pose, in place of a bridge, a mound with a bridge at one end of it, was constructed across the narrow part of the channel, by which the sea was excluded, and some good land was thus recovered for cultivation. The extreme length of this mound is 995 yards, exclusive of the bridge; its width at the base 60 yards, sloping to about 20 feet at the top; its perpendicular height being about 18 feet. The highest tide which has happened since its construction, rose ten feet five inches on the mound, perpendicular height. At the north end it terminates in a strongly built bridge, 34 yards long, consisting of four arches, of 12 feet span each, fitted with strong valve gates. It is, in all probability, one of the most complete structures of the kind in the island. The expense of this work, including some additions and alterations, amounted to near 11,000*l*. The roads thus formed became the bases of other roads, which have been since made out in other directions, and which have been found of incalculable benefit for the improvement of the country. In many places these roads are cut through the hardest rock; in others they are obliged to be supported on bulwarks of solid masonry. Expensive drains to protect them from the mountain floods, and bridges over the innumerable streams that rush from the hills in every direction, are required. These must be formed of the most durable materials, and the best workmanship, to resist the impetuosity of the torrents. Nothing will set this in so striking a point of view, as to state, that, upon the projected road to Assynt, a distance of 46 miles, three bridges of three arches each, two bridges consisting of one arch of 40 feet span, five of 20 feet span each, three of 24, six of 18, two of 12, besides many others of inferior dimensions, would be required. When to this is added, that the lime and timber necessary for their construction had to be imported; that huts had to be constructed for the workmen; that artificers had to be brought from a great distance; and a supply of food, carefully stored up, and purchased from the neighbouring counties, a correct idea will be obtained of the obstacles which were encountered, in carrying these improvements into effect, and which still, in a great degree, stand in the way of the progress of those which remain to be done. To complete these improvements, a mail coach began running in July, 1819; and thus, at the distance of 802 miles, a constant and regular communication is now maintained with London, by the county of Sutherland, which not many years back had no means of intercourse even with the contiguous counties. To obtain this advantage, horses had to be brought from Edinburgh, a distance of 400 miles; and inns and stabling, and also post-offices, had to be built in different parts.

Sutherlandshire, as has been already remarked, was one of the last strongholds of the feudal system in Scotland, where that ancient state of manners prevailed, after it had been banished from the other parts of the country, by the progress of improvement and increased rents. So long as the lands were held by the well understood term of military service, and the landlord was considered as the head of the clan which was spread over his estate, it would have been reckoned altogether inconsistent with the relation in which he stood to his tenants, to have raised their rents. But when, from the change of manners, and the progress of society, these services were of no further use, the landlords, immediately disregarding those family ties which had formerly bound together the chief and his clan, began to think how they could turn their lands to the best account; and it was obvious, that by disencumbering their estates of all the superfluous population which the feudal system had brought together, and letting them to improving tenants, who would convert them to the purposes of sheep pasturage, for which they were best fitted, they would greatly increase their rents. Such was precisely the state of matters in Sutherlandshire. A hardy race of ancient tenants were scattered over the sides, and through the glens, of the various mountains, where from time immemorial their fathers were settled, and to which they were attached, as to a paternal inheritance. It now became the policy of the landlords to follow the same system

system as had been heretofore adopted in the more southern Highlands, by removing all this numerous tenantry from their native glens and mountains, which were to be converted into sheep-walks, and measures for this purpose were adopted as soon as the great works undertaken for facilitating the communications of the country opened a reasonable prospect of successfully carrying through these other improvements. The plan was to transfer the inhabitants of the mountains and glens to certain situations on the sea-shore; to grant them small lots of land; and to engage them also in the herring and white fishery. Such a change was against all the habits, prejudices, and fondest affections of those rude mountaineers, who clung to their mode of life, and to the ancient habitations of their fathers, with an attachment which nothing could break. The removing of the tenants commenced in 1807, and has been since continued as the different tacks expired.

In the years 1818, 1819, and 1820, when a great proportion of the tacks expired, numerous removals took place, which produced great agitation in the country, and gave rise to a violent controversy as to the propriety of these measures, and as to the manner in which they were carried into effect, but into which it is not our purpose to enter. It is quite obvious that the Marquess of Stafford had a right to adopt whatever measures he should deem expedient for the improvement of his property; and that he was only following the mode of management which had been adopted by every other landlord before him. It is also clear that those who were instructed to carry these improvements into effect, had no interest whatever to inflict any unnecessary hardship on the unfortunate people who were to be removed from their abodes, for the interest of the landlord and the improvement of the estate; nor is it to be believed that any unnecessary hardship was inflicted. On the contrary, every expedient was adopted, and the most liberal measures proposed, to reconcile the inhabitants to the change, and to render it as easy to them as possible. On the other hand, it is most manifest that they were, with some exceptions, most averse to the change; that to the last moment they clung to their native spots with the fondest affection; and that, though all persuasion was used, and the most liberal arrangements proposed, they could not be induced, voluntarily, to quit their ancient abodes. It became necessary, in consequence, to call in the civil authorities, in order to enforce their removal, and on some occasions the county was thrown into great agitation, and tumults were occasioned. Though due notice was given to the tenantry, yet in many cases they could not be prevailed on to make the least preparations for a removal; and at one place, after they had retired at the approach of the sheriff's officers, they re-occupied their dwellings which they had quitted, as soon as the officers left them, on the notion that if they again entered them, they were entitled to remain for a year. A new ejection became necessary, and to prevent a second resumption, the timber employed in the construction of the emigrants' habitations was burnt. In lieu of this, new timber was furnished them by the landlord, in the settlements to which they were removed, and other advantages were given them, to reconcile them, as much as possible, to the change. In 1820, the removals were all quietly effected.

In consequence of these arrangements, adopted for the improvement of the lands, the inhabitants of the interior mountains and glens have, with some exceptions, been settled; those from Lord Reay's property on the shores of the Western and Northern oceans, in small towns, or as near to the various towns as it was possible to arrange; and those from the Sutherland estate partly on the shores of the Northern, and partly on those of the German ocean; while some have emigrated to Caithness, and some to America. The estates of the other proprietors have been let in the same manner, and a similar distribution of their inhabitants has also been made. Those tenants who have been settled on the coasts, have betaken themselves to the herring and the cod and ling fishing, with great industry and success, and have likewise been equally persevering and successful in the

cultivation of the lots of ground assigned them. As a proof of the rapid progress of the herring fishery, it appears, that at the village of Helmsdale there were caught in 1814, 2400 barrels of herrings: the quantity has been since increasing every year, until in 1819, it amounted to 20,600 barrels. The shipping has also increased in a similar proportion. In 1814, there was not a single boat belonging to this creek; and in 1819, there entered 5246 tons of shipping. A regular trade has been established with Leith, and other branches of industry have also begun to flourish. On the coast side of Sutherland great agricultural improvements have been effected, to which every encouragement has been given, by inducing artizans and ploughmen to settle in the country; by procuring the most approved implements, and importing seeds of the best description. The consequence has been, that extensive fields of wheat (some of them drilled according to the most improved system of Norfolk husbandry), several hundred acres of turnips sown upon the ridge, and well horse-hoed, with excellent crops of barley (the seed of which was imported from Norfolk), and clover, are now seen, where, a few years back, there was nothing to be found but some patches of the most miserable oats and bear, with which the land was alternately cropped, until it was brought into such a state of exhaustion, that it would not even produce the seed that was bestowed upon it. These improvements commenced in 1809, since which period no less than 27 sets of farm offices have been constructed upon the estate of Sutherland. Lord Ashburton has, in like manner, planted, inclosed, and constructed roads and buildings to a considerable extent. New farm-houses have been built in the most inaccessible parts of the Reay country. Upon the properties of Creech, Ospisdale, and Skibo, inclosures have been made; and plantations and cultivation have been extended over the most unpromising and barren spots. To carry forward these improvements on the Moray frith coast, a search was made for limestone, which was at length discovered in sufficient quantity for all local purposes. The west coast is in a great measure formed of this mineral, but being in many instances combined with magnesia, it is rendered little serviceable as a manure, and not useful to the sculptor. Marble quarries in Assynt were worked for some years by Mr. Joplin, of Newcastle, but have been abandoned on this account. Coal has also been discovered, which, though it does not answer so well for household purposes, is employed in burning lime, and also in making of bricks and salt, which manufactures have lately been established, and the demand of the Moray frith for salt is almost exclusively supplied from the Sutherland salt-pans. Population 4,844 families.

SUTHIALI, a sea-port of Abascia, on the Black Sea.

SUTILE, *adj.* [*sutilis*, Lat.] Done by stitching.—The fame of her needle work, the "sutile pictures" mentioned by Johnson. *Boswell*.

SUTTLER, *s.* [*socteler*, Dutch; *sudler*, German.] A man that sells provisions and liquor in a camp.

I shall *sutler* be

Unto the camp, and profits will accrue. *Shakspeare*.

SUTORS OF CROMARTY, two rocky promontories in Scotland, one on each side of the opening of the frith of Cromarty.

SUTRI, a small town of the Ecclesiastical State, in the Patrimonio di St. Pietro, on the river Pozzolo. It is the see of a bishop, has a cathedral and several other churches, and contains 4000 inhabitants; 12 miles south of Viterbo. Lat. 42. 13. N. long. 12. 15. E.

SUTTERBY, a decayed parish of England, in Lincolnshire; 4½ miles west-south-west of Alford.

SUTTERTON, a parish of England, in Lincolnshire; 9½ miles north-by-east of Spalding. Population 860.

SUTTIKO, or SETTICO, a town of the kingdom of Woolly, in Western Africa, near the Gambia.

SUTTON, a parish of England, in Bedfordshire; 3 miles north-east-by-east of Biggleswade.—2d, A parish in the Isle of Ely, Cambridgeshire; 6½ miles south-west-by-west of the city

city of Ely. Population 1019.—3d, A village in Cheshire; 2 miles north-east-by-east of Frodsham.—4th, Two hamlets in Cheshire; $7\frac{1}{2}$ miles from Chester.—5th, A hamlet in Essex, near Rochford.—6th, A parish in Gloucestershire, commonly called Sutton-under-Brails; 7 miles east of Camden.—7th, A parish in Kent; 4 miles south-west-by-west of Deal.—8th, A township in Lancashire; $2\frac{1}{2}$ miles east of Prescott. Population 2014.—9th, A hamlet in Leicestershire; 6 miles north-by-west of Lutterworth.—10th, A parish in Norfolk; 8 miles east-north-east of Coltishall.—11th, A parish in Lincolnshire; 4 miles from Alford.—12th, A hamlet in Northamptonshire; $1\frac{1}{2}$ mile east-south-east of Wandsford.—13th, A hamlet in Middlesex, near Hounslow.—14th, A hamlet in Nottinghamshire, near Granby.—15th, A township in Nottinghamshire; $3\frac{1}{2}$ miles north-north-west of East Retford.—16th, A parish in Suffolk, near Manning-tree. Population 420.—17th, A parish in Suffolk, near Woodbridge. Population 440.—18th, A parish in Salop, near Shrewsbury.—19th, A parish in Surrey; 3 miles north-north-east of Ewell. Population 638.—20th, A parish in Sussex; 5 miles south of Petworth.—21st, A hamlet in Worcester; 3 miles south-east-by-south of Tenbury.—22d, A parish in the East Riding of Yorkshire, commonly called Sutton-in-Derwent, being seated on that river; $6\frac{1}{2}$ miles west-south-west of Pocklington.—23d, A parish in the East Riding of Yorkshire; $3\frac{1}{2}$ miles north-north-east of Kingston-upon-Hull. Population 3065.—24th, A township in the North Riding of Yorkshire; 5 miles north of Rippon.—25th, A parish in the North Riding of Yorkshire; 2 miles from Thirsk.—26th, A hamlet in the West Riding of Yorkshire, adjacent to Ferry Bridge.—27th, A township in the West Riding of Yorkshire; $6\frac{1}{2}$ miles west-north-west of Doncaster.—28th, A hamlet in the parish and liberties of Rippon, West Riding of Yorkshire.

SUTTON IN AREDALE, or **CRAVEN**, a township of England, West Riding of Yorkshire; 5 miles west-north-west of Keighley.—2d, **SUTTON IN ASHFIELD**, a township of England, in Nottinghamshire; 3 miles west-south-west of Mansfield. Population 3336.—3d, **SUTTON, Bassett**, a parish of England, in Northamptonshire; 6 miles west-by-south of Rockingham.—4th, **SUTTON, Benger**, a parish of England, in Wiltshire; 4 miles north-north-east of Chippenham. Population 404.—5th, **SUTTON, Bingham**, a parish of England, in Somersetshire; $3\frac{1}{2}$ miles south-by-west of Yeovil.—6th, **SUTTON, Bishops**, a parish of England, in Southamptonshire; 2 miles east-south-east of Alresford. Population 445.—7th, **SUTTON, Bonnington**, a village of England, in Nottinghamshire, including the parishes of St. Anne and St. Michael. Population 862.—8th, **SUTTON, Cheney**, a township of England, in Leicestershire; 2 miles south-south-east of Market Bosworth.

SUTTON COLDFIELD, a market-town of England, in the county of Warwick, situated near the north-western boundary of Staffordshire. It stands near a chase or forest, as it was formerly called. The name Coldfield is taken from an extensive district of barren land, of a bleak and cheerless aspect, which lies to the west of the town. The town has a neat appearance, and contains many dwellings of an ornamental character. Within the last century, some manufactures connected with Birmingham have been introduced into the town, much to the advantage of the inhabitants. According to the constitution procured by bishop Vesey, the municipal power of the town consists of a warden, 24 assistants, a town-clerk, steward, &c. The warden for the time being is the coroner.

SUTTON, Courtney, a township of England, in Berkshire; 3 miles south-by-east of Abingdon. Population 757.—2. **SUTTON-IN-LE-DALE**, a parish of England, in Derbyshire; 4 miles east-south-east of Chesterfield. Population 619.—3. **SUTTON, Downs**, a township of England, in Cheshire; 2 miles south-south-east of Macclesfield. Population 2096.—4. **SUTTON, East**, a parish of England, in Kent: 6 miles south-east of Maidstone.—5. **SUTTON, St. Edmond's**, a hamlet of England, in the parish of Sutton St. Mary, Lincolnshire, containing 433 inhabitants.—6.

SUTTON IN THE FOREST, a township of England, North Riding of Yorkshire; 8 miles north-by-west of York. Population 457.—7. **SUTTON, Freene**, a township of England, in the parish of Marden, Herefordshire.—8. **SUTTON, Full**, a parish of England, East Riding of Yorkshire; 6 miles north-west of Pocklington.—9. **SUTTON, Great**, a parish of England, in Essex; $1\frac{1}{2}$ mile south-east of Rochford.—10. **SUTTON, Guilden**, a parish of England, in Cheshire; 3 miles east-north-east of Chester.—11. **SUTTON ON THE HILL**, a township of England, in Derbyshire; 8 miles west-by-south of Derby.—12. **SUTTON AT HONE**, a parish of England, in Kent; $2\frac{1}{2}$ miles south-by-east of Dartford. Population 733.—13. **SUTTON, St. James**, a hamlet of England, in Lincolnshire; 9 miles south-east-by-south of Holbeach. Population 307.—14. **SUTTON, King's**, a parish of England, in Northamptonshire; 6 miles west-by-south of Brackley. Population 1020.—15. **SUTTON, Little**, a township of England, in Cheshire; $7\frac{1}{2}$ miles north-north-west of Chester.—16. **SUTTON, Long**, a parish of England, in Somerset; $2\frac{1}{2}$ miles south-south-west of Somerton. Population 725.—17. **SUTTON, Long**, a parish of England, in Southamptonshire; $2\frac{1}{2}$ miles south of Odiham.—18. **SUTTON, Maddock**, a parish of England, in Salop; 6 miles north of Bridgenorth. Population 394.—19. **SUTTON, Mallet**, a parish of England, in Somersetshire; $4\frac{1}{2}$ miles east of Bridgewater.—20. **SUTTON, Mandeville**, a parish of England, in Wiltshire; 7 miles west-south-west of Wilton.—21. **SUTTON IN THE MARSH**, a parish of England, in Lincolnshire; $6\frac{1}{2}$ miles north-east-by-east of Alford.—22. **SUTTON, St. Mary**, a township of England, in Lincolnshire; $4\frac{1}{2}$ miles east-by-south of Holbeach. Population 1801.—23. **SUTTON, St. Michael**, a parish of England, in Herefordshire; 4 miles north-north-east of Hereford.—24. **SUTTON, Montis**, or **Montacute**, a parish of England, in Somersetshire; 5 miles south-by-west of Castle Cary.—25. **SUTTON, St. Nicholas**, a parish of England, in Herefordshire; 4 miles north-east-by-north of Hereford.—26. **SUTTON UPON TRENT**, a small town of England, in Nottinghamshire, upon the Trent, with a market on Monday. Population 731; $5\frac{1}{2}$ miles south-east of Tuxford.—27. **SUTTON, Valence**, or **Town Sutton**, a parish of England, in Kent, with a free grammar school. Population 827; $4\frac{1}{2}$ miles south-east-by-south of Maidstone.—28. **SUTTON, Veney**, a parish of England, in Wiltshire; $3\frac{1}{2}$ miles south-east of Warminster. Population 620.—29. **SUTTON, Waltrond**, a parish of England, in Dorsetshire; 5 miles south of Shaftesbury.—30. **SUTTON UNDER WHITSTONE CLIFF**, a township of England, North Riding of Yorkshire; 4 miles east-by-north of Thirsk.—31. **SUTTON, Wick**, a township of England, in Berkshire; 2 miles south-by-west of Abingdon.

SUTTON, a post township of the United States, in Caledonia county, Vermont; 15 miles from Danville.

SUTTON, a post township of the United States, in Hillsborough county, New Hampshire; 24 miles west-north-west of Concord. Population 1328.

SUTTON, a post township of the United States, in Worcester county, Massachusetts; 9 miles south of Worcester, and 46 south-west of Boston.

SUTTON, a township of Lower Canada, in the county of Bedford. Population 1200.

SUTTULEGE, SETLEGE, or SUDLEGE, a celebrated river of Hindostan, being the easternmost of the five rivers which are called the Punjab. It rises in the lofty Himalaya mountains, and running to the south-west, is joined by the Beyah or Hyphasis, in the latitude of 30° N. The united streams fall into the Indus, near the 29th degree. It is estimated to be about 600 miles in length, and to be navigable by large boats for 200 miles above its junction with the Indus.

SUTURATED, *adj.* [from *sutura*, Lat.] Stitched or knit together.—These are by oculists called "orbite," and are each of them compounded of six several bones, which, being most conveniently *suturated* among themselves, do make up those curious arched chambers in which these
lookers

lookers or beholders dwell; in which, and from which, they may be haply said to perform their offices. *Smith*.

SUTURE, *s.* [*sutura*, Lat.] A manner of sewing; or stitching, particularly of stitching wounds.—Wounds, if held in close contact for some time, reunite by inosculation; to maintain this situation, several sorts of *sutures* have been invented; those now chiefly described are the interrupted, the glovers, the quill'd, the twisted and the dry *sutures*, but the interrupted and twisted are almost the only useful ones. *Sharp*.—A particular articulation: the bones of the cranium are joined to one another by four *sutures*. *Quincy*.—Many of our vessels degenerate into ligaments, and the *sutures* of the skull are abolished in old age. *Arbuthnot*.

SUURSAY, a small island of the Hebrides, in the west of Harris.

SOWAIDA, a small town of Hedsjas, in Arabia; 30 miles north of Medina.

SUWALKI, a small town in the north-east of Poland; 17 miles north of Augustowo, and 149 north-north-east of Warsaw. Population 1200.

SUZANNE, *Str.*, a small town in the north-west of France, department of the Mayenne, on the small river Erve, with 1400 inhabitants; 27 miles south-west of Alençon.

SUZARA, a small town of Austrian Italy, between Mantua and Guastalla; 14 miles south of the former.

SUZE, a small manufacturing place in the north-west of France, on the river Sarthe, with 1600 inhabitants; 12 miles south-west of Le Mans.

SWAB, *s.* [*swabb*, Swedish.] A kind of mop to clean floors.

To SWAB, *v. a.* [ʃpebban, Saxon.] To clean with a mop. It is now chiefly used at sea.—He made him *swab* the deck. *Shelvoek's Voyage*.

SWABBER, *s.* [*swabber*, Dutch.] A sweeper of the deck.

The master, the *swabber*, the boatswain and I, Lov'd Mall, Meg, and Marian, and Margery. *Shakspeare*.

SWABY, a parish of England, in Lincolnshire; 4 miles west-north-west of Alford.

SWACLIFFE, a parish of England, in Kent; 5½ miles north of Canterbury.

SWAD, *s.* [from ʃpeðan, Sax. fasciare, quia scil. folliculis, tanquam fasciis, pisa obvolvuntur. *Skinner*.] A peasecod. *Still a northern word*.—Take pulse out of the *swads*. *Cotgrave*.—A squab, or short fat person.

Now I remember me,
There was one busy fellow was the leader,
A blunt squat *swad*, but lower than yourself. *B. Jonson*.

To SWA'DDLE, *v. a.* [ʃpeðan, Saxon.] To swathe; to bind in clothes, generally used of binding newborn children.

Invested by a veil of clouds,
And *swaddled* as new-born in sable shrouds;
For these a receptacle I design'd. *Sandys*.

To beat; to cudgel. *A low ludicrous word*.
Great on the bench, great in the saddle,
That could as well bind o'er as *swaddle*. *Hudibras*.

SWA'DDLE, *s.* [ʃpæðl, Sax.] Clothes bound round the body.—I begged them to uncase me: no, no, say they; and upon that carried me to one of their houses, and put me to bed in all my *swaddles*. *Addison*.

SWADLINBAR, a neat smart village of Ireland, in the county of Cavan, agreeably situated on the Clodah river.

SWA'DLINGBAND, **SWA'DLINGCLOTH**, or **SWADLINGCLOUT**, *s.* Cloth wrapped round a new-born child.—That great baby you see there is not yet out of his *swaddling-clouts*. *Shakspeare*.

SWADLINGCOTE, a parish of England, in Derbyshire; 12½ miles south-south-west of Derby.

SWAFFHAM, a market town of England, in the county of Norfolk, a populous, respectable, and genteel town. The

great butter market which was formerly kept at Downham, has been removed to this place. Near the town is an extensive heath, which forms an admirable race-ground. Swaffham races are annually held about the end of September; 15 miles south-east of Lynn, and 94 north-north-east of London.

SWAFFHAM, **BALBECK**, or **GREAT SWAFFHAM**, a parish of England, in Cambridgeshire; 5 miles west-south-west of Newmarket. Population 571.

SWAFFHAM, **PRIOR**, or **LITTLE SWAFFHAM**, a village of England, in the above county, including the parishes of St. Cyric and St. Mary. It has an endowed free school, and is about 1 mile distant from Great Swaffham. Population 803.

SWAFIELD, a parish of England, in Norfolk; 1½ mile north-by-east of North Walsham.

To SWAG, *v. n.* [ʃagan, Sax.; *swiegia*, Icelandic.] To sink down by its weight; to hang heavy. See *To SAG*.—They are more apt, in *swagging* down, to pierce with their points, that in the jacent posture, and crevice the wall. *Wotton*.—Being a tall fish, and with his sides much compressed, he hath a long fin upon his back, and another answering to it on his belly; by which he is the better kept upright, or from *swagging* on his sides. *Grew*.

SWA'GBELLIED, *adj.* Having a large belly.—Your Daue, your German, and your *swag-bellied* Hollander are nothing to your English. *Shakspeare*.

To SWAGE, *v. a.* [from *assuage*; which see.] To ease; to soften; to mitigate; to appease; to quiet.

I love thee,
Though my distracted senses should forsake,
I'd find some intervals, when my poor heart
Should *swage* itself, and be let loose to thine. *Otway*.

To SWAGE, *v. n.* To abate.—It *swageth*, or waxeth cold. *Barret*.

To SWA'GGER, *v. n.* [*swadder*, Dutch, to make a noise; ʃpezan, Saxon.] To bluster; to bully; to be turbulently and tumultuously proud and insolent.—'Tis the gage of one that I should fight withal, if he be alive; a rascal that *swagger'd* with me last night. *Shakspeare*.

SWA'GGERER, *s.* A blusterer; a bully; a turbulent noisy fellow.—He's no *swaggerer*, hostess; a tame cheater; you may stroke him as gentle as a puppy greyhound. *Shakspeare*.

SWA'GGY, *adj.* Dependent by its weight.—The beaver is called animal ventricosum, from his *swaggy* and prominent belly. *Brown*.

SWAIN, *s.* [ʃpein, Saxon and Runic; *swen*, Su. Goth. puer, minister; *swaina*, Lappon. famulus; ʃpan, Sax. bubulcus. See Lye, and Serenius.] A young man.

That good knight would not so nigh repair,
Himself estranging from their joyance vain,
Whose fellowship seem'd far unfit for warlike *swain*. *Spenser*.

A country servant employed in husbandry.
It were a happy life
To be no better than a homely *swain*. *Shakspeare*.

A pastoral youth.
Blest *swains*! whose nymphs in every grace excel;
Blest nymphs! whose *swains* those graces sing so well. *Pope*.

SWAINBY, a hamlet of England, North Riding of Yorkshire; 5½ miles east-south-east of Bedale.

SWAINE, **CAPE**, a cape on one of the numerous islets on the north-west coast of North America. Lat. 52. 13. N. long 231. 40. E.

SWAINISH, *adj.* Rustic; ignorant.—[It] argues both a gross and shallow judgment, and withal an ungentle and *swainish* breast. *Milton*.

SWA'INMOTE, *s.* [*swainmotus*, law Lat. *Dr. Johnson*.—From ʃpan, Sax. bubulcus; *swainmote*, curia quædam forestæ, ita dicta, quasi *ministorum forestæ*, scil. agistorum aliorumque conventus. Lye, edit. Manning, in

V. span.] A court touching matters of the forest, kept by the charter of the forest thrice in the year. This court of *swainmote* is as incident to a forest, as the court of piepowder is to a fair. The *swainmote* is a court of freeholders within the forest. *Cowel*.—A forest hath her court of attachments, *swainmote-court*, &c. *Howell*.

SWAINSCOE, a township of England, in Staffordshire; 8½ miles east-north-east of Cheadle.

SWAINSTHORPE, a village of England, in Norfolk, containing the parishes of St. Mary and St. Peter; 4½ miles north-north-east of St. Mary Stratton.

SWAINSWICK, a parish of England, in Somersetshire; 3 miles north-by-east of Bath.

To SWAIP, *v. n.* To walk proudly; our northern dialect for *sweep*.

SWALCLIFFE, a parish of England, in Oxfordshire; 6 miles west-south-west of Banbury.

To SWALE, or To SWEAL, *v. n.* [ʃpelan, Saxon, *to kindle; to burn*.] To waste or blaze away; to melt: as, the candle *swales*.

Into his face the brond he forst, his huge beard brent a light,
And *swcaling* made a stinke. *Phaer*.

To SWALE, *v. a.* To consume; to waste.

Nor has our hymeneal torch

Yet lighted up his last most grateful sacrifice,
But dash'd with rain from eyes, and *swail'd* with sighs,
Burn dim. *Congreve*.

SWALE, a river of England, which rises in the north-western hills of Yorkshire, on the confines of Westmoreland, and running south-east, passes by Richmond and Thirsk, and falls into the Ure, about 4 miles below Borough-bridge.

SWALE, EAST and WEST, two branches of the river Medway, in England, which run into the Thames, the former below Sherless, and the latter, or main stream, at Sheerness. The oyster fishing chiefly lies upon the coasts of the former, from Colemansole to the Snout Wears, and so to the Ride.

SWALLET, *s.* [*swall*, Swed. the swell of the sea. *Serenius*.] Among the tin-miners, water breaking in upon the miners at their work. *Bailey*.

SWALLOW, *s.* [ʃpalepe, Saxon; *swala*, Su. Goth. idem; sic dict. à Su. Goth. *swale*, porticus, subdivale, quippè ubi nidum struere solet hæc avis. *Serenius*.] A small bird of passage; or, as some say, a bird that lies hid and sleeps in the winter.—The *swallow* follows not summer more willingly than we your Lordship. *Shakspeare*.

To SWALLOW, *v. a.* [ʃpelʒan, Saxon; *swelgen*, Dutch.] To take down the throat.

If little faults

Shall not be wink'd at, how shall we stretch our eye,
Whose capital crimes chew'd, *swallow'd*, and digested,
Appear before us? *Shakspeare*.

To receive without examination.—Consider and judge of it as a matter of reason, and not *swallow* it without examination as a matter of faith. *Locke*.—To engross; to appropriate: often with *up* emphatical.—Homer excels all the inventors of other arts in this, that he has *swallowed up* the honour of those who succeeded him. *Pope*.—To absorb; to take in; to sink in any abyss; to engulph: with *up*.

Though you unite the winds, and let them fight,
Against the churches, though the yesty waves
Confound and *swallow* navigation *up*. *Shakspeare*.

To occupy.—The necessary provision for life *swallows* the greatest part of their time. *Locke*.—To seize and waste. Corruption *swallow'd* what the liberal hand
Of bounty scatter'd. *Thomson*.

To engross; to engage completely. The priest and the prophet are *swallowed up* of wine. *Isaiah*.—*Swallow* implies, in all its figurative senses, some nauseous or contemptuous idea, something of grossness or of folly.

SWALLOW, *s.* [*swalg*, Su. Goth.] The throat; voracity. Had this man of merit and mortification been called to account for his ungodly *swallow*, in gorging down the estates of helpless widows and orphans, he would have told them that it was all for charitable uses. *South*.—A gulf; a whirlpool.

This Æneas is come to paradise
Out of the *swolowe* of hell.

Chaucer.

SWALLOW, a parish of England, in Lincolnshire; 3 miles east-north-east of Caistor.

SWALLOW BAY, a bay on the north coast of Egmont island, between Hanway's point and Swallow point.

SWALLOW HARBOUR, a very convenient harbour on the shore of Terra del Fuego. It is well sheltered from all winds, and excellent in every respect. There are two channels into it, which are both narrow, but not dangerous, as the rocks are easily discovered by the weeds that grow upon them. It is surrounded by steep mountains, covered with snow, which have a most horrid appearance, and seem to be altogether deserted by every thing that has life. Lat. 53. 40. S. long. 74. 30. W.

SWALLOW ISLAND, one of those called Queen Charlotte's islands, in the South Pacific ocean; about 6 leagues in length. Lat. 10. 8. S. long. 165. 58. E.

SWALLOW POINT, a cape on the north coast of the island of Egmont in the South Pacific ocean. Lat. 10. 42. S. long. 164. 26. E.

SWALLOWCLIFFE, a parish of England, in Wiltshire; 5½ miles south-east of Hindon.

SWALLOWFIELD, a parish of England, in Wiltshire; 6 miles south-by-east of Reading. Population 365.

SWALLOWTAIL, *s.* A species of willow.—The shining willow they call *swallowtail*, because of the pleasure of the leaf. *Bacon*.

SWALLOWWORT, *s.* [*asclepia*.] A plant.

SWALLY, a sea-port town of Hindostan, province of Gujerat. It is situated at the mouth of the Taptee river, and is the anchoring place for ships having cargoes on board for Surat, of which it may be considered as the port. Lat. 21. 5. N. long. 72. 50. E.

SWALUVE, or ZWALUWE, a village of the Netherlands, in North Brabant, containing 2100 inhabitants; 10 miles north-north-west of Breda.

SWAM, [ʃpam, Sax.] The preterite of *swim*.

SWAMMERDAM (John), a distinguished anatomist and naturalist, was born at Amsterdam in 1637, and designed by his father, who was an apothecary in that city, for the church: but his own inclinations were directed to physic, which became the object of his study, together with several branches of natural history, particularly entomology. At an early age he made many excursions for the purpose of enlarging his collection of winged insects. At Leyden, where he studied physic, he was distinguished by his skill and assiduity in anatomical experiments and the art of making preparations. At Paris he was intimate with Nicholas Stenonius in 1664, whilst he visited that city and France with a view to further improvement: On his return to Leyden he took the degree of M.D. in 1667, publishing on the occasion a thesis on respiration. At this time he began to practise his invention of injecting the vessels with ceraceous matter: a method from which anatomy has derived very important advantages. He applied very closely to dissection with Van Horne: and in the dissection of insects he was singularly dexterous by the aid of instruments of his own invention. The grand duke of Tuscany, who visited Holland in 1668, and who was introduced to Swammerdam by Thevenot, made him a liberal offer for his share of the collection, on condition of his removal to Florence; but he rejected the offer, on account of his abhorrence of the restraints of a court-life, and impatience of any controul in his religion. Entomology was his favourite and principal pursuit; and in 1669 he published, in Dutch, "A General History of Insects," Utrecht, 4to.; afterwards reprinted, and translated into French and Latin.

the latter with splendid figures. In 1672, he published, as a medical anatomist, a work entitled "Miraculum Naturæ, seu Uteri Muliebris Fabrica, notis in I. V. Horne Prodromum illustratum," Leid. 4to., many times reprinted. By intense application he became hypochondriac, and wholly unfit for society. In this state he was so impressed by the reveries of Antoinette Bourignon, as to be plunged into the depth of mysticism, and to be induced to abandon all his scientific pursuits. At her desire he presented to the world, in 1675, his last publication, which was an account, in Dutch, of the insect called Ephemera. He followed this fanatical female to her retreat in Holstein; and on his return to Amsterdam, his constitution was worn out by his mortifications, and he died in 1680. In one of the paroxysms that seized him not long before his death, he burned all his remaining papers; but in a state of indigence he had disposed of the greater part to Thevenot for a trifling sum. On the lapse of about half a century, these came into the possession of Boerhaave, who caused them to be published in Dutch and Latin by Gaubius, under the title of "Biblia Naturæ, sive Historia Insectorum in certas classes reducta, &c. &c." 2 vols. large folio, 1737, with plates; translated also into German, English, and French. The history of bees in this work is highly esteemed, as peculiarly valuable.

Life by Boerhaave. Haller.

SWAMP, *s.* [*swamms*, Goth.; *ppam*, Sax.; *suamm*, Icel.; *swamme*, Dutch; *suomp*, Danish; *swamp*, Swed.] A marsh; a bog; a fen.

Behold the duteous son, the sire decay'd,
The modest matron, and the blushing maid,
Forc'd from their homes, a melancholy train,
To traverse climes beyond the western main;
Where wild Oswego spreads her *swamps* around,
And Niagara stuns with thundering sound. *Goldsmith.*

To SWAMP, *v. a.* To whelm or sink as in a swamp.
A modern word.

SWAMPY, *adj.* Boggy; fenny.—*Swampy* fens breathe destructive myriads. *Thomson.*

SWAMPY BAY, on the coast of North Carolina. Lat. 35. 42. N. long. 76. 7. W.

SWAMSCOT, the Indian name of Exeter river, in the United States, as far as the head of the tide.

SWAN, *s.* [*ppan*, Saxon; *swan*, Danish; *swaen*, Dutch; *cygnus*, Lat. from the Celt. *gwyn*.]—The swan is a large water fowl, that has a long neck, and is very white, excepting when it is young. Its legs and feet are black, as is its bill, which is like that of a goose, but something rounder, and a little hooked at the lower end of it: the two sides below its eyes are black and shining like ebony. *Swans* use wings like sails, which catch the wind, so that they are driven along in the water. They feed upon herbs and grain like a goose, and some are said to have lived three hundred years. There is a species of swans with the feathers of their heads, towards the breast, marked at the ends with a gold colour inclining to red. The swan is reckoned by Moses among the unclean creatures; but it was consecrated to Apollo the god of music, because it was said to sing melodiously when it was near expiring; a tradition, generally received, but fabulous. *Calmet.*

Let music sound, while he doth make his choice;
Then if he lose, he makes a *swan* like end. *Shakspeare.*

SWAN CREEK, a river of the United States, in the Michigan territory, which falls into the Miami of the lakes; 4 miles from its mouth.

SWAN ISLAND, an island of the United States, on the coast of Maine; 4 miles south-west of Mount Desert. It is 7 miles long, and has a navigable channel on both sides. It contains about 6000 acres. Population 51.

SWAN ISLANDS, a group of islands at some distance from the north coast of Honduras, being chiefly barren rocks.

SWAN ISLES, a cluster of small rocky islets, which lie between the north coast of Van Diemen's Land and the south coast of New Holland. The largest is 2½ miles long, and

about 1 mile in breadth, and appears uninhabited either by man or beast.

SWAN POINT, a cape of the United States, on the coast of Maryland, in the Chesapeake. Lat. 38. 11. N. long. 76. 22. W.

SWAN PORT, a harbour in Derwent river, on the south-east coast of Van Diemen's Land, so called from the numerous flocks of black swans by which it is frequented. The shores are covered with lofty trees and rich verdure, the sea is replete with fish of every description, and there are innumerable cockatoos and parroquets of the richest plumage in the woods.

SWAN RIVER, a river of North America, which takes its rise in Etowwemahmeh lake, from whence it passes through Swan lake into the little Winnipic lake. This latter is connected, by a considerable river, with the lake of Manitoba, which, by the river Dauphin, finally discharges its waters into Lake Winnipic, the common reservoir for the waters of a great number of the adjacent rivers and lakes. All the country in the neighbourhood of this, and of Red Deer river, to the south branch of the Laskatchiwine, abounds in beaver, moose deer, fallow deer, elks, bears, buffaloes, &c. The soil is good, and wherever any attempts have been made to raise the esculent plants, it has been found productive. On this river a fort is erected for the convenience of the fur trade.

SWAN RIVER, a river of North America, which falls into the Mississippi about 40 miles from its source. Its course is from the east, and it is navigable for canoes 90 miles.

SWANBOURNE, a parish of England, in Buckinghamshire; 3 miles east-by-south of Winslow. Population 499.

SWANEVELT, or SWANEFELD, (Herman,) was born at Woerden in 1620, and, as it is said, was a disciple of Gerard Douw, whose style, however, he did not long follow; but as his disposition inclined him to landscape, he travelled to Rome, and there, in 1640, became acquainted with Claude de Lorraine.

He was among the few artists who receive the due meed of praise and profit during their lives; his works were eagerly coveted, and he received very high prices for them. Since his time, a greater honour has been rendered to many, at the expense of amateurs, and cognoscenti, who have not unfrequently purchased as the works of Claude de Lorraine, pictures which were completed on the easel of Swanevelt.

Swanevelt was not only an agreeable and excellent painter, but he also handled the etching-needle and the graver with great taste and skill; and has left us many plates of landscapes and animals, which rival the best with considerable effect.

SWANINGTON, a township of England in Leicestershire; 4 miles east-by-south of Asby de la Zouch. Population 427.

SWANINGTON, a parish of England, in Norfolk; 3½ miles south-east of Reephan.

SWANLAND, a township of England, East Riding of Yorkshire, 6½ miles west-by-south of Kingston-upon-Hull.

SWANLOW, a hamlet of England, in the parish of Whitegate, Cheshire.

SWANSBOROUGH, a post township of the United States, and capital of Onslow county, North Carolina, on White Oak river; 40 miles south-south-west of Newbern. Population 100. Lat. 34. 41. N. long. 77. 17. W.

SWANSCOMBE, a parish of England, in Kent. Population 848; 4 miles east-by-south of Dartmouth, and 2 west of Grangemouth.

SWANSEA, a market town and borough of Wales, in the county of Glamorgan. It is a place of great trade and importance, has increased of late years with extraordinary rapidity in size and population, and is now ranked as the chief town of the county, if not the metropolis of the whole principality. It stands on a beautiful bay of the Bristol channel, on the western side of the river Tawe, near the junction of that river with the sea, and hence in the Welch it is named *Abertawe*. The English name is supposed to have

have been originally written Swinsea or Swinsey, and to have been derived from the number of porpoises which frequent the Bristol channel. The appearance of the town, both from the bay and from the high grounds in the neighbourhood, is very striking and picturesque, and the general aspect of the interior is much superior to that of most Welch towns. The climate is mild and healthy, and the beach remarkably well adapted for sea-bathing. The vicinity also affords agreeable walks and rides; while the bay, which in itself forms so great an ornament to the town, and may be regarded, indeed, as one of the finest in Europe, presents ample opportunities for the enjoyment of excursions by water. Nor is the situation of the place less eligible for the purposes of trade and commerce. The neighbouring country is rich in mineral treasures, and the town in fact stands in the midst of the most inexhaustible mines of coal and of iron; while by means of its harbour, and of the navigable river Tawe, it commands a ready outlet for these productions of the interior. The town extends in length about a mile and a half or two miles, if we include the suburb of Greenhill; the greatest width does not exceed half a mile. The streets are numerous, and contain a large proportion of well built houses, occupied by opulent individuals, among whom are many professional men of eminence, merchants, and substantial tradesmen. The influx of strangers during the summer season for sea-bathing is very considerable, and this circumstance has led to the erection of a great number of lodging houses, which are in general very handsome, and many of them adapted for the reception of families of the first distinction. The castle of Swansea is situated on an elevated spot in the middle of the town, and might still present a bold and picturesque appearance, but for the houses, which, being built up against it, conceal it on every side. The town-hall of Swansea is a spacious and handsome modern building, erected on a part of the castle inclosure, in the middle of the town. The commerce and manufactures of Swansea are very considerable. The mineral riches of the neighbourhood afford not only a direct source of export trade of great extent, but the abundance of coal and iron have drawn hither immense manufacturing establishments in iron, copper, brass, spelter, tin, and earthenware. The produce of these manufactories forms an important addition to the exports of the town, while the consumption of the numerous population that they employ, causes a vast influx of commodities for their supply. Of the potteries at Swansea, there are at present two on a large scale. The ware, which comprises almost every article in this department produced by the Staffordshire works, is of prime quality, and large quantities are annually shipped for the English market. The coal exported from Swansea is chiefly of the kinds called stone-coal and culm, brought down by the canal, which conveys them to shipping quays by the river side. The manufactured shop goods, and articles of consumption, are chiefly imported from Bristol and other English towns.

The corporation of the town have been laudably exerting themselves for many years in improving the harbour. In the year 1791, they obtained an act of parliament to enable them to raise the necessary funds; and since this period prodigious sums have been expended in clearing and deepening the bed of the river, and removing some obstacles at its entrance from the sea. Two large and handsome piers have also been run out, one from the eastern, and the other from the western side, to confine the channel; but not having been laid out with due skill and judgment, a cross pier was added in 1814 within the harbour, to remedy the inconveniences which were still felt by the shipping. About five miles south of the town a light-house has been erected on the outer Mumble rock. Besides its commerce and trade, Swansea derives considerable benefit from the great resort of visitors to the sea-bathing. For the accommodation of invalids, warm and cold salt water baths have been made in the Burrows, and also near the pottery, by the river side. Swansea is a corporate town, and shares the privileges of Cardiff as a contributory borough, in the return of the mem-

ber of parliament for that place. Market on Wednesday and Saturday, and several annual fairs; 45 miles west of Cardiff, and 205 west of London. Lat. 51. 37. F. long. 3. 55. W.

SWANSEY, a post township of the United States, in Cheshire county, New Hampshire; 6 miles south of Keene. Population 1400. Here is a cotton manufactory.

SWANSEY, a post township of the United States, in Bristol county, Massachusetts; 38 miles south of Boston. Population 1839.

SWANSKIN, *s.* A kind of soft flannel, imitating for warmth the down of a swan.

SWANTON, ABBOTS, a parish of England, in Norfolk; 3 miles south-south-west of north Walsham. Population 374.

SWANTON, MORLEY, a parish of England, in Norfolk; 3½ miles north-east of East Dereham. Population 571.

SWANTON, NOVERS, a parish of England, in Norfolk; 6 miles south-west of Holt.

SWANTON, a post township of the United States, in Franklin county, Vermont, on Lake Champlain, and bordering on Canada; 32 miles north of Burlington. This town has some trade in timber, and contains a quarry of coarse marble.

SWANTOWN, a village of the United States, in Kent county, Maryland; 3 miles from Georgetown.

SWANWICH, a town and parish of England, situated in Purbeck isle, Dorsetshire. It consists of one street about a mile in length, with small and low stone buildings. The inhabitants carry on a brisk trade in exporting stone; immense quantities, for various purposes, being annually quarried in the neighbourhood; 6 miles east-south-east of Corfe Castle.

SWANWICH, a township of England, in Derbyshire; 2 miles south-by-west of Alfreton.

To SWAP, *v. a.* [*swipa*, Icel. *to snatch*; *ƿapan*, Sax., *to sweep*.] To strike with a long or sweeping stroke; to strike against; to throw violently.—*Swap* off his hed, this is my sentence here. *Chaucer*.

To SWAP, *v. n.* To fall down.—Al sodenly she *swapt* adoun to ground. *Chaucer*.—To ply the wings with noise; to strike the air.

When fowls fly by, and with their *swapping* wings Beat the inconstant air.

More.

SWAP, *s.* A blow; a stroke. *Prompt. Parv.*

If't be a thwack, I make account of that;

There's no new fashion'd *swap* that e'er came up yet,

But I've the first on 'em.

Beaum. and Fl.

SWAP, *adv.* Hastily; with hasty violence; as, he did it *swap*. It seems to be of the same original with *sweep*. *A low word.*

To SWAP, *v. a.* To exchange. See *To Swop*.

Thy works purchase thee more

Than they can *swappe* their heritages for.

Verses.

SWARBY, a parish of England, in Lincolnshire; 6 miles north-west-by-north of Folkingham.

SWARCHA, a small town of the Austrian states, in Croatia, in the military district of Carlstadt, and the usual residence of the commandant general.

SWARD, *s.* [*sward*, Swedish; *ƿearð*, Sax., *cutis*.]—The skin of bacon.—Brandish no swords but *swards* of bacon! *Brewer*.—The surface of the ground: whence *green sward*, or *green sword*.

The noon of night was past, and then the foe

Came dreadless o'er the level *swart*, that lies

Between the wood and the swift streaming Ouse. *A. Philips*.

To SWARD, *v. n.* To breed a green turf.—The clays that are long in *swerding*, and little subject to weeds, are the best land for clover. *Mortimer*.

SWARDESTON, a parish of England, in Norfolk; 5 miles south-south-west of Norwich.

SWARE. The preterite of *swear*.

SWARFORD,

SWARFORD, a parish of England, in Oxfordshire; 5 miles north-east of Chipping Norton.

SWARKESTONE, a parish of England, in Derbyshire, situated on the Trent, on the road from Derby to Ashby-de-la-Zouch. The bridge across the Trent is supposed to be the largest in Europe. It consists of 39 arches, and extends across the meadows near a mile to Stanton.

SWARLAND, a hamlet of England, in Northumberland; $7\frac{1}{2}$ miles south-by-west of Alnwick.

SWARM, *s.* [*ŷ*yeapm, Saxon; *swerm*, Dutch; *swaerm*, Swed., *swærma*, tumultuari, ab antiq. *hurra*, in gyrum agitari. Stiernh. and Serenius.]—A great body or number of bees or other small animals, particularly those bees that migrate from the hive.

A swarm of bees that cut the liquid sky,
Upon the topmast branch in clouds alight.

Dryden.

A multitude; a crowd.

From this swarm of fair advantages,
You grip'd the general sway into your hand. *Shakspeare.*

To SWARM, *v. n.* [*ŷ*peapman, Sax., *swermen*, Dutch.] To rise as bees in a body and quit the hive.—When bees hang in swarming time, they will presently rise, if the weather hold. *Mortimer.*—To appear in multitudes; to crowd; to throng.

Our superfluous lacqueys, and our peasants,
Who in unnecessary action swarm
About our squares of battle.

Shakspeare.

To be crowded; to be over-run; to be thronged.—These garrisons you have now planted throughout all Ireland, and every place swarms with soldiers. *Spenser.*—To breed multitudes.

Not so thick swarm'd once the soil
Bedropp'd with blood of Gorgon.

Milton.

It is used in conversation for climbing a tree, by embracing it with the arms and legs.

To SWARM, *v. a.* To press close together, as bees in swarming; to throng.

How did thy senses quail,
Seeing the shores so swarm'd!

Fanshaw.

SWARRATON, a parish of England, in Southamptonshire; $3\frac{1}{2}$ miles north-north-west of New Alresford.

SWART, or SWARTH, *adj.* [*swarts*, Gothic; *ŷ*peapt, Saxon; *swart*, Dutch.] Black; darkly brown; tawny.

Whereas I was black and swart before;
With those clear rays which she infus'd on me;
That beauty am I blest with, which you see.

Shakspeare.

In Milton it seems to signify gloomy; malignant.

Ye valleys low,

On whose fresh lap the swart star sparely looks.

Milton.

To SWART, *v. a.* To blacken; to dusk.—The heat of the sun may swart a living part, or even black a dead or dissolving flesh. *Brown.*

SWARTESLUYS, a small fort in the north-east of the Netherlands, in Friesland, in the quarter of Vollenhoven, on the Schwartzwasser.

SWARTEWATER. See VECHTE.

SWARTH, *s.* A row of grass or corn cut down by the mower; a different spelling of *swath*. See SWATH. *Phillips.*—Here stretch'd in ranks the levell'd swarths are found. *Pope.*

SWARTH, or SWAIRTH, *s.* [perhaps from *ŷ*peapt, Sax., *block*, dark, pale, wan. *Ray.*] The apparition of a person about to die, as pretended in parts of the North.—There are the exact figures and resemblances of persons then living, often seen not only by their friends at a distance, but many times by themselves: of which there are several instances in Aubrey's Miscellanies. These apparitions are called fetches, and in Cumberland *swarths*; they most commonly appear to distant friends and relations, at the very instant preceding

VOL. XXIII. No. 1607.

the death of the person, whose figure they put on. Sometimes there is a greater interval between the appearance and death. *Grose.*

SWARTHILY, *adv.* Blackly; duskily; tawnily.

SWARTHINESS, *s.* Darkness of complexion; tawniness.—Discontent disjoins mankind, and sends him, with beasts, to the loneliness of untrod deserts, who was by nature made a creature sociable. Nor is it the mind alone that is thus mudded; but even the body suffers: it thickens the complexion, and dyes it into an displeasing *swarthiness*: the eye is dim in the discoloured face; and the whole man becomes as if statued into stone and earth. *Feltham.*

SWARTHY, *adj.* [See SWART.] Dark of complexion; black; dusky; tawny.

Did they know Cato, our remotest kings
Would pour embattled multitudes about him;
Their swarthy hosts would darken all our plains,
Doubling the native horror of the war,
And making death more grim.

Addison.

To SWARTHY, *v. a.* To blacken; to make swarthy or dusky.—Now will I and my man John swarthy our faces over as if that country's heat had made 'em so. *Cowley.*

SWARTISH, *adj.* Somewhat dark or dusky; inclining to black.—Melancholy, that cold, dry, wretched saturnine humour, creepeth in with a leane, pale, or *swartysh* colour, which reigneth upon solitarye, carefull, musyng men. *Bullein.*

SWARTINESS, or SWARTNESS, *s.* Darkness of colour, duskiness. The first is in Sherwood's Dict. The latter in the Prompt. Parv.

SWARTY, *adj.* Swarthy: than which it is an older word.

Divine Andate, thou who hold'st the reins
Of furious battles and disorder'd war,
And proudly roll'st thy swarty chariot-wheels
Over the heaps of wounds and carcasses, &c. *Beaumont and Fl.*

SWARTZIA [so named by Schreber, in honour of Olof Swartz, M.D. Prof. instit. Berg. Acad. Cæsar, Nat. Cur. Reg. Holm, &c.] in Botany, a genus of the class polyadelphia, order polyandria.—Generic Character. Calyx: perianth one-leafed, inferior, coriaceous, coloured internally; four or five-parted, permanent; segments ovate, sharpish, reflexed, almost equal. Corolla none. Stamina: filaments numerous, capillary, flexuose, longer than the calyx, ascending, united at the base; inserted into a semicircular receptacle surrounding the base of the pedicel of the germ, and two longer and thicker, by the side of the pedicel on each part, before the other filaments, adnate, free, declined. Anthers roundish, flat, emarginate above and below, fastened by the back; on the longer filaments larger and oval. Pistil: germ oblong, compressed, villose, placed on a thickish, declining pedicel. Style none. Stigma oblique, acute. Pericarp: capsule coriaceous, obliquely ovate, pedicelled, one-celled, two-valved. Seed single, ovate, covered at the base with a pulpy pitcher-shaped oblique aril, and pedicelled. *Essential Character.*—Calyx: four-leaved. Petals single, lateral, flat. Legume one-celled, bivalve. Seeds arillated.

1. Swartzia simplicifolia.—With simple leaves; and roundish ovate petal, larger than the calyx; and polyandrous flowers. A shrub.—Native of Trinidad.

2. Swartzia grandiflora.—With simple, oblong-ovate leaves; subtriflorous foot-stalks; round, reniform, very large petal; and oblong legumes.—Native of Trinidad.

3. Swartzia dodecandra.—With simple leaves; dodecandrous flowers; and oblong petal, of the length of the cup. A shrub of a smaller kind than the simplicifolia.—Native of South America.

4. Swartzia triphylla.—With ternate leaves; and margined foot-stalks. This is a small tree, rising to the height of eight feet or more, and branching towards the top; flowers corymbose and axillary. Native of the Caribbee islands.

5. Swartzia pinnata.—With pinnate leaves, and round common footstalk.—Native of Trinidad.

6. *Swartzia alata*.—With pinnate leaves, and winged common footstalk.—Native of Guiana.

To SWARVE, *v. n.* To swerve; which see.

So all at once they on the prince did thonder,
Who from his saddle *swarved* not asyde. *Spenser.*

SWASH, *s.* A figure, whose circumference is not round, but oval: and whose mouldings lie not at right angles, but oblique to the axis of the work. *Maxon.*

To SWASH, *v. n.* [perhaps from *swetsen*, Teut. to make a shrill noise. Our old lexicographers define *swash*, "to clash with words and armour." Sherwood; "to make a noise with swords against targets." Barret.] To make a great clatter or noise; to make a show of valour; to vapour; to bully: whence a *swashbuckler*. *Not in use.*—Draw, if you be men: Gregory, remember thy *swashing* blow. *Shakspeare.*

SWASH, *s.* A blustering noise, in order to make a show of valour.—I will flaunt and brave it after the lusty *swash*. *The Three Ladies of London.*—Impulse of water flowing with violence. *Johnson.*

SWASH, or SWASHY, *adj.* Soft, like fruit too ripe. Derbyshire. *Pegge.*

SWASH, LOWER, a shoal near the coast of North Carolina. Lat. 33. 47. N. long. 78. 9. W.

SWASH, UPPER, a shoal near the coast of North Carolina. Lat. 33. 40. N. long. 78. 10. W.

SWASH, NINE FEET, a shoal near the coast of North Carolina. Lat. 34. 21. N. long. 76. 50. W.

SWASHBUCKLER, *s.* [See To SWASH.] A kind of swordplayer; a braggadochio; a bully.—A *swashbuckler* against the pope, and a dormouse against the devil. *Milton.*

SWA'SHER, *s.* One who makes a show of valour or force of arms. *Obsolete.*—I have observed these three *swashers*; three such anticks do not amount to a man. *Shakspeare.*

SWATCH, *s.* A swathe. *Not in use.*

One spreadeth those bands so in order to lie,
As barlie in *swatches* may fill it thereby. *Tusser.*

SWAT, or SWATE, *pret.* of To sweat.—His hakeney so *swatte*. *Chaucer.*

That far sought wealth, for which the noxious gale
He drew, and *swate* beneath equator suns. *Thomson.*

SWATH, *s.* [*swade*, Dutch.] A line of grass or corn cut down by the mower.

The strawy Greeks, ripe for his edge,
Fall down before him, like the mower's *swath*. *Shakspeare.*

A continued quantity.—An affection'd ass, that cons state without book, and utters it by great *swaths*. *Shakspeare.*—[*puæðe*, *puæðil*, Sax. from *puæðan*, to bind; so our word was *swathel*; then, *swaddle*. See Huloet's Dict.] A band; a fillet.—Long pieces of linen, they folded about me, till they had wrapped me in above an hundred yards of *swathe*. *Guardian.*

To SWATHE, *v. a.* [*puæðan*, Saxon.] To bind, as a child with bands and rollers.

He had two sons: the eldest of them at three years old,
I' the *swathing* clothes the other, from their nursery
Were stol'n. *Shakspeare.*

To SWAY, *v. a.* [*schweben*, German, to move; *swæigia*, Icel. to bend; *swiga*, Su. Goth. the same; which Serenius deduces, prefixing *s*, from the ancient word *vega*, to move.] To wave in the hand; to move or wield any thing massy: as, to *sway* the sceptre.

Glancing fire out of the iron play'd,
As sparkles from the anvil rise,
When heavy hammers on the wedge are *sway'd*. *Spenser.*

To bias; to direct to either side.

Heav'n forgive them, that so much have *sway'd*
Your majesty's good thoughts away from me. *Shakspeare.*

To govern; to rule; to overpower; to influence.

The lady's mad; yet if 'twere so,
She could not *sway* her house, command her followers,
With such a smooth, discreet, and stable bearing.

Shakspeare.

To SWAY, *v. n.* To hang heavy; to be drawn by weight.—In these personal respects, the balance *sways* on our part. *Bacon.*—To have weight; to have influence.—The example of sundry churches, for approbation of one thing, doth *sway* much; but yet still as having the force of an example only, and not of a law. *Hooker.*—To bear rule; to govern.

Had'st thou *sway'd* as kings should do,
They never then had sprung like summer flies. *Shakspeare.*

To incline to one side.

This battle fears like to the morning's war,
When dying clouds contend with growing light:—
Now *sways* it this way, like a mighty sea,
Forc'd by the tide to combat with the wind;
Now *sways* it that way, like the self-same sea
Forc'd to retire by fury of the wind. *Shakspeare.*

SWAY, *s.* The swing or sweep of a weapon.—To strike with huge two-handed *sway*. *Milton.*—Any thing moving with bulk and power.

Are not you mov'd, when all the *sway* of earth
Shakes like a thing unfirm? *Shakspeare.*

Weight; preponderation; cast of the balance.

Expert

When to advance, or stand, or turn the *sway*
Of battle. *Milton.*

Power; rule: dominion.

Only retain

The name and all the addition to a king;
The *sway*, revenue, execution of th' hest,
Beloved sons, be yours. *Shakspeare.*

Influence; direction; weight on one side.

They rush along, the rattling woods give way,
The branches bend before their sweepy *sway*. *Dryden.*

To SWEAL. See To SWALE.

To SWEAR, *v. n.* preter. *swore* or *sware*: part. pass. *sworn*. [*swaran*, Gothic; *puþuan*, Saxon; *swereien*, Dutch.] To obtest some superior power; to utter an oath.

Thee, thee an hundred languages shall claim,
And savage Indians *swear* by Anna's name. *Tickell.*

To declare or promise upon oath.

I gave my love a ring, and made him *swear*
Never to part with it; and here he stands,
I dare be sworn for him, he would not leave it,
Nor pluck it from his finger. *Shakspeare.*

To give evidence upon oath.

At what ease

Might corrupt minds procure knaves as corrupt
To *swear* against you? *Shakspeare.*

To obtest the great name profanely.

Obeys thy parents, keep they word justly;
Swear not. *Shakspeare.*

To SWEAR, *v. a.* To put to an oath; to bind by an oath administered.—Sworn ashore, man, like a duck; I can swim like a duck, I'll be *sworn*. *Shakspeare.*—To declare upon oath: as, He *swore* treason against his friend.—To obtest by an oath.

Now by Apollo, king, thou *swear'st* thy gods in vain.
—O vassal! miscreant! *Shakspeare*

SWE'ARER, *s.* A wretch who obtests the great name wantonly and profanely.—And must they all be hang'd that *swear* and lie?—Every one—Who must hang them?—Why, the honest men.—Then the liars and *swearers* are fools; for there are liars and *swearers* enow to beat the honest men and hang them up. *Shakspeare.*

SWE'ARING,

SWE'ARING, *s.* The act of declaring upon oath; the act or practice of using profane oaths.

All those sayings will I over-swear,
And all those *swearings* keep as true in soul,
As doth that orb'd continent the fire
That severs day from night.

Shakspcare.

SWEAT, *s.* [ʃpeət, Saxon; *swett*, Su. Goth. *æct*, Hebrew.] The matter evacuated at the pores by heat or labour. Soft on the flowery herb I found me laid
In balmy *sweat*.

Milton.

Labour; toil; drudgery.

The field

To labour calls us, now with *sweat* impos'd.

Milton.

Evaporation of moisture.—Beans give in the mow; and therefore those that are to be kept are not to be thrashed 'till March, that they have had a thorough *sweat* in the mow.

Mortimer.

To **SWEAT**, *v. n.* pret. *swat* or *swate*, *swet*, *sweated*; partic. pass. *sweaten*; [ʃpætan, Saxon.] To be moist on the body with heat or labour.

Let them be free, marry them to your heirs,
Why *sweat* they under burdens?

Shakspcare.

To toil; to labour; to drudge.

How the drudging goblin *swet*

To earn his cream bowl duly set;

When in one night, ere glimpse of morn,

His shadowy flail hath thresh'd the corn.

Milton.

To emit moisture.—Wainscots will *sweat* so that they run with water. *Bacon.*

To **SWEAT**, *v. a.* To emit as sweat.

Grease that's *sweaten*

From the murderer's gibbet, throw

Into the flame.

Shakspcare.

To make to sweat.

SWE'ATER, *s.* One who sweats, or makes to sweat.—These *sweaters* seem to me to have at present but a rude kind of discipline amongst them. *Spectator.*

SWE'ATILY, *adv.* So as to be moist with sweat; in a sweaty state.

SWE'ATINESS, *s.* The state of being sweaty. *Ash.*

SWE'ATING, *s.* [ʃpætuŋ, Sax.] The act of making to sweat. Moisture emitted.—In cold evenings there will be a moisture or *sweating* upon the stool. *Mortimer.*

SWE'ATY, *adj.* [ʃpæti, Sax.] Covered with sweat; moist with sweat.—The rabblement hooted and clapped their chopp'd hands, and threw up their *sweaty* night-caps. *Shakspcare.*—Consisting of sweat.

And then, so nice, and so genteel,

Such cleanliness from head to heel;

No humours gross, or frowsy steams,

No noisome whiffs, or *sweaty* streams.

Swift.

Laborious: toilsome.

Those who labour

The *sweaty* forge, who edge the crooked scythe,

Bend stubborn steel, and harden gleening armour,

Acknowledge Vulcan's aid.

Prior.

SWEDE, *s.* A native of Sweden.—What the *Swede* intends, and what the French. *Milton.*

SWEDEN, an extensive kingdom in the north of Europe which has experienced great territorial changes since 1809. It lost in that year the valuable province of Finland, and in 1814 received the accession of Norway, on ceding the comparatively insignificant province of Swedish Pomerania. Sweden, exclusive of Norway, but inclusive of Swedish Lapland, is a country of great length, stretching from 55. 20. to 69. of N. lat. about 1000 miles; its breadth, though not proportioned to its length, is between 200 and 300 miles, in one part from 11. 10. to 23. 20. of east long; and the whole contains an area of 172,000 square miles, of which about one-third belongs to Swedish Lapland.

Norway, though a distinct kingdom, is governed by the same sovereign; and the extent of this country, including Norwegian Lapland, is so great as to carry the total surface of the two kingdoms to 343,000 square miles, constituting them the most extensive monarchy in Europe after Russia; but as the population hardly exceeds 3,300,000, its rank, in this far more essential point, is not above the twelfth of the European states.

Sweden is bounded on the north by Norwegian Lapland, on the east by the gulf of Bothnia and the Baltic, on the south and west by portions of the Baltic and by Norway. The statistics of Sweden have been an object of attention with a government office since 1746, when returns of the population were ordered to be made once in five years. They are on the whole tolerably correct. In regard to territorial divisions there prevails at present a degree of perplexity in maps and geographical works, from an indiscriminate use of the old and new divisions. Sweden consisted originally of three kingdoms, Gothland, Sweden proper, and Norland, the last including Swedish Lapland. Each of these was divided into provinces, but this distinction is now abolished, and the whole kingdom divided into 23 districts, called *læns* or governments.

The number of inhabitants for each square mile is in Gothland or the southern provinces, 38; in the central part of the kingdom, nearly 21; but in Norland, only 1½, giving for the whole kingdom little more than 14 persons per square mile, which is not above one-fourteenth of the relative density of population in Great Britain. The ratio of increase is not rapid, but is understood to be least slow in the northern provinces.

Sweden, though inclosed by mountains on the west and north, is in general a very flat country; and it is remarkable that along the whole road from Gottenburg in the west to Stockholm in the east, there is not a single acclivity of consequence, till within a few miles of the latter. The great mountain chain on the west begins at a short distance from Gottenburg, and extends northward many hundred miles, forming the limit, first between Sweden and Norway, next between Swedish and Norwegian Lapland, and finally terminating in the direction of the North Cape. From this vast range, several subordinate chains separate and traverse both Swedish Lapland and Sweden in an easterly direction; but in the latter they are in general so insignificant as to do little more than vary the aspect of the country, and determine the course of the rivers. In the south of Sweden, a small but distinct range crosses the country (Smaland) from sea to sea, and in particular provinces, as West Gothland, there are insulated mountains of considerable height.

The climate of Sweden is less severe than might be expected in so high a latitude. In Stockholm the average of temperature throughout the year is four degrees higher than at St. Petersburg—a difference arising, not from greater heat in summer, but from less intensity of cold in winter. Winter is in Sweden by no means an unpleasant season: the winds are seldom violent; the cold, without being extreme, is steady, and being very rarely interrupted by a thaw, the snow remains unmelted, the roads dry, and travelling is both agreeable and expeditious. The summer is, in like manner, free from intense heat; while the long duration of sunshine in the northern provinces brings forward the crop with a rapidity that counterbalances the shortness of the season. The most inconstant and most unhealthy part of the year is spring. The quantity of rain that falls annually in Sweden is not great, having been found not to exceed 19 inches, even in the southern provinces.

The most striking feature in the appearance of Sweden is the number and extent of its lakes, which are computed to occupy 9200 square miles, nearly an eighteenth of the whole surface. These lakes are vast sheets of water, pure, transparent, abounding in fish, and in several cases of great importance to navigation. The lake of Wenner, the largest of all, and situated in the south-west of the kingdom, communicates with Gottenburg by the canal of Trohætta, and is likely ere long to communicate with Stockholm, as soon

as the canal shall be extended to the Malar lake. The other great lakes are the Wetter and the Hjelmars, both to the southward of the capital, and at some distance from it. Of the rivers of Sweden, the Ljusna, the Dal, and the Clara, rise in the mountains bordering on Norway, and flow, the first two into the gulf of Bothnia, the last into the lake of Wetter. From that lake issues the Gotha, which flows southward with a full stream, but not a long course, until reaching the Cattogat; while the waters of the Wetter lake are conveyed to the Baltic by the Mottala. The other rivers of Sweden are of secondary size; but approaching Lapland we meet with several streams of magnitude, all flowing into the gulf of Bothnia, viz., the Angerman, the Umea, the Skeleftea, the Pitea, the Lulea, the Torneo. In winter these waters, flowing from frost-bound mountains, are, like the Rhone and other rivers in Switzerland, comparatively inconsiderable; but in summer the melting of the snow often swells them prodigiously, and makes them overflow large tracks of country adjacent to their banks.

The plants of Sweden are similar to those of Britain, with the exception, however, of several, such as broom, furze, and walnut trees, which have not strength to withstand the continued cold of a Swedish winter. The list of these deficiencies increases the farther we proceed to the northward, but throughout all the temperate part of Sweden, the oak, the elm, the alder, thrive as in England, while some trees, such as the spruce and Scotch fir, succeed better. Apple, pear, and cherry trees grow here but languidly; while berries of many different kinds are produced spontaneously, and spread luxuriantly. As to corn, wheat succeeds only in the southern provinces; oats are raised more generally, and in larger quantities; but rye and barley are the species of grain most frequently met with.

In the domestic animals, there is very little difference between Sweden and Britain. Horses, oxen, cows, and sheep are spread over the kingdom as in that country, and the chief difference consists in a marked inferiority of size, the consequence of poorer pasture, and of less skill and capital on the part of the agriculturists. The Swedish horses are well shaped, and uncommonly sure-footed; and it is remarked that all the domestic animals of this country, without excepting the watch dog, possess a great share of tameness. As to beasts of game, hares and foxes are as abundant as in Britain, with a long list of animals, the natural inhabitants of wilds, unknown in Britain, such as beavers, wolves, and, in the cold provinces of the north, bears. In the birds there prevails a greater similarity between Britain and Sweden. The naturalists of the latter have calculated the different species of the winged tribe in their country at about 300. Fish is plentiful, as well along the coast as in the rivers and lakes: in the latter salmon and pike are the principal fish, trout being found only in the mountain streams. On the coast of the Baltic is caught the strämning, a species of herring peculiar to that sea.

Hardly a thirtieth part of the surface of this country is arable, and if the wilds of Norrland were included, it would not be a sixtieth. The farms are here, as in many parts of the continent, miserably small, not exceeding on an average 27 or 28 English acres. The quantity of corn sown on each averages only $4\frac{1}{2}$ Winchester quarters, and the average crop does not amount to a quarter per English acre, owing in a great measure to the scarcity of manure. The chief part of Sweden resembles a great forest, where, as in North America, a farm is a small cultivated patch, with a wood of many hundred acres attached to it, and appropriated in summer to the pasture of the cattle. All improvements requiring the application of capital, are of course excluded from Swedish agriculture, but there are many requiring less capital than skill, which are seldom thought of.

Manufactures are in no better state than agriculture in Sweden, and seem to have a more doubtful prospect of improvement; the thinness of the population, and the limited supply of raw produce raised within the country, being evils not easily remedied. As yet, the metals, particularly iron and copper, have been the staple articles of manufacture.

In the latter half of the 18th century, Sweden exported copper to an annual value of £100,000, but that is since diminished, a number of the mines, at Fahlun and elsewhere, having become less productive. The iron works employ a much greater number of hands; the forges are small, but the ore, and consequently the iron is in general of superior quality. A stagnation has, however, been produced in this important branch, by the very great extension, during the present age, of the iron works of England, where the abundance of coal, and the command of inland navigation, form more than a counterpoise to the cheap labour and the wood fuel of Sweden.

Commerce.—The foreign trade of Sweden, favoured for a time by her neutrality in the war of the French revolution, became after 1807 exposed to great losses from participating in hostilities; and since the peace of 1814, it has had its full share of the fluctuations and distress so general throughout Europe.

The revenue of Sweden is derived from various sources; the rent of the royal domains, a portion of the great tythes, duties on imports and exports, a tax on spirituous liquors, and one, of more questionable policy, on mines, forges, and chimnies, along with a poll tax and a few monopolies. The amount of revenue is about one million sterling, and as it never was greater, the military force of Sweden has at no time been so large as might have been imagined from the brilliancy of its achievements. The troops which crossed the Baltic along with Gustavus Adolphus, did not exceed 10,000 men; and though they subsequently received reinforcements from Sweden, the chief part of his army were Germans. A progressive increase took place towards the close of the 11th century; but even in the splendid exploits of Charles XII., a large proportion of his military followers were foreigners, supported by the resources of the conquered territory. In the reign of Gustavus III., assassinated in 1792, the Swedish army was larger; and in 1808, the aid of a British subsidy, 1,200,000*l.* a year, carried it to 50,000 regulars, and a reserve of 30,000. At present it is thus organized: the corps of the army is one of engineers, three regiments of artillery, seven of cavalry, 28 of infantry. The officers are 18 generals, 29 major-generals, and a staff of somewhat more than 100. This forms the regular army; but there is also a national force or militia, for the levy and support of which, the whole country is divided into petty districts, called *hemmans*, each of which is bound to furnish a soldier, and a spot of land for his maintenance. This land the soldier, in time of peace, cultivates himself, being pledged to attend at exercise only a specified number of days in each year. When permanently absent, the inhabitants of the district are bound to cultivate the land for him. The officers are supported in the same manner; the colonel by a property placed in the centre of his regiment; the captain by a less extensive lot in the centre of his company, and so on down to the corporal. When in the field, these troops receive the same pay as the rest of the army, but at other times the government expense on them is limited to clothing.

Religion and Education.—The Swedes have long been accounted among the most vigorous supporters of the reformed faith, having adopted it with almost complete unanimity in the reign of Gustavus Vasa, and having subsequently made the most signal exertions for its maintenance in Germany. The established creed is Lutheranism; and though particular sects, such as the Swedenborgians, have arisen, the dissenters are, on the whole far from numerous. To the Catholics there prevails a general and decided antipathy, nor would it have been prudent, before the latter part of the 18th century, for a Catholic priest to have shewn himself openly in the provincial part of Sweden.

The Swedish language bears a great resemblance to the Danish, and not a little to the English, or rather Scottish. It is evidently sprung from the same source as the Saxon or German; but being very little known out of the country, and the circulation of literary works at home being very limited, men of letters have been frequently led to adopt Latin as the medium of their publications. The necessity of seeking

SWEDEN, DENMARK, & NORWAY.

seeking for information in other languages, has made the Swedish literati in general familiar with German, French, English, and Italian. Antiquities, formerly the favourite object of their attention, have been exchanged within the last century for the physical sciences. These have been cultivated with great success; witness Linnæus, Bergman, Scheele, and a long list of other naturalists. In poetry and in history the Swedes have several late writers of great merit, though little known out of their own country.

The scientific and literary societies of Sweden are numerous, and belong chiefly to Stockholm.

In Sweden the royal prerogative being limited, a considerable share of power is vested in the nobility and the people. The diet, which, however different in its formation, bears in its object a resemblance to the British parliament, consists of four orders; the nobles, the clergy, the peasants, and the burghers. The nobles are too numerous for so thinly peopled a country, a title of nobility granted to an individual conferring rank on his whole family, the head of which has a seat in the diet as its representative. The clerical body is represented by one archbishop (of Upsal), the eleven bishops of the kingdom, and by deputies from the inferior clergy. The peasants consist of delegates from that body, and the burghers of deputies from the royal free towns. To be eligible as a representative of the peasantry, it is necessary to belong to a family permanently employed in agriculture, and either to hold land from the crown during life, or to possess a portion of it in perpetuity. The expenses of the deputies of the clergy, the peasantry, and the towns, are all defrayed by their constituents. It is optional with each district or town to depute its special representative, or to join with one or more towns, and choose a representative for them all. It is not here as in France and the Netherlands, where the proposition of a new law is confined to the ministers of the crown: in the Swedish, as in the British parliament, any member may bring in a bill for such an object. Each order deliberates separately, and the decision, as in Britain, requires only a simple majority: a bill is in a fit state for the royal assent when agreed to by three out of the four orders. The great drawback on the Swedish representation lies in the want of a middle class between the nobles and the peasants, and in the venality of the former.

The executive administration of Sweden is equally complicated with the legislative. The king is, as in Britain, at the head of the whole, and each department has its board or commission. Thus the royal chancery has, in one division, the home, in another the foreign affairs. The treasury is managed by a chamber or exchequer; trade is superintended by a council; the mines by a board called a college. The army and navy have, in like manner, their respective heads; while, in the administration of justice, the highest court is called the royal tribunal, having subordinate to it two courts of appeal. The lower jurisdictions are the *landshofadinger* or governors in each province. There are separate jurisdictions for the military, the clergy, the physicians, the servants of the crown, and the inhabitants of particular towns, all recapitulated in a code of laws published in 1731, and amended in 1778. The territorial divisions of the kingdom are, first, the *läns*, before mentioned; next, the *vogderies* or *bailliwics*; thirdly, the *harads* or smaller districts; and, finally, the *parishes* or *sokens*.

HISTORY.

The early history of Sweden is not less involved in fable than that of most other nations. Some historians have pretended to give regular catalogues of the princes who reigned in Sweden in very early times; but they differ so much that no credit can be given to them. All indeed agree that ancient Scandinavia was first governed by judges, elected for a certain time by the voice of the people. Among these temporary princes the country was divided, until, in the year of the world 2054, according to some, or 1951, according to others, Eric, or if we believe Puffendorf, Sueno, was raised to the supreme power, with the prerogatives of all the tem-

porary magistrates united in his person for life, or until his conduct should merit deposition.

From this very early period till the year 1366 of the Christian era, the histories of Sweden present us with nothing but what is common to all nations in their early periods, viz., the endless combats of barbarians. At the time just mentioned, however, Albert of Mecklenburg was declared king. He was engaged in frequent wars with Denmark and Norway, and at last was forced to surrender to Margaret of Norway.

Margaret was, in 1415, succeeded by Eric, a cruel tyrant, who was, however, formally deposed. Canutson was chosen regent; but beginning to oppress the people, and aspiring openly to the crown, the Swedes and Danes revolted; in consequence of which a revolution took place, and Christopher, duke of Bavaria, nephew to Eric, was chosen king of Denmark, Sweden and Norway, in 1442.

In 1448, Christopher having died, Canutson was raised to the throne to which he had so long aspired. The kingdoms of Denmark and Norway, however, refused allegiance to him; on which a war immediately commenced. In 1454, peace was concluded, and Denmark, for the present, freed from the Swedish yoke. But Canutson did not long enjoy the crown of Sweden. Having quarrelled with the magistrates and the archbishop of Upsal, the latter formed such a strong party, that the king could not resist him. Canutson died in 1470 after a long and turbulent reign.

The Swedish affairs continued to be involved in great confusion till the year 1520, when a great revolution was effected by Gustavus Ericson, a nobleman of the first rank, who restored the kingdom to its liberty, and laid the foundation of its future grandeur. The occasion of this great revolution was as follows:—In 1518, Christiern, king of Denmark, invaded Sweden, with a design to subdue the whole country; but being defeated with great loss, he was reduced to the utmost distress; one half of his forces having perished with hunger, and the rest being in the most imminent danger by the approach of a rigorous winter. He then thought of a stratagem, which was to invite the regent to a conference, at which he designed either to assassinate or take him prisoner. The regent was about to comply, had not the senate, who suspected the plot, interposed and prevented him. Christiern then offered to go in person to Stockholm, on condition that six hostages should be sent in his room. This was accordingly done; but the wind happening then to prove favourable, he set sail for Denmark with the hostages, of whom Gustavus Ericson or Vasa, was one. Next year the Dane returned; and having defeated the regent, advanced into the heart of the kingdom, destroying every thing with fire and sword; but on his arrival at Stragnez, he granted a suspension of arms, on condition that the people would elect him king. Gustavus was confined by Christiern for a long time, but he continued to nourish the hope of enfranchising his country. At length he effected his escape, hired himself to a cattle merchant, and in this disguise escaped out of the Danish territories, and arrived at Lubec. He now applied to the regency for a ship to convey him to Sweden, where he hoped he should be able to form a party against the Danes. He likewise endeavoured to draw the regency of Lubec into his measures; and reasoned with so much zeal and ability, that Nicholas Gemins, first consul, was entirely gained; but the regency could not be prevailed on to declare for a party without friends, arms, money, or credit. Before his departure, however, the consul gave him assurances, that if he could raise a force sufficient to make head against the enemy in the field, he might depend on the services of the republic, and that the regency would immediately declare for him. Gustavus next proceeded to Calmar, where he made himself known to the principal officers of the garrison, who were mostly Germans, and his fellow-soldiers in the late administrator's army; but, they, seeing him without troops and without attendants, refused to embrace his proposals.

Disappointed in his expectations, Gustavus departed to an old family castle in Sudermania. Hence he wrote to his

friends, intimating his return to Sweden, and beseeching them to assemble all their forces, in order to break through the enemy's army into Stockholm, at that time besieged; but they refused to embark in so hazardous and desperate an attempt.

Gustavus next applied himself to the peasants; but they answered, that they enjoyed salt and herrings under the government of the king of Denmark; and that any attempts to bring about a revolution, would be attended with certain ruin, without the prospect of bettering their condition; for peasants they were, and peasants they should remain, whoever was king. At length, he formed the resolution of trying the courage and affection of the Dalecarlians. Attended, therefore, by a peasant, to whom he was known, he travelled in disguise through Sudermania, Nericia, and Westermania, and, after a laborious and painful journey, arrived in the mountains of Dalecarlia. Scarcely had he finished his journey, when he found himself deserted by his companion and guide, who carried off with him all the money which he had provided for his subsistence. Thus forlorn and destitute, he entered among the miners, without relinquishing his hopes of one day ascending the throne of Sweden. His whole object for the present was to live concealed, and gain a maintenance, till fortune should effect something in his favour: nor was it long before this happened. A woman in the mines perceived, under the habit of a peasant, that the collar of his shirt was embroidered. This circumstance excited curiosity; and the graces of his person and conversation, which had something in them to attract the notice of the meanest of the vulgar, afforded room for suspicion. Some gentlemen relieved his necessities; but when he made known his projects, he was near being betrayed into the hands of the Danes. At length a priest advised him to apply directly to the peasants themselves; told him that it would be proper to spread a report, that the Danes were to enter Dalecarlia in order to establish new taxes by force of arms; and as the annual feast of all the neighbouring villages was to be held in a few days, he could not have a more favourable opportunity: he also promised to engage the principal persons of the diocese in his interest.

In compliance with this advice, Gustavus set out for Mora, where the feast was to be held. He found the peasants already informed of his designs, and impatient to see him. He instantly led them against the governor's castle, which he took by assault, and put the garrison to the sword. This inconsiderable enterprise was attended with the most happy consequences. Great numbers of the peasants flocked to his standard; some of the gentry openly espoused his cause, and others supplied him with money. Gustavus advanced with 5000 men, and defeated a body of Danes. Christiern, unable to suppress the revolt, wreaked his vengeance on the mother and sisters of Gustavus, whom he put to death. His barbarities served only to make his enemies more resolute.

Gustavus, after various successes, was chosen king of Sweden in 1523. Gustavus embraced the doctrines of the reformed religion, and did all in his power to establish the reformation in his new kingdom. His design could not fail to raise against him the enmity of the clergy, and of all the more superstitious part of his subjects. Accordingly, the first years of his reign were embittered by internal disturbances and revolts, which were aided and fomented by Christiern, who was at one time very near regaining possession of the Swedish dominions: but in 1542, Gustavus, having happily extricated himself out of all his troubles, prevailed on the states to make the crown hereditary in his family; after which he applied himself to the encouragement of learning and commerce. A treaty was set on foot for a marriage between his eldest son Eric and Elizabeth, queen of England; but this negociation failed of success.

Gustavus Vasa died in 1560, and was succeeded by his son, Eric XIV. This king created the first nobility that were ever known in Sweden. The whole course of his reign was disturbed by wars with Denmark, and disputes with his own subjects. In the former he was unfortunate,

and towards the latter he behaved with the greatest cruelty. He was soon dethroned by his brothers; of whom Duke John succeeded him.

This revolution took place in the year 1568, but with no great advantage to Sweden. Disputes about religion between the king and his brothers, and wars with Russia, threw matters into the utmost confusion. At last Prince Sigismund, the king's son, was chosen king of Poland, which proved the source of much trouble to the kingdom. In 1590, king John died; and as Sigismund was at a distance, every thing fell into the utmost confusion: the treasury was plundered, and the royal wardrobe quite spoiled, before even Duke Charles could come to Stockholm to take on himself the administration until King Sigismund should return. This, however, was far from being the greatest disaster which befel the nation at this time. The king refused to confirm the Protestants in their religious privileges, and showed such partiality on all occasions to the Papists, that a party was formed against him, at the head of which was Duke Charles, his uncle. The latter assumed the sovereign power, and in 1604, Sigismund was formally deposed, and his uncle, Charles IX., raised to the throne. He proved a wise and brave prince, restoring the tranquillity of the kingdom, and carrying on a war with vigour against Poland and Denmark. He died in 1611, leaving the kingdom to his son, the celebrated Gustavus Adolphus.

Soon after his accession, Gustavus received an embassy from James I. of Britain, exhorting him to make peace with his neighbours. This was seconded by another from Holland. But as the king perceived that the Danish monarch intended to take every opportunity of crushing him, he resolved to act with such vigour, as might convince him that he was not easily to be overcome. Accordingly, he invaded Denmark with three different armies at once; and though the enemy's superiority at sea gave them great advantages, and the number of the king's enemies distracted his attention, he carried on the war with such spirit, that in 1613, a peace was concluded on good terms. This war being finished, the king applied himself to civil polity, and made some reformation in the laws of Sweden. In 1615, hostilities were commenced against Russia, on account of the refusal of that court to restore some money which had been formerly lent them. The king entered Ingria, took Xexholm by storm, and was laying siege to Plescov, when, by the mediation of James I., peace was concluded, on condition of the Russians repaying the money, and yielding to Sweden some part of their territory. In this and the former war, notwithstanding the shortness of their duration, Gustavus learned the rudiments of the military art for which he soon became so famous.

Peace was no sooner concluded with Russia, than Gustavus was crowned with great solemnity at Upsal. Soon after this he ordered his general La Gardie to acquaint the Polish commander Cudekowitz, that as the truce between the two kingdoms, which had been concluded for two years, was now expired, he desired to be certainly informed whether he was to expect peace or war from his master.

Immediately after this, Gustavus made a tour in disguise through Germany, and married Eleonora the daughter of the elector of Brandenburg. He then set sail for Riga with a great fleet, which carried 20,000 men. Riga was besieged and taken; the poles defeated, and several provinces taken; events which occupied Gustavus till the year 1629, when the Poles were to consent to a truce for six years. Gustavus kept the port and citadel of Memel, the harbour of Pillau, the town of Elbing, Brunsberg, and all that he had conquered in Livonia.

Gustavus having thus brought the war with Poland to an honourable conclusion, began to think of resenting the conduct of the emperor in assisting his enemies and oppressing the Protestant states. Before embarking in such an important undertaking, it was necessary that he should consult the diet. In this the propriety of engaging in a war with Germany was warmly debated; but, after much altercation, Gus-

tavus in a very noble speech determined the matter, and set forth in such strong terms the virtuous motives by which he was actuated, that every thing was granted which he could require.

A sanguinary series of battles, managed by the Swedish king, with consummate address took place, and in these, in various successes and defeats, and in the siege and capture of many of the finest towns in Germany, the time was consumed, until the year 1633, when Gustavus was killed at the battle of Lutzen, and the crown devolved on Christiana, daughter of Gustavus, an infant of six years old; the nation was engaged in an expensive foreign war, without any person equal to the arduous task of commanding the armies, or regulating domestic affairs. Christiana was immediately proclaimed queen. The regency devolved on the grand bailiff, the marischal, the high admiral, the chancellor, and the treasurer of the crown. And Oxtenstiern was invested with the chief management of affairs.

The chief that employed Christiana while she was upon the throne, was the peace of Westphalia, in which many clashing interests were to be reconciled, and many claims to be ascertained. It was concluded in the month of October, 1648. The success of the Swedish arms rendered Christiana the arbitress of this treaty; at least as to the affairs of Sweden, to which this peace confirmed the possession of many important countries. No public event of importance took place during the rest of Christiana's reign; for there were neither wars abroad, nor troubles at home. This quiet might be the effect of chance; but it might also be the effect of a good administration, and the great reputation of the queen; and the love her people had for her ought to lead us to this determination. Her reign was that of learning and genius; and she drew about her, wherever she was, all the distinguished characters of her time.

Charles Gustavus, Count Palatine, having gained the favour of Christiana, was appointed generalissimo of the forces, and heir-apparent to the crown. A marriage was proposed between them; but the queen would never listen to this or any other proposal of the kind. In 1650, the ceremony of the queen's coronation was performed; but in four years after, she resigned the crown in favour of Gustavus.

