As compared with the previous month, in November 1945 the fluctuations of index numbers of cost of living tended to rise and, especially, the index of Sian already went up about 41.5%. On the average, the advancement was about 14%. When we compared the indices of this month with those of November 1944, we found that the index of Chungking governmental functionaries, which increased 380%, was the highest and that of Kueiyang, which advanced 130% was next. The average increase was 260%. When November 1942 was taken as the base period, we discovered that the index of Kueiyang, which rose 6670%, ranked first and that of Lanchow which increased only 2180%, ranked last. And the indices of the other cities advanced diversely from 2500% to 4600%. On the average, the advancement was 3400%. When we took the first semester of 1937 as the base period of the indices of the six leading cities in Szechuan, we knew that the index of Loshan, which went up 223,000%, was the leader and that of Chungking governmental functionaries, which advanced 144,800%, was the rear. The average enlargement was 186,400%.

With regard to the indices of different expenditures, as compared with last month, the index of rent was still stable, but the indices of the other expenditures increased differently from 11% to 25%. when a comparison was made between the indices of this month with those of November, 1942, we found that the index of rent, which increased 6560%, ranked first and the indices of the other expenditures rose diversely from 3,000% to 4,500%. Again, when 1937 was taken as the base period, among the six leading cities, the index of fuel and light, which stirred up 350,000%, was first and that of rent, which only enlarged 41,600%, was last.

When November 1942 was taken as the base period, the general indices of November, 1944 and November, 1945 were indicated as in the following table.
