'd by imagining a Nail in the Circumference of a Wheel; the Line which the Nail describes in the Area, while the Wheel revolves in a right Line, is the *Cycloid*.

The *Cycloid* is reputed a modern Curve, and its Invention ascrib'd by some to *Morienne*; by others to *Galileo*; but *Dr. Wallis* shows it of an older Standing, and to have been known to *Bovillus*, about the Year 1500; and even consider'd by Cardinal *Cusanus* much earlier, viz. before the Year 1451.

Huygens has demonstrated, that from whatever Point, or Height, a heavy Body, oscillating on a fix'd Centre, (viz. a Pendulum) begins to descend; while it continues to move in a *Cycloid*, the Times of its Falls, or Oscillations, will be equal to each other.

This Property *M. Fontenelle* states thus: The Nature of the *Cycloid* is such, that, if a Body which describes it, fall from a greater height, and by that means acquire a certain Augmentation of Velocity, as in *Galileo's* Theory; the greater *Cycloidal* Arch which it describes, takes up precisely that Excess of Velocity. So that the Body does not describe it, either sooner for its being accelerated, or later for having a greater Space to move: And hence arises an Equality in Time, notwithstanding the Inequality of Arches.

On this Foundation it is, that the Pendulum Clock is built: on the Subject whereof, the same *M. Huygens* has writ a large Volume, under the Title of *Horologium Oscillatorium*. See PENDULUM; see also OSCILLATION.

CYCLOIDAL Space, the Space contained between the *Cycloid*, and the Subtense thereof. See CYCLOID.

CYCLEMETRY, the Art of measuring Cycles, or Circles. See CYCLE, and CIRCLE.

CYCLOPEDIA, the Circle, or Compass of Arts and Sciences; more ordinarily call'd *Encyclopaedia*. See ENCYCLOPEDIA.

CIGNUS, the Swan, in Astronomy, a Constellation of the Northern Hemisphere. See CONSTELLATION.

Stars in the Constellation *Cygnus*, in *Ptolemy's* Catalogue are 17; in *Tycho's* 19; in the *Britannic Catalogue* 107. The Order, Names, Longitudes, Latitudes, Magnitudes, &c. whereof, are as follow.

Stars in the Constellation CIGNUS.

CYLINDER, in Geometry, (from the Greek *κύλινδρος*, a round long Stone;) a solid Body, contain'd under three Surfaces; suppos'd to be generated by the Rotation of a Parallelogram, as CBEF, (Tab. Geometry, Fig. 55.) about one of its Sides, CF. See SOLID.

If the generating Parallelogram be Rectangular, as CBEF, the Cylinder it produces will be a right Cylinder, i. e. a Cylinder whose Axis is perpendicular to its Base.

If the Parallelogram be a Rhombus, or Rhomboides, the Cylinder will be oblique, or scalenous.

The Surface of a right Cylinder, exclusive of its Bases, is demonstrat'd to be equal to a Rectangle contain'd under the Periphery, and the Altitude of the Cylinder.

The Periphery, therefore, of the Base, and thence the Base it self, being found, and multiply'd by two, and the Product added to the Rectangle of the Height, and Periphery of the Cylinder; the Sum will be the Area or Superficies of the Cylinder; multiply this by the Area of the Base; and the Product will be the Solidity of the Cylinder.

For it is demonstrat'd, that a Circle is equal to a Triangle, whose Base is equal to the Periphery, and Height, to the Radius; and also, that a Cylinder is equal to a Triangular Prism, having the same Base and Altitude with it self: Its Solidity, therefore, must be had by multiplying the Superficies into the Base. See PRISM.

Again, since a Cone may be esteem'd an infinite-angular Pyramid; and a Cylinder an infinite-angular Prism; a Cone is one third Part of a Cylinder, upon an equal Base, and of the same Height. See CONE.

Further, a Cylinder is to a Sphere of the same Base and Altitude as 3 to 2. See SPHERE.

Lastly, it being demonstrat'd in Mechanics, that every Figure, whether Superficial or Solid, generated, either by the Motion of a Line, or of a Figure; is equal to the *Fatum* of the generative Magnitude into the Way of its Centre of Gravity, or the Line its Centre of Gravity describes: Hence, if the Rectangle ABCD, (Tab. Aërostatics, Fig. 45.) revolve about its Axis AD, it will describe a Cylinder, and its Side BC the Surface of the Cylinder. But the Centre of Gravity of the right Line BC, is in the Middle F; and the Centre of Gravity of the generating Plane in the Middle G, of the right Line EF. The Way of this, therefore, is the Periphery of a Circle describ'd by the Radius EG; and of that, the Periphery of a Circle describ'd by EF. The Superficies, therefore, of the Cylinder, is the *Fatum* of the Altitude BC, into the Periphery of the Circle describ'd by the Radius EF, i. e. into the Base: But the Solidity of the Cylinder, is the *Fatum* of the generating Rectangle ABCD, into the Periphery of the Circle describ'd by the Radius EG; which is Subduple of EF, or the Semidiameter of the Cylinder.

Suppose, v. g. the Altitude of the describing Plane, and therefore of the Cylinder, $BC = a$, the Semidiameter of the Base $DC = r$; then will $EG = \frac{3}{2}r$; and supposing the Ratio of the Semidiameter to the Periphery, $= 1 : m$; the Periphery describ'd by the Radius, $\frac{3}{2}r$ will be equal to $m \cdot r$. Therefore, multiplying $\frac{3}{2}mr$ into the Area of the Rectangle $AC = ar$; the Solidity of the Cylinder $= \frac{3}{2}m \cdot ar^2$: But $\frac{3}{2}mr = r \cdot m \cdot a$, and $\frac{3}{2}mr$, the Area of the Circle describ'd by the Radius DG. The Solidity of the Cylinder, therefore, is equal to the *Fatum* of the Base, and the Altitude.

For the Ratio of CYLINDERS; as the Radii of all Cylinders, Cones, &c. are in a Ratio compos'd of their Bases, and Altitudes: Hence, if their Bases be equal, they will be in the Ratio of their Heights; if their Altitudes be equal, in the Ratio of their Bases.

Hence, also, the Bases of Cylinders and Cones being Circles; and Circles being in a duplicate Ratio of their Diameters; all Cylinders and Cones are in a Ratio compos'd of the direct Ratio of the Altitudes, and the duplicate one of their Diameters: and, if they be equally high, as the Squares of the Diameters.

Hence, again, if in Cylinders the Altitude be equal to the Diameter of the Bases, they will be in a triplicate Ratio of the Diameters of the Base. All Cylinders, Cones, &c. are in a triplicate Ratio of their homologous Sides; as also of their Altitudes.

Again, equal Cylinders, Cones, &c. reciprocate their Bases and Altitudes.

Lastly, a Cylinder whose Altitude is equal to the Diameter of the Base, is to the Cube of its Diameter, as 785 to 1000.

To find a Circle equal to the Surface of a given CYLINDER, we have this Theorem: The Surface of a Cylinder is equal to a Circle, whose Radius is a Mean Proportional between the Diameter and Height of the Cylinder. See SUPERFICIES.

The Diameter of a Sphere, and Altitude of a CYLINDER equal thereto, being given; to find the Diameter of the Cylinder: The Theorem is; The Square of the Diameter of the Sphere, is to the Square of the Diameter of the Cy-

linder, equal to it, nearly, as triple the Altitude of the Cylinder, to duple the Diameter of the Sphere. See SPHERE.

To find a Rete, or Net, whence a Cylinder may be form'd, or wherewith any Cylinder may be cover'd. With the Diameter of the Base, describe two Circles; find their Peripheries; and upon a Line equal to the Altitude of the Cylinder, form a Rectangle, whose other Dimension is equal to the found Periphery. Thus may the Cylinder requir'd be form'd, or cover'd.

CYLINDER charged, in Gunnery, is the Chamber of a great Gun. See ORDNANCE.

CYLINDER concave, in Gunnery, is all the Chace, or hollow length of a Piece of Ordnance. See ORDNANCE.

CYLINDER vacant, in Gunnery, is that Part of the Hollow that remains empty, after the Gun is charg'd. See CANON.

CYLINDROID, in Geometry, a solid Body, approaching the Figure of a Cylinder; having, v. g. its Bases elliptical, parallel, and equal.

The Word comes from the Greek *κύλινδρος*, Cylinder, and *ειδής*, Form.

CYMA, in Botany, a Term signifying the Top of any Plant, or Herb.

CYMA, in Architecture. See CIMA, SIMA, and CYMATIUM.

CYMATIUM, CIMATIUM, or CIMA, in Architecture, (from the Greek *κύματις*, undula;) a Member, or Moulding of the Cornice, whose Profile is wavy, i. e. concave a-top, and convex at bottom; frequently also call'd *Doucine*, *Gorgée*, or *Gula Reclia*; especially by the French: by the Italians *Galletta*, i. e. *parva Gula*; but more usually, *Cymatium*, among us; as being the last, or uppermost Member, *q. d.* the *Cyma*, or Summit of the Corniche. See CORNICHE.

Some write it *Simatse*, from *Simus*, *Canus*, hat-nois; but this Etymology is unlucky: the Beauty of the Moulding consisting in its having its Projecture equal to its Height.

M. Felibien, indeed, will not allow this Etymology; contending, that the Moulding is not so denominat'd from its being the uppermost Member of the Corniche; but, according to the Sentiment of *Vitruius*, from its being wavy.

This is certain, that *Vitruius* sometimes uses the Word *Unda* for *Cymatium*, and sometimes *Lyffis*, i. e. *Solution*, *Separation*; in regard, Corniches, where the *Cymatise* are found, separate one piece of Architecture from another; as the Pedestal from the Column, and the Priece from the Corniche.

But, withal, it must be observ'd, that he does not confine *Cymatium* to the Corniche; but also it indifferently for any similar Moulding, where'er he meets with it: in which he differs from the most accurate among the Moderns.

Felibien makes two Kinds of *Cymatium*; the one right, the other inverted: In the first, that Part which projects the furthest is concave, and is otherwise call'd also *Gula Reclia*, and *Doucine*. See DOUCINE.

In the other, the Part that projects furthest is convex, call'd *Gula Inversa*, or *Talon*. See TALON.

Our Architects don't use to give the Name *Cymatium* to these Mouldings, except when found on the Tops of Corniches; but the Workmen apply the Name indifferently, wherever they find 'em.

Palladio distinguishes the *Cymatium* of the Corniche by the Name *Intacoletum*.

Tuscan CYMATIUM, consists of an Ovolo, or Quarter-Round. *Philander* makes two *Doric* *Cymatium*, whereof this is one: *Baldus* calls this the *Lesbian Astragal*.

Doric CYMATIUM, is a Cavetto, or a Cavity less than a Semicircle, having its Projecture subduple its Height.

Lesbian CYMATIUM, according to *Vitruius*, is what we otherwise call *Talon*, viz. a concavo-convex Member, having its Projecture subduple its Height. See TALON.

CYMBAL, a Musical Instrument, used among the Antients; call'd by the Greeks *κύμβαλον*, and by the Latins *Cymbalum*.

It was of Brass, like our Kettle-Drums; and some think in their Form, but smaller, and its Use different.

Cassiodorus, and *Isidore*, call it *Acetabulum*, the Name of a Cup or Cavity of a Bone wherein another is articulated; and *Xenophon* compares it to a Horse's Hoof: whence it must have been hollow; which appears, too, from the Figure of several other Things, denominat'd from it, as a Balon, Caldron, Goblet, Calque; and even a Shoe, such as those of *Empedocles*, which were of Brass.

In effect, the antient *Cymbalis* appear to have been very different from our Kettle-Drums, and their Use of another Kind: To their exterior Cavity was fasten'd a Handle; whence *Pliny* takes occasion to compare 'em to the upper Part of the Thigh, *Coxendicibus*; and *Rabban* to Phials.

They were struck against one another, in Cadence, and made a very acute Sound. Their Invention was attributed to *Cybele*; whence their use in Feasts and Sacrifices: Setting

ring aside this Occasion, they were seldom used but by dissolute and effeminate People.

Mr. Lampe, who has wrote expressly on the Subject, attributes the Invention to the *Caretes*, or Inhabitants of Mount *Ida* in *Crete*: 'Tis certain, these, as well as the *Corybantæ*, or *Guards* of the Kings of *Crete*; and those of *Rhodes*, or *Samos*, were reputed to excel in the Musick of the *Cymbal*. See *CORYBANTES*.

Sylburgius derives the Word *κίμβηλον* from three several Greek Roots, viz. from *κίμα*, crooked; from *κίμβη*, Cup; and from *εὐφών*, Voice. *Isidore* derives it from *cyma*, and *ballo*, to dance, an immodest Dance, used to accompany this Instrument. The real Etymology appears to be from *κίμβη*, *Cymba*.

The *French*, too, had their *Cymbals*, which they called *Timbales*, or *Timbales*; or at least, Instruments that the *Greek*, *Latin*, and *English* Translators render *Cymbals*; for as to their Matter, Form, &c. the Critics are wholly in the dark.

The Modern *Cymbal* is a paltry Instrument, chiefly in use among *Vagrants*, *Gypsies*, &c. It consists of steel Wire, in a triangular Form, whereon are fast'd five Rings, which are touch'd and shifted along the Triangle with an Iron Rod held in the left Hand, while 'tis supported in the right by a Ring, to give it the freer Motion.

Demetrius Lys, that the Monks us'd the Word *Cymbal* for the Bell hung in the Cloister, us'd to call 'em to the Refectory.

CYMBIFORME Os, in Anatomy. See NAVICULARE Or. CYNETICS, *Cynerica*, Books treating of the Art of Hunting. *Grævus Faliscus* has wrote *Cynerica* with Applause.

CYNICS, a Sect of ancient Philosophers, who valu'd themselves on their Contempt of every thing, especially Riches and State, Arts and Sciences; all excepting Morality.

The Founder of this Sect is said to have been *Antisthenes*, a Disciple of *Socrates*; who, after his Master's Death, quitting the *Pyreum*, retir'd to *Cynosarges*, a kind of Academy not far from the Gates of *Athenæ*.

Hence, some will have it, came the Name *κυνικός*, *Cynicus*, viz. from *Cynosarges*. But others, with more probability, derive it from *κύων*, *Canis*, because of their Severity and Impertinency in reprehending Vice.

Thus, *Aristotle* observes, *αἱ κύνες ἰσχυροὶ ἐστὶν ἀπὸ τῆς φύσεως ἐκείνης τοῦ κύνος*, *Canes* were so called, from their free way of rebuking, &c.

Hence, *Digenes* the *Cynic* said of himself, *κύων ἐστίν, I bite the Evil*; and *Antisthenes* himself was called *κύων*, an ingenious and sincere Dog: It being the distinguishing Character of the *Cynics*, to attack and bark at the ill, and to defend and fawn on the Good.

Arius praises the *cynical* Genius to the Skies: 'A *Cynic*, says he, is a Messenger sent from *Jupiter*, to overlook human Affairs;—a publick Doctor, and Tutor of 'Mankind; instructs, and chastises at the same time:—An *Æsculapius*; a Lord and King, adorn'd with a Scepter and Diadem,—who governs the People; and this voluntarily, without trembling, without Guards, &c. but by a good Confidence.

The Ground of this Encomium, may be owing, in some measure, to that affinity between the *Stoicks* and *Cynicks*: the chief difference between 'em was, that the former were more modest and reserv'd than the latter; who were said to have banish'd all Shame, and were able to practise any Obscenity without blaspheming.

Hence, *Laertius* observes of *Digenes*, that he did every thing openly, whether it belong'd to *Ceres* or to *Venus*: Tho, the same *Laertius* adds, that he did it in imitation of the *Cherididefalsi*, i. e. he only ran to an Excess of Impudence, to put others out of conceit with it.

Spasmus CYNICUS, a sort of Spasm, or Convulsion; whereby the Patient is brought to imitate the Gestures, Snarlings, Howlings, &c. of a Dog. See SPASMUS.

Dr. *Frensd*, in the *Philosophical Transactions*, gives us an Account of a very extraordinary *Spasmus* of this Kind, wherewith two Families, at *Blackborn* in *Oxfordshire*, were seiz'd.

The Novelty of the Thing drew abundance of Visitors to the Village, and among the rest Dr. *Willis*; who, a good while ere he reach'd the Place, heard a terrible Noise of barking and howling; upon his entering the Houſe, he was frist saluted with five Girls, bawling, and answering each other by turns, with violent Motions of the Head. In their Face there was no Convulsion seen, beside *Cynic* Distortions, and Oscillations of the Mouth: Their Pulse was pretty regular; their Noise was rather like that of the howling, than of the barking of Dogs; only that its Returns were more frequent, with deep Sighings between.

The *Spasmus* had seiz'd 'em all equally; whereof the youngest was but six, and the eldest fifteen Years of Age; At Intervals they had their Reason and Senses entire; but

not long, ere one of 'em returning to her yelling, set on the rest: till at length, all fainting, they fell like *Epilepticks* on a Bed laid in the middle of the Room to receive 'em.

A little while they would lie quietly and decently together; but upon a new Organ of the Spirits, they began to beat and bruise each other. Two of the youngest awak'd while the Doctor staid, and left their Sisters on the Bed; but the *Spasmus* soon had hold on 'em again.

In July, 1700, Dr. *Frensd* himself visited another Family, in the same Village; where one Boy and three Girls had been seiz'd ten Weeks, without any apparent preceding Cause. A Girl had it first; and the rest, as the Mother inform'd him, were so struck with their Sister's Disorder, that they too were seiz'd.

At his Arrival, they were all at play, very briskly and unconsciously, before the Doors; at length the eldest Girl, about fourteen Years of Age, was seiz'd as usual.

The only Symptom of its approach, was a Swelling of the Stomach; which rising gradually up the Throat, for the Muscles of the Larynx and the Head upon their usual Convulsions: This Rising was a certain Symptom of an approaching Paroxysm in 'em all; and if they endeavour'd to stop it, it burst out with the greater Violence, and held the longer.

The Noise they made was incessant, and disagreeable; yet not so much like the barking or howling of Dogs, as had been given out, as a quaint kind of a Song, consisting of three Notes, or Tones, repeated twice over; and closed by deep Sighs, &c. accompany'd with extraordinary Gestures and Mutations of the Head.

This Disease the Doctor takes to be natural; and to arise from the common Cause of all Convulsions, viz. from the Animal Spirits growing unruly in the Nerves, and driving the Muscles into various Contractions, according to the Circumstances of the Indisposition. See CONVULSION.

CYNODESMUS, among Anatomists, the Band, or Ligation, which ties the Precipice of the Yard to the Nut, or Glass. See PRECIPICE, and GLASS.

CYNOREXY, an immoderate Appetite; to the Degree of a Dificasio; called also *Fames Canina*, and *Bulimy*. See BULIMY.

CYNOSURA, in Astronomy, a Name the *Greeks* have given to *Ursa Minor*, or the little Bear. See URSA.

This is the Constellation next our Pole, consisting of seven Stars; four whereof are dispos'd like the four Wheels of a Chariot; and three lengthwise, representing the Beam; whence some give it the Name of the *Chariot*, or *Charles's Wain*.

From these seven Stars it is the Pole takes its Name, *Sep-tentrionalis*; and the rest of the Hemisphere, as far as the Line, *Septem Triones*. See POLE, NORTH, &c.

The Word *Cynosura* is form'd of *κύων*, q. d. the Dog's Tail.

CYON, or CION, a Graft, Sprig, or Sucker. See CION, GRAFT, &c.

CYPHER. See CYPHER.

CYPH, a Term in the *Arabian* Pharmacy, signifying a kind of strengthening Perfume. See PERFUME.

Mithridates gives the Appellation *Cyphi* to the Traches wherewith the *Egyptian* Priests us'd to sweeten their Gods, to make 'em grant what they requested. He us'd the same in the Composition of *Mithridate*, on account of their efficacy against Poisons, Disturbances, &c. See MITHRIDATE.

The *Cyphi* are compos'd of Raisins, or dry'd Grapes, Turpentine, Myrrh, Bellium, Spica Nardi, Cassia Lignea, Al-palathum, Saffron, &c. temper'd into a Malt with Honey and a little Wine.

CYPHONISM, CYPHONISMUS, a Kind of Torture, or Punishment, in use among the Antients.

The Learned are at a loss to determine what it was: Some will have it to be that mention'd by *S. Jerome*, in his Life of *Paul the Hermit*, Ch. II. which consisted in forcing the Body over with Honey, and thus exposing the Party, with his Hands ty'd, to the warm Sun, to invite the Flies and other Vermin to persecute him.

CYPRESS, *Cypressus*, in Natural History, a precious sort of Wood, the Produce of a Tree of the same Name; frequent in the Island of *Cyprus*.

It is very compact, and heavy; and its Smell as agreeable as that of Santal. It scarce ever rots, decays, or is worm-eaten, no more than Cedar, or Ebony: For which Reason, the Antients us'd it to make the Statues of their Gods.

In *Candia*, and particularly about Mount *Ida*, the Plant is said to rise spontaneously, wherever the Earth is a little dug; but is exceeding difficult to raise by Art.

The Fruit of this Tree, call'd *Cones*, is us'd in stringent Decoctions, for *Hernia's*, *Hæmorrhages*, &c.

CYPRUS, an Order of Knights, call'd also Knights of Silence, and Knights of the Sword; instituted by *Guy de Lusignan*, King of *Cyprus*, in 1192.

The Design of the Institution was, to oppose the Descents and Irruptions of the Infidels in this Island: Accordingly, their Motto was *Securitas Regni*. See SWORN.

CYRENAICI, a Sect of ancient Philosophers; so called from their Chief, *Aristippus* of *Cyrene*, a Disciple of *Socrates*.

Their leading Tenet was, that Man was born for Pleasure; and that Virtue is only so far laudable, as it conduces thereto.

By Pleasure, they meant, not only a Privation from Pain, and a Tranquillity of Mind like what *Epicurus* preach'd up; but an Asssemblage of all the positive Pleasures both of the Mind and the Senses; especially the last.

Cicero makes frequent mention of *Aristippus's* School; and speaks of it as if it yielded Debauchees.

Three Disciples of *Aristippus*, after his Death, divided the Sect into three Branches; under which Division it languish'd and sunk: the first call'd the *Hegesiac* School; the second the *Annicerian*, and the third the *Theodorian*; from the Names of their Authors.

CYRTOMA, a Tumor in any Part of the Body. See TUMOR.

CYST-HEPATIC Duct, a Canal, by which the *Porus Biliaris* discharges part of its Bile into the Gall-Bladder. It was first describ'd by *Dr. Glisson*, and long afterwards pretended to be discover'd by *M. Perrault*.

Verheyen, from the Course of the Bile, inverts the Name, and more properly calls it *Hepaticocysticus*. See HEPATOCYSTICUS.

CYSTIC, an Epithet given to two Arteries and two Veins in the Gall-Bladder. See GALL-Bladder.

The *Cystic* Arteries, or *Cystice Gemelle*, are two Branches from the *Celiac*, bestow'd on the Gall-Bladder, and bringing Blood into the same: The *Cystic Veins* return the Remains of this Blood into the *Vena Porta*. See PORTA.

CYSTICS, are Medicines against Distempers in the Bladder. See LITHONTRIFICS.

CYSTICUS *Meatus*, a Biliary Duct, about the bigness

of a Goose's Quill; join'd to the *Meatus Hepaticus*, at about two Inches distance from the Gall-Bladder; the two together forming the *Ductus Communis*. See DUCTUS COMMUNIS.

CYSTIS, the same with *Vesica*, or *Bladder*. See VESICA, and BLADDER.

The Word is *Greek*, *ωσιν*.

CYSTIS *Cholodochus*, the same with *Folliculus Felleus*. See FOLLICULUS.

CYTHARA, an ancient Musical Instrument, by some supposed the same with the *Lyra*; at least, a particular Species of the *Lyra*; by others different: Tho' its precise Structure does not appear. See LYRA.

The Antients describe it as triangular, in form of a *Greek Delta*, Δ: The Poets ascribe the invention to *Apella*.

CYZICENES, *Cyzicenus*, among the ancient *Greeks*, were a sort of magnificent Banqueting-Houses, always expos'd to the North, and usually opening upon Gardens.

They had their Name from *Cyzicus*, a City very considerable for the Grandeur of its Buildings; situate in an Island of the *Propontis* of the same Name.

These *Cyzicenes* were among the *Greeks*, what the *Triclinia* and *Cenacula* were among the *Romans*.

CZAR, a Title of Honour, assum'd by the Grand-Dukes, or, as they are now styl'd, Emperors, of *Russia*.

The Natives pronounce it *Tsar*, or *Zaar*; and this, by Corruption, from *Cesar*, Emperor: they pretending to be descended from *Augustus*; and accordingly bearing the Eagle as a Symbol of their Empire. See CESAR.

The first who bore the Title of *Czar*, was *Basil*, Son of *Basilides*, who freed his Country from its Subjection to the *Tartars*, and first set it on its present Footing, about the Year 1470.

M. Sperlingius, in his Dissertation on the Majesty of the Name *Konning*, observes, that the *Russian* Princes never bore the Name of *Czar*, till their People had embrac'd the *Greek* Faith: before that Time, he says, they were called *Konger*, King.

D, The 4th Letter of the Alphabet, and the 3d Consonant. Grammarians generally rank it among the Lingual Letters, as supposing the Tongue to have the principal Share in the Pronunciation thereof: Tho' the Abbot *de Dangeau* seems to have Reason in making it a palatal Letter.

The Letter D is the 4th in the Hebrew, *Chaldeæ*, *Samaritanæ*, *Syriacæ*, *Greek* and *Latin* Alphabets; in the five first of which Languages it has the same Name, tho' somewhat differently spoke, *e. gr.* in Hebrew and Chaldeæ *Daleth*, in Syriac *Dolath*, and in Greek *Delta*. The *Arabians* have three D's in their Language, the 1st call'd *Dal*, which is the 8th of their 28 Letters; the 2d, call'd *Dzhal*, is only distinguish'd from the former by having a Point added over it; tho' its Sound is confounded with that of the Z: The 3d, which is their 17th Letter, is call'd *Da*, and pronounced like our D, tho' in Form it resembles the Arabic *Ta*, all it differs in, being a Point added a-top.

The Form of our D, is the same with that of the *Latins*; as appears from all the ancient Medals and Inscriptions. And the *Latin* D, is no other than the *Greek* Δ, rounded a little, by making it quicker, and at two Strokes. The Δ of the *Greeks*, again, is borrow'd from the ancient Character of the Hebrew *Daleth*; which Form it still retains on the *Samaritan* Medals, as is shewn by the Jesuite *Soucier* in his Dissertation on the *Samaritan* Medals. All the Alteration the *Greeks* have made in it, is the making it stoop a little, and taking away a little Line. Nor would it be difficult to shew, that the *Syriac* *Dolath*, and the *Arabic* *Dal*, are both borrow'd from the ancient *Hebrew*, as well as the *Δ* *Daleth* of the *Modern* or *Chaldeæ* *Hebrew*.

Some indeed will have it, that the *Greek* Δ *Delta* is borrow'd from the *Egyptians*, who made their D of three Stars dispos'd in a Triangle; which was a Hieroglyphic that among them denoted God, the sovereign Being, as if they had had some Notion of a Trinity: But this is but poorly supported.

D is also a Numeral Letter, signifying *Five Hundred*; which arises hence, that in the *Gothic* Characters the D is half the M, which signifies a thousand—Hence the Verse
Littera D velut A Quingentes significabit.

A *Dash* added a-top, D, denotes it to stand for *Five Thousand*.

DARTIS, in Logic, one of the Modes of Syllogism. See *Mode* and *SYLLOGISM*.

DACROIDES, in Medicine, a Term applied to Ulcers, which are continually yielding any putrid Matter. The Word is form'd from *δακρυον*, Tear, and *δαίω*, Form; denoting the Ulcers to weep or shed somewhat like Tears.

DACTYL, in Antiquity, a Name attributed to the first Priests of the Goddess *Cybele*; who were particularly call'd *Dactyli Idæi*, on Account of the Goddess herself, who was call'd *Cybele Idæa*, because principally honour'd on Mount *Idæ* in *Phrygia*. The Name *Dactyli* is suppos'd to have been given them on this Occasion; That to prevent *Satan* from hearing the Cries of *Jupiter*, whom *Cybele* had committed to their Custody, they us'd to sing I know not what Verses of their own Invention, which by their unequal Measures seem'd to resemble the Foot call'd *Dactylion*. This is the Account of the Grammarian *Diomedes*. One *Sophocles*, quoted by *Strabo*, Lib. X. speaks differently. They were call'd *Dactyli*, says he, from the *Greek* Word *δακτυλος*, Finger, by Reason their Number was at first equal to that of the Fingers of the Hand, *viz.* Ten; five of them Boys, and as many Girls.—He adds, that 'tis to them we owe the Invention of Iron, and the Manner of Working it, with divers other useful Things. Others make their Number more, and others less than Ten. Some, again, make them Natives of *Phrygia* near the Foot of Mount *Idæ*; and others bring them from elsewhere.

However, all the Authors *Strabo* had seen, agreed, That they were the first who wrought in Iron near Mount *Idæ*; that they were Inapostors; that they had been Ministers of the Mother of the Gods, or *Cybele*; that they dwelt at the Foot of Mount *Idæ*. 'Tis a Conjecture among them too, not that the *Caretes* and *Corybantæ* were the same with the *Dactyli Idæi*, but that the *Caretes* and *Corybantæ* were their Posterity; That a hundred Men, born in *Creta*, were first call'd *Dactyli*; that each of these had nine Children, who were the *Caretes*; and that each of the *Caretes* had Ten Children, who were also call'd *Dactyli Idæi*. *Strabo* only gives us the Names of four of them, which are *Salaminius*, *Damaneus*, *Hercurius*, and *Aemon*. See *CORYBANTÆ*.

DACTYL, *Dactylus*, a Foot in the Latin Verse, consisting of a long Syllable, follow'd by two short ones, as

Carmine &c. Hexameter Verses usually end with a *Dactyl* and Spondee. The *Dactyl* is said to have been the Invention of *Diogenes* or *Bacchus*, who deliver'd Oracles in this Measure at *Delphos*, before *Apollo*. The *Dactyl* and Spondee are the most considerable of the Poetical Feet, as being the Measures us'd in Heroic Verse, by *Homæ*, *Virgil*, &c. These two are of equal Time, but not equal Motion. The Spondee has an even strong and steady Pace like a Trot; But the *Dactyl* resembles the nimble Strokes of a Gallop. See *QUANTITY*, *MEASURE*, &c.

DACTYL was also a Sort of Dance among the ancient *Greeks*, chiefly perform'd, as *Hesychius* observes, by the *Athletæ*.

DACTYL are also the Fruits of the *Trot*, more usually call'd *Dates*. See *DATE*.

DACTYLIC, Something belonging, or that has a Relation to *Dactylis*: Anciently there were *Dactylicæ*, as well as *Spondaicæ* Flutes, *Tibiæ Dactylicæ*. The *Dactylicæ* Flutes consisted of unequal Intervals, as the *Dactylicæ* Foot does of unequal Measures.—*Dactylicæ* Verses are Hexameter Verses, ending in a *Dactyl*, instead of a Spondee; As *Spondaicæ* Verses are those, which have a Spondee in the 5th Foot instead of a *Dactyl*. An Instance of a *Dactyl* Verse we have in *Virgil*, *Æneid*, VII. 33. *His Patria cedere Mauis: Quin Proteius omnia Perlegeres Oculis.*

DACTYLIOMANCY, *Dactyliomania*, a Sort of Divination perform'd by means of a Ring. *Dactyliomania* consisted principally in holding a Ring, suspended by a fine Thread, over a round Table, on the Edge whereof were made divers Marks with the 24 Letters of the Alphabet. The Ring in shaking, or vibrating over the Table, stop'd over certain of the Letters, which being join'd together, compos'd the Answer required. But the Operation was preceded and accompanied by several Superstitious Ceremonies: For first the Ring was to be consecrated with a World of Mystry; the Person who held it was to be clad in linen Garments, to the very Shoes; his Head was to be shaved all around; and in his Hand he was to hold Vervain. Ere he proceeded on any Thing, the Gods were first to be appeas'd by a Formulary of Prayers, &c. compiled for the Purpose. *Anianus Marcellinus* gives the Process at large in his XXXIth Book. The Word is compos'd of the *Greek* *δακτυλος*, Ring; of *ἀμαντις*, Finger, and *μαντις*, Divination.

DACTYLOMANCY. See *DACTYLIOMANCY*.

DACTYLOMOMY, The Art of Accounting, or Numbering by the Fingers. The Rule is this: The left Thumb is reckon'd 1, the Index 2, and so on to the right Thumb, which is the tenth, and of Consequence denoted by the Cypher 0.

DADO, in Architecture, is by some Writers us'd for the *Dyos*; which is the Part in the Middle of the Pedestal of a Column, between its Base and Cornice: It is of a Cubick Form, whence the Name of *Dyos*. See *DYOS*.

DADUCHI, in Antiquity, Priests of *Ceres*. That Goddess having lost her Daughter *Proserpine*, by the Fables, began to make Search for her at the Beginning of the Night. In Order to do this in the Dark, she lighted a Torch, and thus set forth on her Travels throughout the World: For which Reason it is, that she is always seen represented with a lighted Torch in her Hand. On this Account, and in Commemoration of this pretended Exploit, it became a Custom for the Priests, at the Feasts and Sacrifices of this Goddess, to run about in the Temple, with Torches after this Manner: One of them took a lighted Torch from off the Altar, and holding it in his Hand, run with it to a certain Part of the Temple; where he gave it to another, saying to him, *Tibi trado*: This second run after the like Manner to another Place of the Temple, and gave it to the third; and so of the rest.

From this Ceremony, the Priests became denominated *Daduchi*, *q. d.* Torch-bearers; from *δα*, an unctuous, and resinous Wood, as *Pine*, *fir*, &c. whereof the Ancients made Torches; and *δύω*, I have, I hold.

DAILY, in Astronomy, &c. See *DIURNAL*.

DAMAGE is generally taken to signify any Hurt or Hindrance, that a Man takes in his Estate; but particularly a Part of what the Jurors are to inquire of, in passing Verdict for the Plaintiff, or Defendant in a Civil Action, be it Personal or Real; for after Verdict given of the principal Cause, they are ask'd their Consciences touching *Costs* (which are the Charges of Suit, call'd by the Civilians *Expensæ Litis*) and *Damages*, which contain the Hindrances that the Plaintiff or Demandant hath suffered by means of the wrong done him by the Defendant or Tenant. But the Word has two several Significations; the one properly and generally, the other strictly and relatively: Properly, as it is in Cases, where *Damages* are founded on the Statute of 2. H. 4. Cap. 1. and 8. H. 6. Cap. 9. where

Costs are included within this Word *Damages*; for *Damage*, in its proper Signification, is said a *Demand*, when, by Diminution, a Thing becomes worse; and in this Sense Costs of Suits are *Damages*, to the Plaintiff, for by it, his Substance is diminished: But when the Plaintiff declares the Wrong done him to the *Damage* of such a Sum, this is to be taken relatively, for the Wrong which passed, before the Writ brought, and is assid'd by Reason of the Trespas aforesaid; and cannot extend to the Costs of Suit, which are future, and of another Nature.

DAMAGE *Foasant*, or *Pasfant*, i. e. doing hurt, or *Damage*: As when a Stranger's Beasts are doing hurt or spoiling the Grass, Corn, Woods, &c. of another Man, without his Leave or License. In which Case, the Party whom they *damage* may distrain, and impose them, both by Night and by Day; tho' in other Cases, as for Rent, Services, &c. none may distrain in the Night.

DAMASK, a Sort of Silk Stuff, having some Parts rais'd above the Ground, representing Flowers, or other Figures. *Damask* is properly a Sort of Mohair and Satin intermix'd in such Manner as that what is not Satin on one Side, is on the other. The Elevation which the Satin makes on one Side, is the Ground on the other. The Flowers have a Satin Grain; and the Ground, a Grain of Taffetas. It has its Name from its being originally brought from *Damascus* in *Syria*.

DAMASKEENING, or *Damask-Work*, a kind of Mosaic Work; and accordingly, by the *Italians*, call'd by the same Name, *Tassels*, or *Mosaic*.

DAMASKEENING, is properly the Art, or Art of adorning Iron, Steel, &c. by making Incisions thereon, and filling them up with Gold or Silver Wire. It is chiefly us'd in Enriching Sword-blades, Guards and Grips, Locks of Pistols, &c. Its Name shews the Place of its Origin; or, at least, the Place where it has been practis'd in the greatest Perfection, viz. the City of *Damascus* in *Syria*. Tho' *Monfr. Felibien* attributes the Perfection of the Art to his Countryman *Caroline*, who wrought under the Reign of King *Henry IV.*

DAMASKEENING, is partly Mosaic Work, partly Engraving, and partly Carving: As Mosaic Work, it consists of Pieces *de Rapport*; as Engraving, the Metal is indented, or cut in *creux*; and as Carving, Gold and Silver are wrought therein, in *Relievo*.

There are two Manners of *Damaskeening*: In the first, which is the most beautiful, the Artist cuts into the Metal with a Graver, and other Tools proper for Engraving on Steel; and afterwards fills up the Incisions, or Notches with a pretty thick Silver, or Gold Wire. In the other, which is only superficial, they content themselves to make Hatches, or Strokes a-cross the Iron, &c. with a cutting Knife, such as is us'd in making of small Files.

For the first, 'tis necessary the Gravings, or Incisions be made in the dovetail Form; that the Gold or Silver Wire, which is thrust forcibly into them, may adhere the more strongly.

For the second, which is the more usual, the Method is thus: Having heated the Steel till it changes to a Violet, or blue Colour; they hatch it over, and a-cross with the Knife; then draw the Design, or Ornament intended, on this hatching, with a fine Braist Point, or Bodkin. This done, they take fine Gold Wire, and conducting or chasing it according to the Figures already design'd, they sink it carefully into the Hatches of the Metal with a Copper Tool.

DAMASCUS-STEEL, a very fine kind of Steel, made in some Parts of the *Levant*, and particularly at *Damascus*, remarkable for its excellent Temper; and us'd chiefly in the making of Sword-Blades. See **STEEL**.

Some Authors assure us it comes from the Kingdom of *Golconda*, in the *East-Indies*; Where the Method of tempering with Alum, which the *Europeans* have never been able to imitate, was first invented.

DAMIANISTS, a Branch of the Ancients *Accephali* *Stervites*. They agreed with the Catholics in admitting the IVth Council; but disown'd any Distinction of Persons in the Godhead, and profess'd one single Nature incapable of any Difference. And yet they call'd God, the Father, Son, and Ghost. On which Account the *Severian* *Sepprite*, another Branch of *Accephali*, us'd to call them *Sabbellianists*, and sometimes *Tetradites*. Thus much we learn from *Nicephorus Callistes*, L. XVIII. C. 49. They took their Name from *Damianus* a Bishop, who was their Leader.

DAMNATA TERRA, in Chymistry, is the same with *Caput Mortuum*, that is, all the Earthy Part, or Mass, remaining at the Bottom of the Retort, &c. after all the other Principles have been drawn out of the Body by Fire.

DAMPS, in Natural History, are noxious Steams, or Exhalations, frequently found in close, subterraneous Places, particularly Mines, Pits, Cellars, &c. For the Rationale of the Effects of *Damps*, See **POISONS** and **MELURITES**.

The *Damps* in Mines are of 4 Kinds: The first, which withal is the most ordinary, the Workmen apprehend in its Approach, by the Flame of the Candles becoming orbicular, and lessening by degrees, till it goes quiet out; as also by their Shortness or Difficulty of breathing: Those who escape swooning, seldom suffer any great harm by it; but such as swoon away, tho' they are not downright suffocated, yet on their first Recovery are tormented with very violent Convulsions: Their way of Cure is to lay the Person down on the Earth in a prone Posture, with a Hole dug in the Ground under his Mouth; if this fail, they fill him full of good Ale; and if that will not do, they conclude him desperate. The second is the *Peast-Bloom-Damp*, which is call'd so from its Smell. This *Damp* always comes in the Summer-time, and hath not been known to be mortal: The Miners in the Peak of *Derby* fancy it arises there from the Multitude of red Trefoil-Flowers, call'd by them Honey-Suckles, with which the Lime-Stone Meadows of the Peak much abound; perhaps the Smell of this gives timely Notice to get out of the Way: The third is the most pestilential, and most strange of all, if what is said of it be true: They, who pretend to have seen it, (for they say it is visible) do thus describe it: In the highest Part of the Roof of those Passages in a Mine, which branch out from the main Grove, they see a round Thing hanging, about as big as a Foot-Ball, covered with a Skin of the Thickness and Colour of a Cob-web: If this Bag, by a Splinter, or any other Accident, become broken, the *Damp* immediately flies out, and suffocates all the Company: The Workmen, by Help of a Stick, and long Rope, have a way of breaking this at a Distance; and when they have done it, they purify the Place well with Fire: And they will have it, that it gathers from the Steam of their Bodies, and Candles, ascends up into the highest Part of the Vault, and there condenses, and in Time has a Film grown over it, and then corrupts, and becomes pestilential. The fourth, is the *Falminating*, or *Fire-Damp*, whose Vapour being touch'd by the Flame of the Candles, presently takes Fire, and has all the Effects of Lightning, or fired Gun-powder. These are found frequently in the Coal-Mines, and sometimes, tho' rarely, in the Lead ones. How Mineral Steams may prove poisonous, may be understood from *Docteur Mead's* Essay on Poisons.

Naturalists furnish us with very surprizing Instances of the Effects of *Damps*. In the *Hist. de l'Academie des Sciences An. 1705*: We read of a Well in the City of *Reims*, into which a Mason, at Work near its Brink, letting fall his Hammer, a Labourer, who was sent down to recover it, e're he reach'd the Water, was strangled. A second sent to fetch up the Corps, met with with the same Fate, and so a third: At last a fourth, half drunk, was let down, with Charge to call out as soon as he felt any Thing incommode him. He call'd accordingly, as soon as he came near the Water; and was instantly drawn out: yet he died 3 Days afterwards. The Information he brought them was, that he felt a Heat, which scorch'd up his Entrails. A Dog being let down, cried about the same Place; and died as soon as he came to Air; But throwing Water on him, he recover'd; as happens to those thrown into the *Grotto del Cani near Naples*. See **GAOYTO**. The three Carcasses being drawn up with Hooks, and open'd; there appear'd not any Cause of their Death. Now, what renders the Relation the more considerable, is, that the Water of this Well had been drawn and drunk several Years, without the least ill Consequence.

In the same History, An. 1710. a Baker of *Chartres*, having carried 7 or 8 Bushels of Brands out of his Oven into a Cellar 36 Stairs deep; his Son, a robust young Fellow, going with more, his Candle went out on the Middle of the Stairs. Having lighted it a-fresh, he was no sooner got into the Cellar, than he cried out for Help; and they heard no more of him: His Brother, an able Youth, run immediately after him; cried out, he was dead; and was heard no more. He was follow'd by his Wife; and she by a Maid, and still 'twas the same. Such an Accident struck the whole Neighbourhood with a Panic; and no body was forward to venture any further: till a Fellow more hardy and zealous than the rest, perswaded the four People were not dead, would go down to give them Help: He cried too, and was seen no more. Upon this, a 6th Man requiring a Hook to draw some of them forth without going to the Bottom; drew up the Maid: who, having taken the Air, fetch'd a Sigh and dyed. Next Day, the Baker's Friend, undertaking to get up all the Carcasses with a Hook, was let down with Ropes on a wooden Horse, to be drawn up whenever he should call. He soon call'd, but the Rope breaking, he fell back again; And tho' the Rope was soon piec'd again, he was drawn forth dead. Upon opening him, his Meninges were found extravagantly stretched; his Lungs spotted with black, his Intestines

swell'd

swell'd as big as one's Arm, inflamed and red as Blood; and what was most extraordinary, all the Muscles of his Arms, Thighs and Legs, torn and separated from their Parts. The Magistrate, at length, taking Cognizance of the Case, and the Physicians, being consulted; they gave their Opinion, that the Brands had been but ill extinguish'd: the Consequence of which must be, that as the Cellars in *Charrres* abound with Saltpetre, the unusual Heat in this, had rais'd a malignant Vapour, which had done the Mischief: and that a good Quantity of Water must be thrown in to put out the Fire, and lay the Vapour. This perform'd, a Dog, and a lighted Candle were let down without Injury to either: An infallible Sign the Danger was over.

A third History we shall add from Doctor *Conner*, in his *Dissert. Med. Phys.* Some People digging in a Cellar at *Paris*, for supposed hidden Treasure; after a few Hours working, the Maid going down to call her Master, she found them all in their digging Postures: but stark dead. The Person who managed the Spade, and his Attendant who shovell'd off the Earth, were both on Foot, and seemingly intent on their several Offices: The Wife of one of them, as if a-weary, was sat down on the Side of a Hopper, very thoughtful, and leaning her Head on her Arm; And a Boy, with his Breaches down, was evacuating on the Edge of the Pit; his Eyes fix'd on the Ground: All of them, in fine, in their natural Postures and Actions, with open Eyes, and Mouths that seem'd yet to breathe; but stiff as Statues, and cold as Clay.

DAMSEL, from the French *Damoiselle*, or *Damoiselles*, an Appellation anciently given to all young People of Gentle, or Noble Extraction of either Sex; As to the Sons and Daughters of Knights, Barons, and even Kings. Thus, in History, we read of *Damsel Pagan*, *Damsel Louis le Gros*, *Damsel Richard*, Prince of *Wales*. *Pajquier* will have the Word a Diminutive of *Dam*, an ancient Word for Lord; as in some Authors we read *Dam Dieu* for Lord God; *Dam Chevalier*, &c. Tho' in its feminine Sense he takes it to come from *Dame*. Others derive the Word from *Domicellus*, or *Domicellus*, a Diminutive of *Dominus*, quasi *parvus Dominus*. Accordingly, *du Cange* observes, that it has been sometimes wrote *Domesger*. — They who hold the Signory of *Commercy*, *M. de la Roque* tells us, anciently held it under the Title of *Damoiseau*. And *M. de Marca* assures us, that the Noblesse of *Bearn* is still divided into three Bodies or Classes; The Barons, the Cavaliers, and the *Damoisels*, *Domicellos*, call'd in that Country *Domesgers*. The Kings of *Denmark* and *Sweden* have here the same Title, as appears from *Pontanus's Hist. of Denmark*, L. VII. and VIII. and *Henry of Upsal's Hist. of Sweden*, L. III. From the Sons of Kings, the Appellation pass'd to those of Great Lords and Barons; and at length, to those of Gentlemen who were not yet Knights.

At present *Damsel* is applied to all Maids, or Girls not yet married; provided they be not of the lowest Class of People.

DAMSEL is sometimes also applied to a kind of Utensil put in Beds, to warm old Mens Feet wint'ral. It consists of a hot Iron inclosed in a hollow Cylinder, which is wrap'd round with linnen Cloth, and keeps its Warmth a long Time. Some call it a *Nun*.

DANAIDES, in the Ancient *Mythology*, the Daughters of *Danaus*, or *Danaus*, IXth King of *Argos*, and Brother of *Egyptus*. They were 50 in Number, and were espous'd to the 50 Sons of their Uncle *Egyptus*. *Danaus* fearing the Accomplishment of an Oracle, which had foretold that he should be expell'd his Kingdom by a Son in Law, persuaded his Daughters to murder, each of them, her Husband, the first Night; which they perform'd, all but *Hypermestres*, who spared her Husband *Lyceus*. In Vengeance for this Crime of the 49 *Danaides*, the Poets have condemn'd them to Hell, to be continually employ'd in filling a Coak perforated at Bottom. The *Danaides* are sometimes also call'd *Beides*, from their Father, who is the Son of the Egyptian *Belus*.

DANCETTE, in Heraldry, is when the Out-line of any Bordure, or ordinary, is indentured very largely; the Largeness of the Indentures being the only Thing that distinguishes it from Indented. See INDENTED. There is also a bearing of a Bend, called double *Dancette*; thus, He beareth Azure, a Bend double *Dancette* Argent.

DANCHE, in Heraldry, the same with *Indented*; or, as others will have it, with *Dancette*. See INDENTED and DANCETTE.

DANCE, an agreeable Motion of the Body, adjusted by Art to the Measures or Tune of a Violin, or Voice. Some distinguish the *high Dance*, consisting of Capers, Gam-

bades, &c. from the *low Dance*, which is *Terra a Terra*, or close to the Ground. In the *Carrousel* of King *Lonis XIII.* there were *Dances of Horses*. The Invention of such *Dances* is attributed to the *Sybarites*. The Word is French, *Dance*, form'd of the German *Danz*, which signifies the same Thing. *Bochart* derives it from the Arabic *Tanzan*, and *Gricbarr* from the Hebrew *נָטַף* *noth*, which have all the same Signification. *Ménage*, after *Salmasius*, derives the French *Danser* to *dance*, from the Latin *deusare* to *condense* and *fall*; as holding it a Practice among the ancient Fallers, to leap and *dance* as they fall'd their Clothes.

Dancing has always been in Use among all Nations, both civilized and barbarous: Tho' held in Esteem among some; and in Contempt among others. *Dancing*, of it self, no doubt, is harmless. There is a Time, says the Preacher, to *dance*: And sometimes it is even made an Act of Religion. Thus *David danced* before the Ark, to honour God, and express his Excess of Joy for its Return into the City of *Sion*. *Socrates* learnt to *dance of Aspasia*. And the People of *Grete* and *Sparta* went to the Attack, *dancing*. On the other hand, *Cicero* reproaches *Gabinus*, a Consular Man, with having *danced*. *Tiberius* expelled the *Dancers* out of *Rome*. And *Damirata* excluded several Members from the Senate, for having *danced*. *Caesar* and *Pollux* are said to be the first who taught the Art of *Dancing*; and that to the *Carcians*: Tho' others attribute the Invention to *Minerva*; who *danced* for Joy after the Defeat of the Giants.

The Ancients had three kinds of *Dances*: The first Grave, call'd *Emmelia*, answering to our *low Dances* and *Pavanes*. The second Gay, call'd *Cordax*; answering to our *Courants*, *Galliards*, *Gavots* and *Vaults*. The third, call'd *Siccinis*, was a Mixture of Gravity and Gayety. *Neopolemus*, Son of *Achilles*, taught the *Crerans* a new Sort of *Dance*, call'd *Pyrrichia*, or the *Aract Dance*, to be used in going to War. But according to the Fable, the *Coretes* first invented this *Dance*, to amuse and divert the little *Jupiter* with the Noise, and Clash of their Swords, bearing against their Bucklers. *Diodorus Siculus* in the IVth of his *Bibliotheca* assures us, that *Cybele*, Daughter of *Menon*, King of *Phrygia*, and *Dintymena* his Wife, invented divers Things, and among others the Flageolet of several Pipes, *Dancing*, the Tabour and the Cymbal. *Ninus*, 'tis certain, instituted a Sort of *Dance* for the *Sallii*, Priests of *Mars*, who made Use of Weapons therein. From this *Dance* was compos'd another, call'd *Saltatio Minicorum*, or the *Bliffoous Dance*; wherein the *Dancers* were dress'd in little Cordlets, with Gilt Morions, Bells on their Legs, and Swords and Bucklers in their Hands. *Lucian* has an express Treatise, and *Julius Pollux*, a Chapter on this Head; *Albionus*, *Celcius Rhodiginus*, and *Scaliger*, also make mention of this *Dance*.

'Tis not many Years ago, since *Thoinot Arbeau*, a *Dancing-Master* of *Paris*, gave an *Orchoseography*, wherein all the Steps and Motions of a *Dance* are writ, or noted down; as the Sounds of a Song are scored in Music. Tho' the famous *Beauchamp* has some Pretensions to be the Inventor of this Secret, and accordingly procur'd an *Arres* in his Favour.

Dancing is usually an Effect, and Indication of Joy among most Nations: Tho' Mr. *Palleprat* assures us, that there are People in *South-America*, who *dance* to show their Sorrow.

ROPE-DANCER, *Schoenobates*. A Professor of Philosophy at *Danzick*, publish'd a Dissertation on *Rope-dancers*, de *Funambulis*; full of Learning, and an uncommon Knowledge of Antiquity. He defines a *Rope-dancer*, a Person who walks on a thick Rope fallen'd to two opposite Posts; which is precisely, what is express'd by the Latin Word *Funambulus*, being a Compound of *Funis*, Rope, and *Ambulo*, I walk. But our *Rope-dancers* do more, for they not only walk, but *dance* and leap upon the Rope. The Ancients, 'tis certain, had their *Rope-dancers* as well as we. Witness the Greek Words *Neurobates*, *Schoenobates*, and the Latin *Funambulus*, which every where occur. They had likewise their *Cremnobates* and *Oribates*, that is, People who walk'd on the Brinks of Precipices. Nay more, *Suetonius* in *Galba* C. 6. *Seneca* in his 8th Epistle, and *Pliny* Lib. VIII. Cap. 2. make mention of Elephants that were taught to walk on the Rope. *Aron*, an ancient Grammarian and Commentator on *Horace*, takes Occasion to observe on the Xth Satire of the first Book, that *Messala Corvinus* was the first, who used the Word *Funambulus*; and that *Terence* had it from him. But Mr. *Graddock*, the learned Professor above mentioned, shews that he is mistaken, and that *Messala* liv'd after *Terence*. The Business is, *Aron* confounds *Valerius Messala*, who got the Surname *Corvinus* in the War against the Gauls about 200 Years before *Terence*, with one of his Descendants, who was a famous Orator in the Time of *Horace*.

Mt. Groddeck coming from the Historical to the Moral Consideration, maintains that the Profession of a *Rope-dancer* is not allowable; that the Professors are infamous, and their Art of no Use to Society; that they expose their Bodies to very great Dangers; and that they ought not to be tolerated in a well regulated State. But coming afterwards to temper the Severity of his Morals, he allows that there are sometimes Reasons for admitting them. That the People must have Shows; that one of the Secrets of Government is to furnish them therewith, &c.

The ancient *Rope-dancers* had four several Ways of Exercising their Art; The first vaulted or turn'd round the Rope, like a Wheel round its Axis, and there hung by the Heels, or the Neck. The second flew or slid from above, downwards, resting on their Stomachs with the Arms and Legs extended. The third run along a Rope stretch'd in a right Line, or up and down. Lastly, the fourth not only walk'd on a Rope, but made surprising Leaps and Turns thereon. See *SCHOENOBATES*.

DANEGELT, or **DANEGELD** (*Gelt* in *Dutch* signifying Money) was an ancient Tribute or Contribution, which the *Danes* imposed on the *English*, as the Arbitrary Terms of Peace and Departure. It was first imposed as a standing yearly Tax on the whole Nation under King *Ethelred*, A.D. 991. That Prince, says *Cambden*, *Britan.* 142. much distress'd by the continual Invasion of the *Danes*; to procure his Peace, was compell'd to charge his People with heavy Payments, call'd *Danegelt*. At first he pay'd 10000 *lib.* then 16000 *l.* then 24000 *l.* after that 36000 *lib.* and lastly 48000 *lib.* St. *Edward* the Confessor releas'd the Nation from the *Danegelt*. *William* the I. and II. resum'd it. *Henry* the I. and after him King *Stephen*, releas'd them finally.

DANEGELT was also an annual Tax laid on our Ancestors, first of 1 *Sh.* afterwards 2 *Sh.* for every Hide of Land through the Realm, for clearing the Seas of *Danish* Pyrates, which heretofore greatly annoy'd our Coasts. *Edward* the Confessor remitted this Tax. *William* I. and II. resum'd it occasionally. In the Reign of *Henry* I. it was account'd among the King's standing Revenues; But King *Stephen*, on his Coronation Day, abrogated it for ever.

DANTELE' in Heraldry, the same with *Danub*, or rather with *Danette*, viz. a large, open Indenture. See *DANCETTE*.

DAPIFER, the Dignity, or Office of the Grand Master of the Emperor's and other Prince's Household. The Word is pure *Latin*, compounded of *daps*, *dapis*, a Dish of Meat serv'd on the Table, and *Fero*, I bear: So that *Dapifer* literally signifies a Dish-carrier, or an Officer who serves the Meats upon the Table. The Title of *Dapifer* was given by the Emperor of *Constantinople* to the *Cox of Russia*, as a Testimony of Favour. In *France*, the like Office was instituted by *Charlemain*, under the Title of *Dapiferus*, and *Senechauffe*; to which was affix'd the Superintendance over all the Officers of the Household. In *England*, the Office of *Dapifer*, was less Eminent; being found in several of our ancient Charters nam'd one of the Last of the Officers of the Household. The Dignity of *Dapifer*, is still subsisting in *Germany*. Till the Year 1623. the Elector Palatin was *Dapifer* of the Empire: Since that Time the Elector of *Bavaria* has assumed the Title of Arch-*Dapifer* of the Empire. His Office is, at the Coronation of an Emperor, to carry the first Dish of Meat to Table on Horse-back. The several Functions of a *Dapifer* occasion'd the Ancients to give him divers Names. *Ensiarius*, and *Elevator*, *Diprocletor*, *Convocator*, *Trapezopaus*, *Archibritimus*, *Progenila*, *Praegustator*, *Domesticus*, *Megadomesticus*, *Oeconomus*, *Major-domus*, *Senechalus*, *Sobolus*, *Gastaldus*, *Affessor*, *Praefectus*, or *Trapezitus Monsie*, *Princeps Coquorum* & *Maryns*.

DARAPTI, in *Logic*, one of the Modes of Syllogisms. See *MODE* and *SYLLOGISM*.

DARDANARIUS, *Ufurer*, *Monopolist*, a Name anciently attributed to such as caus'd a Scarcity and Dearness of Provisions, particularly Corns, by buying and hoarding them up, to raise their Value, and sell them again at an extravagant Rate. The Name *Dardanarius* was given them from one *Dardanus*, who made a Practice of spoiling and destroying the Fruits of the Earth by a Sort of Sorcery. The same People are also call'd *Aerufestores*, *Dirictarii*, *Sirocopolii*, *Amonea Flagellatores*, and *Septaharii*.

DARIL, in *Logic*, one of the Modes of Syllogisms. See *MODE* and *SYLLOGISM*.

DARK-CHAMBER, See *CAMERA OBSCURA*.

DARK-VENT, a portable *Camera obscura*, made not unlike a Desk, and fitted with Optic Glasses; to take Prospects of Landships, Buildings, Fortifications, &c. See *CAMERA OBSCURA*.

DARREIN, in *Law*, a Corruption of the French *dernier last*, and us'd in the like Sense, as—*Darrein Continuance*. See *CONTINUANCE*.—*Darrein presentment*. See *ASSEZ* of *Darrein presentment*.

DART, in *Geometry*, *Astronomy*, &c. See *SAGITTA*. **DARTOS**, or **DARTUS**, in *Anatomy*, the inner Coat of the *Scrotum*, compos'd of a great Number of Muscular, or Fleshy Fibres; whence some call it a Cutaneous Muscle. 'Tis by means hereof that the *Scrotum* is contracted; which is esteem'd a Sign of Health. The *Dartos* was anciently taken to be a Continuation of the *Paniculus Carnosus*; but mistakenly. It has several Veins and Arteries. It invests the Testicles, and shooting its self between them, separates them from each other. The Word is pure *Greek*, *δάρτις*, *Excortatus pelle*, *Nudatus*, of *σιγα*, *excorio*, probably by Reason this Muscle is close under the Skin. See *SCROTUM*.

DATA, Things given, a Term us'd in *Mathematicks*, *Philosophy*, &c. implying certain Things, or Quantities supposed to be given, or known, in Order, from them, to find out other Things or Quantities, which are unknown, or sought for. A Problem or Question generally consists of two Parts; *Data* and *Quaestio*. See *PROBLEM*, &c.

Euclid has an express Treatise of *Data*; wherein he uses the Word for such Spaces, Lines and Angles as are given in Magnitude; and to which we can assign others equal. See *GIVEN*.

From the primary Use of the Word *Data* in *Mathematicks*, it has been transplanted into other Arts; as *Philosophy*, *Medicine*, &c. where it expresses any Quantity, which, for the Sake of a present Calculation, is taken for granted to be fact, without requiring an immediate Proof for its Certainty; call'd also the *given* Quantity, Number, or Power; and such Things as are known; from whence either in *Natural Philosophy*, the animal Mechanism, or the Operation of Medicines, we come to the Knowledge of Things before unknown, are now frequently in *Physical Writers* call'd *Data*.

DATE, an Addition, or Appendage in Writings, Acts, Instruments, Letters, &c. expressing the Day and Month of the Year when the Act, or Letter, was pass'd or sign'd; together with the Place where the same was done. In Writings of Importance the *Dates* should be wrote in Words at length, *Dated* or given at *London* this twenty sixth Day of *March* in the Year of our Lord one thousand seven hundred twenty and five. In Letters, the *Date* is usually in Figures. *London*, *March* the 26th 1725.—The Word is form'd from the *Latino Datum*, given, the Participle of *do*, I give. The *Latino* usually say *dabunt*, I gave.

An *Antidate* is a false *Date*, prior to the real Time when the Instrument was pass'd or sign'd: A *Post-date* is the posterior to the real Time, &c.

Our ancient Deeds had no *Dates*, but only the Month and Year; to signify that they were not made in Hast, or in the Space of a Day, but upon longer and more mature Deliberation. The Kings Grants began with the Words, *Præsensibus & futuris*, &c. but the Grants of private Persons with, *Omnibus praesentes Literas impetitur*.

DATE, *Dactyl*, the Fruit of the *Palm-Tree*. This Fruit is gather'd in Autumn, ere ripe; and bears a near resemblance to our *Balluce*; being of a green Colour, very sharp and astringent. When ripe, it becomes ruddy, having a hard, longish Stone, cloven at Bottom, encompass'd with a thin white Pellicle or Skin. The Bark or Covering of the *Date*, call'd by the Ancients *Elute* or *Spata*, when the Fruit is in its Flower, is various; having as many Changes of Colour as the *Fig* has: Some black, some white, some brown, some again are round like Apples, and very big. Ordinarily they are oblong, fleshy, yellow, somewhat bigger than the *Thumbs* End, and very agreeable to the Taste. Some are no bigger than a *Chick-Pea*, and others as big as a *Pomegranate*. The best are those, call'd *Royal-Dates*. There is also another Sort, call'd *Carjores*, which are very good. Some of them have Stones, and others none. *Dates* are principally us'd in *Medicine*: Their Qualities are, to soften the Aperities of the Gullet, to strengthen the Child in the Womb, to assuage all immoderate Fluxes of the Belly, and to ease Disorders of the Reins and Bladder. Their bad Property is, that they digest difficulty, cause Pains in the Head, and produce a thick melancholic Blood.—These Effects arise from the Principles they contain, which are a moderate Share of Oil, and a deal of Phlegm, and Essential Salt. The Oil and Phlegm render them moistening and nutritious, good against Acrimonies of the Breath, to assuage Coughs, &c. And the Phlegm and Salt render them deturive and astringent, and good against Discales of the Throat. For the rest; they are an heavy Food, full of an Earthy Juice, and occasion Obstructions in the *Viscera*; for which Reason, People who live of *Dates* become Scorbutic, and lose their Teeth's firmness.

Our *Dares* are brought us from *Egypt*, *Syria*, *Africa*, and the *Indies*. They never come to full Maturity in *Italy*, or the most Southern Parts of *Spain*. And yet there are tolerable *Dares* in *Provençe*; only they don't keep, but breed Worms. Those from *Perfia* exceed all others in Largeness, Colour, and Taste. The Word is form'd of *Dalle*, and that of *Dactylus*, Finger; as being round and oblong, resembling a Finger's End.

DATISI, in Logic, one of the Modes of Syllogisms. See **MONK** and **SYLLOGISM**.

DATIVE, in Grammar, the third Case in the Declension of Nouns; expressing the State, or Relation of a Thing, to whose Profit or Loss some other Thing is refer'd. See **CASE**.

This call'd *Dative*, because usually govern'd by a Verb, implying something to be given to some Person. As, *Commendare Socrati*, To lend to *Socrates*; *Utilis Republicæ*, Useful to the Common-wealth; *Perniciosus Ecclesiæ*, Pernicious to the Church; *Promittere Amicis*, To promise a Friend; *Vision est Placuit*, It seem'd good to *Plato*, &c.

In *English*, where we have properly no Cases, this Relation is express'd by the Sign *to*, or *for*; which are usually either express'd, or understood.

DAVIDISTS, or *Davidici*, a Sect of Hereticks, the Adherents of *David George* a Glazier, or, as others say, a Painter of *Glasow*; who in 1525. began to preach a new Doctrine. He publish'd himself to be the true *Messiah*, and that he was sent hither to fill Heaven, which was quite empty for Want of People to deserve it. He rejected Marriage, with the *Admirers*; denied the Resurrection, with the *Sadducees*; held with *Moses*, that the Soul was not defiled by Sin; and laugh'd at the Self-Denial so much recommended by *Jesus Christ*. Such were his principal Errors. He made his Escape from *Glasow*, and retired first into *Frisland*, and then to *Basil*, where he changed his Name, assuming that of *John Bruck*, and died in 1556. He left some Disciples behind him, to whom he promis'd that he would rise again at the End of three Years. Nor was he altogether a false Prophet herein, for the Magistrates of that City, being inform'd at the three Years End of what he had taught, had him dug up, and burnt, together with his Writings, by the common Hangman. There are still some Remains of this ridiculous Sect in *Holftein*, particularly about *Friederichstade*, where they are intermix'd with the *Armenians*.

DAVIS'S QUADRANT. See **BACK-STAFF**.

DAUGHTER. See **FEMALE**. The Sons and Daughters of the King of *England* are call'd the *Sons* and *Daughters* of *England*; because all the Subjects of *England* have a special Interest in them. See **PRINCES** of the *Blood*.

DAUPHIN, *Dolphin*, in Astronomy. See **DRACHM**.

DAUPHIN, a Title given the eldest Son of *France*, and prescriptive Heir of the Crown; on Account of the Province of *Dauphine*, which in 1343. was given to *Philip de Valois* on this Condition, by *Humbert*, *Dauphin* of the *Viennois*. *M. the Dauphin*, in his Letters Patents styles himself, "By the Grace of God, Eldest Son of *France*, and *Dauphin* of *Viennois*."

DAUPHIN was anciently the Title of the Prince of *Viennois* in *France*. Most Authors, who have fought the Origin of the Name *Dauphin*, and *Dauphine*, seem to have given too much loose to their Imagination. Some will have it deriv'd from the *Affinates*, an ancient People mentioned by *Ptolemy* and *Pliny*; but those Authors place the *Affinates* on t'other Side of the *Alpes* in the *Gallia Cisalpinga*. Others write that the *Allobroges* brought the Name from *Dolphos*; Others, that King *Boson*'s Shield was distinguish'd by the Figure of a *Dolphin*, which he bore thereon. Others, that the Princes who reign'd in the *Viennois* after *Boson*, pitch'd on these Arms as a Symbol of their Mildness and Humanity. Others, that it was given by an Emperor, who made War in *Italy*, but whom they do not name, to a Governour of this Province, who sent him a powerful Supply with such Expedition, that it deserv'd to be compar'd with the Swiftness of a *Dolphin*. *Isabell* fancies the Word to be *Gorbic*; as well as the Names, *Bresh*, *Sovey*, *Beaujeu*, &c. *Claud de Grange* believes the Word to be form'd of *Viennois*, the ancient Name of this Province. A Person of this Province, says he, being ask'd what Countryman he was, answer'd, *de Vienno*, and the Prince of the Province call'd himself the Prince *de Vienno*, and afterwards, changing the *V*, after the

common Custom, into *F*; *de Fiens*; and at Length retrenching the two *es*'s, *Dofin*: The common Opinion that the Word was form'd from *Dolphinus*, occasion'd them to write *Dauphin*. But this appears to *Chorier* no better than an ingenious Anagram, or ridiculous Subtlety. Others will have it that *Guy the Fat*, having a Daughter that he was very fond of, he us'd to call her *Dauphine*; and to immortalize her when dead, gave her Name to his Country. Others are of Opinion, that the late Count *d'Albon*, whose Estate became incorporated with that of the Counts *de Grefvaudan*, by the Marriage of his only Daughter with the first *Guy*, was really named *Dauphin*; and that his eldest Grandson, being oblig'd to take his Name, was call'd *Dauphin*, and bore the Figure of a *Dolphin* for his Arms. *Du Chesne* is likewise of Opinion, that it was the Grandson of *Guy the Fat*, who first bore the Name of *Dauphin*; tho' not for the Reason just alleg'd, but that it was given him at his Baptism; and added to that of *Guy*.

Chorier wont allow any Thing probable in any of these Opinions. He observes then, that *William*, Canon of *Notre Dame* at *Genevle*, who has wrote the Life of *Margaret*, Daughter of *Stephen*, Earl of *Burgundy*, married with *Guy*, Son of *Guy the Fat*, calls the latter simply *Guy the Old*, and the former always Count *Dauphin*. And adds, that no Title, no Monument, ever attributes the Title of *Dauphin* to *Guy the Fat*, or any of his Predecessors; So that it must necessarily have taken its Rise in his Son, all whose Successors have so constantly assum'd it, that it is become the proper Name of the Family. He died in 1142. in the Flower of his Youth; So that it must be about the Year 1120, that that Title commenced; and without doubt, he adds, on some illustrious Occasion. He observes further, that this Prince was of a military Disposition, and delighted in nothing but War; And again, that it was the Custom of the Cavaliers to charge their Cafes, Coats of Arms, and the Housing of their Horses, with some Figure or Device peculiar to themselves, whereby they were distinguish'd from all others engag'd in the same Combat or Tournament. From all these Circumstances he conjectures that this *Guy* chose the *Dolphin* for his Signature; that this was the Crest of his Helmet; and that he bore it on his Coat in some notable Tournament or Battel wherein he distinguish'd himself. And this, *Chorier* makes no doubt, is the real Origin of the Appellation.

Monfr. le President de Valsonnet speaks more justly on the Subject. *Guigney*, or *Guy the Fat*, Son of *Guy the Old*, married *Mabilida*, who has been supposed to be of the same Royal Family, as being call'd *Regina* in several ancient Charters. This Couple had a Son, who, in an Act pass'd between him and *Hugh*, Bishop of *Genevle*, in 1140. is call'd *Delphinus*; *Guigo Comes, qui vocatur Delphinus*. This has occasion'd some Historians to think to discover the Origin of the Name *Dauphin*. There was no Necessity for having Recourse to Voyages beyond the Sea, where the Counts *de Grefvaudan* might take the *Dolphin* for their Arms, or Badge of Distinction. In Effect, that Conjecture does not stand on any Proof; Nor is it true, that the first and second Race of those Princes bore the *Dolphin* for their Arms; There being scarce any Signs thereof before *Humbert I.* who first bore it on his Shield. 'Tis more probable, that the Surname *Dauphin*, which *Guy* first assum'd, pleas'd his Successors so much, that they added it to their own Name, and erected it into a Title, which has been retained ever since. Nothing is more common in those Times, than to find proper Names become the Names of Families, or Dignities. Witness the *Ademars*, *Arbouds*, *Aynards*, *Atlemont*, *Bereogers*, and infinite others, who all owe their Names to some one of their Ancestors, from whom it has been transmitted throughout the Family.

The Seigneurs or Lords of *Auvergne* have likewise bore the Appellation of *Dauphin*; But the *Dauphin* of *Auvergne* had it not till a good while after those of the *Viennois*, and even receiv'd it from them. The Manner was this; *Guy* the VIIIth *Dauphin* of the *Viennois*, had by his Wife *Margaret*, Daughter of *Stephen*, Earl of *Burgundy*, a Son and two Daughters. The Son was *Guy* the IXth, his Successor. *Beatrice*, one of the Daughters, was married to the Count *d'Auvergne*, who, according to *Blouet*, was *William* the Vth, or rather, as *Chorier* and others hold, *Robert* the VIth, Father of *William* the Vth. This Prince

lost the greatest Part of the County of *Auvergne*, which was taken from him by his Uncle *William*, assisted by *Louis the Young*; and was only left Master of the little Canton whereof *Fodable* is the Capital. He had a Son whom he call'd *Dauphin*, on Account of *Gay*, or *Guignes*, his Uncle by the Mother's Side. From his Time his Successors holding the same petty Canton of *Auvergne*, qualified themselves *Dauphins* of *Auvergne*, and bore a *Dolphin* for their Arms.

DAY, a Division of Time, drawn from the Appearance, and Disappearance of the Sun. See SUN.

The Day is of two Kinds, *Artificial*; and *Natural*, or *Civil*.

Artificial DAY, which seems to be that primarily meant by the Word *Day*, is the Time of Light; determin'd by the Sun's Rising and Setting. This is properly defined the Stay of the Sun above the Horizon: In Opposition to which, the Time of Darkness, or, the Sun's Stay below the Horizon from Setting to Rising again, is call'd *Night*. See NIGHT.

Natural DAY, call'd also *Civil* DAY, is the Space of Time wherein the Sun performs one Revolution round the Earth: Or, more justly, the Time wherein the Earth makes a Rotation on its Axis. Which the *Greeks* more properly express by *ἡμετέρας*, *Nyctemeron*, q. d. Night-Day.

The *Epocha*, or Beginning of the *Civil* Day, is the Term from which one Day begins, and in which the preceding Day concludes. The Fixing of this Term is of some Importance. 'Tis certain that for the more commodious distinguishing of Days, it ought to be fix'd in some Moment of Time wherein the Sun is in some discernible Part of the Heavens. The most eligible therefore shou'd be the Moments wherein the Sun passes either the Horizon or the Meridian. In Effect, as there is no Moment can be more accurately determined by Observation than that when the Sun passes through the upper Meridian: if Regard be had to the Exactness of the Measure, the Noon Tyde, has the best Pretensions; the Rising and Setting of the Sun being disturb'd by the Refraction; beside that, the Horizon is seldom clear of Clouds. But yet, as the *Artificial* Day does begin with the Sun's Rise, and ends with the Setting; and besides, the Sun's Passing the Horizon is a Thing easily observed, the Rising or Setting of the Sun shou'd appear the most commodious *Epoch* or Beginning of the *Civil*-Day.

As then there are not wanting Reasons for Beginning the *Natural* Day, both from the Sun's Passing the Meridian, and the Eastern, and Western Side of the Horizon; 'tis no Wonder that different Nations shou'd begin their Day differently.

Accordingly, First, The ancient *Babylonians*, *Persians*, *Syrians*, and most other Eastern Nations, with the present Inhabitants of the *Balearick* Islands, the *Greeks*, &c. begin their Day with the Sun's Rising. Secondly, The ancient *Aethiopsians* and *Jews*, with the *Africans*, *Berberians*, *Marcomanians*, *Silesians*, with the modern *Italiens* and *Chineses*, reckon it from the Sun's Setting. Thirdly, The ancient *Unbri* and *Arabians*, with the modern *Astronomers*, at Noon. And fourthly, The *Egyptians* and *Romans*, with the modern *English*, *French*, *Dutch*, *Germans*, *Spaniards*, and *Portugueses*, at Midnight.

The Day is divided into *Hours*; and the Week, Month, &c. into Days. See HOUR, MONTH, WEEK. For the different Lengths of the Day in different Climates. See CLIMATE, and GLOBE.

It has been a Matter of some Controversy among Astronomers, whether or no the *Natural* Days are all equally long throughout the Year; and if not, what is their Difference. M. . . . Professor of Mathematics at *Sevil*, in a *Memoir* in the *Philosophical Transactions*, asserts, from a continued Series of Observations for three Years, that they are all equal. Mr. *Flaugheed*, in the same *Transactions*, relates the Opinion; and shows, that one Day, when the Sun is in the Equinoctial, is shorter than when he is in the Tropicks, by 40 Seconds; and that 14 Tropical Days longer than for many Equinoctial ones, by $\frac{1}{2}$ of an Hour, or 10 Minutes. The Inequality of the Days flows from two several Principles: The one, the Eccentricity of the Earth's Orbit; the other, the Obliquity of the Ecliptic with Regard to the Equator, which is the Measure of Time. As these two Causes happen to be combin'd, the Length of the Day is varied. See ECCENTRICITY and OBLIQUITY.

DAY, in Law, is frequently used for the Day of Appearance in Court, either originally, or upon Assignment; as, He had a Day by the Rolls, i. e. He had

a Day of Appearance assign'd him. Sometimes, for the Returns of Writs; e. g. Days in Bank are Days set down by State or Order of the Court when Writs shall be returned, or when the Party shall appear on the Writ served. To be dismiss'd without Day, *sine Die*, is to be finally discharged the Court. Days of Prolision in the Exchequer. See REMEMBRANCE.

DAYS of Grace, in Commerce, are a Number of Days allow'd by Custom for the Payment of a Bill of Exchange, after the same becomes due, i. e. after the Time it was accepted for is expired. In England, 3 Days of Grace are allowed; So that a Bill accepted in Order to be pay'd, e. g. 10 Days after Sight, is not to be pay'd till 13 Days. Throughout France, they allow 10 Days of Grace; as many at *Dantzig*; 8 at *Naples*; 6 at *Venice*, *Rotterdam*, and *Amsterdorp*; 4 at *Frankfort*, and 3 at *Leipsic*.

Dog-DAYS, or Dies Caniculares. See DOG-DAYS.

Critical DAYS, Dies Critici. See CRITICAL DAYS.

Intercalary, or Additional DAYS. See INTERCALARY DAYS.

DEACON, *Diaconus*, a Person in the lowest Degree of holy Orders, whose Business is to baptize, read in the Church, and assist at the Celebration of the Eucharist. The Word is form'd from the Latin *Diaconus*, of the Greek *διακονος*, Minister. See ORDERS and ORDINATION.

DEACONS were instituted seven in Number by the Apostles, Acts C. VI. which Number was retain'd a long Time in several Churches. Their Office was to serve in the *Agapee*, and to distribute the Bread and Wine to the Communicants, and to dispense the Alms. By the ancient Canons, Marriage was not incompatible with the State and Ministry of a Deacon. But 'tis now a long Time that the *Romish* Church has prohibited their Marrying; and the Pope only grants them Dispensations for very important Causes; and after Dispensation, they lose the Rank and Functions of their Order, and return to a Lay State. The Deacons were formerly prohibited sitting with the Priests. The Canons of Councils forbid Deacons to consecrate; that being a sacerdotal Office. They also prohibit a Deacon being ordain'd, unless he have a Title, or Call, and be at least 25 Years of Age. The Emperor *Justinian*, in *Novel* 123, assigns the same Age of 25 Years for a Deacon. But this was the Custom when Priests were not ordain'd at less than 30 Years of Age. At present 23 Years of Age suffices for a Deacon.

At *Rome*, under Pope *Sylvester*, they had only one Deacon; then seven were appointed; then 14, and at last eighteen, who were call'd *Cardinal Deacons*, to distinguish them from those of other Churches. See CARDINAL.

Their Office was to take Care of the Temporalities of the Church, look to the Rents and Charities, to provide for the Necessities of the Ecclesiasticks, and even of the Pope. The Collecting of the Rents, Alms, &c. belong'd to the Sub-Deacons; the Deacons were the Depositories and Distributers. Having thus the Management of the Revenues of the Church in their Hands; their Authority grew apace, as the Riches of the Church increased. Those of *Rome*, as being Ministers of the first Church, preceded all others, and even at length took Place of the Priests themselves. Doubtless, it was the Avarice of the Priests that made them give Place to the Deacons, who had the Disposal of the Money. St. *Jerom* exclaims against this Attempt, and proves that a Deacon is inferior to a Priest.

The Council in *Trullo*, which is the III of *Constantinople*, *Aristinus* in his *Synopsis* of the Canons of that Council, *Zonaras* on the same Council, *Simeon Logothetes*, and *Oecumenius*, distinguish Deacons destin'd for Service at the Altar, from those who had the Care of the Distribution of the Alms of the Faithful. Thus, the Custom of constituting Deacons, without any other Office but to attend the Priest at the Altar, being once introduced, those simple Deacons durst no longer pretend to a Superiority over the Priests. As to the other Deacons, who had got the Administration of the Revenues, they would still retain the Superiority; and for Distinction sake, where there were several, the first took the Appellation of *Arch-Deacon*. See ARCH-DEACON.

The Deacons rehearsal certain Prayers at the holy Office, which were thence denominat'd *Deaconies*. See DIACONIC.

They took Care that the People at Church behaved themselves with due Modesty and Respect. They were not allowed to teach publicly, at least not

Surprising Success. He has reduced the Thing to a fixed Art or Method, which he has publish'd in his *Servus Loquens*, Amstelred. 1692. and *de Loquela*, ibid. 1700.

In the *Phil. Transact.* N. 312. we have an Account by Mr. Waller, R. S. Secr. of a Man and his Sister, each about 50 Years old, born in the same Town with Mr. Waller, who had neither of them the least Sense of Hearing; yet both of them knew, by the Motion of the Lips only, whatever was said to them, and could answer pertinently to the Question propos'd. It seems they could both hear and speak when Children; but lost their Sense afterwards; whence they retain'd their Speech, which, tho' uncouth, was yet intelligible.

Such another Instance is that of Mr. Gaddy's Daughter, Minister of St. Germain in Geneva, related by Bishop Burnet. At two Years old they perceiv'd she had lost her Hearing; and ever since, tho' she hears great Noises, yet hears nothing of what is said to her. But by observing the Motions of the Mouth and Lips of others, she has acquired a Sort of Jargon, in which she can hold Conversation whole Days with those that can speak her Language. She knows nothing that is said to her, unless she see the Motion of their Mouths that speak to her; So that in the Night, they are oblig'd to light Candles to speak to her. One Thing will appear the strangest Part of the whole Narration: She has a Sister, with whom she has practis'd her Language more than with any body else; and in the Night, by laying her Hand on her Sister's Mouth, she can perceive by that what she saith, and so can discourse with her in the Dark. Burnet's *Let.* 4. p. 228.

'Tis observ'd by several Authors, that deaf Persons, and those thick of Hearing, hear better and more easily if a loud Noise be rais'd at the Time when you speak to them. Which is owing, no doubt, to the greater Tension of the Ear-Drum, on that Occasion. Dr. Willis mentions a deaf Woman, who, if a Drum were beat in the Room, could hear any Thing very clearly; so that her Husband hired a Drummer for a Servant, that by his Means he might hold Conversation with his Wife. The same Author mentions another, who, living near a Steeple, could always hear very well, if there was a Ringing of 3 or 4 Bells: But never else. See DRUM.

DEAN, a prime Dignitary in most Cathedral, and Collegiate Churches; being usually the President of the Chapter. See CHAPTER.

He is call'd DEAN, *Decanus*, of the Greek *Saxa*, Ten, as being supposed to preside over ten Canons or Prebendaries, at least. See PREBENDARY, &c.

We distinguish between *Deans* of Cathedral, and those of Collegiate Churches. The first, with their Chapter, are regularly subject to the Jurisdiction of the Bishop. As to *Deans* of Collegiate Churches, they have usually the contentious Jurisdiction in themselves, that is, they exercise Jurisdiction over their Canons in all Civil or Criminal Matters; tho' sometimes this belongs to them in common with the Chapter. See COLLEGIATE and CATHEDRAL.

The Word is form'd from the Latin *Decanus*, which was applied among the Romans to a Person who had the Command over ten Soldiers; and to a petty Judge of a Decury. In Imitation whereof, the Prelates establish'd Judges to inspect certain Parts of their Dioceses, under the Denomination of *Archipresbyteri*, &c. who were succeeded by *Decani*, or *Deans*. See RURAL DEAN.

In England, as there are two Foundations of Cathedral and Collegiate Churches, the Old and the New, (the latter being those founded by Henry the VIIIth, on the Suppression of the Abbots and Priors, when their Convents were turn'd into *Dean* and Chapters;) so there are two Ways of Creating the *Deans*; Those of the old Foundation, are brought to their Dignity much like a Bishop. The Prince first sending out his *Commissaire d'Esclire* to the Chapter; the Chapter there choosing, the King yielding his Royal Assent, and the Bishop confirming him, and giving his Mandate to install him. Those of the new Foundation are install'd by a shorter Course; only by the King's Letters Patents, without either Election or Confirmation.

Constantine, we are told, crested an Office of 90 Persons at Constantinople, taken out of divers Trades and Professions, whom he exempted from all Impositions, and bestowed them on the Cathedral Church, to render the Offices of Burial gratis to the Defunct, particularly to the Poor. These he call'd

Decani and *Ladicarii*, probably by Reason they were divided by Tens; Each whereof had a Bier or Litter to carry the Bodies in: 'Tis supposed to be these, who under *Constantins* began to be call'd *Copiates*, i. e. Clerks destined for Labour. For they are usually rank'd among the Clerks, and even before the Chantors. By a Law of the Year 357, it appears that there were of these *Copiates* at Rome. See LEXICARIUS.

The Word *Dean* is also applied among us to divers that are the Chief of some peculiar Churches, or Chapters; as, the *Dean* of the King's Chappel, of *Paul's*, of the *Archde.* of *Battel*, of *Boking*, &c.

RURAL DEAN, or Urban DEAN, was formerly an Ecclesiastical Person, who had a District of ten Churches or Parishes, either in the Country or City, within which he exercised Jurisdiction. These RURAL DEANS were sometimes call'd *Archipresbyteri*, and at first were both in Order, and Authority, above the Archdeacons. They were elected by the Clergy, and by their Votes deposed; but afterwards they were appointed, and removed, at the Discretion of the Bishop: And hence they were call'd *Decani Temporarii*, to distinguish them from the Cathedral *Deans*, who were call'd *Decani Perpetui*. See RURAL DEAN.

We meet with RURAL DEANS as early as the IXth Century. *Hincmar*, in his Capitular to his Archdeacons, reserves the Right of Electing them to himself; and only allows it to the Archdeacons, in Case he be absent, and by Provision only. Some take the RURAL DEANS to hold the Rank and Place of the *Chorepiscopi*. Be this as it will; 'tis certain they are very ancient in France, Germany, and England; tho' till the End of the XVth Century they were unknown in Italy, in Regard the Bishopsricks being there exceeding small, they were not needed. S. Charles Borromeo first introduced them there. See CHOREPISCOPI.

DEAN, in the ancient Monasteries, was a Superior establish'd under the Abbot, to ease him in taking Care of ten Monks; whence he was call'd *Decanus*, in Imitation of those Officers among the Romans, who had ten Soldiers under them. Till the Time of St. *Benedict*, there were usually in each Monastery a *Provost*, *Præpositus*, and several *Deans*, *Decani*, under the Abbot. In some Abbies, there was but one *Dean*, and he, bless'd by the Bishop, as well as the Abbot himself. This Privilege gave him Occasion to think himself in some Measure the Abbot's equal; and to scruple Obedience to him. St. *Benedict* was sensible of this Inconvenience, and to prevent it in his Order, appointed that the Monasteries should be govern'd under the Abbot by several *Deans*, whose Authority being thus shar'd, they would be the less dangerous.

The Office of the *Deans*, we have observ'd, was to have the Inspection of ten Monks, to look to their Working, and all their Exercises. They were not chose by Seniority, but Merit; and might be deposed after three Admonitions. The Monasteries being now less numerous than they were in ancient Times, the Abbot, or Prior, don't stand in so much need of being ass'd; So that *Deans* are set a-side.

DEAN and Chapter; Anciently, Bishops did not ordinarily transact Matters of Moment *sine Concilio Presbyterorum principalium*, who were then call'd *Senatores Ecclesie*, and Collegues of the Bishops; represented in some Measure by our Cathedral, whereof the *Dean* and some of the Prebends are, upon the Bishop's Summons, to assist him in Ordinations, Deprivations, Condemnations, Excommunications, and other weighty Concerns of the Church. See CHAPTER.

DEARTICULATION, in Anatomy. See DIARTHROSI.

DEATH, *Mors*, is generally consider'd as the Separation of the Soul from the Body; in which Sense it stands oppos'd to *Life*, which consists in the Union thereof. See LIFE.

The Physicians generally define *Death* by a total Stoppage of the Circulation of the Blood; and a Cessation of the animal, vital, &c. Functions consequent thereon; As, Respiration, Sensation, &c.

An animal Body, by the Adhesions inseparable from Life, undergoes a continual Change. Its smallest Fibres become rigid, its Minute Vessels grow into solid Fibres no longer pervious to the Fluids, its greater Vessels grow hard and narrow, and every Thing becomes contracted, clos'd and bound up; whence the Dryness, Immobility, and Excretion observed in old Age. By such Means the Offices of the minuter Vessels

fels are destroy'd, the Humors stagnate, harden, and at length conſeſce with the Solids. Thus are the ſubtilſt Fluids in the Body intercepted and loſt, the Concoction weaken'd, and the Reparation prevented; only the coarſer Juices continue to run ſlowly thro' the greater Veſſels, to the Prefervation of Life, after the animal Functiōns are deſtroy'd. At length, in the Proceſs of theſe Changes, Death it ſelf becomes inevitable, as the neceſſary Conſequence of Life.

But 'tis rare, that Life is thus long protracted, or that Death ſucceeds merely from the Decays and Impairments of old Age. Diſeaſes, a long and horrid Train, cut the Work ſhort. See DISEASE.

DEATH-WATCH, in Natural Hiſtory, a little Inſect famous for a ticking Noiſe, like the Beat of a Watch, which the Populace have long took for a Preſage of Death, in the Family where 'tis heard; Whence it is alſo call'd *Pediculus Fatidicus*, *Mortifage*, *Pulſatorius*, &c.

There are two Kinds of *Death-Watches*: Of the firſt we have a good Account in the *Philoph. Tranſact.* by Mr. Allen. It is a ſmall Beetle $\frac{1}{2}$ of an Inch long, of a dark brown Colour, ſpotted; pel- laced Wings under the *Vagina*, a large Cap or Helm- er on the Head, and two *Antennae* proceeding from beneath the Eyes, and doing the Office of Proboſcides. The Part it beats withal, he obſerved, was the extre- am Edge of the Face, which he chuſes to call the upper Lip, the Mouth being protracted by this bony Part, and lying underneath, out of View. Its Figure, as it appears in a Microſcope, ſee represented in *Tab. Natural Hiſtory Fig. 1.*

This Account is confirm'd by Mr. *Derham*, with this Difference, that inſtead of ticking with the upper Lip, he obſerv'd the Inſect to draw back its Mouth, and beat with its Fore-head. He had two, a Male and a Female, which he kept alive in a Box, ſeveral Months, and could bring one of them to beat whenever he pleas'd, by Imitating its Beating. By his ticking Noiſe he could frequently invite the Male to get up upon the other in the Way of Coition. When the Male found he got up in vain, he would get off again, beat very eagerly, and then up again; Whence the ingenious Author concludes, thoſe Pulſations to be the Way whereby theſe Inſects woo one another, and find out, and invite each other to Copulation.

The ſecond Kind of *Death-Watch* is an Inſect in Appearance quite different from the firſt. The former only beats 7 or 8 Strokes at a Time, and quicker; The latter will beat ſome Hours together, without Intermiſſion, and his Strokes are more leiſurely, and like the Beat of a Watch. This latter is a ſmall greyiſh Inſect, much like a Louſe when viewed with the naked Eye. Its Figure, as magnified, is ſeen in *Tab. Natur. Hiſt. Fig. 2.* It is very common in all Parts of the Houſe in the Summer-Months: Is very nimble in running to Shelter; and ſie of Beating when diſturb'd. But will beat very freely before you, and alſo answer the Beating, if you can view it without giving it Diſturbance, or ſtriking the Place where it lies, &c. He cannot ſay, whether they beat in any other Thing, but never heard their Noiſe except in or near Paper. As to their Noiſe, the ſame Author is in doubt whether it be made by their Heads, or rather Snouts againſt the Paper; Or, whether it be not made after ſome ſuch Manner, as *Grashoppers* and *Crickets* make their Noiſe. He inclines to the former Opinion: The Reaſon of his Doubt is, that he obſerved the Animal's Body to ſhake and give a Jirk at every Beat, but could ſcarce perceive any Part of its Body to touch the Paper. But its Body is ſo ſmall, and near the Paper, and its Motion in Tick- ing ſo quick, that he thinks it might be, yet he not perceive it.

The Ticking, as in the other, he judges to be a Wooting-Act; as having obſerved another, after much Beating, come and make Officers to the beating Inſect, who, after ſome Officers, left off Beating, and got upon the Back of the other. When they were join'd, he got off again, and they continued ſome Hours join'd Tail to Tail, like Dog and Birch in Coition.

Whether this Inſect change its Shape, and become another Animal, or not, he cannot ſay; tho' he has ſome Cauſe to ſuſpect that it becomes a Sort of Fly. 'Tis at firſt a minute white Egg, much ſmaller than the Nits of Lice; tho' the Inſect is near as big as a Louſe. In *March* it is hatch'd, and creeps about with its Shell on. When it firſt leaves its Shell, 'tis even ſmaller than its Egg; tho'

that be ſcarce diſcernible without a Microſcope. In this State 'tis perfectly like the Mites in Cheeſe: From the Mite State they grow gradually to their mature or perfect State. When they become like the old Ones, they are at firſt very ſmall; but run about much more ſwiftly than before.

DEBENTURE, a Kind of Writing, in the Nature of a Bond, firſt given in 1649, to charge the Common-wealth to ſecure the Soldier-Creditor, or his Assigns, the Sum due, upon Auditing the Accounts of his Arrears.

The Word is alſo uſed in the Exchequer, and in the King's Houſe, where *Debentures* are uſually given to the Servants for the Payment of their Wages, Board- Wages, and the like.

The Word is mention'd in the Act of Oblivion, 12. *Car. II. Cap. II.* and ſince the late Revolution, has been uſed in many Acts of Parliament, eſpecially in that which relates to the forfeited Eſtates in Ireland, out of which the Soldiers *Debentures* are appointed to be ſatisfied, 11. *W. III.*

DE bene eſſe, a Latin Phraſe uſed in our Law-Books; Doing, or to do a Thing, *De bene eſſe*, is to accept or allow it as well done for the preſent; But when it comes to be more fully examin'd, or tried, to ſtand or fall, to be allowed or diſallowed, according to the Merit, or Well-being of the Thing in its own Nature; or, as we ſay, *Valeret quantum va- lere poſſet*.

Thus, in Chancery, upon Motion to have one of the leſs principal Defendants in a Cauſe examin'd as a Witneſs, the Court (not then thoroughly examining the Juſtice of it, or not hearing what may be objected on the other Side) often orders ſuch a De- fendant to be examin'd *De bene eſſe*, i. e. that his De- poſition ſhall be allowed or ſuppoſed at the Hearing of the Cauſe upon a full Debate of the Matter, as the Court ſhall think fit; But for the preſent they have a Well-being or conditional Allowance.

DEBILITY, in a Medicinal Senſe, is a Relaxation of the Solids, which induces Weakneſs and Fainting.

DEBRUIZED, or **DEBRU'ED**, in Heraldry, is when we would imitate the grievous Reſtraint of any Animal, which is debar'd its natural Freedom by any of the Ordinaries being laid over it.

Thus when a Pale, &c. is born upon a Beaſt in an Eſcutcheon, the Beaſt is ſaid to be *debruſed* of the Pale.

DEBT, a Thing due, whether it conſiſt of Money, or Goods, or other Praſtitutions.

By our Law, *Debts* due to the King are to be ſatisfied in the firſt Place in all Cafes of Executorſhip, and Adminiſtratorſhip; and till the King's *Debt* be ſatisfied, he may protect the Debtor from the Arreſt of any other Creditor.

There are divers Kinds of *Debts*: *Active Debts*, are thoſe whereof a Perſon is Creditor: *Paſſive Debts*, thoſe whereof he is Debtor. There are alſo *Real Debts*, *Per- ſonal*, or *Mobiliary Debts*, and *Mixed Debts*.

Cborography Debt, is that due by Virtue of Note, or Writing under one's Hand, and not proved in Judicature. *Hypothecary Debt*, is that due in Virtue of ſome Con- tract, or Condemnation. *Predicatory Debt*, is that ariſing from an Alienation of Lands, &c. the whole Purchase whereof has not been paid. *Privileged Debt*, is that which muſt be ſatisfied before all others; As, the King's Tax, &c.

DEBTOR, a Perſon who owes ſomething to another: Is Oppoſition to Creditor, which is he to whom it is own. See CREDITOR.

DECAGON is a plain Figure in Geometry, having ten Sides and Angles.

If they be all equal to one another, it is then call'd a Regular *Decagon*, and may be inſcrib'd in a Circle.

Concerning this Figure, the chief Property is, that the Sides of a Regular *Decagon* are, in Power and Length, equal to the greateſt Segment of an Hexagon, inſcrib'd in the ſame Circle, and cut according to ex- trem and mean Proportion. A Fortification alſo con- ſiſting of ten Baſtions, is ſometimes call'd a *Decagon*.

DECALOGUE, the ten Commandments of God, engraven on two Tables of Stone, and given to Moſes.

The Word is Greek, compos'd of *Deca*, Ten, and *logos*, Word, &c. Ten Words. Accordingly, the Jews call them עשר גורמים *the Ten Words*, which Ap- pellation is very ancient. Tho' the Samaritans, both in their Hebrew Text, and their Verſion, add after the 17th Verſe of the XXth Chapter of *Exodus*; and after the 21ſt Verſe of the Vth Chapter of *Deutero-*

mony, an eleventh Commandment, to build an Altar on Mount *Gerizim*, &c. But 'tis apparently an Interpolation, to authorize their having a Temple and an Altar on that Mountain, and to discredit, if possible, the Temple at *Jerusalem*, and the Worship there perform'd. It must be added, however, that, tho' all, both Jews and Christians, agree in the Number of ten Commandments; there is some Difference as to the Manner of dividing them.

The *Pharisees*, and *Posellus* after them, in his Treatise, de *Phœnenum Liberis*, say, that the *Decalogue*, or Ten Commandments, were engraven quite through the Tables which God gave to *Moses*; and that notwithstanding the Middle of the *D* *Men* final, and of the *D* *Samech*, remain'd miraculously suspended without adhering to any Thing. See the *Dissertation on the Samaritan Tablets*, printed at *Paris* in 1715. They add, that the *Decalogue* was wrote in Letters of Light, i. e. in Luminous, Shining Letters.

DECAMERIS, a Term signifying a tenth Part, us'd by Mr. *Sauveur*, and some other Authors, to mark and measure the Intervals of Sounds. The Word is form'd of *deka*, Ten, and *metre*, Part.

DECAMERON, a Work containing the Actions, or Conversations of ten Days. *Boccaccio's Decameron* consists of one hundred Novels related in ten Days.

DECAMP; when an Army raises its Camp, and departs from the Place where it lay before, they say, it is *decamped*.

DECANUS, among the *Romans*, an Officer who had ten other Officers, or Persons, under his Charge; Whence our *English* Dean. See *DEAN*.

DECANTATION, in Chymistry, &c. the Act of pouring out a Liqueur from off the *Fæces*, &c. by gently inclining the Lip or *Contents* of the Vessel; whence the Word is derived. See *CANTHUS*.

DECAPITE, in Heraldry. See *DECAPIT*.

DECAPROTI, among the Ancients, were Officers who gather'd the Tributes or Taxes. The *Decaproti* were oblig'd to pay for the Dead; or, to answer to the Emperor for the *Quota* Parts of such as died, out of their own Estates. *Cicero* in his Oration for *Roscius*, calls them *Decaproti*.

The Word comes from *deka*, Ten, and *protos*, first; probably by Reason the ten first, or principal Persons of each Community, were chose to make the Levies.

DECASTYLE, in the ancient Architecture, a Building with an Ordinance of ten Columns in Front. The Temple of *Jupiter Olympius* was *Decastyle*. The Word is form'd of *deka*, Ten, and *stylos*, Column.

DECEMBER, the last Month of the Year, wherein the Sun enters the Tropic of Capricorn, and makes the Winter-Solstice. See *MONETH*.

In *Romulus's* Year *December* was the 10th Month, whence the Name, viz. from *Decem*, Ten: For the *Romans* began their Year in *March*. The Month of *December* was under the Protection of *Vesta*. *Romulus* assign'd it 30 Days; *Numa* reduced it to 29, and *Julius Cæsar* to 31.

Under the Reign of *Commodus*, this Month was call'd out of Flattery *Anthonis*, in Honour of a Courtesan, whom that Prince passionately loved, and had got painted like an *Anthon*; but it kept that Name but during that Emperor's Life. At the latter End of the Month, they had the *Juveniles Iudi*, and the Country-People kept the Feast of the Goddess *Vaccina* in the Field, having then gotten in their Fruits, and sown their Corn; whence seems to be derived the Festival we make after Harvest is in.

DECEMPEDA, an Instrument us'd by the Ancients in Measuring. The *Decempeda* was a Rule, or Rod divided into ten Feet; whence its Name from *Decem*, Ten, and *Pes* *pedis*, Foot. The Foot was subdivided into 12 Inches; and each Inch into 10 Digits. See *FOOT*. The *Greeks* call'd it *Alaxaras*.

It was greatly us'd both in Measuring of Land, like the Chain among us; and by Architects, to give the proper Dimensions and Proportions to the Parts of their Building, which Use it still retains. *Horace*, Lib. II. Od. 15. lamenting the Magnificence and Delicacy of the Buildings of his Time, observes, that it was otherwise in the Times of *Romulus* and *Cato*, that in the Houses of private Persons there were not then known any Portico's measur'd out with the *Decempeda*, nor turn'd to the North, to take the cool Air.

DECENVIRI, Magistrates among the *Romans*, created with a sovereign Power, to draw up and make Laws for the People; Thus call'd by Reason the Power was committed to ten Persons together.

To the *Decenviri* was given all the Legislative Authority ever held by the Kings, and after them by the

Consuls. One among them had all the Ensigns and Honour of the Function; and the rest had the like in their Turn, during the Year of the *Decenviri*. 'Twas the *Decenviri* drew up the Law of the Twelve Tables, call'd thence the *Leges Decenvirales*, which for a considerable Time were the whole of the *Roman* Law. In the Year 502, the Consuls *Appius Claudius Crassinus*, and *T. Genucius Alurgimus*, were oblig'd to abdicate; upon which the first *Decenviri* were created. The Year following ten new ones were appointed to succeed them, and in the Year 504 another Set were to have been chosen; but that the People rose, made them lay down, and resum'd the Consuls. The excessive Debauchery of *Appius Claudius Crassinus*, one of the Consuls, who was first oblig'd to abdicate, and who had been chosen first *Decenvir* three times, was the principal Cause. *Cicero de Finib. Lib. I. Livy, Lib. III. Halicarneus, Lib. X. and Florus, Lib. C. 24.* give the History.

The *Decenviral* Administration, however, it is to be observed, had not its first Rise at the Time when the Authority of the Consuls was devolved into the Hands of the *Decenviri*: For, during the *Interregnum* that ensu'd after the Death of *Romulus*, the Management of Affairs, which the Senate then took upon them, is call'd by *Halicarneus*, Lib. II. *Decenviral*, by Reason the Senators, divided into Tens, commanded each in their Turn: That is, one of each Ten, for 5 Days successively, having the *Fasces, Licitors*, &c. like the Kings.

There were also military *Decenviri*; and on divers Emergencies *Decenviri* were created to manage and regulate certain Affairs, after the same Manner as Boards of Commissioners are now appointed. Thus, there were *Decenviri* for Conducting Colonies; *Decenviri* to prepare and preside at Feasts, in Honour of the Gods; *Decenviri* to take Care of the Sacrifices; *Decenviri* to keep the *Sybil's* Books. Sometimes, in lieu of *Decenviri*, they only created *Septenviri*, or *Trienviri*, or *Duenviri*, &c. See *QUINDECENVIRI*, &c.

DECENNALLIA, in Antiquity, Feasts which the *Roman* Emperors held every tenth Year of their Reign, with Sacrifices, Games, Largesses to the People, &c. *Augustus* was the Author of this Custom, which was afterwards imitated by his Successors. At the same Time they likewise offer'd Vows for the Emperor, and the Perpetuity of his Empire, call'd *Vota Decennalia*. From the Time of *Ashonius Pius*, we find these Ceremonies mark'd on Medals. **PRIMI DECENNALES. SECUNDI DECENNALES. VOTA SOL. DEGEN. II. VOTA SVSCEP. DEGEN. III.** These Vows must have been made at the Beginning of every 10th Year; for on the Medal of *Pertinax*, who scarce reign'd 4 Months, we find **VOTA DEGEN. & VOTIS DECENNALIBUS.**

Strabo in his *Antiq. Roman. Syntagma*, Cap. IV. is of Opinion, that these Vows took Place of those which the Censor us'd to make in the Times of the Republic for the Prosperity and Preservation thereof. In Effect, they were not only made for the Prince, but also for the State, as may be observ'd from *Dion. Lib. VIII.* and *Pliny the Younger, Lib. X. Ep. 101.*

Augustus's Aim in Establishing this Feast, was to preserve the Empire, and the sovereign Power without Offence, or Restraint to the People. For during the Celebration of this Feast, that Prince us'd to surrender up all his Authority into the Hands of the People, who, fill'd with Joy, and charm'd with the Goodness of *Augustus*, immediately deliver'd it him back again.

DECIDUOUS, in the general, expresses something apt and ready to fall: Thus *Boethius* say, in some Plants the *Perianthium* or *Calyx* is *deciduous* with the Flower, that is, falls off from the Plant with it; in others not. See *CALIX*.

DECIES TANTUM, a Wit that lies against a Juror, who hath taken Money for giving his Verdict; so call'd from its Effect, which is to recover ten times as much as he took. It lies also against Embracers that procure such an Esqueit.

DECLI, in Astronomy, an Aspect or Position of two Planets, when they are distant from each other a tenth Part of the *Zodiac*. See *ASPECT*.

DECIMAL Arithmetic, the Art of Computing by *Decimal Fractions*, first invented by *Job. Regiomontanus*, and us'd by him in the Construction of his *Tables of Sines*, &c. See *ARITHMETIC*, and *DECIMAL FRACTION*.

DECIMAL Fractions are those whose Denominator is one, with one or more Cyphers; as, 10, 100, 1000, 10000, &c. Thus $\frac{2}{10}$, $\frac{3}{100}$, &c. are *Decimal Fractions*. See *FRACTION*.

In the Writing of *Decimal Fractions* we usually omit the Denominator, as only consisting of Unity with Cyphers annex'd: And in lieu thereof, a Point, or Comma, is prefix'd to the Numerator. Thus, $\frac{1}{10}$ is writte .1; $\frac{1}{100}$.01; $\frac{1}{1000}$.001; and .125 expresses an Hundred Twenty-Five Parts of any Thing, suppos'd to be divided into 1000 Parts.

In *Decimals* it is chiefly to be noted, that as Cyphers on the right Hand of Integers, do increase their Value *decimally*; as, 2, 20, 200, &c. so when set on the left Hand of Fractions, they decrease the Value *decimally*; as, $\frac{1}{5}$, $\frac{1}{50}$, $\frac{1}{500}$, &c. But set on the left Hand of Integers, or on the right Hand of Fractions, they signify nothing; but only to fill up Places; thus, 5000, or 0005, is but five Units.

To reduce any *Vulgar Fraction*, of suppos'd $\frac{3}{8}$ to a *Decimal Fraction* of the same Value, whose Denominator shall be 1000; say by the Rule of three, as 8 the Denominator of the *Vulgar Fraction*, is to 5 its Numerator: So will 1000, the Denominator assign'd, be to a 4th Term, which by Working will be found to be 375, and therefore, $\frac{375}{1000}$, or .375, is a *Decimal* of the same Value with the former Fraction $\frac{3}{8}$.

The common Operations in *Decimals* are perform'd as in the *Vulgar Rules*, regard being had only to the particular Notation, to distinguish the Integral from the Fractional Part of a Sum.

In *Addition, and Subtraction of Decimals*; The Points being all plac'd under each other, the Figures are to be added, and subtracted as in common Arithmetic: And when the Operation is done, so many Figures of the Sum, or the Remainder, are to be noted for *Decimals*, as there are the most Places of *Decimals* in any of the given Numbers. An Example will make this clear.

Addition of Decimals.		Subtraction.	
345791	59, 271	From 67, 9	
792	15, 040	Take 29, 8754	
6124	3, 791	Rem. 38, 0246	
053	12, 009		
20	7, 5	From 25, 1462	
2	97, 692	Take 13, 07	
219551		Rem. 12, 0762	

For *Multiplication of Decimals*, observe to cut off just so many *Decimal Parts* from the Product as there are *Decimals* in both Factors: The Work is the same as in Integers. Thus,

Multiplication of Decimals:

1472	365	3, 650
175	122	6, 21
760	750	3, 650
10504	750	7500
1272	265	21900
219760	044550	22951, 650

Note, In the second Example, the Product only amounts to five Places; for which Reason a Cypher is prefix'd, to make up 6 *Decimal Places*; there being so many in the two Factors.

In *Division of Decimals*, proceed in all Respects as in *Dividing of Integers*; and when the Operation is done, mark as many Places in the Quotient for *Decimals*, as, with the Number of *Decimals* in the Divisor are equal to the *Decimal Places* of the Dividend:

122) 8030 (3,65	22) 8030 (3,65
143	143
132	132
110	110
110	110
00	00
22) 8030 (3,65	732) 8321,9 (1,13
143	732
102	1024
110	732
110	2729
...	2196
	233

But there are certain Cases in *Division of Decimals*, which require some further Management: As, first, where the Divisor is a *Decimal Fraction*, and the Dividend an Integer; add, or annex at least as many Cyphers to the Dividend, as there are Places in the Divisor: Thus, $\frac{365}{1000}$ 22,0000 (60,2. For there being three Places of *Decimals* in the Divisor, and four in the Dividend, there will be but one in the Quotient: Secondly, Where the Divisor is a mixt Number, and the Dividend a whole Number, add as many Cyphers to the Dividend, as there are Places in the Di-

visor. Thus, $\frac{365}{1000}$ 22,0000 (60,2. Thirdly, Wherever the Divisor is bigger than the Dividend, annex Cyphers to the latter. Thus, $\frac{365}{1000}$ 22,0000 (60,2.

Decimal Scales, in the general, are any Scales divided *decimally*; But, particularly, certain Scales of Money, Weights, and Measures, made from Tables, so call'd, to expedite *Decimal Arithmetic*, by Shewing by Inspection the *Decimal Fraction* of any Part of Money, Weight, or Measure.

DECIMATION, a Punishment which the *Romans* us'd to inflict on the Soldiers who had quitted their Post, or rais'd a Mutiny in the Camp, or behaved themselves cowardly in the Fight; which was practis'd thus: The General assembled the whole Camp, then the Tribune brought to him those that were guilty, and impeach'd, and reproach'd them; with their cowardly Actions and Baseless in the Presence of the whole Army: Then, putting their Names into an Urn, or Head-Piece, he drew five, ten, or twenty of them, according to their Number; and the Fifth, the Tenth, or the Twentieth, were put to the Sword, and the others saved. This was call'd *Decimare*, a Word of the ancient *Roman* Militia, who, to punish whole Legions, when they had failed in their Duty, made every tenth Soldier draw Lots, and put him to Death for an Example to the others.

DECINERS, or DECENNIERS, or DOZINERS, in the ancient Monuments of our Law, are such as were wont to have the Oversight, and Check of the *Frisburghs*, for Maintenance of the King's Peace; The Limits of whose Jurisdiction was call'd *Decima*, and *Dozain*.

They seem to have had very large Authority in the *Saxon* Times; taking Cognizance of Causes within their Circuit, and redressing Wrongs by Way of Judgment. Thus *Briton*, "We will that all those who are fourteen Years old, shall make Oath, that they will be sufficient and Loyal to us; and neither be Felons, nor assenting to Felons; and we will, that all profess themselves of this or that *Dozain*, and make or offer Surety of their Behaviour by those or those *Dozainers*, except Religious Persons, Clerks, Knights eldest Sons, and Women."

A *Dozain* now seems only to extend so far as a Leet: For in Leets only this Oath is administered by the Steward, and taken by such as are twelve Years old and upwards. See LEET.

DECK of a Ship, a Kind of planked Floor, whereon the Guns are laid, and the Men walk to and fro, serving as a Ceiling to separate the Stories of the Ship, or other Vessel.

Hence, a Ship is said to have two or three Decks, when it contains 2 or 3 Stories in its Cavity. The Middle Sort of Vessels have two Decks; the biggest three, distant from each other about 5 Feet. The Bottom-Deck is call'd the *first Deck*: The second Deck, answering to the second Story from the Ground in Houses, to the Place of the second Battery, contains an equal Number of Guns with the first, abating that there is none over the Stern, which is the Captain's Apartment: Before this Deck are the Kitchen-Offices, &c. In large Vessels there is a third Deck, and a third Battery. Some Vessels have likewise a *Half-Deck*, which reaches from the Main-Mast to the Stern of the Ship: As also a *Quarter-Deck*, which is from the Steerage a-luff to the Master's Round-House. Sometimes there is a *Spare-Deck*, which is the uppermost of all, being between the Main-Mast and the Mizen, call'd also the *Cribose*. A *Rope-Deck* is that made of Cordages interwove, and stretch'd over a Vessel that has no Deck, through which 'tis easy to annoy the Enemy who comes to board her, and has leap'd thereon. These are little used but in Merchant-Vessels, to defend them from the Corsairs: See SHIP, and NAVY.

DECLAMATION, a feign'd Discourse, or Speech made in public, and in the Tone and Manner of an Orator.

Among the Greeks, *Declamation* was become the Art of Speaking indifferently on all Subjects and all Sides of a Question; of making a Thing appear just that was unjust, and triumphing over the best and soundest Reasons. Such Sort of *Declamations* M. de St. Evremont observes, were very fit to corrupt the Mind by Accustoming it, to calveiate the Imagination rather than to form the Judgment, and to seek for Verisimilitudes to impose upon, rather than solid Reasons to convince.

Among us, *Declamation* is restrain'd to certain Exercises, which Scholars perform, to teach them to speak in public. A *Declamation* against *Hannibal*, against *Pyrrhus*, the *Declamations of Quintilian*, &c. In the Colleges of the Jesuites *Declamations* are little Theatrical or Drama-

ric Performances, consisting of a few Scenes not divided into Acts, rehears'd by the Students by Way of Exercise, and to form them for Speaking in public. Such *Declamations* are the most useful Exercises perform'd in the Colleges.

DECLARATION, in Law, a Shewing in Writing the Grief and Complaint of the Demandant, or Plaintiff, against the Defendant, or Tenant, wherein he is supposed to have receiv'd some wrong. This ought to be plain and certain, both because it impeacheth the Defendant, and also compels him to answer thereto.

DECLARATION is also us'd for a Confession which the Quakers, who scruple taking the Oaths of Supremacy, &c. are oblig'd to make and subscribe in lieu thereof. Its Tenor is a solemn Promise before God and the World, to be true to King George, with a Detestation and Horror of that damnable Position, that Princes, excommunicated by the Pope, or any other Power, may be deposed or murder'd; and a Declaration, that no foreign Prince, or Power, has any Right, Jurisdiction, or Authority in this Kingdom.

DECLENSION, in Grammar, an Inflexion of Nouns, according to their divers Cases; as *Nominative, Genitive, &c.* See CASE, NOMINATIVE, &c.

The *Declension* of Nouns is a different Thing in the modern Languages, which have not properly any Cases; from what it is in the ancient Greek and Latin, which have.

Declension, with Respect to Languages, wherein the Nouns admit of Changes, whether in the Beginning, the Middle, or the Ending, is properly the Expression of all those Changes in a certain Order, and by certain Degrees, call'd *Cases*: With Respect to Languages, wherein the Nouns do not admit of Changes in the same Number, *Declension* is the Expression of the different States, or Habitues a Noun is in, and the different Relations it has; which Difference of Relations is mark'd by Particles, call'd *Articles*; as, *a, the, of, to, from, &c.*

DECLENSION of a Disease, is when it is past its Height, and the Symptoms abate. See ACME.

DECLINATION, in Astronomy, the Distance of the Sun, a Star, Planet, or other Point of the Sphere of the World, from the Equator, either Northward, or Southward. See EQUATOR.

Declination is either *real* or *apparent*, according as the real or apparent Place of the Point is consider'd. See PLACE.

Hence the *Declination* is an Arch of a great Circle, as GS, (*Tab. Astronomy Fig. 4.*) intercepted between a given Point, as S, and the Equator AQ, and perpendicular to the same. Consequently, the Circle, by whose Arch the *Declination* GS is measured, passes through the Poles of the World. See CIRCLE of *Declination*.

The *Declination* of a Star, &c. is found by first observing the Altitude of the Pole as PR, (*Tab. Astronomy Fig. 5.*) This subtracted from 90°. gives the Height of the Equator AH. Then, the Meridian Altitude of the Star, HD, being observed, if it be greater than the Altitude of the Equator, AH, the latter subtracted from the former leaves the *Declination* Northward AD: Or, if the Altitude of the Star HT be less than that of the Equator HA, the former subtracted from the latter leaves the *Declination* Southward TA. e. g. *Tycho* at *Vranisbourg* observ'd the Meridian Altitude of the *Cauda Leonis*

Altitude of Equat.	HD	50°	59'	0"
Declinat. therefore,	AD	16	53	40

If the Star be in the Quadrant ZR, then the least Altitude MR subtracted from the Altitude of the Pole PR, leaves the Distance from the Pole PM; which subtracted again from the Quadrant PQ, leave the *Declination* MQ. e. g. *M. Copler* observ'd PM 2° 18' 50" which subtracted from 90° leaves MQ 87° 41' 10". And by this Method are constructed the Tables of *Declinations* of the fix'd Stars given us by *Ricciolus* and *Dechales*.

By comparing the ancient Observations with the modern, it appears, that the *Declination* of the fix'd Stars is variable; and that, differently, in different Stars. For in some it increases, and in others decreases, and that in different Quantities. The greatest Increase or Decrease doth not exceed three Minutes and a half in 20 Years Time.

It has been greatly disput'd among the latter Mathematicians, whether or no the *Declination* and Obliquity of the Ecliptic be variable; but the Point seems now decided in Favour of the Immutability. See OBLIQUITY, and ECLIPTIC.

Circle of DECLINATION is a great Circle of the Sphere, passing through the Poles of the World; Such is PGDK, passing through the Poles T and K.

Parallax of the DECLINATION is an Arch of the Circle of *Declination*, whereby the Parallax of the Altitude increases or diminishes the *Declination* of the Star. See PARALLAX.

Refraction of the DECLINATION, an Arch of the Circle of the *Declination*, whereby the *Declination* of a Star is increased, or diminished, by means of the Refraction. See REFRACTION.

DECLINATION of the Needle, or Compass, is the Variation from the true Meridian. See VARIATION of the *Needle*.

DECLINATION of a Plane, or Wall, in Dialling, is an Arch of the Horizon, comprehended either between the Plane, and the Prime Vertical Circle, if you account it from East to West; or between the Meridian, and the Plane, if you account it from the North, or South. See DECLINER.

There are many Ways given by Authors for finding the *Declination* of Planes: The most handy and practical Way is by a *Declinator*. See DECLINATOR.

DECLINATOR, an Instrument in Dialling, whereby the Declination, Inclination, and Reclination of Planes is determined. Its Structure is as follows: On a square wooden Board ABCD, (*Tab. Dialling Fig. 1.*) describe a Semi-Circle AED, and divide the two Quadrants thereof AE and ED into 90 Degrees, each beginning from E, as in the Figure. Then, having fix'd a Pin in the Center F, fit a wooden Ruler HI upon the same, moveable thereto, with a Box and Needle K, as shewn under COMPASS.

Now, to apply this, in taking the Declination of a Plane, applying the Side AD of the Instrument to the Plane purpos'd, as MN *Fig. 2.* and move the Ruler FG, with the Compass G this Way and that, and about the Center F, till the Needle rest upon the Line of the Magetical Meridian of the Place. Now if the Ruler in this Situation cut the Quadrant in E, the Plane is either Northern or Southern: But if it cut between D and E, the Plane declines to the West; or, if between AE, to the East by the Quantity of the Angle GFE.

The same Instrument will serve to take the Inclinations and Reclinations of Planes. To this End, instead of the Ruler and Needle, a Thread with a Plummet is fix'd on a Pin in the Center E: Then the Side BC of the Declinator ABCD, being applied to the propos'd Plane, as IL *Fig. 3.* If the Plumb-Line EG cut the Semi-Circle AED in the Point E, the Plane is Horizontal; Or if it cut the Quadrant EL in any Point as G, then will EFG be the Angle of Inclination: Lastly, if applying the Side AB to the Plane, the Plummet cut E, the Plane is Vertical.

Hence, if the Quantity of the Angle of Inclination be compared with the Elevation of the Pole, and Equator; it is easily known, whether the Plane be inclined, or reclined. See INCLINATION, and RECLINATION.

DECLINERS, or *Declining Dials*, are those which cut either the Plane of the prime Vertical Circle, or the Plane of the Horizon obliquely. See DIAL.

If we conceive the Plane of the prime Vertical Circle to revolve a little upon a right Line drawn from *Zenith* to *Nadir*; The Plane will become *declining*; nor will it be any longer cut at right Angles by the Meridian, but by some Vertical Circle passing through the intermediate Poles. After the like Manner a Horizontal Plane will be brought to *decline*, if revolving on the Meridian Line, one Part of it be rais'd a little towards the *Zenith*, and the other depress'd towards the *Nadir*.

The Use of *Declining* Vertical Dials is very frequent, in Regard the Walls of Houses, whereon Dials are commonly drawn, do generally decline from the Cardinal Points. Incliners and Recliners, and especially Decliners, are very rare. See DIAL.

DECLINING, $\left. \begin{array}{l} \text{Erect,} \\ \text{Inclining,} \\ \text{Reclining} \end{array} \right\} \text{Dials. See DIAL.}$

DECLIVIS, in Anatomy, a Muscle of the Abdomen, call'd also *Obliquus Descendens*. See OBLIQUUS *Descendens*.

DECLIVITY. See ACTIVITY.

DECOCTION, the Act of Boiling one, or more Plants, or other Drugs, to extract the Juice out of the same for some medicinal Purpose.

Decoctions of Guaiac, and Sarsaparilla, are the common Drink in certain Diseases. See APERTUS, and INFUSION.

Monfr. Bouduc assures us from his own Experience, that the Infusions of Vegetable Purgatives act better, and produce better Effects, than their *Decoctions*; which he attributes to this, that the purest and most active Principles of those Bodies are dissipated and evaporated by Heat. *Memoires de l'Academie Royale des Sciences*, An. 1710.

DECOLLATION, *Beheading*, a Term seldom used, but in the Phrase, *the Decollation of St. John Baptist*, signifying a Painting, wherein is represented the Baptist's Head, struck off from his Trunk; Or, the Feast held in Honour of that Martyr.

A *French* Ambassador at *Constantinople*, shewing the Grand Seigneur a *Decollation of St. John*, admirably represented, except that the Painter had not observed, that when a Man is beheaded, the Skin shrinks back a little; The Emperor immediately spied the Fault in that exquisite Performance; and to convince the Ambassador thereof, sent Orders for a Man to be immediately beheaded, and his Head to be brought for a Proof. *Catherine's Traite de la Peinture*.

DECOMPOSITION, in Chymistry and Pharmacy, the same Thing with *Analysis*, or *Resolution*, viz. the Reduction of a Body into the Principles, or component Parts it consists of. See *ANALYSIS*, and *RESOLUTION*.

Decomposition, is sometimes taken for any Sort of Resolution, or Separation of Parts: In Propriety, however, *Decomposition* is a Process of an Art, in order to a Separation of the Heterogeneities, or Impurities from any Matter.

Tradition, founded on repeated Experiments, is a much surer Way of arriving at the Knowledge of the Properties of a Plant, than any chymical *Analysis*, or *Decomposition* of its Principles. See *MEDICINE*.

DECORATION, in Architecture, an Ornament in a Church, or other public Place: Or, what adorns, and enriches a Building, Triumphant Arch, &c. either without Side, or within. See *ORNAMENT*.

The Orders of Architecture contribute a great deal to the *Decoration*; but then the several Parts of those Orders must have their just Proportions, Characters, and Ornaments; Otherwise the finest Order will bring Confusion, rather than Richness. See *ORDER*.

Decorations in Churches, are Paintings, Vases, Festoons, &c. occasionally applied to the Walls; and with so much Conduct and Discretion, as not to take off any Thing from the Form of the Architecture: As is much practised in *Italy*, at the solemn Feasts.

DECORATION is particularly applied to the Scenes of Theatres. See *SCENE*.

In Opera's, and other Theatrical Performances, the *Decorations* must be frequently changed, in Conformity to the Subject. The Ancients had two Kinds of *Decorations* for their Theatres: The first, call'd *Verisimilis*, having three Sides, or Faces which were turned successively to the Spectators: The other, call'd *Dulcibus*, shewing a new *Decoration* by drawing, or sliding another before it. This latter Sort of *Decorations* is still used, and apparently with much greater Success than among the Ancients, who were oblig'd to draw a Curtain whenever they made a Change in the *Decorations*; whereas on our Stage the Change is made in a Moment, and almost without being perceiv'd. See *THEATRE*.

DECORTICATION, the Peeling, or Unhulking of Roots, Seeds, Fruits, Branches, &c. or the Freeing, of them from their Barks, Rinds, Husks, or Shells. See *BARK*.

DECORUM, *DECOR*, *Decency*, is particularly used in Architecture, for the Suitableness of a Building, and the several Parts, and Ornaments thereof, to the Station, and Occasion. *Vitruvius* is very severe in this Point; and gives express Rules for the Appropriating, or Suitsing the several Orders to their natural Characters. So, e.g. as a *Corinthian* Column should not be set at the Entrance of a Prison, or Gate-House; Nor a *Tuscan*, in the Portico of a Church; As some have done among us, in breach of *Decorum*. Even in the Disposition of the Offices of our ordinary Houses, we find grievous Offences against *Decorum*: The Kitchen being often where the Parlour should be; and that in the first and best Story, which should have been damm'd to the lowest and worst.

DECOUPLE, in Heraldry, the same as *Uncoupled*, i. e. parted, or sever'd; Thus, a *Chevron Decoupled*, is a *Chevron* wanting so much towards the Point, that the two Ends stand at a Distance from each other, or are parted, or uncoupled.

DECOURS, } in Heraldry. See *DIACREMENT*,
DECRESSANT, }

DECOY, a Place made fit for Catching of wild Fowl: Hence, a *Decoy-Duck* is one that flies abroad, and lights into Company of wild ones, and being become acquainted with them, by her Allurement draws them into the *Decoy-Place*, where they become a Prey.

DECREE, a Resolve made by a Superior Power, for the Regulating of an Inferior.

The Commerce between Soul and Body, *Fa. Malbranche* observes, has no other *Vinculum*, or Connection, but the Efficacy of the divine *Decrees*. Second Causes only execute the *Decrees* of Providence. The Doctrine of the *Cabalists* infers, that God enters into Sin by a positive *Decree*; in that if Crimes were not ordain'd by an antecedent *Decree*, God could not foresee the Events.

The *Decrees of Councils*, are the Laws made by them; to regulate the Doctrine and Policy of the Church. See *CANON*.

Decree was originally used by the Lawyers for any Thing ordain'd by the Prince, upon Cognizance of the Cause: But the *Canons* now restrain the Word *Decree* to the Ordinances of Popes; as the Name *Canon* is to what is ordain'd by Councils.

The *Decrees* in Chancery, are the Determinations, or Sentences of the Lord Chancellor, upon full Hearing, and Weighing the Merits of the Cause. See *CHANCERY*.

DECREMENT, or **DECRESSANT**, in Heraldry, by the *French* Heralds usually call'd *Decours*, or, *es Decours*, is the Wane, or Decrease of the Moon, when she is receding from the Full towards the New.

In this State she is call'd in Blazon, a *Moon-Decressant*, or, *en Decours*; Since to call it a *Crescent*, would be improper, as that Term denotes an Increase. The Moon looking to the left Side of the Eclipticon, is always supposed to be *decreasing*: When she faces the right, she is *Crescent*, or in the *Increment*.

DECREPITATION, in Chymistry, a Drying, and Calcining of Salt over the Fire, continued till such Time as it ceases to crackle. See *SALT*.

The Term is also applied to the Noise, or Crackling of the Salt during the Operation. The Design of this Operation is to free the Salt of its superfluous Moisture. But the Salt is hereby rendered spongy, and apt to imbibe Moisture, that unless it be kept very close, it soon moistens again.

DECRETAL, a Rescript, or Letter of a Pope; whereby some Point, or Question in the Ecclesiastical Law is solved, or determined.

The *Decretals*, *Littere Decretales*, compose the second Part of the Canon-Law. See *CANON LAW*.

Decretals, are *Instituta propria Pape*, *Præcepta vero Regum*. They were first compiled into a Body by *Regino*, *Burchard*, *Anselm*, and *Ivo*: Afterwards by *Gratian*, who lived in the Pontificate of *Innocentius III*; which latter, as being generally approv'd, is call'd, *The first Collection of the Decretals*. Twelve Years after, a second Collection was made by *Gilbertus*, and *Almaric*, under the Name of *Volaterranus*; which, beside the *Decretals* of the former, contain'd those of *Celestine* the 11th. The third Collection was begun by *James Major*, Arch-Deacon of *Compostella*, and collected out of the Registers of *Innocent* the 11th. It was call'd, *Romanus Compilatio*; But, containing many Things not generally receiv'd, that Pope was persuad'd to employ some Person, to make a Collection by his Authority. Accordingly, *Petrus Beneventanus*, a Notary, or, as others say, *F. Raymond*, a Dominican, was appointed for that Work; which is the only Collection authorized by the holy See to be read in the Schools. *Bouffice* the VIIIth, in 1297, made a new Collection, under the Name of *Sextus*, containing 5 Books. *Clement* the 11th made a third, under the Title of *Clementines*; And *John* the XXIIIth, under that of *Extravagantes*. See *CLEMENTINES*, and *EXTRAVAGANTES*.

All the *Decretals* attributed to the Popes before *Siricius*, in 318, are evidently supposititious. All the World allow them an Imposture; and even such as are most favourable to the Court of *Rome*, are oblig'd to abandon them: Tho' they have been one great means of Establishing the Grandeur of *Rome*, and ruining the ancient Discipline, particularly as to Ecclesiastical Judgments, and the Rights of Bishops. They are supposed by some, the spurious Offspring of *Isidore*, Arch-Bishop of *Seville*, by Reason the Collection thereof bears the Name of *Isidore Peccator*, or *Mercator*. They were first publish'd by *Riculpus* Bishop of *Mentz*, in the 11th Century.

DECUPLE, in Arithmetic, a Term of Relation, or Proportion, implying a Thing to be ten times as much as another. See **RATIO**.

DECURIO, the Chief, or Commander of a *Decury*, both in the *Roman* Army, and in the College, or Assembly of the People. See **DECURV**.

DECURIO Municipalis, was a Name given to the Senators of the *Roman* Colonies. See **MUNICIPAL**.

They were call'd *Decuriones*, by Reason their Court, or Company, consisted of ten Persons. By means here-of the Cities of *Italy*, at least such as had Colonies, had a Share, under *Augustus*, in the Election of the *Roman* Magistrates; The *Decuriones*, or Senators of those Cities, having Suffrages therein, which they sent, seal'd up to *Rome*, a little before the Election.

DECURIO was also a Name given to certain Priests intended, as it should seem, for some particular Sacrifices, or other religious Ceremonies; or for the Sacrifices of private Families and Houses, as *Struvius* conjectures, who thence derives their Name. But he the Origin of the Name what it will, we have an Inscription in *Græce*, which confirms what we have said of their Function. **ANCHIALVS. CVB. AED. Q. TER. IN. AEDE. DECVRIO. ADLECTVS. EX. CONSENSV. DECVRIONVM. FAMILIÆ. VOLVNTATE.** Where we have a *Decurio* in the House of a private Person, *Q. Terentius*.

DECURY, ten Persons rang'd under one Chief, or Commander, call'd *Decurio*. See **DECURIO**.

The *Roman* Cavalry was divided into *Decuries*.

Romulus divided the whole *Roman* People into three Tribes; over each of which he appointed a Tribune: Each Tribe he subdivided into ten *Centuries*, with Centurions at their Heads: And each *Century* he subdivided further into ten *Decuries*, over each of which a *Decurio* commanded.

DECUSSION, in Geometry, Opticks, Anatomy, &c. The Point wherein two Lines, Rays, or Nerves, &c. cross, or intersect each other: Or the Action it self, of Crossing.

The Optic Nerves of both Eyes are commonly supposed to *decussate* e're they reach the Brain; to which *Decussation*, many Authors attribute it, that we see single with two Eyes: Others deny any *Decussation*. See **OPTIC NERVE**, **VISION**, &c.

The Rays of Light *decussate* in the *Crystalline*, e're they reach the *Retina*. See **CRYSTALLINE**.

There are divers Muscles, Membranes, &c. that *decussate*; their Fibres running over each other under greater or less Angles; and by that means giving both Strength and Convenience of Motion different Ways.

DECUSSIONIUM, is a Surgeon's Instrument, wherewith the *aura Mater* is pressed down in the Operation of Trepanning, to save it from Damage.

DECYPHERING, the Art, or Act of finding the Alphabet of a Cypher, or of Explaining a Letter wrote in Cypher. See **CYPHER**.

Every Language has peculiar Rules of *Decyphering*. *Jacques Gessory* has published the Principles of *Decyphering* the *French*; wherein the Rules proper to that Language are laid down. The principal, we shall here add as a Specimen in this Kind. As, first, that when a Character is found alone, it must either be an *A, Y*, or an *O*, these being the only Letters in the Alphabet that make Words singly. Secondly, the Character that occurs the oftent in a Writing to be *Decypher'd* is ordinarily an *E*; this being the most common Letter in that Language. Thirdly, To know the *U*, you must take the Character that is always preceded by one certain other, which will be the *Q*. Fourthly, The *I* is also known by means of the *Q*, for since *QUE*, and *QUI*, are the only Syllables in the *French* Tongue that begin with *Q*; whenever you find a Word of three Characters, whereof the first is a *Q*, and the last is not an *E*, it must be an *I*. Fifthly, In all Words of two Letters, one of them is a Vowel. Sixthly, Of the three first Characters of a Word, one of them is a Vowel. Seventhly, The Vowels being once *decypher'd*; the Consonants are readily found by the Connection certain Consonants usually have with certain Vowels.

DEDI, in Law, a Warranty given to the Feeffee and his Heirs. See **WARRANTY**.

DEDICATION, the Act of Consecrating a Temple, Altar, Statue, Place, &c. to the Honour of some Deity. See **TEMPLE**, **ALTAR**, **CHURCH**, &c.

The Use of *Dedications* is very ancient both among the Worshipers of the true God, and among the Heathens. The Hebrews call it *הקדש* *hqdsh*, Initiation, which the Greek Translators render *ἱερωα*, and *ἱερωα*, *Renewing*. In the Scripture we meet

with *Dedications* of the Tabernacle, of Altars, of the first and second Temple, and even of the Houses of private Persons. *Numb. VIII. 10, 11, 84, 88. Deut. XX. 5, 80, 88. 2d of Kings V. 63. 2d Chron. VII. 5, 9. 1st Esdr. VI. 16, 17. 2d Esdr. XII. 27. Psalms. XXIX. 1. Hebr. IX. 18.* There are also *Dedications* of Vestels and Garments of the Priests, and Levites, and even of the Men themselves.

Under the Christian Dispensation, we call those Ceremonies *Consecrations, Benedictions, Ordinations*, &c. and not *Dedications*, which is only applied to Places. See therefore, **CONSECRATION**, **BENEDICTION**, and **ORDINATION**.

The Feast of the **DEDICATION**, or rather the Feast-Day of the Saint, and Patron of a Church, call'd in our Law-Books, &c. *De dicione*, was celebrated not only by the Inhabitants of the Place, but by those of all the neighbouring Villages, who usually resorted thither. And such Assemblies were authorized by the King. *Ad Dedicaciones, ad Synodos, &c. venientes sit summa Pae.*

The Custom is still retain'd in divers Places, under the Name of *Wakes*, or *Vigils*. See **WAKE**.

The Heathens had also *Dedications* of Temples, Altars, and Statues of their Gods, &c. *Nebuchodonosor* had a *Dedication* of his Statue, *Daniel III. 2. Pilate* dedicated gilt Buckles at *Jerusalem* to *Tiberius*, *Pablo de Legat. Petronius* would have dedicated a Statue to the Emperor in the same City, *ibid. p. 791. Lycophron* speaks of the *Dedication* of the Temple of *Parthenope*. *Tacitus Hist. Lib. IV. C. 53.* mentions the *Dedication* of the Capitol, upon Rebuilding it by *Vespasian*, &c. These *Dedications* were perform'd with Sacrifices proper to the Deity they were offer'd to; but were never practis'd without Permission. Among the *Greeks*, it does not appear who gave the Permission: But among the *Romans*, it was the Magistrate.

The Jews celebrated the *Dedication* of their Temple every Year for eight Days. This was first enjoy'd by *Judas Maccabeus*, and the whole Synagogue, in the Year of the *Syromacedonian* *Æra* 148. i. e. 164. Years before Christ.

The Heathens had the like Anniversaries, as that of the *Dedication* of the Temple of *Parthenope*, mention'd by *Lycophron*.

Under Christianity, *Dedication* is only applied to a Church; and is properly the Consecration thereof, perform'd by a Bishop, with a Number of Ceremonies prescribed by the Church. The Christians finding themselves at Liberty under *Constantine*, in lieu of their ruinous Churches, built new Ones in every Place; and dedicated them with a deal of Solemnity. The *Dedication* was usually perform'd in a Synod; at least they assembled a Number of Bishops, to assist at the Service. We have the Description of those of the Churches at *Jerusalem*, and *Tyre*, in *Eusebius*, and many others in later Writers. In the Sacramentary of *Gelasius*, the *Dedication* of the Baptistry, is deliver'd separately from that of the Church, which was perform'd with less Ceremony than at present.

DEDIMUS Potestatem, in Law, a Writ wherewith Commission is given to one, or more private Persons for the Expedition of some Act belonging to a Judge. The Civilians call it *Delegatio*. It is granted most commonly upon Suggestion, that the Party, who is to do something before a Judge, or in a Court, is so weak he cannot travel. Its Use is various; as, to take a personal Answer to a Bill in Chancery; to examine Witnesses, levy a fine, &c.

DEDUCTION, in Commerce, a subtraction, or retrenching a little Sum payd from a greater remaining to pay. See **SUBTRACTION**.

When you have made a Deduction of 300 l. which I sent you, from the 500, which you lent me, there will only remain 200 due.

DEED, Factum, in Law, an Instrument written on Paper, or Parchment, consisting of three Things: *viz.* Writing, Sealing, and Delivery; and comprehending a Contract, or Bargain between Party and Party.

Of these there are two Sorts: *Deeds indentèd*, and *Deeds poll*; which Denominations arise from the Form and Fashion thereof; the one being cut in, and out in the Top, or Side, call'd *Indentèd*; and the other plain.

A *Deed Indentèd*, or *Indenture*, consists of two Parts, or more, (for there are *tripartite*, *quadripartite*, *septempartite*, &c. *Deeds*) wherein it is express'd, that the Parties thereto have to every Part thereof interchangeably set their several Seals. The Cause of their Indenting is, that, whereas the several Parties have each of them one, the *Indenture* may make it appear, that they belong to one and the same Contract, by their tallying. See **INDENTURE**.

A *Dead toll*, or *polled*, anciently call'd *Charta decima Parte*, or *Charta simplex*, is a plain *Deed*, without indenting used, when the Vendor, for Example, only seals, and there is no need for the Vendor's Sealing a Contract, by Reason the Nature of the Contract is such, that it requires no Covenant from the Vendee. See *POLL*.

DEEMSTERS, or DEMSTERS. All Controversies in the Life of *Man* are decided, without Process-Writings, or any Charges, by certain Judges chose from among themselves, call'd *Deemsters*. *Cambr. Britan.* The Word is form'd from the Saxon *Zemas*, Judge, or Umpire.

DEEP-Sea Line, in the Sea-Language, a small Sea-Line to found withal when a Ship is in very deep Water at Sea. At the End of this Line is a Piece of Lead, call'd the *deep Sea Lead*, at the Bottom of which is a Coat of white Tallow, to bring up Stones, Gravel, Shells, or the like, from the Bottom, in order to learn the Differences of the Ground; which being enter'd from Time to Time in their Books, by comparing of Observations, they guess by their Soundings, &c. what Coasts they are on, tho' they cannot see Land. See *SOUNDING*.

DE Expensis Militum, a Writ commanding the Sheriff to levy 4 Shillings per Day, to defray the Expences of a Knight of the Shire attending in Parliament. And there is a like Writ *de Expensis Cronae, & Burgensium*, to levy 2 Shill. per Day for every Burgeis in Parliament. See *REPRESENTATIVE*.

DE facto, something actually done, or done indeed: In Contradistinction to *de jure*, where a Thing is only so in Justice, or Equity, but not in Fact.

After the Revolution, the Retainers to the abdicated King talk'd much of the Difference between a King *de jure*, and *de facto*, a Prince in actual, but not legal Possession of the Crown; and another who had the Right, but not the Possession. The Non-Jurors still hold the Chevalier for King *de jure*; and only allow King George for King *de facto*.

DEFAULT, in Law, an Offence, in omitting what a Person ought to do, particularly before a Court of Justice, at a Day assign'd, for which Judgment may be given against the *Defaulter*.

DEFECATE, a Term applied to some body that is purged, and clear'd of Feces, or Impurities. See *FÆCUS*. Distillations, and other Chymical Operations, are intended to separate the most pure, and subtle Parts from the Feces, or Lees. See *DISTILLATION*.

Spirit of Wine well *defecate*, easily evaporates. See *SPIRIT*.

DEFLECTION, the Act of Abandoning, or relinquishing of a Party, or Interest a Person had been engag'd in. The Word is form'd of the Latin *deficio*, to fail of.

DEFECTIVE, or DEFICIENT Names, in Grammar, are such as want either a Number, a particular Case, or are indeclinable. See *NOUN*.

The Term *defective* is also applied to a Verb that has not all its Moods and Tenses. See *VERB*, *MOON*, &c.

DEFESANCE, or DEFEZANCE, in Law, a Condition relating to a Deed, as to an Obligation, Recognizance, or Statute, which being perform'd by the Obligor, or Recognizer, the Act is disabled, or annulled, as if it had never been done.

The Difference between a *Proviso*, or Condition in Deed, and a *Defesance*, is this, that a *Proviso*, or Condition is annexed, or inserted in the Deed of Grant, whereas a *Defesance* is usually a Deed by itself.

DEFENCE, in War, is used for any Thing that saves to preserve, or secure the Soldiers, or the Place.

The Parapets, Flanks, Casemates, Ravelins, and Out-Works that cover the Place, are call'd the *Defences*, or Covers of the Place. See *PARAPET*, &c.

And when the Canon has beat down, or ruin'd these Works, so that the Men cannot fight under Cover, the *Defences* of the City are said to be demolish'd.

Line of DEFENCE, is that which flanks a Bastion, being drawn from the Flank opposite thereto. The *Line of Defence* should not exceed a Musket Shot, i. e. 120 Fathoms, or 750 Foot, or 60 Rhinland Perches. Indeed *Molder* allows 65; *Scheiter* 70; the Counts *de Pagan* and *Vauban* 75. There are greater Lines of Defence, and lesser; call'd also *Rajants*, and *Fickouts*.

Line of DEFENCE greater, or siebant, is a right Line, as EC, (*Tab. Fortification Fig. 3.*) drawn from the Point, or Vertex of the Bastion C to the Concourse E of the opposite Flank IE, with the Courtine EA.

Line of DEFENCE lesser, call'd also *Rajants*, and *Floiquants*, is the Face of the Bastion continued to the Courtine, as CI.

DEFENDING is ordinarily synonymous with *Flanking*. Thus, we say, the Flank *defends* the Courtine, and the opposite Face of the Bastion. This Demi-Lane Flank, or *defends* the Horn- or Crown-Work. The an-

cient Fortifications are easily taken, there being nothing to *defend*, to flank them. When we say, Flank *defends* the Courtine, we mean, not only that it is a-side of the Courtine, but also, that it prevents the Approaches; that is, such as are, posted on the Flank of a Bastion, can see any that come to attack the Courtine, and can shoot them, or prevent their approaching it.

Inner DEFENDING-Angle, is the Angle CIE, made by the lesser Line of Defence with the Courtine.

Outer DEFENDING-Angle, is the Angle COF, form'd by the two lesser Lines of Defence CO, and FO.

The Lines, or Sides of the Rampart, or Wall, are *defended* by Mulkets, or Carbines, as more easy, cheap, and commodious than Canons.

To estimate how far the Fire-Arms plac'd in any Post will *defend*; From the Extremes of a Line, as AB (*Fig. 4.*) draw Lines AC, and BD along, which the Fire-Arms are to be directed; then the Quantity of Defence is measur'd by a Perpendicular AE, intercepted between the Parallels: As is demonstrated by Mathematicians.

Hence, first, If from the given Angle ABE, and right Line AB, you seek AE, by Trigonometry, and by Experience determine the Number of Feet answering to one Fire-Lock, or Soldier; the Quantity of Defence will be had. Secondly, The Quantities of the Lines of Defence are as their Lengths; provided the Lines of Direction be perpendicular thereto.

DEFENCE, in our Law-Books, is us'd for a Prohibition: as, in *Rot. Parl. 21. Edu. III. Cris and Defence was made throughout England*. i. e. Proclamation and Prohibition. *Salmoneus punantur in Defensio. Stat. West. 2. c. 47.* Salmons are by that Act prohibited to be taken at certain Times. *Uffurarius delictus Rex Eduardus ne remaneret in Regno II. Edu. Confess.* In the Statutes of *Eduard I.* we have one, entitled, *Statutum de Defensione portandi Arma, &c.* And 'tis *defended* by Law, to diltrain on the High-Way.

The **DEFENCE-Month** is more usually call'd *Fence-Month*. See *FENCE-MONTH*.

DEFENCES, in Heraldry, are the Weapons of any Beast; as, the Horns of a Stag, the Tuiks of a wild Boar, &c.

DEFENDANT, is a Term in Law, signifying him, who is sued in an Action Personal; as Tenant is he, who is sued in an Action Real. See *PLAINTIFF*.

DEFENDEMUS, in Law, a Term us'd in Feoffments, and Donations, having this Force, that it binds the Donor, and his Heirs, to defend the Deme, if any Man go about to lay any Servitude on the Thing given, other than is contained in the Donation. See *WARRANTY*.

DEFENDERS, were anciently notable Dignitaries both in the Church and State; whose Business was to look to the Preservation of the public Weal, and to protect the Poor and Helpless, and maintain the Interests, and Causes of Churches.

About the Year 450 each Patriarchal Church began to have its *Defender*; which Custom was afterwards introduced into other Churches, and continued to later Days under other Names, as those of *Advocate*, and *Advocatus*. See *ADVOCATE*, &c.

In the Year 407, we find the Council of Carthage asking the Emperor for *Defenders* of the Number of *Scholastici*, i. e. Advocates who were in Office; and that it might be allowed them to enter, and search the Cabinets and Papers of the Judges, and other Civil Magistrates, whenever it should be found necessary for the Interest of the Church.

The Emperor still retains the Quality of *Advocate of the Church*: And the Kings of Great Britain preserve the Title of *Defender of the Faith*, granted to King Henry VIII. by Pope Leo X. on Occasion of that Prince's Writing against *Luther*, and afterwards confirm'd by *Clement VII*.

The Council of *Chalcedon*, *Gen. 2.* calls the *Defender* of a Church *Exarchus*. *Conin de Officiis Aulae Const.* makes mention of *Defenders of the Palace*. So does *Bollandus*, *Act. S. Janni*, T. 1. p. 501. There was also a *Defender of the Kingdom*; *Defensor Regni*; *Defenders of Cities*, *Defensores Civitatis*; *Defenders of the People*; *Defensores Plebis*; *Of the Poor*, *Fatherly*, *Widows*, &c.

DEFENDER of the Faith, a Title, or Quality attributed to the Kings of England, as that of *Cartholians* to the Kings of Spain, *Christianissimus* to the Kings of France, and *Advocatus Ecclesie*, to the Emperor. See *TITLE*, *QUALITY*, *KING*, &c.

It was first granted by Pope Leo X. to King Henry VIII. on Account of his Writing against *Martin Luther*, in Defence of the Church of Rome: And the Bull for the same bears Date *quinto Idus Octobris 1521*. See *TITLE*.

DEFENSITIVE, in Medicine, and Chirurgery, a Bandage, Plaster, or the like, us'd in the Cure of a Wound,

Wound, to moderate the Violence of the Pain, the Flux of Blood, and the Access, and Impression of the external Air.

The Causticization perform'd, the Wound is cover'd with Lint and the Eye with a *Defensive*, and a Triangular Compress. *Dionis*.

For the first dressing of the Entorse, Mr. *Dionis* us'd a little *Defensive* made of the White of an Egg, *Oleum Rosarum*, and Alum-Powder.

DEFERENS, *Deferentia*, in Anatomy, is applied to certain Vessels of the Body, appointed for the Conveyance of Humours from one Place to another.

The *Vasa Deferentia*, are the Vessels that convey the Seed as fast as it is secreted, and prepar'd in the Testicles, &c. into the *Vesiculae seminales*, there to be deposited, till an Emission is requir'd. See SEED.

Some call them the *Ejaculatory Vessels*. They are white, nervous, and round, situate partly in the *Scrotum*, and partly in the Abdomen. See GENERATION.

DEFERENT, or *Deferent*, in the ancient Astronomy, a Circle invented to account for the Eccentricity, Perigee, and Apogee of the Planets.

As the Planets are found differently distant from the Earth at different Times, it was supposed, that their proper Motion was perform'd in a Circle, or Ellipsis, which is not concentric with the Earth; And this eccentric Circle, or Ellipsis, they call'd the *Deferent*, because passing through the Center of the Planet, it seem'd to support, or sustain it in its Orbit.

The *Deferent* is supposed differently inclin'd to the Ecliptic, but in none more than 8 Degrees, excepting that of the Sun, which is in the Plane of the Equator it self, and is cut differently by the *Deferents* of the other Planets in two Places, call'd *Nodes*.

In the *Ptolemaic* System, the same *Deferent* is also call'd the *Deferent of the Epicycle*, because it traverses the Centre of the Epicycle, and seems to sustain it. See EPICYCLE, PROLEMAIC, &c.

DEFICIENT Numbers, are such whose Parts added together make less than the Integer, whose Parts they are. E. g. 8, whose Quota-Parts are 1, 2, and 4, which together only make 7. See ABUNDANT Number.

DEFICIENT Hyperbola, is a Curve that Denomination, having only one Asymptote, and two Hyperbolic Legs, running out infinitely towards the Side of the Asymptote, but contrary Ways. See CURVE.

DEFFAIT, or *Decapité*, a Term used by the French Herald, to denote a Beast, whose Head is cut off smooth; in which it differs from *Erasé*, where it is, as it were, torn off, and the Neck left ragged. See ERASED.

DEFILE, in Fortification, is a straight narrow Lane, or Passage, through which a Company of Horse, or Foot, can pass only in File, by making a small Front, so that the Enemy may take an Opportunity to stop their March, and to charge them with so much the more Advantage, in Regard that the Front and Rear cannot reciprocally come to the Relief of one another.

Hence, to go off File by File, is call'd *Defiling*. The Army began to *desfile* on the left, and was forc'd to *desfile* at each End of the Field, by Reason of the Morasses, and the Woods. The Word is form'd from the French *desfile*, to unthread, or unstring.

DEFINITE, in Grammar, is applied to an Article, or a Tense of a Verb, that has a precise, determinate Signification. See ARTICLE, TENSE, &c.

Such are, the Article *the* in English, *le* and *la* in French, &c. which fix, and ascertain the Noun they belong to, to some particular; as, *the King*, *le Roy*; whereas in the Quality, of *King*, *de Roy*, the Articles *of*, *de*, mark nothing precise, and are therefore call'd *Indefinite*. *I have loved*, is a *Præter-Perfect Definite*. See VERB.

DEFINITION, in Philosophy, Logic, &c. an Enumeration of the chief simple Idea's, whereof a compound Idea consists; in order to ascertain, or explain its Nature, and Character. See IDEA.

The Schoolmen give very imperfect Notions of *Definition*. Some define it the first Notion, or Conception, that arises of a Thing, whereby it is distinguish'd from every other, and from which, all the other Things that we conceive of it, are deduced. But the usual Doctrine is, *Oratio explicans quod res est*, A Discourse explaining what a Thing is: That is, as they further explain it, A Discourse conveying those Attributes which circumscribe, and determine the Nature of a Thing. For to explain, is only to propose the Parts separately, and expressly, which were before propos'd conjunctly, and implicitly; so that every Explanation has regard to some Whole.

Hence, according to the divers Kinds of Parts in any Thing, viz. Physical Parts, Metaphysical Parts, &c. arise so many divers Kinds of *Definitions* of the same

Thing; Thus, *Man* is either defined an *Animal*, consisting of *Soul and Body*; Or, a *reasonable Animal*, &c.

Definitions are of two Kinds; The one *Nominal*, or, of the Name: The other *Real*, or, of the Thing.

DEFINITION of the Name, or *Nominal Definition*, is that which explains the Sense, or Signification affixed to a Word: Or, as *Wolffius* more accurately considers it, an Enumeration of certain Marks, or Characters, sufficient to distinguish the Thing defined from any other Thing; so to leave it out of doubt, what the Subject is intended, or denoted by the Name. Such is the *Definition* of a Square, when it is said to be a quadrilateral, equilateral, rectangular Figure.

By *Definition of the Name*, is either meant a Declaration of the Idea's, and Characters affixed to the Word in the common Usage of the Language; or the peculiar Idea's, &c. which the Speaker thinks fit to denote by that Word; i. e. the special Sense wherein he proposes to use it, in his future Discourse. For it may be observed, that the Significance of any Word depends entirely on our Will; and we may affix what Idea we please to a Sound, which it self signifies nothing at all. The *Definition* of the Name therefore, in the second Sense, is merely arbitrary; and ought never to be call'd in Question; Only 'tis to be minded, that we keep inviolably to the same Signification. Hence, a *Definition* comes to stand, or to be made Use of, as an undoubted, or self-evident Maxim, as it frequently does, and particularly among Geometricians, who, above all other People, make Use of such *Definitions*.

Not that we mean, that after having defined a Thing so and so, there is nothing in our Idea affix'd to the defined Term, but must be granted to the Thing it self: Thus, if any one should define *Heat* to be a Quality in certain Bodies, like that which we feel upon the Application of Fire, or hot Bodies, no Man could find Fault with the *Definition*, as far as it expresses what he means by the Word *Heat*; but this does not hinder us from denying, that there is any Thing in the Body that warm us, like what we feel in our selves.

DEFINITION of a Thing, or *Real Definition*, is properly an Enumeration of the principal Attributes of a Thing, in order to convey, or explain its Nature. Thus a *Circle* is defined a *Figure*, whose *Circumference* is every where equidistant from its Centre.

A good Author, *Wolffius*, defines a *Real Definition* to be a distinct Notion explaining the *Genus* of a Thing, that is, the Manner wherein the Thing is made, or done: Such is that of a *Circle*, whereby 'tis said to be form'd by the Motion of a right Line round a fix'd Point. On which footing, what was before instanc'd as a *Real Definition* of a Circle, amounts to no more than a nominal one.

This Notion of a *Real Definition* is very strict and just; and affords a sufficient Distinction between a *real*, and a *nominal* one. But, tho' it has the Advantages of Analogy, Distinctness, and Convenience on its Side; yet, being only it self a *Nominal Definition*, i. e. a *Definition* of the Term *Real Definition*, we must consider it in that Light, that is, as an Idea affix'd arbitrarily to that Word, and which the Author always denotes by that Word in the Course of his Book. But, in Effect, 'tis not the usual Sense, or Acceptation of the Term; which is much less convenient and distinct. And 'tis to that usual Acceptation we are here chiefly to have regard.

A *Definition* is usually divided into *accurate*, and *inaccurate*; The first is what we strictly call a *Definition*; The second, we distinguish under the Name of *Description*. See DESCRIPTION.

Of the Parts enumerated in a *Definition*, some are common to other Things beside the Thing defined; Others peculiar thereto: The first are call'd the *Genus*, or *Kind*; and the second, the *Difference*. Thus, in the former *Definition* of a Circle, by a Figure whose Circumference is every where equidistant from its Centre: The Word *Figure* is the *Kind*, as being a Name common to all other Figures, as well as the Circle: The rest are the *Difference*, which specify, or distinguish the Circle from every other Figure.

And hence arises that Recipe of *Fa. de Colonia*, for the making of a *Definition*. Take, says he, something that is common to the Thing defined with other Things, and add to it something that is proper, or peculiar to the Thing; and you will have a *Definition*. Thus, e. g. Rhetoric is defin'd the Art of Speaking well; For that it is an Art, is common to it with several other Things; but that it is the Art of Speaking well, is peculiar to it alone.