The new king found himself involved in considerable difficulties on his accession to the throne. The treasury was quite exhausted; great part of the revenue was appointed for the support of Christiana's household; the people were oppressed with taxes; and the nation having been disarmed for several years, began to lose its reputation among foreigners. To remedy these evils, Charles proposed to resume all the crown-lands which had been alienated by grants to favourites during the late reign; to repeal a duty which had been laid on salt; to put the kingdom in a posture of defence; and to enter on a war with some neighbouring state. Under a pretence that Casimir king of Poland had questioned his title to the throne, he prepared to invade that kingdom. The Poles were defeated, and the kingdom reduced.

In 1656, a war took place with the elector of Brandenburg. While Charles was employed in the conquest of Poland, that prince had invaded Royal and Ducal Prussia, and reduced the most considerable towns with little opposition. The kind of Sweden took umbrage at his progress; and having marched against him, defeated his forces in several slight encounters, and obliged him to acknowledge himself a vassal of Sweden. These rapid conquests alarmed all Europe; and the Poles were no sooner assured that they should be assisted by foreign powers, than they every where revolted and massacred the Swedes. Charles immediately marched from Prussia to chastise the insolence of the Poles, and totally defeated a body of 12,000 men. This did not hinder all the Poles incorporated with his troops to desert; which considerably reduced his army; and the campaign being performed in the depth of winter, he was at last obliged to retreat to Prussia. In his march he was harassed by the Poles; and a body of 4000 Swedes was surprised and defeated by them at Warka. This loss, however, was soon after recompensed by a complete victory gained by Adolphus the king's brother, and General Wrangel.

Charles now gained over the elector of Brandenburg, by ceding to him the sovereignty of Prussia, that he might be at liberty to turn his whole strength against Poland; but the elector had so procrastinated matters, that the Poles having obtained assistance from the Tartars, had reduced the city of Warsaw. The Poles and Tartars were defeated with great slaughter. A more formidable enemy than the Poles now began to make their appearance. The Russians invaded the provinces of Carelia, Ingermania, and Livonia; they were repulsed in the provinces of Carelia and Ingermania; but in Livonia they had better success. For seven months, however, they battered the walls of Riga, without venturing to pass the ditch or storm the practicable breaches.

The king of Hungary, the Turks, the town of Austria and the Danes united the Poles in attacking Charles. After many brilliant and successful campaigns, he died of an epidemic fever, and was succeeded by his son Charles XI. in 1660.

The new king was a minor at the time of his father's death; and as the kingdom was involved in a dangerous war with so many enemies, the regency determined to conclude a peace, if it could be obtained on reasonable terms. A treaty was accordingly concluded at Oliva; and during the minority of the king, nothing remarkable occurs in the history of Sweden. In 1672, he entered into alliance with Louis XIV., which two years after involved him in a war with the elector of Brandenburg; and from this time the Swedes continued to fight with various success, during his reign. When he made peace with Denmark, a marriage took place between Charles and Ulrica Eleonora, daughter to the king of Denmark. From this time the Swedish monarch applied himself to the reformation of the state; and by artfully managing the disputes between the nobility and peasants he obtained a decree empowering him to alter the constitution as he pleased.

On the 15th of April, 1697, died Charles XI., leaving his crown to his son, the celebrated Charles XII., at that time a minor. On his accession he found himself under the tuition of his grandmother Eleonora, who had governed the kingdom during the minority of the late king. Though Charles was at that time only 15 years of age, he showed a desire of taking the government into his own hands; and was invested with absolute authority in three days after he had expressed his desire. He was scarcely seated on the throne when a powerful combination was formed against him. Augustus, king of Poland, formed designs on Livonia; the king of Denmark revived the disputes he had with the duke of Holstein, as a prelude to a war with Sweden, and Peter the Great of Russia began to form designs on Ingria, formerly a province of Russia. In 1699, the king of Denmark marched an army into Holstein. Charles sent a considerable body of troops to the duke's assistance; but before their arrival the Danes had ravaged the country, taken the castle of Gottorp, and laid close siege to Tonningen. Here the king of Denmark commanded in person; and was assisted by the troops of Saxony, Brandenburg, Wolfenbuttle, and Hesse Cassel. England and Holland, as guarantees of the last treaty with Denmark, in concert with Sweden, joined Charles against this confederacy, and sent fleets to the Baltic.

In the year 1700, Charles, having entrusted the affairs of the nation with a council chosen out of the senate, set out on the 8th May from his capital, to which he never afterwards returned. He embarked at Carlsroon, and defeated the fleet of the allies. Having made a descent on the island of Zealand, he defeated a body of cavalry that opposed his march, and then proceeded to invest Copenhagen by sea and land, and obliged the Danes to make peace; then he marched against the Russians. The contest that ensued between Charles and Peter, with the celebrated battles of Narva and Pultava, have been already related under RUSSIA, so that we shall here confine ourselves chiefly to those events in which Peter the Great was not immediately concerned.

In 1701, as early as the season permitted, Charles, having received a reinforcement from Sweden, marched against the Saxons, and entirely defeated them. He then formed a scheme for dethroning Augustus; and in 1704, this king was formally

formally deposed by the diet, and the crown conferred by Charles on Stanislaus Leczinsky palatine of Posnania. Augustus, however, did not yet tamely give up his kingdom. His adherents daily skirmished with the Swedes, and, assisted by the Russians, continued for a long time a desultory war.

After his defeat at Pultava by the Russians, Charles fled in a mean calash, attended by a little troop inviolably attached to his person, some on foot, and some on horseback. In the Turkish dominions he was treated with hospitality; but Augustus recovered the kingdom of Poland, and the Danes invaded Sweden; the latter were, however, repulsed. In the mean time, Charles succeeded in procuring a rupture between the Porte and Russia. In 1711, the grand signior gave orders to the vizir to fall on the Russians with an army of 200,000 men. The vizir promised obedience; but at the same time professed his ignorance in the art of war, and dislike to the expedition. The khan of Crim Tartary, who had been gained over by the reputation and presents of the king of Sweden, had orders to take the field with 40,000 of his men, and had the liberty of assembling his army at Bender, that Charles might see that the war was undertaken on his account. The little success of these wars has been stated in the article *RUSSIA*.

The treaty of the Pruth was most violently opposed by Count Poniatoffski and the khan of Tartary. The former had made the king acquainted with the situation of both armies; on which he instantly set out from Bender, filled with the hopes of fighting the Russians, and taking ample vengeance. Having ridden 50 leagues post, he arrived at the camp, just as the czar was drawing off his half-famished troops. He alighted at Poniatoffski's tent; and being informed of particulars, instantly flew in a rage to the vizir, whom he loaded with reproaches, and accused of treachery. The violent behaviour of Charles did not promote his interest. The vizir perceived that his stay in Turkey might prove fatal to himself; and therefore determined to get him out of the country as soon as possible. Succeeding vizirs adopted the same plan; and at last the grand signior himself, wrote a letter to Charles, in which he desired him to depart by next winter, promising to supply him with a sufficient guard, with money, and every thing else necessary for his journey. Charles gave an evasive answer, and determined to procrastinate his journey, as well to gratify his own stubborn temper, as because he discovered a correspondence between Augustus and the khan of Tartary, the object of which, he had reason to believe, was to betray him to the Saxons. When he was again pressed to fix the day of his departure, he replied, that he could not think of going before his debts were paid. Being asked how much was necessary for this purpose, he replied 1000 purses. He obtained twelve hundred purses, and then demanded 1000 purses more before he would set out. It was now unanimously agreed that such a troublesome guest ought to be removed by force, should other means fail. Positive orders were therefore sent to Charles to depart; and in case of refusal to attack him in his quarters. Nothing could equal his obstinacy on this occasion: in spite of the menaces of his enemies, in spite of the entreaties of his friends, he persisted in his resolution; and at last determined to resist, with 300 Swedes, being all the attendants he had, an army of 20,000 janissaries well armed and furnished with cannon. At length he was attacked in earnest. Most of the Swedes surrendered at once; but, with 40 menial servants only, and the generals Hord and Dardorff, he determined to defend himself to the last extremity. Though the house was burnt over his head, he continued to fight like a madman, but was taken prisoner at length with all his followers.

On the 14th of October, 1714, Charles set out for Sweden. This kingdom was now in the greatest distress. On the news of his defeat at Pultava, the Danes had invaded Schonen, but were defeated by general Steenboeck. This victory, however, did not put an end to the war. On the contrary, the kings of Denmark and Poland with the czar of Russia, entered into stricter bonds of amity than ever. They dreaded the return of Charles to his own dominions,

and apprehended that numberless victories would soon efface the remembrance of Pultava. They determined, therefore, to make the best use of their time; and perhaps Charles never took a more imprudent resolution than obstinately to remain so long in the Turkish dominions. The return of Charles seemed to give new life to the whole nation. Though the number of inhabitants was visibly diminished, the levies he had ordered were completed in a few weeks; but the hands left to cultivate the earth consisted of the infirm, aged, and decrepid; so that a famine was threatened in consequence of the military rage which had seized all the youth of the kingdom.

The presence of Charles did not now produce those consequences which the allies had feared. And though the king's courage and military skill were not in the least diminished, the efforts he made, instead of restoring Sweden to its splendour, served more completely to exhaust it. In 1715, the king of Prussia declared against him, on account of his demanding back the town of Stetin, which that monarch had seized. To complete his embarrassment, the elector of Hanover, George I. of Britain, also became his enemy. The forces of Denmark, Prussia, Saxony, and Hanover, joined to invest Wismar, while a body of 36,000 men formed the siege of Stralsund; at the same time that the czar, with a fleet of 20 large ships of war, and 150 transports, carrying 30,000 men, threw every part of the Swedish coast into the greatest consternation. The heroism of Charles could not prevail against so many enemies; yet he was still so much dreaded, that the prince of Anhalt, with 12,000 brave troops, did not think himself a match for this furious enemy when at the head of only 2000, till he had entrenched his army behind a ditch, defended by chevaux-de-frize. It appeared, indeed, that his precaution was not unnecessary: for in the night Charles with his men clambered up the ditch, and attacked the enemy in his usual manner. Numbers, however, at last prevailed; and Charles was obliged to retire, after having seen his favourite Grot-husen, General Dardorff and Doring, the companions of his exile, killed by his side; he himself being wounded in the breast.

Stralsund was now besieged and taken, in spite of the utmost efforts of the king. He retreated, however, in safety.

To revenge himself for these losses, Charles invaded Norway with an army of 25,000 men. The Norwegians were every where defeated and pursued with that vigour for which the king of Sweden was so remarkable; but strong reinforcements arriving from Denmark, and provisions failing, he was at last obliged to retire. He returned, however, the next year, and with 18,000 men he formed the siege of Frederickshall, though the severity of the frost rendered it almost impossible to break ground. Charles resolved to form trenches; and his soldiers cheerfully obeyed, digging into ground with the same labour as if they had been piercing a rock. On the 11th of December the king visited the trenches in the midst of a terrible fire from the enemy, imagining that his men might be animated by his presence. He took his post in a most dangerous station, whence he was entreated to retire; but he remained obstinate. At last he was seen to fall on the parapet with a deep groan, and soon afterwards expired, having been mortally wounded by a cannon ball.

Charles XII. was succeeded in 1717 by his sister the princess Ulrica Elconora, wife to the hereditary prince of Hesse. On this occasion the states took care to make a previous stipulation for the preservation of their liberties, and obliged the princess to sign a paper to this purpose before entering on the government. Their first care was to make a peace with Great Britain, which the late king intended to have invaded. The Swedes then, to prevent their farther losses by the progress of the Russian, the Danish, the Saxon, and other arms, made many great sacrifices to obtain peace from those powers. The French, however, about the year 1738, formed a dangerous party in the kingdom, which not only broke its internal quiet, but led it into a ruinous war with Russia, by which it lost the province of Finland.

Their

GUSTAVUS IV.

Engraved for the Encyclopædia Londinensis, 1827.

Their Swedish majesties having no children, it was necessary to settle the succession; especially as the duke of Holstein was descended from the queen's eldest sister, and was, at the same time, the presumptive heir to the empire of Russia. Four competitors appeared; the duke of Holstein Gottorp, Prince Frederic of Hesse-Cassel, nephew to the king, the prince of Denmark, and the duke of Deux-Ponts. The duke of Holstein would have carried the election, had he not embraced the Greek religion, that he might mount the throne of Russia. The tzarina interposed, and offered to restore all the conquests she had made from Sweden, excepting a small district in Finland, if the Swedes would receive the duke of Holstein's uncle, Adolphus Frederic bishop of Lubec, as their hereditary prince and successor to their crown. This was agreed to; and a peace concluded at Abo, under the mediation of his Britannic majesty. Adolphus died dispirited in 1771, after a turbulent reign of twenty years; and was succeeded by his son Gustavus. The most remarkable transaction of this reign is the revolution which took place in the government in the year 1772, by which the king, from being the most limited became one of the most despotic monarchs in Europe. Ever since the death of Charles XII., the whole power of the kingdom had been lodged in the states; and this power they are said to have abused. Gustavus therefore determined either to seize on that power of which they made such a bad use, or perish in the attempt. The revolution was effected in the following manner. On the morning of the 19th of August, 1772, a considerable number of officers, as well as other persons known to be attached to the royal cause, had been summoned to attend his majesty. At the moment when one detachment which was to mount guard was drawn up, together with that which was to be relieved, his majesty addressed them with all that eloquence of which he is said to have been a perfect master. All the officers but three, and all the soldiers but one, answered him with loud acclamations. The senators were now immediately secured, and the new constitution proclaimed.

The power thus obtained was employed by the king for the good of his subjects. He took care that the law should be administered with impartiality to the richest noble and the poorest peasant, making a severe example of such judges as were proved to have made justice venal. He gave particular attention and encouragement to commerce, was a liberal and enlightened patron of learning and science, and laboured strenuously to introduce into his kingdom the most valuable improvements in agriculture that had been made in foreign countries.

But while thus active in promoting the arts of peace, he was not inattentive to those of war. The fleet, which he found decayed and feeble, he in a few years restored to a respectable footing, and, besides changing the regulations of the navy, he raised a new corps of sailors, and formed them to the service by continual exercise. The army, which, as well as the navy, had been neglected during the aristocracy, was next to be reformed. The king began by giving cloaks, tents, and new arms to all the regiments. Afterwards, under the direction of Field Marshal Count de Hessenstein, a new exercise was introduced, and several camps were formed, in which the soldiery were manœuvred by the king himself. The sale of military offices, which had been permitted for many years, was entirely suppressed; and the king provided not only for the re-establishment of discipline and good order in the army, but for the future welfare of the individuals which composed it. These warlike preparations were necessary to a plan which he had formed for entirely abolishing the power of the aristocracy, and freeing Sweden from the factions which had long been formed in it by the court of St. Petersburg. The change which he had introduced was very inimical to the intrigues of that court; and the Russian ambassador exerted himself openly to bring about a rupture between the king and the discontented nobles. Gustavus ordered him to quit the kingdom in eight days, and immediately prepared for war with Russia. To

this apparently rash enterprise he was incited by the Ottoman Porte, at that time unable to oppose the armies of the two empires; and his own ambition, together with the internal state of his kingdom, powerfully concurred to make him lend every assistance to his ancient ally. It is needless for us to enter into a detail of the particulars of that war. Suffice it to say, that neither Gustavus Adolphus nor Charles XII. gave greater proofs of undaunted courage and military conduct in their long and bloody wars than were given by Gustavus III. from the end of the year 1787 to 1790, when peace was restored between the courts of St. Petersburg and Stockholm.

The king of Sweden was now at liberty to cherish again the arts of peace, and to humble the haughty spirit of the nobles. But the revolution which he effected, though calculated to promote the general good of the people, produced a conspiracy against his life, among the nobles. On the 16th of March, 1792, at a masquerade, he was surrounded by several persons in masks, one of whom fired a pistol at the back of the king, and lodged the contents in his body. On the 28th of March, a mortification was found to have taken place, and he expired on the following day.

The king had by his will appointed a council of regency; but convinced by recent experience how little dependence was to be placed on the attachment of his nobles, and aware of the necessity of a vigorous government in times of such difficulty and danger, he appointed his brother, the duke of Sudermania, sole regent, till his son, then a minor, should attain the age of 18 years. In his dying moments he desired that all the conspirators, except the perpetrator of his murder, might be pardoned.

The young king, who was about 14 at his father's death, was proclaimed by the name of Gustavus IV.

From the accession of Gustavus IV., to the end of his reign, few transactions of any importance occurred. Soon after the king had taken on himself the administration of affairs, he engaged warmly in the war against France, and till the time of his deposition, continued a most faithful ally of Britain. The efforts of the Swedish monarch towards humbling the power of Buonaparte, have been already noticed under the articles BRITAIN and FRANCE; and the war with Russia, in which his alliance with Britain had involved him, has been sufficiently touched on in the article RUSSIA. This prince seems to have been endowed with great and amiable qualities, but he was certainly rash and imprudent in a high degree, and he thus materially injured his kingdom.

The discontented nobles of Sweden found, in a temporary derangement in the mind of Gustavus, an excuse for de-throning him. His uncle, the duke of Sudermania, who had been at the head of the conspirators, was proclaimed king on the 29th of June, 1809, under the title of Charles XIII. His first measures were to convoke a general diet, and proclaim a new constitution; but as he was compelled to continue in amity with England; he was attacked by France, and by the same measure was embroiled with Russia. This powerful enemy obtained a series of advantages, which were only checked by the occasional naval exploits of the British. At length Sweden was forced to yield the governments of Kynnemegard, Nyland and Tawastland, Abo and Biorneboj, with the isles of Aland, Savolax, Carelia, Wasa Heleaboy and West Bothnia, as far as the river. So that Russia obtained during the abovementioned wars, nearly a fourth of her territory, and a sixth of her population from Sweden.

The Swedes now chose, under the title of Crown Prince, a successor for Charles XIII., but he shortly after dying, and no other competitor of equal talents and interest appearing, they raised to this high station Bernadotte, a distinguished general of Napoleon's army. Sweden soon became entirely under the direction of the Crown Prince, and he finding the people universally favourable to amity with Napoleon, since the emperor would hear of no peace without a declaration of war against England. But a forced war of this

kind was, of course, carried by neither party with vigour, and trade continued in an underhand manner between the countries. But the impatient and clear-sighted emperor of France was not to be deluded by these measures. He incessantly and vehemently urged on Bernadotte, the necessity for commencing active war, and at length marched 20,000 men into Swedish Pomerania. The Crown Prince contrived to get these forces withdrawn, but he held off, and prevaricated until, in 1813, he joined the emperor of Russia, who had taken part against Napoleon, and made peace with England. The successful issue of the war that these powers exercised against France, produced for Denmark the loss, and to Sweden the accession, of Norway.

In the year 1817, a futile attempt was made to overthrow the power of Bernadotte, by a party who favoured the son of Gustavus; but it produced no success, though the country in general, was, from misery and privation, in a disturbed state.

In the year 1818, Charles XIII. died, and Bernadotte, under the name of Charles John, ascended the throne of Sweden, and then proceeded to Norway, and was crowned sovereign of that country.

In the year 1823, the transactions which took place in the Diet, indicated a free and liberal mode of going about business, which promised much improvement. A decree was passed to give publicity to the speeches made by the Diet, and some stand was made against voting a large sum for military expenses. But it appears from the same authority, that the country was in a miserable condition, especially that occupied by the land-holders. This year the prince royal was married to the daughter of Eugene Beauharnois, and these powers were given to this potentate—two votes in the Diet, and the administration of the kingdom, in the event of the king's absence.

In the year 1824, arrangements were made with the Swedish government for facilitating the commercial intercourse between that kingdom and Great Britain. On the 24th of April, two declarations were issued at Stockholm, in which the Swedish minister stated, that having received from the English plenipotentiary the assurance of a perfect reciprocity, he declared, "That English merchant ships arriving in the ports or waters of the kingdom of Sweden, should in future be placed upon the same footing as national vessels, with respect to pilot, light-house, and tonnage dues, and, in general, with respect to all those duties which are included in the denomination of port-dues payable to the crown, of whatever description they may be." It was declared, "That English merchant ships should be equally assimilated to national vessels, with respect to salvage dues, without any restriction or difference." "And that, as Swedish commerce was already in the enjoyment of reciprocal advantages in the ports of Great Britain, the above-mentioned arrangements in favour of English commerce should be put in force in all the ports of the kingdom of Sweden, without delay, and with as much expedition as possible."

The second document equally proclaimed, "That all articles, the growth, produce, or manufacture of the kingdom of Great Britain and of its colonies, which, according to the existing regulations, might be imported into Sweden on board of Swedish vessels, may be imported into Sweden in English ships direct from the ports of Great Britain, without being subject, on their entry, to other or higher duties to the crown than if imported on board a Swedish vessel.

"That all articles, the exportation whereof was not prohibited, might be exported from the ports of the kingdom of Sweden on board of English vessels, to any place whatever, without being subject, on their export, to other or higher duties to the crown than if exported on board a Swedish vessel.

"But that, as Swedish merchant vessels did not enjoy the liberty of visiting the ports of the colonies and foreign possessions of England, it was understood that the privileges above specified were not applicable to goods imported into

the ports of Sweden, in vessels belonging to the said colonies and foreign possessions, or in vessels strictly English, coming direct from the English colonies."

The speech of the king at the closing of the Diet this year, described much improvement in the commerce of the kingdom, proclaimed the rapid progress of many internal improvements, and of a plan for a new code of civil law. Since this period no events of great or general interest have reached us. The state of Norway is much more prosperous than that of Sweden, and its superior happiness in this respect may doubtless be traced to the excellent system by which its inhabitants have contrived to have it governed.

"When the power over Norway was assumed by the Swedish monarch, its independence of Sweden was secured by resolutions of the States, or the Storting, guaranteed by the king on the 4th November, 1814. These fundamental rules decree, 1st. That only citizens of Norway, of the Lutheran religion, shall be nominated to fill any office. 2d. That Norway shall be answerable for its own national debt alone. 3d. That none shall be judged but by the law, and that torture shall not be practised. 4th. That no retrospective law shall be enacted. 5th. That no one shall be arrested, or confined, but in cases specified by the law. 6th. The liberty of the press shall not be infringed. 7th. Landed property shall not become forfeited. 8th. No nobles shall be created. 9th. Each Norwegian, without regard to rank or wealth, is bound to serve a certain time. 10th. Norway shall retain its own bank and coins. 11th. Norwegian merchant ships may carry their own national flag.

Under these stipulations, Norway is a limited hereditary monarchy, in which the executive power is vested in the king, and the legislature in the States, or Storting. The king exercises his power through a Viceroy, who resides in the royal palace at Christiania. The members of the legislature are chosen by electors, who are nominated for that purpose by those who have a right to vote. In the cities, the number of electors to be chosen is one to every fifty voters; in the country, one to every hundred votes. These electors choose the deputies for the respective districts; from five to fourteen electors choose one deputy; from fifteen to twenty-four, two deputies; from twenty-five to thirty-four, three deputies; and from thirty-five upwards, four deputies, which is the greatest number that any electoral assembly can nominate. The deputies must be thirty years of age, and have resided the last ten years within the kingdom. Whoever is chosen is bound to serve. They are free from arrest, and are paid for their time and travelling expences. The number of the representatives of the country are as two to one of those from the cities. The whole number is from 75 to 100. The servants of the crown, the members of the council, and pensioners, are ineligible. The assembly meets every third year on the first working day in February. There are two chambers, or bodies; one called the Lagthing, consisting of one-fourth the members, the other called the Odelsting, comprehending the other three-fourths. All laws must originate in the Odelsting, from its own members, or from the suggestion of the king; but the assent of the other body is required for their enactment. The forms of passing laws are complicated, but they insure great deliberation. The assembly continues its session three months, but the king may prolong it beyond that period, or call it together in the intervals of the regular assemblies. The Senate, appointed by the king, is rather an executive than a legislative body, but must consist of Norwegians."

SWEDEN, a post township of the United States, in Oxford county, Maine; 25 miles west-south-west of Paris.

SWEDEN, a township of the United States, in Genesee county, New York.

SWEDENBORG (Emanuel), the son of a Swedish bishop, was born at Stockholm in the year 1689, and educated under the tuition of his father. In 1716, Charles XII., by whom he was highly esteemed, appointed him assessor to the college of mines; and having directed his attention to physical and mathematical subjects, he published

J. Duss sc.

CHARLES JOHN I.

Engraved for the Encyclopædia Londinensis. 1827.

lished a work, entitled "Dædalus Hyperboreus," containing an account of experiments made by himself and others in mechanics and natural philosophy; and also a proposal for determining, in a new manner, the longitude of places by the moon. He also printed a treatise on algebra; and he is said to have been the first person who, in Sweden, wrote on the subject of the integral and differential calculus. His name was most deservedly enrolled among those of the members of the academies of Upsal, Stockholm, and Petersburg; and several distinguished foreigners wished to have the honour and advantage of corresponding with him. In 1743, his views were directed to subjects which he conceived to be of much higher importance than those of science. "Whatever of worldly honour and advantage," says he, "may be in these things, I hold them as matters of low estimation, compared with the honour of that holy office to which I have been called by the Lord himself, who was graciously pleased to manifest himself to me, his unworthy servant, in a personal appearance, in the year 1743; to open to me a sight of the spiritual world, and to enable me to converse with spirits and angels; and this privilege has continued with me to this day." He taught that after death a man is so little changed, that he does not know but he is still living in the present world; he eats and drinks, and enjoys conjugal delight as in this world; and so great is the resemblance between the two worlds, that in the spiritual world there are cities with palaces and houses, and also books and writings, employments and merchandize, gold, silver, and precious stones. He died in London, in the month of March, 1772; and his remains, after lying in state, were deposited in a vault at the Swedish church, in Princes square.

SWEDESBOROUGH, a post township of the United States, in Gloucester county, New Jersey, on Raccoon creek; 20 miles south-south-west of Philadelphia. It contains an Episcopal church, a woollen manufactory, and 50 or 60 houses. Raccoon creek is navigable for boats to this place.

SWE'DISH, *adj.* Respecting the Swedes.—The Icelandic is the mother of the modern *Swedish* and Danish tongues. *Percy.*

To **SWEEP**, *v. a.* pret. and part. pass. *swept*. [*ſpapan*, *ſpæopan*, Sax.] To drive away with a besom. To clean with a besom.—What woman, having ten pieces of silver, if she lose one, doth not *sweep* the house, and seek diligently till she find it? *St. Luke.*—To carry with pomp.

Let frantic Talbot triumph for a while,
And, like a peacock, *sweep* along his tail. *Shakspeare.*

To drive or carry off with celerity and violence.

Though I could,
With barefac'd power, *sweep* him from my sight,
And bid my will avouch it; yet I must not. *Shakspeare.*

To pass over with celerity and force.—Then *sweep* they the blue waves. *May.*—To rub over.

Their long descending train
With rubies edg'd, and sapphires *swept* the plain. *Dryden.*

To strike with a long stroke.
Descend, ye nine; descend and sing;
The breathing instruments inspire;
Wake into voice each silent string,
And *sweep* the sounding lyre. *Pope.*

To **SWEEP**, *v. n.* To pass with violence, tumult, or swiftness. Perhaps in the first quotation we should read *swoop*.

Haste me to know it, that I with wings as swift
As meditation or the thoughts of love,
May *sweep* to my revenge. *Shakspeare.*

To pass with pomp; to pass with an equal motion.
She *sweeps* it through the court with troops of ladies,
More like an empress than duke Humphrey's wife. *Shakspeare.*

To move with a long reach.
Nor always errs; for oft the gauntlet draws
A *sweeping* stroke along the crackling jaws. *Dryden.*

SWEEP, *s.* The act of sweeping. The compass of any violent or continued motion.

A torrent *swell'd*
With wintry tempests, that disdains all mounds,
Breaking away impetuous, and involves
Within its *sweep*, trees, houses, men. *Philips.*

Violent and general destruction.—In countries subject to great epidemical *sweeps*, men may live very long; but where the proportion of the chronical distemper is great, it is not likely to be so. *Graunt.*—Direction of any motion not rectilinear.—Having made one incision a little circularly, begin a second, bringing it with an opposite *sweep* to meet the other. *Sharp.*

SWEETPER, *s.* One that sweeps. *Barret.*
SWEET'PINGS, *s.* That which is swept away.—Should this one broomstick enter the scene, covered with dust, though the *sweepings* of the finest lady's chamber, we should despise its vanity. *Swift.*

SWEET'NET, *s.* A net that takes in a great compass.—She was a *sweepnet* for the Spanish ships, which happily fell into her net. *Camden.*

SWEET'PSTAKE, *s.* Originally perhaps a game at cards: it is now applied to the winner of the whole that is staked or wagered, and is a common phrase at horse-races, usually called *sweepstakes*.

Is't writ in your revenge,
That *sweepstake* you will draw both friend and foe,
Winner and loser? *Shakspeare.*

SWEESTAKE'S FORELAND, a cape in the straits of Magellan. Lat. 52. 40. S. long. 71. 24. W.

SWEET'PY, *adj.* Passing with great speed and violence over a great compass at once.

They rush along, the rattling woods give way,
The branches bend before their *sweepy* sway. *Dryden.*

Wavy.
Behind
The *sweepy* crest hung floating in the wind. *Pope.*

Strutting; drawn out.
Behold their swelling dugs; the *sweepy* weight
Of ewes, that sink beneath their milky freight. *Dryden.*

SWEERS ISLAND, an island on the north coast of New Holland, about 8 miles in length, at the bottom of the gulf of Carpentaria. Long. of a hill on the island, called Inspection Hill by Captain Flinders, 139. 44. 52. E. lat. 11. 8. 15. S.

SWEET, *adj.* [*ſwete*, Sax.; *soet*, Dutch. Our old word was *sute*, *sote*, or *soote*. "My prechynge was not in *sutely* styrynge wordis of manny's wisdom." Wicliffe, I Cor. ii. "On the *sote* grasse I sate me down." Chaucer, Fl. and Leaf. "They dauncen deffly, and singen *soote*." Spenser, Shep. Cal.] Pleasing to any sense.—*Sweet* expresses the pleasant perceptions of almost every sense: sugar is *sweet*, but it hath not the same sweetness as music; nor hath music the sweetness of a rose; and a *sweet* prospect differs from them all: nor yet have any of these the same sweetness as discourse, counsel, or meditation hath; yet the royal Psalmist saith of a man, we took *sweet* counsel together; and of God, my meditation of him shall be *sweet*. *Watts.*—Luscious to the taste.—This honey tasted still is ever *sweet*. *Davies.*—Fragrant to the smell.

Balm his foul head with warm distilled waters,
And burn *sweet* wood to make the lodging *sweet*. *Shakspeare.*

Melodious to the ear.—The dulcimer, all organs of *sweet* stop. *Milton.*—Beautiful to the eye.

Heav'n bless thee!
Thou hast the *sweetest* face I ever look'd on. *Shakspeare.*
Not salt.

The sails drop with rain,
Sweet waters mingle with the briny main. *Dryden.*
Not

Not sour.—Trees whose fruit is acid, last longer than those whose fruit is *sweet*. *Bacon*.—Mild; soft; gentle.

Let me report to him

Your *sweet* dependency, and you shall find
A conqueror that will pray in aid for kindness. *Shakspeare*.

Grateful; pleasing.—*Sweet* interchange of hill and valley.
Milton.—Not stale; not stinking: as, that meat is *sweet*.

SWEET, *s.* Sweetness; something pleasing.

Hail! wedded love,
Perpetual fountain of domestic *sweets*! *Milton*.

A word of endearment.

Sweet! leave me here awhile,
My spirits grow dull, and fain I would beguile
The tedious day with sleep. *Shakspeare*.

A perfume.

As in perfumes,
'Tis hard to say what scent is uppermost;
Nor this part musk or civet can we call,
Or amber, but a rich result of all:
So she was all a *sweet*. *Dryden*.

SWEET EDINBURGH'S KEYS, a cluster of islets and rocks in the Spanish Main. Lat. 14. 55. N. long. 82. 5. E.

SWEET HERB LAKE, a lake of North America. Lat. 54. 40. N. long. 99. W.

SWEET SPRINGS, a post village of the United States, in Munroe county, Virginia; 28 miles south-east of Lewisburg and 42 south-west of Warm Springs. This place is celebrated for its mineral waters, which are much resorted to
SWEET WATER CREEK, a river of the United States, in Kentucky, which runs into Bear creek.

SWEETBREAD, *s.* The pancreas of the calf.

Sweetbread and collops were with skewers prick'd
About the sides; imbibing what they deck'd. *Dryden*.

SWEETBRIAR, *s.* A fragrant shrub.—For March come violets and peach-tree in blossom, the cornelian-tree in blossom, and *sweetbriar*. *Bacon*.

SWEETBROOM *s.* An herb, *grica*.

SWEETCELESTY, A plant, *myrrhus*.

SWEETCISTUS, *s.* A shrub, called also gumcistus.

A better claim *sweet-cistus* may pretend,
Whose sweating leaves a fragrant balsam send.
Tate's Cowley.

To SWEETEN, *v. a.* To make sweet.—Give me an ounce of civet to *sweeten* my imagination. *Shakspeare*.
—To make mild or kind.—All kindnesses descend upon such a temper, as rivers of fresh waters falling into the main sea; the sea swallows them all, but is not changed or *sweetened* by them. *South*.—Devotion softens his heart, enlightens his mind, *sweetens* his temper, and makes every thing that comes from him instructive, amiable, and affecting. *Law*.—To make less painful.

Thou shalt secure her helpless sex from harms,
And she thy cares will *sweeten* with her charms. *Dryden*.

To palliate; to reconcile.—These lessons may be gilt and and *sweetened* as we order pills and potions, so as to take off the disgust of the remedy. *L'Estrange*.—To make grateful or pleasing.

I would have my love.

Angry sometimes, to *sweeten* off the rest
Of her behaviour. *B. Jonson*.

To soften; to make delicate.—Corregio has made his memory immortal, by the strength he has given to his figures and by *sweetening* his lights and shadows, and melting them into each other so happily, that they are even imperceptible. *Dryden*.

To SWEETEN, *v. n.* To grow sweet.—Where a wasp hath bitten in a grape, or any fruit, it will *sweeten* hastily *Bacon*.

SWEETENER, *s.* One that palliates; one that represents things tenderly.

But you who, till your fortune's made,
Must be a *sweetener* by your trade,
Must swear he never meant us ill. *Swift*.

That which contemperate acrimony.—Powder of crabs' eyes and claws, and burnt egg-shells, are prescribed as *sweeteners* of any sharp humours. *Temple*.

SWEETHEART, *s.* A lover or mistress.

Mistress, retire yourself
Into some covert; take your *sweethearts*
And pluck o'er your brows. *Shakspeare*.

SWEETHOPE, a township of England, in Northumberland; 11½ miles north-by-east of Hexham.

SWEETING, *s.* A sweet luscious apple.—A child will chuse a *sweeting* because it is presently fair and pleasant, and refuse a runnet, because it is then green, hard, and sour. *Ascham*.—A word of endearment.

Trip no further, pretty *sweeting*;
Journeys end in lovers meeting. *Shakspeare*.

SWEETISH, *adj.* Somewhat sweet.—They esteemed that blood pituitous naturally, which abounded with an exceeding quantity of *sweetish* chyle. *Floyer*.

SWEETISHNESS, *s.* Quality of being somewhat sweet.—Tar-water—may extract from the clay a fade *sweetishness* offensive to the palate. *Bp. Berkeley*

SWEETLY *adv.* [*preclice*, Sax.] In a sweet manner; with sweetness.

He bore his great commission in his look;
But *sweetly* temper'd awe, and soften'd all he spoke. *Dryden*.

SWEETMARJORAM. See MARJORAM.

SWEETMEAT, *s.* Delicacies made of fruits preserved with sugar.

Why all the charges of the nuptial feast,
Wine and desserts, and *sweetmeats* to digest. *Dryden*.

SWEETNESS, *s.* [*pretnjje*, Sax. Not often found in the plural.] The quality of being sweet in any of its senses; fragrance; melody; lusciousness; deliciousness; agreeableness; delightfulness; gentleness of manners; mildness of aspect.

O our lives' *sweetness!*

That we the pain of death would hourly bear,
Rather than die at once. *Shakspeare*.

Whosoever obeys the laws of Jesus, bears with the infirmities of his relatives and society, seeks with *sweetnesses* to remedy what is ill, and to prevent what it may produce, and throws water upon a spark. *Bp. Taylor*.

SWEETWILLIAM, *s.* [*armeria*, Lat.] A plant. A species of gilliflower.

Sweet-william, sops in-wine, the champion, and to these
Some lavender they put. *Drayton*.

SWEETWILLOW, *s.* Gale or Dutch myrtle.

SWEFLING, a parish of England, in Suffolk; 3 miles west-north-west of Saxmundham.

SWEINI, a village on the northern frontier of Darfur, the first at which the caravans from Cairo arrive, and where they are obliged to wait, till they receive permission from the king to proceed; 45 miles north of Cobbe.

To SWELL, *v. n.* part. pass. *swollen*, [*prellan*, Sax. *swellen*, Dutch.] To grow bigger; to grow turgid; to extend the parts.

Propitious Tyber smooth'd his watery way,
He roll'd his river back, and pois'd he stood,
A gentle *swelling* and a peaceful flood. *Dryden*.

To tumify by obstruction.

Swoll'n is his breast; his inward pains encrease,
All means are us'd, and all without success. *Dryden*.

To be exasperated.

My pity hath been balm to heal their wounds,
My mildness hath allay'd their *swelling* griefs. *Shakspeare.*

To look big.—Here he comes, *swelling* like a Turkey-cock. *Shakspeare.*—To be turgid. Used of style.

Peleus and Telephus exil'd and poor,
Forget their *swelling* and gigantic words. *Roscommon.*

To protuberate.—This iniquity shall be as a breach ready to fall *swelling* out in a high wall. *Isa.*—To rise into arrogance; to be elated.

In all things else above our humble fate,
Your equal mind yet *swells* not into state. *Dryden.*

To be inflated with anger.
The hearts of princes kiss obedience,
So much they love it; but to stubborn spirits
They *swell* and grow as terrible as storms. *Shakspeare.*

To grow upon the view.
O for a muse of fire, that would ascend
The brightest heaven of invention!
A kingdom for a stage, princes to act,
And monarchs to behold the *swelling* scene. *Shakspeare.*

It implies commonly a notion of something wrong.—Immoderate valour *swells* into a fault. *Addison.*

To SWELL, *v. a.* To cause to rise or encrease; to make tumid.

Wind, blow the earth into the sea,
Or *swell* the curled waters 'bove the main. *Shakspeare.*

To aggravate; to heighten.—It is low ebb with his accuser, when such peccadillos are put to *swell* the charge. *Atterbury.*—To raise to arrogance.

The king of men, who *swoln* with pride,
Refus'd his presents, and his prayers deny'd. *Dryden.*

SWELL, *s.* Extension of bulk.

The swan's down feather,
That stands upon the *swell* at full of tide,
And neither way inclines. *Shakspeare.*

The fluctuating motion of the sea, after the expiration of a storm; also, the surf.

SWELL, a parish of England, in Somersetshire; 4 miles west-south-west of Langport.

SWELL, LOWER and UPPER, two adjoining parishes of England, in Gloucestershire; 1½ mile west-by-north of Stow-on-the-Wold.

SWELLING, *s.* Morbid tumour.—There is not a chronic disease that more frequently introduces the distemper I am discoursing of, than strumous or serophulous *swellings* or ulcers. *Blackmore.*—Protuberance; prominence.—The superficies of such plates are not even, but have many cavities and *swellings*, which, how shallow soever, do a little vary the thickness of the plate. *Newton.*—Effort for a vent.—My heart was torn in pieces to see the husband suppressing and keeping down the *swellings* of his grief. *Tatler.*

To SWELT, *v. n.* To break out in sweat, if that be the meaning. *Dr. Johnson.*—I rather take it for a poetical variation of *swelled*. *Mason.*—With huge impatience he inly *swelt*. *Spenser.*

To SWELT, *v. n.* [ʃwɛltən, Sax. *to die*; *swiltan*, Goth.] To faint; to swoon. *Still a northern expression.*—We that made his heart to *swelt*. *Chaucer.*

To SWELT, *v. a.* To overpower as with heat; to cause to faint. This, according to Mr. Pegge, is at present a Derbyshire term.—Is the sun to be blamed that the traveller's cloak *swelts* him with heat? *Bp. Hall.*

To SWE'LTR, *v. n.* To be pained with heat.

If the sun's excessive heat
Makes our bodies *swelter*,

To an osier hedge we get
For a friendly shelter;

There we may
Think and pray,
Before death

Stops our breath.

Chalkhill.

VOL. XXIII. No. 1608.

To SWE'LTR, *v. a.* To parch or dry up with heat.—Some would always have long nights and short days; others again long days and short nights; one climate would be scorched and *sweltered* with everlasting dog-days, while an eternal December blasted another. *Bentley.*

SWE'LTRY, *adj.* Suffocating with heat.

SWEPSTER, a parish of England, in Leicestershire; 4½ miles south-by-east of Ashby-de-la-Zouch. Population 520.

SWEPT. The participle and preterite of *sweep*.

SWERD, *s.* See SWARD.

To SWERD, *v. n.* See To SWARD.

SWERTIA [so named by Linnæus, in honour of Eman Swert, a cultivator of bulbs and flowers in Holland], in Botany, a genus of the class pentandria, order digynia, natural order of rotacæ, gentianæ (*Juss.*)—Generic Character:—Calyx: perianth five-parted, flat, permanent; segments lanceolate. Corolla, one-petalled, wheel-shaped; border flat, five-parted; segments lanceolate, bigger than the calyx, with the claws connected. Nectaries ten, as it were two dots in the base of each segment of the corolla within, excavated, girt with small erect bristles. Stamina: filaments five, awl-shaped, from erect spreading, shorter than the corolla. Anthers incumbent. Pistil: germ ovate-oblong. Style none. Stigmas two, simple. Pericarp: capsule round, acuminate at both ends, one-celled, two-valved. Seeds numerous, small, fastened to the suture of the capsule. There are species with four-cleft flowers. The nectaries in one species project beneath in horns. *Essential Character.*—Corolla, wheel-shaped. Nectariferous pores at the base of the segments of the corolla. Caps, one-celled, two-valved.

1. *Swertia perennis*, marsh *swertia*, or *felwort*.—Corollas five-cleft; peduncles four-cornered, awl-shaped; stem undivided; root-leaves oval. This is a handsome plant, with a perennial root composed of long whitish fibres.—Native of Germany, Austria, Switzerland, France and Siberia, in alpine bogs. It is a doubtful native of Britain.

2. *Swertia difformis*.—Corollas five-cleft, the terminating one, six-cleft; peduncles, very long; leaves linear. The flowers are white.—Native of Virginia.

3. *Swertia decumbens*.—Corollas five-parted; leaves linear lanceolate; nectaries ten, bristly.—Native of Arabia Felix.

4. *Swertia corniculata*.—Corollas four-cleft, four-horned.—Native of Siberia, where, for its grateful bitterness, it is received among the domestic remedies of the inhabitants.

5. *Swertia dichotoma*.—Corollas four-cleft, hornless, peduncles nodding; leaves elliptic; stem branched.—Native of eastern Siberia: it flowers in August; the preceding in July.

6. *Swertia tetrapetala*.—Corollas four-cleft, hornless; peduncles erect; leaves lanceolate; stem simple.—Native of Kamtschatka.

To SWERVE, *v. n.* [*swerven*, Saxon and Dutch.] To wander; to rove.

The *swerving* vines on the tall elm prevail,
Unhurt by southern showers or northern hail. *Dryden.*

To deviate; to depart from rule, custom, or duty.

Were I the fairest youth
That ever made the eye *swerve*. *Shakspeare.*

To ply; to bend.
Now their mightiest quell'd, the battle *swerv'd*
With many an inroad gor'd. *Milton.*

To climb on a narrow body.
She fled, returning by the way she went,
And *swerv'd* along her bow with swift ascent. *Dryden.*

SWERVING, *s.* The act of departing from rule, custom, or duty.—Annihilation in the course of nature, defect, and *swerving* in the creature, would immediately follow. *Hakewill.*

SWETENHAM, a parish of England, in Cheshire, on the river Dane; 5 miles north-west of Congleton.

SWETOE, or DESWETOE, a small island in the Caspian sea, distinguished by the production of naphtha, which the inhabitants convey from the springs by means of troughs; 25 miles east of Baku.

SWEVEN, *s.* [ꝛꝛeꝛen, Sax.] A dream. *Obsolete.*—Nothing but vanities in *sweven* is. *Chaucer.*

SWIECZECZOW. See SCHWETZKO.

SWIETEN (Gerard Van), Baron, first physician to their imperial majesties at Vienna, was born at Leyden, on the 7th of May, 1700. He was descended of an ancient and reputable family of the Low Countries, but lost his parents at an early age, in consequence of which his early education was said to have been somewhat neglected. Having passed through the usual grammatical studies, he was sent at the age of sixteen to the university of Louvain, where he was soon distinguished by his industry and superior attainments in the philosophical classes. Determining, however, upon following the profession of medicine, he returned to Leyden, where he became a most zealous and favourite pupil of the illustrious Boerhaave. After seven years of study under this great master, he took the degree of doctor in 1725, and he was soon after appointed to a medical professorship, which he occupied for many years with great distinction. To his lectures, as well as to those of his celebrated colleague, the medical students of Germany, France, and England, resorted in crowds.

His constitution began to fail about the year 1769, and after three years of declining energy, he was attacked with a mortification in one of his toes in June, 1772, which terminated fatally, after he had prepared for death by an exemplary performance of all acts of devotion.

The great work, upon which the reputation of baron Van Swieten is built, is his copious and learned commentaries upon the aphorisms of his respected master; it is entitled "Commentaria in Hermanni Boerhaavii Aphorismos de cognoscendis et curandis Morbis," and extended to five volumes quarto. It is a vast magazine of medical practice and pathological research, the result of the author's extensive reading and of his personal experience: the immense mass of well-selected and well-arranged facts which it contains, and the judicious summary of the knowledge of the best ancient writers, as well as of his own time which it presents, renders it a work of great value.

SWIETENIA [so named by Jacquin, in honour of the illustrious Gerard, Van Swieten, Archiater to Maria Tercsa, Empress of Germany, who at his persuasion founded the botanic garden at Vienna], in Botany, a genus of the class decandria, order monogynia, natural order of trihilatæ, melie (*Juss.*)—Generic Character:—Calyx: perianth one-leafed; five-cleft, obtuse, very small, deciduous. Corolla: petals five, obovate, obtuse, concave, spreading; nectary one-leafed, cylindrical, length of the petals; mouth ten-toothed. Stamina: filaments ten, very small, inserted below the teeth of the nectary. Anthers oblong, erect. Pistil: germ ovate. Style awl-shaped, erect, length of the nectary. Stigma headed, flat. Pericarp: capsule ovate, large, woody, one-celled; at the top five-celled, five-valved; valves opening at the base. Seeds very many, imbricate, compressed, oblong, obtuse, having a leafy wing. Receptacle large, five-cornered. It is allied to *Cedrela* by the fruit.—*Essential Character.*—Calyx, five-cleft. Petals five. Nectary cylindrical, bearing the anthers at the mouth. Capsule five-celled; woody, opening at the base. Seeds imbricate, winged.

1. *Swietenia mahogany*, or mahogany tree.—Leaves pinnate, about four-paired; leaflets ovate-lanceolate, equal at the base; panicles axillary. The mahogany is a lofty and very branching tree, with a wide handsome head. Racemes subcorymbed, with about eight flowers in each, axillary, solitary, two inches long. Flowers small, whitish.

The mahogany tree is a native of the warmest parts of America, and grows plentifully in the islands of Cuba, Jamaica and Hispaniola; there are also many of the trees on the Bahama islands. In Cuba and Jamaica there are (or

rather were) trees of a very large size, so as to cut into planks of six feet breadth. Those on the Bahama islands are not so large; though these are frequently four feet diameter, and rise to a great height, notwithstanding they are generally found on the solid rock, where there seems to be scarcely any earth for their nourishment.

The wood which has been brought from the Bahama islands has usually passed under the name of Madeira wood. The Spaniards make great use of this wood for building ships, and it is better adapted to this purpose than most sorts of wood yet known, being very durable, resisting gun-shots, and burying the shot without splintering; nor is the worm so apt to eat this wood as that of the oak; so that for the West Indies, ships built of mahogany are preferable to any other. The excellency of this wood for all domestic purposes has been long known in England; and it is a matter of surprise that for a long time the only author who had noticed this tree was Mr. Catesby.

2. *Swietenia febrifuga*.—Leaves pinnate, about four-paired; leaflets elliptic-roundish emarginate, unequal at the base; panicle terminating, divaricate. This is a very large tree, with a straight trunk, rising to a great height and thickness, and covered with a gray, scabrous, cracked bark. Branches numerous; the lower spreading, the higher ascending, forming a very large shady head. Peduncles and pedicels round and smooth. Bractes very minute.—Native of the mountainous parts of Rajahmundry Cicar, north of Samulcotah and Peddapore. It flowers about the end of the cold, or beginning of the hot season; and the seeds ripen in three or four months after. The wood is of a dull red colour, remarkably hard and heavy; it is reckoned by the natives the most durable wood they know, and on that account is used for all the wood work in their temples; it is also very serviceable for various other purposes.

3. *Swietenia chloroxylon*.—Leaves pinnate, many-paired; leaflets halved-cordate obtuse; panicle terminating, spreading. This is a middle-sized tree, with the trunk tolerably erect; supporting a large spreading, evergreen, shady head: bark pretty smooth, of a dark rust-colour.—Native of the mountainous parts of the Circars; flowering at the beginning of the hot season. The wood of this tree is of a deep yellow colour, remarkably close-grained, heavy and durable: it is used for various economical purposes, and comes nearer to box wood than any other in that country. It is the Billoo of the Telingas.

Propagation and Culture.—In the West Indies this tree grows to a large size in a few years. The manner of their propagation in the Bahama islands, as described by Mr. Catesby, is as follows:—When the fruit is ripe, the outer hard shell separates next the foot-stalk, and thereby exposes the seeds; which being broad and light, are dispersed on the surface of the rocks. Such of them as happen to fall into the fissures, very soon send forth roots, and if these tender fibres meet with resistance from the hardness of the rock, they creep along the surface, and seek another fissure, into which they creep, and swell so as to break the rock, and thereby make way for the root to penetrate deeper.

Sow the seeds in small pots filled with light sandy earth, and plunge them into a hot-bed of tanner's bark, giving them a gentle watering once a week; if the seeds are good, the plants will appear in a month or five weeks, and when they are two inches high, fill a sufficient number of small pots with light earth, and plunge them into the tan-bed a day or two, that the earth may be warmed before the plants are put into the pots; then shake out the young plants, carefully separating them so as not to tear their roots, and plant each singly in the pots, shading them till they have taken fresh root: after which treat them in the same manner as directed for other plants from the West Indies; being careful not to give them much water, especially in winter; as also when they are shifted, to preserve the earth about their roots.

SWIFT, *adj.* [ꝛꝛꝛꝛꝛ, Sax.; *swipan*, Icel.; *citò agere*. *Serenius.*

Serenius. The Sax. *ppipan* means the same.] Moving far in a short time; quick; fleet; speedy; nimble; rapid.

Thou art so far before,
That *swiftest* wing of recompence is slow
To overtake thee.

Shakspeare.

Ready; prompt.—To mischief *swift.* *Milton.*

SWIFT, *s.* The current of a stream.—He can live in the strongest *swifts* of the water. *Walton.*

SWIFT, *s.* [from the quickness of their flight; *apus.*] A bird like a swallow; a martin.—*Swifts* and swallows have remarkably short legs, and their toes grasp any thing very strongly. *Derham.*

SWIFT (Jonathan), the celebrated Dean of St. Patrick's, was descended from the younger branch of an ancient family in Yorkshire, of no small note and considerable property. His grandfather, Thomas Swift, was a clergyman, possessed of a good estate near Ross, in Herefordshire, but by his sufferings in the cause of Charles I., his fortune was ruined. He had ten sons, one of whom, named Jonathan, married Abigail Erick, a lady of good family in Leicestershire, with little or no fortune. He died young, about two years after his marriage, seven months before the birth of his only son, the subject of this article, and left his widow in very distressed circumstances. Being kindly invited by her husband's eldest brother, Godwin, she removed to his house in Dublin, where her son Jonathan was born on the 30th of November, 1667. When he was but a year old, he was carried away by his nurse, without the knowledge of his mother or kindred, to Whitehaven, whither she went to visit a sick relation, from whom she expected a legacy; and here he continued for almost three years, his nurse taking care of him, and teaching him to spell, so that he could read any chapter in the Bible before he was five years old. At the age of six he was sent to the school of Kilkenny, founded and endowed by the Ormond family; and at the age of fourteen he was admitted into the university of Dublin, where the expense of his education was defrayed by his uncle Godwin Swift, the eldest of his father's brothers, who had settled in Ireland. His uncle, who impaired his fortune by expensive projects, could afford him but a small pittance; and the straightness of his circumstances restrained the efforts of his genius, and discouraged his application to those branches of literature to which his attention was directed. For mathematics, and the barbarous logic of that age, he had no taste; and as he had employed his hours of study in history and poetry, which were more suitable to his inclination, his proficiency had been so inconsiderable, that in his first examination for the degree of bachelor of arts, he was rejected, and it was at last conferred upon him "speciali gratiâ," or by favour rather than merit. In other pursuits adapted to his taste he was diligent, and employed eight hours a day in study. It was at this time, or at the age of nineteen, that he planned and partly executed his "Tale of a Tub," in which he displayed an uncommon stock of miscellaneous reading. Soon after this his uncle Godwin died; and the incompetent support he then continued to enjoy was derived from the bounty of another uncle (William), whose circumstances would not allow any very liberal contribution. A cousin, however, named Willoughby Swift, the eldest son of his uncle Godwin, who was then a considerable merchant at Lisbon, hearing of his destitute condition, sent him a supply; from this time he never knew what it was to want any thing in his purse.

Swift was now in his twenty-first year, altogether without prospect of advancement either in the church or in any secular department; without any great reputation as a scholar, from the disgraceful manner in which he obtained his degree, and with a splenetic, morose temper, occasioned, or at least aggravated, by his dependent, penurious, and distressed circumstances, and disqualifying him for making personal friends. Nevertheless, it is to these circumstances, says one of his biographers, that the world owes a "Swift;" to the want of money, want of learning, want of friends.

His poverty and his pride were the subordinate guards of his virtue at college; and hence it happened that during his residence there, no flaw was to be found in his moral character, however low his talents and attainments might be rated. In 1688, being then in his twenty-first year, Swift left Ireland, and determined to visit his mother, who had found an asylum among some of her relations in Leicestershire. His mode of travelling was that of a pedestrian, with an occasional relief in a carrier's waggon. His mother, altogether dependent, could afford him no permanent protection and assistance; but induced him to apply to the lady of Sir William Temple, who then lived in retirement at Moor Park in Surrey. Swift was kindly received, continuing with Sir William, as an inmate, at Moor Park and Sheene for two years. This circumstance greatly contributed to the prosperous events of his future life. In the company and conversation of Sir William Temple, he made considerable improvement, and was actually employed by him in the revival and correction of his works; and by him he was introduced to king William, and had repeated opportunities of intercourse with him. In the year 1692, he made a journey to Oxford, and took a master's degree. He returned to Moor Park, but finding no disposition in Sir William Temple to promote his settlement in the world, he left him in 1694, not without some tokens of displeasure. In 1695, Lord Capel, then Lord Deputy of Ireland, to whom he had been recommended, gave him the prebend of Kilroot, in the diocese of Connor, worth about 100*l.* year. A letter from Sir William himself determined him upon returning to England, and having resigned his Irish prebend, with about 80*l.* in his pocket, the whole stock which he then possessed, he embarked for England, and arrived at Moor Park in the year 1695. In this situation he remained about four years, in the greatest harmony, with tokens of mutual confidence and esteem, till the death of Sir William in 1699, who bequeathed to him a pecuniary legacy and his MSS. During this period of his life, Swift diligently prosecuted his studies, and regularly discharged his clerical functions in the family. He also became preceptor to a young lady, niece to Sir William Temple, who resided at the house; and at the same time Miss Johnson, afterwards well known by the name of "Stella," partook of the benefit of the same instruction. Miss Johnson was daughter to Sir William's steward, and being at that time about fourteen years of age, beautiful in her person, and possessed of fine talents, Swift took great delight in cultivating and forming her mind. At this time he also wrote his famous digressions, found in the "Tale of a Tub," and the "Battle of the Books," in honour of his great and learned friend. From the MSS. of Sir William Temple, Swift selected two volumes of letters, which he published, with a dedication to king William; to whom he also addressed a memorial, reminding him of the promise given by his majesty to the deceased, that the first vacant prebend of Canterbury or of Westminster should be conferred on himself; but no farther notice of him was ever taken by the king. Failing in his expectations from this quarter, he accepted an invitation from the Earl of Berkeley, appointed one of the lords-justices in Ireland, to accompany him in the quality of chaplain and private secretary. Upon their arrival at Dublin, the earl was persuaded to take a lay secretary; and as his lordship intended to present his chaplain to the deanery of Derry, just become vacant, Swift was again disappointed by an application which secured that preferment to another person: so that he was put off with the livings of Laracor and Rathbeggin, in the diocese of Meath, which conjunctly were not of half or one-third the value of the deanery. The effect of these disappointments was the increase of that irascibility and misanthropy, which are so strongly marked in Swift's writings, and in his general conduct. Swift continued in the family of Berkeley during that nobleman's stay in Ireland; and it was at this time that his true humorous vein in poetry began to display itself, in several little pieces, written for the private entertainment of the earl's family. After Lord Berkeley's removal from Ireland,

Ireland, Swift went to reside on his living at Laracor; where he continued for some time in the strict and constant discharge of his duty, occasionally diverging into strains of humour. Soon after his settlement at Laracor, Swift invited "Stella" to Ireland, and she came, accompanied by another lady of the name of Dingley, who was related to the family of the Temples. These ladies occasionally resided in the parsonage-house when Swift was absent; but they were never known to lodge in the same house, nor to see each other without a witness. This mysterious connection lasted till her death, and he usually celebrated her birth-day by verses, exhibiting almost the only strokes of tenderness that have ever fallen from his pen. Ambition now took full possession of his mind; and under the influence of this passion, he abandoned the duties of his parish, and the charming conversation of the amiable Stella, in hope of finding some favourable opportunity of distinguishing himself and pushing his fortune in the world. In 1701, being in his thirty-fourth year, he published his first political tract, without his name, entitled, "A Discourse of the Contests and Dissentions in Athens and Rome," the main scope of which seems to have been to bring discredit upon the impeachments then carrying on by the House of Commons against some of the whig-leaders, to which party Swift was then attached. Upon the accession of queen Anne, whom Swift found upon the throne in his next visit to London, his friends were in power, and he had gratified them by the before-mentioned publication. He declined, however, all overtures made to him by the heads of the whiggish party, and after some time determined to have no concern in their affairs. For several years he kept himself neutral, and abstained from meddling in politics. Finding that he could be of no use in his political capacity, he turned his attention to other matters; residing on his living for the greatest part of the year, performing his parochial duties, and hardly ever employed his pen, except in writing sermons. In 1703, however, he published his "Meditation on a Broomstick," for which he was much censured on account of the ridicule contained in it of the style and manner of so great and pious a man as Mr. Boyle, though it has been said that it was not his intention to ridicule Mr. Boyle, but merely to furnish occasion for much innocent mirth on lady Berkeley's enthusiasm and simplicity of heart, and to exonerate himself from the task of reading to her writings, which were not at all suited to his taste. In the same year he also published the "Critical Essay on the Faculties of the Mind." In 1704 he published, anonymously, the "Tale of a Tub," known to be his composition, though never avowed by him, a work which learned judges have pronounced to be rather indecorous than irreligious. The "Battle of the Books," printed with the former, is a burlesque composition of ancient and modern authors, to the disadvantage of the latter. The prominent object of ridicule is Dryden; but this poet was of too high a class to be permanently injured by Swift's wit. In 1708 he appeared as a professed author, by the publication of four different works. The first of these, entitled, "The Sentiments of a Church-of-England Man with respect to Religion and Government," appeared on a change in the ministry; and this, together with the "Letter concerning the Sacramental Test," afforded full proof of his adherence to the principles of the Tories. In his "Argument against the Abolition of Christianity," he exhibits a specimen of that talent for grave irony in which he was almost unrivalled. His other piece was a ridicule of astrology, under the title of "Predictions for the year 1708, by Isaac Bickerstaff, Esq.," the popularity of which induced Steele to borrow the name for his Tatler. In the following year he wrote a serious work entitled "A Project for the Advancement of the Christian Religion," dedicated to lady Berkeley, for whom he seems to have entertained an affectionate respect, and written (as Dr. Johnson says) with sprightliness and eloquence. Upon his return to Ireland, he cultivated an intimacy with Addison, then secretary to the earl of Wharton, lord lieutenant; but as for himself, he had no prospects of advancement, till the

Tories came into power, in 1710. In a commission on the Irish prelacy for soliciting the queen to remit to the clergy of Ireland the first-fruits and twentieths, payable to the crown, he became acquainted with Harley, afterwards earl of Oxford, and secretary St. John, afterwards lord Bolingbroke; and having gained their confidence, he became one of the sixteen members of administration and their supporters, who called themselves "brothers," and dined weekly at one-another's houses. He wrote a number of papers in the "Examiner," concerning the late administration, but, as Dr. Johnson thinks, though he exerted his powers both of argument and wit, he did not, in the latter, equal the papers in which Addison opposed him. He published at this time "A Letter to the October Club," a set of Tory country gentlemen, who wished to stimulate Harley to more vigorous measures, and his address had the effect which he proposed of preventing cabals against his party.

Deeply immersed as he was in politics, he still adhered to the cause of literature, and in 1711 published "A Proposal for correcting, improving, and ascertaining the English Tongue," in a letter to the earl of Oxford. The institution of an academy for settling the language was a part of his project. Towards the close of the year 1711, he published the most celebrated of his political tracts, called "The Conduct of the Allies." This work, which was designed to dispose the nation to peace, was much applauded, and furnished the Tory members with all their arguments in parliament. The same strain of argument was pursued in his "Reflections on the Barrier Treaty," published in the following year. He also printed "Remarks on the Bishop of Sarum's Introduction to his Third Volume of the History of the Reformation," written by Burnet to excite in the nation an alarm of popery. In these remarks, Swift indulged the rancour of his personal aversion to that prelate. It has been observed of Swift, that no man of letters ever assumed and maintained so much consequence as he did, in his association with men of power. The services he rendered them induced them to gratify his pride in this respect. When Harley once sent him by his secretary 50*l.*, he returned it with a letter of expostulation and complaint; but he afterwards accepted a draft of 1000*l.* upon the treasury, which he was prevented from receiving by the death of queen Anne. When Harley desired Swift to introduce Parnell to him, he declined doing it upon the principle, that a man of genius was superior to a man of high station; and he obliged the treasurer to walk with his staff of office from room to room, searching for Parnell, to request the honour of his acquaintance.

Swift had been long aiming at a bishopric in England; and when a vacancy occurred, he was recommended to the queen by his ministerial friends; but archbishop Sharp, having infused into her mind suspicions of his faith, he was overlooked. The highest preferment which they could bestow upon him was that of the deanery of St. Patrick's in Dublin, which he obtained in the year 1713, and which he retained for life.

In a pamphlet, published in the next year, anonymously, "The Public Spirit of the Whigs," in answer to Steele's "Crisis," he reflected so severely and contemptuously on the Scots nation, that the peers of that nation went up in a body to the queen, and demanded reparation. A proclamation was issued, offering 300*l.* for the discovery of the author, and orders were given for the prosecution of the printer; but by some management, the storm was averted. The antipathy that prevailed between Oxford and Bolingbroke in the course of this year, caused him to be sent for, in order to reconcile the contending parties; but failing in his endeavours for this purpose, he withdrew from town, and wrote "Free Thoughts on the present State of Affairs," which it was not thought advisable to print: though they have since appeared among his works. The death of the queen terminated all contests among the Tory ministers, by annihilating their power; and Swift was constrained to take up his residence in a country which he always disliked.

On his return to Dublin, his haughty imperious temper

was severely tried by the triumph of the Whigs, and the indignity with which he was treated. He, therefore, withdrew to the functions of his clerical office, and by the exercise of integrity and firmness, made many reforms, in the chapter of St. Patrick's, and obtained an authority never before possessed by any one in his station. He opened his house twice a week to good company, and extended his acquaintance among the most cultivated and respectable of both sexes. Mrs. Johnson, who had lodgings near the deanery, regulated his table on public days, though she sat at it merely as a guest. In 1716, he was privately married by Dr. Ashe, bishop of Clogher, to this lady, long known as his Stella; but before the event took place, he had formed another amorous connection, which was attended with circumstances more censurable than any other occurrence of his life. About the year 1712, he became acquainted, in London, with Miss Esther Vanhomrigh, an accomplished young lady of fortune, with a literary taste, which Swift took pleasure in cultivating by his instructions. She became enamoured of his person, and actually made proposals of marriage to him. The flame on his part seems to have been mutual, and dictated his "Cadenus and Vanessa," the longest and most finished of his poems. Although he was engaged to Stella, he had not resolution to terminate the intercourse. When absent, he corresponded with her, and she followed him to Ireland. After his marriage with Stella, he still visited Vanessa, and encouraged her hopes. Having questioned Stella whether or not she was really married, an answer was sent to her in the affirmative; and Stella sent her note to Swift, and went into the country, without seeing him. He went immediately to the house of Vanessa, threw a paper on her table with a very indignant aspect, and then left her without uttering a word. Thus their connection terminated. The shock was fatal to the lady, who died in 1723, leaving in charge to her executors to publish all the letters that had passed between Swift and herself, together with the poem of "Cadenus and Vanessa." The poem was published, but the letters were suppressed.

In 1720, the dean of St. Patrick's claimed an interest in the regard of his countrywoman, by publishing a pamphlet, entitled, "A Proposal for the universal Use of Irish Manufactures." In 1724, he resumed his political character, by exerting all his powers for defeating a scheme for supplying the currency of that country by coining a large quantity of copper money, a person named Wood, of Wolverhampton, having obtained a patent for this purpose. With this view he wrote a series of letters under the name of "M. B. Drapier," which caused the coin to be universally refused, to the great displeasure of the Irish government, which offered a large reward for the discovery of the author; but he was not betrayed.

In 1726, he published his "Gulliver's Travels," which was the product of spleen, as the author himself assured his friend Pope.

In the same year, Swift being in England, published three volumes of Miscellanies, in conjunction with Pope, to whom he relinquished the whole profits; for he seems never to have regarded his literary exertions as objects of pecuniary emolument.

On the death of George I. in 1727, Swift paid his duty to the new king and queen; he also paid his court to the favourite, Mrs. Howard; but eventually he gained nothing, and always afterwards spoke of queen Caroline with malevolence. His Stella had been long languishing in a state of decline; her complaint being probably mental, on account of her extraordinary situation, combined with her bodily malady. She died in January, 1728, bequeathing her fortune, in her own name, to charitable uses. Notwithstanding the doubts that have been thrown upon the reality of the marriage, the proof of it seems to be incontestible; his conduct with respect to both this lady and Miss Vanhomrigh fixes an indelible blot on his memory, nor can any talents he possessed, or popularity he acquired, ever efface it.

The death of Stella very much affected Swift, though he afterwards continued to vent his rancorous feelings in various

effusions, both in prose and verse, on public topics. As an Irish patriot, anxious to meliorate the condition of the poor, he distinguished himself; and with this view he devoted a third of his income to charity. The most finished and interesting of his poems, written about this time, was the "Verses on his own Death," formed on a misanthropic maxim of Rochefoucault. Having indulged his hatred and contempt of the Presbyterians in a bitter poem, in which he introduced the name of a counsellor Bettesworth, who was obnoxious to him as an active leader in the Whig party at Dublin, he was threatened with corporal retaliation; but his popularity was such, that the inhabitants of St. Patrick's district resolved to embody in his defence. In other instances he made little discrimination in the satires which he circulated; and such was the malignity of his temper, that it manifested itself in a kind of declared hostility against all mankind, a few of its own favourites excepted. At this time his most familiar associates were selected from the inferior class, and especially from among females, who were always ready to administer obsequious flattery. In 1736 his constitution sustained a shock from a severe fit of giddiness, to which, as well as deafness, he was habitually subject; so that after this period he undertook no work that required much thought or labour.

A total failure of speech for some months preceded his decease, which happened in October, 1744, in his 78th year. He bequeathed the greatest part of his property to an hospital for lunatics and idiots, the intention of which he had announced in the verses on his own death:

"To shew by one satiric touch,
No nation wanted it so much."

He was buried in St. Patrick's cathedral, under a monument, for which he wrote a Latin epitaph; one clause of which displays very forcibly the state of his own feelings; "Ubi sæva indignatio ulterius cor lacerare nequit."

"As a writer, Swift was original, and probably will always remain unparalleled. In wit, he stands first in the walk of grave irony, maintained with such an air of serious simplicity, that it would deceive any reader not aware of his drift. He also abounds in ludicrous ideas of every kind, with which his poems are abundantly interspersed, but which too often deviate into offensive grossness. His style in verse is the most perfect example of easy familiarity that the language affords; and his readiness in rhyme is astonishing, the most uncommon associations of sounds coming as it were spontaneously, in words the best adapted to the occasion. That he was capable of high polish and elegance, some of his pieces sufficiently prove; but the humorous, familiar, and sarcastic, was his habitual taste."

SWIFT, a river of England, in Leicester and Warwick shires, which runs into the Avon, above Rugby.

SWIFT, a river of the United States, in New Hampshire which runs east into the Saco, in Conway.

SWIFT'S CREEK, a river of Virginia, which runs into the Appomatox. Lat. 37. 20. N. long. 77. 37. W.

SWIFTFOOT, *adj.* Nimble.

Where now the valley greene, and mountain bare,
The river, Forrest, wood, and crystal springs,
The hauke, the hound, the hinde, the *swift-foot* hare?

Mir. for M ag

SWIFTGATE, a river of England, in Gloucestershire, which runs into the Avon below Tewkesbury.

SWIFTHEELED, *adj.* Swiftfoot; rapid; quick.

Vows are vain: no suppliant breath
Stays the speed of *swift-heel'd* death.

Habington.

SWIFTLY, *adv.* [ʃwɪft-lice, Sax.] Fleetly; rapidly; nimbly; with celerity; with velocity.

Pleas'd with the passage, we slide *swiftly* on,
And see the dangers which we cannot shun.

Dryden.

SWIFTNESS, *s.* [ʃwɪftneŋe, Sax.] Speed; nimbleness; rapidity; quickness; velocity; celerity.

Let our proportions for these wars
Be soon collected, and all things thought upon,
That may with reasonable *swiftness* add
More feathers to our wings.

Shakspeare.

To SWIG, v. n. [*swiga*, Icel. Serenius and Lye refer to this Icel. word; the latter to the Sax. *ƿilzan*, also, *to swill*.]
To drink by large draughts.

To SWIG, v. a. To suck greedily.

The flock is drain'd, the lambkins *swig* the teat,
But find no moisture, and then idly bleat.

Creech.

SWIG, s. A large draught: as, he took a good *swig*.
A low expression.

To SWILL, v. a. [*ƿilzan*, Sax.] To drink luxuriously
and grossly.

The wretched, bloody, and usurping boar,
That spoil'd your summer fields and fruitful vines,
Swills your warm blood like wash, and makes his trough
In your embowell'd bosoms.

Shakspeare.

The most common of these causes are an hereditary dis-
position, and *swilling* down great quantities of cold liquors.
Arbuthnot.

Such is the poet, fresh in pay,
The third night's profits of his play;
His morning draughts till noon can *swill*,
Among his brethren of the quill.

Swift.

To wash; to drench.
As fearfully as doth a galled rock
O'erhang and jutty his confounded base,
Swill'd with the wild and wasteful ocean.

Shakspeare.

To inebriate; to swell with plenitude.
I should be loth
To meet the rudeness and *swill'd* insolence
Of such late wassailers.

Milton.

To SWILL, v. n. To be intoxicated.—As though he
were delighted with drinking, and *swilling*, and gaming.
Whateley.

SWILL, s. Drink, grossly poured down; hogwash.—
Give swine such *swill* as you have. *Mortimer.*

Thus as they swim in mutual *swill*, the talk
Reels fast from theme to theme.

Thomson.

SWILLAND, a parish of England, in Suffolk; 6 miles
north-by-east of Ipswich.

SWILLER, s. A notorious drunkard; called also, in
our old lexicography, a *swilboat* and a *swilpot*. *Barret.*

SWILLINGS, s. Hogwash. *Cotgrave and Sherwood.*
A northern term. *Gros.*

SWILLINGTON, a parish of England, West Riding of
Yorkshire; 6 miles east-south-east of Leeds. Population 490.

SWILLY, a river of Ireland, in the county of Donegal,
which runs into the Swilly Lough.

SWILLY, a small island or rock in the South ocean,
about 13 miles south from the south cape of New Holland,
surrounded with rocks and shoals. Lat. 43. 55. S. long.
147. 6. E.

To SWIM, v. n. preterite *swam*, *swom*, or *swum*. [*ƿym-*
man, Sax.; *swemmen*, Dutch.] To float on the water; not
to sink.—I will scarce think you have *swam* in a gondola.

Shakspeare.—To move progressively in the water by the
motion of the limbs.

Leap in with me into this angry flood,
And *swim* to yonder point.

Shakspeare.

To be conveyed by the stream.—I *swom* with the tide,
and the water under me was buoyant. *Dryden.*—To glide
along with a smooth or dizzy motion.

She with pretty and with *swimming* gait
Following.

Shakspeare.

To be dizzy; to be vertiginous. See *SWIMMING*.—To
be floated.—Sudden the ditches swell, the meadows *swim*!
Thomson.—To have abundance of any quality; to flow in
any thing.

They now *swim* in joy,
Ere long to *swim* at large, and laugh; for which
The world a world of tears must weep.

Milton.

To SWIM, v. a. To pass by swimming.

Sometimes he thought to *swim* the stormy main,
By stretch of arms the distant shore to gain.

Dryden.

SWIM, s. A kind of smoothly sliding motion.—Both
the *swim* and the trip are properly mine; every body will
affirm it that has any judgment in dancing, I assure you.
B. Jonson.—The bladder of fishes by which they are sup-
ported in the water.—The braces have the nature and use of
tendons, in contracting the *swim*, and thereby transfusing
the air out of one bladder into another, or discharging it
from them both. *Grew.*

SWIMBRIDGE, a parish of England, in Devonshire.
A brook runs from hence into the Taw. Population 1150:
4 miles south-east-by-east of Barnstaple.

SWIMMER, s. One who swims.—Birds find ease in
the depth of the air as *swimmers* do in a deep water. *Brown.*
—A protuberance in the leg of a horse.—The *swimmer* is
situated in the fore legs of a horse, above the knees, and upon
the inside, and almost upon the back parts of the hind legs,
a little below the ham; this part is without hair, and re-
sembles a piece of hard dry horn. *Farrier's Dict.*

SWIMMING, s. The act of floating on the water, or of
moving progressively in the water by the motion of the
limbs. Dizziness.—I am taken with a grievous *swimming*
in my head, and such a mist before my eyes, that I can
neither hear nor see. *Dryden.*

SWIMMINGLY, adv. Smoothly; without obstruction.
A low word.—John got on the battlements, and called to
Nick, I hope the cause goes on *swimmingly*. *Arbuthnot.*

SWINBROOK, a parish of England, in Oxfordshire; 2½
miles east of Burford.

SWINBURN GREAT, a township of England, in Nor-
thumberland; 6½ miles north-by-east of Hexham. Popula-
tion 387.

SWINBURN, LITTLE, a township of England, in the
above county; 9 miles north-by-east of Hexham.

SWINCOMBE, a parish of England, in Oxfordshire; 8
miles north-west-by-north of Henley-upon-Thames.

SWINDALE, a hamlet of England, in Westmoreland;
8 miles west-north-west of Orton.

SWINDEN, a hamlet of England, West Riding of York-
shire; 8 miles south-south-east of Settle.

SWINDERBY, a parish of England, in Lincolnshire;
6½ miles south-west-by-west of Lincoln.

To SWINDLE, v. a. To cheat: to impose upon the
credulity of mankind, and thereby to defraud the unwary by
false pretences and fictitious assumptions. *A cant word.*
James.

SWINDLER, s. [from the Germ. *schwindler*.] A
sharper; a cheat.—With us, it signifies a person who is
more than thoughtless or giddy. We affix to the term the
character of premeditated imposition; so that a *swindler*
comes under the criminal code, and may be prosecuted ac-
cordingly. *James.*

SWINDON, a market town of England, in the county of
Wilts. It is a respectable town, and situated on the summit
of a considerable eminence, which commands a delightful
prospect over parts of Berkshire, and Gloucestershire. There
is no particular trade carried on here; but, as a number of
persons of independent fortune reside in the town, their con-
stant intercourse enlivens the place, while their dwellings
serve, in no small degree, to ornament it. The houses in
the town are mostly well built of stone. The church stands
at the south-east end of the town. The architecture is mean,
but the interior is neatly fitted up, and contains several monu-
mental erections, one of which, on the east side of the south
aisle, is of excellent design and exquisite workmanship. In
Newport-street is a very respectable free school, which was
established in 1764, for the instruction of 20 boys and 5
girls, and is supported entirely by voluntary contribution.
Adjoining the church-yard is a water-mill of peculiar con-
struction.

struction. Some very extensive quarries are wrought in this neighbourhood, which, together with the pursuits of husbandry, afford sufficient employment for the mass of inhabitants. The stones raised from these quarries are usually of great magnitude, and, in point of beauty and durability, scarcely yield, when cut, to the celebrated Portland Stone. Swindon house, a seat of the family of Goddard, stands at a short distance from the north side of the church-yard. It is a neat edifice. In a field at Brome, to the north of Swindon, is a stone called Long Stone, which, with several others, are supposed to be the remains of a Druidical temple. In 1811 Swindon contained 263 houses, and 1341 inhabitants.

SWINDON, a parish of England, in Gloucestershire; 2 miles north-north-west of Cheltenham.

SWINDON, a village of England, in Staffordshire, north-west of King's Swinford. Here are blade-mills, where scythes, axes, reaping-hooks, &c., after being prepared by the white-smiths, are ground to a fine edge.

SWINDON, a township of England, West Riding of Yorkshire; 6 miles west-by-south of Wetherby.

SWINE, *s.* [ʃpɪn, Sax.; *swyn*, Dutch.] A hog; a pig.—O monstrous beast! how like a *swine* he lies! *Shakespeare.*

SWINE, a parish of England, East Riding of Yorkshire; 6 miles north-north-east of Kingston-upon-Hull.

SWINEBREAD, *s.* [*cyclaminus*.] A kind of plant; truffles.

SWINEFLEET, a township of England, West Riding of Yorkshire, situated on the Ouse; 4½ miles south-by-east of Howden. Population 770.

SWINEFORD, an inconsiderable village of Ireland, in the county of Mayo; 103 miles west of Dublin castle.

SWINEGRASS, *s.* An herb.

SWINEHERD, *s.* [ʃpɪn and hɪpɔ, Sax.] A keeper of hogs.—There *swineherd*, that keepeth the hog. *Tusser.*

SWINEHOP, a parish of England, in Lincolnshire; 6½ miles south-east-by-east of Caistor.

SWINEMUNDE, a small town of the Prussian states, in Pomerania, in the isle of Usedom, at the mouth of the river Swine. It is neatly built, contains 2400 inhabitants, chiefly fishermen, pilots, and sailors, and serves as a harbour to the town of Stettin; all ships of more than 100 tons burden being obliged to discharge or lighten their cargoes here. In 1757 this place was attacked by the Swedes, and suffered considerable injury; 15 miles north-north-east of Usedom. Lat. 53. 56. N. long. 14. 12. E.

SWINEPIPE, *s.* A bird of the thrush kind. *Bailey.*

SWINESHEAD, a market town of England, in the county of Lincoln. It is a small neat town. Market on Thursday. Population in 1811, 1561; 7 miles south-west of Boston, and 109 north-east of London.

SWINESHEAD, a parish of England, in Huntingdonshire; 3 miles west-south-west of Kimbolton.

SWINESTEAD, a parish of England, in Lincolnshire; 2 miles south-east of Corby.

SWINESTY, *s.* A hogsty; a place in which swine are shut to be fed.

SWINESUND, a bay of the German ocean, which separates Norway from the province of Bahus in Sweden, and extends as far as Frederickshall. It is almost entirely surrounded by steep rocks.

SWINETHORPE, a hamlet of England, in Lincolnshire; 8 miles west-by-south of Lincoln.

SWINEYARD, a hamlet of England, in Cheshire; 7 miles north-north-west of Nether Knutsford.

SWINFEN, a hamlet of England, in Staffordshire; 2 miles south-south-east of Lichfield.

SWINFORD, a parish of England, in Leicestershire; 4 miles south-south-east of Lutterworth. Population 410.

SWINFORD, KING'S. See KING SWINFORD.

SWINFORD, OLD, a parish of England, in Worcester-shire; 1½ mile north-north-west of Hagley.

To SWING, *v. n.* [ʃpɪŋən, Sax.] To wave to and fro, hanging loosely.—Jack hath hanged himself: let us go

see how he *swings*. *Arbutnot*.—To fly backward and forward on a rope.

To SWING, *v. a.* Preterite *swang*, *swung*. To make to play loosely on a string. To whirl round in the air.

His sword prepar'd,

He *swang* about his head, and cut the winds. *Shakespeare.*

To wave loosely.

If one approach to dare his force,

He *swings* his tail, and swiftly turns him round. *Dryden.*

SWING, *s.* Motion of any thing hanging loosely.—In casting of any thing, the arms, to make a greater *swing*, are first cast backward. *Bacon*.—A line on which any thing hangs loose. Influence or power of a body put in motion.

The ram that batters down the wall,
For the great *swing* and rudeness of his poize,
They place before his hand that made the engine.

Shakespeare.

Course; unrestrained liberty; abandonment to any motive.

Take thy *swing*;

For not to take, is but the self-same thing.

Dryden.

Unrestrained tendency.—Were it not for these, civil government were not able to stand before the prevailing *swing* of corrupt nature, which would know no honesty but advantage. *South.*

To SWINGE, *v. a.* [ʃpɪŋən, Sax.] The *g* in this word, and all its derivatives, sounds as in *gem*, *giant*.] To whip; to bastinado; to punish.—Sir, I was in love with my bed; I thank you, you *swing'd* me from my love, which makes me the bolder to chide you for your's. *Shakespeare.*

—To move as a lash. *Not in use.*

He, wroth to see his kingdom fail,

Swinges the scaly horror of his folded tail.

Milton.

SWINGE, *s.* [ʃpɪŋən, Sax.] A sway: a sweep of any thing in motion. *Not in use.*

The shallow water doth her force infringe,

And renders vain her tail's impetuous *swinge*.

Waller.

SWINGEBUCKLER, *s.* A bully; a man who pretends to feats of arms.—You had not four such *swingebucklers* in all the inns of court again. *Shakespeare.*

SWINGER, *s.* One who swings; a hurler.—Holy-water *swingers*, and even song clatterers. *Bale*.—A great falsehood: a low expression.—How will he rap out presently half a dozen *swingers*, to get off cleverly! *Echard.*

SWINGFIELD, a parish of England, in Kent; 5 miles north of Folkestone.

SWINGING, *adj.* Great; huge. *A low word, but of ancient usage.*

The sea shall rock it,

'Tis the best nurse; 'twill roar and rock together.

A *swinging* storm will sing you such a lullaby.

Beaum. and Fl.

SWINGINGLY, *adv.* Vastly; greatly.

Henceforward he'll print neither pamphlets nor linen,

And, if swearing, can do't shall be *swingingly* maul'd;

Swift.

SWINGK, or ISMENE, a small town of Austrian Illyria, in the peninsula of Istria; 6 miles north-west of Mitterburg.

To SWINGLE, *v. a.* To dangle; to wave hanging. To swing in pleasure. To rough dress flax.

SWINHOE, a hamlet of England, in Northumberland; 7 miles south-east-by-east of Belford.

SWINHOLM, one of the smaller Shetland isles.

SWINISH, *adj.* Befitting swine; resembling swine; gross; brutal.

They clepe us drunkards, and with *swinish* phrase

Soil our addition.

Shakespeare.

To SWINK, *v. n.* [ʃpɪŋən, Sax.] To labour; to toil; to drudge. *Obsolete.*

Riches,

Riches, renown, and principality,
For which men *swink* and sweat incessantly.

Spenser.

To SWINK, *v. a.* To overlabour. *Obsolete.*

The labour'd ox.

In his loose traces from the furrow came,
And the *swink'd* hedger at his supper sat.

Milton.

SWINK, *s.* [ʃɪnc; Sax.] Labour; toil; drudgery.
Obsolete.

Ah, Piers, been thy teeth on edge, to think
How great sport they gaynen with little *swinke*?

Spenser.

SWINKER, *s.* A labourer; a ploughman. *Obsolete.*
—A trewe *swinker* was he. *Chaucer.*

SWINNA, a small island, about a mile long, and half a mile broad, lying nearly in the middle of the Pentland frith. It is a barren and inhospitable island, containing five or six families, who gain a livelihood by the high wages for pilotage through that dangerous strait. At each side of it are the dangerous whirlpools, called the wells of Swinna. Swinna belongs to the parochial district of South Ronaldshay and Burray.

SWINNERTON, a parish of England, in Staffordshire; 3 miles west-by-north of Stone. Population 893.

SWINSCOE, a hamlet of England, in Staffordshire; 4 miles from Ashborne.

SWINTON, a township of England, North Riding of Yorkshire; 7 miles south-west-by-south of Bedale.—Also another township in the same Riding; 2 miles north-west-by-west of New Malton.

SWINTON, a parish of Scotland, in Berwickshire, to which, in 1761, that of Simron was united. It extends 4 miles in length from east to west, and from 3 to 3½ in breadth. Population 866.

SWINTON, a township of England, West Riding of Yorkshire; 5 miles north-north-east of Rotherham. Population 846.

SWINTROP, a parish of England, in Lincolnshire; 10 miles from Louth.

SWIPES, *s.* Bad small-beer: a colloquial term.

SWIR, a river in the north of Russia, which issues from the lake Onega, and falls into the lake Ladoga. It is navigable for small vessels.

SWIRE, a parish of England, in Dorsetshire; 1 mile from the sea, and 6 south-east of Bridport.

SWISLOCZ, a small town of Russian Lithuania, in the government of Minsk; 50 miles south-east of Minsk.

SWISS, or SWITZER, *s.* A native of Switzerland.—Spinoza hath corrupted many among the *Switzers*. *Abp. Usher.*

SWISS, *adj.* Of or belonging to Switzerland.—A gentleman, hearing him talk of his *Swiss* compositions, cried out with a kind of laugh, Is our music then to receive further improvements from Switzerland? *Addison.*

SWITA, a small island in the Ionian sea, on the coast of Epirus.

SWITAWKA, a small town of the Austrian state, in Moravia, on the river Switawa; 28 miles west of Olmutz.

SWITCH, *s.* [*swaig, sweg, Su. Goth. surculus, baculus flexilis. Serenius.*] A small flexible twig.—Fetch me a dozen crabtree staves, and strong ones; these are but *switches*. *Shakspeare.*

To SWITCH, *v. a.* To lash; to jerk.

