PLANT AND SOIL DISEASES

THE BUREAU OF PLANT INDUSTRY

WASHINGTON, D. C.

[The following text is extremely faint and illegible due to the quality of the scan. It appears to be the title page of a technical manual or report, likely containing details about plant and soil diseases.]

TO THE

K I N G.

S I R,

THE ARTS and SCIENCES humbly crave Audience of Your Majesty. The near Concern they have in the Happiness of a People, assures 'em of the favourable Attention of a Prince who makes that Happiness his own. 'Tis by These, the Parsimony of Nature is supplied, and Life render'd easy and agreeable under its numerous Infirmities. By these the Mind is reclaim'd from its native Wildness; and enrich'd with Sentiments which lead to Virtue and Glory. 'Tis these, in fine, that make the Difference between your Majesty's Subjects, and the Savages of *Canada*, or the *Cape of Good Hope*.

THE Protection of ARTS has ever been esteem'd the proper Province of the Great. 'Tis a Branch of the Regal Office; which a Prince, like Your Majesty, equal to the whole Charge of a Crown, will not suffer to be alienated into other Hands. From this, do the first and most distinguish'd Names in the List of Fame, derive a large Share of their Glory: and if there be any Age or Nation more conspicuous than the rest, and which is look'd on with Envy by our own; 'tis that wherein the Sovereigns have signaliz'd themselves most in this Quality.—Indeed, the Time seems at hand, when we are no longer to envy *Rome* her AUGUSTUS and AUGUSTAN AGE, but *Rome* in her turn shall envy ours.

SOMETHING extraordinary is apparently intended by Providence in calling such a Prince, to such a People: A Prince who feels a generous Impulse to devote his Cares and all his Toils to the Welfare of Mankind; and a People conspiring with unexampled Ardor and Unanimity to all his glorious Views. Some of our best Princes have had their Hands ty'd down; check'd by reluctant Factions, who oppos'd every nobler Design: Your Majesty has found the happy Secret, to make even Contention do you Homage; and turn Opposition itself into Approbation, and Applause.

THERE is a Time reserv'd in Fate for every Nation to arrive at its Height; and the uppermost Place on the Terrestrial Ball is held successively by several States. May not the numerous Prefages which usher in Your Majesty's Reign, give us room

D E D I C A T I O N.

to expect that our Turn is next; and that what *Greece* was under *ALEXANDER*, and *Rome* under *AUGUSTUS Cæsar*, *Britain* shall be under *GEORGE* and *CAROLINE*?

BUT even this were to under-rate our Hopes, which are rais'd, by Your Majesty, to something still more truly glorious. Greatness, so fondly coveted, has already cost the World very dear; and, tho' still pursued by unthinking Men under almost every Shape, is only desirable in a few. Of it self it is rather an Object of Terror and Alarm, than Delight; and at best only pleases, when join'd with something naturally amiable. From the Practice of Your Majesty, Men may correct their Sentiments, and learn, that Greatness has no Charm except when founded in Goodness. To be Great, and a King, is but a small Matter with Your Majesty; 'tis a Quality many others enjoy in common with You, and to which some have even been doom'd, to their Infamy: 'tis what *Herod* was, and *Nebuchadnezzar* was; and *Nero*, and *Domitian* were. But, while other Princes chuse to be great in what is destructive, and others in things wholly indifferent; 'tis Your Majesty's Praise to be great in what is the Perfection of our Nature, and that whereby we approach nearest the Deity. Happy Choice! to use Power only as the Means of rendering your Beneficence more diffusive; and thus make Power and Royalty minister to the Happiness of Mankind, which they have too often invaded.

YOUR Majesty commands a People capable of every thing. Not more fitted to shine in Arms, or maintain an extended Commerce; than to succeed in the stiller Pursuits of Philosophy and Literature. And it will be Your Majesty's Glory, not to let any of their Talents lie unemploy'd.—If Your Majesty gives the Word, while some of 'em are busied in avenging Your Cause, by humbling some turbulent Monarch; some in extending your Dominions by new Settlements, and some in increasing your Peoples Wealth, by new Trades: Others will be employ'd in enlarging our Knowledge, by new Discoveries in Nature, or new Contrivances of Art; others in refining our Language; others in improving our Morals; and others in recording the Glories of your Reign, in immortal Verse.

THE Work I here presume to lay at Your Majesty's Feet, is an Attempt towards a Survey of the Republick of Learning, as it stands at the Beginning of Your Majesty's auspicious Reign. We have here the Boundary that circumscribes our present Prospect; and separates the known, from the unknown Parts of the Intelligible World. Under Your Majesty's Princely Influence and Encouragement, we promise our selves this Boundary will be removed, and the Prospect extended far into the other Hemisphere. Methinks I see Trophies erecting to Your Majesty in the yet undiscover'd Regions of Science; and Your Majesty's Name inscribed to Inventions at present held impossible!

I am, with all Sincerity and Devotion,

May it please Your MAJESTY,

Your Majesty's most Dutiful,

and Obedient Subject,

and Servant,

Ephraim Chambers.

T H E

P R E F A C E.

TIS not without some Concern that I put this Work in the Reader's Hands; a Work so disproportionate to a single Person's Experience, and which might have employ'd an Academy. What adds to my Jealousy, is the little measure of Time allow'd for a Performance to which a Man's whole Life scarce seems equal. The bare Vocabulary of the Academy *della Crusca* was above forty Years in compiling, and the Dictionary of the *French Academy* much longer; and yet the present Work is as much more extensive than either of them in its Nature and Subject, as it falls short of 'em in number of Years, or of Persons employ'd.

THE Reader might be here led to suspect something of Disingenuity; and think I first put a Book upon him, and then give him Reasons why I should not have done it.—But his Suspicions will cease, when he is appriz'd of the Advantages under which I engaged; which, in one Sense, are superior to what had been known in any former Work of the Kind; all that had been done in them accruing, of course, to the Benefit of this. I come like an Heir to a large Patrimony, gradually rais'd by the Industry, and Endeavours of a long Race of Ancestors. What the *French Academists*, the *Jesuits de Trevoux*, *Daviler*, *Chomel*, *Savary*, *Cbaucun*, *Harris*, *Wolfius*, and many more have done, has been subservient to my Purposes. To say nothing of a numerous Class of particular Dictionaries which contributed their Share; Lexicons on almost every Subject, from Medicine and Law, down to Heraldry and the Manage.

Yet this is but a Part. I am far from having contented my self to take what was ready procur'd; but have augmented it with a large Accession from other Quarters. No part of the Commonwealth of Learning, but has been traffick'd to on this Occasion. Recourfe has been had to the *Originals* themselves on the several Arts; and, not to mention what small Matters could be furnish'd *de proprio pectore*, the Reader will here have Extracts and Accounts from a great Number of *Autours* of all Kinds, either overlook'd by former Dictionaryists, or not then extant; and a Multitude of Improvements in the several Parts, especially of Natural Knowledge, made in these last Years. I should produce Instances hereof; but I hope this would be needless, as it is endless; and that there are few Pages which will not afford several.

SUCH are the Sources from whence the Materials of the present Work were derived; which, it must be allowed, were rich enough not only to afford Plenty, but even Profusion: So that the chief Difficulty lay in the Form; in the Order, and Economy of the Work: To dispose such a Variety of Materials in such manner, as not to make a confus'd Heap of incongruous Parts, but one consistent Whole.—And here it must be confess'd there was no Assistance to be had; but I was forced to stand wholly on my own Bottom. Former Lexicographers have not attempted any thing like Structure in their Works; nor seem to have been aware that a Dictionary was in some measure capable of the Advantages of a continued Discourse. Accordingly, we see nothing like a Whole in what they have done: And hence, such Materials as they did afford for the present Work, generally needed further Preparation, ere they became fit for our Purpose; which was as different from theirs, as a System from a Cento.

THIS we endeavour'd to attain, by considering the several Matters not only absolutely and independently, as to what they are in themselves; but also relatively, or as they respect each other. They are both treated as so many Wholes, and as so many Parts of some greater Whole; their Connexion with which, is pointed out by a *Reference*. So that by a Course of References, from Generals to Particulars; from Premises to Conclusions; from Cause to Effect; and *vice versa*, i. e. in one word, from more to less complex, and from less to more: A Communication is opened between the several Parts of the Work; and the several Articles are in some measure replaced in their natural Order of Science, out of which the Technical or Alphabetical one had remov'd them.

FOR an Instance.—The Article ANATOMY is not only consider'd as a *Whole*, i. e. as a particular Combination or System of Ideas; and accordingly divided into its Parts, *Humane* and *Comparative*: and Humane again subdivided into the Analysis of *Solids* and *Fluids*, (which are refer'd to in the several Places in the Book, where they themselves being treated of, refer to others still lower, and so on) but also as a *Part* of MEDICINE; which accordingly it refers to, and which it self refers to another higher, &c.—By which means a Chain is carried on from one End of an Art to the other, i. e. from the first or simplest Complication of Ideas appropriated to the Art, which we call the *Elements* or Principles thereof; to the most complex or general one, the *Name* or Term that denotes the whole Art.

NOR is the Pursuit dropt here; but as the Elements or Data in one Art, are ordinarily *quæstæ* in some other subordinate one, and are furnish'd thereby; (as here for Instance, the Elements of *Anatomy* are furnish'd by *Natural History*, *Physicks*, and *Mechanicks*; and *Anatomy* may be consider'd as a Datum, or Element furnish'd to Medicine) We carry on the View farther, and refer out of one Art or Province into the adjoining ones, and thus lay the whole Land of Knowledge open: It appears indeed with the Face of a Wilderness; but 'tis a Wilderness thro' which the Reader may pursue his Journey as securely, tho' not so expeditiously and easily, as thro' a regular Parterre.

IT may be even said, that if the System be an Improvement upon the Dictionary; the Dictionary is some Advantage to the System; and that this is perhaps the only Way wherein the whole Circle or Body of Knowledge can be deliver'd. In any other Form, many thousand Things must necessarily be hid and overlook'd: All the Pins, the Joints, the binding of the Fabrick must be invisible of course; all the lesser Parts, one might say all the Parts whatsoever, must be in some measure swallowed up in the Whole. The Imagination, stretch'd

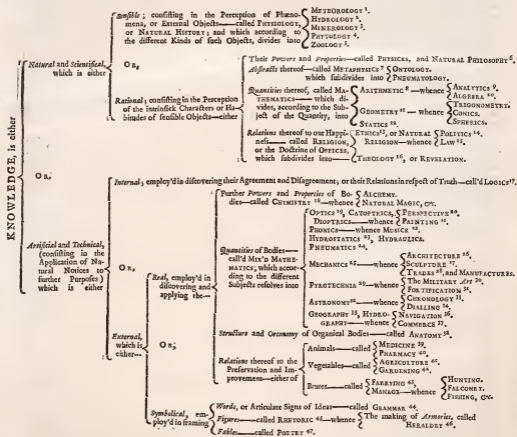

and amplified to take in so large a Structure, can have but a very general, indistinct Perception of any of the Parts.—Whereas the Parts are not less Matter of Knowledge when taken separately, than when put together. Nay, and in strictness, as our Ideas are all Singulars or Individuals, and as every Thing that exists is one; it seems more natural to consider Knowledge in its proper Parts, *i. e.* as divided into separate Articles denoted by different Terms; than to consider the whole Assemblage of it in its utmost Composition: which is a thing merely artificial and imaginary.

AND yet the latter Way must be allow'd to have many and real Advantages over the former; which in truth is only of use and significance as it partakes thereof: For this Reason, that all Writing is in its own Nature artificial; and that the Imagination is really the Faculty it immediately applies to. Hence it should follow, that the most advantageous way, is to make use of both Methods: To consider every Point both as a Part; and to help the Imagination to the Whole: and as a Whole, to help it to every Part.—Which is the View in the present Work—so far as the many and great Difficulties we had to labour under would allow us to pursue it.

IN this View we have endeavour'd to give the Substance of what has been hitherto found in the several Branches of Knowledge both natural and artificial; that is, of Nature, *first*, as she appears to our Senses; either spontaneously, as in Natural History; or with the Assistance of Art, as in Anatomy, Chymistry, Medicine, Agriculture, &c. *Secondly*, to our Imagination; as in Grammar, Rhetoric, Poetry, &c. *Thirdly*, to our Reason; as in Physics, Metaphysics, Logicks, and Mathematics. With the several subordinate Arts arising from each; as Architecture, Painting, Sculpture, Trade, Manufactures, Policy, Law, &c. and numerous remote Particulars, not immediately reducible to any of these Heads; as Heraldry, Philology, Antiquities, Customs, &c.

THE Plan of the Work, then, I hope, will be allow'd to be good; whatever Exceptions may be taken to the Execution of it. It would look extravagant to say, That half the Men of Letters of an Age might be employ'd in it to advance; and yet it will appear, that a Work accomplish'd as it ought to be, on the Footing of this, would answer all the Purposes of a Library, except Parade and Incumbrance; and contribute more to the propagating of useful Knowledge thro' the Body of a People, than any, I had almost said all, the Books extant.—After this, let the Reader judge how far I may deserve Censure for engaging in it, even disadvantageously; and whether to have fall'd in so noble a Design, may not be some degree of Praise.

BUT, it will be here necessary to carry on the Division of Knowledge a little further; and make a precise Partition of the Body thereof, in the more formal Way of Analysis: The rather, as an Analysis, by shewing the Origin and Derivation of the several Parts, and the Relation in which they stand to their common Stock and to each other; will assist in restoring 'em to their proper Places, and connecting 'em together.

THIS is a View of Knowledge, as it were, *in femine*; exhibiting only the grand, constituent Parts thereof. It would be endless to pursue it into all its Members and Ramifications; which is the proper Business of the Book it self. It might here, therefore, seem sufficient to refer from the several Heads thus deduced, to the same in the Course of the Work; where their Division is carried on. And yet this would sometimes prove inconvenient for the Reader; who to find some particular Matter must go a long Circuit, and be banded from one part of the Book to another: To say nothing of the Interruptions which may frequently happen in the Series of References. To obviate this we shall take a middle Course, and carry on the Distribution further, in a Note in the Margin;

gin; but this in a looser manner, to prevent the Embarrass of an Analysis so complex and diffusive as this must prove. Some of the principal Heads of each Kind will here come in sight, and such as will naturally suggest, and lead to the rest; so that this will afford the Reader a sort of Summary of the Whole: And at the same time will dispense a kind of auxiliary or succedaneous Order thro'out the Whole; the numerous Articles omitted, all naturally enough ranging themselves to their proper Places among these. A Detail of this Kind is of the more Consequence, as it may not only supply the Office of a *Table of Contents*, by presenting the dispersed Materials of the Book in one View; but also that of a *Directory*, by indicating the Order they are most advantageously read in.—*Note*, then, that the *initial* Articles here, tally to the *final* ones of the Analysis; and that the several *Members* hereof, are so many *Heads* in the

I

METEOROLOGY, or the History of AIR and ATMOSPHERE: including, 1^o, that of its Constit. *Aether, Fire, Vapor, Exhalation*, &c. 2^o, Meteors form'd thereof, as *Cloud, Rain, Shower, Drizzle, Snow, Hail, Dew, Damp, &c. Rain-bow, Parhelion, Halo, Thunder, Water-spout*, &c. 3^o, Winds, *Men-fcen, Hurricane*, and the like.

HYDROLOGY, or the History of WATER; including that of *Spring, Rivers, Acidula*, &c. of *Lake, Sea, Ocean*, &c. of *Tides, Deluge*, and the like.

MINEROLOGY, or the History of EARTH; 1^o, Its Parts, as *Mountain, Mine, Maf, Bog, Grotto*, and their Phenomena, as *Earth, quake, Volcano, Conflagration*, &c. Its Strata, as *Clay, Sole, Sand-stone*, &c. 2^o, Fossils or Minerals, as *Metals, Gold, Silver, Mercury*, &c. with Operations relating to 'em, as *Fusion, Refining, Purifying, Daring, Etching*, &c. *Litharge, Lavatory, Pines*, &c. Salts, as *Nitre, Nitron, Gemma, Silica, Armoniac, Borax*, &c. Sulphurs, as *Arfenic, Amber, Ambergreaf, Coal, Bitumen, Naphtha, Petrol*, &c. Semimetals, as *Antimony, Cinabar, Marcasite, Magnet, Bifmuth, Calamine, Cobalt*, &c. Stones, as *Marble, Porphyry, Slate, Adfpar*, &c. Gems, as *Diamond, Ruby, Emerald, Opal, Turcoif, &c. Amethyst, Lapis*, &c. whence *Ultramarine, Azure*, &c. Petrifications, as *Crystal, Spar, Stalactites, Trachites, Cornu Ammonii*, and the like.

PHYTOLOGY, or the History of PLANTS; their Origin, in the *Seed, Fruit*, &c. Their Kinds, as *Trees, Herb*, &c. extraordinary Species, as *Tea, Coffee, Paraguay, Vine, Ginseng, Cotton, Tobacco*, &c. *Coral, Mushroom, Truffle, Parasite, Miffile, Maf*, &c. Paris, as *Road, Stone, Flower*; *Wood*, as *Gumacum, Saffron, Ebony, Aloes*, &c. Leaf, as *Foliation, Ruff*, &c. Bark, as *Quinquina*, &c. *Piffil, Farina, Stamina*, &c. Operations thereof, as *Vegetation, Germination, Circulation*, &c. Circumftances, as *Perpendicularity, Parallelifm, Ferility*, &c. Productions, as *Honey, Wax, Balin, Sugar, Manna*, &c. *Gum, Ruff, Camphor*, &c. *Indigo, Opium, Galls*, and the like.

ZOOLOGY, or the History of ANIMALS: Their Origin in *Egg, Embryo, Foetus, Generation, Conception, Gestation, Hatching, Migration*, &c. Their Kinds, as *Quadruped, Bird, Fish, Infeft, Reptile, Romitant, Carnivorous*, &c. Extraordinary Species, as *Unicorn, Torpedo, Tarantula, Tortoff, Camelion, Salamander*, &c. *Barnacle, Anchovy, Death Watch*, &c. Moulths, as *Double Animals, Hermaphrodite, Male, Pifmy, Giant*, &c. Metamorphoses, as *Aurelia, Metemphychofis*, &c. Parts, as *Head, Hand, Foot, Finger, Tail, Fin, Wing, Gill*, &c. Covering, as *Hair, Wool, Silk, Feathers*, &c. *Armature*, as *Nail, Sting, Horn, Tooth, Shell, Procyfis, Web*, &c. Productions, as *Pearl, Bezoard, Calfeum, Oves, Meccum, Mummy, Ufnea*, &c. *Kermes, Cochineal*, &c. Motion, as *Flying, Swimming*, and the like.

PHYSICS, or the Doctrine of CAUSES; as *Nature, Law*, &c. Occasions or Means, as *Principle, Matter, Form*, &c. Their Composition or Constitution, in *Element, Atom, Particle, Body, Class, World, Univerfis, Space, Vacuum*, &c. Properties of Body, as *Extension, Solidity, Figure, Divifibility*, &c. Powers thereof, as *Attraction, Cohesion, Gravitation, Repulfion, Elasticity, Electricity, Magnetifm*, &c. Qualities, as *Fluidity, Promifc, Ductility, Hardnefs, Volatility, Density, Polarity*, &c. *Light, Heat, Cold*, &c. Operations or Effects thereof, as *Motion, Rarefaction, Dilatation, Condensation, Diffufion, Evolution, Freezing, Evaporation, Fermentation, Diftion, Effervescence*, &c. *Piffim, Swine, Haring, Faling, Smelling*, &c. Modifications or Changes, as *Aftivation, Corruption, Putrefaction, Generation, Degeneration, Transmutation*, &c. Systems or Hypothefis hereof, *Copernican, Epicurean, Aristotilian, Peripatetic, Cartesian, Newtonian*, &c.—Occult and Fictitious Qualities, Powers, and Operations, *Antipoffifals, Sympoffis, Antipaf, Archans*, &c. *Magic, Witchcraft, Virgine Divina, Ligarure, Talifman, Cabbala*, &c. *Ormid, Bard, Urachan, Gynnoftichif, Magi, Ruffician*, and the like.

METAPHYSICS, or the Doctrine of ENDS, EFFENCES, EXISTENCE, POWER, &c. *Underftanding*, &c.—THE MIND, Its Faculties, *Apprehenfion, Judgment, Imagination, Reafon, Will*, &c. Its Operations, *Attention, Reflection, Affociation, Abftraction*, &c. Its Perceptions, as *Subftance, Accident, Mode*, &c. Relations, as *Unity, Multitude, Infinity, Univerfal*, &c. *Quantity, Quality, Whole, Part*, &c. *Genus, Species, Difference*, &c. *Proper, Oppofite, Circumftance, External*, &c. Effects hereof, *Knowledge, Science, Art, Experience*, &c. Conditions, *Probability, Certainty, Fullity*, &c. Systems hereof, *Nominals, Scitific*, &c.

ARITHMETIC, including the Doctrine of DISCRETE or DISCONTINUOUS QUANTITY, viz. *Number, Ratio, Proportion*, &c. *Kinda*, as *Integer, Fraction, Decimal, Serid*, &c. Relations, as *Rat, Prover, Square, Cube*, &c. Rules or Operations thereof, as *Notation, Numeration, Addition, Subtraction*, &c. *Reduction, Praxifis, Poffion*, &c. *Extraction, Approximation*, &c. *Inftroments* fubfervient thereto, as *Logarithms, Nipair's Bones*, &c.

ANALYTICS, or the Refolution of PROBLEMS by Species or Symbolical Expressions: Rules or Operations hereof, *Addition, Subtraction, Multiplication*, &c. Application thereof, in *Combinations, Permutations, Magic Squares, Chances, Gamus*, &c. *Series, Progreffus*, &c. *Methods de Maximi, Fluxions, Exponentialis, Tangent*, &c.

ALGEBRA, or the Doctrine of EQUATIONS; *Simple, Quadratic, Cubic*, &c. Operations thereof, as *Reduction, Conftruction*, &c.

GEOMETRY, or the Doctrine of EXTENDED, or CONTINUOUS QUANTITY, viz. 1^o, *Lines, Right, Perpendicular, Parallel, Oblique*, &c. *Angles, Area, Scalens, Vertical, Oppofit*, &c. 2^o, *Figure*, or Surfaces, *Triangle, Square, Parallelogram, Trapezium, Polygon*, &c. Circumftances hereof, as *Perimeter, Area*, &c. Operations relating hereto, as *Bifecting, Dividing, Multiplying, Meafuring*, &c. *Inftroments* used thereto, as *Compass, Ruler, Square, Parallelifm, Scale*, &c. *Curves*, as *Circle, Cycloid, Cifoid, Catenaria, Conic, Evolute, Squadratrix*, &c. Circumftances thereof, as *Axis, Diameter, Radius, Centre, Circumference, Affix, Ordinate*, &c. *Arch, Chord, Sine, Tangent, Secant*, &c. *Inftroments* used hereto, as *Artificial Lines, Circles*, &c. Operations arising herefrom, as *Surveying, taking Angles or Bearings*, &c. with *Quadrant, Flaw-Table, Semicircle, Circumferentor*, &c. taking *Diftance*, with *Chain, Perambulator*, &c. *Plating into Draught*, *Map*, &c. with *Protractor*, &c. 3^o, *Solids* or Bodies, as *Cube, Parallelepiped, Prism, Pyramid, Cylinder, Polyhedron*, &c. Their *Surface, Solidity*, &c. Operations relating hereto, as *Cutvatore*, *meafuring of Timber, Gauging*, &c. *Inftroments* used hereto, as *Carpenters Rule, Settor, Sliding Rule, Gauging Rod*, &c.—The Sphere, its Doctrine, *Projection*, &c. Application thereof, in *Planifphere, Analemma*, &c.—The Cone, its *Sections, Ellipfis, Parabola, Hyperbola*, &c. Their *Asymptotes, Foci*, &c. Their *Conftruction, Quadrature, Rectification*, &c.

STATICS, or the Doctrine of MOTION; Its *Laws, Velocity, Momentum*, &c. *Caufes*, as *Gravity, Percuffion, Communication*, &c. *Modifications*, as *Composition, Acceleration, Retardation, Reflection, Refraction*, &c. *Kinda*, as *Afcent, Defcent, Central, Centrifical*, &c. *Oftillation, Undulation, Projection*, &c. Powers or Applications thereof, as *Lever, Screw*, &c. *Pendulum, Projectile*, &c. Operations directed hereto, as *Gannery, the Mechanical Art*, &c. enumerated hereafter.

ETHICS, or the Consideration of NATURAL INCLINATIONS, PASSIONS, &c. Objects thereof, as *Good, Evil, Virtue, Vice, Beauty, Deformity*, &c. *Pleafure, Pain*, &c. *Refidence, Envy, Confidence*, &c. *Law, Obligacion*, &c. *Will, Liberty, Adifin, Affeuf, &c. Necessity, Preffion, Providence*, &c. Systems hereof, *Stoicifm, Platonifm, Academy, Cynic*, and the like.

POLICY, or the Consideration of SOCIETY and COMMONWEAL; Its Origin, in *Contract*, &c. Constitutions and Forms thereof, as 1^o, *Monarchy, Defpotifm*, &c. Powers thereof, *King, Queen, Prince, Duke, Emperor, Sultan, Poply, Caliph, Cafar, Czar, Ince, Erbanarch, Tarrarch, Defpot*, and the like. Their Titles, *Majesty, Highnefs, Grace, Excellence*, and the like. Their Regalia, *Crown, Scepter, Tura, Fafes*, &c. 2^o, *Aristocracy* its Powers, as *Archon, Dictator, Doge, Senate, Council*, &c. 3^o, *Democracy*; *States-General, Stadtholder, Protector*, &c. Their *Succession, Elective, Hereditary*, by *Primogeniture*, &c. Their *Transactions*, as *Peace, War, Treaty, Union, League, Croifade*, &c. By *Arms, Flact, Embaffie, Secretary, Plenipotentiary, Envoy, Legat, Nuncio*, &c. Their *Territories, Empire, Principality, Signory*, &c. Their *Estates, Nobles, Commons, Clergy, Confes, Enumeration, Tribe, Quarter*, &c. *Province, Circle, County, Gay, Town*, &c. *Magiftrature, Chancellor, Judge, Sheriff, Justice, Mayor, Alderman, Bailiff, Conftable, Inter-Rex, Consul, Protor, Conful, Vizir, Tribune, Triumvir, Provoft, Epifci, Adie, Prefit, Quefor, Provincial, Vice-Roy, Lieutenant, Steward, Warden, Keeper, Jurifconfultus, Proverfar, Advocate, Barrifter, Prothonotary, Cufos, Philotar, Chirographer, Uffer, Clerk*, &c. Their *Justification*; *Courts*, as *Areopagus, Comitia*, &c. *Parliament, Dine, Divan, Chamber, Affize, Privy Council*, &c. *Chancery, King's-Bench, Exchequer, Admiralty, Verge, Juffions, Tern, County Court, Lee, Eyre*, &c. *Terms, Greivis, Commissions, Cyer, Convocation, Archde, Prerogative, Faculties, Delegates, Reta, Inquifition*, &c. Their *Revenues, Treafury, Effe, Exchequer, Tally, Polinal Arithmetick, Ducies, Customs, Gabel, Excife*, &c. *Coinage, Money, Interest, Uffury*, &c. Their *Houfhold, Chamber, Grand-Cloft, Wardrobe*, &c. *Under-Steward, Chamberlain, Comptroller, Cofferer, Ago, Ode*, &c. *Guard, Stables, Ordnance*, &c. directed by *Captain, Master, Esquary*, &c. *Militia, Navy, Poff, Timorist, Artilleryman*, &c. *Dignities, Dolphin, Elector, Palatine, Grace, Pallgrave, Thane, Earl, Count, Knight, Gervier, Barone, Bath, Titonit, Male, Elephant*, &c. *Gentleman, Toman*, &c. Their *Names, Surnames, Titles, Precedence*, &c. *Factions, Patriotic, Guelph, Tory*, &c. *Corporations*, or lesser *Communities, Univerfity, Academy, Colleges*

I MIGHT here have ended my Preface; and perhaps the Reader would be willing enough to be thus dismissed. But something has been already started which will require a further Disquisition.—The Distribution we have made of Knowledge is founded on this, That the several Branches thereof commence either *Art or Science* according to the Agency or Non-agency of the human Mind in respect thereof: It remains to take the Matter up a little higher; and explain the Reason and Manner of this Operation. To consider Knowledge in its Principles,

lege, Axioms, Chapter, School, Hospital, Inn, Public Edifice, Guildhall, Prison, Tower, Arsenal, Library, Museum, Circus, &c. Solemn Ceremonies, as Triumph, Tournament, Coronation, Quadrif. Demaree, Medal, Trophy, Monument, Funeral, Tomb, Catacomb, &c.

¹⁴ **LAW**, or the Rules and Measures of SOCIETY; published in *Acts, Statute, Charter, Rescript, Constitution, Decree, Senatus-consultum, Pragmatic sanction, &c.* Recorded, in *Infinite, Civil, Novel, Reviser, Preamble, Corpus, Donative, &c.* Kinds, *Grat, Coum, Sumptuary, &c.* Respecting, *1^o*, Persons, as the King; his Prerogative, Royalties, &c. viz. *granting Dispensation, Pardon, Commutation, Exemption, Dispense, Franchise, Forc, Part, Parlon, Vert, Chafe, Inoff, Inoff, Tith, Tax, Aid, Aidage, Surtax, Drilage, Waifs, Fines, Fieckart, Treasures Trove, &c.* Officers and Magistrates, created by *Writ, Warrant, Commission, &c.* Their Oath, *Yis, Declaration, Votation, Prosecution, &c.* Corporations, Regular, Secular, &c. made by *Charter, Patent, &c.* dissolved by *Writ, Warrant, Mandamus, &c.* Subjects, as *Denizens, Naturalization, Husband, Wife, Marriage, Concubine, Separation, Alimony, Dower, Agency, Bastard, Adoptive, Emancipation, Lord, Tenant, Villain, Vassal, Client, Patron, Striver, Slave, Retainer, Manumission, Emfranchising, &c.* Tenure, *Service, Homage, Fealty, Serjeanty, Feign, Relief, Guardian, Wardship, Scage, Her, Inheritance, Acquisit, &c.* Estates or Things, either Real, as *Tenements, Hereditaments, Freehold, Fee, Calsonary, Tail, Coverture, Coverture, &c.* In *Reversion, Mortgage, Hypothecation, &c.* Personal, *Honorary, Common, Glebe, Advowson, &c.* Acquired by *Occupancy, Prescription, Common, Debt, Possession, Fiat, Recovery, Deforcance, Lease, Devis, Attornment, Intestament, Levy, &c.* Lost by *alienation, Mortmain, Disfranchisement, Surrender, Discontinuance, Disclaimer, Forfeiture, Resignation, Depreciation, Lapse, &c.* Or Personal, as *Goods, Chattels, Emblements, Annuity, Debt, Specialty, Recognizance, &c.* Acquired by *Succession, Heir, Mortuary, Heir Legem, Testament, Executor, Administrator, Ordinary, Judgment, Fieri facias, &c.* ¹⁵, Wrongs or Injuries; either Criminal, and to Persons, as *Treason, Parricide, Murder, Felony, Assault, Rape, Adultery, Fornication, Detraction, Perjury, Heresy, &c.* Prosecuted by *Indictment, Accusation, Attain of Conspiracy, and upon the Cap, Habeas Corpus, &c.* Punished, with *Exile, Crucifixion, Wheel, Fork, Scale, Pillory, Transportation, Divorce, Sepulchre, &c.* Or Civil, and to Things; as *Trespass, Nuisance, Detriment, &c.* Remedied by *Writ of Quare Impedit, Darnel Prohemium, Appeal, Attain, Error, Right, Distress, Surety, Assize, Assize, Assize, &c.* Suit, or Course of Proceedings whereby Redress is procured; including, *1^o*, *Process*, either by *Bill, Summons, Subpoena, Attachment, Capias, Excois, &c.* to which belong *Appearance, Attorney, Bail, Fines, Deforcment, Nonfuit, Arrangement, &c.* ^{2^o}, *Pleading*; whence *Count, Declaration, Affidavit, Founders, Act Pro, Bar, Abate, Release, Replication, Counterpley, Demurrer, &c.* ^{3^o}, *Issue*; whence *Demurrer, 4^o*, *Trial*, whence *Proof, Evidence, Prescription, Attachment, Jury, Challenge, Array, Verdict, Oath, Affidavit, Affirmation, Oath, Oath, Paise first or daret, Rack, Torment, &c.* ^{5^o}, *Judgment*, whence *Arrest, &c.* ^{6^o}, *Execution*; whence *Sine factis, Reprieve, &c.*

¹⁶ **THEOLOGY**, or the Consideration of GOD: his Nature and Attributes, as *Eternity, Ubiquity, &c.* His Unity, Trinity, &c. *Persons, Hypostasis, &c.* Our Duty to him, discovered by *Revelation, Revelation, Prophecy, &c.* by the *Messiah, Evangelists, Apostles, &c.* In the Bible, *Pentateuch, Hagiographa, Psalter, Gospel, Apocalypse, &c.* Canon, *Dialecticon, Apherpho, &c.* Circumstances thereof, *Style, Allegory, Type, Parable, Mystical, &c.* Text, *Verbum, Septuaginta, Vulgate, &c.* *Paraphrase, Targum, &c.* Points, *Quotation, &c.* Matter thereof; Declarations, of *Inarnation, Passion, Crucifixion, Miracles, &c.* Injunctions, as *Worship, Prayer, sacrifice, &c.* Sacraments, as *Eucharist, Baptism, &c.* Promises, as *Grace, Justification, &c.* Decrees, as *Predestination, Election, Reprobation, &c.* Breaches on our Part, *Sin, Apostasy, Imputation, &c.* Remedies thereof, by *Repentance, Confession, &c.* Rewards and Punishments allotted thereto, *Heaven, Hill, Refurrection, Immortality, &c.* His Ministers, *Angels, Devils, &c.* His Church, either *Universal, as Gains, Martyrs, Confessors, Fathers, Doctors, &c.* or *Militant, as its Offices, Creed, Liturgy, Doctrine, Decalogy, Tradition, &c.* Discipline, *Rites, &c.* as *Abolition, Anathema, Excommunication, &c.* *Catechism, Confession, Confirmation, &c.* In *Priesthood, as Bishop, Priest, Deacon, &c.* *Patriarch, Archbishop, Primate, Dean, Canon, Prebend, Archdeacon, Chanter, &c.* Their *Engages, Missive, Censor, Pallium, &c.* Their *Ordination, Consecration, Collation, Investiture, &c.* *Benefices, Revenue, Tithes, &c.* Places set apart, as *Chapel, Chapel, Oratory, &c.* *Cathedral, Parochial, Cardinal, &c.* Choir, *Nave, Altar, Font, &c.* *Dioecese, Province, &c.* Assemblies, as *Synod, Council, Convocation, Consistory, Chapter, Presbytery, &c.* *Faith, Faith, Lent, Vigil, &c.* *Feast, Epiphany, Pentecost, Annunciation, Purification, Presentation, &c.*—Particular Systems or Professions thereof, viz. *Reform'd or Protestant, as the Church of England, Lutheranism, Calvinism, &c.* *Romish or Latine; its Mass, Breviary, Legend, &c.* *Transubstantiation, Extreme Unction, Supererogation, Penance, &c.* *Hierarchy, Pope, Cardinal, &c.* *Secular, Regular, Monk, Religious, Abbot, Prior, &c.* *Order, Congregation, Monastery, General, &c.* *John, Carthusian, Carmelite, Franciscan, Dominican, &c.* *Third Order, Censite, Anchoress, Hermit, Relic, Monastery, Cell, &c.* *Rite, Vow, Reform, Novitiate, &c.* *Image, Relic, Saint, Virgin, Refractory, &c.* *Canonization, Beatification, &c.* *Indulgence, Jubilee, Exorcism, &c.*—Greek, it

Antologus, Prothefis, Partide, &c. *Marrine, Jacobite, Yezman, &c.* *Armenian, Coptic, Solitary, &c.*—*Scit, and Hecretica; as Manichee, Gnostic, Ariane, &c.* *Ebionite, Nestorian, Millenarian, Quarodocum, &c.* *Mentzigi, Socinian, Arminian, &c.* *Presbyterian, Anabaptist, Independent, Quaker, &c.* *Quaker, Servant, Pre-adeant, &c.* *Deist, Atheist, Spinozist, &c.*—*Jewish, its Talmod, Tradition, &c.* *Temple, Tabernacle, Sanctuary, Ark, &c.* *Pentate, Levitic, Tribe, &c.* *Fibod, Theraphim, Circumcision, Sabbath, Sanhedrin, &c.* *Robins, Doctor, Gabbala, Majora, &c.* *Pharisee, Sadducee, Effian, Carait, &c.* *Nazarite, Therapeutae, &c.* *Samaritan, Dehekan, Hellenist, &c.* *Pastor, Synagogue, Ghetto, &c.*—*Mahometan; their Akoran, Mohl, Dervise, Alim, Mufelman, &c.*—*Heathen; their Idolatry, Theogony, &c.* Their Gods; *Penates, Lares, Lemures, &c.* *Pana, Sylvanus, Neptun, Genius, &c.* *Apostrophe, Sacrifice, &c.* *Feast, Fortuna, Deity, Deum, Genius, &c.* *Apostrophe, Sacrifice, &c.* *Feast, Lophozion, &c.* as *Eleusis, Eleusina, Caralia, &c.* *Ministers there; of; Res, Pontifex, Lemus, Fylax, Corymbant, &c.* *Games; Olympic, Isthmian, &c.* *Divination, Oracle, Pythian, Sibyl, &c.* *Augur, Japex, &c.* *Temple, Fane, Pagod, &c.* *Scit; as Basilian, Eremitic, Sabian, &c.*

¹⁷ **LOGICS**, or the Consideration of IDEAS or NOTIONS; Their Kinds, *Simple, Complex, Adequate, &c.* Disposition, into *Classes or Categories, Predicaments, Predicates, &c.* Their Composition, or Association into *Assum, Proposition, Problem, Theorem, Thesis, Hypothesis, Argument, as Syllogism, Enthymem, Sorites, Sophism, Dilemma, Contradictio, &c.* Their Resolution, *Definition, Division, &c.* into *Præmissæ, Consequentes, Terms, &c.* Their Truth, *Falsity, Evidence, Demonstration, &c.* Operations therewith, as *Argumentation, Induction, Distinguishing, Philosphizing, &c.* *Dignation, Dignation, Contradiction, Reductio ad absurdum, &c.*

¹⁸ **CHEMISTRY**, including the Use of FIRE, Water, Air, Earth, Ferments, *Mentruum, Furnaces, Retorts, and other Instruments;* to change *Animal, Vegetable, and Fossil Bodies;* by inducing *Fusion, Putrefaction, Fermentation, Distillation, Exhalation, &c.* and hereby procuring *Spirits, Salt, Oil, Acid, Alcali, Armatum, Urinum, Vinæ, Vinæ, Pinguis, Hæmæra, Galice, Crystall, Sars, Tartar, Regius, Metallurg, Extract, Elixir, Gum, Alkali, Libære, Sulphureum, Phosphorum, Alkali, Philosophæ, Stone, and the like;* by the Operations of *Distillation, Calcination, Amalgamation, Digestion, Precipitation, Purification, Fixation, Transmutation, and the like.*—*Arbor Diæna, Aurum Fulminans, Artificial Earthquake, Magic, Divination, &c.*

¹⁹ **OPTICS**, including the Laws and Consideration of VISION; and *Visible Objects;* effected by means of *Light, its Rays.* Their Reflexibility, *Refraction, &c.* *Focus, Transparency, Opacity, Shadow, &c.*—*Reflection thereof, in Mirror, Looking-glass, Catoptric Cylinders, &c.*—*Refraction, in Lens, Prism, Glass, &c.* Application, in *Telescope, Microscope, Magic Lantern, &c.* *Speicula, Polioscopes, Polyhedron, Camera Obscura, &c.*

²⁰ **PERSPECTIVE**, or the PROJECTION of Points, Lines, Planes, &c. in *Geography, Orthography, Iconography, Anamorphosis, &c.*

²¹ **PAINTING**, or the DESIGNING of Objects in *Clear-obscurity, Perspective, &c.* with *Ordinance, Expression, &c.* Circumstances thereof, *Animæ, Contrast, Group, &c.* Kinds, *Limning, Miniature, Camæux, Fresco, &c.* Enamelling, *Mosaic, &c.*

²² **PHONICS**, or the DOCTRINE of SOUNDS, *Faite, &c.* Their Modifications in *Echo, Resonance, Whispering-place, Speaking- trumpet, &c.*—Their *Tune, Gravity, Interval, &c.* *Time, Triple, &c.* expressed by *Note, Chord, &c.* Comparisons thereof, *Concord, as Unison, Octave, Third, Fourth, Disson, &c.* Composition, as *Solemp, Harmony, Counter-point, Symphony, Symonia, Chime, Sing, Rhythmus, &c.* Kinds, *Genus, Mæd, &c.* Circumstances, *Key, Staff, Signature, Transposition, &c.* *Staff, Scale, Gemmut, Staffing, Modulation, &c.* Instruments, *Organ, Bell, Trumpet, Lyre, Cymbal, Viola, Harpsichord, &c.*

²³ **HYDROSTATICS**, or the Consideration of FLUIDS; their *Specific Gravity, Density, Equilibrium, &c.* Instruments to measure the Same, as *Aræometer, Hydrostatical Balance, &c.* *Siphon, Torricellian, &c.*—Motion thereof, in *Pump, Fountain, Spiral Screw, Hydrocælisticum, Hydromantia, &c.*

²⁴ **PNEUMATICS**, including the Consideration of AIR; its *Weight, Density, Pressure, Elasticity, &c.* *Condensation, Rarefaction, Motion, Wind, &c.* In *Air-jump, Siphon, Vacuum, &c.* Measured by *Barometer, Torricellian, Hygrometer, Manometer, &c.* *Anæmeter, Windmill, &c.*

²⁵ **MECHANICS**, including the Structure and Contrivance of MACHINES, as *Balance, Steelyard, Pulley, Polypast, &c.* *Wheel, Clock, Watch, Passulion, Spring, Scale, Cylinders, Crank, Rata, Astralabe, Perpetual Motion, &c.* *Mill, Press, Vise, Lath, Latex, Windmill, &c.* Operations of *Swimming, Diving, Flying, &c.*

ples, antecedent to such Intervention of ours; and even pursue it up to its Cause, and shew how it exists there, before it be Knowledge: And to trace the Progress of the Mind thro' the Whole, and the Order of the Modifications induced by it. This is a Desideratum, hitherto scarce attempted; but which we could not here decline entering upon, on account of its immediate Relation to the present Design. 'Tis the Basis of all Learning in general; the great, but obscure Hinge, on which the whole Encyclopædia turns.

T O

36 ARCHITECTURE, including the Construction of BUILDINGS; as *Roofs, Temples, Churches, Halls, Palaces, Theatres, &c. Ship, Gallies, Gallies, Arks, Bureaux, Beams, &c. Pyramid, Mastodon, Pantheon, &c. Capital, Sarcophagus, Escalot, &c. Arch, Vault, Bridge, Monument, Tomb, &c. Forms thereof, Rotunda, Platform, Pinnacle, &c. Plans, Design, Ichthyography, Profile, &c. Paris, as Foundation, Wall, Roof, &c. Door, Windows, Stairs, Chimney, &c. Orders, as Tuscan, Doric, Corinthian, &c. Caryatid, Rustic, Gothic, &c. Column, Pilaster, Attic, &c. Parts thereof, Entablature, Capital, Pedestal, &c. Cornice, Frieze, Base, &c. Pilast, Pediment, Modillion, Console, &c. Mouldings, Ogee, Torse, Astragal, Scotia, Abacus, Ovolo, &c. Materials as Brick, Stone, Tyle, Slate, Shingle, &c. Timber, Weinstock, Glass, Lead, Plaster, &c. Beam, Rafter, Mortar, Nail, Hinge, Key, Lock, &c. Quarry, Masonry, &c.*

Its *Zones, Climates, &c. Its Places, their Longitude, Latitude, Distance, Elevation, &c. Inhabitants, Antiquity, Aberginity, Tragedies, Aft, Perfign, &c. Influences relating thereto, Globe, Map, &c.*

37 SCULPTURE, or the framing of Statues, Figures, Ornaments, &c. in *Relievo, Creux, &c. as Carving, Pottery, Porcelain, &c. Engraving, Seal, Dye, &c. Etching, Cutting, Mexico Lines, &c. Foundry, of Bell, Letter, Ornamance, &c. Coining, Money, Medal, Medallion, &c. Pile, Legend, &c. Lapidary, Turnery, Inlaying, Veneering, Damascening, Enchasing, &c.*

38 NAVIGATION, or the Consideration of SAILING; in *Ship, Frigate, Bark, &c. Parts thereof, Mast, Anchor, Sails, Tards, Cordage, Capstan, Rudder, Deck, &c. Their Course, Rhumb, &c. Shewn by Compass, Needle, Variations, &c. Directed by Starboard, Carree, &c. Distance or Reckoning, by Log, Observation, Longitude, Latitude, &c. Taken by Fore-staff, Back-staff, Abreleat, Nautical, Sinical Quadrant, &c. Wrought by Gunner, Chart, Mercator, Traverse, &c. The Operations of Sounding, Weighing, Careening, Signals, Bury, &c.*

39 TRADES AND MANUFACTURES; as *Printing, Paper-making, Book-binding, &c. Gliding, Japanning, Glass-making, Grinding, &c. Plumbery, Glazery, Forging, Hammering, &c. Weaving, Blacking, Whitening, &c. Pulling, Dying, Pressing, Sheering, Coloring, Taying, Finishing, &c. Woolen, Silk, Linnen, Uncombed, &c. Cloth, Serge, Taffety, Stocking, &c. Velvet, Taffety, Hat, &c. Tanning, Carrying, Tawing, &c. Channing, Chagreen, Marraquin, &c. Making Paperment, Glass, Gun-powder, Small, Shot, Starch, &c. Candle, Taper, Torch, &c. Steel, Button, Pin, Needle, Pipe, Fin, Pen, &c.*

37 COMMERCE, or the Affairs of MERCHANDISE; including, *Money, Coin, Species, &c. as Pound, Crown, Shilling, Penny, Sterling, Ducat, Dollar, Piece of Eight, Talent, Sester, Shetel, and the like. Weights, Libra, Ounce, &c. Measures, Foot, Yard, Standard, &c. Given in Exchange, Trade, Permutation, Comminution, &c. for Manufacture, Spice, Drug, Woolen, Slen, Negro, &c. Imported, Exported, Transferred, Coway, Flota, &c. Conditions thereof, Tariff, Contraband, Charter-party, Freight, Average, &c. Customs, Duty, Tonnage, Pounds, &c. Bottomry, Assurance, Vite, &c. Translated by Company, as Hans, Steel-yard, East India, Turkey, Hamburgh, Mississippi, South Sea, African, Reijfer, Colony, Fisker, Palfrey, &c. At Staple, Fair, Market, Bani, Bury, &c. By Commission, Factor, Broker, &c. Writing, paying by Bill, as of Usance, Acceptance, Pan. Protrah. Discount, Rechange, &c. Adios, Subscription, Book-buying, &c.*

40 PYROTECHNY, or Artificial Fire-Work; including the Consideration and Use of *Gun-powder, Match, Fuze, &c. Of Ordnance, Cannon, Gun, Mortar, &c. Carriage, Charge, Projectile, Range, Point-blank, Ravel, &c. Petard, Corusc, Shot, Bomb, Granado, &c. Rocket, Star, &c.*

38 ANATOMY, or the Analysis of ANIMAL BODIES, and their PARTS, viz. *Bones, as Cranium, Rib, Vertebra, Radius, Femur, Tibia, Sacrum, Pelvis, Patella, &c. Their Articulation, Apophysis, &c. Muscles, Abductor, Adductor, Erector, Depressor, Deltoideus, Sartorius, Cucullaris, Orbicularis, Splenicus, &c. Their Tendons, Fibres, &c. Vessels, as Artery, Vein, Aorta, Aorta, Trachea, Pulmonary, &c. Viscus, as Cæca, Peria, Jugular, Carotid, &c. Glands, as Pancreas, Parotid, Prostate, &c. Nervus Optic, Olfactory, Auditory, &c. Lymphatic, Lactal, Mesarian, Mesogastrius, &c. Their Valves, Thimus, Anafloafis, &c. Their Humours, as Gula, Blood, Spirit, Seed, Gall, Urine, Milt, Sweat, Mucous, &c. Membranes; Panniculi, Gaitis, Cuticula, Papilla, &c. Venter, Head, Meninges, Brain, &c. Eye, Ear, Papil, Tympanum, Tongue, Throat, Palate, Larynx, Glottis, Ospharynx, &c. Viscera, Stomach, Lungs, Heart, &c. Liver, Spleen, Kidney, Intestines, Bladder, &c. Functions or Operations thereof, Respiration, Deglutition, Digestion, Glystification, Sanquification, Circulation, Symphe, Nutrition, Secretion, Excretion, Peristaltion, Vomiting, &c. Genitals, Penis, Uthile, Clitoris, Matrix, Vagina, Hymen. Embryo, Zygote, Nite, &c. Erection, Generation, Conception, Gestation, Delivery, Lactia, Menfes, &c.*

41 MILITARY ART, including the Consideration of ARMIES, Fleets, Cavalry, Infantry, &c. Consisting of *Regiments, Troops, Companies, Phalans, Legions, &c. Soldiers, Dragoon, Grenadier, Fusilier, Cavalier, Archer, Janissary, Sabel, Feltes, Argyriferi, Gun-fermy, &c. Divided into Squads, Battalion, Brigade, &c. Commanded by General, Marshal, Bafew, Admiral, &c. Lieutenant, Brigadier, Colonel, Captain, Sergeant, Major, Adjutant, Ensign, Quarter-Master, Tribune, Centurion, Principius, &c. In Battle, Siege, March, Camp, &c. Ranged in Line, Column, &c. Motions, Attack, Retreat, Halt, &c. Evolutions, Wheeling, Counter-wheeling, &c. Signals, Word, Drum, Chumade, &c. Guards, Grenier, Placet, Patrol, Round, Quarter, Piece of Arms, &c. Standard, Banner, Eagle, Labarum, &c. Their Arms, Artillery, Carabine, Musquet, &c. Helmer, Buckler, Pelta, Cuirafs, &c. Aries, Balista, Catapulta, Fendax, &c.*

39 MEDICINE, including the Consideration of LIFE and HEALTH; Conditions thereof, *Longevity, Strength, Temperance, &c. Means, as Food, Drink, Exercise, &c. Opposites, as Death, Dysafe, &c. Kinds thereof, Chronic, Epidemic, Contagious, &c. as Plague, Fever, Gout, Apoplexy, Epilepsy, Palfy, Pex, Pityrius, Palpitation, Madnes, Hydrophobus, Scabin, Hypochondriac, Phibis, Scorbute, Dropsy, Tympanum, Lepra, Ich, Plica, Ophthalmia, Gouta, Cataract, and the like. Venens, Uter, Cancer, Fractura, Diffractio, Corie, and the like. Symptoms, Sign, Diagnostics, Pulse, Urine, &c. Prescription, Crisis, Cure, &c. Recimen, Diet, Medicis, &c. Kinds thereof, Specific, Purgative, Emetic, Diaphoretic, Duretic, Alterative, Soporific, Anesthet, Emollient, Opiate, Absorbent, Confit, Anodyne, Symplicetic, Cordiac, Cephalic, Febrifuge, Antispasmodic, Chalybeic, Mercurial, and the like. Operations, as Evacuacion, Phlebotomy, Scarre, Lithotomy, Amputation, Incision, Sarcuacion, Caustic, Cupping, Trepanning, Touching, Tapping, Striking, Transfusion, Castration, Circumcision, and the like.*

42 FORTIFICATION, or the Construction of FORTRESSES; as *Citadel, Castle, Tower, &c. Fort, Star, Redoubt, &c. Works, or Parts thereof, Rampart, Bastion, Ditch, Counter-scarp, Curtain, &c. Ravelin, Horn-work, Crown-work, &c. Approaches, Trench, Sap, Mine, &c. Line, Parallel, Circumvallation, &c. Battery, Attack, &c.*

40 PHARMACY, or the Preparation and Composition of REMEDIES; as *Antibiotics, Treacle, Hiera Pitra, Lawdium, Diacodium, Turbit, Calomel, &c. in the Form of Electuary, Confection, Extract, Tinctura, Syrup, Troche, Pill, Ponder, Lobe, Pison, Aazar, Drops, medicated Aloe, Wines, Waters, Unguent, Emplastr, Fargy, Glyster, Sapphir, Pessary, Collyrium, &c. From Drugs, or Simple; as, Gualiacum, Saffron, Calocyanon, Crocus, Rhotark, Caffia, Senna, Cortex, Syrac, Jalap, Scammony, Opium, &c. Fats, Clams, Horns, &c. of Piper, Crab, Eel, &c. Gambogium, Millepedes, Stomony, Ufona, Ichthyella, &c. Antimony, Orpiment, Asphaltum, Bismuth, Marsurfin, Bole, Cinnabar, Mars, Venus, &c.*

43 ASTRONOMY, or the Doctrine of the HEAVENS; Their *Circles, Ecliptic, Zodiac, Meridian, Equator, Vertical, Azimuth, Galaxy, &c. Points, as Pole, Zenith, Nadir, &c. Celestial Bodies, viz. Stars, Sun, &c. Assemblage thereof, into Sign, Constellation, &c. Their Precision, Culmination, Refraction, Declination, Ascension, Longitude, Latitude, Altitude, Amplitude, Azimuth, Planets, as Saturn, Venus, Earth, Moon, Satellite, Comet, &c. Their Places, Aspects, Syzygy, Conjunction, Quadrature, Diameter, Distance, Period, Revolution, Orbit, Node, &c. Their Station, Retrogradation, Equation, &c. Their Phases, Eclips, Penumbra, Umbra, Parallax, Crispation, Macula, &c. Observations thereof, taken with the Quadrant, Gnomon, Micrometer, Retinada, &c. Collected in Catalogue, Tables, &c. Hypotheses, or Systems thereof, Copernican, Tychoenic, Ptolemaic, &c. Exhibited in Sphers, Globe, &c.*

44 CHRONOLOGY, or the Doctrine of TIME; measured by *Year, Month, Week, Day, Hour, Age, Period, Cycle, &c. Commencing from Epocha, Creation, Hebra, &c. Laid down in Fagii, Almanack, Calendar, Julian, Gregorian, &c. Accommodated to Peasly, Feria, Easter, &c. by means of Epact, Golden Number, Dominical, &c.*

41 AGRICULTURE, or the Tillage and Improvement of SOILS, Clay, Sand, Earth, &c. by the Operations of *Ploughing, Fallowing, Sowing, Sowing, Mowing, Mowing, &c. To produce, Corn, Hemp, Flax, Liguaria, Saffron, &c. For Malt, Bread, &c. Grana, Threshing, &c. The Culture of Trees, Timber, &c. by Planting, Lepping, Barking, &c. For Coppice, Park, Paddock, Hedge, Pasture, &c.*

45 DIALLING, including the Furniture and Projection of DIALS, Horizontal, Declining, Rectifying, Demeriting, &c. *Moon-Dial, Ring-Dial, Horodidical, &c. Instruments, as Declinator, Analemma, Sealer, &c.*

42 GARDENING, including the Culture of HERBS, Flowers, Fruits, &c. as *Dwarf, Standard, Stove, Wall, Espalier, Salked, &c.*

46 GEOGRAPHY, including the Doctrine of the EARTH, or GLOBE: its *Circles, Parallel, Tropic, Horizon, Axis, Poles, &c.*

TO be a little more explicit—*Words* are the next Matter of Knowledge; I mean, of Knowledge consider'd as it now stands, communicable, or capable of being transmitted from one to another. We should have known many Things without Language; but it would only have been such Things as we had seen or perceived our selves. The Observations of others could no way have been added to our own; but every Individual must have gone thro' a Course for himself, exclusive of all Advantages, to or from, Contemporaries, Predecessors, or Posterity.—'Tis evident that, in this Case, nothing like an *Art*, or *Science*, could ever have arose; nor even in the Mind of the most sagacious Observer: The little System of Things which come immediately in one Man's way, would but have afforded a slender Stock of Knowledge; especially to a Being whose Views were all to terminate in himself. Add, that, as the chief Occasions of his Observation would be of the same kind with those of other Animals; 'tis probable his Knowledge would not have been very different, whether we consider its Quantity or Quality. 'Tis confess'd that all our Knowledge, in its Origin, is no other than Sense; whence it should follow, that one Being has no natural Advantage over another in its Disposition for Knowledge, other than what it has in the superior Number, Extent, or Acuteness of its Senses.

'TIS, in effect, to Language that we are chiefly indebted for what we call *Science*. By means hereof our Ideas and Notices, the things in their own nature merely personal, and adapted only to private use; are extended to others, to improve their stock: and thus, by a kind of second Sense, we get Perceptions of the Objects that are perceived by all Mankind; and are present, as it were by proxy, to things at all Distances from us: We hear Sounds made a thousand Years ago, and see Things that pass a thousand Miles off. If the Eagle really sees, the Raven smells, and the Hare hears, farther and better than Man; their Sense, at the best, is but narrow, in comparison of ours, which is extended, by the Artifice of Language, over the whole Globe. They see with their own Eyes only; we with those of the whole Species.—In effect, by Language, we are upon much the same footing, in respect of Knowledge, as if each individual had the natural Sense of a thousand: an Accession which alone must have set us far above any other Animals. But at the same time, this very accession of a multitude of Ideas more than naturally belong'd to us, must have been in great measure useless; without certain other Faculties of ordering and arranging 'em; of abstracting, or making one a Representative of a Number; of comparing 'em together, in order to learn their Relations; and of compounding, combining 'em, &c. to make 'em act jointly. The Effect hereof is what we call *Discoursing* and *Philosophizing*: And hence arise *Doctrines*, *Theories*, &c.

EVERY Word is supposed to stand for some Part, or Point of Knowledge; such as do not, have no Business in the Language, and ought of Consequence to be thrown out of doors. It follows, that the Vocabulary of any Language, is representative of the several Notices of the People among whom it obtains: I mean of the primary or absolute Notices; for by the Construction of these Words with one another, a new Set of secondary or relative Notices are express'd.—To enter better into this, it is to be observ'd, that the several Objects of our Senses, with that other Set of Things analogous hereto, the proper Objects of the Imagination, are represented by fixed Names*; denoting, some of 'em, Individuals †; others, Kinds ‡, &c. Now, these, which make the first or fundamental Part of a Language, 'tis obvious, are no other than a Representation of the Works of Nature, as they exist in a kind of still Life, or in a State of Independency one upon another. But in regard we do not consider the Creation as thus quiescent, but observe a great number of Mutations arise in the Things we are conversant among; we are hence put under a necessity of framing another Set of Words, to express these Variations, and the Actions to which they are owing, with the several Circumstances and Modifications thereof. By this means, Nature is remov'd out of her dormant Constitution, and shewn in Action; and thus may occasional Descriptions be framed, accommodate to the present State of Things.

HENCE arise two Kinds of Knowledge; the one *absolute*, including the standing Phenomena: the other *relative*, or *occasional*, including what is done, or passes, with regard to them. The former is in some Sense permanent; the latter merely transient, or historical. The first is held forth, as already observed, in the Vocabulary: the second vague, and uncircumscrib'd by any Bounds; being what fills all the other Books extant. In effect, this last, being in some measure casual, may be said to be infinite: for that every new Case, i. e. every new Application and Combination of the former, furnishes a new Accelivation.

IN the wide Field of Knowledge, appear some Parts which have been more cultivated than the rest; either on account of the Goodness of the Soil, and its easy Tillage, or by reason they have fallen under the Hands of industrious and able Husbandmen. These Spots, being regularly laid out and planted, and conveniently circumscrib'd or fenced round, make what we call the *Arts*, and *Sciences*: And to these have the Labours, and Endeavours of the Men of Curiosity and Learning in all Ages, been chiefly confin'd. Their Bounds have been enlarg'd from time to time, and new Acquisitions made from the adjoining Waste; but still the Space

The Operations of *Planting*, *Transplanting*, *Replanting*, *Watering*, *Engrafting*, *Isolating*, *Pruning*, *Pinching*, *Vareting*, &c. *Preventing Drought*, *Winds*, *Guns*, &c. The Use and Ordering of a *Hot-bed*, *Green-house*, *Seminary*, *Nursery*, *Garden*, *Vineyard*, &c. of Ground they possess is but narrow; and there is room either to extend 'em vastly, or to lay out new ones. They shew like the *Cyclades* at a distance: *Apparent rari nantes in Gorgite vasto.*

THEY were divided, or canton'd out by their first Discoverers, into a number of Provinces, under distinct Names; and have thus remain'd for time immemorial, with little Alteration. And yet this Distribution of the Land of Science, like that of the Face of the Earth or Heavens, is wholly arbitrary and occasional; and might easily be broke thro', and alter'd, and perhaps not without advantage. Had not *Alexander* and *Cæsar* liv'd, the Division of the Globe had doubtless been very different from what we now find it; and the Cafe would have been the same with the World of Learning, had no such Person been born as *Aristotle*. The first Divisions of Knowledge were as feanty and ill concerted as those of the first Geographers; and for the like Reason: And the future *Columbus's* and *Bacon's*, by opening new Traffs, have carried our Knowledge a great way further; yet the Regard we bear to the ancient Adventurers, and the established Division; has made us take up with it, under all its Inconveniencies, and strain and stretch things, to make our Discoveries quadrate thereto. I do not know whether it might not be more for the general Interest of Learning, to have all the Inclosures and Partitions thrown down, and the whole laid in common again, under one undistinguish'd Name. Our Inquiries, in such case, would not be confin'd to so narrow a Channel; but we should be led to explore, and pursue many a rich Mine and Vein, now doom'd to lie neglected, because out of the way.

ART and Science are indeed two Words of familiar Use, and great importance; but, I doubt little understood. The Philosophers have long labour'd to explain and ascertain their Notion and Difference; but all their Explanation amounts to little more than the substituting one obscure Notion for another. Their Attempts usually terminate in some barren Definition, which rather casts Obscurity than Light on the Subject. Nor is the Reason far to seek, however it may have escap'd Notice; but evidently lies in an Abuse of Language, whereby those different Words come to be applied to Things of the same Nature; and each of 'em in their turn to Things wholly different. Whence, any Definition that can hold of 'em universally, must needs be very abstracted, and general; and may hold of almost any thing else; and of consequence can express very little of the Essence, and obvious Phenomena thereof: To come at which, we must be at the Pains of a new Investigation.

TO SCIENCE, then, belong such Things as Men may discover by the use of Reasoning, and Sense: Whatever the Mind desires in virtue of that Faculty whereby we perceive Things, and their Relations, is matter of Science: Such are the Laws of Nature, the Affections of Bodies, the Rules and Canons of Right and Wrong, Truth and Error, the Properties of Lines and Numbers, &c. Science, in effect, is the Result of mere Reason and Sense in their general or natural State, as imparted to all Men; and not modified, or circumstantiated by any thing peculiar in the Make of a Man's Mind, the Objects he has been conversant among, or the Ideas he has present to him. Consequently, Science is no other than a Series of Deductions, or Conclusions which every Person, endued with those Faculties, must, with a proper degree of Attention, i. e. may and draw: And A SCIENCE, i. e. a form'd Science, is no more than a System of such Conclusions; relating to some one Subject, orderly and artfully laid down in Words, to save Others the Labour and Expence of making 'em at first hand. Thus a Person who has all the Ideas express'd in *Euclid's* Definitions, and sees the immediate Connexion of those in his Axioms; which no Man acquainted with the Language can be supposed without; has it in his Power, with Attention and Industry, to form all the Theorems and Problems that follow: He has nothing to do but to range those Ideas orderly in his Mind, compare 'em together, one by one, in all their Changes, and put down the immediate Relations observ'd in the Comparison, i. e. their parity, imparity, &c. And after the Relations of each to each are thus got; which make a kind of primary Propositions; to proceed to combine 'em, and take down the Relations resulting from a Comparison of several Combinations. By such means, without any other Helps than Penetration and Perseverance, might he make out an infinite Number of Propositions: more by half than *Euclid* has done; there being a new Relation, i. e. a new Proposition, resulting from every new Combination.

TO ART, on the other hand, belong such Things as mere general Reason would not have attained to: Things which lie out of the direct Path of Deduction, and which required a peculiar Cast, or Bypass of Mind to see or arrive at. A Man might call these the Results of particular, or personal Reason, in opposition to the former; but that such a Denomination would be thought unphilosophical. It may, perhaps, be more just to consider the Reason, here, as modified, or tinctured with something in the Complexion, Humour, or Manner of thinking of the Person*; or as restrain'd or diverted, out of its proper course, by some Views, or Notices peculiar to him.—The Difference between Art and Science, amounts to much the same as between *Wit* and *Humour*; the former whereof is a general Faculty of exciting agreeable and surprizing Pictures in the Imagination †, by the associating of Ideas, which at the same time have both a notable Diversity and a Congruity; and the latter, a particular one: The former is pure and absolute in its kind; the latter tinged with something foreign and complexional.

'TIS essential to Art, therefore, as to Humour, to partake of the Person from whom it proceeded; and consequently there are as many Arts, as Inventors of Methods of performing, or doing things. Hence, there is no coming at an Art, otherwise than by learning it. A Person left to his own Thought, will scarce ever hit on the same thing, unless either we suppose a marvellous Agreement between the Characters and Circumstances of the Persons; or that the Art is in great measure scientificall, and partakes but little of the Genius and Humour of the Inventor.—There is no such thing, properly speaking, as studying an Art, or learning a Science: The first, every Man beside the Inventor must be taught; the latter, every Man must find. In effect, to attain to an Art, there is some previous Knowledge requir'd, which a Man's own Reason would never have suggest'd; whereas a Science requires no more than clear Ideas, and close Attention. With these Helps a Man may of himself go the whole length of a Science, so far as it is properly a Science. Indeed if the Improvers, or rather Writers thereof, have gone a jot out of the common way, in compliance with their own personal Views; they have so far adulterated the Science, and put it on the footing of an Art. And to this very Cause are owing a great part of the Difficulties we meet withal in attaining the Sciences: The rest ariseth from want of Sense, i. e. of Clearness and Precision in our Perceptions, and want of Perseverance and Attention to 'em. These render Geometry itself, little other than an Art: We want Preliminaries to it as to other Arts. And thus every Science is an Art to some People, and only to be attained, as we do mechanic Arts, by Habit, and Remembrance; instead of Contemplation and Deduction.—Reason, clogg'd and embarrass'd by Genius and Complexion, can no more rise to the heights of Science, than when pure and refin'd, it can descend to the depths of Art.

* *Vid. Bossu, Traité du Poëme Epique, Li. c. 1.*

† *Locke, op. Elem. Understand. Lib. II. c. 11.*

AN Art and a Science, therefore, only differ as less and more pure: A *Science* is a System of Deductions made by Reason alone, undetermined by any thing foreign or extrinsic to it-self: An *Art*, on the contrary, requires a number of Data and Postulata to be furnish'd from without, and never goes any length, but at every turn it needs new ones. 'Tis the Knowledge or Perception of these Data that in one Sense constitutes the Art; the rest, that is, the doctrinal Part, is of the nature of Science; which attentive Reason alone will discern.

AN Art, in this light, appears to be a Portion of Science, or general Knowledge, consider'd, not in it-self, as Science, but with relation to its Circumstances, or Appendages. In a Science, the Mind looks directly backwards and forwards, to the Premises and Conclusions: in an Art we also look laterally, to the concomitant Circumstances. A Science, in effect, is that to an Art, which a Stream running in a direct Channel, without regard to any thing but it-self and its own progress; is to the same Stream turn'd out of its proper Course, and running in a different one dispos'd into Cascades, Jets, Cisterns, Ponds, &c. and serving to water Gardens, turn Mills, and other particular Purposes. In which case, the Progress of the Stream is not considered with regard to it-self, but only as it concerns the Circumstances of the Works: every one of these Works, nay each part thereof, are so many Data, which modify the Course of the Stream, and vary it from its original Habitude. 'Tis easy to trace the Progress of the former, from its Rise to its Issue; in regard it flows consequentially: But a Man ever so well acquainted with this, will never be able, of himself, to discover that of the Second, for want of Acquaintance with the Circumstances, which his Reason can never find out, in regard they depend on the Genius, Humour and Caprice of the Engineer who laid the Design.

THESE are so many different Characters, or Conditions of Art and Science: But there is a Difference between 'em prior to any of these, and of which these are only Consequences. The Origin of 'em all lies higher, in the Principle of Action or Operation above specified; namely, as the Mind is either active or passive therein. With regard to this; those Things may be said to belong to Science which we only see, or perceive; which flow from the Nature and Constitution of Things, by the sole Agency of the Author thereof; subservient only to His general Purposes, exclusive of any immediate Agency or Intervention of Ours: And, on the contrary, those Things belong to Art, wherein such Science or Perception is further modified and circumstantiated in our Mind, and directed and applied by us, to particular Purposes and Occasions of our own.—From hence arise the several Differences abovemention'd: For the Matters of Art are only *Personal*, as they are according to the Measure of the Artist's natural Faculties, in respect of Quantity and Degree; and to the Complexion and Cast of his moral Faculties, in respect of their Quality. The Perception, even of Matters of Art, is of the Nature of Science: so that thus far the two agree: And their Difference only commences from the superinducing a further Modification, in the Matter of such Perception; and the giving it a new Direction to some particular End. By means hereof, it becomes invested with a new Set of Conditions and Circumstances, wholly personal; as being all fram'd and adapted to the particular View and Aim of the Artist, (which is the mere Result of his particular Disposition, Humour, Manner of thinking, Situation, Occasion, &c.) and conducted according to his particular degree of Knowledge, and Address; which is the Effect of a particular Set of Objects, and a particular Organism of Body. In a word, in Art there is a moral View or Motive superadded to the natural Science, or Perception; which Motive is the proper Principle, or *primum Mobile* of Art: Perception is its Matter; and some Member of the Body its Organ or Instrument. And from such new Principle, &c. arise a new Set of secondary Perceptions, analogous to the natural and primary ones. The whole, therefore, ends in this, That Science arises from a natural Principle, Art from a moral one; or even, as moral Matters are also in one Sense natural, Science may be said to be of divine Original; Art, of human.

FROM this View may appear the deficiency of that established Definition of Art; *Arts est habitus mentis cum rebus ratione operativus*: A habit of the Mind operative according to right Reason: which is evidently taken from a partial Consideration of the Subject. If it be the Character or Condition of Art to proceed according to right Reason; then, the more and purer this Reason, the more perfect the Art. But, in a great part of the Arts, Reason appears to have very little to do; and the less, as those Arts are in greater Purity and Perfection.—Thus it is in Poetry; a Man that would undertake an Ode, or an Epic Poem on the strength of his Reason, would be miserably out: All his Efforts would never carry him above the humble Sphere of Verification, where he must be contented to wait for an Impulse of another kind. So far is Reason from leading the way, that it can scarce follow at a distance, so as to keep in sight. The Principle of Motion is evidently something other than Reason; otherwise, the greatest Philosophers would be the best Poets, and *vice versa*. On the contrary, most of us know of People very weak in Reason, who yet are powerful in Poetry: The Poetical Talent we have seen follow some People to *Bedlam*, others it has conveyed thither; and, which is still more, some People have first found it there. Poetry is found an Appendage of one kind of Lunacy, and accordingly passes among Physicians for a Symptom thereof; nor is it to be question'd, but, upon a Computation, *Moorfields* might number double the Poets with any other Spot of the like Dimensions in the Kingdom.—Let not this pass as any Reflection upon the Poets: A Spice of Madness is not so unrespectable a thing as some imagine; and a Man that is seated on that Bench, finds himself in the best Company in the World. Some of the greatest Philosophers, Poets, Prophets, and Legislators; I might have said Divines, Fathers, and Affecticks too, of all Ages, are confessedly his Affectioners. 'Tis remarkable with what Respect and Awe the Antients treated People suspected to be touch'd: The very Names they call'd 'em by import the utmost Veneration, and place 'em, as it were, at the Threshold of *Jupiter* *. One of their most common Appellations, *Numine afflati*, is at the same time the most just and philosophical that can be thought of. In effect, a Share of Fury and Enthusiasm, is held by them a *sine qua non*, a Circumstance absolutely necessary to become any thing extraordinary; and hence so many Proverbial Expressions to that Purpose: "No great Genius *sine aliqua mixtura dementiae*; No great Man *sine aliquo afflatu Divino*, &c."—We may add, that the Poets themselves have an hundred times expressly attributed all their greater, and happier Thoughts, to Enthusiasm, Extasy, and Fury; and they do it implicitly almost in every Piece they write: it being their standing Practice, to take a formal leave of Reason, at first setting out, and call a Muse for their future Guide: which, to talk out of the Poetical Style, is as much as to say, They resign themselves over to the Conduct of Genius and Imagination, which they now find strong and prevalent in 'em. Thus inspired, a new Scene of Objects arises; Castles on Castles: They see things invisible to other Eyes, that is, the Phenomena of their own Fancy, which exist no where else. For tho' what one Man's Reason perceives, all others, equally good and perfect, will perceive; even tho' it have no Existence but what that Perception gives it: yet it is not so with Imagination, which is a personal Thing, arising from the particular Disposition or Organism, which is different in every two Persons; whereas Reason springs from the general one, which is the same in the whole Species.—From such prevalence of the Imagination, arises what we call Poetry, ΠΟΙΗΣΙΣ, q. d. *making, feigning, inventing*; which is common

* Ομοίωτος, ενθουσιαστος, ενδουσιαστος, ενδουσιαστος, ενθουσιαστος, Εκστασις, Πιρηνεσις, Πυθιη, Σιδωνη, &c.

to all Men in a greater or less degree: Philosophers have a little of it, the Poets a great deal, but the Lunaticks scarce any thing else.

IT may look strange to say that the Principle is precisely of the same kind in 'em all. We are used to consider it, in the two first, as Constitution; in the latter as Disease: In the one 'tis perpetual; in the other only occasional: In the one, arbitrary and uncontrollable; in the other, limited and restrained. The Barque, in the one case, drives of necessity, as wanting Cable and Anchor to hold her; and in the other, sails out of choice, as finding the Wind favourable and the Voyage desirable. But all this amounts to little more than a difference in Degree, between the Fictions of the Poet and the Lunatic: The moving Principle is the same in both, tho' its Effects be various. If the proper Balance and Adjustment between the Powers of Reason and Imagination be wanting, yet they still retain their Nature; as the Wind is the same whether the Pilot direct the Helm or not.—

SOME People give more ear to Authority than to Reason: to such it may not be amiss to observe, that this Doctrine is countenanc'd by the Antients; who, in some respects, seem to have had clearer and juster Notions than the Moderns; as being less embarras'd with the Jargon, and Refinements of the scholastic Learning. Philosophy, with them, was one degree more simple, and obvious than among us. Nature was not yet cover'd and conceal'd under so much Elucidation, but afforded more frequent and nearer Views of her-self.—Accordingly, the Divine Plato, in his *Phædrus*, asserts, “That *Enthusiasm* and *Mania* are one and the same thing” and has a long, and cogent Discourse, to prove that it must be so: And among the several Species of Enthusiasm, he expressly ranks Poetry. In effect, *Pneuma* and *Musarion*, make two of the principal Branches in his Division of Enthusiasm, or Inspiration. And *Plutarch**, tho' he divide Enthusiasm somewhat differently from Plato; yet clearly agrees with him in making Poetry a Species of it. Nay, the most reserved of all the ancient Criticks, *Longinus*, declares, that “the Poet is possess'd with a kind of Enthusiasm; that he believes he really sees what he speaks; and represents it so to others that they catch the Enthusiasm, and see it likewise †.” Add, that speaking of the *Orator*, he does not scruple to use *Πνευμα ἰσχυροῦς*, as synonymous with *Mania*.—But this Point will be consider'd more fully hereafter.

THE Principle then of the Art of Poetry is something other than Reason; and I know of no Art that has more of the Nature and Essence of an Art, than Poetry: Nothing that can fashion, build, produce things, &c. at that rate: Sculpture, Architecture, Agriculture, &c. are Arts, but in a much inferior Degree.—And yet, turning another side of Things forward, Poetry will scarce appear to have any thing of an Art in it, but rather to be all the Work of Nature; wherein human Thought and Study have the least hand. It is produced by a Principle superior to that of Reason, *i. e.* a more immediate Action of the Author of Nature.—But the same may be said of most of the other Arts; and when we say that Art produces Effects, we mean Nature does so. The Poet's Imagination may be considered as a Field, wherein the Author of all Things shews his Handy-work, by the Production of a Set of Objects which existed not before: New Images arise here, like new Plants, according to the settled Laws of the Creator; so fruitful is the Womb of Nature! New Worlds innumerable arise out of a single old one.

THE Factive Arts, as some love to call 'em, *i. e.* those from which permanent Effects arise, may be consider'd as so many secondary or derivative Natures, rais'd by Engraftment from the old Stock, and spreading or projecting out from this, or that part thereof.—Here, at first sight, Man appears somewhat in quality of Creator; the Potter's power over his Clay has been made a Shadow or Similitude of that of the Deity over his Works: and yet the Potter, at best, is only accessory or occasional to his own Productions. Nature, that is, the Power or Principle of Action and Motion to which we owe this visible Frame and all the Appearances and Alterations therein, acts by fixed Laws, which necessarily produce different Effects, according to the different Circumstances of Things: Thus a glass Globe being swiftly revolved about its Axis, and a Hand applied to its Surface; feels hot, emits Light, attracts Bodies, &c. *i. e.* is a hot, luminous, electrical Body, tho' without these Conditions it has none of those Properties. So Gunpowder, otherwise a Mass of dark, inert, motionless Matter; being only touched with a lighted Brand, instantly blazes up, and smokes, with Noise; perhaps bursts a Rock, or drives a Ball, in a parabolic Direction, and levels a Tower, or other Work. Now, nothing arises here but in consequence of pre-establish'd Laws, which import that the Globe and the Powder, whenever by any means they come under these or t'other Circumstances, shall have these or t'other Effects. There are no two Bodies in Nature more different than the same is from it-self, under the different Circumstances of Contiguity or Non-contiguity with this or the other Body, *e. g.* a Spark of Fire. But both States are equally natural; and in effect there must be a Law of Nature for the one, as well as the other.—Now the Agency of Man amounts to this, that he has it in his power to put Bodies in such Circumstances as are necessary to bring 'em under this or that Law, or to make this or that respective Law take effect. And this we call *Art*; and by this means we can produce a number of things, or bring 'em into act, which otherwise would have remained in eternal Non-entity, or barely in *Potentia*. Man may be said to create 'em, but no otherwise than the Apothecary creates the Blister, or the Gardner the Apple; *i. e.* those Effects would necessarily have arisen, upon the same Position of the Cantharides and the Cutis, or the Scion and Stock, if there never had been Apothecary or Gardner in the World.

WE may define the Works or Productions of Art, therefore, to be all those Phenomena or Effects which would not have arose without the Agency or Intervention of Man. Now Man can only be said to act or intervene, so far as what he does is of his own Source or Principle, without being moved or directed by any established Law of Nature, *i. e.* so far as he is exempted from the Influences of any necessary Laws of Nature concurring, however remotely, to such Effect. So that if, as some Philosophers have maintained, Man were not really and truly a free Agent; there would be no such thing as Art, in the Sense here understood: but *Art* would only be a name given to that System or Series of Effects, to which Man is made by Nature, and in her hands, subservient; and might with equal reason be attributed to such Effects as any other natural Production, *e. g.* a Plant, or Mineral, is subservient.

HAD it not been for the inspired Writers, we should not have known but that the whole System of our World is a Production of Art; the Result of a new Application of Things made by some created Being, in virtue or consequence of some pre-establish'd Laws of the Almighty. Our general Laws of Nature, and Motion, might only be particular Cases of some more universal one; special Instances, emerging out of some more general one, which it-self was not perhaps the first. Thus there might be an infinite Series or Subordination of Systems of Nature, each more universal, extensive, and, as we call it, more metaphysical, *i. e.* nearer the Source of Power and Action, than other.

SOMETHING like this, we actually see in our own little System: The Mineral World is subservient to the Vegetable; and this to the Animal. Mineral Matters, under certain Conditions which bring them under the Laws of Vegetation, pass into Plants; and from particular Applications of Parcels of Plants, Animal

* In *Ætop.*† *Ποιητ. ἰσχυρ.*

Substances arise. Under other Circumstances, the same Matters become subject to other Laws, (*i. e.* other Actions of the Creator, for Laws are no other) and return the way they came; Animals into Plants, and these into Minerals.—Nothing can be more simple and uniform than the whole Dispensation: A Body is only what it is, in virtue of a Law of Nature, *i. e.* of the Will of the Creator; and consequently 'tis this alone can alter it. Hence, a piece of Matter, under the different Circumstances of Motion or Rest, Contiguity with this or with that Body, falling in with new Laws; by the Concurrence and Activity thereof, becomes a Means of exhibiting different Phenomena: on occasion whereof we give it a different Denomination, and range it under a different Class of natural Things: And to the Means whereby those Circumstances are determin'd, we give the Names of *Generation, Corruption, Putrefaction, Fermentation, Vegetation, Animation, Assimilation, Accretion, &c.* which are all accountable for on the same Principle. 'Tis no more wonderful, a *Fungus*, with all its Furniture of Flowers, Seed, &c. should arise from a Mixture of Earth and Dung; than to behold so wonderful a Body as *Flame*, arise from a casual Collision of Flint and Steel; or *Air* from the mere Dissolution of a *Metal*.

WE see, then, how far Man is concern'd in the Productions of Art. Our Endeavours are contriv'd by Nature to be Means accessory to the Law's taking place, from whence the Effects are to arise. We are part of the Chain whereby the Effect is connected to the Cause. The Circumstances are in our Power on which such, and such Laws depend; and thus far we may be said to be *Active*, in the Case of Art: supposing that there is nothing higher, or further; and that the Chain ends with us; in a word, that our Agency is not subordinate, but collateral to that of the Almighty. But if there be other superior Laws which respect those same Circumstances, and which are not in our Power, *i. e.* if the Circumstances necessary to the former Law, be themselves supposed necessary Laws, and the immediate Work of Nature; our Agency will dwindle into nothing. The utmost that can be said of us in such case, is, That we are Active in respect of the one, and Passive in that of the other; which to most People may appear a kind of Contradiction.—The Statue can't be form'd, unless our Desire or Inclination concur thereto; so far its Existence depends on us: But are our Desires and Inclinations with respect thereto of our own growth; or do they arise naturally, in consequence of an Apprehension of Good, and Advantage in the Subject? That is, does any thing appear good and advantageous to us absolutely and of it self; or only what the Creator represents to us as so? And do we desire or pursue this seeming Good, from any Principle or Tendency that is in us, other than what we owe to his Laws? The Difficulty seems to amount to this; whether between our Faculties of apprehending and willing, and their respective Objects, there be any Relation which he did not create or establish?—If any alledge, that 'tis such Relation constitutes the Faculty; and therefore that the Question ends in this, Whether our Faculties are from God or our selves; *i. e.* whether they can be the Causes of themselves? I should suspect some Sophism in the Case, which at present I have not leisure to detect.

BUT having traced the Agency of Man thus far, we must be obliged here to desist; and from the *Factive Arts* resume the Consideration of the *Passive* ones; *i. e.* pass from what Art does out of us, to what it is in us; or rather, from the Arts whose Source is supposed in our selves, and which proceed outwards; to those whose Source seems without us, and tend inwards; That is, from those which arise from our Observation and Reason, directing us how to minister Occasions to the Laws which obtain in the external World; to those which flow into our Imagination, and furnish Occasions to the Laws which obtain in the internal World.—An Inquiry which may perhaps carry us where the Reader little imagines; but which will afford an ample Discussion of the Principle above establish'd; and a further Insight into the Origin and Cause of Science and Art; and the Nature and Measure of our Agency and Passion therein.

WE have already spoke something concerning *Poetry*; not for its own sake, but as a proper Instance to illustrate the Nature of *Art* in. It makes the lowest Article in our *Analysis*; which, in reality, is the highest in the Scale of Art; there being a sort of progressive Rising from the Beginning of the *Analysis* to the End. It begins with the first Matter of Knowledge, the common Objects of our Senses; and proceeds thro' the various Modifications they undergo by the other Faculties of Imagination and Reason, till those sensible Objects become so much our own, are so assimilated to us, and as it were humaniz'd; that they are part of our selves, and obey and take Directions from our Will, and minister to all our Views and Purposes: of which, this of producing Images and making Fables, is in one Sense the highest; inasmuch as the greatest Effects here arise from the slenderest Means and Endeavours. The Poet stirs but little in the Matter; but Nature co-operates so strongly with him, that this little suffices, even to make new Worlds. In effect, the Poet seems, as it were, to sit nearer the Spring of Action than other Men; and to have only to do with the general and higher Principles thereof, which command and direct a Number of other subordinate ones, that he himself is not aware of.—What we shall say of Poetry, therefore, will hold proportionally of all the other Arts; and we have only kept to that, because the Influence or Inspiration is here confessedly the purest, and the nearest to Heaven of all others*. The Principle or Spirit of Poetry, may be said to be that of Art in general; and hence many † Authors make no scruple to make all Arts the Invention of Poets: Thus it is *Homer* is often complimented with being the Father of all Arts.—This has, indeed, an Appearance of Truth; but 'tis only an Appearance: For *Homer*, supposing him the Inventor of Poetry, or at least the best Poet; has no other Title to the Invention of other Arts, than what he derives either from a greater Share of the Spirit whereby they are produc'd, than other People; or from his having communicated that Spirit, by the Force of his Poems, thro' other People, where it has generated, and brought forth other Arts; or from the Seeds and Principles of Arts and Inventions, which his Imagination was so pregnant withal, and which he disseminated over the World, where many of 'em, by due Cultivation, have sprung up into the Form and Maturity we now see 'em.

THE Mind is allowed to be passive in respect of the Matter of the Art of Poetry. We need not quote the Poets to prove it: No true Poet ever question'd his Inspiration: Every body knows that their whole System is built on the Supposition. And hence the Stories of *Apollo* and the *Muses*, of *Helicon* and *Parnassus*; the Dreams of *Pindus*, and the *Aonian* Maids: with a thousand other Reveries ‡. But the Philosophers, and Critics also, give 'em their Suffrages, and attest their Inspiration, in the strongest Terms. *Plato* has already been cited to this Purpose: He contends, at large, that all Poetry is "by immediate divine Inspiration, in the proper, and literal Sense of the Word."[§] *Aristotle* confirms it: "Εἴθω ἢ ἄλλοις, Poetry comes by divine Inspiration."[¶] And *Plutarch* says as much of all the Branches of Enthusiasm; Poetical, Divinatory, Bacchical or Corymbantical, Martial, and Erotick: to all which, he asserts, the Appellation, *Ἐνθουσιαστικὸν*, or *Ἐνθουσιαστικὸν* μὲν § †, equally agrees.—And not only so, but they hold the Enthusiasm communicable from one to another. It arises from the Poet, as its Centre, and is diffus'd, in *Orbem*; in a less degree of intenseness, the further it recedes from him. *Plato* asserts, that the *Ἐνθουσιαστικὸν*, or those who sung and rehears'd the Poets Works on the publick Theatres; nay, and the Spectators themselves,

 † *in Dial. Ion. or ubi rūs Ἴσοδο.*

Porphyry, Ἴσοδ'

were all divinely inspir'd, in some degree: which he illustrates in the Case of a Needle touch'd by a Magnet, which communicates an attractive Property to another Needle; that, to a third; and so on, with a continual Diminution.—Nor does the Effect end here, but the Professors of other Arts, as *Sculpture, Criticism*, and even *Pbiology* itself, borrow their Flame and Inspiration from this Fire. Thus *Pbidias* declared he was inspired to make that wonderful Statue of *Jupiter Olympus*, by the reading of *Homer*: And thus *Aristotle* may be said to have been inspired by the same Poet, to compose his immortal *Poetics*: The like is said of *Longinus*; that he was inspired by the Muses, or with the Fire of a Poet*.

BUT after Poetry, *Rhetorick* comes next, and shares most of the Spirit thereof, even more than Criticism. Accordingly, *Plato*, in his Dialogue inscribed *Menon*, allows that “as we say Pythians, Prophets, and “Poets are divinely agitated; so we do Orators.” Elsewhere he adds, “That they are certainly inspir'd “of God, and plainly possess'd.” So *Dion. Halicarnassens* † relates, that “*Demosthenes* did plainly *utroque*.” And adds, that the Distemper caught so among his Audience, that “they were possess'd at second hand, “and brought to do many things against their own Reason, and Judgment.” And *Æschines*, his professed Enemy and Antagonist allows as much. I need not say that *Plutarch* relates the like of *Cicero*, in the Instance of his Oration to *Cæsar*, for *Ligarius*.

SOMETHING like this has been observed, even in the Case of Prayer to God: Several Hereticks are on record for possessing their Hearers that way. *Hacket*, executed for Blasphemy under Queen *Elizabeth*, is said, by the Historian, “to have ravish'd all that heard him at his Devotions; and converted many in spite of their “Teeth.” And *Sarracina* relates, the People were persuaded that “God directed his Tongue.” *St. Basil* even affirms ‡, “that our Prayers are never right or acceptable, till the Ardor thereof carry us out of our selves, so “that God possess us in some extraordinary manner.” And hence the learned and pious *Goussaubon* establishes a new kind of Enthusiasm, which he calls *Supplicativo*, or *Precatory*; as he does divers others, as Musical Enthusiasm, Mechanical Enthusiasm, &c. To say no more, the Author last mentioned makes no scruple to make even “the ordinary Delights and Benefits Men receive from the Harangues of Orators, Sophists, Preachers, &c. “the Effect of Enthusiasm and Inspiration; as being what could never arise from mere Reason.” And *Plutarch*, and others, make that *Ardor* which the Soldier feels in Battle, of the same kind with that which inspir'd the Prophet, Orator, and Poet**.

WE have here little less than a System, sufficient to account for most of the Phenomena in the Animal World, on Principles of *Enthusiasm*. Reason, it may be observ'd, has here little to do; and it should seem, that Man ought rather to be defined, *Animal Enthusiasticum*, than *Animal Rationale*. And yet this is only a few, out of infinite Instances, of the immediate Agency and Inspiration of the Deity. We find the same Principle in every Art, every Invention, every Discovery, where no natural and necessary Connection is perceiv'd between the Discovery, and something known before, *i. e.* where the Reason of such Discovery, is not apprehended by any intuitive Knowledge. What has no immediate Dependence either on what we perceive by Sensation or Reason, comes by the Vehicle of Inspiration, *i. e.* of Imagination or Invention, for there it ends. The Imagination may be called the Medium of Art, as Sense is of Science. The Faculty of Reason, can make no great Discoveries; it can only advance from one Step to another, which must be ready laid to its Hand; and if these be any where interrupted or discontinued, there it is at a Stand. 'Tis, in fine, a limited Principle, subject to very narrow Bounds; whereas the Imagination seems to be indefinite, and still kept in the Creator's Hand, to be occasionally made use of for the Conduct of Mankind.

THE Truth is, when we say, such a Thing is the Effect of Enthusiasm, or Inspiration; speaking, I mean, of profane Matters; (the Inspiration, for instance, of *Scripture*, being Matter of a very different Consideration, and quite beside our present Purpose) this does not remove it out of the ordinary Course of Things: It does not put it on any other Principle, different from that whereby Causes and Effects succeed each other in the physical World. We can account for the Phenomena of the Imagination, as well as those of Sensation. They have their respective Laws, like other things; which they are subject to; and to which we have Arts, and Processes appropriated. In effect, all the Inspiration here spoke of, may be produced without any great Conjunction.—If the Reader will not take Offence at this novel Philosophy, he may be convinc'd of it. And 1°, in the Instance of the *Musical* Kind.

ENTHUSIASM is defined, in an ancient Author ††, to be “a when a Person engaged in some Office of “Religion; and hearing the Sound of Drums, Trumpets, Cymbals, &c. becomes alienated, or transported out “of himself, and sees Things unseen to others.” And what is here called *Enthusiasm*, is more significantly call'd by another ††, *νεαίρωσις μωρία*, Madness occasioned by the Sound of brazen Instruments: which coincides with the *Fever Corybantica*, so much spoke of among the Antients.

NOW, as we do not know any immediate Correspondence or Connexion between any one Sound, and any Idea; 'tis no more strange that one Idea should be excited by it, than another. There is a Law of the Creator, whereby a certain Order and Succession of Vibrations of the Air, is arbitrarily made the Occasion of a certain Perception in our Minds; and as the Circumstances of this Vibration are alter'd, a different Idea arises: *i. e.* to every different Combination of such Circumstances, a different Idea is attach'd; to usual and ordinary Combinations, ordinary Ideas; and to unusual and extraordinary, extraordinary Ideas. And hence there is, perhaps, no Idea, no Image whatever, but may be rais'd by means of Sound. Now, I do not know what *Common Sense* is, unless it be, the having common Ideas. Just so far as new Perceptions are rais'd in us, in Exclusion of the old ones; we may be said to be removed out of our selves, *i. e.* we are so far got into another System; the Phenomena which now present themselves to us, being so far different, from what they were before, and even from what they would still be, to another Person in the same Place, but under other Circumstances. On this Principle, we shall scarce find any thing but might be produced by Music; especially, when to the Force of well-adjusted Instruments, which the Antients seem to have study'd more, and understood better, than we; was added to the Solemnity of a Temple, the supposed Residence of a God, whose Statue there stood before 'em; with the awful Rites of Invocation; accompanied with furious Gesticulations, Dancings, and all the Devices that could be thought of, to unliinge the natural Sense, and Reason, which we find is but frail and precarious at best, and apt to play us false when most duly looked to. Few People are able to stand up against mere Music; which, unassist'd with any thing else, has been made to produce, and remove settled Madness; cure Fevers ††; drive Persons to kill themselves, or their Friends. 'Tis not long since the *Italian* died, who had reduced the turning of People mad by his Music, into a regular Art; which he could depend on at any time †.—The Reader that has a mind to see further on this Head, may consult the Articles, SOUND, MUSIC, TARANTULA, &c. in the Body of the Book.

2^o, THE Inspiration of Poetry is of a stiller, and purer Kind; and needs less Artifice and Apparatus to produce it in an Imagination naturally disposed for it. The attentive Consideration of some interesting Object, usually suffices to set it a going. And the Gentlemen of that Faculty have all Nature to chuse out of: The finest Seasons, the most agreeable Scenes, and the most moving Objects. Hence it is, that they are continually harping on "Groves, and Shades, and Gods, and Nymphs, and Darts, and Flames."—How do they riot in "Meadows trim with Daisies pied; shallow Brooks, and Rivers wide: Towers and Battlements they see, bosomed high in tufted Trees." Sometimes, they raise up "Knights, and Squires, and Maids forlorn; or, Lover pendant on a Willow Tree, or Lady wandering by a River's Side." Then, "Tilts and Tournaments, and Feats of Arms: Pomp, and Feast, and Revelry, with Masque and antique Pageantry;" "Stories of *Thebes* or *Pelops* Line; or the Tale of *Troy* divine: Of *Arthur* and *Cambuscan* bold; of *Cambal* and of *Algarife*, and who took *Cannoe* to Wife."—If these fail, they have all that is gloomy, and solemn, and terrible in Nature at their Beck; we may now expect to see "the red Bolt, or forked Lightning glare." Earthquakes and Tempests seldom roar in vain: if by chance they do, the "ill-boding Raven's Croke" is ready at hand; or else "the far-off Curfew sounds, o'er some wide watery Shore, swinging slow with solemn roar." And now for "baleful Ebon Shades, and ragged low brow'd Rocks." Next enter "horrid Shapes, and Shrieks, and Sights unholly: Gorgoons, and Hydras, and Chimera's dire." Images of things most moving to Sense, readily alarm and raise a Commotion in the Imagination. And the new Ideas thus procured, coming to be mixed, and combined in the Imagination, with others there before; new Effects arise from 'em, in consequence of the Laws of the Creator: much as intelligibly as Fire and Flame, upon mixing two chymical Liquors.

SCALIGER, in his *Poetica*, makes two Kinds of *Enthousiasm*, or Poets divinely inspired. The first, those on whom the Inspiration falls, as it were, from Heaven; without any thought or seeking, or at least by means of Prayer and Invocation. The second, those in whom it is procured by the Fumes of Wine.

ALL that is required to the first, is only a delicate, pregnant Imagination; susceptible of any feeble Impressions that may happen to be made in the Course of Things; and ready to take fire at the least Spark. The Surfaces of the finer Fluids, we find, are kept in continual motion by the bare Tremor of the Atmosphere, tho' to us insensible: And thus the Air is never so still, but that the Aspin Leaf feels its Impulse, and bends and trembles to it; when others require a ruder Gust to move 'em: Yet Gusts, too, give way in a general Storm; whole Forests then totter indifferently: even the Trunks of sturdiest Oaks, now yield like the reed. —And, accordingly, we read, in ancient History, of whole Nations being at once seiz'd with the poetical Fury. Few of the Cities of Greece, not even *Athens* it self, with all its Philosophy, but has one time or other labour'd under these epidemical Enthousiasms.

WE have already observ'd, that Invention is the Principle, or Source of Poetry. An excellent modern Poet adds *, that 'tis this which furnishes Art with all its materials; and that without it, Judgment it self can, at best, but Real wisely.—Now, this Faculty of Invention it self, is usually no other than a Delicacy, or Readiness of taking Hints: but even at most, what we are said to *invent*, is only what results, or arises from something already in us. There is no new Matter got by inventing: that can only come by the way of Sense and Observation: All that passes in the other Case, is, that from the Memory of certain Things, *i. e.* the Comprehension of certain Ideas to the Mind; certain new Ideas arise, according to the Order of Things. The sprightly Imagination is led, on various Occasions, to compound its Ideas, and many of 'em so oddly and boldly, that we take its Productions for new Things; and thus think we invent 'em, because they did not exist in us before in that form; tho' the Matter or Elements thereof did. There is no more real Invention in the Poet, than in the Tapestry or Mosaic Worker, who ranges and combines the various colour'd Materials furnish'd to his Hand, so as to make an Assemblage or Picture, which before had no Existence.

THE Reader who has any doubt about this, need only take the first piece of Poetry that comes in his way, to be convinced, that all that is new and moving in it, is no other than new Composition or Combination of sensible Ideas. In the *Il Allegro* and *Il Penitioso*, for instance, two of the most poetical Pieces in our, or perhaps any other Language; how easy is it to resolve all that is so magical and ravishing, to the new, uncouth, and frequently wild and romantic Assemblages of Imagery. Indeed, who can contain himself at "—Sport which wrinkled Care derides, and Laughter holding both his Sides.—*Cynthia* peeping thro' a Cloud, while rocking Winds are piping loud.—To hear the Lark begin her Flight, and singing tattle the dull Night: Or the Cock with lively Din, scatter the Rear of Darkness thin: Or listen how the Hound and Horn, loudly rouse the slumbering Morn.—Or, see glowing Embers thro' the Room, teach Light to counterfeit a Gloom.—Or storied Windows richly dight, casting a dim religious Light.—Or hear *Orpheus* sing such Notes as warbled to the Spring, drew Iron Tears down *Pluto's* Check.—Or Verse with many a winding Bout, of linked Sweetness long drawn out, with wanton Heed and giddy Cunning, the melting Voice thro' Mazes running; untwisting all the Chains that tie the hidden Soul of Harmony."

PERSONIFICATION, which is of that Extent and Importance that it is usually held the Life and Essence of Poetry; is a vast Source of new Imagery. By this, not only different Objects, but different Systems and Worlds, are combined and blended together; and what belongs to one Kind of Beings, Man, is attributed to every other: each Object, either of Sense or Imagination, being occasionally invested with all the Characters and Properties belonging to the human Kind. Thus, an Arrow grows *impatient*, and *thirsts* to drink the Blood of a Foe; or *loiters* and *slops half way, loth to carry Death, &c.* So an Action of the Body, *Laughter*, is above represented as it self laughing, ready to burst its Sides. And in the same Piece we have one of the Planets, the Moon, represented as *trick'd up and frownc'd*; and again, as *kerchief'd*, and in a decent Undress, and thus going a *Hunting*. To tell us, that a fine Spring Morning, attended with a gentle Gale of Wind, is very pleasant; presently,—"*Zephyr* with *Aurora* playing, as he met her once a Maying, on a Bed of Violets blue, and fresh blown Roses dipt in Dew, fill'd her with a Daughter fair, yclep'd in Heaven *Euphrosyne*, and Mirth on Earth." How consistent with the Nature of Things, that a Breath of Air should lay an early Hour of the Day down; and that from a green Gown thus given, a Passion of the Mind should in time be brought forth? In effect, the Inspiration of the Poet amounts to little more than relating things that are naturally incongruous. He presents new Objects, new Worlds, but 'tis only by differently combining the Parts of the old one. He does not make any thing, he only patches: He does not invent, he only transposes: Nor has he the least Power to move, other than what he derives from the Novelty and Strangeness of his Combinations; to which nothing exists in the ordinary System, any thing conformable.—To say no more, if Invention furnish Art; Memory furnishes the Invention; and Sensation the Memory, where all Knowledge originally commences. And the whole Process is nothing but the Action, or Operation of the Deity in a Course of Laws.

AS to the second Kind of Poets, in whom the Inspiration is promoted or excited by means of Wine; *Cassion* is perfectly frighted at it; judging it the highest Strain of Impiety, to suppose a Man may be divinely

* Pope in *Pref. to Homer*.

inspir'd by the Fumes of Liquor.—And yet I don't know whether his Fright be not founded on a Misapprehension. If *Scaliger* or any other Person alledge, that the Juice of the Grape may be an Occasion of such an Effect, i. e. a Means or Condition necessary to make the Laws that concur to Invention take place; I do not see what Religion has to do here, more than in any other Enthusiasm. The use of such a Means, is no ways derogatory to the Power or Goodness of God; who still remains the Author of this, as of any other Inspiration; whether it be by Visions, by Voices, Dreams, or the like. What matters it whether the Sound of a Cymbal, or the Sight of an Image, or the Effluvia of a Liquor be the Occasion? So long as he is the Cause, what matters it what Instrument he makes use of? And of all the Blessings this Juice is made the Occasion of to us; why should it be precluded from that, which none of God's Creatures, not even the vilest, but occasionally ministers? The Antients did not think so meanly of it: they set up a God on purpose to preside over it; and it even had the largest Share in their most solemn Ceremonies of Religion.

THE Inspiration of *Orators*, bears a near Relation to that of the Poets; tho' being somewhat grosser, it becomes more technical, and demands more Industry, and Art.—*Quintilian* tells us how a Rhetor is to get inspir'd*; "not by supinely loiting and gazing at the next moveable, and carelessly turning things over in his Mind; but by "imagining the Judge and the Audience present, and strongly representing to himself the Time, the Occasion," &c. He adds, that no body ought to pretend to be an Orator, unless he have this Art of Inspiration at command; so that he can raise it at pleasure.

WHAT has been said above, contains some of the general Principles of Enthusiasm, and their Connection with other physical Effects: and 'twill be easy to trace and pursue the same, where they appear in other Cases, and with other Circumstances. Thus the Inspiration excited by the Orator in his Audience, is resolved, by *Cassianus*, into the Musick of the Speaker, i. e. the Tone and Cadence of his Voice; and the *Enthousiasme*, or order and placing of his Words: In which last, how simple and trivial soever it may seem, all the great Masters of the Subject allow somewhat mysterious and unaccountably forcible; and accordingly make it the principal Part of Rhetorick. And yet there is nothing in the Whole, but what results from the Powers, Properties, &c. of the several Letters, consider'd as so many Sounds, artfully combin'd. In effect, there is some *Phonics*, or Dimension, and some *Meters*, or Numbers in all Diction; much more in that of Oratory: And Musick it self has no Charm in it, but what it derives from those very Sources.

NOR must it be omitted, that the use of *Metaphors* contributes its share to the Effect. The Secret whereof consists in this, that they are, as it were, accommodated to the Senses; and present such Images to the Imagination, as move us most when perceived in the Way of Sensation †.

AS to that Enthusiasm felt in *Prayer*, its Cause is not far to seek. The Powers of Rhetorick, and Musick; and of a peculiar Fervour of Imagination, rais'd by an apprehension of the Presence of God, &c. will go a great way. We may add, that the antient Heathens made use of *Dithyrambs* in all their most solemn Prayers; which *Proclus* observes, are peculiarly fit to stir up enthusiastical Dispositions. A Man that rides *Pindar's* Horse, cannot well fail of going at a great rate.

BUT the most extraordinary and unaccountable kind of Inspiration is still behind, viz. that of *Prophecy*, *Divination*, *discovers of Cures by Dreams*, &c. which yet may all be produced by Art; and accordingly, have all been taught and studied like other Arts: not to say, also, practis'd like them, for a Livelihood. Schools and Colleges of Prophets, Divines, Augurs, &c. were numerous both among Jews and Gentiles; and there was little in their Discipline, but what may be resolv'd into what has been already said. Here, all the Means above mentioned, all the Springs of Enthusiasm, were us'd; and frequently combin'd together, to make the more compound and extraordinary Effect. The Sight of vast Objects, as Rocks and Mountains, wild Prospects, solitary Groves, gloomy Caves, furious Rivers, Seas, &c. which we find to work so strongly on the Mind, were indulg'd; and ‡ frequent Changes, and sudden Transitions made from one to another **. Such unusual Objects necessarily suggest'd unusual Ideas; which were heighten'd by proper Applications to all the other Senses. And when the Man was at length got out of the ordinary System of Thinking, into another more unusual and extraordinary, tho' equally physical, or if you will, mechanical one; what he utter'd was judg'd all oracular: It was not his Sense, or Reason that spoke; and therefore it must be that of God himself. And among a large Train of Objects which presented themselves to him, some of 'em could not want an Analogy to Things that were really to come; at least, in the Opinion of a Person already possess'd with the Notion thereof. It may be added, that the Prophecies themselves, had their Share in producing Futurity; the Events whereof partook in them. In effect, the Revelations still retain'd something of the Means made use of to raise 'em. Thus, if the one were either agreeable or displeasing, the other would be of the same Kind: And hence a Revelation was artificially producible of the Complexion required: which was the very Apex of the Art. So that the Divination, when most perfect, really suppos'd a natural Knowledge of the Thing demanded, and was built on it.

AS to *Dreams*, &c. there was a Formula for 'em; the Circumstances whereof might be appropriated to raise in the Imagination an Idea of the Thing required.—After a number of Ceremonies, the Party was to sleep in the Temple: *Pellibus incubit fratris, somnumque petivit*. And the Priests had not only the placing of his Body, and the strewing of his Bed; but also the Management of Odours, Sounds, &c. in the Night-time. So that if any natural Means were known for the Cure, here was room enough to suggest it to the Patient's Imagination, which was made accessible to 'em, and as it were put into their Hands. But, if no proper Remedy were known; as, 'tis probable, they hardly enter'd so far into the Part: yet, what was thus suggest'd, perhaps at random, how strongly must it operate, when enforced by the Opinion of its coming by Miracle and Inspiration? We see what the bare Presence and Assurance of a Physician will frequently do; even cure Disorders far out of the Reach of his Skill: and what an Improvement would it not be to the Faculty, to have the further Assistance of a little Shew of Religion and Ceremony?—A deal more might be said on this Head, from the Practice of EXORCISMS, AMULETS, PHYLACTERIES, &c. to which the Reader may turn in the Book; as also to the Articles WITCHCRAFT, EPHEMERALS, &c.

IT appears then, that 'tis in vain that we pretend to pervert the Order of Nature. Sensation does and must inevitably precede Imagination; which cannot by any human Means come at the smallest Grain of any thing, but what passes thro' that Canal. There is no harm in saying, that such Things are of Divine Inspiration; the Mischief lies in supposing, that these are more so than others; that what appears only to the Imagination, is more of God than what appears to Sensation: which is, in effect, to say, that we have some Knowledge which we do not receive from God.

* Instit. Lib. v.

† Cicero 3. de Orat.

‡ *Multos Nemora Sylvæque, multos Annes sut Maria commovent, quorum fluctuanda mens, &c.* *Cic. de Divin.*

** *Livy, relating the horrible Riots of the Saturnalia, says, "Idem " would heretofore be taken as if mad, fall into strange fantastical Agitations of body, and break out into Prophecies!" Velut mentis capti, cum agitatione sanctæ corporis vacillat.* Dec. iv. l. 9.

NO body can imagine, that what we have said tends to exclude God, and Providence out of the World; but rather to establish, and confirm 'em in it. So far is it from shewing, that the Deity has no hand in the Production of such and such Effects; that it shews, nothing else has any. The Whole is His; and the Agency of Man is only circumstantial. For, what necessary Connexion between any of the Means here used, and the Effect? And in whose Hand but God's, could such incompetent Instruments produce such Ends? In reality, we not only confess his Preference and Agency in the great and extraordinary Phenomena; but see and admire it every where, in the most ordinary ones. Nor does this imply any thing to the Disadvantage of Revea'd Religion; which is a Point quite foreign to the present Purpose. The Inspiration and Prophecy we have spoke of is all natural, and ordinary; and does not any way preclude the Deity from more extraordinary, and miraculous Manifestations of his Will. On the contrary, if weak Man can do so much, acting subalternately to certain Laws of Nature, and by means of others; what may we not conceive of the Author of those Laws, whenever in the Wisdom of his Councils, he shall think fit to interpose: as, in the two great Dispensations whereof the sacred Writings speak?

BUT, if we have not made Philosophy encroach too far on Religion; it may, perhaps, be objected, that we have made Religion of too much Concern in Philosophy; in that we are continually recurring to the dernier Resort, the Deity; which is held unphilosophical.—But let it be consider'd what it is to philosophize; and whether our Theories amount to any thing more, than Enumerations of Laws, *i. e.* Actions, of the Creator? 'Tis certain, all the Structure and Œconomy discover'd by Dissection, Microscopes, Injection, &c. furnish no more scientific Account of the Origin of an Animal, than of a Spark of Fire. The usual System of Generation amounts to no more than Augmentation; as it supposes the Animal already form'd, and only undertakes to enlarge, and show how it arrives at its Bulk. An Animalcule is to be given us, either *in semine*, or *in ovo*, or we labour in vain; Assimilation being all the Generation we have any Idea of. We find our selves lost and bewilder'd, when we come to think “How the dim Speck of Enty began,” and here begin to confess, and mourn the Imperfection of our Knowledge. As if there were any Difficulty here, which did not equally obtain in every Step of the Process. All the difference is, in the one Case we are sensible we only know the *What*, and in the other we also think we know the *How*: Which is a Delusion: And were it not for the Paradox, one might almost affirm, that we know those Things best, which we think we know the least. For that here we more immediately see the real Cause, without the Cloud and Embarrass of Occasions, which at other times confound us. Occasions, are Causes, with respect to us, who only act at second hand; and the great Source of our Error, is, that we can't easily see thro' 'em to the real Cause. Whence, the greater number of Means and Occasions we perceive; the further is the Cause apt to be involved, and the more Attention is required to extricate it. And by this way alone can Philosophy lead to Atheism.—Our Knowledge, in effect, is all relative; it respects our selves, and our uses, either more or less immediately; and is chiefly applied in the Arts, and Affairs of Life, where Occasions are Causes: And hence we take a Tincture, which we carry with us thro'out; and apply, unawares, the same Notion when we come to philosophize, where we are less interested, and consequently our Knowledge purer and more absolute. And thus we are betrayed fatally to confound *Art* with *Nature*; *First Cause* with *Second*; *God* with *our selves*: all which must be done, ere the Philosopher can commence Atheist.

THIS not distinguishing between Causes and Occasions, has produced an infinite deal of false Refinement; to the great detriment of our most obvious and palpable Knowledge. We continually over-shoot the Mark; and looking too far, mis seeing what is close to us. We are willing to leave God out of the Affair as far as we can, and only have recourse to him when we are at a pinch. He is rarely wanted, unless now and then, for a Miracle, or so. The Deity is not to interpose, *nisi dignus vindice nodus*, till we have occasion for him; *i. e.* till the Case becomes so obvious and glaring, that the Charm is broke, and we are forced to see him in spite of all our Prejudice. The Occasions are so visibly inadequate, that our Conscience cries out, and necessitates us to look to and confess a Cause.—But, tho we be well enough contented to find him at the End of the Chain; alas he must be also present at every Link, or the Whole will fall to pieces. He is not more concern'd in forming the original *Stamen* of a Fœtus, than in nourishing, assimilating, or bringing it at length to Light. We can as easily conceive the first Formation of a piece of unorganiz'd Matter into an Animal, as any other Production of Nature; or even, as we call it, of Art. Generation is effected after the same manner as other Arts; and the same Principles that will account for the making of a *Statue*, will account for that of a *Child*. If the Figure of a Man arise out of a Mass of Clay; is it by any other Operation than that of Nature, which according to the Position of the Hand, determines the Parts of the Clay to move in this Direction, or that; according to certain Laws of Motion, and Percussion? And if the same be afterwards harden'd, upon standing to the Fire; is it not by the same Nature acting by certain other Laws, the Set or Collection whereof makes the physical Process called *Exhalation*? The Hand, you'll say, was the Occasion. But what is an Occasion? I doubt we have no just Idea of that Word; and that it implies somewhat of a Contradiction; at least, if any thing of Causely be denoted by it. Considering that we say, Light is the Occasion of Shadow, Joy of Sorrow, and every thing of its Contrary. If a piece of Phosphorus, upon becoming contiguous to Air, immediately begin to smoke, and produce Fire and Light, with all the wonderful Phenomena thereof, as Colour, Refrangibility, Reflexibility, alternate Fits of easy Refraction and easy Transmissiion, have different Powers inherent in the different Sides of its Corpuscles, be relouable by a Prism into all the Appearances of a Rainbow, exhibit the Species of Objects, act on and consume Bodies, give Sensations of Heat, Pain, &c. and all these Properties permanent, and immutable for ever; What a System of Laws, what an infinity of Springs must be play'd for all this? No Circumstance whereof is in our hand, beside that of Contiguity or Non-contiguity with the Air: which, for our own Glory, we dignify by the Name *Occasion*, and suppose something in it analogous to Cause; and thus put our selves in some measure on a footing with the Almighty.—We know, without Light the visible Universe would cease to be; and without Heat, all Motion and Action must be at an End: So that it may even be said to be owing to Fire, that there is a World. And yet how easy is it to produce what thus contains in it all Things! In effect, Fire is an *Occasion*; and contributes just as much to the Existence of the World, as we do to that of Fire. When we are doing, we might as well go on, and make our selves the Causes or Occasions of the Universe; which we are, in the very same Sense, as of any one Phenomenon in it. And thus, the same Principle which appear'd so destructive to Religion, is found equally so to Philosophy. So consistent is the Nature of Things! one Error is subversive of almost all Truth: One Wheel amis in the Machine of Knowledge, makes the whole a Lye.

OF this, many of the Antients seem to have had a juster Notion than we; as, in effect, they may be said to have had more Religion than we.—Their Mythology, which is supposed to be their Physics, speaks of nothing else but God, under various Forms and Shapes, *i. e.* in various Views and Relations. The Poets, from whom it was taken, first personified God, or the first Cause; and then his Attributes. His *Power* they called *Jupiter*, which they conceiv'd as his reigning Attribute; his *Justice* was *Juno*, the Consort of Power; his *Wisdom*, *Minerva*, the Offspring of *Jove's* Brain, &c. And thus it is they are to be understood, when they

* *Vid.* Bossu, *Traité du Poëme Epique*, L. i. c. 2.

say *Jupiter* did so, and so; *Juno* persecuted the *Trojans*; *Minerva* instructed *Telemachus*, &c. which seems to be all the Polytheism the Inventors were guilty of; tho' after-Ages, not perceiving that this was the Work of Poetry and Fiction, absurdly took it in another Sense.

IN effect, the whole Physics of the Antients, was no other than a Theology; as all just Physics ought to be. I may even add, that the making a Difference between the two Sciences, and erecting 'em into Provinces independent of, and opposite to each other, has proved most pernicious to both; and been the great Source both of Irreligion and Ignorance; which will never be dry'd up, till the two be restored to each other, and laid together again. To run any length in either of 'em, without having recourse to the other; as the generality of Authors affect to do, is downright inconsistency. Some of our Systems of Theology, one would take for pure Inspiration thro'out; as if the Authors supposed they could know any thing of God, otherwise than by means of Sense, and Phenomena: or as if Enthusiasm it self did not pre-suppose Sense, or could arise without it.—And, on the other hand, some Treatises of Philosophy seem to have refined God out of the World, by whom all things in it subsist; and which, in *Seneca's* Philosophy, was no other than God himself *. They have made us an Universe so fine, that it may stand of it self, without any God, i. e. without any Cause, at all: Occasion is the highest Causation they require. This is to abstract with a witness; to distinguish the Knowledge of the Cause from that of the Effect, and *vice versa*: whereas there is no knowing any thing of either, other than by their Relations to each other.

I MAY add, that the further either of these Sciences is carried, on this footing, the more idle and extravagant it will become; and that the one tends to downright Madnes, and the other to downright Atheism. On the one hand, to make a System without a God, is nothing less than to be a God one's self: The Author's Imagination must supply the Place of a Deity, by animating the Mafs, and giving Connexion to the several Parts and Members, i. e. by establishing the Relation of Cause and Effect, which is the very thing that denominates God. Yet even such imaginary System it self, cannot arise without God, acting by his Laws upon the Imagination, in the Course of Things; so as to produce such Effect: And thus what tends most directly to exclude God, does at the same time suppose him.—And, on the other hand, to make a God without a System; that is, to give a Theology or Doctrine of God, without a Physiology, or that of the World, is directly to make a God, not to find one. 'Tis to make an Effect antecedent to its Cause: 'Tis to do, I am asham'd to say what!

I AM afraid I may seem to have been too long absent from my Subject; but it has been all along in my Eye, and a little Recapitulation will convince the Reader, that we have not wander'd far out of the way.—We have shewn whence all our Knowledge originally rises: that Sensation is its only Source; that what comes this way, comes by the Agency of the Divine Being: that it is further modified in the Memory or Imagination, where new Assemblages are frequently made, which is called *Invention*; that it is continually altering, by the Admission of new Ideas from without; but still remains subject to the Laws imposed by the Creator, so that nothing happens therein, but in consequence of such Laws.—Thus far the Mind appears merely passive: And thus it stands with respect to the *Matter* of all Knowledge and Art.—It remains, now, to consider its *Form*, or that whereby such Knowledge becomes *Art*, i. e. becomes subservient to human Purposes, and under the Direction of human Reason.

HERE, therefore, a new State of the Mind, *Agency*, and a new Faculty thereof, *Reason*, come in play: the Foundation and Office whereof, will be ascertain'd, by inquiring, What there is in the Artist's, e. g. *Lioner's*, Mind, that concurr'd with his Inspiration or Invention, to the Production of his Poem? This will be found to resolve into, first, an Inclination, or Desire to produce some Piece, in the way of a Fable, that shall strongly represent the Mischiefs of Discord among Confederates; and, secondly, a Knowledge of the Means necessary to that End, or an Acquaintance with certain Rules and Measures which tend to produce such Effect.

THE first is a *Moral View* or *Motive*, which has already been laid down as the Spring or Principle of all human Action, and which is founded on the Apprehension of Good or Advantage to arise from such Poem. The second, viz. the Knowledge of the *Means*, stands on the common Footing of the Knowledge hitherto discours'd of.

THE *Means* and Measures of an Art, make a kind of preliminary Doctrine, necessary or conducive thereto, called the *Theory of the Art*; which, also, in one Sense, may be consider'd as another *Art*, distinct from the former: At least, to come at it is the Business of another Art.—If, for instance, a certain Position, or Set of Motions of the Body, be constituted by Nature the Occasion of a poetick Inspiration; and such and such Images and Ideas arising herefrom, be constituted the Occasions of such and such Passions in the Mind of a Reader, and such and such Views consequent thereon, viz. an Aversion to Enmity, and Contention: To form an Art productive of these Effects, we must first see and observe such or the like Effects, to arise from such or the like Causes; and argue or infer, that 'tis probable these Motions, or these Images, are the Occasions thereof: and consider and collect the Order, Manner, and Circumstances thereof, to form the *Art*, or *Method*.—So that we have here, as before, 1^o, *Matter*, viz. Phenomena, first furnished by Sensation, and preserv'd in the Memory; 2^o, *Form*, arising from the Moral View, which led us to frame an Art, and in order thereto, to consider and dwell on the Phenomena, compare 'em together, and infer something from 'em.—It appears, therefore, that we have two Arts of Poetry, very different from each other; coming from different Causes, tending to different Purposes, and rarely found, in any degree, in the same Person. The first Art *Homer* has in perfection, the second, *Aristotle*.

BUT for all their difference, the two are really of the same general Nature, and Kind; and only differ in point of Degree, and Subordination; as they are nearer to, or further from, the Principle of all Knowledge and Art, Sensation.—*Homer*, we have shewn, was inspired: He derived his Art only from Nature acting on him in the ordinary Course of Things, and first presenting Objects to his Sense, then to his Imagination: And others are inspired from him, i. e. derive the Inspiration from Nature thro' his means: among whom is *Aristotle*. Nature, as she appears to the Senses, is *Homer's* Subject: as she shews her self in *Homer*, is *Aristotle's*; by which time the Inspiration is grown a degree cooler, and less forcible, and the Ideas thus excited at second hand moving the Mind less, it can attend more steadily to 'em, and perceive their Relations better. In the first it falls like Lightning, immediately from Heaven; the second may be compared to the Reflexion of the same in a Mirror. The reading of *Homer*, i. e. the exciting and calling up his Ideas and Images, does, as it were, impregnate *Aristotle's* Imagination; and transplant the Poet's whole Nursery into the Philosopher's Garden, to be further cultivated. Accordingly, *Aristotle* applying his Apprehension and Reason to 'em, and examining 'em closely on all Sides, perceives divers Relations and Analogies between 'em, which *Homer* was not aware of; and which the Warmth of his Imagination, and the quick Succession of new Ideas, would not give him room to attend to. These Analogies he calls *Rules*, or *Laws*; the Assemblage or System whereof, make what we call *Aristotle's Art of Poetry*.

* *Totum hoc quo consistitur & usum est & Deus; & socii ejus sumus & membra.* Epist. 92.

THE like Process might be observ'd in the several other Arts. Those we have hitherto chiefly kept to, have been of the symbolical Kind : we shall here give an Instance in what we call the real Kind, viz. *Architecture*.—An *Albanian* Sculptor, then, observing an *Acanthus* shooting up under a Basket ; is pleas'd with the Figure it presents ; and taking the Hint, invents the Capital of a Column on the Model thereof : And by a number of like Steps, an entire Order gradually arose ; and, in time, a whole Art.—Things thus advanced ; and another Person seeing a Building framed after such manner ; he attentively examines the several Members, their Forms, Proportions, &c. and puts 'em down in writing : And thus does another posterior Art arise. And between the two, there still remains the Subordination already observ'd between the Means, or Occasions of producing 'em ; i. e. the Rules thus form'd being couched in Words, or Language, supply the Office of the external Objects they were originally deriv'd from, and prove Occasions of raising Ideas or Images in the Imagination of future Artists, to be imitated in the proper Materials.

THE Arts, then, of Poetry and Architecture, come first in at *Homer's*, and *Callimachus's* Sense, in the simple Quality of natural Phenomena, or Objects ; which meeting with other Ideas in the Memory, or Imagination, and coming to be compared and combin'd therewith, by the Agency of the Moral View or Principle which suggest'd the making of a Poem, &c. as advantageous and desirable ; new Productions arise, e. g. a Poem, or a Building : which coming at length under the Cognizance and Consideration of Reason, certain Relations or Analogies are discover'd therein, which tend to propagate, and produce the like at any time.—Reason returns Rules for Matter ; which Rules, prove like the Philosopher's Stone, which tends to turn all Materials it is applied to, into Gold ; and the Materials thus transmuted, like the pretended multiplicative Virtue of the same Gold, from every thing they are applied to, produce Rules again.

REASON, in effect, which is the last Faculty the Matter of Art arrives at, is the first from which the Form or Rules thereof, which are to propagate it, arise. In which view, Reason may be laid down as the Principle of this secondary Art, or Theory ; as Imagination of the primary one, or of the Matter. We still see the Effect of the first Laws, even in the latter Art : External Objects strike the Sense and Imagination so strongly ; that they reach to Reason ; which, like an infinitely elastic Substance, reflects 'em back again ; and thus they again grow into Objects of Sense : and so in a Circle.

THIS seems to make the two Arts differ very widely : And as Reason appears our highest Faculty, (inasmuch as 'tis this alone that tends to produce, and multiply) and accordingly, all our Knowledge appears proportionally higher and purer, as Reason is more concern'd therein : the Rules or Theory of an Art, appears of infinitely nearer Consequence than the Matter thereof. The former is in some Sense active, and, like the Almighty Mind, tends to produce new Things, new Worlds, new Systems without end ; the latter is mere Passion, and ends in bare Brute Perception.

YET, *Aristotle's* Rules, it must be observ'd, do not tend to produce Poetry ; I mean, not the Matter of Poetry ; but only the Form. *Aristotle's* Art is not the Art of Poetry in that Sense ; as its Rules don't tend to produce the Enthusiasm. They only give the human Part, and relate what Reason observes in the Productions of the Imagination, i. e. what there is in 'em that is a proper Object of this last Faculty, and comes under its Notice. In effect, Poetry is only subject to *Aristotle's* Rules, as there is Reason, not as there is Inspiration or Invention in it.

THE Source of Poetry, we have observ'd, lies out of Poetry, in a higher Ground ; and to turn the Stream upon us, is the Business of this other Art of Inspiration. The immediate Inspiration, is not so immediate as we might imagine. It is not the ultimate Principle of Art, but is it self subordinate to another further, or purer Art ; so that we must not have only Art and Rules to produce Poetry, but also to produce the Principle thereof, Inspiration, or Invention. And the same will hold of the Rules of this last Art, themselves, which will require others ; and so in infinitum. At least, the Series will be infinite, if we only take our selves, and our own Agency into the Account.—

TO clear up this a little farther ; it is to be observ'd, that the Art, e. g. of Poetry, is not only the Result of another higher Art, as above laid down ; but, as it consists of Matter and Form ; these are each of 'em the Subject of a particular Art, and each of 'em require another higher Art to produce 'em.—The Means, for instance, necessary to Inspiration, or the Invention of Images, make one Art ; and those for their Application to the present Purpose, another. So that the Art of Poetry resolves it self into two subordinate ones ; the first of which may be call'd the *Art of Invention*, the other the *Art of Judgment*, or Criticism : each of which has all the Characters of the general Art ; is come at like it, produces new Objects like it, and resolves like it into Matter and Form.—Nor does the Matter end here : For as each of these subordinate Arts, consists, again, of Matter and Form ; each of 'em resolves lower into two other Arts : and the same may be said of each of these ; and so on. So that there is really an infinite Series of Arts, previous to any one, and accessory thereto ; all distinct from each other, tho' all of the same general Nature and Kind, and only differing in Point of Order, or Subordinacy. They arise subordinately from the same Cause, and tend subordinately to the same End : Which Difference, or Subordinacy, as already noted, arises only from their greater, or less distance from the Principle of all Knowledge, Sensation.

UPON the whole, sensible Nature furnishes the Matter of them all, by means of the Imagination ; and moral Nature the Form, by means, or light of Reason.—The former Proposition has been sufficiently discuss'd. It remains to inquire a little further into the latter : For, that Reason furnishes the Means, &c. must be further qualified, ere it be receiv'd.—Our Reason, it is to be observ'd, does not perceive any necessary and immediate Connexion between the Means, and the Effect : for there really is none. Consequently Reason cannot be the Author of 'em ; in regard, the Medium is wanting whereby it could possibly attain 'em. So that they must be procured by some other Canal ; which will at length be found to end in Sensation. In effect, ere we know that such Means conduce to such End, we must first have observ'd, or found it so by Experience. Our Memory suggests to us, that such or the like Causes, have been follow'd by such or the like Effects ; which is the only Foundation we have to expect any thing from 'em on the present Occasion.—Thus, if *Homer's* Reason direct him to retire into a Place free of Noise and Disturbance, at a time when his Mind is clear and in due Temper ; and there to apply himself with Attention and Earnestness, to think on his Subject : In consequence of which Means, new Ideas and Images present themselves ; some more immediately relative to the present Purpose, others less : Whence comes all this, but that *Homer* remembers, such or the like Ideas as are now wanted, to have arose upon the use of such or the like Means ? And if, among the Crowd of Images, he chuses only such as are most proper, and immediately conducive to his End, and throw aside or expunge the rest ; whence is this, but that he remembers such, on former Occasions, to have contributed more fully to Ends like his own ; than such others ? So that the whole Process appears to be little other than Remembrance ; which, we know, resolves into Sense.

BUT, Memory, it is to be here noted, deals only in *past* Things. It informs us, that on such an Occasion, such Means, under such Circumstances, produced such Effects: But its Notices are merely narrative, or historical; and relate only to those numerical Means, Occasions, Circumstances, &c. which can never happen again. So that Memory speaks nothing to the present Case; nor gives any Directions how the particular Purpose now in view is to be attain'd. Its Language is only this, "Such Means did produce such and such Effects."—To make the Application of *past* Things to present, is the Office of Reason; which comes in where Memory ends; and subjoins, That "if such Means have done so, such others will now do so." And consequently 'tis Reason that, in strictness, prescribes the present Measures.

OUR Inquiry now draws towards an Issue; and it only remains to shew, in what manner Reason attains this End, *i. e.* what farther or higher Means there are, whereby it is enabled to furnish Measures for the present Exigent, from the Circumstances of *past* ones?—This it effects by certain Perceptions of *Similitude* and *Dissimilitude*, *Parity* and *Imparity*, *Congruity* and *Incongruity*, between former and present Means, Occasions, &c. By virtue of these, the Mind infers, argues, or presumes, That "inasmuch as such Means were followed by such Effect; such others, by parity of Reason, will be followed by such others." And that "as there are such and such Differences between former and present Occasions and Circumstances; there must be such and such other correspondent Variations in the present Measures, to keep up the Congruity." All which resolves into that comprehensive Word, *Analogy*.—Thus it is found, that every *Means*, every Step of an *Art*, includes what has been already shewn of the whole *Art*; and consists of *Matter*, furnish'd by Memory, from Sense and Observation; and *Form*, furnish'd by Reason, from Comparison, and Analogy.

AND thus it is Reason that makes all our historical Knowledge of any significancy to us. 'Tis this that makes former Cases subservient to the present Occasion. We may look upon this, as the Instrument or Faculty of transferring; whereby the Effects of former Times and Places, are brought over to the present ones. Without this, Sense would lose its chief use; and Memory, with all its Copia, be no other than useless Lumber.—'Tis this Faculty alone that arranges our sensible Ideas into any thing of Subordinacy. Memory only presents 'em such as they first appear'd; wholly distinct all, and independent of each other; being connected by nothing but their Co-presence, or Co-existence in point of Time and Place. The Establishment of all other Relations is the Work of Reason; which, from these few sensible Relations, infers numerous others, *e. g.* from the Comprehension of two Things, in respect of Time, Place, &c. it concludes that some new Appearance perceiv'd in the one, was occasioned by the other; and therefore, that there was some Power in the latter, by which this was effected, &c. And thus it is we come by the Relations or Perceptions of *Cause*, *Effect*, *Action*, *Passion*, *Property*, *Quality*, &c. So that, to this Faculty of Reason, we owe the whole Science of *Physicks*; which is no other than the Doctrine of Causes: At least, the Form thereof. The Matter, *i. e.* the Sensations themselves, being furnished by Sense, constitute *Natural History*, the Basis of all Knowledge whatever.

WE are now got to the Top of all our *Natural Faculties*, *Reason*; and the most refined of all our Science, *Analogy*.—It remains to observe, that with this *Natural Reason*, is connected *Moral Inclination*. In the Case, for instance, of *Good*; to the Voice of Reason representing a Thing as such, is connected a *Desire* or *Inclination* towards the same; which is the Spring or Principle of all human Action, or Operation; and commands a number of subordinate ones, the application of all which constitutes what we call the *Pursuit* of such Good.

AND thus we are got to the bottom of all our moral Faculties, *Desire* or *Inclination*.—Hence, as Reason is the End of *Passion*, or Perception; *Inclination* is the Beginning of *Action*: The one terminating in the Apprehension of Good, where the other commences. And again, as the Perception of *Analogy* is the ultimate Effect of Science; the *Inclination* arising by means hereof, is the Beginning of *Art*: the two being join'd, and as it were, inoculated in some middle Point. And thus external or physical Things, come to influence or produce internal, or moral ones; thus the whole Effect of sensible Nature is applied to moral Nature. And thus do *Physicks* take hold of *Ethicks*; God, of Man.—Hence, moral Knowledge may be consider'd as a kind of Medium between Perception, and Inclination; Action, and Passion; Science, and Art: Accordingly, it possesseth a middle Region in the Orb of Knowledge; as being that by whose Mediation, a Communication is made between the two; and the Effects of the one imparted, or handed over to the other.

BUT, to determine the Nature and Origin of *Analogy*; and shew how these Notices or Perceptions of *Similitude*, *Parity*, &c. by means whereof Reason makes her Conclusions, are arriv'd at; and whether they arise in the same general manner as other Ideas, by the Agency of the divine Being, (the human Mind remaining wholly passive therein) or whether we perceive or discern 'em immediately, by some intuitive Power inherent in the Nature of the Mind; and so are active therein—will need a little farther Attention.

IT must be allow'd, then, that these Perceptions, *Similitude*, &c. are no proper Objects of Sense: They do not come from without, as any part of the Matter of our Sensations: they are of no Colour, Figure, Solidity, or the like. Nor do they seem to arise immediately, and necessarily, upon any Objects being presented; but rather to require some Action, or Operation of the Mind, to produce and give 'em being. The Truth is, they are not any immediate Objects, but result from a Comparison between several; which Comparison seems to be the Work of the Mind, bringing one to the other, and considering their Agreement and Disagreement.

BUT, tho this bids much fairest for Action of any thing yet allerdg'd; yet will the whole hereof be found to resolve into Sense, and Memory.—If, seeing a Sword run thro' a Person, I find he dies upon it; and seeing afterwards a Spear run in like manner thro' another, I conclude he will likewise die: Whence is this, but that in the latter Case, some of the Circumstances of the present Transaction, do necessarily recal the Memory of the former ones: Since, so far as they were alike, they were really the same? Consequently, as the Idea of Death was connected to the former; it belongs equally to the latter. In effect, in two similar things, so far as I see a *Similitude*, so far I see the same thing in both. *Similitude* is only a Repetition: and therefore what agrees to the one, must, so far as their *Similitude* goes, agree to the other, for the same Reason that it does to either. Hence, if I am passive in remembering the Sword, and passive likewise in seeing the Spear; and the one be in some respects the same with the other: I am not active in perceiving that Sameness: since 'tis only the Perception of one thing twice over. And my knowing it to be the same now, is only my remembering it to be what I had seen before; with this difference, that the Power which first represented it to me absolutely; does now represent it with this additional Circumstance, that I had seen it before.

AGAIN, if I argue or conclude that what agrees to, or arises from one thing; will do so in another thing similar only in some Circumstances: This is founded wholly on a *Presumption*, that the Agreement reaches to those Points upon which the former Effect depended. So that all physical Causation, in respect of us, is mere *Presumption*. Accordingly, the great *Regula philosophandi* established by Sir *I. Newton*, that "Effects of the same kind, arise from the same Cause;" and that "Qualities which agree to all the Bodies hitherto known, agree universally to all;" are at bottom only *Presumptions*. Yet are they just physical *Laws*; and the best the Subject will allow of.

THUS far, therefore, we see but little that looks like Activity, even in the Faculty of Reason. But Reason has not been yet shewn in its Height. Tho it have its Origin in physical Matters; and shew it self first in the Establishment of Causes, Properties, &c. it reaches much higher, and is seen in its Perfection in Metaphysics; where, making its own Productions its Object, it proceeds to examine the Nature and Essence of such Cause, Property, &c. And hence the Doctrine of Quality, Quantity, &c. in the General or Abstract.—Nor does the Matter stop here; but the Mind still proceeds to erect a new and most magnificent Science of Quantities, Analogies, Proportions, &c. hereupon: founded on this Principle, that “so far as a thing unknown, agrees or is like to another thing known; so far is such former thing, its Nature, Effects, &c. known.” A Science infinitely extensive, and productive of infinite Uses; as being that whereby Knowledge is applied, or transferr’d from one thing to another: And of infinite Certainty, as being founded on a self-evident Proposition.—It proceeds by Definitions, Axioms, &c. But as the Things themselves which are its Subject, are only Abstracts, which are but a kind of Shadows of real and sensible things; so are its Definitions, which cannot be said to be Definitions in the same Sense as those of a Concrete, e. g. a Plant, an Instrument, or the like; inasmuch as they do not excite any Image or Idea in the Mind. And hence that Difficulty under which the Writers of the Principles of Mathematicks labour, to give intelligible Definitions of *Unity, Multitude, Number, Part, Whole, &c.*

ITS Axioms are only Duplicates of some Proposition, or the same thing express’d in two manners; the one direct, the other implicit; properly call’d *Identical Propositions*.—Thus that Axiom, “The Whole is equal to its Parts;” easily resolves into this other, “The Whole has the Nature and Characters of a Whole:” which amounts to this, “A Whole is a Whole.”

TO illustrate the Progress of the Mind in this new Scene: Suppose, for instance, a Ball, or Sphere; and let it be divided into two Parts.—Our Senses do not inform us that the two Segments thereof are equal to the whole one: On the contrary, they represent them as very unequal; and ’tis Reason alone that finds their Equality. The Cause hereof, is, that the Figure, &c. of the divided Sphere, which are the things the Eye takes cognizance of, are very different from those of the whole one; and that the Quantity or Substance, in which alone the Equality consists, is no Object of Sight, but only of Reason; which informs us that the two Segments are still really the whole Sphere, only existing with some variety in respect of Figure, Place, &c. Hence we find it necessary, i. e. included in the Nature and Notion of a Whole, that the Sphere be equal to its Parts; and thus, by analogy, pronounce the same Ratio universally between every Whole and its Parts, and so make an Axiom which is the Foundation of a new kind of universal Knowledge. In effect, to say that the whole Sphere is equal to its Parts, is no more than to say, the Quantity or Substance is not altered by any Alterations made in its Figure, Place, Number, &c. which is as much as to say, that the Substance is the Substance, the Sphere, the Sphere.

FROM such Axioms it proceeds to *Theorems and Problems*; every one whereof is resolvable into Thesis and Hypothesis; each of which may be again resolved into Axioms or Identical Propositions, which is called *Demonstrating*. In fine, all Demonstration supposes Identical Propositions, and turns on ’em; and its Certainty arises from no other Principle, but the Identity or Sameness of the Thing implied in such Propositions, with the Thing express’d.

IT appears then, that the whole Process consists in abstracting, or setting aside the sensible Idea that gave the first Occasion, and considering the Relations thereof by themselves, as if they had distinct, independent Existences. By thus excluding the Consideration of the physical *Ens*, Sensation and Imagination are of course excluded, with all the Action and Inspiration annex’d to ’em; and thus is Reason left in full play, without any thing to supersede, or divert it.—Thus we may be said to make a new World, and furnish it with a new Set of Creatures; and a new Doctrine, which is, as it were, the Shadow of the former. Metaphysics, and Mathematics, in effect, are the Science of *Entia humana, or rationis*, as Physics of *Entia natura, or sensus*.

BUT such Abstracts, e. g. Quantity, Measure, Weight, &c. tho no immediate Objects of Sense, have yet a Connexion with things which have, whereby they become of the utmost import in the World. There is that Relation established between the Faculties of Sense and Reason, that tho the Objects of the one be not cognizable by the other, yet the Communication between ’em is by the all-wise Creator made very near and intimate: Such Dimensions, Weight, &c. are combined by him with such Effects, Motions, Resistances, &c. and prove the Occasion of such and such Effects; which is the great Principle of all human Action, and all truly artificial Production in the World.

BY means of this Communication, the first Impulse is brought back again from the highest pitch of abstracted Mathematicks, to the first Objects of Sense; from Fluxions and Differences, the farthest Parts of the *Pais d’infini* Reason has ever travell’d to, to the grossest and most palpable Objects that strike every Sense. And thus are Action and Passion, Sensation and Reason, Art and Science, found to reciprocate, and produce each other.

HAVING thus discuss’d the Nature, and Characters of *Art and Science*; it remains to settle the Notion of a *TERM of Art*; a Diction as little understood as any thing in Language.—Art and Science, we have observed, are Denominations of Knowledge under this or that Habitude; and Words are Representatives of the several Parts thereof. The whole Compass of Words, in all their Cases, is suppos’d equivalent to the whole System of possible Science; tho ’tis only a small Part thereof that is actual, i. e. only a few of the possible Combinations are, or ever will be, made.

THE Business of Knowledge, then, is canton’d out among the Body of Words: but they don’t bear equal Shares thereof. Being Creatures of our own, we have dealt with ’em accordingly; and made some more, others less significant, at pleasure: some stand for large Tracts, or Provinces; others for little Spots, or petty Districts thereof. In effect, the Order wherein we attain our Knowledge, has occasion’d us to make a kind of Sortiment and Package, as if I may say the Word, in the Matter thereof. Tho the Mind only sees and perceives Individuals, which alone are the proper Objects thereof; yet it has a Power of combining and complicating these together, for its own convenience: And hence its progress from Particulars to Generals; from Simple, to Complex.—Hence we come to have Words of all Orders, and Degrees; from the Simplicity of an Atom, to the Complexness of the Universe. ’Tis pleasant to trace the Mind bundling up its Ideas, and giving Names to the several Parcels; to observe, for instance, how it proceeds from the simple Idea, *Thinking*, to the more complex one, *Knowledge*, thence to the more complex, *a Science*, thence farther to *Scientificall, &c.*

INDEED ’tis very few of our Words that express single, or simple Ideas. The Reason is, that observing certain Relations to obtain between the several Ideas; as, of Cause and Effect, Subject and Attribute, &c. we don’t so much consider them absolutely and independently, as under such Circumstances and Relations to each other. The great Readiness and Propensity of the Mind to combine, and bundle up its Ideas, and thus pay, or receive ’em in Parcels, has left us very few simple ones; I mean, very few Names which denote only one Idea. The Words *Atom*, or *Mathematical Point*, usually imply several Ideas; in regard, we are led to take their Attributes, and Relations, into the Consideration of the Subject: Thus we consider the *Atom* as hard, heavy, and invisible; as the Principle of physical Magnitude; as contributing to the Constitution of Bodies, &c. Even the primary Qualities themselves, as *hardness, heaviness, &c.* simple as they are in their own Nature; and

Nature; are so far combined with particular Circumstances, *e. g.* their Cause, Effects, &c. that their Names become none of the least complex.

NOW, what we call a *Term*, consider'd as to its Nature and Origin, is no other than "a Word which denotes an Assemblage, or System of Ideas relating to some one Point, which the Mind artfully complicates or associates together, for the conveniency of its own Operations." Or, "a Word which comprehends several Ideas under a certain Relation to each other, whereby they represent some complex piece of Knowledge to the Mind for the conveniency," &c. Or, "it is a Word, which holds several different Ideas combin'd together in a Relation such as they appear'd under when the Mind first consider'd 'em as a standing Phenomenon, and took Measures to have 'em fix'd or retain'd in that Quality."

THE Effect of *Terms* is, that by virtue thereof, we are enabled to receive, or communicate Knowledge with more ease and dispatch; so far as having proper Combinations thereof always ready made, we are saved the Necessity of beginning *de novo*, and detailing it in Individuals: much as in Arithmetick, to avoid the Embarrass of a large Number of Units, we tell by Tens, or Sixties, or Hundreds: With the like View, on some occasions, we make up certain Sums of Money in Rouleaus, or in Purfes; and thus pay and receive 'em, without the Trouble of telling or enumerating the Contents.

IN this Sense of Term, we shall find little else but Terms in Language: Among *Nouns*, little beside proper Names, which indeed are out of the ordinary Case of Language, as serving occasionally to denote an hundred different Subjects. Yet even these sometimes become *Terms*; as, when any particular Ideas become constantly attach'd to 'em, *e. g.* In *Maccenas*, *Machiavel*, *Augustus*, *Atlas*, *Bucephalus*, *Buccentaur*, *Royal Oak*, *Argo*, &c. And among Verbs, very few but are Terms, except the general ones, *to be*, *to do*, and *to suffer*. As all the others suppose these, and modify or superadd some farther Circumstance thereto; they commence Terms of course: such, for instance, is the Word *to moisten*; which, as it carries a farther meaning than the bare Act of applying a Fluid to a dry Body; and denotes, *e. g.* the *Modus* of its Effect, and the Alteration superinduced by it, *viz.* the softening, lubricating, &c. is a good Term. So, *to strike*, as it not only implies a certain Motion of the Arm, but this Motion, effected by the successive Contraction and Dilatation of certain Muscles, &c. has every thing that is essential to a Term. In the same Sense, a *Staff* is a Term as much as a *Lever*; and a *Pin*, as an *Axis in peritrochio*.

THIS may look like stretching a Point, especially to those who are used to consider Terms as Things, I know not how, quaint, and mysterious; and make a Term and a hard Word the same thing. But there is no Remedy: Complexness is the only Characteristic that will be found to hold good of 'em all; and if there be any other more specifick and distinguishing Properties in most of 'em, as we shall have occasion hereafter to shew there are, yet these, not being universal, cannot be made the Foundation of a just Philosophical Definition. They may perhaps be introduced, to good purpose, into a popular one; as they afford a more useful and adequate Knowledge of the Subject so far as they do obtain.

THUS much relates to what we may call *Terms of Knowledge*, which are one degree more simple than the Terms of an Art, or Science; and were, for that Reason, pitch'd upon to exhibit the common Nature, and Origin of both. These latter arise out of the former, by the Superaddition of some new Character, or Condition. They were before Members of the Commonwealth of Knowledge; but are now incorporated into some certain Province, or City thereof; where they become of farther Significance and Consideration than before: that is, some new Ideas and Circumstances are now taken into the Combination, which before did not belong to it.—A Term of Art, then, "is a Word that has a Meaning beyond its general, or scientific one; and this Meaning restrain'd to some one Art." Or, it is "a Word used to denote a certain Combination of Ideas, under some peculiar Relation; retained arbitrarily in some Art, and either not used in any other Art, or for a different Combination, or with other Relations and Circumstances."

TO make the way a little clearer to the Philosophy of a Term of Art, it is to be observ'd, that from the primary or literal Sense of Words, we frequently, by Abstraction, form a secondary, general, or philosophical one, expressing only the Quality most predominant in the former, exclusive of the particular Circumstances of the Concrete. Thus the Word *Spirit*, literally and primarily signifying *Breath*; we thence frame a more simple general meaning, and use the Word for any thin, subtil Matter whatever.—Now, Terms of Art are not immediately formed from the literal, or grammatical, but from the general, or philosophical, Acceptations of Words; which are their proper Basis, or the Ground-work they are erected on. The general or abstract Sense of some Word already established, being found to agree to something which we have occasion to give a Name to; we take the Word in that Sense, and superadd the other Incidents and Circumstances which the present Occasions furnish, thereto: which being different according to the different Matter and Subject of the Art, specify the meaning of the Term in this, or that Art. So that the Word which, to raise it to a philosophical or scientific Sense, was generaliz'd; to form a Technical one is again particulariz'd, or appropriated, and invest'd with new Accidents. Which falls in with the Difference above laid down between *Art and Science*.

THUS, the same Word *Spirit*, which literally signifies *Breath*, and philosophically any subtil Substance, is technically brought to denote diverse other things; as, in Anatomy, a thin animal Juice secreted in the Brain, and detach'd thence thro' the Nerves for the Uses of Sensation and muscular Motion: in Chymistry, the Exhalations of Bodies expos'd to the Fire; in Theology, the third Person of the Trinity; in Metaphysics, any incorporeal Agent, or Intelligence, &c. In all which, we see the same *Substratum*, *viz.* a fine subtil Substance; but this modified a great diversity of ways: each of which is susceptible, by farther Super-additions, of infinite more. And hence Legions of sorts of Spirits, both in the human Body, the Chymists Laboratories, the Hierarchy, &c.

THE Notion of a Term will receive some farther Light from that of a DEFINITION; which is, as it were, the Analysis thereof.—By Definition we undo, what was done in the Term; that is, we resolve the complex Ideas into simple ones, or restore the Ideas from their new and artificial State, to their primitive and vague one. A Definition, then, may be defined, "an Enumeration of the several simple Ideas couched under any Term, in the Relation wherein they stand to one another."—We have already shewn, that Terms are Words which have peculiar and determinate Meanings, resulting from a certain Combination of Ideas; in which view, a Term may be said to be, "a Word that is capable of Definition;" *i. e.* of having its Sense explain'd, and ascertained by an Enumeration of its Properties, and Relations: by which it is distinguish'd from other Words merely grammatical, whose Meanings are general and indeterminate, and may be used with equal propriety in a thousand Cases. We can explain a Term: A Word is inexplicable: all we can do towards this, amounts not to Definition, but only to Substitution.

THUS the Idea attach'd, for instance, to the Word *Force*, is absolutely incommunicable by means of any Language; we can only try whether the Party have it not already, under another Name; to which end we may tell him 'tis *Power*, or *Energy*, or *Vigour*; if he have Ideas for any of these, he'll take in that of *Force*, by its Relation thereto; if he have not, we must proceed to try him with more, and tell him 'tis *Fortia*, or
Viz.

Vit, or *Efficacia*, or *Potentia*, &c. or 'tis *vis*, or *lyde*, &c. If none of these will do, it remains to try, whether he may not have it, without any Name to it; and say, 'tis "That whereby one thing, coming in contact with another, moves, or shakes, or breaks it," &c.—If by any of these means he learns what *Force* is, he does not form any new Idea: he only learns a new Name; and finds that what he calls by one Name, others call by another; or that what he had never taken the Pains to distinguish by any Name, some others have. To get the Idea, he must have recourse to Sensation, not to Language; it being a physical *Ens*, and only to be attain'd that way.

BUT the simple Idea called *Force*, being given; and coming to be afterwards modified or circumstantiated by new Accidents added thereto, and thus form'd into Terms, in this or that Art; 'tis here in the Power of Language, alone, to excite 'em; by resolving such compound Idea into its ingredient ones, which being recomposed—or put together again in the manner assign'd by the Definition, gives the full adequate Import thereof.—Thus the Idea of *Force* being variously modified, and combined with other Ideas of *Centre*, *Attraction*, *Repulsion*, *Will*, *Machinè*, &c. in the Words, *Central Force*, *Centripetal Force*, *Centrifugal Force*, *Necessity* or *Moral Force*, *Mechanick Power*, &c. we can, by Definition, arrive at the Meaning thereof; by having those Circumstances specified, or superadded to the Idea of *Force*.—In this case, there is no coming at the Idea by Sensation; in regard 'tis a Creature of our own, and does not exist any where without us, to make an Object of Sense.

HENCE appears all the diversity of Definitions; *Technical* ones, computing only to Terms, as to *Central Force*; *Scientific* or *Philosophical*, to Qualities, as *Forcefulness*; and *Nominal* or *Succedaneous*, belonging to simple Ideas, as *Force*.

'TIS the various Affemblage of simple Ideas denoted by common Words, that makes all the Variety of Terms; as 'tis of Simples in an Apothecary's Shop, that makes the Variety of his Medicines.—The Analogy goes farther; and it may be said that Terms, like Medicines, only differ from each other as their ingredient Ideas, and the Relations thereof do differ.—If these be not all relearnd in the Definition, the Term or Medicine is not specified, or distinguished from some other, which may have all except that one or two omitted. Consequently, such one or two are the Characteristicks of that Term; which may be explain'd in some sort, by only enumerating those Characteristicks, and couching all the rest under that other Term. This amounts to little more than the *Substitution* above-mention'd; and yet to this is reducible all that the Schoolmen teach of *Genus*, *Species*, and *Difference*.

BESIDE simple Words, which we have observed are, in their own Nature, inexplicable; there are divers others that become accidentally so: And such are all the Data, or preliminary Principles of any Art, with respect to those who confine themselves to the Bounds of that Art. Thus, if it be demanded of an Apothecary, to define one of his Simples, e.g. *Mercury*; he must needs be at a stand, unless he be likewise versed in Mineralogy; by reason it is putting him to explain a Datum, which his Art does not explain, but assume; the Explication thereof lying in another Province. For the Data or Principles of any Art, are only explicable from another, e.g. those of *Chymistry*, *Pharmacy*, &c. from *Physics*; *Physicks*, from *Physiology* and *Mechanicks*; *Mechanicks* from *Geometry*, &c. So that to explain *Mercury*, would to him be, in some measure, to explain a simple Idea. But ask him to define *Calomel*, and he is prepared for you; and will readily enumerate the several Ingredients, and the manner of preparing it: which is the proper pharmaceutical Definition of *Calomel*.

HERE it may be observed, that the Words used in the Definition of a Term, do many of 'em represent complex Ideas; and consequently ought themselves to be defin'd, if we would have the Definition complete. The Term has usually divers subaltern ones; all which are resolvable into it, and make part and parcel of the Knowledge held forth by it. Thus, if *Calomel* be defin'd, "A medicinal Pouder precipitated from a Solution of crude Mercury in Aqua fortis, by adding thereto a Lixivium of Sea Salt; and then purified by repeated Ablutions in a Filtrè," &c. The Ideas, *Pouder*, *Precipitated*, *Solution*, *Mercury*, *Aqua fortis*, *Ablution*, *Filtrè*, &c. remain to be explain'd, to furnish the complete Notion of *Calomel*.—But as this would be endless, and would defeat the Intention of a Definition; the Practice obtains, to suppose all other Terms known, except that particular one under Definition. By this means, we avoid the Embarrass of bringing down every Word to its Principles, or simple Ideas; and acquit our selves by bringing it to the next complex ones: Since the bringing an unknown Term to several known ones, is a kind of indirect Definition.

SUCH is the Nature of a Technical Definition, which holds good or valid for those of that Art, or Craft; who are to be supposed furnished with the necessary Data, or preliminary Notices. But to make a scientific Definition, we must go still lower; and bring down the Words, if not to their simple Ideas, yet to general or common ones. For it is to be observed, there are great numbers of complex Ideas current among most People, which therefore may be consider'd as Data, and used as simple ones, for more convenience sake. All technical Apparatus, then, is to be here thrown by; and instead of giving five or six hard Words for one, the general Effect, and Meanings thereof are to be made use of. Thus, *Calomel* may be defin'd "a white Pouder, which falls down from Quicksilver dissolved in Spirit of Salt-petre, upon casting Salt therein; and is afterwards washed, again and again, by passing fair Water thro' it," &c. Where, tho' several of the Words be complex; yet most People, in the ordinary Course of Life, have fram'd the complex Ideas belonging to 'em: so that they may be consider'd as simple ones.—Yet the Definition can scarce be said to be complete, even here: The general or philosophical Sense of Words, we have observed, is form'd from the grammatical one; and consequently the Definition ought in strictness to extend thither: The Solution, to be adequate, should go as far as the Knot; the Analysis as the Synthesis.

THE Reader already begins to feel this Preface grow tiresome; and yet half the Business is still behind. When so large a Work was to follow, he perhaps imagines he should have been excused from a long Preface: and the like, probably, may the Author say; who, after so tedious a Work, could not be over-fond of any superfluous Fatigue. But, the Expediency of the Case, which sway'd and determin'd the one; may suffice to satisfy the other. Several Matters were purposely waded in the Course of the BOOKS, to be treated of in the PREFACE; which appear'd the properest Place for such Things as have a regard to the whole Work. What has been hitherto insisted on, as well as what remains, immediately affects every Article in the Book; and tends, withal, to let a little needful Light into certain Points hitherto involved in great Obscurity. I consider a Preface, as a kind of Vehicle, wherewithal to convey the Reader commodiously from the Title into the Book. The Preface is a kind of Comment on the Title, the Book a Paraphrase on it: Or, if you had rather, the Book is the Title executed, the Preface the Title explain'd.

HAVING, therefore, dispatched the leading Words ART, SCIENCE, TERM, and DEFINITION; we proceed to consider the Nature of a *DICTIONARY*.—It were to be wish'd that the many Adventurers in Print, who publish their Thoughts under this or that Form and Denomination, would frame themselves a precise Notion of the Character and Laws thereof. There is something arbitrary, and artificial in all Writings: They are a kind of Draughts or Pictures, where the Aspect, Attitude, and Light, which the Objects are taken in, tho' merely arbitrary, yet sway and direct the whole Representation. Books are, as it were,

Plans or Prospects of Ideas, artfully arranged, and exhibited, not to the Eye, but to the Mind; and there is a kind of analogous Perspective which obtains in 'em, wherein we have something not much unlike Points of Sight, and of Distance. An Author, in effect, has some particular View or Design in drawing out his Ideas; either, nakedly to represent something, or distort and ridicule it, or amplify, or extenuate, or discover, or teach, or prove, &c. whence arise divers kinds of Pieces, under the Names of *Histories, Discourses, Treatises, Essays, Inquiries, Examinations, Paraphrases, Courses, Memoirs, Burlesques, &c.* In all which, tho' the Matter or Subject may be the same, the Conduct or artificial Part is very different; as much as a Still-Life from a History, or a Grottesque, or a Nudity, or a Caricature, or a Scene-work, or a Miniature, or a Profile, &c. Each of these Methods of Composition has its particular Characters, and Laws; and to form a Judgment of the Things represented, from the Pictures made of them, 'tis necessary we be able to unravel, or undo what is artificial in 'em, resolve 'em into their former State, and extricate what has been added to 'em in the Representation: That is, we should know the manner thereof; whether, *e. g.* they be mere Nature, thro' this or that Medium, in a fore, or side-View, withinside or without, to be seen from above or below; or Nature rais'd and improv'd, for the better, or the worse.—The Case amounts to the same as the viewing of Objects in a Mirror; where, unless the form of the Mirror be known, *viz.* whether it be plain, concave, convex, cylindrick, or conick, &c. we can make no Judgment of the Magnitude, Figure, &c. of the Objects.

'TIS beyond my Purpose to enter into the Nature of the several Methods of Composition abovemention'd. I shall only note, by the way, that the first Writers in each, mark'd and chalked out the Measures for all that came after them. The several Manners of composing amount to so many *Arts*; which, we have already shewn, are things in great measure personal, and depend on the Genius or Humour of the Inventors.

WERE we to inquire who first led up the way of *Dictionaries*, of late so much frequented; some little Grammarian, would, probably, be found at the head thereof: And from his particular Views, Designs, &c. if known, one might probably deduce, not only the general Form, but even the particular Circumstances of the modern Productions under that Name. The Relation, however, extends both ways; and if we can't deduce the Nature of a Dictionary from the Condition of the Author; we may the Conditions of the Author from the Nature of the Dictionary. Thus much, at least, we may say, that he was an Analyst; that his View was not to improve or advance Knowledge, but to teach, or convey it; and that he was hence led to untie the Complexions or Bundles of Ideas his Predecessors had made, and reduce 'em to their natural parity; which is all that is essential to a Dictionary. Probably this was in the early Days of the *Phœnician* or *Egyptian* Sages, when Words were more complex and obscure than now; and mystic Symbols and Hieroglyphics obtain'd; so that an Explication of their Marks or Words, might amount to a Revelation of their whole inner Philosophy: In which Case, instead of a Grammarian, we must put perhaps a *Magus*, a *Mythes*, or *Brachman* at the head of Dictionaries. Indeed this seems the more probable; for that a grammatical Dictionary could only have place, where a Language was already become very copious, and many Synonyma's got into it; or where the People of one Language were desirous to learn that of another: which we have no reason to think could be very early, till much Commerce and Communication had made it necessary.

WHEN a Path is once made, Men are naturally dispos'd to follow it; and tho' it be not the most convenient: Numbers will enlarge, and widen, or even make it straighter and easier; but 'tis odds they don't alter its Course. To deviate from it, is only for the Ignorant and Irregular; Persons who don't well know it, or are too licentious to keep it. And hence the Alterations and Improvements made in the several *Arts*, are chiefly owing to People of those Characters. There is scarce a more powerful Principle in Nature than that of Imitation, which not only leads us to do *what* we see others do, but *as* they do it. 'Tis true there are Exceptions from every Rule: there are Heteroclitics, Persons in good measure exempted from the Influence of this Principle; and 'tis happy there are; witness such as *Paracelsus, Hobbes, Leibnitz, &c.* In effect, if an *Art* were first broached by a happy Genius, it is afterwards cultivated, on his Principles, to advantage; otherwise not: and it may wait long for the anomalous Hand of some Reformer, to set it to rights. Some of our *Arts* have met with such Hands, others still want 'em.

WERE we, now, to give an absolute and consistent Definition of a *Dictionary*; we should say, "It is a Collection of Definitions of the Words of a Language."—Whence, according to the different kinds of Words and Definitions above laid down, *i. e.* according to the different Matter, and the different View wherein such Matter is considered, will arise different sorts of Dictionaries: *Grammatical*, as the common Dictionaries of Languages, which for one Word substitute another of equal import, but more obvious sense: *Philosophical*, which give the general Force or Effect of the Words, or what is common to 'em in all the Occasions where they occur: and *Technical*, which give the particular Sense attach'd to 'em in some one or more *Arts*.

BUT, in truth, this is a little chimerical; and is to forget what has been already said. Tho' we have *Dictionaries* under all these Titles; it would perhaps be hard to find any conformable to this Partition; which is not so much taken from what really is, as what might, or should be. Dictionaryists are far from considering their Subject so closely, or confining themselves to so narrow, tho' direct, a Channel: They must have more room; and think themselves privileg'd by the general Quality of Lexicographers, to use all kinds of Definitions promiscuously. 'Tis no wonder they should not keep to Views which they had not, and which could only arise from Researches they never made. While the Notions of *Term* and *Art*, remain'd yet in the Rubbish they were left by the Schoolmen; those of *Definition* and *Dictionary* must needs be vague and arbitrary enough; and the Dictionaryists and Expositors, profited by an Embarrass it was their Business to have remov'd. They have not only built on it, but improv'd it, by a continual varying and confounding of Views, imperfect Enumerations, &c.

'TIS not to be imagin'd, the Mischiefs, and Inconveniences that have arose from this single Head; the great Uncertainty it has introduc'd into Language; and the Obstacle it has been to the Improvement thereof. 'Tis certain it has, in great measure, defeated the Intention of Speech; and turn'd Knowledge which that was to be the Medium of, into Jargon and Controversy. All the Confusion of *Babel* is brought upon us hereby; and People of the same Country, nay the same Profession, no longer understand one another.—The Effect is, that our Knowledge is grown into little other, than that of Peoples Misunderstandings or Misapprehensions of one another; which is the only kind of Knowledge that grows; and which will for ever grow; there being the Seeds already laid of such Disputes, as, according to the ordinary spreading of such things, must overshadow, and starve every thing else. If all Men meant precisely the same thing by the same Name; there would be no room for their differing, upon any Point, either in Philosophy or any thing else: There is no more possibility of seeing the Relations of Things to each other, differently; than of altering their Nature, and overturning the System. Relations of Ideas are as immutable as the Creator's Will.—Error, in effect, is no natural Production; nor is there any direct way of coming at it: We must go about for it; and find some Law of Nature, to put it in our Power. So that Error is in one sense Truth ere it takes place; only 'tis not the Truth it is taken for.

THE Weakness of our Reason, which we complain so much of, is in great measure idle; the Fault is foreign, and lies wholly in the Confusion of Language; which would not only puzzle us, but the very Angels in Heaven, to make any thing of: Witness abundance of our Explications of *Trinity, Hypothesis, Substance, Accident, Faculty, Liberty, Cause, Nature, Attraction*, &c. which Divines and Philosophers fatigue themselves so much about. I am confident, that were the Almighty to inspire us with a new Language, agreeable to Things themselves; it would amount to a Revelation; and all our Duties, and Relations would be visible therein.—The Disease, in effect, has spread so far, that there is little hopes of seeing it remov'd, or even alleviated, without a new Language, formed *ex post facto*, from what we now perceive.—But something of this will come under Consideration hereafter; in the mean time we venture to pronounce, that “The Reformation of Science, amounts to little more than the Reformation of Language.”

THERE are two Manners of writing: In the one, which we may call *Scientific*, we proceed from Ideas and Things, to Words; that is, first lay down the Thing, then the Name it is called by.—This is the way of Discovery, or Invention; for that the Thing ought to be first found before it be named. In this way, we come from Ignorance to Knowledge; from simple and common Ideas, to complex ones.

THE other, *Didactic*, just the Converse of the former; in which we go from Words, and Sounds, to Ideas, and Things; that is, begin with the Term, end with the Explanation.—This is the historical Way, or the way of Teaching and Narration; of resolving the extraordinary Knowledge of one Person, into the ordinary of another; of distributing artificial Complications, into their simple Ideas: and thus razing and levelling again what Art had erected.

THE *Dictionary* comes under the latter Kind. It supposes the Advances and Discoveries made, and comes to explain or relate 'em. The Dictionaryist, like an Historian, comes after the Affair; and gives a Description of what pass'd. The several *Terms*, are so many Subjects, supposed to be known to him; and which he imparts to others, by a Detail of the Particulars thereof.—Indeed, the Analogy between a *Dictionary* and a *History*, is closer than People at first sight may imagine: The Dictionaryist relates what has pass'd with regard to each of our Ideas, in the Coalitions, or Combinations that have been made thereof: His Business is to deliver the Progresses made in the several Parts of Knowledge under his Consideration, by an orderly Retrospect and Deduction of the Terms, from their present complex, to their original simple State. The Dictionary of an Art, is the proper History of such Art: The Dictionary of a Language, the History of that Language. The one relates that such an Art, or such and such Parts thereof, stand so and so; are managed so and so; and the result so and so: The other, that such and such a Word is used as synonymous to such and such others. The Dictionaryist is not supposed to have any hand in the Things he relates; he is no more concerned to make the Improvements, or establish the Significations, than the Historian to achieve the Transactions he relates.

THE difference between what we commonly call the *History* of an Art, and a *Dictionary* thereof, is only circumstantial; arising from the different Views of the two Authors: The one chiefly regards the Time and Order when each Step, each Advance, was first made, *i. e.* how it stood with respect to such and such *Æras*, or Periods of Time; and might more properly be called the *Chronology* of the Art: the other regarding chiefly the Object or Intention of the Art, relates its present Constitution, and how it proceeds to attain the End proposed. You may add, that the former primarily considers what is past, or already advanced; the other also what is present, or remains to be done: The one tells, *e. g.* how *Mercury* finding a dead Tortoise on the Shore, took its Shell, added Strings to it, and made it into a Lyre: The other, how a Lyre is, or may be made. And if you will likewise add this, that the History intermixes divers foreign, and accidental Circumstances with the Discovery; which the Dictionary abstracts and sets aside, and so reduces it nearer to Science; you will have the full and adequate Difference between 'em. Thus the making of the first Lyre is related with some Circumstances which have no place in the proper Structure of the Instrument, and are therefore to be omitted in the Dictionary, which only takes in what belongs to the Art, or Artists in general; not what belongs to some one of 'em.

THE whole, in effect, amounts to this, that the first time of doing a thing, is related by the Historian with the several Particulars which in any wise, tho' occasionally only and remotely, affected it: Whereas the Dictionaryist, coming afterward, keeps more closely and severely to the Point, and relates nothing but what is essential; that is, the first time, the thing is consider'd as now arising; a new Production or Phenomenon, from some analogous Principle; and therefore we attend to the foreign Causes that brought it forth: whereas afterwards, we consider it as arising from the pre-existing Theory, or Prescriptions of Artists, and thus resolve the Cause into the Art it self.

ANY other difference which there may seem to be between the two; is only as to more or less particular; which, indeed, is a thing that embarrasses and amuses us on many other occasions: Thus in mere civil Histories, if one relates the Series of a Campaign, another the Bombardment of a Town, and a third the Wounding and Death of a general Officer; tho' the two latter Subjects be only Parts of the former, yet the first will be said to have compos'd a Piece of *History*, the second a Piece of *Fortification*, and the third a Piece of *Chirurgery*. And yet there is no other difference between them, than between the Geography of a Country, and the Topography of a Village, or a Hillcock; the History of a Nation, and the Biography of a single Person.

TO say no more, the Dictionary of an Art stands in much the same Relation to the History thereof; that the History of a People, does to the Lives of all the considerable and active Persons therein. Their difference is only as to the Point of Sight; the Eye being supposed to near in the one Case, as to see the Parts distinctly, and in the other so far off, as to take in the Whole completely: whence the one gives you all the Incidents; the other only the greater. In effect, the one is all concerted to one point of view, most favourable to the Whole, and the great Parts; the other to many; the Eye being shifted for each Part, to furnish an adequate Representation thereof. In the one Case, it is supposed within the Work; so as only to see those Parts next it, which necessarily hide the rest; in the other, 'tis without, and can only take cognizance of those which lie outwards: So that the one chiefly discovers how things stand within; the other how they stand with regard to the adjacent ones.

I AM afraid to keep the Reader any longer in this painful way of Disquisition, wherein we are obliged to dig for every step we take. It would doubtless seem a more agreeable, as well as more reputable Employment, to be raising things on high; than thus engaged in sinking, and working under ground: A Castle in the Air is an Object of Pleasure to every body, while it lasts; and wial is easily rais'd, and at small Expences. Your Mines and subterranean Matters are mere drudgery, and Pioneers work; difficult to carry on, dubious of Success, and overlook'd when done. Being therefore arrived near the Surface, we take this Opportunity to quit the Course, and emerge to open Air.

AFTER so severe an Inquiry into the Reason, Nature, and Perfections of a *Dictionary*; it may prove dangerous and impolitic to speak any thing about the present one. From the Design of a Dictionary in general, to the actual Performance of any particular one, the Language must be much altered. A Man would make fine

work, that should examine the several Dictionaries extant, by the Standard here laid down: None of them could abide such a Trial; even that here offered must go to wrack, like the rest.—It may be remember'd, that the Thing executed is allowed to come short of the Idea conceived: The former is only a Copy of the latter, and liable to all the Imperfections incident to other Copies. A thousand things interfere: Lexicography, being of the Nature of an Art, deviates of course from what pure Reason would prescribe; and its Productions come to degenerate still farther, by the Accidents that attend their bringing forth. The Tools, the Materials, and forty things come into the Account: the former prove out of order; the latter obstinate, and untractable, or perhaps not easy to be had. In effect, the Author's Situation, his want of Leisure or Perseverance, his Frailties and Foibles, nay his very Perfections and all, conspire against it.

INDEED, a too fervile Attachment to the Rules and Methods of an Art, in many Cases proves incommodious and impertinent. We know that the Rules of an Art are posterior to the Art it self; and were taken from it or adjusted to it, after the thing it self was done. An Author, therefore, is still in some measure left to his own Conduct, and may consider himself as invested with a sort of discretionary Power, whereby he can dispense with some of 'em, and go by others of his own suggesting, where he apprehends it for the general advantage of the Work. The Heights of Art are never to be reach'd by the Rules, but by Genius; by reason the Rules were accommodated to a certain Concourse of Circumstances, which rarely happens twice; so that Laws should be made *de novo* for every new Case, or Condition of things. While a Person considers himself as following at second hand, the Measures pointed out or prescribed by others; he will not go on with that Spirit and Alacrity, as when he follows his own Bent. He should therefore consider himself in the Place of the first Inventor, or as his Representative, or Successor; and therefore qualified to enact with the same Authority for the present occasion, as he did for another.

WHEN a Law is not founded on mere Reason, as we have shewn is the Case in Art; the Observation of such Law cannot be enjoined on others. It may well obtain with respect to the Person that first establish'd it, as being agreeable to his personal Reason, *i. e.* accommodated to his particular Combination of Genius, Situation, and other Circumstances; but can't extend to those in whom this Combination is different. Accordingly, few Laws of Art are universal. Small matter by what Laws and Prescripts a People is guided, provided they be led on to Happiness; or by what Course a Vessel steers, if she do but make a prosperous Voyage.

WITH this View, in the present Work, we have taken all the Advantages the nature of the Thing would afford us; and have frequently made our selves Delinquents against strict Rule, for our Reader's good.—A Dictionary, by our own Confession, is to be a History; and yet we have not kept so close to that Form, as to abandon the Benefit of all others. In the business of Mathematicks, for instance, the regular way is to relate, or enumerate the several Matters belonging thereto, without investigating or demonstrating their truth: Demonstrations, strictly speaking, have nothing to do in a Dictionary, no more than anti-tick Instruments, Declarations, &c. in a History. To pretend to demonstrate the several Properties and Relations, *e. g.* of *Lines*, *Angles*, *Numbers*, &c. in a Dictionary, were an Indiscretion as great, as for an Historian to produce Certificates, and Copies of Parish Registers, of the *Births*, *Burials*, *Marriages*, &c. of the several Persons whose Actions he relates.—And yet, on some extraordinary Occasions, we have not forbore to give Demonstrations; where, for instance, there was any thing very interesting, or important in 'em: A Practice which Historians themselves frequently give into; tho' it be a confessed Irregularity, as it breaks in upon the Unity of the Narration, and accordingly gives their Work the Denomination of *Mis'd History*.

BUT we are far from the Views of some Dictionarists, who think it incumbent on 'em to demonstrate every thing that is capable thereof. This is directly to forget their Quality; to corrupt the Integrity of the Work *mal à propos*; 'tis being licentious, and impertinent at the same time, and dispensing with the Rules to their own cost. How dear, *e. g.* must a competent Demonstration of most of *Euclid's* Propositions be here purchased? Either the Reader must be at the Pains of picking it piecemeal from out of twenty several parts of the Book, where the Alphabet has happen'd to cast it; or the Author must relinquish the Advantages of a Dictionary, and deliver things together, that properly belong to so many several places; or there must be a Repetition of the same thing a dozen times over. And for what? why, to make the *Dictionary* do the Business of an *Euclid's Elements*; which it is the unfittest in the World for. You might with equal propriety make an ozier Basket supply the Office of a Pleasure-Boat; or a Sword-pommel that of a Portmanteau, as *Paracelsus* is said to have done.

WHEN a thing has been once regularly demonstrated, it may be assumed, or taken for granted: every body perhaps may be concerned in the Truth of it, but not to see the Truth of it. To make it a Principle to take nothing upon trust, would be as troublesome in the Sciences, as in Life; and we must remain for ever, both wretched, and ignorant. Not only Suppositions, but even Errors, frequently lead us to Knowledge otherwise inaccessible. Mathematicians themselves, who of all others keep most to Demonstration, yet find themselves under a frequent Necessity of admitting and making use of things as true, which they do not see to be so; and thus are sway'd, like other People, by Authority. A Person who makes use of the Equality of the Square of the Hypothense, to the Squares of the two Sides; upon the Credit of *Pythagoras*, or *Euclid's* having demonstrated it; does little more than what they themselves do on many Occasions, who assume and make use of Propositions they have no other evidence of, but the knowledge or remembrance of their having been demonstrated.

THE Case is much the same with *experimenting*; which stands on the like footing as demonstrating. They are both necessary in their kind; the latter, as it leads on our Knowledge, the former as it follows, and secures the Rear: But their use is to be restrained to these Purposes; and may be dispens'd withal in Cases where neither of these are concerned. A Person who would discover any Point in *Physicks*, or broach and establish any Point in *Mathematicks*, must use 'em: But the Occasion is in great measure private, and personal; and does not extend to the Publick in the same degree as the Knowledge of the Doctrines themselves. That is, the particular means by which a thing was first come at, or is shewn to be true, do not interest us so immediately as the Knowledge of the thing it self, which might have arose from various other means, and in other manners: A Man may know a thing in the way of *Presumption*, of *Opinion*, of *Surmise*, of *Authority*, and forty other ways; which, tho' all much inferior and less excellent than the way of *Demonstration*, and *Certainty*; yet we are glad of 'em on many occasions, and use 'em to good purpose. Every degree of Knowledge is valuable. It would be an unreasonable, as well as an incommodious Sullenness in us, to refuse all Light, except that of Noon-day. We find our Ease and Happiness frequently depend on the doing of things by Twilight, or even Moon-light, or the still more dubious Light of, perhaps, a Rush or a Glow-worm.

PYTHAGORAS, in all probability, was not ignorant of the Equality of the Square of the Hypothense, &c. before he demonstrated it; else, what should have led him to look for the Demonstration? And the like may be said of many of *Mr. Boyle's* Experiments. *Plato* even observes, that "the very putting a Question, implies some Knowledge of the thing demanded; since without this we should not know that what is returned is an Answer."

LESS might have sufficed, to shew why in the Course of this Work we have usually omitted the Apparatus of Demonstrations, and Experiments; and given the Doctrines pure and unincumbered by any thing not essential to 'em. The Experiments, for instance, which led to the Theory of Light, and Colours, what would they be, but like the Scaffolding before a fine Building, which break and interrupt the Sight, and hide most of the Beauties of the Work? Such Scaffolding, 'tis true, would be of use to the Connoisseurs; who might have a mind to examine the Work, to measure the Proportions of the several Parts, and inquire whether every Stone were justly laid. But to the generality it would rather be an Incumbrance, much to the disadvantage of the Work.—Yet, in the Case of Experiments, as of Demonstrations, we have receded a little from strict Method, in favour of such as have any thing very remarkable or beautiful in 'em. For the rest, the Reader, if his Curiosity serve him, is told where to have 'em at first hand.

IN the Case of Definitions, too, we do not keep inviolably to what has been above laid down; but reserve to our selves the discretionary Right above specified.—We make use occasionally of all sorts of Definitions, as they best suit our Design, the conveying of Knowledge. In effect, we have usually a Regard to the degree of notoriety, importance, &c. of the Term, tho' a Point arbitrary, and indefinite enough; and endeavour to accommodate the Explication thereto. 'Tis a Rule with us, to say, *Communia proprie, propria communiter*; to express common Things so as that even the Learned may be the better for 'em; and the more abstract and difficult, so as even the Ignorant may enter into 'em. Accordingly, in popular Terms we endeavour to give a technical Definition, *i. e.* to waive the general and obvious Meaning, which is supposed to be known; and enter farther into the nature of the Thing, not known: As in defining of *Milk*, &c. But in the more remote Terms, the popular and nominal Definition is also given, as being supposed to be here wanted.

THE literal and technical Definitions of a Term, are lame and imperfect without each other; the first gives its Use and Effect, as part of general or abstracted Science; the second, as applied to some particular Subject.—The literal Notion, *e. g.* of *Relation*, is that of "conformity, dependence, or comparison of one thing to another." Thus much is common to *Relation*, both in Grammar, Logick, Geometry, &c. *i. e.* it expresses this, both when applied to *Words*, to *Propositions*, to *Quantities*, &c.—The technical Notion of *Relation* in Grammar, is "the dependence of Words in Construction." This makes the grammatical Notion of *Relation*, *i. e.* it limits or ties down the general abstract Idea of *Relation*, to the particular Subject of Grammar, Words. Again, the technical Notion of *Relation*, with regard to Arithmetick, Geometry, &c. is "the conformity, or dependence between two or more Lines or Numbers;" *i. e.* the Mathematicians adopting the Word into their Art, restrain its literal or general Meaning, to some particular Purposes of their own, *i. e.* to *Quantities*.

FROM the whole, it follows, that the two Kinds of Definitions differ as an Art and a Science; as general and particular Reason; and again, as abstract, and concrete. And hence, from the several technical or particular Meanings, one might of themselves run back to the general, or literal Meaning, by abstracting; but not contrariwise, from the general or abstract to the particular ones; in regard those other are arbitrary, and depend on the good pleasure of the Artift who first introduc'd them.

ACCORDING to strictness, every Term should be first given in its literal, or grammatical Meaning; especially when the same is a Term in several Arts; as this helps to fill up the Series, and shew the orderly Derivation of the Word, *à primis naturalibus*, from the first simple Ideas that gave rise to it, to its last, and utmost Composition. This is like giving the *Root* of the Family; which is certainly necessary to its Genealogy.—Yet we have not always kept to this Method. In some Words, there is a deal of the literal import of the Word preserv'd in the Term or the technical one; as in the word *Free*, or *Freedom*: A Man who has a Notion of *Freedom* in its common or literal Sense, will easily pass on to all the particular ones, as *Free City*, *Free Port*, *Freedom of Speech*, of *Behaviour*, &c. So that in this Case, a literal Definition might almost alone suffice; the Word having suffer'd very little at the hands of Artifts.—In other Words, the literal or primary import of the Word, is almost lost in the Term: for instance, in the Term *Power*, in Arithmetick; which will scarce bear any tolerable Definition at all. Literally, the Word implies a Relation of Superiority or Ascendency over something, which in respect hereof is conceiv'd as weak, &c. According to the analogy of Language, therefore, the Arithmetical Power should have somewhat of this relation of superiority over the *Root*: But the *Root* it self is also a *Power*: So that the Definition of *Power* must take in two opposite Relations, *viz.* *Power* and *Subjection*.

PERHAPS, to go in the most regular manner, and take up things from their Source; one should begin with settling their Etymologies: but the great alterations Words undergo, and the great length they are run from their original Meanings, in being borrowed from one Language or Age to another, would frequently make this not only a tedious, but an useless Labour: so that here, too, we have us'd a discretionary Power, and only meddled with Etymologies where they appear'd of any significance.

TO explain a Term as a Term, we usually express the Circumstances wherewith it is attended in the Art to which it belongs, in their artful Names. This is agreeable to the manner of Artifts, who writing of their respective Arts, use Terms as common Words, and suppose 'em to be known: and 'tis this that constitutes a technical Explication; not the giving the general Effect or Force, in such Words as may equally agree to all other Arts.—And yet in some Cases we recede from this Rule, particularly in divers of the lower Class of Manual Arts, and the Structure of some Machines: Thus, *e. g.* in Turnery, we make no difficulty, for instance, instead of *Chuck*, to say a round piece of Wood, &c. The reason is, that where the several subordinate Terms of a Definition are themselves explain'd in their places, we may suppose 'em understood; but where the Term defined is it self so low, that we do not go lower to define the Parts couched under it; there we chuse, as more scientificall, to substitute some more obvious Name, or the general Meaning of the Word for the Term it self; and thus prefer the general or popular, to the technical Definition.

FOR it is to be observed, that the Dictionary has its Limits; it only carries Matters so low; to a certain pitch of Simplicity, where we suppose People may take 'em up, and carry 'em further as they please. We bring 'em into their Sphere, and so leave 'em. So much Knowledge, *i. e.* such a number of complex Ideas, as we may presume 'em usually to have got in the common Occurrences of Life, we are willing to suppose, as a Footing: where these end, our Dictionary is to begin, which is to take in the rest.

IF at any time we explain a complex Idea, which it may be supposed most People have form'd; 'tis because we think they don't take in all the simple Ideas that go to constitute it: as in the Case of *Milk*, *Blood*, or the like; where People are contented with two or three of the more obvious Properties and Phenomena, and sur over the rest.—Thus in *Milk*, *Whiteness* and *Fluidity* are almost alone considered; and these, in the common Opinion, constitute *Milk*; so that whatever has these two Attributes, comes in for the denomination *Milky*. The Texture and component Parts of this *Milk*, the manner of that Fluid's being secreted, collected, &c. with the peculiar Properties, and Virtues resulting from all these are left behind. So in *Blood*, 'tis enough it be a *reddish*, *pretty compact*, *animal Juice*, when warm fluid and homogeneous, &c. This is going a great way, and even the Dictionaries seldom go farther: But, for the component Parts, the *Cruor* and *Serum*; with the component Principles of these, *viz.* the *Oil*, *Phlegm*, &c. their Form, Properties, &c.

whence arise the Crafts, Colour, Heat, Specific Gravity, &c. of Blood; Writers don't ordinarily trouble themselves.

IF, by the Artifice abovementioned, we get free of a vast load of plebeian Words, which must have greatly incumber'd us; the Grammar and Analogy of Language disengages us from a still greater number of all kinds. The various States of the same Word, consider'd as it comes under different Parts of Speech, and accordingly assumes different Terminations, increases the List of Terms immensely: as, in *Dark, Darken'd, Darkning, Project, Projection, Projectile, Projective*, &c. which may either be consider'd as one and the same Word under different Habitudes; in regard there is a common Substratum of them all: or, as so many different Terms; in regard every one takes in something not contained in the other.——This Latitude we make use of occasionally; and either consider the Words this way or that, as seems most advantageous to our purpose. In some Cases, where the Alteration is merely grammatical, we content our selves to explain 'em in one state, e. g. *Sbearing*; and suppose the Reader able, by Grammar to form the rest, as *Sborn*, &c. In others, where several particular Ideas are arbitrarily superadd'd to the Word in one Part of Speech, which do not belong to it in another, we there explain it in all: as, *Precipitate, Precipitant, Precipitation*, &c.

THIS gives an occasion to mention a strange kind of Licencé frequently practis'd in our Language. Tho' there be ordinarily a great deal of difference between the several States or Modifications of the same Word, e. g. *Reflecting, Reflexion, Reflexible*, &c. the same as between the Action and Quality, the Power and the Exercise of it in this or that Case, the Cause and the Effect; yet Authors make no difficulty of using 'em promiscuously: which would make downright Nonsense, were the Readers to keep to the strict import of the Words. But the Truth is, we are not so critical about the Matter; if the Meaning come within our reach we jump at it, and are glad to take it; without waiting to see whether it would reach us in its present Direction, or whether it might not rather fall short, or fly by us. What Confusion should we make, even in our best and clearest Writers, were we resolv'd not to understand 'em but according to the strict Rules of Grammar, and not indulge 'em the petty liberty of using *quid pro quo*, one part of Speech for another? In a thousand Cases, the same Idea is denoted by opposite Terms: Thus, we say, such a Medicine is good *for*, or *against* the Worms, Plague, &c.

IT may be urged, that as Custom has authoriz'd this latitudinarian Practice, it is become of grammatical Authority; and that as the Licencé is known, it can't deceive us; since the Readers are led on such occasions to relax the Bands of Grammar, and annul the difference between the Parts of Speech, in order to admit one a substitute for another.——But I am afraid this expedient scarce indemnifies us from the Abuse. Besides the extraordinary embarrass of reading what is thus promiscuously wrote, 'tis not always we know when and how to supersede the strict import of an Author's Words, and make him speak Sense in his own despite. This I take to be none of the least occasions of Controverfy and Dispute owing to Language, and which we may almost despair of seeing rectified, unless in a new one.

I SHALL not here enter upon the Merits and Defects of the *English Tongue*, consider'd as a Language: A great deal has been said on that Head by others, for which the Reader may turn to the proper Article in the Dictionary it self. This Place we reserve, not for other Peoples Notions, but our own; and what we have to add, will be chiefly as it stands with regard to *Art*, and more particularly to a *Dictionary of Arts*.

I BELIEVE none will question but we met with Difficulties enough in the Course of this Work. The very Bulk and Dimensions of it confess as much, and the Variety and Uncertainty of its Matter still more. But these were in some sort natural Difficulties, and ought to be consider'd as necessarily appendent to the very Essence of the Design; and therefore did not afflict us so much as those that rose from it at second hand, or were superadd'd to it, as it were, by Accident. And such was the present wild State of our Language, which alone were sufficient to have baffled the best Scheme, and broke thro' the best Measures that could be form'd.

WE have already represent'd *Language* as something very important; and as having a near and necessary interest in Knowledge. *Names*, we here add, are solemn things, as they are Representatives of Ideas themselves, and used on most occasions in their stead: and *Terms*, or Combinations of Ideas, are still more so; as much as complex Engines, are of further and nicer Consideration than the simple mechanic Powers. But who would imagine this, to consider the wanton use we make of 'em; and with how little Fear, or Discretion, Words are treated among us? Every body think themselves privileg'd to alter, or set aside the old, and introduce new ones at pleasure. *England* is open to all Nations, at least in this respect; and our Traders in this Commodity, import their Wares from every Country in all security. The mercantile Humour seems to have possess'd every Part of us, so that we are not only unwilling to be without the natural Produce of our Neighbour Countries, but we even envy 'em their Fashions, their Follies, and their Words. Scarce a petty Author that appears, but makes his Innovations: But when a Dictionary comes out, 'tis like an *East India Fleet*, and you are sure of a huge Cargo. The Effect is, that our Language is, and will continue in a perpetual flux; and no body knows whether he is master of it or no. The utmost he can say, is, that he had it for such a Day, exclusive of what has happen'd since.

A MAN never knows when he is at the end of the Terms, e. g. in Architecture. When he has got two or three Names, for some one Member, and thinks himself overtock'd, 'tis odds he has not half. 'Tis not enough he knows what it is nam'd in the *English*; but he must likewise learn what the *French, Italian, Latin, and Greek*, likewise call it, or frequently find himself at a stand. Thus it is in the Case of *Fillets, Lists, Lissets, Reglets, Platbands, Bandoletts, Tarnias, and Baguettes*; of *Chaplets, Attragals, Batooms, and Tors*; of *Gnats, Guelles, Douzines, Cimars, Cymastiums, Ogees, and Talons*; of *Ouoms, Ovolos, Echims's, Quarter-rounds, Baulims, &c.* between which, there is no known, allowed differences; but they are either used indiscriminately, or distinguish'd arbitrarily; one Person making this distinction, and the next another, or perhaps none at all. So that if we come strictly to Dictionaries, we should have a different one for every Author.

BUT the Mischief does not end here: for as the ancient Arts are in many respects different from the modern; the use of their Terms necessarily involves us in a new Confusion, and makes the same Word stand in an ancient Author for one thing, and in a modern for another. Thus it is in *Parastata, Orthostata, Anta*, &c. In effect, there is that Alteration continually making in the Language of Architecture, that there ought, in Propriety, to be a different Dictionary of it for every different Age.

THE Truth is, a fourth part of the Words in some of our popular Dictionaries, stand on no better Authority, than the single Practice of some one fanciful Author; who having an intemperate Desire to shew either his Learning or Breeding, has met with Dictionary-Writers fond enough to take his Frippines off his hands, and expose 'em to the Publick for legitimate Goods. By such means, these Exotics have obtain'd a kind of Currency; so that a Dictionary would be thought defective without 'em. To omit even our Fopperies would be thought a Failing; and might even be esteem'd by many as the most unpardonable of all.——On these accounts we have been oblig'd to temporise a little, how much soever against our Will; and thus perhaps have contributed

contributed to the full farther Establishment of a number of Words, which we had much rather have seen prescribed, or banish'd the Land.

UPON the whole, nothing could be more desirable than an *Index expurgatorius*, to clear the Language of our superfluous Words, and Equivocals; all the modern *French* and *Italian* Terms in the several Arts, where we have *Latin* and *Greek* ones; and even all the *Latin* and *Greek* ones, where we have *English* or *Saxon* ones, equal in Sound and Significancy. I think the learned Languages ought to have the preference to the modern, because every Person may be supposed to have read, but not to have travelled; and our Country Words I would prefer to any others, because there is the most analogy between 'em, and they usually retain more of the Origin and Etymology than those transplanted from other Languages.—Such a Reform would reduce our Dictionaries to more reasonable Dimensions; and disincumber the Arts from half the difficulty now to be surmounted in attaining 'em.

BUT, there is another Spring of Words no less prolific than that hitherto spoke of, and which has produced a Swarm of spurious, misshapen Words, which no Nation but our own would ever have own'd; I mean the Itch of coining or making *English* Words, by a sort of analogy; from the *Latin* and *Greek* ones. This Fault the Tribe of Lexicographers have carried to a strange excess. How must a Man stare, to see what detestable Stuff some late Writers of that Class have complimented us with: Words of their own manufacture, scarce fit to do any thing with, except cure Agues! Witnesses such as *Scopulosity*, *Siliculous*, *Scatebrofity*, *Sieftic*, *Pugnacity*, *Segnity*, *Synulative*, *Multerosity*, *Magient*, *Grasility*, *Fastuousness*, *Excucous*; and many thousand more, at the Reader's service, to be met withal in a Dictionary which few People are without. One would almost wish the Mold destroyed that such Grotesques were cast in, for fear of new Impressions. We are already over-run with this Author's Scarecrows: but what shall we be when, having thus anglicis'd all the *Greek* and *Latin* Words, he proceeds to do the same with the *Dutch*, *Irish*, *Welsh*, &c. Indeed, I am the less angry with him, for that he has carried the Abuse so far, as must not only save People from being seduc'd, but bring the Practice into Contempt. Such Monsters can't possibly live long: if they have escap'd the Midwife, who ought to have strangled 'em ere they came to light, yet if ever they stir abroad they must infallibly be knock'd o' the head.

HOW oddly will our Practice in this respect look, when confronted with that of our Neighbours? One of the most learned Men and greatest Critics of the last Age, M. Menage, incur'd an infinite deal of Censure, for only endeavouring to introduce the single word *Professeur*: and could not succeed in it, notwithstanding that a Word of that import was confessedly wanting in the *French*; and both the Sound and Analogy of the new Word were unexceptionable.

TO return. The different state of different Arts is very remarkable. Some of 'em are refined to a degree of subtilty that destroys 'em; as Metaphysics, and Logics: others have had no refinement or polishing at all, but lie waste and over-run for want of it; as Agriculture, Heraldry, &c. The grossness of some is their fault; it being such as disgusts, and forbids a delicate Mind from pursuing them: in others, their subtilty and nicety is their bane, as leaving nothing for a hearty Appetite to feed on. What menage fare, for instance, are the School Rules, and Doctrines of *Mediums*, *Extremes*? &c. They do indeed furnish us with Relations, and true Relations too; but these so remote from all Purposes of Life, that they are in great measure insignificant.

'TIS certain all our Knowledge and Arts ultimately refer to the great End of Preservation. The Faculties of the Mind, like those of the Body, were not given us for the mere Exercise, or Gratification of 'em; but in subserviency to farther purposes. Our Knowledge is all of the Nature of Revelation; and the divine Being reveals nothing to us for the mere vague sake of our knowing it, but that it may minister to his Ends, the being and well-being of his Creatures. Our Perceptions and Notices are all Instruments in his hands, which he has appointed to do his work, and bring about the wonderful and adorable Ends of the Creation. They are second Causes, or at least Occasions of what we do; and no doubt are under the Direction of him for whom we do; whose Glory is served thereby. Tho they extend to abundance of things, yet they all centre and terminate at last in our Preservation; and accordingly, as they are farther from, or nearer to this Point, they are found fainter or stronger; very near they are palpable and cogent; as they recede, they continually abate of their clearness, and evidence; and when arrived at a certain distance, dwindle to nothing, and are lost. At a great height from this Centre, the Nexus or Chain whereby things are held together, and in virtue whereof we proceed from things known to things unknown, becomes insensible; so that we lose our hold, and wander on we don't know where. Our Faculties here falter; the Objects they meet with are inadequate to 'em; the Air grows too thin for Respiration. But, where we leave off, there possibly some superior Order of Beings may take it up.—We have, indeed, a kind of *Comets* in the Affair of Learning, which seem to be got far out of the Orb; so that one would wonder how they came there, or what sustains 'em; as also what they do there. Such are, mere Antiquaries, Etymologists, Microscopists, Alchemists, Physiognomists, and other Searchers of Futurity: But these, for all their seeming distance and irregularity, do all respect the same central Point, and move by the same Law with others; and even answer very good Purposes to the whole.

IN effect, the several Arts have been cultivated to more or less purpose, as our Preservation is more or less immediately interested in 'em; and by this Key one might almost venture to judge which Arts are capable of being carried still further, and which not.—Our Knowledge of very great and of very little things, is very imperfect, e. g. of very great and little Objects, Distances, Sounds, &c. And the reason, no doubt, is, that there is but little Relation between us and them; so that we are but little interested in the Knowledge of them. Those things we have necessarily and immediately to do withal, are made to our reach: for the rest, no matter, to the Creator's chief Purpose, what they are.

AND yet our Leisure and Curiosity have found means of making even these more cognizable than otherwise they are: we can, in some measure, alter the established Relation between our Faculties and their Objects; and make use of one Law of Nature, to undo or supersede another.—Thus we can magnify a little Sound or little Body, or a little Distance, &c. or we can diminish large ones; and thus make things in some measure adequate Objects, that naturally are not so.

BUT there is no great advantage in this: We only, by these means, come at a better apprehension of things which Nature seem'd to put out of our way for no other reason but because they did not concern us; lest we should be engaged to mistake, and run after things that had no relation to us, to the neglect of those which have.—Thus, Anatomy is really found of much less use than at first sight one would imagine; as being employ'd in taking things asunder and considering their Parts, which Nature chiefly intended to be considered and dealt with together. There is I know not what secret Law, whereby the Effect of a thing is, as it were, attach'd to its integral State; so that in proportion as you either diminish it, by taking from it, or enlarge it by adding to it, its Effect is alter'd, in a manner beyond what we can well account for from the bare Consideration of Magnitude.

ABUNDANCE of the less useful Notices, we find, were kept back, and left to be accidentally turned up in course of time: such as the Knowledge of Glasses, and their Effects. 'Twas no very important matter whether they were known or not; their uses were not immediate. If they had, the things themselves would have been palpable, and necessarily discovered long ago. Men lived tolerably well without knowing how many Feet a Loufe had, or how many Years a Cannon Ball would be in travelling to the Sun. The *Refrangibility* of the Rays of Light in passing different Mediums, which is the great Foundation of all our optic Glasses; seems only a secondary Property or Effect arising from another Power, or property of *Attraction* between the Light and the Medium; which it self probably arises from some other. And there seems nothing absurd in imagining that Nature did not immediately intend such Refrangibility; but that it follow'd accidentally, from some Principle which she did intend: So that the great modern Invention of Glasses, might be an accidental Derivation, from some of Nature's Redundancies. In effect, the only things left to Study and Art, may be these very Redundancies; the other Matters, which primarily concern us, being learnt in a more immediate manner.

NO body will take this for a Reflection on Art: 'Tis only a Panegyrick on Nature: an Illustration of her Goodness in contriving that things most necessary and useful, should be most obvious, so as to be almost discoverable by a sort of Instinct; and the other less immediately useful ones, left to be accidentally turned up in the Course of Experiment and Disquisition. We may admire her Wisdom still farther in this, that she shou'd as it were go out of her way, and annex a sort of Pleasure, beyond her main Purpose, to the Knowledge even of things not immediately useful; in order to engage us to Industry and Activity. This shews that the has Ends to serve by that very Activity; and perhaps is the best Demonstration in the World of the Necessity we are under to pursue Knowledge; and may raise a Suspicion, that this very Pursuit may possibly contribute to our Preservation in some farther manner not yet attended to.

'TIS no wonder the School Philosophy should be carried such a length; considering the narrowness of its Subject, and the great number of hands to cultivate it for so long a time. Its chief Employment is in assigning, and enumerating the Characters and Differences of our Perceptions, or internal Objects, taken as they are excited in us in the natural Course of things; by which it is distinguished from the Modern, which is chiefly employed in means to vary and modify these Perceptions; and thus find out further Relations and Differences than would otherwise have appear'd.—The Philosophers of the former kind are contented to take Nature as she comes home to 'em; and apply their Reasonings thereto without more ado: Those of the latter, go out in quest of her, to have more Matter to reason upon. The former are more contemplative, the latter more active; the former, in fine, reason, abstract, and discourse more; the latter observe, try, and relate more.

HENCE we discover why the Old is much more perfect in its kind than the New. The former has little to do but compare, order, methodize, &c. what is ready at hand; the latter has likewise to find; after which all the labour of the other still remains. The former takes Nature in all her Simplicity; the latter adds Art to her, and thus brings Nature into consideration in all her diversity: the former chiefly considers natural Bodies in their integral State; the latter divides, and analyses 'em: So that the former finds most of the principal Relations, the latter many more curious, and amusing ones. Hence, the former haltes to its Perfection, and can't long hold out; for that its Matter is limited: the latter can scarce ever arrive at it, since Experiments are endless. To say no more, to have Philosophy in its perfection, we should have the Order, Precision, and Distinctness of the Old; and the Matter, the Copia of the New.

THE modern is yet wild and unascertain'd. 'Tis not arrived at the Maturity of Method; the Mine is but just open'd, and the Adventurers are yet only solicitous about the Matter to see what it affords. Circumstances do not yet come in course; and 'twill be long ere it arrive at a just extent to give room and leisure for reducing it to regularity. True, the Rules and Methods of the ancient, are in some measure applicable to the new, and will go a good way towards the ordering and ascertaining of it; but the present Philosophers seem yet too warm and sanguine for such a Business; which must be left to the succeeding Age to think about. Add, that the farther they go on to dig Materials, still the more difficult will the ranging of 'em be; inasmuch as there is but one true and just Order to lay them in; and the more of 'em, the more intricate that Order, and the harder to find. This a Man may be positive of, he never will see half the Experiments and Observations already made, laid up or used in a System of Physics.

BUT when that is done, a deal will still remain, ere we have the chief uses of it. For physical Knowledge, strictly consider'd, is only a Step, a Means of arriving at a higher and farther kind. Histories, Observations, and Experiments of the Kinds, Order, Strata, &c. for instance of Fossils, are very useful and laudable things, as they tend to lay in a Stock of sensible Phenomena, for the Mind to work upon, digest, and draw new Notices from, for the Improvement of our own Faculties, and the better Conduct of Life: But 'tis a Short-sightedness to forget this farther View, and look only to the Things themselves. The bare Acquisition of new Ideas is no real advantage, unless they be such as have some relation to our selves, and are in some sense adequate, and adapted to the Circumstances of our Wants, and Occasions, or capable of being made so. Knowledge, in the first State, is like Food in the Stomach, which may please and satisfy us, but is of no use to the Body till farther prepared. It must be brought nearer us, and made more our own, more homogeneous to our selves, ere it feeds us.—The modern Philosophy is not so properly a Philosophy, as the Adit or Opening of one. Its Matter has yet only undergone the first Concoction: we are yet only conversant about new physical Relations, learnt by Sensation; whereas to bring it to the Perfection requir'd, it must have undergone the farther Operations of Imagination, and Reason. Mere Physics, as such, do not make a Philosophy; those Physics must first be carried up to Metaphysics and Ethics, ere we can safely stop. So far as it is Physics, it is foreign to the Mind, and its Occasions; before it affect and influence our Reason and Judgment, it must be subtiliz'd vastly, and made more similar to the Metaphysical Nature of the Mind. While Physics, it remains under the Direction of the Author of Nature; and proceeds wholly by his Laws, and to execute his Purposes: ere it come under our Direction, and become subservient to our Will, it must have laid aside what was active, and necessary in it, and become passive to our Reason, *i. e.* it must have been transfer'd from the Dominion of the Almighty's Will, or Reason, and brought under ours; if that do not imply a Contradiction.

'TO return. Sensible Phenomena, we have already shewn, are the Foundation of Philosophy: but your Edifice will neither make any Figure, nor afford any Convenience, till you have carried it one or two Stories higher. 'Tis but, as it were, the Cellaring, or Ground-work; which one would think were no very comfortable place to live and spend all one's time in. 'Tis one extreme, to take our Lodging as some of the modern Virtuofos are contented to do, under ground; and another to reside altogether in Garrets, as the Schoolmen may be said to have done.

THE School Philosophy, however, is of some farther use, as Matter of History: We learn by it how People have thought, what Views have obtain'd, and in what various Manners the same thing has been conceiv'd; which, tho' it be Knowledge as it were once removed, yet is not intirely useless. The History of human

human Thoughts is no doubt the most valuable of all others; it being this alone that can make the Basis of a just Logic, as Physiology of a just Physics. We must know wherein People have fail'd, or fallen short, or been deceiv'd, to learn the Reasons thereof, or be able to form Rules for avoiding the like. The several Opinions that have obtain'd, may be consider'd as so many Phenomena of the human Mind, which must be consider'd and inquir'd into to find its Nature.—This alone were enough to have engaged us not to omit that part of Learning, in the present Work; tho' there were not wanting other circumstantial Reasons which had also their share; as, the necessity hereof to the understanding not only of the ancient Writers, but even of the modern ones, who frequently combat, remark, &c. upon the ancient Notions. To which it may be added, that abundance of our Terms and Dictions are derived from them, and therefore could not be so completely understood without 'em. The Language of the ancient and modern Philosophy is not very different: the chief Diversity is in the different Ideas affixed to the same Words, and the different Applications of 'em. And happy had it been for the Moderns, had they form'd a new Set of Terms adapted to their new Notions: By adopting the old ones, they have not only introduced a world of Ambiguity and Confusion; but have even lost the Credit of many of their own Discoveries, which now lie blended and buried among those of the Antients. One is at a loss to think what could induce the great Philosopher of our Age, to use the word *Attraction*, in the Sense he has done. No doubt it was originally as pertinent as any other; but the Stamp and Impression it had already taken from the Antients, made it less fit to receive a new one. It could at best but take it imperfectly; and the result was, a promiscuous Image, wherein we neither see the one nor the other, distinctly. 'Tis scarce in the Power of Imagination, totally to divest a Sound of its received Meaning, and consider it as indifferent to all things; any more than to annihilate the Characters on a piece of Paper, and consider it as a mere Blank. Accordingly, tho' the great Author abovementioned explain'd over and over, in the clearest Terms, the Sense he fix'd to his *Attraction*; yet Experience verifies how much he was overseen; the chief Objections against his whole System being drawn from a Misapprehension of this very Word, which keeps half the Philosophers in Europe still at a distance, afraid to admit a most excellent Doctrine, merely out of distrust of the Vehicle that conveys it. But this *en passant*: The Reader who desires to see farther, may turn to the Articles *ATTRACTION*, *NEWTONIAN PHILOSOPHY*, *GRAVITATION*, &c.

WHAT has been spoke of the *School Philosophy*, reminds us of *Astrology*; the Terms whereof have not been omitted in this Work.—Were it only that it has once obtain'd, is still extant in Books, and has given occasion to abundance of Terms and Phrases, adopted into other Arts; it would have a Title to be remembered. "The History of Mens Follies, says the imitable Fontenelle, makes no small part of Learning; and "unhappily for us, much of our Knowledge terminates there.*" But this is not all; and they who absolutely reject all Astrology as frivolous, don't know it. Every Art and Science has its Vanities, and Foibles; even Philosophy, and Theology: and every one its good Sense, even Astrology. The heavenly Bodies have their Influences: The Foundation, therefore, of Astrology is good: but those Influences are not directed by the Rules commonly laid down, nor produce the Effects attributed to 'em: so that the Superstructure is false. Astrology, therefore, ought not to be exploded, but reformed. Indeed a Reformation would reduce it into a little compass; but this little is too much to be lost, as it now is, among that heap of Trumpery mixed with it.—We have even been careful to preserve what is just and rational, in Physiognomy, Witchcraft, and many other fanciful Arts. The time was, when Physics was not much more worthy the Study of a Man of Sense, than Astrology now is; so that one might propose an *Introductio ad sanam Astrologiam*, as a Desideratum.

THE Preface is now degenerated into a *Dissertation* in good earnest: at least, it has got the Length and Formality thereof, and wants only the Accuracy and Precision.—Enough has been discoursed of the general Nature, and Subject of the Work: You must now allow me to defend a little more to particular, and personal Matters; and thus end my Preface, where I might have had Precedents enough for beginning it.

I WILL at least deal honestly with my Reader, and not be caught faulty in point of Morality, whatever I may be in any thing else.—What has been said hitherto, has been on the advantageous side of my Work; and I should not have acquitted my self, should I not likewise mention what may be alleg'd on the contrary Part.—The curious Reader, then, may expect, he will here meet with Omissions, and there with Redundancies: here the Method and Economy are not kept to; there an Article is imperfectly treated: here, a Passage from some other Language is not sufficiently naturalized; there a Sentiment of some other Author is not sufficiently digested: There, in fine, the Author was asleep, and here the Printer.

ONE might palliate these Objections, by alleging, that "they are things not peculiar to this Work, but "extend to all of the Kind; that most of 'em are things not foreign and accidental to it, but arise of necessity, from the very Nature and form of a Dictionary; and that many of 'em, are not peculiar even to a "Dictionary, but agree to all extensive Undertakings, and are appendant to the very best Part of the Design, "its Universality:" but instead of extenuating, I had rather be guilty of inflaming, and aggravating 'em.

FOR Errors, they cannot be very few, considering the Hands thro' which most Parts of our Knowledge have passed, and from whom we are obliged to take our Accounts. What one Author, upon the most particular Subject, will you produce, that has not his share of 'em? and what *Argus* could possibly see, and correct the Errors in all the Authors he had to do with? *Scaliger*, in his Exercitations against *Cardan*, has shewn some twenty thousand, in one small Work; and no body imagines he has pick'd it perfectly clean. Yet *Cardan* was no ill Author. *Bayle's* Dictionary has been called the Errata of *Morreri*; yet is not *Bayle* himself without his Errors.—The most we can say, is, that we hope there will be few found in the present Work, in comparison of others of the like kind. Many thousands we have corrected, both in the Dictionaries and other Writings we have collected from, by means of the Light which other Parts of Knowledge afforded: But after so large a Harvest, no doubt there remains a tolerable Gleaning. We flatter our selves, however, that what we have overlook'd, the Reader will frequently be enabled to correct, by the Means here afforded; and that there will be few Errors found in the Book, which the Book it self will not help to rectify.

AS to Omissions, there is scarce any avoiding 'em; and the more intelligent the Reader is, the more of this kind he will necessarily meet withal: they being only such in relation to hisfulness. Indeed, I must own my self greatly a Debtor on this score; and tho' at present insolvent, yet if the Reader will give me Credit, it shall be my endeavour to see all I owe discharged; if not in a Lump, yet by a Course of Payments.

FOR Redundancies, you know there cannot well be richness without 'em. After you have picked what you think fit of this kind, and laid it by; 'tis ten to one but the next Person that comes, will restore half of 'em to their places; and tax your Temerity, and want of Taste: and the next after him will go near to replace the other half.

AS to Irregularities, and breaches of Method, I will not claim Impunity on the Score of being the first that introduced any certain Rules, or Method into this way of writing at all: But there will be at least this Satisfaction attending my Case, that I cannot be indicted for the Breach of any Laws but my own.—Nor

must it be forgot, that I pretend to have carried the *Dictionary-Way* to a pitch hitherto little thought of: So that if I have fallen short of the Mark on one side; it may be some Atonement that I have gone beyond it in another. I am sensible, however, there is no Point I have been more delinquent in than this one of Method; and that I am at every turn forgetting my own View. The References, and necessary Connexions between the Parts, which should shew their Relation, and help the Imagination to put 'em together, are but too frequently dropt, and the Reader left without his Cue.

AS to *Jejuneness*, and Crudity; no doubt there must be a deal of that kind, considering the Time so great a Load of Fruit had to hang and ripen. Much of it was gathered ere it could possibly be matured; so that 'tis no wonder it now and then tastes of the Wood. But setting aside this; if a Man may not be allow'd to say a good number of indifferent things, in the Compass of five hundred Sheets, I know not who would be an Author.

LASTLY, as to there being little in it *new*, and of my own growth; I must here change my Style; and from Confession, turn to Vindication.—The Work is, what it ought to be, a *Collection*; not the Produce of a single Brain, for that would go but a little way; but of a whole Commonwealth. If any Person will undertake to write a Dictionary, even of some one particular Art, from his own Fund, alone; a Man may safely undertake to prove it good for nothing. I do not pretend to entertain my Gucils at this rare, with just what my own scanty Barns afford: The whole Country is ranck'd to make 'em the fuller Banquet. Call me what you will; a *Dave*, and say I am fluck over with other Peoples Feathers: with all my Heart; but it would be altogether as just to compare me to the *Bee*, the Symbol of Industry, as that of Pride. For tho I pick up my Matters in a thousand Places; 'tis not to look gay my self, but to furnish you with Honey. I have rifled a thousand Flowers; prickly ones many of 'em, to load your Hive. No body that fell in my way, has been spared; Antient nor Modern, Foreign nor Domestick, Christian, nor Jew, nor Heathen: Philosophers, Divines, Mathematicians, Critics, Casuists, Grammarsians, Physicians, Antiquaries, Mechanics, all are served alike. The Book is not mine, 'tis every body's; the mix'd Issue of a thousand Loins. The Prince of modern Authors, is pillaged to some purpose; and what Quarter then can any body else expect? If ever you wrote any thing your self; 'tis possible there is something in it of yours: so that you will at least allow something in it good.

NONE of our Predecessors can blame us for the use we have made of them; since it is their own Practice. It is a kind of Privilege attached to the Office of Lexicographer, if not by any formal Grant, yet by Connivance at least. We have already assumed the *Bee* for our Device; and who ever brought an Action of Trower or Trespass against that avowed Free-booter? If any body blames us, 'twill ten to one be some of those very Drones, who are sustained by our means.

'TIS idle to pretend any thing of Property in things of this Nature. To offer a thing to the Publick, and yet pretend a Right reserved therein to one's self, if it be not absurd, yet it is forbid. The Words we speak; nay, the Breath we emit; are not more vague and common than our Thoughts, when divulged in print. You may as well prohibit People to use the Light that shines in their Eyes, because it comes from your Candle: E'en clap it in a dark Lanthorn, and let us not be amused, and dazzled by it; if we may not be the better for good things, let's not be the worse for the ill and indifferent ones mix'd with 'em.

WE see the same Thought, which was first started in one Author under a world of Crudity, borrow'd by another become farther improv'd and ripen'd; and at length transmitted to a third, yield Fruit in abundance. All Plants will not thrive in all Soils that will produce 'em; some languish in their Mother-Beds: whence the Gardener is under a frequent necessity of Replanting, Engrafting, &c.

TO do justice to a *Collection*, I mean a general and promiscuous one; it has its Advantages. Where numbers of things are thrown precariously together, we sometimes discover Relations among 'em, we should never have thought of looking for: As, the Painter's and Sculptor's Fancy, is frequently led on to the boldest and most masterly Designs, by something they spy in the fortuitous Sketches of Chance, or Nature: insomuch that a celebrated Author * makes no scruple to lay this down as the first Origin and Occasion of all these Arts. 'Tis certain most of our Knowledge is empirical, the Result of Accident, Occasion, and casual Experiment: 'Tis but very little we owe to Dogmatizing and Method; which, as already observ'd, are posterior Matters, and only come in play after the Game is started. 'Twas, in all probability, the hand of Chance that first threw Sulphur, Charcoal, and Salt-petre together; and what surprizing Effects have not arose from it; what Handle has it given to Art and Contrivance, to direct and apply this fortuitous Production?

'TIS indeed surprizing to consider, what slender Experiments and Observations many of the capital Doctrines have arose from: as The Blows of a Smith's Hammer on his Anvil, struck out the Principles of Music; which *Guido*, a poor Friar, perfected by what he observed in conning over his Beads. The Inventions of *Printing*, of *Glass*, of the *Dipping Needle*, of *Phosphorus*, of *Telescopes*, of *Taffata*, of *Antimony*, &c. are supposed to have arose in the like manner; as the Reader may find under their proper Articles: And how many more we know not, by reason the great Obscurity of their first Rise, ere they attain'd a degree of Usefulness and Perfection sufficient to be taken notice of, has buried the particular Circumstances thereof. If we will hear the antient *Phoenicians*, and *Egyptians*, amongst whom most of the Arts are supposed to arose; they all came from casual Observations: Geometry from the Inundations of the *Nile*; the Flight of the Crane, gave occasion to the Invention of the Rudder; the Ibis taught to administer a Clyster, &c. In effect, a new Observation in some Peoples Minds prepared for it, is like a Spark in a heap of Gun-powder, which may blow a whole Mine.

WHAT Advantages may not Philosophy derive from such a Collection, or Farrago of Arts; when 'tis considered, that every Circumstance, every Article of an Art, ought to be look'd upon as a Datum, a Phenomenon, or Experiment in Philosophy; and that the least of 'em may possibly be the Foundation of a new System?—To consider only the *Tanning*, or *Currying* of Leather: what is the whole Process, but a Series of physical Effects, arising from new applications of Body to Body? And how many Lectures will the Philosopher have from Painting, Gardening, Agriculture, &c. touching *Planting*, *Engrafting*, *Pruning*, *Exposure*, *Expression*, *Walls*, &c. which might never have come in his way, but by such a chance? When a thing is once started, it may be applied infinite ways, and no body knows where it will stop.

THRO'OUT the Whole, we have had a particular regard, both in the Choice of the several Heads, and in dwelling or amplifying upon 'em; to the extending our Views, dilating our Knowledge, opening new Tracks, new Scents, new Viitas. We have endeavour'd not only to furnish the Mind; but to enlarge it, and make it in some measure co-extend with the Dimensions of all Minds, in all Ages and Places, and under all Situations and Circumstances: as Language, in some measure, makes our Senses do. With which view, we have given the Sentiments, Notions, Manners, Customs, &c. of most People, that have any thing new, unusual, or hardy in 'em.

SUCH a Variety of Views, Principles, and Manners of thinking, is a sure Remedy against being too violently attached to any one; and is the best way of preventing the making of Pedants, Bigots, &c. of any

* Leon Batista Alberti, della Scama.

kind. It may be said, that every Art tends to give the Mind a particular Turn; and that the only way of maintaining it in its natural Rectitude, is by calling in other opposite ones, by way of Counter-balance. Thus we find nothing more perverse and unfeeling than a mere Mathematician, mere Critic, Grammarian, Chymist, Poet, Herald, or the like; and the proper Disposition is only to be had from a just Temperament or Mixture of 'em all.

I OWN this is not the way to make a very great progress in any Art; but at the same time it is the only way to hinder our being spoil'd by any; and becoming Creatures rather of *Homer* or *Aristotle's* making, than God's: and receiving our Tastes, Views, Relishes, at second hand, rather than from Nature her self. This, however, is only to be understood with regard to personal Benefit. For no doubt the Publick is better provided for, by the mere Pursuers of particular Arts, than the general Applicers to all: since each is hereby brought to greater Perfection; and the Mixture and Temperament, wanting in the Individuals, is found in the Whole.

TO conclude, the ultimate View of a Work of this, or any other kind, should be, the forming a sound Mind, *i. e.* a System of Perceptions, and Notions agreeing to the System of Things, or in the Relation thereto, intended by its Author. The End of Learning and Study, is not the filling our Heads with other Mens Ideas; that is an Enrichment which may prove for the worse, if it carry any ill Quality with it: Richness is not the chief thing aim'd at; 'tis only a Circumstance, or Matter of a secondary Consideration: Soundness is the first. There are many Measures which the Husbandman dares not use, by reason they would corrupt the Land, at the same time they enriched it; and lay the Foundation of a Disease, which would in the End impoverish, and make it spend it self in unprofitable Weeds. A little pure Logic, or Theology, or Chymistry, in some Peoples Heads, what Mischiefs have they not produced?—But it must be owned, Mens Heads are not so soon fill'd: the Memory is not so tenacious as we imagine; Ideas are transient things, and seldom stay long enough with us to do us either much good, or harm: Ten to one but what we read to-day, is forgot again to-morrow. And what chiefly makes new Ideas of any significancy, is their extending and enlarging the Mind, and making it more capacious and susceptible.—But neither is this Enlargement the last Aim; but is chiefly of use, as it contributes to the increasing our Sensibility, to the making our Faculties more subtil, and adequate, and giving us a more exquisite Perception of things that occur; and thus enabling us to judge clearly, pronounce boldly, conclude readily, distinguish accurately, and to apprehend the manner and Reasons of our Decisions. In which view, several things may be useful, that are not so much direct Matters of Knowledge, as subservient to the same End; for instance, much of the School Philosophy, which by exercising and exciting the Mind, has a kind of collateral tendency to sharpen its Faculties; and needs only be read, not retain'd, to produce its Effect.—But neither does the Matter end here: Even this does not amount to the full and adequate End of Knowledge: This is only improving the Organ; and there must be some farther End in such Improvement. No Man sharpens his Weapon on the sole Consideration of having it sharp, but to be the fitter for use. Briefly, then, our Faculties being only so many Inlets, whereby, and according to the Measure whereof, we receive the Intimations of the Creator's Will, or rather, the Effects of his Power and Action; all the Improvements made in 'em, have a tendency to subject us more entirely to his Influence and Direction; and thus make us conspire, and move more in concert with the rest of his Works, to accomplish the great End of all things. In which our Happiness and Perfection consists; the Perfection of a single Nature, arising in proportion as it contributes to that of the T O' N A N.

 Triangle, p. 242. col. 2. l. 41. for A C, r. B C.

N. B. The Figures relating to each Art are placed fronting the Name of the respective Art, in the Body of the Book; and are refer'd to under that Title: as, *Tab. Architecture*, *Tab. Geometry*, &c.—To each Figure is also annex'd the Word for whose Exemplification it serves: So that the Reader may either go from the Word to the Figure, which exemplifies it; or backwards, from the Figure, to the Word which explains it.

A LIST of the SUBSCRIBERS.

HIS Grace the Duke of
A. *Archl.*
The Right Hon. the
Lord *Abergavenny.*
The Right Hon. the Lord *Arundale,*
of *Trerice.*
Sir *Jacob Aekworth* Kt. Surveyor of
the Navy.
Sir *John Anstruther* of *Anstruther,* Bar.
Thomas Archer Esq;
William Archer Esq;
Dingley Atkham Esq;
Dr. *Allen.* Mr. *Asgill.*
Mr. *Oliver Aiton,* Attorney at Law,
seven Books.
The Rev. *James Anderson* M.A. of
Swallow-street, St. *James's.*
Major *Seab Adams.*
Mr. *Ansdell,* Bookfeller in *Liverpool.*
Mr. *Samuel Aris,* Printer.
Mr. *Eleazer Albin,* Painter.
Mr. *Abraham Abovwith* in *Durham.*

THE Right Hon. the Earl of
B. *Berkshire.*
The Rt. Hon. the Earl of *Burlington.*
The Right Hon. the Lord *Belhaven.*
The Right Hon. the Lord *Binning.*
The Right Hon. *George Baillie,* Esq;
The H. n. Mr. *Bruce.*
The Hon. *Alexander Brodie* of *Brodie,* Esq; Lord *Lyon.*
John Blackland of *Grays-Inn,* Esq;
George Bagnal Esq;
Richard Backwell jun. Esq;
Samuel Buckley Esq;
Henry Barham Esq; F.R.S.
Anthony Balam Esq;
John Blackwood Esq;
John Busby Esq; F.R.S.
John Bamber, M.D. F.R.S.
The Rev. Mr. *John Benson.*
The Rev. Mr. *Bowen.*
The Rev. Mr. *Baron* of *Wimstead.*
The Rev. Mr. *Edmund Bayner.*
Dr. *Brown.*
Edward Barry M.D.
Mr. *Charles Bard,* Attorney at Law.
Mr. *Alderman Bennet* of *Cork,* Books.
Mr. *John Brown* Chymist, F.R.S.
Mr. *John Beavis.*
Mr. *George Bincker* of *Coveant-Garden.*
Mr. *Peter Brown.*
Mr. *William Bonner* of *Cambridge,*
Bookfeller.
Mr. *Nicholas Blomberg.*
Mr. *Job Bradley,* Bookfeller at *Chef-*
terfield.
Mr. *William Brown* in *Edinburgh.*

THE Most Reverend His Grace
C. *Timothy Goodwin,* Lord Arch-
bishop of *Coagh.*
The Right Hon. the Marquis of
Carmarthen.
The Right Hon. the Lord *Carmichael.*
The Right Hon. the Lord *Cobhill* of
Cabrasi.
The Right Hon. the Lord *Crichton.*
Sir *Archer Croft,* of *Croft-Castle* in
Herefordshire, Baronet.
Sir *Alexander Cuning,* Baronet.
Sir *James Colquhoun* of *Lusk,* Bar.
Sir *Donauan Campbell* of *Lochnell,* Bar.
Sir *James Campbell* of *Abercrombie,* Bar.
Sir *James Campbell* of *Auchenbrook,* Bar.
The Hon. Col. *Thomas Cornwallis.*
The Hon. Col. *Charles Carcarr,*
Groom of the Bedchamber to his
Majesty.

UNIVERSAL DICTIONARY

O F

ARTS and SCIENCES.

A

A

A

A Vowel, and the first Letter of the *English* Alphabet. See LETTER, VOWEL, and ALPHABET; where what relates to *A*, consider'd in each of those Capacities, is deliver'd.

The Grammarians will needs have *A* the first Letter in all Languages; and some of 'em assign a natural Reason for it, viz. that it is the most simple, and the easiest pronounc'd of all articulate Sounds. To confirm this, *Jul. Scaliger* observes, that *A* is the first Sound Nature puts forth at the crying or smiling of Infants; and that it needs no other Motion to form it, but a bare opening of the Lips. See VOICE.

Covarruvias, refining on this Sentiment of *Scaliger*, observes, very gravely, that the first Sound put forth by Boys is *A*; but that Girls first put forth *E*; each pronouncing the initial Letter of the Name of the first Parent of its respective Sex. Dr. *Littleton*, setting *Adam* aside, makes the one speak the first, and the other the initial Letter of the Name of the Mother of Mankind, *Eva*.

But 'tis in vain that Authors compare the *A* of the *English*, *Latin*, *French*, &c. with the *Aleph* of the *Hebrews*, or the *Eloph* of the *Arabs*. Those two Letters have no Conformity with our *A*, except in this, that they are the first of their several Alphabets. What sets 'em far asunder, is, that these Oriental *A's* are not Vowels. See VOWEL.

Some Criticks take the *Hebrew Aleph* to be neither Vowel, nor Consonant, but what the Grammarians call an *Aspirate*, or *pneumatic* Letter; like the *H* in the *Latin* and our Language; adding, that *S. Jerom* appears to have had the same Thought, who probably learnt it from the *Jews* of the School of *Tiberias*. But the *Jesuits de Trevoux* give the thing another Turn: Those Fathers have prov'd that the *Hebrew Aleph*, *Arabic Eloph*, and *Syriac Oloph*, are real Consonants; and that the same holds of all the other Aspirates. This is a Paradox in Grammar; but 'tis not the less true for being a Paradox. See ASPIRATE, and CONSONANT.

Of all the Letters, *A* is observ'd to be that which dumb Persons are soonest taught to pronounce. The Reason is, that it does not depend on the Muscles, and other Organs of the Mouth, and Tongue, which are generally wanting in Mutes; but on those of the Throat and Nose, which they commonly have. See DUMBNESS.

This first, simplest Sound, yet serves us to express most of the Movements of the Soul. 'Tis so much the Language of Nature, that upon all sudden and extraordinary Occasions, we are necessarily led to it, as the Instrument readiest at hand. With this we speak our Admiration, Joy, Anguish,

Aversion, Apprehension of Danger, &c. Where the Passion is very strong, we frequently heighten the *A*, by adding an Aspirate, *Av*. See INTERJECTION.

'Tis observ'd of the *English* Pronunciation, that we speak the *a* with a slenderer, and more pony Sound than any of our Neighbours: Ordinarily, 'tis scarce broad enough for a French *e Neuter*; and comes far short of the gross *a* of the *Germans*, which wou'd make our *an*, or *av*, or *o*. In some Words, however, as *talk*, *wall*, *stall*, &c. the *a* is broad, and deep enough. But this, 'tis observ'd, may not be the mere Sound of *a*; but the Effect of the ancient Orthography, which, as low as *Q. Elizabeth*, added an *u* to the *a*, and wrote *taulk*, &c.

The *Romans* laid a mighty Stress on their *a*; and distinguish'd exactly, both in writing and speaking, when it was long, and when short. To denote it long, they first wrote it double, *Aala*, for *Ala*; which not being enough, they inserted an *b* between 'em, *Abala*: At length they fell to the common long Accent *ā*, or *āa*. See ACCENT.

A was one of the Numeral Letters among the Antients, and signify'd 500. With a Dash atop, *ʌ*, it stood for 5000. See CHARACTER.

Baronius gives us a Set of ancient Technical Verses, wherein the Numeral Value of each Letter of the Alphabet is express'd; whereof this is the first.

Possidet A numerus quingentos, ordine recto.

But we shall here observe, once for all, that it was not strictly among the Antients that this Use of Numeral Letters had place, as is commonly suppos'd. *Isidoro Hispanensis*, an Author of the VIIIth Century, affirms it expressly: *Latini autem Numeros ad Literas non computant.* The Usage was really introduc'd in the Days of *Barbarism*. *M. du Cange*, explaining what that Usage was, at the beginning of each Letter of his *Glossary*, the generality of Dictionary-Writers, who take it from him, mistake him. The account, they all lay, is found in *Valerius Probus*: whereas *du Cange* says no such thing; but only that it is found in a Collection of Grammarians, among whom are *Valerius Probus*, and *Petrus Diaconus*. *Habetur verò illud cum Valerio Probo, Paulo Diacono, (it should rather have been Petro) & aliis qui de numeris scripserunt, editum inter Grammaticos antiquos.* See NUMERAL.

A is also us'd in the *Julian* Calendar, as the first of the seven Dominical Letters. See DOMINICAL.

It had been in use among the *Romans* long before the Establishment of Christianity, as the first of the eight *Numeral Letters*; in imitation whereof it was, that the Dominical Letters were first introduc'd. See NUMERAL.

A is also an Abbreviature, us'd in divers Arts, and with divers Intentions. See ABBREVIATURÆ. Thus, Among Logicians, A is us'd to denote an universal Affirmative Proposition; according to the Verbe,

Afferit A, negat E, verum generaliter Anba.

Thus, in the first Mood, a Syllogism consisting of three universal Affirmative Propositions, is said to be *Bar-bar-a*; the A thrice repeated, denoting for many of the Propositions to be universal. See MOON, BARBARA, &c.

Among the Romans, A was us'd in the giving of Votes, or Suffrages. When a new Law was propos'd, each Voter had two wooden Ballots put in his Hand; the one mark'd with a Capital A, signifying *Antiquo*, q. d. *Antiquum volo*; and the other with V.R. for *Ut rogas*. Such as were against the Law passing, cast the first into the Urn, as who should say, *I refuse it, I antiquate it*; or I like the ancient Law, and desire no Innovation. See SUFFRAGE, CENTURY, &c.

In the Trials of Criminal Causes, the same Letter A, denotes *Abolutio*: whence *Cicero*, pro *Milone*, calls A, *Littera solvendi*, a Saving Letter. Three Ballots were distributed to each Judge, mark'd with the Letters, A for *Abolvo*, C for *Condemno*, and N. L. for *Non Liquet*, it is not clear. From the Number of each cast into the Urn, the Praetor pronounc'd the Prisoner's Fate. If they were in equal number, he was absolv'd. See ABSOLUTION, CONDEMNATION, &c.

In the ancient Inscriptions of Marbles, &c. A occasionally stands for *Augustus*, *Ager*, *Annus*, &c. When double, it denotes *Augusti*: and when triple *Auro*, *Argento*, *Aere*. *Misere* adds; that when it occurs after the Word *Miles*, it denotes him young. See INSCRIPTION.

On the Reverse of ancient Medals, A denotes 'em struck by the City *Argos*. And among the later Coins, the same Letter is the Mark of *Paris*. See MEDAL, COIN, MONEY, &c.

Among English Writers, A is ordinarily us'd for *Anno*, as A. D. *Anno Domini*; for *Autumn*, as A. M. A. B. &c. See CHARACTER.

Among Physicians, \bar{a} or \bar{aa} , is us'd in Prescription for *Ana*; to denote an equal Portion of divers Ingredients, whether in respect of Measure or Weight. See ANA.

Thus, *℞ Sal. Volat. Oleos. Trass. Croc. aa ℥ss.* expresses *Sal. Volatile Oleosum, and Tincture of Saffron, of each half an Ounce.*

The same \bar{a} or \bar{aa} is also us'd in the like Sense, without expressing any limited Quantity or Weight: Thus, \bar{a} or \bar{aa} P. Æ. denotes simply, *equal Parts* of the Ingredients there mention'd.

Lastly, among Chymists, A A B signify an *Amalgama*, or the Operation of *Amalgamating*. See AMALGAMATION.

ABACTOR, a barbarous Latin Word, retain'd in our Dictionaries as a Law-Term, tho never yet naturaliz'd, nor its Idea agreed on.

Literally, it imports the same with *Abigens*, or as others write it, *Abigens*, or *Abigen*; form'd of *Abigo*, I drive away, q. d. a *Driver of Cattle*.

Technically, it is us'd to denote a *Theif*; but with something particular in the manner of his Crime, to distinguish it from *Furtum*, or common Theft. 'Tis generally suppos'd to be one who steals, or drives off Cattel by Herds, or great Numbers: Thus *Bracton*, L. iii. c. 6. *Si quis suam furripuit, fur erit; Et si quis gregem Abigenus*. See THEFT.

Others will have *Abactores* to be strictly those who drive off Cattel openly, and by main Force. In the former Sense, the Act of *Abactio* amounts to the *Abigens*, and in the latter to the *Rapine* of the Civilians.

But the Distinction between *Fur* and *Abacter* has now no place among us.

So, among the ancient Physicians, *Abactus* was us'd for a Mischance procur'd by Air, or force of Medicines; in contradistinction to *Aborsus*, which is Natural. But the Moderns know no such distinction. See ABORTION.

ABACUS, among the Antients, was a kind of Cupboard, or Buffet. See BEFFER.

In this Sense *Livy*, describing the Luxury into which the Romans degenerated after the Conquest of *Asia*, says, They had their *Abaci*, Beds, &c. plated over with Gold. *Dec. IV. lib. ix.*

The Word is Latin, but form'd from the Greek, $\alpha\beta\alpha\zeta$; which among that People signify'd the same thing. *Gualbertus* goes higher: He derives $\alpha\beta\alpha\zeta$, from the Hebrew $\alpha\beta\alpha$, to be elevated, rais'd; and supposes its primary Signification to be a *high Shelf*, or other Convenience for things to be laid upon out of the way.

ABACUS was particularly us'd among the Mathematicians, for a little Table strew'd o'er with Dust, on which they drew their Schemes and Figures. And hence the

ABACUS Pythagoricus, a Table of Numbers, contriv'd for the ready learning of the Principles of Arithmetic; denominated from its Inventor *Pythagoras*.

Hence also, from an Agreement in point of Use, the Names *Abacus* and *Abaco*, are us'd among the English and *Italians* for an *Alphabet*, or A B C, &c.

The *Abacus Pythagoricus* was, in all probability, no other than what we call *Multiplication-Table*. See TABLE. *Ludolfus* and *Wolffius* give us Methods of performing Multiplication without the help of the *Abacus*; but they see too operose in ordinary Cases for Practice. See MULTIPLICATION.

ABACUS, in Architecture, is the uppermost Member of the Capital of a Column; serving as a kind of Crowning, both to the Capital and the whole Column. See COLUMN.

Dr. *Harris*, and the rest of the Dictionary-Writers, make the *Abacus* to be the Capital it self; which is altogether as just, as to make the Crown of the Head the whole Head. See CAPITAL, and CROWNING.

Vitruvius, and others after him, who give the History of the Orders, tells us, the *Abacus* was originally intended to represent a square Tile laid over an Urn, or rather over a Basket. An *Alteman* old Woman happening to place a Basket thus cover'd over the Root of an *Acanthus*; that Plant shooting up the following Spring, encompass'd the Basket all around, till meeting with the Tile, it cur'd back in a kind of Scrolls. An ingenious Sculptor passing by, took the Hint, and immediately executed a Capital on this Plan; representing the Brick by the *Abacus*, the Leaves by the Volutes, and the Basket by the Vase, or Body of the Capital. Such was the Rise of the first regular Order. See ORDER, ACANTHUS, VOLUTE, CORINTHIAN, &c.

There is some difference in the Form of the *Abacus* in different Orders. In the *Tuscan*, *Doric*, and ancient *Ionic*, it is a flat, square Member, well enough representing its original Tile; whence the *French* call it *Tailleur*, *Trencher*. See TUSCAN, DORIC, and IONIC.

In the richer Orders it has lost its native Form; its four Sides, or Faces, being arch'd, or cut inwards; with some Ornament, as a Rose, or other Flower, or Fishes Tail in the middle of each Arch. See CORINTHIAN, and COMPOSITE; see also FLOWER, &c.

But some Architects take other Liberties in the *Abacus*, both in respect of its Name, Place, and Office. Thus, in the *Tuscan* Order, where it is the largest and most massive, as taking up one third of the height of the whole Capital, it is sometimes call'd the *Die* of the Capital.—In the *Doric* 'tis not always the uppermost Member of the Capital; a Cymatium being frequently placed over it.—In the *Ionic*, some make it a perfect Ogee, and crown it with a Fillet. See DIE, CYMATIUM, OEGE, &c.

Add, that the *Abacus* is not constantly restrain'd to the Capital of the Column; *Scamozzi* using the Name for a concave Moulding in the Capital of the *Tuscan* Pedestal. See PEDestal.

ABAFT, in the Sea Language, denotes the *Stern*, or Hind-part of a Vessel; call'd also *Aft*. See AFT.

The Stern, strictly speaking, is only the Outside; *Abaft* includes both inside and out. See STERN.

ABALIENATIO, in the Roman Law, is a Term scarce us'd in any English Writer; tho our Dictionaries would pass it for English. Indeed, it is not very common among the Latins. The usual Term among them was *Alienatio*; and in our Language *Alienation*. See ALIENATION.

ABAPTISTON, or ANABAPTISTON, a Name antiently given to an Instrument in Chirurgery, by the modern Writers call'd *Trepau*, *Modiolus*, *Terebra*, *Terebellum*, and *Trafine*. See TREPAN, MODIOLUS, &c.

The Word is a mere Stranger in our Language. It seems to be one of those Exoticks imported by the Dictionaries; and never taken notice of but by themselves.

ABARTICULATION, in Anatomy, is represented by *Blanchard*, and other Lexicographers after him, as synonymous with *Diarthrosis*: but the Definition they give of it, does not quadrate with that Notion.

Abarticulation, or *Dearticulation*, say they, is a good Constitution of the Bones, whereby they become dispos'd to move strongly and readily. But what this should mean, it were hard precisely to say. See DIARTHROSIS.

ABASING, literally denotes the taking a thing down, or bringing it lower.

In this Sense the Word is us'd at Sea; where, to *abase* a Flag, is to lower, or take it in, as a Token of Submission and Inferiority. See FLAG.

By an Ordinance of *Philip II.* King of *Spain*, the Captains are peremptorily enjoin'd, rather to perish than *abase* the Royal Flag.

ABASED, *Abaisse*, in Heraldry, is applied to the Vol, or Wings of Eagles, &c. when the Tip, or Angle looks downward toward the Point of the Shield; or when the Wings are shut: The usual way of bearing 'em being spread, with the Tip pointing to the Chief, or the Angles. See VOL.

A Chevron, a Pale, Bend, &c. are also said to be *abase*, when their Points terminate in, or below the Centre of the Shield. See CHEVRON, PALE, &c.