There are three common Rules of a good *Definition*. First, That it be clear, and more easy and obvious than the Thing defined. Secondly, That it be universal, or adequate to the Thing defined; That is, that it agree

to all the Things contain'd in the Species *defined*. And Thirdly, That it be proper to the Thing *defined*. The two ordinary Defects of *Definitions*, are, not to agree either to the *whole Thing*, or the *sole Thing* defined: *Neque omni, neque soli*; than which nothing is more common, even among the best and justest Authors.

My Lord Bacon observes of *Aristotle's Definitions* in the general, that they are very much like that, whereby Man should be *defined* an *Animal that tills the Ground*. Not was his Master *Plato* less acceptable. The Joke put upon him on that Account is famous: *Plato*, it seems, had *defined* Man, *Animal Bipes, & Impluvius*, A two-footed Animal without Feathers. Upon which, *Diogenes the Cynic*, a great Derider of the Academicks, threw a Cock skip'd of his Feathers, and quite naked, into the Middle of *Plato's* School; crying, *Here is Plato's Man*. *Definition*, it must be observed, has not place every where: It has only to do with compound Ideas; as being no more than an Enumeration of the chief simple Ideas they are compounded of. Simple Ideas cannot be *defined*, as not allowing of an Enumeration. He who knows not what it is one calls *Heat*, will only learn it by Experience, or some synonymous Word, or some Word of an other Language, or by Circumlocution, whereby a Thing is shown, not *defined*; As if we should say, it was a *Sensation which we find when we sit by the Fire, or in the Sun*, which shows nothing of the Nature of the Thing; nor would a Person that had never felt the Sensation, understand any more what is meant thereby, than a Man born blind would know what a green Colour was, by telling him it was the Sensation we have when we behold the Grass in the Field.

Our *Definitions* of Substances, it must be added, are very defective. And as for Individuals, we have no *Definitions* at all. The Ideas of Substances are compounded of the various simple Ideas joyntly impress'd when they presented themselves; And all we can do to *define* them, is only to enumerate those several sensible Ideas, as Colour, Density, Malleability, Weight, &c. Thus, Gold is *defined* by such a peculiar Colour, Gravity, &c. Yet such *Definitions* may raise an Idea clear enough of that Substance in the Mind of one who has separately receiv'd, by his Senses, all the simple Ideas that are in the Composition of the Complexion *defined*; Tho' the intimate Nature and Essence of Substance is unknown, and consequently cannot be *defined*. Thus, 'tis only the Modes, or Attributes that can be explain'd by what we properly call a *Definition*. See SUBSTANCE, MODE, &c.

DEFINITION, in Rhetoric, is defined by *Tully*, a short, comprehensive Explanation of a Thing.

The *Definitions* of the Orator, it must be observ'd, differ much from those of the Logician, and Philosopher: These latter *define* a Thing closely and drierly by *Genus*, and Difference, e. g. *Man is a reasonable Animal*, &c. The Orators take a larger Compass, and *define* Things more ornamentally from the Places of Rhetoric; Thus: *Man is a curious Work of an Almighty Creator, fram'd after his own Image, endow'd with Reason, and born to Immortality*. But this Rhetorical *Definition*, in Strictness, comes nearer to the Nature of a Description, than an accurate *Definition*.

There are divers Kinds thereof; As, first, That drawn from the Parts whereof a Thing consists: Thus, *Oratory is an Art consisting of Invention, Disposition, Elevation, and Pronunciation*. Secondly, From the Effects; As, *Sin is the Plague of the Soul, the Sting of Conscience, the Scandal of Nature, the Ruin of the World, the Horror of God*, &c. Thirdly, From Affirmation, and Negation, as when we first say what a Thing is not, that it may be the better conceiv'd what it is. Thus *Cicero*, by *Defining* the Consulate, and shewing, that it does not consist in Ensigns, Licitors, &c. but in Virtue, proves that *Piso* was not Consul. Fourthly, From the Adjuncts, as when Chymistry is *defined*, *An Art without Sense, whose Beginning is Deceit; its Middle, Labour; and its End, Beggery*. And lastly, From Similies, and Metaphors; as when Death is *defined*, *A Leap in the Dark*, &c.

To this last Class of Metaphorical *Definitions*, are reducible those five not unpleasing *Definitions* of a Man which we shall here subjoin. The Poets feign, that the Sciences were once call'd together by *Minerva's* Command, to form a *Definition* of Man. The first, viz. Logic, *defined* him, *A sort of Eurythymus*; his Birth the Antecedent, and his Death the Consequent. Astronomy *defined* him, *A changeable Moon*; which never continues in the same State. Geometry *defined* him, *A Spherical Figure*; which ends in the same Point where it began. Lastly, Rhetoric *defined* Man, *An Orator*; whose Exordium was to be born; Narration, *Trouble*; and Per-

oration, *Death*; the Figures of the Oration being Sighs, Tears, or Joy, worse than Tears.

DEFINITOR, a Term used in several Religious Orders, for an Assessor, or Counsellor of a General, or Superior. See GENERAL.

In most Orders of Religious, the *Definitor* takes Place after the Superior of the Convent he lives in, when in the Convent itself; but out of the Convent, the *Definitor's* Place is before his own Superior.

Definitors are also subject, in the Convent they reside in, to the immediate Superior of the Convent, as to Things relating to the Monastic Discipline; but in nothing else.

DEFINITIVE, is applied to somewhat that terminates or decides a Question, or Process.

The House of Lords have pass'd a *Definitive Sentence* on such a Cause. *The Church* has given a *Definitive Judgment* on such an Article of Faith. The Word is used in Opposition to *Provisional*, and *Interlocutory*. See PROVISIONAL, &c.

DEFLAGRATION, in Chymistry, the Inkindling, or setting Fire to a Salt, a Mineral, or other Matter, mix'd for that Purpose with a sulphureous one, in order to purify it; As is done in the Preparing of *Aethiops Mineral*, *Sol Prunelle*, &c.

The Word is form'd of the Latin *de*, and *flagrare*, to burn.

DEFLECTION, is the turning any Thing a-side from its former Course, by some adventitious Cause; and is often apply'd to the Tendency of a Ship from her true Course, by the Reason of Currents, &c. which divert her, and turn her out of her right Way.

DEFLECTION of the Rays of Light, is a Property which Dr. *Hooke* observed 1675, and read an Account of before the Royal Society, *March* 18. the same Year. He says, he found it different both from Reflection, and Refraction; and that it was made towards the Surface of the opacous Body perpendicularly.

This is the same Property which Sir *Isaac Newton* calls *Inflexion*. See INFLECTION.

DEFLORATION, or *Deflowering*, the Act of taking away a Woman's Virginitie. Death, or Marriage, are decreed by the Civil Law in Case of *Defloration*. Many Anatomists make the *Hymen* a real Proof of Virginitie, persuaded that where it is not found, the Girl must have been *deflowered*. See HYMEN, and VIRGINITY.

The Ancients had so much Respect for Virgins, that they would not put them to Death, till they had first procur'd them to be *deflower'd*. The Natives of the Coast of *Malabar* pay Strangers to come and *deflower* their Brides.

Among the *Scots*, and the Northern Parts of *England*, it was a Privilege of the Lords of the Manour, granted them by King *Edward*, that they should have the first Nights Lodging with their Tenants Wives. King *Malcolm* allowed the Tenants to redeem this Service at a certain Rate, call'd *Marchette*, consisting of a certain Number of Cows. *Buchanan* says, it was redeem'd with half a Mark of Silver. The same Custom had Place in *Friesland*, *Friseland*, and some Parts of *Germany*.

By the Custom of *Anjou*, and *Maine*, a Maid after 25 Years of Age, may suffer herself to be *deflowered* without being disinherited for it by her Father. *Du Cange* quotes an Arret of the 19th of *March* 1409, obtain'd by the Inhabitants of *Abbeville* against the Bishop of *Aniens*, for taking Money to dispense with an Injunction he had made, not to suffer them to get their Wives Maiden-Heads the three first Nights; The Injunction being founded on a Canon of the IVth Council of *Carthage*, which decrees the same, out of Reverence to the Matrimonial Benediction.

DEFLUXION, a Falling, or Flowing of a Humour on any Part of the Body; as of Rheum on the Trachea, and Oesophagus in a Catarrh. See FLUXION, HUMOUR, &c.

DEFLUXIONS on the Lungs are very dangerous. See PNEUMONIA.

DEFLUXIONS on the Eyes produce a Weakness of Sight, and frequently Blindness. See EYE.

The Word is form'd from the Latin *Defluo*, I flow down, the Humors falling upon some Part, where they are gather'd together.

DEFORCEMENT, in Law, a Withholding Lands, or Tenements, by Force, from the right Owner. See DEFORCEMENT.

DEFORCEOR, or *DEFORCIANT*, one that overcomes, and casts out another from his Lands, &c. by mere Force.

A *Deforceor* differs from *Disseiser*, first, in this, that a Man may disseise without Force. Secondly, in that a Man may *deforce* another that never was in Possession,

as where several Persons have a Right to Lands, as common Heirs, and one entering first, keeps out the rest. See DISSEISOR.

Again, a *Deforcceor* differs from *Intruder*, in that a Man becomes *Intruder* by a wrongful Entry only into Lands void of a Possessor; whereas a *Deforcceor* holds out the rightful Heir. See INTRUSION.

DEFORMITY, a displeasing, or painful Idea excited in the Mind on Occasion of some Object, which wants of that Uniformity, that constitutes Beauty. See BEAUTY.

'Tis an Inquiry of some Delicacy, and Importance, whether there be any such Thing as *absolute Deformity*. Our Perception of the Idea's of Beauty, and Harmony is justly reckon'd a *Sense*; From its Affinity to the other Senses, in this, that the Pleasure does not arise from any Knowledge of Principles, Proportions, Causes, Uses, &c. but strikes at first View; as also in this, that the Ideas of Beauty, like other sensible Ideas, are necessarily pleasant to us, as well as immediately. See SENSE.

But, as the other Senses, which give us Pleasure, do also give us Pain; does this Sense of Beauty make any Objects disagreeable to us, and the Occasion of Pain?

That many Objects give no Pleasure to our Sense, is obvious; many are certainly void of Beauty: But then, says a late excellent Author, there is no Form which seems necessarily disagreeable to it self, when we dread no other Evil from it, and compare it with nothing better of the Kind. Many Objects are naturally displeasing, and distasteful to our external Senses, as well as others pleasing, and agreeable; as Smells, Tastes, and some separate Sounds: But for our Sense of Beauty, no Composition of Objects, which give not unpleasant simple Ideas, seems positively unpleasant, or painful of it self, had we never observ'd any Thing better of the Kind.

Deformity, then, is only the Absence of Beauty, or a Deficiency in the Beauty expected in any Species: Thus bad Music pleases Rusticks, who never heard any better; and the finest Ear is not offended with tuning of Instruments, if it be not too tedious, where no Harmony is expected: And yet much smaller Dissonancy shall offend amidst the Performance, where Harmony is expected. A rude Heap of Stones is no way offensive to one who shall be displeas'd with Irregularity in Architecture, where Beauty was expected. And had there been a Species of the Form, which we now denominate *ugly*, or *deform'd*, and had we never seen, or expected greater Beauty, we should have receiv'd no Disgust from it. Tho' the Pleasure would not have been so great in this Form as in those we now admire. Our Sense of Beauty seems design'd to give us positive Pleasure; but not positive Pain, or Disgust, any further than what arises from Disappointment.

There are indeed many Faces which at first View are apt to raise Dislike. But this is generally not from any positive *Deformity*, which of it self is positively displeasing, but either from Want of expected Beauty, or from the carrying some natural Indications of morally bad Dispositions, which we all acquire a Faculty of discerning in Countenances, Airs, and Gestures. That this is not occasion'd by any Form positively disgusting, appears hence, that if upon long Acquaintance we are sure of finding Sweetness of Temper, Humanity, and Cheerfulness, tho' the bodily Form continues, it shall give us no Disgust. There are Horrors rais'd by some Objects, which are only the Effect of Fear for our selves, or Compassion towards others, when either Reason, or some foolish Association of Ideas makes us apprehend Danger, and not the Effect of any Thing in the Form it self. For we find, that most of those Objects, which excite Horror at first, when Experience, or Reason has removed the Fear, may become the Occasion of Pleasure; as in ravenous Beasts, a tempestuous Sea, a craggy Precipice, a dark shady Valley, &c.

This Association of Ideas makes many Objects beautiful and pleasant. The Beauty of Trees, their cool Shades, and their Aptness to conceal from Observation, have made Groves, and Woods, the usual Retreat of those who love Solitude, especially the Religious, the Penive, the Melancholy, and the Amorous: And do not we find, that we have so joy'd the Ideas of those Dispositions of Mind, with those external Objects, that they always occur to us along with them? And according as the Habits, or Passions contracted, or gratified therein give us Pleasure, or Pain, Remembrance is pleasurable, or painful. The Dim Light in Gothic Buildings has had an Association of a very foreign Idea, which *Milton* expresses in his Epithet, *A dim religious Light*. After the like Manner, the casual Conjunction of Ideas give us Disgusts when there is nothing disagreeable in the Form it self. And this, in Effect, is the Cause of most of our fantastic Aversions to

the Figures of divers Animals, &c. Thus Serpents of all Kinds, and many Insects, really beautiful enough, are beheld with Aversion by many People, who have got some accidental Ideas associated to them. See ASSOCIATION of Ideas.

DEFTARDAR, or DEFTERDER, the Treasurer of the Revenues of the *Turkish*, and *Persian* Empire. See TREASURER.

Meninski calls him *Supremus Thesaurarius*, High Treasurer; and *Præses Camera*, President of the Exchequer; And *Cæpulus* makes him the Keeper, and Comptroller of the Books of Receipt, and Payment.

The *Defstardar*, or as *Vigenere* calls him, the *Deftender*, has in his Charge the Rolls, and Accounts of the Militia, and the Treasury; He receives all the Grand Seignior's Revenues, pays his Forces, and furnishes the Expenses of all public Affairs: In which, his Office differs from that of the *Chazanadar*, who is Treasurer of the *Seraglio*, or Court, as the *Defstardar* is of the State.

Ricaut makes a *Defstardar* in each *Beglierbie*, or Government. *Vigenere* assures us, there are but two, the one for *Europe*, and the other for *Asia*: The first resides at *Constantinople*, and has under him two General Commissioners, or Deputies, one for *Hungary*, *Transylvania*, *Wallachia*, *Croatia*, *Servia*, *Bulgaria*, *Bosnia*, &c. The other for *Greece*, and the *Morea*, with the Islands of the *Archipelago*.

Each of these has under him as many Sub-Commissioners, or Agents, as there are Sanjaquats in his Province; which Sub-Commissioners have as many Clerks as there are Sabass's in their Sanjaquat, to keep the Account of the Timariots in their Districts. The *Deftender of Asia* has two General Commissioners, the one for *Anatolia*, the other for *Syria*, *Arabia*, and *Egypt*; who have likewise their Sub-Commissioners, Clerks, &c. as those of *Europe*.

The Word is compounded, first, of דפטר *deftter*, a *Turkish* Name for a Book, Register, Memoir, &c. which *Meninski* derives from the Greek *δύψα*, Skin, Parchment: The second Word, whereof *Defstardar* is compounded, is דאר *dar*, a *Turkish*, and *Persian* Word, signifying keeping, or holding, *q. d.* Book-keeper of the Monies receiv'd, and expended.

DEGENERATION, the Act of failing, or declining from a more perfect, or valuable Kind, or Condition, to a less.

'Tis a great Dispute among Naturalists, whether or no Animals, Plants, &c. be capable of *degenerating* into other Species. The Affirmative being urged by many as a strong Objection against the Plant, &c. being contain'd in the Seed; and the Doctrine of Generation, wherein that is suppos'd.

Forstus Licetus, Lib. IV. *de Spont. vivent. ori.* expressly contends, that the Forms of Animals *degenerate* into other more imperfect ones: Thus, says he, the Soul of a Calf, after its Death, *degenerates* into the Souls of the Worms, Bees, &c. arising out of his Carcass; But the other School-Men laugh at the Notion.

Others hold, that in the same Matter there are divers Forms; and that *Degeneration* is only the putting off one Form, and calling forth another latent one: But it is impossible, the Form of a Worm, and that of a Calf, should be actually existing together in the same Piece of Matter. See FORM.

Others hold, that the *Degeneration* only obtains in Vegetables, and define it the Change of a Plant of one Kind into that of another viler Kind. Thus, say they, Wheat *degenerates* into Tares; Oats into *Avena*, or wild Oats; *Ocimum* into *Serpyllus*; *Silybrium* into Mint; *Caulis* into *Rapa*, &c.

The Plantule, or *Stamen* of the future Vegetable, they hold to exist in the Seed; so as that to produce such a *Plexus*, or Organism, a Matter so and so prepar'd is requir'd: And add, that the Matter in the Soil where the Seed is lodged being such as is incapable of producing the said *Plexus*, it must necessarily change into another of a different Nature from that of the Seed requir'd, tho' in some Respects alike, and approaching thereto: Thus, Tares and Wheat, in many Respects agree; so also *Serpyllus* and *Ocimum*, &c. They allow, however, that there is no *Degeneration* in the Root, but only in the Seed: In as much as the Root already supposes a perfect Organization.

But our latest and best Naturalists maintain such a *Degeneration*, or Transformation, to be a *Chimera*: Nor but they allow, that a Plant, by being transplanted to an improper Soil, or Sun, may be deprav'd; so as a Florid *Caulis*, *c. g.* may produce only a *Brassica Capitata*; and a *Dutch Rose* of an hundred Leaves, another *Rose* far short thereof in Number of Leaves, Colour, Smell, &c. such a Depravation is possible, and frequently happens; but

but a specific Transformation forms out of the Power of Nature; a new Form ever supposing a new Generation, which again supposes a Corruption of the former Kind. See TRANSFORMATION, and SEED.

DEGLUTITION, in Medicine, the Act of swallowing the Food. See FOON.

DEGLUTITION is perform'd, in the first place, by means of the Tongue, driving the Aliment into the *Oesophagus*, or Gullet; and then, by the Contraction of the Spincter, and the fleshy Fibres of the same *Oesophagus*, which lessening the Bore, or Aperture thereof, protrude the Contents downwards into the Stomach. See OSOPHAGUS, PHARYNX, DIGESTION, &c.

DEGLUTITION succeeds Mastication, and is followed by COECATION. See MASTICATION, and COECATION.

DEGRADATION, in our Law-Books call'd DISGRADATION, and DEPOSITION, the Act of depriving, or stripping a Person for ever of a Dignity, or Degree of Honour, and taking away the Title, Badge, and Rights thereof. See DEPOSITION.

The Degradation of a Peer, a Priest, a Knight, a Gentleman, an Officer, &c. is perform'd with divers Ceremonies. That anciently observ'd in degrading a Person from his Nobility, is very curious, and deserves to be rehearsed here, after *Gellius*, and *la Colombiere*. It was practis'd in the Time of *Francis I.* upon Captain *Fangel*, who had cowardly given up *Fontarabia*, whereof he was Governor.

On this Occasion, twenty or thirty Cavaliers, without Impatation, or Reproach, were assembled, before whom the Gentleman was accused of Treason, and Breach of Faith, by a King at Arms. Two Scaffolds were erected, the one for the Judges, Heralds, and Parliament, and the other for the condemn'd Cavalier, who was arm'd at all Points, and his Shield placed on a Stake before him, reversed with the Point upwards. On one Side assisted twelve Priests, in Surplices, who sang the Vigils of the Dead. At the Close of each Psalm they made a Pause, during which the Officers of Arms stripp'd the Condemn'd of some Piece of his Armour, beginning with the Helm, and proceeding thus, till he was quite disarm'd: Which done, they broke his Shield in three Pieces with a Hammer. Then the King at Arms turn'd a Basin of hot Water on the Criminal's Head; and the Judges, putting on Mourning Habits, went to the Church. This done, the Degraded was drawn from off the Scaffold, with a Rope tied under his Arm-Pits, laid on a Bier, and cover'd with Mourning-Cloaths, the Priest singing some of the Prayers for the Dead; And then he was deliver'd to the Civil-Judge, and the Executioner of Justice.

Take a more Domestic Instance: Sir *Andrew Harclay*, Earl of *Carlisle*, being convicted, degraded, and attainted of Treason, 18^o. *Edu. III.* coram Rege; after Judgment was pronounc'd on him, his Sword was broke over his Head, and his Spurs hewn off his Heels; Sir *Anthony Lucy*, the Judge, saying to him, *Andrew, now art thou no Knight, but a Knave*. And by *Stat. 13. Caroli II.* *William, Lord Mansion*, Sir *Henry Milmay*, and others, were degraded from all Titles of Honour, Dignities, and Preeminences, and none of them to bear, or use the Title of Lord, Knight, Esquier, or Gentleman, or any Coat of Arms, for ever afterwards.

As to Ecclesiasticks, we have an Instance of Degradation before Condemnation to Death, in the VIIIth Century, at *Constantinople*. It is in the Person of the Patriarch *Constantin*, whom *Constantin Copronymus* caused to be executed. He was made to ascend the *Ambo*; the Patriarch *Nicetas* sent some of his Bishops to strip him of the *Pallium*, and anathematized him. Then they made him go out of the Church backwards. But we have a much later Instance in our own History. When *Craemer*, Arch-Bishop of *Canterbury*, was degraded by Order of Queen *Mary*; They dress'd him in Episcopal Robes, made only of Canvas, put the Mitre on his Head, and the Pastoral Staff in his Hand: And in this Attire shew'd him to the People. Which done, they stripp'd him Piece by Piece.

At present, they don't stand so much on the Ceremony of Degradation, in order to the putting a Priest to Death; by Reason of the Delays, and Difficulties that it would occasion. Pope *Boniface* pronounced, that six Bishops were requir'd to degrade a Priest: But the Difficulty of assembling so many Bishops, rendered the Punishment frequently impracticable. With us, a Priest, after having been deliver'd to his Ordinary, if he cannot purge himself of the Crime laid at his Door; his Gown, and other Robes are stripp'd over his Ears by the common Hangman, by which he is declar'd divested of his Orders. It is decid'd, however, that Degradation does not efface the Priests Character.

Degradation only seems to differ from Deposition in a few ignominious Ceremonies, which Custom has added thereto. Accordingly, in the Business of *Arms*, Arch-

Bishop of *Rheims*, sentenced in the Council of *Orleans* in 991; it was deliberated, what Form they should follow in the Deposition, whether that of the Canons, that is, simple Deposition; or that of Custom, viz. Degradation. And it was declar'd, that he should surrender the Ring, Pastoral Staff, and Pallium; but that his Robes should not be tore off him. In Effect, the Canons prescribe no more than a mere reading of the Sentence. 'Tis the rest, therefore, added hereto by Custom, viz. the Stripping off the Ornaments, and the tearing the Pontifical Vestments, that properly constitutes Degradation.

DEGRADATION, in Painting, expresses the lessening, and rendering dim and confused, the Appearance of distant Objects in a Landkip; so as they shall appear there, as they would do to an Eye placed at that Distance from them.

DEGRADED, in Heraldry. A Cross degraded, is a Cross mark'd, or divided into Steps at each End; diminishing as they ascend towards the Middle, or Centre; by the French call'd *Perronne*. See CROSS.

DEJECTION, in Medicine, properly signifies the Act of Ejecting, or Evacuating the Excrements, by means of the Peristaltic Motion of the Guts; In which Sense it comes nearly to the Signification of Excretion. See EXCRETION.

But the Term is also, and that more ordinarily, applied to the Excrements themselves, thus evacuated; in which Sense it is of the same import with *Stool*. See STOOL, and EXCRETMENT.

Viscid, glutinous, or, as they call them, *unguinous* Dejections, frequent in Scorbutic Diseases, indicate a Colliquation of the Solids of the Body. See UNGUINOUS.

DEJECTION, Fall, in Astrology, is applied to the Planets, when in their Detriment, i. e. when they have lost of their Force, or Influence, by reason of their being in Opposition to some others, which check, and counteract them. Or it is used when a Planet is in a Sign opposite to that wherein it has its greatest Effect, or Influence, which is call'd its Exaltation. Thus, the Sign *Aries* being the Exaltation of the Sun, the Sign *Libra* is its Dejection. See EXALTATION.

DEICIDE, *Deicide*, a Term only us'd in speaking of the Condemnation, and Execution of the Saviour of the World, by *Pontius Pilate*, and the Jews; which was an horrible *Deicide*.

The Jews, an ingenious Author observes, were never more remote from Idolatry than at present; Never more inviolably attach'd to the Law of *Moses*, than at present: Whence then that Load of Evils and Misfortunes they have so many Ages groan'd under, Evils incomparably greater and more lasting than all the Chastisements wherewith God anciently avenged their most heinous Idolatries? Whence do they arise, but from the *Deicide* they committed in the Person of Jesus Christ.

DEIFICATION, in the Pagan Theology, the Act, or Ceremony of deifying their Emperors, i. e. of placing them among the Gods, and decreting divine Honours to be render'd them. See GOD.

The Deification is the same with *Apotheosis*. See APOTHEOSIS.

DEINCLINERS, or DEINCLINING Dials, are such as both decline; and incline, or recline at the same Time. See DIAL.

Suppose, for Instance, a Plane to cut the prime Vertical Circle at an Angle of 30 Degrees; and the Horizontal Plane under an Angle of 24 Degrees; the Elevation of the Pole being 52 Degrees; a Dial drawn on this Plane, is call'd a *Deincliner*. See DECLINER.

DEISM, the Doctrine, or Belief of such as hold the Existence of a God, as the whole of their Religion. The Word is form'd from *Deus*, God. See DEISTS.

DEISTS, a Class of People, known also under the Denomination of *Free-thinkers*, whose Character is, not to profess any particular Form, or System of Religion; but only to acknowledge the Existence of a God, without rendering him any external Worship, or Service.

The *Deists* hold, that considering the Multiplicity of Religions, the numerous Preferences to Revelation, and the obscure, precarious Arguments advanced in Proof thereof; the best and surest Way is, to return to the Simplicity of Nature, and the Belief of one God, which is the only Truth agreed to by all Nations.

They complain, that the Liberty of thinking, and reasoning, is oppress'd under the Yoke of Religion, and that the Minds of Men are ridden, and tyranniz'd over by the Necessity impos'd on them of believing inconceivable Mysteries; And contend, that nothing should be requir'd to be assented to, or believed, but what their Reason clearly conceive.

The Appellation *Deist* is more particularly given to such as are not altogether without Religion, but reject all Revelation as an Imposition, and believe no more than what natural Light discovers to them; as that there is a God, a Providence, a future State, with Rewards and Punishments

ments for the Good and the Bad; That God must be honour'd; and his Will, so far as we can learn it, perform'd; but that each Person is to do this after his own Manner, and as his own Conscience suggests.

The Number of *Deists* is daily increasing. In England, a great Part of the Men of Speculation, and Letters, are pretended to incline that Way. And the like is observ'd in some of our Neighbour Nations, where Freedom of Speaking, Writing, and Thinking are indulg'd. See REVELATION.

DEITY, a common Appellation given by the Poets to the Heav'n Gods, and Goddesses. See GOD.

DEIVIRUE, a Term in the School-Theory, signifying something divine and human at the same Time.

The *Eusebians* held, that the same Jesus Christ, and the same Son, produces both divine and human Operations at once, by one single Theandric, or *Deivirile* Operation: So that all the Distinction depends on our manner of Understanding. See THEANDRIC, &c.

The Word is a Compound of *Deus*, God, and *Virilis*, of *Vir*, Man. It was first invented by the *Metaphysicians*, to express their Error by: For as they taught, that there were not two distinct Natures in Jesus Christ, but that the human and the divine Nature were, by the Hypothetical Union, confounded together, and render'd one Nature, which was neither the one nor the other, but a Compound of both; It follow'd, that the Operations of this third Nature, i. e. of Jesus Christ, were neither purely divine, nor purely human; and that there were not two Sorts, the one divine, and the other human, but that they were all of one Sort, viz. Theandric, or *Deivirile*.

DELEGATES, a Number of Commissioners, *delegated*, or appointed by the King's Commission, under the great Seal, to sit upon an Appeal to the King, in the Court of Chancery, in three Cases: First, Upon a Sentence given in any Ecclesiastical Cause, by the Archbishop, or his Official. Secondly, Upon a Sentence given in an Ecclesiastical Cause in Places exempt. Thirdly, Upon a Sentence given in the Admiral Court in Suits Civil and Marine, by Order of the Civil Law.

Court of DELEGATES: This is the highest Court for Civil Affairs, concerning the Church: For the Jurisdiction whereof it was provided 25 H. 8. That it shall be lawful for the Subject, in Case of Defect of Justice in the Ecclesiastical Courts, to appeal to the Sovereign in his Courts of Chancery, whence a Commission is directed under the great Seal to particular Persons therein mentioned, for Redress of Judgment; so that from the highest Ecclesiastical Court there lies no Appeal, but to the Court of *Delegates*, and beyond this to no other, except to the House of Lords. But the King, of his Free-will, may grant a Commission of Review under the great Seal. The Citations run all under the King's Name.

DELEGATION, a Commission extraordinary, given a Judge to take Cognizance of, and determine some Cause which ordinarily did not come before him. See DELEGATES.

Sovereign Courts have frequently Inferior Judges to sit in Judgment on certain Affairs.

In the Civil Law, *Delegation* is also a Sort of Surrender, whereby a Person substitutes another Debtor in his Place. See *Ulpian* l. 11. ff. de *Novationibus*, & *Delegationibus*.

Delegation differs from Transferring, or Translation, in that three Persons intervene in a *Delegation*; viz. the Creditor, the Debtor, and a third, who himself is indebted to the Debtor, and on whom the Debtor transfers the Obligation he was under to pay the Creditor, *delegating* him, as it were, for that Purpose. But in a simple Transfer, 'tis enough the Transferrer and the Transferee be present.

DELETERIOUS, probably from *δολος*, *noceo*, to hurt, a Term sometimes us'd among Naturalists for such Things as are of a pernicious, and poisonous Nature. See POISON.

DELF, is a Quarry, or Mine, where Stone, or Coal is digg'd: from the Saxon Word *Delvan*, to *delv*, or dig; *Delf of Coal*, is Coal lying in Veins under-ground, before it is dug up; and a *Delve of Coals* is a certain Quantity dug out of the Mine, or Pit. See COAL.

DELF, is also us'd in Heraldry for one of the Abatements of Honour; being a Square in the Middle of the Escutcheon. See ABATEMENT.

A *Delf* Terme is due to him that revokes from his own Challenge, or any way recedes from his Parole, or Word. If there be two, or more *Delfs* in an Escutcheon, it is then no longer an Abatement: So also, if it be of Metal, or charged upon it, then becomes it a Charge of perfect bearing.

DELIA, in Antiquity, Feasts celebrated by the *Athenians*, in Honour of *Apollo*, whom they surnam'd *Delius*.

The principal Ceremony in this Feast, was an Embassy, or rather a Pilgrimage to *Apollo* of *Delos*, perform'd every five Year, by a certain Number of Citizens deputed for that Purpose, and call'd *Deliaſts*, *Δελιαſται*, or *Theores*, *Θεωραι*, &c. the Seers; and the first Person of the Embassy, or Deputation, *Architheorus*, *Ἀρχιθεωρος*. To him were added four more of the Family of the *Ceryci* Priests, descended from *Mercury*, who resid'd all the Year at *Delos*, to assist in the Temple. The whole Deputation set out on five Vessels, carrying with them every Thing necessary for the Feast, and the Sacrifices.

The Vessel that carried the *Deliaſts*, or *Theores*, was call'd *Ανδρας*, *Delias*; the four others were the *Παυλα*, *Αντιγονιδ*, *Πρωτομαιδ*, and *Αμμονιδ*. Tho' this is a Circumstance there is some Dispute about.

The *Deliaſts*, who went a-board, were crown'd with Laurel. At their Arrival, they immediately offer'd a Sacrifice to *Apollo*: And after the Sacrifice, a Number of young Maids danced round the Altar, a Dance call'd in Greek *Ἰσθαρος*; wherein, by their various Motions, and Directions, they represented the Turnings and Windings of a Labyrinth. When the *Deliaſts* returned to *Athen*, the People went out to meet them, and received them with all the Joy and Acclamation imaginable. They never laid a-side their Crown till their Commission was fully compleated; and then they consecrated it to some God in his Temple.

The whole Time of their going and returning, with all the Ceremonies thereof, was call'd the *Delia*; during which Time no Criminal might be executed; which was a peculiar Privilege of this Feast, not allowed to any other, not even those of *Jupiter*. Thus, *Plutarch* observes, it was a Day consecrated to *Jupiter* when *Ptolemaeus* was made to take the Poison he was condemn'd to; whereas they waited thirty Days to give it to *Socrates*, by Reason of the *Delia*.

According to *Thucydides*, the *Delia* were first instituted in the 6th Year of the *Peloponnesian* War, after the *Athenians* had expiated the Isle of *Delos*, removed all the Tombs out of it, and ordain'd, that no body should either be born, or die in it, but that all their sick People should be removed into a little Island, call'd *Rheia*. Tho' the *Ionians*, and the neighbouring Islanders of *Ionia*, had long before that Time held a Sort of *Delia*, that is, Feasts, and Games, like those the *Athenians* celebrated afterwards.

DELIAC, or *Deliacus*, among the Ancients, was a Peacemaker, or a Merchant who sold Fowls, fatted Capons, &c.

The Traders in this Way were call'd *Deliaci*, by reason it was the People of the Isle of *Delos* who first brought themselves thereof. They also sold Eggs; as appears from *Cicero* in his Academic Questions, Lib. IV. *Pliny* Lib. X. C. 30. and *Columella*, Lib. VIII. C. 8. likewise mention the *Deliaci*.

DELIACAL Problem, *Problema Deliacum*, a famous Problem among the Ancients, about the Duplication of the Cube. See DUPLICATION.

DELIBERATIVE, is applied to that Kind of Rhetoric employ'd in proving a Thing; or convincing an Assembly thereof; in order to oblige them to put it in Execution. See RHETORIC.

The *Deliberative* Kind was much in Vogue among the *Greeks* and *Romans*, when the Orators harangued the People. To have *deliberative Voice* in an Assembly, is when a Person has a Right to give his Advice, and his Vote therein. In Councils, the Bishops have *deliberative Voices*; Those beneath them have only consultative Voices.

DELINEATING. See DESIGNING.

DELINQUENT, a Person who has committed some Fault. It is the Business of a Magistrate to be severe in punishing *Delinquents*.

DELIQUUM, in Medicine, or *Deliquium Anim*, a swooning, or fainting away; call'd also *SYNCOPE*, *LIPOTHYMIA*, *LIPOTYCHIA*, *ECTHYPISIS*, and *APHYXIA*, which see.

DELIQUUM, in Chymistry, is a Dissolution, or melting of a Salt, or *Calx*, by suspending it in a moist Cellar. Thus Salt of *Tartar*, or any fix'd *Alkali*, in a Cellar, or other cool moist Place, and an open Vessel, resolves, or runs into a Kind of Water, call'd by the Chymists, Oil of *Tartar per Deliquium*.

DELIQUUM, is also us'd in some Authors for a Distillation by Force of Fire. See DISTILLATION.

DELIRIUM, *Doating*, in Medicine, a Symptom, frequently befalling in Fevers, caus'd by internal Inflammations, Wounds, &c. whereby the Mind is disorder'd to a Degree of Folly, or Phrenzy.

Deliriums also frequently arise from immoderate Losses of Blood, whereby the Brain is too much weaken'd;

from the Stings of venomous Beasts; from the Seed, or Menes retain'd in the Womb; from the Rotting of a gangreen'd Member, &c.

A Disorder in the Diaphragm commonly produces a *Delirium*.

Some derive the Word from *De* and *Lira*, which among the Ancients signified, Furrows drawn in right Lines; Whence, *delivare*, a *velis aberrare*.

There are various Species and Degrees of *Delirium*. In some, the Patient is fierce, and outrageous; in others, more mild, and easy, offering no Violence to any body, but only indulging idle, ridiculous Discourse; Some laugh and sing; others cry, and are fullen, &c. See MELANCHOLY, and MANIA.

DELIVERY, *Parturition*, or Birth, in Medicine, the bringing forth of a peric'd Fetus, or Child out of its Mother's Womb, whether it be living, or dead. See FETUS, BIRTH, &c.

To a *Natural Delivery*, according to the Physicians, are required three Conditions: First, That both the Mother and the Child strive alike, the one to *deliver*, and the other to *be deliver'd*: The second, That it come into the World head-fore-most, which is its natural Posture: And the third, That it be quick, and easy, without Accidents.

When the Child presents its Feet foremost, or comes a-cro's, or double, 'tis no natural *Delivery*; And the *Latin* call such Children *Agrippe*, q. d. *Agre Partu*.

A *Legitimate Delivery*, is that which happens at the full Term, i. e. in the 10th Lunar Month. And an *Illegitimate*, that which comes either sooner, or later, as in the 8th Month.

Women are *deliver'd* at 7, 8, 9, 10, and 11 Months, and not later. The' there are some Physicians, who hold, that a *Delivery* may be *legitimate* in the 14th Month.

It has been observ'd, that *Deliveries* are more happy in the 7th Month, than in the 8th, i. e. that the Child is easier sav'd, and more frequently lives, when it comes in the 7th, than when in the 8th Month.

Monsr. *Peysonnal*, a Physician of *Lyons*, has a *Latin* Treatise expressly on the Term of *Delivery*; wherein he undertakes to reconcile all the apparent Contradictions of *Hippocrates*, with Respect therco. He holds, that the shortest Term of a *legitimate* Birth, according to *Hippocrates*, is 181 Days, or six compleat Months, and the length 280 Days, or nine Months and 10 Days. And that Children, who come earlier, or later, than those Terms, do not live, or are not *legitimate*.

Bertholine has compos'd a Book, *de infolitis partu* *Vit*, on the extraordinary Passages of the *Fetus*; where he gives divers Instances of very extraordinary *Deliveries*. There have come out by the Mouth; and others by the *Anus*. See *Salmuth. Obs. 94. Cent. 3*. In the Year 1688, at *Leckerkerck*, 8 or 10 Leagues from the *Hague*, the Wife of one *Christiam Claes*, was deliver'd of 5 Children. The first was a Boy, who liv'd 2 Months; 17 Hours afterwards, came a second Son, which was dead; 24 Hours after a third Son was born, who liv'd about two Hours. In 24 Hours more she had a 4th, dead. Lastly, she died in bringing forth the 5th; which died in the Birth.

DELIVERY, in Law. See REFUGIARE.

DELPHINUS, the *Dolphin*, in Astronomy, a Constellation of the Northern Hemisphere. See CONSTELLATION.

The Number of Stars in this Constellation, according to *Ptolemy*, are 10; according to *Tycho* 10; and according to *Mr. Flamsteed* 18.

The Longitudes, Latitudes, Magnitudes, &c. whereof are as follows.

Stars in the Constellation DELPHINUS.

Names and Situations of the Stars.	Star.	Longit.	Latitude-North.	Magnit.
	α	8 49 50	28 54 38	6
First of three in the Tail.	β	9 44 27	29 06 21	3
Betw. the Tail & the prec. Rho.	γ	10 30 06	30 42 06	6
That immediat. preced. the Tail.	δ	11 27 04	32 10 27	5
North of the follow. in the Tail.	ε	11 00 18	28 51 03	3
Preced. South. in the Rhombus.	ζ	12 01 14	31 56 52	3
South. of the follow. in the Tail.	η	10 54 06	27 31 40	6
Betw. the Tail and the hind Rho.	θ	11 54 05	30 38 14	6
North. of preced. in the Rhomb.	ι	13 03 24	33 02 58	3
	κ	13 02 25	31 39 48	7
South. in the hind Rhombus.	λ	13 48 07	31 58 12	3 4
North. of the following.	μ	25 03 41	33 44 32	3
	ν	21 54 12	23 00 05	5
Informes following the Dolphin (towards Equino).	ξ	13 50 33	24 37 30	6
	ο	14 28 25	29 07 05	6
	π	16 07 40	28 40 19	6
	ρ	16 31 05	29 46 35	6
	σ	16 15 57	26 48 35	6

DELTOIDES, in Anatomy, a triangular Muscle, thus call'd from the Greek *Delta Δ*, and *Ides*, *Forma*. See MUSCLE.

It arises exactly opposite to the *Trapezius*, from one third Part of the *Clavicula*, from the *Aceronium*, and Spine of the *Scapula*, and is inserted tendinous into the Middle of the *Oss Homeri*, which Bone it lifts up directly; and it affixes with the *supra Spinatius*, and *Coraco-brachialis*, in all the Actions of the *Humerus*, except the Depression; it being convenient, that the Arm should be rais'd, and sustain'd, in order to its moving on any Side.

DELUGE, *Cataclysmus*, *Diluvium*, in Natural History, a Flood, or inundation of Water, covering the Earth either in whole, or in Part. See INUNDATION.

We meet with divers of these *Deluges* in ancient History, both sacred and profane. That which happen'd in *Greece*, in the Time of *Deucalion*, call'd the *Diluvium Deucalionicum*, is famous. This *Deluge* only overflow'd *Teffaly*; Its Date is fix'd to the Year before Christ 1529; being the third Year before the *Israelites* coming out of *Egypt*, according to the Computation of *Petavius*, *Rat. Temp. P. L. L. C. 7. P. II. C. 9*.

The *Deluge of Ogys* happen'd near 300 Years before that of *Deucalion*, 1000 Years before the first *Olympiad*, and 1796 before *Jesus Christ*, according to the same Author, *Rat. Temp. P. L. L. C. 4. P. II. L. II. C. 5*. This only ravag'd *Attica*. These two are frequently mention'd in ancient Greek Authors, under the Denomination of *Cataclysmus prior*, and *posterior*.

Of the like Kind were those Inundations in the *Netherlands*, which in 1277 overwhelmed, and cover'd with Sea all that Part, now call'd the *Gulph Dollart* in the united *Netherlands*; and in 1421, all that Part between *Brabant* and *Holland*.

But the most memorable *Deluge* is that which we particularly, and by way of Eminence, call the *Deluge*, or the *Universal Deluge*, or *Noah's Flood*; being a general Inundation sent by God, to punish the Corruption of the then World, by destroying every living Thing, (*Noah*, and his Family, and what was shut up with him in the Ark, only excepted) from off the Face of the Earth.

This *Flood* makes one of the most considerable Events in all History; and one of the greatest Epochs in Chronology. Its History is given us by *Moses*, *Gen. C. VI. and VII*. Its Time is fix'd by the best Chronologists to the Year from the Creation 1656, answering to the Year before Christ 2293. From this *Flood*, the State of the World is divided into *Diluvian*, and *Adamsiluvian*.

The *Deluge* has occasion'd a mighty Subject of Inquiry, and Dispute among the Naturalists, Critics, &c. The Points chiefly controverted, may be reduced to three: First, Its Extent, *viz.* whether *General*, or *Partial*. Secondly, Its natural Cause. And thirdly, Its Effects.

I. The immense Quantity of Water requisite to furnish an *Universal Deluge*, has occasion'd several Authors to suspect it only *Partial*. An *Universal Deluge*, they think, had been unnecessary, considering the End for which it was brought, *viz.* to extirpate the wicked Inhabitants. The World was then but new, and the People not very many; the Holy Scriptures only making 8 Generations from *Adam* to *Noah*. 'Twas but a small Part of the Earth that could be yet inhabited: The Country about the *Euphrates*, which is supposed to have been the Scene of the first *Ancestrarian* Inhabitants, was sufficient to bear them all. Now, Providence, say they, which ever acts wisely, and frugally, would never have disproportion'd the Means to the End so far as to overflow the whole Globe, only to drown a little Corner of it. They add, that, in the Scripture Language, the *whole Earth*, expresses no more than all the Inhabitants. And on this Principle advance, that an Overflowing of the *Euphrates*, and *Tigris*, with a vehement Rain, &c. might answer the *Phenomena* of the *Deluge*.

But the *Deluge* was *universal*. God declared to *Noah*, *Gen. VI. 17*, that he was resolv'd to destroy every Thing that had Breath under Heaven, or had Life on the Earth, by a Flood of Waters. Such was the Menace: See the Execution. The Waters, *Moses* assures us, cover'd the whole Earth, buried all the Mountains, and were no less than 15 Cubits above the height of them: Every Thing perish'd therein, Birds, Beasts, Men, and all that had Life, excepting *Noah*, and those with him in the Ark, *Gen. VII. 19*. Can an *Universal Deluge* be more clearly express'd? If the *Deluge* had only been *Partial*, there had been no Necessity to spend 100 Years in the Building of an Ark, and shutting up all the Sorts of Animals therein, in order to re-stock the World; they had been easily, and readily brought from those Parts of the World not overflow'd, into those that had been. At least,

least, all the Birds would never have been destroy'd; as *Moses* says they were; so long as they had Wings to bear them to those Parts where the Flood did not reach. If the Waters had only overflowed the Neighbourhood of the *Euphrates* and *Tigris*, they could not be fifteen Cubits above the highest Mountains; There was no Rising to that Height, but they must spread themselves, by the Laws of Gravity, over the rest of the Earth: Unless, perhaps, they had been retain'd there by a Miracle; And in that Case, *Moses*, no doubt, would have related the Miracle, as he did that of the Waters of the *Red-Sea*, and the River *Jordan*, which were sustain'd in a Heap, to give Passage to the *Israelites*. *Exod. XIV. 22.* and *Jos. III. 16.* Add, that in Regions far remote from the *Euphrates*, and *Tigris*, viz. in *Italy, France, Switzerland, Germany, England,* &c. there are frequently found in Places, many Scores of Leagues from any Sea, and even in the Tops of high Mountains, whole Trees sunk deep under Ground, as also Teeth, and Bones of Animals, Fishes entire, Sea-Shells, Ears of Corn, &c. petrified; Which, the best Naturalists are agreed, could never have come there but by the *Deluge*.

II. The *Deluge* allowed *Universal*, the Philosophers are solicitous to find Water to effect it.

Moses brings it from two Funds: *The Fountains of the great Deep were broken up; and the Windows of Heaven were open'd.*

Dr. Burnet, in his *Telluris Theoria Sacra*, shews, that all the Waters in the Ocean were not near enough to cover the Earth 15 Cubits above the Tops of the highest Mountains. According to his Computation, no less than 8 Oceans were required. Now, supposing the Sea, therefore, drain'd quite dry, and all the Clouds of the Atmosphere dissolv'd into Rain, we should still want much the greatest Part of the Water of a *Deluge*.

To get clear of this Embarrass, many of our best Naturalists, as *Steno, Burnet, Woodward, Scheuchzer*, &c. adopt *des Cartes's* System of the Formation of the Earth. That Philosopher will have the primitive World to have been perfectly round and equal, without Mountains, or Vales; And accounts for its Formation on Mechanical Principles, by supposing it at first in the Condition of a thick turbid Fluid, replete with divers Heterogeneous Matters, which subsiding by slow Degrees, form'd themselves into different concentric *Strata*, or Beds, by the Laws of Gravity: And thus, at length, left a dry, solid Earth.

Dr. Burnet improves on this Theory: He supposes the primitive Earth to have been no more than an Orbicular Crust, investing the Face of the *Abyss*, or Deep, which grew chinky, clave, burst, and fell down into the Water, and so drown'd its Inhabitants.

The same Theorist adds, That by this Catastrophe, the Globe of the Earth was not only shok, and broke in a thousand Places, but that the Violence of the Shock it then underwent shiftd its Situation, so that the Earth, which before was plac'd directly under the Zodiac, became thenceforth oblique to the same. Whence arose the Difference of Seasons, which the Antediluvian Earth was not expos'd to.

But how all this consifts with the sacred Text above cited, which expressly mentions Mountains as the Standard of the Height of the Water; Or, with that other Passage, *Gen. VIII. 22.* where God, promising not to bring any more *Deluges*, but that every Thing should be restor'd on its ancient footing, says, that *Seed-Time and Harvest, and Cold and Heat, and Summer and Winter, and Day and Night shall cease no more;* we do not see.

Other Authors, supposing a sufficient Fund of Water in the *Abyss*, or Sea, are only concern'd for an Expedient to bring it forth; Accordingly, some have Recourfe to a Shifting of the Earth's Centre, which, drawing after it the Water out of its Channel, overwhelm'd the several Parts of the Earth successively.

The very learned Mr. *Whiston*, in his *New Theory of the Earth*, has a very ingenious Hypothesis, perfectly new. He shews from several remarkable Co-incidences, that a Comet descending in the Plane of the Ecliptic towards its *Perihelion*, pass'd just before the Earth on the first Day of the *Deluge*; The Consequences whereof would be, First, That this Comet, when it came below the Moon, would raise a prodigious, vast, and strong Tide, both in the small Seas, which, according to his Hypothesis, were in the Antediluvian Earth, for he allows no great Ocean there, as in ours; and also in the *Abyss*, which was under the upper Crust of the Earth. And this Tide would rise, and increase all the Time of the Approach of the Comet towards the Earth; and would be at its greatest Height when the Comet was at its least Distance from it. By the Force of which Tide, as also by the Attraction of the Comet, he judges, that the *Abyss* must put

on an Elliptic Figure, whose Surface being considerably larger than the former Spherical one; the outward Crust of the Earth, incumbent on the *Abyss*, must accommodate itself to the Figure, which it could not do while it held solid, and conjoin'd together. He concludes, therefore, that it must of Necessity be extended, and at last broke by the Violence of the said Tides, and Attraction; out of which, the included Water issuing, was a great Means of the *Deluge*: This answering to what *Moses* speaks of the *Fountains of the great Deep being broke up*.

Again, the same Comet, he shews, in its Descent towards the Sun, pass'd so close by the Body of the Earth, as to involve it in its Atmosphere, and Tab, for a considerable Time; and of Consequence, left a vast Quantity of its Vapours, both expanded and condensed on its Surface; a great Part of which being afterwards rarified by the solar Heat, would be drawn up again into the Atmosphere, and afterwards return again in violent Rains; And this he takes to be what *Moses* intimates by the *Windows of Heaven being open'd*; and particularly by the *fourty Days Rain*. For as to the following Rain, which with this made the whole Time of Raining 150 Days; Mr. *Whiston* attributes it to the Earth coming a second Time within the Atmosphere of the Comet, as the Comet was on its Return from the Sun. Lastly, to remove this vast Orb of Waters again, he supposes a mighty Wind to have arise, which dried up some, and forced the rest into the *Abyss* again through the Clefts by which it came up: Only a good Quantity remain'd in the *Avenues* of the great Ocean, now first made, and in lesser Seas, Lakes, &c.

To the Credit of this Theory, it must be observ'd, that it was at first only propos'd Hypothetically: That is, the Author only suppos'd such a Comet, merely, as it would account well, and Philosophically for the *Phenomena* of the *Deluge*: without any Assurance, that there really was any Comet so near the Earth at that Time: And the Hypothesis pleas'd even under such Circumstances: But, upon further Consideration, he has since prov'd, that there actually was a Comet near the Earth at that Time; viz. the same great Comet, which appear'd again in 1688. The Author no longer, therefore, looks upon it as an Hypothesis, but has republish'd it in a particular Treatise, entitled, *The Cause of the Deluge demonstrated*.

III. But the great Difficulty is yet behind. The orderly *Strata*, or Layers of the Earth, with the *Exuvia*, or Remains of Fishes, as their Teeth, Bones, Shells, &c. both Marine, and Fluvial, found in the Bodies, even of the most solid *Strata*, as those of Flints, Marbles, &c. are not yet discharg'd. Those who adhere to *Des Cartes's* System, as *Steno*, &c. take the finding of the Parts of Terrestrial, and Aquatic Animals, Branches of Trees, Leaves, &c. in the Beds, or *Strata* of Stone, to be a direct Proof of the primitive Fluidity of the Earth. But then they are oblig'd to have Recourfe to a second Formation of *Strata*, much later than the first; by Reason at the Time of the first there was neither Plant nor Animal. *Steno*, therefore, holds for second Formations, occasion'd at different Times by extraordinary Inundations, Earth-quakes, Volcano's, &c. But *Burnet, Woodward, Scheuchzer*, &c. chuse rather to attribute a second general Formation to the *Deluge*; without Excluding, however, the particular ones of *Steno*. But the great Objection against this System of Fluidity, is Mountains; For the whole Globe being liquid, whence should such Inequalities arise? Mr. *Scheuchzer*, rather than part with a System, which looks so promising, gives into the Opinion of those, who hold, that, after the *Deluge*, God, to remit the Waters into their subterranean Reservoirs, broke, and displaced, with his own Almighty Hand, a great Number of *Strata*, that were before horizontal, and rais'd them above the Surface of the Earth; whence it is, that the *Strata* in Mountains, tho' concentrical, are never horizontal. See MOUNTAIN, &c.

Dr. Woodward, taking the several *Strata* for the Sediments of a *Deluge*; and considering the Circumstances of those Fishes, Shells, and other *Exuvia*, draws several Inferences, which very much illustrate the Effects of the *Deluge*. As first, That these Marine Bodies, and other Spoils of fresh Water Fishes, were born forth of the Sea, by the universal *Deluge*; and on Return of the Water back again, were left behind at Land. Secondly, That while the Flood cover'd the Globe, all the solid Matters, as Stones, Metals, Minerals, and Fossils, were totally dissolved, and the Cohesion of their Corporcles destroyed; and that these Corporcles, with those of the less solid Bodies, as Earth, Flesh of Animals, and Vegetables, were sustain'd promiscuously in the Water, and made one common Mass. Thirdly, That all the Mass thus sustain'd, was at length precipitated to the Bottom; and that, according to the Laws of Gravity, the heaviest Settling first,

first, and the rest in order. And that the Matters thus subdividing, constituted the several *Serrats* of Stone, Earth, Coal, &c. Fourthly, That these *Serrats* were originally all parallel, even, and regular; and rendered the Surface of the Earth perfectly Spherical; and that the whole Mass of Water lay upon them, and constituted a fluid Sphere encompassing the Globe. Fifthly, That after some Time, by the Force of an Agent seated within the Earth, these *Serrats* were broken on all Sides the Globe, and their Situation varied; being elevated in some Places, and depressed in others; whence Mountains, Valleys, Grotto's, &c. with the Channel of the Sea-Ilands, &c. In one Word, the whole Terrestrial Globe was put, by this Disruption, and Dislocation of the *Serrata*, into the Condition we now behold it in. Sixthly, That upon the Disruption of the *Serrata*, and the Depression of some, and Elevation of other Parts, which happen'd towards the End of the *Deluge*; the Mass of Water fell back again into the depress'd, and lowest Parts of the Earth, into Lakes, and other Cavities, and the Channel of the Ocean; and through the Fissures, whereby this communicates with the Abyss, which it fill'd till it came to an Equilibrium with the Ocean. *Nat. Hist. of Earth, P. I. and II. See FOSVILLE.*

But of all the Systems yet advanced, there seems none better calculated to solve the Phenomena of those petrified *Exuvie*, than that of Mr. de la Pyrene. The Antediluvian World, according to this ingenious Author, had an external Sea, as well as Land, with Mountains, Rivers, &c. and the *Deluge* was effected by breaking the subterraneous Caverns, and Pillars thereof, with dreadful Earthquakes, and causing the flame to be for the most Part, if not wholly, absorbed and swallowed up, and covered by the Seas that we now have. Lastly, this Earth of ours arose out of the Bottom of the Antediluvian Sea, and in its Room; just as many Islands are swallowed up, and others thrust up in their stead. From this System, which is very agreeable to Scripture, the great Difficulties that clog all the other Systems, are easily solved. It is no longer a Wonder, that Shells, and Shell-Fish, and the Bones of Fishes, and four-footed Creatures, with Fruits, &c. should be found in Beds, and Quarries, in Mountains, and Valleys, and the very Bowels of the Earth: For here they bred in the Antediluvian Sea, thither they were elevated with the Hills and Mountains, in the Time of the *Deluge*; there they fell into, were absorbed, and buried in Chasins, and Holes, and Clefts, that would necessarily happen in the Extrusion of the Earth. *Levett. Abrégé. Philosophie. Transact. V. III. p. 448.*

DEMAIN, or DEMEAN, or DEMEASN, or DEMESNE, in the Popular Sense of the Word, is the Lord's Manor Place, with the Lands thereto belonging; which he, and his Ancestors have from Time to Time kept in their own Manual Occupation. *See MANOR.*

DEMAIN, or DEMESNE, in a Law-Sense, otherwise written *Domain*, signifies, according to *Hottoman*, *Patrio-nium Domaini*, the Lord's Patrimony, call'd also by the Civilians, *Dominicium*; The same Author proves those Lands to be *Domain*, which a Man holdeth originally of himself, and those to be *Feodum*, which he holdeth of a superior Lord.

In *England*, no common Person has any *Domain*, simply underhood, for it depends either mediately, or immediately on the Crown; For when a Man in Pleading, would signify his Land to be his own, he saith, That he is, or was seiz'd thereof in his *Domain*, as of Fee; where-by he means, that, although his Land be to him, and his Heirs for ever, yet it is no true *Domain*, but depends upon a superior Lord, and he holdeth by Service, or Rent, in lieu of Service, or by both Service and Rent.

The Word is sometimes also taken more largely for Lands, and Tenements, held for Life, &c. and sometimes more strictly, for such only as are generally held in Fee.

It is sometimes again used for a Distinction between those Lands that the Lord of a Manor has in his own Hands, or in the Hands of his Lessee, demised upon a Rent, for Term of Years, or Life; and such other Lands, pertaining to the said Manor, which belongs to the Free, or Copy-holders. And the Reason why the Copy-hold is accounted *Domain*, is, that because they, who are Tenants to it, are judged in Law to have no other Right, but at the Will of the Lord; so that it is reputed still, after a Sort, to be in the Lord's Hands: And yet in common Speech that is ordinarily call'd *Domain*, that is, neither Fee, nor Copy.

DEMAIN, again, is us'd in a more special Signification, in Opposition to *Frank Fee*: Thus, Those Lands, which were in the Possession of *Edward the Confessor*, are call'd, *Ancient Domain*, and others are call'd, *Frank Fee*; and the Tenants, which hold any of those Lands, are call'd, *Tenants in ancient Domain*, and the others, *Tenants in*

Frank Fee, and also, *Tenants of the Common-Law*; the Reason is, because *Tenants in Ancient Domain* cannot be sued out of the Lord's Court.

DEMAND, in its Popular Sense; is a calling for, or requiring one's due. But it has also a special Signification in Law, as contra-distinguish'd from *Plain*: For all Civil Actions are pursued, either by *Demands*, or *Plains*; according to which the Pursuer is call'd either *Demander*, *Asser*, or *Plaintiff*; viz. in Real Actions, *Demandant*; and in Personal Actions, *Plaintiff*. Add, that where the Party pursuing is call'd *Demandant*, the Party pursued is call'd *Tenant*; and where *Plaintiff*, *Defendant*.

There are two Kinds of *Demands*, the one in *Deed*, or *Folio*, as in every Precipe; The other in *Law*, or *de Jure*; such is Entry in Land, Distress for Rent, &c.

If a Man release another from all *Demands*, it is the best Release the Releasee can have, and shall redound most to his Advantage. A Release of Feuds is more large, than of Quarrels, or Actions; and a Release of *Demands*, more large, and beneficial than either: By a Release of all *Demands* to the Disfeisor, the Right of Entry into the Land, and all contain'd therein, is released: And he that releaseth all *Demands*, excludes himself from all Actions, Entries, and Seizures. But it is no Bar in a Writ of Error to release an Outlawry.

DEMANDANT, *Petens*, is he who is Actor, or Plaintiff in a real Action; Thus call'd, because he *demand*s Lands, &c. *See DEMAND.*

DEMARCHUS, a Magistrate, or Chief of a People, that is, of a Region, or District in the Country.

The *Athenians* divided their Country into certain Regions, or Districts, which they call'd *Demi*, *Demi*, i. e. People; and establish'd a Magistrate at the Head of each, under the Denomination of *δημαρχος*, *Demarchus*, of *ἀρχος*, and *ἀρχη*.

DEMEMBREE, in Heraldry, is when an Animal is dismember'd, i. e. the Limbs cut off its Body. *See DISMEMBER'D.*

DEMI, a Word of the same Use and Effect in the *French* Language, with *Semi*, in the *Latin* and *English*; being form'd from *dimidium*, and used in Composition with other Words, to signify half.

In Words borrowed from the *Latini*, we use *Semi*, and in those from the *French*, we retain their *Demi*. *See SEMI.*

DEMI, or DEMY, in Heraldry, signifies the half of any Thing; as, a *Demy-Lion*, &c. *Caloubriere* has what he calls *Crois & demy*, a Cross and an half; being a Shaft cross'd in the upper Part like the *Calvary Cross*, and having but one Arm at the lower Part. *See CROSS.*

DEMI-Air, or *Demi-Volt*, in Horsemanship, is one of the seven artificial Motions of an Horse, being an Air, in which its Fore-parts are more raised than in *Terra & Terra*, but the Motion of the Horses Legs is more quick in the latter, than in the *Demi-Volt*.

DEMI-Bastion, is a Kind of Fortification, that has only one Face, and one Flank. *See BASTION.*

DEMI-Canon, a Piece of Ordnance, usually about 6 Inches bore, and 5000 Pound Weight; 10 or 11 Foot long, and carrying 2 Shot of 50 Pound Weight. *See CANON, and ORDNANCE.*

It carries Point blank 150 Paces; its Charge of Powder is 14 Pound Weight.

There are also two Sizes of *Demi-Canon* above this, which are something larger, as the ordinary *Demi-Canon*, which is 6 Inches $\frac{1}{2}$ bore, 12 Foot long, weighs 5600 Pound; its Charge of Powder is 17 Pound 8 Ounces, carries a Shot 6 Inches and a half Diameter, and whose Weight is 32 Pound, and this Piece shoots blank 162 Paces.

Demi-Canon of the largest Size, is 6 Inches $\frac{3}{4}$ bore, 12 Foot long, of 6000 Pound Weight; its Charge is 18 Pound of Powder, and it carries 160 Paces.

DEMI-Culvering, is a Piece of Ordnance, commonly 4 $\frac{1}{2}$ Inches bore, 10 Foot long, of 2700 Pound Weight; its Charge is 7 Pound 4 Ounces of Powder; and it carries a Shot of 10 Pound, 11 Ounces; and shoots Point blank 175 Paces: *Demi-Culvering* of the least Size, is 4 $\frac{1}{2}$ Inches bore, 10 Foot long, of 2000 Pound Weight; it carries a Ball of 4 Inches Diameter, its Charge is 6 Pound 4 Ounces of Powder, and its level Range is 174 Paces. *Demi-Culvering* of the elder Sort, is 4 Inches $\frac{3}{4}$ bore, 10 Foot long, its Charge of Powder is 8 Pound, and 8 Ounces, the Ball is 4 $\frac{1}{2}$ Inches Diameter, weighs 12 Pound 11 Ounces, and the Point blank shoots 175 Paces. *See ORDNANCE, and CULVERING.*

DEMI-God, &c. *See SEMI-God.*

DEMI-Gorge, in Fortification, is half the Gorge, or Entrance into the Bastion; not taken directly from Angle to Angle, where the Bastion joins to the Couraine, but from the Angle of the Flank, to the Centre of the Bastion, or

or the Angle the two Courts would make, were they thus protracted to meet in the Bastion. See **GORGE**.

DEMI-LUNE, Half-Moon, in Fortification, an Outwork, as EFGHK (*Tab. Fortific. Fig. 5.*) consisting of Faces, and Flanks; frequently built before the Angle of a Bastion, and sometimes also before the Courline, tho' now much disused. See **OUTWORK**.

DEMI-SOWER, is a Note in Music; two of which are equal to the Quarter. See **QUAVER**, and **NOTE**.

DEMISE, in Law, is applied to an Estate, either in Fee-simple, Fee-tail, or for Term of Life, and so it is commonly taken in many Writs: The King's Death is in Law termed, *The Demise of the King*.

DEMOCRACY, a Form of Government, wherein the Sovereignty, or supreme Authority, is lodged in the People, who exercise the same by Persons of their own Order, deputed for that Purpose. This is the most ancient Form of Government.

The most flourishing Democracies were those of *Rome* and *Athena*. The modern Republics, as *Venice*, and the *United Provinces*, are rather *Aristocracies* than Democracies. The Government of *Basil*, however, is a Democracy; so are some of the free Cities in *Germany*.

The Word is form'd of the Greek *demus*, People, and *kratos*, command.

DEMON, or **DÆMON**, a Name the Ancients gave to certain Spirits, or *Geni*, which appeared to Men, either to do them Service, or to hurt them. See **GENIUS**.

The first Notion of Demons was brought from *Chaldeas*; whence it spread it self among the *Persians*, *Egyptians*, and *Greeks*. *Pythagoras* and *Thales* were the first, who introduced Demons into Greece. *Plato* fell in with the Notion, and explain'd it more distinctly, and fully, than any of the former Philosophers had done. By Demons, he understood Spirits inferior to Gods, and yet superior to Men; which inhabiting the middle Region of the Air, kept up the Offerings and Prayers of Men to the Gods, and bringing the Will of the Gods to Men. But he allowed of none but good, and beneficent Ones. Tho' his Disciples, afterwards, finding themselves unable to give the Reason of Evil, adopted another Sort of Demons, who were Enemies to Men.

There is nothing more common in the Heathen Theology, than these good, and evil *Geni*. And the same superstitious Notion got footing among the *Israelites*, by their Commerce with the *Chaldeans*. But by Demons, they did not mean the Devil, or a wicked Spirit: They never took the Word *Demon* in that Sense, nor was it ever used in such a Signification, but by the Evangelists, and some modern Jews. The Word is Greek, *δαίμων*.

Gale endeavours to shew, that the Origin, and Institution of Demons, was an Imitation of the *Messiah*. The *Phœnicians* call'd them *מוליך Baalim*. For they had one supreme Being, whom they call'd *Baal* and *Moloch*, and various inferior Deities, call'd *Baalim*, wherof we find frequent mention in the Old Testament. The first *Demon* of the *Egyptians* was *Mercury*, or *Tibet*. The same Author finds some Resemblance between the several Offices ascribed to the Demons, and those of the *Messiah*.

DEMONIAC, or **DÆMONIAC**, is applied to a Person posses'd with a Spirit, or *Demon*.

In the *Romish* Church, there is a particular Office for the Exorcism of *Demoniacs*. See **EXORCISM**.

DEMONIACS, are also a Party, or Branch of the *Anabaptists*, whose distinguishing Tenet it is, that the Devils shall be waded at the End of the World.

DEMONSTRABLE, a Term chiefly us'd in the Schools, signifying somewhat that may be clearly and evidently proved. It is demonstrable, that the Side of a Square is incommensurable with the Diagonal. The Problem of the Motion, or Rest of the Earth, is not demonstrable, by reason the same Appearances result from either Supposition.

DEMONSTRATION, in Philosophy, a Syllogism in Form, containing a clear and invincible Proof of a Proposition: Or, a convincing Argument, the two first Propositions wherof are certain, clear, and evident; whence of Necessity arises an infallible Conclusion. See **SYLLOGISM**.

A Demonstration usually consists of 3 Parts: The *Explication*, *Preparation*, and *Conclusion*. The *Explication* is the laying down the Things supposed to be given, or granted; from which the Demonstration is to be made. The *Preparation* is a Supposition to be made, according to the Nature of the Demonstration intended. The *Conclusion* is a Proposition that concludes the Thing to be demonstrated, fully persuading, and convincing the Mind. See **CONCLUSION**.

The Method of demonstrating Things in Mathematicks, is the same with that of drawing Conclusions from Prin-

ciples in Logicks. In Effect, the Demonstrations of Mathematicians, are no other than a Series of *Enchyremes*; so that every Thing is concluded by Force of Syllogism, only omitting the Premises, which either occur of their own Accord, or are recollected by means of Questions. To have the Demonstration perfect, the Premises of the Syllogisms should be proved by new Syllogisms, till at length you arrive at a Syllogism wherein the Premises are either Definitions, or Identic Propositions.

Indeed it might be demonstrated, that there cannot be a genuine Demonstration, &c. such a one as shall give full Conviction, unless the Thoughts be directed therein according to the Rules of Syllogism. *Clavius*, is known to every body, reformed the Demonstration of the first Proposition of *Euclid* into Syllogism: *Herizius*, and *Dejsipodius*, demonstrated the whole six first Books of *Euclid*, and *Henselbins*, all Arithmetic, in the Syllogistic Form.

Yet People, and even Mathematicians, usually imagined, that Mathematical Demonstrations are concluded in a Manner far remote from the Laws of Syllogism; so far are they from allowing, that those derive all their Force and Conviction from these. But we have Men of the first Rank on our Side the Question. *Mr. Leibnitz*, for Instance, declares that Demonstration to be firm and valid, which retains that Form prescribed by Logic. And *Dr. Wallis* confesses, that what is proposed to be proved in Mathematicks, is deduced by means of one, or more Syllogisms. The great *Huygens* too observes, that Paralogisms frequently happen in Mathematicks, through Want of observing the Syllogistic Form. See **SYLLOGISM**.

Problems consist of three Parts: A *Proposition*, *Resolution*, and *Demonstration*.

In the *Proposition* is indicated the Thing to be done. See **PROPOSITION**.

In the *Resolution*, the several Steps are orderly rehearsed, whereby the Thing proposed is perform'd. See **RESOLUTION**.

Lastly, in the *Demonstration* it is shewed, that the Things enjoyned by the *Resolution* being done, that required in the Proposition is effected. As often, therefore, as a Problem is to be demonstrated, it is converted into a Theorem, the *Resolution* being the *Hypothesis*, and the *Proposition* the *Thesis*: For the general Tenor of all Problems to be demonstrated is this, that the Thing prescribed in the *Resolution* being perform'd, the Thing required is done. See **PROBLEM**.

The School-Men make two Kinds of Demonstration: The one *strict*, or *proper quod*; wherein an Effect is proved by the next Cause: As when it is prov'd, that the Moon is eclipsed, by reason the Earth is then between the Sun and Moon. The second *laxa*, or, *quid*; wherein the Cause is proved from a remote Effect: As when it is proved, that Fire is hot, because it burns; Or, that Plants don't breathe, because they are not Animals.

Affirmative DEMONSTRATION, is that, which proceeding by affirmative and evident Proposition, dependent on each other, ends in the Thing to be demonstrated.

A **Negative DEMONSTRATION**, is that, whereby we shew a Thing to be such from some Absurdity that would follow if it were otherwise. This we also call a *Demonstration ab impossibili*.

A **Geometrical DEMONSTRATION**, is that, framed of Reasoning drawn from the Elements of *Euclid*.

A **Mechanical DEMONSTRATION**, is that, the Reasonings wherof are drawn from the Rules of Mechanics.

A **DEMONSTRATION A priori**, is that, whereby an Effect is proved from a Cause, either a next, or remote one; or a Conclusion proved by something previous, whether it be a Cause, or only an Antecedent.

A **DEMONSTRATION A posteriori**, is that, whereby either a Cause is proved from an Effect; or a Conclusion is proved by something posterior, whether it be an Effect, or only a Consequent.

DEMONSTRATIVE, in Rhetoric, one of the *Genera*, or Kinds of Eloquence; being that used in the Composing of Panegyrics, Invectives, &c. See **PANEGYRIC**.

Rhetoric is divided into three Parts; *Deliberative*, *Demonstrative*, and *Judiciary*. See **RHETORIC**.

DEMONSTRATIVE, in Grammar, is applied to Pronouns that serve to shew, point out, or indicate a Thing; As, *This here*, *That there*, *Those yonder*, &c. See **PRONOUN**.

DEMURRAGE, in Traffick, is an Allowance to the Master of a Ship, by the Merchants, for staying in a Port longer than the Time first appointed for his Departure.

DEMURRER, in Law, from the French *Demourer*, to stay, or dwell, is a Kind of Pause, or Stop, put to the Proceeding of any Action, upon some difficult Point, which must be determin'd by the Court, 'ere any further Proceedings can be had therein.

In every Action, the Controversy is either as to Fact, or to Law: The first, decided by the Jury; the second, by the Judge. Now if any Thing turn up in the Cause so rare and difficult, that the Judge cannot pronounce upon it, a *Demurrer*, or Stop is made, and a Time taken, either for the Court to consider, and agree of it among themselves; or otherwise for the Judges, to meet in the Exchequer-Chamber, there, after hearing Council on both Sides, to determine what is Law. This *Demurrer* is express'd in our Records by *Moratur in Lega*. See *MONATURA in Lega*.

In Common Law, the Defendant sometimes *demurreth* to the Plaintiff's Count, or Declaration; And sometimes the Plaintiff *demurreth* to the Defendant's Plea, by averring, that it is not a sufficient Plea in Law, &c.

In Chancery, the Defendant *demurreth* to the Plaintiff's Bill, averring it to be defective in such and such a Point; and demands the Judgment of the Court thereupon, whether he shall be compell'd to make any further, or other Answer thereto.

DENARIUS *TERRÆ*, in our ancient Law-Books, as much Land as is worth a Penny by the Year. *Sibylla Bartholæus tenet unam Acrem, & 5 Denarios Terræ in eodem Tenemento*. Du Cange.

DENARIUS, in Antiquity, the Roman Penny; a Silver Coin, equivalent to, from six to seven Pence Half-Penny Striling. See COIN, MONEY, PENNY, &c.

The Romans having for a long Time us'd Brass Money, which they call *Æs*, quasi *Æs*; or *Libra* and *Pondo*, because it was a Pound Weight, began in the Year of Rome 585 to coin Silver; and coin'd first the *Denarius*, which was mark'd with the Letter X, because it was worth Ten *Afles*, and divid'd into two *Quinarii*, mark'd with V, which was subdivid'd into two *Sestertii*, mark'd with these three Letters, III.

The first, or *Consular Denarius*, was worth more than the after, or *Imperial*. The first weigh'd a just Drachm, or an 8th Part of an Ounce, and was worth about 7 Pence half Penny of our Money. The second was only the 7th Part of an Ounce, and worth 6 Pence, or 6 Pence half Penny.

Mr. Tilletmont observes, that the *Denarius* was held sufficient to keep a Person handiwork for a Day; and upon the whole seems to intimate, that it was equal to 12 French Sols, or 11 English Pence. But this is to over-rate it. *Budeus* shews, that the *Denarius* current in our Saviour's Time, was only worth about 3 Pence half Penny Sterling. *Jesús Christ* was sold for thirty *Denarii*, which were afterwards spent in purchasing a Field.

The Impression on the first *Denarius* was on one Side a Figure of *Janus*; and on the other, the Vessel that brought him to Italy. Afterwards, the Reverse was a *Cæsar* and *Pollux*, and sometimes a Victory, driving a Chariot with two or 4 Horses; whence the *Denarii* were call'd *Zigati*, or *Quadrigati*, or *Retivi*.

DENARIUS is also us'd in our Law-Books for an English Penny. See PENNY.

Denarius Argenteus, qui nominatur Sterlingus *rotundus, sine Yovura, ponderabit 32 Grana Fruventi in medio Spicie; & 20 Denarii faciunt Unciam 3; & 12 Uncie faciunt Libram*. Stat. Edu. I. de Mensuris. See MEASURE, POUND, &c.

DENARIUS *DEI*, *Æra* of Money, call'd also *Argentum Dei*, and by the French *Deniers de Dieu*, and in some Parts of our Country, *Aries*, or *Earls*. *Ita quod novus Mercatorum ab illo Contractu posse distendere, vel restituere possunt Denarius Dei inter Personas contrahentes datus Juris & receptus*. Charta Eduardi I.

DENATES, in Antiquity, Domestic Gods, call'd also *Penates*. See PENATES.

Dionysius Halicarnassensis, Lib. I. speaking of the *Dii Penates*, tells us, that the Historian *Timæus* has wrote, that the Figure, Statue, or Effigy of the *Denates*, or *Penates*, was nothing but a crooked Iron, or Copper Rod, and a Trojan Vessel of Pottery Ware: And that this was all *Æneas* brought from Troy. But, for himself, he assures us, he had seen a Temple at Rome, near the *Forum*, where those Gods were represented sitting, under the Form of two young Men, having each of them a Dart in his Hand: He adds, that the Inscription was DENATES, for that the Ancients, before the Invention of the Letter P, us'd a D instead thereof. But *Dionysius* might be mistaken: For the Bottom of the P is frequently so very small on Medals, that there is no sensible Difference between a P, and a D; which might be the Case in the Inscription that Author mentions; For that the ancient Inhabitants of Italy had no P, is a Mistake sufficiently refuted by many proper Names still remaining of the most early Ages, e.g. *Capsy*, *Capena*, *Picis*, *Pallas*. Nor were the Trojans without the same, witness *Palinurus*, *Paris*, *Priamus*, &c.

DENCHEE, or DENCHED, or ERIENCHEE, in Heraldry, is applied to the Ordinaries in a Shield, when they are pdg'd with Teeth, or indented.

They make this Difference between what is *denched*, and what is *enraid*, that in the former, the Points, or Teeth, are pretty large, and cut straight, like the Teeth of a Saw; whereas in the latter, the Teeth are small, and the Intervals hollow, and a little rounded. See ENRAILED.

DENDRITES, in natural History, a Sort of whitish, or ash-colour'd Stones; whereon are seen Trees, Shrubs, and other rustic Figures, represented in Miniature in blackish, or yellowish Figures. See FIGURED STONE.

Some rank the *Dendrites* in the Class of Stone-Plants; But against this it is urg'd; First, That the Branches of Trees, &c. painted in Miniature on the *Dendrites*, are never confounded together, nor shoot a-cross each other, as those of Stone-Plants usually are. Secondly, That the Fire strips the *Dendrites* of all its Figures, without destroying the Stone, and reducing it to Ashes; which does not hold of any Stone-Plant. From hence it appears, that the Figures of the *Dendrites* are external, and the Effect of a Colour applied on the Stone not Artificially, but by Nature. Two polish'd Marbles being applied on each other with Oil between; upon parting them again, the Oil running into certain Tracks, its Impression exhibits divers Figures like those on the *Dendrites*; the Ramification always beginning on the Side the Marbles are begun to be separated of. So that it appears, the Figures of the *Dendrites* are form'd by some bituminous Liqueur infusing between the Beds, or Strata of the Stones; and accordingly, we actually find, that the *Dendrites* being expos'd to the Fire, yields a bituminous Smell. This same Liqueur issues out of the Stone itself, filtrating through its Pores, as, in all Probability, it is the Cold, and Pressure of the upper Beds, that brings it forth.

In some *Dendrites*, the Figures penetrate quite through, in others they go but to the Middle, and in others not so deep.

DENDROPHORIA, in Antiquity, a Heathen Ceremony, consisting in the carrying of one or more Trees through a City, in certain Sacrifices, and in Honour of certain Deities.

The *Dendrophoria* was perform'd in the Sacrifices of *Bacchus*, *Cybele*, and the God *Sylvanus*. *Aprobanus*, Lib. V. makes mention of that perform'd in the Sacrifices of the Mother of the Gods. It consisted in carrying a Pine in Procession through the City; which Pine was afterwards planted in Memory of that, where under *Arys*, the Favourite of the Goddess, mutilated himself. The Branches of this Tree they crown'd, in Memory of *Cybele's* doing the same; and they cover'd its Trunk with Wool, by reason the Goddess cover'd *Ary's* Breast with the same.

The Persons who perform'd the Office of Carrying the Tree, were call'd *Dendrophori*.

In the Roman History we find mention made of a Company, or College of *Dendrophori*, who attended the Army; And the Critics have been in great Pain to assign their Office. Some hold, that they bew'd, and form'd the Wood for the Tents: Others, that they provided the Wood necessary for the Military Works, Machines of War, &c. *Salmastius* in his Notes on the Life of *Caracalla* by *Spartianus*, owns this general Opinion of all the Learned Men of his Time; but assures with his usual Modesty, that they were all mistaken, and that the *Dendrophori* of the Army were the same with those of the Sacrifices.

The Word is form'd of *Dendro*, Tree, and *ephos*, I bear. DENE, in Astronomy, a fix'd Star, call'd also *Coma Lucida*, or the *Loon's Tail*; its Longitude, Latitude, &c. see under LEO.

DENELAGE, or DANELAGE, the Law made by the Danes in England. See MARCHENLAGE.

DENIER, the French Penny; a small Copper Coin, 12 whereof make a Sol, or French Shilling. See SOL, SHILLING, PENNY, COIN, &c.

The French Denier is about 1/4 Part of the English Penny. It is subdivid'd into two *Milles*, and the *Mille* into two *Oboles*.

Anciently, *Denier* was a general Name for all Sorts of Monies in France; as *Nummus* was for those in Rome. Thus, a Piece of Gold Money, was call'd *Denier d'Or*; Silver Money, *Denier d'Argent*: After the same Manner as the Romans said, *Nummus Aureus*, and *Nummus Argentus*. There were two Kinds of *Deniers*, the one *Tournois*, the other *Paris*; whereof the latter was worth a fourth Part more than the former, and was call'd *Monnoye Royale*, or *Foris Monnoye*, and sometimes *Denier d'Or*, and *Denier a Valeur d'Or*.

DENIZEN, in Law, (from the French *Donation*, i. e. Donation) an Alien that is enfranchis'd here in England by the King's Charter, and Donation; and thereby enabled, in many Respects, to do as the King's Native Subjects do, namely, to purchase, and posses's Lands, to hold any Office, or Dignity, &c. Yet is *Denizenship* short of *Naturalization* by Parliament. For a Stranger naturalized, may inherit Lands by Descent; which a *Denizen* cannot. Besides that, in the Charter, whereby a Person is made a *Denizen*,

there is usually some Clause, or other, which abridges him of that full Benefit, which natural Subjects enjoy.

When a Man is thus Enfranchis'd, he is said to be, *Ad Fidem Regis Angliæ*, or, under the King's Protection; till such Time his Goods may be seiz'd to the King's Use.

DENOMINATION, that whereby one Thing takes a Name, from the Name of another, on Account of some Relation between the two: or, more strictly, it is a Name whereby something is call'd, in Consequence of some Form, or Property thereof. See NAME.

Hence, as the Form is of two Kinds, *viz.* *Internal*, and *External*; *Denomination* becomes two-fold.

Internal Denomination, is that founded on the inner Form, or arising from the Intrinsic Form; thus *Peter* is denominat'd *Learned*, on Account of his Learning, which is something intrinsic.

External Denomination, is that founded, or arising from the external Form. Thus, a Wall is said to be *seen*, and *known* from the Vision, and Cognition employ'd upon it; and thus *Peter* is denominat'd, *honour'd*, by reason of Honour, which is not in the Person honour'd, but in him that honours.

DENOMINATOR, in Arithmetic, a Term only us'd in speaking of Fractions, or broken Numbers. See FRACTION.

The *Denominator* of a Fraction is the lower Number; or that below the Line; shewing into how many Parts the Integer is suppos'd to be divided by the Fraction. Thus in the Fraction $\frac{7}{12}$, seven twelfths, the Number 12 is the *Denominator*; and shews, that the Integer is here divided into 12 Parts. The *Denominator* always represents an Integer.

The Number above the Line 7, is call'd the *Numerator*. See NUMERATOR.

DENOMINATOR of a Ratio, is the Quotient arising from the Division of the greater Term by the less. Thus 6 is the *Denominator* of the Proportion 30 : 5, because $30 \div 6 = 5$. The *Denominator* is what we otherwise call the *Exponent of the Ratio*. See EXPONENT.

DENSITY, that Property, or Habitude of Bodies, whereby they contain such a Quantity of Matter, under such a Bulk. Accordingly, a Body that contains more Matter than another, under the same Bulk, is said to be *denser* than the other. *Density* stands in Opposition to *Rarity*. See RARITY, and CONDENSATION.

Hence, since the Mass is proportional to the Gravity, a *denser* Body is specifically heavier than a *rarer*; and a specifically heavier is *denser* than a specifically lighter. See WEIGHT, and GRAVITY.

The *Densities*, and *Bulks* of Bodies, are the two great Points, whereon all Mechanicks, or Laws of Motion turn: 'tis an Axiom, that Bodies of the same *Density* contain equal Masses, under equal Bulks. If the Bulks of two Bodies be equal, their *Densities* are as their Masses: Consequently, the *Densities* of equal Bodies, are as their Gravities. If two Bodies have the same *Density*, their Masses are as their Bulks: And hence, the Gravities of Bodies of the same *Density*, are in the Ratio of their Bulks. The Masses of two Bodies are in a Ratio compounded of their *Densities*, and Bulks; consequently, their Gravities are in the same Ratio: And if their Masses, or Gravities be equal, their *Densities* are reciprocally as their Bulks. The *Densities* of any two Bodies are in a Ratio compounded of the direct Ratio of their Masses, and the reciprocal one of their Bulks.

The Peripateticks define *Density*, a secondary Quality, whereby a Body is full of it self; its Parts cohering without any Interstice. So that the Form of *Density* consists in the immediate Coherence of Parts. Hence *Porphyry* in his Predicaments defines a *dense* Body, that whose Parts are plac'd so near each other, that no other Body can come between them; as Gold. The efficient Cause of *Density* they usually attribute to cold: *Scaliger*, and some others, attribute it to Moisture. Many of the Moderns take the Smallness of the Parts of Bodies, to contribute much to their *Density*; as by this means the Pores are left the smaller. Tho' 'tis added, that the *Density* of Bodies does not only depend on the Smallness of the Pores, but also on their Fewness; For as we from having any Body absolutely *dense*, in the Sense of the Ancients: Gold is self, the *densest*, and heavest of all natural Bodies, Sir *I. Newton* observes, does contain a great deal more Pore, or Vacuity, than Substance. See PORE.

When the Pressures of two Liquids are equal, the Quantities of Matter in Columns which have equal Bases, do not differ; wherefore the Bulks, that is, the Heights of the Columns are inversely as the *Densities*; whence may be deduc'd the Method of comparing them together: After this Manner: pour Mercury into a curb Tube A, so as to fill the lower Part of the Tube from B to C; (*Tab. Hydrostaticks* Fig. 1.) pour in Water in one Leg from B to E; in the other Leg pour in Oil of Turpentine, till both the Surfaces of the Mercury B C, be in the same Horizontal Line, and the Height of the Oil be CD: These Heights will be as 87 to 100, which is the

inverse Ratio, that the *Density* of Water has to the *Density* of Oil of Turpentine; and therefore those *Densities* are to each other as 100 to 87. The Mercury is pour'd in, lest the Liquids should be mix'd in the Bottom of the Tube.

The *Densities* of Liquids are also compar'd together by immersing a Solid into them; for if a Solid lighter than the Liquids to be compar'd together, be immerst successively into different Liquids, the immerst Parts will be inversely as the *Densities* of the Liquids; for, because the same Solid is made Use of, the Portions of the different Liquors, which in every Case would fill the Space taken up by the immerst Parts, are of the same Weight; therefore the Bulks of those Portions, that is the immerst Parts themselves are inversely as the *Densities*. See further under SOLIDS immerst in Liquids.

The *DENSITY* of the Air, is a Property that has much employ'd the later Philosophers, since the Discovery of the Torricellian Experiment, and the Air-pump. See RARIFICATION, and CONDENSATION.

'Tis demonstrat'd, that in the same Vessel, or even in Vessels communicating with each other, at the same Distance from the Centre, the Air has every where the same *Density*. The *Density* of the Air always increases in Proportion to the Compression, or the compressing Powers. See PRESSURE.

And hence, the lower Air is always *denser* than the upper: Yet the *Density* of the lower Air is not proportional to the Weight of the Atmosphere, by reason of Heat and Cold, which make notable Alterations as to *Rarity*, and *Density*. If the Air be render'd *denser*, the Weight of Bodies therein is diminish'd; and if *rarer*, increased; by reason Bodies lose more in heavier than in lighter *Medium's*. See SPECIFIC GRAVITY.

And hence, if the *Density* of the Air be sensibly alter'd, Bodies equally heavy in a lighter Air, if their specific Gravities be considerably different, will have their *Equilibrium* taken away in a *denser* Air, and the specifically heavier will preponderate; which is the Foundation of the *Manoscope*, an Instrument for measuring the Alterations in the *Density* of the Air. See MANOSCOPE.

DENTAL, *Dentalis*, is applied to Letters, in the Pronunciation whereof the Teeth have a principal Share. See LETTER.

Grammarians, and especially the Hebrew ones, distinguish the Letters into *Dental*, *Labial*, *Guttural*, *Lingual*, *Palatal*, &c. See GUTTURAL, &c.

DENTALIS *Lapis*, or *Dentalium*, is a Kind of Shell, which the Apothecaries pulverize, and use in several Medicaments, as an excellent *Stech*. The genuine *Dentalis*, described by Mr. *Tournefort*, is of a tubular, or Conical Form, about 3 Inches long; of a shining, greenish white; hollow; light, and divided lengthwise by Parallel Lines, running from Top to Bottom. It is about the Thickness of a Feather, and bears some Resemblance to a Dog's Tooth. 'Tis very scarce; and therefore in lieu of it, they usually substitute a Shell of divers Colours found among the Sand when the Sea is withdrawn; but not channel'd, or fluted like the *Dentalis*.

D. *Lister*, in the *Philosoph. Transact.* makes mention of two Species of *Dentalia*; the first commonly enough found about the Island of *Guernsey*, &c. being a long, slender, round Pipe, a little bending, and tapering, and hollow at both Ends; whence it is also call'd, the *Dog-like-tooth*: The other properly call'd *Dentalium*, longer, and thicker than the former; and besides, break'd with Ridges; whence the *Italian* Term *Intaglio*. See ENTALUM.

DENTED, *Indented*, *Tooth'd*. See INDENTED.

DENTED *Verge*, among Botanists, is applied to such Leaves of Plants as are notched, or jagged about the Edge, or Rim; whereof some are *fine dent'd*; others *large*, or *deep dent'd*, i. e. cut into the Leaf. See LEAF.

DENTED *Wheel*, *Rota Dentata*, See WHEEL.

DENTES, in Anatomy. See TEETH.

DENTICLES, or **DENTILS**, in Architecture, an Ornament in Corniches, bearing some Resemblance to Teeth; particularly affect'd in the *Ionic*, and *Corinthian* Orders. They are cut on a little square Member, properly call'd *Denticulus*; and the Notches, or Ornaments themselves, *Dentes*, from *Dens*; as having the Appearance of a Set of Teeth.

Anciently, *Dentils* were never us'd but in the *Ionic* Cornich: Yet we find them in the Remains of the Theatre of *Morcellus*; which is an Argument with some, that *Varronius* had not the Direction of that Building. *Varronius* prefers the Breadth of each *Dentil*, or *Tooth*, to be half its Height; and the indenture, or Interval between each two, be orders to be $\frac{1}{3}$ of the Breadth of the *Dentil*.

The same Author, C. 2. of his 14th Book, observes, that the *Greeks* never us'd *Dentils* underneath Modillions; by reason Modillions represent Forces; and *Dentils* represent Ends of Rafters, which can never be plac'd underneath Forces. See MODILLION.

The *Romans* were not so scrupulous as to this *Decorum*; excepting in the *Parthenon*, where there are no *Dentils* under the *Modillions*, neither in the *Portico*, nor in the Inside of the Building. The *Italians* call them *Dentelli*, and *Denticoli*.

DENTIFORMIS Processus, the same as *Pyrenoides*. See *PYRENOIDES*.

DENTIFRICE, in Medicine, *Tooth-Powder*; a Remedy to rub the Teeth withal, in order to cleanse, or fasten them. See *TOOTH*.

There are *Dentifrices* of divers Kinds, and Forms: Some in Form of a Powder, composed of Corals, Pumice-Stone, Salt, Alum, Egg-Shells, Lobsters, Harts-Horn, Cuttle-Bone, Tartar vitriolated, &c. Others in Form of an Electuary, or Oplate, consisting of the same Powders, mix'd up with Honey.

There are others, prepar'd with Roots boil'd with Alum, and dried in the Oven. Others in Form of a Lignor, drawn by Distillation from drying Herbs, and astringent Medicines. The *Dutch* hold Butter the best *Dentifrice*, to keep the Teeth white and sound; And the *Spaniards*, Urine.

DENTITION, the Act of breeding, or cutting the Teeth. The Time of *Dentition*, is usually from about 7 Months old, to 17. The *Incisives* come first, then the *Maxillares*; and lastly the *Caniini*, or Eye-Teeth. See *TEETH*.

Dentition, *Hippocrates* observes, is usually proceed'd with an Itching of the Gums, Convulsions, Fevers, and Looseness; especially when the Canine-Teeth are cut.

The like Symptoms, *Dr. Lister*, on this Passage of *Hippocrates*, observes, happen to Birds upon Moulting, or Casting their Feathers, on which Occasion they become mute, and dull. See *MOULTING*.

The Germen, or Seed of the Tooth, says *Dolens*, is a slender, mucous Matter, like the White of an Egg, contain'd in the Cells, or *Alveoli* of the Jaw-bone, which grows harder and bigger every Day, till it be fit to break through the Gum. In this Rupture the poor Child is afflicted with terrible Symptoms, Inflammations of the Jaws, Gripes, Waking, Inquietude, Terrours, Dejections, Vomiting, Savivation, Epilepsy, Abscesses, and frequently Death.

There are two Terms, or Periods of *Dentition*; The one, when the Tooth makes its first Endeavour to get out of the Maxillary Bone, and wherein the outer, or upper Part of the Gum lifts to be incompass'd with a whitish Circle. The other, when the Tooth, considerably enlarged in Bulk, renders the Gum tumid, and strives with all its Force to break its Way through the same. The Remedies against the Symptoms of *Dentition* are Absorbents, and gentle Purgatives.

DENUNCIATION, a solemn Publication, or Promulgation of any Thing.

All Vessels are lawful Prize after *Denunciation*, or Proclamation of War. See *PRIZE*.

The *Denunciation* of excommunicated Persons, is, that the Sentence may be the more fully executed, that the Persons may be known, the Entrance into the Church refused them, and that other People may be warn'd, not to have any Communication with them. See *EXCOMMUNICATION*.

DEOBSTRUENTS are such Medicines as open Obstructions. See *OBSTRUCTION*, and *DETRAGENT*.

It must be observ'd, however, that there is something further intimated by *Deobstruent*, than by *Detragent*: For a Medicine may be *deobstruent*, that is not in the strictest Sense *detragent*; as, in Effect, are most made of metalline Substances; such as Steel, and Mercury; which obtain this Appellation from their Acting by their natural Weight, whereby they increase the *Momentum* of their circulating Fluid, and make it strike against the secretory Outlet with greater Force; because the *Momenta*, or *Vires Percussivæ* of all Projectils, of which Kind is a circulating Fluid, is as their Solidities, supposing their Velocities equal. The more therefore the Animal Fluids are saturated with dense, and solid Particles, with the greater Force they distend the Vessels, and more easily break through, where the Structure favours their Escape; and upon that Account are Medicines, which add to these Qualities in the Fluids, call'd *Deobstruents*.

DEODAND, in our Customs, a Thing given, or forfeited, as it were, to God, for the Pacification of his Wrath in a Case of Misadventure, whereby a Christian Soul comes to a violent End, without the Fault of any reasonable Creature: As if a Horse strike his Keeper, and kill him; if a Man, in driving a Cart, falls so as the Cart-Wheel runs over him, and presses him to death; if one be felling a Tree, and gives Warning to the Standers by, to look to themselves; yet a Man is kill'd by the Fall thereof: In the first Place the Horse; in the second, the Cart-Wheel, Cart, and Horses; and in the third, the Tree, is, *Deo dandus*, q. d. to be given to God, that is, to the King, to be distributed to the Poor by his Almoner, for Expiation of this dreadful Event; tho' effected by unreasonable, nay senseless, and dead Creatures.

Omnis que movetur ad Mortem sunt Deodanda.

What moves to Death; or kills him dead, is *Deodand*, and forfeited.

This Law seems to be an Imitation of that in *Exodus*, Chap. XXI. *If an Ox gore a Man, or a Woman, with his Horn, so as they die; the Ox shall be sold to Death; and his Flesh not be eat; So shall his Owner be innocent.*

Fleta says, the *Deodand* is to be sold, and the Price distributed to the Poor, for the Soul of the King, and his Ancestors, and all faithful People departed this Life.

DEOPILLATIVE, a Remedy proper to soften, resolve, and remove Obstructions. See *OBSTRUCTION*.

Deopillatives are the same with what we otherwise call *Deobstruents*. See *DEOBSTRUENT*.

DEPART, a Method of refining, or purifying Gold by means of *Aqua fortis*. See *GOLD*.

There are three Ways of refining Gold; The first by *Antimony*: The second by *Sublimatè*; and the third, which is the most usual, by *Aqua fortis*. The two former, see under the Article *REFINING*.

For the Operation of the *Depart*, they take at the Rate of 1 Pound of impure Gold, and 2 of Silver; these they fuse together in a Crucible, and when fused, cast them into cold Water, where they become divided into Grains of the Bigness of Peas. These Grains taken out, and dried by the Fire, are put in a *departing* Vessel, which is a Stone Matras, and to the Metal is added 4 Pounds of *Aqua fortis*. Then taking the Vessel, they set it on the Coals, and in about an Hours Space, the refining is done. For upon opening the Vessel, they find nothing therein but the *Aqua fortis*, and the Gold reduced into a *Calx*, or Sand: The Silver being all dissolv'd, and imbibed by the Water.

To raise the Gold to its due Fineness, they usually give it the *Aqua fortis* again, and again; using for the first Time, half a Pound; and for the second, a Quarter of a Pound of the Water, to 8 Ounces of Metal. If the third Water be found good, and clear, the Operation is ended: And the *Calx* of the Gold being wash'd in repeated Water, is melted down again in a Crucible, first by a gentle, and afterwards a vehement Fire, to be cast into Ingots, or Wedges.

It must be added, that the Silver, with the Impurities of the Gold, are so thoroughly incorporated with the Water, that to the Eye there does not appear any Thing beside the pure Liquid; yet is not this Silver lost. To recover it again out of the *Menstruum*, they divide their Stock of *Aqua fortis* into several Stone Vessels, which they fill up with Spring Water, observing to put 7 or 8 times as much of this, as that. This done, in each Vessel they put a Quantity of Copper; and leaving the whole for 24 Hours, at the End thereof they find the Spirits of the *Aqua fortis* have quitted the Silver, and are incorporated with the Copper, leaving the former in Form of a *Calx*, or Ashes at Bottom. This *Calx* being dried, is melted into an Ingot, with a little Salt-petre.

To husband the *Aqua fortis*, and make them serve again for a second Operation; they distil them in an Earthen, or Glass Alembic; and when the Distillation is about a third over, change the Recipient. The Water of the first Recipient, serves for the first Operation of *Depart*, and the rest for the subsequent ones.

If the *Aqua fortis*, having quitted the Silver, and being united with the Copper, be then filtrated, it is call'd, *Aqua secunda*; in which if you steep an Iron-Plate some Hours, you will have another *Depart*. For the *Menstruum* will let go the Copper, and prey on the Iron, leaving the Copper in Powder on the Iron-Plate. And filtrating this *Dissoiution*, you may get the Iron out of it by laying in it a Piece of *Lapis Calaminaris*; for the Iron in that Case will *depart* to the Bottom, and the *Lapis* be dissolv'd. And if you again filtrate this Water, and pour on it the Liquor of fix'd Nitre, you will have another *Depart*; the *Lapis* precipitating to the Bottom. And lastly, filtrating this Water, as before, and evaporating Part of it, you will have Crystals of Salt-petre.

DEPARTURE, or **DEPARTER**, in Law, a Term properly applied to a Person, who first pleading one Thing in Bar of an Action, that being replied to, he waves it, and insists on something different from his first Plea. Or it may be applied to a Plaintiff, who in his Replication shows a new Matter from his Declaration. So if a Man plead a general Agreement in Bar; and in his Rejoinder alledge a special one; it shall be adjudged a *Departure* in Pleading. The Defendant hereupon denurreth, because it was a *Departure* from the Declaration. Case II. Part, fol. 127.

DEPARTURE in *Disposit of the Court*, is when the Tenant, or Defendant appears to the Action brought against him, and has a Day over in the same Term; he not appearing, but making a Default, it is a *Departure in Disposit of the Court*, and therefore he shall be condemn'd. The *Departure* is always on the Part of the Tenant, or Defendant; and its Entry is, *quod pro dictis A. licet solentur Exactus, non venierit, sed in contemptum Curie recessit.*

DEPARTURE, in Navigation, is the Easting, or Westing of a Ship, with respect to the Meridian it departed, or sail'd from. See **MERIDIAN**.

Or 'tis the Difference of Longitude, either East or West, between the present Meridian the Ship is under, and that where the last Reckoning, or Observation was made. See **LONGITUDE**.

This *Departure* any where, but under the Equator, must be accounted according to the Number of Miles in a Degree proper to the Parallel the Ship is under. See **Mercator's SAILING**.

DEPHLEGMATED, in Chymistry, an Epithet applied to Spirits that are well clear'd of Water, or Phlegm. See **SPIRIT**, and **PURLEM**.

To effect which, they *rectify* them, i. e. distil them over and over, till they be left quite pure. See **DISTILLATION**, and **RECTIFICATION**.

DEPHLEGMATION, in Chymistry, is the Act of purifying, or clearing a Fluid of its Phlegm, or Water.

This is perform'd by distilling the Spirit, or other Fluid over and over; by which means, the spirituous Part all rises, and leaves the Phlegm, or Water behind. When the Spirit is thus disengag'd of all its Phlegm, or, at least, as much as it can be, it's call'd, a *dephlegmated Spirit*. See **PURLEM**.

DEPILATORY, or **DEPILATIVE**, in Medicine, a Plaster, or Medicine, applied on any hairy Place, in order to bring off the Hair. See **HAIR**.

Depilatories are principally compos'd of Orpiment, which is a very caustic, and even a dangerous Mineral. For Hairs growing on the Fore-head of a young Girl, I prescribed the following *Drope*, or *Depilative Lintment*, *Degori*.

The Word is form'd of the Particle *De*, and *Pilus*, Hair.

DEPONENT, in the *Latin Grammar*, a Term applied to Verbs, which have Active Significations, but Passive Terminations, or Conjugations, and wear one of their Participles Passive: As, *Miser*, I threaten, which has for Participles, *Mitans*, *Mitansurus*, and *Mitansurus*, but no *Mitansurus*, which should be the Participle Passive. See **VERB**.

They are call'd *Deponents*, as having deposited, or laid a-side their Passive Signification.

DEPOPULATION, a Walling, Pilling, Destroying, Depopulating, or Unpeopling any Place. *Cohes Infrisy. Part III. fol. 204.*

Hence; *Depopulatores Agrorum. Stat. 4. Henr. IV.*

DEPORTATION, a Sort of Banishment in Use among the *Romans*, whereby some Island, or other Place was allotted a Criminal for the Place of his Abode, with a Prohibition not to stir out of the same on Pain of Death. See **BANISHMENT**.

Ulpian makes this Difference between *Deportation*, and *Relegation*, that the former confined the Party to one certain Place for ever; whereas *Relegation* was frequently revoked, and allowed a little more Liberty. By *Deportation* that Person lost the Rights of a *Roman* Citizen. See **RELEGATION**.

DEPOSITION, in Law, a Testimony given in Court by a Witness upon Oath. In Chancery, *Deposition* is a Testimony set down in Writing, by Way of Answer to the Interrogatories exhibited in Chancery, where such Witness is call'd *Deponent*. When such Witness is examin'd in open Court, he is said to be examin'd *in vivo*.

DEPOSITION is also used for the sequestering, or depriving a Person of his Dignity, and Office.

Deposition only differs from *Abdication*, in that the latter is supposed voluntary, and the Act of the Dignitary, or Officer himself; and the former of Compulsion, being the Act of a superior Power, whose Authority extends thereto.

Some say the *Deposition*, and some the *Abdication* of King *James II.* See **ABDICATION**.

The Pope pretends to a Power of *deposing Kings*. *Gregory VII.* we are assur'd by *Onuphrius Pannonius*, and *Ortho de Frisivo*, was the first, who ever attempted the *Deposition* of Kings.

Deposition does not differ from *Deprivation*: We say indifferently a *deposed*, or *deprived* Bishop, Official, &c. See **DEPRIVATION**.

Deposition differs from *Suspension*, in that it absolutely and for ever strips, or divests a Priest, &c. of all Dignity, Office, &c. whereas *Suspension* only exhibits, or restrains the Exercise thereof. See **SUSPENSION**.

Deposition only differs from *Degradation*, that the latter is more formal, and attended with a few more Circumstances than the former: But in Effect and Substance they are the same; those additional Circumstances being only Matter of Show, first set on foot out of Zeal, and Indignation, and kept up by Custom, but not warranted by the Laws, or Canons. See **DEGRADATION**.

DEPOSITORY, in Law, a Person entrusted as Keeper, or Guardian of any Thing. See **DEPOSIT**.

Ordinary Depositories are not to warrant the Thing left with them, in Case it be lost, or stolen. They are only to answer for a Fraud, or Breach of Faith, not for Negligence. But a *Necessary Depository*, as an Inn-keeper, is accountable for a Theft, or Robbery, if there have been any Negligence in the Case.

DEPOSIT, *Depositum*, a Thing put in the Hands of another to be kept *gratis*. See **DEPOSITORY**.

The Civilians divide a *Depositum* into Simple, and Judicial.

Judiciary, is that contested between several Persons, and deposited in the Hands of some third Person, by Decree of a Judge.

Simple is either Voluntary, or Necessary. *Necessary* is that done in Case of Hostility, Shipwreck, Fire, &c.

Inn-holders are responsible for the Baggage brought to them, as being a *Necessary Deposit*.

DEPRECATION, in Rhetoric, a Figure whereby the Orator invokes the Aid, or Assistance of some one; or prays for some great Evil, or Punishment to befall him who speaks falsely; either himself, or his Adversary.

DEPRECATIVE, in Theology, a Term only used in the Phrase, *Deprecative Form*, which is applied with regard to the Manner of performing some Ceremonies in the Form of Prayer.

Among the *Greeks*, the Form of Absolution is *deprecative*, being conceiv'd in these Terms, *May God absolve you*; Whereas in the *Latin*, and even some of the Reformed Churches, it is in the declarative Form, *I absolve you*.

DEPRESSION of *Equation*. See **EQUATION**.

DEPRESSION of the *Pole*: So many Degrees as you sail, or travel towards the Zenith; so many you are said to *depress* the *Pole*, because it becomes, respectively, so much lower, & nearer to the Horizon. See **ELEVATION** of the *Pole*.

DEPRESSOR, in Anatomy, a Name common to divers Muscles, from their Office in Lowering, or bringing down the Parts they are fasten'd to. See **MUSCLE**.

DEPRESSOR Labii superioris, in Anatomy, a Muscle call'd also *Constrictor Alae Nasi*. See **CONTRACTOR Alae Nasi**.

DEPRESSOR Labii inferioris proprius, a Muscle placed between the *Depressores Labiorum communis*, on the Part call'd the *Chin*. It appears to be but one Muscle, ascending with a twofold Order of fleshy Fibres, and terminating in the lower Lip. Its Office is shewn by its Name; To let fall the lower Lip.

DEPRESSOR Labiorum communis, by some call'd *Depressor Labii superioris*, is common to both Lips. It arises with a broad Origin from the lower Margin of the under Jaw, by the Side of the *Chin*, and is inserted with a narrow Tail into each Lip near their Coalition; serving to draw them obliquely down.

DEPRESSOR Mucosae inferioris. See **DIGASTRICUS**.

DEPRESSOR Oculi, a Pair of Muscles springing from each Corner of the Eye, and answer'd by another of like Figure and Structure in the lower Eye-lid. These are often consider'd together by Anatomists as one Orbicular Muscle; the Fibres invorning the Eye-lids, and inserted into them, not unlike the Sphincters of other Parts.

DEPRIMENS, in Anatomy. See **DEPRESSION**.

DEPRIVATION, in the Canon Law, the Act of bereaving, divesting, or taking away a spiritual Promotion, or Dignity: As when a Bishop, Vicar, Prebend, or the like, is *deposed*, or deprived of his Preferment for some Matter, or Fault in Fact, or in Law.

Deprivation is of two Kinds; *A Beneficio*, & *ab Officio*.

Deprivation Beneficio, is when for some great Crime, a Minister is wholly, and for ever *deprived* of his Living, or Preferment: which differs from *Suspension*, in that the latter is only a temporary *Deprivation*. See **SUSPENSION**.

Deprivation ab officio, is when a Minister is for ever *deprived* of his Orders; which is the same in Reality, with what we otherwise call *Deposition*, and *Degradation*; and is usually for some heinous Crime, deserving Death, and perform'd by the Bishop, in a solemn Manner. See **DEGRADATION**.

DEPTH, in Geometry, &c. See **ALTITUDE**, **HEIGHT**, &c.

DEPTH of a Squadron, or Battalion, is the Number of Men in a File; which in a Squadron is three, and in a Battalion generally six. See **SQUADRON**, **FILE**, &c.

The Enemies Horse were drawn up; *deep*.

DEPURATION, in Pharmacy, the same as *Clarification*, or *Purification*, viz. the purging a Body of all the Lees, Faeces, and other crass, coarse, and excrementitious Parts adhering therein. See **CLARIFICATION**, **PURIFICATION**, &c.

Fermentation serves to *depurate* Liquors: Symplic Juices, &c. are *depurated* by passing them through the *Monica Hippocratica*, or Straining-Bag. See **FILTER**, &c.

DEPUTATION, a Mission of certain select Persons out of a Company, or Body, to a Prince, or Assembly, to treat of Matters in their Name; or to prosecute some Affair therein. See **DEPUTY**.

Deputations are more or less solemn, according to the Quality of those who send them, and the Business they are sent upon.

Deputation is not properly applied where a single Person sends another with such Commission; but only where a Body are concern'd. The Parliament *deputed* the Speaker, and 4 Members, to present their Address to his Majesty. The Chapter *deputed* two Canons, to solicit their Affair in Council.

DEPUTY, a Person sent, or *deputed* by some Community, in their Name, and Behalf. See **DEPUTATION**.

The several Provinces of the French Dominions send *Deputies* to the King every Year, to present him the *Coyes des Etats*: There are always three *Deputies*, one from each Order. 'Tis the *Deputy* of the first Order, that makes the Compliment to the King.

In the Cities of *York*, there are always *Deputies*, to treat with the Grand Seigneur's Officers, as to Taxes, and other Concerns. These *Deputies* are three or four of the richest, and most considerable among the Burgeses.

DEPUTY, is also frequently used among us, for an Office, or Employ; not a Dignity, and stands indifferently for a Vice, or Lieutenant. See **LIEUTENANT**, and **VICE**.

Among the Ancients, *Deputatus* was applied, First, to Armourers, or Workmen employ'd in the making of Armour in the Forges, &c. And secondly, to a Sort of huffie People, who followed the Army, and in Engagements were charged to bring off, and take Care of the Wounded.

DEPUTATUS, *ἀποστατός*, was also an inferior Officer in the Church of *Constantinople*, whose Business was to call Persons of Condition the Patriarch had a Mind to speak with, and to keep off the Crowd where the Prelate walk'd. This *Deputy* appears to have been a Sort of *Usher*, or *Tipstaff*: But he had likewise the Care of the sacred Vestments; in which he approach'd the Office of a Sacrificer.

DERELICTS, in the Civil-Law, are such Goods as are wishfully thrown away, or relinquish'd by the Owner. The Term is also used for such Lands, as the Sea receding from leaves dry, and fit for Cultivation.

DERIVATION, in Grammar, the Connexion, or Affinity one Word has with another, by having been originally form'd from it. See **ETYMOLOGY**.

DERIVATION, in Medicine, the diverting a Humour, which flows on some noble Part, and drawing it to some other neighbouring Part, where it is less dangerous. See **HUMOUR**.

Thus, in Effusions upon the Eyes, or Teeth, they apply a Blister behind the Neck to draw the Matter thither: And in a Squanaty, they prescribe Bleeding in the *Remule*, or Veins under the Tongue, to divert the Humour from falling on the Throat. See **DEFLUXION**, and **FLUXION**.

DERIVATIVE, in Grammar, a Word, or Diction, which takes its Origin from another Word, call'd its *Primitive*. See **PRIMITIVE**.

Such is the Word *Derivative*, which takes its Origin from the Primitive *Rivus*, a Rivulet, or Channel, out of which lesser Streams are drawn; and thus *Mundus*, *Deity*, *Lovely*, &c. are derived from *Man*, *Deus*, *Lovis*, &c.

DERMA, in Anatomy, the *Cutis*, or Skin of an Animal; or the Tegument investing the whole Body immediately under the Cuticle, or Scarf-Skin. See **CUTIS**.

The *Dermis* consists of two Parts, the *Corpus reticulare*, and the *Papillæ pyramidales*. See **SKIN**, **RETICULARE**, and **PAPILLÆ**.

The Word comes from the Greek *δερμις*, to flea, or exorcise.

DERNIER Ressort. See **RESSORT**.

Whatever Power is committed by the King to any other, the *Dernier Ressort* is still remaining in himself; so that he may sit in Court, and take Cognizance of Causes; except in Felonies, Treasons, and other Cases, where he himself is a Party.

DEROGATION, an Act contrary to a preceding one, and that annuls, destroys, and revokes it.

Derogations, in general Terms, are not regarded in Judicature; they must be in specific, and in formal Terms.

A new Law imparts a *Derogation* of a former one: A second Testament is a *Derogation* of a first.

DEROGATORY, a Clause importing *Derogation*. If a Person own himself indebted in a certain Sum; notwithstanding any Quittance he has obtain'd for the same, the Act is *derogatory*.

DERVIS, or **DERVICHES**, a Sort of Monks among the *Turks*, who lead a very austere Life, and profess extreme Poverty; tho' allowed to marry.

The *Dervis*, call'd also *Mevlevites*, are a *Mohometan* Order of Religious; the Chief, or Founder whereof was one *Mevlevus*. They are now very numerous. Their first Mo-

nastery is that near *Cogni* in *Nasolia*; where the General makes his Residence; and where all the Assemblies of the Order are held: the other Houses being all dependent of this; which Privilege *Ottoman* I. granted this Monastery.

The *Dervis* effect a World of Modesty, Patience, Humility, and Charity. They always go bare-legged, and open-breasted, and frequently burn themselves with hot Iron, to ensure themselves to Patience. They always fast on Wednesdays, eating nothing on those Days till after Sun-set. Tuesdays and Fridays they hold Meetings, at which the Superior of the House presides. One of them plays all the while on a Flute, and the rest dance, turning their Bodies round and round with the greatest Swiftness imaginable. Long Custom to this Exercise from their Youth, has brought them to such pass, that it does not maze, or discompose them at all. This Practice they observe with great Strictness, in Memory of *Mevlevus* their Patriarch's turning miraculously round, for the Space of four Days, without any Food, or Refreshment; his Companion *Hansaf* playing all the while on the Flute; after which he fell into an Extasy, and therein receiv'd wonderful Revelations for the Establishment of his Order. They believe the Flute an Instrument consecrated by *Isaac*, and the Shepherds of the Old Testament; by reason they sang the Praises of God thereon. They profess Poverty, Chastity, and Obedience, and really keep it while they remain *Dervises*: But if they chuse to go out; and marry, they are always allowed.

The Generality of *Dervises* are Charietians: Some apply themselves to *Legendemain*, *Poissurus*, &c. to amuse the People; Others give into Sorcery, and Magic: But all of them, contrary to *Mohomet's* Precept, drink Wine, Brandy, and other fuddling Liquors, to give them the Degree of Gayety their Order requires.

Beside their great Saint *Mevlevus*; there are particular Saints honour'd in some particular Monasteries: As *Kaderis*, greatly rever'd in the Monasteries of *Egypt*, and held by some to be St. *George*, and by others, with more Probability, the Prophet *Elias*. The *Dervises* are great Travellers; And under Pretence of preaching, and propagating their Faith, are continually passing from one Place to another: On which Account they have been frequently used as Spies.

There are also *Dervishes* in *Persia*, call'd in that Country *Abdals*, q. d. *Servants of God*. They lead a very penurious, austere Life, and preach the Alcoran in the Streets, Coffee-Houses, and wherever they can meet with Auditors. The Persian *Dervishes* retail little but Fables to the People, and are in the last Contempt among the Men of Wit, and Letters.

The Word is originally *Persian* *درویش*, signifying a *Beggar*, or Person who has nothing. And by reason the Religious, and particularly the Followers of *Mevlevus*, profess not to possess any Thing; they call both the Religious in general, and the *Moslemans* in particular, *Dervis*, or *Dervishes*.

DESCANT, in Music, the Art of Composing in several Parts. See **COMPOSITION**.

Descant is three-fold; viz. *Plain*, *Figuratè*, and *Double*. *Plain* **DESCANT**, is the Ground-work, or Foundation of Musical Composition, and consists altogether in the orderly Placing of many *Concords*; answering to *simple Counter-points*.

Figuratè, or *Florid* **DESCANT**, is that wherein *Discords* are concern'd as well, tho' not so much, as *Concords*. This may be well term'd, the *Ornamental*, or *Rhetorical* Part of *Musick*; in regard that in this are introduced all the Varieties of *Points*, *Figures*, *Synopses*, *Diversities* of *Measures*, and whatsoever else is capable of adorning the Composition.

Double **DESCANT**, is when the Parts are so contrived, that the *Treble* may be made the *Bass*; and on the contrary, the *Bass* the *Treble*. See **HARMONY**, **COUNTER-POINT**, &c.

DESCENDANT, in Genealogy, a Term relative to *Ascendants*, and applied to a Person, who is born, or issued from some other here refer'd to. See **ASCENDANT**.

Adam infected all his *Descendants* with Original Sin. See **ORIGINAL SIN**.

The *Descendants* from the Brothers of the *Maid of Orleans*, are confirm'd in their Exemption from all Taxes, and Imposts, by a Regulation of the Year 1634.

DESCENDING, something that falls, or moves from above, downwards. There are *Ascending*, and *Descending Stars*: *Ascending*, and *Descending Degrees*. See **ASCENDING**, &c.

DESCENDING Latitude, is the Latitude of a Planet in its Return from the *Nodes* to the *Equator*. See **LATITUDE**.

There are *Ascending*, and *Descending* Veins, springing out of the *Cava*: *Ascending*, and *Descending* Arteries, rising out of the *Aorta*. See **CAVA**, and **AORTA**.

DESCENSION, in Astronomy, is either *Right*, or *Oblique*. *Right* **DESCENSION** of a *Star*, or *Sign*, is a *Point*, or *Arch* of the *Equator*, which descends with the *Star*, or *Sign* below the *Horizon*, in a right Sphere. See **RIGHT SPHERE**.

Oblique DESCENSION, isa Point, or Arch of the Equator, which descends at the same Time with a Star, or Sign below the Horizon, in an oblique Sphere. See *oblique SPHERE*.

Descensions, both *Right*, and *Oblique*, are accounted from the first Point of *Aries*, or the Vernal Interfection; according to the Order of the Signs; that is, from West to East. And as they are unequal, when it happens that they answer to equal Arches of the Ecliptick, as e.g. to the 12 Signs of the Zodiac, it follows, that sometimes a greater Part of the Equator rises, or descends with a Sign, in which Case the Sign is said to ascend, or descend *rightly*: And sometimes again a less Part of the Equator rises, or sets with the same Sign; in which Case it is said to ascend, and descend *obliquely*. See *ASCENSION*.

Refraction of the DESCENSION, &c. See *REFRACTION*.

DESCENSIONAL Difference, is the Difference between the *Right*, and *Oblique Descension* of the same Star, &c. See *DIFFERENCE*.

DESCENT, or *DISCENT*, in Law, an Order, or Manner wherein Lands and Tenements are derived to any Man from his Ancestors.

Thus, to make his *Descent* from his Ancestors, is to show how, and by what particular Degrees, the Land in Question came to him from his Ancestors.

Descent is either *Lineal*, or *Collateral*.

Lineal DESCENT, is that convey'd down in a right Line from the Grand-Father to the Father, and from the Father to the Son, from the Son to the Grand-Son, &c.

Collateral DESCENT, is that springing out of the Side of the Line, or Blood, as from a Man to his Brother, Nephew, or the like. See *COLLATERAL*, and *DEGREE*.

If one dies seized of Land, wherein another has Right to enter, and it descends to his Heir, such *Descent* shall take away the other's Right of Entry, and put him to his Action for Recovery thereof. Stat. 32. Hen. VIII.

DESCENT, in Genealogy, and Heraldry, the Order, or Succession of *Descendants* in a Line, or Family. See *DESCENDANT*.

One *Descent*, two *Descents*, &c. A Gentleman is of perfect Blood, who has four *Descents* of Gentility, both by his Father, and Mother's Side, i.e. whose Great-Grand-Father, Grand-Father, and Father, on both Sides, were all Gentlemen. See *GENTLEMAN*.

DESCENT, is also used in Heraldry, to express the coming down of any Thing from above.

Thus a *Lion en Descent*, is a Lion with his Head to one of the base Points, and his Heels towards one of the Corners of the Chief; as if he were leaping from some high Place.

DESCENT, *Fall*, in Mechanicks, &c. is the Motion, or Tendency of a Body towards the Center of the Earth, either directly, or obliquely. See *CENTER*, and *MOTION*.

It is to be here observ'd, First, That a Body cannot descend, unless it can divide, and separate the *Medium*; which it cannot do, unless it be specifically heavier than the *Medium*. For since Bodies cannot penetrate each other, one must give Way 'ere the other can move: And again, Tho' a *Medium*, e.g. *Water* be divisible, yet if it be specifically heavier than another, e.g. *Wood*, it is only heavier as it contains more Particles of Matter in the same Bulk; all which have an Impulse downwards, and consequently in Water there is a greater Impulse than in the same Bulk of Wood. See *SPECIFIC GRAVITY*.

Secondly, The *Descending Body* loses as much of its Weight, as is the Weight of the *Medium*, with the Force of its Cohesion. See *MEDIUM*.

Thirdly, The less the Bulk of the *Descending Body* is, the more of its Gravity does it lose in the same *Medium*. For tho' the Proportion of the specific Gravity of the one to the other be still the same in a greater, or less Bulk, yet the less the Body, the more the Surface, in Proportion to the Mass; and the more the Surface, the more the Friction, or Resistance. See *FRICTION*, and *RESISTANCE*.

The Cause of this *Descent*, or Tendency downwards, has been greatly controverted. There are two opposite Hypotheses advanced; the one holding it to proceed from an internal, and the other from an external Principle. The first maintained by the Peripateticks, and Epicureans, and Newtonians; and the latter by the Cartesianes, and Gassendists.

The Peripateticks teach, that heavy Bodies fall by certain motive Powers, flowing from their Forms towards the Centre of the Earth, as their proper Elements, or Place in the Universe. These Powers they call *Impetus*; and will have them to have been impress'd on the several Parts of the Earth, at the Creation; being a Tendency of the Parts to the whole. And they suppose, that it is by means hereof, that the whole is still preserv'd in its Integral State. Adding, that if there were a perfect Vacuity in any Part of the Air round us, a Stone placed therein would not at all fall, or tend towards the Earth, as being no longer a Part thereof, nor having the natural *Impetus*.

The ancient Epicureans, or Atomists, with the modern Newtonian Philosophers, hold, that all Bodies gravitate, or tend downwards, and that the more strongly, as they contain the more Matter; consequently perfectly solid Bodies, such as they suppose Atoms, or primitive Corporcules to be, the most of all. See *GRAVITY*.

The Cartesianes ascribe the Cause of *Descent* of Bodies to a circular Motion of the *Aether*, which they feign for this very Purpose. According to them, all circular Motion is unnatural; and therefore is continually endeavouring to recede from its Center, and to change into a Rectilinear Motion; consequently such as have the more Motion, recede the more; and in receding, depress, or thrust down such as have less Motion. And thus the Air being moved with the most vehement Velocity, recedes more than solid Bodies, and by that means drives them towards the Center.

The Gassendists account for the *Descent* of heavy Bodies, by supposing certain magnetick Rays proceeding out of the Earth, and consisting of contiguous Particles, which by their continual Emission retain the Rigidity of Rods, or stretched Corda. These Rays being diffused every way from the Earth, as a Center, strike, or impinge on what solid Bodies they meet withal in their Progress, and penetrate the same, some directly, and others obliquely, and refractedly, after the Manner of Rays of Light. These Rays, say they, are a Kind of Arms; and the Descensions, and Curvatures of their Extremes, as it were Fingers, or Hooks, which pull, or draw Bodies from above towards the Earth. And they add, that these Rays being the more rare, as they are more remote from the Center; their Effect is the more feeble; and the *Descent* of Bodies is the more slow, in Proportion as they are higher.

Laws of the *DESCENT* of Bodies.

1. Heavy Bodies in an unresisting *Medium* fall with an uniformly accelerated Motion. See the *Laws of uniformly accelerated Motion* under the Articles *ACCELERATION*, and *MOTION*.

Hence, 1. The Spaces descended are in duplicate Ratio of the Times, and Velocities; and increase according to the uneven Numbers 1, 3, 5, 7, 9, &c. 2. The Times, and Velocities, are in a subduplicate Ratio of the Spaces. 3. The Velocities of descending Bodies, are proportionate to the Times from the Beginning of their Falls. 4. The Spaces described by a falling Body, are as the Squares of the Times from the Beginning of the Fall.

A Body specifically heavier descends in a fluid *Medium*, specifically lighter, (e.g. the Air,) with a Force equal to the Excess of the Weight of the Body above an equal Bulk of the *Medium*. For a Body only descends in a *Medium* with the Force remaining, after a Part has been spent in overcoming the Resistance of the *Medium*. And this Resistance is equal to the Weight of an equal Bulk of the *Medium*: Consequently the Body only falls with the Excess of its Weight above that of an equal Bulk of the *Medium*.

Hence, the Power that sustains a Body in a specifically lighter *Medium*, is equal to the Excess of the absolute Weight of the Body above an equal Bulk of the *Medium*. Thus 47½ Pound of Copper in Water lose 5½ of their Weight. A Power, therefore, of 42 Pounds is able to sustain them.

In supposing heavy Bodies to descend in an unresisting *Medium*, we conceive them free of all external Impediments, from what Cause soever. So that we even set a-side that oblique Impulse given to Bodies while in falling, by the Rotation of the Earth, tho' this produce no sensible Irregularity in a little Distance.

Galileus, who first discover'd the Law of the *Descent* of heavy Bodies by Reasoning, afterwards confirm'd the same by Experiments; the Result of which, repeated an hundred times over, was, that the *Descent* was as the Square of the Times.

Grimaldo and Ricciolus made Experiments to the same Effect, tho' in a different Manner, by letting fall a Number of Balls, weighing 8 Ounces a Piece, from the Tops of several Towers, and measuring the Times of falling by a *Pendulum*. These Experiments are exhibited in the following Table.

Vibrations of the <i>Pendulum</i> .	Time.	Space at the End of the Time.	
		Rom. Foot.	Space descended each Time.
5	0	50	10
10	1	40	30
15	2	30	50
20	3	20	70
25	4	10	90
6	1	0	15
12	2	0	45
18	3	0	75
24	4	0	105

Since then the Experiments of *Ricciolus*, made in such considerable Distances, agree so well to the Theory, 'tis scarce worth taking Notice of what is urged to the contrary by *Decales*, in his *Arith. Math.* who writes, that he had found by Experiment, that heavy Bodies in half a Second of Time descend 4½ Feet; in two 16½; in three 36½; in four 63; in five 90; and in six 123. 'Tis sufficient, that he deduces the Irregularity from the Resistance of the Air, which we suppose out of the Question.

II. If a heavy Body descend in an unresisting Medium through an Interval not over-large, the Space it describes is subcube of that which it would describe in the same Time with the Velocity acquired at the End of the Fall.

III. The Time wherein a Body falls from a given Height being given, to determine the Spaces it fell in the several Parts of that Time.

Suppose the given Altitude = a the Time = t and the Space it fell in 1 Part of Time x: Then

$$\frac{x : x \text{ --- } x^2}{1^2 : x^2 \text{ --- } x^2} \\ \frac{x^2 : a \text{ --- } x^2}{x^2 : a \text{ --- } x^2}$$

Therefore the Space pass'd over in the first Part of Time is $x^2 : t^2$; Consequently that pass'd over in the second Time is $3^2 : t^2$; That in the third = $5^2 : t^2$ &c.

E.g. In the Experiments of *Ricciolus* above deliver'd; the Ball fell 240 Feet in 4 Seconds. Therefore the Space fell the first second was = 240 : 16 = 15. The Space in the second was = 15 : 3 = 45. That in the third = 15 : 5 = 75. And that in the fourth 15 : 7 = 105.

IV. The Time wherein a Body falls a given Space, being given; to determine the Time wherein it will fall any other given Space in the same Medium.

Since the Spaces are as the Squares of the Times: To the Space which the Body falls in the given Time, the Space in the Question, and the Square of the given Time find a fourth Proportional, which will be the Square of the Time sought. The Square-Root, therefore, being extract'd therefrom, the Problem is solved.

For Example, one of *Ricciolus*'s Balls in 4 Minutes Time falling 240 Feet, it is required in what Time it would fall 135 Feet? The Answer will be found = Y (135 : 16 : 240) = Y (135 : 15) = Y = 3.

V. The Space a Body falls in a given Time, being given, to determine the Space it will fall in any other given Time.

To the Square of the Time wherein the Body falls the given Space, the Square of the Time wherein it should fall the Space required, and the given Space, seek a fourth Proportional: This will be the Space required.

For Instance, *Ricciolus*'s Ball falling 60 Foot in a Second, 'tis ask'd what Space it will fall in 4 Seconds? The Answer is, 16.60 : 4 = 4.60 = 240.

For the *Laws of the Descent of Bodies on inclined Planes*. See *Inclined Plane*.

For the *Laws of Descent in Cycloids*. See *Cycloid*, and *Pendulum*.

Line of quickest Descent, is that which a Body falling by the Action of Gravity describes in the shortest Time; which is prov'd by Geometricians to be the *Cycloid*. See *Cycloid*, and also *Celebrissimi Defensusus LINTA*.

DESCENTS, in Fortification, signify the Holes, Vaults, and hollow Places, made by undermining the Ground: such as the Counter-scarps, or Covert-way.

A *Descent* into the Moat, or Ditch, is a deep digging into the Earth of the Covert-way, in Form of a Trench; of which the upper Part is cover'd with Madriers, or Clays against Fires, to secure the Passage into the Moat.

DESCRIBENT, is a Term in Geometry, expressing some Line, or Surface, which by its Motion produces a Plane Figure, or a Solid.

DESCRIPTION, a superficial, imperfect, or inaccurate Definition of a Thing; giving a Sort of Knowledge thereof from some Accidents, and Circumstances peculiar to it, which determine it enough to give an Idea that may distinguish it from other Things; but without explaining its Nature, or Essence.

Grammarians content themselves with *Descriptions*: but Philosophers require exact Definitions of Things. See *DEFINITION*.

DESCRIPTION, in Philosophy, Logic, &c. is an Enumeration of divers Attributes of a Thing, most of which are only accidental: As when a Person is known by his Deeds, his Sayings, his Writings, his Honours, &c. See *DEFINITION*.

A *Description*, as to its outward Appearance, resembles a *Definition*; and is even convertible with the Thing described; but does not explain it. For instead of bringing several Things essential to the Thing described, it only brings a Number of Accidents belonging thereto. E.g. Peter is the tall, young Man who lives on the Green, wears black Clothes, frequents the College, Courts N. . . &c. where it is evident, we do not give any Explication of Peter, as not

bringing Things that are in Peter, but only Circumstances, or Things about him, Tall, Young, Living, Wearing, Frequenting, Courting, &c. a *Description*, therefore, is no proper Answer to the Question, *Quid est, What is he?* but to that, *Quis est? Who is he?*

Descriptions, in Effect, are principally used for Singulars, or Individuals: For Things of the same Species do not differ in Essence, but only as to *His*, and *Ille*, which Difference contains nothing very notable, or distinguishable. But Individuals of the same Kind, differ much in Accidents; E.g. George is King, and William a Citizen; Charles is a Male, and Anne a Female; Henry is wife, and John a Blockhead, &c. Thus, a *Description* is an Accumulation of Accidents, whereby Things are notably distinguish'd from each other, tho' they scarce differ at all in Essence.

Some Authors call a *Description* a *Quasi-Definition*: As Body is a Thing divisible, moveable, solid, extended, &c. only wanting of a Definition in this, that instead of the Form, or Essence of a Thing, it gives one, or more Properties arising from the Form, or Essence. See *DEFINITION*, *ESSENCE*, *FORM*, &c.

DESCRIPTION, in Rhetoric. See *DEFINITION*. *DESCRIPTION*, in Geometry. To describe a Circle, Ellipsis, Parabola, &c. is to construct, or form those Figures, with Rules, Compasses, &c. See *CONSTRUCTION*, and *FIGURE*.

DESERT, or *DESART*, a Wilderness; or wild, uncultivated, uninhabited Place: As the *Deserts of Lybia*, of the *Thebaide*.

Geographers use the Word in the general for all Countries little, or not at all inhabited. See *WILDERNESS*.

In Scripture, we find several Places in the *Holy Land*, or Places adjoining thereto, call'd *Desarts*. The *Desart*, or Wilderness, simply, is that Part of Arabia on the South of the *Holy Land*, wherein the *Israelites* wandred forty Years, from the Time of their Evacuating Egypt to their Entry into the promis'd Land. The *Desart of Bersabee* was that Part of the *Desart* just mention'd, which border'd on the *Holy Land*, running towards the *Mediterranean*. The *Desart of Idumea*, is Idumea it self, a barren, mountainous Country. The *Desarts of Bezbaren, Bezbaidé, Cadesh, Damajons, Dible, Enxaddi, Ebban, Gibean, Horch, Jernel, Judá, Maak, Pharán, Sin, Simai, Sur, Ziph*, &c. are so many dry, uncultivated, and frequently mountainous Places, like our Downs, &c. where there are few, or no Inhabitants, or Inhabitants; whence the *Hebrews* call'd them by *Autiphrass* מדרבר, which properly signifies *human Word*, or *Speech*, by reason there was none heard there.

DESERTER, in War, a Soldier on the Muster-roll, who quits his Company without Leave, or lifts himself under another Officer.

All Soldiers found half a League from a Garrison, or Army, going towards an Enemies Country, or Quarters, without a Pass, are deem'd, and treated as *Deserters*.

The Punishment of *Desertion*, is Death. The ancient Church excommunicated *Deserters*, as having violated their Oath.

DESHABILLE, a French Term, naturalized of late. It properly signifies a Toilette, Night-Gown, and other Necessaries, made use of in dressing, or undressing. Mr. . . . is not to be spoke withal; he is yet in his *Deshabille*, i.e. undress'd, or in his Night-Gown.

The Word is a Compound of the Privative *de*, and *habiller*, to dress.

DESHACHEE, in Heraldry, is when a Beast has its Limbs separated from the Body, so as they still remain on the Escutcheon, with only a small Separation from their natural Places.

DESIGN, or *Draught*, with regard to the Arts and Sciences, signifies the Thought, Plan, Geometrical Representation, Distribution, and Construction of a Painting, Poem Book, or Building.

This Painter has shewn the first *Design* of his Piece, in which the Figures are well dispos'd. The *Design* of that Poem or Book is artfully laid.

Claudian never sees his whole *Design* together: When he composes a Part, he thinks of nothing else; and works up every Member, as if it were separate from all the rest.

In Building, one may use the Term *Ischnography*, when by *Design* is only meant the Plan of a Building, or a flat Figure drawn on Paper. See *ISCHNOGRAPHY*.

Orthography, when some Face, or Side of the Building is rais'd from the Ground. See *ORTHOGRAPHY*.

And *Scenography*, when both Front and Sides are seen in Perspective. See *SCENOGRAPHY*.

DESIGN, in the Manufactories, the Figures wherewith the Workman enriches his Stuff, or Silk; and which he copies after some Painter.

In undertaking such Kinds of figured Stuffs; 'tis necessary, that before the first Stroke of the Shuttle, the whole *Design* be represented on the Threads of the Warp; we don't mean

mean in Colours, but with an infinite Number of little Pack-threads, which being disposed so as to raise the Threads of the Warp, let the Painter see from Time to Time what Kind of Silk is to be put in the Eye of the Shuttle, for Wool.

This Method of preparing the Work, is call'd *reading the Design*, or reading the Figure; which is perform'd after the following Manner.

A Paper is provided considerably broader than the Stuff, and of a Length proportionate to what is intended to be represented thereon. This they divide lengthwise by as many black Lines as there are intended to be Threads in the Warp; and cross these Lines, by others drawn breadthwise; which with the former make little equal Squares. On the Paper thus squared, the Painter designs his Figures, and heightens them with Colours as he sees fit. When the *Design* is finish'd, a Workman reads it, while another lays it on the Simblot.

Now, to read the *Design*, is to tell the Person, who manages the Loom, the Number of Squares, or Threads comprized in the Space he is reading; intimating at the same Time, whether it is Ground, or Figure.

To put what is read on the Simblot, is to fasten little Strings to the several Pack-Threads, which are to raise the Threads named. And thus they continue to do, till the whole *Design* is read.

Every Piece being composed of several Repetitions of the same *Design*; when the whole *Design* is drawn, the Drawer, to re-begin, as I may say, the *Design* afresh, has nothing to do, but raise the little Strings with Slip-knots to the Top of the Simblot, which he had let down to the Bottom. And this he is to repeat as often as is necessary, till the Whole be manufactured.

The Ribbon-Weavers have likewise a *Design*, but much more simple than that now described. 'Tis drawn on Paper, with Lines, and Squares, representing the Threads of the Warp, and Wool. But in lieu of Lines, whereof the Figures of the former consist, these only consist of Points, or Dots, placed in certain of the little Squares, form'd by the Intersection of the Lines. These Points mark the Threads of the Warp that are to be raised; and the Spaces left blank, design the Threads that are to keep their Situation. The rest is manag'd as in the former.

Design, is particularly us'd in Painting, for the first Idea of a large Work drawn roughly, and in little; with Intention to be executed, and finish'd in large. See PAINTING.

In this simple Sense, the *Design* is the simple *Contour*, or Outline of the Figures, or Things intended to be represented; or the Lines that terminate, and circumscribe them. See CONTOUR, and DESIGNING.

Such *Designs* is sometimes drawn in Crayons, or Ink, without any Shadows at all: Sometimes it is *hatch'd*, that is, the Shadows are express'd by sensible Lines, usually drawn a-cross each other with the Pen, Crayon, or Graver. Sometimes, again, the Shadows are done with the Crayon rub'd, so as there does not appear any Lines: Sometimes, the Grain, or Strokes of the Crayon appear, as not being rub'd: Sometimes the *Design* is wash'd, that is, the Shadows are done with a Pencil, in Indian Ink, or some other Liquor: And sometimes the *Design* is colour'd, that is, Colours are laid on, much like those intended for the Grand Work.

The Qualities, or Parts required in a *Design*, are *Correctness*, *Good Taste*, *Elegance*, *Character*, *Diversity*, *Expression*, and *Perspectiva*.

Correctness depends principally on the Justness of the Proportions, and a Knowledge of Anatomy. *Taste* is an Idea, or Manner of *Designing*, which arises either from the Complexion and natural Disposition, or from Education, the Masters, Studies, &c. *Elegance* gives the Figures a Kind of Delicacy, which strikes People of Judgment, and a certain Agreeableness, which pleases every body. The *Character* is what is peculiar to each Thing; in which there must be a *Diversity*, in as much as every Thing has its particular Character, to distinguish it. The *Expression* is the Representation of an Object according to its Character, and the several Circumstances it is supposed to be in. The *Perspectiva* is the Representation of the Parts of a Painting, or Figure, according to the Situation they are in, with respect to the Point of Sight.

The *Design*, or *Draught*, is a Part of the greatest Import, and Extent in Painting. 'Tis acquired chiefly by Habit, and Application; Rules being of less Avail here than in any of the other Branches of the Art, as *Colouring*, *Claire-Obscure*, *Expression*, &c.

The principal Rules that regard the *Design*, are: That Novices accustom themselves to copy good Originals at first Sight: Not to use Squares in drawing; for Fear of flinching and confining their Judgment: To stay till they can design well after the Life 'ere they begin the Practice of Perspective Rules: In *Designing* after the Life, to learn to adjust the Bigness of their Figures to the visual Angle, and the Distance of the Eye, from the Model or Object: To mark out all the Parts of their *Designs*, before they begin to

shadow: To make their Contours in great Pieces, without taking Notice of the little Muscles, and other Breaks: To make themselves Masters of the Rules of Perspective: To observe every Stroke as to its perpendicular Parallel, and Distance; and particularly so to compare, and oppose the Parts that meet upon, and traverse the Perpendicular, so to form a Kind of Square, in the Mind; which is the great, and almost the only Rule of *Designing* justly: To have a regard not only to the Model, but also to the Part already *design'd*; there being no such Thing as *designing* with strict Justness, but by comparing, and proportioning every Part to the first.

The rest relates to *Perspectiva*: As, that those Objects are seen at one View, whose Rays meet in a Point: That the Eye and Object be always conceiv'd as immovable: That the Space, or *Medium* between them, be conceiv'd transparent: And that the Eye, Object, and Picture, be at a just Distance; which is usually double the Bigness of the Subject, or Picture. See PERSPECTIVE.

DESIGNING, the Art of Delineating, or Drawing the Appearance of natural Objects, by Lines, on a Plane. See DESIGN.

To *design* according to the Rules of Mathematicks, makes the Subject of perspective. See PERSPECTIVE, and SCENOGRAPHY.

To *design* by the Camera Obscura. See CAMERA Obscura.

A Mechanical Method of DESIGNING Objects.

Provide a square Piece of Glass fitted into a Frame, ABCD, (Tab. Perspective Fig. 9.) and wash, or smear it over with Water, wherein a little Gum has been dissolved. When 'tis well dried again, turn it towards the Object, or Objects to be *design'd*, so as that the Whole thereof may be seen through a Dioptra, or Sight GH, fix'd thereto. Then proceed to work; and applying the Eye to the Sight, with a Pen and Ink draw every Thing on the Glass, as you see it appear thereon. Having finish'd the Draught, lay a fair, moist Paper thereon; and pressing it pretty tight down, the whole will be transfer'd from the Glass to the Paper. The Method is very good, easy, and exact; and deserves to be more us'd by Painters.

DESIGNATION, the Act of marking, or making a Thing known. The *Designation* of such an Estate is made by the Tenants, Butments, and Boundings.

Among the Romans there were *Designations* of the Confuls, and other Magistrates, some Time before their Election.

DESIGNATOR, a Roman Officer, who assigned, and mark'd each Person his Place, and Rank in publick Ceremonies: Or, a Master of the Ceremonies, who regulated the Seats, March, Order, &c.

There were *Designators* at funeral Solemnities, at the Games, Theatres, and Shews, who not only assign'd every body his Place, but also led him to it; as appears from the Prologue to the *Poenulus* of Plautus.

The Word is form'd from the Verb *designare*. DESPOT, a Title, or Quality given to the Princes of *Walachia*, *Servia*, and some of the neighbouring Countries.

The Word in its first Origin signifies the same with the Latin *Heros*, and the English *Master*. But in Time it underwent the same Fate on Medals, as among the Latins, *Cæsar* did with regard to *Augustus*; ΒΑΣΙΛΕΥΣ, answering to *Augustus*; and ΔΕΣΠΟΤΗΣ, *Despotes*, to *Cæsar*. Thus, *Nicephorus*, having order'd his Son *Stauracius* to be crown'd; the Son, out of Respect, would only take the Name ΔΕΣΠΟΤΗΣ; leaving to his Father that of ΒΑΣΙΛΕΥΣ. For it is to be noted, that it was just about the Time that the Emperors began to cease to use Latin Inscriptions. This Delicacy, however, did not last long; For the following Emperors prefer'd the Quality of ΔΕΣΠΟΤΗΣ to that of ΒΑΣΙΛΕΥΣ, particularly *Constantin*, *Michael Ducas*, *Nicephorus Botaniates*, *Romanus Diogenes*, the *Comnenii*, and some others. In Imitation of the Princes, the Princes likewise assumed the Title of ΔΕΣΠΟΤΗΣ.

'Twas the Emperor *Alexis*, surnam'd the *Angel*, that first created the Dignity of *Despot*; and made it the first after that of *Emperor*, above that of *Augustus*, or *Sebastocrator*, and *Cæsar*. The *Despotes* were usually the Emperors Sons, or Sons in Law, and their Collegues, or Co-partners in the Empire, as well as their presumptive Heirs. The *Despotes* that were Sons of the Emperors, had more Privileges and Authority, than those that were only Sons in Law. *Codin*, p. 38. describes the Habit, and Ornaments of the *Despot*. See the Notes of *Fa. Gaar* on that Author.

Under the Successors of *Constantin the Great*, the Title, *Despot of Sparta*, was given to the Emperor's Son, or Brother, who had the City of *Sparta*, or *Lacedæmon*, by Way of Appanage.

DESPOTISM, or DESPOTIC Government, a Form of Government wherein the Prince is absolute and arbitrary, doing whatever he lists, without being check'd by any other

other Power. Such are most of the Eastern Governments, as those of the *Mogol*, *Grand Seigneur*, *Sopbi*, &c.

DESPOUILLE, in Heraldry, is the whole Coat, Skin, or Slough of a Beast, with the Head, Feet, Tail, and all Appurtenances; so as being filled, or stuffed, it looks like the entire Creature.

DESPUMATION, is the Clarification of any Liqueur, by throwing up its Foulness in a Froth, and taking that off. See **FACED**, **CLARIFICATION**, &c.

DESSQUAMATION expresses the cleansing carious bones, which sink off like Scales. See **SCALES**, **SCUMME**, &c.

DESSERT, the last Service brought on the Tables of People of Quality; when the Meats are all taken off. The *DeSSERT* consists of Fruits, Pastry-Works, Confections, &c.

DESSICATIVE, or **DESSICCATIVE**, in Medicine, Chirurgery, and Pharmacy, a Remedy that has the Virtue of drying up superfluous Moisture; used to skin over old Sores, &c. A *DeSSicative* Unguent, &c. *Pimperella*, &c. is held very detestive, *deSSicative*, and vulnerary. *Lenery*.

DESTALLATION, or *Distillation* in Chymistry. See **DISTILLATION**.

DESTINY, the Order, Disposition, or Chain of second Causes, appointed by Providence; and imparting, or carrying with it a Necessity of the Event. See **FATE**.

According to many of the Heathen Philosophers, *Destiny* was a secret, and invisible Power, or Virtue, which with incomprehensible Wisdom, conducts what to us appears irregular, and fortuitous: Which amounts to what we call *God*.

The *Stoicks* by *Destiny* understood a certain Concatenation of all Things, which from all Eternity follow each other of absolute Necessity; there being no Power able to interrupt their Connexion; which is our Idea of *Providence*. See **PROVIDENCE**.

But the *Stoicks* made even the Gods themselves subject to the Necessity of this *Destiny*. The Truth is, the *Stoicks* rather define what the Word *Destiny* should signify, than what it did signify in common Language: For they had no distinct Idea of this Power to whom they attributed those Events. They had only a vague, confused Idea of I know not what *Chimera*, or unknown Cause, to which they refer'd that invariable Disposition, and the eternal Concatenation of all Things. There is no real Being that the Name *Destiny* can agree to. The Heathen Philosophers, who had form'd an Idea thereof, supposed it to exist without knowing precisely what they meant by it. But Men, not daring on the one Side, to impute to Providence the Evils and Misfortunes that befall them, as they imagined undeserv'dly; and on the other Side, not being willing to allow that it was their own Fault, form'd this Phantom of *Destiny*, to bear the Weight of all the Evil. *Thomas*.

DESTINIES, in Mythology. See **PARCÆ**.

DESTRUCTION, passively taken, is the Corruption, or Annihilation of something before Existing. A Thing passes *ab Esse ad Non-esse*; either by *Corruption*, when nothing of the Substance is lost, but only the Accidents, *vis*. Disposition of Parts. See **CORRUPTION**.

Or, by *Annihilation*, when both Substance and Accidents are lost. See **ANNIHILATION**.

DESUDATION, expresses a profuse, and inordinate Sweating; from what Cause soever. See **SWEAR**.

DESULTOR, in Antiquity, a Vaultor, or Leaper; who jumps off one Horse upon another.

Among the *Scythians*, *Indians*, and *Numidians*, the Cavaliers, or Horse-men, who served in the Wars, were very expert *Desultores*; that is, they always carried with them at least two Horses, and when that they were mounted on grew weary, or wanted Breath, they leap'd with great Agility and Address upon the other, which they led in the Hand. The *Greeks* and *Romans* borrow'd the Practice from those barbarous Nations; but they only used it in their Games, Courses, and funeral Solemnities, and never, that we read of, in War. The *Desultores*, therefore, were among the People of *Asia*, and *Africa*; Soldiers; but among the *Romans*, &c. they were no more than Tumblers; and Posture-Masters. *Enstarkens* on *Homer's Iliad*, Lib. IV. assures us, that instead of two, they had sometimes four, or six Horses, all a-breast, and would jump from the first to the fourth, or sixth, which was the Master-piece of their Art.

DETACH'D Pieces, in Fortification, are Demi-Lunes, Ravelins, Horn- and Crown-Works, and even Bastions, when separated, or at a Distance from the Body of the Place.

In Painting, the Figures are said to be well *detach'd*, or loos'd, when they stand free, and disengag'd from each other, are no where confounded together, but stand out with a strong Relief from the Ground, and each other.

DETACHMENT, a Military Term, signifying a certain Number of Soldiers, taken out of a greater Body, on Purpose to be employ'd in the Undertaking of some particular Enterprise; as to form a Kind of flying Camp, to relieve a Party already engag'd in Battle, to join a separate Army, to assist at the Siege of a Place, or enter into some Garrison, &c.

DETENTION, a Possession, or Holding of an Heritage, or the like, from some other Claimant.

The Word is chiefly used in an ill Sense, for an unjust Holding, &c. The Canons condemn a Person who has intruded into a Benefice, to make Restitution of all the Fruits thereof, during the Time of his unjust *Detention*. See **RENEVIC**.

DETERIORATION, an Act whereby a Thing is rendered worse.

When the *Deterioration* of a Commodity, seiz'd by an Officer, arises from the Fault of the Keeper, he is answerable for the same. *J. Frideric Mayer*, Professor at *Leipsic*, printed a Treatise of *Deterioration*, in the Year 1699, under the Title of, *Traictatus de Deterioratione*.

DETERGENT, in Medicine, is applied to Remedies that cleanse, mundify, and carry off viscid, and glutinous Humours adhering to Bodies.

The Plant, call'd *Harts-Horn*, *deterges*, and consolidates Wounds. *Rhefonticum* is aperitive, and good against the Gravel and Stone; It also *deterges*, and expels Poyson.

Detergents are not only softening, and adhesive, but also, by a peculiar Activity, or Disposition to Motion, joy'n'd with a suitable Configuration of Parts, are apt to abrade, and carry along with them such Particles as they lay hold on in their Passage. All Medicines of this Intention are supposed to cleanse, and heal, that is, incarnate, or fill up with new Flesh all Ulcerations, and Poulnesses, occasioned thereby, whether internal, or external.

To do this, in all internal Cases especially, the Medicine must be supposed to maintain its primary Properties, until it arrives at the Place of Action, and there it does what entitles it to the Appellation of a *Detergent*, and a *Vulnerary*, first by its adhesive Quality, which consists in the comparative Largeness of Surface, and Flexibility of its component Parts: For by this it very readily falls into Contact with, and adheres to the Slough of ulceroous Exudations, which by their loose Situations are easily carried along with the Medicine, and when such Matter is so carried away, which is the cleansing, and *deterging* Part, what was instrumental in this Office, will afterwards stick to, and adhere with the cutaneous Filaments, until by their Addition, and the Protrusion of proper Nourishment *ab interno* to the same Place, the Wound is made up, that is, the Ulcer is healed.

After the same Manner is the Operation of such Substances to be accounted for in external Application. By the Warmth of their Parts they rarify, and by their adhesive Quality, they joy'n with, and take off along with them, in every dressing, what is thrown upon the Place to which they are applied, until a more convenient Matter is brought thither by the circulating Juices, which it assists in adhering to, and incarnating the eroded Cavities. Only this may be taken Notice of, that internally, whatsoever of this Kind is mixed with the Animal Fluids, by the known Laws of Circulation, they will be first separated, and left behind. For all those Parts, which are specifically heaviest, will move nearest the Axis of the Canals, because their Moments are the greatest, and will carry them as near as can be in straight Lines; but the lighter Parts will always be jostled in the Sides, where they looscly meet with Outlets to get quite off, or are struck into such Cavities, where are here speaking of, in which they adhere, and make Part of the Substance.

This is underbodd of the milder Degree of *Detergents*; and it is easy to conceive from hence, how an increase of those Qualities of Activity and Adhesion conjointly, may make a Medicine arise to the greatest Efficacy in this respect. And it is upon this Foot, that all those Medicines operate, which are given to cleanse Obstructions, or Poulnesses in any of the *Viscera*, or Passages; and which may be increased in Efficacy so far, as to scorch off even the Membranes, and Capillary Vessels.

DETERMINATE, or **DETERMINED Problem**, in Geometry, is that which has but one, or at least but a certain, definite Number of Solutions; in Contra-distinction to an *Indeterminate Problem*, which admits of infinite Solutions.

Such, *s. gr.* is the Problem, *To describe an isosceles Triangle on a given Line, whose Angles at the Base shall be double that at the Vertex*: which has only one Solution; as that which follows has two, *vis. To find an isosceles Triangle, whose Area and Perimeter are given*. See **PROBLEM**.

A *Determinate Problem* may either be *Simple*, or *Linear*, *Plane*, *Solid*, or *Spherical*. See **PLANE**, **SOLID**, &c.

DETERMINATION, in Physics, the Disposition, or Tendency of a Body towards one Way, rather than another. Heavy Bodies have a *Determination* towards their Centre. See **CENTRE**.

DETERMINATION of Motion. See **MOTION**.

DETERMINATION, in Philosophy, the Action whereby a Cause is limited, or restrained to act, or not act, this, or that, and in this, or that Manner.

Hence, we say, by a *Determination*, an Agent indifferently to several Things, is in some Measure actual'd.

This, say the School-men, proceeds either from an *Efficient Cause*, in which Case the *Determination* is call'd *Effective*; as when an Artist *determines* an Instrument to a certain Action: Or from the *Form*, as that *determines* the Indifference of the Matter; And thus our Senses are said to be *Determinations*, to have Ideas upon the Presence of external Objects.

A *Determination* to be pleas'd with certain Forms, or Ideas, a late excellent Author calls, an *Internal Sense*; and a *Determination* to be pleas'd with virtuous Actions, Characters, Manners, &c. a *Moral Sense*: Or, the *Determination* is from the *Matter*, or Subject that receives the Action; And thus, the *Heating* of Fire upon Clay *determines* it to harden, upon Wax to soften, &c. Or it is from the *Object*; as when we say, *Colour determines the Visual Power*: Or lastly, it is from the *End*; as the *End* determines the *Desire*.

Determination is either *Moral*, or *Physical*: A *Moral Determination* is that proceeding from a Cause, which operates *Morally*, i. e. by Commanding, Persuading, or Adverting some Eff. &c. *Physical Determination*, is an Act whereby God excites, and applies a second Cause to act antecedently to all Operation of the Creature. Such a *Determination*, the *Thomists* and *Dominicans* maintain necessary to all, and singular Action of every Creature. The *Jesuits*, on the contrary, deny that God thus *determines* even second Causes; and hold, that God has no Influence on the second Causes, but only with the second Cause on the Action. And thus they exclude a *Physical Determination* both from natural Causes, as supposing them already *determined* by Nature to act; so that there needs no other external *Determination* from God to the several Actions; and from free Causes, as supposing such a *Predetermination* contrary to our Natural Liberty. See CAUSE, THOMISTS, &c.

DETERSIVE, in Medicine, the same with *Detergent*. See DETERGENT.

A Clyster is a *deterfive* Medicine, which cleanses the lower Venter. *Deterfive* Unguents are usually call'd *Allopathicatives*. See MONIFICATIVE.

The Leaves, and Summits of the Straw-berry are *deterfive*, and astringent.

DETINET, in Law. See DEBITO, and DETET and SOLET.

DETINUE, a Writ that lies against a Man, who having Goods or Chattels deliver'd to keep, refuses to re-deliver them: answering, in great Measure, to the *Actio Depositi* of the Civilians.

He takes his *Action of Detinue*, to recover the Thing detain'd, not the Damages sustain'd by the *Detinue*.

DETONATION, or *Fulmination*, in Chymistry, the Noise which Minerals make when they begin to heat in Crucibles; by the volatile Parts rushing out with Impetuosity, and the Humidity escaping.

Detonation is much the same with *Decrepitation*, only its Action more forcible, and the Noise greater. Thus, *Aurum fulminans* heated, &c. goes off with a violent Crack, i. e. makes a great *Detonation*.