Lay thy bridle's weight

Most of thy left side; thy right horse then *switching*, all thy throat

Spent in encouragements, give him; and all the rein let float.

Chapman.

To SWITCH, *v. n.* To walk with a kind of jerk: *used in some parts of the north.*

SWITHA, one of the smaller Orkney islands. Lat. 58. 41. N. long. 2. 58. W.

SWITHE, *adv.* [ʃpīðe, Sax.] Hastily. *Obsolete.*—They sighen Marye that sche roos *swythe*, and wente out. *Wickliffe.*

SWITHLAND, a parish of England, in Leicestershire; 3 miles south-west-by-west of Mount Sorrel.

SWITZERLAND, a well known country in the interior of Europe, bounded on the west by France, on the south by Italy, on the north and east by Germany. It extends from east to west nearly 200 miles, and from north to south about 140. Its surface is equal to nearly two-thirds of that of Scotland or Ireland. Its form may be called a medium between an oblong and an oval; and though the limits of its circumference are very irregular, it is, on the whole, a compact country. It consists, since 1815, of 22 cantons, of the following extent and population:—

Cantons.	Religion.	Extent in English square miles.	Population.
Schweitz,	Catholic,	470	28,900
Uri,	Catholic,	650	14,000
Unterwalden,	Catholic,	290	21,200
Berne,	Protestant,	3,700	297,600
Zurich,	Protestant,	970	182,200
Lucerne,	Catholic,	680	86,700
Glaris,	Chiefly Protestant,	410	19,300
Zug,	Catholic,	110	15,000
Appenzel,	Mixed,	220	55,000
Schaffhausen,	Protestant,	150	30,000
Fribourg,	Catholic,	820	67,900
Solothurn,	Catholic,	220	47,900
Bale,	Protestant,	240	47,200
Grisons,	Mixed,	2,430	74,800
Vaud,	Protestant,	1,500	145,300
Ticino,	Catholic,	1,160	88,800
St. Gall,	Chiefly Protestant,	1,120	130,400
Thurgau,	Chiefly Protestant,	340	77,300
Aargau,	Mixed,	780	134,500
Neuchatel,	Protestant,	350	49,800
Valais,	Catholic,	1,970	63,600
Geneva,	Protestant,	90	36,600

18,670 1,714,000

This table exhibits the cantons in a kind of historical succession, the first three being the nucleus of the confederacy formed so early as 1308; the next five having joined them in the course of that century, and the five succeeding cantons in the beginning of the 16th century. This gave to the Helvetic confederacy the form by which it is known in history, viz., 13 cantons in alliance with several neighbouring states, viz., the Grisons, the small town and territory of St. Gall, the petty republic of Valais, and the city of Geneva; while a district on the south side of the Alps, called the Italian bailiwics, was subject to the eight old cantons. Such was the form of the territory till 1798, when the French obtaining possession of the country, and desirous to increase the number of their partizans, formed six new cantons, viz., the Pays de Vaud and the district of Aargau, which till then had been subject to Berne; the Italian bailiwics, and the district of Thurgau, governed till then by deputies from the eight elder cantons; and finally, the Grisons, with the small town and territory of St. Gall, which from allies were made direct members of the confederacy. The Italian bailiwics received the name of canton of the Ticino. The number of cantons amounting thus to 19, remained the same during the sway of Buonaparte; but after his overthrow the confederacy received the further accession of Geneva and the Valais, hitherto separate states, and of Neuchatel, formerly subject to Prussia, carrying the cantons, without any material accession of territory, to 22, their present, and in all probability their permanent number.

The towns of Switzerland, neither large nor numerous, are situated in the western or comparatively level territory: they are—

Geneva,

	Population.
Geneva	22,800
Bale	15,000
Berne	13,340
Zurich	10,500
Lausanne	10,000
St. Gall	8,200
Neufchatel	4,800
Friburg	6,500
Lucerne	5,000
Solothurn	4,200

No part of Europe presents a higher interest than Switzerland. To the admirer of nature it offers scenes of grandeur almost unrivalled; to the observer of national manners, a people of great simplicity and firmness of character; while to the statesman it displays in a striking light the salutary effects of freedom and security of property. Nowhere has the mineralogist or botanist a wider field for investigation; in no country can the poet or the painter find scenes more calculated to exalt the imagination. Yet, though so often visited by travellers, Switzerland is, in a geographical sense, imperfectly described in their works; their inspection being almost always confined to the western or more fertile part of the country. Travellers from Germany commonly enter the Swiss territory by Schaffhausen or Bale; those from France, by Neufchatel or Geneva. The tours of either are in general confined to the Pays de Vaud, the canton of Friburg, and the level part of the canton of Berne. If extended to Italy, the route is generally uniform, viz., by the valley of the Rhone and the Simplon. A more prolonged tour to the northward is sometimes made to comprise Zurich and the majestic fall of the Rhine, after issuing from the lake of Zell; but it rarely happens that travellers proceed from north to south into the central part of Switzerland, by Mount St. Gothard, through the cantons of Schweiz and Uri, the rugged birth-place of Swiss liberty; and it is still more unusual to traverse by Coire and the Splugen, the wild and sequestered country of the Grisons. The British, when proceeding along the western half of Switzerland, have high mountains in prospect to the east, the south, and in some degree the west; but they seldom see the terrific grandeur of defiles and precipices. A more difficult course is indeed opened to those who, passing the limits of Switzerland, and entering on Savoy, approach Mont Blanc, visit the glaciers, travel to the eastward along the valley of Trient, and return by the course of the Rhone and the north side of the lake of Geneva.

Face of the Country.—Switzerland, by far the most mountainous country in Europe, has the Alps not only along the whole of its southern and eastern frontier, but throughout the chief part of its interior. The only extensive track of level ground, or rather of vales, with mountains of more moderate height, being to the westward, in the cantons of Bale, Zurich, and part of Berne; but even there the extreme frontier is formed by mountains, the Jura ridge extending in a long line from north to south. Of the valleys of Switzerland, the most remarkable is that of the Rhone, which is at once the widest, and surrounded by the highest mountains. The Alps vary in height, from 5000 to 15,500 feet. After Mont Blanc, computed at 15,000 feet, comes Monte Rosa, 14,200 feet. Mount St. Gothard, the great St. Bernard, and the Simplon, though well known as the route of travellers, are not equal in height to several mountains of the interior, such as Mont Cervin, 13,800 feet; the Jungfrau-horn, the Tursteraarhorn, the Furca, Schreckhorn, each nearly 14,000 feet; the Wetter-horn and Gallenstock, between 11,000 and 12,000, &c. The Alps branch out into a number of lateral chains, and exhibit at their base, on their ascent, and towards their summit, every variety of temperature and product; rich corn fields or luxuriant pastures extending along the lower part of many of these mountains. The middle consists of pastures less productive, but containing a great variety of plants; while

the summits are often composed of rocks, craggy, inaccessible, devoid of vegetation, and covered with enormous masses of ice and snow. In some parts the transition from pasture to sterility takes place very gradually; in others it is more rapid. Here is seen a mountain whose higher ridges contain hamlets above the range of clouds, and pasturages which appear suspended in the air. There the eye perceives nothing but rocks, precipices, and accumulations of snow and ice. Every mountain has its rivulets, which dash from rock to rock, and frequently form beautiful cascades. At Staubbach, in the valley of Lauter-bronnen, in the canton of Berne, is a stream which precipitates itself over a rock of nearly 1000 feet in height. Other parts offer a transition from scenes bleak and savage, to landscapes of luxuriant verdure. Thus, on crossing Mount St. Gothard, and coming out of the dark subterraneous passage of Urnerloch, the traveller enters a valley so fresh and beautiful as to appear almost an illusion of the fancy.

Switzerland is less remarkable for its minerals than might be expected from the extent of its mountains. Iron, however, is found in several parts, particularly in the district of Sargans, in the east; and there are mines, or rather quarries of rock salt in the canton of Berne. There are mines also of silver, copper, and lead, in different parts; but they have not as yet repaid the labour of working. Marble, porphyry, alabaster, crystal, and sulphur, are occasionally found in the mountains. Of mineral waters, the most considerable are those of Leuck and Schintznach, and the warm baths of Pfeffers.

Glaciers.—The glaciers occupy the plains or hollows which separate the peaks of the highest mountains, being lakes of frozen snow accumulated to a vast height, or rather depth, and detaching, from time to time, enormous masses called avalanches, which roll down with a frightful noise. The formation of glaciers takes place near the line of perpetual congelation (about 8000 or 9000 feet above the sea) although, in a winter of unusual rigour, their ramifications extend considerably lower. Their surface, in some cases smooth and unbroken, is in others marked by deep chasms and pinnacles of ice, rising in fantastic forms, and presenting to the eye the appearance of a city of crystal, with its glittering spires, domes, and turrets. In the long Alpine range, extending along the south of Switzerland, from Mont Blanc in the west, to the extremity of Tyrol in the east, are reckoned no less than 400 of these glaciers, differing greatly, of course, in relative magnitude, but frequently extending from 16 to 18 miles in length, by 1 or 2 in breadth. Their depth can with difficulty be ascertained, but is supposed to vary from 100 to 600 feet; the total extent of their surface has been calculated at 1000 square miles. To explain the manner of their formation, their periodical increase and diminution, and to discuss the question whether their extension continues to be considerable or not, is the province of the naturalist more than of the geographer. We shall merely add, that the formation of glaciers requires such an intensity of cold, that none are found in France, or in the interior of Germany, Russia, or Spain; the only parts of Europe, except the Alps, that contain them, being a few of the most elevated tracks of the Pyrenees, and the bleakest parts of the mountains of Norway and Lapland.

Rivers.—No country is better provided with water than Switzerland, particularly in the summer, when the melting of the snow affords a copious supply, and swells the rivers generally to a third or fourth above their size in winter. The Rhone, rising in the centre of the country, holds a westerly course, flowing through a beautiful valley, and pouring into the lake of Geneva a stream which, turbid at its influx, becomes pure and transparent when issuing out of the lake. The Ticino collects the waters flowing from Mount St. Gothard and the adjoining Alps, whose aspect is towards Lombardy. The Aar, rising on the northern slope of the central Alps, receives the tribute of numberless streams flowing towards the western or more level parts of

Switzerland; while the Rhine, holding at first a north-east course, encircles a part of the cantons, flows through the lake of Constance and Zell, and receives successively the Thur, the Limmat, the Reuss, and the Aar, which, joined to its own waters, render it, ere quitting the Swiss territory, the second river in Europe.

The lakes of Switzerland are numerous: the principal are those of Geneva, Constance, Neufchatel, Bienne, Zurich, Wallenstadt, Waldstadter and Lucerne, Thun, and Brienz. Most of them are navigable, an accommodation of great importance in a country where, from the unevenness of the surface, land carriage is both difficult and expensive. On this account a number of the towns of Switzerland are situated on the side of lakes; and the mountains, rising from the shore, frequently in an amphitheatrical form, render the scenery beautiful and romantic.

Climate.—No country exhibits a greater variety of temperature than Switzerland. While the valleys, or the bases of the mountains, enjoy the warmth of an Italian sun, the ascent discovers a scanty vegetation, and the summit is doomed to all the rigours of an Icelandic winter. In the Alpine cantons it is not unusual to observe, in the higher part of a mountain, the corn little advanced towards maturity while in the low grounds the peasantry are engaged in the labours of harvest. Such a contrast is not, however, exhibited in the northern and level part of the country, where the climate differs little from that of the south of Germany. In winter, however, the degree of cold is greater even in the valleys of Switzerland, than in most parts of France or Germany, in consequence, doubtless, of the accumulation of snow and ice on the adjacent mountains. Sudden storms, particularly of hail, occur frequently, and render the culture of the vine precarious.

Agriculture.—The most striking feature of Swiss husbandry to a foreigner is the care with which a number of lofty and uninviting tracks have been cultivated. In travelling through the country, one is surprised at seeing vines and rich pasturages in spots which at one time can have been little else than naked and sterile rocks. He observes the traces of the plough on spots where, to judge from appearances, even wild animals could hardly pass without hazard. The products of Switzerland are wheat, barley, oats, maize, flax, hemp, and tobacco. The fruits of most frequent occurrence are vines, chesnuts, prunes, peaches, walnuts, cherries; in the colder situations, apples and pears; and in the southern valleys the almond and fig; the latter, however, in small quantities. Wood, both for building and fuel, is found in most parts of the country. But the stock of corn raised is considerably below the consumption of the inhabitants. An annual import is necessary, and in some rugged and secluded districts it is so scarce, that the inhabitants are almost strangers to the use of bread, and subsist on the produce of their dairies. The breeding of cattle, a branch of industry pointed out by the abundance of pasture, and the difficulties attending tillage, forms the grand source of national subsistence in Switzerland. The herds are driven to the mountains in spring, and graze there until the approach of winter forces them to descend gradually into the more sheltered districts. Cheese, butter, tallow, hides, form the chief articles of export from the pastoral districts. After large cattle, the animals chiefly raised are goats, sheep, and hogs. The summits of the Alps are occupied by the chamois, the wild goat, the white and red fox, and a kind of hare which, in summer, resembles the hare of Britain, but in winter becomes as white as snow.

Trade and Manufactures.—Without possessing a productive soil, or the benefit of a maritime situation, Switzerland is less deprived of trade than might be expected in so mountainous a country. The conveyance of goods along the Aar, the Reuss, and the Rhine, facilitates its intercourse with Germany and the Netherlands. The Rhone, though more difficult of navigation, serves in some measure the same purpose in regard to France. The exports are linen, cotton cloth, woollens, and, in a small de-

gree, silks; also cattle, sheep, hides, tallow, butter, and cheese. The chief imports are corn from Germany; salt from Tyrol and Franche Comte; spices, dyewoods, groceries, and other colonial produce from Holland; raw silk from Italy, and some manufactured articles, such as hardware and cotton yarn, from England.

The manufactures of Switzerland are very diversified; linen, lace, thread, and woollens, are of old standing; cottons have been introduced, or at least extended, since the latter part of the 18th century; clocks and watches have long been staple articles at Geneva and Neufchatel; while leather gloves, silks, porcelain, pottery, toys, tobacco, and snuff, are made in various places.

Education.—Of the seminaries of Switzerland, the principal are the celebrated university of Geneva, and the university of Bale, which, though less comprehensive in its objects, and less known out of the limits of Switzerland, has given education to several men of eminence. There are academies or colleges at Zurich, Berne, and Lausanne, and schools of good repute in various towns, in particular Neufchatel, Schaffhausen, and St. Gall; also at Coire, the small sequestered capital of the Grisons. Among literary associations are to be mentioned the Helvetic society of Bale, the physical of Zurich, and the economical of Berne. The superiority of the Protestants over the Catholics in education, is as conspicuous here as in Germany. In regard to improvements in the plan of educating, it suffices to mention the names of Pestalozzi and Fellenberg, both inhabitants of Switzerland. Nor is there here any reluctance to borrow improvements from other countries, the method of Bell and Lancaster having been introduced in several of the principal towns.

Among the eminent men produced by Switzerland, since the revival of letters in Europe, one of the earliest was Zuinglius, the theologian and cotemporary of Luther, followed by Calvin, who, though born in France, was educated at Geneva. At the same time lived Paracelsus, the well known physician and alchymist; and at a much later date, Haller the naturalist; Gesner, who has been called the Theophrastus of Germany; the two Bernouillis, eminent mathematicians; Saussure the naturalist; along with Necker, Rousseau, and Lavater, all three of the last age, and all distinguished, though in a very different manner.

Few countries in the west of Europe have so great a diversity of language as Switzerland. French is spoken all along the western line, viz., at Geneva, in the Pays de Vaud, in the Valais, at Neufchatel, and in a part of the cantons of Berne, Friburg, and Soleure. In the southern canton of the Ticino, in the Valteline, and in a few valleys of the Grisons, Italian is in use; while in the remainder of the Grisons, the language spoken is the Romanesk, or *Romana rustica*. Throughout all the rest of Switzerland, the language used, both currently and for the publication of the acts of government, is German.

National Character.—The Swiss have in general the characteristics of an agricultural people, accustomed to independence; strangers in a great measure to the habits acquired in large towns, and still more to those that are engendered by connection with a court. Education is, in several of the Protestant cantons, as generally diffused as in Scotland; offences are not frequent, crimes extremely rare, and the infliction of capital punishment not often necessary. Hospitality, frankness, attachment to home when at a distance from it, are the well known characteristics of a people in a primitive state of society; they are those of the Swiss, at least of the majority of them; for in Bale and other trading towns, a foreigner would be at some loss to recognise the boasted disinterestedness of these republicans. From the necessity of maintaining their independence against powerful neighbours, the Swiss have long been formed into corps of national militia, and regularly called out to exercise; habits which, joined to the very limited field for industry at home, have led, during nearly three centuries, to the practice of letting troops for hire to foreign powers, in particular

particular the French and Dutch, on the plan of their constituting separate regiments, and not mixing with the troops of the country. On this footing they served in Spain until the revolution of 1820, when they were disembodied, in consequence of their attachment to the crown.

Government.—Switzerland, though a republic, has never, like Rome or Athens, formed one great community; it is, and has all along been, a confederacy of petty states, differing more from each other in their respective constitutions, than the Dutch provinces, or the component parts of the American union. In addition to other distinctions, there is the leading one of religion, a distinction subsisting during ages when a difference of creed constituted a much more decided line of demarcation than at present. In some cantons the form of government is democratic, but in most it is oligarchic, a certain number of families retaining the chief public offices among themselves, and managing all the internal affairs of the canton. The general concerns of the republic, such as the conclusion of foreign alliances, the organisation of the militia, the defence of the country, are managed by a general assembly or diet, composed of deputies from each of the cantons, and holding its meetings at Berne, Zurich, and Lucerne by rotation. In a financial view, the diet has very little to discuss, the contingent of the cantons being furnished, not in money but in men; so that, while the revenue of the union hardly exceeds the insignificant sum of 35,000*l.*, the military establishment ready at its call amounts to 33,000 men.

History.—The Helvetii are well known to the readers of the campaigns of Julius Cæsar, but are less frequently mentioned in Roman history after the empire consolidated its frontier on the side of Germany. After participating in the ravages brought on the Roman provinces by the irruption of the northern hordes, and passing a long period immersed in barbarism, the Swiss are recognized in history in connection with Germany, and as receiving from time to time certain privileges and immunities from the head of the empire. In imitation of the free towns of Germany, the districts of Switzerland entered into associations with their neighbours, to preserve their territory from invasion, and their property from seizure. The 13th century, the era of the election of the politic Rodolph of Hapsburg to the head of the empire, was that of the extension of the Austrian influence over the chief part of Switzerland. Rodolph's son, Albert, a prince of less caution, assumed a lofty tone towards the Swiss, and appointed as governors or high bailiffs, men of overbearing character. It was the tyranny of one of these, named Geyster, that led to the insurrection of the three mountainous districts of Schweiz, Uri, and Unterwalden, in 1308, when the imperial officers were seized, conducted to the frontier, and obliged to take an oath that they never should return. The intestine troubles of Austria prevented retaliatory measures; but at a subsequent date, in the year 1345, on some fresh provocation from these confederates, Leopold, brother of the reigning emperor, advanced at the head of an armed force. A small band of 1400 Swiss awaited his approach in the defile of Morgarten, between a lake and a steep mountain. The Austrians, relying on their superiority, marched forward; but, assailed by rocks and trees precipitated from the mountain, and attacked when in confusion by their intrepid opponents, they fled, with the loss of 1500 men. Encouraged by this success, the three cantons now converted their temporary association into a permanent league, formed an alliance with Bavaria, and were joined soon after (see the preceding table), by five other cantons, of which the largest, by much, was Berne. They were now sufficiently strong to repel invasion, and obtained, in 1476, at Morat in Friburg, a signal victory over an army of Burgundians. The confederacy, after consisting, during a century and a half, of eight cantons, received the addition of five more, making 13, the number by which the Swiss commonwealth is known in the history of Europe. Their military constitution, joined to the rugged and uninviting nature of their country, secured them from further attempts at invasion; so that, if we except some intestine quarrels about religion, happily short lived, the Swiss, during nearly five

centuries, saw very little of war, except in the service of foreign powers. At last, in 1798, the French directory, occupying Lombardy on the one side, and the Rhenish provinces on the other, determined to add Switzerland to their acquisitions, invaded it with a force which it was impossible even for the mountaineers to resist, and succeeded in new modelling the Helvetic constitution. Next year the success of the Austrians brought them and their Russian allies into the heart of Switzerland, but a reverse of fortune obliged them to retire. The treaty of Amiens provided for the evacuation of Switzerland by the French; but no sooner had the latter withdrawn, than the inhabitants began to re-assert their independence, by reverting to the former government; on this Buonaparte marched an armed force into the heart of their country, and imposed on them a constitution in which, under the plausible name of Mediator, he secured, on as large a scale as possible, the co-operation of the Swiss in his future wars. Numbers of this nation were led by him into Germany, Spain, Russia, and, after maintaining the high military character of their ancestors, fell the victims of his ambition. At last, in the spring of 1814, the allied armies approached the Swiss frontier, and entered it with an overpowering force, refusing to acknowledge the neutrality of Switzerland, but promising it future independence. They proved faithful to their engagement. The number of cantons, increased by the French to 19, was now carried, by the addition of the Valais, Geneva, and Neuchâtel, to 22, the integrity and independence of which were recognized in 1815 by the congress of Vienna. Austria, however, reserved to herself the Valteline, a mountainous district in the south-east of Switzerland, and formerly a dependency of the Grisons. For full particulars of the early history of Switzerland, see HELVETIA.

SWITZERLAND, a county of the United States, in Indiana, bounded west by Jefferson, south by the Ohio river, north in part by Indian lands, and east by Dearborn county. Its surface is, in some places, broken by the Ohio and Silver Creek hills, which, however, are of a pretty good soil. It is watered by Venoge and Plum creeks, and several small runs; some running into the Ohio, and others into White river. Vevay is the chief town. Population in 1815, 3500.

SWITZERLAND, New, a settlement of the United States, in Indiana, which was commenced by a few emigrants from the Pays de Vaud, in the spring of 1805, for the purpose of cultivating the vine. As early as the year 1810, eight acres of vineyard were under cultivation, from which were made 2400 gallons of wine, which in its crude state was thought excellent, and equal to the claret of Bourdeaux. A part of this wine was made out of the Madeira grape. The quantity of vineyard grounds has been since greatly augmented, and there is every prospect of still further improvements in this interesting and profitable branch of cultivation.

SWIVEL, *s.* [*sweif*, Icel., volva, instrumentum quo aliquid circumrotatur; *sweifla*, volutare. *Serenius.*] Something fixed in another body so as to turn round in it. A small cannon, which turns on a swivel.

SWO'BBER, *s.* A sweeper of the deck.

Cubb'd in a cabb'in, on a matrass laid,
On a brown george with lousy swo'bbers fed. *Dryden.*

Four privileged cards that are only incidentally used in betting at the game of whist.—The clergyman used to play at whist and swo'bbers: playing now and then a sober game at whist for pastime, it might be pardoned; but he could not digest those wicked swo'bbers. *Swift.*

SWOJANOW, a small town in the east of Bohemia; 94 miles east-south-east of Prague, and 9 south-east of Politzka. Population 1100. Plumbago is found in the environs.

SWO'LLEN, or SWOLN. The participle passive of *swell*. [*pollen*, Sax.]

Unto his aid she hastily did draw
Her dreadful beast, who, *swoln* with blood of late,
Came ramping forth with proud presumptuous gait. *Spenser.*
SWOM,

SWOM, The preterite of *swim*.—You never *swom* the Hellespont. *Shakspeare*.

To SWOON, *v. n.* [αἰσθητικόν, Saxon.] To suffer a suspension of thought and sensation; to faint.

So play the foolish throngs with one that *swoons*;

Come all to help him, and to stop the air

By which he should revive. *Shakspeare*.

If thou stand'st not i' th' state of hanging, or of some death more long in spectatorship, and crueler in suffering, behold now presently, and *swoon* for what's to come upon thee. *Shakspeare*.

SWOON, *s.* A lipthymy; a fainting fit.

SWOONING, *s.* The act of fainting.—Faintings, swoonings of despair. *Milton*.

To SWOOP, *v. a.* The same as *sweep*.—To seize by falling at once as a hawk upon his prey.

This mouldering piecemeal in your hands did fall,

And now at last you came to *swoop* it all. *Dryden*.

To prey upon; to catch up.—The physician looks with another eye on the medicinal herb than the grazing ox, which *swoops* it in with the common grass. *Glanville*.

To SWOOP, *v. n.* To pass with pomp. *Not used*.

The nine-ston'd trophy thus whilst she doth entertain,

Proud Tamer *swoops* along with such a lusty train,
As fits so brave a flood. *Drayton*.

SWOOP, *s.* Fall of a bird of prey upon his quarry.

All my pretty ones?

Did you say all? What, all? O hellkite! all!

What, all my pretty chickens and their dam,

At one fell *swoop*? *Shakspeare*.

To SWOP, *v. a.* [Of uncertain derivation. *Dr. Johnson*.]—To change; to exchange one thing for another. *A low word*.

When I drove a thrust home, he put it by,
And cried, as in derision, spare the stripling;
Oh that insulting word! I would have *swopp'd*
Youth for old age, and all my life behind,
To have been then a momentary man. *Dryden*.

SWOP, *s.* An exchange. See the verb.—These had made a foolish *swop* between a couple of thick bandy legs, and two long trapsticks. *Spect*.

SWORD, *s.* [ἰσθητικόν, Sax., *sweerd*, Dutch.] A weapon used either in cutting or thrusting; the usual weapon of fights hand to hand.

Old unhappy traitor, the *sword* is out

That must destroy thee. *Shakspeare*.

Destruction by war: as, fire and *sword*.—The *sword* without, and terour within. *Deut*.—Vengeance of justice.

Justice to Merit does weak aid afford,

She quits the balance, and resigns the *sword*. *Dryden*.

Emblem of authority.

This I, her *sword*-bearer, do carry,

For civil deed and military. *Hudibras*.

SWORDED, *adj.* Girt with a sword.

The *sworded* seraphim

Are seen in glittering ranks with wings display'd. *Milton*.

SWORDER, *s.* A cut-throat; a soldier. In contempt.

A Roman *sworder* and banditto slave

Murth'er'd sweet Tully. *Shakspeare*.

SWORDFISH, *s.* [αἰσθητικόν.] A fish with a long sharp bone issuing from his head.

SWORDGRASS, *s.* [*gladiolus*.] A kind of sedge; glader. *Ainsworth*.

SWORDKNOT, *s.* Ribband tied to the hilt of the sword.

Wigs with wigs, *swordknots* with *swordknots* strive,
Beaus banish beaus, and coaches coaches drive. *Pope*.

SWORDLAW, *s.* Violence; the law by which all is yielded to the stronger.

So violence

Proceeded, and oppression, and *swordlaw*,

Through all the plain, and refuge none was found. *Milton*.

SWORDMAN, or SWORDSMAN, *s.* Soldier; fighting man.—Worthy fellows, and like to prove most sinewy *swordmen*. *Shakspeare*.

SWORDPLAYER, *s.* Gladiator; fencer; one who exhibits in public his skill at the weapons by fighting prizes.—These they called *swordplayers*, and this spectacle a sword-fight. *Hakewill*.

SWORDS, a long irregularly built town of Ireland, in the county of Dublin. It has no manufacturing establishment, but abounds with houses for the entertainment of travellers. A pleasant brook winds round the town. Before the union with England, it returned two members to the Irish parliament. Near this town stands one of those round towers peculiar to Ireland. It is 73 feet high, and 55 feet in circumference; 7 miles from Dublin castle.

SWORE. The preterite of *swear*. [Sax. ἰσθητικόν.]

How soon unsay

What feign'd submission *swore*.

Milton.

SWORN. The participle passive of *swear*.

What does else want credit, come to me,

And I'll be *sworn* 'tis true. *Shakspeare*.

I am *sworn* brother, sweet,

To grim necessity; and he and I

Will keep a league till death. *Shakspeare*.

SWORTON, a hamlet of England, in the parish of Rosethern, Cheshire.

SWOSZOWICE, a village of the Austrian empire, in Eastern Galicia, circle of Muslenitz.

To SWOUND, *v. n.* To swoon. Formerly *swoon* was so written; and it is still sometimes vulgarly so spoken.—All in gore blood; I *swounded* at the sight. *Shakspeare*.

SWUM. Preterite and participle passive of *swim*.

Air, water, earth,

By fowl, fish, beast, was flown, was *swum*, was walk'd

Frequent. *Milton*.

SWUNG. Preterite and participle passive of *swing*.

Her hand within her hair she wound,

Swung her to earth, and dragg'd her on the ground. *Addison*.

SYANG, a small island in the Pacific ocean. Lat. 0. 25. N. long. 130. 9. E.

SYBARI'TICAL, or SYBARI'TIC, *adj.* [from the *Sybaritæ*, Latin, inhabitants of Sybaris, so given to voluptuousness, that their luxury became proverbial.] Luxurious; wanton.—Dine with me on a single dish, to atone to philosophy for the *sybaritic* dinners of Prior-Park. *Warburton*.

SYBILHEAD, a cape on the western coast of Ireland, in the county of Kerry; 8 miles west-north-west of Dingle. Lat. 52. 11. N. long. 10. 18. W.

SY'CAMINE, or SY'CAMORE, *s.* [συκομορος, Gr. ἰσθητικόν, Sax.] A tree.

Sycamores with eglantine were spread;

A hedge about the sides, a covering over head. *Dryden*.

SYCAMORE, a small stream of the United States, which enters the Ohio, in the state of Kentucky.

SY'COPHANCY, *s.* The practice of an informer.—One that best knew it [the condition of the collectors or farmers of taxes] branded it with *poling* and *sycophancy*. *Bp. Hall*.—The practice of a flatterer.—The *sycophancy* of A. Phillips had prejudiced Mr. Addison against Pope. *Warburton*.

SY'COPHANT, *s.* [*sycophanta*, Lat., συκοφαντης, Gr. from συκον, a fig, and φανω, to shew, to denounce.] To export

export *figs* from Athens was forbidden by law; and they, who *informed* against persons disregarding this law, were called *sycophants*.] A talebearer; a makebate; a malicious parasite.

To SYCOPHANT, *v. n.* [*συκοφαντω*, Gr.] To play the sycophant. *A low bad word.*—His *sycophanting* arts being detected, that game is not to be played the second time; whereas a man of clear reputation, though his barque be split, has something left towards setting up again. *Gov. of the Tongue.*

To SYCOPHANT, *v. a.* To calumniate. *Not in usc.*—He makes it his first business to tamper with his reader by *sycophanting* and misnaming the work of his adversary. *Milton.*

SYCOPHANTICAL, *adj.* Meanly officious; basely parasitical.—Henry the Eighth of England [was] led by the advice of some of his *sycophantical* popish prelates. *Sir Simonds D'Ewes.*

SYCOPHANTIC, *adj.* Talebearing; mischievously officious. *Fawning. Mason.*—'Tis well known, that in these times the illiberal *sycophantic* manner of devotion was by the wiser sort contemned. *Ld. Shaftesbury.*

To SYCOPHANTISE, *v. n.* To play the talebearer. SYCOPHANTRY, *s.* A malignant tale-bearing.—It is fit that the accused should be acquainted with this, that competent time and means may be allowed for his defence, that his plea should receive, if not a favourable, yet a free audience; the contrary practice is indeed rather backbiting, whispering, supplanting or *sycophantry* than fair and lawful judging. *Barrow.*

SYDABAD, a town of Hindostan, province of Agra, belonging to the British. Lat. 27. 30. N. long. 77. 57. E.—There are several other towns of this name in Hindostan, but none of consequence.

SYDAPORAM, a town of the south of India, district of the Carnatic. Lat. 11. 14. N. long. 79. 45. E.—The descendants of Mahomet being called Syeds, there are many places beginning with this name, all through the East.

SYDE, a parish of England, in Gloucestershire; 5 miles east of Painswick.

SYDENHAM (Thomas), a physician of extraordinary genius, was born at Winford Eagle, in Dorsetshire, about the year 1624. He was the son of a gentleman of independent fortune, and was sent to Oxford in 1642, where he was admitted a commoner of Magdalen-hall. After pursuing his studies a few years, he quitted Oxford, and subsequently obtained the degree of doctor of physic at Cambridge, and settled in the practice of his profession in Westminster.

The extensive practice which he is said to have enjoyed from 1660 to 1670, is perhaps only to be accounted for by the greater success which his superiority of skill in the discrimination and treatment of diseases would necessarily command, and which from the novelty of his plans, would become more readily a matter of notoriety; for from this period, namely, after the restoration, his opinions and political connections must have been on the wrong side. He appears to have met with opposition, too, on the part of the college; since he never was admitted to the rank of a fellow, and was only made a licentiate at a late period of his life. It is certain, indeed that he experienced no small share of the enmity and calumny which is usually excited by innovation; yet he appears, from his dedications to Drs. Mapletoft, Brady, Paman, Cole, &c., to have possessed some intimate and valuable friends in the profession; and he seems to have conducted himself towards all without any of that arrogance which too often accompanies originality of talent.

An anecdote has been related, on the authority of Sir Richard Blackmore, in proof of Sydenham's contempt for all medical writings. He is said to have replied to an inquiry respecting the best books to be read to qualify a man for practice, "read Don Quixote." Sir Hans Sloane, however, who affirms that he never knew a man of brighter natural parts, believed this to be a joke. It is certain, indeed, that Sydenham paid little attention to the prevalent

medical doctrines. He tells us, that, on commencing practice, he was immediately convinced, that the only means of acquiring a correct knowledge of his art, was by a diligent and minute attention to the phenomena of diseases, by giving up his whole mind to the investigation of the changes and progress of symptoms, from which the true and natural indications of cure would be readily deduced; an opinion which every subsequent year served only to confirm, and which, he adds, his friend, Mr. Locke, approved of.

It was to febrile diseases that he first applied this inductive method, and he admits, that it was after several years of anxious attention and perplexity that he satisfied himself respecting the proper and successful mode of treating these maladies. In 1666, he published the result of his observations on these subjects, in a work entitled "Methodus curandi Febres, propriis Observationibus superstructa;" which he afterwards republished, with remarks, suggested by subsequent experience, under the new title of "Observationes Medicæ circæ Morborum Acutorum Historiam et Curationem," 8vo., 1675. In this work, however, as in some of his other writings, we find hypothetical language pretty largely intermixed with sound practical observation. He commences with a definition of *discase* after the Hippocratic doctrine, viz., that it is "a violent effort of nature, for the benefit of the constitution, to expel a morbid cause." Thus, the *plague* he deemed a struggle to drive out the contagious matter by means of buboes, perspiration, or various eruptions; and the *gout* a providential exertion to deplete the blood by expelling its impurities; and according to the degree of violence with which this is effected, and the rapidity with which the critical depuration takes place, the disease, he affirmed was *acute* or *chronic*. Nevertheless, in his practice he seems to have been little influenced by hypothesis; but to have regulated his views by an attentive consideration of the symptoms, and of the *juvantia* and *lædèntia*; and in this respect he was the author of much practical improvement. In the treatment of the small-pox especially, then a most frequent and fatal epidemic, he was led to adopt a most salutary method of cure, by repressing the eruptive fever, by means of cool air and antiphlogistic remedies, by which the subsequent eruption and consequent danger were greatly diminished; although this was in opposition, not only to the prevailing practice, which consisted in forcing the eruption by heat and stimulating medicines, but to the hypothetical doctrine, which he had himself admitted. Subsequent experience has not only fully confirmed the propriety and success of his practice, but has shewn the necessity of extending it to other eruptive and febrile diseases. The sagacity and sound observation of Sydenham were also particularly manifested in the correct histories of some diseases which he has left. His descriptions of the *small-pox*, *measles* and *gout*, have been deemed models of medical history; and his detail of the singular variety of deceptive appearances, which *hysteria* assumes in females, is a display of extraordinary acuteness. He was extremely attentive also to the varieties which occurred in diseases, especially of the febrile class, in different seasons, and which required a corresponding modification of the treatment; and he has pointed out what he terms the epidemic constitution of particular years, by which all the prevailing diseases were in some degree modified.

He died in December, 1689, at the age of sixty-five. After his death, a manual of practice, which he had composed for the use of his son, was published by a friend, to whom he had consigned the MS., under the title of "Processus Integri in Morbis fere omnibus Curandis," 1693; which contains a very brief notice of the symptoms of many diseases, both acute and chronic, with some familiar formulæ.

SYDENHAM, DAMERELL, a parish of England, in Devonshire; 5 miles west-by-north of Tavistock.

SYDERSTONE, a parish of England, in Norfolk; 6 miles south of Burnham Westgate.

SYDLING, a parish of England, in Dorsetshire; 8½ miles north-west-by-north of Dorchester. Population 495.

SYDNEY, a town of New Holland, and the capital of

the British settlements in New South Wales, about 7 miles from the mouth of Port Jackson, in a cove to which it gives name. It stands principally on two hilly necks of land, with a proportion of flat ground intervening. These form together Sydney cove, which is one of the finest natural basins of water that can be imagined, and for safety and convenience rivals the finest works of art. It is perfectly secured against any wind, and ships of any dimensions lie there, and receive any repairs they may require, with the greatest security. The western side of the town extends to the water's edge, and occupies, with the exception of the small space reserved around Dawe's battery, the whole of the neck of land which separates Sydney cove from Lane cove, and extends a considerable distance back into the country besides. This part of the town, it may therefore be perceived, forms a little peninsula; and, what is of still greater importance, the water is in general of sufficient depth in both these coves, to allow the approach of vessels of the largest burden to the very sides of the rocks. On the eastern neck of land, the extension of the town has been stopped by the government-house, and the adjoining domain, which occupies the whole of Bennilong's point, a circumstance the more to be regretted, as the water all along this point is of still greater depth than on the western side of the cove, and consequently affords still greater facilities for the erection of warehouses, and the various important purposes of commerce.

The appearance of the town is rude and irregular. Until the administration of governor Macquarrie, little or no attention had been paid to the laying out of the streets, and each proprietor was left to build on his lease, where and how his caprice inclined him. He, however, succeeded in establishing a perfect regularity in most of the streets, and reduced to a degree of uniformity that would have been deemed absolutely impracticable, even the most confused portion of that chaos of building which is still known by the name of "the rocks," and which, from the ruggedness of its surface, the difficulty of access to it, and the total absence of order in its houses, was for many years more like the abode of a horde of savages than the residence of a civilized community. The town, upon the whole, may be now pronounced to be tolerably regular; and, as in all future additions that may be made to it, the proprietors of leases will not be allowed to deviate from the lines marked out by the surveyor-general, the new part will of course be free from the faults and inconveniences of the old. This town covers a considerable extent of ground, and would at first sight induce the belief of a much greater population than it actually contains. This may be imputed to two circumstances, the largeness of the leases, which in most instances possess sufficient space for a garden, and the smallness of the houses erected in them, which in general do not exceed one story. From these two causes it happens, that this town does not contain above seven thousand souls, whereas one that covered the same extent of ground in this country, would possess a population of at least twenty thousand. But although the houses are for the most part small, and of mean appearance, there are many public buildings, as well as houses of individuals, which would not disgrace the cities of more civilized countries. Here is a very good market, although it is of very recent date. It was established by governor Macquarrie in the year 1813, and is very well supplied with grain, vegetables, poultry, butter, eggs, and fruit. It is, however, only held three times a week; viz., on Mondays, Wednesdays, and Fridays. It is a large oblong inclosure, and there are stores erected in it by the governor, for the reception of all such provisions as remain unsold at the close of the market, which lasts from six o'clock in the morning in summer, and seven o'clock in winter, until three o'clock in the evening.

This town also contains two very good public schools, for the education of children of both sexes. One is a day school for boys, and is of course only intended to impart gratuitous instruction:—The other is designed both for the education and support of poor and helpless female orphans.

This institution was founded by governor King, as long back as the year 1800, and contains about sixty children, who are taught reading, writing, arithmetic, sewing, and the various arts of domestic economy. When their education is complete, they are either married to free persons of good character, or are assigned as servants to such respectable families as may apply for them. At the time of the establishment of this school there was a large track of land (15,000 acres) attached to it; and a considerable stock of horses, cattle, and sheep, were also transferred to it from the government herds. The profits of these go towards defraying the expenses of this school, and a certain portion, fifty or a hundred acres of this land, with a proportionate number of them, are given in dower with each female who marries with the consent of the committee intrusted with the management of this institution. Besides these two public schools in the town of Sydney, which together contained, by the last accounts received from the colony, two hundred and twenty-four children, there are establishments for the gratuitous diffusion of education in every populous district throughout the colony. The masters of these schools are allowed stipulated salaries from the orphan fund. Formerly particular duties, those on coals and timber, which still go by the name of "the orphan dues," were allotted for the support of these schools; but they were found to be insufficient, and afterwards one-fourth, and more recently one-eighth, of the whole revenue of the colony was appropriated to this purpose. This latter portion of the colonial revenue may be estimated at about 2500*l.*, which, it must be admitted, could not be devoted to the promotion of any object of equal public utility. Independent of these laudable institutions thus supported at the expense of the government, there are two private ones intended for the dissemination of religious knowledge, which are wholly maintained by voluntary contribution. There are in this town and other parts of the colony, several good private seminaries for the board and education of the children of opulent parents. The harbour of Port Jackson is perhaps exceeded by none in the world. It is navigable for vessels of any burden for about seven miles above the town, i. e., about fifteen from the entrance. It possesses the best anchorage the whole way, and is perfectly sheltered from every wind that can blow. It is said to have a hundred coves, and is capable of containing all the shipping in the world. There can be no doubt, therefore, that in the course of a few years, the town of Sydney, from the excellence of its situation alone, must become a place of considerable importance. The views from the heights of the town are bold, varied, and beautiful. The strange irregular appearance of the town itself, the numerous coves and islets both above and below it, the towering forests and projecting rocks, combined with the infinite diversity of hill and dale on each side of the harbour, form altogether a *coup d'œil*, of which it may be safely asserted that few towns can boast a parallel. The value of land in this town is daily increasing, and rents are in consequence exorbitantly high.

SYDNEY, a river in the interior of New Holland, seen by Mr. Oxley in his second expedition for the purpose of exploring that country. Its course was northward, and the part of it seen by Mr. Oxley crossed the 31st degree of south lat. Long. 151. 15. E.

SYDNEY BAY, a bay on the south coast of Norfolk Island, in the South Pacific ocean. Lat. 29. 5. N. long. 168. 2. E.

SYDONAIA, a village of Syria, situated on the side of a hill, at the top of which is a celebrated nunnery, founded by Justinian. It has the appearance of a castle, with high walls round it. The nuns are twenty in number, who, with the abbess, are employed in hard labour, particularly the rearing of silk worms. A great part of the revenue of the convent arises from vineyards, which produce an excellent strong red wine; 12 miles north-east of Damascus.

SYENA, in Botany, a genus of the class triandria, order monogynia.—Generic Character. Calyx: perianth, three-leaved; leaflets linear-lanceolate, acute, spreading, permanent.

ment. Corolla: petals three, roundish, concave, spreading, length of the calyx. Stamina: filaments three, capillary. Anthers oblong. Pistil: germ superior, roundish. Style filiform. Stigma trifid. Pericarp: capsule globular, crowned with the style, one-celled, three-valved. Seeds six, globular, striated, two fastened to each valve, one above the other. It is allied to *Commelina*.—*Essential Character*. Calyx three leaved. Petals three. Anthers oblong. Capsule one-celled, three valved.

Syena fluviatilis.—This is a minute mossy plant. Stem somewhat branched decumbent. Leaves capillaceous, in whorls. Flowers axillary, white, peduncled, solitary.—Native of Guiana, in rivulets.

SYENE, a town of Upper Egypt, the most southerly in that country, and forming its frontier towards Nubia. It is celebrated, in the annals of ancient astronomy, by the attempt made by Eratosthenes to measure the height of the sun, according to which Syene was said to lie directly under the tropic. A well was formed, which was supposed to mark the precise moment of the summer solstice, by the image of the sun reflected in it. Bruce ascertained that Syene was not now, at least, immediately under the tropic, as he found the latitude 23. 28. ; and according to the more precise observation of Nouet, it is 24. 8. 6. There is still a small temple, supposed to be the ancient observatory; but it is so buried in dirt and rubbish, as to be inaccessible. There are also the remains of a Roman bridge, and a handsome stone quay. But the principal ruins of Syene are those of the Saracen town, which are very extensive, including the city wall, built of unburnt bricks, and flanked with square towers. Many large houses are still in a state of extraordinary preservation, as well as mosques, with lofty minarets, still entire, though resting on very frail foundations. In the Nile, opposite to Syene, is the island of Elephantina, remarkable for the very ancient ruins with which it is covered. The climate of this place is healthy, being free, in a great measure, from the intensely hot south-east and southerly winds, and the plague seldom making its appearance.

SYKEHOUSE, a township of England, West Riding of Yorkshire; 5½ miles north-west-by-west of Thorne. Population 490.

SYKES, POINT, a cape on the west coast of North America, in Behm's Canal. Lat. 55. 6. N. long. 229. 4. E.

SYLAH, a fortified town of Hindostan, province of Gujerat, district of Chalawara. It is a large place, is situated near an extensive lake, and belongs to an Hindoo chief, who is tributary to the Guicowar. Lat. not ascertained.

SYLEHAM, a parish of England, in Suffolk; 5 miles north-east-by-east of Eye.

SYLLABICAL, *adj.* Relating to syllables; consisting of syllables.—The Christians have marked every the least various lection, even *syllabical*. *Leslie*.

SYLLABICALLY, *adv.* In a syllabical manner.—These and many like places, well considered, (upon which no brand of lie or falsity may be fixed,) though they do not literally and *syllabically* agree with the quotation, (but are verified either in a partial or concurrent sense), may sufficiently justify that place in the first front of the Liturgy to be no lie, but a divine scriptural truth. *Bp. Gauden*.

SYLLABIC, *adj.* [*syllabique*, Fr.] Relating to syllables.—In the responses also, which are noted for various voices, this *syllabic* distinction is sufficiently attended to. *Mason*.

SYLLABLE, *s.* [*συλλαβή*, Gr.; *syllabe*, Fr.] As much of a word as is uttered by the help of one vowel, or one articulation.

I heard

Each *syllable* that breath made up between them.

Shakspeare.

Any thing proverbially concise.

To-morrow, and to-morrow, and to-morrow,
Creeps in this petty pace from day to day,

To the last *syllable* of recorded time;
And all our yesterdays have lighted fools
The way to dusty death.

Shakspeare.

To SYLLABLE, *v. a.* To utter; to pronounce; to articulate. *Not in use.*

Airy tongues that *syllable* men's names
On sands, and shores, and wildernesses.

Milton.

SYLLABUB, *s.* Milk and acids.

No *syllabubs* made at the milking pail,
But what are compos'd of a pot of good ale.

Beaumont.

SYLLABUS, *s.* [*συλλαβος*, Gr.] An abstract; a compendium containing the heads of a discourse.

SYLLATIN, a parish of England, in Salop; 4 miles north-by-west of Oswestry.

SYLLOGISM, *s.* [*συλλογισμος*, Gr.; *sylogisme*, Fr.] An argument composed of three propositions: as, *every man thinks; Peter is a man; therefore Peter thinks*.—What a miraculous thing should we count it, if the flint and the steel, instead of a few sparks, should chance to knock out definitions and *syllogisms*? *Bentley*.

SYLLOGISTICAL, or SYLLOGISTIC, *adj.* [*συλλογιστικος*, Gr.] Relating to a syllogism; consisting of a syllogism.—Though the terms of propositions may be complex, yet where the composition of the whole argument is thus plain, simple and regular, it is properly called a simple syllogism, since the complexion does not belong to the *syllogistic* form of it. *Watts*.

SYLLOGISTICALLY, *adv.* In the form of a syllogism.—A man knows first, and then he is able to prove *syllogistically*; so that syllogism comes after knowledge, when a man has no need of it. *Locke*.

SYLLOGIZATION, *s.* The act of reasoning by syllogism.—From mathematical bodies, and the truths resulting from them, they passed to the contemplation of truth in general; to the soul, and its powers both of intuition and *syllogization*. *Harris*.

To SYLLOGISE, *v. n.* [*syllogizer*, Fr.; *συλλογίζεσθαι*, Gr.] To reason by syllogism.—Logic is in effect, an art of *syllogizing*. *Baker*.—Men have endeavoured to transform logic into a kind of mechanism, and to teach boys to *syllogize*, or frame arguments and refute them, without real knowledge. *Watts*.

SYLLOGIZER, *s.* One who reasons by syllogism.—Every *syllogizer* is not presently a match to cope with Belarmine, Baronius, Stapleton. *Sir E. Dering*.

SYLPH, or SYLPHID, *s.* [*syph*, *syphide*, Fr. "nom que les cabalistes donnent aux prétendus génies élémentaires de l'air. Ce mot peut venir du Gr. *σολφη*, (*silphé*), "nom d'une espèce d'insecte qui ne veillit jamais." Morin.] A fabled being of the air.

SYLT, an island of Denmark, on the west coast of the duchy of Sleswick, belonging to the bailiwick of Tondern. It is of a very irregular form, 14 miles in length, and from 3 to 7 in width. It contains about 2700 inhabitants, of Friesland origin, employed partly in cultivating the ground, partly in the oyster fishery.

SYLVAN, *adj.* [Better *sylvan*.] Woody; shady; relating to woods.

Eternal greens the mossy margin grace,
Watch'd by the *sylvan* genius of the place.

Pope.

SYLVAN, *s.* [*sylvain*, Fr.] A wood-god, or satyr; perhaps sometimes a rustic.

Her private orchards wall'd on ev'ry side;
To lawless *sylvans* all access deny'd.

Pope.

SYLVERLEY, a hamlet of England, in Cambridgeshire; 3¼ miles east of Newmarket.

SYLVES, or SILVES, a small town of the south of Portugal, in the province of Algarva, pleasantly situated on a small river; 15 miles east-north-east of Lagos, and 39 west of Tavira. Population 2000.

SYLVIVS,

SYLVIUS (Francis and James), two eminent physicians. See the introduction to the article **PATHOLOGY**.

SYMBOL, *s.* [*symbolic*, Fr.; *συμβολον*, Gr.; *symbolum*, Latin.] An abstract; a compendium; a comprehensive form.—Beginning with the *symbol* of our faith, upon that the author of the gloss enquires into the nature of faith. *Baker*.—A type; that which comprehends in its figure a representation of something else.—A sign or badge to know one by; a memorial.

That as a sacred *symbol* it may dwell

In her sonne's fliest to mind revengement.

Spenser.

SYMBOLICAL, *adj.* [*symbolique*, Fr.; *συμβολικος*, Gr.] Representative; typical; expressing by signs; comprehending something more than itself.—The sacrament is a representation of Christ's death, by such *symbolical* actions as himself appointed. *Bp. Taylor*.

SYMBOLICALLY, *adv.* Typically; by representation.—It *symbolically* teaches our duty, and promotes charity by a real signature and a sensible sermon. *Bp. Taylor*.

SYMBOLIZATION, *s.* The act of symbolizing; representation; resemblance.—The hieroglyphical symbols of scripture, excellently intended in the species of things sacrificed in the dreams of Pharaoh, are oftentimes racked beyond their *symbolizations*. *Brown*.

To SYMBOLIZE, *v. n.* [*symboliser*, Fr.] To have something in common with another by representative qualities.—Our king finding himself to *symbolize* in many things with that king of the Hebrews, honoured him with the title of this foundation. *Bacon*.

To SYMBOLIZE, *v. a.* To make representative of something.—Some *symbolize* the same from the mystery of its colours. *Brown*.

SYMI, a small island near the coast of Asia Minor, shutting in the mouth of a small bay of the same name. The whole population reside in the town, which is built near the top of a high rocky mountain, and containing from 1800 to 2000 houses. The streets are in general from three to five feet wide, unpaved, hilly, rocky, steep, and dirty; but the houses are neat, whitewashed outside, and comfortable within. The island consists almost exclusively of mountains of rock, producing nothing but a little fruit in the gardens of the rich. Every necessary of life being imported, and the sea being their only resource, all the men of the place are naturally seamen. There are belonging to the island fifty trading vessels, and as many small fishing boats.

SYMINGTON, a parish of Scotland, in Lanarkshire, of nearly a circular figure, 3 miles in diameter. The surface is in general level. Population 364.—A parish in Ayrshire; about 4 miles long, and 14 broad. Population 656.

SYMMACHUS (Q. Aurelius Avianus), a Roman senator of the fourth century, became prefect of Rome, pontiff and augur, and proconsul of Africa. He vigorously resisted the changes that were made in the national religion by the triumphs of Christianity, and headed a deputation from the senate to the emperor Valentinian II. The petition above-mentioned is preserved in ten books of Symmachus's Epistles, still extant. "The luxuriancy of Symmachus," says Gibbon, "consists of barren leaves, without fruits, and even without flowers. Few facts, and few sentiments, can be extracted from his verbose correspondence."

SYMMETRICAL, *adj.* Commensurable. *Phillips*.—It was both the doctrine of the apostles, and the practice of the church, while it was *symmetrical*, to obey the magistrate. *More*.

SYMMETRIAN, *s.* One eminently studious of proportion.—His face was a thought longer than the exact *symmetrians* would allow. *Sidney*.

SYMMETRICAL, *adj.* Proportionate; having parts well adapted to each other.—I have known many a woman with an exact shape, and a *symmetrical* assemblage of beautiful features, please nobody. *Ld. Chesterfield*.

SYMMETRIST, *s.* One very studious or observant of proportion.—Some exact *symmetrists* have been blamed for being too true. *Wotton*.

To SYMMETRIZE, *v. a.* To make proportionate.—He would soon have supplied every deficiency, and *symmetrized* every disproportion. *Burke*.

SYMMETRY, *s.* [*symmetrie*, Fr.; *συν* and *μετρον*, Gr.] Adaptation of parts to each other; proportion; harmony; agreement of one part to another.

She by whose lines proportion should be

Examined, measure of all *symmetry*;

Whom had that ancient seer, who thought souls made

Of harmony, he would at next have said

That harmony was she.

Donne.

SYMONDSBURY, a parish of England, in Dorsetshire; 1 mile west of Bridport. Population 860.

SYMPATHETICAL, or **SYMPATHETIC**, *adj.* [*sympathetique*, Fr.] Having mutual sensation; being affected either by what happens to the other; feeling in consequence of what another feels.

To you our author makes her soft request,

Who speak the kindest, and who write the best:

Your *sympathetic* hearts she hopes to move,

From tender friendship and endearing love.

Prior.

SYMPATHETICALLY, *adv.* With sympathy; in consequence of sympathy.—He seems to have caught *sympathetically* Sandy's sudden impulse to break forth into a devout song at the awful and inspiring spectacle. *War-ton*.

To SYMPATHIZE, *v. n.* [*sympatiser*, Fr.] To feel with another; to feel in consequence of what another feels; to feel mutually.

Nature, in awe to him,

Hath doff'd her gaudy trim,

With her great master so to *sympathize*.

Milton.

To agree; to fit. *Not proper*.—Green is a pleasing colour, from a blue and a yellow mixed together, and by consequence blue and yellow are two colours which *sympathize*. *Dryden*.

SYMPATHY, *s.* [*sympathie*, Fr.; *συμπαθεια*, Gr.] Fellow-feeling; mutual sensibility; the quality of being affected by the suffering or pleasure of another.—You are not young; no more am I: go to, then, there's *sympathy*: you are merry, so am I; ha! ha! then there's more *sympathy*: you love sack, and so do I; would you desire better *sympathy*? *Shakspeare*.

SYMPHONIA, in Botany, a genus of the class monadelphia, order pentandria.—Generic Character. Calyx: perianth five-leaved, permanent; leaflets roundish, very small, spreading. Corolla: petals five, roundish, subcoriaceous, concave, converging into a depressed globe. Stamina: filaments cylindric, sheathing the style. Anthers five, ovate, acute, alternate with the stigmas. Pistil: germ ovate. Style cylindric, a little longer than the corolla. Stigmas five, oblong, acute, spreading. Pericarp: berry five celled, globular. Seeds solitary, subglobular, smooth, flatter internally.—*Essential Character*. One-styled. Corolla globular. Berry five-celled.

Symphonia globulifera.—This is a tree with a thick lofty trunk. Branchlets shorter, smooth, marked with scars from the fallen leaves. Leaves at the end of the branchlets, approximating, lanceolate, entire, very smooth, glaucous, keeled underneath with a blunt rachis; veins very fine, transverse; consistence of bay leaves, a hand in length. Petioles very short, half round. Umbel terminating, simple, few flowered, sessile. Peduncles erect, angular, one-flowered.—Native of Surinam.

SYMPHO'NIUS, *adj.* Harmonious; agreeing in sound.

Up he rode,

Follow'd with acclamation and the sound

Symphonious of ten thousand harps, that tun'd

Angelic harmonies.

Milton.

SYMPHONY, *s.* [*symphonie*, Fr.; *συν* and *φωνη*, Gr.] Concert of instruments; harmony of mingled sounds.

The

The trumpets sound,

And warlike *symphony* is heard around;
The marching troops through Athens take their way;
The great earl-marshal orders their array. *Dryden.*

SYMPHORIEN, St., a small town in the south-west of France, department of the Gironde, with 1400 inhabitants; 30 miles south of Bourdeaux.

SYMPHORIEN DE LAY, St., a small town in the south of France, department of the Loire. Population 3300. It has some manufactures of woollens, cotton, and linen; also coal mines in the neighbourhood; 8 miles south-east of Roanne, and 24 north-west of Lyons.

SYMPHORIEN D'OZON, St., a small town in the south-east of France, department of the Isere. Population 1300; 8 miles north of Vienna, and 9 south of Lyons.

SYMPHORIEN SUR COISE, St., a small town in the south-east of France, department of the Rhone. Population 1800. It has some manufactures of leather and nails; 18 miles south-west of Lyons.

SYMPHYSIS, s. [*συν* and *φωσ*, Gr.] In Anatomy, an immoveable union of bones.—*Symphysis*, in its original signification, denotes a connascency, or growing together; and perhaps is meant of those bones which in young children are distinct, but after some years unite and consolidate into one bone. *Wiseman.*

SYMPHYTUM [of Pliny. *Συμφυτον* of Dioscorides: *απο του συμφυνει*, from its conglutinating quality], in Botany, a genus of the class pentandria, order monogynia, natural order of asperifoliae, boragineae (*Juss.*)—Generic Character. Calyx: perianth five-parted, erect, five-cornered, acute, permanent. Corolla: one petalled, bell-shaped; tube very short; border tubular-bellying, a little thicker than the tube; mouth five-toothed, obtuse, reflexed; throat fenced by five lanceolate rays, spinulose at the edge, shorter than the border, converging into a cone. Stamina: filaments five, awl-shaped, alternate with the rays of the throat. Anthers acute, erect, covered. Pistil: germs four. Style filiform, length of the corolla. Stigma simple. Pericarp none. Calyx larger, widened. Seeds four, gibbous, acuminate, converging at the tips.—*Essential Character.* Corolla: border tubular-ventricose; throat closed by lanceolate rays.

1. *Symphytum officinale*, or common comfrey.—Root perennial, fleshy, externally black. Stem two or three feet high, upright, leafy, winged, branched at the top, clothed with short bristly hairs that point rather downward. Leaves waved, pointed, rough; the radical ones on footstalks, and broader than the rest. Clusters of flowers in pairs on a common stalk, with an odd flower between them. Corolla yellowish-white, sometimes purple, the rays downy at each edge.—Native of Europe and Siberia: frequent in watery places, on the banks of rivers and ditches: flowering from the end of May to September. There are two varieties; one with purple flowers.

2. *Symphytum tuberosum*, or tuberous-rooted comfrey.—Leaves ovate, semicurrent; the uppermost opposite. Roots composed of many thick fleshy knobs or tubers, which are joined by fleshy fibres; the stalks rise a foot and half high, and incline on one side. The two upper leaves on every branch stand opposite, and just above them, are loose bunches of pale yellow flowers, the corolla of which, is stretched out farther beyond the calyx than in the common sort.—Native of Germany, Austria, France, Spain and Italy.

3. *Symphytum orientale*.—Leaves ovate, subpetioled. Root perennial. Stalks two feet high. Flowers in bunches like the first sort, but blue. They appear in March, but seldom produce seeds in England.—By the side of rivulets near Constantinople.

Propagation and Culture.—These plants may be cultivated, either by sowing their seeds in the spring, or by parting their roots; the latter, being the more expeditious, is chiefly practised. The best season for parting the roots is the autumn, at which time almost every piece of the root will grow. They should be planted about two feet and a

half asunder, that they may have room to spread, and will require no farther care than to keep them clear from weeds; for they are extremely hardy, and will grow upon almost any soil, or in any situation.

SYMPLOCOS [*Απο του συμπλεκεσθαι*, on account of the rare connection of the petals. *Jacquin.*], in Botany, a genus of the class polyadelphia, order polyandria, natural order of guaiacanae (*Juss.*)—Generic Character. Calyx: perianth one-leafed, bell-shaped, five-cleft, small; segments roundish, erect. Corolla: petals five or eight, oblong, obtuse, erect, spreading very much above. Stamina: filaments very many, awl-shaped, flat, shorter than the petals, growing in four rows to the tube of the corolla; the lower ones shorter. Anthers roundish. Pistil: germ superior, roundish. Style filiform, length of the stamens. Stigma headed, subtrifid. Pericarp: five-celled. Seeds many.—*Essential Character.* Calyx five-cleft. Corolla five-petalled (five to eight), erect at the base. Stamina in four rows, growing to the tube of the corolla. Fruit five-celled.

1. *Symplocos Martinicensis*.—This is a branching tree, twenty-five feet high. Leaves ovate, acute, shining, subcoriaceous, petioled, placed indeterminately. Flowers white, smelling like those of hawthorn. Filaments inserted into a pentapetalous corolla, so as to render it internally monopetalous, by connecting the edges of the petals with their flat bases.—Native of Martinico, in woods; flowering there in November.

2. *Symplocos cipunima*.—Peduncles many-flowered; leaves entire, villose beneath. The shoots of this species are very villose.—Native of Guiana.

3. *Symplocos arechea*.—Peduncles about five-flowered; leaves serrate, almost naked.—Native of the woods of Peru.

4. *Symplocos octopetala*.—Flowers eight-petalled.—Native of Jamaica.

SYMPOSIAC, adj. [*symposiaque*, Fr.; *συμποσιακος*, Gr.] Relating to merry makings; happening where company is drinking together.—In some of those *symposiac* disputations amongst my acquaintance, I affirmed that the dietetic part of medicine depended upon scientific principles. *Arbutnot.*

SYMPOSIUM, s. [Lat.] A feast; a merry making; a drinking together.—It appears that the company dined so very late (in 1609), as at half an hour after eleven in the morning; and that it was the fashion to ride to this polite *symposium* on a Spanish jennet, a servant running before with his master's cloak. *Warton.*

SIMPSON, a parish of England, in Buckinghamshire; 2 miles from Fenny Stratford.

SYMPTOM, s. [*synptomc*, Fr.; *συμπτωμα*, Gr.] Something that happens concurrently with something else, not as the original cause, nor as the necessary or constant effect.—The *symptoms*, as Dr. Sydenham remarks, which are commonly scorbutic, are often nothing but the principles or seeds of a growing, but unripe gout. *Blackmore.*—A sign; a token.—Ten glorious campaigns are passed, and now, like the sick man, we are expiring with all sorts of good *symptoms*. *Swift.*

SYMPTOMATICAL, or SYMPTOMAT'IC, adj. [*symptomatique*, Fr.] Happening concurrently, or occasionally.—*Symptomatical* is often used to denote the difference between the primary and secondary causes in diseases; as a fever from pain is said to be *symptomatical*, because it arises from pain only; and therefore the ordinary means in fevers are not in such cases to be had recourse to, but to what will remove the pain; for when that ceases, the fever will cease, without any direct means taken for that. *Quincy.*—By fomentation and a cataplasm the swelling was discussed; and the fever, then appearing but *symptomatical*, lessened as the heat and pain mitigated. *Wiseman.*

SYMPTOMAT'ICALLY, adv. In the nature of a symptom.—The causes of a bubo are vicious humours abounding in the blood, or in the nerves, excreted sometimes critically, sometimes *symptomatically*. *Wiseman.*

SYNAGO'GICAL, adj. Pertaining to a synagogue.

SYNAGOGUE, *s.* [*synagogue*, Fr.; *συναγωγή*, Gr.] An assembly of the Jews to worship.—Go, Tubal, and meet me at our *synagogue*. *Shakspeare*.

SYNALEPHA, *s.* [*συναλοιφή*, Gr.] A contraction or excision of a syllable in a Latin verse, by joining together two vowels in the scanning or cutting off the ending vowel; as, *ill' ego*.—Virgil, though smooth, is far from affecting it: he frequently uses *synalephas*, and concludes his sense in the middle of his verse. *Dryden*.

SYNARCHY, *s.* [*συναρχία*, Gr.] Joint sovereignty.—The *synarchies* or joint reigns of father and son have rendered the chronology a little difficult. *Stackhouse*.

SYNARTHROSIS, *s.* [*συν* and *αρθρωσις*, Gr.] A close conjunction of two bones.—There is a conspicuous motion where the conjunction is called diarthrosis, as in the elbow; an obscure one, where the conjunction is called *synarthrosis*, as in the joining of the carpus to the metacarpus. *Wiseman*.

SYNA'XIS, *s.* [*συναξις*, Gr.] A meeting of persons; a congregation.—They celebrated their *synaxes* and communions in grots and retirements. *Bp. Taylor*.

SYNBRANCHUS, a genus of fishes of the order Apodes, established by naturalists since the time of Linnæus. The body is eel-shaped; it has no pectoral fins, and the spiracle is single beneath the neck. This genus differs from the *Muraena*, in the circumstance of the spiracles or branchial orifice being single, and situated beneath the throat.

1. *Synbranchus marmoratus*, or olive-brown *Synbranchus*, marbled with blackish spots; the body is yellowish beneath.—The general appearance of this animal is that of a *muraena*: it is about 30 inches long; the head is large, short, and thick; mouth moderately wide, and furnished with several rows of small conical teeth; the tongue is connate; lips fleshy, nostrils simple, seated near the eyes, which are blue; the skin of the body is thick and loose; the back is of a deep olive-colour, with dusky spots; the belly and sides are of a yellowish cast, and the spots on those parts have a tinge of violet.—Native of the fresh waters of Surinam.

2. *Synbranchus immaculatus*.—This is of a plain unvariegated brown colour: it is much allied in general form to the preceding, but is considerably smaller, and very different in colour, being nearly of an uniform brown throughout, with the exception of a few very obscure sub-transverse dusky shades across the body, and a few whitish marblings on the fins.—Native of Surinam.

3. *Synbranchus spagebranchus* is much allied to the preceding.—It has an eel-shaped body, and no pectoral fins: it has two spiracles beneath the neck.

4. *Synbranchus rostratus*, with the upper lip produced into a snout.—This fish, as described by Dr. Bloch, measures about nine inches, and is of a cylindric form, destitute both of fins and scales. The upper jaw is considerably longer than the lower, being indeed sharpened into a snout: the two spiracles or branchial orifices are situated at about an inch beyond the mouth, immediately beneath the neck.—The colour, pale brown.

SYNBORG, a town of Denmark, in the island of Funen, which, though small, has a large and commodious harbour.

SYNCHONDROSIS, *s.* [*συν* and *χονδρος*, Gr.] *Synchondrosis* is a union by gristles; as of the sternon to the ribs. *Wiseman*.

SYNCHRONAL, *adj.* [*συν* and *χρονος*, Gr.] Happening at the same time; belonging to the same time.—The glorious estate of the church, which is *synchroal* to the second and third thunder. *More*.

SYNCHRONAL, *s.* That which happens at the same time, or belongs to the same time, with another thing.—The near cognation and colligation of those seven *synchronals* that are contemporary to the six first trumpets. *More*.

SYNCHRONICAL, *adj.* [*συν* and *χρονος*, Gr.] Happening together at the same time.—It is difficult to make out how the air is conveyed into the left ventricle of the heart, the systole and diastole of the heart and lungs being far from *synchroal*. *Boyle*.

SYNCHRONISM, *s.* [*συν* and *χρονος*, Gr.] Concurrence of events happening at the same time.—The coherence and *synchroism* of all the parts of the Mosaical chronology; after the Flood, bear a most regular testimony to the truth of his history. *Hale*.

To **SYNCHRONIZE**, *v. n.* To concur at the same time; to agree in regard to the same time.—The most genuine sense to me, is to *synchroize* with the history of that time wherein John lived. *Dr. Robinson*.

SYNCHRONOUS, *adj.* [*συν* and *χρονος*, Gr.] Happening at the same time.—The variations of the gravity of the air keep both the solids and fluids in an oscillatory motion, *synchroous* and proportional to their changes. *Arbutnot*.

SYNCHYSIS, *s.* [*συν* and *χυσις*, Gr.] A confusion; a confused arrangement of words in a sentence.—The English translator hath expressed the sense, but not translated strictly to the words, by reason of the *synchysis* and involved and perplexed trajection being not well distinguished. *Knatchbull*.

To **SYNCOPATE**, *v. a.* To contract; to abbreviate, by taking from the middle of a word.—The tyrant time, which hath swallowed many names, hath also in use of speech changed more by contracting, *syncoating*, curtailing, and mollifying them. *Camden*.—[In Music.] To divide a note. See **SYNCOPE**.

SYNCOPE, *s.* [*syncope*, Fr.; *συνκοπή*, Gr.] Fainting.—The symptoms attending gun shot wounds are pain, fever, delirium, and *syncope*. *Wiseman*.—Contraction of a word by cutting off a part in the middle.—The division of a note, used when two or more notes of one part answer to a single one of the other. *Mus. Dict.*

SYNCOPIST, *s.* Contractor of words.—To outshine all the modern *syncopists*, and thoroughly content my English readers, I intend to publish a *Spectator* that shall not have a single vowel in it. *Spectator*.

To **SYNCOPIZE**, *v. a.* To contract; to abridge.—Whether to ascribe this to some modish affectation of times and humours, or more particularly to a poetical humour of *syncoipizing* and contracting their words. *Dalgarno*.

To **SYNDICATE**, *v. a.* [*syndiquer*, Fr.; *συν* and *δικη*, Gr.] To judge; to pass judgment on; to censure. *An unusual word*.—Aristotle undertook to censure and *syndicate* his master, and all law-makers before him. *Make-will*.

SYNDIC, *s.* [*syndic*, Fr.; *συν* and *δικη*, Gr.] A kind of chief magistrate; a curator.—May it please you, that Dr. Guining and Dr. Pearson may be your legal *syndicks* for you, and in your name, to treat and conclude with the said archbishop concerning his and your right and interest in the said books. *Grace in the Senate*.

SYNDROME, *s.* [*συνδρομη*, Gr.] Concurrent action; concurrence.—All things being linked together by an uninterrupted chain of causes, every single motion owns a dependance on such a *syndrome* of preredquired motors. *Glanville*.

SYNECDOCHE, *s.* [*synecdoche*, Fr.; *συνεκδοχη*, Gr.] A figure by which part is taken for the whole, or the whole for part.—Because they are instruments of grace in the hand of God, and by these his holy spirit changes our hearts: therefore the whole work is attributed to them by a *synecdoche*; that is, they do in this manner the work for which God ordained them. *Bp. Taylor*.

SYNECDOCHICAL, *adj.* Expressed by a *synecdoche*; implying a *synecdoche*.—Should I, Lindamer, bring you into hospitals, and shew you there how many souls, narrowly lodged in *synecdochical* bodies, see their earthen cottages moulder away to dust, those miserable persons, by the loss of one limb after another, surviving but part of themselves, and living to see themselves dead and buried by piecemeal? *Boyle*.

SYNECDOCHICALLY, *adv.* According to a *synecdochical* way of speaking.—Thus did our Saviour rise from the dead on the third day properly; and was three days and three nights in the earth *synecdochically*. *Pearson*.

SYNERGISTICK,

Small, vertical text or a signature, possibly a library stamp or a collector's mark, located on the right side of the page.

SYNGNATHUS AND TETRODON.

1 *Hippocampus foliatus*. 2 *Hippocampus*. 3 *Thysanurus*. 4 *Tetrodon lineatus*. 5 *Tetrodon lineatus*.

J. Bass sc.

Engraved for the Encyclopædia Britannica, 1797.

SYNERGISTICK, *adj.* [*συνεργιστικός*, Gr.] Co-operating.—Luther's notions of the irresistible decrees, which he afterwards published in his book *De servo arbitrio*, shocked both parties, and caused a kind of revolution on all sides. The papists raised an outcry against their own doctrine, when expressed in so unguarded a manner: and the Saxon divines, with Melancthon at their head, silently withdrew themselves from their master Luther in this point; and struck out, or rather adopted, another system, viz., the *synergistical*. On this system of the co-operation of grace and free-will, the Augustan confession is wholly built. *Dean Tucker*.

SYNGNATHUS, the PIPE-FISH. The name *syngnathus* is of Grecian origin, and is formed of the word *συν*, which in composition signifies the same as the Latin *con*, together, and *γνάθος*, a jaw. It is given to this fish from that remarkable structure of its mouth, by which the jaws are made to grow together, and the very end of the mouth only opens.

The head of this fish is very small; the snout nearly cylindrical, long, turned up at the end; mouth terminal, without teeth or tongue, and furnished with a lid; the lower jaw is moveable; gill-covers are large, striate and closed; the spiracle on the nape is tubular; the body is jointed, and mailed with many-sided scales: it has no ventral fins.

The fish of this genus inhabit the ocean, near the shores; they feed on lesser worms and insects, and the spawn of other fish: under the tail, commencing at the vent, is a longitudinal groove, concealing the young and the eggs; the eyes of the animal are small, covered at the sides with a membrane; the nostrils are near the eyes, but scarcely to be seen; the palate is smooth; the gill-membrane is very thin, placed on the nape; the fins are small, thin, the rays undivided; it has now lateral line. Gmelin enumerates eight species, of which four are found on the coasts of our own country, to which Stow adds two: we will give the most striking.

1. *Syngnathus hippocampus*.—This species has no caudal fin; the body is seven-sided, tuberculate; the tail is square. This fish has a very singular appearance; it is generally from six to ten inches in length; the body is much compressed; it is of a greenish-brown, varied with darker and lighter specks; the head is large and rather thick, and beset on the upper part, as well as along some of the first joints of the body, with several small, weak, lengthened spines, or cirri, which are sometimes slightly ramified; the snout is slender, the neck suddenly contracting beyond the head; the body is rather short, and suddenly contracting towards the tail, which is long, quadrangular, and terminates in a naked or finless tip. In its dry or contracted state, this animal exhibits the fancied resemblance from which it takes its name, but in the living fish this appearance is somewhat less striking; the head and tail being carried nearly straight.—It is a native of the Mediterranean, Northern, and Atlantic seas.

2. *Syngnathus foliatus*, or foliated pipe-fish.—This is a most extraordinary species, far exceeding all the others in the singularity of its appearance, which at first view rather suggests the idea of some production of fancy than of any real existence. It is longer in proportion, or of a more slender habit, than the other pipe-fish. Its great peculiarity consists in the large leaf-shaped appendages with which the back, tail, and abdomen, are furnished; these appendages are situated on very strong rough square spines or processes; and, were it not for the perfect regularity of their respective proportions, might be mistaken for the leaves of some kind of fucus adhering to the spines. The colour of the whole animal is of a dusky or blackish-olive, thickly sprinkled on all parts, except on the appendages, with small round whitish specks, and accompanied by a kind of metallic gloss on the abdomen; the fins are soft, tender, and transparent.—This curious species is a native of the Indian seas.

SYNNEURO'SIS, *s.* [*συν* and *νευρον*, Gr.] *Synneurosis*

is when the connexion is made by a ligament. Of this in symphysis we find instances, in the connexion of the ossa pubis together, especially in women, by a ligamentous substance. In articulation, it is either round, as that which unites the head of the os femoris to the coxa; or broad, as the tendon of the patella, which unites it to the os tibie. *Wiseman*.

SY'NOD, *s.* [*λεονος*, Sax.; *synode*, Fr.; *συνδος*, Gr.] An assembly called for consultation: it is used particularly of ecclesiastics. A provincial *synod* is commonly used, and a general *council*.—The glorious gods sit in hourly *synod* about thy particular prosperity. *Shakspeare*.—Conjunction of the heavenly bodies.

Their planetary motions and aspects
Of noxious efficacy, and when to join
In *synod* unbenign.

Milton.

SY'NODAL, *s.* Money paid anciently to the bishop, &c., at Easter visitation.—*Synodals* were [anciently] the publication or recital of the provincial constitutions in the parish churches. *Wheatly*.

SY'NODAL, **SY'NODIC**, or *Synodical*, *adj.* [*synodique*, *synodal*, French.] Relating to a synod; transacted in a synod.—St. Athanasius writes a *synodical* epistle to those of Antioch, to compose the differences among them upon the ordination of Paulinus. *Stillingfleet*.—[*Synodique*, Fr.] Reckoned from one conjunction with the sun to another.—The diurnal and annual revolutions of the sun, to us are the measures of day and year; and the *synodic* revolution of the moon measures the month. *Holder*.

SY'NODENDRON, in Entomology, a genus of insects of the order coleoptera. The Generic Character is as follows:—Antennæ clavate, the club lamellate; thorax gibbous, muricate or unequal; lip filiform, horny, palpigerous at the tip. There are four species:—

1. *Synodendron cylindricum*.—Thorax truncate before, five-toothed; head with an erect horn. The female is unarmed.—It is found in this country and other parts of Europe.

2. *Synodendron muricatum*.—Thorax muricate, gibbous; shells two-spined before the tip. The shells are dull testaceous, retuse behind, with a long hooked tooth at the suture, and another lesser one at the margin; the antennæ are testaceous.—It inhabits Europe and America, in woods.

3. *Synodendron capæcinus*.—Shells entire, black; thorax rough before. The thorax has numerous raised denticles before; the shells are naked, retuse at the tip.—It inhabits Coromandel.

4. *Synodendron dominicanum*.—Smooth, black, dusky; shells striate; legs pitchy. The head is black, bent under the thorax; the thorax is prominent before; shells entire, striate.—It inhabits South America, and is a very small insect.

SY'NODICALLY, *adv.* By the authority of a synod or public assembly.—It shall be needful for those churches *synodically* to determine something in those points. *Sanderson*.

SY'NONYMA, *s. pl.* [*συνωνυμος*, Gr.] Names which signify the same thing.

Every tinker for his chink may cry,
Rogue, bawd, and cheater, call you by the surnames
And known *synonyma* of your profession. *B. Jonson*.

SY'NONYMAL, *adj.* [*συνωνυμος*, Gr.] Synonymous.—Repetitions here, and doubled sentences, and enlargements by *synonymal* words, &c. before the shutting up of the period, are but necessary. *Instruct. for Orat.*

SY'NONYMALLY, *adv.* Synonymously.—The fifth canon uses *synonymally*. *Spelman*.

SY'NONYME, *s.* [*synonyme*, Fr.; from the Gr. *συν*, with, and *ονομα*, name, Eol. *ονυμα*.] A word of the same meaning as some other word. *Mason*.—Most *synonymes* have some minute distinction. *Reid*.

To **SY'NONYMISE**, *v. a.* To express the same thing
in

in different words.—This word fortis we may *synonymise* after all these fashions—stout, hardy, valiant, doughty, courageous, adventurous, brave, bold, daring, intrepid. *Camden*.

SYNONYMOUS, *adj.* [συνωνυμος, Gr.] Expressing the same thing by different words; having the same signification; univocal.—When two or more words signify the same thing, as wave and billow, mead and meadow, they are usually called *synonymous* words. *Watts*.—Fortune is but a *synonymous* word for nature and necessity. *Bentley*.

SYNONYMOUSLY, *adv.* In a synonymous manner.—It is often used *synonymously* with words which signify any kind of production or formation. *Pearson*.

SYNONYMY, *s.* [συνωνυμια, Gr.] The quality of expressing by different words the same thing.—We having three rivers of note, *synonymies* with her. *Selden*.

SYNOPSIS, *s.* [συνολις, Gr.] A general view; all the parts brought under one view.—Breviaries, *synopses*, and other loitering gear. *Milton*.

SYNOPTICAL, *adj.* Affording a view of many parts at once.—We have collected so many *synoptical* tables, calculated for his monthly use. *Evelyn*.

SYNOPTICALLY, *adv.* In a synoptical manner.—I shall more *synoptically* here insert a catalogue of all dying materials. *Sir W. Petty*.

SYNTACTICAL, *adj.* [from *syntaxis*, Lat.] Conjoined; fitted to each other. Relating to the construction of speech.—A figure is divided into tropes, &c., grammatical, orthographical, *syntactical*. *Peacham*.

SYNTAX, or **SYNTAXIS**, *s.* [συνταξις, Gr.] A system; a number of things joined together.—They owe no other dependance to the first than what is common to the whole *syntax* of beings. *Glanville*.—That part of grammar which teaches the construction of words.—To make the word gift, like the river Mole in Surrey, to run under the bottom of a long line, and so start up to govern the word presbytery, as in immediate *syntaxis*. *Milton*.

SYNTERESIS, *s.* [συν and τρησις, Gr.] A remorse of conscience.—Though the principles of *synteresis*, the seeds of piety, and virtue, scattered and disseminated in the soul, to bring forth the fruit of virtue and felicity, may be trampled on and kept under, cropped and snibbed, by the bestial part; yet they will sometimes be starting out, sprouting, and putting forth themselves. *Bp. Ward*.

SYNTHESIS, *s.* [συνθεσις, Gr.] The act of joining: opposed to *analysis*.

SYNTHETIC, or **SYNTHETICAL**, *adj.* [συνθετικος, Gr.; *synthetique*, Fr.] Conjoining; compounding; forming composition: opposed to *analytic*.—*Synthetic* method is that which begins with the parts, and leads onward to the knowledge of the whole; it begins with the most simple principles and general truths, and proceeds by degrees to that which is drawn from them or compounded of them; and therefore it is called the method of composition. *Watts*.

SYNTHETICALLY, *adv.* By synthesis.—The plan proceeds *synthetically* from parts to the whole. *Walker*.

SYPHON, *s.* A tube; a pipe.—Take your glass, *siphon*, or crane, and draw it off from its last faces into small bottles. *Mortimer*.

SYPOMBA, an island on the coast of Brazil, about 7 leagues north-east of St. John's island, and north-west from a range of islands which form the great bay of Para.

SYTOTUBA, one of the head branches of the river Paraguay, in South America.

SYRA, or **SYROS**, an island of the archipelago, lying in the midst of the Cyclades, near Delos, in Lat. 27. 22. N. long. 24. 34. E. Its length is about 14, its circumference nearly 36 miles. Its surface is mountainous, but its soil productive. Its climate, like that of the surrounding islands, is very mild, winter being scarcely perceptible, and the heats of summer moderated by the sea breezes. Hence the trees rarely lose their verdure. The products are wheat, barley, wine, olives, honey, cotton, and several kinds of fruit.

SYRACUSE, a celebrated town of Sicily, situated in the south-east of the island, and possessing, in ancient times, a larger population than Athens, or any of the Grecian cities. This estimate, sanctioned by the authority of Thucydides, Strabo, and Cicero, receives confirmation from the nature of the locality, and the still remaining traces of the walls. Syracuse had two harbours, of which the larger is a basin of nearly two miles in length, and the above one in width, with an entrance sufficiently wide for navigation, and sufficiently contracted for defence. To this, and to the means of easy defence on the land side, were owing its increase and eventual magnitude. It was founded by a colony of Corinthians about 736 years before the birth of our Saviour, and was governed at one time as a republic, at another by Gelon, Hiero, and other rulers. The siege by the Athenians, so impressively described by Thucydides, took place 414 years before Christ; the government of Dionysius the Elder, and Timoleon, in less than half a century after. Syracuse was taken by the Romans 212 years before Christ, and continued in their possession until the inroads of the Barbarians on the downfall of the empire.

The shape of ancient Syracuse was triangular, one side being formed by the sea, the other by a line of rock, the third by a strong wall. The city consisted of four parts, that called Ortygia, situated between the two harbours; Acradina, a more extensive quarter, extending along the sea side from north to south; Tyche, an inland and equally large division, and finally, Neapolis, forming the west extremity of the city, and defended by a high and strong ground. The space thus occupied was of great extent, being equal to rather more than half the ground covered by London, Westminster, and Southwark. It was not, however, closely inhabited; for the population could not at any time have exceeded a sixth of that of the English metropolis; nor would it, strong as is its position, have been capable of repelling so formidable an army as that of the Athenians under Nicias, or to resist, during three years, the Romans under Marcellus, had not the difficulties of besieging been far greater in ancient than in modern times.

At present, the only inhabited part of Syracuse is the south-east corner, containing Ortygia and part of Acradina. It is insulated, walled, and entered by draw-bridges. The streets are regular, but narrow; the houses tolerably built. The population is not above 15,000. The cathedral or principal church is the ancient temple of Minerva. The palace of Dionysius, his tomb, the baths of Daphnis, and other ancient buildings, have disappeared; but there remains the ancient amphitheatre, of an oval form, above 300 feet in length, and 200 in width; the arena, the seats, and the passages of communication, were cut out of the rock; and enough yet remains, to convey an idea of its ancient grandeur. In 1810 a beautiful statue of Venus was dug out from among ruins. There still remains a considerable part of the long wall built on the north side of the town by Dionysius; its height does not exceed seven feet, but it is ten feet in thickness, and exhibits a very solid mass of masonry. The catacombs continue in existence, and form another remarkable feature of Syracuse. The speaking grotto, or, as it was called by the ancients, the Ear of Dionysius, is a cave of 170 feet in length, 60 in height, and from 20 to 35 in width, with so strong an echo, that the slightest noise is overheard in the small chamber near the entrance, in which Dionysius is said to have listened to the conversation of his prisoners.

The fountain of Arethusa can no longer boast of ornament, being the resort of the laundresses of the place. It continues, however, a striking object, from its discharge of water, which is such as to resemble the stream of a river. The fountain of Cyane, a few miles from the town, has also a copious discharge. The harbour exists in all its beauty. It is capable of receiving vessels of the greatest burden, and of containing a very numerous fleet. Though at present entirely neglected, it might easily be rendered a great naval and commercial station. The environs of Syracuse are fertile. The exports from the town are limited to wine, oil, hemp, nitre, and some

some wheat. The climate is mild, and the town well adapted for a winter residence, but in summer it is rendered unhealthy by the marshes at the head of the harbour; it is 30 miles south-south-east of Catania, and 80 south-south-west of Messina. Lat. 37. 3. 0. N. long. 15. 27. 3. E.

SYREN. See SIREN.

SYRESHAM, a parish of England, in Northamptonshire; 4 miles north-east of Brackley. Population 593.

SYRESTON, a parish of England, in Nottinghamshire; 5 miles south-west of Newark.

SYRIA, a fine country of Asia, situated along the most interior coast of the Mediterranean, which bounds it on the west, while on the north Mount Taurus and its branches divide it from Asia Minor, and on the east a vast and trackless desert, stretching northwards from Arabia, and partaking of the dreariest character of that region, separates it at an undefined point from the Persian or independent provinces of Kurdistan and Irak Arabi. On the north it has Palestine. That country, indeed, has been often considered as part of Syria, the frontier of which would thus be extended to Arabia and Egypt. As, however, Palestine has already been described at some length, it will be in a great measure excluded from our present description of Syria.

