THE HENRY
FRANCIS DU PONT
WINTERTHUR
MUSEUM

Entered according to Act of Congress, in the year 1871, by

WESLEY CHASE,

in the Office of the Librarian of Congress at Washington.

INTRODUCTORY.

IN view of the great want of information necessary for the erection and furnishing of churches throughout the world, this ILLUSTRATED CATALOGUE has been compiled and issued to the public. It has for its mission the general diffusion of instructions necessary for completing church edifices, and introducing a style of Furniture for churches and Sabbath-schools, lecture rooms and halls, which for beauty, durability, and cheapness cannot be surpassed. Our facilities for supplying the same are superior to any other company, and, consequently, our prices are lower. A careful examination of this Catalogue will enable the party making such examination to decide at once upon the particular style of architecture, internal plan, and furniture required for the completion of a church perfect in every appointment, and fully up to the present standard. We are prepared to furnish plans and specifications for churches and schools, and supply architects to superintend the erection of the same if desired.

Twenty-five years ago A. J. Downing said, "The ugliest church architecture in Christendom is at this moment to be found in the country towns and villages of the United States." We are thankful that such a remark, at least so sweeping, cannot be made to-day.

The improvements in the building and adorning of our edifices devoted to Christian worship, which are evident to the most casual observer, and becoming more manifest every year, are due to the efforts of Downing, and others like him, who, through the publication and circulation of architectural and

kindred works, have been instrumental in awakening a growing interest, and bringing out and developing a better and more refined taste in the erection and embellishment of our churches.

As it has become known that it costs no more to build in correct proportion and in good taste than in defiance of these principles, so has the desire become greater and more general to incorporate fitness of design and beauty of expression in the least as well as the greatest of these, the most prominent evidences of the intellectual attainments and moral standing of our communities. In all ages the character of the people has been expressed by their architecture. In their temples and other public buildings they endeavored to embody their religious and political sentiments, and express *their* degree in the scale of civilization.

In the numerous works published in our country, treating more or less upon church architecture, plans, elevations, and often perspective views are given. These illustrations, though they portray many beautiful buildings, and well-arranged plans which can be adapted to a particular site with very little and sometimes no alteration, yet, being drawn to so small a scale that the comprehension of their details is difficult if not impossible to any but an experienced architect, they become merely mediums for the transmission of general ideas, and are not at all adapted to the purposes of building.

To arrange and lay out a building from a small sketch embodying the general ideas is not a very difficult piece of work ; but to *erect* the building so that all of its exterior and interior details of construction will, by the beauty of their proportions, and in the expression of the sacred purposes which they embody, together with the feelings of reverence they suggest, aid in forming a fitting and harmonious whole, such as will awaken the devotional feelings and beget an attachment of the heart, requires something more elaborate and definite than a sketch in perspective, or even a preliminary drawing.

Every intelligent person is aware of the fact that, while architectural books improve his taste and develop for him new

ideas, they cannot save him any money when he resolves to build. The individual who builds by the book and declines to consult an architect, soon learns from experience that it requires professional knowledge and training to bring his own or another's ideas to a proper and satisfactory result. With these facts in view we have added the architect and superintendent of buildings to our corps of assistants.

In this department of our business we will endeavor to supply the demand made upon us for practical working drawings and specifications so thoroughly prepared that they may be submitted to builders for estimates of total or partial construction without the fear of those long item bills, denominated "extras," which *usually* accompany the fulfillment of contracts after incomplete and diminutive drawings. We believe more practical information can be imparted to builders by well executed general and detail drawings in sufficient number than by any other means; and, further, that these should be all completed before estimates are called for, so that a perfectly definite idea can be obtained of the amount and class of the work.

The usual method of furnishing for estimating purposes only the general drawings and descriptive specifications, in which every prominent item of work is "to be as directed by the architect," or "to be as per detail drawings furnished hereafter," is faulty, from the fact that whenever the builder is the least in doubt in regard to the amount, style, or class of the work he invariably *over-estimates* it, and thus increases the total cost of the structure. A noted superintendent of buildings on being asked what he required to complete a building, answered, "Full drawings and specifications." When asked if any thing more was needed, after a moment's pause said, "Yes, *more drawings.*"

We intend to keep for inspection a number of finished designs, showing churches of different styles and capacities, and adapted to different localities, to which collection will be added such edifices as we may hereafter erect. Our unusual facilities enable us to furnish our patrons at a cost below the average rate now paid for such work, and a visit of inspection

will satisfy them as to our capacity for performing satisfactorily what we propose to accomplish.