Again, an Ordinary is said to be *abase*, when below its due Situation. Thus, the Commanders of the Order of *Malta*, who have Chiefs in their own Arms, are oblig'd to *abase* 'em under those of the Religion.

ABATEMENT, in Heraldry, something added to a Coat-Armour, to diminish its proper Value and Dignity, and note some dishonourable Action, or Stain in the Character of the Person who bears it. See ARMS.

'Tis a little controverted among Authors, whether Heraldry allows of any such thing as regular *Abatements*. *Leigh* and *Guillim*, without any Scruple as to their Reality, give us several Kinds.

Abatements, according to the list of those Writers, are either made by Reversion or Diminution.

Reversion is either turning the whole Escutcheon upside-down; or the adding another Escutcheon, inverted, in the former.

Diminution, is the blanching any part by adding a Stain, or Mark of Diminution: Such are a *Delf*, a *Point Dexter*, a *Point Champaign*, a *Plain Point*, a *Gear Snifter*, and a *Gusset*. See each under its proper Article, *DELTA*, *POINT DEXTER*, *GOAR*, *GUSSET*, &c.

It may be added, that these Marks must always be either Tawny, or Murrey; otherwise, instead of Diminutions, they become Additions of Honour. See TAWNY, MURREY, &c.

The last Editor of *Guillim* discards the whole Notion of *Abatements*, as a Chimera. He alleges, that no one Instance is to be met with of such Bearing; and that it implies a Contradiction to suppose it. Arms, being *Insignia Nobilitatis & Honoris*, cannot admit of any Mark of Infamy, without ceasing to be Arms, and becoming Badges of Disgrace; which all would cover to lay aside. Add, that as no hereditary Honour can be actually diminish'd; so neither can the Marks thereof. Both, indeed, may be forfeited; as in the Case of Treason, where the Escutcheon is totally revers'd, to intimate a total Suppression of the Honour.

Some Instances, however, are produc'd to the contrary by *Colombiere*, and others. But these, tho' they may show some extraordinary Resentments of Princes for Offences committed in their Presence, do not amount to a Proof of such Custom or Practice; much less authorize the Being of particular Badges in the Hands of inferior Officers, as Kings at Arms.

ABATEMENT, in Law, is us'd for the defeating or overthrowing of a thing, as a Writ, Appeal, or the like.

Thus, the *Abatement of a Writ*, is the frustrating, or setting it aside, by some Exception alleg'd and made good against it. Such Exception may be taken either to the Matter, as insufficient; or to the Allegations, as uncertain, e. g. where one of the Parties or a Place are misnam'd; or to some Variation between the Writ and Record; or to the Uncertainty of the Writ, Count, or Declaration; or to divers other Particulars. Upon any of which, the Defendant may pray that the Writ, or Pleinr, may *abate*; i. e. that the Plaintiff's Suit may cease for that time. See Writ.

So we read in *Stow's* story, 'The Appeal *abates* by Covin: that is, the Accusation is defeated by Deceit.—In the old *Nat. Breve*. To *abate* a Castle, or Fortlet, is interpreted, to beat it down.

ABATEMENT is also an irregular Entry upon Lands, or Tenements, left vacant by their former Possessor, and not yet laid hold of by the next Heir.

As he that puts out the Possessor is said to *disseise*; so he that interposes, or steps in between the former Possessor and his Heir, is said to *abate*. See DISSEISEIN.

Coke on Littleton distinguishes between *Abatement* and *Intrusion*; but the new Book of Entries renders *Abatement* by *Intrusion*. See INTRUSION.

ABBESS, the Superior of an *Abbey*, or Convent of Nuns. See ABBEY, and CONVENT.

The *Abbess* has the same Rights, and Authority over her Nuns, that the Abbots regular have over their Monks. See ABBOT.

The Sex indeed does not allow her to perform the Spiritual Functions annex'd to the Priesthood, wherewith the Abbot is usually invest'd; but there are Instances of some *Abbesses*, who have a Right, or rather a Privilege, to commission a Priest to act for 'em. They have even a kind of Episcopal Jurisdiction, as well as some Abbots, who are exempted from the Visitation of their Diocesan. See EXEMPTION.

F. Martene, in his Treatise of the *Rites of the Church*, observes, that some *Abbesses* have formerly consold'd their Nuns. He adds, that their excessive Curiosity carry'd 'em such lengths, that there arose a necessity of checking it.

S. Basil, in his Rule, allows the *Abbess* to be present with the Priest at the Confessions of her Nuns. See CONFESSION.

ABBEY, or **ABBY**, a Monastery, or Religious House, govern'd by an Abbot, or Abbess. See ABBOT, &c.

Abbies differ from *Priories*, in that the one are under the Direction of an Abbot, and the other of a Prior: but Abbot and Prior (we mean a *Prior Conventual*) are the same thing, and only differ in Name. See PRIOR.

Fenches observes, that in the early Days of the French Monarchy, Dukes and Counts were call'd *Abbots*, and Duchies and Counties *Abbies*. Many Persons of the prime

Quality, without any Concern in the Monastic Life, took the same Quality; even some of their Kings are mention'd in History under the Title of *Abbots*. *Philip I. Louis VI.* and afterwards the Dukes of *Orleans*, are call'd *Abbots* of the Monastery of *S. Agnan*. The Dukes of *Aquitain* were call'd *Abbots* of the Monastery of *S. Hilary*, at *Poitiers*; and the Earls of *Anjou* of *S. Aubin*, &c.

One third of the best Benefices in *England* were antiently, by the Pope's Grant, appropriated to *Abbes*, and other Religious Houses; which, upon their Dissolution under King *Henry VIII.* became Lay-Poss: 150 such were dispos'd of between 1500 l. and 35000 l. yearly Revenue, which at a Medium amounted to 2853000 l. per Annum.

ABBOT, or **ABBAT**, the Chief, or Superior of an *Abbey*, of the Male Kind. See ABBEY, and ABBESS.

The Name *Abba* is originally *Hebrew*, where it signifies *Father*. The *Jews* call *Father* in their Language *Ab*; whence the *Chaldee* and *Syriac* form'd *Abba*; and thence the *Greeks* *Abbas*, which the *Latins* retain'd, *Abbas*; and hence our *Abbot*, the French *Abbe*, &c.

St. Mark and *St. Paul* use the *Syriac* *Abba* in their *Greek*; by reason it was then commonly known in the Synagogues, and the primitive Assemblies of the Christians; adding to it, by way of Interpretation, the Word *Father*, *Abba i pater*, *Abba, Father*, q. d. *Abba, that is to say, Father*.

The Name *Abba* and *Abbas*, which at first was a Term of Tenderness and Affection, in the *Hebrew* and *Chaldee*, became at length a Title of Dignity and Honour. The *Jewish* Doctors affected it; and one of their most antient Books, containing the Sayings, or Apophthegms of divers of 'em, is entitled, *Pirke Abbot*, or *Avoth*, i. e. Chapter of the Fathers.

'Twas in allusion to this Association, that *Jesus Christ* forbid his Disciples to call any Man their *Father* on Earth: which Words *S. Jerom* turns against the Superiors of the Monasteries of his Time, for assuming the Title of *Abbots*, or *Fathers*.

The Name *Abbot*, then, appears as old as the Institution of Monks it self. See MONK.

The Governors of the primitive Monasteries assum'd indifferently the Names *Abbots* and *Archimandrites*. See ARCHIMANDRITE.

They were really distinguish'd from the Clergy, the frequently confounded with 'em, because a Degree above Laymen. *S. Jerom*, writing to *Heliodorus*, says expressly, *Abbas Monachus est Causa, abbas Clericorum*. See CLEIKOV, PRIEST, &c.

In those early Days, the *Abbots* were subject to the Bishops, and the ordinary Pastors. Their Monasteries being remote from Cities, built in the farthest Solitudes, they had no share in Ecclesiastical Affairs. They went on Sundays to the Parish-Church with the rest of the People: or, if they were too remote, a Priest was sent 'em to administer the Sacraments; till at length they were allow'd to have Priests of their own Body.

The *Abbot*, or *Archimandrite* himself was usually the Priest: but his Function extended no farther than to the Spiritual Assistances of his Monastery; and he remain'd still in obedience to the Bishop.

There being among the *Abbots* several Persons of Learning, they made a vigorous Opposition to the rising Heresies of those Times; which first occasion'd the Bishops to call 'em out of their Deserts, and fix 'em about the Suburbs of Cities; and at length in the Cities themselves: from which Era their Degeneracy is to be dated.

The *Abbots*, now, soon wore off their former Plainness and Simplicity, and began to be look'd on as a sort of little Prelates. In time they would be Independent of the Bishop; and became so insupportable, that some severe Laws were made against 'em at the Council of *Chalcedon*: This notwithstanding, in time, many of 'em carry'd the Point of Independence; and took the Appellation of *Lords*, with other Badges of the Episcopate, particularly the *Mitre*.

Hence arose new Species and Distinctions of *Abbots*, *Mitred*, and *not Mitred*; *Crozier'd*, and *not Crozier'd*, *Oecumenical*, *Cardinal*, &c.

Mitred Abbots, were those privileg'd to wear the *Mitre*; and having, withal, a full Episcopal Authority within their several Precincts. Among us, these were also call'd *Abbots Sovereign*, and *Abbots general*; and were Lords of Parliament. Of these Sir *Edward Coke*, de *Jur. Eccles.* reckons 27 in *England*, beside two *Mitred Priors*. See PRIOR.

The rest, who were *not mitred*, were subject to the Diocesan.

Pert Hoy, a *Benedictine* Monk, in his Book entitled *Astrum Inextinctum*, maintains, that the *Abbots* of his Order have not only an Episcopate, but even a Papal Jurisdiction; *Potestatem quasi Episcopalem, imo quasi Papalem*; and as such can confer the lower Orders of Deacon and Subdeacon. See ORDER.

When the *Abbots* first assum'd the *Mitre*, the Bishops made heavy Complaints of their Privileges being invaded by the

the Monks; and were particularly offended, that in Synods and Councils there was no Distinction between 'em. On this Occasion, Pope Clement IV. order'd, that the Abbots should only wear their Mitres embroider'd with Gold, and leave Jewels to the Bishops. See **MITRE**.

Crosier's Abbots, are those who bear the **Crosier**, or Pastoral Staff. See **CROZIER**.

There are some **Crosier'd** and not **Mitred**; as the **Abbot** of the **Benedictine** Abbey at **Bourges**: and others, both the one and the other.

Among the **Greeks**, some even took the Quality of **Oecumenical Abbots**, or **Universal Abbots**, in Imitation of the Patriarch of **Constantinople**. See **OECUMENICAL**.

Nor have the **Latins** been much behind 'em in that respect: The **Abbot of Cluny**, in a Council held at **Rome**, assum'd the Title of **Abbas Abbatum, Abbot of Abbots**; and Pope **Celestine**, gave the same **Abbot** the Title of **Cardinal Abbot**. See **CLUNY**.

To say nothing of other **Cardinal Abbots**, thus denominated from their being the principal **Abbots** of Monasteries, which came to be separated.

Abbots, again, are now chiefly distinguish'd into **Regular**, and **Commendatory**.

Abbots Regular, are real Monks, or Religious, who have taken the Vows, and wear the Habit of the Order. See **REGULAR**, **RELIGIOUS**, **VOW**, &c.

Such are all **Abbots** presum'd to be; it being expressly provided by the Canons, that none but a Monk have the Command over Monks.

Abbots in Commendam, are Seculars; tho' they have undergone the Tonfure, and are oblig'd by their Bulls to take Orders when they come of Age. See **SECULAR**, **TONSURE**, &c.

The Term **Commendam** signifies, that they have only the Administration of their Abbies for a Time; yet do they hold, and reap the Fruits of 'em for ever; as well as the **Regular Abbots**.

Their Bulls give 'em a full Power *tam in Spiritualibus, quam in Temporalibus*. And yet, 'tis true, that the **Commendatory Abbots** do not perform any Spiritual Offices; nor have they any Spiritual Jurisdiction over their Monks. So that the Phrase in *Spiritualibus*, is rather something of the **Roman** Style, than a Reality.

Some of their best Canonists rank the **Commendam** in the Number of Benefices, *inter titulos Beneficiorum*. 'Tis no more than a Canonical Title, or Provision to enjoy the Fruits of a Benefice: But as such Provisions are contrary to the ancient Canons, none but the Pope, by dispensing with the old Law, can grant 'em. See **COMMENDAM**, **BENEFICE**, &c.

Our own History speaks very little of these **Commendatory Abbots**; and 'tis probable the Practice never prevail'd much among us. Hence, many of our Writers have been led into the Mistake, of supposing that all **Abbots** are Monks. Of this we have a remarkable Instance, at which many of our Countrymen have stumbled, in that Dispute about the Inventor of the Lines for transforming of Geometrical Figures, call'd by the **French** the **Robervalian Lines**. Dr. **Gregory**, in the **Philosophical Transactions**, Anno 1694. rallies the **Abbot Galley**, who held the Abbey of **S. Martin de Coris**, in **Commendam**, with being a Monk: 'The good Father, says 'he, imagines we are return'd into that fabulous Age where 'in a Monk might be allow'd to say what he pleas'd.' Which Passage the **Abbot** takes hold of, and returns the Raillery, with Interest, on the Doctor, in the *Memoirs de l'Academie*. Anno 1705.

The Ceremony whereby **Abbots** are created, is properly call'd **Benediction**; or sometimes, tho' abusively, **Consecration**. See **BENEDICTION**, and **CONSECRATION**.

It antiently consist'd in cloathing him with the Habit call'd **Cuculle**, **Cowl**; putting the Pastoral Staff in his Hand, and the Shoes call'd **Pedales**, or **Pedules**, on his Feet. These Particularities we learn from the *Ordo Romanus* of **Theodore** Archbishop of **Canterbury**.

The Title **Abbot** has also been given to certain Bishops, by reason their Sees had originally been Abbeyes; and that they were even elected by the Monks: Such are those of **Canosa** and **Montreal**, in **Sicily**. See **BISHOP**.

The same Appellation is extended to the Superiors or Generals of some Congregations of Regular Canons; as that of **S. Genevieve** at **Paris**. See **CANON**, **GENEVIEVE**, &c.

Abbot is also a Title bore by several Magistrates, and other Lay-Persons. Among the **Genoese**, one of their principal Magistrates was call'd the **Abbot of the People**.

In **France**, particularly about the Time of **Charlemaign**, there were several Lords and Courtiers, who having the Inspection of certain Abbeyes committed to them, were styl'd **Abbo-Comites**, or **Abbey-Couns**. See **ABBEY**, **COUNT**, &c.

ABBREVIATURE, or **ABBREVIATION**, a Contraction of a Word, or Passage; made by dropping some of the Letters, and substituting certain Marks, or Characters in their Place. See **SYMBOLE**.

partly for the sake of Expedition, and partly for that of Mystery. A List of the principal Abbreviations in the *General Arts and Faculties*, see under the Article **CHARACTER**.

Of all People, the **Rabbins** are the greatest Dealers in this way; their Writings are unintelligible, without an Explication of the **Hebrew Abbreviatures**. The **Jewish** Authors and Copists don't content themselves to abbreviate Words, like the **Greeks** and **Latins**, by retrenching some of the Letters, or Syllables thereof; but they frequently take away all but the initial Letter. Thus, **ר** stands for **Rabbi**, and **נ** stands for **נאמן**, **נאומי**, **נאמן** according to the Place it is found in.

But what is more, they frequently take the initial Letters of several succeeding Words, join 'em together, and adding Vowels to 'em, make a barbarous sort of Word, representative of all the Words thus abridg'd. Thus, **Rabbi Sebelemosh Jorabi**, in the Jargon of the **Hebrew Abbreviature**, is call'd **Rasi**; and **Rabbi Moses ben Moiseim, Rambam**. And thus again, **כבוד** is put for **מתן כבוד יפה** **מתן כבוד** in *abdo evertis* **Iram**.

Mercerus, David de Pomis, Schindler, Buxtorf, &c. have given Explications of this sort of Ciphers. The most copious Collection of **Roman Abbreviations**, is that of **Severinus Ursinus**, at the End of the *Marmor Arundelia*; **Sertorii Ursari Equitis de Notis Romanorum Commentarius**.

The Word is deriv'd from the Latin *brevis*, of the **Greek βρεβύς**, **Short**.

ABBREVIOIR, or **ABREVOIR**, in Masonry, the Joint, or Junction of two Stones; or the Interstice, or Space left between 'em to be fill'd up with Mortar. See **STONE**, **MORTAR**, **MASONRY**, &c.

The Word is **French**, and literally denotes a **Watering-place**. **ABROACHMENT**, an obsolete Term in some of our ancient Law-Books, for the Act of ingrossing, or buying up a Commodity by Wholesale, in order to sell it off by Retail. See **FORESTALLING**.

ABBUTALS, among Law-Writers, denote the Buttings or Boundings of a piece of Land; expressing on what other Lands, Highways, or the like, the several Extremes thereof do abut, or terminate. Thus, in *Croke*, the Plaintiff is said to fail in his *Abbutals*, i. e. in setting forth how the Land is bounded.

In *friches*, 'tis only the extreme Corners are said to abut; the Sides are said to be adjacent. *Lateral autem unquam autem Abutatur; sed terram proximam adjacere*. **Camden**.

The Word is apparently form'd of the **French abouter**, to terminate upon. The **Camden** advances another Etymology. 'They who have wrote of Limits, say, that certain Hills of Earth, term'd *Botentines*, were placed there 'in, by way of Marks: whence, perhaps, our *Buttings*, and 'Boundings

ABDICATION, the Act whereby a Magistrate, or Person in Office renounces and gives up the same, for himself, and his Heirs. See **RENUNCIATION**.

Abdication is frequently confounded with *Resignation*; but, strictly speaking, there is a difference: *Abdication* being done purely and simply; whereas *Resignation* is done in favour of some third Person. See **RESIGNATION**.

In this Sense, **Diocletian**, and **Charles V.** are said to have abdicated the Crown; **Philip IV. of Spain** resign'd it. The Parliament voted **King James's** Violation of the Laws, and his quitting the Kingdom, without providing for the due Administration of Affairs in his absence, to import an *Abdication* of the Crown.

Among the **Romans**, *Abdication* was also us'd in opposition to *Adoption*: Thus, a Father was said to *abdicate* his disobedient Son. See **ADOPTION**.

It differ'd from *Exheredation*, *Disinheriting*, in this Circumstance, that the *abdicated* Son was banish'd his Father's Family, and cut off from the Succession by a solemn Act, during the Father's Life: whereas *Exheredation* only took place in virtue of his Testament. See **EXHEREDATION**.

ABDOMEN, in Anatomy, the lower Belly; or that Part of the Body between the Hips and the Diaphragm. See **BODY**.

Anatomists divide the Body into three Regions, or Venter; the Head; the Thorax, or Breast; and the *Abdomen*, or Belly, absolutely so call'd; being the lowest Part of the Trunk. 'Tis separated from the Thorax by the Diaphragm, and reaches to the *Ossa pubis*. See **VENTER**.

It is call'd *Abdomen*, from the Latin *abdo*, I hide; by reason that in its Cavity are wrapp'd up and conceal'd many of the principal *Viscera*, viz. the *Stomach*, *Omentum*, *Intestines*, *Liver*, *Spleen*, *Bladder*, &c. See **STOMACH**, **OMENTUM**, **INTESTINES**, &c.

The *Abdomen* is lined internally with a thin, soft Membrane; which investing all the *Viscera* abovemention'd, contains and keeps 'em in their Place, call'd the *Peritonaeum*: upon a Rupture or Dilatation whereof, they are apt to fall, and form those Tumors call'd *Hernies*. See **PERITONAEUM**, and **HERNIA**.

Lawyers, Physicians, &c. use a abundance of *Abbreviatures*;

It is cover'd and defended with five Pair of Muscles; which not only defend the *Viscera*, but by their alternate Relaxations, and Contractions in Respiration, promote the Action of Digestion, and the Excretion of the *Feces* and Urine. By their Contractions, the Cavity of the *Abdomen* is straiten'd, and promotes the descent of the Contents of the *Viscera* thro' the Intestines. They are the proper Antagonists to the Sphincters of the *Anus* and Bladder, and forcibly expel the Excrements of those Parts, as also the *Fetus* in Parturition. See RESPIRATION, DIGESTION, EXCRETION, DELIVERY, &c.

These Muscles are the *Obliqui Dependentes*, and *Ascendentes*, *Linea alba*, *Recti*, and *Pyramidales*; see each under its proper Article, OBLIQUUS, RECTUS, PYRAMIDALIS, &c.

The *Abdomen* is subdivided into three lesser Regions, or Cavities: the uppermost, call'd the *Epigastric*, commences from the Diaphragm and *Cartilago Esophagica*, and terminates two Fingers breadth above the Navel: The second, call'd the *Umbilical*, begins where the former ends, and terminates two Fingers breadth below the Navel: The third, call'd the *Hypogastric*, descends as low as the *Os Pubis*. See EPIGASTRIC, UMBILICAL, and HYPogaSTRIC.

Each of these Subdivisions, the more accurate Writers divide further into three Parts; a middle, and two lateral ones, the *Hypochondriums*. The middle part of the Umbilical, is call'd the *Umbilicus*, or Navel; and its lateral Parts the *Lumbi*, Loins: The Middle of the Hypogastric, is call'd the *Hypogastricum*, and its Sides the *Iliæ*, or Flanks. See each under its proper Place, EPIGASTRICUM, HYPochondRIUM, UMBILICUS, LUMBI, &c.

ABDUCTION, in Logick, a kind of Argumentation, by the *Greeks* call'd *Apogoge* 3 wherein the greater Extreme is evidently contain'd in the Medium, but the Medium not so evidently in the lesser Extreme as not to require some further Medium, or Proof to make it appear.

Thus, in the Syllogism, *All vobis God abfolves are free of Sin 3 but God abfolves all vobis are in Christ 3 Therefore, all vobis are in Christ are free of Sin*. The Major is evident; but the Minor, or Assumption is not so, without some other Proposition to prove it; as, *God took Satisfaction for Sin in the Suffering of Jesus Christ*.

It is call'd *Abductum*; because, from the Conclusion, it draws us on to prove the Proposition assum'd.

ABDUCTOR, or ABDUCENT, in Anatomy, a Name common to several Muscles, whose Action is the withdrawing, opening, or pulling back the Parts they are fix'd to. See MUSCLE.

The Name is *Latin*, compounded of *ab*, from, and *duco*, I draw: Their Antagonists are call'd *Adductores*. See ADDUCTOR.

ABDUCTOR *Auricularis*, or of the little Finger, arises from the Annular Ligament, and the third and fourth Bones of the *Carpus* in the second Rank; and is inserted externally into the first Bone of the little Finger: it serves to draw that Finger from the rest. See FINGER.

In some Subjects it appears divided into two or three Muscles, consisting of so many different Series of Fibres.

ABDUCTOR *Judicis*, or of the fore Finger, arises from the inside of the Bone of the Thumb, and is inserted into the first Bone of the fore Finger, which it draws from the rest towards the Thumb.

ABDUCTOR *minimi digiti manus*. See ABDUCTOR *Auricularis*.

ABDUCTOR *minimi digiti pedis*, or of the little Toe, arises from the outside of the *Os Calcis*, near the exterior Bone of the second Bone of that Toe, which it pulls from the rest.

ABDUCTOR *Pollicis*, call'd also *Tibenas*, springs from the Annular Ligament, and first Bone of the *Carpus*; from whence passing to the Thumb, it makes that fleshy Body call'd *Mons Lunæ*: It draws the Thumb from the Fingers.

ABDUCTOR *Pollicis pedis*, or of the great Toe, springs from the inside of the *Os Calcis*, and the greater *Os Cuneiforme*; and is inserted into the outside of the exterior *Os Soffanoides pollicis*: it serves to draw the great Toe from the rest. See TOE.

ABDUCTOR *Oculi*, or of the Eye, is one of the four *Recti*, or straight Muscles, arising from the bottom of the Orbit, and spread over the first proper Tunic; serving to draw the Eye towards the outer Canthus. See EYE, and RECTUS.

ABECEDARY, ABCEDARY, or ABCEDARIAN, something Alphabetical, or belonging to the Alphabet. See ALPHABET.

Among the Antients, the Term *Abecedarium* was peculiarly applied to those Compositions wherein the initial Letters of each Srophe, or sometimes even of each Verse, follow'd the Order of the Alphabet.

Such, in Holy Scripture, are the CXVIIIth Psalm, and the Lamentations of *Jeremy*: from which it should seem, as if the *Hebrews* had been the Inventors of this Kind of Poetry; contriv'd, no doubt, to assist the Memory.

ABELIANS, ABELONIANs, ABELOITES, a Sect of Hereticks in *Africa*, not far from *Hippo*, cotemporary with *S. Augustin*. See HERETICK.

What distinguish'd 'em, was, that they made it a Duty to marry, and yet liv'd with their Wives in a perfect Continnence, without having any commerce together.

These Hereticks, inconsiderable in themselves, (for they were confin'd to a little compass, and lasted not long;) are become considerable, by the great Pains the Learned have taken to ascertain the Principle they went upon, and the Reason of the Denomination.

Some will have 'em to have built on that Text of *St. Paul*, 1 Cor. vii. 29. *Let they that have Wives be as though they had none*. A late Writer concludes, that they regulated their Marriage on the Foot of the terrestrial Paradise 3 alledging, that there was no other Union between *Adam* and *Eve*, but that of Hearts. He adds, they had likewise an Eye to the Practice of *Abel*, whom they held to have been married, but never to have known his Wife: and from him they deriv'd their Name.

Another Author observes, that it was a Tradition current throughout the East, That *Adam* conceiv'd so much Sorrow for the Death of *Abel*, that he was 150 Years without having to do with *Eve*. 'Tis, he shews, the Sentiment of the *Jewish Doctors*; from whom the Fable was transmitted to the *Arabs*: And hence it was, according to *Gigenot*, that *Abel*, in *Arabic*, came to signify, to abstain from one's Wife. He concludes, that he is the most mistaken Person in the World, or the Story had reach'd *Africa*, and given occasion both to the Sect, and the Name.

'Tis true, the Rabbins do hold, that *Adam*, after the Death of *Abel*, remain'd a long time without any use of Marriage; and till the Time when he begot *Seth*: but to say that this was 150 Years is a manifest Error, and contrary to their own Chronologies, which place *Seth's* Birth in the 130th Year of the World, or of *Adam's* Life; as may be seen in their two *Seder Olams*.

Abarbanel says, it was 150 Years after *Adam's* Fall; as believing, with the other Rabbins, that *Cain* and *Abel* were conceiv'd immediately after *Adam's* Transgression. But, say others, be this as it will, whether a Continnence on occasion of the Fall, or of *Abel's* Death; 'twas the Continnence of *Adam*, not of *Abel*, that these Hereticks imitated; who, on this footing, should have been call'd *Adamites*, rather than *Abelians*.

In effect, 'tis more than probable, they took their Name from *Abel*, for no other Reason, but because they had no Issue more than *Abel*: Not that he liv'd in Continnence after Marriage; but because he was kill'd before he had married.

ABETTER, or ABETTOR, in Law, one who incites, encourages, or sets another on to perform something criminal; or some way secoods and assists him in the Performance it self.

Thus, they who procure others to sue out false Appeals of Felony, or Murder against Men, to render 'em infamous, are particularly denominat'd *Abettors*.

So, *Abettors in Murder*, are such as advise or procure a Murder to be committed, or are accessary thereto. See MURDER.

There are *Abettors* in Felony, but not in Treason: the Law looking on all those concern'd in Treason as Principals. See TREASON.

ABEYANCE, or ABBAYANCE, an obsolete Law-Term, whose precise Signification is not easily gather'd; having been out of date as long ago as *Littleton's* Days.

That Author gives it, as his Sense of the Word, that to be in *AbeYance* is to be in the *Estendement*, *Remembrance*, & *Consideration de la Loy*: In which Sense, says he, the Right of Fee-simple is said to be in *AbeYance*.

He adds, *Tiel Close & Tiel Droit qui est dit en divers Livres estre en AbeYance est a tant a dire en latine, Talis res vel tale rectum que vel quod non est in homine ad tunc suspensibile, sed tantummodo est, & consistit in Consideratione & Intelligentia Legis; & quod alii dixerunt, talem rem, aut tale rectum fore in Nubibus*.

Sir Edward Coke observes, that among the ancient Lawyers, things that are in *posse* only, and not in *esse*, are said to be in *AbeYance*; q. d. yet undetermin'd, and only in Expectation.—*Sunt nondum sunt definitæ, aut sententiâ comprobate sed sunt in expectatione*.

This he confirms from the Etymology of the Word, from the *French* or *Flemish* *Bayer*, or *Beer*, to gape or wait for any thing with a longing Desire.

Dr. Harris, improving somewhat on his Authorities, says, *AbeYance* signifies a Thing's being only in *posse*, and not in *esse*. Thus, adds he, when the Parson of a Church dies, and the Church becomes void, the Fee is in *AbeYance*; because it is not determin'd who shall succeed him.

In this Sense, our *Absentee* may be compar'd to the *Hereditas Jacens* of the Civilians. 'Tis a Principle in Law, That of every Land there is a Fee-simple, or it is in *Absentee*. See *Fee-Simple*.

AB-INTESTATE, in Law, the Heir of a Person who died intestate, and yet had the Power of making a Testament. See *INTESTATE*, and *HEIR*.

ABISHERING, an ancient Law-Term, denoting a being free, or exempt, from all Amerciaments for Transgressions of any kind. See *AMERCIAMENT*.

This Word, in a Charter or Grant, gives the Proprietor not only the Forfeitures, and Amerciaments of all others for Transgressions committed within his Fee; but also exempts him from all such controul by any within that Compass.

According to *Speelman*, it originally signifies a Forfeiture, or Amerciament; and should rather be wrote *Misberjing*, *Misbering*, or *Miskerring*.

ABJURATION, a solemn Renunciation, or Recantation of an Error, Herefy, or false Doctrine. See *RECANTATION*.

The Word is form'd of the Latin *Abjurare*; which in *Cicero*, and other *Roman* Writers, signifies the denying a thing upon Oath. Thus, *Abjurare creditum*, was to forswear a Debt, or to deny the owing it upon Oath, &c.

So, in our own Laws, *To abjure a Person*, is to renounce all Authority or Dominion of such a Person. Thus, by the Oath of *Abjuration*, a Person binds himself not to own any Regal Authority in the Person call'd the Pretender, nor ever to pay him the Obedience of a Subject. See *OATH*, *ALLEGIANCE*, &c.

Abjuration is also us'd in our ancient Customs, for a sworn Banishment for Life; or an Oath taken, to forsake the Realm for ever. See *BANISHMENT*.

This, in some Cases, was admitted from Criminals in lieu of Death. The Devotion for the Church was so warm, from the Time of *Edward the Confessor* to the Reformation, that if a Man having committed Felony, could recover a Church or Church-yard before he were apprehended, it was an Asylum from which he could not be brought to take his Trial at Law; but confessing his Crime to the Justices, or Coroner, and *abjuring* the Kingdom, he was at liberty. See *ASYLUM*.

After *Abjuration*, a Cross was given him, which he was to carry in his Hand thro' the Highways, till he was got out of the King's Dominion; which was call'd the *Banner of Moser-Church*. *Plac. III. 26. Edu. III.*

In time, *Abjuration* dwindled into a perpetual Confinement of the Prisoner to the Sanctuary; wherein, after *abjuring* his Liberty and free Habitation, he was allow'd to spend his Life. By Stat. at *Jac. I.* all use of Sanctuaries, and consequently of *Abjuration* is taken away. See *SANCTUARY*.

ABLACTATION, in Gardening, a Method of Engrafting, more usually call'd *Inoculating*, or *Grafting by approach*. See *GRAFTING*.

Ablactation is only practicable where the Stock to be grafted on, and the Tree from which the Graft is to be taken, stand so near, that the Branch or Cyon may be applied, without cutting off. Hence, 'tis chiefly us'd on Plants that grow in Cafes; as Orange, Lemon, Pomgranate, Vines, Jessamins, &c. The Season is *April*. To perform it, the usual Method is to take the Branch intended for the Graft, and pare it away, both the Rind and Wood, the length of three Inches; then, paring likewise the Stock, so that they may join closely to each other, they bind 'em together, and cover 'em over with Clay, or Grafting-Wax. As soon as they are found well incorporated together, the Head of the Stock is to be cut off four Inches above the Binding; and the Spring following, the Graft: leaving the Stock to subsist by it self.

Or, the Operation may be done, by cutting off the Head of the Stock at first, and leaving the Top a little stoped, and applying the Graft thereon, as in *Shoulder-Grafting*. But this Method is not found equally successful.

The Word originally signifies the weaning a Child from the Breast; being form'd of *ab*, from, and *lac*, Milk.

ABLAQUEATION, a Name us'd by the ancient Writers of Agriculture, for an Operation in Gardening, whereby Earth is dug from about a Vine, or other Fruit-Tree, and its Roots laid bare, to expose 'em more to the Sun, Rain, and Air, in order to promote its Fecundity. See *FRUIT-TREE*.

ABLATIVE, in Grammar, the sixth Case of Nouns. See *CASE*.

The *Ablative* is opposite to the *Dative*; the first expressing the Action of taking away, and the latter that of giving. See *DATIVE*.

The Word is *Latin*, form'd *ab auferendo*, taking away. *Priscian* also calls it the *Comparative* Case; as serving, among the *Metrists*, for comparing, as well as taking away.

The *Ablative* scarce answers to the just Idea of a Case; at least, it is the most vague of all others. 'Twill be shewn in its Place, that the *English*, and other modern Tongues, have

properly no such thing as *Cases*; but even in the ancient Languages, from which the Notion of *Cases* is borrow'd, the *Ablative* is only a sort of Supernumerary, or Supplement to the *Cases*.

The five proper *Cases* not being found sufficient to express all the Relations of Things to each other recourse was had to an expedient; viz. the putting a Preposition before some of the other *Cases*; and this made the *Ablative*. See *PREPOSITION*.

It may be added, that in the plural Number, the *Ablative* is still more obscure; as being only the *Dative* repeated.

In *English*, we have no precise Mark whereby to distinguish the *Ablative* from other *Cases*; and we only use the Term in analogy to the *Latin*. Thus, in the two Phrases, *The Magnificence of the City*, and *He spoke much of the City*; we say, that of the *City* in the first is *Genitive*, and in the latter *Ablative*; by reason it would be so, if the two Phrases were express'd in *Latin*.

ABLUMENTS, *Abluventia*, in Medicine, a Name some Authors give to those Remedies, better known under the Name of *Diluters*, and *Abstergents*. See *DILUTER*, and *ABSTERGENT*.

ABLUTION, in Antiquity, a Religious Ceremony, in use among the *Romans*; being a sort of purifying, perform'd by washing the Body, ere they enter'd on Sacrifice. See *SACRIFICE*.

Sometimes they wash'd their Hands and Feet, sometimes the Head, and oftentimes the whole Body: For which purpose, at the Entrance into their Temples were plac'd Vessels made of Marble Triumphant (as *Du Coust* calls it) fill'd with Water.

This Custom, without doubt, they learnt from the *Jews*; since we read in Scripture, that *Solomon* plac'd at the Entry into the Temple which he erected to the true God, a great Laver, which the Holy Text calls a Sea of Brass, where the Priests wash'd themselves before they offer'd Sacrifice; having beforehand sanctify'd the Water, by throwing into it the Ashes of the Victim that was slain in Sacrifice.

Abolution, among the modern *Romanists*, is understood of the little Drop of Water and Wine, which they take after the Communion, to wash down and facilitate the Digestion of the Host.

The same Term also signifies that which serves to wash the Hands of the Priest who consecrated it.

Abolution, in Pharmacy, is a Preparation divers Remedies undergo, by washing 'em in Water, or some other Fluid, proper to cleanse and free 'em of their Impurities. See *LOTION*.

The Word is sometimes also us'd, tho' with less Propriety, for the washing, or infusing of certain Medicines in Water, to freshen 'em, and dissolve their Salts; call'd *Dulcifying*. See *DULCIFYING*.

ABOLITION, the Act of undoing, destroying, or throwing a Thing out of use.

Thus, in our Laws, the *Abolition* of a Law, Statute, or Custom, is the abrogating or repealing it. See *ABROGATION*, *REPEALING*, *STATUTE*, &c.

So, the Leave given by the King or Judge, to a criminal Accuser, to desist from further Prosecution of the Accused, is peculiarly call'd *Abolition*.

The Word is form'd of the *Latin* *Abolere*, its *extinguere* & *delere*, ut *no oleat quidem*.

ABOMASUS, **ABOMASUM**, or **ABOMASIVUM**, in Comparative Anatomy, one of the Stomachs, or Ventricles of Animals of the ruminating Kind. See *RUMINATING*.

Beasts that chew the Cud are found to have four Stomachs; viz. the *Rumen*, or *Magus Venter* or *Stomach*, properly so call'd, the *Reticulum*, *Omasus*, and *Abomasus*. See *RUMINATION*, &c.

The *Abomasus*, popularly call'd the *Mox*, is the last; being the Place wherein the Chyle is form'd, and from which the Food descends immediately into the Intestines.

It is full of Leaves like the *Omasus*; but its Leaves have this particular to 'em, that beside the Membranes they consist of, they contain a great number of Glands not found in any of the rest. See *OMASUS*, &c.

'Tis in the *Abomasus* of Calves and Lambs, that the Rennet or Earning is form'd, wherewith Housewives turn or curdle their Milk. See *RENNET*.

ABORIGINES, or **ABORIGENES**, in Geography, a Name sometimes given to the primitive Inhabitants of a Country, or those who had their original therein; in contradistinction to Colonies, or new Races of Inhabitants, deriv'd from elsewhere. See *COLONY*.

The Term *Aborigines* is famous in Antiquity: Tho' now an Appellative, 'twas originally a proper Name, given only to certain People of *Italy*; and both the Reason and Origin of it are greatly disput'd among the Learned: The principal Opinions with regard thereto may be reduc'd to four.

The first is that of *Aurelius Victor*, who will have 'em call'd *Aborigines*, q. d. *Aboriginis*, Vagabonds; of *ab*, and *erro*, I wander here and there; and maintains, that they

they were the *Scythians* who came and settled in *Italy*. To this Sentiment *Poflus* adheres.

ad, *S. Jerom* fays, they were called *Aboriginet*, as having no beginning; of *ab*, and *origo*, original; i. e. as being originally of that Country, and not a Colony deriv'd from elsewhere: or, as *Halicarnassus* explains it, *Abi nō pōtēss rōis pōt' dōtōr' dēfēss* as being Chiefs, or Leaders of the Race that inhabited that Country. Of this Opinion *Virgil* seems to be *Æneid*. L. VII. ver. 177.

*Saturaque Senex Janique bifrontis imago
Vestibulo astant, aliique ab origine Reges.*

For, according to the Remark of *Serotus*, *ab origine Reges*, here stands for *Aboriginum Reges*. To which it may be added, that *Pliny*, L. IV. calls the *Tyrians*, *Aboriginet Gadum*, the *Aboriginet of Cadix*; as being the Founders thereof.

3dly, *Dion. Halicarnassus* takes 'em to have been called *Aboriginet*, *Aborigines*, from their inhabiting the Mountains; as who should say, *Abi opes*, a Mountain: Which Notion seems favour'd by *Virgil*, *Æneid*. L. VIII. ver. 321.

*Is genus indocile ac dispersum montibus altis
Cossopit, Legeque dedit.*

Lastly, Others hold, that *Cham*, the *Saturn* of the *Egyptians*, having gather'd together divers wandering Nations, conducted 'em into *Italy*, and that these were the *Aboriginet*. *Livy* affirms, they came from *Arcadia*, under the Conduct of *Oenotrus* Son of *Lycan*. *Gombard* will have 'em the *Phœnicians*, or *Canaanites* expell'd by *Jehona*.

ABORTION, in Medicine, an immature Exclusion of the *Fœtus*; or the Delivery of a Woman with Child, before the legitimate Term; popularly call'd *Miscarriage*. See **DELIVERY**, &c.

This may happen at any time of Pregnancy; but if before the second Month after Conception, it is properly call'd a *false Conception*. See **CONCEPTION**.

We have Influences of *Abortions* by the way of the Mouth, the *Anus*, the *Navel*, &c. See **FORNUS**, **EMBRYO**, &c.

The usual Causes of *Abortions*, are immoderate Evacuations, violent Motions, sudden Passions, Frights, &c. Other Causes are the largeness and heaviness of the *Fœtus*, irritations of the Womb, Relaxation of the Ligaments of the *Placenta*, Weakness, and want of Nourishment in the *Fœtus*; excess of eating, long fasting or waking, the use of Butts for the Shape, offensive Smells, violent Purgatives; and, in the general, any thing that tends to promote the Menstrua.

The Symptoms usually preceding, are a Fever, either continual or intermitting; Pain in the Loins and Head, heaviness in the Eyes, a bearing down and Constriction of the Abdomen. When the Time of Miscarriage is just at hand, the Pains are much the same as those in Labour. See **DELIVERY**.

Abortion is dangerous where the Time of Pregnancy is far advanc'd so that the *Fœtus* must be large, where the Cause is very violent, the Patient strongly convulsed, a large Hemorrhage precedes or ensues, the *Fœtus* is putrid, &c. Under other Circumstances it rarely proves mortal.

The Treatment is to be adapted to the particular Symptoms and Circumstances: If the Patient be Plethoric, as soon as the first Symptoms discover themselves, a Vein is to be open'd: In case of Flooding, recourse is to be had to proper Astringents; or if those fail, to Fomentations, Injections, and Suffumigations: If a *Tenchinus* attend, Rhabarb is to be us'd; and if there be an habitual Laxity of the Uterine Vessels, Guaiacum.

Abortion is also us'd where the Child dies in the Womb; tho it remain there many Years, or even as long as the Mother lives.

ABORTIVE, something come before its due time, or before it has arriv'd at its Maturity and Perfection. See **ABORTION**.

F. Jerom Florentinus has an express Treatise of the Baptism of *Abortives*, or *abortive* Children. His Aim is to shew that an *Abortive* may, and ought to be baptiz'd, at what Time or Term soever it come into the World; by reason the precise Time when the *Fœtus* begins to be animated is not known. There are several curious and uncommon Things in this Work, which is intitled *Homo dubius, sive de baptizato Abortivo*. Lugd. 1674. 4to.

ABORTIVE PRISON, is that made of the Skin of an *abortive* Calf. See **VELDM**.

ABRACADABRA, an Inscription, antiently us'd as a Charm or Spell, for the curing of several Diseases, and driving out Devils. See **CHARM**, **PHYLACTERY**, &c.

The Author of this piece of Superstition, who is said to have lived under the Emperor *Adrian*, form'd the Name from that of the Deity he ador'd, *Abrafax*, or *Abrahas*; whom he made God-paramount; having several petty Divinities under him, and particularly seven Angels who presided over the seven Heavens; and to whom he attributed 365

Virtues or Powers, the Number of Days in the Year; with other idle Reveries.

This **ABRAXAS** *S. Jerom* will have to be the same God whom the *Perfians* and other Heathens worship'd under the Name *Mitra*; which is warranted by some antient Grave-stones. 'Tis added, that most of the Fathers ascribe the Fable of the God *Abrafax*, to *Basilides* and his Followers, a Branch of *Gnostics*. See **BASILIDIANS**.

The *Gnostics*, 'tis known, suppos'd wonderful Virtues in Numbers; and accordingly, this same *Abrahas*, or rather *Abrafax*, was thus denominated, as including or comprehending the Power or Virtue of 365 dependent Intelligences; which Number is express'd by the *Greek* Letters of the Word; it being the Custom of the *Greeks* to express their Numbers by the Letters of their Alphabet: The Value of those in the present Word are thus;

A B P A X A X
1. 2. 100. 1. 60. 1. 200.

which added together make the Number 365.

Abrahadabra still continues in use and esteem among some superstitious People, who pretend to do Wonders hereby in the Cure of Agues and Fevers. The manner of preparing this extraordinary Medicine, they have been at the Pains to describe in the following Verses.

*Inferibus cbaria quod dicitur Abracadabra
Sepius & subter repetas, mirabile dictu;
Donec in angustis redagatur littera conum.*

'Tis that, ' The Word is first to be writc at length, *Abrahadabra*; then, under that *Abrahadabr*; and in the third Line *Abrahadab*, &c.

ABRASION, is sometimes us'd among Medical Writers for the Act of wearing away the natural *Mucus* which covers the Membranes, and particularly those of the Stomach and Intestines, by sharp corrosive Medicines, or Humors. See **STOMACH**, and **INTESTINES**.

The Word is compounded of the Latin *ab*, and *rado*, I shave, or scrape off.

ABRENUNCIATION. See **RENUNCIATION**.

ABRIDGMENT, a Summary, or Comprehension of a Discourse; wherein, the less material Things being more briefly insinuated, the whole is brought into a lesser Compass. See **EPITOME**.

The *Abridgments* of the *Philosophical Transactions*, of *Mr. Boyle's Philosophical Works*, &c. are Works very useful in their kind: Tho there is a very great Fault in the former of these; the Authors having taken upon 'em entirely to omit a vast Number of such Papers and Discourses as were not so much to their own Taste; which is not the Nature of an *Abridgment*, but of a *Flourish*, *Analech*, or *Excerpta*.

ABRIDGMENT of a Court, or Declaration, in Law, is particularly us'd for the making it shorter, by subtracting some of its Substance. See **DECLARATION**.

Thus, a Man is said to *abridge his Pleins*, in *Assize*, or a Woman her Demand in an Action of *Dower*, when, having put any Lands therein which are not in the Tenure of the Tenant or Defendant; and Non-Tenure, or the like, is pleaded to that Land in Abatement of the Writ; they are brought to *abridge*, i. e. to desist from and leave that Parcel out of the Demand; and pray that the Tenant may answer to the rest, to which he has not yet pleaded any thing.

The Demandez both *abridg'd* his Plein or Demand; yet the Writ still remains good for the rest. The Reason is, that such Writs run in general, and do not specify Particulars.

ABROGATION, the Act of annulling or repealing a Law, or of abolishing or setting aside the Authority thereof. See **LAW**, **REPEAL**, &c.

The Word, in this Sense, is borrow'd from the Civil Practice of the *Romans*. Among that People, to propose a Law to the People for their Approbation, was call'd *Regere Legem*; hence, to abolish it was call'd *Abrogare*; to take something from it, *Derogare*; to add a Clause to it, *Subrogare*; and to limit or restrain it, *Obrogare*.

ABSCCESS, in Medicine and Chirurgery, a Tumor arising on divers Parts of the Body, and tending to Suppuration. See **TUMOR**, **SUPPURATION**, &c.

Abscesses arise from Collections of peccant Humours in the internal Parts of the Body; and are also call'd *Impostumes*. See **IMPOSTUME**.

Their Name *Abscess* comes from the Latin Verb *abscedere*, to depart, or remove to another Place; in allusion to the morbid Humors being deriv'd from a few here.

Abscesses arise oftent in Women after Delivery; and the dangerous in themselves, yet appear to be the Crisis of the Disease that gave rise thereto. For the Cure, if they cannot be dissolv'd, i. e. be carried off by proper artificial Evacuations, as Phlebotomy, Purgings, &c. with the use of Calomel between whites, and gentle perspirative Fouts's, Lintments and Cataplasms; recourse is to be had to the contrary Method, and they must be brought to Suppuration.

When

When the Matter is fully ripen'd, they are to be open'd with a Lancet or Cauldick, and their Cure attempted by Digestives and Incarnatives. See RIPENER, DIGESTIVE, INCARNATIVE, &c.

ABSCISSE, ABSCISSA, in Conics, a Part of the Diameter, or transverse Axis of a Conic Section, intercepted between the Vertex or some other fix'd Point, and a Semiordinate. See CONIC SECTION.

Such are the Lines AP, AP, &c. (Tab. Conics, Fig. 20.) intercepted between the Vertex A and the Semiordinates PM, PM, &c.

They are called *Abscisses* of the Latin *Abscindo*, I cut off; as being Parts cut off from the Axis. Others call 'em *Sagitte*, Arrows. See *SAGITTA*.

In the Parabola, the *Absciss* is a third Proportional to the Parameter and Semiordinate; and the Parameter a third Proportional to the *Absciss* and Semiordinate. See PARABOLA, SEMIORDINATE, &c.

In the Ellipsis, the Square of the Semiordinate is equal to the Rectangle of the Parameter into the *Abscisse*, subtracting another Rectangle of the same *Abscisse*, into a fourth Proportional to the Axis, Parameter, and *Abscisse*. See ELLIPSIS.

In the Hyperbola, the Squares of the Semiordinates are to each other as the Rectangles of the *Abscisse* into another Line, compos'd of the *Abscisse* and the transverse Axis. See HYPERBOLA.

ABSENT. See **PRESENT.**

ABSOLUTE, is understood of something that is free, or independent of another. Hence, as there are various ways wherein one thing may be consider'd as free in respect of another, there arise divers sorts of *Absolutes*.

Absolute, e. g. sometimes imports a Thing which does not include the Idea of Relation to another; in which Sense it stands oppos'd to *Relative*.

Thus, *Man* is an *absolute* Term; and, on the contrary, *Creature* and *Father* are *Relatives*, the one referring to *Creator*, the other to *Children*. See **RELATIVE**.

In the like Sense, the Schoolmen hold *Absolute* to imply a Thing not being in *ordine ad*, in order to any other Thing. Thus, *Man*, *Tree*, &c. are *Absolutes*; and every other Thing which has any real Existence which it does not owe to another.

In this Sense too, the Terms of a Proposition are said to be taken *absolutely*; that is, without Relation to each other.

Thus, *Man*, consider'd *absolutely*, and in himself, is an *Absolute* Reasonable Creature.

Sometimes, *Absolute* denotes a being free from Restriction, Limitation, or Modifications; in which Sense, say the Schoolmen, it stands oppos'd to a *res secundum quid*. Thus, a Prince is said to be *Absolute*, when his Will is his Law; or when he is no way restrain'd or tied down by any Laws of his Country. And thus a Thing is said to be *absolutely* and simply good.

Sometimes, again, *Absolute* denotes a Thing's being free from Conditions: In which Sense it stands oppos'd to *Conditional*. See **CONDITIONAL**.

Thus, the Decrees of God are said to be *Absolute* with respect to Men. The rigid *Calvinists* maintain *absolute* unconditional Predestination and Reprobation. A Priest does not forgive Men's Sins *absolutely*, but on Condition of Repentance and Amendment. In this Sense also, we say, an *Absolute* Promise, an *Absolute* Proposition, &c.

The Divines frequently use *Absolute* in a still further Sense, viz. in opposition to *Declaratory*: Thus, the Church of *Rome* holds that the Priest can forgive Sins *absolutely*; the Protestants say, only declaratively and ministerially. See **DECREES**, **ABSOLUTION**, &c.

Again, *Absolute* is sometimes used in respect of *Cause*; and denotes a Thing's being without any Cause. In which Sense, God alone is *absolute*.

ABSOLUTE Number, in Algebra, is the known Quantity which possesses one entire Side or Part of an Equation; being the Rectangle, or Solid whose Root or Value is to be found. See **EQUATION**, and **ROOT**.

Thus, in the Equation $a + 16a = 36$, the *Absolute Number* is 36; which is equal to a multiplied by it self, added to 16 times a .

This is what *Vieta* calls *Homogeneous Comparationis*.

ABSOLUTE Equation, in Astronomy, is the Sum of the Optic and Eccentric Equations. See **EQUATION**.

ABLATIVE ABSOLUTE, is a *Distion* detach'd, and independent of the rest of the Discourse; and neither governing, nor being governed of any other Thing. See **ABLATIVE**.

This is frequent among the *Latins*; in Imitation of whom, the modern Languages have likewise adopted it: *Deleto exercitu*: The Army being cut to pieces. *All things consider'd*, Reason will appear the best Guide in Matters of Religion.

ABSOLUTE Place. } PLACE.
ABSOLUTE Space. } See SPACE.
ABSOLUTE Motion. } MOTION.

ABSOLUTELY, ABSOLUTE, in Philology, and Theology. See **ABSOLUTE**.

In Grammar, we say, A Word is taken *absolutely*, *Absolute suspensus*, when it has no Regimen, or Government. Thus, in the Phrase *We slood's pray without ceasing*; the Word *pray* is taken *absolutely*, as it governs nothing.

In Geometry, *Absolutely* is taken for entirely, completely. Thus, we say, such a thing is *absolutely* round; in contra distinction from what is only partly so, as a Spheroid, *Cycloid*, &c.

ABSOLUTION, ABSOLUTIO, in the Civil Law, &c. a definitive Sentence, whereby a Person accus'd of any Crime, &c. is acquitted, and declared Innocent.

Among the *Romans*, the ordinary Method of pronouncing Judgment was this: After the Cause had been pleaded on both sides, the Pretor used the Word *Dixerunt*, *q. d.* they have said what they had to say. Then, three Balos were distributed to each Judge; one mark'd with the Letter *A.* for *Absolution*; another with *C.* for *Condemnation*; and a third with *N. L.* *non liquet*, it is not clear, to require respite of Judgment: and according as the Majority fell of this or that Mark, the Accus'd was *absolved* or condemn'd, &c. If he were *absolved*, the Pretor dismiss'd him with *Videtur non fuisse*, or *nihil in eo damnationis dignum invenio*.

When the Votes are equally divided on the Sides of *Absolution* and *Condemnation*, the Accus'd is *absolved*: This Procedure is suppos'd to be founded on the Law of Nature, Such is the Sentiment of *Faber* on the 125th Law. *de Div. Reg. Jur. of Cicero, pro Cluentio*; of *Quintilian, Declam.* 254; of *Strabo*, Lib. IX.

ABSOLUTION, in the Canon Law, is a Judicial Act, whereby a Priest, as a Judge, and in virtue of a Power given him by Jesus Christ, remits the Sins of such as appear to have the Conditions requisite thereto.

The *Romanists* hold *Absolution* a Part of the Sacrament of Penance: The Council of *Trent*, Sess. XIV. cap. iii. and that of *Florence*, in the Decree *ad Arminios*, declare the Form or Efficace of the Sacrament to lie in the Words of *Absolution*, *I absolve thee of thy Sins*.

This Formula of *Absolution* in the *Romish* Church is *Absolute*; in the *Greek* Church, *Deprecatory*; and in the Churches of the Reformed, *Declarative*. *Arcerius*, indeed, contends that the *Greek Formula* is *absolute*; and that it consists in these Words, *Mea medicinas habet te venia donatum*. But the Instances he produces are either no *Formula's* of *Absolution*, or only of *Absolution* from Excommunication.

ABSOLUTION is chiefly used in the Reformed Churches for a Sentence whereby a Person who stands excommunicated, is releas'd or freed from the same. See **EXCOMMUNICATION**.

In the Church of *Scotland*, if the Excommunicated shew real Signs of godly Sorrow, and if upon Application to the Presbytery a Warrant be granted for his *Absolution*, he is brought before the Congregation to confess his Sin, and express his Sorrow, as often as the Presbytery shall think meet: When the Congregation is satisfy'd of his Penitence, the Minister puts up a Prayer, desiring Jesus Christ who has instituted the Ordinance of Excommunication, (*i. e.* of binding and loosing the Sins of Men on Earth) with a Promise of ratifying the righteous Sentence above, to accept of this Man, to forgive his Disobedience, &c. This done, he pronounces the Sentence of *Absolution*; by which his former Sentence is taken off, and the Sinner is again receiv'd into Communion.

In the Church of *Rome* there are divers other Political *Absolutions*; as *Absolutio à seors*, which is necessary where a Person has been concern'd in seeing Sentence of Death executed on a Criminal, or has any other way disqualify'd himself for the holding of a Benefice.

Absolutio ad Castellam, is that granted to a Person who has lodg'd an Appeal against a Sentence of Excommunication. It being a Maxim in the Papal Jurisprudence, that the Sentence stands good notwithstanding any Appeal; this sort of *Absolution* is sometimes granted till the Issue of his Appeal be known: by means hereof, some Artifices, at least, of his Excommunication are taken off; inasmuch that Persons may converse with him without danger: And beside, in Case of Death, this Sentence is suppos'd to stand him in some stead.

ABSORBENTS, in Medicine, Remedies which by the Softness or Porosity of their component Parts, become proper to sheath the Astringencies of sharp pungent Humors; or to imbibe or dry away, as with a Sponge, superfluous Moistures.

Such are the Testaceous Powders, Hartshorn, Coral, Crabs Eyes and Claws, calcin'd Bones, burnt Ivory, &c.

Absorbents are the same with what we otherwise call *Driers* and *Sweetners*.

The Term *Absorbent* is frequently confounded with *Alcaly*; Alcalies having, really, the Effect of *Absorbents* with respect to Acids. See **ACID**, and **ALCALY**.

ABSTEMIOUS, is properly understood of such Persons as refrain absolutely from Wine. *Pliny* more expressly says, *Vini abstemiis*; and *Apuleius, Invenius*.

In the Religious Sense of the Word, they are said to be *Abstemious*, who in the Sacrament of the Supper cannot partake of the Cup, by reason of some natural Aversion to the Liquor. The Bishop of Meaux plads the Example of the *Abstemious*, in behalf of excluding the Laity from Communion under that Kind.

The Roman Ladies, in the first Ages of the Republick, were all enjoin'd to be *Abstemious*; and that it might appear whether or no they kept up to the Injunction, it was one of the Laws of the Roman Civility, that they should kiss their Friends and Relations whenever they accosted them.

The Word seems form'd of *abs* and *temetum*, an old Word signifying Wine.

ABSTERGENTS, or **ABSTERSIVE Medicines**, a Class of Remedies, whose Effect is to abrade and wipe away such mucous Particles as they meet in their Passage; and thus cleanse the Parts of viscid or impure Adheions, and carry off the morbid Matter of Wounds, Ulcers, &c. See MEDICINE, MUNDIFICATIVE, &c.

Abstergens are more usually call'd among Physicians *Detergens*. See DETERGENT.

Abstergens are of the Genus of Balsamicks; and only differ in their degree of Subtility and Efficacy, from Vulneraries. See BALSAMICK, and VULNERARY.

The principal Simples in the Class of Detergens, are the Leaves of *Wormwood*, *Garlick*, *Leeks*, *Capers*, *Scureygrass*, *Fumitory*, *Liverwort*, *Yauß*, and *Vervain*; *Bitter Almonds*, *Figs*, *Figsels*, *Raisins*, *Dates*, *Juniper-Berries*; *Gum Annoniac*, *Balsam of Capivi*, *Balm of Gilead*, *Tacamaboca*, *Sapo*, *Turpentine*; *Barberries*, *Lignores*, *Turmeric*, *Madder*, *Parmaßity*, *Mummy*, *Sulphur*, *Salt*, *Mercury*, and *Nature Cinabar*.—Moist of which the Reader will find particularly describ'd under their proper Articles.

The Word *Abstergent* is compounded of the Latin *abs*, from; and *tergo*, I wipe.—Whence, also, *Absterßion* is sometimes us'd for the mechanical Act of *Tersion*, or Wiping. See TERßION.

ABSTINENCE, *Abstinentia*, the Habit of refraining or containing one's self from some Pleasure, or Enjoyment. See PLEASURE.

The Word is compounded of the Latin *abs*, from; and *tenes*, I hold.

The Jews were oblig'd to *abstain* from their Wives at certain Seasons.—The same is enjoin'd in the Apostolical Constitutions, on all fast and meagre Days; and the Church of England recommends certain Days of Fasting and *Abstinence*.—The Great Fast, says St. *Augustin*, is to *abstain* from Sin. See FAST.

The ancient *Athletes* liv'd in a perpetual *Abstinence* from all kind of sensible Pleasure, to render their Bodies more robust and hardy. See ATHLETA.

ABSTINENCE is particularly us'd for a spare Diet, or a slender parsimonious use of Food. See FOOD, and DIET.

The Physicians relate Wonders of the Effects of *Abstinence* in the Cure of many Disorders, and the protracting the Term of Life.—The Noble *Venetian*, *Cornaro*, after all imaginable means had proved vain, so that his Life was despair'd of at 40; recover'd and liv'd to near 100, by mere diet of *Abstinence*: as he himself gives the Account.

'Tis indeed surprizing to what a great Age the primitive Christians of the East, who retir'd from the Persecutions into the Deserts of *Arabia* and *Egypt*, liv'd, healthful and cheerful, on a very little Food: *Cassian* assures us, that the common Rate for twenty four Hours was twelve Ounces of Bread, and mere Water: with this St. *Anthony* lived 105 Years; *James* the Hermit, 104; *Artemius*, Tutor of the Emperor *Arcadius*, 120; St. *Epiphanius* 115; *Simeon Stylites* 112; and *Romaldus* 120.

Indeed, we can match any out-do these Instances of Longevity, at home: *Buchanan* writes, that one *Lawrence* preserv'd himself to 140 by force of Temperance and Labour; and *Spefford* mentions one *Kenigorn*, afterwards call'd *St. Mungob* or *Mungo*, who lived to 185 by the same means.—Other Instances see under the Article LONGEVITY.

In effect, most of the Chronical Diseases, the Infirmities of old Age, and the short Lives of *Englisßmen*, are owing, according to Dr. *Cheyne*, to Repletion; and may be either cured, prevented, or remedied, by *Abstinence*. See REPLETION, EVACUATION, &c.

Among the Brute Creation, we see extraordinary Instances of long *Abstinence*.—'Tis the natural Course for divers Species to pass four, five, or six Months every Year without either eating or drinking: Accordingly, the Tortoise, Bear, Dormouse, Serpent, Swallow, Fly, &c. are observ'd regularly to retire, at those Seasons, to their respective Cells and hide themselves, some in the Caverns of Rocks, or Ruins; others dig Holes under Ground; others get into the Woods, and lay themselves up in the Cloists of Trees; others bury themselves under Water, &c. See MIGRATION, PASSAGE, &c.

In effect, several Species of Birds, the whole Tribe almost of Insects, and many among the other Tribes, are able to subsist all Winter, not only without Food, but many of 'em without Respiration too.—This furnishes an admirable Instance of the Wisdom of the Creator. The proper Food of these Creatures, especially the Insect-Tribe, being now wanting; there is a Provision for 'em to live without it. When the Fields are divested of their flowery Furniture, when the Trees and Plants are stripp'd of their Fruits; what would become of such Animals as are supplied by the Produce of the Spring, and Summer? And when the Air is grown rigid and chilly with Frost, what would become of those many tender Species which are impatient of Cold? To prevent the total Destruction and Extirpation of many Species of Animals; the Author of Nature has provided, that Creatures thus bereav'd of their Food, should be likewise impatient of Cold; to lead 'em thus to shelter themselves out of the way of Danger; and that when there arrived, the natural Texture and Vicissitude of the Blood, should dis,olve it, by a further degree of Cold, to lag and stagnate in the Vessels: so that the Circulation stopping, and the Animal Functions being in great measure suspended; there is no sensible Waste or Consumption of Parts, but they remain in a kind of drossy neutral State, between Life and Death; till the warm Sun revive both them and their Food together, by thawing the congealed Juices both of such Animals and Vegetables. See HEAT.

'Tis more than probable, that all Motion of the Animal Juices is extinct in Flies and other Insects, when thus asleep; in that, tho' cut in pieces they do not awake, nor does any Fluid ooze out at the Wound; unless some extraordinary degree of Warmth have been first apply'd to unbind the Ice.

—The Sleep of such Animals is little else than a real Death; and their Waking, a Resurrection.—For if Life do not consist in a Circulation of the Blood, we don't know what it consists in.—Animals thus asleep, therefore, are rather said to be alive potentially than actually; much as an Embryo is before Conception, or Incubation. See LIFE, SLEEP, BLOOD, CIRCULATION, FORTUS, &c.

Hence 'tis no wonder that Tortoises, Dormice, Bears, &c. are found so fat and fleshy after some Months *Abstinence* as before.—Sir G. *Fat* weigh'd his Tortoise several Years successively, at his going to Earth in *October*, and his coming out again in *March*; and found that of 4 Pounds 4 Ounces, he only us'd to lose about 1 Ounce. *Philosoph. Transact.* N^o 194.

Indeed, we have Instances of Men passing several Months as strictly *abstinent* as other Creatures.—The Records of the *Parliament* mention a *Scotchman* imprison'd for Felony, and strictly watch'd in that *Fortress* for six Weeks; in all which time he took not the least Sustainance: for which he had his Pardon. The *Epßem*, *German*, speak of one *Martha Taylor*, who by a Blow on the Back fell into such a Prostration of Appetite, that she took no Sustainance beside a few Drops with a Feather for thirteen Months: But this was a morbid and unnatural Case, for she slept but little all the Time.—We may add the Instance of *S. Clifton* of *Tinsbury* near *Bath*, who in the Years 1693, 1694, 1695, slept sometimes four Months, and sometimes above six together, with very little Food; and six Weeks without any more than a little Lent, convey'd with a Quill into his Mouth thro' a hole in his Teeth. *Philosoph. Transact.* N^o 302.

It is to be added, that in most Instances of long *Abstinence* related by Naturalists, there were apparent Evidences of a Texture of Blood and Humours, much like that of Summer-Beasts, and Insects.—Tho' it is no improbable Opinion, that the Air it self may furnish something for Nutrition. 'Tis certain, there are Substances of all Kinds, Animal, Vegetable, &c. floating in the Atmosphere; which must be continually taken in by Respiration. And that an animal Body may be nourish'd thereby, is evident in the Instance of *Vipers*, which if taken when first brought forth, and kept from every thing but Air, will yet grow very considerably in a few Days. So the Eggs of *Lizards* are observ'd to increase in Bulk, after they are produced, tho' there be nothing to furnish the Increment but Air alone; after the like manner, as the Eggs or Spawn of Fishes grow, and are nourish'd with the Water. See AIR, and WATER.—And hence, say some, it is, that *Cooks*, *Turn-spit Dogs*, &c. tho' they eat but little, yet are usually fat. See NUTRITION, PERSPIRATION, &c.

ABSTRACT, **ABSTRACTUM**, in Philosophy, that which is separated from some other thing, by an Operation of the Mind call'd *Abstraction*. See ABSTRACTION.

An **ABSTRACT Idea**, is some simple Idea, detach'd and separated from any particular Subject, or Complex Idea; for the sake of viewing and considering it more distinctly, as it is in it self, its own Nature, &c. See IDEA, SIMPLE, COMPLEX, &c.

Thus, Magnitude and Humanity are *Abstracts* when consider'd in themselves, and without being attach'd to any particular

ticular Body, or Person; tho they cannot have any real Subſtance without ſuch Subjects, nor the Subjects without them.

Thus, alſo, *Whitenefs* is an *Abſtract*, or *abſtract* Term; inſmuch as it does not denote any one white Object, but that Colour or Idea in the general, wherever found. See *GENERAL*.

From the Knowledge of *Abſtracts* we arrive at that of *Concretes*, which is the oppoſite Term; Concrete denoting a General or *Abſtract* Idea's being attach'd to ſome particular Subject, or conſider'd as combin'd with ſome other Ideas; as, *great Houſe*, *white Wall*. See *CONCRETE*.

The School Philoſophers define an *Abſtract Term* from the Simplicity of its Signification.—*Abſtracts*, according to them, expreſs only the Forms of Things, or Attributes of Things, diſtinct from the Subjects whereof they are Forms or Attributes; as, *Juſtice*, *Crookedneſs*, &c.—They diſtinguiſh 'em into divers Kinds; *Metaphyſical*, as Humanity; *Logical*, as Whitenefs; and *Phyſical*, as Life, in reſpect of an Animal.

All our ſimple Ideas, ſays Mr. *Locke*, have *abſtract*, as well as concret Names; as, *Whitenefs*, *white*; *Sweetneſs*, *ſweet*, &c.

The like alſo holds in our Idea of Modes, and Relations; as, *Juſtice*, *juſt*; *Equality*, *equal*; &c.

But as to our Ideas of Subſtances, we have very few *abſtract* Names at all—Thoſe few that the Schools have forg'd, as *Animalitas*, *Humanitas*, &c. hold no Proportion with the infinite Number of Names of Subſtances; and could never get admittance into common Uſe, or obtain the Licence of publick Approbation: which ſeems to intimate a Confuſion of Mankind; that they have no Ideas of the real Effences of Subſtances; ſince they have not Names for ſuch Ideas.

It was only the Doctrin of Subſtantial Forms, and the Conſcience of miſtaken Pretenders to a Knowledge they had not, which firſt coined, and then introduced *Animalitas*, *Humanitas*, and the like; which yet went very little farther than their own Schools, and could never get to be current among underſtanding Men. See *SUBSTANCE*.

But the Reality and Exiſtence of all *Abſtract* Ideas, and of any ſuch Faculty in the Mind as *Abſtraction*, has of late been controverted. See the Article *ABSTRACTION*.

In effect, if there were any ſuch Things as *Abſtracts*, *Abſtract Qualities*, &c. we don't ſee how they could be deſtroi'd; they muſt be permanent and immutable: For that which deſtroys the white warm Flame, could not reach the Whitenefs or the Warmth: That which deſtroys the figured, moving, ſolid Ball, could not hurt the Figure, Motion, Solidity, &c.—*Abſtract* Ideas, in fine, ſeem to tend to Subſtantial Forms. See *SUBSTANTIAL FORMS*.

ABSTRACT is alſo extended to divers other Things, in reſpect of their Purity, Simplicity, Subtility, &c.—In this Senſe, we ſay,

ABSTRACT Mathematicks, are thoſe Branches of Mathematical Learning, which conſider Quantity and its Affections, ſimply, and abſolutely. See *QUANTITY*, and *MATHEMATICKS*.

Such are *Arithmetic*, *Algebra*, *Geometry*, *Trigonometry*, and *Analyticks*. See *ARITHMETIC*, *ALGEBRA*, *GEOMETRY*, &c.

They are thus denominated, in oppoſition to *Mixt Mathematicks*; where the ſimple and abſtracted Properties and Relations of Quantity deliver'd in the former, are applied to ſenſible Objects; and by that means become intermix'd with Phyſical Conſiderations.—Such are *Hydroſtatics*, *Optics*, *Navigation*, &c. where Water, Light, &c. are concern'd.

In the like Senſe ſome Authors ſpeak of *Abſtract Numbers*; meaning no more thereby than Numbers, or Aſſemblages of Unities, conſider'd in themſelves, and not applic'd to denote any Collections of particular ſorts of Things. See *NUMBER*.

ABSTRACT is alſo uſed in Matters of Literature, for a compendious View, or Epitome of a larger Work. See *EPITOME*.

An *Abſtract* is ſuppoſed to be a degree ſhorter, and more ſuperficial than an *Abridgment*. See *ABRIDGMENT*.

ABSTRACTION, an Operation of the Mind, whereby we ſeparate Things naturally conjunct, or exiſting together; and form and conſider Ideas of Things thus ſeparated. See *ABSTRACT*.

The Faculty of *Abſtracting*, ſtands directly oppoſite to that of *Compounding*—By *Compoſition* we conſider thoſe Things together, which in reality are not join'd together in one Exiſtence. And by *Abſtraction*, we conſider thoſe Things ſeparately and apart, which in reality do not exiſt apart. See *COMPOSITION*.

Abſtraction is chiefly employ'd theſe three ways—Firſt, when the Mind conſiders any one Part of a Thing, in ſome reſpects diſtinct from the Whole; as a Man's Arm, without the Conſideration of the reſt of his Body.

Secondly, when we conſider the Mode of any Subſtance, omitting the Subſtance it ſelf; or when we ſeparately conſider ſeveral Modes which ſubſiſt together in one Subject. See *MODES*.

This *Abſtraction* the Geometricians make uſe of, when they conſider the Length of a Body ſeparately, which they call a *Line*; omitting the Conſideration of its Breadth and Depth.

Thirdly, it is by *Abſtraction* that the Mind frames general or univerſal Ideas; omitting the Modes and Relations of the particular Objects whence they are form'd.—Thus, when we would underſtand a thinking Being in general, we gather from our Self-conſciouſneſs what it is to Think; and omitting the Conſideration of thoſe Things which have a peculiar Relation to our own Mind, or to the human Mind, we think of a thinking Being in general.

Ideas form'd thus, which are what we properly call *Abſtract* Ideas, become general Representatives of all Objects of the ſame Kind; and their Names applicable to whatever exiſts conformable to ſuch Ideas.—Thus, the Colour that we receive from Chalk, Snow, Milk, &c. is a Representative of all of that Kind; and has a Name given it, *Whitenefs*, which ſignifies the ſame Quality, wherever found or imagin'd. See *GENERAL*.

'Tis this laſt Faculty, or Power of *Abſtracting*, according to Mr. *Locke*, that makes the great Difference between Man and Brutes; even thoſe latter muſt be allowed to have ſome ſhare of Reaſon: That they really reaſon in ſome Caſes, ſeems almoſt as evident as that they have Senſe; but 'tis only in particular Ideas. They are tyed up to thoſe narrow Bounds; and do not ſeem to have any Faculty of enlarging them by *Abſtraction*. *Eſſay on Human Underſtanding*, L. III. c. 5.

Such is the Doctrin of *Abſtract* Ideas, under the Improvements of that excellent Author.—In effect, 'tis the ſtanding Opinion, that the Mind has ſuch a Power or Faculty of framing *Abſtract* Ideas or Notions of Things; and on ſuch very Ideas do a great part of the Writings of Philoſophers turn. Theſe are ſuppoſed in all their Systems; and without them there would be nothing done.—They are more eſpecially reputed the Object of Logic and Metaphyſicks, and all that paſſes under the Notion of the moſt *abſtracted* and *ſublime* Learning.

Yet has a late eminent and ingenious Author, *Dan Berkeley*, contended the Reality of any ſuch Ideas; and gone a good way towards overturning the whole System, and conſequently towards ſetting our Philoſophy on a new footing.

The Qualities or Modes of Things, 'tis on all hands agreed, do never really exiſt apart, and ſeparated from all others; but are conſtantly mix'd and combin'd together, ſeveral in the ſame Object.—But, ſay the Philoſophers, the Mind being able to conſider each Quality ſingly, or *abſtracted* from other Qualities with which it is united, does by that means frame to it ſelf *Abſtract* Ideas, of a different Nature and Kind from the ſenſible ones.

For an Example hereof, The Eye perceiving an Object extended, coloured, and moved, reſolves this Compound Idea into its ſimple, conſtituent ones; and viewing each by it ſelf, excluſive of the reſt, frames *Abſtract* Ideas of *Extension*, *Colour*, and *Motion* themſelves, or in their own Nature.—Not that it is poſſible for ſuch Colour and Motion to exiſt without *Extension*; but only that the Mind can frame to it ſelf, by *Abſtraction*, the Idea of Colour excluſive of *Extension*; and of Motion, excluſive both of Colour and *Extension*.

Again, ſay the ſame Philoſophers, the Mind having obſerv'd that in the particular *Extensions* perceived by Senſe, there is ſomething common, and alike in all; and ſome other things peculiar; as this, or that *Figure* or *Magnitude*, which diſtinguiſh them one from another; it can conſider apart, or ſingle out by it ſelf, what is common; making thereof a general *abſtract* Idea of *Extension*, which is neither *Line*, *Surface*, nor *Solid*, nor has any *Figure* or *Magnitude*, but is an Idea entirely preſcind'd from 'em all.—So, likewise, by leaving out of the ſeveral Colours perceived by Senſe, that which diſtinguiſhes them from one another, and only retaining what is common to all, it makes an Idea of Colour in the *Abſtract*, which is neither *red*, nor *blue*, nor *white*, &c.—After the ſame manner, by conſidering Motion *abſtractedly*, both from the Body moved, and from the Figure it deſcribes, and all particular Directions, and Velocities; an *Abſtract* Idea of Motion is framed, which equally corresponds to all Motions whatever.

They add, that as the Mind frames *Abſtract* Ideas of Qualities or Modes; ſo does it, by the ſame Faculty, attain *Abſtract* Ideas of the more compound Beings, which include many coexiſtent Qualities.—For an Example—Having obſerv'd that *Peter*, *James*, *John*, &c. reſemble each other in Shape, and other Qualities; we can leave out of the Complex Idea we had of *Peter*, *James*, &c. that which is peculiar to each, retaining only what is common to all, and ſo make an *Abſtract* Idea, wherein all the Particulars equally partake.

partake.—And thus it is we are supposed to come by the *Abstract* Idea of *Man*, or of *Humanity*, or *Human Nature*; wherein there is indeed included Colour, because no Man but has some Colour, but it is neither *white*, nor *black*, nor *brown*; because there is no one particular Colour wherein all Men partake. So likewise there is included *Stature*, but then it is neither *tall*, nor *low*, nor yet *middle Stature*, but something *abstracted* from all these: And so of the rest.

Further yet, there being a general Variety of other Creatures, which partake in some Parts, but not all, of the Complex Idea of *Man*; the Mind leaving out those Parts which are peculiar to Men, and retaining those only which are common to all living Creatures, frames the Idea of *Animal*; which *abstracts* or participates not only of all Men, but all Birds, Beasts, Fishes, and Insects.

The continent Parts of such *Abstract* Idea of *Animal*, are *Body*, *Life*, *Sense*, and *spontaneous Motion*.—By *Body*, is meant, *Body* without any particular Shape, or Figure; there being no one common to all Animals; without *Covering*, either of *Hair*, or *Feathers*, or *Scales*: nor yet *naked*; *Hair*, *Feathers*, *Scales*, and *Nakedness*, being the distinguishing Properties of particular Animals, and for that Reason left out of the *Abstract* Idea. Upon the same Account, the *spontaneous Motion* must be neither *walking*, nor *flying*, nor *creeping*; it is nevertheless a *Motion*—But what that *Motion* is, it is not easy to conceive.

I will not affirm, says Dr. Berkeley, that other People have not this wonderful Faculty of *abstracting* their Ideas; but I am confident I have it not myself.—I have, indeed, a Faculty of imagining, or representing to my self the Ideas of Things I have perceived, and of variously compounding or dividing them: I can imagine a Man with two Heads, or the upper Parts of a Man join'd to the Body of a Horse. I can consider the Hand, the Eye, the Nose, each by it self, *abstracted* or separated from the rest of the Body.—But then, whatever Hand or Eye I imagine, it must have some particular Shape and Colour.—So, again, the Idea of a Man I frame to my self, must be either of a white, or a black, or a tawny, a stait or a crooked, a tall, or a low, or a middle-sized Man.

I cannot by any Effort of Thought conceive the *Abstract* Idea above described; and it is equally impossible for me to form the *Abstract* Idea of *Motion*, distinct from the *Body* moving, and which is neither *swift* nor *slow*, *curvilinear*, nor *rectilinear*.—And the like may be said of all other *abstract* general Ideas whatever.

Since all things that exist are only Particulars, whence, says Mr. Locke, is it, that we come by general Words, expressive of a thousand Individuals? His Answer is, Terms only become general, by being made the Signs of *abstract* and general Ideas; so that the Reality of *Abstract* Ideas, should follow from the Reality of General Words.—But this is a Deception.—A Word becomes General, by being made the Sign, not of an *abstract* general Idea, but of several particular ones; any one of which it indifferently suggests to the Mind.—For an Example, when I say that *Whatever has Extension is divisible*; the Proposition is to be understood of Extension in general: not that I must conceive any *abstract* general Idea of Extension; which is neither Line, Surface, nor Solid, neither great nor small, &c.

To make this more evident, Suppose a Geometrician to be demonstrating a Method of dividing a Line in two equal Parts: In order hereto, he draws, for instance, a black Line, an Inch long; and this, which in it self is a particular Line, is nevertheless, with respect to its Signification, general; since it represents all Lines whatever: So that what is demonstrated of this one, will hold of all others.—And as that particular Line becomes general by being made a Sign; so does the Name *Line*: And as the former owes its Generality, not to its being the Sign of an *abstract* or general Line, but of any or all particular right Lines that may possibly exist; so must the latter derive its Generality from the same Cause. See GENERAL TERM.

Mr. Locke, speaking of the Difficulty of forming *Abstract* Ideas, says; And does it not require some Pains and Skill to form the general Idea of a Triangle, which yet is none of the most *abstract* and comprehensive; for it must be neither Oblique, nor Rectangular; neither Equilateral, Isosceles, nor Scaleneous; but all, and none of these, at once.—Now, let any Man look into his Thoughts, and try whether he has, or can attain to an Idea of a Triangle, correspondent to this Description.

From the Notion of *Abstract* Ideas, Dr. Berkeley endeavours to shew, it was, that Bodies first came to be supposed to have an Existence of their own, out and independent of the Mind perceiving 'em.—Can there be a greater Strain of *Abstraction*, says he, than to distinguish the Existence of sensible Objects from their being perceiv'd, so as to conceive them existing unperceiv'd. See BODY, and EXTERNAL WORLD.

We shall only add, that *abstracting*, on the common System, is no more than generalizing; 'tis making one thing stand for an hundred, by omitting the Consideration of the Differences between 'em: It is taking several Differences; i. e. different Combinations, setting aside the Peculiarities in each, and considering only what is found alike in all.—Thus it is that I say, I love my Friends, love my Mistress; love my self, my Battle, my Book, my Ease, &c.—Not that it is possible I should have the same Sensation with respect to so many different sorts of things, things that stand in such different Relations to me; but only that there appearing something in them all that bears a resemblance to the rest, in some Circumstances or other, I chuse to call 'em all by one Name, *Love*. For if I consider the Tendency of the Effects of them all, I shall find they lead me very different ways to very different Actions: and there is not more resemblance between the Causes than between the Effects: All the Analogy there is between them, is a sort of Pleasure or Satisfaction, arising upon the Application of the particular Object to its proper Organ, or Sense.—The *Abstract* Idea of *Love*, then, will terminate in the Idea of *Pleasure*: But, 'tis certain, there can be no Idea of *Pleasure*, without a thing pleasur'd to excite it. Any other *Abstract* Idea of *Pleasure*, will amount to no more than a View or Perception of the Circumstances wherewith our Pleasures have been attended: But these are mere Externals, foreign to the pleasurable Sensation it self; which nothing but an Object applied in such and such a manner, can excite.—To suppose an Idea of *Pleasure* produced obliquely, by any other than the proper Cause, is as absurd as to suppose an Idea of *Sound*, produced without a sonorous Object. The Mind has no Power of making any Ideas, call 'em what you will, whether *Abstract*, or Concrete; or General, or Particular: Its Activity goes no farther than the perceiving of such as are presented to it: So that its Action is really no other than a degree of *Passion*. See SENSE.

ABSTRUSE, denotes something to be deep hidden, or far-removed from the common Apprehensions, and ways of conceiving; in opposition to what is obvious and palpable. In this Sense, Metaphysics is an *abstruse* Science; tho' new Doctrine of infinites is an *abstruse* Point of Knowledge; that few People attain to.—The Word is of Latin Original, *Abstrusus*; form'd of *abs*, from, and *trusus*, I thrust; *g. d.* being far off, and out of reach.

ABSDURD, ABSURDUM, a thing that thwarts, or goes contrary to our common Notions and Apprehensions. See ABSURDITY.

Thus, a Proposition would be *absurd*, that should affirm, that two and two make five; or that should deny 'em to make four. See PROPOSITION.

The Logicians have a way of proving the Truth of a Proposition, by shewing the contrary is *absurd*. See TRUTH.—This they call

Reductio ad Absurdum, or arguing *ex Absurdo*: See REDUCTION.

ABSURDITY, ABSURDITIES, is a kind of Error, or Offence against some evident, and generally allowed Truth, or Principle. See ERROR, MAXIM, &c.

The greatest of all *Absurdities* is the *Contradiction*. See CONTRADICTION.

The Schoolmen make two Species of *Absurdities*—The one, *veritas*, which contradicts the common Sense of Mankind; the other *ratio*, which gives the Lye to some one or more Philosophers; e. g. *Aristotle*.—The latter sort may be a real Truth.

ABSINTHUM, *Wormwood*, a Medicinal Plant, of considerable Efficacy in quality of a Bitter and Stomachic. See STOMACHIC, &c.

There are divers Kinds hercof enumerated by Botanists; at least 30. Those which obtain in Medicine, are, 1^o, the *Roman* or small, call'd also *Potent*; used as a Stomachic, Astringent, Disicant, and to prevent Putrefaction.—*Emuller* says, there is not a chronic Disemper in which it is not serviceable.—A Conserve of the *Roman Absinthium* is now also much used.

2^o, The common or large *Wormwood*, bitterer much than the former, and antiently used not only as a Stomachic and a Destroyer of Worms, but also a Detergent; and prescrib'd against the Jaundice and Dropsy: But it is now grown indiffuse in those Intentions, as being prejudicial to the Eyes; and is now chiefly retain'd as an ingredient in some of the Official Compositions; and particularly some cephalick distill'd Waters. See WATER.

Its Infusion in Wine, makes what they call *Vinum Absinthiacum*. See WINE.—The Pharmacopoeias also mention an Extract of *Absinthium*, *Extractum Absinthii*; and a Syrup of *Absinthium*, *Syrupus de Absinthio*.

Some will have this to yield the *Semen Santalum*, or *Santaleum*, i. e. *Wormseed*; but *Martinius* affirms the contrary. See SANTALICUM.

The Word is compounded of the Privative Particle *a*, and *in*, *possibile*; *q. d.* not possible.

ABUNDANCE, *Copia, Plenty*. See FERTILITY, CORNUCOPIA, &c.

Abundance, when carried to an Excess, is a Fault, call'd *Redundance, Exuberance*, &c. See REDUNDANCE, EXUBERANCE, &c.

The Author of the *Dictionnaire Oeconomique* gives divers Manners or Secrets of producing *Abundance*; an abundant Crop of Wheat, Peas, Apples, Peaches, &c. See FOLICULTIV.

ABUNDANT Numbers, are those whose Quota-Parts added together, exceed the Number it self whereof they are Parts. See NUMBER.

Thus, the Number 12 is *abundant*, its Quota-Parts 1, 2, 3, 4, and 6, amounting to 16.—In opposition to *Abundant Numbers* stand *Defective* ones. See DEFECTIVE.

ABUSE, an irregular Use of a thing; or something introduced contrary to the proper Order, and Intention thereof.

The Business of Reforms, Visitations, &c. is to correct *Abuses* secretly kept into Discipline, &c.—*Constantine* the Great, by introducing Riches into the Church, laid the Foundation for those numerous *Abuses* which the succeeding Ages groaned under.

Self-Abuse, is a Phrase used by some late Writers for the Crime of Self-Pollution. See POLLUTION.—*Nero* is said to have frequently *abused Britannicus*.

In Grammar, to apply a Word *abusively*, or in an *abusive* Sense, is to misapply or pervert its meaning. See CATACHRESIS.

A Permutation of Benefices, without the Consent of the Bishop, is deem'd *abusive*, and consequently null.

ABUTALLS, or **ABUTALS**. See **ABUTTALS**.

ABYSS, **ANYSUS**, a profound, and as it were, bottomless Gulph, or Cavern. See GULF.

The Word is *Greek*, *abyssos*; compounded of the Privative *a*, and *βυσ*, *I enter, reach*; *q. d.* something impenetrable, or not to be fathom'd.

In Scripture, the Word *Abyss*, *abyssos*, is used by the Septuagint, for the Waters which God created at the Beginning with the Earth, which encompass'd it round; and which our Translators render the *Deep*. Thus it is that Darkness is said to have been on the Face of the *Abyss*.—The same Word is also used for that immense Cavern in the Earth where God collected all these Waters on the third Day; which in our Version is render'd the *Sea*; and elsewhere the *Great Deep*.

Dr. Woodward has let some Light into this great *Abyss*, in his *Natural History of the Earth*.—He asserts, that there is a mighty Collection of Waters inclosed in the Bowels of the Earth; constituting a huge Oeb in the interior or central Parts of it; and over the Surface of this Water, he supposes the Terrrestrial *Strata* to be expanded.—This, according to him, is what *Moses* calls the *great Deep*, and what most Authors render the *great Abyss*.

That there is such an Assemblage of Waters lodged in the Depths of the Earth, is confirmed by abundance of Observations. See EARTH, DEEP, &c.

The Water of this vast *Abyss*, he asserts, does communicate with that of the Ocean, by means of certain *Histia's*, or *Chasms* passing betwixt it and the bottom of the Ocean: And this and the *Abyss* he supposes to have one common Centre, around which the Water of both is plac'd; but so, that the ordinary Surface of the *Abyss* is not level with that of the Ocean, nor at so great a distance from the Centre as the other, it being for the most part restrained and depressed by the *Strata* of Earth lying upon it; but wherever those *Strata* are broken, or so lax and porous that Water can permeate them, there the Water of the *Abyss* doth ascend, fills up all the Clefts and Fissures into which it can get admittance; and saturates all the Interstices and Pores of the Earth, Stone, or other Matter all around the Globe, quite up to the Level of the Ocean. See STRATA, FOSSIL, &c.

ACACIA, in Medicine, an inspissated Juice, of a Shrub of the Thorn kind; used as an Astringent. See ASTRANGENT.

There are two Kinds, the *Versa* and *Germanica*.

The *Acacia Vera*, is brought from the *Levant*; and supposed to be the Juice of the Pods of a large thorny Tree, growing in *Egypt* and *Arabia*.—Some Naturalists will have it the same Plant that yields the Gum *Arabic*.

It is very astringent and binding; and on that account good against Fluxes.—Chuse that of a tan-colour, smooth, and shining; and an astringent disagreeable Taste.—It is, or should be, an Ingredient in the *Tverica Andromachi*.

The *German Acacia* is a Counterfeit of the former; being made of the Juice of urine Slices, boil'd to the Consistence of a solid Extract; and put up in Bladders, like the former.—It is distinguish'd from it chiefly by its Colour, which is as black as that of *Spanish Liquorice*.—It is used as a Substitute to the true *Acacia*.

ACACIA, among Antiquaries, is a kind of Roll, resembling a Bag; seen on Medals in the Hands of several of the Consuls and Emperors, from the Time of *Augustus*.

Authors are not agreed either about the Use of this Roll, or about the Substance whereof it consists; some taking it for a plaited Handkerchief, which the Person who presided at the Games threw out as a Signal for their beginning; whilst others rather imagine it intended to represent a Roll of Memoirs, or Petitions. See farther under the Article *Roll*.

ACADEMICKS, **ACADEMICS**, **ACADEMISTS**, a Sect of ancient Philosophers, founded by *Plato*; and called, also, the *Academy*. See ACADEMY.

The *Academicks*, in the later Ages, have taken the Name of *Platonists*. See *PLATONIST*.

The great Dogma of the *Academicks* was this: *Unum scio, quod nihil scio*; 'I know this one thing, that I know nothing.'—Accordingly, they pleaded, that the Mind ought always to remain undetermin'd and in Suspence; as having nothing to determine on but bare Probability or Verisimilitude, which is as likely to lead into Error as Truth. See *PROBABILITY*, *TRUTH*, *ERROR*, &c.

It must be added, that *Plato*, in thus recommending it to his Disciples to distrust and doubt of every thing; had it not so immediately in View to leave 'em fluctuating, and in continual Suspence between Truth and Error; as to guard against those rash precipitate Decisions which young Minds are so liable to, and put 'em in a Disposition to enable 'em the better to secure themselves from Error, by examining every thing without Prejudice.

M. des Cartes, has adopted this same *Acostalepsia*, or Principle of Doubting; but, it must be allow'd, he makes a very different use of it.—The *Academicks* doubted of every thing, and were resolv'd still to doubt: *Des Cartes*, on the contrary, sets out with doubting of every thing; but declares he will not always doubt; and that he only doubts at first, that his Determinations afterwards may be the surer. See *CARTESIANISM*.

In *Aristotle's* Philosophy, say the Followers of *Des Cartes*, there is nothing doubted of; every thing is accounted for, and yet nothing is explain'd, otherwise than by baronous unmeaning Terms, and dark confus'd Ideas: Whereas *Des Cartes* makes you even forget what you knew before: but from your new affected Ignorance, leads you gradually into the sublimest Knowledge.—Hence they apply to him what *Horace* says of *Homer*.

*Non Fumum ex Fugore, sed ex fumo dare Luceam
Cognat, ut speciosa debinc vitacula prodant
Antiphatem, Scyllamque cum Cyclope Charybdim.*

'Tis thus the *Cartesians* talk: But we may add, that long before their Master, *Aristotle* himself had said, that to know a thing well, a Man must first have doubted of it; and that 'tis with doubting all our Knowledge must begin. See *PARIPATETIC*, *PYRRHONIAN*, *SCPTIC*, &c.

ACADEMICS, or **FATHER ACADEMISTS**, is also used among us for the Members of the modern *Academies*, or instituted Societies of learned Persons. See *ACADEMY*.

ACADEMY, **ACADEMIA**, in Antiquity, a fine Villa, or Pleasure-House, situate in one of the Suburbs of *Athens*, about a Mile from the City; which gave the Denomination to the Sect of *Academicks*. See *ACADEMIC*.

It took its Name, *Academy*, from one *Academos* or *Feacampus*, a Citizen of *Athens*, to whom it originally belong'd; and who used to have Lectures, and Assemblies of learned Men therein.—He lived in the Time of *Tesofus*.

Some, mistakenly, derive its Name and Origin from *Cadmus* the *Phenician*, as being the first who introduc'd Learning, and the use of Letters among the *Greeks*.

The *Academy* was farther improved and adorn'd by *Cymon*, with Fountains, Trees, shady Walks, &c. for the Convenience of the Philosophers and Men of Learning, who here met to confer, dispute, &c.—It was also the Burying-Place of illustrious Persons, who had deserv'd well of the Republick.

Here it was that *Plato* taught his Philosophy; and from him, all publick Places destin'd for Assemblies of the Learned and Ingenious, have been since call'd *Academies*.

Sylla sacrific'd the delicious Groves and Walks of the *Academy*, planted by *Cymon* to the Laws of War; and employ'd those very Trees to make Machines wherewith to batter the City.

Cicero had a Villa, or Country Retirement near *Puzanoli*, which he call'd by the Name *Academia*; where he used to entertain his Philosophical Friends.—'Twas here, says Dr. *Harris*, he compos'd his *Academical Questions*, and his *Books de Officiis, de Amicitia, and de Natura Deorum*.

Academy is also used for a Sect of Philosophers, called the *Academicks*. See *PHILOSOPHER*, and *ACADEMIC*.

We usually reckon three *Academies*, or Sects of *Academicks*; the some make five.—The *Antient Academy*, was that whereof *Plato* was the Chief. See *PLATONISM*.

Arcesflaus, one of his Successors, introducing some Alterations into the Philosophy of this Sect, founded what they call the *Second Academy*.

The Establishment of the *third*, call'd also the *New Academy*, is attributed to *Lacides*, or *Carneades*.

Some Authors add a fourth, founded by *Philo* and *Carmides*; and a fifth by *Antiscobus*, call'd the *Antiscoben*, which temper'd the *Antient Academy* with Stoicism. See *Stoicism*.

The *Antient Academy* doubted of every thing; and went so far as to make it a Doubt, whether or no they ought to doubt.—'Twas a sort of Principle with them, never to be sure or fairly'd of any thing; never to affirm or deny any thing either for true or false.—In effect, they asserted an absolute *Acatalepsia*. See *ACATALEPSIA*.

The *New Academy* was somewhat more reasonable; they own'd several things for Truths, but without attaching themselves to any with entire Assurance.—These Philosophers had found, that the ordinary Commerce of Life and Society was inconsistent with the absolute and universal Doubtfulness of the *Antient Academy*; and yet, 'tis evident, they themselves look'd upon things rather as probable, than as true and certain; by this Amendment, thinking to secure themselves from those Absurdities into which the *Antient Academy* had fallen. See *DOUBTING*, &c.

See also further in the *Academical Questions* of *Cicero*; where that Philosopher explains and unravels the Sentiments of those who in his Days call'd themselves Followers of the *new and old Academy*, with great Clearness and Address.

ACADEMY is particularly us'd among the Moderns, for a regular Society or Company of learned Persons; instituted under the Protection of a Prince, for the Cultivation and Improvement of Arts, or Sciences. See *SOCIETY*.

Some Authors confound *Academy* with *University*; but, tho' much the same in *Latin*, they are very different things in *English*.—An *University* is, properly, a Body compos'd of Graduates in the several Faculties; of Professors, who teach in the publick Schools; of Regents or Tutors, and Students who learn under them, and aspic likewise to Degrees. See *UNIVERSITY*.

Whereas an *Academy* is not intended to teach, or profess any Art, such as it is, but to improve it: 'Tis not for Novices to be instructed in, by those that are more knowing; but for Persons of distinguish'd Abilities to confer in, and communicate their Lights and Discoveries to each other for their mutual Benefit.

The first *Academy* we read of, was establish'd by *Charlemain* at the Motion of *Alcuin*: It was compos'd of the chief Wits of the Court, the Emperor himself being a Member.—In their *Academical Conferences*, every Person was to give an account of what ancient Authors he had read; and each even assum'd the Name of some ancient Author whom he affect'd most, or some celebrated Person of Antiquity. *Alcuin*, from whose Letters we learn these Particulars, took that of *Placcus*, the Surname of *Horace*: a young Lord, nam'd *Angilbert*, took that of *Homer*: *Adelard*, Bishop of *Corbie*, was call'd *Augustin*: *Riculf*, Bishop of *Mentz*, was *Demetas*; and the King himself, *David*. See *SCHOOL*.

This lets us see a Mistake in some modern Writers, who relate, that it was in Conformity with the Genius of the learned Men of those Times, who were great Admirers of *Roman Names*, that *Alcuin* took the Name of *Placcus Albinus*.

Most Nations have now their *Academies*, *Russia* not excepted: But, of all Countries, *Italy* bears the Bell in this respect.—We have but few in *England*.—The only one of Eminence is call'd by another Name, viz. the *Royal Society*: An Account whereof, see under the Article *ROYAL SOCIETY*.

Beside this, however, we have a *Royal Academy* of Music; and another of Painting; establish'd by Letters Patent, and govern'd by their respective Directors.

The *French* have flourishing *Academies* of all Kinds, establish'd at *Paris*; mostly by the late King.

Royal ACADEMY of Sciences, for the Improvement of Physics, Mathematics, and Chymistry; was first set on foot in 1666, by Order of the King, who without any Act of Royal Authority issued for that End.—In the Year 1699, it had as it were a second Birth; the same Prince, by a Regulation dated the 26th of *January*, giving it a new form, and putting it on a new and more solemn Footing.

In Virtue of that Regulation, the *Academy* was to be compos'd of four Kinds of Members, viz. *Honorary*, *Pensionary*, *Associates*, and *Elevés*.—The first Class to consist of ten Persons; and the rest of twenty each.—The *Honorary Academists* to be all Inhabitants of *France*; the *Pensionaries* all to reside at *Paris*; eight of the *Associates* allowed to consist of Foreigners; and the *Elevés* all to live at *Paris*.—The Officers, to be a *President*, nam'd every Year by the King, out of the Class of *Honorary Academists*; and a *Secretary* and *Treasurer*, to be perpetual.

Of the *Pensionaries*, three to be *Geometricians*, three *Astronomers*, three *Mechanicks*, three *Anatomists*, three *Chymists*, three *Botanists*; the remaining two, *Secretary* and *Treasurer*.—Of the twelve *Associates*, two to apply themselves to *Geometry*, two to *Astronomy*, two to *Mechanicks*; two to *Anatomy*, two to *Botany*, and two to *Chymistry*.—The *Elevés* to apply themselves to the same kind of Science with the *Pensionaries* they are attach'd to; and not to speak, except when call'd thereto by the *President*.—No Regular or Religious to be admitted, except into the Class of *Honorary Academists*: Nor any Person to be admitted, either for *Associate* or *Pensionary*, unless known by some considerable printed Work, some Machine, or other Discovery.—Further, no Person to be allowed to make use of his Quality of *Academist*, in the Title of any of his Books, unless such Book have been read to, and approved by the *Academy*.

The Meetings of the *Academy* were appointed to be held twice a-week, on *Wednesdays* and *Saturdays*, in the King's Library: (Tho' long after, they were removed to a more commodious Apartment in the *Louvre*.) And to last, at least, two Hours, viz. from Three to Five. At the Beginning of every new Year, each *Pensionary* was to oblig'd to declare in Writing what Work he intends chiefly to prosecute that Year; and the rest to be invited to do the same. All the Observations the *Academists* bring to the Meeting to be left in Writing, in the Hands of the *Secretary*; who is to enter the Substance of what passes at each Assembly in a Register; and at the End of every Year, to publish the History, or Transactions of the *Academy* for that Year.

No Person, not a Member, to be present at their ordinary Meetings; unless such as are introduced by the *Secretary*, to propose some new Machine or Discovery; tho' their publick Meetings, twice a-year, shall be open to every Body.

To encourage the Members to continue their Labours, the King engages not only to pay the ordinary Pensions; but even to give extraordinary Gratifications, according to the Merit of their respective Performances: furnishing, withal, the Expence of the Experiments, and other Inquiries necessary to be made.—Their Motto, *Invenit Et proficit*.

In the Year 1716, the Duke of *Orleans*, then Regent, made an Alteration in their Constitution; augmenting the Number of *Honoraries*, and of *Associates* capable of being Foreigners, to twelve; admitting Regulars among such *Associates*; suppressing the Class of *Elevés*, and establishing, in lieu thereof, a new Class of twelve *Adjuncts*, to the six several Kinds of Sciences cultivated by the *Academy*: and, lastly, appointing a Vice-President, to be choic'd yearly by the King, out of the *Honorary Members*; and a Director and Sub-director out of the *Pensionaries*.

Their *Secretary*, *M. de Fontenelle*, has oblig'd the Publick with 28 elegant Volumes of the Productions of this illustrious Body; under the Title of *Histoire de l'Academie Royale*, &c. avec les *Memoires de Mathematique & de Physique tirez des Registres*, &c.

Academy of Painting, was establish'd fifty Years ago, under the Cardinal *Mazarin*, first Protector thereof; and the Chancellor *Seguier*, Vice-Protector.

It consists of a Director, a Chancellor, four Rectors, a Treasurer, twelve Professors; Adjuncts to the Rectors and Professors; Counsellors; a Secretary; a Professor for Anatomy, and another for Geometry, and Perspective.

Persons are here admitted either in Quality of Painters or Sculptors.—The Painters are admitted according to their respective Talents; there being a Distinction made between those who work in History, and those who only paint Portraits, or Landscips, or Beasts, or Fruits, or Flowers, or paint in Mignature; or only Design; or Engrave; or Carve, &c.

Academy of Medals and Inscriptions, was erected for the Study and Explanation of ancient Monuments; and to consecrate great and memorable Events to Posterity, by similar Monuments; as Medals, Relievo's, Inscriptions, &c.

Academy of Politicks, is compos'd of six Persons, who meet on certain Days each Week at the *Louvre*, in the Chamber where the Papers relating to foreign Affairs are lodg'd.—Here they peruse such Papers as are put in their Hands, by order of the Secretary for foreign Affairs, who acquaints the King with the Progresses they make, and the Capacities of each, that his Majesty may employ them accordingly.

French ACADEMY, establish'd for the Improvement and Refining of the Language. See *FRENCH*, and *LANGUAGE*.

Academy of Music, is no other than the Managers and Directors of the Opera. See *OPERA*.

The *French* have also considerable *Academies* in most of their great Cities; as, at *Montpellier*, a *Royal Academy of Sciences*, on the like Footing as that at *Paris*; being as it were a Counterpart thereof: At *Toulouse*, an *Academy* under the Denomination of *Lanterusts*: Others at *Nismes*, *Arles*, &c.

The *Royal Spanish ACADEMY*, is an *Academy* establish'd at *Madrid*, on the Model of the *French Academy*.—

The Design was laid by the Duke d'Efalonis; and approv'd of by the King in 1714, who declar'd himself Protector thereof.—It consists of 24 Academiſts; including the Director and Secretary.

Its Device is a Crucible on the Fire, with this Motto, *Limpia, fija, y da eſplendor.*

ACADEMY of the *Nature Curioſi*, in Germany, was firſt founded in 1652, by M. *Beuch* a Phyſician; and taken in 1670 under the Protection of the Emperour *Leopold*.

There are other *Academical* Inſtitutions at *Berlin*, and other Parts of the North; ſeveral of which having diſtinguiſh'd themſelves by their Journals, Ephemerides, &c. the Reader will find an Account of 'em under the Article *JOURNAL*.

Italy, alone, has more *Academies* of note than all the reſt of the World; not a City but furniſhes a Set of learned Perſons for an *Academy*, which to them ſeems an eſſential Part of a regular Conſtitution.—*Jarchin* has given us a Specimen of their Hiſtory, printed at *Leipſic*, in 1725; and gives us, wiſh'd, to expect a fuller and more perfect Account from ſeveral learned Perſons, who have been long employ'd about the ſame; as *Kraſſius*, Profeſſor of Eloquence at *Leipſic*; *Hyacinth. Ginna*, and *Miche. Richeyus*.

Jarchin's Account goes no further than thoſe of *Piedmont*, *Ferrara*, and *Aſian*; in which laſt City he reckons 25: But he adds a Liſt of all the reſt, to the Number of 550.—The Names of moſt of 'em are very curious.

The *Academiſts*, e. g. of *Boulogne*, are called *Abandonati*, *Anſioſi*, *Otiſi*, *Arcaſi*, *Conſuſi*, *Diſteſtuſi*, *Dubbiſi*, *Impaticenti*, *Inobili*, *Indifferenti*, *Indomiti*, *Inquieti*, *Inſtabili*, *Della notte*, *Piacere*, *Sitienti*, *Somolenti*, *Torbid*, *Veſpertini*.—Thoſe of *Genoa*, *Accordati*, *Sopiti*, *Reſvegliati*: Of *Gubio*, *Addormentati*: Of *Venice*, *Acuti*, *Allettati*, *Diſcordanti*, *Diſgiunti*, *Diſſanguati*, *Dedonati*, *Filatelſici*, *Incorpſabili*, *Inſancibili*: Of *Rimini*, *Adagiati*, *Eurapei*: Of *Favia*, *Aſſinati*, *Della Chiave*: Of *Fermo*, *Raffrontati*: Of *Molliſa*, *Agitati*: Of *Florence*, *Aſterati*, *Humidi*, *Furſurati*, *Della Cruſca*, *Del Cimento*, *Inſocati*: Of *Cremona*, *Animoſi*: Of *Naples*, *Ardui*, *Inferenti*, *Intronati*, *Lunatici*, *Segreti*, *Sirenes*, *Securi*, *Valanti*: Of *Ancona*, *Argonanti*, *Caliginoſi*: Of *Urbino*, *Aſſurati*: Of *Perugia*, *Arioni*, *Eccentrici*, *Inſenſati*, *Laſtici*, *Unioſi*: Of *Tarentum*, *Audaci*: Of *Macerata*, *Catenati*, *Inferſetti*: Of *Rome*, *Chimerici*: Of *Siccona*, *Corſiſi*, *Giuviali*, *Trapaſſati*: Of *Rome* *Deſici*, *Humorifiſi*, *Lynci*, *Fantaſtiſi*, *Eliminati*, *Incitrati*, *Indiſpoſiti*, *Inſecroſi*, *Malencolici*, *Nogletti*, *Noti Vaſicane*, *Nocturni*, *Ombroſi*, *Peleggrini*, *Sterili*, *Vigilanti*: Of *Padua*, *Deſti*, *Imamuri*, *Ordati*: Of *Trepano*, *Diſſicili*: Of *Breſcia*, *Diſperſi*, *Erranti*: Of *Matina*, *Diſſonanti*: Of *Roccanatone*, *Diſſignali*: Of *Syracule*, *Ebri*: Of *Milan*, *Elionici*, *Faticcoſi*, *Fenici*, *Inceri*, *Nafcoſi*: Of *Candia*, *Extravaſanti*: Of *Pefaro*, *Eterociti*: Of *Comachio*, *Fluttuanti*: Of *Arezzo*, *Forzati*: Of *Turin*, *Fubinauſi*: Of *Roggio*, *Fuſoſi*, *Muti*: Of *Cortona*, *Humorofi*: Of *Bari*, *Incoſtanti*: Of *Rofano*, *Incurſi*: Of *Brada*, *Innomiati*, *Pigri*: Of *Acis*, *Intricati*: Of *Mantua*, *Invaghiati*: Of *Argigento*, *Mutabili*, *Offuſcati*: Of *Verona*, *Olympici*, *Uranii*: Of *Viterbo*, *Oſtinati*: Of — *Vagabondi*.

ACADEMY, is alſo uſed among us for a kind of Collegiate School, or Seminary; where Youth are inſtructed in the Liberal Arts, and Sciences; in a private way. See *SCHOOL*, *SEMINARY*, *COLLEGE*, &c.

The Nonconformiſt Miniſters, &c. are many of them bred up in ſuch private *Academies*; as not reſiſting the common Univerſity-Education.

ACADEMY is alſo uſed in ſpeaking of the Schools of the *Jews*; i. e. thoſe where the Rabbins or Docters inſtruct the Youth of their Nation in the Hebrew Tongue; explain to 'em the Talmud; teach 'em the Cabbala, &c. See *RABBIN*, *CABBALA*, &c.

The *Jews* had had of theſe *Academies*, ever ſince their Return from the *Babylonian* Captivity.

The *Academies* of *Tiberias* and *Babylon* are celebrated. See *TIBERIAS*, *MASSORETES*, *TALMUD*, &c.

ACADEMY is particularly underſtood of a *Riding-School*; or a Place where young Gentlemen are taught to ride the great Horſe, with other ſuitable Exerciſes; as *Fencing*, &c. See *EXERCISES*.

This is what *Vitrucius* calls *Ephibetum*. See *GYMNASIUM*, *GYMNAſTIC*, &c.

The Duke of *Newcaſtle* will have the Art of *Riding* to have had its Origin in *Italy*; and the firſt *Academy* of this ſort to have been eſtabliſh'd at *Naples*, by *Frederic Griſon*; who, he adds, was the firſt that wrote on the Subject; which he did like a true Cavalier, and a great Maſter.—*Henry VIII*, ſays the ſame Author, call'd over two *Italians*, Diſciples of *Griſon*, into *England*; who ſoon ſtock'd the Nation with *Ecuyers*, or *Riding-Maſters*.

He adds, that the greateſt Maſter *Italy* ever produc'd, was a *Newcaſtle*, *Pignatelli* by Name; that *La Broze* rid un-

der him five Years; *Plumet* nine; and *S. Antoine* many Years; and that theſe three *Frenchmen* fill'd *France* with *French* Maſters; which till then had known none but *Italians*.

The Ground ſet apart in an *Academy*, for riding, is call'd the *Manege*; having uſually a Pillar in the Centre, and other Pillars, placed two by two, at the Sides. See *MANAGE*, and *PILLAR*.

ACADEMY, or ACADEMY-Figure, in Painting, is a Drawing or Deſign made after a Model, with a Crayon or Pencil.—Or the Copy of ſuch a Draught. See *DESIGN*.

ACANACEOUS, among Botaniffs, a Term applied to a Claſs of Plants, popularly known under the Name of the *Thiſtle Kind*. See *THISTLE*, and *CARDUUS*.

The Word is form'd of the Greek *ακανα*, *Acan*, I ſtarten; in regard of the Prickles they are beſet withal.

ACANTHABOLUS, or ACANTHABOLUS, a Surgeon's Inſtrument; called alſo *Vajella*.

'Tis ſhaped like a Pair of Pincers; and is uſed to take out any prickly Subſtance that ſhall chance to ſtick to the Oculophagus or Gullet; or the Fragments of corrupted Bones, Hair; or any thing that by chance remains in a Wound.

The ſame Term, *Acanthabolus*, is alſo uſed for an Inſtrument wherewith People pull out the Hairs from their Eyebrows, &c.

It is form'd from the Greek *ακανα*, *Spina*, and *βολα*, *ja*, *cio*, I throw away.

ACANTHA, among ſome Anatomiffs, is applied to the hind, or poſterior Protruberances of the *Vertebrae* of the Back; forming what we call the *Spina Dorſi*. See *VANTERRA*, and *SPINA*.

ACANTHUS, in Architecture, an Ornament in the *Corinthian* and *Composite* Orders; being the Representation of the Leaves of an *Acanaceous* Plant, in the Capitals thereof. See *CAPITAL*, and *LEAVES*.

It takes its Name from *ακανθος*, the Name given the Plant among the Greeks, as being prickly, or of the Thiſtle Kind. The *Latin* Botaniffs call it *Brancha Urſina*, *Bears-foot*, from ſome ſuppoſed reſemblance it bears thereto; or *Brancha Hircina*, by reaſon its Leaves bend and twiſt ſomewhat like a Goat's Horns.

There are two Kinds of the Plant *Acanthus*, one whereof grows wild, and is full of Prickles; the other grows in Gardens, and is by *Virgil* called *Mollis*, in regard it is ſoft, and without any Prickles.—The *Greek* Sculptors adorn'd their Works with the Figure of the latter; as the *Gorbic* did with that of the former, which they represented not only in their Capitals, but alſo in other Ornaments.

The Garden *Acanthus*, is the moſt denſe; bearing a good deal of reſemblance to *Parſley*, or *Smallage*: And thus it is we find it represented in the *Composite* Capitals of *Titus*, and *Septimius Severus* at *Rome*.

Theſe Leaves make the principal Character and Diſtinction of the two rich Orders from the reſt; and their different Number and Arrangement does alſo diſtinguiſh the two Orders from each other. See *ORDER*; ſee alſo *CORINTHIAN*, and *COMPOSITE*.

The Origin and Occaſion of the Ornament, ſee under the Article *ACACUS*.

ACATALECTIC, ACATALECTUS, in the ancient Poetry, a Term applicable to ſuch Verſes as have all their Feet and Syllables; and are in no wiſe defective at the End. See *VERSE*, and *FOOT*.

As, on the contrary, *Catalectic* Verſes are thoſe which end too haſtily, and with a Syllable ſhort. See *CATALECTIC*.

The Words come from *ακατα*, *deſino*; whence *καταλελυτος*, *which wants ſomething at the End*; and the Privative *a* being prefix'd *ακαταλελυτος*, *which wants nothing at the End*.

In the following Strophe of *Horace*, the two firſt Verſes are *Acatalectic*, and the laſt *Catalectic*.

Solvitur acris hyemi, grata vice
Veris & Favoni;

Trabantque ſiccis machinae carinas—

ACATERY, in the King's Houſehold, a kind of Check betwixt the Clerks of the Kitchen and the Purveyors. See *PURVEYOR*, *CLEER*, *HOUSEHOLD*, &c.

The Officers of the *Acatery*, are a Sergeant, two Joint-Clerks, and a Yeoman of the Salt-Scores.

ACATALEPSIA, ACATALEPSY, in Philoſophy, *Incomprehenſibility*; or the Impoſſibility of comprehending or conceiving a thing. See *COMPREHENSION*.

The *Pyrrhoniſms* and *Sceptricks*, and even the Antient *Academy*, aſſerted an abſolute *Acatalepsia*: All human Science or Knowledge, according to them, went no further than to Appearances and Veriſimilitude. See *PYRRHONIAN*, *SCPTIC*, and *ACADEMY*.

They declaim'd much against the Senses; and charg'd them with a principal Hand in seducing and leading us into Error. See SENSE, ERROR, TRUTH, FALSHOOD, DOUBTING, &c.

The Word is a Compound of the Privative α , and $\alpha\lambda\lambda\alpha\lambda\alpha\sigma\tau\alpha\sigma$, *deprehendo*, I find out; of $\alpha\epsilon\tau\alpha$, and $\lambda\alpha\gamma\sigma\alpha\sigma$, *Cogito*, I take. See CATALEPSIS.

ACCAPITUM, in our ancient Law-Books, signifies Relief to the Chief Lord.—Hence also,

ACCAPITARE, to pay Relief to the Chief Lord. See RELIEF.

ACCEDAS *ad Coriam*, is a Writ which lies for him who has received false Judgment, or fears Partiality, in a Court-Baron, or Hundred Court; being directed to the Sheriff.—The like Writ lies also for him that has received such Judgment in the County-Court; and is called *de Falso Judicio*.

The *Accedas ad Coriam* lies also for Justice delayed, as well as falsely given; and is a Species of the Writ *Recordari*. See RECORDARI.

ACCEDAS *ad Vice-comitem*, is a Writ directed to the Coroner, commanding him to deliver a Writ to the Sheriff; who having a Pouch deliver'd to him, suppresses it. See PONS.

ACCELERATED Motion, in Mechanics, is a Motion which receives continual Increments, or Accretions of Velocity. See MOTION.

If the Accretions of Velocity be equal in equal Times; the Motion is said to be *uniformly accelerated*. See ACCELERATION.

The Motion of falling Bodies is an *accelerated Motion*: And supposing the Medium they fall thro', *i. e.* the Air, void of Resistance; the same Motion may be also consider'd as *uniformly accelerated*. See DESCENT, &c.

For the Laws of ACCELERATED MOTION, see MOTION.

ACCELERATION, in Mechanics, the Increase of Velocity in a moving Body. See VELOCITY, and ACCELERATED MOTION.

Acceleration stands directly oppos'd to Retardation, which denotes a Diminution of Velocity. See RETARDATION.

ACCELERATION is chiefly us'd in Physics, in respect of falling Bodies, *i. e.* of heavy Bodies tending towards the Centre of the Earth by the Force of Gravity. See GRAVITY, and CENTRE.

That Natural Bodies are *accelerated* in their Descent, is evident from various Considerations, both *a priori* and *posteriori*.—Thus, we actually find, that the greater Height a Body falls from, the greater Impression it makes, and the more vehemently does it strike the subject Plane, or other Obstacle.

Causes of the Acceleration of Falling Bodies.

Various are the Systems and Opinions which Philosophers have produced to account for this *Acceleration*.—Some attribute it to the Pressure of the Air: The farther, say they, a Body falls, the greater Load of Atmosphere is of consequence incumbent on it: and the Pressure of a Fluid, is in proportion to the perpendicular Altitude of the Column thereof.—Add, that the whole Body of the Fluid pressing in innumerable right Lines, which all meet in a Point, *viz.* the Centre; that Point, by the meeting of those Lines, sustains, as it were, the Pressure of the whole Mass: Consequently, the nearer a Body approaches thereto, the Effect or Pressure of more united Lines must it sustain. See AIR, and ATMOSPHERE.

But what overturns this Account, is, that as the Pressure of the Air downwards increases; so, by the known Laws of Statics, does the Resistance, or the Force wherewith the same Fluid tends to repel, or drive the Body upwards again. See FLUID.

Others insist, that the incumbent Air is the grosser and more vaporous Particles, the nearer the Earth; and fill'd with more heterogeneous Particles, which are not true elastic Air: and hence, say they, a descending Body, meeting continually with less Resistance from the Elasticity of the Air, and having the same Force of Gravity still acting on it, must necessarily be *accelerated*. See ELASTICITY.

But what overturns all Accounts where the Air or Atmosphere are concern'd, is, that the *Acceleration* holds in Vacuo, and even more regularly than in Air. See VACUUM.

The *Peripatetic* Account is worse than this: The Motion of heavy Bodies downwards, say they, arises from an intrinsic Principle, which makes 'em tend to the Centre, as their proper Seat, or Element, where they would be at rest: Hence, add they, the nearer Bodies approach thereto, the more is their Motion intended. See ELEMENT, QUALITY, &c.

The *Gassendists*, on the other hand, hold that the Earth emits a sort of attractive Effluvia, innumerable Threads wherof continually ascend and descend; which Threads, proceeding like Radii from a common Centre, divaricate the more, the further they go: So that the nearer a heavy Body is to the Centre, the more of these magnetic Threads

it receives; and hence the more is its Motion *accelerated*. See EFFLUVIA, and MAGNETISM.

But this is refuted by an easy Experiment: for if a Ball be let fall out of the lowest Window of a high Tower, and also out of the highest; the *Acceleration* will be the same in both Cases, notwithstanding the greater Vicinity to the Centre in the one, than in the other Case.

The *Cartesians* account for the *Acceleration*, from the repeated Pulses of a subtil ethereal Matter, which is continually acting on the falling Body, and impelling it downwards. See CARTESIANISM, ETHER, ELEMENT, MATTER, SUBTILE, &c.

After all, the Cause of *Acceleration* is nothing mysterious; the Principle of Gravitation, which determines the Body to descend, determining it to be *accelerated* by a necessary Consequence. See GRAVITATION.

For, suppose a Body let fall from on high; the primary Cause of its beginning to descend, is, doubtless, the Power of Gravity; but when once the Descent is commenced, that State becomes in some measure natural to the Body; so that if left to it self, it would performe in it for ever, even tho the first Cause should cease; as we see in a Stone cast with the Hand, which continues to move, after it is left by the Cause that gave it Motion. See LAW OF NATURE.

But, beside the Propensity to descend Impres'd by the first Cause, and which of it self were sufficient to continue the same degree of Motion once begun, *in infinitum*; there is a constant Accretion of subsequent Efforts of the same Principle, Gravity, which continues to act on the Body already in Motion, in the same manner as if it were at rest.

Here, then, being a double Cause of Motion, and both acting in the same Direction, *viz.* directly towards the Centre of the Earth; the Motion they jointly produce must necessarily be greater than that of one of 'em.—And the Velocity thus increases, having the same Cause of Increase still persisting, the Descent must necessarily be continually *accelerated*.

For, supposing Gravity, whatever it be, to act uniformly on all Bodies, at equal Distances from the Earth's Centre; and that the Time in which a heavy Body falls to the Earth, be divided into equal Parts infinitely small: let this Gravity incline the Body towards the Earth's Centre, while it moves, in the first infinitely small Part of the Time of its Descent; if after this, the Action of Gravity be suppos'd to cease, the Body would proceed uniformly on towards the Earth's Centre, with a Velocity equal to the Force of the first Impression.

But, now, since the Action of Gravity is here suppos'd still to continue; in the second Moment of Time, the Body will receive a new Impulse downwards, equal to what it received at first; and thus its Velocity will be double of what it was in the first Moment: in the third Moment it will be triple; in the fourth quadruple, and so on continually: For the Impression made in one Moment, is not at all alter'd by what is made in another; but the two are, as it were, aggregated, or brought into one Sum.

Wherefore, since the Particles of Time are suppos'd infinitely small, and all equal to one another; the Impetus acquir'd by the falling Body, will be every where as the Times from the Beginning of the Descent.—And hence, since the Quantity of Matter in the Body given, continues the same; the Velocity will be as the Time in which it is acquir'd.

Further, the Space pass'd over by a moving Body in a given Time, and with a given Velocity, may be consider'd as a Rectangle made by the Time and the Velocity.—Suppose A, (Tab. *Mechanicks*, Fig. 62.) a heavy Body descending, and let AB represent the Time of its Descent; which Line suppose divided into any Number of equal Parts, A C, C E, E G, &c. representative of the Intervals, or Moments of the given Time.—Let the Body descend thro' the first of those Divisions, A C, with a certain equable Velocity arising from the proposed Degree of Gravity: this Velocity will be represented by A D; and the Space pass'd over, by the Rectangle C A D.

Now, as the Action of Gravity in the first Moment produced the Velocity A D, in the Body before at rest; in the second Moment, the same will produce in the Body so moving, a double Velocity, C F; in the third Moment, to the Velocity C F will be added a further degree, which together therewith, will make the Velocity E H, which is triple of the first, and so of the rest. So that in the whole Time A B, the Body will have acquir'd a Velocity B K.—Again, taking the Divisions of the Line, *e. g.* A C, C E, &c. for the Times, the Spaces gone thro' will be the Areas or Rectangles, C D, E F, &c. So that in the whole Time A B, the Space described by the Moveable, will be equal to all the Rectangles, *i. e.* to the denot'd Figure A B K.

Such would be the Case, if the Accretions of Velocity only happen'd in certain given Points of Time, *e. g.* in C, in E, &c. So that the Degree of Motion should continue the same till the next Period of *Acceleration* come up.—If the Divisions or Intervals of Time were suppos'd let,

f. g. by half; then the Dentures of the Figure would be proportionably smaller; and it would approach so much the nearer to a Triangle.—If they were infinitely small, *i. e.* if the Accensions of Velocity were supposed to be made continually, and in every Point of Time, as is really the Case; the Rectangles thus successively produced will make a just Triangle, *e. g.* A B E, (Fig. 64.)—Here, the whole Time A B, consisting of the little Portions of Time A 1, A 2, &c. and the Area of the Triangle A B E, of the Sum of all the little triangular Surfaces answering to the Divisions of the Time: The whole Area or Triangle expresses the Space moved thro' in the whole Time A B; and the little Triangles A 1 f, &c. the Spaces gone thro' in the Divisions of Time A 1, &c.

But these Triangles being similar, their Areas are to one another, as the Squares of their homologous Sides A B, A 1, &c. and consequently, the Spaces moved, are to each other as the Squares of the Times.

Law of Acceleration.

Hence we easily infer the great Law of Acceleration, *viz.* "That a descending Body uniformly accelerated, describes, in the whole Time of its Descent, a Space which is just half of what it would have described in the same Time, with the accelerated Velocity it has acquir'd at the End of its Fall."

For, the whole Space the falling Body has moved thro' in the Time A B, we have already shewn, will be represented by the Triangle A B E; and the Space the same Body would move thro' in the same Time, with the Velocity B E, will be represented by the Rectangle A B E F.—But the Triangle is known to be equal to just half the Rectangle.—Therefore, the Space moved, is just half of what the Body would have moved with the Velocity acquir'd at the End of the Fall.

Coroll.—Hence, 1^o, we gather, that the Space moved with the last acquired Velocity B E, in half the Time A B; is equal to that really moved by the falling Body in the whole Time A B.

2^o, If a falling Body describe any given Length in a given Time, in double that Time it will describe four times that Length; in thrice the Time, nine times, &c. and universally, if the Times be in Arithmetical Proportion, 1, 2, 3, 4, &c. the Spaces described will be 1, 4, 9, 16, &c.

3^o, The Spaces described by a falling Body, in a Series of equal Moments or Intervals of Time, will be as the unequal Numbers 1, 3, 5, 7, 9, &c.—And since the Velocities acquir'd in falling are as the Times; the Spaces will also be as the Squares of the Velocities; and both Times and Velocities in a subduplicate Ratio of the Spaces.

The Motion of a Body ascending, or impell'd upwards, is diminish'd or retarded from the same Principle of Gravity acting in a contrary Direction, in the same manner as a falling Body is accelerated. See RETARDATION.

A Body thus projected upwards, rises till it has lost all its Motion; which it does in the same Time that a Body falling would have acquir'd a Velocity equal to that wherewith the Body was thrown up.

And hence, the same Body thrown up, will rise to the same height, from which, falling, it would have acquir'd the Velocity wherewith it was thrown up.

And hence, the Height which Bodies throw up with different Velocities do ascend to, are to one another as the Squares of those Velocities.

ACCELERATION of Bodies on inclined Planes.—The same general Law obtains here, as in Bodies falling perpendicularly: The Effect of the Plane is, to make the Motion slower; but the Inclination being every where equal, the Retardation rising therefrom will proceed equally in all Parts, at the Beginning and the Ending of the Motion.—The particular Laws, see under the Article INCLINED PLANE.

ACCELERATION of the Motion of Pendulums.—The Motion of pendulous Bodies is accelerated in their Descent; but in a less Ratio than that of Bodies falling perpendicularly. See the *Loves thereof under the Article PENDULUM.*

ACCELERATION of the Motion of Projectiles. See PROJECTILE.

ACCELERATION of the Motion of compressed Bodies, in expanding or restoring themselves. See COMPRESSION, DILATATION, TENSION, FIRE, &c.

That the Motion of compressed Air, expanding it self by its Elasticity to its former Dimensions, is accelerated, is evident from various Considerations. See AIR, ELASTICITY, &c.

ACCELERATION is also applied in the ancient Astronomy, in respect of the Fixed Stars.—This Acceleration was the Difference between the Revolution of the *Primum Mobile*, and the Solar Revolution; which was computed at 3 Minutes, and 56 Seconds. See STAR, PRIMUM MOBILE, &c.

ACCELERATOR Urinae, a Muscle of the Penis, by some made a Pair of Muscles; thus call'd from its Office in expediting the Discharge of the Urine and Semen. See MUSCLE, PENIS, &c.

It arises tendinous from the upper and fore-Part of the Urethra; but soon grows fleshy, passes under the *Oj Pubis*, and encompasses the Bulb of the cavernous Body of the Urethra.—Both sides of this Muscle meet in a middle Line, corresponding to the Seam in the Skin over it; and continue so united, the space of two Inches; after which, it detaches two fleshy Elongations, which become thin Tendons at their Terminations on the cavernous Bodies of the Penis.

Its upper Part covering the Bulb, when in Action, strengthens the Veins which pass thro' it from the *Corpus Cavernosum* of the Urethra; and hinder the Reflux of the Blood in an Erection; and by the repeated Contractions of this upper Part, drives the Blood in the Bulb towards the Glans. See ERECTION.

The two Elongations compress the Channel of the Urethra, and so force out the contain'd Seed, or Urine; whence the Muscle takes its Name. See URINE, and SEED.

ACCENSION, **ACCENSIO**, in Physics, the Act of Kindling, or setting a Body on Fire. See FIRE, FUEL, HEAT, &c.

Accension, on other Occasions, is called *Inflammation*, *Ignition*, *Conflagration*, &c. See IGNITION, INFLAMMATION, CONFLAGRATION, &c.

Accension stands opposed to *Extinction*. See EXTINGUITION.

The Word is form'd of the Latin *Accendo*, I kindle.

ACCENSUS, a Roman Officer, whereof there were two Kinds.

The first, were Officers of the Magistrates; that is, of the Consuls, Praetors, Proconsuls, &c. who had their Name, *Accensi*, *ab accendo*; their principal Employment being to call Assemblies of the People, and summon People to appear in Court.

The other Order of *Accensi*, were a kind of supernumerary Soldiers, kept on foot, to be ready to supply the Place of those who were kill'd or wounded in Battle.—And these, according to *Africanus Peditanus*, because they were added to the proper Number, were called *Accensi*, *quia ad censum bantur*, or *accensibantur*, *i. e. ad censum adhibebantur*.

ACCENT, **ACCENTUS**, a certain Inflection of Voice; or a peculiar Tone and manner of Pronunciation, contracted from the Country or Province where a Person was bred. See VOICE, and PRONUNCIATION.

In this Sense, we say, the *Welch Tone* or *Accent*, the *Northern Accent*, the *Gascon Accent*, *Norman Accent*, &c. See TONE, &c.

The Word is form'd of the Latin *Accentus*; compounded of *ad*, and *cans*, I sing.

ACCENT is also a Tone or Modulation of the Voice, frequently used as a Mark of the Intention of the Speaker; and giving a good or an evil Signification to his Words.

One may give Offence with the softest and most soothing Words imaginable, by a proper Management of the *Accent*, and manner of rehearsing them.—The *Accent* frequently gives a contrary Sense to what the Words themselves naturally imported. See WORD, FIGURE, &c.

The *Accent*, properly, has only to do with high and low.—The modern Grammarians frequently also use it in respect of loud and soft, long and short; which confounds *Accent* with *Quantity*. See QUANTITY.

The Difference between the two may be conceiv'd from that which we observe between the Beat of a Drum, and the Sound of a Trumpet: the former expresses every thing belonging to loud and soft, and long and short; but, so long as there is a *uniformity* in the Sound, there is nothing like *Accent*.

ACCENT is also used in Grammar, for a Character placed over a Syllable, to mark the *Accent*, *i. e.* to shew it to be pronounced in a higher or a lower Tone, and regulate the Inflections of the Voice in reading. See CHARACTER, TONE, VOICE, &c.

We usually reckon three grammatical *Accents* in ordinary use, all borrow'd from the *Greeks*, *viz.* the *Acute Accent*, which shews when the Tone of the Voice is to be raised; and is expressed thus (´). See ACUTE.

The *Grave Accent*, when the Note or Tone of the Voice is to be depressed; and is figur'd thus (˘). See GRAVE.

The *Circumflex Accent* is composed of both the Acute and the Grave; it points out a kind of Undulation of the Voice, and is expressed thus (ˆ). See CIRCUMFLEX.

The Word *Accent* is also applied, somewhat abusively, to the Characters which mark the Quantities of Syllables; or the Time the Voice is to dwell on them. See TIME.

The spurious *Accents* answer to the Characters of Time in Music; as *Crotchets*, *Quavers*, &c.—The genuine *Accents* answer to the musical Notes, *Sol, fa*, &c. See NOTE, &c.

Such are, the *long Accent*, which shews that the Voice is to stop on the Vowel, and is expressed thus (—).

The *short Accent* shows that the Time of Pronunciation ought to be short, and is marked thus (´).

Some even rank the *Hypæra*, *Diastole*, and *Apostrophe*, among *Accents*. See *HYPERA*, *DIASTOLE*, and *APOSTROPHE*.

The *Hebrews* have a Grammatical, a Rhetorical, and a Musical *Accent*; the first and last seem, in effect, to be the same; both being comprized under the general Name of *Tonic Accents*, because they give the proper Tone to Syllables: as the Rhetorical *Accents* are said to be *Euphonic*; inasmuch as they tend to make the Pronunciation more sweet and agreeable.

There are four *Euphonic Accents*, and twenty five *Tonic*, of which some are placed above, and others below the Syllables; the *Hebrew Accents* serving not only to regulate the Risings and Fallings of the Voice, but also to distinguish the Sections, Periods, and Members of Periods in a Discourse; and to answer the same Purposes with the Points in other Languages. See *POINT*.

Their *Accents* are divided into *Emperors*, *Kings*, *Dukes*, &c. each bearing a Title answerable to the Importance of the Distinction it makes.—Their Emperor rules over a whole Phrase, and terminates the Sense completely; answering to our Point.—Their King answers to our Colon; and their Duke to our Comma.—The King, however, occasionally becomes a Duke, and the Duke a King, as the Phrases are more or less short.—It must be noted, by the way, that the Management and Combination of these *Accents* differs in *Hebrew Poetry* from what it is in *Prose*.

The Use of these *Tonic* or Grammatical *Accents* has been much controverted; some holding that they distinguish the Sense, while others maintain that they are only intended to regulate the Music or Singing; alleging, that the *Jews* sing rather than read the Scriptures in their Synagogues.

The Truth seems here to be between the two Opinions; for we are inclined to think, that the primary Intention of these *Accents* was to direct the Singing; yet the Singing seems to have been regulated according to the Sense; so that the *Accents* seem not only to guide the Singing, but also to point out the Distinctions.—Tho' it must be confess'd, that many of these Distinctions are too subtil and inconsiderable; nor can the modern Writers, or the Editors of old ones, agree in the Matter; some of them making twice as many of these Distinctions as others.

The *Hebrew Accents*, in effect, have something common with those of the *Greeks* and *Latins*; and something peculiar to the *Hebrew*.—What they have in common, is, that they mark the Tones; shewing how the Voice is to be rais'd and sunk on certain Syllables. What they have peculiar, is, that they do the Office of the Points in other Languages. See *POINTING*.

Be this as it will, 'tis certain the ancient *Hebrews* were not acquainted with these *Accents*; so that, at best, they are not *Jure Divino*.—The Opinion which prevails among the Learned, is, that they were invented about the VIth Century, by the *Jewish Doctors* of the School of *Tiberias*, called the *Massorettes*. See *MASSORETTES*.

The learned *Hennin*, asserts 'em to be of *Arabic* Invention; and to have been adopted and transfer'd thence into the *Hebrew* by the *Massorettes*: He adds, that they were first brought to their degree of Perfection, by Rabbi *Juda Ben David Ching*, a Native of *Fes*, in the XIth Century.—'Tis indeed possible, the *Jews* might borrow their Points from the *Arabs*; but how they should have their *Accents* from 'em is hard to conceive, the *Arabic* Language having no such thing as *Accents*, either in *Prose* or *Verse*.

The same *Hennin* makes the Arab *Alchabib Ebu Ahmed*, who lived about the Time of *Mohomer*, the great Improver of the *Arabic Accents*.—The chief ground of the Opinion, is, that this Writer is said to have been the first who reduced Poetry into an Art; marking the Measures and Quantities of the Verses, by the *Latin* call'd *Pedes*, and by us, *Feet*.—Add, that the *Share Hennin* gives Rabbi *Juda of Fes*, in completing the *Hebrew Accents*, is chiefly founded on the common Opinion, that this Rabbi was the first Grammarian among the *Jews*. But the Opinion is erroneous; there having been a *Hebrew Grammar* compos'd by R. *Saadias Gaon*, many Years before R. *Juda*. In M. *Simon's* Critical History of the Old Testament, we have a Catalogue of *Hebrew Grammars*; at the Head of which is this of R. *Saadias*: M. *Simon*, on this Occasion, observes, "That 't' after the *Jews of Tiberias* had added Points and *Accents* to the Text of the Old Testament, the Doctors of the other Schools began to do the like in their Copies, which were afterwards imitated by the rest."

As to the *Greek Accents*, now seen both in the manuscript and printed Books, there has been no less Dispute about their Antiquity and Use, than about those of the *Hebrews*.—*Jean Vossius*, in an express Treatise de *Accentibus Græcorum*, endeavours to prove them of modern Invention;

asserting, that antiently they had nothing of this Kind but a few Notes in their Poetry, which were invented by *Aristophanes* the Grammarian, about the Time of *Prolemy Philopater*; and that these were of musical, rather than grammatical Use, serving as Aids in the singing of their Poems; and very different from those introduced afterwards.

He adds, that *Aristarchus*, a Disciple of *Aristophanes*; improved on his Master's Art; but that all they both did only tended to facilitate Youth in the making of Verses.—The same *Vossius* shews from several ancient Grammarians, that the manner of writing the *Greek Accents* in those Days, was quite different from those used in our Books.

Hen. Christ. Hennin, in a Dissertation published to shew that the *Greek* Tongue ought not to be pronounced according to the *Accents*, espoules the Opinion of *Vossius*, and even carries the Matter still further.—He thinks that *Accents* were the Invention of the *Arabians*, about nine hundred Years ago; and that they were only used in Poetry; that they were intended to ascertain the Pronunciation of the *Greek*, and to keep out that Barbarism which was then breaking in upon them; that the ancient *Accents* of *Aristophanes* were perfectly agreeable to the genuine *Greek* Pronunciation, but that the modern ones of the *Arabs* destroy it.

Wetstein, *Greek Professor at Basil*, in a learned Dissertation, endeavours to prove the *Greek Accents* of an older standing.—He owns that they were not always form'd in the same manner by the Antients; but thinks that Difference owing to the different Pronunciation which obtain'd in the several Parts of *Greece*.

He brings several Reasons *a priori* for the Use of *Accents*, even in the earliest Days; as that they then wrote all in capital Letters, equidistant from each other, without any Distinction either of Words or Phrases; which without *Accents* could scarce be intelligible: and that *Accents* were necessary to distinguish ambiguous Words, and to point out their proper meaning; which he confirms from a Dispute on a Passage in *Homer*, mention'd by *Aristotle* in his *Poetics*, Chap. V. Accordingly, he observes, that the *Syracians*, who have tonic, but no distinctive *Accents*, have yet invented certain Points, plac'd either below or above the Words, to shew their Mood, Sense, Person, or Sense. See further in his *Dissertatio Epistolica de Accentuum Græcorum Antiquitate & Usu*. Basl, 1686.

ACCENT, in Music, is a Modulation of the Voice, to express a Passion. See *PASSION*.

Every Bar or Measure is divided into *accented* and *unaccented* Parts. See *MEASURE*.

The *Accented* Parts are the Principal; being those intended chiefly to move and affect: 'Tis on these the Spirit of the Music depends. See *BAR*, and *MUSIC*.

The Beginning and Middle; or the beginning of the first half of the Bars, and the beginning of the latter half thereof, in common Time; and the beginning, or first of the three Notes in triple Time; are always the *accented* Parts of the Measure. See *TIME*.

In Common Time, the first and third Crotchet of the Bar are on the *accented* Part of the Measure.—In Triple Time, where the Notes always go by three and three, that which is in the middle of every three is always *unaccented*; the first and last *accented*. But the *Accent* in the first is so much stronger, that in many Cases the last is accounted as if it had no *Accent*. See *COMPOSITION*.

The Harmony is always to be full, and void of Discords in the *accented* Parts of the Measure. See *HARMONY*.—In the *unaccented* Parts this is not so necessary; Discords here passing without any great Offence to the Ear. See *DISCORD*, *COUNTERPOINT*, &c.

ACCEPT, SEE ACCEPTANCE, and ACCEPTATION.
ACCEPTANCE, ACCEPTIO, ACCEPTATIO, in Matters of Law, an agreeing or consenting to some Act already done; which, without such Consent, might have been undone, or render'd invalid.

The Acceptance of a Donation, is necessary to its Validity; is a Solemnity essential thereto.—Acceptance, say the Civilians, is the Concurrence of the Will or Choice of the Donee, which renders the Act complete; and without which the Donor may revoke his Gift at pleasure. See *DONATION*, &c.

In Beneficiary Matters, the Canonists hold, that the Acceptance should be signify'd at the same time with the Resignation; & non ex intercollo. See *RESIGNATION*.

In Common Law, Acceptance is particularly used for a tacit kind of Agreement to what has been done by another.—If Baron and Feme, seiz'd of Land in Right of the Feme, make a joint Lease, or Feoffment by Deed; reserving Rent: The Baron dying, and the Feme receiving the Rent; such Receipt is deemed an Acceptance, and shall make the Lease good: So that she shall be barr'd from bringing the Writ *Cui in Vita*. See *CUI IN VITA*.

In the *Romish* Theology, the manner of receiving or admitting the Pope's Constitutions; or the Act whereby they are receiv'd, is also call'd *Acceptance*. See CONSTITUTION, BUT, &c.

There are two Kinds of *Acceptances*; the one solemn, the other tacit.

The *Solemn Acceptance* is a formal Act, whereby some Error or Scandal which the Pope condemns, is expressly condemn'd by the Acceptor.—Infinite Disputes and Diffusions have been rais'd in the Catholic World, especially in France, on occasion of the *Acceptance* of the Constitution *Unigenitus*: Many of the *French* Prelates still refuse to accept it.

When a Constitution has been solemnly accepted by those it more immediately relates to; it is suppos'd to be tacitly accepted by all the other Prelates in the Christian World, who have cognizance thereof; and this Acquiescence is what they call *Tacit Acceptance*.

In this Sense, *France, Poland, &c.* tacitly accepted the Constitution against the Doctrine of *Molinos*, and the *Quakers*.—And *Germany, Poland, &c.* tacitly accepted the Constitution against *Jansenius*. See MOLINIST, JANSENIST, &c.

ACCEPTANCE, in Commerce, is particularly understood in respect of Bills of Exchange.—To accept a Bill of Exchange, is to sign, or subscribe it; and thereby become principal Debtor of the Sum contain'd therein; with an Obligation to pay, or discharge it at a Time prefix'd. See BILL OF EXCHANGE.

The *Acceptance* is usually perform'd by him on whom the Bill is drawn; upon its being presented to him by the Person in whose behalf it was drawn, or his Order.—While the Acceptor is Master of his Signature, *i. e.* ere he have return'd the accepted Bill to the Bearer, he may erase his *Acceptance*: But not after he has once deliver'd it. See EXCHANGE.

Bills payable at Sight are not to be accepted; as being to be acquitted at their first presenting; or, in defect of Payment, to be protested.—In Bills drawn for a certain Number of Days after sight, the *Acceptance* must be dated; in regard the Time is to be accounted therefrom.—The Form of this *Acceptance*, is, *Accepted such a Day*, and then the Signature.

Bills drawn payable on a Day named, or at Usance, or double Usance, need not be dated; Usance being reckon'd from the Date of the Bill it self. See USANCE.—On these 'tis sufficient to write, *Accepted*, and the Signature.

If the Bearer of a Bill be contented with an *Acceptance* to be paid in twenty Days after Sight, where in the Bill it self only eight Days are express'd; he runs the Risk of the twelve additional Days: So that if the Acceptor fail, he has no Remedy against the Drawer. And if the Bearer content himself to receive a less Sum than is express'd, in part; he is to stand the Chance of the rest. See PROTEST, ENDORSEMENT, &c.

ACCEPTATION, or *ACCEPTIO*, in Grammar, the Signification of a Word; or the Sense wherein it is taken and receiv'd. See WORD, &c.

Such a Word has several *Acceptations*.—In its first and most natural *Acceptation*, it denotes, &c.

ACCEPTILATION, in the Civil Law, an Acquittance given without receiving any Money; or a Declaration of the Creditor, in favour of the Debtor, signifying, that he is satisfy'd for his Debt, or that he forgives it him, and will make no further Demands.

ACCEPTIO, or *ACCEPTATION*. See *ACCEPTATION*.

ACCEPTOR, of a Bill of Exchange, the Person who accepts the Bill. See *ACCEPTANCE*.

The *Acceptor* becomes personal Debtor by the *Acceptance*; and is obliged to pay it, tho the Drawer fail before it become due. See EXCHANGE.

ACCESS, literally signifies, Easiness of Approach, or Entrance. See ACCESSIBLE.

Such a Person has *Access* to the Prince: A Man of easy *Access*: The *Access* on that side was very difficult, by reason of Rocks, &c.

The Word is of *Latin* Original, *Accessus*, or *Accessio*; form'd of *Accedo*, I come to.

ACCESS, in Medicine, a Fit, or Return of some periodical Disease. See DISTRACE, and PERIODICAL.

Thus, we say, an *Access* of the Gout, an Ague, or an Intermitting Fever, &c. See GOUT, AGUE, INTERMITTING FEVER, &c.

Authors frequently confound *Access* with *Paroxysm*; but they are different things. See PAROXYSM.

ACCESSIBLE, something that may be approached; or, that *Access* may be had to. See ACCESS, and APPROACH.

Such a Place, a Fortrefs, is *Accessible* from the Sea-ward, *i. e.* the Passage to it is practicable. See FORTIFICATION, and FORTIFIED PLACE.

ACCESSIBLE Height, or *Distance*, in Geometry, &c. is either that which may be mechanically measur'd by the Ap-

plication of a Measure to it; or it is a Height whose Base and Foot may be approach'd to; and a Distance measured thence on the Ground. See HEIGHT, DISTANCE, &c.

With the Quadrant, &c. we can take Altitudes both *Accessible* and *Inaccessible*. See ALTITUDE, QUADRANT, &c. Surveying, includes the Measuring, Plotting, &c. both of *Accessible* and *Inaccessible* Distances. See SURVEYING.

ACCESSION, is particularly us'd for the Act whereby a thing *accedes*, *i. e.* joins or unites it self to something existing before. See ACCESSORY.

Thus, we say, the *Accession* of a Governour to a Governour, &c.—The first of *August* is observ'd in Memory of the King's *Accession* to the Crown of *Great Britain*.—This Sense of the Word coincides with *INAUGURATION*.

The Term is also us'd for the Act of engaging, and becoming a Party in a Treaty before concluded between other Powers; on the same Footing and Conditions as if originally comprehended in the Treaty it self.—The *Accession* of the States General to the Treaty of *Hanover*; or of the *Caarina* to the Treaty of *Vienne*, &c. See TREATY.

ACCESSORY, or *ACCESSARY*, something that *accedes*, or is added to another more considerable thing, or arises as a natural Consequence therefrom. See *ACCESSION*.

In this Sense, the Word stands oppos'd to *PRINCIPAL*. See *PRINCIPAL*.

ACCESSORY, or *ACCESSARY*, in Common Law, is chiefly us'd for a Person guilty of a felonious Offence; not principally, but by Participation; as, by Advice, Command, or Concealment. See FELONY.

There are two Kinds of *Accessories*; before the Fact, and after it.—The first is he who commands or procures another to commit Felony, and is not present himself; for if he be present, he is a *Principal*. See *PRINCIPAL*.

The second, is he who receives, assists, or comforts any Man that has done Murder or Felony, whereof he has Knowledge.

A Man may also be *accessory* to an *Accessory*, by aiding, receiving, &c. an *Accessory* to Felony.

An *Accessory* in Felony shall have Judgment of Life and Member as well as the *Principal*, who did the Felony; but not till the *Principal* be first attain'd and convict, or outlaw'd thereon.—Where the *Principal* is pardon'd without Attainder, the *Accessory* cannot be attain'd; it being a Maxim in Law, *Ubi non est principalis, non potest esse Accessorius*. But if the *Principal* be pardon'd, or have his Clergy after Attainder, the *Accessory* shall be attain'd.

In the lowest and highest Offences there are no *Accessories*; but all are *Principals*: as in Riots, Routs, forcible Entries, and other Trespasses, which are the lowest Offences.—So also in the highest Offence, which is High Treason, there are no *Accessories*. See TREASON.

Accessories in Petty Treason, Murder, and Felony, are not to have their Clergy.—There can be no *Accessory* before the Fact in Manslaughter; because that is sudden and unpremeditated. See MANSLAUGHTER.

Accessory by Statute, is such a one as abets, advises, aids, or receives one that commits an Offence made Felony by Statute. See STATUTE.

ACCESSORY NERVES, or *ACCESSORIIUS Willisii*, or *Par accessorium*, in Anatomy, a Pair of Nerves, which arising from the Medulla in the *Vertebra* of the Neck, ascends and enters the Skull, and passes out of it again, with the *Par vagum*, wrap'd up in the same common Integument therewith; and after quitting the same, is distributed into the Muscles of the Neck, and Shoulders. See NERVE, PAR VAGUM, &c.

In its Ascent towards the Head, it receives Branches from each of the first five Pair of Cervical Nerves, near their rise from the Medulla; and sends forth Twigs to the Muscles of the Larynx, Gula, &c.—Uniting with a Branch of the Intercostal, it forms the *Plexus Gangliiformis*. See PLEXUS.

ACCIDENCE, *ACCIDENTIA*, a Name us'd for a little Book, containing the first Elements or Rudiments of the *Latin* Tongue. See GRAMMAR.

ACCIDENT, *ACCIDENS*, in Philosophy, something additional, or superadded, to Substance; or not essentially belonging thereto, but capable, indifferently, either of being or not being in it, without the Destruction thereof. See SUBSTANCE.

Some will have the Word compounded of *ad aliud cadens*, *q. d.* falling or belonging to another; others suppose it form'd *ab accedendo*, happening casually.

The Schoolmen distinguish three Kinds of *Accidents*; *Verbal*, *Predicable*, and *Predicamental*.

Verbal Accident, *Accidens Verbalis*, stands oppos'd to *Essence*; and in this Sense, the Adjuncts to a thing, the Substances themselves, are denominated *Accidents* thereof. See ADJUNCT.

Thus, the Clothes a Man has on, tho real Substances, yet, as they are not essential, but adventitious, or accessory to his Existence, are *Accidents*. See ESSENCE.

Predicable Accident, Accidentis Predicabile, is used in opposition to *Proper*.—Such is any common Quality; as, Whiteness, Heat, Learning, or the like. See **QUALITY**.

Thus, a Man may be sick or well; and a Wall white or black; yet the one be still a Man, and the other a Wall.

These are call'd in the Schools *Predicable Accidents*; because usually laid down and explain'd in the Doctrine of *Predicables*. See **PREDICABLE**.

Predicable Accidents may either be taken in the Abstract, as *Whiteness, Learning*; or in the Concrete, *White, Learned*. See **ABSTRACT**, and **CONCRETE**.

If taken in the Abstract, as is done by *Porphyry*; the *Accident* is defined as above, that which may either be present or absent, without the Destruction of its Subject.

If it be taken in the Concrete; *Accident* is usually defin'd by the Schoolmen, to be something capable of being *predicated* contingently, of many, in respect of Quality.—As *Learning*, which may probably be *predicated* of You, He, &c.

Predicamental Accident, Accidentis Predicamentale; which alone properly answers to the Idea of an *Accident*; is a *Mode*, or Modification of some created Substance, inhering or depending thereon, so as not to be capable of subsisting without the same. See **MODE**.

In this Sense, *Accident* is oppos'd to *Substance*.—Whence, as Substance is defined a thing that subsists of it self, and the Substratum of *Accidents*; so an *Accident* is said to be that *cujus esse est inesse*: And therefore *Aristotle*, who usually calls Substances simply *Esses, Entities, Beings*; commonly calls *Accidents, esse & esse, Entities of Entity*; as requiring some Substance wherein to reside, as their Subject of Inhesion.

An *Accident*, then, has an immediate and essential Dependence on its Substance; both as to its Production, its Continuation, and its Effects: It arises or is deduced from its Subject, is preserved or subsisted by it; and can only be affected by what alters or affects the Subject.

The Schoolmen, however, will not have *Accidents* to be mere Modes of Matter, but Entities really distinct from it; and, in some Cases, separable from all Matter.—But the Notion of real *Accidents* and Qualities is now exploded. See **QUALITY**.

Aristotle and the Peripateticks make nine Kinds of Classes of *Predicamental Accidents*; others contract 'em into a less Number. See **PREDICAMENTAL**, and **CATEGORY**.

Absolute Accident, is a Term used in the *Romish* Theology, for an *Accident* which subsists, or may possibly subsist, at least miraculously, and by some supernatural Power, without a Subject.

Such, they contend, are the *Accidents* of the Bread and Wine in the Eucharist; e. g. the Colour, Flavour, Figure, &c. thereof, which remain after the Substances they belong'd to are changed into other Substances of Flesh, &c. See **EUCARIST**, **SPECIES**, **TRANSUBSTANTIATION**, &c.

This Absurdity has been very stiffly maintain'd by many of their Casuists; and even decreed by some of their Councils.—The Eucharist, say they, being a Sacrament, i. e. a Visible Sign of an Invisible Grace; 'tis necessary there be something sensible therein: Now, this cannot be the Substance, that being destroy'd or transubstantiated; and therefore must be *Accidents*.—Add, that in every Conversion there must be something of the former Nature remaining after the Change; otherwise it would be no more than a simple Substitution of one thing for another: As, then, nothing of the Substance remains, it must be *Accidents*.—Hence, the Council of *Constant* condemns the following Proposition, which is the second of *Wickliff*, as Heretical: *The Accidents of Bread do not remain without a Subject in the Sacrament*. See **VIII**.

Some of the Fathers seem to give Countenance to the same Opinion.—*S. Basil*, in his Vith Homily on the Creation, observes that Light, or rather Brightness, the Splendor of Light, *τι φαιειν ο λαμπροτης*, is a thing distinct from its Subject, as Whiteness is from a white Body; and that it exist'd in the Beginning, without its Subject; having been created four Days before.

The *Cartesians*, to a Man, combat the Notion of *Absolute Accidents*, it being their Doctrine, that the Essence of Matter consists in Extension; and that *Accidents* are only Modifications thereof, in no wise distinct from it: An *Accident* without a Subject must be a Contradiction.—And hence, *Cartesians* is branded as contrary to the Faith. See **CARTESIANISM**.

Various Expedients have been invented by the *Cartesians*, to account for Transubstantiation, &c. without the Hypothesis of *Absolute Accidents*.—Some hold, that the usual Impressions are made on the Sense by the immediate Agency of God; and without any thing remaining of the former Nature. Others ascribe the whole to heterogeneous Matters contain'd in the Pores of the Bread, &c. which remaining unalter'd by the Transubstantiation, produce the same Sensations as the Bread produced.

Accident is also popularly used for a Contingent Effect; or something produced casually, and without any Foreknowledge or Deliberation thereof in the Agent that produced it. See **CHANCE**, **FORTUNE**, &c.

Per ACCIDENS, is frequently used among Philosophers to denote what does not follow from the Nature of a Thing, but from some accidental Quality thereof: In which Sense, it stands oppos'd to *per se*, which denotes the Nature and Essence of a Thing. See **PER SE**.

Thus, Fire is said to burn *per se*, or consider'd as Fire, and not *per accidens*: But a piece of Iron, the red hot, only burns *per accidens*; by a Quality accidental to it, and not consider'd as Iron.

ACCIDENT, in Heraldry, is an additional Note, or Mark in a Coat-Armour, not necessarily belonging thereto, but capable either of being retain'd or omitted, without altering the Essence of the Armour.—Such are *Abatement, Difference, and Tincture*. See **ABATEMENT**, **TINCTURE**, and **DIFFERENCE**.

ACCIDENTAL, something of the Nature of an *Accident*; or, that is not essential to its Subject, but indifferent thereto. See **ACCIDENT**, and **ESSENTIAL**.

Thus, Whiteness is *Accidental* to Marble; and Heat, to Iron.

ACCIDENTAL Point, in Perspective, is a Point in the horizontal Line, where Lines parallel to one another, tho' not perpendicular to the Picture or Representation, meet. See **POINT**, **PERSPECTIVE**, &c.

ACCIDENTAL Dignities, and Debilities, in Astrology, are certain casual Dispositions and Affections of the Planets, whereby they are supposed to be either strengthen'd or weaken'd, by their being in such a House of the Figure, &c.

ACCLAMATION, a confused Noise, or Shout of Joy, by which the Publick express their Applause, Esteem, or Approbation of any thing.

These were formerly used in Churches, as well as Theatres; and the Bishops and other Ecclesiastical Offices, were elected by the *Acclamations* of the People.—But their principal Use has always been at the solemn Entries of Princes and Heroes; where they are usually attended with good Wishes, Prayers, Vows, &c. See **VOV**.

Antiquity has handed down to us several Forms of *Acclamations*; as, *Dii te nobis servent, vestra salus, vestra salus*: 'The Gods preserve you for us; your Safety, our Safety.'—*Is te omnia, per te omnia habemus, Antonine*.

—*Lampridius* relates, that at the Entry of *Severus*, the People cried out, *Salve Roma, quis istum Alexander*. 'Oh Rome, be safe; since Alexander is safe.'—*M. Brijfow*, in his Treatise of *Formulas*, enumerates various sorts of *Acclamations*, used by the Senate, the Army, &c.

The Hebrews used to cry *Hosanna*.—The Greeks, *Agathe Tyche*, that is, Good Fortune. See **HASANNA**.

ACCLIVIS, in Anatomy, a Muscle, otherwise called *Obliquus Ascendens*. See **OBLIQUUS ASCENDENS**.

ACCLIVITY, the Steepness, or Slope of a Line or Plane inclined to the Horizon; reckon'd upwards. See **INCLINED PLANE**.

The Ascent of a Hill is an *Acclivity*; the Descent of the same a *Declivity*. See **DECLIVITY**.

Some Writers of Fortification, use *Acclivity* for *Talus*. See **TALUS**.

The Word is compounded of the Latin *ad*, and *clivus*, Hill, Eminence.

ACCOLA, properly denotes an Husbandman who came from other Parts to till the Land, *Et quod adveniens terram colat*; by which he is distinguish'd from *lucola*. *ff. Accola non propriam, propriam colat lucola terram*. Du Fresne.

ACCOLADE, a Ceremony anciently used in the conferring of Knighthood. See **KNIGHT**.

The *Accolade* consisted in the King's laying his Arms about the young Knight's Neck, and embracing him; in token of Friendship.—After the *Accolade*, the Prince giving him a little Blow on the Shoulder with the Flat of a Sword, he forthwith enter'd into the Profession of Arms.

The Word is *French*, and literally denotes an Embrace, or Hugging; being form'd of *ad*, and *col*, Neck.

ACCOMMODATION, in Philosophy, the Application of one thing, by Analogy, to another. See **ANALOGY**.

Thus, to know a thing by *Accommodation*, is to know it by the Idea of a similar thing refer'd thereto.

A Prophecy of Scripture is said to be fulfill'd various ways; *Prophely*, as when a thing foretold comes to pass; and *Improphely*, or by way of *Accommodation*, when an Event happens to any Place or People, like to what fell out some time before to another.—Thus, the Words of *Isaiah*, spoke to those of his own Time, are said to be fulfill'd in those who liv'd in our Saviour's; and are *accommodated* to them: *Te Hypocrites, well did Isiahs prophesy of you*, &c. which same Words, *St. Paul* afterwards *accommodates* to the Jews of his Time.—This Method of explaining Scripture by *Accommodation*, serves as a Key for solving some of the Difficulties relating

relating to the Prophecies. See TYPE, PROPHECY, &c.

On many Occasions, a Man finds it expedient to translate by *Accommodation*: Thus, the Word *Librarian*, Scrivener, may be translated, by *Accommodation*, a *Printer*; as it originally signifies those who made it their Business to furnish Copies of Books, before the Invention of Printing.

ACCOMMODATION, is also used for an amicable Agreement, or Composition between the two contending Parties.—The Process is grown so intricate and perplex'd, that there is no Hope of getting out of it but by an *Accommodation*.

Accommodations are frequently effected by means of Compromise and Arbitration. See COMPROMISE, and ARBITRATION.

ACCOMPANIMENT, something attending, or added as a Circumstance to, another; either by way of Ornament, or for the sake of Symmetry, or the like. See CIRCUMSTANCE.

The Musick, in Dramatic Performances, should only be a simple *Accompaniment*.—The Organists sometimes apply the Word to several Pipes which they occasionally touch to accompany the Treble; as the Drone, Flute, &c.

In Heraldry, the *Accompaniments* are all such things as are applied about the Shield, by way of Ornament; as the *Beils*, *Mantling*, *Supporters*, &c. See ESCUTCHEON, SHIELD, &c.

A Thing is also said to be *accompanied*, *accompany*, when there are several Bearings or Figures about some one principal one; as a Sailer, Bend, Fels, Chevron, or the like.

ACCOMPLICE, *Complice*, one that has a hand in a Business; or is privy in the same Design or Crime with another. See ACCESSORY, PRIVY, &c.

ACCOMPLISHMENT, the entire Execution, Achievement, or fulfilling of something propos'd, or undertaken.

The *Accomplishment* of the Prophecies of the Old Testament, in the Person of our Saviour, is the great Mark of his being the Messiah. See PROPHECY.

There are two ways of *accomplishing* a Prophecy; *directly*, and by *Accommodation*. See ACCOMMODATION.

The Reverend Mr. Sykes has a particular Inquiry into the Meaning of those Words us'd by the Evangelist, *That it might be fulfill'd*, or *accomplish'd*, which was *spoke by the Prophets*: where he shews, that the Word *πληρωθῆναι*, *fulfill'd*, does not necessarily refer to a Prediction of a future Event *accomplish'd*; but frequently a mere Accommodation of Words, borrow'd from some other Author, and accommodated to the present Occasion. See TYPE.

ACCORD, in Musick, is more usually call'd *Concord*. See CONCORD.

The Word *Accord* is French, form'd, according to some, from the Latin *ad cor*; but others, with more probability, derive it from the French *Corde*, a String, or Cord; on account of the agreeable Union between the Sounds of two Strings struck at the same time. See CHORD.

Whence also some of the Consonances in Musick come to be called *Tetrachord*, *Hexachord*, &c. which are a *fourth*, and a *sixth*. See TETRACHORD, &c.

M. Carre, in the Memoirs of the Royal Academy of Sciences, lays down a new general Proposition, of the Proportion which Cylinders are to have, in order to form the *Accords* or Consonances of Musick. And it is this—That the solid Cylinders, whose Sounds yield those *Accords*, are in a triplicate and inverse Ratio of that of the Numbers which express the same *Accords*.

Suppose, e. g. two Cylinders, the Diameters of whose Bases and Lengths, are as 3 to 2; 'Tis evident their Solidities will be in the Ratio of 27 to 8, which is the triplicate Ratio of 3 to 2: We say, that the Sounds of those two Cylinders will produce a Fifth, which is express'd by those Numbers; and that the biggest and longest will yield the grave Sound, and the smallest the acute one.—And the like of all others. See SOUND, GRAVITY, and ACUTENESS.

ACCORD, in Law, is an Agreement between two, at the least, to satisfy an Offence that the one hath committed against the other; whether it be a Trepass, or such like thing, for which he hath agreed to satisfy him.—This, if executed, becomes a good Bar in Law to any Suit to be brought for the same Matter.

ACCOUNT, or *ACCOMPT*, a *Calculus*, or Computation of the Number of certain things. See CALCULUS, and NUMBER.

There are various Ways of *accounting*; as, by Enumeration, or setting one by one; and by the Rules of Arithmetic, Addition, Subtraction, &c. See ARITHMETIC, ADDITION, SUBTRACTION, &c.

We *account* Time by Years, Months, &c. The *Greeks* accounted it by Olympiads; the *Romans* by Inditions, Lustras, &c. See TIME, YEAR, OLYMPIAD, &c.—We *account* Distances by Miles, Leagues, &c. See MILE, LEAGUE, DISTANCE, &c. see also COMPUTATION.

Money of ACCOUNT, is an imaginary sort of Species, contriv'd for the facilitating and expediting the taking and keeping of *Accounts*.—Such are *Pounds*, *Angels*, &c. See MONEY of Account; see also POUND, &c.

ACCOUNT is also a Relative Term, used in respect of a Company, or Society, when two or more Persons have receiv'd, or disburs'd for each other; or when this has been done by their Order or Commission. See COMPANY, COMMISSION, FACTORAGE, &c.

ACCOUNT, or *ACCOUNTS*, is also used collectively, for the several Books or Registers which Merchants keep of their Affairs, and Negotiations. See BOOK-KEEPING, &c.

Hence, to make out an *Account*; to pass one's *Accounts*, &c.—Bankrupts are oblig'd to surrender their *Accounts*. See BANKRUPT, &c.

ACCOUNT, or *ACCOMPT*, in a Legal Sense, is a particular Detail, or Enumeration deliver'd to a Court, a Judge, or other proper Officer or Person, of what a Man has receiv'd or expended on the Behalf of another, whose Affairs he has had the Management of.—

In the Remembrancer's Office in the Exchequer, are enter'd the States of all the *Accounts* concerning the King's Revenue, for Customs, Excise, Subsidies, &c. See REMEMBRANCER; see also REVENUE, CUSTOM, EXCISE, &c.

The great *Accounts*, as those of the Mint, Wardrobe, Army, Navy, Tenths, &c. are called *Imprest Accounts*. See IMPREST.

All *Accounts* which pass the Remembrancer's Office, are brought to the Office of the Clerk of the Pipe. See PIPE; see also TALLY, CLERK, AUDITOR, &c.

ACCOUNT, in Law, is particularly used for a Writ which lies where an Agent, Steward, or other Person, who ought to render an *Account*, refuses to give his *Account*. See STEWARD.

Chamber of ACCOUNTS, in the French Polity, is a sovereign Court, of great Antiquity, wherein the *Accounts* relating to the King's Revenue are deliver'd in, and register'd. See CHAMBER.

This answers pretty nearly to the Court of Exchequer in England. See EXCHEQUER.

There are Presidents of *Accounts*, Masters of *Accounts*, Correctors of *Accounts*, &c.

ACCOUNTANT, or *ACCOMPTANT*, a Person, or Officer appointed to keep or make up the *Accounts* of a Company, Office, Court, or the like. See ACCOUNT.

There are *Accountants* in the Customhouse, the Excise, &c. See EXCISE, and CUSTOMHOUSE.

The *ACCOUNTANT-General* of the Court of Chancery. See CHANCERY.

ACCOUNTING- or *ACCOMPTING*- or *COUNTING*-House: See COUNTING-HOUSE, GREEN-CLOTH, &c.

ACCOMPTREMENT, an ancient Term, used for an *Habillément*; or a part of the Apparatus, and Furniture of Soldier, Knight, or even a Gentleman. See HABILLÉMENT.

The Word is French; form'd from the ancient German, *Kuffler*.—In some Cathedrals in France, e. g. at Bayeux, the Name *Contre* is given to the Sacrificer, or Officer who has the Care of furnishing and setting out the Altar, in the Church; call'd in German *Kuffler*, *wise*.

ACCRETION, the Growth or Increase of an organical Body, by the Accretion of new Parts. See NUTRITION.

Accretion is of two Kinds; the one, consisting in an external Apposition of new Matter.

This is what we otherwise call, *Justapposition*; and 'tis thus Stones, Shells, &c. are supposed to grow. See STONE, and SHELL.

The other is by some fluid Matter received into proper Vessels, and gradually brought to adhere or grow to the Sides thereof.

This is what we call, *Introspection*; and 'tis thus Plants and Animals are nourish'd. See PLANT, and ANIMAL; see also NUTRITION.

ACCRETION, *ACCRETION*, in the Civil Law, a vague or vacant Portion of Ground, join'd or united with Grounds held or possess'd by another.—A Legacy given to two Persons jointly, *tam re quam verbis*, falls wholly to him that survives the Testator, by Right of *Accretion*.

Alluvion is another Species of *Accretion*. See ALLUVION.

ACCURUE, or *ACCREW*, denotes something to fall by way of Accretion, or Accretion, to another. See ACCRETION, and ACCESSION.

ACCUBITOR, an ancient Officer of the Emperors of *Constantinople*; whose Business was to lie near the Emperor.

The Word is Latin, form'd of the Verb *Accumbo*, I lie by; whence *Accumbatio*, that State or Posture of the Body when we sit, and at the same time lean backwards.

ACCUMULATION, the Act of *heaping*, or amassing several things together.—The Word is compounded of *ad*, and *cumulus*, heap.

The Lawyers speak of an *Accumulation* of Titles; as, when a Person claims Lands, a Benefice, or the like, in Virtue of several Titles, or Pretensions of different Kinds; e. g. by Death, by Resignation, &c.

In a like Sense, we read of *Accumulative* Treason, &c. See TREASON.

ACCURSED, something that lies under a Curse, or under a Sentence of Excommunication. See ANATHEMA, EXCOMMUNICATION, &c.

ACCUSATION, *Accusatio*, in the Civil Law, the intending a criminal Action against any one, either in one's own Name, or that of the Publick. See ACTION, and CRIMINAL.

By the Roman Law, there was no publick Accuser, for publick Crimes; every private Person, whether interrested in the Crime or not, might accuse, and prosecute the Accused to Punishment or Absolution.

But the Accusation of private Crimes was never received, excepting from the Mouths of those who were immediately interrested in them.—None but the Husband could accuse his Wife of Adultery. See ADULTERY.

Indeed, it was not properly an Accusation except in publick Crimes; in private ones it was call'd simply *Actio*, or intending an Action, *intendere Actionem*, or *litens*. See ACTION.

Cato, the most innocent Person of his Age, had been accused 42 times; and absolved 42 times. See ABSOLUTION.

When the Accused accuses the Accuser, it is called *Recriminatio*; which is not admitted till the Accused has been first purg'd. See RECRIMINATION.

By the cruel Laws of the Inquisition, the Accused is forced to accuse himself of the Crime objected to him. See INQUISITION.

It has formerly been the Custom in some Parts of Europe, where the Accusation was very heavy, either to decide it by Combat, or at least to make the Accused purge himself by Oath; which, however, was not admitted, excepting a certain Number of his Neighbours and Acquaintance swore together with him. See OATH, COMBAT, OATH, PURGATION, &c.

ACCUSATIVE, in Grammar, the fourth Case of Nouns that are declined. See CASE, and NOUN.

Its Use may be conceived from this, That all Verbs which express Actions that pass from the Agent, as, to beat, to break, &c. must have Subjects to receive those Actions: for, if I beat, I must beat something; so that a Verb evidently requires after it a Noun, or Name, to be the Subject or Object of the Action express'd. See VERB.

Hence, in all Languages which have Cases, the Nouns have a Termination which they call *Accusative*; as, *amo Deum*, I love God; *Cæsar vincit Pompeium*, Cæsar overcame Pompey.

In English, we have nothing to distinguish this Case from the Nominative, but as we ordinarily place Words in their natural Order, it is easily discover'd, the Nominative constantly preceding, and the *Accusative* following the Verb.—Thus, when we say, the Prince loves the Princess, and the Princess loves the Prince: The Prince is the Nominative in the first, and the *Accusative* in the last; and the Princess the *Accusative* in the first, and the Nominative in the second. See NOMINATIVE.

ACEPHALUS, or ACEPHALOUS, something without a Head. See HEAD.

The Word is compos'd of the Privative *a*, and *kephala*, *Cephalus*, Head.

Pliny represents the *Blemmyes* as a Headless or *Acephalous* Nation. See BLEMMYES.—*Acephalous* Worms are frequent. See WORM, and VERMES.

ACEPHALUS is more frequently applied, in a figurative Sense, to those destitute of a Leader, or Chief.

Thus, the Name *Acephali* is sometimes applied to such Priests or Bishops, as are exempted from the Discipline and Jurisdiction of their ordinary Bishop or Patriarch. See EXEMPTION, PRIVILEGE, PECULIAR.

Anastasis the Library-Keeper, calls this Exemption from the Jurisdiction of a Patriarch, *Autocephalia*. See PATRIARCH.

We find a great Number of Canons of Councils, Capitulars of Princes, &c. against *Acephalous* Clerks, &c.

In our ancient Law-Books, the Term is also used for those poor People who had no proper Lord; as holding nothing in Fee, either of King, Bishop, Baron, or other Feudal Lord. *L. Hen. I.*

In Ecclesiastical History, *Acephali* frequently occurs as the Denomination of divers Sects: Particularly, —1^o, Of those who in the Affair of the Council of *Ephesus*, refused to follow either *St. Cyril*, or *John of Antioch*.—2^o, Of certain Hereticks of the Vth Century, who at first follow'd *Peter Mongus*; but afterwards abandon'd him, upon his subscribing to the Council of *Chalcedon*; they themselves sticking to the Errors of *Eusebius*.—3^o, Of the Adherents of *Severus of Antioch*; and of all in general who refused to admit the Council of *Chalcedon*.

Some will have the Word properly to denote *Hesitator*; and suppose it applied on this Occasion, by reason they stood neuter, or dubious, hesitating about coming into the Council: But the former Opinion is the more probable; *Acephalous* being never used in the latter Sense.

In some Writers, the *Acephalous* Hereticks are called *Acephales*, *Acephalite*.

ACERB, *ACERBUS*, a compound Taste, consisting of sour, with the Addition of a degree of Roughness. See TASTE.

Such is the Taste of all Fruits before they are ripe. See FRUIT, MATURITY, &c.

The Physicians usually make *Acerb* an intermediate Savour between Acid, Astringent, and Bitter. See ACID, &c.

All Matters which come under this Denomination are Astringent. See ASTRINGENT.

ACERRA, in Antiquity, a kind of Altar, erected near the Gate of a Person dead, among the Romans; whereon his Friends and Familiars daily offer'd Incense, till the time of his Burial. See ALTAR, FUNERAL, &c.

ACETABULUM, in Antiquity, a little Vase or Cup, used at Table; to serve up things proper for Sauce, or Seasoning: much after the manner of our Salts, and Vinegar-Cruets. See VASE, and VESSEL.

Hence, *Agricola*, in his Treatise of Roman Measures, L. I. takes the Name to have been form'd from *Acetum*, Vinegar; as supposing it principally destin'd to serve Vinegar on.

ACETABULUM is also used for a Roman Measure, in use chiefly in Medicine, for liquid Matters. See MEASURE.

The *Acetabulum* contain'd a Cystus and a half, as is proved by *Agricola*, from two Verles of *Favonius*; who speaking of the Cystus, says, it weighs ten Drachms; and the *Oxibaphus* or *Acetabulum*, 15.

Bis quinque hunc faciunt Drachme, si appendere tentes, Oxibaphus fies si quinque addatur ad idas.

Binet, in his Treatise of Weights and Measures prefix'd to his Translation of *Pliny*, makes the *Acetabulum* of Oil weigh two Ounces and two Scruples; the *Acetabulum* of Wine, two Ounces, two Drachms, a Grain, and a third of a Grain; and the *Acetabulum* of Honey, three Ounces, three Drachms, a Scruple, and two Siliques. See CYATHUS, COYLE, &c.

ACETABULUM, is also used in Anatomy, for a deep Cavity, in certain Bones, appointed for the Reception of the large Heads of other Bones, in order to their Articulation. See BONE, and ARTICULATION.

Thus, the Cavity of the *Ilium*, or Huckle-Bone, which receives the Head of the Thigh-Bone, is called *Acetabulum*, *Cotylo*, or *Cotyloides*. See ISCHIUM, FEMUR, COXYLE, &c.

The *Acetabulum* is lined and tipp'd round with a Cartilage, whose circular Margin is called *Supercalcium*.—In its bottom lies a large mucilaginous Gland. See MUCILAGINOUS, &c.

ACETABULUM is also used by Anatomists in the same Sense with *Cotyloides*. See COXYLOIDES.

ACETARIA, a Salad. See SALAD.

The Word is form'd of *Acetum*, Vinegar; in regard that Fluid is commonly used for the Seasoning thereof.

ACETOUS, something relating to *Acetum*, or Vinegar. See ACETUM, and VINEGAR.

Thus, we say, an *Acetous* Taste; *Acetous* Qualities, &c. Wine, and all vinous Liqueurs, are render'd *Acetous* by exciting their Salts, and tempering or abating their Sulphure. See WINE, and VINOUS.

The Chymists mention divers *Aceta*, or *Acetous* Liqueurs; as, *Acetum Acidissimum*; made of distill'd Vinegar, with the Addition of some Alkaline, or Volatile Salt. See ALKALINE.—*Acetum Phlogophorum*, a four kind of Liqueur; made by dissolving a little Butter of Antimony in a great deal of Water. *Boyle*.

ACETUM, in Medicine, &c. the same with *Vinegar*; the Properties, Uses, and Preparation whereof, see under the Article VINEGAR.

The Word is pure Latin; form'd of *Acvo*, I am sharp. See ACID.

There are several Medicines in the Shops, whereof this Liqueur is the Basis; as, *Acetum Distillatum*, distill'd Vinegar; chiefly used in other Preparations for Dissolution, and Precipitation. See DISTILLATION, DISSOLUTION, PRECIPITATION, &c.

Spiritus Aceti, Spirit of Vinegar; made by drenching Copper Filings or Spittle Dust with distill'd Vinegar, then evaporating it till the Fumes of the Vinegar cannot be smelt; the Saturation and Evaporation to be again repeated, till the Metal be satiated; which being then distill'd, the Spirit comes over.—Its Qualities and Uses are much the same with those of the former, only more powerful.

Acetum Rosarum, Vinegar of Roses; made of Rose-buds infused in Vinegar 40 or 50 Days; the Roses then press'd out, and the Vinegar preserv'd.—It is chiefly used by way of Embrocation on the Head and Temples, in the Head-ach.

After the same manner is made *Acetum Sambucinum*, Vinegar of Elders; *Acetum Antiochianum*, Vinegar of Rose-maries, &c.

The *German Dispensatories* abound with medicated Vinegars, chiefly aim'd against pecciliential Diseases; but they are not used among us.—The College retains some of 'em, as the *Aetium Theriacale Norimbergense*, but it is never prescrib'd.

ACHAT, in our Law-French, signifies a Contract, or Bargain.

Purveyors were by Act of Parliament 35 Ed. III. ordained to be thenceforth called *Abators*. See PURVEYORS.

ACHE, or AEM, a painful Ailment in any part of the Body. See PAIN, and DISEASE.

Aches are either Scorbutick, Rheumatick, owing to violent Strains, or the like.

Head-Ach. See HEAD-ACH, and CEPHALALGY.

ACHERNER, or ACHARNER, in Astronomy, a Constellation of the first Magnitude in the Sign *Pisces*.—Its Longitude, Latitude, &c. See under the Article *PISCES*.

ACHILLES, a Name which the Schools give to the principal Argument allogg'd by each Sect of Philosophers in their behalf. See SECT.

In this Sense, we say, this is his *Achilles*; that is, his Master-Proof: Alluding to the Strength and Importance of *Achilles* among the *Greeks*.

Zeno's Argument against Motion, is peculiarly term'd an *Achilles*.—That Philosopher made a Comparison between the Swiftness of *Achilles*, and the Slowness of a Tortoise; whence he argu'd, that a slow Movable that precedes a swift one by ever so small Distance, will never be outrun by it. See MOTION.

The ancient Botanists gave the Name *Achilles* to several Plants; one of which is said to be the same with our Milkewort; and took its Name from *Achilles*, who, having been the Disciple of *Chiron*, first brought it into use for the Cure of Wounds and Ulcers.

The Tendon of *ACHILLES*, *Corda Achillis*, is a large Tendon, form'd by the Union of the Tendons of the four Muscles of the Foot, called *Extensores*. See TENDON, and FOOT.

It is so called, because the fatal Wound whereby *Achilles* is said to have been slain, was given there.

ACHILLEIS, or ACHILLIEN, a celebrated Poem of *Statius*, wherein he propos'd to deliver the whole Life and Actions of that Hero. See POEM.

It only takes in his Infancy, the Poet being prevented from proceeding, by Death.

The *Achilleis* is of the Heroic or Epic Kind; but extremely faulty in the Plan, or Fable. See FABLE, &c.

'Tis a Point controverted among the Critics, whether the whole Life of a Hero, e.g. of *Achilles*, be a proper subject Matter of an Epic Poem. See EPIC, and HEROIC.

ACHOR, ACHOROUS, in Medicine, the third Species or Degree of a *Tinea*, or Scald Head. See TINEA.

Achores are a sort of spreading Ulcers, which break the Skin into a Number of little Holes, out of which oozes a viscid Humour.—*Achores* only differ from *Fevi* in this, that their Holes are smaller.

ACHRONICAL, in Astronomy, is applied to the Rising of a Star when the Sun sets; or to the Setting of a Star when the Sun rises. See RISING, and SETTING.

The *Achronical Rising of Mars*, who is then found to be nearer the Earth than the Sun, has been one great Occasion of exploding the ancient *Ptolemaic System*, which places the Sun in the Centre of the World, and *Mars* beyond the Sun. See EARTH, MARS, &c.

The *Achronical* is one of the three Poetical Risings and Settings of the Stars. See POETICAL.

The Word comes from the Greek *α* and *χρονος*, Time.

ACID, ACIDUM, any thing which affects the Tongue with a Sense of Sharpness, and Sourness. See TASTE.

Acids are usually divided into *manifest* and *dubious*.

The *Manifest Acids*, are those above defined, which impress the Idea sensibly.—Such are *Vinegar*, and its Spirit; the Juices of *Citrons*, *Oranges*; Spirit of *Nitre*, Spirit of *Alum*, Spirit of *Vitriol*, Spirit of *Sulphur per Campanam*, Spirit of *Sea Salt*, &c. See VINEGAR, NITRE, VITRIOL, ALUM, SULPHUR, &c.

Dubious Acids, are those which do not retain enough of the Acid Nature to give sensible Marks thereof on the Taste, but agree with the *Manifest Acids* in some other Properties, sufficient to refer 'em to the same Class.—Hence it appears that there are some Characters of *Acidity* more general than that of the sharp Taste; tho' tis that Taste is chiefly regarded in the Denomination.

The great and general Criterion, then, of *Acids*, is that they make a violent Effervescence, when mix'd with another sort of Bodies, called *Alkalies*. See EFFERVESCENCE.

Yet is not this Property alone universally to be depended on, to determine a Body an *Acid*, without the joint Consideration of the Taste, and the Changes of Colour producible in other Bodies thereby.—To distinguish *dubious Acids* from *Alkalies*, mix 'em with a blue Tincture of *Viols*: If they turn it red, they are of the *Acid* Tribe; if green, *Alkaline*. See ALKALY.

Acids are all of the Tribe of *Salts*; and compose a particular Species thereof, called *Acid Salts*. See SALT.

Add, that the *Acid Salts* are all found to be volatile; by which they are distinguish'd from the rest, which are either fix'd, or at least have a urinous, instead of an acid Taste. See VOLATILE, FIX'D, and URINOUS.

Some late Chymical Philosophers have even made it very probable, that 'tis the *Acid* is the saline Part or Principle in all Salts.—They consider it as a subtle, penetrating Substance, diffus'd thro' the several Parts of the Globe; which, according to the different Matters it happens to be united withal, produces different Kinds of Bodies: If it meets a fœcil Oil, it converts it into Sulphur; if it be received into the *Lapis Calcarius*, it conglutates with it, and becomes *Alum*; with Iron it grows into green *Vitriol*; with Copper, into blue *Vitriol*, &c.

Of this Sentiment is Sir *I. Newton*.—'In decomposing Sulphur, says that Author, we get an Acid Salt, of the same Nature with Oil of Sulphur per Campanam; which same Acid abounding in the Bowels of the Earth, unites sometimes with Earth, and thus makes *Alum*; sometimes with Earth and Metal, and makes *Vitriol*; and sometimes with Earth and Bitumen, and thus compounds Sulphur.' *Opticks*.

In effect, all our native Salts, tho' without any Mixture from Art, are yet found to be real Mixtures; and their Composition and Decomposition is easily made.—'As many as they are, they may be all reduced, according to *M. Homberg*, to three Kinds, viz. Salt-petre, Sea-Salt, and *Vitriol*; each whereof has its several Species. Of the Combination of these with different oily Matters, are all the other Salts produced. By the Analyses we have made of 'em, they all appear to be compos'd of an aqueous, an earthy, a sulphurous, and an acid Part; but the *Acid* we hold the pure Salt: This makes our Chymical Principle Salt, the common Basis of all Salts; and which, antecedent to its Determination to any particular Species, appears to be one similar, uniform Matter, the never found alone, but always accompany'd with some sulphureous Mixture or other; which determines it to some one of the three sorts of Fossil Salts abovemention'd.' *Mém. de l'Acad. R. des Sciences*, An. 1708. See PRINCIPLE.

The *Acid*, accompany'd with its determining Sulphur, never becomes sensible to us, except when lodg'd either naturally in some earthy Matter, or artificially in an aqueous one.—In the first Case, it appears under the Form of a crystalliz'd Salt; as Salt-petre, Sea Salt, &c. In the second, it appears in form of an *Acid Spirit*; which, according to the Determination of the Sulphur accompanying it, is either Spirit of Nitre, or Spirit of Salt, or Spirit of *Vitriol*.

What is here spoke of the three simple fossil Salts, may be equally applied to all the compound Salts of Vegetables and Animals, with this difference, that the latter have always a larger Proportion of the earthy Matter than the simple ones, when in form of a concrete Salt; and a larger Proportion of the aqueous Matter, when in form of an acid Spirit.—And hence we account for two important Phenomena; 1^o, that the acid Spirits of Animal and Fossil Salts, are always weaker, and less penetrating, as well as lighter in Weight, than those of the Fossil Salts: 2^o, That after a vehement Distillation, they leave a larger quantity of earthy Matter behind them than the Fossil do.

The Salt naturally contain'd in Plants, may be consider'd as a Mixture of Earth, Oil, a little Water, and an acid Salt: This last Ingredient being separated from the Plant with a vehement Fire, shoots into a new Salt, which sometimes retains an acid Taste, as in the Tartar of Wine; sometimes it assumes a Sweetness, as in Sugar; sometimes is bitter, as in Quinquina; and sometimes almost insipid, as in Sage. This, *M. Homberg* calls the essential Salt of the Plant; which, by a gentle Distillation, resolves into an insipid Water, an acid Liqueur, and a ruddy fetid one; containing part of the acid Salt, and part of the ferid Oil of the Plant: of the Combination of which, is compos'd a particular Kind of ferid Salt, smelling like Urine, called the Volatile Salt or Volatile Alcaly Salt of the Plant: And the Caput Mortuum remaining, being reduc'd into Ashes, is separated by Lixivation into one Part of fix'd Alcaly Salt, and another of insipid Alcaline Earth.—Add, that the essential Salt always dissolves entirely in Water, even the earthy Part join'd with it. But if the same Salt have been robb'd, by means of Fire, of a great part of its *Acid*; the earthy Part will not wholly dissolve, but a Sediment of insipid Earth, indissoluble in Water, will be found at bottom; to which, if an acid Spirit be added, it then becomes entirely dissoluble in Water: Whence it may be fairly concluded, that the other Part of the Ashes, before dissolved in the Water, and which after Evaporation appears in form of a fix'd lixivial Salt, was only dissolved by Virtue of the *Acid* it contain'd; or as having retain'd enough of the *Acid* to effect a Dissolution.

Again, when the Earth of the Plant, satiated with its *Acid*, becomes a crystalliz'd Salt; no more of the same *Acid* can be introduc'd into it: whereas the lixivious Salt drawn from

from the *Athes*, does not crystallize, but still greedily imbibes the *Acid* Spirit.

Hence it may be probably concluded, that the Lixivious, or fix'd Alcali Salt, is no other than the Earth of the Plant, which, notwithstanding the Violence of the Fire, has retain'd a little Portion of its *acid* Salt, sufficient to dissolve it in Water; still reserving a sufficient Number of *Levity* or Pores, to lodge the first *Acid* that shall offer it self, in lieu of that driven out of it by the Fire.—And as the Name *Alcali* is only given to a Salt, in respect of its imbibing and retaining an *Acid* presented to it, in order to the producing a crystalliz'd Salt; the Lixivious Salts of Plants may be said to be more, or less Alcaline, as they absorb more or less of the *Acid*; or, which amounts to the same, as they contain more or fewer Vacuities to be fill'd with *Acids*.

An Alcali, after it has been fully satiated with one sort of *Acid*, will yet sometimes admit and retain part of another *Acid*: This is chiefly observed where a Vegetable *Acid* has been received first, and a Fossil one is offer'd after. And it seems owing to this, That the Vegetable *Acid* having undergone a greater degree of Fermentation in the Body of the Plant, is become rare and pervious, in respect of the more fluid and weighty Particles of the Mineral *Acid*; which therefore force a way in.

The same is always the Case, where an *Acid* appears an Alcali with respect to another *Acid*; that is, where, of two *Acid* Spirits, one whereof has a Mixture of some Alcali; the rarer of the two having possess'd the Pores of the Alcali, is compress'd by the other denser *Acid*.—Thus, a Pin-cushion, tho' ever so full of Cotton, will admit a good Number of Pins.

Now, urinous Salts are Alkalies as well as the Lixivious Kind, *i. e.* they greedily imbibe *Acids*, retain 'em, and together with 'em compose Salts which crystallize.—But their Volatility seems to make it plain, that they are not, like the former, a Composition of a mere earthy Matter, with a little *Acid*; in regard a mere Earth can never become Volatile by such Admixture. Yet is there a great deal of Reason to imagine, that their Composition is no other than a Part of the same Matter, which would have produced the Lixivious Salt, intimately mix'd with a deal of the fecid Oil of the Plant; and that the Oil is the sole Cause of the Volatility of these Salts.

M. Homberg, in his *Essai du Sel principe*, makes three Classes of *Acid* Salts, corresponding to the three Species of Sulphurs wherewith the primitive *Acids* may be combin'd.

The first Class consists of such as contain an Animal, or a Vegetable Sulphur, which amount nearly to the same.—To this Class belong all the diffus'd *Acids* of Plants, Fruits, Woods, &c. which must necessarily retain part of the Oil of the Plant, which is their Sulphur. To this Class also belongs Spirit of Nitre; as being a Substance procur'd from the Excrements of Animals, &c.

The second Class is of those which contain a bituminous Sulphur.—Such are Vitriol, common Sulphur, and Alum; which are all usually procur'd from a Mineral Stone, where-in Bitumen is the prevailing Ingredient.

The third is of such as contain a more fix'd Mineral Sulphur, approaching the Nature of a metalline one.—Such are the *Acids* drawn from Sea Salts and Sal Gemma's; the latter of which is chiefly found in Places near Mines of Metals, and the former probably arises from Rocks, or Veins of Sal Gemma running into the Sea, and there dissolved.

From the peculiar Nature and Properties of the Sulphur thus accompanying the several Kinds of *Acid* Salts, their different Phenomena and Effects are to be accounted for.—See the Article SALT.

The *Acids* of Animals are doubtless chiefly derived from Plants, in the ordinary way of Food, and Nutrition; and those of Plants, again, from those of Minerals. So that there should seem to be but one Spring of *Acidity*: The Diversities arise from what happens to 'em in passing thro' the organiz'd Bodies of Plants and Animals. Hence it is, that Plants and Animals especially, yield a very volatile Alcali Salt; whereas, the Salts of Minerals are found altogether *acid*, and much more fix'd and concrete; tho' 'tis the same Matter in both Cases, under different assumed Forms.

Thus, the younger Lemery argues, that as Animals feed on Plants, and reciprocally, in the Instance of Salt-petre, &c. Plants feed on Animals; inasmuch as their Vegetation is excited by Manure; it happens, that what was real Salt-petre in Plants, becomes only a nitrous Sal Ammoniac in Animals, and vice versa.—The same Author accounts for this double Metamorphosis, by supposing that the nitrous Principle remains the same in both Cases, and in both Cases it attach'd to the same Matrix, with this only difference, that the Matrix becomes more earthy in Plants, and by that means, fix'd; and in Animals, loses its earthy Parts, and assumes other oily ones, which render it volatile. *Mém. de l'Acad.* An. 1717.

As to the Manner wherein *Acids* act on Alkalies, the great Number of little Bubbles produced during their Action, and

the Heat arising thereupon.—M. Homberg explains it thus.—The Matter of Light, which he supposes to be the chymical Principle, Sulphur, and to possess the whole Extent of the Universe; is kept in a perpetual Motion by the continual Impulses which the Sun and Fix'd Stars give it: But this Motion, happening on some Occasions to be slacken'd, may be retriev'd again, and augmented by the near Approach of Flame, which that Author supposes the only Matter capable of giving Motion to Light.—This Motion of Light cannot proceed, without continually striking against the solid Bodies, and even passing thro' all the porous ones, it meets in its way. See SCATTERING, and FIRE.

Suppose, now, *Acids* to be little, solid, pointed Bodies, swimming at liberty in an aqueous Fluid, and kept in continual Motion, by the repeated Impulses of the Matter of Light; and Alkalies, to be spongy Bodies, whose Pores have formerly been fill'd with the Points of *Acids*, and which still retain the Dents or Impressions thereof, and are ready to receive the like Points when driven within 'em. 'Tis easy to conceive, that if some of those porous Alkalies float in the same Liqueur wherein the solid *Acids* float; these latter, being impell'd by the Matter of Light, will enter the Cavities of the former, which are framed as it were on purpose for their Reception; and that they will do it the more readily, if the Motion of the Matter of Light, wherewith they are impell'd, have been accelerated by external Heat.

This Introduction of *Acids* into the Body of Alkalies, is, in all appearance, effected with a great Velocity and a deal of Friction; inasmuch as it produces so considerable a degree of Heat: And as the Pores of the Alkalies were before fill'd with an aerial Matter, which is now expell'd by the Points of the *Acids*; that Air is put in Motion, and produces the Bubbles, which are so much the more sensible, as the Heat accompanying the Action is the greater. See AIR, and HEAT.

Sir I. Newton accounts for the Effects of *Acids* in a different manner, viz. from the great Principle of Attraction. See ATTRACTION.

The Particles of *Acids*, he observes, are of a size grosser than those of Water, and therefore less volatile; but much smaller than those of Earth, and therefore much less fix'd than they.—They are endu'd with a very great attractive Force, wherein their Activity consists; it being by this that they affect and stimulate the Organ of Taste; and by this also, that they get about the Particles of Bodies, either of a metalline or stony Nature, and adhere closely to 'em on all sides; so as scarce to be separable from them by Distillation or Sublimation: and when thus gather'd about the Particles of Bodies, by the same Power they raise, disjoin, and shake them one from another; that is, dissolve 'em.' See DISSOLUTION.

By their attractive Force, also, wherewith they rush towards the Particles of Bodies, they move fluid ones, and excite Heat; shaking asunder some Particles, so as to turn them into Air, and generate Bubbles: and hence all violent Fermentation; there being in all Fermentation a latent *Acid*, which coagulates in Precipitation.' See FERMENTATION.

Acids, also, by attracting Water as much as they do the Particles of other Bodies, occasion the diffus'd Particles readily to mingle with Water, or swim or float in it; after the manner of Salts: And as this Globe of Earth, by the Force of Gravity, attracting Water more strongly than it does lighter Bodies, causes those Bodies to ascend in Water, and so upwards from the Earth; so, the Particles of Salts, by attracting the Water, mutually avoid and recede from one another as far as they can; and are thus diffus'd throughout the whole Water.

The Particles of Alkalies consist of earthy and *acid* Parts united together; but these *Acids* have so great an attractive Force, that they can't be separated therefrom by Fire; and that they even precipitate the Particles of diffus'd Metals, by attracting from them the *acid* Particles, which before had diffus'd, and kept them in Solution.' See PRECIPITATION.

If these *acid* Particles be join'd with earthy ones, in a small Quantity; they are so closely retain'd by the latter, as to be quite suppress'd and lost, as it were, in them; so that they neither stimulate the Organ of Sense, nor attract Water; but compose Bodies which are not *acid*, *i. e.* fatty and sweet Bodies; as Mercurius Dulcis, Brimstone, Luna Cornea, &c.—From the same attractive Force in these *acid* Particles thus suppress'd, arises that Property of fat Bodies, that they stick or adhere to almost all Bodies, and are easily inflammable.—Thus, the *Acid* that lies suppress'd in sulphurous Bodies, by more strongly attracting the Particles of other Bodies (earthy ones for instance) than its own; promotes a gentle Fermentation, produces and cherishes natural Heat, and carries it on so far sometimes, as to the Purification of the Compound; Purification arising hence, that the *acid* Particles which have long kept up the Fermentation, at length insinuate into the little Interstices that

lie between the Particles of the first Composition; and so intimately uniting with those Particles, produce a new Mixture or Compound, which cannot be return'd into its original form.' See PUTREFACTION.

Water has no great dissolving Force, because there is but a small Quantity of Acid in it; for whatever strongly attracts, and is strongly attracted, may be repated an Acid: But in such things as are dissolved in Water, the Dissolution is slowly perform'd, and without any Effervescence.' See WATER, and MENSTRUUM.

When these Acids are applied to the Tongue, or any excoriated Part of the Body; leaving the subtile Earth wherewith they were before united, they rush into the Senfory, set there as Menstruums, and disjoin its Parts; thus causing a painful Sensation.

The illustrious Author, it must be own'd, here carries the Notion of Acidity a great length: Dissolution, according to him, is only effected by Attraction, and is proportional to the degree of attractive Power in the Dissolvent; but all Bodies which attract much are Acids, on his Principle; and consequently all powerful Menstruums must belong to that Class.—And yet Spirit of Urine, which readily dissolves Iron or Copper, even in the Cold, is allow'd an Alcaly; and accordingly makes a vehement Conflict with Aqua fortis. Boyle's *Imperfect. of Chym. Doct. of Qual.*

Some chymical Philosphers, in the last Century, endeavour'd to derive the Qualities of Bodies, and the other Phenomena of Nature, from the Consideration of Alcaly and Acid. See ALKALY.

It has been a Point much controverted among the Physicians, whether or no there be any sincere Acid in human Blood? The generality stand for the Negative; and all Mr. Boyle's Experiments, in his *History of Blood*, seem to give the thing on that side.—But the accurate M. Homburg has at last turn'd the Scale the other way; and shewn, by repeated Experiments, that an Acid, or what is commonly call'd so, and judg'd such by the Change of Colour it causes in a Tincture of Violets, may be drawn from the Blood of all Animals in general, and human Blood in particular. *Mem. de l'Acad. Roy. des Sciences. An. 1712.*

Hence, and from the careful Analyses that Author has made of the Flesh and Excrements of divers Animals, particularly Man; he infers, that the Acid, or Sea Salt of the Aliment taken into the Bodies of Animals; is not destroy'd therein, but passes into the Substance of 'em: the superfluous Portion being return'd unalter'd along with the Excrements. See BLOOD, DIGESTION, &c.

Acids are prescrib'd in Medicine, as Coolers, Antifebricks, Antifuribeticks, Diaphoreticks, Alexipharmicks, &c. See SCURVY, PLAGUE, &c.

Acids, Mr. Boyle observes, 'not only disturb the Body while they continue sensibly acid; but in many Cases create Distempers, wherof they should seem the Remedies.—The they are reputed to have an incisive and resolute Virtue, and accordingly are prescribed to cut tough Phlegm, and dissolve coagulated Blood: yet there are some Acids which must evidently coagulate the animal Fluids, and produce Obstructions, with all their Train of Consequences.—Thus, it is known, that Milk readily curdles with Spirit of Sea Salt, &c.' See COAGULATION.

ACID SALTS. See ACID.—See also SALT, and SPIRIT ACID SPIRITS. See ACID.—See also PRINCIPLE.

ACIDITY, ACIDITAS, ACOR, the Quality which constitutes, or denominates, a Body, Acid; or that Sensation of Sharpness and Acrimony which Acids excite upon the Taste. See ACID, QUALITY, TASTE, &c.

A little Vitriol leaves an agreeable Acidity in Water.—Vinegar and Verjuice have different sorts of Acidity.

The Predominancy of Acidities in the Body, and their ill Effects, in coagulating the Blood, &c. is prevented by either repelling and mortifying them with Lixivious or Urinous Salts; or sheathing and absorbing 'em, with Alkalious Bodies.—Thus, Minium destroys the Acidity of Spirit of Vinegar; Lapis Calaminaris that of Sea Salt, &c. See ABSORBENT, &c.

ACIDULE, in Natural History, a Species of Mineral Waters, which discover a degree of Acidity to the Taste. See WATER.

Acidule are native Waters, impregnated with Particles of some acid Mineral; as Vitriol, Alum, Nitre, or Salt. See WATER.

Sometimes there is also a vinous Flavour join'd with the Acid; by which they become peculiarly denominat'd *Vinous Waters*. See VINOUS.

The Class of Acidule are usually very cold; whence some Authors define Acidule to be all such Mineral or Medicinal Waters as are not hot. See BATH, &c.

The Physicians also frequently include Chalybeat or Ferruginous Waters, under the Class of Acidule. See CHALYBEAT, and FERRUGINOUS.

The Word is a Diminutive of *Acidum*, which is form'd from the Greek *akis*, Point, Edge; in regard the Points of acid Substances prick and vellecite the Tongue.

We sometimes also meet with *Acidulated*, *q. d.* something wherewith acid Juices have been put, in order to give it a Coolness, and Briskness.

ACINI, in Botany, small Grains, growing in Bunches; after the manner of Grape-stones.

The Word is Latin, and literally signifies Grape-stone.

Hence, Anatomists have call'd some Glands of a similar Formation, *Acini Glandulosi*. See GLAND.

ACINIFORMIS TUNICA, the same with the *Tunica Uveae* of the Eye. See UVEA.

ACME, the Height, or Top of any thing.

The Word is Greek, *akme*, Point, Tip; of *ακμαζω*, *vigeo*, I flourish.

Acme is more especially us'd to denote the Height of a Dittemper; which is divided into four Periods by some Institution-Writers.

1^o, The *Arche*, the Beginning, or first Attack.—2^o, *Anabasis*, the Growth.—3^o, *Acme*, the Height.—And, 4^o, *Paracme*, which is the Declension of the Dittemper. See DISEASE.

ACOEMETES, ACOZMETI, a Name given to certain Monks in the ancient Church, who flourish'd particularly in the East; and who were thus call'd, because they had Divine Service continually, and without Interruption, perform'd in their Churches.

The Word is Greek, *ακομητης*, form'd of the Privative *α*, and *κομηω*, I lay down, or sleep in Bed.

The *Acocmetes* divided themselves into three Bodies, each of which officiated in their Turn, and reliev'd the others; So that their Churches were never silent, Night nor Day.

Nicophorus mentions one *Marcellus* as the Founder of the *Acocmetes*; whom some modern Writers call, *Marcellus of Apamea*.—In *Bollandus* we have "the Life of St. Alexander," *der*, Infrator of the *Acocmetes*, who were unknown before "him," says the Author of the Life, a Disciple of St. Alexander. This Saint, according to *Bollandus*, lived about the Year 430. He was succeeded by *Marcellus*.

The *Stylites* were also call'd *Acocmetes*. See STYLITE.

There are a kind of *Acocmetes* still subsisting in the *Romish* Church; the Religious of the *Holy Sacrament*, coming properly enough under that Denomination; in regard they keep up a perpetual Adoration, some or other of them praying before the Sacrament, Day and Night. See SACRAMENT.

ACOLYTHES, ACOLYTHI, in Antiquity, a Term applied to such Persons as were steady and immoveable in their Resolutions.

For this Reason, the Stoicks were call'd *Acolythes*; in regard, nothing could shake or alter their Resolves. See STOICK.

Among Ecclesiastical Writers, the Term *Acolythes* is peculiarly applied to those young People, who, in the primitive Times, aspir'd to the Ministry; and for that Purpose, continually attended the Bishops: Which Assiduity occasion'd their being call'd *Acolythes*.

In the *Romish* Church, there are a sort of *Acolythy* yet in being; but their Functions are different from those of their first Institution. They are such as have only receiv'd the first of the four less Orders, whose Business is to light the Tapers, carry the Candlesticks and the Income-Pot, to prepare the Wine and Water, &c. See ORDER, &c.

At *Rome* there were three Kinds of *Acolythes*, viz. *Palatini*, who waited on the Pope; *Stationarii*, who served in Churches; and *Regionarii*, who, together with the Deacons, officiated in other Parts of the City. See STATIONARIUM, DEACONS, &c.

The Word is derived from the Greek *ακολουω*, to follow. ACONITE, ACONITUM, a Plant, famous among the Ancients, both in quality of a Poison, and a Remedy. See PERSON.

The ancient Botanists give the Name *Aconite* to several Plants of different Kinds.—One Species they call'd *Lycostomum*, *noniflow*, *Wolfsbane*; or *Kapuziner*, *Dogs-bane*; from its Effects: Of this they had likewise their Divisions; as the *Napellus*, thus call'd *a Nape*, because its Root resembled the Turnip-Kind; another call'd *Antiorba*, *Anti-Thora*, *q. d.* good against Disorders of the *Thora*.

The whole Class of *Aconites* is held extremely caustick and acrimonious, in Virtue wherof they produce mortal Convulsions, or Inflammations which end in Mortification; with which the Ancients were so surpris'd, that they were afraid to touch 'em: And hence a thousand superstitious Precautions about the manner of gathering them.—Their Roots are held of service in Malignant Fevers; and accordingly make an Ingredient in some Orvietans, and other Alexipharmick Compositions.

Aconite is said to take its Name from *Acono*, a City in *Bithynia*, where it grows in great abundance: tho' it is also found

found in other Places, particularly the Mountains about *Trent*. Some derive its Name from *axius*, a Rock naked or bare of Earth, wherein the Plant readily thrives.—It was also called *possibet*; as killing Mice with its bare smell, according to *Pliny*.—The Poets feign it to have arose from the Foam of the Dog *Cerberus*, when *Hercules* drag'd him out of Hell.

The Antients used this Plant against the Sting of the Scorpion, which is said to be deaden'd by the Touch of the *Acanto*, and restor'd to its Vigour by that of *Hellebore*.—*Theophrastus* relates, that they had a way of preparing it in those Days, so as it should only destroy at the End of one or two Years.—Arrows dipt in its Juice prove mortal wherever they wound.—The *Indians* use *Acanto*, corrected in Cows Urine, with good success against Fevers. *Lect. Edif. & Cur.*

ACONTIAS, a Name used by some Authors, for a sort of Comet, or Meteor, whose Head appears round or oblong, and its Tail very long and slender, resembling a Javelin. See **COMET**, and **METEOR**.

It takes its Denomination from a Serpent thus call'd, frequent in *Calabria* and *Sicily*; where it is also named *Sactrene*, by reason of its flying at Passengers like an Arrow; in order to which, it winds it self up a Tree, to spring thence with the greatest Violence. For the like Reason, the *Greeks* call it *Acontias*, of *acanto*, a Dart, or Arrow.

ACOPUM, a Fomentation, of warm and emollient things, to allay the Sense of Westiness, occasion'd by too violent Labour or Exercise. See **FUMENTATION**, **BATHING**, &c.

The Word is compounded of the Privative *a*, and *acris*, labor.

ACORN, *Gloss.* See **FRUIT**, **SEED**, **SOILING**, &c.

ACORUS, a Medicinal Plant, of the Rush or Flag Kind; frequently confounded by the Antients, and also by the modern Apothecaries, with the *Colemus Odoratus*. See **CAMOMUS**.

There are two Species of *Acorus*; the *Vernus*, or true, and the *falsus*.—They are distinguish'd by this, that from the middle of some of the Leaves of the former, there arises a longish Cluster of an Infinity of little Flowers, the Thickness of the little Finger, and resembling *Maccropier*, or Long Pepper.—The *falsus Acorus* is the common *Sword-grass*.

'Tis only the Root of the *Acorus* that is used in Physick; and 'tis thus we usually call *Acorus*.—The true is brought from *Lithonia* and *Tartary*: It is knotty, reddish without, and white within; as thick as the little Finger, and half a Foot long.

It is bitter and bitterish; and used in Cephalic and Stomachic Compositions.—It is also an Ingredient in the *Theriacal Andromachi*.

Some rank *Galangals* as a Species of *Acorus*. See **GALANGALS**.

ACOUSTICKS, **ACOUSTICA**, the Doctrine or Theory of Sounds. See **SOUND**.

Acousticks is what we otherwise call *Phonicks*. See **PHONICKS**.

ACONITICS, or **ACONITICA**, or **ACONITIC Medicines**, are Remedies against the Imperfections and Disorders of the Ear; or of the Sense of Hearing. See **EAR**, and **HEARING**.

The Word is form'd of the Greek *akouo*, Hearing.

ACOUSTIC is particularly applied to Instruments used by those who are flow of Hearing; to supply that Defect.

Dr. *Hook* says, it is by no means impossible to hear the lowest Whimper that can be made, to the Distance of a Furlong; and that he knows a way of hearing any Person speak thro' a Stone-Wall three Foot thick. See **WHISPERING-Place**, and **CECRO**.

ACOUSTIC NERVE. See **AUDITORY NERVE**.

ACQUEST, or **ACQUIST**, is understood, in a legal Sense, of Goods, or Effects, immovable, not descended or held by Inheritance; but acquired, either by Purchase or Donation. See **GOODS**.

The Word is *French*; form'd of the Verb *Acquerir*, to acquire.—The *French* Laws make a deal of difference between *Acquest*, and hereditary Effects. The Civil Law allows none. See **HEIR**, **HEREDITARY**, &c.

The Word is also particularly used for Conquest, or Places acquired by the Sword.

ACQUIETANDIS Plegiis, a Writ lying for a Surety against the Creditor that refuses to acquit him after the Debt is paid. See **SURETY**.

ACQUIETARE, in our ancient Law-Books, signifies to pay the Debts of a Person deceas'd; as the Heir those of his Father, &c.

ACQUISITION, properly signifies an *Acquest*. See **ACQUEST**.

ACQUITTALE, a Discharge, Deliverance, or setting free of a Person from the Guilt or Suspicion of an Offence.—The like Discharge in Civil Concerns, is called an *Acquittance*. See **ACQUITTAANCE**.

Acquittal is of two Kinds; in Law, and in Fact.—When two are appealed or indicted of Felony, one as Principal the other as Accessory; the Principal being discharge'd, the Accessory is by Consequence also freed: In which Case, as the Accessory is acquitted by Law, so is the Principal by Fact. See **ACCESSORY**.

ACQUITTALE is also used, where there is a Lord Meff, and Tenant, and the Tenant holds Lands of the Meff, and the Meff holds over of the Lord Paramount: Here, the Meff ought to acquit the Tenant of all Services claimed by any other for the same Lands; the Tenant being to do Service to the Meff only, and not to divers Lords for one Parcel of Land. See **MESN**, and **SERVICE**.

ACQUITTAANCE, or **QUITTAANCE**, a Release, or Discharge in Writing, of a Sum of Money, or other Duty which ought to be paid or done. See **RECEIPT**.

The Verb *Acquit*, the Participle *Acquiescens*, and the Noun *Acquiescentia*, do also signify a Discharge from an Offence objected.—In this Sense, we meet with *Acquiescentia* by Proclamation. See **ACQUITTALE**.

ACRASIA, *Acrasia*, is used by some Writers in Physick, for the Excess or Predominancy of one Quality above another; either in a Mixture, or in the Constitution of a human Body. See **CRASIS**, **TEMPERAMENT**, **CONSTITUTION**, &c.

ACRE, a Quantity of Land, containing four square Rods, or 160 square Poles. See **MEASURE**; see also **ROAD**, and **PERCH**.

By a Statute of 31 *Edw.* it is ordain'd, That if any Man erect a new Cottage, he shall add four Acres of Land to it. See **COTTAGE**.

To find the Quantity of Acres in a Piece of Ground, See **SURVEYING**.

The Word is form'd from the Saxon *Acer*, or *Acker*, Field; of the Latin *Ager*. The *Salmastus* derives it from *Acra*, used for *Arena*, a Land-Measure among the Antients, containing 10 Feet.

The Kingdom of England contains by Computation 33038500 Acres: The United Provinces 4382000, &c. See **POLITICAL ARITHMETICK**.

ACREME, a Term sometimes used in ancient Law-Books, for ten Acres. See **ACRE**.

ACRIBEA, a Term purely Greek, *Acribea*, literally denoting an exquisite or delicate Accuracy; sometimes used in our Language for want of a Word of equal Significance.

ACRIDOPHAGI, in the ancient Geography, a Nation of People said to feed on Locusts.—The Word is compounded of the Greek *akros*, Locust, and *phago*, I eat.

The *Acridophagi* are represented as a People of *Ethiopia*, inhabiting near the Deserts.—In the Spring they made Provision of a large kind of Locusts, which they salted, and kept for their standing Food all the Year: They lived to forty Years of Age, then died of a sort of winged Worms generated in their Bodies. See *St. Jerom* against *Jovinian*, l. II. and on *St. Job*, c. 4. *Theodor. Sicul.* l. III. c. 3. and 29; and *Strabo*, l. XVI.—*Pliny* also speaks of *Acridophagi* in *Parthia*, l. and *St. Jerom* in *Lithya*.

The Circumstances of these People be fabulous; yet may the *Acridophagi* be true; and to this Day they eat Locusts in some Parts of the East.—And hence, *St. Job* the Baptist is said to have lived on Locusts, *acridis*, and wild Honey, *Matt. c. 3. v. 4*. See **HONEY**.

Yet is the rendering of *acridis* by *Locusts*, as the *English* Translators have done, much controverted.—*Isidore de Pelusium*, in his 132d Epistle, speaking of this Food of *St. Job*, says, They were not Animals, but the Tops of Herbs; and even charges those who understood 'em otherwise of Ignorance: But *St. Augustin*, *Beza*, *Ludolphus*, and others, are of a different Sentiment. Accordingly, the *Jesuits* of *Amoy* reject with Contempt the Opinion of the *Ethiopian*, who for *acridis* put *apricus*, a delicious Diet prepared of Honey and Oil; that of some other Innovators, who read *acridis*, or *acridis*, Sea-Crab; and that of *Beza*, who reads *acridis*, wild Pears.

ACRIMONY, *Aperity* or *Sharpness*, expresses a Quality to Bodies, by which they corrode, destroy, or dissolve others. See **CORROSION**, &c.

Salts are only caustick in Virtue of their *Acrimony*. See **SALT**, **CAUSTIC**, &c.—The *Acrimony* of the Bile is supposed the Cause of divers Disorders. See **BILE**.—A *Canthar* is a Diffusion of *Acrimonious* Humour. See **CANTHAR**, **DEFUXION**, **RHUMUS**, &c.

ACROATICKS, a Name given to *Aristotle's* Lectures in the more difficult and nice Parts of Philosophy; to which none but Scholars and Friends were admitted. See **ARISTOTELIAN**, &c.

ACROMION, **ACROMIUM**, in Anatomy, the upper Process of the *Omo-plata*, or Shoulder-Bone. See **OMOPLATA**.

The Word is derived from *akros*, summus, and *akros*, humerus, q. d. the Extremity of the Shoulder; and not from *Anchor*, on account of any resemblance in Figure which the *Acro-*

missio bears to an Anchor, as *Dionis* has imagin'd.

Some have thought the *Acerosion* to be of a Nature different from that of other Bones; in regard, during Infancy, it appears to be no more than a Cartilage, which ossifies by little and little, and about the Age of twenty Years becomes hard and firm, like a common Bone. See BONE, and OSSIFYING.

ACROSPIRE, in Natural History, &c. the same with *Plumule*. See PLUMULE; See also ACROSPYRED.

ACROSPYRED, is used in respect of Barley; which, in the Operation of making Malt, is apt, after coming, or sprouting at the lower, or Root-End, to become *Acrospired*, i. e. to grow aloft at the upper, or Blade-End. See MALT.

ACRÖSTICK, a kind of Poetical Composition, the Verses whereof are disposed in such manner, as that the initial Letters make up some Person's Name, Title, or a particular Motto. See POEM, and POETRY.

The Word is derived from the Greek *ἀκρῶς*, summus, that which is at one of the Extremes, and *στίχῶν*, Versus.

There are also *Acrosticks*, where the Name or Title is in the middle, or some other Part of the Verse.—And others which go backwards; beginning with the first Letter of the last Verse, and proceeding upwards.

Some Refiners in this trifling way, have even gone to *Pentastrophicks*; where the Name is to be repeated five times. See PENTACROSTICK.

The Name *Acrosticks* is also applied by some Authors to two ancient Epigrams in the first Book of the *Anthology*; the one in honour of *Bacchus*, the other of *Apollo*: each consists of 25 Verses; the first whereof is the Proposition or Argument of the whole, and the other 24 composed of four Epithets, beginning each with the same Letter; and thus following in the Order of the 24 Verbs of the Greek Alphabet: So that the first of the 24 Letters comprehends four Epithets beginning with *α*; the second as many, with *β*; and so of the rest, 10 *ω*; which makes 96 Epithets for each God. See EPIGRAM.

ACROTERIA, or ACROTENS, in Architecture, little Pedestals, usually without Bases, placed at the Middle, and at the two Extremes of Frontispieces, or Pediments; and serving to support Statues. See PEDestal, and STATUE.

Those at the Extremes ought to be half the Height of the Tympanum; and that in the Middle, according to *Vitrucvius*, one eighth Part more. See PEDIMENT, &c.

ACROTRIA sometimes also signify Figures, whether of Stone or Metal, placed as Ornaments, or Crownings, on the Tops of Temples, or other Buildings. See CROWNING.

Sometimes it also denotes those sharp Pinnacles, or spiry Bartlements, which stand in ranges about flat Buildings, with Rails and Ballusters. See PINNACLE, and BATTLEMENT.

The Word, in its original Greek, signifies the Extremity of any Body; as the Tip of a Rock, &c.

ACT, *Actus*, in Physicks, an effective Exercise or Application of some Power, or Faculty. See ACTION.

In this Sense, the Word *Act*, stands opposed to *Power*, *Potestas*, which is the Capacity of *acting*. See POWER, and POTENTIA.

Tho' the Word *Act*, properly and primarily, be only applicable where the Power might exist without being drawn forth into *Act*; yet the Schoolmen extend it further; defining it by the Presence of any Power or Perfection, even tho' it could not be absent.—In this Sense, God himself is said to be a most pure *Act*; in regard his Perfections are always and necessarily present. And thus, Form is call'd an *Act*; inasmuch as the Presence hereof compleats the Power and Perfection of Matter.—Form, say some, is Matter reduced into *Act*. See MATTER, and FORM.

Even Existence is termed an *Act*; by reason when this is given a Being, nothing further is wanted. See PERFECTION, and EXISTENCE.

In this Sense, the Greeks call *Act*, *ἰσχύειν*, a Term denoting an actual Possession of Perfection, by the Latins render'd *Perfectionabilis*. See ENTELECHIA.

Metaphysicians give various Divisions of *Act*, viz. into *Infinite*, as the *Act* of Creating; and *Finite*, as the *Act* of Moving.—*Transient*, or those exercis'd in other Beings, as Heating; and *Immanent*, which remain in their own Subject, as Thinking.—*Elicit*, and *Commanded*, &c. See ELICIT, &c.

ACT, in Logick, is particularly understood of an Operation of the Mind. See OPERATION.

Thus, to Discern and Examine, are *Acts* of the Understanding; To Judge and Assert, are *Acts* of the Will. See UNDERSTANDING, WILL, LIBERTY, JUDGMENT, &c.

There are Voluntary *Acts*, and Spontaneous ones which seem produced without the Privy or Participation of the Soul. See VOLUNTARY, and SPONTANEOUS.

ACT, in a Legal Sense, is an Instrument, or other Matter in Writing; of use to declare or justify the Truth of a thing.—In this Sense, Records, Decrees, Sentences, Reports, Certificates, &c. are call'd *Acts*.—Authentick *Acts*; Solemn *Acts*, &c.

ACTS, in the Plural, denote the publick Deliberations, and Resolutions of an Assembly, Senate, Council, Convocation, or the like; enter'd in a Register. See REGISTER, &c.

Acts of Parliament are particularly denominated *Statutes*. See PARLIAMENT, and STATUTE.

The *Acts* of the Royal Society are called *Transactions*; those of the Royal Academy of Sciences at *Paris*, *Mémoires*: Those of the Societies of *Berlin*, *Leipsic*, &c. simply *Acts*, *Acta Eruditorum*, &c. See SOCIETY, ACADEMY, TRANSACTION, JOURNAL, &c.

The *Acts* of the antient Councils were called *Canons*. See CANON.

The Edicts and Declarations of the Council of the Roman Emperors, were called *Constitutory Acts*, *Acta Constitutoria*.

Clerk of the Acts, is an Officer of the Navy. See CLERK, and NAVY.

ACTS are also Matters of Fact transmitted to Posterity in certain authentick Books, and Memoirs.—In this Sense, we say, the *Acts of the Apostles*, *Acts of the Martyrs*, &c.

The *Acts* of Pilate relating to Jesus, is a false and supposititious Relation of our Saviour's Trial before Pilate; impiously fram'd by the Enemies of Christianity; and fill'd with the blackest Blasphemy.—The Emperor *Maximin*, by a solemn Edict, order'd it to be sent into all the Provinces of the Empire; and enjoin'd the Schoolmasters to teach and explain it to their Scholars, and make 'em learn it by heart.

The Piece was wrote with so much Carelessness or Ignorance, that our Saviour's Death was therein referred to the 14th Consulate of *Tiberius*, that is, to the 15th of his Empire; which is eleven Years before our Saviour's Passion, and five before Pilate was made Governor of *Judea*. See *Evangelium*, L. IX. c. 4. and 6. *Ruffin*. L. I. c. 5, &c.

The true and genuine *Acts of Pilate*, were sent by him to *Tiberius*, who reported 'em to the Senate; but were rejected by that Assembly, because not immediately address'd to them: as is testified by *Tertullian*, in his *Apol.* C. 5, and 20, 21. *Euzeb.* Hist. L. II. c. 2. *Justin Martyr*, &c.

There are also spurious *Acts of the Apostles* composed in Hebrew by one *Abdias*; translated into Greek by his Disciple *Europius*; and thence into Latin, by *Julius Africanus*. *Wolfgang Lazius* publish'd the Piece in 1551, from a Manuscript near 700 Years old; supposing it an authentick Work.—A Disciple of *Mones*, named *Lencius*, or *Seleucus*, is also said to have composed *Acts of the Apostles*, towards the Close of the 11th Century.

There have formerly appear'd numerous other Pieces in this Way; as, the *Acts of St. Thomas*, the *Acts of St. Andrew*, the *Acts of St. Paul* and *Thecla*, the *Acts of St. Matthew*, *Acts of St. Peter*, *Acts of St. John*, *Acts of St. Philip*; all which have been declared Apocryphal.—The last were the Production of the Heretick *Peregrinus*: Those of *St. Thecla* were the Work of a Priest in *Asia Minor*, whom *St. John* degraded for his Offence.

ACT, in the Universities, is a Thesis maintain'd in publick, by a Candidate for a Degree; or, to shew the Capacity and Proficiency of a Student. See THESIS, DEGREE, &c.

The Candidates for the Degree of Bachelor and Master of Arts, are to hold *Philosophy Acts*; those for Bachelor of Divinity are to keep *Divinity Acts*, &c. See UNIVERSITY, DOCTOR, BACHELOR, &c.

At *Oxford*, the Time when the Masters or Doctors compilar their Degrees, is also call'd the *Act*; which is held with great Solemnity: At *Cambridge* they call it *Commencement*. See COMMENCEMENT.

ACT OF FASTS, or *Auto de Fe*, is a solemn Day held by the Inquisition, for the Punishment of Hereticks, and the Absolution of the Innocent Accused. See INQUISITION.

They usually contrive the *Auto* to fall on some great Festival; that the Execution may pass with the more Awe and Regard.

The Criminals are first led to Church; where their Sentence is read to 'em, either of Condemnation or Absolution.—Those condemn'd to Death, are here surrender'd up by the Inquisitors to the Secular Power, with an earnest Intreaty that no Blood may be shed.—If they persist in their supposed Errors, they are burnt alive.

ACTS, in Poetry, are certain Divisions, or principal Parts in a Dramatic Poem, contriv'd to give a Respite or Breathing-time, both to the Actors and Spectators. See DRAMA, TRAGEDY, and COMEDY.

In the Interval between the *Acts*, the Theatre remains empty, sad without any Action visible to the Spectators; tho' 'tis supposed all the while there is one passing out of sight. See ACTION.

'Tis not however, purely for the sake of the Respite, that these *Acts* are observ'd; but to give Affairs a greater degree of Probability, and render the Intrigue more affecting. For the Spectator who sees the Action prepared that is to pass in the Interval, cannot forbear acting, in his Imagination, the

the Part of the absent Actors; by which means, he is the more agreeably surpris'd, when a new *Act* coming upon the Stage, he sees the Effects of that Action, which before he could but guess at. See *PROBABILITY*, &c.

To this it may be added, that Authors contrive to have the most dry and difficult Parts of the Drama transacted between the *Acts*; that the Spectators may have no Notion of these, excepting what their Fancy presents them with at a distance; and that nothing may appear upon the Stage, but what is natural, probable, and entertaining.

The ancient Greek Poets were unacquainted with this Division of a Play into *Acts*; tho' their Episodes or Chorus's serv'd almost the same Purpose. See *EPISODES*, and *CHORUS*.

'Tis true, they consider'd their Pieces as consisting of certain Parts or Divisions, which they call'd *Prologis*, *Epitasis*, *Catastasis*, and *Catastrophe*: But there were no real Divisions or Interruptions answering to 'em in the Representation. See *PROLOGIS*, *EPITASIS*, &c.

'Twas the Romans who first introduced *Acts* into the Drama; and in *Horace's* Time, the Five *Acts* were grown into a Law, as appears by the Verse,

Non brevis quinto, nec sit productior, actus.

This Law stands un repeal'd to this Day; tho' it seems to draw its Force from the Authority of *Horace*, rather than that of Reason or Nature.—All Plays are held irregular that have either more or fewer. See *FARCE*.

Some indeed have asserted, that every just Action consists of five distinct Parts; and have undertaken to mark out the precise Share of the Action, which each of the five *Acts* ought to bear.

The first, say they, is to propose the Matter or Argument of the Fable, and to shew the principal Characters.—The second to bring the Affairs or Business upon the Carpet.—The third to furnish Obstacles and Difficulties.—The fourth either points a Remedy for those Difficulties, or finds new in the Attempt.—The fifth puts an end to all by a Discovery.

Be this as it will, 'tis certain, on the Principles of that great Master of the Drama, *Aristotle*, we may have a just and regular Play, tho' only divided into three *Acts*.

The *Acts* are subdivided into *Scenes*. See *SCENE*.

ACTIA, in Antiquity, *ACTIAN Games*, *Ludi Actiaci*, solemn Games, instituted, or according to some only rector'd, by *Augustus*, in memory of the Victory over *Anthony* at *Actium*. See *GAME*.

Some will have 'em held every third Year; but the more common Opinion, is that they only return'd every fifth, and were celebrated in honour of *Apollo*.

By the way, it is a gross Oversight in some Authors, to imagine that *Virgil* insinuates 'em to have been instituted by *Janeas*; from that Passage *Æn.* III. v. 280.

Actiæque Riacis celebramus littora Ludis.

'Tis true, the Poet there alludes to the *Actian Games*; but he only does it by way of Compliment to *Augustus*, to attribute that to the Hero from whom he descended, which was done by the Emperor himself: As is observ'd by *Servius*.

ACTIAN Years, *Anni Actiaci*, were a Series of Years, commencing from the *Æra* of the Battle of *Actium*; call'd the *Æra of Augustus*. See *YEAR*, and *EPOCHA*.

ACTION, *Actio*, in Physics, the Production of an *Act*, or the manner of an *Active Cause*. See *ACT*, and *ACTIVE*.

The Idea of *Action* is so familiar to us, that a Definition may as easily obscure as explain it.—Some Schoolmen, however, attempt to express its Nature by "A Manifestation of the Power or Energy of a Substance; made either within, or without it."—Thus, say they, when the Mind acts, what does it more, than perceive a vital Power exerting it self; as, in reality, the several *Actions* of the Mind, are no other than so many Indications of its Vitality.

'Tis a Point controverted among the Schoolmen, whether or no *Action*, thus taken, be a thing distinct both from the Agent, and the Term or Effect.—The Modists stand for the Affirmative, and the Nominalists assert the Negative.

These latter observe, that the *Action* may be consider'd two ways, Entitatively and Connotatively.—*Action Entitatively* taken, is what we call a Cause, or what may act: *Action Connotatively* consider'd, is the same Cause, only consider'd as acting, or connoting the Effect it produces. Now, say they, a Cause may be without an *Action*, connotatively taken, i. e. may be consider'd as not producing an Effect; but cannot be without it entitatively, for that would be to be without it self. Hence they conclude, that the Cause differs from the *Action* connotatively, not entitatively taken; and the Agent is the Cause of the *Action*, consider'd connotatively, not entitatively.

Actions are divided, with respect to their Principle, into *Univocal*, where the Effect is of the same Kind with the Cause; as the Production of Man by Man: and *Equivocal*,

where it is different; as the Production of Frogs by the Sun. See *UNIVOCAL*, and *EQUIVOCAL*; see also *GENERATION*, &c.—And again, into *Vital*; as Nutrition, Respiration, the *Action of the Heart*, &c. See *NUTRITION*, *RESPIRATION*, *HEART*, &c.—And *not Vital*, as Heating. See *VITAL*, *HEAT*, &c.

With respect to their Subject, *Actions* are divided into *Immanent*; which are receiv'd within the Agent that produced them: as are all vital *Actions*, Cognition, &c. See *THINKING*, *WILLING*, &c.—And *Transient*, which pass into another. See *TRANSIENT*, &c.

In respect of Duration, *Actions* are again divided into *Instantaneous*, where the whole Effect is produced in the same Moment; as the Creation of Light: And *Successive*, where the Effect is produced by degrees; as Corruption, Fermentation, Putrefaction, Dissolution, &c. See *FERMENTATION*, *PUTREFACTION*, *DISSOLUTION*, &c.

The *Corruptions* resolve all *Physical Actions* into Metaphysical: Bodies, according to them, do not act on one another: the *Action* all comes immediately from the Deity: The Motions of Bodies, which seem to be the Cause, being only the Occasions, thereof. See *OCCASIONAL CAUSE*.

'Tis one of the Laws of Nature, that *Action* and *Reaction* are always equal, and contrary to each other. See *REACTION*, and *NATURE*.

For the *Actions of Powers*, &c. See *POWER*, *WEIGHT*, *MOTION*, *RESISTANCE*, *FRICTION*, &c.

For the *Laws of the Action of Fluids*, &c. See *FLUID*, *SPECIFIC GRAVITY*, &c.

ACTION, in Ethics, or *Moral ACTION*, is a Voluntary Motion, of a Creature capable of distinguishing Good and Evil; whose Effect, therefore, may be justly imputed to the Agent. See *MORAL*.

A *Moral Action* may be more fully defined to be whatever a Man, consider'd as endued with the Powers of Understanding and Willing, and with respect to the End he ought to aim at, and the Rule he is to regard in acting; resolves, thinks, does, or even omits to do; in such manner as to become accountable for what is thus done or omitted, and the Consequences thereof. See *OFFICE*.

The Foundation, then, of the Morality of *Actions*, is, that they are done knowingly and voluntarily. See *UNDERSTANDING*, and *WILL*.

All *Moral Actions* may be divided, with respect to the Rule, into *Good* and *Evil*. See *GOOD*, and *EVIL*.

ACTION, in Oratory, is an Accommodation of the Person of the Orator to his Subject; or, a Management of the Voice and Gesture, suited to the Matter spoken or deliver'd. See *ORATORY*.

Action makes use of the great Branches or Divisions of Rhetoric, as usually taught. See *RHETORIC*.

The Antients usually call it *Pronunciation*. See *PRONUNCIATION*.

Action is a collateral or secondary Method of expressing our Ideas; and is susceptible of a kind of Eloquence as well as the primary.—It is an Address to our external Senses; which it endeavours to move, and bring into its Party, by a well-concerted Motion and Modulation, at the same time that the Reason and Understanding are attack'd by force of Argument. Accordingly, *Fully* very pertinently calls it *Sermo Corporis*, the Discourse of the Body; and *Corporis Eloquentia*, the Eloquence of the Body.—The *Roman Mimes* and *Pantomimes*, we read, had such a Copia in this kind, such a Compass even of mute *Action*, that Voice and Language seem'd useless to 'em: They could make themselves understood to People of all Nations; and *Rofcius*, the Comedian, is particularly fam'd, as being able to express any Sentence by his Gestures, as significantly and variously as *Cicero* with all his Oratory. See *MIME*, *PANTOMIME*, &c.

Quintilian gives us a System of the Rules of *Action*; taken not only from the Writings of the ancient Orators, but from the best Examples of the Forum. See his *Institutio*. Orat. L. XI. c. 3. de *Pronuntiatione*.

The Force and Effect of *Action*, at least as practis'd among the Antients, appears to be very great; scarce any thing was able to withstand it. What we usually attribute to Eloquence, was really the Effect of the *Action* only, as some of the greatest Masters in that way have frankly acknowledg'd.—*Demosthenes* expressly calls it, "the Beginning, the Middle, and the End of the Orator's Office;" and *Cicero* professes, that "it does not so much matter what the Orator says, as how he says it." *Neque tantum refert quædã sicut quæ dicitur, quam quomodo dicatur.* De Orat.—Hence, the great Greek Orator is represent'd as practising and adjusting his *Action* in the Glass; *Demosthenes grande quoddam intuens speculum componere Actionem solebat.* *Quintil.*

Every Part of the Body is by them list'd into the Service, and marshal'd in its proper Place: The Hand, the Eye, Head, Neck, Sides, Checks, Nostrils, Lips, Arms, Shoulders, &c.—*Precipuum in Actione, Caput est.*—*Cum gestu concordet, & Lactibus obsequatur.* *Oculi*, *Lachrymæ*, *Super-*

Supercilium, Genæ, Ruror.—*Non Manus solum sed & Natus.*—*Dominator autem maxime Vultus.*—*Genæ & in Vultu Pallor.*—Nares, Labia—Dentes, Cervix, Humeri, Brachia.—*Manus vero, sine quibus trunca esset Actio.*—Quintil. ubi supra.

The Hand is Master of a whole Language, or set of Signs, it self.—Even every Finger is laid down by the Antients as having its distinct Office; and hence the different Names they still bear, *Pollex, Index, &c.* See *FINGER, &c.*

By such a Multitude of Rules and Observances, 'tis no wonder some of the Orators of those, as of our Days, were perverted more than profited.—Rules only tend to perfect the *Actio*, which must have its Origin from another Source, viz. Nature, and good Sense: Where those are deficient, Rules will foiner make an Ape than an Actor. *Eloquentia*, says *Cicero*, *scilicet & religiosum verum fundamentum, sapientia.*—And hence we find the great Masters abovemention'd continually softning, and even unsaying, and calling People off from the intemperate use of their own Rules.—*Nulle arguitur Dignorum, Non ad numerum Articulum Cadens.* *Cicero* even assures us, he was a whole Year in learning to keep his Hand within his Gown. *Pro Cælo.*—The same Author, recommending a Motion of the whole Body, says, the Orator should make more use of his Trunk than of his Hand; *Trunco magis toto se ipse moderans, & virili laterum flexione.* *Brac.*

Walking, *incessus*, is sometimes recommended as highly deserving to be cultivated; but *Cicero* will scarce allow it to be used at all. It seems, some of the active Orators of that Time had render'd it ridiculous; one of whom was pleasantly ask'd by *Flavius Virgilius*, *How many Miles he had declaim'd?* *Cassius Severus*, when he perceiv'd an Orator given to walking, used to cry out for a Line to be drawn round him, to keep him within Bounds.—The Orator *Tityus* improv'd Walking into a sort of Dancing; and 'tis hence, as we are told by *Quintilian*, that the Dance *Tityus* took its Name.—*Juvius* rallied his Father *Carus's* inefficient Libration, or tossing from one side to another, by asking *who that was, haranguing in a Ferry-boat?* And to the like Effect was that of *C. Sclanius*, when *Curio* having spoke with his usual Bustle near *Octavius*, who by reason of his Infirmities, had divers Linciments and Plasters on his Limbs; *You can never be enough thankful, Octavius, to your good Colleague, who has saved you this Day from being eaten by the Flies.*—*Demoiselles*, being naturally apt to be too busy, and especially with his Shoulders, is said to have reform'd himself by speaking in a narrow Pulpitum, and hanging a Spear pointed just over his Shoulders; that if in the Heat of his Discourse he should forget himself, the Puncture might remind him.

After all, 'tis a Point will bear being controverted, Whether *Actio* ought to be practis'd and encourag'd at all? A thing that has so much command over Mankind, 'tis certain, must be very dangerous; since it is as capable of being turn'd to our Disadvantage, as our Advantage. 'Tis putting a Weapon in the Hands of another, which, if he pleases, he may make use of to subdue and enslave us: And accordingly, History is full of the pernicious Uses made thereof.—For this Reason, Eloquence and *Actio* are generally discourag'd in the modern Policy; and both the Bar and the Pulpit, are brought to a more frigid way of Delivery.

Perhaps the Foundation of all *Actio* may be vicious, and immoral.—Voice and Gesture, we know, will affect Brutes; not as they have Reason, but as they have Passions: So far as these are used in a Discourse, therefore, it does not regard an Assembly of Men, more than it would a Herd of Quadrupeds: That is, their whole Effort is spent not on the Rational Faculties, which are out of the Question, but on the Animal ones, which alone they endeavour to possess and actuate, independent of Reason.—Nay more, our Reason and Judgment it self is intended to be byas'd and inclined by them; *Actio* being only used as an indirectway of coming at the Reason, where a direct and immediate one was wanting, i. e. where the Judgment cannot be taken by the proper means, Argument; it is to be taken indirectly, by Circumtion, and Sirragement.

The natural Order of things, then, is here inverted: Our Reason, which should go before, and direct our Passions, is drag'd after 'em: Instead of coolly considering, and taking cognizance of things; and according to what we perceive therein, raising our selves to the Passions of Grief, Indignation, or the like: We are attack'd the other way; the Impression is to be carried backwards, by Virtue of the natural Connection there is between the Reason and the Passions: And thus the Helm, the Principle of our Actions, is taken out of our own Hand, and given to another.