There is no country in Asia more celebrated in antiquity, or which recalls more solemn recollections than Syria. In the earliest periods of the Jewish history, we find it already formed into a powerful kingdom, having Damascus for its capital. Its most remarkable district, however, consisted of the sea coast, entitled Phœnicia, in which commerce first derived its origin, and flourished to a degree unexampled in ancient times, unless in its own colony of Carthage. After the conquests and death of Alexander, Syria was erected by his lieutenant, Seleucus, into a separate kingdom, which at first comprehended the whole west of Asia, and even after its limits were reduced, opposed, under Antiochus, a long and vigorous resistance to the Roman arms. Even under Rome, Antioch was still the splendid and luxurious capital of the east, and next to Rome itself, and to Alexandria, the greatest city in the empire. On the rise of the Saracen power, Syria, exposed to their immediate inroads, was among the first to fall under their sway. Soon, however, when the crusading armies poured into Asia, it became the grand theatre of contest between the armies of the cross and the crescent; and its plains, during many ages, were deluged with blood. At length the Moslem force triumphed over armies whose resources were at so great a distance, and whose strength lay only in the romantic enthusiasm with which they were animated. Syria was finally absorbed in the Turkish empire, of which it has formed one of the richest appendages. Its situation, however, is sufficiently distant to make it be with difficulty kept in regular subjection. Chiefs have from time to time started up, who have for some time set the power of the Porte at defiance. Among the earliest was Fackerdin, emir of the Druses, a well known people, inhabiting the mountainous district of Lebanon. Not contented with reigning over them as a tributary prince, he made himself master of Bairout, and successively of all the towns on the Syrian coast. He pretended to be only the instrument of the Porte in punishing refractory pachas, and recommended himself by remitting a larger tribute than before. He remained for a considerable time almost absolute master of Syria, till, having abandoned himself to ease and luxury, which he had learned during a visit to Italy, the Porte, whose jealousy was now fully awakened, sent against him a strong force, by which the emir was defeated, taken, and put to death. His posterity, however, continued to administer the affairs of the Druses, but entirely as vassals of the Porte. About the middle of the last century, Daher, a powerful Arabian sheik, established in Syria a power so independent, that the Porte, in order to preserve any form of allegiance, was obliged first to grant him an annual lease of his dominions, and then to confirm it to his successor; thus rendering him completely an independent sovereign. At length the Porte, determined to vindicate his power, dispatched a large army into Syria; and though Daher, fortified by the alliance

of the celebrated Ali Bey, gained repeated victories, he was ultimately overpowered and put to death. During his administration, he had greatly improved the condition of Syria. He made no distinctions in point of religion; and his justice had established among the people a sense of security elsewhere unknown in Turkey. His successor was the celebrated Dsjezzar Pacha, who soon raised a power almost equally independent, but the savage energy of whose administration was not accompanied by the improving and protecting system of his predecessor. The reign of this chief was rendered remarkable by the invasion of Syria by Buonaparte, when Dsjezzar, with the aid of British seamen gave that dreaded commander the first serious check he had received. After the death of Dsjezzar, the power reverted to the Porte, and Soleiman was appointed Pacha. About this time the state of Syria became critical, in consequence of the formidable inroad of the Wahabis, who had entirely blocked up the route to Mecca. They would no longer permit the great armed caravan from Damascus to proceed thither, though they allowed passage to single and unarmed pilgrims. The porte sent repeated injunctions to the pacha to avenge this insult to the majesty of the empire. Under this impulse, Abdallah, pacha of Damascus, undertook repeated expeditions, but was always obliged to return without reaching Mecca. He was supplanted by Yussuf Pacha, who made a good governor, and by a just and protecting system, had greatly improved the territory under his jurisdiction; but he was not successful in resisting the Wahabis who, advancing through the Syrian desert, alarmed Damascus itself. Another deadly sin of Yussuf was the being very sparing in his remittances to the Porte, who therefore transferred the pachalic of Damascus to Soleiman, under whose government Acre and Tripoli had already been placed. In 1811, accordingly, when Mr. Burekhardt was at Damascus, Soleiman reigned over the whole of Syria and Palestine, except the pachalic of Aleppo.

The leading feature in the physical aspect of Syria consists in the great mountain chain traversing it from south to north, and known, from its highest pinnacle near Tripoli and Bairout, under the name of Lebanon, or Libanus. Connected with Mount Casius, which stretches farther to the north, it forms a continued range, locking in with Mount Taurus on the frontier of Asia Minor. While Lebanon faces the Mediterranean, a parallel chain, called Anti Libanus, looks eastward upon the Syrian desert. Thus Syria, in its inhabited districts, may be considered as a country of valleys; but many of these valleys are blessed with extreme fertility, as well as with the utmost felicity of climate. That interposed between Lebanon and the Mediterranean, where it is of any breadth, yields amply all the richest products, being preserved, by the vicinity both of the mountains and the sea, from that aridity which forms the usual source of sterility in tropical regions. Besides all the most valuable grains, its fruits are held in especial esteem, particularly the oranges of Tripoli, the figs of Bairout, and the pistachios of Aleppo. As we ascend the sloping sides of Lebanon, all the varieties of European climate are successively experienced. These mountain tracks being possessed by free and industrious tribes, are much more diligently cultivated than the plains, whose tenants are continually exposed to the extortions of the pachas. The vine and the mulberry are reared by care to great perfection; silks and wines are produced, which rival those of Italy and France. Olives and tobacco are also cultivated successfully, and to a great extent. Lebanon is chiefly composed of lime-stone, and presents those castellated rocks, and those extensive caves, which are characteristic of that formation. To the east of this chain vast plains extend, which, as long as they are refreshed with any portion of its moisture, yield most abundant crops of grain. The plains of the Hauran and the Lesge, to the south of Damascus, are peculiarly celebrated for their fertility. From this to the Euphrates, a vast track of desert intervenes, entirely given up to the wandering tribes of the Bedouins.

The commerce of Syria has never been so great in modern

as in ancient times, and may now be stated as inconsiderable. Scanderoon, Tripoli, Saide, and other ports on the Mediterranean, are the residence of a few Frank merchants, and carry on a limited intercourse with Europe. A very extensive land communication has generally been carried on from Syria, with Arabia, Persia, and the interior of Asia; but the domination of the Wahabis in the former country, and the civil wars in the latter, have almost entirely blocked up the passage of the pilgrims and caravans. This circumstance, with the oppression of the pachas, has nearly ruined this celebrated emporium of Syria. The city contains only a small proportion of its former inhabitants, and the plains round it lie deserted and uncultivated. The vicinity of Damascus, on the contrary, which depends more upon agriculture, and has been mildly ruled, exhibits an appearance of populousness and prosperity.

The political state of Syria does not differ from that of the rest of Asiatic Turkey, to which general head we shall here refer. Few countries present a greater variety of population. Its open plains, separated by no defined boundary from Arabia, Persia, and Asia Minor, are variously occupied by the wandering population of these respective countries. Turks and Greeks form, as elsewhere, the basis of population in the cities. The only tribes which can be considered as appropriate to Syria, are the tenants of the heights of Lebanon. The most remarkable of these are the Druses and the Maronites. The former have been sometimes represented as Christians; and a slight resemblance of name has been employed to make them appear original followers of a Count de Dreux, who made a figure in Palestine during the crusades. In fact, however, the Druses are mentioned prior to that era. They are the votaries of Hakem, the caliph of Egypt, who in the 11th century set up pretensions to divinity, and recommended his faith by the abolition of fasting, circumcision, and all the burdensome parts of the Mahometan ritual. The Druses have ever since lived with little outward form of religion, the observances of which are chiefly confined to the okkal or doctors. Their language, which is pure Arabic, clearly disproves the idea of any European origin. The Druses live in a species of rude independence, and are the only people in this part of Asia who have any semblance of a free government. They have a king, indeed, who governs under the Porte, and a hereditary nobility possessed of high privileges; but the people still retain the free possession of the fruits of their industry, and these rude mountains yield more ample produce, and maintain a larger population, than many of the most fertile districts of the Turkish empire. When the cry of war is raised, the whole nation takes arms, and 15,000 men have been raised on a very short notice. They have no idea of regular warfare; their armies are merely a collection of peasants, with short coats, naked legs, and armed with muskets. They never engage in close combat, or on the plain; but maintain a war of posts, firing from a distance, or rising in ambuscade. Their obstinacy and hardihood in this species of warfare renders their frequent rebellions very formidable to the Turkish empire. They can muster 40,000 men, which probably implies a total population of about 200,000.

The Maronites are another people of Lebanon, inhabiting the mountain district of Kesraouan, which rises behind Tripoli. They are more orderly and peaceable than the Druses. They are Christians, and have joined the Romish communion, having renounced all the heresies of their founder Maron, except the marriage of the priesthood, which nothing can ever induce them to relinquish. Their soil produces nothing but the mulberry, which they cultivate with the greatest care, and depend upon almost solely for subsistence. Their chief place, and the residence of the patriarch, is at Cannobine, a convent situated high up the mountain, which the freshness of the air, its picturesque hills, and beautiful arcades, render a delightful residence. Their number is supposed to exceed 100,000. Tribes of less importance are the Mutualis, who inhabit the plain between Libanus and Anti Libanus; and the Arisarians, who oc-

cupy the northern ridge of hills continued from Lebanon, and bordering on Asia Minor, called Mount Casius. It seems impossible to form even a conjecture as to the amount of the mixed population of this part of the Turkish empire.

SYRIAC, *adj.* Spoken in old Syria.—Some *Syriac* copies of the New Testament are now remaining in the duke's library. *Walton*.

SYRIAC, *s.* The Syriac language.—Then spake the Chaldeans to the king in *Syriac*. *Daniel*.

SYRIAN, a very ancient, and formerly a large town, of the Birman dominions, province of Pegue. It is situated on the banks of the Appoo river, and was formerly the port at which several of the European nations had factories. The British factory was destroyed in the year 1744, during the war between the Birmans and Peguers. The town also suffered much on that occasion, and since the removal of the trade to Rangoon, has dwindled into a mere village. Lat. 16. 49. N. long. 96. 17. E.

SYRIASM, *s.* A Syriac idiom.—The scripture-Greek is observed to be full of *syriasm*s and hebraisms. *Warburton*.

SYRINGA, *s.* A flowering shrub.

The sweet *syringa* yielding but in scent
To the rich orange.

Mason.

SYRINGA [from *Συρίγγη*, Gr. *a pipe*], in Botany, a genus of the class diandria, order monogynia, natural order of sepiariæ, jasmineæ (*Juss.*)—Generic Character. Calyx: perianth, one-leaved, tubular, small mouth, four-toothed, erect, permanent. Corolla: one-petalled, funnel-form, tube cylindric, very long; border four-parted, spreading, and rolled back; segments linear, obtuse. Stamina: filaments two, very short; anthers small, within the tube of the corolla. Pistil: germ oblong; style filiform, length of the stamens; stigma bifid, thickish. Pericarp: capsule oblong, compressed, acuminate, two-celled, two-valved; valves contrary to the partition.—Seeds solitary; oblong, compressed; acuminate at both ends; with a membranaceous edge.—*Essential Character*. Corolla, four-cleft; capsule two-celled.

1. *Syringa vulgaris*, or common lilac.—Of this shrub, which grows to the height of eighteen or twenty feet in good ground, there are three varieties: those of the white sort grow more erect than the blue; and the purple or Scotch lilac has its branches yet more diffused. The branches of the white are covered with a smooth bark of a gray colour; in the other two it is darker. The leaves of the white are of a brighter green: they are heart-shaped in all, almost five inches long, and three inches and a half broad near the base; placed opposite on foot-stalks an inch and half in length, the flowers are always produced at the ends of the shoots of the former year, and below the flowers other shoots come out to succeed them; for that part upon which the flowers stand decays down to the shoots below every winter. There are generally two bunches or panicles of flowers joined at the end of each shoot; those of the blue are the smallest, the flowers also are smaller, and placed thinner than either of the others; the bunches on the white are larger, but those of the Scotch are larger still, and the flowers fairer; this therefore makes the best appearance. The lilac is very common in the English gardens, where it has been long cultivated as a flowering shrub. It is supposed to grow naturally in some parts of Persia, but is so hardy as to resist the greatest cold of this country.

2. *Syringa Chinensis*, or Chinese lilac.—Leaves very like those of the preceding, but smaller. Flowers as in *Syringa Persica*.—Supposed to be a native of China.

3. *Syringa Persica*, or Persian lilac.—Leaves lanceolate. The Persian lilac is a shrub of much lower growth than the common sort, seldom rising more than five or six feet high. Flowers in large panicles at the end of the former year's shoots, as in the former; of a pale blue colour, and having a very agreeable odour. They appear at the end of May, soon after those of the common sort, and continue longer in beauty,

beauty, but do not perfect their seeds in England. There are two varieties.

4. *Syringa suspensa*.—Leaves ovate, serrate and ternate.—Native of Japan, in Miaco, &c., often cultivated for the elegance of the flowers. It begins to flower in April.

Propagation and Culture.—The common lilac may be increased by seeds or suckers. It thrives best upon a rich light soil, such as the gardens near London are for the most part composed of; and there they grow to a much larger size, when they are permitted to stand unremoved, than in any other part of England.

SY'RINGE, *s.* [συριγξ, Gr.] A pipe through which any liquor is squirted.—The heart seems not designed to be the fountain or conservatory of the vital flame, but as a machine to receive the blood from the veins, and force it out by the arteries through the whole body as a *syringe* doth any liquor, though not by the same artifice. *Ray*.

To SY'RINGE, *v. a.* To spout by a syringe.—A flux of blood from the nose, mouth, and eye, was stopt by the *syringing* up of oxycrate. *Wiseman*.—To wash with a syringe.

SYRINGOTOMY, *s.* [συριγξ and τετομα, Gr.] The art or practice of cutting fistulas or hollow sores.

SYRMIA, a palatinate of the Austrian province, of Slavonia, lying in the east of that province, between the Danube and the district called "the frontier regiment of Peterwardein." Its superficial extent is 910 square miles; its population between 90,000 and 100,000. It contains the mountain of Carlovics, but is generally level, and of great fertility, though in some places marshy, and consequently unhealthy. The chief products are wheat, maize, wine of a remarkably heating quality, and the spirit extracted from plums, called Slivavicza. Some silk is also raised, but the quantity is not large. The chief town is Vukovar.

SYRUP. See SIROP.

SYR'UIS, *s.* [Latin.] A quick sand; a bog.—A boggy *syr'uis*,—neither sea, nor good dry land. *Milton*.

SYSELAND, a parish of England, in Norfolk; 10½ miles south-east of Norwich.

SYSRAN, a considerable town on the east of European Russia, in the government of Simbirsk, at the confluence of two rivers called the Sysranka and the Krymsa. It contains 6300 inhabitants, has some trade both by land and water, and is the chief town of a circle; 78 miles south of Simbirsk.

SYSTASIS, *s.* [συστασις, Gr.] The consistence of any thing; a constitution.—It is a worse preservative of a general constitution, than the *systasis* of Crete, or the confederation of Poland, or any other ill-devised corrective which has yet been imagined in the necessities produced by an ill-constructed system of government. *Burke*.

SYSTEM, *s.* [système, Fr.; συστημα, Gr.] Any complexure or combination of many things acting together. A scheme which reduces many things to regular dependance or co-operation. A scheme which unites many things in order.—The best way to learn any science is to begin with a regular *system*, or a short and plain scheme of that science well drawn up into a narrow compass. *Watts*.

SYSTEM'ATICAL, *adj.* [συστηματικος, Gr.] Methodical; written or formed with regular subordination of one part to another.—Now we deal much in essays, and unreasonably despise *systematical* learning; whereas our fathers had a just value for regularity and systems. *Watts*.

SYSTEM'ATICALLY, *adv.* In form of a system.—Aristotle brings morality into system, and ranges it into classes according to its different objects, distinguishing virtues into their several kinds, which had not been handled *systematically* before. *Baker*.

SYSTEM'ATIST, or SY'STEMATIZER, *s.* One who reduces things to any kind of system.—Aristotle may be called the *systematizer* of his master's doctrines. *Harris*.

To SY'STEMATIZE, *v. a.* To reduce to a system.—*Systematised* regicide. *Burke*.

SYSTEM-MAKER, *s.* One who forms systems.

We *system-makers* can sustain

The thesis, which you grant was plain.

Prior.

SY'STEM-MONGER, *s.* One fond of framing systems. *Mason*.—A *system-monger*, who, without knowing any thing of the world by experience, has formed a system of it in his dusty cell, lays it down, that flattery is pleasing. *Ld. Chesterfield*.

SY'STOLE, *s.* [systole, Fr.; συστολη, Gr.] The contraction of the heart.—The *systole* resembles the forcible bending of a spring, and the diastole its flying out again to its natural site. *Ray*.—In grammar, the shortening of a long syllable.

SYSTON, a parish of England, in Lincolnshire; 4 miles north-east-by-north of Grantham.

SYSTON, a parish of England, in Leicestershire; 5 miles north-north-east of Leicester. Population 1223.

SY'STYLE, *s.* [systyle, Fr.; from συν and στυλος, Gr.] A building in which the pillars are near together.

SYSZKOVO, a small town of the west of European Russia, in the government of Grodno, on the Niemen.

SYTSCHEVSK, a small town in the interior of European Russia, in the government of Smolensk, on the river Wasuga; 144 miles west-by-north of Moscow.

SYWELL, a parish of England, in Northamptonshire; 4½ miles west of Wellingborough.

SYZGY, *s.* [syzgyie, Fr.; συζυγια, Gr.] A conjunction of any two of the heavenly bodies.

SZABADSZALLAS, a small town in the interior of Hungary, in the district of Little Kumania, with 4000 inhabitants, all Calvinists. They have no manufactures, and few mechanical occupations, being employed in agriculture, rearing cattle, and cultivating the grape; 43 miles south-by-west of Pest.

SZADEK, a small town in the west of Poland; 12 miles north-east of Siradia. Population 800.

SZALA, a river of Hungary, which rises in the county of Wieselburg, flows through the county of Szalad, and falls into the lake of Balaton.

SZALAD, a county of Hungary, lying to the north-east of the Drave, and the north of the lake of Balaton. Its superficial extent is 2130 square miles; its population about 230,000, of very diversified origin, being composed of the descendants of Magyars, Croats, Slovacs, and German settlers. It contains the mountains of Radastong, and a part of the forest of Rakong, but has also a great deal of level ground, and part of the lake of Balaton. It produces wine, and is fertile in corn. The number of hogs reared in the forests is also large. The chief town is Egerszeg.

SZALONAK, or SCHLONING, a small town in the west of Hungary, in the county of Eisenburg, situated on a steep hill of considerable height, and containing 1800 inhabitants.

SZALONTHA, a small town of the east of Hungary, in the county of Bihar, on the river called the Black Koresch. It is inhabited by Calvinists.

SZAMOBOR, a small town of Austrian Illyria; 22 miles north-by-east of Carlstadt, with 2700 inhabitants. It has a Franciscan monastery, and several schools, and in the neighbourhood is a rich copper mine.

SZAMOS. See SAMOSCH.

SZAMOS-UJVAR. See ARMENIERSTADT.

SZARVAS, a large town in the east of Hungary, in the palatinate of Bekesch, on the river Koresch; 82 miles east-south-east of Pest, and 21 north-north-east of Csongrad.

SZARYGRAD, a considerable town in the south-west of European Russia, in the government of Podolia. It has nearly 7000 inhabitants, and is the chief place of a circle.

SZASZ-REGEN, REGINU, or REEN-MARKT, a large market town of Transylvania, in the county of Thorda, inhabited chiefly by the descendants of Saxon settlers, who are employed in weaving or in tanning leather. They are distinguished from the aborigines both by their dress and manner of building their houses.

SZCZERKOW, a small town in the west of Poland, on the

the Widawka; 25 miles south-south-east of Sieradz. Population 800.

SZCZUCZIN, a small town in the north-east of Poland; 104 miles north-north-east of Warsaw, and 27 north-by-east of Lomza. Population 2000.

SZEBELLOB, or **SZEBELEB**, a small town of the north-west of Hungary, in the county of Hont; 51 miles north-by-west of Pest.

SZECS, or **GAL-SZECS**, a small but populous town in the north-east of Hungary, in the county of Zemplin. The inhabitants are of very mixed origin, being descended from Magyars, Slovacs, Rascians, and German settlers.

SZECSENY, a small town in the north-west of Hungary, in the county of Neograd, with 1600 inhabitants; 27 miles north-north-east of Waitzen.

SZEGEDIN, a large town in the east of Hungary, situated in the county of Csongrad, opposite to the confluence of the great rivers Theyss and Maros. It contains a population of 26,000, is surrounded by a mound and moat, and has still a brick fort erected by the Turks in the 16th century, when this place was in their possession. Szegedin is one of the principal towns of Hungary, containing manufactures of woollens, leather, and toys, all on a small scale, but of importance in a country where manufactures are still in their infancy. Its commercial intercourse is more considerable, its position at the junction of two navigable rivers, giving it the command of an extensive water carriage. The inhabitants possess a number of barges, some of the size of 200 or 250 tons, with which they navigate not only the Maros and the Theyss, but the Danube. Their exports consist chiefly of the products of the adjacent country, viz., corn, cattle, wool, tobacco, and timber. Cotton they import from Turkey, and make it the object of a transit trade: salt they import from Transylvania. The climate being favourable for the culture of tobacco, the qualities raised in this neighbourhood are in good repute. As to religion, the inhabitants, as in other Hungarian towns, are much divided, but the Catholics and the followers of the Greek church predominate. This town fell, in the beginning of the 16th century, into the hands of the Turks, and continued in their possession above a century and a half, being retaken by the Austrians only in 1686, some time after the rout of the Turkish army by Socieski, under the walls of Vienna; 100 miles south-south-east of Pest, and 30 north of Csongrad.

SZEGESDVAR, or **FELSO-SEGEST**, a small town in the south-west of Hungary; 134 miles south-south-east of Vienna, and 28 south-by-east of Keszthely.

SZEK, or **SZIK**, a considerable town of Transylvania, and the chief place of the county of Doboka. It has five yearly fairs, and in the neighbourhood are salt mines.

SZEKCSO, a small town in the south-west of Hungary, situated in a plain on the river Kopos; 100 miles south of Pest, and 23 east of Funfkirchen.

SZEKELY-HID, a small town in the east of Hungary; 25 miles east-south-east of Debreczin.

SZEKELY-KERESZTUR, a town of Transylvania, in the province of the Szeklers. It is the chief place of a district, and contains 4500 inhabitants, Catholics, Calvinists, and Unitarians. They are chiefly mechanics, and many of them are sieve-makers; 16 miles south-south-west of Udvarhely, and 40 north-by-east of Hermanstadt.

SZEKSZARD, a neat town of the south west of Hungary, the capital of the county of Tolna. It is situated on the river Sarvitz; 27 miles north-east of Funfkirchen, and 162 south-east of Vienna. Population 3500.

SZEKUDVAR, a large village in the east of Hungary, in the county of Arad, with 3000 inhabitants.

SZENTES, a town of the east of Hungary, in the county of Csongrad, on the small river Kurcza, with 4600 inhabitants; 7 miles south-south-east of Csongrad.

SZENT-JANOS, a large village of the north-west of Hungary, in the county of Liptau, with 1000 inhabitants, almost all Protestants.

SZENTIVANY, a large village in the north-west of Hungary, in the county of Neograd, on the small river Besma.

SZERED, a small town in the west of Hungary, on the river Waag, with a great magazine of salt, kept for account of the Austrian government; 28 miles east-north-east of Presburg.

SZEREDA, a small town of Transylvania, in the province of the Szeklers, district of Marosch, near the Aluta, situated in a fine plain at the base of a mountain.—2. **SZEREDA**, another small town in the province of the Szeklers, district of Tschik, on the Aluta. In the neighbourhood is a small fort.

SZERENCs, a small town of the north-east of Hungary; 9 miles west of Tokay, and 40 east-north-east of Erlau, inhabited by Magyars or descendants of the conquerors of the country.

SZIELNICZA, a small town in the north of Hungary; 41 miles west of Kesmark, and 116 north of Pest. Population 1100, chiefly Slovacs of the Lutheran faith.

SZILICZE, a small town of Hungary; 5 miles west of Caschau. In the neighbourhood is a large cavern, where water has been known to freeze in summer, and melt in winter, the temperature of this great recess being nearly the same at all seasons.

SZISZEK, a large village of Austrian Croatia, situated at the confluence of the rivers Culpa and Save. It is of great antiquity, and is still the chief place of a canton; 39 miles east of Carlstadt.

SZLUIN, a district of the Austrian States, in military Croatia, with a small town, or rather village of the same name, situate on the Corona. The district has an area of 320 square miles, with 43,000 inhabitants; 24 miles south-by-east of Carlstadt.

SZOLNOK, **BELSO** or **INNER**, a palatinate of Transylvania, bordering on Hungary on the north, and the district of Nosnerland on the east, has a territorial extent of 1335 square miles, with about 110,000 inhabitants. It consists partly of level, and partly of hilly ground, but contains no very high mountains, and enjoys a temperate and healthy atmosphere. Tillage, as usual in this part of Europe, is extremely backward, but the pastures are extensive, and the number of cattle is large.

SZOLNOK, **KOSCEP** or **MIDDLE**, a county or palatinate of Transylvania, bounded by Hungary entirely on the north and partly on the west. Its area is 865 square miles, and its population about 50,000, of whom more than the half are Wallachians. It consists entirely of hilly ground, but produces corn and wine, though in general the land is applied to pasturage. These two counties are both in the part of Transylvania allotted to Magyar settlers, and both are watered by the Szamos; yet they are not contiguous in any part, the county of Kovar lying between them, in the quarter (the south) where they approach nearest each other.

SZOMBALFALVA, or **SABBATHDORF**, a village of Transylvania, in the district of Udvarhely, at the confluence of two small rivers called the Fejer and the Soa Pataka.

SZTRASEMON, a small town of the Austrian States, in Slavonia, circle of Poschega, with a silk manufacture.

SZUCSAN, a small town in the north-west of Hungary, on the river Waag; 25 miles north-north-east of Neusohl.

SZWARZENE, or **SCHWARZENY**, a small town of Prussian Poland; 6 miles east of Posen. It contains 2500 inhabitants, who are Lutherans of German descent. A number of them are employed in the manufacture of hats.

SZWISLOWITZ, a small town of Russian Lithuania, in the government of Wilna.

SZYDLOW, a small town in the south of Poland; 34 miles west-by-south of Sendomir. Population 1000.

SZYDOWIEC, a small town in the interior of Poland; 93 miles north-north-east of Cracow, and 17 south-west of Radom. Population 1500, chiefly Jews.

T A B

T.

T A B

T, A mute consonant, which, at the beginning and end of words, has always the same sound, nearly approaching to that of *d*; but before an *i*, when followed by a vowel, has the sound of an obscure *s*: as, *nation, salvation*; except when *s* precedes *t*: as *Christian, question*.

TA, a city and fortress of China, of the second rank, in Sechuen. Lat. 36. 55. N. long. 107. 15. E.

Ta, a river of China, which falls into the Eastern seas. Lat. 36. 55. N. long. 121. 34. E.

TAAIF, a town of Hedsjas, in Arabia, situated in a mountainous, but fertile and well cultivated district, from whence Jidda and Mecca are supplied with excellent fruits, particularly almonds; 60 miles south-east of Mecca.

TAAS, or **TAAES**, a considerable city of Yemen, in Arabia, on the road from Mocha to Sana. It is surrounded by mountains, which are said to be the most productive of plants in the world. They are in the possession, however, of several schiechs; 48 miles east-north-east of Mocha.

TAASINGE, a small island of Denmark, about 8 miles long and 4 broad, lying between Funen and Langeland. The soil is tolerably fertile, and the inhabitants are employed in agriculture, navigation, and fishing. The island has a small town of the same name, and contains about 1800 inhabitants. Lat. 55. 0. N. long. 10. 37. E.

TAASKIER, a small island of Scotland, on the south coast of the isle of Hay.

TAAWIRRY, an island in the South Pacific Ocean. There are two situated within the reef of the island of Otaheite, and on the east side of the main island. Within these islands there is anchorage within the reef that surrounds them. The French vessels under the command of M. Bougainville lay here. The name of the other island is Boourou.

TAB, a river of Persia, the ancient *Arosis*, which rises in the mountains of Fars, divides that province from Khusistan, and falls into the Persian gulf near Endian. At that place it is 80 yards wide, and navigable for boats of 20 tons.

TABA, a village on the Grain coast of Africa.

TABA ISLANDS, four small islands in the Eastern seas, lying north-west and south-east, near the east coast of Borneo. Lat. 2. 6. N. long. 118. 12. E.

TABABELLAH, a town of Hindostan, province of Malwah, belonging to the Mahrattas. Lat. 23. 16. N. long. 75. 20. E.

TABAFRA, a village on the Ivory coast of Africa; 15 miles east of Drevin.

TABAGO, or **TABOGA**, an island in the Pacific Ocean, near the coast of Mexico, about three miles long and two broad. It is mountainous, and on the north side the high land declines with a gentle descent to the sea. Near the strand the soil is a black mould, and deep, but towards the top of the mountains strong and dry. The north side of the island makes a very pleasant appearance, and seems to be a garden of fruit trees, inclosed with others of the forest kind. The principal products are plantains and bananas, which grow very well from the foot to the middle of the mountain; but those near the top are small, as wanting moisture. There was formerly a small town near the sea, on the north side of the island: but it was ruined by the privateers that then frequented those seas. Before it is a good road, about a mile from the shore, where ships may ride very safely in 16 or 18 fathom water; 18 miles south of Panama. Lat. 8. 40. N. long. 80. 9. W.

TABAGUILLA, or **LITTLE TABAGO**, a small island in the Pacific Ocean, near Tabago.

TABALLAR POINT, a cape on the east coast of the island of Borneo. Lat. 2. 12. N. long. 177. 4. E.

TABANIE, a village of Lower Egypt, on the eastern branch of the Nile; 6 miles south-west of Mansora.

VOL. XXIII. No. 1610.

TABANUS, the *Ox-fly*, in Entomology, a genus of the Diptera order of insects; the generic characters of which are, that the mouth has a fleshy proboscis, terminated by two lips, and that the rostrum is furnished with two awl-shaped palpi, placed on each side of, and parallel to, the proboscis. Gmelin, enumerates 38 species.

1. *Tabanus bovinus*.—Greenish eyes; marked down the back by a series of large, whitish, triangular spots, and on each side is a similar appearance, but less distinct than that of the dorsal row. This is the largest of the British species, and, like others of its species, is seen generally in the hottest part of the day, during the middle and the decline of summer. It is very troublesome to cattle. Its larva is large and dusky yellowish, like that of a tipula, marked by transverse blackish streaks or rings; residing under ground in moist meadows, &c.; and changing into a cylindrical brownish chrysalis, with a roundish or slightly pointed extremity, from which within a month proceeds the perfect insect.

2. *Tabanus fervens*.—With green eyes, yellow abdomen and antennæ, and brown head and thorax.—Found in South America.

3. *Tabanus Mexicanus*.—With a livid body, green antennæ, and greenish wings.—Found in Surinam.

4. *Tabanus rusticus*.—Cinereous, with grey eyes, and two black points in the front.—An European insect.

5. *Tabanus bromius*.—With a purple fascia about the eyes, and cinereous body.—Found in Germany, and the northern part of Europe.

6. *Tabanus occidentalis*.—With eyes having double brown fasciæ, a brown body, and the abdomen marked with three yellow lines.—Found in Surinam.

7. *Tabanus tropicus*.—With eyes having triple purplish fasciæ, and the sides of the abdomen ferruginous.—An European insect of a brown colour, smaller than *Tabanus bovinus*, and less common, troublesome to cattle, and especially to horses.

8. *Tabanus pluvialis*.—With eyes waved with four-fold fasciæ, and brown-speckled wings.—This is an European species, very troublesome with us in the latter part of summer, fastening on the legs, hands, &c., and peculiarly teasing on the approach of rain.

TABARABA, a river of Mexico, in the province of Vera-gua, which runs into the Pacific Ocean. Lat. 8. 40. N. long. 82. 48. W.

TABARCA, a small sea-port of Tunis, in Africa, situated in the midst of extensive woods. It is now almost in ruins, but occupied by a small garrison. Opposite to it is a little island famous for a coral fishery. It was long in possession of the Lomellines, a noble Genoese family, from whom it was taken in 1740, by Ally Bashaw, who, having treacherously obtained entrance into the place, put a number of the Genoese garrison to the sword, and carried the rest into slavery; 60 miles north-west of Tunis. Lat. 36. 55. N. long. 9. 18. E.

TABARCA NUEVA, an island of Spain, in the Mediterranean, on the coast of Valencia. It is small, and almost destitute of trees and water, but is inhabited by the descendants of a colony of Spaniards, who were redeemed from slavery in Barbary by the government, and settled here in 1771.

TABARD, *s.* [*tabar*, Welsh; *tabardum*, low Lat.] A short gown; a herald's coat; sometimes written, incorrectly, *taberd*.—Their apparel is said to shine beyond the power of description, and their *tabards* to be studded with diamonds and rubies. *Warton*.

TABARDER, *s.* One who wears a tabard, or short gown: the name is still preserved in certain bachelors of arts on the old foundation of Queen's College in Oxford.

TABARIA. See **TIBERIAS**.

TABARRA, a small town in the west of Spain, in Leon; 16 miles north-by-west of Zamora.

TABAS, a city of Korassan, in Persia, on the road from Herat to Yezd; 337 miles from the former, and 150 from the latter. It is the only city which occurs between these two places, and is thus the scene of some commercial intercourse. It is situated amid a range of mountains, and contains a population of about 20,000.

TABASCO, formerly a province of Mexico, now included within the limits of Vera Cruz, of which it occupies the southern portion, and is 100 miles long by 60 broad. The soil is not very fertile, neither is the air healthy, as the country is in general flat and marshy, filled with small lagoons or lakes; and as it rains during greater part of the year, the climate is very damp. The coast is subject, from September to March, including both those months, to dreadful storms, the northerly gales prevailing during that period, which renders navigation dangerous and difficult. In February, March, and April, the heats prevail, which are insupportable, and accompanied with infinite swarms of mosquitoes and other venomous insects.

TABASCO, the chief town of the above province, and one of the oldest in New Spain, called also Nuestra Señora de la Victoria, on account of a great victory which Cortez gained here on his first landing. The town is not large, but is well built, and is considerably enriched by a constant resort of merchants and tradesmen at Christmas. It stands on an island at the mouth of the Rio Guijalva, which divides itself near the gulf into two arms; 197 miles east-south-east of Vera Cruz. Lat. 18. 34. N. long. 93. 36. W.

TABASCO, an island, or rather a neck of land, in the south-west part of the gulf of Mexico, and at the bottom of the gulf of Campeachy, on which is built the town of Tabasco. It is about 36 miles in length, and 7 or 8 broad. Near it on the continent, are great plains abounding in cattle, sheep, &c., and a wild animal called the mountain cow, or tapir, which subsists on the moss that accumulates on trees, near the great rivers, in marshy situations. It is separated from the continent by the river.

TABASCO RIVER, a river of North America, which runs into the bay of Campeachy. Lat. 18. 15. N. long. 93. 40. W. On the banks of this river are some of the largest cabbage and cotton-trees supposed in the world.

TABAY, a settlement of New Granada, in South America, in the province of Maracaibo, near the city of Merida.

TABBAY, one of the Western islands of Scotland, near the east coast of Skye. Lat. 57. 16. N. long. 5. 51. W.

TABBY, *s.* [*tabi, tabino*, Italian.] A kind of waved silk.—Brocades, and *tabbies*, and gauzes. *Swift*.

TABBY, *adj.* Brinded; brindled; varied with different colours.—A *tabby* cat sat in the chimney-corner. *Addison*.

To TA'BBY, *v. a.* To pass a stuff under a calender to make the representation of waves thereon, as on a tabby.—It is usual to *tabby* mohairs, ribands, &c. *Chambers*.

TABEFACION, *s.* [*tabefacio*, Lat.] The act of wasting away.

To TA'BEFY, *v. n.* [*tabefacio*, Lat.] To waste; to extenuate.—Meat eaten in greater quantity than is convenient *tabefies* the body. *Harvey*.

TABERD, *s.* See **TABARD**.

TABERG, a post village of the United States, in Oneida county, New York.

TABERNA, a town in the east of Spain, in the province of Valencia, on the great road leading along the coast in the direction of Catalonia. Population 4000; 4 miles north-east of Valencia.

TABERNACLE, *s.* [*tabernaculum*, Lat.] A temporary habitation; a casual dwelling.

They sudden rear'd

Celestial *tabernacles*, where they slept
Fann'd with cool winds.

Milton.

A sacred place; a place of worship.—The greatest conqueror did not only compose his divine odes, but set them to music: his works, though consecrated to the *tabernacle*,

became the national entertainment, as well as the devotion of his people. *Addison*.

To TA'BERNACLE, *v. n.* To enshrine; to house.—He assumed our nature, and *tabernacled* among us in the flesh. *Scott*.

TABERNA'CLAR, *adj.* Latticed.—The sides of every street were covered with cloisters, crowned with rich and lofty pinnacles, and fronted with *tabernacular* or open work. *Warton*.

TABERNÆMONTANA [so named by Plumier, in memory of James Theodore, surnamed Tabernæmontanus,] in Botany, a genus of the class pentandria, order monogynia, natural order of contortæ, apocineæ (*Juss.*)—Generic Character. Calyx: perianth five-cleft, acute, converging, very small. Corolla: one-petalled, funnel-form: tube cylindric, long: border five-parted, flat; segments obtuse, oblique. Nectary: glands five, bifid, standing round the germ. Stamina: filaments five, very small, from the middle of the tube. Anthers converging. Pistil: germs two, simple. Style awl-shaped. Stigma oblong, headed. Pericarp: follicles two, horizontally reflexed, ventricose, acuminate, one-celled, one valved. Seeds numerous, ovate-oblong, obtuse, wrinkled, immersed in pulp, imbricate.—*Essential Character*. Contorted. Follicles two, horizontal. Seeds immersed in pulp.

1. *Tabernæmontana citrifolia*, or citron-leaved tabernæmontana.—Leaves opposite ovate; flowers lateral glomerate-umbelled. This rises with an upright woody stalk to the height of fifteen or sixteen feet, covered with a smooth gray bark, abounding with a milky juice, and sending out several branches from the side, which grow erect, and have many joints.—Native of Jamaica, Martinico, &c., and the island of Namoka in the South Seas.

2. *Tabernæmontana laurifolia*, or laurel-leaved tabernæmontana.—Leaves opposite, oval, bluish. This rises with a shrubby stalk twelve or fourteen feet high, sending out a few branches towards the top which grow erect. The flowers are produced in a sort of umbel from the side of the branches; they are small, yellow, and have an agreeable odour.—Native of Jamaica, St. Domingo, and other islands of the West Indies.

3. *Tabernæmontana echinata*, or rough-fruited tabernæmontana.—Leaves opposite, ovate-oblong, acuminate; flowers glomerate-umbelled, fruits echinate. A shrub, sending out from its root several stems of the length of five or six feet: they are woody and branched; flowers corymbose and terminal, situated between the forkings of the branches; they are of a yellow colour and of an agreeable smell.—Native of Guiana.

4. *Tabernæmontana heterophylla*, or various-leaved Tabernæmontana.—Leaves elliptic-lanceolate and subcordate, somewhat waved, acuminate, smooth on both sides; branches dichotomous, flowers racemed.—Native of Cayenne.

5. *Tabernæmontana grandiflora*, or great-flowered tabernæmontana.—Leaves opposite, stem dichotomous; calyxes unequal, very loose.—Native of Carthage in Spanish America: flowering there from July to September.

6. *Tabernæmontana cymosa*, or cyme-flowered tabernæmontana.—Leaves opposite, ovate-lanceolate; flowers cymed.—Frequent in the woods and coppices about Carthage in New Spain: flowering in July and August.

There are thirteen other species, as follows:—*Tabernæmontana amygdalifolia*, *Tabernæmontana discolor*, *Tabernæmontana undulata*, *Tabernæmontana persicariæfolia*, *Tabernæmontana neriifolia*, *Tabernæmontana elliptica*, *Tabernæmontana alternifolia*, *Tabernæmontana amsonia*, *Tabernæmontana angustifolia*, *Tabernæmontana odorata*, *Tabernæmontana alba*, *Tabernæmontana bufalina*, *Tabernæmontana bovina*.

Propagation and Culture.—These plants, being mostly natives of the West Indies, will not live in this country, unless they are placed in a warm stove: they may be propagated by seeds, which must be procured from the countries where the plants grow naturally.

TA'BID, *adj.* [*tabide*, Fr.; *tabidus*, Lat.] Wasted by disease; consumptive.—In *tabid* persons milk is the best restorative, being chyle already prepared. *Arbutnot.*

TA'BIDNESS, *s.* Consumptiveness; state of being wasted by disease.

TABIO, a settlement of New Granada, in South America, which contains 400 families, Spaniards and Indians; 15 miles north-west of Santa Fe.

TABLACHUCCA, a river of Peru, in the province of Conchucos, which enters the Santa.

TABLADA, a settlement of New Granada, in the province of Santa Martha, on the shore of the river Magdalena, on an island formed by the arm of this river.

TABLAS, the name of several inconsiderable settlements in South America.

TABLAS, one of the Philippine islands, which lies due south of Lucon. It is of a very irregular shape; about 30 miles long, by 3 in average breadth.

TA'BLATURE, *s.* A way of expressing musical sounds by letters or cyphers; a piece of music for the lute.

What means this stately *tablature*,
The balance of thy strains?

Which seems instead of sifting pure,
To extend and rack thy veins:

Thy odes first their own harmony did break,
For singing troth is but in tune to speak. *Lovelace.*

In Anatomy, a division or parting of the skull into two tables, but in painting, we may give to any particular work the name of *tablature*, when the work is in reality a single piece, comprehended in one view, and formed according to one single intelligence, meaning, or design. *Ld. Shaftesbury.*

TABLE, *s.* [*tabula*, Lat.] Any flat or level surface.—Upon the castle hill there is a bagnio paved with fair *tables* of marble. *Sandys.*—A horizontal surface raised above the ground, used for meals and other purposes.

We may again
Give to our *tables* meat, sleep to our nights. *Shakspeare.*

The persons sitting at table, or partaking of entertainment.

Give me some wine, fill full,
I drink to th' general joy of the whole *table.* *Shakspeare.*

The fare or entertainment itself: as, he keeps a good *table.*—When a man keeps a constant *table*, he may be allowed sometimes to serve up a cold dish of meat. *Tatler.*—A tablet; a surface on which any thing is written or engraved.

'Twas pretty, though a plague,
To see him every hour; to sit and draw
His arched brows, his hawking eye, his curls,
In our heart's *table.* *Shakspeare.*

[*Tableau*, Fr.] A picture, or any thing that exhibits a view of any thing upon a flat surface.

I never lov'd myself,
Till now, infixed, I beheld myself
Drawn in the flattering *table* of her eye. *Shakspeare.*

A synopsis: many particulars brought into one view.
I have no images of ancestors,
Wanting an ear, or nose, no forged *tables*
Of long descents, to boast false honours from. *B. Jonson.*

The palm of the hand.
Mistress of a fairer *table*
Hath not history nor fable. *B. Jonson.*

Draughts; small pieces of wood shifted on squares. [*Table*, old French; which Roquefort explains by "jeu de tric-trac et des échecs."—So also the Saxon *tæplan*, tesseris sive alæ ludere.]

Monsieur the nice,
When he play at *tables* chides the dice. *Shakspeare.*

To turn the TABLES. To change the condition or fortune of two contending parties: a metaphor taken from the

vicissitude of fortune at gaming tables.—If it be thus, the *tables* would be turned upon me; but I should only fail in my vain attempt. *Dryden.*

To TA'BLE, *v. n.* To board; to live at the table of another.—He lost his kingdom, was driven from the society of men to *table* with the beasts, and to graze with oxen. *South.*

To TA'BLE, *v. a.* To make into a catalogue; to set down.—I could have looked on him without admiration, though the catalogue of his endowments had been *tabled* by his side, and I to peruse him by items. *Shakspeare.*—To represent as in painting.—I entreat you much to meditate sometimes upon the effect of superstition in this last powder-treason, fit to be *tabled* and pictured in the chambers of meditation as another hell above the ground. *Bacon.*—To supply with a table or food.—When he himself *tabled* the Jews from heaven, that omer, which was every man's daily portion of manna, is computed to have been more than might have well sufficed the heartiest feeder thrice as many meals. *Milton.*

TABLE BAY, a bay on the east coast of Labrador. Lat. 53. 44. N. long. 20. 57. W.—TABLE CAPE, a cape on the east coast of New Zealand. Lat. 39. 8. N. long. 181. 36. W.—TABLE CAPE, a steep rocky point of land on the north coast of Van Diemen's Land.—TABLE ISLAND, a small flat island of the Eastern seas in Gaspar's strait.—TABLE ISLAND, a small island in the south Pacific ocean, so called by Captain Wilson. Lat. 18. 54. S. long. 181. 54. W.—TABLE ISLAND, a small island near the coast of Spitzbergen. Lat. 80. 57. N. long. 20. 30. E. 2d. One of the New Hebrides in the South Pacific ocean. Lat. 15. 38. S. long. 167. 7. E. 3d. A small island in the Eastern seas, near the island of Paraguay. Lat. 9. 15. N. long. 118. 2. E. 4th. A small island in the Eastern seas. Lat. 14. 8. N. long. 93. 32. E.—TABLE MOUNTAIN, a mountain of Ireland, in the county of Wicklow; 15 miles west of Wicklow.—TABLE MOUNTAIN. See CAPE OF GOOD HOPE.—TABLE MOUNTAIN, a mountain of the United States, in Pendleton district, South Carolina, near the north-west border of the state, 3168 feet higher than the surrounding country, and about 4000 above the level of the sea. It presents on one side a tremendous precipice of solid rock, about 900 feet nearly perpendicular.—TABLE MOUNTAINS, mountains of the United States, in North Carolina. Lat. 36. N. long. 81. 40. W.—TABLE POINT, a cape on the south coast of the island of Bali. Lat. 8. 45. S. long. 115. 11. E.—TABLE POINT, the southern extremity of Bali island, in the Eastern seas, and the eastern boundary of the south entrance into Bali straits. Lat. 8. 50. S. long. 114. 25. E.—TABLE RIVER, a river of the United States in Louisiana, which runs into the Mississippi. Lat. 37. 12. N. long. 90. 11. W.—TABLE ROCK, a post village of the United States, in Pendleton district, South Carolina.

TABLEBED, *s.* A bed of the figure of a table.
TABLEBEER, *s.* Beer used at the victuals; small beer.
TABLEBOOK, *s.* A book on which any thing is graved or written without ink.

What might you think,
If I had play'd the desk or *table-book*? *Shakspeare.*

TABLECLOTH, *s.* Linnen spread on a table.—I will end with Odo holding master doctor's mule, and Anne with her *tablecloth.* *Camden.*

TABLELAND, *s.* Land far elevated upon the level of the sea, but level on its summit for a great extent.

TABLEHURST, a small village of England, in Sussex, between East Grinstead and Ashdown Forest.

TABLEMAN, *s.* A man at draughts.—In clericals the keys are lined, and in colleges they use to line the *tablemen.* *Bacon.*

TABLER, *s.* One who boards. *Ainsworth.*
TABLETALK, *s.* Conversation at meals or entertainments; table discourse.

Let me praise you while I have a stomach.
—No, let it serve for *tabletalk.* *Shakspeare.*

TABLET, *s.* A small level surface. A medicine in a square

square form.—It hath been anciently in use to wear *tablets* of arsenic, or preservatives, against the plague; as they draw the venom to them from the spirits. *Bacon*.—A surface written on or painted.—It was by the authority of Alexander, that through all Greece the young gentlemen learned, before all other things, to design upon *tablets* of boxen wood. *Dryden*.

TABLEY, NETHER and OVER, two villages of England, in Cheshire; 2 miles from Nether Knutsford.

TABO, or LITTLE DIEPPE, a river and populous sea-port on the Grain coast of Africa.

TABO-DUNE, a sea-port on the Ivory coast of Africa, known by a large green cape near it. About 10 leagues to the east is another sea-port, called also Tabo.

TABOGA. See TABAGO.

TABOLEOO, a river of Chili, which runs east, and turning its course to the north-north-east, enters the Biobio.

TABOR, a circle in the south-east of Bohemia, bounded on the north by the circle of Czaslau, on the east by Moravia, and on the south and west by the circle of Budweis. Its extent is 1270 square miles; its population nearly 160,000. Its soil is fertile, and adapted both to tillage and pasturage. Here are manufactures of woollen, cotton, and linen; and the higher grounds contain productive mines. Bohemian is the only language spoken in this circle.

TABOR, a town of Bohemia, and the capital of a circle, is situated on a hill, on the river Luschnitz; 88 miles west-by-north of Brunn, and 49 south-by-east of Prague. It is fortified, and naturally strong; but has been frequently taken. It contains 3800 inhabitants, whose principal occupation is weaving. This town was built by Zisca, the Hussite general, and fortified in the modern style, which has given rise to a notion in Germany, that Zisca was the inventor of that method of fortifying places. The Hussites called it *Hradistie Hory Tabor*, or the *Camp of Mount Tabor*; and as it was their capital, one of the sects took from it the name of *Taborites*. Lat. 49. 24. 23. N. long. 14. 28. 0. E.

TABOR, a large mountain of Palestine, situated to the south-west of the lake of Tiberias, over which it commands a most extensive prospect. It is of a conical form, and contains on its summit a plain of great extent, and highly cultivated. It is celebrated in scripture as the mount of transfiguration.

TABORITES, or THABORITES, in Ecclesiastical History a branch or sect of the ancient Hussites.

The Hussites, towards the beginning of the 15th century, dividing into several parties, and about the year 1420, into two great factions; one of them retired to a little mountain or rock, situate in Bohemia, 15 leagues from Prague, and there put themselves under the conduct of Ziska; building themselves a fort or castle, and a regular city, which they called *Tabor* or *Thabor*, either from the general word *thabor*, which in the Slavonic language signifies *castle*; or from the mountain *Tabor*, mentioned in Scripture; and hence they became denominated *Thaborites*. Those of the other party were denominated *Calixtins*.

T'ABOUR, *s.* [*tabourin*, *tabour*, old French.] A small drum; a drum beaten with one stick to accompany a pipe.—If you did but hear the pedlar at door, you would never dance again after a *tabour* and pipe. *Shakspeare*.

The shepherd knows not thunder from a *tabour*,
More than I know the sound of Marcius' tongue
From every meaner man. *Shakspeare*.

To T'ABOUR, *v. n.* [*tabourer*, old French.] To drum. [They] *tabouren* in your ears many a soun
Right after their imaginacioun. *Chaucer*.

To strike; to smite; to beat.—And her maids shall lead her as with the voicè of doves, *tabouring* upon their breasts. *Nahum*.

T'ABOURER, *s.* One who beats the *tabour*.—Would I could see this *tabourer*. *Shakspeare*.

T'ABOURET, *s.* A small *tabour*.—They shall depart the manor before him with trumpets, *tabourets*, and other minstrelsy *Spcciator*

T'ABOURINE, *s.* A *tabour*; a small drum.

Trumpeters,
With brazen din blast you the city's ear,
Make mingle with our rattling *tabourines*,
That heaven and earth may strike their sounds together,
Applauding our approach. *Shakspeare*.

TABRE'RE, *s.* *Tabourer*. *Obsoletc*.

I saw a shole of shepherds outgo,
Before them rode a lusty *tabre're*,
That to the meynie a hornpipe plaid,
Whereto they dauncen. *Spenser*,

T'ABRET, *s.* A *tabour*.—Wherefore didst thou steal away, that I might have sent thee away with mirth and with *tabret*? *Genesis*.

TABUE, a village of Lower Egypt, on the Nile; 12 miles north-west of Cairo.

T'ABULAR, *adj.* [*tabularis*, Lat.] Set down in the form of tables or synopses. Formed in laminæ.—All the nodules that consist of one uniform substance were formed from a point, as the crusted ones, nay, and most of the spotted ones, and indeed all whatever, except those that are *tabular* and plated. *Woodward*.—Set in squares.

To T'ABULATE, *v. a.* [*tabula*, Lat.] To reduce to tables or synopses.—His [Maittaire's] book of the dialects is a sad heap of confusion: the only way to write on them is to *tabulate* them with notes, added at the bottom of the page, and references. *Dr. Johnson*.—To shape with a flat surface.

T'ABULATED, *adj.* [*tabula*, Lat.] Having a flat surface.—Many of the best diamonds are pointed with six angles, and some *tabulated* or plain, and square. *Grew*.

TACALALPO, a settlement of Mexico, in the province of Tabasco; 23 miles south-west of Tabasco.

TACALAYO, a settlement of South America, in the province of Chaco; 35 miles north of St. Salvador de Jugui.

TACALAZALUMA, a settlement of New Granada, in the province of Carthagena, on the shore of a lake formed by the arms of the river Cauca to the east.

TACALOA, a settlement of New Granada, in the province of Carthagena, on the shore of the river Cauca; 85 miles south-east of Carthagena.

TACAMBARO, a settlement of Mexico, in the intendancy of Valladolid; 32 leagues south-east of Valladolid.

TACAMES, or ATACAMES, a province of Peru, bounded north by the province of Arica, north-east by Lipes, east and south-east by the territory of Salta, south by Chili, and west by the Pacific Ocean. It is divided into high and low. The first is of a cold temperature, abounding in the productions of the mountainous districts. The ostriches and the vicuñas are found here in abundance: there are some mines of gold and silver in this province; but they are not regularly worked. The desert of this province is a large unpeopled track, dividing the kingdoms of Peru and Chili.

TACAMES, a sea-port town of South America, and capital of a jurisdiction in the audience of Quito, situated in a bay of the Pacific Ocean, to which it gives name; 110 miles north-west of Quito. Lat. 0. 52. N. long. 62. W.

TACAMOCHO, a settlement of New Granada, in the province of Carthagena, on the Magdalena, near where it is entered by the Cauca.

TACARIGUA. See VALENCIA.

TACARIGUA, a large lake of South America, in the province and government of Venezuela.

TACARIGUA, a settlement of the island of Trinidad, in the north point, and nearly at the east extremity.

TACATU, a river of Guiana, which rises from Lake Parima, on the west, and united with the river Maho, forms that which they call the Blanco, which afterwards enters the Amazons.

TACAXI, a small island of Ximo, in Japan, at the entrance of the gulf of Ximabari.

TACAZZE, a great river of Abyssinia, which appears to be the *Astaboras* of Ptolemy. It rises among the mountains of Lasta, after which it passes along the eastern frontier

of the high province of Samen. It then enters the district of Waldubba, and afterwards enters the territory of Sennaar, in its progress through which it receives the great river Mareb, and, swelled by its waters, joins the Nile near Goos, in lat. 17. 45. N.

TACCA [adopted by Forster from Rumphius], in Botany, a genus of the class hexandria, order monogynia, natural order of coronariæ, narcissi (*Juss.*)—Generic Character. Calyx: perianth one-leafed, six-parted: segments oblong. Corolla: petals six. Stamina: filaments scarcely any. Anthers six, oblong. Pistil: germ inferior. Style short, straight, thick. Stigma orbicular, stellate: rays six, bluntish, convex above. Pericarp: berry dry, subglobular, six-ribbed, hexangular, one celled, crowned with the calyx. Seeds many, ovate.—*Essential Character.* Calyx, six-parted. Corolla, six-petalled. Stigma stellate. Berry dry, hexangular, many-seeded.

1. *Tacca pinnatifida*.—Root tuberous. Radical leaf subsolitary, petioled, ternate or biternate; leaflets lacinate, pinnatifid, acute, even, spreading, decurrent a little along the sides of the petioles, a long span or a foot in length. Scape half a fathom in height, herbaceous, fistular, grooved towards the top, erect. Umbel terminating, sessile, quite simple.—Native of the East Indies, China, Cochin-china, Banda and the Society isles.

TACCORARY, a small Dutch settlement, in Ahanta, on the Gold coast of Africa.

TACHAU, a small town in the west of Bohemia, on the river Mies, with 2800 inhabitants; 79 miles west-south-west of Prague.

TACHE, *s.* [from *tack*; which was the old word: "*tak*, or button." Prompt. Parv.] Any thing taken hold of; a catch; a loop; a button.—Make fifty *taches* of gold, and couple the curtains together with the *taches*. *Exodus*.

TACHEN-SEE, a lake of Upper Austria, in the circle of Salzburg, near the borders of Bavaria, and the small town of Wageningen.

TACHINA, a river of Brazil, in the captainship of San Vicente, which runs west, and enters the Uruguay at its source.

TACHIRA, SAN ANTONIO DE, a settlement of New Granada; 32 miles nearly north, with a slight inclination east of Pampeluna.

TACHIRA, a river of New Granada, in the province of Maracaibo, which runs into the great lake of Maracaibo.

TACHYGRAPHY, *s.* [*ταχυ*; and *γραφω*, Gr.] The art or practice of quick writing.

TACIT, *adj.* [*tacitus*, Lat.] Silent; implied; not expressed by words.—As there are formal and written leagues respective to certain enemies, so is there a natural and *tacit* confederation amongst all men, against the common enemy of human society, pirates. *Bacon*.

TACITLY, *adv.* Silently; without oral expression.—While they are exposing another's weaknesses, they are *tacitly* aiming at their own commendations. *Addison*.

TACITURN, *adj.* [*taciturnus*, Lat.] Silent; uttering little.—Grieve was very submissive, respectful, and remarkably *taciturn*. *Smollett*.

TACITURNITY, *s.* [*taciturnité*, Fr.; *taciturnitas*, Lat.] Habitual silence.

The secretest of natures
Have not more gift in *taciturnity*. *Shakspeare.*

TACITUS (Caius Cornelius), a well known historian, was born about the year of the Christian era 57, at Interamna, or the modern Terni. His father was a Roman knight, and procurator of Belgic Gaul. Devoted from his youth to the cultivation of literature and rhetoric, his reputation at maturity was so well established, that he was permitted by Julius Agricola, at the expiration of his consulate, which occurred in the year 77, to form a matrimonial connection with his daughter. Thus introduced into public life, he was honoured by the patronage of Vespasian, Titus, Domitian and Nerva.

The principal works of Tacitus were his "Annals," and his "History." The former comprehended the Roman

affairs from the death of Augustus to that of Nero; but it has been transmitted to us in a very mutilated state. The latter comprised the period from the end of Nero to the death of Domitian; and now exists in an imperfect state, as the narrative does not extend far beyond the accession of Vespasian. His other works are, a "Life of Agricola," and a treatise "On the Manners of the Germans." The style of his writings is singularly concise, abrupt, and elliptical, so that the reader is often at a loss to comprehend his meaning. His aim seems to have been to comprize much in a small compass, and he has thus furnished a great variety of political maxims, which, by the brevity with which they are expressed, are peculiarly adapted to impress the memory. It is observed, however, by one of his biographers, that he occasionally discovers "an affectation of converting common remarks into aphorisms, and of philosophizing when he was only required to narrate." Nevertheless, no prose writer in any language surpasses or perhaps equals him in force of description, and the choice of circumstances by which he dramatizes a scene, and brings it before the eyes of his reader; and no want of perspicuity appears in his style when employed in the relation of striking events.

TACITUS (M. Claudius), an emperor of Rome. See **ROME**.

To TACK, *v. a.* [*tacher*, Breton.] To fasten to any thing. It has now a sense approaching to contempt.

Of what supreme almighty pow'r
Is thy great arm, which spans the East and West,
And *tacks* the centre to the sphere! *Herbert.*

To join; to unite; to stitch together.—I *tack'd* two plays together for the pleasure of variety. *Dryden.*

To TACK, *v. n.* To turn a ship.

On either side they nimbly *tack*,
Both strive to intercept and guide the wind. *Dryden.*

TACK, *s.* A small nail. The act of turning ships at sea.

At each *tack* our little fleet grows less,
And, like maim'd fowl, swim lagging on the main. *Dryden.*

Addition; supplement.—Some *tacks* had been made to money-bills in King Charles's time. *Burnet*.—[*tache*, Fr.] A spot; a stain.—You do not the thing that you would; that is perhaps perfectly, purely without some *tack* or mixture. *Hammond.*

To hold TACK. To last; to hold out. *Tack* is still retained in Scotland, and denotes hold or persevering cohesion.

If this twig be made of wood
That will hold *tack*, I'll make the fur
Fly 'bout the ears of that old cur. *Hudibras.*

TACKET, *s.* A small nail. *Barret, Alv.* 1580. Used in Scotland. See **JAMIESON**.

TACKLE, *s.* [*taccl*, Welsh, an arrow; *tacclau*, armour or accoutrements, arrows; *tacle*, old Fr.; any headed shaft or bolt, whose feathers are not waxed, but glued on. *Cotgrave*.] An arrow.—The *takil* smote, and in it went. *Chaucer*.—Weapons; instruments of action.

She to her *tackle* fell,
And on the knight let fall a peal
Of blows so fierce, and press'd so home,
That he retir'd. *Hudibras.*

[*tacclau*, Welsh; *tackel*, Su. Goth.; ornamenta navis, rudentes, Ihre; *tackel*, Dutch.] The ropes of a ship: in a looser sense, all the instruments of sailing.

At the helm
A seeming mermaid steers; the silken *tackles*
Swell with the touches of those flower-soft hands
That yarely frame the office. *Shakspeare.*

To TACKLE, *v. a.* To supply with tackle.

My ships ride in the bay,
Ready to disembugue, *tackled* and man'n'd,
Ev'n to my wishes. *Beaum. and Fl.*

TACKLED, *adj.* Made of ropes tacked together.

My man shall
Bring thee cords, made like a *tackled* stair,
Which to the high top-gallant of my joy
Must be my convoy in the secret night. *Shakspeare.*

TACKLEY, a parish of England, in Oxfordshire; 3 miles north-east of Woodstock.

TA'CKLING, *s.* Furniture of the mast.

Red sheets of lightning o'er the seas are spread,
Our *tackling* yield, and wrecks at last succeed. *Garth.*

Instruments of action: as, fishing *tackling*, kitchen *tackling*.—I will furnish him with a rod, if you will furnish him with the rest of the *tackling*, and make him a fisher. *Walton.*

TACKUMBREET, a village in the western part of the territory of Algiers, where extensive ruins mark the site of the ancient Siga, the capital of Mauritania. It is situated on the coast of the Mediterranean, at the mouth of the river Tafna; 44 miles south-west of Oran.

TACNA, a town of Peru, in the province of Arica, and 12 leagues distant from the town of that name, the inhabitants of which indeed, having left it in consequence of its being destroyed, first, in 1605, by an earthquake, and afterwards by the English, established themselves in Tacna.

TACDARA, a river of Brazil, in the territory lying between the two great rivers Cuchivara and Madera, which runs east into the latter.

TACOLNESTON, a parish of England, in Norfolk; 4 miles west-north-west of St. Mary Stratton.

TACOTALPA, a settlement of Mexico, in the intendency of Vera Cruz, which contains 337 families of Indians; 47 leagues south-east of Vera Cruz. Lat. 18. 37. N. long. 95. 29. W.

TACOULUM, a town of the south of India, province of the Carnatic. Lat. 13. 4. N. long. 79. 50. E.

TA'CTIC, or **TA'CTICAL**, *adj.* [*τακτικός, τακτω*, Gr.; *tactique*, Fr.] Relating to the art of ranging a battle.

TACTY'CIAN, *s.* One skilled in tactics: *a modern word.*

TA'CTICS, *s.* [*τακτική*, Gr.] The art of ranging men in the field of battle.—When Tully had read the *tactics*, he was thinking on the bar, which was his field of battle. *Dryden.*

TA'CTILE, *adj.* [*tactilis, tactum*, Latin.] Susceptible of touch.

At this proud yielding word
She on the scene her *tactile* sweets presented. *Beaumont.*

TACTI'LITY, *s.* Perceptibility by the touch.

TACT'ION, *s.* [*tactico*, Lat.] The act of touching. *Cockeram.*—They neither can speak, nor attend to the discourses of others, without being roused by some external *taction*. *Ld. Chesterfield.*

TACUBA, a town of Mexico, and capital of a district of the same name; 6 miles west-north-west of Mexico, and having, leading to it, a beautiful causeway of cut stone, being the same by which Cortez made his way into the capital. It contains 724 families of Indians. Lat. 19. 28. N. long. 99. 10. 30. W.

TACUBAYA, a town of Mexico; 4 miles south-west of Mexico. Its population consists of 342 families of Indians.

TACUCU, a small river of Guiana, which enters the Caroni by the west side.

TACUNGA, a province of Quito, bounded east by the valley of Vicoso, north by the province of Quito, north-west by that of Esmeraldas and also Guayaquil, south-west by that of Chimbo, and south by that of Ambato. It is 21 leagues long from east to west, and 14 wide from north to south. It is of a cold temperature, but abounds in cattle, which have excellent pastures. It produces wheat, barley, and rye, and wools of many kinds, of which some beautiful articles are manufactured. The province is well watered, and abounds throughout with nitre.

TACUNGA, the capital of the above district, situated in an extensive plain to the south of Quito, near the Cordillera of the Andes. The town is large and well arranged, the

streets are wide, the houses all of pumice stone, arched and handsome. The inhabitants are computed at 12,000, the greater part being Spaniards and mestizoes. The natives are good mechanics and artizans, and they make cloths, baizes, and other manufactures; 44 miles south of Quito, and 49 north-north-east of Rio Bamba. Lat. 55. 14½. S. long. 73. 23. W.

TACURAGUA, a small river of Guiana, which runs north, and enters the Orinoco.

TACURAY, a small river of Quito, in the province of Manass, which runs north-north-east, and enters the Guayaga.

TACUTO, a river of Guiana, which falls into the Amazonas.

TADCASTER, a market town of England, in the West Riding of Yorkshire, situated almost in the centre of the county, on the south side of the river Wharf, over which it has a fine bridge. The town is neat, well built, and pleasant. Tadcaster is a place of great antiquity. It is supposed to have been the Calcaria of the Romans; and from its situation was considered by them as one of the outposts or gates to the chief military station, the city of York. The ancient name seems to have been derived from calx or limestone, which abounds in the neighbourhood. In the civil wars of England it was always regarded as a post of great importance, and the possession of it was often contested. There are yet some vestiges of a trench surrounding great part of the town, and probably thrown up in the time of Charles I. In 1642 the town was attacked by the earl of Newcastle, and was abandoned by Sir Thomas Fairfax, on account of the superior force of his opponent. Market on Thursday, and four annual fairs; 9 miles south-south-west of York, and 188 north-by-west of London.

TADDINGTON, a township of England, in Derbyshire; 3 miles south-south-west of Tideswell.

TADEO, *Str.*, a town of New Navarre; 120 miles west of Casa Grande.

TADLEY, a township of England, in Southamptonshire; 6½ miles north-north-west of Basingstoke. Population 535.

TADLOW, a parish of England, in Cambridgeshire; 6 miles south of Caxton.

TADMERTON, *GREAT*, a parish of England, in Oxfordshire, in which is situated the hamlet of Little Taderton; 4½ miles west-south-west of Banbury. Population 377.

TADOUSAC, a small settlement of Lower Canada, at the mouth of the Saguenay, on the left side of the river St. Lawrence. Lat. 48. 2. N. long. 69. 16. W.

TADPOLE, *s.* [*ταδ, τοαδ, and pola, a young one*, Saxon.] A young shapeless frog, consisting only of a body and a tail.—I'll broach the *taepole* on my rapier's point. *Shakspeare.*

TAEN. The poetical contraction of *taken*.

The chewing flocks

Had *ta'en* their supper on the savoury herb
Of knot-grass dew-besprent. *Milton.*

TÆNIA, or **TENIA**, in Architecture, a member of the Doric architrave, resembling a square fillet, or reglet; and serving in lieu of a cymatium.

TENIA, in Zoology, a genus of the intestina order of worms; the characters of which are, that the body is flat and articulated, and that the head is furnished with four sucking bladders. Gmelin, in his edition of the Linnæan system, enumerates eighty-six species, besides several varieties. Their habitations are the viscera of men and of different animals. Our limits will not allow us to specify and describe them.

TAENSAPAVA, a river of West Florida, which runs into the Ibberville. Lat. 30. 19. N. long. 90. 52. W.

TAERENDO-ELF, a branch of the river Torneo, in Lapland, which is said to communicate with the river Calix, though it afterwards takes a contrary direction, and flows northward into the Frozen ocean.

TAF, or **TAAFFE**, a river of Wales, in the county of Glamorgan.

Glamorgan. It rises among the hills in Brecknockshire, from two sources, forming two streams, the Greater and Lesser Taf, which unite their waters below the village of Coed-y Cymmer, on their entrance into Glamorganshire: and from thence proceed by Merthyr Tydvil. About 12 miles below this town the Taf receives the Bangoid Taf, a mountain stream which flows into it from the eastward. Lower down it is joined by the Cyuon from the west, and a few miles lower by the united waters of the two Rhonddas. It then proceeds nearly southwards by the ancient city of Llandaff, and afterwards by Cardiff, towards the southern sea, which it enters in the small bay of Pinarth. In dry weather the Taf contains but little water. It is a handsome stream, however, and when swollen by the land floods from the mountains which rise from its shores, it rolls over its rocky bed in an impetuous torrent. It is navigable for small craft as far as Cardiff, to which the tide-water ascends. It is over this river that the noted bridge of Pont-y-Prydd is built, which consists of a single arch 140 feet span, and 55 feet above the level of the river. Its appearance is exceedingly beautiful and picturesque, rising like a rainbow from the steep banks on each side. It was designed and executed by William Edwards, a common mason in the country.

TAFALISGA, a town of the kingdom of Gallam, in Central Africa, situated at the junction of the Faleme with the Senegal.

TAFALLA, a small but ancient town of the north-east of Spain, in Navarre, on the river Cidacos; 27 miles north of Tudela, and 19 south of Pampeluna. It has 3000 inhabitants, was formerly the residence of the kings of Navarre, and the seat of an university. It stands in one of the most healthy and fertile parts of Spain.

TAFARA, a walled village of Bambarra, in Central Africa, where pure Mandingo is spoken.

TAFELBERG, a town on the east coast of the island of Ceram. Lat. 3. 20. S. long. 131. 10. E.

TAFELFICHTE, a mountain of Germany, situated at the point of meeting of the three mountains of Bohemia, Silesia, and Lusatia. Its elevation is 3370 feet, and the prospect from the top, on the side of Bohemia, is immense.

TAFFATA, or TAFFETA, *s.* [*taffetas*, Fr.; *taffetar*, Spanish; *тафата*, Græco-barb. V. Critop. Emend. in Meursii Gloss. p. 88.] A thin silk.

All hail the richest beauties on the earth!
—Beauties no richer than rich *taffata*. *Shakspeare.*

TAFFEREL, *s.* The upper part of the stern of a ship. *Scott.*

TAFILELT, a large district or kingdom, situated to the south-east of the mountain chain of Atlas, and tributary to the empire of Morocco. It consists of a vast plain, presenting an unvaried surface, like the sea out of sight of land. It is traversed by two rivers running in opposite directions, one of which loses itself in the desert of Angad, the other in the loose sands of the Sahara. Water, though brackish, is every where to be found at the depth of 12 feet. The inhabitants live in a patriarchal manner, like the Arabs, and are described as remarkably honest. The country possesses also a numerous breed of sheep and goats, from the wool of which the women manufacture stuffs and carpets, which are held in considerable estimation.

TAFNA, a river of Algiers, which falls into the Mediterranean, near Tackumbreet.

TAG, *s.* [*tag*, Icel., *tagg*, Su. Goth. *cuspis*, *aculeus*, *a point*.] A point of metal put to the end of a string.—It was the fashion, in those days, to wear much ribbon; which some adorned with *tags* of metal at the end. *Richardson.*
—Any thing paltry and mean.

Will you hence
Before the *tag* return, whose rage doth rend
Like interrupted waters. *Shakspeare.*

A young sheep.
To TAG, *v. a.* To fit any thing with an end, or point

of metal; as, to *tag* a lace.—There was hardly a thread of the original coat to be seen, but an infinite quantity of lace, and ribands, and fringe, and embroidery, and points; I mean only those *tagged* with silver; for the rest fell off. *Swift.*
—To fit one thing with another, appended.

His courteous host
Tags every sentence with some fawning word,
Such as my king, my prince, or least my lord. *Dryden.*

The word is here improperly used.
Compell'd by you to *tag* in rhimes
The common slanders of the times. *Swift.*

To join. This is properly to *tack*.—Resistance, and the succession of the house of Hanover, the whig writers perpetually *tag* together. *Swift.*

TAGABONA, a river of West Florida, which runs into the St. Mark. Lat. 30. 22. N. long. 84. 34. W.

TAGADEMPT, a village in the territory of Algiers, round which are the remains of a very large city, supposed the ancient Vaga. The edifices have been entirely defaced by the Arabs; 105 miles south-west of Algiers.

TAGAI, a small town of the east of European Russia, in the government of Simbirsk; 46 miles west of Simbirsk.

TAGALAZ, one of the Fox islands, in the North Pacific ocean. Lat. 53. 30. N. long. 185. 26. E.

TAGAMA, a district in the African desert, to the south of Fezzan.

TAGANROG, a town of the south-east of European Russia; in the government of Ekaterinoslav, near the north-west extremity of the sea of Azoph. It stands on the cliff of a lofty promontory, containing 6000 inhabitants; and being the staple of all the mercantile intercourse between the interior of Russia and foreign countries, through the medium of the Don, its traffic is extensive, and it contains several public establishments connected with its trade. It has a harbour and fortress, maritime and commercial courts, a naval hospital, and a lazaretto. The exports are corn, Siberian iron, leather, fish, and caviar; the imports are Greek wines, fruit, and manufactured articles. The vessels that arrive annually are between 200 and 300; they are in general of a small draught, the sea of Azoph being shallow. Taganrog was fortified by Peter I., in 1697, but dismantled after the treaty of Pruth, and given up to the Turks, in whose possession it remained till 1768. Here died Alexander I. The environs are extremely fertile; 27 miles west-north-west of Azoph. Lat. 47. 12. 40. N. long. 18. 39. 0. E.

TAGAPOLA, a small island among the Philippines; 25 miles west of the island of Samar.

TAGARDI, a small town of European Turkey, in Romania.

TAGARIPE, a castle which has been built upon a point of land in the bay of Todos Santos, in Brazil.

TAGASA, or TAGASTA, a poor town of Fez, situated on a river about three leagues from the Mediterranean; 20 miles north of Melilla.

TAGAZOUTE, a village of Algiers; 45 miles south-east of Oran.

TAGAZZE, a station of the desert of Sahara, in Central Africa, in the route of the caravans from Fez to Tombuctoo.

TAGETES [from Tages, grandson of Jupiter and son of Genius, who first taught the Etruscans the art of divination.—Apuleius, who first used this name, applied it to the Tansey. *Dillenius*], in Botany, a genus of the class syngenesia, order polygamia superflua, natural order of compositæ oppositifoliæ, corymbifera (*Juss.*)—Generic Character. Calyx: common quite simple, one-leaved, tubular, oblong, five-toothed. Corolla: compound radiate; corollets hermaphrodite, tubular, many, on an elevated disk. Females ligular, five, in the ray. Proper in the hermaphrodites, tubular, half-five-cleft, erect, longer than the calyx; segments linear, inwardly villose. In the females ligular, longer than in the hermaphrodites, almost equal in length and breadth, very blunt, narrower towards the tube, tomentose, permanent. *Stamina:*

Stamina: in the hermaphrodites, filaments five capillary, very short. Anther cylindrical, tubular. **Pistil:** in the hermaphrodites: germ oblong. Style filiform, length of the stamens. Stigma bifid, slender, reflexed. In the females: germ oblong. Style filiform, length of the hermaphrodite. Stigma bifid slender, reflexed. Pericarp, none. Calyx unchanged. Seeds in the hermaphrodites solitary, linear, compressed, a little shorter than the calyx. Down with five, erect, acuminate, unequal chaffs. In the females, like the others. Receptacle, naked, small flat.—*Essential Character.* Calyx, one-leaved, five-toothed, tubular. Florets of the ray five, permanent. Down with firm erect chaffs. Receptacle naked.

1. *Tagetes patula*, or French marygold.—Stem a foot and half high, almost upright, smooth, diffused. Leaves deeply pinnatifid, the segments lanceolate, serrate smooth, dark-green; paler at the back; flowers solitary, terminating, gold-coloured, on a long upright peduncle. Calyx eight-grooved, eight-toothed, smooth and even. Corollèts in the ray about thirty, grooved and plaited. Seeds blackish. There are several varieties of the French Marygold, differing in size, and greatly in colour, some beautifully variegated, and others quite plain.

2. *Tagetes erecta*, or African marygold.—Stem three or four feet high, straight, round, green, dividing from the middle into many branches, each bearing one large flower. Leaves long, pinnate, leaflets dark-green. Flowers yellow, from brimstone to orange colour.—Of this there are the following varieties:—Pale yellow or brimstone-colour; deep yellow; orange-coloured: all these with single, double and fistulous flowers; middling African, with orange-coloured flowers; sweet-scented African.—It is a native of Mexico.

3. *Tagetes minuta*.—Stem simple upright, peduncles scaly many-flowered.

4. *Tagetes rotundifolia*.—Stem simple upright, leaves cordate simple, peduncles naked one-flowered.—It grows naturally at La Vera Cruz, in New Spain.

Propagation and Culture.—These plants being annual, must be propagated from seeds every spring; they may be sown upon a moderate hot-bed the beginning of April; and when the plants are come up, they should have plenty of fresh air, for if they are drawn too much, they will not afterward become handsome, notwithstanding they have all possible care taken of them. When their flowers appear, if any should prove single, the plants should be destroyed.

TAGGAH, a ruined town of Algiers, in Africa. On the opposite side of a rivulet is the town of Zainah; 50 miles south-west of Constantina.

TAGGAL, a town of the island of Java, on the north coast. It is prettily situated on a broad river. The country around is extremely fertile; and the whole of this part of Java, and farther to the east, is the rice granary, not only for the supply of Batavia, but for exportation to the Eastern isles; 244 miles east of Batavia. Lat. 6. 44. S. long. 108. 55. E.

TAGGIA, a small town in the north of Italy, province of Genoa, with an extensive cultivation of wine in its vicinity.

TAGHMOM, a village of Ireland, in the county of Wexford, which was a borough previous to the union of Ireland with Great Britain, returning two members to the Irish parliament; 82 miles south of Dublin, and 7 west of Wexford.

TAGLIACOZZI, or **TALIAOCOTIUS** (Gasparo), a famous physician. See the introduction to the article **PATHOLOGY**.

TAGLIACOZZO, a small town in the north of the kingdom of Naples, in the Abruzzo Ultra; 18 miles south-west of Aquila, and 35 east-north-east of Rome.

TAGLIAMENTO, a large river of Austrian Italy, in the government of Venice, which rises on Mount Mauro, near the Alps, in the south of Tyrol, and flows southward till reaching the Adriatic. It is navigable from the small town of Latisana.

TAGLIO, a river of the north-west of Italy, in the pro-

vince of Genoa, which flows into the Mediterranean; 4 miles east of San Remo.

TAGLO BAY, a bay on the south coast of the island of Mindanao. Lat. 6. 8. N. long. 125. 40. E.

TAGLO POINT, a cape on the north-west coast of the island of Mindanao.

TAGOAST, or **TAGAOST**, a town of Western Africa, in the province of Sus, situated in a fertile district. It is large, and defended by a garrison of 400 men.

TAGOLANDA, a small island, about 20 miles in circumference, situated off the north-eastern extremity of Celebes. This island is populous, and plentifully supplied with provisions. The Dutch formerly kept a few soldiers here, and a schoolmaster to convert the inhabitants, who are described as pork-eating Pagans, which is a grand distinction among the Malay islands. Lat. 2. 10. N. long. 125. 5. E.

TAGOMAGO. See **TAYOMAYO**.

TAGTAIL, *s.* A worm which has the tail of another colour.—They feed on *tagtails*, worms and slugs. *Carew*.

TAGUACAY, a river of Paraguay, which runs south, and enters the Parana.

TAGUS, **TAJO**, or **TEJO**, the largest of all the rivers of Spain, issues from a great spring in the mountains of Albaracin, between Arragon and Old Castile, at the distance of little more than 100 miles from the Mediterranean. Pursuing its course to the Atlantic, in a westward direction, a little inclined to the south, it passes the palace of Aranjuez, the cities of Toledo, Talavera, Alcantara, Abrantes, and Lisbon, and flows into the sea, 7 miles below the capital of Portugal. Like the Guadalquivir, and other great rivers of Spain, it absorbs the waters collected between two long parallel chains of mountains. Long before reaching Lisbon, it receives the tide, and becomes expanded into an estuary. Its volume of water is large throughout; but in so mountainous a country as Spain, river navigation is very limited, and that of the Tagus is not at present carried farther than Abrantes in Portugal.

TAGYPEEL, a small island in the Eastern seas, near the north-east coast of Bornea. Lat. 6. 29. N. long. 117. 54. E.

TAGZA, a village of Algiers; 12 miles south-south-east of Constantina.

TAHA EL MODAIN, a village of Egypt; 5 miles south-west of Samalut.

TAHEAN, a city of China, of the second rank, in Yunan. Lat. 25. 52. N. long. 101. 50. E.

TAHEJ, a town of Hindostan, province of Cutch, of which, in the 16th century, it was the capital, but is now dwindled to a small village. Lat. 23. 17. N. long. 76. 27. E.

TAHIRAN. See **TEHRAUN**.

TAHMOUR, a town of Hindostan, province of Oude. Lat. 27. 41. N. long. 81. 10. E.

TAHNOON, a district of Northern Hindostan, province of Nepal, district of the 24 rajahs. It is much covered with wood and long grass, but has not been explored by Europeans.

TAHNUM, a town of Hindostan, province of Nepal, situated 25 miles north-west from Gorcah. Lat. 28. 41. N. long. 84. 10. E.

TAHOU, a village on the Grain coast of Africa. Lat. 4. 50. N. long. 6. 50. W.

TA-HOOROWA, one of the smaller Sandwich islands, situated about 9 miles from the south-west part of Mowee. It is destitute of wood, and the soil appears to be sandy and barren. Lat. 21. 40. N. long. 199. 30. E.

TAHRAH, a town and fortress of Hindostan, province of Cutch, situated about 10 miles from Luckport Bunder. Lat. 23. 40. N. long. 69. E.

TAHTA, a market town of Upper Egypt, on the Nile; 32 miles south of Siout.

TAHUK or **TABUK**, a town of Hedsjas, in Arabia, the first conquest made by Mahomet; 176 miles south-south-east of Jerusalem.

TAHWAHNAHIOOKS, a river of North America, which runs south-west into the Columbia; 110 miles above its mouth.

TAI,

TAI, a large lake of China, in the provinces of Kiangnan and Tchekiang, near 50 leagues in circumference.

TAIBE. See **THAIBE**.

TAIDENT, a town of Fezzan, in Africa; 130 miles south-south-west of Mourzouk.

TAIEF, a town of Hedsjas, in Arabia, which, in the time of Mahomet, was of considerable strength, and withstood a siege of twenty days, at the end of which the inhabitants submitted, and received the doctrine of Islam; 58 miles east of Mecca.

TAIGUEN, a river of Chili, which runs north-north-west, and forming a curve, enters the Quinu.

TAIL, *s.* [Goth. and Icel. *tagl*; *τᾱγλ*, Saxon.] That which terminates the animal behind; the continuation of the vertebrae of the back hanging loose behind.

Oft have I seen a hot o'er-weening cur,
Run back and bite because he was withheld,
Who, having suffer'd with the bear's fell paw,
Hath clapt his *tail* betwixt his legs and cried. *Shakspeare.*

The *tail* fin is half a foot high, but underneath level with the *tail*. *Grew*.—The lower part.—The Lord shall make thee the head, and not the *tail*; and thou shalt be above, and not beneath. *Deut*.—Any thing hanging long; a catkin.—Duretus writes a great praise of the distilled water of those *tails* that hang upon willow trees. *Harvey*.—The hinder part of any thing.—With the helm they turn and steer the *tail*. *Butler*.

To turn TAIL. To fly; to run away.—Would she *turn tail* to the heron, and fly quite out another way; but all was to return in a higher pitch. *Sidney*.

To TAIL, v. n. To pull by the tail.

The conquering foe they soon assail'd,
First Trulla stav'd and Cerdon *tail'd*. *Hudibras.*

TAILBERD, a hamlet of England, in the parish of Sharp, Westmoreland.

TAILED, *adj.* Furnished with a tail.—Snouted and *tailed* like a boar, footed like a goat. *Grew*.

TAILLAD, **CAPE**, a promontory in the south of France, in Provence, in the Mediterranean, to the east of Toulon.

TAILLAGE, *s.* [*tailleur*, Fr.] *Taillage* originally signifies a piece cut out of the whole; and, metaphorically, a share of a man's substance paid by way of tribute. In law, it signifies a toll or tax. *Cowel*.

TAILLE, *s.* *Taille*, the fee which is opposite to fee-simple, because it is so minced or pared, that it is not in his free power to be disposed of who owns it; but is by the first giver, cut or divided from all other, and tied to the issue of the donee. This limitation, or *taille*, is either general or special. *Taille* general is that whereby lands or tenements are limited to a man, and to the heirs of his body begotten; and the reason of this term is, because how many soever women the tenant, holding by this title, shall take to his wives, one after another, in lawful matrimony, his issue by them all have a possibility to inherit one after the other. *Taille* special is that whereby lands or tenements be limited unto a man and his wife, and the heirs of their two bodies begotten. *Cowel*.

TAILLEBOURG, a small town in the west of France, situated on the Charente, with a castle and 1200 inhabitants. It has a traffic in corn, wine, and brandy; 7 miles north of Saintes, and 11 south-west of St. Jean de Angeley.

TAILLEFER, a mountain of the Alps, on the borders of the French department of the Isere, elevated 8280 feet above the sea.

TAILOR, *s.* [*tailleur*, from *tailleur*, French, *to cut*; old Engl. *talyowre*, Prompt. Parv. and to this day *taylior*, in three syllables, is common in the north.] One whose business is to make clothes.

I'll entertain a score or two of *tailors*,
To study fashions to adorn my body. *Shakspeare.*

To TAILOR, v. n. To perform the business of a tailor.

Vol. XXIII. No. 1610.

These *tailoring* artists for our lays
Invent cramp'd rules; and, with strait stays
Striving free nature's shape to hit,
Emaciate sense before they fit.

Green.

TAIMATI, a river of South America, in the province of Darien, which rises in the south coast, and falls into the gulf San Miguel.—There is another river in the same province and kingdom, which rises in the mountains of the north coast, runs south-west, and enters the Chucunaqui.

TAIMATI, a river of New Granada, in the province of Choco, which enters the sea in the gulf of Darien.

TAIMBOORNY, a town of Hindostan, province of Aungabadi, now belonging to the British. Lat. 18. 0. N. long. 75. 23. E.

TAIMUR, a cape of Asiatic Russia, in the district of Turuchansk, on the Frozen ocean. All the efforts to double it have hitherto proved ineffectual.

TAIMURSKAIA, a gulf of the Frozen ocean, on the coast of Asiatic Russia, situated between Cape Cevero Vostopchin and Cape Cevero Zapadnoi. Lat. 75. to 77. N. long. 94. 10. to 98. 10. E.

TAIN, a parish of Scotland, in Ross-shire, extending 8 miles in length along the frith of Dornoch, by about 2 in breadth. Population 2384.