Parties desiring plans will please state size of lot, dimension of building desired, and such other instructions as they may deem advisable.

All communications addressed to the Secretary will be promptly answered by him.

ILLUSTRATED CATALOGUES showing our School Furniture will be sent upon application.

PEW-ENDS.

We show a few of the latest styles of Pew Ends. Our variety is large, and we are prepared to suit any taste.

The different styles shown are designated by letters, and are made of either pine, whitewood, ash, oak, cherry, beech, walnut, or of different kinds of wood, plain or trimmed to suit.

We also furnish the pew seats and back of such wood as ordered, and trimmed to compare with Pew End, or upholstered in any style desired. Prices will vary according to quality of material and style of work.

CHAIRS FOR CHANCELS OR ALTARS.

We show the latest styles of chairs by cuts on the next page. We are prepared to furnish any style desired, plain or ornamental, at satisfactory prices.

READING DESKS AND PULPITS.

READING DESKS AND PULPITS furnished to order. Made of different kinds of material and designs.

SEATS FOR CHURCHES, SABBATH-SCHOOLS, HALLS, AND
LECTURE-ROOMS.

No. 10.

Standard Length, 8 feet.

No. 8.

Standard Length, 8 feet. Requires no fastening to the floor.
For Sunday-schools or Recitation.

No. 12.—Stationary Back Settee.

PATENTED MARCH 22, 1870.

Standard Length, 8 feet.

No. 11.

PATENTED MAY 18, 1869.

Standard Length, 8 feet. Reversible Back.

No. 52.—Stationary Settee.

Standard Length, 8 feet.

No. 56.—Iron Standard Hinge Seat.

This is one of the most desirable styles of Recitation Seat. Height of seat 15 inches, made any length desired. Standard length, 8 feet.

REMARKS ON SEATING CHURCH AND SABBATH-SCHOOL ROOMS.

The arrangement and style of seats for Churches and Sabbath-schools is a matter of great importance. Economy of space is the first and most important item to settle upon. Style of seat is next in order.

Having been engaged for nearly twenty years past in the manufacture of a large variety of seats for public use, we have had ample opportunity to study every point necessary for ease and comfort, and have adopted such as will give entire satisfaction in this respect. Height of seat from floor, height and inclination and curve of back and pitch of seat, are the main principles involved.

The cuts shown in this catalogue of Pew Ends, Chairs, Settees, etc., are only a few of the great variety we are prepared to furnish. All of our furniture is made by machinery, and for neatness, durability, and cheapness we defy competition.

All orders are shipped in what is called "knock down" shape, neatly and securely packed in boxes and crates, so that there is no danger of marring the furniture by handling or transportation.

Parties desiring information in regard to seating Churches, Sabbath-schools, Halls, etc., will please be definite in their inquiry, so that the answer may be to the point.

H I

DIAGRAMS Nos. 18, 19, 20.

DIAGRAM No. 3.

HOW IT IS USED.

In place of an oil-cloth or carpet, we lay it on floors in *plain* or very *elaborate* designs, according to order. We thoroughly secure it in position by the use of small patent nails, which readily draw out in case it is desired to remove it. The cut above gives some idea of its *Stair, Wall, and Floor use*.

It will last as long on floors as

FIVE OIL-CLOTHS,

OR

TEN BRUSSELS CARPETS,

AND ON THE WALLS

AS LONG AS THE HOUSE STANDS,

and never lose its figure with ordinary attention.

**Public Buildings, Lecture Halls, Churches, Hospitals,
Sunday-Schools, Seminaries,**

WILL FIND OUR

WOOD CARPETING

CHEAPER AND MORE DURABLE than any other covering or wainscoting they can use. No alterations are required in the saddles of doors, etc., as is often the case when a thicker floor is laid.

A very nice effect is made by laying our border around the room, and having the carpet made to fit inside the border, and polished. We make very handsome borders—such as diagram No. 10, 15, and 21—30 inches wide, sufficient to allow the furniture to stand upon the border, so that in removing the carpet the furniture need not be taken out of the room.