The Case is much the same here, as in Sensation and Imagination: The natural and regular way of arriving at the Knowledge of Objects, is by Sense; as an Impression begun there is propagated forward to the Imagination, where an Image is produced, similar to that which first struck on the

Organ.—But the Process is sometimes inverted; in Hypochondriack, Lunatick, and other delirious Cases; the Image is first excited in the Imagination; and the Impression thereof communicated back to the Organs of Sense: By which means, Objects are seen, which have no Existence. See *IMAGINATION.*

To say no more, *Action* does not tend to give the Mind any Information about the Case in hand; is not pretended to convey any Arguments or Ideas which the simple Use of Language would not convey. But it is not that we should form our Judgments upon? And can any think help us to make a just Judgment, beside what some way enlarges our Understanding? When *Cicero* made *Cæsar* tremble, turn pale, and let fall his Papers; he did not apprise him of any new Guilt which *Cæsar* did not know of: The Effect had no Dependence on *Cæsar's* Understanding; nor was it any thing more than might have been produced by the unmeasuring Sounds of a musical Instrument duly applied. Logs of Timber and Stone have often trembled on the like Occasions. See *PASSION, MUSIC, &c.*

ACTIO, in Poetry, is an Event, either real or imaginary, which makes the Subject of an Epick or Dramatick Poem. See *ERIC, TRAGEDY, &c.*

The *Action* of a Poem coincides with the *Fable* thereof; it being the usual Practice, not to take any real Transaction of History, but to feign or invent one; or at least, to alter the Historical Fact, so as to render it in good measure fictitious. See *FABLE.*

F. Boffu has two Chapters, *Of Real Action*, the Recitals whereof are Fables: and of *Fægn'd Action* the Recitals whereof are Historical.

The Critics lay down four Qualifications, as necessary to the Epick and the Tragick *Action*: The first, *Unity*; the second, *Integrity*; the third, *Importance*; and the fourth, *Duration.*

For the *Unity* of the *Epic Action*. See *UNITY, &c.*
This *Unity* is not only to exist in the first Draught, or Model of the Fable, but in the whole episodick *Action*. See *ERISSON.*

In order to the *Integrity* of the *Action*, 'tis necessary, according to *Aristotle*, that it have a Beginning, Middle, and End.—If the three Parts of a Whole, seem too generally denoted by the Words, Beginning, Middle, and End; *Boffu* interprets 'em more expressly, thus; The Causes and Designs of a Man's doing an *Action*, are the Beginning; the Effects of those Causes, and the Difficulties met withal in the Execution of those Designs, are the *Middle* of it; and the unravelling and extricating of those Difficulties, the *End* of the *Action*.

The Poet, says *Boffu*, should so begin his *Action*, that, on one hand, nothing should be farther wanting for the Understanding of what he afterwards delivers; and, on the other, that what thus begins require after it a necessary Consequence. The End is to be conducted after the like manner, only with the two Conditions transpos'd; so that nothing be expected after it, and that what ends the Poem be a necessary Consequence of something that went before it. Lastly, the Beginning is to be join'd to the End by a *Middle*; which is the Effect of something that went before it, and the Cause of what follows.

In the Causes of an *Action*, one may observe two opposite Designs; the first, and principal, is that of the Hero: The second comprehends all their Designs, who oppose the Pretensions of the Hero. These opposite Causes do also produce opposite Effects, viz. the Endeavours of the Hero to accomplish his Design, and the Endeavours of those who are against it.—As the Causes and Designs are the Beginning of the *Action*; so those contrary endeavours are the Middle of it, and form a Difficulty, Plot, or Intrigue, which makes the greatest Part of the Poem. See *INTRIGUE, KNOT, PLOT, &c.*

The Solution or clearing up of this Difficulty, makes the Unravelling. See *UNRAVELLING.*

The Unravelling of the Plot or Intrigue, may happen two ways; either with a Discovery, or without. See *DISCOVERY.*

The several Effects which the Unravelling produces, and the different States to which it reduces the Persons, divides the *Action* into so many Kinds.—If it change the Fortune of the principal Person; it is said to be with a *Peripetia*; and the *Action* is denominated *Implex*, or *Mis's*: If there be no *Peripetia*, but the Unravelling be a mere passing from Trouble to Repose; the *Action* is *Simple*. See *PERIPETIA*; see also *CATASTROPHE.*

For the *Duration* of the *Epic Action*, *Aristotle* observes, it is not so limited as that of the *Tragic Action*; the latter is confined to a natural Day; but the *Epopea*, according to that Critick, has no fix'd Time.—In effect, *Tragedy* being full of Passions, and consequently of Violence, which cannot be supposed to last long, requires a shorter time: and the *Epic Poem*, being for the Habits which proceed more slowly, requires a longer time either for 'em to take hold, or to be rooted up: And hence the Difference between the *Epic* and *Dramatic Action*, in point of *Duration*.

Boffa lays it down as a Rule, that the more vehement the Manners of the principal Personages are, the less Time ought the *Action* to last: Accordingly, the *Action* of the *Iliad*, containing the Anger and Passion of *Achilles*, &c. holds but 47 Days; whereas that of the *Odyssey*, where Prudence is the reigning Quality, lasts eight Years and a half; and that of the *Æneid*, where the prevailing Character of the Hero is Piety and Mildness, nearly seven Years. See *ILIAD*, *ÆNEID*, and *ODYSSEY*; see also MANNERS, PASSIONS, &c.

As to the Importance of the Epic *Action*, there are two ways of providing for it: The first, by the Dignity and Importance of the Persons. This way alone *Homer* makes use of; there being, otherwise, nothing great and important in his Models, but what might have happen'd to ordinary Persons. The second, by the Importance of the *Action* itself; such as the Establishment, or Downfall of a Religion, or a State; which is *Virgil's Action*, and in which he has much the Advantage of *Homer*.

Boffa mentions a third way of making the *Action* important, viz. by giving a higher Idea of the Personages, than what the Readers conceive of all that is great among Men.—This is done by comparing the Men of the Poem with the Men of the present Time. See *HERO*; see also CHARACTER, &c.

Action is also used in Painting and Sculpture, for the Posture of a Figure; or the *Action* it is supposed to be in; express'd by the Disposition of its Parts, or the Passion appearing in its Face. See *ATTITUDE*, *EXPRESSION*, &c.

In the Manage, the *Action of the Mouth*, denotes the Agitation of the Horse's Tongue and Mandible, or his Champing on the Bit; discoverable by a white rosy Foam thereon.—This, with the Masters, passes for a Sign of Health, Vigour, and Mettle.

Action, in Law, is defined a Right of demanding, and pursuing in a Court of Judicature, what is any Man's due. See *RIGHT*, *COURT*, *JUSTICE*, &c.

Or, *Action* is any kind of Process which a Person enters for the Recovery of his Right. See *CAUSE*, and *PROCESS*.

Actions are divided, by *Justinian*, into two general Kinds; *Real*, or those against the Thing; and *Personal*, or those against the Person.—For whoever brings an *Action*, either does it against one obnoxious to him, in respect either of Contract, or of Offence; in which Case arise *Actions* against the Person, which require the Party to do, or give something; Or, he does it against one not obnoxious, yet with whom a Controversy is risen touching some Matter; as, if *Caius* hold a Field, which *Julius* claims as his Property, and brings his *Action* for the same. See the *Instit. L. IV. Tit. 4.* where the principal *Actions* introduc'd by the *Roman Law*, are summarily explain'd.

In Common Law, from the two Classes of Real and Personal *Actions*, arises a third, called a *Mixed Action*; which regards both the Person and Thing.

Personal Action, is that which one Man hath against another, on account of a Contract for Money or Goods; or of an Offence done by him, or some other Person, for whose Fact he is answerable. See *PERSONAL*.

Real Action, is that whereby the Demandant claims Title to Lands or Tenements, Rents or Commons, in Fee-simple, Fee-tail, or for Life. See *REAL*.

Real Actions are subdivided into *Possessory*, which lie for Lands, &c. of his own Possession, or Seisin; and *Ancestral*, of the Seisin or Possession of his Ancestor. See *ANCESTRAL*.

But *Real Actions*, formerly so numerous and considerable, as Writs of Rights, of Entry, &c. with their Appendices, as Grand Cape, Petit Cape, Receipt, View, Aid-Prayer, Voucher, Counter-plea of Voucher, Counter-plea of Warranty, and Recovery of Value, are now much out of use; by reason of the usual Admixture of personal Matters therewith, which change 'em into *Mixed Actions*.

Mixed Action, is that laid indifferently for the Thing detained, or against the Person of the Detainer; being thus called, because it has a mixed Respect, both to the Thing, and to the Person. See *MIX'D*.

Others better define it, a Suit given by Law to recover the Thing demanded, and Damages for the Wrong done.

Such is *Assize* of Novel Disseisin, which, if the Dissisor make a Feoffment to another, the Dissisee shall have against the Dissisor, and the Feoffee, or other Ten-tenant; to recover not only the Land, but Damages also.—And the like in *Action* of Waste, *Quare impedit*, &c. See *ASSIZE*, &c.

Actions are also divided into *Civil* and *Penal*.—*Civil Action*, is that which only tends to the Recovery of what, by reason of a Contract, or other like Cause, is a Man's due.—As, if a Man by *Action* seek to recover a Sum of Money formerly lent, &c. See *CIVIL*.

Penal Action, aims at some Penalty upon the Party sued; either corporal or pecuniary. See *PUNISHMENT*, *MULTI*, &c.

Such is the *Action of Legis Aquilæ*, in the Civil Law: And with us, the next Friends of a Man feloniously slain, or wounded, shall pursue the Law against the Offender, and bring him to condign Punishment. See *APPEAL*.

Action is also distinguish'd, as it lies for the Recovery either of the simple Value of the Thing challeng'd; or of the double, triple, quadruple, &c.

Thus, a *Decies tantum* lies against Embracers; and against Jurors that take Money for their Verdict, of either, or both Parties. See *DECIES TANTUM*, *EMBRACERS*, &c.

To this Class also belong all *Actions* on a Statute, that punish an Offence by Restitution, or Fine proportionable to the Transgression.

Action, again, is divided into *Prejudicial*, called also *Preparatory*; and *Principal*.

Prejudicial Action, is that which arises from some Question, or doubtful Point in the Principal one.

As, if a Man sue his younger Brother, for Land descend'd from his Father; and it be objected, he is a Bastard: This Point of Bastardy must be tried, before the Cause can proceed: Whence the *Action* is termed *Prejudicialis, quia prius iudicanda*.

Action, again, is either *Ancestral*, or *Personal*.—*Ancestral Action*, is that which we have by some Right descend'd from our Ancestor.—*Personal Action*, in this Sense, is that which has its Beginning in and from our selves.

There is also *Action Ancestral Destructural*, and *Action Ancestral Possessory*. See *COKE'S INST.*

Action upon the Case, *Actio super Casum*, is a general *Action*, given for the Redress of a Wrong done any Man without Force, and not especially provided for by Law. See *CASE*.

This, of all others, is now most in use.—Where there arises an Occasion of Suit, that neither has a fit Name, nor certain Form already prescrib'd; the Clerks of the Chancery, anciently, conceived a proper Form of *Action* for the thing in question; which the Civilians call *Actionem in factum*, and we, *Action upon the Case*.

Action upon the Statute, *Actio super Statutum*, is an *Action* brought against a Man, upon an Offence against a Statute whereby an *Action* is given that did not lay before. See *STATUTE*.

Thus, where one commits Perjury to the Prejudice of another, he who is damaged shall have a Writ upon the Statute, and a Cause accordingly.

Action Popularis, only differs from an *Action upon the Statute*, in that, where the Statute gives the Suit of *Action* to the Party griev'd, or otherwise to one single Person certain, it is called *Action upon the Statute*; and where the Authority is given by the Statute to every one that will so sue, it is an *Action Popularis*. See *ACCUSATION*.

Action is also divided into *Perpetual* and *Temporal*.—*Perpetual Action*, is that whose Force is not determin'd by any Period of Time.

Of this Kind were all Civil *Actions* among the ancient Romans, viz. such as arose from Laws, Decrees of the Senate, and Constitutions of the Emperors; whereas *Actions* granted by the Prætor died within the Year.

We have also *Perpetual* and *Temporal Actions* in England; all being perpetual, which are not expressly limited.

So divers Statutes give *Actions*, on Condition they be pursued within the Time prescrib'd.—Thus, the Statute of 1 *Edw. VI.* gives *Action* for three Years after the Offences committed, and no longer; and the Statute of 7 *Hen. VIII. c. 5.* does the like for four Years; and that of 31 *Eliz. c. 5.* for one Year, and no more.

But, as by the Civil Law no *Actions* were so perpetual, but that by Time they might be prescrib'd against; so, in our Law, the *Actions* be called Perpetual, in Comparison of those that are expressly limited by Statute; yet is there a Means to prescribe against *Real Actions*, after five Years, by a Fine levied, or a Recovery suffer'd. See *PRESCRIPTION*; see also *FINE*, *RECOVERY*, and *LIMITATION of Action*.

Action of a Writ, is when a Person pleads some Matter, whereby he shews, that the Plaintiff had no just Cause to have the Writ he brought, tho' it be possible he might have another Writ or *Action* for the same Matter.—Such Plea is called, a *Plea to the Action of the Writ*.

When by the Plea it appears, that the Plaintiff has no Cause of any *Action* for the thing demand'd; it is called, a *Plea to the Action*.

Action, in Affairs of Commerce, or *Action of a Company*, is a Part or Share in the Company's Stock, or Capital, which consists of a Number of such *Actions*. See *COMPANY*, and *CAPITAL*.

Thus, the Capital of a Company, which has three hundred *Actions* of a thousand Livres each, consists of three hundred thousand Livres.

Hence, a Person is said to have four or six *Actions* in such Company, if he have contribored to the Capital, and interceded therein, for four or six thousand Livres.

Actions, in France and Holland, amount to the same with *Shares*, or *Subscriptions* in England. See SUBSCRIPTION, BUBBLE, &c.

ACTION is also an Obligation or Instrument, which the Directors of such Companies deliver to those who pay Money into their Stock. See ACTIONARY, BANK, &c.

The *Actions* are always rising, and falling; according as the Company's Credit gains or loses. The smallest Whiff of an approaching War or Peace, true or false, shall frequently occasion a considerable Alteration therein. In the Year 1719, the French Company of the West, since called the *India Company*, arrived at such an immense degree of Credit; that in six Months time, its *Actions* rose to eighteen hundred per Cent. a pitch no other Company ever came near.

In 1673, the *Actions* of the Dutch East-India Company were at six hundred and fifty per Cent. which was the highest they were ever known at.—But the War with France then coming on; they fell 250 per Cent. in a few Months. After the Peace of Nimeguen, they rose again; and in 1718 were almost 600 per Cent.

The French have three Kinds of *Actions*.—*Simple*, which are entitled to a Share in all, both the Profits and Losses of the Company.—*Rentiers*, entitled only to a Profit of two per Cent. sure; for which the King is Security.—And *Interest-ed Actions*, which claim the two per Cent. secur'd by the King; and are also to share the Excess of the Dividend with the simple *Actions*.

There were several other Kinds of *Actions* introduc'd by the Brokers, in the busy Days of the *Rue Quinquempois*, which have since dropt into Oblivion; as *Mother Actions*, *Daughters*, *Grand-mothers*, *Grand-daughters*, &c.

To *Melt* or *Liquidate* an *Action*, is to sell, or turn it into Money, &c.

ACTIONARY, or **ACTIONIST**, a Term frequent in our News-Papers; denoting the Proprietor of an *Action*, or Share in a Companies Stock. See ACTION.

ACTIVE, **ACTIVUS**, something that communicates Motion, or Action to another. See ACTION.

In this Sense, the Word stands oppos'd to *Passive*. See PASSIVE.

Thus, we say, an *Active Cause*, *Active Principles*, &c. See CAUSE.

The Quantity of Motion in the World, Sir I. Newton shews, must be always decreasing, in Virtue of the *Vis Inertiae*, &c. So that there is a necessity for certain *Active Principles* to recruit it: Such he takes the Cause of Gravity to be, and the Cause of Fermentation. Adding, that we see but little Motion in the Universe, except what is owing to these *active Principles*. See MOTION, GRAVITATION, FERMENTATION, &c.

Active Principles, in Chymistry, are those which are supposed to act of themselves, and do not need to be put in action by others. See PRINCIPLE.

Salt, Sulphur, and Mercury, are usually consider'd by the Chymists as *Active Principles*; and Phlogiston and Earth, as *Passive ones*. See SALT, &c.

M. Homberg, and some late Chymists after him, only make one *Active Principle*, viz. Sulphur, or Fire; which they take to be the Source or Principle of all the Motion and Action of the Universe. See SULPHUR, and FIRE.

The Term *Active Principles*, says Dr. Quincy, has been used to express some Divisions of Matter, that are, by some particular Modifications, comparatively *active*, in respect of others; as, *Spirit*, *Oil*, and *Salt*, whose Parts are better fitted for Motion, than those of Earth and Water; but with how much Impropriety, will easily appear.

For, in a strict Sense, all Motion in Matter is rather *Passive*; and there is no *Active Principle*, unless we call so that known Property of Gravitation, on which the *Newtonian* Philosophy is founded; which is a mutual Inclination of Bodies towards one another, in proportion to the Quantity of Matter, in all Bodies: so that let them exist under what Modifications soever, there can be no Alteration made of this universal Property.—Hence, the Division of Matter into what, for Distinction-sake, may be called *Spirit*, does not give it any Properties inconsistent with this general Law. See MATTER, MOTION, &c.

ACTIVE, in Grammar, is somewhat that has an *active* Signification, and serves to explain, or denote an Action. A *Verb Active*, a *Conjugation Active*, &c. an *Active Participle*, &c. See PARTICIPLE, CONJUGATION, &c.

Verbs Active, are such as do not only signify Doing or Acting, but have also Nouns following 'em, to be the Subject of the Action or Impression. See VERB.

Thus, to love, to teach, are *Verbs Active*; because we can say, to love a thing, to teach a Man.

Verbs Neuter also signify an Action; but are distinguish'd from *Verbs Active*, in that they cannot have a Noun following 'em.—Such are, to sleep, to go, &c. See NEUTER.

Some Grammarians, however, make three Kinds of *Verbs Active*: The *Transitive*, where the Action pass'd into a

Subject different from the Agent; *Reflexed*, where the Action returns upon the Agent; and *Reciprocal*, where the Action returns mutually upon the two Agents who produced it. See TRANSITIVE, &c.

ACTIVITY, the Power of Acting, or the *Active Faculty*. See FACULTY, &c.

The *Activity* of Fire exceeds all Imagination.—The *Activity* of an Acid, a Poison, &c.—Bodies, according to Sir I. Newton, derive their *Activity* from the Principle of Attraction.

The *Sphere of Activity* of a Body, is the Space which surrounds it, so far as its Efficacy or Virtue extends to produce any sensible Effect. See SPHERE, EFFLUVIA, &c.

ACTOR, in Dramatic Poetry, one who represents some Person or Character upon the Theatre. See PERSON, and CHARACTER.

Tragedy, in its Original, only consisted of a simple Chorus, who sung Hymns in honour of Bacchus. See TRAGEDY, and CHORUS.

Thespis was the first who took upon him to introduce a *Person*, or *Actor*; who was to ease the Chorus, by reciting the Adventures of some of their Heroes.

Æschylus finding a single Person tire some, thought to entertain the Audience more agreeably by the Introduction of a second Person, who should converse and make Dialogue with the first. He likewise dress'd his *Actors* a little more decently than they had been before; and put them on the Buskin. See BERSKIN.

Sophocles finding the two Persons of *Æschylus* too few for the Variety of Incidents, added a third; and here the Greeks stopp'd; at least, we don't find in any of their Tragedies, above three Persons in the same Scene: tho in their Comedies, they took a further Liberty.

The Moderns have brought a much greater Number of *Actors* upon the Stage.—This heightens the Trouble, and Distress that should reign there; and makes a Diversity, in which the Spectator is sure to be interceded.

Horace speaks of a kind of secondary *Actors* in his Time, whose Business was to imitate the first; and lessen themselves, to become better foils to their Principals. We have little Notion how these subaltern *Actors* behaved. See MIME, PANTOMIME, &c.

ACTUAL, something real, and effective; or that exists truly and absolutely. See REAL, EXISTENCE, &c.

In Philosophy, we say, *Actual Heat*, or *Cold*; in opposition to *Virtual* or *Potential*. See POTENTIAL, &c.

Actual Heat, consider'd actively, is the Act of producing Heat: *Passively* taken, it is the Quality whereby a Body is denominat'd *Hot*.—*Virtual* or *Potential Heat*, actively taken, is the Power or Faculty of producing Heat; *passively* taken, it should be the Power or Faculty of being heated, or of receiving *Actual Heat*. See HEAT, COLD, &c.

In Theology, we say, *Actual Grace*; in opposition to *Habitual Grace*. See HABITUAL.

Actual Grace, is that which God gives us, to make or enable us to act, to do some Action.—*Habitual Grace* is sanctifying Grace, a Habit of Charity, or a Habit inherent in the Soul, which renders us agreeable to God, and Objects of eternal Remembrance. See GRACE.

So, *Actual Sin* is used in Opposition to *Original Sin*. See SIN.

Actual Sin is that committed knowingly, by a Person arriv'd at Years of Discretion. *Original Sin* is that we contract by Descent, as being Children of Adam. See ORIGINAL.

ACTUATE, to bring into Act; or put a thing in Action. See AER, and ACTON.

Thus, an Agent is said by the Schoolmen to *actuate* a Power, when it produces an Act in a Subject.—And thus the Mind may be said to *actuate* the Body.

ACUTE, *Sharp*, something that terminates in a Point, or an Edge; dispos'd either for piercing, or cutting. See POINT, EDGE, &c.

In this Sense, the Word usually stands oppos'd to *Obtuse*. See OBTUSE.

ACUTE *Angle*, is that which is less than a right Angle; or which does not subtend 90 Degrees. See ANGLE.

Such is the Angle AEC, (Tab. Geometry, Fig. 86.)

ACUTE *Angle Triangle*, is that whose three Angles are all acute, called also an *Oxygonous Triangle*. See TRIANGLE.

Such is the Triangle ACB, (Tab. Geometry, Fig. 68.)

ACUTE *Angular Section*, of a Cone, was used by the ancient Geometricians for the Ellipsis. See ELLIPSIS, and CONE.

ACUTE, in Music, is understood of a Sound, or Tone which is sharp, or shrill, or high, in respect of some other. See SOUND.

In this Sense, the Word stands oppos'd to *Grave*. See GRAVE.

Sounds consider'd as *Acute* and *Grave*, that is, in the Relation of Gravity and Acuteness, constitute what we call

Tune, the Foundation of all Harmony. See *TUNE*, *CONCORD*, and *HARMONY*.

Acute Accent, in Grammar, is that which denotes a Syllable to be pronounced with a high or acute Tone of Voice. See *ACCENT*.

The *Acute Accent*, is a little Line, or Virgula, placed over the Vowel, a little sloping or inclined in its Descent from right to left; as, *á*.—It is not used either in *English* or *Latin*; the *French* indeed retain it; but 'tis only to mark the Cloſe or Masculine *á*.

In the ancient *Greek* Manuscripts, the *Acute Accent* floops a great deal more, than in the modern Writings or Editions.

Acute Disease, is that which terminates, or comes to its Period, in a few Days; or, as the Physicians express it, *cito & cum periculo terminatur*. See *DISEASE*.

In this Sense, the Word stands opposed to *Chronical*.—All Diseases which hold above forty Days, are reputed *Chronical*. See *CHRONICAL*.

Dr. Quincy thinks an *Acute Disease* may be defined, that which is attended with an increased Velocity of Blood. See *BLOOD*, *CIRCULATION*, *HEART*, *PULSE*, &c.

Acute Diseases are the more dangerous, in that, beside the Violence of the Symptoms, if there be not time to empty the *Prime Via*, 'tis very difficult to stop their Progress, and save the Patient. *Treo*.

Acute Diseases are usually divided into those properly called *Acute*; and those, which by reason of the Vehemence of the Symptoms, are called *Misſe Acute*.

ACUTENESS, in Music, &c. that which constitutes or denominates a Sound, &c. *acute*. See *ACUTE*.

There is no such thing as *Acuteness* and *Gravity*, absolutely so called; they are only Relations; so that the same Sound may be either *Acute* or *Grave*, according to that other Sound they refer or are compared to. See *RELATION*.

The Degrees of *Gravity* and *Acuteness*, make to many Tones, or Tunes of a Voice, or Sound. See *TONE*, *TUNE*, *VOICE*, &c.

For the Cause and Measure of *Gravity* and *Acuteness*, see *GRAVITY*, *INTERVAL*, &c.

ADAGE, *ADAGIO*, a Proverb, or popular Saying. See *PROVERB*, &c.

Erasmus has made a large and valuable Collection of *Greek* and *Roman Adages*, from their Poets, Orators, Philosophers, &c.

Adage, Proverb, and *Paremia* are the same thing; but differ from *Gnomes*, *Sentences*, and *Apothegms*. See *GNOME*, *SENTENCE*, *APOTHEGM*, &c.

The Word is compounded of *ad*, and *agor*, according to *Scalger*, *Quod agatur ad aliud significandum*, because made to signify some other thing.

ADAGIO, in Music, one of the Words used by the *Italians*, to denote a Degree or Distinction of Time. See *TIME*.

The *Adagio* expresses a slow Time; the slowest of any, except *Grave*. See *ALLEGRO*.

The Triple $\frac{3}{4}$ is ordinarily *Adagio*. See *TRIPLE*.

ADALIDES, in the *Spanish* Policy, are Officers of Justice, for Matters touching the Military Forces.

In the Laws of King *Alphonſus*, the *Adalides* are spoke of, as Officers appointed to guide and direct the Marching of the Forces in time of War.—*Lopez* represents 'em as a sort of Judges, who take Cognizance of the Differences arising upon Excursions, the Distribution of the Plunder, &c.

ADAMANT, *ADAMAS*, in Natural History, &c. an ancient Name for a Precious Stone, by us called a *Diamond*. See *DIAMOND*.

ADAMI POMUM, *ADAM'S Apple*, in Anatomy, a little Prominence in the middle of the *Cartilago Scantiſſima*. See *POMUM ADAMI*.

ADAMITES, *ADAMITE*, a Sect of ancient Hereticks, who took upon them to imitate the Nakedness of *Adam*; as if Man had been reinstated in his original Innocence.

They assidid in the Temples naked, and had to do with Women in publick.

Prodicus was their Author, according to the Account given by *Theodoret*.—They were, in reality, a Branch sprung out of the *Carpocratians* and *Basilidians*. See *CARPOCRATIAN*, and *BASILIDIAN*.

This Sect is said to have flarted up a-fresh in the XVth Century, under *Picard*, their Leader; who pretended to re-establish the Laws of Nature, which, according to him, consisted in two things, *viz.* Community of Women, and Nakedness.—These last walked naked in the publick Places; whereas the former only put off their Clothes in their Assemblies.—*Jones* speaks of *Adamites* in England.

Præ ADAMITES. See *Præ ADAMITES*.

The Critics explain the Name *Adam*, \square from whence these Terms arise, variously; some by *Earth*, others by *Red*, others by *Acquiescence*.—Some of the *Greek* Interpreters explain it Cabalistically: According to them, the *A* signifies *æterndæ*, *Eaſt*; *D*, *Deus*, *West*; *A*,

æterndæ, *North*; and *M*, *mensurandæ*, *South*; as being King of the four Quarters of the World; or, in that he was to people it; or that he was a little World, *µικροκόσμος*.

ADAPTING. See *ACCOMMODATION*.

We say, to *adapt*, or fit a Recipient to the Capital, &c. See *RECIPIENT*, *ALEMISIC*, &c.

ADDER-STING, is used in respect of Carrel, when stung with any kind of venomous Reptiles; as *Adder*, *Scorpions*, &c. or bit by a *Hedge-hog*, or *Shrew*.

ADDICE, or *ADZE*, a sharp Tool, of the Ax-kind, but different from the common Ax.—It is made crooked, and by that means more convenient for cutting the hollow side of any Board, or Timber; being what the *Coopers* generally make use of for that Purpose.

ADDICTIO, *ADDICTION*, in the *Roman* Law, a Transferring, or passing over Goods to another; whether by Sentence of a Court, or in the way of Sale, to him that bids most for 'em. See *ALIENATION*.

The Word stands opposed to *Abdictio*, or *Abdication*. See *ABDICTION*, &c.

It is form'd of *Addico*, one of the stated Words used by the *Roman* Judges, when they allow'd the Delivery of the Thing or Person on whom Judgment had pass'd.

Hence, Goods thus adjudg'd by the *Pretor*, to the right Owner, were called *Bona addicta*; and Debtors deliver'd up in like manner to their Creditors, to work out their Debt, were called, *Servi Addicti*.

ADDICTIO IN DIEM, denoted the adjudging of a thing to a Person for a certain Price; unless by such a Day the Owner, or some other Person gave more for it.

The Word is also used for taking an Administration, and paying the Debts of the Deceased. See *ADMINISTRATION*.

ADDITAMENT, *ADDITAMENTUM*, a thing added to another. See *ADDITION*.

Additaments, in Physick and Chymistry, are Things super-added to the ordinary Ingredients of any Composition.

ADDITION, the Act of joining one thing to another; or of augmenting a thing, by the Accession of others thereto. See *AUGMENTATION*, and *ACCESSION*.

In Matters of Holy Scripture, 'tis forbid to make any *Addition* to the Text, for fear of corrupting and altering the Sense.—In Physicks, we say, that Natural Bodies are form'd by the *Addition* or Aggregation of Parts. See *AGGREGATION*, *ACCRETION*, &c.

ADDITION, is also used for the *Additament*, or the thing added to itself.—In the new Editions of Books, Authors use to make *Additions*; they frequently make needless *Additions*, in lieu of retrenching Superfluities and Impermencies.

'Tis an Axiom, that if to equal Quantities you add unequal ones; the Excess of the Wholes, will be the same as the Excess of the *addition*al Parts.

ADDITION, in Arithmetick, is the first of the four fundamental Rules, or Operations of that Art. See *RULE*, and *ARITHMETICK*.

Addition consists in finding the Amount of several Numbers, or Quantities severally added one to another.—Or, *Addition* is the Invention of a Number, from two or more homogeneous ones given, which is equal to the given Numbers taken jointly or together. See *NUMBER*.

This Number, thus found, is called the *Sum*, or Aggregate of the Numbers given. See *SEM*.

The Character of *Addition* is +, which we usually express by *Plus*. Thus 3+4 denotes the Sum of 3 and 4; and is read 3 plus 4. See *CHARACTER*.

To add any given Numbers together.

The *Addition* of simple Numbers is easy. Thus it is readily perceiv'd that 7 and 9, or 7+9 make 16, and 11+15 make 26.

In longer, or compounded Numbers, the Business is perform'd by writing the given Numbers in a Row, downwards Homogeneous under Homogeneous, *i. e.* Units under Units, Tens under Tens, &c. and singly collecting the Sums of the respective Columns.

To do this, we begin at the bottom of the outmost Row or Column, to the right; and if the Amount of this Column do not exceed 9, we write it down at the Foot of the same Column: If it do exceed 9, the Excess is only to be wrote down, and the rest reserv'd to be carried to the next Row, and added thereto; as being of the same Kind, or Denomination.

Suppose, *e. g.* the Numbers 1357 and 172, were given to be added; write either of them, *v. gr.* 172, under the other, 1357; so, as the Units of the one, *viz.* 2, stand under the Units of the other, *viz.* 7, and the 1357 other Numbers of the one, under the correspondent 172 ones of the other, *viz.* the Place of Tens under Tens, — as 7 under 5; and that of Hundreds, *viz.* 1, under 1529 the Place of Hundreds of the other, 3.—Then, be-

ginning, say, 2 and 7 make 9; which write underneath; also 7 and 5 make 12; the last of which two Numbers,

926

1357
172

1529

926

1529

926

1529

926

ovis. 2. is to be written, and the other 1, reserved in your Mind to be added to the next Row, 1 and 5; then say, 1 and 1 makes 2, which added to 3 make 5; this write underneath, and there will remain only 1, the first Figure of the upper Row of Numbers, which also must be writ underneath; and thus you have the whole Sum, viz. 1529.

So, to add the Numbers 87899+13403+885+1920 into one Sum, write them one under another, so as all the Units make one Column, the Tens another, the Hundreds a third, and the Places of Thousands a fourth, and so on.—Then say, 9 and 3 make 12, and 12+9 make 21; write 1 underneath, and the 1 add to the next Rank; saying, 1 and 8 make 9, 9+2 make 11, and 11+9 make 20; and having writ the 0 underneath, say again, 2 and 8 make 10, and 10+9 make 19, and 19+4 make 23, and 23+8 make 31; then, referring 3, write down 1 as before, and say again, 3+1 make 4, 4+3 make 7, and 7+7 make 14, wherefore write 4 underneath; and lastly, say 1+1 make 2, and 2+8 make 10, which in the 1920 last Place write down, and you will have the Sum 885104107 of them all.

ADDITION of Numbers of different Denominations, for instance, of Pounds, Shillings, and Pence, is perform'd by adding or summing up each Denomination by itself, always beginning with the lowest; and if after the Addition, there be enough to make one of the next higher Denomination, for instance, Pence enough to make one or more Shillings; they must be added to the Figures of that Denomination, that is, to the Shillings; only reserving the odd remaining Pence to be put down in the Place of Pence.—And the same Rule is to be observ'd in Shillings, with regard to Pounds.

For an instance, 5 Pence and 9 Pence make 14 Pence; now in 14 there is once 12, or a Shilling, and two remaining Pence; the Pence, for down; and reserve 1 Shilling to be added to the next Column, which consists of Shillings. Then 1 and 8 and 2 and 5 make 16; the 6 put down, and carry the 1 to the Column of Tens; 1 and 1 and 1 make three Tens of Shillings, or 30 Shillings; in 30 Shillings there is once 20 Shillings, or a Pound, and 10 over: write one in the Column of Tens of Shillings, and carry 1 to the Column of Pounds; and continue the Addition of Pounds, according to the former Rules.

ADDITION of Decimals, is perform'd after the same manner as that of Whole Numbers; as may be seen in the following Example. See also DECIMAL.

650.953
 51.0807
 305.27

 987.3037

ADDITION of Vulgar Fractions, see under the Article FRACTION.

ADDITION, in Algebra, or the **ADDITION of Species**, is perform'd by connecting the Quantities to be added, by their proper Signs; and also by uniting into one Sum, those that can be foited. See QUANTITY, SPECIES, &c.

Thus, a and b make $a+b$; a and $-b$ make $a-b$; $-a$ and $-b$ make $-a-b$; $7a$ and $9a$ make $7a+9a$; $-a\sqrt{ac}$ and $b\sqrt{ac}$ make $-a\sqrt{ac}+b\sqrt{ac}$, or $b\sqrt{ac}-a\sqrt{ac}$; for it is all one in whatever Order they be written.

But, particularly, 1^o, **Affirmative Quantities of the same Species or Kind**, are united by adding the prefix'd Numbers whereby the Species are multiplied. See POSITIVE.

Thus, $7a+9a$ make $16a$. And $11bc+15bc$ make $26bc$.

Also $\frac{3}{2} + \frac{5}{2}$ make 8 ; and $3\sqrt{ac}+7\sqrt{ac}$ make $9\sqrt{ac}$; $6\sqrt{ab-xx}+7\sqrt{ab-xx}$ make $13\sqrt{ab-xx}$. And in like manner $6\sqrt{3}+7\sqrt{3}$ make $13\sqrt{3}$. Again, $a\sqrt{ac}+b\sqrt{ac}$ make $a+b\sqrt{ac}$, by adding together a and b , as Numbers multiplying \sqrt{ac} . And so $2a+3c\sqrt{3axx-x^3}+3a\sqrt{3axx-x^3}$ make $5a+3c\sqrt{3axx-x^3}$ since $2a+3c$ and $3a$ make $5a$.

Affirmative Fractions, which have the same Denominator, are added together by adding their Numerators.

Thus, $\frac{1}{2} + \frac{1}{2}$ make 1 ; and $\frac{2ax}{b} + \frac{3ax}{b}$ make $\frac{5ax}{b}$; and thus

$\frac{8a\sqrt{cx}}{2a+\sqrt{cx}} + \frac{17a\sqrt{cx}}{2a+\sqrt{cx}}$ make $\frac{25a\sqrt{cx}}{2a+\sqrt{cx}}$, and $\frac{aa}{c} + \frac{bx}{c}$ make $\frac{aa+bx}{c}$. See FRACTION.

Negative Quantities are added after the same manner as Affirmative. See NEGATIVE.

Thus, -2 and -3 make -5 ; $-\frac{4ax}{b}$ and $-\frac{11ax}{b}$ make

$-\frac{15ax}{b}$; $-a\sqrt{ax}$ and $-b\sqrt{ax}$ make $-a-b\sqrt{ax}$.
 When a Negative Quantity is to be added to an affirmative one; the Affirmative must be diminish'd by a Negative one.
 Thus, 3 and -2 make 1; $\frac{11ax}{b}$ and $-\frac{4ax}{b}$ make $\frac{7ax}{b}$;
 $-a\sqrt{ac}$ and $b\sqrt{ac}$ make $b-a\sqrt{ac}$.
 And note, that when the negative Quantity is greater than the Affirmative, the Aggregate or Sum will be Negative. Thus, 2 and -3 make -1 ; $-\frac{11ax}{b}$ and $\frac{4ax}{b}$ make $-\frac{7ax}{b}$; and $2\sqrt{ac}$ and $-7\sqrt{ac}$ make $-5\sqrt{ac}$.

ADDITION of Irrational Quantities.—If they be of different Denominations, reduce 'em to the same Denomination; and if they be then commensurable, add the Rational Quantities without the Vinculum; and to their Sum prefix the Radical Sign.—The rest is as in the Addition of Rational.

Thus, we shall find $\sqrt{8} + \sqrt{18} = 2\sqrt{2} + 3\sqrt{2} = 5\sqrt{2} = 50$. On the contrary, $\sqrt{7}$ and $\sqrt{5}$ being incommensurable, their Sum will be $\sqrt{7} + \sqrt{5}$.

ADDITION, in Law, is that Name, or Title which is given to a Man, over and above his proper Name and Surname; as to flew of what Estate, Degree, or Mystery he is; and of what Town, Village, or Country.

Additions of Estate, or Quality, are Yeoman, Gentleman, Esquire, and such like. See YEOMAN, GENTLEMAN, ESQUIRE, &c.

Additions of Degree, are those we call Names of Dignity; as, Knight, Lord, Earl, Marquis, and Duke. See KNIGHT, LORD, DUKE, &c.

Additions of Mystery, are such as Scribeour, Painter, Mason, &c.

Additions of Place, are, of *Towyn*, of *Dale*, of *Woodstock*.—Where a Man hath Household in two Places, he shall be said to dwell in both; so that his Addition in either may suffice.

Knave was antiently a regular Addition. See KNAVE.

By Stat. 1 Hen. V. it was ordained, that in Suits or Actions where Process of Outlawry lies; such Additions should be made to the Name of the Defendant, to shew his Estate, Mystery, and Place where he dwells; and that the Writs, not having such Additions, shall abate, if the Defendant take Exception thereto; but not by the Office of the Court.—The Reason of this Ordinance was, that one Man might not be troubled by the Outlawry of another; but by reason of the certain Addition, every Person may bear his own Burden. See CHURCH.

ADDOUBORS, in Law. See REDDEBORS.

ADDUCENT Muscles, or **ADDUCTORS**, are those which bring forward, close, or draw together, the Parts of the Body whereto they are annexed. See MUSCLE.

The Word is compounded of *ad*, to, and *duco*, I draw, or bring to.

Adducti, or **Adductors**, stand oppos'd to **Abducenti** or **Abductors**. See ABDUCENT, and ABDUCTOR.

ADDITION, in Anatomy, the Motion or Action of the Adductus Muscles. See ABDUCENT, and ABDUCTOR.

ADDUCTOR Oculi, a Muscle of the Eye; so called, because it inclines its Pupil toward the Nose. See EYE.

It is also called **Bibitorius**; because it directs the Eye toward the Cup in drinking. See BIBITOR.

ADDUCTOR Pollicis, is a Muscle of the Thumb, which arises tendinous, and ascends obliquely towards a broad Termination, at the superior Part of the first Bone of the Thumb.—Its Office is to bring the Thumb near the Fore-finger. See FINGER.

ADDUCTOR Pollicis Pedis, called also **Antibellaris**, is a Muscle of the great Toe, which arises from the inferior Part of the *Os Cuneiforme tertium*, and is inserted into the internal Part of the *Os Sessamosidea* of the great Toe; which it draws nearer the rest.

ADDUCTOR Indicis, is a Muscle of the Fore-finger, arising from the inside of the Bone of the Thumb, and inserted into the first Bone of the Fore-finger, which it draws towards the Thumb.

ADDUCTOR minimi digiti Pedis. See TRANSVERSALIS Pedis.

ADELING, or **ETHLING**, from the Saxon *Adelan*, *q. d. Nobilis*; a Title of Honour among the English Saxons, properly belonging to the Successor, or Heir Apparent of the Crown. See FRANCIS, &c.

King Edward the Confessor being without Issue, and intending to make Edgar, to whom he was great Uncle by the Mother's side, his Heir; first called him his *Adeling*.

Now, Antiquaries observe, that it was usual for the Saxons to join the Word *Ling* to the Christian Name, which signify'd a Son, or the Younger; as *Edmundling* for the Son of Edmund: so that *Adeling* signify'd the Son of a King. See KING.

ADEPTION, ADEPTIO, in the Civil Law, the Revocation of a Grant, Donation, or the like.

The *Adeption* of a Legacy, may be either *Express*; as when the Testator declares in form, that he revokes what he had bequeathed: Or *Tacit*, as when he only revokes it indirectly, or implicitly.

ADEPS, in Anatomy, a Species of *Fat*, found in the Cavities of the Abdomen. See *FAT*.

The *Adeps* differs from the common *Fat*, called *Pinguedo*; in that it is thicker, harder, and of a more earthy Substance. See *PINGUET*.

The *Adeps* is much the same with what we call *Sebum, Suet, or Leaf*. See *SEBUM*.

ADEPS is also used by the Physicians, as a general Name for *Fat* of either Kind.

The *Adeps Asjeris*, Goule's *Fat*; *Adeps Canis*, *Fat* of a Dog; *Adeps Homini*, *Fat* of a Man; *Adeps Vipere*, *Vipers Fat*; and *Adeps Ursi*, *Bears Fat*, are all used in Medicine, in quality of Ripeners, or Drawers; as being of a penetrating Nature, and thereby suited to dissolve and rarify the Tumors, and bring 'em as it were to Maturity. See *RIPENER*.

The specific Virtues ascribed to certain of 'em, do not seem well warranted. See *FAT*, *VIPER*, &c.

ADEPTS, ADAPTI, a Denomination given to the Proficients in Alchemy; particularly those who pretend to the Secrets of the Philosopher's Stone, and the Universal Medicine. See *ALCHYM*, *PHILOSOPHER'S Stone*, *TRANSMUTATION*, *ELIXIR*, &c.

Ripley, Lully, Paracelsus, Helmont, Hollandus, Centisoglia, &c. are the Principal among the *Adepts*. See *CHYMISTRY*.

The Word is Latin, *Adeptus*, form'd of the Verb *adipiscor*, I obtain.

'Tis a sort of Tradition among the Alchymists, that there are always twelve *Adepts*; and that their Places are immediately supplied by others, whenever it pleases any of the Fraternity to die, or transmigrate into some other Place, where he may make use of his Gold; for that in this wicked World it will scarce purchase 'em a Shirt.—*Harris*.

ADEQUATE, ADEQUATUM, something equal to, or co-extended with, another; and filling the whole Measure and Capacity thereof. See *EQUALITY*.

In this Sense, the Word stands oppos'd to *Inadequate*. See *INADEQUATE*.

ADEQUATE Ideas, or Notions, are such Images or Conceptions of an Object, as perfectly represent it, or answer to all the Parts and Properties of it. See *IDEA*.

M. Leibnitz defines an *Adequate Notion*, to be that of whose several Characters we have distinct Ideas.—Thus, a Circle being defined a Figure bounded by a Curve Line which returns into it self, and whose Points are all equally distant from a certain intermediate Point therein: Our Notion of a Circle is *adequate*, if we have distinct Ideas of all these Circumstances, viz. a Curve returning upon it self, a middle Point, an Equality of Distance, &c. See *NOTION*, *DEFINITION*, &c.

All Simple Ideas are *adequate* and perfect; and the Faculty, be it what it will, that excites them, represents them entire. See *SIMPLE Idea*.

The Ideas of Modes are likewise *adequate*, or perfect; except of those Modes which occasionally become Substances: for when we speak of Modes separately existing, we only consider them separate from the Substance by way of Abstraction. See *MODE*, *ACCIDENT*, &c.

All Abstract Ideas are also *adequate* and perfect; since they represent all that Part of the Subject which we then consider.—Thus, the Idea of Roundness is perfect, or *adequate*, because it offers to the Mind all that is in Roundness, in general. See *ABSTRACT*.

Of the same Kind are all Ideas, of which we know no Original or external Object really existing out of them; by occasion of which they were excited in us, and of which we think them the Images.—Thus, when a Dog is before us, it is the external Object without us which raises the Idea in our Mind; but the Idea of an Animal in general, has no external Object to excite it: 'tis created by the Mind it self, and must of Necessity be *adequate*, or perfect. See *ABSTRACTION*.

On the contrary, the Ideas of all Substances are inadequate and imperfect, which are not form'd at the Pleasure of the Mind, but gather'd from certain Properties, which Experience discovers in them. See *SUBSTANCE*.

This is evident, in regard our Knowledge of Substances is very defective; and that we are only acquainted with some of their Properties: Thus, we know that Silver is white, that it is malleable, that it melts, &c. but we do not know what further Properties it may have; and are wholly ignorant of the inward Texture of the Particles whereof it consists.—Our Idea of Silver therefore, not representing to the Mind all the Properties of Silver, is *inadequate* and imperfect.

ADESSENIARI, a Sect in Religion, who hold that Jesus Christ is really present in the Eucharist; but in a man-

ner different from what the Romanists hold. See *EUCARIST*, &c.

The *Adesseuarii*, call'd also *Impanatores*, are divided into four different Opinions touching the Point.—Some hold that the Body of Jesus Christ is in the Bread; others, that it is about the Bread; others, that it is with the Bread; and lastly, others, that it is under the Bread. See *IMPANATION*.

The Name *Adesseuarii* was first framed by Prateolus, from the Latin Verb *adesse*, to be present.

ADEFECTED Equation. See *EQUATION*.

ADHESION, ADHERENCE, in Physicks, the State of two Bodies which are join'd or fasten'd to each other, either by the mutual Interposition of their own Parts; or the Compression of external Bodies. See *COHESION*, and *NECESS*.

The Word is compounded of the Latin *ad*, and *haerere*, I stick or cleave to.

Anatomists sometimes observe *Adhesions* of the Lungs to the Sides of the Thorax, the Pleura, and Diaphragma, which give occasion to various Disorders. See *LUNGS*, *PLEURA*, *PLEURIS*, *PHTHISIS*, *PERIPNEUMONY*, &c.

The *Adhesion* of two polish'd Planes, or two Hemispheres, is a Phenomenon arg'd in behalf of the Weight and Pressure of the Atmosphere. See *ATMOSPHERE*.

The Schoolmen distinguish two Kinds of Certitude: the one of Speculation, which arises from the Evidence of the Thing; and the other of *Adhesion*, which has nothing to do with Evidence, but arises purely from the Importance of the Matter, and the Interest we have in its Truth. See *CERTITUDE*, *TESTIMONY*, *TRUTH*, *EVIDENCE*, &c.

ADJACENT, or ADJOINING, something contiguous or situate near another. See *CONTIGUOUS*.

The Word is compounded of *ad*, to, and *jacere*, to lie.

ADJACENT Angle. See *ANGLE*.

ADIAPHORISTS, ADIAPHORISTAE, ADIAPHORITES, a Name given in the XVIIth Century to the moderate Lutherans, who adher'd to the Sentiments of Melancton; and afterwards to those who subscrib'd the Interim of Charles V. See *LUTHERAN*.

The same Name might also be applied to those now call'd *Indifferentists*. See *INDIFFERENTIST*.

The Word is originally Greek, *adiaphoroi*, indifferent.

ADIAPHOROUS, ADIAPHORUS, q. d. Indifferent, or Neutral, a Name given by Mr. Boyle to a Kind of Spirit distill'd from Tartar and some other Vegetable Bodies; and which is neither Acid, Vinous, nor Urinous; but in many respects different from any other sort of Spirit. See *SPIRIT*; see also *NEUTRAL*.

ADJECTIVE, Noun ADJECTIVE, or ADJUNCT, in Grammar, a Kind of Noun join'd with a Noun Substantive either express'd or understood, to shew its manner of being, that is, its Qualities or Accidents. See *NOUN*, &c.

The Word is form'd of the Latin *adjective*, to add to; as being to be added to a Substantive, without which it has no precise Signification at all.

Father Buffier defines *Adjective* in a new manner, and sets it in a Light different from that of other Grammarians.—Nouns, according to him, are Substantives, when the Objects which they represent are consider'd simply, and in themselves, without any regard to their Qualities: On the contrary, they are *Adjectives*, when they express the Quality of an Object. See *QUALITY*.

Thus, when I say simply, a Heart; the Word *Heart* is a Substantive, because none of its Qualities are express'd; but when I say a generous Heart, the Word *generous* is an *Adjective*; because it adds a Quality or Attribute to the Heart.

Adjectives, then, seem to be nothing else but Modifications.—In effect, the End of an *Adjective* being only to express the Qualities of an Object; if that Quality be the Object it self whereof we speak, it becomes a Substantive; e. g. If I say, *this Book is good's good*, here, is an *Adjective*: But if I say, *God is always to be obeyed*, 'tis evident *God* is the Subject I speak of; and consequently, *God* there is a Substantive.

On the contrary, it often happens in other Languages, and sometimes in our own, that a Substantive becomes an *Adjective*; as for instance, in these Words, *the King, Hero as he is, remembers he is a Man*: Where the Word *Hero*, tho' ordinarily a Substantive, is yet apparently an *Adjective*.

From this new Idea of an *Adjective*, it appears that many of the Nouns which, in the common Grammar, are accounted Substantives are really *Adjectives*, and vice versa; Grammar, in this and a thousand other Instances depending upon Custom. See *SUBSTANTIVE*.

AD Inquirendum, a Writ Judicial, commanding Inquiry to be made of any thing touching a Cause depending in the King's Court, for the better Execution of Justice; as of Bastardy, and such like. See *WRIT*.

ADJOINING, ADJUNCTION, in Philosophy, &c. See *ADJUNCT*, and *ADJUNCTION*.

ADJOINING is particularly us'd for the Associating of a Person to another; or appointing him a Colleague, or *Adjunct*. See ADJUNCT, &c.

ADJOURNMENT, the putting off a Court, or Meeting; and appointing it to be kept at another Time, or Place. See COURT, &c.

In this Sense, we meet with the Phrase *Adjournment in Eyre*, for an Appointment of a Day when the Justices in Eyre intend to sit again. See JUSTICE, EYRE, &c.

Adjournments of Parliament differ from *Prorogations*. See PROROGATION.

Each House has the Privilege of *adjourning* it self. See PARLIAMENT.

The Word is form'd of the Latin *ad*, to, and the French *jour*, Day; *q. d.* to another Day.

ADIPOSA, or ADEPOSA *Membrana*, in Anatomy, is a Membrane investing the Body, immediately under the Cutis; supposed to be the Basis of the Fat, which is lodg'd in the Spaces between its Fibres, and in peculiar Cells form'd herein. See FAT, CUTIS, CELL, &c.

Anatomists are divided as to the Reality of this Membrane; most of the later Writers taking it to be no other than the exterior Membrane of the *Membrana Carnosa*, or *Musculorum Communis*. See MEMBRANA, CARNOVA, &c.

Vasa Adiposa, *Fat-Vessels*, make a PART of the Substance of the Omentum, or Casal. See OMENTUM.

ADIPOSE Cells, *Cellule Adiposæ*, or *Loculi Adiposi*. See CELLULE Adipose.

ADIPOSE Ducts, *Ductus Adiposi*. See DUCTUS Adiposi.

Malpighi starts a Doubt whether the *Adipose Ducts* may not be propagated from the Fibres which abound in the Spleen; or those Fibres from them?—As also, whether there be not a yet undiscover'd Communication between the Omentum and the *Membrana Adiposa*.

ADIT, ADITUS, the Shaft, or Entrance into a Mine, Quarry, or the like. See MINE, QUARRY, &c.

ADJUDGE, in Law.—When a determinate Sentence is pass'd in the Behalf of any one, the Case is said to be *adjudged* for him. See SENTENCE.

We have various Collections of Decrees, Reports, *Adjudg'd Cases*, &c. See COMMON LAW.

ADJUDICATION, the Act of *adjudging*; or of giving any thing by Sentence, Decree, or Judgment. See ADJUDGED, and JUDGMENT.

The Word is particularly us'd for the Addition of Consigning a thing sold by Cant, Auction, or the like, to the highest Bidder. See AUCTION.

ADJUNCTIO, a mere external joining, or adding of one thing to another. See ADDITION.

All *Adjunctio* implies a Subordination.—The *Adjunct* is for the sake of the Thing it is join'd to, not contrarywise; as, the Clothes for the Man; not the Man for the Clothes.—Whatever is a Part of a thing, cannot be called an *Adjunct* of it. See ADJUNCTS.

There are various Species of *Adjunctio*; viz. *Adhesion*, *Apposition*, *Adjacency*, *Accombation*, *Incapitation*, *Imposition*, *Affixion*, &c. See ADHESION, APPPOSITION, &c.

ADJUNCT, ANJUNCTUM, in Philology, something added to a Being from without. See ANJUNCTO.

Or, an *Adjunct* is an Additament or Accession to a thing, not essentially belonging to it, but only accidental thereto. See ACCIDENT.

There are two Kinds of *Adjuncts*; the one, a Substance (whether Spirit or Body) accidentally superadded to another, as its Subject.—Such is Water in a Sponge, or Vessel, and the Soul in the Body. See SUBSTANCE.

The second an Attribute, or Mode, accidentally likewise superadded to a Substance; whether Body or Spirit.—Such is Figure in a Body, Knowledge in the Mind, &c. See MODE.

Some divide *Adjuncts* into *Absolute*; which agree to the whole thing, without any Limitation: Thus, Passions are *Absolute Adjuncts* of a Man.—And *Limited*; which only agree to their Subject, in respect of some certain Part thereof: Thus, Man only thinks, consider'd as to his Mind; only grows, as to his Body, &c.

In Ethics, we usually reckon seven *Adjuncts*, popularly call'd *Circumstances*; *Qui, quid, ubi, quibus auxiliis, cur, quomodo, quando*. See CIRCUMSTANCE.

ADJUNCTS, in Rhetorick and Grammar, are certain Words or Things added to others; to amplify the Discourse, or augment its Force. See AMPLIFICATION, &c.

Such are Adjectives, Attributes, and Epithets, which are added to Substantives, Subjects, &c. to express their Nature, Qualities, Accidents, &c. See ADJECTIVE, ATTRIBUTE, EPIHET, &c.

Arguments drawn from *Adjuncts*, are Supplements or Inforcements of the Proof arising from the Circumstances of the Fact. See CIRCUMSTANCE, &c.

ADJUNCT, is also us'd in Civil Concerns, for a Colleague, or Fellow-Officer, associated to another, to assist him in his

Ministry, to share the Functions thereof, or even have an Eye to his Actions. See COLLEGE.

AD *Jura Regis*, is a Writ that lies for the King's Clerk, against him that sought to eject him, to the Prejudice of the King's Title in right of his Crown. See WRIT.

ADJURATION, a Part of Exorcism, wherein the Devil is commanded, in the Name of God, to depart out of the Body of the Possessed, or to declare something. See EXORCISM, POSSESSION, &c.

The Word is Latin, form'd of *adjurare*, to adjure; of *ad*, and *juro*, I swear. See CONJURATION.

ADJUTANT, an Officer in the Army, whose Business is to aid or assist the Major. See MAJOR.

Adjutant is the same that we otherwise call *Aid Major*. See AID MAJOR.

The Term is sometimes also us'd for an *Aid de Camp*. See AID DE CAMP.

The Word is form'd of the Latin *adjutare*, to help, assist.

ADJUTORIUM, in Anatomy, a Bone of the Arm; so called, as being us'd in lifting it up. See BONE, and ARM.

ADMEASUREMENT, ADMENSURATIO, a Writ which lies for the bringing those to Reason, or Mediocrity, that usurp more than their Share. See WRIT.

This Writ lies in two Cases; the one termed *Admeasurement of Dower*, *Admesuratio Dotis*, where the Widow of the Deceased holds more from the Heir or his Guardian, on account of her Dower, than of right belongs to her. See DOWER.

The other *Admeasurement of Pasture*, *Admesuratio Pasture*, which lies between those who have common of Pasture appendant to their Freehold, or common by Vicinage, in case any of them surcharge the Common with more Cattle than they ought. See COMMON.

ADMINICLE, ADMINICULE, ADMINICULUM, a Term us'd in some ancient Statutes, for Aid, Help, or Support. See AID, &c.

In the Civil Jurisprudence, *Adminiculum* signifies the Beginning of a Proof; an imperfect Proof; a Circumstance or Conjecture, tending to form or fortify a Proof.

Among Antiquaries, the Term *Adminicules* is applied to the Attributes, or Ornaments wherewith *Juno* is represented on Medals. See ATTRIBUTE.

ADMINISTRATION, the Government, or Direction of Affairs; particularly the Exercise of distributive Justice. See GOVERNMENT, and JUSTICE.

Indolent Princes confide the *Administration* of publick Affairs to their Ministers. See MINISTER.

Civil Wars are usually rais'd on Pretence of *Male-Administration*; or of Abuses committed in the Exercise of Justice. See WAR.

ADMINISTRATION, in Law, signifies the disposing of a Man's Goods, or Estate, that died intestate, or without any Will; with an Intent to give an Account thereof. See ADMINISTRATOR, INTERSTATE, &c.

Instruments, or Powers of *Administration*, are taken out in the Prerogative Court. See PREROGATIVE.

ADMINISTRATION is sometimes also us'd for the Direction of the Affairs of a Minor, a Pupil, a Lunatick, or the like. See MINOR, PUPIL, TUTOR, &c. see also GUARDIAN.

ADMINISTRATION is also us'd in respect of Ecclesiastical Functions.—The Parson has the *Administration* of the Sacraments in his Parish. See PARSON, PARISH, &c.—The *Administration* of the Sacrament is prohibited to Persons excommunicate. See EXCOMMUNICATION.

In Beneficiary Matters, they distinguish two Kinds of *Administration*; *Temporal*, which relates to the Temporalities of a Benefice, Diocese, &c. and *Spiritual*, to which belong the Power of excommunicating, &c. See TEMPORALTY, &c.

ADMINISTRATOR, in Law, he to whom the Ordinary commits the *Administration* of the Goods of a dead Man, in default of an Executor. See ADMINISTRATION, WILL, EXECUTOR, &c.

An Action lies for or against an *Administrator*, as for an Executor, and he shall be accountable to the Value of the Goods of the Deceas'd, and no further.—Unless there be Waite or other Abuse chargeable on him.

If the *Administrator* die, his Executors are not *Administrators*; but the Court is to grant a new *Administration*.—If a Stranger, who is neither *Administrator* nor Executor, take the Goods of the Deceas'd, and *administer*; he shall be charged and sued as an Executor, not as an *Administrator*.

If a Woman have Goods thus committed to her Charge, or *Administration*, she is called *Administatrix*.

ADMIRAL, ADMIRALUS, ADMIRALLUS, a great Officer, who commands the Naval Forces of a Kingdom or State; and before whom all Causes are cognizable, relating to the Sea. See NAVY, SEA, &c.

Authors are divided about the Origin and Denomination of this important Officer, whom we find establish'd, with some Variation, in most Kingdoms that border on the Sea.—Some borrow it from the *Greeks*; the Captain of the *Seas*, under the Emperors of *Constantinople*, being called *Amiratus* or *Amiralis*, of *αμιρατ*, *Salmé*; or *αμω*, *Salt Water*, and *αμωρ*, *princeps*; in regard his Jurisdiction lay on the Sea, which the *Latins* call *Salom*.—But it is to be observ'd, that this Officer had not the supreme Administration of Naval Affairs; that immediately belong'd to the *Dux Magnus*, or grand General; to whom the *Amiratus* was subordinate, in Quality of *Protocomes*, first Court, or Associate. See *COMES*.

Others derive the Name from the Arabic *Amir* or *Emir*, Lord; and the *Greek* *αμω*, *Marine*; and accordingly, we frequently find *Emir* in *Zonaras*, *Cedrenus*, *Nicetas*, and other *Greeks* of that Time, us'd in the Sense of a Commander.—Add, that in the Life of *St. Peter Thomassin*, we meet with *Amiratus Jerusalem*, for the Governor of *Jerusalem*, under the *Sultan* of *Egypt*. And hence, some will have both the Name and the Dignity of Oriental, and even *Saracen* Extraction: As, in effect, there are no Instances of *Admirals* in this Part of *Europe*, before the Year 1284; when *Philip of France*, who had attended *St. Louis* to the Wars against the *Saracens*, created an *Admiral*.

To say no more, *De Cange* assures us, that the *Sicilians* were the first, and the *Genese* the next after 'em, who gave the Denomination *Admiral* to the Commanders of their Naval Armaments; and that they took it from the *Saracen* or Arabic *Amir*, a general Name for any commanding Officer.—The first *Admiral* we read of in our *English* Affairs, was under *Edward I*.

The *Lord High Admiral* of *England*, in some antient Records called *Captivatus Marinorum*, is Judge or President of the *Court of Admiralty*. See *ADMIRAL'S COURT*.

He takes Cognizance, by himself, his Lieutenant, or Deputies, of all Crimes committed on the Sea, or the Coasts thereof; and all the Civil and Marine Transactions relating thereto: As also of what is done in all great Ships, riding in any great River, beneath the Bridges thereof next the Sea.

Antiently, the *Admiral* had also Jurisdiction in all Causes of Merchants and Mariners; not only on the Sea, but in all foreign Parts.—We have had no *High Admiral* for some Years; the Office being put in Commission, or under the Administration of the *Lords Commissioners of the Admiralty*. See *COMMISSION*.

ADMIRAL is also used for the Commander in Chief of a single Fleet, or Squadron. See *FLEET*.

Thus, we say, the *Admiral* of the *Red*; *Admiral* of the *White*; and *Admiral* of the *Blue*. See *SQUADRON*, *NAVY*, &c.

The Term is also applied to all Flag-Officers: In which Sense it includes *Vice-Admirals* and *Rear-Admirals*. See *FLAG-OFFICER*.

Rear-ADMIRAL? See *REAR-ADMIRAL*.

Vice-ADMIRAL? See *VICE-ADMIRAL*.

Vice-ADMIRAL, is also an Officer appointed by the *Lord High Admiral*, in divers Parts of the Kingdom, with Judges and Marshals subordinate to him; for the exercising of Jurisdiction in Maritime Affairs, within their respective Limits.

There are upwards of twenty *Vice-Admirals*.—From their Decisions and Sentences, Appeal lies to the *Court of Admiralty* in *London*.

There are also *Admirals of the Gallies*. See *GALLEY*. *Montrelet* makes mention of an *Admiral of the Archers*, or *Cross bow-Men*.

ADMIRAL, is likewise the Name of the principal Vessel of a Fleet, which carries the *Admiral* on board. See *FLEET*, *NAVY*, &c.

When two Ships of War, bearing the same Colours, meet in the same Port; that which arrived first, has the Title and Prerogative of *Admiral*; and the other, tho' of greater Strength and Rate, shall only be accounted *Vice-Admiral*.—'Tis pretty much the same with the Vessels that go to *Newfoundland*: that which arrives there the first, taking the Title and Quality of *Admiral*, which it retains during the whole fishing Season. See *FISHERY*.

ADMIRAL'S COURT, or the *High Court of ADMIRALTY*, is a Court held by the *High Admiral*, to which belongs the Decision of all Maritime Controversies, Trials of Malefactors, and the like. See *COURT*, and *ADMIRAL*.

The Proceedings in this Court, in all Civil Matters, are according to the Civil Law; because the Sea is without the Limits of the Common Law, and under the *Admiral's* Jurisdiction. See *CIVIL LAW*.

In Criminal Affairs, which ordinarily relate to Piracy, the Proceedings in this Court were antiently likewise by information and Accusation, according to the Civil Law; but that being found inconvenient, in regard no Person could be convicted without either their own Confession, or an Eye-witness of the Fact, so that the greatest Offenders often

escap'd with Impunity: there were two Statutes made by *Henry VIII*, enacting, That Criminals should henceforth be here tried by Writables and a Jury; and this by special Commission from the King to the *Lord Admiral*: wherein some of the Judges of the Realm are always to be Commissioners; and the Trial according to the Laws of *England*, directed by those Statutes. See *JURY*, *TRIAL*, &c.

The *Court of Admiralty*, is said to have been first erected in 1357, by *King Edward III*.—To the Civil Law, first introduc'd by the Founder, were afterwards added, by his Successors, particularly *Richard I*, the Laws of *Oleron*; and the Marine Usages and Constitutions of several Peoples; as those of *Genoa*, *Pisa*, *Marseilles*, *Messina*, &c. See *ORDER*, and *USES*.

Under this Court is also a *Court-Merchant*, or *Court of Equity*; wherein all Differences between Merchants are decided, according to the Rules of the Civil Law. See *MERCHANT*.

Between the Courts of Admiralty and Common Law, there seems to be *divisum imperium*; for in the Sea, so far as the Low-Water Mark, is accounted *infra corpus comitatus adjacentis*; and the Causes thence arising are determinable by the Common Law: yet when the Sea is full, the *Admiral* has Jurisdiction there also so long as the Sea flows, over Matters done between the Low-Water Mark and the Shore. See *COMMON-LAW*.

ADMIRALTY.—*COURT OF ADMIRALTY*, *Commissioners of the ADMIRALTY*, &c. See *ADMIRAL*, *ADMIRAL'S COURT*, &c.

Among the *Hollanders*, the *Five Admiralties*, are so many Chambers, composed of the Deputies of the Nobles, the Provinces, and the Towns; to whom belong the equipping out of Fleets, and the issuing Provisions for 'em.

ADMIRATION, in Grammar, a Point or Character, intimating something worthy to be admired or wonder'd at.—It is exprest thus (1). See *CHARACTER*.

ADMISSION, *ADMISSIO*, in the Ecclesiastical Law, the Act whereby the Bishop, upon Examination, admits or allows a Clerk to be able, or competently qualify'd for the Office; which is done by the Formula *Admittas te habilem*. See *PRESBTERIATION*, *INDUCTION*, *INSTITUTION*, &c.

ADMITTENDO Clerico, is a Writ granted to him who hath recover'd his Right of Patronage against the Bishop in the Common Pleas. See *PATRON*.

ADMITTENDO Socium, is a Writ for the Association of certain Persons to Justices of Assize formerly appointed. See *JUSTICE*, and *ASSIZE*.

ADNATA, in Anatomy, a pretty thick white Membrane, invading the Ball of the Eye; called also *Conjunctiva*. See *TENIC*, and *CONJUNCTIVA*.

The *Adnata* makes what we commonly call the *White of the Eye*; whence it is also called the *Albuginea*. See *EYE*, &c.

AD Oſſa, *g. d.* to the eighth Number; a Term used by some antient Philosophers, to denote the highest or superlative Degree; because in their way of distinguishing Qualities, they reckon'd no Degree above the Eighth. See *DEGREE*, *HUMOUR*, *QUALITY*, &c.

ADOLESCENTIA, *ADOLESCENTIA*, the State of Youth; or that Period of a Person's Age commencing from his Infancy, and terminating at his full Growth. See *AGE*.

The State of *Adolescence* lasts so long as the Fibres continue to grow, either in Magnitude or Firmness. See *FIBRE*, *NUTRITION*, &c.

It is commonly computed to be between 15 and 25, or even 30 Years of Age; tho, in different Constitutions its Terms are very different.—The *Romans* usually reckon'd it from 12 to 25 in Boys; and to 21 in Girls. See *POBERTY*, &c.—And yet, among their Writers, *Juvenis* and *Adolescens* are frequently used indifferently, for any Person under 45 Years.

The Word is form'd of the Latin *adoleſco*, I grow.—The Fibres being arriv'd at the degree of Firmness, and Tension sufficient to sustain the Parts, no longer yield and give way to the Efforts of the Nutritious Matter, to extend 'em: So that their further Accretion is stopp'd from the very Law of their Nutrition. See *SOLID*, *DEATH*, &c.

ADONIA, or *ADONIC Feasts*, were antient Feasts, instituted in honour of *Adonis*; and observ'd with great Solemnity among the *Greeks*, *Egyptians*, &c. See *FEAST*.

They were begun by the Women; who imitated the Cries and Lamentations of *Venus*, for the Death of her Paramour.—When they were well weary of this, they changed their Notes, and sung his Praises; and made Rejoicings, as if he were rais'd to Life again; or rather, according to *Alexander*, these two Offices made two distinct Feasts, which were held at different times of the Year, the one six Months after the other; *Adonis* being suppled to pals half the Year with *Proserpine*, and halt with *Venus*.—The Feast was also called *Salambon*.

ADONIC, in the antient Poetry, was a sort of short Verse, consisting of a *Dactyl* and a *Spondee*; as, *Rara juvenis*. See *VERSE*.

It is usually placed at the End of each Stanza of Sapphic Verses; and is so called from *Adonis*, in whose Praise it was first made. See **SAPPHIC**.

ADOPTION, *Adoptio*, an Act by which any one takes another into his Family, owns him for his Son, and appoints him his Heir. See **FATHER**, **SON**, &c.

The Word is derived from *adoptare*; whence came *adobere*, to make a Knight; whence also *Miles adobatus*, a Knight newly made or dubbed; he who knighted him, being laid in some Sense to adopt him. See **KNIGHT**.

The Custom of adopting was very familiar among the ancient *Romans*, who had an express Formula for it.—They first learnt it from the *Greeks*, among whom it was called *vuovs*, *Filiation*. See **ADOPTIVE**.

As *Adoption* was a sort of Imitation of Nature, intended for the Comfort of those who had no Children; Eunuchs were not allowed to adopt; as being under an actual Impotency of begetting Children. See **EUNUCH**.

Neither was it lawful for a young Man to adopt an elder; because that had been contrary to the Order of Nature; but it was even requir'd, that the Person who adopted, should be eighteen Years elder than his adoptive Son; that there might at least appear a Probability of his being the natural Father.

The *Romans* had two Forms of *Adoption*; the one before the Praetor: the other at an Assembly of the People, in the Times of the Commonwealth, and afterwards by a Rescript of the Emperor.

In the first, the Natural Father address'd himself to the Praetor, declaring, that he emancipated his Son, resign'd all his Authority over him, and consented he should be translated into the Family of the Adopter. See **EMANCIPATION**.

The latter manner of *Adoption* was practic'd, where the Party to be adopted was already free; and was called *Adrogation*. See **ADROGATION**.

The Person adopted chang'd all his Names; assuming the Prenomine, Name, and Surname of the Person who adopt'd him. See **NAME**.

They had likewise their *Testamentary Adoptions*, wherein Persons were adopted by the Last Will of the Deceas'd; but these were never esteem'd valid, till they had been confirm'd by the People. See **TESTAMENT**.

Of late Years, another Form of *Adoption* has taken place; and this is, by cutting off the Hair of a Person, and delivering it to the Father that is to adopt him. See **HAIR**, and **TENSURE**.

'Twas this way that Pope *Jehu VIII.* adopted *Boson King of Arles*; which perhaps is the only Instance in History of *Adoption* in the Order of Ecclesiasticks; a Law that professes to imitate Nature, not daring to give Children to those in whom it would be thought a Crime to beget any.

M. *Bouffac*, in his *Nottes Theologice*, gives us divers modern Forms of *Adoption*; some perform'd at Baptism; others by the Sword, &c. See **BAPTISM**.

ADOPTIVE, *Adoptivus*, or *Adoptivus*, a Person adopted by another. See **ADoption**.

The Emperor *Adrian* prefer'd *Adoptive Children* to Natural ones; by reason we chuse the former, but are oblig'd to take the latter at random.—*Adoptive Children*, among the *Romans*, were on the same Footing with Natural ones; for which Reason, they were either to be instituted Heirs, or expressly disinherited; otherwise the Testament was null.

M. *Menege* has publish'd a Book of Eloges, or Verses address'd to him; which he calls *Liber Adoptivus*, an *Adoptive Book*; and adds it to his other Works.—*Hainfuss* and *Furstenberg of Munster*, have likewise publish'd *Adoptive Books*.

ADOPTIVI, or **ADOPTIANI**, was an ancient Sect in Religion; thus called, from the manner wherein they conceived our Saviour to be the Son of God.

They took their Rise from *Felix of Urgel*, and *Elipand of Toledo*; the latter of whom writing to the former, for an Account of his Faith in that Point; was answer'd, that according to the Use of the Language which obtains in respect of Human Nature, Jesus was not the Natural, but only the *Adoptive Son of God*.

This Opinion they both afterwards propagated, towards the Close of the VIIIth Century.—And both were convicted and condemn'd; and both abjur'd their Error.

ADORATION, the Act of rendering divine Worship or Honours, to a Being. See **God**, and **Worship**.

The Adoration of Idols is called *Idolatry*. See **IDOLATRY**. The *Romanists* profess a subordinate Adoration to Saints, Images, Relicks, the Cross, &c. See **SAINTE**, **IMAGE**, **RELICK**, **CROSS**, &c.

The Word literally signifies, to apply the Hand to the Mouth; *Manus ad Os admoveere*, q. d. to kiss the Hand; this being, in the Eastern Countries, one of the great Marks of Respect and Submission.

The Election of Popes is performed two ways, by Adoration and by Scrutiny.—In the Election by Adoration, the

Cardinals rush hastily, as if agitated by some Spirit, and fall without more ado to the Adoration of some one among them, and proclaim him Pope. See **CARDINAL**, **POPE**, &c.

In the Election by Scrutiny, Adoration is the last thing, and follows the Election; as in the other it is the Election it self, or rather supercedes the Election. See **ELECTION**, and **SCRUTINY**.

AD Pondus Omnium, the Weight of the Whole; an Abbreviation among Physicians, &c. signifying, that the last prescrib'd Ingredient is to weigh as much as all the others before. See **ABBREVIATURE**.

AD Quod Damnum, a Writ directed to the Sheriff, commanding him to inquire what hurt may befall the King by granting a Fair or Market in any Town, or Place. See **FAIR**, **MARRET**, &c.

The same Writ also issues for an Inquy to be made of what the King or other Person may justly, by granting Lands in Fee-simple to a Convent, Chapter, or other Body Politick; by reason such Land falls into Mortmain, or a dead hand; that is, into such Condition, that the chief Lord loses all Hope of Heriots, Service of Court, and Escheats, upon any traitorous or felonious Offence committed by the Tenant: For that a Body Politick dies not, nor can perform personal Service to the King, or their Mein Lords; as single Persons may do. See **MORTMAIN**.

ADRAGANT, or **TRAGACANTH**, a sort of Gum. See **TRAGACANTH**.

ADDRESS, or **ADDRESS**, a Discourse presented to the King, in the Name of a considerable Body of his People; to express, or notify their Sentiments of Joy, Satisfaction, or the like, on some extraordinary Occasion.

Thus, we say, the Lords Address, the Commons Address.—Addresses were first set on foot under the Administration of *Oliver Cromwell*.

The Word is French, *Adresse*, form'd of the Verb *Adresser*, to send or direct any thing to a Person.—At Paris, their Office of Intelligence is called *Bureau d'Adresse*.

ADRESS, is also used for Dexterity. See **DEXTERITY**.

ADROGATION, among the *Romans*, was a kind of Adoption, only differing from it in this; That the Person here adopted was free, and consented to be adopted by another; and that it was done at the Assembly of the People, while the Commonwealth subsisted; and afterwards by a Rescript of the Emperor. See **ADoption**.

AD Terminum qui preterit, is a Writ of Entry, which lies where a Man, having leased Lands or Tenements for term of Life, or Years, is, after the Term expir'd, held from them by the Tenant, or other Stranger who enjoys the same, and disretheth the Lessor.—The same Writ also lies for the Lessor's Heir.

ADVANCE-Posse, or **Disce**, is a Ditch of Water round the Eplismade, or Glacis of a Place; to prevent its being surprized by the Briegers. See **FOSS**, and **GLACIS**.

ADVANCE-Guard, or **VAN-Guard**, is the first Line or Division of an Army ranged or marching in Battle-array; or that Part which is next the Enemy, or which marches first toward them. See **LINE**.

The whole Body of an Army is divided into *Advance-Guard*, *Arrear-Guard*, and *Main Body*. See **ARMY**, &c.

The Word is sometimes also applied to a small Party of Horse, as 15 or 20, commanded by a Lieutenant, beyond and in sight of the Main Guard.

ADVANCER, among Hunters, is one of the Starts, or Branches of a Buck's Attire, between the back Antler and the Palm. See **ATTIRE**, **HEAD**, &c.

ADVENT, **ADVENTUS**, in the Calendar, the Time immediately preceding Christmas; antiently employ'd in pious Preparation for the *Adventus*, or coming on, of the Feast of the Nativity. See **NATIVITY**, &c.

Advent includes four Sundays, or Weeks; commencing either from the Sunday which falls on St. Andrew's Day, or that next after it.—But, it is to be noted, this Rule has not always obtain'd. In the *Ambrosian* Office, there are six Weeks mark'd for *Advent*; and St. Gregory, in his Sacramentary, allows five.

The fifth Week of *Advent*, in our way of reckoning, is that wherein it begins; but it was antiently otherwise, the Week next Christmas being reputed the first; and the Numeration carried backwards.

Great Austerity was practic'd in the antient Church during this Season.—At first they fasted three Days a week; but were afterwards oblig'd to fast every Day: Whence the Season is frequently called in antient Writers, *Lent*, and *Quadragesima*. See **LENT**, and **FAST**.

The Courts of Justice were all shut.—Under King *John*, it was expressly declared, that in *Adventus Domini nulla Assise capi debet*: But this was afterwards alter'd; and it was made lawful, in respect of Justice and Charity which ought at all Times to be regarded, to take Assizes of Novel Disseisin, Mort d'Ancestor, and Daresin Preforment, in the Time of *Advent*, Septuagesima, and Lent. See **ASSIZE**.

This is also one of the Times, from the Beginning whereof, to the End of the Offices of the *Epiphany*, the solemnizing of Marriage is forbid, without express Licence. See MARRIAGE; see also ROGATION.

ADVENTITIOUS, something accruing, or befalling a Person or Thing, from without. See ACCESSION, &c.

Thus, *Adventitious Matter*, is such Matter as doth not properly belong to any Body, but is casually joined to it. See ACCESSION, ADJUNCTIO, &c.

ADVENTITIOUS, in the Civil Law, is applied to such Goods as fall to a Man, either by mere Fortune, or by the Liberality of a Stranger, or by Collateral Succession. See GOODS.

The Word is used in opposition to *Profectitious*; by which are signified such Goods as descend in a direct Line, from Father to Son. See PROFECTION.

AD VENTRUM INSPECTIUM, in Law. See VENTRIS INSPECTIUM.

ADVENTURE, an extraordinary, and surprizing Enterprize, or Accident, either real or fictitious. See FABLE.

Novels, Romances, &c. are chiefly taken up in relating the Adventures of Cavaliers, Lovers, &c. See NOVEL, and ROMANCE.

The Word is French, and literally denotes an Event, or Accident.

Company of Merchant ADVENTURERS, was an ancient Denomination of the *Hamburg* Company. See HAMBURG COMPANY.

ADVERB, ADVERBIUM, in Grammar, a Particle join'd to a Verb, Adjective, or Participle, to explain their manner of acting or suffering; or to mark some Circumstance or Quality signified by them. See PARTICLE, VERB, &c.

The Word is formed from the Preposition *ad*, and *verbum*; and signifies literally a Diction join'd to a Verb, to show how, or when, or where, one is, does, or suffers: As, the Boy paints neatly, writes ill; the Book is there, &c.

Not that the *Adverb* is confin'd purely to Verbs; but because that is its most ordinary use.—We frequently find it join'd to Adjectives, and sometimes even to Substantives, particularly where those Substantives signify an Attribute, or Quality of the Thing spoken of, v. g. He is very sick; he acts frugally; he is truly King.

An *Adverb* is likewise join'd, sometimes to another *Adverb*, to modify its meaning, v. g. very devoutly, &c. Whence some Grammarians chuse rather to call them *Modificatives*; comprising under this one general Term, both *Adverbs*, Conjunctions, Prepositions, and even Adjectives. See MODIFICATIVE.

Adverbs are very numerous, but may be reduced under the general Class of *Adverbs of Time*, of *Place*, of *Order*, of *Quantity*, of *Quality*, of *Manner*, of *Affirmation*, of *Denial*, and of *Comparison*.

ADVERSARIA, among the Antients, was used for a Book of Accounts, like our Journal or Day Book; thus called, quod adversa parte etiam scriptis impletur, because wrote even on the Backside.

Hence, *Adversaria* is sometimes also used among us for a Common-place-Book. See COMMON-PLACE.

ADVERSARY. See ANTAGONIST, OPPONENT, COMBAT, DUEL, &c.

The Word is form'd of the Latin Preposition *Adversus*, against; from *ad*, and *verso*, I turn to.

ADVERSATIVE, in Grammar.—A Particle, or Conjunction *Adversative*, is that which expresses some Difference, or Opposition between what goes before, and what follows. See CONJUNCTION.

Thus, or is an *Adversative*, v. g. Yes, or no.

ADVERTISEMENT, an Intelligence, or Information, given to Persons interceded in an Affair.

The Word is form'd of the French *Avertissement*, from the Latin *Advertere*, to advert, consider, regard.

ADULT, ADULTUS, one who is come to Years of Maturity; who is enter'd upon Manhood, or the Age of Adulthood; and is old and big enough to have Understanding, and Discernment. See AGE.

The Word is formed from the Participle of the Verb *adulesco*, I grow up. See ADOLESCENCE.

The Anabaptists confer the Sacrament of Baptism upon none but *Adults*. See BAPTISM, and ANABAPTIST.

There is a notable Difference between the Proportions of Infants and *Adults*.—A Man, M. *Doctus* observes, form'd like a Fetus, would be a Monster, and would scarce be acknowledg'd for one of the Species. See FETUS, and EMBRYO.

ADULTERATION, ADULTERATIO, the Act of debasing a Medicine or other thing, with bad Ingredients; or the putting one thing for, and into another. See SOPHISTICATION.

To adulterate the current Coin, is a Capital Crime in all Nations. See MONEY, and COIN.

The Word is Latin; form'd of the Verb *Adulterare*, to corrupt by mingling something foreign to any Substance.

ADULTERINE, in the Civil Law, a Child issued from an adulterous Amour, or Commerce. See ADULTERY.

Adulterine Children are more odious than the illegitimate Offspring of single Persons.—The Roman Law excludes 'em from the Title of Natural Children; as if Nature disavow'd 'em. See BASTARD.

ADULTERY, ADULTERIUM, in our ancient Law Books call'd *Arvovray*, a Crime committed by married Persons, against the Faith pledged to each other in Marriage; by having carnal Commerce with some other; or even by a Person not married; by having to do with another that is. See FORNICATION, MARRIAGE, &c.

The ancient Romans had no formal Law against *Adultery*; but both Accusation and Punishment were arbitrary.—The Emperor *Augustus* was the first who brought them into a Law; which he had the Misfortune to see executed in the Persons of his own Children.—This was the *Julian Law*.

But, tho' this Law left the Accusation of *Adultery* open to every body, yet 'tis certain, *Adultery* has been always look'd upon as a private and domestick Crime, rather than a publick one; so that Strangers were seldom suffer'd to prosecute, especially where the Marriage was peaceable, and the Husband made no Complaint.

Some of the succeeding Emperors abrogated this Law, which left the Accusation of *Adultery* open to Strangers; in regard such an Accusation could not be enter'd, without setting the Husband and Wife at Variance, throwing the Children into a State of Uncertainty, and bringing Contempt and Derision upon the Husband; for as the Husband is the nearest interested in the Matter, 'tis suppos'd he will examine the Wife's Actions with more Circumspection than any other: So that where he is silent, 'tis not fair any body else should speak for him. See ACCUSATION.

For this reason, the Law, in some Cases, has made the Husband both Judge and Executioner in his own Cause; and has allow'd him to revenge himself of the Injury, by taking away the Lives of the *Adulterers* whom he should apprehend in the Act.—'Tis true, where the Husband made a Trade of his Wife's Infamy, or where having seen her Shame with his own Eyes, he yet suffer'd patiently, and dissembled the Affront; in these Cases, *Adultery* became a Crime of publick Concern; and the *Julian Law* provides Punishments for such Husbands, as well as their Wives.

In most European Countries, at this Day, *Adultery* is not a publick Crime; and none but the Husband is suffer'd to intermeddle, excepting where the Scandal is very notorious.—Even the King's Advocates, Attorney, or the like, may not intermeddle.

Add, that tho' the Husband who violates the Conjugal Bond be guilty of *Adultery* as well as the Wife; yet is not the Wife allow'd to accuse, or prosecute him for the same. See WIFE, HUSBAND, &c.

Socrates relates, L. V. c. 8. that under the Emperor *Theodosius*, in the Year 380, Women convicted of *Adultery* were punish'd by a publick Contumelation.

Lycurgus punish'd the *Adulterer* as a Participle.—The *Locrians* tore out his Eyes; and most of the Orientals punish him very severely.

The Saxons formerly burnt the *Adulteress*, and over her Ashes erected a Gibbet, whereon the *Adulterer* was hang'd.—In England, King *Edward* punish'd *Adultery* as Homicide; but *Canons* ordain'd the Man to be banish'd, and the Woman to have her Nose and Ears cut off.—*Quæ uxoratus facit Adulterium, habet Rex vel dominus Imperatorum; Episcopus inferiorem.* L. Hen. I. c. 12. *De Adulterio per totam Civitatem habet Rex hominem, Episcopus mulierem.* Domesday, tit. Centre Civit.

In Spain, they punish'd *Adultery* by cutting off that Part which had been the Instrument of the Crime.—In Poland, before Christianity was establish'd, they punish'd *Adultery* and Fornication in a very particular manner: The Criminal they carried into the Market-Place, and there fasten'd him by the Testicles with a Nail; laying a Razor within his reach, and leaving him under a Necessity, either of doing Justice upon himself, or of persisting in that Condition.

At present, the Laws are much more favourable: — To Divorce, and strip the *Adulteress* of her Dower, is all her Punishment among us: In the *Rossish* Countries, they also shut 'em up in Numerics.

The *Lacedæmonians*, instead of punishing *Adultery*, permitted it; or at least tolerated it; as we are told by *Plutarch*. See CONCUBINE.

According to some of the Papal Decisions, *Adultery* renders Marriage between the two Criminals unlawful; thus making what the Schools call *Impedimentum Criminis*.

The Greeks, and other Christians throughout the East, adhere to the Opinion that *Adultery* dissolves the Band of Marriage: So that the Husband, without more ado, may marry another.—The Council of *Trent* condemns that Opinion; and even in some measure anathematizes those who hold it. *Self. XXIV. Can. 7.*

ADULTERY is also used by some lascivious Astrologers and Astrologers, for an Eclipse of the Sun, or Moon; happening in an unusual, and as they suppose, irregular manner: as in the Case of horizontal Eclipses; where, tho' the Sun and Moon be diametrically opposite, yet they appear as if above the Horizon, by reason of the Refraction. See **ECLIPSE**, **REFRACTION**, &c.

ADVOCATE, **ADVOCATUS**, among the Romans, a Person skill'd in their Law, and who undertook the Defence of Causes at the Bar. See **LAW**.

The Word is compounded of *ad*, and *voco*, *q. d.* I call to my aid, or defence.

The Roman Advocates answer'd to one Part of the Office of a Lawyer among us, *viz.* the Pleading Part; for as to the giving Council, they never meddled with it; that being the Business of the Juris-consulti. See **JURISCONSULTUS**.

The Romans, in the first Ages of their State, held the Profession of an Advocate in great honour; and the Seats of their Bar were crowded with Senators and Consuls; they, whose Voices commanded the People, thinking it an Honour to be employ'd in defending them.

They were styled *Comites*, *Honrati*, *Clarissimi*, and even *Patroni*; as if their Clients were not less oblig'd to them, than Freedom to their Masters. See **PATRON**, and **CLIENT**.

But the Bar was not then venal.—Those who aspired to Honours and Offices, took this way of gaining an Interest in the People, and always pleaded *gratis*.

But no sooner was Luxury and Corruption brought into the Commonwealth, than the Bar became a Share in them.—Then it was that the Senators let out their Voices for pay, and Zeal and Eloquence were sold to the highest Bidder.—To put a Stop to this Abuse, the Tribune *Cincius* procured a Law to be pass'd, called from him, *Lex Cincia*; which the Advocates were forbid to take any Money of their Clients.—*Fred. Brunnerus* has publish'd an ample Comment upon this Law.

It had before been prohibited the Advocates to take any Presents or Gratuities for their Pleading.—The Emperor *Augustus* added a Penalty to it; notwithstanding which, the Advocates play'd their Parts so well, that the Emperor *Claudius* thought he did a great thing, when he oblig'd 'em not to take above eight great Sesterces, which are equivalent to 35 Pounds Sterling, for pleading each Cause.

ADVOCATE is still used in Countries where the Civil Law obtains, for those who plead and defend the Causes of Clients trust'd to them. See **CIVIL LAW**.

In *Scotland* they have a College, or Faculty of Advocates, 180 in number; appointed to plead in all Actions before the Lords of Session.—They have a Dean, Treasurer, Clerks, Examinators, and a Curator of their Library.

By the Articles of the Union, none are to be named ordinary Lords of Session, except those who have been Advocates, or principal Clerks of Session for five Years, &c.

In Doctors Commons, the Advocates are usually called *Professors*, or *Procurators*. See **PROCTOR**, and **PROCURATOR**.

In *France*, they have two Kinds of Advocates, *viz.* *Pleading Advocates*, *Advocats Plaidants*; and *Counsel Advocates*, *Advocats Consultans*.

This Distinction was form'd with a View to the two Branches among the Romans, *Advocati*, and *Jurisconsulti*.—Yet there is this difference, that the Function of the Jurisconsulti, who only gave their bare Advice, was of a different Kind from that of the *Advocati*; being a sort of private and perpetual Magistrature, principally under the first Emperors; as, on the other hand, the *Advocati* never became *Jurisconsulti*. Whereas in *France*, after the *Advocates* have attain'd to Reputation and Experience enough at the Bar, they quit so busy a Province, and become as it were Chamber Council.

They have also their *Advocate General*, and King's *Advocate*, *Avocat du Roy*.

LORD ADVOCATE, in *Scotland*, is one of the Officers of State, whose Business is to give his Advice about the making and executing of Laws; to defend the King's Right, and Interest in all publick Meetings; to prosecute all Capital Crimes before the Judiciary; and concur in all Pursuits before Sovereign Courts for Breaches of the Peace; and also in all Matters wherein the King, or his Donator, has Interest.—He intends no Process of Treason, except by Warrant of Privy Council.

The *Lord Advocate* is sometimes an ordinary Lord of Session; in which Case, he only pleads in the King's Causes; otherwise, he is at liberty to plead in all Causes.

FISCAL ADVOCATE, *Fisci Advocatus*, was an Officer instituted by the Emperor *Adrian*, to defend the Cause, and Interests of the *Fiscus*, or private Treasury; in the several Tribunals where that might be concern'd. See **FISCUS**.

CONFISORIAL ADVOCATE, is an Officer of the Court of *Rome*, whose Office is to plead upon the Oppositions made to the Provisions of Benefices in that Court. See **PROVISION**.—They are ten in number.

ADVOCATE of a *City*, or *Town*, is a Magistrate established in several Places of *Germany*, for the Administration of Justice in that City, in the Emperor's Name. See **ADVOCATE**.

ADVOCATE of a *Church*, or *Ecclesiastical Advocate*, a Person to whom it anciently belong'd, to defend the Rights and Interests of a Church, both in a Legal and a Military Capacity; more usually called *Advocatus*, or *Advocatus*. See **ADVOCATE**.

The Word *Advocatus* or *Advocatus* is still retained, for what we usually call the *Patron*, or he who has the Advowson, or Right of Presentation in his own Name. See **PATRON**, **ADWOWSON**, **PRESENTATION**, &c.

The Monasteries had also their *Advocates*, or *Advocatus*. See **MONASTERY**, &c.

ADVOCATIONE Decimarum, a Writ which lies for the Claim of the fourth Part, or upward, of the Tithes that belong to any Church. See **TITHES**.

ADVOW, or **AVOW**, *Advocatus*, in Law, to justify or maintain an Act formerly done.

Thus, if one take a Distress for Rent, or other thing, and he that is distrain'd sue a *Replevin*; the Distrainer, justifying or maintaining the Act, is said to *avow*. See **DISTRESS**, **REPLEVIN**, &c.

Bracton uses the Latin Term *Advocare*, in the same Signification; as, *Advocatio diffinitio*, l. IV. c. 26. And in *Cassianus de Constat. Bar. Advocare* is used in the like Sense. The Author last cited does also use the Substantive *Delavobamentum*, for a Disavowing, or refusing to *avow*.

The original Use of the Word was this.—When stolen Goods were bought by one, and sold to another, it was lawful for the right Owner to take them wherever they were found; and he in whose Possession they were found, was bound, *Advocare*, *i. e.* to produce the Seller to justify the Sale, and so on till they found the Thief.

Afterwards, the Term was applied to any thing which a Man acknowledg'd to be his own, or done by him; in which Sense, it is mentioned in *Fleta*, l. I. pars 4. *Si vir ipsum in domo sua suscepit, nutrit et advocaverit filium suum*.

ADWOWEE, or **AVOWEE**, or **ADVOCATE** of a *Church*, was heretofore the Patron, or Defender of the Rights thereof. See **ADVOCATE**, **PATRON**, &c.

The Word is French, *Avouer*, or *Avome*, of the Verb *Avouer*, to avow, own, acknowledge Dependence, Subjection, &c.—Whence also *Advowson*. See **AVOW**, and **ADWOWSON**.

There were also *Advowees* for Cathedrals, Abbies, Monasteries, &c.—Thus, *Charlemaign* had the Title of *Advocate* of *St. Peter's*; King *Hugh*, of *St. Riquier*; and *Bollandus* mentions some Letters of Pope *Nicholas*, by which he constituted King *Edward* the Confessor, and his Successors, *Advocates* of the Monastery at *Westminster*, and of all the Churches in *England*.

These *Advowees* were the Guardians, Protectors, and, as it were, Administrators of the temporal Concerns of the Churches, &c. and under their Authority, were pass'd all Contracts which related thereto. See **GUARDIAN**, &c.

It appears also, from the most ancient Charters, that the Donations made to Churches, were confer'd on the Persons of the *Advowees*.—They always pleaded the Causes of the Churches in Court, and distributed Justice for them, in the Places under their Jurisdiction.—They also commanded the Forces furnish'd by their Monasteries, &c. for the War; and even were their Champions, and stood Duels for them. See **COMBAT**, **DUEL**, and **CHAMPION**.

This Office is said to have been first introduc'd in the 14th Century, in the Time of *Stilico*; tho' the Benedictines don't fix its Origin before the 11th Century. *Ad. South. Benedicti*, s. III. p. 1. *Præf. p. 91*, &c.

By degrees, Men of the first Rank were brought into it, as it was found necessary, either to defend with Arms, or to protect with Power and Authority.—In some Monasteries they were called *Conservators*; but these, without the Name, had all the same Functions with *Advowees*. See **CONSERVATOR**.

There were also sometimes several *Sub-Advowees*, or *Sub-Advocates* in each Monastery, who officiated instead of the *Advowees* themselves; which, however, proved the Ruin of Monasteries; those inferior Officers running into great Abuses.

Hence, Husbands, Tutors, and every Person in general, who took upon him the Defence of another, were also called *Advowees*, or *Advocatus*.—Hence several Cities, also, had their *Advowees*; which were establish'd long after the Ecclesiastical ones, and doubtless from their Example.—Thus, we read in History of the *Advowees* of *Augsburg*, of *Arres*, &c.

The *Vidames* assumed the Quality of *Advowees*; and hence it is, that several Historians of the 11th Century, confound the two Functions together. See **VIDAME**.

And hence also it is, that several Secular Lords in Germany bear Mitres for their Crests; as having antiently been Advocates of the great Churches. See MITRE, and CREST.

Spelman distinguishes two Kinds of Ecclesiastical Advocates.—The one, of Causes, or Processes, *Advocati Casarum*; the other, of Territory, or Lands, *Advocati Soli*.

The former were nominated by the King, and were usually Lawyers, who undertook to plead the Causes of the Monarchs.

The other, which still subsist, and are sometimes called by their primitive Name, *Advocates*, the more usually *Patrons*, were hereditary; as being the Founders and Endowers of Churches, &c. or their Heirs. See PATRON.

In this Sense, Women were sometimes *Advocateffes*, *Advocateffe*.—And, in effect, the Canon Law mentions some who had this Title, and who had the same Right of Presentation, &c. in their Churches, which the *Advocates* themselves had.

In a Stat. 25 Edw. III. we meet with *Advowee Patronage*, for the Highest Patrons; that is, the King. See PARAGON.

There were also *Advowees of Countries*, and *Provincet*.—In a Charter of the Year 1187, *Berthold* Duke of Zeringhen, is called *Advowee of Thuring*; and in the *Notitia* of the *Belgic Churches*, publish'd by *Mireus*, the Count of *Loosven* is styled *Count and Advowee of Brabant*.—In the XIII and XIII Centuries, we also meet with the *Advowees of Alsatia*, of *Suabia*, &c.

Raymond de *Agiles* relates, that after the Recovery of *Jerusalem* from the *Saracens*, it being proposed to elect a King thereof; the Bishops pleaded, *Non debere ibi eligi Regem, nisi Deus passus est coronatus est*, &c. That "they ought by no means to appoint a King, in a Place where God had suffer'd and been crown'd; but should content themselves with electing an *Advowee*, or *Advocate* of the City, to take Care of the Garrison, &c."—In effect, *Dodechin*, a German Abbot, who wrote a Voyage to the Holy Land in the XIII Century, calls *Godfrey of Bulloign*, *Advowee of the Holy Sepulchre*.

ADVOWSON, or ADVOWSEN, *Advouerie*, *Advocatia*, or *Advocatio*, the Quality, or Office of an *Advowee*, or *Advocate*, &c. See ADVOWEE, &c.

ADVOWSON, or ADVOWSEN, in Common Law, signifies a Right to present to a Benefice. See PRESENTATION.

In this Sense, the Word imports as much as *Jus patronatus* in the Canon Law. See PATRONAGE.

The Reason of the Name *Advowson*, *Advocatio*, is, that antiently those who had a Right to present to a Church, were Maintainers of it, or great Benefactors to it; and were sometimes called *Patroni*, and sometimes *Advocati*, or *Advowees*. See ADVOCATE, &c.

In the general, an *Advowson* is where a Bishop, Dean, or Chapter, and their Successors, or any Lay Patron, have a Right to present whom they please to any spiritual Benefice, when it becomes void. See VACANCY and BENEFICE, &c.

This *Advowson* is of two Kinds.—*Advowson in gross*, that is, not immediately restrained, or adhering to any Manor, or Parcel thereof.

And *Advowson appendant*, which depends on a Manor, as appertaining to it: This *Kitchin* calls an *Incident*, which may be separated from its Subject.

Add, that as the Builders and Endowers of a Church were the Patrons of it; so those who founded any Religious House, had the *Advowson* or Patronage of it.

Sometimes the Patron had the sole Nomination of the Prelate, Abbot, or Prior; either by Investiture, (or Delivery of a Pastoral Staff) or by direct Presentation to the Diocesan: And if a free Election was left to the Religious, yet a *Cogge d'Elire*, or Licence of Election, was first to be obtain'd of the Patron, and the Person elected was confirm'd by him.

If the Founder's Family was extinct, the Patronage of the Convent went to the Lord of the Manor.

ADVOWTRY. See ADULTERY.

ADUST, ADUSTUS, is applied, among Physicians, &c. to such Humours, as by long Heat become of a hot and fiery Nature. See HUMOUR.

Such is Cholera supposed to be.—Melancholy is usually consider'd as black and *adust* Bile. See CHOLERA, MELANCHOLY, &c.

Adust Blood, says *Blanchard*, is, when by reason of extraordinary Heat, its more subtle Parts are all evaporated, leaving the grosser, with all the Impurities therein, half solidify'd, as it were. See BLOOD.

The Word is form'd of the Latin *adustus*, I burn.

ADYTUM, *Adytum*, a secret or retir'd Place in the Pagan Temples, where Oracles were given, and into which none but the Priests were admitted. See TEMPLE, ORACLE, &c.

Æ, or Æ, a Diphthong, or double Vowel, borrow'd from the Greeks and Latins. See DIPHTHONG.

Authors are by no means agreed as to the Use of the *æ*.—Some, out of regard to Etymology, insist on its being retain'd in all Words, particularly Technical ones, borrow'd from those Languages; while others, from a Consideration that it is no proper Diphthong in our Language, its Sound being no other than that of the simple *e*; contend that it ought to be entirely disused, except in Words which retain their Latin and Greek form in every thing else.

For our own part, till the Point is a little better settled, we must be contented to steer a kind of middle, or neutral Course; conforming our selves to Custom as nearly as may be.—Such Articles, therefore, as are omitted under *Æ*, the Reader will find under *E*.

ÆCEA, in Antiquity, solemn Feasts and Combats, celebrated in *Ægia*, in honour of *Æacus*; who had been their King, and who, on account of his singular Justice upon Earth, was supposed to have a Commission given him, to be one of the Judges in Hell. See FEAST, &c.

ECHMALOTARCHA, in Antiquity, a Greek Term, signifying, Chief or Leader of the Captives.

The Jews who refused to follow *Zerobabel*, and return with him to *Jerusalem*, after the *Babylonish* Captivity; created an *Echmalotarcha*, to govern them.—Not that the Jews themselves call'd him by this Name, as some Authors have asserted; for that People spoke *Hebrew*, or *Chaldee*, not *Greek*. But *Origen*, and others, who wrote in the *Greek* Tongue, render'd the Hebrew Name מְלִיכָא רֹשֵׁי רֹשֵׁי גֵלִיטָא, q. d. Chief of the Captivity, by a Greek Name of the like import, ἀρχιμαλοταρχος, form'd from ἀρχιμαλος, of *αἶμα*, a Point or Pike, and *αρχη*, Command.

However, the Jews must have had Officers of this kind before the Return from *Babylon*: Witness the History of *Sisannah*; the two Elders who condemn'd her, being *Echmalotarche* that Year.—The Jewish Writers assure us, that the *Echmalotarche* were only to be chosen out of the Tribe of *Judah*.

ÆDES, in Antiquity, an inferior kind of Temple, distinguished by this, that it was not consecrated by the Augurs. See TEMPLE, AUGUR, &c.

Such was the *Ævarium*, or Treasury; called *Ædes Saturni*. See ÆRARIUS.

ÆDILIS, *Edile*, in Antiquity, See EDILE.

ÆGILOPS, a Tumor, or rather Ulcer, in the great Canthus or Angle of the Eye, by the Root of the Nose; either with or without an Inflammation. See EYE, TUMOR, and ULCER.

The Word, in its original *Greek*, ἄγριος, signifies a Goat's Eye; in regard, Goats are supposed extremely liable to this Distemper.

If the *Ægilops* be neglected, it bursts, and degenerates into a Fistula, which cuts into the Bone. See FISTULA.

Authors frequently use *Ægilops*, *Aclylops*, and *Fistula Lacrymalis* promiscuously: But the more accurate, after *Ægineta*, make a difference.—The Tumor, ere it becomes ulcerous, is properly called *Aclylops*; and after it has render'd the *Os Lacrymale* carious, *Fistula Lacrymalis*. See ANGYLORS, &c.

If the *Ægilops* be accompanied with an Inflammation; it takes in Rise from the Abundance of Blood, which the too great Plenitude discharges upon the Corner of the Eye.—If it be without an Inflammation, it is supposed to proceed from a viscid pituitous Humour, thrown upon this Part.

ÆGIPAN, in Antiquity, a Denomination given to *Pan*, and the *Panes*. See PANES.

The Word is compounded of *αἶς*, *αἶς*, Goat; as being represented with the Horns, Legs, Feet, &c. of that Animal.

The Antients also gave the Name *Ægipans* to a sort of Monsters mention'd by *Pliny*, *Solinus*, and *Pom. Mela*, L. I. c. 8.—*Salmastus*, in his Notes on *Solinus*, takes *Ægipans* to have signified the same in *Lybia* with *Sylvanus* among the *Romans*. See SYLVAN.

Vollius rejects the Opinion, and shews, that the *Ægipans* had not Faces like Men, as the *Sylvans* had; but like Goats. In effect, the whole upper Part of the Body resembled that Animal; and as to the lower, they painted it with a Fishes Tail. The Monster represented on some Medals of *Augustus*, by Antiquaries called *Capricornus*; appears to be the true *Ægipans*.

ÆGYPTIACUM, in Pharmacy, a kind of detersive Unguent; so called from its dusky Hue or Colour, which resembles the swarthy Complexion of the *Ægyptians*. See DETERSIVE, and UNGUENT.

It is composed of Verdigrise, Vinegar, and Honey, boil'd to a Consistence.

The Prescription is *Mestus*'s.—It is chiefly used for eating off rotten Fleish, and cleansing foul Ulcers; particularly Venereal ones in the Throat, &c. It also destroys those cancerous Erosions apt to grow in Childrens Mouths.

ÆNIGMA. See ENIGMA.

ÆOLIC, or **ÆOLIAN**, in Grammar, the Name of one of the five Dialects of the Greek Tongue. See **GREEK**, and **DIALECT**.

It was first used in *Æolia*; whence it pass'd into *Æolia*, and was that which *Sappho* and *Alceus* wrote in.

The *Æolic* Dialect throws out all the sharp, harsh Accents; and agrees in so many things with the *Doric* Dialect, that the two are usually confounded together. See **DORIC**.

ÆOLIC, or **ÆOLIAN Mode**, in Music. See **MODE**.

ÆOLIPILE, *ÆOLIPILA*, a hydraulic Instrument, consisting of a hollow metalline Ball, with a slender Neck or Pipe arising from the same; which being filled with Water, and thus expos'd to the Fire, produces a vehement Blast of Wind. See **WIND**.

This Instrument, *Des Cartes* and others have made use of, to account for the natural Cause and Generation of Wind.—And hence its Name, *Æolipila*, q. d. *pila Æoli*, *Æolus's* Ball; *Æolus* being reputed the God of the Winds. See **GOD**.

Sometimes the Neck is made to screw into the Ball, which is the most commodious way, because then the Cavity may the more readily be filled with Water: If there be no Screw, it may be fill'd thus.—Heat the Ball red hot, and throw it into a Vessel of Water; the Water will run in at a small Hole, and fill about two thirds of the Cavity.

If, after this, the *Æolipile* be laid on, or before, the Fire; so that the Water and Vessel become very much heated; the Water being rarified into a kind of momentary Air, will be forced out with very great Noise and Violence; but it will be by Fits, and not with a constant and uniform Blast.

These Phenomena, the Reader will be easily enabled to solve, from what is shewn under the Articles, **AIR**, **WATER**, **RAREFACTION**, &c.

The Air or Vapour issuing out of the *Æolipile*, is found sensibly hot near the Orifice; but at a farther distance, cold; like what we observe of our own Breath: The Cause of which is controverted.—The *Corpuscularians* account for it hence, that the Fire contain'd in the rarified Vapour, the sufficient to be felt near the Orifice, disengages it self in the Progress of the Stream; and becomes insensible ere arriv'd at the Journey's End. See **FIRE**.—The mechanical Philosophers, on the other hand, hold that the Vapour, at its Exit from the Ball, is endued with that peculiar Species of circular Motion, which constitutes the Quality Heat; and that the further it recedes therefrom, the more is this Motion destroy'd, by the Reaction of the contiguous Air; till the Heat at length becomes insensible. See **HEAT**.

Charrin suggests some farther Uses of the *Æolipile*.—1^o, He thinks it might be applied instead of Bellows to blow the Fire, where a very intense heat is requir'd. 2^o, If a Trumpet, Horn, or other sonorous Instrument were fitted to its Neck, it might be made to yield Musick. 3^o, If the Neck were turn'd perpendicularly upwards, and prolong'd by a Tube or hollow Cylinder fitted to it, and a hollow Ball laid on the Orifice of the Tube; the Ball would be blown up, and kept fluctuating or playing up and down: As in the Stream of a Fountain. See **FOUNTAIN**.—And, 4^o, it might serve to scent, or perfume a Room, if fill'd with perfume'd, instead of common Air.

ÆON, *EON*, *ÆON*, q. d. *Age*; literally signifies the Duration of a thing. See **AGE**, and **DURATION**.

But some ancient Hereticks have fix'd another Idea to it; in order to which, they have made use of the Philosophy of *Plato*: giving Reality to the Ideas, which that Philosopher had imagin'd in God; and even personifying them, and feigning them distinct from God, and to have been produced by him, some Male, others Female. See **IDEA**, and **PLATONISM**.

These Ideas they call *Æons*; of an Assemblage whereof they compos'd the Deity, calling it *παῖσις*, a Greek Word, signifying Fulness.

Simon Magus is said to have been the first Inventor of these *Æons*; which were afterwards brought to Perfection by *Valentinus*, who acknowledg'd thirty of 'em. See **GNOSTICS**, **VALENTINIANS**, &c.

ÆQUIVOCATION, &c.

ÆRA, in Matters of Chronology, signifies the same with *Æra*; that is, any Point of Time, determin'd at Pleasure, whence to begin the Computation of the Years clapp'd since. See **EPOCH**.

The generality of Writers agree, that the *Æra* was originally used in respect of the manner of reckoning Time among the *Spaniards*; whose *Æra* was thirty eight Years older than the Christian Epoch, or Year of Grace.—*Peter* the fourth King of *Aragon*, was the first who abolish'd the *Spanish Æra* in his States, in the Year 1350: As did *John I.* King of *Portugal*, in 1455.

The Origin of the Word is somewhat obscure.—*Festus* says, that in *Cicero* and *Lucretius*, the Word *Æra* is plural, and signifies the same thing with *Commentaria*, Leaves of a Book of Accounts, or a Merchant's Journal.

Others, according to the same Author, are of opinion, that *Æra* was used instead of *Hera*, for *Horus*, Master, Lord; and that it signify'd the Dominions of a Prince.

Others, according to *Isidore*, derive it from *Æris*, *Æris*; on account of the Tax of a Piece of Silver, impos'd by *Augustus* on the Heads of all the Subjects of his Empire.

Others say, that the Word is form'd from the initial Letters of the three first Words in the publick Acts, *Annus Æra Augusti*; but these three last Etymologies are reject'd with good Reason.

ÆRARIIUM, the publick Treasury of a State or People. See **TREASURY**.

The Temple of *Saturn* at *Rome*, being the great Treasury of the State, was first call'd *Ærarium*; from *Æris*, *Æra*; that being the only Money in use before the Year of *Rome* 485. *Pliny*, L. III. c. 23.—See **MONEY**.

The *Ærarium Militare* was a Fund of Money, destin'd for the Maintenance of several Companies of Soldiers, to be in readiness for the better Defence of the City.—It was first erected under *Augustus*, and maintained by a yearly voluntary Contribution; but that proving insufficient, the twentieth Part of all Legacies and Inheritances, except of such as fell to the next of kin or the Poor, were assign'd to this Treasury.

For the Custody hereof, three of his Lifeguard were constituted *Præfetti Ærarii*. See **PREFECTUS**.

AERIAL, *AERIALIS*, something that consists of Air, or has a relation or resemblance to Air. See **AIR**.

The *Effemini*, the most refined and rational Sect among the *Jews*, held that the human Soul consisted of an *Aerial Matter*. See **ESSENI**.

Angels or Spirits, whether Good or Evil, said sometimes to appear, are supposed to assume an *aerial Body*, in order to come sensibly. See **ANGEL**.

Periphyry and *Jamblicus* admit a sort of Demons or *aerial Spirits*, to which they give various Names. See **DEMON**, **GENIUS**, &c.

The *Rosicrucians*, and other Visionaries, fill the Atmosphere with *aerial Inhabitants*. See **ROSI-CRUCIAN**, **SYLPH**, **GNOME**, &c.

AERIAL Perspective, is that which represents Bodies weaken'd and diminish'd, in proportion to their distance from the Eye. See **PERSPECTIVE**.

Aerial Perspective, has chiefly to do with the Colours of Objects, whose force and lustre it takes off more or less, to make 'em appear as if more or less remote. See **COLOUR**, and **CLAIR-OBSCURE**.

It is founded on this, that the longer Column of Air an Object is seen thro'; the weaker do the visual Rays emitted from it affect the Eye. See **VISION**.

AERIANS, **AERIANI**, in Antiquity, a Sect in Religion, denominat'd from *Aerius*; a Person alive in the Time of *St. Epiphanius*.

The *Aerians* had much the same Sentiments, in respect of the Trinity, as the *Arianos*; beside which, they had some Dogmas of their own, and particularly this: That there is no difference between Priests and Bishops; but that the Priesthood and Episcopate are absolutely one and the same Order, or Dignity: An Opinion since strenuously asserted by many modern Divines. See **BISHOP**, **PRIEST**, **PRESBYTER**, &c.

Aerius built his Doctrine chiefly on some Passages in *St. Paul*; and, among others, that in the first Epistle to *Timothy*, Ch. IV. v. 14. where that Apostle exhorts him not to neglect the Gift he had receiv'd by the laying on of the Hands of the *Presbytery*. Here, observes *Aerius*, is no mention of Bishops; but *Timothy* evidently receiv'd his Ordination from the Presbyters or Priests.

St. Epiphanius, *Her.* 75. stands up briskly for the Superiority of Bishops, against the *Aerians*.—The Word *Presbytery* in *St. Paul*, he observes, includes both Bishops and Priests; the whole Senate, or Assembly of the Ecclesiasticks of the Place: And in such an Assembly had *Timothy* been ordain'd. See **PRESBYTERY**.

AEROMANCY, **AEROMANTIA**, a Kind of Divination, perform'd by means of the Air. See **DIVINATION**, and **AIR**.

The Word is compounded of the Greek *æra*, *Air*, and *μαντις*, *Divination*. See **HYDROMANCY**.

AEROMETRY, **AEROMETRIA**, the Art of measuring the Air, its Powers and Properties. See **AIR**.

Aerometry includes the Laws of the Motion, Gravitation, Precision, Elasticity, Rarefaction, Condensation, &c. of that Fluid. See ELASTICITY, RAREFACTION, &c.

The Word *Aerometry* is but little used: In lieu hereof, we commonly call this Branch of Philosophy, *Pneumatick*. See PNEUMATICS.

C. Wolffius, Professor of Mathematicks at *Hall*, having reduced many of the Affections of this Fluid to geometrical Demonstration; published *Elements of Aerometry*, at *Leipfic*, 1709, first in *High Dutch* and afterwards in *Latin*.—Thus is the Doctrine of the Air incorporated into the Mathematical Sciences. See MATHEMATICS.

The Word is compounded of *air*, and *metron*, to measure. **ÆRUGO**. See RUST.

ÆRUGO ÆRIS, in Medicin, &c. See VERDEGREEN.

ÆRY, or **ARRY**, of Hawks, is what we call a Nest in other Birds. See HAWK, and HAWKING.

ÆSCHYNOUMENOUS Plants, among Botanists, are those popularly called *Sensitive Plants*. See SENSITIVE.

ÆSNECY, in Law. See ESNECY.

ÆSTIMATIO Cæpitii, in our ancient Law-Books. See WERE, WERELDE, WEREGILD, &c.

King *Abelstan*, in a great Assembly held at *Exeter*, decreed what Males were to be paid *pro æstimatione cæpitii*, for Offences committed against several Persons according to their degrees; the *Æstimation* of the King's Head to be 50000 *Trypans*; of an Archbishop, or Satrap, or Prince, 15000; of a Bishop or a Senator, 8000; of a Priest, or a Thane, 2000, &c. *Cresty's Church Hist.* fol. 834. b. and L. Hen. 1.

ÆSTIVAL, or **ESTIVAL**, of or belonging to Summer. See SUMMER.

Thus, we say, the *Æstival Solstice*, &c. in opposition to *Brumal*. See SOLSTICE.

ÆSTUARY, **ÆSTUARUM**, in Geography, an Arm of the Sea running up a good way into the Land. See SEA. Such is *Bristol Channel*, many of the Firths of *Scotland*, &c.

ÆSTUARY, is sometimes also used in Pharmacy, for a Vapour-Bath, *Balneum Vapourarium*, See VAPOUR, and BATH.

ÆS Ustium, called also *Crocus Veneris*, a Chymical Preparation, made of Copper cut into thin Plates, put into a Crucible with Sulphur and Salt, *stratum super stratum*, and thus set in a hot Charcoal Fire, till the Sulphur be consumed. See CROCUS, COPPER, VENUS, &c.

It is very detestive; and is used for eating off dead Flesh. They who make this use of it, are to heat it red hot in the Fire nine times; and quench it as often in Linseed Oil. See ERYTHRIC.

ÆTHER, is usually understood of a thin, subtle Matter, or Medium, much finer and rarer than Air; which commencing from the Limits of our Atmosphere, possesses the whole heavenly Space. See HEAVEN, WORLD, &c.

The Word is *Greek*, *αἴθρ*, supposed to be form'd from the Verb *αἴθω*, to burn, to flame; some of the Antients, particularly *Anaxagoras*, supposing it of the Nature of Fire. See FIRE.

The Philosophers cannot conceive that the largest Part of the Creation should be perfectly void; and therefore fill it with a Species of Matter under the Denomination of *Æther*.—But they vary extremely as to the Nature and Characters of this *Æther*.

Some conceive it as a Body *sui generis*, appointed only to fill up the Vacuities between the heavenly Bodies; and therefore confined to the Regions above our Atmosphere.—Others suppose it of so subtle and penetrating a Nature, as to pervade the Air, and other Bodies; and possess the Pores and Intervals thereof.—Others deny the Existence of any such specific Matter; and think the Air it self, by that immense Tenacity and Expansion it is found capable of, may diffuse it self thro' the interstitial Spaces, and be the only Matter found therein. See AIR.

In effect, *Æther*, being no Object of our Sense, but the mere Work of Imagination, brought only upon the Stage for the sake of Hypothesis, or to solve some Phenomenon, real or imaginary; Authors take the Liberty to modify it how they please.—Some suppose it of an elementary Nature, like other Bodies, and only distinguish'd by its Tenacity, and the other Affections consequent thereon; which is the *Philosophical Æther*.—Others will have it of another Species, and not Elementary; but rather a sort of fifth Element, of a purer, more refined, and spirituous Nature than the Substances about our Earth; and void of the common Affections thereof, as Gravity, &c. The heavenly Spaces, being the supposed Region or Residence of a more exalted Class of Beings; the Medium must be more exalted in proportion.—Such is the ancient and popular Idea of *Æther*, or *Æthereal Matter*. See ÆTHEREAL.

The Term *Æther* being thus embarrassed with a Variety of Ideas, and arbitrarily applied to so many different things; the later and severer Philosophers chuse to let it slide; and in lieu thereof, substitute other more determinate ones.

Thus, the *Cartesians* use the Term *Materia Subtilis*; which is their *Æther*: And Sir I. Newton, sometimes, a *Subtile Spirit*, as in the Cloze of his *Principia*; and sometimes a *Subtile or Æthereal Medium*; as in his *Opticks*.

The Truth is, there are abundance of Considerations, which seem to evince the Existence of some Matter in the Air, much finer than the Air it self.—There is an unknown something, which remains behind when the Air is taken away; as appears from certain Effects which we see produced in *Vacuo*.—Heat, Sir I. Newton observes, is communicated thro' a Vacuum, almost as readily as thro' Air: But such Communication cannot be without some interjacent Body, to act as a Medium. And such Body must be subtle enough to penetrate the Pores of Glass; and may be very well concluded to permeate those of all other Bodies; and consequently be diffused thro' all the Parts of Space: Which answers to the full Character of an *Æther*. See HEAT.

The Existence of such *Æthereal Medium* being settled; that Author proceeds to its Properties; inferring it to be not only rarer and more fluid than Air, but exceedingly more elastic, and active: In Virtue of which Properties, he shews, that a great part of the Phenomena of Nature may be produced by it.—To the Weight, e. g. of this Medium, he attributes Gravitation, or the Weight of all other Bodies; and to its Elasticity, the elastic Force of the Air, and of nervous Fibres, and the Emission, Refraction, Reflection, and other Phenomena of Light; as also, Sensation, Molecular Motion, &c.—In fine, this same Matter seems the *Primum Mobile*, the first Source or Spring of physical Action in the modern System.—See further under the Article *Subtile MEDIUM*, ATTRACTION, GRAVITATION, REFRACTION, REFLECTION, &c. See also FIRE, MUSCULAR MOTION, &c. See also NEWTONIAN Philosophy, &c.

The *Cartesian Æther* is supposed not only to pervade, but adequately to fill all the Vacuities of Bodies; and thus to make an absolute Plenum in the Universe. See MATERIA SUBTILIS; see also PLENUM; see also CARTESIANISM, &c.

But Sir I. Newton overturns this Opinion, from divers Considerations; by shewing, that the Celestial Spaces are void of all sensible Resistance: For, hence it follows, that the Matter contained therein, must be immensely rare, in regard the Resistance of Bodies is chiefly as their Density; so that if the Heavens were thus adequately fill'd with a Medium or Matter how subtle soever, they would resist the Motion of the Planets and Comets much more than Quick-silver, or Gold. See RESISTANCE, VACUUM, PLANET, COMET, &c.

ÆTHEREAL, **ÆTHEREUS**, something that belongs to *Æther*, or is of the Nature of *Æther*. See ÆTHER.

Thus, we say, the *Æthereal Space*; *Æthereal Regions*, &c.—Some of the Antients divided the Universe, with respect to the Matter contain'd therein, into *Elementary* and *Æthereal*. See UNIVERSE, and ELEMENTARY.—Under *Æther*, or the *Æthereal World*, was included all that Space above the upper Element, or, Fire. This they supposed to be perfectly, homogeneous, incorruptible, unchangeable, &c. See CORRUPTION, &c.

'Twas a Point controverted among 'em, Whether or no the *Æthereal Matter* had the Property of Gravity?—Many late Philosophers, not only at home but abroad, contend for its Gravity; and even for its being the Cause of Gravity in all other Bodies.—In effect, says *Newton*, Bodies do not descend by any inherent Principle; but by the Impulse or Traction of something external; which can be nothing but *Æther*; in regard they fall in *Vacuo* as readily, may more so, than in open Air: From the same Principle arises the Cohesion of Bodies, &c. *Lexic. Philosoph. Voc. Æther*. See MEDIUM.

ÆTHEREAL OIL, is a fine, subtle Oil, approaching nearly to the Nature of a Spirit. See OIL.

Thus, the pure Liqueur rising next after the Spirit, in the Distillation of Turpentine, is called the *Æthereal Oil* of Turpentine. See TURPENTINE.

Some Chymists distinguish two Principles in Urine; the one a volatile urinous Salt, resembling Spirit of Nitre; the other an *Æthereal Oil*, or Sulphur; partaking of the Nature of Spirit of Wine. *Dionis*. See URINE.

ÆTHEREAL HEAVEN. See ÆTHEREAL HEAVEN.

ÆTHIOPUS Mineral, a Preparation of Mercury, made by grinding equal Quantities of crude Quick-silver and Flower of Sulphur, in a Stone or Iron Mortar; till they become incorporated into a black Powder. See MERCURY.

It is prescribed for the Worms, and all Crudities and Acrimony of the Humours; and is reputed infallible against the Itch, and other cutaneous Discaises.

ÆTIANS, **ÆTIANI**, in Antiquity, a Sect or Branch of *Arians*, the Disciples of *Aetius* of *Antioch*, surnamed the *Impious*; who, according to *Philostorgius*, was first Smith, then Sophist, and lastly Physician. See ARIAN.

The *Aetians* had divers other Denominations; as, *Pure Arians*, *Emmanuelians*, *Heterogonians*, *Troglodytes*. See EUNOMIANS, HETEROGONIAN, &c.

ÆTIOLOGY, ÆTIOLOGIA, a Rationale, or Discourse of the Cause of a Disease. See DISEASE.

In this Sense, we say, the *Ætiology* of the Small Pox, of the Hydrophobia, of the Gout, the Dropsy, &c. See HYDROPHOBIA, POX, GOUT, DROPSY, &c.

The Word is compounded of the Greek *aitia*, Cause, and *logos*, Sermon, Discourse.

ÆTITES, in Natural History, the Eagle-Stone. See EAGLE-STONE.

The *Ætites*, or *Lapis Ætites*, is a kind of Stone, vulgarly said to be found in the Eagle's Nest; but this, as well as many of the Virtues ascrib'd to it, seem to be fabulous.—It is found under ground in several Parts: Near *Treves* in France, one can scarce dig a few Feet, without finding considerable Strata or Beds hereof.

'Tis usually hollow, and has a kind of Core or Kernel in it, which, upon flaking, rattles: Some have two, and others three such Cores.

It is found of various Forms, and Sizes; but its Texture or Consistence is pretty uniform; consisting of two or three Lays or Coats of a Matter resembling baked Earth: Especially the innermost.—They are originally soft, and of the Colour of yellow Oker.

Diophrastes says, it is of use in discovering a Thief; for by mixing it with his Meat, he'll be unable to swallow it.—*Martbiolus* informs us, that Birds of Prey never hatch their young without this Stone; and that they seek it as far as the Indies.

The Use now made of the Stone, is to assist Women in Labour; to which end, they fasten it about the Knee: it being a Tradition, that according as it is applied above or below the Matrix, it has the Faculty of retaining or excluding the Child. See DELIVERY.

Hence, it is sometimes directed to be bore about the Arm to prevent *Abortion*. See ABORTION.

The Word is form'd of the Greek *aitos*, *Aquila*, Eagle. **AFFECTION, AFFECTIO**, in Physicks, a Quality or Property of some natural Being. See QUALITY, and PROPERTY.

The Schoolmen define *Affection* an Attribute proper to any Being, arising from the Essence thereof. See ATTRIBUTE, PROPER, &c.

Affections are distinguish'd into those of *Body*, and those of the *Mind*.

Affections of Body, are certain Modifications thereof; occasioned or induced by Motion; in Virtue whereof, the Body comes to be so and so disposed. See BODY, MATTER, MOTION MODIFICATION, &c.

These are subdivided into *Primary*; as, *Quantity*, *Figure*, *Motion*, *Place*, *Quality*, and *Time*; and *Secondary*, as *Divisibility*, *Continuity*, *Impenetrability*, *Regularity*, *Health*, *Strength*, &c. See each under its proper Article.

Affections of Mind, are what we more usually call *Passions*. See PASSION.

Alchemical AFFECTIONS. See MECHANICAL *Affection*.

AFFECTION is peculiarly used in Medicine, for a morbid or disorderly State of a Part.—Thus, we say, such a Part of the Body is *affected*, i. e. indisposed, or seized with a Disease. See DISEASE.

The Sick are frequently mistaken as to the Place *affected*, by means of the Consent between the several Parts, which makes a Disorder in one Part be felt in another. See CONSENT.

Hypochondriacal AFFECTION. See HYPOCHONDRICAL, *Hysterical AFFECTION*, &c. See HYSTERIC, &c.

AFFECTION is sometimes also used in a Legal Sense, for the assigning, making over, pawning, or mortgaging a thing, to assure the Payment of a Sum of Money, or the Discharge of some other Duty or Service.—His Effects were all *affected* to his Creditors.—The Revenue of such a Benefice, of such an Hospital, are *affected* to the Payment of Pensions, to the Support of Orphans.—There are certain Duties and Privileges *affected* to certain Offices, &c.

AFFEEORERS, AFFEATORERS, in Law, are those appointed in Court-Loes, upon Oath, to settle and moderate the Fines of such as have committed Faults arbitrarily punishable, or which have no express Penalty set down by Statute. See FINE, &c.

The Word is form'd of the French *Affier*, to affirm; by reason that appointed to this Office, do affirm upon their Oaths, what Fidelity they think in Conscience the Offender hath deserved.

Kitchin joins the three Words as Synonyms; *Affidati*, *Amercatores*, *Affiores*. *Bracton* has *Affidari Mulierem*, to be betrothed to a Woman.—In the Customary of Normandy, the Word *Affaire*, is render'd by the Latin Interpreter *Taxare*, to set the Price of a thing; as *Affimare*, *Indicare*, &c.

AFFERI, in Law. See AVERIA.

AFFIANCE, in Law, the plighting of Troth, between a Man and a Woman; upon an Agreement of Marriage to be had between 'em. See MARRIAGE, and AFFINITY.

AFFIDATIO Dominorum, an Oath taken by the Lords in Parliament; thus called in the *Rot. Parl. Hen. VI.* See OATH, and PARLIAMENT.

AFFIDATUS, or **AFFIDIATUS**, in our Law-Books, a Tenant by Fealty: Also a Retainer. See TENANT, and RETAINER.

—*Affidati non proprie Vassalli sunt sed quasi Vassalli, qui in alicujus fidei & clientelam sunt recepti, recommendati dicti.* Laurentii Amalthæa. *Affidato accipitur pro mutua fidelitatis connexione, tam in sponsalibus, quam inter Dominum & Vassillum.* Proles de Affidata & non Mariata, non est heres. MS.

AFFIDAVIT, an Oath in Writing, sworn before some Person who hath Authority to take such Oath; and made use of, and read in Court, upon Motions, but not upon Trials. See OATH, EVIDENCE, WITNESS, &c.

In the Court of Chancery is an *Affidavit Office*; under the Direction of a *Master*. See CHANCERY, &c.

AFFINAGE, is sometimes used in ancient Law-Books, for the Refining of Metals. See REFINING.

AFFINITY, AFFINITAS, an Alliance, or Relation made between two Families, by Marriage. See ALLIANCE, and MARRIAGE.

In this Sense, the Word stands contradistinguish'd to Consanguinity; which is a Relation by Blood. See CONSANGUINITY.

In the *Mosaic* Law, there are several Degrees of *Affinity*, wherein Marriage is expressly prohibited; which yet seem not at all prohibited by the Law of Nature.—Thus, *Levit. C. VIII. ver. 16.* a Man was forbid to marry his Brother's Widow, unless he died without Issue; in which Case, it became enjoined as a Duty. So it was forbid to marry his Wife's Sister, while she was living, v. 18. which was not forbidden before the Law, as appears from the Instance of *Jacob*.

The ancient *Roman* Law is silent on this Head; and *Papinian* is the first who mentions it; on occasion of the Marriage of *Caracalla*.—The Lawyers who came after him, stretch'd the Bonds of *Affinity* so far, that they plac'd Adoption on the same Foot with Nature. See ADOPTION.

Affinity, according to the modern Canonists, renders Marriage unlawful to the fourth Generation, inclusive: But this is to be understood of direct *Affinity*; and not of that which is secondary, or collateral.—*Affinis mei affinis, non est affinis meus.* See DIRECT, and COLLATERAL.

It is further to be observ'd, that this Impediment of Marriage, does not only follow an *Affinity* contracted by lawful Matrimony, but also that contracted by a criminal Commerce; with this difference, that this last does not extend beyond the second Generation; whereas the other, as has been observ'd, reaches to the fourth. See ADULTERY, CONCUBINE, FORNICATION, &c.

The Canonists distinguish three Species of *Affinity*.—The first, that contracted between the Husband and the Relations by Blood of his Wife; and between the Wife, and the Relations by Blood of her Husband. The second, between the Husband, and those related to his Wife by Marriage; and the Wife, and those so related to her Husband. The third, between the Husband, and the Relations of his Wife's Relations; and the Wife, and the Relations of her Husband's Relations.—By the IVth Council of the *Lateran*, held in 1213, it was decreed, That none but the first Kind was any real *Affinity*; the rest being mere Refinements, which ought to be set aside. *Tit. de Consang. & Affin.*

The Degrees are reckon'd after the same manner in *Affinity*, as in Consanguinity; and therefore differently in the Canon Law from what they are in the Civil Law. See DEGREE.

The Word is form'd of the Latin *Affinis*, Neighbour; of *ad*, and *finis*, Boundary, Limit.

The *Romanists* talk of a spiritual *Affinity*, contracted by the Sacrament of Baptism and Confirmation.—In that Church, a God-father may not contract Marriage with his God-daughter, without a Dispensation. See GOD-FATHER, BAPTISM, &c.

AFFIRM, in Law.—To *affirm*, signifies to ratify, or confirm a former Law, or Judgment.—In the like Sense, is the Substantive *Affirmance* used. See AFFIRMATION.

AFFIRMATION, AFFIRMATIO, a positive Proposition, alledging the Truth of something. See PROPOSITION, and TRUTH.

Affirmation is defined by the Logicians, an Act whereby we attribute one Idea to another; as supposing it to belong, or agree thereto.—As when, conceiving Perfection to agree to the Deity, we say, *God is perfect*. See ATTRIBUTE.

This, on other Occasions, is called *Enunciation*, *Composition*, *Judging*, &c. See ENUNCIATION, COMPOSITION, JUDGMENT, &c.

AFFIRMATION is also used in Grammar, by some late Refiners upon that Art, for what is usually call'd a Verb; in regard the Office of that Part of Speech, is to express what we *affirm*, or attribute to any Subject. See VERB.

AFFIRMATION, is particularly used in a Legal Sense, for a solemn Form of attesting the Truth; allow'd to be used by the Quakers, instead of an Oath, which they hold absolutely unlawful. See **QUAKER**, and **OATH**.

This People, by their Refusal of all Oaths, lay liable to much Trouble; particularly for declining the Oath of Allegiance, in the Time of King Charles II.—But by an Act pass'd Anno 1689, it was decreed, That their solemn Declaration of Allegiance and Fidelity, should be accepted instead of an Oath. See **DECLARATION**, and **ALLEGIANCE**.

In 1695, they also obtained, by a Temporary Act, that their solemn Affirmation should be accepted in all Cases where an Oath is by Law requir'd; except in Criminal Cases, upon Juries, and in Places of Profit and Trust under the Government.—In this Form :

I, A. B. do declare, in the Presence of Almighty God, the Witnesses of the Truth of what I say, &c.

This Act was afterwards continued; and at last made Perpetual.—But this Form not being such as was desir'd, and having, in reality, all the Essentials of an Oath; they applied to the Parliament for an Alteration, which they obtained Anno 1711: When the following Form was sett'd to their general Satisfaction, viz.

I, A. B. do sincerely, solemnly, and truly declare, and affirm.

Which is the Form now used, in the same manner, and under the same Limitation with the former.—Any Person depositing upon his solemn Affirmation, a known Falshood, incurs the Penalty of wilful and corrupt Perjury. See **PERJURY**.

AFFIRMATIVE, in Logick, &c. is understood of a Proposition, or the like, which imports an Affirmation; or that say, A thing is. See **AFFIRMATION**.

In this Sense, the Word stands oppos'd to **NEGATIVE**. See **NEGATIVE**.

There are universal Affirmative Propositions; and such, usually are the first of Syllogisms. See **UNIVERSAL**, **SYLLOGISM**, &c.

In Algebra we have also Affirmative or Positive Quantities. See **QUANTITY**, and **POSITIVE**.

AFFIRMATIVE SIGN, or **CHARACTER**. See **CHARACTER**.

In Grammar, Authors distinguish Affirmative Particles: Such is, *Yes*. See **PARTICLE**, **ADVERB**, &c.

The Term is sometimes also used Substantively.—The Affirmative is the more probable side of the Question; There were no many Votes or Voices for the Affirmative. See **VOTE**.

AFFIRMATIVE is particularly applied in the Roman Inquisition, to such Heretics as own the Errors and Opinions they are charged with; and maintain the same in their Examination with Firmness and Resolution. See **INQUISITION**.

AFFORCIAMENTUM, in Law. See **EFFORCEMENT**.

AFFORESTING, **AFFORESTATIO**, the turning Ground into Forest. See **FOREST**.

In this Sense, the Word stands oppos'd to **DEAFFORESTING**. See **DEAFFORESTING**.

The Conqueror, and his Successors, continu'd afforesting the Lands of the Subject, for many Reigns; till the Grievance became so notorious, that the People, of all Degrees and Denominations, were brought to sue for Relief; which was at length obtain'd, and Commissions granted to survey and perambulate the Forest, and separate all the new afforested Lands; and re-convert them to the Uses of their Proprietors, under the Name and Quality of *Parlous*, or *Povvellee Land*. See further under the Article **PURLED**.

AFFRAY, or **AFFRAYMENT**, in Law, an Assault put upon one, or more Persons.

This, according to the Lawyers, may be done without a Word spoke, or a Blow struck.—As, where a Man shows himself arm'd or brandishes a Weapon, it may strike a Fear into others unarm'd.

Affray is a common Injury; in which it differs from an *Affault*, which is always a particular Injury. See **ASSAULT**.

AFFREIGHTMENT, or **AFFREYMENT**, **AFFREYMENTUM**, in Law, signifies the Freight of a Ship. See **FREIGHT**.

The Word is form'd from the French *Fret*, which expresses the same thing.

AFFRONTE, in Heraldry, is understood of Animals bore in an Escutcheon, as facing, or with their Heads turn'd toward each other.—This is otherwise call'd *Confront*.

The Word is French; and literally signifies the same thing.

AFLIATION. See **ADoption**.

Among the ancient Gauls, *Affiliation* was a sort of Adoption only prevail'd among the Great.—It was perform'd with Military Ceremonies: The Father presented a Battle-ax to the Person he was to adopt for his Son; as an Intimation

that he was to preserve the Effects he thus call'd him to succeed to, by Arms.

AFRICAN COMPANY. See **COMPANY**.

AFRICANUS, a Quality or Surname, given to several Persons, in respect of the Country of Africa. See **TITLE**, **QUALITY**, **NAME**, **SURNAME**, &c.

P. Cornelius Scipio had the Appellation *Africanus* bestow'd on him, from his taking and demolishing the City of Carthage, and thus ridding the Romans of so formidable an Enemy.—In some Medals we find *Scipio's* Head on one side, with the Inscription, *P. SCIPIO AFRIC.*; and on the other, *Scipio* in a Carr drawn by Horses; with **CART. SUBACT.**

Africanus is also the Surname of a celebrated Historian and Chronologist of the III'd Century, born in Palestine; of whom we have nothing extant beside a few Fragments, preserv'd in *Eusebius* and *Synellus*.—His Name was *Julius Africanus*.—Authors frequently confound him with *Sextus*, or *Celsus Africanus*.

AFTER-BIRTH, among Midwives, the Coat or Membranes wherein the Fetus is enclosed, *in Utero*. See **FORTEUS**.

It is thus call'd, by reason it comes away some time after the Fetus; by way of a second Birth, or Delivery. See **DELIVERY**.

Physicians usually call it the *Secundines*. See **SECUNDINE**.—See also **HEM**, &c.

AFTER-PAINS, are Pains felt in the Loins, the Groin, &c. after the Birth is brought away. See **DELIVERY**.

They seem to arise from a Distention of the Ligaments of the *Uterus* in time of Delivery; and are seldom dangerous, unless aggravated by a Detention of the Lochia.—To prevent 'em, Oil of sweet Almonds, Sperma Ceti, Capillus Veneris, &c. are usually prescribed.

AFTER-GRAZ, among Husbandmen, the After-Graz, or second Mowings of Graz; or else Graz or Stubble cut after Corn.

AGA, in the Language of the *Mogols*, &c. signifies a powerful Man, or a Lord and Commander.

In this last Sense, the Term is also used among the *Turks*: Thus, the *Agas* of the *Jamzeris*, is their Colonel; and the *Capti-Aga*, the Captain of the Gate of the Seraglio. See **JANIZARY**, **CAPTI-AGA**, &c.

The Title *Agas* is also given by way of Courtesy, to several Persons of Distinction; tho' not in any Office or Command to entitle 'em to it.

On some Occasions, in lieu of *Agas*, we say, *Agassi*: Thus, the *Agas* or Governour of the Pages, is call'd *Capti-Agassi*; and the *Agas* or General of the Horse, *Spahular-Agassi*. See **PAGE**, **ODA**, **SPAH**, &c.

AGAL, **AGIO**, in Matters of Commerce, a Term used, chiefly in *Holland*, and *Venice*, for the Difference between the Value of Bank-Notes, and current Money. See **BANK**.

The *Agio* in *Holland* is sometimes 2, or even 4 per Cent. in favour of the Bank-Notes. See **DISCOUNT**.

AGAPE, in Church History, *Love-Fests*; a Name given to certain Festivals, celebrated in the ancient Greek Church, to keep up a Harmony and Concord among its Members. See **FEAST**.

The Word is form'd of the Greek *αγαπη*, *Dilection*; of *αγαπαιω*, *I love*.

In the primitive Days they were held without Scandal, or Offence; but in after-Times, the Heathens began to tax them with Impurity.—This gave occasion to a Reformation of these *Agape*.

The Kiss of Charity, with which the Ceremony had end'd, was no longer given between different Sexes; and it was expressly forbidden to have any Beds or Couches, for the Convenience of those who should be dispos'd to eat more at their Feast.

Notwithstanding these Precautions, the Abuses committed in them became so notorious; that they were solemnly condemn'd at the Council of *Carthage*.

Some Critics will have it to be these *Agape* that St. Paul speaks of, *1 Cor. ch. XI*, under the Name of the *Lord's Supper*; which, they contend, was not the Eucharist, but a Feast accompanying it; held by the Christians of those Times, in commemoration of our Saviour's instituting that Sacrament, in his Supper with the Apostles.—The Text seems to intimate, that the Feast was held before the Communion; but by an Ordinance afterwards made, they were oblig'd to communicate fasting; so that the *Agape* were postpon'd till the Sacrament was over.

Some Authors imagin'd this Ceremony to have been, not a Commemoration of our Saviour; but a Custom borrow'd from the Heathens: *Mos vero ille, ut reseruat, says Seditellus on the XIth Chapter of the Epistle to the Corinth. de Gentili adhibe superstitione vanebat.* And *Paulinus the Manichee* is represented in St. *Augustine*, as reproaching the Christians, with converting the Heathen Sacrifices into *Agape*: *Christianus sacrificia Paganorum convertisse in Agapas.*

AGAPETE, in Ecclesiastical History, *Well-beloved*; a Name given to certain Virgins, who in the ancient Church associated themselves with Ecclesiastics, out of a Motive of Piety and Charity.

In the primitive Days, there were Women instituted Deaconesses; who devoting themselves to the Service of the Church, took up their abode with the Ministers, and assisted them in their Functions. See DEACON.

In the Ferour of the primitive Piety, there was nothing scandalous in these Societies: But they afterwards degenerated into Libertinism; insomuch, that St. Jerom asks, with Indignation, *unde Agapetorum festus in ecclesiis introit?* This gave occasion to Councils to suppress them.—St. Athanasius mentions a Priest named *Leontius*, who, to remove all occasion of Suspicion, offer'd to mutilate himself, to preserve his Companion.

AGARIC, or *Fungus AGARICUS*, in Pharmacy, a kind of fungous Excrecence growing on the Trunks, and large Branches of several Trees; but chiefly on the Larch-Tree, and certain Oaks. See FUNGUS.

Dioscorides derives its Name from a Province of *Sarmatia*, called *Agaria*; whence it was first brought.—Several Authors, and among the rest, *Galen*, take it for a Root; but the common Opinion is for its being of the Mushroom kind.—It is brought from the *Levant*.

It is white, light, tender, brittle, of a bitter Taste, pungent, and a little Styptic.—This is what the Antients call'd the *Female Agaric*: As for the Male, it is usually yellowish and woody; and is generally excluded out of Physick, being only used in Dying.

Agaric was a Medicine in mighty use among the Antients; not only for the purging of Phlegm, but in all Distempers proceeding from gross Humours and Obstructions; as the Epilepsy, Madocks, Asthma, &c.—Yet they complain'd, that it weaken'd the Bowels, and purg'd too violently.

They had divers Correctors for it; chiefly of the Aromatic kind: But Dr. *Quincy* says, the best way is to banish it for good, as the present Practice has almost done: for that it rather makes People sick, than purges them; being very nauseous, and but little cathartic. See PURGATIVE.

By a chymical Solution, it passes almost wholly into Oil: It yields no volatile Salt; but abounds with a sort of fealy Earth, and an acid Phlegm.

We read of *Pillule de Agarico*, and *Troches de Agaric*: but they are disused.

Some Authors also mention a *Mineral Agaric*; which is a whitish Stone, found in the Clefts of Rocks in *Germany*; called also *Lac Lunæ*, and by some Naturalists, *Litbonagra*, and *Stromagora*. See LAC LUNE.

AGAT, ACHAT, in Natural History, a precious Stone, partly transparent, and partly opaque. See PRECIOUS STONE, and GEM.

The first *Agats* were said to have been found in *Sicily*, along the Banks of the River *Achates*; whence, some will have it, the Name is deriv'd.

There are various Kinds of *Agats*; which, according to their different Colours, degrees of Transparency, &c. have different Names.—The principal may be reduc'd to these four, viz. the *Ongx*, the *Chalcodony*, the *Black*, and the *German Agat*. See ONYX, and CHALCEDONY.

The *Agat* has ordinarily a reddish Taint; but is finely variegated with Spots and Stains; many of which seem very naturally to represent Woods, Rivers, Trees, Animals, Fruits, Flowers, &c.—*De Bost* mentions one, of the Size of a Nail, wherein a Bishop, with his Mitre, was very well represented: Turning it a little, a Man and Woman's Head were seen in its Place.

The *Sardines*, and *Sardonxy Agats*, are very valuable; the latter is of a sanguine Colour, and is divided into Zones, which seem to have been painted by Art.—*Pliny*, *Strabo*, and *Cicero* say, that *Polycrates's* Ring was a *Sardonxy*. See SARDONYX.

Authors also speak of *Roman Agats*, *Egyptian Agats*, *Ongx-sardonxy Agats*, &c.—The Antients mention a red *Agat*, spotted with Points of Gold, found in *Candia*; and called *Sacred*, as being a Preservative against the Poison of Vipers, Scorpions, and Spiders.—*Pliny* has a whole Chapter of the Virtues of *Agats*.

Agat has always been esteem'd for Seals; as being a Stone that no Wax will stick to. See SEAL, ENGRAVING, &c.

The Gold Wire-drawers burnish their Gold with an *Agat*; whence the Instrument made use of on that occasion, is called *Agat*. See GOLD-WIRE.

Mr. *Boyle* takes *Agats* to have been form'd of separate Beds, or Strata of fine Clay or Earth, brought by a petrifying Liqueur to congregate into a Stone. See GEM.—The same Author observes, that the Fire will purge away the Colours of *Agat*. He also mentions an *Agat* with a moveable Spot or Cloud in it.

AGE, the natural Duration of any thing; and particularly of the Life of Man. See DURATION, and LIFE.

The ordinary *Age* of Mankind has been occasionally varied, in such manner as to afford a fine Instance of the Wisdom of Providence. See the Article LONGEVITY.

AGE is also used in Chronology, for a *Century*; or a System or Period of an hundred Years; called also *Seculum*. See SECVLUM, and CENTURY.

An *Age* differs from a *Generation*. See GENERATION.

AGE is also understood of a certain State or Portion of the ordinary Life of Man; which is divided into four different *Ages*, viz. *Infancy*, *Youth*, *Manhood*, and *Old Age*.

Infancy, or *Childhood*, *Pueritia*, extends as far as the fourteenth Year. See INFANCY, and CHILDREN.

Youth, *Adolescence*, or the *Age* of Puberty, commences at 14, and ends at about 25. See YOUTH, ADOLESCENCE, PUEBERTY, &c.

Manhood, or the *Virile Age*, terminates at 50. See VIRILE.

Old Age, *Senectus*, succeeds, which is the last: the some divide this into two; reckoning it *decrepit Age* after 75. See OLD AGE.

AGE, in Horsemanship, makes a considerable Point of Knowledge; the Horse being an Animal that remarkably shews the Progress of his Years, by correspondent Alterations in his Body. See HORSE.

We have Characteristics from his Teeth, Hoofs, Coat, Tail and Eyes. See TEETH, HOOF, &c.

The first Year he has his *Foal's Teeth*, which are only Grinders and Gatherers: The second, the four foremost change, and appear browner and bigger than the rest: The third, he changes the Teeth next to these; leaving no apparent *Foal's Teeth*, but two on each side above, and two below: The fourth Year, the Teeth next to these are changed, and no *Foal's Teeth* are left, but one on each side above and below. At five Years, his foremost Teeth are all changed; and the Tusshes on each side are complete: those which come in the Places of the last *Foal's Teeth*, being hollow, and having a little black Speck in the midst; which is called the *Mark in a Horse's Mouth*, and continues till eight Years of *Age*. See MARK.—At six Years, he puts up new Tusshes; near which appears a little Circle of young Flesh, at the bottom of the Tush: the Tusshes withal, being white, small, short, and sharp.—At seven Years, the Teeth are all at their growth, and the Mark in the Mouth appears very plain.—At eight, all his Teeth are full, smooth, and plain, and the Mark scarce discernable; the Tusshes looking yellowish.—At nine, the foremost Teeth shew longer, yellower, and fouler than before; and the Tusshes become bluish.—At ten, no Holes are felt on the inside of the upper Tusshes; which till then are very sensible: Add, that the Temples begin to be crooked, and hollow.—At eleven Years, his Teeth are very long, yellow, black, and foul; but he will cut even, and his Teeth stand directly opposite to one another.—At twelve, the upper Teeth hang over the nether.—At thirteen, the Tusshes are worn close to his Chaps, if he have been much ridden; otherwise they will be black, foul, and long.

2^o, As to the *Hof*.—If it be smooth, moist, hollow, and well-sounding, 'tis a Sign of Youth: On the contrary, if rugged, and as it were scamed, one Seam over another, and withal dry, foul, and rusty, 'tis a Mark of *Old Age*.

3^o, For the *Tail*.—Taking him by the Stern thereof, close at the setting on to the Buttock, and gripping it between the Finger and Thumb; if a Joint be felt to stick out more than the rest, the bigness of a Nut, the Horse is under ten; but if the Joints be all plain, he may be fifteen.

4^o, The *Eyes* being round, full, and staring; the Pits that are over 'em filled, smooth, and even with his Temples; and no Wrinkles to be seen, either under or above; is a Mark of *Youth*.

5^o, The Skin being pluck'd up in any Part betwixt the Finger and Thumb, and let go again; if it return suddenly to its Place, and remain without Wrinkles, he may be argued to be young.

6^o, A dark-colour'd Horse, growing grify above the Eyebrows, or under the Main; or a whitish Horse growing mangled, either white or black, all over; may be infallibly concluded extremely aged.

Lastly, a Horse being young, the Bars of his Mouth are soft and shallow; otherwise they are deep, and feel hard and rough.

AGE, in Hunting.—Deer, and other Beasts of Game, have different Denominations, according to their *Age*; which see under the Article HUNTING.

The first Head, called in follow Deer, *Broches*, and in red Deer, *Pricks*, does not come till the second Year of their *Age*: The next Year, they bear four or six small Branches; the fourth Year, eight or ten; the fifth, ten or twelve; the sixth, fourteen or sixteen; the seventh Year, they bear their Heads beam'd, branch'd, and sum'd, as much as ever they will be.

The *Age of a Hart, &c.* is chiefly judg'd of by the Furture of his Head. See HEAD.

The Huntsmen have several other Marks, whereby to know an old Hart without seeing him; as, the Slot, Ennies, Abatures, Folls, Fowmets, Gate, and Fraying Poil. See HUNTING.

Age of the Moon, in Astronomy, is understood of the Number of Days elapsed since the Last Conjunction, or New Moon; called also her *Quarter*. See CONJUNCTION, QUARTER, &c.

To find the *Moon's Age*. See MOON.

AGE, in Chronology.—The *Age of the World*, is the Time pass'd since the Creation. See CREATION.

The several *Ages of the World*, may be reduc'd to these three grand Epochs, viz. the *Age of the Law of Nature*, from *Adam to Moses*.—The *Age of the Jewish Law*, from *Moses to Christ*.—And the *Age of Grace*, from *Christ to the present Year*.

The first *Age*, according to the *Jews*, consisted of 2447 Years; according to *Sealiger*, of 2452; and according to *Usher*, of 2515.—The second *Age*, according to the *Jews*, consisted of 1312 Years; according to *Sealiger*, of 1508; and according to *Usher*, of 1491.—Of the third *Age*, there have elapsed 1726 Years; tho' this, too, is controverted by Chronologers.

Petavius will have our Saviour to have been born four Years before the vulgar Epochs; on which footing, the current Year should be 1730; according to *Capella*, 1731; according to *Berouius* and *Sealiger*, 1728. See NAVILITY.

The *Romans* distinguish'd the Time that preceded them into three *Ages*: The *obscure or uncertain Age*, which reach'd down as low as *Ogyges King of Attica*; in whose Reign the Deluge happen'd in *Greece*.—The *fabulous, or heroic Age*, which ended at the first Olympiad; And the *historical Age*, which commenc'd at the Building of *Rome*. See FABULOUS, HEROIC, HISTORICAL, &c.

Among the *Poets*, the four *Ages of the World*, are the *Golden, the Silver, the Brazen, and the Iron Age*. See the *Metamorphosis of Ovid*, Lib. I. or rather, *Hesiod* in his Poem *Hese na Hesea, Opera & Dies*, ver. 128, &c. He is the first that has describ'd the four *Ages*, and the best.

The *East Indians* also reckon four *Ages* since the Beginning.—The first, which they represent as a sort of *Golden Age*, lasted, according to them 1728000 Years: In this the *God Brahma* was born; and the Men were all *Giants*; their Manners innocent: They were exempt from *Diseases*, and lived 400 Years.—In the second *Age*, which lasted 1256000, their *Rajas* were born: Vice now crept into the World; Mens Lives were fallen to 300 Years, and their Size reduc'd proportionally.—Under the third *Age*, which lasted 8064000 Years, Vice being increas'd, Men only attain'd to 200 Years.—The last *Age* is that wherein we now live, of which 4027195 Years are already gone; and the Life of Man sunk to one fourth of its original Duration.

AGE, in Law, is particularly understood of a certain State or Time of Life, wherein a Person is qualified to do something, which before, for want of Years, and consequently Discretion, they could not. See MAJOR, MINOR, &c.

There are two principal *Ages* in a Man: At fourteen, he is at the *Age of Discretion*; at twenty one Years, at full *Age*.

In a Woman, there were anciently six *Ages* observ'd: At seven Years, her Father might distrain the Tenants of his Manor for aid to marry her; for at those Years she may consent to Matrimony. *Bracton*.—At nine Years old she is dowable; for then, or within half a Year after, she is said to be able *promereri dotem & virum sustinere*. *Fleta*.—At twelve Years, she is able finally to ratify and confirm her former Consent to Matrimony.—At fourteen, she may take her Lands into her own Hands; and should he out of Ward, if she were at this *Age* at her Ancestor's Death.—At sixteen, she should be out of Ward; tho' at the Death of her Ancestor she was under fourteen: The Reason is, that then she might take a Husband able to perform Knight's Service.—At twenty one Years, she may alienate Lands and Tenements.

For a Man; at the *Age of fourteen* he may chuse his own Guardian, and claim his Lands held in Socage. *Dyer*, fol. 162. the *Bracton*, Lib. II. limits this to fifteen Years; with whom *Glasville* agrees.—At fourteen, a Man may consent to Marriage, as a Woman at twelve.—At fifteen he ought to be sworn to the Peace, *An. 24 Edw. I. Stat. 5*.—At the *Age of twenty one*, a Man was oblig'd to be a Knight, if he had twenty Pounds Land *per Annum* in Fee, or for Term of Life, *Anno 1 Edw. II. Stat. 1*. But this Statute is repealed, 17 *Car. I. cap. 10*.—The same *Age* also enables him to make Contracts, and manage his own Estate; which, till that time, he cannot do with Security of those that deal with him.

The *Age of twelve Years*, binds to Appearance before the Sheriff and Coroner, for Inquiri after Robberies, *Anno 52 Hen. III. cap. 14*.—The *Age of twenty four Years* enabled a Man to enter an Order of Religion, without Consent of Parents, *Anno 4 Hen. IV. cap. 17*.

AGE Prior, a Petition, or Motion made in Court, by one in his Minority; having an Action brought against him for Lands coming to him by Descent; requesting, that the Action may rest till he come to full *Age*.—This, the Court, in most Cases, ought to grant.

It is otherwise in the Civil Law; which obliges Children in their Minority to answer by their Tutors, or Curators. See TUTOR, CURATOR, MINORITY, PUPIL, &c.

AGEMOGLANS, or AZANOGGLANS, Children of *Tribute* rais'd every three Years by the grand Seigneur, among the Christians whom he tolerates in his Dominions.

The Commissioners appointed for this Levy, take them by force, even out of the Houses of Christians; always claiming one in three, and pitching upon such as seem the handsomest, and promise to be the most handy.

These are immediately convey'd to *Gallipoli* or *Constantinople*; where they are first circumcis'd, then instructed in the Mahometan Faith, taught the *Turkish* Language and the Exercises of War, till such time as they become of *Age* to bear Arms.

Such as are not judg'd proper for the Army, they employ in the lowest and most servile Offices of the Seraglio; as in the Kitchen, Stables, &c.

The Word, in its Original, signifies a Barbarian's Child; that is, a Child not a *Turk*.—It is compounded of two *Arabic* Words, *OUN Agem*, and *ONNY Cold*; which among the *Turks* signifies as much as *Barbarous* among the *Greeks*; the former People dividing the World into *Arabs* or *Turks*, and *Agem*; as the latter into *Greeks* and *Barbarians*.

AGENT, AGENS, in Physics, that whereby a thing is done or effected; or that which has a Power whereby it acts on another; or by its Action induces some Change in another. See ACT, and ACTION.

The Word *Agent* is us'd promiscuously with *Efficient*; and in contradistinction to *Patient*. See EFFICIENT, PASSIVE, &c.

The Schools divide *Agents* into *Natural* and *Free*.

Natural or *Physical Agents*, are those immediately determin'd by the Author of Nature, to produce one sort of Effect; with an Incapacity to produce the contrary thereto.—Such is Fire, which only heats, and does not also cool.

Free or *Voluntary Agent*, is that which may equally do any thing, or the opposite thereof; as acting not from any Pre-determination, but from Choice.—Such is the Mind suppos'd to be; which may either will or nill the same thing. See PRE-DETERMINATION, LIBERTY, WILL, &c.

Natural Agents, again, are subdivided into *Univocal*; which are such as produce Effects of the same Kind and Denomination with the *Agents* themselves: and *Equivocal*, whose Effects are of a different Kind, &c. from the *Agents*. See EQUIVOCAL, and UNIVOCAL.

The Schoolmen reckon the following Circumstances necessary to the Being of an *Agent*, viz. That it be contiguous to the Object, distinct from it, have a Power over it, a Sphere of Activity, and a Proportion or Rate of acting.

AGENT, is also us'd for a Person entrusted with the Management of the Affairs of a Corporation, or private Person: In which Sense, the Word coincides with *Deputy*, *Procurator*, *Commissioner*, *Factor*, &c. See DEPUTY, PROCURATOR, COMMISSIONER, FACTOR, &c.

Among the Officers in the Exchequer, are four *Agents for Taxes*. See TAX, EXCHEQUER, &c.

AGENTS of Bank and Exchange, are publick Officers, establish'd in the trading Cities of *France*, to negotiate Matters between Merchants, relating to Bills of Exchange; and the buying and selling of Goods. These amount to what, among us, are called *Exchange-Brokers*. See BROKER, and EXCHANGE.

AGENT and Patient, in Common Law, is where a Person does, or gives something to himself; so that he is at the same time both the Doer or Giver, and the Receiver or Party it is done to.—Such is a Woman, when she endows her self with part of her Husband's Inheritance.

AGEOMETRESIA, a Term purely *Greek*, *Ἀγομετρησια*, sometimes us'd by *English* Writers; denoting a Want or Defect in point of *Geometry*.—*Kepler* not having taught any direct and geometrical Methods of finding certain Measures, in his *Elliptic Theory*; particularly, the true Anomaly, from the mean: has been charg'd with *Ageometresia*. See ANOMALY.

AGER Terra, in ancient Writers, the same with an *Acre of Land*. See ACRA.

AGGLUTINANTS, AGGLOUTINANTIA, in Medicine, a Species of strengthening Remedies, whose Office and Eff. is to adhere to the solid Parts of the Body, and thus recruit and supply the Place of what is wore off and wast'd in the animal Actions. See MEDICINE, NUTRITION, &c.

These are most of 'em of the glutinous Kind, or such as easily firm themselves into Gellies and gummy Conferences; whence the Name *Agglutinant*, which is form'd of *ad*, to, and *gluten*, glue. See GLUE, and AGGLOUTINATION.

The Operation and Use of *Agglutinants*, See under STRENGTHENERS.

The principal Simples which come under this Class, are Hing-grass, Olibanum, Gum Arabic, Dragons Blood, Cassia, Sago, Vermicelli, Pulse, Comfrey, Plantain, &c. See I-SING-GLASS, GUM, OLIBANUM, DRAGON'S BLOOD, CASSIA, PULSE, &c.

AGGLUTINATION, literally, denotes the Act of joining, or cementing two Bodies together, by means of a proper Glue, or Glee. See CEMENT, GLEU, &c.

In Medicine, the Term is peculiarly used for the Addition of new Substance; or the giving a greater Consistence to the Animal Fluids, to fit 'em the more for Nourishment. See AGGLUTINANTS; see also ACCRETION, and NUTRITION.

AGGRAVATION, the Act of augmenting a Crime, or the Punishment thereof. See CRIME, and PUNISHMENT. The Word is compounded of *ad*, to, and *gravis*, heavy, grievous.

In the *Romish* Canon Law, *Aggravation* is particularly used for an Ecclesiastical Censure, threatening an Excommunication after three Admonitions used in vain. See CENSURE.

From *Aggravation*, they proceed to *Re-aggravation*; which is the last Excommunication. See EXCOMMUNICATION.

AGGREGATE, the Sum, or Result of several things aggregated or added together. See AGGREGATION, and SUM.

Natural Bodies are *Aggregates*, or Assemblages of Particles or Corpuscles, bound together by the Principle of Attraction. See BODY, PARTICLES, &c.

The Word is form'd of *ad*, to, and *gregis*, gregis, a Flock, Company.

AGGREGATION, **AGGREGATIO**, in Physics, a Species of Union, whereby several things which have no natural Dependence or Connexion with one another, are collected together, so as in some Sense to constitute one. See UNION.

Thus, a Heap of Sand, or a Mass of Ruins, are Bodies by *Aggregation*.

In a like Sense, they sometimes say, To be of a Company or Community by *Aggregation*.—An *Aggregation* of several Doctors to the Faculty of Laws.—In *Italy*, *Aggregationes* are frequently made of Houses or Families; by Virtue whereof, they all bear the same Name, and Arms.

The Word *Aggregation*, strictly speaking, differs from *Congregation*; in that the former denotes a Coalition of several things in some Sense equal; and the latter an Accession of a less to a more considerable. See CONGREGATION.

AGGRESSOR, in Law, he, of two contending Parties, who makes the first Assault, or Attack; or who began the Quarrel, Encounter, or Difference.—In Criminal Matters, it is first enquir'd who was the *Aggressor*. See ATTACK, &c.

AGILDE, in our ancient Customs, a Person so vile, that whoever kill'd him was to pay no Malice for his Death. See *ESTIMATIO CAPITIS*.

The Word comes from the privative *a*, and the Saxon *Gildan*, *solvere*. See GILD.

AGILITY, **AGILITAS**, *Nimbleness*; a light and active Habitude, or Disposition of the Members, and Parts designed for Motion. See MUSCLE, and MUSCULAR.

AGILLARIUS, in ancient Law-Books, a Hayward, or Keeper of a Herd of Cattle in a common Field.

AGIST, in Law.—To *agist*, signifies to take in, and feed, the Cattle of Strangers, in the King's Forest; and gather the Money due for the same. See AGISTOR.

The Word is also extended to the taking in of other Mens Cattle, in any Man's Ground; at a certain Rate *per Week*.

It is also used metaphorically for a Charge or Burden on any thing.—In this Sense, we meet with *Terra ad Custodiam Maris Agistate*, i. e. charged with a Tribute to keep out the Sea. *Sed. Mare Claus.*—So, *Terra Agistrate*, are Lands whose Owners are bound to keep up the Sea-Banks. *Spehnan*.

The Word is form'd of the French *Giste*, a Bed, or Lying-Place.

AGISTOR, an Officer of the Forest, who takes in the Cattle of Strangers, to feed therein; and receives for the King's Use, all such Tack-Money as becomes due upon that account. See FOREST, and AGIST.

In *English*, they are otherwise called, *Guest-takers*, or *Gift-takers*, and made, by Letters Patent, to the Number of four, in every Forest, where his Majesty has any Pasture. See PASTURE.

Their Function is term'd *Agistment*, and *Agistage*.

AGITATION, **AGITATIO**, properly signifies *Shaking*; or a reciprocal Motion of a Body this way and that. See MOTION.

The Prophets, Quakers, Pythian Priestesses, &c. were subject to violent *Agitations* of Body, &c. See PROPHET, QUAKER, PYTHIA, &c.

Among Physiologists, the Term is sometimes appropriated

to that Species of Earthquake, call'd *Tremor*, or Trembling, *Aristotle*. See EARTHQUAKE.

Among Philosophers, it is chiefly used for an intestine Commotion of the Parts of any natural Body. See INTER-TINE.

Thus, Fire is said to *agitate* the minute Particles of Bodies. See FIRE.—Fermentation, and Effervescence, are attended with a brisk *Agitation* of the Particles. See FERMENTATION, EFFERVESCENCE, and PARTICLE.

AGITATION of *Beasts* in the Forest, anciently signify'd the Drift of Beasts in the Forest. See DRIVE, and FOREST.

AGITATORS, in our *English* Affairs, were certain Officers, created by the Army in 1647, to take care of the Interests thereof.

Cromwell leagu'd himself with the *Agitators*, whom he found to have more Interest than the Council of War.—The *Agitators* undertook to make Proposals relating to the Reformation of Religion and the State.

AGLECTS, **AGLETS**, or **AGLEEDS**, among Florists, the Pendants hanging on the Tip-ends of Chives, and Stamina; as in Tulips, Roses, Spike-grass, &c. See CHIVE, STAMINA, &c.

AGNATI, in the Civil Law, a Term used in respect of the Male Descendants of the same Father, in different Lines. See AGNATION.

In this Sense, the Word is contradictorily us'd to *Cognati*. See COGNATI.

AGNATION, **AGNATIO**, in the Civil Law, the Bond of Consanguinity or Relation between the Male-Descendants of the same Father; as Cognation is the Bond of Relation between all the Descendants of the same Father, both Males and Females. See COGNATION.

The Difference, then, between *Agnation* and *Cognation*, consists in this, that *Cognation* is the universal Name, under which the whole Family, and even the *Agnati* themselves are contain'd; and *Agnation* a particular Branch of *Cognation*, which only includes the Descendants in the Male Line. See CONSANGUINITY.

By the Law of the Twelve Tables, Males and Females succeeded one another; according to the Order of Proximity, and without any regard to the Sex; but the Laws were afterwards chang'd in this respect, by the *Lex Voconis*; and Women were excluded from the Privileges of *Agnation*, excepting such as were within the Degree of Consanguinity, i. e. excepting the Sisters of him who died ab-intestate; and it was hence that the Difference between *Agnati* and *Cognati* first took its rise.

But this Difference was again abolish'd by *Justinian*, and the Females were re-instated in the Right of *Agnation*, and all the Descendant's on the Father's side, whether Males or Females, were appointed to succeed each other indiscriminately, according to the Order of Proximity.

Hence, *Cognation* came to take in all the Relations of the Father; and *Agnation* to be restrain'd to those of the Mother.

Adoptive Children enjoy'd the Privileges of *Agnation*; which was call'd *Civil* in their respect, in opposition to the other, which was *Natural*. See ADOPTION.

AGNOITES, or **AGNOZETS**, a Denomination given to certain ancient Hereticks, who denied that Christ foreknew the Day of Judgment.

The Word is Greek, *ἄγνοια*; form'd of *ἄγνοω*, *Ignoro*, I do not know.

Eutocius, Patriarch of *Alexandria*, ascribes this Heresy to certain Solitaries in the Neighbourhood of *Jerusalem*, who in defence hereof, alleg'd divers Texts of the New Testament, and among others, this of *St. Mark*, C. XIII. ver. 32. "Of that Day and Hour knoweth no Man; no not the Angels who are in Heaven, nor the Son, but the Father only."—The same Passage was made use of by the *Arians*; and hence the Orthodox Divines of those Days were induced to give various Explanations thereof: Some alleg'd, that our Saviour here had no regard to his Divine Nature, but only spoke of his Human. Others understand it thus, That the Knowledge of the Day of Judgment does not concern our Saviour consider'd in his Quality of Messiah, but God only. Which is the most natural Explication.

AGNOMEN, among the *Romans*, a kind of Surname, usually given on occasion of some particular Action, Habit, or other Circumstance of the Bearer. See NAME, and SURNOME.

Thus, one of the *Scipio's* was named *Africanus*, and the other *Astianus*, from the brave Achievements which the one did in *Africa*, and the other in *Asia*.

The *Agnomen* was the third in order of the three Roman Names.—Thus, in *Marcus Tullius Cicero*, *Marcus* is the Prænomen, *Tullius* the Nomen, and *Cicero* the *Agnomen*. See NOMEN, PRÆNOMEN, &c.

AGNUS CASTUS, a Shrub, famous among the Antients as a Specific for the Preservation of Chastity, and the preventing of all Venereal Desires, Pollution, &c.

The *Greeks* call'd it *ἄγος*, *Castus*; to which has since been added the Reduplicative *Castus*, q. d. *Castus, castus*.—The

The *Athenian Ladies*, who made Profession of Chastity, lay upon Leaves of *Agnus Castus*, during the Feasts of *Ceres*. See *CEREBALIA*.

It is reputed a Cooler, and particularly of the Genital Parts; and was anciently used in Physick, to allay those inordinate Motions arising from seminal Turbulences: But it is out of the present Practice. See *POLLUTION*.

AGNUS DEI, a piece of consecrated Paste, of great service in the Church of *Rome*.

The Name literally signifies *Lamb of God*; this being supposed an Image or Representation of the Lamb of God, &c.

They cover it up with a piece of Stuff, cut in form of a Heart, and carry it very devoutly in their Processions.—The *Romish Priests*, and Religious, make a good Penny, by selling these *Agnus Dei's* to some, and presenting them to others.

The Pope consecrates fresh ones once in seven Years, the Distribution whereof, belongs to the Master of the Wardrobe; and they are receiv'd by the Cardinals with a world of Reverence, in their Mitres.—This Ceremony they pretend to derive from an ancient Custom of the Church, wherein, in part of the Paschal Taper, consecrated on Holy Thursday, was distributed among the People, to perfume their Houses, Fields, &c. in order to drive away Devils, and to preserve them from Storms and Tempests. See *PASCHAL TAPER*.

The Name *Agnus Dei*, is also popularly given to that Part of the Mass, wherein the Priest, striking his Breast three times, rehearses, with a loud Voice, a Prayer beginning with the Words *Agnus Dei*.

AGON, in Antiquity, *ἄγος*, q. d. *Combat*; a Dispute or Contention for the Mastery, either in some Exercises of the Body, or the Mind.

There were of these *Agones*, on certain Days, in most of their Feasts, and other Ceremonies, in honour of Gods, or Heroes. See *FEAST*, and *GAME*.

There were also *Agones* establish'd expressly, and not attach'd to any other Solemnity.—Such was the *Agon Gymnasium*, at *Athens*; the *Agon Nemenseis*, instituted by the *Argi* in the 53d Olympiad; the *Agon Olympius*, instituted by *Hercules*, 430 Years before the first Olympiad. See *NEMEAN OLYMPIC*, &c.

The *Romans* had also *Agones* instituted after the Example of the *Greeks*: The Emperor *Aurelian* establish'd the *Agon Solis*, *Agon of the Sun*; and *Diocletian*, the *Agon Capitolinus*, which was held every fourth Year, after the manner of the Olympic Games.—Hence, the Years, instead of *Lustra*, are sometimes number'd by *Agones*.

AGON was also an Officer of Sacrifice, whose Business was to strike the Victim. See *SACRIFICE*, and *VICTIM*.

The Name was derived hence, that standing ready to give the Stroke, he frequently ask'd *Agon*, or *Agone*? Shall I strike?

The *Agon* was also called *Papa*, *Caltrarius*, and *Victimarius*. See *POPE*.

AGONALES, in Antiquity, an Epithet given to the *Salii*, consecrated by *Numa Pompilius* to the God *Mars* firamed *Gradivus*. See *SALII*.

They were also call'd *Quirinales*, and *Palatini*. See *QUIRINALES*, and *PALATINI*.—*Rosinus* calls 'em *Agonenfes Salii*.

AGONALIA, or *AOONEA*, in Antiquity, Feasts celebrated by the *Romans*, in honour of *Janus*; or, as some will have it, in honour of the God *Agonius*, whom the *Romans* used to invoke upon their undertaking any Business of importance. See *FEAST*.

Authors vary as to the Etymology of this Solemnity; some derive it from the Mount *Agon*, afterwards *Mont Quirinalis*, whereon it was held.—Others suppose it taken from that Ceremony in the Feast, where the Priest holding the naked Knife, and ready to strike the Victim, which was a Ram, ask'd, *Agone*? Shall I do it?—This is *Ovid's* Opinion. *Fast. L. l. v. 349*. See *SACRIFICE*.

AGONISTICI, in Antiquity, a Name given by *Domstus* to those of his Sect, whom he sent into the neighbouring Places, Fairs, Markets, &c. to preach his Doctrine; for which reason they were also call'd *Circuitares*, *Cercelliones*, *Catropita*, *Caropita*, and at *Rome*, *Montenses*.

They were call'd *Agonistici*, from the Greek *ἀγος*, *Combat*; in regard they were sent as it were to fight, and subdue the People to their Opinions.

AGONOTHETA, *AGONOTHETES*, in Antiquity, a Magistrate chose among the *Greeks*, to preside, and have the Superintendency of their sacred Games, or Combats; to defray the Expences thereof, and adjudge the Prizes to the Conquerors. See *GAME*, *COMBAT*, &c.

The Word is compounded of *ἀγος*, *Combat*, sacred Sport; and *θητης*, *he who disposes, appoints, ordains*.—Among the *Romans*, the like Officer was denominated *Athletobeta*: See *ATHLETOTHEA*.

AGONOCLITA, or *AGONOCITES*, in Antiquity, a Sect in the VIIth Century; whose distinguishing Principle it was, never to kneel, but to deliver all their Prayers standing. See *GENUFLExION*.

The Word is compounded of the Privative Particle *a*, *γινω*, *Know*, and *κλινω*, *I bend*.

AGONY, *ΑΓΟΝΙΑ*, the Extremity of Pain, or a Disease; when Nature makes her last Effort, or Struggle, to throw off the Evil that oppresses her. See *PAIN*, *DISEASE*, and *DEATH*.

The Word is form'd from the Greek *ἀγών*, *Certamen*, *Combat*; this being a kind of Strife, between Life and Death.

AGORONOMUS, in Antiquity, a Magistrate of *Athens*, establish'd for the Maintenance of good Order, and Policy in the Markets; the Inspection of the Weights, Measures, &c.

The *Agoronomus* was much the same with the *Curule Edile* among the *Romans*. See *EDILE*.

The Word is compounded of the Greek, *ἀγορα*, *Market*, and *νομος*, *distribute*.—*Aristotle* distinguishes two Kinds of Magistrates, the *Agoronemi*, who had the Intendance of the Markets; and the *Asynomi*, who inspected the Buildings.

AGRARIAN, in the *Roman Jurisprudence*, a Denomination given to such Laws as relate to the Partition, or Distribution of Lands. See *LAW*.

The Word is form'd of the Latin *Ager*, *Field*. The *AGRARIAN LAW*, *Lex AGRARIA*, absolutely, and by way of Emphasis so call'd, was a celebrated Law, published by *Spurius Cassius*, about the Year 268, for the Division of the Lands taken from the Enemy.—Those other two in the *Digest*, the one publish'd by *Celsus*, and the other by *Nerva*, only relate to the Limits or Boundaries of Grounds; and have no Relation to that of *Spurius Cassius*.

There are fifteen or twenty *Agrarian Laws*, whereof, the principal are, *The Lex Apuleia*, made in the Year of *Rome* 653; the *Lex Bœbia*; the *Lex Cassia*, in the Year 267; the *Lex Cornelia*, in the Year 673; the *Lex Plautia*, in the Year 523; the *Lex Flavia*; the *Lex Julia*, in the Year 693; the *Lex Licinia*, in 373; the *Lex Alia Licinia*; the *Lex Livia*; the *Lex Marcia*; the *Lex Rubria*, made after the taking of *Carthage*; two *Sempronius Laws*, in the Year 620; the *Lex Servilia*, in 690; the *Lex Thoria*; and the *Lex Titia*.

AGREEMENT, *AGREEMENTUM*, in Law, is defined by *Plowden*, a joining or putting together of two or more Minds in any thing done, or to be done.

Of this there may be three sorts.—The first, an *Agreement* executed at the Beginning; mention'd in the Stat. of 25 *Edw. III.* which says, 'That the Goods bought by Forestallers, being thereof attained, shall be forfeited to the King; if the Buyer thereof have made *Grece* with the Seller.' Where the Word *Grece*, otherwise call'd *Agreement executed*, signifies Payment for the Things, or Satisfaction.

The second is, where one does an Act, and another agrees or assents thereto, afterwards. See *ASSENT*.

The third is, when both Parties at one time are agreed that such a thing shall be done in time to come; which is *Executory*, in regard the thing is to be done afterwards. See *CONTRACT*.

AGRESSES, or *OORESSES*, in Heraldry, the same as *Pellet*, or *Bell*. See *OORESSES*.

AGRICULTURE, the Art of tilling or cultivating the Earth, in order to render it fertile, and make it bear Plants, Trees, Fruits, &c. See *EARTH*, *SOIL*, *CULTURE*, *PLANT*, *FRUIT*, *SEED*, &c.

The principal and most general Operations in *Agriculture*, are *Mowing*, *Ploughing*, *Fallowing*, *Sowing*, *Harrowing*; as also, *Reaping*, *Mowing*, &c. See the Articles *MANURE*, *PLOUGHING*, *FALLOWING*, *SOILING*, &c.

To the Operations of *Agriculture* do also belong the Managements of the Productions of particular Countries; as *Hops*, *Hemp*, *Vines*, *Tobacco*, *Saffron*, *Liquorice*, *Woad*, &c. See *HOPS*, *HEMP*, *TOBACCO*, *SAFFRON*, *GLYCIRRHIZA*, *WOAD*, &c.

To the same Art belong *Planting*, *Transplanting*, *Pruning*, *Engrafting*; the Culture of *Forests*, *Timber*, *Coppes*, &c. See *PLANTING*, *TRANSPLANTING*, *PRUNING*, *ENGRAFTING*, *TIMBER*, *TREE*, &c.

Even *Gardening*, or *Horticulture* it self, is only a Branch of *Agriculture*. See *GARDEN*, and *GARDENING*.

The Word is form'd of the Latin *Ager*, *Field*, and *cultura*, of *col*, *I till*.—Among the Antients, it is frequently call'd *Georgics*. See *GEORGIERS*.

We forbear to say any thing about the Antiquity or Usefulness of this Art: Every Reader's Imagination will supply that Defect.—It has been cultivated by many of the greatest Men among the Antients; as Emperors, Dictators, and Consuls; and has been treated of by some of the greatest

greatest Authors: *Virgil* for instance, *Cato*, *Varro*, and *Columella*.

The later Authors on *Agriculture*, are *Palladius Constantinus*, *Cesar*, *Baptista Porta*, *Hersbachius*, and *Agricola*, in Latin; *Alphonso Herrera*, in Italian; *Stephens*, *Liebau*, *de Serrie*, *de Croiscent*, *Bellon*, and *Comel*, in French; and *Evelyn*, *Mortimer*, *Switzer*, *Bradley*, and *Lawrence*, in English. See *GEONOMICÆ*.

AGRIPPA, a Name applied, among the Antients, to Children deliver'd in an unusual, or irregular manner. See *DELIVERY*.

They were called *Agrippe*, quasi *agre parti*.
AGRYPNIA, *Agrypna*, a Watching, or dreaming Sumbler. See *COMA*, *WATCHING*, *SLEEP*, &c.

AGUE, a periodical Disease, consisting in a cold shivering Fit, succeeded by a hot one; and going off in a Diaphoresis, or Sweating. See *DISEASE*.

If the Coldness and Shivering be inconsiderable, and only the hot Fit felt; the Disease is called an *Intermittent Fever*. See *FEVER*.

According to the Periods or Returns of the Fits, the Disease is either a *Quotidian*, *Tertian*, or *Quartan Ague*, or *Fever*. See *QUOTIDIAN*, *TERNIAN*, *QUARTAN*, &c.

The next Cause of Agues, seems to be an obstructed Perspiration, or whatever by overloading the Juices, retards their Motion, or occasions a Lentor in the Blood.—The Symptoms are Headiness and Reaching; a weak, slow Pulse; Coldness, and Shivering, felt first in the Joints, thence creeping over the whole Body; Pain in the Loins, and an involuntary Motion of the under Jaw.

A *Vernal Ague* is easily cur'd; but an *Autumnal* one is more obstinate, especially in aged and cachectical Persons; if complicated with a Dropsy, *Percipitumony*, &c. dangerous.—When an *Ague* proves fatal, it is usually in the cold Fit.

The Cure is usually begun with an Emetic of *Ipecacuanha*, an Hour before the Access; and completed with the *Cortex Peruviana*, administer'd in the Interval between two Fits; and continued at times, to prevent a Relapse. See *CORTIX*.

Dr. *Quincy* endeavours to account for the Effect of the Bark, from the Irregularity, Asperity, and Solidity of its Particles, which fit it to break those Viscidities in the Juices whereby the Capillaries were obstructed, and to draw up the Solids into a Tension, sufficient by the vigorous Vibrations ensuing thereon, to prevent any future Accumulation thereof.—The first Intention, he observes, is answer'd, by giving the Blood a greater Momentum; and the second, by its corrugating the Nerves, and rendering the Contractions of the Vessels more brisk and forcible.—Hence also its Effects upon such as are apt to sweat immoderately.

AID, or **AIDE**, *Auxilium*, literally denotes the Help, Succour, or Assistance, which any Person lends another, when too weak to do, or avoid something. See *ASSISTANT*.

The Word is *French*, form'd, according to *M. Menage*, from the Italian *Aitare*; and that from the Latin *Adjutare*, whence the Spanish *Adjutant*.

AID, in Law, is when a Petition is made in Court, for the Calling in of *Help* from another Person interested in the Matter in Question; who, 'tis probable, may not only strengthen the Party's Cause, who thus prays for *Aid*, but also prevent a Prejudice arising to his own Right.

This is called *Aid Prier*, or *Aid Prayer*: But this Course of Proceeding is now much disused.

A City or Corporation, holding a Fee-farm of the King, may *Pray in Aid* of him; if any thing be demanded of them relating thereto.

The *Aid Prier*, is sometimes also used in the King's behalf, to prevent any Proceeding against him till his Council be call'd, and heard what they have to say for avoiding the King's Prejudice, or Loss.

AID de Camp, an Officer in an Army, whose Business is to attend the general Officers, and receive and carry their Orders, as occasion requires.

When the King is in the Field, he usually appoints young Volunteers of Quality to carry his Orders, who are called the King's *Aids de Camp*.

AID Major, or **Adjutant**, is an Officer, whose Business is to ease the Major of part of his Duty; and to perform it all in his Absence. See *MAJOR*, and *ADJUTANT*.

Some Majors have several *Aid-Majors*.—Each Troop of Guards has but one Major, who has two *Aid-Majors* under him; or more, according as the Business requires. See *TROOP*, and *GUARD*.

Every Regiment of Foot hath as many *Aid-Majors* as it contains Battalions.—When the Battalion is drawn up, the *Aid-Major's* Post is on the Left, beyond all the Captains, and behind the Lieutenant-Colonel. See *REGIMENT*, *BATTALION*, &c.

AID, *Auxilium*, in our ancient Customs, a Subsidy or Sum

of Money due to the Lord, from his Tenants, on certain Occasions. See *SUBSIDY*, *SERVICE*, &c.

It differ'd from a *Tax*, which is imposed at any time when wanted; whereas the *Aid* could only be levied where it was Customary, and where the particular Occasion fell out. See *TAX*.

Such was the *Aid de Relief*, due from the Tenants in Fee, upon the Death of the Lord Mesn, to his Heir; towards the Charge of a Relief of the Fee, of the superior Lord. See *RELIEF*, *FEU*, *LOAN*, &c.

Such also was the *Aid Chevel*, or *Capital Aid*, due by Vassals, to the chief Lord, or the King, of whom they held in *Capite*. See *VASSAL*.

Of this there are three Kinds.—The first, of Chivalry; or, as they call'd it, *Par sine Chevalier*, towards making his eldest Son a Knight, when arriv'd at the Age of 15 Years: The second, of Marriage, or *Par fille marier*, towards marrying his eldest Daughter.—Both these, with all Charges incident thereto, are taken away by Stat. 12 Car. II. See *TENURE*, *CAPITE*, &c.—Some will have 'em to have been first establish'd in *England*, by *William the Conqueror*; and afterwards transferr'd to *Normandy*: But the more common Opinion is, that the Conqueror brought 'em with him: The third was of *Ransom*, due when the Lord was taken Prisoner. See *RANSOM*.

In some Provinces there was a fourth kind of *Aid*; due whenever the Lord should undertake an Expedition to the Holy Land. See *CROISADE*, &c.

We also read of *Aids* paid the Lord, when he was minded to purchase any Land or Tenement. These were only granted once in his Life.—*Aids* for the Repairing and Fortifying of Castles, Seats, &c.

These *Aids*, or Contributions, were at first imposed by the Lord or King, at what Rate he pleas'd; but by a Stat. 3d Edw. I. a Restraint was laid on common Persons being Lords, and they were tied down to a fix'd Proportion: By a subsequent Statute, the same Rate was extended even to the King.

They seem to have been first establish'd with a View to the Clients and Freedmen of ancient *Rome*, who made presents to their Patrons towards his Daughter's Fortune, as also on his Birth-day, and other solemn Occasions. See *PATRON*, and *CLIENT*.—Accordingly, *Boussiller* relates, that in his Time, they depended on the Courtesy and Good-will of the Vassals; for which Reason they were call'd, *Droits de Complaisance*.

The Bishops also received *Aids* from their Ecclesiasticks, called *Synodales*, and *Pentecostals*. They were to be paid at the Time of their Consecration; or when they had a King to entertain; or when call'd by the Pope to his Court, or to a Council; as also when they went to receive the *Palium*. See *SYNODALES*, &c.

Also, that the Archdeacons exacted *Aids* from the Clergy of their Jurisdiction. See *PROCURATOR*, &c.

AIDS are also used in Matters of Policy, for any extraordinary Taxes or Impositions occasionally levied by the King and Parliament, upon the Subjects; to support the Charges of the Government, when the ordinary Revenue proves short. See *SUBSIDY*.

AIDS, in the Manage, are Helps or Assistances, which the Horseman contributes towards the Motion or Action requir'd of the Horse; by a discrete use of the Bridle, Cavesson, Spar, Poinson, Rod, Calf of the Leg, and Voice. See *BRIDLE*.

Such a Horse knows his *Aids*, answers his *Aids*, takes his *Aids* with Vigour, &c.—The *Aids* are made use of, to avoid the Necessity of Corrections.—The same *Aids*, given in a different manner, become Corrections. See *CORRECTION*.

The *Aids* used to make a Horse go in *Airs*, are very different from those requir'd in going upon the Ground. *Newcastle*.

The inner Heel, inner Leg, and inner Rein, are call'd *inner Aids*.—The outer Heel, outer Leg, &c. are call'd *outer Aids*.

AIGLETTE, in Heraldry. See *EAGLET*.

AIGUE Marine, in Natural History. See *AQUA Marina*.

AIGUISCE, or **ANGUISSE**, or **EGUISCE**, in Heraldry, a Term applied to a Cross, when its four Ends are sharpen'd, so however as to terminate in obtuse Angles. See *CROSS*.

The Cross *Aiguise* differs from the Cross *Fitchec*, in that the latter goes tapering by degrees to a sharp Point; whereas only the Ends of the former are taper'd. See *FITCHEC*.

AILE, in Law, a Writ which lies where the Grand-father, or Great Grand-father call'd *Befails*, was seized of Lands or Tenements in Fee-simple, on the Day he died; and a Stranger abates or enters the same Day, and dispossessioneth the Heir. The Word is form'd of the *French Aieul*, *Aous*, Grand-father.

AIR, *AER*, in Physics, a thin, fluid, transparent, compressible, and dilatible Body; surrounding the terraqueous Globe to a considerable Height. See EARTH, and TERRESTRIALS.

Air was consider'd by some of the Antients as an Element; but then, by Elements they understood a different thing from what we do. See ELEMENT.

'Tis certain, that *Air*, taken in the popular Sense, is far from the Simplicity of an Elementary Substance; so there may be something in it, which bids fair for the Appellation.—Hence, *Air* may be distinguish'd into *Vulgar*, or *Heterogeneous*; and *Proper*, or *Elementary*.

Vulgar or *Heterogeneous Air*, is a Coalition of Corpuscles of various Kinds, which together constitute one fluid Mass, whereto we live and move, and which we are continually receiving and expelling by Respiration.—The whole Assemblage of this, makes what we call the *Atmosphere*. See АТМОСФЕРА.

Where this *Air* or *Atmosphere* terminates, there *Ether* is suppos'd to commence; which is distinguish'd from *Air*, in that it does not make any sensible Refraction of the Rays of Light, which *Air* does. See ЭТЕР, and REFRACTION.

The Substances wherof *Air* consists, may be reduced to two Kinds, viz. 1^o, The Matter of Light, or Fire, which is continually flowing into it from the heavenly Bodies. See FIRE.—To which, probably, may be added the Magnetical Effluvia of the Earth. See MAGNETISM.

2^o, Those numerick Particles, which in form either of Vapours, or dry Exhalations, are rais'd from the Earth, Water, Minerals, Vegetables, Animals, &c. either by the solar, subterraneous, or culinary Fire. See VAPOUR, and EXHALATION.

Elementary Air, or *AIR*, properly so call'd, is a certain subtle, homogeneous, elastic Matter; the Basis, or Fundamental Ingredient of the Atmospheric *Air*, and that which gives it the Denomination.

Nature and Production of AIR.

The peculiar Nature of this *erial* Matter, we know but little of; what Authors have advanced concerning it being chiefly conjectural. We have no way of examining it apart, or separating it from the other Matters it is mix'd with; and consequently no way of ascertaining with Evidence what belongs to it abstractedly from the rest.

Dr. Hook, and some others, will have it to be no other than the *Ether* it self; or that fine, fluid, active Matter, diffus'd thro' the whole Expanse of the Celestial Regions; which coincides with Sir Isaac Newton's *Subtle Medium*, or *Spirit*. See ЭТЕР, МЕДИУМ, and СПИРИТ.

In this View it is suppos'd a Body *sui generis*, inextinguishable, incorruptible, immatable, present in all Places, in all Bodies, &c.

Others, considering only its Property of Elasticity, which they account its essential and constituent Character; suppose it mechanically producible; and to be no other than the Matter of other Bodies alter'd, so as to become permanently elastic.—Mr. Boyle gives us several Experiments, which he made "for the Production of *Air*; taking Pro-
duction for the obtaining a sensible Quantity thereof, from Bodies whereto it did not appear either at all, or in so great Plenty."—Among the several Ways of doing this, the fittest for Practice, he observes, are Fermentation, Corrosion, Dissolution, Decomposition; the boiling of Waters and other Fluids; and the mutual Action of Bodies, especially Lime ones, upon each other. *Hist. of Air*.—He adds, "that various solid and mineral Bodies, unsusceptible of Elasticity, being plunged in corrosive anelastic Menstrua, will, by a proper Continuation of their Parts in the Conflict, afford a considerable Quantity of permanently elastic *Air*." *Ibid. supra*.

Of the same Opinion is Sir I. Newton; "The Particles of dense, compact, and fixed Substances, cohering by a strong attractive Force, are not separable without a vehement Heat, or perhaps not without Fermentation; and such Bodies being at length rarified by such Heat or Fermentation, become true permanent *Air*." *Opticks*.—Thus, the same Author adds, "Gunpowder generates *Air* by Explosion." *Ibid.*

We have here, therefore, not only the Materials wherof *Air* should be made; but the Means of doing it; with regard to which, the *Air* is divided into *Real* or *Permanent*; and *Apparent* or *Transient*.—For, that all which appears to be *Air* does not continue such, is evident from the Instance of an *Aëolipile*; the Water of which being sufficiently rarify'd by the Fire, rushes out in a sharp whistling Blast, perfectly resembling *Air*, while the Motion lasts; but soon loses that resemblance, especially in the Cold, and returns by Condensation into its original Water: And the

same may be observ'd of Alcohol of Wine, and other subtle and fugitive Spirits, rais'd by Distillation.—Whereas *real Air* is not reducible by any Compression, Condensation, or the like, into any other Substance beside *Air*. See АЭОЛИПЛЕ.

Water, then, tho it may put on an *erial* Nature for a while, yet is not capable of persisting therein: And the same may be said of other Fluids.—The furthest they can go, is to become Vapour; which is the Matter of the Fluid render'd much rarer, and put in a brisk Motion.—For a Substance to become permanent *Air*, it must be of a fixed Kind; otherwise, it is not capable of undergoing the Alteration necessary to be infused in it; but gives way and flies off too soon. So that the Difference between *Permanent* and *Transient Air*, amounts to the same as that between Vapour and Exhalation; the one, e. g. being dry, the other moist, &c. See VAPOUR, and EXHALATION.

We can go a little further yet.—This elastic Property of *Air*, is suppos'd by many Philosophers, to depend on the Figure of its Corpuscles, which they suppose to be ramous: Some will have 'em to many minute Foculi, resembling Fleeces of Wool; others conceive 'em roll'd up like Hoops, and curled like Wires, or Shavings of Wood, or coil'd like the Springs of Watches; and endeavouring to restore themselves in Virtue of their Texture: so that to produce *Air*, must be to produce such a Figure and Disposition of Parts; and those Bodies only are proper Subjects, which are susceptible of such Disposition; which, Fluids, from the smoothness, roundness, and slipperiness of their Parts, are not. See FLUID.

But Sir I. Newton puts the Thing another way; such a Texture he thinks by no means sufficient to account for that vast Power of Elasticity observ'd in *Air*, which is capable of diffusing into above a Million of times more Space than it before possess'd.—But, as all Bodies are shewn to have an attractive and a repelling Power; and as both these are stronger in Bodies, the denser, more solid and compact they are: Hence it follows, that when by Heat, or any other powerful Agent, the attractive Force is surmounted, and the Particles of the Body separated so far as to be out of the Sphere of Attraction; the repelling Power commencing thence, makes 'em recede from each other with a strong Force, proportionable to that wherewith they before coher'd; and thus they become permanent *Air*.—Hence, says the same Author, it is, that as the Particles of permanent *Air* are grosser, and elastic from denser Bodies, than those of *Transient Air*, or Vapour; true *Air* is more ponderous than Vapour; and a moist Atmosphere lighter than a dry one. *Opticks*, p. 371, &c. See ATTRACTION, REPUSSION, &c.

But, after all, there may still be Reason to doubt, whether the Matter thus produced from solid Bodies have all the Properties of *Air*; and whether such *Air* be not transient, as well as that from humid ones; the not to that degree.—Mr. Boyle argues, from an Experiment made in the *Air-Pump* with lighted Marsh; that those light and subtle Fumes into which the Fire it self shatters dry Bodies, have no such Spring as *Air*; since they were unable to hinder the Expansion of a little *Air*, included in a Bladder they surrounded. *Phys. Mecl. Exper.*—Yet, in some subsequent Experiments, by dissolving Iron either in Oil of Vitriol and Water, or in Aqua-fortis; a large *erial* Bubble was produced, which had a real Spring; so as to hinder the surrounding Liqueur from regaining its Place; and which, by the Application of a warm Hand, readily dilated it self like other *Air*, and broke into the Liqueur in several succeeding Bubbles; and ereo thro' the Liqueur into the open *Air*. *Ibid. supra*.

The same excellent Person further assures us, he procur'd a really elastic Substance from divers other Matters; as Bread, Grapes, Must, Ale, Apples, Peas, Beers, &c. and from some Bodies by only burning 'em in *Vacuo*, particularly Paper, Hartshorn, &c. which yet, upon further Examination, was so far from being pure *Air*, that Animals inclosed in it, not only could not respire it without harm; but even died sooner than in *Vacuo*, where there was nothing like *Air*. *Phys. Meclan. Exper.*

We may here add an Observation of the Members of the Royal Academy of Sciences at Paris; which imports, that the Property of Elasticity is so far from constituting *Air*; that *Air* is render'd more elastic by the Admixture of some other Matters along with it, than it is in its Purity.—Thus, from some Experiments of M. de la Hire at Paris, and of M. Sanctori at Bologna, M. Fontenelle assures us, that *Air* moisten'd with Water, is considerably more elastic, and expands further, than when pure.—M. de la Hire even found the moist *Air* eight times more elastic than the dry. *Hist. de l'Acad. An. 1708*.

But it must not be omitted, that Dr. Farin explains the Experiments another way; and endeavours to shew, that the Conclusion does not necessarily follow from 'em. *Append. ad Varen. Geogr.*

Thus much for *Air* consider'd in it self.—But such *Air*, we have observ'd, do where exists in its Purity.—That wherewith we are concern'd, and whose Properties and Effects are chiefly consider'd, is acknowledg'd by Mr. Boyle to be the most heterogeneous Body in the Universe: *Boerhaave* even shews it to be an universal Chaos, or Colluvies of all the Kinds of created Bodies.—Whatever Fire can volatilize is found in the *Air*; but there is no Body that can withstand the Force of Fire. See FIRE, VOLATILITY, BURNING-GLASS, &c.

Hence, for instance, the whole Fossil Kingdom must necessarily be found therein: For all of that Tribe, as Salts, Sulphurs, Stones, Metals, &c. are convertible into Fume, and thus capable of being render'd part of the *Air*.—Gold it self, the most fix'd of all natural Bodies, is found to adhere close to the Sulphur in Mines; and thus to be rais'd along with it. See GOLD, &c.

All the Parts of the Animal Kingdom must also be in the *Air*: For, beside the copious Effluvia continually emitted from their Bodies, by the vital Heat, in the ordinary Course of Perspiration; by means whereof an Animal, in the Course of its Duration, impregnates the *Air* with many times the Quantity of its own Body, (See PERSPIRATION, EFFLUVIA, &c.) Beside this, we find that any Animal whoe dead, being expos'd to the *Air*, is in a little time caried wholly off, Bones and all. So that the Whole of what before was an Animal, e.g. a Man, an Ox, or the like, is now in the *Air*.

By the way, it may be noted that huge Swarms of the grosser extracmentitious Matters of Animals must swim in the *Air*: At Madrid, we are assur'd, they have no Necessary Houses; and that they always make a Jakes of their Streets overnight; yet does the *Air* imbibe the Filth as fast as 'tis laid; insomuch, that there is no increase of any furd smell.

As to Vegetables, nothing of that Class can be supposed wanting; since we know that all Vegetables by Putrefaction become volatile; even the earthy or vascular Part, in time follows the rest. See VEGETABLE, PLANT, &c.

Of all the Effluvia floating in this grand Ocean the Atmosphere; one of the principal, are the Saline. These, Authors commonly conceive, as chiefly of the nitrous Kind; but there is no doubt but that there are of all the sorts, Vitriolick, Aluminous, Sea Salt, &c. See SALT, NITRE, &c.

Mr. Boyle even observes, that there may be many compounded Kinds of Salts in the *Air*, which we have not on Earth; arising from different saline Spirits, fortuitously meeting and mixing together.—Thus, the glass Windows of ancient Buildings are sometimes observ'd to be corroded, as if they had been Worm-eaten; the nose of the Salts abovemention'd have the Faculty of corroding Glass.

The Sulphurs, too, must make a considerable Article in the *Air*; on account of those many Volcanous, Grottos, Caverns, and other Spiracles chiefly affording that Mineral, dispers'd thro' the Globe. See SULPHUR, VOLCANO, &c.

And the Affections, Separations, Attritions, Dissolutions, and other Operations of one sort of Matter upon another, may be consider'd as a Source, of numerous other neutral or anonymous Bodies, unknown to us.

Air, in this general Sense, is one of the most considerable and universal Agents in all Nature; being concern'd in the Production of most of the Phenomena relating to our World.—Its Properties and Effects, including a great Part of the Researches and Discoveries of the modern Philosophers, have some of 'em been reduced to precise Laws and Demonstrations; in which form they make a Branch of Mathematics, call'd *Pneumatics*, or *Aerometry*. See MATHEMATICS, PNEUMATICS, and AEROMETRY.

Mechanical Properties and Effects of Air.

I, *Fluidity*.—That the *Air* is a Fluid, is evident from the easy Passage it affords to Bodies thro' it; as in the Propagation of Sounds, Smells, and other Effluvia: For this argues it a Body whose Parts give way to any Force impress'd, and in yielding, are easily moved among themselves; which is the Definition of a Fluid. See FLUID.—See also SOUND, &c.

They who, with the *Cartesians*, make Fluidity consist in a perpetual intestine Motion of the Parts, find *Air* also answers to that Character: Thus, in a darkned Room, where the Species of external Objects are brought in by a single Ray; they appear in a continual Fluctuation; and thus even the more accurate Weather-Glasses are observ'd never to remain a moment at rest. See WEATHER-Glass.

The Cause of this Fluidity of *Air*, is attributed by some late Philosophers to the Fire intermix'd therewith; without which, they imagine, the Atmosphere would harden into a Solid, impenetrable Mass.—And hence, the greater the Degree of Fire therein, the more fluid, moveable and pensive the *Air*: And thus, as the degree of Fire is continually varying; according to the Circumstances and Position of

the heavenly Bodies; the *Air* is kept in a continual Rectification. See FIRE.

Hence, in good measure, it is, that on the Tops of the higher Mountains; the Senses of Smelling, Hearing, &c. are found very feeble. See MOUNTAIN.

II, *Weight, or Gravity*.—That the *Air* is heavy, follows from its being a Body; Weight being an essential Property of Matter. See WEIGHT, and GRAVITY.

But we have infinite Arguments of the same from Sense, and Experiment: Thus, the hand, apply'd on the Orifice of a Vessel empty of *Air*, soon feels the Load of the incumbent Atmosphere.—Thus, glass Vessels, exhausted of their *Air*, are easily crush'd to pieces by the Weight of the *Air* without. So, two small hollow Segments of a Sphere, exactly fitting each other, being emptied of *Air*, are press'd together with a Force equal to 100 Pound, by the Ponderus of the ambient *Air*.

Further, a Tube close at one end, being filled with Mercury, and the other end immerg'd in a Balon of the same Fluid; and thus erect'd: The Mercury in the Tube will be suspended to the Height of about 30 Inches above the Surface of that in the Balon. The Reason of which Suspension, is, that the Mercury in the Tube cannot fall lower, without raising that in the Balon; which being press'd down with the Weight of the incumbent Atmosphere, cannot give way, unless the Weight of the Mercury in the Tube, exceeds that of the *Air* out of it.—That this is the Case, is evident hence; that if the whole Apparatus be included in an Air-Pump; in proportion as the *Air* is exhausted from the fame, the Mercury falls: and gradually resting in the *Air* again, the Mercury reascends to its former height.—This makes what we call the *Toricellian Experiment*. See TORICELLIAN.

To say no more, we can actually weigh *Air*: For a Vessel, full even of common *Air*, by a very nice Balance, is found to weigh more than when the *Air* is exhausted; and the Effect is proportionably more sensible, if the same Vessel be weigh'd full of condensed *Air*, and void of *Air*. See WEIGHING, and HYDROSTATICAL Balance.

The Weight of *Air* is continually varying, according to the different degree of Heat, and Cold.—*Ricciolus* estimates its weight to that of Water, to be as 1 to 1000; *Morfeus* as 1 to 1300, or 1 to 1356; *Galileo* only makes it as 1 to 400.—Mr. Boyle, by a more accurate Experiment, found it about London, as 1 to 938; and thinks, all things consider'd, the Proportion of 1 to 1000 may be taken as a Medium; for there is no fixing any precise Ratio, since not only the *Air*, but the Water it self, is continually varying. Add, that Experiments made in different Places necessarily vary, in regard of the different Heights of the Places, and the different Consistencies of *Air* arising therefrom. Boyle, *Phys. Mechn. Exper.*

It must be added, however, that by Experiments made since before the Royal Society; the Proportion of *Air* to Water was, first, found as 1 to 840; then, as 1 to 852; and a third time, as 1 to 860. *Phil. Transf. N^o 181.*—And lastly, by a very simple and accurate Experiment of the late Mr. *Hooke*; the Proportion was settled as 1 to 885. *Phys. Mechn. Exper.*—But these Experiments being all made in the Summer Months, when the Barometer was 29 Inches $\frac{1}{2}$ high; Dr. *Furib* thinks, that at a Medium between Heat and Cold, when the Barometer is 30 Inches high; the Proportion between the two Fluids, may be taken as 1 to 800.

Air, then, being heavy and fluid; the Laws of its Gravitation, or Pressure, may be infer'd to be the same as in other Fluids; consequently, its Pressure must be as its perpendicular Altitude. See FLUID.

This is also confirm'd by Experiment.—For, removing the Toricellian Tube to a more elevated Place, where the incumbent Column of *Air* is shorter; a proportionably shorter Column of Mercury is sustain'd; it being found to descend at the Rate of one fourth of an Inch, for every 100 Foot of Ascent. See LEVELLING.

On this Principle depends the Structure and Office of the Barometer. See BAROMETER.

From hence, also, it follows, that the *Air*, like all other Fluids, must press equally every way.—Which is confirm'd by what we observe of soft Bodies sustaining this Pressure without any Change of Figure; and brittle Bodies, without their breaking; tho' the Pressure upon 'em be equal to that of a Column of Mercury 30 Inches high, or a Column of Water of 32 Foot.—'Tis obvious, that no other Cause can preserve such Bodies unchanged, but the equable Pressure on all Sides, which resists as much as it is resisted. And hence, upon removing or diminishing the Pressure on one side only; the Effect of the Pressure is soon perceiv'd on the other.

For the Quantity and Effect of this Pressure of the Atmosphere on the human Body. See ATMOSPHERE.

From this Gravity of the *Air*, consider'd with its Fluidity, several of its Uses and Effects are deducible.—And, 1^o, by means hereof, it closely invests the Earth, with all the

Bodies on it; and constricts and binds 'em down with a Force amounting, according to the Computation of *M. Pafchal*, to 225 Pounds weight, upon every square Foot, or upwards of 15 Pounds upon every Inch square.—Hence, it prevents, e.g. the Arterial Vessels of Plants and Animals, from being too much distended by the Impetus of the circulating Juices, or by the elastic Force of the Air so plentifully lodg'd in the Blood.—Thus, we see, in the Operation of Capping, that upon a Diminution of the Pressure of the Air, the Parts of the Body grow tumid; which necessarily alters the manner of the Circulation thro' the Capillaries, &c.

The same Cause hinders the Juices from oozing and escaping thro' the Pores of their containing Vessels: This is experienc'd by such as travel up high Mountains, who, in proportion as they ascend, find themselves grow more and more relaxed; and at length fall into a spitting of Blood, and other Hemorrhages; by reason of the Air not sufficiently binding up the Vessels of the Lungs.—The like is observ'd of Animals inclos'd in the Receiver of an Air-Pump, who, as the Air is taken from 'em, swell, vomit, drivel, dung, urine, &c. See VACUUM.

5. The Mixture of contiguous Bodies, especially fluid ones, is chiefly owing hereto.—Hence many Liquids, as Oils and Salts, which readily and spontaneously mix in Air, upon taking that away, remain quietly in their State of Separation.

5. It determines the Action of one Body upon another.—Thus, the Fire which burns Wood immediately goes out, and its Flame dissipates upon removing the Air; by reason something is thro' wanting to press the Corpuscles of Fire against those of the Fuel, and prevent the too speedy Diffusion of the Flame. The same is observ'd of *Aqua Regia*, and Gold; that Menstruum ceasing any longer to operate on the Metal, after the Air is taken away. And upon the same determining Power of the Air it is, that *Papin's* Digestor is built. See DIGESTOR.

Hence also it is, that on the Tops of high Mountains, as on the Pike of *Zeneriffe*, the most savoury Bodies, as Pepper, Ginger, Salts, Spirit of Wine, &c. have no sensible Taste; for want of their Particles being press'd upon the Tongue, so as to enter its Pores, but instead thereof, being dissip'd and blown away by its heat. The only thing that there retains its Savour, is Canary Wine, which is chiefly owing to its unctuous Quality; in Virtue whereof, it adheres closely to the Part, and is not easily blown away.

From this Principle of Gravity chiefly arise our Winds; which are only Air put in Motion by some Alteration in the Equilibrium thereof. See WIND.

III, *Elasticity*,—or a Power of yielding to an Impression by contracting its Dimensions; and, upon removing or diminishing the impressive Cause, returning to its former Space or Figure.—This elastic Force is accounted the distinguishing Property of Air; the other Properties hitherto enumerated being common to it with other Fluids.

Of this Power we have numerous Proofs.—Thus, a blown Bladder being squeez'd in the Hand; we find the included Air sensibly resist; so as upon ceasing to compress, the Cavities or Impressions made in its Surface, are readily expand'd again, and fill'd up.

On this Property of Elasticity, the Structure and Office of the Air-Pump depends. See AIR-PUMP.

This Nisus or Endeavour to expand, every Particle of Air always exerts; and thus strives against an equal endeavour of the ambient Particles; whose Resistance happening by any means to be weaken'd, it strait diffuses into an immense Extent.—Hence it is, that thin glass Bubbles, or Bladders, full of Air, and exactly clos'd; being included in the exhausted Receiver of an Air-Pump, burst, by the Force of the included Air. So a Bladder quite flaccid, containing only the smallest Quantity of Air; swells in the Receiver, and appears quite full. And the same Effect is found, by carrying the flaccid Bladder to the Top of an high Mountain.

This Power does not seem to have any Limits assign'd; nor does it appear capable, by any Means whatever, of being destroy'd or diminish'd.—*Mr. Boyle* made several Experiments, with a View to discover how long Air, brought to the greatest degree of Expansion he could reduce it to in his Air-Pump, would retain its Spring; and could never observe any sensible Diminution; even tho' this poor thin Air was clog'd some Months with a Weight which one would wonder how it should support a Moment.

Yet, *Mr. Hawksbee*, by a later Experiment, has shewn, that the Spring of the Air may be so disturb'd by a violent Pressure, as to require some time to return to its natural Tote.

The Weight or Pressure of the Air, it is obvious, has no dependence on its Elasticity; but would be the same, whether the Air had such Property or not.—But the Air, in being elastic, is necessarily affected by the Pressure, which reduces it into such a Space, as that the Elasticity which resists against the compressing Weight, is equal to that Weight. See COMPRESSION.

In effect, the Law of this Elasticity, is, that it increases as the Density of the Air increases; and the Density increases, as the Force increases wherewith it is press'd. Now, there must necessarily be a Balance between the Action and Re-action; i.e. the Gravity of the Air, which tends to compress it, and the Elasticity of the Air which endeavours to expand it, must be equal. See DENSITY, REACTION, &c.

Hence, the Elasticity increasing or diminishing universally as the Density increases, or diminishes, i.e. as the Distance between the Particles diminishes or increases; 'tis no matter whether the Air be compress'd, and retain'd in such Space by the Weight of the Atmosphere, or by any other means: It must endeavour, in either Case, to expand with the same Force.—And hence, if Air near the Earth be pent up in a Vessel, so as to cut off all Communication with the external Air; the Pressure of the inclos'd Air will be equal to the Weight of the Atmosphere. Accordingly, we find Mercury sustain'd to the same Height, by the elastic Force of Air inclos'd in a glass Vessel, as by the whole atmospheric Pressure.—See further under the Article ELASTICITY.

On the same Principle may Air be artificially condens'd. See CONDENSATION of Air.

And hence the Structure of the Wind-Gun. See WIND-GUN.

Dr. Halley asserts, in the *Philosoph. Transactions*, that from the Experiments made at London, and by the *Academy del Cimento at Florence*, it may be safely concluded, that no Force whatever is able to reduce Air into eight hundred times less Space than what it naturally possesses on the Surface of our Earth. In answer to which, *Monsieur Amontons*, in the Memoirs of the French Academy, maintains, that there is no fixing any Bounds to its Condensation; that greater and greater Weights will still reduce it into less and less compass; that it is only elastic in Virtue of the Fire it contains; and that as 'tis impossible ever absolutely to drive all the Fire out of it, 'tis impossible ever to make the utmost Condensation.

The Dilatation of the Air, by Virtue of its elastic Force, is found to be very surprizing; and yet, *Dr. Wallis* suggests, that we are far from knowing the utmost it is capable of.—In several Experiments made by *Mr. Boyle*, it dilated first into nine times its former Space; then into 32 times; then into 60; then into 150. Afterwards, it was brought to dilate into 8000 times its Space; then into 10000, and even at last into 13679 times its Space; and all this by its own expansive Force, without any help of Fire.

On this depends the Structure and Use of the Manometer. See MANOMETER.

Hence, it appears, that the Air we breathe, near the Surface of the Earth, is compress'd by its own Weight into at least the 13679th Part of the Space it would possess in Vacuum.—But if the same Air be condens'd by Fire; the Space it will take up when most dilated, to that it possesses when condens'd; will be, according to the same Author's Experiments, as 50500 to 1. See DILATATION.

Hence, we see how wild and erroneous was that Observation of *Aristotle*, that Air, render'd ten times rarer than before, changes its Nature, and becomes Fire.

M. Amontons, and others, we have already observ'd, take the Rarefying of Air to arise wholly from the Fire contain'd in it; and hence, by increasing the Degree of Heat, the Degree of Rarefaction may be carried still further than its spontaneous Dilatation. See HEAT.

On this Principle depends the Structure and Office of the Thermometer. See THERMOMETER.

M. Amontons first discover'd that Air, the denser it is, the more it will expand with the same degree of Heat. See DENSITY.

On this Foundation, the same ingenious Author has a Discourse, to prove "that the Spring and Weight of the Air, with a moderate degree of warmth, may enable it to produce even Earthquakes, and other of the most vehement Comotions in Nature."

According to the Experiments of this Author, and *M. de la Hire*, a Column of Air on the Surface of the Earth, 36 Fathoms high, is equal in weight to three Lines Depth of Mercury; and it is found, that equal Quantities of Air possess Spaces reciprocally proportional to the Weights wherewith they are press'd: The Weight of the Air, therefore, which would fill the whole Space possess'd by the terrestrial Globe, would be equal to a Cylinder of Mercury, whose Base is equal to the Surface of the Earth, and its Height containing as many times three Lines, as the Atmospheric Space contains Oebs equal in weight to that of 36 Fathoms, whereof the Experiment was made.—Hence, taking the densest of all Bodies, e.g. Gold, whose Gravity is about 14650 times greater than that of Air in our Orb, it is easy to compute, that this Air would be reduced to the same Density as Gold, by the Pressure of a Column of Mercury 14650 times 28 Inches high, i.e. 409640 Inches; since the Bulk of Air, in that Case, would be in the reciprocal Ratio of the Weights wherewith they are press'd. This 409640 Inches, three-

therefore, expresses the height at which the Barometer must stand, where the Air would be as heavy as Gold, and the Number $24\frac{1}{2}$ Lines, the Thickness to which our Column of 36 Fathoms of Air, would be reduced in the same place.

Now, we know, that 409640 Inches, or 43528 Fathoms, is only the 74th Part of the Semidiameter of the Earth: and when you are past that, whatever Matters there be, they must be heavier than Gold: 'Tis not improbable, therefore, that the remaining Sphere of 645558 Fathoms Diameter, may be full of dense Air, heavier, by many degrees, than the heaviest Bodies among us.—Hence, again, as it is proved, that the more Air is compressed, the more does the same degree of Fire increase the Force of its Spring, and render it capable of so much the greater Effect; and that, for instance, the Heat of boiling Water increases the Spring of our Air, beyond what it ordinarily is, by a Quantity equal to one third of the Weight wherewith it is pressed: We may infer, that a degree of Heat, which in our Orb can only produce a moderate Effect, may have a very violent one in such lower Orb; and that as there may be many degrees of heat in Nature, beyond that of boiling Water, 'tis probable there may be some, whose Violence, thus assisted by weight of the Air, may be sufficient to tear sunder the solid Globe. *Mem. de l'Acad. An. 1705.*

This elastic Power of the Air, is the second great Source of the Effects of this important Fluid.—In virtue hereof, it insinuates into the Pores of Bodies, carrying with it this prodigious Faculty of expanding; and that so easy to be excited: whence it must necessarily put the Particles of the Bodies it is mix'd withal, into perpetual Oscillations. In effect, the Degree of Heat, and the Air's Gravity and Density, and consequently its Elasticity and Expansion, never remaining the same for two Minutes together; there must be an incessant Vibration, or Dilatation and Contraction, in all Bodies. See VIBRATION.

This Recipitation we observe in several Instances, particularly Plants, the Tracheæ or Air-Vessels whereof, do the Office of Lungs: For the contained Air alternately expanding and contracting, as the Heat increases or diminishes, by turns presses the Vessels, and eases 'em again; and thus promotes a Circulation of their Juices. See VEGETABLE CIRCULATION, &c.

Hence, we find, that no Vegetation or Germination will proceed in *Vacuo*.—Indeed, Beans have been observed to grow a little tumid therein; which has led some to attribute that to Vegetation, which was really owing to no other than the Dilatation of the Air within 'em. See VEGETATION, GERMINATION, &c.

From the same Cause it is, that the Air contain'd in the Bubbles in Ice, by its continual Action, bursts the Ice: And thus Glasses and other Vessels frequently crack, when their contained Liquors are frozen. Thus, also, entire Columns of Marble sometimes cleave in the Winter time, from some little Bubble of included Air's acquiring an increased Elasticity.

From the same Principle arises all Putrefaction and Fermentation; neither of which will proceed, even in the best disposed Subjects, in *Vacuo*. See PUTREFACTION, and FERMENTATION.

In this we have a singular Instance of the wonderful Efficacy of Air, that it can change the two Kingdoms, and convert Vegetable Substances into Animal, and Animal into Vegetable. See ANIMAL, &c.

In effect, all natural Corruption and Alteration seems to depend on Air; and Metals, particularly Gold, only seem to be durable and incorruptible, in Virtue of their not being pervious to Air.—Accordingly, Names slightly wrote in the Sand, or Dust, on the Tops of high Mountains, have been known to remain 40 Years, without being in the least alter'd or effaced. See CORRUPTION, ALTERATION, &c.

Effects of the peculiar Ingredients of the Air.

Air not only acts by its common Properties of Gravity, and Elasticity, but there are numerous other Effects, arising from the peculiar Ingredients whereof it consists.

Thus, 1^o, it not only dissolves and attenuates Bodies by its Pressure and Attrition; but as a Chaos, containing all Kinds of Menstruums, and consequently having wherewithal to dissolve all Kinds of Bodies. See DISSOLUTION.

'Tis known, that Iron and Copper readily dissolve, and become rusty in Air, unless well defended with Oil.—*Boerhaave* assures us, he has seen Pillars of Iron so reduced by Air, that one might crumble 'em to Dust between his Fingers; and for Copper, it is converted by the Air into a Substance much like the Verdegrease produced by Vinegar. See IRON, COPPER, VERDEGREASE, &c.

Mr. Boyle relates, that in the Southern English Colonies, the great Guns rust so fast, that after a few Years lying in the Air, large Cakes of Crocus Martis may be easily beat off 'em.—*Acofts* adds, that in *Peru* the Air dissolves Lead,

and considerably increases its weight.—Yet Gold is generally esteem'd indissoluble by Air; being never found to contract Rust, tho' exposed ever so long. The Reason hereof is, that Sea Salt, which is the only Menstruum capable of acting on Gold, being very difficult to volatilize; there is but a small Proportion of it in the Atmosphere. In the Chymists Laboratories, where Aqua Regia is preparing; the Air becoming impregnated with an unusual Quantity of this Salt; Gold contracts a Rust like other Bodies. See GOLD, &c.

Stones also undergo the common Fate of Metals.—Thus, *Purbeck Stone*, whereof *Salisbury Cathedral* consists, is observed gradually to become snifter, and moulder away in the Air; and the like *Mr. Boyle* relates of *Blackington Stone*. See STONES.—He adds, that Air may have a notable Operation on Vitriol, even when a strong Fire could act no further on it. The same Author has even found the Fumes of a sharp Liquor to work more suddenly and manifestly on a certain Metal, when fastened in the Air, than the Menstruum it self did which emitted those Fumes, on those Parts of the Metals it cover'd.

2^o, Air volatilizes fix'd Bodies.—Thus Sea Salt being first calcined, then fused by the Fire, and when fused exposed to the Air to liquify; when liquified set to dry again, then fused again; and, the Operation thus repeated: will by degrees be almost wholly evaporated; nothing remaining but a little Earth behind. See VOLATILITY, VOLATILIZATION, &c.

Helmont mentions it as a mighty Arcanum in Chymistry, to render fixed Salt of Tartar volatile: but the thing is easily effected by Air alone; for if some of this Salt be exposed to the Air in a Place replete with acid Vapours, the Salt draws the Acid to it self, and when saturated therewith, is volatile. See TARTAR, &c.

3^o, Air also fixes volatile Bodies.—Thus, the Nitre or Aquafortis readily evaporate by the Fire; yet, if there be any putrified Urine near the Place, the volatile Spirit will be fix'd, and fall down in form of *Aqua secunda*. See FIXITY.

4^o, Add, that Air brings many quiescent Bodies into Action, i. e. excites their latent Powers.—Thus, if an acid Vapour be diffused thro' the Air, all the Bodies whereof that is a proper Menstruum, being dissolved thereby, are brought into a State proper for Action. See SALT, &c.

In Chymistry, not only the Presence or Absence of the Air, but even its being barely open, or included, is of great consequence.—Thus, *Campfire* fired in a close Vessel, runs wholly into Salts; whereas, if during the Process, the Cover be removed, and a Candle applied, the whole flies off in Fume. So to make Sulphur inflammable, it requires a free Air: in a close Cucurbit, it may be sublimed a thousand times without kindling. Sulphur being put under a glass Bell, and a Fire applied, rises into Spirit of Sulphur per Campanam: But if there be the least Chink whereby the included Air communicates with the Atmosphere, it immediately kindles. So an Ounce of Charcoal, included in a Crucible well luted, will remain without loss for fourteen Days in the intense Heat of a melting Furnace; tho' the thousandth Part of the Fire in open Air, will presently turn it into Ashes.—*Helmont* adds, that the Charcoal remains all that while without any Alteration of its black Colour; but that if the minute Air is let in, it falls instantly into white Ashes. The same holds of the Parts of all Animals and Vegetables; which can only be calcined in open Air: In close Vessels they never become any other than black Coals. See CALCINATION, COAL, &c.

The Air is liable to abundance of Alterations, not only in respect of its Mechanical Properties, Gravity, Density, &c. but also in respect of the Ingredients it consists of.—Thus, in Places abounding with Marcasites, a fretting viridulous Salt is observed to predominate in the Air, which rots the Hangings, and is often seen lying on the Ground in a whitish Efflorescence.—At *Falstun* in *Sweden*, noted for Copper Mines, the mineral Exhalations affect the Air so sensibly, that their Silver Coin is frequently discoloured in their Purges; and the same Effluvia change the Colour of Bras.—*Mr. Boyle* was assured by a Gentleman who possess'd some Ground wherein there were several Veins of Metals, and other Minerals, that he had frequently seen Pillars of Fumes ascending thence; some having no Scent, some an ill one, and some few a good one.—In *Carrizola*, *Campania*, &c. where there are Mines of Sulphur, the Air at times becomes very unwholesome; whence frequent epidemick Diseases, &c.—'Tis added, that the Mines near the Cape of *Good Hope*, emit such horrible Fumes from the Arsenic that abounds there, that no Animal can live near them; so that such as have at any time been opened, were obliged to be immediately closed again.

The Effluvia of Animals also have their Effect in varying the Air: as is evident in contagious Diseases, Plagues, Murders, and other Mortalities which are spread by the Air. See PLAGUE.

The like is observed in Vegetables.—Thus, a good Part of the Clove-Trees which grow so plentifully in the Island of *Ternate*, being fell'd at the Solicitations of the *Dutch*, in order to brighten the Value of that Fruit; such a Change ensued in the *Air*, as shew'd the salutary Effect of the Effluvia of the Clove-Trees, and their Blossoms: the whole Island, soon after they were cut down, becoming exceeding sickly. This, a Physician who had been upon the Spot, and from whom *Mr. Boyle* had the Relation; attributed to the noxious Steams of a Volcano there; the ill Quality whereof, had been corrected by the aromattick Effluvia of those spicy Blossoms.

The *Air* is also liable to Alterations from the Season of the Year.—Thus, few subterraneous Effluvia are emitted in the Winter; by reason the Pores are lock'd up by the Frost, or cover'd by Snow; the subterraneous Heat being all the while at work, and preparing a Fund, to be discharged the ensuing Spring.—Hence it is, that if the same Seed be sown in the same Soil, in Autumn and Spring, and the degree of Heat be the same, a very different Effect will be found; and for the like Reason, Rain-Water gather'd in the Spring, is found to have a peculiar Virtue in respect of Corns; which being steep'd therein, afford a much larger Quantity of Spirits than otherwise.—Hence also, we see why a very severe Winter, is usually follow'd by a wet Spring and fruitful Summer; and *vice versa*.

Again, from the Winter's Solstice to the Summer's, the Sun's Rays growing still more and more perpendicular; their Impulse on the Earth's Surface becomes more and more powerful; by which the Globe or Soil is more and more relaxed, soften'd and purify'd; till he arrives at the Tropic; where, with the Force of a chymical Agent, he resolves the superficial Parts of the Earth into their Principles, Water, Oil, Salt, &c. which are all swept into the Atmosphere.

And hence we conceive the Nature of Meteors, which are either Collections of such Effluvia, or Dispersions thereof. See METEOR.—These Meteors, too, have considerable Effects on the *Air*; and thus Thunder is known to put Liqours upon fermenting afresh.

In effect, whatever alters the Degree of Heat, will make a proportionable Alteration in the Matter of the *Air*. *Mr. Boyle* suggests something further on this Head, *viz.* that the Salts, &c. which in a warm State of Weather were kept in a Fluid, and mix'd together, so as to be in a Condition to act conjunctly; upon a Remission of the Warmth, may lose their Fluidity and Motion, shoot into Crystals, and thus separate again.

The Height or Depth of the *Air* makes a further Alteration; the Exhalations being few of 'em able to ascend above the Tops of high Mountains, as appears from those Plagues, where the Inhabitants of one side of a Mountain have all perish'd, without the least Disorder on the other side.

Nor must Drought and Moisture be denied their Share in varying the State of the Atmosphere.—At *Guinea*, the Heat with the Moisture, conduce so much to Putrefaction, that the purest white Sugars are often full of Maggots; and their Drugs soon lose their Virtue, and many of them grow Verminous. 'Tis added, that in the Island of *St. Jago*, they are oblig'd to expose their Sweetmeats daily to the Sun, to exhale the Moisture they had contracted in the Night, which would otherwise occasion 'em to putrify.

On this Principle depends the Structure and Office of the Hygrometer. See HYGROMETER.

These Diversities in the *Air*, are found to have an Influence on the Operations, Experiments, &c. of Philosophers, Chymists, and other Operators.

Thus, 'tis very difficult to procure Oil of Sulphur *per Campanam* in a clear dry Atmosphere, its Parts being then so ready to escape into the *Air*: But in a thick, moist *Air*, the Oil comes in abundance.—So, all Salts melt easiest in a cloudy *Air*; and when melted, set most forcibly. And all Separations succeed best in such Weather.—If Salt of Tartar be expos'd in a Place where any acid Spirit is floating in the *Air*, it will imbibe the same; and of fixed become volatile. Hence, the Experiments made of Salts at *London*, where the *Air* is plentifully impregnated with Sulphur exhaled from Sea-Coal, prove different from those made on the same Subjects in other Parts of the Kingdom, where Wood, Torf, &c. are the usual Fuel. Hence also, metalline Utensils, &c. rust much sooner at *London*, than in other Parts, where there are fewer acid corrosive Corpuscles in the *Air*; and Fermentation, which is easily rais'd and carried on in a Place free of Sulphur, is impracticable in Places where sulphurous Exhalations abound.—If pure well-fermented Wine be carried into a Place where the *Air* is replenish'd with the Fumes of new Wine then fermenting; it will begin to ferment afresh. So Salt of Tartar swells, and as it were ferments, when carried into a Place where Spirit of Nitre, Viniol, or Sea Salt is preparing.—'Tis Matter of common Observation among Brewers, Distillers, Vinegar-makers, &c. that at the Time when those several Plants used to be in Flower, the respective Juices ferment, and the Pro-

cess succeeds the best.—Add, that Stains caused by vegetable Juices, are observed to be best taken out of Linnen, at the Time when the several Plants that afford them are in their Prime. Thus, *Mr. Boyle* observes, has been experienc'd in the Stains of Juice of Quinces, Hops, &c. which latter, eluding all the endeavours that could be us'd to get it out, has vanish'd of it self the next Harvest.

After all, some of our more curious and penetrating Naturalists, have observed certain Effects of *Air*, which do not appear to follow from any of the Properties, or the Materials above recited.—On this View, *Mr. Boyle* has compos'd an express Treatise of *Suspicious about some unknown Properties of the Air*.—The Phenomena of Fire and Flime in *Vaeno*, seem, according to him, to argue some odd unknown vital Substance diffus'd thro' the *Air*, on Account whereof that Fluid becomes so necessary to the Subsistence of Flame: but whatever this Substance be, it should seem by its sudden waisting or spoiling, that the Quantity thereof is very inconsiderable, in proportion to the Bulk of *Air* it impregnates with its Virtue; in regard, when the Flame can no longer subsist in it, the *Air*, upon Examination, is not found to have undergone any Alteration in any of its Properties. See FLAME.

Other Instances to countenance such Suspensions, are, the Appearance and Growth of Salts in many Bodies; which either assist 'em out at all, or not in that plenty, unless expos'd to the *Air*. *Mr. Boyle* mentions some Marcasites dug from under ground, which being kept in a dry Room, were soon cover'd over with a vitriolick Efflorescence, and in a little time, by the Operation of the *Air* on 'em, were in great part crumbled into a Powder exceeding rich in Copperas; tho' they had probably lain many Ages entire under ground: So, the Earth or Ore of Alom, and many other Minerals, robb'd of their Salt, Metals, or the like, will in tract of time recover 'em; and the like is observ'd of the Cinders of Sea-Coal at the Iron Works. See MINE, METAL, IRON-WORKS, ASHES, &c.

Mr. Boyle adds, that some Lime in old Walls has in time gain'd a large Efflorescence of a nitrous Nature, from which Saltpetre was procurable. Add, that the Colcothar of Vitriol is not naturally corrosive, nor can any Salt be procur'd from it, even by the Assusion of Water; but being expos'd a-while to the *Air*, it yields a Salt, plentifully. See COLCOthAR.

The Existence of such hidden Properties, is also argued, from the Access of the *Air* rendering Antimonial Medicines emetic, and dispos'd to produce Paintings and Heartburnings; and from its speedy corrupting and mouldering of Trees dug from under ground, which had for Ages remain'd firm, and almost impervious to the Ax. See ANTIMONY, and SUBERRANEANS.

To say no more, the Silks in *Jamaica*, if expos'd to the *Air*, soon rot; even while they preserve their Colour: whereas, if kept from the *Air*, they hold both their Firmness and Dye: And the fable Taffety worn at *Brasil*, becomes in a few Days of an iron-grey Colour in the *Air*; but in the Shops preserves its Hue: And some Leagues beyond *Parigua*, white People soon grow tawny; but as soon recover their native Colour, upon removing out of that Quarter.—These, out of a great Number of Instances tending the same way, may convince us, that notwithstanding all the Discoveries hitherto made concerning *Air*, there still remains a Field for future Inquiries.

AIR, in Medicine, &c. makes one of the six Non-Naturals. See NON-NATURAL, HEALTH, DISEASE, &c.

From Observations on Bleeding in Rheumatism, and after taking Cold, 'tis evident, the *Air* can enter with all its Qualities, and vitiate the whole Texture of the Blood, and other Juices. See BLOOD.

From the Palles, Vertiges, and other nervous Affections caus'd by Damps, Mines, &c. 'tis evident *Air* thus qualified can relax and obstruct the whole nervous System. See DAME, &c.—And from the Cholicks, Fluxes, Coughs, and Consumptions produced by damp, moist, and nitrous *Air*, 'tis evident it can corrupt and spoil the noble Organs, &c.—See further under the Article ATMOSPHERE.

Ionate AIR, is a fine aerial Substance, supposed by some Anatomists to be inclos'd in the Labyrinth of the inner Ear, and to minister to the due Conveyance of Sounds to the Senfory. See LABYRINTH, SOUND, and HEARING.

But the Existence of such Ionate *Air*, has of late been call'd in question, and even disprov'd. See EAR.

AIR, in Musick, signifies the Melody, or the Inflection of a Musical Composition. See MELODY.

The Word is also us'd for a Song it self. See SONG.

AIRA, in Horsemanship, the artificial or practis'd Motions of a manag'd Horse. See HORSEMANSHIP.

Such are the *Demi-volt*, *Curve*, *Capriole*, *Croupade*, *Battade*, and *Step and Leap*. See DEMI-VOLT, CURVET, CAPRIOLE, SALT, &c.

Some Authors take *Airs* in a more extensive Sense; and divide 'em into *low*, and *high*.

The *low Airs* include the Natural Paces, as Trotting, Walking, Galloping, and Terra-a-Terra. See *PACE*, *TROT*, *GALLOP*, &c.

The *high*, or *rais'd Airs*, are all such Motions as rise higher than the Terra-a-Terra; as the *Demivolt*, *Carrot*, &c.

AIR PUMP, a Machine, by means whereof the *Air* may be exhausted out of proper Vessels. See *AIR*.

The Use and Effect of the *Air-Pump*, is to make, what we popularly call, a *Vacuum*; which, in reality, is only a Degree of Rarefaction sufficient to suspend the ordinary Effects of the Atmosphere. See the Article *VACUUM*.

By this Machine, therefore, we learn, in some measure, what our Earth would be without an Atmosphere; and how much all Vital, Generative, Nutritive, Alterative Power, depend thereon. See *ATMOSPHERE*.

The Principle on which it is built, is the Elasticity of the *Air*; as that on which the common or Water-Pump is founded, is the Gravity of the same *Air*. See *PUMP*.

The Structure of the *Air-Pump* is, in it self, more simple even than that of the Water-Pump.—The latter supposes two Principles, Gravity and Elasticity likewise: So that the Water-Pump must first be an *Air-Pump*, i. e. must raise the *Air* ere it raise the Water.—In effect, Water being a dormant unelastic Fluid, needs some external Agent to make it ascend; whereas *Air* ascends in Virtue of its own elastic Activity: its natural Tendency is, to separate and leave a Vacuum; and all that remains to *Air*, is to prevent the ambient *Air* from supplying the Place of what thus spontaneously flies away.

To lay no more, to make Water ascend, the Force where-with it is press'd downwards, is either to be diminish'd or increas'd in one Part, more than another; like a Balance in Equilibrium, one of whose Scales may be made to rise, either by diminishing its own weight, or increasing that of the other: the Water, therefore, recedes from the common Centre of Gravity, by the very Power wherewith it tends towards it, indirectly or secondarily applied; for that two similar centripetal Forces being made to act contrary to each other, what the one over-balances the other, must have the Effect of a Centrifugal Force.—Whereas, the Principle whereby *Air* rarifies or diminishes, does not respect the Centre of the Earth, but the Centres of its own Particles; being no other than a certain implanted Power, whereby they immediately tend to recede from each other. See *RAFFINING POWER*.

The Invention of this noble Instrument, to which the present Age is indebted for so many fine Discoveries; is ascribed to *Otto de Guericke*, the celebrated Consul of *Magdebourg*; who exhibited his first publick Experiments therewith, before the Emperor and the States of *Germany*, at the breaking up of the Imperial Diet at *Ratisbon*, in the Year 1654.

Dr. Hook and *M. du Hamel*, indeed, ascribe the Invention to *Mr. Boyle*; but that ingenious Author frankly confesses *de Guericke* to have been beforehand with him. Some Attempts, he assures us, he had made upon the same Foundation, before he knew any thing of what had been done abroad: but the Information he afterwards receiv'd from *Sebastus's Mechanica Hydrostatico-Pneumatica*, published in 1657, wherein was an Account of *de Guericke's* Experiments, first enabled him to bring his Design to any thing of Maturity.—From hence, with the Assistance of *Dr. Hook*, after two or three unsuccessful Trials, arose a new *Air-Pump*; more easy and manageable than the *German* one: and hence, or rather from the great Variety of Experiments that illustrious Author applied it to, the Engine came to be denominated, the *Machina Boyleana*.

Structure and Use of the Air-Pump.

The Basis or essential Part in the *Air-Pump*, is a metallic Tube, answering to the Barrel of a common Pump, or Spring; having a Valve at the bottom, opening upwards; and a moveable Piston or Embolus, answering to the Sucker of a Pump, furnish'd likewise with a Valve opening upwards.—The whole, duly fitted to a Vessel, as a Recipient. See *EMBOLUS*, *VALVE*, and *RECIPIENT*.—See also *SPRING*.

The rest, being only Circumstances chiefly respecting Convenience, has been diversified and improved from time to time, according to the several Views and Address of the Makers.—That of *Otto de Guericke* being less artful, labour'd under several Defects, in respect of the Force necessary to work it, which was very great; and the Progress very slow; beside that it was to be kept under Water; and allow'd of no Change of Subjects for Experiments.