TAIN, a royal burgh of Scotland, in the above parish, and county town of Ross-shire, seated on the south of the frith of Dornoch, 30½ miles north-by-east of Inverness by the ferry of Kessock, and 9 from Dornoch by the Meikle Ferry. The town is old and irregularly built; but there is a number of new houses, and an elegant building for assemblies and the meeting of free masons. The town is governed by a provost 3 bailies, a dean of guild, treasurer, and 9 councillors, and unites with Dingwall, Dornoch, Kirkwall, and Wick, in sending a representative to parliament. Population 1740.

TAIN, or **TEAN**, a river of England, in Staffordshire, which runs into the Dove, near Uttoxeter.

TAIN, a small town in the south-east of France, department of the Drome, situated on the Rhone. It is noted for the excellent wines produced in the neighbourhood, and known by the names of Cote-Rotie and Hermitage. Population 1400; 10 miles north of Valence.

TAIN-GAN, a city of China, of the second rank, in Shantung. Lat. 36. 15. N. long. 116. 50. E.

To TAIN, v. a. [*teindre*, Fr.] To imbue or impregnate with any thing.

The spaniel struck
Stiff by the *tainted* gale, with open nose
Draws full upon the latent prey. *Thomson.*

To stain; to sully.

We come not by the way of accusation
To *taint* that honour every good tongue blesses. *Shakspeare.*

To infect; to poison; to disease.
With wholesome herbage mixt, the direful bane
Of vegetable venom *taints* the plain. *Pope.*

To corrupt.

The yellow tinging plague
Internal vision *taints*. *Thomson.*

A corrupt contraction of *attaint*.

To TAIN, v. n. To be infected; to be touched with something corrupting.

Till Birnam wood remove to Dunsinane
I cannot *taint* with fear. *Shakspeare.*

TAIN, s. [*teinte*, Fr.] A tincture; a stain.—An insect.

As killing as the canker to the rose,
Or *taint*-worm to the weaning herds that graze. *Milton.*

Infection; corruption; depravation.

Her offence
Must be of such unnatural degree,
That monsters it; or your forevouch'd affection
Fall'n into *taint*. *Shakspeare.*

A spot;

A spot; a soil; a blemish.

Now I

Unspeak mine own detraction; here abjure
The *taints* and blames I laid upon myself.

Shakspeare.

TA'INTLESS, *adj.* Free from infection; pure.

No humours gross, or frowzy steams,
Could from her *taintless* body flow.

Swift.

TA'INTURE, *s.* [*tinctura*, Lat.] Taint; tinge; defilement.

See here the *tainture* of thy nest,
And look thyself be faultless.

Shakspeare.

TAIOWA, a small town of Hungary, in the county of Sohl, with copper mines and works.

TAI-PING, a city of China, of the first rank, in Kiangnan, on the Yang-tse-kiang river, at the junction of three of its tributaries. This situation gives it a considerable trade. It is about 525 miles south of Peking. Lat. 31. 38. N. long. 118. 14. E.

TAI-PING, a city of China, of the first rank, in Quangsee. This city is built on a point of land which is almost surrounded by a river. On the land side it is fortified by a wall, that reaches from one arm of the same river to the other. The territory of this city is very fruitful, populous, and well cultivated, being the best in all the province. A great number of forts are kept up, because it is near the confines of the kingdom of Tonquin. Lat. 22. 25. N. long. 106. 34. E.

TAIPOL, a small but strong town of European Russia, in the south of Finland, on a peninsula in the Lake Ladoga; 54 miles north of St. Petersburg.

TAISERO, a town of Japan, in the island of Ximo; 75 miles north of Nangasaki. Lat. 33. 30. N. long. 132. 7. E.

TAISUGAN KARAKOL, a lake of Asiatic Russia, in the government of Oufa; 132 miles south-south-west of Orenburg.

TAI-TCHEOU, a city of China, of the first rank, in Tchekiang. This city, which has six others in its district, is situated on the bank of a river, in a mountainous country, and is not very considerable. Lat. 28. 55. N. long. 121. 2. E.

TAI-TONG, a city of China, of the first rank, in Shansee. It is situated in a mountainous country, and is the only place exposed to the incursions of the Tartars. It is very well fortified, according to the manner of the Chinese, and has a very strong garrison. Its territory is surrounded by the great wall, which has forts from place to place. Its jurisdiction is very large, and extended over four great cities of the second order, and seven of the third. Lapis lazuli is in great plenty here; and there is a kind of jasper, which is transparent, and as white as agate: porphyry, marble, and jasper, of all colours, are very plentiful; and here is also a great trade for skins; 155 miles west of Peking. Lat. 40. 5. N. long. 112. 44. E.

TAITOU SAHA, a small island in the sea of Japan. Lat. 42. 32. N. long. 130. 42. E.

TAI-TSANG, a city of China, of the second rank, in Kiangnam. Lat. 31. 30. N. long. 120. 24. E.

TAIVERAM, a town of the south of India, district of Dindigul. Lat. 9. 54. N. long. 77. 25. E.

TAI-Y, a city of China, of the second rank, in Quangsee, on the south side of the Posoi. Lat. 23. 24. N. long. 106. 18. E.

TAI-YUEN, a city of China, of the first rank, in Shansee. It is three leagues in compass, populous, and strongly fortified. It was formerly a very splendid city, containing numerous palaces, inhabited by princes of blood; but these are now deserted, and are gone to ruin; 230 miles west-south-west of Peking. Lat. 37. 54. N. long. 111. 56. E.

TAJAI, a river of Brazil, in the province of Rey, which runs south-south-east, and enters the Tajai-meri, just before the latter falls into the sea.

TAJAI-MERI, a river of Brazil, in the province of Rey, which runs east, and enters the sea in a bay of the same name.

TAJANJE, a river of Brazil, which runs into the Atlantic. Lat. 27. 35. S.

TAJGAW, a town of Hindostan, province of Bejapoor. It was strongly fortified by Puseram Bow, and was his capital in the year 1792. Lat. 16. 47. N. long. 75. 55. E.

TAJIPURU, a large arm of the great river Amazons, which branches off just before the main stream enters the sea, and, together with the river Dos Bocas, forms the large island of Marayo or Joannes.

TAJUNNA, a river of Spain, which rises a few miles to the south of Siguenza, and falls into the Xarama, a little before the conflux of the latter with the Tagus.

TAKA, a considerable district of Eastern Nubia, occurring in the track between Shendy and Suakin. It extends about three days journey in length, and one in breadth, and is famous over all these countries for its extreme fertility. Its inhabitants are partly cultivators, and partly composed of those wandering Arabs who are named Bedouins. Its produce bears little proportion to what might be expected from the fertility of the soil, and from its being regularly inundated. Its dhourra is of the best quality, and is sold in the market of Jidda 20 per cent. higher than that of Egypt. Its camels and oxen are equally celebrated. The Arabs of Taka are a warlike race, being engaged in constant enmity with their neighbours the Rishareen. They are also a robust and hardy class of men. The chief articles imported are tobacco, natron, spices, especially cloves, incense, beads, and hardware; in return for which they give dhourra.

TAKAKAKKAN, a small island in the Eastern seas, near the east coast of Borneo. Lat. 3. 8. N. long. 116. 51. E.

TAKAMIDJA, a town of Japan, in the island of Nippon; 150 miles south-west of Meaco.

TAKAUL, a town of Asiatic Turkey, in Caramania; 40 miles north of Konieh.

To TAKE, *v. a.* pret. *took*, part. pass. *taken*, sometimes *took*. [Icel. *taka*, pret. *took*; Sax. *tæcan*, *prehendere*.] To receive what is offered; correlative to *give*; opposed to *refuse*.

Distress'd myself, like you, confin'd I live,

And therefore can compassion *take* and give.

Dryden.

To seize what is not given.

In fetters one the barking porter ty'd,

And *took* him trembling from his sovereign's side.

Dryden.

To receive.—No man shall *take* the nether or upper millstone to pledge. *Deut.*—To receive with good or ill will.

For, what we know must be,

Why should we, in our peevish opposition,

Take it to heart.

Shakspeare.

To lay hold on; to catch by surprise or artifice.

Men in their loose unguarded hours they *take*,

Not that themselves are wise, but others weak.

Pope.

To snatch; to seize.—I am contented to dwell on the Divine Providence, and *take* up any occasion to lead me to its contemplation. *Hale.*—To make prisoner.

Appoint a meeting with this old fat fellow,

Where we may *take* him, and disgrace him for it.

Shakspeare.

To captivate with pleasure; to delight; to engage.

More than history can pattern, though devis'd

And play'd to *take* spectators.

Shakspeare.

To entrap; to catch in a snare.—*Take* us the foxes, that spoil the vines. *Canticles.*—To understand in any particular sense or manner. The words are more properly *taken* for the air or æther than the heavens.—*Raleigh.*—To exact.

Take no usury of him or increase. *Lev.*—To get; to have;

to appropriate.—And the king of Sodom said unto Abram,

Give me the persons, and *take* the goods to thyself. *Gen.*

—To use; to employ.—This man always *takes* time, and

ponders things maturely before he passes his judgment.

Watts.—To blast; to infect.

Strike her young bones,

You *taking* airs with lameness.

Shakspeare.

To

- To judge in favour of; to adopt.
The nicest eye could no distinction make,
Where lay the advantage, or what side to *take*. *Dryden*.
- To admit any thing bad from without.
I ought to have a care
To keep my wounds from *taking* air. *Hudibras*.
- To get; to procure.—Striking stones they *took* fire out of them. *Mac*.—To turn to; to practise.—If any of the family be distressed, order is taken for their relief: if any be subject to vice, or *take* ill courses, they are reprov'd. *Bacon*.—To close in with; to comply with.
Old as I am, I *take* thee at thy word,
And will to-morrow thank thee with my sword. *Dryden*.
- To form; to fix.—Resolutions, *taken* upon full debate, were seldom prosecuted with equal resolution. *Clarendon*.—To catch in the hand; to seize.—I *took* not arms till urg'd by self-defence. *Dryden*.—To admit; to suffer.
Yet thy moist clay is pliant to command;
Now *take* the mould; now bend thy mind to feel
The first sharp motions of the forming wheel. *Dryden*.
- To perform any action.
A long sigh he drew,
And his voice failing, *took* his last adieu. *Dryden*.
- To receive into the mind.—A student should never satisfy himself with bare attendance on lectures, unless he clearly *takes* up the sense. *Watts*.—To go into.—When news were brought that the French king besieged Constance, he posted to the sea-coast to *take* ship. *Camden*.—To go along; to follow; to pursue.
The joyful short-liv'd news soon spread around,
Took the same train. *Dryden*.
- To swallow; to receive.—Consider the insatisfaction of several bodies, and of their appetite to *take* in others. *Bacon*.—To swallow as a medicine.—Upon this assurance he *took* physic. *Locke*.—To choose one of more.
Take to thee from among the cherubin
Thy choice of flaming warriors. *Milton*.
- To copy.
Our phoenix queen was pourtray'd too so bright,
Beauty alone cou'd beauty *take* so right. *Dryden*:
- To convey; to carry; to transport.
Carry Sir John Falstaff to the fleet,
Take all his company along with him. *Shakspeare*.
- To fasten on; to seize.—Wheresoever he *taketh* him he teareth him; and he foameth. *St. Mark*.
At first they warm, then scorch, and then they *take*,
Now with long necks from side to side they feed;
At length grown strong their mother fire forsake,
And a new colony of flames succeed. *Dryden*.
- Not to refuse; to accept.
Thou *tak'st* thy mother's word too far, said he,
And hast usurp'd thy boasted pedigree. *Dryden*.
- To adopt.—I will *take* you to me for a people, and I will be to you a God. *Exod*.—To change with respect to place.—Lovers flung themselves from the top of the precipice into the sea, where they were sometimes *taken* up alive. *Addison*.—To separate.
The living fabric now in pieces *take*,
Of every part due observation make;
All which such art discovers. *Blackmore*.
- To admit.
Though so much of Heav'n appears in my make,
The foulest impressions I easily *take*. *Swift*.
- To pursue; to go in.
It was her fortune once to *take* her way
Along the sandy margin of the sea. *Dryden*.
- To receive any temper or disposition of mind.
Few are so wicked as to *take* delight
In crimes unprofitable. *Dryden*.
- To endure; to bear.—Won't you then *take* a jest. *Spectator*.—To draw; to derive.—The firm belief of a future judgment, is the most forcible motive to a good life; because *taken* from this consideration of the most lasting happiness and misery. *Tillotson*.—To leap; to jump over.
That hand which had the strength, ev'n at your door,
To cudgel you, and make you *take* the hatch. *Shakspeare*.
- To assume.
Fit you to the custom,
And *take* t'ye as your predecessors have,
Your honour with your form. *Shakspeare*.
- To allow; to admit.—I *took* your weak excuses. *Dryden*.
To receive with fondness.
I lov'd you still, and
Took you into my bosom. *Dryden*.
- To carry out for use.—He commanded them that they should *take* nothing for their journey, save a staff. *St. Mark*.—To suppose; to receive in thought; to entertain in opinion.
This I *take* it
Is the main motive of our preparations. *Shakspeare*.
- To separate for one's self from any quantity; to remove for one's self from any place.—Four heifers from his female store he *took*. *Dryden*.—Not to leave; not to omit.—The discourse here is about ideas, which he says are real things, and we see in God: in *taking* this along with me, to make it prove any thing to his purpose, the argument must stand thus. *Locke*.—To receive payments.—Never a wife leads a better life than she does; do what she will, *take* all, pay all. *Shakspeare*.—To obtain by mensuration.—With a two foot rule in his hand measuring my walls, he *took* the dimensions of the room. *Swift*.—To withdraw.—Honeycomb, on the verge of threescore, *took* me aside, and asked me, whether I would advise him to marry? *Spectator*.—To seize with a transitory impulse; to affect so as not to last.—Tiberius, noted for his niggardly temper, only gave his attendants their diet; but once he was *taken* with a fit of generosity, and divided them into three classes. *Arbutnot*.—To comprise; to comprehend.—We always *take* the account of a future state into our schemes about the concerns of this world. *Atterbury*.—To have recourse to.—A sparrow *took* a bush just as an eagle made a stoop at an hare. *L'Estrange*.—To produce; or suffer to be produced.—No purposes whatsoever which are meant for the good of that land will prosper, or *take* good effect. *Spenser*.—To catch in the mind.—These do best who *take* material hints to be judged by history. *Locke*.—To hire; to rent.
If three ladies like a luckless play,
Take the whole house upon the poet's day. *Pope*.
- To engage in; to be active in.
Question your royal thoughts, make the case yours;
Be now the father, and propose a son;
Behold yourself so by a son disdain'd;
And then imagine me *taking* your part,
And in your pow'r so silencing your son. *Shakspeare*.
- To incur; to receive as it happens.
Now *take* your turn; and, as a brother should,
Attend your brother to the Stygian flood. *Dryden*.
- To admit in copulation.
Five hundred asses yearly *took* the horse,
Producing mules of greater speed and force. *Sandys*.
- To catch eagerly.
Drances *took* the word; who grudg'd, long since,
The rising glories of the Daunian prince. *Dryden*.
- To use as an oath or expression.—Thou shalt not *take* the name

name of the Lord in vain. *Exodus*.—To seize as a disease.—They that come abroad after these showers, are commonly taken with sickness. *Bacon*.

To TAKE away. To deprive of.

Not foes nor fortune *takes* this pow'r away,
And is my Abelard less kind than they.

Pope.

To TAKE away. To set aside : to remove.—If we *take away* consciousness of pleasure and pain, it will be hard to know wherein to place personal identity. *Locke*.

To TAKE care. To be careful ; to be solicitous for ; to superintend.—Thou shalt not muzzle the ox that treadeth out the corn. Doth God *take care* for oxen? *1 Cor.*

To TAKE care. To be cautious ; to be vigilant.

To TAKE course. To have recourse to measures.—They meant to *take a course* to deal with particulars by reconcilements, and cared not for any head. *Bacon*.

To TAKE down. To crush ; to reduce ; to suppress.—*Take down* their mettle, keep them lean and bare. *Dryden*.

To TAKE down. To swallow ; to take by the mouth.—We cannot *take down* the lives of living creatures, which some of the Paracelsians say, if they could be *taken down*, would make us immortal ; the next for subtilty of operation, to take bodies putrefied, such as may be easily taken. *Bacon*.

To TAKE from. To derogate ; to detract.—It *takes* not from you, that you were born with principals of generosity ; but it adds to you that you have cultivated nature. *Dryden*.

To TAKE from. To deprive of.—Conversation will add to their knowledge, but be too apt to *tack from* their virtue. *Locke*.

To TAKE heed. To be cautious ; to beware.

Take heed lest passion
Sway thy judgment to do ought. *Milton.*

To TAKE heed to. To attend.—Nothing sweeter than to *take heed unto* the commandments of the Lord. *Ecclus.*

To TAKE in. To inclose.—Upon the sea-coast are parcels of land that would pay well for the *taking in*. *Mortimer*.

To TAKE in. To lessen ; to contract : as, he *took in* his ils.

To TAKE in. To cheat ; to gull : as the cunning ones were *taken in*. *A low vulgar phrase.*

To TAKE in hand. To undertake.—Till there were a perfect reformation, nothing would prosper that they *took in hand*. *Clarendon*.

To TAKE in. To comprise ; to comprehend.—This love of our country *takes in* our families, friends, and acquaintance. *Addison*.

To TAKE in. To admit.

Let fortune empty her whole quiver on me,
I have a soul, that, like an ample shield,
Can *take in* all ; and verge enough for more. *Dryden*.

To TAKE in. To win by conquest.—Open places are easily *taken in*, and towns not strongly fortified make but a weak resistance. *Felton*.

To TAKE in. To receive locally.—That which men *take in* by education is next to that which is natural. *Tillotson*.

To TAKE in. To receive mentally.—A man can never have *taken in* his full measure of knowledge before he is hurried off the stage. *Addison*.

To TAKE notice. To observe.

To TAKE notice. To show by an act that observation is made.—Some laws restrained the extravagant power of the nobility, the diminution whereof they took very heavily, though at that time they *took little notice* of it. *Clarendon*.

To TAKE oath. To swear.—The king of Babylon is come to Jerusalem, and hath taken of the king's seed, and of him *taken an oath*. *Ezekiel*.

To TAKE off. To invalidate ; to destroy ; to remove. When it is immediately followed by *from*, without an accusative, it may be considered either as elliptically suppressing the accusative, or as being neutral.

You must forsake this room and go with us ;
Your power and your command is *taken off*,
And Cassio rules in Cyprus.

Shakspeare.

To TAKE off. To withhold ; to withdraw.—He has *taken you off*, by a peculiar instance of his mercy, from the vanities and temptations of the world. *Wake*.

To TAKE off. To swallow.—Were the pleasure of drinking accompanied, the moment a man *takes off* his glass, with that sick stomach which, in some men, follows not many hours after, nobody would let wine touch his lips. *Locke*.

To TAKE off. To purchase.

To TAKE off. To copy.—*Take off* all their models in wood. *Addison*.

To TAKE off. To find place for.—The multiplying of nobility brings a state to necessity ; and in like manner, when more are bred scholars than preferments can *take off*. *Bacon*.

To TAKE off. To remove.—When Moses went in, he *took the veil off* until he came out. *Exod.*

To TAKE on. See *TO TAKE upon*.

To TAKE order with. To check ; to take course with.—Though he would have turned his teeth upon Spain, yet he was *taken order with* before it came to that. *Bacon*.

To TAKE out. To remove from within any place.

Griefs are green ;
And all thy friends which thou must make thy friends
Have but their stings and teeth newly *taken out*.

Shakspeare.

To TAKE part. To share.—*Take part* in rejoicing for the victory over the Turks. *Pope*.

To TAKE place. To prevail ; to have effect.

Where arms *tack place*, all other pleas are vain ;
Love taught me force, and force shall love maintain.

Dryden.

To TAKE up. To borrow upon credit or interest.—I have anticipated already, and *taken up* from Boccace before I come to him. *Dryden*.

To TAKE up. To be ready for ; to engage with.

His divisions are, one power against the French,
And one against Glendower ; perforce, a third
Must *take up* us.

Shakspeare.

To TAKE up. To apply to the use of.

We *took up* arms not to revenge ourselves,
But free the commonwealth.

Addison.

To TAKE up. To begin.—They shall *take up* a lamentation for me. *Ezek.*

To TAKE up. To fasten with a ligature passed under. A term of chirurgery.—A large vessel opened by incision must be *taken up* before you proceed. *Sharp*.

To TAKE up. To engross ; to engage.

Take my esteem,
If from my heart you ask, or hope for more,
I grieve the place is *taken up* before.

Dryden.

To TAKE up. To have final recourse to.—Arnobius asserts, that men of the finest parts and learning, rhetoricians, lawyers, physicians, despising the sentiments they had been once fond of, *took up* their rest in the Christian religion. *Addison*.

To TAKE up. To seize ; to catch ; to arrest.—I was *taken up* for laying them down. *Shakspeare*.

To TAKE up. To admit.—The ancients *took up* experiments upon credit, and did build great matters upon them. *Bacon*.

To TAKE up. To answer by reproving ; to reprimand.—And then a whoreson jackanapes must *take me up* for swearing ; as if I borrowed mine oaths of him, and might not spend them at my pleasure. *Shakspeare*.

To TAKE up. To begin where the former left off.—The plot is purely fiction; for I take it up where the history has laid it down. *Dryden.*

To TAKE up. To lift.—Take up these clothes here quickly: where's the cowstaff? *Shakspeare.*

To TAKE up. To occupy locally.

To TAKE up. To manage in the place of another.—I have his horse to take up the quarrel. *Shakspeare.*

To TAKE up. To comprise.—I prefer in our countryman the noble poem of Palemon and Arcite, which is perhaps not much inferior to the Ilias, only it takes up seven years. *Dryden.*

To TAKE up. To adopt to assume.

The French and we still change, but here's the curse,

They change for better, and we change for worse.

They take up our old trade of conquering,

And we are taking their's to dance and sing. *Dryden.*

To TAKE up. To collect; to exact a tax.—This great bassa was born in a poor country village, and in his childhood taken from his Christian parents, by such as take up the tribute children. *Knolles.*

To TAKE upon. To appropriate to; to assume; to admit to be imputed to.—If I had no more wit than he, to take a fault upon me that he did, he had been hang'd for't. *Shakspeare.*

To TAKE upon. To assume; to claim authority.—The sense sometimes approaches to neutral.

These dangerous unsafe lunes i' th' king! beshrew them,

He must be told on't, and he shall; the office

Becomes a woman best: I'll take't upon me. *Shakspeare.*

This verb, like *prendre* in French, is used with endless multiplicity of relations. And its uses are so numerous, that they cannot all easily be exemplified.

To TAKE, *v. n.* To direct the course; to have a tendency to.

To shun thy lawless lust the dying bride,

Unwary, took along the river's side. *Dryden.*

To please; to gain reception.—Words and thoughts, which cannot be changed but for the worse, must of necessity escape the transient view upon the theatre; and yet without these a play may take. *Dryden.*—To have the intended or natural effect.

The clods, expos'd to winter winds, will bake,

For putrid earth will best in vineyards take. *Dryden.*

To catch; to fix.—When flame taketh and openeth, it giveth a noise. *Bacon.*

To TAKE after. To learn of; to resemble; to imitate.

Beasts, that converse

With man, take after him, as hogs

Get pigs all th' year, and bitches dogs. *Hudibras.*

To TAKE in with. To resort to.—Men once placed take in with the contrary faction to that by which they enter. *Bacon.*

To TAKE on. To be violently affected.—Your husband is in his old tunes again; he so takes on yonder with my husband, that any madness I ever yet beheld seemed but tameness to this distemper. *Shakspeare.*

To TAKE on. To claim a character.

I take not on me here as a physician:

Nor do I, as an enemy to peace,

Troop in the throngs of military men:

But rather

To purge the obstructions, which begins to stop

Our very veins of life. *Shakspeare.*

To TAKE on. To grieve; to pine.

How will my mother, for a father's death,

Take on with me, and ne'er be satisfy'd? *Shakspeare.*

To TAKE to. To apply to; to be fond of.—Have him understand it as a play of older people, and he will take to it of himself. *Locke.*

VOL. XXIII. No. 1611.

To TAKE to. To betake to; to have recourse.—If I had taken to the church, I should have had more sense than to have turned myself out of my benefice by writing libels. *Dryden.*

To TAKE up. To stop.—The mind of man being naturally timorous of truth, and yet averse to that diligent search necessary to its discovery, it must needs take up short of what is really so. *Glanville.*

To TAKE up. To reform.—This rational thought wrought so effectually, that it made him take up, and from that time prove a good husband. *Locke.*

To TAKE up with. To be contented with.—The ass takes up with that for his satisfaction, which he reckoned upon before for his misfortune. *L'Estrange.*

To TAKE up with. To lodge; to dwell.—Who would not rather take up with the wolf in the woods than make such a clatter in the world? *L'Estrange.*

To TAKE with. To please.—Our gracious master is a precedent to his own subjects, and seasonable mementos may be useful; and being discreetly used, cannot but take well with him. *Bacon.*

TAKELEY, a parish of England, in Essex; 3 miles south-east-by-east of Stansted Montfichet. Population 783.

TAKEN, the participle *pass.* of *take*.—Thou art taken in thy mischief. *2 Sam.*

TAKENHAM, a village of England, in Wiltshire, near Wootton Bassett.

TAKENO, a town of Japan, in the island of Ximo; 40 miles east-south-east of Ikva.

TAKER *s.* One that takes.

He will hang upon him like a disease,

He is sooner caught than the pestilence,

And the taker runs presently mad. *Shakspeare.*

TAKING, *s.* Seizure; distress of mind.—What a taking was he in, when your husband asked who was in the basket? *Shakspeare.*

TAKINGNESS, *s.* Quality of pleasing.—All outward adornings—have something in them of a complaisance and takingness. *Bp. Taylor.*

TAKMITZSKAIA, a town of Asiatic Russia, in the government of Tobolsk, on the Irtysh; 36 miles south of Tara.

TAKONNACK, a mountain of the United States, in Massachusetts, south of Great Barrington. Its height is estimated at 3000 feet above the ocean.

TALA, a river of South America, in the province of Tucuman, which runs south-south-east, and enters the river Salado.

TALA, a settlement of South America, in the province of Tucuman, on the shore of the river Passage.

TALABO, CAPE, a cape on the east coast of the island of Celebes. Lat. 0. 50. S. long. 123. 57. E.

TALAFIA, a small island in the South Pacific ocean, among those called Hapaae, south-west of Holavia.

TALAGIR, a small island among the Philippines; 25 miles west of Samar.

TALAHIGUA, a settlement of New Granada, in South America, and in the province of Carthagena, on the shore of the river Magdalena, where it is entered by the Cauca.

TALALAP, one of the Philippine islands, where the Spaniards, in 1630, built a church, and established a small religious mission; but the whole party was soon after murdered by the natives, and the church demolished.

TALAMANCAS, RIO DE LOS, a river of Guatimala, in the province of Costa Rica, which runs into the sea.

TALAMONE, a small town of Italy, in Tuscany, province of Sienna, on the sea-coast; 10 miles north-north-west of Orbitello.

TALANDA, a town of Greece, in the north of the ancient Bœotia, and in the east of the modern province of Livadia, situated on the gulf or channel of the same name, opposite to the long island of Eubœa or Negroponte; 18 miles north-north-east of Livadia, and 25 south-south-east of Zeitum.

TALANDA, or ATALANTA, a small island of European Turkey, in the gulf or channel of Talauda, between the east

coast of Greece and the island of Negroponte. It is opposite to the town of Talanda, and has a village of the same name.

TALANDRE, a large village, or rather town, of France, in Auvergne, department of the Puy de Dome, containing, together with the village of Veyne, 3300 inhabitants. It has a traffic in corn, wine, and hemp, and in the neighbourhood there are coal pits.

TALARIUS Ludus, among the Romans, a game somewhat resembling our dice-playing, and performed with a kind of gold or ivory dice, which they shook, as we do, in a box, before they threw them. There was this difference, however, between their game and ours, that their dice had but four sides, and were conically shaped.

TALARN, a small town of the north-east of Spain, in Catalonia, with 1000 inhabitants; 28 miles north-by-east of Balagner, and 78 north-west of Barcelona.

TALAVERA DE LA REYNA, an ancient town in the interior of Spain, in New Castile, on the right bank of the Tagus, over which there is a bridge of 35 arches, 1200 feet in length. Few towns are more advantageously situated, in point either of climate or of the neighbouring country, being surrounded by a fertile plain of vast extent, intersected by the river. Part of the old ramparts are still in preservation, but they are little more than an object of curiosity; and it is, in a military sense, altogether an open place. It contains several well built churches, in particular that of the Hieronymites; has two public walks, one on the north, the other on the south of the town; but nothing can be poorer than the general appearance of the place. The dwelling-houses are seldom more than one story in height. The streets are badly paved, and are crossed by a number of narrow lanes. The pavement is wretched, and the town is full of pools after a heavy fall of rain. Its population, including the suburbs, is about 8000. Silk manufactures, established here about the year 1748, are still carried on in the town, and in the neighbouring village of Cervera, as well as manufactures of soap, hats, and earthenware.

Talavera is a place of great antiquity, and contains many Roman monuments. In the present age, it is memorable for the battle fought on 27th and 28th July, 1809, between a French army amounting to 47,000 men, and an allied force, in which there were 19,000 British, and between 30,000 and 40,000 Spaniards. The French, after making several desperate attacks on the British position, were repulsed; 63 miles west-south-west of Madrid.

TALAVERA LA REAL, a small town of the west of Spain, in Estremadura, on the Guadiana; 13 miles south-east of Badajos.

TALAVERA LA VIEJA, a small town of the west of Spain, on the Tagus. Here are found the ruins of an ancient Roman town, supposed to have been called *Ebury* or *Ebora*; 70 miles west-by-south of Toledo, and 34 west-south-west of Talavera de la Reyna.

TALBERT, POINTE DE, a cape of France, on the coast Brittany, in the English channel. Lat. 48. 52. N. long. 2. 59. W.

TALBERT'S ISLAND, a small island in the Atlantic, on the coast of Georgia. Lat. 30. 44. N.

TALBOT, a county of the United States, in Maryland, bounded north by Queen Anne county, east by Caroline and Dorchester counties, south by Dorchester county, and west by Chesapeake bay. Population 14,230, including 4875 slaves. Chief town, Easton.

TALBOT, s. [It is borne by the house of *Talbot* in their arms.] A hound: so used in Wase's translation of Grotius: a sort of hunting dog between a hound and a beagle.

The bold *talbot* kind,

Of these the prime, as white as Alpine snows. *Somerville.*

TALC, in Mineralogy. See **MINERALOGY**.

TALCA, or **ST. AUGUSTINE**, a town of Chili, in the province of Maule, of which it is the capital. It was founded in 1742, and is situated on the shore of the river Maule. Its population is considerable, owing to the rich

mines of gold in the mountains, and to the low price of provisions, which has induced many families to leave the other towns, and settle in Talca; 113 miles north-north-east of Concepcion, and 105 south of Santiago. Lat. 35. 13. S. long. 71. 1. W.

TALCAGUANA, PUNTA, a projection of land on the coast of Chili, which bounded the bay of Concepcion towards the west. Lat. 36. 35. S.

TALCAGUANO, a part of the coast, of the kingdom of Chili, within the bay of La Concepcion. It is much frequented by small vessels, as well for its good bottom, as for its being completely sheltered from the north winds; and although the disembarkation be, during the prevalence of those winds, somewhat difficult through the breakers, it is attended with no danger.

TALE, s. [*cale*, from *cellan*, Sax., *to tell*.] A narrative; a story. Commonly a slight or petty account of some trifling or fabulous incident; as, a *tale* of a tub.—This story prepared their minds for the reception of any *tales* relating to other countries. *Watts*.—Oral relation.

My conscience hath a thousand several tongues,
And every tongue brings in a several *tale*,
And every *tale* condemns me for a villain. *Shakspeare.*

[*cale*, Sax., reckoning, from *celan*, to count; *tala*, Icel. number.] Number reckoned.

For ev'ry bloom his trees in Spring afford,
An autumn apple was by *tale* restor'd. *Dryden.*

Reckoning; numeral account.

Money being the common scale
Of things by measure, weight and *tale*;
In all th' affairs of church and state,
'Tis both the balance and the weight. *Butler.*

Information; disclosure of any thing secret.

From hour to hour we ripe and ripe,
And then from hour to hour we rot and rot;
And thereby hangs a *tale*. *Shakspeare.*

To **TALE**, *v. n.* To relate stories. *Obsolete*.—And namely when they *talen* longe *Gower*.

TALEBEARER, s. One who gives officious or malignant intelligence.—The liberty of a common table is a tacit invitation to all intruders; as buffoons, spies, *talebearers*, flatterers. *L'Estrange*.

TALEBEARING, s. The act of informing; officious or malignant intelligence.—The said Timothy was extremely officious about their mistress's person, endeavouring, by flattery and *talebearing*, to set her against the rest of the servants. *Arbuthnot*.

TALEFUL, adj. Abounding in stories. *A bad word.*

The cottage hind
Hangs o'er the enlightened blaze, and *taleful* there.
Recounts his simple frolics. *Thompson.*

TALENT, s. [*talentum*, Lat.] A *talent* signified so much weight, or a sum of money, the value differing according to the different ages and countries. *Arbuthnot*.

Five *talents* in his debt,
His means most short, his creditors most straight. *Shakspeare.*

Faculty; power; gift of nature. A metaphor borrowed from the talents mentioned in the holy writ. It is used sometimes seriously, and sometimes lightly.—He is chiefly to be considered in his three different *talents*, as a critic, satyrist, and writer of odes. *Dryden*.—Quality; disposition. An improper and mistaken use.—Though the nation generally was without any ill *talent* to the church in doctrine or discipline, yet they were not without a jealousy that popery was not enough discountenanced. *Clarendon*.

TALENTED, adj. Endued with talent; a recent affectation, used however by some respectable writers.

TALES, s. [Latin.] A supply for men impannelled upon

upon a jury or inquest, and not appearing, or challenged; equal in reputation to those that were impannelled, and present in court; *tales de circumstantibus*.—Twelve returned upon the principal pannel, or the *tales*, are sworn to try according to their evidence. *Hale*.

TA'LETELLER, *s.* One who relates tales or stories.—*Tale-tellers*, in the north of Ireland, are hired to tell stories of giants and enchanters, to lull people asleep. *Guardian*.

TALGARTH, a parish of Wales, in Breconshire, 10 miles from the town of Brecon. In the neighbourhood is an extensive lake abounding in pike, perch, trout, &c. It has six annual fairs, in March, May, July, September, November and December. Population 606.

TALI, a city of China, of the first rank, in the province of Yunan, situated on a large lake. In the neighbourhood are mountains producing a species of marble beautifully variegated with different colours, exhibiting the appearance of hills, flowers, trees and rivers. This is fashioned by the inhabitants into tables and other pieces of ornamental furniture, for which there is a great demand over China. Lat. 25. 45. N. long. 100. E.

TALINUM, in Botany, a genus of Adanson's, separated by him from the Linnæan **PORTULACA**. See that article.

TALION, *s.* [*talio*, Lat. "lex talionis."] Law of retaliation. *Scott*.—Crimes not capital were punished by fines, flagellation, and the law of *talion*, eye for eye. *Geddes*.

TALISCAYAN, a settlement of Mexico, in the province of Vera Cruz; 24 miles south of Vera Cruz.

TALISMAN, *s.* [*talism*, Arabic. The Arabian *talismans* are said to have been images made under such and such constellations, to receive the heavenly influences; either to be a phylactery, or an oracle. See Patrick on Gen. xxxi. 19.] A magical character.

Of *talismans* and sigils knew the power,
And careful watch'd the planetary hour. *Pope*.

TALISMANIC, *adj.* [from *talisman*] Magical.—The figure of a heart bleeding upon an altar, or held in the hand of a Cupid, has always been looked upon as *talismanic* in dresses of this nature. *Addison*.

TALISSE, a small island in the Eastern seas, near the north coast of the island of Celebes. Lat. 1. 40. N. long. 124. 50. E.

To **TALK**, *v. n.* [*ṭalan*, Saxon; *taelen*, Dutch.] To speak in conversation; to speak fluently and familiarly; not in set speeches: to converse.—I will buy with you, sell with you, *talk* with you; but I will not eat with you. *Shakspeare*.—To prattle; to speak impertinently.—Hypocrites austere *talk* of purity. *Milton*.—My heedless tongue has *talk'd* away this life. *Rowe*.—Consider well the time when Petavius first began to *talk* in that manner. *Waterland*.—To give account; to speak; to reason; to confer.—Let me *talk* with thee of thy judgments. *Jer*.

TALK, *s.* Oral conversation; fluent and familiar speech.

We do remember; but our argument
Is too heavy to admit much *talk*. *Shakspeare*.

Report; rumour.—I hear a *talk* up and down of raising our money, as a means to retain our wealth, and keep our money from being carried away. *Locke*.—Subject of discourse.

What delight to be by such extoll'd,
To live upon their tongues and be their *talk*,
Of whom to be despis'd were no small praise? *Milton*.

TALK, (properly *talca*.) *s.* [*talca*, Fr.] A kind of stone.—Stones composed of plates are generally parallel, and flexible and elastic: as, *talk*, cat-silver or glimmer, of which there are three sorts, the yellow or golden, the white or silvery, and the black. *Woodward*.—Venetian *talk* kept in a heat of a glass furnace, though brittle and discoloured, had not lost much of its bulk, and seemed nearer of kin to *talk* than mere earth. *Boyle*.

TALKAN, a village of Irak, in Persia, 30 miles east of Sultania.

TA'LKATIVE, *adj.* Full of prate; loquacious. The coxcomb bird so *talkative* and grave,
That from his cage cries cuckold, whore, and knave;
Though many a passenger he rightly call,
You hold him no philosopher at all.

TA'LKATIVENESS, *s.* Loquacity; garrulity; fulness of prate.—We call this *talkativeness* a feminine voice; but he that shall appropriate loquacity to women, may perhaps sometimes need to light Diogenes's candle to seek a man.

TA'LKER, *s.* One who talks.—Let me give, for instance, some of those writers or *talkers* who deal much in the words Nature or Fate. *Watts*.—A loquacious person; a prattler.

Keep me company but two years,
Thou shalt not know the sound of thine own tongue.
—Farewell, I'll grow a *talker* for this jeer. *Shakspeare*.

A boaster; a bragging fellow.—The greatest *talkers* in the days of peace, have been the most pusillanimous in the day of temptation. *Bp. Taylor*.

TALKIN, a township of England, in Cumberland; 11 miles east-by-north of Carlisle.

TA'LKING, *s.* Oral conversation.—Neither filthiness, nor foolish *talking*, nor jesting, which are not convenient. *Ephes*.

TA'LKY, *adj.* Consisting of talc; resembling talc.—The *talky* flakes in the strata were all formed before the subsistence, along with the sand. *Woodward*.

TALL, *adj.* [*tâl*, Welsh.] High in stature.—Bring word how *tall* she is. *Shakspeare*.—High; lofty.

Winds rush'd abroad
From the four hinges of the world, and fell
On the vast wilderness, whose *tallest* pines,
Though rooted deep as high, and sturdiest oaks
Bow'd their stiff necks. *Milton*.

Sturdy; lusty; bold; spirited; courageous.—I'll swear thou art a *tall* fellow of thy hands, and that thou wilt not be drunk; but I know thou art no *tall* fellow of thy hands, and that thou wilt be drunk; but I would thou wouldst be a *tall* fellow of thy hands. *Shakspeare*.

TALLACHDU, a parish of Wales, in Breconshire; 170 miles west-by-north of London.

TALLAGE, *s.* [*tailage*, Fr.] Impost; excise.—The people of Spain were better affected unto Philip than to Ferdinand, because he had imposed upon them many taxes and *tallages*. *Bacon*.

To **TALLAGE**, *v. a.* To lay an impost on.—Edward I. *tallaged* his demesnes very heavily, by commissioners of his own. *Bp. Ellys*.

TALLAGH, a decayed village of Ireland, in the county of Waterford, near the river Bride, which is so far navigable for boats. It was erected into a burgh by James I, at the solicitation of the Earl of Cork. Its liberties extended one mile in all directions from the church, considered as the centre. It was never a walled town, nor considered a place affording any strong natural defence: however, in the rebellion of the year 1641, an intrenchment was cast round it by the Earl of Cork, for the protection of the inhabitants against the sudden inroads of the rebels. It returned two members to parliament previous to the union with Great Britain. There is a barrack in the town; and at the west end of the bridge lie the ruins of Lessfinny castle, formerly the property of Earl Desmond; 104 miles south-south-west of Dublin, 23 west-north-west of Cork, and 32 west-south-west of Waterford.

TALLAND, a parish of England, in Cornwall, situated upon the English Channel; 2 miles south-west-by-south of West Looe. Population 801.

TALLANTINE, a hamlet of England, in Cumberland; 3 miles north-north-west of Cockermouth.

TALLAPOOSA, or **OAKFUSKE**, a river of the United States, which rises in Georgia, enters the Alabama territory, flows south west, and unites with the Coosa, 3 miles south-west of Fort Jackson, to form the Alabama. It is navigable, except

except in dry seasons, to the Great Falls, about 35 miles. This river is subject to great periodical elevations and depressions. Much of the country watered by it is very fertile.

TALLARD, a small town in the south-east of France, department of the Upper Alps, on the Durance. Population 1000; 6 miles south of Gap.

TALLATOM, a parish of England, in Devonshire; 4½ miles north-west-by-north of Ottery St. Mary. Population 348.

TALLEVENDE, a small town in the north-west of France, department of Calvados; 2 miles south-west of Vire. Population 3000.

TALLEY, a parish of Wales, in Caemarthenshire; 7 miles from Llandelovawr. Population 880.

TALLIKA, a town of the kingdom of Bornou, in Central Africa, the first which occurs in the route of the caravans after leaving Woolly. It is inhabited by Foulahs of the Mahometan religion; 70 miles west-south-west of Fattconda.

TALLINGTON, a parish of England, in Lincolnshire; 3½ miles west-by-north of Market Deeping.

TALLMADGE, a post township of the United States, in Portage county, Ohio; 15 miles west-south-west of Ravenna. It has an academy and an iron furnace.

TALLOO HARBOUR, a harbour on the north coast of Eimeo, one of the Society islands, in the South Pacific ocean. The bay is about three miles long, and two broad, with deep and clear water, but is difficult of access, from a reef which surrounds it. Lat. 17. 30. S. long. 210. E.

TALLOW, *s.* [*tolkr*, Icel.; *tolk*, Dan.; *talg*, *talge*, Su. Goth. and Germ.; which Wachter deduces from the Welsh *deilliaw*, to flow, to proceed, or come from.] The grease or fat of an animal; coarse suet.—She's the kitchen wench, and all grease; and I know not what use to put her to, but to make a lamp of her, and run from her by her own light. I warrant her rags, and the *tallow* in them, will burn a Lapland winter. *Shakspeare*

To **TALLOW**, *v. a.* To grease; to smear with tallow.—Now fetes the *tallowed* keel. *Ld. Surrey.*

TALLOW POINT, a mark for anchoring in the harbour of Port Royal, Jamaica.

TALLOWCHANDLER, *s.* One who makes candles of tallow, not of wax.—Nastiness, and several nasty trades, as *tallowchandlers*, butchers, and neglect of cleansing of gutters, are great occasions of a plague. *Harvey.*

TALLOWFACED, *adj.* Having a pale, sickly complexion—Every lover admires his mistress, though she be deformed, wrinkled, pimpled, *tallowfaced*. *Burton.*

TALLOWISH, *adj.* Having the nature of tallow. *Hulot.*

TALLOWY, *adj.* Greasy.

TALLWATER, a river of Ireland, in the county of Ar-magh, which runs, with the Callen, into Blackwater, near Charlemont.

TALLY, *s.* [*tailler*, French, *to cut*.] A stick notched, or cut in conformity to another stick, and used to keep accounts by.

So right his judgment was cut fit,
And made a *tally* to his wit.

Hudibras.

Any thing made to suit another.

So suited in their minds and persons,
That they were fram'd the *tallies* for each other:
If any alien love had interpos'd,
It must have been an eye-sore to beholders.

Dryden.

To **TALLY**, *v. a.* To fit; to suit; to cut out, so as to answer any thing.

Nor sister either had, nor brother;
They seem'd just *tally'd* for each other.

Prior.

To **TALLY**, *v. n.* To be fitted; to conform; to be suitable.—I found pieces of tiles that exactly *tallied* with the channel. *Addison.*

TALLY, *adv.* Stoutly; with spirit.

You, Ludowick,

That stand so *tally* on your reputation,
You shall be he shall speak it.

Beaum. and Fl.

TALLYA, a town of the north of Hungary; 45 miles north-east of Erlau, and 10 north-west of Tokay. It contains 3700 inhabitants, and produces a species of excellent wine, which is commonly sold for Tokay.

TALLYLYN, a parish of Wales, in Merionethshire; 6 miles from Machynleth. Population 596.

TALMA (Francis Joseph), the first of French actors, was born at Paris on the 15th of January, 1760. His father was a dentist. He removed from Paris to London, leaving his son at a boarding school which was under the jurisdiction of the Mazarin college. Here Talma first became acquainted with the celebrated professor of rhetoric, under whose rod he smarted, when, some years afterwards, the one became the most eminent actor of the age, and the other the most dreaded critic. Talma, though the youngest and smallest boy in the school, was remarked for his intelligence and sensitiveness. Slight theatrical pieces were performed, as they are in many schools here, on the breaking up for the holidays. In one of these, written by the master, a part was allotted to Talma, then not nine years old. The play was on the story of Tamerlane, and Talma acted a secondary character, the friend and confidant of Tamerlane's son. The son of Tamerlane dies, and the friend has to bear the sad news to the father. The child made the disclosure with a flood of tears. The curtain fell.—the audience were affected and astonished. When a muster was made of the little actors, Talma was missing. In alarm, all ran to seek for him. He was found wrapt in his tragic robe, in a corner of a room where he had gone to undress, weeping bitterly at the sorrows of the scene. His excitement made him ill, and it was a week before he recovered.

Soon after this, Talma's father sent for him. He was placed in a boarding school near Vauxhall. His stay there was only interrupted by a brief visit to France, whence he returned, and remained at Lambeth till he was thought old enough to begin to study his father's profession.

His father lived at No. 13, Old Cavendish Street, Cavendish Square; and was acquainted with Sir John Gallini, who was then proprietor of Hanover Square Rooms, in the neighbourhood. Talma got together a party of amateurs, and they acted *Le François à Londres*, and *Le Dèpit Amoureux*. This was Talma's first appearance on the stage in a real play. He performed the Marquis de Polainville in the first piece, and Eraste in the second. The success of this experiment led to others, and Sir John began to look upon the affair as worth following up seriously. Beaumarchais' *Marriage of Figaro* was then at the height of its popularity, and it was performed at this little theatre, Talma sustaining the part of the Count Almaviva. The fashionable people flocked to the representation with great eagerness. His present Majesty, the Duke of York, and all the leaders of the *haut ton* were among their patrons. Gallini could not but see in this encouragement for a larger speculation. Talma having occasion to visit Paris, he was empowered to bring over Molé and Mademoiselle Contat, to give scenes and recitations. But the chains in which the government holds the actors in France, could not be broken, and the negotiation failed. Talma, however, was unsettled by his recent successes from the study of his father's profession. He was predisposed to make the best use of any encouragement to the pursuit which had caught his fancy. The acquaintance-ship of Molé offered facilities too tempting to be resisted. He had just seen Kemble and Mrs. Siddons. He now saw Brizard, Larive, Molé, and others, in his native country. He disclosed his ruling passion to Molé. The government was just then establishing, under Molé, the school of declamation, which still exists; in which he promised to receive Talma as a pupil as soon as it should be formed, and thence to transfer him to the stage. Talma returned to England, impatient for a summons from Molé. It arrived, and he was presented. His first introduction to a groupe of unknown judges

judges shook his nerves. But he screwed up his courage, and "went through a whole part, with as much accuracy, force, and expression," said a person who was present, "as he afterwards threw into his most practised performances." An order was presently obtained for his *début* at the *Theatre Français*. He appeared there in the character of Seide, in Voltaire's *Funatisme*, on the 15th of November, 1787;—the same play which Garrick produced in a translation, with many touchings-up of his own, under the name of *Mahomet*.

Talma found he was not earnestly received, and grew languid and embarrassed. He went through his regular six nights of experiment, and was then admitted to the course of probation, which lasts two years.

One of those accidents which, though meant to do injury, are often a man's making, placed Talma suddenly in that high station which he ever after maintained. Chenier had presented to Saint Fal, the tragic despot of the hour, his tragedy of *Charles the Ninth*. When the author went for the actor's decision, "Here, my friend, take your manuscript; many thanks for your hero, but I am quite unworthy of such a part; you had better," added he, with a satirical smile, "give it to Talma." The author, who had watched Talma, and guessed of what he was capable, caught at the suggestion. Talma appeared in the part, and to this hour the old theatrical connoisseurs are eloquent in their praise of the thorough illusion of the dress, gesture, and even face of Charles. It was his portrait stepping from its frame—himself risen from the tomb.

The plays of Ducis were then in their greatest popularity. His *Othello* gave a new view of his powers. The sensation it produced was appalling. The French, who are terrified at all murders which are unreal, were excited, by the last scene, almost to phrenzy. When *Othello* stabbed his wife, the ladies shrieked and fainted, and the gentlemen rose tumultuously. It was thought dangerous to preserve so startling a scene, and the author made a second *denouement*, wherein the heroine was saved by the interposition of her father, just as *Othello* raised his dagger. Of course, her innocence was proved, and all ended comfortably for the audience; but not for the tragedian. He could not reconcile himself to the sacrifice of such powerful effect, and he returned to the legitimate play.

A great deal has been said of Talma's intercourse with Napoleon. Their first meeting was at Madame Beauharnais', when Napoleon was General of Division, and paid his addresses to Madame. Talma, the confidant of the courtship, was one of the guests at the wedding, and from that time the acquaintance grew into friendship. There was no very signal disproportion in the rank of the friends. Talma was at the head of his profession, and Napoleon a general, but without an army. He soon had one. During his absence in Italy, Talma was still a favoured friend at his hotel, and so intimate and so much respected, that Madame invited him to be one of the sponsors to a child of which she was to be godmother. On the morning of the baptism, the news arrived of the first battle gained by Napoleon in Italy, and, in the joy of the moment, the child was christened *Victoire*. On the return of the General, distinguished as he now was, the intimacy was not less animated than it had been. The Egyptian expedition was planned. Talma, in his enthusiasm, volunteered to accompany the commander in chief. Napoleon, the only one who could have prevented this enterprise, set himself entirely against it. "You must not commit yourself so rashly, Talma," said he; "you have a brilliant course before you; leave fighting to those who know nothing better." On Napoleon's return and increased rank in the state, Talma, with the modesty of his nature, and the good sense of a man acquainted with the world, made his visits less frequent to the Tuileries; his reception was, however, as cordial as formerly. Napoleon became emperor, and Talma naturally concluded that the intimacy of the sovereign and the subject could no longer be sustained. In a few days he received a note from the first chamberlain in these words:—"His Imperial Majesty was much surprised

not to have received M. Talma's personal felicitations; that it appeared as if he intended to withdraw himself from his Majesty; which was not his Majesty's wish; and that M. Talma was invited to present himself at the Tuileries as soon as he thought proper." It may be supposed that such an invitation was not declined. He waited on the emperor, was received with his early kindness, was constantly at the palace, and was always treated with the same distinction. An idle story has gone abroad of Talma's giving Napoleon lessons of deportment and delivery. The two friends often laughed at this together; and Buonaparte said, on his return from Elba, laughingly, to Talma, "Well, Talma, I hear Chateaubriand says, 'tis you who taught me to be an emperor. He must have thought I played my part well, or he never would have given me you for an instructor;" and their intercourse suffered no subsequent diminution. Talma was at one time taken ill. Napoleon sent Corvisart, his private physician, to attend him; and his first enquiry every morning was after his friend's situation. Immediately on Talma's convalescence, Corvisart pressed him to wait on the emperor, though it was at that embarrassing moment, when he was preparing to divorce Josephine. Talma gave way to the imperial command: his visit happened to fall on the very day of the divorce; and critical as the moment was, he was received in the most cordial manner.

For many years Talma had been desirous of visiting England; he took great pains to renew his English, and studied very intently for some months before he made his final arrangements. He reached London on Wednesday, May 28, 1817; and was received with flattering enthusiasm by the English actors and the patrons of the histrionic art. Talma died in October, 1826.

TALMAY, a small town in the east of France, department of the Côte d'Or, on the Vigene. Population 1100; 3 miles north-east of Pontarlier, and 25 east-by-north of Dijon.

TALMONT, a small town in the west of France, department of the Lower Charente, situated on a peninsula on the right bank of the Gironde, with a small port. Population 2500; 20 miles south-west of Saintes.

TALMUD, or **THA'LMUD**, *s.* [Hebrew.] The book containing the Jewish traditions, the rabbinical constitutions, and explications of the law.—They have this tradition in their *talmud*. *Lightfoot*.

TALMUDICAL, or **TA'LMUDIC**, *adj.* Belonging to the talmud.

TALMUDIST, *s.* One well versed in the talmud.

TALMUDISTIC, *adj.* Talmudical.

TALNERE, a celebrated town and fortress of Hindostan. It was the capital of the sultans of the Adil Shahy dynasty, in the 15th century, and was conquered by Aurungzebe, but on the decline of the Mogul empire, fell into possession of the Mahrattas, and was afterwards part of the possessions of Holcar. At the conclusion of the war with that chief, this fortress was ceded to the British.

TALNESS, *s.* Height of stature; procerity.

An hideous giant, horrible and high,
That with his *talness* seem'd to threaten the sky. *Spenser*.

TALON, *s.* [*talon*, Fr.] The claw of a bird of prey.—It may be tried, whether birds may not be made to have greater or longer *talons*. *Bacon*.

TALPA, the Mole, in Zoology, a genus of the Mammalia Feræ, the characters of which are, that the front teeth in the upper jaw are six, and unequal; those in the lower jaw are eight; the canine teeth are one on each side, the upper ones being the largest; and that the grinders are seven in the upper jaw, and six in the lower. Gmelin enumerates four species, besides several varieties.

1. *Talpa Europæa*, or common mole.—Has a short tail, and pentadactylous or five-toed feet. The body is thick and cylindrical; the snout slender, but very strong and tendinous; the head not distinguished from the body by any appearance of neck; the legs so extremely short, as scarcely to project perceptibly from the body; the fore-feet situated obliquely

outwards, excessively strong and broad, and furnished with very large and stout claws, so as to give the animal the power of working under the surface with the utmost ease and readiness; the hind-feet are small in proportion to the fore-feet, and are calculated for throwing back, with ease the mould from behind the creature, during his subterranean progress; the tail is short and small; the skin is much thicker and tougher in proportion than in other quadrupeds, and the fur with which it is covered equally surpasses that of other animals in fineness and softness. The muscular strength of the mole is very great, and it is enabled to force itself into the ground with an extraordinary degree of celerity. The general length of the mole is about five inches and three quarters, exclusive of the tail, which measures one inch. This animal is supposed to possess the power of hearing in an exquisite degree; and if at any time it emerges from a subterranean retreat, instantly disappears on the approach of any danger. When first taken, either by digging it out or otherwise, it utters a shrill scream, and prepares for defence by exerting the strength of its claws and teeth. The mole has eyes only adapted so far to vision, as to apprise it of the approach of light. In particular circumstances it is very fierce and voracious. Without damp mould for its residence, it is kept alive with difficulty in a state of confinement. Like other animals of a black colour, the mole is sometimes found perfectly white, or cream-coloured, and sometimes spotted. Gmelin reckons four varieties.

2. *Talpa Asiatica*.—Has no tail, and tridactylous fore-feet. This is the Siberian mole of Pennant. It is somewhat smaller than the common mole, its length being four inches; and is a native of the Cape of Good Hope.

3. *Talpa longicaudata*.—With a tail of middling length, and pentadactylous feet, the hinder ones scaly. This is the long-tailed mole of Pennant: its length from nose to tail is four inches and six-tenths; and it is a native of North America.

4. *Talpa rubra*, or red mole of Pennant.—Has a short tail, tridactylous fore-feet, and tridactylous hind-feet.—This is said to be a native of America.

Dr. Shaw mentions some other species.

TAM, EL, a town of Seistan, in Persia, on the Heermund; 25 miles east of Zareng.

TAMA, a small river of Brazil, in the province of Para, which runs north-north-west, and enters the mouth of the arm of the river Las Amazonas, which forms the island of Marayo.

TAMAHOO, a small island in the Eastern seas, near the west coast of Borneo. Lat. 0. 7. N. long. 109. 21. E.

TAMALAMEQUE, a town of South America, in the province of Santa Martha, situated on the shore of the river Madalena. It was improved from a scattered colony into a regular town into 1561. At present it has fallen into such decay as to be nothing more than a miserable settlement; 158 miles south of Santa Martha. Lat 8. 40. N. long. 74. 14. W.

TAMAN, an island in the south of European Russia, in the government of Taurida. It is formed by the straits of Taman, the sea of Azoph, and the Black sea. Part of it lies low, but it contains also a number of small hills, from one of which a volcanic eruption took place on the 4th July, 1804. Wood is scarce, but pasturage is abundant. The inhabitants were formerly Crim-Tartars, but in 1793, a Cossack tribe settled here, and continue to occupy the island. Before the Russians took possession of it, it was called Zmutarakan, but is now frequently called Fanagoria, the name of the chief town.

TAMAR, called by Ptolemy *Talama*, a river of England, which rises in the north-west part of Devonshire, on the borders of Cornwall, about 3 miles from the sea; and on being joined by the Tavy, and passing near Saltash, it forms the noble harbour of Hamoaze, below Plymouth, falling into the sea at Mount Edgecombe.

TAMAR BAY, a harbour in the straits of Magellan, east of Cape Tamar.

TAMAR, CAPE, the north-west point of a large bay and

harbour on the north shore of the straits of Magellan, within the cape. The south-east point of the bay is named Providence. Lat. 52. 51. S. long. 75. 40. W.

TAMAR, a river of Van Diemen's Land. It has more the appearance of a chain of lakes, than of a regularly formed river; and such, according to Captain Flinders, it probably was, until, by long undermining, assisted perhaps by an unusual weight of water, a passage was forced out to the sea.

TAMARA, a village of Morocco, on the coast of the Atlantic; 30 miles west of Terodant.

TAMARA, a sea-port on the north-western part of the island of Socotora, the residence of the king.

TAMARA, a settlement of New Granada, in the province of San Juan de los Llanos, at the foot of the mountains of Bogota; 126 miles north-east of Santa Fe.

TAMARACA, a province of Brazil, bounded north by the province of Paraiba, and south by that of Olinda, east by the sea, and west by the country of the Indians. It is 7 leagues in extent along the coast, but 30 or 40 in the interior of the country. It takes its name from an island which it has opposite to it near the continent, from which it is parted by a very narrow channel. It is fertile and pleasant enough, producing large quantities of Brazil wood, cotton, cocoa-nuts, sugar, melons, citrons, &c., besides a good deal of timber for fuel and other purposes. It is about nine miles in length, and three in breadth, and about 22 in circuit. It has a commodious haven on the south side, with some good springs and rivulets of fresh water. The entrance into the port is by a channel of between 15 and 16 feet water, commanded by a castle, built on an eminence, and formerly taken by the Dutch, who also built Fort Orange at the mouth of the channel, which was inaccessible, by reason of the marshes surrounding it.

TAMARACA, the capital of the above district, situated on the top of a mountain. It has a magnificent parish church. The population consists of 200 housekeepers; 14 miles north of Olinda, and 64 south of Paraiba. Lat. 7. 59. S. long. 35. 6. W.

TAMARIND-TREE. See TAMARINDUS.

TAMARINDUS [Indian date. *Tamar* in Arabic being the name for the date], in Botany, a genus of the class monadelphia, order triandria—olim, triandria monogynia, natural order of lomentaceæ, leguminosæ (*Juss.*)—Generic Character. Calyx: perianth one-leaved; tube turbinate, compressed, attenuated below, permanent; mouth oblique; border four-parted, deciduous; segments ovate, flattish, acute, reflexed, coloured; the upper and lower a little wider. Corolla: petals three, ovate, concave, acute, crenate, waved, reflexed, length of the calyx, inserted into the mouth of the tube; the two lateral ones a little larger. Stamina: filaments three, inserted into the orifice of the calyx at the void sinus, length of the corolla, awl-shaped, united below up to the middle, bowed towards the corolla. Anthers ovate, incumbent, large. Threads five (rudiments of stamens), alternate with the filaments, and united below but separate above, bristle-shaped, headed, very short: the two lateral ones lower than the others. Bristles two, springing from the calyx below the filaments and incumbent on them, very small. Pistil: germ oblong, compressed, curved in, placed on a pedicel fastened to the bottom of the calyx and growing longitudinally to its tube under the back, beyond the tube with the upper margin villose. Style awl-shaped, ascending, pubescent on the lower margin, a little longer than the stamens. Stigma thickened, obtuse. Pericarp: legume oblong, compressed, blunt with a point, swelling at the seeds, covered with a double rind, the outer dry and brittle, the inner membranaceous; a soft pulp between both; one-celled, not opening. Seeds few, angular-roundish, plano-compressed, shining, hard.—*Essential Character*. Calyx four-parted. Petioles three. Nectary of two short bristles under the filaments. Legume pulpy.

1. *Tamarindus Indica*, or tamarind-tree.—This tree grows to a very large size in those countries where it is a native. The stem is covered with a brown bark, and divides into
Leaves

many branches at the top, spreading wide every way. Leaves pinnate, composed of sixteen or eighteen pairs of leaflets, without a single one at the end; they are about half an inch long, and a sixth part of an inch broad, of a bright green, a little hairy, and sit close to the midrib. The flowers come out from the side of the branches, five, six or more together, in loose bunches.—It seems to be a native both of the East and West Indies, and of Egypt, if not Arabia. In the West Indies it flowers in October and November.

The timber of the Tamarind tree is heavy, firm and hard: sawn into boards, it is converted to many useful purposes in building.—The fruit is used both in food and medicine. In many parts of America, particularly in Curaçao, they eat abundance of it raw, without any inconvenience, except gently relaxing the body. In Martinico also they eat the unripe fruit, even of the most austere kind. The Tamarinds which are brought from the East Indies are darker and drier, but contain more pulp; being preserved without sugar they are fitter to be put into medicines than those from the West Indies, which are much redder, but being preserved with sugar, are more pleasant to the palate.

Propagation and Culture.—Sow the seeds on a hot-bed in the spring, and when the plants are come up, plant each in a separate small pot filled with light rich earth, and plunge them into a hot-bed of tanner's bark to bring them forward, observing to water and shade them until they have taken root. Then treat them as hath been directed for the Coffee-tree, with whose culture they will thrive exceeding well.

TAMARISK. See TAMARIX.

TAMARIX [of Pliny. Supposed by some to be from the Hebrew Tamaris, abstersio, on account of its abstergent qualities], in Botany, a genus of the class pentandria, order trygynia, natural order of succulentæ portulacæ (Juss.)—Generic Character. Calyx: perianth five-parted, obtuse, erect, permanent, shorter by half than the corolla. Corolla: petals five, ovate, concave, obtuse, spreading. Stamina: filaments five, capillary. Anthers roundish. Pistil: germ acuminate. Style none. Stigmas three, oblong, revolute, feathered. Pericarp: capsule oblong, acuminate, three-sided, longer than the calyx, one-celled, three-valved. Seeds very many, very small, pappose.—*Tamaris Germanica* has ten stamens, of which the alternate outer ones are shorter; they are all connate at the base.—*Essential Character.* Calyx five-parted. Petals five. Capsule one-celled, three-valved. Seeds pappose.

1. *Tamaris Gallica*, or French tamarisk.—Flowers five-stamened; spikes lateral; leaves lanceolate, embracing imbricate. The first sort is a native of the south of France, Spain, Italy, Russia, Tartary, Barbary, and Japan; where it grows to a tree of middling size, but in England, is seldom more than fourteen or sixteen feet high. There are two varieties.

2. *Tamaris articulata*, or jointed tamarisk.—Flowers five-stamened; spikes lateral; leaves very short sheathed. This is a shrub, with round branches.—Native of the East Indies and Arabia.

3. *Tamaris Songarica*, or Songarian tamarisk.—Flowers eight or ten-stamened, axillary subspiked; leaves fleshy, obtuse, three-sided.—Found in Siberia, in salt places of Songaria.

4. *Tamaris Germanica*, or German tamarisk.—Flowers ten-stamened; spikes terminating; leaves sessile, linear-lanceolate. This has a variety. This is rather a shrub than a tree, having several woody stalks arising from the same root, which grow quite erect, sending out many side branches which are also erect; they have a pale-green bark when young, afterwards changing to a yellowish colour.—Native of Germany, Norway, Dauphiné, Spain, Piedmont, and the mountains of Dauria, Caucasus and Russia.

Propagation and Culture.—The tamarisks may easily be increased either by laying down their tender shoots in autumn, or by planting cuttings in an east border, which will take root in a short time, if they are supplied with water

in dry weather; but they should not be removed until the following autumn, at which time they may be either placed in a nursery to be trained up two or three years, or else where they are designed to remain, observing to mulch their roots, and water them according as the season may require, until they have taken root; after which, the only culture they will require, is to prune off the straggling shoots, and keep the ground clean about them.

TAMARITE, a small town of the north-east of Spain, in Arragon; 20 miles east-south-east of Balastro.

TAMARO, a small river of New Granada, in the province of Maracaibo, which rises near the sea-coast, runs south, and flows into Lake Maracaibo.

TAMASCHI, a small town of the south-west of Hungary; 70 miles south-south-west of Pest, and 15 west-south-west of Simon-tornya.

TAMAULIPA, SAN CARLOS DE, a village, consisting chiefly of straw-huts, on the coast of the bay of Mexico.

TAMAYO, a river of New Granada, in the province of Venezuela, which rises on the side of the Lake Maracaibo, runs nearly due east, and enters the Tucuyo.

TAMAZULA, the name of several inconsiderable settlements in Mexico.

TAMAZULAPA, several inconsiderable settlements in Mexico.

TAMBACH, a village of Bavarian Franconia, on the borders of Saxony, and 4 miles west of Coburg.

TAMBACH, or TAMMICH, a large village of Germany, in the principality of Saxe Gotha, containing 1400 inhabitants; 10 miles north-east of Schmalcalden, and 8 south of Gotha.

TAMBACUNDA, a small town of Western Africa, in the country of Neola; 52 miles west of Baniserile.

TAMBAH, a town of Hindostan, province of Bejapoor, lately taken possession of by the British. Lat. 17. 28. N. long. 73. 35. E.

TAMBAOURA, a gold mine in the kingdom of Bambook. See BAMBOUK.

TAMBEKAN, a town of Hindostan, province of Nepaul, celebrated for the copper mines in its vicinity. Lat. 27. 25. N. long. 85. 30. E.—Near to this town is a celebrated pass through the mountains, which commands the road leading to the sea coast.

TAMBERACHERY, a town of the south of India, province of Malabar. The country in the vicinity of this place produces very fine teak timber, and a great abundance of cocoa nuts. Lat. 11. 21. N. long. 76. 3. E.

TAMBILLO, the name of four inconsiderable settlements in South America, one in Chili, one in Quito, and two in Peru.

TAMBO, a town of Peru, in the province of Calca and Lares, situated on the north shore of the river Quillabamba; 45 miles north-north-west of Cuzco. In the vicinity is a mountain, on which is to be seen a fortress which belonged to the Incas, built of large wrought stone, so beautifully fitted together, as that the junction is scarcely perceptible; a circumstance the more wonderful, when we consider the height to which these stones were carried. None of these stones are of a regular figure. This fortress has its bulwarks, gate, and small squares, arranged with singular disposition and art. It is entered by long wide flights of steps, with several landing places. At a small distance from this fortress are two strong towers, which serve as advanced posts.

TAMBO, a settlement of Chili, in Coquimbo, near the source of the river Choapa.—2d. Of Peru, in the province of Atacames, on the shore of a small river which enters the Quillabamba.—3d. Of New Granada, in the province of Popayan.—4th. Of Peru, in the province of Castro Vireyna. 5th. Of Peru, in the province of Canete.—There is also a settlement of this name in the province of Arequipa.—It is also the name of several other inconsiderable settlements.

TAMBO, a river of Peru, in the province of Moquehua, which enters the Pacific ocean, in the bay of Quilca.

TAMBO, a river of Brazil, which runs north-north-west, and enters the Tocantines.

TAMBOR, a settlement of New Granada, in the province of Popayan; 13 miles west of the city of Popayn.

TAMBORA, a town of the island of Sumbawa, which is much resorted to by the dealers in horses, the surrounding country being celebrated for its breed of these animals.

TAMBOV, a large province or government in the central part of European Russia, lying to the west of those of Penza and Saratov, between lat. 51. 30. and 55. 20. N. and long. 39. 40. and 43. 40. E. Its territorial extent is calculated at about 21,000 square miles, and its population in 1817, was supposed to amount to 1,135,000. Like the far greater part of European Russia, it is level, and all the country from the river Choper to the borders of Saratov, is occupied by extensive steppes. Many tracks in this province are woody and marshy, but in general a sandy soil pervades the north, and a black and fertile mould the south. It is well watered both by rivers and small lakes. The winter has all the severity of the Russian climate, but in summer the heat is such that the Polish cochineal and the Spanish fly are common. The domestic animals do not differ from those in the surrounding governments: the steppes contain various beasts of game. The mineral products are iron, sulphur, and salt-petre.

TAMBOV, a considerable town of Russia, and the capital of the government of Tambov, is situated on the river Zna. It contains 10,700 inhabitants, and is the see of a Greek bishop; with a seminary, a gymnasium, and schools for the families of the better classes. It has a large monastery, in which there are two churches; and the town contains 14 other churches or chapels. It has manufactures of woollen, canvas, linen, and alum, and a considerable carrying trade; but the chief employment of the inhabitants is agriculture; 286 miles south-east of Moscow. Lat. 52. 43. 44. N. long. 41. 45. 15. E.

TAMBO'UR, *s.* [old Fr., *tambour*, a small drum; *tambur*, Arab., the same.] A tambourine; which see. A frame resembling a drum, on which a kind of embroidery is worked; the embroidery so made. [In Architecture.] A member of the Corinthian and composite capital, somewhat resembling a drum; a kind of porch; a round stone, or course of stones.

TAMBOURINE, *s.* [*tamborin*, Spanish; from the Arab. *tambur*.] A kind of drum. What we now call the *tambourin*, is different from the *tabor*; as it is played on with the hand or fingers, not with a stick. Spenser writes this word *tamburin*, and B. Jonson *timburine*.

Calliope with Muses moe,
Soon as thy oaten pipe began to sound,
Their ivory lutes and *tamburines* forego.

Spenser.

TAMBRE, a river of Spain, in Galicia, which flows into the Atlantic at Noya, on the west coast.

TAMBUCCO, or **TABUCCO**, a town on the east coast of the island of Celebes, situated in a bay, to which it gives name. Lat. 3. 50. S.

TAME, a river of England, in the counties of Buckingham and Oxford. It rises near Winslow, in Buckinghamshire, and runs in the Thames below Dorchester.—Also a river in Staffordshire, which rises near Dudley, and falls into the Trent, not far from Eadinghall, about 7 miles above Burton.

TAME, a settlement of New Granada, in the province of San Juan de los Llanos, containing 700 Indians; 58 miles south of Pampeluna.

TAME, a river of Guiana, which enters the Meta.

TAME, *adj.* [*taeme*, Sax.; *taem*, Dutch; *tam*, Danish.] Not wild; domestic.—Thales the Milesian said, That of all wild beasts, a tyrant is the worst, and of all *tame* beasts, a flatterer. *Addison*.—Crushed; subdued; depressed; dejected; spiritless; heartless.

If you should need a pin,
You could not with more *tame* a tongue desire it.

Shakspeare.

Spiritless; unanimated: as, a *tame* poem. *A low phrase.*

To TAME, *v. a.* [*gatanjan*, Gothic; *taaman*, Saxon; *tammen*, Dutch.] To reduce from wildness; to reclaim; to make gentle.

Those that *tame* wild horses,
Pace 'em not in their hands to make 'em gentle;
But stop their mouths with stubborn bits. *Shakspeare.*

To subdue; to crush; to depress; to conquer.

If the heavens do not their visible spirits
Send quickly down to *tame* the offences,
Humanity must perforce prey on itself. *Shakspeare.*

TAMEABLE, *adj.* Susceptive of taming.—Ganzas are supposed to be great fowls, of a strong flight, and easily *tameable*; divers of which may be so brought up as to join together in carrying the weight of a man. *Wilkins.*

TAMEGA, a river which rises in the mountains of Mourao, in the north-west of Spain, flows southward, and joins the Douro in Portugal, after passing by Amarante.

TAMELESS, *adj.* Wild; untamed.—The *tameless* steed could well his waggon wield. *Bp. Hall.*

TAMELY, *adv.* Not wildly; meanly; spiritlessly.

True obedience, of this madness cur'd,
Stoop *tamely* to the foot of majesty. *Shakspeare.*

TAMENESS, *s.* The quality of being tame; not wildness. Want of spirits; timidity.—Such a conduct must appear rather like *tameness* than beauty, and expose his authority to insults. *Rogers.*

TAMER, *s.* Conqueror; subduer.

He, great *tamer* of all human art,
Dulness! whose good old cause I yet defend. *Pope.*

TAMERTON, **NORTH**, a parish of England, in Cornwall; 8 miles north-by-west of Launceston. Population 420.

TAMERTON, **FOLIOT**, a parish of England, in Devonshire; 4½ miles north-by-west of Plymouth. Population 949.

TAMETAVE, a sea-port on the eastern coast of Madagascar. Lat. 18. 5. S. long. 49. 41. E.

TAMIAGUA, a settlement of Mexico, situated on a narrow isthmus on the west coast of the gulf of Mexico. The population consists of 40 Spanish families, and 400 mulattoes and negroes; 146 miles north-north-west of Vera Cruz, and 68 south-east of Tampico. Lat. 21. 16. N. long. 97. 29. W.

TAMIAGUA, a lake of Mexico, which joins the sea between the river Tampico and the Punta Delgada. It has a long and narrow outlet towards the south, running parallel with the shore, and forming an extraordinary large basin, in which are several islands.

TAMIEH, a village of Fayoum, in Egypt, on a canal which forms a communication between the Nile and the Birket el Kairoun; 12 miles north-east of Fayoum.

TAMINY, *s.* [*estamine*, Fr., whence our old word *stamin*, which see.] A kind of woollen stuff: called also *tammin* and *tammy*.—"Estamine" is the stuff *tamine*. *Cotgrave.*

TAMISE, or **THEMESCHE**, an inland town of the Netherlands, in East Flanders, on the Scheldt, containing 5700 inhabitants. It has some manufactures of linen and lace, and enjoys, like most other towns in this level country, the advantages of inland navigation; 8 miles north of Dendermonde.

TAMKIN, *s.* The stopple of the mouth of a great gun.

TAMMANY, **ST.**, a parish of the United States, in the state of Louisiana.

TAMMANY, **ST.**, a county of the United States, in Louisiana, on the north side of Lake Pontchartrain, and west of Pearl river.

TAMMANY'S, **ST.**, a village of the United States, in Mecklenburg county, Virginia, on the north side of the Roanoke, about 75 miles south-south-west of Petersburg.

TAMMARO, a small river in the north of the kingdom

of Naples, in the province of Molise. It falls into the Calone.

TAMMERFORS, a petty town of European Russia, in the government of Finland; 42 miles north-north-west of Tavasthus. Population 600.

TAMMTOUL, a small village of Scotland, in Banffshire, which lies on the banks of the Avon, on the great road to Inverness. It is entirely composed of turf-covered hovels, except the parish church, and a neat Catholic chapel. It contains about 230 inhabitants.

TAMOOK, a small island in the Sooloo archipelago. Lat. 6. 21. N. long. 121. 58. E.

TAMPANAGOS, said to be a lake in North America, the existence of which, however, is doubted. It is reported to commence, according to father Esculante, in the 40th degree of north latitude, and to have been explored to the 42d degree in a north-west direction, where it enlarged its dimensions, after which the discoverer made no further researches.

To **TAMPER**, *v. n.* [of uncertain derivation, derived by Skinner from *tempero*, Lat.] To be busy with physic.

'Tis in vain

To *tamper* with your crazy brain,
Without trepanning of your skull
As often as the moon's at full.

Hudibras.

He tried washes to bring him to a better complexion, but there was no good to be done; the very *tampering* cast him into a disease.—*L'Estrange*.—To meddle; to have to do without fitness or necessity.—That key of knowledge, which should give us entrance into the recesses of religion, is by so much *tampering* and wrenching made useless. *Dec. of Chr. Picty*.—To deal; to practise secretly.

Others *tamper'd*

For Fleetwood, Desborough, and Lambert.

Hudibras.

TAMPICO, an abundant river of Mexico, in a small district of the same name, and on the southern frontier of the intendency of San Luis de Potosi, which runs into the gulf of Mexico. At the mouth of the river is a watch-house to explore the coast.

TAMPICO, a town of Mexico, capital of a district of the same name, situate near the sea, on a neck of land formed by the lake of its name, and the lake of Tamiagua, about 214 miles north-west of Vera Cruz.

TAMRUCK, a small fortress of the south of European Russia, in the government of Taurida, on the coast of the sea of Azoph, between the mouths of the river Kuban; 156 miles south-south-west of Azoph.

TAMSWEG, a small town of Upper Austria, in the circle of Salzburg; 58 miles south-south-east of Salzburg, and 16 west of Muhrau. Population 800.

TAMUL, the name of a Hindoo tribe of the south of India, whose language is spoken in the south-east districts of the peninsula.

TAMUS [of Pliny. Derivation unknown], in Botany, a genus of the class dioecia, order hexandria, natural order of sarmantaceæ asparagi (*Juss.*)—Generic Character.—Male. Calyx: perianth six-parted: leaflets ovate-lanceolate, spreading more at top. Corolla none. Stamina: filaments six, simple, shorter than the calyx. Anthers erect.—Female. Calyx: perianth one-leafed, six-parted, bell-shaped, spreading: segments lanceolate: superior, deciduous. Corolla: petals none. Nectaries an oblong point, fastened internally, to each calycine segment at the base. Pistil: germ ovate-oblong, large, smooth, inferior. Style cylindrical, length of the calyx. Stigmas, three, reflexed, emarginate, acute. Pericarp: berry ovate, three-celled. Seeds two, globular.—*Essential Character*. Calyx six-parted. Corolla none.—Female. Style trifid. Berry three-celled, inferior. Seeds two.

1. *Tamus communis*, or common black bryony.—Root very large, tuberous, blackish externally, whence its old Latin and English names. Stems smooth, twining about every thing in their way, and thus ascending without the aid of

tendrils, to the height of ten or twelve feet in hedges or among bushes, which their festoons of tawny leaves and red berries decorate in autumn. The male flowers soon fall off; but the female flowers are succeeded by ovate smooth berries. These are insipid. The root is acrid, and its pulp scraped has been formerly used as a stimulating plaister. The young shoots are said to be good eating, when dressed like asparagus. The Moors eat them boiled with oil and salt.—Native of Europe, but not in the north, in shady thickets, hedges and woods; also of the Levant, and about Algiers, in hedges. It is called, wild vine, and our ladies seal. The latter name is from the French, *le secaa de la Vierge*.

2. *Tamus Cretica*, or Cretan black bryony.—Leaves three-lobed. This has a rounder root than the other; the stalks twine in the same manner.—It was discovered in the island of Crete or Candia.

Propagation and Culture.—Sow the seeds soon after they are ripe under the shelter of bushes, where, in the spring, the plants will come up, and require no farther care. The roots will abide many years.

TAMWORTH, a market town and borough of England, in the county of Stafford, situated in the south-east angle of the county, at the confluence of the rivers Thame and Anker, and near the great navigable canal. The Thame runs through the town, and divides it into nearly equal parts, one of which is in Warwickshire, and the other in Staffordshire. The town is large and well built, and its situation uncommonly fine, being surrounded on all sides by rich and luxuriant meadows, through which the Thame and Anker glide along in the most picturesque manner. The two bridges, which are thrown across these rivers, add considerably to the general beauty of the scenery. The church of Tamworth, which is dedicated to St. Editha, is supposed to occupy the site of a nunnery. It is a very spacious building; and from the different styles of its architecture, it seems to have undergone very material alterations and repairs at different periods. Besides the church, here are several meeting-houses for dissenters. The hospital was founded and endowed by Guy, the opulent bookseller to whom the borough of Southwark is indebted for the noble institution of Guy's Hospital. The grammar school, founded by queen Elizabeth, is still an excellent and flourishing institution. Tamworth castle is still in existence, and till the commencement of the last century, was the seat of its lords, the first of whom was Robert Marmion, lord of Fontenoy, in Normandy, and a celebrated chieftain in the army of William the Conqueror. The castle, to a modern eye, appears dull and heavy, but the elevation of its site throws around it an air of considerable grandeur. The exterior is still kept in tolerable repair; but the inside is much injured. The apartments are for the most part extremely inconvenient and irregular. Tamworth carries on a variety of manufactures: the chief of these was formerly the manufacture of superfine narrow woollen cloths; but this trade, though still considerable, has much decreased. The printing of calicoes, and the tanneries, on the other hand, are branches of business which have greatly advanced. The ale breweries form likewise considerable sources of wealth to the inhabitants. Tamworth was incorporated in the third year of the reign of Elizabeth, and first sent representatives to parliament two years after this. The right of voting is vested in the inhabitants paying scot and lot. The number of voters is about 250, and the members are returned by the sheriffs of Warwickshire and Staffordshire jointly. The corporation consists of two bailiffs, a recorder, and 24 capital burgesses. One of the bailiffs is chosen from each county. They have the power of holding a three weeks court of record, and acting as justices of the peace within the borough. They have likewise a court leet once a year, a jail, and a common seal. Tamworth seems to have been a town of considerable note at a very early period. In the time of the Mercians, it was a royal village, and the favourite residence of their monarchs. The celebrated Ofa dates a charter to the monks at Worcester, from his palace here, in 781. Several of his successors, in the next century,

date other charters from the same place. In 1811, Tamworth contained 603 houses, and 2991 inhabitants. Market on Tuesday, with three annual fairs; 8 miles south-east of Lichfield, and 114 north-west of London.

TAMWORTH, a post township of the United States, in Strafford county, New Hampshire; 60 miles north-north-east of Concord, and 63 north-north-west of Portsmouth. Population 1134.

To TAN, v. a. [*tannen*, Dutch; *tanner*, Fr.] To impregnate or imbue with bark.—A human skull covered with the skin, having been buried in some limy soil, was *tanned* or turned into a kind of leather. *Grew*.—To imbrown by the sun.

Like sun parch'd quarters on the city gates,
Such is thy *tann'd* skin's lamentable state.

Donne.

TAN, s. The bark of the oak; the ooze with which tanners prepare their leather. *Ash*.

TANA, a large river of Lapland, which forms the boundary between Russia and Sweden for 150 miles, traverses part of Finmark, and falls into the Arctic ocean in lat. 71. N. long. 31. 30. E., at a gulf to which it gives name. A large quantity of salmon is caught here, and was formerly exported to different countries, particularly Holland; but a Finnish colony, which is settled here and carries on the fishery, having increased greatly within the last century, the fish is now required to supply the wants of the population on the spot.

TANACETUM [Derivation unknown], in Botany, a genus of the class syngenesia, order polygamia superflua, natural order of compositæ discoideæ, corymbiferæ (*Juss.*)—Generic Character. Calyx: common hemispherical, imbricate; scales acute, compact. Corolla: compound tubular, convex. Corollets hermaphrodite, numerous, tubular, in the disk. Females, some in the ray. Proper, of the hermaphrodite, funnel-form; with a five-cleft, reflexed border. Female trifid, more deeply divided inwardly. Stamina in the hermaphrodites: filaments five, capillary, very short. Anther cylindrical, tubular. Pistil in the hermaphrodites: germ oblong, small. Style filiform, length of the stamens. Stigma bifid, revolute.—In the females: germ oblong. Style simple. Stigmas two, reflexed. Pericarp none. Calyx unchanged. Seeds solitary, oblong. Down slightly margined. Receptacle naked.—*Essential Character.* Calyx imbricate, hemispherical. Corolla: rays obsolete, trifid (sometimes none, and all the florets hermaphrodite). Down submarginate. Receptacle naked.

1. *Tanacetum suffruticosum*, or shrubby tansy.—Leaves pinnate-multifid, segments linear, subdivided, acute, stem suffruticose. This rises with a branching shrubby stalk, three or four feet high.—Native of the Cape of Good Hope.

2. *Tanacetum Sibiricum*, or Siberian tansy.—Leaves pinnate, segments linear-filiform, corymbs smooth, stem herbaceous.—Native of Siberia.

3. *Tanacetum incanum*, or hoary tansy.—Leaves bipinnate, tomentose; corymb ovate, compound. Perennial, hoary, fine-leaved plant, with yellow flowers turned upwards.—Native of the Levant.

4. *Tanacetum cotuloides*, or chamomile-like tansy.—Leaves tooth-pinnate, acuminate; stem very much branched; flowers subpanicked. Annual, having the appearance of chamomile.—Native of the Cape of Good Hope.

5. *Tanacetum annuum*, or annual tansy.—Leaves bipinnatifid, linear, acute; corymbs tomentose. Annual, rising about two feet high.—Native of Spain and Italy.

6. *Tanacetum monanthos*, or one-flowered tansy.—Stem quite simple, one-flowered, length of the leaves. This is also an annual plant.—Native of the Levant.

7. *Tanacetum vulgare*, or common tansy.—Leaves bipinnatifid, gash-serrate, naked. Common tansy has a fibrous creeping root, which will spread to a great distance. It is bitter, and has a strong aromatic smell. Stems upright, from two to almost four feet high.—Native of Europe and Siberia, in high meadows and pastures, on the banks of

rivers and in swampy places; flowering from June to August. There are three varieties; one with a curled leaf, which is called double tansy by gardeners; another with variegated leaves; and a third with larger leaves, which have little scent.

8. *Tanacetum balsamita*, or cost-mary.—Leaves ovate, entire, serrate. Roots hardy, fleshy and creeping.—It is a native of the South of France, Spain, and Italy.

9. *Tanacetum flabelliforme*, or fan-leaved tansy.—Corymbs simple, leaves deltoid, serrate at the tip. All the florets are hermaphrodite and five-cleft; but having a naked, not a chaffy receptacle, it agrees rather with this genus than *Athanasia*.—Native of the Cape of Good Hope.

Propagation and Culture.—All the sorts from the Cape must be kept in pots, and removed into shelter before hard frosts come on. They are easily increased by cuttings. Common tansy is easily propagated by the creeping roots.

TANACO, a settlement of Mexico, in the intendancy of Valladolid.

TANÆCIUM [From *ταναικη*, protensam s. longam aciem habens.], in Botany, a genus of the class didynamia, order angiospermia.—Generic Character. Calyx: perianth one-leaved, tubular, truncate, quite entire. Corolla one-petalled, long; tube cylindrical, widened above; border from erect, spreading, five-cleft, almost equal; the two upper segments approximating, less divided, nearly upright, the three lower spreading, a little reflexed. Stamina: filaments four, almost equal, shorter than the corolla, bending in under the back of the tube; with the rudiment of a fifth. Anthers two-lobed. Pistil: germ placed on a fleshy ring, roundish. Style simple. Stigma two-lobed. Pericarp: berry large, subpedicelled, globular or oblong, two-celled. Seeds numerous, oblong, angular, nestling.—*Essential Character.* Calyx cylindrical, truncate. Corolla tubular, almost equal, five-cleft. Rudiments of a fifth filament. Berry corticose, very large.