It should be borne in mind that in making comparisons with the cost of our flooring with other materials, such as oil-cloth or carpets, that our

WOOD CARPETING

will last as long as five oil-cloths, or ten Brussels carpets; as easily cleaned as the former, and avoid the trouble and expense of the latter in having to be taken up every short period to be shaken. Also, if desired to *move them*, they can be readily taken up; and if not the size of the room desired to be removed to, additional material to match can always be obtained from us to make it fit any sized room. With any other material this is next to impossible.

FOR THE FLOOR OF THE CHURCH OR SCHOOL.

What shall we do with our Sunday-school floor? Shall we leave it bare? shall we paint it? shall we cover it with cocoa matting? or shall we carpet it?

A bare floor has a somewhat cheerless look, and it is well to put something on it to give it that cozy and home-like appearance and feeling which should be a prominent feature in every Sunday-school. The money spent on such embellishment as this is not wasted. It makes our schools more valuable.

Many schools are carpeted with cocoa matting. It looks well when first put down, very shabby after it has been trampled on a few months, and is as thoroughly unwholesome a dust-trap as can be devised. To judge of its effects on the health of those who walk over it, we have only to look at the floor just after the matting is lifted from it, and before the accumulation of dirt is swept away. This dirt, held by the meshes of the matting, has lain there in powder, to rise with every footstep, to float in the air, and to enter the lungs of every one who has breathed the atmosphere which it has defiled.

Cocoa matting is considered less expensive than carpet and more durable. But many people considering ingrain or three-ply carpet more elegant, procure it at the somewhat greater cost. And there are few things which make a room more beautiful and habitable than a newly-laid and well-selected carpet. Were there nothing better, we should plead for the carpeting of every school-room where a carpet can be afforded. There are only two objections to a carpet: it will wear out; it will hold dust, like the cocoa matting, even if not in such great quantity.

There is something better. An ingenious floor covering has been made. It is a recent invention, already extensively introduced, and a great success. It is cleanly, economical, healthful, durable, and elegant. It holds no cloud of dust, for not a particle of dust can get under it.

It is made of strips of walnut and ash, or other woods, accurately sawed and smoothed by machinery to a uniform length of three feet. They are an inch wide and a quarter of an inch thick. These strips having been thoroughly seasoned by being baked in an oven, so that they will remain perfectly straight, are firmly cemented to a piece of heavy twilled cloth, thus making a fabric which can be rolled up like a length of carpet or matting. The fabric thus formed is laid and fitted to the floor, and secured with small nails. A little linseed oil gives a fine polish, and the elegant appearance of an inlaid floor is presented at a very moderate cost. By a little ingenuity in putting it down, it can be laid in all manner of geometrical patterns. The trouble of laying it and of taking it up are about the same as of an ordinary carpet or oil-cloth. The canvas under it makes it sufficiently yielding to the tread to remove the impression that one is walking on a board floor.

VENTILATION.

There is perhaps no subject affecting the life and health of the public that is of greater importance than this, and to which so little attention is paid.

Much has been said and written on the subject of late years, and very many improvements have been adopted and are now being used in very many of our public buildings.

Any information desired upon this subject will be freely given.

HEATING PUBLIC BUILDINGS

Is a matter of vital importance, and one which has engaged the minds of the best and most learned men in seeking out the best plan. Science has done very much in improving the different methods for heating public buildings, and the variety of plans and devices are almost numberless. The various modes for this purpose that have from time to time been adopted were widely different in character, and for the most part very imperfect and unsatisfactory. They each in their turn served their day, and gave place to the next improvement, and so it will be for all time.

We have made arrangements with manufacturers of the best Furnaces, Stoves, and Steam Heaters for the introduction and sale of their different devices, and we will only recommend such as we are satisfied possess special merit in every particular. Prices are the same as charged by the manufacturers.

When making inquiries in reference to Furnaces it is well to mention the sort of fuel you desire to use, as every Furnace does not require the same kind of fuel.

STAINED GLASS.

We are prepared to furnish all styles of

Stained, Enameled, and Embossed Glass

FOR CHURCHES, DWELLINGS, ETC.,

Executed by the best artists and most experienced workmen.
New and original designs.