Detonation takes away the impure, volatile Sulphur from Bodies.

The Word is form'd of *de*, and *tona*, I thunder.

In the Chymical Sense, *Detonation* is the Act, or Operation of expelling the impure, volatile, and sulphureous Parts out of Bodies, and leaving behind the fix'd, and internal Parts. It is perform'd by means of Salt-petre, &c.

DETRANCHEE, among the *French* Herald, signifies a Line bend-wise, which does not come from the very Angle, but either from some Part of the upper Edge, and thence falling a-shwart, or Diagonally; or from Part of the Dexter-Side.

They say, *Tranchee*, *Detranchee*, and *Retranchee*, to denote, that there are two Diagonal Lines, making two Partitions in the Escutcheon, and coming from the Angles, and a third from some of the other Parts abovementioned.

DEVASTAVERUNT *Bona Testatoris*, a Writ lying against Executors, for passing Legacies, and Debts, without Specialties, to the Prejudice of the Creditors that have Specialties before the Debts on the said Specialties are due. In which Case the Executors are as liable to Actions, as if they had notoriously wasted the Goods of the Testator, or converted them to their own Use; and are compellable to pay such Debts by Specialty out of their own Goods.

DEVENERUNT, a Writ anciently directed to the Executor, after the Death of a Tenant of the King holding in *Capite*; And that, of his Son, and Heir, within Age, and in the King's Custody; commanding the Executor to enquire, upon the Oaths of good and lawful Men, what Lands and Tenements, by the Death of the Tenant, come to the King.

DEVIATION, in the old Astronomy, a Motion of the Planet, or Eccentric, whereby it advances to, or recedes from the Ecliptic. See DEFLECT.

The greatest *Deviation* of *Mercury* is 16 Minutes: that of *Venus* only ten. See EXCENTRICITY.

DEVIL, *Diabolus*, an evil Angel; and one of those celestial Spirits cast down from Heaven, for pretending to equal himself with God. See DEMON.

We find no mention of the *Devil* in the Old Testament, but only *Satan*. See SATAN.

Nor do we meet with the Word *Devil* in any Heathen Authors, in the Signification attach'd to it among Christians, that is, as a Creature revolted from God; their Theology went no further than to evil *Genii*, or *Demons* who harassed, and persecuted Mankind. Thus, the *Chaldeans* believed both a good Principle, and an evil Principle, which was an Enemy of Mankind.

The Relations we have of the Religion of the *Americans*, assure us of some idolatrous Nations, who worship the *Devil*: But the Term *Devil* must not here be taken in the Scripture Sense: Those People have an Idea of two Collateral Independent Beings, one whereof is good, and the other evil. And they place the Earth under the Guidance, and Direction of the evil Being; which our Authors, with some Impropriety, call the *Devil*.

The Word is form'd from the Latin *Diabolus*, which comes from the Greek *διδωμι*, *Accuser*, or *Calumniator*. The *Aethiopsians* paint the *Devil* white, to be even with the *Europeans*, who represent him black. *Ladolph*.

DEVISE, in Heraldry, a Name common to all Figures, Cyphers, Characters, Rebus's, Motto's, Sentences, Proverbs, &c. which, by Allusion to the Names of Persons, or Families, denote their Nobility, or Qualities. See CYPHER, CHARACTER, BADGE, MOTTO, PROVERB, REBUS, &c. *Devise*, in this Sense, is of a much older Standing, than Heraldry it self; being that which gave the first Rise to Armories: Thus, the *Eagle* was the *Devise* of the Roman Empire: Thus SPQR was the *Devise* of the Roman People; and still continues to be what they call the Escutcheon of the City of Rome. See ARMS.

The first *Devises* were simple Letters distributed on the Borders of the Liveries, Housings, and Banners, and at length on the Shields. Thus the K. was the *Devise* of the *French* Kings of the Name of *Charles*, from *Charles* V. to *Charles* IX.

There were also *Devises* by Rebus's, Equivocals, or Allusions, both to Names, and Arms. The *Dukes of Guise* took for their *Devise* an A in an O, to signify each in his *Turn*. And the House of *Senecai*, in *Virtute et Honore Senescit*. Some that had Towers in their Arms, *Turris mea Deus*, &c. See REBUS.

There are also Enigmatical *Devises*: As that of the *Golden Fleece*, with *Aure n'aurai*; intimating that *Philip the Good*, who instituted that Order, renounced every other Woman, but *Isabella of Portugal*, whom he then married. See ENIGMA.

Devises sometimes contain entire Proverbs; As that of *Cesar Borgia*, and *Cesar aut Nihil*. See PROVERB.

The Word *Devise* is form'd from the Latin *dividens*, and was applied to the Things just mentioned, as well as those hereafter mentioned, by reason they served to divide, separate, and distinguish Persons, Parties, &c. *Fa. Menestrier* observes, that there are many different Kinds of *Devises*, as there are different Manners of distinguishing one another, or as there are simple Figures, or Words, capable of expressing Qualities, Offices, Virtues, Actions, &c. of Persons, and of notifying, or distinguishing them from others.

DEVISE, is now taken in a more restrain'd Sense, for an Emblem; or a Representation of some natural Body, with a Motto, or Sentence applied in a figurative Sense to the Advantage of some Person. See EMBLEM.

In this Sense, the Figure, or Image, is call'd the *Body*, and the Motto the *Soul* of the *Devise*.

A *Devise* is a Sort of Metaphor, representing one Object by another wherewith it has some Resemblance. So that a *Devise* is only true, when it contains a Metaphorical Similitude, and may it self be reduced into a Comparison. Lastly, it is a Metaphor painted, and visible, and that strikes the Eye. All these Circumstances are required to a *Devise*; and without them, a Figure only makes a Hieroglyphic, and the Word, only a Diction, or Sentence. See ALLEGORISM, METAPHOR, HIEROGLYPHIC, SIMILE, &c.

Fa. Bombours gives a clean and accurate Explication of the Word *Devise*, in an Extract inserted in the *Journal de Trevoux*. A *Devise*, says he, is a Composition, or Assemblage of Figures drawn from Nature and Art, call'd the *Body*; and of a few Words adapted to the Figure, and call'd the *Soul*. Such a Compound, adds he, we make use of to denote our Thought, or Intention by Comparison; for the Essence of the *Devise* consists in a Comparison taken from Nature, or Art, and founded on a Metaphor. This he illustrates in the following Instance: A young Nobleman of great Courage, and Ambition, bore for his *Devise*, in the last Carrousel at the Court of France, a Rocket mounted in the Air, with this *Italian* Motto, *Poco sara parabe n'ra'sai*, I would last little, provided I might rise high; which seems to hold forth the following Discourse: As
the

the Rocket rises a great Pitch, tho' it only endures a little while; so it does not concern me to live long, provided I attain to Glory, and Eminence: which is a just Comparison. See COMPARISON.

On this footing, a *Devise*, to define it rightly, is a painted Metaphor; or rather, an Enigma inverted: For, whereas Enigma's represent Nature, or Art, by the Events of History, and the Adventures of Fables, a *Devise* is a Representation of human Qualities by natural, or artificial Bodies. Thus, to express the Character of Louis XIV. a Sun was painted, which yet, luminous as it is, has more Virtue than Lustre. And the better to determine the Sense of the Painting to this Signification, the *Capitulum Motto* is added, *Mas virtus que Lux*. The personal Merit of *Mary, Queen of Scots*, was represented by a Pomegranate, with these Words, *Non sprix n'est pas de ma Couronne*. And the Talent of an Apostolical Person, who became all Things to all Men, by a Looking-Glass, with those Words of *St. Paul, Omnibus Omnia*.

Devises are used on Coins, Counters, Seals, Shields, Triumphal Arches, Artificial Fire-Works, and other Solemnities. They are a Sort of Images, very pertinent, and artfully representing the Eterprizes, and Intrigues of War, Love, Piety, Study, Fortune, &c.

The *French* have distinguish'd themselves in this Way, especially since the Time of Cardinal *Mazarin*, who had a wonderful Fancy for them.

The *Italians* have reduced the Making of *Devises* into an Art, and laid down the Laws, and Rules thereof. Some of the principal are, 1. That there be nothing monstrous, or extravagant in the Figures; nothing contrary to the Nature of Things, or to the common Opinion of Mankind. 2. That Figures be not join'd which have no Affinity, or Relation to each other; the Metaphor being to be founded on something real, and not on Hazard, or Imagination; excepting some whimsical Unions establish'd in Fables, which Custom, and the Authority of the Poets have made pass for Natural. 3. That the human Body be never taken into *Devises*; as this would be to compare a Man with himself. 4. That there be a Sort of Unity in the Figures that make the Body: We do not mean, that there must only be a simple Figure; but that, if there be several, they have a Relation, and Subordination to each other: So that there be one principal Figure, whereon all the rest depend. Tho' still the fewer Figures there are in the Body of the *Devise*, and the less they are confus'd, the more perfect and elegant is the *Devise*. 5. The Motto, which is to animate the Figure, must agree so accurately thereto, as that it could not serve for any other. 6. Nothing to be named that appears to the Eye, and which the bare Inspection may make known. 7. The Motto not to have a complete Sense of it self; for being to make a Compound with the Figure, it must only be a Part, and consequently must not signify the whole. If the Words alone have a complete Signification, you have a full, and distinct Notion independently of the Figure; whereas the Signification should result from both. 8. The shorter the Motto, the more beautiful: and a Suspension of the Sense, which leaves somewhat to guess, is one of the principal Graces of the *Devise*. Lastly, it is accounted a Happiness, where the Words of a Poet are applied in a Sense which he never dream'd of, and yet so pertinently, that it should seem they had been intended for the same.

DEVISE, or DIVISE, in common Law, the Act whereby a Testator gives, or bequeaths his Lands, or Goods, by his last Will in Writing: He who makes the *Devise* being call'd the *Devisor*, and he, to whom it is made, the *Devisee*.

The Words of a *Will*, the Law interprets in a larger, and more favourable Sense, than those of a *Deed*: For if Land be devised to a Man to have to him for ever, or to have to him, and his Affixes; In those Cases the *Devisee* shall have a Fee simple. Yet if given in the same Manner by Feoffment, he has but an Estate for Life. So, if one devise Land to an Infant in his Mother's Belly; it is a good and valid *Devise*; tho' 'tis otherwise by Feoffment, Grant, or Gift: for in those Cases there ought to be one of Ability, to receive presently, otherwise it is void. See **WILL**, and **DEED**.

DEUNX, a Division of the Roman *Libra*, or Pound; containing 11 Ounces; or eleven *Twelfths* of any Thing. See **AS**, and **LIBRA**.

DEVOLVED, something acquired by Right of Devolution. See **DEVOLUTION**.

Such a Right is devolved to the Crown. Such a Succession devolved to N... by the Death of N...

The Word is also used for a Right acquired by a Superior of conferring a Benefice, when the Inferior, and Ordinary Colator, has neglected to confer, or has conferr'd it on an unqualified Person. If a Patron neglects to present to a Benefice in six Months, the Presentation devolves upon the Bishop, and from thence to the Primate.

DEVOLUTION, a Right acquired by Succession, from one Degree to another.

Devolution in general, is an Impediment provided by the Customs of several Nations, whereby the Husband who

survives his Wife, or the Wife surviving her Husband, is prohibited to alienate the real, and immovable Effects of the deceased, and obliged to preserve them for the Children issued from that Marriage. So that they succeed thereto in Exclusion of those born of a second Marriage.

DEVOTION, a sincere, ardent Worship of God.

Monfr. *Jurien* defines *Devotion* a Softening, and Yielding of Heart, with an inward Consolation, which the Soul of the Faithful feels in the Exercises of Piety.

Under the Name of *Devotions*, are usually understood certain Religious Practices, which a Person makes it a Law with him to discharge regularly; and with Reason; this Exactitude be founded on solid Piety; otherwise 'tis Vanity, or Superstition.

Among the *Romans*, *Devotion* was a Sort of Sacrifice, or Ceremony, whereby they consecrated themselves to the Service of some Person. The Ancients had a Notion, that the Life of one might be redeem'd by the Death of another: And hence were those *Devotions* so frequent for the Lives of the Emperors. See **VOZA**.

The *Devotion of Decius*, who, after devoting himself to his Country, threw himself into the Hands of his Enemies, and was kill'd, is said to have gain'd the *Romans* the Victory.

But *Devotion* to any particular Person was not known till *Augustus*. The Day after the Title *Augustus* had been given *Octavius*; *Pascovius*, a Tribune of the People, began to say, he would devote, and consecrate himself to him, as was practis'd among the barbarous Nations, to obey him even at the Expence of Life, if he were commanded. His Example was immediately followed by all the rest; and it came at length to be establish'd into a Custom, never to go to salute the Emperor, without declaring they were devoted to him. *Augustus*, tho' seeming to oppose this vile and infamous Flattery, yet rewarded the Author.

DEVOURING, in Heraldry. When Fishes are born in an Escutcheon in a feeding Posture, the Heralds denominate it by *devouring*; by reason Fishes swallow all their Food whole. See **FISHES**.

DEUTERONOMICAN, in the School-Theology, a Term applied to certain Books of Holy Scripture, which were added to the Canon after the rest; either by reason they were not wrote till after the Compilation of the Canon, or by reason of some Dispute as to their Canonicity. See **CANON**.

The Jews, 'tis certain, acknowledge several Books in their Canon, which were put there later than the rest. They say, that under *Ezdras*, a great Assembly of their Doctors, which they call by Way of Eminence, the *Great Synagogue*, made the Collection of the Sacred Books, which we now have in the Old Hebrew Testament. And they agree, that they put Books therein which had not been so before the *Babylonish* Captivity; such are those of *Daniel*, *Ezekiel*, *Haggai*, &c. and those of *Ezdras*, and *Nehemiah*.

And the Church has since added others to the Canon, that were not, nor could not be in the Canon of the Jews; by reason from them were not compos'd till after. Such is the Book of *Ecclesiasticus*; with several of the *Apocryphal* Books, admitted by the *Romanists*; as the *Maccabees*, *Wisdom*, &c. Others were added still later, by reason their Canonicity had not been yet examin'd: And till such Examination, and Judgment they might be set aside at Pleasure.

But since she has pronounced as to the Canonicity of these Books, there is no more room now to doubt of them, than there was for the Jews to doubt of those of the Canon of *Ezdras*. And the *Deuteronomical* Books are as Canonical, as the Proto-canonical. The only Difference between them consisting in this, that the Canonicity of the one was not generally known, examin'd, and settled so soon as that of the others.

The *Deuteronomical* Books in our Canon, are the Book of *Ezher*, either the whole, or at least the seven last Chapters thereof. The Epistle to the *Hebrews*; that of *James*; and that of *Jude*; the second of *St. Peter*; the second, and third of *St. John*; and the *Revelation*. The *Deuteronomical* Parts of Books, are, in *Daniel*, the Hymn of the three Children; the Prayer of *Asariab*; the Histories of *Susannah*, of *Bel*, and the *Dragon*; the last Chapter of *St. Mark*; the bloody Sweat, and the Appearance of the Angel, related in *St. Luke* Chapter XXII; and the History of the adulterous Woman in *St. John*, Chapter VIII.

The Word is Greek, being compounded of *deuteros*, Second, and *kanonikos*, Canonical.

DEUTERONOMY, one of the Sacred Books of the Old Testament; being the last of those wrote by *Moses*. See **PENTATEUCH**.

It does not appear, that *Moses* made any Division of what he wrote into Books; or that he gave different Names and Titles to the different Parts of his Work; nor do the Jews, even at this Day, distinguish them in the Copies they use in the Synagogues; but write them all running as one single Work, without any other Distinction beside

side that of little and great Parafches. 'Tis true, in the other Copies, used by private Persons, they are divided into five Parts, as among us; But they give them no other Name, but the first Word wherewith each Division begins: such as we do in quoting a Decree, or Chapter of the Canon-Law.

Thus, the first Part of *Moses's* Work they call *בראשית* *Bereschit*, because beginning with that Diction. The second they call *שמות* *והנה* *Ve Elieb Schemot*: The third, *ויקרא* *Vajickrab*: The fourth, *ויקרא* *Vajiedober*; and the fifth, *אלה הרבים* *Elleb haadebarim*; which is one of the first Words thereof. This Custom is very ancient among the *Rabbins*, as appears from the ancient Commentaries on those Books, call'd *בראשית רבה* *Vesleeb Schemot Rabba*, &c. and from the *Prologus Galeatus* of St. *Jerom*.

It was the *Greeks*, when they first translated the Law, that gave the five Parts, into which it was divided, the Names of *Genesis*, *Exodus*, *Leviticus*, *Numbers*, and *Deuteronomy*. Accordingly the Names are *Greek*; excepting that of *Leviticus*, which is *Hebrew*. And they express what is contain'd in those Books, or at least the most remarkable Things contain'd therein; which is the *Greek* Manner of giving Titles.

The Book of *Deuteronomy* was so call'd, because this last Part of the Work of *Moses* comprehends the Repetition, or Recapitulation, which that *Legislator* made to the *Israelites* before his Death, of the Law he had before deliver'd them at length. And hence *Deuteronomy* is still call'd by the *Rabbins* *משנה משנה* *Mischnah*, Repetition, *משנה* *משנה* *Repetition of the Law*; second *Law*. They likewise call it *ספר התורה* *the Book of Reprimands*, on Account of the XXVIIIth Chapter, which is full of Blessings promised to such as keep the Law; and of Curses threaten'd such as transgress it.

Deuteronomy was wrote the fortieth Year after the Delivery from *Egypt*, in the Country of the *Moabites* beyond *Jordan*: *Moses* being then in the 120th Year of his Age. It contains in *Hebrew* eleven Parafches, tho' only Ten in the Edition of the *Rabbins* at *Venice*; XX Chapters, and 955 Verses. In the *Greek* and *Latin* Versions it contains XXXIV Chapters. The last is not of *Moses*. Some say it was added by *Jofeph* immediately after *Moses's* Death; which is the most probable Opinion. Others will have it added by *Esdras*.

The Word is *Greek*, compounded of *δευτερος*, *Second*, and *νομος*, *Law*.

DEW, *Roi*, a thin, light, insensible Mist, or Rain, falling while the Sun is below the Horizon.

Naturalists usually rank *Dews* among the Number of Meteors of the watery Kind. Some define it a Vapour liquified, and let fall in Drops. Others a Vapour having a like Relation to Frost, as Rain has to Snow, &c. Among the Differentiations of *Monst. Huet* is a Letter, to shew that *Dew* does not fall, but rises.

To us, *Dew* appears only to differ from Rain as more, and less. Its Origin, and Matter, no doubt, is from the Vapour, and Exhalation of the Earth and Water, rais'd, as shewn under the Article VAPOUR. The thin *Vesicles*, wherof Vapours consist, being once detach'd from their Bodies, we all know, keep rising in the Atmosphere, till they arrive at such a Stage of the Air, as is of the same specific Gravity with themselves: Then their Rise is stopp'd. Now, as 'tis the Warmth, or Fire, that, dilating the Parts of Water, forms the *Vesicles* specifically lighter than Air, and capable of ascending therein; So when that Heat declines, or is lost, as by the Approach, or Contiguity of any colder Body, the *Vesicles* condense, become heavier, and descend. In the Day-time, therefore, the Sun warming the Atmosphere by a continual Influx of his Rays, the Vapours once rais'd, continue their Progress, as meeting with nothing to increase their Gravity, till such Time as they are got far out of the Reach of the reflected Warmth of the Earth, in the middle Region of the Atmosphere. Here condensing, they form *Clouds*, from which arise *Rain*, as shewn under CLOUDS, and RAIN.

But when the Sun is below the Horizon, the Cause is somewhat different: For the Atmosphere then cooling, the Vapours rais'd by the Warmth of the Earth, and of the Rays of the Sun, lodg'd therein the preceding Day, begin to condense apace, as soon as they are got out of the Air, spending their Stock of Fire and Heat on the cold, moist Air they pass through. Their Ascent, therefore, becomes short; and by that Time they are got a few Fathoms high, being exhausted of their Fire, and restor'd to the natural Dimensions, and Gravity of their constituent Water; they precipitate, and fall back again in little Spherules, or Drops, as shewn at *Rain*.

From these Principles the other Phenomena of *Dews* are easily accounted for. Hence, e.g. it is, that *Dews* are more copious in the Spring, than in the other Seasons; there being then a greater Stock of Vapour in Readiness,

through the small Expence thereof in the Winter's Cold and Frost, than at other Times. Hence, what *Pliny* relates of *Egypt*, that it abounds in *Dews* throughout all the Heats of Summer; For the Air there being too hot to condense, the Vapours in the Day-time, they never gather into Clouds, and hence they have no Rain; But we know, that in Climates where the Days are excessive hot, the Nights are remarkably cold; So that the Vapours rais'd after Sun-set, are readily condensed into *Dews*. Or, perhaps, that notable Coldness is rather the Effect, than the Cause of the Quantity of *Dews*. For a deal of Vapour being rais'd by the great Heat of the Earth, and the Stock of Fire spent on it in the Day-time, the Influx of such a Quantity of cold Moisture must greatly chill the Air.

May-Dew whitens Linen, and Wax; The Dew of Autumn is converted into a white Frost. Out of Dew putrified by the Sun, arise divers Insects, which change apace out of one Species into another; what remains is converted into a fine, white Salt, with Angles like those of Salt-peter, after a Number of Evaporations, Calcinations, and Fixations.

There is a Spirit drawn from *May-Dew*, which has wonderful Virtues attributed to it. The Method of gathering, and preparing it, is prescribed by *Hausmann*, Physician at *Kiel*. 'Tis to be gather'd in clean linen Cloths expos'd to the Sun in close Vials; then distill'd, and the Spirit thrown upon the *Caput Morsum*; this is to be repeated till the Earth unite with the Spirit, and become liquid; which happens about the 7th, or 8th Cohobation, or Distillation. By such means you gain a very red, odoiferous Spirit. *Storckersfeld*, a Physician of *Lubeck*, thinks *May-Dew* may be gather'd in Glass-Plates, especially in still Weather, and before Sun-rise. And *Tranquill* is of the same Sentiment. It might likewise be gather'd with a Glass-Funnel, expos'd to the Air, having a crooked Neck to bring the Dew into a Vial in a Chamber. See *Philos. Transact.* 1665. *May Hoffmann*, and others. 'Tis apparently from the Preparation of this Dew, that the Brothers of the *Regis-Cross* took their Denomination. See ROY-CROSSIANS.

In the *Philosoph. Transact.* we have an Account of a very extraordinary Kind of Dew. For a good Part of the Winter 1695, says the Bishop of *Cloyne*, there fell in many Parts of the Provinces of *Amster*, and *Leinster*; a Kind of thick Dew, which the Country-People call'd *Butter*, from its Consistency and Colour; being soft, clammy, and of a dark yellow. It fell always in the Night, and chiefly in low, moorish Places, on the Top of the Grass, and oft on the Thatch of Cabbins. 'Twas seldom observ'd in the same Place twice. It commonly lay on the Earth a fortnight without changing Colour, but then died, and turn'd black. It fell in Lumps; and had a strong Smell like that of Graves. Mr. *R. Vans*, in the same *Transactions*, gives an Account of the like at the same Time, in *Limerick*, and *Tipperary*; adding, that if one rubb'd it with the Hand, it melted; but laying it by the Fire, it dried, and grew hard.

DEXTANS, in Antiquity. See AS.

DEXTER, in Heraldry, is applied to the Right Side, as *Sinister* is to the Left. See ESCUTCHEON.

DEXTER-Point. See POINT.

DEXTER-Wife is the right Side of the Base. See BASE.

DEXTER-Chief, the Angle on the right Hand of the Chief. See CHIEF.

The Word is pure *Latin*, signifying *Right-hand*; whence the Word *Dexterity* for Address, and Ability in the performing of any Thing.

DESTROCHERE, or DESTROCHERE, in Heraldry, is applied to the right Arm, which is painted in a Shield, sometimes naked, sometimes cloth'd, or adorn'd with a Bracelet, and sometimes arm'd, or holding some Moveable, or Member us'd in the Arms.

The *Destrochere* is sometimes placed as the Crest.

The Word is form'd from the *Latin* *Destrochobrium*, which signifies a Bracelet worn on the right Wrist, mention'd in the Acts of the Martyrdom of St. *Agnes*, and the Life of the Emperor *Maximus*.

DIA, the Beginning of divers Terms in Medicine, Chirurgery, Pharmacy, &c.

Where these three Letters begin the Name of a Remedy, Unguent, Plaster, Cataplasm, &c. they signify *Composition*, and *Mixture*; as in *Diaplasma*, *Discolylon*, &c. See DIAPLEASMA, DIACHYLON, &c.

Dia is likewise the Beginning of many Terms in the other Arts, and even in common Use; As, *Diameter*, *Dialogus*, &c. on all which Occasions, *Dia*, which is an inseparable Particle, or Preposition, is borrowed from the *Greek* *Δια*, *ex*, or *cum*; which begins the same Words in the *Greek*.

Indeed we have Words wher'in *Dia* is no Preposition borrowed from a foreign Language, tho' 'tis possible, the Words themselves may; as in *Dracont*, *Diak*, *Diana*, &c.

DIABETES, in Medicine, a haely, and profuse Evacuation of the Drink by the Urinary Passages; accompanied with

with an aident Thirst; and a Leanness of the whole Body.
See URINE.

The Drink thus discharged, is usually a little alter'd from what it was when taken down, and turn'd chould, and milky; but sometimes not at all. See DRINK.

The *Diabetes* seems owing to a too great Laxity of the Fibres of the Arteries of the Kidneys; or too great Quantity of starchy Salts in the Blood, which dissolve the Mass of Blood, or diffuse the Parts thereof; So that the Serosity is easily separated from the same.

According to Dr. *Quincy*, the Evident, and most common Cause of the *Diabetes* is the too great Use of spirituous Liquors, wherewith the *Serum* becomes so Impregnated, that it will not attract, and join with the *Cruor*, or Globules of the Blood, but runs off through the Kidneys sweet, or insipid.

There is another Kind of *Diabetes*; wherein the Person affected renders a great deal more by Urine, than he drinks, viz. sometimes more than he both eats and drinks. Some Physicians attribute this excessive Quantity of Liquor to the Air he respire, which, they suppose, becomes converted in to Water; Or, at least, the Water in the Air respired is here absorbed, and collected. But others, with more Probability, attribute it to a Coagulation of the Blood, fat, and even the solid Parts of the Body.

The Word *Diabetes* is derived from the Greek *διαβαίνω*, to pass quick.

DIABETES, in Hydraulicks, is applied to a Syphon, the two Legs, or Branches whereof are inclosed in one another; As in the Glass described by *Hera*, which runs it self quite empty, without being inverted, as soon as the Water is arrived at the Height of the upper Branch of the Syphon.

DIABOTANUM, in Pharmacy, and Chirurgery, a Plaster, wherewith Wens, &c. are resolved and dissolv'd.

The *Diabotannum* is sovereign for the *Hystericæ*.

DIABROSIS, in Medicine, a Solution of the Continuity of a Part, caused by sharp, corrosive Humors gnawing, and devouring the same.

The Word is Greek, compounded of *δια*, per, through, and *βρωσκω*, to eat.

DIACALCFEOS, in Chirurgery, and Pharmacy, a Plaster applied after the Amputation of a Cancer.

The *Emplostrum Diacalcficos* is compos'd of Oil, *Avenæ*, and *Chalcitis*; from the last of which Drugs it derives its Name.

DIACARYON, or *Ziainum*, in Pharmacy. See *DIACUCUM*.

Galen is said to have prepar'd his *Diacaryon* with the Juice of Walnuts, mix'd with as much Honey as sufficed to render it an agreeable Composition.

The Word is form'd from *καρύον*, Walnut.

DIACARTAMI, in Pharmacy, an Eloffuary compos'd of Turbit, Manna, Scammony, Hermodactyls, and other Purgatives; with the Addition of the Modulus, or Seed of the *Corthamus*, which gives it the Denomination. See *CARTHAMI*.

Diacartami chiefly purges *pituita*. It is prescrib'd in Diseases of the Bsein; and is frequently mix'd in Medicines along with other Purgatives.

DIACAUSTIC Curve, or the *Concave by Refraction*, is a Species of *Concave Curves*, thus conceiv'd: Imagine an infinite Number of Rays; as BA, BM, BD, &c. (*Tab. Geom. Fig. 23.*) issuing from the same Luminous Point B, to be refracted from, or to the Perpendicular MC, in the Curve AMD; and so, as that CE the Sines of the Angles of Incidence CME be always to CG, the Sines of the refracted Angles CMG, in a given Ratio: Then the Curve-Line, which touches all the refracted Rays, is call'd the *Diacaustic*. See *CAUSTIC*.

DIACHYLON, in Pharmacy, a Name given to divers Plasters, on Account of the Mucilages mix'd therein, which are viscid Juices, call'd by the Greeks *χυμαί*; drawn from certain Plants. See *MUCILAGE*.

White, or *Simple DIACHYLON*, is compounded of common Oil, Litharge of Gold, and Mucilages, drawn from the Root of the *Althea*, and the Seeds of *Line*, and *Fenigreek*. It is proper to soften, digest, ripen, and resolve.

The *DIACHYLON*, call'd *Directum*, has for its Basis the common *white Diachylon*, with a Pound of which, an Ounce of Powder of *Iris* is mix'd. This Plaster digests, incides, and ripens with more Force than the *simple Diachylon*.

There is also the *Great DIACHYLON*, *Diachylon magnum*, compos'd of Litharge of Gold, Oils of *Iris*, Camomile, and Aneth, Turpentine, Resin of the Pine, yellow Wax, and Mucilages, of *Line*, and *Fenigreek*, with new Eggs, Raisins of *Damejus*, *Jethyacolla*, Juices of *Iris*, *Squillæ*, and *Hyssop*. This *Diachylon* softens *Schirrus's*, and resolves, and dissipates Tumors. 'Tis call'd, the *Great*, not only on Account of its extraordinary Virtues, but also because compos'd of a greater Number of Ingredients, than the rest.

The *Diachylon Gummatum*, is the *great Diachylon*, with the Addition of Gum Ammonic, *Gambogio*, and *Sagepeppum*, diffus'd with Wine, and boil'd to a Consistence of Honey. This Plaster is the most powerful of all for digesting, ripening, and resolving.

DIACODIUM, in Pharmacy, a Medicine prepared from Poppies Heads.

There are two Kinds: *Simple*, and *Compound*.

Simple DIACODIUM, is a Kind of Opiate, made of the Juice express'd from the Heads of Poppies, both white, and black; and made up with the *Sassa*, or Sugar. It is prescrib'd to soften sharp, Acrus Humours, to appease Coughs, and to provoke Sleep. This Preparation was of great Use among the Ancients; but is now laid a-side, since it has been found, that the Syrup of white Poppies, which is what we now call *Diacodium*, produces the same Effect.

Compound DIACODIUM is made of the *simple*, with the Addition of the Troches of *Ramich*, *Hypocistis*, Myrrh, Saffron, and Balausts. It is good to stop, and soften Catarrhs, Hemorrhoids, and Fluxes of the Belly.

The Word is form'd from the Greek *δια*, per, and *κόδιον*, Poppies Head.

DIACONESSE, and *DIACONATE*. See *DEACON*, and *DEACONRY*.

DIACONI, in Antiquity, was the Name of a Faction at Athens.

That City, we read, was divided into two Parties: Tho' one Favours of an Oligarchy, who would only have a few Persons employ'd in the Government. The other consist'd of such as were for a Democratical, or Popular Government, wherein the whole People should have a Share. The first were call'd *Diaconi*, and the latter *Fediaci*; the latter inhabiting the lower, and the former the upper Quarter, or Part of the City.

The Laws of *Solon* imported, that *Pististratus* should be, Chief of the *Diaconi*. Tho' the Scholiast on *Aristophanes's* Comody, *the Wasps*, affirms, that *Pandion* distributed the Quarter of the *Diaconi* among his Sons, and put *Lyons* at their Head.

DIACONICON, Sacrify, a Place about the ancient Churches, where the sacred Vestments, with the Vessels, and other Ornaments of the Altar were preserv'd.

The first Council of *Laodicea*, in the 21st Canon, forbids the Priests living in the *Diaconicon*, *ἐν τῷ Διακονίῳ*; or touching the holy Utensils. An ancient Latin Version of those Canons renders it, *In Secretario*: But the Copy at *Rome*, as well as *Dionysius Exiguus*, retain the Word *Diaconicon* in Latin. 'Tis true, *Zonarus* and *Beffanous* understand that Expression in the 21st Canon of the Order of a Deacon, and not of a Building, to which Opinion *Leo Allatius* also adheres in his Treatise, *De Templis Græcorum*: But all the other Interpreters are agreed as to its being a Sacrify. Beside the Ornaments of the Priest-hood, and the Altar, there were likewise here deposited the Relicks of the Church.

The Word is Greek, and form'd from *διακονία*, *Iservæ*, by reason here were kept every Thing belonging to Divine Service. It was also call'd *Ἀρακτῆριον*, and in Latin *Salsatorium*: because it was here the Bishop received, and saluted Strangers. Sometimes, too, it was call'd *Μεταδῆσιον*, or *Μεταδῆσιον*, *Mensa*, by reason of the Tables therein, for disposing the sacred Ornaments on; or rather from *Μεταδῆσιον*, an Inn.

DIACOOSTICKS, or *DIAPHONICKS*, is the Consideration of the Properties of Sound refracted in passing through different Mediums; that is, out of a denser into a more subtle, or out of a more subtle into a denser Medium. See *SOUND*, and *REFRACTION*. See also *ACONSTICKS*, and *PHONICKS*.

The Word is form'd from the Greek *δια*, per, through, which intimates a Passage; and *ἀκούς*, *Ihear*, q. d. the Consideration of the Passages of the Sounds we hear.

DIACYDONITES, in Pharmacy, is applied to Things, and Remedies, wherein Quinces are an Ingredient: Thus the Confection *Diacydonites* is a Confection of Quinces, or wherein Quinces have a Share.

The Word comes from *δια*, and *κύδων*, Quince.

DIADEM, in Antiquity, a Royal Head-band, or Fillet, wore by Kings as a Badge of their Royalty; while the Crown was left to the Gods. See *CROWN*.

The *Diademe* was a Sort of Ribbon, or Band wore of Silk, Thread, or Wool, more or less broad. It was tied round the Temples, and Fore-head; the two Ends being knotted behind, and let fall on the Neck.

It was usually white, and quite plain, tho' sometimes embroidered with Gold, and set with Pearls, and precious Stones. In latter Times it likewise came to be twisted round Crowns, Laurels, &c. and appears to have been wore in divers Parts of the Body: Thus *Phavorinus* observes, that *Pompey* was suspected of aspiring to the Royalty, because of his wearing a white Garment, which was no other than a

Figure for an Ulcer he had on his Leg, but which the People construed a *Diadem*.

Pliny Lib. VII. C. 5. observes, that *Bacchus* was the first Inventor of the *Diadem*: *Athenens* assures us, that it was the *Toppers*, and good Fellows, who first made Use of it, to preserve themselves from the Fumes of Wine, by tying it tight round their Heads; and that it afterwards came to be a Royal Ornament.

The *Diadem* remain'd a long Time the peculiar Badge of Kings; At length it was assumed by the *Roman Emperors*, as the Mark of Empire.

Authors are not agreed about the Time when the *Roman Emperors* first assum'd the *Diadem*. Some refer it to *Caesar*, others to *Aurelian*, and others to *Constantine the Great*. The younger *Victor* says positively, that *Aurelian* took the *Diadem*, which no Emperor had dared to do before him. For tho' it should seem from the same Writer, that *Caligula* had done the like, yet *Suetonius* assures us, he had it only in View, and that he never executed it. *Heliogabalus*, indeed, took a *Diadem*, but it was only in the Palace he wore it, and never appear'd with it in publick. *Jornandus* even goes as low as *Dioclesian* for the Introduction of the *Diadem*; But 'tis certain, there is a Medal of *Aurelian*, with a Crown like one of our Ducal Crowns, which is sustain'd by a Border of Pearls, that bears a very great Affinity to a *Diadem*. And the Authors, who have explain'd that Medal, are all agreed it is one. Mr. *Spanheim* also allows *Aurelian* to have taken it: His Successors imitated him therein; And yet the Ornament did not become common till the Time of *Constantine*. After him the Emperresses were allowed to wear it: accordingly we find them represented therewith on Medals: Tho' till then, we have no Instance either of Crown, or *Diadem* on a Woman's Head, in all the *Roman Empire*.

An Author of the Vth Century quoted by *Bollandus*, pretends, that *Constantine* first wore the *Diadem*, and that he only took it to bind his Hair, and keep it in Order. But this is not very probable; and 'tis certain, that at least five Emperors had wore it before him, as *Aurelius*, and *Carinus*. *Eusebius* attributes it to *Constantinus Chlorus*, when only *Cesar*, which is confirm'd by one of his Medals, wherein he is represented with a *Diadem*, adorn'd with Rays; Tho' even after *Constantine*, when the *Diadem* was become the usual Ornament of the *Augusti*, it was not always given to the *Cæsars*. Indeed, we see it on some of the Medals of *Julian*, while only *Cesar*; tho' 'tis pretty certain, he did not wear it till he became *Augustus*. *Du Cange* will not maintain, that *Constantine* first took the *Diadem*; but only, that he first made it into a Kind of *Cask*, or *Cloze-Crown*, as is seen in some of his Medals, and those of his Successors.

The Word comes from the Latin *Diadema*, of the Greek *διδυμα*, a little Band encompassing the Head, of the Verb *διδομαι*, *Alligo*, I tie.

DIADÉM, in Heraldry, is applied to certain Circles, or Rims, serving to bind, or inclose the Crowns of Sovereign Princes; and to bear the Globe, and Cross, or the Flower de *Lis* for their Crest.

The Crowns of Sovereigns differ in this, that some are bound with a greater, and some with a less Number of *Diadems*.

Prelates likewise appear to have anciently wore a Sort of *Diadem*: Thus *Baronius* writes, that *St. James* the Apostle wore a gold Plate on his Fore-head, as a Mark of his Episcopal Dignity.

In Blazoning, the Bandage about the Heads of *Moors*, on Shields, is sometimes also call'd *Diadem*.

DIAGLYPHICE, the Art of Engraving, Cutting, or otherwise working hollow, or concave Figures, in Metals; Such as Seals Inauglia's, the Matrices, or Coins for Medals, &c. See ENGRAVING, and SCULPTURE.

DIAGNOSTIC, in Medicine, a Term applied to those Signs, or Symptoms, which indicate, or discover the present State of a Disease, its Nature, and Cause. See SIGN, and INDICATION.

The Physicians have *Diagnostic*, and *Prognostic* Signs; the first with regard to the present State of the Disease, and the Patient; and the second to the future. See PROGNOSTIC.

The Word is compounded of the Greek *διω*, *per*, through, or by; and *μετρα*, *Iknoo*.

DIAGONAL, in Geometry, a right Line drawn a-cross a Figure of several Sides, from the Vertex of one Angle to that of another: Such is the Line PN (*Tab. Geometr. Fig. 24.*) drawn from the Angle P, to N. See FIGURE. Some Authors call it *Diameter*, and others *Diametral* of the Figure. See DIAMETER.

It is demonstrated, 1. That every *Diagonal* divides a Parallelogram into two equal Parts. 2. Two *Diagonals* drawn in any Parallelogram, bisect each other. 3. The *Diagonal* of a Square is incommensurable with one of its Sides. See PARALLELOGRAM, SQUARE, &c.

Add 4. A very noble Theorem, in Elementary Geometry, first demonstrated by Mr. *Laguy*, in the *Memoires de l'Academie Royale des Sciences*, An. 1706. That the Sum of the Squares of the two *Diagonals* of every Parallelogram, is equal to the Sum of the Squares of the four Sides.

'Tis evident, at first Sight, that the famed 47th Proposition of *Euclid*, so richly worth the Hecatombe it cost its Author, is only a particular Case of this Proposition: For if the Parallelogram be rectangled, it follows of Course, that the two *Diagonals* are equal; and, of Consequence, that the Square of a *Diagonal*, or, which is the same Thing, the Square of the Hypotenuse of a right Angle, is equal to the Squares of the two Sides. If a Parallelogram be oblique-angled, and of Consequence, the two *Diagonals* unequal, as is the more usual Case; the Proposition becomes of more extensive Use.

The Demonstration in oblique-angled Parallelograms is thus: Suppose the oblique-angled Parallelogram ABCD, (*Tab. Geometry Fig. 25.*) whereof BD is the greater *Diagonal*, and AC the lesser: From the Point A, of the obtuse Angle DAB, let fall a Perpendicular AE, to the Side CD; and from the Point B another Perpendicular BF to the Side DC. Then are the Triangles ADE, BCF equal, and similar, as AD is equal to BC, and the Angles ADE, BCF, as well as AED, BCF, are also equal; consequently DE is equal to CF. Now, by *Euclid*, Prop. 12. Lib. II. in the obtuse-angled Triangle BDC, the Square of the Side BD is equal to the Sum of the Squares of BC, and CD, and over and above, to double the Rectangle of CF by CD; and by 13th, Lib. II. in the Triangle DAC, the Square of the Side AC is equal to the Sum of the Squares of AD, and CD, abating double the Rectangle of the same CD, by DE, equal to CF. Consequently, the former Excess precisely compensating this Defect; the Sum of the Squares of the two *Diagonals* is equal to the Sum of the Squares of the four Sides QED.

Hence, in every *Rhombus*, or Lozange, knowing one Side, and a *Diagonal*; the other *Diagonal* will likewise be known: For as the four Sides are equal; subtracting the Square of the given *Diagonal* from Quadruple the Square of the given Side; the Remainder is the Square of the *Diagonal* required.

The Proposition is likewise of great Use in the Theory of compound Motions: For in an oblique-angled Parallelogram, the greater *Diagonal* being the Subtense of an obtuse; and the lesser, of an acute Angle, which is the Complement of the former; the greater will be the greater, and the less, the less, as the obtuse Angle is the greater: So that if the obtuse Angle be conceiv'd to grow till it be infinitely great with regard to the acute one, or, which amounts to the same Thing, if the two contiguous Sides of the Parallelogram be extended directly, End to End in a right Line; the great *Diagonal* becomes the Sum of the two Sides, and the lesser one, nothing. Now, two contiguous Sides of a Parallelogram being known, together with the Angle they include, 'tis easy to find, the Subtense of that Angle, i. e. one of the *Diagonals* of the Parallelogram, in Numbers; which done, Mr. *de Laguy's* Proposition gives the other. Which second *Diagonal* thus found, is the Line that would be describ'd by a Body impell'd at the same Time by two Forces, which should have the same Ratio to each other, as the contiguous Sides have, and act on those two Directions; which *Diagonal*, the Body would describe in the same Time, as it would have describ'd either of the contiguous Sides in, if only impell'd by the Force corresponding thereto. This is one of the great Uses of the Proposition: For the Ratio of two Forces, and the Angle they make, being given, it is frequently necessary to determine, in Numbers, the Line a Body impell'd by the two Forces would describe in a certain Time. See COMPOUND MOTION.

All the Sides of a recti-linear Figure, as AB, BC, CD, DE, (*Fig. 26.*) excepting one EA, and the Angles O, and Y, being given; to find the *Diagonals*.

In the Triangle ABE, the Sides AB, and AE being given, the Angle O is easily found by Trigonometry; and from this, the *Diagonal* BS. And after the like Manner the Triangle BCD is resolv'd, and the *Diagonal* BD found.

Since Ichonographies, or Plans, are best taken by having all the Sides, and *Diagonals*; The Use of this Problem in Planimetry is of some Importance; especially to such as are willing to have their Work accurate, tho' at the Expence of Calculation. See ICHONOGRAPHY, &c.

DIAGRAM, in the ancient Music, was what we call the *Scale*, or *Gammus* in the modern. See SCALE, and GAMMUT.

The Extent of the *Diagramma*, which they also call'd, *Systema perfectum*, was a *Disdiapason*, or two Octaves in the Ratio 1:4. In that Space they had eighteen Chords, tho' these had not all different Sounds. See CHORD.

To explain it, they represent to us eighteen Chords, or Strings of an Instrument, as the Lyre, suppos'd to be tuned according to the Proportions in any of the *Genera*, viz.

Fig. 4. Equinoctial Dial.

Fig. 5. Equinoctial Dial

Fig. 6. Horizontal Dial

Fig. 7. Horizontal Dial. Trigonometrically

Fig. 7 Ring Dial

Fig. 8. Vertical Dial

Fig. 16. Vertical Declining Dial Geometrically.

Fig. 17. Inclined Dial

Fig. 18. Universal Mechanical Dial

Fig. 19. Moon Dial

Fig. 20. Moon Dial

Diatonic, Enharmonic, or Chromatic. See GENERA, DIATONIC, &c.

As the Lyre was improv'd, and more Chords added to it, so was the *Diagramma*: By such means it came from 4 Chords to 7, then 8, then 10, then 14, and at last 18. See LYRE.

To each of these Chords, or Sounds, they gave a particular Name, taken from its Situation in the *Diagramma*, or the Lyre. Their Names, and Order, commencing from the lowest, are as follows: *Prothabonomeus*, *Hypate-Hypaton*, *Parhypate-Hypaton*, *Lychnos-Hypaton*, *Hypate-Meson*, *Parhypate-Meson*, *Lychnos-Meson*, *Mese*, *Trite-Synemmenon*, *Trite-Synemmenon*, *Paranete-Synemmenon*, *Nete-Synemmenon*, *Paranete-Dieszeugmenon*, *Nete-Dieszeugmenon*, *Trite-Hyperboleon*, *Paranete-Hyperboleon*, *Nete-Hyperboleon*.

Guido Aretime improved this Scale, or *Diagram*, very greatly. Finding it of too small Extent, he added five more Chords, or Notes to it; lay'd them all down on a Staff of 5 Lines; and instead of the long Greek Names abovementioned, nam'd all his Notes by *Gregory's* seven Letters, See NOTE, and GAMMUT.

The first, or lowest Note of his Scale, he marked γ , and call'd *Gammus*; whence the whole Scale came to be denominated *Gammus*.

DIAGRAM, in Geometry, &c. a Scheme, for the Explanation, or Demonstration of any Figure, or the Properties thereof belonging. See FIGURE.

DIAGRYDIUM, in Pharmacy, is prepar'd Scammony. See SCAMMONY.

The Preparation is ordinarily perform'd by boiling the Scammony in a Quince. Others make it receive the Fumes of lighted Sulphur, whence it is call'd, *Sulphurated*, *Diagrydium sulphuratum*. Some incorporate it with a Quantity of Spirit of *Vitriol* *refar*, sufficient to make a Sort of Liquid past, which is afterwards set to dry in the Sun, or by a gentle Fire. And this Preparation they call *Diagrydium Refaratum*. The End of all these Preparations is to correct the Scammony; But many more are of Opinion, it has nothing that needs Correction, and that it may be used in its natural State. See SCAMMONY.

The Word *Diagrydium* is form'd, by Corruption, from *Jasgrides*, *little Tear*.

DIAHEXAPTA, or DIAHEXAPTE, among Farriers, a Drink made for Horses, denominated from the six Ingredients it consists of; *viz.* Birthwort, and Gentian Roots, Juniper Berries, Bayberries, Drops of Myrrh, and Ivory Shavings, mix'd together. It is an excellent Counter-Poison, cures Bites of venomous Beasts, Colds, Consumptions, &c.

DIAL, or SUN-DIAL, an Instrument serving to measure Time, by means of the Shadow of the Sun. See TIME, and SHADOW.

The Word is form'd from the Latin *Dies*, Day, because indicating the Hour of the Day. See HORA.

The Greeks call it *Sciasterium*, from its doing it by the Shadow. See SCIASTERIUM.

Dial is more accurately defin'd, a Draught, or Description of certain Lines on a Plane, or Surface of a Body given, so contriv'd, as that the Shadow of a Style, or a Gnomon, or a Ray of the Sun pass'd through a Hole therein, shall touch certain Points at certain Hours. See STYLE.

The Diversity of *Sun-Dials* arises from the different Situation of the Planes, and the different Figure of the Surfaces whereon they are describ'd; whence they become denominated *Equinoctial*, *Horizontal*, *Vertical*, *Polar*, *Direct*, *Erect*, *Declining*, *Inclining*, *Reclining*, *Cylindrical*, &c. See DIALLING.

Dials are sometimes distinguish'd into *Primary*, and *Secondary*.

Primary DIALS, are those, either drawn on the Plane of the Horizon, call'd *Horizontal Dials*; or perpendicular thereon, on the Planes either of the Meridian, or Prime Vertical, call'd *Vertical Dials*; to which Number are usually added those drawn on the Polar, and Equinoctial Planes, tho' neither Horizontal, nor Vertical. See PLANE.

Equinoctial DIAL, is that describ'd on the Equinoctial Plane, or a Plane representing that of the Equinoctial. See EQUINOCTIAL.

A Plane oblique to the Horizon, either hangs over towards it, and makes an acute Angle with the Plane of the Horizon; or it falls off backwards from it, and makes an obtuse Angle therewith. This latter is call'd a *Reclining Plane*; which, if it recline back equal to the Complement of the Latitude of the Place, it lies in the Plane of the Equinoctial; and a *Dial* drawn thereon, is denominated an *Equinoctial Dial*.

Equinoctial Dials are usually distinguish'd into *Upper*, which look towards the Zenith; and *Lower*, which respect the Nadir.

Now, as the Sun only illumines the upper Surface of an Equinoctial Plane, while he is in our Hemisphere, or on the Northern Side of the Equator, an *Upper Equinoctial Dial*

will only shew the Hour during the Spring, and Summer-Season.

And again, as the Sun only illumines the lower Surface of an Equinoctial Plane, while he is in the Southern Hemisphere, or on the other Side of the Equator; a *Lower Equinoctial Dial* will only shew the Hour in Autumn, and Winter.

To have an *Equinoctial Dial*, therefore, that shall serve all the Year round, the *Upper* and *Lower* must be joyned together; that is, it must be drawn on each Side of the Plane.

And since the Sun shines on one Side or other of an Equinoctial Plane the whole Day; such a *Dial* will shew all the Hours of an Artificial Day.

To describe an Equinoctial DIAL Geometrically.

The *Equinoctial* is the first, easiest, and most natural of all *Dials*: But the Necessity of drawing it double, prevents its being much in Use. However, as its Structure shews the reason of the other Kinds; and as it even furnishes a good Mechanical Method of drawing all the other Kinds of *Dials*, it shall be here laid down.

First, then, to describe an *Upper Equinoctial DIAL*: From a Center C (*Tab. Dialling*, Fig. 4.) describe a Circle ABDE, and by two Diameters AD, and BE, intersecting each other at right Angles, divide it into Quadrants AB, BD, DE, and EA. Subdivide each Quadrant into six equal Parts by their right Lines C 1, C 2, C 3, &c. which Lines will be Hour-Lines. Through the Centre C draw a Style, or Pin, perpendicular to the Plane ABDE.

The *Dial* thus describ'd, being raised so as to be in the Plane of the Equator, the Line C 12, in the Plane of the Meridian, and the Point A looking towards the South; the Shadow of the Style will shew the Hours both of the Fore-noon and After-noon.

For, Hourly Circles include Arches of the Equator of fifteen Degrees each. (See *Hourly Circle*.) Consequently the Plane of ABDE being supposed in the Plane of the Equator, the Hourly Circle will likewise include Arches of 15 Degrees of the Circle ABDE. Wherefore, since the Angles 12 C 11, 11 C 10, 10 C 9, &c. are each here supposed 15 Degrees, the Line C 12, C 11, C 10, C 9, &c. are Intersections of Hourly Circles, with the Plane of the Equinoctial.

Again, since the Style passing through the Centre C, is the Axis of the World; its Distance from the Centre of the Earth being inconsiderable, and it being the common Diameter of the Hourly Circles; its Shadow will cover the Hour C 12, when the Sun is in the Meridian, or Circle of 12 a-Clock; C 11, when in the Circle of 11 a-Clock; C 10, when in the Circle of 10 a-Clock, &c.

Secondly, To describe a *Lower Equinoctial DIAL*: The Method is the same as that for the *Upper Dial* already describ'd; except that no Hour-Lines are to be drawn beyond that of 6 a-Clock.

Thirdly, To describe an *Universal Equinoctial DIAL* Join two Metal, or Ivory Planes ABCD, and CDEF, (Fig. 5.) so as to be moveable at the Joyn't. On the upper Surface of the Plane ABCD, describe an *Upper Equinoctial Dial*, and upon the lower a *Lower*, as already directed; and through the Center I draw a Style. In the Plane DEF cut a Box, and put a Magnetical Needle G therein; fit on the same Plane a Brass Quadrant nicely graduated, and passing through a Hole cut in the Plane ABCD. Now, since this may be so plac'd, by means of the Needle, as that the Line I 12, shall be in the Plane of the Meridian; And, by means of the Quadrant, may be so raised, as that the Angle BCE shall be equal to the Elevation of the Equator; it will serve as a *Dial* in any Part of the World.

Horizontal DIAL, is that describ'd on a Horizontal Plane, or a Plane Parallel to the Horizon. See HORIZON.

Since the Sun may illumine a Horizontal Plane at all Times of the Year, while he is above the Horizon; a *Horizontal Dial* may shew all the Hours of the Artificial Day, throughout the Year: So that a more perfect *Dial* cannot be requir'd.

To describe an Horizontal DIAL Geometrically.

Draw a Meridian Line B, (Fig. 6.) on the given immovable Plane; or assume it, at Pleasure, on a moveable one: See MERIDIAN Line.

From a Point taken at Pleasure, as C, erect a Perpendicular CD, and make the Angle CAD equal to the Elevation of the Pole. In D make another Angle CDE equal likewise to the Elevation of the Pole, and draw the right Line DC meeting AB in E. Then make EB equal to ED, and from the Centre B with the Radius BE, describe a Quadrant EBF, which divide into 6 equal Parts. Through E draw the right Line GH, cutting EB at right Angles. From the Centre B through the several Divisions of the Quadrant EF draw right Lines B a, B b, B c, B d, B h, meet-

meeting the Line GH, in the Point a BC dH. From E upon the right Line EG set off the Intervals Ea, Eb, &c. Ea from E to e, Eb from E to f, Ec from E to g, &c. From the Centre A describe a little Circle, and applying a little Ruler to A, and the several Points of Division a, b, c, d, H and e, f, g, h, G, draw the Lines A 11, A 10, A 9, A 8, A 7, and A 1, A 2, A 3, A 4, A 5. Through A draw a right Line 6, 6 perpendicular to AB. Continue the right Line A 7, beyond the little Circle to 7, A 8 to 8, A 5 to 5, and A 4 to 4. Round the whole Scheme draw a Square, Circle, or Oval Figure. And lastly in A fix an Index, making an Angle DAC with the Meridian AB equal to the Elevation of the Pole: Or in C erect a perpendicular Style equal to CD; or at AE fix a Triangular Plate ADE perpendicular to the Plane of the Dial.

Now, the Lines A 11, A 10, A 9, &c. are the Hour-Lines of the Fore-noon; and A 1, A 2, A 3, &c. those of the After-noon: and the Shadow of any of the Gnomon's, or Styles above mention'd, at the several Hours, will fall on the respective Hour-Lines.

A Horizontal Dial, Trigonometrically.

In large Dials, where the utmost Accuracy is required, Geometrical Lines are best for a-side; and in lieu thereof, the Lines of the Dial to be determin'd by Trigonometrical Calculation. Monsr. Clapius, in the *Memoires de l'Academie Royale des Sciences*, An. 1707, has done us good Service herein; having render'd the Calculation of the Hour-Lines, which before had been obscure enough, exceeding easy and expeditious: His Canons, or Analogies we shall lay down under the respective Kinds of Dials.

And, first, For a Horizontal Dial: The Elevation of the Pole of the Place being given, to find the Angles, which the Hour-Lines make with the Meridian, in the Centre of the Dial.

Analogy, or Canon.

As the whole Sine is to the Sine of the Elevation of the Pole of the Place; so is the Tangent of the Sun's Distance from the Meridian, for the Hour required; to the Tangent of the Angle requir'd. That is, As the Side FC (Fig. 7.) is to DC: So is the Tangent of FDC, to the Tangent FC of the Angle FAC. See TANGENT, &c.

Vertical Dial, is that drawn on the Plane of a Vertical Circle. See VERTICAL.

Of these there are several Varieties, according to the Vertical pitch upon. The Verticals chiefly us'd are the Prime Vertical, and the Meridian; from which respectively arise South, North, East, and West Dials.

Dials, which respect the Cardinal Points of the Horizon, are particularly call'd Direct Dials. See DIRECT.

If any other Vertical be chose, the Dial is said to Decline. See DECLINER.

Further, If the Circle, whose Plane is us'd, be perpendicular to the Horizon, as is suppos'd to be the Case in all those now mention'd, the Dials are particular denominated Erect. E. g. Erect South; Direct North, &c. See ERECT, &c.

Otherwise, the Plane being oblique to the Horizon, they are said either to Incline, or Recline. See INCLINER, RECLINER, &c.

South Dial, or more particular an Erect Direct South Dial, is that described on the Surface of the Prime Vertical Circle, looking to the South. See SOUTH.

Since the Sun then illumines the Plane of the Prime Vertical, looking to the South, when, in its Progress he passes from this to that; in which he is employ'd six Hours before, and six after Noon; a South Dial shews the Hours from six in the Morning to six at Night.

To draw a Vertical South Dial.

On the Plane of the Prime Vertical looking Southwards, draw a Meridian Line AB (Fig. 8.) and taking the Interval AC at Pleasure for the Magnitude of the future Dial; In C erect a Perpendicular of an indefinite Length CD, and making an Angle CAD equal to the Elevation of the Equator, draw a right Line AD meeting the Perpendicular CD in D. Then in the Point D make the Angle CDE likewise equal to the Elevation of the Equator, and draw the right Line DE cutting the Meridian in E. Through E draw the right Line GH, cutting the Meridian AB at right Angles. Take EB equal to ED, and with this Radius describe a Quadrant EF. The rest is perform'd as in a Horizontal Dial; except that the Hours of the After-noon are to be wrote on the right Hand, and those of the Fore-noon on the left, as in the Figure. Lastly, in the Point A fix an oblique Style in an Angle equal to the Elevation of the Equator: Or in C erect a perpendicular Style equal to CD. Or, lastly, a Triangular Plate ADE upon AE, so as to be perpendicular to the Plane of the Dial.

Then will the Shadow of any of these Indexes touch the several Hour-Lines at their respective Hours.

North Dial, or Erect Direct North Dial, is that described on the Surface of the Prime Vertical, looking Northward. See NORTH.

Since the Sun only illumines this Surface, while he advances from the East to the Prime Vertical, and proceeds from the same Vertical to the West; and since he is in the Prime Vertical at six a-Clock in the Morning, and six in the Evening; a North Dial shews the Hours before six in the Morning, and those after six in the Evening. And hence, as in Autumn, and Winter Time, the Sun does not rise before six, and yet sets before six in the Evening; a North Dial is of no Use all that Time. But being join'd with a South Dial, it supplies the Defects thereof.

To describe a Vertical North Dial.

Draw a Meridian Line EB (Fig. 9.) and from A describe a little Circle at Pleasure. At A make the Angle DAC equal to the Elevation of the Equator, and from the Point C taken at Pleasure, erect a Perpendicular CD meeting AD in D. Make another Angle CDE likewise equal to the Elevation of the Equator, and draw likewise a Line DE meeting AE in E. Then take EB equal to ED. And through I draw GH, cutting SB at right Angles. And from the Centre B with the Radius IB describe a Quadrant; which divide into six equal Parts. Through the two extrem Divisions draw Lines from the Centre B, viz. B d, and BH, meeting GH in little d, and H, and make I h equal to I d, and IG equal to IH. Then applying a Ruler to A and d, and H; and again to A and h, and G, draw the right Lines A 5, A 4, A 7, and A 8. Lastly, in A fix an oblique Index AD, making an Angle DAE with the Meridian Line in the Plane of the Meridian, equal to the Elevation of the Equator: Or a perpendicular Index in C equal to CD: Or, instead of an Index, a Triangular Plate EDA on the Meridian Line EA, perpendicular to the Plane of the Dial.

Then will A 4, A 5, A 6, be the Hours of the Fore-noon; and A 6, A 7, A 8, those of the After-noon; and accordingly will be pointed out by the Shadow of the several Indexes.

Or thus: In a South Dial (Fig. 10.) If the Hour-Lines 4 and 5, as also 7 and 8, be continued beyond the Line 6 A 6; and the Triangle ADE turned about its Pole A till AE fall directly against A 11; it is evident, a North Dial is hereby had: only observing what has been said about writing the Hours.

A Vertical North, or South Dial Trigonometrically.

These only differ from the Horizontal Dial, in that the Angle CAB is equal to the Complement of the Elevation of the Pole of the Place; so that the same Analogy serves as for the Horizontal one: Only making the second Term the Complement of the Elevation of the Pole of the Place.

East Dial, or Erect Direct East Dial, is that drawn on the Plane of the Meridian, looking to the East. See EAST.

Since the Sun only illumines the Plane of the Meridian, looking Eastward before Noon; an East Dial can only shew the Hours till Noon.

To describe an East Dial.

On the Eastern Side of the Plane of the Meridian draw a right Line AB (Fig. 11.) parallel to the Horizon, and to this join AK, making with it an Angle KAB, equal to the Elevation of the Equator. Then with the Radius AC describe a Circle, and through the Centre D draw AE perpendicular to AK; by which means the Circle will be divided into 4 Quadrants. Each of these Quadrants subdivide into six equal Parts. And from the Centre D thro' the several Divisions draw right Lines, D 4, D 5, D 6, D 7, D 8, D 9, D 10, D 11. Lastly, in D erect a Style equal to the Radius DE, perpendicular to the Plane; or, on two little Pieces perpendicular fix'd in EC, and equal to the same Radius DE, fit an Iron Rod parallel to AC.

Thus will each Index at the several Hours project a Shadow to the respective Hour-Lines 4, 5, 6, &c.

West Dial, or Erect Direct West Dial, is that described on the Western Side of the Meridian. See WEST.

As the Sun only illumines that Side of the Plane of the Meridian, looking to the West after Noon, a West-Dial can only shew the Hours from Noon to Night.

This, therefore, join'd with an East-Dial shews all Hours of the Day.

To draw a West Dial.

The Construction is perfectly the same as that of an East Dial: Only that its Situation is inverted, and the Hours wrote accordingly.

Polar Dial, is that described on a Plane passing through the Poles of the World, and the East, and West Points of the Horizon. It is of two Kinds: The first, looking up towards the Zenith, and call'd Upper; the latter down to the Nadir, call'd Lower.

The Polar Dial, therefore, is inclin'd to the Horizon in an Angle equal to the Elevation of the Pole.

Since the Polar Plane PQQS (Fig. 12.) passes through the East and West Points O and S, a Quadrant of the Equator is intercepted between it, and the Meridian: Consequently the Upper Surface is illumined by the Sun from six in the Morning to six at Night; and the Lower from the Sun's Rise to six in the Morning, and from six in the Evening to Sun-set. A Lower Polar Dial, therefore, shews the Hour of the Morning from Sun-Rise to six a-Clock, and that of the Evening from six to Sun-set; And an Upper, the Hours from six in the Morning to six in the Evening.

To draw an Upper Polar Dial.

Draw a right Line AB (Fig. 13.) parallel to the Horizon, and if the Plane be immovable, find the Meridian Line CE. Divide CE into two equal Parts, and through C draw a right Line EG parallel to AB. Then from the Centre D with the Interval DE, describe a Quadrant, which divide into six equal Parts. And from the same Centre D through the several Points of Division draw right Lines D 1, D 2, D 3, D 4, D 5; and the Intervals E 1, E 2, E 3, E 4, E 5, set off the contrary Way from E 11, 10, 9, 8, and 7. From the Points 5, 4, 3, 2, 1, &c. raise Perpendiculars meeting the Line EG in the correspondent Points. Lastly, in D erect a perpendicular Style equal to DE; or on two equal Pieces E and C, fix a Croft Iron Rod.

Then will 12, 12, 1, 1, 2, 2, 3, 3, &c. be Hour-Lines, to be pointed out at the proper times by the Shadow of the Indices.

An Upper Polar Dial, only differs in Situation, and the Manner of writing in the Hours, from East, and West Dials join'd together in the Line of a-Clock.

A Lower Polar Dial is had by putting out the Hours of the Fore-noon 9, 10, and 11, and those of the After-noon 1, 2, and 3, with the Noon-hour 12 it self: and only leaving the Hours 7 and 8 of the Morning, and 4 and 5 in the Evening.

To draw all the Primary DIALS on the same Block, or Post.

1. Let the Plane ABCD (Fig. 14.) in the proper Position of the Block be supposed Horizontal; And thereon describe a Horizontal Dial. See Horizontal Dial.

2. Draw the right Lines EM, and FL parallel to DC, which accordingly, in the proper Position of the Block, will be parallel to the Horizon. Then let the Plane BNMC make an Angle with EM, equal to the Elevation of the Pole, CME: and thereon describe an Upper Polar Dial. See Polar Dial.

3. Let the Opposite Plane ADE make with EM an Angle DEM, equal to the Elevation of the Equator: And on this draw an Upper Equinoctial Dial. See Equinoctial Dial.

4. Let the Plane KLHI make with FL an Angle HLF: And on this inscribe a Lower Equinoctial Dial. See Equinoctial Dial.

5. Let the opposite Plane EG make with FL an Angle FGL equal to the Elevation of the Pole: And here draw a Lower Polar Dial. See Polar Dial.

6. Let the Plane MNKL, and the opposite one EE be perpendicular to FL: And on that draw a South Dial, and on this a North Dial. See South North and Dial.

7. In the Plane EMLF describe a West Dial; and on the opposite Plane an East Dial. See East and West Dials.

If then the Block be so placed, as that the Plane MNKL looks to the South, and the Plane of the Meridian bisect it by the Line of 12 a-Clock in the Horizontal Dial ABCD, and South Dial MNKL; They will all tell the Hour of the Day.

Secondary DIALS.

Secondary DIALS are all those drawn on the Planes of other Circles, beside the Horizontal, prime Vertical, Equinoctial, and Polar Circles: Or those, which either Decline, Incline, Recline, or Decline.

Declining DIALS are Erect, or Vertical Dials, which decline from any of the Cardinal Points; Or, more strictly, which cut either the Plane of the Prime Vertical, or of the Horizon at oblique Angles.

The Use of Declining Dials is very frequent; as the Walls of Houses, whereon Dials are usually drawn, commonly deviate from the Cardinal Points. See DECLINER.

Of Declining Dials there are several Kinds, denominated from the Cardinal Points, which they seem most to respect, but from which they have a real Declination: Decliners from the South, and from the North, and even from the Zenith.

Vertical Declining DIALS, Trigonometrically.

Prob. 1. The Declination of the Plane, and the Elevation of the Pole of the Plane, being given: To find the Angle form'd in the Centre of the Dial, by the Meridian, and Substyle.

Analogy: As the whole Sine is to the Tangent of the Complement of the Height of the Pole of the Place GF 5 (Fig. 15.) so is the Sine of the Declination of the Plane GFD to the Tangent GD, of the Angle required, GAD.

Prob. 2. The Declination of the Plane being given, and the Elevation of the Pole of the Place; to find the Angle form'd in the Centre of a Vertical Declining Dial, by the Substyle and Axis.

Analogy: As the whole Sine is to the Sine of the Complement of the Elevation of the Pole GF; so is the Sine of the Complement of the Declination of the Plane DGF, to the Side DF, the Sine of the Angle DAB required.

Prob. 3. The Declination of the Plane, and the Elevation of the Pole, given; to find the Difference of Longitudes, that is, the Arch of the Equator comprehended between the Meridian of the Place, and the Meridian of the Plane.

Analogy: As the whole Sine is to the Sine of the Height of the Pole; so is the Tangent of the Complement of the Declination of the Plane, to the Tangent of the Complement of the Difference of Longitudes.

Prob. 4. The Angle of the Difference of Longitudes, and that of the Axis, with the Substyle, being given; to find the Angles form'd in the Centre of a Vertical Declining Dial, between the Substyle and Hour-Lines.

This Problem admits of three Cases. For the Hour-Lines, whose Angles are sought, may be, either, 1. Between the Meridian, and Substyle; or, 2. Beyond the Substyle; or, 3. On that Side the Meridian the Substyle is not. In the two first Cases, the Difference is to be taken between the Sun's Distance from the Meridian that Hour, and the Angle of the Difference of Longitudes found by the last Problem: And in the third Case, the Sum of those two Angles is to be taken; and the following Analogy used.

Analogy: As the whole Sine is to the Sine of the Angle between the Axis and Substyle, CM; so is the Tangent of the Difference of the Sun's Distance from the Meridian, and the Difference of Longitudes, or of the Sum of those two Angles; to the Tangent of the Angle required.

Prob. 5. The Angle form'd by the Substyle, with the Hour-Lines, and that of the Substyle, with the Meridian, given; to find the Angles form'd between the Meridian, and Hour-Lines in the Centre of Vertical Declining Dials.

1. The Angles of the Hour-Lines between the Meridian, and Substyle, are found by subtracting the Angle form'd by the Substyle, with the Hour-Line, from the Angle form'd by the Substyle, with the Meridian.

2. The Angles beyond the Substyle, and on the Side opposite to that of the Meridian, are found by adding those two Angles.

3. Those on the other Side the Meridian, are found by taking their Difference.

To describe a Vertical Dial, declining from the South to the East, or West, Geometrically.

Find the Declination of the Plane, as already taught under the Article DECLINATION, and DECLINER.

Then draw upon Paper a Horizontal Dial, supposing the Line of Contingency of the Horizontal, with the Equinoctial Plane to be GH, (Fig. 16.) Through the Point E, wherein the Meridian Line AE cuts the same, draw a right Line IK, making with GH an Angle HEK equal to the Declination of the given Plane. Thus, as GH represents the Intersection of the Prime Vertical, with the Horizon; IK will be the Intersection of the Inclining Plane, and the Horizon; Whence we also conceive, that the Part IE must be raised above GE, in Case the given Plane declines to the West: Or be depressed below the same GE, in Case it declines to the East. Draw a right Line parallel to the Horizon on the given Plane, or Wall, to answer to IK, and assuming a Point therein, answering to E set off from the right Line IK on the Paper, the several Hourly Distances E 1, E 2, E 3, &c. Then from the Point E erect a Perpendicular EC, equal to the Distance of the Centre of the Horizontal Dial, from its Line of Contingency. Draw Lines thence to the several Points of the Hour-Lines E 1, E 2, E 3, &c. let fall a Perpendicular AD from the Centre of the Horizontal Dial A to the Line of Contingency IK, and transfer the Distance ED from the Point E upon the Wall; then will CD be the Substyle Line. See SUBSTYLE.

Wherefore, joining AD and DC at right Angles; the Hypotenuse AC will be an oblique Index to be fasten'd on the Wall in the Point C, according to the Angle DCA.

To draw a Vertical Dial declining from the North towards the East, and West.

Take the Declination of the Plane, as already taught: Then, as North Dials are only South Dials inverted, draw a Vertical Dial declining from the South, and invert it in such manner, as that the Centre C look to the Horizon, and the Point E to the Zenith; and the Hours on the right

Hand set off towards the Left, and contrarywise; Omitting all Hour-Lines, which in such a Plane cannot be shewn.

For the Practice the best Way is, after drawing a *South Decliner* upon Paper, to prick the several Points thereof through with a Pin; Then applying the Face of the Paper to the Wall, the Back-side thereof will shew you all the Points necessary for the *North Declining Dial*.

Inclined DIALS, are those drawn on Planes not *Erect*, but *Inclining*, or leaning forward towards the South, or Southern Side of the Horizon, in an Angle, either greater or less than the Equinoctial Plane. See *INCLINATION*.

Such an *Inclined Plane* is conceived by supposing one Part of the Plane of the Equator lifted up toward the *Zenith*, and the other depressed toward the *Nadir*; and thus to revolve upon a Line drawn from the East to the West Points of the Horizon.

To draw an Inclined DIAL.

1. The *Inclination* of the Plane, as DC (Fig. 17.) being found by a *Decliner*, as taught under *INCLINATION*; If it fall between the Equinoctial Plane CE, and the Vertical one CB, in such manner, as that the Angle of *Inclination* DCA be greater than the Elevation of the Equator ECA: On the Upper Side draw a *North Dial*; and on the Lower a *South Dial* to the Elevation of the Equator, which is equal to the Aggregate of the Elevation of the Equator of the given Place, and the Complement of the *Inclination* to a Quadrant.

2. If the *Inclined Plane* CF fall between the Horizontal one CA, and the Equinoctial CE, so that as the Angle of *Inclination* FCA is less than the Elevation of the Equator ECA: describe an *Horizontal Dial* to an Elevation of the Pole, equal to the Aggregate of the Elevation of the Pole of the given Place, and the *Inclination* of the Plane.

Dials thus inclined, are drawn after the same manner as *Primary Dials*, except, that the Index in the former Case must be fitted under the Angle ADC, and in the latter under the Angle DFC: And that the Distance of the Centre of the *Dial* from the Line of Contingency in the former Case is DC, and in the latter FC.

Reclining DIALS, are those drawn on Planes not *Erect*, but *Reclined*, or leaning backwards from the *Zenith* towards the North, in an Angle greater, or less than the Polar Plane.

A *Reclined Plane* is conceived by supposing one Part of the Polar Plane raised toward the *Zenith*, and the other depressed towards the *Nadir*: And thus revolving about a Line drawn from East to West. To find the *Reclination* of a Plane. See *RECLINATION*.

To draw a Reclining DIAL.

1. If the *Reclined Plane* HC fall between the Vertical Plane BC, and the Polar Plane IC; so as that the Angle of *Reclination* BCH is less than the Distance of the Pole from the *Zenith* BCI: Describe two Vertical *South* and *North Dials* to an Elevation of the Equator, equal to the Difference between the Elevation of the Equator of the given Place, and the Angle of *Reclination*.

2. If the *Reclined Plane*, as KC fall between the Polar Plane IC, and the Horizontal one CL; so as that the Angle of *Reclination* BCK is greater than the Distance of the Pole from the *Zenith* ICB: Describe a *Horizontal Dial* thereon to the Elevation of the Pole, equal to the Difference between the Angle of *Reclination*, and the Elevation of the Equator in the given Place.

Inclining, and Reclining DIALS, Trigonometrically.

The *Inclination*, or *Reclination* of the Plane, and the Elevation of the Pole being known; to find the Angles made in the Centre of an *Inclining*, or *Reclining Dial*, by the Meridian, and Hour-Lines.

Such *Dial* is properly a *Horizontal Dial*, for a Latitude equal to the particular Elevation of the Pole on the Plane of the *Dial*. Its Angles, therefore, are found by the Analogy laid down for *Horizontal Dials*.

As to the Elevation of the Pole, on the *Dial Plane*, 'tis thus found: The Plane being *inclined*; Either its *Inclination* is greater than the Elevation of the Pole of the Place; or less; or equal thereto. In the two first Cases, for Upper *South*, or Lower *North Dials*, the particular Elevation of the Pole on the Plane, is had by taking the Difference between the Elevation of the Pole of the Place, and the *Inclination* of the Plane: And in the latter Case, the *Dial* is a *Polar Dial*, wherein the Hour-Lines will be parallel, by reason the Plane being *inclined* on the Axis of the World, neither of the Poles can be represented thereon.

For Upper *North*, and Lower *South Dials*: 1. If the *Inclination* be greater than the Elevation, the Complement of the *Inclination* must be added to the Complement of the Elevation. 2. If it be less, the *Inclination* must be added to the Elevation. 3. If it be equal, the *Dial* will be an *Equinoctial Dial*, wherein the Angles at the Centre will be equal to the Sun's Distance from the Meridian.

Deinclined DIALS, are those which both *decline*, and *incline*, or *recline*. See *DEINCLINED*.

The Use of *Inclined*, *Reclined*, and especially *Deinclined Dials*, is very rare: The Geometrical, and Trigonometrical Construction of these last, therefore, as being somewhat intricate withal, we here chuse to omit, and refer such as may have a Fancy for such a *Dial*, to an Universal Mechanical Method of drawing all Kinds of *Dials* here subjoyn'd.

An easy Method, to describe a DIAL, on any Kind of Plane, by means of an Equinoctial Dial, or Circle.

Suppose, e.g. A *Dial* requir'd on a Horizontal Plane; If the Plane be immovable, as ABCD (Fig. 18.) find a Meridian Line GF: Or if moveable, assume the Meridian at Pleasure. Then by means of the Triangle KEF, whose Base is applied on the Meridian Line raise the Equinoctial *Dial* H, till such Time as the Index GI becomes parallel to the Axis of the World, (which is had, if the Angle KEF be equal to the Elevation of the Pole) and the 12 Clock Line on the *Dial* hang over the Meridian Line of the Plane, or the Base of the Triangle. If then in the Night-time a lighted Candle being successively applied to Axis GI, so as the Shadow of the Index, or Style GI fall upon one Hour-Line after another; The same Shadow will mark out the several Hour-Lines on the Plane ABCD.

Noting the Points, therefore, on the Shadow, draw Lines through them to G: Then an Index being fix'd in G, according to the Angle IGF, its Shadow will point out the several Hours by the Light of the Sun.

If a *Dial* were requir'd on a Vertical Plane; having raised the Equinoctial Circle, as above directed, push forward the Index GI, till the Tip thereof I, touch the Plane.

If the Plane be *Inclined* to the Horizon, the Elevation of the Pole should be found on the same; and the Angle of the Triangle KEF made equal thereto.

Note, Beside the several Species of *Dials*, above-mention'd, which are said to be *with Centres*, there are others, call'd *Dials without Centres*.

DIALS without Centres, are those whose Hour-Lines do really converge, but so slowly that the Centre they converge towards, cannot be express'd on the given Plane.

Horizontal DIALS without Centres are to be made for Places the Elevation of whose Pole is very small; or very great.

Vertical DIALS without Centres for Places the Elevation of whose Pole is very great.

For the Furniture of Dials. See FURNITURE.

Ring-DIAL. }
Portable DIAL. } Sec { RING DIAL.
Quadrantal DIAL. } { HORIZONTAL QUADRANT.
Reclining DIAL. } { REFLECTING DIAL.

Nocturnal, or *Night-DIAL*, is that which shows the Hours of the Night.

Of this there are two Kinds, Lunar, and Siderial.

MOON-DIAL, or *Lunar DIAL*, is that which shows the Hour of the Night, by means of the Light, or Shadow of the Moon projected thereon from an Index.

To describe a Moon-DIAL.

Suppose, e.g. A *Horizontal Moon-Dial* required: Draw first a *Horizontal Sun-Dial*: Then erect two Perpendiculars AB, and CD, (Fig. 19.) to the Line of 12 a Clock, and dividing the Interval GF into 12 equal Parts; Through the several Points of Division draw Lines parallel thereto. Now, appropriating the first Line CD to the Day of the New Moon, and the second to the Day, when the Moon comes an Hour later to the Meridian than the Sun, their Intersections with the Hour-Lines will give Points, through which to draw a Curve Line 12, 12, for the Meridian Line of the Moon. After the like manner determine the other Hour-Lines 12, 22, 32, &c. which the Shadow of the Moon projected from the Style of the *Dial* intersects at the respective Hours. Blot out the Hour-Lines of the *Sun-Dial*, together with the Perpendiculars, whereby the Lunar-Hours were drawn, and divide the Interval GF, by other Parallel Lines into 15 equal Parts, answering to the 15 Days between New and Full Moon. Lastly, to these Lines write the several Days of the Moon's Ages.

Now, the Moon's Age being learnt from a Calendar; the Intersection of the Lines of the Moon's Age, with the Lunar Hour-Lines, will give the Hour of the Night.

After the same manner may any other *Sun-Dial* be converted into a *Moon-Dial*.

To draw a Portable Moon-DIAL.

On a Plane that may be raised according to the Elevation of the Equator describe a Circle AB (Fig. 20.) and divide its Circumference into 24 equal Parts. From the same Centre C describe another moveable Circle DE, which divide into 24 equal Parts, or Hours. In the Centre C erect an Index, as for an *Equinoctial Dial*.

This *Dial* being duly plac'd after the manner of an Equinoctial *Dial*, and the 12 a-Clock Line brought to the Day of the Moon's Age: The Shadow of the Index will give the Hour.

To use a *Solar*, as a *Lunar-Dial*, i. e. to find the Hour of the Night by a *Sun-Dial*.

Observe the Hour, which the Shadow of the Index points at by Moon-Light: Find the Moon's Age in the Calendar, and multiply the Number of Day by $\frac{1}{2}$, the Product is the Number of Hours to be added to the Hour shewn by the Shadow, to give the Hour required.

DIALECT, the peculiar Language of some Province, or Part of a Nation, form'd by Corruption of the general, or national Language. See LANGUAGE.

How'er could speak 5 different Languages in one Verse, i. e. five *Dialects*, viz. the *Atric*, *Jonic*, *Eolic*, *Doric*, and the common Language of the *Greeks*. See GREEK, *ATRIC*, *JONIC*, &c.

The *Boionese*, *Bergomas*, *Tyban*, &c. are the *Dialects* of the *Italian*. See ITALIAN.

The *Gafcon*, and *Picard*, are the *Dialects* of the *French*. See FRENCH, &c.

DIALECTICA, the Art of Logic; or, of Thinking, and Reasoning justly. See LOGIC.

Zeno Eleates was the first who discover'd the natural Series of Principles, and Conclusions, observed in Reasoning, and form'd an Art thereof, in Form of Dialogue, which for this reason was call'd *Dialectica*.

The Word comes from the Greek *διαλεκτικη*, of the very *διαλεκτικη*, *differere*, to discourse, reason.

The *Dialectics* of the Ancients is usually divided into several Kinds: The first was the *Eleatica*, that of *Zeno Eleates*; which was threefold: viz. *Confutatorium*, *Colloquatorium*, and *Contentivum*. The first consisting of Rules for detecting, or drawing Conclusions: The second, the Art of *Dialogue*, which became of such universal Use in Philosophy, that all Reasoning was call'd *Interrogation*. Then, *Syllogism* being laid a-side, the Philosophers did all by *Dialogues*; it lying on the Respondent, to conclude, and argue from the several Conclusions made. See DIALOGUE.

The last Part of *Zeno's Dialecticks*, *aporia*, was Contentions, or the Art of Disputing, and Contradicting; tho' some, particularly *Laertius*, ascribe this Part to *Protagoras*, a Disciple of *Zeno*.

The second is the *Dialectica Megarica*, whose Author is *Echidius*, not the Mathematician, but another, of *Megara*. He gave much into the Method of *Zeno*, and *Protagoras*: Tho' there are two Things appropriated to him: The first, that he impugned the Demonstrations of others, not by Assumptions, but Conclusions; continually making Illations, and throwing in *Ergo*, *Ergo*, *Ergo*. The second, that he set a-side all Arguments drawn from Comparison, or Similitude, as invalid.

He was succeeded by *Eubulides*, from whom the Sophistic Way of Reasoning is said to be deriv'd. In his Time the Art is described as manifold: *Mentius*, *Falsus*, *Electra*, *Obvelata*, *Acervata*, *Cornuta*, and *Calvus*. See SOPHISM.

The third is the *Dialectica* of *Plato*, which he proposes as a Kind of *Analysis*, to direct the human Mind, by dividing, defining, and bringing Things to the first Truth; where being arriv'd, and hopping there a little, it applies it self to explain sensible Things; but with a View to return to the first Truth, where alone it can rest. Such is the Idea of *Plato's Analysis*. See ANALYSIS, PLATONISM; ACADEMIC, &c.

The fourth is *Aristotle's Dialectica*, containing the Doctrine of simple Words, deliver'd in his Book of *Prædicaments*: The Doctrine of Propositions, in his Book, *de Interpretatione*: That of the several Kinds of Syllogisms, in his Books of *Analyticks*, *Topicks*, and *Elenchus*'s. See SYLLOGISM, TOPIC, ELENCHUS, PROPOSITION, &c.

The fifth is the *Dialectica* of the *Stoicks*, which they call a Part of Philosophy, and divide into *Rhetoric*, and *Dialectic*: to which some add *Oris*, or *Definitive*, whereby Things are justly defin'd; comprehending likewise the *Canons*, or *Criteria* of Truth. See CANTONUM, &c.

The *Stoicks*, ere they come to treat of Syllogisms, have two principal Places, the one about the Word signifying, the other about the Thing signified. On Occasion of the first, they consider Abundance of Things belonging to the Grammaticians Province, what, and how many Letters, what is a Word, Diction, Speech, &c. On Occasion of the latter, they consider Things themselves, not as without the Mind, but as in it, receiv'd in by means of the Senses. Accordingly, they first teach, that, *Nisi sit in Intellectu, quod non prius fuerit in Sensu*, Whatever is in the Mind, passes thither by the Senses; and that, *Aut incognoscitur sibi, ut Plato*, who meets the Sight; *Aut semelintenditur, ut Cæsar* by his Efficacy; *Aut Propositione*, either by

Enlarging, as a Giant, or by Diminishing, as a Pigmy; *Aut Translatione*, as a Cyclops; *Aut Compositione*, as a Centaur; *Aut Contrario*, as Death; *Aut Privatione*, as a blind Man. See STOICKS.

The sixth is *Epicurus's Dialectic*. For tho' he seems to have deserv'd *Dialectic*, he cultivated it with Vigour: He was only averfe to that of the *Stoicks*, who, he thought, attributed too much thereto; as pronouncing him, alone wife, who was well vers'd in *Dialecticks*. For this Reason *Epicurus* seeming to set a-side the common *Dialecticks*, had recourse to another Way, viz. to certain *Canons*, which he substituted in their stead, the Collection whereof he call'd *Canonica*. And as all Questions in Philosophy are either, *de Re*, or *de Voce*; he gave separate Rules for each. See CANONICA.

DIALECTICAL Arguments, in Logick, are such as are barely probable, and do not convince, or determine the Mind to either Side of the Question. See PROBABILITY.

DIALLING, the Art of drawing *Sun*, *Moon*, and *Star-Dials* on any given Plane, or the Surface of any given Body. See DIAL.

The *Greeks* and *Latins* call it *Gnomonica*, and *Sciæterica*, by reason it distinguishes the Hours by the Shadow of a *Gnomon*. Some call it *Phoro-sciæterica*, by reason the Hours are sometimes shewn by the Light of the Sun. Lastly, others call it *Horologographia*. See GNOMONICA; SCIÆTERICA, &c.

The Antiquity of *Dials* is beyond doubt: Some attribute their Invention to *Anaximenes Milesius*; and others to *Thales*. *Vitruvius* mentions one made by the ancient *Chaldeæ* Historian *Berosus*, on a Reclining Plane; almost parallel to the Equinoctial, call'd *Hemicyclius*. *Aristarchus Samius* invented the Hemisphere *Dial*. And there were some Spherical ones, with a Needle for a *Gnomon*. The *Discus* of *Aristarchus* was an Horizontal *Dial*, with its Limb raised up all a-round, to prevent the Shadows stretching too far.

But it was late 'ere the *Romans* became acquainted with *Dials*. The first *Sun Dial* at *Rome* was set up by *Papirius Cursor*, about the Year of the City 447, before which Time; says *Pliny*, there is no mention of any Account of Time but by the Sun's Rising, and Setting: It was set up in the Temple of *Quirinus*, but went ill: About 50 Years after, *M. Valerius Messala* being Consul, brought out of *Sicily* another *Dial*, which he set up on a Pillar near the *Rostrum*; but for Want of its being made for that Latitude, it could not go true. They made use of it 11 Years; till *Martius Philippus* set up another more exact.

But there seem to have been *Dials* among the *Jews* much earlier than any of these. Witness the *Dial* of *Ahoz*, who liv'd 400 Years before *Alexander*, and within 12 Years of the Building of *Rome*; mentioned by *Josiah* Chap. XXXVIII. Verse 8.

Dialling is wholly founded on the first Motion of the heavenly Bodies, and chiefly the Sun; or rather on the Diurnal Rotation of the Earth; So that the Elements of Sphericks, and the Spherical Astronomy should be master'd, 'ere a Person advances to the Doctrine of *Dialling*. The Doctrine, or Theory, we say, for as to the Practice, or the Operations themselves, distinct from the Demonstrations, nothing is more easy, and obvious.

The first profess'd Writer on *Dialling*, is *Cleovius*; who demonstrates all, both the Theory, and the Operations, after the rigid Manner of the ancient Mathematicians; But so intricately, that no body, we dare say, ever read them all. *Dechales*, and *Oscannon*, give much easier in their *Confesses*, and *Wolffus* in his *Elementis*. Mr. *Picard* has given a new Method of making large *Dials*, by calculating the Hour-Lines; And Mr. *de la Hire*, in his *Dialling*, printed in 1683, a Geometrical Method of drawing Hour-Lines from certain Points determin'd by Observation: *Eberhardus Welpertus*, in 1645, publish'd his *Dialling*, wherein he lays down a Method of drawing the Primary *Dials* on a very easy Foundation. The same Foundation is describ'd at length by *Sebastianus Munster*, in his *Rudiments Mathematicæ*, publish'd in 1551. *Serminius*, in 1672, publish'd a new Edition of *Welpertus's Dialling*, with the Addition of a whole second Part, about Inclining, and Declining *Dials*, &c. In 1708, the same Work, with *Serminius's* Additions, was re-publish'd with the Addition of a fourth Part, containing *Picard's*, and *de la Hire's* Methods of drawing large *Dials*, which makes much the best, and fullest Book on the Subject: *Peterfon*, *Michael*, and *Muller*, have each wrote on *Dialling*, in the *German Tongue*; *Coeffius*, in his *Horologographia plana*, printed in 1689. *Gasparinus*, in his *Gnomonica Mathematica*, and *Bion*, in his *Use of Mathematical Instruments*.

DIALLING-GLOBE, is an Instrument made of Brass, of Wood, with a Plane fix'd to the Horizon, and an Index; particularly contriv'd to draw all Sorts of *Dials*, and to give a clear Exhibition of the Principles of that Art.

DIALLING-Sphere, is an Instrument made of Brass, with several Semi-Circles sliding over one another, on a moving Horizon, to demonstrate the Nature of the Doctrine of Spherical Triangles, and to give the true Idea of drawing Dials on all manner of Planes.

DIALLING-Lines, or *Scales*, are graduated Lines, placed on Rules, or the Edges of Quadrants, and other Instruments, to expedite the Construction of Dials. See **SCALE**.

The principal of these Lines are, 1. A *Scale of six Hours*, which is only a double Tangent, or two Lines of Tangents each of 45 Degrees, join'd together in the Middle, and equal to the whole Line of Sines, with the Declination set against the Meridian Altitudes in the Latitude of London, sappose, or whatever Place it is made for. The *Radius* of which Line of Sines is equal to the *Dialling-Scale of six Hours*. 2. A *Line of Latitudes*, which is fitted to the Hour-Scale, and is made by this Canon; As *Rad.* to the Chord of 90 Degrees: So are the Tangents of each respective Degree of the Line of Latitudes to the Tangents of other Arcs. And then the natural Sines of those Arcs are the Numbers, which taken from a Diagonal Scale of equal Parts, shall graduate the Divisions of the Line of Latitudes to any *Radius*. The Line of Hours, and Latitudes is general for pricking down all Dials with Centres.

DIALLING, in a Mine, call'd also *Plumming*, is the using of a Compass, (which they call *Dial*) and a long Line, to know which Way the Load, or Vein of Ore inclines, or where to shift an Air-Shaft, or bring an Adit to a desired Place. See **MINE**.

The Manner thereof, See under the Article **TIN**.

DIALIA, in Antiquity, Sacrifices perform'd by the *Flamen Dialis*. See **DIALIS**.

'Twas not, however, of such absolute Necessity, that the *Dialis* were perform'd by the *Flamen Dialis*; but that others might officiate. We find in *Tacitus Annal.* Lib. III. Cap. 58. that if he were sick, or detain'd by any other public Employ, the Pontifices took his Place.

DIALIS, in Antiquity, a Latin Term, signifying somewhat that belongs to *Jupiter*, to *Zeus's* *Idol*.

The *Flamen Dialis*, then, was a Priest of *Jupiter*. He was never permitted to swear. See **FLAMEN**.

DIALOGUE, a Conversation of two or more Persons, either by Word of Mouth, or in Writing.

The Word is form'd from the Latin *Dialogus*, of the Greek *Διάλογος*, which signifies the same Thing.

Dialogue, is the most ancient Form of Writing. See **DIALECTIC**.

The first Authors wrote most of their Treatises therein. The Arch-Bishop of *Cambray* gives an admirable Painting of the Advantages of *Dialogue*, at the Head of his Pastoral Instruction. See the Word **DRAMATIC**.

The Holy Spirit himself has not disdain'd to teach us in *Dialogue*, viz. Patience, in the Book of *Job*, and Love of God, in the *Canticicles*. *Justin Martyr* open'd this Way, in his Controversy against the Jews; and *Minutius Felix* follow'd it in his against the Idolaters. 'Tis in this Form, that *Origen* jug'd he could best refute the Error of *Marcion*. The great *Arbanus* thought it no Diminution to the Majesty of Mysteries of Faith, to maintain them by the Familiarity of *Dialogue*. This Way of Writing *St. Basil* chose as the most proper to convey those Rules, which have since illuminated all the East. The Arts of *Dialogue* were admirably put in Practice by *Gregory Nazianzen*, and his Brother *Cesarinus*, for conveying the sublimest Truths. *Sulpicius Severus* could not do better, than publish the Wonders of Solitude in a Kind of Conversations. A Volume of *St. Cyril of Alexandria*, is almost fill'd with *Dialogues*, wherein he explains the most Dogmatical Truths, relating to the Incarnation. The Mystery of *Jesus Christ* is treated of in the same manner, by the Learned *Theodore*. *St. Chrysostom* found no Method more promising to express the Eminence, and Danger of the Priesthood. Who is not acquainted with the beautiful *Dialogue* of *St. Jerom*, wherein he refuses the *Luciferians*? Who does not admire *St. Augustine's* *Dialogues*, and especially those on free Will, where he goes back to the Origin of Sin; against the *Manichees*? The Tradition of the Solitaries in the Desert, is finely illustrated in the Conference of *Cassian*, which have spread the same Light through the West, that the East receiv'd from *St. Basil*. *Gregory the Great* deem'd *Dialogue* worthy the Gravity of the Apostolic See. The *Dialogues* of *St. Maximus*, on the Subject of the Trinity, are famous throughout all the Church. *St. Anselm* shew'd the Force of his Genius in his *Dialogues* on the Fundamentals of Religion. Profane Antiquity likewise made Use of the *Art of Dialogue*, and that, not only on humorous, and comical Subjects, as *Lucian* did, but also on the most serious, and abstract; Such as the *Dialogues* of *Plato*, and those of *Cicero*, which turn altogether on Subjects of Philosophy, or Politick. Among the Moderns, the principal *Dialogists*, are *Montf. de Fenelon*, Arch-Bishop of *Cambray*; *Mr. Pajchal*,

in his *Provincial Letters*; *F. Bouhours*, in his *Eurétriens d'Ariste*, & *Engene*; *Montf. Fontenelle*, in his *Dialogues on the Dead*, and Plurality of Worlds, &c.

DIALOGUE, in Music, is a Composition for at least two Voices, or two Instruments, which answer each other; and which frequently uniting make a *Trio* with the *Thoro-Bass*.

There are Abundance of *Dialogues* in the *Italian Opera's*.

DIALTHÆA, in Pharmacy, an Unguent thus call'd from its *Rass*, which is the Root of the *Athæa*.

It consists of Mucilages drawn from that Root, and from the Seeds of *Line*, *Squillæ*, and *Fennigreek*. The other Ingredients are common Oil, yellow Wax, Resin, Turpentine, *Gambosum*, and Ivy-Gum.

It is esteem'd proper to soften, and resolve; asswage Pains of the Side, softens *Callus's*, and strengthens the Nerves. 'Tis applied, by rubbing it on the Parts affected.

DIALYSIS, in Grammar, a Character consisting of two Points.. placed over two Vowels of a Word, which would otherwise make a Diphthong; but are here parted into two Syllables. See **VOWEL**, and **ΔΙΠΗΘΗΘΗ**.

DIAMARGARITON, in Pharmacy, a Medicine denominated from Pearls, call'd in Latin *Margaritæ*; which are a principal Ingredient therein. See **PEARL**.

There are two Kinds: The *Hor*, and the *Cold*.

The *Hot Diamargariton*, is a Powder composed of Pearls, Pelitory, Ginger, Nutmeg, Cinnamon, and divers other hot Ingredients. It is reputed Hyberic, strengthens the Womb, promotes the *Menses*, and assists in Digestion.

Cold Diamargariton, is a solid Electuary, composed of Pearls ground-fine, and white Sugar dissolved in Rose-Water, or Bugios, and boil'd to a Consistence. It strengthens the Stomach, moderates the too abundant Acids, stops the Spitting of Blood, and Looseness of the Belly.

Compound Cold Diamargariton, is a Powder made of Pearls, red Roses, Flowers of Nephaphar, and Violet, *Lignum Aloe*, red and Citron Sassa, Tormentil Root, Seeds of Melon, Endive, &c. It is applied to give Vigour, facilitate Respiration, and resist the Malignity of Humours.

DIAMASTIGOSIS, in Antiquity. It was a Custom among the *Lacedæmonians*, for the Children of the most distinguish'd Families, to slash and tear each others Bodies with Rods before the Altars of the Gods: The Fathers, and Mothers, who were present at the Spectacle, animating and exciting them all the while, not to give the least Sign of Pain, or Concern.

This they call'd *Diamastigosis*, a Greek Term, derived from *Διαμαστίζω*, to whip, cudgel.

The Design hereof, apparently, was no other than to harden their Youth, and ensure them betimes to Blows, Wounds, &c. that they might despise them when they came to War.

DIAMETER, in Geometry, a right Line passing thro' the Centre of a Circle, and terminating on each Side by the Circumference thereof. See **CIRCLE**.

Or, the *Diameter* may be defined a Chord passing thro' the Centre of a Circle: Such is the Line *AE* (*Tab. Geometry Fig. 27.*) passing through the Centre *C*. See **CIRCULAR**.

Half a *Diameter*, as *CD*, drawn from the Centre *C* to the Circumference, is call'd the *Semi-Diameter*, or *Radius*. See **RADIUS**, &c.

The Properties of the **DIAMETER**.

1. The *Diameter* divides the Circumference into equal Parts. And hence we have a Method of Describing a Semi-Circle upon any Line; assuming a Point therein for the Centre. See **SEMICIRCLE**.

2. The *Diameter* is the greatest of all the Chords.

3. To find the Ratio of the *Diameter* to the Circumference.

This Ratio has been greatly sought for by the Mathematicians: And no wonder: in as much as if this were justly given, the Quadrature of the Circle were achiev'd. See **QUADRATURE**.

Archimedes first propos'd a Method of finding it by Regular Polygons, inscrib'd in a Circle; till arriving at a Side subtending an exceeding small Arch, and then seeking the Side of a Similar Polygon circumscrib'd: Each of these being multiplied by the Number of Sides of the Polygon, gave the Perimeter of the Polygon both inscrib'd, and circumscrib'd. In which Case the Ratio of the *Diameter* to the Circumference of the Circle was greater than that of the same *Diameter* to the Perimeter of the circumscrib'd Polygon, but less than that of the *Diameter* to the Perimeter of the Polygon inscrib'd. The Difference between both gives the Ratio of the *Diameter* to the Circumference in Numbers nearly true.

That Divine Author, as already observed, by Polygons of 96 Sides, found the Ratio of the *Diameter* to the Circumference to be as 7 to 22. viz. Supposing the *Diameter* 7,

the Perimeter of the inscribed Polygon is found $3\frac{1}{2}$, and that of the circumscribed 37.

After his Example, later Authors have found out *Rosio's* nearer Truth; but none spent so much Time on it as *Fau Centen*, who, after immense Pains, found, that supposing the *Diameter* 1, the Circumference is less than 3. 14159265358979323846264338327950, and yet greater than the same Number with the last Figure 0 changed into 1. But as such prolix Numbers are too unwieldy for Practice, many of our present practical Geometers affix the *Diameter* to be to the Circumference as 100 to 314; or in greater Circles as 10000 to 31415, in which Proportion *Protonoy*, *Vieta*, and *Huygens* agree with *Fau Centen*.

M. Meris gives us the *Ratio* 112 to 355, which is the most accurate of all those express'd in small Numbers; as not erring $\frac{1}{100000000}$.

4. The *Diameter* of a Circle given, to find the Circumference, and *Area*; and the Circumference given, to find the *Diameter*.

The *Ratio* of the *Diameter* to the Circumference being had, as in the last Article, that of the Circumference to the *Diameter* is had likewise. Then the Circumference being multiplied into the fourth Part of the *Diameter*, gives the *Area* of the Circle. Thus, if the *Diameter* be 100, the Circumference will be 314, and the *Area* of the Circle 7850. But the Square of the *Diameter* is 10000: Therefore, this is to the *Area* of the Circle as 10000 to 7850, that as 1000 to 785 nearly.

5. The *Area* of a Circle being given, to find the *Diameter*. To 785, 1000, and the given *Area* of the Circle 210176 find a fourth Proportional, viz. 5113 6000, which is the Square of the *Diameter*. Out of this extract the Square-Root, and it is the *Diameter* it self.

DIAMETER of a Curve, or Conick Section, is a right Line, as AD, (*Tab. Conicks Fig. 5.*) bisecting all the Ordinates MM, &c. in P, &c. This, when it cuts the said Lines at right Angles, is particularly call'd the *Axis* of the Curve, or *Section*.

A *Transverse DIAMETER*, is a right Line, as AB (*Tab. Conicks Fig. 6.*) which being continued each Way between two Curves, bisects parallel right Lines between the same, as MM. See *TRANSVERSE*.

Conjugate DIAMETER, is a right Line, bisecting Lines drawn parallel to the *Transverse Diameter*. See *CONJUGATE*.

DIAMETER of a Sphere, is the *Diameter* of the Semi-Circle, by whose Rotation the Sphere is generated; call'd also *Axis of the Sphere*. See *SPHERE*.

DIAMETER of Gravity, is a right Line passing through the Centre of Gravity, See *CENTRE of Gravity*.

DIAMETER, in Astronomy. The *Diameters* of the heavenly Bodies, are either *Apparent*, i. e. such as they appear to the Eye; or *Real*, i. e. such as they are in themselves.

The *Apparent Diameters* measur'd with a Micrometer, are found different, in different Circumstances and Parts of their Orbits.

	Greaterst	Mean	Least
<i>Appar. DIAM. of the Sun accord. to Protonoy</i>	32 20	32 18	31 20

<i>Hewellius</i>	0 11	0 6	0 4

That notable Difference between *Tycho*, and the other two Astronomers, is owing to this, that *Tycho*, in Imitation of the Ancients, measured the *Diameters* as they appear to the naked Eye; whereas *Hewellius* and *Huygens* used Telescopes, whereby a deal of spurious Lustre, which otherwise makes them appear bigger than they are, is shaven off.

For the true *Diameters* of the Sun, and Planets, and their Proportion to each other. See *SEMI-DIAMETER*.

DIAMETER of a Column, is that taken just above the Bases. From this the Module is taken, which measures all the other Parts of the Column. See *MODULE*.

DIAMETER of the Swelling, is that taken at the Height of one Third from the Base.

DIAMETER of the Diminution, is that taken from the Top of the Shaft. See *DIMINUTION*.

DIAMOND, in Natural History, by the Ancients call'd *Adamant*, a precious Stone, the first in Rank, Value, Hardness, and Lustre, of all Gems. See *PRECIOUS Stone*.

The Goodness of *Diamonds* consists in their Water or Colour, Lustre, and Weight: The most perfect Colour is the White. Their Defects are Veins, Flaws, Specks of red or black Sand, and a bluish, or yellowish Cast. In Europe, the Lapidaries examine the Goodness of their rough *Diamonds*, their Water, Points, &c. by Day-Light; in the Indies, they do it by Night; in order to which, a Hole is made in a Wall, a foot-square, and therein a Lamp placed, with a thick Wick, by the Light whereof they judge of the Stone, holding it in their Fingers. The Water, call'd *Celestis*, is the worst of all, and yet is somewhat difficult to discover in a rough *Diamond*. The only infallible Way is to examine it in the Shade of some tufted Tree.

As to the Distinguishing *Diamonds* from other Stones, *Dr. Wall*, in our *Philosophical Transactions*, seems to have found an infallible Method: A *Diamond*, with an easy, slight Friction in the Dark, with any soft, animal Substance, as the Finger, Woolen, Silk, &c. appears luminous in its whole Body: Nay, if you keep rubbing for some Time, and then expose it to the Eye, 'twill remain so for some Time. If the Sun be 18 Degrees below the Horizon; holding up a Piece of Bays, or Flannel stretch'd right between both Hands, at some Distance from the Eye, and another rubbing the other Side of the Bays, or Flannel, pretty briskly with a *Diamond*, the Light is much more vivid and pleasant than any other Way. But what he judges most surprising is, that a *Diamond* being exposed to the open Air, in View of the Sky, gives almost the same Light of it self, without rubbing, as if rubb'd in a dark Room: But, if in the open Air, you put the Hand, or any Thing a little over it, to prevent its immediate Communication with the Sky; it gives no Light; which is a distinguishing Criterion of a *Diamond*.

A *Rough DIAMOND*, is that not yet cut, but just as it comes out of the Mine.

A *Facet DIAMOND*, is that cut in Faces both a-top, and Bottom, and whose Table, or principal Face a-top is flat.

A *Rose DIAMOND*, is that quite flat underneath, but its upper Part cut in divers little Faces, usually Triangles, the uppermost whereof terminate in a Point.

A *Table DIAMOND*, is that which has a large square Face a-top, encompass'd with four lesser.

Diamonds are only found in the *East-Indies*, and that only in the Kingdoms of *Golconda*, *Vijapur*, *Bengale*, and the Island of *Borneo*. There are four Mines, or rather two Mines, and two Rivers, whence *Diamonds* are drawn. The Mines are, 1. That of *Raolconda*, in the Province of *Garnatica*, five Days Journey from *Golconda*, and 8 from *Vijapur*. It has been discover'd about 200 Years. 2. That of *Gani*, or *Coulour*, 7 Days Journey from *Golconda*, Eastwardly. It was discover'd 120 Years ago by a Peasant, who digging in the Ground found a natural Fragment of 25 Carats. 3. That of *Soumerfour*, a large Town in the Kingdom of *Bengale*, near the *Diamond-Mine*. This is the most ancient of them all. It should rather be call'd that of *Goual*, which is the Name of the River, in the Sand whereof these Stones are found. Lastly, the 4th Mine, or rather the second River, is that of *Succedan*, in the Isle of *Borneo*.

DIAMOND-MINE of Raolconda. In the Neighbourhood of this Mine, the Earth is sandy, and full of Rocks, and Cops. In these Rocks are found several little Veins, of half, and sometimes a whole Inch broad, out of which the Miners, with a Kind of hooked Irons, draw the Sand, or Earth, wherein the *Diamonds* are; breaking the Rocks, when the Vein terminates, that the Trunk may be found again, and continued. When a sufficient Quantity of Earth, or Sand is drawn forth, they wash it two or three times, to separate the Stones therefrom. The Miners work quite naked, except for a thin linen Cloth before them, and besides this Precaution, have likewise Inspectors, to prevent their Concealing of Stones; which, however, mauge all this Care, they frequently find means to do; by washing Opportunities when they are not observed, and swallowing them down.

DIAMOND-MINE of Gani, or Coulour. In this Mine are found a great Number of Stones from 10 to 40 Carats, and even more; And it was here that famous *Diamond of Aureng-Zeb*, the Great Mogul, which before it was cut, weigh'd 780 Carats, was found.

The Stones of this Mine are not very clear, and their Water is usually tinged with the Quality of the Soil, being black where that its Marfhy, red where it partakes of red, and sometimes green, and yellow, if the Ground happen to be of those Colours. Another Defect of some Consequence is a Kind of fat Appearing on the *Diamonds*, when cut, which takes off Part of its Lustre. There are usually no less than 60000 Persons, Men, Women, and Children at Work in this Mine. When the Miners have found a Place where they intend to dig, they level another somewhat bigger in the Neighbourhood thereof, and inclose it with Walls about 2 Foot high, only leaving Apertures from Space to Space, to give Passage to the Water. After a few superstitious Ceremonies, and a Kind of Feast, which the Master of the Mine makes the Workmen, to encourage them, every one goes to his Business, the Men digging the Earth in the Place first discover'd, and the Women and Children carrying it off into the Wall round. They dig 12, or 14 Foot deep, and till such Time as they find Water. Then they cease digging, and the Water thus found serves to wash the Earth two or three times, after which it is let out at the Aperture reserv'd for that End. This Earth being well wash'd, and well dried, they sift it in a Kind of open Sieve, or Riddle, much as we do Corn in Europe; then thrash it, and sift it a-fresh; And lastly search it well with the Hands to find the *Diamonds*. They work naked as in the Mine of *Rascloude*, and are watch'd after the like manner by Inspectors.

Diamond-Mine of Soumelpour, or River of Goual.

Soumelpour is a large Town built all of Earth, and cover'd with Branches of Cacao-Trees, and the River of *Goual* runs by the Foot thereof, in its passing from the high Mountains towards the South to the *Ganges*, where it loses its Name. 'Tis from this River are brought all our fine *Diamond* Points, or Sparks, call'd *Natural Sparks*. They never begin to seek for *Diamonds* in this River till after the great Rains are over, that is, after the Month of *December*; And they usually even wait till the Water is grown clear, which is not before *January*. The Season at hand, 8, or 10000 Persons of all Ages, and Sexes, come out of *Soumelpour*, and the neighbouring Villages. The most Experienced among them search, and examine the Sand of the River, going up it from *Soumelpour* to the very Mountains whence it springs. A great Sign that there are *Diamonds* in it, is the Finding of those Stones which we Europeans call *Thunder-Stones*. When all the Sand of the River, which at that Time is very low, has been well examin'd, they proceed to take up that wherein they judge *Diamonds* likely to be found; which is done after the following manner: They dam the Place round with Stones, Earth, and Fascines, and lading out the Water, dig about 2 Foot deep: the Sand thus got is carried into a Place wall'd round on the Bank of the River. The rest is perform'd after the same manner as at *Caoulour*, and the Workmen watch'd with equal Strictness.

Diamond-Mine in the Island of Borneo, or River of Succadan.

We are but little acquainted with this Mine; The Queen who reigns in that Part of the Island not allowing Strangers to have any Commerce in these Stones: Tho' there are very fine Ones to be bought at *Batavia*, brought thither by Stealth. They were anciently imagin'd to be softer than those of the other Mines, but Experience shews, they are in no respect inferior to them. Beside these four *Diamond-Mines*, there have been two others discover'd; one of them between *Caoulour* and *Rascloude*, and the other in the Province of *Carnatica*; but they were both clos'd up almost as soon as discover'd: That of *Carnatica*, by reason the Water of the *Diamonds* was always either black, or yellow; and the other, on Account of their cracking, and flying in Pieces when cut, and ground.

The *Diamond*, we have already observ'd, is the hardest of all precious Stones. It can only be cut, and ground by it self, and its own Substance. To bring it to that Perfection, which augments its Price so considerably, they begin by rubbing several against each other, while rough; after having first glued them to the Ends of two Sticks, or Blocks, thick enough to be held in the Hand. 'Tis this Powder thus rubb'd off the Stones, and receiv'd in a little Box for the Purpose, that serves to grind, and polish the Stones.

Diamonds are cut, and polish'd by means of a Mill, which turns a Wheel of soft Iron sprinkled over with *Diamond* Dust mixt with Oil of Olives. The same Dust well ground, and dilut'd with Water and Vinegar, is used in the sawing of *Diamonds*; which is perform'd with an Iron, or Brass Wire, as fine as a Hair. Sometimes in lieu of sawing the *Diamonds* they cleave them, especially if there be any large Shivers therein. But the Europeans are not daring, or expert enough to run the Risque of cleaving, for fear of breaking.

A Rough *Diamond* must be chosen uniform, of a good Shape, transparent, not quite white, and free of Flaws, and Shivers. Black, rugged, dirty, flawed, veiny Stones, and all such as are not fit for cutting, they use to pound in a Steel Mortar made for that Purpose; and when pulveriz'd, they serve to saw, cut, and polish the rest. Shivers are occasion'd in *Diamonds* by this, that the Miners, to get them more easily out of the Vein; which winds between two Rocks; break the Rocks with huge Iron Leavers, which shake, and fill the Stone with Shivers.

The Ancients had two mistaken Notions with regard to the *Diamond*: The first, That it became soft, by sleeping it in hot Goat's Blood. And the second, That it is malleable, and bears the Hammer. Experience shews us the contrary; there being nothing capable of mollifying the Hardness of this Stone; tho' its Hardness be not such, that it will endure being struck at Pleasure with the Hammer.

The finest *Diamonds* now in the World are that of the *Great Mogul*, weighing 279 Carats; that of the Great Duke of *Toscany*, weighing 139 Carats; and that known in France under the Name of *Grand Sancy*, which is one of the Crown Jewels, weighing 106 Carats, whence its Name *Sancy*, which is a Corruption of *Cent six*, that is 106. *Loveruler*, by a Rule which he had made for Estimating the Value of *Diamonds*, computes that of the *Great Mogul* at a 110000072528 French Livres, equivalent to 879244 Pound Sterling; and that of the Duke of *Toscany*, at 2618335 Livres, or 195374 Pound Sterling.

The following is a Rate, or Manner of Estimating the Value of *Diamonds*, drawn up by a Person exceedingly well vers'd in such Matters, and which, for its Curiosity, as well as the Use it may be of, to Persons who deal in precious Stones, we judge, will be highly acceptable.

Diamonds cut Facet- or Table-wise.

Dutch Cut.

A <i>Diamond</i> weighing	Lib.	Sh.	Lib.	Sh.	Sterl.
1. Grain, is worth from	1.	0	to 1.	1.	
1 $\frac{1}{2}$	1.	16.	to 1.	17.

50.	2200.	0	to 2300.	0	
60.	3500.	0	to 4500.	0	

It must be observ'd, however, that Defects in the Water, or Shape, red, or black Spots; Shivers, and other Failings, frequently found in these Stones, reduce the Price by one third, and sometimes more.

As to *Brilliant*, or *Rose-Diamonds*, the Price is always less by one third, than that of *Table-Diamonds*; tho' the Weights be the same; the reason is, that the latter show themselves a great deal more when set in their Collets, than the former.

Attempts have been made to produce *Artificial Diamonds*, but with no great Success.

The *Fabulous DIAMONDS* made in France, call'd *Temple Diamonds*, on Account of the *Temple* at Paris, where the best of them are made, are vastly short of the genuine Ones; accordingly they are but little valued, tho' the Consumption thereof is pretty considerable for the Habits of the Actors on the Stage, &c.

DIAMOND. The *Diamond* is of considerable Use in the Glass-Manufacture, for squaring the large Plates, or Pieces; and among Glaziers, for cutting their Glass.

These *Diamonds* are differently fitted up. That used for Looking-Glasses, and other large Pieces, is set in an Iron Ferril two Inches long, and a Quarter of an Inch Diameter. The rest of the Cavity of the Ferril is filled with melted Lead, which keeps the *Diamond* firm in its Place.

The Glaziers have a Handle of Box, or Ebony, fitted into the Ferril to hold it by. In the former there is a little Piece of Box crossing the Ferril, in Form of a little Plane, cover'd at Bottom with a thin Copper-Plate.

DIAMOND, in Heraldry, is used to express the black Colour in the Achievements of Noblemen. *Gwillim* dislikes the Way of Blaizing the Coats of Peers by precious Stones, instead of Metals, or Colour. But Practice allows it. See **COLOUR**.

DIAMOND Glass. } See **GLASS.**
DIAMOND Pavement. } See **PAVEMENT.**
DIAMORUM, a Composition in Pharmacy, either *Simple*, or *Compound*.

Simple DIAMORUM, is the common Syrup of Mulberries, made of Mulberry-Juice, and Sugar. It is good against Discales of the Throat, and to stop Dysenteries. There is also a Sort of *Simple Diamorum* made of Mulberry Juice and Honey, call'd also *Mulberry Rob*.

Compound DIAMORUM is made with Mulberry Juice, Saps, Verjuice, Myrrh, and Saffron. It is used to purge Plethora from the Stomach, and Breast, and ease Respiration.

The Word is form'd from *Morus*, Mulberry.
DIANA'S Tree, *Arbor Dianae*, a very curious Phenomenon in Chymistry, being the just Figure of a Tree, with Branches, Leaves, Fruit, &c. shooting up in a Dissolution of Silver in an Acid Spirit.

There are divers Manners of procuring *Diana's Tree*; but most of them exceeding tedious, except the following one of *Monfr. Homberg*, which may be done in a Quarter of an Hours time. Take four Drachms of Filings of fine Silver, with which make an *Amalgama*, without Heat, with two Drams of Quicksilver. Dissolve the *Amalgama* in 4 Ounces of *Aqua fortis*; and pour the Solution into 3 Gallons of common Water; stir it about a while to mingle it well together; and then keep it in a Glass Vessel well stopp'd.

When you would make the Experiment, take about an Ounce of it, and put it in a small Viol, wherein likewise put the Quantity of a small Pea of the ordinary *Amalgama* of Gold, or Silver; which should be as soft as Butter; and set the Viol at rest for 2 or 3 Minutes. Immediately after this you will see several small Threads, or Filaments, arising perpendicularly from the little Bulb of the newly put in *Amalgama*, which will sensibly grow, and thrust out, on the Sides, small Branches in Form of a Tree. The Bulb, or Ball of the *Amalgama* will grow hard, and be like a Pellet of white Earth; and the little Tree of the Colour of bright Silver.

The Form of this Metalline Tree may be varied almost at Pleasure. The stronger you make the first described Water, the thicker will the little Tree be in Branches, and the sooner form'd. The same Author shews, how divers other Kinds of Trees may be produced by Crystallization, and Digestion. See **MARTIS Arbor**.

DIANUCUM, in Pharmacy, a Kind of Rob, made of the Juice of green Walnuts, and Sugars, boil'd together by a moderate Fire, to the Consistence of Honey.

It is good to strengthen the Stomach, promote Sweat, and resist Poison.

The Word is form'd from *Nux, Nucis*; Nut.
DIAPALMA, in Pharmacy, a Desiccative, or drying Plaster, denominat'd from the Wood of the Palm-Tree, whereof the *Spartula* is made, that is to stir it while boiling.

It is compos'd of common Oil, Hogs-Fat, and Licharge of Gold.

It is good to dry, resolve, deterge, and cicatrize: And is the Plaster most used for Wounds, and Ulcers.

DIAPASMA, a common Name for all Perfumes applied on the Body, of what Form soever they be, whether Powders, Essences, Pomatum's, or the like.

The Word comes from the Greek *diapasma*, to water.

DIAPASON, in Music, a Musical Interval, by which most Authors, who have wrote on the Theory of Music, use to express the Octave of the Greeks; as they use *Diapente*, *Diassesson*, *Hexachord*, and *Tetra chord*, to express *Fifths*, *Fourth*, *Third*, and *Sixths*. See **OCAVE**.

The *Diapason* is the first, and most perfect of the Concords; if consider'd *Simply*, it is but one Harmonical Interval; tho' if consider'd *Diatonically*, by Tones and Semi-tones, it contains seven Degrees, viz. three greater Tones, two lesser Tones, and two greater Semi-tones. See **DEGREE**.

The Interval of a *Diapason*, that is, the Proportion of its grave Sound to its acute, is *duplicate*, that is, as 2 to 1. See **INTERVAL**.

DIAPASON, among the Musical Instrument-makers, is a Kind of Rule, or Scale, whereby they adjust the Pipes of their Organs, and cut the Holes of their Flutes, Haut-Bois, &c. in due Proportion, for performing the Tones, Semi-tones, and Concords just.

A Square being divided into eight equal Parallelograms, the Points wherein a Diagonal intersects all these Parallelograms, express all the usual Intervals in Music: And on this Principle it is, that the *Diapason* is founded.

There is a particular Kind of *Diapason* for Trumpets; serving as a Standard, or Measure, for the different Magnitudes, they must have to perform the four Parts of Music. See **TRUMPET**.

There is another for Sack-bags, and Serpents, shewing how far they are to be lengthen'd, or shorten'd, to rise or fall from one Tone or Interval to another.

The Bell-founders have likewise a *Diapason*, or Scale, serving to regulate the Size, Thickness, Weight, &c. of their Bells. See **BELL-FOUNDER**.

DIAPASONDIAEX, in Music, a Kind of compound Concord; whereof there are two Sorts: The greater, which is in the Proportion of 10 to 3; and the less, in that of 16 to 5. See **CONCORD**.

DIAPASONDIAPENTE, in Music, a compound Consonance, in the Triple Ratio, or as 3 to 9. See **CONCORD**.

The *Diapason-dispente* is a Symphony made when the Voice proceeds from the 1st to the 12th Tone.

The Word is properly a Term in the Greek Music: We should now call it a *Trochith*.

DIAPASONDIATESSARON, in Music, a compound Concord, founded on the Proportion of 8 to 3.

The *Diapason-diateffaron* is a Symphony, wherein the Voice proceeds from its first Tone to its eleventh. This the Moderns would rather call the *Eleventh*.

DIAPASONDITONE, in Music, a Concord, whose Terms are in the Proportion of 10 to 4, or 5 to 2.

DIAPASONSEMDITONE, a Concord, whose Terms are in the Proportion of 12 to 5.

DIAPEDESIS, in Medicine, an Eruption, or oozing of Blood through the Coats of the Veins, or Arteries; occasioned either by the Bloods becoming too much dissolved, or attenuated; or by the Pores of the Vessels becoming too patent, and open. See **BLOOD**.

There are some able Physicians who deny there can be any such a Tenuity of Blood, as that it shall exude thro' the Vessels, without any Aperture made therein.

The Word is compounded of *dia*, through; and *pedesis*, I leap.

DIAPENTE, in the ancient Music, an Interval making the Second of the Concords; and with the *Diassesson*, an Octave.

This is what in the modern Music we more usually call a *Fifth*. See **FIFTH**.

The *Diapente* is a simple Concord; yet if consider'd Diatonically, it contains four Terms, two greater Tones, a lesser Tone, and a greater Semi-tone. The *Diapente* is the greatest Part of the *Diapason*, or Octave, harmonically divided. It is produced when the Voice passes from its first Tone to its fifth.

DIAPENTE, is also used in Pharmacy, for a Compound of five several Drugs, or Ingredients.

The Word is form'd of *dia*, and *pentis*, five.

DIAPHANOUS, in Philosophy, *Transparent*, or *pellucid*, is somewhat that gives Passage to the Rays of Light; as Water, Air, Glass, Tale, fine Porcelain, &c. See **TRANSPARENT**.

The Word is form'd of *dia*, three, and *phanis*, luco, I shine.

DIAPHANEITY, in the Schools, the Quality of a transparent Body; or that which denominates it such. See **TRANSPARENT**.

The *Corrarians* hold the *Diaphaneity* of a Body to consist in the Rectitude of its Pores; that is, in their being situated in right Lines; so as that there is no intermediate Substance to prevent the Passage of the Rays. And hence argue, that the rendering Glass malleable is an Impossibility: For as soon as it becomes malleable, its Pores will cease to be situated directly against each other, and of Consequence it will lose its *Diaphaneity*, the principal Character of Glass. See **GLASS**.

See *Yano Newton* accounts for *Diaphaneity* from another Principle, viz. from the Homogeneity, and Similarity between the *Medium*, wherewith the Pores are filled, and the Matter of the Body itself. For the Refractions the Rays undergo in passing thro' out of the Matter into the Pores, i. e. out of one *Medium* into another, being but small, the Progress of the Ray is not so much interrupted, but that it can make its Way through the Body. See OPAcity, REFRACTION, &c.

DIAPHOENIC, in Pharmacy, a soft Purgative Electuary, thus call'd from the Dates, which make its Basis; is the Palm-Tree, whose Fruit they are, being call'd by the Greeks *pinē*. See DATE.

The other Ingredients are the Peonies, Almonds, Turbith, Ginger, white Pepper, Mace, Cinnamon, Rice, Fennel, *Danct*, and Honey.

Diaphoenic purges chiefly Serofities, and excites the Menfes. It is also used in Dropfies, Lethargies, Apoplexies, and Palſies.

DIAPHORESIS, in Medicine, includes all Discharges made thro' the Skins; but chiefly that by insensible Perspiration, and Sweat: Whence *Diaphoretic*, &c.

DIAPHORETIC, in Medicine, is applied to Remedies that promote the Expulsion of Humours by insensible Perspiration. See PERSPIRATION.

Diaphoretic is much of the same Import as *Sudorific*: Except that the latter promote sensible, and the former insensible Perspiration. Their only Difference, therefore, is in the Degree of Action. See SUDORIFICUS, &c.

DIAPHORETIC Antimony, or *Mineral Diaphoretic*, is a Preparation of Antimony, the Process whereof see under the Article ANTIMONY.

DIAPHRAGM, in Anatomy, popularly call'd *Midriff*, and by Anatomists, likewise, *Septum*, or *Medium Transversarium*, is a nervous Muscle, separating the Breast, or *Thorax*, from the *Abdomen*, or lower Venter; and serving as a Partition between the Natural, and the Vital Parts. See VENTER.

Its Figure is round, resembling a Ray, or Thornbark.

It consists of two Circles, the one Membranous, the other fleshy; tho' others will have both of them Muscular: of two Arteries; and two Veins, call'd *Phrenicæ*; and several Branches of Nerves.

The first, or superior Circle arises from the *Sternum*, and the Ends of the last Ribs: The second, or inferior, comes from the *Vertebrae* of the Loins. The upper is cover'd a-top with a Membrane deriv'd from the *Pleura*; and the lower lined at bottom with another from the *Peritoneum*. Its Situation is oblique; being extended from the *Cartilago xiphoides*, by the Extremes of the Ribs, to the Region of the Loins.

It is pierc'd in the middle for the Passage of the *Vena Cava*; and in its lower Part for the *Oesophagus*; and between the Productions of the inferior Circle pass the *Aorta*, *L'œsophage Duct*, and *Vena Azgos*. In its natural Disposition it is convex on the upper Side towards the Breast, and concave on the lower towards the Belly. Hence it has two Motions; the one of Contraction, the other of Relaxation. By the Contraction, or Swelling of the Fibres, the *Diaphragm* becomes flat on each Side; the Consequence of which is, that the Cavity of the Breast is enlarg'd, to give Liberty for the Lungs to receive the Air in Inspiration; and the Cavity of the *Abdomen* less'n'd, and consequently the Stomach and Intestines press'd, for the Distribution of the Chyle. In its Relaxation, whereby it resumes its natural Situation, the Cavity of the Breast is diminish'd, and the Lungs press'd for the Expulsion of the Air in Expiration. See RESPIRATION.

It was *Plato*, as *Galen* informs us, that first call'd it *Diaphragm*, from the Verb *diaphragmō*, to separate, or be between two. Till his Time it had been call'd *epiōs*, *Underbanding*; from a Notion, that an Inflammation of this Part produc'd Phreny; which is not at all warranted by Experience, no more than that other Tradition, that a transverse Section of the *Diaphragm* with a Sword causes the Patient to die laughing. The *Latins* call it *Septum transversum*, q. d. *Partitio laid a-croſs*.

Dr. Hook observes, that an Animal may be kept alive, without *Thorax*, or *Diaphragm*, by blowing Air into the Lungs with a Bellows: Of which he had made the Experiment.

DIAPHRAGM is also a general Name, among the Learned, for all Partitions, or Separations between two Parts of a Thing: As the little perforated Partitions in the Tubes of long Telescopes. See TUBE, &c.

DIAPHRAGMATIC, is applied to the Arteries, Veins, and Nerves distributed thro' the *Diaphragm*.

They are also call'd *Phrenicæ*, or *Phrenicæ*. See PHRENIC.

DIAPRE, or **DIAPER**, in Herakly, a Dividing of a Field into Planes, or Compartments, in the manner of Fret-work; and filling the same with Variety of Figures. See FRET.

This chiefly obtains on *Bordures*, which are *diaper'd*, or fretted over, and the Frets charg'd with Things proper to *Bordures*: As in the adjoining Figure.

DIAPRUNUM, in Pharmacy, a soft, purgative Electuary, thus call'd from the Pulp of *Damaſcus* Prunes, which is its Base.

Diaprunum is either *Simple*, or *Compound*.

Simple **DIAPRUNUM** consists of the Pulp afore-mentioned, with *Cassia*, *Tamarinds*, *Rhubarb*, red *Roses*, *Violet Seeds*, *Santals* both red and Citron, Scrapings of *Ivory*, *Liquorice Juice*, and the four cold Seeds. It is good to prepare, and soften the Humours.

Compound, or *Solutive* **DIAPRUNUM**, is only the *Simple*, with the Addition of half an Ounce of *Scammony* to every Pound of the Electuary, to render it more purgative. **DIARRHŒA**, in Medicine, a *Loosness*, or Flux of the Belly; or a profuse Evacuation of liquid Excrements by Stool. See EVACUATION, and STOOL.

The Word, in the general, is used for any Kind of Flux of the Belly; but properly for that wherein the Humour, or Excrement flows out either pure, or mix'd; with, or without Pain, in a fluid State. See FLUX.

Diarrhœa's are of divers Kinds, according to the Diversity of the Excrements: Some being bilious; some serous; some pituitous; and some purulent. The Purulent always arises from some Abscess open'd in the Body; the rest either from morbid Humours irritating the Intestines, and expelling the Juices out of the adjacent Parts; or from a Laxness of the Intestinal Fibres; or an extraordinary Fermentation in the Blood, whereby it discharges its Excrements into the Intestines.

There are also *Diarrhœa's* arising from unwholesome Foods, and Stoppage of the other Excretions, particularly Perspiration.

It is a standing Observation, that such as perspire but little, are ever subject to a *Diarrhœa*; and on the contrary, People who perspire much, are commonly bound.

Angius mentions *Diarrhœa's* as one usual great Effect of Grief; as likewise of immoderate Anger; without which a Fever would be produc'd.

In the Cure of *Diarrhœa's*, from whatever Cause they arise, the Stomach must be corroborated, and Sudorifics to be mix'd with Absorbents. The Patient to drink sparingly. Quince and Wine burnt with Aromatics is good. *Wainwright* observes, that a Flannel Shirt contributes much to the Cure of an habitual *Diarrhœa*.

Stroterforth, a Physician of *Lubeck*, relates, that a Merchant of that City had a continual *Diarrhœa* from 30, to the Age of 65 Years, which always gave him 3 or 6 Stools a Day, yet he was in good Health all the while, having a good Appetite, and sufficient Strength and Vigour. But in his 65th Year taking some stringent Medicines, he stopp'd his Flux; upon which he was immediately seiz'd with a violent Pain in the Kidneys, Difficulty of Breathing, Loss of Digestion; He gave up his Food as he took it, grew cold at the Extremes of the Body, swell'd in the Thighs, had an insupportable Thirst, and more Appetite, and urined, with much Difficulty, a thin watery Humour, destitute of all Sulphur.

The Word is form'd of the Greek *δια*, through, and *ρρρ*, to flow.

DIARRHODON, in Pharmacy, a Name given to divers Compositions, wherein red *Roses* are an Ingredient.

DIARRHODON Abbasii, is a Cordial Powder, denomin'd from the Abbot who invented it. It consists of red *Roses*, red, and Citron *Santals*, *Lignum Aloe*, Cinnamon, *Rhapontic*, *Spikenard*, *Ivory*, *Harts-horn*, *Saffron*, *Mastic*, *Pearls*, *Amber-gris*, *Musk*, &c. It is used to strengthen the Heart, Stomach, and Liver, to assist in Digestion, and prevent Vomiting.

There are also *Trochisci* **DIARRHODON**, compos'd of red *Roses*, Scrapings of *Ivory*, the *Santals*, *Liquorice*, *Mastic*, *Saffron*, *Camphor*, and *Rose-Water*. They are good to fortify the Heart, Stomach, and Liver, and to stop Disenteries, and other Fluxes of the Belly.

Pillule **DIARRHODON** are compos'd of *Aloes*, *Trochisci* *Diarrhodon*, *Wormwood Leaves*, *Mastic*, and *Rock-Salt*. They purge, then fortify the Stomach, promote Digestion, and prevent a stinking Breath.

The Word is form'd of *δια*, and *ρρρ*, *Rose*.

DIARTHROSI, in Anatomy, a Kind of Articulation, or Junction of the Bones, which being pretty lax, affords room for a manifest Motion. See ARTICULATION.

It is oppos'd to *Synarthrosis*, wherein the Articulation is so close, that there is no sensible Motion at all. See SYNARTHROSI.

Diarthrosis is of three Kinds: 1. When the Head of the Bone is big, and long, and the Cavity that receives it, deep; it is call'd *Enarthrosis*: Such is that of the Thigh, with the Hip. 2. When the Head of the Bone is flat, and the Cavity that receives it superficial, it is call'd *Arthrodia*: such is that of the Jaws, with the Bones of the Temples. 3. When two Bones receive each other reciprocally, and are moveable in each other, it is call'd *Ginglymus*: Thus the *Cubitus* receives the *Radius*, at the same Time that the *Radius* receives the *Cubitus*. See *ENARTHROSIS*, *GINGLYMUS*, &c.

DIARTHROSIS Synarthroidalis, call'd also *Amphiarthrosis*, is a Kind of neutral, or dubious Articulation; being neither absolutely *Diarthrosis*, as not having a manifest Motion; nor absolutely *Synarthrosis*, as not being quite immovable.

Thus the Articulations of the Ribs, with the *Vertebrae*, and those of the Bones of the *Carpus*, and *Tarsus*, among each other, are *Synarthroidal Diarthroses*. See *RIBS*, &c. The Word comes from *δια*, and *αρθρον*, *Jointure*, *Assubledge*.

DIARY Fever, is a Fever of one Day. See *EPHEMERA*.

DIASCORDIUM, in Pharmacy, a Kind of Electuary, or Opiate, first described by *Praxagoras*, and denominated from *Scordium*, which is an Ingredient therein. See *SCORDIUM*.

The other Ingredients are red *Rosés*, *Bole*, *Storax*, *Cinnamon*, *Cassia Lignea*, *Dittany*, *Turmentille Roots*, *Bisfort*, *Gentian*, *Galbanum*, *Amber*, *Terra Sigillata*, *Opium*, *Long Pepper*, *Ginger*, *Mel Rojarum*, and *Malmsey*. It is used against malignant Fevers, the Plague, Worms, the Colic, to provoke Sleep, and resist Putrefaction.

DIASEBESTEN, in Pharmacy, a soft, purgative Electuary, whereof *Sebestes* are the *Basis*. See *SEBESTES*.

The other Ingredients are Prunes, Tamarinds, Juices of Iris, *Agurria*, and *Mercurialis*, *Penidia*, simple *Diaprunum*, Violet Seed, the four cold Seeds, and *Diagrylium*. It is good in intermitting, and continued Fevers, appeases Thirst, promotes Sleep, and expels the morbid Humors by Urine.

DIASENNA, in Pharmacy, a soft, purgative Electuary, thus call'd from *Senna*, which is its Base. See *SENNa*.

The other Ingredients are Sugar Candy, Cinnamon, *Lapis Lazuli*, Silk, Cloves, *Galanga Minor*, black Pepper, *Nardus Indicus*, Seed of the *Bastlica*, Leaves of Cloves, *Cardamomum*, Saffron, Ginger, Zedoary, Roicmary Flowers, Long Pepper, *Lapis Armenius*, and Honey.

Diassena cools and comforts the Melancholic, and Spleetic; and is good against all Difcates arising from an *Atrabilis*.

DIASTEM, in Musick, a Name the Ancients gave to a simple Interval in Contra-distinction to a compound Interval, which they call'd a *System*. See *INTERVAL*.

Musicians divide Intervals into two Kinds: One of them call'd *System*, which is to contain at least two Intervals in any Kind of Musick whatever; but many, contain more.

The other, call'd *Diastem*, is a mere, or single Interval; The proper Signification of the Greek *διαστημα* being Interval. See *SYSTEMA*.

DIASTOLE, in Anatomy, *Dilatation*, or *Dilation*; a Term expressing that Motion of the Heart, and Arteries, whereby those Parts dilate, or distend themselves: The other opposite Motion is call'd the *Systole*, and *Artery*; wherein they contract themselves. See *HEART*.

The *Diastole* of the Heart is properly the Recess of the Parietes of the two Ventricles from each other; the Enlargement of their Cavities and Diminution of their Lengths, or their Approximation to a Spherical Form. See *SYSTOLE*.

The *Diastole*, or Dilatation of the Heart, arises from the Blood brought, by the Veins, into its Ventricles; and that of the Arteries, from the Blood thrown into their Cavities by the Contraction of the Heart. So that the *Diastole* of the Heart, and Arteries, is not effected at the same Time; the *Diastole* of the Heart happening when the Arteries are contracted, and that of the Arteries when the Heart is contracted.

What we call the Beating of the Pulse, is only the *Diastole* of the Arteries. See *PULSE*.

The Lungs and Breast have likewise their *Systole*, and *Diastole*; so has the Brain. See *LUNGS*, &c.

The Word is Greek, form'd from the Verb *διασχω*, to separate, open.

The true Cause of the *Diastole* of the Heart was but lately accounted for before Dr. *Drake*. That the Heart is a Muscle, is made evident beyond all doubt by Dr. *Lower*; and that the Motion of all Muscles consists in Contraction, is not to be doubted. By such means the *Systole* is easily accounted for. But in as much as the Heart has no Antagonist Muscle, the *Diastole* has puzzled the greatest Wits. Dr. *Lower* unhappily attributes it to a Motion of Re-

solution. As the Motion of the Heart, says he, is perform'd by Contraction; and as the Fibres of the Heart are alone form'd for Contraction; it is evident, all the Motion of the Heart lies in its *Systole*. And that the Fibres, in the several Contractions, being stretch'd beyond their Tone, as soon as the *Nisus* is over, the Heart relaxes again by a Motion of Resitution, *Et ab irritueto Sanguine, Diastole ejus liberatis Vicibus succedit*, de Cordis, p. 75. Mr. *Cowper* accounts for the *Diastole* from the Analogy the Heart of an Animal bears to the *Pendulum*'s of those Artificial Automata, Clocks and Watches: its Motion is perform'd like that of other Muscles, the Blood doing the Office of a *Pondus*, or Weight. Both these Notions Dr. *Drake* refutes; and with great Reason and Probability maintains the Weight of the Atmosphere to be the *Pondus*, or Counterpoise to the contractive Force of the Heart. See *HEART*.

It has long been known, that the *dura Mater* has a *Systole* and *Diastole*, exactly corresponding to those of the Heart. But its Cause was not so well known. Dr. *Redley*, in the *Philosoph. Transact.* having bored a Hole in the upper Part of the *Bregma* of a Dog, first perceived the alternate Vibrations of the *dura Mater*; then, continuing the Hole to the Brain, he found both by his Eye, and even afterwards by Touch, very sensibly, that there was a like brisk *Systole* and *Diastole* of the Brain. See *BRAIN*.

DIASTOLE, in Grammar, a Figure whereby a Syllable naturally short, is made long. Thus it is, that *Virgil* begins a Verse with the Word *Italus*, the first Syllable whereof is short.

DIASTYLE, in the ancient Architecture, an Edifice, where the Columns stand at such Distance one from another, that eight Modules, or four Diameters, are allowed for the Intercolunniation. See *INTERCOLUNNIATION*.

DIASYRMIS, in Rhetoric, a kind of Hyperbole; or an Exaggeration of some low ridiculous Thing. See *HYPERBOLIS*.

DIATESSARON, in Pharmacy, a Sort of Treacle, thus call'd because consisting of four Ingredients, which are Roots of *Aristolochia*, and *Gentian*, Laurel-berries, and Myrrh. See *TREACLE*.

It is also call'd *Troisica Pauperum*, because made at a very easy Expence, and in a short Time. It is good against Stings of venomous Beasts, Epilepsies, Convulsions, Colicks, to strengthen the Stomach, and promote the Menstrua.

The Word is Greek, and signifies a Composition of four Drugs.

DIATESSARON, in the ancient Music, was a Concord or harmonical Interval, composed of one greater Tone, one lesser, and one greater Semi-tone; its Proportion being as 4 to 5. See *CONCORD*.

In the modern Music, it is call'd a perfect Fourth. See *FOURTH*.

DIATHESIS, a Term used by some Writers, in the same Sense with *Constitution*. See *CONSTITUTION*.

DIATONIC, an Epithet given the common Music, as it proceeds by different Tones, or Degrees, both ascending, and descending. See *MUSIC*, and *GENERA*.

Authors divide the Sorts of Music into *Diatonic*, *Chromatic*, and *Eubarmonic*.

DIATONIC Music only allows of three Degrees; the greater and lesser Tone, and the greater Semi-tone. See *TONE*, and *DEGREE*.

Hence *Diatonic Music* appears the most natural, and of Consequence is the most ancient. The *Genus*, or Kind, which makes the Character of the *Diatonic Music*, is call'd the *Diatonic Kind*, or *Genus*.

In the *Diatonic Music* there is a Tone between every two Notes, except between *Mi* and *Fa*, and *Si* and *Ut*, where there is only a greater Semi-tone. See *SCALE*.

DIATRAGACANTH, in Pharmacy, is applied to certain Powders, whereof Gum *Adraganth* is the Base. There are two Kinds, *Cold* and *Hot*.

Powder of *Cold Diatrageacanth* is composed of the Gums *Adraganth* and *Arabic*, Liqueurice, Starch, white Poppy Seed, and the four great cold Seeds. It is good to thicken, and soften the too sharp, and fibrile ferous Humours falling on the Breast, to assuage Coughs, and promote Spitting.

Powder of *Hot Diatrageacanth* is composed of Gum *Adraganth*, Cinnamon, Hyssop, Almonds, Lin-Seed, and Fennegreek, Liqueurice, Juice of Liqueurice, and Ginger. It is good against Asthma's, to promote Expectoration, strengthen the Stomach, and assist Digestion.

DIAZEUTIC Tone, in the ancient Greek Music, was that which disjoyn'd two Fourths, one on each Side of it, and which being joyn'd to either, made a Fifth. This, in their Music was from *Mis* to *Parameis*; that is, in ours, from A to B: supposing *Mi* to stand in B. *Sub Mi*. They allowed to this *Diazeutic Tone*, which is our *Le, Mi*, the

Proportion of 9 to 8, as being the unalterable Difference of *Dicentis* and *Diateffaron*.

DICROTOMY, *Dicrection*, a Term used by Astronomers for that *Phasis*, or Appearance of the Moon, wherein she is bisected, or shows just half her Disk, or Circle. See **PHASIS**.

The Time of the Moon's *Dicretomy*, is of considerable Use in fixing the Sun's Distance from the Earth. But 'tis very difficult to fix the precise Moment when the Moon is bisected, or in her true *Dicretomy*. Observation informs us, that when she is 30 Minutes distant from the Quadratures, she appears bisected; but she appears so too in the Quadratures themselves, and some time afterwards, as *Ricciolus* acknowledges in his *Almagest*. So that she appears *Dicretomized* at least for the Space of a whole Hour: In which Time, any Moment may be taken for the true Point of the *Dicretomy*, as well as any other. But the infinite Number of Moments of Time give an infinite Diversity of Distances. The Moment in which the true *Dicretomy* happens, being thus uncertain; but it being granted without that it happens before the Quadrature, *Ricciolus* takes the middle Point between the Quadrature, and the Time when it is first dubious, whether the Moon be *Dicretomized*, or not, for the true *Dicretomy*, Keil.

The Word is Greek, form'd of *διχοτομία*, I bisect, or cut in two, of *δις*, twice; and *τίμη*, τίματα, I cut.

DICTAMNUM, *Dittany*, a Medicinal Plant, much valued among the Ancients, and particularly applauded by their Poets.

It was esteemed a Specific for Wounds of Arrows, which it drew out with wonderful Ease, and according to them, only grew in the Island of *Creta*, and even only in a little obscure Corner thereof; whence its Appellation *Dictamnus Creticus*. At present we scarce know whether there be any Remains thereof in that Island.

The modern *Dictamnus*, call'd also *White Dittany*, or *Frasinella*, from its Leaves, which resemble those of the Ash, call'd by the Latins *Frasinus*, is scarce in less Esteem than that of the Ancients. Its Root, wherein all its Virtue is lodged, is about the Thickness of a Finger, and is frequently divided into a Number of little Branches; its Colour is white, its Taste bitter, its Smell strong, somewhat like that of a He-goat, its Stem is about two Foot high, reddish, and full of Leaves; at the Top of the Stem is a Flower not unlike a *Spice*, or Ear; in the Middle of the Flower is a Pistil with five little Pieces wherein the Seed is contain'd, which is black, shining, and oval. The Root is excellent against the Bite of venomous Beasts, as also against Worms, the Colick, &c. It must be chosen white, both Inside and Outside, not fibrous, and well cleaned.

There are several other Kinds of *Dittany*, but all of less Value: As the *Bastard Dittany*, whose Leaves are much less; the *Wild Dittany*, which neither bears Flowers, nor Fruit.

The Ancients have a Tradition, that the wounded Deer first discover'd the Virtue of the *Dictamnus Creticus*, which being eaten, presently drew out the Arrows sticking in 'em. Thus *Pliny* Lib. VIII. C. 27. And the like Account we have from *Cicero de Natur. Deor.* Lib. II. *Virgil. Aeneid.* Lib. XII. v. 412. *Tertull. de Penit.* C. XI. Tho' *Cicero*, more prudent and reserved than *Pliny*, is contented to speak of it as by hear-say. *Aristotle* Lib. de *Mirabilib. Auscult.* relates it of the Roe-buck. *Pliny* says expressly, that the Juice of this Plant taken inwardly, expels Arrows, and cures Wounds made with other Arms; He adds, that it stops Suppurations, provokes the Menstrues, and Delivery, and is good in Frictions and Fumigations.

DICTATE, *Dictamen*, in the Schools, a Suggestion, Motion, or Sentiment of a Man's Conscience.

A good Action becomes evil if done contrary to the *Dictates* of one's own Conscience.

DICTARE, *Dictata*, is likewise used in the Schools for a Lesson, or Exercise, wherein the Master reading, or speaking something, the Scholars take it down in Writing after him. Here the Act of the Master is likewise call'd *Dictating*.

DICTATOR, a *Roman* Magistrate, created by the Senate, or People, on some extraordinary, and eminent Occasion, to command, with sovereign Authority, for a certain Time never exceeding six Months.

Resort was never had to such an Officer, but in dangerous, and difficult Times; as in sudden Wars, Popular Factions, &c.

He had absolute, and Monarchic Power while his *Dictature* lasted: And some will even have it, his Power went beyond that of the Kings. He was Arbitrator of Peace and War, and had Command of Life and Death, without any Appeals lying to the People. 24 Axes were bore before him, whereas only 12 before the Consul. See **FASCES**.

T. Lartius Flavinus was the first *Dictator*, appointed in the Year of *Rome* 255. *Sylla* was the first perpetual *Dictator*, and *Cesar* the next. After *Cesar* there were no more *Dictators*. The first *Dictator* chose from among the People, was *Marcus Rutilius*, created in 399.

Dionysius Halicarnassensis derives the Word *ab Edicendo*, because they ordained, and appointed what they pleas'd. But *Varro* will have the Word taken hence, that the Consul nam'd him, which the Latins call *dicere*, L. IV. de *Lingua Latina*. *Dictator quod a Consule dicebatur, cuius dicto audientes omnes essent.*

DICTION, the Phrase, Elocution, or Style of a Writer, or Speaker. See **STYLE**.

The *Distion* of a Tragedy, &c. is that which expresses the Sentiments. See **SENTIMENT**.

The *Distion* of an Orator should be pure, proper to the Subject, rich without Affectation, strong and close without Dryness, and suitable to the Person, Time, Place, and Audience. The *Distion*, or Language of Tragedy is accounted the fourth of the Essential Parts thereof. It is of the least Importance of any; yet must peculiar Care be taken herein to make every Passion speak its proper Language. See **TRAGEDY**, &c.

DICTIONARY, a Collection, or Catalogue of all the Words of a Language, or an Art, with their Significations; rang'd in Order of Alphabet. See **ALPHABET**.

What the Latins, and we after them, call *Dictionary*, the Greeks call *Lexicon*. See **LEXICON**.

For the proper Character, Nature, Office, &c. of a *Dictionary*, see the Preface to this Work. See also the Article **VOcabULARY**.

The most ancient *Dictionaries* for the Latin Tongue, are, that call'd *Papias*, compiled by *Solanus*, Abbot of St. Gall, Bishop of *Constance*, who liv'd about the Year 1209; Another was made in 1459, call'd *Gemma Vocabularum*: And a third in 1502, call'd *Gemma Gemmarum*: Another by *Dionysius Nestor*, a Cordelier.

But the most celebrated one was that of *Ambrose Calepinus*, a Hermit of St. *Augustin* at *Bergamo*, and Son of the Count of *Calepin*. *Conras Gesner* is said to have augmented it with four thousand Words. *Paulus Manutius* increased it still more; and *Passerat* after him; and yet *Matthias Martinius* made two Volumes of their Omifions.

There is another noted Latin *Dictionary* of *Crispinus*; To say nothing of *Couper*, *Holyoke*, *Goldman*, *Littleton*, and numerous others of less Consideration.

For the Greek, we have those of *Ileary Stephens*, and *Scapula*: For the Spanish, that of *Covarruvias*: For the Italian, that of the Academy *della Crusca*: For the French, those of *Nicod. Fa. Monet*, *Fa. Gaudin*, *Trevoux*, and that of the French Academy: For the English, we have scarce any worth the Mentioning, unless perhaps that of *Philippus*: Tho' we are in Expectation of one from a good Hand, on the Model of that of the French Academy.

Junius has a *Dictionary*, or Alphabet of the Gothic, Runic, and Anglo-Saxon. There is another in the *Malaya* Language, which is a dead Language, famous throughout the East Indies, where it stands the head of the Latin among us.

There are also *Historical*, and *Geographical Dictionaries*, as that of *Charles Stephens*, which is translated into French, and augmented by *Morery*: Another of *Hoffmann*, printed at *Basil*, in 1671. in two Volumes *Folio*; which were followed by a Continuation of as many Volumes in 1683. Another of Mr. *Boyle*, under the Title of *Historical*, and *Critical Dictionary*, printed at *Rotterdam*, in 1697. in two large Volumes. A *Philosophical Dictionary* of Mr. *Chauvin*, of Berlin; *Law Dictionaries*; *Physical Dictionaries*, *Family Dictionaries*, *Dictionaries of Arts*, of *Commerce*, &c.

DIDACTIC, in the Schools, signifies the manner of speaking, &c. adapted to teach, or explain the Nature of Things.

There are many Words that are only used in the *Didactic*, and *Dogmatick* Way. The Word is form'd from the Greek *διδακναι*, disco, I learn.

DIDYMI, the same with *Gemelli*, or *Twins*. See **GE-MINI**.

DIEM clausis Extremum, a Writ issued out of Chancery to the Escheator of the County, upon the Death of any of the King's Tenants in *Capite*, to enquire by a Jury of what Lands he died seiz'd, and of what Value, and who was the next Heir to him.

DIÆRESIS, *Sectio*, *Dissection*, in Chirurgery, an Operation serving to divide, and separate the Parts whose Union and Continuity were an Obstacle to the Cure; or which were join'd, and conglutinated contrary to the Order of Nature. See **SECTION**.

There

There are four manners of performing the *Dieresis*: viz. by *Cutting*, *Pricking*, *Tearing*, *Draining*, and *Burying*. See *CUTTING*, *BURNING*, *TAPPING*, *CAUTERY*, &c.

The Word in its Original Greek *Διερσις*, signifies *Division*.

DIERESIS, *Διερσις*, is also used in Medicine for the *Opening*, or *Confuming* of the *Vessels*, or *Canals* of an *Animal Body*: when, from some *cutting*, or *corroding Cause* certain *Passages* are made, which naturally ought not to have been, or certain natural *Passages* are dilated beyond ordinary; so that the *Juices* which should have been contained therein, extravasate, or run over. *Blanchard*.

DIERESIS, in Grammar, a Figure whereby a Diphthong is divided into two Syllables. As *Autae* into *Autae*. See *DIPHTHONG*.

DIERESIS, is also used in the general for any Division of one Syllable into two; as in that Verse of *Tibullus*, *Stamina non vlli dissolvenda Deo, per dissolvenda*.

This is usually noted by two Points placed over a Letter, to shew that it is founded by it self, and not join'd with any other, so as to make a Diphthong: Thus *Aera*, by the Points over the *e*, is distinguish'd from *Aera*.

It is also a Kind of *Metaplasm*, or Addition to a Word, by dividing one Syllable into two; as *Autae*, by a *Dieresis*, is of three Syllables, instead of *Autae*. See *DAV*.

DIES, in common Law. There are two Kinds of *Days*: *Juridici*, & *Non Juridici*.

Dies Juridici, or *Festi*, are all Days wherein Justice is admitt'd in Court. See *FESTI*.

Dies Non Juridici, or *Nesesti*, are all Sundays in the Year; and in Easter Term, the Feast of the Ascension of our Lord; in Trinity Term, the Nativity of St. John the Baptist; in Michaelmas Term, the Feast of All Saints, and All Souls; And in Hillary Term, the Purification of the Blessed Virgin.

The same Distinction holds not only as to Legal Proceedings in Court, &c. but also as to Contracts.

In some ancient Authors, *Dies* is also used for daily Provision. *Et redderet dimidium Diem Mellis*, q. d. as much Honey as serv'd the King's Family half a Day.

Dies datus, is a Day, or Time of Respite given to the Tenant, or Defendant by the Court. See *DEPARTURE*.

DIESIS, in Music, a Division of a Tonic, lesser than a Semi-tone; or an Interval consisting of a lesser, or imperfect Semi-tone. See *TONIC*.

The *Diesis* is the smallest, and softest Change, or Inflection of the Voice imaginable. It is also call'd a *Feist*, and express'd by a St. Andrew's Cross, or Saltire.

Aristotle calls *Dieses* the Elements of Voice, as Letters are those of Discourse. Indeed, *Aristotle's Dieses* were apparently different from ours: And we find *Vivianus* expressly making the *Diesis* a fourth Part of a Tonic. But the *Pythagoreans*, who are held the Inventors of the Name *Diesis*, did not make it so small; they only divided the Tonic into two unequal Parts, and call'd the lesser *Diesis*, which we call the lesser Semi-tone; and the greater, which we call the greater Semi-tone, they call'd *Anatome*. See *SEMI-TONE*.

But in After-times, when the Tonic came to be divided into three and four Parts, the Name *Diesis* was retain'd to them all. And hence those different Accounts we meet withal in Authors, of the Quantity of the *Diesis*.

The *Enharmonical DIESIS* is the Difference between a greater, and lesser Semi-tone.

Dieses are divided into three Kinds: The *Lesser Enharmonical Diesis*, or *Simple Diesis*, denoted by a single Cross, raises the Note following by two Comma's, or about $\frac{1}{4}$ of a Tonic: The *Chromatic*, or *double Diesis*, denoted by a double Cross, raises the following Note by a lesser Semi-tone, or about $\frac{1}{2}$ Comma's; which is the common *Diesis*: The *Greater Enharmonical Diesis*, denoted by a triple Cross, raises the Note by 6, or 7 Comma's, or about $\frac{3}{4}$ of a Tonic. None but the *double Diesis* is used in Music. A Flat is frequently used to take away the *Diesis*, and a *Diesis* to take away a Flat.

When Semi-tones are placed where regular Tones should be; or a Tonic where there should be a Semi-tone, it is call'd a *Diesis*, or a *Feist*.

DIESPITER, in Antiquity, a Name given to *Jupiter*.

Some Authors will have it the same with *Dios pater*, *Jupiter*, Father, *Jupiter* being call'd in Greek *Zeus*, or *Zeus*; whence the oblique Cases *Jis*, *is*, &c. Others hold *Diespiter* to signify *Dios pater*, Father of the Day. St. *Augustin* derives the Name from *Dies*, Day; and *Parus*, Production, Bringing forth; it being *Jupiter* that brings forth the Day. Of which Sentiment are *Servius*, and *Macrobius*; the former adding, that in the Language of the *Osci*, they call'd him *Lucentius*; and *Diespiter* in Latin. *Stravens Antiq. Rom. Synt. C. I.* seems to intimate, that *Diespiter* is *Pluto*; But if that be his mean-

ing, he is apparently mistaken: For both in *Cicero*, and in the Inscription he quotes from *Gruter XXI. 8.* we have only *Dispater*, and not *Diespater*.

DIET, in Medicine, &c. a spare Regimen or Course of living, out of regard to Health. See *REGIMEN*, and *HEALTH*.