1. *Tanaecium jaroba*.—Lower leaves ternate, upper geminate; tendrils interpetiolar, terminating; stem scandent. This rises with great ease to the top of the tallest trees in the woods, and then spreads a great way over the limbs of the neighbouring trees, or bends again towards the ground.—This climbing plant is frequent in many parts of the island of Jamaica.

2. *Tanaecium parasiticum*.—Leaves ovate, coriaceous; stem scandent, shrubby, rooting. This weakly plant sustains itself generally by the help of the neighbouring trees, or is found spreading upon the ground, where it does not meet with a support.—It is found in Jamaica, about Port Antonio, near the cascade in St. Ann's, and in many parts of the mountains, especially those between Sixteen-mile-walk and Luidas.

TANAGA, one of the Fox islands, in the North Pacific ocean, about 40 miles in circumference. Lat. 53. 20. N. long. 182. 14. E.

TANAGRA, or **TANAGER**, in Ornithology, a genus of the order passeræ; the characters of which are, that the bill is conic, acuminate, emarginated, subtrigonal at the base, and inclining at the apex. Gmelin enumerates forty-six species.

1. *Tanagra jacapa*.—Black; the forehead, neck, and breast, crimson-coloured. This is the jacapu of Marcgrave, the red-breasted blackbird of Edwards, and the red-breasted tanager of Latham.—It is found in America.

2. *Tanagra Brasilia*.—Crimson, with black tail and wings. This is the cardinal of Buffon, and the Brazilian tanager of Latham. Of this bird there are two varieties, one of which is the blue, the other the black Indian sparrow of Willughby.—Found in South America.

3. *Tanagra rubra*.—Red, with black wings and tail, and tail-feathers white at the apex. This is the Canada tanager of Pennant, and the red tanager of Latham. Of this the scarlet sparrow of Edwards, or *Merula Brasiliensis* of Ray and Willughby, is a variety.—Found in Canada.

4. *Tanagra jacarina*.—Violet-black, with wings whitish beneath,

beneath, and tail of two divaricated branches.—This is a bird of Brasil and Guiana, the jacarini of Marcgrave.

5. *Tanagra violacea*.—Violet, and the under part very yellow: the teitei of Marcgrave, the golden titmouse of Edwards, and golden tanager of Latham. A variety of this, found in Brasil, Surinam, and Cayenne, is shining black, with the abdomen, breast, and front yellow, and the outer tail-feather having on its inner side a white spot.

6. *Tanagra olivacea*.—Olive; the throat and breast yellow, the abdomen white, the quills and tail-feathers brown, with a white margin. This is the olivet of Buffon, and found in Cayenne.

7. *Tanagra gyrola*.—Green, red-headed, yellow collar, and ceruleous breast: the rouvardin of Buffon, the red-headed green-finch of Edwards, and red-headed tanager of Latham.—Found in various parts of South America.

8. *Tanagra Cayana*.—Yellow, green back, red cap, and black cheeks.—A bird of Cayenne, of which there is a variety, underneath golden-coloured, back green and yellow, head ceruleous, wings and tail green.

9. *Tanagra tatao*.—Violet, black back, yellow rump, green head, and violet breast and wings: the titmouse of paradise of Edwards, the paradise tanager of Latham, and the tangara of Brisson, Ray, Willughby, and Buffon.—Found in Guiana.

10. *Tanagra albirostris*.—Black, with a spot on the wings, and tail yellow, and a white beak; the white-billed tanager of Latham. Of this there is a variety.—It is an American bird.

11. *Tanagra gularis*.—Black, beneath white, red head, and purple throat: the rouge-cap, of Buffon, and red-headed tanager of Latham.—Found in Cayenne and Guiana.

12. *Tanagra Cayennensis*.—Black, both sides of the breast and under part of the wings yellow.—Found in Brazil, Guiana, and New Spain.

13. *Tanagra Brasiliensis*.—Black, under part white, throat and rump blueish, face and breast black: the guiragenoia of Marcgrave, the turquin of Buffon, and turquoise tanager of Latham.—A Brasil species.

14. *Tanagra Dominica*.—Black-spotted, above brown, and below whitish: called from the place of its residence, by Latham, the St. Domingo tanager.

15. *Tanagra militaris*.—Brown; breast, neck, throat, and shoulders sanguineous: the military tanager of Latham, and greater bulfinch of Edwards.—Found in South America.

16. *Tanagra grisea*.—Grey-olive, under grey, with wings and tail black, grey at their margin.—Found in Guiana and Louisiana.

17. *Tanagra episcopus*.—Cinereous, with wings and tail externally blueish: the bishop tanager of Latham.—Found in Cayenne.

18. *Tanagra sayaca*.—Hoary, with blueish wings: the sayacu of Marcgrave.—Found rarely in Cayenne.

19. *Tanagra punctata*.—Green; pointed with black; under yellowish-whitish: the syacoa of Buffon, spotted green titmouse of Edwards, and spotted tanager of Latham.—Found in Cayenne.

20. *Tanagra virens*.—Green, under yellowish, cheeks and throat black: the green tanager of Latham.—Found in New Spain, Peru and Brazil.

21. *Tanagra Mississippensis*.—Wholly red: the Mississippi tanager of Latham. Of this species there are two varieties; one found on the river Mississippi, and the other in New Spain.

22. *Tanagra cristata*.—Blackish, golden crest, throat and rump yellow: the houpette of Buffon, and crested tanager of Latham.—Found in Guiana.

23. *Tanagra aestiva*.—Red, bill yellowish: the summer red-bird of Catesby and Edwards, and summer tanager of Pennant and Latham.—Found in Carolina and Virginia.

24. *Tanagra magna*.—Olive-brown; under reddish; legs, front, and temples blueish; vent-feathers and throat red, and the middle of the throat white: the grand tanager of Latham.—Found in Guiana and Cayenne.

25. *Tanagra cærulea*.—Blueish, black bill, and light-red legs: the blue tanager of Latham.—A Cayenne bird.

26. *Tanagra variabilis*.—Green, partly blueish and partly brown, black band about the eye, quills and tail-feathers black, with green margins; variable tanager of Latham.

27. *Tanagra tricolor*.—Green; head, chin, throat, and breast pale sea-colour; black neck-band, head and sides of the neck golden-green, a large spot on the throat, and back black, the breast-band blueish, the abdomen and vent-feathers yellowish-green: the green-headed tanager of Latham. Of this there is a variety.

28. *Tanagra Guianensis*.—Green, head cinereous-grey, front and head-band on both sides from the front to the nape red: the grey-headed tanager of Latham.—Found rarely in the forests of Guiana.

29. *Tanagra nigricolis*.—Olive, beneath yellow, black throat, golden breast, feathers of the wings and tail-feathers brown, with olivaceous-margins: the black-throated tanager.—Found in Guiana.

30. *Tanagra ruficollis*.—Black and blue, with a large red streak on the throat, and black wings and tail: the rufous-throated tanager of Latham.—Found in Jamaica.

31. *Tanagra leucocephala*.—Black and brown, white front, reddish throat, purple breast and wings, and yellowish abdomen and vent-feathers: the quatoztli of Seba.—Found in the mountains of Brazil.

32. *Tanagra flava*.—Yellow throat, breast and spots of the abdomen black, quills and tail-feathers black, sea-coloured at the margin. This is the guiraperea of Ray and Willughby, and the yellow tanager of Latham.—Found in Brazil, of the size of a lark.

33. *Tanagra Amboinensis*.—Varied with black and blue, black vertex, blueish-green rump; cheeks, chin, throat, and breast blueish; abdomen and vent-feathers white.—Found in Amboina, and called calatti.

34. *Tanagra canora*.—Blueish, varied with yellow; black tail, white at the apex; and wings partly blueish and partly yellow: the xiuhtotl of Fernandes.—Found in New Spain.

35. *Tanagra sinensis*.—Olivaceous, beneath yellow, with the quills and tail-feathers black, yellow at their margin: the Chinese tanager of Latham.

36. *Tanagra bonariensis*.—Black and violet, with a slight greenish tint in the wings and tail: the violet tanager of Latham.

37. *Tanagra atra*.—Cinereous, with the face, chin, and throat black (those of the female yellow): the camail or cravatte of Buffon, and black-faced tanager of Latham.—Found in Guiana.

38. *Tanagra pileata*.—Blueish-cinereous, beneath silvery, with the vertex, temples, and sides of the neck black, and the ocular spot white; the hooded tanager of Latham. Of this the tijepiranga of Ray and Willughby is a variety.—Found in Guiana and Brazil.

39. *Tanagra melanictera*.—Above ferruginous, beneath very yellow, head and nape black, wings streaked with white, and tail brown: the black-crowned tanager of Latham.—Found on the Caucasus and in Georgia.

40. *Tanagra Sibirica*.—Black, the tips of the down between the shoulders and the rump ciliated with white.—A Siberian species.

41. *Tanagra atricapilla*.—Reddish and rufous; head, tail, and wings shining black, with a roundish tail: the mordoré of Buffon, and black-headed tanager of Latham.—Found in Guiana.

42. *Tanagra striata*.—Beneath yellow, with a head striated with black and blue, back above blackish and beneath golden, quills and tail-feathers black, with a blue margin: the onklet of Buffon, and furrow-clawed tanager of Latham.—Found in South America.

43. *Tanagra Nigerrima*.—Black, with a white spot within the wings: the Guiana tanager of Latham.

44. *Tanagra Capensis*.—Above ferruginous-brown, beneath ferruginous, varied with white; the middle of the tail black, its sides ferruginous-rufescent, the bill yellowish, the legs black.—Found at the Cape of Good Hope.

TANAGRA, a town of ancient Greece, in the north of Attica,

Attica, on the frontier of Bœotia, of which there remain now only a few ruins at a spot called Grimathi. The adjacent plain is of great beauty and fertility, and was often the object of contest between the Athenians and Thebans.

TANAH, a town of Hindostan, province of Gujerat, belonging to the British. Lat. 21. 21. N. long. 73. 41. E.

TANAK, POINT, a cape on the north coast of Java. Lat. 6. 24. S. long. 108. 36. E.

TANAKEKE, a small island about 12 miles in circumference, surrounded by a cluster of smaller ones, and situated off the south-west extremity of Celebes. This island was formerly given up by the Dutch to the Malays in their service. Many of the smaller are uninhabited, and others peopled by the Buggesses. Lat. 5. 30. S. long. 19. 10. E.

TANALITZKALA, a fortress of Asiatic Russia, in the government of Oufa; 120 miles east of Orenburg.

TANAPATEPEC, a settlement of Mexico, in the district of Tehuantepec, containing 160 families of Indians.

TANAR, a river of Scotland, in Aberdeenshire, which rises at the foot of Mount Battock, and falls into the river Dee, near the church of Aboyne. It gives the name of Glentamar to the district through which it runs, now united to the parish of Aboyne.

TANARO, a considerable river of the north of Italy, in Piedmont, which rises among the Appennines, and after passing by Coni, Cherasco, Alba, Asti, and Alessandria, falls into the Po at Bassignana; 3 miles east of Valenza. It gave name for some time to a department of the French empire.

TANAT, a river of Wales, in the counties of Montgomery and Denbigh. It forms part of the northern boundary between these counties, and runs into the Severn at the north-east point of Montgomeryshire.

TANCONA, a creek on the coast of the Pacific Ocean, in the province of Arica, in Peru.

TANCOS, a small town of the central part of Portugal, in Estremadura, on the north bank of the Tagus; 68 miles west-north-west of Lisbon. Population 2000.

TANDERAGEE, a considerable village of Ireland, in the county of Armagh. The linen manufacture is vigorously prosecuted here, and the proximity of the Newry canal materially contributes to the convenience of the place; 61¼ miles north-west of Dublin.

TANDIL, a river of South America, which enters the sea on the coast of Patagonia.

TANDJONG, CAPE, a cape on the west coast of Borneo. Lat. 5. 24. N. long. 112. 45. E.

TANDOO BAAS, a small island in the Sooloo archipelago.

TANDOO BATTOO, a small island in the Sooloo archipelago. Lat. 5. 9. N. long. 120. 12. E.

TANDRIDGE, a parish of England, in Surrey; 2 miles east-by-south of Godstone. Population 390.

TANE for *taken*, *ta'en*. Ill spelt.

Two trophies *tane* from th' East and western shore,
And both those nations twice triumphed o'er. *May*.

TANETE, a town and small principality on the island of Celebes, situated half way between Fort Rotterdam and the bay of Sorian. In 1775, this petty state was tributary to the Dutch, and governed by a female. Lat. 4. 14. S. long. 119. 35. E.

TANEYTOWN, a post township of the United States, in Frederick county, Maryland. It is a pleasant and handsome town, and contains two handsome brick houses of public worship, one for German Lutherans, and one for Roman Catholics; and about 100 houses, mostly of brick.

TANFIELD, a hamlet of England, in Cheshire; 6½ miles south-west of Gateshead.

TANFIELD, EAST, a hamlet of England, North Riding of Yorkshire; 6½ miles north-north-west of Rippon.

TANFIELD, WEST, another hamlet in the same Riding; 6½ miles north-west-by-north of Rippon. Population 670.

TANG, *s.* [*tanghe*, Dutch, acrid.] A strong taste: a

taste left in the mouth.—It is strange that the soul should never once recal over any of its pure native thoughts, before it borrowed any thing from the body; never bring into the waking man's view any other ideas but what have a *tang* of the cask, and derive their original from that union. *Locke*.—Relish; taste. *A low word*.—There was not the least *tang* of religion, which is indeed the worst affectation in any thing he said or did. *Atterbury*.—Something that leaves a sting or pain behind it.

She had a tongue with a *tang*,
Would cry to a sailor, go hang.

Shakspeare.

Sound; tone: this is mistaken for *tone* or *twang*.—There is a pretty affectation in the Allemain, which gives their speech a different *tang* from ours. *Holder*.

To TANG, *v. n.* [This is mistaken for *twang*.] To ring with.—Be opposite with a kinsman, surly with thy servants; let thy tongue *tang* arguments of state; put thyself into the trick of singularity. *Shakspeare*.

TANG, *s.* [*tang*, Su. Goth.] A kind of sea-weed; called in some places *tangle*.—Calling it the sea of weeds, of flag, or rush, or *tange*. *Bp. Richardson*.

TANGALA, a small island in the Eastern seas, near the south coast of Java. Lat. 8. 20. S. long. 111. 45. E.

TANGE, a small river of East Prussia, which falls into the Kurische Haff, at Memel, where it is of sufficient depth to be navigated.

TANGENT, *s.* [*tangent*, Fr., *tangens*, Lat.]—*Tangent*, in trigonometry, is a right line perpendicularly raised on the extremity of a radius, and which touches a circle so as not to cut it; but yet intersects another line without the circle called a secant that is drawn from the centre, and which cuts the arc to which it is a *tangent*. *Trevoux*.—Nothing in this hypothesis can retain the planets in their orbs, but they would immediately desert them and the neighbourhood of the sun, and vanish away in *tangents* to their several circles into the mundane space. *Bentley*.

TANGER, a small river of Prussia, in the Old Mark of Brandenburg, which falls into the Elbe at Tangermunde.

TANGERANG, a village of the island of Java, about 15 miles west from Batavia. It is a considerable place; and before the neighbouring part of the Bantam country was ceded to the Dutch, it was a large military frontier station; but the fort, barracks, &c., are now nearly in ruins. A large weekly bazaar is held here, to which the produce of the adjacent country is brought, and thence carried to Batavia, by means of a canal which communicates with the river Tjidanee, by a fine sluice, and then runs parallel to the road the whole way to Batavia. Near this sluice and bridge is a beautiful villa, the late residence of General Lutzow. The country is well cultivated, interspersed with several seats or Dutch farms producing rice, and the greatest part of the grass for the consumption of the horses in town. As this article is in great demand, and uncommonly quick in its growth, it is of course much cultivated, and very profitable.

TANGERANG, or TJIDANEE, a river of Java, which has its rise in the Salack mountains, and running north, falls into the ocean; about 20 miles west of Bantam.

TANGERMUNDE, a small town of Prussia, in the Old Mark of Brandenburg (now the province of Saxony), on the Elbe, where it receives the Tanger. It contains 3200 inhabitants, employed in linen weaving, in brewing, and in cultivating the neighbouring district. It has an ancient castle, separated from the rest of the town; 32 miles north-north-east of Magdeburg, and 59 west of Berlin.

TANGHOO. See TOANHOA.

TANGIBILITY, *s.* [from *tangible*.] The quality of being perceived by the touch.

TANGIBLE, *adj.* [*tangible*, French; from *tango*, Lat.] Perceptible by the touch.—*Tangible* bodies have no pleasure in the consort of air, but endeavour to subact it into a more dense body. *Bacon*.

TANGIER, a considerable sea-port of Fez, in Morocco, situated on the straits of Gibraltar, a few miles to the east of Cape

Cape Spartel, which bounds their entrance on the African side. It is an ancient town, known under the name of Tingis or Tinja to the Romans, who took it under Sertorius. On the invasion of the Saracens, it was surrendered to them by count Julian. In modern times, Tangier has been a subject of eager contest between the Moors and the Portuguese. In 1437 it was besieged by prince Ferdinand; but his army was completely defeated, and subjected to an ignominious capitulation. In 1471, Alonzo, king of Portugal, succeeded in obtaining possession of it; and about two centuries after, in 1662, it became the property of England, being ceded to Charles II. as a marriage portion with the princess Catherine of Portugal. The English, however, abandoned it in 1684, destroying the fortifications. Tangier became afterwards a distinguished station of piracy, for which its situation at the mouth of the straits gave it great advantages; but the disuse in Morocco of this nefarious practice has greatly diminished the importance of the place. It now subsists chiefly by supplying the British garrison of Gibraltar with cattle and vegetables, permission for which purpose was given by Muley Ismael, the grandfather of the present emperor. The bay of Tangier is now encumbered by the ruins of the mole and fortification, and is not very safe during winter in westerly winds. The best anchorage for frigates and large vessels is at the eastern point. There are still some batteries facing the bay, in tolerable condition; but these could, with difficulty, resist any powerful attack; 108 miles north-north-west of Fez, and 33 west-south-west of Gibraltar. Lat. 35. 42. N. long. 5. 50. W.

TANGIER ISLANDS, several islands of the Chesapeake, near the coast of Maryland, opposite the mouth of the Potomack. Lat. 38. 12. N. long. 76. 12. W.

TANGIPAO, a river of the United States, which rises in Mississippi, crosses the east part of Louisiana, and flows into Lake Pontchartrain; 10 miles north-east of the pass of Manchac.

TANGKI, a town of China, of the third rank, in Tche-kiang.

To TANGLE, v. a. [See *To ENTANGLE.*] To implicate; to knit together.—The nymphs in twilight shade of tangled thickets mourn. *Milton.*—To ensnare; to entrap. She means to *tangle* mine eyes too.

'Tis not your inky brows, your black silk hair,
Your bugle eye-balls, nor your cheek of cream.

Shakspeare.

To embroil; to embarrass.

When my simple weakness strays,
Tangled in forbidden ways:
He, my shepherd! is my guide,
He's before me, on my side.

Crashaw.

To TANGLE, v. n. To be entangled.

Shrubs and *tangling* bushes had perplex'd
All path of man or beast.

Anon.

TANGLE, s. A knot of things interwoven in one another, or different parts of the same thing perplexed.

He leading swiftly roll'd
In *tangles*, and made intricate seem strait.
To mischief swift.

Milton.

[from *tang.*] A kind of sea-weed.

TANGLEY, a hamlet of England, in Southamptonshire; 5½ miles north-north-west of Andover.

TANGLEY, a hamlet of England, in Oxfordshire; 3 miles north-west of Burford.

TANGMERE, a parish of England, in Sussex; 3 miles east-by-north of Chichester.

TANGO, a small river of South America, in the province of Popayan, which, after a short course, enters the Coqueta.

TANGO, a settlement of Chili, in the province of Santiago.

TANGO, a town of Nippon, in Japan; 65 miles south-west of Meaco.

TANGOLOTANGO, a sea-port town of Mexico, in the

VOL. XXIII. No. 1611.

province of Oaxaca, near the gulf of Mexico; 100 miles south-south-east of Oaxaca. Lat. 16. 8. N. long. 97. 36. W.

TANGTIN, a town of China, of the third rank in Se-chuen.

TANGUEY, or **TONGUEY**, a bay of Chili, on the coast of the Pacific Ocean. Lat. 30. 16. S.

TANG-Y, a town of China, of the third rank, in Shan-tung.

TANG-YANG, a lake of China, about thirty miles in circumference; 32 miles north of Hoaigan.

TANG-YN, a town of China, of the third rank, in Honan.

TANICUCUHI, a large settlement of Quito, in the province of Tacunga, situated on the river of its name. Lat. 47. 30. S.

TANILA, a river of Mexico, which runs into the gulf of Mexico. Lat. 18. 10. N. long. 95. 6. W.

TANING, a town of China, of the third rank, in Shan-see.

TANINGE, a small town of the Sardinian States, in Savoy, province of Faucigny, situated in a fertile valley, on the small river Feron. Population 2500; 22 miles east-by-south of Geneva.

TANJORE; an extensive, populous, and well cultivated district of the south of India, province of the Carnatic. For a considerable period this district constituted a small principality, which was never completely subdued by the Mahometan arms. It was, however, conquered by the Mahratta chief Eccojee, about the middle of the 17th century, and the present rajah is the descendant of that chief. About the middle of the last century it became tributary to the nabob of the Carnatic; and in consequence of the cession of the nabob's territories, this district is now in possession of the British. The rajah is, however, allowed to retain his capital and fortress, with a clear allowance of 12,500*l.* per annum, and some other immunities. This district is about 95 miles in length, by 50 in breadth, situated on the bay of Bengal, and intersected by the river Cavery. It produces a great abundance of rice, cocoa nuts, and some indigo.

TANJORE, a celebrated town and fortress, and capital of the above mentioned district, including the suburbs. It is nearly six miles in circumference. There are two forts, one of which comprehends the palace and other public buildings; the other contains one of the handsomest temples in the south of India, and a college, formerly a celebrated place of Hindoo learning. This fortress, which may be considered as the citadel, is extremely strong, and successfully resisted the arms of both the French and British, but was taken by the latter in the year 1773. It was afterwards restored to the rajah, and is still his residence, and garrisoned by his own troops, with a proviso, that in case of a war with the French, or any of the native powers, the defence of it is to be intrusted to the British. Lat. 10. 42. N. long. 72. 11. E.

TANJORE, a town of the island of Java, situated in the high grounds; 73 miles south-south-east from Batavia, in a delightful country.

TANIST, *s.* [An Irish word; *an taanister*, Erse.] A kind of captain or governor.—Presently after the death of any of their captains, they assemble themselves to chuse another in his stead, and nominate commonly the next brother, and then next to him do they chuse next of the blood to be *tanist*, who shall next succeed him in the said captainry. *Spenser.*

TANISTRY, s. A succession made up of inheritance and election. *Burke.*—The Irish hold their lands by *tanistry*, which is no more than a personal estate for his life-time that is tanist, by reason he is admitted therunto by election. *Spenser.*

TANISTRY, or **TANISTRIA**, an ancient municipal law, or tenure, which allotted the inheritance of lands, castles, &c., held by this tenure, to the oldest and most worthy and capable person of the deceased's name and blood, without any regard to proximity. This, in reality, was giving it to

the strongest; and this naturally occasioned bloody wars in families; for which reason it was abolished under king James I.

TANK, *s.* A large cistern or basin.—I saw a *tank* or magazine of water, a very stately work indeed. *Sir. T. Herbert.*

T'ANKARD, *s.* [*tanquaerd*, Fr, *tankaerd*, Dutch; *tancaird*, Irish;] A large vessel with a cover, for strong drink.

Hath his *tankard* touch'd your brain?
Sure they're fall'n asleep again.

B. Jonson.

TANKERSLEY, a parish of England, West Riding of Yorkshire; 5 miles south of Barnesley. Population 1390.

TANKROWAL, a town of Western Africa, considerably up the Gambia, and situated near the banks of that river. The English African company had once a factory here, which they have now abandoned. The chief trade is in wax. Lat. 13. 10. N. long. 14. 27. W.

TANKSAL, a town of Hindostan, province of Delhi, belonging to the Seiks. Lat. 30. 51. N. long. 76. 53. E.

TAN'LING, *s.* One scorched by the heat of summer.

The king

Hath not deserved my service, nor your loves;
Who find in my exile the want of breeding,
The certainty of this hard life; aye hopeless
To have the courtesy your cradle promis'd
But to bestill hot summer's *tanlings*, and
The shrinking slaves of winter.

Shakspeare.

TANN, a petty town of Bavarian Franconia, on the small river Ulster; 9 miles east-north-east of Fulda. Population 800.

TANN, a small town of Bavaria; 28 miles west-south-west of Passau, and 50 east-by-north of Munich. Population 900.

TANNA, a small town of Saxony, in the Voigtland, belonging to count Reuss of Schlaitz, with 1300 inhabitants; 6 miles south of Schlaitz, and 26 south-by-west of Gera.

TANNA, a town and fortress of Hindostan, province of Aurungabad, district of Bombay. This place is situated on the east side of the island of Salsette. The fort, which is very strong, commands the passage between the island and the mainland, of about 200 yards broad. It is during war garrisoned by a battalion of native infantry, and a company of European artillery: It was taken from the Maharrattas by the British in December 1773, after an obstinate resistance. The town is straggling but not large, although it contains several Portuguese churches. The population consists of native Christians and Hindoos. Lat. 19. 11. N. long. 73. 6. E.

TANNA, a fortress of Bengal, situated on the western bank of the Bhagarutty or Hoogly river, about two miles below Calcutta. It was taken by the British in 1687, but was afterwards restored to the nabob. During the rebellion of 1686 it was besieged by the insurgents; but the British having sent a frigate to aid the garrison, compelled the rebels to decamp. It was again taken by the British in 1756; but the erection of the fortress of Fort William having rendered Tanna unnecessary, the fortifications have been allowed to decay. Lat. 22. 33. N. long. 88. 22. E.

TANNA, an island in the South Pacific ocean, and one of those called New Hebrides, discovered by Captain Cook in the year 1774; about 22 miles in length, and 10 in breadth. The inhabitants would not suffer Captain Cook, or any of his company, to advance far into the island. The produce, as far as could be seen, is bread-fruit, plantains, cocoa-nuts, a fruit like a nectarine, yams, tarra, a sort of potatoe, sugar-cane, wild figs, a fruit like an orange which is not eatable, and some other fruits and nuts. Captain Cook doubts not but nutmegs likewise grow in this island. The bread fruit, cocoa-nuts, and plantains, are neither so plentiful nor so good as at Otaheite; on the other hand, sugar-canes and yams are not only in great

plenty, but of superior quality, and much larger. One of the latter weighed 56lbs., every ounce of which was good. Hogs did not seem to be scarce, but they saw not many fowls. These are the only domestic animals they have. Land-birds are not more numerous than at Otaheite, and the other islands; but they saw some small birds, with a very beautiful plumage, which they had never seen before. There is a great variety of trees and plants. The people are of the middle size, rather slender than otherwise; many are little, but few tall or stout; the most of them have good features and agreeable countenances, are, like all the tropical race, active and nimble, and seem to excel in the use of arms, but not to be fond of labour. Both sexes are of a very dark colour, but not black; nor have they the least characteristic of the negro about them. They make themselves blacker than they really are, by painting their faces with a pigment of the colour of black lead. They also use another sort, which is red; and a third sort brown, or a colour between red and black. All these, but especially the first, they lay on with a liberal hand, not only on the face, but on the neck, shoulders, and breast. The men wear nothing but a belt, and the wrapping-leaf, as at Mallicollo. The women have a kind of petticoat, made of the filaments of the plantain tree, flags, or some such thing, which reaches below the knee. Both sexes wear ornaments, such as bracelets, earrings, necklaces, and amulets. The bracelets are chiefly worn by the men; some made of sea-shells, and others of those of the cocoa-nuts. The men also wear amulets; and those of most value being made of a greenish stone, the green stone of New Zealand is valued by them for this purpose. Necklaces are chiefly used by the women, and made mostly of shells; ear-rings are common to both sexes, and those valued most are made of tortoise-shell. These people, besides the cultivation of ground, have few other arts worth mentioning. They know how to make a coarse kind of matting, and a coarse cloth of the bark of a tree, which is chiefly used for belts. The workmanship of their canoes is very rude; and their arms, with which they take the most pains in point of neatness, come far short of some others. Their weapons are clubs, spears or darts, bows and arrows, and stones. The clubs are of three or four kinds, and from three to five feet long. Captain Cook knew no more of their cookery, than that it consists of roasting and baking; for they have no vessels in which water can be boiled. Nor did he know that they had any other liquor but water, and the juice of the cocoa-nut. They were utter strangers to their religion, and but little acquainted with their government. They seem to have chiefs among them, at least some were pointed out to him by that title; but they appeared to have very little authority over the rest of the people. The island contains a very considerable volcano; and some hot springs were discovered, which raised the thermometer from 80° to 170°, and in one place to 202°. Captain Cook named the harbour where he lay Port Resolution, from the name of the ship, which was the first that had ever entered it, which is situated in lat. 19. 32. S. long. 169. 44. E.

TANNA BALLOO, a small island in the Eastern seas, near the east coast of Borneo. Lat. 4. 52. N. long. 118. 21. E.

TANNA LABU. See TULOUR.

TANNA MERA, a small island in the Eastern seas, near the east coast of Borneo. Lat. 3. 45. N. long. 117. 5. E.

TANNADYCE, a parish of Scotland, in Forfarshire, about 12 miles long, and on an average 4 broad, though in some places its breadth extends to 8 or 10. Population 1510.

TANNAY, a small town in the central part of France, department of the Nievre. Population 1200; 9 miles south-by-east of Clamecy, and 32 north-east of Nevers.

TANNE, a village of Germany, in the duchy of Brunswick, principality of Blankenburg, near Hasselfeld. The village is insignificant, but there are large iron-works in the neighbourhood.

TANNENBURG, a village of East Prussia; 83 miles south-by-west of Königsberg, and 68 north-east of Thorn.

TANNER, *s.* One whose trade is to tan leather.—*Tan-Tanners*

nèrs use that lime which is newly drawn out of the kiln, and not slacked with water or air. *Mozon.*

TANNER'S CREEK, a river of the United States, in Indiana, which runs into the Ohio; 2 miles below Lawrenceburg. It is 30 miles long, and 30 yards wide at its mouth.

TANNER'S HILL, a post village of the United States, in Newberry district, South Carolina.

TANNERRE, a small town in the central part of France, department of the Yonne. Population 800.

TANNESAR, or **THANASIR**, a town of Hindostan, province of Delhi. This place formerly contained the celebrated temple of Jug Soom, which was held in the highest estimation by the Hindoos, and innumerable pilgrims flocked to it annually from all parts of India. Its riches and celebrity attracted the cupidity, or incited the bigotry, of Sultan Mahmoud of Ghizne, who, in the year 1012, marched against it, and having easily captured it, with all its wealth, broke all the small idols to pieces on the spot; but the venerated Jug Soom, after being decapitated, was sent to Ghizne, to form one of the steps of the superb mosque then building by the sultan, being conveniently situated on the high road from Delhi to Lahore. It is a place of considerable consequence, and still held in high veneration by the Hindoos. The ancient city of Hustnapore stood in the vicinity of this place, which is also celebrated for having been the scene of the Mahabarut, or the great war between the Pandoo and Cooroos, at the termination of which, it is fabled, only twelve persons, out of an innumerable multitude, remained alive. It now belongs to the Seiks, and is principally inhabited by people of that religion, and Hindoos. Lat. 29. 55. N. long. 76. 48. E.

TANNESERIM, a district of the Birman empire, extending along the sea-coast, from the 11th to the 14th degrees of northern latitude, and between the 98th and 99th degrees of eastern longitude. The western coast of this territory is protected from the monsoons or storms, by a long range of islands distant from 15 to 30 miles from the mainland, which form an excellent channel for small vessels, but it is too dangerous to be entered by large ones, without an experienced pilot on board. This country has frequently changed masters, having been alternately subject to the kingdoms of Siam and Pegue; but on the conquest of the latter by the Birmans in 1759, it became annexed to their empire.

TANNESERIM, the capital of the above district, and formerly a city of considerable commerce and consequence. It is situated on the south bank of a large river, distant about 20 miles from the sea; but as the entrance of its port is prohibited to Europeans, little more is now known of it. In the year 1688, the British endeavoured to procure the cession of this place from the king of Siam, but the overtures were rejected. It was taken by Alompra, the Birman monarch, in 1759, and the fortifications demolished. It is now governed by an officer from Ummerapoor. Lat. 11. 42. N. long. 98. 50. E.

TANNEWANG, a river on the south coast of the island of Celebes, which runs into the sea; 5 miles west of Bonthain.

TANNHAUSEN, a large village of Prussia, in Silesia, and the principality of Schweidnitz, near the borders of Bohemia, with 1100 inhabitants.

TANNING. *s.* The process of preparing leather with tan or bark. The appearance or stain of a brown colour.—Diseases and distempers, incident to our faces, are industriously to be cured without any thought or blame of pride; as flushings, redness, inflammations, pimples, freckles, ruggedness, *tanning*, and the like. *Bp. Taylor.*

It is difficult to say at what period the art of tanning was discovered. It was doubtless known to the ancients in some degree of perfection; and it is highly probable that the skins of animals were employed by man as a covering long before the art of tanning was known: but they would require in this state to be constantly kept dry, as moisture would soon bring them into a state of putrefaction.

The astringent matter, which converts the skin into leather,

abounds in so many vegetables in every country, that accident would soon lead to some method of producing the change. Independent, however, of vegetables, many earthy and metallic substances have the property of rendering skins incorruptible to a certain extent; and some mineral waters containing copper or iron, will occasion this change. Hence we may conclude, that some means of giving preservation to the skins of animals, must have been known at a very early period.

In the present method, the heaviest and stoutest of the bull and ox hides are selected, to make what are technically called butts or backs, and are manufactured in the following manner:—

When the horns, &c., have been removed, the raw hides are laid on a heap for two or three days, and are then suspended on poles in a close room, called a smoke-house, which is heated somewhat above the common temperature by a smouldering fire: this occasions incipient putrefaction, which loosens the epidermis, and renders the hair and other extraneous matter easy of separation from the true skin. This is effected by extending the hide on a wooden horse or beam of a convex form, and scraping it with a large two-handled knife, called a fleshing-knife, which is bent, to suit the convexity of the beam.

The hides are then immersed in a pit containing water slightly impregnated with sulphuric acid. This operation, which is called raising, by distending the pores and swelling the fibres, prepares the hide for the reception of the tannin, and renders it more susceptible of its action.

When the hides are sufficiently raised, they are removed into a pit, in which they are lain smooth with a stratum of oak bark ground to a coarse powder between each.

The pit is then filled with the tanning lixivium or ooze, prepared from oak bark and water, and the hides remain a month or six weeks without being moved. At the end of this time, the tanning principle being exhausted, the ooze and spent bark are taken out of the pit, and the hides put in again, stratified with fresh bark, and covered with fresh ooze as before. Here they remain about three months, when the same process is repeated, at about the same intervals, three several times or more, according to the strength of the lixivium and the substance of the hides. When sufficiently tanned, they are taken out of the pit, hung up in a shed to dry gradually, and being compressed with a steel instrument, and beaten smooth to render them firm and dense, the operation is complete; and they are ready for sale, and are termed butts or backs. These form the thickest and most substantial sole leather for very strong shoes, and are chiefly intended for exportation.

Crop hides are thus manufactured:—The horns having been removed, the hides are immersed in pits containing a mixture of lime and water, where they remain three or four days, being occasionally moved up and down, that each part may be uniformly exposed to the action of the lime-water. They are then taken out of the lime-pits, and the hair and other extraneous matter being scraped off on a wooden beam, as before described, are washed in water, to free them from the lime and filth adhering. They are now immersed in a weak ooze, and by degrees are removed into other pits, containing solutions gradually increasing in strength, during which time they are taken up and put down (technically termed handling), at least once in every day, that all parts of the hide may be acted upon by the tanning principle equally and uniformly. This is continued for about a month or six weeks, when they are put into other pits with stronger ooze and a small portion of ground bark; from whence, as the tannin becomes exhausted, they are removed to other pits in regular succession, with fresh ooze and fresh bark, for two or three months.

At the end of this period, the hides are put into larger vats, called layers, in which they are stratified, or lain smooth, in a lixivium of greater strength, and with a larger quantity of ground bark between each fold. Here they remain about six weeks, when they are taken up and relaid in the same manner, with fresh bark and strong ooze, for two months.

This

This process is repeated, with little variation, once, twice, or thrice, at the discretion of the manufacturer, till the hides are thoroughly tanned; when they are taken out of the pits, suspended on poles to dry, and being compressed and smoothed, nearly in the manner before described, are called crop hides, and form the principal part of the sole leather which is used in England.

The process of tanning skins (calves, seals, &c.) is somewhat different from hides. They are continued in the lime-pits for ten or fifteen days; they are then depilated and washed in water, after which they are immersed in an infusion of pigeon's dung, called a grainer, having the property of an alkali. Here they remain for a week or ten days, according to the state of the atmosphere and other circumstances, during which time they are frequently handled, and scraped on both sides upon a convex wooden beam. The scraping, or working, as it is termed, with the action of the grainer, helps to discharge all the lime, oil, and saponaceous matter, and renders the skin soft and pliant, fitted to imbibe the tanning principle. They are now removed into pits containing a weak solution of bark, where they undergo nearly the same process of handling, &c., as crop hides; but they are seldom stratified in layers; and the time occupied in tanning them is usually from two to four months, according to their nature and substance. The skins are then dried, and sold to the currier, who dresses and blacks them for the upper leathers of boots and shoes, for harness, and various other purposes.

The light and thin sort of cow-hides and horse-hides undergo nearly the same process in tanning as calf-skins, and are applied to similar uses.

These processes are such as are now commonly practised, varying, however, with the nature and condition of the peculiar kind of hides and skins—with local habits and circumstances—and with the skill and experience of the manufacturer. The greatest defect in the common methods, appears to exist in the means of extracting the tannin from the bark. Cold water is chiefly used for that purpose; but some persons conceiving that this does not entirely exhaust the tanning principle, subject the bark, as before observed, to the action of boiling water, &c. It, however, as Sir Humphrey Davy has stated, the extract as well as the tannin combines with the skin, the extraction of the tannin by heat would tend to oxygenate the former, and render it insoluble in the liquid.

TANNINGTON, a parish of England, in Suffolk; 4 miles north-west of Framlingham.

TANON, POINT, a cape on the south coast of the island of Sibiu. Lat. 9. 52. N. long. 123. 18. E.

TANORE, a sea-port town of the south of India, province of Malabar. It was formerly a place of considerable note, but is now reduced to a mere village. It belongs to the British. Lat. 10. 55. N. long. 75. 55. E.

TANORY, a small island on the east coast of the island of Lewis.

TANPISCO, a river of Guatemala, in the province of Costa Rica, which enters the Pacific ocean, to the east of the town of Nicoya.

TANPIT, *s.* A pit where leather is impregnated with bark.

TANQUAYALAB, a settlement of Mexico, in the district of Vallcs, which contains 213 families of Indians and mulattoes.

TANQUYUCHE, a settlement of Mexico, in the district of Tampico, containing 60 families of Indians.

TANSAC, a small village of Mexico, situated on the Rio del Norte.

TANSEY RIVER, a river of America, which rises in the Rocky mountains, and after a course of several hundred miles, falls into the Missouri near the great falls discovered and described by Captains Lewis and Clark, in their adventurous journey to the source of the Missouri, and from thence to the Pacific ocean. Its general course is from east to west, apparently through wide valleys, well supplied with both

the long and broad leaved cotton wood. The hills on its banks are from 100 to 150 feet in height, and possess bluffs of earth like the lower part of the Missouri. The bed is formed of small gravel and mud; the water turbid, and of a whitish tint; the banks low, but never overflowed; so that, except in depth and velocity, it is a perfect miniature of the Missouri.

TANSHELF, a village of England, West Riding of Yorkshire, near Pontefract. Population 371.

TANSIF. See TENSIFT.

TANSITARO, a town of Mexico, in the intendency of Valladolid, and capital of a district of the same name. It is situated on an elevated ridge, and is extremely cold. It contains about 180 families of Spaniards, Indians, and mulattoes.

TANSLEY, a township of England, in Derbyshire; 1½ mile east of Matlock. Population 370.

TANSOR, or TANSOVER, a parish of England, in Northamptonshire; 2 miles north-north-east of Oundle.

TANSY, *s.* [*tanacetum*, Lat.] An odorous plant. *Miller*.—Strong *fanscy*, fennel cool. *Drayton*.—A kind of cake, of which tansy forms a principal part.—In the spring time are made with the leaves hereof, (*tansy*.) newly sprung up, and with eggs, cakes or *tansies*. *Johnson*.—Our *tansies* at Easter have reference to the bitter herbs. *Selden*.

TANT, *s.* A kind of small field-spider. *Ray*.

TANTALISM, *s.* A punishment like that of Tantalus.—A lively representation of a person lying under the torments of such a *tantalism*. *Addison*.

TANTALIZATION, *s.* Act of tantalizing; state of being tantalized.

To TANTALIZE, *v. a.* [from *Tantalus*, whose punishment was to starve among fruits and water which he could not touch.] To torment by the shew of pleasures which cannot be reached.

Thy vain desires, at strife
Within themselves, have *tantaliz'd* thy life. *Dryden*.

TANTALIZER, *s.* One who tantalizes.

TANTAMOUNT, *adj.* [French.] Equivalent.—God hath inserted it into our reasonable natures; or by his providence hath conveyed it into the minds of all men, which is *tantamount* unto it. *Glanville*.

TANTIEKAN, a town of China, of the third rank, in Kiangnan.

TANTIMA, a settlement of Mexico, in the district of Tampico, which contains 583 families of Indians.

TANTIVY, *adv.* [from the note of a hunting horn, so expressed in articulate sounds.—The old French language has *lentiveux*, to denote an eager person; "homme qui est tente par tout ce qu'il voit; avide, &c." *Roq.*] To ride *tantivy* is to ride at great speed.

TANTOYUCA, a settlement of Mexico, in the district of Tampico, containing 450 families of Spaniards and Indians; 60 leagues north-east-by-north of Mexico.

TANTUMQUERI, a sea-port on the Gold coast of Africa, where a little trade is carried on, and where the English had formerly a fort, which they have now abandoned; 18 miles east of Cormantin.

TANWORTH, a parish of England, in Warwickshire; 4 miles north-west-by-north of Henley-in-Arden. Population 1682.

TAN-YANG, a town of China, of the third rank, in Kiangnan.

TANY BWLCH, a hamlet of Wales, in Merionethshire; in a beautiful and romantic situation; 230 miles north-west of London.

TAO, a city of China, of the second rank, in Hou-quang. Lat. 25. 34. N. long. 101. 0. E.

TAOO, ISLAND, one of the Friendly islands, in the South Pacific ocean; about 24 miles in circumference.

TAORMINA, a small but interesting town of Sicily, in the Val di Demona, situated on a steep and craggy mountain

tain on the eastern coast. Its population is about 4000; and it is remarkable for the number of its churches and convents, some of which are profusely decorated with marble. It has a harbour, and exports, among other articles, wine and hemp. It is built on the site of the ancient Taunoneum, of whose former splendour the remains of antiquity still seen here bear ample witness, the theatre, the naumachia, the cisterns, and the aqueduct, being all objects of admiration to the traveller. The theatre, in particular, is a splendid monument, and is almost unrivalled for its position and high state of preservation. Its seats afford a delightful view of the sea on the one side, and the distant mountains on the other, while Etna and its vicinity appear with peculiar advantage, from the elevation on which it stands. In the 10th century Taormina was taken from the Greek emperors by the Saracens, who called it Al-Moezzia, a name which it retained a considerable time. In 1690, it was much damaged by an earthquake. It is a strong military position; 26 miles north-north-east of Catania, and 27 south-south-west of Messina. Lat. 37. 51. N. long. 15. 23. E.

TAOS, a village of Mexico, in the intendency of New Mexico. It is situated on the east side of the Rio del Norte, and, according to Humboldt, is placed in the old maps 62 leagues too far north, under the 40th degree of north lat. Population 8900.

TAOUKA, one of the Society islands, in the South Pacific ocean. Lat. 14. 30. S. long. 145. 9. W.

TAOUS MOUNTAINS, in North America, the southern part of the chain of the Chippewan or Rocky mountains, where the Del Norte, Red river, Arkansaw, and Colorado, have their rise.

To TAP, *v. a.* To touch lightly; to strike gently. [tæppan, Saxon; *tappen*, Dutch.] To pierce a vessel; to broach a vessel. It is used likewise of the liquor.

That blood, already like the pelican,
Hast thou *tapt* out, and drunkenly caroused. *Shakspeare*.

To TAP, *v. n.* To strike a gentle blow: as, he *tapped* at the door.

TAP, *s.* A gentle blow.—This is the right fencing grace, *tap* for *tap*, and so part fair. *Shakspeare*.—[tæppe, Sax.] A pipe at which the liquor of a vessel is let out.

TAPACRIC, a large and ancient settlement of Peru, capital of a province of the same name, which extended from the Lake Titicaca to the source of the river Chopare. It is now a miserable village, situated near the source of the river Condorillo. Lat. 18. 10. S.

TAPACURO, a small river of Brazil, in the province of Pernambuco, which runs east, and enters the sea close to Cape San Agustin.

TAPANATEPEC, a settlement of Guatimala, in the province of Chiapa.

TAPANOOLY, a British settlement of Sumatra, situated on the small island of Puchong Keechil, at the bottom of the bay of Tapanooly, on the north-west shore, distant about 2½ or 3 miles. The bay of Tapanooly, with the island of Mansalar, forms one of the finest ports in the world; composed of such a complication of harbours within each other, that it is asserted a large ship might lie hid among them, as not to be discovered without a laborious research. This inlet stretches into the heart of the Battas country, with whom a considerable traffic is carried on, and timber for masts and spars is to be procured in the various creeks; but not being in the general track for British vessels, this harbour has been little frequented for naval purposes. The natives are in general inoffensive, and give little annoyance to the settlement; but parties of Acheenese traders, jealous of the influence of the English, endeavoured to drive them out of the bay. The large kima cockle (*chama gigas*) abounds in this bay, one of which that was carried to England measured three feet three inches in its longest diameter, and two feet one inch across. The substance of the shell is in general perfectly white, and several inches thick. The roe of this cockle will sometimes weigh six pounds, and the fish altogether, when cleared of the shell, from 20 to 30 pounds. One method of

taking them in deep water is by thrusting a bamboo between the valves as they lie open, which is made fast by the immediate closure of the shell. In this bay are also found most beautiful corallines and madrepores. The settlement was taken in 1760 by a squadron of French ships, under the Comte d'Estaing; and in 1809, being nearly defenceless, it was again taken and plundered by a French squadron. Lat. 1. 40. N. long. 98. 50. E.

TAPAQUIRE, a small river of Guiana, which enters the Orinoco.

TAPARICA. See TAPORICA.

TAPAYOS, or TAPAJOS, a magnificent river of Brazil, in the capitania of Matto Grosso, which derives its copious sources from numerous branches rising in the interior mountains of Brazil. It is one of those great rivers which come from the south to feed the vast stream of the Amazons. Its course is north for more than 600 miles between the Chingu and the Madera, and it falls into the Amazons, in Lat. 2. 24. 50. S. long. 55. W. The source of the Tapayos is in the mountain plains of Parexis, so called from an Indian nation which inhabits them. These plains occupy a vast space, not level, but formed by undulating heaps of sand and light earth, resembling large waves. The spectator who is in the midst of them ever sees before him a distant and extended mount; he approaches it by a gentle and long declivity, traverses the plain, and advances by an ascent equally gentle, until he gains imperceptibly the heights he saw; another eminence then presents itself, and he proceeds with the same recurring circumstances. The soil of these wide plains is sandy, and so light, that loaded beasts, passing, sink into it so much as to impede their progress. The pasturage is poor, consisting of a grass composed of wiry stalks a foot high, and small rough lancet-shaped leaves. The animals, in grazing, pluck them up with the roots covered with sand. On this account the passage by land is difficult and tedious; though, on finding any of the streams which abound in these plains, there is grass and other mild herbage, which afford tolerable pasturage. The plains of Parexis form, to a large extent and breadth, the summit of those high mountains of the same name, and are situated on some of the most elevated land in all Brazil: and from these mountains descend the greatest rivers of South America; the Paraguay, with all its numerous branches, which takes a southern direction, and issues into the ocean by the estuary of the Plata; and various other important streams which run north into the Amazons. Among these is the Tapayos which is formed by the junction of the two rivers, the Arinos and the Juruena, and their confluent streams. The head waters of all these rivers spring up at a very short distance from the head waters of the Paraguay; so that it would not be difficult to establish a ready communication between them. It is evident also, that by means of the Tapayos and its large branches, the Arinos and Juruena, a more easy communication might be carried on between the maritime city of Para, and the mines of Matto Grosso and Cuiaba. This navigation to Matto Grosso is at least two hundred leagues shorter than that performed through the Madera and Guapore; it is consequently less tedious and expensive, and equally advantageous to the mines of Cuiaba. The navigation of the river Tapayos might lead also to new discoveries in the vast unexplored parts of this river, up to its entrance into the plains of the Parexis; and their products might add to those of the extensive regions on the Amazons. Besides this, the river is known to be auriferous for a great part of its course.

TAPAYOS, a settlement of Brazil, in the government of Para; 350 miles west of Para. Lat. 2. 30. S. long. 57. 12. W.

TAPE, *s.* [tæppe, Sax.] A narrow fillet or band of linen.

Will you buy any *tape*, or lace for your cap,
My dainty duck, my dear-a? *Shakspeare*.

TAPEANTAN, a small island in the Sooloo archipelago. Lat. 6. 15. N. long. 122. 9. E.

TAPER, *s.* [tæpep, Sax.] A wax candle; a light.

Get me a *taper* in my study Lucius:
When it is lighted come and call-me.

Shakspeare.

TAPER, *adj.* Regularly narrowed from the bottom to the top; pyramidal; conical.

Her *taper* fingers, and her panting breast,
He praises.

Dryden.

To TAPER, *v. n.* To grow gradually smaller.

Such be the dog,
With *tapering* tail, that nimbly cuts the wind.

Tickell.

To TAPER, *v. a.* To make gradually smaller.—To light with tapers.

The *taper'd* choir, at the late hour of prayer,
Oft let me visit.

Warton.

TAPERA DOS BOCAS, a town of Brazil, in the government of Para, on the Guanapu; 90 miles south-west of Para.

TAPERNESS, *s.* The state of being taper.—A Corinthian pillar has a relative beauty, dependent on its *taperness* and foliage. *Shenstone.*

TAPESTRY, *s.* [*tapetum*, Lat.] Cloth woven in regular figures.

In the desk
That's covered o'er with Turkish *tapestry*,
There is a purse of ducats.

Shakspeare.

To TAPESTRY, *v. a.* To adorn with tapestry.—Flowers, with which the earth is *tapistred*.

Harmar.

TAPET, *s.* [*tapetia*, Lat.] Worked or figured stuff.

To their work they sit, and each doth chuse
What story she will for her *tapet* take.

Spenser.

TAPETI, in Zoology, the name of an animal common in the West Indies, and called by some *cuniculus Americanus*, the American rabbit. In the Linnæan system, this animal is a species of hare, or *lepus Brasiliensis*. See LEPUS.

TAPHOUSE, *s.* A room in which beer is drawn and sold in small quantities: in large inns now usually called the tap.—The talk of drunkards in *taphouses*.

Beaum. and Fl.

TAPIA, a river of Guiana, which runs south-south-east, and enters the Choromoros.—It is also the name of a river in Chili, which runs north-north-west, and enters the Valdivia.

TAPIA, a settlement of New Granada, in the province of Carthagená, on the shore of the Cauca.—It is the name of several inconsiderable settlements.

TAPIAN POINT, a cape on the west coast of Mindanao. Lat. 7. N, long. 124. 30. E.

TAPIAU, a town in East Prussia, at the influx of the Deine into the larger stream of the Pregel. It is situated on a height, with a bridge over the Deine, and a ferry over the Pregel. Population 1700; 20 miles south-south-east of Königsberg.

TAPICU, a river of Brazil, in the province of Maranhão, which runs north and enters the sea in the bay of Maranhão.

TAPICURO, a river of Brazil, in the province of Todos Santos, which enters the sea between the Pontica and Cape Color. There is a settlement of the same name on its banks.

TAPICURU, a river of Brazil, which rises in the mountains of the interior, and running north, enters the sea opposite the island of San Luis. Lat. 12. 20. S.

TAPINHACANGA, a village of Brazil, in the province of Rio Grande. The whole country around contains auriferous ore, which is separated from the earth by the simple process of washing; and in this species of industry the inhabitants of this place were formerly entirely employed. The country, however, is now nearly exhausted of its treasures; and this, along with most of its other towns and villages, has fallen off in consequence. Its population, from 3000, has dwindled to 1000.

TAPIR, or TAPIJERETE of Marcograve, in Zoology, the name of an animal found in some parts of America, and called by the Portuguese *anta*, by others *danta*, by Dampier *vache montagnarde*, and by others *elan*, and *sus aquaticus*,

and in the tenth edition of the Linnæan system, *hippopotamus terrestris*. Gmelin makes it a distinct genus; and his generic characters, amended by Dr. Shaw, are as follow:—Front teeth in both jaws ten; canine teeth in both jaws single, incurvated; grinders in both jaws five on each side, very broad; feet with three hoofs, and a false hoof on the fore-feet. This animal (*tapir Americanus*) is of the size of a young calf, or heifer, and in shape somewhat approaching to the figure of the hog, and the back arched; its head is thicker than a hog's, and ends in a sharp ridge at top; and the male has a snout, or sort of proboscis, hanging over the opening of the mouth, in which he has a very strong muscle, serving to retract it at pleasure: the nose of the female is destitute of the proboscis (this circumstance is doubted by Sonnini), and the jaws are of equal length; its eyes are small, and very like those of the hog; its ears roundish, bordered with white; and these he can draw forward at pleasure; its legs are thick, and not longer than those of our hogs; its fore-hoofs are divided into three portions; and a sort of false hoof behind; but its hind-hoofs into three; its tail is very small; the skin is hard and solid; and the hair short, and of a pale brown, and when young, variegated with white spots; and along the neck is a bristly mane, an inch and a half high. It lives in thick woods, on the eastern side of South America, from the isthmus of Darien to the river of the Amazons; and sleeps all day, but at night, or early in the morning, goes out for its prey: it feeds on vegetables, and is particularly fond of the stalks of the sugarcane: it often takes the water, and swims excellently. The natives, in places where it is common, eat its flesh, which is said to be good: the Indians shoot it with poisoned arrows, and cut the skin into bucklers. This animal is salacious, slow-footed, and sluggish, and makes a kind of hissing noise, but perfectly harmless: the young are easily tamed, and may be rendered domestic, which is said to be the case in some parts of Guiana. When attacked by dogs it makes a vigorous resistance. The tapir produces but one young at a birth, of which it is very careful, leading it at an early age to the sea, and instructing it to swim.

Ray and Pennant.

TAPIROZA, a strait or channel formed in the middle of the bay of Maranhão, by the island of San Luis with the continent, and defended by a castle and fort.

TAPIS, *s.* [Fr.] Literally tapestry, which formerly covered tables; whence matters laid upon the table for discussion.—The house of lords sate till past five at night. Lord Churchill and lord Godolphin went away, and gave no votes in the matter which was upon the *tapis*. *Ld. Clarendon.*

TAPISI, a large and abundant river of Peru, which rises from the mountains of Cocamas, runs north for more than 25 leagues, and then forms a lake which is known by the same name. It afterwards takes a north-west course, and enters the Ucayale, in Lat. 5. 13. S.

TAPITAY, a settlement of Peru, in the province of Paraguay, situate on the shore of the river Parana.

TA'PLASH, *s.* [from *tap*, and perhaps *lasche*, Fr., *slack*, *slow*.] Poor beer; the last running of small beer; dregs. Still used in the north of England.—Banded up and down by the schoolmen in their *taplash*-disputes. *Bp. Parker.*

TAPLOW, a village and parish of England, in the county of Buckingham, situated on a hill on the banks of the Thames. It commands a fine prospect of the surrounding country, and in the neighbourhood there are several elegant villas; but the mansion of Clifden, belonging to the marquis of Thomond, and once the magnificent palace of the duke of Buckingham, was destroyed by fire in 1795; 1 mile north-east of Maidenhead, and 25 west of London. Population 592.

TAPO, a rapid river, called also TARMA, as being on the confines of this province. It is only passable in rafts made of reeds.

TAPOANA, a river of Brazil, in the province of Rio Janeiro, which runs east, and enters the sea, in Lat. 21. 10. S.

TAPOCOROI, a river of Brazil, which runs into the sea, Lat. 27. S.

TAPOLITZA,

TAPOLTLA, a small town in the west of Hungary; 10 miles north-north-east of Keszthely.

TAPOLTZAN, GREAT, a small town in the north of Hungary; 55 miles north-east of Presburg, and 17 north of Neutra. Population 2700. It has some traffic in iron, and the environs produce saffron; also good pasturage for horses.

TAPOLTZAN, LITTLE, a small town of Hungary; 15 miles south-east of Great Tapoltzan.

TAPOOAMANOO, See SIR CHARLES SAUNDERS'S ISLAND.

TAPOOL, a small island, one of the Sooloo archipelago, situated due south from the principal Sooloo isle. This is a small island, with plenty of fresh water, and abounding with small cattle, goats, and yams, being cultivated to the top.

TAPOPO, a small low island in the Eastern seas, on the west coast of the island of Waygiou, covered with trees to the water's edge.

TAPORICA, or **ITAPORICA**, a large island in the bay of Todos Santos, in Brazil, the largest, most populous and fertile, of all those in the bay. As it has the continent on the east side, this island defends the entrance of the bay, the distance between the island and the mainland, that is, between this island and point St. Antonio, being $7\frac{1}{4}$ miles. Upon the point or extremity is the fort of San Antonio, and a town called Vieja, in lat. 13. S.

TAPORO, a settlement of New Granada, in the province of Maracaibo, on the east coast of the lake of that name.

TAPPA, one of the small Molucca islands, separated from that of Lata by a channel, in some places not above 40 yards wide, and about $1\frac{1}{2}$ miles in length, with deep water. It has a small harbour on the south-east, where a vessel may lie in perfect security in 4 fathoms. Lat. 0. 6. N. long. 123. 35. E.

TAPPAHANNOCK, a part of the entry of the United States, and capital of Essex county, Virginia, on the south-west bank of the Rappahannock. Its situation is low and unhealthy. It contains a court-house, a jail, and an Episcopal church. All the shipping belonging to the towns on the Rappahannock is entered at the custom-house of this place. It amounted, in 1816, to 7625 tons. Very little of it belonged to this town; 55 miles south-east of Fredericksburg, and 50 north-east of Richmond. Lat. 38. 2. N. long. 76. 57. W.

TAPPAN, a post village of the United States, in Rockland county, New York.

TAPPAN SEA, an expansion of the Hudson, in the United States, opposite to Orangetown, from 25 to 35 miles above the city of New York; 10 miles long, and 4 broad where widest. It has on the north side four quarries of stone which are a source of great wealth to the proprietors.

TAPROOT, *s.* The principal stem of the root.

TAPSTER, *s.* [tæppepe, Saxon; and tæppeſtre, he who had the care of the tap in a public-house. One whose business is to draw beer in an alehouse.—The oath of a lover is no stronger than the word of a *tapster*; they are both the confirmers of false reckonings. *Shakspeare*.

TAPPLE, a very considerable river of Hindostan, formed by the union of a number of streams, chiefly rising in the province of Khandeish. It runs nearly from east to west, and falls into the sea about 12 miles below the city of Surat.

TAPTON, or **TUPTON**, a township of England, in Derbyshire, $1\frac{1}{2}$ mile north-east-by-east of Chesterfield.

TAPUAS, a village of Brazil, in the province of Maranh, situated on the west coast of the bay of Maranh.

TAPUCA, a small river of Brazil, in the province of Rey, which runs east, and enters the sea in the bay of Tapicu.

TAPUI-TAPERA, a settlement of Brazil, on the coast; 15 miles north-west of St. Louis de Maranon.

TAPUONGA, a river of the province of Buenos Ayres, which runs north-west, and enters the Yumeri.

TAPUREGENEN, a river of the Caraccas, in the province of Cumana, which runs south, and enters the Cuyuni.

TAPURU, a small river of Cumana, which runs south, and enters the Cuyuni by the north side.

TAPUYAS, a village of Brazil, in the province of Porto Seguro, on the shore of the river Verde.

TAQUARI, a river of Brazil, on the borders of Paraguay, which runs a western course from the mountains, and falls into the Paraguay, opposite the lake of Marmore, by many mouths, the largest of which is in Lat. 19. 15. S. long. 54. W. This river is annually navigated by flotillas of canoes and other craft, which come from St. Paul's to Cuiaba. For about 10 leagues previous to its entrance into the Paraguay, the channel of the river is lost, as it crosses some large plains, which are inundated with water to the depth of several feet. The country being indeed flat, it is annually covered to a great extent during the season of inundation.

TAQUASO, a large river of South America, in the province of Darien. Its course is from north-east to south-west for a great distance, when it turns west, and enters the sea in the gulf of San Miguel. This river carries along in its sands much very fine gold, and all the territory on its shores is particularly fertile and well cultivated by the Indians: but the climate is hot and unhealthy. The river is navigable by canoes for seven leagues from its mouth, this being in Lat. 8. 20. N. On its shore stood formerly the city of Santa Maria.

TAQUILE, or **TAQUUNA**, an island of the great lake of Chucuito, Titicaca, in the district of the province of Pouca-rola, in Peru. In the higher grounds of this island are some plains, on which are to be seen the ruins of some large old towns; and, what is extraordinary, the houses of the same appear to have been built uniformly, and of stone, over stone domes and observatories, and altogether with great regularity. This island, which is three leagues in circumference, is full of gardens and orchards, which produces many green shrubs, flowers and fruits.

TAQUIR, a small island near the coast of Brazil, in the province of Rey, close to the island of Canamea.

TAR, *s.* [cape, Saxon; *terre*, Teut., *tiere*, Danish; from *toere*, *tyre*, Swed., *tæda*, lignum pingue, ex quo hoc liquamen coquitur. Serenius.] Liquid pitch; the turpentine of the pine or fir drained out by fire.

Then, foaming *tar*, their bridles they would champ,
And trampling the fine element would fiercely ramp.

Spenser.

TAR, *s.* A sailor; a seamen, in colloquial language.

In senates bold, and fierce in war,
A land commander and a *tar*.

Swift.

To **TAR**, *v. a.* To smear over with tar.

I have nointed ye, and *tarr'd* ye with my doctrine,
And yet the murrain sticks to ye.

Beaum. and Fl.

To tease; to provoke. *Unused*.—There has been much to do on both sides; and the nation holds it no sin to *tar* them on to controversy. *Shakspeare*.

TAR, or **PAMLICO**, a river of the United States, in North Carolina, which rises in Caswell county, flows through Granville, Franklin, Nash, and Edgecomb counties, and passing by Tarborough, Greenville, and Washington, runs south-east into Pamlico sound, in Lat. 35. 22. N. It is navigable for vessels drawing 9 feet water to Washington, 40 miles, and for boats carrying 30 or 40 hogsheads of tobacco, to Tarborough, 90 miles.

TARA HILL, a mountain of Ireland, in the county of Wexford, near the sea-coast; 4 miles north-east of Newborough.

TARA, ABAD, a town of Hindostan, province of Aungabad, recently belonging to the Mahrattas, but now probably in possession of the British. Lat. 20. 38. N. long. 74. 20. E.

TARABENI, a river of Peru, which rises in the province of Pomabamba, and runs, after various windings, into the abundant stream of the Beni.

TARAGUA, a small port in the island of Cuba, on the north-north-east coast, between the port of Taxa and the islet of Mona.

TARAMA, a river of new granada, in the province of San

San Juan de los Llanos, which rises between the rivers Guaripo and Andava, runs east, and enters the Orinoco, opposite the rapid stream of the Atures.

TARAMANDAHU, a river of Brazil, which runs into the Atlantic. Lat. 30. 40. S.

TARANCON, a small ill-built town of the interior of Spain, in the province of Toledo, containing 3500 inhabitants. The water here is extremely bad, but the wine is considered the best in the province; 42 miles south-east of Madrid, and 30 east of Aranjuez.

TARANNON, a river of England, in Montgomeryshire, which runs into the Severn, near Corfe Castle; about 5 miles west of Newton.

TARANSAY, one of the northern Harris isles, on the west coast of Scotland. It is a high rocky island, about four miles long, and one broad. There is little or no soil on the whole island, and the occupation of the inhabitants is fishing and burning of kelp. Near Taransay is a large verdant island, frequented by vast flocks of geese. On Taransay are the remains of two religious houses.

TARANTA, a mountain near Arkeeko, in Abyssinia, on the road from that city into the interior, supposed by Mr. Bruce to be one of the highest in the world.

TARANTAISE, a province of the Sardinian states, in Savoy, between Faucigny, Savoy proper, Maurienne, and Aosta. Its superficial extent is about 780 square miles; its population 39,000. Its surface is rugged and uneven, covered with mountains and rocks, and little susceptible of culture. By the industry of the inhabitants, however, the least sterile parts of it are brought into cultivation, and made to produce quantities of corn, saffron, fruit, and chesnuts: the pastures nourish a fine race of cattle. A number of the inhabitants, however, go out to seek employment in more favoured countries, and frequently return, after a long absence, to enjoy the reward of their industry in their native land.

TARANTO, or TARENTO, an ancient and considerable town in the south of Italy, in the kingdom of Naples, and province of Otranto. It is built on a small island in the great bay called the gulf of Taranto, and has several advantages as a maritime position, having behind it, towards the north and east, a great maritime inlet called *Mare Piccola* (little sea), which extends into the interior, while it communicates with the sea by two channels, one on each side of the island, or rather islet, occupied by the town. Taranto contains 18,500 inhabitants, and has a castle of some strength for the protection of its harbour. The surrounding country is fertile, but the trade of the town and neighbourhood is far inferior to what it might be rendered in a populous and industrious country. Some intercourse is carried on by shipping, with other ports in the Mediterranean; but the chief support of the inhabitants is derived from fishing, which is carried on in the sea, as well as in the *Mare Piccolo*: in the latter, oysters and all sorts of shell-fish are particularly abundant. Taranto, at present a town of little interest, either as a commercial or military station, filled a conspicuous place in ancient history. Its inhabitants, descended from a colony of Greeks, kept up their connection with the mother country, and on the approach of the Roman arms after the conquest of Samnium, about 280 years before Christ, called to their aid Pyrrhus, king of Epirus. This gave rise to the sanguinary conflicts, in which Grecian science, for some time superior to the rude tactics of the Romans, gave way eventually before their unwearied perseverance. The Tarantines, abandoned by Pyrrhus, and unable to defend themselves, called in the Carthaginians; a step which, coinciding with the collisions between that nation and the Romans in Sicily, was the cause of the first Punic war; 58 miles west of Lecce, and 80 west-north-west of Otranto. Lat. 40. 35. N. long. 17. 29. E.

TARANTO, GULF OF, a spacious bay of the Mediterranean, formed by the two extremities south-east and south-west of Italy.

TARANTULA, s. [Italian; *tarentule*, Fr.] An insect

of the spider kind.—He that uses the word *tarantula*, without having any idea of what it stands for, means nothing at all by it. *Locke*.

TARANTULA, in Entomology, a genus of insects of the order aptera, comprehended by Linnæus under the genus of aranea. We have introduced it, however, as a separate genus, for the purpose of describing some species not mentioned in that article.—The Generic Characters of the tarantulae are, that the mouth is furnished with two horny jaws; that there are no antennæ; that there are two large curved jointed claws sticking out in front, and serving to lay hold of the animal's prey, but which are improperly called feelers; that the claws contain in the male the organs of generation; that the eyes are eight in number, and the feet are as numerous; and lastly, that they have the bag common to all spiders for furnishing cobweb.

1. *Tarantula phalangicum*, or *apulia*.—A description of this and of the marvellous stories to which it has given rise, may be seen in the article before referred to, under the name *aranea tarantula*.

2. *Tarantula reniformis*, or the kidney-shaped tarantula.—This species differs from the apulian variety, in the extraordinary length of the fore-feet, and in the greater slenderness and less hairiness of the body. It is perfectly black, and has the same fierce habits as the rest of spiders: its claws have strictly speaking only one joint.

3. *Tarantula caudata*.—This species is remarkable for the oblong form of its body, and for a long appendage or tail attached to its rump. From its general form and appearance, it might be supposed to be an uniting link between the genera of arana and scorpio. Its claws have three joints; its colour is dusky black.

TARAPAYA, a port on the western coast of South America, in the bay of Pisagua, having at its entrance the small island of Goave, which it defends from the south winds. Lat. 20. 37. S.

TARAPOOR, a town of Hindostan, province of Bahar. Lat. 25. 7. N. long. 89. 30. E.

TARAPOOR, a town and fortress of Hindostan, situated on a high point of land on the coast between Bombay and Surat, now belonging to the British. Lat. 19. 50. N. long. 72. 48. E.—All these names signify the residence of the stars; and there are many other places in India of the same nomenclature.

TARARE, a small town in the east of France, department of the Rhone, situated on the river Tardine, in a valley at the foot of a mountain to which it gives name. It has 2800 inhabitants, and some manufactures of muslin and printed cottons; also of leather and pottery ware; 17 miles south-west of Villefranche, and 22 north-west of Lyons.

TARASCHTSCHA, a small town of the south-west of European Russia, in the government of Kiev.

TARASCON, a considerable town in the south-east of France, situated on the Rhone, opposite to the town of Beaucaire, with which it communicates by a bridge of boats. The inhabitants, nearly 12,000 in number, carry on manufactures of woollens, silk, stockings, and an export trade in wine, brandy, olive-oil, and other products of this southern province. Of public buildings, the principal is the castle, a structure of hewn stone fortified in the Gothic manner, and surmounted by a platform, affording a view of the adjacent country and of the Rhone, which here approaching to its mouth, rolls along a broad and rapid volume of water. Some of the churches are likewise handsome buildings; 9 miles north of Arles, and 55 north-west of Marseilles. Lat. 43. 48. 20. N. long. 5. 23. 54. E.

TARASCON, a small town in the south of France, on the river Arriege, with 1400 inhabitants, and manufactures of leather. In the neighbourhood there are several steel forges; 9 miles south of Foix, and 25 south-east of St. Girons.

TARASIAMA, a small river of Guiana, which enters the Caroni by the west side.

TARATA, the name of three inconsiderable Indian settlements in Peru.

TARAZONA,

TARANTULA, TABANUS AND TETRATOMA.

1 & 3 *Tar. reniforme*. 2 *Tar. caudata*. 4 *Tab. bovinus*. 5 *Tab. tropicus*. 6 *Tab. bromius*.
 7 *Tab. pluvialis*. 8 *Tab. rusticus*. 9 *Tet. cinnamomeum*. 10 *Tet. fungorum*. 11 *Tet. ancora*.

J. Tass sc.

TARAZONA, a town of the central part of Spain, in the province of Cuenca, in New Castile. The province of Cuenca is one of the poorest and most thinly peopled in Spain; but this town contains 6500 inhabitants, who carry on a trade in the products of the country, particularly wine and oil; 16 miles east-by-south of San Clemente, and 112 south-east of Madrid.

TARAZONA, a small town of the north-east of Spain, in Arragon, on the slope of the hill of Moncayo. It is a bishop's see, and has three churches and seven monasteries, but contains only 4000 inhabitants, whose chief employment is the manufacture of some coarse brown cloth; 50 miles west-north-west of Saragossa, and 12 south-by-west of Tudela.

TARBAT, a parish of Scotland, partly in Ross-shire, partly in Cromarty, occupying the extremity of the peninsula formed by the friths of Cromarty, and Dornoch; about $7\frac{1}{2}$ miles long, and $4\frac{1}{2}$ at its greatest breadth. Population 1379.

TARBATNESS, the extremity of the parish of Tarbat, in Scotland, being the point of land formed by the friths of Cromarty and Dornoch. Lat. 57. 59. N. long. 0. 24. W. of Edinburgh.

TARBERT, EAST and WEST LOCHS, two arms of the sea on the west coast of Scotland, in Argyleshire, which form the district of Kintyre into a peninsula.

TARBERT, EAST and WEST LOCHS, two arms of the sea on the west coast of Scotland, which penetrate a considerable way into the island of Harris, one from the east, the other from the west, forming the southern part of the island into a peninsula.

TARBERT, a small island near the west coast of Ireland, and county of Galway; 2 miles south of Omev island.

TARBES, an inland town in the south-west of France, the capital of the department of the Upper Pyrenees, situated in a beautiful meadow, on the left bank of the Adour. The fertility of the environs, and the grandeur of the surrounding scenery, render the approaches of the town highly agreeable. It is the see of a bishop, and has nearly 8000 inhabitants. It is surrounded with a wall, and defended by an old castle. There is here a public square; and the streets of the town are tolerably broad, and well paved. The houses, though low, are not badly built, being constructed of brick or grey marble, and covered with slate. The only public edifices worth notice are the cathedral, the churches, the residence of the bishop, the theatre, and the hospital. Here are, on a small scale, manufactures of linen, handkerchiefs, and paper; also of knives, small copper articles, and leather. There is here also a royal stud. On 20th March, 1814, the French army under Soult were forced from their position here by Lord Wellington; 22 miles east-by-south of Pau, 48 south-west of Auch, and 126 south-by-east of Bourdeaux. Lat. 43. 13. 52. N. long. 0. 4. 14. E.

TARBOCK, a township of England, in Lancashire, near Preston. Population 534.

TARBOLTON, a parish of Scotland, in Ayrshire, in the district of Kyle, about 7 or 8 miles long, and 6 broad, of a very unequal surface. Population 1966.

TARBOLTON, a village of Scotland, in the above parish. It is neatly built, and is situated 9 miles east of Ayr. Near the village stands the ruinous monastery of Feale, or Failfurd, founded in 1252, by John de Graham, lord of Tarbolton. It contains about 450 inhabitants.

TARBOROUGH, a post township of the United States, and capital of Edgecombe county, North Carolina, on the Tar. It contains a court-house, a jail, a bank, and an academy. Large quantities of beef, pork, Indian corn, tobacco, &c., are collected here for exportation. Population 600; 38 miles south of Halifax, and 60 east-south-east of Raleigh. Lat. 33. 35. N. long. 77. 44. W.

TARBRET, a handsome village of Ireland, in the county of Kerry, on the Shannon; 124 miles south-south west of Dublin, and 24 west-south-west of Limerick.

TARCHONANTHUS. [*Tarchon*, an Arabic name for artemisia dracunculus, or tarragon, and *ανθος*, a flower; Vol. XXIII. No. 1612.

having a flower like that of tarchon or tarragon], in Botany, a genus of the class syngenesia, order polygamia æqualis, natural order of nucamentaceæ, corymbifera (*Juss.*)—Generic Character. Calyx: common turbinate, one-leafed, commonly half-seven-cleft, coloured internally, shorter than the corolla, sharpish, permanent. Corolla: compound uniform; florets about twenty. Corollets hermaphrodite, numerous, equal. Proper one-petalled, funnel-form, five-toothed. Stamina: filaments five, capillary, very short. Anther cylindrical, tubular, length of the corollet, tailed at the base. Pistil: germ superior, oblong. Style twice as long as the flower. Stigmas two, gaping. Pericarp none. Calyx unchanged. Seeds solitary, oblong. Down hairy, investing the seed all round. Receptacle hairy, very small, hairs length of the calyx. The down is singular in this, that it does not crown but invest the seed.—*Essential Character*. Calyx one-leafed, commonly half-seven-cleft, turbinate. Seeds covered with down. Receptacle villose.

1. *Tarchonanthus camphoratus*, or shrubby African flea-bane.—Leaves oblong, flat; calyx one-leafed, five-cleft. Stem strong, woody, rising to the height of twelve or fourteen feet, sending out many woody branches at the top, which may be trained to a regular head. It retains the leaves all the year.—Native of the Cape of Good Hope.

2. *Tarchonanthus glaber*, or smooth African flea-bane.—Leaves smooth, entire, and toothed. This resembles the preceding very much. It varies with wider and narrower, entire and toothed leaves.

3. *Tarchonanthus ericoides*, or heath-like African flea-bane.—Leaves acerose; calyxes four-leafed. This is a stiff branching shrub, seldom attenuated at the top. Flowers clustered, lateral, bigger than the leaves, on short peduncles.—These are both natives of the Cape of Good Hope.

Propagation and Culture.—These plants are too tender to live through the winter in the open air in England, but requiring no artificial heat, may be placed with myrtles, oleander, &c. in winter, and in summer may be exposed to the open air in a sheltered situation.

TARCZA, or **TATZMANSDORF**, a large village of the west of Hungary, in the county of Eisenburg, with a mineral spring in high repute.

TARCZAL, a small town of the north of Hungary; 2 miles west of Tokay. The wine produced at this place can scarcely be distinguished from Tokay.

TARDATION, *s.* [*tardo*, Lat.] The act of hindering or delaying.

TARDEBRIGG, a parish of England, in Worcestershire; 3 miles east-south-east of Broomsgrove. Population 2429.

TARDIGRADOUS, *adj.* [*tardigradus*, Lat.] Moving slowly.—It is but a slow and *tardigradous* animal, preying upon advantage, and otherwise may be escaped. *Brown*.

TARDILY, *adv.* Slowly; sluggishly.

He was indeed the glass,
Wherein the noble youth did dress themselves;
Speaking thick, which nature made his blemish,
Became the accents of the valiant:
For those that could speak slow and *tardily*,
Would turn their own perfection to abuse,
To seem like him.

Shakspeare.

TARDINESS, *s.* Slowness; sluggishness; unwillingness to action or motion.

A *tardiness* in nature,
Which often leaves the history unspoke,
That it intends to do.

Shakspeare.

TARDITY, *s.* [*tarditas*, from *tardus*, Lat.] Slowness; want of velocity.—Suppose some observable *tardity* in the motion of light, and then ask how we should arrive to perceive it? *Digby*.

TARDY, *adj.* [*tardus*, Lat., *tardif*, Fr.] Slow; not swift.

Nor should their age by years be told,
Whose souls, more swift than motion, climb,
And check the *tardy* flight of time.

Sandys.
Sluggish;

Sluggish; unwilling to action or motion.
Behold that navy which a while before
Provok'd the *tardy* English close to fight;
Now draw their beaten vessels close to shore,
As larks lie dar'd to shun the hobbie's flight.

Dryden.

Dilatory; late; tedious.
You shall have letters from me to my son
In your behalf, to meet you on the way;
Be not ta'en *tardy* by unwise delay.

Shakspeare.

Unwary. *A low word.*
Yield, scoundrel base, oath she, or die,
Thy life is mine, and liberty:
But if thou think'st I took the *tardy*,
And dar'st presume to be so hardy,
To try thy fortune o'er a-fresh,
I'll wave my title to thy flesh.

Hudibras.

Criminal; offending. *A low word.*—If they take them *tardy*, they endeavour to humble them by way of reprisal: those slips and mismanagements are usually ridiculed. *Collier.*

To TA'RDY, *v. a.* [*tarder*, Fr.] To delay; to hinder.

I chose

Camillo for the minister, to poison
My friend Polixenes; which had been done,
But that the good mind of Camillo *tardied*
My swift command.

Shakspeare.

TARE, *s.* [from *teeren*, Dutch, *to consume*. Skinner.] A weed that grows among corn.—Through hatred of *tares*, the corn in the field of God is plucked up. *Hooker.*—The common vetch.—A poor grain of oat, or *tare*, or barley. *Pope.*

TARE, *s.* [Fr.] A mercantile word denoting the weight of any thing containing a commodity; also the allowance made for it.

TARE, *pret. of tear.*—The women beat their breasts, their cheeks they *tare*. *Dryden.*

TAREIRI, a river of Brazil, which runs into the Atlantic. Lat. 6. S. long. 34. 43. W.

TAREM, a city of Laristan, in Persia, standing in a plain on the banks of a salt river. It is as populous as Lar, the capital of the province, but is a meanly built place, consisting of a mud fort, surrounded on all sides by wretched huts, formed of the branches of the date tree. The place contains many respectable merchants, who trade to Muscat, Gombroon, and Shiras.

TARENA, an abundant river of South America, in the province of Darien, which rises in the central mountains, runs east, collecting the waters of many other tributary streams, and enters the Atlantic by four mouths, forming three large islands in the gulf of Daricn. This river also forms a large lake of the same name, at some distance from its entrance into the sea.

TARENT, or TARRANT, a river of England, in Dorsetshire, which rises near Studhampton, and gives name to several villages through which it passes in its way to where it falls into the Stour; 3 miles south-east of Blandford.

TARENT, an island on the western shore of the Persian gulf, immediately opposite Katif, which, though not so large as Bahrein, is a finer island. It is about seven miles both in length and breadth, well supplied with good fresh water, and embellished with many delightful gardens, which produce abundance of fruit.

TARENTUM, a town of Italy, in Magna Græcia, upon a small promontory of the Messapia. Tarentum was a very ancient city: some have ascribed its origin to the Cretans, before the Trojan war. In the 21st Olympiad, a powerful body of emigrants arrived under Phalanthus from Laconia, that it seemed to be refounded. Here they settled upon an aristocratical plan, enlarged the fortifications of the city, and transformed it into a near resemblance of Sparta; but as most of the nobles perished in a war with the Japyges, democracy was introduced. The favourable situation of this city, when it was first founded, contributed to its rapid prosperity. Placed in the centre of three seas, it obtained the

whole commerce of the Adriatic Sea, of the Grecian or Ionian Sea, and of that portion of the Mediterranean called the Tyrrhenian Sea. The adjacent country was fertile in grain and fruit; the pastures were excellent; the flocks afforded a very fine wool. It is no wonder, then, that the city should become rich, and that riches should be succeeded by luxury. Philosophy was not neglected at Tarentum; and that of Pythagoras gained the preference. The arts were also diligently cultivated. Strabo mentions the gymnasium of this city with high commendation, and the bronze colossus of Jupiter, which was scarcely inferior to that of Rhodes. Fabius Maximus found here abundance of pictures and statues, which served to adorn his triumph. With the wealth of Tarentum, its power also rose above that of all the colonies of Magna Græcia: its land forces were estimated at 32,000 foot and 3000 horse, in constant pay; and thirteen considerable cities acknowledged its dominion. At sea, their fleets rode triumphant and unrivalled. The most brilliant epoch of their history was that of the government of Archytas, whose profound learning as a philosopher, and skill as a mechanic, was no impediment to his political talents and exertions. His virtues also commanded respect. He frequently led the Tarentines to battle, and always returned after success. With Archytas, however, terminated the prosperity of Tarentum. At length this city partook of the horrors of those wars which desolated the southern part of Italy. The inhabitants not only exposed themselves to the Roman arms by some outrages committed against their ambassadors, but in the year 541 of Rome, Annibal having taken possession of Tarentum, the Romans sent against them a body of troops under Fabius Maximus, who retook it, and gained possession of its ample stores of wealth. In the year 664 or 665, it was made municipal; and in process of time, it became a very pleasant city. Whilst Totila was ravaging Italy in the year of Christ 546, the Greeks took possession of Tarentum, but suddenly abandoned it at the approach of a detachment of troops belonging to the king of the Goths; which event occurred in the year 548. In 552, the troops of Narses retook it; but it was doomed to pass under the dominion of Romwald I., duke of Beneventum, in the year 668. On the decline of the Lombard power, the Grecian emperors regained possession of this country, and retained it till Robert Guiscard drove them for ever out of Italy. It is now called TARENTO.

TAREYOU, a river of Brazil, in the province of Pernambuco, which enters by the north side into the Rio Francisco.

TAREYRAS, a settlement of Brazil, in the capitania of Goiaz, on the shore of the river Tocantines.

TARF, a river of Scotland, in the stewartry of Kirkcubright, which rises from a small lake called Loch Whinnoch, in the parish of Girthon, and after a course of 21 miles along the west side of the parish of Tongland, at the southern extremity of that parish, unites with the Dee. Its banks are in many places adorned with natural wood, and fertile meadows, which are enriched by the slime from the river, in its frequent inundations. It abounds with trout and salmon.

TARF, a small river of Scotland, in Athol, Perthshire, which rises at Cairneilar, runs an easterly course of a few miles, and falls into the Tilt below the falls of Piltarff.

TARFF, LOCH, a small lake of Scotland, in Invernessshire, about 3 miles in circumference, in which are several beautiful wooded islands.

TART, a river of Scotland, in Invernessshire, which issues from Loch Tarf, and, after a course of 7 or 8 miles, falls into Loch Ness, at a small distance from the estuary of the Oich, between which, on the point of land, is Fort Augustus.

TARFOWA, a town of Tunis, in Africa, supposed to be the ancient *Taphrura* or *Tapparura*; 24 miles west of Thaine.

TARGE, or TA'RGET, *s.* [τάρχ, τάρχα, Saxon; *targe*, Italian; *targe*, French; *tarian*, Welsh, which seems the original of the rest; *an taargetti*, Erse.] A kind of buckler or shield borne on the left arm. It seems to be commonly

monly used for a defensive weapon, less in circumference than a shield.

Henceforward will I bear
Upon my *target* three fair shining suns. . . . *Shakspeare.*

TARGEA, a settlement of Mexico, in the intendancy of Valladolid, which contains 130 families of Indians, besides Spaniards and Mulattoes, employed in working the mines.

TARGETIER, *s.* One armed with a target.—For horsemen and for *targetiers* none could with him compare. *Chapman.*

TARGIONI (Tozzetti, Giovanni), an eminent Italian physician, was born at Florence in 1712, and took his degree of M. D. at Pisa, where he had studied and acquired singular reputation. He published his "Relazioni d'alcuni Viaggi fatti in diverse parte della Toscana per osservare le Produzioni naturali, e gli antichi Monumenti d'esse," Firenze. t. 1. 1751, 8vo. As a physician, he also published several pieces, and among these were "Directions for the Recovery of drowned Persons" At length, in January, 1782, being in his 71st year, his life terminated by a gradual decay. *Haller. Gen. Biog.*

TARGIONIA [so named by Micheli, in honour of Cypriana Targioni, M. D. of Florence, who had a museum there], in Botany, a genus of the class cryptogamia, order hepaticæ.—Generic Character. Calyx two-valved, compressed, containing at bottom a capsule nearly globular, many-seeded.

Targionia hypophylla.—Not larger than the finger nail. Green not pellucid, rough with white rising dots. Leaf cordate-lanceolate, at first green, afterwards dark purple, blackish underneath. Fructification at the end, on the under side, the size of a vetch. Calyx black; opening, containing the fruit covered with a yellowish skin, and filled with a yellowish pulp which rubs to powder between the fingers, and stains them.—Native of Italy, Spain, Constantinople, Flanders, Saxony about Dresden, and England near Dawlish in Devonshire. Flowering from March to May.