Specimens can be seen at our office and sent to all parts
of the country. Also

IRON SASH AND VENTILATORS.

BELLS.

We are prepared to furnish any style or make of bell desired
at manufacturers' lowest cash prices. Catalogues furnished
upon application.

ORGANS AND MELODEONS.

We are prepared to furnish any style or make desired at
manufacturers' lowest cash prices. Catalogues furnished upon
application.

"GIVE BOOKS FOR FIVE TEACHERS."

The Popular Standard Series of the Pennsylvania Schools,

BROOKS'S NORMAL SERIES OF MATHEMATICS.

BY EDWARD BROOKS, A.M.,

Principal and Professor of Mathematics, Pennsylvania State Normal School,
Millersville, Pa.

These works are the result of thorough study, long experience and mature reflection. Their plan and methods were originated, tested and perfected in a large professional training-school for teachers: Each method was finally adopted as the best, when, after a full trial with many methods, it was proven to embody sounder principles of teaching.

The success everywhere attained by teachers trained in them soon attracted attention, and created a demand that they be collected and arranged for general use. To meet this demand the author arranged the ideas and methods thus tested into the complete system presented in

Brooks's Normal Series of Mathematics.

This series, embodying the most approved methods of teaching, has received the entire confidence and approval of intelligent and skillful instructors wherever they have given it a thorough examination and trial.

The great favor and extensive use accorded to this series, and the permanent and increasing demand in the most intelligent school districts, strongly recommend its general adoption.

It is *approved by more than sixty county and city superintendents* of Pennsylvania, is used in every county, and is recommended by *FOUR-FIFTHS* of those *adopting county uniformly*.

Its methods have displaced those of other text-books, and are now *adopted in all of the centres of advanced educational opinion*.

Thousands of teachers are annually educated and trained from this series. Upward of *two hundred principal cities and towns* and more than *6000 schools* have adopted it in Pennsylvania.

The series has been exclusively selected by many cities, towns and counties of New Jersey, and was recently a *second time officially adopted as the best* by the State of Maryland, where it is now used in upward of 1000 schools. Also used in the best schools of West Virginia and other States.

BROOKS'S NORMAL ARITHMETICS AND GEOMETRY

are used with great success in the public schools of the cities of Philadelphia, Baltimore, Trenton, New Brunswick, Wilmington, Wheeling, Reading, Scranton, Williamsport, Erie, Wilkesbarre, Lancaster, York, Allentown, Altoona, Johnstown, Chester, Frederick City, Cumberland, etc., etc.

BROOKS'S NORMAL ARITHMETICS.

1. Brooks's Primary Arithmetic	\$.25
2. Brooks's Elementary Arithmetic50
3. Brooks's Mental Arithmetic38
4. Brooks's Written Arithmetic95
Key and Methods of Teaching the Mental38
Key and Methods of Teaching the Written . . .	1.00

They are extensively adopted in Pennsylvania, Maryland, Delaware, West Virginia, New Jersey and other States.

This continued and growing popularity and use of these text-books, and the great advantages found to result from teaching by them, steadily win teachers and patrons as their earnest advocates.

The following are among the points that secure their use, by which there is

A SAVING IN TIME, LABOR AND MONEY.

1. The *natural* and *philosophical* plan of the system.
2. The *well-chosen*, *well-apportioned* and *well-arranged* material.
3. The *simple* and *rational* methods of treating the subject.
4. The *terseness* and *perspicuity* of the *language*.
5. The prominence given to *principles*, and the great abundance and variety of problems for their application.
6. The clear and logical *method of analysis*, which relieves this system of the drudgery and rote of the old methods.
7. The *improved methods* in Greatest Common Divisor, Least Common Multiple, Circulates, Involution and Evolution, and the scientific development of Fractions, Ratio and Proportion, Percentage and its business applications.
8. The advanced educational thought that pervades the whole series.
9. The adaptation of the series to all kinds and grades of schools.
10. The low price, durable binding and practical character of each book.

Exceptional Courses.

A SHORT, CHEAP and PRACTICAL COURSE in Three Books (1, 2 and 3), costing at Retail only \$1.13, Furnishes

THE COMMON BUSINESS RULES IN A COMMON SCHOOL TERM.