Diet is a sovereign Remedy against all Diseases arising from Repletion. See *DISEASE*, *REPLETION*, &c.

Diet is founded on this, that Nature ought not to be bafic'd, and distract'd in the Concocting of Food, but left wholly to her Work of digesting, and expelling the morbid Matter. See *FOOD*.

The Word is form'd from the Greek *Dieta*, which signifies *Regimen*, or *Rule of Life*, prescribed by Physicians. And as the Physicians usually order a spare, scanty *Medicines*, less than is usually taken; *Diet* has pass'd into a Name for this Retrenchment, or Diminution of the ordinary Quantity of Food, whether it be by Advice of a Physician, or by a Person's own Choice: provided it be to remove, or prevent some Disorder.

For the Advantages of a spare simple *Diet*, see *ABSTINENCE*, and *FASTING*.

Dr. *Cheyne* shews, how one may supply the Place of Medicines by *Diet*: Any one, says he, may lose a Pound of Blood, take a Purgé, or a Sweat, by dropping the great Meal, or Abstaining from Animal Food, and strong Liquors for four or five Days, in Chronical Cases, as effectually as by opening a Vein, (swallowing a Dose of Pills, or taking a Sudorific Bolus). He advises therefore all Gentlemen of a sedentary Life, and of learned Professions, to use as much Abstinence as possibly they can, consistently with the Preservation of their Strength, and Freedom of Spirits. This they ought to have recourse to, as soon as they find any Heaviness, Inquietudes, restless Nights, or Aversion to Application: Either by lessening one half their usual Quantity of Animal Food, and strong Liquors, till such Time as they regain their wonted Freedom, and Indolence; Or by living a due Time wholly on *Vegetable Diet*, as Sago, Rice, Pudding, and the like, and drinking only Wine and Water. *Essay on Health*, &c.

DIET, or *DEAT*, is also used for an Assembly of the States, or Circles of the Empire, or *Poland*, to deliberate, and concert Measures for the public Good. See *STATI*, *PARLIAMENT*, &c.

The *Diets* of the Empire are ordinarily held at *Ratisbon*. See *COLLEGE*, *EMPIRE*, *ELECTION*, &c.

The *General Diet of Poland* is by the Laws only to be held every two Years. But pressing Occasions convene them every Year. The Laws confine their Sitting to 15 Days; but they frequently protract it to six Weeks. Its usual Place is at *Warsaw*, the Capital of the Kingdom; tho' it has been often held at other Places: In Effect, as by the Laws every third *Diet* is to be convened at *Gradow*, in *Lithuania*; whenever for particular Reasons it is judg'd meet to balk the Turn, and hold it elsewhere, the Nobility of the Grand Dutchy must consent to it. 'Tis the King fixes the Time, and summons it by Circular Letters sent to all the Palatins. In an *Interregnum*, the Arch-Bishop of *Gnesen* calls the *Diet*. The several *Particular Diets*, which are held six Weeks before the *General One*, do each send three Deputies choic'd out of the Members thereof. In *Poland* there are likewise *Diets* on Horse-back, held in the Campaign, or Country. Such are those wherein they chuse their King. They are call'd *Pospolites*.

There are likewise *Diets* held in *Switzerland*: *Diets* of the Protestant Cantons; *Diets* of the Catholic Cantons; and *General Diets*. The first assemble at *Braun*, and are convened by the Canton of *Zurich*: The second at *Lucerne*, convened by the Canton of that Name. The third, composed of the Deputies of all the Cantons, both Protestant and Catholic, is held twice a Year, at the End of *June*, and the Beginning of *December*, and meets at *Baden*. 'Tis the Canton of *Zurich* has the Right of convening it.

The Word *Diet* in this Sense comes from *Dieta*, which originally signified a *Hall*, or *Banqueting Room*; and at length an Assembly of the States, by reason the *German*s held most of their Councils at *Table*.

DIETA, in our old Law-Books, denotes a Journey, or Days-Journey: *Omnis Rationabilis Dieta constat ex viginti Miliaribus*. *Fleta*.

DIETETIC, or *Dieteretic*, that Part of Physic, which considers the way of living with Relation to Food, or *Diet*, suitable to particular Cases. See *FOOD*, and *DIET*.

DIEU & mon Droit, q. d. *God and my Right*, the Motto of the Arms of *England*, first given by King *Richard I.* to intimate, that he held not his Empire in Vassalage of any Mortal. See *MOTTO*.

It was afterwards taken up by *Edward III.* when he first claim'd the Crown of *France*; and was continued without Interruption to the Time of King *William III.* who used the Motto, *Je maintiendrai*; tho'

tho' he commanded the former to be retain'd on the great Seal. The same is to be understood of the late Queen Anne, who us'd the Motto, *Unper Eadem*; which had been before us'd by Queen Elizabeth.

DIFFAMATORY, a Term chiefly us'd in the Phrase *Diffamatory Libel*, signifying a Writing intended to scandalize, or discredit a Person, &c. See LIBEL.

By the Roman Law, and the ancient Ordinances of France, the Makers of *diffamatory Libels* were punish'd with Death. See Baldan. *Commentarius ad Leges de Libellis famosis*.

The Historian tells us, that Cardinal Ximenes was inflexible to all *Diffamatory Libels*. He found it but reasonable, to leave infamous the Liberty of venting their Grief by Writings, which only last while the Person is offend'd at them, and lose all their Spirit and Malignity when despis'd, or disregarded.

DIFFERENTIATION, among the Romans, a Ceremony whereby the Divorce of their Priests was solemniz'd. See DIVORCE.

Differentiation was properly the dissolving of Marriages contracted by Consecration; which were those of the Pontifices. Festus says, it was perform'd with a wheaten Cake; and that it was call'd *Differentiation* from *Far*, Wheat. Vigener will have Consecration and *Differentiation* to be the same Thing. See CONFARREATION.

The Word comes from the Preposition *Dis*, which is us'd in Competition for Division, or Separation; and *Fare*, a Ceremony with Wheat, of *Far*, Wheat.

DIFFERENCE, in Logic, an Essential Attribute belonging to some Species, and not found in the Genus; being the universal Idea that defines the Species. See GENUS, and SPECIES.

Thus, Body and Spirit are the two Species of Substance, which in their Ideas include something more than is included in the Idea of Substance. In Body, for Instance, is found Impenetrability, and Extension; In Spirit, a Power of Thinking, and Reasoning. So that the *Difference* of Body is *impenetrable Extension*; and the *Difference* of a Spirit is *Cognition*. See DEFINITION.

Difference, in Mathematicks, the Excess of one Quantity above another.

This Angle is 60 Degrees, and that 90; Their *Difference* is 30. See ANGLE.

When a less Quantity is subtracted from a greater, what remains is call'd the *Difference*. See SUBTRACTION.

Difference of Longitude of two Places, is an Arch of the Equator intercepted between the Meridians of the Places. See LONGITUDE.

Arc of the Equator, in Astronomy, is an Arch of the Equator comprehended between the Circle of six a Clock, and the Hourly Circle of the Sun. See ASCENSIONAL.

Differences in Heraldry, are certain Additaments to Coat Armour, whereby something is alter'd, or added to distinguish the younger Families from the elder, or shew how far they are removed from the principal House. They are call'd in Latin *Diminutiones*, and *Differenciata Armorum*, and by the French *Brasures*. See DIMINUTION.

Of these *Differences* Sylv. Morgan gives us nine, which obtain principally among us: viz. the *Label*, which denotes the first, or eldest Son; The *Crescent*, the second; The *Mullet*, the Third; The *Martlet*, the fourth; The *Annulet*, the fifth; The *Flower de Lis*, the sixth; The *Rose*, the seventh; The *Eagle fal*, the eighth; And the *Cross Maline*, the ninth. See each under its proper Article, LABEL, &c.

Again, as the first *Differences* are single for the Sons of the first House, or Descend; the Sons of the younger Houses are differ'd by combining or putting the said *Differences* upon each other. As the first *Differences* are the *Label*, *Crescent*, &c. for the first House; the *Difference* for the second House is the *Label* on a *Crescent*, for the first of that House; For the third Brother of the second House a *Mullet* on a *Crescent*, &c.

The Original of *Differences* is controverted. Camden will have them to have begun about the Time of King Richard. Paradin assigns *Differences* wore as early as the Year 870. The President Faucher observes *Differences* to have been hereditary in the French Families before the Time of Louis le Gros, who came to the Crown in the Year 1110. Moreau refers them to the Time of St. Louis; and Lallouette, Belle-fort, &c. to that of Philip Augustus. The Occasion of their Rise is well accounted for by Colombiere.

All Nations, says he, prefer the elder Brothers to the younger; whence those, in a direct Line, succeeding their Fathers, and becoming Masters of their Lands, took on them their Coat Armour, without any Change, or Alteration; and transmitted the same again to their eldest Sons; the younger Brothers, or Bastards not being allowed to bear the same Arms, without some additional Mark, to distinguish

them from the elder. Hence some Heralds, he goes on, have endeavour'd to confine them to certain fix'd, and determinate Figures, for distinguishing the second from the first, the third from the second; and so on to the sixth: Assigning the second a *Label*, the third a *Bardure*, the fourth an *Orle*, the fifth a *Buttoon*, and the sixth a *Beak*, or *Cotice*.

And the Descendants of these to bear double *Differences*, or *Differences* charg'd on one another, viz. the eldest Son of the second Son to retain his paternal Coat, with the *Difference* of the *Label* of 3 Points; the second the *Label* of 4 Points; the third such a *Label* on a Chief; the fourth a *Label* charg'd with certain Figures, as *Englets*, *Lioncels*, *Martlets*, *Crescents*, *Roses*, &c. And for the same reason, the second Son of the third Son shall bear a *Bardure* engraid, the third a *Bardure* charg'd with Bezants, or Tourteaux, &c.

But the same Author judges the fixing any certain invariable *Differences* at all an Abuse; by reason they may happen not to be agreeable to the paternal Coat, but very much deface, and blemish it. He adds, that many other Figures beside those above-mentioned, may be us'd as *Differences*; As Shells, Bezants, Cinque-foils, and a thousand more. Some younger Families have made the *Difference* in their Arms by only diminishing the Ordinaries, or changing the Posture; And others by only changing the Metal, or Colour.

It must be added, that the *Differences* may be of Metal on Metal, or Colour on Colour; which in other Cases is false Heraldry.

DIFFERENTIAL, *Differentiale*, in the higher Geometry, an infinitely small Quantity, or a Particle of a Quantity so small as to be inconceivable thereto, or less than any assignable one. See QUANTITY.

It is call'd a *Differential*, or *Differential Quantity*, because frequently consider'd as the Difference of two Quantities; and as such is the Foundation of the *Differential Calculus*: Sir Isaac Newton, and the English, call it a *Fluxion*, as being consider'd as the momentary Increase of a Quantity. See FLUXION.

Mr. Leibnitz, and others, call it an *Infiniteesimal*. See INFINITEESIMAL.

Differential of the first, second, &c. Degree. See DIFFERENTIAL-DIFFERENTIAL.

Differential Calculus, or *Methodus*, is a Method of differing Quantities; that is, of finding a *differential*, or infinitely small Quantity, which taken an infinite Number of Times, is equal to a given Quantity.

This Method is one of the finest, and subtlest in all Mathematicks, Mr. Leibnitz, who claims the Invention thereof to himself, calls it *Differentialis Calculus*, as considering the infinitely small Quantities found hereby as the *Differences* of the Quantities; and accordingly expressing them by the Letter *d* prefix'd: as the *differential* of *x*, by *dx*; that of *y* by *dy*, &c.

Sir Isaac Newton, who has a better Title to the Discovery, calls it the *Method of Fluxions*, as considering the infinitely little Quantities rather as Fluxions, or momentary Increments, e.g. of a Line, generated by the Fluxion of a Point; of a Surface, by the Flux of a Line; or of a Solid, by the Flux of a Surface; and instead of *d* notes 'em by a dot; e.g. the Fluxion of *x*, instead of *dx* he writes \dot{x} ; that of *y*, \dot{y} , &c. which is the only Difference between the *Differential Calculus*, and the *Method of Fluxions*.

For the History, Doctrine, Use, &c. thereof, see FLUXIONS. DIFFERENTIAL-DIFFERENTIAL *Calculus*, is a Method of differing Differential Quantities.

As the Sign of a *Differential* is the Letter *d*; that of a *Differential* of *dx*, is *ddx*; and the *Differential* of *ddx*, *ddd*, or *d²x*, *d²x*, &c.; or \ddot{x} , \ddot{x} , &c.

Thus, we have Powers, or Degrees of *Differentials*. The *Differential* of an ordinary Quantity is call'd a *Differential* of the first Power, or Degree, as *dx*.

A *Differential* of the second Power, or Degree, is an *Infiniteesimal* of a *Differential* Quantity of the first Degree; as *ddx*, or *d²x*, or *d²x*, *dx²*, &c.

A *Differential* of the third Degree, is an *Infiniteesimal* of a *Differential* Quantity of the second Degree; as *ddd*, *d³x*, *dx³*, and so on.

The Powers of *Differentials*, as *dxⁿ*, are differenced after the same Manner, as the Powers of ordinary Quantities. And again, as Compound *Differentials* either multiply, or divide each other, or are Powers of *Differentials* of the first Degree; *Differentials* are differenced after the same manner as ordinary Quantities. And, therefore, the *Differential-Differential Calculus*, is the same, in Effect, with the *Differential*.

Differential, in the Doctrine of Logarithms. Kepler calls the Logarithms of Tangents, *Differentiales*; which we usually call *Artificial Tangents*. See LOGARITHM and TANGENT.

DIFFORM, is a Word used in Opposition to *Uniform*, and signifies, that there is no manner of Regularity in the Form, or Appearance of a Thing. See **UNIFORMITY**.

The Botanists use it as a Distinction of the Flowers of Plants. See **FLOWER**.

DIFFUSE, *Diffusio*, is chiefly used for a prolix, specious Manner of Writing, &c. See **PROLIX**.

A Dictionary cannot be too *diffusive*: For a Man is never too much inform'd of the Word he wanted; and he is not oblig'd to read the rest.

A *Diffuse* Style is proper for Discourses in the demonstrative Kind. *Demogobnes* is cloie, and concise; *Cicero* on the contrary *diffusive*, &c. See **STYLE**.

DIFFUSION, a *Quassifusio*, or Diffusion of any Thing, upon several Bodies, or Parts of Space.

The School-men make 3 Kinds of *Diffusion*: The first that whereby a pure Quality is *diffused*; as *Cold*, *Force*, &c. This they distinguish into *Equal*, whereby equal Portions, or Degrees of the Quality are distributed upon equal Parts of the *Medium*: Thus, when a direct Motion is impress'd on a moveable, all the Parts of the moveable receive an equal Impetus: And *Unequal*, when unequal Degrees of the Quality are distributed on different Parts of the Subject; Thus it is, that *Force* is impress'd on a Lever, and *Cold* propagated thro' a *Medium*.

The second Kind of *Diffusion* is that perform'd by the Motion of Bodies; Such is the *Diffusion of Light*, *Sound*, *Susil*, *Magnetick*, *Electric Virtues*, &c.

The third is perform'd partly by the Motion of Corpufcles, and partly by the *Diffusion of a Quality*; and thus they hold Fire to be *diffused*.

But the modern Philosophers reject the Notion of Qualities, and their *Diffusion*. According to them, there is no other *Diffusion*, but that of Corporal Substance, emitted in minute *Fibres*, or Particles, into a Kind of Atmosphere all around the Body; which *Diffusion of Corpufcles* some call *Atmospheric*, as being supposed to be terminated by a Circle, whereof the *diffusing Body* is the Centre. Every Body, it is now proved, has its Sphere of Activity, or *Diffusion*, within which the Particles, or Corpufcles, torn from it, and flying away, have a sensible Effect, as we see in odorous, sonorous, &c. Bodies: See **QUALITY**; where the Physical Law of the *Diffusion of Qualities* is laid down. See also **SPHERE of Activity**, **ATMOSPHERE**, **EFLUVIA**, &c.

DIGAMY the same with **BIGAMY**. See **BIGAMY**.

DIGASTRICUS, in Anatomy, a Muscle thus call'd, as having a double Belly; from *dis*, *dis*, twice; and *gaster*, *Belly*. See **MUSCLE**.

It arises fleshy from the upper Part of the *Processus Mesoideus*, and descending, contracts into a round *Tendon*, which passes thro' the *Scrio-hyoideus*, and an annular Ligament, which is fasten'd to the *Os Hyoides*; then it grows fleshy again, and ascends towards the Middle of the Edge of the lower Jaw, where it is inserted. When it acts, it pulseth the lower Jaw down, by the Help of an annular Pully, which alters its Direction.

* **DIGEST**, a Collection of the *Roman Laws*, rang'd and digested under proper Titles, by Order of the Emperor *Justinian*.

That Prince gave his Chancellor *Tribonianus* a Commission for this Purpose; who, in Consequence thereof, chose 16 *Juriconsulti*, or Lawyers, to work upon the same. These, accordingly, took out the best, and insert *Doctrines* from the two thousand Volumes of the ancient *Juriconsulti*, and reduced them all into one Body; which was publish'd in the Year 529, under the Name of *Digest*. This the Emperor gave the Force of a Law, by a Letter at the Head of the Work, which serves it as a *Preface*. See **JURISCONSULTS**.

The *Digest* makes the first Part of the *Roman Law*, and the first Volume of the *Corpus*, or Body of the Civil-Law. See **CIVIL-LAW**.

It was translated into Greek under the same Emperor, and call'd *Pandectæ*. See **PANDECT**.

The Method of quoting it is by a double ff, on Account of the Greek Name *Pandectæ*, which being first abbreviared by a Figure of two III; to abbreviate it yet further, the two Characters were join'd into one III, which the *Latin* Copists mistook for ff.

Cujas says, that *Digest* is a common Name for all Books disposed in a good Order, and Economy: And hence it is, that *Terrallien* calls the Gospel of *St. Luke*, *Digest*.

DIGESTER, or *Digestor*, an Artificial Means, or Instrument, serving to *digest*, or dissolve Meats out of the Stomach, by a Way analogous to that of Animal Digestion.

Mr. Leigh, in the *Philosophy Transact.* gives us an Artificial *Digestor* to illustrate the Natural one: It is prepared from Spirit of Sulphur, Spirit of Harts-horn, the Chyle of a Dog, and its *Saliva*. A Piece of Veal, Mutton, Beef, or the like, of the Bigness of a Nut, being put in a Dram of this Preparation, and set on a Digesting Furnace two Hours, drew from the Flesh a Juice, that had the Colour and Taste

of Chyle, and left the Meat light, dry, and insipid. *Dr. Havers* prepares a *Digestor* of Oil of Turpentine, mix'd with Oil of Vitriol; in which, raw Flesh, and Crums of Bread being put, and the whole committed for four Hours to *digest* in *Balneo Marie*, the Meat is found dissolv'd, and the whole together forms a thickish Pulp: Hence, those Authors, each of 'em, conclude the Food in the Stomach to be *digested* by some such *Menstruum*'s. See **DIGESTION**.

But the most noted *Digestor* is *Papin's Digestor*, the Effect whereof bears a more near Resemblance to the Operation of the Stomach. It is a Sort of Vessel, wherein Meat being put, together with so much Water as serves exactly to fill it, a Lid is screw'd close on, so as to admit of no external Air. Then, by the Application of two, or three lighted Char-Coals, or even a single small Lamp-flame, the Meat is in a few Minutes (six or eight) reduced into a perfect Pulp, or rather Liqueur. By a little Increase of the Fire, or the Addition of a few Minutes in time, the hardest Bones themselves are brought into a Pulp, or Gelly.

The Effect is accounted for from the strict Closure of the Engine, which excluding the Intervention, or Escape of Air, the Successions occasion'd by the Expansions, and Oscillations of Air included in the Flesh, are equable and strong, and so resolve the whole into one seemingly homogeneous Body, and mix the aqueous, saline, oleous, and other Particles, so strongly together, as scarce to be separable; but while hot, to appear one Liqueur, and when cold a Gelly, of a Strength proportionate to the Quantity of Flesh, or Bones dissolved in the Water.

This Experiment seems to hold a close Analogy with the Operation of the Stomach. For tho' the Stomach do not ordinarily dissolve, either so strongly, or so quick; yet in Proportion to its Heat and Constriction, *Dr. Drake* takes it to do the same Thing: Thereby breaking and resolving into small, the Bodies which it included, so mix'd, *inter Minima*, with its Humours. These, thus reduced into a Fluor, and intimately mix'd with the Liquids of the Drink, and Juices of the Stomach, compose that lactescent Liqueur, call'd *Chyle*, or *Clymus*. See **CHYLE**.

DIGESTION, in Medicine, call'd also *Coactio*, that Change of the Food taken in at the Mouth, which it undergoes in the Stomach, in order to afford fit Matter to compose or distend an Animal, till it arrives at its destined Bulk; and to repair the Loss of those Particles, which the Body, in its natural State, necessarily undergoes. See **CONCOCTION**.

The Operation of *Digestion* succeeds to *Mastication*, and *Deglutition*. See **MASTICATION**, and **DEGLUTITION**.

It includes *Clystification*, and is succeeded by *Sanguification*, and *Nutrition*. See **SANGUIFICATION**, and **NUTRITION**.

The Cause, Manner, and means of *Digestion*, have been infinitely controverted: It would be endless to enter into all the Systems, and Hypotheses, that have been fram'd by Philosophers, and Physicians, to account for this important Operation. Some contend, that it is done by a Kind of *Evaporation*, or boiling of the solid, and grosser Parts of the Food, in the liquid, by the Heat of the Stomach, and the adjacent Parts, the Liver, Spleen, &c. See **ELIXATION**.

Others, by *Attrition*; as if the Stomach by those repeated Motions, which are the Effects of Respiration, rubb'd, or ground off the minuter Particles from the grosser Mixtures; and agitating, and driving the rest against each other, attenuated, and dissolved them. See **TRITURATION**.

Others think the *Willous Juice*; Others the Spirits, &c. chiefly concern'd in the Affair.

Others will have the Food dissolved by a *Menstruum*, or *Dissolvent*: But these are greatly divided, as to the Nature, and Origin of this *Menstruum*; Some supposing it an *Acid*, furnish'd by the Glands of the Stomach; Others a *Nitro-aereous Spirit*, which by penetrating the Mass of Food, breaks the Connexion of the most solid Parts; And others, a *Serous Juice*, which divide, and volatilize the Parts of the Food. See **MENSTRUUM**.

Others again suppose *Digestion* to be perform'd by means of a *Ferment*, or *Leaven*; which, mixing with the Aliment, excites an intestine Motion in the Parts thereof, by whose mutual Frictions, and Collisions, the Parts are attenuated, and dissolved. See **FERMENT**.

But these, too, differ in their Opinions of this *Ferment*; Some taking it to be the Remains of the Food last *digested*, which by its Continuance in the Stomach, has contracted an Acid Quality, which constitutes it a *Ferment*: Others take the *Ferment*, or Principles of Fermentation to be contain'd in the Aliment it self; which when inclosed in the Stomach, and heated thereby, being put in Motion, enters on its Office of Fermentation: But these, too, are divided; Some taking it to be the spirituous Part; and some the Air in Foods. See **DIGESTER**.

Others suppose this *Ferment* supplied by the Glands of the Stomach: And lastly, others contend for the *Saliva*.

and make that the Ferment serving principally for the Digestion of the Food.

All these Systems are now reduced to three principal Ones; which we still find explain'd, and defended in the several Writings on that Subject: The first holding Digestion to be perform'd by Fermentation; The second by Trituration; And the third by Fermentation, and Trituration together.

The first Opinion was for a long Time the only one. The Retainers hereto bold, that the Food, after it is receiv'd into the Stomach, is there impregnated with certain menstruous Juices, which being assist'd by the natural Heat of the Stomach, raises a Fermentation in the Foods, which dissolves, attenuates, and converts them into Chyle.

This was the System of the Ancients; who, tho' they only express themselves in general Terms, as dissolving, softening, fubduing, Concretion, Qualities, &c. yet seem to have had the Notion of what we call Fermentation. Thus *Empedocles* and *Hippocrates* teach, that Digestion is perform'd by a Putrefaction of the Foods, after the like manner as the same *Empedocles* holds Water to be converted by Putrefaction into Wine. *Hippocrates*, and *Aristotle* use the Term *Coaction*, which we likewise find in *Eraton*, *Plutarch*, and *Athenarius*, to express the manner of Fruits ripening, the Muff's changing into Wine, and Paft's rising. *Hippocrates* expressly names *Effervescence*, and *Fermentation*, *de veteris Medicinæ*, C. 5. and *Galen* likewise, *L. de Conseruatione*, C. 2. And in another Place he asserts, that a certain Scarcity of the Stomach concurs with the Bile and Spirits to effect Digestion. To say nothing of *Cicero*, who, according to the prevailing Opinion of his Time, attributes Digestion to the Heat of the Stomach. *Lib. II. de Nat. Deor.*

The Juices, or Ferments in the Stomach, to whose Action Digestion is supposed owing, are, the Saliva, Bile, and Pancreatic Juice. This is to be true, that in certain voracious Animals, which eat, and digest fast, particularly Wolves, Ostriches, and Porcupines, the Bile discharges it self immediately into the Cavity of the Stomach; And we have observed a Disposition analogous thereto in a Man that had been a great Eater.

There are only three Marks to know the Fermentation of Dough and Muff by: First, In that the Dough rises, and swells; and the Muff boils, and rarifies. Secondly, In that the Bread and Wine made by these Fermentations, have different Tastes and Qualities from those the Flower and Muff had before. Thirdly, In that the Bread, and Wine, by Distillation, yield Principles that differ in those respects from those drawn from Flower and Muff. Now, all these Characters are found in the Change made in the Food by Digestion.

Against this System it is objected by *Mr. Hequet*, and others, that in every 24 Hours there is prepared a Pound of Saliva, half a Pound of Bile, and at least two Ounces of Pancreatic Juice; to which is to be added that Stomach-Liquor, resembling Saliva; the whole amounting to about 2 Pounds, or 13824 Grains of Ferment. Now, say they, it is allowed by the Chymists, that one Grain of Ferment is sufficient for 805 Grains of Matter to be ferment'd; consequently 2 Pounds of Ferment would suffice for 1200 Pounds of Food: Whereas a Man ordinarily does not take above 4 Pounds in a Day.

Now, this, say they, is an Argument, that Fermentation is not the only, or principal Intention of these Juices; since, if it had, they would have been better proportioned to the Occasion. And, further, it furnishes an Objection, since such a Quantity of saline, menstruous Humour, having so little Business to employ it in fermenting the Food, must act on the Stomach, corrode and destroy the fine Membrane it is lined withal, and do other Mischief.

But to this it is answer'd, 1. That, according to *Mr. Hequet* himself, the Faculty of fermenting only belongs to the Salts, and that, by his own Computation, half a Pound of Bile only contains 30 Grains of Salt; and a Pound of Saliva, with two Ounces of Pancreatic Juice, and the Stomach-Liquor, contain but 14 Grains more: So that the Ferment of the Stomach produced each Day, only amounts to about 44 Grains, which were scarce enough for 2 Pounds of Food. But *Mr. Hequet* diminishes the Quantity of these Salts too much, which *Verheyen*, and others, make a deal more. To which is to be added the volatile Salt, mix'd with the Phlegm and Spirits. 2. It is not true, that there is always required a Grain, and only a Grain of Leaven for 800 Grains of Matter. Experience contradicts this Rule. In some Fermentations there is no need of any Leaven at all, and in others a deal less. As to the Ferment's acting on the Membranes of the Stomach; 'tis certain, it does act on, and vellicate the same when there is no Food to employ it; and this it is, that occasions the Sensation of Hunger. But as fast as they are corroded, they are repair'd again by the Nourishment proper to them. The Stomach is sometimes gnaw'd, and incommoded by the Membranes; but ordinarily it is preserv'd by a viscid Matter, wherewith its inner Coat is lined.

Another Objection against this Doctrine, is, that the Chyle yields no inflammable Spirit; which it should, were it the Effect of Fermentation: But *Monfr. Astruc* answers, that all Fermentations don't produce any such Spirit: That of Dough, for Instance, affords none, nor that of rotten Fruits, nor of Acids, or pure Alkali's. The inflammable Spirit, in Effect, requires a fine attenuated Sulphur, which is not found in all Fermentations.

The second System was invented, or at least renewed in the present Age; and has been maintain'd with a deal of Zeal, and Vivacity, as is commonly the Case in any Thing that has the Appearance of Novelty. Those who espouse this Opinion, contend, that 'tis a mere continual Attrition, or Grinding, that breaks, attenuates, and reduces the Food, and with the Addition of a proper Fluid, forms it into that whitish Substance, call'd Chyle; much as Corn is ground between the Stones of a Mill. Which Opinion seems to be confirm'd by something observ'd in Birds: Their Gizzard, or Crop, is composed of two strong, solid, compact Muscles, which rubbing against each other, and being assist'd by little angular Stones, or Grains of Sand swallow'd by the Birds, break and grind the dry Food those Animals live on: And when the Sand is grown smooth, they cast them off with their other Excrements, and swallow fresh ones.

This Scarcement is thus explain'd by an able Assessor thereof, *Mr. Hequet*, in his Treatise of Digestion. Every thing in the Body is Vessel, consequently, every thing therein is hollow. Every thing therein lives, after its Manner; consequently, every thing is in Motion; Animal Life being nothing but Motion; and consequently all the Vessels are in Motion. Now, the Parts of a Body that are to move, will move towards those Sides, where they find the least Resistance. But the Place of the least Resistance in Tubes is the Cavity; consequently, the Motion of the Parts of Vessels is towards their Axes. The Parts of Vessels that are to move, are the Parietes, or Sides, because flexible, and elastic; and this Motion can only be effected by an Approximation of those Parts: Consequently, the Motion of the Vessels consists in an Approximation of their Parietes; It is, therefore, a Sort of Contraction, Pressure, or Constriction: Hence, as all the Parts of the Body are only Vessels, they all undergo a Sytyle, Pressure, or Constriction. Further, all these Vessels contain Juices in their Cavities; And, therefore, all the Juices, or Liquids in the Body are continually compress'd. This Pressure is the Action of an Elastic Force; consequently the Pressure will be such as is the Force; and, therefore, alternative: Consequently, it is a Pulse, or Palpitation; and therefore the Juices are continually beaten. Now, these Juices are exceedingly divisible; and consequently are continually attenuated, and divided: And a Division effected by a Pulsation, or Beating, is a Trituration; and consequently the Juices in the Body are continually triturated, or ground. The reason why the compressive Force should be alternative, is, that the Membranes, which compose the Vessels, consist of two Plans, or Series of Fibres; the one longitudinal, the other circular, cutting the longitudinal at right Angles: The Longitudinal are tendinous, and Elastic; the Circular are muscular, or motive, like Sphincters, which compress. The Circular are over the Longitudinal, and embrace, or gird them round. The former, we have already observ'd, are Elastic; and their Elasticity opposes the Compression of the latter. From this Opposition, or Resistance, arises a reciprocal Action, and Reaction, which is the alternative grinding Force required.

To such an account for Digestion from a Ferment, these Philosophers object, that Digestion is a Dissolution; that to prepare the Matters for this Dissolution, they must be soften'd; that the proper Effect of acid Ferments, is, to gnaw, or tear the hardest Matters, and to harden the softer, to thicken the fluid, fix the fat, and coagulate the milky: Consequently, that an acid Ferment should rather impede, than promote Digestion. Add, that beside the Force to grind the Juices, and the Vessels to compress them, there are likewise Liquors to dilute, and temper them, viz. the Saliva, and Stomach-Liquor. And Mineral Matters, which the Stomach-Liquor cannot dissolve, are found to be worn, and polish'd after having stay'd some time in the Stomach. Now polishing is the Effect of Triture, or grinding, not of corroding. Accordingly we find Pelotons, or Balls of Hairs, or Threads in the Stomach of Cattel, very smooth, and shining, and far from any Marks of Corrosion.

The Authors of Trituration require three Things for Digestion to proceed: A Liquor, to wet and dilute the Food, which they find in the Saliva, and Stomach-Liquor: A Vessel, which is the Stomach: And a moving Power to grind, which they imagine to have found in the Muscles of the Stomach, Diaphragm, and Abdomen. The moving Force in the Muscles of the Stomach they maintain to be equivalent to a Weight of 24825 Pounds; and the Force of the Stomach alone, to a Weight of 12951 Pounds: A Power more than equal to that of one of the ablest Mill-stones. See *Traite de la Digestion par Monfr. Hequet*.

Borelli, on the footing of the *Equilibrium* of Fluids, has demonstrated, that the Force of the Flexor of the left Articulation of the Thumb is equal to 3720 Pounds: Whence *Pitcairn* deduces, that the Force of the Fibres of the Stomach is equal to 12951, and that of the Diaphragm, and Muscles of the lower Venter, to 248235 Pounds. His Way of Estimating is this: The Flexor only weighs 122 Grains, and yet may sustain 3720 Pounds: Consequently, the Fibres of the Stomach weighing 8 Ounces, and the Diaphragm with the Muscles of the lower Venter, weighing together 8223 Grains, have the Force above-mention'd. But this Argumentation seems founded on a Mistake; for 'tis not in Virtue of its Weight of 122 Grains, that the Flexor Muscle is equivalent to 3720 Pounds: Besides that it would follow hence, that the heavier the Muscles of the Stomach, Diaphragm, and Abdomen, are, the more Force they would have, and consequently the more easy, and expedite would the *Digestion* be: which is false.

The Patrons of this System compare the Brain to the Arbor, or Screw of a Press, the Heart to a Piston, the Lungs to Bellows, the Mouth to a Mill-stone or Pellicle, the Stomach to a Press, and the Intestines to a Receiver, or Vat. They contend, that *Casellus*, a Physician of *Melfino*, was the first of the Moderns, who expressly espous'd the System of Ferments, and that he was followed by *Van Helmont*, and *Willis*.

But even the Partisans of Trituration are not perfectly agreed among themselves: *Pitcairn* will have it perform'd by a total Contraction of the Stomach: And *Mr. Hecquet*, by a successive, peristaltic, or vermicular Contraction.

Airue, in his Treatise, *de la Cause de la Digestion*, refuses this System of Trituration at length. He makes a strong Opposition to the *Calculus*, which raises the moving Force of the Stomach, &c. so very high. The Contraction of the Fibres of the Stomach, to compress the Food, he shews, cannot exceed three Ounces; and 'tis even gratis that he allows so much: That of the Diaphragm, and Abdomen, he computes at about 4 Pounds. He observes, that *Pitcairn*, surpris'd, in all Probability, with what he had asserted of this Force, durst not pursue the Proportion whercon his *Calculus* was founded, and according to which, one of the Forces would be found equivalent to 117088 Pounds, and the other to 240734 3/4, which together make 367822 Pounds. The Diaphragm in its Motion has two Forces; the one direct, which is that, whereby its Muscles draw from the Centre to the Circumference: the other lateral, whereby it rests, or presses on the Stomach; The latter very small in Comparison of the former. Now, what has deceiv'd *Messrs. Pitcairn* and *Hecquet*, is, their taking the direct for the lateral Force; the Contraction of Fibres for their Pressure on the Stomach. And the same Oversight they are guilty of in the Muscles of the Abdomen, whose Pressure against the Abdomen is only lateral. Add, that there are voracious Animals without any Diaphragm at all, as Fishes, which respire through their Gills: and others that have only a single Membrane; as Birds, in whom the Muscles of the lower Venter are very small, and feeble, and in a Situation that incapacitates them from acting at all on the Stomach.

The Membranes of the Stomach being very soft, and having only a slender Motion, seem very unfit for the Office of a Mill-stone. 'Tis true, in certain Fowls the Stomach consists of a close, compact, fleshy Muscle exceeding strong, fit to break little Stones, and Bits of Glass. But to this it is urg'd, that it is no *Digestion*, which in these Animals is effected in the Intestines. And the Structure of our Stomach compar'd with the Gizzard, or Crop of granivorous Birds, does, on the contrary, furnish a very cogent Argument against Trituration. The Gizzard is provided on the Out-side with four fleshy Muscles, the Tendons whereof meet in two opposite Points: The Inside is lined with a hard, thick, cartilagenous Membrane; especially in the Places where the Tendons meet. By this Mechanism Nature plainly intimates the Office of the Gizzard to be the Grinding of the Grain by the Friction of its Parietes, or Sides: Whereas, the Membrane in the Stomach of a Man is exceedingly thin and fine, furnish'd with a few fleshy Fibres, cover'd with a tender, sensible Kind of Down; and the Stomach it self is of a great Capacity. And the Stomach in rapacious Birds, who devour huge Pieces of raw Flesh without chewing, is a still finer Membrane. Lastly, on the System of Trituration there seems no accounting for Hunger, Nausea's, Indigestions, Crudities, &c.

In the System of Trituration it seems impossible to explain, why certain Things easy to grind, e.g. Cabbage Flowers, cannot be digested in certain Stomachs, which yet find no Difficulty in digesting more hard, and solid Meats, as Beef, and Mutton: Whereas, the Difference of Dissolvents gives a natural, and easy Solution. Hydropic People continue to digest, notwithstanding the Fibres of the Stomach, as well as the rest of the Body, are extremely relax'd through the Abundance of Humour. And the total, prompt Change of Nature induced in Foods can be the Effect of nothing else but Fermentation; which even discovers it self by Belches, &c.

while it goes on. The Iron, Needles, Pins, &c. sometimes found undissolved in the Stomach, are no Objection to the System of Fermentation; it being notorious, that no Dissolvent dissolves all Bodies. In Birds, which feed on Grain, the Fermentation is manifest, first, in the Crop where the Grain is prepar'd for *Digestion*, by being macerated in a Liqueur like Saliva; and afterwards in the Gizzard, where the *Digestion* is perfected by a Dissolvent pour'd into it by a conglomerate Gland. But the Thing is still more apparent in Ruminating Animals, which are provided with four Stomachs; the two first whereof, tho' form'd of a nervous Membrane, make but little Alteration in the Aliment, for Want of a Ferment, or *Mesenterium*; So that it returns to be chew'd again; and only becomes well digested in the fourth Stomach, whither a Dissolvent is pour'd from a conglomerate Gland.

The Partisans of the third Opinion allow it incontestable, that there are Acids in the Stomach, which mix with the Foods, and act on them; and hold likewise, that their Action is aided, and promoted by the Motion of the Sybule, and Diastole in the *Viscera*: They add, that the Acids produce a Fermentation; and the Oscillatory Motion of the *Viscera* a Trituration; and that thus *Digestion* is the Effect of Fermentation, and Trituration at the same Time.

Be it as it will with each of the three Systems; thus much we may venture to lay down from 'em all, as the real Proccs of *Digestion*: The End of this Operation being to prepare the Foods, so as they may serve for Nutrition; those Foods must be consider'd from the Time the Man takes them in, till being converted into Chyle, they mix with the Blood, which conveys them into all Parts of the Body. The Foods then we take, are either crude, as Oysters, Fruits, certain Fuls, &c. or dress'd, as Flesh, and Fish, which are roast'd, boil'd, fried, &c. and season'd a thousand divers Ways with Salt, Pepper, and other Spices, Vinegar, Wine, &c. to brighten and enrich the Taste as much as to assist *Digestion*. See FOOD, DRESSING, &c.

Further, there are some Foods we swallow without chewing, as Liquids; and others, which we break and comminute by chewing, as Bread, Flesh, &c. 'Tis of these last we shall here speak, as undergoing more Preparations, and more Changes to fit them for Food, than the others.

The Food, then, is first broke, and divided by the Teeth, and, at the same Time, moisten'd with a Liqueur supplied by the Salival Glands, and thus form'd into a Kind of Paste. See MASTICATION.

Thus prepar'd, it is pass'd through the *Oesophagus* into the Stomach, there to ferment. See DEGLUTITION.

This Fermentation is caus'd, 1. By the Salival Juice, which is a Ferment, and has the same Effect on the Aliment, that Leaven, or Barm has on Paste. 2. By the Heat of the Stomach, *Viscera* of the Abdomen, and even Excrements; which here has nearly the same Effect on Foods, as the Danghill has on Matters laid by the Chymists to digest therein. 3. By the Remains of Foods left adhering in the *Rago*, or Folds of the Stomach, and there turn'd sour, and acrimonious. 4. By the Compression of the Muscles of the Abdomen, and Diaphragm. 5. By the Liqueur which the repeated Compression of those Muscles occasions to drip from the Glands of the Stomach. 6. According to the Sentiment of some modern Physicians, by the Air it self, which being mix'd, and contain'd in the Aliments, dilates by the Heat of the Stomach, and separates the Parts of the Foods. These Causes all contribute to attenuate, and divide the Food, so as to convert them into a cineritious Matter, call'd *Chyle*. See CHYLE.

From the Stomach the Chyle descends into the *Duodenum*, where it is further perfected by the Pancreatic Juice, and the Bile, which thin it, precipitate its grosser Parts, and render it more fluid. The Chyle thus perfected and attenuated, enters the Lactéal Veins, which convey it into the Receptacle, where it is further diluted by the *Lympha*, which is brought hither in Abundance. Hence it rises into the Thoracic Duct, and enters the Subclavian Vein; where being taken up by the ascending *Cava*, it is pour'd into the right Ventricle of the Heart.

The Chyle thus mixing with the Blood, embarrasses the Globules thereof, and thus abates its Motion: And hence that Inclination to go to sleep after Meals. But, by Degrees, the Blood communicates its Motion to the Chyle; and by its volatile, and exalted Parts, together with the Saline and Nitrous Parts of the Air, subtilizes, and gives it its last Perfection. Then the *Digestion* is finish'd; and the Foods being by so many Changes render'd the immediate Matter of Nutrition, are carried by the Blood into all Parts of the Body, to repair, and fill the Vacancies of such as are continually dissipating, and exhaling; or even to add new ones. See NUTRITION.

As to the grosser Parts of the Foods separated from the Chyle by the Bile and Pancreatic Juice, they assume the Colour of Excrements from the Bile; and that rank Smell, they derive from the coarser Sulphurs thereof. These Sulphurs, and Salts of the Excrements, serve, after they have pass'd through the Intestines, and are arriv'd at the last, which is

the *Resolva*, to vellitate the Muscles thereof, and dispose 'em to relax, and thus to apprise Nature of a Necessity to discharge. See EXCRETMENT.

The Separation of the Urine from the Blood, may be esteem'd a Part of perfect *Digestion*; the Design of such Separation being to render the Blood more pure and balsamic, and of Consequence more fit for Nutrition; which the Salts the Urine abounds withal, greatly prevented. This Separation is thus perform'd: The Branches of the emulgent Arteries, which terminate in the Glands, whereof the Substance of the Kidneys is compos'd, carry the Blood thither; where a Serosity is separated from the Blood, by means of the Pores in the Glands of the Kidneys; those Pores representing the Holes in a Sieve, which only let pass such Things as are of a less Diameter than themselves. This Serosity, call'd Urine, is discharged hence into several little Tubes, which joining into a Kind of Pyramids, yield their Humour into the *Pelvis*, whence it runs through the Ureters into the Bladder. See URINE.

DIGESTION, in Chymistry, is a Preparation of Plants, Minerals, Metals, and other Bodies beaten, or ground, by putting 'em in a Vessel, and beating them gradually over a gentle Fire, like the Heat of an Animal Body. See FIRE.

Digestion is a previous Kind of Disposition to a perfect Dissolution of a Body, made by means of Fire, or fiery Particles, beating and loosening the Pores of the Body, and attenuating the Parts of the Fluids, that their Connexion with the harder Matter may be more easily, and perfectly dissolved. *Fabius* seems to describe it pretty adequately by an insensible Action and Reaction of the Particles of a Mass, moving together by some subtle, ambient Fluid, to which it was expos'd for *Digestion*. By calling *Digestion* a reciprocal Action, their Motion is intimated, by means whereof they are torn from the contiguous Ones; and in a Word, differently modified: So that the Motion ended, the digested Mass, differs either wholly, or in Part, from the same Mass before *Digestion*; sometimes in Colour, sometimes in Smell, sometimes in Transparency, sometimes in Taste, sometimes in Consistence, and other Affections. That *Digestion* is effected by Motion, is evident from an Observation of *Dr. Grew*; who bringing a Mixture of Salt of Tartar, and Oil of Turpentine, several Days Journey with him in a Coach to *London*, found it had undergone a more intimate Mixture, than if it had been expos'd to a long *Digestion*.

Digestion is ordinarily confounded with *Maceration*; but the two Things differ, in that there is Heat required to *Digestion*; whereas *Maceration* is done in the Cold. See MACERATION.

Digestion is usually perform'd with the Addition of some *Menstruum* suitable to the Matter: Thus, Roses and Poppies Heads are put to digest in Oil, or Water, to make Unguents, or Symples; Calcined Lead, and Cerusa, are digested in distill'd Vinegar, to make the Magistery thereof, or the *Sol Saturni*. Hence *Dr. Quincy* defines *Digestion* to be the Solution of Bodies, made by *Menstruum's*, with the Assistance of Fire.

To conceive the Nature of Chymical *Digestion*, it may be necessary to shew, how the Particles of Bodies can by this Process be dissolved every Way, and sustain'd in the *Menstruum*; which deserves the more to be accounted for, because those solid Particles have not the same specific Gravity, as the Liquors have in which they swim. Tho' the Nature of a perfectly fluid Body be such, as that the Particles, which constitute it, do very readily give Way upon the smallest Impulse, and recede from one another; yet there is found in most Liquors some Degree of Tenacity; and from hence arises such a Cohesion of Parts, as cannot be broken without some Force. And tho' indeed this Force of Cohesion in Liquors seems to be but little, or none at all, when compar'd with what we experience in Solids, yet we find, it can make some Resistance. And as the Force in Liquors is either stronger or weaker, so it produces a Variety of Effects, differing more or less from the Phenomena, which would naturally flow from a perfect Fluid; So that, tho' by the Laws of Hydrostatics, every Corpuscle, how subtil soever, if put into a Fluid, which is specifically lighter, must necessarily sink to the Bottom; yet we find some heavy Bodies, such as Gold, &c. when reduced into thin Plates, will be sustain'd in Spirit of Wine. This Force, therefore, of Tenacity, which resists the Motion of Bodies in a Fluid, is proportional to the Number of Parts, which are to be separated, or to the Surface of the Body, which we would have move in the Fluid. Hence it is, that since the Surface of a Body may be enlarged, without altering any Thing of its Gravity, the Resistance of a Fluid may be augmented, as to equal the Force of Gravity, which carries the Body downwards. And a Body, tho' specifically heavier than a Fluid, in which it is immersed, may be very well sustain'd in that Fluid, provided it be reduced into very small Particles; because the Gravity of a Body thus reduced into small Particles, decreases in a much greater Proportion, than the Surface does, or, which is proportional to it, the

Tenacity of the Fluid: So that at length the Resistance arising from its Tenacity, will be equal to the Gravity of the Particle, and so hinder its Descent. And, therefore, both in Solution, and *Digestion*, it is a general Rule, that if the Gravity of a Body be to the Tenacity of the Fluid, as P to 1; and if the Body be then subdivided, so that the Diameters of the Parts be to that of the whole, as 1 to P; the Resistance which the Particles will meet with in their Descent, will be equal to their Gravity: for since their Weight is $\frac{1}{P^3}$, but their Surface $\frac{1}{P^2}$, the Gravity will be to the Resistance as $\frac{1}{P^3}$ to $\frac{1}{P^2}$, or as 1 to P. So that by this we may understand, how the Corpuscles of Metals swim in *Menstruum's*, which are specifically lighter, as Gold in the Spirit of Nitre, which is drawn off from Bezoar Mineral, tho' the Gravity of Gold be 15 times greater. And in the same manner we may understand, how Corpuscles specifically heavier, are suspend'd in any other *Menstruum*. And it is for the same Reason, that such as are lighter, cannot rise up to the Surface: for the Pressure of Fluids being equal every Way, the superior Parts act reciprocally on the inferior; so that the same Force, which keeps the heavy Particles from sinking, will not permit those, which are lighter, to ascend.

The Use of *Digestion*, in Pharmacy, is, to extract the Particles, which are more volatile, by a certain *Menstruum*, and to mix them intimately with it. To this End a gentle Fire is commonly us'd, that the Corpuscles, which are most volatile, may separate, as it were of their own Accord: for a fierce Fire forces out the Fees, as well as the finer Particles; and if it does not abate the Strength of the Liqueur, it will not fail of spoiling its Cleared.

DIGESTION, in Chirurgery, is applied to Imposthames, or Abscesses; and expresses their Disposition to ripen, and come to Suppuration. See DIGESTIVE.

Tumors arising on the Parotides of Children, are of easy *Digestion*: They ripen in a little Time. *Dionis*.

DIGESTION is also us'd for *Maturacion*, or that State of a Disease, wherein the morbid Matter is so chang'd in Bulk, Figure, Cohesion, Mobility, &c. by the Use of proper Medicines, or even by the Force of Nature, as to be less noxious and hurtful, and consequently to abate the Violence of the Dilemper. See MATURATION.

The Greeks call it *aradesmos*. The Matter of the Disease so far digested, as to become next a-kin to salubrious, or healthy Matter, is said to be resolved. See CAUDITY, and CRISIS.

DIGESTIVE. The ancient Philo'sophers admitted a *Digestive Faculty*, or *Quality* in the Body; as not knowing how otherwise to account for the Act of *Digestion*. See FACULTY, and DIGESTION.

DIGESTIVE is also us'd in Medicine for such Remedies as strengthen, and increase the Tone of the Stomach, and assist in the Digestion of Foods. To this Class belong all *Stomachicks*, and *Strengtheners*, or *Corroborants*. See STOMACHIC, and STRENGTHENER.

DIGESTIVE, in Chirurgery, is a Sort of Unguent, Plaster, or the like, that ripens, and prepares the Matter of Wounds, &c. for Suppuration. It is usually compos'd of Turpentine, Yolk of Eggs, Oil of *Hypericum*, Unguentum *Balsivum*, and Tincture of Aloes. The Wound must be dress'd the first Day with a *Digestive*, to bring it to Suppuration.

DIGITATED, among Botanists, is applied to the Leaf of a Plant, which is either compos'd of many simple Leaves set together upon one Foot-Stalk, as in the Cinque-fol, Vetches, &c. or else when there are many deep Gashes, or Cuts in the Leaf, as in those of Straw-berries, Hops, &c. See LEAF.

DIGIT, *Digitus*, in Anatomy. See FINGER.

DIGIT, in Astronomy, is the Measure whereby we estimate Eclipses; amounting to the 12th Part of the Diameter of the Lunnary eclips'd.

The Diameter of the Body, or Disk of the Sun, or Moon, is divided into 12 Parts, call'd *Digits*; and an Eclipse is said to be of ten *Digits*, when ten of those Parts are hid. See ECLIPSE.

These *Digits*, *Wolfus*, and some others, call *Digiti Eclypsii*.

DIGIT, in Arithmetick, signifies any Integer under Ten, as 1, 2, 3, 4, 5, 6, 7, 8, 9. See UNITS.

DIGIT, is also a Measure taken from the Breadth of the Finger.

A *Digit* is properly $\frac{3}{4}$ Fourths of an Inch, and contains 4 Grains of Barley, laid breadth-wise so as to touch each other. See MEASURE.

DIGLYPH, a Kind of imperfect Triglyph, consist of the like, with only two Channels, or Engravings. See TARGLYPH.

DIGNITARY, in the Canon Law, and particularly in Chapters, a Person who holds a *Dignity*, that is, a Benefice, which gives him Pre-eminence in the Choir above mere Priests, and Canons. Such is a *Dean*, and *Arch-deacon*; tho' the Word

Word is also abusively applied to a mere Prebend, or Canon.

Dignities are sometimes simple, sometimes with Care of Souls, and sometimes with Jurisdiction and Administration of sacred Things. The Canonists even define *Dignity*, *Administratio cum Jurisdictione & Potestate conjuncta*. If the *Dignity* have no Contentions, or Exterior Jurisdiction, 'tis a simple *Parsonage*, and only gives Pre-eminence.

Of *Dignities*, including Prebends, *Camden* reckons in *England* 544 in Number.

DIHEDIOS, in the Elliptical Astronomy, a Name *Kepler* gives to that Ordinate of the Ellipsis, which passes through the *Focus*, wherein the Sun is supposed to be placed. See *ELLIPSI*.

DJAMBUS, a Foot of Latin Verse, of four Syllables; compounded of two *Jambics*; so that the first and last are short, and the two middle long. See *JAMBUS*.

DIKE, or *Dam*, a Work of Stone, Timber, or Fascines, rais'd to oppose the Entrance, or Passage of the Waters.

Dikes are usually Elevations of Earth, with Hurdles of Stakes, Stones, and other Matters.

The *Dike of Rochel* is made with Vessels fasten'd to the Bottom. The *Dikes of Holland* are frequently broke thro', and drown large Tracts of Land.

The Word comes from the Flemish *Dyk*, a Heap of Earth to bound, or stem the Water. *Salmastius*, and *Menville* take them to have borrow'd the Word from the Greek *δύκος*. *Guichard* derives it from the Hebrew *Dagbah*.

DILAPIDATION, is a wastful Destroying, or letting Buildings run to Rain, and Decay, for Want of necessary Reparation: 13 *Esa. Cap. 13*.

The Money recover'd for *Dilapidations*, by 14 *Edw. 11* shall be employ'd in the Repair of the same Houses.

DILATATION, in Medicine, &c. is the laying open any Orifice, or the Lips of a Wound wider; or the Extension of any Vessel: whence *Dilatatorium*.

DILATATION, in Physicks, a Motion of the Parts of a Body, whereby it expands, or opens it self to a greater Space. See *EXPANSION*.

The Generality of our Authors confound *Dilatation* with *Rarefaction*; but the more accurate, especially the Foreigners, distinguish between them; defining *Dilatation* to be the Expansion of a Body into a greater Bulk, by its own Elastic Power: And *Rarefaction*, the same Expansion produced by means of Heat. See *RAREFACTION*.

The Moderns have observ'd, that Bodies, which, after being compress'd, and again left at Liberty, restore themselves perfectly, do endeavour to dilate themselves with the same Force whereby they are compress'd; and accordingly, they sustain a Force, and raise a Weight equal to that whereby they are compress'd.

Again, Bodies, in dilating by their Elastic Power, exert a greater Force at the Beginning of their *Dilatation*, than towards the End; as being at first more compress'd; and the greater the Compression, the greater the Elastic Power, and endeavour to dilate. So that these three, the Compressing Power, the Compression, and the Elastic Power, are always equal. See *ELASTICITY*.

Again, The Motion whereby compress'd Bodies restore themselves, is usually accelerated: Thus, when compress'd Air begins to restore it self, and dilate into a greater Space, it is still compress'd; and consequently, a new *Impetus* is impress'd thereon, from the dilative Cause, and the former remaining, with the Increase of the Cause, the Effect; that is, the Motion and Velocity must be increased likewise: Thus an Arrow shot from a Bow, does not quit the String, till after that be perfectly restored to its Natural State; Nor does the Arrow move a whit swifter than the String; And if the String, 'ere it have perfectly restored it self to its right Line, be stopp'd, the Arrow will not go its full Length: Which is a Proof, that it is continually acquiring a new *Impetus* from the String. And since Projects at the Beginning of their Motion, are little, or nothing retard'd, but rather accelerated, it is evident, that the Motion of a String restoring it self, is likewise accelerated. Indeed it may happen, that where the Compression is only partial, the Motion of *Dilatation* shall not be accelerated, but retard'd. As is evident in the Compression of a Sponge, soft Bread, Gawze, &c.

DILATORES Ale Nasi, in Anatomy, a Pair of Muscles common to the *Ale Nasi*, and Upper Lip. See *MUSCLE*.

They arise thin, broad, and fleshy, from the Cheek-bones under the Orbits of the Eyes, and descend obliquely with a two-fold Order of fleshy Fibres in each Muscle, which partly terminate in the Upper Lip, and partly in the *Ale Nasi*. They draw the *Ale* from each other, and widen the External Openings of the Nostri.

DILEMMA, in Logic, an Argument consisting of four or more Propositions, so dispos'd, that grant which you will of them, you will be press'd by the Conclusion. See *SYLLOGISM*.

Or *Dilemma* is an Argument consisting of two contrary Parts, or Sides, either of which catches the Adversary. And hence it is also call'd *Syllogismus cornutus*, a horned Syllogism, its Horns being so dispos'd, that if you avoid the one, you run upon the other.

It is also call'd *Crocodilicus*, by reason, that as the Crocodile leads such as follow it, into the Nile, and pursues such as fly it, to destroy them; so, whatever the Adversary either affirms, or denies in this Kind of Syllogism, is turn'd to his Disadvantage. See *CROCODILUS*.

Take an Example: A Philosopher once disswaded a Man from marrying, by this Argument: *Either the Woman you marry will be handsome, or ugly: If handsome, she will give you Jealousy; if ugly, Dissenior.*

Cicero uses this fine *Dilemma*, to prove, that all Pain is to be bore with Patience: *Omnis Dolor aut est vehementer, aut levis: Si levis, facile feretur; Si vehementer, certo brevis futurus est.*

The same *Cicero*, by another *Dilemma*, proves, that no Messengers shall be sent to *Anthony*: *Legatos decernitis; Si ut deprecentur, contemnetis: Si ut Imperetis, non audiet.* Nor must we here omit that beautiful *Dilemma* of *Tertullian*, whereby he clears the Christians, and accuses *Trajan*, who had forbid the seeking them out, and yet order'd them to be punish'd, when found: *O Sententiam Necessitate confusum! Negat inquirendos, ut Innocentes; & mandat puniendos, ut Nocentes: parat & servit, dissimulat & animadvertit. Quid temerissimum Censura circumvenit? Si damnas, cur non & inquiris? Si non inquiris, cur non & abasas?*

For a *Dilemma* to be legitimate, there are two Things required: 1. A full Enumeration of Parts: Thus that of *Aristippus* abovemention'd, whereby he disswades from Marriage, is invalid, as being defective in the Enumeration; there being a middle Degree, or Form between *handsome* and *ugly*.

2. That the *Dilemma* press the Adversary above, and that the Person, who makes it, be not liable to have it retorted upon him. This was the Case in that celebrated *Dilemma* of the Sophist *Protagoras*, which the *Areopagites*, with all their Wisdom, were not able to fettle.

A Youth named *Evasthus*, put himself to *Protagoras*, to learn *Dialectic*, upon this Condition, that he should pay him a large Sum of Money, the first Cause he plead'd, in Case he gain'd the same. *Evasthus*, when fully instructed, refusing to pay the Condition; *Protagoras* brings his Action, arguing thus: You must pay the Money, however the Cause go; for if I gain, you must pay in Consequence of the Sentence, as being cast in the Cause: And if you gain it, you must pay in Pursuance of our Covenant. Nay, retorts *Evasthus*, which Way soever the Cause go, you'll have nothing: For if I prevail, the Sentence gives it, that nothing is due to you; and if I lose, then there is nothing due by the Covenant.

After the like Manner, an ancient Priestess disswading her Son from Haranguing the People, by this *Dilemma*: *Nam si injusta fueris, irasus habebis Deos iratos: Sin vero justa, irasus habebis homines:* The Youth thus return'd the *Dilemma* on his Mother; *Ino*, says he, *expedit ad Populum Verba facere, nam si justa aivero Dei me abasunt, si injusta Homines.*

The Word *Dilemma* is form'd from the Greek *διε*, bis, twice, and *λίμμα*, Sumpcio.

DILUTE. To dilute a Body, is to render it liquid; or, if it were liquid before, to render it more so, by the Addition of a thinner thereto.

Those Things thus add'd, are call'd *Diluents*, or *Diluents*; such are common Wheys, Pissins, and Juleps, which in respect of the Blood in a State of Viscidity are thinner, and therefore are said to thin, or dilute it.

Flower must be well dilute'd, to make it into Paste. Oker is dilute'd with Oil, to paint Beams, Doors, &c.

DIMENSION, is the Extension of a Body, consider'd as measurable. See *EXTENSION*, and *MEASURE*.

Hence, as we conceive a Body extended, and measurable both in Length, Breadth, and Depth; we conceive a *Linea Dimensionis*, viz. Length, Breadth, and Thickness. The first call'd a *Line*, the second a *Surface*, the third a *Solid*. See *LINE*, *SURFACE*, and *SOLID*.

DIMENSION, is particularly used with regard to the Powers of the unknown Quantity of an Equation, which are call'd the *Dimensions* of that Quantity.

Thus in a simple Equation, the unknown Quantity is only of one Dimension, as $x = a + b \cdot x$. In a quadratic Equation it is of two Dimensions, as $x^2 = a^2 + b \cdot x$. In a Cubic, of three, as $x^3 = a^3 + b \cdot x$, &c. See *EQUATION*, *POWER*, &c.

DIMINISH'D Column, in Architecture. See *COLUMN*, and *DIMINATION*.

DIMINISH'D Interval, in Music, is a defective Interval, or an Interval which is short of its just Quantity by a lesser Semi-tone. See *INTERVAL*, and *SEMI-TONE*.

A *Diminifh'd Interval* is mark'd with a flat, or a double *Diſſis*.

DIMINUTION, in Rhetoric, is the Augmenting, and Exaggerating what you have to ſay, by an Expreſſion that ſeems to weaken, and *diminiſh* it.

As, for Inſtance, when a Man ſays with a certain Tone, *This Woman is not ugly*, meaning, ſhe is very handſome.

Some Authors take *Diminution* in a ſtricter Senſe, *vis.* for ſaying leſs than a Man really means, as: *You are not indeed to be commended*; where a greater Reproach is ſecretly meant.

DIMINUTION, in Muſic, is when there are a Number of Words, which are to make Tones and ſeveral quick Motions in the Space of a Cadence; ſeveral Quavers, and Semi-quavers, correſponding to a Crochet, or Minim.

DIMINUTIONS, in Heraldry, a Term uſed by the *Latins* for what we more uſually call *Differences*, and the French *Brifures*. See **DIFFERENCES**.

DIMINUTION, in Architecture, a Contraſtion of the upper Part of a Column, whereby its Diameter is made leſs than that of the lower Part. See **COLUMN**.

To attain thoſe two important Points in Architecture, Strength, and the Appearance of Strength, all Architects have made their Columns leſſer above than below; which is call'd their *Diminution*. Some have likewiſe made them a little bigger towards the middle than at the Bottom, which is call'd their *Swelling*. The *Gothic* Architects, indeed, obſerve neither *Diminution*, nor *Swelling*: Their Columns are perfectly Cylindrical, for which reaſon they are properly call'd *Pillars*, in Contra-diſtinction to *Columns*. See **PILLAR**.

The *Diminution* generally commences from one Third of the Height of the Column. Some make it begin from the very *Baſis*, and hold tapering to the Capital; but this has not ſo good an Effect. *Vitruvius* would have the *Diminution* of Columns diſſer according to their Height, and not according to their Diameter. Thus, a Column 15 Foot high, he *diminiſhes* a ſixth Part of its Diameter, and another of 30 Foot, only an 8th Part; but we don't find this Rule obſerv'd in the Antique.

The Difference of Orders, Mr. *Perrault* obſerves, does not Inſer a Difference of *Diminution*; there being ſmall and great *Diminutions* in different Works of the ſame Order: Excepting, however, the *Tuſcan*, which *Vitruvius* *diminiſhes* by a 4th Part; tho' *Vignola* only makes it a 5th, and the *Treſtan* Column a 9th. The *Diminutions* are very differently adjust'd in the different antique Buildings, as well as in the different modern Authors.

DIMINUTIVE, in Grammar, a Word form'd from ſome other, to ſoften, or *diminiſh* the Force, and Effect thereof: Or, to ſignify a Thing that is little in its Kind.

Thus *Bullock* is a *Diminutive* of *Bull*; *Cellule* of *Cell*.

The *Italians* abound in *Diminutives*; Every Author being at Liberty to make as many as he pleaſes. The *French* are a good deal more reſerv'd in that reſpect; tho' their old Authors were every whit as licentious as the *Italians*, witness *Belleſſet*, &c.

In *Engliſh* we have very few; not that our Language is hard, and incapable of the ſofter Expreſſions, but by reaſon we lay all our Tenderneſs in our Sentiments: Or rather, our Language is tender like a Perſon of Diſcretion, who always ſpeaks Senſe, even in ſpeaking of his Paſſion.

In *Latin*, *Italian*, *Engliſh*, and moſt other Tongues, *Diminutives* are form'd from Primitives, by the Addition of a few Letters, or Syllables: In *French*, the Caſe is frequently otherwiſe, the *Diminutive* being ſometimes ſhorter than the Primitive, ſometimes the ſame Length.

Some Grammarians call at leaſt a *diminutive* Conjunction, as ſerving to leſſen, or *diminiſh* the Force of what went before. See **CONJUNCTION**.

DIMISSORY Letters, *Dimiſſoria Litera*, in the Canon Law, a Letter given by a Biſhop to a Candidate for holy Orders, born, or inhabiting in his Dioceſe; directed to ſome other Biſhop, and giving Leave for the Bearer to be ordain'd by him. See **ORDINATION**.

When a Perſon produces Letters of Ordination, or Tomſure conſerr'd by any other than his own Dioceſan, he muſt at the ſame Time produce the Letters *Dimiſſory* given by his own Biſhop, on Pain of Nullity.

Letters *Dimiſſory* cannot be given by the Chapter *ſede vacante*; This being deem'd an Act of voluntary Jurisdiction, which ought to be reſerv'd to the Succellor.

DIMOCRITAE, a Name given the *Apollinariſts*. Thoſe Heretics at firſt held, that the Word only aſſum'd a human Body, without taking a reaſonable Soul like to ours. But being at length convinc'd by formal Texts of Scripture, they allow'd, that he did aſſume a Soul, but without Underſtanding; the Word ſupplying the Want of that Faculty. From this Way of ſeparating the Underſtanding from the Soul, they became denominat'd *Dinoerites*, q. d. Dividers, Separators, of *ſuis*, and *uſque*, I divide. See **APOLLINARIſT**.

DINNER, the great Meal, or that taken about the Middle of the Day. See **MEAL**.

Monks are ſaid to *dine* at eleven o' Clock, the common People about 12, and the Men of Buſineſs about 2. The *Grand Tartar*, Emperour of *China*, after he has *dined*, makes Publication by his Heralds, that he gives Leave to all the other Kings and Potentates of the Earth, to go to *Dinner*; as if they waited for his Leave.

The Word is form'd from the French *Difner*, which *de Cange* derives from the barbarous Latin *difnare*. *Henry Stephens* derives it from the Greek *δίνω*; and will have it wrote *Dipner*. *Menage* deduces it from *deſinare*, uſed for *deſinere*, as the *Italians* ſtill ſpeak it.

In the general, 'tis agreed to be the moſt ſalutary, to make a ſpare Supper, and to eat the more plentifully at *Dinner*; eſpecially for tender, valetudinary People. This is the Sentiment of the *Schoſa Salernitana*:

*Ex magna Cœna Stomacho fit maxima Paena:
Ut ſis Noſte levis, ſit tibi Cœna brevis.*

Yet *Bernardinus Paternus*, an eminent *Italian* Phyſician, maintains the contrary in a Treatiſe expreſs. See **FOOD**.

The *Romans*, we are aſſur'd, never minded *Dinner*; but deſerv'd their good Cheer to the Evening, which they made their grand Meal. *Dacier*.

DIOCESE, the Circuit, or Extent of the Jurisdiction of a Biſhop, or Arch-Biſhop. See **BISHOP**.

Dioceſe is alſo uſed in ancient Authors, &c. for the Province of a Metropolitan. See **PROVINCE**, and **METROPOLITAN**.

The Word is form'd from the Greek *διοκεναι*, Government, Administration, form'd of *διοκω*, which the ancient Gloſſaries render *adminiſtro*, *modero*, *ordino*; Hence *διοκωνειν τὴν πόλιν*, the Administration, or Government of a City.

Dioceſis, *Dioceſis*, was originally a Civil Government, or Prefecture compoſed of divers Provinces. The firſt Division of the Empire into *Dioceſes* is ordinarily aſcribed to *Conſtantine*; who distributed the whole *Roman* State into four, *viz.* the *Dioceſe of Italy*, the *Dioceſe of Illyria*, that of the *Eaſt*, and that of *Africa*. And yet long time before *Conſtantine*, *Strabo*, who wrote under *Tiberius*, takes Notice *Lib. XIII. p. 432.* that the *Romans* had divided *Aſia* into *Dioceſes*, and complains of the Confuſion ſuch a Division occaſion'd in Geography, *Aſia* being no longer divided by Peoples, but by *Dioceſes*, each whereof had a Tribunal, or Court where Juſtice was adminiſter'd. *Conſtantine*, then, was only the Inſtitutor of thoſe large *Dioceſes*, which comprehended ſeveral Metropoles, and Governments; the former *Dioceſes* only comprehending one Jurisdiction, or Diſtrict, or the Country that had Referre to one Judge, as appears from this Paſſage in *Strabo*, and before *Strabo*, from *Cicero* himſelf, *Lib. III. Epit. ad ſuſul. ep. 9.* and *Lib. XIII. ep. 67.*

Thus, at firſt, a Province included divers *Dioceſes*; and afterwards a *Dioceſe* came to comprize divers Provinces. In After-times the *Roman* Empire became divided into XIII. *Dioceſes*, or Prefectures; tho' including *Rome*, and the ſub-urbicary Regions, there were XIV. Thoſe XIV *Dioceſes* comprehended 120 Provinces: Each Province had a Proconſul, who reſided in the Capital, or *Metropolis*; And each *Dioceſe* of the Empire had a Conſul, who reſided in the principal City of the Diſtrict.

On this Civil Conſtitution, the Eccleſiaſtical one was afterwards regulat'd: Each *Dioceſe* had an Eccleſiaſtical Vicar or Primate, who judg'd finally of all the Concerns of the Church within his Territory. See **ECCLEſIAſTICAL**.

At preſent there is ſome further Alteration: For *Dioceſe* does not now ſignify an Aſſembly of divers Provinces; but is limited to a ſingle Province under a Metropolitan, or even to the ſingle Jurisdiction of a Biſhop.

Gul. Brito affirms *Dioceſe* to be properly the Territory, and Extent of a Baptiſmal, or Parochial Church; whence divers Authors uſe the Word to ſignify a ſimple Pariſh. See **PARISH**.

DIOCLETIAN Epochs. See **EPOCHS**.

DIONYSIAN Period. See **PERIOD**.

DIONYSIACA, Feaſts held among the Ancients, in Honour of *Bacchus*, on the third Day of *September*. See **FESTIV**.

The *Latins* call'd them *Liberalia*, and the Feaſt of *Vintages*, by reaſon *Bacchus*, *Liber* in the Heathen System is reputed the God of Wine; ſee *Varro Lib. 5.* See **LIBERALIA**.

The Word is form'd from the Greek *διονύσιος*, of *Διονύσιος*, *Bacchus*; and that of *Διός*, the Genitive of *Ζεύς*, *Jupiter*, and *Νύξ*, a City in *Egypt* on the Frontiers of *Arabia*, where *Bacchus* is ſaid to have been educated by the Nymphs.

Others derive *Διονύσιος* from *Δύς*, and *Δύς*, *Lord*; and *Niſa*, put by *Metatheliſis*, or Tranſpoſition, for *Sina*; So that,

that, according to *Tzetzes*, *Διόπτρα* signifies no more than *αὐτός καὶ ἄλλος Νόστος*, Lord and King of Nyssa.

DIOPTRER, or *Dioptra*, in the Writers of Astronomy, is frequently used for the Holes pierced in the *Platula*, or Sights of an Alhidade. See **STURTS**.

DIOPTRA, among Surgeons, is an Instrument whereby one may see into the *Marris*, and inspect any Ulcers therein, call'd also *Speculum Marris*, and *Dilatatorium*.

DIOPTRICKS, the Doctrine of refracted Vision, call'd also *Anastalticks*. See **VISION**.

Dioptricks is properly the third Branch of Opticks; Its Office being to consider, and explain the Effects of Light refracted by passing through different *Mediums*, as Air, Water, Glass, &c. and especially *Lens's*. See **OPTICKS**.

The Word *Dioptricks* is originally *Greek*, being form'd of *διω, for*, through, and *ὄψιασι*, I see; whence *διόπτρα* should be to see through any Thing.

The Laws of Dioptricks, see deliver'd under the Articles REFRACTION, LENS, &c. and the Application thereof, in the Construction of Telescopes, Microscopes, and other Dioptrical Instruments, under the Article TELESCOPE, MICROSCOPE, &c.

DIPHRYGES, in Pharmacy, the *Scoria*, Sediment, or Calx of melted Copper gather'd in the Furnace, when the Metal is run out. See **SCORIA**.

Diophrades makes three Kinds of *Diphrages*: One call'd *Natural*, tho' made of a Kind of Clay, or Bole dried in the Sun: That made of *Marcasite*, or *Pyrites* burnt; and that of the *Feces* of Copper. See **COPPER**.

It is moderately sharp, and astringent, and is reputed good for Ulcers that cicatrize with Difficulty.

The Word is form'd from the *Greek* *διω, twice*, and *φρύγιαν*, to roast.

DIPLOE, in Anatomy, a spongy, medullary Substance, separating the two Tables of the *Cranium*, and together with them constituting the Skull. See **CRANIUM**.

The Substance of the *Diploe* being spongy, easily imbibes the Blood, and is found separated into an infinite Number of little Cells of different Magnitudes, which receive little Branches of Arteries from the Brain, and give Passage to little Veins that proceed to the *Sinns* of the *Dura Mater*.

DIPLOMA, an Instrument given by some Colleges, and Societies, on Commencement to any Degree, or passing Examination, as a Proof of Qualification for any Advancement to Title, or Power.

DIPPING-Needle, or *Inclinator*, a Magnetical Needle, so hung, as that instead of playing horizontally, and pointing out North and South, one End dips, or inclines to the Horizon, and the other Points to a certain Degree of Elevation above it. See **NEEDLE**, and **MAGNET**.

Or, a *Dipping-Needle* may be defined with *Mr. Whiston*, to be a long straight Piece of Steel, (represented *Tab. Navigation Fig. 11.*) every way equally poised on its Centre, and afterwards touch'd with a Load-stone; but so contriv'd, as not to play on the Point of a Pin, as does the common horizontal Needle, but to swing in a Vertical Plane, about an Axis parallel to the Horizon: And this in Order to discover the exact Tendency of the Power of Magnetism. See **MAGNETISM**.

The Inventor of the *Dipping-Needle*, *Mr. Whiston* observes, was, without all Question, an *Englishman*, *Robert Norman* by Name, a Compass-maker at *Wapping*, about the Year 1576; which is not only testified by his own Account, in his *New Astrakive*; but was allow'd by *Dr. Gilbert*, and other Writers of that Time. The Occasion of the Discovery he himself relates: viz. that it being his Custom to finish, and hang the Needles of his Compasses, before he touch'd 'em; he always found, that immediately after the Touch, the North-Point would bend, or decline downward, under the Horizon; Inasmuch, that to balance the Needle again, he was always forc'd to put a Piece of Wax on the South End, as a Counter-poize.

The Constancy of this Effect led him at Length to observe the precise Quantity of the *Dip*, or to measure the exact Angle which the Needle would make with the Horizon.

This in the Year 1576 he found at *London* to be 51° 50' But the *Dip* varies as well as the Horizontal Direction; and is now found, at the same Place, to be 75° 10'.

Burrows, Gilbert, Ridley, Bond, &c. endeavour'd to apply this Discovery of the *Dip*, to the finding of the Latitude; and the last Author, going further, likewise propos'd the finding of the Longitude thereby: but for Want of Observations, and Experiments, he could go no length.

Mr. Whiston, being furnish'd with the further Observations of *Col. Windham*, *Dr. Halley*, *Mr. Pound*, *Mr. Canningham*, *Pere Noel*, *Mr. Fenillee*, and his own, has improv'd very much on the Doctrine, and Use of the *Dipping-Needle*, brought it to more certain Rules, and endeavour'd in good Earnest to find the Longitude thereby.

In Order to this, he observes, I. That the true Tendency of the North, or South End of every Magnetic Needle is not to that Point in the Horizon to which the Horizontal Needle points, but towards another directly under it in the same Vertical; and in different Degrees under it, in different Ages, and at different Places.

II. That the Power by which a Horizontal Needle is govern'd, and all our Navigation ordinarily directed, is prov'd to be but one Quarter of the Power, by which the *Dipping-Needle* is mov'd; which should render the latter far the more effectual, and accurate Instrument.

III. That a *Dipping-Needle* a Foot long, will plainly shew an Alteration of the Angle of Inclination in these Parts of the World in half a Quarter of a Degree, or 7½ Geographical Miles; i. e. supposing that Distance taken along, or near a Meridian. And a Needle of 4 Foot, in two or three Miles.

IV. A *Dipping-Needle* 4 Foot long, in these Parts of the World, will shew an equal Alteration along a Parallel; As one of a Foot long will shew along a Meridian, i. e. this will with equal Exactness shew the Longitude, as that the Latitude.

This depends on the Position of the *Lines of equal Dip*, in these Parts of the World, which are found to lye about 14 or 15 Degrees from the Parallels.

Hence he argues, that as we can have Needles of 5, 6, 7, 8, or more Feet long, which will move with Strength sufficient for exact Observation; And since Microscopes may be applied to the Viewing the smallest Divisions of Degrees on the Limb of the Instrument, it is evident, the Longitude at Land may be found thereby to lye less than four Miles.

And as there have been many Observations made at Sea with the same Instrument by *Noel, Fenillee*, &c. which have determin'd the *Dip* usually within a Degree, sometimes within ½, or ¼ of a Degree, and this with small Needles of 5, or 6, or at the most 9 Inches long; 'tis evident, the Longitude may be found even at Sea, to less than half a Quarter of a Degree.

Thus much premis'd, the Observation it self follows.

To find the Longitude, or Latitude by the *DIPPING-Needle*:

If the *Lines of equal Dip* below the Horizon be drawn on Maps, or Sea-Charts, from good Observations, it will be easy from the Longitude known to find the Latitude; and from the Latitude known to find the Longitude, either at Sea, or Land.

Suppose, e. g. you were travelling, or sailing along the Meridian of *London*, and found the Angle of *Dip*, with a Needle of one Foot to be 75°; the Chart will shew, that this Meridian, and the Line of *Dip* meet in the Latitude of 55° 11' which, therefore, is the Latitude sought. See **LATITUDE**.

Or, suppose you were travelling, or sailing along the Parallel of *London*, i. e. in 51° 50' North Latitude, and you find the Angle of *Dip* to be 74°. This Parallel, and the Line of this *Dip* will meet in the Map in 1° 40' of East Longitude from *London*; which is, therefore, the Longitude sought. See **LONGITUDE**.

DIPTERE, or **DIPTERON**, in the ancient Architecture, a Temple surrounded with two Rows of Columns, which from a Sort of Portico's, call'd *Hings*, or *Ilet*. See **TEMPLE**.

The Word is *Greek*, form'd from *διω, twice*, and *πτερον*, *Ala*, Wing.

DIPHTHONG, in Grammar, a double *Vowel*, or the Union, or Mixture of two Vowels pronounced together, so as only to make one Syllable; as the Latin *ae, oe, e, oe, or, or*; the *Greek* *ai, au, &c.* See **VOWEL**, and **SYLLABLE**.

The *Latins* pronounced the two Vowels in their *Diphthongs* much as we do; with this Exception, that the two were not heard equally, but the one was somewhat weaker than the other, tho' the Division was made with all the Delicacy imaginable.

Among us, most of the Latin *Diphthongs* are lost in the Pronunciation: Their *e* and *o* are only spoke as *e's*; So also the English *ea, oa*, &c. tho' wrote with two Characters, are pronounced as simple Sounds.

In *English, French*, and divers other Languages, one may distinguish *Diphthongs* with regard to the Ears, from *Diphthongs* with regard to the Mouth.

A *Diphthong* with regard to the Eye, is form'd of two Vowels meeting in the same Syllable, whether the particular Sound of each of them be heard in the Pronunciation, whether the Sound of one of them be drown'd; or lastly, whether a new Sound different from either of them result from both. In the two latter Occasions, 'tis with some Impropriety, that we call them *Diphthongs*. The first only are real *Diphthongs*, as being such both to the Eye, and Ear.

Diphthongs with regard to the Ear, are either form'd of two Vowels, meeting in the same Syllable, or whose Sounds

are severally heard; Or of three Vowels in the same Syllable, which only afford two Sounds in the Pronunciation.

On this last Occasion, *Diphthongs* with regard to the Ear, are Triphthongs with regard to the Eye.

English *Diphthongs*, with regard both to the Eye and Ear, call'd *Proper Diphthongs*, are *ai*, as in *fair*; *au*, in *Land*; *oe*, in *blood*; *oi*, in *void*; *ou*, in *Food*; and *ou*, in *House*.

English *Improper Diphthongs*; or *Diphthongs* with regard to the Eye, are *aa*, pronounced only like *a*; as in *Aaron*; *ea*, like *e*, as in *Swear*, *Heart*; or like *e*, as *al-ready*; or like *o*, as *Veal*: *eo*, like *e*, in *Feoffee*; or like *e*, in *George*: *eu*, or *ew*, like *u*, as *Deuteronomy*: *ie*, like *e*, as *Ceasing*, *Field*: *ei*, like *a*, in *feign*, or like *e*, in *De-coit*: *oe*, as in *Cloak*, *Doas*: *oo*, as in *Doe*, *Oeconomy*: *ue*, as in *guels*: And *ui*, as *guile*, *recruit*.

The Word is form'd from the Latin *Diphthongus*, and that from the Greek *διφθωρος*, which signifies the same Thing.

DIPTOTES, in Grammar, a Kind of irregular Nouns, having no more but two Cases: As, *Suppetia*, *Suppetiæ*, &c. See CASE.

DIRECT, in Opticks, *Direct Vision* is that perform'd by *direct Rays*; in Contra-distinction to Vision by refracted, or reflected Rays. See VISION.

Direct Vision, is the Subject of Opticks, which prescribes the Laws, and Rules thereof. See OPTICKS.

Direct Rays are those which pass in right Lines from the Luminary to the Eye, without being turn'd out of their Rectilinear Direction by any intermediate Body, either opaque, or pellucid. See RAY.

DIRECT, in Arithmetic. The Rule of three *Direct* is that opposite to the *Inverse*. In the *Direct*, the 4th Number required increases the Proportion; and in the *Inverse* diminishes it. See RULE of Proportion.

DIRECT, in Astronomy. We consider the Planets in three States, viz. *direct*, *stationary*, and *retrograde*. See PLANET.

They are said to be *direct*, when they appear to move forward, according to the Succession of the Signs; and *retrograde*, when they go the contrary Way. See RETROGRADATION, and STATION.

DIRECT, in Matters of Genealogy, is understood of the principal Line, or the Line of Ascendants, and Descendants; in Contra-distinction to the Collateral-Line. See LINE.

Thus the House of Bourbon is said to descend in a *direct* Line from St. Louis.

The Heirs in a *direct* Line always precede those in the Collateral Lines. See COLLATERAL.

A very good Historian uses the Phrase *Direct Speech*, or *Harangue*, when he introduces any one speaking, or haranguing of himself; And he calls it *Indirect*, when the Historian speaks, and only rehearses the chief Points of the Person mentioned.

DIRECT { *Erect* } *Dials* are those whose Planes lie
 { *East* }
 { *West* } directly open to the East, or West-Points of the Heavens, or parallel to the Meridian of the Place. See DIAL.

DIRECT *South*, or *North* { *Inclining* } *Dials*. See DIAL.
 { *Reclining* }

DIRECT *Sphere*. See RIGHT *Sphere*.

DIRECTION, in Astronomy, the Motion, and other Phenomena of a Planet, when *direct*. See STATION, and RETROGRADATION.

DIRECTION, in Astrology, is a Kind of *Calculus*, whereby they pretend to find the Time wherein any notable Accident shall befall the Person whose Horoscope is drawn. See HOROSCOPE.

For Instance, having establish'd the Sun, Moon, or Ascendant, as Masters, or Significators of Life; and Mars, or Saturn, as Promisers, or Portenders of Death; *Direction* is a Calculation of the Time wherein the Significator shall meet the Portender.

The Significator they likewise call *Alphabet*, or Giver of Life; and the Promiser, *Averetes*, *Promissor*, or Giver of Death.

They work the *Directions* of all the principal Points of the Heavens, and Stars, as the Ascendant, Mid-heaven, Sun, Moon, and Part of Fortune. The like is done for the Planets, and fix'd Stars, but all differently, according to the different Authors.

DIRECTION, or *Line of Direction*, in Mechanics, is particularly us'd for a Line passing from the Centre of the Earth thro' the Centre of Gravity of a Body, and the Support or *Fulcrum* that bears it. A Man must necessary fall down as soon as the Centre of his Gravity is out of the *Line of Direction*. See CENTRE, &c.

DIRECTION of the *Load-stone*, that Property whereby the Magnet always presents one of its Sides towards one of

the Poles of the World, and the opposite Side to the other Pole. See MAGNET, and POLE.

The Attractive Property of the Magnet was shewn long before its *Directive*; and the *Directive* long before the Inclinary. See NEEDLE, COMPASS, &c.

DIRECTION *Magnetical*, is also us'd in the general for the Tendency, or Turning of the Earth, and all Magnetical Bodies to certain Points. See MAGNET, and MAGNETISM.

The Situation of our Earth, we know, is such, that its Axis is in the Axis of the Universe; and therefore its Poles, and Cardinal Points, exactly correspond to those thereof. This Situation some account for hence, that it is the most commodious with regard to the Aspects, and Influences of the heavenly Bodies, and renders it the fittest Habitation for Man. Others hold this Position of the Earth an Effect of a Magnetic Virtue; and suppose a Celestial Pole, endued with a like Magnetic Virtue; which extending as far as our Earth, draws the correspondent Part thereof, the Pole, towards it self. See EARTH, and POLE.

Line of DIRECTION, in Mechanics, that wherein a Body moves, or endeavours to proceed. See LINE.

Angle of DIRECTION, in Mechanics, is that comprehended between the Lines of *Direction* of two conspiring Powers. See ANGLE.

DIRECTLY, in Geometry, we say, two Lines lie *directly* against each other, when they are Parts of the same right Line.

In Mechanics, a Body is said to strike, or implate *directly* against another, if it strike in a right Line perpendicular to the Point of Contact.

A Sphere, particularly, strikes *directly* against another, when the Line of *Direction* passeth through both their Centres. See PERCUSSION.

DIRECTOR *Frenis*, in Anatomy, a Muscle of the Penis, call'd more usually *Erector*. See ERECTOR.

DIRIGENT, a Term in Geometry, expressing the Line of Motion, along which the deficient Line, or Surface is carried in the *Genesis* of any Plane, or solid Figure. See GENESIS.

Thus, if the Line AB (*Tab. Geometry Fig. 13*) move parallel to it self, and along the Line AC, so that the Point A always keeps in the Line AC, a *Parallelogram*, as ABCD, will be form'd, of which the Side AB is the Deficient, and the Line AC the *Dirigent*: So also, if the Surface ABCD be supposed to be carried along the Line CE, in a Position always parallel to it self in its first Situation, the Solid ADFH will be form'd, where the Surface AD is the Deficient, and the Line CE is the *Dirigent*.

DIS, a Particle inseparable from divers Words; the Effect whereof is, either to give them a Signification contrary to what the simple Words had; As in *Disgrace*, *Disparity*, *Disproportion*, &c. Or to intimate a Separation, Detachment, Distribution, &c. as in *discerning*, *discouraging*, *disfranchising*, *disjoining*, &c.

DISABILITY, in Law, is when a Man is *disabled*, i. e. made incapable to inherit, or take the Benefit, which otherwise he might do; which may happen four Ways, viz. by the Act of the Ancestor; by the Act of the Party; by the Act of Law; and by the Act of God.

DISABILITY by the Act of the Ancestor is, if a Man be attainted of Treason, or Felony; by this Attainder his Blood is corrupted, and thereby himself and his Children are *disabled* to inherit.

DISABILITY by the Act of the Party himself, as if one Man make a Feoffment to another, who then is sole, upon Condition, that he shall enfeof a Third before N, and when such Feoffment is made, the Feoffee takes a Wife; he has by that *disabled* himself to perform the Condition, according to the Trust in him repoted, and therefore the Feoffor may enter, and out him. Also, if a Man be excommunicated, he cannot, during that Time, sue any Action, but shall be thereby *disabled*, and so in other Cases.

DISABILITY in Act of Love, is properly, when a Man by the sole Act of Law is *disabled*; Thus is an Alien born; and therefore, if a Man born out of the King's Ligeance, will sue an Action, the Tenant, or Defendant, may say, he was born in such a Country out of the King's Ligeance, and demand Judgment, if he be answered; for the Law is our Birth-Right, to which an Alien is a Stranger, and therefore *disabled* from taking any Benefit thereby.

DISABILITY by the Act of God, as when the Party is *Non Compos Mentis*, or *Non sane Memoria*, which so *disables* him, that in all Cases, where he gives, or passes any Thing, or Estate out of him, after his Death it may be disannull'd, and voided.

DISC, DISK, or *Discus*, in Antiquity, a Kind of round *Spurr*, or Palet of Stone, or Metal, about a Foot over, used by the Ancients in their Exercises. See EXERCISE.

The *Discus* of the Ancients was flat and round, resembling the apparent Figure of the Sun.

The Exercise of the *Difcus* was one of those practis'd in the Solemnities of their public Games: It consisted in pitching, or throwing a *Difcus* either upward, or straight forward; and he who threw it highest, or furthest, bore away the Prize.

Those who practis'd at this Game, were call'd *Difcofoli*, i. e. Throwers of the *Difcus*.

Hyacinth, a Favourite of *Apollo*, playing at the *Difcus* with that God, was kill'd by a Blow of *Apollo's Difcus*, which his Rival *Zephyrus* diverted from its Course, and cast on the Boy's Head.

The *Difcus* was thrown by means of a little Cord made of Hair, as appears from *Claudian* Lib. II. in *Eniop. Carm.* 20. v. 359. & *Sen.* *Ovid* describes this Sport *Metam.* Lib. X. v. 175. The *Romans* learnt the Game of the *Difcus* of the *Greeks*, and practis'd it among themselves.

Dempster, *Parallip.* in *Rofini Antiq.* Rom. L. V. C. I. and *Pet. Faber.* *Agonisticus* L. II. C. I. treat of the Diversion of the *Difcus*.

DISC, DISK, or *Difcus*, in Astronomy, the Body, or Face of the Sun, or Moon; such as it appears to us. See *Sun*, &c.

In a total Eclipse of either of those Luminaries, the whole *Disk* is obscured, or darken'd; In a partial Eclipse, only Part of them. See *ECLIPSE*.

Half the Moon's *Disk* was immersed in the Shadow of the Earth in such an Eclipse.

The *Disk* is conceiv'd to be divided into twelve equal Parts, call'd *Digits*; by means whereof it is, that the Magnitude of an Eclipse is measur'd, or estimat'd. Such an Eclipse was for many *Digits*, or Parts of the Sun, or Moon's *Disk*. Mercury and Venus are sometimes seen in the Sun's *Disk*, transiting the Sun's *Disk*. See *TRANSIT*.

Disc, in Opticks, the Magnitude of Telescope Glasses; or the Width of their Apertures, whatever their Figure be, whether Plain, Convex, Meniscus, &c.

Disc, *Difcus*, in Botany, is applied to the central, or middle Part of radiated Flowers; as being round and plain like a Quoit. See *DISCOUS FLOWER*.

This is sometimes also call'd the *Pelvis*, or *Basin*. The *Disk* is compos'd of several Fleurons perpendicularly plac'd.

Disc, in the *Greek* Liturgy, is the same Thing with the *Patena* in the *Latin*.

In the *Greek* Church the consecrated Bread is laid on a *Difcus*, as in the *Latin* Church it is on a *Patina*. The *Difcus* only differs from the *Patina*, in that it is bigger, and deeper; as resembling a Plate, which was the proper Signification of the Word *Difcus* among the Ancients.

DISCENT. See *DESCENT*.

DISCERNING, an Act of the Mind whereby it distinguishes between Ideas. See *IDEA*.

On this Faculty of *Discerning*, depends the Evidence and Certainty of several, even general Propositions, which pass for innate Truths; and which in Reality flow from this clear *Discerning* Faculty of the Mind, whereby it perceives two Ideas to be the same, or different.

In being able nicely to distinguish one Thing from another, where there is the least Difference, consists in great Measure the Exactness of Judgment, and Clearness of Reason, which is to be observ'd in one Man above another; which is quite opposite to Wit, which consists most in the Assemblage of Ideas, and putting those together with Quaintness and Variety, which have the least Resemblance to form agreeable Visions: whereas Judgment separates carefully those Ideas, wherein can be found the least Difference, to prevent Error, and Delusion. To the well-distinguishing our Ideas, it chiefly contributes, that they be clear, and determinate; and when they are so, there will not arise any Confusion, or Mistake about them, tho' the Senses should convey them from the same Object differently on different Occasions. See *JUDGMENT*.

DISCIPLINE, primarily signifies Instruction and Government; But is figuratively applied to a stated Method of living, according to the Rules of some Profession.

Thus we say the *Military Discipline*, the *Ecclesiastic*, or *Chorb* *Discipline*, the *Regular*, or *Monastic Discipline*, &c.

We don't say *Civil Discipline*, but instead thereof, *Policy*. See *POLICY*.

DISCIPLINE, is also used in a peculiar Sense, for the Chastisement, or bodily Punishment inflict'd on a Religious, who has been caught delinquent; Or even for that they voluntarily undergo, or inflict on themselves by way of Mortification. See *PENANCE*.

Among all the Austerities practis'd by the ancient Monks and Solitaries, *Dustin* observes, there is no mention made of *Discipline*: In Effect, it does not appear to have been in Use in Antiquity, unless to punish the Monks, who had been taken tripping.

'Tis commonly said to be *St. Dominic*, and *Peter Damian*, who first introduced the Use of *Discipline*: But *Fa. Mabillon* notes, that *Guy*, Abbot of *Ponsfogin*, and others, had practis'd it before them. 'Tis pretty certain, the Practice was first establish'd in the eleventh Century, with Design to redeem the Penances the Canons impos'd on divers Offences; and at length, they came not only to redeem for themselves, but also for others. See *Fa. Mabillon*.

DISCIPLINE, is also frequently us'd for the Instrument, wherewith a Monk chastises, or mortifies himself; which is usually made of Ropes, knotted Hair, or twisted Parchment. *St. Jerome* is painted with *Difciplines* of Lion Chains, with Spur Rows, &c.

DISCLAIMER, in Law, a Plea, containing an express Denial, renouncing, or disclaiming of a Thing alleged: As if the Tenant sue a Replevin upon a Distress taken by the Lord, and the Lord avow, saying, that he holds of him as his Lord, and that he is desirous for Rent not pay'd, or Service not perform'd; then the Tenant denying to hold of such Lord, is said to *disclaim*: And the Lord proving the Tenant to hold of him, the Tenant loses his Land.

Also, a Man denying himself to be of the Blood, or Kindred of another in his Plea, is said to *disclaim* his Blood. If a Man arraign'd of Felony, *disclaims* Goods; being clear'd, he loses 'em.

DISCONTINUANCE, an Interruption, Intermission, or Cessation of the Course of a Thing: As, *Discontinuance of Possession*; of a *Plea*; *Process*, &c.

The Effect of a *Discontinuance of Possession*, is this, that a Man may not enter on his own Land, or Tenement alienated, wherever his Right be to it, of himself, or by his own Authority; but must bring his Writ, and seek to recover Possession by Law. As if a Man alien the Lands he holdeth in Right of his Wife; Or if a Tenant in Tail make any Feoffment, or Lease for Life not warranted by the *Stat. 32. Hen. VIII.* by Fine, or Livery of Seisin; Such Alienations are call'd *Discontinuances*. See *POSSESSION*.

The Effect of *Discontinuance of Plea*, is, that the Opportunity of Prosecution is lost, and not recoverable, but by beginning a new Suit. For to be *discontinued*, and to be put off without a Day, are the same Thing; and nothing less than to be finally dismiss'd the Court.

If a Justice-Seat be *discontinued* by the not coming of the Justices, the King commonly renews the same by his Writ, &c. *Crompton Jurist.* See *PLEA*.

DISCORD, in Music, the Relation of two Sounds which are always, and of themselves, disagreeable, whether applied in Succession, or Consonance. See *SOCCORD*.

If two simple Sounds are in such a Relation of Tune, that is, have such a Difference of Tune, as that being sounded together, they make a Mixture, or compound Sound, which the Ear receives with Displeasure, it is call'd a *Discord*; As, on the contrary, if it receive it with Pleasure, it is call'd a *Concord*: And whatever two Sounds make an agreeable, or disagreeable Compound, they will have the same Effects respectively, if they be applied in Succession. See *TUNE, CONCORD*.

As *Concords* are denominated *Harmonical Intervals*; so may *Discords* be denominated *Unharmonical Intervals*. See *INTERVAL*.

Discords are distinguish'd into *Concinnous*, and *Inconcinnous Intervals*.

The *Concinnous*, by the Ancients call'd *Emmelli*, are such as are apt, or fit for Music, next to, and in Combination with *Concords*. These are Relations, which in themselves are neither very agreeable, nor disagreeable; and have only a good Effect in Music by their Opposition, as they heighten, and illustrate the more natural and essential Principles of the Pleasure we seek for; or, as by their Mixture, and Combination with them, they produce a Variety necessary to our being better pleas'd.

Notwithstanding this they are still call'd *Discords*; as the Bitterness of some Things may help to set off the Sweetness of others, and yet still be bitter.

The *Inconcinnous Discords*, by the Ancients call'd *Emelli*, are such as are never chosen in Music; as having too great a Harshness in them: Tho' even the greatest *Discord* is not without its Use. See *CONCINNOUS*, &c.

The Essential Principles of Harmony, *Harmonical Intervals*, or *Concords*, are but few, in Number only eight; the indefinite Number of other *Ratio's* are all *Discords*. Hence *Mr. Malcolm* shews the Necessity of taking some of the less untoward of these *Discords* into the System of Music. In order to this, he considers the Effect of having none but *harmonical Intervals* in the System of Music.

1. With respect to a single Voice; If that should move always from one Degree of Tune to another, so as every Note, or Sound to the next were in the *Ratio* of some *Concord*; the Variety, which is Life of Music, would soon be exhaust'd.

ted. For to move by no other, than Harmonical Intervals, would not only want Variety, and so weary as with a tedious Repetition of the same Things, but the very Perfection of such Relations of Sounds would cloy the Ear in the same Manner as sweet and luscious Things do the Taste, which for that reason are artfully season'd with the Mixture of Sour and Bitter. See DEGREES.

2. With respect to Music in Parts, *i. e.* when two, or more Voices join in Consonance, the general Rule is, that the successive Sounds of each be so order'd, that the several Voices shall be all Concords. Now there ought to be a Variety in the Choice of those successive Concords, and also in the Method of their Successions; all which depends on the Movement of the single Parts. So that, if these could only move in an agreeable Manner by harmonical Distances, there are but a few different Ways wherein they could move from Concord to Concord; and hereby we should lose much of the Ravishment of Sounds in Consonance. As to this Part then, the Thing demanded is a Variety of Ways whereby each single Voice, or more in Consonance, may move agreeably in the successive Sounds, so as to pass from Concord to Concord, and meet at every Note in the same, or a different Concord, from what they stood in at the last Note.

In what Cases, and for what Reasons *Discords* are allow'd, the Rules of Composition must teach; But only joining these two Considerations, &c. we see how imperfect Music would be without any other Intervals than Concords. See COMPOSITION.

Beside the *Concords* *Discords* used designedly in Music; there are several other *Discord* Relations, which happen unavoidably, in a Kind of accidental, and indirect Manner. Thus in the Succession of several Notes there are to be consider'd not only the Relations of those which succeed others immediately, but also of those betwixt which other Notes intervene. Now the immediate Succession may be conducted so as to produce good Melody; yet among the distant Notes there may be very gross *Discords*, that would not be tolerable in immediate Succession, and far less in Consonance. And such *Discords* are actually contain'd in the Scale of Music. Thus, taking any one Species, *e. g.* that with the greater Third, and marking the Degrees betwixt each Term and the next; and tho' the Progression be melodious, as the Terms refer to one common Fundamental, yet there are several *Discords* among the mutual Relations of the Terms, *e. g.* from 4th to 7th *g* is 3a: 45; and from 2d *g* to 6th *g*, is 27: 40; and from 1d *g* to 4th is 27: 52 all *Discords*.

The *Discords* of Counterpoint, wherein there is a Mixture of *Discords*, is call'd *Figurative Counterpoint*; Of which there are two Kinds: That wherein the *Discords* are introduced occasionally, to serve as Transitions from Concord to Concord; and that wherein the *Discord* bears a chief Part in the Harmony. See *FIGURATIVE Counterpoint*.

Upon the unannected Parts of the Measure, *Discords* may transiently pass without any Offence to the Ear: This is call'd *Suspension*, by reason the transient *Discord* supports a Concord immediately following. See SUSPENSION.

The *Harmony of Discords* is that wherein the *Discords* are made Use of as the solid and substantial Part of the Harmony. For by a proper Interposition of a *Discord*, the succeeding Concords receive an additional Lustre. Thus the *Discords* are in Music what the strong Shades are in Painting. See HARMONY.

The *Discords* are the 5th when join'd with the 6th; the 4th join'd with the 5th, the 9th is of its own Nature a *Discord*; so is the 7th.

The *Discords* are introduced into the Harmony with due Preparation, and must be succeeded by Concords; which is commonly call'd the *Resolution of the Discord*. The *Discord* is prepar'd by subsisting first in the Harmony in the Quality of a Concord; that is, the same Note which becomes the *Discord* is first a Concord to the Bass-Note immediately preceding that to which it is a *Discord*.

The *Discord* is resolved by being immediately succeeded by a Concord descending from it by the Distance only of greater 2d, or lesser 2d.

Apple of Discord, *Pomum Discordie*, a Phrase used to signify the Subject, or Occasion of some Misunderstanding in a Society.

It is borrow'd from Mythology: The Poets feign, that at the Marriage of *Liberis* and *Peleus*, the Goddess of *Discord* threw a golden Apple whereon were wrote these Words, *to the Fairest*, which immediately stirr'd up a Diffension between *Juno*, *Pallas*, and *Venus*, each pretending a Title to the Apple.

DISCOVERY, in Dramatic Poetry, a Manner of Unravelling a Plot, or Fable, very frequent in Tragedies, Comedies, and Romances; wherein, by some unforeseen Accident, a *Discovery* is made of the Name, Fortune, Quality, and other Circumstances of a principal Person, before unknown. See UNRAVELLING, FABLE, &c.

A late Author defines the *Discovery* by a Change, which bringing us from Ignorance to Knowledge, produces either Love or Hatred in those whom the Poet has a Design to make either happy, or miserable. For a *Discovery* should never be in vain, by leaving those who thus *discover* one another in the same Sentiments they were in before: In Effect, those *Discoveries*, which are immediately follow'd by a *Peripetia*, or Change of Fortune of some principal Character, whereon the Unravelling depends, are the most beautiful. See PERIPETIA.

One of the finest *Discoveries* ever brought upon the Stage, is that of *Oedipus* in *Socrates*; For the minute he finds himself the Son of that *Jocasta*, who was then his Wife, he becomes of the most happy, the most miserable of all Men.

There are three Sorts of *Discoveries*: The first by certain Marks in the Body, either natural, or accidental; Such is that of *Ulysses*, who having receiv'd a Wound in the Thigh by a Boar, before the *Trojan War*, is *discover'd* by the old Nurse, upon washing his Legs after his Return home *incognito*.

The second by Tokens; as the Casket of Things, which the Priests found with *Ira* when he was expos'd, *discovers Creusa*, whom he was a-going to kill, to be his Mother.

The third is made by Remembrance, that is, when the Sight, or Hearing of any Thing occasions us to recollect our Misfortunes. Thus, when *Ulysses* heard *Damocles* sing his Actions at *Troy*, the Memory of them struck him, and drew Tears from his Eyes, which *discover'd* him to *Acisus*.

But the finest Sort is that, which arises from the Subject, or Incidents of the Fable; as that of *Oedipus* from his excessive Curiosity; and the Letter that *Iphigenia* sent by *Pyrrhus*. See FABLE.

DISCOUNT, in Commerce, a Sum deducted, or retain'd in Hand, upon paying a greater. It is much used among Mechanics, and Manufactures, who keep Workmen, Journeymen, Labourers, &c. for the Sums advanced them before hand, which are *discounted* when the Payments are made in Courte.

DISCOUNT, is particularly used for an Allowance made on a Bill of Exchange, or any other Debt not yet become due; to induce the Acceptor, or Debtor, to advance the Money. See EXCHANGE.

Discounts are also frequently made for the Payment of dubious, or bad Debts. See REBATE.

DISCOUNT is also us'd among Merchants when they buy Commodities on Trust, with a Condition, that the Seller shall *discount* so much with him *per Cent.* for each Payment made before the Time expir'd. See PROMPT Payment.

The *Seur de la Porte* distinguishes between these two Kinds of *Discount*: The first, or that upon Bills of Exchange, is reckon'd like the Exchange, at the Rate of so much *per Cent.* *e. g.* at 2 *per Cent.* *Discount* on an hundred, there is only ninety eight Pound to pay; whereas that on Commodities, is not only laid on the hundred Pound, but on the hundred and *Discount* added together. So that *discounting* for Goods at 10 *per Cent.* there is only 8 abated on an hundred and eight, and not on the hundred. This last, he says, is the true *Discount*.

DISCOUNT, is also us'd for the Tare, or Waste of any Commodity, Sum, &c. There are 12 Shillings *Discount* in this Bag.

The Cag of Oil sent me from *Spain* leaks; there are fifty Pints *Discount*. See TARE, &c.

DISCOURSE, an Operation of the human Mind, whereby it passes, or proceeds from one Thing to another; that is, from a known Thing to an unknown. See REASONING.

The School-men define it an Act of Cognition, whereby the Mind deduces one Thing from another: This it does, when in Consequence of an Assent given to one Proposition, it gives Assent to another; So that *Discourse* consists in a Dependency of Assents; and supposes such an Order between the Assents, that that belonging to the Consequent arises from that belonging to the Antecedent. So that the Intellect is then said, *discorrere*, to discourse, when from an Assent to one, or more Propositions, it draws an Assent to another.

The Object of *Discourse*, therefore, or that about which the Intellect is employ'd in *Discourfing*, is the Connexion of Extreams consider'd with regard to some Third, or *Medium*: Thus, when it judges, that every reasonable Animal is rifible, affirming, that there is a Connexion between Rifibility, and Rationality; and then finds, there is likewise a Connexion betwixt Man and reasonable Animal; And afterwards gathering from the Connexion found between Rifible and Man, with Rational, that Man and Rifible have likewise a Connexion, as both are connected with Rational: It is said to *discorrere*.

Hence it appears, that *Discourse*, whereof Men use to value themselves, does really betray the Infirmary of the human Understanding; as it denotes a Chain or Scale of several

ral successive Acts of Cognition necessary to arrive at a Truth. So that there is no *Discourse* in God, who understands all Things truly. See KNOWLEDGE.

DISCOUS Flower. Botanists reckon two Kinds of Plants with a *Discous Flower*: 1. Such as have the Flower compounded, and the Seed pappous, but the Leaves and Stalks not milky, when broken. 2. The *Corymbiferous* Plants, whose Flowers are compounded into a *Discous* Figure, but their Seeds are not pappous.

Of the former Kind, are the Flea-Banes, Ragweeds, Groundsels, &c. and of the latter, are Daisies, Chamomile, Tansy, Wormwood, &c.

DISCRETE, or Disjunct Proportion, is, when the Ratio between two Pairs of Numbers, or Quantities is the same, and yet there is not the same Proportion between all the four Numbers. See RATIO, and PROPORTION.

Thus if the Numbers 6 : 8 :: 3 : 4, are consider'd, the Ratio between the first Pair, 6 and 8, is the same as that between 3 and 4, and therefore these Numbers are *Proportional*; but it is only *discretely*, or *disjunctly*, for 6 is not to 8, as 8 to 3; that is, the Proportion is broken off between 8 and 3, and is not continued all along, as it is in these following, which are call'd *Continual Proportionals*, viz. 3 : 6 :: 12 : 24.

DISCRETE Quantity, is such, as is not continued, and join'd together. See QUANTITY.

Such is a Number, whose Parts being distinct Units, cannot be united into one *Continuum*; for in a *Continuum* there are no actual determinate Parts before Division, but they are potentially infinite; wherefore it is usually and truly said, that Continuum Quantity is divisible in *Infinisimum*. See CONTINUITY.

DISCRETIVE Propositions, are those, where various Judgments are made, and denoted by the Particles *but, notwithstanding,* or Words of the like Nature either express'd, or understood. See PROPOSITION.

Thus, Fortune may deprive me of my Wealth, *but* not of my Virtue; They who cross the Seas change their Climate, *but* not their Disposition, are call'd *Discretive Propositions*.

DISCUS, among the Ancients, a Name which was given to a round Shield, consecrated to the Memory of some famous Hero; and hung up in the Temples of their Gods, as a Trophy of some great Action. From the Figure of this *Discus*, or rather of that, which the *Greeks and Romans* used to divert themselves with, especially at their public Games, and which is a round Quoit of Brass, comes the Word to much in Use among Astronomers, viz. the *Disk* of the Sun, or Moon. See DISC.

DISCUSSION, in Matters of Literature, signifies a clear Treating, or Handling of any Point, or Problem; where the Word imports a *Speaking off* the Difficulties with which it was embarrass'd. In which Sense we say, such a Point was well *discuss'd*, when it was well treated of, and clear'd up.

DISCUSSION, is also used in a Medicinal Sense, for a Dispersing the Matter of any Tumor, or Swelling in the Body.

In which Sense the Surgeons define it an Evacuation of some thin Matter gather'd in any Part, by insensible Perspiration. See DISCUTIENTS.

DISCUTIENTS, or DISCUSSIVES, in Medicine, are Remedies proper to open the Pores, and evacuate the redundant Humours of the Body, by insensible Perspiration; or to discharge Flatulencies, Swellings, &c. by shaking, jumbling, &c.

Discutients are the same with what we otherwise call *Diaphoreticks, and Resolvents*. See DIAPHORETICK, CARMINATIVE, &c.

DISDIAPASON, in Music, a compound Concord, described by *Fa. Parron* as Quadruple of 4 to 1, or of 8 to 2. See CONCORD.

The *Disdiapason* is produced when the Voice goes from the first Tone to the 15th, and may be call'd a *Fifteenth*.

The Voice ordinarily does not go further than its first Tone, to the *Disdiapason*, i. e. it does not go beyond the Compass of a double Octave, for the *Disdiapason* is an Octave doubled. See OCTAVE.

The Voice may sometimes rise several Tones above a *Disdiapason*, but the Effort or Struggle disfigures it, and makes it false.

The ancient Scale, or Diagramma, only extended to a *Disdiapason*. See DIAGRAMMA.

DISDIAPASON-DIAPENTE, in Music, a Concord in a Sextuple Ratio of 3 to 6.

DISDIAPASON-DIATESSARON, a compound Concord in the Proportion of 16 to 3.

DISDIAPASON-DISEN, a compound Consonance in the Proportion of 10 to 2.

DISDIAPASON-SEMI-DISEN, a compound Concord in the Proportion of 24 to 5.

DISEASE, in Medicine, that State of a living Body, wherein it is prevented the Exercise of any of its Functions, whether Vital, Natural, or Animal: Or, *Disease* is an Indisposition

contrary to Nature, whereby the Action of some Part is immediately injured. See FUNCTION.

An ingenious Author of a late *Latin* Treatise, de *Purgatione*, holds the Essence of a *Disease* to consist in a Want of that *Equilibrium* between the solid, and fluid Parts, which is necessary to the Maintenance of Health: Others add, that all *Diseases* arise either from too lax, or too strict a Tension of the Fibres. See HEALTH.

Of all Animals, Man is subject to the most *Diseases*; and of them, the studious and speculative are most expose'd thereto. Other Animals have their *Diseases*; but they are in small Number: Nor are Plants without them; tho' their Maladies scarce exceed half a score.

The Ancients decri'd their *Diseases*: *Vossius de Idolol.* Lib. VIII. C. V.

Several Authors have given us very compendious Theories of *Diseases*; reducing 'em all to some one general Disposition: Thus, *du Brogne* deduces all the *Diseases* of the human Frame from the *Scorbutus*; *Magnus* from the *Artoritis*; and Dr. *Woodward* from the *Bile*: Others imagine them the Effects of a *Pokey Virus*, which lurk'd in the Seed ever since the Sin of *Adam*: *Helmont*, and *Serrius* the *Dane*, take 'em to depend on some extraneous Ferment, form'd in, or out of us. Lastly, it appearing from the Observations of *Pliny*, *Kircher*, *Langius*, and *Bononius*, that there are little Worms in feverish Blood, Pains, Carbs, and the Itch; divers Physicians have took Occasion to suspect, that all the *Diseases* arise from *Worms*. See WORMS, LICH, &c.

A *Disease* is well describ'd to be a deprav'd, and disorderly State of the solid, and fluid Parts, whereby all, or some of the Functions either of the Body, or Mind, or both, are either abolish'd, or impair'd.

For some *Diseases* only impair the Use of the Part, as the *Ophthalmia*, *Gout*, &c. Others destroy it entirely; as the *Gutta serena*, *Palsy*, &c. Some affect the whole Body, as the *Fever*, *Apoplexy*, *Epilepsy*, &c. Others only impair a Part, as the *Asthma*, *Colic*, *Dropsy*, &c. Some only attack the Body, as the *Palsy*; Others disturb the Mind, as *Melancholy*, *Delirium*, &c. Lastly, others affect both the Body and Mind, as the *Mania*, *Phrenzy*, *Pain*, &c.

As the Actions, or Conditions of the Body, so also the *Diseases*, or Defects thereof, may be reduc'd to three general Heads: viz. 1. *Diseases of the Solid Parts*: 2. *Those of the fluid Parts*: And 3. *Diseases compos'd of both*.

A Popular Syllabus of *Diseases* may be given, as follows: The Solid Parts, i. e. the Bones and Flesh may be disorder'd five Ways: viz. Render'd turgid, by Tumors; Cut, with Wounds; Corroded by Ulcers, or Caries; Removed out of their Places, as in *Hernia*, *Dislocans*, and *Dislocations*; Or disorder'd by Fractures, and Contusions.

Diseases of the Fluids are either in the Mass of the Blood, or the Spirit: Those of the Blood are reducible to two Kinds; those that thicken, and inspissate, or which amounts to the same, retard its Motion; and those which attenuate, and dissolve, and of Consequence accelerate it.

To this latter Kind belong Fevers, and feverish Affections alone: All the other *Diseases of the Blood* belong to the former. See FEVER.

In too thick a State of the Blood, its Principles are too crass, and its Molecules too big, whence a Lenzor, lazy Motion, and even Stoppage, particularly in the sinous Passages of the Glands: Hence *Ophthalmia*, *Inflammation*, *Schirrhus*, *Sarcoma*, *Verruca*, *Pustules*, *Oedemata*, *Impetigines*, and other Tumors, and Congestions both in the *Viscera*, and *Harbit* of the Body: And hence, again, *Drownings*, *Melancholy*, *Hypochondriack Affections*, &c. If this thick Blood be too much replete with sharp acid Salts, it will destroy the Texture of the Parts, and break out in *Ulcers*, as in *Phthisical*, *Scrophulous*, *Scorbatic*, and *Veneral Diseases*, *Gangrenes*, *Carbs*, *Cancers*, and other Erosive Tumors, according to the Quality and Degree of Saltness and Acrimony. And from the same Source arise *Cephalgia*, *Cardalgia*, *Colicks*, *Gouts*, *Rheumarthas*, *Pleurisies*, &c. which by abrading the solid Substance, frequently emaciate the Body.

The *Diseases of the Animal Spirits*, arise either, 1. from an Intermission, or Retardation of their Motion; or a Diminution of Quantity; or, 2. from a Disorder in their Organization, or Quality.

To the first Class are reduc'd the *Catalepsy*, *Apoplexy*, *Coma*, *Cerus*, *Palsy*, *Stupor*, *Tremor*, &c. To the second, belong the *Mania*, *Phrenzy*, *Delirium*, *Foiblesse*, *Melancholy*, *Verrigo*, *Spasms*, *Epilepsy*, *Hysterick Affections*, *Horrors*, &c. Add, that as all *Diseases of the Blood* arise from external Causes, viz. some one or more of the Non-Naturals, as Food, Air, Evacuation, &c. so those of the *Spirits* generally proceed from Disorders of the Blood.

Lastly, the *Diseases of the Fluids*, whether those in the Blood, or Spirits, are seldom confin'd long thereto; but presently come to disturb, and impede some of the Functions affected to the solid Parts; and at last corrupt the Substance of the Solids themselves. Hence *Conyunctiva* *Diseases*; which are infinitely various.

But the Learned *Boerhaave* furnishes us a much more accurate, and scientific Division of *Diseases*.

DISEASES of the Solids, he considers, either as of the simple, and *Similar Parts*; Or of the *Organical*.

1. *Similar Diseases*, are, 1. Those of the last, and smallest *Fibres*; which are reducible to too great *Tension*, and *Looseness*, too great *Strength*, or *Weakness*, and a *Solution of their Continuity*. See **FIBRE**, &c.

2. Those of the *Membranes*, which being only Assemblages of the *Fibres* just mention'd, are subject to the same Disorders. See **MEMBRANE**.

3. Those of the last, and *smallest Canals*, which are formed of such *Membranes*.

4. Of the *Membranes* composed of such *Canals*.

5. Of *Canals* composed of such *Membranes*, which are all the greater *Vessels* of the *Body*.

6. Of the *Solid Parts*, which are composed of *Canals* compris'd, and grown together, so as to be void of Humour to distend 'em; Or *Canals* growing into one consistent Part, the Humour hardening together with the Vessel that contain'd it.

Lastly, Supposing these *Parts* all sound, *Diseases* may befall them with respect to their *Structure*, from a *Vice*, or vicious *Application* of the Matter of *Nutrition*. See **SOFTEN**.

II. *Organical Diseases*. An *Organical Part* confiding of the several simple *Parts* abovemention'd, and fitted to perform any Office by means of some Humour contain'd in it; may be consider'd, either in it self, as a *Solid Part*, or with respect to the Humour it contains: In the first View, *Organical Diseases* are reducible to four *Classes*.

1. *Diseases* in the *Figure*, and the *Circumstances* thereof, as *Roughness*, *Solidity*, *Cavity*, &c. To this belong the *aneurysmus*, when one *Vessel* opens into another; the *aneurysmus*, when a *Rupture* is made; and *aneurysmus*, when a *Breach* is occasion'd by *Corrosion*; the *aneurysmus*, which is a total *Obstruction* of the *Cavity*, by a viscous, gummy Matter; the *aneurysmus*, or *Narrowness* of the *Passage*; the *aneurysmus*, or *Compression* of the *Sides* of the *Cavity*; *aneurysmus*, when the *Sides* are quite closed up; and *aneurysmus*, when the *Vessel* is so emptied, that the *Sides* falling together, the *Cavity* is lost.

2. In the *Number*, where 'tis either deficient or redundant: But the *Parts* seldom err in this respect, so as to occasion a *Disease*.

3. In *Magnitude*; to which belong *Nodes*, *Erosions*, and *Callus*.

4. In the *Situation*, and *Connexion*; as when the *Ligaments* are too long, or too short, when broke, or deprav'd; also *Dislocations*, *Luxations*, *Subluxations*, *Hernie*, or *Ruptures* in the *Groin*, *Scrotum*, *Bladder*; *Procidencia* of the *Womb*, *Bladder*, and *Rectum*; Disorders of the *Tendons*, and *Muscles*, particularly their flying out of their *Places*; the *Relaxation*, or *Rupture* of the *Membranous Ligament* that should retain 'em.

Lastly, there is a *Disease* common both to *Similar*, and *Organical Parts*, call'd *Solution of Continuity*.

DISEASES of the Fluids, considering these *Fluids* simply, and in themselves, may be reduced to Disorders in respect of *Quantity*, and *Quality*: But considering them as contain'd in *Solids*, they may err, too, in *Place* and *Proportion*.

As to the first, such an *Abundance* of the *Humours*, as disturbs the *Animal Functions*, is call'd a *Plthora*: *Diseases* from the Defect of *Humours*, we scarce know of any.

As to the second, such *Quality* of the *Humours*, as disturbs the *Animal Functions*, is call'd *Cacoecymia*. Now, this is either in the *Fluids* consider'd in themselves, their own *Parts*, and *Composition*; Or consider'd as they concur towards constituting some *Part* of the *Body*.

If the *Morbid Quality* be consider'd in the *Particles* of the *Humour*, it must either consist in an *Augmentation* of *Bulk*, whence the *Euphrasia*, *Atrophy*, *Synphysis*, and *Synocesis*; or in the *Diminution* thereof, as in the *Diapnoe*, and *Ceneangela*: Or an *Increase* of *Solidity*, whence too great an *Attenuation*; or a *Decay* thereof, whence a *Leucor*, *Stregation*, and *Cobefion*: Or in the *Figure*, as when of *Spherical* it becomes *Angular*, and consequently, with respect to the *Part* 'tis applied to, sharp; whence *Aerinaemias*, both acid, alkaline, muriatic, ammoniac, saponaceous, vitriolic, &c. and *Oleostrias*: Or in *Rigidity*, and *Flexibility*: Or in *Elasticity*: Or in *Cobefion*, and *Divisibility*.

Again, all the *Juices* consider'd together, the principal Disorders they are subject to, are too great *Fluidity*, or *Tenuity*: too much *Velocity* in their *Vessels*, or too little.

Lastly, considering the *Fluids* as contain'd in the *Solids*, there arise divers *Diseases* merely from their changing of *Place*; which may be reduced to two *Classes*, viz. the grosser *Humours* intruding themselves into the finer *Canals*; and the *Humours extravasating*, or getting out among the *Solid Parts*; whence *Inflammations*, *Aneurysms*, *Varices*, *Encystments*, *Oedemas*, *Pustules*, *Dropsy*, *Spongy Membranes* of the *Head*, *Breast*, *Abdomen*, and *Uterus*; and *Emphysemas*.

Add, that the *Humours* collect'd, and stagnating among the *Parts*, grow *putrid*, *purulent*, *ichorous*, *erosive*, and *sharp*; and thus destroy the tender *Stamina*, or *Solids*; whence *Sinus's*, *Fistula's*, *Ulcers*, *Gangrenes*, *Sphacelus's*, *Cancers*, and the like.

These are the prime Differences of the *Diseases* of the *Body*; and from these arise most of the rest: So that they may be regarded, not only as *Diseases*, but as the *Causes* of *Diseases*. See each further explain'd under its respective *Article* in this *Work*.

There is another Division of *Diseases*, in Use among *Physicians*, taken from certain external *Accidents*, which are common to a great many different *Diseases*: which Distinction, too, has its Use; tho' they generally run it too far. *Diseases*, then, are distinguish'd, 1. With respect to their *Cause*, into *Idiopathy*, *Synopathy*, *Protopathy*, *Deuteropathy*, *Hereditary*, *Connate*, and *Acquired*. 2. With respect to their *Subject*, into *Diseases* of *old Age*, *Children*, *Adults*, *Men*, *Women*, *Maids*, *Pregnant*, *Parturient*, *Epidemical*, *Epidemic*, &c. 3. With respect to *Duration*, into *most acute*, which terminate in four *Days*; *Acute*, in twenty; and *Chronical*, which are all those of longer *Continuance*. 4. With respect to *Seasons*, into *Vernal*, *Autumnal*, *Continued*, and *Intermitting*. 5. With respect to their *Effects*, into *Benign*, *Malignant*, *Curable*, *Incurable*, *Mortal*, and *Contagious*. And 6. With respect to their *State*, into *Beginning*, *Progress*, *State*, *Declension*, and *End*.

DISEASES of Plants. *Monfr. Tournefort*, in an express Dissertation on this Subject, in the *Memoires de l'Academie des Sciences*, refers all the *Diseases* of *Plants* to the following *Causes*:

1. The too great *Abundance* of the *Nutritious Juice*. 2. The *Defect*, or *Want* of this *Juice*. 3. Some ill *Qualities* it acquires. 4. Its unequal *Distribution* in different *Parts* of the *Plant*. And 5. *External Accidents*.

The *Diseases* principally observed by our *Gardeners*, are, 1. *Barrenness*, when the *Tree*, tho' outwardly fresh and healthy, bears no *Blossoms*; or if it does, they fall; or if they set, the *Fruit* drops ere it come to *Maturity*. See **BARRENNESS**.

2. *Blooming of the Buds*, occasion'd by a *Frost* happening when the *Leaves* and *Blossoms* are wet. By this means the *Pores* are shut, and the *vital Juices* suffocated; when, if the *Sun* break out on a sudden, they turn yellow, with round fiery *Specks* growing on them; whence frequently proceed *Tumours* like *Warts*, which rotting, grow full of *Maggots*. Mr. *Morriner* adds, that the *Want* of *Rain* at *Blooming Time*, often occasions the *Dropping* off of the *Blossoms* for *Want* of *Sap*; he, therefore, recommends the watering 'em.

3. *Consumption*, proceeding from a *Want* of *Sustenance*, through the *Failure* of the *nourishing Juices*; or from *Obstructions* of the *Veins*, and *Roots*; or ill *Digestion*, and *Secretion* of *Humours*, &c.

4. The *Moss*; an Account of which, see under the *Article Moss*. See also **PARASITE**.

5. The *Jaundice*, which, tho' it does not hinder the *Tree* from appearing sound, yet when it begins to sprout, the *Leaves* become of a whitish green, and as they grow bigger, turn yellow. It frequently arises from external *Causes*, as the *Mildew*; but chiefly from a stony, or chalky *Soil*, impregnated with an acid *Salt*.

6. *Mildew*, a Kind of *Epidemical Disease*, most frequent and fatal in the *Spring Season*. It is properly a *corrosive*, and *nipping Dew*, proceeding from pent up *Vapours* now exhaled, and returned back on the tender opening *Buds*, which infects 'em by its *Aerimony*, and obstructs the *Circulation* of the *nutritive Juices*. By which means the *Leaves* begin to fade, and wither, and both the *Blossoms* and *Fruit* are much prejudic'd. See **MILDREW**.

7. A thick *Fog*, or too abundant *Dew*, *Agricola* assures us, occasions the same *Disease* as the *Mildew*, only in a less *Degree*.

8. *Falling of the Leaves*, which happens when the *Trees* sprouting too soon, are either surpris'd by excessive *Heat*, or *Cold*.

9. *Uredo*, or *Scorching*, of which there are two *Kinds*; the first happening upon the *Fall* of a *subtil Dew*, or *small Rain*, immediately followed by the *piercing Beams* of the *Sun*, which suddenly closes the *Pores* before dilated, and burns up the *Leaves*: The second happening from the like *Fervour* in the *internal Parts* of the *Tree*, viz. in the *Pith*; occasion'd by some inner *Falling*. *Agricola* imputes it to the *Fault* of the *Gardeners*, who in transplanting *Trees*, frequently cut off the lesser *Filaments*, and *Roots*, as also the greater *Roots*, without covering the *Wounds* with *Wax*, or the like.

10. *Scurf*, or *Leprosy*, a *Disease* chiefly of the *Bark*, caused by a too great *Dilatation* of the *Pores*, whereby too much *perspirable Matter* transuding it, hangs and hardens on the *Bark*, which by this means chaps, and cracks, and thus

a Sort of Leprosy is form'd, Perforation obstructed, &c. Add, that this scaly Skin proves a Harbour for Vermin, which live both on the Bark and Tree.

11. **The Worm**, a little Animal generated in the corrupted Substance of the Bark, Blossoms, Fruit-Leaves, Pith, and Roots. Mr. *Genzil* mentions another Kind, call'd *Cock-blossoms*, which stick to the Roots of young tender Trees, and Bark, and kill them. There is a third Sort, call'd *Breasts*, or *Gad-flies*, which gnaw the Roots. The Worm is a very frequent Disease; whereby young hopeful Trees are all of a sudden brought to languish, and decay.

12. **Rotten Roots**, occasion'd chiefly by their being planted too deep. This Disease is incurable.

13. **Blights**. A particular Account whereof, see under **BRIGHT**.

DISEMBOGUE. When a Ship passeth out of the Mouth of some Gulph, they call it *dysemboguing*: They say also of a River, that at such a Place, or after it has run so many Leagues, it *dysembogues* it self into the Sea.

DISFRANCHISE, the contrary to *Esfranchise*; signifying the taking away one's Freedom, or Privilege. See **ESFRANCHISE**.

DISHERRISON, an old Word of the same Import as *Disinherit*.

Our Lord the King, considering his own Damage, and Disherrison of the Crown, &c. Stat. 8. Rich. II. Hen. IV.

DISHERRITOR, a Person who *disherrits*, or puts another out of his Inheritance.

The Sheriff shall forthwith be punish'd as a Disherritor of our Lord the King, and his Crown. Stat. 3. Edw. I.

DISTINCT Proposition. See **DISCRETE** Proposition.

DISJUNCTIVE, something that separates, or *disjoyns*. Thus *OR* and *Neither* are call'd *Disjunctive Conjunctions*, which, in binding a Discourse, do yet separate the Parts thereof. See **CONJUNCTION**.

Aut Cesar, aut Nullus; Either *Cesar*, or nothing. He neither advanced, nor gave back.

Disjunctive Conjunctions may also be call'd *Partitive*, *Distributive*, and *Alternative*.

DISJUNCTIVE Propositions, in Logic, are compound Propositions consisting of two Members, or Parts connected by a *Disjunctive Conjunction*. See **PROPOSITION**.

The first Proposition of a *Dilemma* is always a *Disjunctive Proposition*:

You must either obey the King, or be a Rebel.

But you must not be a Rebel,

Therefore you must obey the King.

DISK. See **DISC**.

DISLOCATION, the putting a Bone out of Joint, by some Violence; usually call'd by the Physicians, *Luxation*. See **LUXATION**.

DISEMBER'D, in Heraldry, is applied to Birds that have neither Feet, nor Legs: As also to Lions, and other Animals, whose Members are separated.

DISMES, *Declinae*, in our Law-Books, *Tituli*. See **TYM**.

DISMOUNTING, in the Military Art, the Act of *Unhorsing*.

Thus, to *dismount* the Cavalry, is to make 'em a-light.

They also say to *dismount* the Canon, when they are thrown off the Carriages, and broken; Horses are also *dismounted* when they are render'd unfit for Service.

DISORIENTATED, a Term applied to a Thing that is turned from the East, or some other of the Cardinal Points. See **CARDINAL POINT**.

The Diels drawn on this Stone, do not go well, by reason it has been moved, and *disorientated*: It no longer looks East and West.

But the Word is most frequently us'd in a figurative Sense, for the *Disconcerting*, or putting a Man out of his Way, or Element. Speak of Law to a Physician, or of Physic to a Lawyer, and they will all be *disorientated*.

An. Marvet uses the Word *disoccidentated*, instead of *disorientated*.

Geneva had *disoccidentated* our Geographer.

The Word is form'd of the privative Particle *de*, and **Orients**, East.

DISPARAGEMENT, is properly us'd for the Matching an Heir, &c. in Marriage, below his, or her Degree, or Condition; or against the Rules of Decency.

The Word is a Compound of the privative Particle *Dis*, and *Par*, equal.

DISPATCH, a Letter on some Affair of State, or other Business of Importance, sent, with Care and Expedition, by a Courier express.

The Business of *Dispatches* lies on the Secretaries of State, and their Clerks. The King gives Directions to his Ministers abroad by *Dispatches*.

The Word is also us'd for the Packet, or Mail containing such Letters. *The Courier has deliver'd his Dispatches*.

The French, during the Reign of the late *Louis XIV.* had a *Conseil des Dispatches*, Council of Dispatches, held in the King's Presence, at which the *Dauphin*, the Duke of Orleans, the Chancellor, and four Secretaries of State assisted.

DISPAUPER. When any Person, by reason of his Poverty, (attested by his own Oath, or of not being worth 5 Pound, his Debts being pay'd) is admitted to sue in *Forma Pauperis*; if afterwards, before the Suit be ended, the same Party have any Land, or personal Estate fall to him; or that the Court, wherein his Suit is depending, thinks fit, for that, or other reason, to take away the Privilege from him; he is then said to be *dispauper'd*. See **FORMA PAUPERIS**.

DISPENSARY, or, as some write it, **DISPENSATORY**, a Name given to divers Collections of compound Medicines, wherein are specified the Ingredients, Proportions, and the chief Circumstances of the Preparation and Mixture; the same with what we otherwise call a *Pharmaceutica*, or *Antidotary*.

Such are the *Dispensaries of Mesne, Cordus*, the College of Physicians at *London, Quincy*, &c.

The Apothecaries, in and about *London*, are oblig'd to make up their compound Medicines according to the Formules prescrib'd in the *College Dispensary*; and are enjoy'd to keep always ready in their Shops all the Medicines there enumerated.

DISPENSARY, is likewise us'd for a Magazin, or Office of Medicines kept ready to be *dispens'd* at the prime Cost of the Ingredients, for the Benefit of the sick Poor.

Of which Kind we have two or three in *London* maintain'd by the College of Physicians. One at the College it self, first begun in the Year 1606; another in *St. Peter's Alley, Cornhill*; and a third in *St. Martin's Lane*: where the best Medicines are sold for their intrinsic Value, and Patients are advis'd every Day, but Sunday, at one of the three Places. See **COLLEGE**.

DISPENSATION, in Law, &c. a Permission to do something contrary to the standing Laws: Or a Relaxation, or Suspension of a Law on some just Occasion.

Some confound *Dispensation* with *Equity*; but they are very different Things: For *Equity* is only the Correction, or Modification of a Law, which is too general; But a *Dispensation* suspends the Obligation of the Law it self, and can, therefore, be only given by the Legislative Power. See **EQUITY**.

The King grants *Dispensations* of Age to some Officers, to be admitted before the Legal Age.

But the greatest Dealer in *Dispensations* is the Pope, who claims the Office *fore divino*, and extends it to every Thing. Indeed, the more sober of the *Rossauiss* themselves deny, that he can give a *Dispensation* for a Thing contrary either to the divine Law, or the Law of Nature; and confine him to what is contrary to positive Laws, as to Things relating to Fasts, Marriages, holding several Benefices, &c. And even in these Things they put Bounds: Thus, say they, a *Dispensation* in the first Degree of Affinity, as of Father and Daughter, Brother and Sister, would be abusive, and null. But 'tis certain, the Papal See does not apprehend it self under any such severe Restrictions.

The Right of giving *Dispensations*, they thus argue: 'Tis certain, the Church has a Power to make Laws; A Power, which the Apostles themselves exercised, and which their Successors have continued to exercise after them. Whoever can make a Law, can annul it; and much more can he *dispense* with it in certain Cases: The Church, then, may *dispense* with the Laws it self has made; And we find it to have done accordingly, in all Ages. In the first Times, it left it to the Judgment of the Bishops to *dispense* with the Length of the Penance enjoy'd by the Canons; And the IV Council of *Carthage* allows of the Translation of Bishops, and Priests, when the Churches Occasion should require it.

The Author of a Treatise of *Dispensations*, printed in 1713, reduces all the Causes of *Dispensation* to the Necessity and public Service of the Church, and not to the private Advantages of the Persons who solicit the *Dispensation*; otherwise, Causes, he observes, will never be wanting.

The same Author maintains, that *Dispensations* should be *dispatch'd gratis*: *Marcellus II.* he observes, was resolv'd to have it so. That Pope us'd to say, that if *Dispensations* were just, they should be granted *gratis*; and if unjust, they were to be refused. And Pope *Pius V.* refused a large Sum of Money offer'd by a Spanish Lord for a *Dispensation*, which that Pope granted, because he judg'd it just. The 9 Prelates, whom *Paul III.* consulted for the Reformation of the Court of *Rome*, recommended the same Thing; Except for *Dispensations* of Marriages contracted malgré some known Impediment.

DISPENSATIONS, in Pharmacy, the Dispensation, and Arrangement of several Medicines, either simple or compound.

all weigh'd in their proper Doses, or Quantities; in order to be employ'd in the making a Composition.

DISPERSION, in Dioptricks. *Point of Dispersion* is a Point from which refracted Rays begin to diverge, when their Refraction renders them divergent. See DIVERGENT.

It is call'd *Point of Dispersion*, in Opposition to the *Point of Concourse*, which is the Point wherein converging Rays concur after Refraction. See CONCURRE.

But the latter is more usually call'd *Focus*, and the former *Virtual Focus*. See VIRTUAL, and FOCUS.

DISPLAYED, in Heraldry, is understood of the Position of an Eagle, or other Bird, when it is erect, with its Wings expanded, or spread forth. See EAGLE.

DISPONDÉE, in the Greek, and Latin Poetry, a double Spondee; or a Foot consisting of four long Syllables; as *Juvenantium, Maccenates*. See SPONDEE.

DISPOSITION, in Rhetoric, is defined by Cicero, the Distribution of the Things, or Arguments invented, or found out, into a proper Order; Or a due placing, or ranging the several Parts of a Speech, or Discourse. See DISTRIBUTION.

The *Disposition* is one of the grand Parts, or Divisions of Rhetoric. See RHETORIC.

The *Disposition* is of the same Necessity in Oratory, as the marshalling an Army, in order to a Battle; or a beautiful Composition in Architecture, Painting, &c. *Horace* enjoys it expressly in Poetry. *Singula queque Locum tenant sortita decuter*.

The *Disposition*, then, is the Order, or Arrangement of the Parts of an Oration: which Parts are usually reckon'd four, viz. the *Exordium*, or Beginning; the *Narration*; the *Confirmation*; and the *Peroration*, or Conclusion.

Tho' some make 'em fix: viz. the *Exordium*, *Division*, *Narration*, *Confirmation*, *Confutation*, and *Peroration*; as indicated in that Popular Verse,

Exordium, narro, feco, firmo, refuto, peroro.

But the *Division* is more naturally refer'd to the *Exordium*; and the *Confutation* to the *Confirmation*.

The *Disposition* is either *Natural*, or *Artificial*. *Natural*, is the Order the Parts are above rehear'd in. *Artificial*, is, when for some particular reason we recede from the Order of Nature. See each Part under its proper Article, EXORDIUM, &c.

DISPOSITION, in Architecture, is the just placing of all the several Parts of an Edifice, according to their proper Order.

DISPROPORTION, a Term of Relation, implying a Want of Proportion, or Suitableness. See PROPORTION, DEFORMITY, &c.

DISPUTE, or DISPUTATION, in the Schools, &c. a Contest, or Combat, either by Word or Writing, on some Point of Learning, or Religion, for a Degree, Prize, Exercise, or even for the mere sake of Truth, or Advantage of a Party, or the Honour of a Triumph.

The *Port Royals* take Occasion to observe, that nothing gives to many different Lights, and Openings for discovering the Truth, as *Disputing*. The Movements of a Mind employ'd singly in the Examination of any Subject, are usually too cool, and languid: It needs a certain Degree of Heat, to wake its Ideas. Now, by the Oppositions in a Dispute, we come to find wherein the Difficulty lies, and the *Insights* the Mind has acquired, enables it to surmount it.

DISQUISITION, an Enquiry into the Nature, Kinds, and Circumstances of any Problem, Question, or Topic; in order to gain a right Notion of it, and to discourse clearly about it.

DISSECTION, in Anatomy, the Operation of cutting, and dividing the Parts of an Animal Body, with a Knife, Scissors, &c. in order to see, and consider each of them a-part. See ANATOMY.

The Ancients made *Dissections* of living Men; as we read of *Hierophilus*, and *Erysihratus*, and in our own Times, of *Corpus*, and *Vesalius*.

Yet, *le Gendre* observes, that the *Dissection* of a human Body, even dead, was held a Sacrilege till the Time of *Francis I*; And the same Author assures us, he has seen a Consultation held by the Divines of *Salamanca*, at the Request of *Charles V*. to settle, whether or no it were lawful, in Point of Conscience, to *disselt* a human Body, in order to learn the Structure thereof.

DISSEISIN, in Law, an unlawful Dispossession of a Man of his Land, Tenement, or other immoveable, and incorporeal Right.

Hence, the Assizes are call'd *Writs of Disseisin*, which lie against *Disseisors* in any Case: Whereof some are term'd *little Writs of Disseisin*, as being Vicinial, that is, faule before the Sheriff in the County Court, because determinable by him without Assize. See ASSIZE.

Disseisin is of three Sorts; viz. *Simple Disseisin*, committed by Day, without Force, and Arms; and *Disseisin by Force*; for which see DEFORCER, and FRESH *Disseisin*. See also RE-DISSEISIN, and POST-DISSEISIN. *Wrongful Disseisin* is no Defect in Law.

DISSEISOR, he who *disseiseth*, or puts another out of his Land: As *Disseisor*, is he who is so put out.

For the Difference between *Disseisor*, and Intruder, and Deforcior, see INTRUDER, and DEFORCION.

DISSEMINATE *Vaccina*. See VACUUM *Dissemination*.

DISSENTERS, a general Denomination, of equal Import with *Non-conformists*.

It expresses certain Sects, or Parties in *England*, who in Matters of Religion, Church Discipline, and Ceremonies, dissent from, or disagree with the Church of *England*, and have a Toleration by Law for the same. See TOLERATION.

Such, particularly, are the *Presbyterians*, *Independents*, *Anabaptists*, and *Quakers*. See PRESBYTERIANS, INDEPENDENTS, &c.

DISSIMILAR *Leaves*, are the two first Leaves of any Plant at its first shooting out of the Ground. See LEAVES.

They are thus call'd, because they usually are of different Form from the common Leaves of the grown Plant.

These *Dr. Grew* observes to be nothing but the very Lobes of the Seed expanded, and thus advanced. See GERMINATION.

Their Use is for Protection of the Plumbe; which, being young, and tender, is thus guarded on each Side, and has also some Rain, and Dew gradually convey'd down to it by this means. See PLUMULA.

DISSIMILAR, in Anatomy. Authors divide the Parts of the Body into *Similar*, and *Dissimilar*.

Dissimilar Parts, by some call'd *Composnd*, and *Organical*, are such as may be divided into various Parts of different Structure, &c. Thus the Hand is divisible into Veins, Muscles, Bones, &c. whose Divisions are neither of the same Nature, nor Denomination. See SIMILAR.

DISSIMILITUDE, in Geometry, &c. See SIMILITUDE.

DISSIMILITUDE, or, a *Dissimili*, in Rhetoric, &c. an Argument, wherein, from *dissimilar*, or unlike Things, other *dissimilars* are deduced.

Thus Cicero, *Si barbarorum est in diem vivere; Nostra Concilia sempiternam tempus spectare debent. Catullus* furnishes a very beautiful Argument from *Dissimilitude*:

*Soles occidere & redire possunt,
Nobis cum semel occidit brevis Lux,
Nox est perpetua una dormienda.*

DISSIPATION, in Physics, an insensible Loss, or Consumption of the minute Parts of a Body; or, properly, the Flux whereby they fly off, and are lost. See EFFLUVIA.

Thus, we don't say *Dissipation*, but *Loss* of Blood, in speaking of the Blood lost at a Wound, or in any other sensible Manner: On the contrary, we say with *Mr. Lemery*, the *Dissipation* of the Spirits is in greater Abundance than that of the solid Parts, consequently the Reparation thereof must be more frequent and copious.

DISSOLVENT, something that *dissolves*, i. e. divides, and reduces a Body into its smallest Parts. See DISSOLUTION.

Thus, *Aqua Regia* is the *Dissolvent* of Gold; *Aqua fortis* of Silver, and other Metals; Water, of Salts and Gums; Spirit of Wine, of Resins; Spirit of Vinegar, of Pearls, Corals, &c.

Sea-Salt is found the proper *Dissolvent* of Gold: This, in almost any Form, whether as a Fluid, or a Solid, or a Spirit, does the Business: Accordingly, this is the *Basis*, or fundamental Ingredient of *Aqua Regia*. See GOLD, and *Aqua Regia*.

So Nitre is the proper *Dissolvent* of Silver; and has that Effect, in whatever Form applied: and accordingly is the *Basis* of *Aqua fortis*. See SILVER, and *Aqua Fortis*.

Spirit of Nitre added to that of Sea-Salt, makes it *dissolve* Gold the better: But Spirit of Sea-Salt added to Spirit of Nitre, disables it from having any Effect on Silver.

Mr. Homberg, however, in the Memoirs of the *French Academy*, furnishes an Instance of a *Dissolution* of Silver, made by the *Dissolvent* of Gold. An *Aqua Regia* may be compos'd of Spirit of Salt, and Spirit of Nitre, only in such small Quantity each, that they may float separately in a third Liqueur, and not meet often enough to unite, at least not in any Quantity. This Water may be made so weak, as not to *dissolve* Gold, but only extract a slight yellow Tincture from it, that scarce takes off any thing of the Weight of the Metal: Nor will it *dissolve* Silver; as being too weak: So that both Metals are safe from it. But this *Aqua Regia*, after it has *dissolved* Gold as far as it can do, that is, after it has extract'd a yellowish Tincture from it, is in a Condition to *dissolve* Silver. This Phenomenon *Mr. Homberg* accounts for hence: That Spirit of Salt, whether alone, or joynd with Spirit of Nitre, being employ'd in keeping those few Particles of Gold dissolved; will not meddle with the Silver: Which, by this means, receiving

receiving the Impression of the greater Quantity of Spirit of Nitre alone, is dissolved thereby. But the Experiment cannot be inverted, i. e. *Aqua Regia* cannot begin with dissolving Silver lightly first, and afterwards dissolve Gold; by reason Spirit of Nitre does not hinder Spirit of Salt from acting on Gold; as Spirit of Salt does Spirit of Nitre from acting on Silver. See GOLD, and SILVER.

Dissolvents are usually call'd by the Chymists *Menstruums*. See MENSTRUUM.

Universal Dissolvent. See ALCAHEMIST.

DISSOLUTION, in Physics, a Discontinuation, or Annihilation of the Structure of a mixt Body; whereby, what was one, and contiguous, is divided into little Parts, either homogeneous, or heterogeneous.

Dissolution, then, is a general Name for all Reductions of concrete Bodies into their smallest Parts, without any regard either to Solidity, or Fluidity: Tho' in the usual Acceptation of the Word among Authors, it is retained to the Reduction of solid Bodies into a State of Fluidity; which is more properly express'd by *Solution*, as a Branch of *Dissolution*. See SOLUTION.

According to the Opinion of *Fr. Tertius de Janis*, now confirm'd by that of the Learned *Boerhaave*, in his Chymistry, the Power, or Faculty of *Dissolving*, is lodged in Fire alone. See FIRE.

Other Fluids, commonly suppos'd *Dissolvents*, only produce their Effect by means of the fiery *Spiculi* they abound withal. Even Air, which is judg'd a powerful *Menstruum*, owes all its Force to the Rays of Light diffus'd therein. See AIR, and MENSTRUUM.

Sir Isaac Newton accounts for all *Dissolutions*, and the several Phenomena thereof, from the great Principle of *Attraction*; And, in Effect, the Phenomena of *Dissolution* furnish a great Part of the Arguments, and Considerations, whereby he proves the Reality of that Principle. See ATTRACTION.

A Specimen of that great Author's Way of Philosophizing on the Subject of *Dissolution* take as follows:

When Salt of Tartar dissolves by lying in a moist Place, is not this done by an Attraction between the Particles of the Salt of Tartar, and those of the Water, which float in the Air in Form of Vapours? And why does not common Salt, or Salt-petre, or Vitriol do the like; but for Want of such an Attraction. And when *Aqua fortis*, or Spirit of Vitriol, pour'd on Steel-slings, dissolves the Filings, with a great Heat, and Ebullition; is not this Heat and Ebullition effected by a violent Motion of the Parts? And does not that Motion argue, that the acid Parts of the Liquor rush towards the Parts of the Metal with Violence, and run forcibly into its Pores; till getting between the outermost Particles, and the main Mass of Metal, they loosen 'em therefrom, and set 'em at Liberty to float off into the Water? When a Solution of Iron in *Aqua fortis* dissolves *Lapis Calaminaris*, and lets go the Iron; or a Solution of Copper dissolves Iron immersed in, and lets go the Copper; or a Solution of Mercury in *Aqua fortis* pour'd on Iron, Copper, Tin, or Lead, dissolves the Metal, and lets go the Mercury; does not this argue, that the acid Particles of the *Aqua fortis* are attracted more strongly by the *Lapis Calaminaris*, than by Iron; by Iron than by Copper; by Copper than by Silver; and by Iron, Copper, Tin, and Lead, than by Mercury? And is it not for the same reason, that Iron requires more *Aqua fortis* to dissolve it, than Copper; and Copper more than the other Metals; and that of all Metals Iron is dissolved most easily, and is most apt to rust; and next after Iron, Copper? When *Aqua fortis* dissolves Silver, and not Gold; and *Aqua Regia* dissolves Gold, and not Silver; may it not be said, that *Aqua fortis* is subtle enough to penetrate the Pores of Gold as well as of Silver, but wants the attractive Force to give it Entrance; and the same of *Aqua Regia*, and Silver? And when Metals are dissolved in acid *Menstruums*, and the Acids in Conjunction with the Metal, act after a different Manner; So as that the Taste of the Compound is milder than that of the Simples, and sometimes a sweet one; is it not because the Acids adhere to the Metallic Particles, and thereby lose much of their Activity? And if the Acid be in too small a Proportion to make the Compound dissoluble in Water; will it not, by adhering strongly to the Metal, become inactive, and lose its Taste; and the Compound become a tasteless Earth? For such Things as are not dissoluble by the Moisture of the Tongue, are insipid. *Novus. Op. in Casco.*

Monsr. Geoffroy furnishes some curious Experiments on Cold *Dissolutions*, in the *Memoires de l'Academie Royale des Sciences*; which have been translated in the *Philosophical Transactions*: 'Tis nothing surprizing, that a simple *Dissolution* should be cold; that common Water, for Instance, wherein Sea-Salt, or *Sul Ammoniac*, or Vitriol, has been cast, should become the colder, by the Mixture of such Salts; it being obvious, that the Salts, being of themselves destitute of Motion, and coming to share that which the

Fluidity gives the Water, must diminish it, when they become intimately mix'd therewith by *Dissolution*; And it is generally agreed among Philosophers, that Heat is a Motion, and Cold a Cessation, or at least a Diminution of Motion.

Yet, notwithstanding this general Principle; 'tis no great Wonder all *Dissolutions* are not Cold, as those are of all volatile Alkalies in common Water; But that some are Hot, as those of all fix'd Alkalies. The Difference may be accounted for hence, that all fix'd Alkalies having been calcin'd by a vehement Fire, they have imprint'd, and retain'd in their Pores some of the Particles thereof.

But it is surprizing, that *Dissolutions* accompanied with Fermentation, i. e. where the Matters boil, and swell, and that with a great Noise, should be cold, and make the Thermometer fall, when immerg'd therein.

This Coldness, with so considerable an Augmentation of Motion, is somewhat extraordinary. But this is not all a Fer, of these cold Fermentations, there are some that emit hot Vapours. Thus it is, with a Mixture of Oil of Vitriol, and *Sul Ammoniac*; for a Thermometer being plung'd in the Mixture, and another a little higher, to receive only the Fumes thereof; the first Thermometer is seen to fall very hastily, through the Coldness of the Fermentation, and the latter to rise through the Heat of the Vapours. *Monsr. Geoffroy* adds an Experiment, shewing that cold Water is render'd still colder for a few Moments, by throwing a large Quantity of live Coals therein.

DISSOLUTION, in Chymistry, Pharmacy, &c. the Reduction of a compact, hard, or solid Body into a fluid State, by the Action of some fluid *Menstruum*, or *Dissolvent*. See MENSTRUUM, and DISSOLVENT.

Dr. Quincey gives us a Mechanical Account of *Dissolution*, in the Instance of Salt dissolved in Water, which is the most simple Operation that falls under this Head. This Motion he ascribes to that attractive Force, which is so very extensive in Natural Philosophy, that there is no Kind of Matter, but what is under its Influence. It may be observed, that the Corpuscles of Salts, which are the most simple, and which are withal very minute, and for their Bulk very solid, and, therefore, exert a very strong attractive Force, which, *ceteris Paribus*, is proportional to the Quantity of Matter. Hence it comes to pass, that the Particles of Water are more strongly attracted by the saline Particles, than they are by one another: The Particles of Water, therefore, cohering but loosely, and being easily moveable, approach the Corpuscles of Salts, and run, as it were, into their Embraces; and the Motion of them is quicker, or slower, according to their less, or greater Distances; the attractive Force in all Bodies being strongest, at the Point of Contact. Therefore, if Salt be thrown into the middle of a Dish full of Water, we shall find the aqueous Particles, which are in the middle of the Dish, sharp, and pungent to the Taste; but the Water upon the Sides of the Vessel almost insipid; so that, when such a Motion once arises, the aqueous Particles are carried with the same Force towards the Salts; and the Moment of them is to be estimated from the Ratio of their Weight, and Celerity, conjointly. By the Force of this Impulse, they open to themselves a Passage into the Pores of the Salts, which are very numerous; and at length break, and divide their Texture, that all Cohesion of their Parts is destroyed: Hereupon, being separated, and removed to a convenient Distance from one another, they are dispersed, and float here and there about the Water. See FUSION, SALT, SOLUTION, &c.

DISSOLUTION of Metals, &c. by Fire, is particularly call'd *Fusion*. See FUSION.

DISSOLUTION of the Blood, is an Affection of that Humor, directly opposite to *Coagulation*. See COAGULATION.

The *Dissolution* is such a Commotion of the fibrous Parts of the Blood, as indisposes it for that Separation of the *Craassamentum* from the ferous Part, which always ensues in healthy Blood on its cooling out of the Body. See BLOOD.

This *Dissolution* is frequently the Consequence of malignant, and pestilential Fevers, and shews it self in *Petechie*, or Purple Spots; also of certain Poisons, particularly the Bites of venomous Beasts, &c. See FEVER, POISON, &c.

DISSOLUTION of Parliament. See PARLIAMENT, and PROROGATION.

DISSONANCE, or DISCORD, in Music, a false Consonance, or Concord. See CONCORD, and CONSONANCE.

A *Dissonance* is properly the Result of a Mixture, or Meeting of two Sounds, which are disagreeable to the Ear; Such are *Dissones*, *Trisones*, *Falſe Fifth*, *Redundant Fourth*, *Seventh*, &c.

Dissonances are used in Music, and have a good Effect therein; tho' it be only by Accident. See DISCORD.

DISSUASION, is Rhetoric. See PERSUASION.

DISSYLLABLE, a Word of two Syllables; as *Fortune*, *Lament*, &c. See FOOT.

The *Spondees*, *Trochees*, *Jambas*, and *Pyrrichius*, are *dissyllabic Feet*. See SPONDEE.

DISTANCE, is properly the shortest Line between two Points, Objects, &c.

The Word is also us'd figuratively for an Interval, not only in respect of Place, but also of Time, and Quality.

Thus, we say the *Distance* of the Creation of the World from the Nativity of *Jesus Christ* is upwards of 4000 Years: The *Distance* between the Creator and Creature, is infinite.

For the *Vision* of *DISTANCE*, or the manner wherein we come by the Idea of *DISTANCE* in Objects. See *VISION*.

DISTANCES, in Geometry, are measur'd by the *Chain*, *Decempeda*, &c. See *CHAIN*, &c.

Unaccessible DISTANCES are found by taking Bearings therefrom from the two Extremes of a Line whose Length is given. See *PLAIN TABLE*, *THEODOLITE*, &c.

DISTANCE, in Geography, is the Arch of a great Circle interlined between two Places.

To find the *Distance* of two Places A and B, (*Tab. Geography Fig. 4.*) far remote from each other: Assume two Stations C and D, from which both the Places A and B may be seen, and with a proper Instrument find the Angles ADC CDB ACD and DCB, and measure the *Distance* CD.

Then in the Triangle ACD we have two Angles given ACD and ADC, together with a Side, from which, by an easy Rule in Trigonometry, found under the Article *TRIANGLE*, we find AD.

So also in the Triangle CBD the Base DC, and the Angles at the same being given, DB is found.

Lastly, in the Triangle ADB, having the Sides AD and DB, together with the included Angle ADB, the *Distance* required AB is found by the Rules given for the Resolution of Triangles. See *TRIANGLE*.

The Height of a remote Object being known, to find its *Distance*, when the Eye first descends it; And again, the Height of the Eye given, to find the *Distance* to which the Eye can reach on the Surface of the Sea, or Land: Add the Height of the Eye AB, (*Fig. 5.*) to the Semi-diameter of the Earth BC, by which you have AC: And since in the Rectangle Triangle ADC, the Sides AC and DC are given, the Angle DCA is found by the common Rule for Resolution of Triangles; the Quantity of which Angle forms the Arch DB; which Arch converted into Feet, or the like, gives the *Distance* required.