TARGUM, *s.* [Hebrew.] A paraphrase on Scripture in the Chaldee language.—This seed, there spoken of, is Christ, as both the *targums* expound it. *Patrick.*

TARGUMIST, *s.* A writer in the targums.

TARGON, a small town in the south-west of France, department of the Gironde. Population 1100; 17 miles north-west of La Reole, and 18 east-south-east of Bourdeaux.

TARGOROD, a small town in the north of European Turkey, in Moldavia, on the river Sereth.

TARGOWICA, or **TERGOWICE**, a small town of Russian Poland, in the government of Podolia, on the river Simicha. A confederation was formed here in 1791, by some noblemen, to support the new constitution of Poland, so soon subverted by the arms of Russia; 78 miles east-south-east of Braclaw.

TARHAR, a small district of Hindostan, province of Allahabad, bounded on the north by the river Jumna, near its confluence with the Ganges. It belongs to the British, but its inhabitants are chiefly Hindoos.

TARIFA, a petty town of the south-west of Spain, situated on a small bay on the north side of the straits of Gibraltar. It was formerly large, but has now only about 4800 inhabitants, whose chief employment is fishing. It is fortified with a wall and towers; and so lately as 1811, a British party lodged in it baffled all the efforts of the French to take it, after a long siege. It was the *Julia Traducta* of the Romans, and received its present name from the Moors; 17 miles west-south-west of Gibraltar.

TARIFF, *s.* [perhaps a Spanish word; *tarif*, Fr.] A cartel of commerce.—This branch of our trade was regulated by a *tariff*, or declaration of the duties of import and export. *Addison.*—It is also a *Book of Rates*; a table or catalogue, drawn usually in alphabetical order, containing the names of several kinds of merchandize, with the duties or customs to be paid for the same, as settled by authority, and

agreed on between the several princes and states, that hold commerce together. *Chambers.*

TARIJA, a jurisdiction of South America, in Peru, but placed under the viceroyalty of Buenos Ayres. This is represented as a charming and fertile country, with a serene sky and a fine temperature of air, producing wheat, maize, and all other things that are essential to the support of man; together with the tree which produces the herb of Paraguay, the cocoa, the vine, and flax, which is cultivated merely for the sake of its seed. In the abundance of pastures is fed a vast number of cattle and sheep. The annual transports of black cattle alone are computed at little less than 10,000 head, which are valued at from eight to ten piastres each. The hides tanned and prepared form sole leather for the inhabitants of La Plata, Potosi, &c. The demands for Spanish and colonial merchandize annually exceed 60,000 piastres; the returns for which are made in productions of the province. St. Bernardo de Tarija is the chief town. Chicas and Tarija form one government.

TARIJA, **ST. BERNARDO DE**, the capital of the above province, was built in 1591, to restrain the hostilities committed by the Indians. It has several convents; 320 miles north of St. Miguel de Tucuman. Lat. 22. 14. S. long. 65. 20. W.

TARIJA, a river of South America, which runs into the Vermejo, in the province of Tucuman.

TARIMBARO, a settlement of Mexico, in the intendancy of Valladolid, containing 25 families of Spaniards, and 184 of Indians.

TARKIO CREEK, a river of the United States, in Louisiana, which runs into the Missouri; 483 miles from the Mississippi.

TARLAND, a parish of Scotland, in Aberdeenshire, to which is united that of Migvy. It forms an irregular district on the western borders of the county. Population 932.

TARKLAND, a village in the foregoing parish, with a weekly market and six annual fairs. It contains about 150 inhabitants.

TARLETON, a township of England, in Lancashire; 8 miles north-by-east of Ormskirk. Population 1281.

TARLETON, a post township of the United States, in Pickaway county, Ohio; 17 miles north-east of Chillicothe.

TARMA, a province of Peru, comprehending several minor districts, and bounded by Truxillo on the north, the Pacific on the east, the Apurimac on the west, and Lima and Guancavelica on the south. The climate varies with the elevation of the ground. On the sea-coast it is hot; but in the interior it varies, being generally cold. It is, however, very productive in maize, and has abundance of cattle, the wool of which they manufacture into cloth, this being one principal branch of trade. It has many mines of silver, and also quicksilver, which are worked to considerable profit.

TARMA, the capital of the above province, is situated on the north shore of the river Chanchamayo, a branch of the Para. It is situated in a deep narrow valley, and inhabited chiefly by creoles, mestizoes, and Indians. The adjoining district is very fertile; but the climate is unhealthy, as the surrounding high mountains prevent a free circulation of air. Near this place are two quicksilver mines. Two veins with antimony and white silver ore are worked; and in several pits they dig native saltpetre of an excellent quality; 103 miles east-north-east of Lima, and 92 south of Guanuco. Lat. 11. 35. S. long. 75. 17. W.

TARMON HILL, a mountain of Ireland, in the county of Mayo, and southern part of the peninsula of Mullet.

TARMUTOLA, a town of Italy, in the central part of the kingdom of Naples, in the Basilicata. Population 4000. It is 10 miles east of Marsico Nuovo, and 28 north-east of Policastro. Being an inland place, and at a distance from the great roads, its trade is inconsiderable.

TARN, *s.* [*tiaurn*, Icelandic.] A bog; a fen; a marsh; a pool; a quagmire.—A pasture overflowed with water, not much unlike a *tarn* or lough, whence the grass
by

by the superfluity of an oleaginous moisture degenerates into coarse piles. *Ray.*

TARN, a department in the south of France, formed of a part of the great province of Languedoc, and adjacent to the departments of the Aveyron and Upper Garonne. It has an extent of 2100 square miles, and a population of nearly 296,000, of whom above 40,000 are Protestants. It has the mountains of Languedoc on the east, and commands, though at a distance, a prospect of the Pyrenees; but its whole surface may be termed an undulating plain, traversed, however, by several chains of small hills. Its principal river is the Tarn, a large stream flowing from the north-east to the Garonne. The soil is in general fertile; the climate steady and temperate. The products are wheat, barley, maize, hemp, flax, vines, and fruit of different kinds. Here are occasional tracks of pasture, partly natural, more procured by irrigation. Of corn, enough is raised to afford a small annual export. The culture of the vine is extensive; but the wines, with the exception of the kind called *vin du Cog*, do not keep sufficiently to admit of export, and are either used on the spot, or made into brandy and vinegar. Here are, on a small scale, mines of iron and coal; some silk also is cultivated. This department is divided into four arrondissements, viz., Albi (the chief town), Castres, Lavaur, and Gaillac.

TARN AND GARONNE, a department in the south of France, formed, not like the other departments of the kingdom, in 1790, but so lately as 1808, of portions of the departments of the Lot and Upper Garonne. It lies to the west of the department of the Tarn, has an extent of 1500 square miles, and a population of 240,000, of whom above 30,000 are Protestants. Situated at a distance of 60 miles from the Pyrenees, its surface is a plain, traversed by three chains of hills, the highest of which is said not to exceed 1200 feet. Its principal rivers are the Tarn and Garonne. Its soil is in general fruitful; its climate mild; but here, as in the south of France generally, the labours of the husbandman are frequently exposed to hazard from hail storms. Its products are wheat, barley, maize, hemp, flax, vines, chesnuts, and several fruits of a southern climate, as almonds and figs. The pastures, from the deficiency of rain, are of limited extent. The domestic animals are mules, asses, horses; poultry is particularly abundant. The culture of silk is on a limited scale. This small department is divided into three arrondissements, viz., Montauban (the capital), Moissac, and Castel Sarrazin.

To TARNISH, *v. a.* [*ternir*, Fr.] To sully; to soil; to make not bright.

Low waves the rooted forest, vex'd, and sheds
What of its *tarnish'd* honours yet remain.

Thomson.

To TARNISH, *v. n.* To lose brightness.—If a fine object should *tarnish* by having a great many see it, or the music should run mostly into one man's ears, these satisfactions would be made inclosure. *Collier.*

TARNOCZ, or TARNOWCE, a small town of the north-west of Hungary; 40 miles west of Kesmark. Population 1100. Lat. 49. 12. 40. N. long. 19. 43. 11. E.

TARNOE, an island in the Baltic, on the south-east coast of Sweden, in the group called the Skæres of Carlscona.

TARNOGROD, a small town of the south-east of Poland; 52 miles west-south-west of Balcz, and 60 south of Lublin.

TARNOPOL, a circle in the east of Austrian Galicia, bordering on Russia. Its territorial extent is 1720 square miles; its population 190,000. It was ceded in 1810 to Russia, as a recompense for the services which she had rendered to France in the campaign of the preceding year, but was restored to Austria at the congress of Vienna.

TARNOPOL, a considerable town in the east of Austrian Poland, and the capital of a circle, is situated on the river Sirth, 84 miles east of Lemberg. It has a Greek and a Catholic church, and 7100 inhabitants, who carry on a considerable traffic, but have not as yet made much greater progress in manufactures than their Polish countrymen. The

principal establishments of this nature are tanneries. The general characteristics of a Polish town, wood buildings, unpaved streets, and accumulation of filth, are applicable to this place.

TARNORUELA, a small town of Austrian Poland, in the circle of Tarnopol, on the river Podhorce.

TARNOW, a circle of Austrian Galicia, bounded on the north by the Vistula, and lying along the river Dunajee. Its area is 1300 square miles; and its population 205,600. It is in general a level country, with the exception of some hills in the south, which are not, however, of great height.

TARNOW, a small town of Austrian Galicia, on the river Dunajee; 47 miles east of Cracow, and 58 south-west of Sendomir. It contains 4300 inhabitants, was erected in 1777 into a bishop's see, is the seat of a court of jurisdiction for the Galician land-holders, and has a gymnasium and high school. It manufactures some linen, and has pleasant environs; but is on the whole an ill built place. It was taken possession of by Austria at the partition of 1773.

TARNOWITZ, a small town of Prussian Silesia, on the confines of Poland. It contains 1500 inhabitants, and has productive mines of silver, iron, and lead, with some calamine; 40 miles south-east of Oppeln.

TARO, a river of the north of Italy, in the grand duchy of Parma, which rises in Piedmont, not far from Borgo St. Stefano, flows through the Parmesan, and falls into the Po at Torricelli.

TARO, a small town of Italy, in the duchy of Parma, on the river Tarò; 28 miles south-west of Parma.

TAROUCA, a small town of the north of Portugal, in the province of Beria; 8 miles south of Lamego. Population 1700.

TARPAULIN COVE, a bay on the south of Massachusetts, near Falmouth, in the United States.

TARPAWLING, *s.* Hempen cloth smeared with tar.

Some the gall'd ropes with dauby marling bind,
Or searcloth masts with strong *tarpawling* coats. *Dryden.*

A sailor.—Was any thing wanting to the extravagance of this age, but the making a living *tarpawlin* and a swabber the hero of a tragedy? *Dennis.*

TARPEIAN, or TARPEIUS, an epithet given to a rock in ancient Rome, of considerable height; whence, by the law of the Twelve Tables, those guilty of certain crimes were precipitated. It was on this rock that the Capitol was built.

The Tarpeian rock might formerly be steep enough on one side to break a man's neck; but it could never have been of that surprising height mentioned by some writers, if any judgment can be formed from its appearance at present.

TARPORLEY, a market town of England, in the county of Chester. It is a small but pleasant town, situated on the high road from London, through Nantwich, to Chester, and within one mile of the Nantwich and Chester canal. The town stands on a gentle slope. It is tolerably clean and well built, and has a handsome church, in which are several fine monuments. Tarporley is chiefly noted as being the place where the principal gentlemen of the county meet at an annual hunt; Delamere forest in that vicinity being well for that diversion. Two miles southward of Tarporley rises the great insulated rock of Beeston, on which are the stately ruins of the far famed Beeston castle, whose almost impregnable strength was once proverbial. Beeston rock is composed of sandstone, very precipitous on one side, but gradually sloping on the other. Its height is 366 feet, and the summit commands a very extensive prospect. Beeston castle was erected in 1220 by Randle Blundeville, earl of Chester, and consisted of an outer and inner area. The outer came about midway of the slope, and was defended by a great gateway, and a strong wall, fortified with round towers, which ran across the slope from one edge of the precipice to the other. Some parts of this wall, and about six or seven round towers, still exist.

On one side the castle is defended by a vast ditch, cut out of the solid rock; on the other by an abrupt precipice that overhangs the vale of Cheshire. The entrance is through a noble gateway, guarded on each side by a great round tower, with walls of a prodigious thickness. Within the walls are the remains of a rectangular building that was formerly the chapel. This castle devolved from the earls of Chester to the crown, and after undergoing many vicissitudes, fell to ruins, in which state it continued to the reign of Henry VIII. Being afterwards repaired, it was garrisoned during the civil wars, and after this was dismantled by order of parliament. Market on Thursday, and several annual fairs. Tarporley in 1811 contained 166 houses, and 701 inhabitants; 11 miles east-south-east of Chester, and 172 north-west of London.

TARPOU, a lake of Thibet, about 60 miles in circumference. Lat. 30. 32. N. long. 81. 54. W.

TARRABY, a township of England, in Cumberland, near Carlisle.

TARRAGON, *s.* A plant called herb-dragon.

TARRAGONA, a sea-port in the north-east of Spain, in Catalonia, near the mouth of the river Francoli. It is a place of great antiquity, though the traditional accounts of its population are exaggerated and absurd. It is built on a hill, and surrounded by walls with turrets, erected either by the Moors, or by the Christians of the middle ages. It was occupied by the British in the beginning of the 18th century, with an intention of rendering it a good naval station, for which, however, the harbour was not well calculated. On the acquisition of Gibraltar in 1704, the design was abandoned, and the works then commenced have since presented nothing but heaps of ruins. Tarragona contains 7500 inhabitants, is the see of a bishop, and has a large and elegant cathedral, built in the Gothic style. It was under the Romans the chief town of the province called Tarracensis, and in the year 516 was the seat of a church council, in which monks are mentioned for the first time in history. A more affecting claim to historical notice has been conferred on it by its siege and sack by the French in 1811, so creditable to the talents, and so dishonourable to the humanity of Marshal Suchet. An attempt to re-take it, in June, 1813, by an allied force under Sir John Murray, was not successful, that officer deeming it imprudent to await the approach of a French army with the troops under his command, the Spanish part of which was indifferently disciplined. He accordingly re-embarked; and though at first exposed to censure, was soon justified by the events of the campaign, in which these troops, under other commanders, were found unable to withstand their veteran antagonists; 49 miles west-south-west of Barcelona, and 278 east of Madrid. Lat. 41. 8. 50. N. long. 1. 15. 30. E.

TARRANT GUNVILLE, a parish of England, in Dorsetshire; 4 miles from Blandford. This, with six other villages in the same county, namely Tarrant Hinton, Kynes, Launceston, Monkton, Rawson, and Rushton, take the name of Tarrant, from being situated near the river of that name. Tarrant Gunville, contains 444 inhabitants.

TARRAS, a small river of Scotland, in Dumfries-shire, which rises in the parish of Ewes, and falls into the Esk, 3 miles below the town of Langholm. It is remarkable for its rugged channel and romantic scenery.

TARRASA, a town of the north-east of Spain, in Catalonia; 9 miles north-north-west of Barcelona, with 4000 inhabitants. It is situated in one of the most industrious parts of Spain, and has several manufactories of broad cloth and serges.

TARREGA, a small town of the north-east of Spain, in Catalonia; 5 miles west of Cervera. It is situated on a height, has 3600 inhabitants, and is fortified.

TARRETBURN, EAST and WEST, two adjoining hamlets of England, in Northumberland, near Hexham.

TARRIANCE, *s.* Stay; delay; perhaps sojourn.

Dispatch me hence;
Come, answer not; but do it presently,
I am impatient of my *tarrance*.

Shakspeare.

Vol. XXIII. No. 1612.

TARRIER, *s.* [This should be written *terrier*, from *terre*, French, *the earth*.] A sort of small dog, that hunts the fox or otter out of his hole.—The fox is earthed; but I shall send my two *tarriers* in after him. *Dryden.*

TARRIER, *s.* One that tarries or stays; one that waits; whatever delays or puts off.—He is oftentimes called of them Fabius Cunctator, that is to say, the *tarrier* and delailer. *Sir T. Elyot.*

TARRING, a small town of England, in the county of Sussex; 17 miles west of Brighton, and 57 south of London.

TARRING, WEST, a parish of England, formerly a market town, in the county of Sussex, near Shoreham, with two annual fairs, in April and October.

TARRINGTON, or TADINGTON, a parish of England, in Herefordshire; 6½ miles west-north-west of Ledbury. Population 488.

To TARRY, *v. n.* [*targir*, French. Kilian refers both the French and our word to the Teut. *traeghen*, to delay; by metathesis therefore *tarry*.] To stay; to continue in a place.

Tarry I here, I but attend on death;
But fly I hence, I fly away from life.

Shakspeare.

To delay; to be long in coming.—Thou art my deliverer; make no *tarrying*, O God. *Psalms.*—To wait; to expect attending.—*Tarry* ye here for us until we come again, *Exod.*

To TARRY, *v. a.* To wait for.—I will go drink with you, but I cannot *tarry* dinner. *Shakspeare.*

TARRRY; *adj.* Consisting of tar; resembling tar.

Foul *tarry* spittle tumbling with their tongue
On their raw leather lips.

Morc.

TARRY-TOWN, a village and landing place on the east bank of the Hudson, in West Chester county, New York; 30 miles north of New York.

TARSEL, *s.* A kind of hawk. See TASSEL.

A falconer Henry is, when Emma hawks;
With her of *tarsels* and of lures he talks.

Prior.

TARSET, a township of England, in Northumberland; 19 miles north-west by north of Hexham.

TARSET CASTLE, in England, a Roman encampment in the county of Northumberland, near Bellingham. It is 20 yards long and 10 broad, and is defended by a deep fosse. At each corner of the area appear the remains of turrets or mounds.

TARSIA, a small town of Italy, in the south of the kingdom of Naples, in Calabria Citra.

TARSO, a small town in the east of Austrian Italy, in the delegation of Treviso.

TARSTON, a hamlet of England, in Oxfordshire; 2 miles south-south-west of Neat Enstone.

TARSUS, in Anatomy, that part of the foot (consisting of about its posterior half) to which the leg is articulated. Its front portion corresponds to the instep in common language.—An obscure motion, where the conjunction is called synanthrosis; as, in joining the *tarsu* to the metatarsus. *Wiseman.*

The same name is foolishly enough applied to the portion of cartilage contained in each eyelid.

TARSUS, a large city of Asia Minor, the ancient capital of Cilicia. It certainly possesses a very high antiquity, and is said by Arrian and Strabo to have been founded by Sardanapalus on the same day with Anchiale, while others are of opinion that it was a Grecian colony founded by Triptolemus. It was much favoured by Augustus, as well as Adrian, and rose to such celebrity as to rival Athens, Antioch, and Alexandria, in wealth and grandeur, as well as in the cultivation of literature and science. It was also adorned with a number of magnificent temples, as well as with a gymnasium and theatre. The city is situated in a fertile plain, on the right bank of the Cydnus. There is a castle said to be built by Bajazet; and the town is partly surrounded

surrounded by a wall, probably the remains of that erected by Haroun al Raschid. On an eminence to the south-west are the ruins of a spacious edifice, which may very probably have been the gymnasium; and about two hundred yards farther to the west, an ancient gateway stands almost entire. The city contains two public baths, a number of mosques, several handsome caravanseras, and a small ancient church. The land in the neighbourhood is exceedingly fertile, yielding great abundance of wheat, barley, sesame, and cotton, which are exported to Malta, and thence to Spain and Portugal. Copper from Maden, and gall-nuts from the mountains, are also staple commodities. The imports consist chiefly of rice, sugar, and coffee. The port is about seven or eight miles distant from the town, whence the sea is not visible. The population during the winter is stated at 30,000, of which there are 200 Armenian, and 100 Greek families; while the remainder consist of Turkmen, who migrate with their families in summer to the mountains.

TART, *adj.* [τάρταρ, Saxon; *taertig*, Dutch.] Sour; acid; acidulated; sharp of taste.—Of the best wines you make your *tartest* vinegar. *Howell*.—Sharp; keen; severe.

Why so *tart* a favour
To trumpet such good tidings? *Shakspeare.*

TART, *s.* [*tarta*, Italian; *taart*, Danish.] A small pie of fruit.—Figures, with divers coloured earths, under the windows of the house on that side near which the garden stands, be but toys; you may see as good sights in *tarts*. *Bacon.*

TARTAGLIA (Nicholas), a celebrated mathematician, was born at Brescia about the beginning of the 16th century. Being left destitute in his childhood by the death of his father, he was no less unfortunate at the siege of Brescia, in 1512, in receiving several wounds, and particularly one which divided his lip, so that he lost the power of distinct articulation; and from this circumstance he got the name of Tartaglia. The defects of his early education were amply compensated by his genius and diligence. Having resided ten years at Verona, he afterwards, viz., in 1534, became professor of the mathematics at Venice; and here, except during an interval of eighteen months at Brescia, he remained till the time of his death, in 1557. His works are numerous. Besides translations of Archimedes and Euclid, he wrote many original treatises in mathematics, one of the most important of which, entitled “*Quesiti e' inventione diversi*,” was published at Venice in 1546, and dedicated to Henry VIII. of England. It is comprehended in nine books, and contains answers to several questions that were proposed to him at different times concerning mechanics, hydrostatics, &c.; and more particularly worthy of notice is the history of the invention of the rules for solving cubic equations, which he communicated to Cardan, under an oath that he would keep the secret.

Tartaglia's genius was no less conspicuously displayed in other sciences than in algebra. He treats of artillery and gunnery, and also of the different methods of fortifying towns, besides various mechanical and algebraical questions. He also proposes many questions with regard to the motion of bodies, and the method of measuring distances, in his “*Nuovia Scienza*” and “*De Numeri e Mesure*.” To Tartaglia we owe the first discovery of the best angle, i. e. 45°, as it was then thought, for elevating a piece so as to throw a ball or shell to the greatest distance. He also announced a method of raising vessels that were sunk, and other heavy bodies, from the bottom of the sea, and the means by which a person may be enabled to remain a considerable time under water; and to him we owe a treatise on the signs which indicate changes in the atmosphere. He has likewise furnished us with a large treatise on arithmetic, algebra, and geometry, published at Venice, in folio, in 1556. Tiraboschi remarks, that all Tartaglia's works manifest great penetration and acuteness, and that they would claim higher commendation, if the author had paid more attention to his style, and if the editions were more correctly printed. But

with all their imperfections and faults, and after all the improvements to which they have led the way, they were justly esteemed at the time when they were written, and they have been useful to those who have in more modern times pursued the same course of study and investigation. *Tiraboschi. Hutton.*

TARTANE, *s.* [*tartana*, Italian; *tartane*, Fr.] A vessel much used in the Mediterranean, with one mast and a three-cornered sail.—I set out from Marseilles to Genoa in a *tartane*, and arrived late at a small French port called Cassis. *Addison.*

TARTAR, *s.* [*tartarus*, Lat.] Hell. A word used by the old poets, *now obsolete.*

He's in *tartar* limbo worse than hell;
A devil in an everlasting garment hath him,
One whose hard heart is button'd up with steel. *Shakspeare.*

[*tartre*, Fr.] *Tartar* is what sticks to wine casks, like a hard stone, either white or red, as the colour of the wine from whence it comes: the white is preferable, as containing less dross or earthy parts: the best comes from Germany, and is the *tartar* of the Rhenish wine. *Quincy*.—The fermented juice of grapes is partly turned into liquid drops or lees, and partly into that crust or dry feculency that is commonly called *tartar*; and this *tartar* may by the fire be divided into five differing substances, four of which are not acid, and the other not so manifestly acid as the *tartar* itself. *Boyle.*

TARTAREAN, *adj.* [*tartarus*, Lat.] Hellish.—His throne mix'd with *tartarean* sulphur. *Milton.*

TARTAREOUS, *adj.* Consisting of tartar.—In fruits, the *tartareous* parts of the sap are thrown upon the fibres designed for the stone, and the oily upon the seed within it. *Grew*.—Hellish.

The spirit of God downward purg'd
The black *tartareous* cold infernal dregs,
Adverse to life. *Milton*

TARTARIZATION, *s.* [from *To tartarize*.] The act of forming tartar.—By dissolution of one subject, and concretion of another; by vaporation and evaporation; by sublimation, and precipitation or *tartarisation*. *Biblioth.*

To TARTARIZE, *v. a.* To impregnate with tartar.

TARTARO, a river of Austrian Italy, in the government of Venice, which rises among the mountains near the lake of Garda, is joined in the department of the Mincio by a canal of the Adige, takes the name of *Canale bianca*, and expands into a number of marshes as it approaches the Adriatic.

TARTAROUS, *adj.* Containing tartar; consisting of tartar.—The asperity of *tartarous* salts, and the fiery acrimony of alkaline salts, irritating and wounding the nerves, produce nascent passions and anxieties in the soul. *Bp. Berkeley.*

TARTARY, the name vaguely given to a most extensive region of Asia, occupying nearly the whole central part of that continent, interposed between Asiatic Russia on the north, and the great empires of Persia, Hindostan, and China on the south. Under the appellation of Tartars, are comprehended many various tribes, having local names and characters, but who generally agree in being addicted to the pastoral life, living in tents in the open fields, without towns or villages; delighting in horsemanship, and having a breed of the finest horses in the world; living on horse flesh, and drinking mares' milk. This race was known and celebrated in antiquity under the name of Scythians, a people who are described as possessed of the same warlike, rude, and pastoral features which distinguish now the tenants of the same regions. The simplicity of their manners, their ignorance of money and of luxury, and their hospitality, caused them to be quoted with admiration by the Greek sages. At the same time, the earliest records of history bear ample testimony to the calamities which their inroads inflicted on the more civilised part of the world, and to the
disasters

disasters incurred by the greatest conquerors, in attempting to subdue them. Even under the Assyrian dynasty, they are represented as having overwhelmed and held the sceptre of Western Asia for the space of 28 years. If we may believe Herodotus, Cyrus, after having subdued the rest of Asia, found the termination of his life in his conflict with Tomyris, queen of this warlike race. Darius, his successor, with difficulty escaped the same fate, in pursuing through their extensive wilds the European Scythians, who then occupied what now constitutes the southern part of Russia in Europe. Alexander himself was little more fortunate; for though he compelled the Scythian host to cross the Jaxartes, he in vain attempted to pursue them beyond it, and suffered in his retreat considerable annoyance from their desultory attacks.

In these earlier periods, although the Scythian tribes frequently laid waste the southern empires, and defeated the most powerful of their armies, they were never able to effect any permanent conquest or settlement. It was during the decline of the Roman empire, when its vast spoils attracted the cupidity of all the races of barbarians, that the pastoral tribes in the interior of Asia began permanently to forsake their vast plains, in search of happier and more fertile regions. Their fortunes were various, and their power was reduced at one time to a very low ebb; but at length rousing their vigour, and swelling their force from the migratory and warlike population of the country itself, they succeeded in overturning the eastern empire, and establishing themselves masters of Constantinople. The Tartar tribes, once engaged in this career of migratory conquest, did not willingly desist. In the twelfth century, Tartary became the seat of the most formidable and extensive empire that perhaps has ever been established. Zingis, originally an obscure Mongol chief, having succeeded in uniting under his standard all the neighbouring tribes, successively conquered China, Persia, and all Central Asia, from the Black sea to the Eastern ocean. His successors added Russia, and overran Poland, with part of Germany. For some time the greatest panic prevailed in Europe, which seemed on the point of being reduced to total subjection. In the course of a few reigns, this vast empire was split into parts, and lost its original energy; but the Tartars were still not weary of giving masters to Asia. The lead was now taken by the populous countries on the Oxus and the Jaxartes, where Timur established a sway, which, though less extended than that of Zingis, was superior in the value and importance of the regions which it comprehended. Timur conquered all Persia, broke the power of the Turks in Asia Minor, and established in India a dynasty, which continued to reign, and to form the most splendid court of Asia, till the close of the last century. China has always been subject to Tartar dynasties; and about three centuries ago was conquered by the Mantchoos, a tribe inhabiting to the north, near the coasts of the Eastern ocean. For a long time, however, the power of this great race has been much on the decline.

The grand division of this extensive portion of Asia, is into Independent Tartary and Chinese Tartary.

Independent Tartary is bounded on the east by a great chain of mountains, called the Beloor Taugh, connected with the Indian ranges of the Himmaleh and the Mooz Taugh, and which separates it from Cashgar and the other districts of Chinese Tartary. On the south, it has the country of Balk or Bulkh (now forming part of the kingdom of Cabul), and the Persian province of Korassan; on the west it extends as far as the Caspian; while on the north it has the provinces of Oufa, Orenburg, and Tobolsk, belonging to Asiatic Russia.

Since the time of Timur, the population and political state of this country have undergone an entire change. It has been occupied, and the ancient inhabitants either exterminated or expelled by the Uzbecks, a people of the widely extended race of Turk or Toork, but whose original seat is not precisely ascertained.

In Bokhara the men are divided, like troops, into parties

or masses of ten each, who have a boiler, a tent, and a camel in common. The Koran is implicitly assumed as the guide, not only in faith and doctrine, but in civil government and domestic life. The king, now reigning in Bokhara, was raised to the throne by the ostentatious profession of poverty, and of all those observances which establish the character of a Mussulman saint; prayer, abstinence, fasting, and mendicity. Even in his present elevation, he has not renounced these religious observances, but spends part of every day in teaching the Mahometan religion, and of every night in watching and prayer. The revenue is collected exactly in the proportions prescribed in the Koran; and one-tenth of it is expended in alms. The drinking of wine, and even the smoking of tobacco, is most strictly prohibited, and made liable to the severest punishment.

The habitations of the Uzbecks consisted originally of a species of moveable tent called *onool*, composed of a lattice of thin lath, covered with black felt. From 20 to 50 of these compose a species of moveable village or camp. Many of them now, however, reside in towns. Horsemanship is the favourite pursuit of the Uzbecks, and their horses are considered, next to the Arabian, as the best in Asia. They are so numerous, that there is scarcely a man so poor as to walk on foot; even beggars travel on horseback, or at least on camels or asses. As might be expected in a people with these habits, the Uzbecks produce numerous bodies of light cavalry, and excel in predatory warfare. Their arms are a long and heavy lance, and a shield; few have swords, but many long knives and daggers. They charge in a body, with shouts, which are loud and terrific. They are brave, and have a wonderful power of enduring thirst, hunger, and fatigue. In battle, they are drawn up in three lines, so that, even after being repulsed, they can return twice to the charge. Their laws of war are most barbarous, giving no quarter except to infidels, whom the Koran allows them to sell as slaves; while the faithful, who cannot be subjected to that indignity, have the honour of being killed on the spot. Yet they do not want good qualities. Compared with other Asiatics, they are sincere and honest; there are few private quarrels among them, and murder scarcely ever occurs. Merchants are protected and encouraged, and notwithstanding the national bigotry, no distinction of religion is made in regard to them.

Of the kingdoms into which Independent Tartary is now divided, Bokhara may be considered as the most important. The territory of the king includes the finest part of the country on the banks of the Oxus, and, though not very extensive, enables him to maintain an army of 80,000 or 100,000 cavalry. The city of Bokhara still contains upwards of 100,000 inhabitants, with very extensive establishments for the cultivation of learning. Samarcand, though greatly declined from its ancient splendour, exhibits the same beauty of climate and situation for which it was celebrated, and contains many fine buildings. Of late Shah Murad Bey, the present possessor, has paid much attention to it, and restored some share of its former greatness. On the Jaxartes, the Bey of Koukan, or Ferganna, possesses an extensive, fertile, and highly populous kingdom, scarcely known to Europeans. The cities of Koukan, Khojund, and Murghelan, are said in populousness and beauty of situation to surpass any other in Central Asia. Unless, however, in these cities on the banks of great rivers, the population generally retains its pastoral and migratory habits. This is more particularly the case as we proceed northwards among the Kirghises, who connect Independent Tartary with Russia, and who have already been described. There remains of Independent Tartary, the country on the Upper Oxus, and that between the Aral and the Caspian. It consists almost entirely of a vast sandy desert, tenanted by roving tribes of Uzbecks and Turcomans, who subsist partly by pasturage and partly by plunder.

The tracks of Central Asia, over which the Chinese empire holds at least nominal sway, are of truly immense extent. They include the whole territory contained between Hindos-

tan and Asiatic Russia, and from the Eastern ocean to the mountain boundary of Independent Tartary; a space comprising, in its greatest dimensions, about seventy degrees of longitude, and twenty degrees of latitude. The southern and mountainous part of this vast track passes under the name of Thibet, and is commonly considered as an appendage to India. The western part of what is usually called Chinese Tartary is among the regions of the globe with regard to which our information is most imperfect. We have scarcely any knowledge respecting it, except the narratives, now by no means recent, of Marco Polo and Goetz, with some Chinese maps procured by the missionaries. The most westerly country, situated immediately on the other side of the Beloor Taugh, appears to be Cashgar, with a capital of the same name, forming the residence of a Chinese Amdan or viceroy. The great emporium of this region, however, is Yarcund, situated farther to the south, and forming the rendezvous of the merchants from India, Cabul, and Independent Tartary. Proceeding eastward, the two principal kingdoms are Koten or Khoten, and Hami or Chamil. The former is represented as very flourishing, containing numerous fortified cities, and excelling both in agriculture and manufactures. It is particularly celebrated for a species of beautifully variegated marble, which bears a high price in China. Hami is also as a wealthy region, inhabited by a voluptuous and even dissolute people. In this part of Asia are also mentioned Acsu, Cialis, Ciarcian, Lop, and Peym. One of its most distinguishing features is the great desert of Shamo or Cohi, which extends from west to east through nearly its whole extent, and afterwards interposes between China and the Russian empire. It extends in this direction nearly 2000 miles. The caravans coast its northern border, till they come to Lop, where they cross from north to south, and proceed along the southern border to China.

The part of Tartary situated to the west and north-west of China, consists entirely of desert or at least of naked plains, particular portions only of which afford pasture and water, and which is traversed by wandering tribes of Mongols, Kalkas, and Eluths.

The most eastern extremity of Tartary, bordering on the Pacific, consists of the country of the Mantchoo Tartars, which, in consequence of having given a conquering dynasty to China, forms now a province of that empire. It is still a favourite hunting residence of the emperors, who have a summer palace at some distance beyond the great wall, to which they resort during three months of the year. The country consists generally of very lofty mountains, covered with immense forests. No grain except oats can be raised in any quantity; and though the latitude be only that of the south of France, the climate resembles that of Norway, and the rivers begin to freeze in September.

Besides the before-mentioned tribes, who inhabit the region properly called Tartary, a great part of the southern provinces of Asiatic Russia have a Tartar population. Among these we may particularly distinguish the Kalmucs and the Baschkirs.

The Kalmucs were formerly one of the most numerous and powerful people of Tartary, and they even boast of the conqueror Zingis as belonging to their nation. After various fortunes and wanderings, the whole body established itself in 1723, upon the banks of the Volga from Tzaritzan to Astracan. They then numbered 14,000 tents or families. They owned the supremacy of the czar, and even allowed him the confirmation of their khan. The Kalmucs have a better organized form of government than most of the wandering tribes. They are divided into nobles or princes, whom they call "white bones;" into priests or Gelums, to whom they pay the highest respect; and into common people, whom they call "black bones." They are formed also into the clans called *Oulouss*, with each a khan at its head; and these khans being assembled, decide on the general affairs of the state, and elect a great khan, who forms the supreme head of the Kalmucs. The people are of a middle size, with black, hard, and shining hair; they have very small eyes, with a

piece of skin stretched externally towards the lacrymal canal, which gives them a physiognomy peculiar to themselves, and distinct from that of the other Asiatic nations. The ears stand out from the head; the nose is broad and flat. They encamp under tents of felt, which, when they change their habitation, are easily placed with all their effects upon the backs of camels or oxen.

The Baschkirs inhabit the southern part of the provinces of Oufa and Orenburg, with part of Tobolsk, between the rivers Belaia, Kama, Volga, and Oural. They seem to have been established here from a very early period, and submitted to Russia at the time of the conquest of Kazan. By the enumeration of 1770, the Baschkirs were found to consist of 27,000 families, divided into 14 cantons.

TARTAS, a small town in the south-west of France, department of the Landes, situated on the declivity of a hill, watered by the Douze. It contains about 3200 inhabitants, who carry on a traffic in corn and wine; 14 miles north-west of St. Sever, and 18 west-by-south of Mont de Marsan.

TARTAS, a river of Asiatic Russia, in the government of Tobolsk, which falls into the Om, near Tartaskoi.

TARTASCH, a small town of European Turkey, in Moldavia; 63 miles south-west of Jassy.

TARTASKOI, a small town of Tobolsk, in Asiatic Russia situated at the junction of the two rivers Om and Tartas; 40 miles west-south-west of Kainsk.

TARTH, a small river of Scotland, in Peebles-shire, which rises in the parish of Kirkurd, and joins the Lyne, a little below Droichill castle. It abounds with fine trout.

TARTINI (Giuseppe), of Padua, a famous violin composer, was born at Pirano, in Istria, in 1692. His father, having been a great benefactor to the cathedral church at Parenzo, had been ennobled in reward for his piety. Giuseppe was intended for the law, but mixing music with his other studies during the course of his education, it soon grew too powerful for the rest, and tyrannized over the whole circle of sister sciences. In 1710, he was sent to the university of Padua to pursue his studies as a civilian; but before he was twenty, having married without the consent of his parents, they wholly abandoned him, and obliged him to wander about in search of an asylum; which, after many hardships, he found in a convent at Assisi, where he was received by a monk his relation, who, commiserating his misfortunes, let him remain there till something better could be done for him. Here he practised the violin, to keep off melancholy reflections; but being discovered by a Paduan acquaintance, differences were accommodated, and he settled with his wife at Venice for some time.

His first book of solos was engraved at Amsterdam, 1734; the second at Rome, 1745; and he produced above two hundred of these compositions; his concertos, likewise amount to two hundred.

Tartini seems to have had a larger portion of genius and knowledge of composition as a mere instrumental composer, than any other author who flourished during the first fifty or sixty years of the last century. Though he made Correlli his model in the purity of his harmony, and simplicity of his modulation, he greatly surpassed that composer in the fertility and originality of his invention; not only in the subjects of his melodies, but in the truly cantabile manner of treating them. Many of his adagios want nothing but words to be excellent pathetic opera songs. His allegros are sometimes difficult; but the passages fairly belong to the instrument for which they were composed, and were suggested by his consummate knowledge of the finger-board, and powers of the bow. He certainly repeats his passages, and adheres to his original *motivo*, or theme, too much, for the favourite desultory style of the present times; but it must be allowed that by his delicate selection and arrangement of notes, his passages are always good. He died on the 26th of February, 1770, to the great regret of the inhabitants of the city of Padua, where he had resided nearly fifty years.

M. de Lalande says, he had from his own mouth the following singular anecdote, which shews to what degree his imagination was inflamed by the genius of composition. "He dreamed one night, in 1713, that he had made a compact with the devil, who promised to be at his service on all occasions; and during this vision every thing succeeded according to his mind; his wishes were prevented, and his desires always surpassed by the assistance of his new servant. In short, he imagined he gave the devil his violin, in order to discover what kind of a musician he was; when, to his great astonishment, he heard him play a solo so singularly beautiful, and executed with such superior taste and precision, that it surpassed all he had ever heard or conceived in his life. So great was his surprise, and so exquisite his delight upon this occasion, that it deprived him of the power of breathing. He awoke with the violence of this sensation, and instantly seized his fiddle, in hopes of expressing what he had just heard, but in vain; he, however, then composed a piece, which is perhaps the best of all his works, (he called it the Devil's Sonata,) but it was so inferior to what his sleep had produced, that he declared he should have broken his instrument and abandoned music for ever, if he could have subsisted by any other means."

TARTISH, *adj.* Somewhat tart. *Scott.*

TARTLAU, a town of Transylvania, in the province of the Saxons; 8 miles east-by-north of Cronstadt, with 3000 inhabitants, partly of German descent, partly Wallachians and gypsies.

TARTLY, *adv.* Sharply; sourly; with acidity.—Sharply; with poignancy; with severity.—Seneca, an ingenious and sententious writer, was by Caligula *tartly* called *arena sine calce*, sand without lime. *Walker.*—With sourness of aspect.

How *tartly* that gentleman looks!

—He is of a very melancholy disposition. *Shakspeare.*

TARTNESS, *s.* Sharpness; sourness; acidity.—Of these sweets put in three gallons, more or less, into an hog's-head, as the *tartness* of your cyder requires. *Mortimer.*—Sourness of temper: poignancy of language.—They cannot be too sweet for the king's *tartness*. *Shakspeare.*

TARTUFISH, *adj.* [from *tartufe*, Fr., a puritan, a hypocrite. "Jamais tartufe ne fut honnête homme." Richelet.] Perhaps precise; formal; or morose. In some parts of Scotland, it is sour, sullen, stubborn. See Jamieson.—God help her, said I; she has some mother-in-law, or *tartufish* aunt, or nonsensical old woman, to consult upon the occasion as well as myself. *Sterne.*

TARUD, a small town of Hedsjas, in Arabia; 10 miles from El Katif.

TARUD ESHERIFF, a village of lower Egypt, on the left bank of the Nile; 6 miles south of Melau.

TARVE, a small island in Denmark, in the Little Belt; 9 miles from Colding in Jutland.

TARVEN, or **TARVIN**, a village and parish of England, in the county of Chester, near a brook that comes from Tarpoley, and bounds Delamere forest. It had formerly a market, which was granted to Sir John Savage, lord of this manor, in the reign of queen Elizabeth. Population 2876; 6 miles east-by-north of Chester.

TARVES, a parish of Scotland, in Aberdeenshire, about 9 miles long, and 6 broad, watered by the Ythan. Population 1804.

TARVIS, a small town of Austrian Illyria, in Carinthia, on a small stream called the Gailitz; 49 miles north-by-west of Trieste, and 14 south-west of Villach.

TASAPAN, a small island in the Eastern seas, near Junkseilon. Lat. 8. 20. N. long. 98. 14. E.

TASCHLIDSCHA, **TASLIZZA**, or **PLEVLE**, a small town in the north-west of European Turkey, in Bosnia. It is the residence of the sandgiak of Hersek, and has 4500 inhabitants; 70 miles south-by-east of Zvornick.

TASCHUCANGO, a small river of Quito, in the province of Mainas, which runs nearly due north, and enters the Amazons.

Vol. XXIII. No. 1613.

TASCO, or **TLACHCO**, a town of Mexico, in the intendancy of Mexico; 90 miles south-east of Valladolid. The elevation of the place above the level of the sea is something more than 2569 feet; 60 miles south-by-west of Mexico, on the north shore of the river Zacatula. Lat. 18. 33. N. long. 99. 31. W.

TASCO, a settlement of New Granada, in the province of Tunja, which contains 100 housekeepers, and 80 Indians.

TASEBURGH, or **TASBOROUGH**, a parish of England, in Norfolk; 2 miles north of St. Mary Stratton. Population 453.

TASHAM DAGH, the name of a mountain on the north coast of Asia Minor, between Amasieh and Samsoun.

TASHKUND, or **TASHKENT**, a considerable city of Independent Tartary, situated on the Sihon of Jaxatres; 210 miles north of Samarcand. Lat. 42. 40. N. long. 64. 48. E.

TASIEVA, a river of Asiatic Russia, which falls into the Tchulim, about 20 miles north-west of Tasiuskoi.

TASIEUSKOI, a town of Tobolsk, in Asiatic Russia, on the Tasiaeva; 820 miles east of Tobolsk, and 448 east-north east of Kolivan.

TASK, *s.* [*tassa*, Italian.] Something to be done imposed by another.

Relieves me from my *task* of servile toil
Daily in the common prison else enjoind me. *Milton.*

Employment; business.—His mental powers were equal to greater *tasks*. *Atterbury.*

To take to **TASK**. To reprove; to reprimand.—A holy man took a soldier to *task* upon the subject of his profession. *L'Estrange.*

To **TASK**, *v. a.* To burthen with something to be done.

Forth he goes,

Like to a harvestman, that *task'd* to mow,
Or all, or lose his hire. *Shakspeare.*

TASKER, *s.* One who imposes tasks.

All is, if I have grace to use it so,
A ever in my great *taskmaster's* eye. *Milton.*

One who undertakes a task, as a day-labourer: this is a colloquial use of *tasker*.

TASLEY, a parish of England, in Salop, situated on the river Severn; 2 miles west-north-west of Bridgenorth.

TASMAN'S HEAD, the most southern point of Brany's island, on the south-east coast of Van Diemen's Land, apparently the same which the French call North Cape of that isle.

TASMAN'S ISLAND, a great peninsula connected with Van Diemen's Land, by an isthmus 600 feet broad by about 1800 feet long. At the southern extremity is an islet, now called Tasman's island, visible at 12 leagues distance.

TASNAD, a small but populous town of Transylvania, in the north-west of the palatinate of Syolnok, inhabited by Magyars.

TASSACORTA, or **TASSA CRODA**, a small sea-port on the western coast of the island of Palma, one of the Canaries, where a few vessels are annually laden.

TASSEL, *s.* [*tasse*, French; *tasselus*, low Latin.] An ornamental bunch of silk, or glittering substances.

Then took the squire an horn of bugle small,
Which hung adown his side in twisted gold,
And *tassels* gay. *Spenser.*

TASSEL, *s.* [properly *tercel* or *tiercel*; Ital. *terzuolo*; which name it is said to have obtained, because it is a *tierce* or *third* less than the female. See Steven's Note on Shakspeare's Rom. and Jul.] The male of the goshawk.

O for a falconer's voice,
To lure this *tassel*-gentle back again! *Shakspeare.*

TASSEL, or **TA'ZEL**, *s.* [*carduus fullonimus*.] An herb. See **TEAZLE**. *Ainsworth.*

TASSELED, *adj.* Adorned with tassels.—A purse of leather—*tasseled* with silk. *Chaucer.*

TASSEES, *s.* Armour for the thighs. *Ainsworth.*

TASSI (Agostino), the cognomen of an artist whose real name was Buonanici. He was born at Perugia in 1566, and studied at Rome under Paul Brill, and received some assistance in the school of the Caracci. His sea-ports, calms, and storms, were faithful transcripts of nature, and touched with great spirit and efficacy. His views of architectural subjects thrown into perspective, which are in the pontifical palace of Monte Cavallo, and in that of the Lancellotti family, are admirable in their kind. His greatest honour, however, is having been the instructor of Claude de Lorraine. He died in 1642, aged 76.

TASSISUDON, a city of Northern Hindostan, province of Bootan, of which it is the capital, and the residence of the Deb rajah. This town stands in a highly cultivated valley, about three miles in length, by one in breadth, intersected by the Tchintchieu river. On the surrounding mountains are some large timber trees, intermixed with fir and pine, and a great variety of flowering shrubs. The climate is esteemed exceedingly salubrious. The castle is built of stone, and forms a square, the walls of which are 30 feet high. The citadel is a very lofty building, consisting of seven stories, each from 15 to 20 feet high. From the centre of these rises a square piece of masonry, which supports a canopy of copper richly gilt, supposed to be immediately over the idol *Maha Moony*. The rajah resides in the fourth story of this citadel, which might more properly be called a temple. The town is of considerable extent, and very populous. Its chief manufactures are brazen images, and paper made from the bark of a tree. Lat. 27. 50. N. long. 89. 30. E.

TASSO (Bernardo), an eminent poet, born at Bergamo, of an ancient and noble family, in the year 1493, became an early proficient in the Greek and Latin classics. His uncle, the bishop of Recanati, who was his instructor and patron, and supplied the place of a parent when he lost his father, having been assassinated by robbers in 1520, Bernardo was under a necessity of quitting his native city, and in 1525 became secretary to count Guido Rangoni, general of the papal army. Having been for a short time occupied in a similar situation under the duchess of Ferrara, he afterwards pursued his studies at Padua and Venice. In 1531, he published at Venice a volume of poems, which induced Ferrante Sanseverino, prince of Salerno, to invite him to his court. Having accepted this invitation, he recommended himself to the prince, and obtained annual stipends, amounting to 900 ducats. He accompanied his patron in several expeditions, and accompanying him to Naples, he there married Porzia de' Rossi, a lady of noble family. At Sorrento, whither he removed, he for some time led a tranquil and studious life; until his patron, in 1547, incurred the displeasure of the imperial court by concurring in presenting a petition against the establishment of the inquisition at Naples. On this occasion the prince joined the French party, so that he was declared a rebel, and his property was confiscated. Influenced by respect for his patron, Bernardo accompanied him to France, where at first he obtained encouragement, but being in process of time deprived of all support, and having lost his wife, he requested the prince's permission to leave him; and complying with an invitation to the court of Guidubaldo II., duke of Urbino, a distinguished patron of literary persons, he was liberally compensated for his past sufferings, and made a member of the celebrated Venetian academy. In 1563, he became secretary at the court of Mantua, and in the service of this court he died, in 1569, being then governor of Ostiglia. The duke of Mantua caused his remains to be honourably interred in that city, and a marble monument to be erected over his tomb, bearing the simple inscription, "Ossa Bernardi Tassi." Of his poems, belonging to the class of "Romanesque," here were two; viz., "Amadigi," consisting of 100 cantos, and "Il Floridante," left unfinished, but corrected and published by his son Torquato, at Bologna, in 1587. His other works are five books of "Rime," with various kinds of

poems, such as eclogues, elegies, hymns, odes, &c. He was also the author of "A Discourse concerning Poetry," and "Letters," of which an edition has been given in three volumes.

TASSO (Torquato), pre-eminent as an Italian poet, was the son of Bernardo and Porzia de Rossi, born at Sorrento, March 11, 1544, and sent at the age of five years to the Jesuits' school, at Naples. Here his proficiency was so rapid, that in two years he recited, publicly, verses and orations of his own composition. At Bergamo, whither the circumstances of his family constrained him to remove, he prosecuted the study of Latin and Greek with such success, that at the age of twelve years, he was admitted into the university of Padua. Here his proficiency in various branches of literature was so signal, that in his seventeenth year he was honoured with degrees in the four branches of canon and civil law, theology, and philosophy. For law he had no predilection; but all the powers and affections of his mind were devoted to poetry. Thus distinguished, he was invited by the celebrated Cesi to Bologna, in the schools and academies of which city his talents were eminently displayed. During his residence in Bologna, he was charged with having written some defamatory verses, and deprived of his books; and though he avowed his innocence, he thought proper to withdraw from the city to a place called Castle-*vetro*, where he was protected by the Count Rangoni. Some time after this event he settled at Padua, and acquired distinction among the academicians denominated "Eterei." At the age of eighteen years, he had published at Venice his poem of the Romanesque class, entitled "Il Rinaldo," which he dedicated to Cardinal Luigi d'Este, in consequence of which he was invited, in 1566, to the court of Ferrara, where he was liberally accommodated, and where, it is said, he prosecuted the execution of his plan of the "Gerusalemme Liberata;" six cantos of which were composed in the 17th year of his life. In 1571, he accompanied the Cardinal d'Este into France, where he was honourably received by Charles IX. and his court, and also by all the learned men of Paris. In the following year he returned to Italy, and caused to be represented his dramatic pastoral of "Aminta." Several cantos of his "Gerusalemme" were at this time dispersed in MS. throughout Italy, and in 1579, the fourth canto was printed in a collection of poems at Genoa. In the following year, fragments of 16 cantos were published at Venice, and we may naturally imagine that this mode of introducing to public notice a work on which he had bestowed much attention and labour, excited his displeasure. In 1581, three editions were printed; and of these, the third at Ferrara has been considered as that which first exhibited this celebrated work in its genuine form. It has occasioned some degree of surprise, that Tasso himself did not guard against these incorrect publications, by committing his work to the press in a more perfect state. His negligence in this respect has been attributed to some mental malady under which he laboured. Of the cause of this malady, different accounts have been given. Tiraboschi has narrated a variety of circumstances, which operating on a mind like that of Tasso, might have contributed to produce, or at least to aggravate the mental disorder under which he laboured. His first provocation seems to have been excited by a courtier, who divulged the secret of his amours, in the presence-chamber of Alfonso, duke of Ferrara, and whom he publicly insulted, so that he was under a necessity of defending himself with his sword against the aggressor and his three brothers. The brothers were banished, and Tasso was confined to his apartment. Disturbed in his mind, and dreading worse consequences, he made his escape, wandered to Turin, Rome and Sorrento, and at length obtained permission to return to Ferrara. Suspecting some hostile design, he withdrew to the court of Urbino, and again returned to Ferrara. Here his disorder was so manifest, that Alfonso ordered him to be shut up in a hospital appropriated to lunatics. The evidence of his disorder is said by some to have been an indecorous liberty which he took in saluting the princess Leonora, the duke's sister; but others have

have thought this circumstance very improbable, and indeed it is hardly necessary to make an attempt for justifying the duke's conduct in the confinement of Tasso, after he had given so many incontestible proofs of mental derangement. At length, however, Tasso was restored to entire liberty. But his disposition to wander still continued; and it is lamentable to reflect, that, as one of his biographers observes, "the admired author of 'Jerusalem Delivered,' the favourite of princes and the boast of Italy, should have harboured in his mind something which defeated every plan to render his circumstances prosperous." His last retreat was with Cardinal Cinzio Aldobrandini, at Rome, who obtained for him a pension from Pope Clement VIII., and had intended, as a compensation for his sufferings, to procure for him the honour of a solemn poetical coronation in the Capitol; but the ceremony was delayed on account of the cardinal's illness, and Tasso manifested symptoms of approaching dissolution. As soon as he was apprized of his danger, he was removed to the convent of St. Onofrio, where, deriving every possible consolation from the kindness of the cardinal, and exhibiting every evidence of sincere piety, he closed his days in April, 1595, at the age of 51. His remains were honourably interred, and after some time a monument was erected to his memory by Cardinal Bonifacio Bevilacqua, in the church of St. Onofrio. Tasso, "in person, was tall, active, and well-proportioned, naturally of a firm temperament, and fit for all bodily exercises. He was sparing of words, sedate and grave in manner, and in conversation displayed little of the fire that animates his works. He was kind and affectionate in all his social relations, and conducted himself with great propriety in company."

His works are very numerous. Those in prose consist of a great number of treatises, dialogues, and letters, on moral, literary, and familiar topics. In poetry, his "Gerusalemme Liberata" is pre-eminent. His "Gerusalemme Conquistata," published in 1593, was a kind of re-composition of the former work, but less satisfactory to its readers. His "Aminta" has been already mentioned; his "Rime" consisted of occasional and miscellaneous pieces; his "Sella Giornata," or Works of the Seven Days, pieces on sacred topics, bear the impression of the gloomy state of his mind. *Tiraboschi. Gen. Biog.* For a criticism on the works of Tasso, see the article POETRY.

TASSO, a small island on the western coast of Africa, at the mouth of the river Sierra Leone.

TASSO, or TASCUS. See THASOS.

TASSONI (Alessandro), an Italian poet and man of letters, was born of an ancient and noble family, at Modena, in the year 1565. Notwithstanding various disadvantages in early life, such as the loss of his parents, a feeble diseased frame, and the persecution of enemies, he successfully cultivated Greek and Latin literature, poetry, and eloquence. At the age of twenty he sought further improvement in the university of Bologna, and here, as well as at Ferrara, he directed his particular attention to jurisprudence. Being under a necessity of seeking employment, he went to Rome, where, being known by his writings, he was admitted into the service of cardinal Colonne, as secretary, and accompanied him to Spain in the year 1600. Being afterwards domesticated with cardinal Cesi, he became a member of the academies degli Umoristi and de' Lincei, and was held in high estimation among the literati of Rome. A specimen of his "Pensieri diversi" (Thoughts on various Subjects) was published in 1608, under the title of "Quesiti" and the whole in 1612. His "Considerations on Petrarch" were first printed in 1609, and were intended to restrain the prevalent idolatry of this author. In 1613 he entered into the service of Charles Emanuel, duke of Savoy, in which situation he was regarded as an enemy to the Spanish monarchy; and he was considered as the author of "Philippics" against the Spaniards, and of a book entitled "Essequie della Monarchia di Spagna." In 1623, he quitted the family of Savoy; and about this time he finished "A Compendium of the Annals of Baronius." In 1626, he was taken into the service of cardinal Lodovico, nephew of Gregory XV.; and upon his death, in 1632, he was invited to the

court of Francis I., duke of Modena, who gave him a pension and some honorary titles. Of this situation death deprived him in 1635, at the age of 70. One of his biographers says of him, that "he had a prepossessing countenance, with a cheerful expression, was open in conversation, a good speaker, serious or pleasant, according to the occasion, of a lively imagination, and sound judgment." The work by which the memory of Tassoni is chiefly preserved, is his mock heroic poem "La Secchia Repita." *Tiraboschi. Gen. Biog.*

Another Alessandro Tassoni of Modena, born in 1488, made a compilation of the different annals of that city, published in Muratori's Collection of Italian historians.

TASSOWITZ, or TASZWITZ, a village of the Austrian states, in Moravia, on the Theya, in the circle of Znaym, with 1100 inhabitants.

TASTABLE, *adj.* That may be tasted; savoury; relishing.—Their distilled oils are fluid, volatile and *tastable*. *Boyle.*

To TASTE, *v. a.* [*taster*, to try, French. *Dr. Johnson.*—The old French word *tasten* is to handle, to feel, to touch, as the Germ. and Teut. *tasten*, from which Kilian and Wachter derive the French; and the latter deduces the word from *tatse*, the hand. *Taste-vin* Cotgrave calls a broker for wine-merchants. Richelet shews *taster*, under the form of *tâter*, as common in the sense of perceiving by the palate: "*tâter*, du vin, de la biere, &c." *Dict. 1685.*]

To perceive and distinguish by the palate.—The ruler of the feast *tasted* the water made wine. *St. John.*—To try by the mouth; to eat at least in a small quantity.—Bold deed to *taste* it under ban to touch. *Milton.*—To essay first.

Thou and I marching before our troops
May *taste* fate to them, mow them out a passage. *Dryden.*

To obtain pleasure from.
So shalt thou be despis'd fair maid,
When by the sated lover *tasted*;
What first he did with tears invade,
Shall afterwards with scorn be wasted. *Carew.*

To feel; to have perception of.—He should *taste* death for every man. *Heb.*—To relish intellectually; to approve.—Thou, Adam, wilt *taste* no pleasure. *Milton.*

To TASTE, *v. n.* To try by the mouth to eat.—Of this tree we may not *taste* nor touch. *Milton.*—To have a smack; to produce on the palate a particular sensation.—When kine feed upon wild garlic, their milk *tasteth* of it. *Bacon.*—To distinguish intellectually.

Scholars, when good sense describing,
Call it *tasting* and imbibing. *Swift.*

To be tintured, or receive some quality or character.
Ev'ry idle, nice, and wanton reason
Shall, to the king, *taste* of this action. *Shakspeare.*

To try the relish of any thing.
The body's life with meats and air is fed,
Therefore the soul doth use the *tasting* power
In vains, which through the tongue and palate spread,
Distinguish every relish sweet and sour. *Davies.*

To have perception of.
Cowards die many times before their deaths;
The valiant never *taste* of death but once. *Shakspeare.*

To take to be enjoyed.
What hither brought us? not hope here to *taste*
Of pleasure. *Milton.*

To enjoy sparingly.
This fiery game your active youth maintain'd,
Nor yet by years extinguish'd, though restrain'd;
You season still with sports your serious hours,
For age but *tastes* of pleasures, youth devours. *Dryden.*

TASTE, *s.* The act of tasting; gustation.—Best of fruits, whose *taste* gave elocution. *Milton.*—The sense by which
the

the relish of any thing on the palate is perceived.—Bees delight more in one flower than another, and therefore have *taste*. *Bacon*.—Sensibility; perception.

Music in the close,

As the last *taste* of sweets is sweetest last. *Shakspeare*.

That sensation which all things taken into the mouth give particularly to the tongue, the papillæ of which are the principal instruments hereof. *Quincy*.—Though there be a great variety of *tastes*, yet, as in smells, they have only some few general names. *Locke*.—Intellectual relish or discernment.—Seeing they pretend no quarrel on other psalms which are in like manner appointed to be daily read, why do these so much offend and displease their *tastes*? *Hooker*.—An essay; a trial; an experiment. *Not in use*.—I hope, for my brother's justification, he wrote this as an essay or *taste* of my virtue. *Shakspeare*.—A small portion given as a specimen.—They thought it not safe to resolve, till they had a *taste* of the people's inclination. *Bacon*.

TASTED, *adj.* Having a particular relish.—Coleworts prosper exceedingly, and are better *tasted*, if watered with salt water. *Bacon*.

TA'STEFUL, *adj.* High relished; savoury.—A sharp kind of sourness in sauces is esteemed pleasing and *tasteful*. *Bp. Hall*.

TA'STELESS, *adj.* Having no power of perceiving taste. Having no relish or power of stimulating the palate; insipid.—By deparating chemical oils, and reducing them to an elementary simplicity, they could never be made *tasteless*. *Boyle*.—Having no power of giving pleasure; insipid.—If by his manner of writing a critic is heavy and *tasteless*, I throw aside his criticisms. *Addison*.—Having no intellectual gust.—With all his faults, [as a prose-writer,] and exclusive of his character as a poet, he [Milton] must ever remain the only learned author of that *tasteless* age in which he flourished. *Orrery*.

TA'STELESSNESS, *s.* Insipidity; want of relish.—They are tainted with that creature vanity, a *tastelessness* (as it were) that is in all created pleasure or profit external. *Whitlock*.—Want of perception of taste. Want of intellectual relish.—The work of writing notes is performed by railing at the stupidity, negligence, ignorance, and asinine *tastelessness* of the former editors. *Swift*.

TA'STER, *s.* [*tasteur*, Fr.] One who takes the first essay of food.

Fair hope! our earlier heaven! by thee

Young time is *taster* to eternity.

Crashaw.

A dram cup. *Ainsworth*.

TASTNESS, a cape on the north of the island of Sanday. Lat. 59. 10. N. long. 2. 21. W.

TA'STY, *adj.* Expressed or done so as to shew intellectual relish. *A modern word*.

TAT, an insular rock in the Baltic, forming a part of the group of the Ert Holmer, and lying about 700 feet to the north of the petty isle of Grësholm.

TATA YOUNBA, a name used by some for the tree which yields what the dyers call the fustic, or yellow wood used in dyeing.

TATA, or **DOTIS**, a large town in the west of Hungary, situated on a height in the midst of marshes; 64 miles east-south-east of Presburg. It contains 8600 inhabitants, and is divided into two parts called Dotis and Tovaris.

TATAAG, a black fish much esteemed by the rhode islanders.

TATAR, a fort of Borneo, erected by the Dutch in 1709. It is a dependency on Java, and is situated about 4 degrees north from the east end of it, on a fine river; and, from its commerce and great population, is of considerable importance.

TATARBASAR, or **TATAR BAZARGIK**, a considerable inland town of European Turkey, in Bulgaria, near the Marizza, the ancient *Hebrus*. It is situated on the great road from Constantinople to Belgrade, or rather from Philippopoli to Sophia. It is little visited by travellers; but is said to contain several mosques, baths, and other good buildings,

with about 10,000 inhabitants; 14 miles north-north-west of Philippopoli.

TATARBINAR, a small town in the south-west of European Russia, in Bessarabia; 70 miles south of Bender.

TATCHBROOK, **BISHOP'S** and **MALLORY**, two united parishes of England, in Warwickshire; 3½ miles south-east Warwick. Population 574.

TATHAM, a parish of England, in Lancashire; 11½ miles north-east-by-east of Lancaster. Population 676.

TATHWELL, a parish of England, in Lincolnshire; 2½ miles south-west-by-south of Louth.

TATIAN, a native of Assyria, from which circumstance he is sometimes called "the Assyrian," and an ecclesiastical writer, who, according to Cave, flourished about the year 172. He was originally a heathen, and by profession a sophist, and teacher of rhetoric. His reading appears to have been extensive, and he is allowed to have been well acquainted with Grecian literature and philosophy. He appears to have written a considerable number of books, one of which, still extant in Greek, and entitled "Oratio ad Græcos," or Oration against the Gentiles, was either an apology for Christianity, or an attack on Heathenism. This was first printed at Zurich in 1546, with the Latin version of Conrad Gesner, it is annexed to the edition of Justin Martyr's works, and those of other fathers: but the best edition is that of Worth, Greek and Latin, Oxon. 1700, 8vo. His design in this work, which displays great learning, was to prove that the Greeks were not the inventors of any of the sciences, but that they were indebted for their acquaintance with them to those whom nevertheless they denominated Barbarians. This work, according to Brucker, everywhere breaths the spirit of the Oriental philosophy, the leading tenets of which he details; and he seems to have adopted several of the opinions of Plato, and of the Alexandrian Platonists, concerning the creation of the world by the Logos, and its animation by a subordinate spirit; concerning the existence of demons in material vehicles, who occupy the aerial regions, and that of æons, who reside above the stars. He also held with Plato the imperfection of matter as the cause of evil, and thence he inferred the meritoriousness of rising above corporeal appetites and passions. Another work of Tatian, cited by St. Clement, was entitled "Perfection according to the Saviour," in which he argued against marriage. Eusebius cites another work composed by Tatian, which was a "Book of difficult Questions, for the explication of several obscure places of Scripture." We have also in Latin a work ascribed to Tatian, called, "Harmony" or "Dia-Tessaron" of the Four. But some approved writers have doubted whether we have one copy of Tatian's Harmony now extant. Dr. Lardner, however, inclines to the opinion, that we are in possession of this work.

TATISCHEVA, a fortress of Asiatic Russia, in the government of Oufa, on the Oural; 28 miles west of Orenburg.

TATISM KOH, a mountain of Irak, in Persia; 12 miles north of Koom.

TATIUS (Achilles), a Greek writer of Alexandria, is supposed to have lived in the latter part of the third century. He is known to us as the author of a work on the Sphere, of which there remains a fragment, being an introduction to a commentary on the Phenomena of Aratus. A copy of this from a MS. in the Florentine library, by Peter Victorius, was printed. It was afterwards translated into Latin by Petau, under the title of "Isagoga in Phenomena Arati." We learn from Suidas, that Tatius also wrote "Erotics," in which he includes "the Loves of Leucippe and Clitophon." This work is preserved, and affords one of the examples of Greek romance. The Latin version of it was made by Annibal Cruceius, and published at Basil in 1554. The latest edition of this piece is that of Bodem, Greek and Latin, Lips. 1776, 8vo. It is elegantly written, but of a licentious cast; and hence it has been inferred that the author was a heathen, when he composed it; but Suidas affirms, that he afterwards became a christian, and attained to episcopacy.

TATMAGOUCHE, or **TATAMAGOUCHE**, a place in

Nova Scotia, on a short bay which sets up southerly from the straits of Northumberland; about 25 miles from Onslow, and 21 from the island of St. John's. It has a very good road for vessels, and is known also under the name of *Tatamaganabou*.

TATNAM, CAPE, the eastern point of Haye's river, in Hudson's bay. Lat. 57. 35. N. long. 91. 30. W.

TATON HILL, a parish of England, in Staffordshire; 3 miles west-south-west of Burton-upon-Trent.

TATOOTCHE, a barren island, on the north-west coast of North America, situated at the entrance of Juan de Fuca's straits.

TATRA, that part of the Carpathian mountains that lies in the Hungarian counties of Zyps, Liptau, and Arva. It contains the highest part of the chain. The peaks are covered with perpetual snow, the Krivan and Lomnitz rising to the height of at least 8500 feet above the level of the sea.

TATSFIELD, a parish of England, in Surrey; 6 miles north-east-by-east of Godstone.

TATTA, or **AKKA**, a station on the southern frontier of Morocco, forming the point of assemblage for the caravans that are to proceed to Tombuctoo; 150 miles south-south-east of Morocco.

TATTA, an extensive district of Hindostan, province of Sinde. Its limits comprehend the whole of the Delta of the river Indus, calculated at 150 miles in length, by 50 in breadth.

TATTA, an ancient and celebrated city, and capital of the above mentioned district. It is situated near the bank of the Indus, about 130 miles from the sea. The town stands in a fertile valley, formed by a range of low hills, which, during the freshes of the river, is frequently inundated; which circumstance often gives the city the appearance of an island. Some of the houses are built of brick and mortar, but the greater number are constructed of mud and timber. The old English factory, purchased in 1751, is still reckoned the best house in the town; it was formerly surrounded by a brick wall, and had a small citadel, but both are fallen to decay. The circumference of the modern town is four miles, and is supposed to contain 15,000 inhabitants. Doctor Robertson was of opinion, that Tatta was the *Pattala* of the Greeks; but this name more probably refers to the ancient capital of Brahminabad. Lat. 24. 44. N. long. 68. 17. E.

TATTARAN, a small island in the Sooloo archipelago. Lat. 6. 10. N. long. 121. 53. E.

TATTENHALL, a parish of England, in Cheshire; 5½ miles south-west-by-west of Tarporley. Population 809.

TATTENHALL, a parish of England, in Staffordshire, near Wolverhampton. Population 1168.

TATTENHOE, or **TOTTENHOE**, a parish of England, in Buckinghamshire; 2½ miles west of Fenney Stratford.

To **TATTER**, *v. a.* [τῶσαν, Sax.] To tear; to rend; to make ragged. *Tattered* is perhaps more properly an adjective.

Through *tatter'd* cloaths small vices do appear,
Robes and furr'd gowns hide all. *Shakspeare.*

TATTER, *s.* A rag; a fluttering rag.—This fable holds, from him that sits upon the throne, to the poor devil that has scarce a *tatter*. *L'Estrange.*

TATTERDEMA'LION, *s.* A ragged fellow.—As a poor fellow was trudging in a bitter cold morning with never a rag, a spark that was warm clad called to this *tatterdema-lion*, how he could endure this weather? *L'Estrange.*

TATTERFORD, a parish of England, in Norfolk; 4 miles west-by-south of Fakenham.

TATTERSETT, a parish in the above county, adjoining to the foregoing.

TATTERSHALL, a market town of England, in the county of Lincoln, situated in a marshy country on the river Bain, which is navigable by boats to its confluence with the Withan. The town is small, and the houses mostly built of brick. The church, in the form of a cross, is a beautiful and spacious edifice, though few have suffered more dilapi-

ations. It consisted of a nave, transept, and a magnificent choir. The castle stands on a level moor, and is surrounded by two great fosses, one of which is occasionally filled with water from the river. It was originally intended as a place of defence, and was progressively raised to great height and extent. In the civil wars, however, it was dilapidated; and the only part now remaining is a square tower of brick, above 200 feet high, and divided into four stories. It is flanked by four octangular embattled turrets, which are crowned with spires. The castle was built by Sir Ralph Cromwell, who was made treasurer of the exchequer by king Henry VI., in 1433. Tattershall formed part of the possession granted by William the Conqueror to Eudo, one of his Norman followers. Robert Fitz-Eudo obtained a grant from king John, by presenting that monarch with a well-trained gos-hawk, for the inhabitants of this town to have the privilege of holding a market weekly on Fridays; and his son, in the time of Edward III., received the royal licence to erect a castle within the manor. Tattershall contains 104 houses, and 506 inhabitants. Market on Friday, and two annual fairs; 12 miles north-west of Boston, and 127 north of London.

TATTERSHALL, THORPE, a parish of England, in Lincolnshire, about three quarters of a mile from the town of Tattershall.

TATTINGSTONE, or **TADINGSTONE**, a parish of England, in Suffolk; 5½ miles south-west-by-south of Ipswich. Population 519.

To **TATTLE**, *v. n.* [*tateren*, Dutch.] To prate; to talk idly; to use many words with little meaning.—The one is too like an image, and says nothing; and the other too like my lady's eldest son, evermore *tattling*. *Shakspeare.*

TATTLE, *s.* Prate; idle chat; trifling talk.

They ask'd her, how she lik'd the play?
Then told the *tattle* of the day.

Swift.

TATTLER, *s.* An idle talker; a prater.—Going from house to house, *tattlers*, busy bodies, which are the canker and rust of idleness, as idleness is the rust of time, are reproved by the apostle. *Ep. Taylor.*

TATTON, a hamlet of England, in Cheshire; 2 miles north of Nether Knutsford.

TATTO'O, *s.* [from *tapotes tous*, Fr.] The beat of drum by which soldiers are warned to their quarters.

All those whose hearts are loose and low,
Start if they hear but the *tattoo*.

Prior.

TATTOOING, a name given at Otaheite, and other islands of the South sea, to the operation of staining the body. For this purpose they prick the skin, so as just not to fetch blood, with a small instrument, somewhat in the form of a hoe, or blade of a saw; that part which answers to the blade is made of a bone or shell scraped very thin, and from a quarter of an inch to an inch and a half wide: the edge is cut into sharp teeth or points, from the number of three to twenty, according to its size. When this is to be used, they dip the teeth into a mixture of a kind of lamp-black, formed of the smoke that rises from an oily nut which they burn instead of candles, and water, or charcoal-dust diluted with water; the teeth, thus prepared, are placed upon the skin, and the handle to which they are fastened, being struck by quick smart blows, with a stick fitted for the purpose, they pierce it, and at the same time carry into the puncture the black composition, which leaves an indelible stain.

TATTORA, a town of Hindostan, province of Bejapoor, belonging to the Mahrattas. Lat. 17. 53. N. long. 74. 29. E.

TATTUBT, the remains of a considerable town in Algiers, the ancient *Tadutti*, where some beautiful granite pillars were some years since dug up, and placed in a mosque at Constantina; 25 miles south of Constantina.

TATU, in Zoology, the Brazilian name for the armadillo, or shell-hedge-hog, or *dasypus* of Linnæus. See *DASYPUS*.

TATU-Apara, the name of a creature of the armadillo kind, being three-banded or *tricinctus dasypus* of Linnæus. See **DASYPUS**.

TAU, in our *Ancient Customs*, signifies a cross.—“*Traddendo dicto comiti Thau eboreum.*” So Mr. Selden, in his notes upon Eadmerus, p. 159. “*Ego Eadgisa prædicti regis ava hoc opus egregium crucis Taumate consolidavi.*” See *Mon. tom. iii. p. 121.*

TAUAG, a village of Farsistan, in Persia; 39 miles south-east of Bender Rigg.

TAVAI POENAMMOO, an island in the South Pacific Ocean, being the most southerly of the two which form New Zealand, and separated from the northern island by a channel called Cook's Straits, discovered by Captain (then lieutenant) Cook, who sailed round them both in the year 1769. It is about 500 miles in length from south-west to north-east, and from 55 to 140 broad. The Endeavour passed nearer on the north-west coast than on the south-east. Captain Cook says, “On the 11th March, when we were off the southern part, the land then seen was craggy and mountainous, and there is great reason to believe that the same ridge of mountains extends nearly the whole length of the island. Between the westernmost land which we saw that day, and the easternmost, which we saw on the 13th, there is a space of about six or eight leagues, of which we did not see the coast, though we plainly discovered the mountains inland. The sea-coast near Cape West is low, rising with a gradual and easy ascent to the foot of the mountains, and being in most parts covered with wood. From Point Five Fingers down to lat. 44. 20. S., there is a narrow ridge of hills that rises directly from the sea, and is covered with wood. Close behind these hills are the mountains, extending in another ridge of a stupendous height, and consisting of rocks that are totally barren and naked, except where they were covered with snow, which was seen by Captain Cook in large patches upon many parts of them, and has probably lain there ever since the creation of the world. A prospect more rude, craggy, and desolate, than this country affords from the sea, cannot possibly be conceived; for as far inland as the eye can reach, nothing appears but the summits of rocks, which stand so near together, that instead of valleys there are only fissures between them. From lat. 44. 20. to lat. 42. 8. S., these mountains lie farther inland, and the sea-coast consists of woody hills and valleys of various height and extent, and has much appearance of fertility. Many of the valleys form plains of considerable extent, wholly covered with wood; but it is very probable that the ground in many places is swampy, and interspersed with pools of water. From lat. 42. 8. to 41. 30. S., the land is not distinguished by any thing remarkable: it rises into hills directly from the sea, and is covered with wood; but the weather being foggy while we were upon this part of the coast, we could see very little inland, except now and then the summits of the mountains, towering above the cloudy mists that obscured them below, which confirmed my opinion that a chain of mountains extended from one end of the island to the other.” Lat. 40. 36. to 47. 20. S. long. 184. 45. to 193. 18. W.

TAVALARO, CAPE, a promontory at the southern extremity of Sardinia. Lat. 38. 53. N. long. 8. 27. E.

TAVANDA, a river of Quito, in the province of Ibarra, which rises in the mountain desert of Cayamburu, and passing through the town of Ibarra, the capital, turns east, and enters the Mira.

TAVASTHUS, or **KRONEBURG**, a small town of European Russia, in Finland, formerly the capital of the district of Tavastland. It contains only 1700 inhabitants, and has a fortified castle, with an arsenal and magazines; 80 miles east-north-east of Abo. Lat. 61. 3. N. long. 24. 26. 30. E.

TAVASTLAND, the former name of a district of Finland, bounded by East Bothnia on the north, and by Nyland on the south. Its length from north to south is about 150 miles; its breadth from east to west varies from 35 to 100 miles.

TAVAYVORE, a small island near the east coast of Lewis. Lat. 58. 6. N. long. 6. 29. W.

TAUBE (Frederick William, Von), born in London in the year 1728. After the queen's death, the father settled at Zelle, where he died in 1742; and in the following year his son was entered at the university of Gottingen. Here he assiduously applied to the study of jurisprudence; and before he left the university, being in his 19th year, he published a dissertation “*De Differentiis Juris civilis a jure Natura,*” intended to prove that the principles of the Roman, Canon, and German law were contrary to the law of nature, and inconsistent with the rights of man. Being acquainted with the English language, he was appointed secretary to the Imperial ambassador at the court of London, and repaired hither in October, 1763. Here he married a niece of the celebrated Dean Tucker, with whom he lived in habits of intimacy and friendship. In 1766, he returned to Vienna, and was appointed secretary to the council of trade. When this college was dissolved, in 1776, he retired to Brussels. Having fulfilled another confidential commission with which he was entrusted, he returned from Belgrade to Vienna 1777, and was ennobled by the emperor, and appointed a member of the government of Lower Austria. His health being much impaired, required an attention which it did not suit his inclination or occupation to give it; his disorder, which was an inflammation of the lungs, increased, and terminated his life in June, 1778, in the 50th year of his age. He was justly honoured for his integrity, his zeal to serve his friends, and his liberality. His principal works are the tract already mentioned; “*Thoughts on the present state of our Colonies in America, on their Behaviour to the Mother-Country, and on the true interest of the Nation in regard of the Colonies,*” London, 1766; “*Historical and Political Sketch of the present state of the English Manufactures, Trade, Navigation, and Colonies, &c.*” 1774, 8vo.; “*History of the English Trade, &c., from the earliest Periods till the Year 1776, with an authentic Account of the true Causes of the present War with North America,*” 1776, 8vo.; “*J. J. Schetzen's Elements of Geography, improved and enlarged,*” 1786, 8vo.; “*Historical and Geographical Description of the Kingdom of Sclavonia and Duchy of Syrmia, &c., in three parts,*” 1777, 1778; “*An Account of various New Discoveries made in 1776 and 1777, in Sclavonia, &c. &c.*” Leipsic, 1777, 4to. He contributed also, between the years 1773 and 1778, to Busching's periodical publications. He also communicated to the Royal Society of London “*A short Account of a particular Kind of Torpedo found in the River Danube, with several Experiments on that Fish,*” published in the *Phil. Trans.* for 1775. *Gen. Biog.*

TAUBER, a river in the west of Germany, which rises in Franconia, and after watering the north-east angle of the Wirtemberg and Baden territories, falls into the Maine at Wertheim. It has a pretty large stream, but is not navigable.

TAUCA, a small river of Guiana, which enters the Cayra near its mouth.

TAUCHA, a small town of Germany, in Saxony, on the small river Parde; 6 miles north-east of Leipsic. Population 1300.

TAUD, a river of England, in Lancashire, which runs into the Dowles, near Lathom Park.

TAUDA, a river of Asiatic Russia, formed by the junction of the Sosva and the Losva, and which falls into the Tobol; 40 miles south of Tobolsk.

TAUDENY, a large village in the desert of Sahara, in Africa, on the caravan route from Morocco to Tombuctoo; 270 miles north-north-west of Tombuctoo.

TAUDICOOMBOO, a town of the south of India, district of Dindigul. Lat. 10. 24. N. long. 78. 2. E.

TAVE, a river of Wales, in Carmarthenshire, which runs into the Severn at St. Clear, near Laugharn.

TAVELA, a small river of Mexico, in the province of Culiacan, which runs into the sea in the gulf of California.

TAVERHAM, a parish of England, in Norfolk; 5 miles north-west of Norwich.

TAVERN,

TA'VERN, *s.* [*taberna*, Lat.] A house where wine is sold, and drinkers are entertained.

Enquire at London, 'mong the *taverns* there;
For there they say he daily doth frequent,
With unrestrained loose companions.

Shakspeare.

TAVERNA, a small town of Italy, in the south of the kingdom of Naples, in Calabria Ultra. Population 2000; 12 miles east-north-east of Nicastro, and 22 south-south-east of Cosenza.

TA'VERNER, **TA'VERNKEEPER**, or **TA'VERNMAN**, *s.* [*tabernarius*, Lat.; *tavernier*, Fr.] One who keeps a tavern.—After local names, the most in number have been derived from occupations; as tailor, archer, *taverner*.
Camden.

TAVERNES, a small town in the south-east of France, department of the Var. Population 1400; 20 miles north of Brignolles.

TAVERNIER (John Baptist), a distinguished traveller, was the son of a native of Antwerp, and born at Paris in the year 1605. The frequent inspection of the maps and charts sold by his father, inspired him with a passion for travelling; so that at the age of twenty-two he had made tours through France, England, the Low Countries, Germany, Switzerland, Poland, Hungary, and Italy. In his business as a jeweller he was eminently skilful; and he employed 40 years in six journies in Turkey, Persia, and the East Indies, by all the practicable routes. Having acquired great wealth, on his return from his sixth journey in 1668, he determined as a Protestant to live under a free government; and, with this view, purchased the barony of Aubonne, near the lake of Geneva. But having suffered very considerable loss of property by the misconduct of a nephew, he sold his barony in 1687, and commenced a seventh journey, which terminated his life at Moscow in 1689, at the age of 84. Destitute of talents for writing, he employed Sam. Chappuzeau of Geneva to arrange his memoirs, which is said to have been no easy task. The fruit of this labour was given to the public in two volumes, describing his six journies, in 1679; and another was added in 1681, by La Chapelle, containing an account of Japan and Tonquin, with a history of the colony of the Dutch in the East Indies. These memoirs of Tavernier, notwithstanding reflections on his veracity, and charges of plagiarism, have been often cited as authority by later writers. Gibbon represents him as "the jeweller who saw so much and so well." *Bayle. Moreri. Gen. Biog.*

TAVERNIER KEY, a small isle on the north coast of Cuba, one of the Tortugas; 2 miles from the south-west end of Key Largo, and 5 north-east of Old Matabombe. To the northward of this last island is a very good road.

TA'VERNING, *s.* Act of feasting at taverns.—The misrule of our *tavernings*. *Bp. Hall.*

TAUFERS, the name of two large villages of the Austrian states, both in Tyrol. The one is 37 miles south-east of Innspruck; the other on the borders of Switzerland; 4 miles west of Glurantz.

TAUGHT, *pret. and part. passive of teach.*—How hast thou satisfy'd me, *taught* to live. *Milton.*

TAULE, a village of Lower Egypt, on the Nile; 2 miles north of Mansora.

TAVIRA, or **TAVILA**, a sea-port in the south of Portugal, in Algarva, at the mouth of the river Segua, which divides it into two. It is surrounded by a wall, and farther defended by a castle: there are also two small forts at the mouth of the harbour. The house of the governor of Algarva, who resides here, is an elegant structure, and the town is, on the whole, tolerably built. It has two churches, an hospital, five convents, and about 5000 inhabitants. The entrance of the harbour is obstructed by a sand-bank; but the export trade, in figs, almonds, and other fruit, is considerable. The fishery also is abundant; 140 miles south-south-east of Lisbon, and 12 west of Castromarin. Lat. 37. 7. 15. N. long. 7. 34. 15. E.

TAVISTOCK, a market town and borough of England, in Devonshire, situated on the river Tavy or Tave, from

which it derives its name. It is one of the stannary towns, and is large, populous, and well built. The streets are narrow, and but indifferently paved, and many of the houses have an appearance of age. The church is a spacious building, dedicated to St. Eustatius. It consists of four aisles, a chancel, and a tower at the west end, raised on arches. Sir Francis Drake, the celebrated navigator, was a native of this place. Many of the inhabitants of the town are employed in the manufacture of serges for the East India Company. The town contains 503 houses, and 4723 inhabitants. Market on Friday; 32 miles west-by-south of Exeter, and 206 west-by-south of London. Lat. 50. 33. N. long. 4. 8. W.

TAUJEPOOR, a town of Bengal, district of Purneah. It formerly had a cantonment for a battalion of native infantry. Lat. 25. 45. N. long. 88. 15. E.—There are several other places of this name.

TAULE, a small town in the north-west of France, department of Finisterre, with 2500 inhabitants, and some paper manufactures; 3 miles north-west of Morlaix, and 33 north-east of Brest.

TAULIGNAN, a small town in the south-east of France, department of the Drome, with 1400 inhabitants, employed partly in the manufacture of silk; 14 miles south-east of Montelimart.

TAULLAR, or **JAULAH MHOORKEE**, a town of Upper Hindostan, province of Lahore, and district of Nadone. It contains a temple, held in high estimation by the Hindoos, on account of a volcanic flame which issues from the side of a mountain in its vicinity, believed by the credulous to be an emanation of the Deity. Lat. 32. 5. N. long. 75. 45. E.

TAUMAGO, an island in the Pacific Ocean, discovered by Quiros in 1606; about 24 or 25 miles in circumference. The island abounds with bananas, cocoa-trees, and palms; it produces also sugar canes, and many kinds of nutritious roots. The fleet here obtained, without difficulty, refreshments, water and wood, of which it stood in great need. The Spaniards lived on good terms with the natives, who were eager to procure them all the assistance that their island afforded; nor was peace infringed till the very moment of their departure. Thinking that it would be of service in the remainder of their voyage, to have some Indians on board, who might act as guides or interpreters, the Spaniards seized four, whom they carried on board by force. Their chief was soon informed of it, and came to demand them in the most earnest manner; but they were refused, and war was instantly declared. A fleet of canoes came out to attack the Spanish ships, which their fire arms quickly dispersed, and would totally have destroyed, had not these brave islanders, with all their courage, been sensible of their inferiority. Lat. 10. S. long. 169. 25. E.

TAUME, a river of England, which rises in Yorkshire, and runs into the Mersey at Stopford, in Lancashire, opposite Stockport.

TAUNDA, a town of Hindostan, province of Oude, advantageously situated on the south side of the river Goggrah, celebrated for its manufacture of cotton cloths, particularly table linen, made in imitation of diaper and dimity. The vicinity also produces indigo, sugar, &c. It is in consequence the residence of several European merchants. Lat. 26. 33. N. long. 82. 38. E.

TAUNDA, a town of Hindostan, province of Gujerat, and district of Cambay. Lat. 22. 55. N. long. 74. 29. E.

TAUNDLA, a town of Hindostan, province of Malwah, belonging to the Mahrattas. Lat. 23. 4. N. long. 74. 38. E.

To **TAUNT**, *v. a.* [*tanser*, Fr. *Skinner. Tanden*, Dutch, *to shew teeth. Minsheu*. And thus Serenius refers it to the ancient word *tand*, dens, a tooth; *tanna*, Icel. dentibus mandere, carpere; not without offering also to notice the Swed. *danta*, which means to censure, to blame.] To reproach; to insult; to revile; to ridicule; to treat with insolence and contumelies.