A more Complete Course can be had in 1, 3 and 4, Costing at Retail only \$1.58.

THE BEST BOOKS OF THE DAY.

OPINIONS OF DISTINGUISHED EDUCATORS.

From J. P. WICKERSHAM, A. M., *Supt. Common Schools, Pa.*—We used Prof. Brooks's books at the *Normal School* while I was Principal of that institution. That is the *best* recommendation I can give. I am very much pleased with the "NORMAL ELEMENTARY GEOMETRY."

From JOHN S. HART, LL. D., *Dept. of Pub. Instruction, N. Y.*—We have been using "Brooks's Arithmetics" in this institution, and are much pleased with them. The methods are good; the statements are clear and scholarly; the matter judiciously selected and well arranged.

From JOSEPH W. WILSON, A. M., *Prof. of Practical Mathematics, Philadelphia Central High School.*—I consider Prof. Brooks's Series of Mental and Written Arithmetics the best published.

From GEORGE W. FETTER, *Principal Philadelphia Girls' Normal School.*—Brooks's Series of Arithmetics are valuable books to both teacher and pupil, and give entire satisfaction in the class-room.

From AARON B. IVINS, A. M., *Principal of Philada. Friends' Central High School.*—During an experience of twenty-six years, I have found no Arithmetics in which the science of numbers is so well treated as in the "Normal Arithmetics," by E. Brooks, A. M.

From GRAMMAR SCHOOL PRINCIPALS, Philadelphia.—"Brooks's Normal Arithmetics are superior to any with which we are acquainted."

From WM. ELLIOTT, JR., *Prof. Math., Baltimore City College, Md.*—"Our committee of teachers unanimously reported in favor of Brooks's Series as best."

From THOMAS C. PORTER, D. D., *Lafayette College, Easton, Pa.*—In these days, when so many crude and worthless school-books issue from the press, and displace older and better ones, it is pleasant to meet such as show marks of true progress. In this field Prof. Brooks has achieved great success. His arithmetical series is superior to any that has yet fallen under my eye.

From H. S. JONES, *Supt. Erie, Pa., Pres. Penna. State Teachers' Association.*—They excel in freshness and practical power, and bear the stamp of the logical thinker and practical teacher.

From HENRY HOUCK, *Ex-Co. Supt., now Deputy State Superintendent, Pa.*—"I am well acquainted with Prof. Brooks's Normal Written Arithmetic. I had a fair opportunity to test its merits, and can say that it gave general satisfaction. It is quite a favorite text-book of three-fourths of the teachers in Lebanon county."

From PROF. JOHN A. STEWART, *High School, Reading, Pa.*—I find them to be very excellent text-books, gotten up with extreme care, and evidently by a master of the subject. A truly philosophical and rigidly logical method has been pursued.

From HON. THOS. H. BURROWES, *Penn. School Journal.*—"We noticed favorably this sterling work, 'Brooks's Written Arithmetic,' and now we rejoice to state that it has met with an encouraging reception, and is going into very large use."

From L. O. FOOSE, *Prin. High School, Harrisburg, Pa.*—I am particularly pleased with the *method, order and simplicity* which are found throughout the whole series.

From JESSE NEWLIN, *County Supt. Schuylkill County, Pa.*—BROOKS'S ARITHMETICS need no opinion of mine to commend them to the intelligent teachers of this or any other State. TWO HUNDRED AND NINETY OF THE THREE HUNDRED AND FORTY schools of this county use them. THE ELEMENTARY WRITTEN ARITHMETIC IS JUST THE WORK FOR AGRICULTURAL AND COAL DISTRICTS, and is rapidly supplanting other larger works. It contains sufficient to make good practical scholars, without the unnecessary matter found in our higher Arithmetics.

Extract Official Report, DR. JAMES L. BRYAN, of Maryland State Board.—"It is difficult to conceive of greater simplification of the principles of Arithmetic, or of rendering the art of teaching it easier. The special features, all of which are improvements upon the old methods, bring the works up to the latest standard of excellence.

From the PATRIOT AND UNION, Harrisburg, Pa.—"The author (Prof. Brooks) is a mathematician of the largest experience, and has brought all of his resources together in his effort to place before the public a simple, easy method of instruction."