Suppose, *E. g.* the Height of the Eye AB, which is somewhat less than in a Man of ordinary Stature. Since BC is 19695539, AC will be 19695544, and the Angle DAB will be found 89° 57' Minutes, 45 Seconds. Consequently DCB, or the Arch DB is 2' 15" or 137". And, therefore, since 120" or 5600" make 345752 Paris Feet, DB 13081" of a Foot. After the same manner we find the *Distance* AB, to which an Object of a given Altitude DB may be seen, and consequently we know what *Distance* we are off from an Object of a given Altitude, when we first discover the Top thereof.

DISTANCE, in Navigation, is the Number of Degrees, or Leagues, &c. that a Ship has sail'd from any Point. See *SAILING*.

DISTANCE, in Astronomy, The *Distance* of the Sun, Planets, and Comets, is found from their *Parallax*. See *PARALLAX*.

That of the fix'd Stars, as having no sensible *Parallax*, we can little more guess at. See *FIXED STAR*.

The *Distances* of the Planets from the Sun and Earth, in Semi-diameter of the Earth, supposing the greatest Horizontal *Parallax* 6"; and the Dimensions of the Orbits, as assign'd by *Kepler*, are as follow.

Dist. from the Sun.	Great-est.	Mean.	Least.	Dist. from the Earth.	Great-est.	Mean.	Least.
Jupiter	34560	32695	30820	h	380556	27444	274532
Saturn	187254	178640	170036	♄	222520	179259	136268
Mars	57226	52326	47426	♂	92221	52944	13668
Earth	34995	34377	33758	♁	34990	34377	33759
Venus	45061	34889	24718	♀	60050	34548	9941
Mercury	16142	13340	10537	☿	51138	37179	23221

Mr. *Cassini* makes the *Distances* somewhat less; as supposing the Sun's *Parallax* a little greater.

Dist. from the Earth.	Great-est.	Mean.	Least.	Dist. from the Earth.	Great-est.	Mean.	Least.
Jupiter	244000	210000	176000	Venus	38000	22000	6000
Saturn	143000	155000	87000	Mercury	33000	22000	11000
Mars	59000	33500	8000	Moon	61	57	53
Sun	23374	23000	21626				

Dr. *Hook*, by exact Observations with a Telescope of 16 Foot, perpendicularly plac'd, first discover'd, that the *Distances* of the Stars from the Zenith is not the same at

all Times of the Year; Particularly the bright Star in the Dragon's-head he found 27, or 30 Seconds nearer the Zenith of *Greenwich* College, in the Brazen Solstice, than in the Equinox. And after him Mr. *Hansford* observed the like Variations in the Pole-Star.

DISTANCE of the Sun from the Moon's Node, or Apogee, is an Arch of the Ecliptic, intercepted between the Sun's true Place, and the Moon's Node, or Apogee. See *NODE*.

Curtate DISTANCE, is the *Distance* of the Planets Place from the Sun, reduced to the Ecliptic. See *CURTATE*.

Line of DISTANCE, in Perspective, is a right Line drawn from the Eye to the principal Point: Such is the Line OF, (*Tab. Perspective Fig. 10.*) drawn between the Eye O, and the principal Point F.

This, as it is perpendicular to the Plane, or Table, can only be the *Distance* of the Eye from the Table.

Point of DISTANCE, in Perspective, is a Point in the Horizontal Line at such *Distance* from the principal Point, as is that of the Eye from the same. See *POINT*.

Such is the Point P, or Q, (*Tab. Perspective Fig. 11.*) in the horizontal Line PQ; whose *Distance* from the principal Point P, is equal to that of the Eye from the same P.

DISTANCE of the Bastions, in Fortification, is the Side of the exterior Polygon. See *BASTION*.

DISTASTE, or DISGUST, a Loss of Appetite, or an Aversion, or Repugnance to Foods which are commonly eaten. See *NAUSEA*.

Distaste is held by Physicians one of the principal Disorders of the Stomach. It arises from a Want of Sensation in the Upper Orifice of the Ventricle; which may be occasioned various Ways: as, by a too great Abundance of Food; thick, heavy Humors in the Stomach; fat, viscid Aliments; Obstructions of the Lactals; Suppressions of the usual Evacuations; Intermittions of the ordinary Exerces; a Defect in the Nerves, in having their natural Faculty abolish'd, or suspended, as in a Letargy, and Apoplexy; and, according to *Silvius*, by a gross, viscid Saliva, or a thick Bile, ascending out of the small Guts into the Stomach.

DISTEMPER, in Medicine, See *DISEASE*.

DISTEMPER, is also us'd in Painting, for the working up of Colours with something else besides bare Water, or Oil. See *COLOUR*.

If the Colours are prepar'd with the former of these, that Kind of Painting is call'd *Linning*; and if with Oil, it is call'd *Painting in Oil*, and simply *Painting*. See *LINING*, and *PAINTING*.

If the Colours are mix'd with Size, Whites of Eggs, or any such proper glutinous, or viscid Substance, and not with Oil, they then say, it is done in *Distemper*; as the admirable Cartons at *Hampton-Court*.

DISTENSION, the Act of stretching a Thing; also the State of a Thing violently stretch'd, and *distended*.

The *Calculus* is a hard, solid, &c. Body, causing a Stupor, Obstructions, and *Distensions*. Degori.

DISTICH, a Piece of Poetry, the Sense whereof is comprehended in two Lines.

There are excellent Morals in *Cato's Distichs*. See *Figure de Marville on the Distichs of Cato, T. 1. p. 54, 55.*

Hexameter, and Pentameter Verses, otherwise call'd *Ellegicks*, are disposed in *Distichs*. See *VERSUS*.

DISTICHIASIS, in Medicine, a Disorder of the Eye-lids, wherein, instead of one, they have two Rows of *Cilia*, or Hairs. See *CILIA*.

In the *Distichiasis*, over the common, and natural Hairs, there grows another extraordinary Row, which frequently eradicates, and tears up the former, and pricking the Membrane, immediately investing the Eye, occasions Pain, and draws Defluxions upon it.

This cur'd, by plucking up the second Row of Hairs with Nippers, and burning the Pores, out of which they issued.

The Word is form'd of *dis*, *since*, and *stichis*, or *stichis*, *Order, Rank*.

DISTILLATION, or DESTILLATION, in Chymistry, and Pharmacy, the Art, or Act of separating, or drawing out the spirituous, aqueous, oleaginous, or Caline Parts of a mix'd Body from the grosser, and more terrestrial Parts, by means of Fire; and collecting, and condensing them again by Cold. See *HEAT*, &c.

The Use of *Distillation* is very great; it being by means hereof, that Waters, Spirits, Essences, and Extracts are chiefly made. See *WATER*, *SPIRIT*, &c.

Distillation is usually perform'd by means of Fire rais'd to a greater, or lesser Degree, as Circumstance least require. See *FIRE*.

The Fire is either applied immediately to the Vessels wherein the Matters are to be *distilled*; or it is applied mediately, by means of Water, Sand, Iron-silings, &c. These different Methods of applying the Fire, are call'd *Baths, Balnei*; *Bat-*

Balsamum Mariae or *Maris*, *Balsamum Arceuthicum*, &c. See **BALNEUM**.

They are also call'd *Heats*; as *Sand-heat*, *Water-heat*, &c. See **HEAT**.

Distillation is two-fold, 1. *Per Ascensum*, by *Ascensu*; when the Matter to be *distill'd* is above the Fire, and the Spirit, or other Principle, is rais'd from it.

2. *Per Descensum*, by *Descensu*; when the Matter which is to be *distill'd* is below the Fire, and the Vapour drawn from it, precipitated to the Bottom of the Vessel.

Distillation by *Ascensu*, is either *Right*, or *Oblique*.

Right Distillation, is perform'd with a common Alembick, or Cucurbit, wherein the Liquor is rais'd, and descends again, in Form of Drops, into a Receiver: And is chiefly us'd when the Texture of the Body is such as allows of an easy *Ascensu*, as in Vegetables. See **ALEMBOICK**.

Oblique Distillation, is perform'd side-ways, and in crooked Vessels, as *Retorts*. Its Use is for such Bodies as consist of heavier Particles, and which cannot be rais'd without a strong Impulse, nor even by the strongest fire high as the Top of the Alembick; of which Kind are almost all Minerals, and Metals. See **RETORT**.

Distillation by *Descensu*, is where the Fire is apply'd on the Top, and all around the Vessel, whose Orifice is at the Bottom; and consequently, the Vapour not being able to rise upwards, it is forc'd to precipitate, and *distill* down to the Bottom.

There is a second Kind of *Distillation* by *Descensu*, call'd *Per Deliquium*; which is a Natural Liquefying, or Refolving of Salts into a Liqueur, by means of Moisture. See **DELIVIVUM**.

In the Refolution of Simples, an excellent Method to preserve their Virtues, is, in lieu of Fire, or any other foreign Heat, which might alter, or destroy these Virtues, to make Use of the Heat of a Dunghill made of purified Herbs of the same Kind with those to be *distill'd*.

The Process, and Measures of *Distillation*, are very different, according to the different Subjects to be *distill'd*.

Acid Spirits are usually drawn in a Reverberatory Furnace, and with a vehement Fire: *Ponderous Woods*, as *Guaiaicum*, *Benz*, *Amber*, &c. are *distill'd* in a Retort, after the same Manner. In these, first comes a little Phlegm, and then, the Fire increasing, the Spirits fly out in white Clouds. When they cease to come, the Matter in the Receiver is filtrated through a Tunnell, which lets pass the Spirits, leaving a black fetid Oil behind.

Odoriferous Plants, as *Balm*, *Wormwood*, *Sage*, *Hyssop*, &c. are *distill'd* by the Cucurbit, or *Vesica*; first pouring a strong Decoction of the same Plant hot, upon the Plant itself bruis'd, and letting the whole digest in a close Vessel two Days. Then about half the Water, or Spirit is drawn away by *Distillation*; and what remains, being press'd, filtrated, and evaporated to the Consistence of Honey, is the *Essence* of the Plant. Lastly, drying what remain'd in the Cloth after Expression, and burning it, they make a *Lixivium* of its Ashes; which being filtrated, and evaporated to Dryness, what remains is the fix'd Salt of the Plant.

Plants not odoriferous, are generally manag'd thus: The Plant being pound, and two Thirds of the Alembick, or *Retort* fill'd with it, they pour a good Quantity of the express'd Juice of the same Plant upon it, so as the bruis'd Matter may float therein, without sticking any where to the Vessel. Then they draw off about half as much Water, as there was Juice, which is the *distill'd* Water of that Plant. What remains, being press'd in a Cloth, and the Juice settled, they filtrate, and evaporate it to two Thirds, and setting it in a cool Place, the *Essential Salt* shoots into Crystals.

There is also a Method of *Distilling Cold*; which is thus perform'd: They take, for Instance, 4 Pounds of Flowers, more or less, and put 'em in 3 or 4 Pints of Water, and the whole in a Capital, which they lute exactly; then they place the Alembick in a Vessel half fill'd with Ice, beaten and salted, as if they meant to freeze the Water; then fit on a Receiver, and lute it well; Then wetting a linen Cloth in hot Water, they cover the Capital therewith, repeating this several times: by which means the finest Parts are rais'd from the Flowers. But Care must be taken, that all the superfluous Water have been first emptied out of the Capital.

Dr. Beak, in the *Philosophical Transactions*, mentions an extraordinary Kind of *Cold Distillations*, viz. made by Frost and cold Air: His Thermometer being expos'd out of Doors, during the severe Frensis of 1665; five clear Drops, like Dew, ascended to the Top of the Tube, which afterwards, in time, re-descended into the Stem, and fill'd the Space of half an Inch; which, tho' the Spirit of Wine it self was tinged very deep, yet this second Spirit was clearer and brighter than any Crystal. The like he did by Exposing his Thermometer to the hot Air in the middle of Summer. And hence takes Occasion to recommend a further Profecution of this *Psychrotechnia*.

The *Ascensu* of Fluids, we are taught by Philosophy, is effected two Ways: 1. On Account of their Specific Gravity; and 2. By Impulse.

The first Way of *Elevation* is manifest from this *Lemma*, viz. That Particles of Bodies which swim in any Fluid, if they are specifically lighter, must be born upwards by that Fluid. Hence, as *distill'd* Liquors are carried upwards thro' the Air, it is to be inquired, how they come to be specifically lighter than Air.

Now, a Fluid will be specifically lighter than another, when, under a larger Surface, it has an equal, or a less Gravity: According to this Proportion, the Bulk of the Fluid ought to be increased in *Distillation*; and how easily, by the Help of Fire, it may be increased, or, which is the same Thing, rarefied, will appear from what we have said under the Articles **RAREFACTION**, **HEAT**, &c.

It is known by Computation, that the Proportion of the specific Gravity of Water to that of Air, is something more than 800 to 1. Since, therefore, similar Spheres, or Solids, are as the Cubes of their Diameters, and the specific Gravity decreases reciprocally, in the very same Proportion, as the Cubes of their Diameters increase: In order to make a Particle of Water lighter than a Particle of Air, no more is necessary than to rarefy it, till his Diameter becomes ten times greater, which in this Case is but a very small Degree of Rarefaction: for the Cube of the Diameter in a Particle so rarefied, is 1000. If the Diameter be made 12 times greater, the Cube will be 1728; and if twelve, 1728. So that Water, when rarefied but 12 Degrees, will be above double lighter than Air. And if the Rarefaction be carried on farther, it may easily be collected from the Increase of the Numbers, that a Particle of Water may be render'd almost infinitely lighter than Air. Now, the *Elevation* of Bodies equally fluid, and heavy, is always proportionable to their different Aptitude to be rarefied; that is, they ascend quicker, upon the Application of any Force, the more susceptible they are of Rarefaction: but in Bodies, whose Aptitude to rarefy is equal, the Time of *Ascensu* is to be determined by their specific Gravity.

But 'tis not only specific Gravity that serves to elevate Bodies in *Distillation*, but an external Impulse may also cause their *Ascensu*: The Impulse, we have here to do with, comes from the Fire, whose Particles, tho' extremely small and light, yet may raise Bodies much heavier than themselves, by acting upon them with a certain Degree of Force: For since the Moment of a Body, or that Force, by which it acts upon another, is in a compound *Ratio* of the Quantity of Matter, and Celerity; the Celerity may be so increased, as to give a sufficient Force to the Body, tho' the Quantity of Matter in it be ever so small. Let some heavy Body, therefore, be suppos'd to descend, with no other Moment than what it receives from its own Gravity; in this Case, then, the Air, which is much lighter, may be moved with such Celerity, as not only to sustain that Body, but to mount it up higher; and the more rapid the *Impetus* of the Air is, or the Surface of the Body more diffused, the higher and swifter will the *Elevation* be.

So Fire, tho' it be a Body of the minutest Size, may be moved with that Rapidity, as to acquire, and communicate what Force can be desired towards removing any Obstacles. When, therefore, the Moment of Fire is augmented in the manner explain'd, so as to exceed the Force of the *distill'd* Body, it will remove it from its former Situation; or what is here the same Thing, because the Direction of its Motion tends upwards, will carry it up. And thus, Particles specifically heavier than the Air contain'd in the Retort, as those of acid Spirits are, ascend by a more violent Impulse of the Fire us'd in *Distillation*.

Another Thing, to be noted, is, That the same Quantity of Matter is elevated so much the easier, in Proportion, as the Surface is enlarged; for the more this is diffused, the more Particles of Fire it receives: having, therefore, this united Force to drive it up, it more easily ascends; so that, by the same Degree of Fire, Bodies will not equally arise, tho' they are equally heavy, if there be that Difference in their Surfaces already suppos'd.

The Air also has no small Share in the Business of Impulse; for being rarefied by the Fire, it is not only impell'd upwards it self, but carries other Particles up with it: and it may be learn'd by many very familiar Experiments, what *Impetus* Bodies so rarefied exert. Whoever, therefore, will consider these three Things, viz. Specific Levity; an Impelling Force; and the Extent of Surface; and what may be effected by them, and how many Ways, and in what Proportions all of them may be changed, will very easily account for all the Variety, which is found in the several Processes of *Distillation*.

DISTINCT Notion, or *Idea*, according to Mr. Leibnitz, is, when we can enumerate Marks and Characters enough whereby to recollect a Thing. *E. gr.* That a Circle is a Figure bounded with a Curve Line that returns into it self; all the Points whereof are equally distant from one middle Point. See **NOTION**, and **IDEA**.

DISTINCT Base, in Opticks, is that precise Distance from the Pole of a convex Glass, in which Objects, beheld through

it, appear *distinct*, and well defin'd; So that the *Distinct Base* coincides with what we otherwise call the *Focus*. See *Focus*.

The *Distinct Base* is caus'd by the Collection of the Rays proceeding from a single Point in the Object, into a single Point in the Representation; and, therefore, Concave Glasses, which do not unite, but scatter, and dissipate the Rays, can have no real *Distinct Base*. See *CONCAVE*.

DISTINCTION, a Diversity of Things, or Conceptions: Or, as Logicians define it, an Assemblage of two, or more Words, whereby disparate Things, or their Conceptions, are denoted.

Hence it is evident, that *Distinction* arises out of Division. See *DIVISION*.

A *Metaphysical Distinction*, call'd also by the Schoolmen *Alietas, Alteritas, and Diverfitas*, is a Non-agreement of being, whereby this Entity is not that, or one is not another.

There are three Kinds of *Distinctions* taken from the three different Modes of Existence; the first *Real*, the second *Modal*, and the last *Rational*.

A *Real Distinction*, is that between Things which may exist, or be conceiv'd to exist a-part from each other; such is that between two Substances, or the Modes of two Substances.

A *Modal Distinction*, is that between several Things, one whereof may exist without the other, but not *vice versa*, the other without that; such is that between the Mind, and an Act of Will; between Wax, and its Hardness; Water, and its Freezing, &c.

A *Distinctio Rationis, or Rational Distinction*, is that between several Things, which are really one and the same, and whereof one cannot exist without the other, nor *vice versa* the other without this: Such is that between a Thing, and its Essence; between the Essence, and Properties, &c.

Of this *Distinction* some Authors admit two Kinds; the one *Founded*, barbarously call'd *Rationis Ratiocinate*, and having some Foundation in Things; as when we distinguish the Justice of God from his Mercy: The other *Not-founded*, call'd *Rationis Ratiocinantis*, which has no Foundation at all, and therefore is by many quite rejected.

The others contend, that there is no *Distinctio Rationis*, but is at the same Time a *Real Distinction*: Thus, say they, God, and just God, are to each other as Milk and white Milk; and a just God, and merciful God, as white Milk and sweet Milk. But when I say, Milk is distinguish'd from white Milk, or white Milk from sweet Milk, the *Distinction* falls between Whiteness and Sweetness, which is a *Real Distinction*. See *ABSTRACTION*.

DISTINCTION, or *Distinguo*, in the Schools, an Expedient to evade an Argument, or to clear up, and unfold an ambiguous Proposition, which may be true in one Sense, and false in another.

The Respondent was hard press'd, but he distinguish'd himself by a Distinguo.

Aoliere makes *T. D.* say to his Mistress, who had told him, he must submit to the Will of a Person he loved: Distinguo, *Madamoiselle, pour l'Interet de son Amour, Concedo: Contre sa Passion, Nego.*

DISTORTION, in Medicine. *Distortio Oris, or Distortion of the Mouth*, is a Contraction, or Shortening of one Side of the Mouth, occasion'd by a Convulsion, or a Palsy of the Muscles of one Side the Face. See *CONVULSION*.

When the *Distortion* arises from a Convulsion, it is on the same Side with the Convulsion, the Force of the convulsed Part being superior to that of the sound Part: On the contrary, when it arises from a Palsy, it is on the opposite Side, the paralytic Part being here surmounced by the sound. See *PALSY*.

In a *Distortion of the Mouth* the Patient can only spit on one Side; and if you make him laugh, or oblige him to pronounce the Letter O, you'll easily perceive, that he only moves one Side of his Mouth.

The Greeks call this Disorder *σπασμὸς κωνίδος*. See *SPASMUS*.

There is also a *Distortion of the Eye*, call'd *Squinting, or Strabismus*. See *STRABISMUS*.

DISTORTOR ORIS, in Anatomy, a Muscle of the Mouth, call'd also *Zygomaticus*. See *ZYGOMATICUS*.

DISTRACTION, in Medicine, the Act of pulling a Fibre, Membrane, or the like, beyond its natural Extent; and what is capable of this Enlargement, is said to be *distractable*. See *FIBRE*.

DISTRRAIN, in Law. To *distrain* is to attach, or seize on one's Goods, for the Satisfaction of a Debt. See *DISTRESS*.

DISTRESS, in Law, signifies a Compulsion in certain real Actions, whereby to bring a Man to appear in Court, or to pay Rent, or other Duty denied.

The usual Effect of *Distress* is to drive the Party *distrained* to replevy the *Distress*, and so take his Action of Trespass against the *Distrainer*; or else to compound with him for the Debt, or Duty, for which *Distress* was made.

Distress is divided by *Brown* into *Real*, and *Personal*.

Personal Distress is made by *distraining* a Man's moveable Goods, and seizing all the Profits of his Lands, and Tenements from the Title, or Date of his Writ; for the Defendant's Contempt in not appearing to an Action brought against him, when he was summoned, or attach'd: And the Issues so return'd by the Sheriff, are forfeited to the King, and citted into the Exchequer.

Real Distress is made on immovable Goods. It differs from an Attachment in this, that it cannot be taken by any common Person, without the Compass of his own Fee; except it be presently after the Castell, or other Things, are driven, or bore off the Ground, on Purpose to avoid *Distress*. See *ATTACHMENT*.

Distress is also divided into *Finite*, and *Infinite*.

Finite Distress, is that limited by Law, how often it shall be made to bring the Party to Trial of the Action, viz. once, twice, &c.

Infinite Distress, is, without Limitation, till the Party come; as against a Jury, which refuses to appear upon Certificate of *Affidic*, the Process is *Venire facias, Habeas Corpus*, and *Distress Infinite*.

Lastly, *Distress* is again divided into *Grand Distress*, by *Fitzherbert* call'd *Magna Distressio*; and *Ordinary Distress*.

Grand Distress, is that made of all the Goods and Chattels the Party hath within the County. See *GRAND DISTRESS*.

There are several Things not *distrainable*: For a *Distress* must be of a Thing, whereof a valuable Property is in some body; and, therefore, Dogs, Bucks, Conies, &c. that are *feræ Nature*, cannot be *distrained*.

Again, altho' it be of a valuable Property, as an Horse, (yet when a Man, or Woman is riding on him) or an Ax (in a Man's Hand cutting Wood) and the like, are for that Time privileged, and cannot be *distrained*.

Again, valuable Things shall not be *distrained* for Rent, which are for the Benefit, and Maintenance of Trades, and which, by Consequence, are for the Common-Wealth, and are by Authority of the Law there; as an Horse in a Smith's Shop; Materials in the Weaver's Shop for making Cloth; Cloth, or Garments in the Taylor's Shop; Sacks of Corn, or Meal in a Mill, or a Market; nor any Thing *distrained* for Damage-feasant, for it is in *Custodia Legis*.

Again, nothing shall be *distrained* for Rent, which cannot be render'd again in as good a Pledge, as it was at the Time of the *Distress* taken; as Sheaves, or Shocks of Corn cannot be *distrained* for Rent, but for Damage-feasant they may. Again, Beads belonging to the Plow shall not be *distrained*.

Lastly, Furnaces, Cauldrons, or the like, fix'd to the Freeholds, or Doors, or Windows of an Houle, or the like, cannot be *distrained*: When a *Distress* is taken, that has Life in it, it must be brought into the common Pound, or kept in an open Place, where the Owner may give it Foud.

DISTRIBUTION, the Act of dividing a Thing into several Parts, in order to the disposing each in its proper Place. See *DIVISION*.

A Dramatic Poet should have *distrinded* his Subject into Acts and Scenes, ere he proceed to the Verification, &c. See *ACT*, &c.

Orators *distribute* their Harangues into *Exordium, Narration, Confirmation*, &c.

The Jewish Nation was *distrinded* into 12 Tribes. See *TRIBE*.

The *Digest* is *distrinded* into 50 Books. See *DIGEST*.

The Distribution of the Food throughout all the Parts of the Body, is one of the greatest Wonders in Nature. See *DIGESTION*, and *NUTRITION*.

Manual, and Quotidian Distributions, are certain small Sums of Money, appointed by the Donors, or Founders thereof, to be *distrinded* to such of the Canons of a Chapter as are actually present, and assistant at certain Obits, and Offices.

DISTRIBUTION, in Rhetoric, a Kind of *Description*; or a Figure, whereby an orderly Division, and Enumeration is made of the principal Qualities of a Subject.

For Example, *He has the Lights to see our Faults, the Justice to restrain 'em, and the Authority to punish 'em.*

Their Throats is an open Sepulchre, they chatter with their Tongues; the Poison of Aps is under their Lips; their Mouth is full of Curfing, and Lyes; and their Feet swift to shed Blood.

DISTRIBUTION, in Printing, the taking a Form a-funder, separating the Letters, and disposing 'em in the Cases again, each in its proper Cell. See *PRINTING*.

DISTRIBUTION, in Architecture. *Distribution of the Plan*, is the dividing, and disposing the several Parts, and Pieces, which compose the Plan of a Building. See BUILDING.

DISTRIBUTION of Ornaments, is an equal, orderly placing of the Ornaments in any Member of Architecture. See ORNAMENT.

DISTRIBUTIVE Justice, is that whereby we give every Person what belongs to him. See JUSTICE.

DISTRICT, the Territory, or Extent of Jurisdiction of a Judge. See JURISDICTION.

A Judge, or Officer cannot judge, or act out of his own District. See JUDGE.

DISTRICT, is properly the Place wherein a Man has the Power of distraining; or, the Circuit, or Territory, wherein one may be compell'd to appear.

Where we say, *Hors de son Fee*; others say, *Extra Districtum suum*.

DISTRINGAS, a Writ directed to the Sheriff, or other Officer, commanding him to distrain one for a Debt to the King, or for his Appearance at a certain Day. See DISTRESS.

DISVELOPED, in Heraldry, is used much in the same Sense with *Display'd*. Thus Colours said in an Army to be flying, are in Heraldry said to be *disvelloped*.

DITCH, in Fortification, call'd also *Foss*, and *Mort*, a Trench dug round the Rampart, or Wall of a fortified Place between the Scarp and Counterpart. See MORT.

Some *Ditches* are *dry*; others *full of Water*: Each whereof have their Advantages.

The Earth dug out of the *Ditch* serves to form the Rampart. See RAMPART.

The *Ditch* should be of such Breadth as that the Tallest Tree may not reach over it, *i. e.* from 15 to 20 Fathoms; Tho' the Rule others give for the Dimensions of the *Ditch*, is, that it afford Earth enough to build the Rampart of due Magnitude.

The Space between the Rampart and *Ditch*, being about 6 Feet, is call'd the *Berm*, or *Lift*. See BERM.

DITHYRAMBIC, belonging to the *Dithyrambus*; as *Dithyrambic Verse*, *Dithyrambic Poet*, *Dithyrambic Hear*, &c.

A Compound, *Dithyrambic Word*, Mr. *Dacier* observes, has sometimes its Beauty and Force. Some Moderns call Compositions in the Taste of the Ode, only not distinguish'd into Strophes, and consisting of all Kinds of Verse indifferently, *Dithyrambic Odes*. See DITHYRAMBUS.

Dithyrambic Poetry owes its Birth to Greece, and the Transports of Wine. It favours strongly of its Original; as admitting of no Rules, but the Salies of a fiery Imagination. And yet Art is not quite excluded; but delicately applied, to guide and restrain the *Dithyrambic Impetuosity*, and only indulge it in Flights that are pleasing. In effect, what our Poets say of the Ode, is more true of the *Dithyrambus*, than of the Ode, that its Disorder is an Effect of Art. See PINDARIC.

DITHYRAMBUS, in the ancient Poetry, a Hymn in Honour of *Bacchus*, full of Transport, and Poetical Rage.

The Measure, which is what distinguishes this Kind of Poetry, is said to have been invented by *Dithyrambus*, a *Theban*; but *Pindar* attributes it to the *Corinthians*; and the modern Etymologists furnish us with another Origin of the Word.

In effect, the Verse might be call'd thus from the God it was consecrated to, who himself was call'd *Dithyrambus*: Either on Account of his having been brought twice into the World, according to the Fable of *Semele* and *Jupiter*, or on Account of his having triumph'd twice; the Word being a Compound of *Dis*, twice, and *Triumphus*, *Triumph*.

Be this as it will, the Ancients, as we are told by *Aristotle* and *Horace*, gave the Appellation *Dithyrambus* to those Verses wherein none of the common Rules, or Measures were observ'd, much like those call'd by the French *Vers Libres*, by the Italians *Vers Scioliti*, and by the modern Greeks, *Polistici*, a Name they give to Prose, which these Verses resemble more than Poetry. See PINDARIC.

We have now no Remains of the *Dithyrambi* of the ancient Poets, so that we cannot say precisely what their Measure was: All we know is, that it was very bold, and irregular. The Poets not only took the Liberty to forge new Words for the Purpose, but made double, and compound Words, which contributed very much to the Magnificence of the *Dithyrambus*.

Horace has sometimes imitated 'em. *Dacier*, *Fa. Comaire*, and some other modern Writers, have composed Latin Pieces of all Kinds of Verse indifferently, according as the Subject, and Words presented themselves, without any Order, or Distribution into Strophes, and call 'em *Dithyrambi*.

DITONE, *Ditonum*, in Music, an Interval comprehending two Tones. See INTERVAL, and TONE.

The Proportion of the Sounds that form the *Ditone* is 4 to 5; and that of the *Semi-ditone*, as 5 to 6. *Fa. Parrasus* makes the *Ditone* the 4th Kind of simple Concords, as comprehending two Tones, a greater, and a lesser: Others make it the first Discord; dividing the *Ditone* into 18 equal Parts, or Commas, the Nine on the acute Side make the greater Tone, as asserted by *Salomon de Caux*.

The Word is form'd of *Dis*, twice, and *tonus*, *Tone*.

DITRIGLYPH, in Architecture, the Space between two Triglyphs. See TRIGLYPH.

DIVAL, in Heraldry, the Herb *Night-bade*, used by such as blazon with Flowers and Herbs, instead of Colours and Metals, for *Sable*, or Black. See SABLE.

DIVALIA, in Antiquity, a Feast held among the ancient Romans on the 21st of December, in Honour of the Goddess *Angerona*; whence the *Divalia* were also call'd *Angeronalia*.

This Feast was establish'd on Occasion of a Disease which destroyed Man and Beast: That Disease was a Kind of Squinancy, or Inflammation and Swelling of the Throat, call'd in Latin *Angina*; whence the Appellation *Angeronalia*, as *Macrobius* relates *Lib. I. Saturni. C. 12*. See ANGERONALIA.

On the Day of this Feast, the Pontifics perform'd Sacrifice in the Temple of *Voluptas*, or the Goddess of Joy and Pleasure, who was the same with *Angerona*; and supposed to drive away all the Scroves and Chagrins of Life.

DIVAN, a Council-Chamber, or Court wherein Justice is administered, in the Eastern Nations, particularly among the *Turks*.

Travellers relate Wonders of the Silence, and Expedition of the *Divans* of the East.

We say, *The Grand Visier has held a Divan*; meaning, he has assembled the Grandes of the Post, to deliberate of the Affairs of the Empire.

Divan is an Arabic Word, signifying an *Estrade*, or the same with *Safa* in the *Turkish* Dialect. See Sopa.

The Word is also us'd for a *Hall*, in the private Houses of the Orientals: The Custom of *China* does not allow the receiving of Visits in the inner Parts of the House, but only at the Entry, in a *Divan* contriv'd on Purpose for Ceremonies. *Le Campre*.

DIVAN-BEGU, or *Beghi*, one of the Ministers of State in *Persia*. The *Divan-Begui* is the Controller of Justice: His Place is the last of the six Ministers of the second Rank, who are all under the *Etmadsler*, or first Minister.

To the Tribunal of the *Divan-Begui* Appeals lie from Sentences pass'd by the Governours. He has a fix'd Stipend, or Appointment of 50000 Crowns, that he may render Justice gratis. All the Sergeants, Ullers, &c. of the Court, are in the Service of the *Divan-Begui*. He takes Cognizance of the Criminal Causes of the *Coms*, Governours, and other great Lords of *Persia*, when accus'd of any Fault, and receives Appeals from the *Darrags*.

There are *Divan-Beghi*'s not only at Court, and in the Capital, but also in the Provinces, and other Cities of the Empire. He is not confin'd by any other Law, or Rule in the Administration of Justice, but the Alcoran; which, too, he interprets at Pleasure. He only takes Cognizance of Criminal Causes.

DIVERGENT, or **DIVERGING Lines**, in Geometry, are such whose Distance is continually increasing. See LINE.

Lines which converge one Way, *diverge* the opposite Way. See CONVERGING.

DIVERGENT, or **DIVERGING**, in Opticks, is particularly applied to Rays, which issuing from a radiant Point, or having in their Passage undergone a Refraction, or Reflection, do continually recede farther from each other. See RAY.

In which Sense the Word is oppos'd to *Convergent*, which implies the Rays to approach each other; or to tend to a Centre, where being arriv'd, they intersect, and if continu'd further, become *diverging*. See CONVERGING.

Concave Glasses render the Rays *diverging*; and Convex ones, converging. See LENS.

Concave Mirrors make the Rays converge; and Convex ones, *diverge*. See MIRROR, and also CONVEXITY, CONCAVITY, RAY, REFRACTION, and REFLECTION.

'Tis demonstrated, in Opticks, that as the Diameter of a pretty large Pupil does not exceed $\frac{1}{2}$ or $\frac{1}{3}$ of a Digit; *Diverging* Rays, flowing from a radiant Point, will enter the Pupil, parallel, to all Intents and Purposes, if the Distance of the radiant from the Eye be 40000 Feet. See LIGHT.

DIVERGING Hyperbola, is one whose Legs turn their Convexities towards one another, and run towards quite contrary Ways. See HYPERBOLA.

DIVERSION, in War, is when you attack an Enemy in one Place, where he is weak, and unprovoked, with Design to make him call his Forces from another Place, where he was going to make an Irruption.

The Romans had no Way to drive *Hannibal* out of Italy, but to make a *Diversiou*, by attacking *Carthage*.

DIVERSION, in Medicine, is the turning of the Courſe, or Flux of Humours from one Part to another, by proper Applications. See **REVULSION**, and **DERIVATION**.

DIVERSITY differs from **DIFFUSION** in this, that the latter is the Work of the Mind; but the former is in Things themſelves, antecedent to any Operation of the Mind. For Things that are ſeveral, are *different*; even tho' I do not conceive 'em. See **DISTINCTION**, and **DIFFERENCE**.

The *Diversity*, or *Difference* of Things, therefore, ariſes from their eſſential Attributes.

DIVESTING, properly ſignifies *Undreſſing*, or ſtripping off one's Garments, in Contra-diſtinction to *Investing*. See **INVESTITURE**.

In Law, it is uſ'd for the Act of ſurrendering, or relinquishing one's Effects. By a Contract of Donation, or Sale, the Donor, or Seller are ſaid to be *diveſted*, and *divoſted* of their Property in ſuch a Commodity, and the Donee, or Purchaſer becomes *invested* therewith.

Devotion is a general *Diveſtiture*, which the Fathers and Mothers make of all their Effects, in Favour of their Children.

DIVIDEND, in Arithmetick, the Number given to be divided; Or that whereof the *Diviſion* is made. See **DIVISION**.

The *Dividend* muſt always be greater than the Diviſor. The Quotient always contains as many Unites, as the *Dividend* contains the Diviſor times. See **DIVISION**.

DIVINATION, the Art of foretelling future Events. See **PROPHESY**.

Divination is divided by the Ancients into *Artificial* and *Natural*.

Artificial is that, which proceeds by reaſoning upon certain external Signs, which it conſiders as Indications of Futurity: *Natural* is that, which preſages Things from a mere internal Senſe, and Perſuaſion of the Mind, without any Aſſiſtance of Signs.

Natural Divination is of two Kinds: the one *Native*; the other by *Infuſus*.

The firſt is founded on this Suppoſition, that the Soul, collect'd within it ſelf, and not diſtraid among the Organs of the Body, has, from its own Nature and Eſſence ſome Fore-knowledge of future Things; Witneſs what is ſeen in Dreams, Extacies, the Conſines of Death, &c.

The ſecond is founded on this, that the Soul receives, after the Manner of a Mirror, ſome ſecundary Illumination from the Preſence of God, and other Spirits.

Artificial Divination is alſo of two Kinds: the one arguing from *Natural Cauſes*; ſuch are the Predictions of Phyſicians about the Events of Diſeaſes, from the Pulſe, Urine, &c. ſuch alſo are thoſe of the Politician, *Ob Venalem Urbem, & cito perituram ſi Emporem ſuſceperit*.

The ſecond proceeds from Experiment and Observations arbitrarily inſtituted; and is moiſtly ſuperſtitious.

Infinite are the Systems of *Divination* reducible to this Head: By *Birds*, the Entrails of *Beaſts*, *Dreams*, *Lines of the Hand*, *Points* mark'd at Random, *Numbers*, *Noans*, the Motion of a *Sieve*, the *Ar*, *Fire*, the *Sortes Praenſtinae*, *Virginitas*, and *Homericæ*; Numerous others, with the principal Species whereof, with their Names, are:

Pythomaney, or *Sciomaney*, which conſiſts in calling up the Souls, or Shades of the Deceaſ'd, to learn of 'em ſomething required. *Dactylomaney*, perform'd by means of one, or more Rings. *Hydromaney*, perform'd with Sea-Water. *Pegomaney*, with Spring-Water. *Ornithomaney*, which was the Buſineſs of the Augurs. *Clidomaney*, perform'd with Keys. *Coſtromaney*, with a Riddle, or Sieve. *Cledoniuſu*, by Words, or Voice. *Extiſpicina*, by the Entrails of Victims. *Alphabetomaney*, or *Aleuromaney*, by Flower. *Keramaſcopia*, by the Conſideration of Thunder-bolts. *Carpomaney*, by Smoak. *Aleſtromaney*, by Cocks. *Pyromaney*, by Fire. *Lithomaney*, by Stones. *Lychomaney*, by Lamps. *Necromaney*, by the Dead, or their Bones, &c. *Oncroceritica*, by Dreams. *Oreſcoſty*, by Eggs. *Lecanomaney*, by a Baſon of Water. *Gaſtraney*, by the Belly, or by Vials. *Palpitation*, *Saluſtatio*, παλψή, by the Pulſation, or Motion of ſome Member. *Axinomaney*, by a Hatchet, or Cleaver. *Caproſomaney*, or *Crystallomaney*, by a Mirror. *Cibromaney*, by the Lines of the Hand. *Geomancy*, by the Earth. *Ceromaney*, by Figures of Wax. *Arithomaney*, by Numbers. *Bolomaney*, by Arrows. *Sycomancy*, &c. all deſcribed by Cardan in his IVth Book, *de Sapientia*; and under their proper Articles in this Dictionary. See **PSYCHOMANCY**, **DACTYLOMANCY**, **Sortes**, &c.

Flud has ſeveral particular Treatiſes of the ſeveral Species of *Divination*: Cicero has two Books of the *Divination* of the Ancients, wherein he relates the whole System. All theſe Kinds of *Divination* have been condemn'd by the Fathers, and Councils, as ſuppoſing ſome Compact with the Devil.

In Holy Scripture we find mention made of nine different Kinds of *Divination*.

The firſt perform'd by the Inſpection of Planets, Stars, and Clouds: 'Tis ſuppoſed to be the Practicers of this, whom *Moſes* calls מַעוֹן *Ma'oon*, of מַעַן *Ma'an*, Clouds, *Deuter. C. XVIII. v. 10.* 2. Thoſe, whom the Prophet calls in the ſame Place מוֹחַשׁ *Moachſch*, which the Vulgate, and Generality of Interpreters render *Augur*. 3. Thoſe, who in the ſame Place are call'd מוֹכַשׁ *Moachſch*, which the Septuagint, and Vulgate tranſlate, *A Man given to ill Practices*. 4. Such Authors, whom *Moſes* in the ſame Chapter, c. 11. calls הוֹכֵר *Hoober*. 5. Thoſe, who conſult Spirits, call'd *Pythia*; or, as *Moſes* expreſſes it in the ſame Book, שְׂאֵל אֲרוֹב, thoſe who ask Queſtions of *Pythia*. 6. Witches, or Magicians, whom *Moſes* calls יְדוּעָי *Judeoi*. 7. Thoſe, who conſult the Dead, *Necromancers*. 8. The Prophet *Hoſea*, C. IV. 12. mentions ſuch as conſult Rods, שְׂאֵל בַּקֶּלֶי, which Kind of *Divination* may be call'd *Rabdomancy*. 9. The laſt Kind of *Divination* mention'd in Scripture, is *Hepatoſcopy*, or the Conſideration of the Liver.

DIVINE, ſomething that comes from, or relates to a God. See **God**.

The Word is alſo uſ'd, figuratively, for any thing that is excellent, extraordinary, and that ſeems to go beyond the Power of Nature, and the Capacity of Mankind: In this Senſe, the Compaſs, Telescope, Clocks, &c. are ſaid to be *divine* Inventions. *Plato* is call'd the *divine Antor*, the *Divine Plato*; and the ſame Appellation is given to *Seneca*: *Hippocrates* is call'd, the *divine old Man*, *Divinus Senex*, &c.

The *Arabs* give the Appellation of *Divines*, אֵלִיָּוִן *Elabion*, to their ſecond Sect of Philoſophers, which conſiſts of ſuch as admit a firſt Mover of all Things, a ſpiritual Subſtance free from all Kind of Matter, in a Word, a *God*. By this Name they diſtinguiſh 'em from their firſt Sect, whom they call *Zebrians*, or *Zabanoun*, i. e. Worldly, or Natural, or rather, Worldlings, and Naturaliſts, as admitting of no Principles beyond the Material World, and Nature.

The Word אֵלִיָּוִן *Elabion*, is deriv'd from אֵלָא *Alla*, *God*: So that the *Elabion* are the *Divines*, or Theologues, as *Capellus* renders it; or, ſuch as own a God.

DIVINITY, the Nature, and Eſſence of God. See **God**.

Divinity and Humanity are join'd together in *Jeſus Chriſt*. 'Tis falſly, that the Atheiſts hold the Notion of a *Divinity* to be a Political Invention of the ancient Legiſlators, to ſecure and warrant the Obſervation of their Laws; On the contrary, 'tis certain, the Legiſlators made Uſe of the Opinion, which they found already impreſs'd on the Minds of the People.

The *Heaven Divinities* may be reduced to three Clafſes: The firſt, *Theological*, repreſenting the Divine Nature under divers Attributes; Thus *Jupiter* denotes the abſolute Power of God, *Juno* his Juſtice, &c.

The ſecond Claſs of *Divinities* are *Physical*: Thus *Eolus* is that Power in Nature, whereby Vapours and Exhalations are collect'd to form Winds, &c.

The laſt are *Moral Divinities*. Thus the *Furies* are only the ſecret Reproaches and Stings of Conſcience.

DIVINITY is alſo uſ'd in the ſame Senſe with Theology. See **THEOLOGY**.

DIVING, the Art, or Act of defending under Water to conſiderable Depths, and abiding there a competent Time.

The Uſe of *Diving* are very conſiderable, particularly in the Fiſhing for Pearls, Corals, Sponges, &c. See **PEARL-FIſHING**, **SPONGES**, &c.

There have been divers Methods propoſed, and Engines contriv'd, to render the Buſineſs of *Diving* more ſafe and eaſy. The great Point is to furniſh the *Diver* with freſh Air, without which, he muſt either make a ſhort Stay, or periſh.

Thoſe who *dive* for Sponges in the Mediterranean, help themſelves by carrying down Sponges dipt in Oil in their Mouths. But conſidering the ſmall Quantity of Air that can be contain'd in the Pores of a Sponge, and how much that little will be contract'd by the Preſſure of the incumbent Air, ſuch a Supply cannot long ſubſiſt the *Diver*. For it is found by Experiment, that a Gallon of Air included in a Bladder, and by a Pipe reciprocally inſpired and expired by the Lungs, becomes unfit for Reſpiration in little more than one Minute of Time. For tho' its Elaſticity be but little alter'd in paſſing the Lungs, yet it loſes its vivifying Spirit, and is render'd eſtate.

In effect, a naked *Diver*, Dr. *Halley* aſſures us, without a Sponge, cannot remain above a couple of Minutes enclorſed in Water; nor much longer with one, without Suffocating; nor, without long Practice, near ſo long; ordinary Perſons beginning to liſe in about half a Minute. Beſides that, if the Depth be conſiderable, the Preſſure of the Water in the Veſſels makes the Eyes Blood-hot, and frequently occasions a Spitting of Blood.

Hence,

Hence, where there has been Occasion to continue long at the Bottom, some have contriv'd double flexible Pipes, to circulate Air down into a Cavity enclosing the *Diver*, as with Armour, both to furnish Air, and to bear off the Pressure of the Water, and give leave to his Breast to dilate upon Inspiration; The fresh Air being forced down one of the Pipes with Bellows, and returning by the other of 'em, not unlike to an Artery, and Vein.

But this Method is impracticable when the Depth surpasses 3 Fathoms; the Water embracing the bare Limbs so closely as to obstruct the Circulation of the Blood in 'em; and withal pressing so strongly on all the Juntures where the Armour is made tight with Leather; that if there be the least Defect in any of them, the Water rushes in, and instantly fills the whole Engine, to the great Danger of the *Diver's* Life.

The *DIVING-BELL*, is a Machine contriv'd to remedy all these Inconveniences. In this the *Diver* is safely convey'd to any reasonable Depth, and may stay more or less Time under Water, as the Bell is greater or less.

'Tis most conveniently made in Form of a truncated Cone, the smaller Base being closed, and the larger open. It is to be poiz'd with Lead, and so suspended, that the Vessel may sink full of Air, with its open Basis downward, and as near as may be in a Situation parallel to the Horizon, so as to close with the Surface of the Water all at once.

Under this Covercle the *Diver* sitting, sinks down with the included Air into the Depth desired: And if the Cavity of the Vessel may contain a Tun of Water, a single Man may remain a full Hour, without much Inconvenience, at 5 or 6 Fathoms deep.

But the lower you go, still, the included Air contracts itself, according to the Weight of the Water that compresses it; So as at 53 Foot deep, the *Bell* becomes half full of Water; the Pressure of the incumbent Water being then equal to that of the Atmosphere: And at all other Depths the Space occupied by the compressed Air in the upper Part of the *Bell* will be to the under Part of its Capacity fill'd with Water as 53 Feet to the Depth of the Surface of Water in the *Bell* below the common Surface thereof. And this condensed Air being taken in with the Breath soon insinuates it self into all the Cavities of the Body, and has no ill Effect, provided the *Bell* be permitted to descend so slowly as to allow Time for that Purpose.

One Inconvenience that attends it, is found in the Ears, within which there are Cavities which open only outwards, and that by Pores so small as not to give Admission even to the Air it self, unless they be dilated, and distended by a considerable Force. Hence, on the first Descent of the *Bell*, a Pressure begins to be felt on each Ear, which, by Degrees, grows painful, till the Force overcoming the Obstacle, what contrains these Pores, yields to the Pressure, and letting some condensed Air slip in, presently este eases. The *Bell* descending lower, the Pain is renewed, and again eases in the same Manner.

But the greatest Inconvenience of this Engine, is, that the Water entering it, contracts the Bulk of Air into so small a Compass, that it soon heats, and becomes unfit for Respiration: So that there is a Necessity for its being drawn up to recruit it; besides the uncomfortable Abiding of the *Diver* almost cover'd with Water.

To obviate these Difficulties of the *Diving-Bell*, Dr. Halley, to whom we owe the preceding Account, contriv'd some further Apparatus, whereby not only to recruit and refresh the Air from Time to Time, but also to keep the Water wholly out of it at any Depth: which he effected after the following Manner:

His *Diving-Bell* was of Wood about 60 Cubic Feet in its Concavity, coated externally with Lead so heavy that it would sink empty; a particular Weight being distributed about its Bottom, to make it descend perpendicularly, and so otherwise. In the Top was fix'd a Glass like a Window, to let in Light from above; with a Cock, to let out the hot Air: And below, about a Yard under the *Bell*, was a Stage suspend'd from it by three Ropes, each charg'd with an hundred Weight, to keep it steady.

To supply Air to this *Bell* when under Water, he had a couple of Barrels, holding 36 Gallons a-piece, cased with Lead, so as to sink empty, each having a Bung-hole at Bottom, to let in the Water as they descended, and let it out again, as they were drawn up again. In the Top of the Barrels was another Hole, to which was fix'd a leathern Pipe, or Hose, long enough to hang below the Bung-hole; being kept down by a Weight appended. So that the Air driven to the upper Part of the Barrel by the Encroachment of the Water, in the Descent, could not escape up this Pipe, unless the lower End were lifted up.

These Air-Barrels were fitted with Tackle, to make 'em rise and fall alternately, like two Buckets; being directed in their Descent by Lines fasten'd to the under Edge of the *Bell*: So that they came readily to the Hand of a Man plac'd

on the Stage, to receive 'em; and who taking up the Ends of the Pipes, as soon as they came above the Surface of the Water in the Barrels, all the Air included in the upper-Part thereof was blown forcibly into the *Bell*; the Water taking its Place.

One Barrel thus receiv'd, and emptied; upon a Signal given, it was drawn up, and at the same time the other let down: By which alternate Succession fresh Air was furnish'd so plentifully, that the Learned Doctor himself was one of five, who were all together in 9 or 10 Fathoms deep of Water for above an Hour and a half, without the least Inconvenience; the whole Cavity of the *Bell* being perfectly dry.

All the Precaution he observ'd, was to be let down gradually about 12 Foot at a Time, and then to stop, and drive out the Water that had enter'd by taking in 4 or 5 Barrels of fresh Air before he descended further. And being arriv'd at the Depth intended, he let out as much of the hot Air that had been breath'd, as each Barrel would replenish with cold, by means of the Cock at the Top of the *Bell*; thro' whose Aperture, tho' very small, the Air would rush with so much Violence, as to make the Surface of the Sea boil.

Thus, he found, any thing could be done that was required to be done underneath. And by taking off the Stage, he could, for a Space as wide as the Circuit of the *Bell*, lay the Bottom of the Sea so far dry as not to be over Shoes therein. Besides, that by the Glass Window so much Light was transmitted, that, when the Sea was clear, and especially when the Sun shone, he could see perfectly well to write, or read, much more to fasten, or lay hold of any thing under him that was to be taken up. And by the Return of the Air Barrels he often sent up Orders written with an Iron Pen on a Plate of Lead, directing how he would be mov'd from Place to Place.

At other times, when the Water was troubled and thick, it would be as dark as Night below; But in such Cases he was able to keep a Candle burning in the *Bell*.

The same Author intimates, that by an additional Contrivance, he has found it practicable for a *Diver* to go out of the *Bell* to a good Distance from it; the Air being convey'd to him in a continued Stream by small flexible Pipes, which serve him as a Clew to direct him back again to the *Bell*. So that there seems little further wanting to the Perfection of *Diving*.

Yet, the famous *Corn. Drebell*, had an Expedient in some respects superior even to this; if what is relat'd of it, be true. He contriv'd not only a Vessel to be row'd under Water, but also a Liquor to be carried in the Vessel, which supplied the Place of fresh Air.

The Vessel was made for King James I; carrying 12 Rowers, beside the Passengers. It was tried in the River *Thames*, and one of the Persons in that submarine Navigation, then living, told it one from whom Mr. Boyle had the Relation.

As to the Liquor, Mr. Boyle assures us, he discover'd by a Physician, who married *Drebell's* Daughter, that it was us'd from Time to Time, when the Air in the submarine Boat was clogg'd by the Breath of the Company, and unfit for Respiration: At which Time, by unstopping the Vessel full of this Liquor, he could speedily restore to the troubled Air such a Proportion of vital Parts, as would make it serve again a good while. The Secret of this Liquor *Drebell* would never disclose to above one Person, who himself assur'd Mr. Boyle what it was. *Boyl. Exp. Phys. Meth. of the Spring of the Air.*

DIVISIBILITY, a passive Power, or Property in Quantity, whereby it becomes separable into Parts; either actually, or at least mentally. See QUANTITY, and MATTER.

The School-men define *Divisibility*, *Capacitas Coextensivum cum pluribus*, a Capacity of Coextending with several Things: Thus, a Staff 4 Foot long is *divisible*, because it may be coextended with 4 Feet, or 48 Inches, &c.

This, the Peripateticks, and *Cartesians*, universally hold an Affection, or Property of all Matter, or Body: The *Cartesians*, as holding the Essence of Matter to consist in Extension; For every Part, or Corpuscle of the Body being extended, has Parts without Parts, and consequently is *divisible*. See EXTENSION.

The *Epicureans*, again, hold *Divisibility* to agree to every Physical Continuum, as, without Parts adjacent to Parts, there can be no Continuity, and wherever there are Parts so adjacent, there must be *Divisibility*. But they deny, that this Affection agrees to all Bodies: For the primary Corpuscles, or Atoms they hold perfectly infecable, and indivisible. See ATOM.

The principal Argument they allege, is, that from the *Divisibility* of all Body, and of every assignable Particle of Body, even after any repeated Number of Divisions, it follows, that the smallest Corpuscle is infinitely *divisible*, which with them is an Absurdity. For a Body can only be divided into such Parts as it actually contains. But to suppose infinite Parts

in the smallest Corpufc, fay they, is to fuppofe it infinitely extended: For infinite Parts placed externally to each other, as the Parts of Bodies doublelefs are, muft make an infinite Extention.

They add, that there is a World of Difference between the *Divifibility* of Physical, and Mathematical Quantities. For every Mathematical Quantity, or Dimenfion, they grant, may be increas'd and diminifh'd infinitely: But Physical Quantity, neither the one nor the other.

An Artift, dividing a continued Body, arrives at certain minute Parts, beyond which he cannot go; which we may call *Minima Artis*. In like manner Nature, which may begin where Art ends, will find Bounds; which we may call *Minima Nature*: And God, whose Power is infinite, beginning where Nature ends, may fubdivide the *Minima Nature*, but he will at length come at certain Parts, to which there being no other Parts continuous, they cannot be taken away. Thefe minute Parts are *Atoms*.

All we can fay to the Point, is, that on the one hand 'tis certain, every extended Corpufc muft have two Sides, and confequently is *divifible*; for if it had not two Sides, it were not extended; and if it had no Extention, an Affemblage of divers fuch Corpufcs would not compofe a Body. And on the other hand, the infinite *Divifibility* fuppofes an Infinity of Parts in the minutest Corpufc: whence it follows, that there is no Body, how fmall foever, but may furnifh as many Surfaces, or Parts, as the whole Globe of the Earth can; nay, and infinitely more; which, to fay no worfe, is a violent Paradox.

The infinite *Divifibility* of Mathematical Quantity is thus prov'd, and illuftrated by the Mathematicians: Suppofe a Line AD (*Tab. Geometry Fig. 35.*) perpendicular to BF, and another, as GH, at a fmall Difftance from A, alfo perpendicular to the fame Line; with the Centres CCC, &c. and Difftances CA, CA, &c. describe Circles cutting the Line GH in the Points e, e, &c. Now, the greater the Radius AC is, the lefs is the Part e G: But the Radius may be augmented in *Infinittum*, and therefore the Part e G may be diminifh'd in the fame manner; and yet it can never be reduced to nothing; becaufe the Circle can never coincide with the right Line BF. Confequently, the Parts of any Magnitude may be diminifh'd in *Infinittum*.

The chief Objections againft the Doctrine, are: That an Infinite cannot be contain'd by a Finite; That it follows from a *Divifibility in Infinittum*, either that all Bodies are equal, or, that one Infinite is greater than another: To which it is anfwer'd, that to an Infinite may be attributed the Properties of a finite, and determin'd Quantity. And who has ever prov'd, that there could not be an infinite Number of Parts infinitely fmall in a finite Quantity; or that all Infinities are equal: The contrary is demonstrated by Mathematicians in innumerable Inftances. We are not here contending for the Poffibility of an actual Division in *Infinittum*; we only affert, that however fmall a Body is, it may be fill farther divided; which we imagine may be call'd, a Division in *Infinittum*, becaufe what has no Limit, is call'd infinite. See INFINITE.

True, there are no fuch Things as Parts infinitely fmall; yet the Subtlety of the Particles of feveral Bodies is fuch, that they very much furpafs our Conception; and there are innumerable Inftances in Nature of fuch Parts actually feperated from one another.

Mr. Boyle gives us feveral Inftances. He fpeaks of a filken Thread 500 Yards long, that weigh'd but two Grains and an half. He meafured Leaf-Gold, and found by weighing it, that 50 fquare Inches weigh'd but one Grain: If the Length of an Inch be divided into 200 Parts, the Eye may diftinguifh 'em all; therefore there are in one fquare Inch 40000 vifible Parts; and in one Grain of Gold there are 200000 of fuch Parts; which vifible Parts no one will deny to be farther *divifible*.

A whole Ounce of Silver may be gilt with eight Grains of Gold, which is afterwards drawn into a Wire thirteen thoufand Foot long. See GOLD, and DUCTILITY.

In Odoriferous Bodies we can fill perceive a greater Subtlety of Parts, and even of fuch actually feperated from one another; feveral Bodies fcarce lofe any fenfible Part of their Weight in a long Time, and yet continually fill a very large Space with odoriferous Particles. See EVOLUTIA.

By Help of Microfcopes, fuch Objects as would otherwife efcape our Sight, appear very large: There are fome fmall Animals fcarce vifible with the beft Microfcopes; and yet there have all the Parts neceffary for Life, as Blood, and other Liquors: How wonderful muft the Subtlety of fuch Parts be, which make up fuch Fluids! whence is deducible the following Theorem:

Any Particle of Matter, how fmall foever, and any finite Space, how large foever, being given; it is poffible for that fmall Sand, or Particle of Matter, to be diffufed through all that great Space, and fill it in fuch manner, as that

there fhall be no Pore in it, whose Diameter fhall exceed any given Line; as is demonstrated by Dr. Keil. *Introdu&.* ad Ver. *Phyf.*

DIVISION, the Act of feperating a Whole into the Parts it contains. See PART.

If the whole be compofed of Parts really diftinct, call'd Integral Parts, the *Divifion* made thereof is properly call'd *Partitio*: As when a Houfe is divided into its Apartments. See PARTITION.

If the Whole be compofed of Parts, call'd *Subje&ive*, that is, if the Whole be only one common Term, the Subje&ts compriz'd in the Extent whereof are the Parts, the *Divifion* thereof is what we properly call *Divifion*: Such is the *Divifion* of a Genus into its Species, &c.

DIVISIONS, in *Phyffics*, or *Divifio Continui*, is the Partition, or Separation of the Parts of a Quantity; whereby, what before was one, is now reduced into feveral. See CONTINUITY.

This *Divifion* is effected by means of Motion, without which there can be no Separation of any Continuum, or even Contiguum.

This Motion is perform'd divers Ways, by *Fraction*, *Sciffion*, *Section*, *Fiffion*, *Refolution*, *Dilution*, *Maceration*, *Diffufion*, *Effuffion*, *Dyffraction*, &c. See DIVISIBILITATE.

DIVISIONS, in Logic, is the feperating any Thing into divers Parts, or Idea's: or more ftrictly, it is the Distribution of a Whole into all it contains. See DISTRIBUTION.

The School-men define it a Difcourfe, explaining a Thing by its Parts: In which it approaches near to the Nature of a *Definitio*, whose Character is to define a Thing by its Parts. See DEFINITION, PART, &c.

Divifion, we have faid, is a Distribution of a Whole, &c. But the Whole has two Significations, whence two Kinds of *Divifion*.

A *Whole* is properly what confifts of integral Parts; as the Human Body, which contains divers Members: And a Distribution into fuch Parts, is properly call'd *Partitio*: Such is that of a Houfe into its Parts. See PARTITION.

But there is another Sort of Whole, which is properly no other than an abstract Idea common to more Things than one, as the *Univerfals*: Or a compound Idea comprehending the Subftance, and its Accidents, or at leaft moft of its Accidents.

This Whole admits of a triple *Divifion*. 1. When the Genus, or Kind, is divided by its Species, or Differences; as when Subftance is divided into Body and Spirit; or into Extended, and Thinking. The fecond, when any Thing is divided into feveral Claffes, by oppofite Accidents; as when Stars are divided into thofe which fhine by their own Light, and thofe that only refle&ct a borrow'd Light. 3. When the Accidents themfelves are divided according to the Subjects in which they inhere; as when Goods are divided into thofe of the Body, the Mind, and Fortune.

The Laws of *Divifion* are, 1. That it be full, and adequate, that is, that the Members of the *Divifion* entirely exhauft the whole Thing divided: As when all Numbers are divided into *Equal*, and *Unequal*. 2. That the Members of the *Divifion* be oppofite; as *Equal*, and *Unequal*; *Corporeal*, and *Not Corporeal*; *Extended*, and *Thinking*. 3. That one Member of the *Divifion* be not contain'd in another, fo as the other may be affirm'd of it. Tho', in other refpects, it might be includ'd without any Fault in the *Divifion*: Thus Extention, Geometrically confider'd, may be divided into a *Line*, *Surface*, and *Solid*; tho' the Line be includ'd in the Surface, and the Surface in the Solid. 4. The *Divifion* not to be made into too many, or too general Parts. Laftly, the Members, unlefs the Subject require it, not to be too unequal; as if the Univerfe were divided into Heaven, and Earth.

The *DIVISION* of a Word, is a Difcourfe explaining the Latitude, or Comprehenfion of a Word: The *Latitude*, when the Word is univerfal; as when the Genus is divided into Species, and Differences: The *Comprehenfion*, when the Word is ambiguous, as *Taurus*, Bull; which fometimes denotes a Conftellation, fometimes a Beaft, and fometimes a Mountain.

The *DIVISION* of a Mode, divides a Quality into its Degrees. The Philofophers, after the Phyfficians, fuppofe 8 Degrees of every Quality: Hence when a Quality is faid to be in the 8th Degree, it marks, that it can be no further intended, or heighten'd. See DEGREE, and QUALITY.

DIVISION, in Arithmetick, is the laft of the four great Rules; being that whereby we find how often a lefs Quantity is contain'd in a greater; and the Overplus.

Divifion, in Reality, is only a compendious Method of Subtra&tion; Its Effect being to take a lefs Number from another greater, as often as poffible; that is, as oft as 'tis contain'd therein. There are, therefore, three Numbers concern'd in *Divifion*: 1. That given to be divided, call'd the

Dividend. 2. That whereby the Dividend is to be divided, call'd the *Divisor*. 3. That which expresses how often the Divisor is contain'd in the Dividend; or the Number resulting from the *Division* of the Dividend by the Divisor, call'd the *Quotient*. See *QUOTIENT, &c.*

There are divers Ways of performing *Division*, one call'd the *English*, another the *French*, another the *Italian*, another the *Spanish*, another the *German*, and another the *Indian* Way, all equally good, and just, as finding the Quotient with the same Certainty, and only differing in the manner of arranging, and disposing the Numbers.

We have likewise *Division* in Integers, *Division* in Fractions; and *Division* in Species, or *Algebra*.

Division is perform'd by seeking how often the Divisor is contain'd in the Dividend; and when the latter consists of a greater Number of Figures than the former, the Dividend must be taken into Parts, beginning from the left, and proceeding to the Right, and seeking how often the Divisor is found in each of those Parts. For Example, 'tis required to divide 6759 by 3: I first seek how oft 3 is contain'd in 6, viz. twice; then, how oft in 7, which is likewise twice, with one remaining. This 1, therefore, is join'd to the next Figure 5, which makes 15, and I seek how oft 3 in 15; and lastly, how oft 3 in 9. All the Numbers expressing how oft 3 is contain'd in each of those Parts, I write down according to the Order of the Parts of the Dividend, that is, from Left to Right, and separate 'em from the Dividend it self, by a Line, thus, *Divisor. Dividend. Quotient.*

$$\begin{array}{r} 3 \overline{) 6759} \\ \underline{6} \\ 7 \\ \underline{6} \\ 15 \\ \underline{15} \\ 9 \\ \underline{9} \\ 0 \end{array}$$

It appears, therefore, that 3 is contain'd 2253 times in 6759; or that 6759 being divided into 3, each Part will be 2253. If there be any Remainder, that is, if the Divisor repeated a certain Number of times is not equal to the Dividend, what remains is wrote over the Divisor fraction-wise. Thus, if instead of 6759 the Dividend were only 6758, the Quotient will be the same as in the former Case, except for the last Figure 8; for 3 being only contain'd twice in 8, the last Number in the Quotient will be 2; and as twice 3 is only 6, there remains 2 of the Dividend; which I write after the Quotient, with the Divisor underneath it, and a Line to separate the two; thus,

$$3 \overline{) 6758} \left(2252 \frac{2}{3} \right)$$

Proof of DIVISION.

Division is proved by multiplying the Quotient by the Divisor, or the Divisor by the Quotient; and adding what remains of the *Division*, if there be any thing. If the Sum be found equal to the Dividend, the Operation is just, otherwise there is a Mistake.

Division $\left\{ \begin{array}{l} \text{in Decimal Fractions,} \\ \text{in Vulgar Fractions,} \\ \text{of Proportion.} \end{array} \right\}$ See $\left\{ \begin{array}{l} \text{DECIMAL-} \\ \text{FRACTION.} \\ \text{PROPORTION.} \end{array} \right.$

Division, in Species, or *Algebra*, is perform'd by reducing the Dividend and Divisor into the Form of a Fraction: This Fraction being the Quotient.

Thus, if $\frac{ab}{cd}$ were to be divided by $\frac{e}{f}$, it must be placed thus, $\frac{ab}{cd} \div \frac{e}{f}$, and that Fraction is the Quotient: tho' others chuse to write it thus, $cd \div ab$, or $cd : ab$, or $ab \div cd$, which last Mark \div is the most common Character for *Division*. See *CHARACTER*.

To perform the Work of *Division* algebraically, these Rules are to be observed: 1. When the Dividend is equal to the Divisor, the Quotient is Unity, and must be placed in the Quotient, because every Thing contains it self once.

2. When the Quotient is express'd Fraction-wise (as in simple *Division*) if the same Letters are found equally repeated in each Member of the Numerator, and Denominator; cast away those Letters, and the Remainder is the Quotient: Thus, $\frac{ab}{b}$ (a , and $\frac{abc}{cb}$ (c , &c.

3. When there are any Co-efficients, divide them as in common Arithmetic, and to the Quotients annex the Quantities express'd by Letters: Thus, $\frac{360 ab}{24 b}$ ($= 15 a$.

4. The general Way of *Division* of compound Quantities, is like the ordinary Way in common Arithmetic, respect being had to the Rules of Algebraic Addition, Subtraction, and Multiplication; as also that like Signs give +, and unlike - in the Quotient; taking Care to divide every Part of the Dividend by its corresponding Divisor, (that is, that whose Letters shew it of the same Kind with the other) to prevent a Fraction, which would otherwise arise: Thus,

$$\begin{array}{r} aa+ab \\ 0 \quad 0-ca-cb \\ \hline -ca-cb \\ \hline 0 \end{array}$$

That for the same reason like Signs giving a Positive, and unlike a Negative Quotient, do hold in *Division*, as well as in Multiplication, is clear from considering the Nature of

Division; (which is only resolving the Thing into its Parts) consequently, since every Dividend is nothing else but the Product of the Divisor, and Quotient multiplied by each other, the Quotient must consist of such Signs, which could produce the Dividend; therefore, if the Dividend be divided by a Quantity, that has a similar Sign with it, the Quotient must be positive; if by a Quantity having a dissimilar Sign, the Quotient must be negative. It may be a general Rule in compound *Division* in Algebra, always to place such a Letter in the Quotient, as will, when multiplied into the Divisor, produce the Dividend, that is always a Rect-angle under the Divisor, and the Quotient: As for Example, $22-16) 2^4-82^4-124 22-64 (2^4+822+4$

$$\begin{array}{r} 2^4-162^4 \\ \underline{82^4-124 22} \\ 82^4-128 22 \\ \hline 422-64 \\ \underline{422-64} \\ 0 \end{array}$$

DIVISION by $\left\{ \begin{array}{l} \text{Napairs Bones,} \\ \text{Logarithmus,} \end{array} \right\}$ See $\left\{ \begin{array}{l} \text{NAPAIRS BONES,} \\ \text{LOGARITHM.} \end{array} \right.$

DIVISION, in Lines, or Geometrical *Division*, is also call'd *Application*; the Design of which, when it is employ'd about the Construction of plain Problems, is this, viz. a Rectangle being given; as also a right Line; to find another right Line, the Rectangle contain'd under which with the right Line given, shall be equal to the Rectangle first given: Such Effect, or Construction is call'd the *Application* of a given Rectangle to a right Line given; and the right Line arising by such Application, is call'd the *Parabola*, or Geometrical Quotient.

This is found by the Rule of Three, by making, As the Line given: is to one Side of the Rect-angle :: fo is the other Side: to the Line sought. Not unlike to which is *des Cartes's* Way of working *Division* in Lines, by Scale, and Compass: Thus suppose $ac (=6)$ were to be divided by $ad (=3)$ make any Angle at Pleasure, and therein let off first $ad (=3)$ the Divisor, and then on the same Leg $aa=6$ to Unity: Then on the other Leg of the Angle set $ac (=6)$ the Dividend, and join ac , and to it, through a , draw ab parallel to dc , which shall cut off ab the Quotient sought; for as $ad : aa :: ac : ab$; that is, as the Divisor: is to Unity :: fo is the Dividend: to the Quotient; on which Reason depends all *Division*.

DIVISION, in Music, the dividing of the Interval of an Octave into a Number of lesser Intervals. See *OCTAVE*, and *SYSTEMS*.

The 4th, and 5th, each of 'em, divide, or measure the Octave perfectly, tho' differently. When the 5th is below, and serves as a Base to the 4th, the *Division* is call'd *Harmonical*; When the 4th is below, the *Division* is call'd *Antientic*. See *SCALE*. See also *CONCORDS*.

DIVISION, in War, is a Battalion, or other Body of Forces in March.

The Lieutenant commanded the first *Division* of Musketeers 3; and the second Lieutenant, the second *Division*.

DIVISION, in Sea-Language, the third Part of a Naval Army, or Fleet, or of one of the Squadrons thereof, under the Command of some General Officer.

Naval Battals are usually rang'd in three Lines, according to their three *Divisions*.

DIVISION, is the dividing Number; or that which shews how many Parts the Dividend is to be divided into. See *DIVIDEND, &c.*

DIVORCE, a Breach, or Dissolution of the Bond of Marriage. See *MARRIAGE*.

In our Law *Divorce* is of two Kinds: The one, a *Vinculo Matrimonii*; which alone is properly *Divorce*: The other, a *Menſa & Thoro*; a Separation from Bed and Board.

The Woman divorced a *Vinculo Matrimonii*, receives all again that she brought with her: The other has a suitable separate Maintenance allow'd her out of her Husband's Effects.

The first only happens through some essential Impediment, as Consanguinity or Affinity within the Degrees forbidden, precontract, Impotency, Adultery, &c. Of which Impediments the Canon Law allows fourteen, comprehended in these Verbs:

Error, Conditio, Fornum, Cognatio, Crimen, Cibus, Disparitas, Vis, Ordo, Ligamen, Homicidat, Si sit affinis, si forte coire ne possit, Si parochi & amplius deſt presentia Testis, Raprave sit Mulier, nec parri reddita ruz.

Divorce is a Spiritual Judgment, and, therefore, is pass'd in the Spiritual Court. Under the old Law, the Woman divorced was to have of her Husband a Writing, as St. Jerome and Josephus testify, to this Effect: *I promise, that hereafter I will lay no Claim to thee; which was call'd a Bill of Divorce.*

Divorce was allow'd of in great Latitude both among the *Pagans* and *Jews*. At *Rome*, *Barronefs*, *Oldnefs*, *Difcase*, *Madnefs*, and *Banifhment*, were the ordinary Causes of *Divorce*. *Carrulus*, 500, or 600 Year after the Building of *Rome*, was the firft who put away his Wife becaufe ſhe was barren.

Jullianus afterwards added *Impotence*, a *Vow of Chafity*, and the *Profefion of a Monafic Life*, as valid Reafons of *Divorce*.

Among the *Jews*, *Uglinefs*, *old Age*, or *ill Humour* in a Wife, were fufficient Reafons for giving her a Bill of *Divorce*. Even the Man's own Pleaſure, or his repenting of his Match, were admitted as good Reafons.

Some hold, that *Jeſus Chriſt* allow'd of *Divorce* in the fingle Caſe of *Adultery*. But we take it for a Miſtake: *Divorce* is no where permitted in the New Teſtament for *Adultery*; but only a Separation. See *Matth. XIX. 9. Mark X. 11. Paul 1. Cor. X. 39.* See alfo the Council of *Florence*; at the End, after the Queſtions propoſed to the *Greeks*. *Terrull. de Monogam. C. 9. and 10. Auguſtin. de Bono Conjugio, & de Adult. Conjug.* See alfo what we have deliver'd under the Article *ADULTERY*.

Pope *Innocent I.* in his Decretal to *Exuperius*, declares fuch as contract a new Marriage after *Divorce*, *Adulterers*; as well as the Perſons they marry withal. The Occaſion of this Decree was, that ſuch Marriages were then allow'd of by the *Romeſe Laws*. There is an Exception, however, in the Caſe of Marriage between two *Heathens*, which the Decrees allow to be diſſolv'd after the Conversion of one of the Parties. And *St. Paul* ſays the ſame, *1. Cor. VII. 15.* Yet even in this Caſe, 1. The Marriage is not immediately diſſolv'd by the Conversion of one of the Parties, but they may ſtill live together, and even on ſome Occaſions ought to do ſo. Nor is it even diſſolv'd by the Separation of the infidel Party; for if ſhe be afterwards converted, he is obliged to take back his Wife: as *Innocent* himſelf decides it *L. IV. Decret. de Divorc. C. Gaudemus*. But the Marriage is diſſolv'd by a ſecond Marriage of the converted Party with another Perſon.

2. Tho' the Party converted to the Faith, may, the Minute of his Conversion, legally ſeparate himſelf, and contract with another; a Liberty the *Chriſtian Law* allows him; as in Juſtice he is not deem'd to owe any Thing to an Infidel; yet Charity frequently forbids ſuch *Divorce* and Separation; As, e. g. if the Infidel conſent to live with him, and not moleſt him in his Religion; if his Faith be not at all in Danger; if there be any Hopes of converting her; or of gaining the Children; if the Separation would prove a Scandal to the *Heathens*, and render *Chriſtianity* odious, &c. See *St. Paul 1. Cor. VII. 13, 14. St. Auguſtin L. I. de Adult. Conjug. ad Pofitum*.

The 4th Council of *Toledo* decrees, that in a Country where *Chriſtianity* is the prevailing Religion, the Infidel Party muſt be advertized to become *Chriſtian*, which if ſhe reſuſe, the Marriage to be diſſolv'd.

The Council of *Trent* prohibits *Divorce* on any Occaſion whatever. The *Papal Diſpenſations*, however, are a *Salvo* for this Piece of Rigor.

In England *Divorce* can only be had by Conſent of Parliament. *Milton* has an expreſs Treatiſe of the Doctrine and Diſcipline of *Divorce*, where he maintains, that *Divorce* ought to be permitted for a mere Incompatibility of Humors.

DIURESIS, from *dis, per*, through, and *ju, fluo*, to flow; is uſ'd to expreſs that Separation which is made of the Urine by the Kidneys: whence *Diuretic*. See **DIURETICS**.

DIURETICKS, in Medicine, are ſuch Remedies as provoke, or promote the Diſcharge of Urine. See **URINE**.

Such is Water drank plentifully, white Wine drank in a Morning; Alkali Salts of all Kinds; Sea-Salt, *Sal Gemme*, Nitre, Borax, Alum, Tartar, Ammoniac, Whey, four Milk, Lemon Juice, &c.

Aqueous Liquors are generally *Diuretic*, eſpecially if mix'd with Salt, and drunk cold. Fermented Liquors are the leaſt *Diuretic* of all; and the leſs as they are the farther. Sharp than four Wines, *Rheniſh*, &c. as alſo acid Spirits of Vinegar, Salt, Sulphur, Alum, Vitriol, &c. Aſparagus, bitter Almonds, Smallage, Eryngium, Eupatorium, Saffraſs, &c. do the ſame.

DIURNAL, in Aſtronomy, ſomething relating to the Day: In Oppoſition to *Nocturnal*, which regards the Night. See **DAY**, and **NIGHT**.

DIURNAL Circle, is an immoveable Circle, in which any Star, or Point in the Surface of the mundane Sphere, moves by a *Diurnal Motion*. See **CIRCLE**.

Thus, if a right Line be conceiv'd to be continued from the Centre of a Star, perpendicular to the Axis of the World, as far as the Surface of the Sphere of the World; it will

deſcribe a *Diurnal Circle* thereon, in making one Revolution about its Axis.

DIURNAL Arch, is the Arch, or Number of Degrees, that the Sun, Moon, or Stars deſcribe between their Riſing, and Setting.

DIURNAL Motion of a Planet is ſo many Degrees and Minutes, &c. as any Planet moves in 24 Hours. See **MOTION**.

The Motion of the Earth about its Axis (in the Copernican Syſtem) is call'd its *Diurnal Motion*, which cauſes the Viciffitudes of Days and Nights.

The *DIURNAL Motion* of the Earth is its Rotation round its Axis, the Space whereof conſtitutes the Natural Day. See **DAY**.

The *Diurnal Rotation* of the Earth is now paſt all Diſpute. See **EARTH**.

DIURNAL is alſo uſ'd in ſpeaking of what belongs to the *Nycthemeron*, or Natural Day of 24 Hours, in which Senſe it ſtands oppoſed to *Annual*, *Menſtrual*, &c. as *Diurnal Motion*, *Diurnal Rotation*, &c.

The *Diurnal* Phenomena of the heavenly Bodies are ſolv'd from the *Diurnal* Revolution of the Earth; that is, from one Revolution of the Earth round its own Axis in 24 Hours. To illuſtrate this: Suppoſe the Circle *PRTH*, (*Tab. Aſtronomy Fig. 13.*) to denote the Earth, C the Centre of the Earth, through which its Axis is conceiv'd to paſs, a round which, its *Diurnal* Revolution is perform'd: B denotes any Place on the Earth; the Line *EW* the viſible Horizon of the Place; E the Eaſt Point of the ſaid Horizon, W the Weſt; the Circle *abcd* of the Circumference of the Heavens; the Circle *S* the Sun in the Heavens, the Semi-Circle *PRT*, the enlighten'd Hemisphere of the Earth, or that Half of it, oppoſite to the Sun; and laſtly, the Semi-Circle *PHT* the darken'd Hemisphere of the Earth.

Now, the Earth ſuppoſed in this Situation, and moving round its Axis towards the Sun; it is evident, the Place *P* of the Earth, will then juſt begin to be enlighten'd by the Sun, and to the Sun will appear there to be juſt riſing, or aſcending the Horizon at E the Eaſt Point of it. The Earth being moved round its own Axis, ſo as the Place *P* of the Earth, which afore was under the Point *a* in the Heavens, is now under the Point *b*; it is evident, the Horizon of the ſaid Place *P*, will be now ſo ſituated, as that the Sun will appear to a Spectator at *P*, as deſcended conſiderably above E the Eaſt End of the Horizon. And while by the Revolution of the Earth round its Axis, the Place *P* paſſes from under the Point *b* in the Heavens, to the Point *c*, the Horizon of the Place *P* will continually ſink lower and lower in reſpect of the Sun, and ſo the Sun will appear to aſcend higher and higher, till *P* is come under *c*, where the Sun will appear in its greateſt Height above the Horizon for that Day; and ſo it will be *Noon*, or *Mid-Day*, at the Place *P*. The Earth moving on, as the Place *P* paſſes from under *c* to *d*, the Weſt Point of its Horizon will aſcend higher and higher, and ſo the Sun will appear more and more to deſcend, as is repreſented by the Horizon at the Point of the Earth under *d*. The Place *P* being carried by the *Diurnal* Revolution of the Earth from under *d* to under *e*, the Sun will then appear juſt on W, the Weſt Point of the Horizon, and ſo will appear to be juſt ſetting. The Place *P* being come under *f*, it will be then *Mid-Night* there. Laſtly, the Place *P* being come round again under *a*, it will be there *Sun-Riſing* again. The ſame holds good as to any other of the Celeſtial Lights, and the Earth; as is obvious from the Figure: the Circle repreſenting the Sun being taken to denote any other Star, Planet, &c.

It remains to obſerve, that whereas by the *Diurnal* Revolution of the Earth, all the ſeveral Celeſtial Lights ſeem to move in the Heavens from Eaſt to Weſt, hence this ſeeming *Diurnal* Motion of the Celeſtial Lights is call'd their *common Motion*, as being common to all of them. Beſides which all the Celeſtial Lights, but the Sun, have a proper Motion; from which ariſe their proper Phenomena: As for the proper Phenomena of the Sun, they likewiſe ſeem to ariſe from the proper Motion of the Sun; but are really produc'd by another Motion, which the Earth has, and whereby it moves round the Sun once every Year, whence it is call'd the *Annual Motion* of the Earth. See **SUN**.

DIURNARY, *Diurnarius*, an Officer in the *Greek* Empire, who wrote down in a Book for that Purpoſe, whatever the Prince did, order'd, regulat'd, &c. every Day. See the 8th Law of the *Theodoſian Code*, *de Cohors*.

DIVUS, **DIVA**, in Antiquity, Names attributed to Men and Women, who had been deified, or placed in the Number of the Gods. See **GOD**, **DEIFICATION**, &c.

Hence it is, that on Medals ſtruck for the Conſecration of an Emperor, or Empreſs, they give 'em the Title of *Divus*, or *Diva*: For Example, **DIVUS JULIUS**, **DIVO ANTONINO PIO**, **DIVO PIO**, **DIVO CLAUDIO**, **DIVA FAUSTINA AUG.** &c.

DIZZINESS. See **VERTIGO**.

DOCK, DOCKING, in Law, a Means, or Expedient for cutting off an Estate Tail in Lands, or Tenements; that the Owner may be enabled to sell, give, or bequeath them. See **TAIL**.

To effect this, a signed Writ of Entry *sur Disseisin in le Poss* is brought of the Lands whereof he intends to dock the Entail; and in a signed Declaration made thereon, 'tis pretended he was disseis'd by a Person, who by a signed Fine, or Deed of Bargain, and Sale, is named, and supposed to be Tenant of the Lands.

The signed Tenant, if it be a single Recovery, is made to appear, and vouch the Bag-bearer of Writs for the *Custos Brevirum* in the Court of Common Pleas; who making Default, a Judgment is by such Fiction of Law enter'd, that the Demandant shall recover, and have a Writ of Seisin for the Possession of the Lands demanded; and that the Tenant shall recover the Value of the Lands, against the Lands of the Vouchee Bag-bearer, a poor, unlanded, illiterate Person; which is feigned to be a Satisfaction to the Heir in Law; tho' he never be to expect it. See **RECOVERY**.

DOCK, in the Sea Language, a Pit, great Pond, or Creek by the Side of an Harbour, made convenient to work in, in order to build, or repair Ships.

This is of two Sorts: 1. A *Dry Dock*, where the Water is kept out by great Flood-gates, till the Ship is built, or repaired, but afterwards can be easily let into it again to float, and launch her.

2. A *Wet Dock*, is any Place in the Ouze, out of the Tide's Way, where a Ship may be haled in, and so dock herself, or sink herself a Place to lie in.

DOCKET, a little Bill tied to Wares, or Goods, and directed to the Person, and Place they are to be sent to.

DOCTOR, a Person who has pass'd all the Degrees of a Faculty, and is empower'd to teach, or practise the same. See **DEGREE**.

The Title of *Doctor* was first created towards the Middle of the XIIIth Century; to succeed to that of *Master*, which was become too common, and familiar. See **MASTER**.

The Establishment of *Dollorates*, such as now in Use among us, is ordinarily attributed to *Irnerius*, who himself drew up the Formulary. The first Ceremony of this Kind was perform'd at *Boulogne*, in the Person of *Bulgarius*, who began to profess the *Roman Law*, and on that Occasion was solemnly promoted to the Doctorate, i. e. install'd *Juris utriusque Doctor*.

But the Custom was soon borrow'd from the Faculty of Law to that of Theology: The first Instance whereof was given in the University of *Paris*, where *Peter Lombard*, and *Gilbert de la Porree*, the two top Divines of those Days, were created *Doctors* in Theology, *Sacrae Theologiae Doctores*.

Speelman gives another Turn to the Thing: He takes the Title *Doctor* not to have commenced till after the Publication of *Lombard's Sentences*, about the Year 1140, and affirms, that such as explain'd that Work to their Scholars, were the first that had the Appellation of *Doctors*.

Others go much higher, and hold *Bede* to have been the first *Doctor* at *Cambridge*, and *John de Beverley* at *Oxford*, which latter died in the Year 721. But *Speelman* will not allow *Doctor* to have been the Name of any Title, or Degree in *England*, till the Reign of King *John*, about the Year 1207.

To pass *Doctor* of *Divinity* at *Oxford*, 'tis necessary the Candidate have been 4 Years Bachelor of *Divinity*. For *Doctor* of *Laws*, he must have been 7 Years in the University to commence Bachelor of Law; 5 Years after which he may be admitted *Doctor* of *Laws*. Otherwise, in three Years after taking the Degree of *Master* of Arts, he may take the Degree of Bachelor in Law; and in four Years more, that of *D.D.* which same Method and Time are likewise required to pass the Degree of *Doctor* in *Physic*.

At *Cambridge*, to take the Degree of *Doctor* in *Divinity*, 'tis required the Candidate have been 7 Years Bachelor of *Divinity*. Tho' in several of the Colleges, the taking of the Bachelor of *Divinity's* Degree is dispensed with, and they may go out *per Saltum*. To commence *Doctor* in *Laws*, the Candidate must have been five Years Bachelor of Law, or seven Years *Master* of Arts. To pass *Doctor* in *Physic*, he must have been Bachelor in *Physic* 5 Years, or 7 Years *Master* of Arts.

Doctor of the *Laws*, was a Title of Honour, or Dignity among the *Jews*.

The *Jews*, 'tis certain, had *Doctors* long before *Jesus Christ*. The Investiture, if we may so say, of this Order, was perform'd by putting a Key, and a Table-Book in their Hands; which is what some Authors imagine our Saviour had in View, *Luke XI. 52.* where, speaking of the *Doctors of the Law*, he says, *Woe unto you Doctors of the Law, for you have taken away the Key of Knowledge; you enter'd not in your selves, and them that were enter'd, you bind-er'd.*

The Greek Text of *St. Luke* calls 'em *Nasuni*; and the Vulgate *Legisperiti*; agreeably to which our *English* Trans-

lators call 'em *Lawyers*. But the French Version of *Dollours de la Loi*, seems the most adequate. In effect, the Word *Legisperiti* is only found in *St. Luke*, and *St. Paul*, *Titus III. 13.* and *Nasuni* in *St. Matthew*, *XXII. 35.* is render'd in the Vulgate, *Legis Doctor*; tho' the *English* Version still retains, *Lawyer*.

These Jewish *Doctors* are the same whom they otherwise call *Rabbins*. See **RABBIN**.

Doctor of the Church, a Title given to certain of the Fathers who have publish'd Books, and whose Doctrines and Opinions have been the most generally followed, and authorized by the Church.

We usually reckon four *Doctors* of the Greek Church, and four of the *Latin*. The first are *St. Athanasius*, *St. Basil*, *St. Gregory Nazianzen*, and *St. Chrysostom*. The latter are *St. Ambrose*, *St. Jerome*, *St. Augustin*, and *Gregory the Great*.

In the *Romish* Clergy there is a particular Office for the *Doctors*. It only differs from that of the Confessors by the Anthem of the *Magnificat*, and the *Lectors*.

The Appellation *Doctor* has since been adjoin'd to several specific Epithets, expressing wherein the Merit of such as the Schools own'd for their Masters, consisted.

Thus *Alexander Hales* is call'd the *Irrefragable Doctor*, and the *Fountain of Life*, as mention'd in *Poſſevinus*. *Thomas Aquinas* is call'd the *Angelic Doctor*; *St. Bonaventura* the *Seraphic Doctor*; *John Duns Scotus*, the *Subtile Doctor*; *Raymond Lully* the *Illuminated Doctor*; *Roger Bacon* the *Admirable Doctor*; *William Ockam* the *Singular Doctor*; *John Gerson*, and *Card. Cajetan* the *Most Christian Doctors*; *Diogenes the Caristean*, the *Extatic Doctor*; and an Infinity of others to be met withal in Ecclesiastical Writers.

Doctores, *Didaskaloi*, in the Greek Church, is a particular Officer, appointed to interpret Part of the Scriptures. He who interprets the Gospels, is call'd *Doctor of the Gospels*: He who interprets *St. Paul's* Epistles, *Doctor of the Apostle*: He who interprets the *Psalms*, *Doctor of the Psalter*.

DOCUMENT, in Law, a Proof given of any Fact asserted; but chiefly with regard to ancient Matters.

Thus we say, The Antiquity of the Foundation of such a Church is proved by a Number of authentic Titles and Documents.

DODECAEDRON, in Geometry, one of the regular Bodies, comprehended under twelve equal Sides each whereof is a Pentagon. See **REGULAR BODY**.

Or a *Dodecaedron* may be conceiv'd to consist of twelve Quinquangular Pyramids, whose Vertices, or Tops meet in the Centre of a Sphere conceiv'd to circumscribe the Solid; consequently they have their Bases and Altitudes equal.

To find the Solidity of the *Dodecaedron*; find that of one of the Pyramids, and multiply it by the Number of Bases, viz. 12, the Product is the Solidity of the whole Body. Or its Solidity is found by multiplying the Base into $\frac{1}{2}$ of its Distance from the Centre, 12 times: And to find this Distance, take the Distance of two parallel Faces: the Half is the Height. See **SOLID**, and **SOLIDITY**.

The Diameter of the Sphere being given, the Side of the *Dodecaedron* is found by this Theorem: The Square of the Diameter of the Sphere is equal to the Rectangle under the Aggregate of the Sides of a *Dodecaedron* and *Hexaedron* inscribed in the same, and triple the Side of the *Dodecaedron*. Thus, if the Diameter of the Sphere be 1, the Side of the *Dodecaedron* inscribed will be $(\sqrt{\frac{1}{2}} - \sqrt{\frac{1}{3}})$; 23. Consequently, that is to this, as 2 to $(\sqrt{\frac{1}{2}} - \sqrt{\frac{1}{3}})$ and the Square of that, to the Square of this, as 4 to $5 - \sqrt{3}$. Therefore the Diameter of the Sphere is incommensurable to the Side of an inscribed *Dodecaedron* both in it self, and its Power.

DODECAGON, a regular Polygon, or Figure with twelve equal Sides and Angles. See **POLYGON**.

Dials are sometimes drawn on all the Sides of a *Dodecagon*. See **DIAL**.

In Fortification, a Place surrounded with twelve Bastions, is call'd a *Dodecagon*: Such is *Palma Nova*, in *Friuli*, &c.

DODECATEMORY, in Astronomy, the 12th Part of a Circle. See **CIRCLE**, **ARCH**, &c.

The Term is chiefly applied to the twelve Parts of the Zodiac of the *Primum Mobile*, to distinguish 'em from the 12 Signs.

DODECATEMORY, is also a Denomination some Authors give to each of the twelve Signs of the Zodiac, by reason they contain a twelfth Part of the Zodiac a-piece. See **SIGN**.

DODONEUS, **DODONIAN**, in Antiquity, an Epithet given to *Jupiter*, as adored, or worshipp'd in the Temple of *Dodona*, in *Dodona's* Grove, or Forest.

Dodona, whence the Appellation arises, is an ancient City of *Epirus*, celebrated on divers Accounts, as the Forest of *Zodons*, the Oracle of *Dodona*, and the Fountain of *Dodona*,

Dodona's Forest, was a Wood, or Grove of Oaks, all consecrated to *Jupiter*. In this Wood was a Temple of that God, wherein was the most famous, and as 'tis said, the most ancient Oracle of all Greece. See ORACLE.

Indeed, 'twas not in the Temple only, that Oracles were deliver'd; The Pidgeons that inhabited the Wood, are said to have done the same.

The Origin, and Occasion of this Fable, we have from *Hesiodus*, who observes, it was founded on this, that *Phœnix*, which in the *Thracian* Language signifies a Pidgeon, does likewise signify a Witch, or Prophetess. But what is more extraordinary, is another Tradition among the Poets, as if the very Oaks of the Forest of *Dodona* spoke, and deliver'd Oracles.

This Fable is easily deduced from the former: The Pidgeons in the Oaks being supposed to speak, 'twas no great Flight of a Poetical Fancy, to introduce the Trees themselves speaking, &c. See *Vossius de Idolol.* L. 1. 7. p. 27.

The Fountain of *Dodona*, was in the Temple of *Jupiter*. The ancient Naturalists assure us, it had a Property of re-kindling Torches, &c. newly extinguish'd. This, no doubt, it did by means of the sulphureous Fumes exhaling from it; as we still find a Fountain in *Dauphine*, call'd the *Burning Fountain*, &c. 'Tis also said, to have extinguish'd lighted Torches; which is no great Miracle, since plunging them into a Place where the Sulphur was too dense, i. e. into the Water, must have that Effect.

DODRANS, in Antiquity, a Division of the As. See A.

DOG, in Astronomy, a Name common to two Constellations, call'd the *Great*, and *Little Dog*; but among Astronomers, more usually, *Canis Major*, & *Minor*. See CANIS MAJOR & MINOR.

Doo-Draw, in the Forest-Law, a manifest Deprehension of an Offender against Venison in a Forest; when he is found *drawing* after a Deer by the Scent of a Hound, led in his Hand.

There are four of these Offences noted by *Marwood*, viz. *Stable-Stand*, *Dog-draw*, *Back-bear*, and *Bloody band*. See STABLE-STAND, &c.

Doo-Days, *Dies Caniculares*, are certain Days, in which the Dog-Star rises, and sets with the Sun; the Weather being excessive hot, and sultry.

They begin about July 24th, and end about August 28th. See CANICULAR DAYS.

Bite of a Mad Dog. See HYDROPHOBIA.

DOGE, the chief Magistrate in the Republicks of *Venice*, and *Genoa*.

The Word properly signified *Duke*, being found in the Latin *Dux*; as *Dogate*, and *Dogado*, from *Ducatus*, Dutch.

The *Dogate*, or Office and Dignity of *Doge*, is elective: At *Venice*, the *Doge* is elected for Life; at *Genoa*, only for two Years: He is address'd under the Title of *Serenity*, which among the *Venetians* is superior to that of Highness. See SERENITY.

The *Doge* is the Chief of the Council, and the Mouth of the Republick; he being always to answer for her. Yet the *Venetians* do not go into Mourning at his Death, as not being their Sovereign, but only their first Minister. In effect, the *Doge* of *Venice* is no more than the Fantom, or Shadow of the Majesty of a Prince; all the Authority thereof being reserv'd to the Republick. He only lends his Name to the Senate: The Power is diffus'd throughout the whole Body, tho' the Answers be all made in the Name of the *Doge*. If he give any Answers on his own Bottom, they must be very cautiously express'd, and in general Terms, otherwise he is sure to meet with a Reprimand. So that 'tis absolutely necessary he be of an easy, pliable Disposition.

Anciently, the *Doges* were Sovereigns; but Things are much alter'd; and at present, all the Prerogatives affect'd to the Quality of *Doge*, are these which follow. He gives Audience to Embassadors; but does not give 'em any Answer on his own Head, in Matters of any Importance: Only, he is allow'd to answer as he judges good, to the Compliments they make to the Signory; such Answers being of no Consequence. The *Doge*, as being first Magistrate, is Head of all the Councils; and the Credentials which the Senate furnishes its Ministers in foreign Courts, are writ in his Name; and yet he does not sign 'em, but a Secretary of State signs them, and seals 'em with the Arms of the Republick. The Embassadors direct their Dispatches to the *Doge*; and yet he may not open 'em, but in Presence of the Councillors. The Money is struck in the *Doge's* Name, but not with his Stamp, or Arms. All the Magistrates rise, and salute the *Doge*, when he comes into Council; and the *Doge* rises to none, but foreign Embassadors.

The *Doge* nominates to all the Benefices in the Church of St. Mark; He is Protector of the Monastery *delle Vergine*; and bestows certain petty Offices of Ushers of the

Household, call'd *Commanders* of the Palace. His Family is not under the Jurisdiction of the Master of the Ceremonies; and his Children may have Staff-Officers, and Gondoliers in Livery.

His Grandeur, at the same Time, is temper'd with Abundance of Things, which render it burdensome. He may not go out of *Venice*, without Leave of the Councillors; and if he does go out, he is liable to receive Affronts, without being entic'd to demand Satisfaction; and if any Disorder should happen where he was, it belongs to the *Podestà*, as being invited with the public Authority, to compose it.

The Children, and Brothers of the *Doge*, are excluded from all the chief Offices of State. They may not receive any Benefice from the Court of *Rome*; but are allow'd to accept of the Cardinalate, as being no Benefice, nor including any Jurisdiction. The *Doge* may not divest himself of his Dignity, for his Ease; and after his Death, his Conduct is examined by three Inquirers, and five Correctors, who fit it with a deal of Severity.

DOGGER, a small Ship, built after the *Dutch* Fashion, with a narrow Stern, and commonly but one Mast; us'd in fishing on the *Zoggers* Bank. See FLOATING VESSEL.

DOGMA, a Maxim, Axiom, Tenet, settled Proposition, or Principle; particularly in Matters of Religion, and Philosophy.

Thus we say, the *Dogmata* of Faith: Such a *Dogma* was condemn'd by such a Council. The *Dogmata* of the *Stoicks* were most of 'em Paradoxical. Speculative *Dogmata*, which do not lay any restraint on Men, appear to them more essential to Religion, than Virtues, which restrain, and confine 'em; nay, they often persuade themselves, that it is allowable to maintain those *Dogmata*, at the Expence of the Virtues.

DOGMATICAL, originally signifies Instructive, Scientific, or something relating to an Opinion, or Science.

In common Use, a *Dogmatical* Philosopher is such a one as asserts Things positively; in Opposition to a *Sceptic*, who doubts of every Thing.

And a *Dogmatical Physician*, he, who, on the Principles of the School Philosophy, rejects all Medicinal Virtues not reducible to manifest Qualities. See DOGMATIST.

DOGMATICI, DOGMATISTS, a Sect of ancient Physicians, call'd also *Logici*, Logicians, from their using of the Rules of Logic in Subjects of their Profession. See MEDICINE.

They laid down Definitions, and Divisions, reducing Diseases to certain *Genera*, those *Genera* to Species, and furnishing Remedies for 'em all; supposing Principles, drawing Consequences, and applying those Principles and Consequences to the particular Diseases under Consideration. In which Sense the *Dogmatists* stand contra-distinguish'd to *Empiricks*, and *Mechanicks*. See EMPIRICK, &c.

Others define *Dogmatists* to be those who brought Physic into a Form, and Arrangement, like those of other speculative Sciences; defining, dividing, laying down Principles, and drawing Conclusions: And hence also the Appellation of *Logici*.

They also applied themselves to seek the Causes of Diseases, the Nature of Remedies, &c.

Erissistratus, a famous *Dogmatist*, went so far, that not contented to dissect Dogs, and other brute Animals, he begg'd condemn'd Criminals of the Magistrates, open'd them while alive, and search'd in their Entrails. See PHYSICIANS.

DOLE, in the *Saxons* Tongue, signifies a Part, or Portion, most commonly, of a Meadow. The Word still signifies a *Share*; a distributing, or dealing of Alms, or a liberal Gift made by a great Man to the People.

Hence also *Dole-Meadow*, is a Meadow wherein several Persons have Shares.

DOLIMAN, a Kind of long Coat, worn by the Turks, hanging down to the Feet, with narrow Sleeves, button'd at the Wrist.

The Turks, both Men and Women, wear Drawers next the Skin; over that a Shift, or Shirt; and over the Shirt a *Doliman*. In Summer it is Linnen, or Muslin; in Winter, Satin, or Stuff.

DOLLAR, or DALLER, a Silver Coin nearly of the Value of the Piece of Eight, or French Crown. See COIN.

Dollars are coin'd in divers Parts of Germany, and Holland; and have their Diminutions, as *Semi-Dollars*, *Quarter-Dollars*, &c.

They are not all of the same Fineness, nor Weight. The *Dutch Dollars* are the most frequent. In the *Levant* they are call'd *Ashani*, from the impression of a Lion thereon.

DOLPHIN, *Delphinus*, in Astronomy. See DELPHINUS.

DOM, or DON, a Title of Honour, originally Spanish, tho' us'd occasionally in some other Countries. See TITLE.

It is equivalent to *Master*, *Sir*, or *Lord*, *Monsieur*, *Sieur*, *Myndeer*, &c. See SIR, MONSIEUR, &c.

Gollar in his *Memoires de Bourg*, L. V. C. 11. affirms us, that the first, on whom the Spaniards confer'd the Title, was *Don Pelayo*; when, upon their being routed, and driven out by the *Saracens*, at the Beginning of the VIIIth Century, they rallied again on the *Pyrenians*, and made him King in *Portugal*, no body is allow'd to assume the Title of *Dom*, which is a Badge or Token of Nobility, without the King's Leave.

The Word is likewise us'd in *France* among some Orders of Religious, as the *Carthusians*, *Benedictines*, &c. The Reverend Father *Dom Calmet*, *Dom Alexis*, *Dom Baldisar*, &c. In the Plural they write *Doms*, with an s, in speaking of several RR PP. *Doms Claude du Ruble*, and *Jacques Doucet*.

It is form'd from the Latin *Domus*; of which it is an Abbreviation. *Domus* is found in divers Authors of the corrupter Latin. *Onuphrius* assures us, it was a Title first given the Pope alone; then to the Bishops, Abbots, and others, who held any Ecclesiastical Dignity, or were eminent for Virtue, and Religion. At length it was usurp'd by the mere Monks.

Some say, they declined the Title *Domus* out of Humility, as belonging to God alone; and assuming that of *Domus*, as expressing Inferiority, *quasi minor Domus*. Indeed, the Appellation *Domus* for *Domus* appears very ancient, as we consider the Surname of *Julia*, Wife of the Emperor *Septimus Severus*, who is call'd on Medals, *JVLLIA DOMINA*, for *JVLLIA DOMINA*.

DOMAIN, the Inheritance, Estate, Habitation, or Possession of any one.

Of how much Evil was Cause, not thy Conversion, but these rich Domains. Milton.

Menago derives the Word from *Domanius*, wrote in the barbarous Latin for *Dominius*.

DOM-BOOK. See *DOMES-DAY*.

DOME, or DOOM, by the Saxons call'd *Dom*, signifies Judgment, Sentence, Ordinance, or Decree.

The Homagers Oath in the Black-Book of *Hereford* ends thus: *So help me God at his Holy Dome, and by my Trowthe.*

DOME, in Architecture, a spherical Roof; or a Work of a Spherical Form rais'd over the Middle of a Building, as Church, Hall, Pavillion, Vestible, Stair-Cafe, &c. by Way of Crowning, or Acroter. See ROOF, and CROWNING.

Domes are the same with what the *Italians* call'd *Capitolias*; and we frequently *Capitolias*: The *Latins*, according to *Vitruvius*, *Thols*. See CUPOLA.

They are usually made round; tho' we have Instances of square Ones; as those of the *Louvre*; and others, that are Polygons, as that in the Jesuites Church in the *Rue St. Antoine* at *Paris*. They have usually Columns rang'd around their Out-sides, both by Way of Ornament, and to support the Vault.

A Flat DOME is that whose Sweep, or Contour, is less than a Hemisphere.

The Word is form'd from the Latin *Doma*, which among the Ancients signified a Roof, or Open Porch; as is observ'd by *Pepys*. 'Tis frequent in the corrupt Latin Authors, who borrow'd it from the *Greeks*, among whom *Trullus*, or *Trullium*, is a common Name for any round Building, such as the Palace of *Constantinople*, wherein was held the Council; thence call'd *in Trullo*. See TRULLES.

DOMS, in Chymistry, the arched Cover of a Reverberatory Furnace. See REVERBERATORY.

DOMES-DAY, or DOOMS-DAY-BOOK, denominated *Liber Judicarius, vel Censusus Anglie*, i. e. the Judicial Book, or Book of the Survey of *England*, is a most ancient Record made in the Time of *William the Conqueror*; upon a Survey, or Inquisition of the several Counties, Hundreds, Tithings, &c. Its Name is form'd from *Dome*, Doom, Judgment, Sentence; and *Day*, which has the same Force: So that *Dome-Day* is no more than a Reduplicative, founding, Judgment Judgment.

The Streets, or Design of the Book, is to be a Register, by which Sentence may be given in the Tenures of Estates; and from which that noted Question, whether Lands be ancient *Demefine*, or not, is still decided. Its Contents are summ'd up in the following Verses.

*Quid deberent fisco, que, quanta Tributa,
Nominis quid Census, que Veftigalia, quantum
Risque teneretur feudali solvere Jure.
Qui sunt Excepti, vel quos Angaria damnat,
Qui sunt vel Glebae Servi, vel Conditionis,
Quos Monachibus Patrono Jure ligatos.*

This Book is still remaining in the Exchequer, fair and legible, consisting of two Volumes, a Greater, and a Less; the Greater comprehending all the Counties of *England*, except *Northumberland*, *Cumberland*, *Westmoreland*, *Durham*, and Part of *Lancashire*; which were never survey'd; And except *Essex*, *Suffolk*, and *Norfolk*, which are comprehended in the Lesser Volume, which concludes with these Words: *Anno Millefimo Octogesimo Sexto ab Incarna-*

tione Domini, vigesimo vero Regis Wilhelmi, facta est ista Descriptio non solum per hos tres Comitatus, sed etiam alios.

It is call'd *Liber Judicialis*, by reason a just, and accurate Description of the whole Kingdom is contain'd therein; with the Value of the several Inheritances, &c.

It was begun by five Justices, assign'd for the Purpose in each County, in the Year 1085. and finish'd in 1086. *Cambden* calls it, *Guilielmi Librum Censusuum*, King *William's* Tax-Book.

Our Ancestors had many *Domes-Books*. We are told by *Ingulphus*, that King *Alfred* made a like Register, with that of *William the Conqueror*. It was begun upon that Prince's dividing his Kingdom into Counties, Hundreds, Tithings, &c. when an Inquisition being taken of the several Districts, it was digested into a Register, call'd *Domboc*, q. d. the Judgment-Book, and reposit'd in the Church of *Winchester*; whence it is also call'd the *Winchester Book*, and *Magna Rolla Winton*. And upon the Model of this *Domboc* it is, that the *Doom-Day* of the Conqueror was form'd.

That of King *Alfred* refer'd to the Time of King *Ethelred*.

And that of the Conqueror, to the Time of *Edward the Confessor*: The Entries being thus made, *C. tenet Rex Guilielmus in Dominico, & valet, &c. ibi decate, &c. T. R. E. valebat*; q. d. It was worth so much *Tempore Regis Edwardi*, in the Time of King *Edward*.

There is a third *Dome-Book*, or *Domes-Day-Book* in 4°. differing from the other in *Folio*, rather in Form, than Matter. It was made by order of the same Conqueror; and seems to be the more ancient of the two.

A fourth Book there is in the Exchequer, call'd *Domes-Day*; which, tho' a very large Volume, is only an Abridgment of the other two. It has Abundance of Pictures, and gilt Letters at the Beginning, which refer to the Time of *Edward the Confessor*.

DOMESTIC, a Term of Somewhat more extent than that of *Servant*; The latter only signifying such as serve for Wages, as Footmen, Lacqueys, Porters, &c. Whereas *Domestic* comprehends all who act under a Man, compose his Family, and live with him, or are suppos'd to live with him. Such are Secretaries, Chaplains, &c.

Sometimes, *Domestic* goes farther, being applied to the Wife and Children.

DOMESTIC, *Domestici*, *Δομῆτιοι*, in Antiquity, was a particular Officer in the Court of the Emperors of *Constantinople*.

Fabrot in his Glossary on *T'heopbilas Simocatta*, defines *Domestic*, in the general, to be any Person intrusted with the Management of Affairs of Importance; a Councillour *cujus fidei graviore alicujus Terrae, & Sollicitudinis committitur*.

Others hold, that the *Greeks* call'd *Domestici* those who at *Rome* were call'd *Comites*; particularly, that they began to use the Name *Domesticus*, when that of Count was become a Name of Dignity, and ceas'd to be the Name of an Officer in the Prince's Family. See COUNT.

Domestici, therefore, were such as were in the Service of the Prince; and assist'd him in the Administration of Affairs, both those of his Family, those of Justice, and of the Church.

The Grand *Domestic*, or *Megadomesticus*, call'd also by Way of Eminence the *Domesticus*, serv'd at the Emperor's Table, in Quality of what we Occidentals call *Dapifer*. Others say, he was rather what we call *Majordomo*.

The *Domesticus Mensae* did the Office of Grand Senechal, or Steward.

The *Domesticus Rei Domestice* acted as Master of the Household.

Domesticus Scholarum, or *Legionum*, had the Command of the reserved Forces, call'd *Schola Palatina*, whose Office was to execute the immediate Orders of the Empire. See SCHOLA.

Domesticus Murorum, had the Superintendance of all the Fortifications.

Domesticus Regionum, that is, of the East and West, had the Care of public Affairs, much like our Attorney or Solicitor General.

Domesticius Isanatorum, or of the Military Cohorts. There were divers other Officers of the Army, who bore the Name *Domesticus*; which signified no more than Commander, or Colonel. Thus, the *Domesticus of the Legion*, call'd *Oprimatus*, was the Commander thereof. See LEGION.

Domesticus Satorum.

Domesticus Clori, or *Chantor*, whereof there were two in the Church of *Constantinople*; the one on the right Side of the Church, and the other on the left. They were also call'd *Protosabites*, *αρχαῖοι*. *Dom. Masci* distinguishes three Kinds of *Domestici* in the Church. *Domesticus of the Patriarchal Clergy*, The *Domesticus of the Imperial Chappel*, that is, the Master of the Emperors Chappel: And the *Domesticus Despinicus*, or of the Emperors. There was another Order

Order of *Domefticks*, inferior to any of thofe abovemention'd, call'd *Patriarchal Domefticks*.

DOMESTICI was alfo a Body of Forces in the Roman Empire. *Pancirollus* takes 'em to have been the fame with thofe call'd *Proteftores*; who had the chief Guard of the Emperor's Perfon, in a Degree above the *Prætorians*; and who under the Chriftian Emperors had the Privilege to bear the Grand Standard of the Crofs.

They are fuppofed to have been 3500 before *Jufinian's* Time, who added 2000 more to the Number. They were divided into feveral Companies, or Bands, which the *Latins* call'd *Scolæ*, fome whereof are faid to have been instituted by *Gordian*. Some of 'em were Cavalry, and fome Infantry.

Their Commander was call'd *Almes Domefticorum*. See **CHURCH**.

DOMIFYING, Domification, in Aftrology, the dividing or diftributing the Heavens into twelve Houfes; to erect a Theme, or Horofcope; by means of fix great Circles, call'd *Circles of Pofition*. See **HOSCORES**.

There are divers Ways of *Domifying*, according to divers Authors. That of *Regiomontanus*, which is the moft uſual, makes the Circles of Pofition paſs through the Interſections of the Meridian, and Horizon. Others make 'em paſs thro' the Poles of the World, or the Equator; and others through the Poles of the Zodiac.

DOMINATION, in Theology, the 4th Order of Angels, or bleſſed Spirits, in the Hierarchy; reckoning from the Seraphim. See **HIERARCHY**, and **SERAPH**.

DOMINICAL Letter, in Chronology, popularly call'd *Sunday-Letter*, one of the ſeven Letters of the Alphabet, A B C D E F G, uſ'd in Almanacks, Ephemerides, &c. to denote the Sundays throughout the Year. See **SUNDAY**.

The *Dominical Letters* were introduced into the Calendar by the Primitive Chriftians, in lieu of the *Nundinal Letters* in the Roman Calendar. See **LETTER**.

The Word is form'd from *Dominica*, or *Dominicus Dies*, Lord's-Day, Sunday.

Theſe Letters, we have obſerv'd, are ſeven: And, that in a common Year, the ſame Letter ſhould mark all the Sundays, will eaſily appear; In as much as all the Sundays are ſeven Days a-part; and the ſame Letter only returns in every ſeventh Place.

But in Biſſextile, or Leap-Year, the Caſe is otherwiſe: For by means of the Intercalary Day, either the Letters muſt be thruſt out of their Places, for the whole Year afterwards, fo, e.g. as that the Letter, which answers to the firſt of *March*, ſhall likewiſe answer to the ſecond, &c. or elſe the Intercalary Day muſt be denoted by the ſame Letter as the preceding one. This latter Expedient has been judg'd the better, and accordingly the Sundays after the intercalary Day have another *Dominical Letter*.

Hence, 1. As the common *Julian*, and *Gregorian* Year conſiſts of 365 Days, i. e. of 52 Weeks, and one Day. The Beginning of the Year, every common Year, goes backwards by one Day; thus, e.g. if this Year the Beginning, or firſt Day fall on a Sunday, the next Year it will fall on Saturday, the next on Friday, &c. Conſequently, if A be the *Dominical Letter* of the preſent Year, G will be that of the next Year.

2. As the *Julian*, and *Gregorian* Biſſextile, or Leap-Year, conſiſts of 366 Days, i. e. 52 Weeks, and 2 Days, the Beginning of the next Year after Biſſextile goes back 2 Days. Whence, if in the Beginning of the Biſſextile Year, the *Dominical Letter* were A, that of the following Year will be F.

3. Since in Leap-Years the Intercalary Day falls on the 24th of *February*, in which Caſe the 23d, and 24th Days are denoted by the ſame Letter; After the 24th Day of *February* the *Dominical Letter* goes back by one Place: Thus, if in the Beginning of the Year the *Dominical Letter* be A, it will afterwards be G.

4. As every fourth Year is Biſſextile, or Leap-year, and as the Number of Letters is 7. The ſame Order of *Dominical Letters* only returns in 28 Years; which, without the Interruption of Biſſextiles, would return in 4 Years. See **BISSEXTILE**.

5. Hence the Invention of the Solar Cycle of 28 Years; upon the Expiration whereof the *Dominical Letters* are reſtor'd ſucceſſively to the ſame Days of the Month, or the ſame Order of the Letters returns. See **CYCLE of the Sun**.

To find the *Dominical Letter* of any given Year. See the Cycle of the Sun for that Year; as directed under **CYCLE**: And the *Dominical Letter* is found correſponding thereto. Where there are two; the propoſed Year is Biſſextile; and the firſt obtains to the 24th of *February*; and the laſt for the reſt of the Year.

By the Reformation of the Calendar under Pope *Gregory*, the Order of the *Dominical Letters* was again diſturbed in the *Gregorian* Year: For the Year 1582, which at the Beginning had G for its *Dominical Letter*; by the Retrenchment of 10 Days after the 4th of *October*, came to have C

for its *Dominical Letter*; by which means the *Dominical Letter* of the ancient *Julian* Calendar is four Places before that of the *Gregorian*: The Letter A in the former anſwering to D in the latter.

DOMINICAL, in Church-Hiſtory. The Council of *Auxerre* held in 578, decrees, that Women communicate with their *Dominical*. Some Authors contend, that this *Dominical* was a linnen Cloth, wherein they receiv'd the Species; as not being allowed to receive 'em in the bare Hand. Others will have it a Kind of Veil, wherewith they cover'd the Head. The moſt probable Account is, that it was a Kind of linnen Cloth, or Handkerchief, wherein they receiv'd, and prefer'd the Eucharift in Times of Perfection, to be taken on Occaſion.

DOMINICANS, an Order of Religious, call'd in ſome Places *Jacobins*, and in others, *Prædicans*, or *Preaching Fryars*. See **JACOBS**, **PRÆDICANS**, &c.

The *Dominicans* take their Name from their Founder *Dominic de Guſman*, a Spaniſh Gentleman, born in 1170, at *Calarvoga*, in Old *Caſtile*. He was firſt Canon and Arch-Deacon of *Oſuna*; and afterwards preach'd with a deal of Zeal, and Vehemence againſt the *Albigenſes* in *Languedoc*, where he laid the firſt Foundation of his Order. It was approv'd in 1215, by *Innocent III.* and confirm'd in 1216, by a Bull of *Honorius III.* under the Rule of *St. Auguſtin*, and the Title of *Preaching Fryars*.

The firſt Convent was founded at *Tholonſe*, by the Biſhop thereof, and *Simon de Montfort*. Two Years afterwards they had another at *Paris* near the Biſhop's Houſe, and ſome time after, a third in the *Rue St. Jacques*, *St. James's* Street, whence the Denomination of *Jacobins*.

St. Dominic, at firſt, only took the Habit of the Regular Canons, that is, a black Soutanne, and Rochet; But this he quitted in 1219, for that which they now wear, which, 'tis pretended, was ſhewn by the bleſſed Virgin herſelf to *Renaud* at *Orleans*.

This Order is diffuſed throughout the whole Earth. It has 45 Provinces under the General, who reſides at *Rome*; and 12 particular Congregations, or Reforms, govern'd by Vicars General.

They reckon three Popes of this Order, above 60 Cardinals, ſeveral Patriarchs, 150 Arch-Biſhops, and about 800 Biſhops. Beſide Matters of the ſacred Palace, whole Office has been conſtantly diſcharg'd by a Religious of this Order, ever ſince *St. Dominic*, who held it under *Honorius III.* in 1218.

The *Dominicans* are alſo Inquiſitors in many Places. See **INQUIſITION**.

The Dogma's of the *Dominicans* are uſually oppoſite to thoſe of the *Franciſcans*. See **FRANCIſCAN**.

There are alſo Nuns, or Siſters of this Order, call'd in ſome Places, *Preaching Siſters*. Theſe are even more ancient than the Fryars; *St. Dominic* having founded a Society of Religious Maids, at *Pronilles*, ſome Years before the Inſtitution of his Order of Men, viz. in 1206.

There is alſo a *Third Order of Dominicans*, both for Men and Women. See **THIRD ORDER**.

DOMINIUM, DOMINION, or DOMAINE, in ancient Cuſtoms, is a Rent due to the Lord, where the Property is not his. With reſpect to Signory, he who pays Rent, has the *Dominium utile* of the Lands; and the Lord he pays it to the *Dominium directum*.

Directum Dominium is the Title alone of *Dominium*; and *Dominium utile*, the Profit reſounding from it.

The Wife retains the *Dominium directum* of her Jointure, and the *Dominium utile* paſſes to her Husband.

DOMINUS, in ancient Times, being prefix'd to a Name, uſually denoted the Perſon to be either a Knight, or a Clergyman. Tho' the Title was ſometimes given to a Gentleman not dubb'd; eſpecially, if he were a Lord of a Manour. See **DOM**, **SIR**, and **GENTLEMAN**.

DONATION, a public Act, or Contract, whereby a Man transfers to another, either the Property, or the Uſe of the Whole, or a Part of his Effects.

A *Donation* to be valid, and complete, ſuppoſes a Capacity both in the Donor, and the Donatory; and requires Conſent, Acceptance, Reſtitution, and Delivery.

DONATISTS, ancient Schiſmaticks in *Africa*, denominated from their Leader, *Donatus*.

They had their Origin in the Year 311; when, in the room of *Menſurinus*, who died the preceding Year, on his Return to *Rome*, *Cecilian* was elected, whom the People refus'd to acknowledge, and to whom they oppoſed *Majorinus*, who, accordingly, was ordain'd by *Donatus*, Biſhop of *Caſis nigris*. They were condemn'd in a Council held at *Rome*, two Years after their Separation, and afterwards in another at *Arles*, the Year following.

The Errors of the *Donatiſts*, beſide their Schiſm, were 1. That Baptiſm concern'd out of the Church, that is, out of their Soç, was null. 2. That there was no Church but in *Africa*: All the reſt of the Churches they held as proſtitute, and

and fallen. *Donatus* seems likewise to have given to the Doctrine of the *Arians*, with whom he was closely allied; and accordingly, *St. Epiphanius*, *Theodoret*, and some others, accuse the *Donatists* of *Arianism*. But *St. Augustin* Ep. 185. to Count *Boniface*, affirms, that the *Donatists*, in this Point, kept clear of the Errors of their Leader.

In 344, under the Empire of *Theodosius the Great*, there arose a Schism among the *Donatists* themselves, by which they were broke into two Parties. For *Parmenian*, their Bishop, being dead, some elected *Primian*, and were call'd *Primianists*; and others, *Maximian*, call'd *Maximianists*. The *Donatists* had likewise other Appellations, as *Circumcelliones*, *Montanisti*, or *Mountaineers*, *Compitesti*, *Rupitesti*, &c.

They held three Councils, or *Conciliabules*; that of *Cirta* in *Nimidia*, and two at *Carthage*. *Constantine* decreed Exile, and even Death, against the *Donatists*. *Constantin*, and *Honorius*, made Laws for their Banishment: And *Theodosius*, and *Honorius*, condemn'd 'em to grievous Mulcts.

DONATIVE, *Donativum*; a Present made any Person, call'd also GRATUITY.

The *Romans* made large *Donatives* to their Soldiers. *Julia Pia*, Wife of the Emperor *Severus*, is call'd on certain Medals, MATER CASTRORUM, by reason of the Care she took of the Soldiery, by Interspoing for the Augmentation of their *Donatives*, &c.

The *Donative* was properly the Gift made the Forces in the Army; as the *Congiarium* was that made the People.

Salmeius in his Notes on *Lampadius*, in the Life of *Heligabalis*, mentioning a *Donative* that Emperor gave of three Pieces of Gold per Head, observes, that this was the common, and legitimate Rate of a *Donative*. *Cassiodorus* in his Notes on the Life of *Pertinax*, by *Capitolinus*, observes, that *Pertinax* made a Promise of three thousand *Denarii* to each Soldier; which amounted to upwards of 97 Pounds Sterling. See COIN.

The same Author writes, that the legal *Donative* was *secco Denarii*; and that it was not customary to give less, especially to the *Pretorian* Soldiers; that the *Centurions* had double, and the *Tribunes*, &c. more in Proportion.

DONATIVE, in the Canon Law, a Benefice given, and collated to a Person, by the Founder, or Patron; without either Presentation, Institution, or Induction by the Ordinary. See BENEFICE.

If Chapels founded by Laymen, be not approv'd by the Diocesan, and as 'tis call'd, *spiritualized*, they are not accounted proper Benefices, neither can they be confirm'd by the Bishop, but remain to the pious Disposition of the Founders: So that the Founders, and their Heirs, may give such Chapels without the Bishop. *Gregorius de Beneficiis*. See CHAPEL.

Gavin observes, that the King might of ancient Time found a free Chapel, and exempt it from the Jurisdiction of the Diocesan. So may he by Letters Patents give Liberty to a common Person to found such a Chapel, and make it *Donative* Not-presentable. And the Chaplain, or Beneficiary, shall be deprivable by the Founder, or his Heir, and not by the Bishop. And this seems to be the Original of *Donatives* in England.

All Bishopsricks in ancient Time were *Donative* by the King.

Again, where a Bishop has the Gift of a Benefice, it is properly call'd a *Donative*, because he cannot present to himself. See BENEFICE, PATRON, PRESENTATION, COLLATION, &c.

DONJON. See DUNGEON.

DONJON, in Fortification, is generally taken for a large Tower, or Redoubt of a Fortress, where the Garrison may retreat in Case of Necessity, and capitulate with greater Advantage.

DONOR, in Law, he who gives Lands, or Tenements to another in Tail: And *Donor*, is he to whom the same are given. See DONATION, &c.

DOOR, in Architecture, an Aperture in a Wall, to give Entrance, and Exit in, and out of the Building, or an Apartment thereof. See HOUSE, BUILDING, APERTURE, &c.

It ought to be a Rule, that the Doors of a House be as few in Number, and as moderate in Dimensions, as possible: For, in a Word, all Openings are Weaknings. 1. That they do not approach too near the Angles of the Walls: It being a most glaring Sollecism to weaken that Part, which must weaken all the rest: A Precept, well recorded, but ill practis'd by the *Italians* themselves, particularly at *Venice*. 2. That the Doors, if possible, be right over one another; that void may be over void, and full over full. 3. That, if possible, they be opposite to each other, so as that one may be from one End of the House to another; which will not only be graceful, but also convenient; as it affords a Means of cooling the House in Summer, by letting in Air; and of keeping out the Wind in Winter, which Way soever it fit. 4. 'Tis not only Ornamental, but secure, to turn Arches over

Doors; as it discharges 'em in great Measure of the superincumbent Weight.

The Proportions of Doors are adjust'd by those of a Man: In larger Buildings they must always be larger than in smaller; but in none should they be less than 6 Foot high, to admit a Man of just Stature, erect; And as the Breadth of a Man, with his Arms plac'd a-kimbo, is nearly sub-double his Height, the Width should never be less than 3 Foot.

Some Architects give us these Dimensions: In small Buildings the Breadth of the Door 4 Foot, or 4 and a half; in middling Buildings, 5 or 6; in large Ones, 7 or 8: In Chambers of the first, 3 and a half, $\frac{3}{4}$, or 4; of the second, 4, or 4 and a half; and of the third, 5, or 6; in Churches, 7 or 8; in Gates, 9, 10, or 12: hence their Height is easily determin'd; except for the Gates of Cities, which should only be $\frac{1}{2}$ of their Breadth.

'Tis an Observation of the excellent *Palladio*, that the principal Door, or Entrance of a House, must never be regulat'd by any certain Dimensions, but by the Dignity of the Person that is to live in it: yet, to exceed rather in the more, than the less, is a Mark of Generosity; and may be excus'd with some noble Emblem, or Inscription, as that of the Conte di *Beneacqua* over his large Gate at *Verona*, where had been committed a like Disproportion, *Pater Janus, Cor magis*.

DORIC, in Grammar. The *Doric Dialect* is one of the five *Dialects*, or Manners of speaking which obtain'd among the *Greeks*. See DIALECT.

It was first us'd by the *Lacedaemonians*, and particularly those of *Argos*; thence it pass'd into *Epirus*, *Iybia*, *Sicily*, the Islands of *Rhodes*, and *Crete*.

In this *Dialect*, *Archimedes* and *Theocritus* wrote, who were both of *Syracuse*; and likewise *Pindar*. *Port Royal*.

In Strictness, however, we should rather define *Doric* the Manner of speaking peculiar to the *Dorians*, after their Retreats near *Parusius*, and *Ajontus*; and which afterwards came to obtain among the *Lacedaemonians*, &c.

Some even distinguish between the *Lacedaemonian*, and *Doric*; but in Reality they were the same; setting aside a few Particularities in the Language of the *Lacedaemonians*; as is shewn by *Rulandus* in his excellent Treatise, *de Lingua Graeca, epistole Dialectis*, L. V.

Beside the Authors already mention'd to have wrote in the *Doric Dialect*, we might add *Arbitas* of *Tarentum*, *Bion*, *Callinus*, *Simonides*, *Bacchylides*, *Cypselas*, *Aicanan*, and *Sophron*.

Most of the Medals of the Greater Greece and *Sicily* favour of the same *Dialect* in their Inscriptions; Witness, AMERAKIOTAN, AHOAGANIATAN, AKRPONTAN, AKTIPITAN, HPAKAKIOTAN, TPAKINIQN EPHEMITAN, KATALONIATAN, KOPIATAN, TATPOMENIATAN, &c. Which shews the Countries wherein the *Doric Dialect* was us'd.

The general Rules of this *Dialect* are thus given by the *Port Royalists*.

D'ivre, du grand, d's d'o & du la fait le Dore.

D'u fait ire, d'v, o, & d'a au fait Encore.

Ofse i de l'Infini : & pour le Singulier.

Se sert au Feminin du Nombre Plurier.

But they are much better explain'd in the IVth Book of *Rulandus*; where he even notes the minute Differences of the *Dialects* of *Sicily*, *Crete*, *Tarentum*, *Rhodes*, *Lacedaemon*, *Laconia*, *Macedonia*, and *Thessaly*.

DORIC, in Architecture, is the second of the five Orders; being that between the *Yfrican* and *Ionic*. See ORDER.

The *Doric* Order seems the most natural, and best proportioned of all the Orders; all its Parts being founded on the natural Position of solid Bodies. Accordingly, the *Doric* is the first, and most ancient of the Orders of Architecture, and is what gave the first Idea of regular Building. See ARCHITECTURE.

At its first Invention it was more simple than at present; and when in After-times they came to adorn, and enrich it more, the Appellation *Doric* was restrain'd to this richer Manner, and the primitive simpler Manner they call'd by a new Name the *Tuscan* Order. See TUSCAN.

The Tradition is, that *Dorus*, King of *Asia*, having first built a Temple of this Order at *Argos*, which he dedicated to *Juno*, occasion'd it to be call'd *Doric*: Tho' others derive its Name, I know not how, from its being invented, or us'd by the *Dorians*.

Some time after its Invention they reduced it to the Proportions, Strength, and Beauty of the Body of a Man. Hence, as the Foot of a Man was judg'd the 6th Part of his Height, they made the *Doric* Column, including the Capital, 6 Diameters high, i. e. six times as high as thick. Afterwards they added another Diameter to the Height, and made it 7 Diameters; with which Augmentation it might be said to be nearer the Proportion of a Man: The human Foot, at least in our Days, not being a 6th, but nearly a 7th Part of the Body. See COLUMN.

The Characters of the *Doric Order*, as now manag'd, are, the Height of its Column, which is 8 Diameters; its Frize, which is enrich'd with Triglyphs, Drops, and Metopes; its Capital, which is without Volutes; and its admitting of Cymatiums. See *TRIGLYPH*, *CYMATIUM*, &c.

The Ancients, we have already observ'd, had two *Doric Orders*: The first, which was the more Simple and Massive, they us'd chiefly in Temples; The second, which was the more light and delicate, serv'd in Portico's, and Theatres.

Vitruvius, indeed, complains of the *Doric* as very troublesome, and perplexing, on Account of the Triglyphs, and Metopes, so as scarce to be capable of being us'd, except in the Pycnostyle, by putting a Triglyph between each two Columns, or in the Arcoctyle, by putting 3 Triglyphs between each two Columns. See *INTERCOLUMNIATION*.

The Moderns, on Account of its Solidity, use it in large strong Buildings; as in the Gates of Cities, and Citadels, the Outfides of Churches, and other massy Works, where Dexterity of Ornaments would be unsuitable.

The most considerable ancient Monument of this Order, is the Theatre of *Marcellus*, at *Rome*, wherein the Capital, the Height of the Frize, and its Projecture, are much smaller than in the modern Architecture.

Vignola adjusts the Proportions of the *Doric Order* thus: The whole Height of the Order, without Pedestal, he divides into 20 Parts, or Models; one of which he allows the Base, 14 to the Shaft, or Fust, one to the Capital, and 4 to the Entablature.

The particular Proportions, &c. of the several Parts, and Members, see under their respective Articles, *SHAFT*, *CAPITAL*, *ENTABLATURE*, *PEDESTAL*, *BASE*, *ARCHITRAVE*, *FRIZE*, and *CORNICH*.

Doric Cymatium. See *CYMATIUM*.

Doric, in Music. The *Doric Mode* is the first of the authentic Modes of the Ancients.

Its Character is to be severe, temper'd with Gravity, and Joy; And it is proper for Occasions of Religion, and War. It begins with *D, Sol, Re*. See *MODE*.

Plato admires the Music of the *Doric Mode*; and judges it proper, to preserve good Manners, as being Masculine. And on this Account allows it of in his Common-wealth.

The Ancients had likewise their *Subdoric Mode*, which was one of their Plagal Modes. Its Character was to be very grave, and solemn. It began with *G, U*, a Diatessaron lower than the *Doric Mode*.

DORMANT, is the Herald's Term for the Posture of a Lyon born sleeping, in a Coat of Arms.

DORMANT Tree, in Building, a Name the Workmen frequently give to a great Beam lying a-cross the House; usually call'd a *Summer*. See *SUMMER*.

Dormant Tiles. See *TILE*.

DORMER, or *DORMANT*, in Architecture, is a Window made in the Roof of an House, or above the Entablature; being rais'd upon the Rafters. The *Latius* call it *Lucerna*, whence the French *Lucerne*, and our *Lubern*.

There are divers Kinds; Square, Round, &c. See *LUTHERN*.

DORMITORY, a Gallery in Convents, or Religious Houses, divided into several Cells, wherein the Religious lodge, or lye, &c. See *CONVENT*.

'Tis deem'd a Crime in a Religious to lye out of the *Dormitory*. By Chap. XXII. of *The Rule of St. Benedict*, it appears, that the ancient *Dormitories* were not divid'd into Cells, but were a Kind of large open Halls, fill'd with Beds, as in our Hospitals. See *CELL*.

The Word is form'd from the Latin *Dormitorium*, of *dormire*, to sleep.

DORSAL Nerves. See *NERVE*.

DORSALIS Tabes. See *CONSUMPTION*, and *PHTHYSIS*.

DORSI Latissimus, in Anatomy. See *LATISSIMUS Dorsii*.

DORSI Longissimus, a Muscle common to the Loins, and the Back: It rises from the upper Part of the *Ossis sacrum, llium*, and first *Vertebrae* of the Loins, and in its Beginning is confounded, if not the same with the *Sacro Lumbalis*. It runs upwards along the whole Tract of the Back, and is connected to every transverse Process in its Way; ending sometimes in the first *Vertebra* of the Back, and sometimes in the first of the Neck.

DORSIFEROUS, or *DORSIPAROUS Plants*, are those of the Capillary Kind; which are without Stem, and bear their Seeds on the Backside of their Leaves. See *CAPILLARY*.

DORSUM, in Anatomy, is the hind Part of the *Thorax*; tho' commonly translated, *Back*.

It includes the Loins. See *LOINS*.

Dorsum Manus, and *Pedis*, is the Outside of the Hand, and Foot; Or that Part opposite to the *Palm*, and *Sole*. See *PALM*, and *SOLE*; as also *HAND*, and *FOOT*.

Dorsum Nasi, is the Ridge of the Nose, which runs the whole Length of that Part. See *NOSE*.

In those we call *Roman Notes*, the *Dorsum* is higher, and more prominent about the Middle, than in the rest; which Part is call'd the *Spina*. See *SPINA*.

DOSÉ, in Pharmacy, &c. The Quantity of any Medicine to be taken at one Time; Or the Weight, or Measure of the several Ingredients in a medicinal Composition. See *MEDICINE*.

A Secret in Physic is nothing, unless the *Dose* be known. Authors, and Dispensatories, that describe the same Remedy, frequently the *Dose* is different; which occasions a great Difference in its Effect.

The Word is form'd from the *Greek Dosis*, which signifies the same Thing.

Dr. Cockburn has given us an Essay towards determining the *Doses* of purgative Medicines, on Mechanical Principles. See *PURGATIVE*.

DOSITHEANS, an ancient Sect among the *Samaritans*. See *SAMARITAN*.

Mention is made in *Origen*, *Epiphanius*, *Jerom*, and divers other *Greek* and *Latin* Fathers, of one *Dositheus*, the Chief of a Faction among the *Samaritans*; But the Learned are not at all agreed, as to the Time wherein he lived. *St. Jerom* in his Dialogue against the *Isaciferians*, makes him before our Saviour; wherein he is followed by *Drusius*, who in his Answer to *Serrarius*, places him about the Time of *Senacherib*, King of *Affyria*. But *Sealiger* will have him since our Saviour's Time. And, in effect, *Origen* intimates him to have been contemporary with the Apostles; in observing, that he endeavour'd to persuade the *Samaritans*, that he was the *Messiah* foretold by *Moses*.

He had many Followers; and his Sect was still subsisting at *Alexandria* in the Time of the Patriarch *Eulogius*; as appears from a Decree of that Patriarch, publish'd by *Photius*. In that Decree *Eulogius* accuses *Dositheus* of injuriously treating the ancient Patriarchs, and Prophets; and attributing to himself the Spirit of Prophecy. He makes him cotemporary with *Simon Magus*; and accuses him of corrupting the Pentateuch in divers Places, and of composing false Books, directly contrary to the Law of God.

Arch-Bishop *Usher* takes *Dositheus* for the Author of all the Changes made in the *Samaritan Pentateuch*; which he proves by the Authority of *Eulogius*. But all we can justly gather from the Testimony of *Eulogius*, is, that *Dositheus* corrupted the *Samaritan Copies* since us'd in that Sect. But that Corruption did not pass into all the Copies of the *Samaritan Pentateuch*, now in Use among us, which vary but little from the *Jewish Pentateuch*. See *PENTATEUCH*.

And in this Sense we are to understand that Passage in a *Samaritan Chronicle*, where it is said, that *Dositheus*, i. e. *Dositheus*, altered several Things in the Law of *Moses*.

The Author of that Chronicle, who was a *Samaritan* by Religion, adds, that their High-priest sent several *Samaritans*, to seize *Dositheus*, and his corrupted Copy of the Pentateuch. *Epiphanius* takes him to have been a *Jew* by Birth, and to have abandon'd the *Jewish Party* for that of the *Samaritans*.

He imagines him likewise to have been the Author of the Sect of *Sadducees*; which is inconsistent with his being later than our Saviour. And yet the Jesuit *Serrarius* agrees to make *Dositheus* the Master of *Sadoc*, from whom the *Sadducees* are derived. See *SADDUCEES*.

Tertullian, making mention of the same *Dositheus*, observes, that he was the first who dared to reject the Authority of the Prophets, by denying their Inspiration. But he makes that a Crime peculiar to this Sectary, which, in Reality, is common to the whole Sect, who have never allowed any but the five Books of *Moses* for divine.

DOUBLE Plea, in Law, is that wherein the Defendant alleges for himself two several Matters in Bar of the Action; whereof, either is sufficient to effect his Desire, in debarring the Plaintiff. See *PLEA*.

This is not admitted in the Common Law: for which reason it is to be well observ'd, when a Plea is double, and when not; for if a Man allege several Matters, one nothing dependant on another, the Plea is accounted *Double*; But if they be mutually dependant on each other, then it is accounted but *Single*.

DOUBLE Quarrel, *Duplex Querel*, a Complaint made by a Clerk, or other, to the Arch-Bishop of the Province, against an inferior Ordinary, for delaying Justice in some Ecclesiastical Cause; as to give Sentence, institute a Clerk presented, or the like.

Its Denomination seems owing to this, that it is commonly made both against the Judge, and him, at whose Suit Justice is delay'd.

DOUBLE Ratio. See *DUPLE*.

DOUBLE Vessel, in Chymistry, is when the Neck of one Bolt-Head, or *Mattress*, is put, and well luted into the Neck of another.

It is also call'd a *Pellican*. See *PELLICAN*, and *MATRASS*.

Of these there are divers Kinds and Forms, us'd in the Circulation of Spirits, in order to their being exalted, and refin'd as high as can be. See CIRCULATION, COMBINATION, RECTIFICATION, &c.

DOUBLE Letter, in Grammar, a Letter, which has the Force and Effect of two; as the Hebrew *Yod*, which is equivalent to the Latin *Y* and *S*; the Greek *Ξ*, &c. See LETTER.

These Letters are evidently equal to two; And even, when we pronounce the Latin *Asis*, or the English *Asiary*, we give the *x* the same Sound, as if it were wrote with two *cs*, *Asis*, *Asiary*, or a *c* and *s*, *Asis*, *Asiary*. Double Letters, along with the *cs*, or *s*, include one of the Mutes.

The Greeks have three *Ξ Ψ Φ*: The Latins only two *X*, and *Z*. And most of the modern Languages have the same.

DOUBLE	}	See	}	Descant, in Music.	DESCANT.
				Fever.	FEAST.
				Tennille.	FEVER.
				Time, in Music.	TENAILLE.
					TIME.

Influences of DOUBLE Children, DOUBLE Cats, DOUBLE Pears, &c. are frequent in the *Philosoph. Transact.* and elsewhere. See MONSTER.

Sir John Floyer, in the same *Transactions*, giving an Account of a Double Turkey, furnishes some Reflections on the Production of Double Animals in general. Two Turkeys, he relates, were taken out of an Egg of the common Size, when the rest were well hatch'd, which grew together by the Flesh of the Breast-Bone; but in all other Parts were distinct. They feed'd less than the ordinary Size, as wanting Bulk, Nutriment, and Room for their Growth; which latter, too, was apparently the Occasion of their Cohesion.

For, having two distinct Cavities in their Bodies, and two Hearts; they must have arose from two Cicutricula's; and consequently, the Egg had two Yolks; which is no uncommon Accident. He has a dried Double Chicken, he assures us, that, tho' it has four Legs, four Wings, &c. it has but one Cavity in the Body, one Heart, and one Head; and consequently, was produced from one Cicutricula.

So, *Pereus* mentions a Double Infant, with only one Head: In which Case, the Original, or *Stamen* of the Infant was one, and the Vessels regular; only, the Nerves, and Arteries towards the Extremities dividing into more Branches than ordinary, produced double Parts.

The same is the Case in the Double Flowers of Plants, occasion'd by the Richness of the Soil. So it is in the Eggs of Quadrupeds, &c.

There are, therefore, two Reasons of Duplicity in Embryo's: 1. The Conjoining, or Connexion of two perfect Animals; And, 2. An extraordinary Division, and Ramification of the Original Vessels, Nerves, Arteries, &c.

DOUBLE-Fishes, in Heraldry. A Cross is denominated Double-Fishes, when the Extremities are pointed at each Angle; that is, each Extremity has two Points: In Contradistinction to *Fishes*, where the Extremity is sharpen'd away to one Point. See CROSS.

Leigh calls it *Double Pritch*, which seems to be a Mistake. *Gibbon* expresses it by an *Oblique Cross*, the two Points whereof at each Extremity are parted inwards by a small Space of a Line. By which it is distinguish'd from the Cross of *Malta*; the two Points whereof proceed from a third Point; or acute Angle between 'em.

DOUBLE Point, in the higher Geometry. When all the right Lines tending the same Way, with the infinite Leg of any Curve, do cut it in one only Point, (as happens in the Ordinates of the *Cartesian*, and in the Cubical Parabola, and in the right Lines which are parallel to the Abscisses of Hyperbolium-Hyperbola's, and Parabola's;) then you are to conceive, that those right Lines pass through two other Points of the Curve, placed (as I may say) at an infinite Distance. Which coincident Intersection, whether it be at a finite, or an infinite Distance, Sir *Isaac Newton* calls the *Double Point*. See CURVE.

DOUBLINGS, in Heraldry, are the Linings of Ribes, or Mantles of State; or of the Mantlings in Achievements. See MANTLE, and FUR.

DOUBLING, in a Military Sense, is the putting two Ranks, or Files of Soldiers, into one. See RANK, and FILE.

When the Word of Command is, *Double your Ranks*, then the second, fourth, and sixth Ranks are to march up into the first, third, and fifth; so that of six Ranks they make but three, leaving double the Interval there was between them before: But it is not so when they *double the half Files*, because then three Ranks stand together, and the three others come up to double them; that is, the first, second, and third, are *doubled* by the fourth, fifth, and sixth; or on the contrary.

Double your Files, directs each other to march to that next to it on the Right, or Left, according to the Word of Com-

mand; In which Case the six Ranks are turned into twelve, the Men standing twice deep; the Distance between the Files being now double of what it was before.

DOUBLING a Cape, or Point, in Navigation, signifies the coming up with it, passing by it, and leaving it behind the Ship.

The Portuguese pretend to be the first that ever doubled the Cape of good Hope, under their Admiral *Vasques de Gama*: But we have Accounts in History, particularly in *Herodotus*, of the Egyptians, Carthaginians, &c. having done the same long before them.

DOUBLON, DUBLOON, a Spanish Coin, being the Double of a Pistole. See PISTOLE.

DOUBTING, the Act of Withholding a full Assent from any Proposition; or Suspicion, that we are not thoroughly apprized of the Merits thereof; Or from our not being able peremptorily to decide between the Reasons for, and against it. See FAITH, LIBERTY, &c.

The Scepticks, and Pyrrhonians, doubt of every Thing: The Character of their Philosophy is, not to allow any Thing for true; but to withhold the Assent, and keep the Mind free, and in Suspense. See SCEPTICS.

The Epicureans trust their Senses, and doubt of their Reason: Their leading Principle is, that our Senses always tell Truth; That they are the first, and only Criteria of Truth; and that go ever for little from them, and that you come within the proper Province of Doubting. See EPICUREANS.

The Scepticks, on the contrary, of all Things bid us doubt our Senses; They are perpetually inculcating the Decitfulness of our Senses; and we are to doubt of every one of their Reports, till they have been examined, and confirm'd by Reason. See CARTESIANS; as also TRUTH, FALLACY, &c.

DOUBTING, in Rhetoric, a Figure wherein the Orator appears some time fluctuating, and undetermined what to do, or say. *Whos shall I do? Shall I apply to those I once neglected, or implore those who now forsake me.*

Tacitus furnishes us a famous Instance of Doubting, in those Words of *Tiberius*, wrote to the Senate. *Quid scribam, P. S. aut quomodo scribam, aut quid omnino non scribam hoc Tempore, Dii me Deaque pejus perdant, quam perire quotide sentio, si scio.*

DOUCINE, in Architecture, a Moulding, or Ornament on the highest Part of the Cornice, in Form of a Wave, half convex, and half concave. See CORNICHE.

The *Doucine* is the same with a *Cymatium*, or *Gula*. See CYNAMIUM, and GULA RECTA, and INVERSA.

DOVE-TAIL, in Carpentry, the strongest of the Kinds of Jointings, or Assemblies; wherein the *Tennon*, or Piece of Wood that enters the other, goes widening to the Extreme, and so cannot be drawn out again, by reason the Tip, or Extreme is bigger than the Hole.

It has its Denomination from the Resemblance the *Tennon* bears to a Dove's Tail.

The French call it *Queue d'Aronde*, Swallow's Tail; which Name the English themselves retain in Fortification. See QUEUE d'ARONDE.

DOVETAILING, in Architecture, is a Way of fastening Boards, or Timbers together, by letting one Piece into another indentedly, with a Dove-tail Joint, or with a Joint in the Form of a Dove's Tail.

DOWAGER, *Dowissa*, (q. d. a Widow endowed, or that has a Jointure) a Title, or Addition applied to the Widows of Princes, Dukes, Earls, and Persons of Honour only. *Queena Dowager*. See QUEEN.

DOWER, or DOWRY, by the Latins call'd *Dos*, is properly the Money, or Fortune, which the Wife brings her Husband in Marriage, to have the Use of it, during her Marriage, towards supporting the Charge thereof. See MARRIAGE.

It is otherwise call'd *Mariageum*, Marriage Goods. See MARIAGEUM.

Among the Germans it was anciently customary for the Husband, to bring a Dowry to his Wife. *Romanus non in Usu sui Uxoribus Dotes retribuere; ideo Verbo gentium carere quo hoc dignificetur; & Rem ipsam in Germanorum Moribus Miratur Tacitus: Dorem, inquit, non Usor Marito, sed Usori Maritus affert.* Spelman.

At present, in Germany, the Women of Quality have but very moderate Fortunes. For Instance, the Princesses of the Electoral House of Saxony, have only 30000 Crowns: Those of other Branches of the same Family, 20000 Florins: Those of *Branfwic*, and *Baden*, only 1500 Florins; besides a Sum for Cloaths, Toys, and Equipages.

DOWER, is also us'd in a Monastic Sense, for a Sum of Money given along with a Maid, upon entering her in some Religious Order.

In France, the Dowry of Persons entering a Monastery, to make Profession of a Religious Life, is limited by Law. That, e. g. given upon entering a Monastery of *Cisterciens*, *Ursulines*, and others, not regularly founded, but establish'd since the Year 1600, by Letters Patent, must not exceed the

Sum of 8000 Livres, in Towns where Parliaments are held; nor 6000, in other Places.

DOWN, by the Latins *Dotarium*, or *Doarium*, is also a Portion of Lands, or Tenements, which the Wife enjoys for Term of Life, from her Husband, in Case she survives him; and which at her Death, descends to their Children.

Among the *Goths*, the *Dower* was only the tenth Part of the Husband's Estate: Among the *Lombards*, a fourth; among the *Romans*, and *Sicilians*, a third; which is the Rate that still obtains among us, and most other Nations.

Our Law-Book distinguishes five Kinds of *Dower*: viz. *Dower per Legem communem*: *Dower per Constitutionem*: *Dower on Assensu Patris*: *Dower ad Optum Ecclesie*: And *Dower de plus belle*.

DOWN, by the common Law, is a third Part of such Lands, as the Husband was sole se'd of in Fee, during the Marriage; which the Wife is to enjoy during her Life, and for which there lies a *Writ of Dower*.

DOWN, by Custom, gives the Wife, in some Places, half her Husband's Lands, so long as she lives single; as in Gavelkind. And as Custom may enlarge, so may it abridge *Dower*, and restrain it to a fourth Part.

IN DOWER *en Assensu Patris*; and *ad Optum Ecclesie*, the Wife may have so much *Dower*, as shall be assign'd, or agreed upon; but it ought not to exceed the third Part of the Husband's Lands. If this be done before Marriage, it is call'd a *Jointure*.

DOWN, *de plus belle*. By this she is endowed with the third, and best Part of her Husband's Estate.

DOWN, an Elevation of Stone, or Sand, which the Sea gathers, and forms along its Banks; and which serves it as a Barrier.

The Word is form'd from the French *Dune*, or the German *Dunin*. *Charles de Vêlle* in his *Compend. Chronolog. Exord. & Progress. Abbat. Clariff. B. Marie, de Danis, says, Velleu reperit Aræarum Colibus (quos Incula Daynen vocat) unigue cinctum.*

Downs are particularly us'd for a famous Road for Ships, along the Eastern Coast of the County of Kent; from *Dover*, to the North Foreland.

This Road has excellent Anchorage, and is well defended by the Castles of *Sandwich*, *Deal*, and *Dover*.

Here it is, the *English* Fleets usually meet. *The Fleet is yet in the Downs: Sail'd from the Downs.*

The Word is form'd from the French *Dune*, of the Celtic *Dun*, a Mountain, or Eminence.

DOXOLOGY, a Church Term, apply'd by the *Greeks* to the 14th Verse of the second Chapter of *St. Luke*, *Glory be to God on High*, &c. because beginning with the Greek Word *Δόξα*, *Glory*.

This they distinguish by the Name of *Great Doxology*: The *Gloria Patri*; *Glory be to the Father*, they call the *Less Doxology*, as beginning with the same Word *Δόξα*. See *Gloria Patri*.

Philostorgius, L. III. N. 15. gives three Formula's of the *Less Doxology*. The first is, *Glory be to the Father, and to the Son, and to the Holy Ghost*. The second, *Glory be to the Father, by the Son, in the Holy Ghost*. And the third, *Glory be to the Father, in the Son, and the Holy Ghost*.

Sozomen, and *Nicophorus*, give a fourth, viz. *Glory be to the Father, and the Son, in the Holy Ghost*.

The first of these *Doxologies*, is that in common Use throughout the Western Church. It was first instituted about the Year 350, by the Catholics of *Antioch*, then call'd *Eustathians*.

The three others were compos'd by the *Arians*: The second was that of *Eusebius*, and *Eudoxus*, and which was approv'd by *Philostorgius*. The three were all made about the Year 341, in the Council of *Antioch*, when they first began to disagree among themselves: *Philostorgius* assures us, that *Flavian*, afterward Patriarch of *Antioch*, was the Author of the first, or *Catholic Doxology*; but *Sozomen*, and *Theodoret*, say nothing of it; and *Philostorgius*, an *Arian* Author, scarce deserves to be credited on his single Word.

There were anciently very great Disputes, and principally at *Antioch*, as to the Form of *Doxology*: That mostly us'd among the Orthodox, was the same as still obtains; the rest were affect'd by the *Arians*, and other Antiriteinians: Yet, *St. Basil*, in his Book, on the *Holy Spirit*, defends the second as orthodox, and legitimate, See *EUSTATHIAN*.

Some Authors write *Hymnology*, as synonymous with *Doxology*: But there is a Difference; *Hymnology* is apply'd to Psalms, or the Recitation of Psalms; and *Doxology* only to the little Verse, *Glory be to the Father*, &c. repeated at the End of each Psalm. See *HYMNOLGY*.

DOZEIN. See *DECENNIAL*.

DRACHM, DRACHMA, an ancient Silver Coin, us'd among the *Greeks*. See *COIN*.

The *Drachma* is supposed by most Authors to have been the same among the *Greeks*, with *Denarius*, or Penny, among

the *Romans*, which was equivalent to four *Sesterces*. See *DENARIUS*.

Of this Opinion is *Budens*, de *Affe*; who confirms it from the Authorities of *Pliny*, *Plutarch*, *Strabo*, and *Valerius Maximus*, with whom *δραχμή* is synonymous with *Denarius*.

But this is no strong Conviction, that the two Monies were precisely of the same Value: Those Authors, in not treating expressly of Coins, might easily render the one by the other, provided there were no considerable Difference between 'em.

Scaliger, in his *Dissertation, de Re Nummaria*, does not say absolutely, that the *Denarius* and *Drachma* were the same Thing; but from a Greek Passage of the *Lawyer*, C. XXVI. *Mandati*, where the *Drachma* is said to be compos'd of six *Oboli*, he concludes, that in the Age of *Sextus*, at least, the *Denarius* and *Drachma* were the same.

But *Agricola*, de *Menf. & Ponder*. L. IV. proves from *Pliny*, *Cestius*, and *Scribonius Largus*, that the *Drachma* only contain'd 7 Ounces; and from *Livy*, *Appian*, *Cleopatra*, &c. that the *Drachma* contain'd 8: And maintains, that when some Greek Authors speak of the Ounce as only containing 7 *Drachms*; they don't mean the *Attic Drachma*, but the *Roman Denarius*, which the Greek Authors render by *δραχμα*.

Gronovius agrees with *Agricola*, viz. that the *Drachma* was the 8th Part of an Ounce. The Opinion is confirm'd by *Isidore*, L. XIV. C. 24. by *Fannius*, who says as much in express Terms; and by *Volfgang*, who divides the Ounce into 24 *Scrupuli*, or *Scrupies*, whereof the *Drachma* comprehended three.

Thus much supposed, and supposing likewise the ancient *Roman* Ounce equal to the modern one, and of Consequence 40 Grains less than ours, it follows, that the ancient *Roman* Ounce weigh'd 556 of our Grains, and the *Attic Drachma* 67 Grains. Lastly, supposing the Silver at *Athenis* of the same Fineness with ours; and taking ours at the Price it now bears, the *Attic Drachma* will be found equivalent to about 7 Pence 3 Farthings Sterling. See *MONEY*.

The *Grecian* Way of accounting Sums of Money, was by *Drachme*: 10 of which were equal to 6 Shillings, 5 Pence 2 Penny; and 100 equal to a *Mina*. See *MINA*.

DRACHM, is also a Weight, us'd by our Physicians; containing just sixty Grains, or 3 *Scruples*; or the 8th Part of an Ounce. See *GRAIN*, and *OUNCE*.

In *Averdupois* Weight, the *Drachm* is an 8th Part of an Ounce. See *WEIGHT*.

DRACHMA was likewise an ancient Jewish Money, having on one Side a Harp, and on the other a Branch of *Grapes*.

This Coin was a *half Shekel*; and was so call'd by the Jews. 'Tis only the *Greeks* call'd it *δραχμα*. It was equal to 2 *Attic Drachmae*. See *SHEKEL*.

DRACO, *Dragon*, in Astronomy, a Constellation of the Northern Hemisphere. See *CONSTELLATION*.

The Stars in the Constellation *Draco*, according to *Ptolemy*, are 31; according to *Tycho*, 32; according to *Bayer*, 33; and according to *Mr. Flamsteed*, 49.

The Longitudes, Latitudes, Magnitudes, &c. whereof are as follows.

Stars in the Constellation DRACO.

Name and Situation of the Stars.	Right Ascension.	Longit. " "	Latitude North. " "	Magnitude.
Left of the Tail.	♂ 5 59 05		57 13 24	4

wife they withdraw beneath the Skin again. The Operation is repeated till such Time as no more Tubercles arise.

The *Dracunculii* is a Disease little known in England. The Editors of the *Leipfic Actis*, speaking of it, in the Tome for the Month of *October 1682*, call the Bodies, which put forth at the Pores after bathing, thick Hairs, *Corpufcula Pitiorum crefforum infiar denfa & piffa*, and not fine *feeder Hair*, as *Dezori* calls 'em. They add, that thefe little Corpufcles are hence call'd *Criovones*; and by reason of their devouring the Food, which fhould nourish the Children, *Comedones*.