Mr. Boyle, by degrees, removed several of these Inconveniences; and alleviated others: but still the Working of his Pump was laborious, by reason of the Pressure of the Atmo-

sphere, a great part of which was to be removed at every Exuction, after a Vacuum was nearly arriv'd at.—But this Inconvenience has been since removed by *Mr. Hooke*, who by adding a second Barrel and Piston to the former, to rise as the other fell, and fall as it rose; made the Pressure of the Atmosphere on the descending one, of as much service as it was of disservice in the ascending one.

Some of the *German* have also brought the *Air-Pump* to do the opposite Office of a Condenser: But this is not to make the Instrument so much better, as more complex. See *CONDENSER*.

The Structure of the *Air-Pump*, as now made among us, with all its Advantages, is represented in Tab. *Pneumatick*, Fig. 16.

It consists of two brazen Barrels or Cylinders, represented by *s s s s*; which communicate with each other by a Canal passing between them at *d d*; and with the Receiver *o o o o*, by means of the hollow Wire *l l*, one End whereof opens into the Canal of Communication, and the other into a like Canal *n n*; which penetrating the Plate *i i i i*, opens into the Receiver.

Within the Cylinders are two Emboli, or Suckers made of Brass, and fitted with Cork and Leather to the Cavities of the Barrels, so as exactly to fill the same; each being furnish'd with its Valve, and terminating at top in a Rack *e e*, by which it is to be work'd.

At the bottom of either Barrel is another Valve; by which the *Air* may pass out of the communicating Canal *d d*, and consequently out of the hollow Wire and the Receiver it self, into the Cylinder, below the Piston; from whence by the Valves of the Piston it may proceed into the upper Space of the Cylinder, and thus into the open *Air*.

For the Application of this Mechanism.—The Wire *l l* being turn'd upward and downward; its Spindle *f*, catching by its Teeth into the Racks, will raise and depress the two Pistons, alternately.—Now, the Consequence of depressing a Piston, is, that the *Air* before inclos'd between it and the bottom of the Cylinder, being thus crowd'd into a less compass, will, by its elastic Force, which now exceeds the Pressure of the Atmosphere, push up the Valve of the Piston, and thus escape; till what little remains be of the same Density with the external *Air* incumbent on the Valve.

This done, and the same Piston being again raised in its turn, from the bottom of the Cylinder to the top; the little *Air* before left, will of necessity expand it self, so as to possess the whole Space of the Cylinder thus deserv'd by the Piston: Upon which, its Force or Pressure upon the Valve at the bottom of the Cylinder, being now inconsiderable; the other, denser *Air* of the Receiver, hollow Wire, and Canal of Communication, by their superior elastic Force, will lift up the Valve, and thus pass into the Cylinder of rarified *Air*, till both be of the same degree of Density.

And thus is the *Air* in the Receiver diminish'd at each Elevation of the Piston, by the Quantity of a Cylinder full; abating for what little remain'd between the depress'd Piston, and the bottom: So that by thus repeating the Operation again and again; the *Air* in the Receiver is at length rarified to such degree, that its Density does not exceed the thin *Air* remaining in the Cylinder when the Piston is raised: which done, the Effect of the *Air-Pump* is at an end; the Valve cannot now be open'd, or if it could, no *Air* would pass it; there being a just Equilibrium between the *Air* on each side.

To judge of the Degree of Exhaustion, there is added a Gage, *g g*; consisting of a Tube, whose upper Orifice communicates with the Receiver; the lower being immersed in a Basin of Mercury, *m m*.—Hence, the *Air* in the Tube rarifying as fast as that in the Receiver; in proportion as the Exhaustion advances, the Mercury will be rais'd by the Pressure of the Column of external *Air*, prevailing over that of the Column of *Air* included; till the Column of *Air*, and Mercury together, become a Balance to that of the external *Air*. When the Mercury is thus risen to the same Height as it stands in the Barometer, which is indicated by the Scale of Inches added to the Gage; the Instrument is a just Torricellian Tube; and the Vacuum may be concluded to be as perfect as that in the upper End of the Barometer. See *BAROMETER*, and *TORICELLIAN*.

To let *Air* again into the exhausted Receiver, the Cock *n* is to be turn'd; which makes a Communication with the external *Air*; upon which the *Air* rushing impetuously in, the Mercury in the Gage immediately subsides into the Basin.

To the *Air-Pump* belongs a large Apparatus of other Vessels, accommodated to the divers Kinds of Experiments. See *APPARATUS*.

Laws of Rarefaction in the Receiver of an Air-Pump.

1^o, For the Proportion of *Air* remaining at any time in the Receiver, we have the following general Theorem.—

⁵ In a Vessel exhausted by the Air-Pump, the primitive or natural Air contained therein, is to the Air remaining, as the Aggregate of the Capacity of the Vessel and of the Pump, (i. e. the Cylinder left vacant in an Elevation of the Piston, with the Wire and other Parts between the Cylinder and Receiver) raised to a Power whose Exponent is equal to the Number of Strokes of the Piston, to the Capacity of the Vessel alone raised to the same Power.

M. Varignon gives an Algebraical Demonstration of this Theorem, in the *Memoires de l'Acad. R. An. 1705*. p. 397, but it may be also demonstrated pneumatically, thus:— Calling the Air remaining after the first Stroke, the first Residual; that after the second, the second Residual, &c. and remembering that the Air in the Receiver is of the same Density as that in the Cylinder, when the Piston is raised: it is evident, that the Quantity of Air in the Receiver, is to the Quantity of Air in the Cylinder, Wire, &c. as the Capacity of the Receiver to that of the Cylinder, &c. and consequently, the Aggregate of the Air in the Receiver and the Cylinder, i. e. the whole primitive Air, is to the Air in the Vessel alone, i. e. to the first Residual Air, as the Aggregate of the Capacity of the Receiver and the Cylinder, to the Capacity of the Receiver alone.—After the same manner may it be proved, that the Quantity of first residual Air, is to the second Residual, as the Aggregate of the Capacity of the Receiver and Cylinder, to the Capacity of the Vessel alone. And the same Proportion does the second Residual bear to the third, and so of the rest.—Hence, the Product of the primitive Air into the first, second, third, fourth, &c. Residuals, is to the Product of the first Residual into the second, third, fourth, fifth, &c. as the Product of the Capacity of the Receiver and Cylinder together, multiplied as oft into it self as the Number of Strokes of the Piston contains Units; to the Product arising from the Capacity of the Receiver alone, multiplied so oft by it self: That is, As the Power of the Aggregate of the Capacity of the Receiver and Cylinder together, whose Exponent is the Number of Strokes of the Piston, to the Capacity of the Vessel alone, raised to the same Power.—Consequently the primitive Air is to the last Residual, in the Ratio of those Powers. *S. E. D.*

² The Number of Strokes of the Piston, together with the Capacity of the Receiver and Cylinder with the Wire, &c. being given; to find the Ratio of the primitive Air to the Air remaining.

Subtract the Logarithm of the Capacity of the Receiver, from that of the Sum of the Capacity of the Receiver and the Cylinder; then, the Remainder being multiplied by the Number of Strokes of the Piston, the Product will be a Logarithm, whose Natural Number shows how oft the primitive Air contains the Remainder requir'd.

Thus, if the Capacity of the Receiver be 460, that of the Cylinder 580, and the Number of Strokes of the Piston 6; the primitive Air will be found to the remaining Air, as 1464 to 1.

For, suppose the Capacity of the Vessel = v ; that of the Cylinder and Vessel together, = a ; the Number of Strokes of the Piston = n ; and the remaining Air = r . Since the Primitive is to the remaining Air as a^n to v^n ; the primitive Air will also be to the remaining Air, as $a^n v^n$ to r . Consequently, if the remaining Air be 1, the Logarithm of the primitive Air is $a - v \times n$.

³ The Capacity of the Receiver and the Barrel being given; to find the Number of Strokes of the Piston required to rarify the Air to a given Degree.

Subtract the Logarithm of the remaining Air from the Logarithm of the primitive Air; and the Logarithm of the Capacity of the Receiver, from the Logarithm of the Aggregate of the Capacity of the Receiver and Cylinder; then, dividing the former Difference by the latter, the Quotient is the Number of Strokes requir'd.

Thus, if the Capacity of the Receiver be supposed 580; that of the Receiver 460; and the primitive Air to the remaining Air, as 1464 to 10: The Number of Strokes required will be found to be 6.

Beside the Effects, and Phenomena of the Air-Pump, recounted under the Articles VACUUM, AIR, &c. we may add some others; which, related at large, make the Substance of Mr. Boyle's *Phys. Mech. Exper.* As,—That the Flame of a Candle usually goes out in a Minute, tho' it sometimes lasts two, but the Wick thereof continues ignited after; and even emits a Smoke, which ascends upwards.—That a kindled Charcoal is totally extinguish'd in about five Minutes, tho' in open Air it remain alive half an Hour; and that it goes out by degrees, beginning from the Top and the Outfides.—That red-hot Iron is not affected by the Absence of the Air; and yet that Sulphur or Gunpowder will not be lighted thereby, but only fused.—That a Match, after lying seemingly extinct in *Vacuo*, a long time; revives again upon the Re-admission of the Air.—That a Flint and Steel Strike Sparks of Fire as copiously in *Vacuo* as out of it; and that the Sparks move in all Directions, upwards, down-

wards, &c. here, as in the Air.—That Magnets and Magnetick Needles, are the same in *Vacuo* as in Air.—That Smoke in an exhausted Receiver, the Luminary being extinct, gradually settles to the Bottom in a darkish Body, leaving the upper part clear and transparent; and that inclining the Vessel sometimes on one side, and sometimes on another, the Fume keeps its Surface horizontal, after the Nature of other Fluids.—That the Syphon does not run in *Vacuo*.—That Water freezes in *Vacuo*.—That Heat may be produced by Attrition in the exhausted Receiver.—That Camphire will not take fire in *Vacuo*; and that Gunpowder, the some Grains of a Heap be kindled by a Burning glass in *Vacuo*, will not give Fire to the contiguous Grains.—That Glow worms lose their Light, in proportion as the Air is exhausted; and at length become totally obscure: but upon the Re-admission of Air, presently recover it all.—That Vipers and Frogs swell much in *Vacuo*, but will live an Hour and half, or two Hours; and the seemingly stark dead in that time, come to Life again in some Hours in the Air.—That Snails survive ten Hours; and Efts or Slow-worms, two or three Days; Leeches five or six.—That Oylers will remain alive in *Vacuo* 24 Hours without harm.—That the Heart of an Eel taken out of the Body, continues to beat in *Vacuo*, more nimbly than in Air; and this for a good part of an Hour.—That warm Blood, Milk, Gall, &c. undergo a considerable Intumescence, and Ebullition in *Vacuo*.—That a Mouse, or other Animal, may be brought, by degrees, to survive longer in a rarified Air, than naturally it does.—That Air may retain its usual Pressure, after it is become unfit for Respiration.—That Silk-Worms Eggs will hatch in *Vacuo*, &c.

AIRY, or AIRIE, of Hawks. See AERY.

AIRY TRIPPLICITY, among Astrologers, the Signs of Gemini, Libra, and Aquarius. See TRIPPLICITY.

ALIMENTA, in Law. See EASEMENTS.

ADJUSTING. See ACCOMMODATION.

ADUTAGE, in Hydraulicks, part of the Apparatus of an artificial Fountain, or Jet d'Eau; being a sort of Tube, fitted to the Mouth or Aperture of the Vessel; thro' which the Water is to be play'd, and by it determin'd into this or that Figure.

It chiefly the Diversity in the *Adutages*, that makes the different Kinds of Fountains.—And hence, by having several *Adutages* to be applied occasionally, one Fountain comes to have the Effect of many.

The various sorts of *Adutages*, their Structure, Application, &c. see under the Article FOUNTAIN.

The Word is French, form'd of the Verb *Ajouter*, to adjust. AKOND, an Officer of Justice in Persia, who takes cognizance of the Causes of Orphans, and Widows; of Contracts, and other Civil Concerns.—He is Head of the School of Law, and gives Lectures to all the subaltern Officers; he has his Deputies in all the Courts of the Kingdom, who, with the second Sadra, make all Contracts.

AL, an Arabic Particle, prefix'd to Words to exalt or give them a more emphatical Signification.—As, in *Alchymy*, *Algebra*, &c.

AL, or ALD, in our ancient Customs, signifies as much as old, antique.—This, being prefix'd to the Names of Places, expresses their Antiquity; as *Alborough*, *Aligate*, &c.

ALA, a Latin Term, literally signifying Wing. See WING.

ALA is also used in Anatomy, for several Parts of the Body, which bear some resemblance to the Figure of a Wing.

Thus, the Lobes of the Liver are sometimes called *Alae*. See LOBE.

The soft, spongy Bodies in the *Pudendum Muliebre*, usually called the *Nymphae*, are also denominated *Alae*. See NYMPHA.

The two Cartilages of the Nose which form the Nostrils, are also called *Alae*. See NOSE, and NOSTRIL.

And the same Denomination is given to the Top of the Auricle. See AUDDICE, and EAR.

ALA is also used in Botany, for the Angle which the Leaves, or the Stalks or Pedicles of the Leaves, form with the Stem or Branches of a Plant from which they arise. See LEAVE, &c.

This Angle is usually acute, and always directed upwards.—The same Name is occasionally applied to the Angle form'd by the Branches themselves, with the Stem; which is also observed to be very regular and uniform. See BRANCH.

ALAE, in the Military Art, are the two Extremes of an Army, ranged in form of Battle. See WING, ARMY, &c.

ALABASTER, ALABASTRIDES, in Natural History, a kind of Stone, softer than Marble, yet harder than Plaster of Paris. See STONE.

It is found of all Colours; some extremely white and shining, which is the most common; some red, like Coral; and other called *Onyx* from its Colour, which resembles that of the *Onyx*, tho' very different from it in Nature. See ONYX.

Alabaster cuts very smooth and easy, and is much us'd among Sculptors for little Statues, Vases, Columns, &c. See **STATUE**, **FOUNDERY**, &c.

They sometimes also employ it like Plaster of Paris: in order to which, they burn and calcine it; after which, mixing it up with Water to a thin Consistence; it is cast into a Mould, where it readily coagulates into a firm Body. See **PLASTER**.

Alabaster, Mr. Boyle observes, being finely powder'd, and thus set in a Basin over the Fire; will, when hot, assume the Appearance of a Fluid, by rolling in Waves, yielding to the smallest Touch, and emitting Vapour; all which Properties it loses again, on the Departure of the Heat, and discovers it self a mere incoherent Powder. See **FLUID**, and **FLUIDITY**.

Some derive the Word from the Latin *albus*, because of the Whiteness of this Stone.—Others, from the Greek *ἀλάστρα*, which they form from the Privative *α* and *ἀλάστω*, *κόπος*; this Stone being too smooth and slippery for the Hand to fasten hold of it.

The *Alabaster* Box of precious Ointment, mention'd in St. Matthew XXVI. 1. Mark XIV. 3. and Luke VII. 37. has given the Criticks and Interpreters some Pain.—To suppose it a Vase of *Alabaster*, does not seem consistent with its breaking so easily, as is intimated by St. Mark.

F. Kircher, in his *Oedip. Aegypt.* notes, that *Alabaster*, *Alabastrum*, was not only us'd for a Vase of odiferous Liquor, but also for an Egyptian Measure, containing nine *Kefis*, or Egyptian Pounds; amounting, according to his Computation, to 24 Roman Sextaries, or Pounds. See **MEASURE**, **WEIGHT**, &c.

ALABASTRA, in a Plant, are those little green Leaves which compass in the bottom of the Flower. See **CALYX**, &c.

ALAISEE, in Heraldry. See **HUMETTY**.

A-LA-MIRE, in Musick. See **NOÏE**, and **GAMUT**.

ALAMODE, a sort of Silk, or Taffety. See **STUFF**, **SILK**, **TAFETY**, &c.

ALANORARIUS, in our antient Customs, a Keeper or Manager of Spaniels, or Sporting Dogs, for the Sport of Hunting, Hawking, &c. See **HUNTING**, and **HAWKING**.

The Word is form'd from the Gothic *Alan*, a Greyhound.

ALARES, in Antiquity, are supposed by some Authors to have been a kind of Militia, or Soldiers among the Romans; so call'd from *Ala*, a Wing, because of their Lightness and Swiftnes in the Combat.

Others make them a People of *Pannonia*: but others, with more probability, take *Alares* for an Adjective or Epithet; and apply it to the Roman Cavalry; because plac'd in the two Wings, or *Alae* of the Army; for which Reason, a Body of Horse was call'd *Ala*. See **WING**, **CAVALRY**, &c.

ALARES Musculi, in Anatomy. See **PTERYGOIDES**.

ALARM, a Signal given by Shouts, or by Instruments of War, for the Soldiers to take to their Arms, at the unexpected Arrival of an Enemy.

The Word is form'd from the French *à l'arme*, to your Arms.

ALARM-Post, is the Ground appointed to each Regiment, by the Quarter-Master-General, for them to march to, in case of an Alarm.

In a Garrison, the *Alarm-Post* is the Place where every Regiment is order'd to draw up, on all Occasions. See **PLACE**.

ALB, **ALBE**, **ALBA**, antiently call'd *Camissa*, a Robe or Vestment of white Linnen, hanging down to the Feet; wherein the *Remiss* Priests perform divine Service.

The *Alb* corresponds to the *Sarplice* among us.—It takes its Name from its Colour, *albus*, white.

ALBA Firmis, or **ALBUM**, was a yearly Rent, payable to the Chief Lord of a Hundred; so call'd, because paid wholly in white Money, or Silver, and not in Corn, which was call'd *Black Mail*.

ALBIGENSES, a Sect or Party of Reformers about *Tholouse*, and the *Albigens*, in *Languedoc*; who, in the XIIIth Century, became remarkable for their opposition to the Discipline and Ceremonies of the Church of Rome. See **REFORMATION**.

They were also known by various other Names; as, the *Petrobrussians*, *Arnoldists*, *Carbares*, *Patarinus*, *Publicans*, *Tisserans*, *Bon-homans*, *Passagers*, &c.

'Tis pretended, they received their Opinions from *Bulgaria*; which having been indicted by the *Patricians* of *Armenia*, diffus'd the same into *Italy*, *Germany*, &c. and that *Peter Bruys* was the first that brought 'em into *Languedoc*, about the Year 1126. See **PETROBRUSSIAN**.

The *Romanists* tax them with abundance of heterodox Opinions; as, for instance, that there are two Gods, the one infinitely Good, and the other infinitely Evil: That the good God made the invisible World, and the Evil one that

which we live in; and the rest of the *Manichean* Tenets. See **MANICHEE**.

But this seems rather one of those pious Frauds allowed particularly in that Church, which conceals it a kind of Magic to blacken Hereticks.

However this be, the *Albigenses* grew so formidable in a little time, that a Holy League or Croizade was agreed upon among the Catholics; and War depon'd against them, the Pope himself raising the first Standard.—In 1229, a Peace was struck up, and an Inquisition establish'd at *Tholouse*, from which time they dwindled by little and little, till the Times of the Reformation; when fact of them as were left, fell in with the *Vandais*, and became conformable to the Doctrine of *Zuinglius*, and the Discipline of *Geneve*. See **VANDOS**.

ALBUGINEA, in Anatomy, the outermost Coat or Tegument of the Eye; call'd also the *Adnata*, *Conjunctiva*, &c. See **ANNATA**, **CONJUNCTIVA**, &c.

It takes the Name *Albuginea*, from its Whiteness; it being this that forms what we call the *White of the Eye*. See **EYE**.

The same Term is also applied to the Membrane immediately encompassing the Testicle. See **TESTICLE**, and **SCROTUM**.

ALBUGO, or **ALBUM Oculi**, the same with the *Albuginea*, or *White of the Eye*. See **EYE**, **ALBUGINEA**, &c.

ALBUGO is also a Disease of the Eye; otherwise call'd *Leucoma*, and popularly, *Pin and Web*. See **LEUCOMA**, and **PIN**.

The *Albugo* is a whitish Speck or Film, growing, say some Authors, on the Cornea; and obstructing the Sight.—Others, more justly, place the *Albugo* on the *Albuginea*; by this distinguishing it from the *Pterygium*, which is a similar Speck on the Cornea. See **PTERYGIUM**.

It oftenest arises as a Scar, after an Inflammation or Ulcer in the Part; particularly in the Small Pox.—The Cure is the same as in the *Pterygium*.

ALBUM Gracum, or *Stercus Canis Officinale*, Dogs white Dung, is a Medicinal Drug, in the present Practice, us'd with Honey, to cleanse and deterge, chiefly in Inflammations of the Throat; and that principally outwardly, as a Plaster.

ALBUMEN Ovi, the White of an Egg. See **EGG**.

It is us'd in Medicine, as being of a glutinous or binding Nature, on which Account it is often mix'd with *Bole Armeniac*, &c. to prevent any dissolved Part from rising into a Tumor, and restore it to its Tone or Elasticity.—It is also an Ingredient in some Mixtures for consolidating fresh Wounds, and preventing too great a Loss of Blood.

ALBURN Colour, Brown. See **AURNURN**.

ALCADE, or **ALCALINE**, or **ALCAID**, in the Spanish Policy, a sort of Judge or Minister of Justice, answering to a Provost. See **PROVOST**.

The *Spaniards* borrow their *Alcade* from the Saracen *Alcaid*. See **ALCAID**.

ALCAICKS, in the antient Poetry, a Name common to several Kinds of Verses; thus call'd from the Poet *Alcaeus*, the Inventor thereof. See **VERS**.

The first Species of *Alcaicks*, consists of two *Dactyls* and two *Trochees*: As,

Exilium impostura cymba.

There is another Kind, consisting of five Feet, of which the first is a Spondee or Iambick; the second an Iambick; the third a long Syllable; the fourth a *Dactyl*; the fifth a *Dactyl* or *Amphimacer*: As those of *Horace*,

*Omnes eodem cogimur, omnium
Verfatur uras, serius, ocuis
Sors exitura,*

Besides these two Kinds of Verses, which are call'd *Alcaick Dactylics*, there is a third sort, call'd simply *Alcaick*; whereof the first is an Epitrite, the second and third *Choriambus's*, and the fourth a *Bacchius*; as,

Cur times flavum Tiberim | tangere cur | olivum?

The *ALCAICER Ode*, consists of four Strophes, each of which contains four Verses; the two first are *Alcaick Verses* of the second Kind; the third an Iambick Dimeter Hypercatalectic, i. e. of four Feet and a long Syllable: As,

Sors exitura, & nos in eternum.

The fourth is an *Alcaick* of the first Kind.—The entire *Alcaick Strophe* is as follows:

*Omnes eodem cogimur, omnium
Verfatur uras, serius, ocuis
Sors exitura, & nos in eternum
Exilium impostura cymba.*

ALCAID, the Governour of a City in *Barbary*. See **ALCAIDE**.

The Jurisdiction of the *Alcaid* is sovereign, both in Civil and Criminal Concerns; and Fines and Penishments lie wholly at his Door.—The Word is form'd of the Particle *Al*, and the Verb **נָתַד** *kad*, or *akad*, to govern, rule, administer.

ALCALI, **ALCALY**, or rather **ALKALY**. See **ALKALY**.

ALCALIZATION, or **ALKALIZATION**, *Alcalizatio*, in Chymistry, the Act of impregnating a Liqueur with an alkaline Salt. See **ALKALY**.

This is done either to make it a better Dissolvent, for some particular Purposes; or to load the Phlegm, so as it may not rise in Distillation, whereby the spirituous Parts may go over more pure. See **DISSOLUTION**, **DISTILLATION**, **SPIRIT**, &c.

ALCANTARA.—Order of **ALCANTARA**, was an ancient Military Order, denominated from a City of that Name in the Kingdom of *Sparta*. See **KNIGHT**, **ORDER**, &c.

Alphonfus IX. having recover'd *Alcantara* from the *Moors*, in the Year 1212; committed the Custody and Defence thereof, first, to the Knights of *Calatrava*; and, two Years afterwards, to the Knights of the Pear-Tree, another Military Order, instituted in 1170, by *Gomez Fernand*, and approved by Pope *Alexander III.* under the Rule of *St. Benedict*: upon which they changed their Name, and took the Denomination of *Knights of Alcantara*.

After the Expulsion of the *Moors*, and the Taking of *Granada*; and the Sovereignty of the Order of *Alcantara*, and that of *Calatrava*, were settled in the Crown of *Castile*, by *Ferdinand* and *Isabella*. See **CALATRAYA**.

In 1540, the Knights of *Alcantara* feed for leave to marry; which was granted 'em.

ALCHYMY, or **ALCHEMY**, a higher or more refined kind of Chymistry, employ'd in the more mysterious Researches of the Art. See **CHEMISTRY**.

The Word is compounded of the Arabic Particle of Augmentation, *Al*, and the Latin *Chymia*, Egyptian *Kemia*, or Greek *χημια*, Chymistry.

The Name *Alchymy* is of no long standing: The first time it occurs, is in *Julius Firmicus Maternus*, an Author who lived under *Constantine the Great*, and who in his *Mathesis*, C. XV. speaking of the Influences of the Heavenly Bodies, affirms, "that if the Moon be in the House of *Saturn*, at the Time a Child is born, he shall be skill'd in *Alchymy*."

The great Objects or Ends pursued by *Alchymy*, are, 1^o, The making of Gold; which is attempted three different ways: by Separation; by Mutation; and by Transmutation; which last is to be effected by means of what they call the *Philosopher's Stone*. See **GOLD**.—See also **TRANSMUTATION**, **PHILOSOPHER'S Stone**, &c.

With a View to this End, *Alchymy*, in some ancient Writers, is also call'd *metatras*, *Poetice*, Poetry; and *χρησμοποιον*, *Chryso-poietice*, q. d. the Art of making Gold.—And hence also the Artists themselves are call'd *metatras*, *Poeti*, *Makers*, and *χρησμοποιου*, *Gold-makers*.

2^o, An Universal Medicine, adequate to all Diseases. See **ELIXIR**.

3^o, An Universal Dissolvent, or Alkabeft. See **ALKABEST**.

4^o, An Universal Ferment; or a Matter which being applied to any Seed, shall increase its Fecundity to Infinity: If, e. g. it be applied to Gold, it changes the Gold into the *Philosopher's Stone of Gold*; if to Silver, into the *Philosopher's Stone of Silver*, i. e. into a Matter which transmutes every thing into Silver; if to a Tree, the Result is the *Philosopher's Stone of the Tree*, which transmutes every thing it is applied to into Trees, &c.

The Origin and Antiquity of *Alchymy* are much controverted.—If regard may be had to Legend and Tradition, it must be as old as the Flood; nay, *Adam* himself is represented by the *Alchymists* as an Adept. A great part, not only of the Heathen Mythology, but of the Jewish and Christian Revelations, are supposed to refer hereto: Thus, *Suidas* will have the Secret of the *Philosopher's Stone* couch'd in the Fable of the *Argonauts*; others find it in the Books of *Moses*, &c.

But, if the Aen of the Art be examin'd by the Monuments of History; it will lose a deal of this fancied Antiquity.—The learned *Dante*, *Ol. Borricchini*, has taken immense Pains to prove it known to the ancient *Greeks* and *Egyptians*. *Herr Covringius*, on the contrary, with equal Address, undertakes to shew its Novelty.

In effect, not one of the ancient Poets, Philosophers, or Physicians, from *Homer* till 400 Years after Christ, mention any such thing.—The first Author who speaks of making Gold, is *Zosimus* the *Panopolitan*, who lived towards the Beginning of the Vth Century, and who has an express Treatise, *προς τους λεγους μετατροπον του χρυσου εν ορυκτοις*, *Of the divine Art of making Gold and Silver*, still extant in Manuscript in the French King's Library. The next is *Eu-*

neas Gargens, another Greek Writer, towards the Close of the same Century, in whom we have the following Passage: "Such as are skill'd in the Ways of Nature, can take Silver and Tin, and changing their Nature, turn 'em into Gold." The same Writer tells us, he was "wont to style himself *χρυσοποιος*, *Gold-finder*, and *χρησμοποιος*, *Chymist*."—Hence we may gather, there was some such Art in being in that Age; but, as neither of these Authors relate how long it had been known before, their Testimony will not carry us back beyond the Age wherein they liv'd.

Nor do we find any earlier, plainer Traces of the Universal Medicine: not a Syllabic of any such thing in all the Physicians and Naturalists, from *Moses* to *Geber the Arab*, who is supposed to have lived in the VIIIth Century. In that Author's Work, intitled, *The Philosopher's Stone*, mention is made of "a Medicine which cures all Lepros:" This Passage some Authors suppose to have given the first Hint of the Matter; the *Geber* himself, perhaps, meant no such thing: For, by attending to the Arabic Style and Diction of this Author, which abounds in Allegory, it appears highly probable, that by *Man* he means Gold, and by Lepros or Diseases, the other Metals, which are all impure in comparison of Gold.

Suidas accounts for this total Silence of Authors in respect of *Alchymy*, by-observing, that *Diocletian* procur'd all the Books of the ancient *Egyptians* to be burnt; and that it was in these the great Mysteries of Chymistry were contained.—*Covringius* calls this History in question, and shs how *Suidas*, who lived but 500 Years before us, should know what happen'd 800 Years before him? To which *Borricchini* answers, that he had learnt it of *Eudemus*, *Helladius*, *Zosimus*, *Paraphrasus*, &c. as *Suidas* himself relates.

Kirever asserts, that the Theory of the *Philosopher's Stone* is deliver'd at large in the Fable of *Hermes*; and that the ancient *Egyptians* were not ignorant of the Art, but declined to prolecutate it. They did not need to transmute Gold, they had ways of separating it from all kind of Bodies, from the very Mud of the Nile, and Stones of all Kinds. But, he adds, these Secrets were never wrote down or made publick, but confin'd to the Royal Family, and handed down traditionally from Father to Son.

The chief Point advanced by *Borricchini*, and on which he seems to lay the greatest Stress, is the Attempt of *Caligula*, mention'd by *Pliny*, for procur'g Gold by Distillation from Orpiment. *Hist. Nat. L. XXXIII. c. 14.*—But this, it may be observ'd, makes very little for that Author's Pretensions; there being no Transmutation, no Hint of any *Philosopher's Stone*, but only a little Gold extract'd or separat'd from the Mineral. See **ORPIMENT**.

The principal Authors in *Alchymy*, are *Geber*, *Eriaz Bacon*, *Ripley*, *Lully*, *John* and *Isaac Hollandus*, *Basili Valentine*, *Paracelsus*, *Van Leubten*, and *Covringius*.

ALCMANIAN, the Name of a kind of Verse, compos'd of three Dactyls and a long Syllable; as,

Munera, letisiamque Dei.

ALCOHOL, or rather **ALCOOL**, in Chymistry, an Arabic Term, chiefly understood of the purest Spirit of Wine, rais'd or rectify'd by repeated Distillations to its utmost Subtinity, and Perfection; so that if Fire be set thereto, it burns wholly away, without leaving the least Phlegm or Faeces behind. See **SPIRIT**, **DISTILLATION**, **RECTIFICATION**, &c.

The Word *Alcohol* is sometimes also us'd for a very fine, impalpable Powder. See **POWDER**.

The Word is form'd from the Arabic or Hebrew קל קאל *Kaal*, to lessen, attenuate, subtilize.

ALCORAN, the *Mahometan* Gospel; or the Revelations, Prophecies, &c. of the Impostor *Mahomet*. See **MAHOMETANISM**.

The Word *Alcoran* is Arabic, and literally denotes either Reading, or Collection; but 'tis in the first of these Senses that the *Alcoran* of *Mahomet* seems best understood; *Mahomet* purposing to have his Book call'd *Reading*, by way of Eminence; in imitation of the Jews and Christians, who call the New and the Old Testament *Writing*, *Scripture*, הכתוב *Books*, or ספרים, on the same account. See **SCRIPTURE**, and **BIBLE**.

The *Mythologists* also call it אלפרקאן *Alpharkan*; from the Verb פרק *Pharaco*, to distinguish: either by reason it makes the Distinction between what is true, and false, or between what is lawful to do, and what not; or else on account of its containing the Divisions, or Heads of the Law: in which, again, they imitate the *Hebrews*, who give divers Books the like Name פרקים *Perakim*, q. d. *Capita*, *Capitula*, Chapters, Heads; e. g. פרקי אבות *Perki Avotum*, *Capitula Patrum*; פיקרי אליעזר *Capitula Rabbi Eliezer*. Lastly, the *Alcoran* is also denominated *Alceobr*, Advertisement, or Remembrance; as serving to retain or retrieve the Knowledge of the Law.

'Tis the common Opinion among us, that *Mahomet*, assisted by one *Seizius*, a Monk, compos'd this Book; but this

the *Muſtawans* believe it as an Article of their Faith, that the Prophet, who they ſay was an illiterate Man, had no hand in it; but that it was given him by God, who, to that end, made uſe of the Miniſtry of the Angel *Gabriel*; that however it was communicated to him by little and little, a Verſe at a time, and in different Places, during the Courſe of 25 Years.—And hence, ſay they, proceeds that Diſorder and Confuſion viſible in the Work; which, in truth, is ſo great, that all their Doctores have never been able to adjust it. For *Mahomet*, or rather his Copied, having put all theſe looſe Verſes promiſcuouſly in a Book together, it was impoſſible ever to retrieve the Order wherein they were deliver'd.

Theſe 25 Years which the Angel employ'd in conveying the *Alcoran* to *Mahomet*, are of wonderful Service to his Followers; inſomuch as they furniſh them with an Answer to ſuch as tax them with thoſe glaring Contradictions wherewith the Book is full: thoſe Contradictions they piously father upon God himſelf; alledging, that in the Courſe of ſo long time, he repeal'd and alter'd ſeveral Doctrines and Precepts, which the Prophet had before receiv'd of him.

M. *d'Herbels* thinks it probable, that when the Heretics of the *Neftorians*, *Eurychians*, &c. had been condemn'd by Occumencial Councils; many Biſhops, Priests, Monks, &c. being driven into the Deſerts of *Arabia* and *Egypt*, furniſh'd the Impoſitor with Paſſages, and crude ill-conceiv'd Doctrines out of the Scriptures: And it was hence, that the *Alcoran* became ſo full of the wild and croneous Opinions of thoſe Heretics.

The *Jews*, alſo, who were very numerous in *Arabia*, contributed their Quota to the *Alcoran*; nor is it without ſome Reaſon that they boaſt, twelve of their chief Doctores to have been the Authors of this detestable Work.

The *Alcoran*, it is to be obſerv'd, while *Mahomet* lived, was only kept in looſe Sheets: His Succeſſor, *Abubeker*, firſt collect'd 'em into a Volume, and committed the keeping thereof to *Hapſa*, the Widow of *Mahomet*, in order to be conſider'd as an Original. And there being a good deal of Diverſity between the ſeveral Copies already diſperſed thro' out the Provinces; *Oſtoman*, Succeſſor of *Abubeker*, procur'd a great Number of Copies to be taken from that of *Hapſa*; at the ſame time ſuppreſſing all the others not conformable thereto.

The chief Differences, then, in the preſent Copies of this Book, conſiſt in the Points; which were not in uſe in the Time of *Mahomet* and his immediate Succeſſors, but were added ſince, to aſcertain the Reading; after the Example of the *Maſſoretes*, who put the like Points to the Hebrew Text of Scripture. See POINT.

The Work is divided into *Surates*, or Chapters; and the *Surates* ſubdivided into little Verſes, which are all compoſed in a broken interrupted Style, reſembling Proſe rather than Verſe.—The Diviſion into *Surates* is but of a late ſtanding: The uſual Number of 'em is 60.

There are ſeven principal Editions of the *Alcoran*; two at *Medina*, one at *Mecca*, one at *Cauſa*, one at *Barſora*, one in *Syria*, and the Common or Vulgate Edition. The firſt contains 6000 Verſes; the others ſurpaſſing this Number by 200, or 256 Verſes: But the Number of Words and Letters is the ſame in all, *viz.* 77659 Words, and 323013 Letters. See MASSORETES.

The Number of Commentaries on the *Alcoran*, is ſo large, that the bare Titles would make a huge Volume.—*Ben Oſſebair* has wrote the Hiſtory thereof, intitled, *Tarik Ben Oſſebair*. The principal among 'em are *Reidbaori Tabelebi*, *Zamalekſebari*, and *Bacai*.

Beside the *Alcoran*, which is the Baſis of the *Mohometan* Faith, they have alſo a Book containing their Traditions, which they call *Senna*. See SONNA, TRADITION, MAHOMETANISM, &c.

The *Mohometans* have a poſitive Theology, built on the *Alcoran* and Tradition; as well as a Scholaſtical one, built on Reaſon.—They have likewiſe their Caſuiſts, and a kind of Canon Law; wherewith they diſtinguiſh between what is of divine, and what of poſitive Right.

They have their Beneficiaries too, Chaplains, Almoners, and Canons, who read a Chapter every Day out of the *Alcoran* in the Moſques; and have Prebends for doing.—The Habit of the Moſque, is what we call the Pariſon of the Pariſh; and the *Scheics* are the Preachers, who take their Text out of the *Alcoran*.

Among the *Persians*, *Alcoran* likewiſe ſignifies a kind of Tower, or Steeple; very high and narrow; ſurrounded without by two or three Galleries, one over another; whence their Monks or Priests repeat their Prayers thrice a Day, with a very loud Voice; making the Tour of the Gallery all the while, that they may be the better heard all around.

ALCOVE, in Building, a part of a Chamber, ſeparated by an Eſtade, or Partition of Columns, and other correſponding Ornaments; in which is placed a Bed of State, and ſometimes Seats, to entertain Company.

The Word is deriv'd from the Spaniſh *Alcoba*; and that from the Arabick *Eleanf*, a Cabinet or ſleeping Place; or from *Eleobas*, a Tent.

ALCYON. See HALCYON.

ALDEBARAN, an Arabian Name, for a fixed Star of the firſt Magnitude, in the Head of the Sign or Conſtellation *Taurus*, or the Bull; and hence popularly called the Bull's Eye.

Its Longitude, Latitude, &c. ſee among the reſt of the Conſtellation *Taurus*.

ALDERMAN, an Aſſociate to the Mayor or Civil Magiſtrate of a City or Town, for the better Administration thereof. See CITY, TOWN, &c.

The Aldermen are an Order of Magiſtrates, in our Cities, and moſt of the municipal or incorporate Towns; who form a kind of Council, and regulate Things relating to the Policy of the Place.—They ſometimes alſo take Cognizance of Civil and Criminal Matters; but very rarely, and only in certain Caſes.

Their Number is not limited; but in ſome Places more, in ſome leſs, from 6 to 26.

Our of theſe are annually elected the *Mayors* or chief Magiſtrates of Places; who, at the Expiration of their Mayoralty, return again into the Body of the Aldermen, whole Delegates they were before. See MAYOR.

The 26 Aldermen of London, preſide over the 26 Wards of the City. See WARD.

When any of 'em die, the Wardmore return two, out of which the Lord Mayor and Aldermen chuſe one.

All the Aldermen that have been Lord Mayors, and the three eldeſt Aldermen who have not yet arriv'd at that Dignity, are by Charter, Juſtices of the Peace.

Formerly, there were alſo Aldermen of the Merchants, of Hospitals, of Hundreds, &c. See SENATOR.

ALDERMAN, among our antient Saxon Anceſtors, was one of the three Orders or Degrees of Nobility. See NOBILITY.

Æthelred was the firſt, *Alderman* the ſecond, and *Thane* the loweſt. See ÆTHELINO, and THANE.

The Alderman was the ſame as our Earl or Count; which Appellation, after King *Æthelſtane's* Time, took place in lieu of Alderman. See EARL, and COUNT.

In the Time of King *Edgar*, Alderman was alſo uſed for a Judge, or Juſtice.—In this ſenſe, *Alewin* Son of *Æthelſtane*, is ſtilled *Aldermanus totius Angliæ*; which *Speſman* interprets, *Juſticiarius Angliæ*.

Thomas Elmſſy, in the Life of *St. Ethelred*, interprets Alderman by Prince, or Count; *Egelwinnus qui cognominatus eſt Alderman*, quod intellegitur princeps ſive comes.—*Matthew Paris*, in lieu of Alderman, uſes the Word *Juſticiarius*; and *Speſman* obſerves, that it was the Norman Kings, who, inſtead of the Saxon Alderman, introduc'd the Word *Juſtice*.

The Word in its original, is compos'd of *Alder*, Senior or Elder, and *Mau*.

ALE, a popular, or Beverage Drink, made from Malt. See MALT, and DRINK.

For the Method of Brewing Ale, ſee BREWING.

Ale is chiefly diſtinguiſh'd from Beer, another potable Liquor made from the ſame Ingredients, by the Quantity of Hops uſed therein; which is greater in Beer, and therefore renders the Liquor bitterer, and ſitter to keep. See BEER, HOPS, &c.

The Brewers alſo diſtinguiſh *Pale* or *Fine Ale*, *Brown Ale*, &c.—Their ſeveral Properties, Effects, &c. ſee under the Article MALT-LIQUOR.

The *Zythum* and *Cerevisia* mentioned by *Tacitus*, as the Beverages of the antient Germans, are ſuppoſed by *Mattiholus* to correſpond to our Ale and Beer.

ALE, *Cereviſia*, is alſo a Denomination given to divers medicated Liquors, or Diet-Drinks, whereof Ale is the Baſis, or Vehicle. See DIET-DRINK.

The medicated Wines, Waters, and Ales, make a large Article in our Diſpenſatories. See WINE, WATER, &c.

Such are the *Cereviſia Oxyderica*, for the Eyes; *Cereviſia Anti-Arthritica*, againſt the Goat; *Cereviſia Cephalica*, for the Head; *Cereviſia Epileptica*, &c.

Gill Ale, is prepared by infuſing the dry Leaves of *Hedera Terreſtris*, i. e. Ground-Ivy, in Malt-Liquor; which hereby becomes impregnated with the Virtues of the Simple; and is therefore reputed Abſterſive, and Vulnerary; good in Diſorders of the Breſt, and againſt Obſtructions of the Viſcera.

Dr. Butler's Purging Ale, is prepared of Polypody, Scum, Sarsaparilla, Aniſeeds, Scarygrass, Agrimony, and Maiden-hair, put up in a Bag, and hung in a Veſſel of Ale.

We alſo meet in ſome Diſpenſatories with Syrup of Ale, made by boiling that Liquor to a Conſiſtence; uſed againſt Obſtructions in the Kidneys, &c.

ALE-Berry, is Ale boil'd with Bread and Mace; ſweetned, ſtrain'd, and drank hot.

ALE-Meaſure. See MEASURE.

ALE-Casser, an Officer in the City of London, whose Business is to inspect the Measures of the Publick Houses.—There are four of them, and they are chosen by the Common-Hall of the City. See MEASURE.

ALE-Silver, a Rent or Tribute yearly paid to the Lord Mayor of London, by those who sell Ale within the City.

ALE-Taster, is an Officer appointed, and sworn in every Court-Lect, to look that there be a due Size and Goodness of Bread, Ale, and Beer, sold within the Jurisdiction of the Lect. See ASSIZE, &c.

ALECTORIA, in Natural History, a Stone sometimes found in the Stomach, Liver, or rather Gall-Bladder of old Cocks. See STONE.

It is ordinarily of the Figure of a Lupine, and seldom exceeds the Bigness of a Bean.—It has abundance of Virtues attributed to it, but most of them are fabulous.

The Word is deriv'd from *aleidos*, a Cock.

ALECTOROMANTIA, an ancient Kind of Divination, perform'd by means of a Cock. See DIVINATION.

This Art was in use among the Greeks; and the manner of it was this.—A Circle was made on the Ground, and divided into 24 equal Portions, or Spaces; in each of which Spaces was written one of the Letters of the Alphabet, and upon each of these Letters was laid a Grain of Wheat.

This done, a Cock was turn'd loose into the Circle, and careful Observation made of the Grains he peck'd.—The Letters corresponding to those Grains, were afterwards form'd into a Word; which Word was to be the Answer desired.

'Twas thus that *Labanius* and *Iamblicus* sought who should succeed the Emperor *Valens*; and the Cock eating the Grains answering to the Spaces ΘΕΟΔ, they concluded upon *Theodos*, but by a Mistake instead of *Theodosius*.

The Word comes from the Greek *aleidos*, a Cock, and *mantia*, Divination.

ALEMBICK, or **LIMBERG**, a Chymical Vessel, consisting of a Matras, fitted with a roundish Head, perforated in a sloping Tube, for the condensed Vapours to pass thro' in Distillation. See CUCURBIT, and DISTILLATION.

Alembick is popularly understood of the whole Instrument of Distillation with all its Apparatus; but in the proper Sense of the Word, it is only a Part hereof, viz. a Vessel usually of Copper, whereto a concave, globular, metalline Head is closely luted; so as to stop the rising Vapours, and direct them into its Rottrum or Beak.

The Heat of the Fire raising the volatile Parts of the Subject, exposed in the bottom of the Vessel; they are received into its Head, where they are condens'd, either by the Coldness of the ambient Air, or by Water externally apply'd; and become a Liquor, which runs out at the Beak into another Vessel, called the *Recipient*. See RECIPIENT.

The Head or Capital of the *Alembick*, is sometimes incorporated with a Vessel full of cold Water, by way of Refrigeratory; tho' this Intention is now more commonly answer'd by a *Serpentine*. See REFRIGERATORY, SERPENTINE, &c.

There are divers Kinds of *Alembicks*: An *Open Alembick*, where the Capital and Cucurbit are two separate Parts; a *Blind Alembick*, or *Blind Head*, where the Capital is sealed Hermetically upon the Cucurbit, &c.

The Word is form'd of the Arabic Particle *Al*, and the Greek *λεβη*, a sort of earthen Vessel, mention'd by *Athenus*, and *Hesychius*. Tho' *Matthæus Silvaticus*, in his *Pandect Medicinæ*, asserts the Word *Alembick* to be *Arabick*, and that it literally denotes the upper Part of a distilling Vessel.

ALEXANDRINE, or **ALEXANDRIAN**, in Poetry, the Name of a kind of Verse, which consists of twelve and thirteen Syllables alternately; the rest or Pause being always on the sixth Syllable. See VERSE.

It is said to have taken its Name from a Poem on the Life of *Alexander*, intitled the *Alexandriad*; written, or at least transfas'd into this kind of Verse by some French Poets: tho' others will have it denominat'd from one of the Translators, *Alexander Paris*.

This Verse is thought by some very proper in the Epopee, and the more sublime Kinds of Poetry; for which Reason it is also called *Heroic Verse*. See HEROIC.

It answers in our Language to the *Hexameters* in the Greek and Latin.—*Chepman's* Translation of *Homer*, consists wholly of *Alexandriens*.

ALEXIPHARMIC, in Medicine, expresses that Property which a Remedy, either simple or compound, hath to resist, or destroy every thing of a poisonous Nature; For the Antients had a Notion, that there was Poison in all malignant Diseases, and in the generality of those whose Cause is unknown. See POISON.

Alexiterial, *Cardiac*, *Antidote*, *Alexipharmic*, and *Counterpoison*, are all Terms of the same Signification. See ANTIDOTE, COUNTERPOISON, &c.

Alexipharmics are ordinarily divided into such as are general; and those more particular, suppos'd only to combat

some particular Disease.—But this Division is founded more on Speculation than Experience.

Alexipharmic Medicines, contain a great Number of volatile Parts, and such as render fluid the Mass of Blood. The greatest part of them are aromatick, and pungent to the Taste. See AROMATIC.—Among the rest, it is true, there are some acid Plants and Juices; but these are only reckon'd in the Number, on account of their Use in malignant, colliquative Fevers.

Alexipharmics chiefly act by exciting or increasing a Diaphoresis, or Perspiration; by which the noxious Matter is thrown off. See DIAPHORETICS, PERSPIRATION, &c.

Alexipharmics, whether simple or compound, are also effectual Preservatives against malignant, and pestilential Fevers; But they are to be used with Caution; some being only proper in Condensations, and others in Colliquations of the Blood. See PRESERVATIVE, PLAGUE, &c.

The Word is derived from the Greek *aleis*, *arceo*, to drive out, or expel; and *pharmakon*, *Pharmacum*, Poison.

ALEXIPHARMIC Waters, &c. See WATER, &c.

ALEXITERIAL, in Medicine, a Term of the same import with *Alexipharmic*. See ALEXIPHARMIC.

It is form'd from the Greek *aleis*, *arceo*, I drive away, or Oppress, I resist.

ALFET, antiently signified the Cauldron in which boiling Water was put, for the Accused to plunge his Hand in up to the Elbow, by way of Trial or Purgation. See WATER.

ALGAROT, or **ALGAREE**, in the Arabian Chymistry, a Powder prepared of Butter of Antimony; being in reality no more than the Regulus of that Mineral, dissolv'd in Acids, and separated again by means of several Lotions with lukewarm Water, which imbibes those Acids. See REGULUS.

This is also called *Mercurius Vita*, or simply *Emetic Powder*.—It purges violently both upwards and downwards. See ANTIMONY.

By collecting all the Lotions, and evaporating two third Parts, what remains is a very acid Liqueur, called *Spirit of Philosophical Vitriol*.

ALGEBRA, a Method of resolving Problems by means of Equations. See PROBLEM, and EQUATION.

Some Authors define *Algebra* the Art of solving all Problems capable of being solv'd: But this is rather the Idea of *Analysis*, or the *Analytic Art*. See ANALYSIS.

The Arabs call it, the *Art of Restitution and Comparison*; or, the *Art of Restitution and Equation*.—*Lucas de Burgo*, the first European who wrote of *Algebra*, calls it, the *Rule of Restitution and Opposition*.—The Italians call it, *Regula Rei Et Census*, that is, the Rule of the Root and the Square; and the Root with them being called *Res*, and the Square *Census*.—Others call it *Speciosa Arithmetick*; others *Universal Arithmetick*, &c.

Menage derives the Word from the Arabic *Algebra*, which signifies the setting of a broken Bone; supposing that the principal Part of *Algebra* is the Consideration of broken Numbers.—Others rather borrow it from the Spanish *Algebra*, a Person who re-places dislocated Bones; adding, that *Algebra* has nothing to do with Fracture; in that it considers broken Numbers as if they were entire, and even expresses its Powers by Letters, which are incapable of Fracture.

Some, with M. *d'Herbelot*, are of Opinion, that *Algebra* takes its Name from *Geber*, a celebrated Philosopher, Chymist, and Mathematician, whom the Arabs call *Giber*; and who is suppos'd to have been the Inventor.—Others, from *Gefr*, a kind of Parchment, made of the Skin of a Camel, wherupon *Al* and *Giafar Sadek* wrote in mystick Characters the Fate of *Mahometanissa*, and the grand Events that were to happen till the End of the World.—But others, with more probability, derive it from *Gebr*, a Word whence, by prefixing the Particle *Al*, we have form'd *Algebra*, which is pure Arabic, and properly signifies the Reduction of broken Numbers to a whole Number.

However, the Arabs, it is to be observ'd, never use the Word *Algebra* alone, to express what we mean by it; but always add to it the Word *Macabehel*, which signifies *Opposition and Comparison*.—Thus, *Algebra-Macabehel*, is what we properly call *Algebra*.

Algebra is a peculiar kind of Arithmetick, which takes the Quantity sought, whether it be a Number, or a Line, or any other Quantity, as if it were granted; and by means of one or more Quantities given, proceeds by consequence, till the Quantity at first only suppos'd to be known, is found to be equal to some Quantity or Quantities which are certainly known, and consequently it self is known. See QUANTITY, and ARITHMETICK.

Algebra is of two Kinds, viz. *Numeral*, and *Literal*. *Numeral*, or *Vulgar ALGEBRA*, is that of the Antients, which only had place in the Resolution of Arithmetical Questions.—In this, the Quantity sought is represented by some Letter or Character; but all the given Quantities are express'd by Numbers. See NUMERAL, and NUMBERS.

Literat, or Specious ALGEBRA, or the New ALGEBRA, is that wherein the given or known Quantities, as well as the unknown, are all expressed or represented by their Specifics, or Letters of the Alphabet. See SPECIES, and SYMBOLES.

This calls the Memory and Imagination of that vast Stress or Effort, requir'd to keep the several Matters necessary for the Discovery of the Truth in hand present to the Mind: For which Reason this Art may be properly denominated *Metaphysical Geometry*.

Specious Algebra, is not, like the Numerical, confin'd to certain Kinds of Problems; but serves universally for the Investigation or Invention of Theorems, as well as the Solution and Demonstration of all kinds of Problems, both *Arithmetical*, and *Geometrical*. See THEOREM, &c.

The Letters used in *Algebra*, do each separately represent either Lines or Numbers, as the Problem is Arithmetical or Geometrical; and together, they represent Planes, Solids and Powers more or less high, as the Letters are in a greater or less Number.—For instance, if there be two Letters, *ab*, they represent a Rectangle, whose two Sides are expressed, one by the Letter *a*, and the other by *b*; so that by their mutual Multiplication, they produce the Plane *a b*. Where the same Letter is repeated twice, as *aa*, they denote a Square.—Three Letters, *abc*, represent a Solid, or a rectangled Parallelepiped, whose three Dimensions are expressed by the three Letters *abc*; the Length by *a*, the Breadth by *b*, and the Depth by *c*: so that by their mutual Multiplication they produce the Solid *abc*.

As the Multiplication of Dimensions is expressed by the Multiplication of Letters, and as the Number of those may be so great as to become inconvenient; the Method is, only to write down the Root, and on the right hand to write the Index of the Power, that is, the Number of Letters whereof the Power to be expressed does consist; as, a^2, a^3, a^4, a^5 : the last of which signifies as much as *a* multiplied five times into it self; and so of the rest. See POWER, ROOT, EXPONENT, &c.

For the Symbols, Characters, &c. used in *Algebra*, with their Application, &c. see the ARTICLES CHARACTER, QUANTITY, &c.

For the Method of performing the several Operations in *Algebra*, see ADDITION, SUBTRACTION, MULTIPLICATION, &c.

As to the Origin of this Art, we are much in the dark.—The Invention is usually attributed to *Diophantus*, a Greek Author, who wrote thirteen Books, the only six of 'em are extant, first published by *Xylander*, in 1575; and since commented on and improved by *Gesner Bacchet*, of the *French Academy*; and since by *M. Fermat*.

And yet *Algebra* seems to have been not wholly unknown to the ancient Mathematicians, long before the Age of *Diophantus*: We see the Traces, the Effects of it in many Places; tho, it looks as if they had designly concealed it.—Something of it there seems to be in *Euclid*, or at least in *Theon* upon *Euclid*, who observes that *Plato* had begun to teach it.—And there are other Instances of it in *Pappus*, and more in *Archimedes* and *Apollonius*.

But the Truth is, the Analysis used by those Authors is rather Geometrical than Algebraical; as appears by the Examples thereof which we find in their Works: So that we make no scruple to say, that *Diophantus* is the first, and only Author among the *Greeks* who has treated of *Algebra* professedly.

This Art, however, was in use among the *Arabs* much earlier than among the *Greeks*. And 'tis said the *Arabs* too borrow'd it from the *Persians*, and the *Persians* from the *Indians*.—'Tis added, that the *Arabs* carried it into *Spain*; whence, some are of opinion, it pass'd into *England*, before *Diophantus* was known among us.

The first who wrote on the Subject in this part of the World, was *Lucas Paucolus*, or *Lucas de Burgo*, a Cordelier; whose Book, in *Italian*, was printed at *Venice* in 1494.—This Author makes mention of one *Leonardus Pisanus*, and some others, of whom he had learnt the Art; but we have none of their Writings.—He adds, that *Algebra* came originally from the *Arabs*; and never mentions *Diophantus*: which makes it probable, that that Author was not yet known in *Europe*.—His *Algebra* goes no further than Simple and Quadratic Equations. See QUADRATIC, &c.

After *Paucolus* appear'd *Stifetus*, a good Author; but neither did he advance any further.

After him, came *Scipio Ferrus*, *Corden*, *Tartalea*, and some others; who reach'd as far as the Solution of some Cubick Equations.—*Bombelli* follow'd these, and went himself a little further.—At last came *Nonnius*, *Ramus*, *Schoner*, *Saligiae*, *Clavius*, &c. who all of them took different Courses, but none of them went beyond Quadratics.

About the same time, *Diophantus* was first made publick; whose Method is very different from that of the *Arabs*, which had been follow'd till then.

In 1590, *Vieta* enter'd on the Stage, and introduc'd what he call'd his *Specious Arithmetick*, which consists in denoting

the Quantities, both known and unknown, by Symbols or Letters.—He also introduc'd an ingenious Method of extracting the Roots of Equations, by Approximation; since much facilitated by *Raphson*, in his *Analysis Aequationum*.

Vieta was follow'd by *Oughtred*, who in his *Clavis Mathematica*, printed in 1631, improved *Vieta's* Method; and invented several compendious Characters, to shew the Sums, Differences, Rectangles, Squares, Cubes, &c.

Mr. Harriot, another *Englishman*, cotemporary with *Oughtred*, left several Treatises at his Death; and among the rest, an *Analysis*, or *Algebra*, which was printed in 1631; where *Vieta's* Method is brought into a still more commodious form, being that which obtains to this Day.

In 1657, *Des Cartes* publish'd his *Geometry*, wherein he made use of the *Literat Calculus* and the *Algebraick* Rules of *Harriot*; and as *Oughtred* in his *Clavis*, and *Marin. Ghetaldus*, in his Books of *Mathematical Composition* and *Resolution* publish'd in 1630, apply'd *Vieta's* Arithmetick to *Elementary Geometry*, and gave the Constructions of Simple and Quadratic Equations; so *Des Cartes* apply'd *Harriot's* Method to the Higher *Geometry*, explaining the Nature of Curves by Equations, and adding the Constructions of Cubic, Biquadratic, and other higher Equations.

Des Cartes's Rule for constructing Cubic and Biquadratic Equations, was further improved by *Tbo. Baker*, in his *Clavis Geometriae Catholicae*, publish'd in 1684; and the Foundation of such Constructions, with the Application of *Algebra* to the Quadratures of Curves, Questions de maximis and minimis, the Centrobaric Method of *Gulielmus*, &c. was given by *R. Slusius*, in 1668; as also by *Format*, in his *Opera Mathematica*; *Roberval*, in the *Mens. de Mathem. & de Physique*; and *Barrow*, in his *Lecl. Geomet.*—In 1708, *Algebra* was apply'd to the Laws of Chance and Gaming, by *R. de Montmort*; and since by *de Moivre*, and *James Bernoulli*.

Thus much for the Progress of *Algebra*.—The Elements of the Art were compil'd and publish'd by *Kersey* in 1671; wherein the *Specious Arithmetick*, and the Nature of Equations are largely explain'd, and illustrated by variety of Examples: The whole Substance of *Diophantus* is here deliver'd; and many Things added concerning *Mathematical Composition* and *Resolution*, from *Ghetaldus*. The like has been since done by *Presfet* in 1694; and by *Ozanam* in 1703.—But these Authors omit the Application of *Algebra* to *Geometry*; which Defect is supplied by *Guisnee* in a *French* Treatise expressly on the Subject, publish'd in 1704; and *L'Hopital* in his *Analytical* Treatise of the Coeic Sections, in 1707.—The Rules of *Algebra* are also compendiously deliver'd by *Sir I. Newton*, in his *Arithmetica Universalis*, first publish'd in 1707; which abounds in choice Examples, and contains several Rules and Methods invent'd by the Author.

Algebra has been also apply'd to the Consideration and Calculus of Infinites; from whence a new and very extensive Branch of Knowledge has arose, call'd the *Doctrine of Fluxions*, or *Analysis of Infinites*, or the *Calculus Differentialis*. See FLUXIONS.—The Authors on this Subject, see under the ARTICLE ANALYSIS.

ALGEBRAICAL, something that relates to *Algebra*. See ALGEBRA.

In this Sense, we say, *Algebraical* Characters, or Symbols. See CHARACTER.

ALGEBRAICAL Curve, is a Curve, wherein the Relation of the Abscissa to the Semiordinate, may be defin'd by an *Algebraical* Equation. See CURVE.

These are also call'd *Geometrical Lines*. See GEOMETRICAL LINES.

Algebraical Curves stand contradictorily with *Mechanical* or *Transcendental* ones. See MECHANICAL, and TRANSCENDENTAL.

ALGEBRAICAL Solution. See RESOLUTION.

ALGENEB, in *Astronomy*, a Fixed Star of the second Magnitude, on the right side of *Perseus*.—Its Longitude, Latitude, &c. see among the rest of the CONSTELLATION PEARSES.

ALGOL, or *Medusa's Head*, a Fixed Star of the third Magnitude, in the Constellation *Perseus*.—Its Longitude, Latitude, &c. see under the ARTICLE PEARSES.

ALGORISM, a Term used by some *Arabick* Authors for the practical Operation of the several Parts of *Specious Arithmetick*, or *Algebra*. See ALGEBRA.—Sometimes it is also used for the Practice of common *Arithmetick*, by the too common Figures. See ARITHMETICK.

ALGORITHM, an *Arabic* Term, which some Authors, and especially the *Spaniards*, make use of to signify the *Doctrine of Numbers*. See NUMBER.

Algorithm is properly the Art of numbering truly, and readily; and comprehends the six Rules of common *Arithmetick*.—It is sometimes call'd *Logistica Numerandi*. See ARITHMETICK, RULE, &c.

In this Sense, we say, the *Algorithm of Integers*, the *Algorithm of Fractions*, the *Algorithm of Sards*, &c. See FRACTION, SURD, &c.

ALGUAZIL, in the *Spanish* Policy, a Serjeant or Officer, who arrests People, and executes the Magistrate's Orders. See SERJEANT, &c.

ALHANDAL, a Term in the *Arabian* Pharmacy.—The Troches of *Alhandal*, *Trochisci Alhandale*, are a kind of Troches, composed of Colocyntis, Bdellium, and Gum Tragacanth. See TRACHE.

They are esteemed good Purgatives, and are used on divers Occasions. See PURGATIVE.

The Word is formed of the Arabic *Handal*, or *Handbat*, a Name for Colocyntis. See COLOCYNTIS.

ALHIDADE, or ALIADADE, the Index or Label of an Astronomical, or Geometrical Instrument, for taking of Heights or Distances.—The *Alhidade* is a kind of Ruler, moveable on the Centre of the Instrument; and carrying the Sights. See INDEX, SIGHTS, &c. See also ASTROLABE, THEODOLITE, &c.

The Word is *Arabic*, where it signifies the same thing.—In *Greek* and *Latin*, it is called *Stylus*, *Dioptra*, and *Linea Fiducie*, Fiducial Line.

ALIEN, in Law, a Person born out of the King's Allegiance, and consequently not capable of inheriting Lands in *England*, till naturaliz'd by Act of Parliament. See NATURALIZATION.

Of these there are two Kinds, viz. *Alien-Friends*, who are of those Countries which are at peace and league with us; and *Enemies*, who are of Countries at war with us.

A Man born out of the Land, so it be within the Limits of the King's Obedience beyond the Seas; or of *English* Parents out of the King's Obedience, so the Parents at the Time of the Birth be of such Obedience, is no *Alien*, but a Subject of the King: Stat. 2. 25 *Edw.* III. commonly called the Statute *De natis ultra mare*.

Add, that if one born out of the King's Allegiance come and dwell in *England*; his Children begotten here are not *Aliens*, but *Denizens*: See DENIZEN.

ALIEN PRIORIES, were those Cells of Monks, formerly established in *England*, which belonged to foreign Monasteries. See PRIORY, ABBY, MONASTERY, &c.

ALIENATION, ALIENATIO, in Law, the Act of making a thing another Man's; or the altering, and transferring the Property and Possession of Lands, Tenements, or other Things, from one Man to another. See TRANSFERRING, POSSESSION, &c.

To alienate, or alien, in *Mortmain*, is to make over Lands or Tenements to a Religious Community, or other Body Politick. See MORTMAIN.

To alienate in Fee, is to sell the Fee-simple of any Land, or other incorporeal Right. See FEE.

Crown-Lands are only alienable under a Faculty of perpetual Redemption. See REDEMPTION.

The Council of *Lateran*, held in 1123, forbids any Cleric to alienate his Benefice, Prebend, or the like. See PREBEND, &c.

ALIENATION-OFFICE, is an Office to which all Writs of Covenants and Entry, upon which Fines are levied and Recoveries suffer'd, are carried; to have Fines for Alienation set and paid thereon. See COVENANT, RECOVERY, FINE, &c.

ALIFORMES Processus, in Anatomy, the Prominences of the *Ox Carneiforme*. See CONIFORMES.

ALIFORMES Musculi, a Pair of Muscles, arising from the *Pterygoide* Bone, and ending in the Neck of the lower Jaw, towards the internal Seat of the Head. See PTERYGOIDES, &c.

They are thus called from the Latin *Alia*, Wing, and *Forma*, Shape; as resembling Wings.

ALIMENT, ALIMENTUM, Food, is a physical Sense, is whatever may be dissolved and turn'd into Chyle, by the Liquor of the Stomach, or the Natural Heat; so as to be afterwards converted into Blood, for augmenting the Body, or repairing the continual Expence of Parts. See FOOD, CHYLE, BLOOD, NUTRITION, &c.

The Word is *Latin*, form'd of the Verb *Alere*, to nourish.

ALIMENTARY, ALIMENTAL, something that relates to Aliment, or Food. See FOOD.

The ancient Physicians hold that every Humour consists of two Parts; an *Alimentary*, and an Excrementitious one. See HUMOUR, and EXCREMENT.

ALIMENTARY Duct, *Ductus Alimentalis*, is a Name given, by Dr. *Tyson* and some others, to that Part of the Body thro' which the Food passes, from its Reception into the Mouth, to its Exit at the Anus; including the Gula, Stomach, and Intestines. See DUCTUS ALIMENTALIS, STOMACH, &c.

Alimentary Duct is sometimes also understood of the Thoracic Duct. See THORACIC DUCT.

ALIMENTARI Pueri, &c. in Antiquity, were certain Children maintained and educated by the Munificence of the Emperors, in a sort of publick Places, not unlike our Hospitals. See HOSPITAL.

Trojan was the first that brought up of these *Alimentary Boys*. He was imitated by *Adrien Antoninus Pius* did the same for a Number of Maids, at the Solli-

citation of *Fausina*: And hence, in some Medals of that Emperour, we read PUELLÆ FAUSTINIANÆ.—*Alexander Severus* did the like, at the Request of *Mamma*; and the Maids thus educated were called *Mammæe*.

ALIMONY, ALIMONIA, in Law, antiently signify'd Nourishment, or Maintenance; but in a more modern Sense, denotes that Portion, or Allowance which a married Woman sues for, upon any occasional Separation from her Husband, wherein she is not charged with Elopement or Adultery. See WIFE, DOWER, &c.

This was antiently called *Rationabile Effortorium*, Reasonable Maintenance, and was recoverable in the Spiritual Court; but now only in Chancery.

ALIQUANT PART, is that which will not measure or divide any Number exactly, but some Remainder will still be left.—Or, an *Aliquant Part*, is that which being taken any Number of times, is always either greater or lesser than the Whole. See PART, MEASURE, &c.

A Table of Aliquant Parts of a Pound, see under the Article MULTIPLICATION.

Thus, $\frac{1}{2}$ is an *Aliquant Part* of 12; for being taken twice, it falls short, and when taken three times it exceeds 12.

ALIQUOT PART, is such Part of any Number, or Quantity, as will exactly measure it, without any Remainder.—Or, it is a Part, which being taken a certain Number of times, becomes equal to the Whole, or Integer. See PART, &c.

Thus, $\frac{1}{3}$ is an *Aliquot Part* of 12; because being taken four times, it will just measure it.

The Word is form'd of the Latin *Aliquotus*, any number of times.

A Table of Aliquot Parts of a Pound, see under the Article MULTIPLICATION.

ALKAHEST, or ALCAHEST, in Chymistry, an universal Menstruum or Dissolvent, wherewith some Chymists have pretended adequately to resolve all Bodies into their first Matter. See MENSTRUUM, DISSOLVENT, MATTER, &c.

Those two eminent Adepts, *Paracelsus* and *Helmont*, expressly declare, that there is a certain Fluid in Nature, capable of reducing all fabularious Bodies, as well homogeneous as mixed, into their *Ens primum*, or Original Matter wherof they are compos'd; or into an uniform equable and potable Liquor, that will unite with Water and the Juices of our Bodies, yet retain its feminal Virtues; and if mixed with it self again, thereby be converted into pure elementary Water.—Whence they also imagin'd, it would at length reduce all Things into Water. See WATER.

This Declaration, seconded by the Affirmation of *Helmont*, who religiously swears himself possess'd of the Secret, has excited the succeeding Chymists and Alchymists to the Pursuit of so noble a Menstruum. Mr. *Boyle* was so fond of it, that he frankly acknowledges he had rather have been Master thereof than of the Philosopher's Stone. See ALCHYMY.

Indeed, 'tis not difficult to conceive, that all Bodies might originally arise from some first Matter, which was once in a fluid Form.—Thus, the primitive Matter of Gold is, perhaps, nothing more than a ponderous Fluid, which from its own Nature or a strong Attraction between its Parts, afterwards acquires a solid Form. See GOLD.—And hence, there does not appear any Absurdity in the Notion of an universal *Ens*, that resolves all Bodies into their *Ens genitale*.

The *Alkabeft* is a Subject that has been canvassed by an infinite Number of Authors; as, *Pantaleon*, *Philalethes*, *Tachenius*, *Ludovicus*, &c.—*Borbaeus* says, a Library might be collected out of 'em. *Weidenfels*, in his Treatise de Secretis Adeptorum, has given us all the Opinions that have been entertained about it.

The Term *Alkabeft* is not peculiarly found in any Language: *Helmont* declares he first observed it in *Paracelsus*, as a Word that was unknown before the Time of that Author, who in his second Book, *De viribus Membrarum*, treating of the Liver, has these Words: *Est etiam Alkabeft liquor, magnam hepatis conservandi & confortandi, &c.* "There is also the Liquor *Alkabeft*, of great efficacy in preserving the Liver; as also in curing hydropical and all other Difficases arising from Disorders of that Part. If it have once conquer'd its like, it becomes superior to all other hepatick Medicines; and tho the Liver it self were broken and dissolved, this Medicine should supply its Place."

'Tis this single Passage of *Paracelsus*, that excited the succeeding Chymists to an Inquiry after the *Alkabeft*; there being but one other indirect Expression about it in all his Works.

Now it being a frequent Practice with this Author to transpose the Letters of his Words, and to make use of Abbreviations, and other ways of Concealment; as in *Tarsar*, which he would write *Sutrarar*; for *Nitrum*, *Mutrus*, &c. 'tis suppos'd *Alkabeft* may be a Word thus disguis'd.—

Hence some imagine it formed of *Alkali est*; and accordingly, that it was the Alkaline Salt of Tartar volatilis'd. This seems to have been *Glauber's* Opinion; who indeed performed surprising things with such a Menstruum upon Subjects of all the three Kingdoms.

Others will have it the German Word *Algeist*, q. d. wholly spirituous, or volatile; Others are of Opinion, that *Alkabeß* is taken from *Salis-geist*, which signifies Spirit of Salt; for the Universal Menstruum, 'tis said, is to be wrought from Water; and *Paracelsus* himself calls Salt the Centre of Water, wherein Metals ought to die, &c.—In effect, Spirit of Salt was the great Menstruum he used on most Occasions.—The Commentator on *Paracelsus*, who gave a Latin Edition of his Works at *Delft*, assures that the *Alkabeß* was Mercury, converted into a Spirit.—*Zewel-fer* judg'd it to be a Spirit of Vinegar rectify'd from Verdigrise.—And *Starkey* thought he discover'd it in his Soap.

There have been some synonymous and more significant Words used for the *Alkabeß*.—The elder *Helmont* mentions the *Alkabeß* by the compound Name of *Ignis-aqua*, Fire-Water; But he here seems to mean the circulated Liqueur of *Paracelsus*; which he terms *Fire*, from its Property of consuming all things; and *Water*, on account of its liquid form.—The same Author calls it *Ignis-gebennus*, infernal Fire; a Word also used by *Paracelsus*: He also intitles it *Sonnum* & *Felsciummum omnium salium*, the principal and most successful among Salts, which having obtained the highest degree of Simplicity, Purity, and Subtility, alone enjoys the Faculty of remaining unchanged and unimpaired by the Subjects it works on, and of dissolving the most stubborn and untractable Bodies, as Stones, Gems, Glass, Earth, Sulphur, Metals, &c. into real Salt, equal in weight to the Matter dissolved; and this with as much ease as hot Water melts down Snow.—This Salt, continues he, by being several times cohobated with *Paracelsus's* *Sal circulatum*, loses all its Fixedness; and at length becomes an insipid Water, equal in quantity to the Salt it was made from.

Helmont is express that this Menstruum is entirely the Product of Art, and not of Nature.—'Tis, says he, a homogeneous Part of elementary Earth may be artificially converted into Water, yet I deny that the same can be done by Nature alone; for no natural Agent is able to transmute one Element into another.' And this he offers as a Reason why the Elements always remain the same.—It may let some light into this Affair, to observe that *Helmont*, as well as *Paracelsus*, took Water for the universal Instrument of Chymistry, and Natural Philosophy; and Earth for the unchangeable Basis of all Things: That Fire was designed as the efficient Cause of all Things; that seminal Impressions were lodged in the Mechanism of Earth; and that Water, by dissolving and fermenting with this Earth, as it does by means of Fire, brings every thing to light; whence originally proceeded the Animal, Vegetable, and Mineral Kingdoms; even Man himself being thus at first created, agreeably to the account of *Moses*.

The great Character or Property of the *Alkabeß*, we have observed, is to dissolve, and change all sublunary Bodies; Water alone excepted.—The Changes it induces proceed thus: 1^o, The Subject exposed to its Operation, is converted into its three Principles, Salt, Sulphur, and Mercury; afterwards, into Salt alone; which then becomes volatile; and at length is wholly turned into insipid Water.—The manner of Application is by roasting the Body proposed to be dissolved, e. g. Gold, Mercury, Sand, or the like, once or twice with the pretended *Alkabeß*; and if the Liquor be genuine, the Body will be converted into its own Quantity of Salt.

2^o, It does not destroy the seminal Virtues of the Bodies dissolved thereby.—Thus, Gold is, by its Action, reduced to a Salt of Gold; Antimony to a Salt of Antimony; Saffron to a Salt of Saffron, &c. of the same seminal Virtues, or Characters with the original Concrete.—By seminal Virtues, *Helmont* understands those Virtues which depend upon the Constitution or Mechanism of a Body, and which make it what it is. Hence, an actual and genuine *Aurum potable* might readily be gained by the *Alkabeß*, as cohering the whole Body of Gold into a Salt, retaining its seminal Virtues, and being withal soluble in Water.

3^o, Whatever it dissolves, may be render'd volatile by a Sand-heat; and if after volatilizing the Solvend, it be dissolv'd therefrom, the Body is left pure insipid Water, equal in quantity to its original self, but deprived of its seminal Virtues.—Thus, if Gold be dissolved by the *Alkabeß*, the Metal first becomes Salt, which is potable Gold; but when the Menstruum is distilled therefrom, 'tis left mere Elementary Water. Whence it appears, that pure Water is the last Production or Effect of the *Alkabeß*.

4^o, It suffers no Change or Diminution of Force by dissolving the Bodies it works on, and therefore sustains no Reaction from them; being the only immutable Menstruum in Nature.

5^o, 'Tis incapable of Mixture, and therefore remains free from Fermentation and Putrefaction; coming off as pure from the Body it has dissolved, as when first put thereon; without leaving the least Foulness behind.

ALKALI, ALKALI, or ALCALY, in Chymistry, a Name originally given, by the *Arabians*, to a Salt extracted from the Ashes of a Plant called *Kali*; and by us Glass-wort, because used in the making of Glass. See KALI, and GLASS.

Afterwards, the Term *Alkaly* became a common Name for the lixivious Salts of all Plants; that is, for such Salts as are drawn by Lyeon from their Ashes. See LIXIVIOUS, and ASHES.

And hence, again, in regard the original *Alkaly* was found to ferment with *Acids*; the Name has since become common to all volatile Salts, and all terrestrial Substances which have that Effect. See ACID.

ALKALI, then, in its modern extensive Sense, is any Substance, which being mixed with an Acid, an Ebullition and Effervescence ensues thereon. See EFFERVESCENCE, &c.

And hence arises the grand Division of Natural Bodies into the two opposite Classes of *Acids* and *Alkalies*. See ACID.

Boerhaave scarce takes this Circumstance to be enough to constitute any determinate Class of Bodies.—In effect, *Alkalies* are not of one similar homogeneous Nature; but there are two several sorts.

The first obtain'd from Vegetable and Animal Substances, by Calcination, Distillation, Putrefaction, &c. such are Spirit of Urine, Spirit of Hartshorn, Salt of Tartar, &c.—The second are of the terrestrial Kind; as Shells, Bole, &c.

The two Species, *Boerhaave* observes, differ widely from each other; having scarce any thing in common, but their being effervescible with *Acids*.—The one is a Class of native, fixed, scentless, insipid, mild, astringent, fossil Bodies. The other a Set of such as are volatile, odorous, sapid, caustic, aperitive, and procured by Art.

Hence, adds the same Author, mere Effervescence with *Acids*, must be allow'd to be of it self insufficient to determine the Nature of an *Alkaly*; and that such a Name, which properly denotes a caustic fiery Substance, should not be affixed to any mild and gentle Body, as Chalk, &c. but other Properties and Considerations are to be taken in, and particularly their Taste, manner of procuring, and the Change of Colour they produce in Bodies.

With regard to this last Circumstance, those Liquors which being pour'd on Syrup of Violets, change it of a green Colour, are *Alkalies*; as those which turn it red, *Acids*.—Thus Oil of Tartar turns it of a kindly green; and Oil of Vitriol of a Carmine red: And if to the Syrup thus made red by Oil of Vitriol, Oil of Tartar be pour'd, it turns that part wherewith it comes in contact, green; leaving the rest red; and the like holds of Oil of Vitriol, pour'd on Syrup made green by Oil of Tartar.

To the like effect *M. Homberg* observes, that a mere heat and bubbling arising upon the Admixture of a Body with an Acid, does not seem an adequate Criterion of the *Alkaline* Nature; since distill'd Oils of all kinds are found to do thus much; and many of 'em with more vehemence than *Alkalies* themselves, so as sometimes even to take fire, which *Alkalies* never do.

To the Definition and Character of an *Alkaly* therefore, *M. Homberg* adds this Circumstance; 'that after the Action, the Mixtures coalesce and shoot into a Salt, or saline Matter.'—This excludes the Oils above mention'd; which do not, after Effervescence, unite with the *Acids* into a saline Substance, but rather compose a resinous one.

All lixivious Salts have these Characters of *Alkaly*.—And not only lixivious, but also all arinous Salts; which are constantly found to imbibe *Acids* with great eagerness, and after Ebullition, to unite and crystallize with 'em. See URINIOUS SALT.

Hence we have two Kinds of *Alkaly Salts*, viz. *Fixed*, or *Lixivious Alkalies*; and *Volatile*, or *Urinous ones*. See SALT; see also *FIX'D*, *VOLATILE*, &c.

But beside *Alkaly Salts*, there are an Infinity of other Bodies, not saline; which answer to the Characters of *Alkaly*, i. e. produce much the same Effects with *Acids*, as the *Alkaly Salts* above mention'd.—And these *alkaline* Matters are in other respects of different Natures.

Some, e. g. are merely *Earthy*; as Quick-lime, Marble, Seal'd Earths, &c.—Others are *Metallic*; among which, scarce have their peculiar and appropriate *Acids* to act on 'em, as Gold, Tin, and Antimony, which only dissolve with Aqua Regia; Silver, Lead, and Mercury, with Aqua fortis; and the others with other sorts of *Acids*, as Iron, Copper, Zinc, Bismuth, &c.—There are others of the Animal Class; consisting, 1^o, of stony Matters found in the Viscera of certain Species; as the Calculus humanus, Bezoards, Crabs Eyes, &c.—2^o, Testaceous Matters and Shells; as Pearls, Oyster-shells, Cuttle-fish Bones, the Shells or Coats of Lobsters, Crabs, &c.—3^o, The Parts of Animals, which

which by length of time, or some other Cause, are become stony, or even earthy; as the fossil Unicorn's Horn, &c.—Lastly, almost all Stone Marine Plants, as Coral, &c.

After all, the *Alkaline* Property does not appear to be native, but rather producible by Art.—This Opinion seems to have been first started by *Helmout*: before him, it was the standing Opinion, that fix'd *Alkalies* pre-existed in mix'd Bodies; and were only separated or extricated from the Parts of the Compound. *Helmout* advanced, that they did not thus pre-exist in their *alkaline* Form, but were Productions of the Fire, by whose violent Action, part of the Salt which in the Concrete is all volatile, lays hold of some part of the Sulphur of the same Body; and both melting together, are fixed into an *Alkali*: which Fixation he exemplifies, by what happens when Salt-petre and Arsenick, tho' both volatile, being exposed to the Fire, are fix'd by the Operation thereof, and made to fix each other.

Some late Chymists, and particularly *M. Geoffroy*, carry the Point something further, and assert, that all *Alkali Salts* whatever, both fix'd and Volatile, are wholly the Effect of Fire; in that before any Action of the Fire, they did not pre-exist in the Mixt wherein they afterwards appear'd. See *FIRE*.

Notwithstanding all the seeming Opposition and Hostility between Acids and *Alkalies*, they may be converted into one another; at least, Acids are convertible into *Alkalies*; as is shewn at large by *M. Geoffroy* in a Discourse express'd, in the *Mém. de l'Acad.* An. 1717, where the Nature and Origin of *Alkalies* is excellently explain'd.

Alkali Salts, according to this Author, are only Acids concentrated in little Molecules of Earth, and united with certain Particles of Oil, by means of Fire.

When an Acid, which we conceive in the general as a small, solid, pointed Spiculum, happens to be absorb'd or concentrated in a proper Portion of Earth; the whole becomes denominat'd a *Saline Compound, Neutral, or Intermediate Salt*; by reason the Acid, thus included in a Sheath, cannot excite the same Savour as when disengag'd therefrom; and yet excites a saline Taste: and for this reason is compound, &c.

Now, Fire is the only Agent capable of disengaging the Acid, from the Earth it is thus invested withal. Upon this, the Acid being lighter than the Earth, rises, and evaporates; leaving the Earth at the bottom of the Vessel; which for this Reason is call'd *Fix'd*, in contradistinction to the Acid, which is *Volatile*. This Earth, thus bereav'd of its Acid, is left with its Pores open and empty, which before were fill'd; and withal, in sustaining the Action of Fire, it necessarily retains some of the Particles thereof, which give it an acrimonious Taste, that mere Earth could never have.—From this Taste it is call'd *Salt*; and from its Pores being open, and thus dispos'd to admit and imbibe new Acids, it is call'd *Alkali Salt*. See *EARTH, SALT, &c.*

Now, it is not to be imagin'd, that an Earth which has once been impregnated with Acids, can ever be perfectly divested thereof; there will still remain some, tho' much less than before. So that an *Alkali* may be conceived as only a too small Quantity of Acid, included in too large a Quantity of Earth.

The visible and sensible Fire is not the only Agent capable of separating Acids from their Earth; Fermentation has the same Effect, in virtue of that pure active Fire produced or concern'd therein. *Alkalies*, therefore, are the Production, either of the one, or the other Fire; and the same may be said of the Acids disengag'd therefrom; it being the Disunion of the Parts of the same Salt occasion'd by Fire, that yielded both the Acids as well as the *Alkalies*. All the Difference is, that the *Alkali* imbibes and retains certain Corpuscles of the Fire, whereas nothing foreign is superadd'd to the Acid.

On this Principle every Acid is volatile, and every *Alkali* should be fix'd, if the *Alkali* were only Earth: But, in regard the little Acid still remaining in the *Alkali*, may be united with a Portion of Oil, as well as a Portion of Earth; and Oil is known to be volatile; the Compound, that is, the *Alkali*, must be volatile, in case the Oil prevail therein.

In this Case, the *Alkali* is found to have a strong, penetrating, urinous Taste and Smell; and is what we call a *Volatile urinous Alkali Salt*.

These things well consider'd; it will be easy to assign what must ensue upon the Separations, or new Unions of the Parts of a Mixt.

An Acid, 'tis evident, may become an *Alkali*, in that after having been separated from its Matrix, it may be restored in a small Quantity to another Matrix, either wholly earthy or earthy and oleaginous.—In the first Case, it will become a *fix'd Alkali*; in the second, it may be, a *Volatile Alkali*, if in the supposed Matrix the Proportion of Oil prevail over that of Earth; and in this Case it will be *urinous*.

Again, what before was a fix'd *Alkali*, may become *Volatile* and *Urinous*, by depositing or letting go part of its Earth, and taking Oil in its stead.

These Transmutations are not found equally easy and practicable in the three different Kinds of Mixts, or the three Kingdoms; by reason of the Diversity of Circumstances that must concur thereto.—They are much the most rare and difficult in the Mineral Realm; by reason, no doubt, that the Parts of Minerals are more closely ty'd together, and have, as it were, less play. The only instance Chymistry hath hitherto produc'd, of a Mineral Acid's being converted into a *fix'd Alkali*, is in the Operation of fixing Salt-petre.

The Vegetable Kingdom, it is observ'd, furnishes a large Quantity of fix'd *Alkali Salt*; and a little volatile *Alkali*: The Animal Kingdom, on the contrary, affords a deal of volatile *Alkali Salt*, and but little fix'd. The Fossil Kingdom affords a very little native fix'd *Alkali Salt*, as the *Egyptian Natrum*, and the Salts procur'd by Liqor from saline Earth about *Smyrna* and some other Places of the East; and the Chymists have also found a Method of converting Nitre into a fix'd *Alkali*: But no body hath hitherto produc'd a volatile *Alkali* from the Acids of the Mineral Kingdom.—And yet, if Acid Salts of the Vegetable Kind be convertible either into fix'd or volatile *Alkalies*, why may not Mineral Acids be susceptible of the same Change? since Vegetable Acids are originally no other than Mineral ones: For, from whence but the Earth should Plants derive their acid Juice?

In effect, *M. Geoffroy* has at length shewn the Operation feasible, by an actual Transformation of the same Acid, Nitre, into a volatile urinous *Alkali*. See the *Mém. de l'Acad.* ubi supra. See also *SALT-PETRE, &c.*

By the way, it is to be noted, that the Influence of *Egyptian Natrum* or Nitre, furnishes an Objection against the general Assertion of all *Alkalies* being artificial, or produc'd by Fire: Mr. *Boyle*, who had some of this Salt sent him by the *English Ambassador at the Porte*; found that Vinegar would work briskly on it, even in the Cold; "Whence, says he, it appears, that the *Egyptian Nitre*, acknowledged to be a native Salt, and made only by the Evaporation of the superfluous Water of the Nile, is yet of a lixivious Nature, or at least abounds with Particles that are so, produced without any precedent Incineration, and the Matter of it exposed to no Violence of the Fire, to make it afford an *Alkali*." *Prodromus of Chym. Princip.*—He adds, "However, he does not know any other Body in Nature, except this, wherein the *Alkaline Properties* are not produc'd." *Ibid.*—And proceeds to give Instances of *Alkalies* being made from Sea Salt, and other Acids; and shews, "how the same Body, without the Addition of any other Salt, may by varying the manner of the Fire's Application, be made either to afford little else than Acids, or a greater or less Quantity of *Alkali*." *Id. ibid.*

For the Theory of the Operation of Acids upon *Alkalies*. See *ACID*.

Hypothesis of ALKALY and Acid.

Tacbenius, and *Spyrius de la Boe*, follow'd by the Tribe of vulgar Chymists, strenuously assert *Sal Alkali* and Acid to be the only universal Principles of all Bodies; and by means hereof, account for the Qualities of Bodies, and the rest of the Phenomena of Nature; particularly those in the Animal Oeconomy.—In a word, *Alkali* and Acid are substituted in the stead of Matter, and Motion. See *PRINCIPLE, ELEMENT, &c.*

Mr. *Boyle* attacks this Hypothesis with great force of Argument.—In effect, 'tis at best but precarious to affirm, that Acid and *Alkaline* Parts are found in all Bodies.

When the Chymists use *Aqua fortis* dissolve Filings of Copper, they conclude, that the acid Spirit of the Menstrum meet in the Metal with an *Alkali*, upon which they work; but how unsafe a way of arguing this is, appears hence, that Spirit of Urine, which is allowed a volatile *Alkali*, and accordingly makes a great Consist with *Aqua fortis*, readily dissolves Filings of Copper, and more genuinely than the acid Liqor.—So, when they see the Magistery of Pearl or Coral, prepared by dropping Oil of Tartar into the Solution of those Bodies made with Spirit of Vinegar; they ascribe the Precipitation to the fixed *Alkali* of the Tartar, which mortifies the Acidity of the Spirit of Vinegar; whereas, the Precipitation would no less ensue, if, instead of the *alkalinate* Oil of Tartar, that strong Acid, Oil of Sulphur per *Campanum*, were used.

It may also be doubted, whether it be just to suppose, that when an Acid is discover'd in a Body, the Operation of that Body on another, abounding with an *Alkali*, must be the Effect of a Consist between those two Principles.—For, an acid Body may do many things, not simply as an Acid, but on account of a Texture or Modification, which endows it with other Qualities as well as Acidity. Thus, when the Chymists use an acid Menstrum, as *Aqua fortis*, Spirit of Salt, Oil of Vitriol, &c. dissolve Iron, they presently ascribe the Effect to an Acidity in the Liqors; tho' well dephlegm'd urinous Spirits, which they hold to have a great

tipathy to Acids, will readily dissolve crude Iron even in the Cold.

Further, the Patrons of this Hypothesis, seem arbitrarily to have assigned Offices to each of their two Principles, as the Chymists do to each of their *tria prima*; and the Peripateticks to each of their four Elements.—But 'tis not enough to say, that an Acid, for instance, performs these things, and an Alkali those; and that they divide the Operations and Phenomena of natural Bodies between them: Assertions of such moment ought not to be received, without further Proof. Indeed, the very Distribution of Salts into Acids and Alkalies, has somewhat arbitrary in it; there being not only several things wherein the Acids agree with Alkalies, but also several things wherein each differs from it self.—To say nothing of the Diversity of fix'd and volatile Alkalies above-mention'd; some, as Salt of Tartar, will precipitate the Solution of Sublimat into an Orange-rummy; others, as Spirit of Blood and Hartshorn, precipitate such a Solution into a milky Substance; and Oil of Tartar very slowly operates upon Filings of Copper, which Spirit of Urine and Hartshorn will readily dissolve in the Fire. And among Acids themselves the difference is no less; for some of them will dissolve Bodies that others will not: and this even where the Menstruum that will not dissolve the Body, is reputed much stronger than that which does; as dephlegmated Spirit of Vinegar will dissolve Lead reduced to minute Parts in the cold, which is an Effect that Chymists expect not from Spirit of Salt. Nay, one Acid will precipitate what another has dissolved, and *contra*; as, Spirit of Salt will precipitate Silver out of Spirit of Nitre. Add, the Properties peculiar to some particular Acids, as that Spirit of Nitre or Aqua fortis, dissolves Camphire into an Oil, and coagulates common Oil into a consistent Substance like Tallow; and tho it will both corrode Silver, Copper, Lead, and Mercury, and keep them dissolved, it quickly lets fall almost the whole Body of Tin.

'Tis no wonder that the Definitions given of Acid and Alkali should be inaccurate and superficial; since the Chymists themselves do not seem to have any determinate Notion of sure Marks, whereby to know them distinctly.—For, to infer, that, because a Body dissolves another, which is dissoluble by this or that known Acid, the Solvent must also be Acid; or to conclude, that, if a Body precipitates a dissolved Metal out of a consentedly acid Menstruum, the Precipitant must be an Alkali, is precarious: since Filings of Spelter will be dissolved by some Alkalies, viz. Spirit of Sal Ammoniac, &c. as well as by Acids; and Bodies may be precipitated out of acid Menstrua, by other Acids, and by Liquors wherein there appears not the least Alkali. Add, that a Solution of Tin-glass, made in Aqua fortis, would be precipitated both by Spirit of Salt, and by common Water.—Nor does that other Criterion of Acids and Alkalies, viz. the Heat, Commotion, and Bubbles excited upon their being put together, appear more determinate; since almost any thing stirred variously and vehemently to agitate the minute Parts of a Body, will produce heat in it.—Thus, the Water be neither an Acid nor an Alkali, it will quickly grow very hot, not only with the highly acid Oil of Vitriol, but with the alkalizate Salt of Tartar. See HEAT.

Neither is the Production of Bubbles, the accompany'd with a hissing Noise, a certain Sign; such Production not being a necessary Effect of Heat, excited by Confusion, but depending on the peculiar Disposition of the Bodies put together, to extricate, produce, or intercept Particles of Air.—Hence, as Oil of Vitriol, mix'd in a due Proportion with fair Water, may be brought to make the Water very hot, without exciting Bubbles; so Mr. Boyle has found, that alkalizate Spirit of Urine, drawn with some kinds of Quick-lime, being mixed with Oil of Vitriol moderately strong, would afford an intense heat, whilst it produced either no manifest Bubbles at all, or scarce any; tho the urinous Spirit was strong, and in other Trials operated like an Alkali: and tho with the Spirit of Urine made *per se*, in the common way, Oil of Vitriol will produce a great hissing, and a multitude of conspicuous Bubbles. On the other side, some acid Spirits, as of Verdegreece, made pure, poured on Salt of Tartar, will frequently make a Confusion, and produce a large froth; tho not accompany'd with any manifest heat. See EVOLUTION.

Many make the Taste the Touchstone whereby to try Acids and Alkalies: But there is a multitude of Bodies, wherein we can so little discern by the Taste which of the Principles is predominant, that one would not suspect there was a Grain of either of them therein: Such are Diamonds, most Gems, and many ignoble Stones; Gold, Silver, Mercury, &c. There are also Bodies abounding with acid or alkalizate Salts; which either have no Taste, or a quite different one from that of the chymical Principles.—Thus, the Venice-glass be in great part compos'd of a fix'd Alkali, it is insipid on the Palate: And Crystals of Silver and Lead, made with Aqua fortis, and containing numerous acid Particles of the Menstruum, manifest nothing of Aci-

dity in the Mouth; the latter having a saccharine Sweetness, and the former an extreme Bitterness. And even in Vegetable Substances of a manifest Taste, 'tis not easy to know by that, whether it be the Acid or the Alkaline Principle which predominates in 'em: As, in the essential Oils of Spices, and the gross empyreumatic Oils of Wood; and even in Alcohol of Wine, which some contend to be an Acid, and others, an Alkali. *Imperfect of Chym. Doct. of Qual.*

ALKALIZATE, or ALKALINE Bodies, among Chymists, are such as have their Pores naturally so formed, that they are fit to be pierc'd, and put into Motion by the Points of an Acid poured upon them. See ALKALY.

ALKEKENG, a Medicinal Fruit, produced by a Plant of the same Denomination, and popularly called *Winter-Cherry*.

The Plant bears a near resemblance to Solanum or Nightshade; whence it is frequently called in Latin by that Name, with the Addition or Epithet of *Vesicarium*.—It is sometimes also called *Malicacabum*.

The Fruit is celebrated for its lithontriptic Quality; and prescribed to cleanse the Urinary Passages of Gravel, and other Obstructions. Its detravive Quality also recommends it against the Jaundice, and other Disorders of the Viscera.

The *Trochiscus Alkekengi*, prepared from it, are but little prescrib'd in the modern Practice. See TROCHUS.

ALKERMES, in Medicine, &c. a Term borrow'd from the Arabs.—The Confession of Alkermes, is a celebrated Remedy, of the Form and Consistence of a Confection; whereof the Kermes Berries are the Basis. See CONFECTIO, and KERMES.

The other Ingredients, as prescribed by the College, are Pippin-Cyder, Rose-Water, Sugar, Ambergrease, Musk, Cinnamon, Aloes Wood, Pearls, and Leaf Gold.—But the Sweets are usually omitted.

It is much used as a Cordial; especially, says Dr. Quincy, among Female Prescribers, and in compliance to them: But that Author decries its Value in that Intention, and thinks it ought only to be regarded as a Sweetener.

ALLANTOIS, ALLANTOIDES, in Anatomy, a third Coat or Membrane of a Fetus, investing part thereof, in manner of a Scarf, or Collar, extending from the *Cartilago Xiphoides*, to the bottom of the Hips. See FETUS.

The Allantois makes part of the *Secundine*.—It is conceived as an urinary Tunic, placed between the Amnion and Chorion, which by the Navel and Urachus receives the Urine that comes out of the Bladder. See SECUNDINE, and URINE.

'Tis a Point controverted among Anatomists, whether the Allantois be found in Man.—M. Drelincourt, Professor of Anatomy at Leiden, in an express Dissertation on this Membrane, maintains it peculiar to the Ruminating Kind. See RUMINANT.

Dr. Hale, on the contrary, has given an accurate Description of the human Allantois; and assign'd the Reason why those who believed its Existence had not before fully found it out; and also an answer to those who yet deny its reality. See *Philosoph. Transact.* N^o 271.

The Word is derived from *allus*, *Farcimen*, a Gut, and *latus*, *Forma*, Shape; because, in many Brutes, it is in the Shape of a Gut-pudding; but in Man, and some others, it is round.—It is likewise called *Farcimantal*.

ALLEGATION, the Citation, or Quotation of an Authority, Book, Passage, &c. to make good any Point, or Assertion. See QUOTATION, CITATION, AUTHORITY, &c.

ALLEGIANCE, the legal Faith and Obedience, which every Subject bears to his Prince. See KING, FEALTY, &c.

This was antiently called *Ligence*; from the Latin *Ligare*, and *Alligare*, to bind, *q. d. Ligamen fidei*. See LIGOR. Oath of ALLEGIANCE, is an Oath given in England to the King, in quality of a Temporal Prince or Sovereign; to distinguish it from the Oath given to him as Primate, or supreme Head of the Church, which is called the *Oath of Supremacy*. See OATH; see also KING, and SUPREMACY.

In this Sense, the Word *Allegiance* comes from the Latin *ad Legem*.—The Quakers are dispensed with not taking the Oath of Allegiance; and in lieu thereof are only enjoind a Declaration. See DECLARATION.

ALLEGORY, ALLEGORIA, a Figure in Rhetoric, whereby we make use of Terms which in their proper Signification, mean something else than what they are here intended to denote: Or, it is a Figure, whereby we say one thing, expecting it shall be understood of another, to which it alludes. See FIGURE, ALLEUSION, &c.

An Allegory is properly a Series, or Continuation of Metaphors. See METAPHOR.

Such is that beautiful Allegory in Horace, Lib. I. Od. 14.

O Navis, referent in mare te novi Fluctus, &c.

Where the *Ship*, stands for the Republick; *Waves*, for Civil War; *Port* for Peace and Concord; *Oars* for Soldiers; *Mariners* for Magistrates, &c.

The Old Testament is supposed by many to be a perpetual Allegory, or typical Representation of the Mysteries of the New. See TYPE.

In effect, Allegory has a good Share in most Religions.—The Jews, we know, abound with 'em: *Philo Judæus* has three Books, *Of the Allegories* in the History of the Six Days. See HEXAMERON.

Nor are the Heathens without Allegories in their Religion: it may even be said, that the Use hereof is of a much earlier standing in the *Gentile*, than in the *Jewish* World.—Some of their Philosophers undertaking to give a Rational of their Faith, and to shew the Reason and Scope of their Fables, and the ancient Histories of their Gods; found it necessary to put another Construction on 'em, and maintain, that they signify'd something very different from what they seem'd to express.—And hence came the Word *Allegory*: for a Discourse that in its natural Sense, *Est ali-quædam*, signifies something other than what is intended by it, makes what we properly call an *Allegory*.

This Shift they had recourse to, in order to prevent People from being shock'd with those Absurdities which the Poets had introduced into their Religion; and to convince the World, that the Gods of Greece had not been those vile Persons which their Histories represented them to be. By this means, the History, as well as the Religion of Greece, was at once converted into Allegory; and the World left to seek for them both in a Heap of Fables, few of which have been solved to any purpose to this Day. See MYTHOLOGY.

The Jews finding the Advantages of this way of explaining Religion; made use of it to interpret the Sacred Writings, so as to render 'em more palatable to the Pagans.

The same Method was adopted by the primitive Writers of Christianity. See ALLEGORICAL.

ALLEGORICAL, something containing an Allegory. See ALLEGORY.

The Divines find divers Senses in Scripture; a Literal, a Mythical, and an Allegorical Sense. See MYSTIC, &c.

The Prophecies, in particular, deliver'd in the Old Testament, are said to be many of 'em accomplish'd in the New; not in their primary and literal, but in their secondary, or Allegorical Sense. See PROPHECY.

The Fathers, and other antient Interpreters of Scripture, are almost all *Allegorists*; as *Origen*, *Clemens Alexandrinus*, *St. Augustin*, *Gregory Nazianzen*, &c. See further under the Article TYPE.

ALLEGRO, in Music, a Word used by the *Italians* to denote one of the six Distinctions of Time. See TIME.

Allegro expresses a very quick Motion, the quickest of all exceeding *Presto*.

The usual six Distinctions succeed each other in the following Order, Grave, Adagio, Largo, Vivace, Allegro, and Presto.

It is to be observed, that the Movements of the same Name, as *Adagio* or *Allegro*, are swifter in Triple than in Common Time.—The Triple $\frac{3}{4}$ is usually *Allegro*, or *Vivace*; the Triples $\frac{3}{8}$, $\frac{3}{16}$, $\frac{3}{32}$, are most commonly *Allegro*. See TRIPLE.

ALLELUJAH. See HALLELUJAH.

ALLEMAND, ALMAIN, a kind of grave, solemn Musick, where the Measure is good, and the Movement slow. See MUSIC, SONG, MEASURE, &c.

ALLER Good, in our antient Writers.—The Word *Aller* serves to make the Expression of superlative Signification. So, *Aller Good* is the greatest Good. Sometimes it is wrote *Alder*.

ALLERION, or ALERION, in Heraldry, as sort of Eagle, without either Beak, or Wings. See EAGLE.

The *Allerion* appears much the same with the *Martlet*, except that the Wings of the former are shut, and they are represented, as it were, Puffant; whereas the *Allerion* is spread, and is represented pale. Add,

that among our *Heralds*, the *Martlet* has a Beak. See MARTLET.

The Name is *French*; and is said to have been introduced for the Word *Eagle*: 'Tis added, that the Practice of calling Eagles, *Allerions*, and of representing 'em spread, without Feet and Beaks, is not above an hundred Years old. Hence, *Mensage* derives the Word from *Aquilaria*, a Diminutive of *Aquila*.

ALLEU, or ALLODS, in our antient Customs. See ALODIAL.

ALLEVIARE, in old Records, to levy or pay an accustomed Fine or Composition. See LEVY.

ALLEVIATION, the Act of *alleviating*, i. e. of allaying, or easing any Grievance: as a Pain, Disease, &c. See PALLIATING; see also PAIN, &c.—The Word is compounded of *ad*, and *levio*, Light.

ALLEY, in Gardening, a Strait parallel Walk, border'd or bounded on each hand with Trees, Shrubs, or the like. See GARDEN, WALL, EDGING, &c.

Alleys are usually laid either with Grass or Gravel. See GRASS-WALK, and GRAVEL-WALK.

An *Alley* is distinguish'd from a *Path*, in this; that in an

Alley there must always be room enough for two Persons, at least, to walk a-breast: So that it must never be less than five Feet in breadth; and there are some who hold that it ought never to have more than fifteen.

Counter-Alleys, are the little *Alleys* by the Sides of the great ones.—A *Front-Alley*, is that which runs first in the Face of a Building.—A *Transverse-Alley*, that which cuts the former at right Angles.—A *Diagonal-Alley*, that which cuts a Square, Thickset, Parterre, &c. from Angle to Angle.—A *Sloping-Alley*, is that which either by reason of the Lowness of the Point of Sight, or of the Ground, is neither parallel to the Front, nor to the Transverse *Alley*.

An *Alley* in *Zooecæ*, is that which has too great a Descent, and which, on that account, is liable to be damaged by Floods; to prevent the ill Effects whereof, it has Flannels of Turf running across it from Space to Space, which help to keep up the Gravel. This last Name is likewise given to an *Alley* in a Labyrinth, or Wilderness, form'd by several returns of Angles, in order to render it the more solitary and obscure, and to hide its Issue.

Alley in *Perpective*, is that which is larger at the Entrance than at the Issue; to give it a greater Appearance of length.

Alley of *Compartment*, is that which separates the Squares of a Parterre.

The Word *Alley* is derived from the *French* Verb *Alley*, to go; the ordinary use of an *Alley* being for a Walk, Passage, or Thorough-fare from one Place to another.

ALLIANCE, the Union or Connection of two Persons, or two Families, by means of Marriage; called also *Affinity*. See MARRIAGE, and AFFINITY.

The Law of the Twelve Tables forbids all Alliance between Persons of unequal Rank and Condition.—And in *Portugal*, they are told, the Daughters of the Nobility are prohibited to ally with such as have never been in the Wars.

The Word is form'd of the Latin *ad hæsit*, q. d. a tying together.

ALLIANCE is also extended to the Leagues, or Treaties of Peace concluded between sovereign Princes and States, for their mutual Safety and Defence. See TREATY, LEAGUE, &c.

The Triple Alliance between *England*, *Holland*, and *Sweden*, is famous.—So is the *Quadruple Alliance*, between *England*, *Holland*, the Emperor, and King of *France*.

In this Sense, we say, *Allies*, for Confederates: The King and his *Allies*; the *Allies* of the Treaty of *Hanover*, &c. See CONFEDERATE.

ALLIGATION, in Arithmetick, a Rule or Operation, whereby Questions are resolv'd, relating to the Mixture of divers Commodities or Ingredients together, with the Value, Effect, &c. thereof. See RULE, MIXTURE, &c.

The Word is form'd of the Latin *Alligare*, to tie together; by reason, perhaps, of a sort of Vincula, or circular Ligatures, ordinarily used to connect the several Numbers together.

Alligation is of two Kinds, *Medial* and *Alternate*.

Alligation Medial, is when from the several Quantities and Rates of divers Simples given, we discover the mean Rate of a Mixture compounded out of 'em.

The several Cases hereof, will come under the following Rules.

The Quantity of the Ingredients, and the Prices of each being given; to find the Price or Value of some part of the Mixture.—Multiply the Ingredients severally by their own Prices, and divide the Sum of those Products by the Sum of the Ingredients; the Quotient answers the Question.

The Prices of the several Ingredients, and the Sum paid or received for the Mixture being given; to find what quantity of each was bought or sold.—Divide the Sum paid or received, by the Sum of the particular Prices; the Quotient is the Answer.

The Ingredients of a Mixture being given, to augment or diminish the Mixture proportionally.—Sum up the Ingredients; then say, As that Sum is to the Augmentation or Diminution, so is the Quantity of each Parcel of the Mixture, to the Quantity of the Mixture desired.

The Nature, Quality, &c. of the several Ingredients of a Mixture being given, to find the Temperament or Degree of Fineness resulting from the Whole.—Place the several Quantities of the Mixture in Rows; against which place orderly their several Qualities of Fineness; and multiply each Quantity by its own Quality or Degree of Fineness; then, as the Sum of the Quantities is to their Products, so is Unity, to the Quality or Fineness of the Mixture.

The Quantities of a Mixture being given; to find the particular Quantities of any Ingredient in any part of the Mixture.—If the Mixture be of only two Things, say, As the Total of the Ingredients in the Composition, is to the Part of the Mixture propos'd; so is the Quantity of the Ingredient propos'd in the whole Composition, to the Quantity of the Ingredient in the Part desired.—If the Mixture consist of more Ingredients, repeat the Work for each.

Given the Total of a Mixture, with the whole Value, and the Values of the several Ingredients; to find the several

Quantities mixed, the unequally.—Multiply the Total of the Mixture by the least Value, subtract the Product from the total Value; and the Remainder is the first Dividend: Then take the said least Value from the greatest valued Ingredient, and the Remainder is the first Divisor. The Quotient of this Division shows the Quantity of the highest-priced Ingredient, and the other is the Complement to the Whole. And when more Ingredients than two are in the Composition, the Divisors are the several Remains of the least Value, taken from the other: The Dividends are the Remains left upon the Divisions, till none remain there; which will be one short of the Number of Ingredients; and this defective Ingredient is to be supplied as a Complement; and in Division, no more must be taken in every Quotient, than that there may remain enough for the other Divisors; and the last to leave nothing remaining. See DIVISION.

ALLIGATION Alternate, is when the Rates or Qualities of divers Simples are given; and the Quantity of each is required necessary to make a Mixture of the given Rate or Quality.

Alligation Alternate, shews the due Proportion of several Ingredients; and counter-changes the Pieces of such Excesses or Differences as arise between the mean Price and the Extremes; ascribing that to the greater Extreme, which proceeds from the lesser; and contrarily.

The Rules which obtain in *Alligation Alternate*, are as follow.

Every greater Extreme to be linked with one lesser.

If either of the Extremes be single, and the other Extremes plural; the single Extreme to be linked to all the rest.

If both greater and lesser Extremes be not plural, they may be linked to diversly, that several Differences may be taken, and a Variety of Answers be made to the Question, yet all true: But if one of the Extremes be single, there can be but one Answer.

The Numbers being linked, take the Difference of each from the mean or common Price; and place this difference against the Number it is linked to, alternately.

Every Number linked with more than one, must have all the Differences of the Numbers it is linked to, set against it.

These Differences resolve the Question, when the Price of every of the Ingredients is given without their Quantities; and the Demand is to mix them so as to sell a certain Quantity at a mean Rate.

But when the Quantity of one, with the Price of all the Ingredients is given; and the Demand is to know the Quantities of the other Ingredients; then, the Rule of Three is to be used.

And when the Price of every Ingredient is given, without any of their Quantities, and the Demand is to make up a certain Quantity to be sold at a mean Rate; then all the Differences added together will be the first Number in the Rule of Three; the whole Quantity to be mixed the second Number; and each Difference apart the several third Numbers: And to many Sorts mixed, so many Operations of the Rule of Three. See RULE of Three.

We shall add an Example, wherein both the Kinds of *Alligation* have place.—Suppose a Mixture of Wine of 119 Quarts, required to be made of Wines of the following Prices 7 s. 8 d. 14 s. and 15 s. per Quart; and so, as that the Whole may be afforded at 12 s. per Quart.

Having linked 8 to 14, and 7 to 15, and counterchanging their Difference from the common Price, 12 s. the Sum of their Difference is found to be 14; by which dividing 119, the Quotient is 8 ⁷/₁₄ or 8 ¹/₂, or for convenience in Operation, ¹⁷/₂.

	Quarts.
8 2	$\frac{3\frac{1}{2}}{2} + 2 = 3\frac{1}{2} = 17$
14 3	$\frac{2\frac{1}{2}}{2} + 4 = 6\frac{1}{2} = 34$
7 4	$\frac{2\frac{1}{2}}{2} + 5 = 7\frac{1}{2} = 37\frac{1}{2}$
15 5	$\frac{2\frac{1}{2}}{2} + 5 = 7\frac{1}{2} = 37\frac{1}{2}$
14	119

ALLIOTH, in Astronomy, a Star in the Tail of the Great Bear, whose Observation is much used at Sea. See STAR.

Its Longitude, Latitude, &c. see among the rest of URAE Major.

To find the Latitude, or Elevation of the Pole by this Star. See LATITUDE, and POLE.

ALLOCATION, ALLOCATIO, the admitting, or allowing of an Article in an Account; and passing it as such. See ACCOUNT.

The Word is form'd of the Latin *Alloco*.

ALLOCATION is also an Allowance made upon an Account; used in the Exchequer. See ALLOCATIONS.

ALLOCATIONE Facienda, a Writ directed to the Lord Treasurer and Barons of the Exchequer, upon the Com-

plaint of some Accountant; commanding them to allow him such Sums as he hath in execution of his Office lawfully expended.

ALLODIAL, ALLODIAN, in ancient Customs.—*Terra ALLODIA*, or ALLODIAL Land, is that whereof a Person has the absolute Property; or which he holds without paying any Service or Acknowledgment to any Superior Lord. See PROPERTY, &c.

Such an Inheritance is *Alloidal*, i. e. not subject to any Charge, Service, &c. See FREE Land.

In this Sense, *Alloidal* Lands opposed to *Feudal*, or *Beneficiary*. See FREE, BENEFICE, &c.—See also ALLODIUM.

ALLODIUM, ALLODE, ALLODUS, or ALLEUD, Land held of a Man's own Right.—*Bollandus* explains *Alloodium*, to be *Prædium, seu quævis possessio libera jure proprio, & non in Feudum Clientelariæ ever accepta*. See ALLODIAL.

After the Conquest of the Gauls, the Lands were divided in two manners, viz. into *Benefices*, *Beneficia*; and *Allodia*. *Benefices*, consisted in Lands given by the King to his Officers and Soldiers; either for Life, or for a Time fixed. See BENEFICE.

Allodes, or *Allods*, were such Lands as were left in Property to the ancient Possessors.—The 62d Title of the *Salo* Law, is, *De Allodis*; where the Word signifies Hereditary Lands, or those derived from a Man's Ancestors. Whence, *Allodium* and *Patrimonium* are frequently used indiscriminately. See PATRIMONY.

In the ancient Capitulars of *Charlemaign* and his Successors, we find *Allode* constantly opposed to *Fee*; but, toward the Period of the second Race of Kings, it lost the Privilege; the Feudal Lords obliging the Proprietors of *Allodial* Lands to hold of them for the future. The same Change also happened in *Germany*, &c. See TENURE.

The Usurpation of the Feudal Lords over the *Allodial* Lands, went so far, that they were almost all either subjected to 'em, or converted into Fees: Whence the Maxim, *Nulla Terra sine Domino*, No Land without a Lord.

The Origin of the Word is infinitely controverted. *Cassoveus* says, it is almost as obscure as the Head of the Nile. Few of the *European* Languages, but one Etymologist or other has derived it from.

ALLONGE, in Fencing, a Thrust, or Pass at the Enemy. See PASS, GUARD, &c.

The Word is *French*, form'd of the Verb *Allonger*, to lengthen out a thing by picing another to it.

ALLOTTING, or ALLOTMENT of Goods, in Matters of Commerce, is when a Ship's Cargo is divided into several Parts, to be bought by divers Persons, whose Names are wrote on as many Pieces of Paper, which are apply'd by an indifferent Person to the several Lots or Parcels; by which means, the Goods are divided without Partiality; every Man having the Parcel which the Lot with his Name on, is appropriated to.

ALLOY, or ALLAY, in Matters of Coinage, &c. a Proportion of a baser Metal, mingled with a finer, or purer. See METAL, MIXTURE, &c.

Such is the Quantity of Copper mingled with Gold, in the Coining of Species of that Metal. See GOLD, MONEY, &c.

The Intention of *Alloy*, is to give the Gold a due hardness, that it may not waste with wearing; and to increase its Weight, so as to countervail the Charges of Coinage. See SEIGNORAGE.

Gold that has more of this, than it ought to have; is said to be of a *coarser* or *greater Alloy*, or below Standard. See STANDARD.

The Proportion of *Alloy* for Gold used in our Mints, is about a 12th Part. See COINING.

The Word seems derived from the *French*, *Loy*, Law; in regard the *Alloy* is fix'd by Law.

ALLUM, or ALUM, *Alumen*, a kind of Mineral Salt, of an acid Taste, leaving in the Mouth a Sense of Sweetness accompany'd with a considerable Degree of Astringency. See SALT.

The ancient Naturalists allow of two sorts of *Alum*; the one *Native*, the other *Factitious*.—The *Natural* is found in the Island of *Mio*, being a kind of whitish Stone, very light, friable and porous; and break'd with Filaments resembling Silver.

The *Factitious Alum*, is prepared in different manners, according to the different Materials whereof it is made.

Alum is of divers Kinds, *Red*, *Roman*, *Citron*, *Plumifer*, *Saccharine*, and *Burnt*. The three last of which, are not proper native *Alum*s.

England, *Italy*, and *Flanders*, are the Countries where the *Alum* is principally produced.—The *English Alum*, called also *Roset Alum*, *Alumen Rufum*, is made from a bluish mineral Stone, frequent in the Hills in *Yorkshire* and *Lancashire*. This Stone they calcine on a Hearth or Kiln; then steep it successively in several Pits of Water; then boil it for about 24 Hours; Lastly, letting it stand for about 100 Hours; the Impurities subside, and leave a pure Liqueur; which, removed into a Cooler, and some Urine added to it, begins,

begins, in three or four Days, to gather into a Mass; which being taken out, washed, and melted over again, is fit for use.

The Mineral Stone, before it is calcined, being exposed to the Air, will moulder in pieces, and yield a Liquor whereof Coppers may be made; but being calcined it is fit for *Allum*.—As long as it continues in the Earth, or in Water, it remains a hard Stone.—Sometimes a Liquor will issue out of the Side of the Mine, which by the Heat of the Sun is turned into a Natural *Allum*.

In the *Allum-Works* at *Civita Vecchia*, the Process, as described by M. *Geoffroy*, is somewhat different.—The Stone, which is of a ruddy hue, being calcined, they boil and dissolve the Calc in Water; which imbibing the Salt, i. e. the *Allum*, separates it self from the useless Earth. Lastly, leaving the Water thus impregnated with Salt to stand for some Days, it crystallizes of it self, like Tartar about a But, and makes what they call *Roche* or *Roman-Allum*.

At *Salsfatare*, near *Puzosoli*, is a considerable oval Plain, the Soil whereof is wholly saline; and so hot, that the Hand cannot long bear it.—From the Surface hereof, in Summer-time, there arises a sort of Flour, or fatish Dust; which being swept up, and cast into Pits of Water at the bottom of the Plain; the Heat of the Ground, without any other Fire, evaporates the Water, and leaves an *Allum* behind.

Allum dissolves in Water, and what remains undissolved at bottom, is a sort of Calc, which dissolves readily enough in Oil, or Spirit of Vitriol.—And hence there arises some doubt, whether *Allum*, as it does not leave an Earth behind, does properly belong to the Class of Salts.—Mr. *Boyle* assures us, that *Alloy Ore* robb'd of its Salt, does in tract of Time recover it again in the Air. See AIR.

The *Swedish Allum* is made of a Mineral which contains a great deal of Sulphur and Vitriol, not to be taken away but by Calcination or Distillation. The Matter remaining in the Iron Vessels used in separating the Sulphur from the Mineral, being exposed to the Air for some time, becomes a kind of bluish Ashes, which they lixiviate, crystallize, and convert into *Allum*.

The Word *Allum* comes from the Greek *λας*, Salt; or perhaps from the Latin *Lumen*, Light; because it adds a Lustre to Colours.

Allum is of some use in Medicine, in quality of an Absorbent; but being apt to excite Vomiting, is not much used inwardly, and rarely without some smooth Aromatick, as a Corrector.—'Tis used outwardly in astringent Lotions, and is an Ingredient in several Dentifrices.

It is a principal Ingredient in Dying and Colouring; neither of which can be well performed without it.—It serves to bind the Colour upon the Stuffs, and has the same Uses there that Gum-water and the various Oils have in Painting. It likewise disposes Stuffs to take the Colour, and adds a degree of Briskness and Delicacy to it; as we see visibly in Cochineal, and the Grain of Scarlet.

The Effects of *Allum* seem owing to its syphtick, or astringent Quality, by which it binds the finer Parts of Colours together, and prevents their exhaling. Hence also it preserves Paper that has been dipp'd in its Water, from sinking when wrote upon. See COLOUR, DYING, &c.

Saccharine Allum, bears a near resemblance to Sugar.—It is a Composition of common *Allum* with Rose-water, and Whites of Eggs, boild together to the Consistence of a Paste, and thus moulded at pleasure. As it cools, it grows hard as Stone.

Burnt Allum, *Allumen Ustum*, is *Allum* calcined over the Fire, and thus render'd whiter, more light, and easily pulveriz'd.

Plumose Allum, *Allumen Plumosum*, is a sort of saline, mineral Stone, of various Colours, most commonly white bordering on green; resembling *Venetian Talk*, except that instead of Scales, it rises in Threads or Fibres, resembling those of a Feather; whence its Name, from *Pluma*, Feather. Some will have this to be the *Lapis Amiantus* of the Antients. See AMIANTUS.

ALLUMINOR, or ENLUMINOR, or ILLUMINER, one who by Trade coloureth, or paints upon Paper or Parchment. See COLOUR, PAINTING, &c.

ALLUSION, ALLUSIO, in Rhetoric, a Figure whereby something is applied to, or understood of, another, by reason of some Similitude of Name, or Sound.

Camden defines *Allusion* a dalliance, or playing with Words like in Sound, but unlike in Sense; by changing, adding, or subtracting a Letter, or two; whence Words resembling one another, become applicable to different Subjects.

Thus the Almighty, if we may use sacred Authority, chang'd *Abram*, i. e. high Father, into *Abrabam*, i. e. Father of many.—Thus the *Romans* play'd on their tipping Emperor *Fiberius Nero*, by calling him *Fiberius Nero*; and thus in *Quintilian* the low Fellow *Placidus*, is call'd *Acidus*. *Allusions* come very near to what we popularly call *Puns*. See PUN.

The Word is form'd of the Latin *ad*, and *ludere*, to play.

ALLUVION, ALLUVIO, in the Civil Law, an Accretion or Accretion made along the Sea-shore, or the Banks of large Rivers, by means of Tempests or Inundations. See ACCRETION, &c.

The Civil Law places *Alluvion* among the lawful means of Acquisition; and defines it to be a latent imperceptible Accretion.—Hence, where any considerable Portion of Ground is torn away at once, by an Inundation; and join'd to some neighbouring Estate; this is not acquired by right of *Alluvion*, but may be claim'd again by the former Proprietor.

The Word is form'd of the Latin *Adluo*, I wash; compounded of *ad*, and *luo*, I wash.

ALMACANTARS, ALMACANTARAS, or ALMACANTARAS, in Astronomy. See ALMACANTARS.

ALMACANTARS Staff. See ALMACANTARS Staff.

ALMAGEST, the Name of a celebrated Book, composed by *Ptolemy*; being a Collection of many of the Observations and Problems of the Antients, relating both to Geometry and Astronomy.

In the Original Greek it was called *αἰμαστικὴ μαθηματικὴ*, q. d. *Greatest Construction*, or *Collection*: Which last Word *Megiste*, join'd to the Particle *Al*, gave occasion to its being called *Almageste* by the *Arabians*, who translated it into their Tongue about the Year 800, by Order of *Maimoon*, Caliph of *Babylon*.—The Arabic Word is *Almagesti*.

Ricciolus has also publish'd a Reformed Astronomy, which he intitles, after *Ptolemy*, the *New Almagest*; being a Collection of ancient and modern Observations in Astronomy. See ASTRONOMICAL Observation.

ALMANACK, or EPHEMERIS, a Calendar or Table, wherein are set down the Days, and Feasts of the Year, the Course of the Moon, &c. See CALENDAR, YEAR, DAY, MONTH, MOON, &c.

The Original of the Word is much controverted among Grammarians.—Some derive it from the Arabic Particle *Al*, and *Mena*, to count.—Others, and among them *Scaliger*, rather derive it from *Al*, and *mensis*, the Course of the Months: Which is contradicted by *Golius*, who advances another Opinion; He says, that throughout the East, 'tis the Custom for Subjects, at the Beginning of the Year, to make Presents to their Princes; and among the rest, the Astronomers present them with their Ephemerides for the Year ensuing; whence those Ephemerides came to be called *Almanack*, i. e. *Handbills*, or New-Years Gifts. See EPHEMERIDES.

To say no more, *Verbehan* writes the Name *Almanac*; and makes it of *Saxon* Original: Our Antients, he observes, used to carve the Courses of the Moon of the whole Year upon a square Stick, or Block of Wood, which they call'd *Almonaght*, q. d. *Almoon-bed*.

The modern *Almanack* answers to the *Fasti* of the ancient *Romans*. See FASTI.

The *Necessaries* for making an *Almanack*, the Reader will find under the Article CALENDAR.

Henry III. of France, very prudently decreed by an Ordinance of 1579, that 'No *Almanack-Maker* should presume to give Predictions relating to Civil Affairs, either of States or private Persons, in Terms either express or covert.' See ASTRONOMY.

In the *Philosoph. Collect.* we have a perpetual *Almanack*, described by Mr. R. Wood.

ALMANDIN, or ALBANDIN, a Precious Stone, of the Ruby Kind; something lighter and softer than the Oriental Ruby; and as to Colour, partaking more of that of the Granat than the Ruby. See RUBY, GRANAT, &c.

It is rank'd among the richest of Stones; and takes its Name from *Albana*, a City of *Caria*, whence *Pliny* says it is brought. See PRECIOUS Stone.

ALMARIA, for *Armaria*, in our ancient Records, the Archives of a Church, or the like. See ARCHIVE.

ALMERY. See AMERY.

ALMOIN, in Law. See FRANK-ALMOIN.

ALMOND, *Amygdala*, a kind of Fruit, inclosed with a thick Stone, and under a thin Skin. See FRUIT.

The *Almond* is the Produce of a pretty tall Tree, resembling a Peach Tree; frequent in *Germany*, *France*, and the neighbouring Countries; as also in *Barbary*, &c.—Its Flowers are pentapetalous, and ranged in the Rose manner: The Pistil becomes a fleshy Fruit, containing a Seed, which is the *Almond*; and which drops out when the Fruit is arriv'd at Maturity.

Almonds are chiefly of two Kinds, *Sweet* and *Bitter*.

The *Sweet Almonds*, *Amygdala Dulces*, are of a soft, grateful Taste; and are reputed cooling, healing, emollient, and nutritive: are much prescribed in Emulcicks, and found of good effect in all Disorders from cholerick and acrimonious Humours.—The *Oil of Sweet Almonds*, drawn without Fire, is a safe and useful Remedy in nephritic Pains. It is also of good repate for Costiveness and Gripes in Children.

For the manner of procuring the Oil of Sweet Almonds, See the Article OIL.

Bitter Almonds, *Amygdale Amara*, are held aperient, detensive, and diuretick; and on those Accounts commended in Obstructions of the Liver, Spleen, Uterus, &c.—Some esteem 'em good to take off the Effects of Drunkenness. Accordingly, *Plutarck* relates, that *Dryfus's* Physician, a stout Drinker, took down at every Cup five *Bitter Almonds*, to allay the Heat and Fumes of the Wine.

The expressed Oil of *Bitter Almonds*, is much used to soften and deterge the Wax out of the Ear.—Some affirm, that *Bitter Almonds* bruise'd, kill or stupify Fowl; so that they may be taken with the Hands: which, they say, is a Secret practis'd among the *Babemians*: And that the *Huffs* remaining after the Oil is capress'd, have the same Effect.

The Word *Almond* comes from the French *Amande*; which *Messenge* derives from the Latin *Amandata*, a Term occurring in the Capitulars of *Charlemain*: Others rather derive it from the Greek *αμυγδαλον*, which signifies the same thing.

Almonds give the Denomination to a great Number of Preparations in Confectionary, Cookery, &c. whereof they are the Basis; as *Almond Cakes*, *Almond Cream*, *Crisp'd Almonds*, *Almond Milk*, *Almond Paste*, *Almond Snow*, &c.

ALMONDS of the Throat, called also *Touffille*, and improperly *Almonds of the Ears*. See TONSIL.

They are two round Glands, placed on the Sides of the Basis of the Tongue, under the common Membrane of the *Fauces*, with which they are covered. See GLAND, TONGUE, &c.

Each of 'em has a large oval Sinus, which opens into the *Fauces*; wherein are contain'd a great Number of lesser ones, which discharge thro' the great Sinus a mucous and slippery Matter into the *Fauces*, *Larynx*, and *Oesophagus*, for the moistening and lubricating of those Parts. See LARYNX, &c.

When the *Oesophagus* Muscle acts, it compresses the *Almonds*; and as they are subject to Inflammation, they frequently are the Occasion of what the common People call a *fore Throat*. See OESOPHAGUS, RAUCEDOR, &c.

ALMOND, or **ALMAN-FURNACE**, is a peculiar kind of Furnace, used in Refining; to separate all Kinds of Metals from Cinders, parts of Melting-Pots, Tels, Bricks, &c. See FURNACE, and REFINING.

The *Almond-Furnace*, called also the *Sweep*, is usually six Foot high, four wide, and two thick; built of Brick, and having a Hole in the middle of the Top, eight Inches over; which grows narrower towards the bottom, where, on the Fore-part it ends in a Point, encompass'd with a Semicle of Iron, to keep the melted Metal.—About the middle of the Back, there is another Hole, to receive the Nose of a pair of Bellows, which require the continual Strength of two Men to work.

The Matter, then, on which the Operation is to be perform'd, being bear small, they kindle Charcoal in the Furnace, to anneal it; and when hot, they throw in two or three Shovelfuls of Coals to one of the foremention'd Stuff; and so proceed during the whole Work, patting Lay upon Lay of one and the other. After eight or ten Hours the Metal begins to run; and when the Receiver below is pretty full, they take it out with an Iron Ladle, and cast it in Sows, in Cavities, or Forms made with Files.

ALMONER, antiently also wrote **ALMNER**, or **ALMNER**, an Officer in a King's or Prince's Household, whose business is to distribute *Alms* to the Poor. See ALMS.

The Lord *Almoner*, or Lord *High Almoner*, is an Ecclesiastical Officer, who has the Forfeiture of all Deadlands, and the Goods of *Felo's de se*, which he is to dispose of to the Poor. See DROVAND.

He had likewise, by an antient Custom, a Privilege to give the first Dish from the Royal Table, to whatsoever poor Person he pleas'd, or, instead thereof, an *Alms*, in Money.

He also distributes daily to 24 poor Men, nominated by the Parishioners of the Parish adjacent to the King's Place of Residence, to each 4*d.* in Money, and an *Alms* of Bread and Small Beer; each Person first repeating the Creed and the Lord's Prayer, in presence of one of the King's Chaplains, deputed by the Lord *Almoner* to be his *Sub-Almoner*; who is also to scatter new-coin'd Two-pences in the Towns and Places thro' which the King passes in his Progress.

He has also the Charge of several poor Penitents to the Crown, below Strals; consisting of such as have spent their Youth, and become superannuated in the King's Service; or the Widows of such Household Servants as died poor, and were not able to provide for their Wives and Children, whom he duly pays.

Under the Lord *Almoner* is a *Sub-Almoner*, a *Yeoman*, and two *Grooms of the Almonry*, choic'd by his Lordship.

ALMONRY, or **ALMRY**, the Office or Lodgings of the *Almoner*; also the Place where the *Alms* are given.

ALMS, *Eleemosyna*, something given out of Charity or Liberality, to the Poor. See CHARITY, ALMONER, &c.

The *Romanists* also extend the Term to what is given to the Church, or other pious Uses.—Hence, what the Church holds on this footing, is called *Tenure in Alms*; for according to *Rastal*, *Alms*, or *Tenure in Alms*, is *Tenure by Divine Service*. See TENURE, and SERVICE.

The Ecclesiasticks were antiently subfided wholly on *Alms*. See CLEVER, TITHES, &c.

The *Alms* of the primitive Christians were divided into three Parts; one whereof belong'd to the Bishops, another to the Priests, and a third to the Deacons and Subdeacons.—Sometimes they divided 'em into four; the last whereof went to the Poor, and the Repairing of Churches.

Chrodestang, Bishop of Metz, in the VIIIth Century, enjoins, in the 42d Chapter of his Rule, that a Priest to whom any thing was offer'd for saying of Mass, or for Confection; or a Clerk for singing of Psalms, or Hymns; should not receive it on any other Condition than as *Alms*.

M. Tillemons observes, upon the *Theodosian Code*, p. 257. that from the IVth Century there were Women employ'd to collect *Alms* for the Prisoners. In all probability these were the Deaconesses of the Churches. See DEACONESSES.

St. Paul, in his second Epistle to the *Corinthians*, C. IX. explains the manner of collecting *Alms* in the Assemblies of the primitive Christians.—This Practice they had borrow'd from the *Jewish Synagogue*, where it still obtains. *Leon de Modena* describes it in the 1st Book of the *Ceremonies and Customs* of those of his Nation, C. XIV.

The *Jews* call *Alms*, *Tzedeka*, i. e. Justice.—The Evangelists and Apostles have also given it the same Appellation in the New Testament.

ALMSFEOH, or **ALMSFROH**, among our *Saxon* Antecessors, *Alms-Money*; that is Peter-pence, antiently paid in *England* on the first of August; called also *Romefesh*, *Romefow*, and *Houthpening*. See PETER-PENCE.

ALMS-HOUSE, a House built by a Person in a private Capacity, and endow'd with a Revenue, for the Maintenance of a certain Number of poor, aged, or disabled People. See HOSPITAL.

ALMUCANTARS, **ALMACANTARS**, or **ALMUCANTARATS**, in Astronomy, are Circles parallel to the Horizon, imagin'd to pass thro' all the Degrees of the Meridian. See CIRCLE, and HORIZON. See PARALLEL.

As the Meridians pass thro' the several Degrees of the Equator; the *Almucantars* pass thro' those of the Meridian of any Place. See MERIDIAN.

The *Almucantars* are the same Thing with regard to the Azimuths and Horizon, that the *Parallels* are with regard to the Meridians and Horizon.

They serve to shew the Height of the Sun and Stars; and are described on many Quadrants, &c. being also called *Parallels of Altitude*. See PARALLEL of Altitude.

The Word is form'd of the Arabic *Almucantarat*.

ALMUCANTARS-Staff, is an Instrument usually made of Pear-tree or Box, with an Arch of 15 Degrees; chiefly us'd to take Observations of the Sun, about the Time of its rising and setting; in order to find the Amplitude, and consequently the Variations of the Compass. See AMPLITUDE, and VARIATION.

ALNAGE, or **AULNAGE**, *q. d. Ell-measure*; the measuring of woollen Manufactures with an Ell; and the other Functions of the *Alnager*. See ALNAGER.

The Word is *French*; form'd of *Alne*, or *Alne*, an Ell See ELL.

All our Laws relating to the *Alnage*, *Sir J. Child* observes, contribute nothing to the well making of our Manufactures, but are rather chargeable, and prejudicial thereto.

ALNAGER, **ALNEGER**, or **AULNEGER**, *q. d. a Measurer by the Ell*; signifies a sworn publick Officer, who, by himself or Deputy, is to look to the Affairs of woollen Cloth made thro' the Land, i. e. the Length, Width, and Work thereof; and to the Seals for that purpose ordain'd. See ALNAGE, CLOTH, &c.

There are now three Officers relating to the *Alnage* or Regulation of Cloth; all which were antiently compris'd in one Person.—These bear the distinct Names of *Searcher*, *Measurer*, and *Alnager*.

A Duty being impos'd on woollen Cloths, for the Maintenance of an Office to look to that Manufacture, and the Loyalty, as they call it, of the Staffs produced therein; the *Alnager*, who had the Direction of the whole, is now become only the Collector of that Duty or Subsidy granted to the King: the he still holds the antient Denomination, because the Collection of that Subsidy was committed to him.—Nor was he abridg'd of his Measuring and Searching, till by his own neglect it was thought proper to separate the two Offices. So that there is now a peculiar Measurer, distinct from the *Alnager*, or Collector, to allow the Affairs of the Length and Breadth of every Cloth made in *England* and *Wales*.

ALOEES, *Azox*, in Medicine and Pharmacy, the inspissated Juice of a serulaceous Plant of the same Name; much used as a purgative Remedy. See Purgative.

The *Aloe-Plant* grows in divers Parts of the *East and West-Indies*; and is also found in some Countries of *Europe*, as *Spain*, and particularly the Mountains of *Siera Morena*.—Its Leaves are green, very thick, hard, and prickly; yielding a kind of Cotton, whereof Laces may be made. Out of the middle of the Leaves arises a Stem, which bears the Flower, and the Fruit, the Seed whereof is very light and hemispherical.

Dioscorides, *Pliny*, and the ancient Naturalists, seem only to have been acquainted with one Species of *Aloe*; which is the *Aloe Vulgaris* above described: But the late Travels into *Asia*, *Africa*, and *America*, have occasion'd the Discovery of forty more sorts, unknown to Antiquity. Mr. *Bradley* assures us, he has been above sixty several Kinds in the Physick-Garden at *Amsterdam*. So that *Aloe* is now become the Denomination of a Genus.—Among the Number, however, there are not above twelve that yield the purgative Juice above mentioned.

The Juice or Extract of *Aloe*, is usually distinguish'd into three Kinds.—The first, which is called *Succotrine* as being brought from *Succotra*, is the purest and most transparent; being fitable, inodorous, black in the Lump, but of a beautiful yellow Colour when bruis'd.—It is brought in Skins from the *Levant* and *East Indies*.

The second is called *Hepatic*, because of its Liver-colour: It is resinous, smells like Myrrh, has a yellow Colour when pounded, and is brought from *China*.—Some confound this with the following sort; as, in effect, there are but two sorts commonly known in our Shops.

The third is the most impure, the blackest, and the strongest.—It was formerly used by the *Indians* to pitch their Vessels withal: and is of little Use among us, excepting for Horses and Cattle; for which reason it is call'd *Cabaline*, i. e. *Horse-Aloe*.

Besides these, some mention another kind of *Aloe* prepared in *Barbadoes*, and brought over in large Gourds: but most Writers make this the *Cabaline* kind.

Some have imagin'd, that these differences of *Aloe* were owing only to the greater, or less Purification of the Juice: But this is a Mistake; it having been found that so Dissolutions, how often severally repeated, will change *Hepatic* into *Succotrine*, nor *Cabaline* into *Hepatic Aloe*.

The manner of preparing *Aloe* is very easy, there being nothing to do but to cut the Leaves of the Plant, and to expose the Juice that spontaneously oozes out of them to the Sun, till it becomes of a proper Consistence.

Aloe is extremely bitter, and purgative; externally applied, either in Substance or Tincture, it prevents Putrefaction and Gangrene.—Its Bitterness makes it so nauseous, that it is rarely used in liquid Forms, but is generally made into Pills, whereof half a Dram is an ordinary Dose.—Scarce any of the Official Pills are without this in their Composition. See *PILL*.

Its cathartick Virtue, is best employ'd in watery, cold, and copulent Constitutions, as it heats and attenuates; being bad for this and hectic Constitutions. It is account-ed efficacious in promoting the Menstrue; and is also good to destroy Worms.

M. *Bonduce*, by his Analysis of *Aloe*, has found that the *Succotrine* scarce contains half the Resin or sulphurous Part, but one third more of the saline Part, found in the *Hepatic*. Hence the *Succotrine* comes to be preferable for internal Ules, and the *Hepatic* for external.

Alox Rafara, is a Preparation of the *Aloe* Juice, made by dissolving it in Juice of Damask Roses, and evaporating it to the Consistence of a PASTE. Then, more Juice is added, and the Evaporation repeated, again and again.—This is held a gentler and safer Cathartic than the *Aloe* alone.

Aloes is also a kind of fragrant Indian Wood; thus called from its exceeding Bitterness, which resembles that of the *Aloe* Juice.

This *Aloe*, called also *Agalobum*, is infinitely valued; and divers strange Fabrics have been invented as to the Origin of the Tree that yields it: Some feign that it grew in Paradise, and was only convey'd to us by means of the Rivers overflowing their Banks, and sweeping off the Trees in their way. Others suppose it to grow on inaccessible Mountains; where it is guarded by certain wild Beasts, &c.—The *Siamese* Embassadors to the Court of France, in 1686, who brought a Present of this Wood from their Emperor, first gave the Europeans any consistent Account of it.

The Tree grows in *China*, *Laos*, and *Cochinchina*; and is much about the Size and Figure of our Olive Trees.—The Trunk consists of three sorts of Wood, very different in Colour, and Properties: Immediately under the Bark it is black, compact, and heavy, call'd by the Portuguese, *Pao d'Agua*, q. d. Eagle-Wood. That next under this, is of a Tan-colour, light and veiny, resembling rotten Wood; and called *Calambou*.

The Heart, of innermost part, is called *Tambac*; and more valued by the *Indians* than Gold it self. It affords a very strong, but agreeable smell; and is used as a Perfume; and is wicah held a sovereign Remedy against the Palsy, Deliquiums, Weaknesses, &c.

'Tis the *Calambou* alone that is known among us.—It is brought in small bits of a very fragrant scent; especially when cast on the Fire, where it melts like Wax. The best is of a blackish purple Colour, and so light as to swim on Water: It is hot and drying; and esteem'd a great Strengthen-er of the Nerve.

Some pharmaceutical Writers make a Distinction between *Aloe*, *Lignum Aloe*, and *Xylo Aloe*; which may amount to the three Orders of Wood above-mention'd. Tho' among us they are the same thing.

ALOEITICS, Medicines wherein *Aloe* is the chief and fundamental Ingredient. See *ALOES*.

The Word is form'd of *Aloe*, which is further derived from *Al*, the Sea, or Salt; that Plant being chiefly found near the Sea-Coasts.

ALOGII, or **ALOGIANS**, a Sect of ancient Hereticks; who denied that Jesus Christ was the Eternal Word. See *ARIAN*.

Trochodorus of Byzantium, by Trade a Carrier, having apostatiz'd, under the Persecution of the Emperor *Suerens*; to defend himself against those who reproach'd him therewith, said; That it was not God he denied, but only Man. Whence his Followers were called in Greek *Alwari*, in regard they rejected the Word; from the Privative *α*, and *Alw*, Verbum.

ALOOF, a Sea Term, signifying as much as, *my your Luff*: being a Word of Command from him that comes, to the Man at the Helm, to keep the Ship near the Wind, when she sails upon a Quarter-wind. See *CONNER*, &c.

ALOPECIA, or **ALOPECHY**, in Medicine, &c. a Falling of the Hair, from what Cause soever that arise. See *HAIR*.

The Word is form'd from *αλωπε*, *Vulpes*, a Fox; whose Urine, it is said, will occasion Baldness; or because such a Disease is common to that Creature.

ALPHA, the Name of the first Letter of the Greek Alphabet. See *LETTER*, and *ALPHABET*.

The *Alpha*, in Composition, denotes, sometimes, *Privation*, in the same Sense with *αυτος*, without; sometimes *Augmentation*, as *αυω*, much; and sometimes *Union*, as *αυα*, together.

It was also used as a Letter of Order, to denote the first; and of Number, to signify one; but when it was a numerical Letter, a little Stroke, or an acute Accent was drawn above it thus 'A, to distinguish it from the *A*, which was a Letter of Order.

The Word is originally *Hebrew*, and comes from *אָלֶפֶת* *Alaph*, which signifies *to learn*; whence *אֶלֶף* the Leader or first of a Company. In this Sense, the *Hebrews* call the first Letter of their Alphabet *Alaph*, the *Syrians* *Alaph*, the *Arabs* *Eliph*, and the *Greeks* *Alpha*. See *A*.

Alpha and *Omega*, in the Divine Writings, signify the Beginning and the End; and therefore the Hieroglyphick of God is form'd of these two Letters, A and Ω.

ALPHABET, the several Letters of a Language, disposed in their natural or custom'd Order. See *LETTER*, and *LANGUAGE*.

The Word is form'd from the Names of the two first Letters of the Greek Alphabet, *Alpha*, *Beta*; which were borrow'd from those of the *Hebrew*, *Alph*, *Beth*. See *ALPH*, &c.

In the English Alphabet we reckon 26 Letters, viz. a b c d e f g h i j k l m n o p q r s t u v w x y z. See each under its proper Article.

But as there is a much greater Number of different Sounds in our Language; 'tis not without Reason that some Grammarians maintain, that there ought to be a greater Number of Letters: As also, that the double Letters, *ss* and *yy*, and the superfluous ones, *k* and *g*, should be retain'd. See *CONSONANT*, *VOWEL*, &c.

The French Alphabet only contains 23 Letters.—*Pasquier* insist maintains it to consist of 25, by reason he adds the two double Letters *ss* for *es*, and *'* for *us*; but those are only Abbreviatures. The *Abbe d'Agean*, on better Grounds, reckons 34 different Sounds in the French Tongue; and urges, that the Alphabet ought of Consequence to consist of 34 different Characters, setting aside the double Letters *ss* and *'*, and the superfluous one *g*. See *FRENCH*.

The Difference between Languages, with respect to the Number of Letters, is very considerable: The *Hebrew*, *Chaldee*, *Syriac*, and *Samaritan Alphabets*, have each 22; the *Arabic* 28; the *Persian* 32; the *Turkish* 33; the *Georgian* 36; the *Coptic* 32; the *Myssivie* 43; the *Greek* 24; the *Latin* 22; the *Sclavonick* 27; the *Dutch* 26; the *Spanish* 27; the *Italian* 20; the *Indians of Bengal* 21; the *Barnamee* 19.

The *Aethiopic* has no less than 202 Letters in its Alphabet, there being 7 Vowels, which they combine with each of their 26

Consonants ; to which they add 20 other aspirated Syllables. — The like is said of the *Tartarian* ; each of their Letters is a Syllable ; having one of the Vowels joined to its Consonant : as *La, Le, Li, &c.*

The *Chinese* have no Alphabet, properly speaking ; except we call their whole Language their Alphabet ; their Letters are Words, or rather Hieroglyphicks, and are in Number about 80,000. See CHINESE, and CHARACTER.

In effect, *Alphabets* were not contriv'd with Design, according to the just Rules of Reason and Analogy ; but successively fram'd, alter'd, &c. as occasion offer'd. — And hence many grievous Complaints as to their Deficiencies ; and divers attempts to establish new, and more adequate ones in their place.

Bishop *Wilkins* charges the *Alphabets* extant with great Irregularities, with respect both of the Order, Number, Power, Figure, &c. — As to the Order, it appears inartificial, precarious, and confused ; in that the Vowels and Consonants are not reduced into Classes, with such order of precedence and subsequence as their Natures will bear. — Even the *Hebrew Alphabet*, from which the rest are deriv'd, is not free from this Imperfection.

As to Number, they are both redundant, and deficient : Redundant, either by allotting several Letters to the same Power, and Sound ; as in the *Hebrew* \aleph and \beth ; and the ordinary *Latin e* and *k, f* and ph : or by reckoning double Letters among the simple Elements of Speech ; as in the *Hebrew* \beth , the *Greek* ξ and ψ , the *Latin q* *ce*, α *ei*, and the \jmath Consonant, or *Jod*. — Deficient in divers respects, especially in regard of Vowels, of which there are seven or eight kinds commonly us'd ; tho' the *Latin Alphabet* only takes notice of five ; whereof two, *vis. i* and *u*, according to our *English* Pronunciation, are not properly Vowels, but Diphthongs.

Add, that the Difference among Vowels in respect of long and short, is not sufficiently provided for : The Antients, we know, us'd to express a long Vowel by doubling its Character ; as *Anaabam, Nasta, Reo, Seedes, Sanctissimus* ; tho' the Vowel *i*, instead of being doubled, was frequently prolonged, as *multas, pluo, vlvus*. — The ways us'd in *English* for lengthning and abbreviating Vowels, *vis. by* adding *e* quiescent to the End of a Word, for prolonging a Syllable ; and doubling the following Consonants, for the shortening of a Vowel, as *Wane Wann, Ware Warr*, &c. or else by inserting some other Vowel, for the lengthning of it, as *Meat Met, Read Red*, &c. are all improper ; in that the Sign ought ever to be where the Sound is.

As to their Powers, again, those are not always fix'd to the same Signification : The Vowels, for instance, are generally acknowledg'd to have each of 'em several Sounds : *Vocales omnes plurimæ, says Lippinus ;* and *Velfius* affirms, the Antients used their Vowels very different ways, *aliquando reminis extinguisque, nunc crassius, nunc intermedio sono*. Thus the Power of the Vowel *e* is express'd in writing no less than six several ways, *vis. by e* ; as in *be, we, she, ye* : — by *ee*, in *thee, free, we* ; — by *ie*, in *field, yield, shield, chief* ; — by *ea*, in *near, dear, bear* ; — by *eo*, in *people* ; — by *i*, in *privilege*. So is the Power of the Vowel *a* ; as in *all, ant, ave, faint, caught, brought* : which are all only various ways of writing the same long Vowel ; besides the other distinct ways of expressing the same Vowel when us'd short : Again, the Power of the Vowel *o* is written five ways ; *o*, as in *to, wo, no, move* ; — *oe*, in *doe* ; — *oo*, in *floor, noon* ; — *ou*, in *could, would* ; — *oo*, in *two* ; and so of the rest. — Nor are the Consonants of more determinate Powers : witness the different Pronunciation of the same Letter (*c*) in the same Word, *Circus* ; and of *g* in *negligence*. — To say no more, the Letters *c, f, s*, are us'd alike, to denote the same Power ; and the Letter *g*, is commonly us'd for *s* ; and which is yet worse, some Letters of the same Name and Shape, are us'd at one time for Vowels, and at another for Consonants ; as *j, v, x, y* ; which yet differ from one another, says Bishop *Wilkins, stent corpus & animæ*.

From this Confusion in the Power of Letters, there arise divers Irregularities ; as, that some Words are distinguish'd in Writing, which are the same in Pronunciation, *e. g. Cæssio and Cæssio*, &c. and others are distinguish'd in Pronunciation, which are the same in Writing ; as *give, dave*, and *Give, evincunt*, &c. Hence also the *Latin Mali*, is a Dissyllable, and the *English Male*, a Mono-syllable.

The Names also, in most *Alphabets*, are very improperly express'd by Words of divers Syllables ; as *Alpha, Beta*, &c. in which respect, the Roman and our *English Alphabets*, which only name the Letters by their Powers, have a great Advantage over the rest.

Lastly, their Figures are not well concert'd ; there being nothing in the Characters of the Vowels answerable to the different Degrees of Aperture ; nor in the Consonants, analogous to the Agreements or Disagreements thereof.

All these Imperfections are endeavour'd to be obviat'd

in the *Universal Alphabets*, or Characters of Mr. *Ladovici, Bishop Wilkins*, &c. See *Universal CHARACTER*.

In the *French King's Library*, is an *Arabic Work*, intitled *Sepher Alacham* ; containing divers sorts of imaginary *Alphabets*, which the Author distributes into Propheticall, Mythical, Philosophical, Magical, Talismanical, &c.

Monsieur *Leibnitz* had it in view to compose an *Alphabet of Human Thoughts*. *Mém. de l'Acad. R. An. 1716.*

'Tis no wonder that the Number of Letters in most Languages shou'd be so small, and that of the Words so great ; since from a Calculation made by Mr. *Prester*, it appears, that, allowing only 24 Letters to an Alphabet, the different Words or Combinations that may be made out of those 24 Letters, taking them first one by one, then two by two, three by three, &c. would amount to the following Number, $159,172,428,887,252,999,425,128,493,402,200$. See COMBINATION.

It may be here observ'd, that every Combination may make a Word, even tho' that Combination have not any Vowel in it ; because the *e* mute or quiescent insinuates it self imperceptibly between the Consonants, or after the Consonants, where there are but two ; the latter of which would not be heard without it. — Tho' the use of this quiescent *e* is very remarkable in the *Armenian, Welch, and Dutch* Languages ; wherein the generality of Words have several Consonants together.

Nor must it be omitted, that every single Letter may make a Word : which is very apparent, where that Letter is a Vowel ; Words of that kind being found in most Languages. Thus, *a* and *o* make Words in the *Greek* ; *a, o*, in the *Latin* ; *a, i, o*, in *English* ; *a, o, y*, in *French* ; *a, e, i, o*, in *Italian* ; *a, y*, in *Spanish* ; *a, o*, in the *Portuguese* ; *a*, in most Languages, and even in the *Dutch and Swedish*. A Consonant also becomes a Word, by adding an *e* mute to it in Pronunciation.

In fine, tho' a considerable Number of the possible Combinations of 24 Letters were retrench'd, yet the Number remaining would still be immense, and vastly superior to that of the Words in any Language known.

Of all other Languages, the *Greek* is look'd upon as one of the most copious, the Radices of which are only esteem'd about 3244 ; but then it abounds exceedingly in Comounds, and Derivatives. Bishop *Wilkins* thinks these may be moderately computed at about ten thousand.

Hermannus Hugo, indeed, asserts, that no Language has so few as 100000 Words ; and *Varro* is frequently quored by learned Men, as if he affirmed that there are in the *Latin* no less than 500000 : But upon inquiring into the Scope of the Passage, Bishop *Wilkins* observes, that this Number is not intended by him to express the just Number of Words in the *Latin* ; but the great Variety made thereof, by the Inflection and Composition of Verbs. — To this purpose he lays it down, that there are above one thousand Radical Verbs in the *Latin* ; and that each Verb admits of five hundred several Varieties : He further supposes, that each of these may be compounded with nine Prepositions ; as *cessit, recessit, accessit, decessit*, &c. which amounts to five Millions. See WORD.

ALPHABET, in Matters of Polygraphy, is a duplicate of the Key or Cypher, which each of the Parties correspondng are to keep by them. See CYPHER.

It is properly an Alphabet of the usual Letters dispos'd in their Order ; opposite to, or underneath which, are the secret Characters correspondng thereto, with the blank or useless Letters, and the other Signs or Symbols serving to obscure, and render it difficult to decypher. See DCRYPTERING.

ALPHETA, in Astronomy, a Fix'd Star in the *Northern Crown* ; otherwise call'd *Lucida Corona*. See LUCIDA.

Its Longitude, Latitude, &c. see among the rest of the Constellation *CORONA SEPTENTRIONALIS*.

ALPHONSINE Table. See TABLE.

ALPHOS, in Medicine, a Distemper describ'd by *Celsus*, under the Name of *Vitiligo* ; wherein the Skin is rough, and looks as if it had Drops of white upon it, not much differing from *Morpew*. See MORPEW.

ALRAMECH, or ABRAMECH, in Astronomy, the *Arabic* Name of a Star, otherwise call'd *Arcturus*. See ARCTURUS.

ALT, in Musick. See DIAGRAM, and SCALE ; see also ALTO.

The Word is form'd of the *Latin altus*, high.

ALTAR, ARA, ALTARE, a Place or Pile whereon to offer Sacrifice to some Deity. See SACRIFICE.

The Jews had their *Brass Altar*, for Burnt offerings ; and a *Golden Altar*, or *Altar of Incense*. See TABERNACLE, &c.

Among the *Romans*, the *Altar* was a kind of Pedestal, either square, round, or triangular ; adorn'd with Sculptures, with Basso Relievo's, and Inscriptions, whereon were burnt the Victims sacrific'd to Idols. See VICTIM.

Those *Altars* set apart for the honour of the celestial Gods, and Gods of the higher Clafs, were placed on some pretty tall Pile of Building; and for that reason were called *Altaria*, from the Words *Alta* and *Ara*, a high elevated *Altar*.—Those appointed for the terrestrial Gods, were laid on the Surface of the Earth, and call'd *Arae*.—And on the contrary, they dug into the Earth, and open'd a Hole for those of the infernal Gods, which they call'd *Sarcophagi*. See *Gon*.

The *Greeks* also distinguish'd two sorts of *Altars*; that whereon they sacrific'd to the Gods, was call'd *Bœtie*, and was a real *Altar*; different from the other, whereon they sacrific'd to the Heroes, which was smaller, and call'd *exœces*. *Pollux* makes this Distinction of *Altars* in his *Onomasticon*: He adds, however, that some Poets us'd the Word *vœces*, for the *Altar* whereon Sacrifice was offer'd to the Gods.—The Septuagint Version does sometimes also use the Word *vœces*, for a form of little low *Altar*, which may be express'd in *Latin* by *Criticula*; being a Hearth, rather than an *Altar*.

The *Jesus* also gave the Name *Altar* to a kind of Tables, occasionally rais'd in the Country or Field, whereon to sacrifice to God.—In such a Place, *be built an Altar to the Lord*.

ALTAAR, is sometimes also us'd among Christians, for a square Table, placed on the Eastern side of a Church, rais'd a little above the Floor, and set apart for the Celebration of the Eucharist. See *EUCCHARIST*.

Its Form is not borrow'd, either from that of the Heathen *Altars*, or even from that of the *Jesus* in the Temple; but in regard the Eucharist was instituted by Jesus Christ at Supper, and upon a Table, the modern *Altar* is made in form of a Table; whence it is more usually, and even more significantly denominated *Communion Table*. See *COMMUNION*.

In effect, the Denomination *Altar* is founded on this Supposition, that the Eucharist is a proper Sacrifice; which, tho' the standing Doctrine of the Church of *Rome*, is utterly denied by most of the Reformed. See *MASS*.

In the primitive Church, the *Altars* were only of Wood; as being frequently to be removed from place to place.—The Council of *Paris*, in 509, decreed, That no *Altar* should be built but of Stone.

At first there was but one *Altar* in each Church; but the Number soon increas'd; and from the Writings of *Gregory* the Great, who lived in the Vith Century, we learn, that there were sometimes 12 or 13.

The *Altar* is sometimes sustained on a single Column, as in the fabrickous Chapels of *St. Cecilia* at *Rome*, &c. sometimes, by four Columns, as the *Altar* of *St. Sebastian* of *Crypts Aeneas*; but the customary Form, is, to be a Massive of Stone-work, sustaining the *Altar-Table*.

These *Altars* bear a resemblance to Tombs: In effect, we read in Church-History, that the primitive Christians chiefly held their Meetings at the Tombs of the Martyrs, and celebrated the Mysteries of Religion thereon. For which Reason, it is a standing Rule to this Day in the Church of *Rome*, never to build an *Altar*, without including the Relicks of some Saints therein. See *RELICK*, *SAINTE*, *CHURCH-YARD*, &c.

ALTAR of *Prothesis*, is a Name given by the *Greeks* to a smaller, preparatory kind of *Altar*, whereon they bless the Bread, before it be carried to the large *Altar*, where the solemn Liturgy is perform'd. See *PROTHESIS*.

F. Geor maintains, that the *Table of Prothesis* was anciently in the Sacrify, or Vestry; which he makes appear from some *Greek* Copies, where Sacrifice is made use of in lieu of *Prothesis*.

ALTAR is also us'd, in Church History, for the Oblations, or contingent Incomes of a Church. See *OBLEATION*.

In ancient Days, they distinguish'd between the Church and the *Altar*.—The Tithes, and other settled Revenues, were call'd the Church, *Ecclesia*; and the other incidental Incomes, the *Altar*. See *TITHES*, &c.

ALTAR, *Ara*, in Astronomy, one of the Constellations of the Southern Hemisphere; not visible in our Climate. See *STAR*, and *CONSTELLATION*.

ALTARAGE, a Word which includes not only the Offerings made upon the *Altar*, but also the Profit that arises to the Priest on account of the *Altar*. See *ALTAAR*.

ALTERATION, *ALTERATIO*, in *Phyicks*, the Act of changing the Circumstances and Manner of a thing; its general Nature and Appearance remaining the same.—Or, *Alteration* is an accidental, and partial Change in a Body; without proceeding so far, as to make the Subject quite unknown, or to take a new Denomination thereupon.—Or, it may be call'd, the Acquisition or Loss of such Qualities as are not essential to the Form of the Body. See *BODY*, *QUALITY*, *ESSENCE*, &c.

Thus, a piece of Iron, which before was cold, is said to be altered, when it is made hot; since it may still be per-

ceiv'd to be Iron, is call'd by that Name, and has all the Properties thereof.

By this, *Alteration* is distinguish'd from *Generation*, and *Corruption*; those Terms expressing an Acquisition or Loss of the essential Qualities of a thing. See *GENERATION*, and *CORRUPTION*.

The modern Philosophers, after the ancient Chymists and *Corpuscularians*, hold all *Alteration* to be effected by means of local Motion: According to them, it always consists either in the Emission, Accession, Union, Separation, or Transposition of the component Particles. See *PARTICLES*, &c. *Aristotle* makes a peculiar kind of Motion, which he calls the *Motion of Alteration*. See *MOTION*, &c.

ALTERANT, or *ALTERATIVE*, in Medicine, a Property, or Power in certain Remedies, whereby they induce an *Alteration* in the Body, and dispose it for Health or Recovery, by correcting some Indisposition; without occasioning any sensible Evacuation. See *MEDICINE*.

Under *Alterants*, therefore, come all Medicines which are not Evacuants. See *EVACUANT*, and *EVACUATION*.

'Tis a Point much question'd by some, whether there really be any such thing as an *Alterant* in this Sense; i. e. any thing which tends to cure a Disorder otherwise than by eliminating or expelling some peccant Matter. See *DISEASE*, *SPECIFIC*, &c.

Dr. Quincy has made it probable, that Remedies usually reputed *Alterants*, act in the same manner on the remoter and more intimate Parts of the Habit, as Emetics, Purgatives, &c. do on the Stomach and Intestines. See *PURGATIVE*.

Alteratives, therefore, are better defined, such Medicines as have no immediate sensible Operation, but gradually gain upon the Constitution, by changing the Humours from a State of Distemperature to Health.

ALTERATION, a Debate or Contest between two Friends, or Acquaintance.

They never come to an open Quarrel; but there is continually some little *Alteration* or other.

The Word comes from the *Latin* *Alterare*; which anciently signifi'd to converse or hold Discourse together. See *DIALOGUE*.

ALTERN Base, a Term in Trigonometry, contradistinguish'd from *true Base*, thus—In an oblique Triangle, the true Base is either the Sum of the Sides; in which Case, the Difference of the Sides is call'd the *Altern Base*; or, the true Base is the Difference of the Sides; in which Case, the Sum of the Sides is call'd the *Altern Base*. See *BASE*.

ALTERNATE, or *ALTERNATIVE*, is understood of several Things which succeed, or are dispos'd one after another, i. e. by turns.

In this Sense, we say, an *Alternate* or *Alternative Office* or Trust, which is discharged by turns: So, two general Officers, who command each his Day, are said to have the Command *alternately*.

In Botany, the Leaves of a Plant are said to be *alternate*, or placed *alternatively*, when there is a Correspondence between the Sides of a Branch; the Leaves of the one, following those of the other.

ALTERNATE Angles, in Geometry, are the internal Angles made by a Line cutting two Parallel, and lying on the opposite Sides of the cutting Line; the one below the first Parallel, and the other above the second. See *ANGLE*.

Thus, *x* and *u*, and *z* and *y*, (Tab. *Geometry*, Fig. 46.) are *Alternate Angles*.

There are also two external Angles, *alternately* opposite to the internal ones. See *OPPOSITE*.

Aliigation ALTERNATE. See *ALIGATION ALTERNATE*.

ALTERNATE Ratio, or *Proportion*, is where the Antecedent of one Ratio is to its Consequent, as the Antecedent of another, to its Consequent; the very same Ratio, in this Case, holding *alternately* in respect of the Antecedents to each other, and the Consequents to each other. See *RATIO*.

Thus, if *A : B :: C : D*; then, *alternately*, *A : C :: B : D*. See *PROPORTION*.

ALTERATE, in Heraldry, is us'd in respect of the Situation of the Quarters. See *QUARTER*.

Thus, in Quarterly, Escutche, the first and fourth Quarters are *alterate*; and are usually of the same Nature. Tho' like holds of the second and third. See *QUARTERING*, *QUARTERED*, &c.

ALTERNATION, a Term sometimes us'd for the divers Changes, or Alterations of Order, in any Number of Things propos'd. See *CHANGE*.

This is also call'd *Permutation*, &c. and is easily found, by a continual Multiplication of all the Numbers, beginning at Unity. See *PERMUTATION*.

Thus, if it be requir'd to know how many Changes or Alterations can be rung on six Bells; multiply the Numbers 1, 2, 3, 4, 5, 6, continually one into another; and the last Product gives the Number of Changes. See *COMBINATION*, *ALTER-*

ALTERNATIVE, is particularly used for the Choice of two things proposed.—In this Sense, we say, To take the *Alternative* of two Propositions. See **ALTERNATE**.

ALTIMETRY, **ALTIMETRIA**, the Art of taking or measuring Altitudes, or Heights; whether accessible or inaccessible. See **ALTITUDE**.

Altimetria makes the first Part of Geometry; including the Doctrine and Practice of measuring both perpendicular and oblique Lines; whether in respect of Height, or Depth. See **GEOMETRY**; see also **HEIGHT**, &c.

The Word is compounded of the Latin *Altus*, high, and *metrum*, measure, I measure.

ALTITUDE, **ALTITUDO**, in Geometry, the third Dimension of Body; called also *Height*, or *Depth*. See **HEIGHT**; see also **BODY**, **DIMENSION**, &c.

ALTITUDE, in Opticks, is usually consider'd as the Angle subtended between a Line drawn thro' the Eye, parallel to the Horizon, and a Visual Ray emitted from an Object to the Eye.

For the *Laws of the Vision* of **ALTITUDE**, see **VISION**. If thro' the two Extremes of an Object, S and T, (Tab. *Opticks*, Fig. 1.) two Parallel, TV and SQ be drawn; the Angle TVS, intercepted between a Ray passing thro' the Vertex S, and terminating the Shadow thereof in V, makes, with the right Line TV, what is called, by some Writers, the *Altitude of the Luminary*.

ALTITUDE, in Cosmography, is the perpendicular Height of a Body, or Object; or its Distance from the Horizon, upwards. See **HEIGHT**; see also **HORIZON**.

Altitudes are divided into *accessible* and *inaccessible*. See **ACCESSIBLE**, and **INACCESSIBLE**.

There are three Ways of *Measuring Altitudes*, viz. Geometrically, Trigonometrically, and Optically.—The first is somewhat indirect and unartful; the second, perform'd by means of Instruments for the Purpose; and the third by Shadows.

The Instruments chiefly used in measuring of *Altitudes*, are the *Quadrant*, *Theodolite*, *Geometrick Quadrant*, or *Line of Shadows*, &c. the *Descriptions*, *Applications*, &c. whereof, see under their respective Articles, **QUADRANT**, **THEODOLITE**, **QUADRAT**.

To take Accessible ALTITUDES.

To measure an accessible *Altitude*, geometrically.—Suppose it required to find the *Altitude* AB, (Tab. *Geometry*, Fig. 88.) plant a Staff DE perpendicularly in the Ground, of such height as may equal the height of the Eye. Then, laying prostrate on the Ground, with your Feet to the Staff; if E and B prove in the same right Line with the Eye C; the length CA is equal to the *Altitude* AB. If some other lower Point, as F, prove in the Line with E and the Eye; you must remove the Staff, &c. nearer to the Object. On the contrary, if the Line continued from the Eye over E, mark out some Point above the *Altitude* requir'd; the Staff, &c. are to be remov'd farther off, till the Line CE raze the very Point requir'd.—Thus, measuring the Distance of the Eye C from the Foot of the Object A; the *Altitude* is had; since CA = AB.

Or thus:—At the Distance of 50, 40, or more Feet, plant a Staff DE, (Fig. 89.) and at a distance herefrom, in C, another shorter one, so as that the Eye being in F; E and B may be in the same right Line therewith. Measure the Distance between the two Staves, GF; and between the shorter Staff and the Object, HF; as also, the difference of the Heights of the Staves, GE.—To GF, GE and HF; find a fourth proportional BH.—To this add the *Altitude* of the shorter Staff, FC. The Sum is the *Altitude* requir'd, AB.

To measure an accessible *Altitude*, trigonometrically.—Suppose it required to find the *Altitude* AB, (Tab. *Trigonometry*, Fig. 12.) chuse a Station in E; and with a *Quadrant*, *Theodolite*, or other graduated Instrument duly placed, find the Quantity of the Angle of *Altitude* ADC. See **ANGLE**.

Measure the shortest Distance of the Station from the Object, viz. DC, which of consequence is perpendicular to AC. See **DISTANCE**.

Now, C being a right Angle, 'tis easy to find the Line AC; since, in the Triangle ACD, we have two Angles, viz. C and D, and a side opposite to one of them, CD, to find the Side opposite to the other: for which we have this Canon.—As the Sine of the Angle A, is to the given side opposite thereto, DC; so is the Sine of the other Angle D, to the Side requir'd CA. See **TRIANGLE**.

To the side thus found, adding BC, the Sum is the perpendicular *Altitude* requir'd.

The Operation is best perform'd by Logarithms. See **LOGARITHM**.

If there happen an Error in taking the Quantity of the Angle A, (Fig. 24.) the true *Altitude* ED will be to the false one BC, as the Tangent of the true Angle DAB, to the Tangent of the erroneous Angle CAB.

Hence, such Error will be greater in a greater *Altitude* than in a less; and hence also, the Error is greater if the Angle be lesser, than if greater.—To avoid the Inconveniences of both which, the Station is to be pitch'd on at a moderate Distance; so as the Angle of *Altitude*, DEB, may be nearly half right.

Again, if the Instrument were not horizontally placed, but inclined, e.g. to the Horizon in any Angle: The true *Altitude* will be to the erroneous one, as the Tangent of the true Angle, to that of the erroneous one.

To measure an accessible *Altitude* optically, by the Shadow of the Body. See **SHADOW**.

To measure an accessible *Altitude* by the geometrical *Quadrat*.—Suppose it required to find the *Altitude* AB, (Tab. *Geom.* Fig. 90.) chusing a Station at pleasure in D, and measuring the Distance thereof from the Object, DB; turn the *Quadrat* this and that way, till the Top of the Tower A, appear thro' the Sight.

If, then, the Thread cut the right Shadows, say, As the Part of the right Shadow cut off, is to the side of the *Quadrat*; so is the Distance of the Station DB, to the Part of the *Altitude* AE.—If the Thread cut the verfed Shadows, say, As the Side of the *Quadrat* is to the Part of the verfed Shadow cut off; so is the Distance of the Station DB, to the Part of the *Altitude* AE.

AE, therefore, being found in either Case, by the Rule of Three; and the Part of the *Altitude* BE added thereto; the Sum is the *Altitude* requir'd.

To take Inaccessible ALTITUDES.

To measure an inaccessible *Altitude*, geometrically.—Suppose AB, (Fig. 89.) an inaccessible *Altitude*, so that you cannot measure to the Foot thereof. Find the Distance CA, or FH, as taught under the Article **DISTANCE**; proceed with the rest as in the Article for accessible *Distances*.

To measure an inaccessible *Altitude*, trigonometrically.—Chuse two Stations, G and E, (Tab. *Trigonometry*, Fig. 25.) in the same right Line with the requir'd *Altitude* AB, and at such distance from each other, DF, as that neither the Angle FAD, be too small, nor the other Station G too near the Object, A B.—With a proper Instrument, take the Quantity of the Angles ADC, AFC, and CFB. See **ANGLE**.—And also measure the Interval FD.

Then, in the Triangle AFD, we have the Angle D, given by Observation; and the Angle AFD, by subdividing the observed *Altitude* AFC, from two right Angles; and consequently the third Angle DAF, by subdividing the other two from two right ones; and also the Side FD: From whence the Side AF is found by the Canon above laid down, in the Problem of accessible *Altitudes*. And again, in the Triangle ACF, having a right Angle C, an observed Angle F, and a side AF; the Side AC, and the other CF, are found by the same Canon. Lastly, in the Triangle ECB, having a right Angle C, observed Angle CFB, and a Side CF; the other side CB, is found by the same Canon.

Adding, therefore, AC and CB; the Sum is the *Altitude* requir'd, AB.

To find an inaccessible *Altitude*, by the Shadow, or the geometrick *Quadrat*.—Chuse two Stations in D and H, (Tab. *Geom.* Fig. 90.) and find the Distance DH or CG; observe what part of either the right or verfed Shadow is cut by the Thread.

If the right Shadows be cut in both Stations, say, As the Difference of the right Shadows in the two Stations, is to the Side of the Square; so is the Distance of the Stations GC to the *Altitude* EA.—If the Thread cut the verfed Shadow at both Stations, say, As the Difference of the verfed Shadows mark'd at the two Stations, is to the lesser verfed Shadow; so is the Distance of the Stations GC, to the Interval GE. Which being had; the *Altitude* EB is also found by means of the verfed Shadow in G; as in the Problem for accessible *Altitudes*.

Lastly, if the Thread in the first Station G, cut the right Shadows; and in the latter, the verfed Shadows; say, As the Difference of the Product of the right Shadow into the verfed, subtracted from the Square of the Side of the *Quadrat*, is to the Product of the Side of the *Quadrat* into the verfed Shadow; so is the Distance of the Stations GC, to the *Altitude* requir'd, AE.

The utmost Distance at which an Object may be seen, being given; to find its *Altitude*.—Suppose the Distance DB, (Tab. *Geography*, Fig. 9.) turn this into Degrees; by which means, you will have the Quantity of the Angle C. From the Secant of this Angle subtract the whole Sine BC; the Remainder will be AB, in such Parts, whereof BC is 1000000.—Then say, as 1000000 is to the Value of AB in such Parts; so is the Semidiameter of the Earth BC 19595559, to the Value of the *Altitude* AB in Paris Feet.

The Sun's *Altitude* may also be found without a *Quadrat*, or any the like Instrument, by erecting a Pin or Wire perpendicularly, as in the Point C, (Tab. *Astronomy*, Fig. 62.)

62.) from which Point you had describ'd the Quadrantal Arch A F. Make C E equal to the Height of the Pin or Wire, and thro' E draw E D parallel to C A, and make it equal to C G, the length of the Shadow; then will a Ruler, laid from C to D, intersect the Quadrant in B; and B A is the Arch of the Sun's Altitude, when measur'd on the Line of Chords. See **CHORD**.

Suppose, e.g. the Altitude be required of a Tower A B, whose Top is visible at the Distance of five Miles: Then will D C B 20', from whose Scent 10000168, subtracting the whole Sine 10000000; the Remainder A B is 168, which will be found 331 Paris Feet.

ALTITUDE of the Eye, in Perspective, is a right Line let fall from the Eye, perpendicular to the geometrical Plane.

ALTITUDE, in Astronomy, is the Distance of a Star, or other Point in the Mundane Sphere, from the Horizon. See SPHERE, HORIZON, DISTANCE, &c.

This Altitude may either be true or apparent.—If regard be had to the rational, or real Horizon; the Altitude is said to be true or real: If to the apparent, or sensible Horizon; the Altitude is apparent.—Or rather, the apparent Altitude is such as it appears to our Observation; and the true, that from which the Refraction has been subtracted. See TRUE, APPARENT, &c.

The Altitude of a Star, or other Point, is properly an Arch of a Vertical Circle, intercepted between the assigned Point and the Horizon. See VERTICAL.—Hence,

Meridian ALTITUDE.—The Meridian being a vertical Circle; a Meridian Altitude, that is, the Altitude of a Point in the Meridian, is an Arch of the Meridian intercepted between it and the Horizon. See OBSERVATION.

To observe the Meridian Altitude of the Sun, of a Star, or other Phenomenon, by means of the Quadrant, see MERIDIAN ALTITUDE.

To observe a Meridian Altitude by means of a Gnomon, see GNOMON.

ALTITUDE of the Pole.—Since the Meridian passes thro' the Poles of the World; the Altitude of the Pole, is an Arch of the Meridian, intercepted between the Pole and the Horizon.

To observe the Altitude or Elevation of the Pole, see ELEVATION, and POLE.

The Altitude of the Pole coincides with the Latitude of the Place. See LATITUDE.

ALTITUDE of the Equator, is the Complement of the Altitude of the Pole to a Quadrant of a Circle. See ELEVATION of the Equator.

To find the ALTITUDES of the Sun, Stars, &c. by the Globe. See GLOBE.

ALTITUDE of the Nonagesimal, is the Altitude of the 19th Degree of the Ecliptic, reckon'd from the East Point. See NONAGESIMAL.

Refraction of ALTITUDES, is an Arch of a Vertical Circle, as S, (Tab. Astronomy, Fig. 28.) whereby the Altitude S E, of a Star or other Body, is increas'd by means of the Refraction. See REFRACTION.

Parallax of ALTITUDES, called also simply Parallax; is the difference C B, (Tab. Astron. Fig. 27.) between the true and apparent Place of a Star; or, the Distance B C, between the true Distance of a Star A B, and the observed Distance A C, from the Zenith A.

The Parallax diminishes the Altitude of a Star, or increases its Distance from the Zenith.

To find the Parallax of Altitude, &c. see PARALLAX.

ALTITUDE of a Figure, in Geometry, is the Distance of its Vertex, from its Base; or the length of a Perpendicular let fall from the Vertex to the Base. See FIGURE, BASE, and VERTEX.

Thus, K M, (Tab. Geometry, Fig. 19.) being taken for the Base of the Rectangle-Triangle, K L M: the Perpendicular K M, will be the Altitude of the Triangle.

Triangles of equal Bases and Altitudes, are equal; and Parallelograms, whose Bases and Altitudes are equal to those of Triangles, are just double thereof. See TRIANGLE, PARALLELOGRAM, &c.

ALTITUDE of Motion, is a Term used by Dr. Wallis, for the Measure of any Motion, estimat'd according to the Line of Direction of the moving Force. See MOTION.

ALTO & Bassi, or in ALTO & in BASSI, in Law, signifies the absolute Reference of all Differences, small and great, high and low, to some Arbitrator or indifferent Person.—*Pateat universis per presentes quod Willielmus Tyr, de Teston, & Thomas Gover de Almeire, posterunt se in Alto & in Bassi, in arbitrio quatuor Hominum, viz. de quadam querela pendente inter eos in curia. Nos & terram nostram Alto & Bassi ipsius domini Regis supplicimus volumus.* Du Cange.

ALUDELS, in Chymistry, Subliming-Pots. See SUBLIMATION.

Aludels, are a Range of earthen Tubes, or Pots without bottoms; fitted, one over another, and diminishing as they advance towards the Top.—The lowest is adapted to a Pot,

placed in the Furnace, wherein the Matter to be sublimed is lodg'd.—And at the Top is a Head, to retain the Flowers which ascend. See FLOWER.

ALVEARIUM, in Anatomy, the bottom of the Concha, or hollow of the Auricle. See AURICLE, and CONCHA.

The *Alvearium Auriculæ* terminates at the *Mensura Auditoria*. See MEATUS.

The Word literally signifies *Bee-bive*, form'd of *Alveus*, Channel.

ALVEOLI, in Anatomy, little Sockets in the Jaws, wherein the Teeth are set. See TEETH, and JAW.

The *Alveoli* are lined with a Membrane of exquisite Sence, which seems to be nervous, and is wrapt about the Roots of each Tooth; from whence, and the Nerve, proceeds that Pain called *Odontalgia*, or Tooth-ach. See ODONTALGIA, and TOOTH-ACH.

ALVIDUCA, a Term used by some Writers for *loseting Medicines*. See PURGATIVE, &c.

The Word is compounded of *Alvus*, and *dnce*, I draw.

ALUM, ALUMEN. See ALUM.

ALVUS, among Anatomists, is sometimes us'd to express the intestinal Tube, from the Stomach to the Anus. See INTESTINES.

ALVUS, in a Medicinal Sense, is taken for the State, and Condition of the Forces, or Excrements contain'd within their Cavity. See EXCREMENT, &c.

Thus, when a Person is laxative, it is called *Alvus liquida*; and when costive, *Alvus adstricta*. See COSTIVE, LAXATIVE, &c.

AMABYR, or AMYBYR, in our ancient Law-Books.—*Pretium virginitatis dotibus solvendum—Puella dicitur esse deserta Regis, & ob hoc Regis esse de an Amabyr habere.*

The Custom was in honour of *Clara*, and obtained till such time as Henry Earl of Arundel, *Temp. Phil. & Mar.* in consideration of *God*, released it to all his Tenants there, by the Name of the *Custom of Amabyr and Cleavage*. See CREAVAGE.

AMAIN, a Sea Term, us'd by a Man of War, to his Enemy; and signifying, *yield*.—Hence, *To strike Amain*, that is, to lower your Topfalls.

AMALGAM, or AMALGAMA, in Chymistry, a Mass of Mercury, united and incorporated with a Metal. See MERCURY, and METAL.

The *Amalgam* of Mercury with Lead, is a soft, friable Substance, of a Silver Colour. See LEAD.

By washing and grinding this *Amalgam* with fair warm Water in a glass Mortar, the Impurities of the Metal will mix with the Water; and by changing the Water, and repeating the Lotion again and again, the Metal will be further and further purified.—*Boerhaave* mentions it as one of the greatest Secrets in Chymistry, to contrive to bring off the Liqueur at last as clear and unmix'd as when first pour'd on the nobler Metals; which might afford a Method of making the Transmutation, PHILOSOPHER'S STOVE, &c.

This philosophical way of purifying Metals, may be applied to all the Metals, except Iron and Copper. See ALMAGAMATION.

The Word *Amalgama* is form'd of the Greek *άμα, simul*, together, and *μαζα, junctura*, to join.

AMALGAMATION; in Chymistry, the Operation of making an *Amalgama*; i. e. of calcining, or rather dissolving some Metal, especially Gold, by means of Mercury. See ALMAGAMA.

Amalgamation is performed by fusing, or at least igniting the Metal; and in this State adding a proportion of Mercury thereto; upon which they mutually attract, and incorporate with each other. See MERCURY.

All Metals, except Iron and Copper, unite and *amalgamate* with Mercury; but Gold with the greatest facility; Silver the next; then Lead, and Tin. See METAL, &c.

The *Amalgamation* of Gold is usually perform'd by heating the Lamine or Plates of Metal red hot; after which, Quicksilver is to be pour'd upon 'em, and the Mixture stir'd with a little Iron Rod, till it begins to rise into Smoke.—It is then thrown into a Vessel full of Water, where it coagulates and becomes manageable.

This Calcination is in great use among Goldsmiths, and Gildees, who by this means render Gold fluid and ductile for their Purposes.—Such Mixture or *Amalgama* being laid on any other Metal, for instance, Copper; and this afterwards placed on the Fire to evaporate; the Gold will be left alone on the Surface of the Copper: which makes what we call *Gilding*. See GILDING.

The Blackness adhering to the *Amalgama* may be washed away with Water; and a deal of the Mercury press'd out thro' a linen Cloth: The red being evaporated in a Crucible, the Gold remains behind in an impalpable Powder. See GOLD.

Gold retains about thrice its own weight of Mercury.

This Operation is denoted among Chymists by the Letters AAA. See CHARACTER.

AMATORII Mufculi, in Anatomy, an Appellation fometimes given to thofe Mufcles of the Eyes which give them a Call fide ways, and affit in that particular Look by fome called Ogling. See **EYE**.

When the *Abduktor* and *Abductor* act together, they give this oblique Mufion. See **HABUCION**, and **HUMILIS**.

The Word is form'd of the Latin *Amare*, to love.

AMAUROSI, in Medicine, a Deprivation of Sight; the Eyes remaining fair, and feemingly unaffected. See **EYE**, &c. *Amurofi* is the fame with what the *Latins* more usually call *Gutta Serena*. See **GUTTA SERENA**.

The Word is Greek, ἀμαροσι, q. d. *Darknefs*; form'd of *αμαροσι*, *obfcurus*.

AMAXOBII, **AMAXOBIIANS**, or **HAMAXOBIIANS**, in antient Geography, a kind of People who had no Houfes, nor even Tents; but lived altogether in Charlots. See **HAMAXOBIIANS**.

The Word is compounded of ἀμαξα, a *Chariot*, and βιος, *vita*, *Life*.

AMAZON, in Antiquity, a Term fignifying a bold, courageous Woman; capable of daring, hardy Atchievements. See **VIRAGO**, **HEROINE**, &c.

The Word is borrow'd from the *Amazons*, a Nation of warlike Women, in *Scythia*, inhabiting near the *Taurus*; who liv'd without Men, and had only to do with Strangers; killing their Male Children, and cutting off the left Breasts of their Females, to make them more fit for the Combat.

'Tis from this last Circumftance that they take their Name, viz. from the Privative α, and μαζα, *Mamma*, *Breast*.

'Tis a Point controverted even among antient Writers, whether ever there really were fuch a Nation of *Amazons*.—*Strabo*, *Palephatus*, and others, abfolutely deny it: on the contrary, *Hecdotus*, *Panofianus*, *Diodorus Siculus*, *Trogus Ponticus*, *Jofeph*, *Pliny*, *Mela*, *Plutarck*, &c. exprefly affirm it.

Hippocrates mentions a Law among 'em, whereby they were doom'd to remain Virgins, till fuch time as they had flain three Men of their Enemies.—He adds, that the Reafon of their cutting off the right Breast, was to make the right Arm the ftronger; as fuppofing this would now receive the Nutriment, which wou'd otherwife have gone to that.

Some Authors relate, that inftead of killing, they twilted the Legs of their Male Children; to prevent their being able to contend with 'em for the Maffery.

M. Petit, a French Phyfician, publish'd a Latin Difertation in 1695, to prove that there really was a Nation of *Amazons*: It contains abundance of curious Inquiries, relating to their Habit, their Arms, the Cities built by 'em, &c.—On Medals, the *Amazons* Buft is usually arm'd with a little Ax, bore on the Shoulder, and a Buckler, in form of a Half-Moon, by the *Latins* called *Pelta*.

Some modern Geographers and Travellers mention *Amazons* ftill in being.—*Jofeph de las Sactas*, a *Portuguefe* Capuchin, in his Description of *Ethiopia*, fpeaks of a Race of *Amazons* in *Africa*. And *Aeneas Sylvius* gives us a very precise Account of a Republick of real *Amazons*, in *Babezia*, which lafted nine Years; founded by the Courage of a Maid named *Vafifa*.

AMBAGES, a Latin Term for a *Circumlocution*; or, an indiredt Difcourfe or Diftion, tending to exprefs or fhew fomething by a Compafs of Words or Sentiments fetch'd from afar. See **CIRCUMLOCUTION**.

AMBARVALIA, in Antiquity, a Feaft, or Ceremony among the *Romans*; celebrated annually, to procure of the Gods a happy Harveft. See **FESTIV**, &c.

At thefe Feaft, they facrificed a Bull, a Sow, and a Sheep; which, before the Sacrifice, were led in Proceffion around the Fields; whence the Feaft took its Name: from the Greek *αμβω*, *ambos*; or the Latin *ambio*, I go round, and *arvum*, Field.—Tho, *Scaliger* writes it *Ambarbalia*; and deduces it from *ambire urbem*, to go round the City.

From the Beasts offer'd in Sacrifice, the Ceremony was alfo called *Suocentauria*. See **SUOCENTAURIA**.

'Tis not certain whether this Feaft was fix'd, or moveable; nor whether it was celebrated once, or twice a year; Authors being of different Opinions on both thofe Heads.

The *Ambrosiale Carmen*, was a Prayer prefer'd on this Occafion; whereof we have the Formula preferv'd in *Cato*, C. 121. de *Re Ruflica*.

The Priests who chiefly officiated at the Solemnity, were called *Fratres Arvales*. See **ARVALES**.

AMBASSADOR. See **EMBAFFADOR**.

AMBE, in Anatomy, a fuperficial Jutting out of a Bone. See **BONE**.

The Word is alfo ufed as the Name of a Chirurgical Inftrument, with which they reduce dillocated Bones.

AMBER, **SUCCINUM**, **CARABE** or **KARABE**, **GLESSUM**, **ELECTRUM**, **CHRYSOLECTRUM**, in Natural History, &c. a yellow transparent Subftance, of a gummous or bituminous Form and Confidence, but a refinous Tafte, and a fmall like

Oil of Turpentine; chiefly found in the *Baltick Sea*, along the Coasts of *Pruffia*, &c.

Naturalifts are infinitely divided as to the Origin of *Amber*, and what Clafs of Bodies it belongs to: fome referring it to the Vegetable, others to the Mineral, and fome even to the Animal Kingdom.—Its Natural History, and its Chymical Analyfis, afford fomething in favour of each Opinion.

Pliny describes it as "a refinous Juice, oozing from aged Pines, and Firs; (others fay, from Poplars, whereof there are whole Forests on the Coasts of *Sweden*;) and difcharged thence into the Sea; where undergoing fome Alteration, it is thrown in this form upon the Shores of *Pruffia*; which lie very low: They add, that it was hence the Antients gave it the Denomination *Succinum*; from *Succus*, Juice." *Nat. Hift. Lib. XXXVII*.

This Opinion of the antient Naturalift, is confirmed by the Observations of many of the modern ones; particularly the learned Father *Camelli*. *Philofoph. Tranfacc. N.º 290*.

Some have imagin'd it a Concretion of the Tears of Birds; others, the Urine of a Beaft; others, the Scum of the Lake *Cephalide*, near the *Atlantick*; others, a Congelation form'd in the *Baltick Sea*, and in fome Fountains where it is found fwimming like Fitch.

Others fuppofe it a Bitumen, trickling into the Sea from fubterraneous Sources; where concreted into this form, and thrown afhore by the Waves.

This laft Opinion was a long time the moft popular; and feem'd to have the beft Ground; but this, too, is now difcarded; as good *Amber* having been found in digging at a confiderable diftance from the Sea, as that gather'd on the Coast.

Others fuppofe *Amber* a compound Subftance.—*Pruffia*, fay they, and the other Countries which produce *Amber*, are moften'd with a bituminous Juice, which mixing with the vitriolick Salts abounding in thofe Places, the Points of thofe Salts fix its Fluidity, whence it congeals; and the Refult of that Congelation makes what we call *Amber*; which is more or lefs pure, transparent, and firm, as thofe Parts of Salt and Bitumen are more or lefs pure, and mix'd in this, or that Proportion.

The Chymifts are as much divided as the Naturalifts. *Amber* being found by Diffillation to yield an acid Spirit, which precipitates into a Salt; is infer'd, by fome, to be of a mineral Nature; this being a Circumftance peculiar to that Kingdom, and never found in the Diffillation of Vegetables: To which may be added, that *Amber* diffolves in Alcohol, not in Water; melts at the Fire, and is inflammable; which are Characters, that feem to refer it to the Clafs of Sulphur, or Bitumens.

Others, on the contrary, argue it of the Vegetable Kind, from its refolving into the fame Principles with Vegetables; viz. Water, Spirit, Salt, and Oil.—*Boerhaave* remembers it to Camphire, which is a concreted Oil of the aromatic Plants of that Country, elaborated by Heat into a cryftalline Form.

There are feveral Indications which difcover where *Amber* is to be found.—The Surface of the Earth is there cover'd with a foft fealy Stone; and Vitriol in particular abounds there, which is fometimes found white, fometimes reduced into a Matter like melted Glafs, and fometimes figur'd like petrify'd Wood.

Amber affumes all Figures in the Ground; that of a Pear, an Almond, a Pea, &c. Among others, there have been found Letters very well form'd; and even Hebrew, and Arabic Characters.—Within fome pieces of *Amber*, have likewife been found Leaves, Infefts, &c. included; which feems to indicate either that the *Amber* was originally in a fluid State; or that having been expofed to the Sun, it was foften'd, and render'd fufceptible of the Leaves, Infefts, &c. which came in its way. The latter of thefe feems the more agreeable to the Phenomenon, in regard thofe Infefts, &c. are never found in the Centre of the piece of *Amber*, but always near the Surface.

'Tis obferv'd by the Inhabitants of the Places where *Amber* is produc'd, that all Animals, whether terreftrial, aerial, or aquatick, are extremely fond of it; and that they frequently find Pieces of it in their Excrements, and in their Bodies when open'd.

The moft remarkable Property of *Amber*, is, that, when rubb'd, it draws or attracts other Bodies to it; and this, 'tis obferv'd, it does, even in thofe Bodies which the Antients thought it had an Antipathy to; as oily Bodies, Drops of Water, the Bafilisk, Sweat of human Body, &c. See **ELECTRICITY**.

Add, that by Friction it is brought to yield Light pretty copioufly in the dark; whence 'tis reckon'd among the native *Phofphori*. See **FRICTION**, **PHOSPHORUS**, **LIGHT**, &c.

Amber is reputed of fome medicinal Efficacy; being ufed in Suffumigations, to remove Deffuxions; and in Powder, as an Alterant, Abforbent, Sweetner, and Astringent. See **SUFFUMIGATION**, **ABSORBENT**, **ASTRINGENT**, &c.

In times of Plague, those who work in Amber at *Konigsberg* are said to be never infected; whence it is held a Preservative.—It is esteem'd a Lithontriptick Diuretic, and Promover of the Menstrua.

Some distinguish Amber with regard to its Colours, into yellow, white, brown, and black.—But the two latter are supposed of a different Nature and Denomination; the one call'd *Jet*, the other *Ambergreece*. See AMBERGREESE.

The white is most valued for Medicinal Uses, as being best digested, of the most odiferous Smell, and containing the greatest Quantity of Volatile Salt.—The yellow is most prized by those who work it into Beads, and other Toys, by reason of its transparency.

Kerkerig pretends to be Master of the Secret of making Coffins of Amber, without destroying its Transparency. 'Tis probable he took the Hint from the *Ethiopiens*, who bury their Dead in Glasses. An *Ethiopian*, the black, makes a fine Figure in a Venice Crystal; much more would he do in a Cover of yellow Amber.

The Amber gather'd on the *Prussian* Coasts, yields that Prince a handsome Revenue.—Authors make mention of other Places where it is found, as on the Banks of the *Po*; the Coasts of *Marzeilles*; and divers Parts of *Asia*, *Africa*, and even *America*: But *Hortman*, who has wrote the History of the *Prussian* Amber, *Succini Prussia Historia*, &c. treats all these Accounts as Fables, and denies Amber to be found any where but in the Northern Countries of *Europe*, viz. in *Poland*, *Silesia*, and *Bohemia*, rarely; *Futland*, *Holstein*, *Denmark*, oftener; more frequently still on the Coasts of *Sawegitia*, *Covrland*, *Livonia*, and *Pomerania*; but most of all, in *Prussia*, in the Country call'd *Sambia*, from *Neve Yss* to *Uraus Urag*.

The Word is originally *Arabick*, *Ambar*, or *Aubar*, which signifies the same thing.

Spirit of AMBER, is an acid Liqueur, procur'd from Amber, by pulverizing and distilling it by a Sand-heat, with or without the Addition of Tobacco-pipes, Bricks, Sand, &c.

It is chiefly us'd externally in Rheumatick Pains and Aches; and internally, in inveterate Gleet, &c.

Oil of AMBER, is a fine, transparent, ponderous, yellow Oil; procur'd after the Spirit, by increasing the degree of Fire.—This, by Rectification, becomes a good Antihysteric, and Emmenagogue; being very subtile and penetrative.

Volatile Salt of AMBER.—The principal Chymical Production of this Substance, is a peculiar white, transparent, acid Salt; which rises after the Oil, and fixes in the Neck of the Retort, &c.

It is a good Cephalic, and Detergent: Dr. *Quincy* says, it extremely attenuates, cuts, and penetrates the most remote and minute Recesses; and thus scours, as it were, the whole nervous System. Its chief tendency, he adds, is to Secretion; and what it carries along with it, is by Urine. It also contributes, with Alexipharmicks, to promote a Diaporesis; and is scarce ever omitted in Prescription for chronic Cates, as Epilepsies, Palfies, &c.

The great Consumption of this Medicine, and the small Proportion that Amber yields of it, occasions it to be frequently adulterated with Sal Ammoniac, Nitre, Cream of Tartar, Salt of Coral, &c.

Tincture of AMBER, is procur'd by Digestion in Spirit of Wine with a Sand-heat. See TINCTURE, and DISTILLATION.

It is prescribed with the same Intentions as the Salt of Amber.

Black AMBER. See JET.

Liquid AMBER, is a kind of native Balsam, or Resin, like Turpentine; clear, reddish or yellowish; of a pleasant Smell, almost like Ambergreece. See RESIN.

It flows liquid, from an Incision made in the Bark of a fine large Tree in *New Spain*; but hardens as it grows older into a solid form, and is brought to us in Barrels.

It is reputed an excellent Balsam; mollifies, consolidates, and is good against the Sciatica, Weakness of the Nerves, &c. See BALM.

AMBER-GREASE, AMBERGRIS, AMBRA GRISTA, AMBARUM, a fragrant Drug, that melts almost like Wax; commonly of a greenish or ash-colour, us'd both as a Perfume and a Cordial.

It is found on the Sea-Coasts, in several Countries; as, along the Southern and Eastern Parts of *Africa*, *Madagascar*, the *Maldives*, some Parts of the *Mediterranean*; and in the *West Indies*, about the Islands of *Bermudas*, &c. It is of divers Colours, whitish, brownish, streak'd with yellow, blackish, &c.

There is a great Variety of Opinions among Naturalists with regard to its Origin and Production: To rehearse 'em all, would make a Volume.—The principal may be reduced to these which follow.

1^o, Some take it for the Excrement of a Bird, which being melted by the Heat of the Sun, and wash'd off the Shore by the Waves; is swallow'd by Whales; who return it back in the Condition we find it. Or, as *Bartolus* re-

lates, from the *Moorish* Inhabitants of the *Maldives*; the Excrements abovemention'd are alter'd and refin'd by lying on the Rocks, expos'd to the Sun, Moon, and Air; from whence they are afterwards wash'd off by the rising Sea. They add, that the Whales frequently swallow pieces hereof: that those Pieces we meet withal of a black Colour, took that Hue in the Stomach of those Animals; and the brown are such as have floated long on the Water; and the white, such as have only been a short time there, which they value the most. *Ramusio*, Tom. I. fol. 312.

2^o, Others speak of it as the Excrement of a Cetaceous Fish; because sometimes found in the Intestines, and sometimes in the Faeces themselves, of such Animals.—*Justus Klobius*, in his History of Amber, describes the Animal; which he says is a Whale, and call'd the *Trunk*: Adding, that the Sperma Ceti is taken out of the Head of the same Creature.—Others, with the *Persians*, suppose the Fish that yields the Ambergreece, a Sea-Calf; others, with the *Africans*, a peculiar Species of Fish, nam'd *Ambracus*; others a Crocodile, by reason its Flesh is perfum'd, &c.

But, to both these Hypotheses it is objected, That we have no Instance of any Excrement capable of melting like Wax. Add, that if it were the Excrement of a Whale, it should rather be found in such Places where those Animals abound, as about *Greenland*, &c. than about the *Maldivy* Islands, *Soffala*, *Melinda*, *Cape Comorin*, &c. where no Whales are found.

3^o, Others take it for a kind of Wax, or Gum, which distils from Trees, and drops into the Sea, where it congeals, and becomes Ambergreece.

4^o, Others, and particularly many of the Orientals, imagine it springs out of the bottom of the Sea, as Naphtha does out of some Fountains.—They add, that the only Springs hereof are in the Sea of *Ormus*, between the *Arabian* and *Persian* Gulphs. *Edrissi*, who is of this Opinion, in the first Climate of his Geography, mentions pieces of Ambergreece, on those Coasts, weighing a full Quintal.—*Paludanus* and *Linschbot* speak of it as a sort of Pitch, gradually working up from the bottom of the Sea, and hardening in the Sun.

5^o, Others take it for a Sea-Mushroom, torn up from the bottom by the Violence of Tempests; it being observ'd, that Ambergreece is never found but after Storms.

6^o, Others asserit it a Vegetable Production, issuing out of the Root of a Tree, whose Roots always shoot toward the Sea, and discharge themselves into the same.—This Account we have in the *Philosophical Transactions*, from one of the *Dutch* Factors at *Batavia*: And the same is confirm'd by Mr. *Boyle*. Of Tastes and Odors.

7^o, Others suppose it a spongy kind of Earth, which the working of the Sea washes from off the Rocks, where, being lighter than Water, it floats.—Others are of Opinion that it is a bituminous Matter; that it is at first liquid, and runs into the Sea, and that it is there condensed and reduced into a Mass.

8^o, Lastly, others maintain, that Ambergreece is made from the Honey-Combs which fall into the Sea from the Rocks, where the Bees had formed their Nests.—This Opinion has something of Experience on its side, and begins now to be generally allow'd; several Persons having seen Pieces that were half Ambergreece, and half plain Honey-Comb; and others, again, having found large Pieces of Ambergreece, which when broke, Honey-Comb, and Honey too, were found in the middle.

The Pieces frequently seem compos'd of divers Strata, laid one over another; with Stones and other Bodies inclos'd therein; and the Strata are sometimes full of little Shells, which seem a Species of *Concha Anatifera*: Whence it may be conjectur'd, that the Ambergreece has originally been in a fluid State; or at least, that it has been melted; and in that State has form'd it self afloat, and involop'd such Bodies as happen'd to be in its way.

It is of considerable use among Perfumers, who melt it over a gentle Fire, and make Extracts, Essences, and Tinctures of it.—It would be of more use in Physick too, were not its Smell so rank and offensive, and on that account apt to occasion Vapours.

We have various Instances in Authors, of huge Pieces of this Matter: The largest that has been known in *Europe*, was brought by the *Dutch East-India* Company, toward the Close of the last Century; and kept in their House for some Years. It was almost round; measured two Foot in Diameter, and weigh'd an hundred eighty two Pounds. The great Duke of *Tuskey* offer'd fifty thousand Crowns for it.

AMBER-SEED, or *Musk-seed*, is a Seed somewhat like the Millet, of a bitterish Taste, and brought dry to us from *Martinico* and *Egypt*.—The *Egyptians* use it internally, as a Cordial, to fortify the Heart, Stomach, and Head, and to provoke Lust.—It gives a grateful Scent to the Breath, after eating; but is not proper for those who are inclinable to Vapours.

AMBIDEXTER, one who uses both Hands alike, the Left as well as the Right, and this in Cases where only the Use of one is necessary.

The Word is form'd from the Latin *ambo*, both, and *dexter*, right hand.—*Hippocrates* observes, that this never happens to Women.

In a legal Sense, *Ambidexter* signifies a Juror, &c. who receives Money of both Parties, for the giving his Verdict, &c. for which he is to forfeit *decies tantum*, ten times as much as he receives. See JUROR.

AMBIENT, a Term applied to such things as encompass others round about.

Thus, the Bodies situate around any other Body, are called the *Ambient*, and often the *Circum-Ambient* Bodies.

And the whole Body of Air, because it encompasses all things on the Face of the Earth, is often by Physical Writers called, by way of Eminence, the *Ambient*, or *Ambient Air*. See AIR.

The Word is form'd of the Latin *Ambire*, to encompass, so round.

AMBIGENAL Hyperbols, in Geometry is that which has one of its infinite Legs inscribed, and the other circumscribed. See HYPERBOLA, and CURVE.

AMBIGUOUS, something dubious, obscure, or which may be taken in different Senses.—The Word is form'd of the Latin *ambo*, both, and *ago*, I drive; *q. d.* that which keeps the Mind wavering, or in Suspence; not knowing which side to chuse.

The Answers of the antient Oracles were always *ambiguous*. See ORACLE.

AMBIT, of a Figure, in Geometry, is the Perimeter, or Circumference, or Sum of all the bounding or encompassing Lines, that constitute or include it. See PERIMETER, CIRCUMFERENCE, &c.

AMBITUS, among the antient Romans, signified the Act of suing, or making Interest for Offices.

The Candidates, in this Case, went about the City; and into all publick Places, and Assemblies, to beg Voices; which was call'd *Ambitus*; *am*, in the antient Latin, signifying *circum*, about, or around, and *ere*, to go. See CANDIDATE.

AMBLE, *AMELING*, in Horsemanship, a peculiar kind of Pace, whereas a Horse's two Legs of the same Side, move at the same time. See PACE.

The *ambling* Horse changes Sides at each remove; two Legs of a side being in the Air, and two on the ground, at the same time: An *Ambler* is usually the first natural Pace of young Colts; which, as soon as they have Strength enough to trot, they quit.—There is no such thing as an *Ambler*, in the Manage; the Riding-Masters allowing of no other Paces, beside Walk, Trot, and Gallop: Their Reason is, That a Horse may be put from a Trot to a Gallop, without stopping him; but not from an *Ambler* to a Gallop, without such Stop; which loses time, and interrupts the Justice and Cadence of the Manage. See TROT, GALLOP, &c.

There are various Practices and Methods of Discipline, for bringing a young Horse to *Ambler*: Some chuse to toll him in his Foot-pace thro' new-plough'd Lands; which naturally inures him to the Stroke requir'd in the *Ambler*. Its Inconveniencies are, the Weakness and Lameness that such disorderly Toil may bring on a young Horse.

Others attempt it by sudden stopping, or checking him in the Cheeks, when in a Gallop; and thus putting him into an Amplexus, between Gallop and Trot; so that losing both, he necessarily stumbles on an *Ambler*.—But this is apt to spoil a good Mouth and Rein; and exposes the Horse to the Danger of an Hoof-reach, or Sineew-strain, by over-reaching, &c.

Others prefer *ambling* by Weights, as the best way; and to this end, some overload their Horse with excessively heavy Shoes; which is apt to make him interfere, or strike short with his hind Feet.—Others fold laden Weights about the Fetlock Pasterns, which are not only liable to the Mischiefs of the former, but put the Horse in danger of incurable Strains, crushing of the Coronet, and brooding of Ring-bones, &c.—Others load the Horse's Back with Earth, Lead, or the like massy Substance; which may occasion a Swaying of the Back, overstraining of the Fillets, &c.

Some endeavour to make him *Ambler* in hand, ere they mount his Back, by means of some Wall, smooth Pale or Rail, and by checking him in the Mouth with the Bridle-hand; and correcting him with a Rod on the hinder Hoofs, and under the Belly, when he treads false: But this is apt to drive a Horse to a desperate Preuz, ere he can be made to understand what they would have of him; and to rear, sprout out his Legs, and make other antick Postures, which are not easily quitted again.

Others think to effect it by a pair of hind Shoes with long Spurs or Plates before the Toes; and of such length, that if the Horse offers to trot, the hind-foot beats the fore-

foot. But this occasions Wounds of the back Sinews, which often bring on an incurable Lameness.

Some attempt to procure an *Ambler*, by folding fine, soft Lifts frait about his Gambrels, in the Place where he is gartered for a Stiffle Strain; and turn him thus to Grass for two or three Weeks, and afterwards take away the Lift.—This is a Spanish Method, but disapproved; for tho' a Horse cannot then trot but with Pain, yet the Members must be Sufferers; and tho' the *Ambler* be gain'd, it must be slow, and unlighty; because attended with a cringing in the hind Parts.

In effect, *Ambling* by the Tramel appears the nearest to Nature, the best and most assured way. See TRAMEL.

There are divers Errors usually practis'd in this Method; as, That the Tramel is oft made too long, and so gives no Stroke; but makes a Horse huckle and shuffle his Feet confusedly; or too short, which makes him volt and twitch up his hind Feet so fuddally, that by Custom it brings him to a String-halt; from which it will scarce ever be recover'd. Sometimes the Tramel is misplaced, and to prevent falling put above the Knee, and the hind Hoof.—In which Case, the Beast cannot give any true Stroke, nor can the fore Leg compel the hind to follow it: or if, to evade this, the Tramel be made short and frait, it will press the main Sinew of the hind-Leg, and the fleshy part of the fore Thighs; so that the Horse cannot go without halting before, and cringing behind.

As to the Form of the Tramel; some make it all of Leather, which is inconvenient; in that it will either stretch or break, and thus confound the Certainty of the Operation. In a true Tramel, the side-Ropes are to be so firm, as not to yield a Hair's breadth; the Hoof soft, and to lie so close, as not to move from its first Place; and the Back-band flat, no matter how light, and to defend from the Fillets so as not to gall.

When the Horse by being Tramed on one side, has attain'd to *Ambler* perfectly in the Hand; it is to be changed to the other side, and that to be likewise brought to Rule. When, by this changing from one side to another, with a half Tramel, the Horse will run and *ambler* in the Hand, readily and swiftly, without Snapping and Stumbling; which is ordinarily done by two or three Hours labour; the whole Tramel is to be put on, with the broad, flat, Back-band, and both sides tramel'd alike.

AMBLYGONOUS Angle, in Geometry, is an obtuse Angle; or an Angle consisting of more than 90 Degrees. See ANGLE, and OBTUSE.

A Triangle is said to be *Amblygonous*, when it has one Angle greater than a right Angle. See TRIANGLE.

The Word is Greek; compos'd of *ἀμβλῦν*, *obtusus*, and *γωνία*, *Angle*.

AMBLYOPY, *AMBLYOPIA*, in Medicine, a Disease of the Eyes; otherwise call'd *Gutta Serena* and *Amaurosis*. See GUTTA SERENA, &c.

The Word comes from *ἀμβλῦν*, *obtusus*, dull, and *ὄψις*, *visus*, I see.

AMBO, a kind of Pulpit, or Desk, antiently used in Churches, whereon the Priests and Deacons used to read, or sing part of the Service; and preach to the People. See PULPIT.

It was ascended by Steps; which occasioned that part of the Office perform'd there, to be call'd the *Gradual*. See GRADUAL.

The Term is derived from *ἀμβρα*, I mount.—The *Latinus* also call'd it *Amblygium*; by reason they read there.—The *Ambro* was mounted upon two Sides; and hence some derive the Appellation, from *ambo*, both.

The Gospel was read at the Top of the *Ambro*; the Epistle a Step lower.

AMBROSIA, in the Heathen Theology, &c. a delicious kind of Food, whereon the Gods were supposed to feed. See GOD.

Lucian, rallying these poetical Gods, tells us, that *Ambrosia* and *Nectar*, of which one is the Meat, and the other the Drink of the Gods, were not so excellent as the Poets describe them; since they would leave them for Blood and Fat, which they come to suck from the Altars like Flies.

The Word is compos'd of the Privative Particle *a*, and *βιω*, *Mortal*; in regard it render'd those who fed thereon immortal, or was the Food of the Immortals.

AMBROSIAN, in Church History.—We frequently read of the *Ambrosian Rite*, the *Ambrosian Office*, &c. denoting a particular Office, or Formula of Worship, used in the Church of *Milan*; which is sometimes also call'd the *Ambrosian Church*. See RITE, OFFICE, &c.

We also meet with the *Ambrosian Chant*, or *Song*; which was distinguish'd from the *Roman*, in that it was stronger and higher.

The Term takes its rise from *St. Ambrose*, Archbishop of *Milan* in the IVth Century, who is usually supposed to have been the Author of this Office. Yet some are of Opinion, the Church of *Milan* had an Office different from that of

the *Roman*, and other Churches of *Italy*, before the Time of that Father. In effect, till the Time of *Charlemagne*, each Church had its several Office: And when in after-Days the Pope took on him to impose the *Roman* Office on all the other Churches of the West; that of *Milan* shelter'd itself from the Imposition, under the Name and Authority of St. *Ambrose*; from which Time, the Phrase *Ambrosian Rite* has obtain'd, in contradistinction to the *Roman* Rite.

The publick Library of *Milan*, is also called the *Ambrosian Library*. See LIBRARY.

AMBRY, or ARMORY, the Place where the Arms, Plate, Vessils, and every thing belonging to House-keeping were kept.

Hence, probably the *Ambry* at *Westminster*, was so called, because formerly set apart for that use; or rather, from *Aumony*, a House adjoining to an Abbey, in which the Charities were laid up, and distributed to the Poor. See ALMS.

AMBULATION, or Walking. See EXERCISE.

AMBULATION, in Physick, is used by some for the spreading of a Gangrene, or Mortification. See GANGRENE, &c.

AMBULATORY, a Term antiently applied to such Courts, &c. as were not fixed to any certain Place; but held sometimes in one Place, and sometimes in another.—In opposition to *Sedentary* Courts. See COURT, and SEDENTARY.

The Court of Parliament was antiently *Ambulatory*; so were the Courts of King's Bench, &c. See PARLIAMENT, KING'S BENCH, &c.

The Word is form'd of the Latin *ambulare*, to walk.

We sometimes also say, in a Moral Sense, a Man's Will is *Ambulatory*, to the Time of his Death; meaning, that he has it always in his Power to revoke it.

AMBURBIA, or AMBURBIALE *Sacram*, is Antiquity, a Religious Feast, or Ceremony, practis'd among the *Romans*, wherein they made Processions around their City.

The Word is compos'd of *ambis*, I go round; and of *ambis*, or *ambis*, an antient Preposition, signifying around, and *urbis*, City.

Hence, also, we have *Amburbiales Victimae*, the Victims carried along in the Procession; and afterwards sacrific'd.

Scaliger, in his Notes on *Festus*, maintains the *Amburbia* to be the same with *Ambrosialis*. See AMBRASIALIA.

AMBUSCADE, AMBUS, AMBUSHMENT, a Body of Men, who lie hid in a Wood, &c. to rush out upon, or in-close an Enemy unawares.—Or, the Place wherein such a Corps hide themselves.

AMBUSTIO, in Medicine, a Burn: See BURN, and BURNING.

AMEL, or *Esmel*. See ENAMEL.

AMEN, a Church Term, used as the Conclusion of all solemn Prayers, &c. and signifying, *so be it, or, for*.

The Hebrews had four kinds of *Amen*.—That just mention'd they call *Amen pest*; which was accompany'd with the greatest Attention, and Devotion: In this Sense, the Word has pass'd into almost all Languages, without any Alteration.

Some Authors are of Opinion, that the Word *Amen* is form'd of the initial Letters of these Words, *Adonai Melech Neeman, Dominus Rex Fidelis*; an usual Expression among the *Jews*, when they would give Weight or Sanction to any thing they said. In effect, 'tis known, that to express the Words *אֲדֹנָי מְלֶכְךָ נִימָן Adonai Melech Neeman*, in the ordinary way of Abbreviatures; the Rabbins only take the initial Letters, which joined together, are really the Letters of the Word *אָמֵן Amen*. See ABBREVIATURE.

On the other hand, there are some of their Cabbalists, who, according to their usual manner of finding hidden Meanings in Words, which they call *Notaricon*; out of the Letters of the Word *Amen*, form the whole Phrase, *Adonai Melech Neeman*. See NOTARICON.

Yet, 'tis certain also, that the Word *Amen* was in the Hebrew Tongue, before ever there were any such things as Cabbala or Cabbalists in the World: as appears from *Deuteronomy*, Chap. XXVII. ver. 15. See CABBALA, &c.

The Primitive of the Word *Amen*, is the Verb *aman*, which, in the passive Voice, signifies to be true, faithful, constant, &c.—Hence came the Noun *אָמֵן Amen*, which signifies, *Truth*.

And, lastly, of this Noun *Amen* they made a kind of affirmative Adverb, which, when plac'd at the End of any Phrase or Proposition, signifies, *So be it, Be it true, I acquiesce in it, &c.*

Thus, in the Passage above cited from *Deuteronomy*, *Moses* ordered the Levites to cry aloud to the People, *Cursed is he that makes any graven or molten Image, &c. and all the People shall say, Amen*; i. e. *Yes, May he be cursed, We desire, we agree to it.*—But at the beginning of a Phrase, as in several Passages of the New Testament, it signifies *Truly, Verily*.—When it is redoubled, or repeated

twice together, as is always done by St. *John*, it has the Effect of a Superlative, agreeably to the Genius of the Hebrew Tongue, and her two Daughters, the *Chaldee* and *Syrack*.—In this Sense we are to understand *Amen, Amen, dico vobis*. The Evangelists usually preferre the Hebrew Word *Amen*, in their Greek *אָמֵן*; the St. *Luke* sometimes renders it by *ἀληθῶς, truly, or, ver, certainly*.

AMEND, or AMENDE, in the French Customs, a *Mutif*, or pecuniary Punishment, imposed by a Sentence of the Judge; for any Crime, false Prosecution, or groundless Appeal. See MULT, PUNISHMENT, APPEAL, &c.

AMENDE *Honorable*, is an afflictive Pain, importing, or carrying with it a Note of Infamy.—As, when the Delinquent is condemn'd to go naked to the Shirt, a Torch in his Hand, and a Rope about his Neck, into a Church or Auditory; and beg pardon of God, the King, or the Court, for some ill deed.

The Phrase *Amende honorable*, is more peculiarly used when a Person is condemn'd to come into Court, or into the Presence of some Person injured; and make an open Re-paration, &c.

AMENDABLE, or AMAINABLE, is applied in our Law-Books to a Woman, that is supposed to be governable by her Husband. See WOMAN, WIFE, &c.

AMENDMENT, in Law, the Correction of an Error committed in a Process, and epi'd before Judgment. See ERROR.

If the Error be committed in giving Judgment, viz. a wrong Judgment be given, there, they cannot amend it; but the Party aggrieved must bring his Writ of Error.—However, where the Fault appears to be in the Clerk who writ the Record, it may be amended.

AMERCEMENT, or AMERICAMENT, in Law, a Penalty affixed by the Peers or Equals of the Party amerced, for an Offence done; or a pecuniary Punishment imposed upon Offenders, at the Mercy of the Court; and therefore in our Law frequently called *Misericordia*. See PUNISHMENT, and MISERICORDIA.

There is this stated Difference between Fines, and *Amercements*; that Fines are Punishments certain, and determined by some Statute; but *Amercements* are arbitrary Impositions, proportion'd to the Fault, at the Discretion of the Court.

Manswood, in his *Forest Law*, makes another Difference as if an *Americament* were a more easy and merciful Penalty, and a Fine a more sharp and grievous one.

In the *New Terms of the Law*, *Americament* is said to be properly a Penalty affixed by the Peers or Equals of the Party amerced for an Offence done; for which he puts himself upon the Mercy of the Lord.—The same Author mentions an *Americament Royal*; and defines it, a pecuniary Punishment laid upon a Sheriff, Coroner, or such-like Officer of the King, by Judges, for some Offence or Abuse in his Office.

AMETHYST, in Natural History, a Precious Stone, of a violet Colour, bordering on Purple. See PRECIOUS STONE.

There are three sorts:—The *Oriental*, which is the hardest, the scarcest, and most valuable, is of a dove Colour; the *German*, which is of a violet Colour; and that of *Carthagen*, which has the Colour of a Pansy.

There are some *Oriental* also of a purple Colour, and others white, and like the Diamond.—There are beautiful ones found in the *Pyreneans*, and in the Mountains of *Auvergne*.

The *Amethyst* is not extremely hard; but may be cut with a leaden Wheel, finer'd with Emery moisten'd in Water.—It is polish'd on a pewter Wheel with Tripoli.—It is easily engraven on, either in *Cross* or *Relievo*.

Plutarch says, the *Amethyst* takes its Name from its Colour; which, according to him, resembles that of Wine mix'd with Water; and not from its preventing Drunkenness: which, however, was a common Opinion, and gave occasion to its being hung about the Necks of great Drinkers.—Those who ascribe this Virtue to the *Amethyst*, derive its Name from the Privative *a*, and *ambrosia*, *so inebriate*. See GEM.

AMETHYST, in Heraldry, signifies the purple Colour, in the Coat of a Nobelman; which in Gentlemen's Escutcheons below that degree, is called *Purpure*; and in those of sovereign Princes, *Mercury*. See PURPLE, and PURPURE.

AMIANTHUS *Lapis*, in Natural History, the same with *Asbestos*. See ASBESTOS.

AMICTUS, in our antient Writers, the uppermost of the six Garments worn by Priests.

It was tied round the Neck, *Ne inde ad linguam transeat mendacium*; and covered the Breast and Heart, *Ne vanitates cogitet*.—*Amictus, Alba, Cingulum, Stola, Manipulus, & Planeta*.

AMIABLE Numbers, denote Numbers which are mutually equal to the whole Sum of one another's Aliquot Parts.—Such are the Numbers 284 and 220. See NUMBER.

AMITTERE Legem Terre, a Law-Phrase, signifying, the Forfeiture of the Right of swearing in any Court or Cause; or to become infamous. See **LAW**.

This is the Punishment of a Champion overcome, or yielding in the Combat; of Jurors found guilty in a Writ of Attaint; and of Persons outlaw'd. See **CHAMPION**, **COMBAT**, **JUROR**, **OUTLAWRY**, &c.

AMMA, a Girdle, or Truss used in Raptures; to hinder the Intestines from bearing down too much. See **RUPTURE**, &c.

AMMI, or **Semen Ammos**, a kind of aromattick Seed, of considerable use in Medicine; the Produce of a Plant of the same Name.

The Seed is brought from the *Levant*: It is found to contain a great deal of essential Oil, and volatile Salt; and to be attenuating, aperitive, hysterick, carminative, cephalick, and alexipharmick being, is one of the four lesser hot Seeds.—It expels Wind, provokes the Menics, &c.

According to *Lenery*, the Plant takes its Name *Ammos* from *Amis*, *arena*; its Seed being very like Grains of Sand.—It is also called *Ammi Creticum*, or *Erbopicum*, to distinguish it from the vulgar *Ammi*, or *Bishops-weed*. It is sometimes also called *Cuminum Ethiopicum*.

AMMON, or **HAMMON**, in Antiquity, an Epithet given to *Jupiter in Lybia*; where was the celebrated Temple of *Jupiter Ammon*.

There has been a great Dispute about the Origin of this Name.—Some derive it from the Greek *Ammon*, *Sand*; in regard the Temple was situate in the burning Sands of *Lybia*: Others borrow it from the Egyptian *Anam*, a Ram; as having been first discover'd by that Animal.—Others will have *Ammon* to signify the Sun; and the Horns where-with he is represented, the Sun-beams.

However this be, *Jupiter Ammon* was usually represent'd under the Figure of a Ram; so in some Medals he appears of a human Shape, having only two Rams Horns growing out beneath his Ears.

AMMONIACK,—*Gum Ammoniac*; or, as it is sometimes, tho' improperly, called, *ARMONIACK*, is a kind of Gum, brought from the *East Indies*; suppos'd to ooze from an umbelliferous Plant. See **GEM**.

It ought to be in dry Drops, white within, yellowish without, easily fusible, resinous, somewhat bitter, and of a very sharp Taste and Smell, somewhat like Garlic.

Diocorides says, it is the Juice of a kind of *Ferula* growing in *Barbary*; and that the Plant that produces it, is called *Agaphis*.

The good *Ammoniac* is of a high Colour, and not mixed with any Scrapings of Wood, Stone, or Sand; it is called *Opuscula*, *Fractura*.—The other, which is full of Stones or Sand, is called *picua*, that is, *Mixture*.

Pliny calls the Tree whence it flows, *Metopion*; and says, the Gum takes its Name from the Temple of *Jupiter Ammon*, nigh which the Tree grows.

Some say, this Gum served the Antients for Incense in their Sacrifices. See **INCENSE**.

It enters several medicinal Compositions, as an Attenuant, and Detergent, against Disorders arising from Viscidities, and Grumes.—Outwardly applied, it is resolutive and suppurative; and, as some say, will of it self draw out Splinters, &c.

Some dissolve the Gum in Vinegar, and other Liquors, and call it *Lac Ammoniacum*; much used in Asthmas, and Obstructions of the Lungs.—But the more usual form of prescribing it is in Pills.

AMMONIAC.—*Sul Ammoniac*, is also a kind of Salt; more usually warr'd **ARMONIAC**. See **ARMONIAC**.

Cornu Ammonis, in Natural History. See **CORNU AMMONIS**.

AMMUNITION, in general, signifies all sorts of warlike Stores and Provisions, more especially Powder and Ball. See **MUNITION**.

The Word is form'd of the Latin *Amunitio*, which, according to *Du Cange*, was used in the corrupt State of that Language for *Subsistence*.

AMMUNITION-Bread, is what is provided for, and distributed daily to, the Soldiers of an Army or Garrison.

Such an Officer has for many Rations of *Ammunition-Bread*, &c. See **RATION**.

AMNESTY, or **AMNISTY**, a General Pardon, which a Prince grants to his Subjects, by a Treaty, or Edict; where-in he declares that he forgets and annuls all that is past, and promises not to make any farther Inquiry into the same. See **PARDON**.

Such *Amnesties* are usually practis'd upon Reconciliations of the Sovereign towards his People, after Rebellions, general Defections, &c.

Such, e. g. was the Act of Oblivion granted at King *Charles's* Restoration.

The Word is derived from the Greek *Amnesia*, *Amnesia*; which was the Name of a Law of this kind, pass'd by *Thersibulatus* upon the Expulsion of the thirty Tyrants out of

Athens.—*Andocides*, an *Athenian* Orator, whose Life is written by *Plutarch*, and of whom we have an Edition, of the Year 1575; gives us, in his Oration upon *Mysteries*, a Formula of the *Amnisty*, and the Oaths taken thereupon.

AMNIOS, or **AMNION**, in Anatomy, the innermost Membrane, wherewith the Fetus in the Womb is immediately invested. See **FETUS**.

The *Amnios* is a white, soft, thin, transparent Membrane; making part of the *Secundines*, and lying next under the *Chorion*. See **SECUNDINE**, and **CHORION**.

It contains a limpid Liquor, like a thin Gelly-broth; with which the Stomach of the Fetus being always found full, it is suppos'd to be the Matter of its Nourishment. See **NUTRITION**.

On its outside lies the *Allantois*, or *Urinary Membrane*. In some Subjects, the *Urinary Membrane*, and *Chorion*, stick so close to one another, that they appear to be but one.

—It bath all its Vessels from the same Origin as the *Chorion*. See **ALLANTOIS**.

The Word is deriv'd from the Greek *Amnis*, a Lamb, q. d. *Pellis Agnina*.

AMOMUM, a Medicinal Fruit, called also *Amomum Racemosum*, *Amomum Verum*, and *Elaterii Pomum*.

It resembles the *Muscet Grape*; and grows, like it, in Clusters; is about the bigness of a Chick-Pea, round, membranous, and divided into three Cells, which contain several brown, angular Grains; of a very strong aromattick Taste, and Smell.

This Fruit is brought from the *East Indies*; and makes part of the Composition of *Treacle*; and is thought to be the *Sison*, or *Smon* of the Antients.

Besides this, there is likewise another paler Seed, which bears the Name, *Amomium*; but neither of them are in much repute in Physick.

The Commentators on *Pliny*, and *Diocorides*, have never been able to agree upon the ancient *Amomum*; the generality of 'em pitch on Fruits different from this.—Some will have the Role of *Jericho* pals for it.—*F. Caswell* is positive he has discover'd the real *Amomum* of *Diocorides*, and that it is the *Tugos*, or *Birao*, or *Caropi*, growing in the *Philippine* Islands; the Grains or Berries whereof, are worn by the Natives about their Necks; both on account of their agreeable Odour, and of their suppos'd Virtue in preserving from Infection, curing the Sting of the *Scelopendra*, &c. *Phil. Transf.* N^o 248.

Scaliger is confident, that the *Amomum* of the Antients was not a Fruit; but the Wood it self, which bore some resemblance to a Bunch of Grapes, and was particularly used in embalming of Bodies: and hence, says he, the Term *Amomy* was given to the Bodies of *Egyptians* embalm'd with it. See **MUMMY**.

AMORTIZATION, or **AMORTISEMENT**, in Law, the Act of turning Lands into Mortmain, i. e. of alienating or transferring 'em to some Corporation, Guild, or Fraternity, and their Successors. See **MORTMAIN**.

The Term is also used for the Licence or Privilege which the King or superior Lord grants, to enable such Corporation, &c. thus to receive Lands into Mortmain: in that otherwise they cannot do.—There is suppos'd to be some Fine, or Acknowledgment paid the King, or the Lord, in Consideration hereof; to make 'em Satisfaction for several incidental Dues and Profits, which would have fallen to them in the common way; which are hereby cut off.

This Practice was borrow'd from the *Lex Persica*, whereby it was forbidden to consecrate any Land to Religious Uses, without the Consent of the People.

The Word is form'd of the French *Amortir*, to extinguish, put out, &c. See **EXTINGUISHMENT**.

AMPELITIS, in Natural History, a kind of Earth that dissolves in Oil; used to blacken the Eyebrows, and the Hair wihal. See **EARTH**.

AMPHIARTHROSIS, in Anatomy, a neutral or dubious kind of Articulation, distinguish'd from the *Diarthrosis*, in that it has no apparent Motion; and from the *Synarthrosis*, in its not being absolutely devoid of Motion. See **ARTICULATION**, **DIARTHROSIS**, &c.

Such is the Articulation of the Ribs, with the Vertebrae; and that of the *Carpus* with the *Tarsus*, &c. See **VERTEBRE**, **CARPUS**, &c.

The Word, according to *Dionis*, is deriv'd from *Amphibios*, and *Arthrosis*, Articulation; the *Amphiarthrosis* being compounded of both the other sorts.—Whence some also call it, *Diarthrosis-Synarthroidal*.

AMPHIBIOUS, in Natural History, a Term applied to a sort of Animals which live both on Land, and in the Water; that is, which breathe the Air, but pass part of their Time in the Water, as affording 'em their chief Food. See **ANIMAL**.

Such are the Frog, Castor, Otter, Tortoise, Sea-Calf, Crocodile, &c.

The *Amphibious* Kind have peculiar Provisions in their Structure, to fit 'em for so various a way of Living; particularly

cularly in the Heart, Lungs, Foremen Ovale, &c. See HEART, FORAMEN Ovale, &c.

The Term is sometimes also extended to Men, who have the Faculty of living a long time under Water.—We have divers Instances of such *Amphibious Men*; the most remarkable is of a *Sicilian*, named the *Fish Child*. Kircher relates, that by a long Habitude from his youth, he had fo acoutom'd himself to live in Water, that his Nature seem'd to be quite alter'd; So that he lived rather after the manner of a Fish, than a Man. See DIVING, PEARL-Fishing, &c.

The Word comes from the Greek *ἀμφί*, *utrinque*, both ways, and *βίωσις*, Life; as living in either Place.

AMPHIBLESTROIDES, in Anatomy, a Tunic, or Coat of the Eye, more usually called *Retina*. See RETINA.

The Word is Greek, *ἀμφιπλευρῆς*, of *ἀμφίπλευρος*, *Retic*, Net; compounded of *ἀμφί*, *circum*, about, *πλευρά*, *jacia*, I cast; and *πλευρά*, Form; by reason of its Net-like Texture: whence the *Latins* also call it *Reticiformis*.

AMPHIBOLOGY, or AMPHIBOLIA, in Grammar, a Fault in Language, whereby it is render'd obscure, and liable to be understood in a double Sense.

Amphibology is chiefly used in respect of a Phrase; as Equivocal is in respect of a Word. See EQUIVOCAL, and EQUIVOCATION.

Of this kind was that Answer which *Pyrrhus* receiv'd from the Oracle; *Αὐτὸν ἔσθ' Ἄεθλα, Romanos vincere posse*: Where the *Amphibology* consists in this, that the Words *ἔσθ'* and *Romanos*, may either of 'em precede, or either of them follow the Words *posse vincere*, indifferently. See ORACLE.

The *English* Language usually speaks in a more natural manner, and is not capable of any *Amphibologies* of this kind: nor is it so liable to *Amphibologies* in the Articles, as the *French* and most modern Tongues. See CONSTRUCTION, ENGLISH, ARTICLE, &c.

The Word comes from the Greek, *ἀμφότες*, *ambiguus*, and *ἀμφί*, *Discourse*.

AMPHIBRACHIUS, the Name of a Foot in the *Latin* and *Greek* Poetry; consisting of three Syllables, the first and last whereof are short, and that in the middle long. See FOOT, and VERSE.

Such is the Word *Amare*.

The Word comes from *ἀμφί*, *circum*, and *βραχίς*, *brevis*, *g. d.* a Foot short at both Ends, and long in the middle.

AMPHICTYONS, AMPHYTRONES, in Antiquity, the Deputies of the Cities and People of Greece, who represented their respective Nations in a general Assembly; having a full Power to concert, resolve, and appoint what they should think fit, for the Service of the common Cause.

The *Amphytrones*, in good measure, were the same with the States General of *Holland*; or rather, with what in *Germany* they call the Diet of the Empire. See STATES, and DYE.

The first Assembly of this kind, was held by the Direction of *Amphitryon*, the third King of *Athens*, who propos'd by that means to bind the *Greeks* more firmly together; so as to render them a Terror to the barbarous Nations their Neighbours.—These met twice a year at *Therapsyle*, in the Temple of *Ceres*, which was built in a large Plain, near the River *Asopus*; and were called *Amphictyons* from the Name of their founder.

Pananius, in his List of the ten Nations which compos'd that Assembly, says nothing of the *Achaians*, *Eleans*, *Argians*, *Messenians*, &c. *Æschines* also gives an Account of the Cities admitted into it, in his Oration, *De falsa Legatione*.

Acrisius instituted a new Council of *Amphytrones*, on the Model of the ancient ones; who met twice a Year in the Temple of *Delphos*.

Each were indifferently called *Ἀμφικτύωνες*, *Πολιέταις*, *Ἰερόσυτοι*, and their Assembly *Παλις*.

The *Romans* never thought fit to suppress the Meeting of the *Amphictyons*. *Strabo* even assures us, that they met in his Time.

AMPHIDROMIA, in Antiquity, a Feast celebrated on the fifth Day after the Birth of a Child. See FÆAST.

AMPHIMACER, a Foot in the ancient Poetry, consisting of three Syllables; the first and last whereof are long, and that in the middle short. See FOOT, &c.

Such are the Words *Omnium*, *Caftris*, &c.

The Word comes from the Greek *ἀμφί*, *circum*, and *μακρός*, *longus*; by reason both Extremes are long.

AMPHIPOLES, in Antiquity, Archons, or chief Magistrates of the City of *Syracuse*. See ARCHON.

They were first establish'd by *Timoleon*, after his Expulsion of *Dionysius* the Tyrant.—They govern'd *Syracuse* for the Space of 300 Years; and *Diodorus Siculus* assures us, they subsisted even in his Time.

AMPHIPROSTYLE, in the ancient Architecture, a kind of Temple, which had four Columns in Front, and as many behind. See TEMPLE:

The Word is derived from the Greek *ἀμφί*, *about*, *αὐτὸ*, *before*, and *σῆμα*, *Column*.

AMPHISCU, in Geography and Astronomy, the People who inhabit the Torrid Zone. See ZONE.

They are thus denominated, as having their Shadow turn'd sometimes one way, and sometimes another, *i. e.* at one time of the Year to the North, and at another to the South. See SHADOW.

The Word comes from *ἀμφί*, *about*, and *σῆμα*, *Shadow*.

The *Amphiscii* are also *Afici*. See ASCII.

AMPHISMELA, an anatomical Knife, *εὐρῆς* on both sides; from *ἀμφί*, *utrinque*, on both sides, and *μελέη*, *incido*, I cut.

AMPHITHEATRE, a spacious Building, either round or oval, having its Area or Arena inclosed with Rows of Seats, rising gradually one over another; with Portico's both within and without-side. See AREA and ARENA.

Among the Antients, the *Amphitheatre* was appointed for the exhibiting of Spectacles or Shows to the People; as, the Combats of Gladiators, and those of wild Beasts. See SPECTACLE, GLADIATOR, &c.

Their Theatre was built in form of a Semicircle, only exceeding a just Semicircle by one fourth part of the Diameter; and the *Amphitheatre* was nothing else but a double Theatre, or two Theatres join'd together: so that the longest Diameter of the *Amphitheatre*, was to the shortest, as 1 $\frac{1}{2}$ to 1. See THEATRE.

There are *Amphitheatres* still standing at *Rome*, at *Nismes*, &c.—The *Amphitheatre* of *Vespasian*, called the *Coliseum*, and that at *Verona* in *Italy*, are the most celebrated now remaining of all Antiquity. See COLISEUM.

Pliny mentions an *Amphitheatre* built by *Curio*, which turn'd on large Iron Pivots; so that of the same *Amphitheatre*, two several Theatres were occasionally made, whereon different Entertainments were presented at the same time.

The Word is deriv'd from the Greek *ἀμφί*, *about*, and *θεῖον*, *Theatre*; which comes from *θεῖναι*, *specto*, *contempler*; so that an *Amphitheatre*, strictly speaking, is a Place where a Person may see all around him.

AMPHORA, in Antiquity, an earthen Vessel, which serv'd as a kind of liquid Measure, among the *Romans*. See MEASURE.

The *Amphora* contained 48 Sextaries; amounting to about seven Gallons, *English* Wine Measure.

Amphora is also a modern Measure used by the *Venetians*. See MEASURE.

Suetonius tells us of a Man who stood for the Quaestorship, and who drank an *Amphora* of Wine at one Meal, with the Emperor *Tiberius*.

The *Amphora* was sometimes also used as a Dry Measure, containing three *Bushels*; the Standard whereof was kept at *Rome* in the Capitol, to prevent false Measures. See STANDARD.

AMPLIATION, properly signifies an *Enlargement*; but in Law, the Word is used to denote a deferring of Judgment till the Cause be further examin'd.

AMPLIFICATION, in Rhetoric, part of a Discourse or Speech, wherein a Crime is aggravated, a Praise or Commendation heighten'd, or a Narration enlarged by an Enumeration of Circumstances; so as to excite the proper Emotions in the Souls of the Auditors. See ORATION, &c.

Such is that Passage in *Virgil*, where, instead of saying merely that *Tyrus* died, he amplifies his Death,

—*At illi stantur frigore membra,
Vitate cum genitum fugit indignata sub umbras.*

Amplification, according to *Cicero*, is a vehement Argumentation; a forcible Affirmation, that persuades by moving the Passions.

Some Authors define *Amplification*, after *Isocrates*, to be a Discourse which makes great things of little; or which raises and exaggerates little things, so as to make 'em appear great.—But in this Sense, *Amplification* should rather become a Sophist or Juggler, than an Orator.

The Matters of Eloquence make *Amplification* the Soul of Discourse.—*Longinus* speaks of it as one of the principal means which contribute to the Sublime; but censures those who define it a Discourse which magnifies Things; this equally agreeing to the Sublime, the *Pæretick*, &c.—The same Author distinguishes *Amplification* from the Sublime by this, that the latter consists wholly in an Elevation of Words and Sentiments, whereas the former consists also in their Multitude: The Sublime is sometimes found in a single Thought; but *Amplification* cannot subsist, excepting in Abundance. See SUBLIME.

There is likewise a difference between the *Amplification*, and the Proof; in that the one serves to clear the Point, and the other to heighten, and exaggerate it. See PROOF.

There are two general Kinds of *Amplification*; the one of Things, the other of Words.—The first is produced in divers manners; as, 1^o, by a Multitude of Definitions: Thus

It is *Cicero amplifies* on History: *Historia est testis temporum, lux veritatis, vita memoria, magistra vite, nunzia veritatis.* See DEFINITION.—2°, By a Multitude of Adjuncts; of which we have a fine Instance in *Virgil's* Lamentation for *Cæsar's* Death, by enumerating the many Prodiges and Monsters that either preceded or succeeded it.—*Vox quoque per Lucas vixit exaudita flentes, ingens & simulacra modis pallentia miris visa sub obscuro noctis; pœneque locute, infandum, sistunt annes, terraque debescunt, & mestum illychramyrum tempus ebur, Æraque student.*—3°, By a Detail of Causes and Effects.—4°, By an Enumeration of Consequences.—5°, By Comparisons, Similitudes, and Examples. See SIMILITUDE, &c.—6°, By the Contrast of Antithets, &c.

Amplification by Words, is effected six Ways.—1°, By using Metaphors. See METAPHOR.—2°, By Hyperbole. See HYPERBOLE.—3°, By Synonyms. See SYNONYMOUS.—4°, By splendid magnificent Terms; as that of *Horace*, *Scandis eratas viridis nautes curas: nec turmas equitum retinens, ocyor cervos, & agente nimbos, ocyor curas.*—5°, By Periphrases, or Circumlocutions. See PERIPHRASIS, &c.—6°, By Repetition. See REPETITION.

AMPLITUDE of the Range of a Projectile, is the horizontal Line subtending the Path in which it moved. See PROJECTILE.