From the DEMOCRATIC STANDARD, Pottsville, Pa.—"With a live teacher, failure on the method here laid down, we think, is impossible.

From F. S. WILLIAMS, *Supt. of Schools, District of Wheeling, W. Va.*—Our Principals and Teachers are all agreed that the interests of the schools have been materially promoted by the introduction of Brooks's Normal Arithmetics and Raub's Normal Spellers.

From J. MORROW, M. E., *Prin. Fourth Ward, Allegheny City, Pa.*—I have had better success in teaching Arithmetic with Brooks's Analysis than any other.

From HENRY B. PIERCE, A. M., *Supt. New Brunswick City Schools, N. Y.*—To those who wish to carry out the Normal system of teaching Arithmetic in their schools, I can recommend no better work.

SPECIAL ANNOUNCEMENT.

Brooks's Normal Elementary Algebra (Now ready) . \$1.25

IMPORTANT IMPROVEMENTS IN GENERAL AND SPECIAL FEATURES INTRODUCED.

This new and beautiful work is characterized by the *clearness* and *conciseness* of its definitions, the *simplicity and elegance* of its explanations, the *thorough discussion of principles*, and the *variety and appropriateness* of its problems. While unusually simple and progressive in its treatment, *more algebraic thought is developed and applied* in this new book than any other work of a like character.

The Normal Algebra is believed to be *the best text-book on the Elements of Algebra* published. It is not a mere collection of problems and solutions, but the evolution of a carefully-matured plan—the embodiment of an ideal formed by a long and thoughtful experience in the school-room. Teachers and students of Algebra will find it to be a work of uncommon interest.

Brooks's Normal Geometry and Trigonometry . . . \$1.25

AN ORIGINAL WORK OF GREAT MERIT. ONCE TRIED, ALWAYS USED.

This practical work has been prepared to meet particularly the conditions and requirements of Normal Schools, Academies, Seminaries and High Schools. It is a *short but complete course*, closely logical in its development from lines forming angles, to the ratios of the cylinder, cone and sphere. Practical problems and undemonstrated theorems are given at the end of each book. Beautiful and concise treatments of Mensuration and Trigonometry are presented.

ADDITIONAL POPULAR TEXT-BOOKS.

RAUB'S NORMAL SPELLERS.

The Best and Handsomest Published.

THE SAME CLASSIFICATION OF WORDS BY WHICH ORTHOGRAPHY IS SUCCESSFULLY TAUGHT, TRAINS TO A CORRECT PRONUNCIATION.

More men, even among those reputed to be great men, fail in spelling than in any other of the common branches of an English education. Almost every adult, however highly educated in other respects, is more or less conscious of frequent uncertainty in writing even familiar words. The reason for this is discovered in the imperfect classification and bad arrangement of words usually given.

The author of the *Normal Spellers* has sought the remedy for these failures in a *thoroughly philosophical system*. A simple and rigid classification of words is made by observing their leading properties. Natural laws are thus found which depend upon the number, the accent, the vowel, the vowel sound and the termination of syllables.

By this plan *spelling* is not only *taught with success*, but accurate pronunciation—the first and important step in a correct system of education—is acquired.

RAUB'S NORMAL SPELLERS excel, because—

- I. They contain more than 12,000 important words of the language.
- II. They classify words by natural and scientific laws.
- III. They give valuable review, dictation, phonetic and syllabication exercises.
- IV. They have elaborate and practical applications of the rules.
- V. They give a large list of words similar in sound, but different in sense.
- VI. They suggest to teachers the best methods of teaching spelling.
- VII. They are beautiful in illustration and letter-press.

SUCCESSFULLY USED.

They have been adopted and *used with great success in many of the best schools* of Pennsylvania, New Jersey, Maryland and West Virginia.

They are *THE PENNSYLVANIA FAVORITE* in the State and County Normal Schools. Several counties have chosen them for county uniformity.

Teachers and directors should send for sample copies.

1. Raub's Primary Speller, 30 cts. | 2. Raub's Normal Speller, 45 cts.

FEWSMITH'S ENGLISH GRAMMARS.

1. Fewsmith's Elementary Grammar, 45 cts.
 2. Fewsmith's English Grammar, 65 cts.
-

The Delight of the School-room; Easy, Thorough, Attractive.