Velebius, in a curious Differtation on the Subject, calls 'em *Cepillari Worms*. *Exercitatio de Vermibus Cepillariis Infantum*.

As to the Nature and Figure of thefe little Bodies, the fame Editors obferve, that the Microfcope has put it paft doubt, they are real living Animals, of an Afh Colour, having two long Horns, two large round Eyes, and a long Tail terminated with a Tuft of Hair; that 'tis difficult to draw them out whole, by fcraping the Child's Body, in that being very foft, the leaf rubbing bruises 'em, and breaks 'em. See *VERMES*.

DRAG, in Building, A Door is faid to drag, when in Opening and Shutting it bangs; or grates upon the Floor. See *DOOR*.

DRAGONMAN, a Term of general Ufe through the Eaft, for an Interpreter whole Office is to facilitate Commerce between the Orientals, and Occidentals. See *INTERPRETER*.

The Word is form'd from the Arabic *Tergeman*, or *Tergiman*, of the Verb *Targama*, he has interpreted. From *Dragoman*, the *Italians* have form'd *Dragomano*, and, with a nearer Relation to its Arabic Etymology, *Turciman*; whence our *Trucheman*, as well as *Dragoman*, and *Dragman*.

DRAGON, in Aftronomy, *Dragon's Head*, and *Tail*, or *Caput & Cauda Draconis*, are the Nodes of the Planets; or the two Points, wherein the Ecliptic is interfeited by the Orbits of the Planets; and particularly that of the Moon; making with it Angles of 5 Degrees. See *PLANET*, *ORBIT*, and *NODE*.

One of thefe Points tends Northward; the Moon beginning then to have Northern Latitude: and the other Southward; where the commences South. See *MOON*.

This her Deviation from the Ecliptic feems (according to the Fancy of fome) to make a Figure like to that of a *Dragon*, whole Belly is, where he has the greateft Latitude; the Interfections representing the *Head* and *Tail*, from which Refemblance the Denomination arifes.

But note, that thefe Points abide not always in one Place, but have a Motion of their own, in the Zodiac, and retrogradewife almoft 3 Minutes a Day; complicating their Circle in about 19 Years; fo that the Moon can be but twice in the Ecliptic, during her Menftrual Period, but at all other Times will have *Latitudes*, as they call it. See *LATITUDE*.

'Tis in thefe Points of Interfection that all Eclipses happen. See *ECLIPSES*.

They are ufually denoted by the Characters Ω *Dragon's Head*, and γ *Dragon's Tail*. See *HEAD*, and *TAIL*.

DRAGON'S BLOOD, *Sanguis Draconis*, call'd alfo *Lapathum rubrum*, in Medicine. See *BLOOD*.

The Ancients had a Notion, that the *Dragon* fighting with the Elephant, fuck'd all its Blood through its Eyes and Ears; that the Elephant falling down dead, crush'd the *Dragon*; and that from their Blood, thus mix'd on the Ground, arofe what they call'd *Dragon's Blood*, which they held in high Esteem.

This is the Account given by *Solians*, *Pliny*, *Ildoro*, and others after them; but this Combat is a mere Fable, invented by the Merchants.

Avicenna, and *Serapion* likewise give the Appellation *Dragon's Blood* to *Cinnabar*. See *CINNABAR*.

But the genuine *Dragon's Blood* is the Juice, or Refin of a large Tree, call'd *Draco*, *Dragon*, growing in *Africa*, and *Affricas*. The Refin is of a dark red, and eafily difolves when brought towards the Fire; if caft into the Fire, it flames: But difolves with much Difficulty in any Liqueur.

It is a good Aftringent; and is us'd in *Hæmorrhagies*, and *Dyfteries*, to tighten the Teeth, and ftrengthen the Gums.

There is alfo a counterfeited *Dragon's Blood*, made of the Gum of the *Cherry*, or *Almond-tree*, difolved, and boil'd in a Tincture of *Brazil Wood*; but this is of no Ufe, except for outward Difcalfs of Horfes.

It derives its Name *Dragon's Blood* from the Rednefs of its Colour, and gives its Name *Dragon* to the Tree that yields it. Some Botanifts talk of the Figure of a *Dragon*, fingly represented under the Round of the Fruit of that Tree. But this is a mere Fiction.

DRAGONNEE, in Heraldry, A *Lyon Dragonne*, is where the upper Half refembles a *Lyon*; the other Half going off like the hind Part of a *Dragon*.

DRACO Volans, with the Meteorologists, is a fat, Heterogeneous, Earthy Meteor, appearing long, and finous, fometimes in the Shape of a flying Dragon. See *METEOR*.

This Shape they will have to arife from the latter Part of the Matter of this Meteor, being fired with greater Impetuofity, than what comes firft out of the Cloud; and they fuppofe the broken Parts of the Cloud, and the fulphureous Matter which adheres to them, forms the apparent Wings of this imaginary Dragon.

DRACONARIUS, in Antiquity, *Dragon-bearer*. Several Nations, as the *Perfians*, *Parthians*, *Scythians*, &c. bore Dragons on their Standards; whence the Standards themfelves were call'd *Dracones*, *Dragons*. The *Romans* borrowed the Cuftom from the *Perfians*; or, as *Cæfari* has it, from the *Daces*; or, as *Codin*, from the *Affrians*.

Among the *Romans*, they were Figures of Dragons painted in red, on their Flags; as appears from *Amatius Marcellinus*: But among the *Perfians*, and *Parthians*, they were like the *Roman* Eagles, Figures in full Relief; So that the *Romans* were frequently deceiv'd, and took 'em for real Dragons.

The Soldier, who bore the Dragon, or Standard, was call'd by the *Romans* *Dracoonarius*; and by the *Greeks* *Δρακονοφορος*, and *Δρακονοτοπος*; for the Emperors carried the Cuftom with them to *Conftantinople*.

Pet. Diaconus Chron. Cafin. L. IV. c. 95. obferves, that the *Bejalii*, *Cerogoftrarii*, *Stavrophori*, *Aquiliferi*, *Leoniferi*, and *Dracoonarii*, all march'd before King *Henry* when he went into *Rome*.

DRACONTIC Month, the Space of Time wherein the Moon going from her afcending Node, call'd *Caput Draconis*, returns to the fame. See *DRAGON'S HEAD*, and *MONTH*.

DRACUNCULI, in Medicine, a Difcafe in Children, wherein they feel a vehement Itching; fuppofed to arife from little Worms, call'd *Dracunculii*, generated from a vitid Humour under the Skin, about the Back, Shoulders, and Arms. See *WORMS*.

Children seiz'd with the *Dracunculii*, become hectic, and fcarce receive any Nourifment at all, tho' they eat plentifully.

The Difcafe, however, is not fo peculiar to Children, but that grown Perfons have been fometimes affeited with it. The Emperor *Henry V.* is faid, to have died of it; having had it from his Birth.

The Women in *Poland* cure their Children of the *Dracunculii*, after the following Manner: The Child is wafh'd, and bathed in hot Water, wherein a Quantity of crum'd Bread, and a handful of Afhes have been caft. The Water being pour'd off, and the Bread gather'd into a Mafs; when they come to break it again the next Day, they find in it an infinite Quantity of fine Hairs, which fome call *Dog's Hairs*, and others, *Worms*; and 'tis thefe Hairs, or Worms, are fuppofed to be the Caufe of the Difcafe.

After thus bathing the Children, they rub their Shoulders, and Arms, with Flower fteep'd in Vinegar, or Honey; upon which immediately arifes on the Skin a great Number of Tubercles, like Poppy-Seed; fuppofed to be the Heads of Worms. Thefe they fcrape off as faft as they appear; other-

The same may be said of any other Beast as well as the Lyon.

DRAGOON, in War, a Kind of Soldier who marches on Horse-back, but without Boots; and fights on Foot, tho' sometimes, too, on Horse-back. See GUARDS.

The *Dragoons* are usually posted in the Front of the Camp, and march first to the Charge, like a Kind of *Enfans Perdus*. They are usually reputed as belonging to the Infantry, and in that Quality have Colonels, and Serjeants; but they have Cornets, too, like Cavalry.

Their Arms are a Sword, Fire-Lock, and Bagonet. When they march on Foot, their Officers bear the Pike, and the Serjeants the Halbert.

Mentage derives the Word *Dragoon* from the Latin *Draconarius*: which in *Vegertus* is us'd to signify Soldiers. But it is more probably derived from the German *Tragen*, or *Dragen*, which signifies to carry; as being Infantry carried on Horse-back.

DRAMS. See CORDIALS.
DRAMA, in Poetry, a Piece compos'd for the Theatre; Or a Piece of Dramatic Poetry. See THEATRE.

A *Drama*, or as we popularly call it, a *Play*, is a Composition either in Prose, or Verse, consisting, not in the simple Recitation, but in the actual Representation of an Action.

Our *Dramas*, are Tragedies, Comedies, and Farces: For those Grotesque Entertainments, lately introduced upon the Stage, scarce deserve the Appellation. See TRAGEDY, COMEDY, FARCE, &c.

Some Critics take the Book of *Canticles* for a *Drama*. See CANTICLES.

The Word is Greek, *δραμα*, which literally signifies *Action*; by reason, in *Dramas*, or Dramatic Poems, they act, or represent *Actions*, as if they really pass'd.

Some scrupulous Authors would restrain *Drama* to serious Pieces; as Tragedies: But with respect to the Etymology, a Comedy is as much a *Drama*, as a Tragedy.

DRAMATIC, in Poetry, is an Epithet given to Pieces wrote for the Stage. See STAGE, and DRAMA.

For the Laws of *Dramatic Poetry*. See UNITY, ACTION, CHARACTER, FABLE, &c.

DRAPERY, in Painting, and Sculpture, the Representation of the Garments, or Cloathing of human Figures. See FIGURE.

In the general Sense, *Drapery* includes not only the Garments, but also the Tapitry, Linings, and most other Things that are not *Ceremonials*, nor Landscips. See PAINTING.

The Art of *Drapery* consists chiefly in three Points, *viz.* The Order of the Folds, or Plates: The different Quality of the Stuffs: And the Variety of their Colours.

As to the *Folds*, they should be so manag'd, that you may easily perceive what it is that they cover, and distinguish it from any Thing else. For Instance, that you see 'tis an Arm that is under the *Drapery*, and not a Leg, &c.

The *Folds*, again, must be large, as breaking, and dividing the Sight the less. There should likewise be a Contrast between 'em, otherwise the *Drapery* will be stiff.

The *Quality of the Stuffs* should likewise be well consider'd; some making their Folds abrupt, and harsh, and others more soft, and easy. The Surface of some, again, has a Lustre, others are dead: Some are fine, and transparent, others firm, and solid.

The Variety of *Colours*, when well manag'd, makes the great Beauty of a *Painting*; all being not equally amicable, and friendly, with respect to each other; and some never to be plac'd near certain others. See COLOURING.

Mr. de Piles gives Abundance of good Observations, as to *Drapery*. Their first Effect, he observes, and that which the Painter ought to have principally in View, is, that they express the Thing they are suppos'd to cover: They must never be made to adhere, and stick to the Parts of the Body: A great Lightness, and Motion of the *Drapery*, are only proper for Figures in great Agitation, or expos'd to the Mind. The Nudities of the Figures should always be design'd, 'ere the Painter proceed to the *Draperies*. *Paolo Veronese* excell'd in *Drapery*.

The Word is French, *Draperie*, form'd from *Drap*, Cloth.

DRASTIC, from *δραστικος*, *actiosus*, brisk; a purgative Medicine that works with Speed, and Vigour; as *Jalap*, *Scammony*, and the stronger Catharticks. See PURGATIVE.

DRAUGHT, in Medicine. See POTION.

DRAUGHT, in Trade, is an Allowance made in the weighing of Commodities; the same as *Clough*. See CLOUGH.

DRAUGHT, in Painting, &c. See DESIGN.

DRAUGHT, or, as 'tis pronounced, **DRAPY**, in Architecture, the Figure of an intended Building describ'd on Paper; wherein is laid down, by Scale, and Compass, the several Divisions, and Partitions of the Apartments, Rooms, Doors, Passages, Conveniences, &c. in their due Proportion. See BUILDING.

'Tis usual, and even exceedingly convenient, 'ere a Building is begun to be rais'd, to have *Draughts* of the *Isobography*, or Ground-plot of each Floor, or Story; As also

of the Form and Fashion of each Front, with the Windows, Doors, Ornaments, &c. in an *Orthography*, or Upright. See ISOBOGRAPHY, and ORTHOGRAPHY.

Sometimes the several Fronts, &c. are taken, and represented in the same *Draught*, to shew the Effect of the whole Building, call'd a *Scenography*, or *Perspective*. See SCENOGRAPHY.

DRAW. A Ship is said to *draw* so much Water, according to the Number of Feet she sinks into it.

Thus, if fifteen Foot from the Bottom of her be under Water, or if she sinks into the Water fifteen Foot perpendicularly, she is said to *draw* fifteen Foot Water; according as she *draws* more, or less, she is said to be of more, or less *Draught*.

DRAW-BACK, in Commerce, a *Rebate*, or *Discount*, upon the Price of Commodities, purchas'd on certain Conditions. See REBATE, and DISCOUNT.

DRAW-BRIDGE, a Bridge made after the manner of a Floor, to be *drawn up*, or let down, as Occasion serves, before the Gate of a Town, or Castle. See BRIDGE.

DRAWING Medicines, or **DRAWERS**. See EPISPASTICKS, and RIFTERNS.

DRAWING of Gold, or *Silver*, is the passing it through a Number of Holes in an Iron, each less than other, to bring it into a Wire. See WIRE *drawing*.

DRAWING of a Bill of Exchange, is the Writing, signing, and giving it to the Person who has already pay'd the Value, or Content thereof, to receive it in another Place. A Person should never *draw* a Bill of Exchange, unless he be well assur'd, it will be accepted, and pay'd. See BILL of Exchange.

DRAWING, in Painting, &c. See DESIGNING.

DRAWING, among Hunters, is when they beat the Bushes after a Fox.

Drawing a snuff, is when the Hounds, or Beagles hit the Scent of their Chace contrary, so as to hit it up the Wind, whereas they should have done it down the Wind.

Drawing on the Sior, is when the Hounds touch the Scent, and *draw* on till they hit on the same Scent.

DRENCH, among Farriers, a Physical Draught, or Potion given a Horse, by Way of Purg. See POTION.

DRENCHES, or **DRENGES**, in our old Customs, a Term about which the Lawyers and Antiquaries are a little divided.

Drenges, says an ancient Manuscript, were *Tenentes in Capite*. *Speelman* says, they were a *Genere Vassalorum usque Inguibonibus*, cum *singuli qui in Domes-day nomenantur singula possiderent Maneria*. Such, as at the coming in of the Conqueror, being put out of their Estates, were afterwards upon Complaint restor'd thereto; for that, they, being before Owners thereof, were neither in *Auxilio*, nor *Covallio* against him.

DRESSING of Meats, the preparing 'em for Food, by means of Culinary Fire. See MEAT, and FOOD.

The Design of *Dressing*, is to loosen the Compages, or Texture of the Flesh, and dispose it for Dissolution, and Digestion in the Stomach. Flesh not being a proper Food without *Dressing*, is alleg'd as an Argument, that Man was not intended by Nature for a Carnivorous Animal. See CARNIVOROUS.

The usual Operations are *Roasting*, *Boiling*, and *Stewing*.

In *Roasting*, it is observ'd, Meat will bear a much greater, and longer Heat than either in *Boiling*, or *Stewing*; and in *Boiling*, greater, and longer than in *Stewing*. The reason is, that *Roasting* being perform'd in the open Air, as the Parts begin externally to warm, they extend, and dilate, and so gradually let out Part of the rarified included Air, by which means the internal Succussions, on which the Dissolution depends, are much weaken'd, and abated; *Boiling* being perform'd in Water, the Pressure is greater, and consequently, the Succussions to lift up the Weight, are proportionably strong; by which means the Coktion is hasten'd: And even in this Way there are great Differences; for the greater the Weight of Water, the sooner is the Business done.

In *Stewing*, tho' the Heat be infinitely short of what is employ'd in the other Ways, the Operation is much more quick, because perform'd in a close Vessel, and full, by which means the Succussions are more often repeated, and more strongly reverberated. Hence the Force of *Papiri Digestor*; and hence an *Illustration of the Operation of Digestion*. See DIGESTOR, and DIGESTION.

Boiling, Dr. *Cheyne* observes, draws more of the Rank, strong Juices from Meat, and leaves it less nutritive, more diluted, lighter, and easier of Digestion: *Roasting*, on the other hand, leaves it fuller of the strong, nutritive Juices, harder to digest, and needing more Dilution. Strong, grown, and adult Animal Food, therefore, should be *boil'd*; and the younger, and tenderer, *roast'd*.

DRE Exchange, *Cambium Siccum*, a soft Appellation, anciently us'd to disguise Usury under; intimating something to pass on both Sides, whereas, in Truth, nothing pass'd but

but on one: In which respect it might be call'd *Dry*. See *Usury*.

Cambium ficum, says *Las. Lopez, de Contract. & Negot. of Cambium non habens Existentiam Cambii, sed Apparentiam ad Instar Arboris Explicatae, &c.*

DRIE Rent. See *RENT*.

DRIFT of the Foreſt, an exact View, or Examination of what Cattel are in the Foreſt, that it may be known, whether it be overcharg'd, or not, and whose the Beasts are; and whether they are commonable Beasts, or not. See *FOREST*, and *COMMON*.

DRIFT-Sail, in a Ship, is a Sail us'd under Water; it is veer'd right a-head, upon the Sea in a Storm, having Shets fasten'd to it as other Sails have; its Use being to keep the Ship's Head right upon the Sea.

It is also useful, to hinder a Ship's driving with a Current, and with that View generally us'd by Fisher-men, especially in the North-Sea.

DRINK, a Part of our ordinary Food, in a liquid Form, serving to dilute, and moisten the dry Meat. See *FOOD*.

The *Drinks*, in different Countries, are different. Those, ordinarily us'd among us, are, *Water, Malt-Liquors, and Wine*. See *WATER, MALT-Liquor, and WINE*.

The Extraordinaries, are, *Cyder, Punch, Brandy, Tea, Strong Waters, &c.* which see.

The *Malt-Drink* brew'd in *England*, in one Year, *Chamberlayne* affirms us, amounts to very near 2 Millions of Barrels of strong, and small. See *EXCISE*.

Water, Dr. *Cheyne* observes, was without all Dispute the primitive original Beverage, as it is the only simple Fluid (for there are but three more in Nature, Mercury, Light, and Air, none of which is fit for human Drink) fitted for diluting, moistening and cooling, the Ends of Drink appointed by Nature: And happy had it been for the Race of Mankind, had other mixt, and artificial Liquors never been invented. Water alone is sufficient, and effectual for all the Purposes of human Wants in Drink. Strong Liquors were never design'd for common Use. They were formerly kept, here in *England*, as other Medicines are, in Apothecaries Shops, and prescribed by Physicians, as they do *Dyscordians*, and *Venice Treacle*, to refresh the Weak, strengthen the Weak, and raise the low-spirited. The Effect of the ordinary Use of Wine, and spirituous Liquors, as natural Causes will always produce their Effects, is to inflame the Blood into Gout, Stone, and Rheumatism, Fevers, Pleurisy, Small-Pox, &c. to dry up the Juices, and scorch and shivel the Solids. Those, whose Appetite, and Digestion is good, and entire, never want strong Liquors to supply 'em with Spirits: Such Spirits are too volatils, and fugitive for any solid, or useful Purposes of Life. Two Ounces of Flesh Meat, well digested, beget a greater Stock of more durable, and useful Spirits, than ten times as much strong Liquors.

All strong Liquors are as hard to digest, and require as much Labour of the Concoctive Powers, as strong Food it self. Water is the only universal Dissolvent, or Menstruum, and the most certain Diluter of all Bodies proper for Food. There are a great many spirituous Liquors, which not only will not dissolve, but will harden, and make more indigestible, especially the Salts of Bodies, wherein their active Qualities, that is, those which can do most harm to human Constitutions, consist. And we have known Persons of tender Constitutions, who could neither eat, nor digest, upon drinking Wine, who, by drinking at Meals common Water, heated, have recover'd their Appetites, and Digestion, have thriven, and grown plump. 'Tis true, strong Liquors by their Heat and Stimulation on the Organs of Concoction, by increasing the Velocity of the Motion of the Fluids, and thereby quickening the other Animal Functions, will carry off the Load that lies upon the Stomach, with more present Cheerfulness. But then, beside the future Damages of such a Quantity of Wine to the Stomach, and the Fluids by its Heat, and Inflammation, the Food is hurried into the Habir unconcocted, and lays a Foundation for a Fever, fit of the Colic, or some Chronical Disease. *Essay on Health, &c. p. 47, 48, &c.*

DRIP, in Architecture. See *LARRIER*.

DRIPE, are also us'd in Building for a Kind of Steps, on flat Roofs, to walk upon. This Way of Building is much us'd in *Italy*: where the Roof is not made quite flat, but a little raised in the Middle; with *Drips*, or Steps, lying a little inclining to the Horizon. See *ROOF*.

DRIVE, in the Sea-Language. A Ship is said to *drive* when an Anchor being let fall, it will not hold her fast, but that she sails away with the Tide, or Wind. See *ANCHOR*.

The best Way to prevent this, is to veer out more Cable; for the more Cable she has, the surer, and safer the rides; or else to let fall more Anchors.

Also when a Ship is a *Hull*, or a *Trye*, we say, she *drives* to Leeward, or in *with the Shore*, according to the Way she makes.

DROGMAN. See *DRAGOMAN*.

DROIT, *Jus*, in our Law-Books, signifies *Right*, or *Law*: whereof our Lawyers make six Kinds, viz. 1. *Jus Recupcrandi*, Right of Recovering; 2. *Jus Entrandi*, Right of Entering; 3. *Jus Habendi*, Right of Having; 4. *Jus Retinendi*, Right of Retaining; 5. *Jus Percipiendi*, Right of Receiving; 6. *Jus Possidendi*, Right of Possessing. See *LAW*, and *RIGHT*; as also *RECTUM*.

DROPAX, in Pharmacy, an external Medicine, in Form of a Plaster, us'd to take off the Hairs from any Part.

The *Dropax* is of two Kinds, *Simple*, and *Compound*. The *Simple* is made of an Ounce of dry Pitch, and two Drachms of Oil.

The *Compound* is made with Pitch, Wax, Colophony, common Bitumen, Sulphur vivum, Pepper, Euphorbium, Cantharides, and Castor. There are also other Ways of making it.

It was anciently much in Use to warm the Parts, to draw the Blood and Spirits to them, and to cure Atrophies. It was applied hot on the Part affected, after first shaving it, and was pull'd off again 'ere quite cold, then heated a-fresh, and applied again; and the Operation thus repeated, till the Part were render'd very red.

The Word is form'd from the Greek *σπορα*, to pluck, so *scars*.

DROPPING, or *Dripping*, is a Term us'd among Falconers, when a Hawk mutes directly downwards in several Drops, not jerking her Dung straight forwards.

DROPS, in Meteorology. See *RAIN*.

The Spherical Form, into which the Drops of Fluids conform themselves, is a Phenomenon that has a little perplex'd the Philosophers.

The Solution commonly given, was, that the equable uniform Pressure of the ambient, or incumbent Atmosphere closed 'em into this Form: But this Account will no longer pass, now that we find the Phenomenon holds in *Vacuo* as well as in Air.

The *Newtonian* Philosophers, therefore, ascribe it to their *Attraction*, which being greater between the several Particles of the Fluids, than between them, and those of the Medium, they are, as it were concentrated, and brought as near each other, and into as little Compass, as may be: which cannot be, without their being spherical.

Thus, Sir *Isaac Newton*: *Gutta enim Corporis cuiusque sunt, ut figuram globosam inducere conentur, facit mutua partium suarum Attractio; Eodem modo quo Terrae Martisque in Rotunditatem antequam conglobentur, Partium suarum Attractione mutua, que est Gravitas.* Opt. p. 338. See *ATTRACTION*.

DROPS, in Medicine, a liquid Medicine, whose Dose is estimated by a certain Number of Drops.

A little Lowness of Spirits, says Dr. *Cheyne*, speaking of the softer Sex under Fits of the Vapours, &c. requires Drops, which pass readily down under the Notion of Physic: Drops beget Drains, and Drains beget more Drains, till they come to be without Weight, and without Measure. Higher, and more severe Fits, begot by these, being thro' farther Necessary upon Necessity of Drops, Drains, and Gills, till at last, *Effigy on Health*.

English Drops, or *Volatile English Drops*, or *Gutta Anglica*, is a Liquor drawn by Fire from a great Number of Ingredients, and found a powerful Remedy against Coagulations of the Blood, Obstructions, Apoplexies, malignant Fevers, Small-pox, &c.

Its inventor was Dr. *Goddard*, a Physician of *London*. King *Charles II.* had much ado to purchase the Secret of him, tho' he offer'd him 5000 Pounds for the same. However, he prevail'd at length; but the Physician look'd on it as a Favour done the Prince, to impart it to him on such Terms.

Hence it is, that the Remedy took the Name of *Gutta Anglica*. See *GUTTA Anglica*.

DROPS, *Gutta*, in Architecture, an Ornament in the Doric Entablature, representing Drops, or little Bells, immediately under the Triglyphs. See *TRIGLYPH*.

DROPSY, *Hydrops*, in Medicine, a Disease occasion'd by a preter-natural Collection of Serum, or Water, in some Part of the Body; Or a too great Proportion thereof in the Blood. See *DISEASE*.

The Word is derived from the Greek *ιδρω*, Water, and *ος*, *Passive*, Face.

The *Dropsy* acquires different Names from the different Parts it afflicts, or the different Parts the Waters are collected in. That of the *Abdomen*, or lower Belly, call'd simply, and absolutely *Dropsy*, is particularly denominated *Ascites*: That of the whole Habit of the Body, *Anasarca*, or *Leucophlegmatia*: That of the Head, *Hydrocephalus*: That of the Scrotum, *Hydrocele*. See *ASCITES*, *ANASARCA*, &c.

There is also a Species of this Disease caus'd, instead of Water, by a Collection of Wind, call'd *Tympanites*, and by *Hippocrates*, the *Dry Dropsy*. See *TEMPERITES*.

These

There are also *Droffies of the Breast, Pericardium, Uterus, Ovaries, &c.*

The Causes of *Droffies*, in general, are whatever may obstruct the ferous Part of the Blood, so as to make it stagnate in the Vessels; Or bruil the Vessels themselves, so as to let the Blood out among the Membranes; Or weaken, and relax the Tone of the Vessels; Or thin the Blood, and make it watery; or lessen Perspiration.

These Causes are various, *vis.* sometimes acute Diseases, schirous Tumours of any of the more noble Viscera, excessive Evacuons, particularly Hemorrhages, hard Drinking, &c.

The *Affetes, or Water-Droffy of the Abdomen*, is the most usual Case, and what we particularly call the *Droffy*: Its Symptoms are Tumors, first of the Feet, and Legs, and afterwards of the Abdomen, which keep continually growing; and if the Belly be struck, or strook, there is heard a Quaffing of Water. Add to this three other Attendants, *vis.* a *Dyspnea*; intense Thirst; and sparing Urine: with which may be number'd Heaviness, Lethargy, Costiveness, a light Fever, and an Emaciation of the Body.

The Curative Indications are two, *vis.* The Evacuation of the Water; and the Strengthening of the Blood, and Viscera. The first is effected by strong Purgatives, particularly *Elixerium, and Crocus Metallorum*. For such as are too weak to bear Purgatives, Dr. Sydenham recommends Emetics, whereof the best are those made of Lixivial Salts. *Etmuller* prefers Diureticks to either Kind. Along with the Evacuons it is to be used Stomachicks, especially *Absinthium, Absorbentium, &c.*

Where other means fail for Evacuating the Water, Rocaure is had to the *Paracentesis*, or Operation of Tapping. See PARACENTESIS.

Mayerne recommends *Mercurius dulcis*, and Nitre, and Ants Eggs, for the promoting of Urine, and draining the Tumour. As for the Viscera, they are restored by Chalybeats, and Strengtheners.

Bagliv notes, that in a *Droffy* arising from a morbid Liver, there is always a vehement dry Cough; which is never observed in the other Species. *Lycho Brake* observes, that Hydropic Persons usually die about full Moon. *Wainwright* extols an Infusion of Green Tea in *Rhenish Wine*; as also Briony Juice, as excellent in this Disease.

DROWNING, the Act of Suffocating, or being suffocated by Water. See SUFFOCATION.

People not accustom'd to diving, Dr. Halley observes, begin to *drown* in about half a Minute's Time. See DIVING.

Drowning was anciently a Kind of Punishment: In the Time of *Louis XI. of France*, the Chronicles assure us, that they frequently *drown'd* their Criminals, instead of hanging them. *Chron. Scand.* See PUNISHMENT.

Natural Historians, and Physicians, furnish us with divers well attested Instances of surprising Recoveries of Persons *drown'd*: Which, if maturely consider'd, might perhaps let a little Light into the dark Notion of Life, and Death.

Pecklin, de Aer. & Alm. def. C. 10. gives us the History of a Gardner of *Trompingholm*, then living, ag'd 65 Years, who 18 Years before slipt under the Ice to the Depth of 18 Ells, where he stood at the Bottom, upright, as it were, for 16 Hours; when, being drawn out with a Crook struck into his Head, and wrapp'd up in Clothes, from the common Persuasion of those People, that he would recover; he was afterwards strook'd, rubb'd with Linnen Swaths, and Air blown up his Nostils for several Hours; till the Blood began to move. Lastly, plying him with Antipoplectic, and Genial Liquors, he was restored to Life. In Memory of this Accident, the Queen Mother settled a yearly Stipend upon him, &c.

Tilassus, Keeper of the King's Library, gives us the History of a Woman he himself knew, who was under the Water 3 whole Days, yet brought to Life again after the same Manner as the *Trompingham* Gardener: and was still alive.

Lastly, *Burmans* assures us, that being in the Village *Bonsif*, of the Parish of *Pitbun*, he assisted at the Funeral Sermon of one *Laur. Jona*, an old Man of seventy; where the Preacher related, that when a Youth of 17, he had been buried 7 Weeks under Water, and at length drawn forth, and brought again to Life. *Pecklin. ubi sup.*

DRUG, in Commerce, a general Name for all Spices, and other Commodities, brought from distant Countries, and used in the Business of Medicine, Dying, and the Mechanic Arts.

The *Drugs* us'd in Medicine, are very numerous, and make the greatest Part of the Commerce of our *Druggists*. Some of 'em grow in *England, France, &c.* But the greatest Part are brought from the *Levant, and the East Indies.*

A List of 'em would be endless. Some of the Principal, are, *Aloe, Ambergris, Amber, Alfa farda, Antimony, Balsams, Benzoe, Borax, Bevojn, Camphor, Cardarides, Cardamum, Cassia, Castoreum, Colloquintids, Croc, Coral, Cubeb, Coffee, Cocoa, Gums Anime Armoniac Adragast, Eleat Galbanum Guts Labdanum Opoponax Sazage-*

nna Sandarac Lacca, Jalap, Monna, Mofic, Mirrb, Myse, Opium, Pearls, Quinquina, Hellebore, Galanga, Zedoary, Rubarb, Sarzaparilla, Storax, Sauguis Draconis, Senna, Sperma Ceti, Spica Nardi, Scammony, Sal Ammoniac, Sublimata, Tamarinds, Tea, Turpentine, Turbith, Tutia, Tartar Vitriol, &c. The Natural History, &c. whereof, see under their respective Articles.

The *Drugs* used by Dyers, are of two Kinds; *Colouring*, which give the Dye, or Colour; And *Non-Colouring*, which only dispose the Stuffs to take the Colours the better, or to render the Colours more shining. See DYING.

Of the first Kind, are, *Peffels, Wood, Indigo, Kermes, Cochineel, Madder, Turmeric, &c.*

Of the second Kind, are, *Alum, Tartar, Arsenic, Realgal, Salpetre, Common Salt, Sal Gemme, Sal Ammoniac, Crystal of Tartar, Agaric, Spirit of Wine, Urine, Tin, Wheat-or Pease-Flower, Starch, Lime, Ales, &c.*

There is a third Sort of *Drugs*, that answer both Intentions; As the *Root, Bark, and Leaf of the Walnut-tree, Galls, Copperofe, &c.* An Account of each of these *Drugs*, see under their proper Articles.

DRUGGET, in Commerce, a Sort of cheap Stuff, very thin, and narrow, usually all Wool, and sometimes half Wool and half Thread: Sometimes cross'd; but usually without Crossing.

Those cross'd, are wove on a Loom with two Treddles, after the same Manner as Linnen, Camelot, &c.

Mr. *Savery* invented a Kind of Gold, and Silver *Druggets*; the Warp being partly Gold- and Silver-thread, and the Wool Thread.

DRUIDS, the Priests, or Ministers of Religion, among the ancient *Celts, or Gauls, Britains, and Germans.*

Some Authors derive the Word *Druid*, and *Drus*, from the Hebrew דְּרוּשִׁים *Deruffim, Druffim, or Driffim*, which they translate, *Contemplators.*

The *Druids* were the first, and most distinguish'd Order among the *Gauls, and Britains*: They were choic'd out of the best Families; and the Honours of their Birth, join'd with those of their Function, procur'd 'em the highest Veneration among the People. They were vers'd in Astrology, Geometry, Natural Philosophy, Politicks, and Geography; and had the Administration of all sacred Things; were the Interpreters of Religion, and the Judges of all Affairs indifferently. Whoever refus'd Obedience to them, was declared impious, and accur'd.

We know but little as to their peculiar Doctrines; only that they believed the Immortality of the Soul, and the *Metempsychosis.*

They were divided into several Classes, or Branches; *vis.* the *Vacerri, Bardi, Eubages, Semothii, or Semothoi, and Saronide.*

The *Vacerri* are held to have been the Priests; the *Bardi* the Poets; the *Eubages*, the Augurs; and the *Saronides*, the Civil Judges, and Instructors of Youth. As to the *Semothoi*, who are said to have been immediately devoted to the Service of Religion, 'tis probable, they were the same with the *Vacerri*. See *BARDI, &c.*

Strabo, however, *L. IV. p. 197.* and *Picard* after him, in his *Celtopædia*, do not comprehend all these different Orders under the Denomination of *Druids*, as Species under their Genus, or Parts under the Whole; but make 'em quite different Conditions, or Orders.

Strabo, again, only distinguishes three Kinds; *Bardi, Vates, and Druids.* The *Bardi* were the Poets; the *Vates*, *O'drue*, (apparently the same with the *Vacerri*) were the Sacrificers, and Naturalists; and the *Druids*, beside the Study of Nature, applied themselves likewise to Morality. See *VATES.*

Diogenes Laertius assures us in his Prologue, that the *Druids* were the same among the ancient *Britains*, with the *Sophi, or Philosophers* among the *Greeks*, the *Magi* among the *Persians*, the *Gymnosophists* among the *Indians*, and the *Chaldeans* among the *Agyptians*. See *MAOI, GYMNOSOPHIST, &c.*

The *Druids* had one Chief, or *Arch-Druid* in every Nation, who acted as High-priest, or *Pontifex Maximus*. He had absolute Authority over all the rest; and commanded, decreed, punish'd, &c. at Pleasur. At his Death he was succeeded by the most considerable among the Survivors; and if there were several Pretenders, the Matter was ended by an Election, or put to the Decision of Arms.

The *Druids*, we have observ'd, were in the highest Esteem. They presided at Sacrifices, and other Ceremonies, and had the Direction of every Thing relating to Religion. The *British, and Gaulish* Youth flock'd to 'em in Crowds, to be instructed by 'em. The Children of the Noblesse, *Mets* tells us, they retir'd withal into Caves, or the most desolate Parts of Forests; and kept 'em there, sometimes for 20 Years, under their Discipline.

Beside the Immortality, and *Metempsychosis*, they instructed in the Motion of the Heavens, and the Course of the

the Stars, the Magnitude of the World, and the Earth, the Nature of Things, the Power and Wisdom of the Gods, &c. They preserved the Memory and Actions of great Men in their Verses, which they never allowed to be wrote down, but made their Pupils get 'em off by Heart. In their common Course of Learning, they are said to have taught 'em 24000 such Verses. They had the *Mysterse* in singular Veneration. *Pliny* relates the Ceremony wherewith they gather'd it every Year. L. XV. C. 44. They plac'd a World of Confidence in Serpents Eggs gather'd after a peculiar Manner, and under a certain Disposition of the Moon, described by *Pliny*; and imagin'd 'em effectual Means for the gaining of Law-Suits, and procuring the good Graces of Princes. And hence, the same Author concludes, it is, that the *Caduceus*, or Rod encompass'd with two Serpents Intwove, has been assum'd as a Symbol of Peace. *Suetonius*, in his Life of *Claudius*, asserts us, they sacrific'd Men; and *Mercury* is said to be the God they made these inhuman Sacrifices to. *Diod. Siculus* L. VI. observes, it was only upon extraordinary Occasions they made such Victims: as to consult what Measures to take, to learn what should befall 'em, &c. by the Fall of the Victim, the tearing of his Members, and the manner of his Blood gushing out. *Augustus* condemn'd the Custom: *Tiberius*, and *Claudius*, punish'd, and abolish'd it. See *Cæsar* L. VI. and *Mela* L. III. C. 2.

We learn from *Cæsar*, that they were the Judges, and Arbiters of all Differences and Disputes, both public and private, took Cognizance of Murders, Successions, Boundaries, and Limits; and decreed Rewards, and Punishments. Such as disobey'd their Decisions, they excommunicated, which was their principal Punishment: the Criminal being hereby excluded from all public Assemblies, and avoided by all the World; no body daring to speak to them, for fear of being polluted.

Servius observes, they had sometimes Interest and Authority enough to stop Armies, upon the Point of Engaging; and accommodate their Differences.

They held an Assembly every Year at a certain Season about the Middle of the Country, and there in a Place consecrated for the Purpose, kept their Affairs, and terminated the Differences of the People, who flock'd thither from all Parts.

Cæsar, who had seen of the *Druids* in Britain, was of Opinion, they had come thence into *Gaul*: But the more able among the Moderns, generally take this for a Mistake, and believe the very contrary. In effect, it appears pretty probable, that the ancient *Britons* were originally *Gauls*; that the *Celts*, or *Belgæ*, *Gaulish* Nations, were the first that enter'd our Island, and peopled it. And that the *Druids* went along with 'em.

Picard Celtesed. L. II. p. 58. believes the *Druids* to have been thus call'd from *Drui*, or *Dryuis*, their Leader, the 4th, or 5th King of the *Gauls*, and Father of *Saron*, or *Nauwes*. *Pliny*, *Salmafus*, *Vigener*, &c. derive the Name from *Drûe*, Oak; on Account of their inhabiting, or at least frequenting, and teaching in *Forests*; or perhaps, by reason, as *Pliny* says, they never sacrific'd but under the Oak. But 'tis hard to imagine, how the *Druids* should come to speak Greek. *Menage* derives the Word from the old British *Drus*, Demon, Magician. *Borel* from the Saxon *Dry*, Magician; or rather the old British *Dru*, Oak; whence he takes *Drûe* to be derived. *Gorop. Becanus* L. I. takes *Drui* to be an old *Celtic*, and German Word, form'd from *Trovuis*, or *Trovuis*, a Doctor of the Truth, and the Faith. This Etymology *Vossius* acquiesces in.

Hornius, in his History of Philosophy, L. II. C. 12. believes all the Learning and Philosophy of the *Druids* to have been derived from the Assyrian *Magi*, who are still call'd in *Germany*, *Truten*, or *Truttner*: And that, as *Magus* has lost its ancient Signification, which was honourable, and now signifies a Magician, or Sorcerer; *Druid*, which had the same Sense, has likewise degenerated, and now signifies no other, than a Person who has Commerce with the Devil, or is addicted to Magic. And accordingly, in *Frisland*, where these anciently were *Druids*, such People are call'd *Drui*. *Gale*, *Dickenfen*, and others, contend, that the *Druids* borrowed all their Philosophy, as well as Religion, from the *Jews*.

DRUIDE. There were also Women, call'd *Druides*, or *Druides*, among the *Gauls*, &c. The Authors of the *Historia Augusta*, particularly *Lampridius*, and *Vopiscus*, make mention thereof.

A *Druides*, says *Lampridius*, p. 125. told *Alexander Severus* something which denoted he should be unhappy.

Vopiscus, in the Life of *Aurelianus*, relates, that having consulted the *Gaulish Druids*, whether or no the Empire should remain in his Family; they gave him for Answer, that no Name should be more glorious in the Empire, than that of the Descendants of *Claudius*. On which the Historian takes Occasion to observe, that *Constantius*, the Father of *Constantine*, was a *Claudius*.

Lastly, the same *Vopiscus*, in his Life of *Numerianus*, relates, that a *Druid* had foretold *Dioclesian*, he should be Emperor, when he should have kill'd *Aper*, which signifies a Boar, and which was the Name of a *Prefectus Prætorii*, whom he kill'd with his own Hand.

Salmafus, in his Notes on *Lampridius*, is a little in doubt who these Women were: But he gives into the most easy, and plausible Opinion, that they were either the Wives, or the Children of the *Druids*.

DRUM, *Tympanum*, a Military, Musical Instrument, of Ufe principally among the Foot, serving to call the Soldiers together, to direct their March, Attack, Retreat, &c.

The Body of the *Drum* is made of a very thin Oak bent into a Cylinder, and cover'd at each End with Parchment, which is firin'd, or braced more or less, according to the Height, or Depth of the Sound required, by Strings; and struck with Sticks. The Height of the *Drum* is equal to its Breadth, which does not exceed two Foot and a half, by reason, no Skins can be had to cover bigger. There are also *Drums*, whose Body is of Brass.

DRUM, or **DRUMMER**, is also a Soldier destined to beat the *Drum*.

In each Company of Infantry there is at least one *Drum*, and a *Drum-Major* in every Regiment.

There are divers Beats of the *Drum*: As the *March*, *Double March*, *Assembly*, *Charge*, *Retreat*, *Alarm*, *Clo-madre*, &c.

DRUM, in Anatomy, or **EAR-DRUM**, a Cavity in the Inner Ear, thus call'd from the Resemblance it bears to the Figure of a *War-Drum*. See **EAR**.

Its outer Extreme is cover'd with a Membrane, by Anatomists more usually call'd *Tympanum*, or more properly, *Membrana Tympani*. See **TYPANUM**.

The Office of the *Membrana Tympani*, or *Drum of the Ear*, has been greatly controverted among Anatomists. The Account best warrant'd, is, that being a *Medium* for the Conveyance of the Sound to the Auditory Nerve, by its different Degrees of Tension, it serves to modify the Sound, and propagate it to the Nerve well proportioned, and commensurate thereto.

The ingenious Dr. *Haller* has improved on this Theory. He conceives, that the Action of the *Muscl*, whereby the *Drum* is stretch'd, and relax'd, does ordinarily, and constantly draw it to a moderate Tension; but when we have Occasion to listen, and give a particular Attention to any Sound, the Action of that *Muscle* is then more intense, and the *Drum* is drawn to a more than ordinary Tension, to facilitate the Passage of the Sound. See **ATTENTION**.

Upon these Considerations, that Author having a young Gentleman, who was born deaf, put into his Hands, and perceiving the great Defect to lye in the Want of a due Tension of the *Tympanum*, he advis'd his Mother to consult with Physicians, whether by some astringent Fumes, or otherwise, it might not be relieved to a due Tension.

In the mean Time he thought of a temporary Way, by the Impulse of any vehement Sound; as of a *Drum* beaten near him: Which Sound, during its Continuance, must needs give the *Tympanum* a Tension, by driving and swelling it outwards, as a fresh Gale of Wind fills the Sails of a Ship. And the Experiment succeeded according to Expectation. For so long as he beat a *Drum* fast, and loud by him, he could hear those that stood by him call him gently by his Name. But when the *Drum* ceased, he could no longer hear the same Persons calling him very loudly. See **DEAFNESS**.

DRUM, in Architecture. See **TAMBOUR**.

DRUNGUS, a Body, or Company of Forces, thus call'd, under the *Roman* Empire.

The Name *Drungus*, as appears from *Vegetius*, L. III. C. 16. was at first only applied to foreign, and even hostile Troops; but under the Eastern Empire, it came in Use for the Troops of the Empire it self. On which Occasion, the Word *Drungus* was fierin'd.

It amounts pretty nearly to what we call a *Regiment*, or *Brigade*. *Leunclavius* observes, that the *Drungus* was not less than 1000 Men, nor more than 4000.

The same *Leunclavius* observes, that *Drungus* among the modern *Greeks* signifies a *Staff*, or *Rod*, the Badge of a Dignity, or Office, as *Agla* among the *Turks*; and thinks, that the Name may be form'd from the Latin *Truncus*. But it appears from *Vegetius*, that *Drungus* is a Barbarous, not a *Latin* Word.

Spelman takes it for *Saxon*, because at this Day, *Troop*, or *Trough*, in *English* signifies a Multitude. *Salmafus* derives it from *Pyrgus*, *Beak*; on Account of the Battalion's being dispos'd beak-wise, or terminating in a Point.

DRUNKENNESS, physically consider'd, consists in a praeter-natural Compression of the Brain, and a Discomposition of its Fibres; occasion'd by the Fumes, or spirituous Parts of Liquors. 'Tis accounted for thus: An immoderate

Quantity of Wine taken into the Stomach, is there heated, and undergoes a Kind of Effervescence; which happens the more readily, as the Liquor abounds the more in Sulphur. By this Action it becomes attenuated, and rarified; So that the grosser Parts being left behind, its finer Parts are fitted to penetrate, and float through the Veins to the Brain; or are convey'd through the Veins to the Heart, whence, after a further Heat, and Rarefaction, they are sent through the caroted Arteries, &c. to the Brain. Hence necessarily arises a Repletion of the Meninges of the Brain; and a Compression of the Fibres of the Brain it self, from the fresh Stock of rarified Sulphur, continually exploded into them: Hence also an Obstruction of the Pores, or Passages of the Brain; a frequent, and disorderly Puffation of the Fibres, and the other Symptoms of this Disease.

Hence it is, that all Liquors will not give *Drunkenness*; but only such as by their Sulphur, or Spirit, are disposed for an Effervescence in the Stomach, and Heart, to diffuse their subtle attenuated Parts plentifully to the Brain. See BRAIN, NERVE, MUSCULAR MOTION, DELIRIUM, &c.

'Tis a popular Mistake, that the only Remedy for Gluttony, is *Drunkenness*; or that the Cure of a Surfeit of Meat, is a Surfeit of Wine: That which nothing can be more contrary to Nature. *Cheyne*. See DRINK.

The ancient *Lacedaemonians* used to make their Slaves frequently *Druck*, to give their Children an Aversion, and Horror for the same. The *Judians* hold *Drunkenness* a Species of Madnefs; and in their Language, the same Term *Ramjeu*, that signifies a *Drunkenard*, signifies also a Phrenetic. DRY MEASURE. See MEASURE.

DRYADES, in the Heathen Theology, the Nymphs of the Woods; a Sort of imaginary Deities, which the Ancients believed to inhabit the Woods, and Groves; and to hide themselves under the Bark of the Oak, call'd by the *Greeks* *Apé*. See GODDESS.

The *Dryades* differ'd from the *Hamadryades*, in that these latter were attach'd to some particular Tree, with which they were born, and with which they died; whereas the *Dryades* were the Goddesses of the Trees, and Woods in general, and liv'd at large in the Middle thereof. For tho' *Apé* properly signifies an Oak; it was also used in the general for *Tree*.

We likewise find mention made in divers Authors of a Kind of Prophets, or Witches, among the *Gauls*, call'd *Dryades*, or *Druides*. See DRUIDES.

DUCAL CROWN. See CROWN.

DUCAL. The Letters Patents granted by the Senate of *Venice* are call'd *Ducals*: So are the Letters wrote in the Name of the Senate, to foreign Princes. See DOG.

A Courier was dispatch'd with a *Ducal* to the Emperor, returning him Thanks for renewing the Treaty of Alliance (in 1716) against the *Turk*, with the Republic of *Venice*.

The Name *Ducal* is deriv'd hence, that at the Beginning of such Patents the Name of the *Duke*, or *Doge*, is wrote in Capitals, thus: *N . . . Dei Grasia Dux Venetiarum*, &c. See DUKE.

The Date of *Ducals* is usually in *Latin*; but the Body *Italian*.

DUCAT, a foreign Coin, either of Gold, or Silver, struck in the Dominions of a *Duke*; being about the same Value with a Piece of Eight, or a *French Crown*, or 4 Shillings and 6 Pence Sterling, when of Silver: and twice as much, when of Gold. See COIN.

The Origin of *Ducats* is refer'd to one *Lauginus*, Governour of *Italy*; who revolting against the Emperor *Justin* the Younger, made himself Duke of *Ravenna*, and call'd himself *Exarchus*, i. e. without Lord, or Ruler. And to shew his Independence, struck Pieces of Money of very pure Gold in his own Name, and with his own Stamp; which were call'd *Ducats*: as *Procopius* relates the Story.

After him, the first who struck *Ducats*, were the *Venitians*, who likewise call'd 'em *Cecobins*, or *Seguins*, from *Zacca*, the Place, where they first were struck. This was about the Year 1280, in the Time of *John Dandolo*: But we have pretty good Evidence, that *Roger*, King of *Sicily*, had coin'd *Ducats* as early as 1240. And *du Cange* scruples not to affirm, that the first *Ducats* were struck in the Duchy of *Ponille*, in *Calabria*.

The chief Gold *Ducats* now current, are the single, and double *Ducats* of *Venice*, *Florence*, *Genoa*, *Germany*, *Hungary*, *Poland*, *Sweden*, *Denmark*, *Flanders*, *Holland*, and *Zurich*. The heaviest of 'em weighs 5 Penny weight 17 Grains, and the lightest 5 Penny weight 10 Grains; which is to be understood of the double *Ducats*, and of the single, in Proportion.

The *Spaniards* have no *Ducats* of Gold, but in lieu thereof make Use of Silver Ones. Not that the Silver *Ducats* is a real Species, but only a Money of Account like our Pound. It is equivalent to 11 Rials. See RIAL.

The Silver *Ducats* of *Florence* serve there for *Piafers*, or *Crowns*. See CROWN.

DUCATOON, a Silver Coin, struck chiefly in *Italy*, particularly at *Milan*, *Venice*, *Florence*, *Genoa*, *Lucca*, *Mantua*, and *Parma*; Tho' there are also *Dutch*, and *Flemish Ducatoons*.

They are all nearly on the same footing; and being a little both finer and heavier than the *French Crown*, are valued at 2 Pence, or 3 Pence more; viz. at about 4 Shill. 8 Pence Sterl. See COIN.

There is also a Gold *Ducatoon*, struck, and current chiefly in *Holland*. It is equivalent to 20 Florins, or Guildens; on the footing of 1 Shilling, 11 Pence, half Penny, the *Florin*. See FLORIN.

DUCES LOCUM, a Writ commanding one to appear at a Day in Chancery, and to bring with him some Evidences, or other Things, which the Court would view.

The same is also granted, where a Sheriff having in his Custody a Prisoner, in a personal Action, returns upon a *Habeas Corpus*, that he is *aequo languidus*, that without Danger of Death he cannot have his Body before the *Judices*.

DUCENARIUS, in Antiquity, an Officer in the *Roman Army*, who had the Command of two hundred Men.

The Emperors had also *Ducenarii* among their Procurators, or Intendants, call'd *Procuratores Ducenarii*. Some say, that these were such whose Salary was 200 Sesterces; as, in the Games of the *Circus*, Horses hir'd for two hundred Sesterces, were call'd *Ducenarii*.

Others hold, that *Ducenarii* were such as levied the two hundredth Penny; Or the Officers appointed to inspect the Raising of that Tribute.

The Inscriptions at *Palmyra* have frequently the Word *Ducenarius*, in *Greek* *Δουκηνριος*.

DUCKING-STOOL, in our Customs. See CUCKLING-STOOL.

DUCKING, or plunging in Water, *Olaus Magonus* tells us, was a Diversion anciently practis'd among the *Goths*, by Way of Exercise: But among the *Colts*, and *Franks*, a Sort of Punishment. *Tacitus* likewise assures us, that it was used among the ancient *Germanus* for the Lazy, and infamous. At *Marfeilles*, and *Bourbon*, their Men and Women of scandalous Life are condemn'd to the *Cale*, as they call it, that is, to be shut up naked to the Shift, in an Iron Cage fasten'd to the Yard of a Chaloupe, and duck'd several times in the River. The same is done at *Toulouse*, to Blasphemers. It is also a Punishment for the Sea-men; who are thrown into the Sea from the Top of the Yard of a Main-Mast into the Sea, several times, according to the Quality of their Offence. Sometimes a Canon-Bull is fasten'd to their Feet, to make the Fall the more rapid. They have also a Kind of *Dry Ducking*, wherein the Patient is only suspended by a Cord, a few Yards above the Surface of the Water. This is a Kind of *Strappado*. The Punishment is made public by the Discharge of a Canon. See BAPTISING.

DUCT, *Ductus*, in Anatomy, a Term, in its general Sense, applied to all the Canals, or Tubes of a Body, as Veins, Arteries, &c. through which the Humors, Spirits, &c. are convey'd. See CANAL, TUBE, &c.

The Word has also a more immediate Application to several particular Vessels; as the

DUCTUS THORACICUS. See DUCTUS THORACICUS.

DUCTUS COMMUNIS CHOLEDOCHUS, a large Canal form'd by an Union of the *Ductus Cysticus*, and *Hepaticus*. This *Duct* descending about 4 Inches, discharges it self into the *Duodenum*, by an oblique Infertion, which does the Office of a Valve, in preventing the Regress of the Bile convey'd hither into the Intestines. See BILE.

It sometimes opens into the *Duodenum* at the same Aperture with the *Pancreatic Duct*.

DUCTUS HEPATICUS, call'd also *Mearus Hepaticus*, and *Biliary Pore*. See PORUS BILIARIS.

DUCTUS CYSTICUS, or *Mearus Cysticus*, a Canal about the Bigness of a Goose-quill, which arising from the Neck of the Gall-bladder, about 4 Inches Distance therefrom, joins the *Porus Biliaris*, and together with it constitutes the *Ductus Communis*. See CYSTIC DUCT.

DUCTUS CYSTO-HEPATICUS, or *Hepaticocysticus*. See CYSTO-HEPATIC.

DUCTUS ADIPOSI, are little Vascules in the *Omentum*, which either receive the Fat separated from the *Adiposæ Loculi*, or Cells, or else brings it to them: For the extreme Fineness of these Vessels renders it extremely difficult to trace their Origin, or Course.

Indeed it remains somewhat doubtful, whether they be hollow, and real *Ducts*; or whether they be not solid Fibres, such as are observed in the Spleen, along which the liquid Fat does, as *Dr. Drake* expresses it, drill its Way, as the easiest it can find. *Malpighi*, his first Discoverer, inclines to the former Opinion. All we know for certain is, that they terminate in little Globules of Fat, concerning the Use and Progress whereof much remains to be discover'd. See FAT.

Ductus Pancreaticus, a little Canal arising from the *Pancreas*, and opening into the *Duodenum*, serving to discharge the Pancreatic Juice into the Intestines. See **PANCREAS**, and **PANCREATIC JUICE**.

This *Duct* being first discover'd by *Virgungus*, is frequently call'd *Ductus Virgungianus*.

Ductus Salivales, the excretory Tubes of the Salivary Glands; serving to discharge the secreted *Saliva* into the Mouth. See **SALIVARY DUCTS**.

Ductus Lacrymales, the excretory Vessels of the *Glandulae Lacrymales*, serving for the Effusion of Tears. See **LACRYMAL DUCTS**.

Ductus Alimentalis, a Name that accurate Anatomists, Dr. *Jyson*, gives the Gula, Stomach, and Intestines; all which make but one continued Canal, or *Duct*. This *Duct* he makes the proper Characteristic of an Animal.

Ductus Urinarius, the same as the *Urethra*. See **URETHRA**.

Ductus Umbilicalis. See **FUNICULUS UMBILICALIS**.

Ductus Chyliferus, } the same as *Ductus Thoracicus*.

Ductus Rosiferus, }

See **THORACIC DUCT**.

Ductus Thoracicus. See **THORACIC DUCT**.

The *Thoracic Duct*, Dr. *Wharton* assures us, was observ'd by *Bartbol. Enfaebio* in 1563; but its Use, and Communication with the *Receptaculum Chyli*, was unknown. And hence *Pecquet*, a Physician of *Dieppe*, is commonly suppos'd to have first discover'd it in 1651; whence its Denomination *Ductus Pecquetianus*: Tho' the Description he gives of its Insertion is faulty. *Van Horne* confounds it with the *Receptaculum*, or as he calls it, *Cisterna Chyli*.

DUCTILITY, in *Physicks*, a Property of certain Bodies, whereby they become capable of being beaten, press'd, drawn, or stretch'd forth, without breaking; Or, whereby they are capable of great Alterations in their Figure, and Dimensions; and of losing in one Way, as they gain in another. See **MARTER**, **BODY**, &c.

Such are Metals, which being us'd by the Hammer, gain in Length and Breadth what they lose in Thickness; or being drawn into Wire through Iron, grow longer as they become slenderer. See **METAL**.

Such, also, are Gums, Glues, Resins, and some other Bodies, which, tho' not malleable, yet may be denominated *Ductile*, in as much as when soft'n'd by Water, Fire, or some other Menstruum, they may be drawn into Threads. See **MALLEABLE**.

So that we have two Classes of *Ductile* Bodies. The one *Hard*, and the other *Soft*: Each of which we shall bestow some Considerations upon.

The Cause of *Ductility* is very obscure; as depending in great Measure on *Hardness*, than which there is nothing in Nature we know less of. 'Tis true, we usually account for *Hardness* from the Force of Attraction between the Particles of the hard Body; and for *Ductility* from the Particles of the *ductile* Body, being, as it were, joyned, and entangled within each other. See **HARDNESS**, **COMMISSION**, &c.

Instead of fanciful Hypotheses to account for *Ductility*; we shall here entertain the Reader with some truly amazing Circumstances and Phenomena thereof.

One of the Properties of Gold, is to be the most *ductile* of all Bodies. See **GOLD**.

Of this, the Gold-beaters, and Gold Wire-drawers, furnish us with abundant Proof. *Fa. Merfenne*, *Monfr. Robault*, *Dr. Halley*, &c. have made Computations thereof: But they trusted to the Reports of the Workmen. *Monfr. Reaumur*, in the *Memoires de l'Academie Royale des Sciences An. 1713*, took a surer Way: He made the Experiment himself. A single Grain of Gold, he found, even in the common Gold-Leaves, us'd in most of our Gildings, is extended into 36 and a half square Inches; and an Ounce of Gold, which in Form of a Cubic is not half an Inch either high, broad, or long, is beat under the Hammer into a Surface of 146 and a half square Feet: An Extent almost double what could be done 90 Years ago. In *Fa. Merfennes* time, it was deem'd prodigious, that an Ounce of Gold should form 1600 Leaves; which together only made a Surface of 105 square Feet. See **GOLD-BEATING**.

But the Dilatation of Gold under the Hammer (how considerable soever) is nothing to that it undergoes in the Drawing Iron. There are Gold-Leaves, in some Parts, scarce $\frac{1}{160000}$ Part of an Inch thick; but $\frac{1}{360000}$ Part of an Inch is a notable Thickness, in Comparison of that of the Gold spun on Silk in our Gold-Thread.

To conceive this prodigious *Ductility*, it is necessary, to have some Idea of the Manner wherein the Wire-drawers proceed. The Wire, and Thread we commonly call *Gold-Thread*, &c. which every body knows is only Silver-Wire gilt, or cover'd over with Gold, is drawn from a large Ingot of Silver, usually about 30 Pound Weight. This they round into a Cylinder, or Roll, about an Inch and a half in Diameter, and 22 Inches long; and cover it over with the Leaves

prepared by the Gold-beater, laying one over another, till the Cover is a good deal thicker than that in our ordinary Gilding. And yet even then 'tis very thin; as will be easily conceiv'd from the Quantity of Gold that goes to gild the 30 Pound of Silver. Two Ounces, ordinarily, do the Business; and frequently little more than one. In effect, the full Thickness of the Gold on the Ingot rarely exceeds $\frac{1}{100}$ or $\frac{1}{1000}$ Part, and sometimes not $\frac{1}{10000}$ Part of an Inch.

But this thin Coat of Gold must be yet much thinner: The Ingot is successively drawn through the Holes of several Irons each less than other, till it be as fine, or finer than a Hair. Every new Hole lessens its Diameter; but it gains in Length what it loses in Thickness, and of Consequence increases in Surface. Yet the Gold still covers it; it follows the Silver in all its Extension; and never leaves the minute Part bare, not even to the Microscope. Yet, how inconceivable must it be attenuated while the Ingot is drawn into a Thread, whose Diameter is 9000 times less than that of the Ingot.

Mr. Reaumur, by exact weighing, and rigorous Calculation, found, that one Ounce of the Thread was 3232 Feet long, and the whole Ingot 1163500 Feet, *Paris Measure*, or 96 French Leagues; equal to 1264400 English Feet, or 240 Miles English: An Extent which far surpasses what *Fa. Merfenne*, *Furriere*, *Dr. Halley*, &c. ever dream'd of. *Merfenne* says, that half an Ounce of the Thread is 100 Toises, or Fathoms long; on which supposing, an Ounce would only be 1200 Feet: whereas *Monfr. Reaumur* finds it 3232. *Dr. Halley* makes 6 Foot of the Wire one Grain in Weight, and one Grain of the Gold, 93 Yards, and consequently the ten thousandth Part of a Grain above one Third of an Inch. The Diameter of the Wire he found one 186th Part of an Inch; and the Thickness of the Gold one 154500th Part of an Inch. But this, too, comes short of *Monfr. Reaumur*: For on this Principle, the Ounce of Wire would only be 2680 Feet.

But the Ingot is not yet got to its full Length. The greatest Part of our Gold-Thread is spun, or wound on Silk; and before they spin it, they flat it, by passing it between two Rolls, or Wheels of exceedingly polish'd Steel; which Wheels, in flattening it, lengthen it by above one Seventh. So that our 240 Miles are now got to 274. The Breadth, now, of these *Lamine*, or Plates, *Monfr. Reaumur* finds, is only one 8th of a Line, or one 96th of an Inch, and their Thickness one 5072th. The Ounce of Gold, then, is here extended to a Surface of 1190 square Feet; whereas, the utmost the Gold-beaters can do, we have observ'd, is, to extend it to 146 square Feet.

But the Gold, thus exceedingly extended, how thin must it be? From *Monfr. Reaumur's* Calculus it is found to be one 175000th of a Line, or one 2100000th of an Inch; which is scarce one 13th of the Thickness of *Dr. Halley's* Gold. But he adds, that this supposes the Thickness of the Gold every where equal; which is no ways probable: For in beating the Gold-leaves, whatever Care they can bestow, 'tis impossible to beat 'em equally. This we easily find by the greater Opacity of some Parts than others. And where the Leaf is thickest, it will gild the Wire the thickest.

Monfr. Reaumur computing what the Thickness of the Gold must be where thinnest, finds it only one 3150000th of an Inch. But what is the one 3150000th Part of an Inch? Yet this is not the utmost *Ductility* of Gold: For instead of two Ounces of Gold to the Ingot, which we have here computed upon, a single one might have been used; And then the Thickness of the Gold, in the thinnest Places, would only be the 6300000th Part of an Inch.

And yet, as thin as the Plates are, they might be made twice as thin, yet still be gilt; by only pressing 'em more between the Wheels, they are extended to double the Breadth, and proportionably in Length. So that their Thickness at last will be reduced to one thirteenth, or fourteenth Millionth Part of an Inch.

Yet with this amazing Thinness of the Gold, 'tis still a perfect Cover for the Silver. The best Eye, nor even the best Microscope, cannot discover the least Chain, or Discontinuity. There is not an Aperture to admit Alcohol of Wine, the subtilist Fluid in Nature, nor even Light it self. Add, that if a Piece of this Gold-Thread, or Gold-plate, be laid to dissolve in *Aqua fortis*, the Silver will be all excavated, or cut out, and the Gold left entire in little Tubules.

As to the *Ductility* of *Soft Bodies*, it is not yet carried to that Pitch. The Reader, however, must not be surpris'd, that among the *ductile* Bodies of this Class, we give the first Place to the most brittle of all others, *Glass*. We all know, that when well penetrat'd with the Heat of the Fire, the Workmen can figure, and manage it like soft Wax. But what is most remarkable, is, that it may be drawn, or spun out into Threads exceedingly fine, and long.

Our ordinary Spinners don't turn their Threads of Silk, Flax, or the like, with half the Ease, and Expedition, as the *Glass-Spinners* do Threads of this brittle *Marter*. We have

of 'em us'd in Plumes on Childrens Heads, and divers other Works, much finer than any Hair; and which bend, and wave like them with every Wind.

Nothing is more simple and easy than the Method of making them: There are two Workmen employ'd: The first holds one End of a Piece of Glass over the Flame of a Lamp; and when the Heat has soften'd it, a second Workman applies a Glass-hook to the Metal thus in Fusion; and withdrawing the Hook again, it brings with it a Thread of Glass, which still adheres to the Mass. Then, fitting his Hook on the Circumference of a Wheel about a Foot and a half in Diameter, he turns the Wheel as fast as he pleases; which drawing out the Threads, winds it on its Rim; till after a certain Number of Revolutions it is cover'd with a Skin of Glass-Thread.

The Mass in Fusion over the Lamp, diminishes insensibly, being wound out, as it were, like a Peloton, or Clue upon the Wheel; and the Parts, as they recede from the Flame, cooling, become more coherent with those next to 'em; and this by Degrees: The Parts nearest the Fire, are always the least connected together, and of Consequence must give Way to the Effort the rest make to draw 'em towards the Wheel.

The Contour of these Threads is usually a flat Oval, being three or four times as broad as thick. Some of 'em scarce seem bigger than the Thread of a Silk-Worm; and are flexible to a Miracle. If the two Ends of such Threads be knotted together, they may be drawn and bent, till the Aperture, or Space in the Middle of the Knot don't exceed one 4th of a Line, or one 48th of an Inch in Diameter.

Hence, Mr. *Reaumur* advances, that as the Flexibility of Glass increases in Proportion to the Fineness of the Threads; had we but the Art of drawing Threads as fine as those of a Spider's Web, we might weave Stuffs, and Cloaths hereof, for Wear.

Mr. *Reaumur* made some Experiments this Way: He could make Threads fine enough, as fine, in his Judgment, as any Spider's web, but could never make 'em long enough, to do any Thing with 'em.

The same ingenious Author observes, that the Matter whereof Spiders and Silk-worms form their Threads, is brittle, when in the Mass, like dry Gums. As 'tis drawn out of their Bodies, it assumes a Consistence, much as Glass-threads become hard, as they recede from the Lamp; tho' from a different Cause. The *Ductility* of this Matter, and the Apparatus thereto being much more extraordinary in Spiders, than in Silk-worms; we shall here only consider the former. Something has already been said of each under the Article SILK, which see.

Near the Anus of the Spider are six *Papille*, or Teats, represented in *Nat. Hist. Fig. 6*. The Extremities of the several *Papille* are furnish'd with Holes, that do the Business of Wair-drawers, in forming the Threads. Of these Holes, Mr. *Reaumur* observes, there are enough in the Compass of the smallest Pins-head, to yield a prodigious Quantity of distinct Threads. The Holes are perceiv'd by their Effects: Take a large Garden-Spider ready to lay its Eggs, and applying the Finger on a Part of its *Papille*, as you withdraw that Finger, it will take with it an amazing Quantity of different Threads.

Monfr. *Reaumur* has often told 70, or 80, with a Microscope, but has perceiv'd, that there were infinitely more than he could tell. In effect, if he should say, that each Tip of a *Papille* furnish'd a thousand, he is persuaded, he should say vastly too little. The Part is divided into an Infinity of little Prominences, like the Eyes of a Butter-fly, &c. Each Prominence, no doubt, makes its several Thread; or rather, between the several Protuberances, are Holes that give Vent to Threads; the Use of the Protuberances, in all probability, being to keep the Threads at their first Exit, ere yet harden'd by the Air, a-part. In some Spiders these Protuberances are not so sensible; but in lieu thereof there are Tufts of Hair, which may serve the same Office, viz. to keep the Threads a-part. Be this as it will, there may Threads come out at above a thousand different Places in every *Papille*; consequently, the Spider having six *Papille*, has Holes for above 6000 Threads. 'Tis not enough, that their Apertures are not only immensely small: The Threads are already form'd ere they arrive at the *Papille*, each of 'em having its little Sheath, or Duct, in which it is brought to the *Papille* from a good Distance.

Monfr. *Reaumur* traces 'em up to their Source, and shows the Mechanism by which they are made. Near the Origin of the Belly, he finds two little soft Bodies, which are the first Source of the Silk. Their Form and Transparency resemble those of Glass-beads, (see Fig. 7.) by which Name we shall hereafter denote them. The Tip of each Bead, as R, goes winding, and makes an Infinity of Turns, and Returns towards the *Papille*. From the Base, or Root of the Bead, proceeds another Branch much thicker; which winding variously, forms several Knots, and takes its Course like

the other, towards the Hind-part of the Spider. In these Beads, and their Branches, is contain'd a Matter proper to form the Silk, only that it is too soft. The Body of the Bead is a Kind of Reservoir, and the two Branches two Canals proceeding from it. A little further backward, there are two other lesser Beads, which only send forth one Branch a-piece, and that from the Tip. Beside these, there are three other larger Vessels on each Side the Spider, which Mr. *Reaumur* takes for the last Reservoir, where the Liquor is collected. They are represented (Fig. 8.) The biggest is near the Head of the Insect, and the least near the Anus. They all terminate in a Point; and from the three Points of these three Reservoirs it is, that the Threads, at least the greatest Part of the Threads, drawn out at the three *Papille*, proceed. Each Reservoir supplies one *Papille*. Lastly, at the Roots of the *Papille*, are discern'd several fleshy Tubes: probably, as many as there are *Papille*. Upon lifting up the Membrane, or Pellicle, that seems to cover these Tubes, they appear full of Threads, all distinct from each other, and which, of Consequence, under a common Cover, have each their particular One; being kept like Knives in Sheaths. The immense Quantity of Threads contain'd here, Monfr. *Reaumur* concludes, upon tracing their Course, do not all come from the Points of the Reservoirs; but some from all the Turns, and Angles; nay probably, from every Part thereof. But by what Conveyances the Liquor comes into the Beads, and out of the Beads into the Reservoirs, remains yet to be discover'd.

We have already observ'd, that the Tip of each *Papille* may give Passage to above a thousand Threads; yet the Diameter of that *Papille* does not exceed a small Pins-head: But we were there only considering the largest Spiders.

If we examine the young, rising Spiders, produced by those; we shall find, that they no sooner quit their Egg, than they begin to spin. Indeed their Threads can scarce be perceiv'd; but their Webs, form'd thereof, may. They are frequently as thick, and close, as those of House-Spiders; And no Wonder: there being often 4, or 500 little Spiders concurring to the same Work. How minute must their Holes be! The Imagination can scarce conceive that of their *Papille*. The whole Spider is perhaps less than a *Papille* of that which produced it.

This is easily seen: Each big Spider lays 4 or 500 Eggs; these Eggs are all wrapp'd up in a Bag; and as soon as the young Ones have broke through the Bag, they begin to spin. How fine must their Threads be?

Yet is not this the utmost Nature does: There are some Kinds of Spiders so small at their Birth, that they are not visible without a Microscope. There are usually found an Infinity of 'em in a Cluster, and they only appear like a Number of red Points. And yet there are Webs found under them, tho' well nigh imperceptible. What must be the Tenacity of one of these Threads? The smallest Hair must be to one of these what the most massive Bar is to the finest Gold-wire above mentioned.

The Matter whereof the Threads are form'd, we have observ'd, is a viscid Matter. The Beads are the first Receptacles where it is gather'd, and the Place where it has the least Consistence. 'Tis much harder when got into the six great Reservoirs, whether 'tis carried by Canals from the former: This Consistence it acquires in good Measure in its Passage; Part of the Humidity being dissipated in the Way; or separated by Parts designed for that Purpose.

Lastly, the Liquor is dried still further, and becomes Thread, in its Progress through the respective Canals to the *Papille*. When these first appear out at the Holes, they are still glutinous; so that such as spring out of neighbouring Holes, stick together. The Air compleats the drying.

By boiling the Spider, more, or less, the Liquor is brought to a greater or less Consistence, fit to draw out into Threads, for 'tis too fluid for that Purpose, while yet inclos'd in its Reservoirs.

The Matter contain'd in these Reservoirs, when well dried, appears a transparent Gum, or Glue, which breaks when much bent: Like Glass, it only becomes flexible by being divided into the finest Threads. And probably 'twas on this Account Nature made the Number of Holes so immense. The Matter of the Silk form'd in the Bodies of Spiders being much brittle than that form'd in Silk-worms, needed to be wound smaller. Otherwiz we don't conceive, why the should form a great Number of Threads, which were afterwards to be reunited: a single Canal might have done. See DIVISION-LITV.

DUEL, a single Combat, at a Time and Place appointed, in Consequence of a Carrel, or Challenge. See CHALLENGE, &c. Duels were anciently allowed by common Law, in Cases where Proof could not be had. In which Sense *Fleta* defines *Duel*, *Singularis Pugna inter duos ad probandum Veritatem Litis, & qui vicit, probasse intelligitur*. Stat. de Finib. Levat. 27. Ed. 1. See COMBAT.

This *Duelling* was fo general a Method of terminating Differences among the Nobles; that even Ecclesiasticks, Priests, and Monks were not excus'd from the same. Only, to prevent their being stain'd with Blood, they oblig'd 'em to procure Champions to fight in their stead; as is shewn at large by Father *Dacberi*, in the VIIIth Tome of his *Spicilegium*. See *CHAMPION*.

None were excepted but Women, sick People, and Cripples, and such as were under 21 Years of Age, or above 60.

The Custom was for the two Champions to enter a List, or small Enclosure, by the Authority of the ordinary Judge, not only on Criminal Occasions, but on some Civil Ones, for the Maintenance of their Right.

The Monk *Sigbert* even relates, that a Question on a Point of Law being presented to the Emperor *Otho I. viz.* whether the Representation had Place in direct Succession: And the Doctors finding themselves embarras'd in the Resolution thereof; the Emperor remitted the Decision of so critical a Point to the Judgment of Arms; and pitch'd on two bold Fellows to maintain the *pro* and the *contra*. The Victory fell to him who contend'd for the Representation; In Favour of whom a Law was straightway made, which is in Force to this Day.

This Custom came originally from the Northern Nations; among whom it was a Custom to end all their Differences by Arms; as we are assur'd by *Paterculus*. It afterwards pass'd as a Law among the *Germani*, *Danes*, and *Franks*; especially after *Gondebaud*, King of the *Burgundians*, admitted it instead of Swearing. Mr. *Godeau*, in his History of the Church, VII. Cent. says, it was the *Lombards* who first introduced into *Italy* the Barbarity of single Combats, whence the Custom spread throughout the rest of *Europe*.

The Form of the Combat was this: The Accuser and Accused giving Pledges to the Judge, on their respective Behalf; the Judge took first up that of the Defendant, and next that of the Demandant. They were then both clap'd up in safe Prison; and the Chief Justice was to furnish 'em with suitable Arms. Such as fought on Foot had only a Sword and Buckler. The Horse-men were arm'd at all Points, as well as their Horses.

The Day of Combat being come, they made Choice of four Cavaliers, to guard the Field; and perform'd divers Ceremonies, Prayers, Oaths, &c. describ'd by *Passquier*, and other Authors, quoted by *de Cange*, who mentions an Ordinance of King *Philip the Fair* in 1306, prescribing the several Rules, Conditions, and Ceremonies, which are curious to see.

The Vanquish'd, whether Accuser, or Accused, was punish'd with Death, or Mutilation of Members, and ignominiously drag'd out of the Camp, hung on a Gibbet, or burn'd, according to the Circumstances of the Case.

This Way of trying by *Duel*, was insinuated as a Method of consulting Providence, to learn who was the Criminal; and it was imagin'd, that God thus interrogated, would not fail to declare himself in Favour of the Innocent. But it happen'd so often, that the unjust Accuser came off victorious; that they began to be convinced, they must not prescribe to his Wisdom, the Necessity of interrupting the Course of second Causes. This was giving Rules to Murder, and disguising Assassinations under Method and Measure. See *SOA 728*.

Saxo Grammaticus observes, that as early as the Year 981, the Kings of *Denmark* had abrogated the Proof by *Duel*; and in lieu thereof, appointed the Proof by red hot Iron, which was annull'd in its Turn. See *ORDAL*.

But *Duels* were condemn'd before by a Council held at *Valence* in 853; where the Person who kill'd his Enemy, was excommunicated; and the Person kill'd, pronounced unworthy of Burial. Afterwards, the Popes *Nicholas I. Celestin III.* and *Alexander III.* likewise interpos'd; and *Frederic I.* and *II.* prohibited 'em in *Germany*. *St. Louis* did what he could to abolish 'em in *France*; but his Ordinance only took Place on his own Lands, and not on those of his Vassals. After his Example, the Counts of *Arvergne* and *Poitou*, and several other Lords, forbid 'em likewise. *Philip the Fair*, following the Foot-steps of his Grand-father, *St. Louis*, forbid all Gages, or Pledges of *Bastel*; and yet he permitted 'em in four Cases, in the Ordinance above-mentioned of the Year 1306. The last *Duel* of Note was in the Year 1547, before King *Henry II.* between *Jarnac* and *Chatigneraie*, mention'd by *Thouamus*, and *de Serres*.

In *England*, the Trial by *Duel* is disus'd; tho' the Law on which it is founded be still in Force. The last Trial of this Kind admitted, was in the 6th Year of King *Charles I.* between *Donnaid*, Lord *Rey*, or *Rhee*, Appellant, and *David Remley* Esquire, Defendant, in the painted Chamber at *Westminster*.—*Stephanus de Nerbona omnibus—scitis me desisse Wilhelmo filio Radulphi de Filmgele pro Homagio & servitio suo, & propter Duellum quod fecit pro me—suas virgatas Terre.*

DUEL is also us'd for a single Combat on some private Quarrel, or Occasion.

The *Duel* must be premeditated; otherwise 'tis only a *Rencontre*. See *RENCONTRE*.

The Holly, or rather Madness of *Duelling* reign'd fur some Ages in *France*; where the Flower of the Noblesse perish'd thereby. 'Tis one of the Glories of the late *Louis XIV.* to have us'd all his Power and Authority towards abolishing *Duels*. The severe Edicts and Laws he made against *Duels*; put a Stop to the Custom.

The Word is form'd from *Duellum*, us'd by the barbarous *Latin* Writers, quasi *duorum bellum*.

DUKE, a sovereign Prince, without the Title, or Quality of King: Such are the *Duke of Savoy*; *Duke of Parma*, &c. See *PRINCE*.

There are also two Sovereigns, that have the Title of *Great-Duke*: The *Grand-Duke of Tuscany*, and the *Grand-Duke of Moscow*, now call'd the *Czar*, or Emperor of *Russia*. The Emperor of *Germany* is *Arch-Duke of Austria*.

The Word is borrow'd from the modern *Greeks*, who call *Zoncas*, what the *Latins* call *Dux*.

DUX is also a Title of Honour, or Nobility, the next below *Princes*. See *NOBILITY*, *PRINCE*, &c.

The *Ducate*, or Dignity of *Duke*, is a *Roman* Dignity, denominat'd a *Ducento*.

The first *Dukes*, *Duces*, were the *Dufores Exercituum*, Commanders of Armies. Under the later Emperors, the Governours of Provinces were entitl'd *Duces*. In latter Times the same Denomination was given to the Governours of Provinces in Time of Peace.

The first Governour in Quality of *Duke*, was a *Duke of the Marches Rhetica*, or *Grisons*, whereof mention is made in *Cassiodorus*. The *Goths*, and *Frandals*, upon their over-running the Provinces of the Western Empire, abolish'd the *Roman* Dignities wherever they settl'd. But the *Franks*, &c. to please the *Gaulish* People, who had long been us'd to that Form of Government, made it a Point of Politicks, not to change any Thing therein; and accordingly divid'd all *Gaul* into *Duchies*, and *Counties*; and gave the Names sometimes of *Dukes*, and sometimes of *Counts*, *Comites*, to the Governours thereof. See *COUNTY*.

In *England*, during the *Saxon* Time, *Camden* observes, the Officers and Commanders of Armies were call'd *Dukes*, *Duces*, after the ancient *Roman* Manner, without any Addition. After the *Conqueror* came in, the Title lay dormant, till the Reign of *Edward III.* who created his Son *Edward*, first call'd the *black Prince*, *Duke of Cornwall*. After whom, there were more made in such a Manner as that their Titles descend'd to their Posterity.

They were created with much Solemnity, per *Cincturam Gladii, Cappaque, & Circuli Aurei in Capite Insignitum*.

Tho' the *French* retain'd the Names, and Form of the Ducal Government, yet under their second Race of Kings, there was scarce any such Thing as *Dukes*; but all the great Lords were call'd *Counts*, *Peers*, or *Barons*. Excepting, however, the *Dukes of Burgundy*, and *Aquitaine*; and a *Duke of France*, which was a Dignity, *Hugh Capet* himself held, corresponding to the modern Dignity of *Maire de Palais*, or the King's Lieutenant.

By the Weakness of the Kings, the *Dukes*, or Governours made themselves Sovereigns of the Provinces trust'd to their Administration. This Change happen'd chiefly about the Time of *Hughes Capet*; when the great Lords began to dismember the Kingdom; so that that Prince found more Competitors among 'em than Subjects. 'Twas even with a deal of Difficulty they could be brought to own him their Superior, and to hold of him by Faith, and Homage.

By Degrees, what with Force, and what by Marriages, these Provinces, both *Dutchies*, and *Counties*, which had been rent from the Crown, were re-united. But the Title *Duke* was no longer given to the Governours of Provinces.

From that Time *Duke* became a mere Title of Dignity, affect'd to a Person, and his Heirs Male, without giving him any Domain, Territory, or Jurisdiction over the Place whereof he is *Duke*. All the Advantages thereof consist in the Name, and the Precedence it gives 'em.

The *Dukes* of our Days retain nothing of their ancient Power, but the Coronet on their Escutcheon; which is the only Mark of their departed Sovereignty.

They are created by Patent, Gilture of the Sword, Mantle of State, Imposition of a Cap, and Coronet of Gold on the Head, and a Verge of Gold in their Hand. See *CORONET*, *GRACE*, &c.

The eldest Sons of *Dukes* are by the Courtesy of *England* styl'd *Marquises*, and the younger Sons, *Lords*, with the Addition of their Christian Name, as *Lord James*, *Lord Thomas*, &c. and take Place of *Viscounts*, tho' not so privileged by the Laws of the Land. A *Duke* has the Title of *Grace*; and being writ to, is stild, in the *Heralds* Language, *Moh* *begb*, *potens*, and *Noble Prince*. *Dukes* of the Blood

Royal, are filed, *Most high, most mighty, and Illustrious Princes.*

DUKE-DUKE, a Quality given in Spain to a Grandece of the House of *Sylva*, on Account of his having several Duchies, by the uniting of two considerable Houses in his Person.

Don *Rodrigo de Sylva*, eldest Son of Don *Roy Gomez de Sylva*, and Heir of his Duchies, and Principalities, married the eldest Daughter of the *Duke de l'Infantado*; In Vertue of which Marriage, the present *Duke de Pastrana*, who is descended therefrom, and is Grand-son of Don *Rodrigo de Sylva*, has added to his other great Titles, that of *Duke-Duke*, to distinguish himself from the other *Dukes*, some whereof may enjoy several Duchies, but none so considerable Ones, nor the Titles of such eminent Families.

DULCIFYING, the Sweetening of any Thing: a Term used in Physick, for rendering a Fluid less acid, and rough, either by taking away its Salts, or breaking their Points, or covering 'em with something smooth, and soft.

DUMBNESS, the State of a Person who wants the natural Use of Speech. People born deaf, are said to be naturally dumb, as not being able to learn Words. See **DEAFNESS**.

Dumbness is sometimes the Result of the Want, or even the ill Conformation, of the Tongue. See **TONGUE**.

Yet in the 3d Tome of the *Ephem. German.* we have an Account of a Book, entitled, *Jac. Rolandi Aglossostomographia, sive Descriptio Oris sine Lingua, quod perfecte loquens*, &c. See **MUTE**.

DUNG, in Agriculture, and Gardening. See **MANURE**, and **COMPOST**.

DUNGEON, DONGEON, or DONJON, the most elevated Part of a Castle built after the ancient Mode; serving as a Watch-Tower, or Place of Observation. See **CASTLE**.

In some Castles, as that of *Vincennes*, &c. the *Duncheon*, or *Donjon*, serves as a Prison for Persons they would have the most securely kept; whence our Word *Duncheon*.

Faubert derives *Duncheon* from *Domicilium*, in that the *Duncheon* being the strongest Part of the Castle, was usually the Lord's Apartment. *Ménage* derives it from *Domionis*, which in some ancient Writings we find us'd in the same Sense. Others derive it from *Domus Julii Cesaris*, or *Domus Jugi*; And others from *Domus Juliani*, the Emperor *Julian* having built several such Castles in the *Gaule*, whereof there is one still standing in *Lorraine*, call'd *Dom Julien*. *Du Cange* derives the Appellation from *Domo aut Colle Adificatoria*, which the barbarous Writers have alter'd into *Dunjo*, *Dungeo*, *Dongio*, *Daugio*, *Dongio*, and *Douino*.

DUO, in Music, a Song, or Composition to be perform'd in two Parts only; the one sung, and the other play'd on an Instrument; or by two Voices alone.

It is also call'd a *Duo*, when two Voices sing different Parts, accompanied with a Third, which is a thorough Bass. Unisons and Octaves must rarely be us'd in *Duo's*, except at the Beginning and End.

DUODENA Arterio, and *Vena*, a Branch of an Artery, which the *Duodenum* receives from the *Cæcili*; to which answers a Vein of the same Name, returning the Blood to the *Porta*. See **VEIN**, and **ARTERY**.

DUODENUM, in Anatomy, the first of the *Intestina tenuia*, or small Guts; being that which receives the Food first chylified from the Stomach. See **INTESTINES**.

It has its Name *Duodenum*, as being about twelve Fingers Breadth long: On which Account, some also call it *Dodecadactylum*.

The *Duodenum* arises from the *Pylorus*, or right Orifice of the Stomach; whence descending towards the Spine, from Right to Left, quite straight, it terminates where the Circumvolutions of the rest begin.

Its Coats are thicker, and its Cavity, or Canal less than any of the other Intestines. At its lower End are two Gallnals, opening into its Cavity, one from the Liver, and Gall-Bladder, call'd the *Ductus Communis Cholidicus*; and the other from the *Pancreas*, call'd *Pancreaticus*. See **CHOLIDICUS**, and **PANCREATICUS**.

The *Duodenum* is quite straight; but the *Intestinum Jejunum* makes divers Windings, and Inflexions: The reason is, that the Bile, and Pancreatic Juice mixing at the Beginning thereof, or at the End of the *Duodenum*, would otherwise precipitate not only the gross Parts of the Excrements, but also the Chyle it self, too hastily. See **BILE**, **EXCREMENT**, &c.

DUPLA, DUPLÉ, DOUBLE Ratio, is where the Antecedent Term is double the Consequent; Or, where the Exponent of the Ratio is 2; Thus 6: 3 is in a *Duple Ratio*. See **RATIO**.

Sub-Duple, Sub-Double Ratio, is where the Consequent Term is double the Antecedent; Or, the Exponent of the Ratio is $\frac{1}{2}$. Thus, 3: 6 is in a *Sub-duple Ratio*. See **RATIO**.

Dupla-Segulariter
Dupla-Superpartiens tertias } **Ratio**. { See **RATIO**.

DUPLICATE, a second Instrument, or Act, in Writing; as a Brief, Writ, Dispatch, &c. Or a Transcript, or Copy of another.

'Tis usual to write a *Duplicate*, when it is apprehended the first Dispatch, &c. is lost.

In Chancery, *Duplicate* is particularly us'd for second Letters Patent granted by the Lord Chancellour, in a Case where he had formerly done the same.

The Word is form'd from the Latin *Duplicata*, or *Duplicata*.

DUPLICATE Ratio must be well distinguish'd from *Duple*.

In a Series of Geometrical Proportions, the first Term to the third is said to be in a *Duplicate Ratio* of the first to the second; or as its Square is to the Square of the second: Thus, in 2, 4, 8, 16, the Ratio of 2 to 8, is *Duplicate* of that of 2 to 4; or as the Square of 2 to the Square of 4; wherefore *Duplicate Ratio* is the Proportion of Squares, as Triplicate is of Cubes, &c. and the Ratio of 2 to 8, is said to be compounded of that of 2 to 4, and of 4 to 8. See **RATIO**, &c.

DUPLICATION, Doubling, in Arithmetic, and Geometry, the multiplying a Quantity, either discrete, or continued, by two. See **MULTIPLICATION**.

The Term is chiefly us'd in the Phrase, *Duplication of the Cube*, which is a famous Problem fought by the Geometricians these two thousand Years. See **CUBE**.

It was first proposed by the Oracle of *Apollo* at *Delfos*; which, being consulted about the Manner of stopping a Plague then raging at *Athens*, return'd for Answer, that the Plague should cease when his *Altar*, which was Cubical, should be doubled. Upon this, they applied themselves, in good Earnest, to seek the *Duplication* of the Cube, which hence forwards was call'd the *Delian Problem*. See **PROBLEM**.

The Problem is only to be solv'd by finding two mean Proportionals between the Side of the Cube, and double that Side; the first whereof will be the Side of the Cube doubled: as was first observ'd by *Hippocrates Chius*. See **PROPORTIONAL**.

Eutocius, in his Comments on *Archimedes*, gives several Ways of performing it by the *Mesolabe*. *Pappus Alexandrinus*, and his Commentator *Commandin*, give three Ways: The first, according to *Archimedes*; the second, according to *Hera*; and the third, by an Instrument invented by *Pappus*, which gives all the Proportions required.

The *Sieur de Coniers* has likewise publish'd an elegant Demonstration of the same Problem, by means of a Compass with three Legs: But these Methods are all Mechanical.

DUPLICATION, in Anatomy, a Doubling, or Folding of the Membranes, or other like Parts; as the *Duplicatures of the Peritonæum, of the Omentum, of the Pleura*, &c. See **PERITONÆUM**, **OMENTUM**, **PLEURA**, &c.

In the History of the *French Academy* for the Year 1714. an Account is given of a young Man, who died at the Age of 27 Years, in the *Duplication* of whose Meninges were found little Bones, that seem'd to proceed out of the inner Surface of the *dura Mater*, and with their acute Points stimulated the *pia Mater*.

That *Duplication* of the *Peritonæum*, wherein the Ancients placed the Bladder, is not found by the modern Anatomists. *Diomis*.

Fabricius ab Aquependente first discover'd the *Duplication* of the *Curculæ*. See **CURCULÆ**.

DUPONDUS, in Antiquity, a Weight of two Pounds: Or a Money of the Value of two *As's*. See **AS**.

As the *As*, at first, weigh'd a just *Pondo*, or *Libra*; the *Dupondus*, then, weigh'd two. And hence the Name.

And tho' the Weight of the *As* was afterwards diminish'd, and of Consequence that of the *Dupondus* also; they still retain'd the Denomination. See **PONDO**, and **LIBRA**.

DURESSE, Hardship, in Law, is where a Person is kept in Prison, or restrain'd of his Liberty, contrary to Order of Law; or threaten'd to be kill'd, maim'd, or beaten.

In which Case, if a Person be in Prison, or in Fear of such Threats, make any Specialty, or Obligation, by reason of such Imprisonment, or Threats; such Deed is void in Law: And in an Action brought on such Specialty, the Party may plead, that it was brought by *Duresse*.

Brook, in his Abridgment, joyns *Duresse* and *Manasse* together, i. e. *Durissimus & Miasm*, Hardship, and Threatnings.

DURA Mater, or *DURA Meninge*, a strong, thick Membrane, which lines, or covers all the inner Cavity of the *Cranium*, and includes the whole Brain; being it self lined on its inner, or concave Side by the *pia Mater*, or *Meninge tenuis*. See **MENINGES**.

The *dura Mater* sticks very close to the Basis of the Skull, and its Sutures by the Fibres, and Vessels it sends to the *Pericranium*. See **BRAIN**, and **CRANIUM**.

It is fasten'd to the *pia Mater*, and the Brain, by the Vessels which pass from one to the other. It gives a Coat, or Covering to all the Nerves which rise from the Brain; and

and to the *Medula Spinalis*, and all the Nerves, which rise from it. See NERVE.

Its Surface is rough towards the Skull, and smooth towards the Brain. It is a double Membrane, woven of strong Fibres, which may be plainly seen on its Inside, but very little on its Outside next the Skull: It has three Proceſſes made by the Doubling of its inner Membrane. See Duplicatura.

The first resembles a Sickle, and is therefore call'd *Fals*. See FALS.

The second separates the *Cerebrum* from the *Cerebellum*, down to the *Medula Oblongata*, that the Weight of the *Cerebrum* may not offend the *Cerebellum*, which lies under it. This Proceſſus is very strong, and thick, and in ravenous Beasts it is for the most Part bony, because of the violent Motion of their Brain.

The third is the smallest, and separates the External Substance of the hind Part of the *Cerebellum* into two Proceſſes. See CEREBELLUM.

In the *dura Mater* are several Sinus's, or Channels, which run between its internal and external Membrane: The four principal Ones, are, the *Sinus Longitudinalis*; the second and third Sinus are call'd the *Lateralis*; and the fourth, the *Torcular*. See SINUS, LONGITUDINALIS, &c.

Besides these there are more of inferior Note, mention'd by Anatomists, as *de Vernoy*, *Dr. Ridley*, &c. Their Use is, to receive the Blood of the adjacent Parts from the Veins, to which they are as so many Trunks, and discharge the Blood into the internal Jugulars. See JUGULAR.

The Vessels of the *dura Mater*, are, first, a Branch from the Carotid, while it is in its long Canal, which is dispersed in its Fore- and lower Part of the *dura Mater*; secondly, an Artery, which enters the Hole of the Skull, call'd, *Foramen Arteriale duri Matris*: It is dispersed on the Sides of this Membrane, and runs as high as the *Sinus Longitudinalis*: The Vein which accompanies the Branches of this Artery, goes out of the Skull, by the *Foramen Lacrimum*. Thirdly, a Branch of the Vertebral Artery, and Vein, which last passes through the Hole behind the Occipital Apophyses, where they are dispersed in the Hind-part of the *dura Mater*. It has also Nerves from the Branches of the fifth Pair, which give it an exquisite Sense.

It has a Motion of Syſtole, and Diaſtole, which is caused by the Arteries, which enter the Skull. No doubt, the great Number of Arteries in the Brain contribute more to it, than thoſe few proper to it ſelf, which may assist a little, tho' not very sensibly, because of its Smallness, and Paucity.

The Use of the *dura Mater* is to cover the Brain, the Spinal Marrow, and all the Nerves; to divide the *Cerebrum* in two, and to hinder it from pressing the *Cerebellum*.

DURATION, an Idea we get by attending to the fleeting, and perpetually perishing Parts of Succession. See SUCCESSION.

The Idea of Succession we get by reflecting on that Train of Ideas, which continually follow one another in our Minds, while awake. The Distance between any Parts of this Succession is what we call *Duration*: And the Continuation of the Existence of our selves, or any Thing else commensurate to the Succession of Ideas in the Mind, is call'd our own *Duration*, or that of the Thing coinciding with our Thinking. So that we have no Perception of *Duration*, when that Succession of Ideas ceases. See IDEA, and EXISTENCE.

Duration, in Mr. *Lock's* Philosophy, is a Mode, or Modification of Space. See SPACE, and MODE.

The simple Modes of *Duration*, are any Lengths, or Parts thereof, whereof we have distant Ideas; as *Hours*, *Days*, *Weeks*, *Months*, *Years*, *Time*, and *Eternity*, &c. See HOUR, DAY, WEEK, MONTH, YEAR, &c.

Duration, as mark'd by certain Periods, and Measures, is what we properly call *Time*. See TIME.

1. By observing certain Appearances, at regular, and seemingly equi-distant Periods, we get the Ideas of certain Lengths, and Measures of *Duration*, as Minutes, Hours, &c. 2. By being able to repeat those Measures of Time, as often as we will, we come to imagine *Duration* where nothing really endures, or exists: Thus, we imagine, *to morrow, next Year, yesterday*, &c. 3. By being able to repeat such Idea of any Length of Time, as of a *Minute, Year*, &c. as often as we will, and add 'em to one another, without ever coming to an End, we get the Idea of *Eternity*. See ETERNITY.

Time is to *Duration*, as Place is to Space, or Expansion. They are so much of those boundless Oceans of Eternity, and Immenſity, as is set out, and distinguish'd from the rest; and thus serve to denote the Position of finite, real Beings, in respect of each other in those infinite Oceans of *Duration*, and Space.

DUTCHY-COURT, a Court wherein all Matters belonging to the *Dutchy*, or County Palatine of *Lancaster*, are decided by Decree of the Chancellor of that Court. See PALATINE.

The Original of this Court was in *Henry* the 10th Time; who obtaining the Crown by Deposition of *Richard* II. and

having the *Dutchy of Lancaster*, by Descent, in Right of his Mother, became seiz'd thereof as King, not as Duke. So that all the Liberties, Franchises, and Jurisdictions of the said County pass'd from the King, by his great Seal, and not by Livery, or Attornment, as the Baron of *March*, and other Possessions, which descended to him by other Ancestors than the King's, did.

Henry IV. by Authority of Parliament, sever'd the Possessions, Liberties, &c. of the said *Dutchy* from the Crown: But *Edward* IV. restor'd 'em to their former Nature.

The Officers belonging to this Court, are the Chancellor, Attorney, Receiver General, Clerk of the Court, and Messenger; beside the Assitants: as an Attorney in the Exchequer; another in Chancery, and four Counsellors. See CHANCELLOR of the *Dutchy*.

The *Dutchy of Lancaster*, says *Gwin*, grew out of the Grant of *Edward* III. who gave that *Dutchy* to his Son *John* of *Gaunt*, and endowed it with Royal Rights, equal to those of the County Palatine of *Chester*. And so far as it came afterwards to be extinct in the Person of King *Henry* IV. by reason of its Union with the Crown; the same King suspecting himself more rightfully Duke of *Lancaster*, than King of *England*, determined to save his Right in the *Dutchy*, whatever should befall the Kingdom. Accordingly, he separated the *Dutchy* from the Crown; and settled it so in his own Person, and Heirs, as if he had been no King, or Politic Body at all: In which Condition it continued during the Reigns of *Henry* V. and VI. who defended from him; till *Edward* IV. who, by Recovery of the Crown, reconstituting the Right of the House of *York*, appropriated the *Dutchy* to the Crown again. Yet so, as he suffer'd the Court, and Officers to remain as he found 'em. In this Manner, it came, together with the Crown, to *Henry* VII. who taking *Henry* IV. Policy, (by whose Right, indeed, he obtain'd the Kingdom) re-separated the *Dutchy*, and so left it to his Posterity, who still enjoy it.

DUTY, in Policy, and Commerce, an Impos't, laid by Authority of a Prince, &c. on Merchandizes, and Commodities, either of his own Country, or brought from abroad; towards supporting the Expences of the Government. See CUSTOMS.

The *Duties* on various Kinds of Commodities are infinite. The principal are, the

Duties of Exportation, and *Importation*, pay'd upon the bringing in, or carrying out of the divers Kinds of Goods, Animals, and even Persons; agreeable to the Tarifs settled between the several Nations. See IMPORTATION, and EXPORTATION.

There is no State in *Europe*, or perhaps in the World, where the *Duties* of Exportation and Importation, are so many, and so considerable, as in *England*. The two principal, are, the *Duties of Tonnage*, and *Poundage*. The first charged on Liquors, in Proportion to their Measure, and Content. See TONNAGE.

The second on the other Commodities, and paid according to their Value, settled in a Tariff. See POUNDAGE.

These two *Duties*, which have a long Time been on foot in *England*, were re-establish'd at the Restoration of King *Charles* II. in 1660, upon the Parliament's annulling all the Laws made under *Cromwell*, and decreeing the Execution of the ancient Ordinances.

To these there have been eighteen new *Duties* added since that Time: Ten of 'em for Liquids, and the other eight on other Kinds of Commodities.

The *Duties on Liquids*, are the ancient *Duty of Tonnage*, or *old Subsidy*: the *Additional Duty*, *Duty of Excise*, *Duty of Coinage*, the *old Impos'tion*, the *Additional Impos'tion*, the *Orphan's Money*, the *Duty on French Wines*, the *New Subsidy*, the *Duty on Hungary Wines*, and the *one Third*, and *two Thirds of Subsidies*.

The *Duties* on other Commodities, are the *Ancient Duty of Poundage*: the *Additional Duty* of 1660, on *Licenses*, and *Silks*: the *new Impos'tion of Poundage*, call'd the *Impos't* of 1690: Another *Impos'tion* of four *Pistols* in 1693: the *Duty* of 25 per *Cent* on French Goods, impos'd in 1695: the *new Subsidy of Poundage* in 1697: Another *Additional Subsidy* of a *Third* of *Poundage* in 1703: Another *Third* in 1704: A *Duty* on *Fish*, *Oils*, and *Woods* in 1709: Another on *Leather*, *Velvet*, and *Parchment*, in 1711: A second on the same Goods, in 1712: And lastly, in the same Year, A *Duty* on *Paper*, *Paſte-Board*, and *Soap*.

We shall here enter into a more particular Detail of the *Duties* on *Liquids*; as *Wines*, *Brandies*, *Vinegars*, *Cyders*, &c.

First, then, the *Duty of Tonnage*, or the *Old Subsidy*, we have already observ'd, was establish'd in the twelfth Year of King *Charles* II. It was at first only granted him for Life; but afterwards continued in the first Year of King *James* II. during the Life likewise of that Prince. And lastly, by several Acts, in the Reign of Queen *Anne*, it was again continued for 96 Years, ending in the Year 1808.

This first *Duty of Tonnage*, is 4 Pound 10 Shillings *Scr.* per Tun, on all *French* Wines brought by *English* Vessels into the Port of *London*; and only 3 Pound, into the rest. The same Wine brought by foreign Vessels into the Port of *London*, pays 6 Pound; and into the other Ports, 4 Pound 10 Shillings *Scr.* *French* Vinegar made of Wine, pays 4 Pound 10 Shillings, brought by *English* Vessels; and 6 Pound, by foreigners. *French* Cyder, and Perry, and Vinegar made of those Liquors, pay as in the preceding Article. *Rhenish* Wine brought into any Port of *England*, pays 1 Pound *Scr.* per Awe, a Measure amounting to the Sixth of a Tun, so that the *Duty per Tun* is about 7 Pound 10 Shillings, which is a Fourth more than that of *French* Wine. *Spanish*, and *Portuguese* Wines, *Muscadines*, *Malusseys*, and other *Greek* Wines, pay the same as *French* Wines; and the like is to be understood of Vinegars made thereof.

Additional Duty of the old Subsidy. This first Augmentation of the old Tonnage, was made in 1660, and continued like the Subsidy it fell to 1808.

For this *Duty*, *French* Wines pay 3 Pound *Scr.* per Tun. *Rhenish* Wines pay as *French* Wines. *Spanish* Wines pay 4 Pound; *Portuguese* Wines, 3 Pound; *Muscadines*, *Malusseys*, and other *Greek* Wines, pay the same as *Spanish* Wines. Vinegar, Cyder, and Perry, are exempt from this *Duty*. See SUBSIDY.

Duty of Excise, is not laid on Wines, but only on Mal-Liquors, &c. See EXCISE.

Duty of Coinage was imposed in the 18th Year of King *Charles II.* to defray the Expence of Coining of the Money. It has been continued by divers Acts to the Year 1715, and even since that Time.

Wines of all Kinds pay equally 10 Shilling *Scr.* per Tun on this *Duty*. See COINAGE.

Duty of old Imposition of Tonnage was establish'd in the Year 1685, and continued by divers Acts; that of 1711 made it perpetual.

By this *Duty*, *French* Wines pay 8 Pound *Scr.* per Tun in all the Ports of *England*; *Spanish*, *Portuguese*, *Muscadine*, and other *Greek* Wines, 12 Pound; Vinegars 8 Pound.

Duty of Additional Imposition was establish'd in 1690, continued by divers Acts to 1720, and in 1712 made perpetual. This *Duty* none but the *French* pay, the other Nations being exempt from it.

Each Tun of *French* Wine pays for this *Duty* 8 Pound *Scr.* in any Port of *England*; Vinegar, Cyder, and Perry pay 25 per Cent. of their Value.

Orphans-Duty is only charg'd on Wines brought into the Port of *London*. Its Name expresses the pious Office it is intended for.

It had its Rise in the 6th Year of King *William III.* It is fix'd at 4 Shillings per Tun on all Wines indifferently. See ORPHANS.

Additional Duty on French Wines, is one of the *Duties* to which *French* Wines alone are subject. It was establish'd in the Year 1695, for 20 Years, and since continued.

It is rated at 25 Pound *Scr.* per Tun: And Vinegars at 15 Pound.

New Subsidy was granted to King *William III.* in 1695, for his Life, and since continued to Queen *Anne* for her Life.

This is properly a Duplicate of the *Duty* of Tonnage, to which *French*, and other Wines are equally subject, whether brought in *English*, or foreign Vessels; tho' there are some Differences, as to Vinegars, Cyders, and Perry.

Duty on Hungarian Wines, is very late, only establish'd in the first Year of Queen *Anne*. It is the same with that pay'd by *Rhenish* Wines.

Duty, call'd *First Subsidy*, is a Third of the old Subsidy, first establish'd in 1703, and since continued by divers Acts, to expire in 1805.

Duty, call'd *Two Third Subsidy*, is likewise a new *Duty*, first establish'd in 1704, to last only for a certain Time, tho' since made perpetual.

It confists in two other Thirds of the old Subsidy, so that these two *Duties* of 1703, and 1704, are equal to the whole Subsidy.

Besides these *Duties* imposed on all Wines imported, both by Natives, and Foreigners; there are likewise the *Duty of Butlerage*, another *Duty* call'd *Foreign*, another of *Bristol*, and another of *Southampton*, amounting together to about 40 Shillings per Tun; but as these *Duties* are only levied on Wines imported in foreign Vessels, 'tis but rarely they are paid; most of the Wine-Trade being manag'd by *English* Vessels.

From this State of the *Duties* paid by Wines and other Liquors brought into *England*, it appears that *French* Wines imported by *Englishmen* into the Port of *England*, pay 55 Pound, 16 Shill. 8 Pence *Scr.* per Tun. Those imported by the same into the other Ports, 51 Pound, 13 Shillings, and 6 Pence: Tho' brought by Foreigners into the Port of *London*, 61 Pound, 15 Shillings, and 10 Pence; and into the other Ports, 57 Pound, 12 Shilling, and 8 Pence.

Spanish, *Italian*, *Muscadine*, *Malussey*, and other *Greek* Wines, imported by the *English* into the Port of *London*, pay 27 Pound, 7 Shilling, and 10 Pence *Scr.*; and brought by the same into the other Ports, 25 Pound, 4 Shillings, and 9 Pence. The same Wines brought to *London* by Foreigners, pay 35 Pound, 7 Shillings, 3 Fourths.

Portuguese, *Rhenish*, and *Hungary* Wines brought to *London* by *English* Vessels, pay 16 Pound, 10 Shillings, and 3 Pence; into the other Ports, 22 Pound, 7 Shillings, and 2 Pence: The same Wines imported to *London* by Foreigners, pay 32 Pound, 9 Shilling, and 5 Pence; and into the other, 28 Pound, 6 Shilling, 3 Pence.

French Vinegars imported to *London* by the *English*, pay 27 Pound, 10 Shillings, 11 Pence; and into the other Ports, 26 Pound, 4 Shilling, 6 Pence: Imported by Foreigners into *London*, they pay 28 Pound, 17 Shillings, 5 Pence; and in the other Ports, 27 Pound, 10 Shillings, 11 Pence.

Spanish and *Portuguese* Vinegars, imported to *London* by *English* Vessels, pay 12 Pound, 10 Shillings, 12 Pence; in the other Ports, 11 Pound, 4 Shillings, 6 Pence: The same Vinegars imported to *London* by foreign Vessels, pay 13 Pound, 17 Shillings, 3 Pence; and in the other Ports, 12 Pound, 10 Shillings, 1 Penny. As to Cyders, and Perries, the Importation is not considerable.

French Brandy imported by any Vessel into any Port, pay 78 Pound, 4 Shillings *Scr.* per Tun; and Brandy from any other Countries, except *France*, only 48 Pound, 4 Shillings: All other foreign Brandy being exempted from *Duties* of 30 Pound *Scr.*, charged on *French* Brandy by Acts of Parliament, under the Reign of King *William III.*

The *English* Merchants, it is to be observ'd, are not oblig'd to pay these several *Duties* before 12 Months; nor Foreigners before 9: giving Security for the same. Or, if they pay ready Money, there is a Deduction made 'em of 5 per Cent. on the old *New Third*, and two *Third Subsidy*, and on the other *Duties* 6, and one Fourth per Cent. Add, that if these Merchandizes be again exported into other Countries, after they have been enter'd in *England*, the *Duties* are return'd; tho' this only within the Compass of a Year to Natives, and of 9 Months to Foreigners.

In *Spain*, the *Duties* of Export, and Import, are call'd, *Duties of Aweighs*, and amount to about 5 per Cent. of the Value of the Goods: For Instance, the Piece of Velvet of 40 *Spanish* Varres, or Yards, pays 20 Reals: Hats of *Vigone*, 5 Reals a Piece: Linnens, 224 Reals per 100 Varres: Gold and Silver Laces, a Reals 3 Quarters, the Mark Weight. The *Duties* of Exportation are nearly on the same footing.

In *Portugal*, the *Duties* of Importation were anciently the same on all Kinds of Goods; viz. 18 per Cent. of the Value. But since the Year 1667, Silks have been excepted out of the general Tariff, and reduced to 15 per Cent. For Exportation the *Duties* are only 6 per Cent.

In *Holland*, the *Duties* of Exportation, and Importation, are nearly alike; both of 'em being about the Rate of 5 per Cent. of the Value of the Goods. At *Hembourg*, and *Bremen*, the *Duties* are but 1 per Cent. At *Lubeck*, three 4ths per Cent. In *Amoy*, 5 per Cent. At *Venice*, 6 and three 4ths per Cent. for what the Natives import; and 10 and a half to Strangers: The *Duties* of Exportation are 9 per Cent. At *Leghorn*, the *Duties* of Exportation, and Importation are very inconsiderable; but with the Addition of a Number of petty *Duties*, became as great as at *Venice*. In the Ports of the Levant, *Constantinople*, *Smyrna*, *Alapka*, &c. the *Duties* of Exportation, and Importation are nearly on an equal footing, viz. 5 per Cent. except to the *Venetians*, and *Jews*, who pay 5 per Cent.

The Customs *Duties* are likewise to be added for *Smirna*, &c. which are about 2 per Cent. At *Cairo*, *Alexandria*, and some other Cities of *Egypt*, the *Duties* are of two Kinds: One for Goods brought in Ships from *Europe*; the other, for those brought by the Caravans from *Asia*. The first are fix'd at 20 per Cent. The second are arbitrary, but always very high. Beside the ordinary *Duty*, they here pay the *Golden Duty*, which is the tenth Part of what is paid for the first *Duty*. As to *Duties* of Exportation, they may be said to pay none, the 1 and a half per Cent. being rather the Custom-house Fee, than any *Duty* of the Sovereign.

DUUMVIR, a general Name among the ancient *Romans*, for several Magistrates, Commissioners, and Officers, where two were join'd together in the same Function. So that they had almost as many *Duumvirs*, as they had Officers join'd two by two in Commission.

There were *Duumvirs* to direct the Building, Repairing, and Consecrating of Temples, and Altars; *Capital Duumvirs*, who took Cognizance of Crimes, and condemn'd to Death. *Duumvirs* of the Marine, or Navy, &c. But the most considerable *Duumvirs*, and those usually thus call'd by Way of Eminence, were the

DUUMVIRI SACRANUM, which were created by *Targuin*, for the Performance of Sacrifice, and Keeping of the Sybils Books.

Books. They were chose out of the Nobility, or *Patriarii*; and held their Office for Life. They were exempted from serving in War, and from the Offices imposed on the other Citizens: Without them the Oracles of the Sybils could not be consulted.

The Commission held till the Year of Rome 388; when, at the Request of *C. Licinius*, and *L. Sexinus*, Tribunes of the People, they were chang'd into *Decemviri*; that is, in lieu of two Persons, the Trust was committed to ten, half Patricians, half Plebeians. See **DECEMVIRI**.

Sylla added five to their Number, upon which they became denominated *Quindecemviri*. Their Body was afterwards much increased, and at length amounted to sixty; yet still retain'd the Denomination of *Quindecemviri*. See **QUINDECEMVIRI**.

They were entirely abolish'd under the Emperor *Theodosius*, along with the rest of the Heathen Superstitions. See **SYBILLS**.

The *Capital Duumviri*, *Duumviri Perduellionis*, were not ordinary Magistrates; but created on certain Occurrences. The first *Duumviri* of this Kind were those appointed to judge the surviving *Horatius*, for killing his Sister, after vanquishing the *Curiatii*.

The Word is compos'd of *duo*, two, and *Vir*, Man. There were also *Duumviri* in the Roman Colonies; who held the same Rank and Authority in their respective Colonies, that the Consuls held at Rome. They were chose out of the Body of *Decuriones*, and wore the *Prætexta*, or Robe border'd with Purple.

There were also *Municipal Duumviri*, whom *Vigeneri* compares to our Sheriffs, or rather Mayors of Towns.

DUUMVIRATE, *Duumviratus*, the Magistrature, Office, or Dignity of the *Duumviri*. See **DUUMVIR**.

The *Duumvirate* lasted till the Year of Rome 388; when it was chang'd into a *Decemvirate*. See **DECEMVIRATE**.

DWAL, in Heraldry, the Herb *Night-shade*; used by such as blazon with Flowers and Herbs, instead of Colours and Metals, for Sable, or Black. See **SABLE**, &c.

DWARE. See **GYANT**, **PIGMY**, and **STATUERE**.

DWARF-Trees, are Fruit-Trees, thus call'd from the Lowness of their Stature; frequently planted in the Borders of Gardens. See **FRUIT-TREE**.

They seldom grow above 4 or 5 Foot high; and are usually a Hoop tied within the Middle of the Branches, to make 'em spread a-round.

Dwarf-Trees are of especial Advantage for Table-Fruit, whether Peas, Apples, Plums, or Cherries; The Fruit they yield is usually of the finest, and best; and as such they make a considerable Article in the Gardeners Province.

There are divers Ways of Producing *Dwarfs*. *Dwarf-Pears* are usually produced by Inoculating on Quince-Stocks, which grow the *Dwarf's* Height.

As for *Dwarf-Apples*, the Stocks they chuse to graft on are those rais'd of the Cuttings of the Apple.

In order to provide Stocks of each Kind, they chuse such Stems, and Branches, as grow straight; in the Month of *October*; from Trees whose Cuttings will grow, or which in the Places they are to be grafted in are at least an Inch thick: Cut 'em off an Hand's Breadth below the Knots, or Burs, which are the Places where they usually put forth their Roots; and cut off the Top, that they may not be above a Yard long. If they cannot be got to long of Quinces, shorter must do. Cut off all Side-Branches close to the Body, except one small Twig near the Top for the Sap to vent it self at. Set them in Beds, as Seed-plants are; and keep 'em a Foot above Ground.

It being somewhat difficult, to get enough of such Branches as have Burs and Knots on 'em; a particular Method has been invented to bring those Knots, and Burs, artificially, call'd *Circumposition*. It is perform'd by tying some Earth in a Piece of old Hat, a Foot long, about the Place where you intend to cut, in the Month of *February*; and in *October* it will have shot Roots therein.

Such Trees alone, as are apt to put forth Roots, are proper for *Dwarf* Stocks; as the *Kentish* Codlin, *Gennet* Mul, some Sorts of sweet Apple, Bitter Sweet, Quince-tree, Mulberry-tree, and the *Paradise* Apple Tree.

Stocks for *Dwarf Apple-Trees* are likewise rais'd by cutting down an old Tree, which is apt to cast forth good Suckers from the old Roots; which at two Years Age may be transplanted, or else inoculated where they stand.

As for *Dwarf Pear-Trees*, Stocks may be rais'd for them from the Suckers of old Pear-trees. Else, cut off the Top of some old ill Pear-tree, and the Roots will cast forth Suckers. For *Dwarf Cherries* and *Plums*, Suckers of the common red Cherry, and ordinary Plum-tree, are the best.

As to the *Grafting*, or *Inoculating* of *Dwarf-Stocks*, it must be done as low as may be, with two Lyons, and those longer than in Grafting for long Standards; that they may spread from the Ground. See **ENGRAFTING**.

As to the *Planting* of *Dwarf-Trees*, 'tis best in a light, hot Earth, from the Middle of *October*, to the End of *November*. In cold, wet Soil, 'tis best in *March* and *April*. The Stem of the Tree to be cut off seven or eight Inches above the Graft; and remember to cut off half the Length of the Roots, and hairy Fibres; To turn the Cut of the Tree towards the North; to let the Graft always be two or three Inches above the Ground, lest it take Root; To plant 'em shallow, as being apt of themselves, in light Ground, to sink a Foot deep, which is sufficient; and to cover the Ground, when they are planted, with Horse-Litter.

DYE, in Architecture, is the Middle of the Pedestal; or that Part which lies between the Base and the Cornice: being so nam'd, because it is frequently made in the Form of a Cube, or *Dye*. It is also call'd *Dado*, by the *Italians*; and by *Vitruvius*, *Truncus*. See **PEDESTAL**.

DYE, is also us'd for a Cube of Stone, placed under the Feet of a Statue, and over its Pedestal, to raise it, and show it the more.

DYNASTY, a Term in History, signifying a Race, or Succession of Kings of the same Line, or Family. See **RACE**. We find frequent Mention in ancient History of *Dynasties* of *Persians*, *Affyrians*, *Modes*, &c.

Masnedo has left an Historical Chronology of *Egypt*, divided into 30 *Dynasties*.

The Word is form'd from the Greek *Dynastia*, of *Dynastes*, to be powerful, to be King.

DYPTYCHA, or rather **DIPTYCHA**, in Antiquity, a public Register, wherein were wrote the Names of the Consuls, and other Magistrates, among the Heathens; and of Bishops, and deacons, as well as surviving Brethren among the Christians.

Justinian, offended at Pope *Vigil*, for refusing to subscribe the Condemnation of the three Chapters, gave Orders for his Name to be erased out of the *Dyptychs*. *Du Pin*. The Emperor commanded the Name of the new Patriarch to be enter'd in the *Dyptychs Sacra*.

'Tis certain, there were prophane *Dyptychs*'s in the Greek Empire, as well as sacred Ones in the Greek Church. The former were the *Martirolois*, or Register, wherein the Names of the Magistrates were enter'd: In which *Sacred Dyptychs* is a Term in the Greek Chancery.

Sacred DIPTYCHA. The Word is plural; *Dyptycha* being a double Catalogue, in one whereof was wrote the Names of the Living, and in the other those of the Dead, which were to be recurs'd during the Office. We meet with something not unlike the *Sacred Dyptychs* of the *Greeks*, in the Canon of the Mass, according to the *Latin* Usage; where the People are enjoy'd to pray once for the Living, and once for the Dead; several Saints are invoked in different Times, &c.

Genston Hervey explains the Word *Dyptychs*, *ἑρῶντες*, by *Altar-Cloths*: *Mosinus*, by that of *Libelli Ecclesiasticos*, Church-Books; But neither of those Authors, tho' in other respects of great Abilities, and well vers'd in the Greek Antiquity, has given the genuine Signification of the Word. The *Dyptychs* were neither Altar-Cloths, nor Church-Books, but a Sort of Tables, or Tablets, alike in Figure to the two Tables of Stone given to *Moses*; On one of these Tables was wrote the Names of the Deceased, and on the other those of the Living, for whom Prayers were to be offer'd; which the Deacon read over, while the Mass was celebrated.

In these *Dyptychs* were enter'd the Names of Bishops, who had govern'd their Flocks a-right; and were never expung'd out of the same, unless they were convicted of Heresy, or some other gross Crime. In the *Dyptychs* were likewise enter'd the Names of such as had done any signal Service to the Church, whether they were living, or dead, and mention was made of 'em in the Celebration of the Liturgy.

The Jesuite *Rosweyde* asserts, that few Names were enter'd in the *Sacred Dyptychs*, but those of Bishops and Patriarchs; and doubts very much, whether the *Sacred Delta*, mention'd by the pretended *St. Dionysius*, *Ecolof. Hierarch. C. II.* wherein were enter'd the Names of the new baptiz'd, with their God-fathers and God-mothers, were the same with the *Dyptychs*. He allows, however, that the Names of the Emperors, and other great Persons, distinguish'd by their Faith, and their Merits, or Benefactions, were us'd to be enter'd.

Mosinus, in his *Glossarium Græco-Barbarum*, imagines 'em to have wrote the Term *Dyptycha*, by reason there were two Books, in one of which were wrote the Living, and in the other the Dead. But *Fa. Rosweyde* shows, he is mistaken: For in effect, there was but one, the Living being enter'd on one Side thereof, and the Dead on the other. And if the Living, and Dead, were each wrote in a several Book, each of 'em was call'd *Dyptycha*, and not both together.

Cassaubon, in his Observations on *Athenens*, L. VI. C. 14, supposes the Christians to have borrow'd the Custom of writing Names in a Book, and rehearsing 'em at Mass, from the Heathens, who enter'd the Names of Persons they would do any signal Honour to, in the Verses of the *Salmi*; as was done to *Germanicus*, and *Vernis*, Sons of the Emperor *Marcus*.

ens Aurelius, and long Time before, during the Age of the Republic, to *Momarcus Vestrius*, and *Lucia Volamina*, as we are told by *Tacitus*, L. II. *Spartian*, *Ovid*, *Poetus*, *Plutarch*, &c.

But *Fa. Rufeyd* does not approve this Notion of *Cassianus*. The pretended *St. Dionysius*, a very ancient Author, says the contrary, and asserts the first Establishment of this Usage to have been founded on Scripture. 2 *Tim.* II. 19. *Psal.* CXV. 15. *Rufeyd* adds *Ecc.* XLIV. 1. and takes there to have been the Passages the ancient Church had a View to, rather than the *Sallian* Verse.

The *Prophane Diptycha* were frequently sent as Presents to Princes, &c. On which Occasion they were finely gilt, and embellish'd; as appears from *Symmachus*, L. II. Ep. 81. Those presented were usually of Ivory. The first Law, *de Expend. Lator. C. T. beod.* forbids all Magistrates below Consul, to make Presents of *Diptycha* of Ivory, in the public Ceremonies.

Fa. Rufeyd owns himself at a Loss for the Origin of this Custom of making Presents of *Diptycha*'s. *Luc. Carion*, L. II. *Exordiar. C. 6.* supposes it to have arose hence, that such Presents were at first made to the Persons who had been nominated *Questores*, to whom they were to be of Use. Many imagine the *Diptycha* to have originally been a Kind of Table-Books us'd by *Lovers*. Thus *Papias* defines 'em, *Tabelle, in quibus Amores scribebantur*.

The Word *Diptycha* is form'd from the Greek *διπτυχον* and *διπτυχον*, and that from *διπτυχον*, a Masculine Noun derived from *πτερον*, I fold, or plait. From its Future *πτερο* is form'd *πτερον*, a fold, or plait, to which adding *δι*, twice, we have *διπτυχον*, in the Genitive *διπτυχου*, whence the Nominative Neuter *διπτυχον*, q. d. a Book folded in two Leaves: Tho' there were some in 3, and others in 4, or 5 Leaves.

An ingenious Author imagines this Name to have been first given 'em to distinguish 'em from the Books that were roll'd, call'd *Polymina*. See *VOLUMES*.

DYSCRASY, from *δυσ*, malus, bad, and *κρasis*, or *spacia*, *Temperamentum*, Conflition, is an ill Habit of Body; as in a Jaundice, or the like.

DYSENTERY, or **DYSSENTERY**, in Medicine, a bloody *Diarrhea*; or a Flux of Blood by Stool; attended with Pains and Gripping. See *FLUX*.

The Word *Dysentery* is form'd from the Greek *δύς*, difficultly, and *έντερον*, Intestine; and properly signifies that Kind of Flux of the Belly, characterized by the Frequency of Stools, or Dejections, mix'd with Blood, and accompanied with Gripes: The Fever, Ulcer, &c. which attend it, are not essential to the Disease; tho' many, both of the Ancients and Moderns, think the Ulcer is.

The *Dysentery*, *Sydenham* observes, begins with a Chills, and Shivering; which is followed by a Heat; then Gripings of the Belly ensue, with mucous, or sanious Stools, which in Progress of Time are found interspers'd with Streaks of Blood, with vehement Pain.

The Stools are sometimes void of Blood; and yet, if they be frequent, and attended with Gripes, and a mucous *Collyvies*, the same Author says, it is a proper *Dysentery*.

Along with the Excrements, beside a whitish Mucosity, frequently come Scrapings of the Guts, in Form of little Skins. If pure Blood be evacuated, the Patient's Life is in great Danger.

Ermsler makes three Kinds of *Dysenteries*: 1. When a laudable Blood is evacuated, from a mere *Pletthora*, or Plenitude, without any Disorder of the Intestines; as in the *Hemorrhoidal Flux*. See *HEMORRHOIDS*.

2. When a thin, watery Blood is evacuated, call'd the *Hepatic Flux*, tho' really arising from the Hemorrhoidal Vessels.

The third Kind, which is that we properly call *Dysentery*, is, when Blood is cast out mix'd with a purulent Matter in the Excrements.

This is either *benigna*, i. e. without a Fever, and not contagious; Or *malignant*, which is attended with a pestilential Fever; and frequently ravages whole Cities, and Provinces: Happening most commonly in Armies. In the last Stage, a Sort of Caruncles are frequently ejected along with the purulent Matter, which are difficult to be accounted for, unless from an Excoriation, and Ulceration of the Intestines. Sometimes the Intestines are even greened.

The next Cause of the *Dysentery*, as assign'd by some Physicians, is a ferous, or other morbid Humour, mix'd with the Mass of Blood; the Consequence of which is a too great Fermentation in the Blood, and a Dissolution of its Parts, which are thus render'd too liquid. The second Cause is a

Vellation, and Irritation of the nervous Fibres of the Intestines, occasion'd by sharp, acid Humours separated from the Blood; which occasion the Spiral Fibres, that produce the Peristaltic Motion of the Guts, to move too fast, and thus to expel the Matters too hastily out of the Intestines. The Mediate Cause, in the Physicians Language, is some foreign Body adhering strongly to the Intestines, and by its sharp Points, vellating the nervous Fibres of the Intestines, and at length ulcerating 'em. The Remote Causes are any Thing that corrupts the Mass of Blood, as viscid, and crude, sharp Juices; ill Foods; Autumnal Fruits; Grapes; new Wine drunk in Excess; Poisons; violent Medicines; Waters convey'd through leaden Pipes; Rainy Weather in the Spring, with a dry Winter, and a hot Summer, and Autumn.

The Seat of the Disease is in the Intestines, either the big, or the small, or both: When the Disease is in the small Ones, the Gripes begin long before the Stools, and are felt about the Navel; and the Blood, and Excrements, are more blended; as being longer together. When the larger Intestines are seiz'd, the Pain is less vehement, and is felt lower, &c.

Purgatives have rarely any good Effect in *Dysenteries*; as increasing the Fermentation of the Blood, and irritating the Fibres of the Intestines more and more. Nor are Emetics much better; as tending to draw the peccant Humours into the Stomach, or at least into the higher Intestines, and cause more frequent Stools.

Ipecacuanha, however, is excellent on this Occasion: Not so much as a Vomitory, *Dr. Friend* observes, as a Sudorific; having this Faculty, beyond all other Emetics, that it corrects the *Dysenteric* Ferment, in Proportion as it evacuates it. In the *Philosophical Transactions* we have an express Discourse on the Subject; where it is asserted to be infallible in all *Dysenteries*, and *Louisinosis*, how dangerous and inveterate fever; except in Pulmonic and Hydropic Patients, whose Fluxes are Indications of approaching Death.

Sydenham commends Phlebotomy: But *Willis* says, no Evacuation is good; and prescribes hot Cardiacks, as Spirit of Wine a little burnt, &c.

Balsamic, and Symplic Medicines are also to be used, according to the divers Causes, and Symptoms of the Disease. *Borre*, in a Letter to *Bartolin*, asserts, there is no better Medicament in *Dysenteries* than Rose-Water wherein Gold has been extinguish'd.

Dotens relates, that he cured above an hundred Persons with Oil of sweet Almonds, mix'd with Orange Juice.

DYSPEPSY, in Medicine, a Difficulty, or Weakness of Digestion. See *DIGESTION*.

The *Dyspepsy* may arise from the Softness of the Ferment of the Stomach, or its being sparing in Quantity; from a Relaxation of the Fibres of the Stomach; the Want of a proper Heat in the Stomach, &c.

Bitters, and Sub-astringents, are its proper Remedy. The Word is form'd from the Greek *δύς*, difficultly, and *πέψω*, coquo, to concoct.

DYSPNOEA, in Medicine, a Difficulty of breathing. See *RESPIRATION*.

The *Dyspnea* admits of three Degrees: A *Short-Breath*; an *Asthus*; and an *Orthopnea*.

The *Short-Breath*, is the first, and lightest Degree.

The *Asthus* is more violent, accompanied with a wheezing. See *ASTHMA*.

The *Orthopnea* is the highest of all; the Patient affected therewith not being able to lye down, but oblig'd to keep erect, without which he could not respire.

The most usual Causes of *Dyspnea*'s are Phlegms contain'd in the *Bronchia*; or the too strong Constitution of the *Bronchia* themselves, which prevent the easy Ingress of the Air into the Lungs.

The Word is form'd from the Greek *δύς*, difficultly, and *πνέω*, I breathe.

DYSURIA, in Medicine, a Difficulty of making Urine, accompanied with Pain, and a Sense of Heat.

It is also call'd *Ardor Urinae*, by reason the Urine seems to burn the *Uretbra*, as it issues forth. See *URINE*.

The *Dysuria* differs chiefly from the *Strangury* in this, that in the *Strangury*, the Urine only comes out, as it were, Drop by Drop; whereas in the *Dysuria* it streams out without Interruption, and frequently in the proper Quantity. See *STRANGURY*.

The ordinary Causes of the *Dysuria*, are the Acrimony, or Sharpness of the Urine; and the Excoriation, or Exulceration of the Neck of the Bladder, or the Urinary Passage.

The Word is form'd from the Greek *δύς*, difficultly, and *ούρη*, so make Urine.

E, The 5th Letter of the Alphabet, and the 2d Vowel. See LETTER and VOWEL.

E, is a Letter that admits of some Variety in the Pronunciation, in most Languages; whence *Grammarians* usually constitute for many different **E's**, or Kinds of **E**. The *Greeks*, e. g. have their long and short e, viz. *ε*; and *η*, *ἔψιλον* and *ἒτα*.

The *Latins* have an opener e, called *vassius*; such was the last in the Word *Heres* Master; and another closer, as that in the Adverb *Here* Yesterday. This latter e and i, were frequently used for each other: Thus for *here*, they wrote *heri*: And in divers Places we meet with *sibe*, *quasē*, &c. for *sibi*, *quasi*, &c.

The *Roman* e, was likewise sometimes wrote *æ*: For which Reason, there are some *Antiquaries*, who take that Medal of *Gallian*, GALLIANÆ AUGUSTÆ, not to be any Satyrical Medal, as the rest have imagined; nor to be a *Dative* Feminine, but a *Vocative* Masculine, *Galliane Auguste*, wrote with an *æ*.

In *English* we easily distinguish three **E's**, or Sounds of **E**: The First, Mute, and not heard at all; as in *Amsterdam*, *Sense*, *Blue*, &c. The Second, close or short, pronounced with the Lips near shut; as in *Equity*, *Nettle*, &c. The Third, open or long; as in *Fear*, *Easy*, &c.

The *French* have, at least, six Kinds of **E**; the First, pronounced like A; as in *empereur*, *Orient*, &c. The Second, a final Mute, in the last Syllable of divers Words not pronounced at all; as in *bonne*, *bonne*, &c. The Third, an imperfect Mute, pronounced much like the Diphthong *ea*, &c. as in *Je*, *de*, *re*. The Fourth, e ferme, or e masculine, marked at the Ends of Words with an Accent *é*. The Fifth, is e ouvert, or long e, having the same Sound with *ai*, as in *mer*, *féte*, &c. In the middle of Words it is sometimes marked with a Circumflex, and in the End, with an Accent *è*. The Sixth, is an Intermediate e, between the ouvert and ferme; as in *Cabaret*, *Lettre*, &c. Some add a Seventh Kind of e, not reducible to any of the former, as that in *Grammairien*, *Historien*, &c. And others admit of only three Kinds, viz. the Mute, open, and shut; but they make Variation therein; which amounts to the same thing.

As to the Form of the Letter **E**, we borrow it from the *Latins*, who had it from the *Greeks*, and they from the *Phœnicians*; by *Cadmus*, who first brought it them. Now the *Phœnicians* had the same Characters with the *Hebrews*. Accordingly, the Form of the Antient Hebrew *He*, was the same with that of our **E**, as may be seen in the *Hebrew* Medals, and the *Jesuite Societys* Dissertation thereof, p. 143. All the Difference between them consists in this, that the *Hebrews* reading from Right to Left, turn their Letters that Way; whereas the *Moderns*, reading from Left to Right, write their Letters accordingly.

The little e, was form'd of the great one, in writing it fast, and making the cross Strokes at Top and Bottom without taking Pen off Paper, and then adding the Stroke in the Middle **E**.

The *Greek* *η*, *η*, *ἒτα*, was no original Letter; but added to the Alphabet in after Times. Of this we have Proofs still extant in the ancient Monuments; particularly, the *Farnese* Columns, brought to *Rome* from the *Via Appia*, where the *ἒψιλον* **E**, is used in lieu of the *Η*. e. g. ΔΗΜΕΤΡΟΣ ΚΟΡΗ, for ΔΗΜΕΤΡΟΣ ΚΟΡΗ. 'Tis said to have been added by *Simonides*. *Bibliand. de Ration. Commun. Linguar.* p. 40.

The Pronunciation of the *η*, seems to have been varied: *Terentianus* informs us, that it was pronounced like the *Latin* e; but the *Greeks* themselves, for several Ages, pronounced it like an *ι*. 'Tis disputed how the *Latins* render it in their Language. The common Opinion is, that they render it by an e: As in *ἀμαρτία*, *βία*, *ἡμέρα*, *ἔστος*, *ἔστω*, &c. which they render *Demeritus*, *Bia*, *Homera*, *Thestus*, *Thestaurus*, &c. Tho' there are Persons, exceedingly well versed in Antiquity, who hold that they pronounced it like an *ι*.

Lud. de Dieu, one of the most Learned *Grammarians* of his Age, observes as much in his Animadversions on *Genesis* VI. 24. Adding, that 'tis for this Reason, that the *Hebrews*, e. g. the Paraphrast *Jonathan*, express it by a *ἒβριμ*; as, *ἒβριμ*, *ἒβριμ*.

J. Rod. Wetsten proves the same in his Learned Orations on the true Pronunciation of the *Greek* Tongue, from an Infinity of Instances. Citing to this Purpose a M.S. Pfalter of the VIIIth Century, where all the *η's* are expressed by *ι's*. In Effect, *Wetsten* proves, not only that the *Latins* pronounced and wrote it as an *ι*, which might happen from its being so easily confounded with an *ι*; but also that they rendered it by an *ε* and *ia*; that it was often used for *Υ* and **E** *Ι*; and that in the Time of *Ptolemy*, this Letter had a Kind of intermediate Sound between the

ε and *ι*. See that Author. See also *Vossius de Idiote*. L. II. C. 16.

E on the Keys of an Organ, or Harpsichord, denotes the Tones *E*, *mi*, *fa*.

On the Compass, in Sea-Charts, &c. it marks the East Point, or Wind. **E** East. **ESE** East South East. **NE** North East, &c. See WINDS and COMPASS.

In Calendars, **E** is the 5th of the Dominical Letters. See DOMINICAL-LETTERS.

Among Authors, *E. gr.* stands for *Exemplis gratis*; for Instance. See CHARACTER.

In several Dictionaries, we find it noted, that the Letter **E**, among the Antients, was a Numeral Letter, signifying 250, according to the Verse

E quaque Ducentos & Quingenta tensit.

But it has already been observed, that this Use of Numeral Letters was unknown among the Antients. *Afford* *Hippolytus*, an Author of the VIIIth Century, says as much in express Terms, in the first Book of his *Origines*, Cap. III. In Effect, it was first introduced in the Times of Barbarism and Ignorance.

EAGLE, *Aquila*, *Αἰετῖς*, in Natural History, the largest, strongest, and swiftest of all the Birds that live by Prey. See BIRD.

It has a long, hooked Beak; yellow, scaly Legs; thick, crooked Talons; and a short Tail. Its Plumage is chestnut, brown, ruddy and white. Its Beak, black at the Tip; and in the middle, blue, tho' in some yellow.

Its *Nest*, or *Neit*, is usually on the highest Rocks, sometimes on the Tops of old Trees. It feeds its young till such Time as they are able to fly, and then drives them out of the Nests. Its Food is Birds, Hares, Lambs, Kids and Fawns; nay, Sir *Robert Sibbald* assures us, Children too, when it can catch them, of which he gives an Instance in the *Orcaades* Islands. *Prod. Nat. Hist. Scot. L. III. p. 2, & 14*.

Ray mentions an *Eagle's Nest*, found near the River *Derwent*, in 1668. It consisted of large strong Sticks, the one End whereof was laid on the Crug of a Rock, and the other on two Beech-Trees: It was two Yards Square: In it were found one *Eagle's*, with the Carcasses of one Lamb, one Hare, and three *Gryllis*. *Synops. Method. Av. p. 6*. The *Eagle* frequently watches the fishing Hawk, and as soon as it perceives it to have struck a Fish, takes Wing, pursues the Bird till it lets fall its Prey, and often catches it ere it reaches the Earth or Water. *Philos. Transact.* No. 201.

It lives very long, and as *Naturalists* assure us, rarely dies but of Hunger; the upper Part of its crooked Beak growing so long, with Age, that it closes up the lower, and so disables it from opening and taking in Food.

Its Sight is quick, strong and piercing to a Proverb. The Reason why the *Eagle*, the Fibres of whose Optic Nerves are not stronger than those of other Animals, is able to face the Sun, and endure its brightest Rays, the *Jesuite Angelus*, in his *Opticks*, assures us, is, that it has two Sets of Eyelids, the one thick and close, and the other thinner and finer, which last it draws over the Eye, when it looks at any luminous Body, and thus breaks the Force of its Rays.

The *Falconers* have train'd up *Eagles* to the Game; but they only succeed in Mountainous Countries. On Plains they can't keep any time on the Wing, and when they stoop, or light, are weak, so that the Saker beats them. See FALCON.

Aristotle, and *Pliny*, reckon up Six Kinds of *Eagles*, to which they give Names corresponding to the Difference of their Plumage: As the *Eagle-Royal*, called by *Aristotle*, *ἰσθαυὸς* and *αἰετῖς*, from the ruddy, golden Colour of its Feathers, which are likewise spotted as it were with Stars. The *Black-Eagle*, *Valeria*, the smallest and most vigorous of all. The *White-tail'd Eagle*, or *Fygargus*. The middle sized *Eagle*, with a large Tail, living in *Moravia*; *Morpheus*: The *Sea-Eagle*, *Haliastur*: And the bearded *Eagle*, *Offspring*.

EAGLE, in *Heraldry*, is the Symbol of Royalty, as being, according to *Philosophus*, the King of Birds; and for that Reason dedicated, by the Antients, to *Jupiter*.

The *Eagle*, is the Arms of the Emperor, and the King of *Poland*. It is accounted one of the most Noble bearings in *Heraldry*, and according to the Learned in that Art, ought never to be given, but in Consideration of singular Bravery, Generosity, &c. On which Occasions, either a whole *Eagle*, or an *Eagle Naissant*, or only the Head, or other Parts, agreeable to the Exploit, may be granted.

The *Eagle* is sometimes represented with one Head, and sometimes with two, tho' never more than one Body, two Legs, and two Wings open'd, or stretch'd out, in which Posture, it is said to be *spread* or *display'd*: Such is that of the Empire, which is blazon'd a *spread Eagle*, *Sable*, *diadem'd*, *langued*, *beak'd* and *member'd*, *Guies*.

The Reason why *Eagles* are generally given in *Heraldry* display'd, is partly, because in that Posture they fill up the Escutcheon better, and partly, because 'tis imagin'd a Posture natural to the *Eagle*, when it plumes its Feathers, or faces the Sun. However, there are *Eagles* born in other Postures: Some monstrous ones, with Human or Wolves Heads, &c.

The late Authors only say *display'd*, to express the two Heads; and say an *Eagle*, without any Addition, when it has but one: The Kingdom of Poland bears *Gules*, an *Eagle argent*, crown'd and member'd Or.

The *Eagle* has been bore, by Way of Ensign, or Standard, by several Nations. The first who seem to have bore the *Eagle*, are the *Perfians*; according to the Testimony of *Xenophon*. Afterwards, it was assumed by the *Romans*; who, after a great Variety of Standards, at length fix'd on the *Eagle*, in the 2d Year of the Consulship of *C. Marius*: Till that Time, they us'd indifferently *Wolves*, *Leopards*, and *Eagles*, according to the Humour of the Commander.

Several among the Learned maintain, that the *Romans* borrowed this Custom from *Jupiter*, who had appropriated the *Eagle* as his own Badge, in Commemoration of its supplying him with Nectar, while he lay conceal'd in *Crete*, for Fear of being devour'd by his Father *Saturnus*. Others hold that they borrow'd it from the *Isfians*, and others from the *Egyptians*.

The *Roman Eagles*, it must be observ'd, were not painted on a Cloth, or Flag; but were Figures in *Reliefs*, of Silver or Gold, bore on the Top of Pikes; the Wings being display'd, and frequently a Thunder-bolt in their Talons. Under the *Eagle* were filed on the Pike, Bucklers, and sometimes Crowns. Thus much we learn from the Medals. See *Felceus* in his *Dissert. de Insignibus*. And *Lippinus*, de *Militia Romana*, L. IV. *Dist.* 5.

Consuetudo is said to have first introduced the *Eagle* with two Heads, to intimate, that tho' the Empire seem'd divided, it was yet only one Body. Others say, that it was *Charlemaign*, who returning the *Eagle*, as the *Roman* Ensign, added to it a second Head: But that Opinion is destroy'd, by an *Eagle* with two Heads, noted by *Lippinus*, on the *Antonine* Column; as also by the *Eagle's* only having one Head on the Seal of the *Golden-Bull*, of the Emperor *Charles IV*. The Conjecture, therefore, of *F. Menestrier*, appears more probable, who maintains, that as the Emperors of the *East*, when there were two on the Throne at the same Time, struck their Coins with the Impression of a Cross, with a double Traverse, which each of them held in one Hand, as being the Symbol of the Christians; the like they did with the *Eagle* in their Ensigns; and instead of doubling their *Eagles*, join'd them together, and represented them with two Heads. In which they were followed by the Emperors of the *West*.

Fa. Papebroch, wishes that this Conjecture of *Menestrier* were confirm'd by ancient Coins; without which, he rather inclines to think the Use of the *Eagle* with two Heads, to be merely arbitrary: Tho' he grants it probable, that it was first introduced on Occasion of two Emperors in the same Throne.

EAGLE, *Aquila*, in *Astronomy*, is a Constellation of the Northern Hemisphere, having its right Wing contiguous to the Equinoctial. See *CONSTELLATION*.

For the Stars in this Constellation, their Number, Longitude, Latitude, &c. See *AQUILA*.

There are also three several Stars, particularly denominated among the Arab Astronomers, *Eagles*. The 1st, *Nasr Sabai*, the *Eagle* of *Cosopus*, called also *Sitabed Yemen*, the Star of *Arabia felix*, over which it is supposed to preside: The 2d, call'd *Nasr Althaur*, the flying *Eagle*; and the 3d, *Nasr Awoke*, the retiring *Eagle*.

White-EAGLE, is a *Polish* Order of Knighthood, instituted in 1325, by *Uladyfian V*. on Marrying his Son *Casimir*, with a Daughter of the Great Duke of *Lithuania*.

The Cavaliers of this Order were distinguished by a Gold Chain, which they wore on the Stomach, whereon hang a Silver *Eagle* crown'd.

Black-EAGLE, was a like Order, instituted in 1701. by the Elector of *Brandenburgh*, on his being crown'd King of *Prussia*.

EAGLE, in Architecture, a Figure of that Bird antiently us'd, as an Attribute, or Cognizance of *Jupiter*, in the Capitals and Friezes of the Columns of Temples, consecrated to that God.

EAGLES-STONE, in Natural History, a Stone, by the *Greeks*, call'd *Aetites*, and the *Italians*, *petra de Aquila*; as being sometimes found in the *Eagle's* Nest; of famous traditional Virtue, either for the forwarding, or preventing the Delivery of Women in Labour, according as it is applied above, or below the Womb.

Matthioli observes that the Birds of Prey, could never hatch their Young without it, and that they go in Search for it as far as the *East-Indies*. *Rassels* has an express *Latin* Treatise on the Subject. See *AETITES*.

The *Eagle* on Medals, is, according to *M. Spanheim*, a Symbol of Divinity and Providence, and according to all other Antiquaries, of Empire. The Princes on whose Medals 'tis most usually found, are the *Ptolemies* and the *Seleucides* of *Syria*. An *Eagle* with the Word *CONSECRATIO*, expresses the Apotheosis of an Emperor.

EAGLET, or *EAGLON*, diminutives of *Eagle*, properly signifying young *Eagle*. The *Eagle* is said to prove his *Eaglets* in the Brightness of the Sun; if they shut their Eye-lids, he difowns them.

In *Heraldry*, when there are several *Eagles* on the same Escutcheon, they are call'd *Eaglets*.

EALDERMAN, or *EALDORMAN*, among the *Saxons*, was of like Import with an Earl among the *Danes*, *Canab. Briton.* p. 107. Also an Elder, Senator, or States-man.

Hence, at this Day, we call those *Aldermen*, who are Associates to the chief Officer in the Common-Council of a City, or Corporate Town. See *ALDERMAN*.

EAR, the Organ of Hearing; or the Part whereby Animals receive the Impression of Sounds. See *HEARING* and *SOUIND*.

The Ear is generally divided into *Internal*, and *External*.

The External, or outer Ear, in most Animals, consists of two grand Parts, viz. that which appears prominent from the Head, call'd the *Auricle*; and an inner Part, which enters the Skull by a narrow Passage, call'd the *Meatus Auditorius*, and leads to the *Auris*, or Ear, properly so call'd.

The *Auricle*, or outer Part of the External Ear, is semi-circular, and contains divers Sinuosities. Its upper Part, which is the broadest, is call'd the *Pinna*, and sometimes the *Ala*; and the lower, which is narrower, softer and pendant, the *Lobe*, or *Fibra*, being that to which Ladies hang their Rings, &c. The outer Area, or Extent of the *Auricle*, is call'd the *Helix*; and the inner, opposite thereto, the *Antihelix*: The little Protuberance of the Side next the Face, is call'd the *Tragus*, or *Hircus*; and the Ridge just above, and opposite to it, *Antitragus*: And the Cavity, leading to the Beginning of the *Meatus*, the *Concha*. See each Part describ'd under its proper Article; *HELIX*, *TRAGUS*, *CONCHA*, &c.

The *Auricle* stands out from the Head, and is furrow'd with divers winding Canals, which receive and collect the wandering circumambient Impressions, and Undulations of Sound, and modify and forward them to the inner Ear. It is form'd of a thin *Cartilage*, cover'd with a Skin. It has two Mufcles, which in Men are very small, whence some Anatomists deny there are any at all, tho' others increase their Number to three, one *Abolent*, and two *Retrabent*; and others to four. But in Beasts, which move and prick the Ears, as *Horses*, *Asses*, &c. they are very large and considerable. Those who have lost their *Auricles*, *M. Dionis* observes, have but a confused Way of Hearing; and are oblig'd either to form a Cavity round the Ear with their Hands; or to make use of a Horn, applying the End of it to the *Meatus Auditorius*. See *AURICULA*.

The inner Part of the External Ear, is possess'd by the *Meatus Auditorius*, or Auditory Passage, which commences from the Bottom of the *Concha*, call'd the *Alveolarius*, and is continued in a winding Direction, turning sometimes this Way, and sometimes that, to the *Membrana Tympani*. The *Meatus* is dug out of the *Ossis Temporis*, and lined with a Skin, or *Membrane*, which is furnish'd with divers little Glands, that separate a thick, yellow, glutinous Humour, call'd *Cerumen*, or Ear-wax, serving to defend the Ear from the Ingress of Vermine, and other extraneous Bodies. This *Meatus* is all the External Ear in divers Animals, as Reptiles, Birds, Moles, divers Fishes, &c. The farther End thereof is closed by a thin, dry, round, transparent Membrane, call'd the *Membrana Tympani*; and improperly, *Tympanum*, or Drum, which separates the External Ear from the Internal. See *MEATUS AUDITORIUS*, and *TYMPANUM*.

Behind the *Membrana Tympani*, is a Cavity call'd, by different Authors, the *Tympanum*, *Cavitas Tympani*, *Concha Internus*, and *Meatus Auditorius Internus*. In this Cavity are five considerable Parts, viz. four little Bones, two Apertures, call'd *Foramina*, or *Foveolae*, as many *Meatus's* or Passages; four *Mufcles*, and a Branch of a *Nerve*.

The 1st of the Bones, or *Ossicles*, is the *Malleolus*, or Hammer, thus call'd from the Figure, which is bigger at one End, call'd the *Head*, than at the other, call'd the *Helix*, or Handle: The 2d, is call'd the *Incus*, or Anvil: The 3d, the *Stapes*, or Stirrup: And the 4th, the *Ossicula*. These Bones are nearly of the same Bigness at the Birth of the Child, as when it is arriv'd at Maturity; so that all that Age does is to harden them.

To give Motion to these Bones, is the Office of the four *Mufcles* of this Cavity; three of them belonging to the *Malleus*, viz. the *Externus*, *Obliquus*, and *Internus*; and the 4th to the *Stapes*, call'd the *Mufculus Stapedis*.

The two *Mearns*'s are situate at the Sides of the Cavity; the one opening into the Palate, called *Aqueductus*, not only on Account of its Form, but because it may serve for the Discharge of any heterogeneous Matters: By other Authors it is call'd from its Discoverer, *Tuba Eustachiana*. 'Tis by Means hereof, that Persons, thick of hearing, assist the Sense, by opening their Mouths. The other is shorter and bigger, opening into the *Sinus* in the Mamillary Procefs.

The two Apertures, or *Fenestra*, of the *Tympanum*, are in the Surface of the *Os petrosum*, which is opposite to the Membrane of the *Tympanum*. The first, called *Fenestra Ovalis*, by Reason of its Figure, is situate a little higher than the other, and receives the Basis of the *Stapes*. The other call'd *Rotunda*, notwithstanding its Figure, is oval like the former, and closed by a thin, dry, transparent Membrane, resembling that of the *Tympanum*.

The last Thing to be consider'd in the Cavity of the *Tympanum*, is a fine Chord which runs over the inner Surface of the Membrane, called *Chorda Tympani*. Anatomists have long disput'd, whether it was an Artery, a Vein, a Nerve, or the *Tendon* of one of the Muscles of the *Malleus*: But 'tis now discover'd to be a Branch of the fifth Pair of Nerves, which meets the *Portio dura* of the Auditory Nerve.

The two *Fenestra* abovemention'd, open into a Cavity dug out of the *Os petrosum*, called the *Labyrinth*, as being perplex'd with divers *detours* and *Meadures*. In this Cavity is supposed to be contain'd the innate Air. It is divided into three Parts; the first called the *Vestibule*, by Reason it leads into the other two: In it are observ'd nine Apertures, or *Foramina*. The second, comprehends three round Canals, dispos'd in a semicircular Form, and thence call'd *Canales Semicirculares*. The third is the *Cochlea*, which consists of two Parts, viz. a spiral Semi-oval Canal; and a *Lamina*, form'd into a spiral Flight. The Canal makes two Turns and an half round a *Newel*, or Axis, still growing less as it ascends. The spiral *Lamina* divides this Cavity into two, being fasten'd by its Base to this *Newel*, and by its other Extremity, to the Surface of the Canal, opposite to the *Newel*, by Means of a very fine Membrane. The Cavity of the *Cochlea* thus divided, turns, as it were, two winding Stair Cases, both built on the same *Newel*, one over 't'other, but without any Communication between them.

Lafly, There is the Auditory Nerve, which consists of two Branches, or Parts, the one soft, call'd *Portio mollis*; and the other harder, *Portio dura*: The soft Part is spent on the Organ of Hearing, being divided into five Branches, which form a delicate Web, that lines the *Vestibulum*, *Cochlea*, &c. The hard Part, passing out of the *Cranium*, is distributed among the Parts of the External Ear, &c.

The other Vessels of the Internal Ear, are Arteries and Veins from the Carotids and Jugulars.

Particular Descriptions of each Part of the Ear above recited, see under the proper Articles; TYMPANUM, FENESTRA, MALLEOLUS, STAPES, INCUS, ORBICULARIS, LABYRINTH, VESTIBULE, COCHLEA, CANALIS SEMICIRCULARIS, AUDITORY NERVE, &c.

The immediate Organ of Hearing, has been generally supposed to be the Membrane of the *Tympanum*: But later Anatomists shew this to be a Mistake, from divers Instances wherein that Membrane has been absolutely destroy'd, and broke, without the least Diminution of the Sense of Hearing.

The Parts that bid the fairest for the Prerogative are those which compose the *Labyrinth*, viz. the *Cochlea*, *Lamina Spiralis*, *Vestibule*, and *Semicircular Canals*: The *Portio mollis* of the Auditory Nerve, ramified and diffus'd through these Parts, receives the Impression of Sounds, and propagates it to the Brain. See HEARING.

Behind, and under, the External Ear, are a Number of large Glands, called *Parotides*, wherein is separated a great deal of *Saliva*, which is convey'd by the excretory Ducts into the Mouth. See PAROTIDES.

The comparative Anatomy of the Ear furnishes abundant Instances of the Creator's Wisdom.

In *Birds*, the outer Ear is of a Form proper for Flight; not protuberant, as that would obstruct their Progress, but close and cover'd. See BIRD.

In *Quadrupeds*, its Form is agreeable to the Posture and Motion of the Body, but admirably varied, according to their various Occasions: In some, as the Hare, 'tis large, open and erect; by which Means, that timorous, defenceless Creature, is warn'd of the least Approach of Danger: In others, 'tis cover'd, to keep out noxious Bodies. In the subterraneous *Quadrupeds*, who are forced to mine and dig for their Food and Habitation, as a protuberant Ear would obstruct 'em, and be liable to Injuries, their Ears are very short, lodged deep and backwards in the Head.

'Tis Moles have no *Auricle* at all, but only a round Hole, between the Neck and Shoulder. Some Authors ob-

serve, that the *Mearns*, or Passage, is closed with a little Skin, which opens and shuts like an Eye-lid. The Seal-Calf, and the several Species of Lizards and Serpents, are likewise without any External Ear. And the Tortoise, Camelion, and Generality of Fishes, have the Passage of the Ear quite stop'd, or cover'd over. There is a Sort of Whale, which has the Aperture of the Ear under the Shoulders.

Among all the Varieties in the Structure of this Organ, none, Dr. Grew observes, are more remarkable than those in the Passage into the *Os petrosum*. For in an Owl, which perches on a Tree, or Beam, and hearkens after the Prey beneath her, it is produced further out above, than below; for the better Reception of the least Sound: In a Fox, which scouts underneath the Prey at Root, it is for the same Reason produced further out below: In a Pole-Cat, which hearkens straight forwards, it is produced behind, for the taking of a forward Sound: Whereas in a Hare, which is very quick of Hearing, and thinks of nothing but being pursued, it is supplied with a bony Tube, directed backwards, so as to receive the smallest, and most distant Sound that comes behind her.