AMPLITUDE, in Astronomy, an Arch of the Horizon, intercepted between the true East or West Point thereof, and the Centre of the Sun, or a Star at its rising or setting. See HORIZON, RISING, SETTING, &c.

Amplitude is of two Kinds; *Eastern* or *Ortive*; and *Western*, or *Occiduous*.

Eastern, or *Rising Amplitude*, *Amplitude Ortiva*, is the Distance between the Point wherein the Star rises, and the true Point of East, wherein the Equator and Horizon intersect. See EAST.

Some call it *Eastern*, or *Ortive Latitude*. See LATITUDE. *Western*, or *Setting Amplitude*, *Amplitude Occidua*, is the Distance between the Point wherein the Star sets, and the true Point of West in the Equinoctial. See WEST.

The *Eastern* and *Western Amplitude*, are also called *Northern*, and *Southern*, when in the Northern and Southern Quarters of the Horizon.

The Complement of the *Eastern* or *Western Amplitude* to a Quadrant, is called the *Azimuth*. See AZIMUTH.

To find the *Sun's* or a *Star's* *Amplitude*, either rising or setting, by the *Globe*. See GLOBE.

To find the *Sun's* *Amplitude*, trigonometrically; having the *Latitude*, and the *Sun's* *Declination* given.—Say, As the *Co sine* of the *Latitude* is to *Radius*, so is the *Sine* of the present *Declination* to the *Sine* of the *Amplitude*.—Suppose, e.g. the *Latitude* 15° 30', and the *Declination* 11° 50';

Then to the Arco, of	50° 30'	0,2085903
the Co-sine of		
Add the Sine of		9,5118926

Sum is the Sine of

9,5117429

which is the *Amplitude* requir'd.

MAGNETICAL AMPLITUDE, is an Arch of the Horizon, contained between the Sun, at his rising, and the East or West Point of the Compass; or, it is the Difference of the Rising or Setting of the Sun, from the East or West Points of the Compass. See COMPASS, RISING, SETTING, &c.

It is found by observing the Sun at his rising or setting, by an *Amplitude Compass*. If the Compass have no Variation, the *Magnetical Amplitude* will be the same as the true one.

AMPUTATION, in Chirurgery, the Operation of cutting off a Limb, or other Part of the Body, with an Instrument of Steel. See CHIRURGERY, OPERATION, &c.

In Cases of Mortification, recourse is frequently had to *Amputation*. See MORTIFICATION, GANGRENE, SPHACELUS, &c.

The Method of performing it, in the Instance of a Leg, is as follows.—The proper Part for the Operation being four or five Inches below the Knee; the Skin and Flesh are first to be drawn very tight upwards, and secured from retreating by a Ligature two or three Fingers broad: above this Ligature another loose one is pass'd, for the Gripe, which being twisted by means of a Stick, may be straiten'd to any degree at pleasure. Then, the Patient being conveniently situated, and the Operator placed to the inside of the Limb; which is to be held by one Assistant above, and another below the Part designed for the Operation; and the Gripe sufficiently twisted, to prevent too large an Hemorrhage, the Flesh is, with a Stroke or two, to be separated from the Bone with the Dissecting-Knife. Then the Periosteum being also divided from the Bone with the Back of the Knife, saw the Bone asunder with a few Strokes as possible.—When two parallel Bones are concerned, the Flesh that grows between them must likewise be separated, before the use of the Saw.

This being done, the Gripe may be slacken'd; to give an Opportunity for searching for the large Blood-Vessels, and securing the Hemorrhage at their Mouths, either by the actual Cautey, the Ligature, stitching them up, applying Vitriol Buttons, or the like. After this a dry Pledget of Lint, or one dipp'd in Spirit of Wine, and sprinkled with Dispenze, may be applied to the Stump. Then loosen the first Ligature, and pull both the Skin and Flesh, as far as conveniently may be, over the Stump, to cover it; and secure them with the Cross-stitch made at the depth of half, or three quarters of an Inch in the Skin.—It remains, to apply over the whole Stump two large Pledgets, dipp'd in Oxycrate and dried, and afterwards charged with Astringents; and on these to apply a Plaster of De-minium, or simple Diachylon; and over these, an Ox-bladder, wetted in Oxycrate; and over all, a Cross-cloth pretty tight, secured with Rollers.

After all this, the Gripe may be slacken'd, so as to be made easy for the Patient; or even entirely taken away, after he is put to Bed; in which he must lie with the Stump somewhat raised; as an Assistant for 12 or 14 Hours keeping fast the Dressing with his hand, to prevent any violent Hemorrhage.—In three or four Days the Dressing may be removed; and proper Digestives, mixed with Astringents, applied: having an actual Cautey, or some powerful Symp-tick, in readiness, in case of a violent Hemorrhage at the first opening.

M. Sabourin, Surgeon of *Genova*, is recorded in the History of the Royal Academy of Sciences, An. 1702, for an Improvement in the Method of *Amputation*, proposed to that Academy.—The whole Secret consists in living a piece of Flesh and Skin, a little lower than the Place where the Section is to be; wherewith the Stump is to be afterwards cover'd.—The Advantages hereof, are, that in less than two Days time, this Flesh unites with the Extremes of the divided Vessels, and so saves the Necessity either of blinding the Ends of those Vessels with Thread, or of applying Causticks or Astringents; which are Methods very dangerous, or at least very inconvenient. Add, that the Bone thus cover'd up, does not exfoliate.

AMSDORFIANS, in Church-History, a Sect of Protestants, in the XVth Century; denominated from their Leader *Amsdorf*.

Sanders, Her. 186, represents them as maintaining, that good Works were not only unprofitable, but even opposite and pernicious to Salvation.—The *Amsdorfians* were rigid Confessionists.

AMULET, AMULETUM, a kind of Medicament, hang about the Neck, or other part of the Body; to prevent, or remove Diseases.

The Word *Amulet* is form'd of the Latin *Amuletum*, *Amolimentum*; of *amoliri*, to remove, draw away. See PRESERVATIVE.

Such are Quills of Quick-silver or Arsenic, which some hang on the Neck, or wear under the Shirt against the Plague, and other contagious Diseases; the Blood-stones worn by others against Hemorrhages; and that wore by the Women of the *East Indies* to bring down the Menstrue.

Amulets are frequently no other than a sort of Spells or Charms; consisting of quaint Words and Characters, suppos'd to have the Virtue of warding off ill.—*Pliny* makes frequent mention of 'em. See CHARM, &c.

The Greeks call these kind of Remedies *μακρήτες*, *Phylacteries*; *αμαλία*, *Periapts*; *αμολιζουμιν*, *αμολιζουμιν*, *επισην*.—The Latins call 'em *Amuleta*, *Apposita*, &c. See PHYLACTERY, PERIAPTA, &c.—The Council of *Laodicea* forbids Ecclesiasticks to wear such *Amulets* and *Phylacteries*, on Pain of Degradation. St. *Corystostom* and St. *Jerom* are likewise zealous against the same Practice. *Hoc apud nos*, says this last Father, *superstitiosius muliercule, in perennis Evangeliiis & in crucis ligno & ipsiusmodi rebas que habent quidem velum Dei sed non iuxta scientiam, usque hodie fassitant*. See KIREB. Oedip. Egypt.

Amulets are now fallen from the great Repute they were anciently in; yet the great Mr. *Boyle* alleges 'em as an Instance of the Ingress of external Evil into the Habit; in order to shew the great Porosity of the human Body.—He adds, that he is perswaded none of these external Medicines do answer; for that he himself having once been subject to bleed at the Nose, and reduced to use several Remedies to check it; found that Moss of a dead Man's Skull, the only applied so as to touch the Skin till the Moss was warm thereby, the most effectual of any.—A memorable thing of this kind was communicated to *Zoesler* by the chief Physician to the States of *Moravia*, who having prepared some Troches of Toads after *Helmont's* manner, not only found that being worn as *Amulets* they preserv'd him and his Domesticks and Friends from the Plague; but being put on the Plague-sores of others, they were greatly relieved, and even saved thereby.

The same Mr. Boyle shows how the Effluvia even of cold Animals, may in tract of Time pervade the Pores of a living Animal; by supposing an Agreement between the Pores of the Skin, and the Figure of the Corpufcles. *Belini* has demonstrated the Poffibility of the Thing in his laft Propositions, *De Febribus*: And the like is done by Dr. *Wainwright*, Dr. *Keil*, &c. See EFFLUVIA, PORE, SKIN, PLAGUE, &c.

AMULET, in Cookery. See OMELET.
AMURCA, in Pharmacy, a Medicine made of the Lees or Sediment of Olives.—It is an Astringent. See OLIVE.

AMY, in Law, the Person next of kin to an Orphan, or Infant; who is to be intrusted for him: properly called *Prochein Amy*. See PROCHERIN, &c.

The Word is French, and literally fignifies Friend.

AMYGDALÆ. See ALMONDS.

AMYGDALATE, an Artificial Milk, or Emulsion, made of blanched Almonds, &c. See ALMOND.

AMYLUM. See STARCH.

AMYNTICA *Empiftra*, in Pharmacy, defenfative, or ftrengthening Plaifters.

ANA, or *an*, in Medicine, denotes an equal Quantity of any Thing, whether in liquid or dry Measure. See A.

Hence *Anatica Proportio* is used by some Writers to fignify the Ratio, or Proportion of Equality. See EQUALITY, RATIO, &c.

ANA, in Matters of Literature, a Latin Termination, adopted into the Titles of feveral Books in other Languages.—*Anæ*, or *Books in Ana*, are Collections of the memorable Sayings of Perfons of Learning, and Wit; much the fame with what we otherwise call *Table Talk*.

Wolffius has given the History of *Books in Ana*, in the Preface to the *Cafauboniana*: He there observes, that the fuch Titles be new, the Thing it felf is very old; that *Xenophon's* Books of the Deeds and Sayings of *Socrates*, as well as the Dialogues of *Plato*, are *Socraticana*: That the Apothegms of the Philofophers, collected by *Diogenes Laertius*; the Sentences of *Pythagoras*, and thofe of *Epictetus*; the Works of *Athenius*, *Stobæus*, and divers others, are in many *Anæ*'s. Even the *Genera of the Jews*, with feveral other Oriental Writings, according to *Wolffius*, properly belong to the fame Clafs. See GEMARA.

The *Scaligeriana* was the firft Piece that appear'd with a Title in *Anæ*. It was compofed from the Writings of *Vafant* and *Verbanianus*, who, as 'tis faid, took 'em from the Mouth of *Scaliger*, whom they had continually attended a long time. The firft Edition was in 1666.—Soon after came the *Perroniana*, *Thuana*, *Naudæana*, *Pafiniana*, *Sorberiana*, *Menegiana*, *Anti-menegiana*, *Fureteriana*, *Chevronsiana*, *Leinitsiana*, &c. to *Ariquiniana*.

ANABAPTISTS, a Religious Sect, whofe diftinguifhing Tenet is, That Children are not to be baptized, till they arrive at Years of Difcretion; as holding it requifite, that they give a Reafon for their Faith, before they can receive a regular Baptifm. See BAPTISM.

The Word is compounded of *ana*, *denno*, again; and *baptizo*, I baptize; of *bapto*, I wash; it being their Practice to re-baptize fuch as had been baptized in their Infancy.

There were *Anabaptifts* even in the Primitive Church; that is, Hereticks who baptized a fecond time: Such were the *Novatians*, *Catharygians*, and *Donatifts*. See NOVATIAN, CATHARYGIAN, and DONATIST.

There were alfo in the IIIrd Century feveral Catholick Bifhops in *Asia* and *Africa*, who held the Baptifm of Hereticks invalid; and therefore re-baptized fuch as were converted to Orthodoxy.

But thefe ancient Re-baptifts were not called *Anabaptifts*. See RE-BAPTIZER.

In the XIIIth Century, the *Waldenfes*, *Albigenfes*, and *Petrobruffians*, are alfo recorded as of the fame Belief; but neither was the Denomination given them. See ALBIGENES, WALDENSES, &c.

Thofe properly called *Anabaptifts*, are a Sect of Proteftants, who firft appeared in the XVIIth Century, in fome Provinces of *Germany*, particularly *Wefphalia*, where they committed feveral Outrages.—They taught, that Baptifm was not to be conferr'd on Children; that it is unlawful to fwear, or to bear Arms; that a true Chriftian cannot be a Magiftrate, &c.

'Tis not known who was the Author of this Sect: Some charge it on *Carltad*; others on *Zuinglius*. *Cocleus* fays it was *Balthazar Pacinotamus*, who began to teach in 1527; and was burnt, at *Vienna*, fome time afterwards.—*Mecorius* affirms it was firft broach'd by *Pelargus*, in 1522; who was fcondem'd by *Bodeftin*, *Carltad*, *Welfenberg*, *Quicow*, *Didymus*, *More*, &c.

But the common Opinion fathers it on *Thomas Munzer*, or rather *Munzer*, of *Zwickau*, a City of *Mifnia*; and *Nick. Stork*, of *Stalberg* in *Saxony*; two Perfons originally Difciples of *Luther*, from whom they took occafion to feparate, on pretence that his Doctrine was not perfect enough; that he had only carried the Reformation half-way; and that to arrive

at the true effential Religion of Chrift, immediate Retraction was juft add to the dead Letter of Scripture: *Est revelationibus divinis judicandam esse dicent, & ex libris, Muncerum*.—In effect, if thofe two Perfons were not the firft Inventors of the Doctrine; they appear, at leaft, to have been the firft Teachers, and Propagators thereof. See LUTHERANISM.

Steidan furnifhes the beft Account of the Origin of the *Anabaptifts*, in his *Historical Commentaries*.—*Luther*, he obferves, had preach'd up fo ftrenuoufly for the Evangelical Liberty; that the Penfions of *Suabia* flocking together, leagued themfelves againft the Ecclefiaftical Powers, on pretence of defending the Evangelical Doctrine, and flaking off the Yoke of Servitude: *Obdulia caufa quafi & Evangelii doctrinam teneri, & fervitum ab fe profugare vellet*. *Luther* wrote 'em feveral Exhortations to lay down their Arms, but in vain: They rector'd his own Doctrine upon him; maintaining, that having been made free by the Blood of *Jefus Chrift*, it was injurious to the Name of Chriftian, that they had hitherto been reputed Servants: *quod hinc usque sint habiti velut conditione fervi*. Accordingly, they proclaimed every where, that they only took up Arms, by reafon they esteem'd themfelves obliged thereto by Commandment of God.

Luther finding all his Exhortations ineffectual, publish'd a Book, wherein he invited all the World to take up Arms againft thofe Fanatics, who thus abused the Word of God.—He was obliged to write a fecond, foon after, to juftify his Conduct; which to many appear'd too fevere, and even cruel.

The *Anabaptifts*, to the Number of forty thoufand, ravaged all the Places wherever they came. *John of Leiden*, who headed 'em, declar'd himfelf their King; and never flir'd out or appear'd in publick, without a large Retinue of principal Officers: Two young Men always rode immediately after him, the one bearing in his Hand a Crown, and the other a naked Sword.—Their Pretence was to eftablifh the new Reign of *Jefus Chrift* on Earth, by force of Arms; condemning all ufe of Arms for other Purpofes.

Calvin wrote a Treatife againft the *Anabaptifts*, fill extant in his *Opufcula*.—What they chiefly fupported their great Doctrine on, was thofe Words of our Saviour, *He that believes and is baptized, fhall be faved*, Matt. C. XVI. v. 16. As none but Adults are capable of believing, they argued, that no others were capable of Baptifm: Efppecially as there is no Paffage in all the New Testament, where the Baptifm of Infants is clearly enjoined. *Calvin*, and other Writers againft 'em, are pretty much embarras'd to anfwer this Argument; and are oblig'd to have recourfe to Tradition, and the Practice of the Primitive Church. In this Point they have apparently the Advantage over 'em; mention being made of Infant-Baptifm by *Origen*; the Author of the Queftions attributed to *Juftin*; a Council held in *Africa*, fpoke of by *St. Cypprian*, where the Baptifm of Infants immediately after they were born, was exprefly enjoin'd; and feveral other Councils, of *Antun*, of *Myfin*, of *Giron*, of *London*, of *Vienna*, &c. befide other Fathers, as *Irenæus*, *Jerom*, *Ambrofe*, *Auguftin*, &c.

It muft be added, that very confiderable Arguments may be drawn againft the *Anabaptifts* even from Scripture: Children, we are told, are capable of the Kingdom of Heaven: *Mark X. 14*; *Luke XVIII. 16*; and our Saviour made fuch be brought near him, and blefs'd 'em. Yet, He affures us in *St. John III. 5*, that unlefs a Man be baptized he cannot enter the Kingdom of God. Whence it follows, that Children, inasmuch as they are capable of entering into Heaven, are alfo capable of being baptized.—The *Anabaptifts* anfwer, that thofe here fpoke of by our Saviour, were grown big, fince they could come to him; and confequently were capable of an Act of Faith: But this is contrary to the exprefs Terms of Scripture, which in *St. Matthew* and *St. Mark*, calls 'em *wafhe*; and in *St. Luke*, *babes*, *little Children*: The fame *St. Luke* writes, that they were brought to *Jefus*; which is a Prefumption that they were not yet able to walk.

Another Argument much infifted on, is drawn from thofe Words of *St. Paul* to the *Romans*, C. V. "If by one Man's Offence Death reign'd; much more they who receive abundance of Grace and of the Gift of Rightcoufnefs, fhall reign in Life by one, *Jefus Chrift*." For, if all become criminal by one; then are Children criminal: Confequently, if all are juftified by one, then are Children juftified: But this cannot be without Faith. And confequently Children may have the Faith required for the receiving of Baptifm, i. e. an Abfolute Faith, preceding the Sacraments, as a Difpofition requifite thereto. This Faith they have, not of themfelves; but by others, viz. their Parents; or their Godfathers and Godmothers, who anfwer for 'em. Nor is there any thing in the whole Difpenfation, but what is very equitable: It being but juft, that as they had finned in the Will of another, they might alfo be juftified by the Will of another.

The *Anabaptists* adopted several other Dogmata from the *Quakers*, &c. touching the Incarnation, &c. But those who now retain the Name, have abandoned the greatest Part thereof; and in lieu of the Fanatic Zeal of the ancient Founders of the Sect, have given into an Exemplary Simplicity in their Actions, Discipline, Dress, &c. not much unlike the modern *Quakers*. See *QUAKERS*.

As they multiplied, they divided into a great number of Sects; which took particular Denominations, either from the Leaders thereof, or the peculiar Opinions, which they superadded to the general System of *Anabaptism*.—The principal were the *Muncerians*, *Catharists*, *Enthiasts*, *Silentes*, *Adamites*, *Georgians*, *Independants*, *Hutites*, *Melchiorites*, *Nudipedations*, *Memoires*, *Bulboldians*, *Augustinians*, *Servotians*, *Monasterians*, *Libertins*, *Desecratiants*, *Sempervivants*, *Polygamites*, *Amorofians*, *Glancularians*, *Manifestarians*, *Bacularians*, *Pacificators*, *Pastoricides*, *Sanguinarij*, &c.

ANABASHI, in Antiquity, the Couriers who travel'd on Horseback, or in Chariots. See *COURIER*, and *POST*.

The Word comes from the Greek *anabasi*, *advectus*, mounting.

ANABIBAZON, in Astronomy, the *Dragon's Head*; or the Northern Node of the Moon, where she passes the Ecliptick from South to North Latitude. See *DRAGON*, and *NODE*.

ANABROSIS, in Medicine, the issuing of Blood at a Hole wore in a Vein by Corrosion.—The Word is Greek, *anabrosis*, *erosio*.

ANACALYPTERIA, in Antiquity, Feasts celebrated among the Heathens, on the Day that the Bride was permitted to lay aside her Veil, and to be seen in publick. See *FEAST*, *MARRIAGE*, &c.

They were thus called from the Greek *anacalypsis*, to discover, *uncover*.

ANACAMPTICK, signifies as much as *Reflecting*; and is frequently used in reference to Echoes, which are said to be Sounds produced *anacampitically*, or by Reflexion. See *REFLECTION*, *SOUND*, and *ECHO*.

Hence also *Anacampiticks* is by some used for *Catoptricks*, See *CATOPTRICKS*, *PRONICKS*, &c.

ANACATHARTIC, is understood of a purging Medicine, that works upwards. See *PURGATIVE*.

The Word comes from *ana*, *supra*, upwards; and *καθαίρω*, *purgo*, I purge.

ANACEPHALEOSIS, in Rhetorick, a Recapitulation; or a short and summary Repetition of what has been said. See *RECAPITULATION*.

The Word comes from the Greek *ana*, which in Composition signifies *Repetition*, and *κεφαλή*, *Head*.

ANACHORET, or **ANCHORET**. See *ANCHORET*.

ANACHRONISM, in Matters of Chronology, an Error in Computation of Time; whereby an Event is placed earlier than it really happen'd. See *TIME*, and *CHRONOLOGY*.

Such is that of *Virgil*, who places *Dido* in *Africa* at the Time of *Æneas*; tho, in reality, she did not come there till 300 Years after the taking of *Troy*.—An Error on the other side, whereby a Fact is placed later, and lower than it should be, is call'd a *Parachronism*. See *PARACHRONISM*.

The Word is compounded of the Greek *ana*, *sursum*, *supra*, *retrosum*, higher, backwards; and *κεῖθεν*, *tempus*, Time.

ANACLATICKS, that Part of Opticks which considers reflected Light. See *REFRACTION*.

Anclaticks are the same with what we more usually call *Dioptricks*. See *DIOPTRICKS*.

ANACLETERIA, in Antiquity, Feasts celebrated in honour of Kings and Princes, when they took upon them the Administration of their State, and made a Solemn Declaration thereof to the People.

The Word is form'd of *ana*, and *κλιεῖν*, *oro*, I call.

ANACREONTIC, in the Greek and Latin Poetry, something invented by *Anacreon*; or in the Manner and Taste of *Anacreon*.

Anacreon, a Poet of *Teios*, who lived upwards of 400 Years before Christ, was famous for the Delicacy of his Wit; and the exquisite, yet easy and natural, turn of his Poetry.—We have several of his Odes still extant; and few of the modern Poets, but have *Anacreonticks* in Imitation hereof.

They are most of 'em compos'd in Verses of seven Syllables; or rather, of three Feet and an half, Spondees and Iambus's, the sometimes *Anapaests*.—Hence, Verses in that Measure are usually call'd *Anacreonticks*, or *Anacreontic Verses*. See *VERSUS*.

ANADIPLOSIS, in Rhetorick, a Figure, in which one Verse begins with the same Word wherewith the former ended. See *FIGURE*.

The Word is sometimes also used in Physick, for a Reduplication of the Fits, or Paroxysms of Fevers; in which Sense, some Writers also call it *Epanadiplosis*.

ANAGLYPHICE, or the **ANAGLYPHIC Art**, signifies *Sculpture*; or the Art of Carving, Engraving, Chasing, and Embossing. See *SCULPTOR*, *CARVING*, *ENGRAVING*, *ENCHASING*, &c.

The Word comes from the Greek *anaglypho*, *exsulto*. **ANAGOGICAL**, *Mysterious*, something that raises the Mind to Things eternal and divine; the Matters of the next Life. See *ANAGOGE*.

This Term is principally used with regard to the different Senses of the Scripture.—The literal Sense is the first, and the natural Sense: The mystical Sense is founded on the natural Sense, from whence it is taken by Analogy or Comparison, by Similitude or Resemblance of one thing to another; and is divided into several kinds. See *MYSTICAL*.

Where it regards the Church, and Matters of Religion, it is called the *Allegorical Sense*. See *ALLEGORICAL*.

Where it regards our Morals, it is called the *Tropological Sense*. See *TROPOLOGICAL*.

And where it regards Eternity, or the Life to come, it is called the *Anagogical Sense*. See *SENSE*.

The Word is derived from the Greek *anagoge*, *carrying away*, *overturning*; which is form'd of the Preposition *ana*, *sursum*, upwards, and *αγωγη*, *leading*; of *αγω*, *duco*.

ANAGOGE, **ANAGOGE**, a Rapture, or Elevation of the Soul, to things Cœlestial, and Eternal. See *EXTASY*, &c.

This is not the natural Sense of such a Passage of Scripture, it is an *Anagogy*. See *MYSTIC*.

We have Comments on the Scripture, which are *Anagogies* throughout. See *ANAGOGICAL*.

ANAGRAM, **ANAGRAMMA**, a Transposal of the Letters of a Name; or a Combination thereof in some new manner, so as to exhibit one or more Words, either to the Advantage or Disadvantage of the Person to whom it belongs. See *NAME*.

The Word is form'd from the Greek *αναγγραφο*, I write backwards.

Thus, the *Anagram* of *Galenus* is *Angelus*; that of *Logica*, *Caligo*; that of *Loramus*, is *Alerion*; on which account it was, that the Family of *Lorraine* took *Alerions* for their Armour.—*Calvin*, in the Title of his Imitations, printed at *Strasbourg* in 1559, calls himself *Alcimus*, which is the *Anagram* of *Calvinus*, and the Name of an eminent learned Person in the Time of *Charlemain*, who contributed greatly to the Reformation of Learning in that Age. *Barclay*, in his *Argenis*, anagrammatizes *Calvinus* by a less creditable Name, *Uffaulca*; and *Rabelais*, to be revenged of the same *Calvin*, who had made an *Anagram* of his Name, found in that of *Calvin*, *Jau Cul*.

Such as keep close to the Definition of *Anagram*, take the Liberty to omit or retain the Letter *H*, and that Letter only; but such as stand up for the poetical Licence, make bold sometimes to use *E* for *A*, *V* for *W*, *S* for *Z*, and *C* for *K*; and vice versa. See *ALPHABET*.

This way of writing was scarce known among the Antients: *Daurat*, a French Poet in the Reign of *Charles IX.* is usually said to be the first that broach'd it: Yet *Lycophon*, who wrote under *Ptolemy Philadelphus*, about 280 Years before Christ, appears to have been no Stranger to the Art of making *Anagrams*. *Cæterus*, in his *Prologomena* to *Lycophon*, gives us two of his Pieces in this Kind; the first on the Name of King *Ptolemy*, *Ptolemaeus*, in which he found *αὐτοπύρα*, of *Honey*; to insinuate the Sweetness and Mildness of that Prince: The second was on *Queen Arsinoe*, *ἄρσινος*, of whom he made *τοῦ ἡγῆ*, *Jano's Violet*.

The Cabbalists among the Jews are profess'd *Anagrammists*; the third Part of their Art, which they call *Mora*, i. e. changing, being nothing but the Art of making *Anagrams*, or of finding hidden and mystical Meanings in Names: which they do by changing, transposing, and differently combining the Letters of those Names.—Thus, of *ן* the Letters of *Noah's* Name, they make *ן* *Grace*: of *משיח* *the Messiah*, they make *משיח* *he shall rejoice*.

There are two manners of making *Anagrams*; for, 1^o, some only consist in dividing a single Word into several: Thus the *Enigma* of the God *Terminus*, mention'd by *Antes Gellius*, Lib. XII. c. 6. is founded on the *Anagram* *TERMINUS*: and thus *Sustineamus* yields *su tinea mus*.—This Kind alone seems to have been used among the Romans.

The second, is where the Order and Situation of the Letters is changed: Such are those abovemention'd; and also these, *Roma*, *Mora*, *Amor*; *Julius*, *Linus*; *Corpus*, *Porcus*, *Procus*, *Spurcus*.

To find all the *ANAGRAMS* any Name will admit of, algebraically, see the Article *COMBINATION*.

The finest and happiest of all the *Anagrams* extant, is that on the Question put by *Pilate* to *Jesus Christ*; *Quid est veritas?* which anagrammatically make, *Est cur qui adest*: The *Anagram*, here, is the best, and justest Answer that could possibly be given.

Besides the ancient kind of *Anagram*, there have been new ones invented; as, the *Mathematical Anagram*, invented in 1680; by which the Abbot *Cassian* found, that the eight Letters of the Name of *Lewis XIV.* made *Vrai Heroi*, i. e. *true Hero*.

We are now likewise furnish'd with the *Numerical Anagram*; where the numeral Letters (i. e. each 23 in the *Roman* cyphering stood for Numbers) taken together, according to their numerical Values, express some Epocha; Of which kind is that Diffich of *Godard* on the Birth of the late *French King*, in the Year 1638, on a Day wherein there was a Conjunction of the Eagle with the Lion's Heart:

*eXorles DeLpho agVILe CorDijVe Leons
CongreffV gaLLos spe LarLaqVe refeClr.*

ANALECTA, a Greek Term, signifying *Collection*; form'd of *ἀνάληξις*, *I gather*.

ANALEMMA, a *Planisphere*; or Projection of the Sphere, on the Plane of the Meridian, orthographically made, by straight Lines and Ellipses; the Eye being suppos'd to be at an infinite Distance, and in the East or West Points of the Horizon. See **PLANISPHERE**, **PROJECTION**, and **SPHERE**.

ANALEMMA, is also us'd for an *Astralabe*; or kind of Instrument, consisting of the Furniture of the same Projection, drawn on a Plate of Brass or Wood; with an Horizon or Carrol fitted to it. See **ASTRALABE**.

Its use is for finding the Time of the Sun's rising and setting, the Length of the longest Day in any Latitude, and the Hour of the Day.

The *Analemma* is also of considerable use among Diallists, for laying down the Signs of the Zodiac, with the Length of Days, and other Matters of Furniture, upon Dials. See **DIAL**, and **FURNITURE**.

The Word is derived from the Greek *ἀνάληξις*, of *ἀνάληξις*, *refusio*.

ANALECTICKS, in Medicine, *Restoratives*; or Remedies proper to restore the Body, when wasted or emaciated, either by the Continuance of a Disease, or the Want of Food. See **RESTORATIVE**.

The Word is Greek, *ἀναλεκτικὸς*, derived of *ἀναλαμβάνω*, *I re-establish, restore*.

ANALOGY, a certain Relation, Proportion, or Agreement, which several Things, in other respects different, bear to each other.—Such is that between the Ball in the Heavens, and the Animal so called on Earth.

The Word is Greek, *ἀναλογία*; which the *Latins* usually render by *Comparatio*, and *Proportionalitas*: And hence, among Geometricians, *Analogy* is frequently us'd for a Similitude of Ratio's; called also *Proportion*. See **PROPORTION**.

Reasonings by *Analogy* may serve to explain and illustrate, but not to prove any thing; yet is a great deal of our philosophizing no better founded. See **SIMILITUDE**, **PHILOSOPHY**, and **ETC.**

In Matters of Language, we say, New Words are form'd by *Analogy*, i. e. new Names are given to new Things, conformably to the establish'd Names of other Things of the like Nature and Kind. See **LANGUAGE**, and **WORD**.—The Difficulties and Obscurities in a Language, are chiefly to be clear'd up by *Analogy*. See **ETYMOLOGY**.

The Schoolmen define *Analogy* to be a Resemblance, join'd with some Diversity: Its Foundation, according to them, is laid in the Proportion of several Things, consider'd as that Proportion proceeds upon different Considerations. See **PROPORTION**.

Thus, a *sound Animal*, a *sound Food*, and a *sound Proportion*, agreeing in this, that they have a common Denomination, but the Reason or Quality whereon the Denomination is founded, different; are said to have an *Analogy*, or to be *analogous*.

Accordingly, *Analogous Things* are defined to be such as have a common Name, but the Thing immediately signified by that common Name, different; yet with some Correspondence or Relation discernible therein. See **GENERAL TERM**.

Philosophers usually distinguish three Kinds of *Analogy*, viz.—of *Inequality*, where the Reason of the common Denomination is the same in Nature, but not in Degree or Order: In which Sense, *Animal* is *analogous* to Man, and Brute.—Of *Attribution*; where, tho the Reason of the common Name be the same, there is a difference in its habitude or respect thereto: In which Sense, *Healthy* is *analogous* both to a Man, and an Exercise.—Of *Proportionality*; where, tho the Reasons of the common Name do really differ, yet they bear some proportion to each other: In this Sense, the Gills of Fishes are said to be *analogous* to the Lungs in terrestrial Animals: and thus, the *Eye* and the *Understanding* are said to bear an *Analogy* to each other.

ANALOGISM, **ANALOGISMUS**, in Logick, an Argument from the Cause to the Effect. See **CAUSE**, and **ETC.**

ANALYSIS, in Logick, a Method of applying the Rules of Reasoning, to resolve a Discourse into its Principles; in order to a Discovery of its Truth, or Falshood. See **PRINCIPLE**.

Or, *Analysis* is an Examination of some Discourse, Proposition, or other Matter, by searching into its Principles, and separating and opening its Parts; in order to consider them more distinctly, and arrive at a more precise Knowledge of the Whole. See **DISCOURSE**, **PROPOSITION**, **REDUCTION**, and **ETC.**

The Word is Greek, *ἀνάλυσις*, which literally signifies, *Resolution*; form'd of *ἀνά*, and *λύω*, *solvo*, *refolvo*, *I loosen*, *I resolve*.

Analysis makes one great Branch or Species of Method; called also *Resolution*. See **METHOD**, and **RESOLUTION**.

ANALYSIS, in Mathematics, a Method of solving, or resolving Mathematical Problems. See **PROBLEM**.

There are two general Methods of finding Truth in Mathematics; *Synthesis*, and *Analysis*.—*Analysis* is the Demonstration, or Consideration of the Consequences drawn from any Proposition; in which a Man proceeds, till he comes to some known Truth, by means whereof, he may be able to give a Solution of the Problem. See **RESOLUTION**.

The Method of *Analysis* consists more in the Judgment and readiness of Apprehension, than in any particular Rules, where pure Geometry is made use of, as it was among the Antients; but at present Algebra is principally us'd on this Occasion, which furnishes certain Rules to perform or arrive at the End propos'd. See **ANALYTIC**.

This Method, under its present Improvements, must be allowed the Apex or Height of all human Learning; being the great Instrument or means whereby so many surprizing Discoveries have been of late Years made, both in Mathematics, and Philosophy. It furnishes the most perfect Instances, and Examples of the Art of Reasoning; gives the Mind a surprizing Readiness at deducing and discovering Things unknown, from a few *Data*; and by using Signs for Ideas, presents Things to the Imagination, which otherwise seem'd out of its Sphere. By this, Geometrical Demonstrations may be wonderfully abridg'd; and a long Series of Arguments, wherein the Mind cannot without the utmost Effort and Attention discover the Connection of Ideas, are hereby converted into sensible Signs, and the several Operations requir'd therein, effected by the Combination of those Signs. But what is yet more extraordinary, by means of this Art, a Number of Truths are frequently express'd by a single Line, which in the common way of explaining and demonstrating Things, would fill whole Volumes: Thus, by mere Contemplation of one single Line, whole Sciences may sometimes be learnt in a few Minutes time; which otherwise could scarce be attain'd in many Years. See **MATHEMATICS**, **KNOWLEDGE**, **THEOREM**, and **ETC.**

Analysis, is divided, with regard to its Object, into that of *Finite*, and that of *Infinite*.

Analysis of finite Quantities, is what we otherwise call *Specious Arithmetick*, or *Algebra*. See **ALGEBRA**, and **SPECIOUS ARITHMETICK**.

Analysis of Infinite, called also the *New Analysis*, is particularly us'd for the *Method of Fluxions*, or *Differential Calculus*. See **FLUXIONS**, and **CALCULUS**.—See also **INFINITE**.

ANALYSIS, is also us'd in Chymistry, for the decomposing of a mixt Body; or the Reduction thereof into its Principles. See **PRINCIPLE**, **REDUCTION**, **DECOMPOSITION**, **BODY**, and **ETC.**

To *analyse Bodies*, or resolve 'em into their component Parts, is the chief Object of the Art of Chymistry. See **CHYMISTRY**.

The *Analysis of Bodies* is chiefly effected by means of Fire. See **FIRE**.

All Bodies, by a Chymical *Analysis*, resolve into Water, Earth, Salt, Sulphur, and Mercury; tho every Body does not afford all these Parts, but some more, some less, according to the Kingdom they belong to. See **ELEMENT**.—See also **WATER**, **EARTH**, **SALT**, and **ETC.**

The *Analysis of Vegetables* is easy; that of Fossils, particularly Metals and Semi-metals, difficult. See **VEGETABLE**, **FOSSIL**, **METAL**, and **ETC.**

Some Bodies of the Fossil Tribe consist of Particles so very minute, and so firmly united, that the Corporcles thereof need less heat to carry them off, than to separate 'em into their Principles: So that the *Analysis* is impracticable in such Bodies.—Hence the difficulty of *analysing* Sulphur. See **SULPHUR**.

The Anatomical Dissection of an Animal, is a kind of *Analysis*. See **ANATOMY**, and **DISSECTION**.

ANALYSIS is also us'd for a kind of Syllabus, or Table of the principal Heads, or Articles of a continued Discourse; disposed in their natural Order, and Dependency.—*Analyses* are more scientific than Alphabetical Indexes; but are less us'd, as being more intricate.

ANALYTIC, ANALYTICAL, something that belongs to, or partakes of the Nature of *Analysis*. See *ANALYSIS*.

Thus, we say, an *Analytical Demonstration*; *Analytical Enquiry*; *Analytical Table*, or *Scheme*; *Analytical Method*, &c. See *METHOD*.

The *Analytical Method* stands opposed to the *Synthetic*.—As in *Mathematics*, says *Sir I. Newton*, so in *Natural Philosophy*, the Investigation of difficult Things by the *Analytical Method*, ought to precede the Method of *Composition*. This *Analytical* consists in making Experiments, and Observations, and in drawing general Conclusions therefrom by *Induction*, and admitting of no Objections against the Conclusions, but such as are drawn from Experiments and other certain Truths. And tho' the arguing from Experiments and Observations by *Induction*, be no *Demonstration* of general Conclusions; yet it is the best way of arguing which the Nature of the Things admits of; and may be esteem'd so much the stronger, as the *Induction* is more general. And if no Exception occur from Phenomena, the Conclusion may be pronounced generally. By this way of *Analysis*, we may proceed from Compounds to Ingredients; and from Motions to the Forces producing them; and in general, from Effects to their Causes, and from particular Causes to more general ones, till the Argument end in the most general.—This is the *Analytical Method*.

The *Synthetic* consists in assuming the Causes discovered, and established as Principles; and by them explaining the Phenomena proceeding from them, and proving the Explanations. See *SYNTHESIS*.

ANALYTICS, ANALYTICAL, the Doctrine, and Use of *Analysis*. See *ANALYSIS*.

The great Advantage of the present *Mathematics* above the ancient, is chiefly in Point of *Analyticals*.

The Authors on the ancient *Analyticals*, are enumerated by *Pappus*, in the Preface to his 7th Book of *Mathematical Collections*; being, *Euclid*, in his *Data*, and *Porismata*; *Apollonius*, de *Sectione Rationis*; *Apollonius*, in his *Conicis*, *Inclinationis*, and *Tactionis*; *Aristæus*, de *Locis Solidis*, and *Eratosthenes*, de *mediis proportionalibus*. But the ancient *Analyticals* were very different from the modern.

To the modern *Analyticals*, principally, belong *Algebra*; the History of which, with the several Authors thereon, see under the Article *ALGEBRA*.

The chief Writers upon the *Analysis* of Infinites, are its Inventors, *Sir Isaac Newton*, in his *Analysis per Quantitatem Seriem, Fluxiones & Differentias, cum enumeracione Linearum 3^o ordinis*; and de *Quadratura Curvarum*; and *M. Leibnitz*, in *Act. Eruditor. An. 1684*: The *Marquis de l'Hopital*, in his *Analyse des Infiniment petites*, 1696: *Carre*, in his *Methodes pour la mesure des Surfaces, la division des Solides*, &c. par l'application du calcul integral, 1700: *G. Masfredinus*, in a posthumous Piece, de *Constructione Equationum differentialium primi gradus*, 1707: *Nich. Mercator*, in *Logarithmotechnia*, 1668: *Cheyne*, in *Methodo Fluxionum inversa*, 1703: *Craig*, in *Methodo figurarum linearum rellis & curvis comprehensarum Quadraturarum determinanda*, 1685; and de *Quadraturis figurarum curvilinearum & locis*, &c. 1693: *Dau. Gregory*, in *Exercitatione Geometrica de dimensionibus figurarum*, 1684; and *Niutentis*, in *Considerationibus circa Analysis ad quantitates infiniti parvas applicatas, principia*, 1695.—The Sum of what is found in l'Hopital, Carre, Cheyne, Gregory, and Craig; is collected into one Volume, and very well explain'd by *C. Huges*, under the Title of, *A Treatise of Fluxions*, &c. 1704.

ANALYTICK, in *Logic*, is a Part of that Science, teaching to decline and construe Reason, as Grammar doth Words.

ANAMORPHOSIS, in *Perspective* and *Painting*, a monstrous Projection; or a Representation of some Image, either on a plane or curve Surface, deformed; which at a certain distance shall appear regular, and in proportion. See *PROJECTION*.

The Word is *Greek*; compounded of *ana*, and *morphosis*, formation, of *μορφή*, form.

To make an *Anamorphosis*, or monstrous Projection on a Plane.—Draw the Square ABCD, (Tab. *Perspective*, Fig. 18.) of a bigness at pleasure, and subdivide it into a Number of Arceolas, or lesser Squares.—In this Square, or Recticle, called the *Circular Prototype*, let the Image to be distorted be drawn.—Then draw the Line *ab* = *AB*; and divide it into the same Number of equal Parts, as the Side of the Prototype *AB*; and in *E*, the middle thereof, erect the Perpendicular *EV*, so much the longer; and draw *VS* perpendicular to *EV*, so much the shorter, as the Image is desir'd to be distorted. From each Point of Division draw right Lines to *V*, and join the Points *a* and *S*; as also the right Line *aS*. Thro' the Points *a*, *e*, *f*, *g*, draw Lines parallel to *ab*; then will *abcd* be the Space that the monstrous Projection is to be delineated in; called the *Circular Eclipte*.

Lastly, in every *Arceola*, or small Trapezium of the Space *abcd*, draw what appears delineated in the correspondent *Arceola* of the Square ABCD: by this means you will obtain a deformed Image, which yet will appear in just Proportion to an Eye distant from it the length *FV*, and raised above its height, *VS*. See *DESIGNING*.

It will be diverting to manage it so, that the deformed Image do not represent a mere Chaos; but some other Image: Thus, we have seen a River with Soldiers, Waggon, &c. marching along the side of it; so drawn, that when viewed by an Eye in the Point *S*, it appears to be the fantastical Face of a Man.

An Image also may be distorted mechanically, by perforating it here and there with a Needle, and placing it against a Candle, or Lamp; and observing where the Rays which pass thro' these little Holes fall on the plane, or curve Surfaces; for they will give the correspondent Point of the Image deformed: by means whereof, the Deformation may be completed.

To draw the *Anamorphosis*, or Deformation of an Image upon the convex Surface of a Cone.

It is manifest from the former Case, that all here required, is to make a *Circular Eclipte* on the Surfaces of the Cone, which shall appear to an Eye duly placed over its Vertex, equal to the *Circular Prototype*.

Let the Base ABCD, therefore, of the Cone, (Fig. 19.) be divided by Diameters into any Number of equal Parts, that is, the Periphery thereof: And let some one Radius be likewise divided into equal Parts, and thro' each Point of Division draw concentric Circles: thus will the *Circular Prototype* be made.—With double the Diameter *AB*, as a Radius, describe the Quadrant *EFG*, (Fig. 20.) so as the Arch *EG* be equal to the whole Periphery; then this Quadrant folded duly up, will form the Surfaces of a Cone, whose Base is the Circle ABCD.—Divide the Arch *AB* into the same Number of equal Parts as the *Circular Prototype* is divided into, and draw Radii from each of the Points of Division. Produce *GF* to *I*, so that *FI* = *FG*, and from the Centre *I*, with the Radius *IF*, draw the Quadrant *FKH*, and from *I* to *E* draw the right Line *IE*. Divide the Arch *KF* into the same Number of equal Parts, as the Radius of the *Circular Prototype* is divided into; and draw Radii thro' each of the Points of Division, from the Centre *I* meeting *EF*, in *1*, *2*, *3*, &c. Lastly, from the Centre *F*, with the Radii, *F1*, *F2*, *F3*, &c. describe the concentric Arches.—Thus will the *Circular Eclipte* be form'd, each *Arceola* whereof will appear equal to other.

Hence, what is delineated in every *Arceola* of the *Circular Prototype*; being transferred into the *Arceolas* of the *Circular Eclipte*: the Image will be distorted or deformed; yet an Eye being duly raised over the Vertex of the Cone, will perceive it in just proportion.

If the Chords of the Quadrants be drawn in the *Circular Prototype*, and Chords of their fourth Part in the *Circular Eclipte*, all things else remaining the same; you will have the *Circular Eclipte* on a quadrangular Pyramid.

And hence it will be easy to deform any Image, in any other Pyramid, whose Base is any regular Polygon.

Because the Eye will be more deceived, if from contiguous Objects it cannot judge of the distance of the Parts of the deformed Image; therefore, these kinds of deformed Images are to be view'd thro' a small Hole.

ANANAS, in *Natural History*, by some called *Nanas*, by others *Jayama*, and by us popularly the *Pine-Apple* on account of the resemblance it bears to the Cones of Pines or Firs; is a fine *Indian Fruit*, which grows on a Plant like the *Fig-tree*, and of the Size of an *Artichoke*.

The Fruit is adorned on the Top with a little Crown, and a bunch of red Leaves resembling Fire. The Flesh is fibrous, but dissolves in the Mouth; having the delicious Taste of the Peach, the Quince, and the Muscadine Grape, all together.—*M. du Terré* describes three Kinds of *Ananas*. They make a Wine from the Juice, which is almost equal to *Malmsey* Sack, and will intoxicate as soon.

It is good to strengthen the Heart and Nerves, against naufragating, to refresh the Spirits, and excites Urine powerfully; but is apt to occasion Abortion in Women.—They make a Confection of the *Ananas* on the Spot, which they bring hither whole; and is found of good service to refresh a decay'd, or aged Constitution.

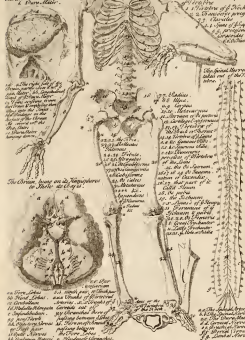

The *Anana*, or *West-India Pine-Apple*, is generally allowed, both for its rich and delicious Flavour, and its beautiful Colour, for the King of Fruits.—Great Endeavours have of late been used to cultivate the Plant in *Europe*; in which they have succeeded, and there are now produced delicious Fruits of this kind, in some of the fine Gardens in *England*.—They are usually about the Size of a Tennis-Ball.

ANAPEST, ANAPESTUS, a Foot in the *Greek* and *Latin* Poetry, consisting of two short, and one long Syllable. See *FOOT*.

MYOLOGIA, OR THE MUSCLES

External Muscles of the Fore Parts of the Body

External Muscles of the Back Parts of the Body

Internal Muscles of the Body, appearing after the former are taken off

Internal Muscles of the Back Parts of the Body, appearing after the former are taken off

Such is the Word *Legere*.

The Word is derived from *doxala*, *contra ferire*; this Verse being the Reverse of the Dactyl. See DACTYL.

Aspessick Verses, *i. e.* Verses wholly composed of such Feet, were much in vogue among the Antients.

ANAPHORA, in Rhetoric, a Figure whereby the same Sound is repeated in the Beginning of several Sentences, or Verses. See FIGURE.

The Word is Greek, *ἀναφωρῆς*, signifying Relation, or Re-
petition.

ANAPLEROTICKS, in Medicine, such Remedies as incarnate, and fill up Ulcers and Wounds with new Flesh. See WOUND, and ULCER.

Anapleroticks are the same with what we otherwise call *Incarnatives*. See INCARNATIVE.

The Word comes from the Greek *ἀναπληρῶναι*, to fill up.

ANARCHY, the want of Government in a Nation, where no supreme Authority is lodged, either in the Prince or other Rulers; but the People live at large, and all things are in confusion. See GOVERNMENT.

The Word is derived from the Greek Privative *α*, and *ἀρχή*, Command, Principality.

ANASARCA, in Medicine, a sort of universal Dropsy, wherein the whole Substance of the Body is swelled, or bloated with pituitous Humours. See DROPSY.

The *Anasarca* is otherwise called *Lenophlegmatia*. See LEUCOPHELEMATIA.

The Word is form'd of the Greek *ἀνασῆρα*.—The *Anasarca* is a further degree of a *Cachexia*. See CACHEXY.

In an *Anasarca*, the Legs swell at the beginning, especially towards Night, and then pit remarkably: The Urine is pale, the Appetite decays; at length the Swelling rises higher, and appears in the Thighs, Belly, Breast, Arms. The Face becomes pale and cadaverous; the Flesh soft and lax; a difficulty in Respiration comes on, attended with a slow Fever, &c.

ANASTOMOSIS, or ANASTOMOSIS, in Anatomy, is sometimes used to express such an Aperture of the Mouths of the Vessels, as less out their Contents. See VESSEL, &c.

The Word is form'd of the Greek *ἀνα*, per, thro', and *σύν*, Oi, Mouth.

ANASTOMOSIS is more frequently used to denote the opening of two Vessels into one another; or the Union and Junction of the Mouths of two Vessels, whereby they come to communicate with one another.

There are various *Anastomoses* of this kind, *e. g.* of an Artery with an Artery, a Vein with a Vein, or a Vein with an Artery. See ARTERY, and VEIN.

The Circulation of the Blood in the Fetus is effected by means of the *Anastomoses*, or Inoculations of the Vena Cava with the Pulmonary Vein; and of the Pulmonary Artery with the Aorta. See FOETUS.

The same Circulation is also perform'd in Adults, by the *Anastomoses* or Continuations of the Capillary Arteries with the Veins. See CIRCULATION of the Blood.

After the Circulation of the Blood thro' the Heart, Lungs, and large Blood-Vessels, was demonstrated by Harvey; it was only quest'd how the Extremities of the Arteries transmitted the Blood to the Veins: till *Leeuwenhoek's* Microscopes had discover'd the Continuations of the Extremities of those Vessels, in Fish, Frogs, &c.—However, there were not wanting those who doubted of the like Continuations of the Extremities of the Arteries and Veins in human Bodies and Quadrupeds; since those Animals it had hitherto been chiefly seen in satisfactorily, were either such Fish, or amphibious Kinds, as have but one Ventricle in their Hearts, and their Blood actually cold; beside that their Blood does not circulate with such Rapidity, as in Animals whose Hearts have two Ventricles. This difference in the principal Organ of Circulation, moved Mr. Cooper to make Experiments on Animals, whose Organs differ only from the Human in their gross Figure, and nor in their intimate Structure.—The Result was a plain Discovery of the like Inoculations of the Arteries and Veins, in the Omentum of a Cat.

George Frederick Francus, of Frankenan, a Physician of Copenhagen, published, in the Year 1705, a learned and copious Work, intitled, *Anastomosis Recta*.

ANASTOMATICS, or ANASTOMATIC Medicines, are such as have the Faculty of opening, and dilating the Orifices of the Vessels; and by that means of making the Blood circulate the more freely.

The Word comes from the Greek *ἀνασῆρα*, I open, unstop.

ANATHEMA, an Excommunication, attended with Exorcisms and Curses. See EXCOMMUNICATION.

There are two Kinds of *Anathemas's*; the one *Judiciary*, the other *Abjurator*.

The former can only be pronounced by a Council, a Pope, Bishop, or other qualified Person; and differs from a simple Excommunication in this, that an Excommunication only prohibits the Criminal from entering within the Church, or from holding Communion with the Faithful; whereas

an *Anathema* cuts him off from the Body, the Society, and even the Commerce of the Faithful, and delivers him over to the Devil.

The latter kind of *Anathema* usually makes a Part of the Ceremony of Abjuration; the Convert being obliged to *anathematize* the Herefy he abjures. See ABJURATION.

Most Greek Writers distinguish *Anathema*, written with a long *e*, *ἄνθεμα*; and from *Anathema* with a short *e*, *ἀνάθεμα*; Yet *Beza* rejects the Difference.—*Pollux*, in his Lexicon, observes that the Word properly signifies, Gifts dedicated to the Gods: This Interpretation is confirm'd by *Helychius*, who explains *Anathema* by *Ornaments*; these Gifts being hung up as Ornaments to the Temples.

The Critics and Commentators are divided about the manner wherein St. Paul wishes to be *Anathema* for his Brethren, *Romans*, Cap. IX. 3. Some render it by *accursed for*, others by *separated from*, &c.

ANATOCISM, ANATOCISMUS, an Usurious Contract, wherein the Interest arising from the principal Sum, are added to the Principal it self, and Interest exacted upon the Whole.

Anatocista is what we popularly call *Interest upon Interest*, or *Compound Interest*. See INTEREST.

This is the worst Kind of Usury, and has been severely condemn'd by the *Roman* Law, as well as the Common Laws of most other Countries. See USURY.

The Word is originally Greek, but is used by *Cicero* in Latin; whence it has descended into most other Languages. It comes from the Preposition *ἀνα*, which in Composition signifies *Repetition* or *Duplication*, and *νασ*, Usury.

ANATOMY, the Art of dissecting, or artistically taking to pieces, the solid Parts of Animal Bodies; in order to an exact Discovery of their Structure and Oeconomy. See ANIMAL, BODY, DISECTION, and OECONOMY.

Anatomy makes a great Branch of that Division of Medicine called *Physiology*. See MEDICINE, and PHYSIOLOGY.

It is sometimes divided, with regard to its End, into *Speculative* and *Practical*; a Division of very little use and moment.—It is also divided, with regard to its Subject, into *Human* and *Comparative*.

Human, which is absolutely and properly denominated *Anatomy*, is that employ'd on the human Body; called also *Anthropology*. See ANTHROPOLOGY.

Comparative Anatomy, is that which considers Brutes, and other Animals, and even Vegetables; chiefly with a View to illustrate the human Structure. See COMPARATIVE ANATOMY.

The Subject of *Anatomy*, viz. the Body, is variously divided into *Parts*, *Organical*, and *Inorganical*; *Similar*, and *Dissimilar*; *Spermatick*, &c. See PART.—See also SIMILAR, ORGANICAL, &c.

Its more obvious Division, is into *Solids* and *Fluids*, or *Containing* and *Contained* Parts. See SOLID, and FLUID.

Under the Solids come the *Bones*, *Muscles*, *Nerves*, *Arteries*, *Veins*, *Cartilages*, *Ligaments*, *Membranes*, &c.—Under the Fluids, come *Glyste*, *Blood*, *Milk*, *Fat*, *Lymph*, &c. see each under its proper Article, BONE, MUSCLE, NERVE, ARTERY, VEIN, CARTILAGE, MEMBRANE, &c. See also CHYLE, BLOOD, MILK, FAT, &c.

The ancient Writers of *Anatomy*, *Hippocrates*, *Democritus*, *Aristotle*, *Galen*, and others, look'd upon this as the most important Part of Physick, and that, without which the Uses of the Parts of an human Fabric, and consequently the Causes of Diseases incident thereto, could no way be discovered. And yet this Art, useful as it is, was entirely discontinued for several Ages; till in the XVth Century it began to flourish afresh.—The Dissection of an human Body was look'd upon as Sacrilege before that time; and we have seen a Consultation which the Emperor *Cleopius V.* appointed to be held by the Divines of *Salamanca*, in order to be satisfied, whether or no it were lawful, in point of Conscience, to dissect a dead Carcase.—We may add, that to this Day the use of *Anatomy* and *Skeletons*, is forbid in *Muscovy*; the first as inhuman, the latter as subservient to Witchcraft: And *Olearius* assures us, that one *Quirinus*, a German Chirurgoon, being found with a Skeleton, hardly escap'd with Life; and the Skeleton, after being solemnly dragg'd about the Streets, was burnt. *Boyle's Usefulness of Philos.*

Vesalins, a *Flemish* Physician, who died in 1564, was the first who let *Anatomy* on any tolerable footing. He was followed by *Carpus*, *Sylvius*, *Fernelius*, *Fallopins*, *Eustachius*, *Fabricius*, *Pareus*, *Banovius*, *Hoffman*, *Riolanus*, &c.

They were succeeded by others, to whom some of the finest Discoveries in *Anatomy* are owing.—*Weslius*, in the Year 1624, discovered the *Lactical* Veins; and in 1628, the immortal *Harvey* publish'd his admirable Discovery of the Circulation of the Blood. See LACTEAL, and CIRCULATION.—*Pequet* discovered the Reservoir of the Chyle, and the Thoracic Duct, in 1651. See RECTIFICATION OF CHYLE, and THORACICK DUCT.—*Rudbeck*, a *Swede*, and *Barboline*, a *Dane*, found out the Lymphatick Vessel, in 1650, and 1651. See LYMPHATICK.—*Wharton*, in 1655,

discovered the lower Salival Ducts; and *Sinus* the upper Salival Ducts, those of the Palate, the Nourish, and Eyes, in 1664. See SALIVAL.—*Wirsingius*, in 1642, discover'd the PANCREATIC Ducts. See PANCREATIC.—*Willis*, who came after him, publish'd an *Anatomy* of the Brain, and Nerves, in a manner much more exact than had been done before him; yet he had omitted some considerable Things, which were afterwards observ'd by *Viesseus*. See NERVE.—In effect, *Gliſſon* treated particularly of the Liver; *Wharton* of the Glands; *Havers* of the Bones; *Graaf* of the Pancreatic Juice, and the Parts of Generation; *Lower* of the Motion of the Heart; *Boerhaave*, of Respiration; *Peyer*, of the Glands of the Intestines; *Brown*, of the Muscles; *Drelincourt*, of the Conception of the Ova in Women, the Placenta, and the Membranes of the Fœtus. See LIVER, GLAND, BONE, GENERATION, RESPIRATION, FŒTUS, &c.

Malpighi, who died in 1694, is one of those to whom *Anatomy* owes the most: He made a great Number of Discoveries in the Lungs, Brain, Liver, Splicen, Glands, and Lymphatics, by help of the Microscope, &c. Nor must it be omitted that *Ruyſch*, still living, has let great Light into many of the finer and more intricate Parts of the human Frame, particularly the Glands; by means of his Injections. See MICROSCOPE, and INJECTION.

Mauget, and *Le Clerc*, two Physicians of Geneva, have given us a *Bibliotheca Anatomica*; containing all the new Discoveries that have been made in this Art.

The best Systems of the Art, as it now stands, are those of *Verheyen*, *Drake*, *Keil*, &c.

ANATOMY of Plants. See PLANT.—See also ROOT, BRANCH, BARK, PITH, WOOD, LEAF, FLOWER, SEED, &c.—See also VEGETATION, &c.

The Word comes from the Greek ἀνάτομη, Section, or Cutting; of ἀνάτομη, dissecto.

ANATRON, or NATRON, a kind of native Salt-petre, or Nitre, found in Egypt. See NATRON, and NITRE.

ANATRON, is also a volatile Salt, skimm'd from the Composition of Glass, when in fusion. See GLASS.

When powdered, it yields a kind of Powder; which being diffus'd in the Air, or in a proper Liquor, becomes common Salt, after Coagulation.

Anatron is likewise the Name of a nitrous Juice, which condenses in Vauls, Arches, and other subterraneous Places. See STALACTITES.

ANATRON is also used by some Writers for a compound Salt, made of Quicklime, Alam, Vitriol, common Salt, and Nitre. See SALT.

ANBURY, a kind of Wen, or spongy Wart, growing upon any part of a Horse, or Cow, full of Blood.

ANCESTORS, Progenitors; or those from whom a Person is descended. See PROGENITOR.

The Word is deriv'd from the Latin *Ancestor*, wrote, by *Contractus*, for *Antecessor*, goet before.

The Law distinguishes between *Ancestor* and *Predecessor*; the former being applied to a Natural Person, as such an one, and his *Ancestor*; and the latter to a Body Politick or Corporate, as a Bishop, and his *Predecessors*.

ANCESTREL, in Law.—*Homage* ANCESTREL, signifies Homage that hath been done or performed by one's *Ancestors*. See HOMAGE.

Alien ANCESTREL. See ACTION.

ANCHOR, an Instrument used at Sea, and in Rivers; to retain and fasten a Vessel by. See SHIP.

An *Anchor* is a large strong piece of Iron, crooked at one End, and form'd into two Bars, resembling a Hook; fasten'd at the other end by a Cable. See CABLE, &c.

The Goodness of the *Anchor* is a Point of great Importance; and the Safety and Conservation of the Vessel depending principally thereon.—Great Care is to be taken, that the Metal it is made of, be neither too soft, nor too brittle; the latter rendering it liable to break, and the former to straiten. See IRON.

Travellers tell us of People in the *Indies* who make use of wooden *Anchors* in their Navigation.—The Inhabitants of the Island of *Ceylon*, in lieu of *Anchors*, use huge round Stones; and in some Places, the *Anchors* are a kind of Machines of Wood, loaden with Stones.

The Word comes from the Latin *Anchora*, of the Greek ἀγκυρα, which comes from ἀγκυρα, incurvus, crooked.

The Parts of an *Anchor*, are, 1^o, The Ring, into which the Cable is fasten'd; 2^o, The Beam, or Shank, which is the longest Part of the *Anchor*; 3^o, The Arm, which is that which runs down into the Ground; at the End of which is, 4^o, The Flanke, or Fluke, by some called the Palm; being that broad and pick'd Part with its Bars like an Arrow-head, which fastens into the Ground; 5^o, The Stock, a piece of Wood fasten'd unto the Beam, near the Ring, serving to guide the Fluke, so that it may fall right, and fix in the Ground.

There are three Kinds of *Anchors* commonly used: the *Kedger*, the *Grapple*, and the *Stream-anchor*: which see under their respective Articles.

Aubin, in his Dictionary of Sea-Affairs, printed at *Amsterdam* in 1702, observs, that the *Anchor* of a large heavy Vessel is smaller, in proportion, than that of a lesser and lighter one. The Reason he gives, is, that tho' the Sea employs an equal Force against a small Vessel as against a great one, supposing the Extent of Wood upon which the Water acts, to be equal, in both; yet the little Vessel, by reason of its superior Lightness, does not make so much resistance as the greater; the Defect whereof must be supplied by the Weight of the *Anchor*.

ANCHOR, in Architecture and Sculpture, an Ornament in form of an *Anchor*, or Arrow's-head; frequently carved on the Echinus, or Quarter-round, in the *Doric*, *Ionic*, *Corinthian*, &c. Capitals. See CAPITAL, &c.

The *Anchors* are usually intermix'd with Representations of the Echinus; which the Echinus it self is popularly called Eggs and *Anchors*. See ECHINUS, QUARTER-ROUND, &c.

ANCHORAGE, or ANCHORING, Ground fit to hold a Ship's *Anchor*, so that she may ride safely. See ANCHOR.

The best Ground for a Ship to anchor in, is stiff Clay or hard Sand; and the best riding at *Anchor*, is when a Ship is Land-locked, and out of the Tide.

ANCHORAGE, in Law, a Duty taken of Ships for the Pool of the Haven, where they cast *Anchor*. See DUTY.

No Man can let an *Anchor* fall on the King's Ground in any Port, without paying for it to the King's Officer appointed by Patent.

ANCHORED, in Heraldry.—A Cross-ANCHORED, or ANCHER, is a form of Cross so called, because the four Extremities resemble the Flouke of an *Anchor*. See CROSS.

This Cross is so like the Cross *Moline*, that the Resemblance has occasioned many Mistakes in Heraldry. See MOLINE.

ANCHORET, ANCHORITE, or ANACHORITE, a Hermit, or devout Person, living alone in some Desert; to be further out of the reach of the Temptations of the World, and more at leisure for Meditation. See HERMIT.

Such were *St. Anthony*, *St. Hilarion*, &c. *Paul* the Hermit was the first of the Tribe of *Anchorites*.—The Word comes from the Greek ἀγκυρα, I retire into a Bay-Place.

These People are very numerous among the *Greeks*; confining principally of Monks, who not caring for the Fatigues and Offices of the Monastery, purchase a little Spot of Ground, with a Cell, whither they retreat, and never appear in the Monastery again, excepting on solemn Days. See MONK.

These are also called *Ascetes* and *Solitaries*. See ASCETA, and SOLITARY.

The *Anchorites* of *Syria* and *Palestine* retire into the most obscure, and unfrequented Places; hiding themselves under Rocks, and Mountains, and living on the spontaneous Productions of the Earth.—The *Anchorites* in *America*, are look'd upon there, as by far the most perfect sort of Monks; and are held in much higher Opinion and Veneration than the *Cenobites*, or Monks residing in Monasteries. See CENOBITE.

Many of these retire, with the leave of their Abbots, and have an Allowance from the Monastery.—The People, in regard of their Piety, present them with good Sums of Money, which they carefully board up, and at their Death, bequeath it to the Monastery they had belong'd to.

ANCHOVY, in Matters of Commerce, &c. a little Sea Fish, much used by way of Sauce, or Seasoning.

Scaliger describes it as of the Herring-kind, about the Length of a Finger, having a pointed Snout, a wide Mouth, no Teeth, but Gums as rough as a Saw.—Others make it a sort of *Pichard*: But others, with better Reason, hold it a peculiar Species, very different from either. See FISH.

The *Anchovy* is caught in the Months of *May*, *June*, and *July*, on the Coasts of *Catalonia*, *Provence*, &c. at which Season, it constantly repairs up the Straits of *Gibraltar*, into the *Mediterranean*.

The Fishing is chiefly in the Night-time; when, a Light being put out on the Stern of their little Fishing-Vessels, the *Anchovies* flock round, and are caught in the Nets. See FISHING.

When the Fishery is over, they cut off the Heads, take out the Guts; then lay 'em in Barrels and salt 'em.—The common way of eating *Anchovies*, is as Salad, with Oil, Vinegar, &c. in order to which, they are first boned, and the Tails, Fins, &c. stipp'd off. They are made into Sauce by mincing, adding to 'em a Cutlet of Veal or Ham, with Pepper, &c. over the Fire.

The Word is derived from the Spanish *Anchora*, or rather from the Italian, *Anchois*.

ANCHYLOPS, in Medicine, a Species, or rather Degree of *Fibula Lachrymalis*; frequently confounded with *Agilops*, &c. See FISTULA, and AGILOS.

ANCIENT. See ANTIEN.

ANCO, or ANCON, the Tip of the Elbow; or the backward and larger Process of the Cubitus. See CUBITUS.

The *Ancon* is the same with what the *Greeks* call *Olecranon*. See *OLECRANUM*. And hence,

ANCONIUS *Musculus*, in Anatomy, the sixth Muscle of the Elbow; so called, as being situate behind the Fold of the Ancon or Elbow.

It arises from the back part of the Extremities of the *Humerus*, passes over the Elbow, and is inserted into the lateral and internal Part of the *Cubitus*; about three or four Fingers Breadth above the *Olecranon*.—Its use is to assist in extending the Arm.

ANCONES, in Architecture, are the Corners or Coins of Walls, Cross Besoms, or Rafter. See *COIN*, &c.

ANCONY, in the Iron Mines, a Bloom wrought into the Figure of a flat Iron Bar, about three Foot long, with two square rough Knobs, one at each End. See *IRON*, and *BLOOM*.

ANCREE, in Heraldry, the same with *anchored*. See *ANCHORED*.

ANCYLE, or *ANCIUS*, in Antiquity, a little Buckler, which fell, as 'tis said, from Heaven, upon *Numa Pompilius*; at the same time that a Voice was heard, which declared that *Rome* should be Mistress of the World, while she preserv'd that Buckler. See *BUCKLER*.

The *Ancyle* was, as it were, the *Palladium* of *Rome*. See *PALLADIUM*.

Different Authors give different Etymologies of this Word.—Some derive it from the *Greek* *ἀγκύλη*, crooked; *Varro* derives it *ab Ancisa*; as being cut or arch'd on the two Sides, like the Bucklers of the *Trojanians*, called *Petra*. *Plutarch* thinks the Word may be derived from the *Greek* *ἄγκυρα*, Elbow, this Weapon being wore on the Elbow: but the Opinion of *Varro* is the most probable.

Tho' there was but one *Ancyle* that fell from Heaven; yet were there twelve preserv'd; *Nam*, by the Advice, as 'tis said, of the Nymph *Egeria*, having ordered eleven others, perfectly like the first, to be made; that if any should attempt to steal it, as *Ulysses* did the *Palladium*, they might not be able to distinguish the true *Ancyle* from the false ones.

These *Ancylis* were preserv'd in the Temple of *Mars*; and were committed to the Care of twelve Priests or *Salii*, instituted for that purpose. See *SALII*.

They were carried every Year, in the Month of *March*, in procession around *Rome*; and the 30th Day of that Month, were again deposited in their Place.

ANCYLE, is also us'd in Anatomy, for the Contraction of the Ham.

ANCYLOGLOSSUS, *ἀγκυλογλωσσός*, one that is Tongue-ty'd, or has an Impediment in his Speech, arising from a Contraction of the *Frenum* of the Tongue. See *TONGUE*.

ANCYROIDES, is us'd by some Writers in Anatomy, for the Process or shooting forth of the Shoulder-bone, in form of a Beak. See *OMOPLATA*.

ANDABATÆ, in Antiquity, a kind of Gladiators, who fought hood-wink'd. See *GLADIATOR*.

They were called *Andabate*, *quasi andabam*, *uscensives*, because they fought on Horseback, or out of Chariots.

ANDREW.—*Knights* of *St. Andrew*, or of the *Tribute*. See *TRIBUTE*.

ANDREW'S Cross, is a Badge wore in the Hat, by the People of *Scotland*, on the Day of the Feast of that Saint.

It consists of blue and white Ribbands, dispos'd into a Cross, or Saltire; and is intended as a Commemoration of the Crucifixion of *St. Andrew*, the tutelary Saint of *Scotland*. See *CROSS*, and *SALTIRE*.

ANDROGYNE, or *ANDROGYNUS*, an *Hermaphrodite*; something born with two Sexes, being Male and Female in the same Person. See *HERMAPHRODITE*.

Many of the Rabbins are of opinion, that *Adam* was created *Androgyne*; that he was Male on one Side, and Female on the other; and that he had even two Bodies, the one of a Man, and the other of a Woman: so that God, to create *Eve*, only separated those two from each other. See *SEX*.

Plato tells us, that in the Beginning People were born double, and with both Sexes; but that this Duplicity of Members, giving them too much Strength and Vigour, they became insolent, and even declared War against the Gods.—Upon which, *Jupiter*, to tame their Pride, split each of them into two; but so as that each Moiety still retain'd a strong Passion to be re-united: and hence that Philosopher derives the natural Love between the two Sexes.

The Astrologers also give the Appellation *Androgyne* to such of the Planets as are sometimes hot, and sometimes cold; as *Mercury*, which is repared hot and dry when near the Sun, and cold and moist when near the Moon.

The Word comes from the *Greek* *ἀνδρῶν*, Male and *θηλέων*.

ANDROIDES, an Automaton, in figure of a Man; which by virtue of certain Springs, &c. duly contriv'd, Walks, Speaks, &c. See *AVOMATON*.

Albertus Magnus, is recorded as having made an *Androides*.—The Word is compounded of the *Greek* *άνδρῶν*, *άνδρῶν*, Man, and *είδος*, form.

ANDROLEPSY, *Ἀνδρὸλεψία*, in Antiquity.—If an *Athenian* were kill'd by a Citizen of some other Place; and such City refused to deliver up the Criminal to Punishment; it was held lawful to take three Inhabitants of such City, and punish the Homicide in them.—This the *Greeks* called *Androlepsia*, and the Romans *Clarigatio*. See *CLARIGATIO*. Some Authors also use *Androlepsia* for *Reprisals*. See *REPRISAL*.

The Word is form'd of *άνδρῶν*, Man, and *λήψαι*, capio, I take.

ANDROMACHI *Tberiacæ*, or *Treacle* of *ANDROMACHUS*, in Pharmacy, is a capital Alexipharmic Composition; called also *Venice Treacle*. See *THERIACA*, and *ALEXIPHARMIC*.

ANDROTOMY, *ANDRATOMY*, the Anatomy or Dissection of human Bodies. See *DISSECTION*.

It is thus called in opposition to *Zootomy*, which denoteth that of Brutes. See *ZOOTOMY*.

Anatomy is the Genus, and comprehends all Dissections in general, whether of Men, Beasts, or Plants; and *Androtomy* and *Zootomy* are the Species. See *ANATOMY*.

ANÉCOTOTES, *Ἀνεκδοτὰ*, a Term used by some Authors, for the Titles of *Secret Histories*; that is of such as relate the secret Affairs and Transactions of Princes; speaking with too much Freedom, or too much Sincerity, of the Manner and Conduct of Persons in Authority, to allow of being made publick.

Hercin they imitate *Procopius*, who gives this Title to a Book which he publish'd against *Justinian* and his Wife *Theodora*; and seems to be the only Person among the Antients, who has represent'd Princes, such as they are in their domestick Relation.—*Varillas* has published *Anecdotes* of the House of *Medici*.

The Title *Anecdotes* is also given to such Works of the Antients as have not yet been published.—In this Sense, *M. Muratori* gives the Name *Anecdota Græca*, to several Writings of the *Greek* Fathers, found in the Libraries, and first publish'd by him.—*F. Martene* has given a *Thesaurus Sacdotiarum Novus*, in Folio, 5 Vol.

The Word is *Greek* *ἀνεκδοτῶν*, q. d. *Things not yet known, or hitherto kept secret*.

ANEMIUS Furnus, among Chymists, a *Wind-Furnace*; us'd to make fiercer Fires for melting, &c. See *FURNACE*.

The Word is form'd of the *Greek* *ἄνεμος*, Wind.

ANEMONE, *ANEMON*, or *Wind-Flower*; a general Name, under which *Hesychius* comprizes all Flowers that are of a short Duration, and that are easily beaten down, ruffled, and destroy'd by the Wind. See *FLOWER*.

The Word is derived from *ἄνεμος*, *Ventus*; in regard of the Effects which the Wind has on such Flowers.—*Pliny* rather derives it hence, that the *Anemone* never opens but when the Wind blows. Others say, it was thus called from a Nymph of that Name.

ANEMOSCOPE, a Machine invented to foretel the Changes of the Wind. See *WIND*.

It has been observ'd, that *Hygoscopes* made of Cats-gut, &c. prove very good *Anemoscopes*; seldom failing, by the turning of the Index about, to foretel the shifting of the Wind. See *HYGOSCOPE*.

The *Anemoscope* us'd by the Antients, seems, by *Vitruvius's* Description of it, to have been intended rather to shew which way the Wind actually blew, than to foretel into which Quarter it would change.

The Word is deriv'd from the *Greek* *ἄνεμος*, Wind, and *σκοπεῖν*, to look. See *ANEMOMETER*.

Otto de Gueric also gave the Title *Anemoscope*, to a Machine invented by him, to foretel the Change of the Weather, as to fair and rain. See *WEATHER*.

It consisted of a little wooden Man, who rose and fell in a Glass Tube, as the Atmosphere was more or less heavy.—Accordingly, *M. Camiers* has shewn, that this *Anemoscope* was only an Application of the common Barometer. See *BAROMETER*.

ANEMOMETER, a Machine wherewith to measure the Strength of the Wind. See *WIND*.

The *Anemometer* is variously contriv'd. In the *Philosophical Transactions*, we have one describ'd, wherein the Wind being suppos'd to blow directly against a flat Side, or Board which moves along the graduat'd Limb of a Quadrant; the Number of Degrees it advances, shews the comparative Force of the Wind.—*Wolffius* gives the Structure of another, which is mov'd by means of Sails, like those of a Wind-Mill; which raise a Weight, that, fill the higher it goes, receding further from the Centre of Motion, by sliding along an hollow Arm fitted on to the Axis of the Sails, becomes heavier and heavier, and presses more and more on the Arm, till being a Counterpoise to the Force of the Wind on the Sails, it stops the Motion thereof. An Index, then, fitted upon the same Axis at right Angles with the Arm, by its rising or falling points out the Strength of the Wind, on a Plane divid'd, like a Dial-plate, into Degrees. See its Figure, Plate *PNEUMATICS*.

The Word is compounded of the *Greek* *ἄνεμος*, Wind, and *μετρεῖν*, Measure.

ANEURISM, *ANEURISMA*, in Medicine, a soft yielding Tumor, form'd of Blood extravasated and spread under the Flesh, by the Rupture or Dilatation of an Artery. See **ARTERY**, and **TUMOR**.

Aneurisms usually proceed from an Artery being accidentally cut, or prick'd in bleeding; or from some preternatural Dilatation, or a Corrosion of its Coats, &c. See **PHLEBOTOMY**.

If an Artery happen to be cut, the Blood gushes out impetuously, by Stars; and is not easily stop'd; an Inflammation and Discoloration of the Part succeeds, with a Tumor, and Inability to move the Part. The Symptoms are nearly the same in case of a Corrosion of the Coats of the Artery, only less violent. See **WOUND**.

If the Blood cease to flow from the wounded Artery, and pour it self between the Intertices of the Muscles; recourse is had to manual Operation; which being neglected, the Expiration of the Limb frequently becomes unavoidable.—An *Aneurism* from a Dilatation of the Canal, is seldom fatal; tho' reckon'd, when large, incurable: The chief Inconveniencies are the Magnitude of the Tumor, and the Pulsation. See **HEMORRHAGE**.

M. Littré gives us the History of an *Aneurism* of this kind, in the *Aorta*; the Cause whereof he attributes to an extraordinary Diminution of the Cavity of the Axillary and Subclavian Arteries. *Illust. de l'Acad. R. An. 1712*.—Another History of an *Aneurism* of the same Part, we have in the *Philosophical Transactions*. It was occasioned by some violent Shocks the Patient receiv'd on the Breast, which threw him into spitting of Blood, and soon after form'd the Tumor, whereof he dy'd. Upon Dissection, the *Aneurism* was found to be, that it filled the whole Cavity of the Thorax on the right Side. N° 265.

The Word comes from the Greek *ἀνεῦρον*, dilate, I dilate. **ANGARIA**, a Term in Law, signifying any troublesome, or vexatious Duty or Service, paid by the Tenant to the Lord.—The Word is form'd of the French *Angarie*, Personal Service; that which a Man is bound to perform in his own Person.—*Præstationes Angariorum & Perangariorum planiflorum & navium*, Impressing of Ships. See **SERVICE**, &c.

ANGIEOGRAPHY, a Description of the Weights, Measures, Vessels, &c. used by the several Nations. See **MEASURE**, **WEIGHT**, **VESSEL**, &c.

The Word is compounded of *ἀγγίον*, Vessel, and *γράφω*, scribo, I describe.

ANGIOLOGY, **ANGIOLOGIA**, in Anatomy, the History, or Description of the Vessels in a human Body; e. g. the Nerves, Arteries, Veins, and Lymphatics. See **VESSEL**.

Angiology is a Branch of **SARCOLOGY**. See **SARCOLOGY**.

The Word seems to be derived from *ἀγγίον*, a Vessel, and *λόγος*, Speech, or Discourse.

ANGEL, a spiritual, intelligent Substance; the first in Rank and Dignity among created Beings. See **SPIRIT**.

The Word *Angel*, is not properly a Denomination of Nature, but of Office; denoting as much as *Nuntius*, Messenger, a Person employ'd to carry one's Orders, or declare his Will.—Thus it is St. Paul represents *Angels*, *Heb. I. 14*. where he calls them Ministering Spirits; And for the same Reason the Name is given, in the Prophet *Malachi*, C. II. 7, to Priests; and by St. *Matthew*, C. XI. 10, to St. *John Baptist*. Jesus Christ himself, according to the Septuagint, is call'd in *Isaiah*, C. IX. 6, the *Angel* of the mighty Council; a Name, says *Tertullian*, in *Cæsus Christi*, C. IV. which speaks his Office, not his Nature.—So the Hebrew Word used in Scripture for *Angel*, is also a Name of Office, and not of Nature *לֵוִיִּם* *Legatus*, q. d. Legate, Envoy, Minister; and yet Custom has prevailed; inasmuch that *Angel* is now commonly taken for a Denomination of Nature.

The Existence of *Angels* is supposed in all Religions.—Indeed, the ancient *Sadducees* are represented as denying all Spirits; and yet the *Samaritans* and *Caraites*, who are reputed *Sadducees*, openly avow it: witness *Abnail*, the Author of an *Arabic* Version of the Pentateuch; and *Aaron*, a *Caraitic Jew*, in his Comment on the Pentateuch; both extant in Manuscript, in the King of France's Library. See **SADDUCEE**, **CARAITES**, &c.

In the *Alcoran*, we find frequent mention of *Angels*.—The *Muslimans* believe 'em of different Orders or Degrees, and destin'd for different Employments, both in Heaven, and on Earth. They attribute exceeding great Power to the *Angel Gabriel*; as, to be able to descend in the Space of an Hour from Heaven to Earth; to overturn a Mountain with a single Feather of his Wing, &c. The *Angel Michael*, they suppose, appointed to take the Souls of such as die; and another *Angel*, named *Israffil*, stands with the Trumpet ready in his Mouth to proclaim the Day of Judgment. See **ALCORAN**, **MAHOMETANISM**, &c.

The Heathen Philosophers and Poets, were also agreed as to the Existence of intelligent Beings, superior to Man; as is shewn by St. *Cyrian*, in his Treatise of the Vanity of Idols, from the Testimonies of *Plato*, *Socrates*, *Trismegistus*, &c. See **PLATONISM**, &c.—See also **DEMON**, **GENIUS**, &c.

Some Christian Writers, since *Lactantius*, Institut. Lib. I. c. xv. alledge the *Evangelium*, and the Operations of Magic, as convincing Proofs thereof. St. *Thomas* produces other Considerations, in behalf of the Opinion, Lib. II. *contra gentes*, c. xvi.

Authors are not so unanimous about the Nature as the Existence of *Angels*.—*Clement Alexandrianus* believ'd them had Bodies; which was also the Opinion of *Origen*, *Cesarinus*, *Tertullian*, and several others. *Albanus*, St. *Basil*, St. *Gregory Nicæen*, St. *Cyril*, St. *Chrysostom*, &c. hold 'em mere Spirits.

Ecclesiastical Writers make an Hierarchy of nine Orders of *Angels*. See **HIERARCHY**.

ANGEL is more particularly understood of a Spirit of the ninth and lowest Class, or Order of the Hierarchy, or Heavenly Choir. See **HIERARCHY**.

The Scripture makes mention of the Devil and his *Angels*.—We also say, the Fallen *Angels*, Guardian *Angels*, &c. See **GUARDIAN**, **DEMON**, **GENIUS**, &c.

In the Apoclyptic, the Denomination *Angel* is also given to the Pastors of several Churches.—The *Angel* of the Church of *Ephesus*; the *Angel* of the Church of *Smyrna*, &c. *Du Cange* adds, that the same Name was antiently given to certain Popes and Bishops; by reason of their singular Sanctity, &c.

ANGEL is also used in Commerce, for an antient Gold Coin struck in England; so call'd from the Figure of an *Angel* impress'd upon it. See **COIN**.

Its Value in 1 *Hen. VI.* was 6s. 8d. in 1 *Hen. VIII.* 7s. 6d. in 34 *Hen. VIII.* 8s. and in 6 *Edw. VI.* it was 10s.—And the half *Angel*, or, as it was sometimes call'd, the *Angelot*, was the Moiety of this.

The *Angel* now subsists no otherwise than as a Money of Account. See **MONEY**.

The French have also had their *Angels*, *Demi-Angels*, and *Angelots*; now disused.

ANGELIC, or **ANGELICAL**, something belonging to, or that partakes of, the Nature of *Angels*. See **ANGEL**.

Thus, we say, an *Angelical* Life, &c.—St. *Thomas* is styled the *Angelical Doctor*.—The *Angelical* Salutation is call'd by the *Romanists* *Ave Maria*. See **Ave**.

The *Greeks* distinguish two Kinds of Monks: Those who profess the most perfect Rule of Life, are call'd *Monks of the Great* or *Angelical Habit*.

ANGELICA, call'd also **ARCHANGELICA**, and *Radix Siniace*, a medicinal Plant, thus nam'd, on account of its great Virtue as an *Alexipharmic* or Counterpoison. See **ALEXIPHARMIC**.

It is of a sweet Smell, and aromatick Taste; and is load'd with a highly exalted Oil, and volatile Salt.—It is reputed cordial, stomachick, cephalick, aperitive, sudorifick, vulnerary, resists Poison, &c. tho' the chief Intention wherein it is now prescribed among us, is, as a Carminative.

Its Root is in the most esteem; tho' the Leaves are also used.

ANGELICA-WATER, is one of the compound Waters of the Shops; thus call'd from the *Angelica* Roots, which are the Basis thereof. See *ANGELICA-WATER*.

ANGELICA, *Αἰθώρα*, was also a celebrated Dance, among the antient *Greeks*, perform'd at their Feasts. See **DANCE**.

It was thus call'd, from the Greek *ἀγγέλος*, *Nuntius*, Messenger; by reason, as *Polixæ* assures us, the Dancers were dress'd in the Habit of Messengers.

ANGELICA VESTIS, among our Antecessors, was a Monkish Garment, which Laymen put on a little before their Death, that they might have the Benefit of the Prayers of the Monks.

It was from them call'd *Angelical*, because they were call'd *Angeli*, who by these Prayers *animæ saluti succurrebant*.—Hence, when we read the Phrase *ad succurrendum* in our old Books, it must be understood of one who had put on the Habit, and was at the Point of Death.

ANGELICI, were an antient Order of Knights, instituted in 1191, by *Isacius Angelus Flavianus Comnenus*, Emperor of *Constantinople*. See **KNIGHT**, and **ORDER**.

They were divid'd into three Classes; but were all under the Direction of one Grand Master.—The first, were call'd *Torquati*, from a Collar which they wore, and were 50 in number.—The second were call'd the *Knights of Justice*, and were Ecclesiasticks.—And the third were call'd *Knights Servitors*.

Justiniani will have this Order to have been instituted in the Year 513, by *Constantine*; and supposes the Occasion thereof to have been the Appearance of an *Angel* to that Emperor, with the Sign of a Cross and these Words, *In hoc signo vinces*: But, that there was such a thing as any Military Order in those Days, is a mere Fable. See **MILITARY ORDER**.

ANGELICI were also a Sect of antient Hereticks.—St. *Augustin* supposes 'em thus call'd from their yielding an extravagant Worship to *Angels*, and such as tended to Idolatry: To *Euphrosinus* derives the Name from their holding that the World was created by *Angels*.

ANGERONALIA, in Antiquity, solemn Feasts, held by the Romans, on the 21st of December, in honour of *Angerona*, or *Angerona*, the Goddess of Patience and Silence. See FEAST.

Angina and *Julius Modestus*, quoted by *Macrobius*, *Satur.* l. 1. c. 10. derive the Name from *Angina*, Squinancy; and suppose the Goddess to have been thus denominated, by reason she presided over that Disease.—Others suppose it form'd from *Angor*, Grief, Pain; to intimate that she gave Relief to those afflicted therewith. Others deduce it from *Ango* I press, I close; as being reputed the Goddess of Silence, &c. See GUD and GONDESS.

ANGINA, in Medicine, a Disease, popularly call'd the *Quincy*, *Squinancy*, or *Espinancy*. See SQUINANCY. *Angina* is a Difficulty of Respiration and Deglutition, from a Disease in the Muscles and Glands about the Throat and Larynx. See LARYNX, &c.

The Word is form'd from the Greek *αἰσιν*, strangulate to strangle, suffocate.

If any Symptoms appear on the outside of the Throat, the *Angina* is said to be *external*; if none appear, *internal*.—It is sometimes supposed to be *epidemic*.

In the *external Angina*, before any Suppuration appears, recourse is had to repeated Venesection in the Jugulars.—Vesicatories, and Cupping are also used; with Purgatives, emollient Gargles, &c.

ANGLE, ANGVUS, in Geometry, the Aperture or mutual Inclination of two Lines, which meet, and form an Angle in their Point of Interfection. See LINE.

Such is the Angle ABC, (Tab. GEOMETRY, Fig. 91.) form'd by the Lines AB, and AC, meeting in the Point A.—The Lines AB and AC, are call'd the *Legs of the Angle*; and the Point of Interfection, the *Vertex*. See LEO and VERTEX.

Angles are sometimes denoted by a single Letter affix'd to the Vertex, or angular Point, as A; and sometimes by three Letters, that of the Vertex being in the middle, as BAC.

The *Measure of an Angle*, whereby its Quantity is expressed, is an Arch, DE, described from its Vertex A, with any Radius at pleasure, between its Legs, AC and BC. See ARCH.

Hence Angles are distinguished by the Ratio of the Arches which they thus subtend, to the Circumference of the whole Circle. See CIRCLE and CIRCUMFERENCE.—And thus, an Angle is said to be of so many Degrees, as are the Degrees of the Arch DE. See DEGREE.

Hence also, since similar Arches, AB and DE, fig. 87. have the same Ratio to their respective Circumferences; and the Circumferences contain each the same Number of Degrees; the Arches AB, and DE, which are the Measures of the two Angles ACB, and ADE, are equal; and therefore the Angles themselves are so too.—Hence, again, as the Quantity of an Angle is estimated by the Ratio of the Arch, subtended by it, to the Periphery; it does not matter what Radius that Arch is described withal: But the Measures of equal Angles are always either equal Arches or similar ones; and contrarily.

It follows, therefore, that the Quantity of the Angle remains still the same, tho' the Legs be either produced or diminished.—And thus similar Angles, and in similar Figures, the Homologous or Corresponding Angles are also equal. See SIMILAR, FIGURE, &c.

To measure, or find the Quantity of an ANGLE.

1°. On Paper—Apply the Centre of a Protractor to the Vertex of the Angle O; (Tab. SURVEYING, fig. 29.) so as the Radius Op lie on one of the Legs: The Degree shewn in the Arch, by the other Leg of the Angle, will give the Angle required. See PROTRACTOR.—To do the same with a Line of Chords, see CHORD.

2°. On the Ground—Place a surveying Instrument, *E. gr.* a Semi-circle, fig. 16. in such manner as that a Radius thereof CG may lie over one Leg of the Angle, and the Center C over the Vertex.—The first is obtain'd by looking thro' the Sights F and G, towards a Mark fixed at the End of the Leg; and the latter, by letting fall a Plummet from the Centre of the Instrument.—Then, the moveable Index HI being turn'd this way and that, till thro' its Sights, you discover a Mark placed at the extreme of the other Leg of the Angle: The Degree it cuts in the Limb of the Instrument, shews the Quantity of the Angle. See SEMI-CIRCLE.

To take an Angle with a *Quadrant*, *Theodolite*, *plain Table*, *Circumferentor*, *Compass*, &c. see QUADRANT, THEODOLITE, PLAIN TABLE, CIRCUMFERENTOR, COMPASS, &c.

To plot or lay down any given Angle; i. e. the Quantity of the Angle being given, to describe it on Paper, see PLOTTING and PROTRACTING.

To bisect a given Angle, as HIK, fig. 92. from the Centre L, with any Radius at pleasure, describe an Arch

L.M. From L and M, with an Aperture greater than L.M, strike two Arches, mutually intersecting each other in N. Then, drawing the right Line LN, we have HN = NIK.

To trisect an Angle, see TRISECTION.

ANGLES are of various Kinds, and Denominations.—With regard to the Form of their Legs, they are divided into *Rectilinear*, *Curvilinear*, and *Mix'd*.

Rectilinear, or *right-lined ANGLE*, is that whose Legs are both right Lines; as ABC (Tab. GEOMETRY, fig. 91.) See RECTILINEAR.

Curvilinear ANGLE, is that whose Legs are both of 'em Curves. See CURVE and CURVILINEAR.

Mix'd, or *Mixtilinear ANGLE*, is that, one of whose Sides is a right Line, and the other a Curve. See MIX'D.

With regard to their Quantity, Angles are again divided into *Right*, *Acute*, *Obtuse*, and *Oblique*.

Right ANGLE, is that form'd by a Line falling perpendicularly on another; or that which subtends an Arch of 90 Degrees.—Such is the Angle KLM, Fig. 95. See PERPENDICULAR, &c.

The Measure of a right ANGLE, therefore, is a Quadrant of a Circle; and consequently all right Angles are equal to each other. See QUADRANT.

Acute ANGLE is that which is less than a right Angle, or than 90°—as AEC, fig. 86. See ACUTE.

Obtuse ANGLE, is that greater than a right Angle, or whose Measure exceeds 90°—as AED, fig. 86. See OBTUSE.

Oblique ANGLE, is a common Name both for Acute and Obtuse Angles. See OBLIQUE.

With regard to their Situation in respect of each other, ANGLES are divided into *Contiguous*, *Adjacent*, *Vertical*, *Alternate*, and *Opposite*.

Contiguous ANGLES, are such as have the same Vertex, and one Leg common to both—Such are FGH, and HGI, fig. 92. See CONTIGUOUS.

Adjacent ANGLE, is that made by producing one of the Legs of another Angle—Such is the Angle AEC, fig. 86. made by producing a Leg ED, of the Angle AED, to C. See ADJACENT.

Two adjacent Angles, *x* and *y*; or any other Number of Angles made on the same Point E, over the same right Line CD, are together equal to two right ones; and consequently, to 180°.—And hence, one of two contiguous Angles being given, the other is likewise given: as being the Complement of the former to 180°. See COMPLEMENT.

Hence, also, to measure an inaccessible Angle in the Field; taking an adjacent accessible Angle, and subtracting the Quantity thereof from 180°, the Remainder is the Angle required.

Again, all the Angles *x, y, z, E*, &c. made a-round a given Point E, are equal to four right ones; and therefore all make 360°.

Vertical ANGLES, are those whose Legs are Continuities of each other—Such are the Angles *o* and *x*, fig. 86. See VERTICAL.

If a right Line AB, cut another, CD, in E, the vertical Angles *x* and *o*, as also *y*, and E, are equal.—And hence, if it be required to measure in a Field, or any other Place, an inaccessible Angle, *x*; and the other vertical Angle, *o*, be accessible: This latter may be taken in lieu of the former. See SURVEYING.

Alternate ANGLES, See ALTERNATE.—Such are the Angles *x* and *y* fig. 56.

The alternate Angles *y* and *x*, are equal. See OPPOSITE Angles.

Opposite ANGLES, See OPPOSITE.—Such are *u* and *y*, and also *z* and *y*.

External ANGLES, are the Angles of any right-lined Figure made without it, by producing all the Sides severally.

All the external Angles of any Figure taken together, are equal to four right Angles: And the external Angle of a Triangle is equal to both the internal and opposite ones, as is demonstrated by *Euclid*, Lib. 1. Prop. 32.

Internal ANGLES, are the Angles made by the Sides of any right-lined Figure within.

The Sum of all the internal Angles of any right-lined Figure, is equal to twice as many right Angles as the Figure hath Sides, excepting four. This is easily demonstrated from *Euclid*, Prop. 2. Lib. 2.

The external Angle is demonstrated to be equal to the internal opposite one; and the two internal opposite ones, are equal to two right ones.

Homologous ANGLES, are such Angles in two Figures, as retain the same Order from the first, in both Figures. See FIGURE.

ANGLE at the Periphery, is an Angle whose Vertex and Legs do all terminate in the Periphery of a Circle—Such is the Angle EFC, fig. 95. See PERIPHERY.

Angle in the SEGMENT, is the same with that at the Periphery. See SEGMENT.

It is demonstrated by *Euclid*, that all the *Angles* in the same Segment are equal to one another; that is, any Angle EHG, is equal to any Angle EFG in the same Segment EFG.

The *Angle* at the Periphery, or in the Segment, is comprehended between two Chords AB and BD, and stands on the Arch AB. See CHORD, &c.

The Measure of an *Angle* without the Periphery G, (fig. 96.) is the Difference between half the Concave Arch LM, whereon it stands, and half the Convex Arch, NO, intercepted between its Legs.

ANGLE in a *Semi-circle*, is an *Angle* in a Segment of a Circle, whose Base is a Diameter thereof. See SEGMENT.

It is demonstrated by *Euclid*, that the *Angle* in a Semi-circle is a right one; in a Segment greater than a Semi-circle, is less than a right one; and in a Segment less than a Semi-circle, greater than a right one.

Since an *Angle* in a Semi-circle stands on a Semi-circle, its Measure is a Quadrant of a Circle; and therefore is a right *Angle*.

ANGLE at the Centre, is an *Angle* whose Vertex is in the Centre of a Circle, and its Legs terminated in the Periphery thereof.—Such is the *Angle* CAB. See CENTRE.

The *Angle* at the Centre is comprehended between two Radii, and its Measure is the Arch BC. See RADIUS, &c.

Euclid demonstrates that the *Angle* at the Centre, BAC, is double of the *Angle* BDC, standing on the same Arch BC.—And hence, half of the Arch AD, is the Measure of the *Angle* at the Periphery.

Hence also, two or more *Angles* HLI, and HMI (fig. 97.) standing on the same Arch HI, or on equal Arches, are equal.

ANGLE without the Centre, HIK, is that whose Vertex K is not in the Centre, but its Legs HK and IK are terminated in the Periphery.

The Measure of an *Angle* without the Centre, is half of the Arches HI and LM, whereon it and its Vertical K do stand.

ANGLE of Contact, is that made by the Arch of a Circle and a Tangent in the Point of Contact.—Such is the *Angle* HLM, (fig. 43.) See CONTACT.

The *Angle* of Contact, in a Circle, is proved by *Euclid* to be less than any right-lined *Angle*: But from hence it does not follow, that the *Angle* of Contact is of no Quantity, as some have imagined.—Sir Isaac Newton shows, that if the Curve HAE, fig. 97. be a cubic Parabola, the *Angle* of Contact, where the Ordinate DF is in the subtriple Ratio of the Abscissa AD, the *Angle* BAF contained under the Tangent AB in its Vertex, and the Curve, is infinitely greater than the circular *Angle* of Contact BAC; and that if other Parabola's of higher kinds be described to the same Axis and Vertex, whose Abscissas AD are as the Ordinates DF², DF³, DF⁴, &c. you will have a Series of *Angles* of Contact going on infinitely, of which any one is infinitely greater than that next before it.

ANGLE of a Segment, is that made by a Chord with a Tangent, in the Point of Contact.—Such is the *Angle* MLH. See SEGMENT.

It is demonstrated by *Euclid*, that the *Angle* MLC, is equal to any *Angle* MAL in the alternate Segment MAL.

For the *Effects*, *Properties*, *Relations*, &c. of *Angles*, when combined into *Triangles*, *Quadrangles*, and *polygonous Figures*, see TRIANGLE, QUADRANGLE, SQUARE, PARALLELOGRAM, POLYGON, FIGURE, &c.

ANGLES are again divided into *Plane*, *Spherical*, and *Solid*.

Plane ANGLES are those we have hitherto been speaking of; which are defined by the Inclination of two Lines in a Plane, meeting in a Point. See PLANE.

Spherical ANGLE is the Inclination of the Planes of two great Circles of the Sphere. See CIRCLE and SPHERE.

The Measure of a Spherical *Angle*, is the Arch of a great Circle at right *Angles* to the Planes of the great Circles forming the *Angle*, intercepted between them.

For the *Properties* of *Spherical Angles*, see SPHERICAL *Angle*.

Solid ANGLE is the mutual Inclination of more than two Planes, or plane *Angles*, meeting in a Point, and not contain'd in the same Plane.

For the *Measures*, *Properties*, &c. of *solid Angles*, see SOLID *Angle*.

We also meet with other less usual sorts of *Angles* among some Geometricians; as,

Horned ANGLE, *Angulus Cornutus*, that made by a right Line, whether a Tangent or Secant, with the Periphery of a Circle.—

Lunular ANGLE, *Angulus Lunularis*, is that form'd by the Intersection of two Curve Lines; the one Concave, and the other Convex. See LUNE.

Cuspid ANGLE, *Angulus Cuspidatus*, is the inner *Angle*, made by two Spherical Convex Lines intersecting each other. See CUSPID.

Sifroid ANGLE, *Angulus Sifroides*, is that in Figure of a Sistrum. See SISTRUM.

Peleoid ANGLE, *Angulus Peleoides*, is that in figure of a Hatchet. See PELEOIDES.

ANGLE, in Trigonometry. See TRIANGLE and TRIGONOMETRY.

For the *Sines*, *Tangents*, and *Secants* of ANGLES, see SINE, TANGENT, and SECANT.

ANGLE, in Mechanics.—ANGLE of Direction, is that comprehended between the Lines of Direction of two conspiring Forces. See DIRECTION.

ANGLE of Elevation, is that comprehended between the Line of Direction of a Projectile, and a horizontal Line.—Such is the *Angle* ARB, (Tab. MECHANICS, fig. 47.) comprehended between the Line of Direction of the Projectile AR, and the horizontal Line AB. See ELEVATION and PROJECTILE.

ANGLE of Incidence, is that made by the Line of Direction of an impinging Body, in the Point of Contact.—Such is the *Angle* DCA, (fig. 63.) See INCIDENCE.

ANGLE of Reflexion, is that made by the Line of Direction of the reflected Body, in the Point of Contact from which it rebounds.—Such is the *Angle* ECF. See REFLEXION.

ANGLE, in Optics.—Visual or Optic ANGLE, is the *Angle* included between two Rays drawn from the two extreme points of an Object, to the Centre of the Pupil.—Such is the *Angle* ABC, (Tab. OPTICS, fig. 69.) comprehended between the Rays AB, and BC. See VISUAL *Angle*.

Objects seen under the same, or an equal *Angle*, appear equal. See MAGNITUDE and VISION.

ANGLE of Interval, of two places, is the *Angle* subtended by two Lines directed from the Eye to those places.

ANGLE of Incidence, in Catoptrics, is the lesser *Angle* made by an incident Ray of Light, with the Plane of a Speculum; or, if the Speculum be concave or convex, with a Tangent in the point of Incidence.—Such is the *Angle* ABD (fig. 26.) See RAY and MIRROR.

Every incident Ray, AB, makes two *Angles*, the one acute, ABD, the other obtuse, ABE; the sometimes both right.—The lesser of such *Angles* is the *Angle* of Incidence. See INCIDENCE.

ANGLE of Incidence, in Dioptrics, is the *Angle* ABI, (fig. 26.) made by an incident Ray, AB, with a Lens or other refracting Surface, HI. See LENS, &c.

ANGLE of Inclination, is the *Angle* ABD, contained between an incident Ray, AB, and the Axis of Incidence, DB. See AXIS, &c.

ANGLE of Reflexion, } in Catoptrics. See REFLECTED ANGLE, } TION.

ANGLE of Refraction, } in Dioptrics. See REFRACTED ANGLE, } TION.

ANGLE, in Astronomy.—ANGLE of Commutation. See COMMUTATION.

ANGLE of Elongation, or, ANGLE at the Earth. See ELONGATION.

Parallactic ANGLE. See PARALLACTIC *Angle*.

ANGLE at the Sun, or the Inclination, is the *Angle* RSP, (Tab. ASTRONOMY, fig. 25.) under which the Distance of a Planet P, from the Ecliptic PR, is seen from the Sun. See INCLINATION.

ANGLE of the East. See NONAGESIMAL.

ANGLE of Obliquity, of the Ecliptic. See OBLIQUITY and ECLIPTIC.

The *Angle* of Inclination of the Axis of the Earth, to the Axis of the Ecliptic, is 23°, 30'; and remains invariably the same in all points of the Earth's annual Orbit. By means of this Inclination, such Inhabitants of the Earth as live beyond 45° of Latitude, have more of the Sun's Heat, taking all the Year round; and those who live within 45°, have less of his Heat, than if the Earth always moved in the Equinoctial. See HEAT, &c.

ANGLE of Longitude, is the *Angle* which the Circle of a Star's Longitude makes with the Meridian, at the Pole of the Ecliptic. See LONGITUDE.

ANGLE of right Ascension, is the *Angle* which the Circle of a Star's right Ascension makes with the Meridian at the Pole of the World. See RIGHT Ascension.

ANGLE, in Navigation.—ANGLE of the Rhumb, or LOXODROMIC ANGLE. See RHUMB and LOXODROMY.

ANGLES, in Fortification, are understood of those formed by the several Lines used in Fortifying. See FORTIFICATION, FORTIFYING, &c.

ANGLE of, or at the Centre, is the *Angle* formed at the Center of the Polygon, by two Semi-diameters drawn thither from the two nearest Extremities of the Polygon. See POLYGON.—Such is the *Angle* CKF (Tab. FORTIFICATION, fig. 1.)

ANGLE of the Circumference, is the mixed *Angle* made by the Arch drawn from one Gorge to the other. See GORGE.

ANGLE of the Counterfarp, is that made by the two Sides of the Counterfarp, meeting before the middle of the Curtain. See COUNTERFARP.

ANGLE of the Curtain, or of the Flank, is that made by, or contain'd between, the Curtain and the Flank; such is the *Angle* BAE. See CURTAIN.

ANGLE of the Complement of the Line of Defence, is the *Angle* arising from the Interfection of the two Complements one with another. See COMPLEMENT.

Diminished ANGLE, is the *Angle* which is made by the meeting of the exterior Side of the Polygon, with the Face of the Bastion—Such is the *Angle* BCF.

ANGLE of the Polygon, or of the exterior Figure, is the *Angle* PCN, formed at the Point of the Bastion C, by the meeting of the two outermost Sides or Bases of the Polygon, PC and CN.

ANGLE of the Epaule, or Shoulder, is that form'd by the Flank and the Face of the Bastion—Such is the *Angle* ABC. See EPAULE.

ANGLE of the Interior Figure, is the *Angle* GHM, made in H, the Center of the Bastion, by the meeting of the innermost Sides of the Figure GH and HM.

Flanking ANGLE outwards, or ANGLE of the Tenaille, is that made by the two distant Lines of Defence, i. e. the two Faces of the Bastion when prolonged. See TENAILLE.

ANGLE flanking inward, is the *Angle* GIH, made by the flanking Line with the Curtain.

ANGLE flanked, by some call'd the *ANGLE of the Bastion*, BC, CS; being the outermost part of the Bastion, and that most expos'd to the Enemy's Batteries, and therefore by some call'd the *Point of the Bastion*. See BASTION.

ANGLE of the Triangle, in Fortification, is half the *Angle* of the Polygon.

ANGLE forming the Flank, is that consisting of one Flank, and one Demi-gorge.

ANGLE forming the Face, is that composed of one Flank and one Face.

ANGLE of the Moat, is that made before the Curtain, where it is intersected. See MOAT.

Re-entering, or Re-entrant ANGLE, is that whose Vertex is turn'd inwards, towards the Place. See RE-ENTRANT.

Saillant ANGLE, is that which advances its Point towards the Field. See SAILLANT.

ANGLE of the Tenaille, or the outward flanking Angle, called also the *Angle of the Moat, or the dead Angle*, is made by the two Lines ficient in the Faces of the two Bastions, extended till they meet in an *Angle* towards the Curtain—This always carries its Point in towards the Work.

ANGLE of a Wall, in Architecture, is the Point, or Corner, where the two Sides or Faces of a Wall meet. See WALL, CORNER, &c.

ANGLES of a Battalion, in the Military Art, are the Soldiers where the Ranks and Files terminate. See BATTALION.

The *Angles* of a Battalion are said to be *blunted*, when the Soldiers at the four Corners are removed, so that the square Battalion becomes octagonal: which was an Evolution very common among the Antients, the now disused. See EVOLUTION.

ANGLES, in Anatomy, are understood of the *Cantbi*, or Corners of the Eye, where the upper Eye-lid meets with the under. See EYE and EYE-LID.

That next the Nose is call'd the *great or internal*, and that towards the Temples, the *left or external Angle* or *Cantbi*. See CANTBI.

ANGLES, in Astrology, are certain Houses of a Figure or Scheme of the Heavens—Thus the Horoscope of the first House is termed the *Angle of the East*. See HOUSE, HOROSCOPE, &c.

ANGLICISM, a Distinction in the *English* Idiom; or a Manner of Speech peculiar to the *English* Tongue. See IDIOM and ENGLISH.

ANGLING, the Art of catching Fish by means of a Rod, with Line, Hook and Bait fixed thereto. See FISH and FISHING.

There are several prudential Rules observed by thorough Anglers; as, not to wear any white or shining Apparel, but be clothed in a dark sky-Colour: To invite the Fish to the place intended for *Angling*, by casting in from time to time proper Foods, as boil'd Coen, Worms, and Garbage: To keep them together in the time of *Angling*, by throwing in Grains of ground Malt; or sinking a Box of Worms, with small holes for them to creep slowly out at, &c. To draw Salmon or Trout together, they use a Composition of fine Clay incorporated with Blood, and Malt ground.

To learn what Bait is best for any Fish at any time; after having caught one, they slit his Gills, and take out the Stomach; and thus find what he last fed on.

The several Methods of *Angling* for Salmon, Trout, Carp, Tench, Perch, Pike, Dace, Gudgeon, Roach, Flounder, &c. See the Articles SALMON-FISHING, TROUT-FISHING, &c.

For the Rules of *Angling* with the Fly, see FLY-FISHING.

ANGLING-Rod. See FISHING-Rod.

In *Angling*, they observe, after having struck a large Fish, to keep the Rod bent; which will hinder him from running to the utmost Length of the Rod-Line, by which he would be enabled to break his Hold or Hook.

ANGLING Line is either made of Hair, twisted; or Silk; or the *Indian Grass*—The best Colours are the Sorrel, White and Grey; the two last for clear Waters, the first for muddy ones. Nor is the pale water Green despicable: this Colour is given artificially, by steeping the Hair in a Liquor made of Alum, Soot, and the Juice of Walnut-Leaves boil'd together.

ANGLING Hook. See FISHING-Hook.

ANGLING Fly. See FISHING Fly.

ANGLO Saxon. See ENGLISH.

ANGUINEAL Hyperbola. See HYPERBOLA and CURVE.

ANGULAR, something that relates to, or hath, *Angles*. See ANGLE.

Angular Objects at a distance appear round; the little Inequalities disappearing at a much less distance than the Bulk of the Body. See VISION.

ANGULAR Motion, is a compound kind of Motion, where-in the Moveable both slides and revolves at the same time. See MOTION, SLIDING, &c.

Such is the Motion of the Wheel of a Coach, or other Vehicle. See WHEEL.

The Phenomena, &c. of such Motion, see accounted for under the Article ROTA *Aristotelica*.

ANGULAR Motion, in Astronomy, is the Increase of the Distance between any two Planets, revolving round any Body as the common Center of their Motion. See PLANET, CENTER, &c.

The Quantity of this Motion is expressed by two right Lines drawn from the said Center, to the revolving Bodies; which will open wider, and consequently grow greater, as the revolving Bodies part farther and farther from one another.

ANGUSTICLAVIA, or ANGUSTICLAVUS, in Antiquity, a Roman Tunica, embroider'd with little purple Studs. See TUNICA.

The *Angusticlavus* was wore by the Knight. See KNIGHT.

The Word is compounded of *angustus*, narrow, small; and *Clavus*, Nail or Stud: in regard those Ornaments were smaller in this Garment than in the *Laticlavus* wore by the Senators. See LATICLAVUS. See also SENATOR, &c.

ANHELITUS signifies a shortness and thickness of Breath; as in an Asthma. See RESPIRATION and ASTHMA.

The Word is *Latin*, form'd of the Verb *anhelo*, I puff and blow.

ANIL, in Natural History, the Plant from which Indigo is procured. See INDIGO.

ANIMA, a Soul, or either Rational, Sensitive, or Vegetative. See SOUL, RATIONAL, SENSITIVE, and VEGETATIVE.

The Word is pure *Latin*, form'd of the Greek *aneme*, Ventus, Wind, Breath. See SPIRIT.

ANIMA Mundi, q. d. *Soul of the World, or of the Universe*, is a certain pure, ethereal Substance or Spirit, diffused, according to many of the ancient Philosophers, thro the Mass of the World, informing, actuating, and uniting the divers parts thereof into one great, perfect, organical, vital Body or Animal. See WORLD, UNIVERSE, ANIMAL, &c.

Plato treats at large of the $\psi\upsilon\chi\eta\ \tau\omicron\ \kappa\omicron\sigma\mu\mu$, in his *Ti-mæus*; and is even supposed to be the Author of the Dogma: Yet are Interpreters much at a loss about his Meaning. *Aristotle*, however, taking it in the common and obvious sense, strenuously opposes it. See PLATONISM, &c.

Servetus, on *Plato's Timæus*, explains this Decline thus: 'Our Philosopher will have the Universe *Constitutus* of $\psi\upsilon\chi\eta\ \tau\omicron\ \kappa\omicron\sigma\mu\mu$, consisting of Body and Spirit; the Spirit he makes to be that Analogy, or Symmetry, whereby things of different Nature, are amicably associated in the grand Compages of all things. In which sense the *Anima Mundi* signifies as much as the Form of the Universe.' See HARMONY.

Others will have the *Anima Mundi* to signify I know not what ignific Virtue, or vivific Heat, infused into the Chaos, and diffused thro its whole Frame; for the Conservation, Nutrition, and Vivification thereof. See HEAT, &c. Hence

Hence that of the Poet,

I, mens est Ollis Vigor & Caleſtis Origo—

Others ſuppoſe *Plato*, by his *Anima Mundi*, to have meant God, or the Spirit of God; and to have taken the Hint from *Moses*, who in his Account of the firſt Day's Creation, ſays, *The Spirit of God moved on the Face of the Deep*. See GOD, AUVS, &c.

The modern *Platonists* explain their Maſter's *Anima Mundi* by a certain univerſal, ethereal Spirit, which in the Heavens exiſts perfectly pure, as retaining its proper Nature; but on Earth, pervading elementary Bodies, and inſtimately mixing with all the minute Atoms thereof, acquires ſome what of their Nature; and becomes of a peculiar Kind—So the Poet:

*Spiritus intus alit, totumque inſuſa per orbem
Mens agit molem, & magno ſe corpore miſcet.*

They add, that this *Anima Mundi*, which more immediately reſides in the Celeſtial Regions as its proper Seat, moves and governs the Heavens in ſuch manner, as that the Heavens themſelves firſt received their Exiſtence from the Fecundity of the ſame Spirit: For that this *Anima*, being the primary Source of Life, every where breathed a Spirit like itſelf, by virtue whereof various kinds of things were framed conformable to the Divine Ideas. See IDEA, PLATONIST, &c.

The Notion of an *Anima Mundi* is rejected by moſt of the modern Philoſophers; tho' *M. du Hamel* thinks, without any great reaſon; for the generality of them admit ſome thing very much like it—The *Peripatetics* have recourſe to celeſtial Influences, in order to account for the Origin of Forms, and the ſecret Powers of Bodies. See FORM, PERIPATETIC, &c.

The *Carteſians* have their ſubtile Matter, which anſwers to moſt of the Uſes, and Intentions of *Plato's Anima Mundi*; being ſuppoſed to flow from the Sun and the other heavenly Bodies, and to be diſſuſed thro' all the Parts of the World, to be the Source or Principle of all Motions, &c. See SUBTILE MATTER, CARTESIAN, &c.

Some later Philoſophers ſubſtitute Fire; and others a ſubtile elatic Spirit or Medium diſſuſed thro' all the Parts of Space. See FIRE, SUBTILE MEDIUM, &c. NEWTONIAN, &c.

The principal thing objected, on the Chriſtian Scheme, againſt *Plato's* Doctrine of the *Anima Mundi*, is, that it mingles the Deity too much with the Creatures; confounds, in ſome meaſure, the Workman with his Work, making this, as it were, a part of that, the ſeveral Portions of the Univerſe fo many parts of the Godhead—Yet is the ſame Principle aſſerted by *Seneca*, *Epiſt. 92. Totum hoc quo conſtituitur, & unum eſt, & Deus. Et ſocii ejus ſuntus & membra—*

ANIMA Hepatis, q. d. the Soul of the Liver; a Term applied by the Chymiſts, to the *Sul Martis*, Salt of Iron or Steel; on account of its Uſe in Diſtempers of that Part. See IRON, MARS, STEEL, SALT, LIVER, &c.

It is ſometimes alſo preſcribed under the Name of *Vitriolus Martis*. See VITRIOL.

ANIMA Articulorum is a Denomination ſometimes given to *Hermodyctylis*; on account of their Efficacy in Diſorders of the Joints. See HERMODYCTYL.

ANIMA Pulmonum, is uſed for Crocus, or Saſſon; by reaſon of its great Uſe in Diſeaſes of the Lungs. See SAFFRON and LUNGS.

ANIMA, or *Gum ANIMÆ*, in Pharmacy, a kind of Gum or Resin; whereof there are two kinds, *Western* and *Eastern*—The firſt flows from an Inciſion of a Tree in *New Spain*, called *Courbaſi*; it is tranſparent, and of a Colour like that of Frankincenſe: its Smell is very agreeable, and it eaſily conſumes in the Fire. See GUM, &c.

The *Eastern Gum Anima* is diſtinguiſhed into three Kinds: the firſt white; the ſecond blackiſh, in ſome reſpects like Myrrh; the third pale, reſinous, and dry.

All the ſeveral Kinds of *Anima* are uſed in Perfumes; by reaſon of their charming Smell; they are alſo applied externally in cold Diſorders of the Head and Nerves, in Pulſes and Catarrhs; but are little known among us; inſomuch that our Apothecaries uſually ſell Bellium for Gum *Anime*. See BELLIIUM.

ANIMADVERSION, ſometimes ſignifies Correction; ſometimes Remarks, or Obſervations made on a Book, &c. and ſometimes, a ſerious Conſideration and Reflection on any Subject, by way of Criticiſm.

The Word is formed of the *Latin animadvertere*, to animadvert: of *animus*, the Mind; and *adverto*, I turn to, or toward.

ANIMAL, a Being, which, beſides the Power of growing, increaſing, and producing its like, which Vegetables likewiſe have, is further endowed with Senſation, and

ſpontaneous Motion. See BEING, SENSATION, and MOTION.

The Word *Animal* is derived from the *Latin Anima*, Soul; and literally denotes ſome thing endued with a Soul. See ANIMA and SOUL.

An *Animal*, reſpect being only had to the Body, not the Soul, may be deſcri'd with *Boerhaave* to be an organical Body, conſiſting of Veſſels and Juices; and taking in the Matter of its Nourishment, by a Part called a Mouth; whence it is conveyed into another called the Inteſtines, into which it has Roots implanted, whereby it draws in its Nourishment, after the manner of Plants. See MOUTH.

According to this Definition, an *Animal* is diſtinguiſhed from a Foſſil, in that it is an organical Body; and from a Vegetable by this, that it has its Roots within itſelf, and a Plant without itſelf. See FOSSIL and VEGETABLE.

In effect, the Inteſtines of an *Animal* are, in reality, no more than its Earth, or the Body it adheres to; inſo much which it ſends forth its Roots; that is, the laſt Veſſels, which theſe draw the Matter of its Life and Increaſe. See INTESTINES.

An *Animal* is better deſcri'd from its Mouth than its Heart; ſince we don't know whether the whole *Tribus* have ſuch a Part; for as ſeveral have 16 Hearts, particularly the Silk-Worm; and ſome even 60; ſo 'tis poſſible others may have none at all. See HEART.

Nor can any general Character of an *Animal* be taken from the Brain, the Lungs, or the like; ſince we know of many quite deſtitute thereof. See BRAIN, LUNGS, &c.

The genuine Characteriſtic, then, of an *Animal*, is to be free and at large with reſpect to the Subject it derives its Nourishment from: for every thing is taken in by the Mouth; and the Mouth does not adhere to any thing: Whereas all Plants are conſected, in ſome manner or other, to the Body which furniſhes them Food.

Hence it follows, that a *Fœtus*, while it remains in the Mother's Womb, is a real Plant; as being conſected by the *Funiculus umbilicalis* to the Placenta, and by the *Plicera* to the Uterus, from whence it receives its Nourishment—If it did not derive its Food by the ſaid *Funiculus*, but by its Mouth, it were an *Animal*; and if it drew it by both, a Neophyte, or Plant-Animal. See FŒTUS, NEOPHYTE, &c.

Some have deſcri'd *Animals* from their Loco Motion, as being capable of ſhifting from place to place, and Plants from their ſticking faſt to the ſame Subject; but on this Principle, Oysters, Muſſels, Cockles, &c. are excluded from the Clafs of *Animals*, in as much, as they adhere, or grow to Rocks, &c. yet 'tis certain, that theſe Creatures are real *Animals*, as they have Mouths and Stomachs to take in their Food, and Lactals and Meſenteric Veins to receive it—Indeed, Muſſels ſeem an Exception from the former Definition. That Anomalous Creature breathes, and receives its Nourishment, not at the Mouth, but by the *Anal*: The Part which we account its Head, tho' without either Eyes, Ears, or Tongue, or any other Apparatus, ſave a Hole, which we may call its Mouth, is an immovable Part; being faſtened to one of the Shells, ſo, that it cannot ſeek for Food, but the Food muſt come to ſeck it. This Food is Water, which, as the Shells open, enters in at the *Anus* of the Muſſel, which opens at the ſame time; and paſſing thence into certain Canals between the inner Surface of the Shell, and the outer Surface of the *Animal*, is conveyed thence into its Mouth, by a certain Motion, which the *Animal* can produce at pleaſure.

We chuſe therefore with *Dr. Puffon*, to fix the Criterion of an *Animal* in a *Ductus Alimentalis*, i. e. a Gula, Stomach, and Inteſtines; all which make but one continued Canal. See DUCTUS ALIMENTALIS.

All *Animals*, according to the moſt probable and received Opinion, come from Eggs, and are there incloſed, as it were in Epitome, till the Seed of the Male penetrate their Covering, and ſtrech them, ſo as they become ready for hatching. See EGG, GENERATION, &c.

There enters into their Veſſels a chylous Juice; which being puſh'd forwards by the Spirits, circulates thro' the whole Habit of the little Body, nourishes and dilates it by little and little, and thus produces what we call Growth. See CHYLE, CHYLIFICATION, and NUTRITION.

This Circulation repeated ſeveral times, refines and attenuates the Juices, till at length they became of a red Colour, and are converted into what we call Blood—This natural Operation bears a great reſemblance to ſeveral chymical Operations, by which, in attenuating and diſſolving oily or fulphureous Subſtances, they aſſume a red Colour. See CIRCULATION, BLOOD, and SANGUIFICATION.

The Philoſophers comprehend Man under the Species of *Animals*; and deſine him, a reaſonable *Animal*: tho' among Naturaliſts, &c. *Animals* are uſually reſtrain'd to Irrationals.

St. *Augustin* relates, that a great many Crapulous persons in his Time, extended that Prohibition of the Law, *Thou shalt not kill*, to all *Animals*: They grounded their Opinion on some Passages of Scripture wherein God speaks of *Animals* as if they had some Principle of Reason; declaring that he will require the Blood of Man at the hand of Beasts, Gen. c. 9. Adding, in the same place, that he makes a Covenant not only with Man, but with every living Creature.—See CARNIVOROUS.

ANIMALS are ordinarily divided into *terrestrial, aquatic, volatile, amphibious, Insects*, &c.

Terrestrial Animals, are either *Quadrupeds* or *Reptiles*.—*Quadrupeds* have either the Feet cloven, as the Bullock; or entire, as the Horse; or divided into several Toes or Claws, as the Dog, Lion, &c. See *QUADRUPED*, *INSECT*.

The other Divisions will be found under the words *FISH*, *BIRD*, *REPTILE*, &c.

But, for a complete and general Account of the various kinds of *Animals*, we shall here subjoin Mr. *Ray's* General Scheme.

Animals are either,

Sanguineous, that is, such as have Blood, which breathe either by

Lungs, having either

Two Ventricles in their Heart, and those either

Viviparous.

 { Aquatick, as the Whale kind,

 { Terrestrial, as Quadrupeds.

 { Oviparous, as Birds.

But one Ventricle in the Heart, as Frogs, Tortoises,

and Serpents.

Gills, as all sanguineous Fishes, except the Whale-kind.

Exanguineous, or without Blood, which may be divided into

Greater; and those either

Naked.

 { Terrestrial, as naked Snails,

 { Aquatick, as the Poulp, Cuttle-fish, &c.

Covered with a Tegument, either

 { Crustaceous, as Lobsters and Crab-fish.

 { Testaceous, either

 { Univalve, as Limpets,

 { Bivalve, as Oysters, Muscles, Cockles, &c.

 { Turbinate, as Periwinkles, Snails, &c.

Lesser, as Insects of all Sorts.

Viviparous hairy Animals, or Quadrupeds, are either

Hoof'd, which are either

 { Whole-footed or hoof'd, as the Horse and Ass;

 { Claven-footed, having the Hoof divided into

 { Two principal Parts call'd Bifcala, either

 { Such as chew not the Cud, as Swine;

 { Ruminant, or such as chew the Cud, divided into

 { Such as have perpetual and hollow Horns:

 { Beef-kind,

 { Sheep-kind,

 { Goat-kind.

 { Such as have solid, branched, and deciduous Horns,

 { as the Deer kind.

 { Four Parts, or Quadrifcula, as the Rhinoceros and Hippopotamus.

Claw'd, or digitate, having the Foot divided into

 { Two Parts or Toes, having two Nails, as the Camel-kind.

 { Many Toes or Claws, either

 { Undivided, as the Elephant

 { Divided, which have either

 { Broad Nails and an humane Shape, as Apes.

 { Narrower and more pointed Nails, which in respect of their Teeth, are divided into such as have

 { Many Fore teeth or Cutters in each Jaw:

 { The greater, which have

 { A shorter Snout and rounder Head, as the Cat-kind.

 { A longer Snout and Head, as the Dog kind.

 { The lesser, the Vermin or Weasel kind.

 { Only two large and remarkable Fore teeth, all which are Phytivorous and are call'd the Hare-kind.

For particulars relating to *Animals*, their Number, Analogous Structure, Sogacity, Instinct, &c. See *ARB*, *HEAD*, *NECK*, *TAIL*, *FREY*, *STORAGE*, *INSTINCT*, &c.

ANIMALS consist of *Solids*, or firm parts, as Flesh, Bones, Membranes, &c. and *Fluids*, as Blood, &c.

The *Solids* are mere Earth, bound together by some Oily Humour; and accordingly are reducible by Fire into such Earth again. See *EARTH*, *FIRE*, *SOLID*, &c.

Thus a Bone being perfectly purg'd of all its Moisture, by Calcination, is found a mere Earth, which the least force

will crumble into Dust, for want of the natural Glutes: Yet the same Bone by immersing it in Water or Oil becomes firm and strong again; and more so in Oil than Water. And thus Cypells are made of Animal Earth, which will sustain the utmost Effort of Fire. See *CV* &c.

The *Fuid Parts* of *Animals* are the cruder as they are less distant from the Laticals, and absorbent Vessels.—Thus Chyle is little else but a vegetable Juice; but in its farther progress, gradually lays aside its vegetable Characters, till after a number of Circulations it becomes a perfect Animal Juice, under the denomination of *Blood*, from whence the other Humours are all derived. See *CYCLE*, *BLOOD*, *HUMOUR*, *SECRETION*, &c.

The parts of *Animals* are distinguished from those of Vegetables by two Circumstances: The first, that when burnt they are found perfectly insipid; all Animal Salts being volatile and flying off with heat; the contrary of which is found in Vegetables, which constantly retain some fixed Salt in all their Ashes. See *SALT*, *VOLATILE* and *FIXED*.

The second, that no sincere Acid is contained in any Animal Juice; nor can any Acid Salt be extracted from the same: The contrary of which is found in all Vegetables: See *ACID*.

Yet are *Animals* reconverted into their Vegetable Nature, by Putrefaction. See *PUTREFACTION*.

ANIMALS make the Subject of that Branch of Natural History call'd *Zoology*; see *ZOOLOGY*.

The Structure of *Animals*, with their Disorders, Remedies, &c. make the Subject of Anatomy, Medicine, &c. See *ANATOMY*, *MEDICINE*, &c.

ANIMALS make the principal matter of Heraldry; both as Bearings and as Supporters, &c. See *BEARING*, *SUPPORTER*, &c.

'Tis an establish'd Rule among the Heralds, that in Blazoning, *Animals* are always to be interpreted in the best Sense; that is, according to their most noble and generous Qualities, and so as may redound most to the Honour of the Bearers.

Thus the Fox, being reputed witty, and wishal given to fishing for his Prey; it is the charge of an Escutcheon, we are to conceive the Quality represented to be his Wit and Cunning, not his Theft.

Gullions adds, that all Savage Beasts are to be figured in their fiercest Action; as, a Lion crested, his Mouth wide open, his Claws extended, &c. Thus formed, he is said to be *Rampant*.—A Leopard, or Wolf is to be portray'd going, as it were, Pedestrim: which form of Action, Sir *John Chappman*, fits their natural Disposition, and is termed *Passant*.—The gentler kinds are to be set forth in their noblest and most advantageous Action; as, a Horse running or vaulting, a Grey-hound coursing, a Deer tripping, a Lamb going with smooth and easy pace, &c.

Every *Animal* is to be moving, or looking, to the right side of the Shield; and it is a general Rule, that the right Foot be placed foremost, because the right side is reckoned the beginning of Motion: add, that the upper part is nobler than the lower; so that things constrained either to look up or down, ought rather to be design'd looking upwards.—It must be noted, that notwithstanding these solemn Precepts of *Gullions*, and the other Masters of Armory; we find by Experience, that there are Lions *Passant*, Couchant, and Dormant, as well as *Rampant*, and that most *Animals* look down, and not up.

ANIMAL is also used Adjectively, to denote something that belongs or partakes of the Nature of an Animal Body, (see *BODY*).—Thus we say *Animal Food*, *Animal Economy*, &c. See *FOOD*, *ECONOMY*.

ANIMAL Actions are those peculiar to *Animals*; or which belong to *Animals*, as such. See *ANIMAL* and *ACTION*.

Such are *Sensation* and *Muscular Motion*. See *SENSATION*, &c.

ANIMAL Motion is the same with what we call *Muscular Motion*. See *MUSCULAR Motion*.

It is divided into two Branches; Natural or Involuntary, and Spontaneous. See *NATURAL* and *SPONTANEOUS*.

ANIMAL Faults, among Physicians, See *FUNCTION*. Moralists frequently oppose the *Animal* part, which is the sensible, fleshy part of Man; to the Rational part, which is the Understanding.

ANIMAL Secretion is the Act whereby the divers Juices of the Body are secreted or separated from the common Mass of Blood, by means of the Glands. See *SECRETION*, *BLOOD* and *GLAND*.

The Theory of Animal Secretion is one of the Improvements in Physic, for which we are indebted to Geometrical Reasoning.—The sum of what our late Writers on the Head have shewn, may be reduced to the following Heads.

(1.) Different Juices may be separated from the common Mass of Blood by means of the different Diameters of the

Orifices of the secretory Ducts. For all Particles, whose Diameters are less than those of the Ducts, will pass thro' them; so that any Matter may be evacuated by any of the Glands, provided the Diameters of its Particles be made less than those of the secretory Duct, either by a Commixture of the Matter to be separated, or by an Enlargement of the separating Passage.

(2.) By the different Angle which the secretory Duct makes with the Trunk of the Artery. For all Fluids press the Sides of the containing Vessels in a Direction perpendicular to its Sides; which is evident in the Pulsation of the Arteries, it being to that Pressure that the Pulsation is owing. It is likewise evident, that the Blood is urged forward by the Force of the Heart; so that the Motion of Secretion is compounded of both these Motions. Now the lateral Pressure is greater when the direct Velocity is so; but yet not in proportion to such Velocity: for the lateral Pressure is considerable, even when the Fluid is at rest; being then in proportion to the Specific Gravity of the Fluid: And in a Fluid like the Blood in the Arteries which is thrown in a right Direction, or a Direction parallel to the Axis of the Vessel, the lateral Pressure will be in a Proportion compounded of both: From whence it will follow, that if two Particles of equal Diameters, but of unequal Specific Gravities, arrive, with the same Velocity, at an Orifice capable of admitting them, yet they will not both enter it and pass, because their Motion of Direction will be different: So that the Diversity of the Angles which the Ducts make with the Trunk of the Artery, is altogether necessary to account for all the possible Diversities of Secreted Fluids, even supposing their Diameters and Figures to be the same.

(3.) By the different Velocities with which the Blood arrives at the Orifices of the secretory Ducts.—For since the Secretions are made in a fluid form; no possible Reason can be assign'd, why some Animals have a soft loose Texture of the solid Parts, and why one Part of the Body is of an easily separated Texture, and others of a firmer, but this different Velocity of the Blood at the Orifices of the secretory Ducts, whereby the Particles seem'd for Nourishment, and Accretion, are drove or impacted into the Vessels, that receive them with a greater or less Force; it being difficult to imagine that such a Diversity in Texture can altogether proceed from the different Solidities and Contacts of the constituent Parts. See further under the Article SECRETION.

ANIMAL SPIRITS, are a fine subtle Juice, or Humour in Animal Bodies; supposed to be the great Instrument of muscular Motion, Sensation, &c. See MUSCULAR MOTION, SENSATION, &c.

The Ancients distinguished Spirits into three Kinds, viz. Animal, Vital, and Vegetative: but the Moderns have reduced them to one sort, viz. Animal; about the Nature of which, and the Matter whence they are formed, great disputes have arisen among the Anatomists, tho' their very Existence has never been fairly proved.

As it is hard to define what could never yet be brought under the Judgment of our Senses, all that we shall here offer concerning them, is, that they must needs be extremely subtle Bodies, which escape all manner of Examination by the Senses, tho' ever so well assisted; and pervade the Tracts of the Nerves, which yet have no discoverable Cavities or Perforations; nor could ever by any Experiment be collected; yet are constantly moving in vast Quantities, as they must of necessity be, to perform all those mighty Operations which are ascribed to them.—However, the Antiquity of the Opinion claims some Reverence.

By the Help of these we are furnished with a vast Number of precocious Solutions of great Phenomena; and without them we must leave a great Chasm in the philosophical History of Animal Bodies.

They are supposed to be separated in the Brain, from the subtiler Parts of the Blood; and thence carried, by the Nerves, to all Parts of the Body, for the Performance of all animal and vital Functions. See BRAIN and NERVE. See also further under the Article SPIRIT.

ANIMALCULE, ANIMALCULUM, is a Diminutive of Animal; and expresses such a minute Creature as is scarce discernible by the naked Eye.

Such are those numerous Insects which crowd the Water in the Summer Months; changing it sometimes of a deep, or pale red, sometimes a yellow, &c. They seem to be of the Shrimp kind, call'd by *Susanerdam*, *Pulex Aquaticus arborescens*. The cause of their Concourse at this time, Mr. *Derham* observes to be to perform their Coit. He adds, that they afford a comfortable Food to many Water Animals.—The green Scum on the top of stagnant Waters is nothing else but prodigious Numbers of another smaller Order of Animalcules; which in all probability serve for Food to the *Pulex Aquaticus*.

The Microscope discovers Legions of Animalcules in moist Liquors, as Water, Wine, Brandy, Vinegar, Beer, Spirit,

Urine, Dew, &c. In the Philosoph. Transact. we have Observations of the Animalcules in Rain-Water, in several Chalybeate Waters, Infusions of Pepper, Bay-bonies, Oats, Barly, Wheat, &c. See MICROSCOPE.

The human Seed has been observed by divers Authors to contain huge Numbers of Animalcules; which gave occasion to the Syllem of Generation ab animalculis. See SEED and GENERATION.

ANIMATE, ANIMATED, something endowed with Life, or a living Soul. See LIFE and SOUL.

Thus, in Mechanics, *Animate Power* is us'd to denote a Man or Brute; in contradistinction to inanimate ones, as Springs, Weights, &c. See POWER, &c.

ANIMATED MERCURY, among Chymists, signifies Quicksilver impregnated with some subtle and spirituous Particles, so as to render it capable of growing hot when mingled with Gold. See MERCURY, AMALGAMA, &c.

ANIMATED NEEDLE, a Needle touch'd with a Load stone. See NEEDLE, MAGNET, &c.

ANIMATION, signifies the informing of an animal Body with a Soul.

Thus the Fetus in the Womb is said to come to its Animation, when it begins to act as a true Animal; or after the Female that bears it is quick, as the common way of Expression. See FORTES.

The common Opinion is, that this happens about 40 days after Conception. But *Jer. Florentinus*, in a Latin Treatise entitled, *Homo Dubius, seu de Baptismo Abortivorum*, shows this to be very precarious. See CONCEPTION, ABORTION, &c.

ANISALPTOR, in Anatomy, a Muscle, otherwise call'd *LATISSIMUS Dorsi*.

ANKER, a liquid Measure, chiefly us'd at *Amsterdam*, &c. See MEASURE.

The Anker is the 4th part of the Aem, and contains two Stelken: each Stelken consists of sixteen Mingles; the Mingle being equal to two Paris Pints. See PINT, &c.

ANKYLOSIS, a Disease in the Junctures of an human Body; where the nervous Liquor that shou'd lubricate the Bones, and make their Motions more easy, growing too thick, clog up, and as it were, cement the Bones within one another. See BONES, ARTICULATION, &c.

The Word is derived from the Greek *αγκυρωσις*, which comes from *αγκυρα*, a Harbours, or Callous in a Juncture.

ANNALS, ANNALES, an historical Account of the Affairs of a State, digested in order of Years; see YEAR.

The difference between Annals and History is variously assign'd by various Authors.—Some say that History is properly a Recital of Things which the Author has seen, or been a by-stander to. What they build upon, is, the Etymology of the Word; History in the Greek, signifying the Knowledge of Things present, and in *cæcili*, *ιστοριαν*, properly signifies to see. On the contrary, Annals, say they, relate to the Transactions of others, and such as the Writer never saw. See HISTORY.

Of this Opinion, the great *Annalist*, *Tacitus* himself, seems to have been; in regard, the first Part of his Work, which treats of former Times, he calls Annals; whereas when he comes down to his own Times, he changes his Title, and call'd it History.

Aulus Gellius is of a different Sentiment, and pretends that History and Annals only differ from one another as the Genus does from the Species; that History is the Genus, and implies a Narration or Recital of Things past; and that Annals are the Species, and are also a Recital of Things past; but with this difference, that these last are digested into certain Periods, or Years.

The same Author gives us another Opinion, which he says he borrows from *Simplicius Æliæ*: According to that Writer, Annals are a bare Relation of what passes each Year; whereas History relates not only the Transactions themselves, but also the Causes, Motives, and Springs thereof. The *Annalist* has nothing to do but to lay down his Facts, but the Historian reasons and descants on them.

Of this last Opinion seems *Cicero* to be, when speaking of *Annalists*, he says, *Usque deinde laudem putant esse brevitate, non Exornatores rerum, sed tantum Narratores*. He adds, that History, in its Original, was a Composition of Annals.

The same *Cicero* relates the Origin of Annals: To preserve the Memory of Transactions, the *Pontifex Maximus*, says he, wrote what pass'd each Year; and expost it on a Table, in his own House, where every one was at liberty to read them.—These they call'd *Annales Maximæ*; and the Custom was kept up till the Year of Rome 620. See FASTI.

Several other Writers, in imitation hereof, took to this simple, and naked Way of relating Facts; and were hence denominat'd *Annalists*—Such were *Cato*, *Pitætor*, *Puff*, *Antipater*, &c.

ANNATES, ANNATS, Annata, the same with *Primitivæ* or *First-fruits*; so call'd from the *Latin Annus* Year, because the Rate of First-fruits, paid for (spiritual) Livings, is after the Value of one Year's Purchase. See **PRIMITIVÆ** and **FIRST FRUITS**.

Annates were antiently a Right paid to the Pope, upon his granting a Full for a vacant Benefice, Abby, or Bishoprick; but since the Reformation they are paid in *England* to the King.—The first Pope that imposed them in *England*, seems to have been *Clement V.* who, according to *Matthew of Westminster*, exacted *Annates* of all the vacant Benefices in the Kingdom, for the space of two Years, or according to *Walshingham* for three Years. His Successor *John XXII.* introduced the like in *France*.

Yet *Polysdore Virgil*, and some others, take *Annates* to be of a much elder standing; and to have obtained long before they were paid to the Pope.—'Tis certain at least, that from the Twelfth Century, there were Bishops and Abbots, who by some peculiar Custom or Privilege, took *Annates* of the Benefices depending on their Diocese or Abbey.

Matthew Paris, in his History of *England*, for the Year 746, relates that the Archbishop of *Canterbury* in virtue of a Grant or Concession of the Pope, received *Annates* of all the Benefices that became vacant in *England*. But in after-times the Holy See thought fit to take 'em away from the Bishops and Archbishops, and appropriate 'em to themselves.

ANNEALING, or as it is popularly call'd *Nealing*. See **NEALING**.

One fine use of Silver, says *Mr. Boyle*, was only discovered since the Art of *annealing* upon Glass came to be practis'd.—For prepared Silver, or even the crude Metal being burnt on a Glass Plate, will tinge it of a fine yellow, or golden Colour. And there are several mineral Earths, and other coarse Matters, of use in this Art, which by means of Fire impart transparent Colours to Glass, and sometimes very different ones from those of the Bodies themselves. See **PAINTING ON GLASS**.

ANNEXATION, in Law, the uniting of Lands or Rents to the Crown. See **ANNEXED**.

ANNEXED, something join'd to, or dependant of, another.—Thus we say such a Farm, such an Advowson is *annex'd* to such a Fee, such a Manor, &c. *Charles VIII.* in the Year 1486, *annex'd* *Provence* to the Crown of *France*.

ANNIENTED, a Term sometimes used in Law Books, in the Sense of frustrated, or annull'd.

It is of *French* original; being form'd of the Verb *Annientir* to bring to nothing, annihilate.

ANNIHILATION, the Act of reducing a Substance into Nothing; or of totally destroying and taking away its Existence. See **SUBSTANCE** and **EXISTENCE**.

Annihilation stands oppos'd to *Creation*: The one supposes something made out of nothing, the other nothing made out of something. See **CREATION**.

All Annihilation must be Metaphysical or Supernatural. See **BODY**, **ALTERATION**, **CORRUPTION**, &c.

Bodies naturally admit of Changes and Alterations in their form; but not of *Annihilation*.

Philosophers object against this Notion of *Annihilation*; in that it supposes an Act required thereof: Whereas, according to them, *Annihilation* must ensue upon God's merely ceasing to act, or to create a thing. For, in the Conservation of a thing be a continued Creation thereof; as is almost universally allowed: 'Tis evident a thing can no longer endure, than while God continues to create.

The Word is compounded of *ad* to, and *nihi* nothing.

ANNI NUBILES, among Law- Writers, the legal Age, at which a Maid becomes fit for Marriage; which is at 12 Years. See **AGE**.

ANNIS SEED, or **ANISEED**, a medicinal Seed or Grain; produced by an Umbiliferous Plant of the same Name, common in our Gardens. See **SEED**.

It has a sweetish Taste, intermix'd with something pungent and bitter: Is reputed an Aromatic, and prescribed not barely as a Carminative against Wind; but also as a Pectoral, Stomachic and Digestive. See **CARMINATIVE**, &c.

It also yields by Distillation, a white cordial Oil call'd *Essence of Anis-seed*; of a very strong penetrating Smell, and efficacious in its medicinal Operation: It being also used by the Confectors to scent their Pomatums, &c.

In distilling the *Anis-seed* for the Oil; there is procur'd a limpid Water call'd *Anis-seed* Water; which has much the same Virtues with the Oil.

ANNIVERSARY, is properly the yearly Return of any remarkable Day; and was antiently call'd a *Year-day* or *Mind-day*, that is, a Memorial-day. See **ANNUAL DAY**, &c. On some extraordinary Occasions such Days have been register'd, and annually observed, in gratitude to Founders and Benefactors.—

The Word is form'd from *annus* and *verta*, in regard of its returning every Year.—In this Sense we say *An-*

niversary Days, *Anniversary* Feasts, *Anniversary* Prayers, &c.

ANNIVERSARY Days, Dies Anniversarii, among our Ancestors were those Days wherein the Martyrdoms of the Saints were yearly celebrated in the Church; as also Days wherein, at every Year's end, Men were wont to pray for the Souls of their deceas'd Friends.—*Anniversaria dies ideo repetitur defunctis, quoniam justissimus quatuor eorum causa beatur in alia vita.*—This was the Reason given by *Alicuinus* in his Divine Office, &c.

ANNOISANCE, or Nuisance, in Law, a Hurt or Offence, either to a publick place, as a High-way, Bridge, or common River; or to a private one, by laying any thing that may breed Infection; by encroaching, or the like means. See **NUISANCE**.

ANNOISANCE is also used for a Writ brought upon this Transgression. See **NUISANCE**.

ANNOTATION, a succinct Commentary, or Remark on any Book, or Writing; in order to clear up some Passage, or to draw some Inadition or Consequence from it. See **COMMENT**, &c.

The Critics of the last Age have made learned *Annotations* on the Scriptures, the Classics, &c.

The Word is form'd of the Latin *adnotatio*; of *ad* and *Nota*, Note.

ANNUAL, something which returns every Year, or closes at the end of the Year. See **YEAR**.

Thus we say an *Annual* or yearly Feast, Office, Commifion, Rent, &c. See **ANNUITY**.

The *Annual Motion* of the Earth see proved under the Article **EARTH**.

ANNUAL, is sometimes used for the yearly Rent, or Income of a Prebendary, &c. See **PREBEND**, &c.

ANNUAL Plants, call'd also simply *Annuals*, are such as only live their Year, i. e. come up in the Spring, and die again in Autumn: And accordingly are to be recruited every Year. See **PLANT**.

Annuals stand contradiistinguished from *Bisannuals*, *Triennials*, &c.

ANNUAL Leaves, are such Leaves as come up afresh in Spring, and perish in Winter. See **LEAF**.—These stand oppos'd to *Perennial*. See **PERENNIAL**.

ANNO DOMINI, a. d. in the Year of our Lord; the Computation of Time from the Epocha of the Incarnation of Jesus Christ. See **EPOCHA**, **COMPUTATION**, &c.

ANNUAL Equation, of the mean Motion of the Sun and Moon, and of the Moon's Apogee and Nodes. See **EQUATION**, **MOON**, &c.

The *annual Equation* of the mean Motion of the Sun depends on the Eccentricity of the Earth's Orbit; and is 16 $\frac{1}{2}$ of those Parts, whereof the mean Distance between the Sun and the Earth is 1000: whence by some, it is call'd the *Equation of the Center*, and when greatest, is 1 Degree 56', 20".

The greatest *annual Equation* of the Moon's mean Motion is 11', 40". of its Apogee 20', and of its Node 9', 30". See **NODE**, &c.

These four *annual Equations* see always proportionable; so that when any of them is at the greatest, the three others are also greatest; and *vice versa*.—Hence the *annual Equation* of the Center (of the Sun) being given, the other three corresponding Equations will be given; so that one Table (that is, of the central Equation) may serve for all.

ANNUALIA, yearly Oblations antiently made by the Relations of deceas'd Persons, on the Day of their Death. See **OBULATION**.

This Day they call'd *Year-day*, &c. and on it, Mass was celebrated with great solemnity. See **ANNUIVERSARY**.

ANNUENTES Musculi, in Anatomy, a Pair of transverse Muscles, at the Root of the *Vertebrae* of the Back; call'd also by *Mr. Cowper*, *Recti interni minores*, because they lie under the *Recti majores*. See **RECTI**.

They are call'd *Annuentes*, because they help to nod the Head directly forward. See **HEAD**, **MUSCLES**, &c.

ANNUITY, a yearly Rent or Revenue, paid for Term of Life or of Years, or in Fee and for ever. See **REVENUE**, **FEE**, &c.

In Common Law, the Difference between a Rent, and an *Annuity* consists in this, that Rent is payable out of Land; whereas an *Annuity* charges only the Person of the Grantor: and that for the Recovery of a Rent, an Action lies; whereas for that of an *Annuity*, there only lies a Writ of *Annuity* against the Grantor, his Heirs and Successors. See **RENT**, **WRET**, **ACTION**, &c.

Add, that *Annuities* are never taken for Assets; as being no Freeholds in Law. See **ASSETS**.

The Computation of the Value of *Annuities* belongs to Political Arithmetic. See **POLITICAL ARITHMETIC**.

Dr. Halley, in his Observations on the *Breslaw* Bills of Mortality, shews, That it is 80 to 1, a Person of 25 Years of Age does not die in a Year.—That it is 5 to 1, one of a Man of 40 lives 7 Years; and that one of 30 may reasonably

nably expect to live 27 or 28 Years. So great a difference is there between the Life of Man at different Ages; that it is 100 to 1. one of 20 lives out a Year; and but 38 to 1 that one of 50 doth so.

Whence, and from some other Observations, he constructed the following Table; shewing the Value of *Annuities* for every fifth Year of Life to the 70th.

Age.	Years Purchase.	Age.	Years Purchase.
1	10,28	40	10,57
5	13,40	45	9,91
10	13,44	50	9,21
15	13,33	55	8,51
20	12,78	60	7,60
25	12,27	65	6,54
30	11,72	70	5,52
35	11,12		

ANNULAR, ANNULARIS, something that relates to, or resembles, a Ring, by the *Latins* called *Annulus*. See **RING**.

ANNULAR Pratuberance, is a Process of the *Medulla Oblongata*; thus called by *Dr. Willis*, in regard it furrounds the same, much like a Ring. See **MEDULLA Oblongata**.

ANNULAR Cartilage, or **ANNULARIS**, is the second Cartilage of the *Larynx*; being round, and inclosing the whole *Larynx*; called also *Cricoides*. See **LARYNX** and **CRICOIDES**.

ANNULAR Ligament, Ligamentum Annulare, is a strong Ligament, encompassing the *Carpus* or *Wrist*; after the manner of a Bracelet. See **LIGAMENT**.

Its use is to connect or bind the two Bones of the Arm together; and also to restrain the Tendons of the several Muscles of the Hand and Fingers, and prevent their flying out of their places, when in Action. See **CARPUS**, **HAND**, **FINGER**, &c.

The Ligament of the *Tartus* is also denominated *Annular Ligament*. See **TARSA**.

Add, that the *Sphincter Muscles* of the *Anus* is also called *Annularis*, or *Annular Muscle*; from its Figure. See **SPHINCTER**.

ANNULAR is also an Epithet given the fourth Finger; popularly call'd the *Ring Finger*. See **FINGER**.

ANNULET, *q. d.* little Ring; in Heraldry, is a Difference or Mark of Distinction, which the fifth Brother of any Family ought to bear in his Coat of Arms. See **DIFFERENCE**.

Annulets are also part of the Coat-Armour of several Families: They were antiently reputed a Mark of Nobility, and Jurisdiction; it being the Custom of Prelates to receive their Investiture per *Baculum & Annulum*. See **BISHOP**, **INVESTITURE**, &c.

ANNULETS, in Architecture, are small square Members, in the Doric Capital; under the Quarter-round. See **DORIC** and **CAPITAL**.

They are also call'd *Fillets*, *Listels*, &c. See **FILLETS**, &c.

Annulet is also a narrow flat Moulding, common to other Parts of a Column, *viz.* the *Bases*, &c. as well as the Capital; so call'd, because it encompasses the Column round.—In this Sense *Annulet* is frequently used for a *Baguette* or little Astragal. See **BAGUETTE**, and **ASTRAGAL**.

ANNULLING, the abolishing of an Act, Procedure, Sentence, or the like. See **ABOLITION**.

The Word is compounded of *ad* and *nullus*, none; *q. d.* *non datur*.

ANNUNCIATE, ANNUNTIADA, or ANNUNTIATE, a Denomination common to several Orders, both Religious and Military; instituted with a View to the Annunciation. See **ORDER** and **ANNUNCIATION**.

The first Religious Order of this kind, was instituted in 1252, by seven *Flowerin* Merchants.—These are also call'd *Servites*, *q. d.* *Servants*. See **SERVITES**.

The second was a Nunnery at *Bourges*, founded by *Jean* Queen of *France*, after her Divorce from *Louis XII*.

The third, was also a Nunnery, founded by a *Genoese* Lady in 1600.—The fourth, a Priory, founded by Cardinal *Torrecremata*, at *Rome*; which last are grown so very rich, that they give Fortunes of sixty *Romane* Crowns to above 400 Girls, on the Anniversary of the Annunciation.

Knights of the ANNUNCIATE, was a military Order, instituted in 1350, by *Amadeus*, Duke of *Savoy*. See **KNIGHT**.

It was at first call'd the Order of the True Lovers Knots; in memory of a Bracelet of Hair presented to the Founder by a Lady; but upon the Election of *Amadeus VIII*. to the Pontificate, it changed its Name for that of the *Annunciata*.

ANNUNCIATION, the Tidings which the Angel *Gabriel* brought to the Holy Virgin, of the Mystery of the Incarnation. See **INCARNATION**.

ANNUNCIATION is also the Name of a Feast, celebrated annually on the 25th of *March*, popularly call'd *Lady-day*, in Commemoration of that wonderful Event. See **FEAST**.

This Feast appears to be of great Antiquity in the *Latin* Church. Among the Sermons of *St. Augustin*, who died in 430, we have two on the *Annunciation*, *viz.* the 17th and 18th de *Senctis*: And yet there are much earlier Testimonies of its use in the *Greek* Church. *Proclus*, who died in 446; *Chrysostom*, in 407; and even *Gregory Thaumaturgus*, in 295; have all of them Discourses on the *Annunciation*. *Rives*, *Perkins*, and some other Protestant Writers after 'em, have indeed question'd the Authentickness of the two Homilies of *Gregory Thaumaturgus*, on the *Annunciation*; but *Vossius* acknowledges 'em the genuine Productions of that Father.

Add, that some Authors are of opinion, that the Feast was originally solemnized in Honour of our Saviour; and that the holding it in the Name and Honour of the Virgin, is of a much later standing.

Several of the Eastern Churches celebrate the *Annunciation* at a different Season from those of the West.—The *Syrians* call it *Befcarach*, *q. d.* Search, Inquiry; and mark it in their Calendar for the first Day of *December*. The *Armenians* hold it on the 9th of *January*; thus anticipating the Time, to prevent its falling in *Leas*: But the *Greeks* make so scrupul of celebrating the Festival even in *Leas*. See **LEAS**.

The Word is compounded of the *Latin ad* and *annuntio*, I tell, I declare; of *Annuntius*, Messenger.—The *Greeks* call it *εὐαγγέλιον*, Good tidings; and *χαρην*, Salutation.

The *Jews* also give the Title *Annunciation* to part of the Ceremony of their Passover, *viz.* that wherein they explain the Origin, and Occasion of the Solemnity.—This Explanation they call *גזירות*, *Haggada*, *q. d.* *Annunciation*.

ANNULUS, a Ring. See **RING**.

ANODYNE, in Physick, is understood of such Remedies, as by their gentle Heat and temperate Moisture, calm and alluage Pain. See **PAIN**.

These are also call'd *Paregoricks*. See **PARAGORICKS**.

There are others, which bear the same Name, but improperly, *viz.* such as occasion a Stupor, Drowsiness, and Sleep, properly call'd *Narcoticks*, *Hypnoticks*, or *Opiates*. See **NARCOTICK**, **OPIATE**, &c.

The true *Anodynes* are applied externally, to the part affected.—Such among the Class of Simples are the *Opium*, *Lilly*, *Root of Mallows*, *Leaves of Violet*, *Elder*, &c.

The Word is derived from the privative Particle *a* and *anō*, *do*, to be in pain.

We have also certain compound Medicines in the Shops, prepared with this Intention; and call'd by this Name.—Such is the *Anodyne Balsam*, made of *Castile Soap*, *Camphir*, *Saffron*, and *Spirit of Wine*; digested in a Sand-heat. It is recommended not only for procuring Ease in the most racking extremities of pain, but for assisting in discharging the peccant matter that occasion'd it.

ANOMALOUS, q. d. Irregular; something that deviates from the ordinary Rule and Method of other things of the same kind. See **RULE**, &c.

The Word is not compounded of the privative *a*, and *nomos*, Law, as it is usually imagined: for whence, on such supposition, should the last Syllable *al*, arise? But it comes from the *Greek ἀνόμαστος, anōmastos, rough, irregular*, form'd of the Privative *a*, and *νόμος, plain, even*.

ANOMALOUS Verbs, in Grammar, are such as are irregular in their Conjugations; deviating from the Rules or *Parumala*'s observ'd by others. See **VERB** and **CONJUGATION**.

These are *Anomalous Verbs*, irregular Inflections of Words, in all Languages.—In the *English* all the Irregularity in our *Anomalous Verbs*, lies in the formation of the Preter Tense, and passive Participle; tho' this only holds of the Native *Teutonic* or *Saxon* Words, and not of the foreign Words, borrow'd from the *Latin*, *Welsh*, *French*, &c.

The principal Irregularity arises from the quickness of our Pronunciation, whereby we change the Consonant *d* into *t*, cutting off the regular ending *ed*.

Thus for *mix'd*, we write *mixt* or *mix'd*; for *describ'd* or *describ'd*; for *suatich'd*, *suatichr*, &c.—But this is rather of the nature of a Contraction than an Irregularity; and

and is complained of by some of our Politer Writers as an Abuse much to the disadvantage of our Language, tending to disfigure it, and turn a tenth part of our smoothest Words into Clusters of Consonants: which is the more inexcusable, in that the want of Vowels has been the general Complaint of the best Writers.

Another Irregularity relates to the preter Tense, and passive Participle.—Thus *gives*, if it were regular, or formed according to the Rule, would make *gived* in the preter Tense, and the passive Participle; whereas it makes *gave* in the preter Tense, and *given* in the passive Participle.

ANOMALICAL YEAR, in Astronomy, called also *Periodical Year*, is the space of time wherein the Earth passes thro' her Orbit. See YEAR.

The *Anomalical*, or common Year, is somewhat greater than the Tropical Year; by reason of the precession of the Equinox. See TROPICAL.

ANOMALY, in Grammar, the Irregularity of Formation or Conjugation, observed in several Verbs. See ANAMALOUS.

ANOMALY, in Astronomy, is the Distance of a Planet from the Aphelion or Apogee; or an Irregularity in the Motion of a Planet, whereby it deviates from the Aphelion or Apogee. See PLANET, APHELION and APOGEE.

Johannes distinguishes three kinds of Anomalies; Mean, Eccentric and True.

Mean or *Simple* ANOMALY in the ancient Astronomy, is the Distance of a Planet's mean place from the Apogee. See PLACE.

In the modern Astronomy, it is the Time wherein the Planet moves from its Aphelion A, to the mean Place or Point of its Orbit I. (Tab. ASTRONOMY, fig. 1.)

Hence, as the Arch, or the Angle, or the Elliptic Area A S I, is proportional to the Time wherein the Planet describes the Arch A I; that Area may represent the mean Anomaly.—Or thus: The Area S K A found by drawing a Line L K, thro' the Planet's place, perpendicular to the Line of the Apides P A, till it cuts the Circle D A, and drawing the Line S K; may represent the mean Anomaly; for this Area is every where proportional to the former Area S I A, as is demonstrated by Dr. Gregory, lib. 5. *Elem. Astron. Physic. Math.*

ANOMALY of the Eccentric, or of the Centre, in the new Astronomy, is an Arch of the Eccentric Circle A K, fig. 1. included between the Aphelium A, and a right Line K L, drawn thro' the Centre of the Planet K, perpendicularly to the Line of the Apides A P. See ECCENTRIC.

In the ancient Astronomy, it is an Arch of the Zodiac, terminated by the Line of the Apides, and the Line of the mean Motion of the Centre.

True or *Equated* ANOMALY, is the Angle at the Sun, A S I, which a Planet's distance from the Aphelium, A I, appears under; or it is the Angle or Area, taken proportionally to the time in which the Planet moves from the mean Place I, to its Aphelion A.

And hence, in the Sun's Motion, it will be the distance of his true place, from the Apogee.—

The true Anomaly being given, the mean one is easily found: but it is difficult to find the true Anomaly from the mean one given.—

The Geometrical Method of *Wallis* and *Newton*, by the protracted Cycloid, are not fit for Calculation; nor yet the Methods of *Series*, as being too laborious. Hence Astronomers are forced to have recourse to Approximation. *Ward*, in his *Astronomia Geometrica* takes the Angle A S I, at the Focus where the Sun is not, for the mean Anomaly; which will nearly represent it, if the Orbit of the Planet be not very Eccentric; and thus easily solves the Problem. But this Method does not hold of the Orbit of *Mars*, as being more Eccentric than those of the other Planets.

Sir *Isaac Newton* shows how to effect even this; and when his Correction is made, and the Problem solved, according to *Ward's* Hypothesis, Sir *Isaac* affirms, that even in the Orbit of *Mars*, there will scarce ever be an Error of above a Second.

ANOMEANS, ANOMORANS, or ANOMIANS, ANOMOI, or ANOMIANT, a Greek Word, composed of the privative *a* and *nomos*, similar, resembling; q. d. different, dissimilar.

In the fourth Century, this was the Name by which the pure *Arians* were distinguished; in regard they not only denied the Consubstantiality of the Word, but even asserted, that he was of a Nature different from that of the Father: In Contradistinction to the Semi-Arians, who indeed denied the Consubstantiality of the Word, but own'd at the same time, that he was like the Father. See ARIAN, and SEMI-ARIAN.

The Semi-Arians condemned the *Anomeans* in the Council of *Selucia*, and the *Anomeans* condemned the Semi-Arians in their Turn, in the Councils of *Constantinople* and *Antioch*; ensuing the Word *ousios* out of the Formula of *Rimini*, and that of *Constantinople*, and pretending that the Word had not only a different Substance, but also a Will

different from that of the Father. Whence they were to be call'd *Apostolici*. See HOMODUSA, &c.

ANONYMOUS, something that is nameless; or to which no Name is affixed. See NAME.

The Term is chiefly applied to Books which do not express their Author's Name. It is derived from the Greek *anonymos*, without Name, of the privative *a* and *onymos*, name, Name.

Zecker, Advocate of the Imperial Chamber of *Spire*; and *Placcius* of *Hambourg*, have given a Treatise of *Anonymous Books*—*Bernard Gottlobus Serenius*, treats of learned Men who have endeavoured to divine the Authors of *Anonymous Books*.

ANOREXY, ANOREXIA, in Medicine, an Inappetency, or Loss of Appetite. See APPETITE.

Anorexia is properly a longer continuance than is natural, without a desire to eat. See FOOD, FASTING, DISTASTE, &c.

If the Thought, or the Sight of proper Food, create a Sickness in the Stomach, or a Tendency to vomit; it is called a *Nausea*. See NAUSEA.

Anorexia, is chiefly considered as a Symptom of some other Disorder, from which the curative Indications are to be taken, and afterwards Stomachics used. See STOMACHIC.

The Word is compounded of the privative Participle *a* and *orexis*, *Cappis*, I desire.—

ANSES, or ANSE, in Astronomy, those apparently prominent Parts of the Planet *Saturn's* Ring, discovered in its opening, and appearing like Handles to the Body of that Planet. See SATURN and RING.

The Word is Latin; and literally signifies Handles or Arms of divers Urensils.—

ANSCOTE, in our ancient Law Books, the same with *Angit*. See SCOT and LOT.

ANSEL *Weight*. See AUNIEL *Weight*.

ANSPESADES, a kind of Inferior Officers in the French Foot, below the Corporals, and yet above the common Centinels. See CORPORAL, &c.

There are usually four or five in each Company.—The Word is formed of the Italian *ansa* *Spesada*, q. d. broken Lance; which was occasioned hence, that they were originally disbanded Gentlemen, who for want of other Subsistence sued for a Place of some distinction in the Infantry.

ANSWER. See RESPONSE, RESPONAL, BILL, PLEADING, REPLICATION, &c.

ANTA, or ANTE, in the ancient Architecture, a square Column, or Plaster, placed at the Corners of the Walls of their Temples and other Edifices. See PLASTER, TEMPLE, &c.

The *Ante* stood out of the Wall, with a Projecture equal to one eighth of their Face, provided there were no Ornament that had a greater Projecture; but it was a Rule that the Projecture of the *Ante* should always equal that of the Ornaments.

They took their Name, according to Mr. *Perrault*, from the Preposition *Ante* before; because placed before the Walls and Coins of Buildings to secure 'em.

ANTAGONIST, an Adversary; or a Party opposit to another in any Combat or Dispute. See ADVERSARY, &c.

The Word is formed from the Greek *anti*, contra, against, and *agonis*, oppono, I oppose.

ANTAGONIST *Muscles*, in Anatomy, are those which have opposite Functions. See MUSCLE.

Such are the *Flexor* and *Extensor* of any Limb, the one whereof contracts it, and the other stretches it out. See FLEXOR and EXTENSOR.

We have some solitary Muscles, without any *Antagonists*; as the Heart, &c. See HEART, &c.

ANTANACLASIS, a Figure in Rhetoric; being a repetition of the same Word, but in a different Signification. See REPETITION.

The Word comes from the Greek *anti*, and *anaclassis*, *repercussio*, I strike again.

ANTANAGOGE, *antiphrasis*, a Figure in Rhetoric, when not being able to answer the Accusation of the Adversary, we return the Charge, by loading him with the same Crimes. See RECRIMINATION.

ANTARES, in Astronomy, the *Scorpion's Heart*; a fix'd Star of the first Magnitude, in the Constellation *Scorpio*—its Longitude, Latitude, &c. see among the rest of the Constellation *Scorpio*.

ANTARCTIC, or ANTARCTIC, Pole, the Southern Pole, or End of the Earth's Axis; so called because it is opposite to the Arctic or North Pole. See POLE, SOUTH, ARCTIC, &c.

The Stars near the *Antarctic Pole* never appear above our Horizon. See STAR, HORIZON, &c.

The Word is composed of *anti* contra, and *arcticus*, *Urfa*, bear.

ANTARCTIC, or ANTARCTIC Circle, is one of the lesser Circles of the Sphere, parallel to the Equator, at

the distance of 19 deg. 30. min. from the South Pole. See **CIRCLE**.

It takes its Name from its being opposite to another Circle, parallel likewise to the Equator, and at the same distance from the North Pole; and called the *Arctic Circle*. See **ARCTIC CIRCLE**.

ANTECEDENT, in the Schools, something that precedes, or goes before another, in respect of time; from the *Latin Proposition ante*, before, and *cedens de cetero*, to go—In this Sense the Word stands opposed to *Subsequent*.

An *Antecedent Decree*, is a Decree preceding some other Decree, or some Action of the Creature, or the Provision of that Action. See **DECREE**.

'Tis a Point much controverted, whether Predetermination be a Decree antecedent to Faith, or subsequent thereon. See **PREDERMINATION**.

So, an *Antecedent Will, or Desire*, is that which precedes some other Will or Desire, or some Knowledge or Provision—Thus we say, God by a sincere, but *Antecedent Desire*, wills all Men to be saved: That is, this sincere Desire of God precedes, and does not suppose, the Knowledge of their Faith and Repentance.

By the way it must be noted that the Term *Antecedent* is only applied to God in respect of the Order of Nature, not of an Order of Succession; for that God, by reason of his infinite Perfections, sees and foresees both at the same Time: after the same manner he also wills, and not successively, one thing after another—Yet does not this hinder, but that God may will one thing on occasion of another, or have such a desire on occasion of such a Provision; which Divines call the Order of Nature, in contradistinction to that of Time.

ANTECEDENT, *Antecedens*, in Logick, is the first Proposition of an Enthymeme, or of an Argument which only consists of two Members. See **ENTHYME**, **PROPOSITION**, &c.

In Opposition hereto, the latter is called the *Consequent*. See **CONSEQUENT**.

Thus in the Syllogism *cogito, ergo sum*, I think, and therefore exist; *cogito* is the *Antecedent*; being thus called because it precedes the *ergo*, or the *copula* of the Argument.

ANTECEDENT, in Mathematicks, is the former of the two Terms of a Ratio; or that which is compared with the other. See **RATIO** and **TERM**.

Thus, if the Ratio be of *a* to *b*; *a* is said to be the *Antecedent*.

ANTECEDENT Signs, are such Symptoms of Disorder as appear before a Distemper is so formed, as to be reducible to any particular Class, or proper Denomination. See **SIGN** and **SYMPTOM**.

ANTECEDENT in Grammar, the Word which a Relative refers to. See **RELATIVE**.

ANTECEDENCE, **ANTECEDENCY**. See **ANTECEDENT** and **ANTECEDENTIA**.

ANTECEDENTIA among Astronomers—When a Planet appears to move Westward, contrary to the Order or Course of the Signs; as, from *Taurus* towards *Aries*: it is said to move, in *Antecedentia*. See **PLANET**, **ORDER**, **SIGN**, &c.

On the contrary, when it goes Eastward or forwards, from *Aries* towards *Taurus*; it is said to move in *Consequentia*. See **CONSEQUENTIA**, &c.

ANTECESSOR, one that goes before, or leads another. See **PRECURSOR**, **PREDCESSOR**, &c.

The Term is particularly used in some Universities for a Professor, who teaches, or lectures the Civil Law.

ANTECHAMBER, or **ANTICHAMBER**, an outer Chamber, before the principal Chamber of an Apartment; where the Servants wait, and Strangers stay, till the Person to be spoken withal is at leisure, &c. See **APARTMENT**.

The Word is formed of the Latin *Ante Camera*. See **CHAMBER**.

ANTECHRIST, or **ANTICHRIST**, *Antichristus*, among Divines, &c. a Tyrant who is to reign on Earth, toward the end of the World; for the ultimate Proof of the Elect; and to give a shining Instance of the Divine Vengeance, before the last Judgment.

The Word is compounded of the Greek *anti*, contra, against, and *christos*, Christ—In Scripture he is also called *Man of Sin*, *Son of Perdition*, &c. 'Tis added that he shall set up his Throne at *Babylon*.

The Bible and the Fathers all speak of *Antichrist* as a single Man; tho' they assure withal, that he is to have divers Precursors or Forerunners—Yet many Protestant Writers apply to the Romish Church, and the Pope who is at the Head of it, the several Marks and Signatures of *Antichrist*, enumerated in the Apocalypic; which would rather imply *Antichrist* to be a corrupt Society, or a long Series of persecuting Pontiffs, than a single Person.

However, the Point having been maturely debated at the Council of *Gap*, held in 1603, a Resolution was taken thereupon, to insert an Article in the Confession of Faith,

whereby the Pope is formally declared to be *Antichrist*—Pope *Clement VIII*, we read, was stung to the Life with this decision; and even King *Henry IV*. of France was not a little mortified, to be thus declared, as he term'd it, an Imp of *Antichrist*.

The learned *Grotius* maintains that *Caligula* was *Antichrist*; but neither does this quadrate with his Appearance at the end of the World.

Father *Mascarda*, a Spanish Jesuit, has published a large and learned Work, de *Antichristo*, in XIII Books—In the first he relates all the Opinions of the Fathers with regard to *Antichrist*. In the second he speaks of the Time when he shall appear; and shews that all the Fathers who supposed *Antichrist* to be near at hand, judged the World was near its Period. In the third he discourses of his Origin and Nation; and shews that he is to be a Jew, of the Tribe of *Dan*: This he founds on the Authority of the Fathers; on the Passage in *Genesis XLIX*. *Dan is a Serpent in the Way*, &c. On that of *Jeremy*, VIII. 16. where it is said the Armies of *Dan* shall devour the Earth; and on the *Apocalypse*, cap. VII. where *St. John* enumerating all the Tribes of *Israel*, makes no mention of that of *Dan*. In the fourth and fifth Books, he treats of the Signs of *Antichrist*. In the sixth of his Reign and Wars. In the seventh of hisVICES. In the eighth of his Doctrine and Miracles. In the ninth of his Persecutions: And in the rest, of the coming of *Enoch* and *Elias*, the Conversion of the Jews, the Reign of Jesus Christ, and the Death of *Antichrist*, after having reigned three Years and a half.

ANTECURSOR. See **PRECURSOR**.

ANTEMILUVIUM. See **ANTIMILUVIAN**.

ANTEJURAMENTUM, and **PREJURAMENTUM**, by our Ancestors also called *Juramentum Calumnice*; an Oath which both the Accuser and Accused were obliged to make before any Trial or Purgation. See **OATH** and **PURGATION**—The Accuser was to swear that he would prosecute the Criminal; and the Accused was to make Oath on the very Day that he was to undergo the Ordeal, &c. that he was innocent of the Fact of which he was charged. See **ORDEAL**.

If the Accuser failed, the Criminal was discharged; if the Accused, he was intended to be guilty, and was not to be admitted to purge himself by the Ordeal. See **COMBAT**, **DUEL**, &c.

ANTEPAGMENTA, or **ANTIPEGMENTA**, in the ancient Architecture, the Jambs of a Door, or Lintel of a Window. See **DOOR** and **WINDOW**.

The Word is also used for the entire *Chambrano*, i. e. the Door-Case, or Window-Frame. See **CHAMBRANCE**.

ANTEPENULTIMA, or **ANTEPENULTIMATE**, in Grammar, the third Syllable of a Word, reckoning from the latter End; or the last Syllable but two. See **WORD** and **SYLLABLE**.

'Twas upon this Syllable, that the Greeks placed their acute Accents. See **ACCENT**—The *Antepenultima* of a Dactyl is long. See **DACTYL**.

The Word is compounded of the Preposition *Ante*, before; and *Penultima*, last but one. See **PENULTIMATE**.

ANTEPREDICAMENTA, **ANTEPREDICAMENTA**, in Logick, certain previous Matters, requisite to a more easy and clear apprehension of the Doctrine of Predicaments or Categories. See **PREDICAMENT**.

Such are Definitions of Common Terms; as Equivocals, Univocals, &c. with Divisions of Things, their Differences, &c. See **DEFINITION**, **DIVISION**, &c.

They are thus called because treated by *Aristotle* before the *Predicaments*; that the Thread of the Discourse might not afterwards be interrupted.

ANTERIOR, or **ANTERIOUR**, something before another, chiefly in respect of Place—In this Sense the Term stands opposed to *Posterior*. See **POSTERIOR**.

The Word is Latin; formed of the Preposition, *Ante*, before.

ANTESTATURE, in Fortification, a small Retrenchment, made of Palisadoes, or Sacks of Earth, set up in haste, to dispute with the Enemy the Remainder of a Piece of Ground, part whereof hath been already gain'd. See **RETRENCHMENT**.

ANTHELIX, in Anatomy, the inner Circuit of the Auricle; thus call'd from its opposition to the outer Circuit, call'd the *Helix*. See **AURICLE** and **HELIX**.

ANTHELMINTICKS, Medicines good to destroy Worms. See **WORM** and **VERMIFUGOUS**.

The Word is compounded of *anti*, contra, against, and *helmi*, Vermis, Worm.

ANTHEM, *Antiphona*, a Church-Song, performed in Cathedral, and other Service, by the Choirists, divided for that purpose into two Chorus's, who sing alternately. See **SONG**, **CHOIR**, **CHORISTER**, &c.

The Word was originally used both for Psalms, and Hymns, when thus perform'd. See **PSALM** and **HYMN**.

Socrates represents St. Ignatius as the Author of this way of flogging among the *Greeks*; and St. *Antrose* among the *Latins*. *Theodorus* attributes it to *Diodorus* and *Flavianus*. *Anaxarxus Fortunatus* has wrote expressly of the Order of *Antiani*, *de Antiphanarum Ordine*.

At present the Term is used in a somewhat narrower Sense; being applied to certain Passages taken out of the *Psalms*, &c. and accommodated to the particular Solemnity in hand.

ANTHERA, in Pharmacy, a Term us'd by some Writers for the Yellow part in the Middle of a Rose. See **ROSE**—It is reputed more astringent than the rest.

ANTHERÆ, among Botanists, those little Tusis, or Knobs which grow on the Tops of the Stamina of Flowers; more usually call'd *Spices*. See **SPICES**.

ANTHESPHORIA, in Antiquity, a Feast celebrated in Sicily, in Honour of *Proserpine*. See **FEAST**.

The Word is deriv'd from the Greek *ἄνθη*, Flower, and *είρη*, I carry, in regard that Goddess was forc'd away by *Pluto*, when she was gathering Flowers in the Fields. Yet *Festus* does not ascribe the Feast to *Proserpine*; but says it was thus call'd, by reason Ears of Corn were carried on this Day to the Temples.

Anthesia seem to be the same thing with the *Floriferum* of the *Latins*.

ANTHETERIA, in Antiquity, was a Feast celebrated by the *Athenians*, in Honour of *Bacchus*. See **FEAST**.

Some are of opinion it took its Name from the Month *Anthesterion*, wherein it was celebrated—Others pretend, that it was not the Name of any particular Feast, but that all the Feasts of *Bacchus* were call'd *Antheteria*.

The most natural Derivation of the Word is from *ἄνθη*, Fls; a Flower; it being the Custom at this Feast to offer Garlands of Flowers to *Bacchus*.

The *Antheteria* lasted three Days, the eleventh, twelfth, and thirteenth of the Month; each of which Days had a Name suited to the proper Office of the Day—The first Day of the Feast was call'd *ἀνομία*, i. e. Opening of the Vessels, in regard on this Day they open'd the Vessels, and tasted the Wine—The second they call'd *γύσις*, *Congii*, the Name of a Measure, containing the Weight of about ten Pounds; on this Day they drank the Wine prepar'd the Day before—The third Day they call'd *κύρσις*, Kettles; on this Day they boil'd all sorts of Pulse in Kettles; which however they were not allow'd to taste, as being offer'd to *Mercury*.

ANTHOLOGION, **ANTHOLOGE**, a Church Book in use among the *Greeks*. See **GREEK**.

The *Anthologion* is a sort of Breviary or *Mss*-Book, containing the daily Offices address'd to our Saviour, the Virgin, and the principal Saints; with other Common Offices of Prophets, Apostles, Martyrs, Poets, and Confessors, according to the Greek Rite. See **BREVIARY**, **MASS**, **OFFICE**, &c.

It is call'd *ἀριθμολογίων*, q. d. florilegium, or a Collection of Flowers.

ANTHOLOGY, **ANTHOLOGIA**, a discourse or Treatise of Flowers; thus call'd from *ἄνθη*, Fls, a Flower, and *λόγος*, *Sermo*, Discourse. Others chuse rather to derive *Anthology* from *ἄνθη*, Fls, a Flower, and *ἄγω* I gather; and use it to signify a Collection of Flowers. See **FLOWER**.

ANTHOLOGOS is particularly us'd for a Collection of Epigrams of divers *Greek* Poets. See **EPIGRAM**.

St. ANTHONY, gives the Name to an Order of Knighthood, establish'd in 1382. by *Albert of Bavaria*, &c. who had then taken a Resolution to make War against the *Turks*. See **ORDER** and **KNIGHT**.

The Knights of this Order wore a Collar of Gold, with a Hermit's Girdle, to which hung a Crucifix and a little Bell. Some Authors mention another Order of *St. Anthony* in *Arabia*, instituted in 170.

St. ANTHONY'S FIRE. See **RAYSERPENS**.

ANTHORA, or *Healing Wolfs-bane*, a Species of *Aconite*, whose Root is useful in Physick; being reputed a good Antidote, and a certain Counterpoison to the *Thora*, whence its Denomination *Anthora*. See **ACONITE**.

The Root contains a great deal of volatile Salt and essential Oil—It is alexipharmick, cardiack, stomachick, and good against the Wind-Cholick—

ANTHOS, *ἄνθος*, in its original *Greek*, signifies Flower; but by way of Excellency is appropriated to *Rosemary*, so as to express only Flowers of *Rosemary*. See **ROSEMARY**.

ANTHRACOSIS, a Disease of the Eyes, occasion'd by a corrosive Ulcer, cover'd with Skin, and attended with a general Swelling; especially of the Parts about the Eye. See **EYE** and **ULCER**.

The Word is Greek *ἀνθρακώδης*, and denotes an Inflammation resembling a Coal; *ἀνθραξ* signifying a Coal. See **ANTHRAX**.

ANTHRAX, *ἄνθραξ*, strictly signifies a live Coal; and figuratively, a Scab or Bitch, made by a corrosive Hu-

mour, which, as it were, burns the Skin, and occasions sharp pricking Pains.

The *Anthrax* is also call'd *Carbo* and *Carbunculus*. See **CARBUNCLE**.

The Cure is attempted with Cataplasms of *Theriac*. *Lond*. *Allium*, *Cepa* coll. *Sapo* Nig. &c.

ANTHROPOLOGY, **ANTHROPOLOGIA**, a Discourse or Treatise upon Man, or Human Nature.

Anthropology includes the Consideration both of the Human Body and Soul, with the Laws of their Union, and the Effects thereof, as Sensation, Motion, &c. See **BODY**, **SOUL**, **SENSATION**, **MOTION**, &c.

Yet Dr. *Drake* entitles his Anatomy of the Human Body, *Anthropologia*. See **ANATOMY**.

The Word is compounded of *ἄνθρωπος*, Man, and *λογία*, Discourse.

ANTHROPOLOGY, is particularly us'd in Theology, for a way of speaking of God, after the manner of Men; by attributing Human Parts to him; as Eyes, Hands, Ears, Anger, Joy, &c.—

We have frequent Instances of *Anthropology* in Holy Scripture; by which we are only to understand the Effect, or the Thing which God does, as if he had Hands, &c. See **ANTHROPOPATHY**.

ANTHROPOMANCY, or **ANTHROPOMANTIA**, a Method of Divination, performed by inspecting the Viscera of a Person deceased. See **DIVINATION**.

The Word is compounded of *ἄνθρωπος*, Man, and *μαντεία*, Divination.

ANTHROPOMORPHITE, one who attributes to God, the Figure of a Man. See **GOD**, &c.

ANTHROPOMORPHITES were a Sect of ancient Hereticks, who, out of a too great Simplicity, taking every thing spoken of God in the Scriptures in a literal Sense; imagin'd he had real Hands, Feet, &c.—The Passage they chiefly insist on, was that in *Genesis*, where it is said that God made Man after his own Image.

The Word comes from the *Greek* *ἄνθρωπος*, Man, and *μορφή*, Shape.

ANTHROPOPATHY, a Figure, Expression or Discourse, whereby something is attributed to God, which properly belongs only to Man.

Anthropopathy is frequently us'd promiscuously with *Anthropology*; yet in strictness they ought to be distinguished as the Genus from the Species—*Anthropology* may be understood of any thing Human attributed to God; but *Anthropopathy*, only of Human Affections, Passions, Sensations, &c. See **ANTHROPOLOGY**.

The Word is compounded of *ἄνθρωπος*, Man, and *πάθος*, Passion.

ANTHROPOPHAGI, *Cannibals*; or such as feed on Human Flesh. See **CANNIBAL**.

The Word is compounded of the *Greek* *ἄνθρωπος*, Man, and *φαγέω*, *Edo*, I eat—The primitive Christians were accused by the Heathens of being *Anthrophaggi*; as appears from *Tatianus*, *Tertullian* in his *Apologeticks*, Cap. VII. and *Salvianus* de *Provid*. Lib. IV. They affirm'd that the Christians, in the Mysteries of their Religion, killed a Child, and feasted on its Flesh. This Calumny was grounded on what they had heard of the *Eucharist*, and the *Communion*. See **EUCCHARIST**, **COMMUNION**, **ALTAR**, &c.

ANTHROPOPHAGY, the Act of eating human Flesh. See **ANTHROPOPHAGI**.

Some Authors trace the Original of this barbarous Custom, as high as the *Deluge*; and attribute it to the Giants—*Pliny* mentions *Scythians* and *Sauromatans*; and *Jovianus*, *Egyptians*, who accus'd themselves to this horrible Report—*Livy* tells us, that *Hannibal* made his Soldiers eat human Flesh, to render them more fierce and daring in Battle.

In the southern Parts of *Africa*, and in some Parts of *America*; this horrid Practice still obtains. See **CANNIBAL**.

The Physicians think they have discover'd the Principle of *Anthrophagy*, and that it consists in a black acriminous Humour, which being lodg'd in the Coats of the Ventricle, produces this Voracity. And they give several Instances of this inhuman Hunger, even among their own Patients—*M Petit* has disput'd the Question, whether or no *Anthrophagy* be contrary to Nature?

ANTI, a *Greek* Preposition, added to several *English* Words, in two different Senses—Sometimes it signifies before; as in *Anti-Chamber*, a place before the Chamber; in which case it has the same Meaning with the *Latin*, *ante*, before; sometimes again it signifies contrary, or opposite; and is then deriv'd from the *Greek* *ἄντι*, *contra*, against; as in *Antipodes*, those who have their Feet oppos'd to ours.

In this latter Sense, the Word makes part of the Names of various Medicines: as *Antivenereal*, those us'd against the Pox; *Antiarthriticks*, those against the Gout; *Antispasmodicks*, against the Asthma; *Antielminticks*, against Worms;

Worms; *Amphredricks*, against Lust; *Anti-epilepticks*, against the Falling Sickness, &c.

ANTI, in matters of Literature, are Pieces written by way of Answer, to others, whose Names are usually annex'd to the *Anti*.

See the *Anti* of *M. Baillet*; and the *Anti-Baillet* of *M. Menage*. There are also *Anti-Monagians*, &c.

Cæsar the Dictator wrote two Books by way of Answer to what had been objected to him by *Cato*; which he call'd *Anti-Catones*; mentioned by *Jovenal*, *Cicero*, &c. — *Vives* assures us, he had seen *Cæsar's Anti-catones* in an ancient Library.

ANTIADÉS, a Term used by some Writers for the Glandules, and Kernels, more commonly call'd *Touffils* and *Almonds of the Ear*. See *TONSIL*, *ALMOND*, and *AMYGDALA*, &c.

ANTIADIAPHORISTS, ANTIADIAPHORISTE, those opposite to the *Adiaphorists*. See *ADIAPHORIST*.

This Name was given, in the XVIIth Century, to the rigid *Lutherans*, who dissent'd the Episcopal Jurisdiction, and many of the Church Ceremonies, retain'd by the Moderate *Lutherans*. See *LUTHERAN*.

The Word is compounded of the Greek *αντι* contra, against, and *ἀλογία*, indifferant.

ANTIABACCHIC, ANTIABACCHUS, in the ancient Poetry, a Foot, consisting of three Syllables; the two first whereof are long, and the third short. See *FOOT*. Such are the Words *cantare*, *virtute*.

It is fo call'd as being contrary to the *Bacchic*, the first Syllable whereof is short, and the two last long; as *εγεστ*. See *BACCHIC*.

ANTIARDIUM, in Anatomy, &c. that Part of the Breast just against the Heart, commonly call'd the Pit of the Stomach.

The Word is compounded of *αντι*, contra against, and *καρδια*, Cor, Heart.

ANTICHRESIS in the Civil Law, a Covenant or Conventio, whereby a Person borrowing Money of another, engages, or makes over his Lands to the Creditor, with the Use and Occupation thereof, for the Interest of the Money lent.

This Covenant was allowed of by the *Romans*; among whom Usury was prohibited: It was afterwards call'd *Mortgage*, to distinguish it from a simple Engagement, where the Fruits of the Ground were not alienated, which was call'd *Vifage*. See *MORTGAGE*.

ANTICHTHONES, in Geography, are those People who inhabit Countries opposite to each other.

The Word is compounded of *αντι*, contra, and *χθον*, Terra.

The Term *Antichthon* is now used in the same Sense with *Antipodes*; but the *Antients* used it in a different one.—They consider'd the Earth as divided by the Equator into two Hemispheres, the Northern and Southern; and all those who inhabited one of these Hemispheres were reputed *Antichthon*s to those of the other. In this Sense the Word is used by *Mela* and other ancient Authors. See *ANTIPODES*.

ANTICKS, ANTIQ. WORK. See *ANTIQU*.

ANTICIPATION, the Act of doing a Thing before the time.—Such a Debt was not yet become due; He *Anticipated* the time of Payment.

ANTICIPATION, in Philosophy. See *PREENOTION*.

ANTICOR, ANTICOROR or ANTCOROR, or *Avant-Cor*, among Farriers, is usually described as a preternatural Swelling, of the Size and Figure of an Apple, occasioned by a sanguine and bilious Humour; and appearing in the Horse's Breast opposite to his Heart.

A late Author affirms, that the generality of Writers on that Subject have been mistaken as to this Disease; attributing it to the Heart, whence it is by *Solleysell*, call'd the *Swelling of the Pericardium*; whereas it is really an Inflammation in the Gullet, and Throat; and the same that in human Bodies, is call'd the *Angina*, or *Squinancy*.

ANTIDACTYLUS in Poetry, a Foot in Verse, contrary to a *Dactyl*; consisting of three Syllables, whereof the first two are short, and the last long. See *DACTYL*.

ANTIDATE, a spurious Date, prior to the true Date of a Writing Instrument, AG, Deed, or the like. See *DATE*.

ANTIDICOMARIANITES, or ANTIADICOMARIANISTES, ancient Hereticks, who pretended that the Holy Virgin had not preserv'd her Virginity, but that she had several Children by *Joseph*. See *VIRGIN*.

Their Opinion was grounded on some Expressions of our Saviour, wherein he mentioned his Brothers, and his Sisters.—The *Antidicomarianites*, were the Disciples of *Helvidius* and *Trojanus*, who appeared in *Rome* toward the close of the IVth Century.

ANTIDILUVIAN, something before the Deluge. See *DELUGE*.

In this Sense, those Generations from *Adam*, till *Noah's* Flood, are call'd *Antidiluvian*; and those since descending from *Noah*, to the present time, are call'd *Postdiluvian*. See *AG*, *PATRIARCH*, &c.

Dr. *Burnet*, and Dr. *Woodward* differ very widely about the *Antidiluvian* World; the former imagines its Face and Appearance to have been smooth, equable, and in all respects different from what we now find them to be.

The latter on the contrary endeavours to prove, that the Face of the terraqueous Globe before the Deluge was the same as it is now, viz. unequal, distinguished into Mountains, and Dales, and having likewise a Sea, Lakes, and Rivers; that this Sea was salt as ours is; was subject to Tides, and possess'd nearly the same Space and Extent that it now does; and that the *Antidiluvian* World was stock'd with Animals, Vegetables, Metals, Minerals, &c. that it had the same Position in respect of the Sun which ours now hath, its Axis not being parallel, but inclined, as at present, to the Plane of the *Ecliptic*; consequently that there were then the same Succession of Weather, and the same Vicissitudes of Seasons, as now. See *TERRAQUEOUS MOUNTAIN*, &c. See also *FOSSIL*, &c.

ANTIDOTE, a Remedy taken either to prevent, or cure, GOUTAGE, See *PLAQUE*, *CONTAGION*, *PRESERVATIVE*, &c.

The Word *Antidote* is also used to signify a Medicine taken to prevent the ill Effects of some other, for instance, Poison. See *POISON*.

In this Sense the Word has the same Signification with *Alexipharmic*, *Alexiteric* or Counterpoison. See *ALEXIPHARMIC*, *COUNTER-POISON*, &c.

The Word is borrow'd from the Greek *ἀντι*, against, and *δοσιν*, I give; as being something given against Poison, either by way of Medicine, or Preservative.

ANTIET, or ANCIET, usually stands opposed to *Modern*. See *MODERN*.

The Word comes from the French *Ancien*, of the Latin *Antiquus*. Thus we say the *Ancient* Architecture, *Ancient* Monuments, *Ancient* Church. See *ARCHITECTURE*, &c.

When we say absolutely, the *Antients*, we mean the *Greeks* and *Romans*—Thus, the *Antients* used to burn their Dead.—The Learned have been greatly divided of late days, with regard to the Preference between the *Antients* and *Moderns*.

ANTIET is sometimes opposed to young or new—We say the *antient* Bishop of such a City, when he has resign'd his See, and a new one is put in his Place. The *antient* Bishop of *Frejus*, now Cardinal de *Flcury*.

ANTIETNS in Church-Discipline. See *ELDERNS*.

The Society of *Grays-Inn*, consists of *Benchers*, *Antients*, *Barristers*, and *Students* under the Bar; the *Antients* are the Elder, *Barristers*. See *INN*, *BARRISTER*, &c.

In the Inns of Chancery there are only, *Antients* and *Students*, or *Clerks*; and among the *Antients*, one is yearly the *Principal*, or *Treasurer*—In the Middle Temple, *Antients* are such as are past their Reading, and never read. See *TEMPLE*.

ANTIET is sometimes also used in a Military Sense for an *Engage*. See *ENGAGE*.

ANTIET, in some antient Statutes is used for *Elder-ship* or Seniority—Thus the eldest Sister can demand no more than her other Sisters beside the Chief *Messe*, by reason of her *Antienty*.

ANTIET, is also the Flag, or Streamer born in the Stern of a Ship. See *FLAG*, *SIGNAL*, &c.

ANTIET *Demefac*, or *Demefin*, is a Tenure, whereby all *Manors* belonging to the *Crown* in *William* the *Conqueror's*, and *St. Edward's* time, were held. See *TENURE* and *DEMEIN*.

The Numbers, Names, &c. hereof were enter'd by the *Conqueror*, in a Book call'd *Doomsday-Book*, yet remaining in the *Eschequer*; so that such Lands as by that Book appear'd to have belonged to the *Crown* at that time, are call'd *Antient Demefin*. See *DOOMS-DAY*.

The Tenants in *Antient Demefin* are of two sorts; one who hold their Lands frankly by Charter; the other by Copy of Court-Roll, or by the Verge at the Will of the Lord, according to the Custom of the Manor. See *FREE-HOLD*, *COPY-HOLD*, &c.

The Advantages of this Tenure, are, 1. That Tenants holding by Charter cannot be rightfully impleaded out of their Manor; and when they are, may abate the *Writ* by pleading the Tenure. 2. They are free from *Toll* for all things relating to their *Livelihood* and *Husbandry*; nor can be impannell'd on any *Inquest*.

These Tenants held originally by plowing the King's Land, plashing his Hedges, and the like services, for the maintenance of his Household; and it was on this account such liberties were given 'em, for which they may have

Writes to such as take the Duties of Toll, &c. See *SKRVICE*, &c.

No Lands are to be accepted *ancien* Demasie, but such as are held in Socage. See *MONSTRABERUNT*.

ANTIHECTICKS, **ANTIHECTICA**, Remedies against *Hectical Disorders*. See *HECTIC*.

ANTHECTICUM Poterii, in Pharmacy, a celebrated Chemical Preparation, made of equal quantities of Tin, and calcinated Regulus of Antimony, by melting 'em in a large Crucible, and putting to them, by little and little, three times the quantity of Nitre: the Detonation being over, the whole is wash'd with warm Water till no filiness remains.

It is a very penetrating Medicine, making way into the minutest Passages, and searching even the nervous Cells; whence its use in *Hectic Disorders*, from which it derives the Name. See *HECTIC*.

It is applied to good purpose in Heavinesses of the Head, Giddiness, and Dimness of Sight, whence proceed Apoplexies and Epilepsies; And in all Affections and Foulnesses of the Viscers of the lower Belly is reckoned inferior to nothing. Thus it obtains in the Jaundice, Diopsies, and all kind of Cachexies. Dr. Quincy adds, that there is scarce a Preparation in the Chymical Pharmacy of greater efficacy in most obdurate chronic Distempers.

ANTILOGARITHM, is the Complement of the Logarithm of a Sine, Tangent or Secant; or the Difference of that Logarithm, from the Logarithm of ninety Degrees. See *LOGARITHM* and *COMPLEMENT*.

ANTILOGY, **ANTILOGIA**, a Contradiction between two Expressions or Passages in an Author. See *CONTRADICTION*.

Tirinus has published a large Index of the seeming *Antilogies* in the Bible; i. e. of Texts which apparently contradict each other, but which are explained and reconciled by him, in his Comments on the Bible.—A *Meloso* of the Oratory in Italy, has attempted the like; but has done little more than rehearse what occurs of that kind in the principal Commentators.

The Word is *Greek*, *αντιλογία*, q. d. Contrary Saying. **ANTIMENSIA**, a kind of Consecrated Table-Cloth, occasionally used in the *Greek Church*, in lieu of a proper Altar. See *ALTAR*.

F. Goar observes, that in regard the *Greeks* have but few consecrated Churches; and that consecrated Altars are not things easy to be removed; That Church has for many Ages made use of certain consecrated Struts, or Linens call'd *Antimensia*, to serve the purposes thereof.

ANTIMONIA ARCHICLAI, something that opposes or stands against Monarchy, or Kingly Government. See *MONARCHY*.

Antimonarchica is frequently used in the Sense of *Republican*. See *REPUBLIC*.

ANTIMONIALS, in Medicine, Preparations of Antimony; or Remedies whereof Antimony is the Basis, or principal Ingredient. See *ANTIMONY*.

Antimonials are chiefly of an emetic tendency; tho' they may be so qualified as to become either Cathartic, or Diaphoretic, or even only Alterative. See *EMETIC*, *CATHARTIC*, &c.

Dr. Quincy assures, that there are no Medicines in Pharmacy to be compared with these in Maniacal Affections; for that there are no Emetics or Cathartics of any other Title that are strong enough for such Patients, unless in an Overdose, which might be dangerous. See *MANIA*.

An *Antimonial Cap*, made either of Gla's of Antimony, or of Antimony prepared with Sale-petre, tho' a Substance indissoluble by the Stomach, will give a strong Cathartic, or Emetic Quality to any Liquor poured into it; without any diminution of its own weight.

ANTIMONY, **ANTIMONIUM**, in Natural History, a Mineral Substance, of a Metalline Nature; having all the seeming Characters of a real Metal, excepting Malleability. See *MINERAL* and *METAL*.

Antimony is what we properly call a *Semi-Metal*; being a Fossil Gliche, composed of some undetermined Metal, combined with a sulphurous and stony Substance. See *SEMI-METAL*.

It is found in Mines of all Metals; but chiefly those of Silver and Lead; That in Gold Mines is usually held the best.—It has also his own Mines; particularly in *Hongary*, *Transylvania*, and *Germany*, and several Provinces of *France*.

Antimony is found in Clods or Stones of several sizes, bearing a near resemblance to black Lead; only that it is lighter and harder; whence also it is called *Marcas* of Lead; and its metalline part supposed to be of that Species. See *LEAD*.

Its Texture is somewhat particular, being full of little shining Veins or Threads, like Needles; brittle as Glass—sometimes there are Veins of a red or golden Colour inter-

mixed, which is called *Male Antimony*; that without 'em being denominated *Female*—It fuses in the Fire, tho' with some difficulty; and dissolves more easily in Water.

When dug out of the Earth, it is put into large Crucibles, fused by a violent Fire, and then poured into Cones, or *Antimonial Horns*; which makes the common or crude *Antimony* of the Shops, the Apex whereof is always the best and purest part, as the Basis or broadest part is the foulest.

Antimony is supposed by many of the Chymists to contain the seminal Principles of all kind of Bodies; and accordingly the Character whereby it is denoted in their Writings, is the same with the Character of the Earth; to denote that *Antimony* is a kind of Microcofm. See *CHARACTER* and *EARTH*.

The Uses of *Antimony* are very Numerous, and Important.—It is a common Ingredient in Specula, or burning Concaes, serving to give them a finer Polish.—It makes a Part in Bell-Metal; and renders the Sound more clear.—It is mingled with Tin to make it more hard, white, and sounding; and with Lead, in the casting of Printer's Letters, to render them more smooth and firm. It is a general Help in the melting of Metals, and especially in casting of Cannon Balls. See *SPECULUM*, *FOUNDERY*, &c.

Antimony is the *Stibium* of the Antients; by the *Greeks* called *stivis*.—The reason of its modern Denomination is usually refer'd to *Basil Valentine*, a German Monk, who having thrown some of it to the Hogs, observ'd, that after purging them violently, they immediately grew fat upon it. This made him think that by giving his Fellow-Monks a like Dose, they would be the better for it. The Experiment however succeeded so ill, that they all died of it; and the Medicine thenceforward was called *Antimony*, q. d. *Anti-Monk*.

Its singular Properties and Effects have occasion'd it various other Denominations; as *Protetus*, by reason of its various forms and appearances, *Laput*, *Devorator*, *Saturn* of the *Philosophers*, *Balsamum Solis*, *Lavacrum Leprosorum*, &c. all chiefly respecting its Faculty of destroying, and dissipating wherever Metals are fused along with it, all except Gold; whence its great Use in refining and purifying. See *REFINING*, *PURIFYING*, *GOLD*, &c.

Antimony, is particularly used in Pharmacy, under various Forms, and with various Intentions.—Its medicinal Virtue is supposed to arise from the sulphurous part in its Composition, which being dissolved by any proper Menstruum, sets at liberty an active volatile Salt, or other unknown Principle, to which the Operation is chiefly owing. See *ANTIMONIALS*. See also *SULPHUR*.

Before the XIVth Century, *Antimony* had no place in Medicine; otherwise than as an Ingredient in some Cosmetics; but about that time, *Basil Valentine* having found a method of preparing, and correcting the dangerous Qualities of its Sulphur, published a Book, entitled *Corvus Triumphalis Antimoni*, wherein he maintained it a sure Remedy for all Diseases.—But, in spite of all he could say in its behalf, tho' confirmed by Experience, *Antimony* remained in a general Neglect, upwards of 100 Years; till about the beginning of the XVth Century, when it was brought into Vogue by *Paracelsus*.—The Parliament of *Paris*, immediately upon this Restoration, condemned the use of it in form; and a Physician named *Besacier*, having been found delinquent herein, was excluded the Faculty. It seems, a deal of Mischief had been done by it, for want of knowing the proper ways of Application; so that the Affect of Parliament represents it as a mere Poison.—

Several learned Men complained of so severe and unjust a Prohibition; and by a Course of happy Experiments brought it into Esteem again; whence in spite of all the Invektives made against *Antimony*, by divers Authors, it was at length replaced, in the Year 1617, by Public Authority, among the Number of Purgative Drugs; and was inserted accordingly in the Pharmacopœia, published by the Faculty the same Year.

Patin did all he could to decry *Antimony*: in his Letters we find an unusual Vehemence express'd against it.—He had even compiled a large Register of Persons whom the Physicians had kill'd by it; which he call'd the *Martyrology of Antimony*.

Crude *ANTIMONY*, or *Antimony in Substance*, is the Native Mineral *Antimony*, melted down and cast in Cones, as abovementioned.—It is much used in Diet-drinks and Decoctions of the Woods, and Compositions against the Scurvy, as a Diaphoretic, and Deobstruent. See *DIAPHORETIC*.

Prepared *ANTIMONY* is that which has undergone some Chemical Process, whereby its Nature and Powers are altered or abated; and thus differently, according to the Circumstances of the Preparation. See *ANTIMONIALS*.

Antimony, says Mr. Boyle, alone, or associated with one or two other Ingredients, by a variety of Operations and Compositions, might be brought to furnish a whole Apo-

theary's Shop: It will answer the Physician's Intention whether he wants to employ a Cathartic, or an Emetic, a Diarrhetic, Diaphoretic, Decobruent, Bezoardic, Cordial, &c.

Regulus of ANTIMONY, or Purification of ANTIMONY. See *REGULUS of Antimony.*

Of this are made the *Villule Perpetue, Vinum Emeticum, &c.* See *PILLULE Terpetue, EMETIC Wine, &c.*

Glass of ANTIMONY, Vitrum Antimonii, is crude Antimony ground and calcined by a vehement Fire, in an earthen Crucible; till it ceases to fume, which is a Proof that its Sulphur is evaporated.—The Calx is then vitrified in a Wind Furnace; upon which it becomes transparent, ruddy, and shining. See *GLASS.*

This is the strongest Emetic of any Preparation of Antimony. See *EMETIC.*—Yet, if dissolved in Spirit of Urine, it ceases to be either Emetic, or Cathartic; even tho' the Menstruum be drawn from it.

Flowers of ANTIMONY, is Antimony pulverized, and sublimed in an Aludel; the volatile Paris wherof stick to the subliming Pot. See *FLOWER and SUBLIMATION.*

This is also a powerful Vomitive; of singular Efficacy in maniac Cases; being the *Heracleean Remedy* by which some have gain'd so much Reputation.

Another sort of Flowers are made of the *Regulus of Antimony* with Sal-Ammoniac sublimed as before; which make a Remedy somewhat gentler than the former.—*Helmont* also gives us a Preparation of *purging Flowers of Antimony.* See *DIAPHORETIC Antimony.*

Butter of ANTIMONY, is a white, gummosus Liquor; otherwise call'd *Icy Oil of Antimony.* It is usually prepared of crude (tho' sometimes of *Regulus of Antimony*, and corrosive Sublimatè, by pulverizing, mixing, and distilling 'em by a gentle Heat: upon which the Butter rises into the Neck of the Retort; from which, when full, it is to be melted down into the Receiver, by the Application of live Coals.

It is of a very fiery, corrosive Nature, so as to be a Poison when used internally. Externally it is applied as a Caustic, to stop Gangrene, cure Caries, Cancors, &c. See *CAUSTIC.*

This Butter may be converted into an Oil, called also *rectified Butter of Antimony*; by gently distilling it a second time; which renders it more fluid, fusible, volatile, and efficacious.—This digested with thrice its Weight of Alcohol, makes the purple *Tincture of Antimony,* a Secret highly valued by Mr. Boyle, as an excellent Vomit.

The same Butter precipitates, by warm Water, into a white, ponderous Powder, or Calx, call'd *Mercurius Vita,* and Powder of *Algarot*; repared a violent Emetic.

Of Butter of Antimony is also prepared the Bezoar Mineral; by dissolving the rectified Butter with Spirit of Nitre; then drying the Solution, and applying more Spirit of Nitre; and repeating this a third time. The white Powder remaining at last, kept neatly red-hot for half an Hour, is the Bezoardicum Mineral. See *BEZOAR.*

Cinnabar of ANTIMONY, is prepared of Mercury, Sulphur, and Antimony mixed and sublimed in a luted Pot-head, and a naked Fire.—It is a good Diaphoretic and Alterative. See *CINNABAR.*

There is also a Cinnabar of Antimony procured after the Butter of Antimony has done rising, by increasing the Degree of Fire.—This sublimed a second time, makes a yet better Cinnabar.

Crocus, or Liver of ANTIMONY, is the same with what we otherwise call *Crocus Metallorum*; excepting that this latter is more mild and less emetic; being made by repeated Lotions of the former, in warm Water, and then drying it again to a Powder. See *CROCUS Metallorum.*

It is also call'd *Terra Sancta Rulandi, Terra Aurea, Terra Rubra, &c.*

Diaphoretic ANTIMONY, is prepared of Antimony powder'd and mixed with three times the Quantity of Nitre; and the Mixture thrown at several times into an ignited Crucible; upon which, a Detonation ensues. What remains being kept in Fusion a quarter of an Hour, turns into a white Mass call'd *Antimonium Diaphoreticum Nitratum,* or Diaphoretic Antimony with Nitre; being hereby bereaved of its emetic and purgative Virtue, and rendered only Diaphoretic. See *DIAPHORETIC.*

If the Air can have Access to it, it will again become emetic. See *AIR.*

There is also a kind of sweet Diaphoretic Antimony; made of the former, by pulverizing, boiling it in Water, and filtrating the Decoction: Upon which, a white Powder will be left in the Filter; which being washed by repeated Effusions of warm Water, and dried, is the *deleyed or common Diaphoretic Antimony.*—This is given as an Alexipharmic in malignant Fevers, Small Pox, &c. particularly in case of Deliriums. It is also applied in scorbutic and venereal Disorders: Though the learned Boer-

have absolutely decries it, as a mere metalline Calx, destitute of all medicinal Virtue, and only fit to load and choke up the Body, by its Inactivity and Weight.

Diaphoretic Nitre of ANTIMONY, is made by exhaling the Solution of the preceding Preparation over a gentle Fire to a dryness; upon which, there remains a Salt composed of Nitre, and the Sulphur of the Antimony, call'd *Nitrum Antimoniatum.*—It is no other than a *Cor of Sal Prunelle,* or *Sal Polycephalum;* and accordingly is found aperitive, cooling, diarrhetic; good in inflammatory Fevers, &c. See *PRUNELLE and POLYCEPHAL.*

Golden Sulphur of ANTIMONY, is made of the Scorpi which arises in preparing the *Regulus*; by boiling it, filtrating the hot Decoction, and adding distill'd Vinegar: Upon which the whole coagulates, changes into a brown Colour, emits a stercoraceous Odor, and precipitates a red Powder. The whole Mass being wash'd by repeated Affusions of Water, till the Liquor come away scintill'd and insipid, and then dried, it becomes a red Powder, call'd the *Golden Sulphur, or Precipitate of Antimony*; either on account of its own Colour, or the yellow euc it gives to Glass, Metals, &c.—It either proves emetic, cathartic, diarrhetic, or sudorific, as its Force happens to be determined. See *PURGATIVE.*

Ceruss, or Calx of ANTIMONY, is the *Regulus* distilled with Spirit of Nitre, in a Sand-Furnace; what remains after the Fumes are all spent, is a white Powder; which being wash'd sweet, is the Ceruss required.—It is diaphoretic; and by many set on a footing with the *Mineral Bezoard.*

Magistry of ANTIMONY, is crude Antimony digested with *Aqua Regia* eight or ten Days; to which, Water is then put, but pour'd off again e'er it settle: This to be repeated till there remain nothing behind but a yellowish Powder; which, being suffer'd to settle, and the Water decanted off, becomes by repeated Ablutions, an insipid Magistry. See *MAGISTRY.*

Its Operation is rather cathartic than emetic, tho' sometimes sudorific.

Antimony revivified, Antimonium resuscitatum, is prepared of Flowers of Antimony and Sal-Ammoniac, digested in distill'd Vinegar; then exhaled, and the remainder sweeten'd by Ablution.—It is emetic, and sometimes also sudorific; good in Maniac Cases, &c.

All these Preparations of Antimony, how severe soever alone, may yet be so managed, as to operate little or nothing at all in the Prime Vias, nor be perceived till they are got into the smallest Vessels.—And then it is they are qualified to combat the Gout, Pox, Evil, &c. See *PURGATIVES.*

ANTINOMASY, or rather ANTONOMASY, a Figure in Rhetoric, whereby a Noun Appellative is used instead of a proper Name. See *FIGURE and NAME.*

Thus we say, the *Philosopher,* instead of *Aristotle;* the *Orator,* for *Cicero;* the *Apostle,* for *St. Paul,* &c.—Thus also we call a voluptuous Person, a *Sardanapalus,* &c. And thus we say *Henry the Great,* meaning *Henry IV. of France.*

The Word is compounded of the Greek *ân,* and *nomas,* Name.

ANTINOMY, Antinomia, a Contradiction between two Laws, or two Articles of the same Law. See *LAW.*

The Word sometimes also signifies an Opposition to all Law; whence a Sect of Enthusiasts, who are for carrying Gospel-Liberty above all moral Regards, and slight the Motives of Virtue as insufficient to Salvation, are call'd *Antinomians.*

The Word is derived from the Greek *ân,* contra, and *nomos,* Law.

ANTINOUS, in Astronomy, a Part of the Constellation *Antis,* or the Eagle. See *EAGLE.*

ANTIPIGMENTS, Antipigmenta. See *ANTEPIGMENTS.*

ANTI-PATHY, Antipathia, a natural Enmity, or Aversion of one Body to another.—In this Sence, the Word stands oppos'd to *Sympathy.* See *SYMPATHY.*

Such is commonly said to be between the Salamander and the Tortoise, the Vine and the Elm, the Toad and the Weazel, the Sheep and the Wolf, the Olive and the Oak, &c.

Mersenne, in his *Quest. Comment. in Genes,* gives other more extraordinary Instances; as, that a Drum made of a Wolf-Skin, will break another made of a Sheep-Skin: That Hens will fly at the Sound of a Harp string with Fox-Gut Strings, &c. See other Matters relating to this Head, under the Articles *SOUND, MUSIC, TUNE, TARANTULA,* &c.

Mr. Boyle mentions "a Lady, who having a strange Antipathy to Honey; and her Physician conceiving it a great measure imaginary, mix'd a little Honey in a Medicine dicine applied to her Foot: But he soon repented his

"Curiosity; for it caused a strange Disorder in her, which ceas'd upon removing of the Medicine. *Useful of Philes*." — *Dr. Mather* relates that "a Gentleman in *New-England* swoons upon seeing any one cut their Nails with a Knife; but is not the least affected, if the same be done with a Pair of Scissors." *Phil. Transact.* N^o 539.

The *Peripatetics* account for *Antipathies* from certain occult Qualities inherent in the Bodies. See OCCULT, PERIPATETIC, &c. See also WITCHCRAFT, CONSENT OF Parts, &c.

Some think that the Term *Antipathy*, can only be applied to any certain purpose, when used with the Restriction of modern Philosophers; among whom it signifies no more than a *Vitæ Centrifuga*, or repelling Power. See REPELLING and CENTRIFUGAL.

The Word is compounded of the Greek *anti*, contra, against, and *πάθος*, Passio.

ANTIPERITASIS, in Philosophy, the Action of two opposite Qualities, one whereof, by its Opposition excites and heightens the Force of the other. See QUALITY.

This Word is Greek, *Antiperitasis*; form'd of *anti*, contra against, and *περιτασις*, to stand round; *q. d.* Resistance or Recency against any thing that surrounds or betsets another.—It is usually defined, "the Opposition of a contrary Quality, whereby the Quality it opposes becomes heighten'd, or intended; or the Action whereby a Body attack'd by another, collects itself, and becomes stronger by such Opposition; or an Intension of the Activity of one Quality, by the Opposition of another."

Thus Cold, say the School-Philosophers, on many Occasions exalts the Degree of Heat; and Dryness that of Moisture. See COLD, &c.

Thus it is that Quick-Lime is set on fire by the Affusion of cold Water: So Water becomes warmer in Winter than in Summer, by *Antiperitasis*: And to the same Cause it is owing that Thunder and Lightning are excited in the middle Region of the Air, which is continually cold.

This *Antiperitasis* is a Principle of great Use and Extent in the Peripatetic Philosophy.—"It is necessary," according to the Authors of that Class, "that Cold and Heat be both of them endued with a self-ignoring Power, which each may exert when surrounded by its contrary; and thereby prevent their mutual Destruction."

Thus it is supposed that in Summer, the Cold expelled from the Earth and Water by the Sun's scorching Beams, retires to the middle Region of the Air, and there defends itself against the Heat of the superior and inferior. And thus, also, in Summer, when the Air about us is fairly hot, we find that Cellars and Vaults have the opposite Quality: so in Winter, when the external Air freezes the Lakes and Rivers, the internal Air, in the same Vaults and Cellars, becomes the Sanctuary of Heat; and Water, fresh drawn out of deeper Wells and Springs, in a cold Season, not only feels warm, but manifestly smokes."

Mr. Boyle has canvass'd this Doctrine thoroughly, in his History of Cold.—"It is certain that, *a priori*, or considering the reason of the thing abstracted from the Experiments alleg'd to prove an *Antiperitasis*, it appears highly absurd: Since, according to the Course of Nature, one Contrary ought to destroy, not to strengthen another: Beside, that it is an Axiom that natural Causes act as much as they can; which, as to inanimate Creatures, must be allowed physically demonstrative; in regard thereto act not by choice, but by a necessary Impulse."

It is commonly, indeed, alleg'd, as a Proof of a Power Nature has given Bodies of flying their Contraries, that Drops of Water, falling on a Table, collect into little Globules, to avoid the contrary Quality in the Table, and keep themselves from being swallowed up by the dry Wood: but this we can account for on more intelligible Principles, viz. the Power of Attraction, and Repulsion. See ATTRACTION and REPUSSION.

As to the *Antiperitasis* of Cold and Heat, the Peripatetics talk of those Qualities being surrounded by their Opposites, as if each of 'em had an Understanding and Foresight, that in case it did not gather up its Spirits, and fight against its Antagonist, it must infallibly perish; which is to transform physical Agents into moral ones.

In effect, not only Reason, but Experiment also, concludes against the Notion of an *Antiperitasis*: The leading Argument urged in behalf of it, is, the heating of quick Lime in cold Water: Now, who can sufficiently admire at the Laziness and Credulity of Mankind, who have so long, and generally acquiesced in what they might so easily have found to be false? For if, instead of cold Water, the Lime be quenched with hot, the Ebullition will oftentimes be far greater than if the Liquor were cold. See HEAT.

Again; in freezing a Balon to a Joint-Stool with a Mixture of Snow and Salt, by the Fire-side, 'tis pretended,

that the Fire so intends the Cold, as to enable it to congeal the Water that stagnated upon the Surface of the Stool, betwixt that and the bottom of the Vessel. But how little need there is of an *Antiperitasis* in this Experiment, appears hence, that *Mr. Boyle* has purposely made it with good success, in a place where there neither was, nor ever probably had been, a Fire. See FIRE and FREEZING.

The Patrons of an *Antiperitasis* usually plead that Aphoristical Saying of *Hippocrates*, "The Viscera are hottest in Winter," in behalf of their Opinion: But the only Proof usually brought of such greater Heat, is, that Men then have a greater Appetite; so that the Aphorism supposes Digestion to be made in the Stomach by Heat, which is easily refell'd. See DIGESTION.

Another Argument, urged in favour of an *Antiperitasis*, is borrowed from the Production of Hail, which is presumed to be generated in Summer only, not in Winter; and, according to the Schools, is made in the lowest Region of the Air, by the Cold of the falling Drops of Rain being so highly intended by the Warmth they meet with in the Air near the Earth, as to congeal into a solid form. See the Article HAIL.

As to the refreshing Coldness which subterraneous Places afford in Summer, it may be deny'd that they are then really colder than in Winter; tho' if the contrary were allow'd, it would not necessarily infer an *Antiperitasis*.—'Tis certain, the smoking of Waters drawn from deep places in frosty Weather, does not necessarily infer such Water to be warmer than at other times when it does not smoke; since that Effect may proceed, not from the greater Warmth of the Water, but from the greater Coldness of the Air. For a Man's Breath in Summer, or in mild Winter Weather, becomes very visible; the cold ambient Air suddenly condensing the fuliginous Steams discharged by the Lungs; which, in warmer Weather, are readily dissipated in imperceptible Particles through the Air. See the Articles WATER, COLD, &c.

ANTIPERISTALTIC, in Anatomy, a Motion of the Intestines contrary to the *Peristaltic* Motion. See PERISTALTIC.

The *Peristaltic* Motion is a Contraction of the Fibres of the Intestines from above, downwards; and the *Antiperistaltic* Motion is their Contraction from below, upwards. See INTESTINES.

The Word is derived from the Greek *anti*, against, *mel*, about, and *πίσις*, that which bath the Power of compressing. See VERMICULAR.

ANTIPHONE, ANTIPHONUM, the Answer made by one Choir to another, when the Halm or Anthem is sung between two. See ANTHEM, CHOIR, &c.

ANTIPHRAISIS, a sort of figurative Speech which has a contrary meaning to what it carries in appearance.—Or, a kind of Irony, wherein we say one thing and mean the contrary. See FIGURE and IRONY.

The Word is derived from the Greek *anti* and *φρασις*, of *φράσις*, I speak.

'Tis a common Error, to make *Antiphrasis* consist in a single Word; as when we lay that the *Parce* are thus call'd by *Antiphrasis*, because they spare no body, *Parce quia nemini parcunt*.—*St. Jerom*, in his Epistle to *Riparius* against *Vigilantius*, says he ought rather to be call'd *Dormitantius* pro *Antiphrasis*, than *Vigilantius*, because he opposed the Christians holding Wakes at the Tombs of the Martyrs.

Senilius, in his *Minerva*, p. 471. condemns such *Antiphrasis*; by reason *Parce* is not applicable to a single Word, but signifies *Orationem, aut loquendi Modum*. See PHRASE.

That excellent Grammarian defines *Antiphrasis* to be a Form of Irony, whereby we say a thing, by denying what we ought rather to affirm it to be: *Antiphrasis est Ironia quedam forma cum dicimus negando id quod debuit affirmari*.—As when we lay, *It did not displeas me*, or, *He is no Fool*; meaning, *I was pleas'd with it*, or, *He is a Man of Sense*.—On this Principle, the *Antiphrasis* ought to be rank'd among the Figures of Sentences, and not those of Words. See FIGURE.

ANTIPODES, or ANTICTHONES, in Geography, a relative Term, understood of such Inhabitants of the Earth as live diametrically opposite to one another. See EARTH.

The *Antipodes* are those who live in Parallels of Latitude equally distant from the Equator, the one toward the North, the other to the South; and under the same Meridian, the 180°, or just half of that Meridian, distant from one another. See PARALLEL and MERIDIAN.

The *Antipodes* have the same degree of Heat and Cold; the same length of Night, and Day; but at contrary times; it being Midnight with one when it is Noon with the other; and the longest Day with one, when shortest with the other. See HEAT, DAY, NIGHT, &c.

Again, as the Horizon of any place is 90° distant from the Zenith thereof; *Antipodes* have the same Horizon. See HORIZON.—And hence, when the Sun rises to one, he sets to the other. See RISING and SETTING.

The Word comes from the Greek *ἀντί*, against, and *πόδι*, a Foot.

Plato is said to have first started the Notion of *Antipodes*; and likewise to have given them the Name: As he conceiv'd the Earth to be of a spherical Figure, it was easy for him to infer that there must be *Antipodes*. See EARTH.

Many of the Antients, and particularly *Lactantius* and *Aurelius*, laugh'd at the Notion.

The latter of those Fathers is out of his wits to think how Men and Trees should hang pendulous in the Air, their Feet uppermost; as they must do in the other Hemisphere.

And if we may believe *Aventine*, *Boniface* Archbishop of *Metz*, and Legate of *Pope Zachary*, in the eighth Century, declared a Bishop of that Time, called *Virgilius*, a Heretick, for maintaining that there was such a thing as *Antipodes*.

But this Piece of History is controverted by the Authors of the *Mém. de Trevoux*; having been made use of, it seems, by some Persons, to shew that the Church has been mistaken in its Decisions.—The only Account extant of the matter, upon which the Tradition is founded, is a Letter of *Pope Zachary* to *Boniface*; wherein he says, "if it be proved that he maintain that there is another World, and other Men under the Earth; another Sun, and another Moon; expel him the Church, in a Council; after first divesting him of the Priesthood, &c." The Authors above-cited endeavour to prove that this Threatening was never executed; and that *Boniface* and *Virgilius* afterwards lived together in good Understanding; and that *Virgilius* was even canonized by the same *Pope*. *Mém. de Trev. an 1708.*

They further assert, that were the Story true; the *Pope* had done nothing contrary to Truth and Equity: in regard the Notion of *Antipodes* was very different in those days, from what it is now.—For besides the Demonstrations of the Mathematicians, say they, the Philosophers too added their Conjectures; and asserted that the Sea made two great Circles around the Earth, which divided it into four parts; that the vast Extent of this Ocean, and the burning Heats of the torrid Zone, prevented any Communication between those four parts of the Earth, so that Men could not be of the same Kind, nor proceed from the same Original: and this," say our Authors, "was what was meant by the Word *Antipodes* in those Times."

As to the Sentiments of the Primitive Christians with regard to *Antipodes*; some, rather than admit the Conclusions of the Philosophers, absolutely denied the whole, even the Demonstrations of the Geometricians relating to the Sphericity of the Earth: which *Lactantius's* way, *Inspir. lib. iii. c. 24.* Others only call'd in question the Conjectures of the Philosophers: which is *St. Augustin's* Method, *de Civit. Dei, lib. xvi. c. 9.*—After putting the Question, whether there ever were Nations of *Cyclopes*, or *Pigmies*, or of People whose Feet stood outward, &c. he comes to the point of *Antipodes*, and asks, "whether the lower part of our Earth be inhabited by *Antipodes*?"—He made no doubt of the Earth's being round, nor of there being a part diametrically opposite to ours; but only disputes its being really inhabited. And the Considerations he suggests for that purpose are just enough: As, That they who asserted *Antipodes*, had no History for it; That the lower part of the Earth may be cover'd with Water; and that to place *Antipodes* there, of a different Origin from us, (as must have been the Opinion of the Antients, since they thought it impossible to go from our World to theirs;) is to contradict Scripture, which teaches that the whole Race descended from one Man.—Such is the Sentiment of that Critic.

It may be added, that the Christian Fathers were not the only Persons who disputed the Truth of *Antipodes*. *Lucretius* had done it before them at the end of his first Book, v. 10, 65, &c. See also *Plutarch, lib. de Facie in Orbe Luna*; and *Pliny*, who refutes the Opinion, *lib. ii. c. 65.*

ANTIPEPLICAMENTS, in Logic. See ANTEPREDICAMENT.

ANTIPTOSIS, a Figure in Grammar, whereby one Case is put for another. See CASE.

The Word comes from the Greek *ἀντί*, pro, and *πίπτω*, casus.

ANTIQUARY, ANTIQUARIUS, a Person who studies and searches after Monuments and Remains of the Antients; as, old Medals, old Books, old Statues, Sculptures, and Inscriptions, and, in general, all curious Pieces that may afford any light into Antiquity. See ANTIQUITY.

See also MONUMENT, MEDAL, INSCRIPTION, SCULPTURE, STATUE, &c.

Formerly there were several other kinds of *Antiquaries*. The *Librarii*, or Copists, i. e. those who transcribed in fair legible Characters what had been before written in Notes, were called by this Name. See LIBRARIJ.—They were also denominat'd *Calligraphi*.

In the chief Cities of *Greece* and *Italy*, there were other Persons of Distinction, call'd *Antiquaries*, whose business it was to shew Strangers the Antiquities of the Place, to explain the ancient Inscriptions, and to give them all the assistance they could in this way of Learning.

This was doubtless a very curious and useful Institution; and might well deserve to be re-establish'd.—*Panjanias* calls these *Antiquaries* Ἐργηταί; and the *Sicilians* call'd 'em *Nyssaegoi*.

ANTIQUATED, ANTIQUATUS, something obsolete, or grown out of date, or use. See OBSOLETE.

ANTIQUE, ANTIQVUS, something that is antique. See ANTIEN.

The Term is chiefly us'd by Architects, Sculptors, and Painters; who apply it to such pieces of Architecture, Sculpture, Painting, &c. as were made at the time when the Arts were in their greatest perfection, among the ancient *Greeks* and *Romans*, viz. from the Age of *Alexander the Great* to the time of the Emperor *Phocas*, when *Italy* became over-run by the *Goths* and *Vandals*.

In this sense the Word stands oppos'd to *Modern*. See MODERN.

Thus we say, an antique Building, or a Building after the Antique; an antique Bust, or Bas Relievo; the antique Manner, Taste, &c.

ANTIQUE is sometimes even contradistinguish'd from antique, which denotes a lesser degree of Antiquity, when the Art was not in its utmost Purity: Thus, antique Architecture is frequently distinguish'd from antique Architecture. See ARCHITECTURE.

Some Writers use the Compound *Antiquo-modern*, in respect of old Gothic Churches and other Buildings; to distinguish them from those of the *Greeks* and *Romans*.

ANTIQUE WORK. See ANTIQ. WORK.

ANTIQUITY, ANTIQVITAS, ancient Days; or the Times past long ago. See AGE, TIME, ANTIQUE, ANTIEN, &c.

Thus we say, the Heroes of Antiquity, the Marks of Antiquity, &c.

ANTIQUITY is also us'd in respect of the Remains, or Monuments of the Antients. See MONUMENT, REMAINS, RUINS, &c.

Thus we say, the Antiquities of *Greece*, the Jewish Antiquities, *Roman Antiquities*, &c.—The Chinese are innate Admirers of Antiquity.

ANTISCIJ, or ANTOCII, in Geography, the People who inhabit on different sides of the Equator; and who, of consequence, at Noon, have their Shadows projected opposite ways. See SHADOW.

The People of the North are *Antiscij* to those of the South; the one projecting their Shadows, at Noon, towards the North Pole, and the others towards the South Pole.

Antiscij are frequently confounded with *Antaci*, who inhabiting opposite sides of the Equator, have the same Elevation of Pole. See ANTOCII.

The *Antiscij* stand contradistinguish'd from *Periscij*, &c. See PERISCIJ.

ANTISCIJ are sometimes also us'd among *Astrologers*, for two Points of the Heavens equally distant from the Tropics—Thus the Signs *Leo* and *Taurus* are held *Antiscij* to each other.

The Word comes from the Greek *ἀντί*, against, and *σκία*, Shadow.

ANTISCORBUTICKS, Remedies against the Scorbutus or Scorvy. See SCORBUTUS. See also DETRAGENT.

ANTI-SFODIUM. See SFODIUM.

ANTI-SIGMA, a Mark in the ancient Writings, when the Order of the Vowels is to be changed.

ANTISPASTUS, in the ancient Poetry, a Foot in Verse, having the first Syllable short, the second and third long, and the fourth short. See FOOT and VERSE.

ANTISTITIUM, a Term us'd in ancient Histories, for a Monastery. See MONASTERY.

ANTISTROPHE, a Figure in Grammar, whereby two Terms of Things mutually dependent one on another, are reciprocally converted. See FIGURE and CONVERSION.

As, if one should say, the Master of the Servant, and the Servant of the Master.

ANTISTROPHE was also a kind of Dance in use among the Antients; wherein they stepped sometimes to the Right, and sometimes to the Left, still doubling their Turns or Conversions. See DANCE.

The Motion towards the Left, they call'd *Antistrophe*; from *ἀντί*, against, and *στροφή*, of *στροφή*, I turn. See ΣΤΡΟΦΗ.—Hence

ANTYPOPHIT, is also used in Lyric Poetry, in respect of an Ode, which is usually divided into the *Strophe*, *Antistrophe* and *Epode*. See **ODE**.

The *Antistrophe* is a kind of Echo, or Repetition to the *Strophe*; and the *Epode* a launching out from them both. See **STROPHE** and **EPODE**.

ANTITACTA, or **ANTITACTIC**, in Antiquity, a kind of Gnosticks, who own'd that God, the Creator of the Universe was good and just; but afflicted wital, that one of his Creatures had created Evil, and had engaged us to follow it, in order to see us in opposition to God the Creator; and that it becomes our Duty to oppose this Author of Evil, in order to avenge God of his Enemy. See **GNOSTICISMS**.

Hence comes their Name; which is derived from the Greek *ἀντιτάξω*, I oppose, I am contrary.

ANTITENAR, in Anatomy, a Muscle of the Thumb; whose Office is to draw it to the Fingers—It rises from the Bone of the *Metacarpus* that sustains the Fore-finger, and is inserted into the first Bone of the Thumb. See **FINGER**.

ANTITENAR is also the Name of a Muscle of the great Toe; which arising from the inferior part of the third *Os Cuneiforme*, and passing obliquely, is inserted into the inside of the *Ossa Sesamoidea*. See **TOE**.

The Word is compounded of the Greek *ἄντι*, against; and *ἑνάριον*; as being Antagonist to the *Tenars*. See **TENAR**.

ANTITHESIS, in Rhetoric, a setting two things by way of Opposition to each other, that the Excellency of the one, and the Folly of the other may appear the more strongly. See **OPPOSITE** and **OPPOSITION**.

Such is that of *Cicero*, in the second *Catilinarian*: "On the one side stands Modesty, on the other Impudence; on the one Fidelity, on the other Deceit; here Piety, there Sacrilege; here Continency, there Lust, &c."—Such also is that of *Alexander* to some seditious young Men, *Andite, Juvencus, Seneca, quæm Juvencum senes Andivere*—Such again is that of *Seneca, Cavæ Leves loquuntur, Ingenites stupent*.

St. Augustin, Seneca, Salvoian, and many other ancient Writers, seem greatly to affect *Antitheses*; but among the Moderns they are generally decried. *Destinatus* represents them as the Favourites of young Writers.

Perflus long ago declaimed against the impertinent use of *Antithets*.

—*Criminis Rati*

Librat in Antithesis, doctus possit Figurari.

ANTITHESIS is also a Figure in Grammar, whereby one Letter is substituted in the room of another; as *ali* for *illi*. The Word is deriv'd from the Greek *ἀντιθέσις*, Opposition.

ANTITHETARIUS, a Term occurring in the Title of a Chapter in the *Laws of Casuarius*, viz. Capit. 47, but not in the Chapter it self. The meaning of the Word, is where a Man endeavours to discharge himself of the Fact of which he is accused, by recriminating, i. e. by charging the Accuser with the same Fact. See **RECRIMINATION**.

ANTITHET, **ANTITHETON**, an Opposite, or Contrary; something disposed by way of Antithesis. See **ANTITHESIS**.

ANTITRAGUS, in Anatomy, part of the Auricle opposite to the *Tragus*. See **TRAGUS**, **AURICLE** and **EAR**.

ANTITRINITARIANS, Hereticks who deny the holy Trinity, and teach that there are not three Persons in the God-head. See **TRINITY** and **GOD**.

Thus the *Photinians*, who do not believe the Distinction of Persons in God; the *Arians*, who deny the Divinity of the Word; and the *Macedonians*, who deny that of the Holy Spirit, were all properly *Antitritarianians*. See **PHOTINIAN**, **ARIAN**, and **MACEDONIAN**.

Among the Moderns, *Antitritarianians* are particularly understood of *Scinians*, call'd also *Unitarians*. See **SCINIAN** and **UNITARIAN**.

The *Bibliotheca Antitritarianorum*, or *Antitritarianian* Library, is a Posthumous Work of *Christopher Sandius*, an eminent *Antitritarianian*; wherein he gives a List digested in Order of Time, of all the Socinian or modern *Antitritarianian* Authors, with a brief Account of their Lives, and a Catalogue of their Works.

ANTITYPE, a Greek Word, properly signifying a Type or Figure corresponding to some other Type. See **TYPE**.

The Word *Antitype*, *Ἀντίτυπος*, occurs twice in the New Testament, viz. in the Epistle to the *Hebrews*, IX. 24. and in *St. Peter, 1 Ep. III. 21*. where its genuine Import has been much controverted—The former says, that "Christ is not entered into the Holy Places made with Hands, which are *ἀντίτυπα*, the Figures or *Antitypes* of the true; " now to appear in the Presence of God for us."—Now *τύπος*, as is elsewhere observed, signifies the Pattern by which another Thing is made: and as *Moses* was obliged to make the Tabernacle, and all Things in it, according to

the Pattern shew'd him in the Mount; the Tabernacle so formed was the *Antitype* of what was shewn to *Moses*: Any Thing therefore formed according to a Model or Pattern, is an *Antitype*.

In the latter Passage, the Apostle speaking of *Nash's* Flood, and the deliverance of only eight Persons in the Ark from it, says *ἡ σὺν ἡμῖν ἀβὴρ τὸν οὐρανὸν βασίλευσεν*. *Baptisus* being an *Antitype* to that, now saves us; not putting away the Fifth of the Flood, but the Author of a good Confidence toward God, &c. The meaning is, that Righteousness, or the Answer of a good Confidence towards God, now saves us by means of the Resurrection of Christ, as formerly Righteousness saved those eight Persons by means of the Ark, during the Flood—The Word, *Antitype*, therefore here signifies a general Similitude of Circumstances; and the Particle *ἡ*, *substantivo*, refers, not to the immediate Antecedent, *ἡ τὸ ὕδωρ*, Water, but to all that precedeth.

ANTITYPE, among the ancient Greek Fathers, and in the Greek Liturgy, is also applied to the Symbols of Bread and Wine in the Sacrament. See **SYMBOL**, **EUCCHARIST**, &c.

Hence it has been argued by many Protestants, that the Greeks do not really believe the Doctrine of Transubstantiation; in regard they call the Bread and Wine *Antitypes*, *ἄντιτυποι*, q. d. Figures, Similitudes, even after the Consecration. See **GREEK**, **TRANSUBSTANTIATION**, &c.

Clement, in his Constitutions, *S. Cyril*, and *Gregory Nazianzen*, and several other ancient Writers, make no scruple of using the Term on the same Occasion; as is allowed by *Leo Allatin*, *Smicer*, &c. *Thebanur*. *Ecc. lessit*.

M. Simon replies to *Dr. Smeith*, who had made this Observation of the Greeks calling the Species, *Antitypes*, after Consecration; that the Greek Church does not hold the Consecration completed till after the Prayer call'd *Invocation of the Holy Spirit*, which comes after the Passage of the Liturgy, where the Bread and Wine are call'd *Antitypes*.

Add, that *Marcus Ephesus*, the Leader of the Party against the *Latins*, at the Council of *Florence*; makes use of this very Passage in the Greek Liturgy, to prove that the Consecration does not consist wholly in the Words, *This is my Body*; but also in the Prayer or Benediction which the Priest rehearses afterwards, invoking the Holy Spirit. See **GREEK**.

ANTLER, among Hunters, the first of the Pearls that grow about the Bar of a Deer's Horn. See **HEAD**.

There are also *Sar-Antlers*, *Brow-Antlers*, &c. See **HUNTING**.

ANTINOMASIA, in Rhetoric. See **ANTINOMASY**.

ANTRUM, in Anatomy, the beginning of the Pylorus, or lower Orifice of the Stomach. See **PYLORUS** and **STOMACH**.

ANTOECI, in Geography, choid Inhabitants of the Earth who live under the same Meridian, and at the same Distance from the Equator; the one towards the North, and the other to the South. See **EARTH**.

Hence, the *Anteci* have the same Longitude and the same Latitude, only of a different Denomination. See **LATITUDE**, &c.

The Inhabitants of *Peloponnesus* are *Anteci* to the *Hotentots* of the Cape of Good Hope—*Anteci* are frequently confounded with *Antipodi*. See **ANTIPODI**.

The *Anteci* have precisely the same Hours of the Day and Night; but opposite Seasons; when 'tis 12 a-Clock in the longest Summer Day with one; 'tis 12 a Clock of the shortest Winter's Day with the other; and hence the Night of the one is always equal with the Day of the other. See **DAY**, **HOUR**, **SEASON**, &c.

Hence also those Stars which never rise to any given Place, to the *Anteci* and *Antipodes* thereof never set; and vice versa—And if the *Anteci* turn their Faces toward each other, or the *Antipodes* look both toward the Equator, the Stars will rise to the one on the right Hand, and to the other on the Left. See **ANTIPODES**, &c.

The Word is form'd of the Greek *ἄντι*, *contra*, and *ἄντιον*, I dwell, inhabit—The *Anteci* are contradictingly call'd from the *Periæci*. See **PERIÆCI**.

ANUS, in Medicine, the Extremity of the Intestine *Rectum*; or the Orifice of the Fundament. See **RECTUM** and **FUNDAMENT**.

Fistula in *Ano* are very difficult of Cure. See **FISTULA**. The *Gabonites* sent golden *Anus's* back with the Ark, to be cured of a Disease which afflicted them in the *Anus*. See **ARK**.

Spinifer of the *Anus*, or *Spinifer* **ANI**. See **SPRING-TER ANI**.

Levator ANI. See **LEVATOR ANI**.

Scalptor ANI. See **ANI-SCALPTOR**.

Procidencia, or *Prolapsus ANI*. See **PROCIDENTIA ANI**.

Anus is also used for a small Hole in the third Ventricle of the Brain, which leads into the fourth Ventricle of the *Cerebellum*. See **BRAIN** and **VENTRICLE**.

AORISTUS, AORIST, a Tense in the Greek Grammar, answering to the Præter-perfect of the Latin and English. See TENSE and GREEK.

As, for instance, *I lov'd you*—The Greeks have two *Aoristus's*; the Latin, *notæ*. See PRÆTER and PRÆTERITUM.