There has long been a demand for a series of Grammars that shall be *simple* in statement, *methodical* in arrangement, *consistent* in definitions and notes, *clear* in language, and *abundant* in illustrations and *exercises*—a series that shall be a *natural* and *perfect growth* from its commencement to its completion, *terse* and *perspicuous* in all of the details, and *comprehensive* enough to embrace just what can and should be *well understood and mastered by ordinary pupils in a common school term*.

The authors of Fewsmith's Grammars have been enabled to give the subject a close and patient investigation during their large academic and grammar-school experience. They have labored intelligently and faithfully to more nearly meet this demand. "They have shown neither a slavish adherence to, nor a rash defiance of, the opinions of others, but have followed the dictates of common sense, and laid down the rules and interpreted the laws of the language in accordance with its own idioms and the best present usage." Careful attention has been given to the presentation of what is essential. Etymology is ably treated in a little more than half the space usually occupied. A simpler system of analysis is given, and the treatment of the synthesis of syntax is fuller and more practical. The subject is made more interesting, while nothing is lost that can add to a fair and exact knowledge of the construction of the language.

New thought is developed through the whole course, and is invariably fixed and assimilated by the aptitude of the many fresh examples introduced to illustrate every fact.

A *short course* for country schools is furnished in the Elementary Grammar. Fewsmith's system is commended as the best for—

- I. The pure, plain and accurate language used.
 - II. The introductory object-course, with classified practical exercises.
 - III. The methodical and progressive arrangement and classification.
 - IV. The exclusion of all that is merely speculative and critical.
 - V. The short, clear discussion on Etymology and the very able and thorough development of Syntax.
 - VI. The abundant fresh examples and drill exercises drawn from modern literature.
 - VII. The great beauty of the typography and the moderate price.
-

USED IN A THOUSAND SCHOOLS IN MARYLAND.

They have been *twice adopted* by the Maryland State Board, *exclusively used* in Baltimore City, Erie City, Trenton, Cumberland, Wilmington, Lewistown, West Chester, Chester, Media, Camden, Salem, Burlington, Pittston, etc., etc., and chosen for uniformity in several of the best counties, educationally, of Pennsylvania and New Jersey.

RECOMMENDATIONS OF RAUB'S NORMAL SPELLERS.

Official Report of DR. JAMES L. BRYAN, of the Maryland State Board, adopting Raub's Spellers for the State.—"Our reasons for selecting Raub's Normal Spellers are their great simplicity and yet thorough system as regards pronunciation and orthography. Spelling is here taught, in great measure, without the use of marks and signs unknown in reading—taught by association. So well arranged, indeed, is the work that it is almost as easy to find words in the Speller as in a Dictionary. The very large number of words, exceeding that of any other common Speller tested by the system, together with the excellence of the print, and the fineness of the paper, and cheapness in cost, makes the decision in their favor a duty."

From JESSE NEWLIN, County Superintendent, Schuylkill County, Pa.—"Prof. Raub's Spellers are used in a large number of our schools. I have used the Normal Speller in my examinations of over one thousand teachers, who share with me the opinion that it is not surpassed by any other extant. The more it is used, the more its arrangement is liked."

From SAMUEL P. BATES, LL.D., late Deputy State Superintendent and State Historian.—"The children who use this book may well bless their stars that they live in the day of 'The Normal Speller.'"

From C. W. WANEE, County Superintendent, Fayette County.—"I do not hesitate to recommend Raub's Speller to the public as being a work adapted to our schools."

From PROF. E. T. BURGAN, M. E., Penn. Agricultural College.—"I do not hesitate to pronounce it decidedly the best book of the kind with which I am acquainted."

From T. M. POTTS, Principal Greenwood Seminary.—"I believe it to be superior to any other work I have ever met with. The plan I believe to be the true one."

From WM. H. SANNER, County Superintendent, Somerset County.—"Of Raub's Spellers I cannot speak in too high terms of commendation. They are just what we need in our common schools."

From "THE BUCKS COUNTY INTELLIGENCER," Pa.—"Prof. Raub has prepared books that overcome the obstacles met in the old spelling-book. We bespeak with these books a new era in the spelling of our children."

RECOMMENDATIONS OF FEWSMITH'S GRAMMARS.