Schellhammer denies the Existence of the innate Air, so much talk'd of, in the *Labyrinth*; and with good Reason, as there is a Passage out of the *Labyrinth* into the Throat, thro' which the innate Air might escape. This is past doubt: Since by stopping the Breath, and straining, we can force the External Air into the Ear, and even hear it rushing in. When the Passage is any Way stopp'd, as by a Cold, &c. the Hearing thereby becomes dull and obtuse: And when by strong Swallowing, or other Motion of the Throat, the Passage is open'd, we perceive it by a sudden Crack, and immediately hear very clearly; the Load of incumbent Air being then discharged from the inner Ear. See SOUND, DEAFNESS, WHISPERING-PLACE, SPEAKING-TYMPAN, BELLOWING-COAR.

Several Naturalists and Physicians have held, that cutting off the Ears render'd Persons barren, and unprolific; which Notice was what first occasion'd the Legislators to order the Ears of Thieves, &c. to be cut off, lest they should produce their like.

The Ear has its Beauties, which a good Painter ought by no Means to disregard: Where it is well form'd, it wou'd be an Injury to the Head to be hidden. *Suetonius* inflicts particularly on the Beauties of *Augustus*'s Ears; and *Aelian*, describing the Beauties of *Assyria*, observes he had short Ears. *Martial* ranks large Ears among the Number of Deformities. *Felshin*.

Among the *Athenians*, it was a Mark of Nobility to have the Ears bored or perforated. Among the *Hebrews* and *Romans*, it was a Mark of Servitude.

EAR, in Music, a kind of internal Sense, whereby we perceive and judge of Harmony, and musical Sounds.

In Music, we learn universally to acknowledge something like a distinct Sense from the external one of hearing; and call it a good Ear. And the like Distinction we should probably acknowledge in other Affairs, had we distinct Names to denote those Powers of Perception by. See SENSE.

Thus, a greater Capacity of perceiving the Beauties of Painting, Architecture, &c. is called to a *fine Taste*. See TASTE.

EAR-WAX, } See CERUMEN.

EAR-RING, } PENDANT.

EAR, is also applied to a long Cluster of Flowers, or Seeds, produced by certain Plants; usually called by Botanists, *Spica*. See SPICA.

The Flowers and Seeds of Wheat, Rye, Barley, &c. grow in Ears. The same holds of the Flowers of Lavender, &c. We say the Stem of the Ear, i. e. its Tube or Straw: The Knot of the Ear: the Lobes, or Cells, wherein the Grains are enclosed: The Beard of the Ear, &c. we have known 80 Ears of Wheat from the same Root.

EARL, an English Title of Honour, or Degree of Nobility, next below a *Marquis*, and above a *Viscount*. See NOBILITY, MARQUIS, VISCOUNT, &c.

Earls, were anciently Attendants, or Associates, of the King in his Councils, and Martial Expeditions; much as *Counts*, Counts, were of the Magistrates of *Rome*, in Quality of Deputies, to execute their Offices for them. See COUNT.

Hence also *Earls* are called in *Latin*, *Comites*; in *French*, *Comtes*, Counts, &c. The *German* call them *Graven*, as *Langrave*, *Margrave*, *Palfgrave*, &c. The *Saxons*, *Ealdormen*; the *Danes*, *Eorlas*; and the *English*, *Earls*.

At first the Title *Earl* always died with the Man; *William the Conqueror* first made it Hereditary; giving it in Fee to his Nobles; and annexing it to this or that Shire or County: For the Support of the State thereof, he allotted the third Penny out of the Sheriff's Court, issuing out of all Pleas of the Shire from which the *Earl* took his Title. But of later Days the Master is much alter'd.

Earls are now created by Charter, without any Authority over, or particular Relation to, their Counties; and without any Profit arising thence, except some annual Stipend out of the Exchequer for Honours Sake. The Number of *Earls* being of late much increased, and no more Counties being left for them; several of them have made Choice of some eminent Part of a County, as *Linsley, Holland, Craven, &c.* Others, of some Towns; as *Marborough, Exeter, Bristol, &c.* And others of some Village, or their own Seat, Park, &c. as *Godolphin, Bolton, Danby, Wharton, &c.*

Two *Earls* we have which are not local, *i. e.* not dignified from any Places, but from Noble Families; *viz.* *Earl Rivers*, and *Earl Powlet*. A third is denominated from his Office, *viz.* the *Earl-Marshal*. See **MARSHAL**.

Earls are created by Circumference of Sword, Mantle, a Cap and a Coronet on his Head, and a Charter in his Hand. They are styled by the King, *Companiones nostri*, our Cousins. Their Title is, *Mox potest* and *Noble Lord*. Their Coronet has the Pearls rais'd on Points, with Leaves between. See **CORONET**.

Earl was a mighty Title among the *Saxons*: It is observed to be the most ancient of any of the Peerage; and that there is no other Title of Honour in Use among the present Nobility, which was likewise used among the *Saxons*, beside it.

The Original Titles of Honour among the *Saxons*, were *Jödeling, Calöepman*, and *Deyen* or *Dæde*. The first was appropriated to those of the Royal Family. The other two to the rest of the Nobility. Only the *L'ban* were afterwards distinguished into *Majores* and *Minores*. See **THANE**.

Earl-Marshal, is a great Officer, who had antiently several Courts under his Jurisdiction, as the *Court of Chivalry*, now almost forgotten; and the *Court of Honour*, now quite laid aside: But he hath still some Preeminence in the *Court of Marshalsea*; where he may sit in Judgment against Criminals offending within the Verge of the Court; whence the chief Officer under him is called *Knight-Marshal*. See **MARSHAL**, and **MARSHALSA**.

Under him is also the Herald's Office, or College of Arms. See **HERALD**, and **COLLEGE of Arms**.

The Office of *Earl-Marshal* is Hereditary in the most Noble Family of *Hovard*; and enjoy'd by the Duke of *Norfolk*, the principal Branch thereof; tho' now, for Reasons of State, it is discharged by Deputation: But yet it is to be observed, it is not given out of the Name and Family of *Hovard*.

EARNEST, called also *Arbes*, Money advanced to complete, or assure, a verbal Bargain, and bind the Parties to the Performance thereof.

By the Civil Law, he who recedes from his Bargain, loses his *Earnest*: Or, if the Person, who receiv'd the *Earnest*, give back, he is to return the *Earnest* double. But, with us, the Effect of *Earnest* is more. The Person who gave it, is in strictness obliged thereby to abide by his Bargain; and in Case he decline it, is not discharged upon forfeiting his *Earnest*; but may be sued for the whole Money stipulated.

EARTH, Terra, in Natural Philosophy, one of the four vulgar, or Peripatetical Elements; deniz'd, a simple, dry and cold Substance; and as such, an Ingredient in the Composition of all Natural Bodies. See **ELEMENT**.

It should be well observed, that the Element *Earth* is a very different Matter from the *Earth* whereon we tread: *Aristotle* having laid down *cold* and *dry* as his first Element; to give it a suitable Name, look'd among the divers Bodies, for that which should come the nearest thereto; which being *Earth*, he gave his first Element that Denomination: Tho', thus borrowing a Word, that had been used for a different Thing, occasioned a great Part of his Followers to run into an extravagant Error, and to suppose, that this habitable fossil *Earth*, was an Element. See **PRINCIPLE**.

EARTH, in Chymistry, is the fourth of the Chymical Elements, or Principles, into which all Bodies are resolvible by Fire. See **PRINCIPLE**.

After drawing off the Spirit, Sulphur and Phlegm, *e. gr.* of Wine, what remains in the Retort, is a tasteless, smellless, dusty Matter, not capable either of being rais'd by Distillation, or dissolved by Solution, and called *Earth*, or *Terra sannata*, or *Caput Mortuum*. See **CAPUT Mortuum** and **TERRA sannata**.

This *Earth* is supposed to be the Basis, or Substratum of all Bodies; and that, wherein the other Principles reside. 'Tis all that is solid, *e. gr.* in an Animal or Vegetable Body, *i. e.* all the Vascular Part; the rest being Juices. See **SOLID**, **VESSEL**, **VEGETABLE**, &c.

EARTH, in Natural History, is a fossil, or terrestrial Matter, whereof our Globe principally consists; whose Character is to be neither dissoluble by Fire, Water, nor Air;

not transparent, more fusible than Stone, and generally containing some Degree of Patness. See **Fossil**.

Of such *Earth*, some is Simple, and Immutible; other, Compound and Pasty. Of the first Kind is *Chalk, Pumice, and Rotten-stone*; of the Second, or Compound *Earths*, are *Bales* of all Kinds, red, white and brown; *Fallers Earth*, the divers Kinds of *Medicinal Earth*, as the *Cretica, Hungarica, Turcica, Muscica, Lemnian Earth, Malta Earth, Terra Sigillata, &c.* To this Class are likewise refer'd *Argillæ*, or *Clay Earth*, form'd into Pottery Ware.

These *Earths* are all resolvible into an Oil, a little acid Salt, &c. and a *Calx*, which is the Basis, or the *Earth* properly so call'd. See the divers Kinds of *Earths* described under their proper Articles: **CHALK**, **PUMICE**, **BOLL**, **SIGILLATA-TERRA**, &c.

Naturalists generally rank *Sand* as a Species of *Earth*; tho' with no great Propriety. *Sands* being, in strictness, a Sort of Crystals, or little transparent Pebbles, calcinable, and by the Addition of a fix'd alkaline Salt, fusible, and convertible into Glass: And therefore properly reducible to the Class of Stones. See **STONE**.

By Means of *Sand* it is, that the fatty *Earth* is render'd fertile, and fit to feed Vegetables, &c. For pure *Earth* is liable to coalesce into a hard coherent Mass, as in *Clay*; and *Earth* thus imbedded, and as it were glued together, would be very unfit to nourish Plants. But if with such *Earth, Sand, i. e.* hard Crystals which are indissoluble in Water, and still retain their Figure, be intermix'd, they will keep the Pores of the *Earth* open, and the *Earth* it self loose and incompact, and by that Means give room for the Juices to move, ascend, &c. and for Plants to be nourish'd thereby. Thus a Vegetable, planted either in the *Sand* alone, or in the fat *Glebe* and *Earth* alone, receives no Growth or Increase; but is either starved or suffocated: But mix the two, and the Mass becomes fertile. In Effect, by Means of *Sand*, the *Earth* is render'd in some Measure Organical; by preserving a Sort of Pores, and Intertices therein, somewhat analogous to Vessels is effected; by which the Juices of the *Earth* may be convey'd, prepared, digested, circulated, and at length excreted and thrown off into the Roots of Plants. See **WATER** and **VEGETATION**.

EARTH, in Geography, this terraqueous Globe, or Ball, whereon we inhabit, consisting of Land and Sea. See **TERRAQUEOUS GLOBE**; See also **OCEAN**.

The *Earth*, consider'd in different Relations, or Habitudes, makes the Subject of Geography and Geometry. See **GEOGRAPHY**, &c.

The Figure of the *Earth* is demonstrated to be nearly Spherical. Thus: the Moon is frequently seen eclipsed by the Shadow of the *Earth*; and in all Eclipses, that Shadow appears circular, what Way soever it be projected, whether towards East, West, North or South, howsoever its Diameter vary, according to the greater or less Distance from the *Earth*.

Hence it follows, that the Shadow of the *Earth*, in all Situations, is really Conical; and consequently the Body that projects it, *i. e.* the *Earth*, is nearly Spherical. See **SHADOW**.

The Natural Cause of this Sphericity of the Globe is, according to *Sir Isaac Newton*, the great Principle of Attraction, which the Creator has stamp'd on all the Matter of the Universe; whereby all Bodies, and all the Parts of Bodies, mutually attract one another. See **ATTRACTION**.

The same is the Cause of the Sphericity of the Drops of Rain, Quicksilver, &c. See **Drop**, **SPHERICITY**, &c.

We say 'tis nearly Spherical; for the Inequalities on its Surface prevent its being perfectly so. Besides that, *Huygens* and *Sir Isaac Newton* have shewn, that the *Earth* is higher and bigger under the Equator, than at the Poles: So that its Figure, nearly, is that of an oblate Spheroid, swelling out towards the Equatorial Parts, and flatted or contracted towards the Poles. The Ratio of the greater Diameter to the less, *Huygens* determines to be as 578 to 577. See **MOUNTAIN**, **SPHEROID**, **PENDULUM**, &c.

The Reason of this Inequality is deduced from the Diurnal Rotation of the *Earth* on its Axis; as is already shewn in that of the Sun. See **SUN**.

This Roundness of the *Earth* is further confirm'd by its having been frequently sail'd round: The first Time was in the Year 1519, when *Ferd. Magellan* made the Tour of the whole Globe in 114 Days. In the Year 1557, our Countryman *Drake* performed the same in 106 Days: In the Year 1586, *Sir Thomas Cavendish* made the same Voyage in 77 Days; *Simon Cordes*, of *Rotterdam*, in the Year 1590; and in the Year 1598, *Oliver Noort*, a *Hollander*, in 107 Days; *Will. Corn. Van Schouten*, in the Year 1615, in 94 Days; *Jam. Herriot* and *Joh. Huygent*, in the Year 1623, in 802 Days: All of whom sailing continually from East to West, at length arriv'd in *Europe*, whence they set forth; and in the Course of their Voyage observ'd all the

the *Phænomena*, both of the Heavens and Earth, to correspond to and confici this spherical Figure.

What the *Earth* loses of its Sphericity by Mountains and Valleys, is nothing considerable; the highest Eminence being scarce Equivalent to the minutest Protuberance on the Surface of a Lemon: What it loses by the Swelling of the Equatorial Parts is more sensible. See MOUNTAIN.

Sir *Isaac Newton* makes the greatest Diameter 34 Miles bigger than the less, fixing the *Ratio*, as 692 to 688. If the *Earth* were in a fluid State, its Revolution round its Axis would necessarily make it put on such a Figure, by Reason the Centrifugal Force being greatest towards the Equator, the Fluid would there rise, and swell most: and that it should be so now, seems necessary to keep the Sea in the Equinoctial Regions from overflowing the *Earth* thereabouts.

Add, that Experiments made on Pendulums, which must be of different Lengths, to swing equal Times here and at the Equator, evince the same Thing. See PENDULUM.

Monf. *de la Hire* and *M. Derham*, indeed, have shewn, in the *Memoirs of the French Academy*, and *Philosoph. Transact.* that this Diversity may arise either from the greater Heat, or the greater Rarity of the Air there than here; as having observed a like Variation between Pendulums when heated and cold, and when in *Vacuo* and open Air. But, beside that Sir *Isaac Newton* and Monf. *Bernoulli*, have set aside these Causes as insufficient; Monf. *Cassini* has found, that the Degrees of a Meridian grow larger, the further we go towards the Line by one Eight hundredth Part of every Degree; which puts the Sphericity of the *Earth* past Question.

The Ancients had various Opinions as to the Figure of the *Earth*: Some, as *Anaximander*, held it Cylindrical; and others, as *Leucippus*, in Form of a Drum. But the principal Opinion was, that it was flat; that the visible Horizon was the Bounds of the *Earth*, and the Ocean the Bounds of the Horizon; that the Heavens and *Earth* above this Ocean was the whole visible Universe; and that all beneath the Ocean was *Hades*. Of which Opinion were not only divers of the ancient Poets and Philosophers, but also some of the Christian Fathers, as *Lactantius*, *St. Augustine*, &c.

Fa. Taquet draws from petty Conclusions from the Spherical Figure of the *Earth*; as, 1. That if any Part of the Surface of the *Earth* were quite plain; a Man could go more walk upright thereon, than on the Side of a Mountain: 2. That the Traveller's Head goes a greater Space than his Feet; and a Horseman than a Footman, as moving equal Arches of greater Circles: 3. That a Vessel full of Water being rais'd perpendicularly, some of the Water will be continually flowing out, yet the Vessel still remain full; and on the contrary, if a Vessel full of Water be let perpendicularly down, tho' nothing flow out, yet it will cease to be full: Consequently there is more Water contain'd in the same Vessel at the Foot of a Mountain, than on the Top; by Reason the Surface of the Water is compress'd into a Segment of a less Sphere below than above. *Videq. Astronom. L. I. C. 2.*

The Magnitude of the *Earth*, and the Number of Miles its Diameter contains, has been variously determined by various Authors, ancient and modern. The Way to arrive at it, is, by finding the Quantity of a Degree of a great Circle of the *Earth*. But this Degree is found very different, according to the different Methods and Instruments made use of, as well as the different Observers. See DEGREE.

The Method observed by Mr. *Norwood*, and the French Astronomers *Picard*, *Cassini*, &c. viz. by measuring the Distance between two remote Places on the same Meridian, is undoubtedly the best; and was performed with such exceeding Accuracy, especially by Monf. *Cassini*, that hardly any thing further or better can be expected. According to that Author, the Ambit or Circumference of the *Earth* is 253750280 Paris Feet; or, 134650777 English Feet; or, 23031 $\frac{1}{2}$ of our Statute Miles: Whence, supposing the *Earth* spherical, its Diameter must be 7967 Statute Miles; and consequently its Radius, or Semi-diameter, may be taken in a round Number for 398350000 Feet: Its Surface will be 299444206 Miles; which being multiplied into $\frac{1}{2}$ of its Semi-diameter, gives the solid Content of the Globe of the *Earth* 264856000000 Cubic Miles.

On the Surface of the *Earth* are conceiv'd the same Circles, as on the Surface of the *Mundane* Sphere already described; viz. AN EQUATOR, ECLIP TIC, TROPICS, POLAR-CIRCLES, MERIDIANS, HORIZON, PARALLELS, &c. which See, as also SPHERE and GLOBE.

The *Terraqueous* Globe is now generally granted to have two Motions, the one *Diurnal*, around its own Axis, in the Space of 24 Hours, which constitutes the Natural Day, or *Nycthemeron*. See DIURNAL-MOTION.

The other *Annual*, round the Sun, in an Elliptical Orbit, or Track, in 365 Days 6 Hours, constituting the Year. See ANNUAL-MOTION and YEAR.

From the former we derive the Diversities of Night and Day: See NIGHT and DAY. And from the latter, the Vicissitudes of Seasons, Spring, Summer, &c. See SEASON, SPRING, SUMMER, WATER, &c.

See the Motion of the *Earth* proved under the Article EARTH in Astronomy.

In the *Terraqueous* Globe we distinguish three Parts, or Regions, viz. 1. The *External* Part, or Crust, which is that from which Vegetables arise, and Animals are nourish'd. 2. The *Middle*, or intermediate Part, which is posited by Fossils, extending further than human Labour ever yet penetrated. 3. The *Internal*, or *Central* Part, which is unknown to us, tho' by many Authors suppos'd of a magnetic Nature; by others, a Mass, or Sphere of Fire; by others, an Abyss, or Collection of Waters, surrounded by the Strata of *Earth*; and by others, a hollow, empty Space, inhabited by Animals, who have their Sun, Moon, Plants, and other Conveniences within the same.

Others divide the Body of the Globe into two Parts, viz. the *External* Part, which they call the *Cortex*, including the whole Depth of Crusts or Masses of the Strata of the *Earth*: And the *Internal*, which they call the *Nucleus*, being of a different Nature from the former, and possess'd by Fire, Water, or the like. See CORTIX and NUCLEUS.

The *External* Part of the Globe either exhibits Inequalities, as *Mountains* and *Valleys*; or it is plain and level; or dug in Channels, *Rivers*, Beds, &c. for *Rivers*, *Lakes*, *Seas*, &c. See RIVER, LAKE, OCEAN, &c.

These Inequalities in the Face of the *Earth*, are by most Naturalists suppos'd to have arose from a Rupture, or Subversion of the *Earth*, by the Force either of the subterraneous Fires or Waters. The *Earth* in its Natural and Original State, *Des Cartes*, and after him *Burner*, *Struo*, *Woodward*, *Webster*, and others, suppose to have been perfectly round, smooth, and equable; and accounts for its present rude and irregular Form, principally from the great Deluge. See DELUGE, EARTHQUAKE, &c.

In the *External*, or *Cortical* Part of the *Earth*, we meet with various *Strata*, which are suppos'd to be the Sediments of various Floods, the Waters whereof being replete with Matters of divers Kinds, as they dried up, or oozed through, deposited these different Matters, which in Time harden'd into *Strata* of Stone, Sand, Coal, Clay, &c. See STRATA, COAL, &c.

Dr. Woodward has consider'd the Business of *Strata* with great Attention, viz. their Order, Number, Situation with respect to the Horizon, Depth, Intersections, *Fissures*, Colour, Consistence, &c. and ascribes the Origin and Formation of them all, to the great Flood, or *Cataclysmus*. At that terrible Revolution, he supposes all the terrestrial Bodies of all Kinds to have been dissolved and mix'd with the Waters, and sustain'd therein, so as only to constitute one common Mass therewith. This Mass of terrestrial Particles, intermix'd with Water, he supposes to have been at length precipitated to the Bottom, and that, according to the Laws of Gravity, the heaviest sinking first, and the lighter in their Order. By such Means were the *Strata* form'd, whereof the *Earth* consists, which attaining their Solidity and Hardness by Degrees, have continu'd so ever since. These Sediments, he further concludes to have been at first all parallel and concentrical, and the Surface of the *Earth* form'd thereby, perfectly smooth and regular: But in Course of Time, divers Changes happening from *Earthquakes*, *Volcanos*, &c. the Order and Regularity of the *Strata* was disturb'd and broke, and the Surface of the *Earth*, by such Means, brought to the irregular Form in which it now appears. See further Particulars under FOSSIL, VOLCANO, SPRING, ATMOSPHERE, &c.

EARTH, in Astronomy, is one of the primary Planets, according to the System of *Copernicus*. Its Character is δ . See PLANET, &c.

In the Hypothesis of *Ptolemy*, the *Earth* is the Centre of the System. See SYSTEM.

Whether the *Earth* move, or remain at Rest, i. e. Whether it be fix'd in the Centre, with the Sun Heavens and Stars moving round the same from East to West; or whether, the Heavens and Stars being at Rest, the *Earth* move from West to East, is the great Article that distinguishes the *Ptolemaic* from the *Copernican* System. See COPERNICAN, and PTOLEMAIC System.

Motion of the EARTH.

The happy Industry of the Astronomers of our Age, has put the Motion of the *Earth* beyond all reasonable doubt: On which Account, the Names of *Copernicus*, *Gassendus*, *Kepler*, *Hook*, *Flamsteed*, &c. will ever be mention'd with the highest Honour.

Indeed, the same Motion had been held by many of the ancient Philosophers. *Cicero*, in his *Tuscul. Quest.* assures us, that *Nicetas* of *Syracuse* first discover'd that the *Earth* had a diurnal Motion, by which it revolved round its Axis in the Space of 24 Hours: And *Platarch*, de *Placit.*

Philosoph.

Philosoph. tells us, that *Philolaus* discover'd its Annual Motion round the Sun. About 100 Years after *Philolaus*, *Aristarchus* the *Samian*, propos'd the Motion of the *Earth* in stronger and clearer Terms, as we are assur'd by *Archimedes*, in *Arenar.*

But the Religious Opinions of the *Heathen* World, prevented the Doctrines becoming more cultivated. For *Aristarchus*, being accus'd of Sacrilege by *Cleantes* for moving *Vesta*, and the tutelary Deities of the Universe out of their Place; the Philosophers began to lay aside so perilous a Position.

Many Ages afterwards, *Nic. Cusanus* revived the ancient System, in his *Doll. de Pignorant.*; and assert'd the Motion of the *Earth*: But the *Dogma* got but little Ground till the Time of *Copernicus*, who shew'd its great Use and Advantages in Astronomy; and who had, immediately, all the Philosophers and Astronomers, that durst think differently from the Crowd, and were not afraid of Ecclesiastical Censures, on his Side. So that *Kepler*, his Contemporary, made no Scruple to cry: *Hoderno tempore preclarissimum quippe Philosophorum & Astronomorum Copernicus adhibetur: Sæcra est hæc Gloriet; vincens suffragis melioribus: Ceteris pene sola obstat Superstitio aut Natus a Cleanthibus.*

The Arguments alledg'd against the Motion of the *Earth*, are vain and frivolous. The Principal are,

1. That it is a heavy Body, and very unfit for Motion.
2. That if the *Earth* were to move round its Axis in 24 Hours, all our Houses, Buildings, &c. would tumble down.
3. That Bodies wou'd not fall upon the Places perpendicularly under them: Nor a Bullet, *e. gr.* shot perpendicularly from the Ground, fall back again upon the same Spot.
4. That it is contrary to the Words of Scripture: And,
5. That it is repugnant to our Senses, which represent the *Earth* at Rest, and the Sun in Motion.

The Arguments for the Motion of the *Earth* are of another Kind, and carry other-ways Evidence with them; being deduced from actual Observation and Phenomena, and not from the fanciful Surmises of timorous Zealots. They are these:

1. The Sun will equally appear in Motion, and the *Earth*, as standing still, to a Spectator on the *Earth*; whether the Sun really move round the *Earth* at Rest; or the *Earth* move round the Sun at Rest.

For suppose the *Earth* in T, (*Tab. Astronom. Fig. 14.*) and the Sun in 1; the Sun will then appear in γ . And suppose the Sun to proceed in an Orbit, surrounding the *Earth*, from 1 to 2, he will then appear in δ ; and if he proceed further to 3, he will be seen in ϵ ; and thus will he appear to go on, according to the Order of the Signs in the Ecliptic.

Suppose again the *Earth* in 1; (*Fig. 15.*) the Sun, S, will be seen in γ : Let the *Earth* go on from 1 to 2, the Sun will appear to the Inhabitants of the *Earth* to have proceeded from γ to δ ; and if the *Earth* proceed to 3, the Sun will appear to have advanced further from δ to ϵ ; and so on, according to the Successions of the Signs of the Ecliptic.

Thus does the Sun appear alike to move, whether it really move, or stand still; so that the Objection from Sense is of no Force. See *VISION*. But again,

2. If one of the Planets be supposed to have moved a certain Space, from West to East; the Sun, *Earth*, and other Planets, together with the fixed Stars, will all seem to an Inhabitant of that Planet, to have moved just so far round it the contrary Way.

For suppose a Star M, (*Fig. 16.*) in the Zenith of an Inhabitant of a Planet plac'd in T; and suppose the Planet to have revolved on its Axis from West to East; in a certain Space of Time, the Sun S, will have arriv'd at the Zenith of T; then the Star 1, then N, then the *Earth* L, and at length the Star M again. To the Inhabitant of the Planet therefore, the Sun S, with the *Earth* L, and the Stars 1, N, M, &c. will appear to have moved round the Planet a contrary Way.

Thus, to the Inhabitants of the Planets, if any such there be, the *Mundane* Sphere, with the Sun, Stars, and all the other Planets, will, as to us, appear to move round them from East to West. And accordingly, the Inhabitants of our Planet the *Earth*, are only liable to the same delusive Appearances with those of the rest.

3. The Orbits of all the Planets include the Sun, as the common Centre of them all: But 'tis only the Orbits of the superiour Planets that include the *Earth*, which however is not in the Centre of any of them, as we have already shewn under the Articles, *SUN* and *PLANET*.

4. The *Earth*'s Orbit being prov'd to be between thofe of *Venus* and *Mars*; it follows, that the *Earth* must turn round the Sun: for, as it lies within the Orbits of the superiour Planets, their Motions would indeed appear unequal and irregular; but they would never either be stationary or retrograde. See *STATION* and *RETROGRADATION*.

5. From the Orbits and Periods of the several Planets about the Sun; and of the Moon and the Satellites round the *Earth*, *Jupiter* and *Saturn*; it is evident, that the Law of Gravitation is the same towards the *Earth*, *Jupiter* and *Saturn*, as towards the Sun; and the periodical Times of the several Bodies moving round each, are in the same Ratio to their several Distances from them. See *PARABOL*.

Now, it is certain, that on the Hypothesis of the *Earth*'s annual Motion, her periodical Time exactly suits this Law, bearing such a Proportion between those of *Mars* and *Venus*, as the several other Bodies directed by the same Law do bear, *i. e.* the Squares of the Periods are in all, as the Cubes of the Distances from the Centre of their Orbits. But supposing the *Earth* to be at Rest, this Law is broke most exorbitantly.

For if the *Earth* don't move round the Sun, the Sun must move with the Moon round the *Earth*: Now the Distance of the Sun to that of the Moon, being as 10000 to 45; and the Moon's Period being less than 28 Days, the Sun's Period should be found no less than 242 Years, whereas in Fact it is but one Year. Which single Consideration, Mr. *Whiston* thinks of Weight enough to determine the Controversy between the two Systems, and to establish the Motion of the *Earth* for ever. See *REVOLUTION*.

Whereas, supposing our *Earth* to have once revolved about the Sun in a circular Orbit, whose semi-diameter were equal to the *Earth*'s original Distance from the Sun six Degrees past its Perihelion, the annual Period would be found exactly and surprizingly equal to the *Lunar* or the ancient *Solar* Year, which were exactly commensurate; containing 12 Synodical, or 13 Periodical Months, *i. e.* 355 Days, 4 Hours, 19 Minutes. See *MONTH*.

6. The Distances of certain of the fix'd Stars from the Zenith, have been observ'd to be various at various Times of the Year. That, particularly, of the *Pole-star* from the Pole, has been discover'd by Mr. *Flaughthead* from repeated Observations, for 7 Years successively; to be greater about the Summer Solstice, than about the Winter, by about 40 Seconds. Whence it appears, that the *Earth* changes its Situation; receding from the *Pole-Star*, and returning back to it again Annually. See *PARALLAX* of the *Earth*'s Orbit.

Which Argument is further confirm'd from this, that the *Earth* is nearer the Sun at *Christmas*, than at *Midsummer*; as appears both from its apparent Diameter being greater in *December* than in *June*; and from its Motion being swifter by one 25th Part in the former Season, than the latter: Whence it is that there are about 8 Days more in the Summer half Year, *vs.* from *March* to *September*, than in the Winter, from *September* to *March*. See *SOLSTICE* and *EQUINOX*.

7. Either the heavenly Bodies revolve round the *Earth* in 24 Hours, or the *Earth* revolves round its Axis in that Time. Now the Planets, revolving round the Sun, perform their Revolutions in greater or less Times, as their Orbits are greater or less, *i. e.* as they are more or less remote from the Sun. Of Consequence, if the Stars and Planets revolved round the *Earth*, they would perform their Revolutions in unequal Times, according as their Orbits, or their Distances, were unequally big. At least, the fix'd Stars, which are at such prodigious Distances from the *Earth*, wou'd never move round it in 24 Hours, as the nearest Planet is supposed to do. See *REVOLUTION*.

This is an Inelegancy, which is avoided in the System where the *Earth* is supposed to move; and where every Planet is so much the longer in describing its annual Orbit round the Sun, as the Orbit is greater. See *ORBIT*.

8. In all the Works of Nature we are acquainted withal, the Creator appears to act by the shortest, easiest, and simplest Means. Now, if the *Earth* be at Rest, and the Stars move, the Velocity of these latter must be immense, and yet all the Purposes thereof, might have been answer'd by a moderate Motion of the *Earth* alone.

For the Moon's mean Distance from the *Earth*, is 57 Semi-diameters of the *Earth*; which, supposing a Semi-diameter of the *Earth* 3440 Geographical Miles, amounts to 196080 Miles. Hence, the Circumference of the Moon's diurnal Circle, being 1231380 such Miles, the Moon's horary Motion must be 283308 Miles: Consequently in each Second, a Space less than that of the Pulsè of an Artery, the Moon, tho' the slowest of all the heavenly Bodies, must move 3 Miles and five 9ths. See *MOON*. Again, the Sun's mean Distance from the *Earth* is 22000 Semi-diameters of the *Earth*, or 75680000 Geographical Miles; consequently the Sun's diurnal Progress, when in the Equator, must be 475270400 Miles: And therefore in the Space of one Second, *i. e.* in the twinkling of an Eye, he must move 5480 Miles.

Again, the Distance of the Sun from the *Earth*, is to that of *Mars* nearly as one and a half; to that of *Jupiter*, as one to five and a Quarter; and to that of *Saturn*, as one to nine: Wherefore as the diurnal Spaces, and all other Things described in the same Time, are in the same Ratio; *Mars*, in one

one twinkling of an Eye, must fly 8222; *Jupiter* 28688; and *Saturn* 52060 Miles. Lastly, the fix'd Stars being yet vastly more remote from the *Earth* than *Saturn*, their Motion in, or near the Equator, must be vastly swifter than that of *Saturn*.

9. If the *Earth* be at Rest, and the Stars move by any common Motion, the several Planets must each Day describe several Spirals running forth to a certain Term towards the North, and thence returning to the opposite Term towards the South; sometimes narrower, and sometimes broader.

For the Distances of the several Planets from the Zenith alter every Day; increasing to a certain Point towards the North, and thence decreasing again towards the South: Consequently, the Altitude of the Pole, being always found the same, and the Planets not returning to the same Point of the Meridian; they do not describe Circles but Spirals. Add, that as the several Planets do not retain the same Distance from the *Earth*, but are sometimes nearer, and sometimes recede further from it; at a greater Distance, a greater Spiral, and at a less, a less is described.

Further, as their Motion is slower, when the Planet is further from the *Earth*; the greater Spirals are described in lesser Times than the lesser. And as the greatest and least Distance of the Planets from the *Earth* is not affix'd to the same Point of the Heavens, the Planets have moved in different Tracts every Day from the Beginning.

10. Bodies let fall from any considerable Height, are found by Experiment not to fall upon the Spot perpendicularly under them, but to the South-East thereof. See DESCENT.

The Experiment was proposed to Dr. Hook, in the Year 1679, by a Person, who suggested, that if the *Earth* had any diurnal Motion, the Body would fall to the East of the perpendicular. Dr. Hook, on that Occasion, read a Discourse before the Royal Society, wherein he endeavour'd, *a priori*, to assign what Curve a falling Body would describe; asserting particularly, that the Fall of the Body would not be directly East, but South East: Which was confirm'd by divers actual Trials.

11. The Power of Gravity is found to decrease as you approach nearer to the Equator: Which is a Circumstance that agrees to all Bodies, which have a Motion on their Axis; and them only, as being really the necessary Result of such Motions. See GRAVITY.

For a Body, revolving on its Axis, the Parts, or Appendages thereof, are continually endeavouring to recede from the Centre. Consequently, the Equator being a great Circle, and the Parallels all decreasing towards the Poles, the Centrifugal Force is greatest in the Equator, and decreases towards the Poles, in the Ratio of the Diameters of the Parallels to that of the Equator. Now the Power of Gravity determines the several Parts or Appendages towards the Centre of the whole: Consequently the Centrifugal Force acting contrary to the Power of Gravity, retards the Defcent of Bodies, and that most where it is greatest.

Dr. Keil computes, that the Force of Gravity to the Centrifugal Force at the Equator is as 289 to 1; consequently, a Body placed there, would lose one 289th Part of the Weight it would have, were the *Earth* at Rest. Consequently, the Centrifugal Force, at the Poles, being infinitely small, a Body will there weigh 289 Pounds, which at the Equator only weighs 288.

12. The following is an actual Demonstration of the *Earth's* Motion, drawn from Physical Causes, for which we are indebted to the Discoveries of Sir Isaac Newton; and which Dr. Keil takes for conclusive, and unanswerable.

All the Planets, 'tis demonstrat'd, gravitate towards the Sun: And Observations testify to us, either that the *Earth* turns round the Sun, or the Sun round the *Earth*, in such Manner, as to describe equal Areas in equal Times. But 'tis demonstrat'd further, that whenever Bodies turn round each other, and regulate their Motion by such Law, the one must of Necessity gravitate to the other: Consequently, if the Sun in its Motion do gravitate to the *Earth*; Action or Reaction being equal and contrary, the *Earth* must likewise gravitate towards the Sun. Again, the same Author has demonstrat'd, that when two Bodies gravitate to one another, without directly approaching one another in right Lines; they must both of them turn round their common Centre of Gravity: The Sun and *Earth*, therefore, do both turn round their common Centre of Gravity; but the Sun is so great a Body in Respect of our *Earth*, which is, as it were, but a Point; that the common Centre of Gravity of the two Bodies, will lie within the Body of the Sun itself, and not far from the Centre of the Sun. The *Earth*, therefore, turns round a Point, which is in the Body of the Sun; and therefore turns round the Sun. Q. E. D.

To say no more, to suppose the *Earth* at Rest, confounds and destroys all the Order and Harmony of the Universe, annuls its Laws, and sets every Part at Variance

with other, robs the Creator of half the Praise of his Work, and Mankind of the Pleasure of the Contemplation thereof. In Effick, it renders the Motions of the Planets inextricable and useless, which otherwise are plain and simple. So that such of the later Astronomers, as have asserted it with the most Zeal, have been forced to set it aside, when they came to compute the Motions of the Planets. None of them would ever attempt to compute these Motions in variable Spirals; but in all their Theories they tacitly suppose the *Earth* to move on its Axis, so as to turn the diurnal Spirals into Circles.

Thus, the Jesuite Riccioli, who, at the Pope's Command, oppos'd the Motion of the *Earth* with all his Might, as something contrary to Holy Scripture; yet, to frame Astronomical Tables, which should any thing tolerably agree to Observation, he was forced to have Recourse to the Motion of the *Earth*, as his only Refuge.

This, Dr. Chales, another of the same Fraternity, frankly confesses: '*P. Riccioli* — *nullas Tabulas aperire potuit que vel mediocriter Observationibus responderent; Nisi secundum Systema terre motu; notwithstanding, that he called in all the foreign and forced Assurances of moveable Epicycles: So that in his Astronomy reformata, where he undertakes to give accurate Tables of the Celestial Motions, he gives in to the Hypothesis of the Motion of the Earth.*' *De Chales Astron. Reformata. L. X. C. 1.*

The System, then, which supposes the *Earth* at Rest, is, of it self, of no Use, or Significance in Astronomy; Nor does it avail more in Physics; for the principal Phenomena are no Way deducible from it; but the Retainers thereto are either forced to fly to the immediate Agency of the Deity, (which in Physics is the same as the *Reductio ad Absurdum* in Geometry) or to Reason and Principles unknown.

Some oppos'd the Motion of the *Earth*, as contrary to Revelation; there being mention made, in Holy Scripture, of the Sun's rising and setting; of his standing still in the Time of *Joshua*; and his going back in that of *Hezekiah*.

Now, to take the genuine Sense of these Passages, the Laws of Interpretation must be settled. 1. Then, we suppose, that the several Words of Scripture have their several Ideas corresponding to them; and that a Man takes their Sense, in whom those Ideas are excited by the reading. 2. That the Words of Scripture, attentively read, are sufficient to excite those Ideas in a Mind not prepossess'd. Hence, 3. It follows, that either God must have exhibited the Definitions of the Words that occur in Scripture; or, that he supposes prior Notions, and leaves us to take their Sense the ordinary Way. Hence, 4. We argue, that no other Ideas are to be affix'd to the Words of Scripture, but such as occur to a Person who looks or attends to the Things 'emself speaks of. See DEFINITION.

By the *Sun's Rising*, therefore, is meant no more than his Re-appearance in the Horizon, after he had been hid below it: And by his *Setting*, an Occultation of the Sun, before visible in the Horizon. When the Preacher therefore says, *Eccles. i. 5. The Sun rises, and sets, and returns to his Place*; he means, doubtless, no more than the Sun, which before was hid, is now seen in the Horizon; and after being there conspicuous, is hid again, and at length re-appears in the East. For thus much only appears to a Person who views the Sun; and therefore thus much, and no more, is express'd by the sacred Writers.

In like Manner, when in *Job. X. 12, 13. the Sun and Moon are said to have stood still*; all meant by Station is, that they did not change their Place, with Respect to the *Earth*. For that General, by *Sun stand thou still over Gibeon, and thou Moon, over the Valley of Ajalon*; required no more, than that the Sun, which then appeared over that City, should not change its Situation. And from his bidding the Sun to keep his Situation, it would be unjust to infer, that it moves round the *Earth* at Rest.

Gassendus, very pertinently to the present Purpose, distinguishes two sacred Volumes, the one written, called the Bible; the other, Nature, or the World; God having manifested himself by two Lights: the one of Revelation, and the other of Demonstration. Accordingly, the Interpreters of the former are Divines; of the latter, Mathematicians. As to Matters of Natural Knowledge, the Mathematicians are to be consulted; and as to the Objects of Faith, the Prophets; the former, being no less Interpreters, or Apostles, from God to Men, than the latter. And as the Mathematician would be judg'd to wander out of his Province, if he should pretend to controvert, or set aside any Article of Faith from Principles of Geometry; so it must be granted, the Divines are no less out of their Limits, when they venture to pronounce on a Point of Natural Knowledge, beyond the Reach of any not versed in Geometry and Opticks, merely from Holy Scrip-
D*

ture, which does not pretend to teach any thing of the Matter.

For Instance, we may quote *Lactantius*, and *Augustine*; the first of whom render'd himself ridiculous by disputing, from Scripture, against the Roundness of the Earth;

The Earth, thus proved to move, it is to be further observed, that the Altitude of the Pole being found at all Times of the Year, i. e. in all Points of its Annual Orbit, (the Ecliptic) to be the same; it follows, that the Earth proceeds in such Manner along its Orbit, as that its Axis is constantly parallel to the Axis of the World, and of Course parallel to itself. See AXIS.

This Motion, which *Copernicus* calls the Motion of Libration, may be well enough illustrated, by supposing a Globe, with its Axis parallel to that of the Earth, painted on the Flag, or Antics of a Mast, moveable on its Axis, and continually driven by the West Wind, while it makes the Tour of an Island: 'Tis evident, that in every Situation of the Ship, the Axis of the painted Globe will continue Parallel to the Axis of the World. See LIBRATION, and PARALLELISM.

According to Sir *Isaac Newton's* Principles, the Earth's Axis does, in every annual Revolution, incline twice towards the Ecliptic, and twice return to its former Position. On which *Newton* it is, that the Precession of the Equinoctial Points is supposed to depend; and as Mr. *F. Smalton* likewise imagines, the annual Parallax of the fix'd Stars likewise. See NOTATION, PRECESSION, PARALLAX, &c.

EARTh, in Agriculture and Gardening. See SOIL.

Unuried Earth, i. e. the Soil, or Earth 6 or 7 Inches deep, where neither Spade nor Plow has reach'd, is greatly recommended by Mr. *Lawrence*, for Amendments and Improvements, both in the Fruit and Kitchen Garden. He assures us, from his own Experience, that no Kind of Compost, made with Art, exceeds it. And adds, that if the choicest Fruit-Trees be planted herein, they presently discover an uncommon Healthfulness and Vigour: And that if any tender Sorts of Annuals be discreetly sown in this Earth, made fine by sifting, their Looks, Colour, &c. soon discover that they like the Soil. Melons and Cucumbers, need no other Compost but this Unuried Earth: And Asparagus it self will prosper, at least, as well in this Unuried Earth, if laid a Foot and a half deep, as with all the usual Expence of Dung. Tho' for the tenderer Flowers, and Exotics, this Earth is not found to have any extraordinary Excellencies. For annual Plants, produced from Seed, a Coat of this Unuried Earth, 2 Inches deep, may suffice: On other Occasions, a greater Depth is required.

EARTH-Bags, in Fortification, the same with Canvas Bags; which see.

EARTH-Flax. See ALUMEN Plumbosum.

EARTHING, in Agriculture and Gardening, the Covering of Vines, Sallery, and other Trees and Plants with Earth.

EARTHQUAKE, in Natural History, a vehement Shake, or Agitation of some considerable Place, or Part of the Earth; from Natural Causes; attended with a huge Noise like Thunder, and frequently with an Eruption of Water, or Fire, or Smoak, or Winds, &c.

Earthquakes are the greatest, and most formidable Phenomena of Nature. *Aristotle*, and *Pliny*, distinguish two Kinds, with Respect to the Manner of the Shake, viz. a Tremor and a Puls; the first being horizontal, in alternate Vibrations, compared to the shaking of a Person in an Ague. The 2d, perpendicular, up and down: Which latter Kind are also called by *Aristotle* *seismos*, from the Resemblance of their Motion to that of Boiling.

Agricola increases the Number, and makes four Kinds; which *Ab. Magnus*, again reduces to three, viz. Inclination, when the Earth liberates alternately from right to left; by which Mountains have been sometimes brought to meet, and clash against each other: Pulsation, when it beats up and down like an Artery: And Trembling, when it shakes and totters every Way, like a Flame.

Phenomena of EARTHQUAKES.

The *Philosophs. Transact.* furnish us with Abundance of Histories of Earthquakes: Particularly, one at *Oxford*, in 1663, by Dr. *Wallis* and Mr. *Boyle*. Another, at the same Place, in 1683, by Mr. *Piggot*. And another in *Scilly*, in 1692-3, by Mr. *Hartop*, *Fa. Alessandro Borghesi*, and *Vin. Bonajour*; which last, is one of the most terrible Ones in all History.

It shook the whole Island; and not only that, but *Naples* and *Malta* shared in the Shock. It was of the second

Kind mention'd by *Aristotle* and *Pliny*, viz. a perpendicular Pulsation, or Succussion. It was impossible, says the Noble *Bonajour*, for any Body, in this Country, to keep on their Legs, on the dancing Earth; nay, those that lay on the Ground, were toss'd from Side to Side, as on a rolling Billow: High Walls leapt from their Foundations several Paces, *Sc. Phil. Transact. N^o. 207.*

The Mischief it did is amazing: almost all the Buildings in the Countries were thrown down. Fifty four Cities and Towns, beside an incredible Number of Villages, were either destroyed or greatly damaged. We shall only instance the Fate of *Catanea*, one of the most famous, ancient, and flourishing Cities in the Kingdom; the Residence of several Monarchs, and an University. 'Tis once famous, now unhappy *Catanea*, to use the Words of *Fa. Burgos*, had the greatest Share in the Tragedy. *Fa. Authon. Serrovita*, being on his Way thither, and at the Distance of a few Miles; observed a black Cloud, like Night, hovering over the City; and there arose from the Mouth of *Montibello*, great Spires of Flame, which spread all around. The Sea all of a sudden began to roar, and rise in Billows; and there was a Blow, as if all the Artillery in the World had been at once discharged. The Birds flew about almost dead, the Cattle in the Fields ran crying, &c. His and his Companions Horses stop'd short, trembling; so that they were forced to alight. They were no longer off, but they were lifted from the Ground above two Palms; when casting his Eyes towards *Catanea*, he with Amazement saw nothing but a thick Cloud of Dust in the Air. This was the Scene of their Calamity: For of the magnificent *Catanea*, there is not the least Footstep to be seen. *S. Bonajour* assures us, that of 18914 Inhabitants, 18000 perish'd therein. The same Author, from a Computation of the Inhabitants, before and after the Earthquake, in the several Cities and Towns, finds that near 60000 perish'd out of 249000. *Ibid. N^o. 202.*

Jamaica is remarkable for Earthquakes. The Inhabitants, Dr. *Sloan* informs us, expect one every Year. That Author gives us the History of one in 1687: Another horrible one in 1692, is described by several anonymous Authors. In two Minutes Time it shook down and drown'd nine 10ths of the Town of *Port-Royal*. The Houses sunk out-right, 30 or 40 Fathoms deep. *Phil. Transact. N^o. 209.* The Earth opening, swallowed up People; and they rose in other Streets; some in the middle of the Harbour, and yet were saved; Tho' there were 2000 People lost, and 1000 Acres of Land sunk. All the Houses were thrown down throughout the Island. One *Hoskins*, had his Plantation removed half a Mile from its Place. Of all Wells, from one Fathom to six or seven, the Water flew out at the Top with a vehement Motion. *Ibid.* While the Houses, on one Side of the Street were swallow'd up, on the other they were thrown on Heaps; and the Sand in the Street rose like Waves in the Sea, lifting up every Body that stood on it, and immediately dropping down into Pits; and at the same Instant, a Flood of Water breaking in, roll'd them over and over; some catching hold of Beams and Rafters, &c. Ships and Sloops in the Harbour were overfit and lost; the *Jesus* Frigate particularly, by the Motion of the Sea, and sinking of the Wharf, was driven over the Tops of many Houses, *Ibid.* It was attended with a hollow rumbling Noise like that of Thunder. In less than a Minute, three Quarters of the Houses, and the Ground they stood on, with the Inhabitants, were all sunk quite under Water; and the little Part, left behind, was no better than a Heap of Rubbish. The Shake was so violent, that it threw People down on their Knees, or their Faces, as they were running about for Shelter. The Ground heav'd and swell'd like a rolling Sea; and several Houses, still standing, were shuffled and moved some Yards out of their Places. A whole Street is said to be twice as broad now as before; and in many Places, the Earth would crack, and open, and shut, quick and fast. Of which Openings, two or three Hundred might be seen at a Time; in some whereof, the People were swallow'd up; others, the closing Earth caught by the middle, and press'd to Death; in others, the Heads only appear'd. The larger Openings swallow'd up Houses; and out of some would issue whole Rivers of Waters, spouted up a great Height into the Air, and threaten'g a Deluge to that Part the Earthquake spared. The whole was attended with Stench and offensive Smells, the Noise of falling Mountains at a Distance, &c. and the Sky, in a Minutes Time, was turned dull and reddish, like a glowing Oven. Yet, a great Sufferer as *Port-Royal* was, more Houses were left standing thereon, than on the whole Island beside. Scarce a Planting House, or Sugar Work was left standing in all *Jamaica*. A great Part of them were swallow'd up, Houses, People, Trees and all at one Gape: In Lieu of which afterwards, appear'd great Pools of Water, which when dried up, left nothing but Sand, without any

Mark that ever Tree, or Plant, had been thereon. Above 12 Miles from the Sea, the Earth gaped and spouted out, with a prodigious Force, vast Quantities of Water into the Air: Yet the greatest Violences were among the Mountains and Rocks; and 'tis a general Opinion, that the nearer the Mountains, the greater the Shake; and that the Cause thereof lay there. Most of the Rivers were stop'd up for 24 Hours, by the falling of the Mountains; till swelling up, they found themselves new Tracks and Channels; tearing up in their Passage Trees, &c. After the great Shake, those People who escap'd, got on board Ships in the Harbour, where many continued above two Months; the Shakes all that Time being so violent, and coming so thick, sometimes two or three in an Hour, accompanied with frightful Noises like a rustling Wind, or a hollow rumbling Thunder, with Brimstone Blasts, that they durst not come a Shore. The Consequences of the Earthquake was a general Sickness, from the noisome Vapours belched forth, which swept away above 3000 Persons. *Ibid.*

After the Detail of these horrible Convulsions, the Reader will have but little Curiosity left, for the less considerable Phenomena of the Earthquake at *Lima*, in 1687, described by *Fa. Alvarez de Toledo*, wherein above 5000 Persons were destroy'd; this being of the *Vibratory* Kind, so that the Bells in the Church rung of themselves: Or that at *Batavia* in 1699, by *Witzen*: That in the *North of England* in 1703, by *Mr. Theobald*: Or, lastly, those in *New-England* in 1663 and 1670, by *Dr. Mather*. We will therefore relieve him with some Attempts towards a Theory of Earthquakes.

Causes of EARTHQUAKES.

Naturalists are here divided. Some ascribe Earthquakes to Water, others to Fire, and others to Air; and all of 'em with some Reason. To conceive which, it is to be observed, that the Earth every where abounds in huge subterraneous Caverns, Veins and Canals; particularly about the Roots of Mountains: That of these Cavities, Veins, &c. some are full of Water, whence arise composed Gulphs, Abysses, Springs, Rivulets; and others full of Exhalations: And that some Parts of the Earth are replete with Nitre, Sulphur, Bitumen, Vitriol, &c. See *AZYS, STRATUM, &c.*

This premis'd, 1. The Earth it self may be the Cause of its own shaking; when the Roots, or Basis, of some large Mass being dissolved, or worn away by a Fluid underneath, it sinks into the same; and with its Weight, occasions a Tremor of the adjacent Parts; produces a Noise; and frequently an Inundation of Water.

2. The subterraneous Waters may occasion Earthquakes, by their overflowing, cutting out new Courses, &c. Add, that the Water being heated, and rarified by the subterraneous Fires, may emit Fumes, Blasts, &c. which by their Action, either on the Water, or immediately on the Earth it self, may occasion great Successions.

3. The Air may be the Cause of Earthquakes: For Air, being a Collection of Fumes, and Vapours rais'd from the Earth and Water; if it be pent up in the too narrow Viscera of the Earth, the subterraneous, or its own native Heat, rarifying and expanding it, the Force wherewith it endeavours to escape, may shake the Earth: Hence there arise divers Species of Earthquakes, according to the different Position, Quantity, &c. of the impregn'd *Aura*.

Lastly, Fire is a principal Cause of Earthquakes; both as it produces the aforesaid subterraneous *Aura*, or Vapours; and as this *Aura*, or Spirit, from the different Matter and Composition whereof arise Sulphur, Bitumen, and other inflammable Matters, takes Fire either from some other Fire it meets withal, or from its Collision against hard Bodies, or its Intermixture with other Fluids; by which Means bursting out into a greater Compass, the Place becomes too narrow for it; so that pressing against it on all Sides, the adjoining Parts are shaken; till having made it self a Passage, it spends it self in a *Volcano*, or burning Mountain. See *VOLCANO, ERUPTION, &c.*

But to come nearer to the Point: *Dr. Lister*, in *Philosoph. Transact.* N. 157. is of Opinion, that the material Cause of Thunder, Lightning, and Earthquakes, is one and the same, *viz.* the inflammable Bechth of the Pyrites, which is a substantial Sulphur, and takes Fire of it self. See *PYRITES, THUNDER, &c.*

The Difference between these three terrible Phenomena, he takes only to consist in this; that this Sulphur, in the former, is fired in the Air; and in the latter, under Ground. Which is a Notion that *Pliny* had long before him: *Quid enim, says he, aliud est in Terra Tremor, quam in Nube Tonitru?*

This he thinks abundantly indicated by the same sulphureous Smell being found in any Thing burnt with Lightning; and in the Waters, &c. call'd up in Earthquakes, and even in the Air before and after them.

Add, that they agree in the Manner of the Noise; which is carried on, as in a Train, fired; the one rowling and rattling through the Air, takes Fire as the Vapours chance to drive; as the other fired under Ground, in like Manner, moves with desultory Noise.

Thunder, which is the Effect of the Trembling of the Air, caused by the same Vapours dispersed through it, has Force enough to shake our Houses; and why may not there be Thunder and Lightning under Ground, in some vast Repositories there, I see no Reason. Especially if we reflect, that the Matter which composes the noisy Vapour above us, is in much larger Quantities under Ground. *Philosoph. Transact.* No. 202.

That the Earth abounds in Cavities, every Body allows; and that these subterraneous Cavities are, at certain Times, and in certain Seasons, full of inflammable Vapours, the Damps in our Mines sufficiently Witness, which fired, do every thing as in an Earthquake, save in a lesser Degree.

Add, that the Pyrites alone, of all the known Minerals, yields this inflammable Vapour, is highly probable: For that no Mineral, or Ore whatsoever, is sulphureous, but as it is wholly, or in Part, a Pyrites; and that there is but one Species of Brimstone, at least with us in *England*, which the Pyrites naturally, and only yields. The Sulphur Fire, of natural Brimstone, which is found in and about the burning Mountains, is certainly the Effects of Sublimation; and those great Quantities of it said to be found about the Skirts of *Volcano's*, is only an Argument of the long Duration and Vehemence of those Fires: Possibly, the Pyrites of the *Volcano's*, or burning Mountains, may be more sulphureous than ours: And, indeed it is plain, that some of ours in *England* are very lean, and hold but little Sulphur; others again very much: Which may be one Reason, why *England* is so little troubled with Earthquakes; and *Italy*, and almost round the *Mediterranean* Sea, so very much: tho' another Reason is, the Paucity of Pyrites in *England*.

Comparing our Earthquakes, Thunder and Lightning, with theirs, it is observed, that there it lightens almost daily, especially in Summer Time, here seldom; there Thunder and Lightning is of long Duration, here it is soon over; there the Earthquakes are frequent, long, and terrible, with many Paroxysms in a Day, and that for many Days; here very short, a few Minutes, and scarce perceptible. To this Purpose, the Subterraneous Cavities in *England* are small, and low, compared to the vast Vaults in those Parts of the World; which is evident, from the sudden Disappearance of whole Mountains and Islands.

Dr. Woodward gives as another Theory of Earthquakes: He endeavours to shew, that the subterraneous Heat, or Fire, (which is continually elevating Water out of the Abyss, to furnish the Earth with Rain, Dew, Springs and Rivers) being stopped in any Part of the Earth, and so diverted from its ordinary Course, by some accidental Glut, or Obstruction, in the Pores or Passages, through which it used to ascend to the Surface; becomes, by such Means, preternaturally assembled, in a greater Quantity than usual, into one Place; and therefore causes a great Rarefaction, and Intumescence of the Water of the Abyss; putting it into great Comotions, and Disorders, and at the same Time making the like Effort on the Earth; Which being expanded upon the Face of the Abyss, occasions that Agitation and Concussion we call an Earthquake.

This Effort, in some Earthquakes, he observes, is so vehement, that it splits and tears the Earth, making Cracks and Chafins in it, some Miles in length, which open at the Instant of the Shock, and close again in the Intervals betwixt them; nay, it is sometimes so violent, that it forces the super-incumbent *Strata*, breaks them all throughout, and thereby perfectly undermines, and ruins the Foundation of them; so that these failing, the whole Tract, as soon as the Shock is over, sinks down into the Abyss, and is swallow'd up by it; the Water thereof immediately rising up, and forming a Lake in the Place, where the said Tract before was. That this Effort being made in all Directions indifferently, the Fire dilating and expanding on all Hands, and endeavouring to get room, and make its Way through all Obstacles, falls as foul on the Water of the Abyss beneath, as on the Earth above, forcing it forth, which Way soever it can find Vent, or Passage, as well through its ordinary Exits, Wells, Springs, and the Outlets of Rivers, as through the Chafins then newly open'd; through the *Caminis*, or Spiracles of *Ætna*, or other neighbouring *Volcano's*; and those *Hottus's* at the Bottom of the Sea, whereby the Abyss below opens into it, and communicates with it. That as the Water, resident in the Abyss, is, in all Parts of it, stored with a considerable Quantity of Heat, and more especially in those, where these extraordinary Aggregations of this Fire happen; so likewise is the Water, which is thus forced out of it; inasmuch, that when thrown forth, and mixed with the

Waters of Wells, or Springs of Rivers, and the Sea, it renders them very sensibly hot.

He adds, that though the Abyss be liable to these Com-motions in all Parts; yet the Effects are no where very remarkable, except in those Countries, which are Mountainous, and consequently stony and cavernous underneath; and especially where the Disposition of the *Strata* is such, that those Caverns open into the Abyss, and so freely admit, and entertain the Fire; which assembling therein, is the Cause of the Shock; it naturally steering its Course that Way, where it finds the readiest Reception, which is towards those Caverns. Besides, that those Parts of the Earth, which abound with *Strata* of Stone, or Marble, making the strongest Opposition to this Effort, are the most furiously shattered; and suffer much more by it, than those which consist of Gravel, Sand, and the like laxer Matter, which more easily give Way, and make not so great Resistance; but above all, those Countries which yield great Store of Sulphur, and Nitre, are, by far, the most injured and incommoded by *Earthquakes*; those Minerals constituting in the Earth a kind of natural Gunpowder, which taking Fire upon this Assenbance, and Approach of it, occasions that murmuring Noise, that subterraneous Thunder, which is heard rumbling in the Bowels of the Earth during *Earthquakes*, and by the Assistance of its explosive Power, renders the Shock much more greater; so as sometimes to make miserable Havock and Destruction.

And it is for this Reason, that *Italy, Sicily, Anstolia*, and some Parts of *Greece*, have been so long, and so often alarm'd and harass'd by *Earthquakes*; these Countries being all Mountainous and Cavernous, abounding with Stone, and Marble, and affording Sulphur and Nitre in great Plenty.

Further, that *Finns, Vesuvius, Hecla*, and the other *Vulcano's*, are only so many *Spiracles*, serving for the Discharge of this subterraneous Fire, when it is thus preternaturally assembled. That where there happens to be such a Structure and Conformation of the interior Parts of the Earth, as that the Fire may pass freely, and without Impediment from the Caverns, whereto it assembles unto those *Spiracles*; it then readily and easily gets out, from Time to Time, without flaking, or disturbing the Earth: But where such Communication is wanting, or Passage not sufficiently large and open, so that it cannot come at the *Spiracles*, it heaves up and shocks the Earth, with greater or lesser Impetuosity, according to the Quantity of Fire thus assembled, till it has made its Way to the Mouth of the *Vulcano*. That therefore there are scarce any Countries much annoyed with *Earthquakes*, but have one of these fiery Vents; which are constantly in Flames, when any *Earthquake* happens; as disgorging that Fire, which, whilst undrocted, was the Cause of the Disaster. Lastly, that were it not for these *Diarticula*, it would rage in the Bowels of the Earth much more furiously, and make greater Havock than it doth.

We have seen what Fire and Water may do; and that either of them, in good Hands, are sufficient for all the Phenomena of *Earthquakes*: If they should both fail, we have a third Agent, scarce inferior to either of them: The Reader must not be surpris'd when we tell him it is Air.

Monsr. Amontons, in the *Memoires de l'Acad. des Sciences*, An. 1705. has an express Discourse to prove, That on the Foot of the new Experiments of the Weights and Spring of the Air, a moderate Degree of Heat may bring the Air into a Condition, capable of causing *Earthquakes*. It is shewn, that at the Depth of 4528 Fathoms below the Surface of the Earth, Air is only one fourth less heavy than Mercury. Now, this Depth of 4528 Fathoms is only a 74th Part of the Semidiameter of the Earth. And the vast Sphere beyond this Depth, in Diameter 645158 Fathoms, may probably be only filled with Air; which will be here greatly condensed, and much heavier than the heaviest Bodies we know of in Nature. But it is found by Experiment, that the more Air is compress'd, the more does the same Degree of Heat increase its Spring, and the more capable does it render it of a violent Effect: And that, for Instance, the Degree of Heat of boiling Water increases the Spring of the Air above what it has in its natural State, in our Climate, by a Quantity equal to a third of the Weight wherewith it is press'd. Whence we may conclude, that a Degree of Heat, which on the Surface of the Earth will only have a moderate Effect, may be capable of a very violent one below. And as we are assur'd, that there are in Nature, Degrees of Heat, much more considerable than that of boiling Water: 'Tis very possible there may be some, whose Violence, further assisted by the exceeding Weight of the Air, may be more than sufficient to break and overturn this solid Orb of 4528 Fathoms; whose Weight, compar'd to that of the included Air, would be but a Trifle.

Artificial Earthquakes. Chymistry furnishes us a Method of making *Artificial Earthquakes*, which shall have all the great Effects of natural ones: Which, as it may illustrate the Proceeds of Nature in the Production of these terrible Phenomena under Ground, we shall here add.

To twenty Pounds of Iron Filings, add as many of Sulphur: Mix, work, and temper the whole together with a little Water, so as to form a Mass, half moist, and half dry. This being buried three or four Foot under Ground, in six or seven Hours Time, will have a prodigious Effect: The Earth will begin to tremble, crack and finck, and Fire and Flame burst through.

Such is the Effect even of two cold Bodies, in the cold Ground: There only wants a sufficient Quantity of this Mixture to produce a true *Ætna*. See *VOLCANO*. If it were supposed to burst out under the Sea, it would produce a Spout. See *SPOUT*. And if it were in the Clouds, the Effect would be Thunder and Lightning. See *THUNDER*, &c.

EASE, in the Sea-Language, is the same as let go slack; thus they say, *Ease* the Bowling, *Ease* the Sheet, that is, let it go slack.

EASEL-Pieces, among Painters, such small Pieces, either Portraits, or Landships, as are painted on the *Easel*, i. e. the Frame whereto the Canvas is strain'd.

They are thus called, to distinguish them from larger Pictures drawn on Walls, Ceilings, &c.

EASEMENT, in Law, a Service, or Convenience, which one Neighbour has of another by Charter, or Prescription, without Profit: As a way through his Ground, a Sink or the like. In the Civil Law, these are call'd *Servitus predii*.

EAST, in Astronomy, Geography, &c. one of the Cardinal Points of the Horizon, being the Point whereto the prime Vertical intersects that Quarter of the Horizon the Sun rises in. See *ORIENT*, *CARDINAL-POINT*, *HORIZON*, &c.

To find the *East* and *West* Line, Points, &c. See *MERIDIAN Line*.

East-Wind, is that which blows from the *East Point*. See *WIND*.

The Word *East* is German. In *Italy*, and throughout the *Mediterranean*, the *East Wind* is called the *Levanon*. In *Greek*, ἀνατολή, because it comes from the Side of the Sun, ἀπ' ἡλίου. In *Latin*, *Eurus*.

EAST-DIALS, } See *DIAL*.

EASTERN, } See *ORIENTAL*.

EAST-INDIES, See *INDIES*.

EAST-INDIA COMPANY, See *COMPANY*.

EASTER, a Feast of the Church, held in Memory of our Saviour's Resurrection. See *FEAST*, &c.

The *Latins*, &c. call it *Pascha*, a Hebrew Word, signifying *Passage*; applied to the Feast of the *Passover*, which is held among the *Jews*, much about the same Time. See *PASSOVER*.

In *English* it is called *Easter*, from the *Saxon* *Ēastre*, a Goddess, worship'd with peculiar Ceremony in the Month of *April*.

Easter is one of the most considerable Festivals in the Christian Calendar; being that which regulates and determines the Time of all the other moveable Feasts.

The Rule for the Celebration of *Easter*, fix'd by the Council of *Nice*, in the Year 325, is, that it be held on the Sunday after the Full Moon, next after the 21st of *March*, i. e. the Sunday following the first full Moon after the Vernal Equinox: So that if the full Moon next after the Vernal Equinox, happen on a Sunday; *Easter* Sunday is defer'd eight Days longer, viz. to the Sunday following.

The Reason of which Decree was, that the Christians might avoid the celebrating their *Easter*, at the same Time with the *Jewish Passover*, which, according to the Institution of *Moses*, was held the very Day of the full Moon. See *EQUINOX*.

To find *Easter*, agreeably to this Rule, the Method that obtain'd throughout all the Church, from the Time of *Dionysius exiguus*, to that of the Reformation of the Calendar under Pope *Gregory*; and which still obtains in *England*, *Sweden*, and among the *Greeks*, where the *Gregorian* Correction is not admitted; is, by Means of the Golden Numbers, duly distributed throughout the *Julian* Calendar. See *CALENDAR*.

The Vernal Equinox, at the Time of the *Nicene* Council, happening on the 21st of *March*, has been, upon *Dionysius's* Authority, assign'd to the same Day of the *Julian* Year ever since; so that in the *Julian* Way of computing, no full Moon is *Paschal*, but that immediately after the 21st of *March*. Therefore *Easter* can never happen earlier than the 22d of *March*. Now, by finding the full Moons, next after the 21st of *March*, for the several

Golden Numbers, or Years of the Lunar Cycle, we shall have a Table for the finding of *Easter* for ever.

Such Table being of notable Use in the *Julian* Computation, we shall here subjoin it.

Gold. Numbr.	Full Moons next after Ver. Equin.	Gold. Numbr.	Full Moons next after Ver. Equin.
I	5 April, D	XI	15 April, G
II	25 March, B	XII	4 April, C
III	13 April, E	XIII	24 March, F
IV	2 April, A	XIV	12 April, D
V	22 March, D	XV	1 April, G
VI	10 April, B	XVI	21 March, C
VII	30 March, E	XVII	9 April, A
VIII	18 April, C	XVIII	29 March, D
IX	7 April, F	XIX	17 April, B
X	27 March, B		

Now to find *Easter*, for any given Year, find the Dominical Letter, and the Golden Number of the given Year, as directed under DOMINICAL LETTER and GOLDEN NUMBER.

Then, in the Table, seeking the Dominical Letter, with the Day of the Paschal full Moon, and the Sunday Letter annex'd thereto; Compare this Letter with the Dominical Letter of the given Year; that it may appear how many Days are to be added to the Day of the Paschal full Moon, to give *Easter*-Day.

E. gr. In the Year 1715, the Dominical Letter is B, and the Golden Number VI; consequently, the Paschal full Moon, is fixed, by the Table, to the 10th of April; whose Sunday Letter being B, the Dominical Letter given, it self is a Sunday: and, therefore, *Easter* will fall on the Eighth Day following, *viz.* the 17th of April.

But in this Computation, the Vernal Equinox is supposed affix'd to the 21st of March; and the Cycle of 19 Years, or Golden Numbers, is supposed to point out the Places of the new and full Moons exactly: Both which are Erroneous. Whence it follows, that the *Julian Easter* never happens at its due Time, unless by Accident.

For an Instance of the Error, it may be observed, that in the Year 1715, the Vernal Equinox falls on the 10th of March; 11 Days ere the Rule supposes it: And the Paschal full Moon on the 7th of April, 3 Days earlier than was supposed. *Easter*-Day, therefore, which is held on the 17th of April, should be held on the 10th.

This Error was grown to such a Pitch, in Course of Time, that Pope Gregory XIII. thought necessary to correct it. And accordingly, in the Year 1582, by the Advice of *Aloysius Lilius*, he order'd 10 Days to be thrown out of October; so to bring back the Vernal Equinox to its old Place, *viz.* the 21st of March. And hence the *Gregorian Calendar*, *Gregorian Year*, &c. See GREGORIAN.

In the New, or *Gregorian* Computation, in lieu of Golden Numbers, the Time of *Easter* is found by Means of Epacts, contriv'd for that Purpose. See EPACT.

The following Table renders the finding of *Easter* in the *Gregorian* Year, from the Year 1700, to the Year 1900, very easy.

Epact.	Paschal full Moons.	Epact.	Paschal full Moons.
X	13 April, E	IX	4 April, C
XI	2 April, A	XX	24 March, F
XXII	22 March, D	I	13 April, D
III	10 April, B	XII	1 April, G
XIV	30 March, E	XXIII	21 March, C
XXV	18 April, C	IV	9 April, A
VI	7 April, F	XV	29 March, D
XVII	27 March, B	XXVI	17 April, B
XXVIII	15 April, G	VII	6 April, E
		XXVIII	26 March, A

Now, to find *Easter* for any given *Gregorian* Year. Seek the Dominical Letter, and the *Gregorian* Epact; as shewn under EPACT, &c. Find the Epact in the Table, and note the Paschal full Moon, with the weekly Letter, corresponding to the same. The rest is perform'd, as already taught for the *Julian Easter*.

E. gr. The Dominical Letter of the Year 1715, is F, and the Epact XXV; consequently, the Paschal Moon falls on the 18th of April, C: And therefore *Easter*-Day is the 21st of April.

Tho' the *Gregorian* Calendar be, doubtless, preferable to the *Julian*; yet it has its Defects. It cannot, for Instance, keep the Equinox fix'd to the 21st of March; but it will sometimes fall on the 19th, and sometimes on the 23d.

Add, that the full Moon happening on the 10th of March, might sometimes be Paschal; yet is not allowed as such, in the *Gregorian* Computation: As, on the contrary, the full Moon of the 22d of March, may be allow'd for Paschal, which yet it is not. *Scaliger* and *Calvisius* have proved other Inaccuracies on this *Calendar*. See CALENDAR.

EAVES, the Margin, or Edge, of the Roof of a House; being the lowest Tiles, Slate, or the like, which hang over the Walls, to throw off the Waters to a Distance from the Wall. See ROOF.

EAVES-LATH, is a thick feather-edge Board, generally nail'd round the Eaves of a House for the lowermost Tiles, Slate, or Shingles to rest upon.

EBIONITES, ancient Hereticks, who rose in the Church, from the very Beginning thereof. See HERETICKS.

Origen takes them to have been so called from the Hebrew Word *Ebion*, which in that Language signifies Poor; because, says he, they were Poor in Sense, and wanted Understanding. *Eusebius*, with a View to the same Etymology, is of Opinion they were thus called, as having poor Thoughts of *Jesus Christ*; taking him for no more than a mere Man. But all this, says *Mont. Simon*, in his Critical History, is no more than a sorry Allusion to the Name of these Sectaries, which in the Hebrew Tongue signifies Poor.

'Tis more probable, the *Jews* gave this Appellation to the *Christians* in general, out of Contempt; because in the first Times there were few but poor People, that embraced the *Christian* Religion.

This Opinion *Origen* himself seems to give into, in his Book against *Celsus*; where he says, that they called *Ebionites*, such among the *Jews*, as believed that *Jesus* was truly the expected *Messiah*. It might even be urged, with some Probability, that the Primitive *Christians* assumed the Name of themselves, in Conformity to their Profession. 'Tis certain, *Epiphanius* observes, they valued themselves on being Poor, in imitation of the *Apostles*.

The same *Epiphanius*, however, is of Opinion, that there had been a Man of the Name *Ebion*, the Chief, and Founder of the Sect of *Ebionites*; being contemporary with the *Nazarites* and *Cerinthians*. He gives a long and exact Account of the Origin of the *Ebionites*, making 'em to have arose after the Destruction of *Jerusalem*; when the first *Christians*, called *Nazarites*, went out of the same to live at *Pella*. See NAZARITE.

The *Ebionites*, then, are little else than a Branch of *Nazarites*; only, that they alter'd and corrupted, in many Things, the Purity of the Faith, held among those first Adherents to Christianity. For this Reason, *Origen* distinguishes two Kinds of *Ebionites*, in his Answer to *Celsus*; the one believ'd that *Jesus Christ* was born of a Virgin; and the others, that he was born after the Manner of other Men.

The first were Orthodox in every Thing, except that to the *Christian* Doctrine, they join'd the Ceremonies of the Jewish Law, with the *Jews*, *Samaritans*, and *Nazarites*: They differed from the *Nazarites* however, in several Things, chiefly as to what regards the Authority of the sacred Writings: For the *Nazarites* received all for Scripture, contain'd in the Jewish Canon; whereas the *Ebionites* rejected all the Prophecy; and held the very Names of *David*, *Solomon*, *Isaiab*, *Jeremiab* and *Ezekiel*, in Abhorrence. See PENTATEUCH.

They receiv'd nothing of the *Old Testament* but the *Pentateuch*; which should intimate them to have been separated rather from the *Samaritans* than the *Jews*. They agreed with the *Nazarites* in using the Hebrew Gospel of *St. Matthew*, otherwise called the Gospel of the twelve Apostles: But had corrupted their Copy in Abundance of Places. And, particularly, had left out the Genealogy of our Saviour, which was preserv'd entire in that of the *Nazarites*, and even those us'd by the *Cerinthians*. See GOSPEL.

Their last, worst Sentiments, as to the Birth of our Saviour, were the same with those of the *Ebionites*, built their Error on this very Genealogy. See CLEMENTINES.

Beside the Hebrew Gospel of *St. Matthew*, the *Ebionites* had adopted several other Books under the Names of *St. James*, *John*, and the other Apostles. They also made use of the *Travels* of *St. Peter*, which are supposed to have been written by *S. Clement*; but had alter'd them so, that there was scarce any Thing of Truth left in them. They made that Saint tell a World of Falshoods, the better to authorize their own Practices. See *S. Epiphanius*, who is very diffusive on the ancient Heresy of the *Ebionites*, *Heb.* 30.

EBONY, in Natural History, a Kind of Wood, brought from the *Indies*, exceedingly hard and heavy, and taking a very fine Polish; and on that Account, us'd in *Mosaic* and Inlaid Works, Toys, &c. See WOOD, MOSAIC, &c.

There are divers Kinds of *Ebony*, the most usual among us are black, red and green; all of them the Product of the Island of *Madagascar*, where the Natives call them indifferently, *Hasan Manuti*, q. d. black Wood. The Island

of *St. Maurice*, belonging to the *Dutch*, likewise furnishes Part of the *Ebonies* used in *Europe*.

Authors, and Travellers, give very different Accounts of the Tree that yields the *black Ebony*: By some of their Descriptions it should be a Sort of Palm Tree, by others a *Cypripis*, &c. The most authentick of them, is that of *Monf. Placour*, who resided many Years in *Madagascar* as Governour thereof. He assures us that it grows very high, and big; its Bark black, and its Leaves resembling those of our *Myrtle*, of a deep, dusky, green Colour.

Tavernier assures us, that the Islanders take Care to bury their Trees, when cut down, to make them the blacker. *F. Plumier* mentions another *black Ebony Tree*, discovered by him at *St. Domingo*, which he calls *Spartium portulacæ foliis aculeatum Ebonis materia*. *Canada* also bears a little Shrub, known to the Botanists, under the Name of *Ebenus Cretica*.

Pliny and *Dioscorides* say, the best *Ebony* comes from *Ethiopia*, and the worst from *India*; but *Theophrastus* prefers that of *India*. *Black Ebony* is much prettier'd to the other Colours. The best is a jet black, free of Veins and Rind, very massive, astringent, and of a sharp pungent Taste.

Its Rind infused in Water, is said to purge pituita, and cure Venereal Disorders; whence *Matthioli* took *Guaiacum* for a Sort of *Ebony*. It yields an agreeable Perfume, when laid on the Coals: When green, it readily takes Fire, from the Abundance of its Fat. If rubbed against a Stone, it becomes brown. The *Indians* make Statues of their Gods, and Scepters for their Princes, of this Wood. It was first brought to *Rome* by *Pompey*, after his subduing *Mtiberidæes*. 'Tis now much less used among us, than antiently; since the Discovery of so many Ways of giving other hard Woods a black Colour. See *MARQUETRY*.

As to *green Ebony*, besides *Madagascar*, and *St. Maurice*, it likewise grows in the *Antilles*, and especially in the Isle of *Tobago*. The Tree that yields it is very bushy, its Leaves smooth, and of a fine green Colour. Beneath its Bark is a white Rind about two Inches thick; all beneath which, to the very Heart, is a deep green, approaching towards a black; tho' sometimes streak'd with yellow Veins. Its Use is not confined to Mosaic Work: 'Tis likewise good in dying, as yielding a fine green Tincture.

As to *red Ebony*, called also *Grenadilla*, we know little of it more than the Name.

The Cabinet-Makers, Inlayers, &c. make *Pear Tree*, and other Woods, pass for *Ebony*, by *Ebonising*, or giving it the black Colour thereof. This, some do, by a few Washes of a hot Decoction of *Galls*, and when dry, adding Writing Ink thereon, and polishing it with a just Brush, and a little hot Wax.

Others heat, or burn their Wood black.

EBRUBARITES, a Sect, or Order of Religious among the *Mohometans*; thus call'd from their Founder *Ebrubard*, a Disciple of *Nasræ benî*.

The *Ebrubarites*, notwithstanding the extraordinary Sanctity they make Profession of, with an absolute Detestation of all worldly Things, are regarded by the *Musulmans*, as no better than Heretics; by Reason they don't esteem themselves obliged to go in Pilgrimage to *Mosca*. To excuse themselves herefrom, they urge that the Purities of their Souls, their sublime Contemplations, Extasies, &c. shew them *Mosca* and *Mohomer's Tomb*, without stirring out of their Cells.

EBULLITION, in *Physicks*, the Act of *Boiling*; or, a vehement Agitation of the Parts of a Fluid, produced by Fire. See *BOILING*.

Philosophers are disagreed about the Cause and Manner of *EBULLITION*. Some account for it from an Attenuation of the Particles of the Fluid, at the Bottom of the Vessel; which, by being attenuated, become lighter, and heave upwards against the super-incumbent Load: Others, from the Particles of Fire mixing with, and dilating the Particles of the Fluid, and so rendering them specifically lighter: And others, not from any Attenuation, nor even Rarefaction of the Particles of the Fluid by the Action of Heat; but from a Rarefaction of the Air pent up, and intermix'd with the Fluid; which coming to expand, tends upwards against the Pressure of the less heated, less rarified Part of the Fluid. See *HEAT*, *AIR*, &c.

A more precise Account of the Process under the foregoing Article *BOILING*.

EBULLITION, in *Chymistry*, &c. is also used for a violent intestine Motion, or Collocation of Parts, occasion'd by the Mixture of Salts of different Natures.

Dr. Harris will have it properly, and immediately, to signify that particular Struggle, or Effervescence, arising upon the mingling together of an acid and alkaliate Liqueur. See *ACID* and *ALCALI*.

Mr. Boyle has an Experiment to shew, that a considerable *EBULLITION* may be produced by such a Mixture, without the Bodies acquiring any Heat; nay, that a Degree

of Cold may be produced greater than was in either of the Bodies singly; tho' accompanied with a great Struggle, Tumult, Noise and Froth. For having shook one Part of Oil of Vitriol, into 12 Parts of common Water, the Mixture was at first sensibly warm: Then, the Ball of a Thermometer was placed in it, till the included Spirit had gain'd the Temperament of the Mixture; but then a convenient Quantity of Volatile Salt of *Sal Armoniac*, being gradually put in to satiate the acid Spirits of the Mixture, the Spirit in the Thermometer descended above an Inch. See *EFFERVESCENCE*.

ECARTELE, in *Heraldy*. See *QUARTERLY*.

ECANTHIS, or **ECKANTIS**, in *Medicine*, is a Disease of the Eyes.

The *Ecantisis*, or *Eckantis*, is properly a fleshy Excrescence, in the *Cantibus*, or Angle of the Eye; thus call'd from the *Greek*, $\epsilon\gamma\alpha\sigma\theta\iota$, which signifies the same Thing.

ECCE-HOMO, among Painters, a Name given a Painting, wherein our Saviour is represented in a Purple Robe, with a Crown on his Head, and a Reed in his Hand; such as he was presented before *Pilate* by the *Jews*.

The Phrase is *Latin*, borrow'd from the Words of the *Jews* themselves, *q. d. This is the Man*.

He has a fine *Ecce homo*.

ECCENTRIC, or **EXCENTRICK**, in *Geometry*, is applied where two Circles, or Spheres, tho' contain'd, in some Measure, within each other, yet have not the same Centre; and consequently are not parallel: In Opposition to *Concentric*; where they are parallel, have one and the same common Centre. See *CONCENTRIC*.

The Sun's Orbit is *Eccentric*, with regard to the Globe of our Earth; *Mars* is very *Eccentric*, with regard to the Sun, that is, his Motion is about a very different Centre. See *EARTH*, &c.

ECCENTRIC, in the New Astronomy, or *Eccentric Circle*, is a Circle, as *P D A E*, (*Tab. Astronom. Fig. 17.*) described from the Centre of the Orbit of a Planet C, with half the Axis *CE*, as a Radius. See *ECCENTRICITY*.

ECCENTRIC, or *Eccentric Circle*, in the Antient *Ptolemaic* Astronomy, was the very Orbit of the Planet it self, which it was supposed to describe about the Earth; and which was conceiv'd *Eccentric* thereto; called also the *Deferent*. See *DEFERENT*.

In Lieu of *Eccentric Circles* round the Earth; the Moderns make the Planets describe Elliptic Orbits round the Sun; which accounts for all the Irregularities of the Motions of the Planets, and their different Distances from the Earth, &c. more justly and naturally. See *ORBIT*.

Anomaly of the *ECCENTRIC*, is an Arch of the *Eccentric Circle* as *A K*, intercepted between the *Aphelion A*, and the right Line *K L*, which passing thro' the Centre of the Planet *K*, is drawn perpendicularly to the Line of the *Apsides A P*. See *ANOMALY*.

ECCENTRIC Equation, in the Old Astronomy, is an Angle made by a Line drawn from the Centre of the Earth, with another drawn from the Centre of the *Eccentric*, to the Body or Place of any Planet; the same with the *Prosthaphæresis*; and is equal to the Difference, (accounted in an Arch of the *Ecliptic*) between the Sun's, or a Planet's, real, and apparent Place. See *PROSTHAPHÆRESIS*.

ECCENTRIC Place of a Planet, in its Orbit, is the Place wherein the Planet is seen from the Sun. See *PLACE*.

ECCENTRIC Place, in the *Ecliptic*, is the Point of the *Ecliptic*, to which the Planet viewed from the Sun, is refer'd. This coincides with the *Heliocentric Place*. See *HELIOCENTRIC*.

ECCENTRICITY, the Distance between the Centres of two Circles, or Spheres, which have not the same Centre. See *ECCENTRIC*.

ECCENTRICITY, in the old Astronomy, is the Distance of the Centre of the Orbit of a Planet, from the Centre of the Earth. See *PLANET*.

That the five Planets have such an *Eccentricity*, is allow'd on all Sides, and may be evinc'd from several Considerations; chiefly this, that *Saturn*, *Jupiter*, *Mars*, *Venus* and *Mercury*, at sometimes appear greater, and at others less; which can only proceed from hence, that their Orbits being *Eccentric* to the Earth, in some Parts thereof they are nearer us, and in others more remote: But as to the *Eccentricities* of the Sun and Moon, some Dispute has been made.

The Moderns many of them hold, that the Sun and Moon appear sometimes larger, and sometimes less; not that they are nearer as at one Time than another, but because they are view'd through different Columns of Air, which producing a Difference in the Refraction of their Light, may occasion those different Appearances. Accordingly, we find very sudden Alterations of the apparent Magnitude of the Moon; where nothing but a Change in the Air can take Place. See *MOON* and *SUN*.

Thus *Kopler*, on the 2d of *March*, in the Year 1588, found the Moon's apparent Diameter 31 Minutes, pretently after 52' 2", then 50' 5"; and the preceding Day it had been 35". And again, on the 22d of *February*, 1591, he observed the Moon's Diameter twice 31', six Times 32, seven Times 33, and six Times 34'. See DIAMETER.

They add, that when the Sun and Moon are in the Southern Signs, and consequently lower, being then seen thro' a longer Column of dense Air, they must appear bigger: Consequently, in the Winter Time, when the Sun is in *Capricorn*, being seen thro' a greater Quantity of Air, he must appear larger than in Summer, when, being nearer our Zenith, the Quantity of Air he is seen thro' is lesser. And the like may be said of the Moon. See SUN, &c.

But others take the *Eccentricities* of the Sun and Moon to be sufficiently proved, both from Eclipses; from the Moons greater and less Parallax, at the same Distance from the Zenith; and from the Sun's being observed to continue longer in the Northern Hemisphere, than in the Southern, viz. 186 or 187 Days in the first, and only 178 or 179 Days in the latter. See DISTANCE, HEMISPHERE, EARTH, &c.

ECCENTRICITY, in the new Astronomy, is the Distance of the Centre of the Orbit of a Planet, as C, from the Sun S, i. e. the Distance between the Centre of the Ellipsis and the Focus thereof: called also *simple*, or *single Eccentricity*.

DOUBLE ECCENTRICITY, is the Distance between the two Foci in the Ellipsis; which is equal to twice the *single Eccentricity*. See FOCUS, ELLIPSIS, &c.

To find the *Eccentricity* of a Planet, e. gr. the Earth: Since the Sun's greatest apparent Diameter is to his least, as 32' 45" to 31' 38", or as 1963" to 1898", the Sun's greatest Distance from the Earth will be to his least, as 1963 to 1898. Since then, $PS + SA = PA = 3864$; the Radius of the Eccentric CP, will be found 1930: And consequently $SC = PC - PS = 32$. Wherefore, CP being 10000, CS will be found = 1658.

Hence, as the Earth's *Eccentricity* SC, is scarce the Sixteenth Part of the Radius of the Eccentric CP; the Earth's elliptic Orbit does not deviate much from a circular one. So that 'tis no Wonder a *Calenus*, made on the Foot of an Eccentric Circle, should answer near enough to Observation. And since the *Eccentricity*, determin'd from the Difference of the apparent Diameters, (in observing which, an Error of some Minutes could not easily be avoided) does not seem exact enough; nothing hinders but that the *Eccentricity*, and the Place of the Apogee, may be determin'd on the Hypothesis of the Excentric Circle.

ECCHO, or rather *Echo*. See ECHO.

ECHYMOSIS, from *εχμα*, *effusio*, to pour out, and *μα*, *Sanguis*, Blood, signifies those livid Spots, or Blotches, in the Skin, which are made by extravasated Blood: The same with *Echymoma*. See ERANTHEMATA.

ECCLESIA, a Latin Term signifying Church. See CHURCH.

In our ancient Law-Books, *Fitz-Herbert* observes, *Ecclesia* properly signifies a *Personage*. Whence, if a Presentation was made to a Chappel, as to a Church, by the Name of *Ecclesia*, it changed the Name thereof, and it presently commenced a Church.

When the Question was, Whether it were, *Ecclesia*, *aut Capella pertinet ad Ecclesiam*? The Issue was, Whether it had *Hospitalitatem & Sepulturam*? For if it had the Administration of the Sacraments, and Sepulture, it was in Law judg'd a Church. See CHAPPEL.

ECCLESIAENS, ECCESIANI, in Church History. Upon any falling out, or Misunderstanding, between the Emperors and the Church Men, the Adherents to the Emperor called such as stuck to the Interests of the Church, and Churchmen, *Ecclesiani*; a Term of Reproach, answering to our *High-Churchmen*.

ECCLESIASTES, one of the Books of the Old Testament; Thus call'd, by a Greek Word, signifying *Preacher*. By Reason the Author declares, or *preaches*, against the Vices and Vanities of the World.

This is *Mariansa's* Judgment; *Grotius* thinks otherwise: He takes it to derive its Appellation from its being a *Collection* of nine Sentences, and Reflections on the Vanity of the Things of our Earth, &c. For the Word *קטל* signifies to *amass* or *collect* *אמאגיסין*.

Some Hebrew Doctors take its Name to arise from *amafing* a deal of Wisdom: Others, because the Author's Aim is to *assemble*, and *call* together, all such as are willing to consult their Safety, and avoid the Dangers of the World; which is the Opinion of *Gejerus*: Lastly, others, with *Calovius*, deduce it from his *assembling* them about him, as a Precher *assembles* his Auditory.

There are different Sentiments as to the Author of this Book: The most common is, that it is *Solomon's*, who is supposed to have wrote it towards the Close of his Life, to give Tokens of his Penitence to Posterity.

Grotius, indeed, takes the Work to be posterior to *Solomon*; and to have been wrote after his Death by I know not what Authors, six in Number; who, to give their Book the greater Authority, put *Solomon's* Name to it, and represented him as Repentant. What he founds for many positive Facts on, is, that we meet with Words in this Book, which are no where else seen, but in *Daniel*, *Ezdras*, and the *Chaldee Paraphrases*.

But, 'tis certain, all, both *Hebrews*, *Greeks* and *Latins*, have always spoke of it as a Work of *Solomon*. Indeed, there are Authors, who have attributed all the Books of *Solomon* to *Isaiah*; but these are only to be understood as if that Prophet had collected them. If it be true, that there are *Chaldee* Words in the *Ecclesiastes*, 'tis easier to suppose *Solomon* understood that Language, than to deny him the Author of the Book.

If the Book is not *Solomon's*, because *Grotius* has found four or five Dialects, which are only to be explain'd by the *Chaldee* and *Arabic*; we are not sure of the Author of any Book in the Bible. *Moses* must not be the Author of *Genesis*; For even in the very first Verbe of that Book, we meet with two or three Words, that are only deducible from *Arabic* Roots. How many Authors attribute to *Solomon*, or to *Moses*, the Book of *Job*; which is that of all the Books of the Old Testament, where there is the most *Arabic*, *Chaldee*, or *Syriac*.

In fine, *Calovius* assures us, that the true Reason why *Grotius* would not allow *Solomon* the Author of the Book of *Ecclesiastes*, is, that it speaks too clearly, and precisely for his Time, of the Universal Judgment, Eternal Life, and the Pains of Hell, which yet are Truths established before *Solomon* in the *Psalm*, the *Pentateuch*, and *Job*.

There appear no Reasons, therefore, for denying this Book to *Solomon*; But several for ascribing it to him. The 1. The Title of the Book, which assigns its Author to be the Son of *David*, and King of *Jerusalem*. 2. Several Passages in the Book, which agree to no Body but that Prince, as *C. I. v. 12. C. VII. v. 24. C. XII. v. 9, &c.*

3. Constant Tradition of the ancient *Jews* and *Christians*. The *Thalmudists*, and other Rabbins, however, note that the Book of *Ecclesiastes*, was some Time e're it was put in the Canon. See the *Gemara* on *Pirke Aboth* f. 1. col. 1. *Massech Schabbath* C. II. fol. 30. col. 2. *Abu Ezra* on the *Ecclesiastes* VII. 4. *Maimonides*, *Morab*, *Nebuchin*, L. III. C. 28. *Marcerus*, *Calovius*, and *Gejerus* on this Book.

ECCLESIASTIC, or ECCLESIASTICAL, something belonging to, or set apart for the Church; in Contradistinction to *Civil*, or *Secular*, which regard the World. See CIVIL, &c.

There are Ecclesiastical Things and Persons: Ecclesiastical Law, Jurisdiction, History, Ceremonies, Discipline, Preferences, &c. See LAW, JURISDICTION, HISTORY, CEREMONY, &c.

Ecclesiastical Persons, are either Regular or Secular. See REGULAR and SECULAR.

In the Empire there are three Ecclesiastical Electors, viz. the Archbishops of *Mentz*, *Treves*, and *Cologne*. See ELECTOR.

In France, they have Ecclesiastical Peers, &c. See PEER.

ECCLESIASTICAL COURTS, see the Convocation, Court of Delegates, Of Arches, Of Audience, Prerogative Court, Court of Pecuniary, Bishops Court, and Archdeacon Court. See each under its proper Article, CONVOCATION, AUDIENCE, ARCHES, &c.

Ecclesiastical Confures and Punishments, are Excommunication, Penance, Suspension, Deprivation, and Deposition, or Degradation. See EXCOMMUNICATION, PENANCE, SUSPENSION, DEGRADATION, &c.

ECCLESIASTICUS, an Apocryphal Book, composed by *Jesus* the Son of *Sirach*, and admitted, by the *Romish* Church, in the Canon of the Old Testament. See APOCRYPHA.

It is frequently wrote by an Abbreviation, *Eccle*, to distinguish it from the *Ecclesiastes*, which is wrote *Eccle*. *Isidore*, L. VI. *Etym. C. 3.* and among the Moderns, *Grotius*, and *Drossius*, deny the Author of the *Ecclesiastics* to be *Jesus* the Son of *Sirach*, Grandson of the High Priest *Jesus*, who return'd from *Babylon* with *Zerobabel*; but it appears pretty certain, they are deceiv'd. See the Preface of the Author, that XLth Chapter, v. 29. and the Title of the LIXth, with the whole Chapter.

Genebrard asserts, that *Jesus* the Son of *Sirach* was of the Race of *Jesus* Son of *Joseph*. But this does not appear.

St. Jerome assures us, in his Preface to the Books of *Solomon*, that he had seen this Book in *Hebrew*; and that the *Hebrews* intitled it *Parables*: From which the *Jesuite Marians* concludes, that the High Priest *Jesus* wrote this Book in *Hebrew*; as it appears likewise from the Prologue

to the Book it self; and that his Grandson translated it into Greek, which likewise appears from the Prologue; that he made this Translation in *Egypt*, where the Author lived in his 38th Year; that it was done under the Reign of *Prohomy Evergetes*, Successor of *Prohomy Philadelphus*, who began to reign in the Year of *Rome* 512, 240 Years before Christ; that the Grandfather had intitled it *Parables*, which the Grandson changed into *Eccelesiasticus*, q. d. *Preacher*: Lastly, that the Book, however, is attributed to the Translator, by Reason he changed, and added many Things to the Original.

Fa. Calmes takes the Book of *Eccelesiasticus* to have been composed under the Pontificate of *Onias III.* Son of *Simon*, and the Reign of *Antiochus Epiphanes*, King of *Syria*. He adds, that neither the Author of the *Latin* Translation, nor the Time when it was made, is known; but being quoted regularly by all the Antient Fathers, there is no doubt of its being very Antient. He takes it to have been done by the Translator of the Book of *Wisdom*.

ECCOPE, *Amputation*, in *Chirurgery*, a dividing of a fleshy Part, and cutting off that which is gangrened, cancer'd, or the like: As also an *Amputation* of an Excrecence, &c. See *AMPUTATION*.

ECCOPE, is likewise used for a Kind of Fracture, or Solution of Continuity of the Skull, by a simple Incision. See *FRACTURE*.

The Word is form'd from the *Greek*, *ἔκκοπος*, to cut.

ECOPROTICKS, in *Medicine*, *Laxative*, or *loosening* Remedies, which purge gently, by softening the Humours and Excrements, and fitting them for Expulsion. See *EVACUANTS*, *PURGATIVES*, &c.

The Word is composed of the *Greek* Particle *εκ*, and *πρωτον*, Excrement.

ECHINATE Seeds, are such as are prickly and rough like the Coat of a Chestnut; or, as some say, like the Skin of a Hedge-hog. See *SEED*.

ECHINUS, in *Architecture*, a Member, or Ornament, near the Bottom of the *Ionic*, *Corinthian*, and *Composite* Capitals; which, from its circular Form or Contour, is called by the *French*, *Quart de Rond*, and by the *English*, *Quarter round*, or *Boultin*; and from its being usually carved, or cut with Figures of Eggs, &c. is called also by the *Latins*, *Ovum*, by the *Italians*, *Ovolo*, the *French*, *Oue*, and the *English*, *Eggs* and *Anchors*. See *QUARTER-ROUND* and *OVOLO*.

Lastly, The Eggs being encompassed with a Cover, and thus bearing some Resemblance to a Chestnut cut open; The *Greeks* have call'd it *εχινος*, *Echinus*, that is, *Chestnut*. See *BOULTIN*, &c.

ECHINUS, among *Botanists*, is used for the prickly Head, or Top of any Plant; thus call'd from its Likeness to an Hedge-hog or Chestnut.

ECHIQUTE, in *Heraldry*. See *CHIEF*.

ECHO, or **ECCHO**, a Sound reflected, or reverberated, from a solid, concave Body, and so repeated to the Ear. See *SOUND* and *REFLECTION*.

The *Peripateticks*, who took Sound for I know not what Species, or Image of the sonorous Body, impressed on the adjoining Air; account for *Echo* from a Reflexion of the Species, occasion'd by its meeting some Obstacle in the Way. But the *Moderns*, who know Sound to consist in a certain Tremor, or Vibration, in the sonorous Body, communicated to the contiguous Air, and by that Means to the Ear; give a more consistent Account of *Echo*.

For a tremulous Body, striking on another solid Body, 'tis evident, may be repell'd without destroying or diminishing its Tremor; and consequently a Sound may be redoubled by the Reflexion of the tremulous Body, or Air. See *SOUND*.

But a simple Reflexion of the sonorous Air, is not enough to solve the *Echo*: For then every plain Surface of a solid hard Body, as being fit to reflect a Voice or Sound, would redouble it; which we find does not hold.

To produce an *Echo*, therefore, it should seem that a Kind of Concavation, or Vaulting were necessary, in order to collect, and by collecting, to heighten and increase, and afterwards reflect the Sound; as we find is the Case in reflecting the Rays of Light, where a concave Mirror is required.

In Effect, as often as a Sound strikes perpendicularly on a Wall, behind which is any Thing of a Vault, or Arch, or even another Parallel Wall; so it will it be reverberated in the same Line, or other adjacent ones.

For an *Echo* to be heard, therefore, 'tis necessary the Ear be in the Line of Reflexion: For the Person who made the Sound to hear its *Echo*, 'tis necessary he be perpendicular to the Place which reflects it: And for a manifold or *Tantological Echo*, 'tis necessary there be a Number of Walls and Vaults, or Cavities, either placed behind each other, or fronting each other.

A single Arch, or Concavity, &c. can scarce ever stop and reflect all the Sound; but if there be a convenient Disposition behind it, Part of the Sound, propagated thither, being collected and reflected, as before, will present another *Echo*: Or if there be another Concavity, oppos'd at a due Distance to the former; the Sound reflected from the one upon the other will be told'd back again by this latter, &c.

Many of the Phenomena of *Echo*'s, are well consider'd by the *Bishop of Leitch*, &c. Who remarks, that any Sound, falling either directly, or obliquely, on any dense Body, of a smooth, whether plain or arched, Superficies, is reflected, or *Echoes* more or less. The Surface, says he, must be *smooth*, otherwise the Air, by Reverberation, will be put out of its Regular Motion; and the Sound thereby broke and extinguish'd. He adds, that it *Echoes* more or less, to shew, that when all Things are, as before described, there is still an *Echoing*; tho' it be not always heard; either because the direct Sound is too weak to be heard quite back again to him that made it, or that it does return to him, but so weak, that it cannot be discern'd; or that he stands in a wrong Place to receive the reflected Sound, which passes over his Head, under his Feet, or on one Side of him, and which therefore may be heard by a Man standing in the Place where the reflected Sound will come, provided no interposed Body intercept it; but not by him that first made it.

Echo's may be produced with different Circumstances; For, 1. A *Plane* Obstacle reflects the Sound back in its due Tone and Loudness; Allowance being made for the proportionable Decrease of the Sound, according to its Distance. See *PLANE*.

2. A *Convex* Obstacle reflects the Sound somewhat fainter, and somewhat quicker, tho' weaker, than it otherwise would be. See *CONVEX*.

3. A *Concave* Obstacle, *echoes* back the Sound, bigger, slower, and also inverted; but never according to the Order of Words. See *CONCAVE*.

Nor does it seem possible to contrive any single *Echo*, that shall invert the Sound, and repeat backwards: Because, in such Case, the Word last spoken, that is, which last occurs to the Obstacle must be repell'd first, which cannot be. For where in the mean Time should the first Words hang and be conceal'd; or how, after such a Pause, be revived, and animat'd again into Motion.

From the determinate Concavity, or Archedness of the reflecting Bodies, it may happen that some of them shall only *echo* back one determinate Note, and only from one Place.

4. The *Echoing* Body being removed farther off, it reflects more of the Sound than when nearer; which is the Reason why some *Echo*'s repeat but one Syllable, some one Word, and some many.

5. *Echoing* Bodies may be so contrived, and placed, as that reflecting the Sound from one to the other, either directly and mutually, or obliquely and by Succession, out of one Sound, shall a *multiple Echo*, or many *Echo*'s arise.

Add, that a *multiple Echo* may be made, by so placing the *Echoing* Bodies, at unequal Distances, as that they may reflect all one Way, and not one on the other; by which Means, a manifold successive Sound will be heard; one Clap of the Hands like many; one Ha like a Laughter; one single Word like many of the same Tone and Accent; and so one Viol, like many of the same Kind, imitating each other.

Lastly, *Echoing* Bodies may be so order'd, that from any one Sound given, they shall produce many *Echo*'s, distinct both as to Tone and Intention. By which Means a Musical Room may be so contrived, that not only one Instrument playing therein, shall seem many of the same Sort and Size, but even a Confort of different Ones; only by placing certain *Echoing* Bodies so, as that any Note play'd, shall be return'd by them in 3 ds, 5ths, and 8ths.

ECHO, is also used for the Place where the Repetition of the Sound is produced, or heard.

The Word is form'd of the *Greek*, *ἠχον*, *Sonus*, of the Verb *ἠχον*, *Sono*, I sound.

Echo's are distinguish'd into divers Kinds, *vis.*

1. *Single*, which return the Voice but once; whereof some are *Toncal*, which only return a Voice when modulat'd into some particular Musical Tone. Others, *Poly-syllabical*, which return many Syllables, Words and Sentences.

2. *Multiple*, or *Tantological*, which return Syllables and Words the same oftentimes repeated.

In *Echo*'s, the Place where the Speaker stands, is call'd the *Centrum Phonicum*; and the Object, or Place, that returns the Voice, the *Centrum Phonoacousticum*. See *CENTRUM*.

At the Sepulchre of *Metella*, Wife of *Craffus*, was an *Echo*, which repeated what a Man said, five Times. Authors mention a Tower at *Cyricus*, where the *Echo* repeated seven Times.

But the finest *Echo* we read of, is that mention'd by *Bartolus*, in his *Notes on Stratus's T'ebolus*, L. VI. v. 30, which repeated the Words a Man utter'd seventeen Times: It was on the Banks of the *Nile*, between *Cobbeus* and *Zingen*. *Bartolus* assures us, he had proved what he writes; and had told seventeen Repetitions. And whereas, in common *Echo's*, the Repetition is not heard till some Time after hearing the Words spoke, or the Notes sung; in this, the Person who speaks, or sings, is scarce heard at all; but the Repetition most clearly, and always in surprizing Varieties; the *Echo* seeming, sometimes to approach nearer, and sometimes to be further off. Sometimes the Voice is heard very distinctly, and sometimes scarce at all. One hears only one Voice, and another several: One hears the *Echo* on the right, and the other on the left, &c.

ECHO, in Architecture, is apply'd to certain Kinds of Vaults, and Arches, most commonly of Elliptical, or Parabolic Figures; us'd to redouble Sounds, and produce Artificial *Echo's*.

The Method of making an Artificial *Echo*, is taught by the Jesuite *Blancaui*, in his *Echometry*, at the End of his Book on the *Sphere*. *Vitruvius* tells us, that in divers Parts of Greece, and Italy, there were brazen Vessels, artfully ranged under the Seats of the Theatres, to render the Sound of the Actors Voices more clear, and make a Kind of *Echo*; by which Means, of the prodigious Multitude of Persons, who assist'd at the Spectacles, every Body might hear with Ease and Pleasure.

ECHO, in Poetry, &c. a Kind of Composition, wherein the last Words, or Syllables, of each Verse, contain some meaning, which being repeated a-part, answers to some Question, or other Matter, contain'd in the Verse.

Such is that famous *Echo* of *Erasmus*,—*Decem annos conuivisti in legenda Cicerone . . . one, i. e. un, Affine*.

The first *Echo*, in Verse, according to *Pasquier*, is that in the *Sylve* of *Johannes Secundus*: But *Pasquier* is mistaken; for the ancient Greek and Latin Poets have wrote *Echo's*. This *Martial* intimates plainly enough, when laughing at such Sorts of Baubles, he says, there is nothing like them among his Poems. *Nisquam Græcæ quod recantat Echo*: By which, on the one Side, he shews there were Latin Poets in his Time, who made *Echo's*; and on the other, that the Invention came from the Greeks.

Aristophanes, in his Comedy, intitled *Συμπόσια*, introduces *Euripides* in the Person of *Echo*. And *Callimachus*, in the Epigram, *Ἐχάσθη τὸ μῦθος τὸ κωμικὸν*, seems to have intended a Kind of *Echo*.

ECHOMETRE, in Music, a Kind of Scale, or Rule, with several Lines divided thereon, serving to measure the Duration, or Length, of Sounds, and to find their Intervals and Ratio's.

The Word is form'd of the Greek, *ἠχῶ*, Sound, and *μέτρον*, Measure.

ECHYMOISIS, or *ECCHYMOSIS*, in Medicine, *Suffisio*, a Disease of the Eye; wherein the Blood, extravasated by some Blow, or Contusion, upon its Arrival between the Cutis, and the Flesh or Muscles, stops there, without any Appearance of a Wound.

The *Echymosis* is either simple, or with Abscess.

The Word is form'd of the Greek, *ἐκχύμας*, Effusion of Humours, τὸ ἕρμα.

ECLECTIC, *ECLECTICI*, a Name given to some ancient Philosophers. See *PHILOSOPHER*.

Diogenes Laertius, L. I. and *Suides* say, that the *Eclectici* were such, as without attaching themselves to any particular Sect, took what they judg'd good and solid from each, And hence their Denomination; which, in the Original Greek, signifies, that may be chosen, or that chosen, of the Verb *ἐκλέγω*, I choose.

Laertius, in the same Place, notes, that they were also, for the same Reason, denominat'd *Analogetici*, but that they call'd themselves *Philastetici*, i. e. Lovers of Truth.

The Chief, or Founder of the *Eclectici*, was one *Potamon*, of *Alexandria*, who lived under *Augustus*, and *Tiberius*; and who, weary of doubting of all Things with the *Scepticks* and *Pyrrhonians*, form'd the *Eclectic* Sect; which *Vossius* calls the *Eclective*.

ECLEGMA, in Medicine, a Pectoral Remedy, of the Consistence of a thick Syrup; call'd also *Loboch*, *Linctus*, and *Lambatiue*. See *LINOEN*, &c.

The Word is form'd of the Greek *ἐκ*, and *λέγω*, to lick; by Reason the Patient is to take it by licking it off the End of a Liguorick Stick dipt therein: To the End that being taken thus by little and little, it may remain the longer in the Passage, and moisten the Breadth the better.

There are *Eclegma's* of Poppy, others of Lentils, others of Squills, &c. The Intention is to heal, or ease the Lungs in Coughs, Peripneumonies, &c. and are usually compos'd of Oils, incorporated with Syrup.

ECLIPSE, in Astronomy, a Privation of the Light of one of the Luminaries, by the Interposition of some opaque Body, either between it and the Eye; or between it and the Sun. See *SUN*, *MOON*, and *SATELLITE*.

The Word is derived from the Greek, *εὐλαψία*, of *εὐλαπναι*, *deficere*, I fail.

The Antients had frightful Ideas of *Eclipses*, as Prefiges of the most dismal Events: *Ptolemaeus* assures us, that at *Rome*, it was not allow'd to talk publicly of any natural Cause of *Eclipses*. They made a huge Noise with Brazen Instruments, and rais'd loud Shouts, during *Eclipses* of the Moon, as thinking thereby to ease her in her Labour; Whence *Jovensal*, speaking of a talkative Woman, says; *Vna Laboranti poterit succurrere Lunæ*. Others attributed the *Eclipse* of the Moon to the Arts of Magicians, who by their Incantments, pluck'd her out of Heaven, and made her skim over the Grass. The Natives of *Mexico* kept Fast, during the *Eclipse*; and, particularly, their Women, who beat and abused themselves, drawing Blood from their Arms, &c. They imagin'd the Moon had been wounded by the Sun in some Quarrel between them.

The Duration of an *Eclipse*, is the Time between the *Immersion* and *Emergence*.

The *Immersion*, or Incidence of an *Eclipse*, is the Moment when Part of the Sun or Moon's Disk first begins to be hid. See *IMMERSION*.

The *Emergence*, or *Expurgation*, is the Time when the Eclipsed Luminary begins to re-appear, or emerge out of the Shadow. See *EMERGENCE*.

To determine the Duration of *Eclipses*, they usually divide the Diameter of the Luminary *Eclipsed*, into 12 equal Parts, call'd *Digits*, or *Digiti Ecliptici*. See *DIGIT*.

Eclipses, are divided with Respect to the Luminary *Eclipsed*, into *Eclipses of the Sun*, of the *Moon*, and of the *Satellites*: And with Respect to the Circumstances, into *Total Eclipses*, *partial*, *annual*, &c. *Eclipses*.

ECLIPSE of the Moon, is a Deficiency of Light in the Moon, occasion'd by a Diametrical Opposition of the Earth between the Sun and Moon. See *MOON*.

The Manner of this *Eclipse* is exhibited in *Tab. Astronom. Fig. 24* where A represents the Earth, and B or C the Moon.

When all the Light of the Moon is intercepted, i. e. when her whole Disk is cover'd, the *Eclipse* is said to be *Total*; when only Part, *Partial*. When the *Total Eclipse* lasts for some Time, it is said to be *Totalis cum Mora*, Total with Continuance; when only Instantaneous, *Totalis sine Mora*, Total without Continuance.

Eclipses of the Moon, only happen in the Time of full Moon; by Reason 'tis only then the Earth is between the Sun and Moon. Nor do they happen every full Moon, by Reason of the Obliquity of the Moon's Way with Respect to the Sun's; but only in those full Moons, which happen either in the Nodes, or very near them, where the Aggregate of the apparent Semi-diameters of the Moon and the Earth's Shadow, is greater than the Latitude of the Moon, or the Distance between their Centres. See *NODE*.

The most considerable Circumstances in the *Eclipses of the Moon*, are,

1. That as the Sum of the Semi-diameters of the Moon, and Earth's Shadow, is greater than the Aggregate of the Semi-diameters of the Sun and Moon, (that when least, being $5\frac{1}{2}$, and this, when greatest, scarce $3\frac{1}{2}$.) 'Tis evident, *Lunar Eclipses* may happen in a greater Latitude of the Moon, and at a greater Distance from the Nodes, and consequently are more often observ'd in any one Part of the Earth, than *Solar* ones; tho', with Respect to the whole Earth, the latter are as frequent as the former.

2. *Total Eclipses*, and those of the longest Duration, happen in the very Nodes of the Ecliptic; by Reason the Section of the Earth's Shadow, then falling on the Moon, is considerably greater than her Disk. There may likewise be *Total Eclipses*, within a little Distance off the Nodes; but the further, the less their Duration; further off still, there are only *Partial* ones, and at length none at all: As the Latitude and the Semi-diameter of the Moon together, are either less, equal, or greater than the Semi-diameter of the Shadow.

3. All *Lunar Eclipses* are universal, i. e. are visible in all Parts of the Globe, which have the Moon above their Horizon; and are every where of the same Magnitude, and begin and end together.

4. In all *Lunar Eclipses*, the Eastern Side is what first Immerses, and also Emerges; for that tho' at first she be more Westerly than the Earth's Shadow, yet her proper Motion being swifter than the same, she overtakes and outgoes it.

5. The Moon, even in the Middle of an *Eclipse*, has usually a faint Appearance of Light; which *Gassendus*, *Ricciolus*,

Riccioli, Kepler, &c. attribute to the Light of the Earth's Atmosphere transmitted thither. See ATMOSPHERE.

Lunary. She grows sensibly paler and dimmer, before ever she enters within the Earth's Shadow, which is attributed to the Earth's PENUMBRA. See PENUMBRA.

Astronomy of Lunar ECLIPSES, or the Method of calculating their Times, Places, Magnitudes, and other Phenomena.

Preliminary 1. To find the Length of the Earth's Shadow Cone. Find the Sun's Distance from the Earth for the given Time; See SUN and DISTANCE. Then, as the Sun's Diameter is known in Semi-diameters of the Earth, the Length of the Cone will be found from the Rules given under SHADOW.

Suppose, e. gr. the Sun's greatest Distance from the Earth, 34996 Semi-diameters of the Earth; and the Sun's Semi-diameter to be to that of the Earth as 153 to 1. Then will the Length of the shadowy Cone be found 230 $\frac{1}{2}$.

Hence, as the Moon's least Distance from the Earth, is scarce 64 Semi-diameters; the Moon, when in Opposition to the Sun, or near the Nodes, will fall into the Earth's Shadow, tho' the Sun and Moon be in their Apogees. And much more, if they be in or near their Perigees, by Reason the Shadow is then longer; and the Moon nearer the Base of the Cone.

2. To find the apparent Semi-diameter of the Earth's Shadow, in the Place of the Moon's Passage, for any given Time. Find the Sun and Moon's Distance from the Earth; and thence, their Horizontal Parallaxes: Add the Parallaxes together, and from the Sum, subtract the apparent Semi-diameter of the Sun. The Remainder is the apparent Semi-diameter of the Shadow.

Thus, suppose the Moon's Parallax 46' 48", the Sun's 6". The Sum is 56' 24"; from which the Sun's apparent Semi-diameter 16' 5" subtracted, leaves 40' 19" for the Semi-diameter of the Shadow.

Note, *M. de la Hire* omits the Sun's Parallax, as of no Consideration; but increases the apparent Semi-diameter of the Shadow by a whole Minute, for the Shadow of the Atmosphere; which would give the Semi-diameter of the Shadow, in our Instance, 41' 15".

3. The Moon's Latitude, *AL*, at the Time of her Opposition, together with the Angle at the Node *B*, being given; to find the Arch between the Centres *AI*, and the Arch *IL*. (Fig. 35.) Since in the spherical Triangle *AIL*, Rectangular at *A*; the Side *AL* is given, as also the Angle *ALI*, as being the Complement of *LAI*, or *B* to a right Angle; the Arch between the Centres *AI*, is found by Spherical Trigonometry: And since the Angle *LAI*, is equal to *B*, each of them, with *IAB*, making a right Angle: And the Moon's Latitude *AL* is given; the Arch *LI* will likewise be found by Spherical Trigonometry. See SPHERICAL TRIANGLE.

To determine the Bounds of an ECLIPSE of the Moon.

Since there is no Eclipse possible, but when the Aggregate of the Semi-diameters of the Shadow, and the Moon is greater than the Moon's Latitude, (for without this, the Moon will not come in the Shadow) add the apparent Semi-diameters of the Moon in Perigee, and of the Shadow, supposing the Sun in Apogee; by which you will have the Spherical Triangle *MNO*, (Fig. 36.) having given the Angle at the Node, whose Quantity is the Moon's greatest Latitude in the Conjunction; the right Angle *E*; and the Leg *MO*; find the Moon's Distance from the Node *NO*: Which is the utmost Bound, beyond which the Eclipse cannot reach. After the same Manner, adding the apparent Semi-diameters of the Moon in Apogee, and of the Shadow of the Sun in Perigee, for the sake of having the *LH*, in the Triangle *NLH*; the Distance of the Moon, from the ascending Node *HN*, will be found by Spherical Trigonometry; which is the Bound within which the Moon will necessarily be Eclipsed.

Thus, e. gr. the Semi-diameter of the Shadow, when the Sun is in Apogee, and the Moon in Perigee, according to *Kepler*, is 45' 40". And the apparent Semi-diameter of the Moon in Perigee 16' 25". Consequently *MO* 66', or 1 $\frac{1}{2}$ 6'; and therefore there will be no Eclipse at all, if the Moon's Latitude be greater than 1 $\frac{1}{2}$ 6". Now, as the same Angle *N* is supposed by *Kepler* to be 5 $\frac{1}{2}$ 18'.

Log. Sin. N	89655337
Sin. MO	82832433
Whole Size	100000000

Log. of Sine *ON* 93177096. The Number corresponding to which in the Tables is 11 $\frac{1}{2}$ 59' 50". If, therefore, the Moon's Distance from the ascending Node be greater than 12 $\frac{1}{2}$; no Eclipse can happen. And, in like Manner, the Semi-diameter of the Shadow in the Sun's

Perigee, and the Moon's Apogee is 45' 50", and the Moon's Semi-diameter in her Apogee 15'. Consequently, *LH* is 58' 50". And, therefore, there will be an Eclipse, if the Moon's Latitude don't exceed 58' 50". But here, as before, the Argument of the Latitude is found 10 $\frac{1}{2}$ 40'.

To determine the Quantity of an Eclipse, or the Number of Digits Eclipsed.

Add the Moon's Semi-diameter *IK*, (Fig. 35.) to the Semi-diameter of the Shadow *AM*; then will *AM* + *IK* = *IM* + *IK* = *AI* + *MK*. From this Sum, therefore, subtract the Arch between the Centres *AI*, the Remainder gives the Scraples, or Parts of the Diameter Eclipsed *MK*. Say, therefore, as the Diameter *KH*, is to the Scraples, or Parts thereof Eclipsed *MK*, so is 12, to the Digits Eclipsed.

Thus, supposing *KH*, 30' 42", and consequently *IK*, 15' 22 $\frac{1}{2}$ AM, 41' 15"; and *AI*, 45' 14": The Moon's Semi-diameter will be 15' 22", and that of the Shadow 41' 15"; the Sum whereof, is 56' 37". From which the Arch between the Centres 45' 14", being subtracted, leaves 13 21 Scraples, or 801 Seconds. Then as 1844: 801 :: 12: 5 $\frac{1}{2}$ Dig. or 5 Dig. 13'.

To find the Scraples of half Duration of an Eclipse, or the Arch of the Lunar Orbit, which her Centre describes from the Beginning of the Eclipse to the middle thereof.

Add the Semi-diameters of the Shadow *AP*, and the Moon *PN* together; the Sum gives *AN*. From the Square of *AN*, subtract the Square of *AI*; the Remainder is the Square of *IN*, the Square Root of this Residue is the Arch *IN* required.

To find the Scraples of half Duration of a Total Darknes, in a Total Eclipse.

Subtract the Moon's Semi-diameter *SV*, (Fig. 37.) from the Semi-diameter of the Shadow *AV*; the Remainder is *AS*: In the Triangle *ALS*, which is Rectangular at *L*, therefore, we have the Arch *AS* given by the last Method; and the Arch between the Centres *AI*: Whence the Arch *IS* is found, as in the last Problem.

To find the Beginning, Middle, and End of a Lunar Eclipse.

Say, as the Moon's Horary Motion from the Sun, (See HORARY) is to 3600 Horary Seconds; so are the Seconds of the Arch *LI*, (Fig. 35.) to the Horary Seconds equivalent thereto. Subtract these Scraples, or Seconds, in the first and third Quadrant of the Anomaly, from the Time of full Moon, and add it to the same in the second and fourth; the Result is the Time of the middle of the Eclipse. Then say, as the Moon's Horary Motion from the Sun is to 3600 Scraples, or Seconds, so are the Seconds of half Duration *IN*, to the Time of half Duration: The double of which gives the whole Duration. Lastly, subtract the Time of half the Duration, from the Time of the middle of the Eclipse, the Remainder will be the Beginning of the Eclipse. And add the same to the same, the Sum will be its End.

Suppose, e. gr. *LI* = 4' 5" = 245", *IN* 2550", Time of Full Moon 9 $\frac{1}{2}$ 25' 49", Horary Motion of the Moon from the Sun, 30 $\frac{1}{2}$ 12', or 1812", then will

To calculate an Eclipse of the Moon.

1. For the given Time of the mean full Moon, compute the Moon's Distance from the Node; to find whether there be an Eclipse or not: As taught in the first Problem.
2. Compute the Time of the true full Moon, with the Sun and Moon's true Place reduced to the Ecliptic.
3. For the Time of the true full Moon, compute the Moon's true Latitude, the Distance of each Luminary from the Earth, with the Horizontal Parallaxes, and apparent Semi-diameters.
4. For the same Time, find the Sun and Moon's true Horary Motion.
5. Find the apparent Semi-diameter of the Shadow.
- And 6. The Arch between the Centres A I, with the Arch L I.
7. Compute the Scruples of half Duration I N.
- And thence, 8. Determine the Beginning, Middle, and End of the Eclipse.

Lastly, Find the Scruples Eclipsed, and thence the Quantity of the Eclipse: as taught under the preceding Problems.

E. gr. Anno, 1708, the mean full Moon fell on the 29th Day of September, at 3^h 45' 24" Afternoon: And then the Moon's Distance from the ascending Node, was 5° 22' 36". Consequently the Full Moon was Eclipsed. Now, for that Time, we find

True full Moon	5 ^h 23' 49"
True Place of the Sun	6° 45' 47"
Moon's Place in the Ecliptic	6 43 47
Moon's True Latit. North	43 25
Horizont. Parallax. of ☉	6
of ☾	16 18
Apparent Semi-diam. of ☉	16 5
of ☾	15 22
True Horar. Mot. of ☾ from ☉	30 12
Semi-diam. of Shadow	41 13
Arch between the Centres	43 14
Arch L I	4 5
Scruples of half Duration	36 30
Scruples Eclipsed	13 21
Duration of Eclipse	2 ^h 25 2
Beginning	8 ^h 3 12
Middle	9 13 43
End	10 28 14
Quantity	5 Dig. 15'.

To draw a Type, or Figure of a Lunar Eclipse on a Plane.

1. Let CD, (Fig. 38.) represent the Ecliptic; and let the Centre of the Shadow be in A: Thru' which draw a right Line GA, perpendicular to DC: And suppose D the East, C the West, A the South, and G the North.

2. From A, with the Interval of the Aggregate AN, of the Semi-diameter of the Shadow AP, and of the Moon PN, describe a Circle DGCQ; and with the Interval of the Semi-diameter of the Shadow AP, draw another Concentric Circle EMFR, which will exhibit the Section of the Shadow in the Passage of the Moon.

3. Let AL be equal to the Latitude of the Moon at the Beginning of the Eclipse; and in L erect a perpendicular LN, meeting the greater Circle in N, towards the West. Then will the Centre of the Moon, at the Beginning of the Eclipse, be in N.

4. After like Manner, make AS equal to the Latitude of the Moon at the End of the Eclipse; and in S, erect a perpendicular OS, parallel to DC: Then will the Centre of the Moon be in O, at the End of the Eclipse.

5. Connect the Points O and N by a right Line: ON will be the Arch of the Orbit, which the Centre of the Moon describes during the Eclipse.

6. From O and N, with the Interval of the Moon's Semi-diameter, describe Circles PV and TX, which will exhibit the Moon at the Beginning and End of the Eclipse.

7. Then, from A, letting fall a perpendicular AI to ON; the Centre of the Moon will be in I, in the Middle of the Darkness.

Wherefore, lastly, from I, with the Interval of the Moon's Semi-diameter, describe a Circle HK: This will represent the Moon in its greatest Obscurity, and at the same Time the Quantity of the Eclipse: The Circle PNTX, &c. terminating the Shade.

ECLIPSE of the Sun, is an Occultation of the Sun's Body, occasion'd by a diametrical Interposition of the Moon between the Sun and the Earth. See SUN.

It is distinguished, like that of the Moon, into Total and Partial, &c. to which must be added a third Species called Annular.

Eclipses of the Sun, some Authors observe, should in Propriety be called Eclipses of the Earth. See EARTH.

As the Moon is found to have a Parallax of Latitude; Eclipses of the Sun only happen when the Latitude of

the Moon, viewed from the Sun, is less than the Aggregate of the apparent Semi-diameter of the Sun and Moon. Solar Eclipses, therefore, happen when the Moon is in Conjunction with the Sun, in, or near the Nodes, i. e. at the new Moons. Consequently, the memorable Eclipse of the Sun, at our Saviour's Passion, happening at the Time of full Moon, when the Sun and Moon are in Opposition, was preternatural. See CONJUNCTION, OPPOSITION, &c.

Tho' the New Moon cover the Sun from the Earth, yet is not there an Eclipse every new Moon; by Reason the Moon's Way is not precisely under the Ecliptic, but placed obliquely thereto; only intersecting it twice in every Period. So that Eclipses can only be occasion'd in such new Moons, as happen in these Intersections or Nodes, or very near them.

In the Nodes, when the Moon has no visible Latitude, the Occultation is Total: and with *some Continuance*, when the Disk of the Moon, in *Perigee*, appears greater than that of the Sun in *Apoeeo*, and its Shadow is extended beyond the Surface of the Earth; and, *without Continuance*, at moderate Distances, when the Cusp, or Point of the Moon's Shadow, barely touches the Earth. Lastly, out of the Nodes, but near them, the Eclipses are partial.

Further, when the Moon, being in her *Apoeeo*, appears much less than the Sun; as happens most finibly, when he is in *Perigee*: the Cusp of the Lunar Shadow not reaching the Earth, she becomes in a Central Conjunction with the Sun, yet not able to cover his Disk; but lets his whole Limb appear like a lucid Ring or Bracelet: hence called an *Annular Eclipse*.

The other Circumstances of Solar Eclipses, are,

1. That none of them are universal; that is, none of them are seen throughout the whole Hemisphere, which the Sun is then above; the Moon's Disk being much too little, and much too near the Earth, to hide the Sun from the Disk of the Earth, which is fifteen Times bigger than it.

2. Nor does the Eclipse appear the same in all Parts of the Earth, where it is seen; but when in one Place it is Total, in another it is Partial.

3. It does not happen at the same Time, in all Places where it is seen; but appears more early to the Western Parts, and later to the Eastern.

4. Its Beginning is always on the Western Side the Sun, and on the same Side it ends.

5. In most Solar Eclipses, the Moon's darken'd Disk is cover'd with a faint, dawning Light; which is commonly attributed to the Reflexion of the Light, from the illuminated Part of the Earth.

Lastly, In Total Eclipses of the Sun, the Moon's Limb is seen surrounded by a pale Circle of Light; which the late Astronomers take for a manifest Indication of a Lunar Atmosphere. See ATMOSPHERE.

The Astronomy of ECLIPSES of the Sun.

To determine the Bounds of a Solar Eclipse. If the Moon's Parallax were insensible, the Bounds of a Solar Eclipse would be determined after the same Manner as tho' of a Lunar: But by Reason here is a sensible Parallax, we must alter our Measures a little, viz.

1. Add the apparent Semi-diameters of the Luminaries both in *Apoeeo* and *Perigee* together.

2. Since the Parallax diminishes the Northern Latitude; to the former Sum, add the greatest Parallax of Latitude possible: And since the Parallax augments the Southern Latitude, from the same Sum, subtract the greatest Parallax of Latitude. Thus, in each Case, will you have the true Latitude, beyond which there can be no Eclipse.

This Latitude given, the Moon's Distance from the Nodes, beyond which Eclipses cannot happen, is found, as already directed for Lunar Eclipses.

As different Authors follow very different Hypotheses, with Regard to the apparent Diameters of the Luminaries, and the greatest Parallax of Latitude; they differ much in assigning the Bounds at which Solar Eclipses happen. *Ptolemy*, makes the utmost Bound of Eclipses at 19° 25', Distance from the Node; *Copernicus*, at 19° 12'; *Tycho*, at 18° 25'; *Kepler*, at 17° 16'; *Ricciolus*, at 18° 49'. Tho' *Ptolemy*, in other Places, judges 16° 42' Minutes distance from the Node, necessary; *Copernicus*, 16° 25'; *Tycho*, 17° 9'; *Kepler*, 15° 55'; and *Ricciolus*, 15° 58'.

To find the Digits Eclipsed.

Add the apparent Semi-diameters of the Luminaries into one Sum: From which subtract the Moon's apparent Latitude, the Remainder is the Scruples, or Parts of the Diameter Eclipsed. Then say, as the Semi-diameter of the Sun is to the Scruples Eclipsed; so are 6 Digits reduced into Scruples, or 360 Scruples, to the Digits Eclipsed.

To find the Scruples of half Duration, or the Line of Immersion.

The Method is the same as that deliver'd for Lunar Eclipses.

To determine the Duration of a Solar Eclipse.

Find the Horary Motion of the Moon from the Hour, for one Hour before the Conjunction, and another Hour after: Then say, as the former Horary Motion is to the Seconds in an Hour, so are the Scruples of half Duration to the Time of Immersion: And as the latter Horary Motion is to the same Seconds, so are the same Scruples of half Duration to the Time of Emerſion. Laſtly, adding the Time of Immersion to that of Emerſion; the Aggregate is Total Duration.

To determine the Beginning, Middle, and End of a Solar Eclipse.

From the Moon's Latitude, for the Time of Conjunction; find the Arch I L, (Fig. 35.) or the Diſtance of the greateſt Obſcurity. Then ſay, as the Horary Motion of the Moon from the Sun, before the Conjunction, is to 3600 Seconds of an Hour; ſo is the Diſtance of the greateſt Darkneſs, to the Interval of Time between the greateſt Darkneſs and the Conjunction.

Subſtract this Interval, in the firſt and third Quarter of the Anomaly, from the Time of the Conjunction; and in the other Quarters, add it to the ſame; the Reſult is the Time of the greateſt Darkneſs. Laſtly, from the Time of the greateſt Darkneſs, ſubſtract the Time of Incidence, and add it to the Time of Emerſion; the Difference, in the firſt Caſe, will be the Beginning; and the Sum, in the latter Caſe, the End of the Eclipse.

Indeed, as the Interval between the Conjunction, and the greateſt Obſcurity is very ſmall, and exceedingly precarious; 'tis ſcarce worth while to be ſo very precise; and, accordingly, many Authors uſe the Time of the apparent Conjunction for that of the greateſt Darkneſs.

<i>E. gr.</i> in our Caſe,			
Time of Conjunction	21 ^h	36'	59"
Time of Incidence	1	2	36
Beginning of Eclipse	20	34	23
Or 8 ^h Morn.	34	23	
Time of Conjunction	21	36	59
Time of Emergence	1	5	47
End of Eclipse	22 ^h	42	46
Or 10 Morn.	42	46	

Or, if you would determine it with more Accuracy, ſubſtract about two Minutes for the Diſtance between the Conjunction ſeen, and the Time of the greateſt Obſcurity.

To find the Moon's apparent Latitude at the Beginning and End of an Eclipse.

From the Argument of the Moon's Latitude, computed for the Time of the apparent Conjunction, ſubſtract the Scruples of half Duration, together with the Motion of the Sun, anſwering to the Time of Incidence: The Remainder, is the Argument of Latitude, at the Beginning of the Eclipse.

To the ſame Sum add the ſame Scruples, together with the Sun's Motion anſwering to the Time of Emergence: The Aggregate is the Argument of Latitude, at the End of the Eclipse. The Argument of the Latitude given; the Moon's true Latitude is found after the common Manner. (See LATITUDE.) And from the true Latitude, the apparent one.

The apparent Latitude of the Moon, at the Beginning and End of a Solar Eclipse, given; to draw a Type or Figure thereof.

This is perform'd, as already taught for Eclipses of the Moon.

To calculate an Eclipse of the Sun.

1. Find the mean New Moon, and thence the true one; together with the Place of the Luminaries for the apparent Time of the true one.
2. For the apparent Time of the true new Moon, compute the apparent Time of the new Moon obſerved.
3. For the apparent Time of the new Moon ſeen, compute the Latitude ſeen.
4. Thence, determine the Digits Eclipſed.
5. Find the Time of the greateſt Darkneſs, Immersion, and Emerſion.
6. Thence determine the Beginning, and Ending of the Eclipse.

From the preceding Problems, it is evident, that all the Trouble, and Fatigue of the Calculus, ariſes from the Parallaxes of Longitude and Latitude; without which, the Calculation of Solar Eclipses would be the ſame with that of Lunar ones.

ECLIPSES of the Satellites. See SATELLITES of Jupiter.

The chief Circumſtances here obſerved are,

1. That the Satellites of Jupiter undergo two or three Kinds of Eclipses; whereof, the firſt are proper, being ſuch as happen when Jupiter's Body is directly interpoſed between them and the Sun: Theſe happen almoſt every Day. Mr. *Haweſteed* and *Caffai*, give us Tables, wherein their Immersions into Jupiter's Shadow, and Emerſions again, are computed to Hours and Minutes.

The 2d are Occultations, rather than Obſcurements; wherein the ſame Satellites, coming too near to Jupiter's Body, are loſt in his Light: Which *Ricciolus* calls *occidere Zouſſeos*, ſetting Jovially. In which Caſe, Jupiter's neareſt Satellite exhibits a third Kind of Eclipse; being obſerved like a Macula, or dark round Spot, tranſiting Jupiter's Diſk, with a Motion contrary to that of the Satellite: Juſt as the Moon's Shadow projected on the Earth, will appear to do, to the Lunar Inhabitants.

The Eclipses of Jupiter's Satellites furniſh the beſt Means of finding the Longitude at Sea. Thoſe, particularly, of the firſt Satellite, are much finer than the Eclipses of the Moon; and withal happen much oftener: Beſide that, the Manner of applying them is very eaſe. See LONGITUDE.

ECLIPTIC, *Eclipticus*, ſomething belonging to Eclipses. See ECLIPSE.

All new and full Moons are not *Ecliptic*, i. e. Eclipses don't happen every new and full Moon, tho' there be then an Interpoſition, either of the Earth between the Sun and Moon, or of the Moon between the Sun and Earth. The Reaſon is, that the Interpoſition is only as to Longitude, and not as to Latitude. The Sun is always in the *Ecliptic*, but the Moon is not; ſhe deviates from it about five Degrees, ſometimes on the North Side, and ſometimes on the South. But every five Months, or thereabouts, ſhe cuts the *Ecliptic*; and 'tis only about thoſe Times, that there can be Eclipses either of the Moon or Sun.

The Places, wherein ſhe cuts the *Ecliptic*, are called the *Nodes* of the Moon. See NODES.

ECLIPTE *Bandis*, or *Termini Ecliptici*; is the Space of about 15 Degrees from the *Nodes* of the *Ecliptic*; within which, if the Moon be, at the Time of a Conjunction or Oppoſition with the Sun, there may be an Eclipse of the Sun, or Moon, tho' ſhe be not preciſely in the *Nodes*. See ECLIPSE.

ECLIPTE *Digits*, *Digiti Ecliptici*. See DIGITS. *ECLIPTE*, in Astronomy, is particularly uſed for a Line, or Circle, on the Surface of the Sphere of the World, under which the Centre of the Sun proceeds in its proper Motion: Or a Line, with the Sun's Centre, deſcribes in his annual Progreſs. See CIRCLES, SUN, &c.

It has its Name *Ecliptic*, by Reaſon all Eclipses happen when the two Planets are in or near the *Nodes*, or Interſections of the *Ecliptic*. See ECLIPSE.

It is alſo called the *Sun's Orbit*, and *Sun's Way*, by Reaſon the Sun never deviates from it, in his annual Motion from Eaſt to Weſt. See ORBIT.

The North, or aſcending *Node* of the *Ecliptic*, is called the *Dragon's-Head*, and the South, or deſcending *Node*, the *Dragon's-Tail*. See DRAGON, &c.

The *Ecliptic* is placed obliquely with Reſpect to the Equator, and cuts it in two Points, *viz.* the Beginnings of *Aries* and *Libra*, or into two equal Parts; and, accordingly, we find the Sun twice every Year in the Equator: And all the reſt of the Year, either on the North or South Side thereof. See EQUINOCTIAL.

The *Ecliptic* is a great Circle of the Sphere, biſected by the Horizon; conſequently, the Arch of the *Ecliptic*, intercepted between the Horizon and the Meridian, is a Quadrant. And again, the *Solſtitial Points* of the *Ecliptic*, i. e. thoſe moſt remote from the Equator, are a Quadrant diſtant from the Equinoctial ones. Laſtly, as the greateſt Declination of the *Ecliptic*, from the Equator, is an Arch of a great Circle diſtant by a Quadrant from the Equinoctial Points; it will be the Meaſure, or Quantity of the Obliquity of the *Ecliptic*, i. e. of the Angle form'd by the Interſection of the Equator with the *Ecliptic*. See SPHERE.

The Obliquity of the *Ecliptic*, or the Angle wherein it cuts the Equator, is uſually ſix'd at 23° 30'; which, therefore, is the greateſt Declination of the *Ecliptic* from the Equator: The Points of which greateſt Declination on each Side, are called the *Solſtitial Points*; thro' which are drawn the two Tropicks. See SOLSTICIAL and TROPIC.

The Method of obſerving the greateſt Declination of the *Ecliptic* is thus: About the Time of one of the Solſtices obſerve the Sun's Meridian Altitude with the utmoſt Care, for ſeveral Days ſucceſſively; From the greateſt Altitude obſerv'd, ſubſtract the Height of the Equator. The Remainder is the greateſt Declination in the Solſtitial Point.

Ricciolus, c. 97. at *Bologna*, in the Year 1636, obſerved the Sun's Meridian Altitude, on the 20th of June, to be

be $68^{\circ} 59' 55''$, on the 21st, $69^{\circ} 0' 10''$; and on the 22^d, $68^{\circ} 59' 55''$. The greatest then was, $69^{\circ} 0' 10''$; from which the Height of the Equator $45^{\circ} 29' 50''$, being subtracted, left $23^{\circ} 30' 20''$ for the greatest Declination.

It has been Matter of great Dispute among the late Astronomers, whether the *Obliquity of the Ecliptic* be fix'd or moveable.

'Tis certain, the Observations of the ancient Astronomers represent it considerably greater, than those of the Moderns: Whence *Purbachius*, *Reinboldus*, *Regiomontanus*, *Copernicus*, *Rheticus*, *Lognonotanus*, *Tycho*, *Snelsius*, *Laufferbergius*, *Bullialdus*, and others, have concluded it variable.

To determine the Point, the Observations of the Astronomers of all Ages, have been collected together; the chief of which are: That of *Ptolemy*, in the Year before Christ 324, which makes it $23^{\circ} 51' 41''$: That of *Eratosthenes*, in 230, $23^{\circ} 51' 20''$: And that of *Hipparchus*, in the Year before Christ 140, $23^{\circ} 51' 20''$: That of *Ptolemy*, in the Year after Christ 140, $23^{\circ} 51' 20''$: Of *Albatregius* in 880, $23^{\circ} 25'$: *Regiomontanus*, in 1460, $23^{\circ} 30'$: *Waltberus*, in 1476, $23^{\circ} 30'$: *Copernicus*, in 1525, $23^{\circ} 28' 24''$: *Ratmannus* and *Byrgius*, in 1570, $23^{\circ} 30' 20''$: *Tycho*, in 1587, $23^{\circ} 30' 22''$: *Kepler*, in 1627, $23^{\circ} 30' 30''$: *Gassendus*, in 1636, $23^{\circ} 31'$: *Ricciolus*, in 1646, $23^{\circ} 30' 20''$: *Hevelius*, $23^{\circ} 30' 20''$: *Newton*, $23^{\circ} 30'$: And *De la Hire*, in 1702, $23^{\circ} 29'$.

Upon the whole, tho' the oldest Observations make the *Obliquity* the greatest, yet it appears to be immutable: For it was by Mistake that *Eratosthenes* concluded, from his Observations, the greatest Declination to be $23^{\circ} 51' 20''$: From the same Observations he should only have made it $23^{\circ} 51' 5''$, as is shewn by *Ricciolus*. And the like oversight has been found by *Gassendus* and *Petireficus* in the Observations of *Ptolemy*; which Mistakes of *Eratosthenes* and *Ptolemy* were retain'd by *Hipparchus* and *Ptolemy*: And gave Occasion to the former not'd Authors to conclude that the *Obliquity* was continually decreasing.

Yet *Monf. le Chevalier de Louville*, who has consider'd the Merits of the Cause with infinite Attention, is of another Sentiment: The Result of his Researches, he gives us in the Memoirs of the Royal Academy, for the Year 1717, viz. that the *Obliquity of the Ecliptic* diminishes at the Rate of a Minute in 100 Years. The Ancients, we know, had no Regard to any Refractions in their Observations: And besides, made the Sun's Horizontal Parallax $3'$, whereas the modern Astronomers scarce make it $10''$. These two Inaccuracies have a very ill Effect on their Observations; which *M. de Louville* is oblig'd to free them of, e're he can build on them.

According to an ancient Tradition of the *Egyptians*, mention'd by *Herodotus*, the *Ecliptic* had anciently been perpendicular to the Equator: This Notion they were led into, by observing, for a long Series of Years, that the *Obliquity* was continually diminishing; or which amounts to the same, that the *Ecliptic* was continually approaching to the Equator. For hence they took Occasion to suspect that those two Circles, in the Beginning, had been as far off each other as possible. *Diod. Siculus* relates, that the *Chaldeans* reckon'd 403000 Years from their first Observations to the Time of *Alexander's* entering *Babylon*. This enormous Account, may have some Foundation, supposing the *Chaldeans* to have built on the Diminution of the *Obliquity of the Ecliptic* of a Minute in 100 Years. *M. de Louville*, taking the *Obliquity* such as it must have been at the Time of *Alexander's* Entrance into *Babylon*, and going back to the Time when the *Ecliptic*, at that Rate, must have been perpendicular to the Equator, actually finds 402942 *Egyptian*, or *Chaldean* Years, which is only 58 Years short of the former *Epocha*. In the general, there is no Way of accounting for the fabulous Antiquity of the *Egyptians*, *Chaldeans*, &c. so probable, as by long Periods of very slow Celestial Motions, whereof they had observed a little Part, and thence calculated the Beginning of the Period; making the World and their own Nation to commence together. If *M. de Louville's* System be true, in 140000 Years more, the *Ecliptic* and Equator must coincide and mix in one.

The *Ecliptic* is divided into twelve Parts, called *Signs*. See *Sign*.

ECLIPSE, in Geography, &c. is a great Circle of the Globe, cutting the Equator under an Angle of $23^{\circ} 29'$. See *GLOBE*.

The *Terrrestrial Ecliptic*, therefore, is in the Plane of the *Celestial Ecliptic*; Like which it has its *Equinoctial* and *Solstitial Points*, and is bounded by *Tropicks*. See *EQUATOR*, *SOLSTITIAL*, *EQUINOCTIAL*, *TROPIC*, &c.

ELOGUE, in Poetry, a Kind of pastoral Composition, wherein Shepherds are introduced conversing together. See *PASTORAL*.

The *Elogue* is properly an Image of the Pastoral Life: Nor do we see what Finesse it was that determin'd

Sannazarius to put Fishermen in lieu of Shepherds, who had been Time out of Mind in Possession of the *Elogue*.

The Beauty of the *Elogue*, *Monf. Fontenelle* observes, is not attach'd to Rural Things, but rather to what is calm and easy in the Country Life. Shepherds being agreeable Personages, the Poets abuse them; and provided they do but talk a little about Reeds, and Herbage, they conclude on Courf's 'tis an *Elogue*.

There are *Elogues* in *Theocritus* of a lofty Character; and *Virgil* has some in the sublime Style. The *Elogues*, therefore, occasionally raises its Voice. Yet *M. Fontenelle* esteems it a Fault in some modern Poets, to have put Matters of high Concern in their *Elogues*; and to have made their Shepherds sing the Praises of Kings and Heroes. *Ronsard*, in particular, has made himself ridiculous, by making the *Eloge* of *Budens* and *Variable* in his first *Elogue*, by the Shepherd *Margot*. Such Folks should have been above the Knowledge of simple *Margot*.

The Sentiments, whereof *Elogues* consist, the same Author observes, should be finer and more delicate than those of real Shepherds: Only, their Form should be as simple, and Country-like as can be. But this Simplicity excludes none but glaring and excessive Ornaments.

Since the Establishment of the Academy, or Assembly of *Arcadians* at *Rome*, about the Year 1690; the Taste for *Elogues* has been greatly improved among the *Italians*. Those Gentlemen, who are the Flower of the Wits of *Italy*, take the Name of the Shepherds of *Arcadia*; and will not allow their Assembly to be treated as an Academy. They have each of them a poetical Name, which is always that of some Shepherd; and apply themselves particularly to *Elogues*, as Pieces most proper to their Profession.

The learned *Sig. Crocicentini*, one of the Founders of the Assembly, who had long been Custos, i. e. the President thereof, and bore the Name of *Alphosibeo Ceria*, has wrote the Laws and Establishment of the Society, with the Names of all who had been admitted thereof, at the End of his Book, entitled, *la Bellezza de la Vulgar Poesie*.

The Word *Elogue*, is form'd from the *Greek* ελογος, *Choice*. According to the Etymology of the Word, therefore, *Elogue* should be no more than a choice Piece; but Custom has determin'd it to a farther Signification, viz. a little, elegant Composition in a simple, natural Style and Manner.

Idyll and *Elogue*, in their primary Intention, are the same Thing: Thus, the *Idylls*, εὐδαμια of *Theocritus*, are Pieces wrote perfectly in the same Vein with the *Elogues* of *Virgil*.

But Custom has made a Difference between them, and affected the Name *Elogue*, to Pieces wherein Shepherds are introduced speaking; *Idyll*, to those wrote like the *Elogue*, in a simple, natural Style, but without any Shepherds in them. See *Idyll*.

Some imagine the Name *Elogue*, to have been originally attributed to such Poems, as were wrote in Imitation of others; such as the *Elogues* of *Virgil*, which are only Imitations of *Theocritus*.

Others are of Opinion, the Word was first form'd from εὐλογος, *Goats*, and εὐλογο, *Discourse*, q. d. a Conversation or *Discourse* of *Goats*, or *Goat-herds*. But *Fa. Ruens*, in his Comments on *Virgil*, thinks, they would then have made it εὐλογος, *Elogogy*, rather than *Elogues*; or, at least, the Word would have been wrote in *Greek* by α, and in *Latin* by e, not o.

Bartidius advances another Opinion, viz. that the Name *Elogue*, was given to all Poetical Compositions that were of a moderate Length, tho' not short to give them the Name of *Books*; and hence it is, that *Statius*, in the Epistle at the Head of the 11th Book of his *Sylvae*, and in the Preface to his fourth Book, calls his Poems *Elogues*; tho' he had not call'd them so in the Title.

Antonius, in the Preface to his *Cupid crucified*, calls also his *Idylls*, *Elogues*. Add, that *Crinus*, in his Comment on *Horace*, declares to have seen very ancient Manuscripts, wherein the Satyrs of the Poet are call'd *Elogues*; in which he is seconded by one learned Countryman *Mr. Baxter*.

ELOGIUM, is also apply'd to other Compositions beside those of Poetry.

Thus, we sometimes read of the *Elogues* of *Dionysius*, of *Pythius*, of *Croesus*, *Theophrastus*, *Strabo*, &c. In which Sense it only signifies *Encomium*, or *Collection*; whence the Name.

ELOGARIUS, *Elogary*, a learned Man, who has made Abundance of Extracts from Authors. *Justus Lipsius*, the Jesuite *Potavius*, *Vossius*, *Selden*, and *Grotius*, must have been great *Elogaries*.

ECPHORA, *Proffure*, in Architecture, is usually the Line, or Distance, between the Extremity of a Member, or Moulding, and the Naked of the Column, or other Part it projects from.

Some Authors, however, account the *Ecphora* from the Axis of the Column; and define it to be the right Line intercepted between the Axis, and the outermost Surface of a Member or Moulding. See *PROFURE*.

ECPHRACTICKS, in Medicine, such Remedies as have a Faculty of opening, and unstoping the Vessels, through which the Humours are to pass: Or which incise, and attenuate tough, viscid Humours, and thereby promote their Discharge. The same with *APPERIENS* and *DE-OBSTRUENTS*.

The chief simple *EcpRACTICKS*, are the little *Cantarella*, *Wormwood*, *Agrewood*, *Hyssop*, *Chamaedris*, Bark of *Tamarisk*, Roots of *Capers*, *Scelopendrium*, &c.

The Word is form'd from the Greek *εκφωρα*, so free from Obstruction; of *εκ* and *φωρα*, *obstruo*, *sepio*.

ECTIPESMA, in Chirurgery, a Kind of Fracture of the Skull, &c. wherein there are several Splinters, that press and disorder the inner Membranes. See *FRACTURE*.

The Word is pure Greek, *εκτιπεςμα*.

ECTHESIS, in Church History, a Name the Emperor *Heracius* gave to a Confession of Faith publish'd by him in 639. See *FAITH*.

The *Ecthesis* favour'd the Error of the *Monothelites*; and establish'd only one Will in *Jesus Christ*. *Heracius* publish'd it at the Instigation of *Abbasius*, Chief of the *Jacobites*, *Cyrus*, Patriarch of *Alexandria*, and *Sergius*, Patriarch of *Constantinople*: But finding that the *Roman* Church esteem'd it Heretical, he disown'd it, and declared by another Edict, which he spread throughout the East and West, that *Sergius* was the Author of the *Ecthesis*.

The Word is Greek, *εκτιπεςμα*, and signifies Exposition.

ECTHLOPSIS, *Ellypsion*, in Grammar, a Figure whereby an *us* is retrench'd, or cut off, at the End of a Word; for the Sake of the Measure of the Verse. See *FIGURE*.

The Word is Greek, *εκθλοψις*, which signifies Ellypsion.

Thus, in *multum ille*, &c. In scanning the Verse, we drop the *us*, at the End of *multum*, and only make three Syllables in the two Words.

Some account the *Ecthlopsis*, a Poetical Licence in the Latin Verification: But, in Reality, the *Ellypsion* of an *us* final, when the following Word, in the same Verse, begins with a Vowel, is of Necessity, nor of Licence.

Antiently, the *s* was likewise retrenched before a Consonant; as *facundus suoque*, for *facundus*, &c. In Effect, the *m* and *s*, were peculiarly rough and harsh in the Latin Pronunciation; as appears from *Quintilian*. And 'twas this led the Poets to retrench them at the Ends of their Words; as the like Cause did the *French*, to drop their *e* Feminine before a Word, beginning with a Vowel, and us to avoid a Hiatus, or Concourse of Vowels.

ECTHYMOSIS, in Medicine, a vehement Agitation and Dilatation of the Blood; such as happens in extraordinary Emotions of Joy.

The Word is form'd of *εκ θυμου*, and *Ανιμου*, *Mind*.

ECTROPIUM, in Medicine, a Disease of the Eyes, consisting in a Sort of Inversion of the lower Eye-lid, which disabes it from covering its Part of the Eye. See *PALPEBRÆ*.

The Word is Greek, *εκτροπιον*.

ECTYLOTICKS, Remedies proper to consume, and eat off Callus's, Warts, and other Excrecences, form'd on the Flesh. See *CALLUS*, &c.

The Word is form'd of *εκ* and *καλλος*, *Callus*.

ECTYPE, *ECTYPUS*, among Medallists, an Impression of a Seal, Ring, or Medal; or a figured Copy of an Inscription, or other ancient Monument.

In the Books of Travels, we find Abundance of *Ectypes* of antient Inscriptions, of the *Trajan* Column, of *Columbar*, &c.

The Word is Greek *εκτυπος*, is the Original, or Model, *επιτυπος*, the Copy, or Image, moulded or struck in *Crown*: And *καλυμμα*, *Ellypsion*, the Image in *relievo*, or emboss'd. See *TYPE*.

ECU, the *French* Crown. See *CROWN*.

ECUSSON, in Heraldry, an Inescutcheon, or little Ecutcheon. See *ESCUSSION*.

EDDISH, or **EADISH**, is the latter Pasture, or Grass, that comes after mowing, or reaping; and is otherwise called *Engraft*, *Eargh*, and *Ercob*.

EDDY, in Natural History, is when the Water, at any Place, runs back, contrary to the Tide, or Stream, and so falls into the Current again.

The Sea-men call that *Eddy-Water* which falls back, as it were, on the Rudder of a Ship under Sail, the *Dead*

Water. An *Eddy Wind*, is that which returns, or is beat back from any Sail, &c.

EDGINGS, in Gardening, Rows of Shrubs, or Plants, placed by Way of Borders, around Beds, Compartments, &c.

For the *Edgings* of Compartments, Box Items the most proper. But they are frequently made of Aromatic Plants, as Sage, Sweet Marjoram, Thyme, Lavender, Hyssop, &c.

EDHILING, *Edbilingus*, an ancient Name of the Nobility among the *Anglo-Saxons*.

The *Saxon* Nation, says *Nisbard*, *Hist. L. IV.* is divided into three Orders, or Classes of People; the *Edlingi*, the *Frilingi*, and the *Lanai*: Which signify the Nobility, the Freeman, and the Vassals or Slaves.

Instead of *Edhiling*, we sometimes meet with *Adeling*; which Appellation is likewise given to the King's Son, and the presumptive Heir of the Crown.

EDICT, an Instrument sign'd and seal'd by a Prince, to serve as a Law to his Subjects. See *LAW*.

Edicts have no Room in *England*, where the enacting of Laws is not lodg'd in the King, but in the Parliament. In the *Roman* Law, we find frequent mention of the *Edict* of the *Pretor*, quod *Pretor edixit*, which was a Phrase consecrated to the Ordinances of the *Pretor*; tho' it was us'd on other Occasions. See *PRETOR*.

In the *French* Law, *Edicts*, *Edits*, make a great Figure: They are of various Kinds; some importing a new Law, or Regulation, as the *Edict* of Duels, of second Marriages, &c. Others the Erection of new Offices, Establishments of Duties, Rents, &c. Sometimes Articles of Pacification, as the *Edict* of *Nantes*, &c.

Edicts are all seal'd with green Wax, to shew that they are perpetual and irrevocable.

Edicts with them, are much the same as Proclamations with us; but with this Difference, that the former hath solely the Authority of a Law in it self, from the Power issuing it forth; whereas the latter is only the Declaration of a Law, to which it refers, and hath no Power in it self.

EDIFICE, a *Building*. See *BUILDING*.

The Word is form'd of the *Latin*, *Ædifici*.

EDILE, or **ADILE**, **ÆDILIS**, in Antiquity, a *Roman* Officer, whose Function came near to that of our Mayors. The *Ædiles* had the Care and Superintendance of public and private Buildings, of Baths, Aqueducts, Roads, Bridges, Causeways, &c. The Weights, and Measures, were likewise under their Direction.

They fix'd the Rates of Provisions, and took Care the People were not exacted on therein. The Inquiry and Cognizance of Debauches, and Disorders in public Houses, likewise belong'd to them: They were to rectify Comedies; and it belong'd to them to treat the People with grand Games and Spectacles at their own Expence.

All these Functions, which render'd the *Edility* so considerable, belong'd at first to the *Ediles* of the People, *Ædiles Plebei*, or *Minor*. These were only two in Number; and were first created in the same Year as the *Tribunes*: For the *Tribunes*, finding themselves oppress'd with the Multiplicity of Affairs, demanded of the Senate to have Officers, whereon they might discharge themselves of Affairs of less Importance; and, accordingly, two *Ediles* were created. And hence it was, that the *Ediles* were elected every Year, at the same Assembly as the *Tribunes*. See *TRIBUNE*.

But these *Plebeian Ediles*, having refused, on a signal Occasion, to treat the People with Shows; as pleading themselves unable to support the Expence thereof: The *Patricians* made an Offer to do it, provided they would admit them to the Honours of the *Edility*.

On this Occasion, there were two new *Ediles* created, of the Number of the *Patricians*, in the Year of *Rome* 388. They were call'd *Ædiles Curules*, or *Majores*, as having a right to sit on a *Curule* Chair, enrich'd with Ivory, when they gave Audience; whereas the *Plebeian Ediles*, only sat on Benches. See *CURULE*.