AORTA, in Anatomy, an Artery, which arises immediately out of the left Ventricle of the Heart; and is distributed thence thro' all Parts of the Body. See ARTERY and HEART.

The *Aorta* is otherwise called the *great Artery*; as being the Trunk, out of which the other Arteries all spring; and the great Conduit or Canal whereby the Blood is convey'd throughout the Body. See BLOOD and CIRCULATION.

The Word is form'd of the Greek *ἀορτή*, which signifies a Vessel, Chyl, &c.—The *Aorta* is divided into two great Trunks, call'd the *Ascending* and *Descending*; *Aorta ascendens* and *descendens*. See ASCENDING and DESCENDING.

Ossifications, or Petrifications of the Coats of the *Aorta* at its rise from the Heart, are so frequent, that some think it a constant Case.—Mr. Cooper, however, has an express Dissention to them that whenever such Ossification happens in Man, it is a Disease, and incommodes the Part in the due Execution of its Office. Of this he gives us several Instances; one, in which an Intermittion of Pulse was produced; in another, a Coldness of the Extremes with a Gangrene, &c. *Phil. Transact. N^o 299*.

AONIDES, in Mythology. See MUSÆ.

APAGMÆ, a Term us'd by some Writers in Chirurgery, for the thrusting of a Bone or other Part out of its proper place. See DISLOCATION.

APAGOGICAL Demonstration, is such as does not prove the thing directly, but shows the Impossibility and Absurdity which arises from denying it. See DEMONSTRATION.

Hence it is also call'd, *Reductio ad impossibile*, or *ad absurdum*. See REDUCTION and ABSURDUM.

APANNAGE, APENNAGE, or APPANNAGE. See APPANAGE.

APELLITA, Hereticks in the Primitive Church, who taught that Christ left his Body dissolved in the Air; and so ascended into Heaven without it.

APARTMENT, a Portion of a large House, wherein a Person may lodge separately; having all the Conveniences requisite to make a compleat Habitation. See HOUSE, &c.

A compleat *Apartment* must consist at least of a Chamber, an Antichamber, and a Cabinet or Wardrobe. See CHAMBER, ANTICHAMBER, &c.

The Word comes from the Latin *Apartmentum*, of the Verb *partiri*, to divide.

APATHY, a moral Insensibility; or a Privation of all Passion, all Motion, or Perturbation of Mind. See PASSION.

The *Stoicks* affected an entire *Apathy*: their wife Man was to enjoy a perfect Calmness or Tranquillity of Mind, incapable of being ruffled, and above the reach of any Sense either of Pleasure or Pain. See STOICKS, PLEASURE and PAIN.

The Word is form'd of the privative Particle *α*, and *πάθος*, Passion.

In the first Ages of the Church the Christians adopted the Term *Apathy*, to express a Contempt of all earthly Concerns; a State of Mortification, such as the Gospel prescribes. And hence we find the Word often us'd among the devouter Writers: *Clemens Alexandrinus*, in particular, brought it exceedingly in vogue; thinking hereby to draw the Philosophers to Christianity, who aspir'd after such a sublime pitch of Virtue.

Quietism, is only *Apathy* disguised under the appearance of Devotion. See QUIETISM.

APATURIA, in Antiquity, Feasts celebrated by the *Æthiopi* in honour of *Bacchus*. See FEAST.

The Word is derived from the Greek *ἀπαύρισις*, Fraud.—It is said to have been instituted in memory of a fraudulent Victory, obtain'd by *Milanthus* King of *Athens*, over *Xanthus*, King of *Beotia*, in a single Combat, which they agreed upon, to put an end to a Debate between 'em relating to the Frontiers of their Countries.—Hence *Zuadus* calls it *Festum Deceptionis*, the Feast of Deceit.

This Feast lasted four Days: The first Day, those of the same Tribe made merry together; and this they call'd *Διπνοε*. The second Day, which they call'd *Ἀνδρῶν*, they sacrificed to *Jupiter* and *Minerva*. The third Day, which they call'd *Ἰουβῶν*, such of their young Men and Maids as were of Age, were admitted into their Tribes. The fourth Day they call'd *Ἑστία*.

Other Authors give a different Etymology of this Feast, from what we have now related: They tell us, that the young *Æthiopi*ans were not admitted into the Tribes on the

third Day, till their Fathers had first swore that they were their own Children; and that till that time they were suppos'd, in some measure, to be without Fathers, *ἀπαύρισις*, whence the Feast, say they, took its Name.

Xenophon, on the other hand, informs us, that the Relations and Friends met on this occasion, and join'd with the Fathers of the young People who were to be received into the Tribes; and that from this Assembly the Feast took its Name: that in *Ἀπαύρισις*, the *α* is from being a Privative, is a Conjunction, and signifies the same thing with *σύν*, together.

APEPSY, APEPSIA, in Medicine, a want of Digestion, See DIGESTION.

Apopsia, is a Defect in the Stomach, which prevents the Aliment taken in from affording a proper Chyle for supplying the Blood and nourishing the Body. See FOOD, STOMACH, CHYLE, BLOOD, NUTRITION, &c.

The Word is form'd from the privative Particle *α*, and *πέψω*, *coquo*, I boil, or concoct.

APERIENS, or APERIENS, or APERITIVE, in Medicine, See APERIENT.

The Word is Latin; being the Participle of the Verb *Aperire*, to open; *q. d.* opening.

Crocus Martis APERIENS, opening Saffron of Iron, is a Preparation of Iron-Plates or Filings, made by exposing them to the Rain or Dew, till they contract a Rust; which is the Medicine required. See CROCUS and MASS. See also AIR, &c.—it is a good *Aperient*.

APERIENS Palpebræ Rellus, in Anatomy, is a Muscle, which rising in the Orbit of the Eye, near the entrance of the Optic Nerve; passes over the attolent Muscle of the Eye, and is at last inserted into the whole superior Part of the upper Eye-lid, which it serves to open. See EYE and PALPEBRA.

APERIENTS, or APERITIVE Medicines, are such as open the obstructed Passages of the small Vessels, Glands, and Pores; and by that means promote a due Circulation of the contained Juices. See OBSTRUCTION, CAPILLARY GLAND, CIRCULATION, &c.

Aperients, then, coincide with *Diobstruents*. See DI-OBSTRUENT.

The five lesser *Aperients*, or opening Seeds, are Grass, Madder, Bryngo, Capers and Cammock.—The greater opening Seeds are Smallage, Fennel, Asparagus, Parsly, and Butcher's Broom.

APERITIONS, in Architecture, are the Openings in a Building; as Doors, Windows, Stair-cases, Chimneys, Outlets and Inlets for Light, Smoke, &c. See BUILDING. See also DOOR, WINDOW, &c.

The *Aperitions* should be as few as may be; it being a Rule that all Openings are Weakenings.

APERTURE, APERTURA, the Opening of any thing; or a Hole, Cleft, or vacant Place in some otherwise solid, or continuous Subject. See OPENING.

The Word comes from the Latin *Apertura*, of *Aperire*, to open.

In Geometry, *Aperture* is us'd for the Space left between two Lines which mutually incline towards each other to form an Angle. See ANGLE.

In Optics, *Aperture* is the Hole next the Object-Glass of a Telescope, or Microscope; thro' which the Light and Image of the Object come into the Tube, and are thence carried to the Eye. See OBJECT-GLASS.

APERTURE is also understood of the Part of the Object-Glass itself, which covers the former, and which is left pervious to the Rays. See TELESCOPE.

A great deal depends on having a just *Aperture*.—To find it experimentally; apply several Circles of black smutted Paper, each bigger than other, upon the Face of the Glass, from the Magnitude of a Pea to the whole Extent of the Glass; and with each of these, separately, view several distant Objects; as the Moon, Stars, &c. That thro' which they appear the most distinctly, is to be pitch'd upon.

M. *Newton* affirms, that he found that the *Apertures* of Telescopes ought to be nearly in the subduplicate Ratio of their Lengths: But *Huygens*, who first introduced the Use of *Apertures*, assures us he found by experience, that the *Aperture* of an Object-Glass, E. g. of 30 Foot, is to be determined by this Proportion: as 30 to 3, that is, as 10 to 1, so is the Root of the Distance of the Focus of any Glass multiply'd by 30, to its *Aperture*: and the focal Distances of the Eye-Glasses are to be proportional to the *Apertures*.

A Table of *Apertures* for Telescopes of various Lengths, &c. See under the Article TELESCOPE.

The greater or less *Aperture* of an Object-Glass, it is to be noted, does not increase or diminish the visible Area of the Object; all that is effected by this, is the admittance of more or less Rays, and consequently the more bright or obscure Appearance of the Object.

Hence, in viewing *Venus* thro' a Telescope, a much less Aperture is to be used than for the *Moon*, *Jupiter*, or *Saturn*, because her Light is so vivid and glaring—Which Consideration does a little invalidate and disturb M. *Arcour*'s Proposition, as is shown by Dr. *Hook*, *Phil. Transact.* N^o 4.

Apertura Tabularum, in ancient Law-Books, signifies the breaking open a Last Will and Testament. See WILL and TESTAMENT.

Apertura Feudi, denotes the loss of a feudal Tenure, by default of Hinc to him, to whom the Feud or Fee was first granted. See FEE, FEUD, TENURE, &c.

APETALOUS, in Botany, something without Petala or Leaves. See PETALA and LEAF.

The Word comes from the privative Particle α, and σῆμα, *Folium*, a Leaf. See FLOWER, PLANT, &c.

APEX, the Vertex or Summit of any thing. See VERTEX, APICES, &c.

APHÆRESIS, or AΦHÆRESIS, in Grammar, a Figure, whereby something is taken away from the beginning of a Word. See FIGURE and WORD.

Thus *Cicæna*, by AΦhæresis was wrote *Conia*. A like Retrenchment at the end of a Word is call'd *Syncope* or AΦcope. See SYNCOPE and AΦCOPE.

APHELION, or AΦHELLION, in Astronomy, that Point of the Earth's or a Planet's Orbit, in which it is the farthest distant from the Sun that it can be. See ORBIT.

Thus a Planet being in A, (Tab. ASTRONOMY, fig. 1.) its utmost Distance from the Sun S; is said to be in its *Aphelion*. See PLANET, SUN, &c.

In the System or Supposition of the Sun's moving round the Earth; the same Point is called the *Apogee*. See APOGEE.

The *Aphelion* stands oppos'd to the *Perihelion*. See PERIHELION.

The *Apheliums* of all the primary Planets are at rest; excepting that those Planets nearest the Sun, *viz. Mercury, Venus, the Earth, and Mars*, being acted upon by *Jupiter and Saturn*, their *Apheliums* move a small matter in Consequence with respect to the fixed Stars, and this in the sequiplicate Ratio of the Distance of those Planets from the Sun.

Hence, if the *Aphelium* of *Mars* move 35 Minutes in Consequence, in respect of the fixed Stars in 100 Years; the *Apheliums* of the *Earth, Venus, and Mercury*, will move in 100 Years, 18 Min. 36 Sec. 11 Min. 27 Sec. and 4 Min. 39 Sec.

The Method of finding the place of the *Aphelion*, is by observing several of the great Digressions of the Planet from the Sun; till by two or three repeated Observations it be found to remain at a stand—in the *Philosophical Transactions*, N^o 128, we have a Geometrical Method of finding the *Aphelia* of the Planets, by Dr. *Halley*.

Kepler places the *Aphelium* of *Saturn* for the Year 1700, in 28^o. 3'. 44". of *Sagittarius*; De la Hire, in 29^o. 14'. 41".

—The *Aphelium* of *Jupiter* in 8^o. 10'. 40". of *Libra*: De la Hire in 10^o. 17'. 14". —The *Aphelium* of *Mars* in 0^o. 51'. 29". of *Virgo*; De la Hire in 0^o. 25'. 25". —The *Aphelium* of the *Earth* in 8^o. 25'. 30". of *Cancer*. —The *Aphelium* of *Venus* in 5^o. 24'. 27". of *Aquarius*; De la Hire in 0^o. 16'. 10". —And the *Aphelium* of *Mercury* in 1^o. 44'. 29". of *Sagittarius*; De la Hire in 1^o. 3'. 14".

The annual Motion, according to *Kepler*, of the *Aphelium* of *Saturn* is 1'. 11". of *Jupiter*, 47". of *Mars*, 1'. 7". of the *Earth*—of *Venus*, 1'. 18". and of *Mercury* 1'. 45". According to De la Hire, that of *Saturn* is 1'. 22". of *Jupiter* 1'. 32". of *Mars* 1'. 7". of the *Earth*—of *Venus* 1'. 26". and of *Mercury* 1'. 59".

The Word comes from the Greek ἀπή, from, and ἄνω, Sun.

APHONY, from the privative Particle α, and φωνή, Voice; implies a loss of Speech, or Voice. See VOICE, &c.

APHORISM, a Maxim, general Rule, or Principle of a Science; or a brief Sentence, comprehending a great deal of Matter in a few Words. See MAXIM, &c.

The Term is chiefly used in Medicine and Law.—Thus we say the *Aphorismus* of *Hippocrates*, of *Scaevola*, of *Boerhaave*, &c. *Aphorismus* of the Civil Law, &c.

The Word comes from the Greek ἀπό, εἶς, choice, ἄσπασμα, separate, seligo, I separate, I chuse, *q. d.* choice, or select Sentences. See SENTENCE, AXIOM, &c.

APHRONITRE, AΦHROΝITREUM, a kind of Nitre, mention'd by the Antients; supposed to be the Spume, or the lightest and Subtilst Part thereof, emerging to the top. See NITRE.

Some modern Naturalists rather take the ancient *Aphronitre* to have been a Native Salt-Petre; now call'd *Salt-Petre* of the Rock. See SALT-PETRE.

The Word is compounded of the Greek ἀφρός, Froth, and ἄνιτρον, Nitre.

APHTHÆ, in Medicine, Itic Ulcers or Pimples rising in the Mouth, the Palate, Gums, at the Root of the Tongue, &c. See ULCEA, &c.

Sucking Children are particularly subject to these *Aphthæ*, when either the Nurse's Milk is corrupted or the Child's Stomach becomes unfit for Digestion: for in these cases, the sharp acrimonious parts of the Milk rising up, easily exulcerate those tender and delicate parts.

There are some of these *Aphthæ* white, others red, others livid and blackish: The white and red are the least dangerous, and the most easily cured; the livid and black often prove mortal.

When they happen in grown Persons, they are owing to thm, scrofs, and sharp Humours returned from the several parts of the Body to the Mouth.

A Linctum of *Acid' Rosarum* and Oil of Vitriol, is esteem'd a good Remedy for the *Aphthæ*.

The Word seems derived from the Greek ἀφθαι, to corrupt; or from ἀφθαι, accedo, I kindle.

APHTHARDOCITES, AΦHTHARDOCITES, a Sect of Heretics, sworn Enemies of the Council of Chalcedon.

They arose among the *Eusebians*, and made their first appearance in the Year 553. See EUSEBIAN.

The Word is derived from the Greek ἀφθαι, incorruptible, and δόξα, I judge; and was given them, because they imagined the body of *Jesus Christ* was incorruptible and impassible, and not capable of Death.

APARY, a *Bee-House*; a Place or Court where Bees are kept.

The Word comes from the Latin, *apis*, a Bee. The *Apiary* should be green'd from high Winds on every side, either naturally or artificially; and well defended from Poultry, &c. whose Dung is offensive to Bees.

APICES, in Botany, little Knobs growing on the Tops of the *Stamina*, in the middle of Flowers. See STAMINA and FLOWER.

They are commonly of a dark, purplish Colour.—By the Microscope they have been discover'd to be, as it were, a sort of *Capsule feminales*, or Seed-Vessels, containing in them small globular, and often oval Particles of various Colours, and exquisitely formed; called the *Farina FCCUNDANS*. See FARINA FCCUNDANS.

What the Uics of these are, is not entirely agreed: Some have guess'd them to be a kind of male Sperm which falling down into the Flower, fecundates and ripens the Seed. See further under the Article Generation of PLANTS.

The Word is Latin; being the Nominative plural of *Apex*, the Top or summit of any thing.

APOBATERION, among the Antients, signified a firewell Speech, or Poem; occasion'd by a Person's departure out of his own Country, or some other place where he had been kindly received, and entertained.

Such is that of *Aestas* to *Heleus* and *Andromache*, *Æn.* Lib. III.—The *Apobaterion* stands oppos'd to the *Epitaphion*. See EPITAPHION.

APOCALYPSÆ, *Apocalypsis*, *q. d.* Revelation; the Name of the last Book in the Canon of Scripture. See CANON and BIBLE.

The *Apocalypse* contains Discoveries, or Revelations relating to many important Mysteries of Christian Faith; made to the Apostle *St. John*, in the Isle of *Patmos*, during his Banishment there under the Psecution of *Domitian*. See REVELATION.

The Word is form'd of the Greek ἀποκάλυψαι, I reveal, I discover.

This, of all the Books of the New Testament, is that, about which the antient Fathers, and the Practice of the Church, were the most and the longest divided.—*St. Jeron* relates, that the Greek Church doubted of its Authentickness even in his Days: *St. Basil* and *Gregory Nazianzen* absolutely reject it; and the Council of *Laudiceæ* never mention it in their Canon of the Sacred Writings.

Some attributed it to the Heretic *Cerinthus*; and others, to another *John*, Disciple of *St. John*—*Dionysius Alexandrinus* censures it as written in bad Greek, and even finds Solecisms and Barbarisms in it, abundance: tho he allows it to contain a mystic sense, which he says he admires even where he does not understand.

On the other hand, *St. Justin*, *Irenæus*, and *St. Augustin*, make no doubt of its being Canonical. The third Council of *Carthage*, held in 397, plac'd it in the Canon of the New Testament; and the Churches both of the East and West have acknowledged it ever since.

The *Alogians* are represented by Ecclesiastical Writers, as great Declainers against the *Apocalypse*, many of the Fights whereof they turn'd into Ridicule; particularly the Visions of the seven Trumpets; the four Angels bound on the River *Euphrates*, &c.—*St. Ephraim* defend: it against them: The Book, he observes, is not a mere History, but a Prophecy; so that it is no wonder the Author should

should express himself after the manner of the Prophets, whose Style is usually figurative.

Of all their Objections against the Authority of this Book, that seems the best grounded which is drawn from those Words in Cap. ii. ver. 15. *Write to the Angel of the Church of Thyatira*: There was not, say they, any Christian Church at *Thyatira* at that time.—*St. Epiphanius*, who grants 'em this Point, is forced to have recourse to the Prophetic Spirit; as if *St. John* had foreseen there would be a Church there in course of time.

Some late Authors have made a good amendment to *St. Epiphanius's* Answer: 'Tis probable, in the time of that Father, the Catalogue of the Bishops, with other Acts, which shew that there had been a Church establish'd there from the time of the Apostles; might not be known. *Grotius* adds, that tho' there was not, indeed, any Church of Gentile Converts at *Thyatira* when *St. John* wrote; yet there was one of Jews, as there had been another at *Tibefalonia* before *St. Paul* preached there.

Several Orthodox Writers have rejected the *Apocalypse* as a Book which countenanced the Reveries of *Corinthians* touching the carnal Reign of Christ on Earth. See *CERINTHIAN*, and *MILLENNARIES*.

The *Dionysius Alexandrinus* allow'd the *Apocalypse* for an inspired Writing; yet he took it for the Work of another *John*, beside *St. John the Evangelist*; which he endeavours to make appear from the Diversity of Style. But we all know how precarious the Arguments are, which are drawn from the mere Consideration of Style.—'Tis true, in most of the ancient Greek Copies, both printed and manuscript, we find the Name *John the Divine* at the Head thereof; but they who put this Title, meant no more thereby than to denote the Apostle *St. John*, whom the Greek Fathers call the *Divine*, by way of Eminence, to distinguish him from the other Evangelists. See *EVANGELIST*.

There have been several other Works published under the Title of *Apocalypse*.—*Saxamen* mentions a Book us'd in the Churches of *Palästina*, call'd the *Apocalypse*, or *Revelation* of *St. Peter*. He also mentions an *Apocalypse* of *St. Paul*; which the *Coptes* retain to this day. *Enchiridion* also speaks of both these *Apocalypses*.—*St. Epiphanius* mentions an *Apocalypse* of *Adam*: *Nicéphorus*, of an *Apocalypse* of *Efraz*: *Gratian* and *Cedrenus*, of an *Apocalypse* of *Moses*, another of *St. Thomas*, and another of *St. Stephen*.

Porphyry, in his Life of *Plotin*, makes mention of the *Apocalypses* or *Revelations* of *Zoroaster*, *Zosirian*, *Nicthæus*, *Allegans*, &c.

APOCHYLISMA, among Physicians, *Inspiration*; the boiling and thickening of any Juice with Sugar and Honey, into a kind of hard Conscience. See *INSPIRATION*, &c.

APOCOPE, a Figure in Grammar, wherein the last Letter or Syllable of a Word is cut off. See *FIGURE* and *WORD*.

The Word is derived from the Greek *ἀπόκοψω*, to cut off; which is form'd from the Preposition *ἀπό*, and the Verb *κόβω*, I cut.

A like Retrenchment at the beginning of a Word is call'd *APROCRISIS*. See *APROCRISIS*.

APOCRISIARIUS, or **APOCRISIARUS**, in Antiquity, an Officer appointed to carry or deliver the Messages, Orders, and Answers of a Prince.—He afterwards became his Chancellor, and kept the Seal. In the baser *Latin* we sometimes meet with *Apostrota*, Secretary, for *Apostrofy*.

Zosimus defines the *Apostrofyarius*, Secretary for foreign Affairs; being the same with what *Vopiscus* in the Life of *Aurelian* calls *Notarius Secretorum*.

The Title and Quality of *Apostrofyarius* became at length appropriated, as it were, to the Pope's Deputy or Agent, who resided at *Constantinople* to receive the Pope's Orders, and the Emperor's Answer.—*St. Gregory* was *Apostrofyarius* of Pope *Pelagius*, at the time when he compos'd his *Morals* on *Job*.

The *Apostrofyarius* did the Office of the modern Nuncio's. See *NUNTIO*.

Sometimes, however, he had the Rank and Quality of the Pope's Legate. See *LEGATE*.

The Heresy of the *Mountbelites*, and afterwards that of the *Iconoclastes*, broke off the Custom of having a Papal *Apostrofyarius* at *Constantinople*.

The Word is form'd from the Greek *ἀποκρίσις*, *R'sponsum*, Answer.—Hence he is usually call'd in *Latin*, *R'sponfalis*.

APOCROUSTICS, Medicines intended to stop the Flux of malignant Humours, to a part diseas'd. See *REFRELLENT*.

They are usually cold, astringent, and consisting of large Particles; wherein they differ from drawing Medicines, which are hot, and consist of more subtle parts. See *RURIBERRA*.

The Word is derived from *ἀποκρύπτω*, *psello*, *psello*, I drive. **APOCRYPHAL**, something *obscure*; or that comes from an uncertain Author, whereon much credit cannot be reposed.

Thus we say, an *Apocryphal* Book, Passage, History, &c. meaning, such as are of suspected Authority.—In Matters of Doctrine, the Writings of *Hereticks*, *Schismatics*, &c. are held *Apocryphal*.

Vossius observes, that with regard to the sacred Books, none are to be account'd *Apocryphal*, except such as have neither been admitted into the Synagogue, nor the Church, so as to be added to the Canon and read in public. See *CANON*, *BIBLE*, &c.

The Word is derived from the Greek *ἀποκρύπτω*, to hide; because the Origin of such Books was unknown, or because they contain'd some Mysteries not fit to be known.—For this reason, the Books of the *Syriacs* were anciently call'd *Apocryphal*, as being committed to the Trust of the *Deceemorian* alone; and for the like reason the Annals of the *Egyptians* and *Tyrans* were call'd by the same Name. See *SYRIBIT*, *DECEMVI*.

Before the *Septuagint* Version, the Books of the Old Testament were all *Apocryphal* in this sense.—But in process of time, the sense of the Word was changed, and those Books alone were call'd *Apocryphal*, which were of doubtful or suspected Authority.

In the original meaning of the Word, all the Writings deposited in the Temple were call'd *Apocryphal*; by reason they were kept secret from the People.

When the Jews publish'd their Sacred Books, they only gave the Appellations of *Canonical* and *Divine* to such as they thus made public; and such as were still retain'd in their Archives, they call'd *Apocryphal*, for no other reason, but because they were not public; so that they might be really Sacred and Divine, tho' not promulg'd as such.

Thus, in respect of the Bible, all Books were call'd *Apocryphal*, which were not insert'd in the Jewish Canon of Scripture; and 'tis in this sense *St. Epiphanius* is to be understood, when he says, that the *Apocryphal* Books are not put in the Ark among the other inspired Writings. See *ARK*.

There has been a great Dispute between the Romanists and the Reformed, about the Authority of those Books, now call'd, by the latter, *Apocryphal*; as, *Judith*, *Tobit*, *Esther*, *Maccabees*, &c. the one having the Opinions of many of the Primitive Fathers for their Vouchers, and the others, the Tradition of their Church.

M. Simon contends, that they must have been read, in Greek, even by the Apostles themselves; which he infers from divers Passages in their Writings.—He adds, that the Church receiv'd them with the other Books of Scripture, from the *Hellenish Jews*; and that if the Churches of *Palästina* never admitted them, 'twas not for their accounting them *Apocryphal* in the sense the Word is now us'd, but because they read none but what were writ in Hebrew.

To this we oppose the Authority of a great number of Ecclesiastical Writers, particularly among the *Greeks*; who make a precise Distinction between the Books now call'd *Apocryphal*, and those contain'd in the Jewish Canon.—*St. Jerom*, in particular, is very full upon the Head; and even speaks of his Opinion as the common Opinion of the Church at that time.

APODICTICAL Argument, or *Syllagism*, signifies a clear, convincing Proof, or Demonstration of a Thing. See *DEMONSTRATION*, *ARGUMENT*, &c.

The Word is form'd of the Greek *ἀποδείκνυμι*, I demonstrate, I shew clearly.

APOGEE, or **APOGEUS**, in Astronomy, that Point in the Orbit of the Sun, or a Planet, which is furthest distant from the Earth. See *ORBIT* and *EARTH*.

The *Apogee* is a Point in the Heavens, at the Extreme of the Line of the *Apsides*; in which the Sun, or a Planet, is at the greatest Distance that it can be at, from the Earth, in its whole Revolution. See *APSID*, *EARTH*, *PLANET*, &c.

The opposite Point hereto, is call'd the *Perigee*. See *PERIGEE*.

The ancient Astronomers regarding the Earth as the Centre of the System; chiefly consider'd the *Apogee* and *Perigee*: The Moderns, making the Sun the Centre, change the *Apogee* and *Perigee* for *Aphelion* and *Perihelion*. See *APHELION* and *PERIHELION*. See also *SYSTEM*.

The *Apogee* has a Motion; the Quantity of which is found by comparing two Observations thereof made at a great distance of time; converting the difference into Minutes, and dividing it by the number of Years elaps'd between the two Observations. The Quotient gives the annual Motion of the *Apogee*.—Thus, from an Observation made by *Hipparchus* in the Year before Christ 129, whereby the Sun's *Apogee* was found $5^\circ, 30'$ of π ; and another

another made by *Ricciolus*, in the Year of Christ 1646, wherein it was found 7° , $26'$, of \odot ; the annual Motion of the *Apogee* is found to be $1'$, $2''$.

APOGEE of the *Moon*. See *MOON*.

APOGEE of the *Equant*, is its farthest Distance from the Earth; or that Point where the Circumference of the *Equant* is intersected by the Line of the *Aphides*, in the remotest Part of the Diameter.

So the *Perigee* of the *Equant* is the opposite Point, or the nearest part of the Diameter.

The *aequa Apoee* of the *Epicyle*, is a Point where the *Epicyle* is cut above, by a right Line drawn from its Centre, to the Centre of the *Equant*, or the Point of the *Epicyle* most remote from the Earth. See *EPICYCLE*.

The Word is form'd of the Greek $\alpha\mu\alpha$, *ap*, from $\gamma\epsilon$ and $\omega\eta$ or $\rho\alpha\iota\sigma$, Earth—In the corrupt *Latin*, *Apoee* sometimes signifies a Grotto, or subterraneous Vault.

APOGRAPH, *APOGRAFIUM*, a Copy or Transcript of some Book or Writing. See *COPY*.

In this sense the Word stands oppositely to *Autograph*; as a Copy to an Original. See *AUTOGRAPH*.

It is form'd of $\alpha\mu\alpha$, *ap*, from $\gamma\omega\mu\alpha$, *scribo*, I write.

APOLLINARISTS, *APOLLINARIANS*, ancient Heretics, who denied that *Jesus Christ* assumed true Flesh. *Apollinaris* of *Laodicea*, their Leader, fancied I know not what strange kind of Flesh, which he supposed to have existed from all Eternity.—He distinguish'd between the Soul of *Christ*, and what the *Greeks* call *vis*, *Understanding*; and from this Distinction took occasion to assert, that *Christ* assumed a Soul without its Understanding, and that this Defect was supplied by the Word: tho' some of his Followers held that *Christ* had no Soul at all.

Apollinaris further taught, that the Souls of Men were propagated by other Souls, as well as their Bodies—*Theodoret* charges him with confounding the Persons of the Godhead; and with giving into the Errors of *Sabellius*; and *Basil* accuses him of abandoning the literal sense of Scripture, and taking up wholly with the allegorical sense.

This Heresy was very subtle; it was condemn'd in a Synod at *Alexandria*, under *St. Athanasius*, in the Year 362. It was subdivided into several different Heresies, the chief whereof were the *Polemianis* and the *Antidicomarianites*. See *ANTIDICOMARIANITE*.

APOLLINARIAN Games, in Antiquity, *Iudi Apollinarias*, were solemn Games held yearly by the *Romans* in honour of the God *Apollo*. See *GAME*.

The Tradition goes, that at the first Celebration hereof, they were suddenly invaded by the Enemies; and obliged to take to their Arms: upon which occasion a Cloud of Darts and Arrows falling upon their Enemies, the *Romans* soon return'd Victors to their Sports.

APOLOGETICAL, *APOLOGETIC*, something said, or written by way of Excuse, or Apology for any Action, or Person. See *APOLOGY*.

The *Apologetic of Tertullian* is a Work full of Strength and Spirit; such as in all respects became the Character of that Father.—He there vindicates the Christians from all that had been objected to them, particularly the abominable Crimes said to be perpetrated at their Meetings, and their want of Love and Fidelity to their Country. The Grounds of this last Accusation, was their refusing to take the accustomed Oaths, and swear by the tutelary Gods of the Empire.—*Tertullian* addresses his *Apologetic* to the Magistrates of *Rome*; the Emperor *Severus* being then absent.

APOLOGUE, *APOLOGUS*, a moral Fable; or a feign'd Relation, intended to inform, and amend the Manners. See *FABLE*.

Such are the Fables of *Aesop*; whence, moral Fables are usually denominated *Aesopic Fables*.

Jfn. Scaliger derives the Name $\alpha\mu\lambda\gamma\alpha$, *apologus*, inasmuch as the *Apologue* means something more than what at first sight it expresses.

Father de Colonia makes it essential to the *Apologue*, that it contain what passes among Brutes; and distinguishes it from the *Parable*, by this, that the latter, tho' feign'd, might possibly be true, which the former cannot; since Brutes cannot speak. See *PARABLE*.

APOLOGIA, *APOLOGIA*, *Defence*; a Discourse or Writing in vindication of a Person. See *DEFENCE*, *VINDICATION*, &c.

The Word is form'd of the Greek $\alpha\pi\lambda\omega\gamma\omega\sigma\tau\alpha\iota$, *I referre*, *I referre* with Words.

APONEUROSIS, among Anatomists, the spreading or Expansion of a Nerve, or Tendon, breadth-wise; in manner of a Membrane. See *NERVE* and *TENDON*.

It sometimes also signifies the cutting off a Nerve or Tendon.—And in some Writers we find it used for a Tendon itself. See *TENDON*.

The Word is compounded of the Greek $\alpha\mu\alpha$, *ap*, from $\gamma\epsilon$ and *nuer*, a Nerve.

APOPHLEGMATISMS, are Medicaments, chew'd, in order to draw away Phlegm, and Humours from the Head and Brain. See *MASTICATORY*.

Of this kind is *Tobacco*; which is as excellent as any, abating that it spoils the Teeth; and *Sage* has almost the same Virtues without the same Defects.

The Word comes from the Greek $\alpha\mu\alpha$ and $\phi\lambda\gamma\mu\alpha$.

APOPHYGE, *APOPHYGES*, in Architecture, that part of a Column where it begins to spring out of its Base, and shoot upwards. See *COLUMN* and *BASE*.

The *Apophyge*, in its Original, was no more, than the Ring or Ferril heretofore fasten'd at the Extremities of wooden Pillars, to keep them from splitting; which afterwards was imitated in Stone-work. See *ORDER*.

The Word in its original Greek signifies *Flight*; whence the French also call it *Escape*, *Cunge*, &c. See *CONGE*.

APOPHYSIS, in Anatomy, a Process or Protrusion of a Bone; being a part eminent or jutting out beyond the rest. See *BONE*, *PROCESS*, &c.

Such are the Eminences of the *Vertebrae*, the *Omoplate*, *Thigh-bone*, &c. See *VERTEBRÆ*, *OMOPLATE*, &c.

APOPHYSES Mamillares, are the Beginnings of the olfactory Nerves; as far as the *Osi Criviformis*, where they divide into little Fibres, which pass thro' thole Bones, and spread themselves throughout the upper part of the Nose. See *OLFACTORY NERVUS*, *NOSE*, &c.

APOPHYSES Mamillares, or *Mastoides*, is also one of the external Eminences of the *Osi Petrosum*. See *PETROSUM*.

The Word is Greek, and literally denotes a *Production outwards*.

APOPLEXY, in Medicine, a sudden Privation of all the Senses, and all the sensible Motions of the Body, excepting that of the Heart and Lungs; attended with a great Deprivation of the principal Faculties of the Soul. See *SENSATION*, *MOTION*, &c.

It differs from a *Coma*, a *Lethargy*, and a *Coma*, in regard that in those three Disorders, the Stupor is not so profound, nor all Sensation quite destroy'd. See *CARUS*, *LETHARGY*, and *COMA*.

It differs from a *Syncope*, in that there is no sensible Pulse in this last; whereas in an *Apoplexy*, the Pulse is perceptible almost till Death. See *SYNCOPE*.

It differs from an *Epilepsy*, in regard all Motion is not abolisht in that as in this: and it differs from the *Palsy*, inasmuch as the Palsy is not attended with any Stupor, nor does it deprive the Patient of Sense and Perception. See *EPILEPSY* and *PALSY*.

The *Apoplexy* may be occasion'd by an Interruption of the Passage of the Blood towards the Brain; or by any thing that hinders the Influx of the animal Spirits into the Organs of Sense, and the Parts of voluntary Motion: Sometimes it is owing to an abundance of Phlegm, and sometimes to a viscid *Purina*, wherewith the Brain is oppress'd; as is observable in Winter *Apoplexies*, and in those of old People. It sometimes also comes from too gross a Lympha, which stops up the Nerves; or a Plethora, which oppresses them; or Exerecencies within-side the Cranium, pressing the Vessels; or a Polypus, blocking up the Carotids, &c. See *BRAIN*.

In dissolving Persons dead hereof, clotted extravasated Blood is usually found in one or both Ventricles of the Brain. See *Philos. Transact.* N^o 175, 315, &c.

Hippocrates distinguishes two kinds of *Apoplexies*, the one *strong*, the other *weak*; only differing in the greater, or less Difficulty of Respiration.

The more modern Authors distinguish *Apoplexies*, from their Cause, into *Sanguinous* and *Purinous*; to which may be added *Lymphatic*, *Polypus*, &c.

The Fit is usually preceded by a violent Pain in the Head, Dimness and Loss of Sight or Memory: Sometimes by an universal Indolence; and sometimes by a Flux of pituitous Matter by the Nose and Mouth.—It is attended with a swooning and difficulty of breathing: sometimes with a Fever, rarely with a foaming at the Mouth, frequently with a Sweat, Hemorrhoids, or Diarrhea; and it goes off.

To prevent an *Apoplexy*, Wine and hard Labour are to be avoid'd; no eating to excess; nor so sleeping after Dinner: Exercise to be kept up, and Care and Chagrin to be kept under.

To cure an *Apoplexy*, Medicines must be used that occasion large Evacuations; and nothing of opiate or astrigent meddled withal.—During the Fit, copious bleeding in the Jugulars to be used, and the Patient laid on his back; applying strong Velocities to the Nose; blow up strong Sternutatories, and rub the Temples with Cephalic Mixtures.—A hot Iron may also be apply'd near the Vertex or Occiput, an Epispastic to the Neck; to which

are to be added powerful Purgatives, Clysters, &c.—Cupping and Scarification on the Head, are commend- ed by some in lieu of Venesection.

The Disease sometimes degenerates into a Paralysis— Sometimes only half the Head is affected; in which Case the Disease is called Hemiplegia. See HEMIPLEGIA, &c.

The Word *Apoplexy*, comes from the Greek, *αποπληξια*, to strike or astonish; this Distemper striking suddenly, and, as it were, like a Thunder-bolt.

Apoplectic Water, *Aqua Apoplectica*. See WATER. **APORE**, **ΑΠΟΡΕ**, or **ΑΠΟΡΙΣΜΑ**, a Problem difficult to resolve, and which has never been resolved, tho' it be not, in itself, impossible. See PROBLEM.

Such we conceive the Quadrature of the Circle; the Duplication of the Cube; the Trisection of an Angle, &c. See QUADRATURE, DUPLICATION, TRISECTION, &c.

The Word is derived from the Greek *απορος*, which signifies something very difficult and impracticable; being formed from the Privative α, and πορος, Passage.

Hence also the Word *Pore*, which is understood of those imperceptible Passages in Bodies, which make room for the Transpiration of Humours. See PORE.

When a Question was proposed to any of the Greek Philosophers, especially of the Sect of Academicks; if he could not give a Solution, his Answer was *απορος*, q. d. I do not conceive it, I cannot see thro' it, I am not able to clear it up.

APORRHOE, **ΑΠΟΡΡΗΟΕ**, in Philosophy, sulphu- rous Effluvia or Exhalations, emitted from the Earth, and subterraneous Bodies. See VAPOUR and EXHALATION.

The Word is form'd from the Greek *απορροη*, deflue, I flow from. See MEPHITES, &c.

APOSIOPESIS, in Rhetoric, otherwise called *Reti- cency*; a Figure, by which a Person really speaks of a thing, at the same time, that he makes a shew as if he would say nothing of it. See RETICENCY.

The Word comes from the Greek *αποσιωπις*, tacet, re- ticeo.

APOSTASY, a deserting or abandoning of the true Reli- gion. See RENEGADO.

Among the *Romanists*, it also signifies the forsaking of a religious Order, whereof a Man had made Profession; with- out a lawful Dispensation. See ORDER, &c.

The Antients distinguish'd three kinds of *Apostacy*; the first, a *Supererogative*, is committed by a Priest or Religious, who abandons his Profession, and returns to his Lay State; the second, a *Mandatus Dei*, by a Person of any Condition, who abandons the Commands of God, tho' he retain his Faith; the third, a *Fide*, by him who not only abandons good Works, but also the Faith.

There is this difference betwixt an *Apostate*, and an He- retic; that the latter only abandons a part of the Faith, whereas the former renounces the whole. See HERETIC.

The Word is borrow'd from the *Latin* *apostatare*, to de- spise or violate any thing. Hence

Apostatarum Leges, anciently signify to transgress the Laws.—*Qui leges Apostolatus terre sit, reus sit apud Re- gem*. L. L. Edw. Confess.

The *Latin* *apostatarum*, again, comes from the Greek *απο*, and *στασις*, *στα*, I stand.

APOSTATA *Captivando*, a Writ which anciently lay against one, who having enter'd and profess'd some Order of Reli- gion; broke out again, and wandered the Country, contrary to the Rules of his Order. See APOSTACY.

APOSTEME, **ΑΠΟΣΤΕΜΑ**, **APOSTUME**, in Medicine, a preternatural Tumor; call'd also *Abscess* and *Impostume*. See ABSCESS and IMPOSTUME.

The Word is form'd of the Greek *αποστασις*; which comes from the Verb *αποστασειν*, *abstondere*, to depart from one place and fix in another; alluding to the manner wherein the Tumor is usually form'd of a translated Humor. See DE- RIVATION, FLUXION, REVULSION, &c.

APOSTLE, **ΑΠΟΣΤΟΛΟΣ**, q. d. *Envoy* or *Messenger*; a Disciple of Jesus Christ, commission'd by him to preach his Gospel, and propagate it to all the Parts of the Earth. See GOSPEL.

St. Paul is frequently call'd the *Apostle*, by way of Emi- nence; and the *Apostle of the Gentiles*, by reason his Mini- stry was chiefly made use of for the Conversion of the Gen- tile World, as that of St. Peter was for the Jews.—

The several *Apostles* are usually represented with their re- spective Badges or Attributes: St. Peter, with the Keys; St. Paul, with a Sword; St. Andrew, with a Cross or Sul- tace; St. James minor, with a Fuller's Pole; St. John, with a Cup and a winged Serpent flying from it; St. Bar- tholomew, with a Knife; St. Philip, with a long Staff, whose upper End is form'd into a Cross; St. Thomas, with a Lance; St. Matthew, with a Harcher; St. Matthias, with a Battle-Ax; St. James major, with a Pilgrim's Staff and a Gourd Bottle; St. Simon, with a Saw; and St. Zbad- deus, with a Club.

The Word *Apostle*, *αποστολ*, originally signifies a Person delegated or sent; from the Verb *αποσταλειν*, *mitti*: In which Sense it occurs in *Herodotus*, and other prophane Auth- ors.—Hence, in the New Testament, the Term is applied to divers sorts of Delegates; and to the twelve Disciplo- les by way of Eminence.

In this Sense, certain false Preachers of the Gospel an- tiently disput'd Paul his Quality of *Apostle*; by reason none but those who had seen Jesus, and been Witnesses of his Actions, could be said to be sent by him.—In answer to these sophistical Doctors, who had seduced the Churches of *Galatia*; he begins his Epistle to 'em with these Words, *Paul an Apostle, not of Men nor by Man, but by Jesus Christ and God the Father*: By which he signified that he had his Mission immediately from God; and of consequence was a true *Apostle*.

The name *Apostle* was also attributed to the ordinary tra- velling Ministers of the Church.—Thus St. Paul, in the Epistle to the *Romans*, XVI. 7. says, *Salute Andre- nicus and Junia, say Kinnsuen and Fellow-Prisoners, who are of note among the Apostles*.

The Name *Apostle* was also given to those sent by the Churches to carry their Aims to the Poor of other Churches.

—This Usage they borrow'd from the Synagogues, who call'd those whom they sent on this Message, by the same Name; and the Function or Office itself *αποστολη*, *Apostole*, q. d. Mission.—Thus St. Paul writing to the *Philippians*, tells 'em, that *Epaferoditus* their *Apostle* had mislead'd to his Wants, Chap. II. 25.

APOSTLE is also used for a Person who first planted the Christian Faith in any place.

Thus St. *Dionysius* of *Corinth* is call'd the *Apostle of France*; St. *Xavier* the *Apostle of the Indies*, &c.— In the *East-Indies*, the Jesuit Missionaries are also call'd *Apostles*. See MISSIONARY, &c.

In some Ages of the Church, the Pope was also denomi- nated *Apostle*. See *Sidon. Apollin*. Lib. VI. Ep. 4. See also POPE and APOSTOLICAL.

In the *Greek* Liturgy, **APOSTLE** is particularly used for the Epistles of St. Paul, printed in the Order wherein they are to be read in Churches, thro' the Course of the Year.— Another Book of the like kind, containing the Gospels, is call'd *Ευαγγελιον*, Gospel.—The *Apostles*, of late Days, has also contain'd the other canonical Epistles; and the Acts of the *Apostles*, and the Revelations. Hence it is also call'd, *Acts of the Apostles*, *Πατερστικον*; & that being the first Book in it. See ACTS of the *Apostles*.

APOSTLE is also used among the *Jews*, for a kind of Officer anciently sent into the several Parts and Provinces in their Jurisdiction, by way of Visitor, or Commissary; to see that the Laws were duly observed, and to receive the Moneys collected for the Reparation of the Temple, and the Tribute payable to the *Romans*.—The *Tiberiasus* Code, Lib. XIV. *De Judois*, calls *Apostoli*, *qui ad exequen- dum aurum atque argentum a Patriarcha certo Tempore diriguntur*. The *Jews* call'd 'em *שולחים*, *Scholithim*, q. d. Envoys, Messengers.

Julian the *Apostate* remitted the *Jews* the *Apostole*, *Αποστολη*; that is, as he himself explains it, the Tribute they had been accus'd to send him.

These *Apostles* were a degree below the Officers of the Synagogues call'd *Patriarchs*, and received their Commis- sions from 'em.—Some Authors observe, that St. Paul had born this Office; and that 'tis this he alludes to in the beginning of the Epistle to the *Galatians*: as if he had said, *Paul*, no longer an *Apostle* of the Synagogue, nor sent thereby to maintain the Law of *Moses*, but now an *Apostle* and Envoy of Jesus Christ, &c.—St. *Jerome*, tho' he does not believe that St. Paul had been an *Apostle* of this kind; yet imagines that he alludes thereto, in the Pas- sage just cited.

In the *Ancient* of *Bremen* there are twelve large Pieces of Cannon call'd the twelve *Apostles*; on a Supposition that the whole World must be convinced, and acquiesce in the Preachings of such *Apostles*.

APOSTOLIC, **ΑΠΟΣΤΟΛΙΚΑ**, **APOSTOLICUS**, some- thing that belongs to the *Apostles*, or descends from them. See APOSTLE.

Thus we say the *Apostolical* Age, *Apostolical* Doctrine, *Apostolical* Character, &c.—The *Romanists* call their Church, the *Catholic* and *Apostolical* Church; and thus ap- propriate a Title to *Rome*, which anciently was held in common with it by several other Churches.

In the *Primitive* Church, the Appellation *Apostolical* was attributed to all such Churches as were founded by the *Apostles*; and even to the Bishops of those Churches, as be- ing the reputed Successors of the *Apostles*.—These were confin'd to four; viz. *Rome*, *Alexandria*, *Antioch*, and *Jerusalem*.

In after-times other Churches assumed the same Quality, on account, principally, of the Conformity of their Doctrine, with

with that of the Churches which were *Apostolical* by Foundation, and because all Bishops held themselves Successors of the Apostles. See BISHOP.

The first time the Term *Apostolical* is attributed to Bishops, as such, is in a Letter of *Cicero*, to the Council of *Orleans*, held in 511; tho' that King does not there expressly denominate 'em *Apostolical*, but *Apostolica sede Dignissimo*, Highly worthy of the *Apostolical* See. In 581 *Gaustrum* calls the Bishops met at the Council of *Majon*, *Apostolical Pontiffs*, *Apostolici Pontifices*.

In progress of Time, the Bishop of *Rome* growing in Power above the rest; and the three Patriarchs of *Alexandria*, *Antioch* and *Jerusalem* falling into the hands of the *Saracens*; the Title *Apostolical* became restrained to the Pope and his Church alone.—Tho' some of the Popes, as St. *Gregory* the Great, not contented to hold the Title by this Title, began, at length, to insinuate that it belong'd to 'em by another and peculiar Right, as being the Successors of St. *Peter*.

And hence a Legion of *Apostolicals*; *Apostolical See*, *Apostolical Nuncio*, *Apostolical Notary*, *Apostolical Brief*, *Apostolical Chamber*, &c.

APOSTOLOCI, call'd also **APOSTOLI**, and **APOSTLES**, a Name assum'd by two different Sects of Heretics, on account of their pretending to imitate the Manners and Practices of the Apostles. See **APOSTLES**.

The first *Apostolici*, otherwise call'd *Apotactite* and *Apotactici*, rose out of the *Encratite*, and *Cathari* in the IIIrd Century. They made profession of abstaining from Marriage, and the use of Wine, Flesh, Money, &c. See **APOTACTITE**, **ENCRATITE**, &c.

The other Branch of *Apostolici* were of the XIIIth Century; These also condemned Marriage, but allow'd of Concubines; set aside the use of Baptism; and in many things imitated the *Masichites*. St. *Bernard* wrote against 'em.

APOSTOLORUM Unguentum, the *Apostles Ointment*, in Pharmacy, is a kind of detergent, or cleansing Unguent, composed of twelve Drugs; the Number of the *Apostles*, whence its Name. See **UNGUENT**. It was invented by *Avicenna*, and is otherwise call'd *Unguentum Veneticum*.

The principal Ingredients are Turpentine, Resin, Wax, Gum Ammiac, Birth-wort Roots, Olibanum, Hellebium, Myrrh, and Galbanum, Opopanax, Verdigrise, Litharge, Oil of Olives and Vinegar. See **DETRACTANT**, &c.

APOSTROPHE, in Rhetoric, a Figure, whereby the Orator, in an extraordinary Commotion, turns his Discourse from the Audience, and directs it to some other Person, or thing. See **FIGURÆ**.

Thus *Cicero*, in his Oration for *Milo*, addresses himself to the Great Patriots who had shed their Blood for the Public; and calls 'em to the defence of his Client. So the same Orator in his first *Catilinarian* directs himself to *Jupiter* the Protector of the City and Empire, and beseeches him to repel the Parricide, &c.

The *Apostrophe* is frequently also address'd to Inanimates, as Tombs, Monuments, Defendants, &c.—*Cicero's Apostrophe to Tiberus*, in his Oration for *Ligarius*, is judg'd one of the finest Passages in his Works.

That *Apostrophe of Demosthenes*, wherein he addresses himself to the *Greeks* slain at the Battle of *Marathon*, is famous. Cardinal *Perron* says, it has procured the Orator as much Glory as if he had rais'd 'em from the Dead.

The Word is *Greek ἀποτροπή, apostrophē*; form'd of ἀπο, ab, from, and τροπή, tropē, a turn.

APOSTROPHE, in Grammar, is an Accent or Character, placed over a Letter, in lieu of a Vowel, to denote that the Vowel is cut off, and not to be pronounced. See **ACCENT** and **CHARACTER**. As in *Ev'us* for *Evens*; *The Angelic Host*, for *The Angelic*, &c.—The affluence of frequent *Apostrophes*, so usual among some late *English* Writers, is a great Abuse. See **ANOMALOUS**.

APOTACTITE, or **APOTACTICI**, an ancient Sect, who affecting to follow the Evangelical Counsels of Poverty, and the Examples of the Apostles, and primitive Christians, renounc'd all their Effects and Possessions. See **APOSTOLICI**.

It does not appear that they gave into any Errors during their first State: Some Ecclesiastical Writers assure us, they had divers Holy Virgins, and Martyrs, under the Persecution of *Dioclesian*, in the IVth Century: but they afterwards fell into the Heresy of the *Encratite*, and taught that the renouncing of all Riches, was not only a Matter of Council and Advice, but of Precept and Necessity.—And hence the 6th Law in the *Theodosian* Code joys the *Apotactite* with the *Emmanit* and *Arian*. See **EMMANIT** and **ARIAN**.

The Word is form'd of the *Greek ἀποστασις, or ἀπστασις*, I renounce.

APOTHECARY, a Person who practises Pharmacy, or that part of Physick which consists in the Preparation and Composition of Medicines. See **PHARMACY** and **MEDICINE**.

Nich. Laugins has wrote a large Volume expressly against the *Apothecaries*, their *quid pro quo's*, Ignorance in the *Materia Medica*, and suffering themselves to be so easily imposed on by foreign Merchants, Druggists, &c. who supply 'em with adulterated Drugs, one set for another, old Effete exhausted ones, for new ones just imported from the *Levant*, &c. See **DRUGS**, *Quid pro Quo*, &c.

The *Apothecaries in England* are obliged to make up their Medicines, according to the Formula's prescribed in the College Dispensary. See **DISPENSARY**, **OFFICINAL**, &c.—Their Shops are subject to the Visitation of the Censor of the College; who are empowered to destroy such Medicines as they think good. See **COLLEGE**.

Bartholin complains of the too great number of *Apothecaries in Denmark*; tho' there were but three in *Copenhagen*, and four in all the Kingdom beside: What would he have said of *London*, where there are upwards of 1100?

The Word is derived from the *Greek ἀποθήκη*, Shop, by way of Eminence.

APOTHEGM. See **APOTHEGM**.

APOTHEOSIS, in Antiquity, a Heathen Ceremony, whereby their Emperors and great Men were placed among the Gods. See **God**.

After the *Apotheosis*, which they also called *Deification* and *Conservation*; Temples and Altars were erected to the new Deity, and Sacrifices, &c. offer'd to him. See **DEIFICATION**, **CONSECRATION**, **ALTAR**, **SACRIFICE**, &c.

It was one of the Doctrines of *Pythagoras*, which he had borrow'd from the *Chaldees*; that virtuous Persons, after their Death, were rais'd into the Order of the Gods. See **PYTHAGORIANS**.

And hence the Antients deified all the Inventors of things useful to Mankind; and those who had done any important Service to the Commonwealth.—*Tiberius* proposed to the *Roman* Senate the Apotheosis of *Jesus Christ*, as is related by *Eusebius*, *Tertullian*, and St. *Cyprius*. *Juvenal* rallying on the frequent *Apotheosis*, introduces poor *Atlas*, complaining that he was ready to sink under the Burthen of so many Gods as were every day added to the Heavens. See **HEAVEN**.

Seneca ridicules the *Apotheosis* of *Claudius* with admirable Humour.—*Herodian*, in speaking of the *Apotheosis* of *Severus*, gives us a very curious Description of the Ceremonies used in the *Apotheosis* of the *Roman* Emperors.—

After the Body of the deceased Emperor, says he, had been burnt with the usual Solemnities, they placed an Image of Wax, perfectly like him, but of a sickly Aspect, on a large Bed of Ivory, covered with Cloth of Gold, in the Vestibula of the Palace. The greatest part of the Day, the Senate sat ranged on the left Side of the Bed, dress'd in Robes of Mourning; the Ladies of the first Rank sitting on the right Side, in plain white Robes, without any Ornament.— This lasted for seven Days successively, during which, the Physicians came from time to time to visit the Sick, always making their Report that he grew worse; till at length they publish'd it, that he was dead.

This done, the young Senators and *Roman* Knights take the Bed of State upon their Shoulders, carrying it thro' the *Via Sacra*, to the old *Ferun*, where the Magistrates were used to divest themselves of their Offices. There, they fit it down between two kind of Amphitheatres, in the one whereof are the Youth, and in the other the Maidens of the first Families in *Rome*, singing Hymns set to solemn Airs, in praise of the deceased. These Hymns ended, the Bed is carried out of the City into the *Campus Martius*, in the middle of which Place is erected a kind of square Pavilion, the Inside whereof is full of combustible Matters, and the Outside hung with Cloth of Gold, and adorned with Figures of Ivory, and various Paintings.

Over this Edifice are several others, like the first in Form and Decoration, but less always diminishing and growing slender towards the Top.—On the second of these is placed the Bed of State, and a great Quantity of Aromatics, Perfumes, and odoriferous Fruits and Herbs are thrown all around; after which, the Knights make a Procession or Cavalcade in solemn Measures around the Pile; several Chariots also run round it, those who conduct them being clad in purple Robes, and bearing the Images of the greatest *Roman* Emperors and Generals.

This Ceremony ended, the new Emperor comes to the *Catafalca* or *Pile*, with a Torch in his Hand; and at the same time, fire is set to it, on all Sides; the Spices and other Combustibles kindling all at once.

While this is doing, they let fly from the Top of the Building, an Eagle, which mounting into the Air with a Fire-brand, carries the Soul of the dead Emperor along with it into Heaven, as the *Romans* believe; and thenceforward he is rank'd among the Gods.—'Tis for this Reason that the Medals, wherein *Apotheosis* are represented, have usually an Altar with Fire upon it; or however, an Eagle making its Flight into the Air, and sometimes two Eagles.

The Word *Apotome* is derived from the Preposition $\alpha\pi\omicron$ and 309, DEVS, GOD—

APOTOME, in Mathematics, the remainder or difference of two incommensurable Quantities. See INCOMMENSURABLE.

A—An *Apotome* is an irrational Residue, as CB, arising, when from a rational Line AC, call'd a , you cut off a rational part AB, call'd b , only commensurable in power to the whole Line AC—it may be expressed thus, $a - \sqrt{b}$

B—APOTOME, in Musick, is the Part remaining of an entire Tone, after a greater Semi-tone has been taken from it. See TONE and SEMI-TONE.

The Proportion, in numbers, of the *Apotome* is, of 2048 to 2187. See DEGREE.

The Greeks thought that the greater Tone could not be divided into two equal Parts; for which reason they called the first part $\alpha' \mu\acute{\alpha}\tau\eta$, and the other $\delta\acute{\alpha}\mu\eta\eta$; in this, imitating Pythagoras and Plato.

The Word is deriv'd from the Greek Verb $\alpha\pi\omicron\sigma\tau\omega$, *abscindo*, I cut off.

APOZYMI, in Medicines, a Form of Remedy, otherwise call'd a Decoction. See DECOCTION.

Apocems are a Class of liquid Medicines, compos'd of Decoction of divers Plants, Roots, Flowers, Leaves, Fruit, and Seeds, sweetned and clarified.

It differs from Symp, in Thickness and Consistence; the Symp being more dense and viscid than the *Apocem*. See SYMP.

It differs from a *Julep*, in that it is thicker and more viscid; and is not made with distilled Waters, as *Juleps* are, but only with Decoctions. See JULEP.

There are purging *Apocems*, Cephalic *Apocems*, Hepatic *Apocems*, &c.

The Word is derived from the Greek $\alpha\pi\omicron\sigma\tau\omega$, *deseruesco*, I grow hoar, I bail.

APPANAGE, APPENAGE, APPANAGE, or APENAGE, the Fortune of a King's younger Son; or a settled Portion of Lands, &c. assign'd for the Subsistence of the Cadets, or younger Sons of a Sovereign Prince. See KING, &c.

The younger Sons of England have no certain *Appanages*, as in France; but only what the good-pleasure of the King bestows upon 'em. See PRINCE, &c.

Even in France, during the first and second Races of Kings, the Right of Primogeniture and *Appanages* were unknown; but the Domains were divided pretty equally among all the Children. See PRIMOGENITURE.

Great Inconveniences arising hence; it was at length found proper to put off the young or born with Counties, Duchies, or other-Districts; on condition of their paying Homage and Fealty for the same, and of their reverting in defect of H. or his Male, to the Crown.

This has happened accordingly to the first and second Branch of the Dukes of Burgundy—The Duchy of Orleans is the *Appanage* of the second Son of France.

Nicot and *Menege* derive the Word from the Latin *Panis*, Bread, which frequently includes all other sorts of Provision necessary for Subsistence. *Du Cange* takes it to have been form'd of the base Latin, *Apparus*, *Appanementum*, and *Appanagium*, which amounts to the same thing; those Words, being apparently form'd of *panis*.

APPARATOR, See APPARITOR.

APPARATUS, properly signifies a formal Preparation for some publick and solemn Action. See PARAPARATION.

Thus we say, the Apparatus of a Feast, Coronation, &c. The Prince made his Entry with great Apparatus and Magnificence.

APPARATUS is also used for the Utensils, and Appendages belonging to some more considerable Machine—As the Furniture or Apparatus of an Air-pump, Microscope, &c. See AIR-PUMP, MICROSCOPE, &c.

APPARATUS is sometimes also used, in Chirurgery, for the Bandages, Medicaments, and Dressings of a Part; or the several Matters apply'd for the Cure of a Wound, Ulcer, or the like. See WOUND, ULCER, &c.

There is no judging of the Quality of a Heart, till after taking off the first Apparatus, or Apparel.

APPARATUS is particularly used for the Operation of cutting for the Stone. See STONE and CUTTING.

There are three sorts of Apparatus; *viz.* the Small, Great, and High Apparatus: Which see described under the Article LITHOTOMY.

The High Apparatus, said to have been invented by De Franco, is reputed the most ancient; the little used among us all of late—In this Method an Incision is made above the Groin, along the *Linea Alba*, into the Fund of the Bladder; thro which the Stone is extracted.

The great Apparatus, invented by John de Romanis, a Physician of Cremona, in the Year 1525; is perform'd by making an Incision in the Perineum. See PERINEUM.

It is denominated *great* from the number of Instruments used in it.

The small Apparatus, thus call'd from the few Instruments it requires, was invented by Celsus—Here, the two Fore-Fingers are thrust up the Fundament till they come against the Stone, and drive it to the Neck of the Bladder; from which it is extracted thro an Incision *in perineo*.

APPARATUS is also used as the Title of several Books compos'd in form of Catalogues, or Dictionaries; for the Ease and Convenience of Study.

The Apparatus upon Cicero, is a kind of Concordance, or Collection of Ciceronian Phrases, &c.—The Apparatus Sacer of Posssevinus, is a Collection of all kinds of Ecclesiastical Authors printed in 1611, in three Volumes—Glossaries, Comments, &c. are also frequently call'd Apparatus's.

APPAREL, or APPAREIL. See APPARATUS.

APPARENT, that which is visible, evident to the Eye, or the Understanding. See APPARENCE.

HEAR APPARENT. See HEAR APPARENT.

APPARENT Magnitude of an Object, is the Magnitude thereof such as it appears to the Eye. See MAGNITUDE.

The apparent or seeming Magnitude is measured by the Optick Angle. See OPTICK ANGLE.

Thus the apparent Magnitude of an Object is said to be so many Degrees as the Optick or Visual Angle subtends. See ANGLE and DEGREE.

The apparent Magnitudes of distant Objects are usually said to be as their Distances, reciprocally. See the Articles VISIBLE and VISION.

In strictness, however, it may be demonstrated, that the apparent Magnitudes of the same Object AC, (Tab. OPTICK fig. 61.) seen at different Distances, *viz.* at the Places D and B; that is, the Angles ADC and ABC are in a Ratio less than the reciprocal Ratio of the Distances DG and BG; but when the Object is very remote, *viz.* when the Optick Angles ADC and ABC, are not above one or two Degrees, they are nearly in that Ratio reciprocally.

APPARENT Magnitude or Diameter of the Sun, Moon, or any Planet, is the Quantity of the Angle that their Diameters appear under, to an Observer on the Surface of the Earth.

The apparent Diameters of the Celestial Luminaries are subject to some Diversity—That of the Sun is observ'd to be least when he is in *Cancer*, and greatest when in *Capricorn*. See SUN.

In the Moon there is a twofold Increase and Decrease of her apparent Diameter; the one, when she is in the Conjunction, and Opposition with the Sun; and the other in her Quadratures.

The greatest apparent Diameter of the Sun, according to Cassini, is 32', 10", and the least 31', 38".—According to de la Hire, the greatest is 32', 45" and the least 31', 38"—The greatest apparent Diameter of the Moon, according to Kepler, is 31', 44" and the least 30', 00"—And according to de la Hire, the one is 31', 50" and the other 29', 20". See SUN and MOON.

The apparent Diameter of Saturn's Ring, according to Huygens, is 1', 18", when least. See SATURN.

The apparent Diameters of the other Planets, see under the Article DIAMETER.

If the Distances of any two remote very Objects, for example, two Planets, be equal, their true Diameters are proportional to the apparent ones; and if the apparent Diameters be equal, the true Diameters will be as the Distances from the Eye—Hence, when neither the Distances nor the apparent Diameters are equal, the true Diameters will be in a Ratio compounded of the direct Ratio of the Distances, and of the direct Ratio of the apparent Diameters.

There is a further very observable Difference between the apparent Magnitudes or Diameters of the Sun and Moon when in the Horizon, from what they are in the Meridian; the reason whereof has long perplexed the Philosophers. See MOON.

APPARENT Place of any Object, in Opticks, is that wherein it appears, when seen thro' one or more Glasses. See PLACE, OPTICK GLASS, &c.

The Apparent Place is different from the real one; for when, by Refraction thro Glasses, that parcel of Rays which fall on the Pupil of the Eye, from each Point of any near Object, is made to flow as close together as which comes from a distant one; or when, by the same means, the Rays coming from distant Objects are made to diverge as much as if they flow'd from near ones; then the Eye must necessarily for the Place of the Object changed; which Change is its Apparent Place. See VISION.

If an Object be placed nearer to a convex Glass than is the Distance of its Focus; its Apparent Place may be determined: But if the Object be in the Focus of the Glass, the *Locus Appareus* of the Object cannot be determined; only that it will appear vastly remote.

Not can the *Locus Apparens* be determined, if the Object be beyond the Focus of a convex Glass; But if the Object be further distant from a convex Glass, than its Focus, and the Eye lie beyond the distinct Base, its *Apparent Place* will be in the distinct Base. See the *Article LENS*.

Apparent Place of a Star, &c. is a Point in the Surface of the Sphere determined by a Line drawn from the Eye, thro' the Centre of the Star, &c. See *PLACE*.

The true, or real Place, is determined by a Line drawn from the Centre of the Earth, through the Star or Planet.

APPARENT, or sensible Horizon, is that great Circle which limits our Sight; or the Place where the Heavens and the Earth seem to meet. See *HORIZON*.

It may be conceiv'd as a Cone, whose Vertex is the Eye, and its Base the circular Plain which terminates our Prospect—It determines the Rising and the Setting of the Sun, Moon, or Stars. See *RISEING, SETTING, &c.*

APPARENT CONJUNCTION, is when the right Line supposed to be drawn thro' the Centres of two Planets, does not pass thro' the Centre of the Earth, but thro' the Eye of the Spectator. See *CONJUNCTION*.

APPARENT MOTION, TIME, &c. See *MOTION, TIME, &c.*

APPARITION, in Astronomy, a Star or other Luminary's becoming visible, which before was hid—In this sense the Word stands oppos'd to *Occultation*. See *OCULTATION*.

The *Helical Rising* is rather an *Apparition* than a proper Rising. See *HELIACAL*.

Circle of perpetual APPARITION. See *CIRCLE of perpetual Apparition*.

APPARITOR, or APPARITOUR, or APPARATOR, a Beside in an University, who carries the Mace before the Masters and the Faculties. See *BRADLE* and *UNIVERSITY*.

APPARITORS are also Messengers, who cite Men to appear in the Ecclesiastical Courts. See *SUMMONS, SUMMONER, CITATION, &c.*

Among the *Romans*, *Apparitors* were the same with Serjeants or Tip-staffs among us; or rather *Apparitor* was a general Term, and compriz'd under it all the Ministers and Attendants of the Judges and Magistrates, appointed to receive and execute their Orders—And hence, they say, the Name was deriv'd, viz. from *appareo*, to be present, to be in waiting.

Under the Name *Apparitores* were comprehended the *Scribe, Accens, Interpreter, Praecones, Viatores, Lictores, Servi Publici*, and even the *Carnifices* or Hangmen. See *SCRIBA, ACCENS, &c.*

They were usually chosen out of the Freed-Men of the Magistrates; and their Condition was held in so much Contempt, that as a Mark of Ignominy, the Senate appointed a City that had revolted from them, to furnish them with *Apparitors*.

There were also a kind of *Apparitors of Cohorts*, call'd *Cohortales, or Conditionales*, as being attach'd to a Cohort, and doom'd to that Condition—The *Apparitors of the Praetors, Praetoriani*, were those who attended the Praetors, or Governors of Provinces; and who, on their Master's Birth-day, were always chang'd and preferr'd to better Posts—Add, that the *Pontifices* had also their *Apparitors*, as appears from an Inscription of an ancient Marble in the *Via Appia*:

APPARITORI
PONTIFICUM
PARMULARIO.

APPEAL is used in Common and Civil Law, to signify the removing of a Cause from an inferior Judge to a superior; or the having recourse to a superior Judge to rectify what is amiss in a Sentence pass'd by an inferior. See *JUDGE* and *COURT*.

Appeals lie from any of the ordinary Courts of Justice to the House of Lords, who judge *ex dernier Ressort*; i. e. no *Appeal* lies from 'em. See *RESSORT, PARLIAMENT, &c.*

There are *Appeals* from Ecclesiastical Justice to Secular.—The first Instance is that of *Paulus Sanvostenus*, who being condemn'd and deposed by the second Council of *Artois*, refused to surrender the Episcopal House to *Domnus*, who had been elected his Successor; and *appealed* to the Emperor.

APPEAL is also used in Common Law in the same sense as *Accusatio* among the *Civilians*. See *ACCUSATION*—For, as in the Civil Law, Cognizance of criminal Cases is taken either upon Inquisition, Accusation, or Denunciation; so in ours it is taken either upon Indictment or *Appeal*.

Indictment comprehends both Inquisition and Denunciation—*Appeal* or Accusation is a lawful Declaration of another Man's Crime (which, by *Bracton*, must be Felony at the least) before a competent Judge, by one that setteth

his Name to the Declaration, and undertakes to make it good on the Penalty that may otherwise ensue.

An *Appeal* is commenced two ways; either by *Writ*, or *Bill*—*Appeal by Writ*, is when a *Writ* is purchased out of Chancery by one to another; to this end, that he *appeal* a third of some Felony committed by him, finding Pledges that he shall do it, and deliver this *Writ* to the Sheriff to be recorded.

Appeal by Bill is, when a Man of himself gives up his Accusation in Writing to the Sheriff or Coroner; offering to undergo the Burden of *appealing* the Person therein named.

This Practice is drawn from the *Normans*, as appears from the grand Customary, wherein is a solemn Discourte both of the Effects of this *Appeal*, viz. the Order of the Combat, and of the Trial by Inquest; which, by our Law, is in the choice of the Defendant. See *TRIAL, COMBAT, INQUEST, &c.*

APPEAL of Mayhem, is an accusing of one that hath maimed another—But this being co Felony, the *Appeal* thereof is but in manner of an Action of Trespas; so that there is nothing recover'd but the Damages.

Bracton calls this *Appellum de Plagis & Membro*, and has a whole Chapter of it.

In King *John's* time, there is recorded an *Appeal* against a *Jew*, *qui fecit emendari quendam Nepotem suum*.

Appeal of wrong Imprisonment, is used by *Bracton* for an Action of wrong or false Imprisonment. See *ACTION, &c.*

APPEAL is particularly used for a private Accusation of a Murderer, by one who had Interest in the Murder'd Party; or of any Felon by one of his Accomplices in the Fact. See *MURDER, FELONY, &c.*

If an *Appeal* of Murder or Felony be sued by any common Person against a Peer; he shall be tried by Commoners, and not by his Peers. See *PEER*.

The Person who brings an *Appeal*, is call'd the *Appellant*; and the Person *appeal'd*, the *Appellee*.

APPEARANCE, the exterior Surface of a Thing; or that which first strikes the Sense, or the Imagination. See *EXTERIOR* and *SURFACE*.

The *Academicks* maintain, that the sensible Qualities of Bodies are only *Appearances*; and the like Doctrine is held by some later Philosophers. See *ACADEMICK* and *QUALITY*. See also *BODY, EXTERNAL World, &c.*

Our Errors arise chiefly from a too hasty and precipitate Assent of the Will, which acquiesces too early in the *Appearances* of Truth. See *WILL, LIBERTY, ASSENT, ERROR, &c.*

APPEARANCE, in Perspective, is the Representation or Projection of a Figure, Body, or the like Object, upon the Perspective Plane. See *REPRESENTATION* and *PROJECTION*.

The *Appearance* of an objective right Line, is always a right Line. See *PERSPECTIVE*.

The *Appearance* of an opaque Body and a Luminary being given, to find the *Appearance* of the Shadow; see *SHADOW*.

APPEARANCE of a Star, or Planet. See *APPARITION*.

APPEARANCES, in Astronomy, &c. are more usually call'd *Phenomena*. See *PHENOMENA*.

In Opticks, we use the Term *Direct Appearance*, for the View or Sight of an Object by Direct Rays; without either Refraction or Reflection. See *DIRECT* and *RAY*. See also *OPTICKS, VISION, &c.*

To save *APPEARANCES*, is to discharge one's Duty seemingly, or acquit himself of the Formalities and External thereof; so as to save his Character, and avoid the giving of Scandal or Offence.

APPEARANCE, in Law, is the Defendant's engaging to answer a Cause or Action entered against him in some Court of Judicature. See *ACTION, PROCESS, &c.*

Appearance, in the King's Bench, is the Defendant's filing either of Common or Special Bail, if the Action be by *Bill*—If it be by Original, the *Appearance* must be with the *Philazer* of the County where the Arrest was. See *BAIL, BILL, PHILAZER, &c.*

Appearance, in the Common-Pleas, must be entered with the *Philazer* there; but if it be by *Bill*, with the *Prothonotary*. See *PROTHONOTARY, &c.*

APPELLATIVE, or Noun APPELLATIVE, in Grammar, a common Name; or a Name which belongs, or is applicable to all things of that kind. See *NAME* and *NOUN*.

Such are the Names, *Man, Angel, Horse, Plant, Tree, &c.* *Appellatives* stand oppos'd to proper Names, which belong only to Individuals; as *Peter, Gabriel, Balaam, &c.* See *PROPER NAME*.

The Word is form'd of the *Latin*, *appellare*, to call; name a thing.

APPENDANT, or APPERTENANT, in Law, is under Good of such things as by time of Prescription have be-

longed, appertained, and been joined to some other principal thing.

Thus an Hospital may be *appendant* to a Manor, a Common of Fishing to a Freehold, &c.

APPENDED Remedies, *APPENSA*, such as are outwardly applied, by hanging about the Neck.

Such are divers Amulets, Necklaces, Phylacteries, &c. See *AMULET*.

The Word comes from the Latin *ad*, and *pendo*, I hang to. *APPENDIX*, or *APPENDAGE*, a thing accessory to, or dependant, of another. See *ACCESSORY*, &c.

The Term is chiefly used in matters of Literature, for an additional Discourse, placed at the end of any Piece, or Writing; to explain or prosecute something there left deficient, or draw Conclusions therefrom.—In this sense the Word coincides with *Supplement*. See *SUPPLEMENT*.

APPENDIX, in Anatomy, is a part, in some measure, detach'd from another part to which it adheres.

There are membranous *Appendices* of various Figures, in most of the inner parts of the Body.

The *Coccyx* is by some Writers call'd *Appendix*, or *Appendicula Vermiformis*. See *COCCYX* and *INTESTINE*.

APPENDIX is particularly used in the same sense with *Epiphysis*. See *EPIPHYSIS*.

APPURTINANCES, or *APPURTENANCES*. See *APPURTENANCES*.

APPETITE, *APPETITUS*, *APPETENCY*, in Philosophy, a Desire of enjoying something wanted; or a Complacency in the Enjoyment of a thing present.

Some Philosophers define it more generally, a Passion of the Soul whereby we desire something; or a Propensity or Impulse towards any thing apprehended as good. See *PASSION*, &c.

The Schoolmen distinguish *Appetite* into *Voluntary* and *Natural*.—The first is the Will itself, acting under a competent Knowledge or information of the thing in hand: Such is the *Appetite* or Desire of being happy.—The second is a kind of Instinct whereby we are mechanically driven to consult our own Preservation. See *INSTINCT*, *WILL*, *NATURAL Inclination*, &c.

Natural Appetite is subdivided into *Concupiscible* and *Inferable*. See *CONCUPISCENCE* and *INFERABLE*.

The Word comes from the Latin Verb *appetere*, to desire, to covet; form'd of *ad*, to, and *peto*, I draw.

APPETITE, in Medicine, coincides with what we more usually call *Hunger*, or *Thirst*. See *HUNGER* and *THIRST*.

A Loss or Prostration of *Appetite*, is call'd *Anorexia*. See *ANOREXIA*.

An immoderate *Appetite* is call'd *Bulimia*, or *Fomes Canina*. See *BULIMIA*.

Some, however, distinguish between the *Bulimia*, and *Canine Appetite*; making it the distinguishing Character of the latter, that it is attended with a *Lientery*, or other Colicical Flux. See *CANINE*.

A preposterous *Appetency* of things not proper for Food, is call'd *Pica*. See *PICA*.

APPIAN Way, in Antiquity, *Via Appia*, a celebrated Road, leading from the *Porta Capena* in *Rome*, to *Brundisium*, at the farthest Eastern Extremity of *Italy*. See *ROAD* and *VIA*.

It took its Name from *Appius Claudius*, by whom it was made, during his Consulship, in the Year of *Rome* 441.—It still subsists in many places; being paved, not with little Stones or Pebbles, like our Streets, but with large Flag-Stones, like the Pavements of our Churches.

APPLAUSE, properly signifies an Approbation of some thing witness'd by clapping the hands.

The Word is form'd of the Latin *Applausus*, or *Plausus*, of the Verb *plaudere*, to clap.

The ancient way of applauding by clapping the hands, is scarce retain'd any where but in the Colleges and Theatres.—Such a Tragedy was acted with great *Applause*: Such a Student maintain'd a Thesis with *Applause*, &c. See *ACCLAMATION*.

APPLE. See *FRUIT*, *ORCHARD*, &c.

APPLICATE, *APPLICATA*, *Ordinate APPLICATE*, in Geometry, is a right Line drawn across a Curve, so as to bisect the Diameter thereof. See *CURVE*, *DIAMETER*, &c.

Apply is the same with what we otherwise call *Ordinate*. See *ORDINATE*.

APPLICATION, the Act of applying one thing to another, by approaching or bringing them nearer together.

Motion is defined by a successive *Application* of any thing to different parts of Space. See *MOTION*.

The *Application* of a Vesicatory to the Neck or other part, produces an Irritation of the Bladder.

The true and only Secret in Physick, is how to *apply* a Medicine, not how to make it.

APPLICATION is also used for the adjusting, accommodating, or making a thing quadrate to another. See *ACCOMMODATION*.

Thus we say, the *Application* of a Fable, &c. See *FABLE*.

APPLICATION, in Theology, is particularly used for the Act whereby our Saviour transfers, or makes over to us, what he had earned or purchased by his holy Life, and Death.

'Tis by this *Application* of the Merits of Christ, that we are to be justified; and entitled to Grace, and Glory. See *MERIT*, &c.

The Sacraments are the ordinary Means, or Instruments whereby this *Application* is effected. See *SACRAMENT*.

APPLICATION is sometimes also used in Geometry, for what in Arithmetick we call *Division*. See *DIVISION*.

APPLICATION also signifies the fitting or applying of one Quantity to another, whose Areas, but not Figures, are the same.

Thus *Euclid* shews how to *apply* a Parallelogram to a right Line given, that shall be equal to a right-lined Figure given. See *APPLY*.

APPLY is used among Mathematicians three ways.
1. It signifies to transfer a Line given into a Circle, most commonly, or into any other Figure; so as its Ends be in the Perimeter of the Figure.

2. To *apply* denotes as much as to *divide*, especially among the Latin Writers; who, as they say, *duc* AB into CB, draw AB into CB, when they would have AB multiplied by CB; or rather, when they would have a right-angled Parallelogram made of those Lines: So they say, *applicata* AB ad CB, *apply* AB to CB, when they would have CB divided by AB; which is thus expressed, $\frac{CB}{AB}$.

3. It also signifies to fit Quantities, whose Areas are equal, but Figures different. See *APPLICATION*.

APPOINTEE, a Foot-Soldier, in the French Army, &c. who for his long Service, and Bravery, receives Pay above private Sentinels. See *ANSERESSE*.

APPOINTMENT, a Pension or Salary given by great Lords and Princes, to Persons of Worth and Parts; in order to retain them in their Service. See *SALARY*.

The Term is chiefly used among the French.—The King of France gives large *Appointments* to several of the Officers in his Service.

Appointments differ from Wages, in that the latter are fixed and ordinary, being paid by the ordinary Treasurers; whereas *Appointments* are annual Gratifications granted by Brevet for a time uncertain, and are paid out of the Privy Purse.

APPORTIONMENT, *APPORTIONAMENTUM*, in Law, a dividing of a Rent into two Parts or Portions, according as the Land whence it issues, is divided among two, or more. See *RENT*, *DIVISION*, *PARTITION*, &c.

Thus if a Man, having a Rent-Service issuing out of Land, purchase a part of the Land; the Rent shall be *apportioned*, according to the Value of the Land.—So if a Man let Lands for Years, reserving Rent; the Rent shall be *apportioned*.

But a Rent Charge cannot be *apportioned*, nor Things that are yearly; as if one hold Land by Service, to pay to his Lord rent at such a Feast a Horse or a Rose; there, if the Lord purchase a part of the Land, this Service is totally extinct; because such things cannot be divided without hurt to the whole.

Yet, in some cases, a Rent Charge shall be *apportioned*: As, if a Man hath a Rent-Charge issuing out of Land, and his Father purchaseth a part of the Land charged in fee, and dies; and this Parcel descend to his Son, who hath the Rent-Charge; there the Charge shall be *apportioned* according to the Value of the Land; because such Portions of the Land, purchased by the Father, comes not to the Son by his own Act, but by Descent, and Course of Law.

Common appendant is of common Right, and severable: And tho' the Commoner, in such case, purchase a Parcel of Land wherein the Common is appendant; yet the Common shall be *apportioned*. But in this case, Common appurtenant, not appendant, becomes extinct by such Purchase. See *Coke*.

APPOSAL of *Sheriffs*, is the charging them with Money received on their account in the Exchequer, 22 & 23 Car. 2. *Act for better Recovery of Fines due to his Majesty*.

APPOSER, in Law. See *FOREIGN Apposer*.

APPOSITION, the Act of putting or applying one thing to another. See *APPLICATION*.

APPOSITION is used in Physicks, with respect to Bodies, which derive their Growth from the Adjunction or Union of neighbouring Bodies. See *ADJUNCTION*.

Most Bodies of the fossil or mineral Kingdom, are form'd by Juxtaposition, or the *Apposition* of Parts, brought to join and adhere to each other. See *ACCRETION*.

APPOSITION, in Grammar, is the putting two or more Substantives together in the same Case, and without any copula.

copular Conjunction between them. See SUBSTANTIVE, CONJUNCTION, COPULATIVE, &c.

Thus, *Flanders*, bloody Theatre, horrible Scene of War, &c.

APPRAISE, to rate, value, or set a Price on Goods, by a Person who is a competent Judge, and is authorized thereto.

The Word is derived from the French *apprécier*, which signifies the same thing—Hence we also say an *Appraiser*, a sworn *Appraiser*, an *Appraisement*, &c.

APPRENDRE, in our ancient Law-Books, a Fee or Profit to be taken or received. See FEE.

APPREHENSION, in Logic, the first Idea which the Mind forms of any thing, abstractly of its particular Qualities. See IDEA.

Apprehension coincides with what we otherwise call *Perception*. See PERCEPTION.

The Word literally denotes the Action of the Hand, whereby it takes hold of, and grasps any thing; being form'd of the Latin *ad*, to, and *prehendo*, I hold. See COMPREHENSION.

APPREHENSION, in Law, signifies the seizing a Criminal, in order to bring him to Justice.

APPRENTICE, one who is bound by Covenant to serve a Tradesman, or Artificer a certain Time; usually seven Years; upon Condition of the Master's instructing him in his Art or Mystery. See TRADE, COMMERCE, ART, &c.

Sir *Thomas Smith* says, that Apprentices are a kind of Bondmen, or Slaves, differing only in this that they are Servants by Covenant, and for a time. *de Rep. Anglor. Lib. 3.* See SERVANT, SLAVE, &c.

Antiently, Benchers in the Inns of Court were called *Apprentices of the Law*, in Latin *Apprenticii Juris Nobiliores*; as appears by Mr. *Selden's* Notes on *Forfeiture*: and so the learned *Pitowden* styles himself.

Sir *Henry Finch* in his *Nomenclatura* writes himself *Apprenticius Legis*: Sir *Edward Coke* in his Instit. says, *Apprenticius Legis* in pleading are called *Homines consilarii*, &c. in *Legis periti*; and in another place, Apprentices and other Counsellors of Law.

APPROACHES, in Fortification, the several Works made by the Besiegers for advancing or getting nearer to a Fort, or Place besieged. See WORK, FORTIFICATION.

Such are *Trenches*, *Mines*, *Saps*, *Loggins*, *Batteries*, &c. See TRENCH, MINE, SAPP, BATTERY, &c.

APPROACHES, of *Lines of Approach*, are particularly used for Trenches dug in the Ground, and their Earth thrown up on the Side towards the Place besieged; under Shelter at Defence whereof the Besiegers may approach without Loss, to the Parapet of the cover'd Way; and plant Guns, &c. wherewith to cannonade the Place. See TRENCH.

The *Lines of Approach* are to be connected by Lines of Communication. See COMMUNICATION.

The Besieged frequently make *Counter-Approaches*, to interrupt and defeat the Enemies *Approaches*.

APPROPRIATE, APPROPRIATED, in Philosophy, is understood of something which is indeed common to several, yet, in some respects, is peculiarly attributed to one. See PROPER and COMMON.

Thus, Creation is common to the Father, Son, and Holy Ghost; and yet is *appropriated* to the Father.

APPROPRIATE, in Law, is understood of a Church or Benefice, the Patronage whereof is annex'd to some Church-Dignity; so that the Patron receives the Tithes. See CHURCH, BENEFICE, PATRONAGE, PARSON, and TITHE.

There are computed in *England* 3845 Churches *Appropriated* and *Impropriate*. See APPROPRIATION, IMPROPRIATION, &c.

APPROPRIARE ad Honorem, in Law, signifies to bring a Manor within the Extent and Liberty of such an Honour. See HONOUR, MANOR, &c.

APPROPRIARE Communem, in Law, signifies to discommon, i. e. to separate, and inclose any Parcel of Land, which before was open Common. See COMMON.

APPROPRIATION, the Act of *Appropriating*, or applying a Church-Benefice, which of its own Nature is *juris divini*, and no Person's Patrimony, to the proper and perpetual Use of some Religious Community. See APPROPRIATE.

Appropriation, is where the Advowson of a Parsonage is given or belongs to any Bishoprick, religious House, College, &c. and to their Successors; so that the House or Body, is both Patron and Parson, and some one of the Members officiates as Vicar. See PARSON, ADVOWSON, &c.

It is called *Appropriation*, because the Profits of the Living are appropriated to the use of the Patrons; so that Parsons, tho' they are not ordinarily accounted *Domini Usufructuarii*, having no right of Fee-simple; yet, by reason of the Perpetuity of their Succession, are reputed Owners of the Fee-simple, and are therefore called *Proprietarii*: See PATRON and PATRONAGE.

To make an *Appropriation*, after Licence obtain'd of the King in Chancery, the Consent of the Diocesan, Patron, and Incumbent, is necessary, if the Church be full; if it be void, the Diocesan and the Patron, upon the King's Licence, may conclude it.

To *dissolve an Appropriation*, it is enough to present a Clerk to the Bishop, and he to institute and induct him: for that once done, the Benefice returns to its former Nature.

APPROVEMENTUM, APPROVEMENTUM, or **APPROVEMENT**, is sometimes used in ancient Writers for *Improvement*. See IMPROVEMENT.

Thus, to **APPROVE**, *Approbare*, is to make the best benefit of a thing by increasing the Rent, &c.

In some ancient Statutes, Bailiffs of Lords in their Franchises are call'd their *Approver*. See BAILIFF.

Gna omnibus Approvementis & aliis pertinentiis suis, &c. Mon. Angl.

APPROVEMENT, is more particularly used where a Man hath common in the Lord's Waste, and the Lord incloseth part of his Waste for himself; leaving sufficient Common, with Egrets and Regrets, for the Commoner.

APPROVER, one who confessing Felony in himself, appealeth or impeacheth another or more of his Accomplices. See APPEAL.

He is so call'd because he must *prove* what he hath alledg'd in his Appeal—This *Proof* should either be by Battle, or by the Country, at the choice of the Appellee. See PROOF, BATTLE, PAIS, &c.

APPROVERS of the King, are those who have the letting of the King's Demesnes in small Manors, &c. See DEMESNE.

APPROXIMATION, in Arithmetick, a continual approach nearer still and nearer to a Root or Quantity sought, without a possibility of ever arriving at it exactly. See ROOT.

We have divers methods of *Approximation* delivered by *Wallis*, *Raphson*, *Halley*, *Howard*, &c. all of 'em being no other than Serles's infinitely converging, or approaching still nearer to the Quantity requir'd, according to the Nature of the Series. See CONVERGING and SERIES.

'Tis evident, that if a number propos'd be not a true Square, it is in vain to hope for a just quadratick Root thereof, explicable by rational Numbers, integers or fracted; whence, in such Cases, we must content ourselves with *Approximations*, somewhat near the Truth, without pretending to Accuracy: and so for the Cubick Root, of what is not a perfect Cube; and the like for superior Powers. See SQUARE, CUBE, POWER, QUADRATURE, EXTRACTION, &c.

This the Antients were aware of, and accordingly had their Methods of *Approximation*; which, tho' scarce applied by them beyond the quadratick or perhaps the cubick Root, are yet equally practicable, by due Adjustments, to the superior Powers also: as is shewn in the *Philosoph. Transact.* N^o 215.

If there be a Non-quadratick or Non-cubick Number; the former being express'd by $aa + b$, and the latter by $aaa + b$, where aa and aaa are the greatest Square and Cube in the propos'd Numbers; then $\sqrt{aa + b} = a + \frac{ab}{2aa + b}$; and $\sqrt[3]{aaa + b} = a + \frac{ab}{3aaa + b}$; $\sqrt[4]{\frac{1}{2}aa + \frac{b}{3a}}$ will be easy and expeditious *Approximations* to the Square and Cube Root.

To *extract the Root of an Equation by Approximation*.
1^o. For a quadratic Equation—suppose the Equation $x^2 - 4x - 31 = 0$; let the Root be $8 + y$, so that y may denote the Fraction, whereby the assumed Number either exceeds or comes short of the Root: Then

$$\begin{aligned} x^2 &= 64 + 16y + y^2 \\ - 4x &= - 40 - 4y \\ - 31 &= - 31 \\ \hline - 7 + 11y + y^2 &= 0 \end{aligned}$$

Since the Powers of Fractions are continually decreasing; and we only here want a Root nearly true; y^2 is cast away: Upon which,

$$\frac{-7 + 11y = 0}{y = \frac{7}{11} = \frac{1}{1} \text{ nearly} = 0.6}$$

Wherefore $x = 8 + 0.6 = 8.6$
Suppose $x = 8.6 + y$. Then
 $x^2 = \frac{7396}{100} + \frac{172}{10}y + y^2$
 $- 4x = - 34.4 - 4y$
 $- 31 = - 31$
 $\frac{7396}{100} - 34.4 - 31 + \frac{172}{10}y - 4y - 31 = 0$

Which,

Which, being reduced to the same denomination, as here follows

$$\begin{array}{r} 73.96 - 4300 = 3100 + (1720 - 500)y = 0 \\ - 0.04 + 22.0y = 0 \\ \hline 12.10y = 0.04 \\ y = 0.04 : 12.10 = 0.0032 \end{array}$$

Therefore $x = 8.6000 + 0.0032 = 8.6032$

Suppose $x = 8 - 60.2 + y$; Then will

$$\begin{array}{r} x^2 = 7401505024 + 17.2064000y + y^2 \\ - 5x = - 43.01600000 - 300000000 \\ - 21 = - 51.00000000 \\ \hline - 0.000294976 : 12.2064000y = 0 \\ y = 0.000294976 : 12.2064000 \\ = 0.0000277808 \end{array}$$

Therefore $x = 8.6032000000 + 0.0000277808 = 8.603277808$.

Suppose, again, the Root of a Cubic Equation $x^3 + 2x^2 - 22x - 70 = 0$ be required by Approximation; here let the Root be $5 + y$, since the Terms are omitted wherein y^3 and y^2 are found; there is no necessity for expressing 'em in the Transformation of the Equation. Wherefore, we find

$$\begin{array}{r} x^3 = 125 + 75y \dots \\ + 2x^2 = 50 + 20y \dots \\ - 22x = 110 - 22y \\ - 70 = - 70 \\ \hline - 10 + 72y = 0 \\ y = - \frac{10}{72} = 0.1 \end{array}$$

Therefore $x = 5 + 0.1 = 5.1$

Suppose $x = 5.1 + y$; Then will

$$\begin{array}{r} x^3 = 132.651 + 78.050y \dots \\ + 2x^2 = 52.020 + 20.400y \\ - 22x = - 117.300 - 22.000y \\ - 70 = - 70.000 \\ \hline - 2.629 + 75.430y = 0 \\ 75.430y = 2.629 \\ y = 3.649 : 75.430 = 0.0348 \end{array}$$

Wherefore $x = 5.1 + 0.0348 = 5.1348$.

And after the same manner might one proceed to Infinity.

APPULI, in the Manage, *q. d.* rest or stay upon the Hand; is the reciprocal Effort between the Horle's Mouth and the Bridle-Hand; or the Sense of the Action of the Bridle in the Hand of the Horleman. See **HEAD**, **BRIDLE**, &c.

A *just Appul* of the Hand, is the nice bearing up or stay of the Bridle; so that the Horle being awed by the Sensibility and Tenderness of his Mouth, dares not rest too much upon the Bit-Mouth, nor check or beat upon the Hand to withstand it.

A *dull, or base Appul*, is when a Horle has a good Mouth, but his Tongue so thick, that the Bit cannot work, or bear upon the Bars; the Tongue not being so sensible as the Bars: tho' the like Effect is sometimes owing to the grossness of his Lips. A Horle is said to have *no Appul*, when he dreads the Bit mouth; is too apprehensive of the Hand, and can't bear the Bit. He is said to have *too much Appul*, when he rests or throws himself too much, too hardly upon the Bit.—Horles designed for the Army ought to have a *full Appul* upon the Hand.

APPULSE, in Astrology, the approach of any Planet to a Conjunction with the Sun, or a Star. See **CONJUNCTION**.

APPURTENANCES, or **APPERTINENCES**, in Common Law, signify things both corporeal, *i. e.* belonging to another thing, as their principal; *E. gr.* Hamlets, to a chief Manor, and the like; and incorporeal, as Liberties and Services of Tenants, &c. See **APPENDANT**.

The Word is form'd of the *Latin*, *ad*, to, and *pertinere*, to belong.

APRIL, the fourth Month of the Year, according to the common Computation, but the second according to that of the Astronomers. See **MONTH**.

In this Month the Sun travels thro' the Sign **Taurus**. See **SUN** and **TAURUS**.

The Word is derived from the *Latin aperilis*, of *aperio*, I open; because the Earth, in this Month, begins to open her Bosom for the Production of Vegetables. See **SPRING**.

APRON, in Gunnery, a piece of Lead which caps, or covers the Vent, or Touch-Hole of a great Gun. See **GUN**, **ORDNANCE**, &c.

APSIDES, or **APSIDES**, or **APSIDÆ**, in Astronomy, two Points in the Orbit of a Planet, the highest whereof is cal-

led the *Aphelion*, or *Apoee*; and the lowest the *Perihelion*, or *Perigee*. See **APHELION**, **APOEE**, **PERIHELION**, and **PERIGEE**.

The *Apsides* are also called *Archi*. See **AUCH**.

The Diameter which joins these two Points is call'd the *Line of the Apsides*, and passes thro' the Center of the Orbit of the Planet, and the Center of the Earth.—Such is the Line **AP**, (Tab. **ASTRONOMY**, fig. 1.) drawn from the *Aphelion A* to the *Perihelion P*. See **ORBIT** and **PLANET**.

The *Eccentricity* is reckoned in the Line of the *Apsides*; being the Distance between the Center of the Orbit of the Planet **C**, and the Center of the Sun or Earth **S**, according as the *Copernican* or the *Ptolemic* System is followed. See **ECCENTRICITY**.

For the Motion of the Line of the *Apsides*, see **ARCHE**, &c.

The Word comes from the *Greek* ἄρχι, an Arch, or Vault.

APSIDES were also antiently used for a kind of private Oratories, or Chapels in great Churches; otherwise called *Doxologia*, or *Doxalia*. See **ORATORY**.

They were thus call'd, because arched or vaulted over. The Word still obtains in the Low Countries, where it denotes a kind of Choir, or Place beyond the Altar; where the Religious sit, and sing the Office, separate from the People, and without being seen by 'em.

AP-THANES, an ancient Term for the higher Nobility in *Scotland*. See **THANE**.

APTITUDE, the natural Disposition any thing hath to serve for such or such a purpose.

Thus, Oil hath an *Aptitude* to burn, and Water to extinguish Fire.

APTOTE, in Grammar, a Noun indeclinable, or which is without any Variation of Case. See **NOUN** and **CASE**.

The Word is derived from the *Greek* Privative α, and ἄπωσις, *Casus*.

AFUS, in Astronomy, the *Bird of Paradise*; one of the Constellations of the Southern Hemisphere, not visible in our Latitude. See **CONSTELLATION**.

APYREXY, in Medicine, the Intermittion of a Fever or Ague. See **FEVER** and **AGUE**.

The Word is form'd of the privative Particle α, and πυρ, *Ignis*, Fire or Heat, or *νεύρασις, fibricatio*, to be feverish.

AQUA, in natural History, Physicks, Chymistry, Medicine, &c. See **WATER**.

The Word is pure *Latin*, and supposed to be compounded of *a* and *qua*, *q. d.* from which; alluding to the Opinion that Water is the Basis or Matter of all Bodies.

AQUA fortis, is a corrosive Liquor, serving as a Menstruum wherewith to dissolve Silver, and all other Metals except Gold. See **MENSTRUUM**, **DISSOLUTION**, **METAL**, &c.

Aqua fortis is made of *Salt-Petre*, which is the only Salt that will act on Silver. See **NITRE**, **SALT-PETRE**, and **SILVER**.

To prepare *Aqua fortis*, they mix either Sand or Alum, or Vitriol, or the two last together, with the *Salt-Petre*; then distill it by a violent Fire; and catch the Fumes; which condensing in the Receiver, are the *Aqua fortis*.

If some of those Matters be not added to the Nitre, it runs too readily, and thus prevents the Evaporation; but when the Fusion is prevented, the parts of the Salt receiving more violent Impressions from the Fire, are converted into a volatile Spirit.

If to the Spirit of Nitre thus distill'd, Sea-Salt or Sal-Ammoniac be added; it commences *Aqua Regia*, and will no longer dissolve Silver, but Gold. See **AQUA REGIA**.

Hence, to try whether or no *Aqua fortis* be pure; put a Grain of a Solution of Silver in *Aqua fortis*, into a like Quantity of the Water in question; and if the Solution remains without either the Water's turning milky, or the Silver precipitating, the *Aqua fortis* is pure.

Aqua fortis is commonly held to have been invented about the Year 1300; tho' others will have it to be known in the Time of *Moses*.

Aqua fortis is a Liquor of various and extensive Use.— It is very useful to Refiners for parting or separating Silver from Gold and Copper. See **PARTING**, **REFINING**, &c.

To the Workers in Mosaic, for staining and colouring their Woods. See **MOSAIC**.

To Dyers in their Colours, and particularly Scarlet. See **DYING**, **COLOUR**, **SCARLET**, &c.

To other Artists, for the colouring of Bone and Ivory; which is done by steeping the Matters therein, after first tinging it with Copper, or Verdigrise, &c.—Some also turn it into *Aqua Regia*, by dissolving in it a fourth of its weight of Sal-Ammoniac, and then stain therewith Ivory Bones and Bones, of a fine purple Colour. There are, also, Book-Binders, who throw it on Leather, and thereby make *marbled*

marble Covers for Books. See MARBLING, BOOK-BINDING, &c.

And there are Diamond-Cutters, who use it to separate Diamonds from metallic Powders. See DIAMOND.

'Tis, farther, of service in etching Copper, or Brass-Plates. See ETCHING.

Lastly, Mr. Boyle assures us he has caused Canes to be stained like Tortoise-Shell, by a mixture heretofore with Oil of Vitriol, laid on them at several times, over live Coals, to cause it to penetrate the deeper ; and, afterwards, giving them a Gloss with a little Soft Wax and a dry Cloth.

AQUA REGIA, or **REGIA**. See **AQUA REGIA**. It is thus call'd, because it dissolves Gold, which is vulgarly esteem'd the King of Metals.—It is sometimes also call'd *Aqua Chrysolea* and *Stygia*.

AQUA VITE, is commonly understood of what we otherwise call Brandy. See BRANDY.

Some, however, distinguish between 'em ; appropriating the Term Brandy to what is procured from Wine, or the Grape ; and *Aqua Vite* to that drawn after the same manner from Malt, &c. See WINE, MALT, DISTILLATION, &c.

AQUA MARINA, in natural History, a Gem, or precious Stone, of a Sea-Green Colour ; whence its Name, see PRECIOUS STONE and GEM.

It is found along the Sea-Coasts ; and is said to vie with the Amethyst in hardness. See AMETHYST.

Some of the Critics contend for its being the sixth Stone in the Rationale of the *Jewish* High Priest ; call'd, in the *Hebrew*, *Tharfiz* ; and render'd in *Latin*, by *Berillus*, *Thalassius*, &c. *Jonathan* and *Onkelos* call it, in the *Graecae*, *Νοδίον*, *Berulus* *Jamnia* : Tho' the *Seventy*, S. *Jerom*, *Aquila*, *Paynius*, the Translators of *Geneva*, and *Schindler* render it *Chrysolitus*.—Others will have it a *Turquoise*. *Leo de Juda* and *Huterus* translate it *Hyacinthus*.

Several of the Lapidaries take it for the Beryl ; which coincides with the first Opinion. See BERYL.

AQUA omnium forum, in Pharmacy, signifies the distill'd Water of Cows-Dung, when they are at Grass. See WATER.

AQUEDUCT, **AQUEDUCTUS**, q. d. *Ductus Aquae*, a Conduit of Water ; is a Construction of Stone, or Timber, made on an uneven Ground, to preserve the Level of the Water, and convey it, by a Canal, from one place to another. See WATER.

There are *Aqueducts* under ground, and others rais'd above it, supported by Arches.

The Romans were very magnificent in their *Aqueducts* ; they had some that extended an hundred Miles. *Frontinus*, who had the Direction of them, tells us of nine that emptied themselves thro' 13514 Pipes, of an Inch Diameter. *Blasius* has observ'd, that in the space of twenty-four Hours, *Rome* received, from these *Aqueducts*, no less than five hundred thousand Hogheads of Water.—The *Aqueduct* built near *Mainstone* for carrying the River *Bure* to *Verfall*, is the greatest in the World. It is 7000 Fathoms long ; and its Elevation 2560 Fathom ; containing 122 Arcades.

AQUEDUCT, in Anatomy, is a Passage or Perforation, partly membranous, and partly cartilaginous ; leading out of the Bony Passage of the internal Ear into the Palate. See EAR and PALATE.

It makes the beginning of the *Canalis particularis*, and is divided into two Parts ; the shortest of which opens into the Cavity of the Skull, &c.

It is thus call'd, not only on account of its Form, which is that of a Canal ; but from its serving to discharge any foreign Matters collect'd in the inner Cavities of the Ear.—It is sometimes call'd *Aqueductus Fallopii*, from the Name of its first Discoverer.

AQUARIANS, **AQUARI**, a kind of Hereticks in the third Century, so called from the *Latin*, *Aqua*, Water ; because they used nothing but Water in the Sacrament. See EUCHARIST.

'Tis said the Occasion of the Abuse was owing to the Persecution which prevail'd in those Times : For the Christians being then oblig'd to celebrate the Sacrament in the Night ; found it necessary to make use of Water, lest the smell of the Wine should betray them to the Heathens. But they afterwards went farther, and actually forbid the use of Wine in the Eucharist, even when it might be used with safety.

Epiphanius tells us, the *Aquarians* were the Followers of *Tatian* ; and were so call'd, because they abstain'd wholly from Wine, and did not use it even in the Eucharist. See APOSTEMIOUS.

AQUARIUS, in Astronomy, the eleventh Sign in the Zodiac, reckoning from *Aries*. See SIGN and CONSTELLATION.

The Sun moves thro' it in the Month of *January* ; 'tis mark'd thus ☿. See CHARACTER.

The Poets feign, that it was *Ganymede*, whom *Jupiter* ravish'd under the Shape of an Eagle, and carried away into Heaven, to serve as Cup-bearer in the room of *Hebe* and *Fulcan* ; whence the Name.—Others hold, that the Sign was thus call'd, because, when it appears in the Horizon, the Weather usually proves rainy.—The Stars in the Constellation *Aquarius*, in *Ptolemy's Catalogue*, are 45 ; in *Tycho's* 40 ; in the *Britannic Catalogue* 99 : The Longitudes, Latitudes, Magnitudes, &c. whereof, are as follow :

Stars in the Constellation AQUARIUS.

AQUATIC, something which lives, breeds, or grows in, or about the Water. See WATER.

We have *Aquatic Plants*, *Aquatic Animals*, &c. See PLANT, ANIMAL, &c.

Trees which grow on the Banks of Rivers, or in Marshes, &c. are also call'd *Aquatics*.

AQUEOUS, AQUEOUS, something that partakes of the Nature of Water, or abounds therein. See WATER.

This Milk is said to consist of an *Aqueous* or ferous, and a butyrous Part. See MILK.

The Chymists separate the *Aqueous Part* or Phlegm from all Bodies by Distillation. See PHLEGM.

AQUEOUS Humour, is the first or outermost of the three Humours of the Eye. See HUMOUR AND EYE.

It lies immediately under the Cornea, which it causes to protuberate a little; and is supposed to be furnished by certain Ducts provided for the purpose. See CORNEA.

Anatomists are divided about the Origin and Conveyance of this Humour.—'Tis certain, the Source must be pretty plentiful, inasmuch as, if by any Accident the Cornea is contain'd in be wounded, so that the Humour runs out, and the Cornea falls or collapses; the Wound readily heals, by only closing of the Eye, and the Humour recruits; of which we have numerous Instances among Physicians.

Dr. Nuck thinks he has discover'd the Ducts whereby the Humour is furnish'd. See AQUEOUS DUCTS.

Others denying the reality of those Ducts, suppose it immediately derived from the Arteries. Dr. Drake admits the Ducts, and takes 'em to be only Branches of the excretory Ducts of the *Glandula Innaminate*, and *Lachrymalis*; which piercing the Tunicks of the Eye, deliver their Liquor by ways hitherto unknown.

AQUEOUS DUCTS, or *Ductus Aquosi Nuckii*, are certain Ducts, discover'd by Dr. Nuck, whereby the *Aqueous Humour* is supposed to be convey'd into the inside of the Membranes which inclose that Liquor.—But the Discovery is not univerally allow'd. See AQUEOUS HUMOUR.

AQUILA, in Natural History, &c. See EAGLE.

AQUILA, in Astronomy, a Constellation of the northern Hemisphere; usually join'd with *Antinous*. See CONSTELLATION.

The Stars in the Constellation *Aquila* and *Antinous*, in *Protonoy's Catalogue*, are 15; in *Lycob's*, 17; in the *Britannic Catalogue*, 70; The Longitudes, Latitudes, Magitudes, &c. whereof, are as follow.

Stars in the Constellation AQUILA cum ANTINOUS.

AQUILINE, **AQUILINUS**, something belonging to an Eagle—Hence, *Aquilinus* Nose, denotes a hooked Nose, like the Beak of an Eagle; a Hawk's Nose.

AQUILO, the North-East Wind; or that which blows from the North-Eastern Point of the Horizon. See WIND, NORTH and POINT.

The Seamen call it, *North North East*. See RHUME. The Poets give the Name to all stormy Winds dreaded by the Mariners.

ARA, the Altar, in Astronomy, a Southern Constellation; consisting of eight Stars. See STAR and CONSTELLATION.

ARAB, **ARABIAN**, **ARABIC**, something that belongs to the People of Arabia. See ARABIA.

The *Arabian Horse* is said to be nursed with Camel's Milk—There are many strange Reports of this Beast. The Duke of Newcastle assures us, that the ordinary Price of one is 1000, 2000, or 3000 Pounds; and that the Arabs are as diligent in keeping the Genealogies of their Horses, as Princes of their Families. They strike Medals on every occasion to keep up the Pedigree. The Fortune the *Arabians* give their Sons, when arrived at Manhood, is, two Suits of Arms, with two Scimiters, and a Horse; who always lies in the next Room to him—Yet such of the Breed as have been brought into England, never proved very extraordinary. See HORSE.

ARABIAN Year. See ARABIAN YEAR.

ARABESQUE, or **ARABESQUE**, something done after the manner of the *Arabians*.

Arabesque, *Grotesque*, and *Moresque*, are Terms applied to such Painting, Ornaments of Frezces, &c. wherein there are no human, or animal Figures, but which consist wholly of imaginary Foliages, Plants, Stalks, &c. See GROTESQUE and MORESQUE.

The Words take their Rise from hence, that the *Moors*, *Arabs*, and other *Mahometans*, use these kinds of Ornaments; their Religion forbidding them to make any Images or Figures of Men, or other Animals. See IMAGE.

ARABIC, **ARABICK**, **ARABICUS**, something that relates to Arabia, or the *Arabs*—

ARABIC, or **ARABIC Tongue**, is a Branch or Dialect of the Hebrew. See LANGUAGE and HEBREW.

Father *Angelo de St. Joseph* speaks much of the Beauty and Copiousness of the Arabic. He assures us it has no less than a thousand Names for a Sword; five hundred for a Lion; two hundred for a Serpent; and eighty for Honey. See WORD, ALPHABET, &c.

ARABIC Figures, or **Characters**, are the Numerical Characters commonly made use of in large Computations. See FIGURE, NUMERAL, &c.

The Arabic Characters stand contradistinguished to the Roman. See CHARACTER, &c.

The Learned are generally of opinion, that the Arabic Figures were first taught us by the *Saracens*, who borrow'd them from the *Arabs*, and they from the *Indians*—Scaliger was so satisfied of their Novelty, that he immediately pronounced a Silver Medallion he was consulted about, Modern; upon his being told of the Numerical Figures 254, 255, being on it. The common Opinion is, that *Placidus*, who lived towards the Close of the thirteenth Century, was the first Christian who made use of them. Father *Mabillon* even assures us, in his Work *de Re Diplomatica*, that he has not found them any where earlier than the fourteenth Century.

Yet Dr. *Wallis* insists on their being of a much older Standing; and concludes they must have been used in England at least as long ago as the time of *Hermannus Contractus*, who lived about the Year 1050; if not in ordinary Affairs, yet at least in Mathematical ones, and particularly Astronomical Tables.

The same Author gives us an Instance of their Antiquity in England, from a Mantle-Tree of a Chimney, in the Parsonage House of *Helmdon* in *Northamptonshire*, wherein is the following Inscription in *Basso Relievo*, M° 133, being the Date of the Year 1135. *Philof. Transact.* N° 154.

Mr. *Laffkin* furnishes a yet earlier Instance of their Use, in the Window of a House, part of which is a Roman Wall, near the Market-place in *Colchester*; where between two carved Lions stands an Effigieon, containing the Figures 1090. *Philof. Transact.* N° 255.

M. *Huet* is even of opinion, that these Characters were not borrowed from the *Arabs*, but from the *Greeks*; and that they were originally no other than the Greek Letters, which we all know that People made use of to express their Numbers by. See NUMBER, NUMERAL, &c.

Gum ARABICK, is the Name of a Gum which distils from a Species of *Acacia*, growing in *Egypt* and *Arabia*. See GUM.

It is very common among us, but little is to be met with which is genuine; it is supposed to be adulterated with our common Plum-tree Gums—That is accounted best, which is in smallest Pieces, and almost of a white Colour.

It dissolves easily in any aqueous Liquor, and is good in all kinds of Fluxes.

ARABICK, **ARABICUS**, was also a Title or Denomination of Honour, given to the Emperor *Saporus*; on account of his conquering Arabia; and reducing it into the form of a Roman Province. See TITLE, and QUALITY.

On the Reverse of some Medals of that Emperor, we read PARTHIC. ARABIC. ADIAB. COS. II. PP. And sometimes PARTH. ARAB. PARTH. ADIAB. That is, *Parthicus, Arabicus, Adiabemans*, &c. Doubtless because he overcame the *Parthians* in Arabia and *Adiabene*; and took from them those two Provinces.

ARABICI were also a kind of Heretics, who sprung up in Arabia, about the Year 207; whose distinguishing Tenet was, That the Soul died with the Body, and also rose again with it. See RESURRECTION.

Enchirid. lib. vi. c. 38. relates, that a Council was call'd to stop the Progress of the rising Sect; that *Origen* assisted at it; and convinced them so thoroughly of their Error, that they abjured it.

ARABISM, **ARABISMUS**, an Idiom or Manner of speaking peculiar to the *Arabs*, or the *Arabick* Language. See IDIOM and ARABIC.

R. *Martin* maintains, that the *Arabs* sometimes express an Oath, in the Hebrew, as well as the *Arabick*: *Ademore*, a perfect Master of the *Arabick*, and who makes great use thereof to explain the Hebrew; does not reject the Sentiment, nor yet much approve it: he contents himself barely to rehearse it, which, for so zealous a Partisan of *Arabism*, is enough to shew that he had no great opinion of it—Father *Scavien*.

ARABLE Land, antiently call'd *ARALIA*, is such as is fit for Tillage. See LAND and TILLAGE.

It is thus call'd from the Latin *arare*, of *ararius*, a Plough. See PLOUGH and PLOUGHING.

ARACHNOIDES, in Anatomy, a fine, thin, transparent Membrane, which lying between the *Dura* and *Pia Mater*, is supposed to invest the whole Substance of the Brain. See MENING and BRAIN.

Many Anatomists deny the Existence of such third Membrane; and contend that it ought rather to be looked on as the external *Lamina* of the *Pia Mater*, which sends its internal *Lamina* between the Folds of the cortical part of the Brain. See *Pia Mater*.

ARACHNOIDS, or **ARANEAE Tunica**, is likewise used for a fine, slender Tunick, wherewith some Anatomists suppose the crystalline Humour incompart'd. See CRYSTALLINE.

This, others call *Crythalloides*, and *Crythallina*; and others, and with good reason, deny the reality thereof, with its vulgarly supposed use. See CILIARY and TUNICK.

The Word is borrowed from the Greek *arakhē*, a Spider, Spider's Web; and *ἄραξ*, Form; in regard of the Fineness of these Parts, which are supposed to resemble that of a Spider's Web.

ARACK, or **ARRACK**, a spirituous Liquor, imported from the *East Indies*; chiefly used by way of Dram, and in Punch. See DRINK, PUNCH, &c.

The Nature and Composition of this celebrated Liquor has been much controverted—The Name *Arack*, Mr. *Lockyer* assures us, is an Indian Word for strong Waters of all kinds; for that they call our Spirits and Brandy, *English Arack*—But, what we understand by the Name *Arack*, is really no other than a Spirit procured by Distillation, from a vegetable Juice call'd *Toddy*, which flows by Incision out of the Coconut Tree, like the Birch Juice procured among us. See VEGETABLE and TAPPING.

The *Toddy*, Mr. *Lockyer* adds, is a pleasant Drink of itself when new, and purges those not used to it; and when stale, is heady, and makes good Vinegar. The *English* at *Madras* use it as *Leven* to raise their Bread with.

Goe and *Baravia* are the chief Places for *Arack*—As *Goe* there are divers kinds; single, double, and treble distilled. The double distilled, which is that commonly sent abroad, is but a weak Spirit in comparison with *Baravia Arack*; yet on account of its peculiar and agreeable Flavour, is preferred to all the other *Aracks* of India. This is attributed to the carbon Vesicles, which alone they use at *Goe* to draw the Spirit; whereas at *Baravia* they use Copper Stills.

The *Parier Arack*, made at *Madras*; and the *Colombo*, and *Quilons Arack* at other places, being fiery hot Spirits, are little valued by the Europeans, and therefore rarely imported; tho' highly prized among the Natives.

ARÆOMETER, **ARÆOMETRUM**, an Instrument wherewith to measure the Density or Gravity of Fluids. See FLUID, GRAVITY, and DENSITY.

The Word is form'd of the Greek *aræos*, rarus, tenuis, thin; and *μέτρον*, Measure.

The *Arcometer*, or Water-poife, is usually made of Glass; confisting of a round hollow Ball, which terminates in a long slender Neck, hermetically seal'd at-top: there being first, as much running Mercury put into it, as will serve to ballance or keep it swimming in an erect Position.

The Stem is divid'd into Degrees; (as represented Tab. MISCELLANY, fig. 18.) and by the Depth of its Descent into any Liquor, its Lightness is concluded; for that Fluid in which it sinks least, must be heaviest; and that in which it sinks lowest, lightest. See WATER-POIFE, &c.

M. Haulberg has invented a new *Arcometer*, described in *Philos. Transact.* N^o 262. thus: A (fig. 19.) is a Glass-bottle or Matrass, with so slender a Neck, that a Drop of Water takes up in it about five or six Lines, or $\frac{3}{4}$ of an Inch. Near that Neck is a small capillary Tube D, about six Inches long, and parallel to the Neck.—To fill the Vessel, the Liquor is poured in at the Mouth B, (which is widen'd to receive a Tunnel) till it run out at Z; that is, till it rise in the Neck to the Mark C, by which means you have always the same Bulk or Quantity of Liquor; and consequently, by means of the Balance, can easily tell, when different Liquors fill it, which weighs most, or is most intensely heavy.

Some regard, however, is to be had to the Season of the Year, and Degree of Heat and Cold in the Weather: by reason some Liquors rarely with Heat, and condense with Cold, more than others; and accordingly take up more or less room. See SPECIFIC GRAVITY, RAREFACTION, &c.

By means of this Instrument, the ingenious Author has made a Table, to shew the different Weights of the same Bulk of the most considerable chemical Liquors, both in Summer and Winter; as follows:

The *Arcometer* full of | weigh'd in Summer. | in Winter.

	oo.	dr.	gr.	oo.	dr.	gr.
Quick-silver	11	00	07	11	00	32
Oil of Tarrar	01	03	08	01	03	31
Spirit of Urine	01	00	32	01	00	43
Oil of Vitriol	01	03	58	01	04	03
Spirit of Nitre	01	01	40	01	01	70
Salt	01	00	59	01	00	47
Aqua Fortis	01	01	58	01	01	55
Distill'd Vinegar	00	07	55	00	07	60
Spirit of Wine	00	06	47	00	06	61
River Water	00	07	55	00	07	57
Distill'd Water	00	07	50	00	07	54

The Instrument itself weigh'd, when empty, one Dram twenty-eight Grains.

ARABOSTYLE, ARABOSTYLOS, in the ancient Architecture, a sort of Inter-columniation; wherein the Columns were placed at the Distance of eight, or, as some say, ten Modules from one another. See INTER-COLUMNIATION.

In the *Aræstyle* the Columns were the widest and openest they ever were planted at; whence the Name: from the Greek *aræos*, *rarus*, and *stasis*, Column.

The *Aræstyle* is chiefly used in the *Tysson* Order; at the Gates of great Cities and Fortresses.

AREOTICKS, or AREOTICKS, in Medicine, such Remedies as tend to open the Pores of the Skin, and render them large enough for the morbid Matter's being carried off by Sweat or insensible Perspiration. See PORE, SWEAT, PERSPIRATION, &c.

To the Class of *Aræticks* belong Diaphoreticks, Sudorifics, &c. See DIAPHORETICK, SUDORIFICK, &c.

ARAIGNEE, in Fortification, a Branch, Return, or Gallery of a Mine. See MINE, &c.

ARANEAE *Tunica*. See ARACHNOIDES.

ARATRUM *Terra*, in our ancient Law-books, as much Land as can be till'd with one Plough.—*Hoc manerium est 30 Aratorum*. See CARUCATA *Terra*.

ARATURA *Terra*, an ancient Service which the Tenant was to do his Lord, by ploughing his Land. See SERVICE, &c.

ARBALET, or BALISTA, a kind of Weapon, vulgarly called a *Cross-bow*. See HARQUEBUSS.

It consists of a Steel-bow, fix'd in a Shaft of Wood, furnish'd with a String and a Trigger; and is bent with a piece of Iron fitted for that purpose.—It serves to throw Bullets, large Arrows, Darts, &c.

The Antients had large Machines to throw Arrows without, called *Arbalists* or *Baliste*. See BALISTA.

The Word is derived from *Arbalista*, i. e. *Arca-balista*, a Bow with a Sling.

ARBITER, in the Civil Law, a Judge nominated by the Magistrate, or chosen voluntarily by two contending Parties, on whom they confer a Power, by Compromise, of deciding their Difference according to Law. See JUDGE and COMPROMISE.

The *Romans* sometimes submitted to a single *Arbiter*; but ordinarily they chose several; and those in an uncertain Number. See ARBITRATION.

In Matters wherein the Publick was concerned, as Crimes, Marriages, Affairs of State, &c. it was not allowed to have recourse to *Arbiters*.—Nor was it permitted to appeal from an arbitral Sentence; the Effect of an Appeal being to suspend the Authority of a Jurisdiction, not of a Compact. See APPEAL.

Among the Moderns there are usually divers kinds of *Arbiters*; some, obliged to go by the Rigour of the Law; and others, authorized by the contending Parties to relax, or give way to natural Equity, properly call'd *Arbitrators*. See ARBITRATION.

Justinian absolutely forbids a Woman from being ellected *Arbiter*, or rather *Arbitress*; as judging such an Office unbecoming the Sex. And yet Pope *Alexander III.* confirm'd an Arbitral Sentence given by a Queen of France.

ARBITRAGE, or ARBITREMENT. See ARBITRATION.

ARBITRARY, something left to the Choice and Determination of Men; or not fixed, and settled by any positive Law or Injunction. See LAW, LIBERTY, &c.

The Punishment of such a Crime is *Arbitrary*.—*Arbitrary* Fines or Mulcts are usually call'd *Arbitrations*. See AMERCEMENT.

The Laws or Measures whereby the Creator acts, are *Arbitrary*; at least all the Physical Laws. See LAWS OF NATURE.

ARBITRARY POWER. See DESPOTICK, POWER, MONARCHY, GOVERNMENT.

The Word is form'd from the Latin *arbitrium*, Will; whence also *Arbiter*, *Arbitrator*, &c.

ARBITRATION, or ARBITREMENT, the settling of a Cause or Quarrel to the Decision of one, or more indifferent Persons under the Quality and Denomination of *Arbiters*, or *Arbitrators*. See ARBITER and ARBITRATION.

Among us, two Arbitrators are usually chose by the contending Parties; and in case these cannot agree, a third is added, call'd an *Umpire*; in whose Decision both sides bind themselves to acquiesce.

ARBITRATOR, an extraordinary Judge, or Commissioner, in one or more Causes between Party and Party, chosen by their mutual Consents. See ARBITRATION.

An Arbitrator is either general, that is, including all Actions, Quarrels, and Demands; or special, which includes one or more Matters, or Facts specified.

The Civilians make a difference between *Arbiter* and *Arbitrator*, tho they both ground their Power on the Compromise of the Parties; yet their Liberty is divers: for an *Arbiter* is tied to proceed and judge according to Law, with Equity intermingled; whereas an *Arbitrator* is permitted wholly to his own Discretion, without Solemnity of Process, or Course of Judgment, to hear or determine the Controversy committed to him; so it be *justa Arbitrii boni Viri*. See ALTO & BASSO.

ARBOR, in natural History, Botany, &c. See TREE.

ARBOR in Chymistry.—ARBOR *Phlogistica*, is a Name common to several Metalline Crystallizations; thus call'd from their Ramifications resembling a Tree. See CRYSTALLIZATION.—Such are the

ARBOR *Diana*, *Diana's Tree*. See DIANA'S TREE.

ARBOR *Marsis*, *Tree of Mars*. See TREE OF MARS.

ARBOR *Periphrastica*, among the Schoolmen, is a Scale of beings; or a Figure, consisting of three Rows or Columns of Words; the middlemost whereof contains the Series of Genera and Species; and bears some Analogy to the Trunk; and the Extremes, containing the Differences, to the Branches of a Tree. See GENUS, SPECIES, and DIFFERENCE.—Such is

ANIMAL

Irrational Rational

MAN

This That

PLATO.

The *Arbor Porphyriana* is otherwise call'd *Scala Predicamentalis*. See PREDICAMENT, &c.

ARBOR *Genealogica*, or Tree of Consanguinity; signifies a Lineage drawn out, under the Figure or Resemblance of Root, Stock, Branches, &c. See CONSANGUINITY, GENEALOGY, STOCK, &c.

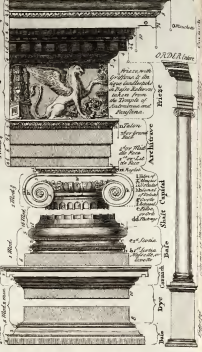

ARBOR is also figuratively used in Mechanicks, for the principal part of a Machine, which serves to sustain the rest.—It is also used for a Spindle or Axis whereon a Machine turns.

TUSCAN

DORIC

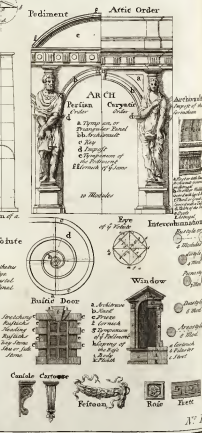

IONIC

Mouldings & Members

CORINTHIAN

COMPOSITE

Arbor of a Crane, a Mill, Windmill, &c. See CRANE, MILL, WINDMILL, &c.

ARBOREUS, **ARBOROUS**, is applied by some Naturalists to such Excrecences, Fungus's, Mosses, and other Parasites as grow on Trees. See FUNGUS, MUSHROOM, GALLS, MOSS, PARASITE, ACORUS, &c.

ARBORIST, **ARBORISTA**, a Person skill'd in Trees; their Kinds, Forms, Natures, &c. See TREE.

Arboris is an appellation of less extent than *Botanist*. See BOTANY, &c.

ARBOUR, among Gardeners, &c. a kind of shady Bower or Cabinet, contrived to take the Air in. See GARDEN.

Arbours are now gone much into disuse, by reason their Seats, apt to be moist, are unwholesome.—They are distinguish'd into *natural* and *artificial*.

Natural arbours, are formed only of the Branches of Trees, interwoven artfully, and born up by strong Lattice-work, Poles, Hoops, &c. which make Galleries, Halls, Porchicos, and green Villas naturally covered.

The Trees wherewith these *Arbours* are formed, are usually the Female Elms, or *Dutch Lime-Trees*; in regard they easily yield, and by their great quantity of small Boughs, form a thick Brush-wood: the lower parts are filled up with Horn-beam.

Artificial Arbours, and Cabinets are made of Lattice-work, born up by Standards, Cross-rails, Circles and Arches of Iron. For which purpose they make use of small Fillers of Oak, which being planed and made strait, are wrought in Checkers, and fastened with Wire.

ARC, or ARR. See ARCH.

The Words are formed from the *Latin*, *Arcus*, a Bow. **ARCANUM** literally signifies a Secret; and is therefore very pertinently applied by Quacks and Impostors in Medicine, who conceal their Ignorance and Fraud under a pretence of Secrecy.—Hence *Legions of Arcana*.

There are also standing official Compositions, under the Denomination of *Arcana*: such are

The *Arcanum Corallinum*, a Preparation of red Precipitate; made by distilling it with Spirit of Nitre, and repeating the Distillation again and again, till a red Powder be procured. This Powder holl'd in Water, and the Water poured off, and tartariz'd Spirit of Wine put to the Powder; two or three Cohobations are made: which leave a Powder, much like the Prince's Powder; of good use in the Gout, Dropsy, Scary, &c. It operates chiefly by Stool.

Arcanum Jovale, is made of an Amalgam of Mercury and Tin, digested in Spirit of Nitre: the Nitre being drawn off, the remaining matter is wetted with Spirit of Wine, and the Spirit burnt away; and this for several times till the pungent Taste is gone: what remains is used much with the same Intensions as the *Antibellum Poterii*, and is recommended by some as a Sudorific. See ANTIBELLUM.

Arcanum duplicatum is prepar'd of Caput Mortuum of Aqua fortis, by dissolving it in hot Water, filtrating, and evaporating it to a Crustic; then leaving it to shoot.

The *Arcanum duplicatum*, or *Paracea duplicata* is extoll'd as a Diuretic, and Sudorific.—The Recipe was purchased at the expence of 500 Dollars, by that great Virtuoso the Duke of Holstein. *Schroder*, that Prince's Physician, writes wonders of its great uses in Hypochondriacal Cries, continued and intermitting Fevers, Stone, Scary, &c.

ARC-DOUTANT, in Building, a flat Arch or part of an Arch abutting against the Reins of a Vault, to support, and prevent its giving Way. See VAULT.

Arc-boutants are only arch'd Buttresses. See BUTTRESSES.

The name is *French*; form'd of *arc* and *bouter*, to a-butt. **ARCH**, **ARR**, **ARCUS**, a part of any curve Line; e. gr. of a Circle, Ellipsis, or the like. See CURVE.

ARCH of a Circle is a part of the Circumference thereof, less than a half, or Semicircle.—Such is AB (Tab. GEOMETRY, fig. 27) See CIRCLE and CIRCUMFERENCE.

The half or Line that joins the two Extremes of the Arch is called the *Chord*; and the Perpendicular rais'd in the middle of that Line, the *Sine* of the Arch. See CHORD and SINE.

All Angles are measured by *Arches*—to know their Quantity, an Arch is described, having its Centre in the Point of the Angle. See ANGLE.

Every Circle is supposed to be divided into 360 Degrees; and an *Arch* is estimated according to the Number of those Degrees it takes up.—Thus an *Arch* is said to be of 30, of 80, of 100 Degrees. See DEGREE. Hence

Equal **ARCHES** are such Arches of the same or equal Circles, as contain the same Number of Degrees. See EQUAL.—Hence

In the same or equal Circles, equal Chords subtend equal *Arches*.—And hence, again, *Arches* intercepted between parallel Chords are equal.

A Radius, CE, fig. 98, which bisects the Chord in D, does also bisect the *Arch*, in E; and is perpendicular to the Chord, and on the contrary.—And hence the Problem, to bisect an *Arch* is solved by drawing a Line AB perpendicular to the Chord in F.

Similar **ARCHES** are those which contain the same Number of Degrees of unequal Circles. See SIMILAR.—Such are the *Arches* AB and DE, fig. 87.

Two Radii being drawn from the Centre of two concentric Circles; the two *Arches* intercepted between 'em, bear the same Ratio to their respective Peripheries; and also the two Sectors to the Areas of their respective Circles. See ANGLE.

The Distance of the Centre of Gravity of an *Arch* of a Circle, from the Centre of the Circle, is a third Proportional to a third part of the Periphery and the Radius. See CENTRE of GRAVITY.

For the Sines, Tangents, &c. of *Arches*. See SINE, TANGENT, &c.

ARCH in Astronomy—*Diurnal ARCH* of the Sun, is part of a Circle parallel to the Equator, described by the Sun in his Course betwixt rising and setting. See DIURNAL, DAY, &c.

His *nocturnal Arch* is of the same kind; excepting that it is described betwixt his setting and rising. See NIGHT, RISING, &c.

The Latitude and Elevation of the Pole are measured by an *Arch* of the Meridian: The Longitude, by an *Arch* of a parallel Circle. See ELEVATION, LATITUDE, LONGITUDE, &c.

ARCH of Progression, or *Divulsion*, is an *Arch* of the Zodiac which a Planet seems to pass over, when its Motion is according to the Order of the Signs. See DIRECTION.

The **ARCH** of Retrogradation is an *Arch* of the Zodiac, described while a Planet is retrograde, and moves contrary to the Order of the Signs. See RETROGRADATION.

ARCH of Station. See STATION and STATIONARY.

ARCH between the Centres is an *Arch*, as AI (Tab. ASTRONOMY, fig. 35.) passing from the Centre of the Moon's Shadow, A, perpendicular to her Orbit GH. See ECLIPSE.

If the Aggregate of the *Arch* between the Centres AI, and the apparent Semi-diameter of the Moon, be equal to the Semi-diameter of the Shadow; the Eclipse will be total without any duration; if less, total with some duration; and if greater, yet less than the Sum of the Semi-diameters of the Moon and the Shadow, partial.—

ARCH of Vision is the Sun's depth below the Horizon, at which a Star, before hid in his Rays, begins to appear again. See POETICAL RISING.

ARCH, in Architecture, is a Concave Building, rais'd with a Mould bent in form of the *Arch* of a Curve, and serving as the inward Support of any Superstructure. See BUILDING.

An *Arch*, says Sir Henry Wotton, is nothing but a narrow or contracted Vault; and a Vault, a dilated Arch. See VAULT.

Arches are used in large Intercolumnations of spacious Buildings; in *Porticos*, both within and without Temples; in publick Halls, as Ceilings, the Courts of Palaces, Cloisters, Theatres and Amphitheatres. See PORTICO, THEATRE, CEILING, &c.

They are also used as Buttresses and Counter-forts to support large Walls laid deep in the Earth, for Foundations of Bridges and Aqueducts, for triumphal Arches, Gates, Windows, &c. See BUTTRESSES, ARC-BOUTANT, &c.

Arches are either *circular*, *elliptical*, or *semi-circular*.

Circular ARCHES are of three kinds, viz.—1st, *Semi-circular*, which make an exact Semicircle, and have their Centre in the middle of the Chord of the Arch.

2^{ly}, *Scheme*, which are less than a Semicircle, and consequently are flatter *Arches*; containing some, 90 Degrees, others 70, and others only 60.

3^{ly}, *Arches of the third and fourth Point*, as some of our Workmen call them; tho' the *Italians* call them *di terzo* and *quarto acuto*, because they always meet in an acute Angle at top.—These consist of two *Arches* of a Circle ending in an Angle at the Top, and are drawn from the Division of a Chord into three or four Parts, at pleasure.—Of this kind are many of the *Arches* in old *Gebeck* Buildings; but on account, both of their Weakness and Unsightliness, they ought, according to Sir Henry Wotton, to be forever excluded out of all Buildings.

Elliptical ARCHES consist of a Semi-Ellipsis; and were formerly much used instead of Mantle-trees in Chimneys.—These are commonly 2 Key-stone and Chaperels or Imposts.

Straight ARCHES, are those whose upper and under Edges are strait; as in the others they are curved; and those two Edges also parallel, and the Ends and Joints all pointing towards a Center.—These are principally used over Windows, Doors, &c.

The Doctrine and Use of *Arches* is well delivered by Sir *Henry Wotton*, in the following *Theorems*.—1st, All Matter, unless impeded, tends to the Center of the Earth in a perpendicular Line. See DESCENT, GRAVITY, CENTRE, &c.

2^{dy}, All solid Materials, as Bricks, Stones, &c. in their ordinary rectangular Form, if laid in Numbers, one by the Side of another, in a level Row, and their Extreme ones sustained between two Supporters; those in the middle will necessarily sink, even by their own Gravity, much more if press'd down by any superincumbent Weight—To make them stand, therefore, either their Figure or their Position must be altered.

3^{dy}, Stones, or other Materials being figured *Concave*, i. e. Wedge-wise, broader above than below, and laid in a level Row, with their two Extremes supported as in the preceding Theorem; and pointing all to the same Center; none of them can sink, till the Supporters or Barments give way, because they want room in that Situation to descend perpendicularly. But this is but a weak Structure; in regard the Supporters are subject to too much Impulsion, especially where the Line is long; for which reason, the Form of straight *Arches* is seldom used, excepting over Doors and Windows, where the Line is short—In order to fortify the Work, therefore, we must not only change the Figure of the Materials, but also their Position.

4^{thly}, If the Materials be shaped wedge-wise, and be disposed in form of a circular *Arch*, and pointing to some Center; in this Case, neither the pieces of the said *Arch* can sink downwards, for want of room to descend perpendicularly; nor can the Supporters or Barments suffer so much Violence as in the precedent flat Form: for the Convexity will always make the incumbent Weight rather rest upon the Supporters, than heave them outwards: whence this Corollary may be fairly deduced, that the security of all the *Arches* above-mention'd is the Semi-circular; and of all Vaults, the Hemispherical.

5^{thly}, As Semi-circular Vaults, rais'd on the whole Diameter, are the strongest; so those are the most beautiful, which keeping to the same height, are yet diffused, one fourteenth part longer than the said Diameter: which addition of width will contribute greatly to their Beauty, without diminishing any thing considerable of their Strength.

It is, however, to be observ'd, that according to Geometrical Strictness, to have the strongest *Arches*, they must not be Portions of Circles, but of another Curve, call'd the *Catenaria*, whose Nature is such, that a number of Spheres dispos'd in this form, will sustain each other, and form an *Arch*. See CATENARIA.

Dr. *Gregory* even shews, that *Arches* constructed in other Curves, only stand or sustain themselves by virtue of the *Catenaria* contain'd in their thickness; so that were they made infinitely slender or thin, they must tumble of course; whereas the *Catenaria*, tho' infinitely slender, must stand, in regard no one point thereof tends downward more than any other. *Philosoph. Transact.* N^o. 331.

See further of the Theory under the Article VAULT. *Arches* are sustain'd by Impuls. See IMPOSTS. *ARCH* is particularly used for the Space between the two Peers of a Bridge. See PIER and BARGE.

The chief or Master *Arch* is that in the middle; which is widest, and usually highest, and the Water under it deepest: being intended for the passage of Boats or other Vessels—We read of Bridges in the East, which consist of 300 *Arches*.

ARCH-Stone. See KEY-Stone. *Triumphal ARCH*, is a Gate, or Passage into a City, magnificently adorned with Architecture, Sculpture, Inscriptions, &c. which being built of Stone or Marble, serves not only to adorn a Triumph, at the Return from a victorious Expedition, but also to preserve the Memory of the Conqueror to posterity. See TRIUMPH.

The most celebrated Triumphal *Arches*, now remaining of Antiquity, are that of *Titus*, of *Septimus Severus*, and of *Constantine*, at Rome.

ARCH, in the Scripture Sense. See ARK. *ARCH*, or *ARCH*, is also a Term without any meaning of itself, but which becomes very significant in composition with other Words: It heightens and exaggerates them; and has the Force of a Superlative, to shew the greatest Degree or Eminence of any thing.

Thus we say *Arch-fool*, *Arch-rogue*, &c. to express Folly and Knavery in the utmost Degree—So also *Arch-Treasurer*, *Arch-Angel*, *Arch-Bishop*, *Arch-Heretic*, &c. to denote such as have a Pre-eminence over others.

The Word is form'd of the *Greek* αρχη, beginnings; whence αρχων, princeps, summus.

In *English* we usually cut off the final *i*, from *Archi*, tho' to very ill purpose; the Words wherewith it is join'd, sounding much harsher on that score than they would do were it preserv'd entire, as it is in most other Languages. See ANOMALOUS, CONTRACTION, &c.

ARCHÆUS, an obscure Term, us'd chiefly among the Ancient Chymists, to express I know not what principle of Life and Motion; and the Cause of all the Effects which subsist in Nature. See LIFE.

Hence, as they differ in their Ideas of a vital Cause; the Term *Archæus* becomes applied to very different Things: The most of 'em conceive it of the Nature of Fire. See FIRE.

Some use *Archæus* to denote the Fire lodg'd in the Centre of the Earth; to which they ascribe the Generation of Metals and Minerals, and which they believe to be the Principle of Life in Vegetables. See CENTRE, &c.

Others by the Word *Archæus* mean a certain universal Spirit, diffus'd throughout the whole Creation, the active Cause of all the Phenomena in Nature. See SPIRIT, ÆTHER, MEDIUM, &c.

Others, instead of *Archæus*, chuse to call it the *Ambra Martis*; and others the *Vulcan* or *Heat* of the Earth. See ANIMA Martis, &c.

They add, that all Bodies have their Share of this *Archæus*; and when this is corrupted, it produces Diseases, which they call *Archæal Diseases*.

They likewise attribute Ideas to it; which for this Reason they call *Archæal Ideas*. See IDEA.

The Word is derived from αρχη, Principle; 'this Fire being the Principle and Source of all the Effects in Nature. See PRINCIPLE.

Hellmont is a great Admirer of the Dogma of an *Archæus*—No Poison, says he, can act on a Carcase; if, therefore, it "have any Effect, 'tis by means of the *Archæus*. He adds, "that if any heterogeneous Body happen to be present "to the *Archæus*; it rises into a fervour, endeavours to "expel the hostile matter; and, in order to that, exerts "all the force of the Body—To cure any Disease, therefore, is to pacify, and compose this *Archæus*. This *Archæus*, he holds, is irritated at the least appearance of any thing heterogeneous; and as its Office is to watch over the "Health, and Safety of the whole Body; it is excited at "the very Shadow of the Enemy, calls its Forces to the "Charge, raises Fevers, &c. All, therefore, required to "an universal Medicine, is something that may readily pacify, and lay this Unnatural Fever upon all occasions." This Doctrine of *Hellmont*, *Boerhaave* observes, would not be so absurd, did he not ascribe Understanding to this *Archæus*: setting this aside, the Principle which renders Poisons deadly, and Remedies beneficial, is the Circulation of the Blood. See CIRCULATION and BLOOD.

ARCH-ANGEL, an intellectual Substance or Angel in the eighth Rank among the blessed Spirits which compose the Celestial Hierarchy. See ANGEL and HIERARCHY.

The Word is compounded of the *Greek* αρχη, Prince and επισκοπος, Angel.

ARCHBISHOP, *ARCHIEPISCOPUS*, a metropolitan Prelate, having several Suffragan Bishops under him. See BISHOP, SUFFRAGAN, &c.

Archbishops were not known in the East, till about the Year 520; and tho' there were some soon after this who had the Title, yet that was only a personal Honour by which the Bishops of considerable Cities were distinguished—it was not till of late that *Archbishops* became Metropolitans, and had Suffragans under them. See METROPOLITAN.

Athanasius appears to be the first that used the Title *Archbishop*, which he gave occasionally to his Predecessor; *Gregory Nazianzen*, in like manner, gave it to *Athanasius*; not that either of them were entitl'd to any Jurisdiction, or even Precedence, in virtue thereof.

Among the *Latins*, *Isidore Hispalensis* is the first that speaks of *Archbishops*. He distinguishes four Orders or Degrees in the Ecclesiastical Hierarchy, viz. Patriarchs, *Archbishops*, *Metropolitans*, and *Bishops*. See PATRIARCH, &c.

England is divided into two *Archbishopricks*, or Provinces. See ARCHBISHOPRICK.

ARCHBISHOPRICK, *ARCHIEPISCOPATUS*, the Dignity of Archbishop; or the Province under his Jurisdiction. See ARCHBISHOP.

There are two *Archbishopricks* in *England*, viz. of *Canterbury* and *York*; the Prelates whereof are call'd *Primates* and *Metropolitans*. See PRIMATE and METROPOLITAN.

The Archbishop of *Canterbury* had antiently Jurisdiction over *Ireland* as well as *England*, and was styled a *Patriarch*, and sometimes *Alerius orbis Papa*, and *Orbis Britannicæ Pontifex*. Matters done and recorded in his Name ran thus, *Anno Pontificatus nostri primo*, &c. See *PATRIARCH*, *POPE*, &c.

He was also *Legatus Natus*. See *LEGATE*.

He even enjoyed some special Marks of Royalty; as, to be Patron of a Bishoprick, which he was of *Rocheſter*; to make Knights, coin Monies, &c. — He is still the first Peer of *England*, and next to the Royal Family; having precedence of all Dukes, and all Great Officers of the Crown. See *NOBILITY*, *PEER*, *PRECEDENCE*, &c.

He has, by Common Law, the Power of Probate of Wills and Testaments, and granting Letters of Administration, &c. See *PROBATE*, *ADMINISTRATION*, &c.

He has also a Power to grant Licences and Dispensations in all Cases formerly sued for in the Court of *Rome*, and not repugnant to the Law of God. See *DISPENSATION*, *PLURALITY*, *NON-RESIDENCE*, *COMMENDAM*, &c.

He also holds several Courts of Judicature; as, Court of Arches, Court of Audience, Prerogative Court, and Court of Peculiars. See *ARCHES*, *AUDIENCE*, &c.

The Archbishop of *York* has the like Rights in his Province, as the Archbishop of *Canterbury*; has precedence of all Dukes next of the Royal Blood; and all Officers of State except the Lord High Chancellor. He has the Rights of a Count *Palatine* over *Hexamsire*. See *CONVOCAION*, &c.

ARCHDEACON, *ARCHIDIACONUS*, a Church Officer, whose Business is to visit the Parishes within a certain District, or part of a Diocese committed to him. See *VISITATION*, *PARISH*, &c.

The *archdeacon*, sometimes also call'd *Arch-Write*, was originally the first and eldest of the Deacons who attended on the Bishop; whence his Name. See *DEACON*.

He was not known before the Council of *Nice*; his Function is since become a Dignity; and even set above that of Priest: tho' antiently it was quite otherwise. The *archdeacon* was the Bishop's chief Minister for all external Concerns, and particularly the Administration of the Temporalities. He took care that Order and Decency were observ'd in Divine Service, look'd to the Ornaments and Utensils of the Church; had the Direction of the Poor, and the Inspection of the Manners and Behaviour of the People: for which reason he was call'd the *Bishop's Hand and Eye*.

These Advantages soon got him the upphard over Priests, who had only Spiritual Functions. But he had no Jurisdiction over 'em till the 16th Century; tho' by this time he was become superior to the Archimandrite, or Rural Dean himself. See *RURAL Dean*.

In the Xth Century *Archdeacons* were considered as having Jurisdiction in their own Right or attach'd to their Office; with a Power of Delegating it to others. But from that time Measures were taken to lessen their Power, by increasing their Number.—He whose District lay in the Capital City, took the Quality of *Great-Archdeacon*.

We have sixty *Archdeacons* in *England*: their Office is to visit every other Year, to enquire into Reparations and Moveables belonging to the Church, reform Abuses in Ecclesiastical Matters, and bring the more weighty Affairs before the Bishop; besides which, they have also a Power to suspend, excommunicate, and in many Places to prove Wills, and in some to institute to Benefices.

It is one part of the *archdeacon's* Office to induct all Clerks into their Benefices within his Jurisdiction; and by the Act of Uniformity, he is now oblig'd to be in Priests Orders. See *INDUCTION*.

Many *Archdeacons* in old Foundations, have, by prescription, their Courts and Officials as Bishops have. See *COURT*, *OFFICIAL*, &c.

ARCH-CHAMBERLAIN, *ARCH-CAMERARIUS*, an Officer of the Empire; much the same with what in *England* we call *Great Chamberlain*. See *CHAMBERLAIN*.

The Elector of *Brandenbourg* is *Arch Chamberlain* of the Empire, being so appointed by the Golden Bull; and in that Quality, he bears the Scepter before the Emperor, walking on the left hand of the Elector of *Saxony*. At some Solemnities he serves on horseback like other Electors; carryng a Baton with a Towel in his Hands: from which slighting he sets it for the Emperor to wash.—He has his Vicar, or *Sub Arch-Chamberlain*, who is Prince of *Hohenollera*, of the House of *Brandenbourg*. See *ELECTOR*, *EMPIRE*, &c.

ARCH-CHANCELLOR, *ARCH-CANCELLARIUS*, a Great Chancellor, who antiently presided over the Notaries, that is, the Secretaries of a Court. See *CHANCELLOR*.

This Office chiefly obtained in *France*, under the two first Races of their Kings; and afterwards under the Em-

pire: as they had three several Territories, *Germany*, *Italy*, and *Aries*; they had three *Arch-Chancellors*; and hence the three *Arch-Chancellors* still subsisting in *Germany*, the Archbishop of *Mentz* being *Arch-Chancellor of Germany*, the Archbishop of *Clagen* of *Italy*, and the Archbishop of *Treves* of *Aries*.

Bern. de Malliacroth, in an express Treatise of *Arch-cancellarius Imperii Romani*, shews that these three Archbishops were *Arch-Chancellors* before they were Electors.—We also read of *Arch-Chancellors* of *Burgundy*, &c.

ARCH-CHANTER, *ARCHICANTER*, the Chief or President of the Chanters of a Church. See *CHANTER*.

ARCH-DEVIN, *ARCHIDIVINA*, the Chief or Pontiff of the antient *Druids* in a Nation. See *DEVIN*.

ARCH-ETTLER, *ARCHIEPISCOPUS*, the Great Butler of the Empire. See *BUTTLER*.

The King of *Bohemia* is *Arch-butler*: his Business is to present the first Cup at an Imperial Entertainment; but he is not obliged to officiate with his Crown on. He has for Vicar or Deputy the Hereditary Prince of *Lusbourg*. See *ELECTOR*.

ARCH-DAFFER, or *Chief-Sewer*, is another Officer of the Empire. See *EMPIRE*.

The Elector of *Bavaria* is *Archdapifer*.—The *Palatine* of the *Rhine* pretended this Office was annexed to his Palatinate; but has since desisted. See *PALATINE*.

ARCHDUKE, *ARCHIDUX*, a Duke vested with some Quality, Pre-eminence, and Authority above other Dukes. See *DUX*.

The *Archduke* of *Austria* is a very antient Title. There have also been *archdukes* of *Lorraine*, and *Breabant*.

Austria was erected into a Marquisate by *Otto*, or *Henry I.* and into a Duchy by *Friederic*, in 1156: But we don't well know when, nor why the Title *Arch-duchy* was given it.—'Tis commonly held, that Duke *Friederic IV.* first assumed the Quality; Others, that it was given by the Emperor *Maximilian I.* in 1459; and ample Privileges annexed to it. The principal hereof are, That the *Archduke* shall distribute Justice in his own Dominions, without Appeal; that he shall be judg'd to have received the Investiture of his States, after having demanded it three times; and cannot be deprived of his Countries, even by the Emperor and the States of the Empire; that no Affair of the Empire can be concluded without his Participation; and that he have a power of creating Counts, Barons, and Gentlemen, throughout the whole Empire: which are Privileges to which the other Dukes of the Empire are strangers.

ARCHE, among Physicians, the beginning of a Disease. See *DISEASE*.

ARCHED Legs, is an Imperfection in a Horse when being in his natural Position, he has his Legs bent forwards; and his whole Leg makes a kind of Arch or Bow. See *HORSE*.

It usually arises from excessive Labour, whereby the back Sinews are made to shrink up so that the Legs remain *arch'd*, and tremble after a little Riding. Tho the Disorder is sometimes natural to them.

ARCHERS, a kind of Militia or Soldierly, armed with Bows and Arrows. See *ARM*, *MILITIA*, &c.

They were much in use in former Times; but are now laid aside, excepting in *Turky*, and some of the Eastern Countries; where there are Companies of *Archers* still on foot in their Armies.

The Name *Archer*, however, is still retained even where the Thing is lost: Thus, in *France*, the Officers who attend the Prevaists, to make Captures, Seizures, Arrests, &c. are call'd *Archers*; tho their Arms be only Halberds or Carbines.—In this sense they say, the *Archers* of the *Grand Prevost de l'Hotel*; of the *Prevost des Marchands*; the City *Archers*; the *Archers du Guet*, or of the Watch, &c.

They have also their *Archers des Pauvres*, *Archers* of the Poor; whose Office is to seize such Beggars as they find in the Streets, and carry them to the Hospitals.

The Word is form'd of the Latin *Arceus*, a Bow; whence *Arctarius*, *Arquitel*, and even *Arquis*, as we sometimes read it in the corrupt State of that Tongue.—*Varro* observes, that *Archer* originally signified a Brigand, or Highwayman.

ARCHERY, in our antient Customs, a Service of keeping a Bow for the Use of the Lord, to defend his Castle. See *SERVICE*.

ARCHES, or Court of ARCHES, is one of the Archbishop's Courts; to which Appeals lie in Ecclesiastical Matters from all parts of the Province of *Canterbury*. See *COURT*, *APPEAL*, and *ARCHBISHOP*.

This Court is thus call'd, from the *arch'd* Church and Tower of *St. Mary le Bow*, where it was wont to be held.

The

The Judge of the Court of the *Archebis*, is called the *Dean of the Archebis*, or the *Official of the Archebis Court*, &c. with which Officialty, is commonly joined a peculiar Jurisdiction over thirteen Parishes in *London*, termed a *Deanery*, exempt from the Authority of the Bishop of *London*, and belonging to the Archbishop of *Canterbury*; of which the Parish of *St. Dunstons* is one, and the principal.

Others suppose the Denomination and Functions of *Dean of the Archebis* to have arose hence, that the Archbishop's Official or Dean being oft employ'd abroad in foreign Embassies, the Dean of the *Archebis* was his Substitute in this Court.

This Judge on any Appeal made, forthwith, and without any farther Examination of the Cause, sends out his Citation to the Appellee, and his Inhibition to the Judge from whom the Appeal was made.

The Advocates who are allowed to plead in the *Archebis Court*, are to be Doctors of the Civil Law, in one of our Universities. See ADVOCATE.

ARCHETYPE, ARCHETYPUS, a Pattern or Model, by which any Work is form'd, or which is copied after, to make another like it. See MODEL.

In this sense the Word coincides with *Original*; and stands opposed to *Copy*. See ORIGINAL and COPY.

Among Minsters, &c. *Archetype* is peculiarly us'd for the Standard or original Weight, by which the other Weights are to be adjusted and examined. See STANDARD.

The Philosphers, particularly the *Platonists*, talk of an *Archetype World*; meaning, the World, such as it exist'd in the Divine Mind, or in the Idea of God, before the Creation. See IDEA, PLATONISM, &c.

The Word is compounded of *αρχη*, Beginning; and *τυπη*, Type. See TYPE.

ARCHIACOLYTHUS, *q. d.* Chief *Acolytus*; was an ancient Dignity, in Cathedral Churches; the Ministers whereof were divided into four Orders, or Degrees, *viz.* Priests, Deacons, Subdeacons, and *Acolyti*; each of which had their Chiefs: The Chief of the *Acolyti* was called *Archiacolythus*. See ACOLYTHUS, &c.

ARCHIATER, ARCHIATRUS, ARCHIATOR, the chief Physician of a Prince who retains several. See PHYSICIAN.

The Word is form'd of the Greek *αρχη*, Principium, Chief; and *ιατρος*, Medicus, a Physician.

ARCHEUNUCH, ARCHIENUCHUS, the Chief of the Eunuchs. See EUNUCH.

The *Archieunuch* was one of the principal Officers in *Constantinople*, under the Greek Emperors.

ARCHIGALLUS, in Antiquity, the Chief of *Cybele's* Priests, call'd *Galli*. See GALLI.

ARCHILOQUIAN, a Term in Poetry, applied to a sort of Verses, whereof *Archilochus* was the Inventor. See VERSE.

These consist of seven Feet; the four first whereof are ordinarily Dactyls, the sometimes Spondees; the three last Trochees: for instance;

Solvitur aeris Hyems grata vice Veris & Favoni. HER.

'Tis usual to mix Iambic Verses of six Feet, abating a Syllable, with *Archiloquian* Verses; as *Horace* himself has done in the Ode now cited.

These Verses are also call'd *Dactylic*, on account of the Dactyls at the beginning. See DACTYL and DACTYLIC.

ARCHIMANDRITE, the Superior of a Monastery; amounting to what we now call *Abbot*. See ABBOT, SUPERIOR, &c.

Quarantius observes, that the Word literally denotes the Chief or Leader of a Flock; in which sense it may be applied to any Ecclesiastical Superior: Accordingly, we find the Name sometimes attributed to Archbishops. But among the *Greeks*, where it is chiefly us'd, it is restrained to the Chief of an Abbey.

M. Simon maintains the Word originally derived from the *Syriac*; at least the part *Mandrite*, which by a Circumlocution, he makes to signify a Solitary or Monk.

ARCHIMIME, ARCHIMIMUS, is the same thing, in effect, with *Arch-Button*.

The *Archimimes*, among the *Romans*, were Persons who imitated the Manners, Gestures, and Speech both of the Living and the Dead. See MIME.

At first they were only employ'd on the Theatre; but were afterwards admitted to their Feasts, and at last to their Funerals; where they walked after the Corps, counterfeiting the Gestures and Behaviour of the Person who was carrying to the Funeral Pile; as if he were still alive. See FUNERAL.

ARCHIPELAGO, in Geography, a Sea interrupted by a great Number of Islands. See SEA.

The most celebrated, and that to which the Name is in some measure appropriated, is that between *Greece*, *Macedonia*, and *Asia*; wherein are the Islands of the *Aegean Sea*: which is call'd the *White Sea*, in contradistinction to the *Iuxine*, which they call the *Black Sea*.

The modern Geographers mention other *Archipelago's*; as, that of *Lazarus*, near the Coast of *Malabar* and *Malacca*; the *Archipelago of Mexico*; that of the *Caribbees*, wherein are above 10000 Islands; that of the *Philippines*, containing 11000 Islands; those of the *Molucces*, of *Celebes*, &c.

The Word is form'd, by Corruption, of *Aegeopelagus*, *q. d.* *Aegean Sea*; which, again, is form'd of *Ayama*, or Holy Sea; a Name originally given it by the *Greeks*, on account of the *Cyclades*, for which they had a very high Veneration.

ARCHIPERACITA, or ARCHIPERACIYA, an Officer in the *Jewish Academies*. See ACADEMY.

The *Archiperacita* was not the same with the *Archiepiscopus*, as *Greotius* and others have mistakenly imagin'd; but rather the Chief or Principal of those appointed to read, explain, and profess the Law, in their Schools. And hence the Name; which is form'd of the Greek *αρχη*, Chief; and the *Hebrew* or *Chaldee* *פרש*, *Phersak*, Division, Chapter.

ARCH-LEVITE, ARCHILEVITA, See ARCHIDEACON. **ARCHMARSHAL**, ARCHIMARISCALLUS, the Grand Marshal of the Empire. See MARSHAL.

The Elector of *Saxony* is *Archmarshal* of the Empire; and in that Quality goes immediately before the Emperor, bearing a naked Sword.

ARCH-MINISTER, ARCHMINISTER, the Prime Minister of a Prince or State. See MINISTER.

Charles the Bald having declared *Boson* his Viceroy in *Italy*, under the Title of Duke; made him also his first Minister under that of *Archminister*: from the Greek *αρχη*, and the *Latin Minister*—*Chorier*.

ARCH-PRIEST, ARCHIPRESBYTER, a Priest, established in some Dioceses, with a Pre-eminence over the rest. See PRIEST.

Antiently, the *Arch-Priest* was the first Person after the Bishop, and even acted as his Vicar, in his absence, as to all spiritual Concerns. In the sixth Century, there were found several *Arch-Priests* in the same Diocese; from which time they were call'd *Deans*. See DEAN.

In the ninth Century, they distinguished two kinds of Cares or Parishes; the smaller, govern'd by simple Priests; and the Baptistal Churches, by *Archpresbyters*, who, beside the immediate Concern of the Cure, had the Inspection of the other inferior Priests, and gave an account thereof to the Bishop, who governed the Chief or Cathedral Church in Person. See BISHOP, PARISH, CATHEDRAL, &c.

There are *Arch-Presbyters* still subsisting in the Greek Church; vested with most of the Functions and Privileges of *Choripiscopi*, or Rural Deans. See CHORIPISCOPUS and RURAL DEAN.

ARCH-PAINTER, ARCHITYPORAPHUS. See PAINTER.

ARCH-PRIOR, was a Name sometimes given to the Master of the Order of Templars. See MASTER and TEMPLAR.

ARCHISTRATEGUS, *Αρχιστρατηγος*, the Generalissimo, or Captain General of an Army.

ARCHITECT, ARCHITECTUS, a Person skill'd in Architecture, or the Art of Buildings; who makes Plans and Designs of Edifices, conducts the Work, and directs the Masons and other Artificers employ'd therein. See ARCHITECTURE, PLAN, DESIGN, &c.

The Word is derived from the Greek *αρχη*, *Principi*, and *τεχνον*, *Workman*, *q. d.* the principal *Workman*.

The most celebrated Architects are, *Vitruvius*, *Palladio*, *Scamozzi*, *Serlio*, *Vignola*, *Barbare*, *Cataneo*, *Alberti*, *Viola*, *Bullant*, and *De Lorme*.

Vitruvius enumerates twelve Qualities requisite to an Architect; That he be Docil and Ingenious; Literate; skill'd in Designing; in Geometry; Opticks; Arithmetick; History; Philophy; Musick; Medicine; Law, and Astrology. See BUILDING, &c.

ARCHITECTONICK, that which builds a thing regularly, according to the Nature and Intentions thereof.

Thus, that plattick Power, Spirit, or whatever else it be which hatches the Ova of Females into living Creatures of the same Species, is by some call'd the *Architectonick Spirit*. See PLASTICK.

ARCHITECTURE, ARCHITECTURA, the Art of Building; i. e. of erecting Edifices proper for Habitation, or Defence. See BUILDING, EDIFICE, &c.

Architecture is usually divided, with respect to its Objects, into three Branches, Civil, Military, and Naval.

Civil ARCHITECTURE, called also absolutely and by way of Eminence ARCHITECTURE, is the Art of contriving and executing commodious Buildings for the Uses of Civil Life; as Houses, Temples, Theatres, Halls, Bridges, Colleges, Portico's, &c. See HOUSE, TEMPLE, THEATRE, &c.

Architecture is scarce inferior to any of the Arts in Point of Antiquity.—Nature and Necessity taught the first Inhabitants of the Earth to build themselves Huts, Tents, and Cottages; from which, in course of Time, they gradually advanced to more regular and stately Habitations, with Variety of Ornaments, Proportions, &c. See Vitruvius's Account of the Origin of Architecture under the Article ORDER.

The ancient Writers represent the *Tyrrians* as the first among whom Architecture was carried to any tolerable Pitch; and hence it was that *Solomon* had Recourse thither for Workmen to build his Temple. *Villalpandus*, indeed, contends, that only Under-workmen were sent for from *Tyre*, Artificers in Gold, Silver, Brass, &c. and that the Rules of Architecture were delivered by God himself to *Solomon*. Hence, he adds, the *Tyrrians* rather learnt their Architecture from *Solomon*; which they afterwards communicated to the *Egyptians*; these to the *Greeks*, and these again to the *Romans*—In effect, the Author last cited, undertakes to prove, that all the Beauty and Advantages of the Greek and Roman Buildings, were borrow'd from this Fabrick. *Tom. ii. Part ii. Lib. Iadeg. liii. C. ix. x.*

To confirm this, *Sturmius* produces several Passages in *Vitruvius*, where the Rules given by that Architect, *Lib. vi. C. 11. and Lib. v. C. 1.* quadrate exactly with what *Josephus* relates of the Jewish Temple, *Antiq. Jud. Lib. vi. & viii. &c.* See TEMPLE.

To what a Pitch of Magnificence the *Tyrrians* and *Egyptians* carried Architecture, ere it came to the *Greeks*, may be learnt from *Isaiah xxiii. 8.* and *Vitruvius's* Account of the *Egyptian* Oeas; their Pyramids, Obelisks, &c. See OBELISK, PYRAMID, &c.

Yet, in the common Account, Architecture should be almost wholly of *Grecian* Original: Three of the regular Orders or Manners of Building, are denominated from them, *viz. Corinthian, Ionic, and Doric*: And scarce a Part, a single Member, or Moulding, but comes to us with a Greek Name. See CORINTHIAN, DORIC, IONIC; see also MOULDING, &c.

Be this as it will, 'tis certain the *Romans*, from whom we derive it, borrow'd what they had entirely from the *Greeks*; nor seem, till then, to have had any other Notion of the Grandeur and Beauty of Buildings, beside what arises from their Magnitude, Strength, &c.—Thus far they were unacquainted with any Order beside the *Tuscan*. See TUSCAN.

Under *Augustus*, Architecture arriv'd at its Glory; *Tiberius* neglected it, as well as the other polite Arts. *Nero*, amongst a Heap of horrible Vices, still retain'd an uncommon Passion for Building, but Luxury and Dissipation had a greater Share in it, than true Magnificence.—*Apollodorus*, excell'd in Architecture, under the Emperor *Trajan*, by which he merited the Favour of that Prince; and it was he who rais'd the famous *Trajan* Column, subsisting to this Day. See TRAJAN.

After this, Architecture began to dwindle; and tho' the Care and Magnificence of *Alexander Severus* supported it for some Time, yet it fell with the western Empire, and sunk into a Corruption, from whence it was not recovered for the Space of twelve Centuries.

The Ravages of the *Visigoths*, in the 5th Century, destroy'd all the most beautiful Monuments of Antiquity, and Architecture thence forwards, became so coarse and artless, that their profess'd Architects understood nothing at all of just Designing, wherein its whole Beauty consists: Hence a new Manner of Building took its Rise, called the *Gothic*. See GOTHIC.

Charlemagne did his utmost to restore Architecture, and the *French* applied themselves to it with Suc-cess, under the Encouragement of *H. Capet*: His Son *Robert* succeeded him in this Design; till by Degrees the modern Architecture was run into as great an Excess of Delicacy, as the *Gothick* had before done into Massiveness. To these may be added, the *Arabick* and *Morick*, or *Moorish* Architecture; which were much of a-piece with the *Gothic*, only brought in from the South by the *Moor* and *Saracen*, as the former was from the North by the *Goths* and *Vandals*. See ARABER, MORISCO, GROTESK, &c.

The Architects of the 13th, 14th, and 15th Century, who had some Knowledge of Sculpture, seem'd to make Perfection consist altogether in the Delicacy and Multitude of Ornaments, which they bestow'd on their Buildings, with a

World of Care and Sollicitude, tho' frequently without any Conduct or Taste.

In the two last Centuries, the Architects of *Italy* and *France* were wholly bent upon retrieving the primitive Simplicity and Beauty of ancient Architecture, in which they did not fail of Success: Inasmuch, that our Churches, Palaces, &c. are now wholly built after the Antique.—

Civil Architecture may be distinguish'd, with regard to the several Periods or States thereof, into *Antique, Antique, Gothic, Modern*, &c. See ANTIQUE, ANTIENT, GOTHIC, and MODERN, &c.

Another Division of Civil Architecture, arises from the different Proportions which the different Kinds of Buildings render'd necessary, that we might have some proper for every Purpose, according to the Bulk, Strength, Delicacy, Richness, or Simplicity required.—

Hence arose five Orders or Manners of Building, all invented by the Antients at different Times, and on different Occasions, *viz. Tuscan, Doric, Ionic, Corinthian*, and *Composite*; the History, Characters, &c. of each whereof see under their respective Articles, TUSCAN, DORIC, IONIC, CORINTHIAN; and COMPOSITE.

What forms an Order, is the Column with its Base and Capital; surmounted by an Entablature, consisting of Architrave, Frieze, and Cornice: and sustain'd by a Pedestal. See ORDER; see also COLUMN, ENTABLATURE, PEDA- TAL, &c. see also CAPITAL, &c.

For a general View of the Elements of Architecture, with the Rules which obtain with respect to the Matter, Form, Proportion, Situation, Foundation, Distribution, Covering, Apertures, &c. See the Article BUILDING.

For Particulars, see FOUNDATION, WALL, ROOF, WINDOW, DOOR, CEILING, &c. see also BEAUTY, &c.

There are several Arts subservient to Architecture, as Carpenary, Masonry, Paving, Joinery, Smithery, Glazery, Plumbery, Plastering, Gilding, &c. See CARPENARY; MASONRY, PAVING, JOINERY, SMITHERY, GLAZERY, PLUMBERY, PLASTERING, GILDING, &c.—See also TIMBER, STONE, BRICK, TYLE, MORTAR, LEAD, GLASS, &c.

We have no Greek Authors extant on Architecture.—The first who wrote of it was *Aphobareus* the *Athenian*, who was succeeded by *Democritus* and *Theophrastus*.—Among the *Latins*; the younger *Pliny* seems to speak the best; and indeed shows himself very knowing therein.

Of all the Antients, *Vitruvius* is the only entire Author; tho' *Vegetius* relates that there were 700 Architects at *Rome* in his Time.—He lived under *Augustus*, and compos'd a complete System of Architecture, in ten Books, which he dedicated to that Prince. There are two Things censured by the Moderns in this excellent Work, *viz.* Want of Method, and Obscurity. The Mixture of Latin, Greek, in *Vitruvius*, is such, that *Leon Baptista Alberti*, has observed, he wrote Latin to the *Greeks*, and Greek to the *Latins*: He adds, that the Work contains abundance of Things superfluous and foreign to the Purpose.—For this Reason *M. Perrault* has extract'd all the Rules out of *Vitruvius's* prolix Work, methodized and published them in a little Abridgement.—Several Authors have also endeavour'd to explain the Text of *Vitruvius*, particularly *Philander*, *Barbary*, and *Salmassius*, in Notes added to their several Latin Editions; *Rivius* and *Perrault* in the Notes to their German and French Versions; and *Baldus* in his *Lexicon Vitruvianum*.—The same *M. Perrault* has also compos'd an excellent Treatise Of the five Orders, which may be esteem'd a Supplement to *Vitruvius*, who left the Doctrine of the Orders defective.

The Authors upon Architecture since *Vitruvius*; are — *Leon Baptista Alberti*, who in 1512, published ten Books of the Art of Building, in Latin, designed to outvie *Vitruvius*; in which, however, he has not succeeded: His Work has abundance of good Things, but is deficient in the Doctrine of the Orders.—*Seb. Serlio*, who wrote seven Books of Architecture, five of which concerning the five Orders, were made publick in 1602; throughout all which, he reitigiously keeps to *Vitruvius's* Rules: The seventh was since publish'd in 1575; but the sixth, concerning private Buildings, has not yet appear'd.—*And. Palladio*, who wrote four Books of Architecture, containing the fundamental Rules of the Art, with various Instances of all the Kinds of Works; publish'd in Italian in 1575: The two first Books are render'd into High-Dutch, and enlarg'd with Annotations by *Zwecker*.—*Phil. de Lorme*, who publish'd nine Books of Architecture, in French, in 1567.—*J. Barozzio de Vramia*, who in 1631, made publick his Rules of the five Orders, in Italian; since translated, with large Additions, by *Daweler*, under the Title of *Cours d'Architecture*, &c. and since also into High-Dutch, with Notes.—

To these are to be added *Vincenz. Scamozzi*; his *Idea of Universal Architecture*, publish'd in 1615, in Italian; *Car. Phil. Dieffenhart*, in his *Theatre of Civil Architecture*, publish'd in High-Dutch in 1697; wherein he not only delivers the Rules of Architecture, but explains and compares the

five Orders as laid down by *Palladio, Vignola, Scamozzi*, &c. which same Design was also executed in French by *R. Preart de Cambrai*, in a *Parallele de l'antient Architecture with the Modern*, publish'd in French in 1650, and since translated into English with Additions, by Mr. *Evelyn*. *Fr. Blondel* Director of the Royal Academy of Painting, &c. in 1698, gave a *Course of Architecture*, in French; being a Collection from all the celebrated Writers upon the Subject of the Orders, &c.—*Nich. Goldman*, in a Treatise of *Stylometricis*, publish'd in Latin and High-Dutch, in the Year 1661, has done good Service, in reducing the Rules and Orders of Architecture to a further Degree of Perfection, and shewing how they may be easily delineated by means of certain Instruments invented by him.

Lastly, the *Elements of Architecture* are laid down by Sir *H. Wotton*—The same are reduced by *Sturmius*, and *Wolffius*, to certain Rules and Demonstrations; and thus is Architecture brought into the Form of a Mathematical Art; by the first, in his *Methodus Juvenil.* and the second, in his *Elementa Architecturæ*, Tom. II. An. 1715.

Military Architecture, is the Art of strengthening and fortifying Places, to screen them from the Inroads of Enemies, and the Violence of Arms. See FORTIFIED Place.

This we more usually call Fortification. See FORTIFICATION.

The Business of Military Architecture, is to erect Forts, Castles, and other Fortresses, with Ramparts, Bastions, &c. See FORTRESS, RAMPART, BASTION, &c.

Naval Architecture, or Ship-Building; is that which teaches the Construction of Ships, Gallies, and other floating Vessels for the Water; with Ports, Moles, Docks, &c. on the Shore. See VESSEL, SHIP, GALLEY, BOAT, &c. See also MOLE, DOCK, &c.

Architecture in Perspective, is a sort of Building, wherein the Members are of different Measures and Modules, and diminish in proportion to their Distance; to make the Work appear longer and larger to the View than really it is. See PERSPECTIVE.

Such is the celebrated Pontifical Stair-case of the *Vatican*, built under Pope *Alexander VII.* by the Cavalier *Bernini*.

Counterfeit Architecture, is that which has its Projections painted, either in Black or White, or coloured after the Manner of Marble; as is seen practis'd in the Facades and Palaces in *Italy*, and in the Pavilions of *Marly*.

This Painting is made in Fresco, upon plaster'd Walls, and in Oil, on Walls of Stone. See PAINTING and FRESKO.

Under the Name of Counterfeit Architecture, which we otherwise call Scene-Work, is likewise comprehended, that painted on slight Boards or Planks of Wood, whereon the Columns, Pilasters, and other Parts of Building, seem to stand out, with a Relief; the whole being coloured in imitation of various Marbles, Metal, &c. and serving in the Decorations of Theaters, triumphal Arches, Publick Entrées, Funeral Pomp, &c.

ARCHITRAVE, in Building, that part of a Column, or Order of Column, which lies immediately upon the Capital. See ORDER and CAPITAL.

The Architrave is the lowest Member of the Frieze, and even of the whole Entablature. See FRIEZE and ENTABLATURE.

The Architrave is supposed to represent the principal Beam in Timber Buildings, whence the Name, which is form'd of the Greek ἀρχή, chief; and the Latin *Trabs*, Beam. See BEAM, &c.

The Architrave is different in the different Orders—in the *Tuscan* it only consists of a plain Face, crown'd with a Fillet; and is half a Module in Height. See FACE, TUSCAN, &c.

In the *Doric* and *Composite*, it has two Faces, or Falcie; and three in the *Ionick* and *Composite*; in which last Order it is $\frac{1}{3}$ of a Module high, tho' but half a Module in the rest. See FASCIA, DORIC, CORINTHIAN, &c.

Architects, however, take a deal of Labour in this Part; some using more Members than others; and many of them having two or three Forms of Architraves. What we give is after *Vignola*.

Architrave is sometimes also called the *Reason-piece*, or *Master-beam* in Timber-Buildings, as Porticos, Cloisters, &c. in Chimneys it is called the *Mantle-piece*; and over the Jambes of Doors, or Lintels of Windows, *Hypothyron*. See MANTLE, &c.

The Greek, call it the *Epistyle*. See EPISTYLE.

ARCHITRAVE-DOORS, are those which have an Architrave on the Jambes and over the Door; upon the Capital, if straight, or on the Arch, if the Top be curved. See DOOR, JAMB, &c.

ARCHITRAVE-WINDOWS, of Timber, are commonly an Ogee rais'd out of the solid Timber, with a Liff over it; tho' sometimes the Mouldings are struck and laid on; and sometimes are cut in Brick. See WINDOW.

The upper Falcia is called the *Header*, or *heading* Architrave; and the lower the *Jac*.

ARCHITYPE. See ARCHTYPE.

ARCHIVAULT, in Architecture, the inner Concave of an Arch; or a Band or Frame adorned with Mouldings, running over the Faces of the Arch-Stones, and bearing upon the Imposts. See ARCH, VAULT, IMPOST, &c.

It is different in the different Orders—in the *Tuscan*, it has only a single Face; two Faces crown'd, in the *Doric* and *Ionick*; and the same Mouldings with the *Architrave* in the *Corinthian* and *Composite*.

The Word is *French*, *Archivolte*, where it signifies the same thing.

ARCHIVE, or ARCHIVES, a Chamber wherein the Records, Charters, and other Papers and Evidences of a State, or Community, are preserved. See RECORD, PAPER, &c.

Thus we say the *Archives* of a College, of a Monastery, &c.

The *Archives* of ancient *Rome*, were in the Temple of *Saturu*; and the *Archives* of *Chancery* are in the *Roll-Office*. See CHANCERY, ROLLS, &c.

The Code calls *Archivum publicum, vel Armarium publicum ubi acta & Libri exspectantur*. Code de *fid. Instrum.* Arb. § xxx. q. 1.

The Word comes from the Latin *Arca*, (quod arcet *Y. sum*) a Chest or Coffer; or the Greek ἀρχαϊον, which *Suidas* uses in the same Sense. In some Latin Writers we read *Archarium*.

ARCHONIDES, ARACHNOIDES, or ARANEA Tanica. See ARACHNOIDES.

ARCHON, in Antiquity, a chief Magistrate of *Athena*.

After the *Athenians* had abolished Monarchy, they created *Archons*, who were obliged to render an Account of their Administration.

Some of these were annual, and others perpetual; *Molon*, the Son of *Codrus*, was the first of those; and *Cron* of these.

The Occasion of their Institution was this: *Codrus*, King of *Athena*, having devoted himself, for the good of his People, in the War with the *Heracleids*; his Sons, *Molon* and *Nileus*, disputed the Crown betwixt them: The *Athenians* took this Occasion of dissolving their Monarchy, and in lieu of Kings, created perpetual Governors, under the Name of *Archons*—*Molon*, Son of *Codrus*, was he who first had this Charge, and his Descendants enjoy'd it for a long Succession of Years. But a perpetual Magistracy, seem'd to this free People, too lively an Image of Royalty, the very Shadow whereof they were resolv'd to abolish.—Accordingly, the Administration of an *Archon*, which had before been perpetual, they now reduced to ten Years; and some time after, to one; with a View of recovering, as oft as possible, the Authority into their own Hands, which they never transferr'd to the Magistrates, but with Regret.

There were thirteen perpetual *Archons*, and seven decennial; the first whereof was established in the 24th Olympiad.

Under the *Roman* Emperors, several *Greek* Cities had two *Archons*, for chief Magistrates, which were, the same with the *Dumviroi* in the Colonies and *Municipia*. See DUMVIR.

The Name *Archon* is also applied by some Authors to divers Officers both civil and religious, under the Eastern or *Greek* Empire.—Thus Bishops are sometimes call'd *Archontes*; and the same may be said of the Lords of the Emperor's Court.

We also read of the *Archon of the Antimenfes*, *Archon of Archons*, *Grand Archon*, *Archon of Churches*, *Archon of the Gospel*, *Archon of the Walls*, &c.

The Word comes from the Greek ἀρχων, which signifies a Commander, or one that governs.

ARCHONTICKS, ARCHONTICI, in Church-History, a Sect of Hereticks, who arose towards the Close of the second Century. See HERETIC.

They were thus call'd from the Greek Word ἀγγελοι, Principallities, or Hierarchies of Angels; by reason they held the World to have been created by the Angels. See ANGEL, HIERARCHY.

The *Archontici* were a Branch of *Valentinians*. See VALENTINIAN.

ARCH-TREASURER, *Archibisessararius*, the Great Treasurer of the *German* Empire. See TREASURER.

This Office was erected with the 8th Electorate, in favour of the Elector Palatine, who had lost his former Electorate, which was given to the Duke of *Bavaria*, by the Emperor *Ferdinand II.* who took it away from *Fredere V.* Elector Palatine, after the Battle of *Prague*, where he was defeated in maintaining his Election to the Crown of *Bolonia*. See ELECTOR.

The Dignity of *Arch-Treasurer* is contest'd between the Elector of *Brandenburg*, now King of *Great-Britain*, who claims it in Virtue of his Succession to the Elector *Fredere*; and the present Elector Palatine. See PALATINE.

ARTIC.

ARCTIC, *ARCTICA*, in Astronomy, an Epithet given to the North-Pole, or the Pole rais'd above our Horizon. See **NORTH**, and **POLE**.

'Tis call'd the *Arctic Pole*, on occasion of the Constellation of the little Bear, in Greek call'd $\alpha\rho\kappa\tau\iota\kappa\alpha$; the 1st Star in the Tale whereof, nearly points out the North Pole. See *URSA MINOR*.

ARCTIC Circle, is a lesser Circle of the Sphere, parallel to the Equator, and 25° $30'$ distant from the North-Pole; from whence its Name. See **CIRCLE** and **SENER**.

This, and its Opposite, the *Antarctic*, are call'd the two *polar Circles*; and may be conceived to be describ'd by the Motion of the Poles of the Ecliptick, round the Poles of the Equator, or of the World. See **POLE** and **POLAR**.

A-RÉ, or **A-É-MIRÉ**, one of the eight Notes in the Scale of Musick. See **NOTE** and **SCALE**.

ARCTOPHYLAX, in Astronomy, a Constellation, otherwise call'd *Bootes*. See **BOOTES**.

ARCTURUS, in Astronomy, a Star of the Constellation *Arctophylax*, or *Bootes*. See **BOOTES**.

The Word is form'd of *arctos*, Bear, and *tes*, Tail, *q. d. Bear's Tail*; as being very near it.

It rises on the first Day of *September*, and sets on the 13th Day of *May*; and has been supposed rarely to appear without bringing some Storm. See **STAR**.

ARCTOS, **ARCTUS**, in Astronomy, a Name given by the *Greeks* to two Constellations of the northern Hemisphere; by the *Latins* call'd *Ursa major* and *minor*; and by us the greater and little *Bear*. See *URSA MAJOR* and *MINOR*.

ARCUATION, is us'd by some Writers in Surgery, for the large Cap of the Bones; as in the Case of *Rickets*, &c. See **BONE**, **RICKETS**, &c.

ARCUATION, in Gardening, is the raising of Trees by Layers. See **TREE**, **NUSSERY**, &c.

This, *Sauvaze* observes, is now the general Method of raising such Trees as can't be rais'd from Seed, or that bear no Seed; as Elm, Abele, Lime, Alder, Sallows, &c. See **SEED**, **PLANTING**, &c.

The first Thing here done, is to procure large strong Mother-Plants, which the Author calls *Stools*. These being planted in a Trench, will throw out twenty, thirty, forty, or fifty Plants a-piece; which may be begun to lay about *Michaelmas* following; at which Time, if the Stools have been carefully managed, they will have shot five, six, or more main Branches out of the Root, and on every one of these, as many side or collateral Branches.

These main Branches are to be bent down to the Ground, and when thus laid quite round the Stool, and pegged fast down, the small ones may be serv'd in the same manner. Thus the main Branches are to be cover'd over, all except the Top; and the small, or Side-Branches, to be cover'd over two or three Inches thick upon the Joints. This done, they may be treaded to make them take Root the better.

About the Middle of *September* they may be opened; when it is probable they will have taken Root: Otherwise, they may lie till next Spring; then taking them up, plant them in the Nursery. See **NUSSERY**.

ARDENT, **ARDENS**, something hot, and, as it were, burning. See **HEAT** and **BURNING**.

The Word is form'd of the Latin *Ardere*, to burn.

ARDENT Fever, is a violent burning Fever. See **FEVER**.

AREA, properly denotes any plain Surface whereon we walk. See **SURFACE**.

The Word is *Latin*, and originally signifies a *Threshing-Floor*; form'd of the Verb *Areo*. See **THRASHING**.

AREA, in Matters of Building, signifies the Extent of the Floor. See **FLOOR**.

AREA, in Geometry, denotes the Compafs or superficial Content of any Figure. See **FIGURE** and **CONTENT**; see also **SUPERFICIES**.

Thus if a Figure, *e. gr.* a Field, be in Form of a Square, and its Side be 40 Foot long, its *Area* is said to be 1600 square Feet, or contains 1600 little Squares, each a Foot every Way. See **SQUARE** and **MEASURE**.

Hence, to find the *Area* of a Triangle, Square, Parallelogram, Rhombus, Trapezium, Rhombus, Polygon, Circle, or other Figure, is to find the Magnitude or Capacity thereof in square Measures—To do which, see under the Articles TRIANGLE, SQUARE, PARALLELOGRAM, RECTANGLE, TRAPEZIUM, RHOMBUS, POLYGON, CIRCLE, &c.

To find the *Area* of Fields, and other Inclosures; they first survey or take the Angles thereof; then plot them on Paper, and thus cast up their Contents in Acres, Roods, &c. after the usual manner of other plain Figures. See **SURVEYING**, **PLOTTING**, &c.

The Law by which the Planets move round the Sun, is this, that a Line or Radius drawn from the Centre of the Sun to the Centre of the Planet, always sweeps or describes Elliptic *Areas* proportional to the Times. Thus, the Sun being supposed in S, and a Planet in A, (*Tab. Astronomy*, Fig. 65.) and letting it proceed in any given Time, to B. In such Progress, its Radius AS, will have describ'd the *Area*

ASB. Suppose again, the Planet to be arriv'd to F; then the Elliptic Space PSD being drawn equal to the other ASB, the Planet will move thro' the Arch PD in the same Time as thro' the Arch AB. See **PLANET** and **ELLIPSE**.

Sir J. Newton demonstrates, that whatever Bodies do observe such Law in their Motions about any other Body, do gravitate towards such Body. See **GRAVITATION**, and **NEWTONIAN Philosophy**.

ARRA, is also us'd in Medicine, for a Disease which makes the Hair fall. See **HAIR**.

The *Area* is a general kind of Depilation, and is distinguished into two Kinds, *Alopecia* and *Ophiasis*. See **ALOPECIA**, &c.

ARENATION, among Physicians, a kind of dry Bath, when the Patient sits with his Feet upon hot Sand. See **BATH**, **BALNEUM**.

AREOLA, or **AREOLA MAMILLARIS**, in Anatomy, the Circle which furrounds the Nipple. See **BREAST**.

ARETOLOGY, **ARTEOLOGIA**, that part of moral Philosophy which treats of Virtue; its Nature, and the Means of arriving at it. See **VIRTUE**.

ARDENT Spirits, are those distill'd from fermented Vegetables; thus call'd because they will take Fire and burn. See **SPIRIT**, **DISTILLATION**, and **FERMENTATION**.

Such are Brandy, Spirits of Wine, &c. See **BRANDY**, &c.

ARDERS, are Fallows or Plowings of Grounds.

ARDOR Ventriculi, a Heat in the Stomach, usually express'd by the Word Heart-burn, or Cardialgy. See **CARDIALGY**, &c.

ARENA, among the *Romans*, sometimes figur'd the game with *Circus*, or *Ambisbeatre*, viz. a Place where the Gladiators had their Combats. See **CIRCUS**, **AMPHITHEATRE**, &c.

But, properly speaking, *Arene* was only the Pit or Space in the Middle of these Places.—The *Arene* was the same thing with regard to the Gladiators, viz. the Campus, or Field, was to Soldiers and Armies, viz. the Place where they fought.—And he who fought in the *Arene* was call'd *Arenarius*. See **GLADIATOR**.

The Word is originally *Latin*, and signifies Sand, in regard the Place was always strew'd with Sand, to conceal from the View of the People, the Blood spilt in the Combat.

AREOPAGUS, in Antiquity, a celebrated Tribunal of the *Athenians*.

Some imagine the *Areopagus* the proper Name of a Court of Justice, situate on a Hill, in *Athen*; and that in this Court the Senate of that illustrious City assembled.—Others say that *Areopagus* was the Name of the whole Suburbs of *Athen*, whereto stood the Hill on which the Court was built: And the Name *Areopagus* seems to countenance this last Opinion; for it signifies literally, the Hill or Rock of *Mars*, from $\alpha\rho\alpha$, Hill, and $\rho\alpha\gamma\epsilon$, belonging to *Mars*. In effect, the Denomination might either arise hence, that the *Areopagus* was built in a Place where had been a Temple of *Mars*; or because the first Cause pleaded there, was that of this God, who was accus'd of killing *Neptune*; or else because *Mars* was there condemn'd for Adultery.

This Tribunal was in great Reputation among the *Greeks* and the *Romans* themselves had so high an Opinion of it, that they trusted many of their difficult Causes to its Decision.

Authors are not agreed about the Number of the Judges who compos'd this august Court.—Some reckon thirty-one, others fifty-one, and others five hundred: In effect their Number seems not to have been fix'd, but was more or less every Year.—By an Inscription quoted by *Volterranus*, it appears they were then 500.

At first this Tribunal only consist'd of nine Persons, who had all discharged the Office of Archons.—Their Salary was equal, and paid out of the Treasury of the Republick: They had three *Ovoli* for each Cause.

The *Areopagites* were Judges for Life.—They never sat in Judgment but in the Night-time, to the Intent that their Minds might be more present and attentive, and that no Object, either of Pity or Aversion, might make any Impression upon them.—All Pleadings before them, were to be in the simplest and most naked Terms; without Exordium, Epilogue, Passions, &c. See **EXORDIUM**, **EPILOGUE**, &c.

At first they only took Cognizance of criminal Causes, but in course of Time their Jurisdiction became of greater Extent.—Mr. *Spon*, who examined the Antiquities of that illustrious City, found some Remains of the *Areopagus* still existing, in the middle of the Temple of *Themis*, which was heretofore in the middle of the City, but is now without the Walls.—The Foundation of the *Areopagus* is a Semi-circle, with an Elevation of 140 Paces around it, which properly made the Hall of the *Areopagus*. There is a Tribunal cut in the middle of a Rock, with Seats on each Side of it, where the *Areopagites* sat, expos'd to the open Air.

This Court is said by some to have been instituted by *Solon*; but others carry it much higher; and assert it to have

been establish'd by *Cecrops*, about the Time that *Aaron* died; viz. in the Year of the World 2555, maintaining withal, that *Solon* only made some new Regulations in it.—In effect, *Demosthenes* himself, in his Oration against *Ctesiphon*, owns himself at a Loss on the Point: *The Juristators of this Tribunal*, says he, *whatever they were, whether Gods or Heroes.*

AREOMETER, }
 ARGOMETER, }
 AREOTIAS, } see { AREOMETER,
 ARGOMETER,
 AREOTICKS.

ARGAL, or ARGEL, hard Lees sticking to the Sides of Wine-Vessels; otherwise called *Tartar*. See TARTAR.

ARGENTUM *Album*, mentioned in *Domusday*, signifies *Bullion*, or Silver uncoined. See BULLION.

In these ancient Days, such pass'd as Money from one to another in Payment—*Summus pro ipso hoc Metallo pensili non Signata*. Spelm. See SILVER and MONEY.

ARGENTUM *Dei*, *God's Penny*; antiently signified *carneif Money*, or Money given to bind a Bargain; in some Places called *Ercel*, or *rles*. See EARNEST.

Et cepit de predicto Hourico tres denarios de Argento Dei pre mombus. See CONVENTION.

ARGEA, ARGEA, or ARGEI, in Antiquity, human Figures made of Rushes, thrown annually by the Vestals into the River *Tyber*, on the Day of the Ideas of *May*. See VESTAL.

This Ceremony we learn from *Festus* and *Varro*; the latter of whom, however, says they were cast by the Priests; Unless by *Sacerdotibus*, we suppose he meant *Priestesses*. He adds that the Number of Figures was thirty—

Plutarch, in his *Roman Questions*, enquires, Why they were called *Argæa*? There are two Reasons assign'd: The first, that the barbarous Nation who first inhabited these Parts, call all the *Greeks* they could meet withal, into the *Tyber*; for *Argians* was a common Name for all *Greeks*: But that *Heracles* persuaded them to quit so inhuman a Practice, and to purge themselves of the Crime, by instituting this Solemnity—The second, that *Evander*, an *arcadian*, and a sworn Enemy of the *Argians*, to perpetuate that Enmity to his Posterity, order'd the Figures of *Argians* to be thus cast into the River.—

ARGENT, in Heraldry, signifies the Colour White, used in the Coats of Gentlemen, Knights, and Barons. See COLOURS and WHITE.

Barons and all Nobles have the white Colour call'd *Pearl*; and sovereign Princes have theirs called *Luna*.

Without either this or *Or*, the Herald says there can be no good Army. See *Or*.

Argent is express'd in Engraving, by the Parts being left plain, without any Strokes from the Graver. The Word is French, derived from the Latin *Argentum*, Silver; this Colour being supposed the Representation of that Metal:

Whence the *Spaniards* call this Field *Campo de Plata*, a Silver Field.

In the doubling of *Mantles*, where the White is supposed to represent a Fur, and not a Metal, it may be *blanc'd White*.

ARGILLA, or ARGIL, a white Earth, like Chalk, but more brittle; of some Use in Physick. See EARTH, CHALK, &c.

The Word is sometimes also us'd for *Posters Earth*, or Clay. See POTTERY, CLAY, &c.

ARGO, in Antiquity, a Ship of Vessel celebrated among the Poets; being that wherein the *Argonauts* made their Expedition. See ARGONAUT.

The Critics are divid'd about the Origin of the Name: Some will have it thus call'd from the *Perion* who built it, *Argus*; others, from the Greek Word *Argos*, swift, as being a light Sailer; others, from the City *Argos*, where they suppose it built: Others, from the *Argives*, who went on board it, according to the *Dilich* quoted from an antient Latin Poet by *Cicero*, in his first *Tulcanus*:

Argo, quia Argivi in ea Delecti Viri Vestii, petebant pellem inauratam Arietis.

Ovid calls *Argo* a sacred Ship, *sacrant consecendis in Argum*; by reason, say some, that *Minerva* contriv'd the Plan, and even assist'd in the building thereof: Or rather, on account of a piece of Timber in its Prow, which spoke, and render'd Oracles—Several Authors make mention of the Piece of Timber, which is said to have been hewn in the sacred Forest of *Dodona*. See ORACLE and DODONIAN.

Jafon having happily accomplish'd his Enterprize, consecrated the Ship *Argo* to *Neptune*, in the *Isthmus of Corinth*; where it did not remain long before it was transferr'd into Heaven, and made a Constellation. See CONSTELLATION.

The Generality of Authors represent the Ship *Argo* as of a long Make, resembling the modern Gallies—The Scholiast of *Apollonius* observes, that it was the first long Vessel ever made: And *Pliny* relates the same, after *Philostephanus*, who had affirm'd, that *Jafon* was the first that traile'd out to Sea in a long Vessel: *Longa Nave Jafonem prius Navigasse, Philostephanus Aulow est. Hist. Nat. l. c. 56.* By a long Ship, it is to be observ'd, the *Greeks* understood a Ship of War, in opposition to Ships of Barthen, which were built round.—See SHIP.

ARGO, or NAVIS, in Astronomy, is a Constellation of fixed Stars, in the Southern Hemisphere. See STAR and CONSTELLATION.

The Stars in the Constellation *Argo*, in *Ptolemy's Catalogue*, are 8; in *Tyches's* 12; in the *Britannic Catalogue* 25; the Longitudes, Latitudes, Magnitudes, &c. whereof, are as follow:

Stars in the Constellation Argo or Navis.

Names and Situations of the Stars.	Longit.	Latitude	Mag.
Preced. under the Shield in the Stern	29 10 21	47 26 26	3

ARGONAUTS, in Antiquity, a Company of fifty-two or fifty-four Heroes, who embark'd along with *Faon*, in the Ship *Argo*, for *Colchos*; with a Design to obtain the golden Fleece. See **ARGO** and **FLEECE**.

Hercules, *Theseus*, *Castor*, *Orpheus*, &c. were of the Number of the *Argonauts*.

ARGONAUTS of *St. Nicholas*, was the Name of a military Order instituted by *Charles III.* King of *Naples*, towards the End of the 14th Century. See **ORDER** and **KNIGHT**.

They wore a Collar of Shells, enclosed in a Silver Crescent, whence hung a Ship with this Devise, *Non credo Tempori, I don't trust Time*. Hence these *Argonaut-Knights* came to be called *Knights of the Shell*. They received the Order of *St. Basil* Archbishop of *Naples*, and held their Assemblies in the Church of *St. Nicholas*, their Patron.—

ARGUMENT, **ARGUMENTUM**, in Philosophy, as defined by *Cicero*, is some probable Matter alledg'd to gain Belief. See **PROBABILITY**, **BELIEF**, &c.

Others, somewhat more scientifically, define *Argument*, a Medium, from whose Connection with two Extremes, the Connection of the two Extremes themselves is infer'd. See **MEDIUM** and **EXTREMES**.

Arguments are divided, with regard to their Source, into those fetch'd from Reason, and those from Authority. See **REASON** and **AUTHORITY**.

The Logicians also divide their *Arguments*, with regard to their Form, into *Syllogisms*, *Enthymemes*, *Inductives*, &c. See **SYLLOGISM**, **ENTHYME**, &c.

An *Argument* in Form, is a Syllogism made according to the strict Rules of Logick.—According to *Aristotle*, the Enthymeme is the *Argument* of Rhetoric, as the Syllogism is that of Logick.—Rhetoric is defined the Art of finding *Arguments* adapted to persuade, or gain Belief. See **RHETORIC**, **INTENTION**, **PERSUASION**, &c.

The Rhetoricians divide *Arguments* with respect to the Places they are drawn from, into *intrinsic* or *artificial*; and *extrinsic* or *inartificial*, or remote. See **PLACE**, **AMPLIFICATION**, &c.

The first, are the proper Invention of him who speaks; of which there are several Kinds, viz. *Definition*, *Distribution*, *Genus*, and *Species*, *Form*, *Similitude*, *Dissimilitude*, *Comparison*, *Requency*, *Adjuncts*, *Antecedents*, *Consequents*, *Causis*, and *Effects*. See each in its Place, **DEFINITION**, **DISTRIBUTION**, **GENUS**, &c.

To these some add two other Places of *Argument*, viz. the *Manners*, and the *Passions*. See **MANNERS** and **PASSIONS**.

The second, are borrowed from abroad, and only applied by the Orator to the Point in hand; such are *Locus*, *common Report*, *Books*, *Oaths*, *Torture*, and *Witnesses*. See **LAW**, **OATH**, **TORTURE**, &c.

A late Author divides the Places or general Heads of *Arguments*, with regard to their End, into those intended to persuade or dissuade, which are chiefly drawn from the Considerations of *Profit*, *Honour*, and *Equity*: See **PERSUASION**.—Those intended to praise, or dispraise; see **PANEGYRIC**.—And those intended to accuse or defend; see **ACCUSATION**, **DEFENCE**, **COMPUTATION**, **CONFIRMATION**, **VINDICATION**, &c.

ARGUMENT is also a kind of Syllabus, or Abridgement of the Subject of a Book, History, Comedy, or the like.—We have almost lost the original Use of Prologues, which was to give the *Argument* of the Play. See **PROLOGUE**.

ARGUMENT, in Astronomy, is an Arch whereby we seek another unknown Arch proportional to the first. See **ARCH**.

ARGUMENT of *Inclination*, is an Arch of the Orbit, intercepted between the ascending Node, and the Place of the Planet from the Sun, number'd according to the Succession of the Signs. See **INCLINATION**.

ARGUMENT of the *Moon's Latitude*, is her Distance from the Node. See **NODE**.

The same Term is sometimes also used for the Distance of the *Moon's true Place*, from the *Sun's true Place*. See **PLACE**.

By this we find the Quantity of the real Obscuration in Eclipses, or how many Digits are darken'd. See **ECLIPSE**.

ARGUMENT of the *Moon's Menstrual Longitude*, is an Arch of her Eccentric, L. P. (Tab. Astronomy, Fig. 32.) intercepted between her true Place once equated L; and a right Line P Q, drawn thro' the Centre of the Eccentric B, parallel to the Menstrual Line of the Apides.

The annual *Argument* of Longitude, is the Angle DAH. **ARGUMENTATION**, the Art of inventing or framing *Arguments*; of making Inductions, and drawing Conclusions. See **ARGUMENT**, **INDUCTION**, **CONCLUSION**, &c. See also **DISCOURSE**, **RATIOCIATION**, &c.

Argumentation, according to *Cicero*, is the delivering, or unfolding of an *Argument*.—The Matter of *Argumentations*, is Propositions; the Form, their due Disposition with regard to one another. See **PROPOSITION**, **SYLLOGISM**, **ENTHYME**, and **SCRIPES**.

ARGYRASPIDES, in Antiquity, Persons arm'd with Silver Bucklers, or Bucklers silvered. See **BUCKLER**.

The *Argyraspides*, according to *Quintus Curtius*, Lib. iv. c. 13. made the second Corps of *Alexander's Army*; the first were the *Phalans*. See **PHALANX**.

According to *Justin's Account*, Lib. xii. c. 7. *Alexander* having penetrated into *India*, and extended his Empire as far as the Ocean; for a Monument of his Glory, order'd the Armour of his Soldiers, and the Hoofs of his Horses, to be adorn'd with Silver; and hence command'd them to be called *Argyraspides*; from the Greek *argyros*, Silver, and *aspis*, Buckler.

By this Author it should seem that *Alexander's* whole Army was called *Argyraspides*.—After that Prince's Death, the *Argyraspides* deserv'd all other Chief of the Army, disclaiming to obey any other after having born Arms under *Alexander*.

ARGYROPEA, in Alchymy, the Art of making Silver. See **ALCHYMY** and **SILVER**.

The Scope or Design of *Argyropea* and *Cyrystopea*, is to make Gold and Silver. See **CHRYSOPEA**, **TRANSMUTATION**, **PHILOSOPHERS-STONE**, &c.

The Word is formed of *argyros*, Silver, and *peia*, I make. See **POEY**.

ARIANS, or **ARRIANS**, a Sect of Heretics, the Retainers to *Arius*, and *Arianism*. See **ARIANISM**.

The *Arians* divided into a great Number of Parties and Factions, under different Denominations, who mutually condemn'd each other.—Such were the *Semi-Arians*, *Anomians*, *Exequetians*, *Eusebians*, *Protinians*, *Eudoxians*, *Acetians*, *Eumonians*, *Macedonians*, *Alians*, *Platyrarians*, &c. See **SEMI-ARIAN**, **ANOMIAN**, **EUSEBIAN**, **PROTINIAN**, **EUDOXIAN**, &c.

ARIANISM, or **ARRIANISM**, an ancient Heresy in the Church, broach'd by *Arius*, in the beginning of the fourth Century. See **ARIAN**.

He denied that the Son was God consubstantial and coequal with the Father. He own'd that the Son was the Word, but denied that Word to have been eternal; asserting that it had only been created before all other Beings.—See **TRINITY**, **SON**, **FATHER**, &c.

This Heresy was condemn'd in the first Council of *Nice* in 325; but notwithstanding that, was not extinguish'd: On the contrary, it became the reigning Religion, especially in the East, where it obtain'd much more than in the West.

—At the Time of *St. Gregory Nazianzen*, the *Arians* were Masters of the Capital City of the Empire, and frequently upbraid'd the Orthodox with the Smallness of their Numbers. Accordingly that Father begins his 2th Oration against the *Arians*, thus: *Where are those who reproach us with our Poverty, and define the Church by the Multitude of People, despising the little Flock*, &c.

Arianism was carried into *Africa* under the *Vandals*; and into *Affa* under the *Goths*: *Italy*, the *Gauls*, and *Spain*, were also deeply infected with it. But having reigned 30 Years with great Splendor, it sunk almost all at once.

Erasmus seem'd to have aim'd, in some measure, to restore *Arianism*, at the beginning of the 16th Century; in his Commentaries on the New Testament: Accordingly, he was reproach'd by his Adversaries, with *Arian* Interpretations and Glosses, *Arian* Tenets, &c. To which he made little Answer, save that there was no Heresy more thoroughly extinct than that of the *Arians*: *Nulla Heresis magis extincta quam Arianorum*.

But the Face of Things was soon changed: *Servetus*, a *Spaniard* by Nation, publish'd in 1531, a little Treatise against the Mystery of the Trinity; which once more set the Heresy of the *Arians* on foot in the West.—Indeed he rather show'd himself a *Protinian*, than an *Arian*; only that he made use of the same Passages of Scripture, and the same Arguments against the Divinity of our Saviour; with the proper *Arians*. See **SERVETIST**.

'Tis true, *Servetus* had not, properly speaking, any Disciples; but he gave occasion, after his Death, to the forming of a new System of *Arianism* in *Geneva*, much subtler and more artful than his, and which did not a little perplex *Calvin*.—From *Geneva* the new *Arians* removed to *Poland*, where they gain'd considerable Ground; but at length degenerated, in great measure, into *Socinians*. See **SOCINIAN**.

The learned *Grotius* himself, seems to have border'd a little on *Arianism*, in his Notes on the New Testament; where he mounts the Father too high above the Son; as if the Father alone were supreme God, and the Son inferior to him even in respect of his Divinity. And yet 'tis rather the Doctrine of the *Semi-Arians*, than of the *Arians*, that he seems to give into.—In *England*, the Progress of *Arianism*, or rather *Eusebianism*, is too recent, to need a Detail.

ARIETATION. See **BANTHQUARE**.

ARIETUM Levatio, an ancient kind of sportive Exercise; by Tilting, or running at the Quintain. See **QUINTAIN**.

ARIES, in Astronomy, the Ram; a Constellation, or Sign of the Zodiac. See SIGN, CONSTELLATION, and ZODIAC.

The Stars in the Constellation *Aries*, in *Protony's Catalogue*, are 18; in *Zycho's*, 21; in the *Britannic Catalogue* 65; the Longitudes, Latitudes, Magnitudes, &c. whereof, are as follow:

ARIES also denotes a *battering Ram*; being a military Engine much in use among the *antient Romans*, to batter and beat down the Walls of Places besieged. See MACHINE.

Of this there were two kinds; the one rude and plain, the other artificial and compound.—The former seems to have been no more than a great Beam, which the Soldiers bore in their Arms, and with one End of it, by main Force, assailed the Walls:

The compound Ram is described by *Josephus* thus: 'The Ram is a vast long Beam, like the Mast of a Ship, strengthened at one End with a Head of Iron, something resembling that of a Ram, whence it took its Name. This is hung by the middle, with Ropes, to another Beam, which lies a cross a couple of Posts; and hanging thus equally balanced, is, by a great Number of Men, violently thrust forward, and recoil'd backwards; and so shakes the Wall with its Iron Head. Nor is there any Tower or Wall so thick or strong, as to resist the repeated Assaults of this forcible Machine.'

M. Felicien describes a third sort of battering Ram, which run on Wheels; and was the most perfect and efficacious of them all.

Vitruvius affirms, that the Ram was first invented by the *Carthaginians*, while they laid Siege to *Cadix*: This was the simple kind above-mentioned; *Pephastrus* a *Tyrrian*, contrived to suspend it with Ropes; and *Polydus*, the *Thessalian*, to mount it on Wheels, at the Siege of *Byzantium*, under *Philipp of Macedon*.

The Engine opposed to the Ram, was called *Lupus*, the Wolf.—*Pitarch* tells us, that *Mark Antony*, in the *Parthian War*, used a Ram of 80 Foot long; and *Vitruvius* assures us they were sometimes made 100, and sometimes 120 Foot long, to which, perhaps, the Force of the Engine was in great Measure owing.

The Ram was managed at once by a whole Century of Soldiers; so that it play'd continually, and without Intermission, being usually cover'd with a *Finca*, to protect it from the Attempts of the Enemy. See *VINEA*.

ARISTA, in Botany, a long needle-like Beard, that grows out from the Husk of Corn, or Grass; called also the *Scam*. See CORN, &c.

ARISTARCHUS, in its ordinary Greek, signifies, *god Prince*; but in its ordinary Use among the Learned, is understood of a very severe Critick; there having been a Grammarian of that Name, who critic'd on the Verses of the very best Poets. See CRITIC and CRITICISM.

Hence we derive the Titles of several Books; *Aristarchus Sacer*, *Heinsius's Notes* on the New Testament; *Aristarchus Anti Bercianus*, &c.

ARISTOCRACY, ARISTOCRATIA, a Form of political Government, where the supreme Power is lodg'd in the Hands of the *Optimates*, i. e. a Council or Senate composed of the principal Persons of a State, either in respect of Nobility, Capacity, or Probity. See GOVERNMENT and OPTIMATES.

The antient Writers of Politicks prefer this Form of Government to all others.—

The Republick of *Venice* is an *Aristocracy*. See REPUBLIC. *Aristocracy* coincides with *Oligarchy*; which however, is more ordinarily used to signify a Corruption of an aristocratical State, where the Administration is in the Hands of too few. See OLYGARCHY.

The Word is derived from *ἀριστος*, *optimus*, and *κρῆσις*, *imperio*, I command, govern.

ARISTOLOCHIA, popularly call'd *Birdswort*; a medicinal Plant, used as an Ingredient in Treacle, &c. See *TRIALACA*.

Cicero derives its Name from its Inventor *Aristolochus*; others, from its Virtues.—These last suppose it form'd from *ἀριστος*, *optimus*, and *λόχος*, bringing forth young; in regard it is found of excellent Use in bringing down the Lochia, or Memes of Women newly deliver'd. See LOCHIA, &c.

There are four Kinds of *Aristolochia*, viz. the *round*, *long*, *rampant* or *creeping*, and the *slender*; but only the two former are used among us.—The *round* is of a sub-acid aromatic Taste, found very common in *Languedoc*, *Spain*, and *Italy*: Its Root is of particular Use in facilitating Delivery, provoking the Menes, and bringing down the After-Birth; and is externally applied in vulnerary Tinctures, and in Waters for Gangrenes.

The *long Aristolochia* likewise grows in *Languedoc*; its Root is used in Opriates, and in Tinctures for the Asthma, and to excite the Menes; its Decoction, in Lotions, to facilitate the Delivery of the After-birth, &c.

Besides these, there are several other Kinds of *Aristolochia* in *America*; one particularly in *Virginia*, whose Roots are used against the Bites of venomous Beasts, in malignant Fevers, and the Small-Pox.—Its alexipharmackick Virtue has occasion'd it to be call'd *Viperinum Virginiae*.

ARISTOTELIAN, something that relates to *Aristotle*.—Thus we say the *Aristotelian Philosophy*, an *Aristotelian Dogma*, &c.

The Philosopher from whom the Denomination arises, was the Son of *Nicomachus*, born in the Year of the World 3879.

at *Stagyra*, a Town of *Macedonia*; whence he is also called the *Stagyrite*.

At 17 Years of Age he entred himself a Disciple of *Plato*, and attended in the Academy 20 Years. See *ACADEMY*.

Being then sent on an Embassy from the *Athenians* to King *Philip*, he found, at his Return, that *Xenocrates*, during his Absence, had put himself at the Head of the Academic Sect; upon which he chose the *Lycæum* for the future Scene of his Disputations. See *LYCÆUM*.

It being his Practice to philosophize Walking, he got the Appellation *Peripateticus*; whence his Followers were also called *Peripatetics*.—Tho' others will have him to have been thus named from his attending on *Alexander* at his Recovery from an Illness, and discoursing with him as he walked about. See *PERIPATETIC*.

He was a Person of admirable Genius, and of great and various Learning: *Averroes* makes no Scruple to call him 'the Genius of Nature, the Limit of human Understanding; and declares him 'sent by Providence to teach us all that 'may be known'—He is accused of a too immoderate Desire of Fame, which led him to destroy the Writings of all the Philosophers before him, that he might stand singly and without Competitors. And hence, in the Schools, *Aristotle* is called *The Philosopher*.

Laertius, in his Life of *Aristotle*, enumerates his Books, to the Number of 4000; of which scarce above 20 have survived to our Age; They may be reduced to five Heads; the first, relating to Poetry and Rhetoric; the second, to Logicks; the third, to Ethics and Politics; the fourth, to Physics; and the fifth, to Metaphysics. In all which, as there are many Things excellent and invaluable, particularly what relates to Poetry, Rhetoric, and the Passions; so there are others, in the other Parts, which the Improvements of later Ages have taught us to explode and despise.—See *ARISTOTELIAN Philology*.

ARISTOTELIAN Philology, the Philology taught by *Aristotle*, and maintained by his Followers. See *PHILOSOPHY*.

The *Aristotelian* is otherwise called the *Peripatetic Philology*; the Rise and Fate whereof, see under the Article *PERIPATETIC Philology*.

ARISTOTELIANS, a Sect of Philosophers, otherwise called *Peripatetics*. See *ARISTOTELIAN* and *PERIPATETIC*.

The *Aristotelians* and their Dogma's prevail to this Day, in the Schools; maigre all the Efforts of the *Cartesians*, *Newtonians*, and other *Corpuscularians*. See *SCHOOL*, *NEWTONIAN*, *CARTESIAN*, *CORPUSCULAR*, &c.

The Principles of *Aristotle's* Philology, the Learned agree, are chiefly laid down in his four Books *de Cælo*; his 8 Books of *Physics*, belonging rather to Logicks, or Metaphysics, than to Physics.—To give an Idea, then, of *Aristotelianism*, the reigning System of many Ages; and shew *Aristotle's* Method of Philosophizing; we cannot do better than produce a Specimen of the Work.

Those four Books he entitles, *de Cælo*, because the Heavens are the chief of the simple Bodies he treats of. He begins with proving that the World is perfect, which he does thus—All Bodies, says he, have three Dimensions; they can't have more, for the Number three, according to *Pythagoras*, comprehends all: Now the World is the Assimblage of all Bodies, therefore the World is perfect.

In the second Chapter, he lays down certain *Peripatetic* Axioms; as—that all natural Bodies have of themselves a Power of moving; that all local Motion is either Rectilinear, Circular, or composed of the two; that all simple Motions are reducible to three, the Motion of the Centre, the Motion towards the Centre, and the Motion about the Centre: That all Bodies are either simple or compounded; simple are those which have some Power within themselves, whereby they move, as Fire, Earth, &c. Compound are such as receive their Motion from those others wherof they are compounded.

From these Principles he draws several Consequences:

A circular Motion, says he, is a simple Motion: But the Heavens move in a Circle; therefore the Motion of the Heavens is simple: But a simple Motion can only belong to a simple Body; i. e. to a Body which moves by its own Force.—Therefore the Heaven is a simple Body, distinct from the four Elements, which move in right Lines. This Proposition he likewise proves by another Argument, thus—There are two kinds of Motions, the one natural, the other violent; the circular Motion of the Heavens, therefore, is either the one or the other: If it be natural, the Heaven is a simple Body distinct from the four Elements, since the Elements don't move circularly in their natural Motion: If the circular Motion be contrary to the Nature of Heaven, either that Heaven must be some of the Elements, as Fire, or something else; But Heaven cannot be any of the Elements; i. e. it cannot be Fire; for, if it were, the Motion of Fire being from below upwards, the Heaven would have two contrary Motions, the one circular, the other from below, upwards, which is impossible. Again; If the Heav-

ven be any other thing which does not move circularly of its own Nature, it will have some other natural Motion, which likewise is impossible; for if it move naturally from below upwards, it will be either Fire or Air; if from above downwards, it will be Water or Earth; *ergo*, &c.—A third Argument is this—The first and most perfect of all simple Motions, must be that of a simple Body, especially that of the first and most perfect of all simple Bodies: But the circular Motion is the first and most perfect of all simple Motions, because every circular Line is perfect, and no right Line is so: For if it be finite, something may be added to it; if infinite, it is not perfect, because it wants an End, *terminus*, and Things are only perfect when they are ended, *terminis*. Therefore, the circular Motion is the first and most perfect of all Motions; and therefore a Body which moves circularly is simple, and the first and most divine of simple Bodies. His fourth Argument is—That all Motion is either natural or not; and every Motion which is not natural to some Bodies, is natural to others: Now the circular Motion is not natural to the four Elements; there must, therefore, be some simple Body to which it is natural: Therefore the Heaven, which moves circularly, is a simple Body, distinct from the four Elements.—Lastly, the circular Motion is either natural or violent to any Body; if it be natural, it is evident this Body is one of the most simple and perfect; if it be not, 'tis strange this Motion should last for ever.—From all these Arguments, therefore, it follows, that there is some Body distinct from the circumambient ones, and which is of a Nature as much more perfect than they, as it is more remote. Such is the Substance of his second Chapter.

In the third Chapter, he asserts that the Heavens are incorruptible, and immutable; and the Reasons he gives for it, are—That they are the Abode of the Gods, that no Person has ever observ'd any Alterations in them, &c.—

In the fourth Chapter, he attempts to prove, that the circular Motion has no Contrary: In the 5th, that Bodies are not infinite: In the 6th, that the Elements are not infinite: In the 8th, he shews that there are not several Worlds of the same Kind, by this very good Argument; that as Earth is heavy by Nature, if there were any other Earth besides ours, it would fall upon our Heads, our Earth being the Centre, to which all heavy Bodies tend. In the 9th, he proves it impossible that there should be several Worlds, because if there were any Body above the Heavens, it must be either simple or compound, in a natural or a violent State; none of which is possible, for Reasons which he draws from the three Kinds of Motion above mentioned. In the 10th, he maintains that the World is eternal, because it is impossible it should have had any Beginning, and because it endures for ever. He employs the 11th in explaining the Notion of Incorruptibility; and in the 12th endeavours to shew that the World is incorruptible, because it could not have any Beginning, and because it endures for ever: All Things, says he, subsist either during a finite, or an infinite Space: But what is only infinite one Way, is neither finite nor infinite; therefore nothing can subsist in this Manner.

The Reader, we are of Opinion, will find this Taste of *Peripateticism* sufficient; otherwise, it had been easy to have given him his Fill. If he requires more, let him have Recourse to the Articles *PRINCIPLE*, *ELEMENT*, *FORM*, *QUALITY*, *ACCIDENT*, *SYMPATHY*, *FUGA VACUI*, *ANTIPE- RISTASIS*, &c.

It were needless to point out the particular Defects in the Specimen here laid down; 'tis easy to observe that the Principles are most of them false and impertinent, and the Reasonings absurd and inconclusive; but that the greatest part has no distinct Meaning at all.

Such is the Philology, and such the Method of philosophizing, of the *Genius of Nature*, the *Prince of Philosophers*, *Aristotle*.

ARITHMANCY, *ARITHMANTIA*, or *ARITHMOMANCY*, a kind of Divination, or Method of foretelling future Events, by means of Numbers. See *DIVINATION* and *NUMBER*.

The Word is compounded of *αριθμος*, Number, and *μαντις*, Divination.

The Gematria, which makes the first Species of the Jewish Cabala, is a sort of *Arithmancy*. See *GEMATRIA* and *CABALA*.

ARITHMETIC, *ARITHMETICA*, the Art of Numbering; or, that Part of Mathematics which considers the Powers and Properties of Numbers, and teaches how to compute or calculate truly, and with Expedition and Ease. See *NUMBER*, *MATHEMATICS*, *COMPUTATION*, &c.

Some Authors chuse to define *Arithmetic*, the Science of discrete Quantity. See *DISCRETE* and *QUANTITY*.

Arithmetic consists chiefly in the four great Rules or Operations of *Addition*, *Subtraction*, *Multiplication*, and *Division*. See each in its Place, *ADDITION*, *SUBTRACTION*, *MULTIPLICATION*, and *DIVISION*.

'Tis true, for the facilitating and expediting of Computations, both Mercantile and Astronomical, divers other useful Rules have been contrived; as, the Rule of Proportion, of

Alligation, of False Position, Extraction of Square and Cube Roots, Progression, &c.—But these are only Applications of the first four Rules. See RULE; see also PRORATION, ALLIGATION, POSITION, EXTRACTION, &c.

We have very little Intelligence about the Origin and Invention of *Arithmetic*; History neither fixes the Author, nor the Time.—In all Probability, however, it must have taken its Rise from the Introduction of Commerce; and consequently, be of *Tyrian* Invention. See COMMERCE.

From *Asia* it passed into *Agypt*, (*Josephus* says by means of *Abraham*.) Here it was greatly cultivated and improved; inasmuch, that a great part of their Philosophy and Theology, seem to have turned altogether upon Numbers. Hence whole Wonders related by them about *Unity*, *Trinity*; the Numbers *Seven*, *Ten*, *Four*, &c. See UNITY, TRINITY, TETRACTYS, &c.

In effect, *Kircher*, in his *Œdip. Agypt.* Tom. II. p. 2. shews, that the *Egyptians* explained every thing by Numbers; *Pythagoras* himself affirming, that the Nature of Numbers goes through the whole Universe; and that the Knowledge of Numbers is the Knowledge of the Deity. See PYTHAGORIAN.

From *Agypt Arithmetic* was transmitted to the *Greeks*, who handed it forward, with great Improvements, which it had received by the Computations of their Astronomers, to the *Romans*; from whom it came to us.

The ancient *Arithmetic*, however, fell far short of that of the Moderns: All they did was to consider the various Divisions of Numbers; as appears from the Treatises of *Nicomachus*, wrote in the third Century of *Rome*, and that of *Boethius*, still extant. A Compendium of the ancient *Arithmetic*, wrote in *Greek*, by *Pselus*, in the ninth Century from our Saviour, was given us in Latin by *Xylander*, in 1556.—A more ample Work of the same Kind, was wrote by *Jordanus*, in the Year 1210; publish'd with a Comment by *Faber Stapulensis* in 1480.

Arithmetic, under its present State, is variously divided, into various Kinds; *Theoretical*, *Practical*, *Instrumental*, *Leogerithmical*, *Numerous*, *Specious*, *Decadal*, *Dynamical*, *Tetrahycal*, *Dodecimal*, *Sexagesimal*, *Vulgar*, *Decimal*, *Finite*, *Infinite*, &c.

Theoretical ARITHMETIC, is the Science of the Properties, Relations, &c. of Numbers consider'd abstractedly; with the Reasons and Demonstrations of the several Rules. See NUMBER.

Euclid furnishes a *Theoretical Arithmetic*, in the seventh, eighth, and ninth Books of his Elements.—*Basilius Monachus* has also given a Theory for demonstrating the common Operations, both in Integers and broken Numbers, in his *Logistica*, publish'd in Latin by *Chambers*, in 1600.—To which may be added *Lucas de Burgo*, who, in an Italian Treatise publish'd in 1525, gives the several Divisions of Numbers from *Nicomachus*, and their Properties from *Euclid*; with the Algorithm, both in Integers, Fractions, Extractions of Roots, &c.

Practical ARITHMETIC, is the Art of Computing; that is, from certain Numbers given, of finding certain others whose Relation to the former is known.—As, if a Number be required equal to two given Numbers 6 and 8.

The first entire Body of *Practical Arithmetic*, was given by *Nich. Tartaglia a Venetian*, in 1556, consisting of two Books; the former, the Application of *Arithmetic* to civil Uses; the latter, the Grounds of *Algebra*. Something had been done before by *Stifelius*, in 1544; where we have several Particulars concerning the Application of Irrationals, Cosicks, &c. no where else to be met withal.—

We omit other merely practical Authors which have come since, the Number whereof is almost infinite; as *Genius Frisius*, *Morus*, *Wingate*, &c.

The Theory of *Arithmetic* is joined with the Practice, and even improved in several Parts, by *Maurycius* in his *Opuscula Mathematica*, 1575; *Heneleubus* in his *Arithmetica Perfecta*, 1629, where the Demonstrations are all reduced into the Form of Syllogisms; and *Yacquet* in his *Theoria et Praxis Arithmetica*, 1704.—

Instrumental ARITHMETIC, is that where the common Rules are performed by means of Instruments contrived for Ease and Dispatch; such are *Nepair's Bones*, described under their proper Article; Sir *Sam. Morland's* Instrument, the Description whereof was published by himself in 1666; that of *M. Leibnitz*, described in the *Miscellan. Berolin.* and that of *Polemus*, publish'd in the *Venetian Miscellany*, 1709.—To these may be added,

Logarithmical ARITHMETIC, perform'd by Tables of Logarithms. See LOGARITHM.

The best Piece on this Subject, is *Jon. Briggs's Arithmetica Logarithmica*, 1624.

To this Head may also be added, the universal *Arithmetical Tables of Prosthaphereses*, published in 1610, by *Hercourt ab Hohenburg*; whereby Multiplication is easily and accurately perform'd by Addition, and Division by Subtraction.—

The *Chinese* have little Regard to any Rules in their Calculations; instead of which, they use an Instrument made of a little Plate, a Foot and half long, a-cross which are fixed ten or twelve Iron Wires, on which are strung little round Balls. By drawing these together, and dispersing them again one after another, they count, somewhat after the Manner in which we do by Counters; but with so much Ease and Readiness, that they will keep pace with a Man reading a Book of Accounts, let him make what Expedition he can: And at the End the Operation is found completely done; and they have their Way of proving it. See COMPT.

Numerous ARITHMETIC, is that which gives the Calculus of Numbers or indeterminate Quantities; and is performed by the common Numeral, or Arabic Characters. See ALGEBRA and CHARACTER.

Specious ARITHMETIC, is that which gives the Calculus of Quantities; using Letters of the Alphabet instead of Figures, to denote the Quantities. See SPECIOUS ARITHMETIC.

Specious Arithmetic coincides with what we usually call *Algebra*. See ALGEBRA.

Dr. Wallis has joined the Numeral with the literal Calculus; and by means hereof, demonstrated the Rules of Fractions, Proportions, Extractions of Roots, &c. A Compendium of which is given by *Dr. Wells*, under the Title of *Elements of Arithmetic*, An. 1698.

Decadal ARITHMETIC, is that performed by a Series of ten Characters, so that the Progression is from 10 to 10—Such is the common *Arithmetic* among us, which makes Use of the ten Arabic Figures, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9; after which we begin 10, 11, 12, &c.

This Method of Computation is not very ancient, being utterly unknown to the *Greeks* and *Romans*—It was introduced into Europe by *Gerbert*, afterwards Pope, under the Name of *Sylvester II.* who borrowed it from the Moors of *Spain*.—No doubt it took its Origin from the ten Fingers of the Hands, which were made use of in Computations before *Arithmetic* was brought into an Art.

The Eastern Missionaries assure us, that to this Day the *Indians* are very expert at computing on their Fingers, without any Use of Pen and Ink, *Lat. Edif. & Cur.*—Add, that the Natives of *Peru*, who do all by the different Arrangement of Grains of Maize, out-do any European, both for Sureness and Dispatch, with all his Rules; *Sotary Diss. de Com.*

Binary, or Dyadic ARITHMETIC, is that wherein only two Figures, Unity, or 1, and 0, are used. See BINARY ARITHMETIC.

M. Dangecourt, in the *Berlin Miscell.* gives us a Specimen of the Use hereof in Arithmetical Progressions; where he shews, that the Laws of Progression may be easier discovered hereby, than in any other Method where more Characters are used.

Tetrahye ARITHMETIC, is that wherein only the Figures 1, 2, 3, and 0, are used.

We have a Treatise of this *Arithmetic*, by *Erhard Wiggel*: But both Binary and this are little better than Curiosities, especially with regard to Practice; inasmuch, as the Numbers may be much more compendiously expressed by *Decadal Arithmetic*, than by either of them.

Vulgar ARITHMETIC, is that conversant about Integers and vulgar Fractions. See INTEGER and FRACTION.

Sexagesimal ARITHMETIC, is that which proceeds by Sixties; or, the Doctrine of Sexagesimal Fractions. See SEXAGESIMAL.

Sam. Reyher has invented a Kind of Sexagesimal Rods, in Imitation of *Nepair's Bones*; by means whereof the Sexagenary *Arithmetic* is easily performed.

Decimal ARITHMETIC, is the Doctrine of Decimal Fractions. See DECIMAL FRACTION.

Political ARITHMETIC, is the Application of *Arithmetic* to Political Subjects; as, the Strength and Revenues of Princes, Number of Inhabitants, Births, Burials, &c. See POLITICAL ARITHMETIC.

ARITHMETIC of Infinities, is the Method of summing up a Series of Numbers consisting of infinite Terms; or of finding the Ratio thereof. See INFINITE SERIES, &c.

This Method was first invented by *Dr. Wallis*; as appears from his *Opera Mathematica*, where he shews its Use in Geometry, in finding the Areas of Superficies, and the Contents of Solids, and their Proportions.—But the Method of Fluxions, which is an universal *Arithmetic* of Infinities, performs all this much easier; and Multitude of other Things which the former will not reach. See FLUXIONS, CALCULUS, &c.

ARITHMETIC of Rationals and Irrationals. See RATIONAL, &c.

ARITHMETICAL Complement, of a Logarithm, is what the Logarithm wants of 10,000,000. See COMPLEMENT.

Thus the *Arithmetical Complement* of 7.1079054, is 2.8920946; where each Figure, but the last, is subtracted from 9; and that from 10. See *LOGARITHM*.

ARITHMETICAL Progression,
ARITHMETICAL Proportion,
ARITHMETICAL Medium or Mean, } see } *PROGRESSION*.
 } } *PROPORTION*.
 } } *MEDIUM*.

ARK, or *ARC*, or *Arch*, *Archi*, in *Geometry*, *Astronomy*, &c. See *ARC*.

ARK, *ARCA*, in the *Scripture-Language*, a kind of floating Vessel built by *Noah*, for the Preservation of the several Species of Animals, from the Deluge. See *DELUGE*.

The *Ark* has afforded several Points of curious Enquiry among the Critics and Naturalists, relating to its Form, Capacity, Materials, Time of Building, &c.

Noah is computed to have been an hundred Years in building the *Ark*, viz. from the Year of the World 1557, to the Flood, which happen'd in the Year 1656: At least, this is the common Opinion of the Learned. *Origen*, lib. iv. *Contra Cels.* s. *August.* de *Civit. Dei*, lib. xv. c. 27. and *Contra Faust.* lib. xii. c. 18. and in his *Quest.* on *Gen.* v. and xxiii. *Rupert.* lib. iv. in *Gen.* xx. asserts as much; and are followed by *Silvan.*, *Torniel.*, and *Spandun.*—*Pelletier* of *Rouen* declares himself of the same Opinion, in an express Dissertation, *De Arca Noe*, printed in 1700.

Yet *Berosus* affirms, that *Noah* only began to build the *Ark* 78 Years before the Flood: *Solomon Jarchi*, on the other hand, will have it 120 Years in building; and *Tancredus* only 52. See the Texts, *Gen.* v. 35. *Gen.* vi. 8c.

Fa. Fournier, in his *Hydrography*, gives into the Opinion of the Fathers; noting, that the only Hands employed in it were *Noah* and his three Sons. To this Purpose he alleges the Instance of *Archias* of *Corinth*, who, with the Help of 300 Workmen, built *Hero's* Great Ship in one Year. Add, that *Noah's* eldest Son was not born till about the Time when the *Ark* was begun, and the younger, after; so that it was a long Time ere they could do their Father any Service.—However, for so large a Building, a prodigious Number of Trees must have been required, which would employ a great Number of Workmen to fell and hew; Were it possible for three Men to have lain them?

The Wood whereof the *Ark* was built, is called in *Scripture* עֵץ זָבַח, etc. *Gopher*, *Gopher Wood*: And in the *LXX.* ἕνδοξον ξύλων, square Timbers. *Onkelos* and *Jonathan* render *Gopher* by קֶדְרִים, *Kedros*, Cedar: *St. Jerom.* in the Vulgate, by *Ligna Levigata*, Placed Wood; and elsewhere, *Ligna Bituminata*, q. d. Pitch'd Woods. *Kimbi* translates it, Wood proper to float; Vatable, Light Wood, which swims in the Water without corrupting: *Juanis, Tremellin.*, and *Buxtorf*, a kind of Cedar, by the Greeks called *Κεφισάριον*; *Avenarius* and *Musler*, Pine; *Fuller* and *Bochart*, Cypress; others, Box; others, Fir; *Cassale*, Turpentine, &c.—*Pelletier* prefers the Opinion of those who hold the *Ark* made of Cedar: His Reasons are, the Incorruptibility of that Wood; the great Pleasantry thereof in *Asia*, whence *Herodorus* and *Theophrastus* relate, that the Kings of *Egypt* and *Syria* built whole Fleets thereof, in lieu of Deal; and the common Tradition throughout the East, imports, that the *Ark* is preserved entire to this Day on Mount *Ararat*.

The Dimensions of the *Ark*, as delivered by *Moses*, are 300 Cubits in Length, 50 in Breadth, and 30 in Height; which, compared with the great Number of Things it was to contain, seems to many too scanty. And hence an Argument has been drawn against the Authority of the Relation.

To solve this Difficulty, many both of the ancient Fathers and later Critics, have been put to miserable Shifts.—*Origen*, *St. Augustin.*, and others, maintain, that by the *Cubits* here spoke of, we are to understand the *Egyptian* Geometrical Cubit, equal, according to them, to 6 vulgar Cubits, or 9 Foot. But the Truth is, it does not appear there ever was any such Measure as a Geometrical Cubit either among *Egyptians* or *Jews*.—Others account for it, by asserting the Stature of Mankind, in the first Ages, to have been much greater than in our Days; and consequently the Cubit, which is taken from a Part of the human Body, proportionally larger. But this does not avail, since the same Reason will infer an equal Augmentation of other Animals.—Others suppose the sacred Cubit here spoke of, which was a Hand-breadth longer than the civil one: But this only affords a small Supply; beside, that the sacred Cubit does not appear to have been ever used, except in sacred Edifices, as the Temple and Tabernacle.

This Difficulty is much better solved by *Buteo* and *Kircher*, in Treatises express'd, *de Arca Noe*, wherein, supposing the common Cubit of a Foot and an half, they prove geometrically, that the *Ark* was abundantly sufficient for all the Animals supposed to be lodged therein.—*Suallius* computes the *Ark* to have been above half an Acre in Area: *Causus*, *Buteo*, and others, have also calculated the Capacity of the

Ark. *Father Lamy* shews that it was 110 Foot longer than the Church of *St. Mary of Paris*; and 64 Foot narrower; to which his *English* Translator adds, that it must have been longer than *St. Paul's* Church in *London*, from West to East, broader than that Church is high in the Inside, and about 54 Foot in Height, or Measure.

The Things contained in it were, one Pair of every Species of unclean Animals, and seven Pair of every Species of clean Animals, with Provisions for them all, during the whole Year.—The former appears at first View almost infinite, but if we come to a Calculus, the Number of Species of Animals will be found much smaller than was imagined, not amounting to 100 Species of Quadrupeds, nor 200 of Birds; out of which, in this Case, are to be excepted such Animals as can live in the Water.—*Zoologists* usually reckon but 170 Species in all; and *Bishop Wilkins* shews, that only 72 of the quadruped Kind needed a Place in the *Ark*.

By the Description *Moses* gives of the *Ark*, it appears to have been divided into three Stories, each 10 Cubits, or 15 Foot high: And it is agreed on, as most probable, that the lowest Story was destined for the Beasts, the middle for the Food, and the upper for the Birds, with *Noah* and his Family; each Story being subdivided into different Apartments, Stalls, &c.—The *Josephus*, *Philo*, and other Commentators, add a kind of fourth Story, under all the rest; being as it were, the Hold of the Vessel, to contain the Ballast, and receive the Filth and Excreta of so many Animals.

Drextius makes 300 Apartments, *Father Fournier* 535; the anonymous Author of the Questions on *Genesis*, 400; *Buteo*, *Temperarius*, *Arias Montanus*, *Hofius*, *Wilkins*, *Lamy*, and others, suppose as many Partitions as there were different Sorts of Animals.—*Pelletier* only makes 72, viz. 36 for the Birds, and as many for the Beasts: His Reason is, that if we suppose a greater Number, as 333 or 400; each of the eight Persons in the *Ark* must have had 37, 41, or 50 Stalls to attend and cleanse daily, which he thinks impossible. But there is not much in this; to diminish the Number of Stalls, without a Diminution of the Animals, is vain; it being, perhaps, more difficult to take care of 300 Animals in 72 Stalls, than in 300.

Buteo computes, that all the Animals contained in the *Ark*, could not be equal to 300 Horses; he even reduces the whole to the Dimensions of 56 Pair of Oxen. *Father Lamy* enlarges it to 64 Pair, or 128 Horses; so that supposing one Ox equal to two Horses, if the *Ark* had Room for 256 Horses, there must have been Room for all the Animals. But the same Author demonstrates, that one Floor would suffice for 300 Horses, allowing 9 square Feet to an Horse.

As to the Food in the second Story, it is observed by *Buteo* from *Columella*, that 30, or 40 Pounds of Hay ordinarily suffices an Ox for a Day; and that a solid Cubit of Hay, as usually pressed down in our Hay-racks, weighs about 40 Pound; so that a square Cubit of Hay is more than enough for one Ox one Day.—Now it appears that the second Story contains 15000 solid Cubits, which divided between 206 Oxen, will afford each more Hay by two thirds, than he can eat in a Year.

Bishop Wilkins computes all the carnivorous Animals equivalent, as to the Bulk of their Bodies and their Food, to 27 Wolves; and all the rest to 230 Boeves. For the former he allows 1825 Sheep, and for the latter 109300 Cubits of Hay: All which will be easily contained in the two first Stories, and a deal of Room to spare.—As to the third Story, no Body doubts of its being sufficient for the Fowls, with *Noah* his Sons and Daughters.

Upon the whole, the learned *Bishop* remarks, that of the two, it appears much more difficult to assign a Number and Bulk of necessary Things to answer the Capacity of the *Ark*, than to find sufficient Room for the several Species of Animals already known.—This he attributes to the Imperfection of our Lists of Animals, especially those of the unknown Parts of the Earth; adding, that the most expert Mathematician at this Day, could not assign the Proportions of a Vessel better accommodated to the Purpose, than is here done; and hence concludes, that the Capacity of the *Ark* which had been made an Objection against *Scripture*, ought to be esteemed a Confirmation of its divine Authority; since, in those ruder Ages, Men being less verted in Arts and Philosophy, were more obnoxious to vulgar Prejudices than now; so that had it been an human Invention, it would have been contrived according to those wild Apprehensions which arise from a confused and general View of Things; as much too big, as it has been represented too little.

ARK of the *Covenant*, in *Scripture*, is used for a kind of Chest, wherein were kept the two Tables of Stone, whereon God had engraven the ten Commandments given to *Moses* on the Mount, and held in high Veneration among the *Hebrews*. See *COVENANT*.

The *Ark* was taken by the *Philistines*, and returned with divers Presents.—It was at first placed in the Tabernacle, afterwards in the Sanctuary of the Temple. See TABERNACLE, TEMPLE, and SANCTUARY.

Josephus describes it at 5 Palms long, 3 broad, and as many high; the Wood, both within Side and without, lined with Plates of Gold, and fitted with golden Hinges.—The Lid or Covering of the *Ark* was called the *Propitiatory*, over which were two Figures placed called *Cheerubim*, a kind of Spirits with Wings of a peculiar Form never seen but by *Moses* before the Throne of God. It may be added that some Critics take the Word *Cheerub*, כַּרְבֻּב, to be only a Transposition of the Hebrew Letters of the Word *כַּרְבֻּב*, *Recherub*, *Chariot*; and that by the *Cheerubim* being placed over the *Ark*, we are only to understand that the *Ark* was a sort of *Chariot*, on which God sat. See PROPITIATORY, CHEERUB, &c.

The Jews to this Day, have a kind of *Ark* in their Synagogues, wherein their sacred Books are reposed, in imitation of the ancient *Ark* of the Covenant.—This they call *Aron*. *Leo* of *Madena* gives a Description thereof, in his Account of the Customs and Ceremonies of those of his Nation: 'The Jews, says he, in the eastern Side of all their Synagogues, have an *Ark*, or *Armory*, called *Aron*; in Memory of the *Ark* of the Covenant. In this are preferred the five Books of *Moses*, wrote on Vellum, with Ink made on Purpose, &c.

Tertullian calls this *Ark*, *Armarium Judaicum*; whence the Phrase, to be in the *Armory* of the Synagogue, q. d. to be in the Number of canonical Writings. See APOCRYPHA.

ARM, *Brachium*, a part of the human Body, terminating at one End in the Shoulder, and at the other in the Hand. See BODY, SHOULDER, &c.

Among Physicians, the *Arm* only includes that part between the Shoulder and the Elbow; the rest, from the Elbow to the Wrist, being taken into the greater Hand. See HAND.

The *Arm*, in this latter Acceptation, has only one large Bone, called the *Humerus*, or Shoulder-Bone. See HUMERUS.