From PROF. J. WILLIS WESTLAKE, A. M., Prof. of English Language and Literature, Penna. State Normal School, and late of Baltimore City College, Md.—"Fewsmith's Grammar is the plainest, best, most practical text-book on this subject with which I am acquainted."

From H. S. JONES, Supt. Erie City Schools, Pa., and Pres. Penna. State Teachers' Ass'n.—"The style of the work is not in any way pedantic, but, on the other hand, scholarly, and of such a character as to command the respect of all true lovers of pure English."

From JOHN VANDERVEER, M. D., Pres. Board, Easton, Pa.—"I know of no work on the subject more simple, accurate, clear and full, and which I would adopt with more confidence of success."

From MISS S. W. STARKWEATHER, Supt. Public Schools, West Chester, Pa.—"Fewsmith's Grammar has given more than satisfaction. The change has been truly refreshing to scholars and teachers alike. The new work seems far superior in clearness and simplicity of rules and definitions and in copiousness of exercises, which are eminently calculated to assist pupils in *reducing to practice* what has hitherto been a dead letter."

From S. K. DASHIELL, Examiner of the Schools, Howard County, Md.—"I do not hesitate to say that the State Board have made an excellent and valuable selection in Brooks's Normal Arithmetics and Fewsmith's Grammars. I have been for twenty-one years a teacher, and I have never seen any books to compare with these. He who tries to study either the Grammar or the Arithmetic and fails, may try in vain for progress by the study of any Grammar or Arithmetic I ever saw."

WILMINGTON, DEL., Jan. 31, 1868.—For the last few months we have used Fewsmith's Grammar in this school, and find that it serves to simplify and facilitate the study. As a text-book to be used in school, we regard it as being decidedly superior to any heretofore introduced.

LAURA A. OSGOOD,
MARY MILLER,
EMMA PRINGLE.

Pelton's Political and Physical Outline Maps . . . \$25.00

"Unexcelled in Beauty, Instructive Matter, Durability and Mounting."

1. Physical and Political Map of the Western Hemisphere, 7 ft. by 7 ft.
2. Physical and Political Map of the Eastern Hemisphere, 7 " 7 "
3. Map of the United States, British Provinces, Mexico, Central America and the West India Islands . . . 7 " 7 "
4. Map of Europe 6 " 7 "
5. Map of Asia 6 " 7 "
6. Map of South America and Africa 6 " 7 "

Though the first large-size *OUTLINE MAPS* in this country, they are now, as they have been, the best, and for their size the *cheapest*. They are revised and corrected to correspond with the latest changes and discoveries. This is the only set of maps published on a large scale, exhibiting the main features of Physical Geography without detracting from the practical features of Political and Local Geography.

THE BOOK FOR COUNTRY SCHOOLS.

Roberts's History of the United States 75 cts.

A Clear and Succinct History of this Country to the Close of the Late War.

This work is desirable in size for common schools, being neither so large as to make its study and review impossible in one term, nor so small as to compel an uninteresting style. It is arranged as follows: 1, Discoveries; 2, Settlements; 3, Colonies; 4, The Confederation; 5, The Republic.

TEXT-BOOKS OF THE CONSTITUTION.

BY FURMAN SHEPPARD, ESQ., *Philada., Pa.*

1. SHEPPARD'S FIRST-BOOK OF THE CONSTITUTION, 75 cts.
2. SHEPPARD'S TEXT-BOOK OF THE CONSTITUTION, \$1.25.

Heartily endorsed by the *ablest* statesmen, *jurists* and *educators* in all parts of the Union. Used in Washington, D. C., Baltimore, Wheeling, Allegheny City, etc. They contain:

- I. The Discovery, the Settlement of the Country; the Provincial, Proprietary and Charter Governments.
- II. The Declaration of Rights, Declaration of Independence, and Articles of Confederation.
- III. The changes through the Revolutionary to the Constitutional Government.
- IV. A correct copy of the Constitution in Text, Orthography, Capitals and Punctuation.
- V. A very lucid analysis and explanation of each Department of the Government and each Clause of the Constitution.

Peterson's Familiar Science, 18mo, 80 cts.; 12mo, \$1.60.

QUARTER OF A MILLION COPIES SOLD.

The most popular work extant upon the scientific explanation of common things.