Beside that the *Curule Ediles* shared all the ordinary Functions with the *Plebeians*, their chief Employ was, to procure the Celebration of the grand *Roman* Games, and to exhibit Comedies, Shows of Gladiators, &c. to the People.

To ease these four first *Ediles*, *Cæsar* created a new Kind, call'd *Ediles Cereales*, as being deputed chiefly to take Care of Corn, which were call'd *Ædiles Cereales*; for the Heathens honour'd *Ceres* as the Goddess who presided over Corn, and attributed to her the Invention of Agriculture. These *Ediles Cereales*, were also taken out of the Order of *Patricians*.

In the Municipal Cities there were *Ediles*, with the same Authority as at *Rome*.

The Word is form'd of *Ædes*, on Account of their having the Care of Temples, Houses, &c.

EDITOR, in the Common-wealth of Learning, a Person who takes the Care of publishing the Work of another Author;

Author; usually, of an ancient Author: For *Editor* is neither properly applied to a working Printer, nor to an Author who prints his own Works.

Erasmus, was a mighty *Editor* of ancient Writings. The *Learn'd Doctors, Scaliger, Petavins, Fa. Sirmond, Bishop Walton, Mr. Hearn, &c.* are learned *Editors*.

EDUCATION, the Art of bringing up, forming, and instructing Children.

The Follies of a too delicate *Education*, are well express'd in that Devise of an Ape, which by over caressing and hugging its young ones, strangles them; with the Motto, *Complicetendo neas.*

Olivius Ferrarius, has a very good *Latin* Treatise on the Subject of *Education*, entitled *Cibron*; the Name of the Centaur who was *Achilles's* Tutor.

Mr. *Lock's* excellent Treatise of *Education*, is known to every Body. *Quintilian* employs the second Chapter of his first Book, in enquiring whether a Domestic, or a College *Education*, be preferable, i. e. whether it be better to bring up ones Children at Home, or to send them to the Colleges, and public Schools. After urging all that can be said on either Side, he concludes for a College, or School *Education*.

EDULCORATION, in Pharmacy, is the *sweetening*, or *sweetening* of any Remedy, by Means of Sugar, or Symps. See **SWEETENING**.

EDULCORATION, in Chymistry, is the *sweetening*, or purging any Thing of its Salts, &c. by repeated Lotions, or Washings in cold Water: *E. gr.* the freeing of Precipitates of Mercury, M-tals, &c. of the sharp Salts by Means whereof they had been dissolved; or which had been mingled with them, to effect a Dissolution. See **ABJECTION**.

EFFARE, or **EFFRAYE**, in Heraldry, a Term applied to a Beast, when rearing on its hind Legs, as if it were affrighted.

EFFECT, the Result, or Consequence, of the Application of a Cause, or Agent, on some Subject. See **CAUSZ**.

'Tis one of the great Axioms of Philosophy, that *Effectus pleni*, whole or adequate *Effects*, are always proportionable to the Powers of their Causes.

The Term is also of somewhat further Import in the Arts: As when we say, in Painting and Architecture, that such a Contrast, or such a Drapery, or such an Attitude, have a *fine*, or an *ill Effect*, i. e. are beautiful, or noble, &c. Too many Breaks, and little Enrichments in a Building, have a pitiful *Effect*, i. e. give it a mean Aspect.

In the Manage, *Effect* is applied to the Motions of the Hand, which direct the Horse.

They distinguish four *Effects* of the Hand, *viz.* in using the Bridle to put a Horse forwards, draw him backwards, and shifting it out of the right Hand into the left, or *vice versa*.

EFFECTS, in Commerce, &c. are the Goods possess'd by any Person, whether moveable or immovable: particularly those which Merchants and Dealers, acquire by Trade. The *Effects* of Merchants are usually distinguished into three Classes, good, bad and doubtful. By an Ordinance of the *French* Court in 1673, every Merchant is obliged to take an Inventory, or Review, every Year, of all his *Effects* of all Kinds.

EFFECTIONS, in Geometry, the Geometrical Constructions of Propositions. See **CONSTRUCTION**.

The Term is also used in Reference to Problems and Practices; which when they are deducible from, or founded upon, some general Propositions, are called the *Geometrical Effusions* thereto belonging.

EFFERVESCENCE, is popularly used for a light *Ebullition*, or a strong intestine Motion, produced in a Liqueur, by the first Action of Heat, without any notable Separation of its Parts. See **EVOLUTION**.

Such a Liqueur must be heated to a slight *Effervescence*.

EFFERVESCENCE, in Physics, Chymistry, &c. is not applied to any *Ebullitions*, or Motions produced by Fire; but only to those resulting from the Mixture of Bodies of different Natures, which by their acting on one another, occasion a Heat, or at least an Agitation of Parts, resembling the *Ebullition*, or boiling produced by Fire.

Acids mix'd with Alkalies, *e. gr.* Oil of Tartar, and Spirit of Vitriol, produce an *Effervescence*, &c.

Chauvin defines *Effervescence* more scientifically, to be a violent Expulsion of the Air, out of the Pores of the Particles of one Body, by the Intrusion of the Particles of another Body mix'd therewith, into those Pores before possess'd by Air.

In order for *Effervescence* to take Place, the Particles of the latter Body must be supposed conformable, both in Bulk and Figure, to the Pores of the other; so as they may enter, and fill the same, like Wedges: And beside, a strong Degree of Attraction between the Particles of the two Bodies, stronger than the Attraction, or Force of

Cohesion, between the Particles of either of the Bodies alone. See **ATTRACTION**.

Hence it should seem, that *Effervescence* only differs from Fermentation, in the Degree of Explofion; which in *Effervescences*, by Reason of the greater Purity and Freedom of the Acid and Alkali, is greater than in Fermentations. See **FERMENTATION**.

Of *Effervescences*, some are *hot*, and others *cold*. Of the first Kind, are those produced by the Mixture of Oil of Tartar *per deliquium*, with Spirit of Vitriol; Quicklime with cold Water; all acid Spirits, with alkaline, or earthy Bodies; *Aqua fortis*, Spirit of Vitriol, Spirit of Nitre, *Aqua Regia*, &c. with all Metallic Bodies, Marcasites and Minerals; Coral, with Lemon, or Orange Juice; Marble with Spirit of Salt; Hartshorn, Chalk, Bones Tooth, Crabs Eyes, Mother of Pearl, and all Shells with Acids. In all which, the *Effervescences* are attended with a pretty intense Heat. Oil of Vitriol, and Oil of Turpentine, particularly, mix'd together, produce such a vehement Heat, that unless they be mix'd Drop by Drop, they are apt to burst forth into Flame, and break the Vial.

On the contrary, Silver-slings being dissolved in Spirit of Nitre, produce a cold *Effervescence*, which, instead of Heating, cools the Glass, so as to render it painful to the Sense of feeling.

This different Effect is ascribed to this, that in the former Case, the mix'd Bodies, one or both of them, abound with Sulphur; but not in the latter. Not but some attribute the Heat, usual in *Effervescences*, to the vehement Friction, and Collision of the Particles against each other.

Powder'd Coral, mix'd with distill'd Vinegar, produces a cold *Effervescence*, which the same Philosophers account for hence, that the Pores of the Coral being very great, it may be easily dissolved in the acid Spirit, without any great Friction, or Collision of the Parts, such as would be necessary to generate any considerable Heat.

An *Effervescence* may also be produced by the Mixture of two cold Liqueurs. See **DISSOLUTION**.

EFFICACIOUS, **EFFECTUAL**, in Theology. Within these 150 Years there have been very great Disputes on the Subject of *Efficacious Grace*. *Grace* is usually divided into *sufficient* and *efficacious*; tho' the *Jansenists* hold, that there is no *Grace* sufficient, but what is *Efficacious*, i. e. but what effectually determines the Will to act. See **SUFFICIENT**.

Efficacious Grace, is defined to be that which enlightens the Mind, and touches the Heart, in such Manner, as always to produce its Effect, however it be opposed, or resisted by the Will. See **GRACE**.

Some Divines maintain that *Efficacious Grace* is *Efficacious* of its self. *Efficacious Grace* of its self, if there be any such Thing, is that which produces its Effect merely of its self, and not in Virtue of any Consent of the Will. *Calvin*, is the first that ever used the Term *Gratia Efficax per se*. *Grace* *Efficacious* of its self.

A late Divine holds the *Efficacy* of *Grace* in it self to consist in this, that *Efficacious Grace* is always join'd with a Moral Necessity of doing the Thing it inclines to; and sufficient *Grace*, join'd with a moral Impotence of doing it. See **SUFFICIENT**.

The *Armenian* and *Popish* Way of conceiving the Necessity of *Efficacious Grace*, is to hold that this *Grace* is never wanting, at least to the Righteous, except thro' their own Default; that they always stand in Need of other inner *Graces*, truly and properly sufficient, in Order to draw down this *Efficacious Grace*; and that they do infallibly draw it down, when it is not rejected, tho' they often remain without Effect, thro' a Resistance, instead of a Consent thereto.

Fa. Malebranch maintains, that the mutual Commerce between Soul and Body, i. e. Life, has no other *Vinculum*, or Principle, but the *Efficacy* of God's Decrees: That second Causes have no proper *Efficacy*, &c. See **SECOND CAUSE**.

EFFICIENT, in Philosophy. An *Efficient Cause* is that which produces an *Effect*. See **CAUSE** and **EFFECT**.

Philosophers usually distinguish four Kinds of Causes in Nature: The *Efficient*, a *final*, a *formal*, and a *material*. See each under its proper Article.

The School Philosophers are exceedingly divided as to the Nature and Essence of an *Efficient Cause*.

Aristotle defines an *Efficient* to be, *id unde, that from which*: Or, *the first Principle of Change and Rest*, i. e. of Production and Conservation: The *Efficient*, called *id unde*, that from which; as the End or final Cause, is that proper, *quod*, for which; the Exemplar, *ad quod*, that to which; the Matter, *ex quo*, that of which; and the Form, *per quod*, that by which. And it is call'd the first Principle, not in Respect of Priority of Time, for the End exerts its Causality before the *Efficient*, but of

Dignity: The *Efficient* being the Physically active Principle; and the End only acting objectively.

Others of the Schoolmen define *Efficient* to be *Principium per se influens in alius sine Mutatione sui* — The *Ramissi*, after *Plato* and *Cicero*, define an *Efficient* to be that, a *qua res est*, from which a Thing is: To which a great Author, objecting that a Thing may also be from its End; adds, that an *Efficient* is that, a *qua res vera casualitate proficiscitur*.

Others define *Efficient* to be, *qua per Actionem causat*, that which causes by acting: For to effect, every Body knows, is to act; and hence, neither a Procatartick, nor an Exemplary Cause, are properly *Efficients*, tho' usually rank'd among the same.

Lastly, others define an *Efficient* to be a Cause, a *qua alius producat*, from which something is produced; and consequently, what arises from such a Cause, is called an *Effect*: And thus God is the *Efficient* Cause of the World; and the World the *Effect* of God. To which Definition of an *Efficient*, all the former Definitions are reducible.

An *Efficient* Cause then, is either *Physical*, as Fire is the *Efficient* Cause of Heat; or *Moral*, as an Adverser is the Cause of a Murderer: Or *Universal*, which in various Circumstances produce various Effects, as God and the Sun; or *particular*, as a Horse, which produces a Horse: Or *Univocal*, which produces an Effect like it self; as a Horse begets a Horse: Or *Equivocal*, as the Sun producing a Frog: Or *Natural*, which acts not only without Precept, in Opposition to Artificial, but also from within, and according to its own Inclination, in Opposition to violent, as Fire acts when it warms: Or *Spontaneous*, as a Dog eating: Or *Voluntary* and *free*. See LIBERTY.

Others consider *Efficient* Causes, either as *Principal*, or as *Instrumental*. Others, either as *next*, or *remote*; or *Mediate* or *Immediate*. Others, in fine, divide *Efficient* Causes, among all the Kinds of Beings, natural and supernatural; spiritual and corporeal; substantial and accidental; vital and not vital, &c.

But the most celebrated Division of *Efficients*, is that into *first* and *second*.

A *first Cause* is that, between which and the Effect there is some necessary Connection. Of which Kind there is none but God alone.

A *second Cause* is that from which an Effect follows in Consequence of the Will, or Constitution of the Creator; and which the *Cartesians* call an *Occasional Cause*. But these precarious, or Occasional Causes are, in Reality, no Causes at all, but only antecedent Effects.

This is easily shewn: For 1. All Action, at least all corporeal Action, is contain'd in Motion; but Motion can only result from the first Cause: It being an allow'd Principle, that Body of it self is inert and inactive. The true Cause of Motion, therefore, is a spiritual, not a corporeal Nature. But neither can a finite, spiritual Nature, be the chief Cause of Motion; for there is no necessary Connection between the Will, e. g. of an Angel, and the Motion of a Body, nor between that of any other Being except God. Thus, when an Angel wills, a Stone moves; by Reason God has constituted such a Law between the Will of the Angel, and the Motion of the Stone: And thus, we move our Hands when we please. Not that the Soul is the principal Cause of such Motion, but only the *Occasional Cause*. See OCCASIONAL.

Others have a different Notion of first and second Causes. A *first Cause*, say they, is that which is independent of every other, as God alone. A *second Cause* is that depending on some other, as every Creature.

EFFICIENTS, in Arithmetic, the Numbers given for an Operation of Multiplication, called also *Factors*. See FACTOR.

The *Efficients* are the Multiplicand and Multiplier. See MULTIPLICATION.

EFFIGY, EFFIGIES, a Portrait, Figure, or Representation of a Person to the Life. Kings are shewn in *Effigy* in their State Beds.

EFFIGY, is also used for the Print, or Impression of a Coin, representing the Prince's Head who struck it.

To execute or degrade in *Effigy*, is the Execution, or Degradation of a condemn'd, consumacious Criminal, who cannot be apprehended, or seiz'd. In *France* they hang a Picture on a Gallows, or Gibbet, wherein is represented the Criminal, with the Quality or Manner of the Punishment: At Bottom is writ the Sentence, or Condemnation. 'Tis only Condemnations of Death, that are executed in *Effigy*.

EFFLORESCENCE, a breaking out of some Humours in the Skin; as in the Measles, and the like. See EXANTHEMA.

EFFLUVIUM, a Flux, or Exhalation of minute Particles from any Body: Or an Emanation of subtle Cor-

puscles, from a mix'd, sensible Body, by a Kind of Motion of *Transpiration*. See TRANSPIRATION.

That there are such *Effluvia*, continually emitted from all Bodies, is pretty certain: Thus, if a Body be immersed in Water, or any other humid Matter, there are little Bubbles continually transmitted therefrom to the Surface of the Water; which are suppos'd to be nothing else but little Particles, detach'd from the solid Body; and which, when they arrive at the Surface, emerge in Form of Bubbles. And thus a Body, placed in the Receiver of an Air-Pump, is seen, as it were, in a Kind of Effluence, by Reason of the external Particles continually flowing from the same.

Odoriferous Bodies, every Body knows, are continually emitting substantial *Effluvia*; by Means whereof it is, that they excite in us the Sense of *Smelling*. These minute *Effluvia* are sometimes perceived by the Eye, in Fumes and Vapours. See SMELLING.

The School Philosophers hold these *Effluvia* to be intentional Qualities, as they call them, and nothing substantial; but the Moderns laugh at the Notion, as finding that these *Effluvia* refresh and nourish both the Animal and Vital Spirits.

Some Bodies are found to emit *Effluvia* for a great Number of Years, without any considerable Loss, either as to Bulk or Weight; as Magnets, Electrical Bodies, Ambers, divers odorous Bodies, &c. The Tenacity of whose emanant Corpuscles is incredible: Not but that the Loss they sustain by the continual Emission of *Effluvia*, may be made up to them by the Reception of other similar *Effluvia* of the same Kinds of Bodies, diffus'd thro' the Air.

'Tis added, that these *Effluvia* are emitted in Manner of *Radii*, Rays, in *Orbels*, and that the Circumference or Bound of the Activity of the Radiation, exhibits the same Figure as is that of the Radiant. This the Astronomers sufficiently prove, from the Ratio of the Refraction of the Atmosphere. For the Law of the Emission of these *Effluvia*. See QUALITY.

That *Effluvia* may considerably operate upon, and have great Effects on Bodies within the Sphere of their Activity, is proved by Mr. *Boyle*, in an express Treatise on the *Subtility of Effluvia*; where he shews, 1. That the Number of Corpuscles, emitted by Way of *Effluvia*, is immensely great. 2. That they are of a very penetrating Nature. 3. That they move with vast Celerity, and in all Manner of Directions. 4. That there is frequently a very wonderful Congruity, or Incongruity in the Bulk and Shape of these *Effluvia*, with the Pores of the Bodies they penetrate into and act upon. 5. That in animal and organic Bodies, particularly, these *Effluvia* may excite great Motions of one Part of the Frame upon another, and thereby produce very considerable Changes in the Oeconomy. Lastly, That they have sometimes a Power of procuring Assistance in their Operations by the more Catholic Agents of the Universe, such as Gravity, Light, Magnetism, the Pressure of the Atmosphere, &c.

That *Effluvia* are emitted to very great Distances, we have a notable Proof in this: That our Wines grow turbid in the Hoghead, precisely at the same Time when the Grapes are at their Maturity in other remote Countries, whence the Wine was imported. Beside that, Odoriferous *Effluvia* are, in many Cases, perceived at the Distance of many Leagues. Again, that the Generality of *Effluvia* retain the proper Colour, Smell, Taste, and other Properties, and Effects of the Bodies whence they proceeded, and this even after they have pass'd thro' the Pores of other solid Bodies, we have abundant Proof: Thus, magickal *Effluvia* penetrate all, even the most solid Bodies, without any Change of their Nature, or Loss of Force. And the same we see confirm'd in *Sympathetic Inks*, and Powders, the Sagacity of *Blood-bounds*, &c. See DIVISIBILITY.

EFFUSION, the Pouring out of any liquid Thing with some Degree of Force.

In the antient Heathen Sacrifices, there were divers *Effusions* of Wine, and other Liqueurs; called *Libations*. See LIBATION.

When Princes conclude a Treaty of Peace, they usually pretend 'tis to prevent the *Effusion* of Christian Blood.

EFFUSION, or FUSION, *Aquarius*, in Astronomy, is that Part of the Sign *Aquarius*, represented on celestial Globes and Planispheres, by the Water issuing out of the Urn of the Water-Bearer. See AQUARIUS.

EGG, in Natural History, a Part form'd in the Females of certain Animals; which, under a Shell, or Cortex, includes an Embryo, or Fœtus, of the same Species; the Parts whereof are afterwards display'd, and dilated, either by Incubation, or by the Accession of a nutritious Juice.

The Species of Animals that produce Eggs, are particularly denominat'd *Oviparous*; and the Part wherein the Egg is form'd, the *Ovary*. See OVARY and OVIPEAROUS.

Of the various Kinds of Eggs, those of Hens, or Pullets, being the most usual, and which have been the most observed; we shall say somewhat of the Structure thereof, and the Generation of the Chick therein.

The Exterior Part, then, of a Hen's Egg is the *Shell*; a white, thin, friable Cortex, including all the other Parts, and defending them from Injuries. Immediately under the Shell lies the *Membrana communis*, which lines the whole Cavity of the Shell, adhering pretty closely to it, except at the bigger End, where a little Cavity is left between them, which with Age grows bigger. Under this Membrane are contain'd two *Albumina*, or Whites, each wrap'd up in its own Membrane. In the middle of the inner White, is the *Vitellus*, or Yolk inclosed likewise, in its separate *Involutum*, or Cover. The outer Albumen is oblong or oval, accommodated to the Figure of the Shell: The inner is spherical, and of a more crass, and viscid Substance; and the Yolk is of the same Figure. See ALBUMEN and YELK.

At each End is a *Chalazaa*, or Trundle, which are, as it were, the Poles of this *Microcista*: These are white, dense Bodies, consisting each of three little Globules like Hail connected together: In these not only the several Membranes are connected, or knit together; by which Means the several Liquors are kept in their proper Place and Position to each other; but they serve also to keep one and the same Part of the Yolk uppermost; let the Egg be turn'd which Way it will. See CHALAZAA.

Above the Middle, between the *Chalazaa*, on the Side of the Yolk, and in the Membrane thereof, is a little Vesica or Bladder, not unlike a Verruc, or Lentil, called the *Cicatricula*, and by some the Eye of the Egg. In this Vesica is contain'd a Humour, in a'al of which the Chick is generated. See CICATRICULA.

All these Parts of a Pullet's Egg, are found in all other Eggs to which the Definition of an Egg properly and strictly agrees: Such Egg being that, of a Part whereof the Animal is form'd, the rest serving for its Food. Accordingly, the first Seed, or Stamina of the Chick, is in the *Cicatricula*.

The *Albumen* is the Nutritious Juice, whereof it is distended and nourished till it become big; and the Yolk serves it for Food after it is well grown, and partly also after it is hatch'd. For, a good Part of the Yolk remains after Exclusion; being receiv'd into the Chicken's Belly, as a Store-house, and convey'd thence by the *Appendicula*, or *Ductus Intestinalis*, as by a Funnel, into the Guts, serving instead of Milk. See INCUBATION, and PUNCTUM SALLENS.

An Egg, improperly so call'd, is that of the whole whereof the Animal is form'd; such are the Eggs of Flies, Butterflies, &c. which *Aristotle* calls *Vermiculi*.

The Two have this farther Difference, that whereas the former, after they are excluded from the Female, need no External Nutriment, nor any Thing but Warmth and Incubation, to bring the Fœtus to Perfection: The latter, after they are fallen out of the Ovary into the Uterus, require the Nutritious Juices of the Uterus to distend and enlarge them; whence they remain much longer in the Uterus than the other.

The principal Differences among Eggs, properly so call'd, are, that some are *perfect*, i. e. have all the Parts above described, while in the Ovary, or Uterus: And others, *imperfect*, as not having all those Parts till after they are excreted or laid; such are the Eggs of Fishes, which after they are brought forth, assume an *Albumen* to themselves from the Water.

Another Difference is, that some are fecundated, and others not: The first are those which contain a Sperm, injected by Coition of the Male, to dispose them for Conception: The rest, not impregnated with this Sperm, never breed young by any Incubation, but always putrify. An Egg fecundated, contains the Rudiments of the Chick, e're ever the Hen have fate upon it. By the Microscope we see, in the middle of the *Cicatricula*, the plain *Corina* of the Chick, swimming in the *Liquamen* or Humour; it consists of fine white *Zones*, or Threads, which the Warmth of future Incubation enlarges, by rarifying and liquifying the Matter first of the *Albumen*, and then of the *Vitellus*, and pressing them into the Vessels of the *Cicatricula*, for a further Preparation, Digestion, Assimilation, and Accretion; till the Chick, too big for its Coverlet, breaks the Shell, and is deliver'd.

'Twas antiently thought that none but Birds and Fishes, with some other Animals, were produced, *ab Ovo*, from Eggs; but the Generality of the Moderns incline to think, that all Animals, even Man himself, are generated the same Way. *Harvey*, *Graaf*, *Kerkringius*, and several other great Anatomists, have so strenuously asserted this Opinion, that it now generally obtains.

In the *Testes* of Women, are found little Vesicles, about the Size of green Peas, which are accounted as Eggs; for which Reason, these Parts, which the Antients call'd *Fœcicles*, the Moderns call *Ovaries*. These Eggs, fecundated by the most volatile and spirituous Part of the Seed of the Male, are detach'd from the *Ovary*, and fall down the *Fallopian* Tubes into the *Uterus*, where they grow and increase. See CONCEPTION and GENERATION.

This System is countenanced and confirm'd by Abundance of Observations and Experiments. *Monte de S. Maurice*, upon opening a Woman at *Paris*, in 1682, found a Fœtus perfectly form'd in the Testicle.

M. *Olivier*, a Physician at *Brest*, attests, that in the Year 1684, a Woman, pregnant seven Months, was brought to Bed of a whole Plac full of Eggs, fasten'd together like a Branch of Grapes, and of various Sizes, from that of a Lentil, to that of a Pigeon's Egg. *Wormius* assures us, that he had himself seen a Woman who had lain an Egg. And *Barbolin* confirms him, *Cent. I. Hist. Anatom. IV. p. 11*. The same Author tells us, he knew a Woman at *Copenhagen*, who, after twelve Weeks Conception, was deliver'd of an Egg wrap'd up in a thin Shell. *Lawsunus*, *Dec. II. An. ix. Obs. 58. p. 72*. of the *Curiosi Nature*, relates the same Thing of another Woman seven Weeks gone: The Egg she brought forth was of a Size between that of a Hen and a Pigeon; and was cover'd with Membranes instead of a Shell. The outer Membrane, or *Chorion*, was thick and bloody; and the inner, or *Amnion*, thin and transparent, including a whitish Humour, wherein the Embryo swam fasten'd by Umbilical Vesicles, like Threads of Silk.

Bonetus, in a Letter to *Zwingerus*, published in the Ephemerides of the *Curiosi Nature*, *Dec. II. An. 2. Obs. 186. p. 417*. relates, that a young Maid had cast forth a great Number of little Eggs. *Cou. Vidungius* observes, that in dissecting a Woman who had a Rupture, or Defect, he found Eggs of divers Sizes in the Cornu of the Womb. Lastly, we meet with divers Instances of the same Thing in *Robodius*, *Cent. III. Obs. 57*. and in several Places of the Memoirs of the *Curiosi Nature*. Insumach that *Berger*, in his Treatise de *Natura humana*, L. II. C. I. p. 461. makes no Scruple to settle it as his Opinion, that the only Difference between Animals, called *Oviparous*, and those denominated *Viviparous*, consists in this; that the former casts their Eggs out of the Body, and lay them in Nests; and that their Eggs contain all the Nourishment requisite for the Fruit, or Fœtus: Whereas in the latter, the Eggs are only lay'd from the Ovary into the Uterus; that they have but little Juice; and that the Mother furnishes the rest.

There is not so much as a Plant, whose Generation, according to the Sentiment of *Empedocles*, and since him of *Maispighi*, *Rallius*, *Fabric*, *ab Aquasendente*, *Grew*, and others, is not effected by the Way of Eggs. See PLANT, &c.

On the other Hand, we have numerous Instances of *Oviparous* Animals, producing their young absolutely alive, and without Eggs. Such Instances we have of a Crow, a Hen, Serpents, Fishes, Eels, &c. See *Ishord*, *ab Amalansen*, *Breviar. Memorabil. N. 28. in Append. M. Curios. Nat. Dec. II. An. 4. p. 201*. *Lyticus*, *Obs. VI. Aldrovand. Hist. Serp. & Dracon. p. 309*. *Sch. Nuremberg. De Mirac. Natur. in Europ. C. 41*. *Franc. Paullin de Anguilla*, S. I. C. 2. &c.

But this is not all: Natural History abounds with Instances of Males, and even Men casting out Eggs by the Fundament. The Thing will look fo odd to an English Reader, that we might be censur'd, were we to relate the various Accounts of this Kind in Form. We shall, therefore, content our selves to refer the Reader, who has Curiosity enough that Way, to the Authors and Places where he may meet with them; viz. *Christ. Paulin. Cynograph. Curios. Sect. I. L. 3. § 56*. *M. Curiosi. Nat. Dec. II. A. 8. Obs. 117. p. 261*. and *Dec. I. An. 2. Obs. 250*. and *Dec. II. An. 4. Append. p. 199*. *Scheuch. Hist. Monst. p. 129*, &c.

M. *Solterforth* is of Opinion, that at least, in some of these Cases, what was taken for Eggs might be no more than certain Aliments ill digested, and coagulated; an Instance of which he himself had seen. As to those of Women, *Wormius* and *Formanus*, L. III. de *Fœtibus*, p. VI. C. 20. § 9. p. 88a. take it for the Effect of the Devil: But *Barbolin* and *Solterforth* treat the Notion, as it deserves, with Derision.

Gouffer, de *Causis Lingua Hebraice*, explodes the modern System of Generation *ab Ovo*, as contrary to Scripture: And others imagine they have seen the Animal alive, and form'd in the Seed of the Male. See ANIMALCULI and SÆP.

Maispighi, has made very curious Observations with the Microscope, of all the Changes that happen in the Egg, every half Hour of Incubation. *Vossius*, and divers other Authors, are very solicitous about settling the Question, which was form'd first, the Egg or the Pullet, de *Idolis*, L. III. C. 78. H h *

In *Egypt*, they hatch their Eggs by the Heat of a Furnace, or Oven; and frequently have seven or eight Thousand Chickens come forth at a Time. An Account of the Method heretofore we have in the *Philosoph. Transact.* See HATCHING.

At *Tanquin*, they are said to keep Eggs entire for the Space of three Years, by covering them up in a Paste made of Ashes and Brine. The Tortoise is said to lay no less than fifteen Hundred Eggs, which she covers in the Sand, and leaves the Sun to hatch them; and the Eggs of the Ostrich are hatch'd after the same Manner. *Willough. Orustol. L. II. C. 8. §. 1.*

In the *Acta Erudit. Lips. An. 1683. p. 221.* mention is made of a Hen's Eggs, in all Respects like the common Ones, in the middle whereof was found another, of the Size of a Pigeon's Egg. See SUPERFETATION.

Eggs with double Shells, are no unusual Phenomenon. *Harvey* is very large on the Rationale of these Appearances, in his Treatise *de Generatione Animal.* Among the Ancients, the Egg was the Symbol of the World; it being a Tradition among them, that the World was made of an Egg: Whence Eggs became of singular Veneration, in the Sacrifices of *Cybele*, the Mother of the Gods.

Some of their Deities were likewise form'd of Eggs. See Oology

Eco, in Architecture, an Ornament in that Form, cut in the Echinus, or Quarter-round, of the *Ionic* and *Composite* Capitals. The Profile, or Contour of the Echinus, is enrich'd with Eggs and Anchors, alternately placed. See ECHINUS, OVULO, &c.

COWS-EGG, is a Name some Authors give to a Kind of Beccard, frequently found in the Stomach of that Beast. See BECCARD.

EGIS, or ÆGIS, in the ancient Mythology, the Shield, or Buckler of *Jupiter* and *Pallas*.

The Goat *Amalthea*, which had suckled *Jupiter*, being dead; that God cover'd his Buckler with the Skin thereof: Whence the Appellation *Egis*, from *αἴς*, *αἴψη*, *She-Goat*.

Jupiter, afterwards restoring the Beast to Life again, cover'd it with a new Skin, and placed it among the Stars.

As to his Buckler, he made a Present of it to *Minerva*; whence that Goddess's Buckler is also called *Egis*, in *Virgil, Æneid. L. VIII. v. 354.* and 435, and other Authors.

Minerva, having kill'd the Gorgon *Medusa*, nailed her Head in the Middle of the *Egis*, which benevolent had the Faculty of converting into Stone all those who look'd thereon; as *Medusa* her self had done during her Life. See *Homer, Iliad. L. V.*

Others take the *Egis* not to have been a Buckler, but a *Cuirass*, or rather a *Plastron*. And 'tis certain, the *Egis* of *Pallas*, described by *Virgil, Æneid. L. VIII. v. 455.* must have been a *Cuirass*; since the Poet says expressly, that *Medusa's* Head was on the Breast of the Goddess. But the *Egis* of *Jupiter*, mention'd a little higher, *v. 354.* seems to have been a Buckler. The Word

— Cum sepe nigraentem
Egida concutret dextra.

agreeing very well to a Buckler, but not at all to a *Cuirass*, or Breast-Plate.

Servius makes the same Distinction on the two Passages of *Virgil*; for in *v. 354.* he takes the *Egis* for the Buckler of *Jupiter*, made as abovementioned of the Skin of the Goat *Amalthea*; And in Verse 455, he describes the *Egis* as the Armour which covers the Breast; and which in speaking of Men is called *Cuirass*, and *Egis* in speaking of the Gods. Abundance of Authors have overlooked these Distinctions for Want of going up to the Sources.

EGYPTIANS, in our Statutes, a counterfeit Kind of Rogues, who, being *English* or *Welsh* People, disguise themselves in uncouth Habits, linearizing their Faces and Bodies; and framing to themselves an unknown, canting Language, wander up and down; and under Pretence of telling Fortunes, curing Diseases, &c. abuse the common People, tricking them of their Money, and stealing all that is not too hot, or too heavy for them.

See several Statutes made against them; *An. 1 & 2 Phil. & Mar. Ch. 11. 5. Eliz. &c.*

The Origin of this Tribe of Vagabonds called *Egyptians*, and popularly *Gypsies*, is somewhat obscure; at least, the Reason of the Denomination is so. 'Tis certain, the ancient *Egyptians* had the Character of great Cheats, and were famous for the Cleanliness of their Impositions; whence the Name might afterwards pass proverbially into other Languages; as 'tis pretty certain it did into the *Greek* and *Latin*. Or else, the ancient *Egyptians*, being much versed in Astronomy, which in those Days was little else but Astrology, the Name was on that Score assumed by these *Diseurs de bonne Aventure*, as the *French* call them, or good Fortune-tellers.

Be this as it will, there is scarce any Country of *Europe* but has its *Egyptians*, tho' not all of them under that Denomination.

The *Latins* call them *Egyptii*; the *Italians*, *Ciani* and *Cingari*; the *Germans*, *Zigenner*; the *French*, *Bobemiens*; others, *Sarafens*; and others, *Tartari*, &c.

Mungler, Geogr. L. III. C. 5. relates, that they made their first Appearance in *Germany*, in 1417, exceedingly tawny and sun-burnt, and in pitiful Array; tho' they affected Quality, and travel'd with a Train of Hunting Dogs after them, like Nobles. He adds, that they had Passports from King *Sigismund* of *Bohemia*, and other Princes. Ten Years afterwards they came into *France*, and thence pass'd into *England*.

Pesquier, in his *Recherch. L. IV. C. 19.* relates the Origin of the *Gypsies*, thus: On the 17th of April 1427, there came to *Paris* twelve Penitents, or Persons, as they said, adjudg'd to Penance, viz. one Duke, one Count, and ten Cavaliers, or Persons on Horseback: They took on themselves the Character of *Christians of the lower Egypt*, expell'd by the *Saracens*, who having made Application to the Pope, and confess'd their Sins, receiv'd for Penance, that they should travel thro' the World for seven Years, without ever lying in a Bed. Their Train consisted of 120 Persons, Men, Women and Children, which were all that were left of 1200, who came together out of *Egypt*. They had Lodgings assign'd them in the Chappel, and People went in Crowds to see them. Their Ears were perforated, and Silver Buckles hung to them. Their Hair was exceedingly black and frizled; their Women ugly, thievish, and Pretenders to telling of Fortunes. The Bishop soon afterwards oblig'd them to retire; and excommunicated such as had shewn them their *Shands*.

By an Ordinance of the Estates of *Orleans*, in the Year 1560, it was enjoy'd all these Impostoes, under the Name of *Bohemians* and *Egyptians*, to quit the Kingdom on Penalty of the Gallies. Upon this they dispers'd into lesser Companies, and spread themselves over *Europe*. The first Time we hear of them in *England*, was three Years afterwards, viz. Anno 1563. *Raph. Volaterranus* making mention of them, affirms that they first proceeded or stroll'd from among the *Scythians*, a People of the *Perside* in *Egypt*.

EGYPTIAN-YEAR. See YEAR.

EJACULATION, in Medicine, the Act of emitting Seed; by the Latin *ejaculari*, to cast upwards. See EMISSION.

To evince a Man's Virility, in a Court of Justice, where he is accus'd of Impotency, 'tis required he give Evidence of Erection, Intromission, and Ejaculation. See CONGRESS, &c.

EJACULATOR, in Anatomy, a Name applied to two Muscles, from their Office in the Ejaculation of the Seed. See SEED.

The *Ejaculatores* arise from the Sphincter of the Arms, and advance along the Urethra, as far as the middle thereof; where they are inserted laterally.

The same Denomination is likewise given two Muscles of the *Clitoris*, which arising from the Sphincter *Ani*, advance laterally along the *Labia*, and are inserted aside of the *Clitoris*. See GENERATION.

EJACULATORY, in Anatomy, is a Term applied to two little Ducts, or Canals, arising from the *Vesiculae seminales*.

The *Ejaculatory* Ducts are about an Inch in length; towards the *Vesiculae*, they are pretty wide; but contract themselves as they approach towards the Urethra, which they penetrate together.

Some Authors apply the same Name to the *Vasa deferentia*; but *malè propos.* See DEFERENTIA VASA.

EICETES, called also HEICETES, Heretics of the VIIth Century, who made Profession of the Monastic Life.

From that Passage in *Exodus*, where *Moses* and the Children of *Israel* are said to have sung a Song in Praise of the Lord, after they had pass'd the Red Sea wherein their Enemies had perish'd; the *Eicetes* concluded, that they must sing and dance, to praise God aright: And as *Mary* the Prophetess, Sister of *Moses* and *Aaron*, took a Drum in her Hand, on the same Occasion; and all the Women did the like, to testify their Joy, by playing, beating and dancing; the *Eicetes*, the better to imitate their Conduct herein, endeavour'd to draw Women to them to make Profession of the Monastic Life, and assist in their Mirth.

EJECTION, the Act of throwing out, or discharging any Thing, at some of the Excretories; as by Stool, Vomiting, &c. See EXCRETION, EVACUATION, EMISSION, &c.

EJECTIONE FIRME, a Writ which lies for the Lessee for Years, who is ejected before the Expiration of his Term, either by the Lessor, or a Stranger.

EIRE, in Law. See EVAS.

ELABORATION, the Act of finishing or perfecting any Thing with Labour and Time.

The Term is chiefly used in Medicine, where the Chyle, Blood and Semen, are said to be well *Elaborated*, when they are well condition'd, have undergone all the Secretions, Mixions, Impregnations and Circulations necessary to bring them to Perfection. See CHYLE, BLOOD, and SEED.

If the Chyle went directly from its *Receptaculum* to the Breasts, it would not be sufficiently *Elaborated* to afford good Milk. See MILK.

ELABORATORY. See LABORATORY.

ELASTIC Body is that, which by being struck, or stretch'd, has its Figure alter'd; but endeavours, by its own Force, to resume the same. Or, it is a springy Body, which when compress'd, condensed, or the like, makes an Effort to set it self at Liberty; and to recel the Body that constrain'd it. Such is a Sword-Blade, a Bow, &c. which are easily bent, but presently return to their former Figure and Extension. See ELASTICITY.

Elastic Bodies are either *Natural*, or *Artificial*: Those most eminent for their *Elastic Power* among *Artificial Bodies*, are Steel Bows; Brafs, Ivory, and Marble Balls; Leathers, Skins, Membranes; Brafs, Silver, Iron, and Steel Chords or Wires; Nerves, Gut, Hemp and Flax Strings, &c.

Among *Natural Bodies*, the principal are Air, Sponges, the Branches of green Trees, Wool, Cotton, Feathers, &c. 'Tis disput'd, whether or no Water have any *Elastic Force*: The most common Opinion is, that it has none of it self; and that if it flew any, 'tis owing to the Air contain'd therein. See WATER.

The Word is form'd from the *Greek*, ελαστικός, of ελασίζω, to push, press, &c. See SPALING.

The principal Phenomena observed to obtain in *Elastic Bodies*, are,

1. That an *Elastic Body*, (i. e. a *Body perfectly Elastic*, if any such there be) endeavours to restore it self with the same Force wherewith it is press'd or bent. Thus, whatever Force is applied to bend a Bow, with the same Force it strives to unbend it self, or return to its Natural State. For the Force, wherewith the String is drawn, is the same with that which resists the Draught; the Bow being bent so long, till the Force applied, and that which resists it, are in *Equilibrium*.

2. An *Elastic Body* exerts its Force equally towards all Sides; tho' the Effect is found chiefly on that Side where the Resilience is weakest: As is evident in the Case of a Bow shooting out an Arrow; a Gun exploding a Ball, &c.

3. *Elastic Bodies*, in what Manner soever struck, or impell'd, are inflected, and rebound after the same Manner. Thus a Bell yields the same Sound in what Manner, or on what Side soever struck.

4. A *Body perfectly Fluid*, if any such there be, cannot be *Elastic*; by Reason its Parts cannot be compress'd. See FLUID.

5. A *Body perfectly Solid*, if any such there be, cannot be *Elastic*; in that having no Pores, it is incapable of being compress'd. See SOLID.

6. Hard, long, flexible Bodies, apt to acquire *Elasticity*, do it chiefly in three Manners: Either by being extended, by being contracted, or by being bent.

7. Bodies, in dilating themselves by their *Elastic Power*, exert a greater Force at the Beginning of their Dilatation, than towards the End thereof. By Reason the Bodies are more compress'd at first; and the Resilency is always equal to the Compression.

8. The Motion, whereby compress'd Bodies restore themselves, is usually an accelerated Motion. See DILATATION.

For the *Laws of Motion and Percussion* in *Elastic Bodies*, See MOTION and PERCUSSION.

ELASTIC Force. See ELASTICITY.

ELASTICITY, or ELASTIC Force, in Physics, a Property, or Power, in natural Bodies, which denominates them *Elastic*; and by which they are restored to the Figure, and Extension they had lost from any External Cause. See *Elastic Bodies*.

The Cause, or Principle, of this important Property *Elasticity*, or Springiness, is variously assign'd: The *Cartesians* account for it from the *Materia subtilis* making an Effort to pass thro' Pores that are too narrow for it. Thus, say they, in bending, or compressing, a hard, elastic Body, e. g. a Bow, its Parts recede from each other on the *Convex Side*, and approach on the *Concave*: Consequently the Pores are contracted or streighten'd on the *Concave Side*; and if they were before round, are now, for Instance, Oval: So that the *Materia subtilis*, or Matter of the second Element, endeavouring to pass out at those Pores, thus streighten'd, must make an Effort, at the same Time, to restore the Body to the State it was in when the Pores were more patent and round, i. e. before the Bow was bent: And in this consists its *Elasticity*. See RESILIENCE.

Other later, and more wary Philosophers, account for *Elasticity* much after the same Manner as the *Cartesians*; with this only Difference, that in lieu of the subtle Matter of the *Cartesians*, these substitute *Ether*, or a fine *Etherial Medium*, that pervades all Bodies. See *ETHER*.

Others, setting aside the precarious Notion of a *Materia subtilis*, account for *Elasticity* from the great Law of Nature, *Attraction*, or the Cause of the Cohesion of the Parts of solid and firm Bodies. See COHESION.

Thus, say they, when a hard Body is struck or bent, so as the component Parts are moved a little from each other, but not quite disjoin'd, or broke off, or separated so far as to be out of the Power of that attracting Force whereby they cohere; they must certainly, on the Cessation of the External Violence, spring back to their former natural State. See ATTRACTION.

Others resolve *Elasticity* into the Pressure of the Atmosphere: For a violent Tension, or Compression, tho' not great enough to separate the constituent Particles of Bodies far enough to let in any foreign Matter, must yet occasion many little *Vacuola* between the separated Surfaces; so that upon the Removal of the Force they will close again, by the Pressure of the Aerial Fluid upon the external Parts. See ATMOSPHERE.

Lastly, Others attribute the *Elasticity* of all hard Bodies to the Power of Resilience in the Air included within 'em. And so make the *Elastic Force* of the Air, the Principle of *Elasticity* in all other Bodies. See AIR.

Laws of ELASTICITY.

To enquire a little more expressly into the Nature and Laws of *Elasticity*, we shall consider the Phenomena thereof. Let it be premis'd, then, that all the Bodies wherein this Power is observed do consist, or may be conceived to consist, of small Threads, or Fibres, which, laid together, constitute such Bodies. To examine *Elasticity*, therefore, in its most simple Case, we had best consider it in Musical Strings, or Chords, and particularly those of Metal; for those of Cat-gut, having a spiral Twist, cannot be consider'd as the Fibres whereof Bodies are form'd.

Now the *Elasticity* of a Fibre, or Chord, consists in this, that it may be stretch'd or extended; and that upon removing the Force whereby it was stretch'd, or lengthen'd, it returns to its former length. Fibres have no *Elasticity*, unless they be extended with a certain Force; as appears in lax Chords, which may be moved a little out of their Position, without endeavouring to recover it. Tho' what the Degree of Tension is, necessary for *Elasticity* to commence, is not yet determined by Experiment. Add, that when a Fibre is too far stretch'd, it loses its *Elasticity*; tho' here, too, the Degree of Tension that destroys *Elasticity* is unknown. But 'tis certain, *Elasticity* depends on Tension, and is confin'd within a certain Sphere, or Boundary thereof on either Side. See CHOARD and FRANK.

This, if it do not give us the proper adequate Cause of *Elasticity*, yet shews us the Difference between *Elastic* and *Unelastic* Bodies; how it is a Body loses its *Elasticity*; and how a Body, destitute of any such Force, comes to acquire it.

Thus, a Plate of Metal, by repeated Blows of a Hammer, becomes *Elastic*; and being heated, again loses that Property.

Between the Limits of Tension, wherewith *Elasticity* is terminated, there are different Forces required to give different Degrees of Tensions, in order to stretch Chords to certain Lengths. What the Proportions of these Forces is, can only be determined by Experiment made with Chords of Metal. But as the Lengthenings of such Chords is scarce sensible, the Proportions cannot be directly measured; but a particular Apparatus, and a Kind of Circuit are necessary to arrive thereat. Dr. *Gravesande* has taken a good deal of Pains, in order to fix these Laws; the Result of whose Experiments are as follow.

1. That the Weight, whereby a Fibre is increas'd a certain Length, by its Stretching, is in the different Degree of Tension, as the Tension it self: If, e. g. there be three Fibres of the same Kind, Length and Thickness, whose Tensions are as 1, 2, and 3; any Weights, in the same Proportion, will stretch them equally.

2. That the least Lengthenings of the same Fibres are to one another, nearly as the Forces whereby the Fibres are lengthen'd. Which Property may likewise be applied to their Inflexion.

3. In Chords of the same Kind, Thickness, and which are equally stretch'd, but of different Lengths, the Lengthenings produced by superadding equal Weights, are to one another as the Lengths of the Chords. Which is evident hence, that the Chord is lengthen'd in all its Parts: Consequently the Lengthening of a whole Chord is double the Lengthening of half of it, or a Chord of half the Length.

4. Fibres of the same Kind, but different Thicknesses, may be compar'd together after the like Manner; only con-

considering them as consisting of a greater or less Number of fine Fibres of the same Thickness; the Number whereof must be taken in the Ratio of the Solidity of those Fibres, *i. e.* as the Squares of the Diameters, or as the Weight of the Fibres, when their Lengths are equal. Such Fibres, of Consequence, will be equally stretch'd by Forces that are in the same Ratio of the Squares of the Diameters; which same Ratio, is likewise required between the Forces whereby the Chords are inflect'd, that the *Sagittæ* may be equal in the given Fibres.

5. The Motion of a stretch'd Fibre agrees with the Motion of a Body vibrating in a Cycloid; and how unequal soever the Vibrations are, they are all perform'd in the same Time. See CYCLOID.

6. In two equal Chords, unequally stretch'd, unequal Forces are required to inflect them equally. Their Motions may be compared to those of two Pendulums, describing similar Cycloids, by different Forces. Consequently, the Squares of the Times of the Vibrations of the Fibres are to each other inversely, as the Forces whereby they are equally inflect'd, which are as the Weights by which the Chords are stretch'd.

7. The Motions of similar Chords, equally stretch'd, but of different Lengths, must be compared with that of Pendulums after another Manner; for as the Times of the Vibrations are to be consider'd, the Celerities also, whereby the Chords are moved, must be consider'd. Now these Celerities are to one another directly as the Weights whereby the Chords are inflect'd, and inversely as the Quantities of Matter in the Chords; that is, inversely as their Lengths. The Celerities, therefore, are in an inverse duplicate Ratio of those Lengths; that is, inversely as the Squares of the Lengths: And the Squares of the Times of the Vibrations, are likewise in the inverse Ratio. Consequently, the Lengths of the Chords will be as the Times of the Vibrations.

Elastic Lamine, or Plates, may be consider'd as Congeries, or Bundles of Elastic Chords. When the Plate is inflect'd, some Fibres are lengthen'd; and there are unequal Lengthenings in several Parts of the Plate.

The Curve form'd by the inflect'd Plate, is easily determin'd from what has been shewn concerning Chords. In Effect, in the Vibrations of such Plate, or Spring, the Motion thereof is accelerated, after the same Manner as the Motion of a Chord, and of a Pendulum in a Cycloid, are accelerated. And the Vibrations of such Springs are all perform'd in the same Time.

Elastic Balls, Spheres, &c. may be consider'd as consisting of several Elastic Plates, or Springs; and the Intercussions, or Yieldings inward of any Point thereof, are proportionable to the Forces wherewith the Body is compress'd.

THE ELASTICITY of Fluids is accounted for, from their Particles being all endowed with a Centrifugal Force; whence Sir Isaac Newton, Prop. 25. Book 2. demonstrates, that Particles, which mutually avoid, or fly off from one another by such Forces as are reciprocally proportional to the Distances of their Centre, will compose an Elastic Fluid, whose Density shall be proportional to its Compression; and *vice versa*, if any Fluid be composed of Particles, that fly off and avoid one another, and hath its Density proportional to its Compression; then the Centrifugal Forces of those Particles will be reciprocally, as the Distances of their Centres.

ELASTICITY of the Air, is the Force wherewith it dilates itself, upon Removing the Force whereby it was compress'd. See AIR.

The Elasticity or Spring of the Air, was first discover'd by the great Galileo. Its Existence is proved by this Experiment of that Philosopher: That an extraordinary Quantity of Air, being intruded by Means of a Syringe into a Glass or Metal Ball, till such Time as the Ball, with this Accession of Air, weigh considerably more in the Balance than it did before; upon opening the Mouth thereof, the Air rushes out, till the Ball have sunk to its former Weight.

For hence we argue, that there is just so much Air gone out, as compress'd Air had been crowded in. Air, therefore, returns to its former Degree of Expansion, upon removing the Force that compress'd, or restituted its Expansion; consequently it is endued with an Elastic Force.

It must be added, that as the Air is found to rush out, in very Situation, or Direction of the Orifice; the Elastic Force of the Air acts every Way, or in every Direction.

The Elasticity of the Air making a considerable Article in the new Pneumatics; we shall here give the principal Laws thereof.

1. The Elasticity of the lower Air, is equal to the Weight of all the upper incumbent Air. For the upper Air is easily proved to press on the lower. See PRESSURE.

And the Elasticity of the Air, has already been shewn

equal to the compressing Power: Whence it follows, that the Elasticity of the Air is equal to the Weight of the whole incumbent Atmosphere.

Hence, as the Weight of the upper Air, incumbent on the lower, is equal to the Weight of a Column of Water of the same Diameter with the Column of Air, and the Altitude of 31 Feet; or to a Column of Mercury 28 Inches high: The Spring of the lower Air is equal to the same Column of Water, or Mercury.

Hence, again, the Spring of the Air, included in a Vessel, &c. is likewise equal to the Weight of the whole incumbent Atmosphere. Consequently the Air, included in a Vessel, presses with the same Force, as the Weight of the Atmosphere. And, therefore, the Elasticity of the included Air, is able to sustain Mercury to the Height of 28 Inches, and Water, to the Height of 31 Feet, in an empty Tube. See AIR-PUMP.

2. The Elastic Force of Air compress'd, is to that of the same Air dilated reciprocally, as the Bulk of the dilated Air to that of the compress'd Air.

For the Elasticity of Air more compress'd, is to that of Air less compress'd; as the Weight incumbent on that, to the Weight incumbent on this. But the Bulks of more, and less compress'd Air, are in the same reciprocal Ratio of their Weights. Therefore the Elastic Force, &c.

Hence the Elasticity of Air more compress'd, is stronger than that of Air less compress'd.

3. The Elasticity of more compress'd Air, is to that of Air less compress'd, *Cæteris paribus*, as Mass, or Quantity of more compress'd Air is to the Mass of Air less compress'd, under the same Bulk.

4. The Ratio of the Space fill'd by Air press'd only by the Weight of the Atmosphere, to the Space it is reduc'd into by further Compression, being given; to determine the Elastic Force of the compress'd Air.

Since the Spring of the Air, press'd only by the Weight of the Atmosphere, is equal to the Weight of a Column of Mercury of the same Base with the Column of Air, and of the Height of 28 Inches; to the Bulk of the compress'd Air, that of the Air not compress'd, and the Weight of the Column of Mercury; seek a fourth proportional: This will express the Quantity of the Elastic Force in the compress'd Air.

Hence, subtracting the Weight of the Column of Mercury from the Quantity of the Elastic Force, thus determin'd, the Remainder is the Force of Elasticity, whereby it exceeds the Resistance of the Weight of the Atmosphere.

5. Heat increases the Elasticity of the Air; and Cold diminishes it. See HEAT and COLD.

6. The Elastic Force of the Air, whereby it is expanded, in Rarefaction, is to the Elasticity of the Air condensed; as the Bulk of the rarified Air, to the Bulk of the condensed Air.

ELATERIUM, in Pharmacy, a purgative Medicine, prepared from the wild Cucumber.

'Tis made of the Juice of the Plant, by straining it thro' a Cloth, and evaporating the Moisture thereof, till it come to the Consistence of an Extract, or a Mass for Pills.

Elaterium is a vigorous Purgative, and is used in Lethargies, Palsies, and Hypochondriacal Melancholies.

The Word is form'd from the Greek, *ελαστιν*, I reel.

ELBOW, the outer Angle made by the Flexure, or Bend of the Arm: Or the Point to which the two Bones that form the Arm incline. See ARM.

That Eminence, whereon the Arm rests, called by us *Elbow*, is by the Latins call'd *Cubitus*, and the Greeks *εγυριον*, and by others *επιστυριον*.

ELBOW, is also used by Architects, Masons, &c. for an obtuse Angle of a Wall, Building, Road, &c. which divers it from its right Line. See CURVE.

ELCESAITES, or ELCESAIANS, as Theodoret calls them, ancient Hereticks thus call'd from the great Prophet *Elesai*, or *Elsai*.

This *Elesai*, who lived in the Time of Trajan, gave into the Sentiments of the *Ebionites*, touching *Jesus Christ*; tho' he alter'd and reform'd them in some Things, to denominate himself the Author of a Sect.

His Fundamental Doctrines were, that *Jesus Christ*, who was born from the Beginning of the World, had appear'd from Time to Time under divers Bodies; that he was a celestial Power, or Virtue, call'd *the Christ*, whereof the Holy Spirit was Sister; (Note, the Hebrew Word for Spirit, is *Feminine*) and that both of them had descended into *Jesus the Son of Mary*.

The *Elcesaites*, according to St. Epiphanius, were also called *Samaeans*, from the Hebrew Word *Samae*, Sam.

Scaliger was notoriously mistaken, in holding that *Elsai* was no more than *Elsai*, or *Elsae*; on which Supposition the *Elcesaites* were the same with the Sect of *Essenes*, which is contrary to all Antiquity.

Origen makes mention of the *Eloefists*, in one of his *Homilies*, as a Heresy newly risen. The Retainers hereto, says he, don't admit all the Books of the Canon, but only some of them. They allow some Passages out of the Old Testament and the Evangelists, but reject all the Epistles of *St. Paul*. Add, that they have produced a Book, which they pretend to have descended to them from Heaven; and maintain, that whoever perform what is enjoy'd therein, shall obtain Pardon of all their Sins. See *Eusebius*, *Hist. Lib. VI. C. 38.* who remarks, that this Heresy became extinct almost as soon as it was found.

St. Epiphanius is very full on the Subject of this Sect, *Her. 19.* where he observes, that *Elssi* was a Jew by Birth, and that not being able to live according to the Law of *Moses*, he invented new Opinions, and got himself Followers. He was a profess'd Enemy of Virginity, and obliged all who profess'd his Doctrine, to marry. He tutor'd them to Hypocrisy in Times of Persecution; pretending it was lawful to adore Idols, provided the Heart had no Share therein.

ELDERS, *Seniores*, *Primoeres*, in the Jewish History, were the most considerable Persons for Age, Experience, and Manners, among the ancient People. Thus, *Moses*, we read, assembled the *Elders* of the People together, and acquainted them with what the Lord had commanded.

Long afterwards, those who held the first Rank in the Synagogues, were usually call'd *Zekunim*, *Elders*, in Imitation of the 70 *Elders*, whom *Moses* establish'd for the Judges of the *Sauvedim*. The President, or Chief, had in a particular Manner the Appellation of *Elder*, being, as it were, *Decanus seniorum*, Dean of the *Elders*.

In the first Assemblies of the Primitive Christians, those who were of the first Place, or Rank, assumed the Denomination of *Presbyters*, *Priests*, or *Elders*.

The Word *Presbyters*, which occurs so frequently in the Old Testament, and which includes alike both Bishops and Priests, does likewise signify *Elders*. See *Monf. Simon's* Observations thereon, in his Supplement *aux Ceremonies des Juifs*.

The President, or Bishop, as being the chief of the *Elders*, did likewise assume the Denomination of *Elder*: Whence it is, that in the New Testament the Name Bishop is frequently confounded with that of Priest. For the like Reason, the Council of the first Assemblies, or Churches, was call'd *Presbyterium*, or Council of the *Elders*, where the Bishop presided in Quality of first *Elder*, being seated in the middle of the other *Elders*. The Priests, or *Elders*, who sat by him, had each his Judges Chair; for which Reason they are call'd by the Fathers, *Assessores Episcoporum*. Nothing of any Importance was done, till it had first been examined, and resolv'd in this Assembly, where the Bishop only made one Body with the other *Elders* or Priests; the Jurisdiction which we now call Episcopal, not being then Dependiant on the Bishop alone, but on all the *Elders*, over whom he was the President. See *BISHOP*.

ELDERS, is also a Denomination still retain'd in the Presbyterian Discipline.

The *Elders* are Officers, who, in Conjunction with the Pastors, or Ministers and Deacons, compose the Consistories, or Kirk-Sessions, meeting to consider, inspect and regulate Matters of Religion and Discipline. They are chose from among the People, and receiv'd publicly with somewhat of Ceremony. In *Scotland*, there are an indefinite Number of *Elders* in each Parish, generally about Twelve.

Chamberlain makes mention of a *Ruling Elder* in each Parish, chose by the Kirk-Session; the Congregation afterwards approving the Choice, after a strict Scrutiny into his Life and Manners. He adds, that the Minister ordains him; and that his Office is for Life: His Business being to assist the Minister in overseeing and correcting the Manners of the People; to attend him in Visiting, Catechising, Praying for the Sick, in private Admonitions, and at the Communion Table.

But this Account we apprehend to be a Mistake; what that Author says of *Ruling Elders*, belonging properly to the *Simple Elders*. As to *Ruling Elders*, there are no such Things, but in the General Assemblies, where they appear as Representatives of the rest. See *KIRK-SESSIONS*, *SYNOD*, *GENERAL Assembly*, *PRESBYTERY*, &c.

ELECT, *Chosen*. In Theology, particularly in the Scriptures, *Elect* is applied to the Saints, the Predestinated: In which Sense, the *Elect* are those Persons God has chose to bestow the Glory of Heaven upon.

The Apostles also apply it to the Primitive Christians: In which Sense, the *Elect* are those chosen to the Favour and Blessing of Christianity. God, who has predestinated the *Elect* to Glory, has likewise predestinated them to Sanctification. See *PREDESTINATION*.

ELECT, is likewise applied to Archbishops, Bishops, and other Officers, who are chose, but are not yet con-

secrated, or actually invested with their Office, or Jurisdiction.

Emperor Elect, before he is inaugurated and Crown'd: *Lord Mayor Elect*; before his Predecessor's Mayoralty is expired, or the Sword put in his Hands.

Philip of Savoy was five Years Archbishop of *Lyon*, without ever being ordain'd or consecrated; after which he quitted his Archbishoprick to marry the Countess of *Burgundy*. All that Time he bore the Title and Quality of Archbishop *Elect* of *Lyon*, *Electus Lugdunensis*.

ELECTION, a Choice made of any Thing, or Person, whereby it is prefer'd to some other. There is this Difference, however, between Choice and *Election*; that *Election* has usually a Regard to a Company, or Community, that makes the Choice; whereas *Choice* is seldom us'd, but when a single Person makes it.

The most solemn *Election* is that of a Pope; which is perform'd by the Cardinals, in four several Manners.

The first, as they call it, by the *Holy Spirit*; when the first Cardinal who speaks, having given his Vote for any one, proceeds to the Adoration, and proclaims him Pope, as by a sudden Inspiration of the Holy Ghost. In which Case, he is deem'd duly *Elected*, if all, or at least two Thirds of the Assembly be consenting thereto.

The second, by *Consensus*, when the whole College pitches on three Cardinals, to whom they give a Power of nominating the Pope; which Power expires upon the Burning out of a Candle lighted on that Occasion.

The third, by Way of *Poll* or *Scrutiny*, which last is the most usual; the Cardinals throwing seal'd Tickets, wherein their Votes are wrote, into a Chalice, or Cup, placed on the Altar. Two thirds of the Votes are required to determine an *Election* by Scrutiny. See *CONCLAVE*.

The fourth is by Way of *Accession*; when, the Votes being too much divided to *Elect* any Body, some of the Cardinals desist from their first Suffrage, and *Accessant*; that is, give their Voices to him, who has already the Majority by Scrutiny.

The Way of *Accession*, however, is always added to the Scrutiny; it being the constant Practice for all the Cardinals, to give their Voices, after the last Scrutiny, to him whom they find to have the Plurality already. So that all *Elections* of Popes are, with the unanimous Consent of all the Cardinals. See *CARDINAL*.

Election of Bishops, of Members of Parliament, &c. See *BISHOP*, *PARLIAMENT*, &c.

ELECTION, is also when a Person is left to his own free Will to take or do either one Thing, or another, which he pleases.

ELECTION, in Theology, the Choice which God, of his good Pleasure, makes of Angels or Men, for the Designs of Mercy and Grace.

The *Election of the Jews*, was the Choice God made of that People to be more immediately attach'd to his Worship and Service, and for the Messiah to be born thereof.

Election also, sometimes, signifies a Predestination to Grace and Glory; and sometimes to Glory only. 'Tis an Article of Faith, that Predestination to Grace is gratuitous; merely and simply so: *Gratia quia gratia datur*. But the Divines are divided as to the Point, whether *Election* to Glory be gratuitous, or whether it suppose Obedience and good Works, *i. e.* whether it be before, or after the Prevision of our Obedience.

Some hold that it is before, and after at the same Time: It is before the Prevision of our Obedience, as Glory is intended as antecedent to our Obedience: And it is after, as this Glory is intended us as a Reward, and of Consequence, as a Sequel of our Obedience. See *GRACE*, *PREDESTINATION*, *REPROBATION*, &c.

ELECTION, is also a Part of Pharmacy, being that which teaches how to chuse simple Medicaments, Drugs, &c. and to distinguish the Good from the Bad. See *PHARMACY*.

Some distinguish a general *Election*, which gives the Rules and Marks for all Medicines in general; and a particular one for each Medicine in particular.

ELECTIVE, what is done by Election. The Empire of *Germany* was Hereditary in the Time of *Charlemagne*; and did not become *Elective*, till after the Death of *Louis* the III'd, the last of the Race of *Charlemagne* in the Empire. Indeed, it was not entirely *Elective* till the Time of *Frederic II*, in 1210.

Some Benefices are *Elective*, others Collative. Municipal Offices in *England*, are generally *Elective*; in *Spain*, Venal; *Poland* is an *Elective* Kingdom. All Prelatures in *France* are *Elective*, since the *Concordat*.

ELECTOR, a Person who has a Right to *elect*, or chuse another to an Office, Honour, &c.

The *Electors* of a Burgeis, a Knight of the Shire, a Grand Master of an Order, &c.

The Word is form'd of the *Latin*, *Eligere*, to chuse.

ELECTOR, is particularly, and by Way of Eminence, used for the Princes of Germany, in whom lies the right of electing the Emperor; being all sovereign Princes, and the principal Members of the Empire. See COLLEGE of Electors.

The Origin of Electors is not well known: Some refer it to Otto III, in the Year 997; others to Frederic II, who died in 1250; and others, to Rans of Hapsburg, Founder of the Family of Austria, in the Year 1280.

Their Number, however, was unfixed, at least till the Time of Frederic II, in the 13th Century. The Golden Bull, published by Charles IV, in 1346, fix'd the Number of Electors to seven; three of them Ecclesiastical, viz. the Archbishops of Mentz, Treves, and Cologne; and four Secular, viz. the King of Bohemia, the Count Palatine of the Rhine, the Duke of Saxony, and the Marquess of Brandenburg. By the Treaty of Munster, in 1648, this Order was changed: The Duke of Bavaria being put in the Place of the Count Palatine, and an eighth Electorate created for the Count Palatine.

In the Year 1698, a ninth Electorate was created by the Emperor Leopold, in Favour of Ernst Duke of Hannover, under the Title of Elector of Brunswick. Some Opposition was made to this Election; and the Princes of Germany stood out for some Time, and refused to acknowledge it. But they afterwards acquiesced in it, and it has been recognised by all the foreign Princes. The King of France did it at last by the Treaty of Rastat.

The several Functions of the Electors are as follow: The Elector of Mentz, is Chancellor of Germany; convokes the States, and gives his Vote before any one of the rest. The Elector of Cologne, is Grand Chancellor of Italy, and consecrates the Emperor. The Elector of Treves, is Grand Chancellor of the Gauls, and confers the Imposition of Hands on the Emperor. The Count Palatine of the Rhine is Grand Master of the Imperial Palace, and presents the Emperor with a Globe at his Coronation. The Marquess of Brandenburg is Grand Chamberlain, and puts the Ring on the Emperor's Finger. The Duke of Saxony, now King of Poland, is Grand Marshal, and gives the Sword to the Emperor. The King of Bohemia, who was antiently only Duke, is Grand Butler, and puts Charlemaign's Crown on the Emperor's Head. Lastly, the Prince of Hannover, now King of Great Britain, is Arch-Treasurer; tho' first erected under the Title of Standard-Bearer of the Empire.

ELECTORAL, something relating, or belonging, to an Elector. See ELECTOR.

The **Electoral Prince** is the eldest Son of an Elector, and the presumptive Heir of his Dignity.

Electors are address'd under the Title of **Electoral Highnesses**. See HIGHNESS.

The **Electoral College**, consisting of all the Electors of the Empire, is the most illustrious and August Body in Europe. *Belarmino* and *Baronius* attribute the Institution of the Electoral College to Pope Gregory V, And the Emperor Otto III, in the Xth Century. Of which Opinion, are the Generality of Historians, and particularly the Canonists. But *Wicquefort* is of another Opinion; and endeavours to make it appear, from the Elections of the succeeding Princes, that the Number of Electors was not then fix'd; nor the Electoral Dignity annex'd to any particular Principalities, exclusive of the other Princes of Germany. He adds, that there was nothing settled with Regard hereto before Charles IV; and that the Publication of his Golden Bull, was only to prevent Schismas, and secure the Repose of the Kingdom by a Regulation in Form.

'Twas the Golden Bull, therefore, publish'd in 1356, that constituted the Electoral College, and reduced the Number of Electors to seven. See COLLEGE.

ELECTORAL Crown, or **Coronet**, is a Scarlet Cap, turn'd up with Ermine, clos'd with a Semi-circle of Gold, all cover'd with Pearls. On the Top is a Globe with a Cross thereon. See CROWN and CORONET.

ELECTORATE, the Dignity of an Elector, with the Territory, or Dominions, to which the Quality is annex'd. The Electorate of Saxony, of Bavaria, &c. The Emperor, of his own special Authority, in the Year 1698, erected a ninth Electorate, in Favour of the House of Lunenburg. The Princes, who disputed the Validity of this Election, were called the *Opposers of the ninth Electorate*.

Tho' the Custom ordinarily be, in Germany, for the Sons of Princes to share their Father's Lands and Territories among them; those whereto the Electorate is attach'd, are not us'd to be divided; but pass entire to the eldest Son, who succeeds to the Electorate.

ELECTRICITY, or **ELECTRIC Force**, is that Power, or Property, whereby Amber, Jet, Sealing-Wax, Agat, Glais, and most Kinds of precious Stones, attract Straws, Paper, and other light Bodies to themselves. See ATTRACTION.

Electricity differs from Magnetism in this, that the latter only attracts Iron, whereas the former indifferently attracts most Kinds of Bodies; tho' the Effect is only sensible in light ones. See MAGNETISM.

The *Peripateticks* hold this Power to consist in I know not what Quality, or sympathetic Power, subsisting between the Amber, &c. gr. and the Straw, and resulting from the substantial Form of each. See QUALITY.

But the later Philosophers generally agree to make it the Effect of a corporeal Effluvia, emitted from, and returning to, the Electrical Body. Tho' as to the Nature of these Effluvia, and the Manner of their acting, they are greatly divided. See EFFLUVIA.

Some, with *Cabeus*, suppose actual Steams to issue out of the Electrical Body, when agitated by Attrition; and that these disperse and repel the ambient Air, which, after it has been driven off a little Way, makes, as it were, a little Whirlwind, by the Resistance it meets withal in the remoter Air, to which these Electrical Steams do not reach: And that these Steams shrinking quickly back again to the attracting Body, do, in their Return, attract and bring along with them such light and small Bodies as they meet in their Way.

Others, with *Dr. Gilbert*, *Gassendus*, *Sir Kenelm Digby*, &c. hold, that on rubbing, or chafing, the Electrical Body is made to emit Rays, or Fibres, of an unctuous Nature; which coming to be condensed and cool'd by the ambient Air, do lose their Agitation, and so shrink back again into the Body from which they fall'd; and by that Means carry along with them such light and small Bodies, as happen to be fall'd, or sticking to their further Ends. *Gassendus* adds, that these unctuous Effluvia being emitted all Manner of Ways, do frequently decussate, or cross each other; and by that Means take the better hold of Straw, &c.

The *Cartesians*, not being able to imagine how so hard and brittle a Body as Glais, should emit Effluvia, attribute Electricity to the Globules of the first Element; which breaking out thro' the Pores, or Chinks of the Body, like little Darts or Swords, and not meeting with proper Meatus's, or Passages in the Air, return whence they came, and carry the little Bodies, whose Pores they happen to enter, and be entangled in, along with them.

Mr. Boyle, *Mr. Hawksbee*, &c. have made a Number of Experiments, to ascertain the Nature and Laws of Electricity; the Result whereof may be summ'd up under the following Articles.

1. That Electrical Bodies do not at all, or very rarely attract, except when warm'd, and thereby sollicit'd to emit Effluvia more copiously.

Mr. Hawksbee, having heated a Glais Tube, of about an Inch Diameter, and 30 Inches long, by rubbing it vehemently on Paper; and then applying it to several Pieces of Leaf Brass, found, that they were no sooner within the Sphere of Activity of the Effluvia emitted by the Tube, than they began to be put into very brisk and surprizing Motions; would leap toward the Tube, even at the Distance of 12 or 14 Inches; would sometimes adhere, and fasten to the Tube, settle on its Surface, and there remain quiet; and sometimes be thrown off from it with a great Force. And thus would they be alternately attracted and repell'd, for several Times successively. Sometimes, again, they would move slowly toward the Tube; sometimes, would remain suspended between the Tube and the Table they were first laid on; and sometimes slide along in that Direction of the Side of the Tube, without touching it.

2. That Bodies, warm'd by Fire, don't attract so forcibly, as when heated by rubbing; tho' if they be first heated, and then rubb'd, they will attract the more strongly.

Mr. Hawksbee assures us, that the hotter he made the Tube by rubbing, to the greater Distance did the attractive Force extend it self: But that this would answer, in Proportion, to any Degree of Heat excited, he will not undertake. When the Tube was render'd the hottest by the strongest Attrition, the Force of the Effluvia was render'd manifest to another Sense, namely that of feeling, being plainly perceived on the Face, or any other tender Part, making Strokes or Impulses on the Skin, much like those made by pushing a Number of limber Hairs against it.

3. That Tension, or Wiping, is almost universally necessary, as well as Attrition, or rubbing, to produce Electricity; by Reason the Effluvia can more readily escape, when there is nothing to stop up, or chok the Pores.

4. That the Interposition of the finest Linnen, as Muslin, Gauze, or the like, will totally hinder the Operation of Electrical Bodies.

5. The Effect is less sensible in thick and cloudy Weather. For the Air being clogg'd with Vapours and Exhalations rais'd from below, the Resistance the Electrical Effluvia meet withal, must be greater than when the Air is free of any such Impediments. Hence, also, in all Probability,

ability, arises the Necessity of Terſion; the watery Particles being apt to run together, and condense on the Surface of the Body, and so obstruct the Paſſage of the Matter.

6. *Electrical Bodies* are more feccible, *Cæteris paribus*, in hot Weather than in cold; in Summer than in Winter; by Reason the more vigorous Action of the Solar Rays, does more effectually shake the Parts of Bodies, and unlock the Pores, and so make Room for a more plentiful Emission of Effluvia. Beside, that in warmer Weather, the Medium being rarer, makes less Opposition to the Paſſage of the Effluvia.

7. The Air being exhausted out of the Tube, it loses almost all its *Electricity*: So that tho' rubb'd, and heated more vehemently, and Leaf-Gold applied nearer than usual, it scarce attracts at all. And what little Attraction remains, Mr. Hauksbee conjectures, may arise from the little Portion of Air remaining in the Tube: And so the Attraction may continue in Proportion to the Quantity of Air. When the Air is let into the Tube again, the attractive Power is immediately restor'd; and that before any new Attrition can be given the Tube, or e're it be removed from the Distance and Position it was in when exhausted. Mr. Boyle, however, found that a Piece of Amber did sensibly attract when the Air was pump'd out of the Receiver.

8. *Electrical Bodies* attract all Things indifferently, whereas the Magnet draws only Iron and Steel.

9. A large Piece of very *Electrical Amber* being suspended by a silken Thread, and one End of it rubb'd strongly on a little Cushion; the Cushion being brought nearer, towards the Amber at rest, will plainly make the Amber tend towards it, and follow it. Whence it appears that the *Electric Body*, is attracted by the other Bodies, as well as it attracts them. And that it is only by Accident that the small attracted Bodies approach to the *Electric ones*.

10. After an *Electrical Body* has been well rubb'd, there is a certain Nick of Time in which the light Body, instead of being attracted, will be actually repell'd, or driven away from the *Electrical one*, by the Effluvia going briskly out, and not returning again.

Mr. Hauksbee assures us, that the Pieces of Leaf Gold would be sometimes thrown off from his Tube with a great Force, even to the Distance of six or seven Inches. And thus, not only when they adhered to the Surface of the Tube, would they be thus suddenly and precipitantly driven from it; but also in their Motion of Ascent towards it.

11. A Glass Globe, being contrived to be whirled round, with its Axis parallel to the Horizon, and a Semi-circle of Wire fitted round the upper Hemisphere thereof, at the Distance of 4 or 5 Inches, with several Pieces of Woollen Thread hung thereon, of such Lengths, as that when extended in a Direction towards the Centre of the Glass, they would reach within an Inch of the Circumference thereof; but when left at Liberty, hang down in a parallel Position: Upon applying the Hand, and so adding an Attrition to the former Rotation, the Threads presently began to change their Direction, and all harmoniously pointed to the Centre of the Globe; and to put it past Doubt, this Effect depended on the Attrition, the Experimentator, by shifting the Place of the Attrition hither and thither, cou'd draw the Threads towards this or that End of the Globe, tho' they all still went uniformly converging towards some Centre, in the Axis thereof; and so form'd a Kind of Conical Surface.

The same Phenomena follow'd upon shifting the Wire, and putting it on the lower Hemisphere. Add, that upon suspending the Motion and Attrition, the Threads would continue in their first direct Posture for the Space of four or five Minutes. And in the mean Time, if the Finger, or any other Body, were applied near the Extremity, or Points of the Threads, they would avoid and fly from the same: But if applied about an Inch Distance from the End of such Thread, the Thread would usually be attracted towards it.

ELECTRUM, the same as *Amber*. See **AMBER**.

ELECTUARY, in Pharmacy, a Form of Medicine, composed of Powders and other Drugs, incorporated with Honey or Sugar; to be divided into Doses, like Bolus's, when taken.

It is thus call'd, by Reason all the Parts, or Ingredients it consists of, should be well chosen; from the Latin Verb *Eligere*, to chuse, whence *Electus*, chosen. Others derive it from *Lac*; and accordingly the Greeks, under the Eastern Empire, call'd it *λεκτικόν*. Scaliger derives it from *λεγω*, to lick; and calls it in Latin, *Electum*.

Vossius observes, that all the Remedies prescribed for the Sick, as well as the Concoctions taken by Way of Regale, were called by the Greeks, *λεκτικόν* and *λεκτικόν*, of the Verb *λεγω*, to lick: Whence, says he, was

form'd the Latin *Electarium*, and afterwards *Electarium*. This Opinion he proves from the Laws of Sicily, where it is ordain'd, that *Electaries*, Symps, and other Remedies, be prepared lawfully. The *Hollandists*, who relate this Etymology, seem to confirm it. *Act. Sauii Mart. F. II. p. 131.* See **ΕΛΕΥΘΕΡΑ**.

Electaries are either *soft*, or *solid*; and of each Kind, some are *Alterative*, others *Corroborative*, others *Purgative*, &c.

The soft are of the Consistence of Honey, and consist of 3 Ounces of Powders to a Pound of Honey or Sugar.

The solid are in Manner of *Tablets*, or *Lingues*. The Purgative are usually of the soft Kind; But the Corroborative only admit of an Ounce and half or two Ounces.

Among the soft *Electaries* are reckon'd *Treacle*, *Mithridate*, the Confection of *Hamech*, that of *Alkermes*, the *Catholicon*, *Diaprunum*, *Diapnoic*, *Galens Hiera piera*, &c. which see explain'd under their respective Articles.

Among the solid *Electaries*, are reckon'd *Carthamus*, *Rose Juice*, *Voilet Juice*, &c. Monf. Lemery reckons up above 120 Sorts of *Electaries*.

ELEEMOSINA *Carucaria*, or *pro Aratri*, or *Aratri*, in our antient Customs, a Penny which King *Edward* order'd to be paid for every Plough in *England*, towards the Support of the Poor.

Sometimes 'tis called *Eleemosina Regis*, because first appointed by the King.

Eleemosine are also used for the Possessions belonging to Churches.

ELEEMOSINARIA. See **AMBER**.

ELEGANCE, **ELEGANCY**, consider'd in the general, is a Manner of doing or saying Things with Choice, Politeness and Agreeableness: With *Choices*, in going out of the common Ways: With *Politeness*, in giving the Thing a Turn which strikes People of a delicate Taste: And with *Agreeableness*, in diffusing a Relish throughout which hits every Body.

Elegantia poetica, poetical *Elegancies*, are of Service to Scholars in making their Verses. By being too regular in the Grammatical Construction, we lose certain Licences, wherein the *Elegance* of Language consists. *Elegance*, tho' irregular, is better than Regularity without *Elegance*.

The *Elegance* of a Painting is not founded on the Correctness of the Design, as appears in *Raphael* and the *Antique*. It is most felt in Works otherwise careless and inaccurate; as in *Corregio*, where, manage all the Defects as to Juifness of Design, there is an *Elegance* even in the Manner of the Design it self, as well as in the Turn of the Attitudes, &c.

The *Elegance* of a Design, is a Manner of Being, which Embellishes, and heightens Objects either as to their Form, or Colour, or both; without defraying or perverting the Truth.

ELEGIAC, in the Latin Poetry, something that belongs to *Elegy*. See **ELGY**.

Elegiac Verses, *Elegi*, are alternately Hexameter and Pentameter. See **VERSE**.

Quintilian esteems *Tibullus* the Top of the *Elegiac Poets*: But the younger *Pliny* gives the Preference to *Propertius*. They have each of them Reason on their Side; and one might make a third Choice, as true as either of them.

ELEGIT, in Law, a Writ judicial, which lies for him that has recover'd Debt, or Damages; or upon a Recognition in any Court, against one not able in his Goods to satisfy; and directed to the Sheriff, commanding him to make Delivery of half the Party's Lands, and all his Goods, Oxen and Beasts for the Plough, excepted.

The Creditor shall hold the Moiety of the said Land so deliver'd to him, till his whole Debt and Damages are satisfied; and during that Time, he is Tenant by *Elegit*.

ELEGI, a Kind of Poem, or Poesy, used on mournful, plaintive Occasions. See **POEM**.

The first Inventor of the *Elegy* is not known: Some say 'twas one *Theocles of Naxos*, or, according to others, of *Etruria*; who, in the Heat of his Frenzy, first produced this Kind of Verse. But, no Wonder we are in the Dark as to this Matter: *Horace* assures us, 'twas a Poet not settled among the Grammarians even in his Time, who the Author was.

*Quis tamen exiguus Elegos emisit Anſor
Grammatici certant & alicui sub Judice lis est.*

The chief Writers of *Elegy* among the Greeks, are *Callimachus*, *Parrhasius* and *Euphorion*: And among the Latins, *Ovid*, *Catullus*, *Tibullus*, and *Propertius*.

The *Flemish* have distinguish'd themselves among the Moderns for this Kind of Latin Verse: And the *Elegies* of *Biderman*, *Grotius*, and especially *Sedronius* and *Valilius*, might become the purest Antiquity. The Countess

de la Suze, has distinguish'd her self for *Elegies* in the French Tongue.

In the *English*, we have nothing considerable of the *Elegiac* Kind, but what we have in *Milton*. The *English* and *French Elegies* are chiefly in *Alexandrine* Verse.

In Process of Time, *Elegy* degenerated from its Original Intention; and not only Masters of Grief, but also Joy, Wishes, and almost every Subject, became free of *Elegy*. Complaints, Expostulations, Prayers, Vows, Praises, Congratulations, Reproaches, &c.

The Office of the *Elegy* is well deliver'd by *M. Boileau*.

*La plaintive Elegie en longs habits de Deuil,
Scait les Cheveux epars gemir sur un Cercueil:
Elle peint des Amans la Joye, & la Tristesse;
Flatte, Menace, Irrite, apaise une Maitresse.*

In Mourning Weeds sad *Elegy* appears,
Her Hair dishevell'd, and her Eyes in Tears:
Her Theme, the Lover's Joy, but more his Pains;
By Turns she sings, soothes, threatens and complains.

The Diction of *Elegy* is to be clean, easy, perspicuous, expressive of the Manners, tender and pathetic; not debauch'd or oppress'd with Sentences, Points, &c. No Apodictic's are allow'd; and the Sense to be generally closed in every Distich or two Lines. At least in the *Latin*.

ELEMENTARY, something that relates to the Elements. See ELEMENT.

The Elements of a Body are also called the *Elementary Principles* thereof. See PRINCIPLE.

The whole Space, included within the Concave, or Orbit of the Moon, is called the *Elementary Region*, as being the Seat, or Sphere of the four Vulgar Elements, and the Bodies compounded thereof. See REGION.

The Author of the *Comus de Gabalis*, calls *Elementary People* a Kind of perfect Beings, which inhabit the Elements, and are only known by what they call the Philosophers, or Sages. According to these Fools, who at best are great Fools, the *Element of Fire* is inhabited by Salamanders; *Water*, that is, the Sea and Rivers, by Nymphs, or Oridians; *Aer*, by Gnomes and Gnomides; and *Air*, by Sylphs and Sylphides.

ELEMENTS, in Physics, the first Principles, or Ingredients of Things; whereof all Bodies are compounded; and into which they are all resolvable. See BODY.

Elements are conceiv'd as the most simple, homogeneous Parts, or Corpuscles; of an Assemblage, and Mixture whereof, all the Bodies we see, consist. See CORPUSCLES, &c.

Authors generally talk very wildly and inconsistently of the *Elements*, and confound them with the *Principles* of Things: Yet is there a great deal of Difference. As we find, by Experience, that all Things cannot indifferently be made of all; that Stone, for Instance, and Marble, are not convertible into Flesh, nor are fit to nourish or augment an animal Body: It seems to follow, that all the Variety of Bodies could never arise from the first simple Combination of the two Principles, Matter and Form; but only some infinitely simple Beings, or Corpuscles, which being variously intermix'd, might constitute all other Bodies.

Now those most simple of all Beings, thus form'd of the first Determination and Coaction of Principles, are what the Philosophers properly call *Elements*: So that *Elements* and *Principles* have this Difference between them; that a *Principle*, as Matter, is a Kind of incomplete Nature; but an *Element*, a perfect or complete one. See PRINCIPLE.

Hence it follows, that there must, of Necessity, be more *Elements* than one: Since otherwise all Things would be equally simple, and there would be no such Thing as a Compound in Nature. Most of the Antients, not aware of this, confound *Element* with *Principle*: On this footing, the *Elements* are sometimes held corruptible, and sometimes incorruptible.

The Retainers to incorruptible *Elements*, mean precisely by *Element* what we mean by the *first Matter*. In Effect, their *Elements* are their Atoms, or Corpuscles, which are supposed indivisible, incorruptible, &c. See ATOM and CORPUSCLES.

Democritus is held the first Author of this Tenet; which accordingly is adhered to by *Epicurus* and many of their Descendants, the *Epicureans* and *Corpuscular* Philosophers. See CORPUSCULAR, &c.

Among those who hold them corruptible, some will only have one, and some several. Of the former, the Principal are *Heraclitus*, who held *Fire*; *Anaximenes*, *Air*; *Thales* *Mist*, *Water*; and *Hesiod*, *Earth*; as the only *Element*. *Hesiod* is follow'd by *Bernardus*, *Velesius*; and *Ibales*, by many of the Chymists. See WATER, &c.

Among those who admit several corruptible *Elements*, the principal are the *Peripateticks*; who, after their Master *Aristotle*, contend for four *Elements*, viz. *Fire*, *Air*, *Water*, and *Earth*. *Aristotle* took the Notion from *Hippocrates*; *Hippocrates* from *Pythagoras*; and *Pythagoras* from *Ocellus Lucanus*, who seems to be the first Author of the *Dogma*.

But there is a still further Variety of *Elements*: For the Philosophers, not considering Matter in it self, or in the general, but only some of the Sensations it excites in us; some of them refer all to the Sense of Sight, and assert *lucid* and *obscure*, or *pellucid* and *opaque*, to be the *Elements* of all Things: And others, regarding only the Sense of Touch, make *hard* and *liquid*, or *hot* and *cold*, the *Elements* of Things.

In this latter Class we are to reckon *Aristotle*; tho' his Way of Proceeding was somewhat different from the rest. For, considering the four principal Qualities that fall under the Sense of Touching, *Heat*, *Cold*, *Dryness* or *Hardness*, and *Humidity* or *Liquid*: And observing that two of these Qualities might be one and the same Thing taken in two different Relations; and that they might be combined four Ways; he made four *Elements*; the first, *cold* and *dry*; the second, *cold* and *moist*; the third, *hot* and *moist*; and the fourth, *hot* and *dry*.

Then, to give Names to these *Elements*, he enquired in what Things these several *Elements* seem'd chiefly to prevail. Accordingly, taking the *Earth* to be the coldest, and, at the same Time, driest of all Things, he call'd the first *Element*, *Earth*. See EARTH.

And *Water*, being the coldest and moistest of all Things, he call'd his second *Element*, *Water*. See WATER.

Again, judging *Air* the moistest, and at the same Time hottest of all Things, his third *Element* he call'd *Air*. See AIR.

Lastly, *Fire* being the hottest and driest of all Things, his fourth *Element* he denominated *Fire*. See FIRE.

These Denominations gave Occasion to some, imperitiously enough, to mistake his Meaning; and to take this habitable *Earth*, this potable *Water*, this *Air* we breathe, and this *Fire* we burn on our Hearths, to be the four *Elements*; notwithstanding that the Word *Element* denotes a most simple Thing; whereas the Bodies just mention'd, are all exceedingly compound. See PERIPATETICK.

The *Cartesians* only admit three *Elements*; which they pretend are all that could arise from the first Division of Matter: To explain their Origin, they suppose the whole Mass of Matter in the Universe, divided into an infinite Number of Particles of unequal Magnitudes, and of any Figure at Pleasure. These several Particles they suppose, further, to have been revolved, or whirled, in various Manners, each round its Centre; so as to become truly separate and apart.

Thus much supposed, 'tis impossible but the Angular, Eminent, and Implicated Parts of the several Particles must be broke off; and thus, tho' little before, they must continue continually to grow less till they arrive at a perfect Rotundity. By this Means we get two Kinds of determinate Matter for the two first *Elements*: The first, a fine Dust rubb'd, or broke off from the Angles of the Particles, till they are turn'd round; which is the Matter of the first *Element*, or the *Materia subtilis*. The other, the Parts themselves that turn'd round, and smooth, which makes the second *Element*.

And, as 'tis probable some Particles of Matter may either separately, or conjunctly, still retain irregular, hooked, and intricate Forms; these constitute the third *Element*.

'Tis added, that the *Elements* are convertible into each other: For the third *Element*, by growing round, may become the second; and the second, by a continual Commination and Subtilizing, the first. See CARTESIAN Philosophy.

Our great Sir *Isaac Newton*, considers the primary *Elements* of Bodies on the atomical System, thus: All Things consider'd, it seems probable, that God in the Beginning form'd Matter in solid, massive, hard, impenetrable, moveable Particles of such Sizes, and Figures, and with such other Properties, and in such Proportion to Space, as most conduc'd to the End for which he form'd them; and that these primitive Particles, being solids, are incomparably harder than any porous Bodies compounded of them; even to very hard as never to wear out: No ordinary Power being able to divide what God made one in the first Creation. While the Particles remain entire, they may compose Bodies of one and the same Nature and Texture in all Ages: But should they wear away, or break in Pieces, the Nature of Things depending of them, would be changed. *Water* and *Earth*, composed of old worn Particles, and Fragments of Particles, would not be of the same Nature and Texture now, with *Water* and *Earth* composed of entire Particles in the Beginning. And, therefore, that Things may

may be lasting, the Changes of corporeal Things are to be placed only in the various Separations, and new Affiliations and Motions of those permanent Particles: Compound Bodies being apt to break not in the midst of solid Particles, but where those Particles are laid together, and only touch in a few Points. It seems to me, likewise, that these Particles have not only a *Vitæ Inertis*, but the passive Laws of Motion refusing therefrom, but are also moved by certain active Principles; such as is Gravity, and that which causes Fermentation and the Cohesion of Bodies. See GRAVITY, FERMENTATION, and COHESION.

ELEMENTS, in Chymistry, are the Principles, or component Parts of Natural Bodies, into which they are resolvable by Fire, &c.

The Effect of Chymistry is to analyze or resolve Bodies into their Elements. See CHEMISTRY.

The Chymical Elements are divided into *Active* and *Passive*. See PRINCIPLES.

The Chymists are somewhat divided as to their Elements: The Generality of them to the Vulgar *Periphatetic Elements*; *Water*, which they call *Phlegm*; and *Earth*, which they call *Caput mortuum*; add three more, *vis. Salt, Sulphur, and Mercury*. *Salt*, they hold, the Principle of Taste; and *Sulphur*, of Smell and Inflammation: As to *Mercury*, which they also call *Spirits*, some hold it the Principle of Colours, but others deny it; and, in Effect, they agree in nothing, but that 'tis the most subtle and spirituous Part. See SALT, SULPHUR, &c.

The Elements of Fossils are, 1. *Mercury*, as the Base; 2. *Sulphur*, as the Coagulator, or Binder. 3. *Salt*. 4. *Earth*. The Elements of Metals, are *Sulphur* and *Mercury* alone; *Mercury* as the Base, or Matter, and *Sulphur* as the Binder, or Cement. The Elements of Fossil Salts, are an infusid acid Spirit and Earth. The Elements of Earths, are an Oil, a little acid Salt, and a Calx. The Elements of Sulphurs are an acid Spirit, an Oil, and an Earthy or Metallic Matter. See *Sulphur*.

But, after all, it must be added, that there is no assigning any precise Number of Chymical Elements; some Bodies yielding more, and others less. And even these very Elements themselves are reducible, by a further Process, into other Elements.

Thus, by repeated Distillations of Wine, we successively get a Spirit of Wine, a vapid Water, a subacid Water, a more acid Water, Oil, bitter yellow Spirit, and a *Caput mortuum*, which is resolvable into Earth, Oil, &c. Now, are these so many several Elements? Add, that what they account an Element, now that it is separated, is very different from what it was when it existed in the mix'd; as appears hence, that upon remixing all the Elements a Body is resolved into, the Mixture will bear no Resemblance to the first Body.

In Effect, the Elements seem rather to be produced by the Fire, than separated by it. Beside, that they are convertible, or at least resolvable, into one another.

Thus, Spirit of Wine is found to yield an acid, an Oil, and a Water: And Salts yield either an Acid, or an Alkali, with Phlegm.

What makes the Notion of the Chymical Elements still more precarious, is, that a Pot-herb, and a poisonous Herb, shall sometimes yield Elements perfectly alike; more so, that the same Plant analyzed at two different Times. *Mout. Homberg*, has considered the Difficulties charged on Elements, with great Attention.

The Result of numerous Experiments made to ascertain the Matter is: That the four Principles, Salt, Oil, Water, and Earth, are always found in all Plants, in what Manner soever analyzed: That these Principles are more or less Volatile, or fix'd according to the different Manners of Analyzing: That this Difference arises, not only from the different Force of Fire, but also from the Fermentation of the mixt, preceding the Analysis: That a vehement Fire, rendering different Elements equally volatile, confounds them in the Analysis: That the Fire evaporates, and absolutely loses several Parts: And that to have the Elements as pure as may be, only Fermentation and a gentle Fire must be used.

ELEMENTS, are also used figuratively, for the Principles and Foundations of Arts and Sciences.

Thus we say, Letters are the Elements of Speech: He does not know the first Elements of Grammar.

The Elements of Mathematicks have been deliver'd by several Authors in their Courses, Systems, &c. The first Work of this Kind, is that of *Peter Herigon*, in Latin and French, published in 1644, in ten Tomes; wherein are contain'd the Elements of *Euclid*, *Euclid's Data*, *Apollonius Pergensis*, &c. with the Elements of Arithmetic, Algebra, Trigonometry, Architecture, Geography, Navigation, Opticks, Sphericks, Astronomy, Music, Perspective, &c. The Work is remarkable for this, that throughout, a Kind of real and universal Characters are used; so that the

Demonstrations may be understood by such as only remember the Characters, without any Language or Words at all. See CHARACTER.

Since *Herigon*, the Elements of the several Parts of Mathematicks have been laid down by others, particularly the Jesuite *Scotus*, in his *Corpus Mathematicum*, in 1674; Sir *Jonas Moor*, in his *New System of Mathematicks*, in 1681; *De Chales*, in 1674; *Osannum*, in his *Cours de Mathematique*, in 1699. And above all, *Christ. Wolfius*, in his *Elementa Mathematica Universa*, in two Vols. Quarto. The first published in 1713, and the second in 1715; a Work never enough to be commended.

The Elements of *Euclid*, are the first and best System of Geometry. We have Abundance of Editions, and Comments on the XV Books of *Euclid's Elements*. *Orontius Finicus*, first published the first VI Books in 1530; with Notes to explain *Euclid's* Sense. The like did *Peterarius* in 1557. *Nic. Tartaglia*, made a Comment on all the XV Books about the same Time, with the Addition of some Things of his own: And the like did *Fran. Hoffmannus*, a noble Frenchman, in the Year 1578, with considerable Additions, as to the Comparisons, and Inscriptions of solid Bodies; which Work was afterwards re-publish'd with a prolix Comment by *Clavius*, whose Edition has since been variously printed, at various Places and Times.

De Chales, *Herigon*, and *Comandarius*, have likewise done well upon *Euclid*; so has *Dr. Barrow*, who is remarkable for the Conciseness and Strictness of his Demonstrations. But as the whole XV Books do not seem necessary, especially for young Mathematicians, some Authors have chose only the first Six, with the Eleventh and Twelfth at most: It would be endless to relate the several Editions herof: The two best are the French one of *Dechales*, and the Latin one of *And. Tacquet*: The best Edition of the former of which is that of *Paris* in 1709, by *Osannum*; and of the latter, that of *Cambridge* in 1704, by *Mr. Wolfius*.

Herivius, and *Dafyodius*, have thrown all *Euclid's* Demonstrations into Syllogisms; to shew how by a concatenation of Syllogisms, a complete Demonstration arises. *Per. Ramus* dillicked *Euclid's* Order, as appears from his *Dissertation* on the XV Books of *Euclid*; and therefore he compiled 25 new Books of Elements, in the Order of the Schools, but unhappily: Tho' his Example was afterwards followed by others, particularly the Jesuite *Gaston Pardies*, in 1680; *Arnand*, in 1667; and *Fa. Lamy*, in 1683; *Polmier*, a French Physician, in 1704, digested *Euclid* into a new Method: The like did *Angelus de Marchettis* of *Pisa*, in 1709, in his *Euclides Reformatus*.

ELEMENTY of an Area, called also its Differential, is the Rectangle, P M R Q. (*Tab. Analysis* Fig. 11.) of the Semi-ordinate P M, into the Differential of the Axis, P P. See DIFFERENTIAL.

ELEMI, or ELEMZY, in Pharmacy, a pellucid Resin, of a whitish Colour, intermix'd with yellowish Particles, which give it much of the Colour and Consistence of Wax; of a pretty brisk, bitter, tho' not disagreable, Taste; and a Smell like that of Fennel.

'Tis usually called *Gum Elemi*, tho' very improperly, inasmuch as it takes Fire readily enough, and dissolves in oleaginous Liquors, which are the Characters of a Resin. It flows from Incisions made in the Trunk, and large Branches of a Kind of wild Olive Tree, growing in *Ethiopia*, and *Arabia felix*. It is also found in the *Ponille*, a Province of the Kingdom of *Naples*.

Pomer, in his History, and *Leмери*, in his Treatise of Drugs, describe *Elemi* as a white Resin, bordering on green, odoriferous, and brought from *Ethiopia*, in Cakes of two or three Pounds a-piece, wrap'd up in the Leaves of the *Indian Gane*.

It is excellent in Diseases of the Head; and proper to digest, resolve and suppurate. It is held a Kind of Natural Balsam; and sovereign in the Cure of all Kinds of Wounds.

The true *Gum Elemi* is that above described; but there are several spurious ones, some natural, and others fictitious, frequently sold for the same.

The fictitious, or counterfeit, is made of Resin wash'd in Oil of *Aspie*; tho' the ill Smell, and white Colour, might easily discover the Deceit. The natural Gums, obtained for *Elemi*, are,

1. A Gum brought from the *American* Islands, in Barrels of divers Weight, cover'd up with the Leaves of a Plant unknown in *Europe*.

The 2d might be taken for Resin, but for its Smell, which is somewhat sweeter, and more aromatic.

The 3d is of an Ash Colour, bordering on brown, brought over in large Pieces, very dry and friable.

Pomer does not take any of them for Natural; but rather supposes them to be originally *Elemi*, only impure

and coarse, since melted down, and made up by the Fire.

ELENCHUS, in Logic, by the *Latus* call'd *Argumentum* and *Inquisitio*, a vitious or fallacious Argument, which deceives under the Appearance of Truth; the same with *Sophisma*. See *SOPHISMA*.

ELEOSACHHARUM, from *Eleus*, *Oleum*, and *Saccharum*, Sugar; a Mixture of Oil with Sugar, frequently added to distill'd Oils, to make them mix with aqueous Fluids for prestat Use.

ELEPHANT, gives the Denomination to a famous Military Order, contriv'd by the Kings of Denmark. See *KNIGHT*.

It is call'd the *Order of the Elephant*, from its Arms, which are an *Elephant*.

There are a deal of different Sentiments as to the Origin and Institution of this Order: The first is that of *Memenius* and *Hoopingius*, who attribute it to *Christian IV.* who was elected King in 1584. The second, that of *Selden* and *Hubof*, who derive it from *Frederic II.* elected in 1542. 3^d. *Gregorio Leti* goes back as far as *Frederic II.* who reigned about the Year 1350. 4th. *Bernard Rebolledus*, will have *King John* to be the Author, who began to reign in 1478. 5th. *Anselmus, Rosernus*, and *Loescher*, hold it to have had its Rise under *Christian I.* Father of *Frederic I.* Lastly, *Voghtinus, Boehman*, and *Bieberodius*, maintain *Canutus VI.* to have been the first Initiator; and the Occasion thereof to be the *Croisades*. This Prince, according to the Chronology of *Swaning*, reign'd towards the Close of the XIIth Century, from the Years 1168, to 1191.

This, at least, we are certain of, that the Order was subsisting in the Year 1494; there being a Pairing still extant, done that Year by Count *Reinsden*, a Knight of this Order. And we have even authentic Evidences of the Marquess of *Mantua's* being created Knight of the same Order by *Christian I.* in 1474. There are Bulls of Pope *Pius II.* and *Sixtus IV.* confirming the Statutes of the Order, authorizing the holding of Assemblies, or Chapters, in the Chappel of *Boogebild*, and settling the Privileges of the Knights.

The Order was at first call'd the *Order of St. Mary, Ordo S. Mariæ*: Tho' it seems to have had the Appellation of the *Elephant*, as early as *Christian I.* Witness the Figure of an *Elephant*, so often struck on his Coins, Medals, &c.

The Manner of its Institution is thus related: King *Canutus* having sent a Fleet against the *Saracens*, in 1189, which took *Silima* and *Prolemais*; a Gentleman among the *Danish Croisades*, kill'd an *Elephant*; in Memory of which extraordinary Accident, the Order was erected. This Account is render'd the more probable by this; that it is refer'd to an *Æra*, when nothing was more common than to take the Spoils of a vanquish'd Enemy for Armories, or Cognizances: And accordingly some of the principal Arms of the like Kind now on Foot, e. g. the *Lions of the Low-Countries*, had their Rise at the Time of the *Croisades*; as is shewn by *Hoegerus* and *Hoopingius*. Which Circumstances greatly corroborate the Opinion of those, who ascribe the Order to King *Canutus*.

Bessaron brought with him a very antient, and rare Coin from the *East to Rome*; wherein was seen the Image of the Holy Virgin, with an *Elephant*. *Cassian* takes this to have been the Badge, or Symbol, of the *Danes*, engaged in the *Croisades* against the *Saracens*; and supposes it to relate to the Order of the *Elephant*. The Chancellor *Fruhus*, had another Coin of the like Kind, wherein was the Image of the Holy Virgin, an *Elephant*, and a *Crescent*, which was antiently a Member in the Arms of this Order. *Boissau* relates another antient Figure of the Arms of this Order, bearing the Image of the Holy Virgin with four *Elephants*, charged with Towers. And *Petra Sancta*, a fourth, wherein was the Virgin with three Keys, and four *Elephants*, and Spurs: Whence it appears, that the Order was under the Protection of the Virgin. Accordingly, the Order is still call'd the *Order of St. Mary*. To the Collar of the Order hangs an *Elephant*, with a Silver Turret on its Back; and underneath the *Elephant*, an Image of the Holy Virgin, encircled with Rays. See the Abbot *Justinius*, *Hist. de rebus gl. Ord. Milit. e. Coenob. T. II. C. 72*.

The Chappel of *Roesebild*, was founded by *Christiane I.* for the Assemblies, or Chapters, of the Order to be held in. It was at first call'd the Chappel of the three Kings, *Capella trium Regum*: Afterwards *Frederic I.* gave it the Name of the *Royal Chappel*.

The Order was retriev'd by *Frederic II.* who created Abundance of Knights at the Ceremony of his Coronation, which is the only Time when the *Danish* Kings make any of these Knights. *Christian V.* augmented and enrich'd it very considerably. In the Year 1694, a grand

Chapter of the Order was held at *Fredericsburg*, in the Chappel of the Knights, wherein six *German* Princes were admitted into the Order.

We have Abundance of Writings on the Subject of this Order; whereof that of *Janus Biberodius* may serve for all the rest: 'Tis the latest, the most ample, and masterly. It was published at *Copenhagen*, in the Year 1705, under the Title of *Breviarium Equitum seu de Illustrissimis, & Inclitissimis Ordine Elephantino, &c.*

ELEPHANTIASIS, in Medicine, a Kind of Leprosy, call'd *Lepra Arabum*, in Contradiction to the *Lepra Græcorum*, which is another Disease. See *LEPROSY*.

The *Elephantiasis* is thus call'd, by Reason those seiz'd therewith, have their Arms, and Legs, big, swollen, and tuberos; the Skin bloated, yet rough to the Touch, all wrinkled and unequal like the Skin of an *Elephant*.

The *Elephantiasis Græcorum*, or *Lepra Arabum*, is described by *Deadatus*, as a contagious Disease, infecting the Body with a Crowd of Evils. The Skin of the Face, Knees, Elbows, Thighs, Hands and Feet is full of moveable, indolent Tubercles of a livid Colour, tending to Redness: In the Mouth, Palate, and Jaws, likewise, arise Tubercles, sometimes yellow, and sometimes livid: In the Intervals between the Toes, and on the Soles of the Feet, especially the hard callous Parts thereof, as also in other Parts of the Limbs, break out Ulcers, which penetrate the Cutis, are very broad, and keep spreading with callos, and tumid Lips: These, upon a little Violence yield Blood, and yet are indolent. Add, that Ulcers eat the Nose, with Tumors about the Ears; the Lips thicken, and the Feet and Hands are wonderfully bloated.

Yet *Enaniler, Haly, Abbas*, and others, speak of the *Elephantiasis* as a ruddy, livid Swelling of the Feet and Legs, with Varices, and Ulcers; which make the Feet appear like *Elephants* Feet.

The *Elephantiasis, Turner* observes, is a Disease unknown in our Parts of the World; at least in these Days. Some Authors call it *Leontiasis*, and others *Satyriasis*. The *Greeks* call it *isoparionis*; and sometimes *isipus, Elephant*, and *isoparionis*.

ELEPHANTINE, something that relates, or belongs to an *Elephant*.

The Term is chiefly applied to certain Books of the antient *Romans*, wherein were recorded the Actions of the Princes, and the Proceedings, Acts, &c. of the Senate. This we learn from *Pollio*, and *Popiscus*, in the Life of the Emperor *Tacitus*, where he observes that in the 6th Press of the *Ulpian* Library, was kept one of these *Libri Elephantini*; wherein, for a long Course of Time, were wrote down the Decrees, and Edicts of the Senate.

In some of these Books, were registred all the Acts and Measures of the Senate, and the Magistrates of *Rome*; in others, the Proceedings and Events in Provinces, in War, &c.

There were above thirty five large Volumes of them, as many as there were Tribes: There being likewise contain'd in them the Births, and Degrees of the Citizens; the Enumerations and all Things belonging to the Consue. They were renew'd every five Years with the Censors; and were all antiently kept in the *Ænarium*, or public Treasury, which was in the Temple of *Saturus*. *Vigenere* on *Tit. Livy*.

Vigenere, and several others, believe these Books to have been call'd *Elephantine*, by Reason of their enormous Bulk, e. g. as big as *Elephants*, or *Bullocks*. But *Loisel* on the XVIIth Chapter of the XIth Book of *Aulus Gellius*, gives us a different Etymology; and assures us they were call'd *Elephantine*, because made of Ivory Leaves, or Tablets, which every Body knows is a Production of the *Elephant*. And, accordingly, *Ulpian, L. 52. H. de Legat. 2.* makes mention of an Ivory Book. *Scaliger* and *Gerard Vossius*, say they were made of the Intestines of an *Elephant*.

Vossius does not deny, indeed, but that they might have been made of Ivory; but being there were several other Books, and Tablets, made of that Matter, as appears from *Martial, L. XIV. Epigr. 3.* and a hundred other antient Authors, and from what we have shewn under the Term *DYRRIC*: It does not appear, why the Name *Elephantine* should be peculiarly appropriated to these.

Martial does not give the Name *Elephantinus*, but *Edwens*, of *Ivory*, to the Tablets mention'd in the Place last quoted, *Idorei Pugillares: Alexander ab Alexandro Genal. Diar. L. II. C. 2.* makes mention of the *Libri Elephantini*: So does *Salmasius*, on the Passage in *Popiscus*, just quoted; where he refers *Scaliger*, maintains that these Books were of Ivory, and shews, that the Antients used the Word *Elephas*, for *Ivory*; witness *Virgil Æneid. L. III. v. 464.* and *Servius* on the same: And *Elephantinus*, for what was of Ivory; witness *Martianus Capella*,

Capilla, and *Ipsore* in his *Glosses*. He shews further, that it was no impossible Thing to write on Ivory, as *Scaliger* had suggested; that they did not make use of a Goole Quill as we do, nor of Ink like ours: But Rufuses, or Reeds, firm'd after a different Manner from our Pens, and Ink fit to take upon Ivory. The Matter of Fact, in fine, he asserts, is clear from *Martial*, and *Plautus* in his *Mofellaria*.

ELEVATION, *Altitude*, or *Height*, in Astronomy. The *Elevation of any Star*, or other Point, in the Sphere, is an Arch of the Verticle Circle, intercepted between his Star or other Point, and the Horizon.

And the same Definition serves for the *Depressiou*, or Depth of any Point.

Hence, as the Meridian is a Vertical Circle; a Meridian Altitude, or *Elevation*, i. e. the *Elevation of a Point* in the Meridian, is an Arch of the Meridian, intercepted between the Point and the Horizon. See ALTITUDE.

ELEVATION of the Pole, is the Altitude of the Pole above the Horizon of any Place; or an Arch of the Meridian, intercepted between the Pole and the Horizon. See POLE.

Thus, in *Tab. Astronomy* Fig. 29. A Q being supposed the Equator, H R the Horizon, H Z P N the Meridian, and P the Pole; P R is the *Elevation of the Pole*.

The *Elevation of the Pole*, is always equal to the Latitude of the Place; that is, the Arch of the Meridian intercepted between the Pole, and the Horizon, is equal to the Arch of the same Meridian, intercepted between the Equator and the Zenith.

Thus the North Pole is elevated 51° 32' above the Horizon of *London*: And there is the same Distance, or Number of Degrees between *London* and the Equator; so that *London* is likewise in 51° 32' of Northern Latitude. See LATITUDE.

To observe the *Elevation of the Pole of any Place*. See POLE and LATITUDE.

ELEVATION of the Equator is an Arch of the Meridian, less than a Quadrant, intercepted between the Equator, and the Horizon of the Place. See EQUATOR.

Thus A Q, as before, representing the Equator, H R the Horizon, P the Pole, and H Z P N the Meridian; H A is the *Elevation of the Equator*. See EQUATOR.

The *Elevations of the Equator*, and of the Pole, together, are always equal to a Quadrant: Consequently, the greater the *Elevation of the Pole*, the less the *Elevation of the Equator*, and vice versa.

Thus in the Figure just cited P A, is supposed by the Construction a Quadrant; and H A + A P + P R a Semi-circle: Consequently H A + P R is a Quadrant.

To observe the *Elevation of the Equator*.

Find the *Elevation of the Pole*, after the Manner already directed under the Article POLE.

Subtract the *Elevation* found, from a Quadrant, or 90°, what remains is the *Elevation of the Equator*. Thus, the *Elevation of the Pole* 51° 32', being subtracted from 90°, leaves the *Elevation of the Equator* 38° 28'.

ELEVATION, in Architecture, a Draught, or Description, of the principal Face, or Side of a Building; called also an *Upright*, or *Orthography*. See ORTHOGRAPHY.

ELEVATION, we also find used in some Writers of Perspective, for the *Scenography*, or perspective Representation of the whole Body or Building. See SCENOGRAPHY.

ELEVATION, in the *Romish* Religion, is applied to that Part of the Mass, wherein the Priest hoists, or raises the Host, with the Cup, above his Head; for the People to adore it: After having consecrated, and adored it himself.

The Priest, who assits at Mass, rings a Bell at the *Elevation*; to apprise the People to cast their Eyes upon their new form'd Saviour, and adore him.

St. *Louis* decreed, that they should fall on their Knees at the *Elevation*, in Imitation of certain Religious whom he does not name. The *Chartreuse*, and the Religious *de la Trappe*, still observe this Ceremony of prostrating themselves at the *Elevation*.

Angle of ELEVATION, in Mechanicks, is the Angle A R B, (*Tab. Mechanicks* Fig. 37.) comprehended between the Line of Direction of a Projectile A R, and the Horizontal Line A B. See PROJECTILE.

ELEVATION of a Mortar Piece, or Gun, is the Angle, which the Chafe of the Piece, or the Axis of the hollow Cylinder, makes with the Plane of the Horizon. See MORTAR, &c.

ELEVATOR, in Chirurgery, an Instrument used to raise up Bones, as those in Fractures of the Skull, when beaten, or crush'd in, with Blows, or the like.

There are dented *Elevators*: *Elevators* with three Feet, call'd *Elevatores Triploides*.

The *Elevator made Lever* wife, is a new Invention: Its Use is in drawing Teeth. One Extremity of it is flat, to rest on the Gum, at the Bottom of the Tooth, and the

other hooked, like one of the Branches of a *Pelican* to fasten hold of the Tooth.

ELEVATOR, in Anatomy, a Name common to several Muscles, which do the Office of raising or lifting up of the Parts they belong to; of equal Import with *Attollens* and *Levator*. Such are the

ELEVATOR *Ale Nafi*, a Muscle, or Pair of Muscles of the Nose, of a Pyramidal Figure, very narrow, tho' fleshy at its Origination on the fourth Bone of the upper Jaw; and very broad and thin at its Termination on the Side of the *Ale Nafi*: Its Action is to pull the *Ale* upwards, and turn it outwards. See NOSE.

ELEVATOR *Asi*. See LEVATOR *Asi*.

ELEVATOR *Auris*, or *Attollens Auriculam*, is in Reality no more than a Part of the Muscle of the Scalp, with some fleshy Fibres in it, as it descends over the temporal Muscles to the upper Part of the *Concha*. Its Action is scarce visible; the Auricles being scarce perceiv'd in Men to have ordinarily any Motion at all. See AURICLE.

ELEVATOR *Oculi*, one of the *Musculi Recti* of the Eye, serving to draw it upwards. See RECTI.

ELEVATOR *Laborum Communis*, a Muscle of the Lips; arising from the fourth Bone of the upper Jaw, and terminating at the Angle of the Lips, under the *Zygomaticus*. See LIPS.

ELEVATOR *Labii inferioris*, is a Muscle, that arises from the second Bone of the under Jaw, below the Incisions. It descends, and passes under the *Zygomaticus*, and is inserted into the under Lip.

This, assisted by a small, but strong Pair of Muscles, arising from the Gum of the *Dentes Incisivi*, and descending directly, is inserted into the lower Part of the Skin of the Chin; and serves to pull the Skin of the Chin upwards, and consequently thrust up the Lip.

ELEVATOR *Labii Superioris*, ariseth from the upper Part of the second Bone of the upper Jaw; and descending obliquely, is inserted into the upper Lip, above the *Dentes Incisivi*. It draws up the Lip.

ELEVATOR *Scapulae*. See LEVATOR.

ELEVE, a Term purely *French*; tho' of late used in our Language. Literally it signifies a Pupil, or Scholar, bred up under any one; from the Verb *elever*, to raise.

It was first used by the *French* Writers in speaking of Painters: Such a Painter was an *Eleve de da Vinci*, of *Raphael*, &c. From Painting, it came to be applied to such as studied, or learned any other Art under a Master. In the Royal Academy of Sciences, there were so *Elevés*: And in that of Inscriptions, so *Eleves*. The *Elevés* were to act in Concert with the Pensionaries.

We are not afraid, says *Mont. Fontenelle*, to compare a simple *Eleve*, such as *Mont. Amontons* was, to one of the greatest Members the Academy ever had. [*M. Mariotte*] The Name *Eleve*, with us, implies no Difference as to Merit; it only signifies somewhat of Seniority, and Survivance.

The Denomination *Eleve*, however, has been since suppressed, and that of *Adjoint* substituted in its Room; by Reason every Body did not know the Sense affix'd to it by the Academy. And now the Pensionary Academists have not, as formerly, each of them an *Eleve*: But the *Elevés* are become *Adjoints*, or Associates to the Academy.

The Word is form'd of the *Italian*, *Allievo*, a Disciple or Novice.

ELEUSINIA, in Antiquity, the Mysteries of the Goddess *Ceres*; or the religious Ceremonies perform'd in her Honour: Thus call'd from *Eleusis*, a maritime Town of the *Athenians*, wherein was a Temple of that Goddess, famous for the Celebration of these Mysteries.

The *Eleusinae* were the most solemn and sacred Ceremonies in Use among the *Greeks*; for which Reason they were call'd *Mysteries* by Way of Eminence. They are said to have been instituted by *Ceres* her self, at *Eleusis*, in Memory of the Zeal and Affection wherewith the *Athenians* receiv'd her.

This is the Account *Socrates* gives in his *Panegyric*; but *Diodorus Siculus* assures us, L. VI, that the *Eleusinae* were instituted by the *Athenians*, in Gratitude to *Ceres*, for having instructed them to lead a less barbarous and rustic Life. Yet the same Author, in the first Book of his *Bibliotheca*, relates the Thing in another Manner.

A great Drought, says he, having occasion'd a miserable Famine throughout all *Greece*; *Egypt*, which had that Year reap'd a most plentiful Harvest, bestow'd Part of the Fruits thereof upon the *Athenians*. 'Twas *Erichon* that brought this extraordinary Supply of Corn: In Commemoration of which Benefaction, *Erichon* was created King of *Athen*, who instructed the *Athenians* in these Mysteries, and the Manner of celebrating them.

This Account comes near to what we are told by *Herodotus* and

and *Panfanitis*, viz. that the *Greeks* learn'd their Gods, and their Religion from the *Egyptians*.

Theodore, L. I. *Græconicar. Affection* writes that it was *Orpheus*, not *Erichon*, who made this Establishment; and who instituted for *Ceres*, what the *Egyptians* practis'd for *Isis*: Which Sentiment is confirm'd by the Scholiast on the *Alceus* of *Euripides*.

Eleusis, the City where these Mysteries were celebrated, was so jealous of the Glory thereof, that when reduced to the last Extremities by the *Athenians*, it would not surrender but on this Condition, that the *Eleusinia* should not be taken from them; tho' these were no Religious Ceremonies peculiar to the Town, but were held common to all *Greece*.

The Matter of these Mysteries, as related by *Arnobius* and *Lactantius*, was an Imitation, or Representation, of what the *Fables* teach of *Ceres*. They lasted several Days; during which, the People run about with burning Torches in their Hands; sacrific'd Abundance of Victims, not only to *Ceres*, but also to *Jupiter*; made Libations, from two Vessels, one of them to the East, and the other to the West; march'd in Pomp and Procession to *Eleusis*, making Pauses from Time to Time, wherein they sung Hymns, and sacrific'd Victims: And this they perform'd, not only in going to *Eleusis*, but in returning back to *Athens*.

For the rest, they were obliged to keep it as an inviolable Secret; and the Law condemn'd to Death any one who should dare to divulge their Mysteries. *Tertullian* in his Book against the *Valentinians*, relates that the Figure shewn in the *Eleusinia*, and which was so expressly prohibited to be made public, was that of a Man's privy Parts: *Theodore*, *Arnobius*, and *Clement Alexandrinus*, likewise make mention of it; but say it was the Figure of a Woman's Privities.

The Day after the Feast, the Senate assembled at *Eleusis*, apparently to examine whether every Thing had been managed according to Order.

There were two Kinds of *Eleusinia*, the greater and the lesser: Tho' we have been hitherto speaking of were the greater.

The lesser were instituted in Favour of *Hercules*: For that Hero desiring to be initiated into the former; and the *Athenians* not being able to gratify him therein, by Reason the Law prohibited any Stranger being admitted; being loth however to give him an absolute Denial, they instituted new *Eleusinia* whereat he assist'd.

The greater were held in the Month *Boeoticon*, which answer'd to our *August*; and the lesser in the Month *Anthestion*, which happen'd in our *January*.

People were only brought to partake of these Ceremonies by Degrees: At first, they were to be purified; then admitted to the little *Eleusinia*: And at last initiated in the greater. Those who were yet only at the lesser, were call'd *Mythes*; and those admitted to the greater, *Epoptes*, or *Epoptoi*, i. e. Inspectors. They were usually to undergo a Probation of five Years, e're they pass'd from the lesser to the greater. Sometimes, indeed, they were contented with a single Year; immediately after which, they were admitted to the most secret religious Parts of the Ceremony. *Martyrus* has an express Treatise on the *Eleusinia*, where most of these Points are proved.

Some Writers call the City, where the *Eleusinia* were celebrated, *Eleusina*, not *Eleusis*: *Harpocration* confirms this Orthography, in deriving its Name from *Eleusinus*, a Son of *Mercury*: To which Sentiment, *Pausanias* likewise adheres in his *Atticks*. Others, who write it *Eleusina*, *Advent*, suppose it thus call'd, by Reason *Ceres*, after running over the World in Search of her Daughter, stop'd here, and put an End to her Pursuit. *Diodorus Siculus*, L. V. will have the Name *Eleusis* to have been given this City, as a Monument to Posterity, that Coen, and the Art of cultivating it, were brought from Abroad into *Attica*.

ELEUTHERIUS, in Antiquity, a Greek Word, signifying *Liberator*, *Deliverer*; given by the *Greeks*, as a Surname, or Epithet to *Jupiter*, on Occasion of his having gain'd them the Victory over *Mardonius*, General of the *Persians*, and killed 300 Thousand Men of his Army, and by that Means deliver'd them from the Danger they were under of being brought under the *Persian* Yoke.

There were also Feasts solemniz'd, on this Occasion, in Honour of *Jupiter Eleutheri*, and call'd *Eleutheria*. They were held every five Years, with Courses of armed Chariots, &c.

The Scholiast on *Pindar*, *Olymp. Od. 7.* says, they were celebrated at *Plæta*, the Place where the Victory was obtain'd.

The Word is form'd from *ἐλευθερός*, free.

ELICIT, or **ELICITE**, in Ethics, is applied to an Act of the Will, immediately produced by, and of the Will, and received within the same.

Such is *Willing*, *Nilling*, *Loving*, *Hating*, &c. Such Acts are denominat'd *Elicit*, by Reason being before in the Power of the Will, they are now brought forth into Act. But these Acts are so far intrinsic, that some Authors consider them as the Will it self; and deny they should be distinguish'd from it any more than that *Light* is to be distinguish'd from the *Sun*.

ELIGIBILITY, in the *Romish* Canon Law. A Bull of *Eligibility*, is a Bull granted by the Pope, to certain Persons, to qualify them to be *chosen*, or invested with an Office, or Dignity, whereof they were before incapable, by Reason of Want of Age, Birth, or the like.

In several Churches in *Germany*, a Person who is not of the Chapter, cannot be elect'd Bishop, without a Bull of *Eligibility*.

The Word is form'd of the *Latin*, *eligere*, to chuse; whence the Word *Eligibilis*, &c.

ELISION, in Grammar, the cutting off, or suppressing a Letter, at the End of a Word.

Elisions are but little known in *English*: In *Latin*, *French*, &c. they are frequent; and consist mostly in Suppressing of the *s* final.

In Writing, it is mark'd by an Apostrophe; as *egon' quem quæram*, for *egone*. *Emm' ego te?* for *Emme*. *Venist' in* for *Venistis*, &c. *Cet' Esperance*, for *Cette*: *L'homme*, for *le homme*.

In the Pronunciation we make frequent *Elisions*, but don't mark them in Writing; thus we write *risque* it, but pronounce *risq' it*. So the *French* pronounce *us' ame*, but write *us ame*. In Effect, they never mark any *Elisions* but at the End of the Monosyllables *je ne le te ce que* and *sa*. They never elide the *o*, nor *u*, nor *i*, but in the Conjunction *si* before *il*; nor *a* but in *la*.

In Poetry, the Syllable where there is a Vowel *Elided*, is never reckon'd: And great Care is taken to avoid the Concourse of Syllables, where there is no *Elision*; this making what they call a *Histus*, or Chiasm.

ELIXATION, in Pharmacy, &c. the seething or boiling of any Medicine in a proper Liqueur, gently and for a considerable Time; amounting to what, in the dressing of Meats, we properly call *Stewing*.

The Liqueur ordinarily us'd in *Elixations*, is Spring or River Water: Tho' on some Occasions they use Milk, Whey, Beer or the like.

The ordinary Purpose of *Elixation*, is to extract the Virtue out of the Medicine, and impart it to the Liqueur. Tho' it is sometimes also us'd to free the Parts of Animals, Plants, &c. of their Crudities, as well as to soften, and make them tender; to take away from Foods, or Medicaments, any disagreeable Taste, or other ill Quality; to separate the earthy or grosser Parts, and for other Intentions. See **EXTRACTION**.

The Word is form'd from the *Latin*, *lixare* to boil, or boil in Water. *Decoctio* is a Sort of *Elixation*. See **DECOCTION**.

ELIXIR, in Medicine, a compound Extract, Tincture, or Essence, drawn from a Mixture of several Ingredients, by infusing them in a proper Menstruum. See **EXTRACT**.

Or it is a strong, spirituous Liqueur, or Juice, to be taken inwardly; containing the purest, and most efficacious Parts of several mix'd Bodies, communicated to it by Infusion and Maceration.

Dr. Quincy defines it a strong Infusion in some Menstruum, whereby the Ingredients themselves are almost dissolved, and a Juice thus acquired of a thicker Consistence than an ordinary Tincture. See **TINCTURE**, **INFUSION**, &c.

Boerhaave takes an *Elixir* to be a compound Magistery, i. e. a compound of various Bodies, changed after the same Manner as a single Body is in a Magistery. See **MAGISTERY**.

Spirits drawn from Vegetables, i. e. the strong, or spirituous Waters of Vegetables, are usually the Base of *Elixirs* and the Menstruum, or Dissolvent, whereby the Essence of the other Ingredients is drawn or separated. Spirit of Wine is the best and most commodious Menstruum of all.

The *Charletans* abuse the Term *Elixir*, and apply it to Abundance of simple Extracts, or Tinctures; only to put them off at the higher Price. Some Authors, for *Elixir*, use the Word *Quintessence*. See **QUINTESSENCE**.

Menege derives the Word from the *Arabic*, *Elixir*; properly signifying *Fraction*, by Reason *Elixirs* have the Force of breaking Diseases: Others, more naturally derive it from *Alcheste*, an Artificial Extraction of some Essence. Others from the *Greek* *ἔλαιον*, Oil, and *ἔσσω*, I draw, q. d. an Extract of the Oil, which is the essential Part of Mixts. Others from the *Greek* Verb, *ἐλεῖν*, to help, assist, by Reason of the great Succours we receive from *Elixirs*. Lastly, others from *ἔλαιον*, to draw.

ELIXIR Proprietatis, is a Remedy first invented by *Paracelsus*. It is compos'd of Aloes, Myrrh, and Saffron; the Tincture, or Effence whereof, is drawn by putting them to dissolve, or digest with Spirit of Sulphur. Some add Spirit of Wine to the Spirit of Sulphur.

Crollius takes this *Elixir* to be the Balm, or Balsam of the Antients; adding, that it contains all the Virtues of the Natural Balm. It comforts and fortifies the Heart and Stomach, assists Digestion, purifies the Blood, and promotes Sweat.

ELIXIR, among the Alchymists, is us'd for the *Philosopher's Stone*, or the *Powder of Projection*; and sometimes for a *Universal Medicine*, which shall cure all Diseases, call'd by Way of Excellence the *Grand Elixir*.

These two Things, most Alchymists take to coincide; so that what will make Gold, will cure all Diseases. See **PHILOSOPHER'S-STONE**.

The Notion of a *Grand Elixir* is of a long standing. *Kircher* assures us, that the ancient *Egyptians* had a Method of drawing an *Elixir* from the hardest and most precious Substances; which, on Account of its Subtily and Perfection, they call'd *Heaven*. And this he takes to be that admirable, and celestial Water, capable of removing all Diseases; call'd also the *Stone*, and the *Philosopher's Stone*, as being drawn from precious Stones; and sometimes, by the Hermetical Denominations, *Aqua Vitæ*, *Vegetable Seed of Nature*, *Solar Soul*, &c. *Oed. Egypt. Tom. II. p. 430.*

ELKS Claw, in Pharmacy, a Drug, suppos'd to be good against the *Epilepsy*; known in the Shops by the Name of *Ungula Aleis*. See **ENTRAPER**.

The Animal that yields it, call'd by the *Latins*, *Aleo*; by the *German*, *French*, &c. *Elend*; and by us, *Elk*; is a wild Beast, found in the Forests of *Muscovy*, *Sweden*, and *Prussia*; but more abundantly in *Canada*, and most Parts of *North America*.

'Tis about the Size and Figure of a Mule; only its Snout bigger, its Tail short, its Feet cloven; and that it bears a large Ramage, or Horn, like that of a Deer, weighing three, and sometimes four Hundred Weight. That anatomized in the Royal Academy of Sciences, was five Foot seven Inches long. Its Hair is brown, and about the Length of that of a Goat: Its Ears nine Inches long, and four broad; and its Tail not above two Inches; its Neck short and thick: Its Skin strong and hard, tho' thin; its Flesh very delicate, especially that of the Female: And the Ligaments of its Joints exceeding strong; which has occasion'd some Authors to say, that its Legs had no Joints at all; and that it was this made it so ready at sliding on the Ice, to save it self from the Wolves.

It neither runs, nor bounds; but its Trot is almost equal to the swiftest Running of a Deer.

Pausanias says, that the Male has Horns: And *Cæsar*, that the Female hath none: But we find that both have.

The Hunting of the *Elk*, is one of the principal and most agreeable Employments of the Savages of *Canada*, *Accadia*, &c. They chuse a Time when the Snow is on the Ground; in which the Beast is apt to sink and stick. When they have kill'd enough with their Fire Arms, to feast for several Days; they Bea them, and send the Skins to the *French*, who dress it in Oil, like the Buffalo Skin. See **CHAMOIS**.

The Savages likewise take care to cut off the left hind Foot of each Beast; especially if it be a Female; the Hoof whereof is that applauded Remedy for the *Falling Sickness*.

Antient Authors tell us, that to catch the *Elk*, the *Northern* People watch the Occasion when he falls down of the *Epilepsy*; which it frequently does; and that they lay hold of it ere it can recover Strength enough to put its left Foot in its Ear; which cures it immediately.

And hence it is, that the Notion of its Virtue, in the Cure of that Disease, had its Rise. The *German*s call it *Ellend*, that is, Misery, by Reason of the Misery it is reduc'd to in falling so often into the *Epilepsy*; tho' it has its Remedy always about it; which has given People reason to suspect, that the Virtue attributed to it is fabulous.

Accordingly, *Olaus Magnus* says, 'tis the outer Hoof of the right Foot that the *Elk* puts in its Ear to cure the *Epilepsy*; which being impossible, it should seem as if *Olaus* only spoke of it by Way of sneer.

He adds, that the Blows it deals are so strong, that with its head Feet it will break the Trees like Mushrooms; and with its fore Feet pierce the Hunters thro' and thro'.

Powers gives us the Marks to distinguish the genuine *Elks Claws*; but as their Virtue is very equivocal, not to say absolutely false, there is no great Harm in being deceiv'd: The Opinion alone may serve for the Reality.

ELL, *Una*, a Measure, which obtains under different Denominations in most Countries. See **MEASURE**.

The *Ell* is the Standard, or Measure, whereby Cloths, Stuffs, Linnens, Silks, &c. are usually measur'd, or estimat'd; answering, in good Measure, to the *Yard* of *England*, the *Canna* of *Italy*, the *Varre* of *Spain*, the *Palm* of *Sicily*, &c. See **YARD**.

Servius will have the *Ell* to be the Space contain'd between the two Hands when stretch'd forth; But *Suttonius* makes it no more than a *Cubit*. See **CUBIT**.

The *Ells* which occur most frequently in *England*, are *English* and *Flemish*: The *Ell English* contains three Foot nine Inches; or one Yard one Quarter *English* Measure: The *Ell Flemish*, 27 Inches, or three Quarters of a Yard; so that the *Ell English* is to the *Flemish* *Ell* as five to three.

M. Ricard, in his Treatise of *Commerce*, reduces the *Ells* thus: An hundred *Ells* of *Amsterdam*, are equal to ninety eight, three Quarters, of *Brabant*, *Antwerp* and *Brussels*; to fifty eight and an half of *England* and *France*: To an hundred and twenty of *Hamburg*, *Frankfort*, *Leipsic* and *Cologne*: An Hundred twenty five of *Breslaw*: An Hundred and ten of *Bergen* and *Drontheim*: And an Hundred and seventeen of *Stockholm*. See **MEASURE**.

ELLEBORE, a Medicinal Plant. See **HILLEBORE**.

ELLIPSIS, in Geometry, one of the Conic Sections, popularly call'd an *Oval*, or *Oblong*. See **CONIC**.

The *Ellipsis*, to define it from its Form, is a regular, continued curve Line, including a Space that is longer than broad; wherein are two Points equally distant from the two Extremes of the Length; from which, two right Lines being drawn to any Point, assum'd at Pleasure in the *Ellipsis*, their Sum is equal to the Length of the *Ellipsis*.

Thus, in the *Ellipsis* AEBMD, &c. (*Tab. Conicks* Fig. 21.) the Lines Ea and fa drawn from the two Points E and f, equally distant from the two Extremes A and B, are equal to AB.

Or, taking the *Ellipsis*, as Geometricians frequently do, for the Space contain'd, or included within this Curve Line; it is defin'd a Figure, contain'd under one single oblong Line, and having two unequal Axes or Diameters AB and DE.

The greater Axis of the *Ellipsis*, or the right Line representing the Length of the *Ellipsis* AB, or of the Space included by the *Ellipsis*, is call'd the *Transverse Axis*, or Diameter: And the lesser Axis, representing the Breadth of the *Ellipsis* DE, the *Conjugate*, or *Second Axis*. The two Axes always bisect each other at right Angles. See **AXIS**.

The two Axes are the two greatest Diameters of the *Ellipsis*, but there are an Infinity of other different Diameters. See **CONJUGATE**, **TRANSVERSE**, &c.

The Centre of an *ELLIPSIS*, is the Point C, wherein the two Axes intersect.

The two Points F and f, on the greater Axis, equally distant from the Extremes thereof A and B, are call'd the *Foci*, or *Unilities* of the *Ellipsis*; from which two Lines, drawn to the Circumference of the *Ellipsis*, as already observ'd, are equal to the greater Axis. See **FOCUS**.

The *Ellipsis*, considering it as a Conic Section, that is, as a Curve arising from a Section of the Cone, is best defin'd from its Genesis, or the Manner of its Production, thus: An *Ellipsis* is a Curve Line, produced by cutting the Cone ABC, (*Fig. 22.*) by a Plane, in such Manner, as that the Axis of the Section DE, meets with the Diameter of the Base AB, produced in F.

Or, defin'g it from one of its known Properties assum'd; an *Ellipsis* is a Curve Line, wherein the Square of the Semi-ordinate PM, (*Fig. 22.*) is to the Rectangle of the Axis AP and PB; as the Parameter, to the Axis.

Thus, if AB = a, the Parameter = b; PM = y; AP = x: Then will b : a :: y² : ax - x². Consequently ay² = ax² - bx². See **CONIC SECTION**.

Hence, 1. y² = bx - bx² : a. That is, the Square of the Semi-ordinate, is equal to the Rectangle of the Parameter into the Abscissa; abating another Rectangle of the same Abscissa into a fourth proportional to the Axis, Parameter and Abscissa.

And hence the Word *Ellipsis*, which is form'd from the *Greek*, *ελλειψις*, *Deficiency*, a Denomination the ancient *Greek* Geometricians gave this Figure, by Reason, among other Properties, this is one, that the Squares of the Ordinates are less than, or *defective* of the Rectangles under the Parameters and Abscissa.

To find the Axis, Parameter, and Semi-ordinate of an ELLIPSE.

Hence, also 2°. The Parameter, Abscissa, and Semi-ordinate, in an Ellipsis being given; the Axis is found by making $1. b : y :: y : a^2$, $2. \frac{y}{b} = \frac{(bx - y^2)}{b}$; $x = a$.

3°. The Axis AB, the Abscissa AP, (Fig. 23.) and the Semi-ordinate PM being given, the Parameter AG is thus found: Make $AI = PM$, and from A, thro' M, draw the right Line AL. In I erect a Perpendicular LI: Then, since $AP : PM :: AN : LI$; $LI = y^2 : x$. Produce PM to O, till $PO = LI = y^2 : x$ and from B, thro' O, draw a right Line BG. In A erect a Perpendicular GA = $ay^2 : (ax - x^2)$: This will be the Parameter AG.

4°. The Axis AB, and the Parameter AG being given, we can assign every Abscissa, as B P, its Semi-ordinate P N; by drawing the Line GB to the Parameter AG, which is perpendicular to the Axis AB: Then, erecting a Perpendicular P N, make $PL = PH$. Lastly, on AL describe a Semi-circle.

To find the Foci, conjugate Axis, Ratio of the Ordinates, &c. of an ELLIPSE.

1°. From B to L, (Fig. 23.) set off half the Parameter; then will $CL = \frac{1}{2} a - \frac{1}{2} b$. In the Centre C erect a Perpendicular CK, meeting the Semi-circle described on AL. Thus will $CK = \sqrt{(\frac{1}{2} a^2 - \frac{1}{2} ab)}$. Therefore, making $CF = CK$, F will be the Focus. The latter Equation furnishes us this Theorem.

If the Axis AB, be cut in the Focus F, the Rectangle under the Segments of the Axis AF, FB will be sub-quadruple of the Rectangle under the Parameter and the Axis. See FOCUS.

2°. The Parameter, and Axis AB given, the Conjugate Axis is easily found; as being a mean proportional, between the Axis and Parameter. Consequently, the Parameter is a third proportional to the greater and lesser Axis. Add, that the Square of half the Conjugate Axis, is equal to the Rectangle, under the Distance of the Focus from the Vertex, and its Complement to the Axis.

3°. In an Ellipsis, the Squares of the Semi-ordinates PM, and p m, &c. are to each other as the Rectangles under the Segments of the Axis. Hence $DC^2 : PM^2 = CB^2 : AP^2$. Consequently $DC^2 : CB^2 = PM^2 : AP^2$. That is, the Square of the less Axis is to the Square of the greater; as the Square of the Semi-ordinate, to the Rectangle under the Segments of the Axis.

4°. The right Line FD, (Fig. 24.) drawn from the Focus F, to the Extremity of the Conjugate Semi-Axis; is equal to half the transverse Axis AC.

Hence, the Conjugate Axes being given, the Foci are easily determined. For, bisecting the greater Axis AB in C; from C erect a Perpendicular CD, equal to the Conjugate Semi-Axis. Then, from D, with the Interval CA, the Foci F and f are determined.

To describe an ELLIPSE.

5°. The Sum of two right Lines FM, and fm drawn from each Focus of an Ellipsis, F and f to the same Point of the Periphery M, being equal to the greater Axis AB: The Conjugate Axes of an Ellipsis being given, the Ellipsis is easily described. For, determining the Foci F and f, as already directed; and fixing two Nails therein, and about these Nails tying a Thread FMf, equal to the Length of the greater Axis AB: The Thread being stretch'd, and a Style, or Pin, applied at its Extent, the Duét or Sweep of the Style or Thread about the Nails will describe an Ellipsis.

6°. The Rectangle under the Segments of the Conjugate Axis, is to the Square of its Semi-ordinate, as the Square of the Conjugate Axis, to the Square of the greater Axis. Hence, the Co-ordinates to the Conjugate Axis, have the same Relation, as there is between the Co-ordinates to the greater Axis. Consequently, the Parameter of the Conjugate Axis, is a third proportional to the Conjugate Axis, and the greater Axis.

To determine the Subtangent P T, (Fig. 25.) and Sub-normal P R in an ELLIPSE.

7°. As the first Axis, is to the Parameter; so is the Distance of the Semi-ordinate from the Centre, to the Sub-normal. See SUBNORMAL.

8°. The Rectangle under the Segments of the Axis, is equal to the Rectangle, under the Distance of the Semi-ordinate from the Centre, into the Subtangent. See SUBTANGENT.

9°. As the Distance of the Semi-ordinate from the Centre, is to half of the Axis; so is the Abscissa to the Portion of the Subtangent intercepted between the Vertex of the Ellipsis and the Tangent.

10°. The Rectangle under the subtangent P T, into the Abscissa A P, is equal to the Rectangle under the Segments

of the Axis. Hence, the Square of the Semi-Axis AC, is equal to the Rectangle of C T, into P C.

11°. The Rectangle under the Subtangent, and the Distance of the Ordinate from the Centre, is equal to the Difference of this Distance, and the Square of the Transverse Semi-Axis.

12°. In an Ellipsis, the Square of the Semi-ordinate is to the Square of the Conjugate Semi-diameter; as the Rectangle under the Segments of the Diameter, to the Square of the Semi-diameter. Consequently, the Relation of the Semi-ordinates to the Diameters, is the same as to the Axes: And the Parameter of the Diameter, is a third proportional to the Diameters.

IGURVE ELLIPSES, are those defined by the Equation $ay^2 + x^2 = bx^2 (a - x^2)$ which some call *Elliptoides*, if m be greater than 1, and n greater than 1. See ELLIPTOIDES. In Respect of these Curves, the Ellipsis of the first Kind is called the *Apollonian Ellipsis*.

QUADRATURE of the ELLIPSE. See QUADRATURE.

ELLIPSIS, in Grammar, and Rhetoric, a figurative Way of speaking, wherein something is suppress'd, or left out in a Discourse, and supposed or understood. See FIGURE. This chiefly happens, when, being under the Transport of a violent Passion, a Man is not at Leisure to say every Thing out at Length; the Tongue being too slow to keep Pace with the rapid Motions of the Mind. So that on these Occasions we only bring forth broken, interrupted Words and Expressions; which express the Violence of a Passion, better than any consistent Discourse.

Pa. Bossu considers the Ellipsis, as a Way of disguising Sentences; by suppressing the Word which should make the particular Application, and leaving the whole in a Kind of ingenious Ambiguity. See SENTENCE.

Thus, the Trojans, in Virgil, being reduced by Turnus to the last Extremity, and ready to be destroy'd, spy Æneas coming to assist them: Upon which the Poet says, *Spes addita suscitât Iras*. Which Expression signifies either, in particular, that the Hope they conceive retrieves and augments their Courage: Or in general, that the Hope of Assistance at Hand naturally raises Courage, and gives new Strength.

If the Poet had added a Word, and said, *Illis spes addita suscitât Iras*, the Passage had been expressly affected to the first Sense; and it had ceased to be a Sentence, and commenced the Application of a Sentence. The Suppression of that Word makes a Sentence in Form. See SENTENCE.

This, that excellent Critick looks on as one of the Finest of the Latin Tongue; wherein it had vastly the Advantage of the Modern Tongues. *Traite du Poeme Epique*. Page 466, &c.

ELLIPTIC, or ELLIPTICAL, something that belongs to an Ellipsis. See ELLIPSE.

Kepler first maintain'd, that the Orbits of the Planets are not Circular, but Elliptic; which Hypothesis was afterwards adhered to by M. Bouillaud, Mr. Flamsteed, Sir Isaac Newton, Mont. Cassini, and others, of the later Astronomers, have confirm'd the same: So that this, which was once by Way of Contempt call'd the *Elliptic Hypothesis*, is now the prevailing Doctrine. See ORBIT.

Dr. Isaac Newton demonstrates, that if any Body revolve round another in an Elliptic Orbit, its centrifugal Forces, or Gravities, will be in a duplicate Ratio; or as the Squares of its Distances from the Umbilicus, or Focus. See CENTRIFUGAL.

Serlio, Hartman, &c. demonstrated that the best Form for Arches, or Vaults, is the Elliptical. See ARCH.

ELLIPTIC SPACE, is the Area, contain'd within the Circumference, or Curve of the Ellipsis.

'Tis demonstrated, 1°. That the Elliptic Space is to a Circle described on the transverse Axis; as the Conjugate Diameter is to the transverse Axis.

2°. That the Elliptic Space is a mean proportional between two Circles described on the transverse and conjugate Axes. See CIRCLE.

ELLIPTIC CONOID, is the same with the Spheroid. See SPHEROID.

ELLIPTIC SPECULA, or MIRRORS. See MIRROR.

ELLIPTICAL COMPASSES, is an Instrument, made usually in Brass; for the drawing any Ellipsis, or Oval, at one Revolution of an Index. See COMPASSES.

ELLIPTICAL DIAL, is an Instrument, usually of Brass, with a Joint to fold together, and the Gnomon to fall flat; for the Sake of the Pocket.

By it are found the Meridian, Hour of the Day, Rising and Setting of the Sun, &c. See DIAL.

ELLIPTOIDES, an Infinite Ellipsis, i. e. an Ellipsis defined by the Equation $ay^2 + x^2 = bx^2 (a - x)^n$, wherein $m > 1$ and $n > 1$.

Of this there are several Kinds or Degrees: As the Cubical Ellipsoid, wherein $ay^2 = bx^2 (a - x)$. A Biquadratic or Sur-

Surdoploidal Elliptoid, or that of the third Order, wherein $ay^4 = bx^3$ (a - x)².
 If any other Ordinate be called v , and the correspondent Abscissa z ; there will be $av^m + n = bz^m$ (a - x)ⁿ.
 Consequently, $ay^m + n$; $ay^m + n = bx^m$ (a - x)ⁿ; bx^m (a - x)ⁿ that is, $y^m + n$; $v^m + n = x^m$ (a - x)ⁿ; z^m (a - x)ⁿ.

ELOCUTION, is defined by *Tully*, the chusing and adapting of Words, and Sentences, to the Things, or Sentiments, to be express'd. To the *Elocution* properly belongs the *Delectus Verborum*, the Choice of Words. See **RHETORIC**.

The Virtues of the *Elocution* consist chiefly in the Use of Figures, and figurative Dictions, in the Periods, and the Style. See **FIGURE**, **PERIOD**, and **STYLE**.

ELOGE, a Praise, or Panegyric, bestow'd on any Person, or Thing; in Consideration of its Merit. See **PANEGYRIC**.

The Term is principally used by the *French*; and from them borrow'd by the *English*. It is form'd of the *Greek*, *eulogia*, Commendation, &c.

That fine Discourse of *Socrates*, entitled *epiphonema*, is a historical *Eloge*, of the City of *Abeus*. *Fa. Labba*, has compos'd an historical *Eloge* of the City of *Boulogne*; *Fa. Menestrier*, of the City of *Lions*; and *M. Marivaux*, of the Bishops and Archbishops of *Paris*, for about a Century.

The Secretary of the Royal Academy of Sciences at *Paris*, makes the *Eloges* of such Members as die; and delivers them in public at the next Meeting of the Company. Funeral Orations are only *Eloges* of eminent Persons decas'd.

Some Authors have wrote *Eloges* on despicable, and even pernicious Things. See **ENCOMIUM**.

ELONGATION, in *Astronomy*, the Digression, or Receding of a Planet from the Sun, with Respect to an Eye placed on our Earth. See **PLANET**.

The greatest Distance of the Planet, &c. from the Sun, is called the greatest *Elongation*: Which varies on two Accounts, viz. in that both the Earth and the Planet revolve, not in Circles, but in Ellipses.

The *Elongation* is chiefly consider'd in *Venus* and *Mercury*: The greatest *Elongation* of *Venus* is 45 Degrees, and that of *Mercury* 30 Degrees: That is, the former never recedes from the Sun, or is seen distant from him, above 45°; nor the latter above 30°. Whence it is that *Mercury* is so rarely seen; as being usually lost in the Light of the Sun. See **MERCURY** and **VENUS**.

ELONGATION, is also us'd, by some Authors, for the Difference in Motion, between the swiftest and the slowest of two Planets; or the Quantity of Space, whereby the one has overgonc the other: Called also *Superation*.

The swiftest Motion of the Moon, with Regard to the Sun, is called the *Elongation* of the Moon from the Sun. See **MOON** and **SUN**.

We also say Diurnal *Elongation*, Hourly *Elongation*, &c. Angle of **ELONGATION**, or Angle at the Earth, is the Difference between the Sun's true Place, and the Geocentric Place of a Planet. Such is the Angle *ETR* (*Tab. Astron.* Fig. 40.) between the Place of the Sun E, and that of the Planet R.

ELONGATION, in Chirurgery, is an imperfect Luxation; when the Ligament of any Joint is so extended, or relaxed, as to lengthen the Limb, but yet not to let the Bone go quite out of its Place. See **LUXATION**.

ELOPEMENT, in Law, is when a married Woman, of her own Accord, departs from her Husband, and dwells with an Adulterer; for which, without voluntary Reconciliation to the Husband, she shall lose her Dowry; nor shall the Husband, in such Case, be compelled to allow her any Alimony. See **ALIMONY**.

Sponsa Virum Mulier fugiens, & adultera facta, Do se sua careret, nisi sponsa sponte revertata.

The Word is derived from the *Saxon*, *Teolepan*, i. e. to depart from one Place to dwell in another.

ELOQUENCE, the Art of speaking, or Writing well; or of touching and persuading. See **RHETORIC** and **ORATORY**.

Demosthenes, and *Cicero*, are the Princes of ancient *Eloquence*; the one among the *Greeks*, the other among the *Romans*. Their Manner, however, was exceedingly different; the first being close, strong, nervous, concise, severe, so that a Word could not be spared: The latter copious, florid, and rich, so that a Word could not be added.

It was objected to *Cicero*, that his *Eloquence* was *Asiatic*, that is, redundant, or stuffed with needless Words and Thoughts. See **STYLE**.

Peticles was call'd a Torrent of *Eloquence*, a *Tumultuous* of *Eloquence*. Pedants don't distinguish *Eloquence* from the heaping up of Figures, the Use of big Words, and the Roundness of Periods.

True *Eloquence* depends principally on the Vivacity of the Imagination. In Strictness, 'tis not that which gives Grace and Ornament, but Life and Motion, to Discourse. Its Mien is that of an *Amason*, not that of a *Cygnette*.

The Authors of the *Art of Thinking* remark, that the Rules of *Eloquence* are observ'd in the Conversations of People naturally *Eloquent*, tho' they never think of them, while they practise them. They practise those Rules because they are *Eloquent*; they don't use them to be *Eloquent*.

The *Eloquence* of the Chair, and Pulpit, is much more difficult than that of the Bar. Sir *George Mackenzie* has a Treatise of the *Eloquence* of the Bar. *Idea Eloquentia forensis*, &c.

ELUDING, the Act of evading, or rendering a Thing vain, and of no Effect; a dextrous getting clear, or escaping out of an Affair, a Difficulty, an Emburra.

The Design of Chicanery is to elude the Force of the Laws: This Doctor has not resolv'd the Difficulty, but Eluded it. To Elude a Proposition, &c.

Alexander, says the Historian, in cutting the Gordian Knot, either Eluded the Oracle, or fulfill'd it: *Ille nequicquam incensus cum latebris Nodis, nihil, inquit, interest, quomodo solvatur; Gladioso ruppit omnibus Joris, Oraenii forem vel clavis vel implevit.* Q. Curt. 13.

ELYSIUM, or **ELYSEAN**, or **ELISIAN Fields**, in the ancient Theology, or rather Mythology; a Place in the *Jusuri*, i. e. in the lower World, or as we sometimes render it, in Hell; furnish'd with Fields, Meads, agreeable Woods, Groves, Shadoes, Rivers, &c. whether the Souls of good People went after this Life.

Orpheus, *Hercules*, and *Aeneas*, are held to have descended into them, in their Life-time, and return'd again. *Virgil*, Lib. VI. v. 638, &c. And *Tibullus*, Lib. I. *Eleg.* 3. give us fine Descriptions of the *Elysian Fields*.

Virgil, opposes *Elysium* to *Tartara*; which was the Place where the Wicked underwent their Punishment.

Heic Locus est, pariter ubi se via fudit in ambas: Dextera, qua Diis magis sub membris tendit: Hoc iter Elysium nobis: at laeva Malorum Exeret Paros, & ad Impia tartara mittit.

Some Authors take the Fable to have been borrowed from the *Phoenicians*; as imagining the Name *Elysium* form'd from the *Phoenician* *Elas*, or *Uly alas*, or *Uly alas*, to rejoice, or be in Joy; the Letter *a* being only changed into *e*, as we find done in many other Names; as in *Enakim*, for *Anakim*, &c. On which Footing *Elysian Fields* should signifie the same Thing as a Place of Pleasure, or:

Locos letos & Amans vitas Fortunatorum Nervorum, sedesque beatas. Virg.

Others, derive the Word from the *Greek*, *ελυω*, *solvo*, *I deliver*, *I let loose*, *disengage*; by Reason here Men's Souls are freed, or disencumber'd from the Fetters of the Body. *Bernardus* and *Hornius*, Hist. Philosph. L. III. C. 2. take the Place to have deriv'd its Name from *Elion*, one of the first who came into Greece after the Deluge, and the Author and Father of the *Attolians*. *Ol. Rudbeck*'s contends, that it was in Sweden the *Elysian Fields* were plac'd. See **ACHERON**.

On the Subject of the *Elysian Fields*, see the Treatise of *J. Windet*, de *Vitis fustorum Statu*.

ELYTHROIDES, in Anatomy, one of the proper Coats, or Tunicks of the Testicles. See **TESTICLE**.

The *Elythroides* is the second proper Coat of the Testis: It resembles a Sheath, or *Vagina*, whence some have also call'd it *Vaginalis*.

It is form'd of a Dilatation, of the Production of the *Peritonaeum*: Its inner Surface is smooth and equable; and the outer rough and unequal; which makes it adhere the more strongly to the first of the proper Coats, called *Erythroides*.

The Word is form'd of the *Greek*, *ελυθηρ*, *Vagina*, a Sheath, and *ειδος*, *Form*.

EMANATION, the Act of flowing, or proceeding, from some Source, or Origin.

As, the Emanation of Light from the Sun; of Effluvia from odorous, &c. Bodies; of Wisdom, from God, &c.

The Word is also us'd for the Thing that proceeds, as well as the Act of Proceeding: As, the Power given a Judge, is an Emanation from the Regal Power: The reasonable Soul is an Emanation from the Divinity: The Holy Spirit is an Emanation from the Father and the Son, &c.

The Word is form'd of the *Latin* *e*, out, and *manare*, to flow.

Among the School-men, *Emanation* is also used for the Production of some lesser Thing, in Order to the Production of a greater, by Virtue of some natural Connection, or Dependence between them.

For, as when several Moveables are join'd together, the same Power that moves the first moves all the rest (as in pulling up the Trunk, you pull up the Roots, Branches, &c. or in drawing one Link of a Chain, you bring forward all the rest). The same is to be understood in all conjunct, natural Effects; viz. that the same Power whereby the first is produced, does also produce all the rest, naturally connected to it: In that by Means of the Connection, the Action of the Agent is convey'd from one to the other; so that the first determines the Agent to the Production of all the rest.

In this Sense, they say an *Emanation* of Properties from the Essence, wherewith they have a natural Connection.

And hence that is call'd an *Emanative Cause*, (in Contradistinction to an Efficient Cause) which produces an Effect by its mere Presence, without the Intervention of any Action; as a Rose doth a Smell, &c. Others, and with good Reason, deny that there is any such Thing as an *Emanative Cause*, to produce an Effect without any Action. See CAUSE.

EMANCHE, in Heraldry. See MANCHE.

EMANCIPATION, in the Roman Law, the Act of setting a Son free from the Power, and Subjection to his Father. See FREEDOM, ENFRANCHISING, &c.

The Effect of *Emancipation* was, that the Goods, and moveable Effects, which the Son should thenceforth acquire, should be his sole Property, and not the Property of his Father; as they were before *Emancipation*. Beside that, *Emancipation* put the Son in a Capacity of managing his own Affairs, and of marrying without his Father's Consent, tho' a Minor, or Pupil, and less than 25 Years of Age. See PERIL, &c.

There were two Kinds of *Emancipation*: The one *ratæ*, which was by the Son's being promoted to some Dignity, or by his becoming of Age, or by Marriage: In all which Cases, the Son became his own Master of Course.

The other *express*, where the Father declared before the Judge, that he *emancipated* his Son. This was not perform'd without some Formality: The Father was first to sell his Son imaginarily, to another Man, whom the Lawyers call *Pater Fiduciarius*, Father in Trust; of whom being bought back again by the natural Father, he manumitted, or set him free by a Declaration before the Judge. See MANUMISSION.

That imaginary Sale was call'd *Mancipatio*; and the Manumission, consequent thereon, *Emancipatio*.

Emancipation still obtains in France, chiefly, with Regard to Minors, or Pupils, who are hereby set at Liberty to manage their Effects, without the Advice, or Direction, of their Fathers or Tutors. It must be observed, however, that the *Emancipation* only extends to the selling of Moveables, and letting of Leases, &c. of Immoveables; not to the Selling or Mortgaging of Immoveables: Which are only done with the Consent of a *Curator*, ordinarily appointed a Person when *emancipated*.

Formerly, *Emancipation* was perform'd in the ordinary Courts of Justice, when desired by the Child; but if he were a Minor, the King's Letter was required. Tho' there were other Ways of *Emancipation*, as Marriage; the Age of 20 Years: And in some Provinces, the Death of the Mother, by Reason the Children were there under the Power of the Father and Mother conjointly, so that the Death of either of them *emancipated* the Child.