It has five sorts of Motions, which are effected by five Pair of Muscles, upwards, by the *Deltoidei*, *Suprascapularis*, and *Coracobrachialis*; downwards, by the *Terci*, *Rotundus major*, and *Latissimus Dorsi*; forwards, by the *Pectoralis*; backwards, by the *Infraspinatus*; and circular, by the *Transversalis*, *Subscapularis*, and *Infraspinatus*. See each Muscle described under its proper Article.

The other Part consists of two Bones, called *Ulna*; viz. the *Radius* and *Cubitus*, or *Ulna*. See FOOT, RADIUS, and ULNA.

The Muscles whereby this Part are moved, are the *Biceps*, *Brachii Internus*, *Gemellus*, *Brachii Externus*, *Anconeus*, *Pronator Radii teres*, and *Quadratus*; *Sopinator Longus*, &c. See each in its Place.

The usual Venesections are in the *Arm*. See PHLEBOTOMY, &c.

ARM, in the Manage, is applied to a Horse, when he endeavours to defend himself against the Bit; to prevent obeying, or being check'd thereby.

A Horse is said to *arm* himself, when he presses down his Head, and bends his Neck, so as to rest the Branches of the Bridle upon his Brisket; in order to withstand the Effort of the Bit, and guard his Bars and his Mouth.

A Horse is said to *arm* himself with the Lips, when he covers the Bars with his Lips, and deadens the Pressure of the Bit.—This frequently happens in thick-lipp'd Horses.—The Remedy is by using a Bit-mouth, forged with a Canon or Scotch-mouth, broader near the Bankers than at the Place of its Pressure, or rest upon the Bars.

For arming against the Bit, the Remedy is to have a wooden Ball cover'd with Velvet, or other Matter, put on his Chast; which will so press him between the Jaw-bones, as to prevent his bringing his Head so near his Breast.

ARM, is also used in Geography, for a Branch of a Sea, or River. See SEA, OCEAN, RIVER, &c.

Italy and *Sicily* are only parted by an *Arm* of the Sea.—St. *George's Arm*, in the *Mediterranean*, is the *Thracian Bosphorus*.

Among Gardeners, *Arm* is sometimes used in respect of Cucumbers and Melons, in the same Sense as Branch, of other Plants. See BRANCH, CLASPER, &c.

ARM is used figuratively for Power.—The *Secular Arm*, is the Lay or Temporal Authority of a secular Judge; to which Recourse is had for the Execution of the Sentences pass'd by Ecclesiastical Judges. See SECLAR.

The Church sheds no Blood: Even the Inquisition, after they have found the Person guilty, surrenders him to the secular *Arm*. See INQUISITION.

The Council of *Arnoeb*, held in 541, decrees, that Recourse be had to the *Secular Arm* to repress those who refuse Obedience to the Church: For secular *Arm*, they here use exterior Power.

ARM, in the military Art, Heraldry, &c. See ARMS and ARMOUR.

ARM, in the Sea-Language.—A Ship is said to be *armed*, when fitted out and provided in all respects for War. See SHIP.

Also, a Cross-Bar-shot is said to be *armed*, when some Rope-yarn, or the like, is rolled round about one End of the Iron-Bar which runs thro' the Shot, both that the Shot may be the better rammed down into the Gun, and left the sharp End of the Bar should catch into any Honey-Combs within the Cylinder of the Piece.

ARM, in respect of the Magnet.—A Loadstone is said to be *armed*, when it is capped, calcd, or set in Iron or Steel, in order to make it take up the greater Weight; and also to distinguish readily its Poles. See MAGNET, POLE, &c.

The usual Armour of a Loadstone in form of a right-angled Parallelepipedon, consists of two thin Pieces of Steel or Iron, in a square Figure, and of a Thickness proportionable to the Goodness of the Stone: If a weak Stone have a strong Armour, it will produce no Effect; and if the Armour of a strong Loadstone be too thin, its Effect will not be so considerable as when thicker.—The proper Thickness is found by filing it thinner and thinner, till its Effect is found the greatest possible.

The Armour of a Spherical Loadstone, consists of two Steel Shells fastened to one another by a Joint, and covering a good Part of the Convexity of the Stone. This also is to be filed away, till the Effect is found the greatest.—This surprising to what Degree the Armour of a Loadstone will augment its Effect: A good Stone thus *armed*, will lift above 150 times more than before. See MAGNETISM.

Kircher, in his Book *de Magnete*, tells us, that the best way to *arm* a Loadstone, is to drill a Hole thro' the Stone from Pole to Pole, and in that, to place a Steel Rod of a moderate Length; which Rod, adds he, will take up more Weight at the End, than the Stone itself *armed* the common Way, can do.

ARMA dare, q. d. to give Arms, in some ancient Charters, signifies to dub, or make a Knight. See KNIGHT.

ARMA deponere, to lay down Arms, was a Punishment antiently enjoin'd when a Man had committed an Offence. See HEU. I.

ARMA Molita, were sharp Weapons: *Fleta* calls them *Arma Emolita*.

ARMA Mutare, q. d. to change Arms, was a Ceremony used to confirm a League or Friendship.

ARMA Reversata, Inverted Arms; was when a Man was convicted of Treason or Felony. See DEGRADATION, &c.

ARMAN, among Farriers, a Confection of great Efficacy to prevent a total Loss of Appetite in Horses. See APPETITE.

ARMATURE. See ARMOR.

ARMARIUM Unguentum, in antient Writers, a sympathetic Ointment, or Weapon Salve, whereby Wounds are said to have been cured at a Distance, by only dressing the Weapon. See SYMPATHETIC.

ARMED. See ARM and ARMS.

ARMED, in Heraldry, is used in respect of Beasts and Birds of Prey, when their Teeth, Horns, Feet, Beak, Talons, or Tails, are of a different Colour from the rest.—He beaks a Cock, or a Falcon, *armed*, Or, &c.

ARMIGER, q. d. *Armour Bearer*; a Title of Dignity, render'd in *English*, by *Esquire*. See ESQUIRE.

ARMILLARY, ARMILLARIS, in Astronomy, an Epithet given to an artificial Sphere, composed of a Number of Metalleine Circles, representative of the several Circles of the Mundane Sphere, put together in their natural Order. See SPHERE and CIRCLE.

Armillary Spheres ease and assist the Imagination to conceive the Constitution of the Heavens, and the Motions of the heavenly Bodies. See HEAVEN, SUN, PLANET, &c.

Such is represented, *Tab. Astron. Fig. 21.*—where P and Q represent the Poles of the World, A D the Equator, E L the Ecliptic and Zodiac, P A G D the Meridian, or the Subsistial Colure, T the Earth, F G the Tropic of Cancer, H T the Tropic of Capricorn, M N the Arctic Circle, O V the Antarctic, N and O the Poles of the Ecliptic, and R S the Horizon.

The Word is form'd of the Latin *Armilla*, a Breviety.

ARMILLA Membranosia, is a Name given by some Anatomists, to the annular Ligament. See ANNULAR Ligament.

ARMAMENT, a large Body of Forces, rais'd and provided with the Furniture of War, either for Land or Sea Service. See ARMY.

ARMENIANS, in respect of Religion, a Sect, or Division among the Eastern Christians; thus called from *Armenia*, the Country antiently inhabited by them. See SECT.

The *Armenians*, since the Conquest of their Country by *Seba Abas* King of *Persia*, have had no fixed Place of Habitation, but are dispersed in divers Parts of *Persia*, *Turky*, and even some Parts of Europe.—Their chief Employment is

is Merchandize, in which they excel.—The Cardinal de Richlieu, we are told, had a Design to make an Establishment of them in France, for promoting the Commerce of that Country.

With regard to Religion, there are two Kinds of Armenians; the one Catholics, and subject to the Pope, having an Archbishop in Persia, and another in Poland.—The other make a peculiar Sect, having two Patriarchs in Naxosia. They have their Printing-house at Marshfield.

The Armenians are of the Sect of Monophysites, and only allow of one Nature in Jesus Christ. See MONOPHYTISTE.

As to the Eucharist, they agree with the Greeks, except in this, that they mix no Water with their Wine, and use unleavened Bread after the manner of the Latins. See GRAPE, AZYMUS, &c.

They abstain very rigorously from eating of Blood and Meats strangled, and are much addicted to Fasting, inasmuch, that to here them talk, one would conclude that their whole Religion consisted in Fasting.

The Monastic Order is in great Repute among them, since one of their Patriarchs introduced that of St. Basil; but part of them which have united with the Church of Rome, have changed their ancient Rule, for that of the Dominicans. See BASILIAN and DOMINICAN.

ARMENIAN-Stone, *Lapis Armenicus*, in natural History, called also *Lapis Stellaris*; is a kind of precious Stone, nearly resembling the *Lapis Lazuli*, except that it is softer, and instead of Veins of Gold, is intermix'd with Green. See STONE and LAZULI.

Zoerbaev rather ranks it among Semi-Metals; and supposes it composed of a Metal and Earth.—See METAL.—He adds, that it only differs from the *Lazuli* in degree of Maturity; and that both of them seem to contain Arsenic. See ARSENIC.

It is found in *Tirol*, *Hungary*, and *Transylvania*; and is used both in Mosaic Work, and to make that beautiful Blue Colour called *Azure*. See AZURE and MOSAIC.

ARMENIAN Bole, *Bolus Armenicus*, or *Bolus Armonica*, is a native Bole or Earth, brought from *Armenia*. See BOLE and EARTH.

Some conjecture it to have a Mixture of Iron in its Composition.—That which is palish, red, soft, fattish upon the Pallate, and adhesive on the Tongue, is the best. It is a good Astringent, and Vulnerary; and in those Intentions frequently prescribed against Diarrhæas, Dysenterics, Hemorrhages, and other Defluxions.—Externally it is used in strengthening Plasters, against Luxations of the Joints.

ARMILUSTRIUM, in Antiquity, a Feast held among the Romans; wherein they sacrific'd, arm'd at all Points, and with the Sound of Trumpets. See FEAST.

Some define *Armilustrum* to have been a Feast, wherein a general Review was made of all the Forces in the *Campania Martius*.—But this does not come up to the Point; for *Varro* does not derive the Word from the Latin *Arma* and *lustrare*, to make a Review; but from the Custom of holding this Feast in the Place where the Reviews were used to be made, or rather from their going round the Place arm'd with Bucklers. And he prefers this last Opinion, being persuaded that it was from this Ceremony, that the Place where this Sacrifice was offer'd to the Gods, was called *Armilustrum*, or *Armilustrum*, ab *luendo aut lustris*, i. e. *quod circumstant ludentes, ancillis armati*.

This Sacrifice was intended as an *εὐχαισθησιον*, an Expiation of Arms, for the Prosperity of the Arms of the People of Rome; and was celebrated on the 14th of the Calends of November.

ARMINGS, is a Ship, are the same with *Wash-Clothes*, being Red Clothes, hung about the Outfides of the Ship's Upper-works, fore and aft; and before the Culbridge Heads.—There are some also hung round the Tops, called *Top-Armings*.

ARMINIANISM, the Doctrine of *Arminius*, a celebrated Professor in the University of *Leyden*; and of the *Arminians*, a Sect which follow him.

The principal Article wherein the *Arminians* differ from the other Reformed, consists in this, that thinking the Doctrines of *Calvin*, with regard to Free-will Predestination and Grace, too severe, they have return'd to those of the Romish Church, and maintain, that there is an universal Grace given to all Men; that Man is always free, and at Liberty to reject or embrace Grace, &c. See GRACE, FREE-WILL, &c.

Gomar, *Arminius's* Collegue, stood strenuously up for a particular or special Grace, given only to those who were predestinated or elect; and for a positive Decree both of Election in some, and of Reprobation in others. See PREDESTINATION, ELECTION, REPROBATION, &c.

At length, the Matter came to an Hearing, before the Synod of *Dort*, where *Arminianism* was condemn'd in Form.—These Disputes began in the Year 1609. From the School they pass'd into the Government, and the Republick of *Holland* was once in a fair way to be over-turned by them.

ARMINIANS, a religious Sect or Party, which arose in *Holland*, by a Separation from the *Calvinists*. See ARMINIANISM.

The *Arminians* are sometimes also called *Remonstrants*; by reason of a Remonstrance which they perter'd to the States General in 1611, wherein the chief Articles of their Faith were laid down. See REMONSTRANCE.

The latter *Arminians* carried Things much further than *Arminius* himself, and even came very near to *Socinianism*.—Especially under *Simon Episcopius*.—When the *Calvinists* upbraid'd them with receiving an ancient Heresy already condemn'd in the *Pelagians*, and *Semi-Pelagians*; they replied, that the mere Authority of Men cou'd not be allow'd a legitimate Proof any where but in the Church of Rome; that it was not enough to shew any Opinion had been condemn'd, without shewing it had been condemn'd justly: *Nec satis est damnatum Olim Sententiam esse, nisi damnatum; aut jure aut recte damnatum esse, constat*.

On this Principle, which the *Calvinists* cannot well gain-say, the *Arminians* retrench abundance of those called fundamental Articles of Religion. Not finding them all clearly express'd in Scripture, they laugh'd at all the Catechisms and Formula's of Faith which they would have restrain'd them to; and accordingly were condemn'd at the famous Synod of *Dort*, held in 1618, whereas Divines from all the Reformed Churches were present.

Many among them have quitted the Doctrine of their Master relating to the Points of eternal Election and Predestination.—*Arminius* taught, that God elect'd the Faithful out of a Foreknowledge of their Faith: But *Episcopius*, and others, think he elects no Person from all Eternity, and only elects the Faithful, at the Time when they actually believe. They speak very ambiguously of the Previdence of God, which was the principal Strong-Hold of *Arminius*. They look on the Doctrine of the Trinity as a Point not necessary to Salvation; and many of them hold there is no Precept in Scripture, by which we are enjoind to adore the Holy Ghost; and that Jesus Christ is not equal to God the Father. And they generally avoid the Word *Satisfaction* of *Christ*. The *Episcopius* declares, that Jesus Christ has made Satisfaction to God, so far as to render him propitious to Mankind.

They press with a great deal of Earnestness, a general Toleration of all those who profess the Christian Religion; maintaining that all Christians are agreed in the essential Points: As it has never been decided by any infallible Authority, which of the many Ways is the true one, and the most agreeable to the Word of God; they ought all to combine on the same Footing, to compose one Church, without obliging any to quit their own Sentiments, or embrace those of others.

Their principal Writers are *Arminius*, *Episcopius*, and *Grotius*; to which may be added *Carcellæus*, who has collect'd a System of Theology out of the large diffusive Writings of *Episcopius*, with the Addition of many Things of his own.—The *Carcellæus*, it must be own'd, is rank'd by the *Socinians* among the Number of their Writers.

ARMISTICE, *Armistitium*, a short Truce, or Cessation of Arms for a small Time. See TRUCE, CESSATION, &c.

ARMONIACK, or rather ARMONIAC, in natural History, a sort of volatile Salt; whereof there are two Kinds; ancient and modern. See SALT.

The ancient *Sal Armoniacæ*, called also *Sal Cyrenaicæ*, described by *Pliny* and *Dioscorides*, was a native Salt, generated in the Earth, or rather the Sands, in those large Inns or Caravaneras, where the Crouds of Pilgrims coming from all Parts to the Temple of *Jupiter Ammon*, used to lodge.—The Method of Conveyance in those Parts being on Camels; and those Creatures when in *Cyrene* a Province of *Egypt* wherein that celebrated Temple stood, urining in the Stables, or say some in the parch'd Sands: Of this Urine, which is remarkably strong, sublim'd by the Heat of the Sun, arose a kind of Salt, denominat'd sometimes from the Temple *Armoniacæ*, and sometimes from the Region *Cyrenaicæ*.

This Salt being no longer found in those Places, some Authors suspect there was never any such thing; and that the ancient as well as the modern *Sal Armoniacæ* was factitious.—What pleads for the contrary, is, that the Salt frequently belch'd out in large Quantities from Mount *Ætna*, appears much of the same Nature, and answers to most of the Characters of the ancient *Sal Armoniacæ*. The Reason no more is produced in *Egypt*, is the Cessation of Pilgrimages to that ancient Idol.

Its Characters are, that it cools Water, turns *Aqua Fortis* into *Aqua Regia*, and consequently dissolves Gold; that it sublimes by a large Fire, and affords a pungent vitrious Savor. See AQUA-REGIA, URINOUS, &c.

The modern *Sal Armoniacæ*, called also *Aqua Calcis*, is held by some to be native, and to trickle out of the Ground about Mount *Vesuvius*, *Ætna*, &c. in Form of a Liqueur; which,

which, when filtered and inspissated, becomes *Sal-Armoniac*.—But 'tis certain, all the modern *Sal-Armoniac* is compound and factitious; consisting of a Mineral, a Vegetable, and an animal Salt combined together.

Indeed, though there scarce be any Drug more common than *Sal-Armoniac*, the Public has been entirely at a Loss, both as to the Place whence it comes, and how it was made; all we knew for certain, was that it came from the *Levant*, and was a volatile urinous Salt, penetrated by an Acid.—Father *Seiors*, the Jesuit, has at length removed the Veil, in the *Memoirs* of the *Journal de Trévoux*, for *1717*.—This Salt, says that Father, in a Letter to the Count de *Tbolonsie*, is made in *Egypt*, in a sort of Ovens contrived for the Purpose, the Tops whereof are perforated with several longitudinal Clefts; and on these Clefts are laid several long-necked Glass-Bottles, filled with Soot, a little Sea-Salt, and the Urine of Cattle; well stopp'd.

This done, they cover them up with a Body of Clay and Brick, all but the Necks, which lie open to the Air; and put the Fire in the Oven, which they keep up for 3 Days and Nights.—The Phlegm of the Materials contained in the Bottles, being thus exhaled by the Heat of the Fire; and the acid and alkaline Salts abounding therein, being thus brought together near the Necks of the Bottles, they coalesce, harden, and form a whitish Mass, which is the *Sal-Armoniac*.—It must be added, that all Soot is not fit for the Purpose, but only that exhaling from a sort of Fuel made of Dung.

Our Chymists have divers Ways of preparing a *Sal-Armoniac*, in Imitation of this.—The common Way is by putting one part of common Salt, to five of Urine; to which some add half that Quantity of Soot: The whole being put in a Vessel, they raise from it by Sublimation a white friable farinaceous Substance, which they call *Sal-Armoniac*.—*M. Lermery* suspected, that what is imported to us from Abroad, must be made after a different Manner; he even concluded that it was made as our common Salt is, by Lotion, and Evaporation: In which Suspicion, it appears from the foregoing Account, he is far from the Truth.—They purify it by Dissolution in hot Water, which being filtered, and evaporated to a Cattle, shoots into a fine white Salt, used in Medicine both as a Sudorific and a Diuretic; and proving a good Aperient in all Obstructions.

There are various Preparations of this Salt, in the modern Pharmacy; as,

Sublimate of *Sal-Armoniac*, of like Virtue as the purified. See SUBLIMATION.—

Volatile *Sal Armoniac*, made by subliming the *Sal-Armoniac* with Salt of Tartar; used against malignant Fevers as a Sudorific; as also in Pocket Smelling-Bottles.—

Flowers of *Sal-Armoniac*; made of *Sal-Armoniac*, with Sea-Salt decrepitated.—Its Vertues are much the same as of the sublimated *Sal-Armoniac*. See FLOWERS.—

Sometimes, instead of the Sea-Salt, Iron or Steel are used; which makes what they call *Martial Flowers of Sal-Armoniac*, of a very penetrating and deobstruent Nature, and recommended in all Kinds of Obstructions, Cachexies, Jaundice, Dropsies, &c.

Spirit of Sal-Armoniac.—Of this we have various Kinds, which derive different Denominations and Properties from the different additional Ingredients the Salt is distilled withal: As—*Spirit of Sal-Armoniac with Tartar*, with *Quicklime*; with *Amber*; with *Steel* or *Iron*: *Sweet Spirit of Sal-Armoniac*; *Acid Spirit of Sal-Armoniac*; *Diuretic Spirit of Sal-Armoniac*, &c.

ARMOR, or ARMOUR, a defensive Habit, wherewith to cover and secure the Body from the Attacks of an Enemy. See ARMS.

Such are the *Buckler*, *Cuirasse*, *Helmet*, Coat of Mail, Gantlet, &c. See BUCKLER, CUIRASSE, HELMET, &c.

A complete *Armor* antiently consisted of a Coat or Helm, a Gorget, *Cuirasse*, Gantelets, Tasses, Breastts, Cuisses, and Covers for the Legs, to which the Spurs were fastened.—This they called *Armor Cap-a-pe*, and was the Wear of the Cavaliers, and Men at Arms.

The Infantry had only part of it, viz. a Pot or Head-Piece, a *Cuirasse*, and Tassels; but all light.—Lastly, the Horses themselves had their *Armor*, wherewith to cover the Head and Neck.

Of all this Furniture of War, scarce any thing is now retained.

The Gallantry of going to the Battle naked, without any defensive *Armor*, prevailed so far, that the *French*, during the Reign of *Louis XIV.* were obliged to be continually issuing Ordonnances to restrain it; in consequence of which, the General Officers, and those of the Cavalry, were obliged to resume the *Cuirasse*.—

COAT-ARMOUR, is the Escutcheon of any Person, or Family, with its several Charges, and other Furniture, as Mantling, Crest, Supporters, Motto, &c. See ESCUTCHEON, CHARGE, CREST, MANTLING, SUPPORTER, MOTTO, &c.

Thus we say, a Gentleman of Coat-Armour; meaning one who bears Arms. See COAT, ARMS, GENTLEMAN, &c.

ARMORY, or ARMOURY, a Store-house of Arms, or a Place wherein military Habilliments are kept, to be ready for Use. See ARMS.

There are *Armories* in the Tower, and all Arsenals, &c. See TOWER and ARSENAL.

ARMORY is also used for a Branch of Heraldry; being the Knowledge of Coat-Armours, as to their Blazons, and various Incendments. See HERALDRY; see also COAT-ARMOUR, BLAZON, &c.

ARMS, ARMA, all Kinds of Weapons, whether for Defence, or Offence. See WEAPON, DEFENCE, &c.

The Arms of Offence, are the Sword, Pistol, Mulsquet, Bayonet, Pike, &c. See SWORD, GUN, &c.

ARMS of Defence. See under ARMOR.

FIRE-ARMS. See FIRE-ARMS.

The principal Arms of the antient Britons, were Hatchets, Scythes, Lances, Swords, and Bucklers: The Spears, &c. brought in the Halbard, Bow, Arrows, Arbalets, &c.

The Word is formed from the French *Armes*; which *Nicod* derives from a Latin Phrase, *Quod operantur arms*; by reason they cover the Shoulders, or Sides: But ought rather to be brought from *Arma*; which *Varro* derives of *Arceo*, eo quod Arceant hostes.

'Tis supposed that the first Arms were of Wood, and were only employ'd against Beasts.—That *Nimrod*, the first Tyrant, turn'd them against Men; and that his Son *Belus* was the first that waged War; whence, according to some, came the Appellation *Bellum*.—*Diodorus Siculus* takes *Belus* to be the same with *Mars*, who first train'd Soldiers up to Battle.—

Arms of Stone, &c. even of Brass, appear to have been used before they came to Iron and Steel.

Josephus assures us, that the Patriarch *Joseph* first taught the Use of Iron Arms in *Egypt*, arming the Troops of *Pharaoh* with a Cask and Buckler.

In the Eye of the Law, Arms, Arma, are extended to any Thing which a Man takes in his Hand in his Wrath, to cut at, or strike another.—So *Crompton*.—*Armorum appellatio in ubique Scuta & Gladii & Galens* significat, sed & Fustes & Lapidis.

ARMS of Courtesy, or Parade, were those used in the antient Jests, and Tournaments. See JUST and TOURNAMENT.

These usually were Lances not shod; Swords without Edge or Point; and frequently wooden Swords, or even Canes.

PASS of ARMS, was a Kind of Combat in use among the antient Cavaliers. See PASS of ARMS.

PLACE of ARMS, in Fortification, &c. See PLACE of ARMS.

ARMS, are also the natural Weapons, or Parts of Defence of Beasts; as Claws, Teeth, Tusks of Elephants, Beaks of Birds, &c. See BILL, TALON, TUSK, &c.

Some Animals are sufficiently guarded against all common Dangers by their natural Cloathing, their Armour of Shells, as the Tortoise, &c. See SHELL, TORTOISE, &c.—Others, destitute of this Guard, are armed with Horns; others with sharp Quills, or Prickles, as the Porcupine and the Hedgehog; others with Stings, &c. See HORN, STING, &c.

ARMS are also used figuratively for the Profession of a Soldier.—Thus we say, he was bred to Arms. See SOLDIER.

ARMS, or ARMORIES, are also used in Heraldry, for Marks of Dignity and Honour, regularly compos'd of certain Figures and Colours, given or authorized by Sovereigns, and bore in Banners, Shields, Coats, &c. for the Distinction of Persons, Families, and States. See FLORES, COLOUR, SYMBOL, HONOUR, NOBILITY, &c. see also SHIELD, &c.

They are called *Arms*, in regard they are bore principally on the Buckler, *Cuirasse*, Banners, and other Apparatus of War.—They are also called *Coats of Arms*, *Coat Armour*, &c. because antiently embroider'd on Surcoats, &c. See COAT of ARMS, &c.

Some will have the Name to have been first occasion'd by the antient Knights, who in their Jests and Tournaments bore certain Marks (which were frequently their Mistress's Favours) in their *Armour*, i. e. their Helms or Shield; to distinguish them from each other. See JUST, TOURNAMENT, &c.

Arms make the Subject of the Art of Heraldry. See HERALDRY and BLAZON.

Three Flowers de lys, in a Field Azure, are the Arms of France.—The Arms of England are three Lyons.—In the Arms of Great-Britain are Quartered the Arms of France, England, Scotland, and Ireland. See QUARTER and QUARTERING.

There has been a great Dispute among the Learned about the Origin of Arms.—*Favin* will have them to have been from the Beginning of the World; *Seygin* from the Time of *Noah*; others, from that of *Osiris*, which is supported by some Passages in *Diodorus Siculus*; others, from the Times of the Hebrews, in regard Arms were given to *Moyses*, *Jesseus*, the twelve Tribes, *David*, &c. Others,

Others will have them to have taken their Rise in the heroidal Age, and under the Empires of the *Assyrians, Medes, and Persians*; building upon *Philostratus, Xenophon, and Quintus Curtius*.

Some pretend that the Use of *Arms*, and the Rules of Blazon, were regulated by *Alexander*.—Some will have them to have had their Original under the Empire of *Augustus*; others, during the Inundations of the *Goths*; and others, under the Empire of *Charlemagne*.

Clovier observes, that among the ancient *Gauls*, each Man bore a Mark on his Backler, by the Sight whereof he might be known to his Fellows; and hence he refers the Original of the *Arms* of noble Families.—*Camden* has observ'd something like this of the ancient *Picts*, and *Britons*, who going naked to the Wars, painted their Bodies with Blazons, and Figures of divers Colours, which he supposes to have been different in different Families, as they fought divided by Kindreds. Yet *Spelman* says, that the *Saxons, Danes, and Normans*, first brought *Arms* from the North into *England*; and thence into *France*.

Upon the whole it is certain, that from Time immemorial, there have been Symbolical Marks in use among Men, to distinguish them in Armies, and to serve as Ornaments of Shields and Ensigns; but these Marks were used arbitrarily as Devices, Emblems, Hieroglyphicks, &c. and were not regular *Armories*, like ours, which are hereditary Marks of the Nobility of a House, regulated according to the Rules of Heraldry, and authoriz'd by Princes. See *DEVICE, EMBLEM, HIEROGLYPHIC, &c.*

Before *Marius*, even the Eagle was not the constant Ensign of the *Roman Army*; but they bore in their Standards a Wolf, Leopard, or Eagle indifferently, according to the Fancy of the Generals. See *EAGLE, ENSIGN, &c.*

The same Diversity has been observed with regard to the *French and English*; on which account, Authors are divided when they speak of the ancient *Arms* of those Countries.—In effect, it appears from all the best Authors, that the *Armories* of Houses, as well as the double Names of Families, were not known before the Year 1000. And several have even endeavour'd to prove, that the Use of *Arms* did not begin till the Time of the first *Crossades* of the Christians in the East. See *CROISADE*.

The Truth is, it was the ancient Tournaments that occasioned the fixing of *Armories*. See *TOURNAMENT*.

Henry the Fowler, who regulated the Tournaments in *Germany*, was the first who introduc'd these Marks of Honour, which appear to be of an older standing in *Germany*, than any other Part of Europe.—It was then that Coats of *Arms* were first instituted; which were a kind of Livery compos'd of several Bars, Fillets, and Colours; whence came the *Fess, Bend, Pale, Chevron, and Lozenge*; which were some of the first Elements of *Armories*. See *COAT, FESS, BEND, &c.*

Those who had never been concerned in any Tournament, had no *Arms*, tho' they were Gentlemen. See *GENTLEMAN*.

Such of the Nobility and Gentry as cross'd the Sea in the Expeditions to the Holy Land, also assum'd these Tokens of Honour to distinguish themselves.

Before these Times, we find nothing upon ancient Tombs but *Crosses*, with *Gothick* Inscriptions and Representations of the Persons deceas'd. The Tomb of *Pope Clement IV.* who died in 1268. is the first whereon we find any *Arms*; nor do they appear on any Coins struck before the Year 1336. We meet with Figures, it is true, much more ancient, both in Standards and in Medals; but neither Cities nor Princes ever had *Arms* in Form; nor does any Author make mention of Blazoning before that Time.

Originally, none but the Nobility had a Right of bearing *Arms*; but King *Charles V.* having ennobled the *Parishians*, by his Charter in 1371. he permitted them to bear *Arms*: From whose Example, the more eminent Citizens of other Places did the like.

Camden refers the Original of hereditary *Arms* in *England* to the Time of the first *Norman Kings*. He says their Use was not establish'd till the Reign of *K. Henry III.* and instances in several of the most considerable Families in *England*, wherein, till that Time, the Son always bore different *Arms* from the Father.—About the same Time it became the Custom here in *England*, for private Gentlemen to bear *Arms*; borrowing them from the Lords of whom they held in Fee, or to whom they were the most devoted.

ARMS, at present, follow the Nature of *Titles*, which being made hereditary, these are also become so; being the several Marks for distinguishing of Families and Kindreds, as Names are of Persons and Individuals. See *NAME, &c.*

ARMS are variously distinguish'd by the *Heralds*.—*Full or Entire ARMS*, are such as retain their primitive Purity, Integrity, and Value; without any Alterations, Diminutions, Abatements, or the like. See *DIMINUTION, ABATEMENT, &c.*

'Tis a Rule, that the simpler and less diversified the *Arms*, the more noble and ancient they are.—For this Reason, *Garcias Ximenes*, first King of *Navarre*, and his Successors for several Ages, bore only *Gales*, without any Figure at all.

The *Arms* of Princes of the Blood, of all younger Sons and junior Families, are not pure, and fall; but distinguish'd and diminished by proper Differences, &c. See *DIFFERENCE*.

Charged ARMS, are such as retain their ancient Integrity and Value; with the Addition of some new honourable Charge or Bearing, in Consideration of some noble Action. See *CHARGE*.

Speaking, or Vocal ARMS, are those wherein the Figures bear an Allusion to the Name of the Family.—Such are those of the Family of *la Tour* in *Anvergue*, who bear a Tower; that of the Family of *Prado* in *Spain*, whose Field is a Meadow. See *DEVICE, MOTTO, &c.*

Most Authors hold these the most noble and regular, as is shewn by an Infinity of Instances produced by *Fa. Varenus* and *Meunier*.—They are much defaced, when they come to partake of the *Rebus*. See *REBUS*.

ARMS are also said to be *Party*, or divided; *Couped*; *Quartered*, &c. See *PARTY, COUPE, QUARTERING, &c.*

ARMS are said to be *false* and irregular, when there is something in them contrary to the established Rules of Heraldry.—As, when Metal is put on Metal, or Colour on Colour, &c. See *METAL and COLOUR*.

The *Laws*, and other Affairs of *Arms*, with the Cognizance of Offices committed therein, belong, among us, to the *Earl-Marshal*, and *College of Arms*. See *MARSHAL and COLLEGE of ARMS*.

ARMS, in Falconry, are the Legs of an Hawk, from the Thigh to the Foot. See *HAWK and HAWKING*.

<i>King</i> at <i>ARMS</i> ,	}	see	}	<i>KING</i> at <i>Arms</i> ,
<i>Herald</i> at <i>ARMS</i> ,				<i>HERALD</i> ,
<i>Poursuivant</i> at <i>ARMS</i> ,				<i>POURSUIVANT</i>
<i>College</i> of <i>ARMS</i> ,				<i>COLLEGE</i> of <i>Arms</i> .

ARMY, a Body of Soldiers, Horses and Foot, divided into Regiments, under the Command of a General, with several Ranks of subordinate Officers under him. See *SOLDIER, GENERAL, OFFICER, REGIMENT, &c.* see also *CAVALRY, INFANTRY, &c.*

This is to be understood of a *Land Army*.—A *Naval or Sea Army*, is a Number of Ships of War, equip'd and mann'd with Marines, under the Command of an Admiral, with other inferior Officers under him. See *NAVY, ADMIRAL, SHIP, &c.*

We say, an *Army* ranged in Form of Battle.—The March of an *Army*.—The Retreat of an *Army*.—The Review of an *Army*, &c. See *MILITIA, BATTLE, MARCH, RETREAT, REVIEW, CAMP, &c.*

An *Army* is usually divided into three Corps; the Vanguard, Rear-guard, and Main-Body. See *VAN-GUARD, REAR-GUARD, and BODY*.

ARMIES are also rang'd in Lines, Columns, &c. with Wings. See *LINE, COLUMN, WING, &c.*

Our *Armies* antiently were a sort of Militia, compos'd chiefly of the *Vassals* and Tenants of the Lords. See *VASSAL, TENANT, LORD, SERVICE, MILITIA, &c.*

When each Company had served the Number of Days or Months enjoyn'd by their Tenure, or the Customs of the Fees they held; they returned Home. See *TENURE, FEU, &c.*

The *Armies* of the Empire consist of divers Bodies of Troops, furnished by the several Circles. See *EMPIRE and CIRCLE*.

The *Groß* of the French *Armies* under the *Merovingian Race*, consist of Infantry. Under *Peppin and Charlemagne*; the *Armies* consist almost equally of Cavalry and Foot: But since the Declension of the *Carlovingian Line*, the Fees being become hereditary, the national *Armies*, says *le Gendreau*, are chiefly Cavalry.

The *Armies* of the Grand-Signior consist most of Janizaries, Spahis, and Timariots. See *JANIZARY, SPAHIS, and TIMARIOT*.

ARNODI, in Antiquity, the same with *Rhopodi*. See *RHAPODI*.

The *Word* is compounded of the Greek *arnos*, a Lamb; which was their usual Reward; and *arnos*, Song, Singing.

ARNOLDIST'S, *ARNALDISTA*, a kind of Sectaries in the XIIIth Century; thus called from their Chief, *Arnold of Broffe*.—He declaim'd much against the great Wealth and Possessions of the Church, and preach'd against Baptism and the Eucharist.

After raising great Disturbances at *Broffe* and *Rome*, he was hang'd at this latter Place in 1155, and his Ashes cast into the *Tyber*.—His Disciples were also call'd *Publicans* or *Poblecanis*.

AROMATIC, AROMATICUS, is understood of a Drug, Plant, or the like, which yields a brisk, agreeable Smell, and a warm, spicy Taste.

Such are Frankincense, Storax, Benjoin, Cinnamon, Mace, Cloves, Nutmeg, Pepper, &c.—Such also are Lavender, Marjoram, Sage, Thyme, Rosemary, &c. See SPICES, &c.

The Word is form'd of the Greek *aroma*, of *aroma*, to make fit, accommodate; in regard Spices, which are all Aromatic, are used for the seasoning and preparing of Meats.

AROMATICUS, or Aromatic Medicines, are either simple or compound.—To this Class belong most Cardiac, Cephalic, and Carminative Remedies, with many Stomachic ones. See CARDIAC, CARMINATIVE, CEPHALIC, STOMACHIC, &c.

The *Aromaticum Rosatum*, is a compound official Powder, made of Red Roses, Liquorice, Aloes Wood, Yellow Sanders, Clove, Cloves, Mace, Gum, Tragacanth, Nutmegs, Cardamoms, Galangals, Spikenard, Ambergrease and Musk mix'd together.—It is chiefly prescribed in Cordial and Cephalic Boles and Electuaries, to strengthen the Stomach and Head, which all Aromatics have a Tendency to.

Some Writers give the Title *Aroma Germanicum* to Eucampine, as preferring it, in that Intention, to Ginger itself. See EUCAMPANE, &c.

Aromatics are of particular Service in cold cachectic Habits, which the Load of Humours has been forced away by strong Detergents and Cathartics; as they tend to strengthen the Fibres, and prevent a Relapse.—Hence they become of absolute Use after Purgings, and carrying off the Waters of a Dropsy; or in the Intervals thereof, to fortify the Springs, and prevent a filling again. See DROPSY.

ARONDE, in Fortification. See *QUEUX d'Aronde*.

ARPAGUS, in ancient Inscriptions, signifies a Child who died in the Cradle.

The Romans made no Funerals for their *Arpagi*.—They neither burnt their Bodies, nor made Tombs, Monuments, or Epitaphs for them; which occasioned *Jurnal* to say,

—*Terra clauditur Infans
Vel minor igne rogi.*

In after-times it became the Custom to burn such as had lived to the Age of 40 Days, and had cut any Teeth; and these they called *Rapti*.

The Word *Arpagus* signifies the same thing in Greek. *Eustathius* assures us, it was the Custom among the Greeks never to bury their Children either by Night or full Day, but at the first Appearance of the Morning, which they called, *Ἡλικὸς ἀρπαγίου*

ARQUEBUSS, or HARQUEBUS, a large Hand-gun, something bigger than our Musquet; and called by some a *Caliver*. See HARQUEBUS.

ARQUEBUS a *Croc*, is a sort of small Fort-Arm, which carries a Ball of about three half Ounces; now only used in old Castles, and some Garrisons of the French.

The Word is deriv'd from the Italian *Arco-buffo*, or *Arco-clubo*, form'd of *Arco*, a Bow, and *Buffo*, a Hole; because of the Touch-Hole of an *Arquebust*, which succeeds to the Use of the Bow among the Antients.

ARRAIGN, or ARRAIN, in Law, signifies to set a Thing in Order, or in its Place. See ARRANGEMENT.

Thus, he is said to *Arraign* a Writ of Novel Disseisin, who prepares and fits it for Trial before the Justices of the Circuit. In this Sense *Littleton* says, the Lessee *arraigne* the Assize of Novel Disseisin.—To *arraign* the Assize, is to cause the Tenant to be called to make the Plea, and to set the Cause in such Order, as the Tenant may be forced to answer thereto.

A Prisoner is also said to be *arraigned*, when he is indicted and brought forth to his Trial. See INDICTMENT.—

Spelman is of Opinion the Word should be written *Arranis*, from *Arranare*, and that from the old French *Arramir*, i. e. *Jurare, promittere, Solemniter profiteri*. Yet in the Register we find no such Word as *Arranare*; but in all the Writs of Assize, the Year-Books, &c. it is *Arranavit*: The more natural Derivation is from the French *Arraivner*, i. e. *ad rationem ponere*, to call a Man to answer in Form of Law; which comes from the barbarous Latin *Adraivonare*, i. e. *placitare*—In which Sense, to *arraign* a Criminal, is *ponere eum ad rationem*.

ARRAIGNMENT, or ARRANGEMENT, in Law, the Act of *Arraigning*, or setting a Thing in Order. See ARRIGNING.

ARRAIATIO *Peditum*, the arraying of Foot Soldiers. See ARRIVING.

ARRAS-HANGINGS, a sort of rich Tapestry, made at *Arras* in the County of *Artois* in *Flanders*. See TAPESTRY.

ARRANGEMENT, or RANGEMENT, the Disposition of the Parts of a Whole, in a certain Order. See PART and DISTRIBUTION.

The modern Philosophy shews us, that the Diversity of Colours depends entirely on the Situation and the Arrangement of the Parts, which reflect the Light differently; the Diversity of Taste and Smells on the different Arrangements of the Pores, which render them differently sensible; and the Diversity of Bodies on the different Arrangements of their Parts. See BODY, &c.

The happy Arrangement of Words makes one of the greatest Beauties of Discourse. See CONSTRUCTION, &c.

ARRAY, in Law, the raking or ordering a Jury or Inquest of Men impanel'd on any Cause. See JURY, INQUEST, &c.

The Word may be derived either from the obsolete French *Array*, Order, or from *Raye*, a Line.—Hence the Verb, to *Array* a *Panel*, Ann. 3 Hen. V. c. d. to set forth the Men empanelled one by another. The *Array* shall be quashed, *ib.* By the Statute, every *Array* in Assize ought to be made four Days before.—Hence also, to challenge the *Array*; see CHALLENGE.

ARRAYERS, *Armatores*, is used in some antient Statutes, for such Officers as had care of the Soldiers Armour, and saw them duly accoutred in their Kinds. See ARMOUR, ACCOUTREMENTS, &c.

Such were the *Commissioners of Array*, appointed by King Charles I. in the Year 1642.

ARREARS, or ARREARAGES, the Remains of an Account; or a Sum of Money remaining in the Hands of an Accountant. See ACCOUNT and ACCOMPTANT.

The Word is also used more generally for a Remains of Reots, or Mooies unpaid at the due Time; whether they be Rents of a Manor, or any other Thing reserved.

The Word is derived from the French *Arreages*, which is formed from *arriere*, and that again from *retro*, behind.

ARREST, in common Law, an Execution of the Command of some Court, or Officer of Justice.—Hence, when a Person is legally stopp'd, apprehended, and restrained of his Liberty, for Debt, &c. he is said to be arrested, or put under an *Arrest*; which is the beginning of Imprisonment. See ATTACHMENT, IMPRISONMENT, and HAUTELOUE.

To move or plead in *Arrest* of Judgment, is to shew Cause why Judgment should be stay'd, tho' there be a Verdict in the Cause. See JUDGMENT and VERDICT.

To plead in *Arrest* of taking the Inquest, is to shew Cause why an Inquest should not be taken. See INQUEST.

The Word *Arrest*, is originally French, and is used by them for a Decree, or Determination of a Cause debated to and fro: In which Sense it seems deriv'd from the Greek *arrestos, placitum*, the Pleasure of the Court. See ARRET.

ARRENTATION, ARRENDARE, in the Forest Law, the Licensing an Owner of Lands in the Forest, to enclose them with a low Hedge and small Ditch, in consideration of a yearly Rent. See FOREST, PURLEV, &c.

Saving the *Arrentations*, denotes a Power reserved to give such Licences for a yearly Rent.

ARRESTANDIS *bonis ne dissipentur*, a Writ which lies for him whose Cattle or Goods are taken by another, who, during the Controversy, makes, or is like to make them away, and will hardly be able to give Satisfaction for them afterwards.

ARRESTANDO *ipsum, qui pecuniam recepit ad proficiendum in Obsequium Regis, &c.* is a Writ which lies for the Apprehension of him that hath taken Prent-Money for the King's Wars, and hides himself when he should go. See PRENT-MONEY.

ARRESTO *facto super bonis Mercatorum Alienigenorum, &c.* is a Writ which lies for a Denizen against the Goods of Strangers of another Country found within this Kingdom, in Recognition of Goods taken from him in that Country, after he hath been denied Restitution there. See MARK.

This among the antient Civilians, was called *Clarigatio*, now barbarously *Repraisals*. See CLARIGATIO and REPRISALS.

ARRETED, ARRECTATUS, is sometimes used in our antient Law-Books, for *imputed*, or laid to; as, No Folly may be *arreted* to one under Age.

ARRHABONARII, a Sect in Religion, who held that the Eucharist is neither the real Flesh and Blood of Christ, nor yet the Sign of them, but only the Pledge or Earnest thereof.

The Word is derived from the Greek *Ἀρραβων, Arrha*, Earnest.

ARRHA, ARRES, or *Argentum Dci*. See EARNEST, &c.

ARRHEPHORIA, a Feast among the Athenians, instituted in Honour of *Minerva*.—Boys, or, as some say, Girls, between 7 and 12 Years of Age, were the Ministers that assisted at this Feast. See FEAST.

The Word is derived from the Greek *Ἀρραβω*, which is composed of *ἄραβω*, Mystery, and *ἵκω*, I carry.—This Feast was also called *Herriphoria*, from *Herse* the Daughter of *Cecrops*, on whose account it was established.

ARRIERE,

ARRIERE, a French Term, literally signifying the hind, or posterior Part of any Thing; usually wrote in English, abridgedly, Rear. See REAR.

ARRIERE-BAN, or **ARRIERE-BAN**, in the French Customs, is a general Proclamation, whereby the King summons to the War all that hold of him; both his Vassals, i. e. the Noblesse, and the Vassals of his Vassals. See VASSAL, TENURE, &c.

To the Provost of Paris belongs the convoking and commanding of the *Arriere-Ban*. See PROVOST, &c.

M. Caseneuve takes the Word to be composed of *Arriere* and *Ban*: The *Ban*, according to him, denotes the convening of the Noblesse or Vassals, who hold Fees immediately of the King; and *Arriere*, those who only hold of the King mediately.—*Passquier* observes, that the Word is frequently mentioned in the Salic Law.

ARRIERE-CORPS. See CORPS.

ARRIERE-FEE, or **FIEF**, is a Fee dependant on some other superior one. See FEE.

This commenced at the Time when the Counts and Dukes, rendering their Governments hereditary in their Families, distributed to their Officers certain Parts of the royal Domains which they found in their Provinces; and even permitted those Officers to gratify the Soldiers under them, with Parts thereof. See COUNT, DUKE, &c.

ARRIERE-GUARD. See REAR-GUARD.

ARRIERE-VASSAL, or **TENANT**, the Vassal or Tenant of another Vassal or Tenant. See VASSAL, TENANT, &c. see also **ARRIERE-FEE**.

ARRONDIS, in Heraldry, a **Cross-Arrondie**, or **round-ed**, is that whose Arms are composed of Sections of a Circle, not opposite to each other, so as to make the Arm buldge out thicker in one Part than another; but both the Sections of each Arm lie the same Way, so that the Arm is every where of an equal Thickness; and all of them terminating at the Edges of the Escutcheon, like the plain Coils. See CROSS.

ARSACIDES, **ARSACIDE**, the Descendants of *Arfaces* King of *Partbia*.

This *Arfaces*, according to the *Persian* Chronicles, was of the Lineage of *Cyrus*; the others affirm that he was descended from *Darius*.—Be this as it will, *Arfaces* having freed the *Partbians* from the Domination of the *Seleucides*, they esteemed him the Founder of their Monarchy, and would have all their future Kings bear his Name, and be called *Arfacids*. Whence the Poets have attributed the Appellation to the whole Nation.

The *Arfacids* began to reign in *Arfaces*, under *Selenus* II. surnamed *Callinicus*, the third of the *Seleucides*, 240 Years before Christ; and continued about 460 or 470 Years; when *Artaxerxes* kill'd *Artabanus*, the last of the *Arfacids*, about the Year of Christ 217.

ARSENAL, a royal or publick Magazine, or Place appointed for the making, and keeping of Arms necessary either for Defence, or Assault. See ARMS and ARMORY.

The *Arsenal* of Venice is the Place where the Gallies are built and laid up.—The *Arsenal* of Paris, is that where the Cannon or great Guns are cast. It has this Inscription over the Door—

*Vulcania Tela Ministrat,
Tela Giganteis abellaturra furoris.*

There are also *Arsenals*, or *Store-houses*, appropriated to Naval Furniture and Equipments. See NAVY, YARD, &c.

The Word, according to some, is deriv'd from *Ars* or *Arcus*; or rather from *Art*, an Engine; this being the Place where the Engines of War are preserv'd.—Some derive it from *Ars Senatus*, as being the Defence of the Senate; others from the Italian *Arsenale*, or from the modern Greek *Arsenalis*; but the most probable Opinion is, that it is deriv'd from *Darsinaa*, which, in the Arabic, signifies an *Arsenal*.

ARSENIC, **ARSENICUM**, in natural History, a ponderous mineral Substance, extremely caustic or corrosive, to the Degree of a violent Poison. See FOSSIL, CORROSIVE, &c.

The Word is compounded of the Greek *arsen*, Man, and *nikos*, I overcome, kill; alluding to its poisonous Quality. See POISON.—

In an ancient Manuscript ascribed to the Sybils, is a Verse which plainly intimates *Arsenic* :

*Tetra syllabus sum; prima pars mei Virum,
Secunda Victoriam significat.*

Arsenic is rank'd among the Class of Sulphurs. See SULPHUR.

There are divers Kinds of *Arsenic*; viz. Yellow, or Native, Red, and Crystalline.

Native Arsenic is of a Yellow, or Orange-colour; whence it is also denominated *Auripigmentum*, or *Orpiment*.—It is chiefly found in Copper-Mines, in a sort of Globes or Stones,

of different Figures and Sizes. Its Colour, tho' always Yellow, yet admits of divers Shades and Mixtures, as a golden Yellow, reddish Yellow, green Yellow, &c. It is found to contain a Portion of Gold, but so little, as not to quit the Cost of separating it. See ORPIMENT.

Of this are prepared two other Kinds of *Arsenic*, viz. *White* and *Red*.

This, sublimed with some other Matters, is the *Sandaracha Grecorum*. See SANDARACH.

Tho' some Naturalists will have Red *Arsenic*, and *Realgal*, two distinct Drugs, taking the latter for a native Mineral, and the former for a Preparation of a native *arsenic*. See REALGAL.

Red Arsenic, called also *Realgal*, is only the native Yellow sublimed by Fire.

The *White*, or *Crystalline*, is drawn from the Yellow, by subliming it with a Proportion of Sea-Salt.—This Species is chiefly in Use among us for real *Arsenic*. Some Authors give it a different Origin, and maintain it a native Matter, found in white scaly Globes in the Mines.

White and Yellow *Arsenic* are also procurable from Cobalt: The Method of which, as practis'd in *Hungary*, is given us by *Dr. Krieg*, in the *Philosophical Transactions*, N^o 293.—The Cobalt being beat to Powder, and the light sandy Part wash'd off, by a Current of Water, they put what remains in a Furnace; the Flame of which passing over the Powder, takes along with it the Arsenical Part, in Form of a Smoak; which being receiv'd by a Chimney, and carried thence into a close Brick Channel, sticks by the Way to the Sides; and is scrap'd off, in form of a whitish or yellowish Powder.—From what remains of the Cobalt, they proceed to make Smalt. See SMALT.

The smallest Quantity of any of these *Arsenics*, being mixed with any Metal; renders it friable, and absolutely destroys its Malleability.

Hence, the Refiners dread nothing so much as *Arsenic* in their Metals; nor could any thing be so advantageous to them, were such a thing to be had, as a Menstruum that would absorb, or act on *Arsenic* alone; for then their Metals would be readily purified, without flying off, or evaporating. See REFINING.

A single Grain of *Arsenic* will turn a Pound of Copper into a beautiful seeming Silver. This Hint many Persons have endeavour'd to improve on, for the making of Silver, but in vain, as it could never be brought to sustain the Hammer: Some have been hang'd for coining Species of this furious Silver. See SILVER, COINING, &c.

The Chymists furnish several Preparations of *Arsenic*, which all turn on repeated Ablutions and Sublimations, to blunt the corrosive Salts thereof, and change them into a safe Medicine, after the Manner of Sublimate.—Such are *Fuly* of *Arsenic*, &c. But it scarce appears worth the Pains; And whatever some may urge, *Arsenic* should never be used inwardly in any Form, as gasping and tearing the Parts, and occasioning mortal Convulsions.—Its Fume taken into the Lungs, kills instantly: And the other it is sublimed, says *Boerhaave*, the rarer it grows.—Butter and Cow's Milk taken in large Quantities, prove good Antidotes against *Arsenic*.

Regulus of **ARSENIC**, is the most fix'd and compact Part thereof, prepar'd, by mixing it with Pot-ashes and Soap, dissolving the whole, and casting it into a Mortar; upon which the heaviest Part falls to the Bottom. See REGULUS.

Caustic Oil of **ARSENIC**, is a Butyrous Liqueur, like Butter of Antimony, prepar'd of *Arsenic* and corrosive Sublimate.—It serves to eat off fungous Flesh, cleanse carious Bones; &c.

Arsenical Magnet, *Magnus Arsenicus*, is a Preparation of Antimony, with Sulphur and White *Arsenic*.

ARSENOTHELYS, among the ancient Naturalists, the same with *Hermaphrodite*. See HERMAPHRODITE.

The Greeks used the Word both of Men and Beasts.—It is form'd from *arsen* and *thelys*, Male and Female.

ARSIS and **Trahis**, a Phrase in medical Composition, where a Point being inverted, is said to move *per Arsis & Trahis*; that is, rises in one Part, and falls in another; or, on the contrary, falls in one Part, and rises in another: Whence is produc'd a very agreeable Variety.

ART, **ARS**, is defined by the Schoolmen, a Habit of the Mind operative or effusive according to right Reason; or, somewhat more intelligibly, a Habit of the Mind prescribing Rules for the due Production of certain Effects; or the introducing of Changes in Bodies from some Foreknowledge and Design in a Person endued with a Principle or Faculty of Acting. See HABIT, ACTION, &c.

On this Footing, **Arts** are divided into *active* and *passive*.—Such as leave no external Effect after their Operation, as Dancing, Fiddling, &c. are called *active* or *practical Arts*: Those which do leave an Effect, as Painting, &c. are called *passive*, or *Effective Arts*. *Magna Moral*. lib. 1. cap.

ART is better defined, after my Lord Bacon, a proper Disposal of the Things of Nature by human Thought and Experience, so as to make them answer the Designs and Uses of Mankind. See EXPERIMENT, &c.

Nature, according to that Philosopher, is sometimes free, and at her own Disposal; and then she manifests herself in a regular Order: as we see in the Heavens, Plants, Animals, &c.—Sometimes she is irregular, and disorderly, either thro' some uncommon Accident, or a Depravation in Matter, when the Resistance of some Impediment perverts her from her Course; as in the Production of Monsters. See MONSTER.—At other Times she is subdued and fashioned by human Industry, and made to serve the several Purposes of Mankind.

This last is what we call *Art*; in which Sense, *Art* stands opposed to Nature. See NATURE, ARTIFICIAL, &c.

Hence, the Knowledge of Nature may be divided into the History of Generations, of Prætergenerations, and of Arts.—The first considers Nature at Liberty; the second, her Errors; and the third, her Restraints.—

ART is also used for Science or Knowledge reduced into Practice. See KNOWLEDGE.

Several of the Schoolmen hold Logic and Ethics to be *Arts*; inasmuch as they do not terminate in mere Theory, but tend to Practice. See THEORY and PRACTICE; see also LOGIC, ETHICS, &c.

In this Sense, some Branches of the Mathematicks are *Arts*, others Matters of Doctrine, or Science. See MATHEMATICS.

Statics is wholly scientific, as it takes up with the mere Contemplation of Motion: Mechanics, on the contrary, is an *Art*, as it reduces the Doctrines of Statics into Practice. See MATHEMATICS.

ART is principally used for a certain System or Collection of Rules, Precepts, and Inventions or Experiments, which being duly observ'd, make the Things a Man undertakes succeed, and render them advantageous and agreeable. See RULE, PRECEPT, EXPERIMENT, &c.

In this Sense, *Art* is opposed to Science, which is a Collection of speculative Principles and Conclusions. See SCIENCE.

The Nature and Origin of Art, and its Distinction from Science, will be farther consider'd in the Preface to this Work.

Arts, in this Sense, may be divided, with respect to their Scope and Object, into *human*, as Medicine; and *divine*, as Theology. See MEDICINE and THEOLOGY.

Human, again, may be subdivided into *Civil*; as Law, Politics, &c. *Military*, as Fortification, &c. *Physical*, as Agriculture, Chymistry, Anatomy, &c. *Metaphysical*, as Logicks, pure Mathematicks, &c. *Philological*, as Grammar, Criticism, &c. *Mercantile*, to which belong the Mechanical Arts and Manufactures. See each in its Place.

ARTS are more popularly divided into *Liberal* and *Mechanical*.

The *liberal Arts* are those that are noble, and ingenious; or which are worthy of being cultivated without any regard to Lucre arising therefrom.—Such are *Poetry*, *Musick*, *Painting*, *Grammar*, *Rhetoric*, the *military Art*, *Architecture*, and *Navigation*. See LIBERAL; see also POETRY, MUSIC, GRAMMAR, RHETORIC, &c.

Mechanical Arts, are those wherein the Hand, and Body are more concern'd than the Mind; and which are chiefly cultivated for the sake of the Profit they bring with them.—Of which kind are most of those which furnish us with the Necessaries of Life, and are popularly known by the Name of *Trades*.—Such are *Weaving*, *Tinners*, *Brewing*, *Masonry*, *Clock-making*, *Carpentry*, *Joinery*, *Foundery*, *Printing*, &c. See TRADE, MANUFACTURE, &c.

The *mechanical Arts* take their Denomination from *μηχανη* , Machine; as being all practis'd by means of some Machine or Instrument. See MACHINE, &c.

With the *liberal Arts* it is otherwise; there being several of them which may be learnt and practis'd without any Instrument at all: As *Logic*, *Eloquence*, *Medicine* properly so called, &c.

The *Arts* which relate to the Sight and Hearing, My Lord Bacon observes, are reputed liberal beyond those which regard the other Senses, which are chiefly employed in Matters of Luxury. See SENSE.

It has been well noted by some Philosophers, that during the Rise and Growth of States, the *military Arts* chiefly flourish; when arrived at their Height, the *liberal Arts*; and when on the declining hand, the *vulgar Arts*.

There are also divers particular *Arts*; as the *Art of Memory*, the *Art of Decyphering*, *Art of Flying*, of *Swimming*, *Art of Diving*, &c. See MEMORY, DECYPHERING, FLYING, SWIMMING, DIVING, &c.

Democritus maintain'd, that Men learnt all their *Arts* from Brutes; the Spider taught 'em Weaving, the Swallow Building, the Nightingale Music; and several Medicine.

The Nature, Office, History, &c. of the several Arts; will be found under their respective Articles in this Dictionary.

The Word *Art* is derived from the Greek *ἀρτιος*, Virtue, Industry.—This is the Opinion of *Donatus*, on the first Scene of *Terence's Andria*: *Arts ἀρτιος ἀρτιος, διότι ἐστὶ περὶ ὕψωτον*. Others derive it from *ἀρτι*, Utility, Utility, Profit; which is found in that Sense in *Æschylus*.

ART is also applied to divers imaginary, and even superstitious Doctrines and Inventions.—Such are,

Lully's Art, or the *Transcendental Art*, by means whereof a Man may dispose whole Days on any Topic in Nature, without understanding the least title of the Thing in Dispute; thus called from its Inventor *Raimond Lully*, or *Ramon Lull*.

It confists chiefly in disposing the several Sorts of Beings into divers Scales or Climaxes, to be run down in a descending Progression.—Thus, whatever were proposed to be talk'd on, they wou'd say, first, it is a *Being*, and consequently, one, true, good, perfect: then, it is either created, or incanted. Again, every created Being is either *Body* or *Spirit*, &c.

Angelical Art, or the *Art of Spirits*, is a Method of attaining to the Knowledge of any thing desired, by means of an Angel, or rather of a Dæmon. See DEMON.

Under this come the *Arts of Magic*, *Sorcery*, *Witchcraft*, &c. See MAGIC, SORCERY, WITCHCRAFT, &c.

*Term of ART, } see { TERM,
Master of ARTS, } MASTER, DEGREE, FACULTY.*

Arts Notoria, is a manner of acquiring Sciences by Infusion, without any other Application than a little Fasting, and making a few Ceremonies. See FASTING, &c.

They who make Profession of this *Art*, affirm that it was by means hereof that *Solomon*, in one Night's Time, acquired all his Knowledge.—*Debris* shews it to be a criminal Curiosity, and founded on a secret Compact with the Devil. *Disquis. Mag.* p. 11. It was solemnly condemn'd by the Sorbonne, in 1320.

St. Aselm's Art, is a superstitious Manner of curing Wounds, by barely touching the Linnen wherewith those Wounds had been cover'd. See WOUND and SYMPATHY.

Debris, in his *Disquisitiones Magice*, observes that some Italian Soldiers, who practis'd this *Art*, attributed the Invention thereof to *St. Aselm*; but assures us withal, that it was really invented by *Aselm of Parma*, a celebrated Magician.

St. Paul's Art, is a Branch of the *Arts Notoria*, so called as being suppos'd to have been taught by *St. Paul*, after his being taken up into the third Heaven.

Art and Part, is a Term used in the North of England, and in Scotland.—When any one is charged with a Crime, they say he is *Art and Part* in committing the same; that is, he was both a Contriver, and acted a Part in it. See PRINCIPAL, ACCESSARY, &c.

ARTERIOTOMY, in Chyrurgery, &c. the Operation of opening an Artery; or of letting of Blood by the Arteries; practis'd in some extraordinary Cases. See ARTERY, PHLEBOTOMY, &c.—For the Effects hereof, see ANEURISMA.

Arteriotomy, is a very dangerous Operation, seldom used with Design, except in the Temples, and behind the Ears, where the Arteries are easily clos'd again by reason of the *Cranium* underneath, which would be very difficult in any other Part.—In the other Parts it usually proves fatal; and we have numerous Instances of Persons kill'd in Bleeding, by a Mistake of an Artery for a Vein.

Casberwood endeavours to introduce *Arteriotomy* in apoplectic Cases, as much preferable to Venesection; but he is not much followed. See APOPLEXY.

The Word is form'd of *αρτηρια*, and *τομή*, *seco*, I cut.

ARTERY, **ARTERIA**, in Anatomy, a hollow fistulous Canal, appointed to receive the Blood from the Ventricles of the Heart, and distribute it to all Parts of the Body, for the Maintenance of Heat and Life, and the Conveyance of the necessary Nutrimēt. See BLOOD, HEART, LIFE, &c.

The Word is Greek, *αρτηρια*; which some imagine deriv'd from *ἀρτι*, *Aer*, the Air, and *τηναι*, *ferre*, to keep: But others who understand the Use of the Part better, derive it from *ἀρτι* *ὑπὸ ἀρτι*, because of its continual Throbbing or Beating.

The *Arteries* are ordinarily compos'd of three Coats or Membranes. The first or outermost, nervous or tendinous; being a Thread of fine Blood Vessels with Nerves, for nourishing the other Coats. The second muscular, made up of circular, or rather spiral Fibres; of which there are more or fewer *Spiras*, according to the Bigness of the *Artery*: These Fibres have a strong Elasticity, by which they contract themselves with Force, when the Power by which they have been stretched out, ceases. The third and inmost Coat is a fine, dense, transparent Membrane, which keeps the Blood within its Channels, which otherwise upon the Dilatation of

of an *Artery*, would easily separate the spiral Fibres from one another. As the *Arteries* grow smaller, these Coats grow thinner.

All the *Arteries* are coeliac, *i. e.* begin with a Trunk, and growing less and narrower, end in Branches so minute, that they escape the Sight, unless assisted with Microscopes; by which, in the Tails of Tadpoles and very small Eels, the Extremities of the *Arteries* seem, by the swift uninterrupted Course of the Blood, to be inoculated or continued to the Originations of the Veins: Tho' by the Transparency of those Vessels, the actual Continuation be not visible. See ANASTOMOSIS, and INOCULATION.

The Coats of the *Arteries* are of a very dense, close Contexture; by which means the Blood not being visible thro' them, they generally appear white. Add, that the Blood proceeding from a greater Capacity to a less, is thereby somewhat obstructed in its Passage; but being forced on by the Motion of the Heart, dilates the Coats, and thereby occasions a salient Motion, call'd the *Pulse*.—By this Thickness and Whiteness of the *Arteries*, with the Pulsation observed therein, *Arteries* are distinguish'd from Veins. See VEIN.

The Pulse of the *Arteries*, like that of the Heart, consists of two reciprocal Motions, a Sy stole or Contraction, and a Diastole or Dilatation: But they keep opposite Times; the Sy stole of the one answering to the Diastole of the other. See PULSE, SYSTOLE, and DIASTOLE.

All the *Arteries* of the Body, we have observed, arise in two large Trunks, from the two Ventricles of the Heart. That from the right Ventricle, is call'd the *Pulmonary Artery*, serving to carry the Blood into the Lungs: That from the left, the *Aorta*, or *great Artery*; which, by its numerous Ramifications, furnishes all the rest of the Body, as far as the remotest Stages of Circulation. See CIRCULATION of the Blood.

The *Great Artery*, after it leaves the Heart, divides into two large Trunks, call'd the *ascending*, or upper; and *descending*, or lower, Trunks. See AORTA.

The ascending Trunk, or *Aorta ascendens*, conveys the Blood to the Head, and other upper Parts of the Body, and is subdivided into three Branches.—The first, the right *Subclavian*, whence arise the *Carotid*, *Vertebral*, *Cervical*, *right Axillary*, &c.—The second, is the *left Carotid*.—The third, the *left Subclavian*; whence arise the *left Cervical*, *Vertebral*, and *Axillary*.—See each described in its proper Article, SUBCLAVIAN, CAROTID, VERTEBRAL, CERVICAL, AXILLARY, &c.

The descending Trunk, or *Aorta descendens*, carries the Blood to the Trunk, and the lower Parts of the Body.

Out of this arise the *Bronchial*, *Intercostals*, *Cœliacæ*, *Pheenic*, *Mesentericæ*, *Emulgentæ*, *Spermaticæ*, *Iliacæ*, *Umbilical*, *Epigastricæ*, *Hypogastricæ*, *Crysal*, &c. with their several Ramifications.—See each in its Place.

A Draught of the several *Arteries*, with their Divisions and Subdivisions, in their natural Order and Position, as taken from the Life; see in Plate Anatomy.

ARTERY, is also applied to that fistulous Tube, composed of Cartilages and Membranes, which descends from the Mouth to the Lungs, for the Conveyance and Reconveyance of the Air, in Respiration. See RESPIRATION and LUNGS.

This is particularly call'd the *Apera Arteria*, or *Trachea*, and popularly the *Wind-pipe*. See TRACHEA.

ARTERIAL, or ARTERIOUS, in Anatomy, something that relates to the Arteries. See ARTERY.

The arterial Blood is supposed more warm, florid, and spirituous than the venal. See BLOOD.

The Ancients gave the Name *Vena Arteriosa*, to the Tube or Canal whereby the Blood passes from the right Ventricle of the Heart to the Lungs, as supposing it of an intermediate Nature and Office, between an Artery and a Vein.—The Moderns finding it a real Artery, call it the Pulmonary Artery. See PULMONARY.

The *Canalis Arteriosus*, is a Tube in the Heart of a Fœtus; which with the Foramen Ovale, serves to maintain the Circulation of the Blood, and divert it from the Lungs. See CANALIS ARTERIOSUS, FÆTUS, CIRCULATION, and FORAMEN OVALE.

ARTHRITIS, in Medicine, a Disease better known under the Name of the Gout. See GOUT.

The Word is form'd from the Greek *arthron*, *Articulus*, a Joint; in regard in that chief Seat of that Distemper is in the Joints.—

ARTHRODIA, in Anatomy, a Species of Articulation, wherein a flat Head of one Bone is received into a shallow Socket of another. See BONE and ARTICULATION.

Such is that of the *Humerus* with the *Scapula*. See HUMERUS, &c.

The Word is formed from the Greek *arthron*, *Articulus*, and *procur*, *recipio*, I receive.

ARTHROSIS, or ARTHRON, in Anatomy, a Juncture of two Bones, designed for Motion; call'd also *Articulation*. See ARTICULATION.

The Word is formed from the Greek *arthron*, *Articulus*, Juncture, Joint.

ARTICLE, ARTICULUS, a little Part or Division of a Book, Writing, or the like.—*Aquinas* divides his Sum of Theology, into several Questions; and each Question into divers *Articles*.—Such an Account consists of so many *Articles*.

ARTICLE is also us'd for the several Clauses, or Conditions of a Convention, Treaty of Peace, or the like. See TREATY, CONTENTION, &c.

In this Sense we say, *Articles of Marriage*, *Articles of Capitulation*, *Preliminary Articles*, &c.—The Establishment of an *East-India Company* at *Offend*, is a direct Breach of the eighth and ninth *Articles* of the Treaty of *Amster*.

ARTICLES of the Clergy, *Articuli Cleri*, are certain Statutes touching Persons and Causes ecclesiastical, made under *Edward II.* and *III.*

ARTICLE of Faith, is some Point of Christian Doctrine which we are oblig'd to believe, as having been revealed by God himself, and allow'd and establish'd as such by the Church. See FAITH, &c.

ARTICLE, *Articulus*, in Anatomy, is a Joint, or Juncture, of two or more Bones of the Body. See BONE, JOINT, &c. see also ARTICULATION.

ARTICLE of Death, *Articulus Mortis*, the last Pangs, or Agony of a dying Person. See AGONY.

The Pope usually sends his Benediction to the Cardinals, &c. in *Articulis Mortis*.

ARTICLE, in Arithmetic, signifies the Number 10, or any Number justly divisible into ten Parts; as 10, 20, 40, &c.—These are sometimes call'd *Decads*, and sometimes *round Numbers*: *Harris*.

ARTICLE, in Grammar, is a Particle us'd in most Languages, for the declining of Nouns, and denoting the several Cases and Genders thereof. See PARTICLE, NOUN, CASE, GENDER, &c.

The Use of *Articles* arises hence, that in Languages which have not different Terminations to express the different States and Circumstances of Nouns; there is something required to supply that Office. See TERMINATION.

The *Latins* have no *Articles*; but the *Greeks*, and most of the modern Languages, have had Recourse hereto, for fixing and ascertaining the Vague Signification of common and appellative Names. See NAME and APPELLATIVE.

The *Greeks* have their *the*, the eastern Tongues their *be*, *Emphaticus*; the *Italians* their *il*, *lo*, and *la*.—The *French* their *le*, *la*, and *les*.—The *English* also have two *Articles*, *A* and *An*; which being prefixed to Substantives, apply their general Signification to some particular Thing.—Thus we say, *A Man*; that is, some Man or other: *The Man*; that is, that certain Man.—

Hence it appears that *A* is us'd in a larger, and more general Sense, being applied indifferently to any particular Person or Thing.—Whereas, *The* distinguishes individually, and shews what particular Thing is spok'd of.—If the Substantive to which the Particle *A* is affix'd, begin with a Vowel, or an *H*; we write and speak it, *As*: So we say, *An Eye*, an *Hour*, &c.

Some Grammarians make the *Article* a distinct Part of Speech; others will have it a Pronoun; and others, with Mr. *Greenwood*, a Noun adjective. See SPEECH, PRONOUN, ADJECTIVE, &c.

Articles are Things of great Service in a Language, as they contribute to the more neat and precise expressing of several Properties and Relation which must otherwise be lost.—And hence one great Disadvantage of the Latin, above other Languages which have *Articles*; in that the *Article*, being either excess'd, or left out, makes an Alteration in the Sense, which the *Latins* cannot distinguish.—Thus when the Devil said to our Saviour, *Si tu es filius Dei*, it may either be understood, *if you are a Son of God*, or, *if you are the Son of God*.—*Sealiger*, from the Want of *Articles* in the Latin, concluded them useless.

The *Italians* even prefix *Articles* to proper Names; which dont naturally need any, in regard they do of themselves signify Things individually.—Thus they say, *Il Ariosto*; *Il Tasso*, *Il Petrarca*.—Even the *French* join the *Article* to the proper Names of Kingdoms, provinces, &c. as *la Suede*, *la Normandie*.—And we our selves do it to the Names of certain Mountains and Rivers; as *the Rhine*, the *Danube*, the *Alps*, &c.

Indefinite ARTICLE. The *Article A* is said to be indefinite, because applied to Names taken in their more general, and confused Signification; as, He travelled with the Post and Equipage of a Prince; where the Word *Prince* may be understood of any Prince in the general.

Definite ARTICLE. The *Article The* is said to be definite, or demonstrative, as fixing the Sense of the Word it is put before, to one individual Thing. See DEFINITE.

Dr. *Buffler* distinguishes a third kind of *Articles* in the French, which he calls intermediate, or *partitives*, serving to denote part of the Thing express'd by the Substantives they

added to: As, *Des Savans ont cru*, some learned Men have supposed, &c. I want, *De la lumiere*, some Light, &c.

The Use and Distinction of the definite and indefinite Articles *le* or *la*, and *de* or *du*, make one of the greatest Difficulties in the French Tongue, as being utterly arbitrary, and only to be acquired by Practice.—We may add, that in the *English*, tho' the Articles be so few, yet they are of such frequent Use, that they easily discover any Stranger, from a natural Englishman. See ENGLISH and FRENCH.

ARTICULARIS, ARTICULARIS, in Medicine, an Epithet applied to a Disease which more immediately infects the *Articuli*, or Joints.—The *Morbus Articularis*, is the same with the Greek *arthritis*, and our *Gout*. See **ARTHRITIS** and **GOUT**.

ARTICULATE Sounds, are those which express the Letters, Syllables, &c. of any Alphabet, or Language. See SOUND, LETTER, ALPHABET, &c.

Brutes cannot form articulate Sounds, cannot articulate the Sounds of their Voice; excepting some few Birds, as the Parrot, Pyc, &c. See VOICE.

ARTICULATION, ARTICULATIO, in Grammar, a distinct Pronunciation of Words and Syllables. See PRONUNCIATION, &c.

Articulation, is that part of Grammar which treats first of Sounds, and Letters; then of their Combination, for the composing of Syllables and Words. Hence he who pronounces his Words clearly, and distinctly, is said to pronounce them *articulately*. See LETTER, SYLLABLE, WORD, &c.

ARTICULATION, in Anatomy, a Junction or Connexion of two Bones, design'd for Motion. See BONE, MOTION, &c.

There are various Forms and Kinds of *Articulation*, laid to the several Sorts of Motion and Action.—That which has a notable and manifest Motion, is called *Diarthrosis*. See **DIARTHROSIS**.—This is subdivided into *Enarthrosis*, *Artbrodia*, and *Ginglymus*. See each in its Place, **ENARTHROSIS**, **ARTHRODIA**, and **GINGLYMUS**.

That which only admits of an obscure Motion, is called *Synarthrosis*; see **SYNARTHROSIS**.—It is subdivided into *Symphysis*, *Sutura*, *Harmonia*, *Sypharosis*, *Syncondrosis*, *Synsarcosis*, *Syntesis*, and *Synsymbiosis*. See **SYMPHYSIS**, **SUTURA**, **HARMONIA**, &c.

ARTIFICIAL, ARTIFICIALIS, something made by Art, not produced naturally, or in the common Course of Things. See ART.

Art is usually consider'd as a Thing very different from Nature; and artificial Things, from natural ones: Whence arises another more grievous Error, viz. that Art is a different Principle built upon Nature, and of such Power, as to be able, either to perfect what Nature had begun, to rectify and amend her when disordered, or to free her when confined; tho' not utterly to divert or transmute her.—But the Truth is, artificial Things do not differ from natural ones in Nature or Form, but only in the Efficient: Man has no Power over Nature, beside what he has by Motion; in virtue whereof, he can apply natural Bodies to, or remove them from, one another. Where such Application, or joining of active Things to passive ones, is practicable, there may Man do any thing; where it is not, nothing. Gold we sometimes see purified by the Chymist's Fire; and sometimes find it perfectly pure in the Sands, Nature herself having done the Business: So the Rainbow is sometimes form'd on high in the Water of a Cloud; and sometimes here below by a sprinkling of Water. Nature, therefore, governs all Things; under this Subordination, of the Course of Nature, the Latitude or Evagation of Nature, and Art, or Man super-added to her other Works. *Bacon de Augmen. Scient. lib. II. See NATURE.*

ARTIFICIAL frequently coincides with *falsitious*. See **FACTIVIOUS**.

Thus we have *artificial Sal-Armonic*, *artificial Botax*, &c. See **HARMONIC** and **BOTAX**.

ARTIFICIAL DAY. See **DAY**.

ARTIFICIAL GLOBE, SPHERE, &c. See **GLOBE, SPHERE**, &c.

ARTIFICIAL HORIZON. See **HORIZON**.

ARTIFICIAL EYE. See **EYE**.

ARTIFICIAL NUMBERS, are *Secants*, *Sines*, and *Tangents*.—See **SECANT**, **SINE**, and **TANGENT**; see also **LOGARITHMICAL**.

ARTIFICIAL LINES, on a Sector or Scale, are certain Lines so contrived, as to represent the Logarithmick Sines, and Tangents; which, by the help of the Line of Numbers, will solve all Questions in Trigonometry, Navigation, &c. pretty exactly. See **LINE**, **SCALE**, **SECTOR**, &c.

ARTIFICIAL FIRE-WORKS, are Compositions of inflammable Materials; chiefly used on solemn Occasions, by Way of Rejoicing. See **FIRE-WORKS**.

ARTIFICIAL ARGUMENTS, in Rhetoric, are all such Proofs or Considerations as arise from the Genius, Industry, or Invention of the Orator. See **ARGUMENT** and **INVENTION**.

Such are *Definitions*, *Cases*, *Effects*, &c. which are thus called to distinguish them from Laws, Authorities, Citations, and other Arguments of that Nature, which are said to be

Artificial Arguments. See **DEFINITION**, **AUTHORITY**, &c.

ARTILLERY, the heavy Equipage of War; comprehending all sorts of great Fire-arms with their Appurtenances, as Cannons, Mortars, Bombs, Petards, Miquelets, Carbines, &c. See **CANNON**, **MORTAR**, **GUN**, **PETARD**, &c. In this Sense, the Word *Artillery* coincides with what we otherwise call *Ordnance*. See **ORDNANCE**.

There was no attacking such a Place for want of heavy *Artillery*.—The *Persians*, we are told in the Embassy of *Figueron*, would never, in 1518, have either *Artillery* or Infantry in their Armies, by reason they hinder'd their Charging and retiring with so much Nimbleness; wherein their chief military Address and Glory lay.

The Term *Artillery* is sometimes also applied to the ancient Instruments of War, as the *Catapulta*, battering Rams, &c. See **ARIES**, **MACHINE**, **CATAPULTA**, &c.

Park of ARTILLERY, is that Place in a Camp set apart for the *Artillery*, or large Fire-arms.

Trails or Train of *Artillery*, is a Set, or certain Number of Pieces of Ordnance mounted on Carriages, with all their Furniture fit for Marching.—To it frequently belong Mortar-pieces, with Bombs, Carcasses, &c. under the Direction of a Master of the *Artillery*. See **MASTER**.

There are Trains of *Artillery* in most of the King's Magazines, as in the *Tower*, at *Portsmouth*, *Plimouth*, &c.

ARTILLERY-COMPANY, is a Band of Infantry, consisting of 600 Men, making part of the Militia or City-guard. See **MILITIA**.

Their Officers are a *Leader*, two *Lieutenants*, two *Esquires*, three *Gentlemen of Arms*, &c.

ARTILLERY is also used for what we otherwise call *Pyrotechnia*, or the Art of Fire-works, with the Instruments and Apparatus belonging thereto. See **PYROTECHNIA**.

The Writers upon *Artillery*, are *Casimir Simonowitz*, *Apole*, *Buchnerus*, *Brannius*, *Mietz*, and *De S. Remigio*, in his *Memoires de l'Artillerie*, which contains an accurate Description of all the Machines and Instruments of War now in Use, with every Thing that relates thereto.

ARTOTYRITES, or **ARTOTYRITES**, a Sect in Religion; being a Branch of the ancient *Montanists*, who first appear'd in the second Century, and infected all *Galatia*. See **MONTANIST**.

They used Bread and Cheese in the Eucharist, or perhaps Bread baked with Cheese.—Their Reason was, that the first Men offer'd to God, not only the Fruits of the Earth, but of their Flocks too.

Hence, according to *St. Augustin*, came their Name, which is Greek; being composed of *αριον*, Bread, and *τυρος*, Cheese.

ARVALES Fratres, were Priests in ancient *Rome*, who assisted in the Sacrifices of the *Ambrosalia* offer'd every Year to *Ceres* and *Bacchus* for the Prosperity of the Fruits of the Earth, viz. of the Corn and Wine. See **PRIEST** and **AMBROSALIA**, &c.

They were instituted by *Romulus*, and were twelve in Number; all of them Persons of the first Distinction; the Founder himself having been of the Body.—They made a College, called *Collegium Fratrum Arvalium*. See **COLLEGE**.

The Mark of their Dignity, was a Garland, composed of Ears of Corn, tied with a white Ribbon, which *Pliny* says, was the first Crown in Use at *Rome*. See **CROWN**.

The Word is originally Latin, and is formed from *Arvum*, a Field; because, in their Ceremonies, they went in Procession a-round the Fields: Others say, because they were appointed Arbitrators of all Differences relating to the Limits of Fields and Land-Marks.

According to *Fulgentius*, *Seca Laurentia*, *Romulus's* Nurse, was the first Founder of this Order of Priests: She, it seems, had twelve Sons, who used to walk before her in the Sacrifice; one of whom dying, *Romulus*, in favour of his Nurse, promised to take his Place; and hence, says he, came this Sacrifice, the Number twelve, and the Name of Brother.—*Pliny* seems to indicate the same thing, when he mentions that *Romulus* instituted Priests of the Fields, after the Example of *Seca Laurentia* his Nurse.

ARUSPICES, an Order of Priests among the ancient *Romans*, who strewed Things to come, by inspecting the Entrails of Beasts killed in Sacrifice. See **PRIEST** and **SACRIFICE**.

The Word is derived from *haruga*, which signifies the Entrails of Victims; and *aspicere*, to view or consider. Others say, from *arax*, and *aspicere*, to inspect the Altars.—*Fa. Pezron* is positive the Word was originally form'd of the Celtic *Ar*, Liver; and *spicio*, I look; whence *Aspex*: Which being a Word somewhat rude of Pronunciation, they thence form'd *Aruspex*. See **ASPICES**.

The Doctrine or Discipline of the *Aruspices*, was form'd into a precise Art, called *Aruspicina*. See **DIVINATION**.

ARYTÆNOIDES, in Anatomy, the third and fourth Cartilages of the Larynx, situate under the *Thyroides*; call'd also *Guttalæ*. See **LARYNX**.

The *Arytænoides* are thus call'd on account of the Figure of an *Ewer*; which, together, they somewhat resemble:
From

From *ἀφω, haurio*, to drink; and *ἴσος, Forma*, Shape.
ARYTENOIDEUS, in Anatomy, a Pair of Muscles of the Larynx. See **LARYNX**.

The *Arytenoides* has its Head in one Arytenoid Cartilage, and its Tail in the other; and serves to bring them together, and shut the Rima or Glottis. See **GLOTTIS**.

ARYARYTENOIDEUS, in Anatomy, one of the Muscles serving to close the Larynx; otherwise called little *Arytenoides*, and *Aryarytenoides*, as deriving its Origin from the posterior and inferior part of the Arytenoides. See **ARYTENOIDES**.

ARYTHMUS, in Medicine, a Sinking or Failure of the Pulse, so as it can no longer be felt. See **PULSE**.

The Word is form'd from the privative Particle *α*, and *ῥυθος, Modulus*, or *Pulsus*.

AS, among Antiquaries, has two different Significations. 1° It signifies a Weight; and in this Sense the Roman *As* is the same with the Roman *Libra*, or Pound. See **WEIGHT, LIBRA, POUND, &c.**

The *As* had several Divisions.—The principal were, the *Unctus*, or Ounce; which was the twelfth Part of the *As*; *Sextans*, the sixth Part of the *As*, or two Ounces; *Quadrans*, the fourth Part of the *As*, or three Ounces; *Triens*, the third Part of the *As*, which was four Ounces; *Quincunx* was five Ounces; *Semis*, half the *As*, that is six Ounces; *Sextans*, seven Ounces; *Bes*, two Thirds of the *As*, or eight Ounces; *Dodrans*, three Fourths of the *As*, or nine Ounces; *Dextans*, ten Ounces; *Denarius*, eleven Ounces. See **OUNCE, UNCTA, QUADRANS, &c.**

Hence, also, the Word *As* came to signify a whole or entire Thing, or the Totality of any Thing; in which Sense it was used, principally, in Matters of Succession, and signified the whole Succession, or Inheritance. Thus, to inherit any Person, *ex asse*, was to inherit all his Estate, to be his sole Legatee, his only Heir; and thus, to inherit, *ex triente*, *ex semelle*, *ex besse*, was to inherit a Third, an Half, or two Thirds of the Estate.

2° *As* was also the Name of a Roman Coin. See **COIN**.

Under *Numa Pompilius*, according to *Eusebius*, the *As* was either of Wood, Leather, or Shell.—In the Time of *Julus Hæstilius*, it was Brass, and was call'd *As, Libra*, or Pound.—Four hundred and twenty Years after, the first *Punic War* having exhausted the Treasury, they retrench'd a *Sextans* or two Ounces, and thenceforward only made it of the Weight of a *Dextans*, or ten Ounces.—After this they took away another Ounce, and reduced the *As* to a *Dodrans*, or nine Ounces.—Lastly, by the *Papirian Law*, they took away an Ounce and half more, and reduced the *As* to a *Sextans* and *Semuncia*: And 'tis generally thought that it rested here all the Time of the Commonwealth. See **MOSEV**.

This last was called the *Papirian As*, in regard the Law just mentioned was pass'd in the Year of *Rome* 565, by *C. Papirius Carbo*, then Tribune of the People. Thus there were four different *As*'s in the Time of the Commonwealth.

The Figure which the *As* bore, was a *Janus* with two Faces on the one Side, and the Rostrum or Prow of a Ship on the other Side.

The Word is derived from the Greek *ἀσ*, which, in the *Doric* Dialect, is used for *αἰ*, one, *q. d.* an entire Thing; as above noted. *Goodwin* will have it named *As*, quasi *Æs*, because made of Brass.—*Budeus* has wrote nine Books *De Asse et eius partibus*, of the *As* and its Parts.

ASAPPES, ASAPPI, an Order of Soldiers in the *Turkish Army*, whom they expose to the first Shock of their Enemies, to the end that being thus fatigued, and their Swords blunted, the Spahis and Janizaries may fall on and find an easy Conquest.

The *Asappes* are held of so little Value, that they frequently serve as Bridges for the Cavalry to pass over, in ill Roads, and as Fascines to fill up the Ditches of Places besieged.—The greatest Part of them are natural *Turks*, they travel on Foot, and have no Pay, but the Plunder they can get from the Enemy.

The Word is deriv'd from the *Turkish Saph*, which signifies Rank, File, Order; from whence they have form'd *Asaphs*, to range in Battle.

ASBESTINE Paper or Cloth, is such as will burn in the Fire, be purified by it, and yet not consume. See **INCOMBUSTIBLE**.

It is made of the *Asbestos*, or *Lapis Amiantibus*; and is by some called *Linum Vitrum*. See **ASBESTOS**.

The Antients are said to have made Napkins and Towels of it, which, when soiled, instead of Washing, they threw into the Fire to cleanse. See **LINUM INCOMBUSTIBILE**.

ASBESTOS, or *Amiantibus, Lapis*, in natural History, called also *Carytus Lapis*, an inflammable Matter; supposed by some to be a sort of Flax, growing on the *Pyreneans*; whence it is also called *Linum vitrum, Linum incombustibile*, &c.

The *Asbestos*, or *Lapis Asbestos*, is really a sort of native, silice Stone, which one may split into Threads or Filaments,

very fine, brittle, yet somewhat tractable, silky, and of a greyish silver Colour, not unlike *Talc of Venice*.

It is almost insipid to the Taste, indissoluble in Water; and exposed to the Fire, neither consumes nor calcines.—A large Burning-glass, indeed, reduces it into little Glass Globules, in proportion as the Filaments separate; but common Fire only whitens it. See **BURNING-Glass**.

These Filaments are of different Lengths, from one Inch to ten.—The Stone is found inclosed within other very hard Stones, and is brought from the Isles of the *Archipelago*, the *Pyreneans*, and from *Montauban* in *France*. We have also seen Instances of it in *Scotland, Wales, &c.*

Several Persons have pretended to the Secret of spinning the *Asbestos*: *B. Porta* assures, that in his Time, 'twas a thing known to every Body in *Venice*: And yet this should seem hardly practicable, without the Mixture of some other very pliant Matter, as Wool, Line or Hemp along with it; the Filaments of the *Amiantibus* it self being too brittle to make any tolerable fine Works.—See further of the natural History, Preparation, Manufacturing, &c. of this celebrated Stuff, under the Article **LINUM INCOMBUSTIBILE**.

The Works made of *Asbestos*, were heretofore held in so great Esteem, that they were of equal Price with Gold; and none but Emperors and Kings had Napkins made of it. See **ASBESTINE-Cloth**.

Some Antiquaries are of Opinion, that the Antients made Shroods of the *Asbestos*, wherein they burnt the Bodies of their Kings, in order to preserve their *Asbes* entire, and prevent their being mix'd with those of Wood, and other combustible Matters, whereof the common Funerall Fires were form'd. See **FUNERAL BURNING, &c.**

Others assert, that the Antients used the *Asbestos*, to make perpetual Wicks for sepulchral Lamps.

However this be, there are some at this Day who use the *Asbestos* for the Wicks of such Lamps as they would not have any trouble withal; because the *Amiantibus* never wasting, there is no occasion for shifting the Wick. See **LAMP**.

The Word *ασβεστος, Asbestos*, properly signifies an *incombustible Body*; being form'd of the privative Particle *α*, and *βρωμας, extinguo*.—Notwithstanding the common opinion that Fire has no Effect on the *Asbestos*; yet, in two Trials before the Royal Society, a Piece of incombustible Cloth made of this Stone, a Foot long, and half a Foot broad, weighing about an Ounce and half, was found to lose above a Dram of its Weight, each Time.

The *Asbestos* applied to any Part of the Body, excites an Itching; and yet we read of it as antiently prescribed for Diseases of the Skin, and particularly for the Itch: Unless it were rather the *Alumen Punicum* that was meant hereby; for even at this Day, they are frequently confounded. See **ALUM and PUMOST**.

ASCARIDES, in Medicine, a kind of little Worms, sometimes found in the Rectum, and adhering to the Fundament. See **WORMS and VERMES**.

They are thus called from the Greek *ἀσκαρίδος, I leppis*, on account of their continual troublesome Motion, causing a most intolerable itching.

ASCENDANT, or ASCENDENT, or ASCENDING Line, in Geology, is understood of such Relations as have gone before us; or those nearer the Root of the Family. See **LINE and CONSANGUINITY**.

Such are Father, Grandfather, Great Uncle, &c.—They are thus called in Contradistinction to Descendants, or the descending Line. See **DESCENDANT**.

Marriage is always forbid between the *Ascendents* and *Descendents*, in the direct Line. See **MARRIAGE, DEGREES, &c.**

ASCENDENT, in Astrology, the Horoscope; or the Degree of the Equator which rises upon the Horizon, at the Time of the Birth of any one. See **HOROSCOPE**.

This is supposed to have an Influence on his Life and Fortune, by giving him a Bent and Propensity to one thing more than another. See **NATIVITY, &c.**

In the Cælestial Theme, this is also called the *First House, the Oriental Angle*, and the *Significator of Life*. See **HOUSE, THEME, SIGNIFICATOR, &c.**

Such a Planet ruled in his *Ascendent*.—*Jupiter* was in his *Ascendent*, &c.

Hence the Word is also used in a moral Sense, for some Superiority which one Man has over another, from some unknown Cause.

ASCENDING, in Astronomy, is understood of those Stars, or Degrees of the Heavens, &c. which are rising above the Horizon, in any Parallel of the Equator. See **RISE and HORIZON**.

ASCENDING Latitude, is the Latitude of a Planet when going towards the Poles. See **LATITUDE**.

ASCENDING Node, is that Point of a Planet's Orbit, wherein it passes the Ecliptic, to proceed to the Northward. See **ORBIT, PLANET, &c.**

This is otherwise called the *northern Node*, and represented by this Character Ω . See *NODE*, &c.

ASCENDING, *Ascendens*, in Matters of Genealogy, &c. See **ASCENDENT**.

ASCENDING Signs, among Astrologers, are those which are upon their *Ascant* or *Rise*; from the *Nadir* or lowest Part of the Heavens, to the *Zenith* or highest. See *SIGN*, *ZENITH*, *NADIR*, &c.

ASCENDING, in Anatomy, is applied to such Vessels as carry the Blood upwards, or from lower to higher Parts of the Body. See **BLOOD** and **VESSEL**.

The *Ascending Arteries*, *Arteriae ascendens*, is the superior Trunk of the Artery, which furnishes the Head. See **AORTA**.

The *ascending Veins*, *Vena Cava Ascendens*, is a large Vein form'd by a Meeting or Union of the two Iliacs of one Side, with those of the other. See **CAVA**.

Many of the ancient Anatomists, call'd this the *descending Vein*; as imagining that the Blood descended from the Liver by this Vein, to supply the Parts below the Diaphragm. But the Moderns have shown that it has a quite contrary Use, and serves for the Conveyance of the Blood from the lower Parts to the Head; whence its Appellation *Ascendens*.

ASCENSION, *Ascensio*, a rising, or moving upwards. See **ASCENT**, **ASCENDANT**, **ASCENDING**, &c.

ASCENSION is particularly used for that miraculous Elevation of our Saviour, when he mounted to Heaven in the Sight of his Apostles.—

Hence also, **ASCENSION-DAY**, a Festival of the Church, held ten Days before *Whitsunday*, in Memory of our Saviour's *Ascension*. See **FEAST**.

ASCENSION, in Astronomy, is either *right* or *oblique*.

Right ASCENSION. See **RIGHT ASCENSION**.

To find the *Right Ascensions* of the Sun, Stars, &c. trigonometrically, say, as Radius is to the Cosine of the Sun's greatest Declination, so is the Tangent of the Distance from *Aries* or *Libra*, to the Tangent of *Right-Ascension*.

To find the *Right-Ascensions* mechanically by the Globe. See **GLOBE**.

The *Arch of Right-Ascension*, is that Portion of the Equator intercepted between the beginning of *Aries*, and the Point of the Equator which is in the Meridian: Or it is the Number of Degrees contained therein.—This coincides with the *Right-Ascension* it self.—The *Right-Ascension* is the same in all Parts of the Globe.

We sometimes also say, the *Right-Ascension* of a Point of the Ecliptic, or any other Point of the Heavens. See **DESCENSION**.

Oblique ASCENSION. See **OBlique ASCENSION**.

To find the *Oblique Ascensions* of the Sun, either trigonometrically, or by the Globe. See **ASCENSIONAL DIFFERENCE**, and **GLOBE**.

The *Arch of Oblique-Ascension*, is an Arch of the Horizon intercepted between the beginning of *Aries*, and the Point of the Equator which rises with a Star or Planet in an Oblique Sphere.—This coincides with the *Oblique Ascension* it self.—The *Oblique Ascensions* change according to the Latitude of the Places.

The Difference between the *Right* and *Oblique Ascensions*, is called the *ascensional Difference*. See **ASCENSIONAL**.

ASCENSIONAL DIFFERENCE, is the Difference between the *Right* and *Oblique Ascensions*. See **ASCENSION**.

Or it is the Space of Time which the Sun rises or sets before or after six of the Clock.

To find the *Ascensional Difference* trigonometrically, having the Latitude of the Place, and the Sun's Declination given; say, As the Co-Tangent of the Latitude, is to the Tangent of the Sun's Declination, so is the Radius to the Sine of the *Ascensional Difference*.

For Example, suppose the Latitude be $51^{\circ} 30'$. and the Sun's Declination $9^{\circ} 00'$.

Then, to the Ar.co. of the Co- } $51^{\circ} 30'$ 0,999395
Tangent of — — — — }
Add the Tangent of — — — $9^{\circ} 00'$ 2,199712
Sum is the Sine of — — — $11^{\circ} 29'$ = 9,299107

which is the *ascensional Difference* required; and being reduced into Time, by allowing four Minutes of an Hour for every Degree, it will be $44^m 29^s$. See **TIME**.

If the Sun be in any of the northern Signs, and the *ascensional Difference*, as **D.O.** be subtracted from the *Right Ascension D.* in *Tab. Astronomy*, Fig. 63, the Remainder will be the *Oblique Ascension O.*—If be in a southern Sign, the *ascensional Difference* being added to the *Right Ascension*, the Sum is the *Oblique Ascension*; and thus may Tables of *Oblique Ascensions* be constructed for the several Degrees of the Ecliptick, under the several Elevations of the Pole. See **TABLE**.

ASCENSORIUM occurs in our ancient Writers for a Stair or Step. See **STAIR**.

ASCENT, *Ascensus*, the Motion of a Body tending from below upwards. See **MOTION**.

In this Sense the Word stands opposed to *Descent*. See **DESCENT**.

The *Peripateticks* attribute the spontaneous *Ascent* of Bodies, to a Principle of Levity inherent in them. See **LEVITY**.

The Moderns deny any such Thing as spontaneous Levity, and shew that whatever ascends, does it in virtue of some external Impulse or Extrusion. Thus it is that Smoke, and other rare Bodies, ascend in Atmosphere; and Oil, light Woods, &c. in Water: Not by any external Principle of Levity, but by the superior Graviry or Tendency downwards of the Parts of the Medium wherein they are. See **GRAVITY**, **MEDIUM**, **ATMOSPHERE**, &c.

The *Ascent* of light Bodies in heavy Mediums is produced after the same manner as the *Ascent* of the lighter Scale of a Balance.—It is not that such Scale has an internal Principle whereby it immediately tends upwards; but it is impelled upwards by the Preponderancy of the other Scale; the Excess of the Weight of the one having the same Effect by augmenting its Impetus downwards, as so much real Levity in the other: By reason the Tendencies mutually oppose each other.—See this further illustrated under the *Articles Specific Gravity*, *FLUIDS*, *HYDROSTATICAL Balance*, &c.

Ascent of Bodies on inclined Planes. See the Doctrine and Laws thereof, under the Article *Inclined PLANE*.

Ascent of Fluids, is particularly understood of their rising above their own Level between the Surfaces of nearly contiguous Bodies, or in slender capillary Glass Tubes, or in Vessels filled with Sand, Ashes, or the like porous Substance. See **FLUID**.

This Effect happens as well in *vacuo* as in the open Air, and in crooked as well as straight Tubes.—Some Liquors, as Spirit of Wine, and Oil of Turpentine, ascend swifter than others; and some rise after a different manner from others. Mercury does not ascend at all, but rather subsides.

The Phenomenon, with its Causes, &c. in the Instance of Capillary Tubes, will be spoke of more at large under the Article *CAPILLARY Tube*.

As to Planes—Two smooth polished Plates of Glass, Metal, Stone, or other Matter, being so disposed as to be almost contiguous, have the Effect of several parallel capillary Tubes; and the Fluid rises in them accordingly, the like may be said of a Vessel fill'd with Sand, &c. the divers little Interstices whereof form, as it were, a kind of Capillary Tubes. So that the same Principle accounts for the Appearance in them all. And to the same may probably be ascribed the *Ascent* of the Sap in Vegetables. See **VEGETABLE** and **VEGETATION**.

Thus Sir *I. Newton*—'If a large Pipe of Glass be filled with sifted Ashes well pressed together, and one End dipped into stagnant Water, the Fluid will ascend slowly in the Ashes, so as in the Space of a Week or Fortnight, to reach the Height of 30 or 40 Inches above the stagnant Water. This *Ascent* is wholly owing to the Action of those Particles of the Ashes which are upon the Surface of the elevated Water; those within the Water attracting as much downwards as upwards: It follows, that the Action of such Particles is very strong; tho' being less dense and close than those of Glass, their Action is not equal to that of Glass, which keeps Quicksilver suspended to the Height of 60 or 70 Inches, and therefore acts with a Force which would keep Water suspended to the Height of above 60 Feet.—By the same Principle, a Sponge sucks in Water, and the Glands in the Bodies of Animals, according to their several Natures and Dispositions, imbibe various Juices from the Blood.' *Opticks*, p. 367.

If a Drop of Oil, Water, or other Fluid, be laid on a Glass Plane perpendicular to the Horizon, so as to stand without breaking or running off; and another Plane inclined to the former, so as to meet a-top, be brought to touch the Drop; then will the Drop break, and ascend towards the touching End of the Planes: And it will ascend the faster in proportion as it is higher, by reason the Distance between the Planes is constantly diminishing.—After the same manner, the Drop may be brought to any part of the Planes, either upward or downward, or sideways, by altering the Angle of Inclination.

Lastly, if the same perpendicular Planes be so placed, as that two of their Sides meet and form a small Angle, the other two being only kept a-part by the Interposition of some thin Body; and thus immersed in a Fluid tinged with some Colour: The Fluid will ascend between the Planes, and this the highest where the Planes are nearest; so as to form a Curve Line, which is found to be a just Hyperbola, one of the Asymptotes whereof, is the Line of the Fluid, the other being a Line drawn along the touching Sides.—

The physical Cause in all these Phenomena, is the same Power of Attraction. See ATTRACTION.

ASCENT, in Astronomy, &c. See ASCENSION.

ASCENT in Logic, is a kind of Argumentation, wherein we rise from Particulars to Universals. See UNIVERSAL, ARGUMENT, and PARTICULAR.

As, when we say, This Man is an Animal, and that Man is an Animal, and the other Man, &c. therefore every Man is an Animal.—Or Fire, Water, Air, and Earth, are four; therefore the Number of Elements is four.—See INDUCTION.

ASCETIC, ASCETA, ASCETES, an ancient Name for such Persons, as in the primitive Times devoted themselves to the Exercises of Piety and Virtue in a retired Life; and particularly to Prayer and Mortification. See SOLITARY.

Asterwards, when the Monks came in fashion, this Title was bestowed upon them; especially such of them as lived in Solitude. See MONK, HERMIT, ANCHORITE, &c.

The Word is derived from the Greek *ασηται*, which is form'd from *ασηε*, exercise, I exercise.

The Term *Ascetic* is also used as a Title of several Books of Spiritual Exercises: As, the *Ascetics*, or devout Treatises of St. Basil, Archbishop of *Cæsarea* in *Cappadocia*.

We also say, the *Ascetic Life*, meaning the Exercise of Prayer, Meditation, and Mortification.—See MYSTIC.

ASCRETA, a Secretary. See SECRETARY.

ASCETERIUM, ASSISTERIUM, ARCHISTERIUM, &c. are Words frequently used among our ancient Writers, for a Monastery. See MONASTERY.

ASCI, in Geography, are those Inhabitants of the Globe, which, at certain Times of the Year, have no Shadow. See GLOBE and SHADOW.

Such are the Inhabitants of the Torrid Zone; by reason the Sun is sometimes vertical to them. See TORRID and ZONE.

To find on what Days the People of any Parallel are *Ascii*. See GLOBE.

The Word is form'd of the privative Particle *a*, and *asus*, Unbra, Shadow.

ASCITE, in Antiquity, a Sect or Branch of Montanists, who appear'd in the eleventh Century. See MONTANIST.

The Word is derived from the Greek *αση*, a Bag or Bottle. The *Ascites* were so call'd, because they introduc'd a kind of Bacchanals into their Assemblies, who danced round a Bag or Skin blow'd up; saying, they were those new Bottles fill'd with new Wine, whereof Jesus Christ makes mention, *Matth.* xix. 17.

These are sometimes also call'd *Ascendrogites*.—

ASCITES, in Medicine, a Species of Dropsy, affecting chiefly the Abdomen, or Lower Belly. See ABDOMEN.

The *Ascites* is the ordinary Water-Dropsy. See DROPSY.

The Word is borrowed from the Greek *αση*, Uter, Belly.

ASCLEPIAD, ASCLEPIADEUS, a Greek or Latin Verse of four Feet, containing a Spondee, a Coriambus, and two Dactyls. See FOOT and VERSE.

Such is the Verse, *Mæneas atavis Edite Regibus.*

Or of four Feet, and a long Syllable; the first a Spondee, and the second a Dactyl, after which comes the long Syllable, succeeded by two Dactyls: as,

Sublimi feriam sidera vertice.

ASCODROUTES, in Antiquity, a Sect of Hereticks, in the second Century, who rejected all Use of Sacraments, on this Principle, that incorporeal Things cannot be communicated by Things visible and corporeal. See SACRAMENT.

They made perfect Redemption consist in the Knowledge of the Universe, *Theodorici*, lib. 1. *Heret.*

ASCOLIA, in Antiquity, a Feast which the Peninsins of *Africa* celebrated in Honour of *Bacchus*. See FEAST.

They sacrificed a Goat to him, and of the Skin thereof made a Foot-ball, which they blew up, and anointed with some unctuous Matter. The young People playing at this, and keeping themselves always on one Foot, whilst the other was suspended in Air, by their frequent Falls, gave occasion of Diversion to the Spectators.—Hence this Feast took its Name; *αση*, signifying a Bag or Budget.

ASELLUS, in Medicine. See MILLEPERES.

ASHLAR, a Term among Builders; by which they mean common or free Stones, as they come out of the Quarry, of different Lengths and Thicknesses. See STONE and QUARRY.

ASHLERING, among Builders, Quartering to tack to, in Garrets, about 2 $\frac{1}{2}$, or 3 Foot high, perpendicular to the Floor, up to the Underside of the Rafters. See BUILDING, ROOF, COVERING, &c.

ASH, in Building. See TIMBER.

ASH-WEDNESDAY, the first Day of Lent; so called from a Custom of the ancient Church, of Fasting in Sackcloth, with *Albes* on their Heads, in Token of Humiliation. See LENT.

ASHES, *Cineres*, the terrene or earthy Part of Wood, and other combustible Bodies, remaining after they are

burnt or consumed with Fire. See EARTH, BURNING, FIRE, &c.

Albes are properly the Earth, and fix'd Salts of the Fuel, which the Fire cannot raise, all the other Principles being gone off in the Smoke. See SMOKE, FUEL, FIX'D, VOLATILE, SALT, &c.

The Chymists frequently call the *Albes* of a Body its *Cals*. See CALX and CALCINATION.

Albes, if well burnt, are usually pure White, by reason the Oil to which they owe their Blackness when in a Coal, is supposed quite evaporated. See COAL, SULPHUR, &c. WHITE, BLACK, &c.

The *Albes* of Kali, Fern, or the like, are a principal Matter in the Composition of Glass. See KALI, GLASS, &c.

The *Albes* of all Vegetables are found to contain Iron, inasmuch that M. *Geoffroy* makes it a chymical Problem, which he proposes to the Public, To find *Albes* without any Particles of Iron therein.—Whether the Metal existed in the Plants themselves, or is produced in 'em by the Operation of Calcination, is a Point very ingeniously controverted between Mess. *Geoffroy* and *Lemery* the younger, in the Memoirs of the Royal Academy. See the Substance of the *Dispute* under the Article METAL.

Albes, are of considerable Use in making Lixiviums, or Lyes, for the Purposes of Medicine, Bleaching, Sugar-Works, &c. See LIXIVIUM; see also BLEACHING, &c.

The Antients preserved the *Albes* of their dead Ancestors, with great Care and Piety, in Urns, for the Purpose. See FUNERAL URN, &c.

Albes, of all Kinds, in Virtue of their Salt, make an excellent Manure for cold and wet Grounds. See MANURE.

Hence that of *Virgil*,

—No pudet,

Effates Cinerem innumdam jactare per agras.

Pot-ASHES. See POT-ALBES.

In the *Philosophical Transactions*, N^o 21. we have an Account of a Shower of *Albes* in the Archbishop's, which held several Hours, and extended to Places distant above 100 Leagues. See SNOWER and RAIN.

ASIDE, in the Drama.—*An Aside*, *Scorsem*, is something which an Actor speaks a-part, or, as it were, to himself, for the Instruction of the Audience, by discovering some Sentiment which otherwise did not appear, and which is to be concealed from the rest of the Actes then present.

The severer Critics condemn all *Asides*; and with some Reason; as they are a manifest Breach of Probability.—Accordingly, they are never to be used but at a Pinch, which a good Author will scarce suffer himself to be brought to. See PROBABILITY, TRAGEDY, COMEDY; see also SOLILOQUY.

ASPALATH, ASPALATHUM, in Pharmacy, the Wood of a prickly Tree, heavy, oleaginous, somewhat sharp and bitter to the Taste, of a strong Smell and Purple Colour. See WOOD.

The *Aspalath* is otherwise called *Rhodium*, or *Rosewood*, and was antiently in much Repute, as an Astringent or Droyer, but now disused. See ROSE.

In Virtue, Taste, Smell, and Weight, it resembles the *Lignum Aloes*; and in Physick they are frequently substituted the one for the other. See ALOES.

There are four Kinds of *Aspalath*—the first, of the Colour of Box; hard, solid, heavy, and of a Smell like *Rosæ*, whence its Appellation *Rosewood*.—The second, red, like Yew, and of a very agreeable Smell.—The third, hard, twisted, knotty: it has a rank Smell, like that of a Goat, and a disagreeable Taste.—The fourth, has an ash-colour'd Bark, and its a Wood of a Purple Dye.

The *Rose-wood* is what the Inhabitants of *Martinico* call *Cypress-wood*. See CYPRESS.

It affords an Oil of an admirable Scent; reputed one of the best of Perfumes, chiefly used in scending Pomatams and Liniments. See PERFUME.

ASPECT, ASPECTUS, in Perspective, Gardening, &c. See PROSPECT, EXPOSURE, &c.

ASPECT, in Astronomy, is used for the Situation of the Stars, or Planets, in respect of each other; or certain Configurations, and mutual Relations between the Planets, arising from their Situations in the Zodiac. See STAR, PLANET, &c.

The such Configurations may be varied, and combined a thousand Ways, yet only a few of them are considered.—Hence, *Wassius* more accurately defines *Aspect* the meeting of luminous Rays emitted from two Planets, to the Earth, either situate in the same Right Line, or including an Angle which is one or more Quota Parts of four Right Angles. See RAY and ANGLE.

Hence it follows, that Conjunction and Opposition are the two Extremes of the *Aspects*; Conjunction being the Beginning, and Opposition the highest Term. See CONJUNCTION and OPPOSITION.

Beside these two extreme *Aspects*, Conjunction, and Opposition, the Antients reckon'd three other, *viz.* *Trigon* or *Trine*, the Angle measur'd by A. B. *Tab. Astron.* Fig. 3. *Tetragon* or *Quadrat*, the Angle measur'd by the Quadrant A D; and *Sextile*, which is the Angle measur'd by the Sextant A G. See *TRIGON*, *TETRAGON*, *QUADRAT* and *SEXTILE*.

The Doctrine of *Aspects* was introduced by the Astrologers, as the Foundation of their Predictions.—Hence *Kepler* defines *Aspects* by an Angle form'd by the Rays of two Planets meeting on the Earth, able to excite some natural Power or Influence. Accordingly, we read much of *benign* *Aspects*, *malign* *Aspects*, &c.—But this Notion is long ago exploded. See *ASTROLOGY*.

To the ancient *Aspects*, the modern Writers have added several more; as *Decile*, containing the tenth Part of a Circle; *Tridecile*, three tenths; and *Quintile*, four tenths, or two fifths.—*Kepler* adds others, as he tells us, from meteorological Observations; as, the *Semi-Sextile*, containing the twelfth part of a Circle; and *Quincunx*, containing five twelfths.—Lastly, to the astrological Physicians we owe *Octile*, containing one eighth; and *Trioctile*, containing three eighths.

The Angle intercepted between two Planets in the *Aspect* of Conjunction is 0; in the *Semi-Sextile Aspect*, 30°; in *Decile*, 36°; in *Octile*, 45°; in *Sextile*, 60°; in *Quintile*, 72°; in *Quartile*, 90°; in *Tridecile*, 108°; in *Trine*, 120°; in *Trioctile*, 135°; in *Biquintile*, 144°; in *Quincunx*, 150°; in *Opposition*, 180°.

The Angles or Intervals are reckon'd on the secondary Circles; for the manner whereof, see *SECONDARY CIRCLE*.

The *Aspects* are usually divided into *Partite* and *Platic*. *Partite Aspects*, are when the Planets are just to many Degrees distant, as is above express'd.—

Platic Aspects, are when the Planets do not regard each other from their very Degrees; but the one exceeds as much as the other comes short.—

Double Aspect, is used in Painting, where a single Figure is so contriv'd, as to represent two or more different Objects, either by changing the Position of the Eye, or by means of angular Glasses.—

Instances hereof see under the Articles *MIRROR*, *CATOPTRIC CISTULA*, *ANAMORPHOSIS*, &c.

ASPER, in Grammar.—*Spiritus ASPER*, a Character or Accent, in form of a c; plac'd over certain Letters, in the Greek Tongue, to shew they are to be strongly aspirated, and to supply the Place of an *h*. See *ASPIRATE*.

ASPER also signifies a little Turkish Silver Coin, wherein most of the Grand Signior's Revenues are paid. See *COIN* and *MONEY*.

The *Asper* is worth something more than an English Halfpenny.—The only Impression it bears, is that of the Prince's Head under whom it was struck.—The Pay of the Janizaries, is from twelve to fifteen *Aspers* per Diem. See *JANIZARY*.

ASPERA Arteria, in Anatomy, the *Wind-pipe*; or otherwise call'd the *Trachea*. See *TRACHEA* and *ARTERY*.

The *Aspera Arteria*, is a Canal situate in the Fore-part of the Neck, before the *Oesophagus*: Its upper End is call'd the *Larynx*; from whence it descends to the fourth Vertebra of the Back, where it divides and enters the Lungs. See *OESOPHAGUS*, *LARYNX*, *VERTEBRA*, &c.

It is firm'd of annular Cartilages ranged at small and equal Distances from one another, growing smaller and smaller, as they approach the Lungs; and those of the Bronchia so close to one another, that, in Expiration, the second enters within the first, and the third within the second, and the following always enters the preceding. See *RESPIRATION*, &c.

Between the Larynx and the Lungs, these Cartilages make not complete Rings; but their hind Part, which is contiguous to the *Oesophagus*, is membranous, that they may better contract and dilate, and give way to the Food as it passes down the Gullet. See *DEGLUTITION*.

The Cartilages of the Bronchia are completely annular, yet their capillary Branches have no Cartilages, but instead of them small circular Ligaments, which are at pretty large Distances from one another.—The Use of the Cartilages, is to keep the Passage for the Air open; but in the capillary Bronchia, they would hinder the subsiding of the Vessels. See *BRONCHIA*.

These Cartilages are tied together by two Membranes, external and internal: the external is composed of circular Fibres, and covers the whole *Trachea* externally; the internal is of an exquisite Sense, and covers the Cartilages internally: it is composed of three distinct Membranes; the first woven of two Orders of Fibres; those of the first Order being longitudinal, for the shortening the *Trachea*; these make the Cartilages approach and enter one another: the other Order is of circular Fibres, for the contracting the Cartilages.

When these two Orders of Fibres act, they assist, together with the external Membrane, in Expiration, in Coughing, and in Altering the Tone of the Voice. See *EXPIRATION*, *VOICE*, &c.

The second Membrane is altogether glandulous; and the excretory Vessels of its Glands opening into the Cavity of the *Trachea*, separate a Liquor for moistening the same, and defending it from the Acrimony of the Air.—The last is a Net of Veins, Nerves, and Arteries; the Veins are Branches of the *Vena Cava*, and the Nerves of the Recurrent; and the Arteries, Sprigs of the Carotides. See further under the Article *TRACHEA*.

ASPERIFOLLE, in Botany, one of the Divisions or Kinds of Plants. See *PLANT*.

The Characters of the *Asperifolium* Kind, are, that the Leaves stand alternately, or without any certain Order on the Stalks: The Flowers are monopetalous, but have the Margin cut into five Divisions, sometimes deep, sometimes shallow; and the upper Spike or Top of the Plant, is often curved back, something like a Scorpion's Tail.

They are call'd *Asperifolia*, because they are usually rough-leav'd, but not always so.

After each Flower there usually succeed four Seeds; Mr. *Ray* reckoning the *Cerintus* the only Plant of this Genus, that hath less than four Seeds at the Root of each Flower; this, indeed, hath but two.

The Herbs *Asperifolia*, are the *Pulmonaria Maculosa*, *Cynoglossa*, *Borago*, *Buglossa*, *Anebisa*, *Echinum*, *Linum Umbelicatum*, *Heliotropium majus*, *Aporine major*, *Cosfolida major*, *Lithospermum*, *Echinum Scorpaoides*, and *Cerintus*.

ASPERITY, *ASPERITAS*, implies the Inequality, or Roughness of the Surface of any Body; whereby some Parts of it do lie out beyond the rest, as to hinder the Hand, &c. from passing over it easily and freely. See *PARTICLE*.

Asperity, or Roughness, stands oppos'd to Smoothness, Politure, &c. See *PULISHING*, &c.

From the *Asperity* of the Surfaces of contiguous Surfaces, arises *Friction*. See *SURFACE* and *FRICTION*.

According to the Relations of *Vermaseus*, the blind Man so famous for distinguishing Colours by the Touch, it should appear that every Colour has its particular Degree and Kind of *Asperity*. He makes Black the roughest, as it is the darkest of Colours; but the others are not smoother in proportion as they are lighter; *i. e.* the roughest do not always reflect the least Light: For, according to him, yellow is two Degrees rougher than blue, and as much smoother than green. *Boyle*'s Colours. See *COLOR*, *LIGHT*, &c.

ASPERSION, the Act of sprinkling with Water, or some other Fluid. See *WATER*.

Some contend for Baptism by *Aspersio*, others by Immersion. See *BAPTISM*, *IMMERSION*, &c.

The Word is form'd of the Latin *aspergere*, to sprinkle; of *ad*, to, and *spargo*, I scatter.

ASPHALITES, in Anatomy, the fifth Vertebra of the Loins. See *VERTEBRA*.

It is thus call'd because conceived as the Support of the whole Spine of the Loins; from the Privative *a* and *σπῆλαια*, I support.

ASPHALTOS, or *ASPHALTUM*, a solid, brittle, black, inflammable, bituminous Substance, resembling Pitch, brought from *India*; whence it is also call'd *Jewish Pitch*. See *PITCH*.

The *Asphaltos* belongs to the Class of Bitumens; and is the furthest maturated and encocted of the whole Tribe; but consists of the same simple Principles as the rest. See *BITUMEN* and *SULPHUR*.

It is found swimming on the Surface of the *Lacus Asphaltites*, or Dead Sea, where anciently stood the Cities of *Sodom* and *Gomorrah*.—It is call'd up from time to time, in the Nature of a liquid Pitch, from the Earth which lies under this Sea; and being thrown upon the Water, swims like other fat Bodies, and condens'd by little and little, thro the Heat of the Sun, and the Salt that is in it.

The *Arabs* use it to pitch their Ships withal, as we do common Pitch.—Besides, there was a deal of it employ'd in the embalming of the Antients. See *EMBALMING*, &c.

It is supposed to fortify, and resist Putrefaction; resolve, attenuate, cleanse and cicatrize Wounds: But is little us'd among us either externally or internally.

'Tis usual to sophisticate the *Asphaltos*, by mixing common Pitch along with it; the Result whereof makes the *Pisphaltum*, which the Coarseness of the black Colour, and the fetid Smell easily discover.—Others, however, will have its pitchy Quality natural to it, and suppose *Pisphaltum* to be the native *Asphaltum*. See *PISASPHALTUM*.

ASPHALTUM is also a kind of bituminous Stone, found near the ancient *Babylon*, and lately in the Province of *Neuchâtel*; which mix'd with other Matters, makes an excellent Cement, incorruptible by Air, and impenetrable by Water; supposed to be the Mortar so much celebrated among

among the Antients, wherewith the Walls of Babylon were laid. See **MORAYR**, &c.

It yields an Oil which defends Ships from Water, Worms, &c. much better than the ordinary Composition; and which is also of good Service for the cleansing and healing of Ulcers, &c.

ASPIC—Oil of **ASPIC**, vulgarly called *Oil of Spike*, is an inflammable Oil drawn from the Leaves and Flowers of a Plant frequent in the Southern Parts of France, resembling Lavender, and by the Botanists called *Lavandula Mas*. See **OIL**.

It is much used by Paleters and Farriers; and sometimes also in Medicine.—The true Oil of *Aspic*, is of a white Colour, and an aromatic Taste; and is held the only Thing capable of dissolving Sandarach: By which it is easily distinguish'd from the Counterfeit, which is only Oil of Turpentine mixed with a little Petrol.

ASPIRATE, **ASPIRATIO**, or *Spiritus Asper*, in Grammar, a Character used to denote an Aspiration. See **ASPER** and **ASPIRATION**.

ASPIRATION, the Act of *aspirating*; i. e. of pronouncing any Syllable, or Word, strongly; with a good deal of Breath, and Vehemence. See **ASPIRATE** and **PRONUNCIATION**.

This we do, for instance, in those Words which have the Letter *H*, before them; as Harangue, Hook, Holland, Hero, &c. whereas the like Syllables are founded much softer and easier without the *H*, as in Ear, Eat, &c. See **H**.

The *Aspirate*, by the Greeks called *Spiritus*, and marked over their Vowels, seems to be very different from the Letters; but is, nevertheless, a true Letter, as well as the rest, and a real Consonant.—By Letters we dont mean the Characters of the Alphabet, which are changeable according to the Languages and the People, and among the same People, according to Time and Custom; and even according to the Fancy of particular Persons.—Thus, some, for instance, write the *Aspirates*, or Letters *aspirated*; which, by others, are omitted; the both the one and the other pronounce alike; as in *Humo*, *Huomosi*, an Italian Word frequently written *como uomosi*. See **ALPHABET**.

But, by Letters, we mean articulate Sounds, form'd by the Organs of Speech, (viz.) The Throat, Mouth, Tongue, Palate, Teeth, &c. See **LETTER** and **VOICE**.

These Sounds are of two Kinds, the one simple, and the other compound, or modified.—*Simple*, are those pronounced by a single Motion of the Organ; such are the Vowels. See **VOWEL**.

Compound Sounds, are those same simple Sounds modified by a Motion of the Organ superadded to the Motion necessary to pronounce the simple Sound; of which Kind are the Consonants. See **CONSONANT**.

Now an *Aspirate* is an Effect or Consequence of a Motion made by some of the Organs of Speech; and therefore must either be a Vowel or a Consonant.—The former it cannot be, as not being a simple Sound, or a Sound that may be pronounced by itself. It must therefore be a Modificative, or Consonant; and in Effect it has all the Properties of one.

For, 1st, it results from a Motion of the Organ, which, of itself, produces no Sound. Thus the *Spiritus* of the Greeks, our *h aspirate*, as well as that of the French, and other People, has no more Sound of it self than *b*, *c*, *d*, &c. and the same Thing may be observed of the *Aleph*, *Heth*, and *Caph*, of the Eastern Languages.

2^{dy}, On the contrary, our *h*, the *Spiritus of the Greeks*, and the other *Aspirates* just mentioned, are pronounced with all the Vowels, in the same manner as Consonants are.—They modify those Vowels, and are Effects of a Motion of the Organ superadded to the Motion necessary to form the Vowel. Thus, to pronounce *ba*, two Motions of the Organ are required as well as for *ba*, or *ca*, &c. One for *a* which it self is a Sound; the other for *h*, which yields no Sound, no more than *b*; but adds something to *a* which modifies it, and makes that *ba* is not mere *a*, nor *ba*, nor *ca*, &c. And this must hold still more sensibly in the stronger *Aspirates*, as those of the oriental Tongues \aleph , δ , ϕ , ψ , ω ; χ , ψ , &c. In all which, there are evidently two Motions, the one for the Vowel, and the other to modify it: Now this being the Nature and Essence of a Consonant, it follows, that let them be denoted in what Manner they will, whether as our *h*, as the Orientals do, i. e. by proper Characters in the Course of the Words themselves; or, as the Greeks do some of theirs, by a Sign of Aspiration placed over the Vowel; it matters not. The *Aspirate* is no less a Consonant in \aleph , than in χ ; in ω , than in ψ ; in ω , than χ ; and so of others.

The third and last Reason is, that the Eastern Languages, which do not express the Vowels, do yet express the *Aspirate*.

Add, that the *Aspirate* is frequently chang'd into a Consonant, and express'd by a Consonant. Thus, of ξ is made

Sex; of ι *etra*, ϵ *Septem*; of ν *vesperus*, &c. Of the Hebrew \aleph \aleph , and thence *Vinum*, &c. Nay, even in the same Language, *Hesiod*, speaking of *Hercules's* Buckler, uses \aleph \aleph for δ δ ; making no Difference between a δ and an *Aspirate*. See **CONSONANT**.

Hence it evidently follows, that *Aspirates* are real Consonants; and that it must be an Error to rank \aleph , δ , ϕ , ψ , of the Eastern Languages, among the Vowels; and to exclude the *h* in ours, out of the Number of Letters.

ASSA-FŒTIDA, or **ASA-FŒTIDA**, a Gum or Resin, brought from the *East-Indies*, of a brownish Colour, a sharp Taste, and a very strong, offensive Smell; whence it is also called *Stercus Diaboli*, or Devil's Dirt.

'Tis not known from what Plant this Gum is procured; all that has been advanced on that Point by the Botanists and the Writers of Pharmacy, amounts to no more than Conjectures, founded on the different Relations of Travellers.—They who after the Antients, suppose it drawn from the *Lafer*, or *Laferpitium*, would be hard put to it to get clear of those many Disputes which have so often divided the Botanists on the Subject of the true *Lafer*, and the *Succus Cyrenensis*, so infinitely prized among them. Indeed there seems but little Resemblance between the Gum described by *M. Furciere*, out of *Pliny*, lib. xix. c. 3. and our *Assa-Fœtida*: If they be the same, 'tis certain we are not acquainted with half its Virtues.

The modern *Assa-Fœtida*, which is little used but by the Farriers, is a Gum said to distil during the Summer's Heats, from a little Shrub, frequent in *Persia*, *Media*, *Alyria*, and *Arabia*.—It is at first white, bordering on yellow, then on red, and lastly on Violet; and melts under the Fingers like Wax.

It is of known Efficacy in some uterine Disorders; but the Rankness of its Smell occasions it to be seldom used; yet in the *East-Indies* it makes an Ingredient in their Ragoats.

ASSA-DULCIS, a Name sometimes given to Gum Benjain. See **BENJOYN**.

ASARABACKA, or **ASARA-BACARA**, a Plant mentioned by *Pliny* and *Dioscorides*, under the Name of the *Wild Nardus*; by us called **ASARDUM**.

Ancients relate, that it is brought from *Cebus*; that its Roots resemble those of Gramen, or Dog's-Tooth; but that it has a pretty brisk Smell, and bites the Tongue when tasted.—Its Leaves were antiently much in Use, as an Emetic, and Cathartic; and in some Authors we find a superstitious Observation in the gathering 'em: They alledge, that if the Plant be pull'd forward it becomes vomitive, but if backwards purgative. *Rulandus* and *Fernelius* frequently describe it as a Diuretic.

But it is chiefly used among us as a Sternatory, in order to which, it is dried and reduced to a Powder, to be taken as a Snuff; in which Quality it drains the Head of mucous Humours.

ASSACH, or **ASATH**, a kind of Purgation, antiently used in *Wales*, by the Oaths of 500 Men. See **PURGATION** and **OATH**.

ASSAILANT, one that assaults, or sets upon another. See **ASSAULT**, **ATTACK**, &c.

ASSART, in Law, an Offence committed in the Forest, by pulling up, by the Roots, Woods which serve as Thickets and Covert for the Deer, and making them plain as arable Land. See **FOREST**.

This is the greatest Trospal that can be committed in the Forest, being more than a Waste. For whereas Waste of the Forest is but the filling and cutting down the Covers, which may grow again; *Assart* is a total Extirpation thereof. See **WASTE**.

What we call *Assortum*, is elsewhere term'd *Disboscatio*. **ASSART** was also used for a Parcel of Land assarted. See **ASSART**.

ASSART-RENTS, were those paid to the Crown for the Forest Lands assarted. See **RENT**.

ASSASSIN, a Person who kills another with the Advantage either of an Inequality in the Weapons, or by means of the Situation of the Place, or by attacking him at unawares. See **MURDERER**, **DEED**, &c.

The Word *Assassin* is said, by some, to have been brought from the *Levant*, where it took its Rise from a certain Prince of the Family of the *Assafides*, popularly called *Assafius*, living in a Castle between *Antioch* and *Damasco*, and bringing up a Number of young Men, ready to pay a blind Obedience to his Commands; whom he employed in murdering the Princes with whom he was at Enmity. See **ASSACIERS**.

The Jew *Benjamin*, in his Itinerary, places them near Mount *Libanus*; and calls them in Hebrew, from the Arabic \aleph \aleph , *El assifus*; which shews that the Name did not come from *Assafide*, but from the Arabic \aleph \aleph , *Assif*, *Insidiator*, a Person who lies in Ambush.

The *Assassins*, or *Assassinsii*, *Assassini*, above-mentioned, possessed eight or twelve Cities about *Tyre*: They chose themselves a King, whom they call'd the *Old Man* of the Mountain. In 1213, they *assassinated* *Leou*, of *Bavaria*. They were *Mahometans*, but paid some Tribute to the Knights-Templars.—The Favourers of the *Assassins* were condemned by the Council of *I. 9003*, and under *Junocens IV.* in 1231.—The *Tartars* overcame them, and kill'd their old Man of the Mountain in 1257; upon which the Faction became extinct.

ASSATION, the preparing or dressing of Medicaments, or Foods, in their own Juices, without Addition of any foreign Moisture.

Assation, in respect of culinary Matters, is more frequently call'd *Roasting*; and in Pharmacy, *Uston* or *Torrefaction*. See DRESSING, ROASTING, TORREFACTION, &c.

The Word is form'd of the Latin *assare*, to roast.
ASSAULT, in the Art of War, an Attack made upon a Camp, Fortress, or Post, in order to become Master thereof. See ATTACK, FORTRESS, &c.

An *Assault* is properly a general Attack, wherein the *Assailants* do not screen themselves by any Works.—

The Words are, to give an *Assault* to such a Place, to be commanded to the *Assaults*, to stand an *Assault*, to repulse an *Assault*, to carry by *Assault*, &c.

While an *Assault* lasts, and both Parties are mix'd; there is no use of Cannon on either Side; for they are afraid of destroying their own Men thereby.

A Governour is obliged to sustain three *Assaults* ere he give up the Place.—'Tis very difficult Living a Town from Pillage that is carried by *Assault*. See PILLAGE, &c.

The *Enfans perdus* march first to the *Assault*. See ENFANS PERDUS.

ASSAULT, in Law, is a violent Injury offered to a Man's Person, of a larger Extent than *Battery*, for that it may be committed by only offering to give a Blow, or by a threatening Speech, &c. See BATTERY.

To rebuke a Collector with foul Words, so that he departed for Fear, without doing his Office, was adjudg'd an *Assault*; and to strike a Man, tho' he be not hurt with the Blow, is reputed the same. In Trespas for *Assault* and *Battery*, a Man may be found guilty of the *Assault*, and excused of the *Battery*, 25 *Edw.* 3.

ASSAY, or ESSAY, or SAY, in Coinage, &c. the Proof or Trial of the Goodness, Purity, Value, &c. of Gold, Silver, or other Metals. See GOLD, SILVER, METAL, &c.

The Methods of ASSAYING, or making ASSAYS, see under the Article ESSAY.

ASSAY of Weights and Measures, signifies the Trial or Examination of common Weights and Measures, used by the Clerk of the Market. See WEIGHT, MEASURE, STANDARD, CLERK of the Market.

ASSAYER of the King, is an Officer of the Mint, establish'd for the *Assay*, or due Trial of Silver and Gold. See ASSAY.

The *Assayer* is indifferently appointed by the Master of the Mint, and the Merchants who bring Silver, &c. for Exchange. See MINT, COIN, &c.

ASSEMBLAGE, the joining or uniting of several Things together; or, the Things themselves to be joined, or united. See UNION, &c.

The *Assemblage* of two Bones for Motion, is called *Articulation*. See ARTICULATION.

The Carpenters and Joiners have various Kinds and Forms of *Assemblage*; as, with Mortices and Tenons, with Dove-tails, &c. See MOR TISS, DOVE-TAIL, &c.

The *Europeans* admire the Carpentry of some *Indians*, where the *Assemblage* is made without either Nails or Pins. See CARPENTRY, NAIL, &c.

The Word *Assemblage* is also used in a more general Sense, for a Collection of several Things, so dispos'd together, as that the whole has an agreeable Effect.—'Tis with Discourse as with Bodies, which owe their chief Excellency to the just *Assemblage*, and Proportion of their Members.—

ASSEMBLY, a meeting of several Persons in the same Place, and with the same common Design.

The Word is form'd from the Latin *adsumulare*; compounded of *ad* to, and *sumul* together.

Assemblies of the Clergy, are called *Convocations*, *Synods*, *Councils*; tho' that annual one of the Kirk of *Scotland*, retains the Name *General Assembly*. See CONVOCATION, SYNOD, COUNCIL, &c.

Those of Judges, &c. are called *Courts*, &c. See COURT. The *Assemblies* of the Roman People were called *Comitia*. See COMITIA, &c.

The *Assembly* of a Preacher, &c. is his Audience.—The Academies have their *Assemblies*, or Days of *Assembly*. See ACADEMY, &c.

The *Assemblies* of Dissenters, &c. are frequently called *Conventicles*. See CONVENTICLE.

ASSEMBLY is particularly used in the *Beau Monde*, for a stated and general Meeting of the polite Persons of both Sexes; for the sake of Conversation, Gallantry, and News.

Unlawful Assembly, in Law. See UNLAWFUL ASSEMBLY. ASSEMBLIES of the Campus Martii, or Mail, of the Field of Mars, or May. See FIELD of Mars, &c. CAMPUS, &c.

Quarter, or Place of ASSEMBLY, in a Camp, &c. See QUARTER of Assembly.

ASSEMBLY, is also used in the military Art, for the second Beat of the Drum, before the March. See DRUM.

On hearing this, the Soldiers strike their Tents, roll them up, and then stand to their Arms. See MARCH.

The third Beating is called the *March*, as the first is call'd the *General*. See GENERAL.

ASSENT, ASSENSUS, an Agreement or Acquiescence of the Mind, to something propos'd, or affirm'd.—Thus, to *assent* to any Proposition, is to allow it true, or to perceive its Truth. See TRUTH.

The Schoolmen observe, that to every Proposition, how compound or complex soever it be, there only goes one *Assent* of the Mind.—Thus, in the conditional Proposition, *If the Sun shines it is Day*; there is only one *Assent* of the Mind, which regards the Connexion of the Effect with the Condition. So in the disjunctive Proposition, *Peter either studies, or does not study*; the Mind does not give a two-fold *Assent* to the two Parts thereof, it being enough that *Peter* do either the one or the other, for the Proposition to be true. See PROPOSITION.

Assent is distinguished, like *Faith*, into *implicit*, or *blind*; and *explicite*, or *seeing*. See FAITH, &c.

Others distinguish it into *actual* and *habitual*—

Actual Assent, is a Judgment whereby the Mind perceives a thing to be true.—

Habitual Assent consists in certain Habits induced in the Mind by repeated Acts. See HABIT and HABITUDE.

To this belongs *Faith*, which is an *Assent* arising from the Authority of the Person who speaks: Such also is *Opinion*, which is defin'd an *Assent* of the Mind *cum fermidine Opusii*, &c. See FAITH, OPINION, &c.

For the Measures and Degrees of *Assent*, see PROBABILITY, VERISIMILITUDE, EVIDENCE, DEMONSTRATION, &c.

Fr. Mallebranch lays it down as an Axiom, or Principle of Method, never to allow any thing for Truth, from which we can forbear our *Assent* without some secret Reproach of our own Reason. See LIBERTY, METHOD, MAXIM, &c.

ASSERTION, ASSERTIO, in the Language of the Schools, a Proposition which a Person advances; which he avows to be true, and is ready to maintain in publick. See PROPOSITION.

ASSESSOR, or ASSESSOUR, an inferior, or subordinate Officer of J. Jice, chiefly appointed to assist the ordinary Judge with his Opinion and Advice. See JUDGE and JUSTICE.

The Masters in Chancery are *Assessors* of the Lord Chancellor. See MASTER and CHANCELLOR.

The Word is Latin, form'd of *ad*, to, and *sedes*, I sit.

There are two Kinds of *Assessors* in the imperial Chamber, ordinary and extraordinary.—The *ordinary* are now in Number 41, whereof 3 are elected by the Emperor, viz. 3 Counts or Barons, and two *Juris Consulti*, or Civil Lawyers. The Electors appoint 10, the six Circles 18, &c. They act in Quality of Councillors of the Chamber, and have Salaries accordingly. See IMPERIAL and CHAMBER.

Assessor, is particularly used among us, for an Inhabitant of a Town, or Village, elected by the Community, to settle the Taxes, and other Impositions of the Year, to fix the Proportion which each Person is to bear, and to see the Collection made. See TAX, &c.

By the Stat. 16 & 17 *Car.* 2. two Inhabitants in every Parish were made *Assessors* for the Royal Aid. See AID.

ASSETS, in Law, Effects sufficient to discharge the Burden laid on an Executor, or Heir, for satisfying the Testator's Debts or Legacies. See EXECUTOR, HEIR, TESTAMENT, LEGACY, &c.

The Word is form'd of the French *Asses*, enough; in regard whoever charges another with *Assets*, charges him with having enough defenc'd or come to his Hands to discharge that which is in Demand.

Assets are of two Sorts, *real* and *personal*—Where a Man dies seized of Lands in Fee-simple, the Lands which descend to his Heir, are *Assets real*. See REAL.

Where he dies possid'd of any personal Estate, the Goods which come to the Hands of the Executor, are *Assets personal*. See PERSONAL.

Of real *Assets* there are two Sorts, *per Descend*, and *Assets enter maini*.

Assets per Descend, are where a Man enters into Bond, and dies seized of Lands in Fee-simple, which descend to his

his Heirs, and are therefore chargeable as *Assess* in his Hands. If the Heir alien the Lands before the Bond be put in Suit, he is discharged.

Assens enter manus, is when a Man dies indebted, leaving to his Executors sufficient wherewithal to discharge his Debts and Legacies. See EXECUTOR.

ASSEVERATION, an earnest Affirmation, or Avouching. See AFFIRMATION, &c.

ASSIDEANS, ASSIDUÏ, in Antiquity, a Sect among the *Jetes*; thus called from the Hebrew, אֲסִידִים, *ahsidim*, merciful, righteous.—The *Asside* are recorded as holding Works of Supererogation necessary.—They were the Fathers and Predecessors of the *Pharisees*; and from them likewise arose the *Esseni*. See PHARISEE and ESSENI.

The Jesuit *Serrarius* and *Drusus*, have wrote against each other upon the Subject of the *Assideans*, on occasion of a Passage in *Joseph Ben Gorien*; the first maintaining, that by the Name *Assideans* he means *Esseni*, and the latter *Pharisees*.

ASSIENTO, in Matters of Commerce, a Contract or Convention between the King of Spain and other Powers, for furnishing the Spanish Dominions in America, with Negro Slaves. See NEGRO, &c.

The Term is originally Spanish, and signifies a Farm: Accordingly, the first *Assiento* was a Treaty or Contract made with the French Guinea Company, whereby they were put in possession of this Privilege, in consideration of a certain Duty which they were to pay to the King of Spain's Farms, for every Negro thus furnished.—

This Contract was signed in the Year 1702, to last ten Years, with a further Liberty allow'd the *Assentists* of two Years more, in case they had not furnished the whole Number stipulated before.—The two principal Articles regarded, first, the Number of Negroes to be provided, which was 3800 while the War should last, and 4800 in case of Peace. Secondly, the Duty to be paid the King of Spain, during the Farm, or *Assiento*; which was fixed at 35 Pieces of Eight per Head.—

By the Treaty of *Utrecht*, Philip V. being acknowledged King of Spain by the Allies; it was one of the Articles of the Peace between England and France, that the *Assiento* Contract should be transferred to the English.—Accordingly a new Inframent was signed in May 1713, to last 30 Years; and the furnishing of Negroes to the Spanish America, was committed to the *South-Sea Company*, just then erected. See SOUTH-SEA COMPANY.

In virtue hereof, they are yearly to furnish 4800 Negroes; for which they are to pay at the same Rate as the French, with this Condition, that during the first 25 Years, only half the Duty shall be paid for such as they shall import beyond the fixed Number.

The last Article gives them a further Privilege not enjoyed by the French; which is, that the English *Assentists* shall be allowed, every Year, to send to the Spanish America a Ship of 500 Tons, loaden with the same Commodities as the Spaniards usually carry thither; with a Licence to sell the same concurrently with them at the Fairs of *Puerto Bello*, and *La vera Cruz*.—This additional Article is supposed as advantageous to the Company, as the whole Contract besides; being granted contrary to the usual Spanish Policy, which has ever solicitously preserved the Commerce of their America to themselves. See ROYALTY.

Some new Articles have been since added to the ancient *Assiento*; as, that the English shall send their Register-Ship yearly, even tho' the Spanish Fleets and Gallies do not go; and that for the first 10 Years, the said Ship may be of 650 Tun.

The manner of valuing the Negroes, in order to settle the King of Spain's Duty, is the same as delivered under the Article NEGRO.

ASSIGN, in Law, a Term introduced in favour of Bastards; who, because they cannot pass by the Name of Heirs, are comprised under that of *Assigns*. See HEIR and BASTARD.

ASSIGN is also used for the appointing of a Deputy, or the making over a Right to another. See ASSIGNEE.

In this Sense we say, such Lands or Estate were assigned or affixed to such Persons for such Uses, &c. See APPROPRIATION, &c.

In the Stat. 20 Edw. I. we read of Justices assign'd to take *Assizes*, &c. See ASSIZE.

ASSIGN also signifies to point out, or set forth.—Thus we say, to assign the real Cause of such an Event, &c.

So, to assign Error, is to shew in what part of a Proceeding at Law, an Error is committed. See ERROR.

To assign false Judgment, Verdict, &c. is to declare how and where Judgment, Verdict, or the like, is unjust. See JUDGMENT, VERDICT, &c.

To assign Waste, is to shew especially wherein the Waste is committed. See WASTE.

ASSIGNEE, in Law, a Person to whom a Thing is appointed, or assigned, to be occupied, paid, or done. See ASSIGN.

An Assignee differs from a Deputy in this, that the Assignee possesses or enjoys the thing in his own Right; and a Deputy in the Right of another. See DEPUTY.

Assignee may be so either by Deed or by Law.

Assignee by Deed, is when a Lessee of a Term sells and assigns the same to another: that other is his Assignee by Deed.—

Assignee by Law, is he whom the Law so makes without any Appointment of the Person.—Thus, an Executor is Assignee in Law to the Testator, who dies possessed of a Lease made to him and his Assigns. See EXECUTOR, TESTATOR, &c.

ASSIGNMENT, the Act of Assigning, or transferring to another. See ASSIGN.

The Assignment of a Dower, is the setting out of a Woman's Marriage-Portion by the Heir. See ESTABLISHMENT and DOWER.

ASSIMILATION, the Act of assimilating; or an Act whereby Things are rendered similar or like to one another. See SIMILITUDE, &c.

The Word is compounded of *ad*, to, and *similis*, like.

ASSIMILATION, ASSIMILATIO, in Physics, is properly a Motion whereby Bodies convert other duly disposed Bodies, into a Nature like, or homogeneous to their own. See MOTION, BODY, &c.

Some Philosophers call it, the Motion of Multiplication, meaning, that Bodies are hereby multiplied, not in Number, but in Bulk; which is more properly expressed by the Motion of Augmentation or Accretion. See ACCRETION, ACCRESSION, AUGMENTATION, &c.

Such Assimilation we see in Flame, which converts the oily or other Particles of a Fuel into its own fiery and luminous Nature. See FLAME, FUEL, FIRE, &c.

The like we see in Vegetables, where the watery Juices imbibed from the Earth, being further prepared and digested in the Vessels of the Plant, become of a vegetable Nature, and augment the Wood, Leaves, Fruit, &c. thereof. See VEGETABLE, VEGETATION, SAP, WOOD, FRUIT, &c.

So in Animal Bodies, we see the Food assimilated, or changed into an animal Substance, by Digestion, Chylification, and the other Operations necessary to Nutrition. See FOOD, DIGESTION, CHYLIFICATION, NUTRITION, ANIMAL, &c.

ASSISA, or ASSISE, *Assize*. See ASSIZE.

ASSISA Cadera, to fall from the *Assize*, in Law, is to be non-suited. See NONSUIT.

ASSISA Cadit in Furatam, is where the Thing in Controversy is so doubtful, that it must necessarily be tried by a Jury. See JURY.

ASSISA capi in modum *Assize*, is when the Defendant pleads to the *Assize*, without taking any Exception to the Count, Declaration, or Writ.

ASSISA Nocumenti, is an *Assize* of Nuisance. See NUISANCE and ANNOYANCE.

ASSISA Panis & Cerevisie, denotes the Power or Privilege of assigning, or adjusting the Weight and Measure of Bread and Beer. See ASSIZE.

ASSISE Judicium, in Law, signifies a Judgment of the Court, given either against the Plaintiff or Defendant, for Default. See DEFAULT.

ASSISA Continuanda, is a Writ directed to the Justices, to take an *Assize* for the Continuance of a Cause, where certain Records alleg'd cannot in Time be procured by the Party. See WRIT.

ASSISA proroganda, is a Writ directed to the Justices of *Assize*, for the Stay of Proceedings, by reason of the King's Business, wherein the Party is employed. See WRIT.

ASSIZE, or ASSISE, *Assis*, in Law, a sitting of Judges, or Justices; for the hearing and determining of Causes. See JUDGE, JUSTICE, CAUSE, &c.

The Word is French, *Assise*, of *Assis*, seated; form'd of *Asside*, I sit by; which is compounded of *ad*, to, and *sedeo*, I sit. See ASSESSOR.

ASSISE, or ASSISES, were originally used for certain extraordinary Sittings of superior Judges, in the inferior Courts depending on their Jurisdiction; to inquire whether the sub-

altern Judges and Officers did their Duty; to receive the Complaints prefer'd against them; and take Cognizance of Appeals from them. See APPEAL, &c.

ASSIZE, was also a Court or Assembly, composed of several great Persons of the Realm; held occasionally in the King's Palace, for the final Decision of all Affairs of Importance. See COURT, PALACE, &c.

This is more usually called, among our Writers, *Placita*, or *Curie Generales*. See PLACITA, &c.

Yet there is some Difference between *Assizes* and *Placita*.—The Viccounts, or Sheriffs, who originally were only Lieutenants of the Countes, or Counts, and render'd Justice in their Place; held two Kinds of Courts, the one ordinary, held every Day, and called *Placitum*; the other extraordinary, called *Assize*, or *Placitum Generale*; at which the Count himself assisted for the Dispatch of the more weighty Affairs.—These *Assizes* were also called *Mallum*. See COURT, VICOUNT, SHERIFF, &c.

Hence, the Term *Assize* came to be extended to all grand Days of Judgment, at which the Trials and Pleadings were to be solemn and extraordinary.

The modern Constitution of *Assizes* is pretty different from that hitherto spoke of.—Our *Assize* may be defined a Court, Place, or Time where, and when Writs and Processes, either civil or criminal, or both, are consider'd, dispatch'd, decided, &c. by Judges and Jury. See PROCESS, COURT, DAY, JURY, &c.

In this Sense, we have two Kinds of *Assizes*; general and special.

General *Assizes*, are those held by the Judges twice a Year, in their several Circuits. See CIRCUIT.

The Nature of these *Assizes* is explained by my Lord Bacon, who observes that all the Counties of the Kingdom, are divided into six Circuits; thro' each of which two learned Men, assign'd by the King's Commission, ride twice a Year, call'd *Justices* or *Judges of Assize*, who have several Commissions, by which they sit, viz.

1^o *Commission of Oyer and Terminer*, directed to them, and many others of the best Account in their respective Circuits. See OYER and TERMINER.—In this Commission, the Judges of *Assize* are of the *Quorum*; so that without them there can be no Proceeding. This Commission gives them Power to deal with Treasons, Murders, Felonies, and other Misdemeanors. See TREASON, FELONY, &c.

The second is of *Goal-Delivery*, which is only to the Judges themselves, and the Clerk of the *Assize* officiate.—By this Commission they have to do with every Prisoner in Goal, for what Offence soever. See GOAL-Delivery, &c.

The third is directed to themselves, and the Clerk of the *Assize*, to take Writs of Possession, called also *Assizes*; and to do Right and Justice thereupon. See WRIT.

The fourth, is to take *Nisi prius*, directed to the Justices, and the Clerks of *Assizes*, whence they are also called *Justices of Nisi prius*. See NISI prius.

The fifth, is a *Commission of Peace*, in every County of their Circuit; and all the Justices of the Peace, having no lawful Impediment, are bound to be present at the *Assizes*, to attend the Judges. See PEACE.

The Sheriff of every Shire is also to attend in Person, or by a sufficient Deputy allow'd by the Judges, who may fine him if he fail. See SHERIFF.

This excellent Constitution of Judges, Circuits, and *Assizes*, was begun in the Time of Henry the Second; tho' somewhat different from what it is now.

Special *Assize*, is a particular Commission granted to certain Persons, to take Cognizance of some one or two Cases, as a Disceisin, or the like.—This was frequently practis'd among our Ancestors. *Bracton*, lib. 3. c. 12.

Assize, or *Assize*, is also used for a Writ directed to the Sheriff, for the Recovery of Possession of Things immovable, whereof your self, or Ancestors, have been disceis'd. See WRIT, POSSESSION, &c.

Littleton, and others, suppose these Writs of *Assize* to give the Denomination to the *Assizes*, or Courts so call'd; and assign several Reasons of the Name of the Writ: As,

First, because such Writs settle the Possession, and Right in him that obtains by them. Secondly, Because, originally, they were executed at a certain Time and Place appointed; for, by the Norman Law, the Time and Place must be known forty Days before the Justices sit; and by our Law there must be fifteen Days Preparation, except they be tried in

the standing Courts at *Westminster*.—But, it is more natural to suppose the Writs denominated from the Courts; and that they were call'd *Assizes*, because antiently tried at special Courts of *Assize*, set and appointed for that Purpose.—Tho, of later Days, they are dispatched at the general *Assizes*, along with the Commissions of *Oyer and Terminer*, &c.

This Writ is as well of Things corporeal, as incorporeal Rights, being of four Sorts, viz.

ASSIZE, or *Assize*, of *Novel Disceisin*, which lies where a Tenant in Fee-simple, Fee-tail, or for Life, is lately disceis'd of his Lands or Tenements, Rent-service, Rent-sock, or Rent-charge, Common of Pasture, common Way, &c. See DISCEISIN, TENANT, &c.

To this may be added, the Bill of fresh Force, directed to the Officers or Magistrates of Cities or Towns-corporate; being a kind of *Assize* for Recovery of Possession in such Places, within forty Days alter the Force, as the ordinary *Assize* is in the County. See FRESH FORCE.

ASSIZE of *Mort d'Ancestor*, lies where my Father, Mother, Brother, Uncle, &c. dies seized of Lands, Tenements, Rents, &c. held in Fee-simple; and after their Death, a Stranger abates. See ABATEMENT.—It is good as well against the Abator, as any other in Possession. See ABATOR.

ASSIZE of *Darrein Predecessment*, lies where I, or my Ancestor have presented a Clerk to a Church, and after the Church becomes vacant by his Death, or otherwise, a Stranger presents his Clerk to the same Church, in my Disturbance. See PRESENTATION, PATRONAGE, &c.

These three *Assizes* were instituted by Henry the Second, in the Place of Duels; which, till then, had obtained on these Occasions.—*Magna assisa est regale Beneficium, Clementia principis de Concilio procerum populi indultum; a quo vice bonum et status Integritati tam Salubriter Consultitur, ut in Fure quod quis in libero Soli tenemento possidet, retinendo, Duello Cajum homines declinare possunt, &c. Glouvil, lib. xi. c. 7.* See DUEL, COMBAT, &c.

ASSIZE of *Utrum*, lies for a Parson against a Layman, or a Layman against a Parson, for Land or Tenement, doubtful whether it be in Lay-fee, or Free-alms. See TITHES, &c.

ASSIZE, or *Assize*, is also used, according to *Littleton*, for a Jury. See JURY.

This, that Author supposes to be by a *Metonymia effecti*, the Jury being so called, because summoned by Virtue of the Writ of *Assize*. See ASSIZE.

Yet it must be observed, that the Jury summoned upon a Writ of Right, is likewise called the *Assize*; but this may be said to be *metonymice*, or abusively so termed. *Assize*, in this Signification, is divided in *magnam & parvam*.

ASSIZE is also used, according to *Littleton*, for an Ordinance or Statute of *Assize*. See STATUTE and ORDINANCE.

Thus the Statute of Bread and Ale, Anno 51 Hen. 3. is termed the *Assize of Bread and Ale*.

ASSIZE, or *Assize*, is further used for the Scantling or Quantity it self prescribed by the Statute.

Thus we say, when Wheat is of such or such Price, Bread shall be of such *Assize*.

ASSIZE of the Forest, is a Statute or Condition containing Orders to be observed in the King's Forest. It is called an *Assize*, because it sets down and appoints a certain Measure, Rate, or Order in the Things it concerns.

Clerk of *Assize*. See CLERK of *Assize*.

ASSIZE, again, is used for the whole Process in Court, founded on such Writ of *Assize*; and sometimes for a part of it, viz. the Issue or Verdict of the Jury.

Thus we read, that *Assizes of Novel Disceisin shall not be taken but in their Shires; and after this Manner, &c. Mag. Chart. cap. xii.—So in Merton, cap. iv. Hen. III. we meet with, Certified by Assize, quited by Assize, &c.*

ASSIZER of Weights and Measures, is an Officer who has the Care and Oversight of those Matters. See CLERK of the Market.

ASSISOR, the same with *Assessor*. See ASSESSOR.

In Scotland, *Assizers* are the same with our *Jurors*. See JUROR.

ASSISTANCE. See AID.

ASSISTANT, is used for a Person or Officer appointed to attend a principal Officer, for the more regular Discharge of his Function.—Such a Bishop or Prick had seven or eight *Assistants*.

ASSISTANTS, are particularly used for a kind of Counsellors, or Controllers, added to the Generals or Superiors of Monasteries, &c. to take Care of the Affairs of the Community.—The General of the Jesuits has five *Assistants*, of consummate Experience, chosen by him out of all the Provinces of the Order, and denominated from the Kingdoms or Countries to which they belong, *v. gr. Italy, Spain, Germany, France, and Portugal*. See **GENERAL**, **JEJUIT**, &c.

In the like Sense, most of our Trading Companies have their *Courts of Assistants*. See **COMPANY**, &c.

ASSISTANTS are also those condemned to *assist* in the Execution of a Criminal. See **ABSOLUTION**.

ASSOCIATE, an Adjuict, Partner, or Member. See **ADJUNCT**, **ASSOCIATION**, &c.

The Word is compounded of the *Latin ad* and *socius*, Fellow, Companion.

ASSOCIATION, **ASSOCIATIO**, the Act of associating or forming a Society, or Company. See **ASSOCIATE**, **SOCIETY**, **COMPANY**, &c.

Associatio is properly a Contract or Treaty of Partnership, whereby two or more Persons unite together, either for their mutual Assistance, or the Joint carrying on of an Affair; or even for a more commodious Manner of Life.—The effect of all *Associationes* is that made by the Band of Matrimony.

ASSOCIATION of Ideas, is where two or more Ideas, constantly and immediately follow or succeed one another in the Mind, so that one shall almost infallibly produce the other; whether there be any natural Relation between them, or not. See **IDEA**.

Where there is a real Affinity or Connection in Ideas, it is the excellency of the Mind, to be able to collect, compare, and range them in Order, in its Enquiries: But where there is none, nor any Cause to be allied for their accompanying each other, but what is owing to mere Accident or Habit; this unnatural *Associatio* becomes a great Imperfection, and is generally speaking, a main Cause of Error, or wrong Deductions in reasoning. See **ERROR**, &c.

Thus the Idea of Goblins and Sprights, has really no more Affinity with Darkness than with Light; and yet let a foolish Maid inculcate these often on the Mind of a Child, and raise them there together, 'tis possible he shall never be able to separate 'em again so long as he lives, but Darkness shall ever bring with it those frightful Ideas.—Let Custom, from the very Childhood, have joined the Idea of Figure and Shape to the Idea of God, and what Absurdities will that Mind be liable to, about the Deity?

Such wrong Combinations of Ideas, Mr. Lock shews, are a great Cause of the irreconcilable Opposition between the different Sects of Philosophy and Religion: For we can't imagine, that all who hold Tenets different from, and sometimes contradictory to one another, should wilfully and knowingly impose upon themselves, and refuse Truth offered by plain Reason: But some loose and independent Ideas are by Education, Custom, and the constant Din of their Party, so coupled in their Minds, that they always appear there together: These they can no more separate in their Thoughts, than if they were but one Idea, and they open 'em as if they were so. This gives Sense to Jargon, Demonstration to Absurdities, Consistency to Nonfence, and is the Foundation of the greatest, and almost of all the Errors in the World.

ASSOCIATION, in Law, is a Patent sent by the King, either of his own Motion, or at the Suit of the Party Plaintiff, to the Justices of Assize; to have other Persons associated to them, in order to take the Assize. See **PATENT** and **ASSIZE**.

Upon this Patent of *Association*, the King sends his Writ to the Justices of the Assize, by it commanding them to admit them that are so sent.

ASSOILE, in our ancient Law Books, signifies to absolve, deliver, or let free from an Excommunication. See **ABSOLUTION**, **EXCOMMUNICATION**, &c.

ASSONANCE, in Rhetorick and Poetry, a Term used where the Words of a Phrase, or a Verse, have the same Sound or Termination, and yet make no proper Rhyme. See **RHYME**.

These are usually vitious in English; though the Romans sometimes used them with Elegancy: As, *Abstemio comparavit, Exercitum ordinavit, Aciem instravit*.

The *Latins* call it *similitudo desinens*; and the *Greeks* *συνείδησις*. See **HOMOIOTELEUTON**.

ASSONANT Rhymes, is a Term particularly applied to a kind of Verses common among the *Spaniards*, where a Resemblance of Sound serves instead of a natural Rhyme. See **RHYME**.

Thus, *ligera, cubierta, tierra, mesa*, may answer each other in a kind of *assonant Rhyme*, in regard they have each an *e* in the penultimate Syllable, and an *a* in the last.

ASSUMPSIT, in Law, a naked Contract; or a voluntary Promise, by Word of Mouth, by which a Man assumes and takes upon him to perform, and pay any thing to another. See **CONTRACT**, **COVENANT**, &c.

This Term comprehends any verbal Promise; and is variously expressed by the Civilians, according to the Nature of the Promise: Sometimes, by *actum*; sometimes by *promissio*, *pollicitatio*, or *Constitutio*. See **PACTUM**.

Where a Man sells Goods to another, the Law makes the *Assumpsit*; and promises that he shall pay for them.

ASSUMPTION, **ASUMPTIO**, a Feast celebrated in the *Roman* Church, in honour of the miraculous Ascent of the Holy Virgin, Body and Soul, into Heaven. See **FEAST**, **VIRGIN**, &c.

The Word is compounded of the *Latin ad*, to, and *sumo*, I take.

This Feast is held with great Solemnity both in the Eastern and Western Churches.—Yet is not the *Assumption* of our Lady any Point of Faith. The ancient Martyrologists speak of it with a great deal of reserve, as a thing not yet fully ascertained: Tho' a Divine who should now deny it, would be obliged to retract.

The *Sorbonne*, in the Year 1696, in the Condemnation of *Marty of Aréola*, protested, among other things, that they believed that the Holy Virgin was assumed, or taken into Heaven, Body and Soul.

ASSUMPTION was also among our Ancestors, used for the Day of the Death of any Saint: *Quia cum anima in Caelum assumitur*.

ASSUMPTION, in Logick, is the Minor, or second Proposition, in a categorical Syllogism. See **MINOR**, **SYLLOGISM**, &c.

ASSUMPTION is sometimes also used for a Consequence drawn from the Propositions whereof an Argument is composed. See **CONSEQUENCE**.

Thus we say, the Premises are true, but the *Assumption* is captious. See **PREMISE**, &c.

ASSUMPTIVE ARMS, in Heraldry, are such as a Man has a right to assume of himself, in virtue of some Action. See **ARMS**.

As, if a Man who is no Gentleman of Blood, nor Cost Armour, takes a Gentlemans Lord, or Prince, Prisoner in any lawful War; he becomes intitled to bear the Shield of such Prisoner, and enjoy it to him and his Heirs.—The Foundation hereof is that Principle in Military Law, that the Dominion of Things taken in lawful War passes to the Conqueror.

ASSURANCE, in Law. See **SECURITY**.

ASSURANCE, or **INSURANCE**, in Commerce. See **INSURANCE**.

Policy of ASSURANCE, is a Contract whereby one or more Persons oblige themselves to make good any Damages which a Ship, a Hoisie, or the like, may undergo, by Sea, Fire, or the like Danger.—The Nature and Laws hereof see under the Article of **POLICY of Assurance**.

We have several Offices of *Assurance from Fire*.—As, the *Sea-Fire Office*, the *Hand-in-Hand Fire Office*, the *Phoenix Office*, &c. some for Houses, others for Goods; and some for both.

We have also *Assurances for Life*, in Virtue whereof, when the Person assured dies, a Sum of Money becomes payable to the Person in whose Favour the Policy of Assurance was given. See **ANNUITY**, &c.

ASSURANCE, in Logick. See **CERTAINTY**, **EVIDENCE**, **DEMONSTRATION**, &c.

ASSUROR, a Merchant, or other Person, who assumes a Ship, Hoisie, Life, or the like. See **ASSURANCE**.

Assurers are not answerable for what Damages arise thro' the Negligence, or other Fault of the Master or Seaman; or even those which arise from any Vice or Defect in the thing assured. See **AVERAGE**.

ASTATI, or **ASTATHI**, or **ASTATHYI**, a Sect of Hereticks in the ninth Century, the Followers of one *Sergius*, who renewed the Errors of the *Nestorians*. See **MANCHIC**.

They prevailed much under the Emperor *Nicephorus*; but his Successor, *Michael Cerepalates*, curb'd them with very severe Laws.

The Word is derived from the *Greek* privative *α*, and *στασις*, *stasis*, to stand firm, and signifies any thing unstable and inconstant.

ASTERISK, a Character in form of a small Star, set over any Word, or Sentence, to make it the more conspicuous, or to refer to the Margin for a Quotation, Explanation, &c. See **CHARACTER**, **NOTE**, **REFERENCE**.

The Word is derived from a Diminutive of the *Greek* *ἀστρον*, *Star*.

ASTERISM, **ASTERISMUS**, in Astronomy, the same with **CONSTELLATION**.

The Word comes from the *Greek* *ἀστρον*, *Stella*, *Star*. See **STAR**.

ASTHMA, in Medicine, a Disease of the Lungs, accompanied with a Shortness, and Difficulty of Respiration. See **RESPIRATION** and **LUNGS**.

Or, *Asthma* is a Difficulty of Breathing, arising from a Disorder of the Lungs; and usually attended with violent Motions of the Diaphragm, Abdominal and Intercoastal Muscles, as also a rattling in the Throat.

The Word is *Greek*, *ἀσθμα*; form'd of the Verb *ασπναι*, *Spiro*; I breathe.

If Respiration be only thick and quick, without the other Symptoms, it is call'd a *Dyspnœa*.—If it be so intense as to occasion a violent Motion of the Muscles of the Throat; so that the Patient cannot be tolerably easy, except in an erect Posture, it is call'd an *Orthopnœa*. See **DYSPNÆA** and **ORTHOPNÆA**.

The *Asthma* is usually divided into *Moist* and *Dry*, or *Mamfest* and *Oppress*, or *Pneumonic* and *Catarrhical*: The first attended with an Expectoration of purulent Matter; the latter without.

The true *Asthma* is occasioned by an abundance of Serosities, or of gross viscid or purulent Humours, collected in the Cavities of the Lungs, which stop up or straighten the Passages of the Air, and compress the *Bronchia*. See BRONCHIA.

It is also owing to Empyema's, Phthisis's, Cruditins in the Stomach, Cachexies, &c. See EMPYEMA, PHTHISIS, &c.

The convulsive *Asthma* is supposed to be occasioned by an irregular Motion of the Animal Spirits; and happens when the Spirits do not flow fast enough, or in sufficient Quantity, into the Muscles of the Breast, either by reason of an Obstruction, or of some other Obstacle: The necessary Consequence whereof is a violent and painful Respiration.—The *Asthma*, again, is either *continal*, or *periodical*, and *intermitting*; which last returns chiefly where a febrile Regimen is not observed.

The *Asthma* is found to be the most violent when the Patient is in Bed, and in a prone Posture; the Contents of the lower Belly, in that case, bearing against the *Diaphragm*, so as to lessen the Capacity of the Breast, and to leave the Lungs less room to move.

The Cure of the true or pneumonic *Asthma*, is by bleeding; after which Emetics may be used; and if the Paroxysm returns, Emetics, with Glysters instead of Purges.—Infusions of *Fin. Espin.* or the Juice thereof, being detensive and attenuating, are reputed excellent. *Lullar's* also contribute to the Cure. *Stillepedes*, Spirit of *Gum Arumiac*, with *Sal Arumiac*, *Coffea*, Tincture of *Sulphur*, &c. are commended in *Asthmatic* Cases.

For the convulsive Kind, the Cure is attempted by *Antispasmodics*, *Antispasmodics*, *Antispasmodics*, *Opials*, &c.

ASTRAGAL, ASTRAGALUS, in Anatomy, a Bone of the Heel, having a convex Head, articulated with the two *Osselets* of the Leg, by *Ginglymus*. See HEEL and FOOT.

The *Astragalus* call'd *Talus*, and *Os Talus*, is the first Bone of the *Tarsus*. See TALUS and TARSUS.

Some also apply the Name to the *Vertebra* of the Neck.—*Haver*, in his *Osses*, uses the Term on this Occasion. See VERTEBRÆ.

ASTRAGAL, in Architecture, is a little round Member, in form of a Ring, or Bracelet; serving as an Ornament on the Tops and at the Bottoms of Columns. See MOULDING, COLUMN, &c.

The *Astragal* is sometimes also used to separate the *Fasciæ* of the Architrave; in which case it is wrought in Chaplets, or Beads and Berries.

It is also used both above and below the Lists, adjoining immediately to the Square, or Dic of the Pedestal. See DYE and PEDESTAL.

The Word is derived from the Greek *ἀστρογώνιον*, which signifies the *Angle* or *Angle-Bone*.

ASTRAGAL, in Gunnery, is a Kind of Ring or Moulding on a piece of Ordnance, at about half a Foot's Distance from the Mouth; serving as an Ornament to the Piece, as the former does to a Column. See ORDNANCE, CANNON, &c.

ASTRAL, something belonging to the Stars, or depending of the Stars. See STAR.

The Word comes from the Latin *astrum*, of the Greek *ἀστρον*, Star.

ASTRAL, or *Siderial Year*. See SIDERIAL and YEAR.

ASTRINGENTS, ASTRINGENTIA, in Medicine, *binding Remedies*; or such as have the Power of contracting the Parts, and diminishing the Peres thereof. See MEDICINE.

Astringents act either by the Asperity of their Particles, whereby they corrugate the Membranes, and make them draw up closer; or by thickening the Fluids, whereby they cannot run off so fast as before.

Astringents therefore stand opposed to *Laxatives*. See LAXATIVE, PURGATIVE, &c.

Hence, *Astringents* are of the Class of Strengtheners, or Corroborants; the Nature and Operation whereof, see under the Article STRENGTHENER.

Astringents only differ from *Stypticks*, in Degree of Efficacy. See STYPTICK.

The Word is compounded of the Latin *ad* and *stringo*, I bind.

Among Simples, Mint, red Roses, Nettles, Sanicle, Barbaries, Quinces, Pomegranates, Sloes, Cinamon, Blood-stone, Alum, Chalk, Boles, Coral, Tatty, &c. are principal *Astringents*.

ASTROITES, or *Lapis ASTROITES*, in Natural History, a Kind of figured Stone, found in divers Parts, and particularly the North of England. See FIGURED-STONE.

The Form thereof is very uniform and regular; consisting of several thin pentagonal Joins fit one over another, so as to form a Kind of five-angled Column.—The usual Figures, as given by Dr. Lister, are represented in *Tab. Nat. History*, Fig. 14.

These Stones, as now found, are all Fragments, consisting of from 1 to 25 Joins.—The Matter or Substance thereof when broken, is Flint-like, of a dark shining Politure, but much softer, and easily corroded by an acid Menstruum.—They creep, like the *Corus Ammonis*, in Vinegar; but a stronger Spirit, as of

Nitre, agitates them with some Violence. See CORNUS AMMONIS.

The protuberant Parts repeated under the top Joint of the first Figure are not found in all; but only in those which are deep-joined.—They are always in Number. Dr. Lister calls them *Wyers*; and compares them to the Antennæ of Lobsters.

'Tis controverted among the Naturalists, to what Species of Bodies the *Astrates*, *Trivertices*, *Entrochi*, &c. are to be refer'd. Some will have 'em Native Stones, others Rock-Plants, and others Petrifications of Plains. See STONE. See also PETRIFICATION, SPAL, TROCITES, ENTROCHES, &c.

ASTROLABE, ASTROLABUM, was originally used for a System or Assenblage of the several Circles of the Sphere, in their proper Order and Situation with respect to each other. See CIRCLE and SPHERE.

The ancient *Astrolabes* were the same with our Artillary Spheres. See ARTILLARY.

The first and most celebrated of this Kind was that of *Hipparchus*, which he made at *Alexandria*, the Capital of *Egypt*, and lodg'd in a secure Place, where it serv'd for divers Astronomical Operations.—*Ptolemy* made the same use of it; but as the Instrument had several Inconveniences, he bethought himself to change its Figure, though perfectly natural and agreeable to the Doctrine of the Sphere; and to reduce the whole *Astrolabe* upon a Plane Surface, to which he gave the Denomination of *Planisphere*. See PLANISPHERE.—Hence,

ASTROLABE, is used among the Moderns for a *Planisphere*; or a *Stereographic* Projection of the Sphere upon the Plane of some Circle thereof. See PROJECTION and STEREOGRAPHICK.

The usual Planes of Projection are that of the Equinoctial, the Eye being suppos'd in the Pole of the World; and that of the Plane of the Meridian, the Eye being suppos'd in the Point of Intersection of the Equinoctial and Horizon.

Stoffler, *Gemma Frislar*, and *Cassius*, have treated at large of the *Astrolabe*.—See a further Account of the Nature and Kinds thereof, in the Article PLANISPHERE.

ASTROLABLE, or Sea ASTROLABE, is an Instrument chiefly used for taking the Altitude of the Pole, the Sun, or Stars, at Sea. See ALTITUDE.

The *Astrolabe* represent'd *Tab. Navigation*, Fig. 22. consists of a large Brass Ring, about 15 Inches in Diameter, whose Lamb, or convenient Part thereof, is divided into Degrees and Minutes; fitted with a moveable Index, or Label, which turns upon the Centre and carries two Sights.—At the Zenith is a Ring, to hang it by in time of Observation.

To use the *Astrolabe*, turn it so to the Sun, as that the Rays may pass freely through both the Sights F and G; in which Case, the Edge of the Label cuts the Altitude in the divided Limb.

The *Astrolabe*, though now grown into disuse, is at least equal to any of the other Instruments used for taking the Altitude of the Zenith.—There are a great many other uses of the *Astrolabe*; whereof *Clavius*, *Herricus*, &c. have wrote entire Volumes.

The Word is form'd from the Greek *ἀστρον*, Star, and *λαβωον*, Captus, I take.—The *Arabs* call it, in their tongue, *Ashkhalab*; a Word form'd by Corruption from the common Greek Name: Though some of 'em have endeavour'd to give it an *Arabic* Original. But the learned are generally satisfied that the *Arabs* borrowed both the Name and the Use of the Instrument from the *Greeks*.—*Nasir Reddi Thousi* has a Treatise in the *Persian* Language, entitl'd, *Bait Babli Ashkhalab*, wherein he teaches the Structure and Application of the *Astrolabe*.

ASTROLOGY, ASTYLOGIA, the Art of foretelling future Events, from the Aspects, Positions, and Influences of the Heavenly Bodies. See ASPECT, INFLUENCE, &c.

The Word is compounded of the Greek *αστρον*, Star, and *λογος*, Discourse; whence, in the literal Sense of the Name, *Astrology* should signify no more than the *Doctrine* or *Science* of the Stars; which we read was its original Acceptation, and made the ancient *Astrology*; though, in Course of Time, an Alteration has arose; that which the Antients call'd *Astrology* being by us term'd *Astronomy*. See ASTRONOMY.

Astrology may be divided into two Branches, *Natural* and *Judicial*.

To the former belong the predicting of natural Effects; as, the Changes of *Weather*, *Winds*, *Storms*, *Earthquakes*, *Thunder*, *Floods*, *Earthquakes*, &c. See NATURAL. See also WEATHER, WIND, RAIN, HURRICANE, THUNDER, EARTHQUAKE, &c.

To this our Countryman *Goad* chiefly keeps, in his two Volumes of *Astrology*; wherein he pretends, that Inundations may be foretold, and an Infinity of Phænomena explained from the Contemplation of the Stars.—Accordingly, he endeavours to account for the Diversity of Seasons, from the different Situations and Habitudes of the Planets, from their Retrograde Motions; the Number of fix'd Stars in the Constellations, &c.

This Art properly belongs to *Physiology*, or *Natural Philosophy*.

In Foundation and Merits the Reader may gather from what we have said under the Articles, AIR, ATMOSPHERE, WEATHER, ÆTHER, FIRE, LIGHT, COMET, PLANET, MAGNETISM, EFFLUVIA, &c.

For this *Astronomy*, Mr. Boyle has a just Apology in his *History of the Air*.—Generation and Corruption being the Extremes of Motion, and Rarefaction and Condensation the Mean ones; he shews, that the Effluvia of the Heavenly Bodies, as we find them immediately contribute to the latter, must also have a mediate Influence on the former; and consequently, all physical Bodies are affected thereby. See GENERATION, CORRUPTION, RAREFACTION, CONDENSATION, &c.

'Tis evident, that the Properties of Moisture, Heat, Cold, &c. employ'd by Nature to produce the two great Effects of Rarefaction and Condensation almost wholly depend on the Course, Motion, Position, &c. of the heavenly Bodies.—And 'tis also clear that every Planet must have its own proper Light, distinct from that of any other; Light not being a bare visible Quality, but endued with its speck'd Power. The Sun, we know, not only shines on all the Planets, but by his genial Warmth calls forth, excites, and raises the Motions, Properties, &c. peculiar to them; and his Rays must flare or receive somewhat from the Tincture thereof; and thus tinged be again reflected into the other Parts of the World, and particularly the adjacent Bodies of the planetary System. Whence, according to the Angle the Planets make with that grand Luminary, and the Degree wherein they are enlighten'd, either by his direct or his oblique Rays; together with their Distance and Situation in respect of our Earth; the Powers, Effects, or Tinctures, proper to each, must be transmitted hither, and have a greater or less effect on salutary Things.—See *Méte de Imperio Solis & Lunæ*, &c.

Judiciary, or *Judicial ASTROROLOGY*, which is what we commonly call *Astrology*, is that which pretends to foretell moral Events; i. e. such as have a Dependence on the Will and Agency of Man; as if that were directed by the Stars. See WILL, ACTION, &c.

The Professors hereof maintain, "That the Heavens are one great Volume, or Book wherein God has wrote the History of the World; and in which every Man may read his own Fortune, and the Transitions of his Time.—The Arr, say they, had its Rise from the same Hands as *Astronomy* itself: While the ancient *Astronomers*, whose serene unclouded Sky favour'd their Celestial Observations, were intent on tracing the Paths and Periods of the heavenly Bodies; they discover'd a constant textual Relation or Analogy, between them and things below; and hence were led to conclude, these to be the *Pages*, the Destinies, so much talk'd of, which preside at our Births, and dispose of our future Fate. See PARS, DESTINY, FATE, &c."

"The *Laws* therefore of this Relation being ascertained by a Series of Observations, and the Share each Planet has therein; by knowing the precise Time of any Person's Nativity, they were enabled from their Knowledge in *Astronomy*, to erect a Theme or Horoscope of the Situation of the Planets, at that Point of Time; and hence, by considering their Degrees of Power and Influence, and how each was either strengthened or temper'd by other, to compare what must be the result thereof. See HOROSCOPE, NATIVITY, HOUSE, &c."

Thus the *Astronomers*.—But the chief Province now remaining to the modern Professors, is the making of Calendars or Almanacks. See CALENDAR and ALMANACK.

Judicial *Astrology* is commonly said to have been invented in *Chaldea*, and thence transmitted to the *Egyptians*, *Greeks*, and *Romans*.—Though it is to the *Arabs* we owe it. At Rome the People were so infatuated with it, that the *Astronomers*, or as they were then call'd, the *Mathematicians*, maintained their Ground in spite of all the Edicts of the Emperors to expel them out of the City. See MATHEMATICS.

Add, that the *Brames*, who introduced and practiced this Art among the *Indians*, have hereby made themselves the Arbiters of good and evil Honors, which gives them a vast Authority: They are consulted as Oracles; and they have taken care never to fall their Answers but at good Rates. See BRACHMAN.

The same Superstition has prevailed in more modern Ages and Nations. The French Historians remark, that in the Time of Queen *Catherine de Medicis*, *Astrology* was in so much Vogue that the most inconsiderable thing was not to be done without consulting the Stars. And in the Days of King *Henry III.* and *IV.* of *France*, the Predictions of *Astronomers* were the common Theme of the Court Conversation.

This predominant Humour in that Court was well rallied by *Barclay*, in his *Argenis*, Lib. II. on Occasion of an *Astronomer*, who had undertook to instruct King *Henry* in the Event of a War then threatened by the Faction of the *Guisers*.

"You maintain," says *Barclay*, "that the Circumstances of Life and Death depend on the Place and Influence of the Celestial Bodies, at the Time when the Child first comes to Light; and yet own that the Heavens revolve with such vast Rapidity, that the Situation of the Stars is considerably changed in the least Moment of Time.—What certainty then, can there be in your Art; unless you suppose the Midwives constantly careful to observe the Clock; that the Minute of Time may be convey'd to the Infant as we do his Patrimony? How often does the Mother's Danger prevent this Care? And how many are there who are not touched with this Superstition? But suppose

them watchful to your Will: If the Child be long in Delivery; if, as is often the Case, a Hand or the Head come first, and be not immediately followed by the rest of the Body; or which State of the Stars is to determine for him? Thus, when the Head made its Appearance; or when the whole Body was disengag'd? I say nothing of the common Errors of Clocks, and other Time-keepers, sufficient to elude all your Cares.

"Again, why are we to regard only the Stars at his Nativity, and not these rather which those who the *Fœtus* was animat'd in the Womb? And why must those others be excluded which presided while the Body remained tender, and susceptible of the weakest Impression, during Gestations?

"But setting this aside; and supposing, withal, the Face of the Heavens accurately known: Whence arises this Dominion of the Stars over our Bodies and Minds, that they must be the Arbiters of our Happiness, our manner of Life, and Death? Were all they who went to Battle, and died together, born under the same Position of the Heavens? And when a Ship is to be cast away, shall it admit no Passengers but those doom'd by the Stars to suffer Shipwreck? Or rather, do not Persons born under every Planet go into the Combat, or aboard the Vessel; and thus notwithstanding the Disparity of their Birth, perish alike? Again, all who were born under the same Configuration of the Stars do not live or die in the same manner. Are all who were born at the same Time with the King, Monarchs? Or are they all even alive at this Day? View M.

Vilroy, here; nay view your self: Were all that came into the World with him as wise and virtuous as he; or all born under your own Stars, *Astronomers* like you? If a Man meet a Robber, you will say he was doom'd to perish by a Robber's Hand; but did the same Stars which, when the Traveller was born, subjected him to the Robber's Sword; did they likewise give the Robber, who perhaps was born long before, a Power and Inclination to kill him? For you will allow it as much owing to the Stars that the one kills, as that the other is kill'd. And when a Man is overwhelmed by the fall of a Hoarf, did the Walls become faulty because the Stars had doom'd him to die thereby; or rather, was not his Death owing to this, that the Walls were faulty? The same may be said with regard to Honours and Employments: Because the Stars that shone at a Man's Nativity promised him Preferment, could they have an influence over other Persons not born under them, by whose Suffrages he was to rise? Or how do the Stars at one Man's Birth annul or set aside the contrary Influences of other Stars, which shone at the Birth of another?

"The Truth is, supposing the reality of all the planetary Powers; as the Sun which visits an Infinity of Bodies with the same Rays, has not the same effect on all; but some things are harden'd thereby, as Clay; others, softned, as Wax; some Seeds cherish'd, others destroy'd; the tenderer Herbs scorched up, others indemnified by their cosier Juice: So, where so many Children are born together, like a Field till'd so many different Ways, according to the various Hedges, Habitudes, and Temperament of the Parents, the same Celestial influx must operate differently. If the Genius be fustible and towards, it must predominate therein: If contrary, it will only correct it. So that to foretell the Life and Manners of a Child, you are not only to look into the Heavens, but into the Parents, into the Fortune which attended the pregnant Mother, and a thousand other Circumstances utterly inaccessible.

"Further, does the Power that portends the new-born Infant a Life, for Instance, of 40 Years; or perhaps a violent Death at 30; does that Power, I say, endure and reside still in the Heavens, waiting the destin'd time, when, descending upon Earth, it may produce such an effect? Or is it infused into the Infant himself; so that being cherish'd, and gradually growing up together with him, it bursts forth at the appointed Time, and fulfils what the Stars had given it in Charge? Perish in the Heavens it cannot; in that depending immediately on a certain Configuration of the Stars, when that is changed, the effect connect'd with it must cease, and a new, perhaps a contrary one, take place. What Repetitory then have you for the former Power to remain in, till the Time come for its Delivery? If you say it inheres or resides in the Infant, not to operate on him till he be grown to Manhood; the Answer is more preposterous than the former: For this, in the Instance of a Shipwreck, you must suppose the Cause why the Winds rise, the Ship is leaky, or the Pilot, through Ignorance of the Place, runs on a Shoal or a Rock. So the Farmer is the Cause of the War, that impoverishes him; or of the favourable Season which brings him a plentiful Harvest.

"You boast much of the Event of a few Predictions, which, considering the Multitude of these your Art has produced, plainly confess its impertinency.—A Million of Deceptions are industriously hidden and forgot in favour of some eight or ten which have succeeded. Out of so many Conjectures it must be preternatural if some did not hit; and 'tis certain, that considering you only as Guessers, there is no room to boast you have been successful therein. Do you know what Fate awaits *Scily* in this War; and yet are not apprehensive what shall befall your self? Did not you foresee the Opposition I was

"this Day to make you? If you can say whether the King shall vanquish his Enemies; find out, first, whether he will believe you."

ASTRONOMY, ASTRONOMIA, the Doctrine of the Heavens, and the Phenomena thereof. See HEAVEN.

Astronomy is properly a mind mathematical Science, whereby we become acquainted with the Celestial Bodies, their Magnitudes, Motions, Distances, Periods, Eclipses, &c. See MATHEMATICS.

Some understand the Word *Astronomy* in a more extensive Sense; including under it the Theory of the Universe, and the primary Laws of Nature: In which Sense it rather seems a Branch of *Physics* than of *Mathematics*. See PHYSICS, SYSTEM, NATURE, &c.

The Word is compounded of the Greek *astron*, Star; and *nomos*, Law, Rule.—Care must be taken to distinguish *Astronomy* from *Astrology*. See ASTROLOGY.

The Heavens may be consider'd two Ways; either as they appear to the naked Sense, or as they are discovered by the Understanding: And hence *Astronomy* is divided into two Branches, *Spherical* and *Theoretical*.

Spherical Astronomy, } See } SPHERICAL Astronomy.
Theoretical Astronomy, } See } THEORETICAL Astronomy.

The Invention of *Astronomy* has been variously assigned; and several Persons, several Nations, and several Ages have laid claim to it.—From the Accounts given us by the antient Historians, it appears that Kings were the first Inventors and Cultivators of it: Thus, *Babylus*, King of *Affrica*, *Atlas*, King of *Mauritania*, and *Uranus*, King of the Country situate on the Shore of the *Atlantic* Ocean, are severally recorded, as the Persons to whom the World owes this noble Science.

This, at least, is pretty evident, that it was known to those Nations long before it came into *Greece*: Agreeably to which, *Plato* tells us, it was a *Berberian* who first observed the heavenly Motions; to which he was led by the clearness of the Weather in the Summer Season, as in *Egypt* and *Syria*, where the Stars are constantly seen, there being no Rain or Clouds to interrupt the Prospect. And the want of this clearness of Atmosphere the same Author lays down as the Reason why the *Greeks* came so late to the Knowledge of *Astronomy*.

The generality of Writers fix the Origin of *Astronomy* and *Astrology* in *Chaldea*; and accordingly among the Antients we find the Word *Chaldeeus* frequently used for *Astronomer*.—Some chuse to attribute the Invention to the antient *Hebrews*; and some, even, to the first *Men*; building on the Authority of *Josephus*, and of what he mentions about *Seth's* Pillars.—The *Muslimans* ascribe it to *Enoch*, and other Orientals to *Cain*.—But these Opinions appear scarcely probable to others, in regard they find no Terms of *Astronomy* in the Language of those first People, that is, in the *Hebrew* Language; which, on the contrary, are very frequent in the *Chaldee*: Though it must be own'd we have something of this kind in *Job*, and the Books of *Solomon*.

We don't know whether it is worth noting, that *Rasbeck*, in his *Atlantica*, maintains *Astronomy* to have been invented by the *Suedes*: His Reasons are, the great Diversity in the length of the Days in that Country, which must naturally lead the People to conclude the Earth round, and that they lived near one of its Extremes: A Conclusion which the *Chaldeeans*, and other Inhabitants of the middle Parts of the Globe, had no easy Way of coming at. The *Suedes*, adds our Author, prompted hereby to enquire further into the great Opposition of Seasons, soon discover'd that the Sun bounds his Progress by a certain Space in the Heavens, &c.—But we have no Historical Facts to support this reasoning, which at best only proves that the thing might be so.

By *Porphyry's* Account, *Astronomy* must have been of a very antient standing in the East; for he tells us, that when *Babylus* was taken by *Alexander*, there were brought thence celestial Observations, for the Space of 1903 Years, which therefore must have commenced within 115 Years of the Flood, or fifteen Years of the building of *Babel*.—*Epigenes*, according to *Pliny*, affirm'd that the *Babyloniens* had Observations of 720 Years, engraven on Bricks.—*Achilles Tatius* ascribes the Invention of *Astronomy* to the *Egyptians*; and adds, that their Knowledge therein was engraven on Columns, and by that means transmitted to Posterity.

From the *Egyptians*, *Astronomy* is commonly supposed to have pass'd to the *Greeks*: *Laertius* tells us, that *Thales*, first, about the 90th Olympiad, and after him *Eudoxus* and *Pythagoras*, travel'd into *Egypt*, to be instructed herein; and that this last, in particular, living in a close Community with the *Egyptian* Priests for seven Years, and being initiated into their Religion, was here let into the true System of the Universe; which he afterwards taught in *Greece* and *Italy*.—He was the first, among the *Euro-peans*, who taught that the Earth and Planets turn round the Sun, which stands immovable in the Center; that the diurnal Motion of the Sun and fix'd Stars, was not real but apparent, arising from the Earth's Motion round its own Axis, &c. See PYTHAGOREAN.

Yet *Strabon* represents the Introduction of *Astronomy* into *Greece*, somewhat differently; maintaining, that *Berysus*, a *Babyl-*

onian, brought it thither immediately from *Babylus* itself; and open'd an *Astronomical* School in the Island of *Co*. *Pliny*, Lib. VII. c. 37. adds, that in consideration of his wonderful Predictions, the *Athenians* erected him a Statue in the *Gymnasium*, with a gilded Tongue.—If this *Berysus* be the same with the Author of the *Chaldee* Historics, he must have been before *Alexander*.

After *Pythagoras*, *Astronomy* sunk into neglect; most of the celestial Observations brought from *Babylus*, were lost, and 'twas but a very small Number that *Proclus*, in his Time, was able to retrieve.—However, some few of his Followers continued to cultivate *Astronomy*; among whom were *Philolaus* and *Archylarchus* *Seminus*.

At length, those Patrons of Learning, the *Ptolomeys*, Kings of *Egypt*, founding an Academy for *Astronomy*, at *Alexandria*, there arose several eminent *Astronomers* from the same; particularly *Hipparchus*, who, according to *Pliny*, undertook what would have been a great Work even for a God to achieve, viz. to number the Stars, and leave the Heavens as an Inheritance to Posterity: He foretold the Eclipses both of the Sun and Moon for 600 Years, and on his Observations is founded that noble Work of *Ptolomey*, intitled *paradeigma*. See CATALOGUE, &c.

The *Saracens*, on their Conquest of *Egypt*, got a Tincture of *Astronomy*, which they carried with them out of *Africa* into *Spain*; and by this means *Astronomy*, after a long Exile, was at length introduced a fresh into *Europe*.

From this Time, *Astronomy* began to improve very considerably; being cultivat'd by the greatest Geniuses, and patronized by the greatest Princes.—*Alphonsus*, King of *Castile*, caus'd it writ those Tables which still bear his Name. See TABLE.

Copernicus re-call'd the antient *Pythagorean* System; and *Tycho* *Brache* publish'd a Catalogue of 770 fix'd Stars, from his own Observations. See COPERNICAN, STAR, &c.

Kepler, from *Tycho's* Labours, soon after discover'd the true Theory of the World; and the physical Laws by which the heavenly Bodies move. See PLANET, PERIOD, GRAVITATION, &c.

Galle first introduced Telescopes into *Astronomy*, and by their means discover'd the Satellites of *Jupiter*; the various Phases of *Saturn*, the Mountains of the Moon, the Spots in the Sun, and its Revolution about its Axis. See TELESCOPE, SATELLITE, MOON, MACULA, &c.

Add, that *Herschel*, from his own curious Observations, furnish'd a Catalogue of the fix'd Stars, much more complete than *Tycho's*—*Huygens* and *Cassini* discover'd the Satellites of *Saturn*, and his Ring.—And *Gassendus*, *Harras*, *Bullialdus*, *Ward*, *Raccois*, *Gesaisn*, &c. each contributed very considerably to the improvement of *Astronomy*. See SATURN, RING, ELLIPTIC, MICROMETER, &c.

The immortal *Newton* first demonstrat'd from physical Considerations, the great Law that regulates all the heavenly Motions, sets bounds to the Planets Orbs, and determines their greatest Excursions from the Sun, and their nearest approaches to it.—'Twas he first taught the World whence arose that constant and regular Proportion observ'd by both primary and secondary Planets, in their Calculation round their central Bodies; and their Distances compar'd with their Periods.—He has given us a new Theory of the Moon, which accurately answers all her Irregularities, and accounts for 'em from the Laws of Gravity and Mechanics. See NEWTONIAN. See also ATTRACTION, MOON, TIDE, &c.

Dr. Halley oblig'd the World with the *Astronomy* of Comets, and with a Catalogue of the Stars in the southern Hemisphere; and continues still a Benefactor to *Astronomy*, by his Observations: To which it may be added, that he is in the Press, a new set of astronomical Tables; preferable by many Degrees to any yet published. See COMET, TABLE, &c.

Mr. Flamsteed upwards of forty Years watch'd the Motions of the Stars, and has given us a great number of curious Observations of the Sun, Moon, and Planets; besides a noble Catalogue of 3000 fix'd Stars; which is more than double the Number in that of *Hevelius*.—Nothing now seem'd wanting to *Astronomy*, but an universal and complete Theory of the celestial Phenomena, explain'd according to their true Motions and physical Causes, which has been perform'd by *Dr. Gregory*. See CENTRIFUGAL, CENTRIFUGALS, &c.

ASTRONOMY is sometimes divided, with respect to its different States, into *New* and *Old*.—The antient *Astronomy* is such as the Art flour'd under *Ptolomey*, and his Followers; with all the Apparatus of solid Orbs, Epicycles, Eccentrics, Detremes, Triplications, &c. See PTOLOMAIC. See also HEAVEN, EPICYCLE, &c.

The antient *Astronomy* is deliver'd by *Claud. Ptolomey*, who died A. D. 147; in his *paradeigma* *Suaris*; translated in 827, into *Arabic*; and thence, in 1528, into *Latin*. An Epitome of it, for the use of Learners, was made by *Paribachius* and his Scholar *Regiomontanus*, in 1550; containing the whole Doctrine of the heavenly Motions, their Magnitudes, Eclipses, &c.—On the Model hereof, *Albertus* intitled the *Arabic*, compil'd another Work, on the Knowledge of the Stars, published in *Latin* 1537.

The *New Astronomy* is such as the Art has been since *Copernicus*; by whom those fictitious Machines were thrown out; and the Constitution of the Heavens reduc'd to more simple, natural, and certain Principles. See COPERNICAN. See also SYSTEM, SUN, EARTH.

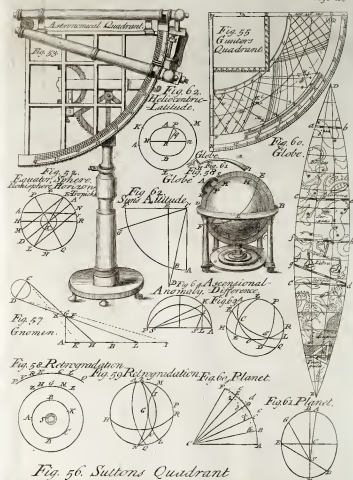

Fig. 56. Suten's Quadrant

EARTH, PLANET, ORBIT, &c. See also SPHERE, GLOBE, &c.

The modern *Astronomy* is deliver'd in Copernicus's six Books of *Celestial Revolutions*, published about the Year 1566; wherein, by retrieving Pythagoras's and Ptolemaeus's Dogma of the Motion of the Earth, he laid the Foundation of a juster System.—Kepler's *Commentaries of the Motions of Mars*, published in 1609; wherein, in lieu of the circular Orbits admitted by all former *Astronomers*, he propos'd the elliptic Theory; which, in his Epitome of the *Copernican Astronomy*, published in 1635, he apply'd to all the Planets.—Joh. Baulhalus's *Astronomia Ptolemaica*, published in 1645, wherein he endeavour'd to amend Kepler's Theory, and render the Calculus more Exact and Geometrical: Some Errors committed by Baulhalus were pointed out by Dr. Seth Ward, in his *Inquiry into the Ptolemaic Astronomy*, published in 1653; and corrected by himself in his *Foundations of the Ptolemaic Astronomy more clearly explain'd*, in 1657.—Ward's *Astronomia Geometrica*, published in 1656; wherein a Geometrical Method is propos'd of computing the Planets Motions; though not consistent with the true Laws of their Motions established by Kepler. The same was propos'd the Year following by the Count de Pagau. The Truth is, Kepler himself does not seem to have been ignorant thereof; but rather chode to let it slide, as finding it contrary to Nature.—Vin. Wing's *Astronomia Britannica*, published in 1669; wherein, going on Baulhalus's Principles, he gives just Examples of all the Precepts in practical *Astronomy*, well accommodated to the Capacity of Learners.—Newton's *Astronomia Britannica*, published in 1687; and Street's *Astronomia Carolina*, in 1661; both upon Ward's Hypothesis.

In Ricciolus's *Almagestum Magnum*, published in 1651, we have the several Hypotheses of all the *Astronomers*, ancient as well as modern.—And in Dr. Gregory's *Elementa Astronomia Physicæ & Geometricæ*, in 1702, the whole modern *Astronomy*, as founded on the Discoveries of Copernicus, Kepler, and Sir Isaac Newton.—The Marrow of the new *Astronomy* is also laid down by Whiston, in his *Prælectio Astronomicæ*, in 1707.—For Novices in the Art, Mercator's *Institutiones Astronomicæ*, published in 1676; which contains the whole Doctrine, both according to the Antients and Moderns; and Dr. Keill's *Introductio ad Veram Astronomicam*, in 1718, which only takes in the Modern, are the best calculatour.

ASTRONOMICAL, something that relates to *Astronomy*. See ASTRONOMY.

ASTRONOMICAL Observations. See CELESTIAL Observations.

The *Astronomical Observations* of the Antients, among which those of Hipparchus make a principal Figure, are preserv'd by Ptolemy in his *Almagest*. See ALMAGEST.

In the Year 880, Albategnius, a Saracen, apply'd himself to the making of Observations: In 1457, Regiomontanus undertook the Province at Norimberg; and his Disciples J. Wernerus, and Ber. Walbersen, continued the same from 1475 to 1504. Their Observations were published together in 1544.—In 1509, Copernicus, and after him the Landgrave of Hesse, with his Assistants Rothmannus and Birgerus, observed; and after them Tycho, at Uraniburg, from 1582 to 1601.—All the Observations hitherto rehear'd, together with Tycho's Apparatus of Instruments, are contain'd in the *Historia Cælestis*, published in 1672, by Order of the Emperor Ferdinand.—Soon after, Hevelius, with a still more magnificent and better contriv'd Apparatus of Instruments, describ'd in his *Machina Cælestis*, began a Course of Observations. It is objected to him that he only us'd plain Sights, and could never be brought to take the Advantage of Telescopick ones; which occasion'd Dr. Hook to write Animadversions on Hevelius's Instruments, printed in 1674; wherein he disputes them on account of their Inaccuracy: But Dr. Halley, who at the Instance of the Royal Society went over to Danzig in the Year 1679, to inspect his Instruments; approv'd of their Justness, as well as of the Observations made with them.

Jer. Horrox, and Will. Crabtree, two of our own Countrymen, are famous for their Observations from the Years 1635 to 1645.—They were followed by Flamsted, Cassini the Father and Son, Halley, de la Hire, Roemer, and Kerschus.—See further under the Article OBSERVATORY, CATALOGUE, &c.

ASTRONOMICAL YEAR.
ASTRONOMICAL CHARACTERS, &c.

ASTRONOMICAL Place, of a Star or Planet, is its Longitude, or Place in the Ecliptick reckon'd from the beginning *Aries*, in Consequence, or according to the natural Order of the Signs. See PLACE, LONGITUDE, &c.

ASTRONOMICAL Time. See ASTRONOMICAL TIME.
ASTRONOMICALS, a Name used by some Writers for Sexagesimal Fractions; on account of their use in *Astronomical Calculations*. See SEXAGESIMAL.

ASYLUM, or AZYLUM, a Sanctuary, or Place of Refuge and Protection, where a Criminal who shelters himself is deem'd inviolable, and not to be touch'd by any Officer of Justice. See REFUGE, PRIVILEGE, &c.

The Word *Asylum* is Latin: *Servus* derives it from the Greek *ἀστυ*; which is compounded of the privative Particle *α*, and *αστυ*, I take out, I drive, because no Person could be taken out of an *Asylum* without Sacrilege. See SACRILEGE.

The first *Asylum* were establish'd at Athens, by the Deicides of Hercules, to shelter themselves from the fury of his Enemies. See HERACLES.

The AIRS, STONES, and Tombs of Hero's, were, antiently, the ordinary Retreat of those who found themselves griev'd by the Rigour of the Laws, or oppress'd by the Violence of Tyrants; But of all others, Temples were held the most sacred and inviolable Refuge. It was suppos'd that the Gods took upon them to punish the Criminal who thus threw himself upon them; and it had been a great Imperty in Man to take Vengeance out of the Hands of the Immortals. See ALTAR, TEMPLE, TOMB, STATUE, &c.

The Israelites had their Cities of Refuge, which were of God's own Appointment; where the Guilty, who had not committed any detestable Crime, found Safety and Protection.—As to the Heathens, they allow'd Refuge and Impunity, even to the vilest and most flagrant Offenders for the sake of peopling their Cities; and it was by this means, and with such Inhabitants, that Thebes, Athens, and Rome, were first bro'th'd.—We even read of *Asylums* at Lyons and Venus among the antient Gauls; and there are some Cities in Germany which still preserve the antient right of *Asylum*.

Hence, on the Medals of several antient Cities, particularly in Syria, we meet the Inscription, *ΑΣΥΛΑΚΑ*, to which is added, *ΙΕΡΑΙ*. For Instance, ΤΥΡΟΥ ΙΕΡΑΕ ΚΑΙ ΑΣΥΛΟΕ ΣΕΒΑΣΤΩΝΟΣ ΙΕΡΑΕ ΚΑΙ ΑΣΥΛΟΕ.— This Quality of *Asylum* was given them, according to M. Sparacinus, in regard of their Temples, and of the Gods rever'd by them.

The same Qualities has also been given to Cities: Thus *Diana* of Ephesus is call'd *ασυλος*—Add, that the Camp form'd by *Romulus* and *Remus*, and which afterwards became a City, was first call'd *Asylum*; and a Temple was therein erect'd to the God *Asylum*, *Ουσι δρωμεν*.

The Emperors *Honorius* and *Theodosius* granting their Immunities to Church-yards, the Bishops and Monks laid hold of a certain Tract or Territory, without which they fix'd the Bounds of the Secular Jurisdiction: And so well did they manage their Privileges, that Convents, in a little time, became next a-kin to Fortresses; where the most glaring Villains were in Safety, and brav'd the Power of the Magistrate. See CHURCH-TARD.

These Privileges, at length, were extend'd not only to the Church-yards, but also to the Bishop's Houses, whence the Criminal could not be removed without a legal Assurance of Life, and an entire Remission of the Crime.—The Reason of the Extension was, that they might not be oblig'd to live altogether in the Churches, &c. where several of the Occasions of Life could not be decently done.

But, at length, the *Asyla*, or Sanctuaries, were strip'd of most of their Immunities, in regard they serv'd to make Guilt and Libertinage more daring and bold-faced. In England, particularly, they were entirely abolished. See the Article SANCTUARY.

ASYMMETRY, *ASYMMETRIA*, a want of Symmetry or Proportion. See SYMMETRY.

In Mathematics, the Term is particularly us'd for what we more usually call *Incommensurability*; which is when between two Quantities there is no common Measure: As, between the Side, and Diagonal of a Square.—In Numbers, *hard Roots*, as $\sqrt{2}$, &c. are incommensurable to rational Numbers. See INCOMMENSURABLE, SQUARE, SURD, &c.

The Word is derived from the privative Particle *α*, *ει*, and *μετρον*, *q. d.* without Measure.

ASYMPTOTE, in Geometry, a Line which continually approaches nearer and nearer to another, yet will never meet therein, though indefinitely prolonged. See LINE.

The Word is compounded of the privative Particle *α*, *ων*, with, and *σμιω*, I fill; *q. d.* Inconspicuous, or which never meet.—Some Latin Authors call them *Tutatae*.

Asymptotes gives us divers sorts of *Asymptotes*; some Straight, others Curve; some CONCAVE, others CONVEX, &c. and further, propos'd an Instrument to describe them without.—Though, in strictness, the Term *Asymptotes* seems appropriated to right Lines.

Asymptotes, then, are properly right Lines, which approach nearer and nearer to some Curve, of which they are said to be the *Asymptotes*; but which, though they and their Curves, were indefinitely continued, would never meet. See CURVE.

Asymptotes may be conceiv'd as Tangents to their Curves at an infinite Distance. See TANGENT.

Two Curves are also said to be *Asymptotical*, when they thus continually approach, without a possibility of meeting.—Thus two Parabolas, whose Axes are in the same right Line, are *Asymptotical* to one another.

Of Curves of the second Kind, that is, the Conick Sections, only the Hyperbola has *Asymptotes*, which are two in Number. All Curves of the third Kind have at least one *Asymptote*, but they may have three; and all Curves of the fourth Kind may have four *Asymptotes*. See CURVE of higher Kind.

The Conchoid, Cliffoid, and Logarithmic Curve, though not reputed Geometrical Curves, have each also one *Asymptote*. See MECHANICAL TRANSCENDENTAL, &c.

ASYMPTOTES of the Conchoid.—The Nature of *Asymptotes* will be easily conceived in the Instance of the *Asymptote* of a Conchoid.—Suppose MMAM, &c. (Tab. Analysis, Fig. 1.) be a Part of a Conchoid, C its Pole, and the right Line BQ, so drawn that the Parts QM, EA, OM, &c. of right Lines drawn from the Pole C, are equal to each other: Then will the Line BD be an *Asymptote* of the Curve: Because the Perpendicular ML, &c. is shorter than MO, and MR than MQ, &c. so that the two Lines continually approach; yet the Points M, &c. and R, can never coincide, in regard there is still a Portion of a Line to keep them asunder; which Portion of a Line is infinitely divisible, and consequently must be diminish'd infinitely ere it become nothing. See DIVISIBILITY, INFINITE, &c. See also CONCHOID.

ASYMPTOTES of the Hyperbola are thus described.—Suppose a right Line DE (Tab. Conicks, Fig. 20.) drawn through the Vertex A of the Hyperbola, parallel to the Ordinates MM, and equal to the Conjugate Axes, viz. the Part DA, and that AE to the Semi-axis: Then, two right Lines drawn from the Centre C, of the Hyperbola, through the Points D and E; viz. the right Lines CF and CG, are *Asymptotes* of the Curve.

For the Properties of the *ASYMPTOTES* of a Hyperbola, see HYPERBOLA.

If the Hyperbola GMR, Fig. 12. be of any kind whose Nature with regard to the Curve and its *Asymptotes*, is express'd, by this general Equation $x^m y^n = ax^m + b$; and the right Line PM be drawn any where Parallel to the *Asymptote* CS, and the Parallelogram PCOM, be completed: This Parallelogram is to the hyperbolic Space PMGB, contained under the determinate Line PM, the Curve of the Hyperbola GM indefinitely continued towards G, and the Part PB of the *Asymptote* indefinitely continued the same way, as $m - n$ is to n : And so if m be greater than n , the said Space is squareable; but when $m = n$, as it will be in the common Hyperbola, the Ratio of the foregoing Parallelogram to that Space is as 0 to 1; that is, the Space is infinitely greater than the Parallelogram, and so cannot be had: And when m is less than n , the Parallelogram will be to the Space, as a negative Number to a positive one, and the said Space is squareable, and the Solid generated by the revolving of the indeterminate Space GMOL about the *Asymptote* CE, is double of the Cylinder generated by the Motion of the Parallelogram PCOM about the Axis CO.

ASYMPTOTE of a Logarithmic Curve.—If MS be the Logarithmic Curve, PR an *Asymptote*, PT the Subtangent, and MP an Ordinate; then will the indeterminate Space RPMS = PM + PT; and the Solid, generated by the Rotation of this Curve about the *Asymptote* VP, will be $\frac{1}{2}$ of a Cylinder, whose Altitude is equal to the Length of the Subtangent, and the Semidiameter of the Base equal to the Ordinate QV. See LOGARITHMIC.

ASYMPTOTIC Spaces. See HYPERBOLA.

ASYNDETON, a Figure in Grammar, implying a defect or want of Conjunctions in a Sentence. See FIGURE and CONJUNCTION.

As, in the Instance, *Veni, Vidi, Vici*, I came, I saw, I conquer'd; where the Copulative *et*, and, is omitted.

The Word is derived from the privative α , and *synō*, colligo, bind together.

Asyndeton stands oppos'd to *Polyssyndeton*. See POLYSSYNDETON.

ATAMADULET, the first Minister in the Persian Empire. See MINISTER.

The *Atamadulet*, or, as Tavernier writes it, *Athemaduleit*; and Saufen, *Esmaduleit*, is much the same with the Grand Visier in Turkey; excepting that he has not the Command of the Army, which the Visier has. See VISIER.

The *Atamadulet* is Great Chancellor of the Kingdom, President of the Council, Superintendent of the Finances; and has the Charge of all Foreign Affairs.—The *Atamadulet* is in effect Vice-Roy of the Kingdom: He issues the King's Mandates, or Orders, in this Style, *Beude derza Ali ibi alia Esmaduleit*; that is, I who am the support of the Powers, the Creature of this Part, the highest of all Parts, &c.

The Word is Arabic, compounded of *Itimade* and *daulet*, that is, the Trust of Majesty, or according to Tavernier, the Support of Riches.

ATARAXY, ATARAXIA, a Term much used by the Stoicks, to denote that calmness and tranquillity of Mind, and that firmness of Judgment which sets us free from any Agitations or Emotions arising from Self-Opinion, and the Knowledge we imagine our selves possess'd of. See STOICKS.

In this *Ataraxy*, they supposed the sovereign Good to consist. See GOOD.

The Word is purely Greek, compounded of $\alpha\tau\alpha\chi\eta$ and $\tau\alpha\beta\eta$, Order. See ATAXY.

ATAXY, ATAXIA, a want of Order or Regularity.—The Term is chiefly used in Medicine, where the Order of the Critical Days, or other Phenomena of a Disease, is inverted. See CRITICAL, &c.

The Physicians have frequent recourse to an *Ataxy* or Irregularity of the Spirit, when at a loss to account for any Disorder in the Body. The Spirit, Dr. Drake observes, being always at Hand, are forced to bear the blame of a thousand things they are innocent of. See SPIRIT.

The Word is compounded of the privative α , and $\tau\alpha\beta\eta$, Order.

ATCIEVEMENT, in Heraldry, the Coat of Arms of any Person or Family, duly marshall'd with its external Ornaments, as Supporters, Helms, Crests, and Mottoes. See COAT and ARMS. See also SUPPORTER, HELMET, &c.

Such are usually hung out on the Fronts of Houses after the Death of some considerable Person; and are now corruptly called *Hatchments*.

The Word is form'd of the French, *Achevement*, finishing, Consummation, Perfection.

ATELLANÆ, or ATTELLANÆ, in Antiquity, a kind of comic and satyrical Pieces, performed on the Roman Theatre; somewhat less ludicrous than the Farces on the English Stage, and yet less grave and serious than the Greek or Latin Comedies and Tragedies. See COMEDY, TRAGEDY, SCENE, &c.

The *Atellane*, or *Fabula Atellanæ* of the Romans, answer'd to the *Satyræ* among the Greeks. See SATYR, FABLE, &c.

They were thus called from *Atella*, or *Atelina*, a City of Tuscany, where they were first represented.

They became so licentious and impudent, that the Senate was at length obliged to suppress them. See SCENE.

ATHANASIAN Creed. See CREED, TRINITY, &c.

ATHANASIANÆ, See ARIANS and ARJANISM.

ATHANATI, an Order of Soldiers among the ancient Persians.—The Word is originally Greek, and signifies immortal; being compounded of the privative α , and *θανatos*, Death.

The *Athanasæ* were a Body of Cavalry, consisting of ten thousand Men, always complete, because, when any one of 'em died, another was immediately put into his Place.—It was for this Reason that they were call'd *Athanasæ*, or *immortals*.

ATHANOR, in Chymistry, a large immovable Furnace, built of Brick or Earth, and cover'd with a Tower a-top; proper to maintain a temperate and equable Degree of Heat for a considerable time. See FURNACE, HEAT, &c.

The Heat of the *Athanos* is intended or regulated by opening or shutting a Register. See REGISTER.

It is made to communicate its Heat by Tubes or Apertures at the Side of the Hearth or Fire-Place, to several adjacent Vessels; by which means different Operations are carry'd on at the same time.—We meet with divers Forms and Contrivances of this Furnace, in the Writers of Chymistry.

The *Athanos* is also call'd *Paganæ Henrica*, flow Harry; because chiefly used in the flower Operation; and because when once filled with Coals, it keeps burning a long time; whence the Greeks call it *mesōs*, *q. d.* giving us trouble, as it does need to be continually attended.—It is also call'd the *Philosophical Furnace*, or *Furnace of Arcana*; and popularly, the *Tower Furnace*.

The Word *Athanos* is borrowed from the Arabi, who call an Oven, *Tannour* from the Hebrew *תנור*, *Tannour*, an Oven, or Furnace; whence, with the additional Particle *אל*, *אלתנור*, *Al-tannour*, &c.—Others chuse to derive the Name from the Greek *athanos*, Immortal; because of its durable Fire.

ATHEIST, ATHEUS, a Person who denies the Deity; who does not believe the Existence of a God, nor a Providence; and who has no Religion, true nor false. See GOD, PROVIDENCE, RELIGION.

In general, a Man is said to be an *Atheist* who owns no Being superior to Nature, that is, to Men and the other sensible Beings in the World. See NATURE.

In this Sense, *Spinoza* may be said to be an *Atheist*; and it is an Impropriety to rank him, as the learned commonly do, among *Deists*; since he allows of no other God beside Nature, of which Mankind makes a Part; and there is no *Atheist* but allows of the Existence of the World, and of his own in particular. See SPINOZISM. See also EXISTENCE, SUBSTANCE, &c.

Plato distinguishes three kinds of *Atheists*.—Some, who deny absolutely that there are any Gods; others who allow the Existence of Gods, but maintain that they don't concern themselves with human Affairs, and so deny a Providence; and others, who believe there are Gods, but think they are easily appeas'd with a little Prayer, or the like; and that they remit the greatest Crimes for the smallest Supplication. See EPICUREAN, &c.

The Word *Atheist* is derived from the privative α , and *θεός*, God.

ATHENÆA, a Feast of the ancient Greeks, held in Honour of *Athenus*, who was call'd *Athen*. See FEAST.

These were afterwards call'd *Panathenæa*. See PANATHENÆA.

ATHENÆUM, in Antiquity, a publick Place wherein the Professors of the liberal Arts held their Assemblies, the Rhetoricians declaimed, and the Poets rehear'd their Verses.

The *Athenae* were built in form of Amphitheatres; and were also incompar'd with Seats, which *Sidonius* calls *Conci.* See AMPHITHEATRE.

The two most celebrated *Athenae* were that of *Rome*, and that at *Lince*; the former of which, according to *Aurelius Victor*, was built by the Emperor *Adrian*.

The Word is *Greek*, and is derived from *Athena*, a learned City, where many of these Assemblies were held; or from the *Greek* Name of *Pallas*, *Athena*, Goddess of Science; intimating that *Athenae* was a Place consecrated to *Pallas*, or set apart for the Exercises over which she presides.

ATHEROMA, in Medicine, a Kind of a Tumor or Swelling, of a puffy Consistence, without pain, or discolouring the Skin. See TUMOR.

The *Atheroma* is contain'd in a Cystis or membranous Bag; and does not give way when touched with the Finger, nor retains any dent after pressure.

The *Atheroma* is thus call'd from the *Greek* *athra*, a Kind of Pap or Pulp which the Matter of this Tumor resembles.—It is near a kin to the *Milkeris* and *Stenosis*; and cured like them. See MELKERIS and STENOSIS.

ATHLETA, is Antiquity, a Wrestler, or a strong courageous Person, who employs himself in Exercises of the Body, as running, wrestling, and other like Gymnic Sports, for which the Ancients had established Prizes. See EXERCISE and GYMNASTIC. See also GAME, CIRCUS, &c.

The *Athlete* lived in continual Abstinence from Pleasures, to render themselves the more vigorous and robust. See ABSTINENCE.

The Word comes from the *Greek* *athlos*, of *athlos*, *eris*, pugna, I contend, I fight. See COMBAT, GLADIATOR, &c.

ATIA. See ODO and ATIA.

ATLANTIS, or ATLANTICA, in Antiquity, an Island spoke of by *Plato* and other Writers, under some extraordinary Circumstances; and render'd famous by a Controversy among the Moderns about it.

The most distinct Account of this celebrated Place, is given us in *Plato's Timaeus*, and *Critias*; which amounts, in a few Words, to what follows.—“The *Atlantis* was a large Island in the Western Ocean, situate before, or opposite to, the Straights of *Gibraltar*. Out of this Island there was an easy Passage into some others, which by near a large Continent exceeding all *Europe* and *Africa*. *Nephtus* settled in this Island, which he distributed among his ten Sons; to the youngest fell the extremity of the Island call'd *Gades*, which in the Language of the Country signifies *Esposus*, Fertile, or abundant in Sheep. The *Descendants* of *Nephtus* reigned here from Father to Son, for a great Number of Generations, in the Order of Primogeniture. They also possessed several other Islands; and passing into *Europe* and *Africa*, subdued all *Libya* as far as *Egypt*, and all *Europe* to *Alia Minor*. At length the Island sunk under Water; and for a long Time afterwards, the Sea thereabouts was full of Flats and Shelves.

The learned *Roadbeck*, Professor in the University of *Upsal*, in an express Treatise intitled, *Atlantis sive Maboens*, maintains, very freely, that *Plato's Atlantis* is *Scandis*; and attributes to his Country, whatever the Ancients have said of the *Atlantis*, or *Atlantic Island*.—After the little Abridgment we have given of *Plato's* Account, the Reader will be surpris'd to find *Saxons* taken for the *Atlantis*; and accordingly tho' *Roadbeck's* Work be full of uncommon Erudition, the Author passes for a Visionary in this Point.

Others will have *America* to be the *Atlantis*; and hence infer, that the *new World* was not unknown to the Ancients: But what *Plato* says, does by no means quadrate thereto.—*America* should rather seem to be the vast Continent beyond the *Atlantis*, and the other Islands mentioned by *Plato*.

Beacon, in his *History of Islands*, Cap. 5. advances a much more probable Opinion than that of *Roadbeck's*.—The *Atlantis*, according to him, was a large Island extended from the *Canaries* to the *Azores*; and these Islands are the Remains thereof not swallowed up by the Sea.

The *Atlantis* took its Name from *Atlas*, *Nephtus's* eldest Son, who succeeded his Father in the Government thereof.

ATLANTIDES, among the Poets. See VERGILIA.

ATLAS, in Architecture, is a Name given to those Figures, or Half-Figures of Men, so much used instead of Columns, or Pilasters; to support any Member of Architecture, as a Balcony, or the like. See COLUMN, &c.

These are otherwise call'd *Telamones*. See TELAMON.

ATLAS, in Anatomy, the Name of the first *Vertebra* of the Neck, which supports the Head. See VERTEBRA and NECK.

It is so call'd in allusion to the celebrated Mountain *Atlas*, in *Africa*, which is so high, that it seems to bear the Heavens; and to the Fable, in which, *Atlas*, the King of this Country is said to bear the Heavens on his Shoulders.

The *Atlas* has no spiny *Apophyses*; because the Motions of the Head don't turn on this *Vertebra*, but on the second. As it is oblig'd to turn about as often as the Head moves round, had there been any spiny *Apophyses*, it would have incommoded the Motion of the Muscles in the Extension of the Head.—It is also

of a finer and firmer Texture than the other *Vertebrae*; and it differs further from them in that those receive at one End, and send received at the other, whereas this receives at both Extremities; for two Eminences of the Occiput are inserted within its two upper Cavities, which makes its Articulation with the Head; and at the same time, two other Eminences of the second *Vertebrae* are received within its two lower Cavities; by means of which they are articulated together.

ATLAS is also a Title given to Books of universal Geography, containing Maps of the known Parts of the World; as if they were view'd from the Top of that celebrated Mountain, which the Ancients esteem'd the highest in the World; or rather on Account of their holding the whole World like *Atlas*.

We have also *Atlas's* of particular Parts, See *Atlas's*, &c.—The first Work under this Denomination was the *Great Atlas* of *Blaeu*.

ATMOSPHERE, ATMOSPHERA, an Appellative of our Earth; consisting of a thin, fluid, elastic Substance, call'd *Aer*, surrounding the Terraqueous Globe, to a considerable Height. See EARTH.

By *Atmosphere* is usually understood the whole Mass, or Assemblage of ambient Air; Though, among the more accurate Writers, the *Atmosphere* is restrain'd to that Part of the Air next the Earth, which receives Vapours and Exhalations; and is terminated by the Refraction of the Sun's Light. See REFRACTION.

The further or higher Spaces, though perhaps not wholly destitute of Air, are supposed to be possess'd by a finer Substance call'd *Aether*; and are hence denominated the *Aetherial Region*, or Space. See AETHER, HEAVEN, &c.

A late eminent Author considers the *Atmosphere* as a large Chymical Vessel, wherein the Master of all the Kinds of Solubility Bodies is copiously floating; and thus expos'd to the continual Action of that immense Furnace the Sun; whence innumerable Operations, Sublimations, Separations, Compositions, Digestions, Fermentations, Purifications, &c. See CHEMISTRY.

For the Nature, Constitution, Properties, Uses, Diversities, &c. of the ATMOSPHERE, see the Article AIR.

We have a large Apparatus of Instruments, contriv'd for indicating and measuring the State and Alterations of the *Atmosphere*; as, *Barometers*, *Thermometers*, *Hygrometers*, *Manometers*, *Anemometers*, &c. see each under its proper Article. BAROMETRE, THERMOMETRE, HYGROMETRE, &c.

The *Atmosphere* intimates itself into all the Vacuities of Bodies; and thus becomes the great Spring of most of the Mutations here below; as Generation, Corruption, Dissolution, &c. See GENERATION, CORRUPTION, DISSOLUTION, &c.

'Tis one of the great Discoveries of the modern Philosophers, that the several Motions attributed by the Ancients to a *Æger-æther*, are really owing to the Pressure of the *Atmosphere*. See FUGA-VACII, PUMP, PRESSURE, &c.

Weight of the ATMOSPHERE.

Organical Bodies are peculiarly affected by this Pressure: To this, Plants owe their Vegetation; and Animals their Respiration, Circulation, Nutrition, &c. See PLANT, ANIMAL, VEGETATION, CIRCULATION, &c.

To this also we owe several considerable Alterations in the animal Economy, with regard to Health, Life, Disease, &c. See HEALTH, &c.

And hence, a Calculus of the precise Quantity of this Pressure, becomes a Point worthy of Attention.

Our Bodies, then, are equally press'd on by the incumbent *Atmosphere*; and the Weight they sustain is equal to a Cylinder of *Air*, whose Base is equal to the Superficies of our Bodies.—Now, a Cylinder of *Air* of the Height of the *Atmosphere*, is equal to a Cylinder of *Water* of the same Base, and 35 Foot high; or a Cylinder of *Mercury*, 29 Inches high; as appears from the Torricellian Experiments; as also from the Height to which *Water* ascends in Pumps, Syphons, &c. See TORICELLIAN. See also PUMP, SYPHON, &c.

Hence it follows, that every Foot square of the Superficies of our Bodies, is press'd upon by a Weight of *Air* equal to 35 cubical Feet of *Water*; and a cubical Foot of *Water*, being found, by Experiment to weigh 76 Pound Troy Weight, therefore the Compu't of a Foot square upon the Superficies of our Bodies, sustains a quantity of *Air* equal to 2660 Pound: For $76 \times 35 = 2660$; and so many Foot square as the Superficies of our Body contains, so many times 2660 Pound does that Body bear.

Hence, if the Superficies of a Man's Body, contain 15 square Feet, which is pretty near the Truth, he will sustain a Weight equal to 39900 Pound, for $2660 \times 15 = 39900$, which is above 13 Tun for the ordinary Load.

The Difference of the Weight of the *Air* which our Bodies sustain at one time more than at another, is also very great.—The whole Weight of *Air* which presses upon our Bodies when the *Mercury* is highest in the Barometer, is equal to 39900 Pounds. Whence, the Difference between the greatest and the least pressure of *Air* upon our Bodies, may be prov'd to be equal to 3982 Pounds.

The Difference of the Air's Weight, at different times, is measur'd by the different Height to which the Mercury is rais'd in the Barometer; and the greatest Variation of the Height of the Mercury being 3 Inches, a Column of Air of any assignable Base equal to the Weight of a Cylinder of Mercury of the same Base, and of the Altitude of three Inches, will be taken off from the Preflure upon a Body of an equal Base, at such times as the Mercury is three Inches lower in the Barometer; so that every Inch square of the Surface of our Bodies, is prefl'd upon at one time more than another, by a Weight of Air equal to the Weight of 3 cubical Inches of Mercury.—Now a cubical Foot of Water being 76 Pound; a cubical Foot of Mercury must be 1064 Pound = 102144 Drams: And as 102144 Drams is to a cubical Foot, so, which is all one, 1728 cubical Inches, so is $\frac{192}{1728}$

Drams, to one cubical Inch. So that a cubical Inch of Mercury being very near = 59 Drams; and there being 144 square Inches in a Foot square, therefore a Mass of Mercury of a Foot square, = 144 square Inches; and if three Inches high, must contain 432 cubical Inches of Mercury, which x 59 (the Number of Drams in a cubical Inch of Mercury) makes 25488 Drams.—And this Weight does a Foot square of the Surfaces of our Bodies, sustain at one time more than at another.

Suppose again, the Superficies of a human Body = 15 Foot square; then would the Body sustain at one time more than at another, a Weight = $15 \times 25488 = \frac{382120}{8}$ Drams (= $\frac{47790}{12}$ Ounces) = 3982 $\frac{1}{2}$ Pound Troy.

Hence, it is so far from being a wonder that we sometimes suffer in our Health, by a change of Weather; that it is the greatest, we don't always do so.—For when we consider that our Bodies are sometimes prefl'd upon by near a Tun and a half Weight more than at other, and that this Variation is often very sudden; 'tis surprizing that every such Change does not entirely break the Frame of our Bodies to pieces.

In effect, the Vessels of our Bodies being so much strained by an increas'd Preflure, would dissipate the Blood up to the very Heart, and the Circulation would quite cease; if Nature had not wisely contriv'd, that when the Resistance to the circulating Blood is greatest, the Impetus, by which the Heart contracts, should be so too.—For, upon an increas'd of the Weight of the Air, the Lungs will be more forcibly expanded, and thereby the Blood more intimately broken and divided, so that it becomes finer for the more fluid Secretions, such as that of the nervous Fluid; by which the Heart will be more strongly contracted. And the Blood's Motion towards the Surface of the Body being obstructed, it will pass in greater quantity to the Brain, where the Preflure of the Air is taken off by the Cranium; upon which score also, more Spirits will be separated, and the Heart, on that account too, more enabled to carry on the Circulation, through all passible Canals, whilst some others, towards the Surface, are obstructed. See HEART, CIRCULATION, &c.

The most considerable Alteration made in the Blood, upon the Air's greater or lesser Preflure on the Surface of our Bodies, is its rendering the Blood more or less compact, and making it crowd into a less, or expand into a greater Space, in the Vessels it enters.—For the Air contain'd in the Blood, always keeps it self in Equilibrium with the external Air that presses upon our Bodies; and this it does by a constant Nfius to unhand it self, which is always proportionable to the compressing Weight by which it was hent: So that if the Compression or Weight of the circumambient Air be ever so little abated, the Air contain'd within the Blood unfolds its Springs, and forces the Blood to take up a larger Space than it did before. See BLOOD, HEAT, COLD, &c.

The Reason we are not sensible of this Preflure, is well explained by Borellus, *De mot. nat. à Grav. fac. prop. 29. &c.*—After shewing that Sand perfectly rammed in a hard Vessel is not capable by any means of being penetrated or parted, not even by a Wedge; and likewise that Water contained in a Bladder compressed equally on all Sides, cannot yield or give way in any Part: He proceeds, “ In like manner, within the Skin of an Animal “ are contained a diversity of Parts, some hard, as Bones; others “ soft, as Muscles, Nerves, Membranes, &c. others fluid, as “ Blood, Fat, &c. Now 'tis not possible the Bones should be “ broke or displaced in the Body, unless the Weight lay heavier “ on one Part than another, as we sometimes see in Posters. “ If the Preflure be subdivided, so that it lay equally all around, “ upwards, downwards, and sideways, and no Part of the Skin “ is exempt therefrom, it is evidently impossible any Fracture “ or Luxation should follow. The same may be observed of the “ Muscles and Nerves; which, though soft, yet being composed “ of solid Fibres do mutually sustain each other, and resist “ the common Weight. The same holds of Blood, and the other “ Humours; and as Water does not admit any manifest “ Condensation, so the Animal Humours contained in their Vessels may suffer an Attrition from an impulse made in one or “ more particular Places; but can never be forced out of their “ Vessels by a universal Compression.—It follows, that as none “ of the Parts undergo either Separation, Luxation, Contusion, or “ any other Change of Situation; 'tis impossible any Sense of Pain

“ should ensue, which can only be the effect of a Solution of Conti-
“ nuity.” This is confirmed by what we see in Divers, &c. See DIVING.

The same is farther confirmed by Mr. Boyle; who including a young Frog in a Vessel half full of Water, and intruding so much Air as that the Water must sustain eight times the Weight it otherwise would; yet the Animalcule, notwithstanding the great tenderness of its Skin, did not seem to be at all affected thereby.

For the Effects of the Removal of the Preflure of the Atmosphere, see AIR-PUMP.

For the Cause of the Variations in the Weight and Preflure of the Atmosphere, see BAROMETER.

Height of the ATMOSPHERE.

The Height of the Atmosphere is a Point about which the modern Naturalists have been very follicious.—Had not the Air an elastic Power, but were every where of the same Density, from the Surface of the Earth to the extreme Limit of the Atmosphere, like Water, which is equally Dense at all Depths; it being above observed that the Weight of the Column of Air reaching to the Top of the Atmosphere is equal to the Weight of the Mercury contained in the Barometer; and the Proportion of Weight likewise being known between equal bulks of Air and Mercury; it were easy to find the Height of such Columns, and consequently of the Atmosphere it self.—For a Column of Air one Inch high, being to an equal Column of Mercury, as 1 to 10800; 'tis evident that 10800 such Columns of Air, that is, a Column 900 Foot high, is equal in Weight to one Inch of Mercury: And consequently the 30 Inches of Mercury sustained in the Barometer, require a Column of Air 17000 Foot high, on which footing the Height of the Atmosphere would only be 27000 FOOT, or little more than five English Miles high. See TORRICELLIAN.

But the Air, by its elastic Property, being liable to expand and contract; and it being found by repeated Experiments in England, France, and Italy, that the Spaces it takes up, when compressed by different Weights, are reciprocally proportional to those Weights themselves; or, that the Air takes up the less Space, the more it is prefl'd: It follows, that the Air in the upper Regions of the Atmosphere where the Weight is so much less, must be much rarer than nearer the Surface of the Earth; and consequently that the Height of the Atmosphere must be much higher than is above assign'd.

If we suppose the Height of the whole Atmosphere divided into innumerable equal Parts; the Density of the Air in each of the said Parts being as its Quantity, and the Weight of the Atmosphere being also as the Quantity of the whole incumbent Air; 'tis evident the Weight of the incumbent Air is every where as the Quantity of Air contained in the adjacent Part, which makes a Difference between each two contiguous Parts of incumbent Air.—Now, we have a Theorem in Geometry, that where the Differences of Magnitudes are geometricaly proportionable to the Magnitudes themselves, those Magnitudes are in continual Arithmetical Proportion: Wherefore it, according to the Supposition, the Altitude of the Air by the continual Addition of the new Parts into which it is divided, do increase in a continual Arithmetical Proportion; its Density will be diminished, or which amounts to the same, its Gravity increased, in continual Geometrical Proportion.

From such a Series it is easy by making two or three Barometrical Observations of the Rarity of the Air at two or three different Heights; to find its Rarity at any other Height, or the Height corresponding to any Rarity; and consequently the Altitude of the whole Atmosphere, supposing the utmost Degree of Rarity known beyond which the Air cannot go. See the Articles BAROMETER, SERIES, PROGRESSION, &c. See also Greg. Astron. Phys. Geom. Leg. 5. Prop. 3. and Halley in Philosoph. Transact. N^o. 181.

It must not be here omitted, that some Observations made by Cassini and his Associates, seem to render this Method precarious.—In continuing the Meridian Line of the Observatory at Paris, they measured the Meridians of several Mountains with great accuracy; noting the Height of the Barometer at the Top of each; and found, that the Rarities of the Air as you ascend from the Level of the Earth, are much greater than they ought to be, according to this Proportion.

Suspecting, therefore, the justness of the Experiments, the Royal Academy made divers others, under great Diligences of Air, far exceeding the Rarities found on the Tops of the Mountains; the Result whereof was, that they all exactly answered the Proportion of the incumbent Weights. Whence it should follow, that the higher Air about the Tops of Mountains, is of a different Nature, and observes a different Law from that near the Earth.

The Reason hereof may be owing to the great Quantity of gross Vapours and Exhalations here, more than there; which Vapours being less Elastic and not capable of so much Rarefaction as the pure Air above: The Rarefactions of the pure Air increase in a greater Ratio than the Weights diminish.—M. Fontenelle, however, from some Experiments of M. de la Hire, accounts for the Phenomenon in a different Manner; alleging, that the elastic

fic Power of Air is increased by the admixture of Humidity therewith; and consequently, that the Air near the Tops of Mountains, being moister than that below, becomes thereby more Elastic, and rarifies in a greater Ratio than naturally and in a drier State it would.—But Dr. *Jurins* shews, that the Experiments produced to support this System, are by no means conclusive. *Append. ad Varco. Geograph.*

Be this as it will, the Rarities of the Air at different Heights proving not to bear any constant Proportion to the Weights wherewith they are press'd; Experiments made with Barometers at the Feet and Tops of Mountains, cannot give the Height of the Atmosphere; since our Observations are all made near the Earth; whereas the greater Part of the Atmosphere is far beyond; and the farther from us, the farther does it seem to recede from the Nature and Laws of ours.—M. *de la Hire*, therefore, after *Kepler*, has recourse to a more simple and secure Way of ascertaining the Height of the Atmosphere; viz. from the consideration of the Crepuscules.

'Tis allow'd by Astronomers, that when the Sun is 18° below the Horizon, we begin or cease to see the Twilight: Now the Ray wherewith we do it, can be no other than a horizontal Line, or a Tangent to the Earth in the Place where the Observer is. But this Ray cannot come directly from the Sun, which is under the Horizon; and must therefore be a Ray reflected to us by the last inner and concave Surface of the Atmosphere. We are to suppose that the Sun when 18° below the Horizon, emits a Ray which is a Tangent to the Earth, and strikes upon this last Surface of the Atmosphere, and is thence reflected to our Eye, being still a Tangent, and horizontal.—It there were no Atmosphere, there would be no Crepusculum; and consequently if the Atmosphere were not so high as it is, the Crepusculum would begin and end when the Sun is at a less Distance from the Horizon than 18°. And contrarily.—Hence we gather, that the largeness of the Arch by which the Sun is depress'd when the Crepusculum begins or ends, determines the Height of the Atmosphere. We are to note however, that 32' Minutes must be subtracted from the Arch of 18°, for the Refraction, which raises the Sun so much higher than he would be; and 16' more for the Height of the upper Limb of the Sun, which is supposed to send the Ray, above his Centre, which is supposed to be 18° low. The remaining Arch, therefore, which determines the Height of the Atmosphere, is only 17° 12'.

Two Rays, one direct, and the other reflected, but both Tangents to the Earth, must necessarily meet in the Atmosphere, at the Point of Reflection, and comprehend an Arch between 'em of 17° 12', wherof they are Tangents.—Hence it follows from the Nature of the Circle, that a Line drawn from the Centre of the Earth, and cutting the Arch in two, will go to the Point of Concurrence of those two Rays; and as it is easy finding the excess of this Line over the Semidiameter of the Earth, which is known, 'tis easy to find the Height of the Atmosphere, which is only that excess.—On this Principle M. *de la Hire* discovers the Height of the Atmosphere to be 3722 Fathoms, or near 17 French Leagues. The same Method was made use of by *Kepler*, who only rejected it, because it gave the Height of the Atmosphere 20 times greater than he otherwise allow'd it.

It must be added, that in this Calculus, the direct and reflected Rays are supposed to be right Lines; whereas in fact they are Curves, form'd by the perpetual Refraction the Rays undergo in passing through a Series of different Densities of Air.—Comparing, then, upon them as two similar Curves; or rather as a single Curve, one extreme wherof is a Tangent to the Earth: Its Vertex equally distant from both Extremes, determines the Height of the Atmosphere; which therefore, will be found somewhat lower than in the former Case; the Point of Concurrence of two right Lines, which are here only Tangents to the Curve, the one at one end, and the other at the other; being higher than the Vertex of the Curve. On this footing, M. *de la Hire* finds the Atmosphere 35362 Fathoms, or 16 Leagues. *Hist. de l' Acad. Roy. des Sciences*. An. 1713. See the Articles REFRACTION, CREPUSCULUM &c.

ATMOSPHERES of the Heavenly Bodies.

Lunar Atmosphere.—That the Moon is surrounded, like the Earth, with a changeable Atmosphere, see evinc'd under the Article MOON.

The Reality of the Atmospheres of the other Planets, see also under the Article PLANET.

For the ATMOSPHERES of COMETS, and the Sun, see COMET and SUN.—See also MACULA, TAIL, &c.

ATMOSPHERE of Solid, or consistent Bodies, is a kind of Sphere form'd by the Effluvia, or minute Corporcles emitted from them. See SPHERE and EFFLUVIA.

Mr. Boyle endeavours to shew that all Bodies, even the hardest and most coherent, as Gems, &c. have their Atmospheres. See GEM.—See also MAGNET, MAGNETISM, &c.

ATOM, ATOMUS, in Philosophy, a Corpuscle; or a Part or Particle of Matter too minute as to be indivisible. See CORPUSCLE.

The Word is *Græc.* ἀτομος; form'd of the privative α, and τμω, I cut, I divide.

Atoms are properly the *minima Naturæ*, the last or ultimate Particles into which Bodies are divisible; and are conceived as the first Rudiments, or component Parts of all physical Magnitudes, or the pre-existent and incorruptible Matter wherof Bodies were form'd. See PARTICLES, BODY, &c.

The Notion of Atoms arises hence, that Matter is not divisible, in infinitum. See DIVISIBILITY.

And hence many Authors are led to deny the reality of Atoms, together with that of Mathematical Points: An Atom, say they, either has Parts, or it has none: If it have none, it is a mere Mathematical Point: If it have, then do these Parts also consist of others, and so to Infinity. See CONTINUITY, &c.

But this is to recede from the genuine Character of Atoms, which are not esteem'd indivisible, because of their want of Bigness, or Parts; (for all physical Magnitude must have three Dimensions, Length, Breadth, and Thickness; and all Extension is divisible) but they are indivisible on account of their Solidity, Hæreticity, and Impenetrability, which preclude all Division, and leave no Vacancy for the Admission of any foreign Force to separate or disunite them. See INDIVISIBLE, DIVISIBILITY, EXTENSION, MATTER, &c.

As Atoms are the first Matter, 'tis necessary they shou'd be indivisible, in order to their being incorruptible.—Sir *Isaac Newton* adds, that 'tis also required they be immutable, insofar as the World's continuing in the same State, and Bodies being of the same Nature now as formerly. See HARDNESS.

Hence the Ancients were also led to maintain Atoms, eternal; for that what is immutable must be Eternal. See ETERNITY.

They also added Gravity, and in Consequence thereof, Motion to their Atoms: And further, observing that Atoms thus falling perpendicularly, cou'd not join or unite together, they super-added a fortuitous or side Motion, and furnish'd them with certain hooked Parts, in order to enable them to catch and hang the better together.—And from a casual or fortuitous Jumble of these hamous Atoms, they supposed the whole Univ'rs to be form'd. See GRAVITY, MOTION, HAIMOUS, &c.

ATOMICAL Philosophy, the Doctrine of Atoms; or a Method of accounting for the Origin and Formation of all things, from the Supposition of Atoms, endued with Gravity and Motion. See ATOM, WORLD, &c.

The Atomical Philosophy was first broach'd and taught by *Milesius*, *Leucippus*, and *Democritus*: It was cultivated by *Epicurus*; whence it became also denominated the Epicurean Philosophy. See EPICUREAN.

It has been since adher'd to by *Gassendus*, and others; and is now espous'd and retrieved by a great Part of the philosophical World, under the Denomination of the Corpuscular Philosophy. See CORPUSCULAR Philosophy.

ATONEMENT. See PROPITIATION, SACRIFICE, &c.
ATONY, ATONIA, in Medicine, &c. a want of Tone or Tension; or a Relaxation of the Solids of a human Body; occasioning a loss of Strength, Faintings, &c. See TONE, SOLID, FIBRE, RELAXATION, &c.

The Word is compounded of the privative α, and τωω, tends, I stretch.

ATRABILIS, in the ancient Medicine, black or adust Bile. See BILE and ADUST.

Atrabilis was one of the great Humours of the ancient Physicians; whence arose the *Atrabiliary*, one of their Temperaments; answering to what we call Melancholically. See HUMOUR, TEMPERAMENT, MELANCHOLICALLY, &c.

ATROPHY, ATROPHIA, an Indispotion or Disease, wherein the Body or some of its Parts, do not receive the necessary Nutrimnt, but dwindles or wastes insensibly. See NUTRITION.

Such are what we commonly call *Consumptions*, *Phtisies*, &c. See CONSUMPTION, PHTHISIS, &c.

An Atrophy is natural in old Age, call'd *Atrophia Senilis*. See OLD AGE, DEATH, &c.

The Word is compounded of the privative Particle α, and τρωω, I feed, nourish.

ATTACHING, or ATTACHMENT, in Law, the taking or apprehending a Person or Thing by Commandment or Writ. See COMMANDMENT and WRIT.

The Word is form'd of the French *Attacher*, to fasten, tie; and that from the corrupt Latin *Attachiare*, of *Attexere*, to weave to; or rather from the Celtic *Tach*, a Nail, and *tacho*, to nail.

Lawbard makes this Difference between an Arrest and an Attachment; that an Arrest proceeds out of an inferior Court by Precept, and an Attachment out of a higher Court, by Precept or Writ; and that a Precept to arrest hath these formal Words, *Duci facias*, &c. and a Writ of Attachment these, *Præcipimus tibi quod attaches talem, & habeas eum coram nobis*. See ARREST.

By this it appears, that he who arrests, carries the Party arrested to another higher Person, to be dispos'd of forthwith; whereas he that attaches keeps the Party attached, and presents him in Court at the Day assign'd in the Attachment.

There is this further Difference, that an Arrest lies only upon the Body of a Man; and an Attachment sometimes on his Goods too; for a Man may be attach'd by an hundred Sheep.

ATTACHMENT, by Writ, differs from a Distress in this, that an Attachment does not reach Lands, as a Distress does; and that a

Distrés does not touch the Body, which an *Attachment* does.—Yet the two are frequently confounded together.

In the most common Use, an *Attachment* is an Apprehension of a Man by his Body, to bring him to answer the Action of the Plaintiff.—A Distrés with a Writ, is the taking of a Man; a Distrés without a Writ, is the taking of a Man's Goods for some real Cause, as Rent, Service, &c. See DISTRÉS.

ATTACHMENT out of the Chancery, is had of course, upon an *Affidavit* made that the Defendant was served with a *Subpoena*, and appears not; or if such upon not performing some Order or Decree. See CHANCERY.

After the Return of this *Attachment* by the Sheriff, *quod nos of Innocentus in Balliva sua*; another *Attachment*, with Proclamation, issues; and if he appear not thereupon, a Writ of Rebellion. See REBELLION, &c.

ATTACHMENT of the Forest, is one of the three Courts held in the Forest. See FOREST.

The lowest Court is call'd the *Attachment*, the mean Swanmote, the highest, the Justice in Eyre's Seal. See SWANMOTE, and JUSTICE.

The Court of *Attachments* seems to call'd, because the Verderors of the Forest have therein no other Authority, but to receive the *Attachments* of Offenders against Vert and Venison taken by the rest of the Officers, and to imprison them, that they may be presented or punished at the next Justice Seat.—This *Attachment* is by three means; by Goods and Chattels; by Body, Pledges, and Mainprize; or by Body only.—This Court is held every forty Days throughout the Year.

ATTACHMENT of Privilege, is, by Virtue of a Man's Privilege, to call another to that Court whereto he himself belongs, and in respect whereof he is privileged to answer some Action. See PRIVILEGE.

Foreign *ATTACHMENT*, is an *Attachment* of Goods or Money found within a Liberty or Cuy, to satisfy some Creditor within such City or Liberty.

By the Custom of some Places, particularly London, a Man may attach Money or Goods in the Hands of a Stranger: As, if A. owes B. 10 l. and C. owes A. 10 l. B. may attach the 10 l. in the Hands of C. to satisfy himself.

ATTACHAMENTA Honorum, in our ancient Law Books, denotes a Distrés taken upon the Goods or Chattels of any Person, sued for personal Estate, or Debt, by the legal *Attachiators* or Bailiffs, as a Security to answer the Action.

ATTACHAMENTA de Spiritu & Bosco, signifies an ancient Privilege granted to the Officers of Forests, to take to their own use, Thorns, Bush, and Windfalls, within their own Precincts or Liberties. See FOREST.

ATTACK, an Attempt upon any Person or Thing; or the Act of beginning a Combat, or Dispute. See AGGRESSOR.

ATTACK, in the military Art, is an Attempt or Engagement to force a Post, a Body of Troops, or the like. See ASSAULT.

We say to begin, to make, to sustain an *Attack*, &c. Several Authors have wrote of the Art of *attacking* and *defending*. See DEFENCE.

ATTACK of a Siege, is the Effort made by the Besiegers with Trenches, Mines, Galleries, &c. to make themselves Masters of a Fortress, in *attacking* one of its Sides. See SIEGE, FORTIFICATION, WORK, &c.

Faulty ATTACK, is that which is not vigorously prosecuted; serving only to make a Diversion among the besieged, and to oblige them to divide their Forces, that the true *Attack* may be carried on with greater Success. See FALSE.

To *ATTACK in Flash*, is to *attack* both Sides of the Bastion. See BASTION.

ATTAINER, in Law, is when a Man has committed Felony, or Treason, and Judgment is pass'd upon him. See FELONY and TREASON.

The Children of a Person *attainted* of Treason cannot be Heirs to him, or any other Ancestor; and if he were noble before, his Posteriority are hereby degraded and made baie: Nor can this Corruption of Blood be silv'd but by an Act of Parliament, unless the Judgment be revertd by a Writ of Error. See *ATTAINED*.

Our ancient Laws makes this Difference between *Attainder* and *Conviction*, that a Man was said to be convicted presently upon the Verdict; but not *attainted* till it appeared he was no Clerk, or being a Clerk, and demanded by his Ordinary, could not purge himself. See CLERGY.—add, that *Attainder* is more extensive than *Conviction*; *Conviction* being only by the Jury, and *Attainder* not before Judgment. See CONVICTION.

A Man is *attainted* two ways; by *Appearance*, or by *Process*. *Attainder* by *Appearance*, is either by *Confession*, by *Battel*, or by *Verdict*.—*Confession*, wherof *Attainder* grows, is twofold; one at the Bar before the Judges, when the Prisoner, upon his Indictment read, owns himself guilty, never putting himself on his Jury. The other is before the Coroner, in Sanctuary; where he, upon his Confession, was in former times constrain'd to abjure the Realm, which is also call'd *Attainder* by *Abjuration*. See SANCTUARY and ABJURATION.

Attainder by Battel, is when the Party appeal'd by another, chusing rather to try the Truth by Combat than by Jury, is vanquish'd. See BATTLE, COMBAT, DUEL, &c.

Attainder by Verdict, is when the Prisoner at the Bar answering Not guilty to the Indictment, hath an Inquest of Life and Death pass'd on him, and is by the Verdict of the Jury pronounced Guilty. See INQUEST.

Attainder by Process, otherwise call'd *Attainder by Default*, or *Attainder by Outlawry*, is where a Party files, or does not appear after being five times publicly call'd in the County-Court, and at last, upon his Default, pronounced, or returned outlaw'd. See OUTLAWRY.

Bill of ATTAINER, is a Bill brought into Parliament, for *attaining*, condemning, and executing a Person for High-Treason. See BILL, PARLIAMENT, TREASON, &c.

ATTAIN, *ATTINGAL*, in Law, a Writ which lies after Judgment, against a Jury that hath given a false Verdict in any Court of Record; by the Action real or personal, if the Debt or Damages exceed 40s. See JURY and VERDICT.

If the Verdict be found false, the Judgment anciently was, that the jurors Meadows should be plough'd up, their Houses broken down, their Woods grubbed up, and their Lands and Tenements forfeited to the King.

If it pass against him that brought, that *Attains*, he shall be imprisoned, and generally ransom'd at the King's Will.

ATTAINED, in Law, is used for a Person found guilty of some Crime or Offence, particularly of Felony or Treason. See *ATTAINER*.

Yet a Man is said to be *attainted* of *Dissipation*; and so it is used in French: as, *estre atteint, & vaincu en aucun cas*, is to be cast in any Cause.

ATTAIN, among Farriers, signifies a knock, or hurt in a Horse's Leg; proceeding either from a Blow with another Horse's Foot, or from an over-reach in frosty Weather, when a Horse being rough-shod, or having Shoes with long Calks, strikes his hinder Feet against his Fore-leg.

The Farriers distinguish *aptes Attains*, given by the Toe of the Hind-foot upon the Swock of the Fore-leg.—And *without Attains*, or Over-reaches on the Pastern-Joint, which are little Bladders like Wind-Galls, coming either by a Wrench, a Strain, an Over-reach, or the like. The usual Place is in the Heel or Trush.

ATTENDANT, or *ATTENDENT*. See ASSISTANT. See also RETINUE, SATELLIT, &c.

ATTENDANT, *ATTENDENS*, in Law, signifies one that owes Duty or Service to another, or depends upon him.—Thus if there be Lord, Mesne, and Tenant; and the Tenant hold of the Mesne by a Penny; and the Mesne hold over by two Pence: If the Mesne releases to the Tenant all his Right in the Land, and the Tenant die, his Wife shall be endowed of the Land, and shall be *Attendant* to the Heir, of the third Part of the Penny, not of the third Part of the two Pence; she being to be endowed of the best Possession of her Husband.—Where the Wife is endowed by the Guardian, she shall be *Attendant* to the Guardian, and to the Heir at his full Age. See WIFE and WOMAN.

ATTENTION, *ATTENTIO*, a due Application of the Ear, or the Mind, to any thing said, or done.

Attention of Mind is not properly an Act of Understanding, but rather of the Will, by which it calls the Understanding from the Consideration of other Objects, and directs it to the thing in hand. See UNDERSTANDING and WILL.

Attention, in respect of Hearing, is the stretching or straining the Membrana Tympani, so as to make it more susceptible of Sounds, and better prepared to catch even a feeble Agitation of the Air. Or it is the adjusting the Tension of that Membrane to the Degree of loudness or lowness of the Sound we are attentive to. See TYMPANUM. See also HEARING, &c.

The Word is compounded of *ad*, to; and *teno*, of *teno*, I stretch.

ATTENUANTS, *ATTENUATIVES*, or *ATTENUATING Medicines*, such as subtilize or break the Humours into finer Parts; and thus dispose them for Motion, Circulation, Excretion, &c. See *ATTENUATION* and HUMOR.

Attenuants stand oppos'd to *Thickners*, or Medicines which condense, inspissate, &c. See DETERGENT.

ATTENUATION, *ATTENUATIO*, the Act of *attenuating*; that is, of making any Fluid thinner, and less consistent than it was before. See FLUID.

The Word is compounded of the Latin *ad*; and *teno*, thin, slender, weak.

Attenuation is defined more generally by *Chavaria*, the dividing or separating of the minute Parts of any Body, which before, by their mutual Nexus or Implication, form'd a more continuous Mass.—Accordingly, among the Alchymists, we sometimes find the Word us'd for Pulverization, or the act of reducing a Body into an impalpable Powder. See POWDER and PULVERIZATION.

ATTIGATION, the giving Testimony, or Evidence of the Truth of any thing; especially in Writing. See TESTIMONY, EVIDENCE, &c.

Thus we say, Miracles need be well attested, to gain Credit. See MIRACLE.

The Word is compounded of the *Latin ad, to; and testis, witness.*

ATTICISMUS, ATTICISMUS, a short, concise Expression or manner of speaking; thus call'd from the People of *Attica, or Athens,* who abounded therein. See STYLE and LACONIC.

ATTIC, ATTICUS, something relating to *Attica,* or the City *Athena.*

In Matters of Philology we use, *Attic Salt, Sales Attici,* for a delicate, poignant Kind of Wit and Humour, peculiar to the *Athenian* Writers: *Attic Witness, Atticus testis,* was a Witness inculpable of Corruption; So an *Attic Male* was an excellent one, &c.

ATTIC is also used in Architecture for a Kind of Building, where-in there is no Roof or Covering to be seen; thus call'd because us'd at *Athena.*

ATTIC, or ATTIC-Order, is also a kind of Ictile Order, rais'd upon another larger one; by way of crowning, or to finish the Building. See ORDER.

It is sometimes also used for the convenience of having a Wardrobe, or the like; and instead of regular Columns, has only Pilasters of a particular Form. See COLUMN and PILASTER.

There are also *Attice* used for high Altars.—The Order takes its Name from *Athena,* where it was first practis'd.

ATTIC of a Roof, is a Kind of Parapet to a Terrace, Platform, or the like. See PARAPET, TERRACE, &c.

ATTIC Covered, is that which encompasses the whole Parapet of a Building, without any Interruption; following all the Joints, the Returns of the Pavilions, &c.

ATTIC Interpol'd, is that situate between two tall Stories, sometimes adorn'd with Columns, or Pilasters. See STORY.

ATTIC Boys, is a peculiar Kind of Bile used by the ancient Architects, in the Ionic Order; and by *Paladio,* and others of the Moderns, in the *Doric.* See DORIC and IONIC.

The *Attic* is the most beautiful of all the Bases. See BASE.

ATTIRE, in Botany, is used to denote the third Part or Division of the Flower of a Plant; the other two being the Em-palement and the Falsium. See FLOWER. See also EMPALEMENT, &c.

This *Attire* is of two Kinds; Semi-form, and Florid.—The Semi-form *Attire* consists of two Parts; Chives, or the Scamina; and Semets, or Apices; one upon each *Attire.* See STAMINA and APEREA.

The Florid *Attire* is usually call'd *Thruas,* as in the Flowers of Marigold, Tansy, &c.—These *Thruas* are call'd *Suits,* which consist of two, but most times of three Pieces.—The outer Part of the Suit is the Floret, whose Body is divided at the top, like a Cowslip Flower, into five Parts or distinct Leaves. See THRUAS, &c.

ATTIRE, in Hunting, the Head or Horns of a Deer. See HEAD.

The *Attire* of a Stag, if perfect, consist of *Bar, Pearl, Beam, Gutters, Antlers, Ser-antlers, Royal, Ser-royal,* and *Crook.*—Of a Buck, the *Bar, Beam, Dew-water, Black-antler, Advancers, Palms,* and *Spellers.* See the Article HUNTING.

ATTITUDE, in Painting and Sculpture, the Posture of a Figure, or Statue; or the Disposition of its Parts, by which we discover the Action it is engag'd in, and the very Sentiment suppos'd to be in its Mind. See FIGURE, STATUE, and ACTION.

The representing of these in a strong and lively manner, makes what they call a good Expression. See EXPRESSION.

The Word comes from the *Italian Attitudo,* which signifies the same thing.

ATTOLLENS, in Anatomy, a Name common to several Muscles, whose Office or Action is to raise the Parts they belong to. See MUSCLE.

The *Attollens, or Attollens* Muscles, are otherwise call'd *Elevators.* See ELEVATOR.

The Word is compounded of the *Latin ad, to; and tollo, I raise, I lift.*

ATTORNEY, ATTORNATUS, in Law, a Person appointed by another to do something in his stead; particularly to solicit and carry on a Law Suit. See AGENT, DEPUTY, &c. See also, CAUSE, PROCESS, ACTION, &c.

Attorneys in Common Law are much the same with *Procurators, Proctors, or Syndics,* in the Civil Law. See PROCURATOR, PROCTOR, &c.

The Word is compounded of the *Latin ad, to; and the French tourner, to turn; q. d. to turn a Business over to another.*—The ancient *Latin* Name, according to *Bracton,* is *Responsalis.* See RESPONSALIS.

Antiently, those of Authority in Courts had it in their Power whether or no to suffer Men to appear or sue by another than themselves; as appears from *Fitz. de Nat. Brev. in the Writ, Destinatus postquam de Attornato factus;* where it is shew'd, that Men were driven to procure the King's Writs, or Letters Patent, to appoint *Attorneys* for them; But 'tis since provided by Statutes, that it shall be lawful to appoint an *Attorney* without such Cir-

caution; as appears by several Statutes, 20 Hen. III. cap. 10. 46 Edu. I. cap. 8. Sec.

There is a great diversity of Writs in the Table of the Registles, wherein the King, by his Writ, commands the Judges to admit of *Attorneys;* whereby there arose so many unskillful *Attorneys,* and so many mischief thereby, that for restraining them it was enact'd, 4 Hen. IV. cap. 18. that the Judges should examine them, and displace the unskillful; and again 33 Hen. VI. cap. 7. that there should be but a certain Number of *Attorneys* in *Norfolk* and *Suffolk.*

Attorney is either *General* or *Special.*

ATTORNEY General is he who by general Authority is appointed to manage the Affairs or Suits of the Community.

Such is the *Attorney-General* of the King, who is the same as *Procurator Cæsaris* in the *Roman* Empire. See PROCURATOR.

To him come Warrants for making out Patents, Pardons, &c.

He is at the Head of managing all Law-Affairs of the Crown, either in criminal Prosecutions or otherwise; especially in Matters of Treason, Sedition, &c. In all Courts he pleads within the Bar; but when a *Privy-Councillor,* he cannot plead in any Court, but on the King's Affairs, without obtaining a *Privy Seal* for so doing.

Attorney-Special, is he who is employ'd in one or more Causes particularly specified.

Attorneys are also distinguished with respect to the Courts, into *Attorneys at Large,* and *Attorneys Special,* belonging to this or that Court only.

ATTORNEY of the Court of the Duchy of Lancaster, Attornatus Curia ducatus Lancastriae, is the second Office in that Court, being there, for his Skill in Law, plac'd as Auditor to the Chancellor of that Court. See DUCHY COURT and ASSASSOR. See also CHANCELLOR, &c.

ATTOURNMENT, in Law, a transferring of Duty and Service to another Lord; or an Acknowledgment which a Lord makes of Homage and Service to a new Lord. See TENANT and TENANT.

Thus, when one is Tenant for Life, and he in Reversion grants his Right to another; it is usually the Tenant for Life agree thereto, which is call'd *Attournment;* and without which nothing passes by the Grant.—If the Grant be by Fine, in Courts of Record, he shall be compelled to *Attourn.* Stat. 27 Hen. VIII.

The Words used in *Attournment* are these; *I agree me to the Grant made to you; or more commonly, Sir, I Attourn to you by force of the same Grant; or, I become your Tenant; or deliver to the Grantee a Penny by way of Attournment.* Litt. lib. 3.

Attournment is either by Word, or by Act; voluntary, or compulsory; by the Writ, *Per quod servitus,* or by Distress.—It may be made to the Lord himself or to his Steward in Court. There is *Attournment* in Deed, and *Attournment* in Law. *Coke.* *Attournment* in Law is an Act, which though it be no express *Attournment,* yet in Issuement of Law it is of equal Force. *Coke on Litt.*

ATTRACTION, ATTRACTIO, or TRACTIO, in Mechanics, the Act of a moving Power, whereby a Moveable is brought nearer to the Mover. See POWER and MOTION.

As Action and Re-action are always equal, and contrary; it follows, that in all *Attraction,* the Mover is drawn towards the Moveable, as much as the Moveable to the Mover. See ACTION and REACTION.

The Word is compounded of *ad, to; and trahere, I draw.*

Attraction, or ATTRACTIVE Power, in Physics, is a natural Power inherent in certain Bodies, whereby they act on other distant Bodies, and draw them toward themselves. See FORCE.

This, the Peripateticks call the *Motus of Attraction;* and our many Occultists, *Suction;* and produce various Instances where they suppose it to obtain.—Thus the Air, in Respiration, is taken in, according to them, by *Attraction,* or *Suction;* so is the Smoak through a Pipe of Tobacco; and the Milk out of the Mother's Breasts: Thus also it is that the Blood and Humours rise in a Cupping-Glass, Water in a Pump, and Smoak in Chimneys; so Vapours and Exhalations are attracted by the Sun; Iron by the Magnet, Straws by Amber, and electrical Bodies, &c. See SUCTION.

But the later Philosophers generally explode the Notion of *Attraction;* asserting, that a Body cannot act where it is not; and that all Motion is perform'd by mere Impulsion.—Accordingly, most of the Effects which the Antients attributed to this unknown Power of *Attraction,* the Moderns have discovered to be owing to more sensible and obvious Causes; particularly the Pressure of the Air. See AIR and PRESSURE.

To this are the Phenomena of Inspiration, Smoking, Sucking, Cupping-Glasses, Pumps, Vapours, Exhalations, &c. See RESPIRATION, SUCTION, PUMP, CUPPING-GLASS, VAPOUR, SMOAK, EVAPORATION, &c.

For the Phenomena of magnetic and electrical *Attraction,* see MAGNETISM and ELECTRICITY.

The Power opposite to *Attraction* is call'd *Repulsion;* which is also argued to have some Place in natural Things. See REPULSION.

Attraction, or ATTRACTIVE Power, in the *Newtonian* Philosophy, is a Power or Principle, whereby all Bodies, and the Particles

Particles of all Bodies, mutually tend towards each other.—Or, more fully, *Attraction* is the effect of such Power, whereby every Particle of Matter tends towards every other Particle. See MATTER and PARTICLE.

Attraction, its Laws, Phenomena, &c. make the great Hinge of Sir Isaac Newton's Philosophy. See NEWTONIAN PHILOSOPHY.

It must be observed, that though the great Author makes use of the Word *Attraction*, in common with the School Philosophers; yet he very studiously distinguishes between the Ideas.—The ancient *Attraction* was a kind of Quality, inherent in certain Bodies themselves; and arising from their particular or specific Forms. See QUALITY and FORM.

The Newtonian *Attraction* is a more indefinite Principle; denoting, not any particular Kind or Manner of Action, nor the physical Cause of such Action; but only a Tendency in the General, a *Visus accensibilis*; to whatever Cause, physical or metaphysical, such effect be owing; whether to a Power inherent in the Bodies themselves, or to the Impulse of an external Agent.

Accordingly, the great Author, in his *Philos. Nat. Prin. Math. Notes*, "that he uses the Words *Attraction*, *Impulse*, and *Propulsion*, to the Centre, indifferently; and cautions the Reader "not to imagine that by *Attraction* he expresses the Motus of the Action, or the efficient Cause thereof; as if there were any proper Powers in the Centres, which in reality are only mathematical Points; or, as if Centres could attract. *Lib. I. p. 5.*—So, he "considers centripetal Powers as *Attractions*; though, physically speaking, they are perhaps more just to call them *Impulses*." *Ib. p. 147.* He adds, "that what he calls *Attraction* may possibly be effected by Impulse, though not a common or corporeal Impulse; or in some other Manner unknown to us." *Optic, p. 322.*

Attraction, if consider'd as a Quality arising from the specific Forms of Bodies, ought, together with Sympathy, Antipathy, and the whole Tribe of occult Qualities to be espoused. (See OCCULT QUALITY.) But when we have set these aside, there will remain innumerable Phenomena of Nature, and particularly the Gravity or Weight of Bodies, or their Tendency to a Centre, which argue a Principle of Action seemingly distinct from Impulse; where, at least, there is no sensible Impulsion concern'd. Nay, what is more, this Action, in some respects, differs from all Impulsion we know of; Impulse being always found to act in Proportion to the Surfaces of Bodies; whereas Gravity acts according to their solid Contents, and consequently must arise from some Cause that penetrates or pervades the whole Substance thereof.—This unknown Principle, (unknown we mean in respect of its Cause, for its Phenomena and Effects are most notorious) with all the Species and Modifications thereof, we call *Attraction*; which is a general Name, under which all mutual Tendencies, where no physical Impulse appears, and which cannot, therefore, be accounted for from any known Laws of Nature, may be rang'd.

And hence arise divers Kinds of *Attractions*; as, Gravity, Magnetism, Electricity, &c. which are so many different Principles, acting by different Laws; and only agreeing in this, that we do not see any physical Causes thereof; but that, as to our Senses, they may really arise from some Power or Efficacy in such Bodies, whereby they are enabled to act, even upon distant Bodies; though our Reason absolutely disallows of any such Action.

Attraction may be divided, with respect to the Law it observes, into two Kinds.—1^o That which extends to a sensible Distance.—Such are the *Attraction of Gravity*, found in all Bodies; and the *Attraction of Magnetism and Electricity*, found in particular Bodies.—The several Laws and Phenomena of each, see under their respective Articles, GRAVITY, MAGNETISM, and ELECTRICITY.

The *Attraction of Gravity*, call'd also among Mathematicians, the *Centripetal Force*, is one of the greatest and most universal Principles in all Nature.—We see and feel it operate on Bodies near the Earth, (See WEIGHT) and find, by Observation, that the same Power, (*i. e.* a Power which acts in the same Manner, and by the same Rules; *viz.* always proportionally to the Quantities of Matter, and as the Squares of the Distances) does also obtain in the Moon, and the other Planets, primary and secondary as well as the Comets: And even that this is the very Power whereby they are all retain'd in their Orbits, &c. And hence, as Gravity is found in all the Bodies which come under our Observation, it is easily infer'd, by one of the settled Rules of philosophizing, that it obtains in all others; and as it is found to be as the Quantity of Matter in each Body, it must be in every Particle thereof; and hence every Particle in Nature is prov'd to attract every other Particle, &c. See the *Demonstration herof laid down at large, with the Application of the Principle to the Celestial Motions, under the Article, NEWTONIAN PHILOSOPHY, SUN, MOON, PLANET, COMET, SATELLITE, CENTRIPETAL, CENTRIFUGAL, &c.*

From this *Attraction* arises all the Motion, and consequently all the Mutation, in the great World.—By this, heavy Bodies descend, and light ones ascend; by this Projectiles are directed, Vapours and Exhalations rise, and Rains, &c. fall. By this Rivers glide, the Air presses, the Ocean swells, &c. See MOTION,

DESCENT, ASCENT, PROJECTILE, VAPOUR, RAIN, RIVERS, TIDE, AIR, ATMOSPHERE, &c.

In effect, the Motions arising from this Principle make the Subject of that extensive Branch of Mathematicks, call'd *Mechanicks*, or *Statics*; with the Parts or Appendages thereof, *Hydrostaticks*, *Pneumaticks*, &c. See MECHANICKS, STATICKS, HYDROSTATICKS, PNEUMATICKS. See also MATHEMATICKS, PHILOSOPHY, &c.

2^o That which does not extend to sensible Distances.—Such is found to obtain in the minute Particles whereof Bodies are compos'd, which attract each other, or extremely near, the Point of Contact; with a Force much superior to that of Gravity; but which at any Distance therefrom decreases much faster than the Power of Gravity.—This Power, a late ingenious Author chooses to call the *Attraction of Cohesion*; as being that whereby the Atoms or insensible Particles of Bodies are united into sensible Masses. See COHESION, ATOM, PARTICLE, &c.

This latter Kind of *Attraction* owns Sir Isaac Newton for its Discoverer; as the former does, its Improver.—The Laws of Motion, Percussion, &c. in sensible Bodies under various Circumstances, as falling, projected, &c. as ascertain'd by the later Philosophers, do not reach to those more remote, inclinate Motions of the component Particles of the same Bodies, whereon the Changes of the Texture, Colour, Properties, &c. of Bodies depend; so that our Philosophy, if only founded on the Principle of Gravitation, and carried so far as that would lead us, wou'd necessarily be very deficient. See LIGHT, COLOUR, &c.

But, beside the common Laws of sensible Masses, the minute Parts they are compos'd of, are found subject to some others, which have been but lately taken notice of, and are yet very imperfectly known. Sir Isaac Newton, to whose happy Penetration we owe the hint, contents himself to establish, that there are such Motions in the *visus insensibilis*, and that they flow from certain Powers or Forces, not reducible to any of those in the great World.—In virtue of these Powers, he shews, "that the small Particles act on one another even at a Distance; and that many of the Phenomena of Nature are the Result thereof." Sensible Bodies, we have already observed, act on one another divers ways; and as we thus perceive the Tension and Cohesion of Nature, it appears highly probable that there may "be other Powers of the like Kind; Nature being very uniform and consistent with herself.—Those just mentioned, reach to sensible Distances, and so have been observed by vulgar Eyes: But there may be others, which reach to such small Distances, as have hitherto escap'd Observation; and 'tis probable Electricity may reach to such Distances, even without being excited by Friction."

The great Author just mentioned, proceeds to confirm the Reality of these Suspicions from a great Number of Phenomena and Experiments, which plainly argue such Powers and Actions between the Particles, *e. g.* of Salts, and Water, Oil of Vitriol and Water, Aqua Fortis and Iron, Spirit of Vitriol and Salt-petre.—He also shews, that these Powers, &c. are unequally strong between different Bodies; frogger, *e. g.* between the Particles of Salt of Tartar, and those of Aqua Fortis, than those of Silver; between Aqua Fortis and Lapis Calaminaris, than Iron; between Iron than Copper, Copper than Silver, or Mercury. So Spirit of Vitriol acts on Water, but more on Iron or Copper, &c.

The other Experiments which concur to the Existence of such Principle or *Attraction* in the Particles of Matter are innumerable; many of them the Reader will find enumerated under the Articles MATTER, ACID, SALT, MENSTRUUM, &c.

These Actions, in virtue whereof the Particles of the Bodies above mentioned tend toward each other, the Author calls by a general, indefinite Name, *Attraction*, which is equally applicable to all Actions, whereby distant Bodies tend towards one another, whether by Impulse, or by any other more latent Power: And from hence accounts for an Infinity of Phenomena, otherwise inexplicable, to which the Principle of Gravity is insufficient.—Such are Cohesion, Dissolution, Coagulation, Crystallization, the Ascend of Fluids in Capillary Tubes, Animal Secretion, Fluidity, Fixity, Fermentation, &c. See the respective Articles, COHESION, DISSOLUTION, CRYSTALLIZATION, ASCENT, SECRETION, SPHERICITY, FIXITY, FERMENTATION, &c.

"Thus," adds our immortal Author, "will Nature be found very conformable to herself, and very simple; performing all the great Motions of the heavenly Bodies, by the *Attraction* of Gravity, which intercedes those Bodies, and almost all the small ones of their Parts, by some other attractive Power diffus'd through the Particles thereof.—Without such Principles, there never would have been any Motion in the World; and without the continuance thereof, Motion wou'd soon perish, there being otherwise a great Decrease or Diminution thereof, which is only supplied by these active Principles." *Opticks, p. 373.*

We need not say how unjust it is in the generality of foreign Philosophers, to declare against a Principle which furnishes so beautiful a View; for no other Reason but because we cannot conceive how a Body should act on another at a Distance.—'Tis certain

certain, Philosophy allows of no Action but what is by immediate Contact and Impulsion: (for how can a Body exert any active Power there, where it does not exist? To suppose this of any thing, even the supreme Being himself, would perhaps imply a Contradiction.) Yet we see Effects without feeling any such Impulse; and where there are Effects, we can easily infer there are Causes, whether we see them or no. But a Man may consider such Effects, without entering into the Consideration of the Causes; as, indeed, it seems the Business of a Philosopher to do: For to exclude a Number of Phenomena which we do see, will be to leave a great Chasm in the History of Nature; and to argue about Actions which we do not see, will be to build Castles in the Air.—It follows, therefore, that the Phenomena of Attraction, are Matter of physical Consideration, and as such entitled to a Share in a System of Physics; but that the Cause thereof will only become to us when they become sensible; i. e. when they appear to be the Effects of some other higher Cause, (for a Cause is no otherwise seen than as it self is an Effect, so that the first Cause must from the Nature of things be invisible.) We are therefore at Liberty to suppose the Causes of Attraction what we please, without any Injury to the Effects.—The illustrious Author himself seems a little inelusive as to the Cause; inclining, sometimes, to attribute Gravity to the Action of an immaterial Cause, *Opticks*, p. 343. &c. And sometimes to that of a material one. *Id.* p. 325.

In his Philosophy, the Research into Causes is the last thing; and never comes in turn till the Laws and Phenomena of the Effect be settled; it being to these Phenomena that the Cause is to be accommodated.—The Cause even of any, the greatest, and most sensible Action is not adequately known: How Impulse or Percussion it self works its Effect, i. e. how Motion is communicated by Body to Body, confounds the deepest Philosophers; yet is Impulse received not only into Philosophy, but into Mathematics; and accordingly the Laws and Phenomena of its Effects, make the greatest Part of common Mechanics. See PERCUSSION, and COMMUNICATION of Motion.

The other species of Attraction, therefore, when their Phenomena are sufficiently ascertain'd, have the same Title to be presented from physical to mathematical Considerations; and this, without any previous Inquiry into their Causes, which our Conceptions may not be proportionate to: Let their Causes be occult, as all Causes ever will be; so as their Effects, which alone immediately concern us, be but apparent. See CAUSE.

Our noble Countrymen, then, far from adulterating Philosophy with any thing Foreign, or Metaphysical; as many have reproach'd him; has the Glory of opening a new Source of sublimer Mechanicks, which, duly cultivated, might be of infinitely more Extent than all the Mechanics yet known: 'Tis hence alone we must expect to learn the manner of the Changes, Productions, Generations, Corruptions, &c. of natural things; with all that Scene of Wonders opened to us by the Operations of Chymistry. See GENERATION, CORRUPTION, OPERATION, CHYMISTRY, &c.

Some of our own Countrymen have prosecuted the Discovery with laudable Zeal: Dr. Keil particularly, has endeavoured to deduce some of the Laws of this new Action, and applied them to solve divers of the more general Phenomena of Bodies, as Cohesion, Fluidity, Elasticity, Softness, Fermentation, Coagulation, &c. And Dr. Erard seconding him, has made a further Application of the same Principles, to account at once, for almost all the Phenomena that Chymistry presents.—So that the new Mechanics should seem already raised to a complete Science; and nothing can now turn up, but we have an immediate Solution of, from the attractive Force.

But this seems a little too precipitate; a Principle so fertile, should have been further explored; its particular Laws, Limits, &c. more industriously detected and laid down, ere we had got to Application.—Attraction, in the gross, is so complex a thing, that it may solve a thousand different things alike: The Notion is but one Degree more simple and precise, than Action it self; and till more of its Properties are ascertain'd, it were better to apply it less, and study it more.

As a Specimen of the extent of the Principle, and the manner of applying it, we shall here subjoin the principal Laws and Conclusions thereof; as settled by Sir Isaac Newton, Dr. Keil, Dr. Erard, Dr. Morgan, &c.

THEOR. I. Bodies that attractive Power whereby the Planets and Comets are retain'd in their Orbits; there is another, by which the several Particles whereof Bodies consist, attract, and are mutually attracted by, each other; which Power decreases in more than a duplicate Ratio of the Increase of the Distance.

This Theorem we have already observ'd, is demonstrable from a great Number of Phenomena.—We shall here only mention a few easy and obvious ones; as, the Spherical Figures, assumed by the Drops of Fluids; which can only arise from such Principle into one, upon the first touch, or extremely near approach of their Surfaces: The rising of Water up the Sides of a Glass Bubble immerg'd therein, higher than the Level of the other Water, or of Mercury, up a Sphere of Iron, or the like. See SPHERICITY, DROP, &c.

As to the just Law of this Attraction, it is not yet determin'd; only that we know in the general, that the force, in receding from the Point of Contact, is diminished in a greater Proportion than that of the duplicate Ratio of the Distances, which is the Law of Gravity. For that if the Deminution were only in such duplicate Ratio, the Attraction at any small assignable Distance would be nearly the same as at the Point of Contact: Whereas Experience teaches, that this Attraction almost vanishes, and ceases to have any Effect, at the smallest assignable Distance.—But whether to fix on a triplicate, or quadruplicate, or some other proportion to the increasing Distances, is not ascertain'd by Experiment.

II. The Quantity of Attraction in all Bodies, is exactly proportional to the Quantity of Matter in the attracting Body; as being in reality the Result or Sum of the united Forces of the Attraction of all those single Particles of which it is compos'd; or, in other Words, Attraction in all Bodies is, *actetur paribus*, as their Solidities.

Hence, 1^o. At equal Distances the Attraction of homogeneous Spheres will be as their Magnitudes.—And,

2^o. At any Distance whatever, the Attraction is as the Sphere divided by the Square of the Distance.

This Law, it must be noted, only holds in respect of Atoms, or the smallest constituent Particles, sometimes call'd Particles of the last Composition; and not of Corporcles or Compositions made up of these; for they may be so put together, as that the most solid Corporcles may form the lightest Particles; i. e. the uniformity of their Surfaces for intimate Contact, may occasion such great Interstices as will make their Bodies large in Proportion to their Matter.

III. If a Body consist of Particles, every one whereof has an attractive Power decreasing in a triplicate, or more than a triplicate Ratio of their Distances; the Force wherewher a Particle is attracted by that Body in the Point of Contact, or at an infinitely little Distance from the Contact, will be infinitely greater than if that Particle were placed at a given Distance from the Body. See INFINITE.

IV. Upon the same Supposition, if the attractive Force at any assignable Distance, have a finite Ratio to its Gravity; this Force in the Point of Contact, or at an infinitely small Distance, will be infinitely greater than its Power of Gravity.

V. But if in the Point of Contact the attractive Force of Bodies have a finite Ratio to their Gravity; this Force in any assignable Distance is infinitely less than the Power of Gravity, and therefore ceases.

VI. The attractive Force of every Particle of Matter in the Point of Contact, almost infinitely exceeds the Power of Gravity, but is not infinitely greater than that Power; and therefore in a given Distance, the attractive Force will vanish.

This attractive Power, therefore, thus superadded to Matter, only extends to Spaces extremely minute, and vanishes in greater Distances; whence, the Motion of the heavenly Bodies, which are at prodigious Distance from each other, cannot at all be disturb'd by it, but will continually go on as if there were no such Power in Bodies.

Where this attracting Power ceases; there, according to Sir Isaac Newton, does a repelling Power commence; or rather, the attracting does thence forward become a repelling Power. See REPELLING POWER.

VII. Supposing a Corporcle to touch any Body, the Force whereby that Corporcle is impell'd, that is, the Force with which it coheres to that Body, will be proportionable to the Quantity of Contact: For the Parts farther remov'd from the Point of Contact, contribute nothing towards its Cohesion.

Hence, according to the Difference in the Contact of Particles, there will be different Degrees of Cohesion; that the Powers of Cohesion are greater when the touching Surfaces are Planes; in which case, *actetur paribus*, the Force by which one Corporcle adheres to others, will be as the Parts of the touching Surfaces.

Hence it appears why two perfectly polish'd Marbles, join'd together by their plane Surfaces, cannot be forc'd asunder, but by a Weight which much exceeds that of this incoherent Air.

Hence also may be drawn a Solution of that famous Problem concerning the Cohesion of the Parts of Matter. See COHESION.

VIII. The Power of Attraction in the small Particles increases, as the Bulk and Weight of the Particles diminishes.

For, the Force only acting at or near the Point of Contact, the Momentum must be as the Quantity of Contact; that is, as the Density of the Particles, and the Largeness of their Surfaces: But the Surfaces of Bodies increase or decrease as the Squares, and the Solidities as the Cubes of the Diameter. Consequently, the smallest Particles having the largest Surfaces in proportion to their Solidities, are capable of more Contact, &c.

Those Corporcles are most easily separated from one another, whose Contacts are the fewest and the least, as in Spheres infinitely small.

Hence we have the Cause of Fluidity. See FLUIDITY, WATER, &c.

IX. The Force whereby any Corporcle is drawn to another nearly adjacent Body, suffers no Change in its Quantity, let the Matter of the attracting Body be increased or diminished; supposing

posing the same Density to remain in the Body, and the Distance of the Corpufcle to continue the fame.

For fince the attractive Powers of Particles are diffus'd only through the fmalleft Spaces; 'tis manifelt that the remoter Parts at *C D* and *E* contribute nothing towards attracting the Corpufcle *A*: And therefore the Corpufcle will be attracted with the fame Force

towards *B*, whether thofe Parts remain or be taken away; or, laftly, whether others be added to them.

Hence, Particles will have different attractive Forces, according to their different Structure and Compofition; thus a Particle perforated will not attract fo ftrongly as its entire. So, again, the different Figures into which a Particle is form'd, will occafion a diversity of Power: Thus a Sphere will attract more than a Cone, Cylinder, &c.

X. Suppose a Body of fuch a Texture as that the Particles of the left Compofition, by an external Force, fuch as a Weight compreffing them, or an Impulfe given by another Body, may be a little removed from their original Contact, but fo as not to acquire new ones; the Particles by their attractive Force tending to one another, will foon return to their original Contacts.—But when the fame Contacts and Positions of the Particles which compofe my Body, return; the fame Figure of the Body will alfo be reftor'd: And therefore Bodies which have loft their original Figures, may recover them by Attraction.

Hence appears the Caufe of Elasticity.—For, when the contiguous Particles of a Body have by any external Violence been forc'd from their former Points of Contact, to extremely fmall Distances; as foon as that Force is taken off, the feperated Particles muft return to their former Contact: By which means the Body will refume its Figure, &c. See ELASTICITY.

XI. But if the Texture of a Body be fuch that the Particles by an impreffed Force being remov'd from their Contacts, come immediately into others of the fame Degree, that Body cannot reftore it felf to its original Figure.

Hence we underftand what Texture that is wherein the Softnefs of Bodies confifts. See SOFTNESS.

XII. The Bulk of a Body heavier than Water, may be fo far diminifh'd, that it fhall remain fufpended in Water, without defcending by its own Gravity. See SPECIFIC GRAVITY.

Hence it appears why faine, metallic, and other fuch-like Particles, when reduc'd to fmall Dimenfions, are fufpended in their Menftrums. See MENSTRUUM.

XIII. Greater Bodies approach one another with a lefs Velocity than fmalfer.—For the Force with which two Bodies *A* and *B* approach, resides only in the neareft Particles;

the more remote having nothing to do therein. No greater Force, therefore, will be apply'd to move the Bodies *A* and *B*, than to move the Particles *c* and *d*; but the Velocities of Bodies mov'd by the fame Force are in a reciprocal Ratio of the Bodies: Wherefore the Velocity with which the Body *A* tends towards *B*, is to the Velocity with which the Particle *c* detach'd from the Body would tend towards the fame *B*, as the Particle *c* is to the Body *B*; confequently the Velocity of the Body *A* is much lefs than wou'd be the Velocity of the Particle *c* detach'd from the Body.

Hence it is that the Motion of large Bodies is naturally fo flow and languid, that an ambient Fluid and other circumjacent Bodies generally retard them; whilst the leffer go on more briskly, and produce a greater number of Effects: So much greater is the attractive Energy in fmalfer Bodies than in the larger.—Hence again appears the Reafon of that chymical Axiom; Salts don't all fall they are diffolv'd.

XIV. If a Corpufcle placed in a Fluid be equally attracted every way by the circumambient Particles, no Motion of the Corpufcle will enfue.—But if it be attracted by fome Particles more than others, it will tend to that part where the Attraction is the greateft; and the Motion produc'd will correspond to the Inequality of the Attraction, viz. the greater the Inequality, the greater the Motion, and vice verfa.

XV. Corpufcles floating in a Fluid, and attracting each other more than the Particles of the Fluid that lie between them, will force away the Particles of the Fluid, and rufh to one another with a Force equal to that by which their mutual Attraction exceeds that of the Particles of the Fluid.

XVI. If a Body be immerged in a Fluid whole Parts more ftrongly attract the Particles of the Body than they do one another; and if there be a number of Pores or Interftices in the Body pervious to the Particles of the Fluid; the Fluid will immediately diffufe itfelf through thofe Pores. And if the Connexion of the Parts of the Body be not fo ftrong, but that it may be overcome by the Force of the Particles rufhing within it; there will be a Diffolution of the Body. See DISSOLUTION.

Hence, for a Menftrum to be able to diffolve any given Body, there are three things requir'd.—1^o. That the Parts of the Body attract the Particles of the Menftrum more ftrongly, than thofe attract each other. 2^o. That the Body have Pores or In-

terftices open and pervious to the Particles of the Menftrum. 3^o. That the Cohesion of the Particles which confine the Body, be not ftrong enough to refift the Irruption of the Particles of the Menftrum. See MENSTRUUM.

XVII. Salts are Bodies endued with a great attractive Force, though among them are interperfed many Interftices, which lie open to the Particles of Water; thefe are therefore ftrongly attracted by thofe faine Particles, fo that they forcibly rufh into them, feperate their Contacts, and diffolve the Contexture of the Salts. See SALT.

XVIII. If the Corpufcles be more attracted by the Particles of the Fluid than by each other; they will recede from each other, and be diffus'd through the whole Fluid.

Thus, if a little Salt be diffolv'd in a deal of Water, the Particles of the Salt, though fpecifically heavier than Water, will evenly diffufe themfelves through the whole Water; fo as to make it as Saline at Top as Bottom.—Does not this imply that the Parts of the Salt have a centrifugal, or repulfive Force, by which they fly from one another; or rather, that they attract the Water more ftrongly than they do one another? For as all things afcend in Water which are lefs attracted than Water by the Gravity of the Earth, fo all the Particles of Salt floating in Water, which are lefs attracted by any Particle of Salt, than Water is, muft recede from the Particle, and give way to the more attracted Water. *Newt. Opt. p. 363.*

XIX. Corpufcles, or little Bodies fwimming in a Fluid, and tending towards each other; if they be fuppof'd elaftick, will fly back again after their Congress, till ftriking on other Corpufcles, they be again reflected towards the firft; whence will arife innumerable other Conflicts with other Corpufcles, and a continual Series of Percuffions and Reboundings.—But, by the attractive Power, the Velocity of fuch Corpufcles will be continually increas'd; fo that the intestine Motion of the Parts will at length become evident to Senfe. See INSTINCTIVE MOTION.

Add, that in proportion, as the Corpufcles attract each other with a greater or lefs Force, and as their Elasticity is in a greater or lefs Degree, their Motions will be different, and become fenfible at various Times, and in various Degrees.

XX. If Corpufcles that attract each other happen mutually to touch, there will not arife any Motion, becaufe they cannot come nearer. If they be placed at a very little Distance from each other, a Motion will arife; but if further remov'd, the Force wherewith they attract each other, will not exceed that wherewith they attract the Particles of the intermediate Fluid, and therefore no Motion will be produced.

On thefe Principles depend all the Phenomena of Fermentation and Ebullition. See FERMENTATION AND EBULLITION.

Hence appears the Reafon why Oil of Vitriol, when a little Water is pour'd on it, works and grows hot: For, the faine Corpufcles are a little difjoin'd from their mutual Contact, by the infus'd Water; whence, as they attract each other more ftrongly than they do the Particles of Water, and as they are not equally attracted on every fide, there muft of neceffity arife a Motion. See VITRIOL.

Hence alfo appears the Reafon of that uncommon Ebullition occafion'd by adding Steel-filings to the forefaid Mixture. For the Particles of Steel are extremely elaftick; whence there muft arife a very ftrong Reflexion.

Hence alfo we fee the Reafon why fome Menftrums all move ftrangely, and diffolve Bodies fower, when dilute'd with Water.

XXI. If Corpufcles mutually attracting each other have no elaftick Power, they will not be reflected back from each other, but will form Congeries, or little Malles; whence a Congeries will arife. See CONGREGATION.

If the Gravity of the Particles thus small'd, exceed the Gravity of the Fluid, a Precipitation will fucceed.—Precipitation may alfo arife from an Increafe or Diminution of the Gravity of the Menftrum wherein the Corpufcles are immerg'd. See PRECIPITATION.

XXII. If Corpufcles fwimming in a Fluid, and mutually attracting each other, have fuch a Figure, as that in fome given Parts they have a greater attractive Power than in others, and their Contact greater in thofe Parts than in others; thofe Corpufcles will ufe into Bodies with given Figures; and thence will arife Criftallization. See CRYSTALLIZATION.

Particles immerged in a Fluid mov'd with a fuit or a flow progressive Motion, will attract each other in the fame Manner as if the Fluid were at reft; but if all the Parts of the Fluid do not move equally, the Attractions will be difturb'd.

Hence it is that Salts will not cryftallize till the Water wherein they are diffolv'd is cold.

XXIV. If between two Particles of a Fluid there happen to be a Corpufcle whole two oppofite Sides have a ftrong attractive Power, that intermediate Corpufcle will agglutinate or faften the Particles of the Fluid to it felf.—And feveral fuch Corpufcles diffus'd through the Fluid, will fix all its Particles into a firm Body; and the Fluid will be frone or reduc'd into Ice. See FREEZING.

XXV. If a Body emit a great Quantity of Effluvia whole attractive Powers are very ftrong; as thofe Effluvia approach any other very light Body, their attractive Powers will overcome the Gravity of that Body, and the Effluvia will draw it towards themfelves;

elves; And as the Effluvia are closer and more copious at little Distances from the emitting Body, than at greater; the light Body will be continually drawn towards the denser Effluvia, till such time as it comes to adhere to the emitting Body itself.

And hence most of the Phenomena of Electricity may be accounted for. See ELECTRICITY.

ATTRACTIVE, ATTRATRIX, something that has the Power of Faculty to attract. See ATTRACTION, FACULTY, &c.

ATTRACTIVE Power, or Force, *Via attractiva*. See POWER, ATTRACTION, &c.

ATTRACTIVES, or ATTRACTIVE Remedies. See ATTRACTION.

ATTRAHENTS, ATTRAHENTIA, or ATTRACTIVE Remedies, such Medicines, externally applied, as by their Activity and Warmth penetrate the Pores; and mix with and rarefy any obstructed Matter; so as to render it fit for Discharge, upon laying open the Part by Caustick or Incision. See MEDICINE, CAUSTICK, &c.

Attrahents are the same with what we otherwise call Drawers, Ripeners, Maturants, Digestives, &c. See RIPENERS, DIGESTION, &c.

The principal Simples belonging to this Class, are the several Kinds of Fat, or Adipes; the Dung of Pidgeons and Cows; Bean, Yell. Herring, the Sucking of a Leech, Mellist, Tobacco, Oil, Pitch, Resin, Frankincense, &c. See each under its proper Articles, FAT, ADIPS, HERRING, OIL, PITCH, RESIN, FRANKINCENSE, &c.

In many Instances, as the Matter rarefies and grows more fluid by means of such Medicines; the reluctant Blood is apt to walk it back into the common Mass; which sometimes does a deal of Mischief; or by making it take up more room upon its Rarefaction, occasions it to distend more the Parts in which it is contained: Upon which a Sense of Pain is excited, and thereby a greater Concourse of fluid, and consequently a needless Increase of the Tumor. So that Medicines under this Denomination require the most careful Management.

ATTRIBUTE, ATTRIBUTUM, in Philosophy, a Property which agrees to some Person, or Thing; or a Quality, which determines something to be after a certain Manner. See PROPERTY and QUALITY.

Thus, Understanding is an Attribute of Mind; Figure, an Attribute of Body, &c.

Ignorance makes the Soul and the Body to be of the same Substance; with this only Difference, that the Soul is to be conceiv'd under the Attribute of Thought, and the Body under that of Extension. See SUBSTANCE, SPINOZISM, &c.

Of the several Attributes belonging to any Substance, that which presents it self first, and which the Mind conceives as the Foundation of all the rest, is call'd its essential Attribute. See ESSENCE and ESSENTIAL.

Thus, Extension is by some, and Solidity by others, made the essential Attribute of Body or Matter. See BODY, MATTER, EXTENSION, SOLIDITY, &c.

The other Attributes are call'd accidental ones. See ACCIDENT and ACCIDENTAL.

Mr. Lock endeavours to prove, that Thinking, which the Cartesian make the essential Attribute of the Mind, is only an accidental one. See THINKING, MIND, SOUL, &c.

ATTRIBUTE, in Logic, is an Epithet given to any Subject; or it is any predicate thereof; or whatever may be affirmed or denied of any thing. See SUBJECT, PREDICATE, &c.

Every Proposition consists of a Subject, an Attribute, and a copulative Particle. See PROPOSITION.

Attributes are usually divided into positive, which give a thing somewhat; as when we say of a Man that he is animate: And Negative; as when we say of a Stone that it is inanimate.—Others, again, divide them into common, which agree to several different Things, as Animal: And proper, as Thought, &c.

The Word is compounded of the Latin, *ad*, to; and *tribuo*, I give.

ATTRIBUTES, in Theology, are understood of the several Qualities and Perfections which we conceive in God; and which constitute his proper Essence; as Justice, Goodness, Wisdom, &c. See GOD.

The Heathen Mythologists divided the Deity into as many distinct Beings as he has Attributes: Thus the Power of God was call'd *Jupiter*; the Wrath and Vengeance of God, *Juno*, &c. See POETRY.

ATTRIBUTES, in Painting and Sculpture, are Symbols added to several Figures, to denote their particular Office and Character. See FIGURE and SYMBOL.

Thus the Club is an Attribute of Hercules; the Palm an Attribute of Victory; the Peacock of *Juno*; the Eagle of *Jupiter*, &c. See STATUS, SCULPTURE, &c.

ATTRITION, ATTRITIO, or TRITIO, or FRICTIO, expresses such a Motion of Bodies against one another, as strikes off some superficial Particles; whereby they become less and less. See MOTION and FRICTION.

The Word is form'd of *attrere*, to rub, wear; compounded of *at*, to; and *tere*.

The grinding and polishing of Bodies is performed by *Attritio*. See GRINDING and POLISHING.

The Effects of *Attrition* in exciting Heat, Light, Electricity, &c. see under the Articles HEAT, LIGHT, FIRE, ELECTRICITY, &c.

A Feather by being only drawn through the Fingers has been found by Mr. S. Grey to acquire a Degree of Electricity, and would be attracted by the Finger when held near it; a human Hair, after having passed three or four times between the Finger and Thumb, would fly to his Finger at the Distance of half an Inch; and the Hair of a Dog's Ear, and the Threads of Silk would do the like. The like was found in Pieces of Ribband of several Colours, half a Yard long; the Hand held at the lower-end of any of which, would attract them at the Distance of five or six Inches. But if they imbibed the Moisture of the Air, their Electricity would be much weakened thereby; in which Case, the Fire never failed to give them a strong one. In effect, the same Author found Woollen, Paper, Leather, Wood-shavings, Parchment, and Gold-beater's Skin, to be Electrical; and that they not only came to the Hand, or any other solid Body, but attracted small Bodies to them, sometimes at the Distance of eight or ten Inches: some of these, also, appeared luminous upon Friction. See *Philos. Trans.* N^o. 366.

ATTRITION is also frequently used for the Friction, or rubbing of such supple Bodies one against another, as will not wear out, but occasion some particular Determinations of the Fluids they contain.

Thus, the various Sensations of Hunger, Pain, or Pleasure, are occasion'd by the Attrition of the Organs form'd for such Impressions. See HUNGER, PAIN, PLEASURE, &c.

ATTRITION, among Divines, is a Sorrow or Regret for having offended God; arising from a Sense of the Offensiveness of Sin, and the Apprehensions of having incurred the loss of Heaven, and Punishment; i. e. the Pains of Hell. See HEAVEN and HELL.

Attrition is esteem'd the lowest Degree of Repentance, being a step short of Contrition. See REPENTANCE and CONTRITION.

ATTORNATO *faciendo vel Recipiendo*, a Writ which a Man owing Suit to a County, Hundred, or other Court, and desiring to make an Attorney appear for him there, whom he doubts the Sheriff or Steward will not otherwise admit; purchaseth, to command him to receive such Attorney, and admit his Appearance by him. See ATTORNEY.

AVANT, a French Preposition, signifying before, or a priority either in respect of Time or Place; sometimes used, in Composition, in our Language, but more usually contracted, and wrote *Vant*, or *Vant*, or even *Van*. See VAN.

AVANT Corps,	} See {	VAN Corps.
AVANT Fijje, &c.		VAN Fijje.
AVANT Gard, &c.		VAN Guard, &c.

AVANCHERS, among Hunters, the second Branches of a Hart's Horn. See HEAD, HUNTING, &c.

AVAST, a Term frequently used on board a Ship, signifying to stop, hold, or stay.

The Word is form'd of the Italian, *vasta*, or *vasta*, it is enough, it suffices.

AUCTIO, AUCTION, a kind of Sale among the ancient Romans, perform'd by the public Cryer, *vel Auctus*, that is, under a Spear stuck up on that occasion, and by some Magistrate who made good the Sale by Delivery of the Goods.

This was termed *Auctio*, q. d. increase; because according to *Sigisaeus*, the Goods were sold to him, *qui plurimum rem auget*, who would bid most for them.

And hence our English Word, *Auction*, which signifies the same thing among us.

AUBAINE, in the French Customs, the act of inheriting after a Foreigner, who dies in a Country where he is not naturalized.

The Word is form'd of *Aubain*, a Foreigner; which *Menage* derives further from the Latin, *Abbas natus*; *Cajus*, from *Adonus*; *de Cange* from *Abbas*, a Sat, or *Irishman*; by reason thereof were anciently much given to travelling and living abroad.

The King of France, by the right of *Aubaine*, claims the Inheritance of all Foreigners in his Dominions; exclusive of all other Lords, and even of any Testament the deceased could make. An Ambassador, though not naturaliz'd, is not subject to the right of *Aubaine*. The Swiss, Savoyards, Scots, and Portuguese, are also exempted from the *Aubaine*, as being reputed Natives and Regnicoles.

AUDIENCE. See HEARING, ATTENTION, and AUDITORY.

The Word is form'd from the corrupt Latin, *Audentia*, of *Audire*, to hear.

AUDIENCE is also used for the Ceremonies practiced in Courts, at the admission of Ambassadors, and publick Ministers, to a hearing. See EMBASSADOR, &c.

Such an Ambassador sent to demand *Audience*; took his *Audience* of Leave to depart, &c.

AUDIENCE is also the Name of a Court of Justice, established by the *Spaniards* in the *West Indies*; answering in effect to the Parliaments in *France*.

They judge without Appeal, and have each a certain District, which ordinarily takes in several Provinces, call'd also *Audiences*, from the Names of the Tribunals to which they belong.

Hence *Spain* divides *Spain* into as many of these *Audiences* as there are of those Tribunals.—New *Spain* comprehends three *Audiences*; those of *Guadalajara*, *Mexico*, and *Guatemala*.

AUDIENS is also the Name of one of the Ecclesiastical Courts, which is, where-ever the Archbishop calls a Cause to his own Hearing. See COURT and ARCHBISHOP.

The Court of *Audience* is chiefly concerned in Differences arising upon Elections, Consecrations, Institutions, Marriages, &c.

AUDIENDO & terminando, a Writ, or rather a Commission, directed to certain Persons, when an Infraction or great Misdemeanour is committed in any Place, for the Appealing and Punishment thereof.

AUDIENTES, in Ecclesiastical History. See AUDITORES.

AUDIT, a regular hearing and examining of an Account, by Officers appointed for that purpose. See AUDITOR and ACCOUNT.

AUDITA querela, a Writ which lies against him, who, having taken a Statute-Merchant, or a Recognizance in the Nature of a Statute-Scaple, or a Judgment, or a Recognizance of another; and craving, or having obtained Execution of the same from the Mayor and Bailiffs, before whom it was entered; at the Complaint of the Party who entered the same, upon Suggestion of some just Cause why Execution should not be granted; as a Release, or other Exception.—This Writ is granted by the Lord Chancellor, upon view of the Exception suggested, to the Judges of either Bench, willing them to grant Summons to the Sheriff of the County where the Creditor is, for his appearance at a certain Day before them.

AUDITOR, a Hearer, or one who listens or attends to any thing. See HEARING, ATTENTION, and AUDITORY.

AUDITOR is also used for several Officers, appointed to audit, or hear Accounts, Pleadings, &c. See ACCOUNT.

Antiently the Word *Auditor* was also used for Judges, and even for Inquisitor. Notaries are also frequently call'd *Auditors*.

AUDITOR, in our Law, is an Officer of the King, or some other great Person, who yearly, by examining the Accounts of under Officers accountable, makes up a general Book, with the Difference between their Receipts and Charge, and their Allowances or Allocations. See ACCOUNT.

AUDITORS of the Revenue, or of the Exchequer, are Officers who take the Accounts of those who collect the Revenues, Taxes, &c. rais'd by Parliament; as also of the Sheriffs, Electors, Collectors, Tenants, and Customers, and set them down, and perfect them. See REVENUE and EXCHEQUER.

AUDITORS of the Profit or Improfit, are Officers in the Exchequer, who take and make up the great Accounts of *Ireland*, *Berwick*, the Mint, Customs, Wardrobe, First-fruits, Naval and military Expences, and of all Monies imprested to any Man for the King's Service. See PREST and IMPREST.

AUDITOR of the Receipts, is an Officer of the Exchequer who files the Tellers Bills, and makes an Entry of them, and gives the Lord Treasurer a Certificate of the Money receiv'd the Week before. See EXCHEQUER and TELLER.

He makes Debentures to every Teller, before they pay any Money, and takes their Accounts. He keeps the black Book of Receipts, and the Treasurer's Key of the Treasury, and sees every Teller's Money lock'd up in the new Treasury.

There are also *Auditors of the First-Fruits*; of the Principality of *Wales*; of the Duchy of *Cornwall*, &c. See FIRST-FRUITS, &c.

AUDITOR of the Rota. See ROTA.

AUDITORS Conventual, Collegiate, &c. were Officers formerly appointed among the Religious, to examine and pass the Accounts of the House.

AUDITORES, or AUDIENS, in Church History, *Catechumens*; or those newly introduced in the Mysteries of the Christian Religion, and not yet admitted to Baptism. See CATECHUMEN.—Hence,

AUDITORIUM, AUDITORY, in the antient Churches, was that Part of the Church where the *Auditors* stood to hear, and be instructed. See CHURCH.

The *Auditorium* was that Part now call'd *Nave* *Episcopæ*. See NAVE.

In the primitive Times the Church was so strict in keeping the People together in that Place, that the Person who went from thence in Sermon-time was order'd by the Council of *Carthage* to be excommunicated.

AUDITORY, something belonging to the Sense of Hearing. See HEARING.

AUDITORY, AUDIENCE, is also a collective Name, denoting an Assembly of Persons, hearing, or attending to a Person who speaks in publick. See ASSEMBLY, ORATION, &c.

AUDITORY is also used for the Seat or Bench where a Magistrate, or Judge, hears Causes. See BENCH.

At *Rome*, the several Magistrates had *Auditories* or Seats of Justice according to their Dignity.—Those of the superior Offi-

cers were call'd *Tribunals*; those of the inferior, *Subsella*. See TRIBUNAL, &c.

The *Palæni* had their Benches or *Auditories* in the Emperor's Portico.—Those of the *Hebreus*, at the Gates of *Cades*.—The Judges appointed by the antient Lords distributed Justice under an Elm, which was usually planted before the Manor-House, and served them for an *Auditory*.

AUDITORY NERVE, in Anatomy, a pair of Nerves arising from the *Muscle Obliquatus*, and distributed, the one to the Ear, the other to the Tongue, Eye, &c. See EAR and TONGUE.

The soft and spongy Branch of the *Auditory Nerve* being diffused through the Labyrinth and Tympanum of the Ear, is the immediate Organ of the Sense of Hearing. See HEARING.

The *Auditory Nerves* make the seventh Conjugation, according to the way of reckoning of the Moderns; and the fifth according to the Antients. See PAIR and CONJUGATION.

Animals observe a singular Mark of the Wisdom and Contrivance of the Creator in the *Auditory Nerve's* being thus dispatched to different Parts; an admirable and useful Conjecture hereby established between them.—Hence it is that most Animals upon hearing any uncouth Sound, are found to erect their Ears, and prepare them to catch it; to open their Eyes, to stand upon the Watch; and to be ready with the Mouth to call out, or testify their Danger: Accordingly most Animals when surprized or terrified, flatter or cry out, &c. See CONSENT of Parts.

Dr. *Willis* observes a further use of this nervous Communication between the Ear and the Mouth; which is, that the Voice may correspond with the Hearing, and be a Kind of Echo thereof; that what is heard with one of the two Nerves may be readily express'd with the Voice, by the help of the other. *Cereb. Anat. c. 17.*

AVATUS AUDITORIVS, or AUDITORY, Passage in Anatomy. See MEATUS.

AVE-MARIA, or AVE-MARY, the Angel *Gabriel's* Salutation of the Virgin, at his bringing the Tidings of the Incarnation; thus call'd, as beginning with those Words, *Ave Maria*, *Hail Mary*. See VIRGIN, ANNUNCIATION, &c.

The *Ave-mary* is a Prayer or Formula of Devotion very usual in the *Roman* Church.—Their Chapters and Rosaries are divided into so many *Ave-marys*, and so many *Pater-nosters*: And hence the beads themselves, which indicate them, are also call'd *Ave's* or *Ave-mary's*. See CHAPLET, ROSARY, &c.

AVELLANE, or Cross AVELLANE, in Heraldry, a Form of Cross which resembles four Fibbers in their Hufts or Cases, joined together at the great End. See CROSS.

Hence its Name; a Fibber in *Latin* being *Nax Avellana*.—*Syl. Moscorum* says, it is this Cross which Ensigns the Moant of Authority, or the Sovereign's Globe.

AVENAGE, in Law, a certain Quantity of Oats, paid to a Landlord, in lieu of some other Duties; or, as a Rent, from the Tenant.

The Word is *French*, form'd of the *Latin*, *avena*, Oats.

AVENOR, an Officer under the Master of the Horse; who, by Order or Warrant from him, swears in all the Officers belonging to the Stables. See MASTER of the Horse.

The *Avenor* also makes up the Accounts of the Stables, and issues Debentures for paying the Officers and Servants.

In a Stat. *Car. II.* we find the *Avenor* mentioned as an Officer who provides Oats for the Stables.—In the *Rev. Parl. 1 R. 21. Edw. III.* we also read of *Avenor* of the Queen, of the Prince, &c.

AVENTURÆ, in our antient Writers, signify Tournaments, or Military exercises on Horseback. See TOURNAMANT.

AVENTURE, or rather ADVENTURE, in our Law Books, a mischance, causing the Death of a Man, without Felony; as, when he is sud only drowned, or burnt by any Misale or Mischance, falling into the Water or Fire. See MISADVENTURE, CHANCE, &c.

AVENUE, in Fortification, an Opening or Inlet into a Fort, Bastion, or the like Place. See FORTY BASTION, FORTIFICATION, &c.

The Word is form'd of the *French* *Avenir*, or *Advenir*, to come to, to arrive at. See ADVENT.

AVENUE, in Gardening, is a Walk, planted on each side with Trees, and leading to some Place. See VISTA. See also GROVE, GRADE.

All *Avenues*, *Mortimer* says, should lead to the Front of an House, Garden-Gate, Highway-Gate, or Wood, and terminate in a Prospect.—In an *Avenue* to an House, whatever the Length of the Walk is, it ought to be as wide as the whole Breadth of the Front, and if wider, better.

AVERAGE, AVERAGIUM, in Law, that Duty or Service which the Tenant is to pay the King, or other Lord, by his Beasts and Carriages. See SERVICE.

The Word is derived from the base *Latin*, *Averia*, Cattle; or the *French*, *Ouvree*, Work.

AVERAGE is also used in Navigation and Commerce, for the Damage which a Vessel, or the Goods and Lading thereof, sustains, from the time of its Departure to its Return; as also, for the Charge or Contributions towards defraying such Damages.

A late Author who has wrote a Treatise exprets upon *Averages*, distinguishes two Kinds thereof; Simple or Private, and Gross or Common.

To the first, the particulars things which suffer, alone contribute; to the second, all both the Ship and the Merchandizes contribute in common.

Of the first Kind are all extraordinary and unforeseen Experiences and Accidents, befalling either the Ship, or the Goods, or both; the Loss in which Cases, it is to be wholly defray'd by the thing or things which occasioned it.—Such as the loss of Cables, Anchors, Masts, and Sails, by reason of Storms, &c. As also Damages accruing to Goods through their own Defects, by walking, rotting, wetting, Storms, Piques, &c. The Sailor's Wages while the Ship is extraordinarily detained by Embargo's, provided he be hired for the whole Voyage, and not per Month. All these are simple or private *Averages*, and not to be charged to the common Account.

For gross or common *Average* to have Place, the Author just mentions, *the* 1^o. That something must have been cast into the Sea, and this out of absolute Necessity. 2^o. That the Commander have had the Consent of the Owners for so doing. 3^o. That it have only been done for the Safety of the whole Ship, and that the Ship have been saved in Consequence thereof.—In such Cases, all those for whose Interest the thing was cast into the Sea, are to contribute to indemnify the Person whose Property it was: And every thing is to be taxed hereto, so much as Jewels, Gold, &c. notwithstanding they do not any way burthen the Ship; and even the Vessel it self, but not Passengers, nor Provisions. *Raamold. Christ. a Description in Nov. Lt. Mar. Bal. 1700.*

To the occasions of common *Average* may be added, Compositions with Pirates for the Ransom of the Ship; as also Cables, Masts, Anchors, &c. lost or abandoned for the common Good; the Food and Physick of the Sailors wounded in Defence of the Ship; and the Pay and Provisions of the Crew when the Ship is arrested or put under Embargo by order of a Prince, provided it were hired for the Month, and not for the whole Voyage.

AVERAGE is more particularly used for the QUOTE or Proportion which each Merchant or Proprietor in the ship or Lading is adjudg'd, upon a reasonable Estimation, to contribute to a common *Average*.

AVERAGE is also a little Duty which those Merchants who send Goods in another Man's Ship, pay to the Master thereof, for his ease of them, over and above the Freight. See *FREIGHT*.

Hence, in Bills of Lading it is expressed.—Paying so much Freight for the said Goods, with Primage and *Average* accustomed.

AVER-CORN, in ancient Writings, such Corn as by Custom is brought by the Tenant's Carts or Carriages, to the Lord's Granary, or Barn.

AVERIA, in our Law Books, properly signify Oxen or Horses used for the Plough; and in a general Sense, any Cattle.

When mention is made of one Beast, they say, *Quidam equus, vel quidam Bos*: When of two, or more, they do not say *Equi* or *Boves*, but *Avoria*.

AVERTMENT, in Law, usually signifies an Offer of the Defendant to make good, or justify an Exception pleaded in Abatement or Bar of the Plaintiff's Action.

The Word also signifies the Act as well as the Offer of justifying the Exception.

Avortment is two-fold, general and particular.—A general *Avortment* is the Conclusion of every Plea to the Writ, or in Bar of Replication, or other Pleadings; (for Courts, or Avowries in nature of Counts, need not be *averted*), concerning Matter affirmative, ought to be *averted* with an *hoc paratus est Verificare*.

Particular *Avortment* is when the Life of a Tenant for Life, or Tenant to Tail, is *averted*, &c. And an *Avortment* contains as well the Matter as the Form thereof.

AVERNI, among the ancient Naturalists, certain Lakes, Grots, and other Places which infect the Air with poisonous Steams or Vapours; call'd also *Mephitis*. See *MEPHITES*, AIR, POISONS, &c.

The Word is Latin, form'd of the Greek privative, *av*, and *vern*, Bird; as intimating that Birds could not fly over them, but dropp'd down dead.

Averna are said to be frequent in Hungary on account of the abundance of Mines therein. See *MINE* and *MINERAL*.

The Grots *dei Cavii*, in Italy, is famous. See *GROTTA*, EXHALATION, &c.

But the most celebrated *Averna* was a Lake near *Bayas*, in Campania, by *Strabo* call'd the *Lucrine Lake*, and by the Italian Geographers, *Lago di Tropepla*.—The Fumes it emitted are represented by the Ancients as of so malignant a Nature, that Birds could not fly over it, but sunk down dead; which some later Writers have been chofe to attribute to this, that the sulphurous Effluvia hereto, not being of consistence to sustain the Birds, they dropp'd by their own Weight.

This Circumstance, joined with the great Depth of the Lake, occasioned them to take it for the Gate or Entrance of Hell; and accordingly *Virgil* makes *Averna* descend this Way to the In-

feri. *Vibius Siquaffer* says, there was no Bottom to be found of it: *Inmensae Altitudinis caetero ima pars apprehendi non potest*. See *HELL*.

AVERRUNCATION, in Agriculture, the Act of scraping, cutting, or lopping off the superfluous Branches of Trees. See *PRUNING*.

AVERRUNCI, in Antiquity, an Order of Deities among the Romans, whose Office was to avert Dangers and Evils. See *God*.

The Greeks call'd this Species of Gods, *'Αβερύωνες*, or *'Αβερύωνες*; and their Fable *Averruncus*: Sometimes, *'Αβερύωνες*.

The Egyptians had also their *Dii Averruncus*, or *Apatropes*, who were pictured in a menacing Posture, and sometimes with Whips in their Hands.—*Ipsi* was a Divinity of this Kind; as is shewn by *Kircher*. See *Ordy. Egypt. T. III. p. 487*.

AVERPENY, *q. d.* Average-peny, Money contributed towards the King's Averages; or Money given to be freed thereof. See *AVERAGE*.

AVERSION. See *ANTI-PATHY*.

AVERY, a Place where Oats, or Provender are kept for the King's Horses. See *AVERA*.

AUGES, in Astronomy, two Points in a Planet's Orbit, otherwise call'd *Aphels*. See *APSIDES*.

One of the *Auges* is particularly denominat'd the *Apogee*, the other *Perigee*. See *APOGEE* and *PERIGEE*.

AUGMENT. See *AUGMENTATION*.

AUGMENT, *ARGUMENTUM*, in the Greek Grammar, an Increase of the Quantity, either of a Letter, or of a Word. See *QUANTITY*.

There are two Kinds of *Augments*.—*Temporals*, or of a Letter, when a short Vowel is chang'd into a long one; or a Diphthong into another longer one: that call'd by reason the time of its Pronunciation is now lengthen'd.

Augmentum Syllabicum, or of a Syllable, is when a Letter or Syllable is added at the beginning of the Word; so that the Number of Syllables is enlarg'd.

AUGMENTS, in Mathematics. See *INCREMENTS*, *FLUXIONS*, &c.

AUGMENTATION, *AUGMENTATIO*, the Act of augmenting; that is, of adding or joining something to another, to render it larger, or more considerable. See *ADDITION*, *ACCESSION*, *ACCRETION*, *AMPLIFICATION*, &c.

AUGMENTATION is also used for the *Augment*; i. e. the Addition, or the thing added. See *ADDITION*, *ACCESSION*, &c.

Such a Minister petitioned the King for an *Augmentation* of Salary, of Wages, &c.

AUGMENTATION was also the Name of a Court erected under *Henry VIII.* to the end the King might be justly dealt with, touching the Profit of such Religious Houses, and their Lands, as were given him by Act of Parliament the same Year.—This Court was dissolv'd under Queen *Mary*, by the Parliament held the first Year of her Reign; but the Office of *Augmentation* remains to this Day.

The Court took its Name hence, that the Revenues of the Crown were thought to be much augmented by the Suppression of the said Houses; many of which the King refer'd to the Crown.

AUGMENTATIONS, in Heraldry, are additional Charges frequently given as a particular Mark of Honour, and generally born either on an Escutcheon, or a Canton.—Such are the Arms of *Ulster*, bore by all the Barons of England.

AUGURY, in Antiquity, an Officer or Minister among the Romans, appointed to observe the Chattering and Feeding of Birds; and by means thereof, form Conjectures about future Events. See *AUGURY*.

The *Augurs* made a College or Community, which at first consisted of three Persons, then four, and lastly nine; four of them *Patriarii*, and five *Plebii*.—*Cicero* was of the College of *Augurs*. See *COLLEGE*.

They bore an *Augural Staff*, or Wand, as the Ensign of their Office and Authority.

The Word *Augur* is derived from *Avus*, Bird, and *Garrulus*, Chattering. *Praxas* derives it from the Celtic *Av*, Liver, and *Gur*, Man: So that according to him, an *Augur* is properly a Person who inspects the Entrails, and divines by means of the Liver: Others derive it from the Arabic *Ogur*, good Fortune.

Augurs, properly speaking, differed from *Augures*, and *Augury* from *Auspicy*, in that the former was in strictness confin'd to the chirping of Birds, and the latter to their flying, feeding, &c. See *AUSPICES*, &c.

AUGURY, in Antiquity, the Art of divining, or foretelling Events, by the chattering, singing, and feeding of Birds. See *DIVINATION* and *AUGUR*.

The Observation of *Auspices* is very antient, as having been prohibited by *Moses* in *Leviticus*.—The Cup put in *Benjamin's* Sack, in *Egypt*, was that used by *Joseph* to take *Auspices* by.

In its more general Signification, the Word *Augury* comprises all the different kinds of Divination; which *Ferri* distinguishes into four Species of *Augury*, according to the four Elements.—Pyromancy, or *Augury* by the Fire; Aeromancy, or *Augury* by the

the Air; Hydromancy, or *Agury* by the Water; and Geomancy, or *Agury* by the Earth. See AEROMANCY, PYROMANCY, &c.

The particular Branches are, *Alethromancy, Antrologomancy, Belomancy, Catoptrromancy, Capnomancy, Gaftrromancy, Gemomancy, Aruspina, Libanomancy, Lecanomancy, Necromancy*, &c. See each described under its proper Article.

Cicero, who was one of the College, wonders how two *Agurs* could meet without laughing at each other; by which it appears what Opinion he had of the Art.—And yet no Affair of Moment could be resolv'd on without first consulting them; and their Advice, be it what it would, was, by a Decree of the Senate, enjoyn'd to be exactly and religiously performed.

AUGUST, AUGUSTUS, something majestic, venerable, sacred. See MAJESTY, &c.

The Title *Augustus* was first given by the Roman Senate to *Octavian*, after his being confirmed by them in the Sovereign Power.—It was conceived as expressing something divine, or elevated above the Pitch of Mankind; being form'd of the Verb *augere*, I grow, Increase; *tanquam sepea humanam formam augetus*.

The Successors of *Augustus* assumed the same Quality; so that thenceforward Emperor and *Augustus* were the same thing: They became synonymous Terms. See EMPEROR.

The presumptive Heir of the Empire, or he who was destined to succeed to the Dignity, was first created *Caesar*; which was a step necessary to arrive at that of *Augustus* or Emperor.—Yet *F. Pagi* maintains the Converse; viz. that it was necessary to be *Augustus*, previously to the being *Caesar*. See CAESAR.

M. Flecher observes, that the Emperor *Valentinian* proclaimed his Brother *Valens, Augustus*; without first declaring him *Caesar*; which had never been practiced before.—'Tis added, that *Marcus Aurelius*, upon his succeeding to *Antoninus*, immediately created *L. Verus*, both *Caesar* and *Augustus*. This was the first time the Romans had known two *Augusti* at once; for which reason the Year when it was done, viz. 161, was mark'd in the *Fasts* with the Conulate of the two *Augusti*.

It was a surprising Spectacle to the People of Rome to see themselves governed by two Sovereigns, after so much Blood spilt for the Choice of a single Matter.

The Empress also took the Quality of *Augusta*; and even some Ladies of the Imperial Family, who had never been Wives of Emperors.

On Medals and Coins, some of the ancient Kings of France are also found with the Appellation *Augusti*; particularly *Charlebert, Clothaire*, and *Clovis*: add that the Wife of this last, *Chrotachilde*, is also call'd by *Heric*, in his Book of the Miracles of St. Germain, indifferently, either *Augusta*, or *Queen*.

The *Historia Augusta*, is the History of the Roman Emperors from the time of *Adrian* to *Carinus*, compos'd by six Latin Writers.

AUGUSTALIA, in Antiquity, a Feast instituted in Honour of the Emperor *Augustus*. See FEAST.

This Festival was first established after he had ended all his Wars, and settled the Affairs of *Sicily, Greece, Asia, Syria*, and the *Partians*:—The Day whenon he made his Entry into Rome, was appointed to be kept a Feast; and was call'd *Augustalis*. See AUGUSTALIS.

AUGUSTALIA was also a Name given to the Games celebrated in Honour of the same Prince, on the 4th of the Ides of *October*. See GAME. See also AUGUSTALIS.

AUGUSTALIS, in Antiquity, a Name given by the Romans 1^o. to those who led the first Ranks of an Army; 2^o. to certain Magistrates in Cities; 3^o. to all the Officers of the Emperor's Palace.

The Governor or Prefect of *Egypt* is particularly call'd *Augustalis*, or *Profectus Augustalis*; as being first established by *Augustus* after the Defeat of *Mark Antony* and *Cleopatra*. He resided at *Alexandria*.

AUGUSTALIS was also a Priest or Pontiff, invested with the Direction and Superintendency of the Games perform'd in Honour of *Augustus*. See GAME, PONTIFF, &c.

The *Augustales* were instituted by *Tiberius*, immediately after *Augustus*'s Death; as is observ'd by *Tacitus*, who assures us they were Priests.—Several Cities had six of these *Augustales*; whence they were call'd, *Senatus Augustalis*.

AUGUSTAN Confession, was a Confession of Faith, made by the ancient Reformers at *Augusta*, or *Augsburg*, in Germany. See CONFESSION, REFORMATION, PROTESTANT, LUTHERANISM, &c.

AUGUST, in Chronology. See MONTH.

AUGUSTINS, an Order of Religious; thus call'd from St. *Augustus*, whose Rule they observe. See ORDER and RELIGIOUS.

The *Augustini*'s, popularly also call'd *Augustin Friars*, were originally Hermits, whom Pope *Alexander IV.* first congregated into one Body, under their General *Lawrence*, in 1256. See HERMIT.

The *Augustini* are cloth'd in Black, and make one of the four Orders of Mendicants. See MENDICANT.

From these arose a Reform, under the Denomination of *Berens Augustini*, or *Minoriti*, or *Friars Minor*. See MINOR and MINORITE.

There are also Canons Regular of St. *Augustus*, who are clothed in white, excepting their Cope, which is black.—At Paris they are known under the Denomination of, *Religious of Genesieve*; that Abby being the Chief of the Order. See GENESIEVE.

There are also *Augustines*, or Nuns, who observe the Rule of St. *Augustus*. See RELIGIOUS and NUN.

The AUGUSTIN of *Jansenius* is a celebrated Treatise of that Author, Bishop of *Ypres*, entitled, *Compendium Fidei Episcopi Iprophi Augustini*; the first Tome whereof contains a Discourse against *Pelagianism*; and the second divers Treatises of Reason; the use of Authority in Theological Matters; the State of Innocence; fall of Nature by Sin, Grace, &c.—From these several Treatises were collected the five famous Propositions, enumerated under the Article JANSENIISM.

AU-GUY-PAN-NEUF, or AGUILLANNEUF. See MELETO and VINCUS.

AVIGNON-Berry, call'd also, *French Berry*, is the Fruit of a Shrub, by some Authors call'd *Limon*; growing pleasantly near *Avignon*, &c. in France. See BERRY.

The Berry is somewhat less than a Pear; its Colour Green, approaching towards a Yellow; of an astringent and bitter Taste.—It is much used by the Dyers who stain a yellow Colour with it; and by the Painters, who make a fine golden Yellow of it. See YELLOW.

AULA, in our ancient Law-Books, signifies a Court Baron.—*Aula ibidem tracta quarto de Augusti*, &c. See BARON.

Aula Eclesiastica is what we now call *Naves Eclesiasticae*. See NAVE. AULIC; AULICA, an Act which a young Divine maintains in some foreign Universities, upon the Admission of a new Doctor of Divinity. See ACT.

It is so call'd from the Latin, *Aula*, a Hall; it being in the Hall of the University that this Act is usually held. See UNIVERSITY, DEGREE, DOCTOR, &c.

The Person who presides at the Disputation is the same, that is, to take the Doctor's Cap.

AULIC, AULICUS, is also a Name attributed to certain Officers of the Emperor, who compose a superior Court or Council, which has an universal Jurisdiction, and without Appeal, over all the Subjects of the Empire, in all Processes enter'd therein. See EMPEROR and EMPIRE.

We say *Aula Council*, the *Aulic* Court or Chamber, *Aulic* Councillors, &c.

The *Aulic* Council is established by the Emperor, who nominates the Officers; but the Elector of *Mentz* has a right of visiting it.—It is compos'd of a President, who is a Catholic; a Vice-Chancellor, presented by the Elector of *Mentz*, and of eighteen Assessors, or Counsellors, nine whereof are Protestants, and nine Romish. See ASSASSOR.

They are divided into two Benches, one whereof is taken up by Nobles, and the other by Lawyers.—They hold their Assembly in the Presence of the Emperor; and for that reason are call'd *Justitium Imperatorum*, the Emperor's Justice; and *Aulic Council*, because their follows the Emperor's Court, *Aula*, and has its Residence in the Place where he is.—This Court clothes a little with the Imperial Chamber of *Spain*; in that they are preventive of each other: It not being allowed to remove any Cause from the one to the other. See IMPERIAL CHAMBER.

Nor can the Emperor himself hinder or suspend the Decisions of either Court; much less call any Cause before himself which has once been before them; without the Consent of the States of the Empire. Yet, in some Cases the same Council forbears making any peremptory Conclusion without the Emperor's Participation; and only Decrees thus, *Plac Vobis ad Caesarem*; that is, make a Report thereof to the Emperor in his Privy-Council. AULNEGER, or ALNAGER. See ALNAGER.

AUMONE, or ALMS. See ALMS.

Tenure in AUMONE, is where Lands are given to a Religious House, or Church, that some Service may be said for the good of the Donor's Soul. See TENURE.

AUMONIER, or ALMONER. See ALMONER.

AUNCIENT Domain. See ANTIEN Domain.

AVIARY, a House or Apartment for the keeping, feeding, and propagating of Birds. See BIRD.

The Word is form'd of the Latin, *Avia*.

AUNCEL-Weight, *quasi Handful-Weight*, is a kind of Billance, consisting of Scales hanging on Hooks fasten'd at each End of a Beam or Staff, which a Man lifts up on his Hand or Fore-finger, and so discovers the Equality or Difference between the Weight and the Thing weigh'd. See BILLANCE.

There being great Decrets practiced in these Weights, they were prohibited by several Statutes, and the even Billance alone commanded. See WEIGHT and STANDARD.

The Word is still used in some Parts of England, to signify Meat sold by poising in the Hand, without putting it into the Scales.

AVISO, an Advice, piece of Intelligence, or Advertisement; to notify some Event, or Matter worthy of Knowledge. See ADVERTISEMENT, &c.

The Word is Italian, and is chiefly used in Matters of Commerce.

AVOCATORIA, a Mandate of the Emperor of Germany, directed to some Prince or Subject of the Empire, to stop his unlawful Proceedings in any Cause brought by way of Appeal before him. See EMPEROR and EMPERE.

AVOIDANCE, in Law, has two Significations: The one, when a Benefice becomes void of an Incumbent; the other, when we fly in Pleasings in Chancery, coarced or avoided, travelled or denied, &c. See VOIDANCE.

AVOIRDUPOIS, or AVERDUPOIS Weight, a kind of Weight used in England; the Pound whereof contains sixteen Ounces. See WEIGHT.

The Proportion of a Pound *Avirdupois* to a Pound Troy, is as 17 to 14. See TROY, POUND, and OUNCE.

All the larger and coarser Commodities are weigh'd by *Avirdupois* Weight; as Groceries, Cheese, Wool, Lead, Hops, &c. Sellers who live not in Corporation Towns, are to make their Bread by *Avirdupois* Weight; those in Corporations by *Troy Weight*.—The Apothecaries buy their Drugs by *Avirdupois*, but sell their Medicines by *Troy*.

AVOWEE, ADVOCATUS. See ADVOWEE and ADVOCATE.

The *Avowee* is he to whom the Right of Advowson of any Church belongs, so that he may present therein in his own Name; he is thus called by way of Distinction from those who sometimes present in another Man's Name, as a Guardian that presents in the Name of his Ward; as also from those who only have the Lands whereon an Advowson belongs for Term of Life, or Years, by Intraion, or Disclaim.

AUPIS ALLER, a French Phrase, sometimes used among English Writers, signifying, at the ussuy.

AURA, an airy Exhalation, or Vapour. See VAPOUR and EXHALATION.

The Word is *Lates*, deriv'd from the Greek *ἀἶς*, gentle Wind.

AUREA *Alexandrina*, in Pharmacy, a kind of Opiate or Antidote, in great Fame among the ancient Writers. See ANTIDOTE.

It is called *Aurea*, from the Gold which enters its Composition, and *Alexandrina*, as having been first invented by a Physician named *Alexander*.—It is reputed a good Preservative against the Colick and Apoplexy.

AURELIA, a Term used by natural Historians for the first apparent Change of the *Erucas*, or Maggot of any Species of Insect. See INSECT.

Aurelia is the same with what other Writers call *Nymphæa*. See NYMPHÆA.

AUREOLA, the Crown of Glory given by Painters and Statuaries to Saints, Martyrs, and Confessors; as a Mark of the Victory which they have obtain'd. See CROWN.

F. *Sinnsud* says, the Custom heretofore was borrow'd from the Heathens, who us'd to encompass the Heads of their Deities with such Rays.

The Word *Aureola*, in its Original, signified a Jewel which was propos'd as the Prize of a Dispute; and was given as the Reward of Victory.

Among the *Rossij* School-Divines, *Aureola* is supposed to be a special Reward bestow'd on Martyrs, Virgins, Doctors, and other Saints, on account of their Works of Supererogation.

AURICHALCUM, is a fictitious Metal, popularly call'd *Brag*. See BRASS.

The *Aurichalcum* is a Mixture of Copper and Calamine-stone melted together by a very vehement Fire, in Furnaces made on purpose. See COPPER and CALAMINARIS.

AURICLE, AURICULA, in Anatomy, the external Ear; or that Part of the Ear which is prominent from the Head. See HEAD.

The Word is a diminutive of *Auris*, Ear; q. d. *Little Ear*.

For the Structure and Variety in the *Auricle*; with the several Parts thereof, their Names, &c. see EAR.

AURICLE is also applied to two Appendages of the Heart; being two semicircular Caps, covering the two Venicles thereof. See VENTRICLE.

They move regularly like the Heart; only in an inverted Order; their Systole corresponding to the Diastole of the Heart and *Ves vesja*. See farther of their Structure and Office under the Article HEART. See also SYSTOLE and DIASTOLE, &c.

AURICULA *Judas*, or *Jew's Ear*, a kind of Fungus or Mushroom, resembling in Figure, a human Ear. See FUNGUS and MUSHROOM.

It grows on old Elder Trees, which is the Tree whereon, 'tis pretended, *Judas* hang'd himself; which has given occasion to the Name.

This Fungus steep'd in Water, and applied to the Eyes, frees them of Inflammations: 'Tis also used Gargle-wise in Decoctions, against Inflammations of the Throat, or swelling of the Tongue.

AURICULAR, AURICULARIS, something known or learnt only by the Ears. See EAR.

Thus we say, an *Auricular Witness*, *Auritus Testis*, a Witness by hearing. See WITNESS, EVIDENCE, TESTIMONY, &c.

AURICULAR Confession. See CONFESSION.

The *Little Finger* is also call'd *Auricularis*, because used in cleansing the Ear. See FINGER.

AURIGA, in Astronomy, the *Waggoner*; a Constellation of fixed Stars in the Northern Hemisphere. See STAR and CONSTELLATION.

The Stars in the Constellation *Auriga*, in *Platow's* Catalogue are 145; in *Tychow's* 23; in the *Britannica* Catalogue 68; the Longitudes, Latitudes, Magnitudes, &c. are as follow.

Stars in the Constellation AURIGA.

Names and Situations of the Stars.	Longitude.		Latitude North.	Magn. Nat.

AURIPIGMENTUM, call'd also *Orpiment*. See **ORPI-MENT**.

AVOWRY, in Law, is where one takes a Distress for Rent or other thing; and the other sues Replevin. In which Case the taker shall justify, in his Plea, for what Cause he took it: And if he took it in his own Right, it is to show it, and so *avow* the taking; which is call'd his *Avowry*. If he took it in the Right of another, when he has shew'd the Cause, he is to make Co-avowance of the taking, as being a Bailiff or Servant to him in whose Right he did it. See **DISTRESS**, &c.

AURIS, an Ear. See **EAR**.

The cutting off the Ears was a Punishment inflicted by the *Saxons* Laws on those who robbed Churches; and afterwards on every Thief; and at length on divers other Criminals. See **PUNISHMENT**.

AURISCALPIUM, an Instrument wherewith to pick and cleanse the Ear from Wax. See **EAR**, **CERUMEN**, &c.

The Word is compounded of the *Latin*, *Auris*, Ear; and *Scal-
po*, I scratch.

AURORA, *Crepusculum*, *Twilight*; that faint Light which begins to appear in a Morning, when the Sun is within eighteen Degrees of the Horizon. See **CREPUSCULUM** and **TWILIGHT**.

The Poets have personified, and even made it a Goddess; representing her with a Chariot, rosy Fingers, &c.

Nival, derives the Word, *ab Oriente sive Luna aut aurore*.

AURORA Borealis, or **AURORA Septentrionalis**, the Northern *Dawn* or *Light*; is an extraordinary Meteor, or luminous Appearance, shewing it self in the Night Time, in the Northern Part of the Heavens. See **METEOR**.

'Tis usually of a reddish Colour, inclining to yellow, and sends out frequent Comets of pale Light, which seem to rise from the Horizon in a pyramidal undulating Form, and strike, with great Velocity, up to the Zenith.

This kind of Meteor never appears near the Equator, and was so rare in *England*, that none are recorded in our Annals since that remarkable one, *Novemb*, 14. 1574. till the surprising *Aurora Borealis*, *March* 6. 1716. which appeared for three Nights successively, but by far more strongly on the first.—Indeed, in the Years 1707 and 1708, five small ones were observ'd in little more than eighteen Months.

Hence it should seem that the Air or Earth, or both, are not at all times dispos'd to produce this *Phenomenon*; for though 'tis possible it may happen in the Day-time, in bright Moon-shine, or in cloudy Weather, and so pass unobserv'd; yet that it should appear so frequent at some times, and so seldom at others, cannot well this way be accounted for.—That in *March* 1716, was visible to the West of *Ireland*, *Confines* of *Russia*, and to the East of *Poland*; extending at least near 30° of Longitude, and 50° in Latitude, that is, over almost all the North of *Europe*; and in all Places at the same time, it exhibited the like wondrous Circumstances.

A sufficient number of Observations have not yet been made by the Curious, to enable them to assign the Cause of this *Phenomenon*, with any certainty.—*Dr. Halley*, however, imagines that watery Vapours, or Effluvia, rarified exceedingly by subterraneous Fire, and tinged with sulphurous Streams, which Naturalists suppose to be the Cause of Earthquakes; may also be the Cause of this Appearance: Or, that 'tis produced by a kind of subtil Matter, freely pervading the Pores of the Earth, and which entering into it near the Southern Pole, passes out again with some Force into the *Aether* at the same Distance from the Northern; the obliquity of its Direction being proportion'd to its Distance from the Pole. This subtil Matter, by becoming some way or other more dense, or having its Velocity increas'd, may be capable of producing a small Degree of Light, after the manner of Effluvia from electric Bodies, which by a strong and quick Friction, emit Light in the Dark: To which sort of Light this seems to have a great Affinity. *Phil. Trans.* N^o. 347.

AURUM, in Natural History, *Gold*. See **GOLD**.

The Word is chiefly applied to certain Chymical Preparations, wherof *Gold* is the Basis or principal Ingredient.—Such are the *Aurum potabile*, *Aurum fulminans*, &c.

AURUM fulminans, fulminating or thundering *Gold*. See **AURUM FULMINANS**.

It is inflammable, not only by Fire, but also by a gentle Warmth; and gives a Report much louder than that of Gun-powder.

Its Effect is commonly said to be principally downwards; in opposition to Gun-powder, which is chiefly upwards; but this rather seems a vulgar Error. See **GUN-POWDER**.

A Scruple of this Powder acts more forcibly than half a Pound of Gun-powder: a single Grain laid on the Point of a Knife, and lighted at the Candle, goes off with a greater Noise than a Musket.—It is said to consume even to the very last Atom.

AURUM potabile, *Potable Gold*, is a Composition made of *Gold*, by reducing it, without any Corrosive, into a Gum, or Substance like Honey, of the Colour of Blood; which Gum steep'd in Spirit of Wine, acquires a Ruby-colour, and is call'd *Tincture*

of *Gold*.

An Ounce of this Tincture, mix'd with sixteen Ounces of another Liqueur, is call'd *Aurum potable*, because of its Gold-colour; and is said to be a sovereign Remedy against several Distempers. See **POTABLE GOLD**.

A modern Physician has asserted that *Gold* is a Refin drawn from the Earth; and that the grand Secret of rendering *Gold potable*, does not consist in dissolving this Refin by means of Corrosives, but by a Water, whereto it melts like Ice or Snow in hot Water; and this Water must be nothing but a Water extracted from *Gold*, agreeable to an Axiom that he lays down, which is, that Matters of different Natures have no Ingress into one another; but that every Menstruum or Dissolvent ought to be taken from Bodies of the same kind with those it is to act upon.

The same Author observes, that Blood and Urine furnish a *Sal Armoiac*, which mingled with *Aqua-fortis*, acts upon *Gold*; whence he conjectures, that there may be a conformity of Nature between *Gold* and Blood; and that by consequence, *Gold* well open'd and subtiliz'd, might produce a Refin, and a Fire that would augment the Blood.

AURUM Mosiacum, See **MOSAIC GOLD**.

AURUM Mosiacum is also a Preparation in Pharmacy, thus called from its golden Colour and Appearance. It is made of Mercury, Tin, Sal Armoiac, and Flowers of Sulphur, by grinding, mixing, then sifting them three Hours in a Sand Heat.—The dirty Sublimata being taken off, the *Aurum Mosiacum* is found at the Bottom of the Matras.

It is recommended in moist chironical and nervous Cafes; and particularly Convulsions of Children.

AURUM Reginae. See **QUEEN GOLD**.

AUSCULTARE, in our antient Customs.—In regard the reading of Prayers with a graceful Tone or Accent, makes some Impression on the Hearers; there was antiently a Person appointed, in Monasteries, to hear the Monks read, who instructed them how to perform it, before they were admitted to read publicly in the Church, or before the People.—This was call'd *Auscultare*, q. d. to hear, listen.

Quoniam Lecturam vel Cantatorem esse aliquod in Monasterio; si utique habeat ab eo, viz. Cantore, profectum suscipit debet Auscultare. Lanfrancus in Decret. pro Ord. Benedic.

AUSPICES, in Antiquity, a sort of Priests or Soothsayers, appointed to observe the Flight of Birds, and thence to form Predictions of future Events. See **DIVINATION**.

The *Auspices* were thus call'd, *Quasi Auspiter, ab avisbus Insperandis*.—They are odiously confounded with the *Augurs*, tho' in strictness there be a Difference. See **AVOVR**.

AUSPICY, **AUSPICURUM**, a kind of Augury amongst the Antients, which consisted in considering the Flight and feeding of Birds, in order to know whether any Undertaking they were about, would prove happy or unfortunate. See **AUSPICES** and **AUGURY**.

They attribute the Invention hereof to *Tiresias* the *Theban*. See **DIVINATION**, **OMENS**, &c.

AUSTERE, implies a rough, astringent Taste; such as that of *Vinum*, &c. See **TASTE**.

Austere things differ from acerb or sour ones; in that they constringe the Mouth and Tongue somewhat less, and are devoid of Acidity. See **ACERRA**.

The Word comes from the *Greek*, *αυστρός*, **AUSTERITY**, **AUSTERENESS** of Taste, that which denominated a *spid Body*, *Austere*. See **AUSTERE**.

AUSTERITY, in a moral Sense, signifies *Severity*, or a rigid Carriage and Deportment in any thing.

Thus we say, *Austerity of Manners*; the *Austerities* of the *Monastick Life*. The *Austerity* of the *Roman* Censors kept the People in their Duty. The greatest *Austerity* of the *Cartosians* is perpetual Solitude. See **CENSOR**, **CARTHUSIAN**, **SOLITARY**, &c.

AUSTRAL, **AUSTRALIS**, the same with *Southern*. See **SOUTH** and **SOUTHERN**.

Thus, *Austral Signs*, are the six last Signs of the Zodiac; so called, because they are on the South-line of the Equinoctial. See **SIGN**.

The Word is derived from *Auster*, the South-Wind. See **WIND**.

AUSTRALIS PARS, is a Constellation of the Southern Hemisphere; not visible in our Latitude. See **CONSTELLATION**.

AUTHENTICK, **AUTHENTICUS**, something genuine, and of good Authority; in opposition to what is fictitious and spurious.

It also signifies something solemn, and celebrated; cloth'd in all its Formalities; and attested by proper Persons to whom credit has been regularly given.

In this Sense we say, the Truths of Christianity are founded on *Authentic Testimonies*, &c.—*Authentic Papers*, Instruments.—The Nobility, and Persons of Rank, were particularly call'd *Authentic Persons*, as being supposed more deserving of Credit than others.

The Word is *Greek*, *ἄστυος*; q. d. *cum Auctoritate*.

AUTHENTICKS, AUTHENTICKS, in the Civil Law, is a Name given to the Novels of *Justinian*. See **NOVEL**.

The Reason of the Denomination is not well known.—*Aliud* will have to it to have been first given them by *Acurfus*.

They were Originally composed in *Greek*, and afterwards translated into *Latin* by the Patriarch *Julian*, who also reduced them into fewer Novels and left *Compas*.—In the time of *Bulgars*, there was a second Version made, more exact and literal, though not quite so elegant as the former.

This Translation, says the Author just cited, being preferred by *Acurfus*, he call'd it the *Authentick*, by way of preference over that of *Julian*, as being more conformable to the Original.

The *Authenticks* or Novels are divided into IX Collations, or Chapters. See **CHAPTER, CIVIL-LAW, &c.**

AUTHOR, AUCTOR, properly denotes one who created or produced any thing; and is applied by way of Eminence to the first Cause, viz. God.—Thus we say the *Author* of Nature, &c. See **CAUSE, GOD, NATURE, &c.**

The Word is *Latin*, from'd of the *Greek*, *αυτορ*, *Ipse*. The Term *Author* is sometimes also cited in the same Sense with *Inventor*.—*Polydore Virgil* has wrote eight Books of the *Authors* or *Inventors* of things, &c. See **INVENTION**.

Pythagoras is held the *Author* of the Dogma of *Metempsychosis*. See **METEMPSYCHOSIS, &c.**

AUTHOR, in Matters of Literature, is a Person who has wrote or composed some Book, or Writing. See **BOOK, WRITING, &c.**

Thus we say the sacred *Authors*; anonymous *Authors*, &c.—The *Latin Authors* pillaged the *Greeks*, &c. See **ANONYMOUS, &c.**

An Original *Author* is he who first treated of any Point or Subject; who did not follow any other Person, imitate any Model either in the Matter or the Manner of what he has wrote. See **ORIGINAL**.

AUTHORITY, AUCTORITAS, a right to command, and make one's self obey'd. See **POWER**.

In this Sense we say the Supreme or Sovereign Authority; Absolute or Despotick Authority; the Royal Authority; the Episcopal Authority; the Authority of the Church; of a Father, &c. See **SUPREME, SOVEREIGN, ROYAL, DESPOTICK, &c.** See also **JURISDICTION, GOVERNMENT, &c.**

AUTHORITY, is also used for the Testimony of an Author, or Writing. See **TESTIMONY**.

The Word is also particularly understood of an Apophthegm, or Sentence of some great or eminent Person, quoted in a Discourse, either by way of Proof, or Embellishment.

The Term also includes Rules, Laws, Canons, Decrees, Decisions, &c. alleged in Confirmation of a Matter in Dispute. See **CONFIRMATION, &c.**

Passages quoted from *Aristotle* are of great Authority in the Schools: Texts of Scripture are of decisive Authority.

Authorities make a Species of Arguments call'd by Rhetoricians, *inartificial*, or *extrinsec Arguments*. See **ARGUMENT**.

For the Use and Effect of *Authorities*, see **EVIDENCE, REASON, PROBABILITY, FAITH, REVELATION, &c.**

AUTOCEPHALUS, a Person who is his own Chief or Master, and has no other over him. See **ACEPHALUS**.

The Word is compounded of the *Greek* *αυτορ*, *ipse*; and *κεφαλη*, *Caput*, Head.

This Denomination was given by the *Greeks* to certain Archbishops, who were exempted from the Jurisdiction of Patriarchs.—Such was the Archbishop of *Cyprus*, by a general Decree of the Council of *Ephesus*, which freed him from the Jurisdiction of the Patriarch of *Antioch*. See **ARCHBISHOP, PATRIARCH, &c.**

There were several other Bishops in the East, who were *Autcephali*; and in the West, those of *Ravenna* pretended to the same Right.—The VIth Council, Canon 39. says, they have the same Authority with Patriarchs; but this is not to be understood in the full Latitude of the Words; but only as intimating, that the *Autcephali* have the same Authority over their Bishops, that Patriarchs had over their Archbishops: In which Sense only they are equal to Patriarchs. See **BISHOP, METROPOLITAN, &c.**

AUTOGRAPHY, AUTOGRAPHI, the very Hand-writing of any Person: Or the Original of a Treatise, or Discourse.—In opposition to a Copy. See **HAND-WRITING, ORIGINAL, COPY, &c.**

The Word is form'd of the two *Greek* Words *αυτορ*, and *γραφοι*, *scribo*.

AUTOMATON, or AUTOMATUM, a self-moving Engine; or a Machine which has the Principle of Motion within it self. See **MACHINE and MOTION**.

Such were *Archytas's* Dove, mentioned by *Aulus Gellius*, *Nact. Att. L. 10.* and *Regiomontanus's* Wooden Eagle, which, as *Hales* will relate, flew forth of the City, met the Emperor, fluted him, and return'd: As also his Iron Fly, which at a Feast flew out of his Hands, and taking a Round, returned thither again. *Apol. c. 10. §. 1.*

Among *Automata* are reckoned all Mechanical Engines which go by Springs, Weights, &c. included within them; such are

Clocks, Watches, &c. See **SPRING, PENDULUM, CLOCK, WATCH, &c.**

The Word is *Greek*, *αυτοματον*, compounded of *αυτορ*, *ipse*, and *μαωο*, *facili*; whence *αυτοματον*, *spontaneous*.—The *Cartesians* maintain Brutes to be mere *Automata*. See **CARTESIANISM, CAUSE, &c.**

AUTOPSY, AUTOPIA, an ocular Demonstration; or the seeing a thing one's self. See **SIGHT, VISION, &c.**

The Word is compounded of *αυτορ*, *ipse*, and *ψυχη*, *Psyche*; Sight.

AUTUMN, AUTUMNUS, the third Season of the Year; being that wherein the Harvest, and the Fruits of the Summer are gathered. See **SEASON, YEAR, &c.**

Autumn begins on the Day when the Sun's Meridian Distance from the Zenith, being on the decrease, is a mean between the greatest and least; which happens when the Sun enters *scor.* Its End coincides with the beginning of *Winter*. See **WINTER, &c.**

Some derive the Word from *auges*, I increase, *quod autumnus fructibus auget*.

Divers Nations computed the Years by *Autumn*; the *English-Saxons*, by *Winters*.—*Tacitus* tells us, the ancient *Germans* were acquainted with all the other Seasons of the Year, but had no Notion of *Autumn*. *Linnæus* observes of the beginning of the several Seasons of the Year, that

Dat Clavens Hyemem, dat Petrus Ver Cathedraus, Desinat Urbem, Autumnat Barholomæus.

AUTUMN, in Alchemy, the Time or Season when the Operation of the Philosopher's-stone is brought to Maturity and Perfection. See **ALCHEMY and PHILOSOPHER'S-STONE**.

AUTUMNAL, something peculiar to *Autumn*. See **AUTUMN**.

AUTUMNAL Point, is one of the Equinoctial Points; being that from which the Sun begins to descend towards the North Pole. See **EQUINOCTIAL Point**.

AUTUMNAL Equinox, is the Time when the Sun is in the *Autumnal Point*. See **EQUINOX**.

AUTUMNAL signs are those through which the Sun passes during the Season of *Autumn*. See **SIGN**.

The *Autumnal signs* are *Libra, Scorpius, and Sagittarius*. See **LIBRA, SCORPIUS, and SAGITTARIUS**.

AUXESIS, in Rhetorick, a Figure, when any thing is magnified too much. See **FIGURE and HYPERBOLLE**.

AUXILIARY, AUXILIARIS, any thing that is helping or assisting to another. See **AUXILIUM**.

Thus we say a Prince is to trust more to his own Soldiers, than to *Auxiliary Troops*, &c.

AUXILIARY Verbs, in Grammar, are such as help to form or conjugate others; that is, are prefixed to them to form ordenate the Mood and Tense thereof. See **VERB, CONJUGATION, &c.**

Such, in *English* are, *have, am, or be*; in *French*, *estre and avoir*; in *Italian*, *es and fion*, &c.

All the modern Languages we know of make use of *auxiliary Verbs*.—The reason is, that the Verbs thereof do not change their Terminations or Endings, as those of the *Latin and Greek*, to denote the different Tenses or Times of being, doing, or suffering; nor the different Moods or Manners of their signifying; so that to supply this defect, recourse is had to different *auxiliary Verbs*. See **TERMINATION, TENSE, PERSON, &c.**

The *Auxiliary* supplies the want of *Passives* in our Language. See **PASSIVE**.

Besides the perfect *auxiliary Verbs*, we have several defective ones; as *do, will, shall, may, can, and have*; which by changing their own Terminations, have the necessity of changing those of the Verbs they are added to.—Thus, instead of *ego aro, tu aris, ille arit*, &c. we say, *I do burn, thou dost burn, he doth burn*, &c.

AUXILIUM, in Law. See **AIO**.

AUXILIUM Curie, signifies an Order of the Court for the summoning of one Party at the Suit of another.

AUXILIUM ad Filium Militem facientem & filium Maritandæ, was a Writ directed to the Sheriff of every County, where the King or other Lord had any Tenants, to levy of them reasonable Aid, towards the Knighting his Son, and the Marriage of his eldest Daughter. See **AIO**.

AWARD, in Law, the Judgment of one who is neither assigned by Law, nor appointed by the Judge, for ending a Matter in Controversy; but is chosen by the Parties themselves that are at variance. See **ARBITRATOR, ARBITRATION, &c.**

AWN, in Botany, *Arifia*; the Beard growing out of the Husk of Corn or Grass. See **ARETA, CORN, &c.**

AWNING, on board a Ship, is when a Sail, or Tarpsulin, or the like, is hung over any part of the Ship, above the Decks, to keep off the Sun, Rain, or Wind.

In the Loop-boat they make an *Awning*, by bringing the Sail over the Yard and Stay; and *bowing* it out with the Boat-hook.

AXILLA, or **ALAS**, in Anatomy, the Cavity under the upper Part of the Arm; commonly called the *Armpit*. See **ARM**.

The Word is a diminutive of *Axis*; q. d. *little Axis*. See *AXIS*.

Abcesses in the *Axilla* are usually dangerous, on account of the many Blood-Vessels, Lymphatics, Nerves, &c. thereabout, which form large Plexus's. See *ULCER*.

By the ancient Laws, Criminals were to be hang'd by the *Axilla*, if they were under the Age of Puberty. See *HANGING*, *POBERTY*, &c.

AXILLA, in Botany, is the space comprehended between the Stems of Plants and their Leaves. See *PLANT*, *STEM*, *LEAF*, &c.

Hence we say, those Flowers grow in the *Axilla* of the Leaves, i. e. at the Base of the Leaves or their Pedicles. See *FLOWER*, &c.

AXILLARY, *AXILLARIS*, in Anatomy, something that belongs to the *Axilla*, or lies near them. See *AXILLA*.

AXILLARY VEIN is one of the subclavian Veins; which passing under the Arm-pits, divides it self into several other Veins. See *SUBCLAVIAN VEIN*.

AXILLARY ARTERY is a Remainsder of the Trunk of the subclavian Artery; which passing under the Arm-pits, changes its Name, and is call'd *Axillary*. See *ARTERY*.

The second Vertebra of the Back is also call'd *Axillary*; in regard it is the nearest to the Arm-pits. See *AXIS* and *VERTEBRA*.

AXINOMANCY, *AXINOMANTIA*, a Species of Divination, or Method of foretelling future Events by means of an AX or Hatcher. See *DIVINATION*.

The Word is form'd from the Greek *ἀξίς*, *axis*, and *μαντία*, *divination*.

This Art was in good repute among the Ancients; and was performed by laying an Agat-stone on a red-hot Hatcher. See *AGAT*.

AXIOM, *AXIOMA*, a self-evident Truth; or a Proposition whose Truth every Person perceives at first sight. See *TRUTH* and *PROPOSITION*.

Thus, that the whole is greater than a Part; that a thing cannot give what it self has not; that a thing cannot be and not be at the same time; that from nothing, nothing can arise, &c. are *Axioms*.—The Word is Greek, *ἀξίωμα*, q. d. *arguitur, Auctoritas*, or even *Esfatum*: Whence *Cicero* in lieu thereof uses the Word *Præmissatum*.

By *Axioms*, call'd also *Maxims*, are understood all common Notions of the Mind, whose Evidence is so clear and forcible, that a Man cannot deny them without renouncing common Sense and natural Reason. See *MAXIM*, *EVIDENCE*, &c.

The Rule of *Axioms* is this, that whatever Proposition expresses the immediate clear Comparison of two Ideas without the help of a third, is an *Axiom*.—On the other hand, a Truth which does not arise from an immediate Comparison of two Ideas, is no *Axiom*. See *IDEA*, *RELATION*, &c.

Wolffius assigns the Essence of an *Axiom* thus: Whatever Proposition arises immediately from the Consideration of a single Definition, is an *Axiom*.—Thus it necessarily following from the Genesis of a Circle, that all right Lines drawn from the Centre to the Circumference thereof, are equal; inasmuch as they all represent the same Line in different Situations: This is an *Axiom*. See *DEFINITION*.

Hence, the Truth of *Axioms* being perceived by the mere Imagination of a Definition; they need no Demonstration: Since they are necessarily as true, as the Definition is just. See *DEMONSTRATION*.

Several Authors abuse this Property of *Axioms*, and obtrude for *Axioms* the Premises of Syllogisms, which they are not able to prove.—*Euclid* himself lies liable to Exception on this Account, having assumed the Equality of Figures which mutually agree, or are congruous to each other, as an *Axiom*. See *CONGRUENCY*.

Axioms, in effect, strictly speaking, are no other than identick Propositions.—Thus to say that all Right Angles are equal to each other, is as much as to say, all Right Angles are Right Angles: Such Equality being implied in the very Definition, the very Name. See *DEFINITION*.

My Lord Bacon proposes a new Science, to consist of general *Axioms*, under the Denomination of *Philosophia prima*. See *PHILOSOPHY*, *KNOWLEDGE*, &c.

AXIOM is also an established Principle in some Art or Science. See *PRINCIPLE*, &c.

Thus, it is an *Axiom* in Physics, that Nature discovers herself most in the smallest Subjects; that Nature does nothing in vain; that Effects are proportional to their Causes, &c. Thus it is an *Axiom* in Geometry, that things equal to the same third are also equal to one another; that if to equal things you add Equals, the Sums will be Equal, &c. So it is an *Axiom* in Opticks, that the Angle of Incidence is equal to the Angle of Reflection, &c. It is an *Axiom* in Medicine, &c. that there is no sincere Acid in the human Body, &c.

In this Sense the general Laws of Motion are call'd *Axioms*; as, that all Motion is Rectilinear, that Action and Re-action are equal, &c. See *LAWS* of *NATURE*.

These particular *Axioms*, it may be observed, do not immediately arise from any first Notions or Ideas, but are deduced from certain Hypotheses: This is particularly observable in physical *Matheses*, wherein, as several Experiments contribute to make one

Hypothesis, so several Hypotheses contribute to one *Axiom*. See *HYPOTHESIS*, &c.

AXIS properly signifies a Line or long Piece of Iron or Wood passing through the Centre of a Sphere, which is moveable upon the same. See *SPHERE*.

In this Sense we say the *Axis* of a Sphere, or Globe; the *Axis*, or *Axis-Tree* of a Wheel, &c. See *GLOBE*, *WHEEL*, &c.

AXIS of the World, in Astronomy.—The *Axis* of the World is an imaginary Right Line, conceived to pass through the Centre of the Earth, and terminating at each End in the Surface of the mundane Sphere. See *SPHERE*.

About this Line as an *Axis*, the Sphere, in the Ptolemaic System, is supposed daily to revolve. See *EARTH* and *ROTATION*. See also *PTOLOMAIC*.

This *Axis* is represented by the Line PQ, *Tab. Astronomy*, Fig. 52.—The two extrem Points hereof, in the Surface of the Sphere, viz. P and Q, are call'd its *Poles*. See *POLE*.

AXIS of the Earth, is a Right Line, upon which the Earth performs its diurnal Rotation. See *EARTH*, *ROTATION*, &c.

Such is the Line PQ, *Tab. Geography*, Fig. 7.—The two extrem Points hereof are also call'd *Poles*. See *POLE*.

The *Axis* of the Earth is a Part of the *Axis* of the World.—It always remains parallel to it self, and at Right Angles with the Equator. See *PARALLELISM*.

AXIS of a Planet, is a Line drawn through the Centre thereof, about which the Planet revolves. See *PLANET*, &c.

The Sun, Moon, and all the Planets, except Mercury and Saturn, are known, by Observation, to move about their several *Axes*; and the like Motion is easily infer'd of these two. See *SUN*, *MOON*, *MERCURY*, *SATURN*, &c.

AXIS of the Horizon, the Equator, Ecliptic, Zodiac, &c. are Right Lines drawn through the Centres of those Circles perpendicularly to the Planes thereof. See *CIRCLE*. See also *HORIZON*, *ECLIPTIC*, *EQUATOR*, &c. See also *PLANE*, &c.

AXIS, in Mechanics.—The *Axis* of a Balance is the Line upon which it moves or turns. See *BALANCE*.

AXIS of Oscillation, is a Right Line parallel to the Horizon, passing through the Centre, about which a Pendulum vibrates. See *OSCILLATION* and *PENDULUM*.

AXIS, in Geometry.—*Axis* of Rotation, or Circumvolution, is an imaginary Right Line, about which any plane Figure is conceived to revolve, in order to generate a Solid. See *SOLID*, *GENESIS*, &c.

Thus a Sphere is conceived to be formed by the Rotation of a Semicircle about its Diameter or *Axis*, and a Right Cone by that of a Right Angle Triangle about its perpendicular Leg, which is here its *Axis*.

AXIS of a Circle or Sphere, is a Line passing through the Centre of a Circle or Sphere, and terminating at each End, in the Circumference thereof. See *CIRCLE* and *SPHERE*.

The *Axis* of a Circle, &c. is otherwise call'd the *Diameter* thereof.—Such is the Line AB, *Tab. Geometry*, Fig. 27. See *DIAMETER*.

AXIS is yet more generally used for a Right Line proceeding from the Vertex of a Figure to the Base thereof. See *FIGURE*, *VERTEX*, and *BASE*.

AXIS of a Cylinder is properly that quiescent Right Line about which the Parallelogram turns, by whose Revolution the Cylinder is formed. See *CYLINDER*.

Though, both in Right and Oblique Cylinders, the Right Line joining the Centres of the opposite Bases, is also call'd the *Axis* of the Cylinder.

AXIS of a Cone is the Right Line or Side upon which the right angled Triangle forming the Cone makes its Motion. See *CONE*.

Hence it follows that only a Right Cone can properly have an *Axis*; in regard an Oblique one cannot be generated by any Motion of a Plane Figure about a Right Line at rest.

But in regard the *Axis* of a Right Cone is a Right Line drawn from the Centre of its Base to the Vertex; in Analogy hereto the Writers of Conicks do likewise call the same Line drawn from the Centre of the Base of an Oblique Cone to the Vertex, the *Axis* thereof.

AXIS of a *Wedge*, is that Quiescent Right Line passing through the Middle thereof, perpendicularly to its Base, and equally distant from its Sides.

AXIS of a *Conick Section*, is a Right Line passing through the Middle of the Figure, and cutting all the Ordinates at Right Angles. See *CONICK SECTION*.

Thus if AP, *Tab. Conicks*, Fig. 31. be drawn perpendicularly to MN, so as to divide the Section into two equal Parts; it is call'd the *Axis* of the Section. See *SECTION*.

TRANSVERSE AXIS, call'd also the *first* or *principal AXIS* of an Ellipsis or Hyperbola, is the *Axis* AP, last defined: Being thus call'd in contradistinction to the conjugate or secondary *Axis*. See *TRANSVERSE*.

The *Transverse Axis* in the Ellipsis the longest; and in the Hyperbola cuts the Curve in the Points A and P, Fig. 32.

CONJUGATE AXIS, or *second AXIS* of the Ellipsis, is the Line FF, Fig. 31. drawn through the Centre of the Figure C, parallel to the Ordinate MN, and perpendicularly to the *Transverse Axis* AP; being terminated at each extrem by the Curve. See *ELLIPSIS*.

The Conjugate is the shorter of the two *Axes* of an Ellipsis. See CONJUGATE.

Conjugate, or second Axis of an Hyperbola, is the Right Line FF, Fig. 32, drawn through the Centre parallel to the Ordinates, M N, M' N', perpendicularly to the *Axis* AP. See HYPERBOLA.

The Length of this *Axis*, though more than infinite, may be found by this Proportion, $\sqrt{AN \times PM} : AP :: MN : FF$.

Axis of a Parabola. See PARABOLA.

The *Axis of a Parabola* is of an indeterminate Length, that is infinite.—The *Axis* of the Ellipsis is determinate.—The Parabola has only one *Axis*; the Ellipsis and Hyperbola two. See CURVE.

Axis in Opticks.—*Optick Axis*, or *Visual Axis*, is a Ray passing through the Centre of the Eye; or it is that Ray which proceeding out of the Middle of the luminous Cone, falls perpendicularly on the crystalline Humour, and consequently passes through the Centre of the Eye. See OPTICK, RAY, CONE, VISION, &c.

Common or mean Axis, is a Right Line drawn from the Point of Concurrence of the two optick Nerves, through the Middle of the right Line, which joins the Extremity of the same optick Nerve. See OPTICK NERVE.

Axis of a Lens, or Glass, is a right Line passing along the *Axis* of that Solid whereof the LENS is a Segment. See LENS and GLASS.

Thus a spherical convex Lens, being a Segment of some Sphere; the *Axis of the Lens* is the same with the *Axis of the Sphere*; or it is a right Line passing through the Centre thereof. See CONVEX, &c.

Or the *Axis of a Glass* is a right Line joining the Middle Points of the two opposite Surfaces of the Glass. See OPTICK GLASS.

Axis of Incidence, in Dioptricks, is a right Line drawn through the Point of Incidence, perpendicularly to the refracting Surface. See INCIDENCE.

Such is the Line DB, Tab. Opticks, Fig. 56.

Axis of Refraction, is a right Line continued from the Point of Incidence or Refraction, perpendicularly to the refracting Surface, along the further Medium.—Such is the Line BE.

Or it is that made by the incident Ray, perpendicularly prolonged on the Side of the second Medium. See REFRACTION.

Axis of a Magnet, or Magnetical Axis, is a Line passing thro' the middle of a Magnet, length-wise; in such manner, as that however the Magnet be divided, provided the Division be according to a Plane wherein such Line is found, the Loadstone will be made into two Loadstones. See MAGNET and MAGNETISM.

The extremities of such Lines are called the Poles of the Stone. See POLE and POLARITY.

Axis, in Anatomy, is the third Vertebra of the Neck; reckoning from the Skull. See VERTEBRA.

'Tis thus called by reason the two first Vertebrae, with the Head, move thereon, as on an *Axis*. See HEAD and NECK.

Spiral Axis, in Architecture, is the *Axis* of a twisted Column, drawn spirally, in order to trace the Circumvolutions without. See TWISTED COLUMN.

Axis of the Ionic Capital, is a Line passing perpendicularly through the middle of the Eye of the Volute. See IONIC and VOLUTE.

The *Axis* is otherwise call'd *Cathetus*. See CATHETUS.

Axis in Peritrochio, is one of the five mechanical Powers, or simple Machines; contriv'd chiefly for the raising of Weights to a considerable Height. See MECHANICAL POWER, &c.

It consists of a Circle, represented AB, (Tab. Mechanicks, Fig. 44) concentric with the Base of a Cylinder, and moveable together with it, about its *Axis* EF.—This Cylinder is call'd the *Axis*; the Circle, the *Peritrochium*; and the Radii, or Spokes, which are sometimes fitted immediately into the Cylinder, without any Circle, the *Septulae*. See PERITROCHUM.

Round the *Axis* winds a Rope, whereby the Weight, &c. is to be rais'd.

The *Axis in Peritrochio* takes place in the Motion of every Machine, where a Circle may be conceived describ'd about a fix'd *Axis*, concentric to the Plane of a Cylinder about which it is plac'd; as in Crane-Wheels, Mill-Wheels, Captains, &c. See WHEEL.

Doftrine of the AXIS in Peritrochio.

1. If the Power, applied to an *Axis in Peritrochio*, in the Direction AL, Fig. 7, perpendicular to the Periphery of the Wheel, or to the Spoke, be to a Weight G, as the Radius of the *Axis* CE, is to the Radius of the Wheel CA, or the Length of the Spoke; the Power will just sustain the Weight, i. e. the Weight and the Power will be in *Equilibrio*.

2. If a Power be applied to the Wheel in F, according to the Line of Direction FD, which is oblique to the Radius of the Wheel, though parallel to the perpendicular Direction; it will have the same Proportion to a Power which acts according to the perpendicular Direction AL, which the whole *Sex* has to the Sine of the Angle of the Direction DFC.

Hence, since the Distance of the Power in A, is the Radius CA; the Angle of Direction DFC being given; the Distance DC is easily found.

3. Powers applied to the Wheel in several Points, F and K, according to the Directions, FD and KI, parallel to the perpendicular one AL, are to each other as the Distances from the Centre of Motion CD and DI, reciprocally.

Hence, as the Distance from the Centre of Motion increases; the Power decreases; & vice versa.—Hence also, since the Radius AC is the greatest Distance, and agrees to the Power acting according to the Line of Direction; the perpendicular Power will be the smallest of all those able to sustain the Weight G, according to the several Lines of Direction.

4. If a Power acting according to the Perpendicular AL, lift the Weight G; the Space of the Power will be to the Space of the Weight, as the Weight to the Power.

For, in each revolution of the Wheel, the Power passes thro' its whole Periphery; and in the same time the Weight is rais'd a Space equal to the Periphery of the *Axis*: The Space of the Power, therefore, is to the Space of the Weight, as the Periphery of the Wheel to that of the *Axis*: But the Power is to the Weight as the Radius of the *Axis* to that of the Wheel. Therefore, &c.

5. A Power, and a Weight being given, to construct an *Axis in Peritrochio*, whereby it shall be sustain'd.

Let the Radius of the *Axis* be big enough to support the Weight without breaking. Then, as the Power is to the Weight; so make the Radius of the Wheel, or the Length of the Spoke, to the Radius of the *Axis*.

Hence, if the Power be but a small part of the Weight, the Radius of the Wheel must be vastly great.—E. g. Suppose the Weight 3000, and the Power 50, the Radius of the Wheel will be to that of the *Axis* as 60 to 1.

This Inconvenience is provided against by increasing the number of Wheels and *Axes*; and making one turn round another, by means of Teeth or Pinions. See WHEEL-AXUNGIA, a kind of Fat, the fittest and moistest of any in the Bodies of Animals. See FAT.

It is different from Lard, which is a firm Fat; and from Sweet Lard, or Adeps, which is a kind of dry Fat.

The Latins distinguish Fat into *Pinguedo*, call'd also *Axungia*; and *Adeps*, or *Sebum*; but many of our modern Writers confound them. See PINGUEDO.

The Physicians make use of the *Axungia* of the Goose, the Dog, the Viper, and some others, especially that of Man, which is of extraordinary Service in the drawing and ripening of Tumors, &c. See ATTRAHENT. See also VIPER, &c.

The Word is supposed to be form'd, ab *Axe Rotarum que unguntur*.

AXUNGIA of Glass, call'd also the *Gall*, and *Salt of Glass*, is a Scum taken from the Top of the Matter of Glass before it be verified. See GLASS.

AYEL, in Law, a Writ which lies where the Grandfather being seized in his Demain the Day he died, a Stranger enters the same Day, and dispossession the Heir. See WRIT.

AYRY, or *Aery of Hawks*, a Nest or Company of Hawks; so call'd from the old French Word *Aire*, which signifies the same thing. See HAWK and HAWKING.

AYZAMENTA. See EMBLEMENTS.

AZIMUTH, in Astronomy.—The *Azimuth of the Sun*, or a *Star*, is an Arch of the Horizon, comprehended between the Meridian of the Place, and any given Vertical. See MERIDIAN and VERTICAL.

The *Azimuth* is the Complement of the Eastern and Western Amplitude to a QUADRANT. See AMPLITUDE.

The *Azimuth* is found by this Proportion; as Radius is to the Tangent of the Latitude, so is the Tangent of the Sun's Altitude to the Cotang of the *Azimuth* from the South, at the time of the Equinox.

To find the *Azimuth of the Globe*, see GLOBE.

The Word is pure Arabic, where it signifies the same thing.

Magnetical AZIMUTH is an Arch of the Horizon contained between the Sun's *Azimuth*-Circle, and the magnetical Meridian; or it is the apparent Distance of the Sun from the North or South Point of the Compass. See MAGNETICAL.

It is found, by observing the Sun with an *Azimuth* Compass, when he is about 10 or 15 Degrees high, either in the Forenoon or Afternoon. See AZIMUTH COMPASS.

AZIMUTH Compass is an Instrument used at Sea for finding the Sun's magnetical *Azimuth*. See MAGNETICAL AZIMUTH.

The Description and Use of the *Azimuth* Compass, see under the Article AZIMUTH COMPASS.

AZIMUTH Dial, is a Dial whose Style or Gnomon is at right Angles to the Plane of the Horizon. See DIAL.

AZIMUTHS, call'd also vertical Circles, are great Circles intersecting each other in the Zenith and Nadir, and cutting the Horizon at right Angles. See VERTICAL.

The Horizon being divided into 360°; for this reason they usually conceive 360 *Azimuths*.—These *Azimuths* are represented by the Rhumbs on Sea CHARTS. See HORIZON, RHUMB-CHART, &c.

On the Globe these Circles are represented by the Quadrant of Altitude when screw'd in the Zenith. See GLOBE, QUADRANT of Altitude, &c.

On these *Azimuths* is reckoned the Height of the Stars and the Sun, when he is not on the Meridian. See ALTITUDE, SUN, STAR, &c.

AZONES, in Mythology, a Term antiently applied to such of the Gods as were not the private Divinities of any particular Country or People, but were acknowledg'd as Gods in every Country, and worshipp'd by every Nation. See GOD.

The Word is derived from the *Greek* privative *α*, and *ζών*, Zone, Country.

These *Azons* were a Degree above the visible and sensible Gods, which were call'd *Zones*; who inhabited some particular Part of the World, and never stirr'd out of the District or Zone that was assign'd them.

AZOTH, among the antient Chymists, signifies, sometimes, the first Matter of Metals; sometimes an universal Medicine; and sometimes the Mercury of a Metal.—But the Term is now disus'd. See METAL, MERCURY, &c.

AZURE, the blue Colour of the Skies. See BLUE, COLOUR, SKY, &c.

AZURE, in Heraldry, signifies a blue Colour, in the Coats of Arms of all Persons under the Degree of a Baron. See COLOUR.

In the Escutcheons of Noblemen, Blue is call'd *Saphir*; and in those of sovereign Princes, *Jupiter*.

In engraving, it is represented by Strokes or Hatches drawn horizontally, as in the annexed Figure.

The French prefer this Colour to all others, by reason the Field of the Arms of their Kings is *Azure*.

AZURE is also us'd for a mineral Colour, prepared from the *Lapis Armenus*. See ARMENUS.

The *Azure* is very near a-kin to Ultramarine; being procur'd from the Armenian Stone much after the same Manner as the other is from *Lapis Lazuli*. See ULTRAMARINE and LAPIS LAZULI.

AZYGOS, in Anatomy, a Vein otherwise call'd *Vena fasci parvi*, because single. See VEIN.

The *Vena Azygos* is the third Branch of the ascending Trunk of the *Cava*.—It descends through the right Side of the Cavity of the *Thorax*, and at its arrival at the eighth or ninth *Vertebra*, begins to keep the Middle, and sends forth on each Side, intercostal Branches to the Interstices of the eight lower Ribs; and there is divided into two Branches, the larger of which is insert-

ed sometimes into the *Cava*, but oftener into the Emulgent: The other enters the *Cava*, commonly a little below the Emulgent, but is seldom joined to the Emulgent it self. See CAVA and EMULGENT.

AZYMITES, they who Communicate with Bread not leavened or fermented. See AZYMU.

This Appellation is given by *Cersularius*, to those of the *Latin* Church, upon his Excommunicating them in the XIth Century.

The *Armenians* and *Maronites* do also make use of *Azymas*, or unleavened Bread, in their Office; on which Account some *Greeks* call them *Azymites*. See ARMENIAN and MARONITE.

AZYMU, something not fermented, or that is without Leaven. See FERMENT and LEAVEN.

The Term *Azymas* is much us'd in the Disputes betwixt those of the *Greek* and *Romish* Church; the latter of whom contend, that the Bread in the *Mass* ought to be *Azymas*, unleaven'd, in imitation of the paschal Bread of the *Jews*, and of our Saviour, who instituted the Sacrament on the Day of the Passover; and the latter strenuously maintaining the former, from Tradition, and the constant Usage of the Church. See SACRAMENT, EUCHARISTY, &c.

This Dispute was not the Occasion of the Rupture between the *Greek* and *Latin* Churches; *Phocas* having broke with the Pope 200 Years before.—The Patriarch *Cersularius*, in the XIth Century, excommunicated the *Latins* for adhering to the Use of *Azymas* Bread.

St. Thomas, in 4 *Sent.* Dist. 11. q. 2. Art. 2. *Questiun.* 3. relates, that during the first Ages of the Church, none but unleavened Bread was us'd in the Eucharist, 'till such time as the *Ekkesites* arose, who held that all the Observances prescribed by *Moses* were still in force; Upon which, both Eastern and Western Churches took to the Use of leaven'd Bread; and after the Extinction of that Heresy, the Western Church returned to the *Azymas*; the Eastern pertinaciously adhering to the former Usage.

This Account is contriverted by Fa. *Sirrossa*, in a Dissertation express'd, wherein he shews, that the *Latins* had constantly communicated in leaven'd Bread, till the Xth Century. And Cardinal *Boss*, *Rerum Liturgic.* c. 23. p. 185. owns a deal of distrust of what St. Thomas alledge.—In the Council of *Florence* it was decreed that the Point lay at the Discretion of the Church; and that either leavened or unleavened Bread might be us'd: The Western Church has preferred the latter.

The Word is derived from the *Greek* *αζυμος*, *for* fermented, which is compos'd of the privative *α*, and *ζυω*, Ferment.

B A C

B, THE second Letter of our Alphabet, and of most others, is the first Consonant, and first Mute, and in its Pronunciation resembles the Bleating of a Sheep; upon which account *Petrus* tells us in his Hieroglyphicks, that the *Egyptians* represented the Sound of this Letter by the Figure of that Animal. 'Tis also one of those Letters which the *Eastern* Grammarians call *Labial*, because the principal Organs employ'd in its Pronunciation, are the Lips. It has a near Affinity with the other *Labials* P and V, and is often used for P both by the *Armenians* and other *Oriental*s, as in *Betrus* for *Petrus*, *appon* for *appon*, &c. and by the *Romans* for V, as in *amabit* for *amavit*, *Berna* for *Verna*, &c. whence arose that Jest of *Aurelian* on the Emperor *Bonifus*, *Non ut vivas natus est, sed ut bibat*. B requires an intire Closure and Pressure of the Lips to pronounce it, and therefore can scarce ever end the Sound of a Word: But when you endeavour to pronounce it there, you are obliged to add an E to open the Lips again, as in *Jeb*, which is sounded *Jebe*. This Letter also if it pass through the Nostrils, becomes an M; as appears by those who have the Nostrils stop'd by a Cold or otherwise, when they endeavour to pronounce the Letter M; as for Instance, *many Men*, is by such an one founded *many Ben*. With the Antients B stood for 300, as appears by this Verse:

Et B trecentum per se retinere videtur.

When a Line was drawn above it, \bar{B} , it stood for 3000, with a kind of Accent below it for 200; but among the *Greeks* and *Hebrews* this Letter signified only 2. B F in the Preface to the *Decrees*: or *Senatus-Consulta* of the old *Romans*, signified *Bonum*. 'Tis often found on Medals to mark the *Epocha*. *Plutarch* observes that the *Macedonians* changed β into B, and pronounced *Bilyt*, *Beronice*, &c. for *Philip*, *Pheronice*, &c. and those of *Delpbos* instead of β used Π , as $\beta\delta\omega\sigma$ for $\pi\delta\omega\sigma$, $\beta\omega\sigma\tau\iota$ for $\pi\omega\sigma\tau\iota$, &c. The *Latins* said *suppono*, *oppono*, for *subpono*, *obpono*, and pronounced *optinuit*, tho they wrote *obtinuit*, as *Quintilian* has observed. They also used B for F or PH; thus in an ancient Inscription mentioned by *Gruter*, OBRENDARIO is used for OFRENDARIO.

BABYLONISH Hours. See Hours.

BACCHANALIA, a Religious Feast in Honour of *Bacchus*, celebrated with much Solemnity among the Antients, particularly the *Athenians*, who even compared their Years thereby, till the Commencement of the *Olympiads*. The *Bacchanalia* are sometimes also call'd *Orgia*, from the *Greek* $\omega\rho\gamma\eta$, Fury, Transport; by reason of the Madness and Enthusiasm wherewith the People appear'd to be possess'd at the Time of their Celebration. They were held in Autumn, and took their Rise from *Egypt*; whence, according to *Diodorus*, they were brought into *Greece* by *Melampus*. The Form and Disposition of the Solemnity depended, at *Athen*s, on the *Archon*, and was at first exceedingly simple, but by degrees became incumber'd with a world of ridiculous Ceremonies, and attended with a world of Dissoluteness and Debauchery; insomuch that the *Romans*, who grew alarm'd of 'em, suppress'd them by a *Senatus-Consultum* throughout all *Italy*. The Women had a great Share in the Solemnity, which is said to have been instituted on their account; for a great Number of 'em attending *Bacchus* to the Conquest of the *Indies*, and carrying in their Hands the *Thyrus*, i. e. a little Lance cover'd with Ivy and Vine-Leaves, singing his Victories and Triumphs wherever they went, the Ceremony was kept up after *Bacchus's* Deification under the Title of *Bacchanalia*, and the Women were insall'd Priestesses thereof under that of *Bacchantes*. These Priestesses at the Time of the Feast run thro the Streets and over the Mountains cover'd with Tygers Skins, their Hair dishevell'd, their *Thyrus* in one Hand and Torches in the other, bowling and striking *Euboe Pans*, *Euboe Bacce*. Men and Women met promiscuously at the Feast, all perfectly naked, except for the Vine-Leaves and Cullers of Grapes which bound their Heads and Hips; here they danced and jump'd tumultuously, and with strange Gesticulations sung Hymns to *Bacchus*, till weary and giddy they tumbled down distracted. See *Cassellanus's Erotologion*.

BACCHIUS, in the *Latin* Poetry, is a particular Kind of Foot, consisting of three Syllables, where the first is short

B A C

and the two last long, as *Egeates*: It is the Reverse of a *Dactyle*, and takes its Name from that of *Bacchus*, because frequently used in the Hymns compos'd in his Honour.

BACCIFEROUS Plants, whether Trees, Shrubs, or Herbs, are such as bear Berries, i. e. Fruit cover'd with a thin Membrane, wherein is contained a Pulp, which grows soft and moist when ripe, and encloses the Seed within its Substance. The *Bacciferous* Trees Mr. *Ray* divides into four Kinds: (1.) Such as bear a caliculate or naked Berry; the Flower and Calix both falling off together, and leaving the Berry bare, as the *Sassafras* Tree, &c. (2.) Such as have a naked monoprycnous Fruit, that is, containing in it only one Seed, as the *Arbutus*, *Terebinthus*, *Leuciscus*, &c. (3.) Such as have a naked but polyprycnous Fruit; that is, containing two or more Kernels or Seeds within it, as the *Jasagnum*, *Ligustrum*, &c. (4.) Such as have their Fruit compos'd of many *Acinis*, or round soft Balls set close together like a Bunch of Grapes, as the *Ova maris*, *Rubus vulgaris*, *Rubus Idæus*, and the *Rubus minor fructu ceruleo*, &c. See Plant.

BACILLI, in *Medicine*, such Compositions as are of a cylindrical Figure, like a Stick; call'd also Lozenges: from the *Latin* Word *Baculus*, a Staff.

BACK-STAFF, in Navigation, an Instrument by the *French* call'd the *English Quadrant*; invented by Captain *Devis*: of good Use in taking the Sun's Altitude at Sea. It consists of three Vanes, A, B, and C, and of two Arches. [Plate of Navigation, Fig. 5.] The Vane at A call'd the Horizon-Vane; that at B the Shade-Vane; and that at C the Sight-Vane. The lesser Arch B is of 60 Degrees, and that of C (or f g) of 30 Degree.

To Use the Back-Staff; the Shadow-Vane B is set upon the 60th Arch, to an even Degree of some Altitude less by 10 or 15 Degrees, than you judge the Complement of the Sun's Altitude will be: The Horizon-Vane is put on at A, and the Sight-Vane on the 30th Arch f g: The Observer's Back being then turned to the Sun (whence the Name of Back-Staff or Back-Quadrant) he lifts up the Instrument, and looks thro the Sight-Vane, raising or falling the Quadrant, till the Shadow of the upper Edge of the Shade-Vane fall on the upper Edge of the Slit in the Horizon-Vane; and then if you can see the Horizon thro the said Slit, the Observation is well made: But if the Sea appear instead of the Horizon, move the Sight-Vane lower towards g: If the Sky appear, move it upwards towards f, and so try if it comes right: Then observe how many Degrees and Minutes are cut by that Edge of the Sight-Vane which answers to the Sight-Hole, and to them add the Degrees cut by the upper Edge of the Shade-Vane, the Sum is the Sun's Distance from the Zenith, or the Complement of his Altitude. To find the Sun's Meridian, or greatest Altitude on any Day, continue the Observation as long as the Altitude is found to increase, which you will perceive by the Appearance of the Sea instead of the Horizon, removing the Sight-Vane lower: but when you perceive the Sky appear instead of the Horizon, the Altitude is diminish'd; therefore desist from farther Observation at that Time, and add the Degrees upon the 60 Arch to the Degrees and Minutes upon the 30 Arch, and the Sum is the Zenith Distance, or Co-altitude of the Sun's upper Limb.

And because it is the Zenith Distance, or Co-altitude of the upper Limb of the Sun, not the Center that is given by the Quadrant, in observing by the upper End of the Shade-Vane, add 16 Minutes, the Sun's Semidiameter, to that which is produced by your Observation, and the Sum is the true Zenith Distance of the Sun's Center. If you observe by the lower Part of the Shadow of the Shade-Vane; then the lower Limb of the Sun gives the Shadow; and therefore you must subtract 16 Minutes from what the Instrument gives: But considering the Height of the Observer above the Surface of the Sea, which is commonly between 16 and 20 Foot, you may take 5 or 6 Minutes from the 16 Minutes, and make the Allowance but of 10 Minutes, or 12 Minutes, to be added instead of 16 Minutes. Mr. *Flemhead* contriv'd a Glass Lens, or double Convex, to be plac'd in the middle of the Shade-Vane, which makes a small bright Spot on the Slit of the Horizon-Vane, instead of the Shade: Which is a great Improvement, if the Glass be truly made; for by this means the Instrument may be used in hazy Weather, and

a much more accurate Observation made in clear Weather, than could be by the Shadow.

BACK-BONE. See *Spina Dorſi*.

BACK-STAYS of a Ship, are Ropes whose Uſe is to keep the Maſt from falling aſt: All Maſts, Top-Maſts and Flag-Staves have Stays, except the Sprit-Sail-Top-Maſt; the Stay of the Main-Maſt, which is called the *Main-Stay*, is by a Lannier faſten'd to a Collar which comes about a Knee belonging to the Head; the Main-Top-Maſt-Stay is faſten'd to the Head of the Fore-Maſt by a Strap, and a Dead-Man's Eye; and ſo is the Main-Top-Gallant-Maſt ſtayed to the Head of the Fore-Top-Maſt: The Fore-Maſt and Maſts belonging to it, are in the ſame manner ſtayed to the Bold-Sprit and Sprit-Sail, Top-Sail Maſt, which Stays do likewiſe ſtay the Bolt-Sprit it ſelf. The Mizzen-Stay comes to the Main-Maſt by the Half-Deck, and the Top-Maſt-Stays come to the Shrouds with Crews-Fect. The Length of the Stay is the ſame with that of the Maſt it belongs to; the Main-Maſt, Fore-Maſt, with the Maſts belonging to them, have alſo *Back-Stays*, which help to keep the Maſt from pitching forward or over-board, becauſe they go on either Side of the Ship.

BACULE, in Fortification, a Kind of Portcullis or Gate, made like a Pit-fall with a Counter-Poiſe, and ſupported by two great Stakes: It is uſually made before the *Corps-de-Garde* advancing near the Gates.

BACULOMETRY, the Art of Meaſuring accelliſible and inacceſſible Lines, by the help of one or more Staves.

BACULUS DIVINATORIUS, or *Virgula Divina*; A Branch of Haſle-Tree, fork'd, uſed for the Diſcovery of Mines, Springs, &c. See *Virgula divina*.

BADGER, from the French *Bogasier*, i. e. a Carrier of Luggage; a licenſ'd Huckleſter, or Perſon that buys Corn or other Proviſions, and carries them from one Place to another to make Profit of.

BAG, in Commerce a Term uſed to ſignify different Quantities of Commodities; a Bag of Almonds, for inſtance, is about 3 Hundred Weight, of Annifeed from 3 to 4 Hundred, of Pepper from 1 $\frac{1}{2}$ to 3 Hundred, of Goats-Hair from 3 to 4 Hundred, of Cotton-Yarn from 2 $\frac{1}{2}$ to 4; &c.

BAGNIO, an Italian Term ſignifying a Bath. Hence *Bagnio* is become a general Name in Turkey for the Prifons where their Slaves are incloſed; it being uſual in thoſe Prifons to have Baths. See *Baths*.

BAGNOLIANS, a Sect of Hereticks in the Eighth Century; in reality *Manichees*, tho they diſguiſ'd their Errors. They rejected the *Old Teſtament*, and Part of the *New*; held the World to be Eternal; and affirm'd God did not create the Soul, when he infus'd it into the Body. They derive their Name from *Bagnols*, a City in *Languedoc*.

BAGPIPE, a Muſical Inſtrument of the Wind-kind; chiefly uſed in Country Places. It conſiſts of two principal Parts: The firſt a Leather Bag, which blows up like a Foot-Ball, by means of a Portvent, or little Tube fitted to it, and ſtopp'd by a Valve. The other Part conſiſts of three Pipes, or Flutes; the firſt called the Great Pipe, or Drone, and the ſecond the Little one; which paſs the Wind out only at Bottom: The third has a Tongue, and is play'd on by compreſſing the Bag under the Arm, when full, and opening or ſtopping the Holes, which are eight, with the Fingers. The little Pipe is ordinarily a Foot long, that play'd on 13 Inches, and the Portvent fix. The *Bagpipe* takes in the *Compaſs* of three Octaves.

BAGUETTE, in Architecture, a little round Moulding leſs than an *Altragal*, ſometimes carv'd, and enrich'd with Folings, Pearls, Ribbands, Laurels, &c. Tho according to *M. le Clerc*, when the *Baguette* is enrich'd with Ornaments, it changes its Name, and is called *Chapelet*.

BAILE, or *Bale*; the Seamen call Lading or Caſting the Water by Hund out of a Boat, *Bailing*, and when the Water is thus bail'd out, they ſay, *The Boat is freed*. They call alſo thoſe Hoops that bear up the Tilt of the Boat *Bailes*.

BAIL, in Law, from the French *Bail*, a Guardian, or Goſler; is uſed for the ſetting at Liberty one arreſted or impriſoned upon an Action, either Civil or Criminal, under Sureties taken for his Appearance at a Day and Place aſſign'd. 'Tis call'd *Bail*, becauſe hereby the Party confin'd is deliver'd into the Hands of thoſe who bind themſelves for his forth-coming: perhaps from the French *Bail*, *leatio*, a letting out any thing to Farm, &c. *Bail* is either Common or Special: *Common Bail* is in Actions of ſmall Prejudice or ſlight Proof, in which Caſes any Sureties are taken: *Special Bail* is given in Caſes of greater Moment, where 'tis requir'd that the Sureties be Subſidy Men at the leaſt, and according to the Value. *Almoſt* diſtinguiſhes between *Bail* and *Mainpriſe* thus: He that is *mainpriſed* is ſaid to be at large, and to go about at his Liberty, without Ward, till the Time of Appearance; whereas he who is let to *Bail* to two or more Men, is always accounted by Law, to be in their Ward and Cuſtody for the Time; and they may, if they pleaſe, actually keep him in Priſon.

Bale in Commerce; a Pack or certain Quantity of Merchandize, as a *Bale* of Spicery, of Books, or Thread.

BAILEMENT, a Term in Law, ſignifying the Delivery of Things, whether Writings or Good, to another; but ſometimes to the *Bailor*, that is, back to him who deliver'd them; ſometimes to the Uſe of him to whom they are deliver'd; and ſometimes to a third Perſon.

BAILIFF, in its Original ſignifies *Guardian*, and is uſed to expreſs an Officer who does Juſtice in a certain Diſtrict or Territory. *Pagnier* maintains, that *Bailiffs* were originally a Kind of Commiſſioners, or Judges Delegate, ſent into the Provinces to examine whether or no Juſtice were well diſtributed by the Counts, who were then the Ordinary Judges. *Loyſſeu* refers the Origin of *Bailiffs* to the Uſurpation and Idleneſs of the great Lords, who having got the Administration of Juſtice into their own Hands, and being weary of the Burden, turn'd it over to their Commiſſioners, whom they call'd *Bailiffs*. The *Bailiffs* had at firſt the Intendance of Arms, of Juſtice, and of the Finances; but abuſing their Power, they were by degrees ſtripp'd of it, and the greateſt Part of their Authority transfer'd to their Lieutenants, who were to be Men of the Long Robe. 'Tis true, in France they have ſill ſome Prerogatives, as being reputed the Heads of their reſpective Diſtricts; in their Name Juſtice is adminiſtr'd, Contracts and other Deeds paſſed, and to them is committed the Command of the Militia. From theſe it was that the *Engliſh Bailiffs* originally took both their Name and their Office: For as the French have eight Parliaments, which are ſupreme Courts, whence no Appeal lies, within the Precincts of the ſeveral Parliaments, or Provinces, and in which Juſtice is adminiſtr'd by *Bailiffs*, at leaſt by their Lieutenants; ſo in England are ſeveral Counties wherein Juſtice was adminiſtr'd by a Viſcount or Sheriff, who appears likewiſe to have been call'd *Bailiff*, and his Diſtrict or County *Bailiwick*. Further, the Counties were again ſubdivided into Hundreds; within which 'tis manifeſt Juſtice was antiently render'd by Officers call'd *Bailiffs*. But thoſe Hundred-Courts are now ſwallow'd up by the County-Courts, certain Franchiſes alone excepted, (See *County and Hundred*) and the *Bailiffs* Name and Office is grown into ſuch Contempt, at leaſt theſe *Bailiffs* of Hundreds, that they are now no more than bare Meſſengers, and Mandatories within their Liberties, to ſerve Writs, and ſuch mean Offices. Theſe *Bailiffs* are of two Kinds, *viz.* *Bailiffs Errant*, and *Bailiffs of Franchiſes*. *Bailiffs Errant* are thoſe whom the Sheriff appoints to go up and down the County to ſerve Writs, ſummon County Courts, Sessions, Aſſizes, &c. *Bailiffs of Franchiſes* are thoſe who are appointed by every Lord within his Liberty, to do ſuch Offices therein, as the *Bailiff Errant* does at large in the County. There are alſo *Bailiffs of the Foreſt*, and *Bailiffs of Mannors*, who direct the Husbandry, fell Trees, gather Rents, pay Quit-Rents, &c. The Word *Bailiff* ſtill retains ſome of its antient Significance; being apply'd to the Chief Magiſtrates of ſeveral Corporate Towns, as *London, Leominſter*, &c. And again, the Government of ſome of the King's Caſtles is committed to Perſons call'd *Bailiffs*, as the *Bailiff of Dover Caſtle*. *Borel* derives the Word *Bailiff* from the Greek *βασιλευς*, Council. *Cambden* will have *Bailiff* to have been a Term uſed in the *Lower Empire*, and to have paſſed thence into *Sicily*, ſo to France and England, ſignifying *Conſervator*. This is certain, we frequently find the Word *Bajulus*, and ſometimes *Bajulus*, to ſignify a Judge, whence *Bailiff* was eaſily form'd.

BAILIWICK the Place of the Jurisdiction of a *Bailiff* within his Hundred or Lord's Franchiſe.

BAIRAM, a Feaſt of the Turks, which they celebrate after the Faſt of *Ramazan*. 'Tis kept twice in the Year, once immediately after *Ramazan*, which they call *Grand Bairam*, and again 70 Days after, which they call *Little Bairam*. *Bairam* holds for three Days, during which no Work is done; but Preſents paſs from one to another with many Manifeſtations of Joy. If the Day after *Ramazan* ſhould prove ſo cloudy, as to prevent the Sight of the New-Moon, *Bairam* is put off to the next Day, when it begins tho the Moon be ſill obſcured. When they celebrate this Feaſt; after numerous Ceremonies, or rather ſtrange Mimickries, in their Molque, they end it with a ſolemn Prayer againſt the *Inſidels*, to root out Chriſtian Princes, or to arm them one againſt another, that they may have an Opportunity to extend the Borders of their Law.

BAJULUS, an Officer in the Court of the Greek Emperors. The *Bajuli* were the *Preceptors* of the Emperors, whereof there were ſeveral Degrees; the *Grand Bajulus*; and the *Bajuli* who were the *Sub-Preceptors*. The firſt Officer who bore this Title was *Antiochus*, in the Time of the younger *Theodoſius*. Hence the *Italians* uſe the Word *Bajulus* of the Kingdom, in the ſame Senſe with the *Proteſtor* of the Kingdom in England.

BAKING, the Art of preparing Bread, or of reducing Meals of any Kind, whether ſimple or compound, into Bread.

Bread. The Forms of *Baking* are various, but may be reduced to two; the one for unleavened, the other for leavened Bread: for the first the chief is *Manchet Baking*, the Process whereof is as follows. The Meal ground and bolted is put into a Trough, and being opened in the Middle, to a Bushel is poured in about three Pints of warm Ale, with Barm and Salt to season it. This is kneaded together with the Hands thro the Brake; or for want thereof with the Feet thro a Cloth: after having lain an Hour to swell, 'tis molded into Manchet; which, scotch'd in the Middle, and prick'd a-Top to give room to rise, are baked in the Oven by a gentle Fire. For the second, call'd *Cheat-Bread-Baking*, 'tis thus: The Meal being in the Trough, some Leaven (saved from a former Batch fill'd with Salt laid up to four, and at length dissolved in warm Water) is strain'd thro a Cloth into a Hole made in the Middle of the Heap, and work'd with some of the Flour to a moderate Consistence; this is covered up with Meal, where it lies all Night, and in the Morning the whole Heap is stir'd up and mixt together with a little warm Water, Barm and Salt, by which it is season'd, stiffen'd, and brought to an even Leaven: 'tis then kneaded or trodden, moided and baked as before.

The Learned are in great doubt about the Time when *Baking* first became a particular Profession, and *Bakers* were introduced. 'Tis generally agreed they had their Rise in the East, and pass'd from Greece to Italy after the War with Pyrrhus, about the Year of Rome 585. Till which time every Housewife was her own Baker: For the Word *Psitor*, which we find in the Roman Authors, before that time signified a Person who ground or pounded the Grain in a Mill or Mortar to prepare it for *Baking*, as *Varro* observes. According to *Athenæus*, the *Cappadocians* were the most applauded *Bakers*, after them the *Lydians*, then the *Phoenicians*. To the foreign *Bakers* brought into Rome, were added a Number of Freed-Men, who were incorporated into a Body, or, as they call it, a College; from which neither they nor their Children were allowed to retire. They held their Effects in common, and could not dispose of any Part of 'em. Each *Baker-house* had a *Patronus*, who had the Superintendency thereof; and these *Patroni* elected one out of their Number each Year, who had the Intendance over all the rest, and the Care of the College. Out of the Body of the *Bakers* were every now and then one admitted among the Senators. To preserve Honour and Honesty in the College of *Bakers*, they were expressly prohibited all Alliance with Comedians and Gladiators; each had his Shop or *Bake-house*, and they were distributed into 14 Regions of the City. They were excluded from Guardianships and other Offices, which might divert 'em from their Employment. See *College*.

BALANCE, *Libra*, or the *Scales*, one of the six simple Powers in Mechanicks, used principally for determining the Equality, or Difference of Weights in heavy Bodies, and consequently their Masses or Quantities of Matter. The *Balance* is of two Kinds, viz. the Ancient and Modern. The Ancient or Roman, call'd the *Statera Romana*, or Steelyard, consists of a Lever or Beam, moveable on a Centre, and suspended near one of its Extremes: On one side the Centre are applied the Bodies to be weigh'd, and their Weight; measured by the Divisions mark'd on the Beam, in the Place where a Weight moveable along the Beam being fix'd, keeps the *Balance* in *Equilibrium*. This is still in Use in Markets, &c. where large Bodies are to be weigh'd. See *Statera*.

The Modern *Balance*, now ordinarily in Use, consists of a Lever or Beam suspended, exactly by the Middle; and the Extremes whereof are hang Scales. In each Case the Beam is call'd the *Brachia*; the Line on which the Beam turns, or which divides its *Brachia*, is call'd the *Axis*, and when consider'd with regard to the Length of the *Brachia*, is but esteem'd a Point, and call'd the Centre of the *Balance*; and the Places where the Weights are applied, the *Points of Suspension or Application*. In the Roman *Balance* therefore, the Weight used for a Counterbalance is the same, but the Points of Application various; in the Common *Balance*, the Counterpoise is various, and the Points of Application the same. The Principle on which each is founded is the same, and may be conceiv'd from what follows.

Doctrine of the Balance.

The Beam AB (*Plate of Mechanicks, Fig. 9.*) the principal Part of the *Balance*, is a Lever of the first kind, which (instead of resting on a *Fulcrum* at C, the Centre of its Motion) is suspended by somewhat fastened to C, its Centre of Motion. Hence the Mechanism of the *Balance* depends on the same Theorem as that of the *Lever*, (See *Lever*). Wherefore, as the known Weight is to the unknown, so is the Distance of the unknown Weight from the Centre of Motion to the Distance of that of the known Weight, where the two Weights will counterpoise each other; consequently the known Weight shows the Quantity of the unknown Weight. Or thus, the Action of a

Weight to move a *Balance* is by so much greater, as the Point press'd by the Weight is more distant from the Centre of the *Balance*, and that Action follows the Proportion of the Distance of the said Point from that Centre. When the *Balance* moves about its Centre, the Point B describes the Arch Bb (*Fig. 10.*) whilst the Point A describes the Arch Aa, which is the biggest of the two; therefore in that Motion of the *Balance*, the Action of the same Weight is different, according to the Point to which it is applied: Hence it follows, that the Proportion of the Space gone thro by that Point at A is as Aa, and at B as Bb; but those Arches are to one another as CB, CA.

Varieties in the Application of the Balance.

If the *Brachia* of a *Balance* be divided into equal Parts, one Ounce applied to the ninth Division from the Centre, will equiponderate with three Ounces at the third; and two Ounces at the sixth Division act as strongly as three at the fourth, &c. Hence it follows, that the Action of the Power itself, and its Distance from the Centre; for that Distance is as the Space gone thro in the Motion of the *Balance*. It may be here observ'd, that the Weight equally presses the Point of Suspension at whatever Height it hangs from it, and in the same manner as if it was fixed at that very Point; for the Weight at all Heights equally stretches the Cord by which it hangs.

A *Balance* is said to be in *Equilibrium*, when the Actions of the Weights upon each *Brachium* to move the *Balance*, are equal, so as mutually to destroy each other. When a *Balance* is in *Equilibrium*, the Weights on each Side are said to equiponderate; unequal Weights may also equiponderate; but then the Distances from the Centre must be reciprocally as the Weights. In which case, if each Weight be multiplied by its Distance, the Products will be equal; which is the Foundation of the Steelyard. Thus in a *Balance* whose *Brachia* are very unequal; a Scale hanging at the shortest, and the longest divided into equal Parts: If such a Weight be apply'd to it, as at the first Division shall equiponderate with one Ounce in the Scale; and the Body to be weigh'd be put into the Scale, and the above-mentioned Weight be moved along the longest *Brachium*, till the *Equilibrium* be found; the Number of Divisions between the Body and the Centre shews the Number of Ounces that the Body weighs, and the Sub-Divisions the Parts of an Ounce.

On the same Principle also is founded the *deceitful Balance*, which cheats by the Inequality of the *Brachia*; for Instance: Take two Scales of unequal Weights, in the Proportion of 9 to 10, and hang one of them at the tenth Division of the *Balance* above-described, and the other at the ninth Division, so that there may be an *Equilibrium*; if then you take any Weights, which are to one another as 9 to 10, and put the first in the first Scale, and the second in the other Scale, they will equiponderate. Several Weights hanging at several Distances on one Side, may equiponderate with a single Weight on the other Side: To do this it is required, that the Product of that Weight, by its Distance from the Centre, be equal to the Sum of the Products of all the other Weights, each being multiplied by its Distance from the Centre: To demonstrate which, Hang three Weights, of an Ounce each, at the second, third, and fifth Divisions from the Centre, and they will equiponderate with the Weight of one single Ounce applied at the tenth Division of the other *Brachium*; and the Weight of one Ounce at the sixth Division, and another of three Ounces at the fourth Division, will equiponderate with a Weight of two Ounces on the other Side at the ninth Division. Several Weights unequal in Number on either Side, may equiponderate: In this case, if each of them be multiplied by its Distance from the Centre, the Sums of the Product on either Side will be equal; and if those Sums are equal, there will be an *Equilibrium*: To prove which, hang on a Weight of two Ounces at the fifth Division, and two others, each of one Ounce, at the second and seventh, and on the other Side hang two Weights, each also of one Ounce, at the ninth and tenth Divisions, and these two will equiponderate with those three.

To the Perfection of a *Balance* 'tis required, that the Points of Suspension be exactly in the same Line as the Centre of the *Balance*; that they be precisely equi-distant from that Point on either Side; that the *Brachia* be as long as conveniently they may; that there be as little Friction as possible in the Motion of the Beam and Scales; and lastly, that the Centre of Gravity of the Beam, be placed a little below the Centre of Motion. See *Motion, Mechanicks, &c.*

Balance of the Air, is used for the Weight of that Fluid, whereby, according to its known Property, it precesseth where 'tis least resisted, till it is equally adjust'd in all Parts. See *Air*. See also *Gravity*, and *Barometer*.

Hydrostatical Balance, is a Machine for determining the specific Gravities of Bodies. See *Hydrostatical*.

Balance of Trade, is the Difference between the Value of Commodities bought of Foreigners, and the Value of the native Productions transported into other Nations. 'Tis necessary that this *Balance* be kept in Trading Nations; and if it cannot be made in Commodities, it must in Specie.

Balance of a Watch or Clock, is that Part of either, which by its Motion regulates and determines the Beats: The Circular Part of it is called the *Rim*, and its Spindle the *Verge*: There belong to it also two *Pallats* or *Nuts*, which play in the Fangs of the *Crown-Wheel*: And in *Pocket-Watches*, that strong Stud in which the lower Pivot of the *Verge* plays, and in the Middle of which one Pivot of the *Crown-Wheel* runs, is called the *Potence*: The wrought Piece which covers the *Balance*, and in which the upper Pivot of the *Balance* plays, is the *Cock*: The small Spring in new *Pocket-Watches* is called *Regulator*. See *Clock* and *Watch*.

Balance, one of the Signs of the *Zodiac*. See *Libra*.

BALANI, in Natural History, are certain Excrescences usually growing to the Shells of the larger Sort of *Sea-Shell-Fish*. See *Shell*.

BALANUS, or *Glass*, is sometimes used for the Nut of the *Yard*; sometimes also the *Clitoris* is so called. It is sometimes also used for a *Suppofitory*. See *Penis*, &c.

BALAUSTINES, in Pharmacy, are the Flowers of the *Pomegranate*, which are very rough to the Tongue and *Palate*, and very astringing; they are therefore used in *Diarrhea*, and other Fluxes, *Hemias*, &c.

BALCONY, in Architecture, a Projecture beyond the Naked of a Wall or Building, supported by Pillars, or *Consols*, and encompassed with a *Balustrade*. This Contrivance is not only made use of in Houses, but also in Ships. The Word comes from the *Italian*, *Balcone*, and that from the *Latin*, *Palcus*, or the *German*, *Palk*, a Beam. *Covarruvias* derives it from *Balano*, *jacere*; asserting that *Balconies* were originally little *Turrets* over the Gates of *Citadels*, whence *Darts*, &c. were thrown on the Enemy.

BALDACHIN, or *Baldaggin*, a Piece of Architecture in Form of a Canopy, supported with Columns, and serving as a *Crown* or *Covering* to an *Altar*. The Word comes from the *Italian*, *Baldacchino*.

BALE, in Commerce, a Pack of Merchandise, of different Quantity; a *Bale* of *Cotton-Yarn* is from 3 to 4 Hundred Weight, of *Raw-Silk* from 1 to 4 Hundred, of *Lockram* or *Dowls* either three, three and a half, or four Pieces, &c.

BALISTA, a military Engine in Use among the Antients, somewhat like our *Cross-Bow*, tho' much bigger; it had its Name from *βαλλω*, *jacere*, being used in casting of Stones, &c. in which it differed from the *Catapulta*, which was used only for casting *Darts* and *Arrows*; in other respects they were alike, and were each bent in the same manner. *Marellinus* describes the *Balista* thus; a round Iron Cylinder is fasten'd between two Planks, from which reaches a hollow square Beam placed *Cross-wise*, fasten'd with *Cords*, to which are added *Screws*; at one End of this stands the Engineer, who puts a *Wooden Shaft* with a big *Head*, into the *Cavity* of the *Beam*; this done, two Men bend the *Engine*, by drawing some *Wheels*: when the *Top* of the *Head* is drawn to the utmost End of the *Cords*, the *Shaft* is driven out of the *Balista*, &c.

BALKS, in Agriculture, are *Ridges* or *Banks* between two *Furrows* or *Pieces* of arable Land: the Word is used sometimes for *Polcs* or *Rafters* over *Out-houses* or *Barns*; and among *Bricklayers* for great *Beams*, such as are used in making *Scaffolds*.

BALL AND SOCKET, a Machine contrived to give an Instrument full play. It consists of a *Ball* or *Sphere* of *Brass*, fitted within a *conclave* *Semi-Globe*, so as to be moveable every way, both *Horizontally*, *Vertically*, and *Obliquely*. 'Tis carried by an *endless Screw*, and is principally used for the managing of *Surveying Instruments*; to which it is a very necessary *Appendage*. The antient *Balls and Sockets* had two *Concaves*, or *Channels*, the one for the *Horizontal*, the other for the *Vertical* Direction. The *French* call it *Genou*, *Knee*.

BALLAST, in Navigation, any heavy Matter used to sink a *Vessel* to its proper Depth in *Water*, or to give it a just Weight and *Counterpoise*; to prevent its *Overturning*. The ordinary *Ballast* is *Sand*, or *Stones* stowed in the *Bottom*, or *Hold*, o'ert the false *Keel* of a *Vessel*. The *Ballast* is sometimes one half, sometimes a third, and sometimes a fourth Part of the Burden of the *Vessel*. Flat *Vessels* require the most. Masters of *Vessels* are obliged to declare the Quantity of *Ballast* they bear, and to unload it at certain Places. They are prohibited unloading their *Ballast* in *Havens*, *Roads*, &c. the Neglect of which has ruin'd many excellent *Ports*. The Word comes from the *Flemish*, *Balast*; the *French* call it *Left*, and the *Latin*, *Lestagium*. See *Leftage*.

BALLON, in Chymistry, a *French* Word for a large round short-neck'd *Matras*, or *Vessel* used in Chymistry, to receive what is distilled or drawn off by the means of *Fire*. *Ballon* is also used in Architecture for a round *Globe* placed a-top of a *Pillar*, or the like, by way of a *Pillar*. See *Acroter*, or *Crowning*.

BALLOTTING, a Method of Voting at Elections, &c. by means of little *Balls* of several Colours, which the *French* call *Balottes*.

BALIS, or *Ballets*, a frequent Bearing in Coats of Arms, in *Heraldry*, but never so called; but according to their several Colours have several Names, as *Besants* when the Colour is *Or*; *Plates* when it is *Argent*; *Harts* when it is *Azure*; *Tortoiseaux* when it is *Gules*; *Pomcis* when it is *Vert*; *Pellets*, or *Agrestes*, when *Sable*; *Golpes* when 'tis *Purple*; *Orenges* when *Tanne*; *Guzes* when *Sanguine*: which are all the Colours usually mentioned in *Heraldry*.

BALLUSTRADE, in Architecture, an Assemblage of one or more Rows of little turn'd Pillars, high enough to rest the *Elbows* on, fixed upon a *Terrace*, or the *Top* of a *Building*, or else to make a *Separation* between one Part of it and another. *Ducange* derives the Word from *Balustrum*, or *Balustrina*, a Place among the Antients where their *Baths* were rais'd in.

BALM, or *Balfam*, a kind of *Gum*, in very great Reputation in *Medicine* and *Chirurgery*; used to be liquified by means of *Spirit of Wine* or *Oil*, and found a sovereign Remedy in the Cure of *Wounds* and several *Diseases*. The *Ladies* for a particular Value on it, in regard when mix'd with the *Yolk* of an *Egg* and *Spirit of Wine*, it makes an admirable *Paint*. There are various Kinds of *Balms* or *Balfams*, if into the Number hereof we take all those which *Empirics*, or even *Physicians* and *Chirurgeons* call by this Name; such are *Apoplectic Balfams*, *Stomachic Balfams*, *Benzoadic*, *Hysteric*, *Vulnery*, *Magistral*, &c. But the *Genuine*, that is, the *Natural Balfam*, come in a little Compass, being in great measure reducible to these two, the *Balm of Gilead*, and *Balm of Balsam of Peru*.

Balm of Gilead, or of the *Levant*, is held in the greatest Esteem, tho' there are some who hold that of *Peru* equal to it in *Virtue*. 'Tis drawn by *Incision* from a *Tree* called *Balsamum*, growing in *Egypt* and *Judea*, and which is held so precious, that it makes Part of the special Revenue of the *Grand Signior*, without whose *Permission* none are allowed to be planted or cultivated. The *Incision* through which this admirable *Juice* flows, is made in the *Dog-Days*: *Theophrastus* says it must be made with *Iron Nails*; *Pliny* with *Glass*, because, says he, *Iron* makes the *Plant* die; *Tacitus* tells us, that when the *Branches* are full of *Sap*, their *Veins* seem to apprehend the *Iron*, and stop when the *Incision* is made with that *Metal*, but flow freely when opened with a *Stone*, or a *Piece* of broken *Pircher*: *Lafily*, *Marnot* says, the *Veins* must be opened with *Ivory* or *Glass*. The *Juice* is white at first, afterwards becomes green, by degrees a *Gold Colour*, and when old the Colour of *Honey*. It is at first muddy, but by degrees grows clear, and of the Consistence of *Turpentine*. Its *Smell* is agreeable, and very brisk; its *Taste* bitter, sharp and astringent; it easily dissolves in the *Mouth*, and leaves no *Stain* on *Woolen Cloth*. The *Balfam* commonly in Use is brought hither from *Cairo*, and is not properly the *Gum*, or *Tears* of the *Tree*, flowing by *Incision*, for it yields but little that way; but is prepared from the *Wood* and the *green Branches* of the *Tree* distilled; and yet even this is frequently adulterated with *Cyprus Turpentine*: Besides which, there is likewise a *Liquor* extracted from the *Seed* of the *Plant*, which is frequently passed off for the true *Balfam*, tho' its *Smell* is much weaker, and its *Taste* much bitterer. The *Tree* is about the Height of a *Granada* *Tree*; its *Leaves* like those of *Rue*, always green; its *Flowers* white, and in form of *Stars*, whence spring out little pointed *Pods*, inclosing a *Fruit* like an *Almond*, called *Carpopalsamum*, as the *Wood* is called *Xylobalsamum*, and the *Juice* *Opo-balsamum*. See *Opo-balsamum*.

The *Carpopalsamum* enters the Composition of *Treacle*, having little other Use in *Medicine*: It must be chosen of an aromatick *Taste* and agreeable *Smell*. See *Carpo-balsamum*. The *Xylobalsamum*, which like the other Products of the *Balfam-Tree*, is brought from *Cairo*, is used in *Troches* of *Hedycrum*. 'Tis in little *Faggots*, the *Bark* red, the *Wood* white, and resinous, and aromatick. See *Xylo-balsamum*. There is likewise a *Balm of Mecca*, which is a dry white *Gum* resembling *Copperas*, especially when old. 'Tis brought from *Mecca* by the Return of the *Caravans* of *Pilgrims* and *Mahometan Merchants*, who travel thero out of *Devotion* to the *Birth-Place* of their *Prophet*. It has all the *Virtues* of the *Balm of Gilead*, or *Judea*; and is probably the same, only harden'd, and its *Colour* alter'd.

Balfam of Peru is of three Kinds; or rather, one and the same *Balfam* has three several Names, viz. *Balsam*

Jams of Incision, which is a white glistinous Resin oozing at an Incision in the Tree, and afterwards thicken'd and harden'd. This is excellent for green Wounds, and much resembles the *Opobalsamum*, excepting in Smell, which distinguishes it. *Dry Balsam*, which is distill'd from the Tops of Branches cut off, to which are fasten'd little Vessels to receive the Liquor, which at first is like Milk, but reddens by being expos'd to the Sun. Its chief Use is in the Composition of the *Lac Virginale*, which is made much better with this, than with *Syrax* or *Benjamin*. Lastly, *Balsam of Lotion*, which is blackish, and is drawn from the Bark, Roots, and Leaves of the Tree minced and boiled together. This is used in Wounds like the *rosate Balsam*; and on account of its excellent Smell, by the Perfumers.

Besides these two *Balsams*, which alone are to be esteem'd genuine ones, Naturalists reckon *Balsam of Copais* or *Copayba*, of *Tolu* or *liquid Amber*, and a *New Balsam*. *Balsam of Copa*, *Copais*, *Caucais* or *Copayba*, comes from *Brazil* in earthen Bottles, pointed a-top. 'Tis a kind of Oil, either clear or thick; the first white, of a refinous Smell: the other a little more on the yellow; both are admirable for the *Jews* use it after Circumcision to stop the Blood. *Balsam of Tolu* is a liquid Resin, which as it grows old becomes of the Colour and Consistence of *Flowers Sice*. It comes by Incision from some Trees growing in *New Spain*; where the Inhabitants receive it in little Vessels of black Wax: In Taste and Smell it resembles *Balm of Gilead*; as it grows old it takes the Consistence of *dry Balsam*. *Balsam of liquid Amber* is a clear reddish Resin, produced by a Tree in *New Spain*, call'd by the Natives *Ojofit*, much resembling *Ambregreaf*, especially in Smell, whence its Name. The *New Balsam* is liquid; when new it is call'd *Oil of liquid Amber*, and when old *Balsam of liquid Amber*; it comes from both the *Spains*, in *Barris*; and is very rare among us: 'Tis found sovereign for Wounds, especially in *Fistulas in Ano*: It resembles *Balsam of Tolu* in Smell and Colour, and is express'd in the manner of *Oil of Laurel*, from a red Fruit in the Island of *St. Domingo*.

Artificial Balsams, in Pharmacy, are Medicines usually employ'd externally: In Consistence they somewhat exceed a common Unguent, and are prepared principally to recreate the nobler Parts, by their excellent Odor. There are some also of a more liquid Consistence, between an Oil and Liniment; the principal Use whereof is in Wounds: They are made various Ways, and of various Aromaticks and distill'd Oils; Oil of Nutmegs, or white Wax, are usually the Basis of *Balsams*; with these are mix'd *Deer's Grease*, *Manna*, &c. According to the different Intentions they are to answer, they acquire different Names, as *Appetick*, *Stomachick*, &c. *Balm of Sulphur* is of two kinds, viz. that of *common Sulphur*, and that of *Sulphur with Aulse*: the first is drawn by Fire from a Composition of Nut Oil drawn without Fire, Flower of Sulphur, Oil of Tartar, and White Wine mix'd. This is used to digest and resolve crude Matters gathered in any Part of the Body: 'tis apply'd externally, and serves for the Basis of the Plaster of Sulphur. *Balsam of Sulphur antiseptic*, is drawn from Oil of green Anise and Flower of Sulphur dissolved together. *Balm of Saturn*, is a Salt of Saturn; Dr. Harris says, a Sugar of Saturn, dissolved in Oil or Spirit of Turpentine digested, till the Matter have acquired a red Tincture. This is found to resist the Putrefaction of Humours, and is good to cleanse and cicatrize Ulcers.

Balm or Balsam, among the Chymists, is the Spirit of common Salt extract'd by Art. The Preparation is this: They dissolve the Salt, and place its Dissolution, well clarified, in Horic-Dung to purify, for the Space of two or three Months, and then distil it strongly with a Saad-Heat; upon which there arises a precious Unctuous, wherein Things the most corruptible being steep'd, are said to remain entire, eternally. 'Tis said, that 'twas by this means some of the Antients preserved dead Bodies entire without reducing 'em to Mummy, and particularly that of the Woman mentioned by *Volaterran* to be found in a Mausoleum near *Albania*, in the Time of Pope Alexander VI. which was by his Order thrown secretly into the *Tiber*, to prevent Idolatry; she being found as fresh as when alive, the she had been dead 1300 Years.

BALNEUM, a Word much used by Chymists, generally signifying a Vessel of Water, in which another is placed that requires a more gentle Heat than the naked Fire.

Balneum Mariae, is by some so call'd, as being supposed to have been first invented by the Blessed Virgin; but by others with more Propriety, *Balneum Maris*, or *Sea-Bath*, in regard the Vessel here floats on a kind of Sea. Here the Cucurbit is placed in hot Water, which warms the Matter contain'd. A Sand Heat is sometimes also call'd *Balneum siccum*, or *cineritium*, or *areusium*. See *Bath*, *Saad*, &c.

BALOTADE, a Leap in which a managed Horic offers to strike out with his hind Legs, but does it not, only ma-

king an Offer, and shewing the Shoes of his hind Feet.

BALSAM. See *Balm*.

BALSAMICK, a Term in Phycick; signifying that Property in a Medicine, whereby 'tis render'd soft, gently attenuating, and somewhat agglutinating.

BAN, or *Bans*, a solemn Proclamation or Publication of any thing, or a publick Edict or Summons; as of a Prince to the Nobles of a Province, frequent among the *French*; of a Lord to his Vassals, &c. to call 'em to Arms. Hence the Use of the Word *Banns* in publishing Matrimonial Contracts in the Parish-Church before Marriage; that if there be any Exceptions against either Party, as to prior Engagements, &c. there may be an Opportunity of making them. These are what *Terullian* seems to mean by *Trinundina Promulgatio*. *Bradlow* mentions *Banns Regis*, for a Proclamation of Silence made by the Court before the Congress of the Champions in a Combat. Some derive the Word from the *British*, *Ban*; *Clamor*, *Noise*; Others from the *German*, *Ban*, *Publication* or *Proscription*, because frequently made with Sound of Trumpet; whence also come the Words, *Banishment*, *Banner*, *Abandon*, &c. *Borel* derives it from the *Greek*, $\alpha\lambda\lambda\alpha$, *all*, because the Convocation is general.

BANC, or *Bench*, in Law, is a Seat or Bench of Judgment; as *Bancus Regis* the King's Bench, and *Bancus communis placitorum* the Common Bench. *Jus Banci*, or the Privilege of having a Bench, was antiently only allowed to the King's Judges, *qui summam administrant jurisdictionem*. Inferior Courts, as Courts Baron, Hundred Courts, &c. were not allowed that Privilege; and even at this Day the Hundred Court of *Freibridge*, in *Norfolk*, is held under an Oak at *Geywood*; and that of *Woolfry*, in *Hertfordshire*, under an Oak, near *Abston* in that County, call'd *Hundred-Oak*. King's Bench or Bench, is a Sovereign Tribunal where the King himself formerly presided, the Judges being placed in a lower Bench at his Feet. The Jurisdiction of this Court is very extensive, and reaches throughout all *England*, the Law supposing the King himself to be present. See *King's Bench*. *Common Bank* or *Common Pleas*, the second Court of Justice in *England*, where common and ordinary Causes are pleaded between Subject and Subject. Here most Civil Causes are tried, whether real or personal, according to the Rigour of the Law. Here are usually four Judges, the Chief whereof is call'd Lord Chief Justice of the Common Pleas. Formerly there were seven Judges, then six, then five, &c. See *Common Pleas*.

BAND, any Piece of Stuff cut long and narrow, as the *Sword-Band* for Infants, &c.

Band, in Architecture, a general Name for any flat low Member; which is also call'd *Fuze*, from the Latin *Fascia*, which *Vitruvius* uses for the same thing; and sometimes *Filer*, *Plinth*, &c. See *Fascia*, *Plinth*, *Filer*, &c.

Band, *Knights of the*, are a military Order in *Spain*, instituted by *Alphonfus XI.* King of *Castile*, Anno 1332. It takes its Name from the *Banda*, *Band*, or red Ribband which comes a-crofs over the Right Shoulder and under the Left Arm of the Knight. This Order is for none but Nobles; the eldest Sons of *Grandees* are excluded; and before Admission, 'tis requisite to have served at least ten Years either in the Army, or at Court. They are bound to take up Arms for the *Catholic Faith* against the *Infidels*. The King himself is Grand Master of the Order.

Band of Soldiers, so many as fight under the same Flag or Ensign; from *Bandium*, which the *Romans* used in the same Sense with *Vexillum*, or *Banner*. Thus *Romulus* call'd those who fought under the same Manipule, (a Handful of Hay being then us'd for a Flag) *Manipulus Militum*.

BANDAGE, a Ligature to bind up Wounds. These are of several Sorts, and adapted to the different Parts of the Body where the Wound happens. The Knowledge of their proper Use is no small Part of Surgery. *Trusses* used in Ruptures are also thus call'd. See *Ligature*.

BANDALIERE, a large leathern Belt, thrown over the Right Shoulder, and hanging down under the Left Arm; wore by the ancient Musqueteers, both for the sustaining of their Fire-Arms, and for the Carriage of their Musket-Charges, which being put up in little wooden Cases, coated with Leather, now commonly call'd *Baudaliers*, were hung to the number of 12 to each *Bandalier*. The *French* Soldiery still retain the *Bandalier*; their Horse, their Musqueteers, and common Guards, wearing it indifferently; excepting for some Difference in its Garniture. The Word seems furnish'd from the *French* *Bandoalier*, a kind of *Banditti* particularly infesting the *Pyreneas*; who were formerly distinguish'd by this Piece of Furniture; and were themselves so denominated, *quasi Ban de Volens*, a *Knot* of *Robbers*.

BANDELET, in Architecture, any little Band or flat Moulding, as that which crowns the *Doric* Architecture: 'tis also call'd *Teuta*, from the Latin *Teuta*, which *Vitruvius* uses for the same thing.

BANDEROLLE, a little Standard in form of a Guidon, extended further in Length than in Breadth, hung out on the Masts of Vessels, &c.

BANIANS, a religious Sect in the *Indies*, who believe a Metempsychosis; and will therefore eat no living Creature, nor even kill noxious Animals, but endeavour to release them if they see 'em in the hands of others; they are so fearful of having Communication with other Nations, that they break their Cups if one of a different Religion has drank out of 'em, or even touch'd 'em; and empty the Water out of a Pond where he has wash'd himself. If they happen to touch one another, they must wash and purify themselves before they drink, eat, or enter their own Houses. They carry, hanging at their Necks, a Stone called *Tamburan*, as big as an Egg, and perforated in the Middle, through which run three Strings; this Stone, they say, represents their Great God, and upon that account they have great Respect shewn them by all the *Indians*. *Banian*, in their Language, signifies, *innocent People and without Guile*; for, besides their refraining to hurt any the least living Creature, they profess to pardon the Injuries done to themselves.

BANISHMENT, or *Exile*, among us is of two Kinds; the one voluntary and upon Oath, the other by Compulsion, for some Offence or Crime. This Punishment is by the *Civilians* called *Bannamentum*, and was antiently term'd *Deportatio*, if perpetual; if for a Time, *Relegatio*.

BANK, in Commerce, a Term given to certain Societies, Cities, or Communities, who take on 'em the Charge of the Money of private Persons, to improve it, or to keep it secure. There are several of these *Banks* establish'd in the several principal Trading Cities in *Europe*; as in *Venice*, *London*, *Amsterdam*, *Hamburg*, *Paris*, &c. But of all others that of *Venice* is the most considerable, as being the most antient, and that whereon the others are model'd. The *Bank of Venice*, commonly call'd the *Banca del Giro*, is properly a Board of publick Credit and Interest; or a general and perpetual Purse for all Merchants and Traders, established by a solemn Edict of the Commonwealth, which enacts, That all Payments of Wholesale Merchandize, and Letters of Exchange, shall be in *Banco*, or *Bank Notes*; and that all Debtors and Creditors shall be obliged, the one to carry their Money to the *Bank*, the other to receive their Payments in *Banco*; so as Payments are perform'd by a simple Transfer from the one to the other: he who was before Creditor on the *Bank-Books*, becoming Debtor as soon as he has resign'd his Right to another, who is enter'd down as Creditor in his Place; so that the Parties only change a Name, without any effective Payment being made. Indeed, there are sometimes effective Payments made, especially in Matters of Retail, and when Foreigners are dispos'd to have ready Money to carry it off in Specie; or when particular Traders chafe to have a Stock by 'em to negotiate in Letters of Exchange, &c. The Necessity of these effective Payments, has given occasion to the opening a Fund of ready Money; which is found so far from diminishing the Stock, that this Liberty of withdrawing Money at pleasure rather augments it. By means of this *Bank*, the Republick, without incurring the Freedom of Commerce, or without paying any Interest, is Mistress of 500000 Ducats, to which the Capital of the *Bank* is limited, to be in readiness on any pressing Occasion; the Republick being Security for the Capital.

The Word *Bank* originally signified a *Bench*, which the first *Bankers* had in the publick Places, in Markets, Fairs, &c. on which they told their Money, wrote Bills of Exchange, &c. Hence when a *Banker* fail'd they broke his *Bank*, to advertise the Publick, that the Person to whom the *Bank* belong'd was no longer in a Condition to continue his Business. As this Practice was very frequent in *Italy*, 'tis said the Term *Bankrupt* is derived from the Italian *Banco rotto*, broken *Bench*.

BANKER, a Person who negotiates and trafficks in Money; who receives and remits Money from Place to Place, by Commission or Correspondents, by means of Bills or Letters of Exchange. See *Exchange*, *Bank*, &c. In *Italy* the Employment of a *Banker*, especially in Republicks, does not derogate from the Nobility; and hence it is, that most of the Cadets, or younger Sons of Condition, undertake it for the Support of their Family. The *Romans* had two Kinds of *Bankers*, tho' their Office was much more extensive than that of the *Bankers* among us; being publick Officers, in whom were united the Functions of a *Broker*, *Agent*, *Banker*, and *Notary*; managing the Exchange, taking in Money, assisting in Buying and Selling, and drawing the Writings necessary on all these Occasions.

BANKRUPT, a Trader, who consumes his Stock, or runs out in Trade, so as not to be able to answer the Demands of his Creditors. His absconding from his Place of Abode, or being denied to his Creditors, suffering himself to be arrefted willingly, for Debt, and suffering himself to

lie two Months in Prison, on any lawful Action, is by Law deemed an Act of *Bankruptcy*. See *Commission of Bankruptcy*.

BANKRUPTCY, the Failure, Absconding, and Relinquishment of Traffick in a Merchant, Banker, or other Trader. There is some Difference however, between a *Bankruptcy* and a *Failure*; the first being suppos'd voluntary and fraudulent, and the latter constrain'd and necessary, by means of Accidents, &c. A *Failing*, or Stopping of Payment, diminishes the Merchant's Credit, but does not note him with Infamy, as *Bankruptcy* does. When a Merchant, &c. fails to appear at the Exchange, &c. without apparent Reason, 'tis call'd a *Failing of Presence*; the *Bankruptcy* becomes open from the Day he absconds, or the Seal is affix'd to his Effects. Those who fail are oblig'd to give in to their Creditors, a State or Inventory of all their Effects and Debts, and to surrender their Books; otherwise they are reputed fraudulent *Bankrupts*. All Payments and Transfers, as also all Acts, Obligations, &c. of Persons who fail, are null unless made ten Days before the *Failing* is become publick. See *Bank*.

BANNERET, an antient Knight or Lord, who had a Right to carry a *Banner* for assembling of his Vassals, when a *Baron* was proclaim'd, and might also form 'em into a Troop of Horse; from the Word *Banner*, or from *Ban* or *Bande*, which formerly signified a *Banner*. Antiently there were two kinds of Knights, Great and Little; the first whereof were call'd *Bannerets*, the second *Esquires*, the first compos'd the upper, the second the middle Nobility. To be qualified for a *Banneret*, one must be a Gentleman of Family, and must have a Right to raise a certain Number of arm'd Men; with Estate enough to subsist at least 28 or 30 Men. This must have been very considerable in those Days, in regard each Man, besides his Servant, had two Horse-men to wait on him, armed, the one with a Cross-Bow, the other with a Bow and Hatchet. The Form of the *Banneret's* Creation was this: On a Day of Battle the Candidate presented his Flag to the King or General, who cutting off the Train or Skirt thereof, and making it a Square, return'd it again, the proper *Banner of Bannerets*: Hence *Bannerets* were sometimes call'd *Knights of the Square Flag*, and by this Form of their Flag they were distinguish'd from *Barons*. Others will have *Bannerets* to have been Persons who had some Portion of a Barony assign'd 'em; and enjoy'd it under the Title of *Baro Proximus*, with the same Prerogatives as the *Baron* himself. Some Authors attribute the Institution of *Bannerets* to *Conan*, Lieutenant of *Maximus*, who commanded the *Roman* Legions in *England* under the Empire of *Gratian*, in 383. This General, say they, revolting, divided *England* into 40 Cantons, and in these Cantons distributed 40 Knights, to whom he gave a Power of assembling, on Occasion, under their several *Banners*, as many of the effective Men as were found in their respective Districts; whence they were call'd *Bannerets*. However this be, it appears from *Froissart*, &c. that antiently such of the Military Men, as were rich enough to raise and subsist a Company of arm'd Men, and had a Right to do so, were call'd *Bannerets*. Not, however, that these Qualifications render'd 'em Knights, but only *Bannerets*; the Appellation of Knights being only added thereto, because they were of the Upper Nobility, or simple Knights before. Among the *Spaniards*, *Bannerets* are known by the Name of *Ricos hombres*. *Larrey* will have *Bannerets* so call'd, because of the *Banner* or *Standard* waved in the face of the Army at the time of their Creation. *Bannerets* were second to none but *Knights of the Garter*; but they dwindled, and at last became extinct, on the Institution of *Baronets* by King *James I*.

BANNIMUS, is the Form of Expulsion of any Member from the University of *Oxford*, affixing the Sentence up in some publick Place, as a Denunciation or Promulgation of it.

BANQUETTE, in Fortification, is a little Foot-Path or Elevation of Earth in Form of a Step, along a Parapet, or that by which the Musqueteers get up to discover the Counterscarp, or to fire on the Enemies in the Moat, or in the Covert-Way: These are generally a Foot and half high, and almost three Foot broad.

BAPTISM, in Theology, from the Greek *βαπτίζω*, to dip or plunge, the Ceremony of Washing; or a Sacrament whereby a Person is initiated into Christianity, and Original Sin wash'd away in Infants, and actual Sins in Adults who receive it. The *Jews* practis'd this Ceremony, after Circumcision, on their Proselytes, long before the Coming of *Jesus Christ*. For the Matter of *Baptism*, any natural Water is held sufficient, but nothing else is allow'd: For this reason Pope *Stephen II*. excommunicated a Priest for baptizing a Child with Wine. In the Primitive Times this Ceremony was perform'd by Immersion, as it is to this Day in the *Oriental* Churches, according to the Signification of the Word. The Practice of the *Western* Churches, is to sprinkle the Water on the Head or Face of the Person to be baptis'd, except

In the Church of *Milan*, in whose Ritual 'tis order'd, that the Head of the Infant be *plunged* three times into the Water. A trine Immersion was first us'd, and continued for a very long time: This was to signify either the three Days that our Saviour lay in the Grave, or the Three Persons in the Trinity. But it was afterwards laid aside, because the *Arians* used it: 'twas then thought proper to *plunge* but once, lest the *Hereticks* should think that the *Catholicks*, like them, divided the Trinity. Some are of Opinion, that *Sprinkling* in *Baptism* was begun in cold Countries. 'Twas introduced in *England* about the Beginning of the 9th Century. At the Council of *Coleky*, in 816, it was order'd, that the Priest should not only *sprinkle* the holy Water upon the Head of the Infant, but likewise always *plunge* them in the Basin. There are abundance of Ceremonies deliver'd by Ecclesiastical Writers, as us'd in *Baptism*, which are now diffus'd; tho' there are not wanting those who contend for their Re-admission; as the giving Milk and Honey to the *baptized*, in the *Eest*; Wine and Milk, in the *West*, &c. It appears, that in the Primitive Times none were *baptized* but Adults. Formerly there were great Disputes, whether the *Baptism* of *Hereticks* was valid. The general Opinion run for the Affirmative, provided it was conferr'd in the Name of the Trinity, and therefore they allow'd even that of the Lairy, or Women in case of Necessity. The Council of *Reau* in 1073, order'd, that the Priest should *baptize* fasting, &c. Theological Authors distinguish three Kinds of *Baptism*. 1. The *Baptism* of Water, which is that above-mention'd. 2. The *Baptism* of Fire, which is the perfect Love of God, join'd with a Desire to be *baptiz'd*; call'd also the *Baptism* of the Spirit: on occasion this may supply the Place of Water-*Baptism*. 3. *Baptism* of Blood; which is the Martyrdom of a *Catechumen*. *Baptism*, in the Primitive Times, was only administ'r'd at *East* and *Whitsuntide*, except in Cases of Necessity. The *Catechumens* were not forward in coming to *Baptism*. St. *Ambrose* was not *baptiz'd* before he was elected Bishop of *Milan*; and some of the *Fathers* not till the time of their Death; some deferring it out of a tender Conscience; and others out of too much Attachment to the World, it being the prevailing Opinion of the Primitive Times, that *Baptism*, whenever conferr'd, wash'd away all antecedent Stains and Sins. The *Fathers* rallied this superstitious Delicacy to such a degree, that they introduced a different Extreme; the ridiculous Zeal of some People carrying them to *baptize* the Dead by Proxy.

Baptism, or *Christening*, in the Sea-language, a Ceremony in long Voyages aboard Merchant-Ships; perform'd both on Persons and Vessels which pass the Tropick, or Line, for the first time. The *Baptism* of Vessels is simple, and consists only in the washing them throughout with Sea Water; that of *Passengers* is more mysterious; but neither the one nor the other without making the Crew drunk; the Seamen, on Christening the Ship, pretending to a Right of cutting off the Beak-Head, unless redeem'd by the Master or Captain. The Christening of a Seaman, or Passenger, is as follows: The oldest of the Crew who has pal'd the Line, or Tropick, comes, whimsically dress'd, his Face black'd, a Grottesque Cap on his Head, a Waggoner or other Sea-Book in his Hand, follow'd by the rest of the Seamen masqu'd like himself, each having some Kitchen Utensil in his Hand, with Drums beating: he places himself gravely on a Seat prepar'd on the Deck, at the Foot of the Main-Mast. At the Tribunal of this pleasant Magistrate, each Passenger not yet initiated, swears, he will take care the same Ceremony be observ'd, whenever he is in the same Circumstance; by giving a little Money, by way of Gratification, he is discharge'd with a little *sprinkling* of Water; otherwise, as is usually the Case with the Seamen, he is heartily *drench'd* with Streams of Water pour'd on him: Ship-Boys are inclos'd in a Cage, and *drench'd* at Discretion; and besides, in Memory of the Ceremony, are oblig'd to whip each other, which they never spare.

BAPTISTERY, the Place where Persons are *baptiz'd*, or the Font in which 'tis done. Antiently in the Churches which *baptiz'd* by Immersion, the *Baptistry* was a kind of Pond where the *Catechumens* were *plunged*. In the first Times the *Baptistry* was a little Church adjoining to a greater, purposely appointed for the Administration of this Ceremony. There were several Fonts and Atrials in each *Baptistry*, because then they *baptiz'd* a Number at once, all of whom received the Eucharist immediately after. At first, these *Baptistries* were only in the great Cities where Bishops resided, who alone had the Right of *baptizing*; but they afterwards allow'd Parishes to have Fonts, for the more commodious Administration of *Baptism*. This Right was conferr'd to Parishes alone; and if any Monasteries were found with *baptismal* Fonts, 'twas because they had *baptismal* Churches in another Place: Tho' the Bishops sometimes granted them to Monks, upon condition that they would have a secular Priest along with 'em to take care of the People; but they afterwards found

means to throw off the Priest, and make themselves Masters of the Church, and attach it, with its *baptismal* Font, to their own Monastery.

BAR, in Heraldry, one of the honourable Members of a Coat of Arms, which is hereby divided into two equal Parts from Angle to Angle, beginning at the Top on the Left Hand, and running Diagonal-wise to the Right. It takes up one Third of the Coat, and is commonly us'd for the Distinction of Barlards.

Bar, in Heraldry, is likewise a Fish, or Barbel, often placed in Coats of Arms, commonly in a bended leaning Posture.

Bar, in Law, is a Destruction for ever, or the taking away for a time, the Action of him that hath Right; and it is call'd a *Plea in Bar* when such a *Bar* is plead'd. The Word *Bar* is also us'd for a material *Bar*, as the Places where Sergeants or Counselors stand to plead Causes in Court, Prisoners to answer Indictments, &c. Whence our Lawyers who are call'd the *Bar*, or licensed to plead, (in other Countries call'd *Licentiate*) are term'd *Barriers*.

Bars, in the Menage, the Ridges or upper Parts of the Gums, between the Under-Tussets and the Grinders of a Horse; the outward Sides whereof are always call'd the *Gums*. These *Bars* should be sharp-edg'd and lean; for since all the Subjection a Horse suffers, proceeds from those Parts, if they have not these, they will be very little or not at all sensible, so that the Horse can never have a good Mouth; for, if they be flat, round, and insensible, the Bit will not have its Effect; and consequently, such a Horse can be no better govern'd by his Bridle, than if one took hold of his Tail.

Bars, in Musick, Strokes drawn perpendicularly a-cross the Lines of a Piece of Musick, including between each two, a certain Quantity or Measure of Time, which is various as the Time of the Musick is triple or common. In common Time, between each two *Bars* is included the Measure of four Crotchets, in triple Time three Crotchets. Their principal Use is to regulate the Hearing, or Measure of Time in a Concert. See *Time*.

BARACK, or *Baraque*, a Hutt or little Lodge for Soldiers in a Camp; those for the Horse were formerly call'd *Baracks*, and those for the Foot *Hutts*; but *Barack* is now us'd indifferently for both: they are generally made by fixing four forked Poles in the Ground, and laying four others a-cross them; afterwards they build up the Walls with Soda, Wattles, or what the Place affords: the Top is plank'd, thatched, or covered with Turf, as they have Convenience. When the Army is in Winter Quarters, the Soldiers usually build *Baracks*; in the Summer they are content with their Tents. The Word comes from the Spanish *Baracca*'s, little Cabins which the Fishermen make on the Sea-Shore.

BARALIPTON, a Term in Logick; a Syllogism in *Baralippon* is, when the two first Propositions thereof are general, and the third particular; the middle Term being the Subject of the first, and the Attribute of the second: For Example,

Every Evil ought to be fear'd:
Every violent Passion is an Evil:
Therefore something that ought to be fear'd is a violent Passion.

BARALLOT, the Name of a Sect. The *Barallots* were *Hereticks* at *Bologna* in *Italy*, who had all things in common, even their Wives and Children. They gave so readily into all manner of Debauchery, that they were also term'd *Campliers*.

BARANG, the Name of an Officer among the *Grocks* of the *Lower Empire*, whose Business it was to keep the Keys of the City-Gates where the Emperor resided. *Codinus* says, *Barangs* are those Officers who stood at the Door of the Emperor's Bed-Chamber and Dining-Room. Some think they were *Englishmen*, and took their Name from the English *bar*, to shut or make fast. They were arm'd with an Ax.

BARBACAN, in Architecture, a Canal or Opening left in the Walls, for Water to come in and go out at, when Edifices are rais'd in Places liable to be overflow'd; or to drain off the Water from a Terras. The Word comes from the Italian *Barbacane*, which *Splianus* derives from the Arabick.

Barbacan, a military Term, signifying a Cleft or Aperture made in the Walls of a Castle or Fortress, to fire thro upon the Enemy. Some think the Word implies a wooden Parapet; others any kind of Defence or Safeguard against the Enemy: *Du Cange* calls it the *outer Defence*. 'Twas formerly a Fort at the Entrance of a Bridge, or without the City, having a double Wall, with Towers.

BARBARA, a Logical Term: A Syllogism in *Barbara*, is that whereof all the Propositions are universal and affirmative; the middle Term being the Subject in the first Proposition, and Attribute in the second: For Example,

Whoever suffers a Man to starve, whom he ought to sustain, is a Murderer:

Whoever is rich, and refuses to give Alms, suffers those to starve whom he ought to sustain:

Therefore, whoever is rich, and refuses to give Alms, is a Murderer.

BARBARIAN. The Greeks call'd all those Barbarians who were not of their Country, as did also the Romans, generally. This Word signified with them no more than Foreigner, and did not carry that Odium with it as it does now. This may appear from those Lines of Ovid, who was certainly a well-bred Man.

*Barbarus hic ego sum, quis non intelligit ulli,
Et ridet stolidi verba Latina Getæ.*

Strabo derives the Word *Barbaros* from *basbas*, *balbatus*, by reason Foreigners coming to *Aliens* used to stammer, or speak coarsely: Others derive it from *basbas*, a Word that Foreigners frequently stumbled on, which yet had no Meaning; others from the Arabick *Bar*, a Defect; and *Vossius* from the Chaldeæ Adverb *Bar*, extra, foris.

BARBARISM, in Grammar, is a hard or coarse Expression, and such as is not used by polite Authors; 'tis a Fault between a Solecism and Impropriety, and is committed by using any foreign Word or Phrase, not suited to the Genius of the Language; or by the dropping of Particles, Pronouns, or Prepositions, where they are necessary. *Suidas*, *Isidorus*, &c. confine the *Barbarism* to a single Word; but *Vossius* extends it to Phrases.

BARBE, in Commerce, a kind of Horses brought from *Barbary*, much esteem'd for their Vigour and Swiftness: They are usually of a slender Make, and their Legs fat apart. 'Tis a Maxim, that *Barbs* grow ripe but never old, because they retain their Vigour to the last; which makes 'em prized for Stallions. 'Tis said they were antiently wild, and run at large in the Defarts of *Arabia*; and that it was in the Time of *Chequi* *Ismael*, that they first began to tame 'em. 'Tis said there are *Barbs* in *Africa* that will outrun Ostriches, ordinarily sold, according to *Dapper*, for 1000 Ducats, or 100 Camels. They are fed very sparingly; *Dapper* says with Camel's Milk. 'Tis added, that in *Barbary* they preserve the Genealogy of their *Barbs*, with as much Care as the *Europeans* do those of their noble Families; and that to sell 'em, they always produce their Titles of Nobility.

Barbe, a military Term. To fire on *Barbe*, is to fire the Cannon over the Parapet instead of thro the Embrazures; but in this case the Parapet must be but three Foot and a half high.

Barbe, or Barde, is also an old Term for the Armour of the Horses of the antient Knights, and Soldiers, who were accoutred at all Points. *La Crusca* says, the *Barde* is an Armour of Iron or Leather, wherewith the Neck, Breast, and Shoulders of the Horse are cover'd.

BARBOTINE, a Grain, otherwise call'd *Semen Santonivianum*, and *Semen contra Vermes*, or *Worm-Seed*; which see.

BARDESANTTES, an Heretical Sect, the Followers of *Bardessanes*, of *Mesopotamia*; who as soon as he became a Christian, distinguish'd himself by his Knowledge in Philosophy, but afterwards renouncing the Christian Religion, embraced the Errors of *Valentius*, and added to them others of his own: He asserted the Actions of Mankind to depend on Fate. His Followers invented other Notions.

BARDS, antient Poets among the *Gauls* and *Britons*, who described and sung in Verse the brave Actions of the great Men of their Nation. The Design of their Verses was to paint and recommend Virtue, and sometimes to put an end to the Difference between Armies at the very point of Engagement. The *Bards* differ'd from the *Druids*, in that the latter were Priests and Teachers of the Nation, but the former only Poets and Writers, (See *Druid*.) *Larrey*, *Bodæus*, and *Pasquier*, indeed will have the *Bards* to have been Priests; *Clooverius* and *Pasquier* Philosophers; and *Clooverius* Orators too, but without much Foundation in Antiquity. *Strabo* divides the Sects of Philosophers among the *Gauls* and *Britons* into three, viz. the *Druids*, *Bards*, and *E-wates*. The *Bards*, adds he, are the Singers and Poets; the *E-wates*, the Priests and Natural Philosophers; and the *Druids*, to Natural Philosophy add also the Moral. *Hornius* however reduces 'em to two Sects, viz. *Bards* and *Druids*; others to one, and make *Druid* a general Name comprehending all the others: *Clooverius* will have it, that there were *Bards* also among the antient *Germanis*; because *Tacitus* makes mention of their Songs and Poems which contain'd their History. *Bochart* derives the Word from *paros*, to sing. *Camden* agrees with *Festus*, that *Barde* properly signifies a Singer: and adds, that the Word is

pure British. Others derive the Name from *Bardas*, a *Druid*, the Son of *Dryis*, and the fifth King of the *Celte*.

BAR-FEE, a Fee of 10 Pence, which every Person acquitted of Felony pays the Gaoler.

BARGE, a little floating Vessel used in the Navigation of Rivers, &c. *Barges* are of various Kinds, and acquire various Names, according to the Variety of their Uses and Structures: As,

<i>A Company's Barge,</i>	<i>A Severn-Trow,</i>
<i>A Rose-Barge,</i>	<i>A Ware-Barge,</i>
<i>A Royal-Barge,</i>	<i>A Light Horseman,</i>
<i>A Sand Barge,</i>	<i>A West-Country-Barge.</i>

BARK, the exterior Part of Trees, serving 'em for a Skin or Covering, (See *Plant*.) There are a great many kinds of *Barks* in use in the several Arts: Some in Medicine, as the *Quinquina*, or *Jesuits Bark*, *Macer*, &c. see *Cortex*; others in Dying, as the *Bark of the Alder* or *Willow*; others in Spicery, as *Cinnamon*, *Cassia lignea*, &c. see *Cinnamon*, &c. the *Bark of Oak* in Tanning, see *Tanning*; others on other Occasions, as *Cork*; that of the *Linden-Tree* for Cordage for Wells; that of a kind of *Birch* used by the *Indians* for Canoes, capable of holding 14 Persons. The Antients wrote their Books on *Barks*, especially those of the *Ash* and *Linden*; not on the exterior or outer *Bark*, but the inner and finer.

The *Bark* of Trees in general is of a spongy Texture, and by many little Fibres which pass thro the capillary Tubes whercof the Wood consists, communicates with the Pith; so that the proper Nutrimnt of the Tree being imbibed by the Roots, and carried up thro the fine arterial Vessels of the Tree by the Warmth of the Soil, &c. to the Top of the Plant, is there condensed by the cold Air, and returns by its own Gravity down the Vessels which do the Office of Veins, lying between the Wood and inner *Bark*, leaving as it passes by, such Parts of its Juice as the Texture of the *Bark* will receive, and requires for its Support: See *Sap*. That soft whitish Kind or Substence between the inner *Bark* and the Wood, which Mr. *Bradley* thinks to do the Office of Veins, some account a third *Bark*, only differing from the others in that its Fibres are closer; 'tis this contains the liquid Sap, Gums, &c. found in Plants in the Spring and Summer Months. It hardens by little and little, by means of the Sap it transmits, and is converted imperceptibly into the woody Part of the Tree. There are few Trees but what have it; yet 'tis still found in less Quantity, as the Tree is more exposed to the Sun; that of the *Oak* is ordinarily about an Inch Diameter. 'Tis here that the Corruption of Trees generally begins: whence those who fell and cut out Trees, ought always to take care to leave as little of it on, as possible. See *Wood*.

In the two *Indies* they manufacture the *Bark* of a certain Tree into a kind of Stuff or Cloth. 'Tis spun and dress'd much after the manner of Hemp. The long Filaments separated from it, upon beating and steeping it in Water, compose a Thread, of a middle kind between Silk and common Thread; neither so soft nor bright as Silk, nor so hard or flat as Hemp. Some of these Stuffs are pure *Bark*, and are call'd *Pennis*, *Beambones*, &c. In others they mix Silk with the *Bark*, and call 'em *Guineans* and *Nillas*: the *Fountain* too, are part Silk part *Bark*, and are only distinguish'd by being striped.

Bark, a little Vessel for the Sea, with pointed or triangular Sails, in number two, or three at the most. *Menage* derives the Word from the Latin *Barca*; *Fournier* from *Barce*, a City in *Africa*; and *Toletanus* from *Barcelona*; others, among whom *Salmasius*, from the Greek *baen*, a round Building; *Scaliger* from *baen*, ab *Oneribus gerendis*. Some Authors use the Word *Bark* for any Vessel that has no Masts. Of *Barks* there are various Kinds: As,

<i>A Birlander,</i>	<i>A Skuit,</i>
<i>A Sack,</i>	<i>A Snaul,</i>
<i>A Sattee,</i>	<i>A Snaucke.</i>

BARK-BINDING, a Dis temper incident to Trees, cured by sitting the *Bark*, or cutting it along the Grain of the Tree.

BARK-GALLING, is when Trees are gall'd by Thorns, or by being bound to Stakes, &c. and is cured by Clay laid on the gall'd Place, and bound up with Hay.

BARKING of Trees, is the Peeling off or Stripping the *Bark* from the Wood. The Month of *May* is the Season for *Barking* of Trees, because then the Sap loosens the *Bark* from the Wood; which 'tis very hard to effect in any other Time, unless the Season be very wet; Heat and Dryness being always opposite thereto.

BARM-YEAST, the Head or Workings-out of Ale or Beer. See *Leven*, *Paft*, *Baking*, &c.

BARNABITES, a Set of Religious, or Regular Priests, of the Congregation of St. *Paul*. Their Habit is black, and the same with that they wore when first established, Anno *Dominii* 1535. by the express Bulls of Pope *Clement VII*. Their Office is to instruct, catechize, and

serve in Missions. This Order was founded by *Astouine Mérie Zacariab*; they were call'd *Barnabites* from the Church of *St. Barnabas*, at *Milan*.

BARNACLE, in Natural History, a little Sea-Animal, frequent among the Western Isles of *Scotland*; the manner of whose Production has occasion'd some Speculation among the Learned. The *Barnacle*, at first, appears in form of a little Shell-fish growing on old weather-beaten Timber, chiefly *Asb* and *Fir*, driven in great Quantities by the Western Ocean upon the Shores. The Shell, Sir *Robert Murray* tells us, resembles that of a Mufcle in Colour and Consistence, very thin about the Edges, and about half as thick as broad, cross'd with Sutures, &c. It hangs to the Wood by a Neck longer than the Shell, of a slimy Substance, round and hollow, not unlike the Wind-pipe of a Chicken, by which it seems to draw its Nourishment from the Wood, both for its own Vegetation and that of the Animal inclosed. The Curiosity is, that instead of a Fish, which one expects in the Shell, there is found a perfect feather'd Fowl, vulgarly call'd *Solus Goose*. In a number which Sir *Robert Murray* open'd, he found the *Sea-Fowl* perfectly form'd; the Bill like that of a Goose, the Eyes mark'd, the Neck, Breast, Wings, &c. very compleat; the Feathers every where perfect; and the Feet like those of other Water-Fowl. He observes, he never saw any of 'em alive; nor does he know any body that ever did: But adds, he is credibly inform'd they have been seen as big as the Fish. The *French* have also their *Barnacles*, which they call *Macreuse*, or *Macroul*, on the Coasts of *Normandy*, &c. only differing from the *Scottish*, in that the one seems of the *Goose* Kind, the other of the *Duck* Kind. Dr. *Tant. Robinson*, rejecting the popular Opinions of their being generated from rotten Woods, Fruits dropp'd into the Sea, and there metamorphos'd into Birds, &c. observes, that the *Barnacles* are all oviparous, from the Anatomy of their Parts serving to Generation, and that they are both Male and Female. The *French* eat the *Macreuse* on Fish-Days, and throughout all *Leant*, taking it for a kind of Fish. Yet Mr. *Ray* observes, 'tis a real Fowl; and refers it to the Species of *Sea-Ducks* describ'd by Mr. *Willoughby*.

BARNACLES, Horse-Twitchers or Brakes, are Instruments which Farriers apply to Horse's Noses when they will not stand quietly to be shod, blooded, &c.

BAROCO, a Term in Logic. A Syllogism in *Baroco* has the first Proposition universal and affirmative, but the second and third particular and negative; and the middle Term the Attribute in the two first: For Example,

Every Virtue is attended with Discretion:

Some kinds of Zeal are not attended with Discretion:

Therefore some kinds of Zeal are not Virtues.

BAROMETER, a Machine for measuring the Weight of the Atmosphere, and the Variations therein, in order chiefly to determine the Changes of Weather, from the Greek *βαρος*, *ous*, and *μετρον*, *mensura*. The *Barometer* is frequently confounded with the *Baroscope*, the somewhat improperly; the latter, in strictness, being a Machine that barely shews an Alteration in the Weight of the Atmosphere: but 'tis one thing to know that the Air is heavier at one time than at another, and another to measure how much that Difference is; which is the Business of the *Barometer*.

The *Barometer* is founded on the *Toricellian* Experiment, as 'tis call'd from its Inventor *Toricelli*: which is no more than a Glass Tube fill'd with Mercury, hermetically seal'd at one End; the other open, and immerg'd in a Basin of stagnant Mercury. Now, as the Weight of the Atmosphere diminishes, the Mercury in the Tube will here descend; on the contrary, as it increases, the Mercury will again ascend: the Column of Mercury suspended in the Tube being always equal to the Weight of the incumbent Atmosphere; as is shewn under the Word *Toricellian*.

The Mechanism of the Barometer is as follows.

A Glass Tube A B, Plate *Pneumaticks*, Fig. 2, hermetically seal'd in A, having its Diameter about $\frac{1}{8}$ of an Inch, and its Length at least 31 Inches, is fill'd with Mercury so justly, as not to have any Air over it, nor any Bubbles adhering to the Sides of the Tube; which is best done by means of a Glass Funnel, with a capillary Tube. The Orifice of the Tube, fill'd after this manner, so as to overflow, is closely press'd by the Finger, so as to exclude any Air between it and the Mercury, and thus immerg'd in a wooden Vessel, of a convenient Diameter; so, however, as not to touch the Bottom: At the Distance of 28 Inches from the Surface of the Mercury, are fix'd two Plates, C E and D F, divided into two Inches, and these again subdivided into any number of smaller Parts: Lastly, the Tube is inclosed in a wooden Frame, to prevent its being broke; and the Basin, the open to the Air, secured from Dust; and the *Barometer* is compleat.

Many Attempts have been made to render the Changes in the *Barometer* more sensible, and so to measure the Atmosphere more accurately; which has given Rise to a great Number of *Barometers* of different Structures. Hence comes the *Wheel Barometer*, *Diagonal Barometer*, *Horizontal Barometer*, *Pendulous Barometer*, &c. of each whereof in their turns.

Des Cartes, and after him *Huygens*, us'd a Tube A B, Fig. 2, having a Cylindrical Vessel C D; one half of which Vessel, together with the upper Part of the Tube, were fill'd with Water; the other half of the Vessel, and the lower Part of the Tube, with Mercury: But here, the Column suspended was larger, and consequently the Variation greater, yet the Air imprison'd in the Water getting loose by degrees, fill'd the void Space in the top, and so ruin'd the Machine. He then betought himself of placing the Mercury a top, and the Water at bottom, in the manner following: A D G, Fig. 3, is a bent Tube hermetically seal'd in A, and open in G; the cylindrical Vessels B C and F E are equal, and about 29 Inches a-part; the Diameter of the Tube is about a Line, that of each Vessel 15 Lines, and the Depth of the Vessels about 10; the Tube is fill'd with Mercury (the common *Barometer* standing about 29 Inches) which will be suspended between the middle of the Vessel F E, and that of the Vessel B C; the remaining Space to A, being void both of Mercury and Air: Lastly, common Water, ting'd with a sixth Part of *Aqua Regis*, to prevent its freezing, is pour'd into the Tube F G, till it rises a Foot above the Mercury in D F. When, then, the Mercury rising above the Level of that contain'd in F E, through the Tube A D, becomes a Balance to the Weight of the Atmosphere; as the Atmosphere increases, the Column of Mercury will increase, consequently the Water will descend; as the Atmosphere again grows lighter, the Column of Mercury will descend, and the Water ascend. This *Barometer* therefore, which is the same with that of Dr. *Hook*, will discover much minuter Alterations in the Air than the common one: for, instead of two Inches, the Fluid will here vary two Foot; and by enlarging the Diameters of the Cylinders, that Variation may be still increas'd; but it has this Inconvenience, that the Water will evaporate, and so render the Alterations precarious; tho' the Evaporation be, in some measure, prevented by a Drop of Oil of sweet Almonds swimming a-top. On account of this Defect, others have had recourse to a

Horizontal, or Rectangular Barometer, A B C D, Fig. 4, the Tube whereof is bent, in form of a Square B C D; a-top of its perpendicular Leg it is join'd to a Vessel or Cistern A B; and its Variation accounted on the Horizontal Leg C D. Now here the Interval, or Space of Variation, may be made of any Extent at pleasure, and so the minutest Change in the Air become sensible. For the Diameter of the Tube C D being given, 'tis easy to find the Diameter of the Vessel A B, so as that the Scale of Descent in the Tube D C shall have any given Proportion to the Scale of Ascent in the Vessel A B; the Rule being, that the Diameter of the Vessel is to that of the Tube in a subduplicate reciprocal Ratio of their Scales. The Diameters then of C D and A B being given, together with the Scale or Ascent of the Mercury in the Vessel, the Scale of Mercury in the Tube is found thus; as the Square of the Diameter of the Tube is to the Square of the Diameter of the Vessel, so, reciprocally, is the Scale of Mercury in the Vessel to the Scale of Mercury in the Tube.

This and the preceding Contrivance of *Huygens*, are founded on a Theorem in Hydrostatics, viz. that *Fluids* having the same Base, gravitate according to their perpendicular Altitude, not according to the Quantity of their Matter; whence the same Weight of the Atmosphere supports the Quicksilver that fills the Tube A D and the Cistern B, as would support the Mercury in the Tube alone. See *Hydrostatics*.

This last however, with its Virtues, has great Defects; for, by reason of the Attraction between the Parts of the Glass and of the Mercury, (which Dr. *Juris* has shewn to be considerable) the Length of the Scale, (consequently the Quantity of Motion) and the Attrition against its Sides, especially in sudden Rises and Descents, the Mercury breaks, some Parts of it are left behind, and the Equilibrium of its Rise and Fall ruin'd. Some therefore prefer the

Diagonal Barometer, where the Space of Variation is considerably larger than in the common one, and yet the Rise and Fall more regular than in the others. The Foundation of the *Diagonal Barometer* is this; that in a *Toricellian* Tube A B, Fig. 5, inclined at any Angle to the Horizon, the Cylinder of Mercury equivalent to the Weight of the Atmosphere, is to a Cylinder of Mercury, equivalent to the same placed in a vertical Tube, as the Length of the Tube A B to the perpendicular Height B C. Hence, if the Height B C be subtriple, subquadruple, &c. of the Length of the Tube, the Changes in the *Diagonal Barometer* will

be double, or triple, &c. of the Changes in the common *Barometer*. This *Barometer* will scarce allow its Tube to be inclined to the *Horizon* at a less Angle than 45°, without undergoing the Inconvenience of the *Horizontal* one.

Wheel-Barometer is a Contrivance of *Dr. Hook*, to make the Alterations in the Air more sensible; the Foundation of this is the common *Vertical Barometer*, with the Addition of a couple of Weights *A* and *B*, *Fig. 5.* hanging in a Pulley, the one playing at liberty in the Air, the other resting on the Surface of the Mercury in the Tube, and rising and falling with it. Thus is the Motion of the Mercury communicated, by means of the Pulley, to an Index which turns round a graduated Circle; and thus the two Inches of vertical Ascent are here improv'd to 4, 5, or more, at pleasure. But the Friction of the Parts, in the Pulley, and Index, is so considerable, that unless the Machine be made with a great deal of Accuracy, it does not answer.

Pendant Barometer is a Machine rather pretty, and curious, than useful. It consists of a conical Tube placed vertically; its upper and smaller Extreme hermetically sealed; it has no Vessel or Cistern; its conical Figure supplying that Defect: for when fill'd, like the rest, there will be as much Mercury sustain'd as is equivalent to the Weight of the *Atmosphere*; and as that varies, the same Mercury takes up a different Part of the Tube, and so becomes of a different Weight. Thus when the Weight of the *Atmosphere* is increased, the Mercury is driven up into a narrower part of the Tube, by which means its Column is lengthen'd, and, for the Reason just given, its Weight increas'd. Again, the *Atmosphere* decreasing, the Mercury sinks into a wider Part of the Tube, by which means its Column is shorten'd, and its Pressure accordingly weaken'd. Thus the same Mercury is still a Balance to the *Atmosphere* under all its Variations. The Inconvenience in this *Barometer* is, that to prevent the Mercury and Air from changing Places, the Bore of the Tube must be very small; which Smallness of the Bore renders the Friction so sensible, as to impede its playing.

Marine Barometer is likewise a Contrivance of *Dr. Hook*, to be used at Sea, where the Motion of the Waves renders the others impracticable. 'Tis nothing more than a double *Thermometer*, or a Couple of Tubes half fill'd with Spirit of Wine, the one hermetically seal'd at both Ends, with a Quantity of common Air inclosed; the other seal'd at one End, and open at the other. Now, the Air, we know, is able to act on the Spirit of Wine, and to raise it two ways; the one by its Gravity, as in the *Toricellian Tube*; the other by its Heat, as in the *Thermometer*. If then the two Tubes be graduated, so as to agree with each other at the time when the Air is inclosed, it will easily follow, that, where-ever the two agree afterwards, the Pressure of the *Atmosphere* is the same, as at the time when the Air was inclosed. If in the *Thermometer* open to the Air the Liquor stand higher, considering withal how much the other is risen or fallen from the other Cause of Heat or Cold, the Air is heavier; on the contrary, when it is lower, compar'd with the other, the Air is lighter than at the time when the Instrument was graduated. Here the Spaces answering to an Inch of Mercury will be more or less, according to the Quantity of the Air inclosed, and the Smallness of the Tubes; and may be increas'd, almost in any Proportion.

But it must be remember'd, that the Density and Rarity of the Air, on which this Machine is founded, don't only depend on the Weight of the *Atmosphere*, but also on the Action of Heat and Cold. This, therefore, can never be a just *Barometer*; but may properly enough be call'd a *Mensurometer*, or Instrument to shew the Density of the Air.

Statistical Barometer or *Baroscope*, used by *Mr. Boyle*, *Otero*, *Guerris*, &c. is fallacious, and liable to be acted on by a double Cause: It consists of a large Glass Bubble, balanced by a Brass Weight, in a nice Pair of Scales; for these two Bodies being of equal Gravity, but unequal Bulk, if the Medium in which they equiponderate be changed, there will follow a Change of their Weight; so that if the Air grows heavier, the greater Body being lighter in Specie, will lose more of its Weight than the lesser and more compact; but if the Medium grow lighter, then the bigger Body will outweigh the less.

But the most accurate *Barometer* ever yet invented, is that of *Mr. Caswell*, the Structure whereof he describes as follows: Suppose *A B C D*, *Fig. 6.* a Bucket of Water, wherein is the *Barometer* *xx r e z y o s m*, consisting of a Body *xx r s m*, and a Tube *e z y o*. The Body and Tube are both concave Cylinders, communicating with each other, made of Tin, or rather Glass. The Bottom of the Tube, *z y*, has a Lead Weight to sink it, so as the Top of the Body may just swim even with the Surface of the Water, by the addition of some Grain Weights a-top. The Water, when the Instrument is forced with its Mouth downwards, gets up into the Tube to the Height *y o*. There is added on the Top a small concave Cylinder, which we call the *Pipe*, to distin-

guish it from the other at Bottom, which we call the *Tube*: this Pipe is to sustain the Instrument from sinking to the Bottom. *m d* is a Wire, *m s*, *d e* two Threads oblique to the Surface of the Water, performing the Office of *Diagonals*. Now, while the Instrument sinks more or less, by the Alteration of the Gravity of the Air; there, where the Surface of the Water cuts the Thread, is form'd a small Bubble, which ascends up the Thread, as the Mercury of the common *Barometer* ascends, & vice versa. This Instrument, as appears from a Calculation which he annexes, shews the Alterations in the Air more accurately than the common *Barometer*, by 1200 times. He observes, that the Bubble is seldom known to stand still a Minute; that a small Blast of Wind, that can't be heard in a Chamber, will make it sink sensibly; that a Cloud always makes it descend, &c.

Phenomena of the Barometer.

The Phenomena of the *Barometer* are various; the Causes assign'd for 'em by several Authors as various; nor is its Use in predicting the Weather yet perfectly ascertain'd.

On the top of *Sacredon Hill*, 1240 Yards high, *Dr. Halley* found the Mercury lower by 3 Inches 8 Tenths than at the Foot thereof; whence it appears, that at every 30 Yards the Mercury sinks $\frac{1}{2}$ of an Inch. *Mr. Deslons*, from some Experiments he made at the Top and Bottom of the Monument, allows 32 Feet perpendicular Ascent to a Fall of the Mercury of $\frac{1}{2}$ of an Inch: Whence we have not only a Foundation for determining the Height of the *Atmosphere*, which on this Foundation (were it equally dense every where) would not be found more than 5 Miles and $\frac{1}{2}$; but also a very accurate Method of measuring the Height of Mountains. Thus, if on the Surface of the Earth the Mercury be at 30 Inches, at 1000 foot high, it will be at 28,91 Inches; at 2000 Foot, 27,86; at 3000, 26,85; at 4000, 25,87; at 5000, 24,93; at 1 Mile, 24,67; at 2 Miles, 20,29; at 5 Miles, 11,28; at 10 Miles, 4,24; at 15 Miles, 1,60; at 20, 0,95; at 30 Miles, 0,08; at 40, 0,01: tho' it must be observ'd, this is on a Supposition that the *Atmosphere* is equally dense every where.

The greatest Height the Mercury has been known to stand at in the *Barometer*, at *London*, is 30 Inches $\frac{1}{2}$, its least 28 Inches; its greatest Height at the Observatory at *Paris*, has been found 28 Inches $\frac{1}{2}$, and its least 26 $\frac{1}{2}$ of the *Paris* Foot, which exceeds the *London* Foot by $\frac{1}{4}$; and with these Observations agree others made at *Hall*, in *Saxony*, by *Wolffius*. 'Tis true, there is an Experiment wherein the Height of the Mercury is found surprisingly to exceed these Numbers; Mercury perfectly purged being suspended in a Tube, in the *Toricellian* way, at the Height of 75 Feet; tho' by the least Shake it falls down to the ordinary Height. See the Accounts of this Phenomenon under the Word *Toricellian*.

The Phenomena of the *Barometer*, *Mr. Boyle* observes, are so very precarious, that 'tis exceedingly difficult to form any general Rules about the Rise or Fall thereof. Even that which seems to hold most universally, *viz.* That when high Winds blow the Mercury is the lower, sometimes fails.

Dr. Halley gives us the following Observations.

That in calm Weather, when the Air is inclined to Rain, the Mercury is commonly low; in serene good settled Weather, high.

That on great Winds, tho' unaccompanied with Rain, the Mercury is the lowest of all, with regard to the Point of the Compass the Wind blows on. That, *ceteris paribus*, the greatest Heights of the Mercury are on Easterly and North-Easterly Winds. That after great Storms of Wind, when the Mercury has been low, it rises again very fast.

That in calm frosty Weather it stands high.

That the more Northerly Places find greater Alterations than the more Southern: And that within the Tropicks, and near them, there is little or no Variation of the Height of the Mercury at all.

Dr. Beal observes;

That, *ceteris paribus*, the Mercury is higher in cold Weather than in warm, and usually in the Morning and Evening higher than at Mid-Day.

That in settled and fair Weather, the Mercury is higher than either a little before or after, or in the Rain; and that it generally descends lower after Rain than it was before it. If it chance to rise higher after Rain, it is generally follow'd by a settled Serenity.

That there are frequently great Changes in the Air, without any perceptible Alteration in the *Barometer*.

For the Use of *Barometers* an ingenious Author observes, That by their means we may regain the Knowledge which still resides in Brutes, and which we forfeited by not continuing in the open Air, as they generally do; and by our Intemperance, corrupting the Crasis of our Senes.

As to the Predictions from *Barometers*, *Dr. Halley* has found, that the Rising of the Mercury forebodes fair Weather after foul, and an Easterly or North-Easterly Wind.

That

That the Falling thereof portends Southerly or Westerly Winds with Rain, or stormy Winds, or both.

That in a Storm, the Mercury beginning to rise, is a pretty sure Sign that it begins to abate.

Mr. *Patrik* observes, that in hot Weather the Falling of the Mercury presages Thunder; that when foul Weather happens soon after the Fall of the Mercury, it seldom holds long; and the same is observ'd, if fair Weather succeed presently after its Rise.

Lastly, Mr. *Derbam*, from a long Series of *Barometrical Observations* made by Dr. *Schenker*, at *Zaricb*, compar'd with others made at the same times by himself at *Upminster*, observes that throughout the whole Year the Mercury was lower at the former Place than at the latter, by sometimes one and sometimes above two Inches; tho' the Difference at a Medium he computes to be about half an Inch; and thence concludes the Situation of *Zaricb* to be near $\frac{1}{2}$ of an English Mile higher than that of *Upminster*. He found, however, a considerable Harmony between the two; the one usually rising and falling, and that much or little, as the other did; tho' this Harmony is not so complete, as has been observ'd in *Barometers* nearer home, as at *London*, *Paris*, in *Lowcshire*, &c.

Cause of the Phenomena of the Barometer.

These are the Phenomena of the *Barometer*; to account for which, the *Hypothesis* that have been fram'd, are almost infinite. Indeed, as the Weight of the *Atmosphere* is generally allow'd to be the Foundation of the *Barometer*, so 'tis generally granted, that the Alterations in the Weight of the Air, are the Occasions of those in the *Barometer*; and yet even this does not obtain universally. Dr. *Lifter*, for instance, accounts for the Changes of the *Barometer* from the Alterations of Heat and Cold. This, he says, he has often observ'd, that in Storms, &c. when the Mercury is at the lowest, it breaks and emits small Particles, which he calls a kind of *fracking*; and argues, that in all times of its Descent, it is more or less on the Prect. In this Disorder, he thinks, its Parts are contracted and brought closer together, and for that reason descend; Besides, in the fracting they let go little Particles of Air, before inclosed in 'em; and these rising into the Top of the Tube, the Mercury must sink, both from the Column's being shorten'd by their Escape, and by their lying upon it. Mercury therefore, he adds, rises either in very hot or very cold Weather, between the Tropicks, &c. as being then in its natural State; and again, in the intermediate Degrees of Heat and Cold it falls, as being contracted, and as it were convuls'd and drawn together. But this Account, however ingenious, comes far short of accounting for the Phenomena; nay, in some respects, contradicts them.

The Changes in the Weight of the *Atmosphere*, therefore, must be laid down as the Cause of those in the *Barometer*; but then, for the Cause of that Cause, or whence those Alterations arise in the *Atmosphere*, will be no easy Matter to determine; there being, perhaps, no one Principle in Nature, that will account for such a Variety of Appearances, and those too so irregular. 'Tis probable, the Winds, as driven this or that way, have a great Share in 'em; some Share too, Vapours and Exhalations rising from the Earth may have; some, the Changes in the Air of the neighbouring Regions; and some, the Flux and Reflux occasion'd in the Air by the Moon.

Dr. *Halley* thinks the Winds and Exhalations sufficient; and on their footing gives us a very probable Rationale of the *Barometer*: the Substance of what may be said on that Head is as follows.

1st, Then, the Winds must necessarily alter the Weight of the Air in any particular Country; and that, either by bringing together and accumulating a greater Quantity of Air, and so loading the *Atmosphere* of any Place; which will be the Case, as often as two Winds blow at the same time from opposite Points towards the same Point; or, by sweeping away part of the Air, and removing some of the Load, give room for the *Atmosphere* to expand itself; which will be the Case, when two Winds blow at the same time, and from the same Point, opposite ways; or, lastly, by cutting off the perpendicular Pressure of the *Atmosphere*, which happens, as often as any single Wind blows briskly any way; it being found by Experiment, that a strong Blast of Wind, even made by Art, will render the *Atmosphere* lighter; and accordingly, the Mercury, in a Tube under which it passes, as well as in another at a Distance from it, subsides considerably. See *Philos. Transact.* N^o. 492.

2^{dy}, The cold nitrous Particles, and even Air itself condens'd in the Northern Parts, and driven elsewhere, must load the *Atmosphere*, and increase its Pressure.

3^{dy}, Heavy, dry Exhalations from the Earth, must increase the Weight of the *Atmosphere*, and heighten its Elastic Force, as we find the specific Gravity of Menstruums increases'd by dissolv'd Salts and Metals.

4^{thly}, The Air being render'd heavier from these and the like Causes, is thereby the more able to support the

Vapours; which being likewise intimately mix'd with it, and swimming every where equally throughout it, make the Weather serene and fair: Again, the Air being made lighter from the contrary Causes, it becomes unable to support the Vapours wherewith it is replete; these therefore precipitating are gathered into Clouds, and those in their Progress coalesce into Drops of Rain.

These things observ'd, it appears pretty evident, that the same Causes which increase the Weight of the Air, and make it more able to support the Mercury in the *Barometer*, do likewise make a serene Sky, and a dry Season; and the same Causes which render the Air lighter, and less able to support the Mercury, do likewise generate Clouds and Rain.

Hence, 1st, When the Air is lightest, and the Mercury in the *Barometer* lowest, the Clouds are very low, and move swiftly; and when after Rain the Clouds break, and a calm Sky again shines forth, being purg'd of its Vapours, it appears exceedingly bright and transparent, and affords an easy Prospect of remote Objects.

2^{dy}, When the Air is heavier, and the Mercury stands higher in the Tube, the Weather is calm, the somewhat less clear, by reason the Vapours are dispers'd every where equally; if any Clouds now appear, they are very high, and move slowly. And when the Air is heaviest of all, the Earth is frequently found envelop'd in pretty thick Clouds, which appear to be form'd out of the grosser Exhalations, and which the Air is then able to sustain, tho' a lighter *Atmosphere* could not.

3^{dy}, Hence it is, that with us the Mercury stands highest in the coldest Seasons, and when the Wind blows from the North or North-East Corner: for in that Case there are two Winds blowing towards us at the same time, and from opposite Corners; there being a constant West Wind found in the *Atlantic* Ocean, at the Latitude corresponding to ours. To which we may add, that in a North Wind, the cold condens'd Air of the Northern Parts is brought hither.

4^{thly}, Hence, in the Northern Regions, the Variation of the Mercury is more sensible than in the Southern ones; the Winds being found both more strong, more frequent, more various, and more opposite to each other in the former than the latter.

Lastly, Hence it is, that between the Tropicks, the Variation of the Mercury is scarce sensible; the Winds there being extremely genic, and usually blowing the same way.

Now, this Account, however well adapted to many of the particular Cases of the *Barometer*, yet comes short of some of the principal and most obvious ones; and is, besides, liable to several Objections.

For, 1st, If the Wind were the sole Agent in effecting these Alterations, we should have no Alterations without a sensible Wind, nor any Wind without some Alteration of the Mercury; both which are contrary to Experience.

2^{dy}, If two Winds be suppos'd blowing from the same Place, viz. *London*, opposite ways, viz. N. E. and S. W. there will be two others, blowing from opposite Points, viz. N. W. and S. E. to the same Place; which two last will balance the first, and bring as much Air towards the Point, as the others swept from it. Or thus, In proportion as the Air is carried off N. E. and S. W. the adjacent Air will crowd in from the other Points, and form a couple of new Currents in the Direction N. W. and S. E. to fill up the Vacancy, and restore the *Equilibrium*. This is a necessary Consequence from the Laws of Fluids.