When I had at my pleasure *taunted* her,
She in mild terms begg'd my patience.

Shakspeare.

To

To exprobrate; to mention with upbraiding.

Rail thou in Fulvia's phrase, and *taunt* my faults
With such full licence. *Shakspeare.*

TAUNT, *s.* Insult; scoff; reproach; ridicule.

With scoffs and scorns, and contumelious *taunts*,
In open market-place produc'd they me,
To be a public spectacle. *Shakspeare.*

TAUNTER, *s.* One who taunts, reproaches, or insults.
Huloet.

TAUNTINGLY, *adv.* With insult; scoffingly; with
contumely and exprobaton.

It *tauntingly* replied
To th' discontented members, th' mutinous parts,
That envied his receipt. *Shakspeare.*

TAUNTON, a market town and borough of England, in the county of Somerset. It is situated upon the river Tone, is one of the principal towns in the county, and, in point of size, buildings, and the respectability of its inhabitants, may vie with many cities. It extends in length nearly a mile from east to west, and consists of four principal streets, with various minor ones branching off. The streets are wide and airy; the houses are very well built, and most of them have small gardens behind, which add greatly to their healthiness, as well as to the convenience of the inhabitants. The country in the vicinity is the most delightful imaginable; and the vale of Taunton, or Taunton Dean, is proverbial for its fertile soil and temperate climate. The public buildings are the churches, the market-house and town-hall, with the free grammar school. The parish churches are two in number, viz., St. Mary Magdalen's and St. James's. St. Mary's is a very elegant and splendid building, situated near the centre of the town. It is built in the Gothic style of architecture, whence it has been supposed to have been founded by Henry VII. as were several other churches in Somersetshire, in token of his gratitude to the county for their steady adherence to the house of Lancaster. Besides the parish churches, there are several dissenting meeting-houses in the town. The largest, as well as the oldest, is called Paul's meeting-house.

The market-house stands in the centre of the town, and is a handsome and commodious building, with several apartments for different purposes. In the lower part is the town-hall, and a coffee-room furnished with newspapers, &c. On the first floor there is an elegant assembly-room, 50 feet long, and 30 wide, in which hang two superb chandeliers, presented to the inhabitants of Taunton by the late colonel Coxe, when representative for the county. In the upper floor is a handsome room, supplied with a billiard-table. On each side of this house is a large wing or arcade, for the accommodation of those who attend the markets with poultry, butter, and other articles of provisions. The corn-market is also held in one of the arcades. In front is a spacious area, on which are erected moveable stalls, placed in rows, for the use of the butchers. This area is inclosed by posts and chains. In the middle of it, to the north, is a noble pavement of broad stones, 216 feet in length, and 18 broad, which is called the Parade. The free grammar school of Taunton was founded in the reign of Henry VII. by Richard Fox, bishop of Winchester. It was liberally endowed about the year 1553, by William Walbee. The charitable institutions in Taunton consist of several alms-houses, two work-houses, and an hospital or infirmary. The work-houses support a considerable number of poor. Taunton hospital is an oblong building, situate in East Reach, and was erected by subscription in 1811, to commemorate the jubilee kept in honour of his late majesty's having attained the 50th year of his reign. The building which was erected about 50 years ago for the purpose of an hospital, has been converted into a convent, and is now inhabited by nuns of the order of St. Bridget, who came into England during the troubles occasioned by the revolution in France. Part of the castle of Taunton still remains. It was originally built by Ina, king of the West Saxons, so early as

the year 700. On the north side of the town stands a farmhouse, called the Priory, near to which there was once a priory of black canons, which was founded by William Gifford, bishop of Winchester, in the reign of Henry I. Besides this, there were several chapels and chantries in Taunton, all of which were dependent on the mother church, in the convent dedicated to St. Peter and St. Paul. Taunton carries on some manufactures, and also a considerable trade to Bridgewater by means of the Tone, which is navigable for small craft. It was for a long period the principal seat of the manufacture of coarse woollen goods, such as serges, druggets, shalloons, &c. This manufacture flourished here soon after its introduction into England by the memorable John Kemp, from Flanders.

Large quantities of malt liquor are sent from this town to Bristol for exportation. Taunton is an ancient borough by prescription, but its rights were confirmed by a charter at a very early period. In the reign of Charles II. it was deprived of its charter by that prince, on account of its adherence to the parliament during the reign of his father. He restored its privileges, however, about 17 years thereafter. During the existence of its charter, the corporation consisted of a mayor, recorder, two aldermen, 24 capital burgesses, a town-clerk, two constables, and two serjeants-at-mace. Besides these magistrates, there were six gentlemen, justices of the peace at large, with powers to act within the borough. The mayor and aldermen were elected annually from among the burgesses. About 1792, the corporate body was dissolved, and the charter lost, on account of the number of members having been allowed to decrease below a majority of the whole.

Taunton is a place of great antiquity, and numerous Roman coins have been found in the neighbourhood. It is certain that it was a place of some note in the time of the Saxons, from the circumstance of king Ina building his castle here. In 1821 Taunton contained 1503 houses, and 8539 inhabitants. Markets on Wednesday and Saturday, which are very considerable; 31 miles north-east of Exeter, and 140 west of London. Lat. 51. 1. N. long. 3. 6. W.

TAUNTON, a post township of the United States, and capital of Bristol county, Massachusetts, on the river Taunton. Lat. 41. 24. N. long. 71. 10. W.

TAUNTON, a river of the United States, which empties into Narraganset bay, at Tiverton, opposite the north end of Rhode Island. It is formed by several streams which rise in Plymouth county, Massachusetts. Its course is about 50 miles from north-east to south-west, and it is navigable for small vessels to Taunton, which is about 20 miles.

TAUNTON-DEAN, or the VALE OF TAUNTON, a district of England, in the county of Somerset, extending about 30 miles along the course of the river Tone, and noted for its remarkable fertility and produce.

TAVO POINT, a cape on the north coast of Java. Lat. 6. 27. S. long. 111. 4. E.

TAVOLARA, a small island on the north-east coast of Sardinia, in front of the entrance of the harbour of Terra Nova. The only occupants of this island are wild goats.

TAVORA, a small town of the north of Portugal, in the province of Beria; 6 miles east of Lamego.

TAVOY, a town of the Birman empire, province of Pegue, and district of Martaban. It is advantageously situated on the eastern side of a fine bay, formed by an extensive island of the same name, and were it not for the jealousy of its present possessors, might be a place of considerable commerce. Tavoy formerly belonged to the king of Siam, but was taken by the Birmans in 1785. It was besieged the following year by the Siamese, but was so well defended, or rather the besiegers so awkward, that it remained in possession of the conquerors till the year 1790, when bribery caused the gates to be opened, and restored it to the monarch of Siam. It was again taken by the Birmans in 1792, and confirmed to them by the treaty of peace of 1793. Lat. 13. 20. N. -long. 98. 20. E.

TAURAT, a settlement on the island of Cuba; 38 miles north-north-east of St. Jago.

TAURE, a town of Bengal, district of Mongier. Lat. 24. 31. N. long. 86. 50. E.

TAVRIA, a small town in the north of Italy, in Piedmont, province of Turin. Population 2300.

TAURICASTRO, or **TAURO CASTRO**, a small town of Greece, in Livadia, opposite to Negroponte; 20 miles north-east of Athens.

TAURICORNOUS, *adj.* [*taurus* and *cornu*, Latin.] Having horns like a bull.—Their descriptions must be relative, or the *tauricornous* picture of the one the same with the other. *Brown*.

TAURIDA, a government in the south of European Russia, which consists in the following parts:—1st. The peninsula of the Crimea; 2d, a considerable tract to the north of the peninsula, between the Dnieper and the Berda; 3d, the island of Taman, or Tmutarakan; 4th, the land of the Tschernomorski, or Black Sea Cossacs, lying to the east of the Crimea. This province lies between lat. 44. 32. and 47. 50. N.; and between long. 31. 36. and 40. 24. E.: has a superficial extent of 25,000 square miles, fully equal to that of Scotland; but the inhabitants are so thinly scattered, that their number does not exceed 260,000, making hardly 74 to the square mile. The province is divided into six circles, besides the isle of Taman, and the land of the Czernomorski Cossacs. This name is also given to the range of mountains which form a sweep along the whole coast of the Crimea from east to west.

TAURIS, a great city of Persia, which at different periods has been the capital of the empire. Its antiquity has been the subject of much discussion, Sir William Jones and other writers conceiving it to be the ancient *Ecbatana*. D'Anville, however, imagines it to be Gaza, or Ganzaca, where Cyrus deposited the treasures of Croesus, and which was afterwards taken by Heraclius. It was a favourite city of Haroun al Raschid, and, according to Persian tradition, which, however, is little to be trusted, was founded by Zobeida, one of his wives. It was probably to him at least that it was indebted for that extraordinary magnitude and splendour which it once exhibited. Situated near the frontier of contending empires, it has alternately been the object of contest to Turks, Tartars, and Persians, and has been taken and sacked eight different times. It has suffered still more by earthquakes, which have repeatedly levelled its proudest edifices with the ground. The last, in 1724, is supposed to have destroyed 100,000 inhabitants. At present Tauris does not contain more than 30,000 people, and is, on the whole, one of the most wretched cities in Persia. It is seated in an immense plain at the foot of a mountain, on the banks of a small river, the waters of which are consumed in the cultivation of the land. The ruins of the ancient city cover a great extent of ground, but exhibit a very mean appearance, being nothing but a confused heap of old mud walls. Lat. 38. 10. N. long. 46. 37. E.

TAUROBOLIUM, or **TAUROBOLION**, among the ancients, sacrifices of bulls, which were offered to Cybele, the mother of the gods, to render thanks to the goddess of the earth, for her teaching men the art to tame those animals, and fit them for labour.

TAUROGEN, a small and ill built town of Russian Lithuania, in Samogitia, government of Wilna; 35 miles south of Miedniki.

TAVROV, a town in the south-east of European Russia, in the government of Voronez, situated near a river of the same name. It consists of two adjoining villages, and is inhabited by soldiers, and carpenters who build the boats used in the navigation of the Don. In 1744, all the public buildings were destroyed by fire; 47 miles south east of Voronez.

TAURUS, the name which Europeans give to a lofty chain of mountains, situated in the eastern part of Asia Minor, where it borders on Syria, called by the Turks Gebel Kurin.

TAURUS, *s.* The second sign in the zodiac.—Were we not born under *Taurus*? *Shakspeare*.

VOL. XXIII. No. 1613.

TAURUS, in some ancient customs, signifies a husband.—Leg. H. I. cap. 7. "Videtur autem matris ejus, cujuscunque taurus alluserit."

TAURUS, in Entomology, a species of scarabæus.—Also, a species of cicada, found in Coromandel.—Also, a species of cimex.—In Ornithology, the bittern or butter-pump.—In Zoology. See *Bos*.

TAUSS, **DOMAGLIEZE**, or **DRASTOW**, a town of Bohemia, 15 miles west of Klatau, and 80 west-south-west of Prague. It is surrounded with a wall, contains 4400 inhabitants, and has large manufactures of thread and linen.

TAUSTE, a neat town in the north east of Spain, in Arragon, on the small river Riguel, near its influx into the Ebro. It contains 3200 inhabitants, and is situated in a fruitful district. A canal from this place forms the great canal of Arragon, and promotes the internal trade of the country; 27 miles north-west of Saragossa, and 170 east-north-east of Madrid.

TAUTENBURG, a large village of Germany, in the grand duchy of Saxe Weimar; 1 mile east-south-east of Dornburg.

TAUTOLOGICAL, *adj.* [*tautologique*, Fr.] Repeating the same thing.—Pleonasm of words, *tautological* repetitions. *Burton*.

TAUTOLOGIST, *s.* One who repeats the same thing.—*To TAUTOLOGIZE*, *v. n.* To repeat the same thing.—That in this brief description the wise man should *tautologize*, is not to be supposed. *Smith*.

TAUTOLOGY, *s.* [*ταυτολογία*; *ταυτο* and *λογος*, Gr.; *tautologie*, Fr.] Repetition of the same words, or of the same sense in different words.

Saint Andre's feet ne'er kept more equal time,
Not ev'n the feet of thy own Psyche's rhyme;
Though they in numbers as in sense excel,
So just, so like *tautology* they fell.

Dryden.

Every paper addressed to our beautiful incendiaries, hath been filled with different considerations, that enemies may not accuse me of *tautology*. *Addison*.

TAUVES, a petty town of France, in Auvergne, department of the Puy de Dome, on the small river Mourgagne. Population 2100; 23 miles south-west of Clermont, and 30 west of Issoire.

TAVY, **ST. MARY**, a parish of England, in Devonshire; 4 miles north-east of Tavistock. Population 631.

TAVY, **ST. PETER'S**, a parish in the above county, half-a-mile distant from the foregoing.

TAW, a river of England, in the county of Devon. It rises near the centre of the county, about 3 miles south-east of Oakhampton, flows to Barnstaple, and then turns westerly, and joins the Towridge, at its mouth, in the Bristol Channel.

To TAW, *v. a.* [*tauwen*, Dutch; *tauwan*, Sax.] To dress white leather commonly called alum leather, in contradistinction from *tan* leather, that which is dressed with bark.

He's to be made more tractable, I doubt not—

Yes, if they *taw* him as they do whit-leather
Upon an iron, or beat him soft like stock-fish,

Beaumont.

TAW, *s.* A marble to play with.

Trembling I've seen thee
Mix with the children as they play'd at *taw*;
Nor fear the marbles as they bounding flew,
Marbles to them, but rolling rocks to you.

Swift.

TAWALLY ISLE, one of the Gilolo islands; 35 miles long from north to south, and 6 in average breadth. Lat 0. 21. S. long. 127. 14. E.

TAWANDEE, a township of the United States, in Bradford county, Pennsylvania. Population 783.

TAWANDEE CREEK, a river of the United States, in the north part of Pennsylvania, which runs east into the Susquehannah, about 10 miles above Asylum.

TAWAY TOWN, an Indian station in North America, on the Ohio, near the sources of the Au-Glaize.

TA'WDRILY, *adv.* In a tawdry manner. Pulteney uses it in a letter to Swift.

10 L

TA'WDRINESS,

TAWDRINESS, *s.* Tinsel finery; finery ostentatious without elegance.—A clumsy beau makes his ungracefulness appear the more ungraceful by his *tawdriness* of dress. *Richardson*,

TAWDRY, *adj.* [from Stawdrey, Saint Awdrey, or Saint Etheldred, as the things bought at Saint Etheldred's fair. Henshaw, Skinner.] Meanly shewy; splendid without cost; fine without grace; shewy without elegance. It is used both of things and of persons wearing them.

Old Romulus and father Mars look down,
Your herdsman primitive, your homely clown,
Is turn'd a beau in a loose *tawdry* gown.

Dryden.

TAWDRY, *s.* A slight ornament; a kind of necklace worn by country wenches.

Not the smallest beck,
But with white pebbles makes her *tawdries*, for her neck.

Drayton.

TAWED, *part. adj.* Of the colour of tan; embrowned. His knuckles knob'd, his flesh deep dented in,
With *tawed* hands and hard ytanned skin. *Sackville.*

TAWEETAWEE, the chief of a cluster of islands, 56 in number, composing part of the Sooloo archipelago. There is a lake in the centre, abounding in crocodiles, and an island near the shore, which affords refuge to fugitive slaves. Few inhabitants dwell in Tawetawee. The other islands are of various size, some high, others merely rocks; and all these have inhabitants, though but thinly peopled. Fish are very plentiful in the sea; and in the channels separating them are valuable pearl oysters. Most of the islands are named after the different parts of the human body, from a supposed resemblance.

TAWER, *s.* [from *taw*; *taupepe*. Sax.] A dresser of leather. *Barret.*

TAWNY, *adj.* [*tané*, *tanné*, Fr.] Yellow, like things tanned.

This child of fancy that armado hight,
For interim to our studies shall relate,
In high-born words, the worth of many a knight
From *tawny* Spain, lost in the world's debate. *Shakspeare.*

TAWSTOCK, a parish of England, in Devonshire; 3 miles south-by-west of Barnstaple. Population 1136.

TAWTON, **BISHOP'S**, a parish of England, in Devonshire, situated on the river Taw. It was the first bishop's see in the county, from whence it was removed to Crediton, and afterwards to Exeter. Population 978; 2½ miles south-by-east of Barnstaple.

TAWTON, **NORTH**, a parish of England, in Devonshire; 6½ miles north-east of Oakhampton. Population 1417.

TAWTON, **SOUTH**, a parish in the same county; 4½ miles east of Oakhampton. Population 1516.

TAWY, a river of Wales, in Brecknockshire and Glamorganshire, which runs into the Bristol Channel, at Swansea.

TAX, *s.* [*tāsg*, Welsh; *taxe*, Fr., *taxe*, Dutch.] An impost; a tribute imposed; an excise; tallage.—He, says Horace, being the son of a *tax* gatherer or collector, smells everywhere of the meanness of his birth. *Dryden.*—[*taxo*, Lat.] charge; censure.

All private *taxes*, and immodest phrases,
Whatever may but shew like vicious;
For wicked mirth never true pleasure brings,
But honest minds are pleas'd with honest things. *Beaum.*

[*taxa*, low Lat.] Task; lesson to be learned. *Obsolete.*—At the archdeacon's visitation, the archdeacon shall appoint the curate to certain *taxes* of the New Testament, to be conned without book; and at their next synod to exact a rehearsal of them. *Articles of Eccl. Visitation and Inquiry.*

To TAX, *v. a.* [*taxer*, Fr.] To load with imposts.—Jehoiakim gave the silver and gold to Pharaoh, but he *taxed* the land to give the money. 2 *Kings*. [*Taxo*, Lat.] To charge; to censure: to accuse.—It has *of* or *with*, and some-

times *for*, before the fault imputed, and is used both of persons and things.—How many hath he killed; I promised to eat all of his killing.—Niece, you *tax* signior Benedick too much; but he'll be meet with you. *Shakspeare.*

TAXABLE, *adj.* That may be taxed. *Sherwood.*

TAXAMALCA, a town of Mexico; 60 miles south of Mexico.

TAXAMARCA, a town of Mexico, in the province of Mechoacan; 40 miles east of Mechoacan.

TAXATION, *s.* [*taxatio*, Lat.,] The act of loading with taxes; impost; tax.—I bring no overture of war, no *taxation* of homage; my words are as full of peace as matter. *Shakspeare.*—Accusation; scandal.—My father's love is enough to honour; speak no more of him, you'll be whipt for *taxation* one of these days. *Shakspeare.*

TAXATION.—Taxes should properly imply that money which a nation pays to its servants for the management of its business. This money is to be expended in protecting the state against other nations, or otherwise establishing foreign relations; in the expenses necessary for the administration of the laws; or, lastly, in paying these servants for their labour. The necessity of these disbursements is as great as it is obvious; and hence, while they are properly managed, no good citizen or reasonable man can for an instant demur to contribute his portion of them. But since, by a very excellent provision of nature, men, while uncivilized, are less governed by decisions founded on reason than by the powers of terror and authority, the servants to whom these important powers belonged, were originally *rulers*, and *imposed* a tribute rather than received a reward. In more advanced states of civilization it might appear that this supremacy would no longer be allowed; but when it is considered that we can never expect any state to exist in which force may not be required to compel the refractory to pay their taxes; that authority pays for those devoted services which money never can obtain, but which a state perpetually requires. It is perceived that the union of servant and ruler is natural and proper, and must always continue to a certain extent.

The above being our definition of taxation, it follows that a scheme of taxation is to be sought for and adopted, which will at once serve the ends in view, at the least possible expenditure, and require as little delegation of arbitrary power as is absolutely essential. But this being stated, who is to fix how much, either absolutely or relatively, is necessary for preventing the aggression of foreign states, for repelling invasion, for making war, for obtaining commercial advantages, for preventing dangerous coalitions, and for administering justice with impartiality, for giving her all the pomp necessary to authority, and her officers the fortune necessary to ensure incorruptibility. Or again, how can we lay down the exact degree of power which is absolutely necessary to enforce the payment of contributions, or to give consequence to public servants whether at home or abroad. These great questions are not to be settled without much information and deep reflexion, even in the most general way. And every rule must be essentially modified by the peculiar circumstances of different nations. As we have not the materials necessary to settle those questions, we shall not enter upon them, and have merely stated them in order to establish the problem that is to be solved, leaving its solution to time and abler hands.

But if we cannot decide how much taxation is exactly required, there are some points which are of great importance to human happiness, and have received the consideration of enlightened men. In all these investigations, we conceive writers have been too much led away by a narrow economy; but, nevertheless, economy is of so much importance, that it deserves from states, as well as individuals, every attention. The following maxims are laid down by Dr. Smith with regard to all taxes, and are drawn up with great judgment and comprehension:—

First maxim. "The subjects of every state ought to contribute towards the support of the government, as nearly as possible, in proportion to their respective abilities; that is, *in proportion to the revenue which they respectively enjoy*
under

under the protection of the state. The expense of government to the individuals of a great nation is like the expense of management to the joint tenants of a great estate. In the observation or neglect of this maxim consists what is called the equality or inequality of taxation."

Second. "The tax which each individual is bound to pay ought to be certain, and not arbitrary. The *time* of payment, the *manner* of payment, the *quantity* to be paid, ought all to be clear and plain to the contributor and to every other person. When it is otherwise, every person subject to the tax is put, more or less, in the power of the tax-gatherer, who can either aggravate the tax upon any obnoxious contributor, or extort, by the terror of such aggravation, some present or perquisite to himself. The uncertainty of taxation encourages the insolence and favours the corruption of an order of men who are naturally unpopular, even where they are neither insolent nor corrupt. The certainty of what each individual ought to pay is, in taxation, of so great importance, that a very considerable degree of inequality, it appears, I believe, from the experience of all nations, is not near so great an evil as a very small degree of uncertainty."

Third. "Every tax ought to be levied at the time and in the manner in which it is most likely to be convenient for the contributor to pay it. A tax upon the rent of land, or of houses, payable at the same term at which rents are usually paid, is levied at the time when it is most likely to be convenient for the contributor to pay, or when he is most likely to have wherewithal to pay. Taxes upon such consumable goods as are articles of luxury, are all finally paid by the consumer, and generally in a manner that is very convenient for him. He buys them by little and little, as he has occasion to buy the goods; and as he is at liberty, too, either to buy or not to buy as he pleases, it must be his own fault if he ever suffers any considerable inconvenience from such taxes."

Fourth. "Every tax ought to be so contrived as both to take out and to keep out of the pockets of the people as little as possible, over and above what it brings into the public treasury of the state."—*Wealth of Nations*, iii. p. 255.

TAXER, *s.* One who taxes.—These rumours begot scandal against the king, taxing him for a great *taxer* of his people. *Bacon*.

TAXIMAROA, a settlement of Mexico, in the intendency of Valladolid; 5 leagues south of Valladolid. Its population consists of above 600 families of Spaniards, Indians, and mulattoes.

TAXUS [of Pliny, &c.], in Botany, a genus of the class, dioecia, order monadelphia, natural order of coniferae. Generic Character.—Male. Calyx none; except a bud like a four-leaved perianth. Corolla none. Stamina: filaments numerous, united at bottom into a column, longer than the bud. Anthers depressed, blunt at the edge, eight-cleft, gaping every way at the base, and, when they have discharged their pollen, flat, peltate, and remarkable for their eight-cleft margin.—Female. Calyx as in the male. Corolla none. Pistil: germ ovate, acuminate. Style none. Stigma obtuse. Pericarp: berry from the receptacle elongated into a præputium, globular, succulent, gaping at the top, coloured, at length wasting from dryness, and evanescent. Seed one, ovate-oblong, prominent at the top, beyond the berry. *Essential Character*.—Male. Calyx none. Corolla none. Stamina many. Anthers peltate eight-cleft.—Female. Corolla none. Style none. Seed one, in a berried calycle that is quite entire.

1. *Taxus baccata*, or common yew tree.—Trunk straight, with a smooth deciduous bark. Wood hard. Leaves thickly set, evergreen. Flowers axillary.—The yew tree is a native of Europe, North America and Japan. Its proper situation is in mountainous woods, or more particularly the clefts of high calcareous rocks. Yew trees sometimes grow to an enormous size, one in the church-yard of Crowhurst in Surrey, was ten yards in compass. Another in Branburne church-yard, not far from Scots-Hall in Kent, which being fifty-eight feet eleven inches in circumference, will bear near

twenty-feet diameter. Such another is also to be seen in Sutton church-yard near Winchester. Near the church at Hedsor in Bucks, is a fine growing yew-tree, which measures twenty-seven feet in circumference. Other remarkable yews that are mentioned are, one at Ifley by Oxford, four yards and six inches round. Talbot's Yew in Takersley parish. One in Martley church-yard, Worcestershire, about twelve yards in circumference. In the church-yard at Ashill, in Somersetshire, are two very large yew-trees; one fifteen feet round, with a vast spread of branches, extending north and south fifty-six feet. The other divides into three large trunks just above the ground, but many of the arms are decayed. Two trees are now growing on the hill above Fountain's abbey, near Ripon, which in 1770 measured in circumference from thirteen feet to twenty-six feet six inches. In the church-yard at Aberistwith are eleven yew-trees, the largest twenty-four feet, and the smallest eleven and a half in circumference. In Mankilad church-yard are twelve fine trees, the largest of which is twenty-five feet in circumference. Doubtless there must be many large ancient yew-trees remaining in Wales.

The twigs and leaves of yew, eaten in a very small quantity, are certain death to horses and cows, and that in a few minutes. A horse tied to a yew-hedge, or to a faggot-stack of dead yew, shall be found dead before the owner can be aware that any danger is at hand; the writer has been several times a sorrowful witness to losses of this kind among his friends; and in the isle of Ely had once the mortification to see nine young steers or bullocks of his own all lying dead in an heap from browsing a little on an hedge of yew in an old garden, into which they had broken in snowy weather. Even the clippings of a yew edge have destroyed a whole dairy of cows when thrown inadvertently into a yard. And yet sheep and turkeys, and, as park-keepers say, deer, will crop these trees with impunity.

Some intelligent persons assert, that the branches of yew, while green, are not noxious: but among the number of cattle that we have known fall victims to this deadly food, not one has been found, when it was opened, but had a lump of green yew in its paunch. True it is, that yew-trees stand for twenty years or more in a field, and no bad consequences ensue: but at some time or other, cattle, either from wantonness when full, or from hunger when empty, will be meddling, to their certain destruction. In the south of England almost every church-yard has its yew-tree, and some have two; but in the north few are to be found.

2. *Taxus nucifera*, or acorn-bearing yew.—Leaves linear distant. The fruit resembles the acorns of the Oak, and is astringent. The wood is in request among the cabinet-makers.—Native of Japan, here and there near Nagasaki and in Nipou.

3. *Taxus macrophylla*, or long leaved yew.—Leaves solitary, lanceolate remote. The wood is used by the cabinet-makers.—Native of Japan near Nagasaki, &c. It flowers in June.

4. *Taxus verticillata*, or whorl-leaved yew.—Leaves whorled linear, sickle-shaped.—Native of Japan.

Propagation and Culture.—Sow the berries in autumn, as soon as they are ripe, without clearing them from the pulp upon a shady bed of fresh undunged soil, covering them about half an inch thick with the same earth. In the spring clear the bed carefully from weeds, and if the season prove dry, refresh the bed with water occasionally, to promote the growth of the seeds, many of which will come up the same spring, but others will remain in the ground until autumn or spring following; but where the seeds are preserved above ground, until spring before they are sown, the plants never come up until the year after.

The Yew may likewise be propagated by cuttings of one or two years growth, planted in a shady border, the beginning of April, or the end of August: torn branches are preferable for this purpose.

TAY, one of the largest rivers in Scotland. It has its rise on the frontiers of Lorn, Argyllshire, although it does not assume the name of Tay till it issues from the lake of that name. At its source, it has the name of Fillan, winding in an easterly

easterly course of some miles; its stream is considerably augmented by several brooks falling into it from the neighbouring hills. About 10 miles from its source it discharges itself into Loch Dochart. Issuing from thence, it loses the name of Fillan, and acquires that of Dochart, giving the name of Glendochart to the vale through which it runs. At the eastern extremity of this vale, it, besides other streams, receives the waters of Lochy from the north-west; and shortly after, the united streams are lost in Loch Tay. About two miles after leaving this lake, it receives a considerable addition to its size from the Lyon on the north-west, and it continues its course towards the east. At Logierait it is joined by the united streams of the Garry and Tummel from the north, a river which almost rivals it in size. Here it turns towards the south; and receiving the waters of the Bran from the south, near Dunkeld, it advances to Perth, augmented by various tributary streams, particularly the Isla at Kinclaven from the north-east, the Schochie at Loncarty, and the Almond about two miles above the bridge of Perth, both from the west. A little below this town it turns to the east, and receiving, as it proceeds, the waters of the Ern at Inehyra, it washes the coast of the Carse of Gowrie, a fine level, which, in all probability, was part of its former channel. After receiving the Erne, it enlarges itself to about three miles broad; but contracts to two miles at Dundee, about eight miles below which it opens into the German ocean. At the entrance of the frith, there are sand-banks on both sides; those on the south side named Goa, and on the north Aberlady and Drumlon; and before these, in the very mouth of the frith, lie the Cross sands, upon which a buoy is moored, to direct vessels into the river. On the Buttonness, or Barry sands, are two light-houses. Between the north and south sands, the opening may be about a mile, with about three fathoms water; but it soon turns wider, and the depth of the roads near Dundee is full six fathoms. The river is navigable as far as Newburgh, in Fife, for vessels of 500 tons; and vessels of considerable size can go up as far as Perth. The frith of Tay is not so commodious as that of the Forth; but, from the Buttonness to Perth (nearly 40 miles), the whole may be considered as a harbour. There are fewer great falls of water on the Tay than in most rivers which rise in a Highland district; but it possesses several cascades of considerable height, particularly at the Linn of Campsie, near its junction with the Isla, where the river is precipitated over a huge basaltic dike, into a pool of great depth. There are only a few small islands near the town of Perth, and Mugdrum's Inch, near Newburgh. The salmon fishery on the Tay is very extensive, and the rents of the river are about 7000*l.* sterling. The fishing begins on the 11th of December, and ends on the 26th of August.

TAY, a river of Ireland, in the county of Waterford, which runs into the sea; 7 miles west-north-west from Dunganarvan bay.

TAY, *Loch*, one of the most beautiful of the Scottish lakes, lies in Braidalbin, in Perthshire. It extends about 15 miles in length, and from 1 to 2 in breadth, receiving at its south-west extremity the united streams of the Dochart and Lochy, and pours forth its waters at the north-east end by the river Tay.

TAYA ISLE, a small island in the Eastern seas, situated off the east coast of Sumatra. In this neighbourhood there are many very small islands scattered, among which from 50 to 100 chests of opium may be disposed of; for which pepper, gold, tin, and rattans, are the returns. The inhabitants being all pirates, it is necessary that trading vessels be well armed, and constantly on their guard. Lat. 6. 48. N. long. 105. 5. E.

TAYABO, a town on the east coast of the island of Celebes, in Gunong Tellu bay. Lat. 1. 10. S. long. 121. 30. E.

TAYAC, a small stream in Mexico, which discharges itself into the gulf of Mexico, in about 29. 50. north lat., and 97. west long.

TAYBA, or THAIBE, a ruined town in the deserts of Syria, which shows, in its present state, evident marks of

its former magnificence. In 1691, it was inhabited by some Mahometans, who had had a mosque supposed to have been the remains of a Christian church; but the whole is now desolate, and the houses in ruins.

TAYEQUA, a settlement of South America, in the province of Darion, in the gulf of San Miguel.

TAYLOR (Brook), LL.D. and F.R.S., an eminent mathematician, was born of a good family, at Edmonton, near London, in the year 1685. In early life he devoted himself to music, drawing, and painting, in which he was reckoned to excel. At the same time he pursued his classical studies and mathematics under a private tutor: and in 1701, at the age of 15, he was entered a fellow-commoner at St. John's college, in the university of Cambridge. Such was his assiduity in the prosecution of mathematics, that in 1708 he composed his treatise "On the Centre of Oscillation," which was published in the Phil. Trans. In the next year he took his degree of bachelor of laws, and in 1712, he was elected fellow of the Royal Society. By a letter addressed to Mr. Machin, dated in this year, it appears that he had then given a solution of Kepler's famous problem, pointing out its importance and use. He also at the same period presented to the Society three papers, viz. "On the Ascent of Water between two Glass Planes;" "On the Centre of Oscillation;" and "On the Motion of a stretched string." In consideration of his services to the Society, and distinguished qualifications for the office, he was elected their secretary in 1714, taking in the same year his degree of doctor of laws at Cambridge. In 1715, he published his "Methodus Incrementorum;" a curious essay, preserved in the Phil. Trans. entitled, "An Account of an Experiment for the Discovery of the Laws of Magnetic Attraction;" and also a treatise, of high value and reputation, "On the Principles of Linear Perspective." His correspondence this year with Count de Montmort on the tenets of Malebranche was ably conducted, and gained for him an eulogy from the French academy; and in 1716, on his visit to Paris he was treated with great personal respect. Upon his return to London, in 1717, he composed three treatises, published in the 30th volume of the Phil. Trans.; the titles of which are, "An Attempt towards an Improvement of the Method of approximating in the Extraction of Roots of Equations in Numbers;" "A solution of Demouivre's 15th Problem, with the assistance of Combinations and infinite Series;" and "A Solution of the Problem of G. G. Leibnitz proposed to the English." In 1721, he published the last paper that appears with his name in the Phil. Trans. entitled, "An Experiment made to ascertain the Proportion of Expansion of Liquor in the Thermometer, with regard to the Degree of Heat."

He died of a decline in the 46th year of his age, Dec. 1731.

TAYLOR (Jeremy), an eminent divine and prelate of the established church in Ireland, was the son of a barber at Cambridge, where he was born in the early part of the 17th century. At the age of 13 he was admitted at Gonville and Caius college in the university of that place, where he remained till he took the degree of M.A. Having taken orders, he occasionally preached in London, and obtained by the interest of archbishop Laud, in 1636, a fellowship of All Souls' college, Oxford. Here he resisted attempts that were made to proselyte him to popery, and became more established in Protestant principles. Laud appointed him one of his chaplains, and procured for him the rectory of Uppington, in which he settled about the year 1640, at which time he surrendered his fellowship and married. In 1642 he was chaplain in ordinary to Charles I., and served his cause by writing in defence of the church of England. When the parliament became victorious, his living was sequestered, and he retired into Wales, where he was kindly received by the earl of Carbery, under whose protection he exercised his ministry, and kept a school for the support of his family. In this state of retirement, he composed those discourses, which caused him to be held in high estimation, as one of the first writers in the English language, "with respect to fertility of conception, eloquence of expression, and comprehensiveness of thought." At this period, the death of three hopeful
sons

sons disturbed his tranquillity, and rendered it necessary for him to change the scene, and to remove to London, where he exposed himself to considerable danger by officiating in a private congregation of loyalists. Invited by Edward lord Conway to his seat at Portmore in the county of Antrim, he remained in Ireland until the Restoration. On that event he came over to England, and in January, 1660-1, his services were recompensed by the promotion to the sees of Down and Connor. He was also made privy-counsellor of Ireland, and appointed to the administration of the bishopric of Down, and honoured with the office of vice-chancellor to the university of Dublin. Of his works, which were numerous, consisting chiefly of sermons and devotional pieces, and printed in four, and also in six volumes, folio, the most remarkable is entitled, "Theologia Eclectica, or a Discourse on the Liberty of prophesying; shewing the unreasonableness of prescribing to other men's faith, and the iniquity of persecuting different opinions," 4to. first published in 1647. The author, when this book was written, belonged to a vanquished and persecuted party; and he strongly and boldly pleads for liberty of conscience, and the rights of individuals to judge for themselves in matters of religion. This work, considering the time in which it was written, and the connections of the author, indicates a very enlightened mind with regard to the subjects of discussion; and may be perused with no small degree of interest even in the present period of greater knowledge and liberality. With respect to toleration, however, he limits it to such doctrines as are not inconsistent with society or the public good; a limitation which is capable of being much misconstrued and misapplied. The most popular of Taylor's other writings, have been his "Golden Grove, or Manual of daily Prayers;" his treatise on "Holy Living and Dying;" and his "Ductor Dubitantium, or Rule of Conscience." Dr. Dodwell long since observed, and not unjustly, that "Dr. Taylor, in his voluminous writings, said many lively things, which will not bear a strict examination." *Biog. Brit. Gen. Biog.*

TAYLOR (John), LL.D., the son of a barber at Shrewsbury, was born about the year 1703, and distinguished himself as a scholar and critic. In 1755, still prosecuting his legal studies, he published "Elements of Civil Law," 4to. reprinted in 1769. An abridgment of this learned work, entitled "A Summary of the Roman Law," was published in 1773.

TAYLOR'S ISLES, three small islands on the north coast of New Holland, between Thistle island and the shore, from which they are about 2 miles distant.

TAY-MING, a city of China, of the first rank, in Pechee-lee, situated in a fertile and agreeable country; 232 miles south-south-west of Peking. Lat. 36. 20. N. long. 114. 49. E.

TAYNG, a town of Corea; 25 miles south-east of Haimen.

TAYNGEN, a small but neat town of Switzerland, in the canton of Schaffhausen, and 4 miles north-east of the town of Schaffhausen.

TAYNTON, a parish of England, in Oxfordshire; 2 miles north-west of Burford.

TAYNTON, a parish of England, in Gloucestershire; 3 miles south-south-east of Newent. Population 416.

TAYNUILT, a small ill built village of Scotland, in Argyllshire, on the south coast of Loch Etive, about 6 miles from Bunawe.

TAYOMAYO, a small island of Spain, in the Mediterranean, on the north-east coast of the island of Majorca.

TAZE, a river of Asiatic Russia, which rises from two lakes, Ku and Din, in the northern part of the government of Tobolsk, and after a considerable course from south to north, falls into the Tazovskaia gulf, in the Frozen ocean. Lat. 67. 35. N. long. 80. 14. E.

TAZEWELL, a county of the United States, in the south-west part of Virginia. Population 3007, including 328 slaves.

TAZEWELL, a post township of the United States, and capital of Clairborne county, Tennessee; about 35 miles north of Knoxville.

Vol. XXIII. No. 1614.

TAZLA, or **SALATO**, a lake of Asiatic Turkey, 36 miles long and 2 broad; 30 miles north of Kognieh.

TAZLA, a town of Asiatic Turkey, in Caramania; 28 miles north of Kognieh.

TAZOVSKAIA, a gulf or bay in the Obskaia gulf, formed by the waters of several rivers of Siberia, and joined to the Obskaia gulf, about 140 miles in length, and 3 in breadth. Lat. 67. 40. to 69. N. long. 76. to 80. E.

TCHABAR, a river of Chinese Tartary, which runs north into the Songarie.

TCHABISCHI, a town of Russia, in the government of Irkoutsk, on the Amur; 40 miles north-north-east of Stretensk.

TCHACA-TOHOI, a town of Chinese Tartary, in the country of Hami; 15 miles north-west of Quatcheou.

TCHADOBETZ, a river of Asiatic Russia, which flows through the governments of Irkoutsk and Tomsk, and after a course of 250 miles falls into the Tunguska, near Yeniseisk.

TCHADOBSKO, a town of Russia, in the government of Tobolsk, on the Tunguska; 212 miles east of Yeniseisk.

TCHAGANE, a river of Asiatic Russia, which rises in the country of the Kirghises, and after a course of 100 miles, falls into the Derkoul, which pours their united waters into the Oural.

TCHAGANSKOL, a fortress of Russia, on the Oural; 16 miles south of Ouralsk.

TCHAIA, a river of Russia, which runs into the Lena, near Tchamska, in the government of Irkoutsk. Lat. 58. 5. N. long. 109. 34. E.

TCHAI-YAM, a river of China, which joins the Lo; 15 miles west-south-west of Pao-king.

TCHAKAN-TOTOHO KIAMEN, a post of Chinese Tartary, in the country of the Mongols; 18 miles south-east of Kara-Hotun.

TCHALEI, a Tartarian standard of Chinese Tartary. Lat. 46. 25. N. long. 123. 14. E.

TCHALIN, a city of China, of the third rank, in Hou-quang, on the Mi river; 815 miles south of Peking.

TCHAMDSOU-TIGAC, a lake of Thibet, about 36 miles in circumference. Lat. 31. 30. N. long. 81. 26. E.

TCHAMNAGOM-DOU, a lake of Thibet, about 36 miles in circumference. Lat. 30. 50. N. long. 93. 54. E.

TCHAMSKA, a village of Asiatic Russia, in the government of Irkoutsk; 64 miles east-north-east of Kirensk.

TCHANG, a lake of China, about 20 miles in circumference; 40 miles north-east of Tcin-tcheou.

TCHANG-CHAN, a town of China, of the third rank, in Tche-kiang, situated on the river Tsien-tang, where it first becomes navigable; 22 miles south-west of Kin-tcheou.

TCHANG-KIA-KEOU, a gate on the great wall which separates China from Tartary, in the northern part of Pechee-lee, the principal passage by which the Tartars enter China; 90 miles north-north-west of Peking.

TCHANG-PING, a city of China, of the second rank, in Pechee-lee; 20 miles north-north-west of Peking. Lat. 40. 14. N. long. 115. 37. E.

TCHANG-TCHA, a city of China of the first rank, in Hou-quang, on the Heng river. The inhabitants of this city have given occasion to a great festival, which is celebrated in the fifth month throughout the empire. The mandarin who governed this city, and was much esteemed and beloved by the people for his probity and virtue, happening to be drowned in the river, they instituted a festival to his honor, which is celebrated by sports, and feasts, and fights upon the waters as if they intended to search for the mandarin, the object of their love and grief. This festival, which was at first peculiar to this city, came afterwards to be observed throughout the empire; 742 miles south of Peking. Lat. 28. 11. N. long. 112. 25. E.

TCHANG-TCHEOU, a city of China, of the first rank, in Fo-kien, the most southerly in the province. It stands on a river, and carries on a considerable trade. The neighbour-

ing mountains abound with the finest crystal; 950 miles south of Peking. Lat. 24. 32. N. long. 117. 34. E.

TCHANG-TCHEOU, a city of China, of the first rank, in Kiang-nan. The population has been estimated at 200,000 souls; 525 miles south-south-east of Peking. Lat. 31. 50. N. long. 119. 29. E.

TCHANG-TE, a city of China, of the first rank, in Hou-quang. It is large, and stands on a river near the great lake Tong-ting; 717 miles south-south-west of Peking. Lat. 29. 2. N. long. 111. 2. E.

TCHAN-CHAN, or CHAN-SAN, a small island in the Chinese sea, and most southerly of those called Mi-a-tou; 18 miles north-west of Tchang-tcheou.

TCHANKOUR, a town of Thibet; 105 miles south-east of Sourman.

TCHAN-TE, a city of China, of the first rank, in Honan. This is one of the most northern cities of the province. Two things are here remarkable: the first is a fish resembling a crocodile, the fat of which is of such a singular nature, that when once kindled, it cannot be extinguished; the second is a mountain in the neighbourhood, so steep and inaccessible, that in time of war, it affords a place of refuge to the inhabitants, and a safe asylum from the insults and violence of the soldiery. Techan-te contains in its district one city of the second class, and six of the third; 255 miles south-south-west of Peking. Lat. 36. 6. N. long. 114. 0. E.

TCHANY, a very large lake of Asiatic Russia, situated in the Barabinski steppe, between the Ob and the Irtysh. It abounds with fish, and receives many small rivers; it is about 65 miles long, and 30 broad; 100 miles west-north-west of Kolivan.

TCHAO, a city of China, of the second rank, in Pe-che-lee; 155 miles south-south-west of Peking. Lat. 37. 48. N. long. 114. 29. E.

TCHAO, a city of China, of the second rank, in Yunan; 1202 miles south-west of Peking. Lat. 25. 40. N. long. 100. 4. E.

TCHAO-KING, a city of China, of the first rank, in Quang-tong. It is reckoned the best built city in the province, and is the residence of the tsong-tsi or governor. The port is very spacious, placed at the confluence of three rivers, one of which communicates with Canton; 1062 miles south-south-west of Peking. Lat. 23. 3. N. long. 111. 44. E.

TCHAO NAIMAN SOUMI HOTUN, a town of Chinese Tartary; 198 miles north of Peking. Lat. 42. 28. N. long. 115. 44. E.

TCHAO-TCHEU, a city of China, of the first rank, in Quang-tong, near the mouth of the Pe-kiang, over which there is a magnificent bridge. Lat. 23. 37. N. long. 116. 21. E.

TCHAOUTCHE AGHISI, a town of Asiatic Turkey, in Anatolia, on the Black sea; 12 miles north-west of Erekli.

TCHAPIE DSAKE TOMPSOU, a lake of Thibet, about 54 miles in circumference. Lat. 32. 12. N. long. 84. 34. E.

TCHASOVIA, a village or town of the island of Schoum-shu, one of the Kurile islands.

TCHASTIJA, an island of Russia, in the government of Irkoutsk, in the Lena; 112 miles north-east of Kirensk.

TCHAT, a mountain of Thibet, on the frontiers of Yarkan. Lat. 33. 10. N. long. 78. 44. E.

TCHATELLI, a town of Chinese Tartary, in the country of Hami; 38 miles north-west of Hami-Hotun.

TCHAUNSKAIA, a gulph on the northern coast of Russia, in the Frozen Sea. Lat. 71. to 72. N. long. 166. to 169. E.

TCHAZMIUNSKOI, a cape on the east coast of Kamtchatka; 52 miles south of Verchnei Kamtchatskoi. Lat. 55. 48. N. long. 160. 15. E.

TCHEBARKULSKAIA, a fortress of Russia, in the government of Oufa; 132 miles east of Oufa.

TCHECHUL, a river of Russia, which runs into the Lena, nearly opposite Ilmsk.

TCHECO, a town of Thibet; 93 miles east-south-east of Lassa.

TCHFTKAN, a town of Asiatic Turkey, in Aladulia; 45 miles north-north-west of Adana.

TCHEGEN, an island in the Caspian sea; 144 miles south of Astracan.

TCHEGOTCHINA, a river of Russia, which runs into the Kolima. Lat. 68. N. long. 150. 14. E.

TCHEGUEDE HOTUN, a town of Chinese Tartary, on the east bank of the Amur, opposite Teldon; 673 miles north-north-east of Peking. Lat. 49. 26. N. long. 127. 37. E.

TCHÉKENAGUR, a town of Asiatic Turkey, in Carmania; 21 miles south of Kirshehr.

TCHÉ-KIANG, a province of China, bounded on the north and north-west by Kiangnan, on the east by the sea, on the south by Fo-kien, and on the south-west by Kiang-see; about 200 miles in length from north to south, and from 120 to 180 broad. This province, which was formerly the residence of some of the emperors, is one of the most considerable in the empire, on account of its maritime situation, extent, riches, and the number of its inhabitants. Excellent hams are brought from this province, and those small gold fish with which ponds are commonly stocked. The tallow-tree grows here, and a species of mushrooms, which are transported to every province of the empire. In Tchekiang there are reckoned to be 11 cities of the first class, 72 of the third, and 18 fortresses, which in Europe would be accounted large cities. According to Sir George Staunton, the number of inhabitants amounts to 21 millions.

TCHÉLAO, a town of Persia, in the province of Korasan. Near it is a narrow defile in a mountain, called by the orientals, Hell, from the difficulty of the passage.

TCHÉLBOSCH, a river of Russia, which joins the Bisuga, and runs with it into the sea of Azoph; 40 miles south-west of Eiskoi.

TCHÉLEH-DAGHI, a mountain of Anatolia, north-east of Boli.

TCHÉLGA, a town of Abyssinia; 20 miles north-west of Gondar. Lat. 12. 44. N. long. 37. 18. E.

TCHÉLABINSK, a town of Asiatic Russia, in the government of Orenbourg. It stands on the river Miasse, which falls into the Ictette, and is one of the most important fortresses upon this frontier. The tribunals of the district were transported thither in 1782. The garrison consists of 300 Cossacs, and a company of invalids; and the town contains 2 churches and 500 houses; 188 miles east of Oufa. Lat. 54. 50. N. long. 62. 4. E.

TCHÉ-LI LÉOU, a city of China, of the second rank, in Se-chuen, on the Kincha river; 840 miles south-west of Peking. Lat. 28. 56. N. long. 105. 4. E.

TCHÉMURTAESKOI, a fortress of Asiatic Russia, in the government of Irkoutsk; 60 miles south-west of Selen-ginsk.

TCHEN, a city of China, of the second rank, in Honan; 416 miles south-south-west of Peking. Lat. 34. 46. N. long. 110. 36. E.

TCHEN, a city of China, of the second rank, in the island of Hai-nan. Lat. 19. 32. N. long. 108. 49. E.

TCHEN-AN, a town of Corea; 35 miles south-south-east of Hetsin.

TCHENBAR, a town of Russia, in the government of Penza; 80 miles west-south-west of Penza. Lat. 52. 52. N. long. 43. 30. E.

TCHENDEI, a river of Russia, which runs into the Yana, near its mouth.

TCHENE, a town of Egypt, on the right bank of the Nile; 18 miles north of Eusench.

TCHENG-TCHANG, a town of Corea; 30 miles south-south-east of Haimen.

TCHENG-TE, an island in the Eastern seas, near the south coast of Corea, about 10 miles long and 6 broad. Lat. 34. 20. N. long. 128. 37. E.

TCHÉOU-CHAN, or CHU-SAN, an island in the Chinese sea, near the west coast of China, belonging to the province of Tchekiang, about 24 miles long, and from 4 to 10 broad.

TCHÉPETKINA,

TCHEPETKINA, a river of Asiatic Russia, which runs into the Kolima; 88 miles north of Verchnei Kovimskoi. Lat. 67. 35. N. long. 148. 14. E.

TCHERNAIA, a river of Asiatic Russia, which runs into the Anadir; 100 miles below Anadirskoi.

TCHERNAIAGRIADA, a fortress of Asiatic Russia, on the Volga; 32 miles north-north-west of Astracan.

TCHERNIKEH, a town of Asia Minor, in the government of Sivas, at the union of the Tosanlu and Jekil-Ermak; anciently a city of Pontus, and called Eupatoria, from Mithridates, surnamed Eupator; 24 miles north of Amasia. Lat. 40. 26. N. long. 36. 38. E.

TCHERNOLUTZKAIA, a fort of Asiatic Russia, in the government of Tobolsk; 20 miles west of Omsk.

TCHERNORIEGENSKAIA, a fortress of Asiatic Russia, in the government of Oufa, on the Oural; 12 miles west of Orenbourg.

TCHERPLINSKOI, a fortress of Asiatic Russia, in the government of Oufa, on the Oural; 124 miles east of Orenbourg.

TCHESKAIA, a gulf or bay in the Frozen ocean, on the north coast of Asiatic Russia. Lat. 66. 50. to 77. 40. N. long. 45. to 47. E.

TCHESUCHINSKOI, a fortress of Asiatic Russia, on the borders of China; 104 miles south-west of Nertchinsk.

TCHÉ-TAN, a river of China, which runs into the Tom; 12 miles west of Yeou.

TCHESCHEOU HOTUN, a town of Chinese Tartary, in the country of Hami; 983 miles east of Peking.

TCHETKINA, one of the Fox islands, in the North Pacific ocean. Lat. 53. 80. N. long. 184. 44. E.

TCHÉUISKOI, a fortress of Asiatic Russia, in the government of Tobolsk, on the Obi; 48 miles north-north-east of Kolivan.

TCHIATAM, a town of Thibet; 510 miles east of Lassa. Lat. 28. 3. N. long. 99. 20. E.

TCHICOU, a town of Corea; 18 miles south-south-east of Long Kouang.

TCHIEIN, a village of Asiatic Russia, near the straits which separate the continent of Asia from America. Lat. 65. 40. N. long. 188. 24. E.

TCHIKIRI, a river of Chinese Tartary, which runs into the Amur; 15 miles north of Saghalien Oula Hotun.

TCHILDIRI, a range of mountains in the southern part of Georgia, which bounds on the north the delightful plain of Erivan. It then enters the Persian province of Aderbijan, and sinks gradually into the plain of Mogai.

TCHILINSKOI, a town of Russia, in the government of Irkoutsk, on the Ingoda; 60 miles east of Doroninsk.

TCHINDAT TURUKUEVSKA, a fortress of Russia, in the government of Irkoutsk; 80 miles south-west of Nertchinsk.

TCHINDAT TURUKUEVSKOI, a fort of Russia, in the government of Irkoutsk; 72 miles south of Nertchinsk.

TCHINEH, a town of Asiatic Turkey, in Anatolia; 15 miles west-north-west of Moglah.

TCHING, a city of China, of the second rank, in Honan; 382 miles south of Peking. Lat. 33. 49. N. long. 114. 38. E.

TCHING, a city of China, of the second rank, in Honan; 340 miles south-south-west of Peking. Lat. 34. 50. N. long. 113. 29. E.

TCHI-NGAM, a city of China, of the second rank, in Se-tchuen; 780 miles south-west of Peking. Lat. 28. 32. N. long. 107. 4. E.

TCHING-CANG, a city of China, of the second rank, in Yunan; 1302 miles south-west of Peking. Lat. 24. 12. N. long. 99. 16. E.

TCHING-HANG, a city of China, of the first rank, in Se-tchuen; 910 miles south-west of Peking. Lat. 27. 18. N. long. 104. 26. E.

TCHING-KIANG, a city of China, of the first rank, in Kiang-nan, on the south side of the river Yang-tse. This is not one of the largest cities of the province, for it is not above a league in circumference; but it is one of the most

considerable for its situation and commerce; it is the key of the empire towards the sea, and is also a fortress, where there is a strong garrison. The walls are above 30 feet in height in several places. The streets of the city and suburbs are paved with marble; 470 miles south-south-east of Peking. Lat. 32. 14. N. long. 118. 55. E.

TCHING-KIANG, a city of China, of the first rank, in Yunan; 1082 miles south-south-west of Peking. Lat. 24. 44. N. long. 102. 40. E.

TCHING-NING, a city of China, of the second rank, in Koei-tcheou; 1017 miles south-south-west of Peking. Lat. 26. 3. N. long. 105. 23. E.

TCHING-TCHEOU, a city of China, of the first rank, in Hou-quang. This city is situated on an angle made by two rivers. The country is watered by a great number of brooks, which make the valleys exceedingly fruitful. The district of this city contains one of the second order, and nine of the third; 765 miles south-south-west of Peking. Lat. 23. 23. N. long. 109. 40. E.

TCHING-TEOU, a town of Corea; 30 miles south-south-west of Kang-tcheou.

TCHING-TING, a city of China, of the first rank, in Peché-lee. It is a large city, about 4 miles in circumference. Its jurisdiction is very extensive, and comprehends 32 towns, 5 of which are of the second, and 27 of the third class. Northward from it lie several mountains, where the Chinese say many simples and curious plants may be found. On these mountains there are also several monuments of temples erected in honour of deceased heroes, among which is one consecrated to the memory of the first emperor of the dynasty of Han; 137 miles south-south-west of Peking. Lat. 29. 9. N. long. 114. 20. E.

TCHING-TOU, a city of China, of the first rank, in Se-tchuen. This was formerly the residence of the emperors, and one of the largest and most beautiful cities in China; but in 1646 it was almost entirely destroyed, during the civil wars which preceded the last invasion by the Tartars; 810 miles south-west of Peking. Lat. 30. 40. N. long. 103. 44. E.

TCHINKITANY BAY, a bay on the west coast of North America, called by the Spaniards Baya de Guadalupe.

TCHIN-KOU, a town of China, of the third rank, in Chan-si, on the river Han; 17 miles east of Han-tchong.

TCHIN-NAN, a city of China, of the second rank, in Yunan; 1187 miles south-west of Peking. Lat. 25. 16. N. long. 101. 4. E.

TCHIN-NGAN, a city of China, of the first rank, in Quangsee. From being a small borough, it was surrounded with walls, and made a city of the first rank, but still does not possess any high consideration; 1150 miles south-south-west of Peking. Lat. 23. 21. N. long. 106. 0. E.

TCHIN-YUEN, a city of China, of the second rank, in Quangsee. Lat. 23. 14. N. long. 106. 49. E.

TCHIRAKI, a town of Chinese Tartary, in the country of the Kalkas. Lat. 48. 36. N. long. 115. 16. E.

TCHIRINKOUTAN, one of the small Kurile islands. Lat. 49. 20. N. long. 153. 4. E.

TCHIRNOOI, one of the small Kurile islands. Lat. 47. 8. N. long. 151. 50. E.

TCHISEGI DAGHI, a mountain of Asiatic Turkey, in the government of Sivas, near Divriki.

TCHI-TCHEOU, a city of China, of the first rank, in Kiang-nan. It stands in a hilly country on the banks of the Kyang; 570 miles south of Peking. Lat. 30. 45. N. long. 117. 0. E.

TCHI-TCHOUAN, a town of Thibet; 20 miles north of Chao-ma-ing Hotun.

TCHIUNA, a river of Russia which rises 6 miles from Bratskoi, in the government of Kolivan, lat. 56. N. long. 101. E, and runs into the Tunguska; 58 miles south-east of Yeniseisk, in lat. 57. 54. N. long. 93. 34. E.

TCHIURAC, a river of Anatolia, which runs into the Meinder near Tcheharshebeh.

TCHI-YUEN, a city of China, of the first rank, in Koei-tchoo. The district belonging to it is small, but abounds in fruit,

fruit, and produces the finest flowers in all China. Lat. 27. 1. N. long. 107. 51. E.

TCHO, a city of China, of the second rank, in Chan-si, on the river Fuen; 298 miles south-west of Peking. Lat. 36. 36. N. long. 111. 23. E.

TCHOCOUC, a town of Thibet; 18 miles east of Harachar Hotun.

TCHOHA KIAMEN, a post of Chinese Tartary; 45 miles south-west of Kara.

TCHOL, a river of Chinese Tartary, which rises in lat. 48. 20. N. long. 120. 34. E. and runs into the Noup. Lat. 46. 28. N. long. 123. 31. E.

TCHOL HOTUN, a town of Chinese Tartary, on a river of the same name; 500 miles north-north-east of Peking. Lat. 46. 41. N. long. 123. 35. E.

TCHOL-ABADI, a village of Asiatic Turkey, in Carmania; 32 miles south-west of Askshehr.

TCHOM-COU-CHO, a town of Chinese Tartary; 25 miles south-west of Ning-yuen.

TCHOM-YUEN, a town of Chinese Tartary; 15 miles north of Geho.

TCHONG, a town of Corea; 68 miles from Kin-nai-tchan.

TCHONG, a city of China, of the second rank, in Quangsee. Lat. 22. 26. N. long. 107. 4. E.

TCHON-KING, a city of China, of the first rank, in Se-cheun. This is one of the most commercial cities of the province. It is indebted for its trade to its situation at the confluence of two remarkable rivers; one of which, called Kincha-kiang, or Golden-sand, receives in its course all the streams from the mountains which rise on the neighbouring confines of Tartary. The other is Ta-kiang, which has its source beyond the boundaries of China, and is commonly called Yang-tse-kiang. Tchong-king is built upon a mountain, and rises in the form of an amphitheatre. The air round it is wholesome and temperate. The city is celebrated for its fish, and a particular kind of trunks, made with canes, interwoven in the manner of basket-work. It has in its district three cities of the second class, and eleven of the third; 750 miles south-west of Peking. Lat. 29. 42. N. long. 106. 19. E.

TCHORRO TOHON KIAMEN, a post of Chinese Tartary; 23 miles north of Odoli.

TCHOSCHO, a small river of Russia, which runs into the Tcheskaja gulf; 40 miles north-north-east of Mezen.

TCHOUCTEY KIAMEN, a post of Chinese Tartary; 10 miles north-east of Tchol.

TCHOUDSONG, a town of Thibet, on the borders of China; 340 miles south-east of Lassa. Lat. 27. 22. N. long. 96. 50. E.

TCHOU-KIONG, or Yung, a city of China, of the first rank, in Yunan; 1187 miles south-west of Peking. Lat. 25. 6. N. long. 101. 20. E.

TCHOUKTCHES, a people inhabiting the peninsula which forms the north-eastern extremity of Asiatic Russia; bounded on one side by the Frozen ocean, and on the other by the gulf of Anadir. Their country, barren and rocky, leaves them no mode of subsistence except fishing and hunting. They are of the same race with the Koriaks, but still ruder in their general habits of life. Their dwelling is often in the hollow of rocks, and their cottages are partly constructed of the bones of whales. Their entire number is not supposed to exceed 4000. Their tents are square, and composed of four rods supporting rein-deer skins, which form the roof. Their bed consists of branches of trees, covered with the skins of wild beasts. Their furniture and mode of feeding are dirty and disgusting. The dress of the women consists solely in the skin of a wild beast, fastened to the neck. The people are skilful in the use of the sling, and shew much courage and address in the whale fishery. Though nominally included in the Russian empire, they live almost entirely independent, protected by their extensive deserts, which would not reward the trouble necessary for their occupation. Though of the same race with the Koriaks, they carry on often bloody contests with that people.

TCHOULGUE HOTUN, a town of Chinese Tartary; 745 miles east-north-east of Peking. Lat. 44. 1. N. long. 131. 47. E.

TCHOULGUE HOTUN, a town of Chinese Tartary; 840 miles east-north-east of Peking. Lat. 44. 48. N. long. 133. 49. E.

TCHOUMOU, a town of Thibet; 63 miles east-south-east of Lassa.

TCHOUMOURTI, a town of Thibet, near the Ganges; 225 miles east-south-east of Latac.

TCHOURHATAI, a town of Chinese Tartary. Lat. 43. 4. N. long. 119. 45. E.

TCHOUSOR, a town of Thibet, 36 miles south-west of Lassa.

TCHOU-TAN, a river of China, which runs into the Yuen, near Hong-kiang-se.

TCHUKOTSKOIE NOS, a cape in the country of the Tchouktches, forming the north-eastern extremity of Asia. The attempts to double it have been frequent; but the object seems to have been effected only once, in 1648, by a Cossack named Lemman Deschnef. Doubts have even been raised as to the reality of his achievement; but the concurrence of his description of the coast and people with those of Cook and other recent navigators, seem to leave no reasonable ground of scepticism.

TCHUMARA STANITZ, a village of Asiatic Russia, in the government of Irkoutsk, on the Lena. Lat. 61. 12. N. long. 125. 14. E.

TCHUMISCH, a river of Asiatic Russia, which runs into the Obi; 7 miles south-south-east of Kolivan.

TCHU-TCHEOU, a city of China, of the first rank, in Tche-kiang; 730 miles south-south-east of Peking. Lat. 28. 36. N. long. 139. 33. E.

TCI-NAN, or TSI-NAN, a city of China, of the first rank, in the province of Shantung, situated south of the river Tsing-ho, or Tsi. This city is large and populous, and is much respected by the Chinese, on account of its having been formerly the residence of a long series of kings, whose tombs, rising on the neighbouring mountains, afford a beautiful prospect. Tci-nan has under its jurisdiction four cities of the second class, and 26 of the third; 235 miles south of Peking. Lat. 36. 46. N. long. 116. 46. E.

TCIN-CHOUI, a lake of China, about 37 miles in circumference; 25 miles north-north-east of Tcin-tcheou.

TCING, a city of China, of the second rank, in Pe-che-lee; 130 miles south-south-west of Peking. Lat. 38. 8. N. long. 114. 6. E.

TCI-NGIN, a city of China, of the second rank, in Shantung; 275 miles south of Peking. Lat. 35. 34. N. long. 116. 24. E.

TCIN-TCHEOU, a city of China, of the first rank, in Shan-tung. The principal branch of its commerce is fish, which are caught in such abundance, that we are assured the profit arising from their skins only is very considerable; 230 miles south-south-east of Peking. Lat. 36. 46. N. long. 118. 20. E.

TCITCICAR HOTUN, a town of Chinese Tartary, capital of a province in the country of the Mantchoos. This is the usual residence of a Tartarian general, and capital of a district. This city was built to guard the frontiers of the Chinese empire from the Russians; 355 miles north-east of Peking. Lat. 47. 25. N. long. 123. 30. E.

TE, a city of China, of the second rank, in Shan-tung, on the grand canal; 150 miles south of Peking. Lat. 37. 35. N. long. 115. 50. E.

TEA, a river of England, in Buckinghamshire, which runs into the Ouse, near Stony Stratford.

TEA, a river of the north-west of Spain, in Galicia, which joins the Minho, near Salvatierra.

TEA, s. [a word, I suppose, Chinese; *thé*, Fr. "Tea was first imported from Holland by the Earls of Arlington and Ossory, in 1666; from their ladies the women of quality learned its use. Its price was then three pounds a pound, and continued the same to 1707. In 1715, we began to use green tea; and the practice of drinking it descended to the lower

lower class of the people." Dr. Johnson's Review of Hanway's Journal.] A chinese plant of which the infusion has lately been much drunk in Europe.

The muse's friend, *tea*, does our fancy aid,
Repress those vapours which the head invade. *Waller.*

When you sweep, never stay to pick up *tea* spoons.
Swift.

To TEACH, *v. a.* pret. and part. pass., *taught*, sometimes *teached*, which is now obsolete. [æcan, Saxon. *Dr. Johnson.*—From the Swed. *te*; Icel. *tia*, to show; the derivation of which by Stiernh. from the M. Goth. *ataugian*, to show; (compounded of *at*, to, and *augo*, the eye,) Serenius pronounces highly ingenious and probable. See also Wachter in V. ZEIGEN.] To instruct; to inform, as a master; correlative to learn.

I am too sudden bold,
To *teach* a teacher ill besemeth me. *Shakspeare.*

To deliver any doctrine or art, or words to be learned.—They *teach* all nations what of him they learned. *Milton.*—To show; to exhibit so as to impress upon the mind.—He is a good divine that follows his own instructions; I can easier *teach* twenty what were good to be done, than to be one of the twenty to follow my own *teaching*. *Shakspeare.*—To tell; to give intelligence.

Huswives are *teached*, instead of a clocke,
How winter night passeth by crowing of cocke. *Tusser.*

To TEACH, *v. n.* To perform the office of an instructor.

I have labour'd
And with no little study, that my *teaching*,
And the strong course of my authority,
Might go one way. *Shakspeare.*

TE'ACHABLE, *adj.* Docile; susceptible of instruction.—'Tis sufficient that matters of faith and religion be propounded in such a way, as to render them highly credible, so as an honest and *teachable* man may willingly and safely assent to them, and according to the rules of prudence be justified in so doing. *Wilkins.*

TE'ACHABLENESS, *s.* Docility; willingness to learn; capacity to learn.—Docility, *teachableness*, tractableness, is the property of wisdom; and he that is wise, is nearest unto happiness. *Granger.*

TE'ACHER, *s.* One who teaches; an instructor; preceptor.

I went into the temple, there to hear
The *teachers* of our law, and to propose
What might improve my knowledge or their own. *Milton.*

One who without regular ordination assumes the ministry.—Dissenting *teachers* are under no incapacity of accepting civil and military employments. *Swift.*—A preacher; one who is to deliver doctrine to the people.—Wolves shall succeed for *teachers*. *Milton.*

TEACHES, an island of the United States, on the coast of Virginia, in Northampton county.

TEAD, or TEDE, *s.* [*tede*, old Fr.; *tada*, Lat.] A torch; a flambeau. *Not in use.*

A bushy *tead* a groom did light,
And sacred lamp in secret chamber hide. *Spenser.*

TEAGUE, *s.* A name of contempt used for an Irishman. His case appears to be like honest *Teague's*,
When he was run away with by his legs. *Prior.*

TEAL, *s.* [*teelingh*, Dutch.] A wild fowl of the duck kind.—Some serve for food to us, and some but to feed themselves; amongst the first sort we reckon the dip chick, coots, *teal*, wigeon. *Carew.*

TEALBY, a parish of England, in Lincolnshire; 4½ miles east-north-east of Market Raisin. Population 629.

TEALING, a parish of Scotland, in Forfarshire, lying on the south side of the Sidlaw hills, about three miles in length, and from one to two in breadth. Population 779.

TEAM, *s.* [*temo*, the team of a carriage, Latin; *team*,

Sax. *a yoke*.] A number of horses or oxen drawing at once the same carriage.

Making such difference betwixt wake and sleep,
As is the difference between day and night,
The hour before the heav'nly harness'd *team*
Begins his golden progress in the East. *Shakspeare.*

Any number passing in a line.
Like a long *team* of snowy swans on high,
Which clap their wings, and cleave the liquid sky. *Dryden.*

To TEAM, *v. a.* To join together in a team.
By this the Night forth from the darksome bower
Of Erebus her *teamed* steeds gan call. *Spenser.*

TEAN, UPPER and LOWER, two hamlets of England, in Staffordshire, near the Tean river, which runs into the Dove between Cheadle and Checkley.

TEANO, a small town of Italy, in the north-west of the kingdom of Naples, in the Terra di Lavoro, with several churches, an hospital, and 3100 inhabitants. It is the see of a bishop, and has one of the Catholic establishments styled *Conservatorio della Nunziata*; 12 miles north-west of Capua, and 27 north-north-west of Naples.

TEA POT CREEK, a small river of North America.
TEAR, *s.* [*ea* in this word is pronounced *ee*; and *tear* rhymes to *cheer*: *tagr*, M. Goth.; *teap*, Sax.; *daigr*, Welsh and Armor.; *δακρυν*, Gr.; all signifying the same.] The water which violent passion forces from the eyes.

She comes; and I'll prepare
My *tear*-stain'd eyes to see her miseries. *Shakspeare.*

Any moisture trickling in drops.
Let Araby extol her happy coast,
Her fragrant flow'rs, her trees with precious *tears*,
Her second harvests. *Dryden.*

To TEAR, *v. a.* pret. *tore*, anicently *tare*; part. pass. *turn*. [*tairan gatairan*, M. Goth.; *taera*, Su. Goth.; *teapan*, Saxon: *ea* is pronounced as *a*, and *tear* rhymes to *square*.] To pull in pieces; to lacerate; to rend; to separate by violent pulling.

Come seeling night,
And with thy bloody and invisible hand
Cancel and *tear* to pieces that great bond
Which keeps me pale. *Shakspeare.*

To laniate; to wound with any sharp point drawn along.

Old men with dust deform'd their hoary hair,
The women beat their breasts, their cheeks they *tare*.
Shakspeare.

To break or take away by violence.
As storms the skies, and torrents *tear* the ground,
Thus rag'd the prince, and scatter'd death around. *Dryden.*

To divide violently; to shatter.—Is it not as much reason to say, that God destroys fatherly authority, when he suffers one in possession of it to have his government *turn* in pieces, and shared by his subjects? *Locke.*—To pull with violence; to drive violently.—He roar'd, he beat his breast, he *tore* his hair. *Dryden.*

Blush rather, that you are a slave to passion,
Which, like a whirlwind, *tears* up all your virtues,
And gives you not the leisure to consider. *A. Philips.*

To take away by sudden violence.
The hand of fate
Has *turn* thee from me, and I must forget thee. *Addison.*

To make a violent rent.
In the midst a *tearing* groan did break.
The name of Antony. *Shakspeare.*

To TEAR, *v. n.* [*tieren*, Dutch.] To fume; to rave; to rant turbulently.—All men transported into outrages for small trivial matters, fall under the inuendo of this bull that ran *tearing* mad for the pinching of a mouse. *L'Es-trange.*

TEAR, *s.* A rent; a fissure.

TE'ARER, *s.* One who rends or tears; one who blusters.

TE'ARFALLING, *adj.* Tender; shedding tears.

I am in

So far in blood, that sin will pluck on sin,

Tearfalling pity dwells not in this eye.

Shakspeare.

TE'ARFUL, *adj.* Weeping; full of tears.

Is't meet that he

Should leave the helm, and, like a fearful lad,

With *tearful* eyes add water to the sea?

Shakspeare.

TE'ARLESS, *adj.* Without tears.

Why weep ye now? ye saw with *tearless* eye

When your fleet perish'd on the Punic wave.

Shenstone.

TEARN, a river of England, in Staffordshire and Salop, which falls into the Severn.

TEARNSIDE, a hamlet of England, in the parish of Kirkby Lonsdale, Westmorland.

TEARY, or TEHREE, a town of Hindostan, province of Allahabad, and capital of a petty chief under the British protection, whose territories are situated on the north-west boundary of Bundelcund. The title of Rajah has been long established in the reigning family; and although compelled to pay tribute for a long period to the Mahrattas, was never dispossessed of his lands. During the war in 1809, the present rajah, named Bickermajeet Sing, requested to be enrolled among the number of the British allies, and was of considerable utility. His revenue is estimated at about 50,000*l.* per annum. Lat. 24. 45. N. long. 78. 52. E.

To TEASE, *v. a.* [*træjan*, Saxon.] To comb or unravel wool or flax.

Coarse complexions,

And cheeks of sorry grain, will serve to ply

The sampler, and to *tease* the huswife's wool.

Milton.

To scratch cloth in order to level the nap.—To torment with importunity; to vex with assiduous impertinence.—My friends always *tease* me about him, because he has no estate. *Spectator.*

TE'ASEL, *s.* [*træf*, Saxon.] A plant.—The species are three: one is called *carduus fullonum*, and is of singular use in raising the nap upon woollen cloth. *Miller.* See *CARDUUS.*

TE'ASELER, *s.* [from *teasel*; *teizeler*, Norm. Fr.] One who raises the nap on woollen cloth by means of the teasel. *Kelham.*

TE'ASER, *s.* Whoever or whatever torments by incessant importunity.—These *teasers*, rather to rouse than pinch the game only made Whitaker find his spirits. *Fuller.*—A fly buzzing at his ear, makes him deaf to the best advice. If you would have him come to himself, you must take off his little *teaser*, which holds his reason at bay. *Collier.*

TEAT, *s.* [*teih*, Welsh; *tit*; Saxon; *tette*, Dutch; *teton*, French. *Dr. Johnson.*—Germ. *titte*, *dutte*; Heb. *dad*; M. Goth. *daddian*, lactare: vox antiquissima. See Wachter and Serenius.] A dug; a pap.—Even at thy *teat* thou hadst thy tyranny. *Shakspeare.*

TEATH, or TEITH, a river of Scotland, in Perthshire, which takes its rise from two sources; the northern branch, at the western extremity of the parish of Balquhider, where, running eastward some miles, it forms the small Loch Doine, and shortly after falls into Loch Voil, from which it issues near the Kirktown of Balquhider; then, running eastward for a mile or two, it takes a southerly direction, and runs into Loch Lubnaig, from whence it issues at the south end, and, taking a course south-east, joins the other branch at Callander. The southern branch takes its rise from Loch Catharine, between the parishes of Aberfoyle and Callander, from whence it runs in an easterly course through the small lochs of Achray and Vannachoir, until it meets with the north branch. In this neighbourhood it pursues a very winding course. At length it becomes rapid, and takes its course by the church of Kilmadock, passing the town and ancient

castle of Doune, where it receives the waters of the Ardoch. After this it moves more gently through the vales of Blair Drummond, and joins the Forth at the bridge of Drip. The river Teath abounds with trout and salmon. It is a clear but rapid stream, containing a body of water considerably greater than the Forth. The value of this river for driving machinery is exceeded by none in Scotland; yet, excepting the works at Danston, one mile above Doune, it is almost totally neglected, chiefly from the want of coal and lime.

TEATH, ST., or ST. ΕΤΗΑ, a parish of England, in Cornwall; 3½ miles south-west-by-west of Camelford. Population 857.

TEATINOS, a small island in the Pacific Ocean, between the island of Chiloe and the coast of Chili. Lat. 43. 35. S.

TEBALA, a town of Arabia, in the province of Hedsjas; 128 miles south-south-east of Mecca.

TEBAY, a hamlet of England, in Westmoreland, on the Lime; 2½ miles south of Orton.

TEBECRIT, a town of Algiers, near the Mediterranean; 2 miles from Ned Roma.

TEBELBELT, a town of Africa, in the country of Tafilet; 100 miles south of Sugulmessa.

TEBELENI, or TEPELENI, a small town in the west of European Turkey, in Albania, situated on the river Bolina, and surrounded on all sides by barren mountains. It contains 2000 inhabitants, and is ill built, but has a strong castle. It was the birth-place of the well known Ali Pacha; 35 miles south of Berat, and 58 north-west of Joannina.

TEBESTA, a town of Africa, in the kingdom of Tunis, on the borders of Algiers, where are found several beautiful ruins; 130 miles south-south-west of Tunis.

TEBIARE, a river of New Granada, in the province of San Juan de los Llanos, which runs south-west into the Meta.

TEBIQUARI, a river of South America, which rises in lat. 27. S. and joins the Iquay, to form the Rio Grande, in lat. 30. 55. S.

TEBIQUARI, a river of South America, which runs into the Paraguay, 8 miles below Assumption.

TEBIQUARI-MINI, a river of Paraguay, which runs south-west, and enters the Parana.

TEBOROPI, a river of Paraguay, which enters Yacayohi.

TEBWORTH, a hamlet of England, in Bedfordshire; 3½ miles north-north-west of Dunstable.

TECALETH, a town of Morocco; 121 miles west-north-west of Morocco.

TECALI, a town of Mexico, and capital of a district of the same name, which contains above 200 families of Spaniards and mulattoes; 17 miles south-east of Puebla de los Angeles.

TECALTITLAN, the name of two inconsiderable settlements of Mexico.

TECAMACHALCO, a settlement of Mexico, in the intendancy of Mexico, with a population of above 450 families of Spaniards, mulattoes, and mestizoes or the middle races.

TECEUT, or TECEHT, a town of Morocco, in the province of Sus, situated in a fertile soil, abounding with grain, dates, figs, grapes, and sugar canes. Here is a manufacture of Morocco leather; 150 miles south-west of Morocco.

TECH, a river in the south of France, department of the Eastern Pyrenees, which falls into the Mediterranean below Boulon.

TECHE, a river of the United States, in Louisiana, which flows south-east, and joins the Atchafalaya, about 15 miles above its entrance into the gulf of Mexico. It is navigable to new Iberia, about 45 miles.

TE'CHILY, *adv.* Peevishly; fretfully; frowardly.

TE'CHINESS, *s.* Peevishness; fretfulness.—Age is not a more common plea than unjust: The young man pretends it for his wanton and inordinate lust; the old, for his grippleness, *teehiness*, loquacity: all wrongfully, and not without foul abuse. *Bp. Hall.*

TE'CHNICAL, *adj.* [*τεχνικος*, Gr.; *technique*, French.] Belonging to arts; not in common or popular use.—In *technical* words, or terms of art, they refrain not from calling

calling the same substance sometimes the sulphur, and sometimes the mercury of a body. *Locke.*

TECHNICALLY, *adv.* In a technical manner.—The first professed English satirist, to speak *technically*, is bishop Joseph Hall. *Warton.*

TECHNOLOGY, *s.* [τεχνη and λογος, Greek.] A description or discourse upon arts.—There were not any further essays made in *technology* for above fourscore years; but all men acquiesced in the common grammar. *Twells.*

TE'CHY, *adj.* [for *touchy*, that is, inclination to be touched with whatever is said or done. *Ray.* Often written *tetchy*; which see.] Peevish; fretful; irritable; easily made angry; forward.

I cannot come to Cressid but by Pandar,
And he is as *tetchy* to be woo'd to woo,
As she is stubborn-chaste against all suit.

Shakspeare.

TECKLENBURG, a small town of Prussian Westphalia; 17 miles north-north-east of Munster, and 11 west-south-west of Osnabruck. It contains 900 inhabitants, and is the chief place of a county, which came to Prussia in the 17th century, and is now included in the government of Munster.

TECLA, *Str.*, a town of the province and government of Buenos Ayres, situate at the source of the river Piray-mini.

TECLA, *Str.*, a fort of the province and government of Buenos Ayres, situate on the Sierra de St. Ignacio, which constitutes the boundary between Buenos Ayres and Brazil. Lat. 31. 16. 8. S. long. 54. 14. 24. W.

TECOCUILCO, a town of Mexico, and the capital of a district of the same name. Its population consists of 340 families of Indians, mulattoes, and mestizoes; 223 miles south-east of Mexico. Lat. 17. 24. N. long. 96. 13. W.

TECOLUTLA, a river of Mexico, in the intendancy of Mexico, which falls into the Gulf of Mexico, in lat. 21. N. long. 95. 50. W.

TECOMACHALCO, a river of Mexico, which rises in the mountains to the west of the city of Mexico, and running from east to west, enters the lakes in the valley of Mexico.

TECORIONA, a settlement of Mexico, in the province of Ostimuri, on the shore of the river Hiaqui.

TECORIPA, a settlement of Mexico, in the province of Sonora.

TECRIT, a town of Irak Arabi, in the province of Mosul, on the western bank of the Tigris. It is thought to be the *Birtha* or *Vitra* of the ancients, described as a very strong fortress, and said to have been founded by Alexander the Great. It was a considerable town in 1393, when it was taken by Timur. It contains now only five or six hundred houses, with two coffee-houses; but the ruins are very extensive. Lat. 34. 37. N. long. 42. 37. E.

TECTONA [Τεκτωνια, *structura*, opus fabrile, so named from the use of this noble tree in building.], in Botany, a genus of the class pentandria, order monogynia, natural order of vitices (*Juss.*)—Generic Character. Calyx: perianth one-leafed, bell-shaped, half-five-cleft, permanent; segments ovate, from upright spreading, obtuse. Corolla one-petalled, funnel-form, length of the calyx. Tube short. Border five-cleft; segments spreading, ovate, externally tomentose. Stamina: filaments five, inserted into the orifice of the tube of the corolla, very short. Anthers globular, grooved, standing out. Pistil: germ superior, ovate, very villose, girt with a short pitcher-shaped gland. Style filiform, erect, a little longer than the calyx. Stigma obtuse, two or three-toothed. Pericarp: drupe subglobular, depressed, four-lobed, rounded-four-cornered, hirsute, corky-spongy, juiceless, within the calyx now large, inflated, membranaceous, veined, concealed. Seed: nut subglobular, terminated by a round tubercle, four-ribbed, four-celled; axis bony, hollow within. Kernels compressed.—*Essential Character.* Corolla five-cleft. Stigma toothed. Drupe dry, spongy, within the inflated calyx. Nut three-celled.

1. *Tectona grandis*, teak-wood, or Indian oak.—Trunk erect, growing to an immense size; bark ash-coloured. Branches cross-armed, numerous, spreading; young shoots

four-sided; sides channelled. Leaves opposite, spreading, ovate, a little scalloped, above scabrous, beneath covered with soft white down; larger at a distance from the flowers, and on young trees from twelve to twenty-four inches long, and from eight to sixteen broad. Panicle terminating, very large, cross-armed; divisions dichotomous, with a sessile fertile flower in each cleft; the whole covered with a hoary, farinaceous substance. Flowers small, white, very numerous, fragrant.—Native of the vast forests in Java and Ceylon, Malabar, Coromandel, Pegu, Ava, the confines of Cochinchina and Cambodia, &c. On the coast of Coromandel it flowers in the hot season; and the seed is ripe in August and September. Lord Cornwallis and Colonel Kyd begun some time ago to introduce it into Bengal, where it thrives well.

The wood of this tree has by long experience been found to be the most useful timber in Asia: it is light, easily worked, and at the same time both strong and durable: that which grows near the banks of the Godavery is beautifully veined, and very closely grained; it is particularly fit for furniture, gun-carriages, &c., where small timber is wanted. For ship-building the teak is reckoned superior to many sorts of wood, being light, strong, and very durable, either in or out of the water. Pegu produces the largest quantity; the large rivers there enable the natives to bring it down to the sea-ports from the interior mountainous parts of the country where it grows, at a cheap rate, which enables them to sell it lower than in any other part of India.

TECTONIC, *adj.* [τεκτονικος, Gr.] Pertaining to building. *Bailey.*

TECULET, a town of Africa, in the empire of Morocco, situated near the coast of the Atlantic, on the edge of a mountain; 15 miles east of Mogodor, and 99 north-west of Morocco.

To TED, *v. a.* [τεαδαν, Saxon, *to prepare.*] To spread abroad new-mown grass, in order to make it into hay.

The smell of grain, or *tedded* grass or kine,
Or dairy, each rural sight, each rural sound.

Milton.

TEDBOURNE, *St. MARY*, a parish of England, in Devonshire; 4½ miles south-south-west of Crediton. Population 580.

TED'DER, or **TE'THER**, *s.* [*tudder*, Dutch; *tiudt*, a rope, Icelandic.] A rope with which a horse is tied in the field that he may not pasture too wide. [*teigher*, Erse.]—Any thing by which one is restrained.—We live joyfully, going abroad within our *tedder*. *Bacon.*

To TE'DDER, *v. a.* To tie up; to restrain. Though it is not required that we should be always *teddered* to a formal solemn praying; yet by our mental meditations, and our ejaculatory emissions of the heart and mind, we may go far to the completing the Apostle's counsel. *Feltham.*

TEDDESLEY, a hamlet of England, in Staffordshire; 2 miles east-north-east of Penkridge.

TEDDINGTON, a parish of England, in Middlesex, situated on the banks of the Thames, near Hampton. In the neighbourhood are many handsome villas. Population 732; 14 miles south-west-by-west of St. Paul's, London.

TEDDINGTON, a parish of England, in Oxfordshire; 5 miles from Thame.

TEDDINGTON, a hamlet of England, in Worcester-shire; 9½ miles south-west of Evesham.

TEDE'UM, *s.* An hymn of the church, so called from the two first words of the Latin.

The choir,

With all the choicest music of the kingdom,
Together sung *te deum*.

Shakspeare.

TEDIEN, a river of Persia, which runs into the Caspian Sea; 20 miles west of Zaweh.

TEDIF, a town of Syria, in the pachalic of Aleppo. Here is a Jewish synagogue; and the inhabitants have a tradition that one of the minor prophets resided here. On a hill near this town are some sepulchres and aqueducts cut in the rock; 21 miles east of Aleppo.

TEDINGHAUSEN,

TEDINGHAUSEN, a town of the duchy of Bremen; 9 miles south of Ottersberg.

TE'DIOUS, *adj.* [*twdium*, Lat.] Wearisome by continuance; troublesome; irksome.

The one intense, the other still remiss,
Cannot well suit with either, but soon prove
Tedious alike.

Milton.

Wearisome by prolixity. Used of authors or performances.—Slow.

But then the road was smooth and fair to see,
With such insensible declivity,
That what men thought a *tedious* course to run,
Was finish'd in the hour it first begun.

Harte.

TE'DIOUSLY, *adv.* In such a manner as to weary.

Why dost thou wrong
Our mutual love so much, and *tediously* prolong
Our mirthful marriage-hour.

Drayton.

TE'DIOUSNESS, *s.* Wearisomeness by continuance.

She distastes them all within a while;
And in the sweetest finds a *tediousness*.

Davies.

Wearisomeness by prolixity.—In vain we labour to persuade them, that any thing can take away the *tediousness* of prayer, except it be brought to the same measure and form which themselves assign. *Hooker.*—Prolixity; length.

Since brevity's the soul of wit,
And *tediousness* the limbs and outward flourishes,
I will be brief.

Shakespeare.

Uneasiness; tiresomeness; quality of wearying.

TEDLA, or **TADILA**, a province of Morocco, which extends along the east side of the Atlas, to the borders of Fez and Algiers.

TEDNEST, or **TEDOEST**, a town of Africa, in the empire of Morocco. This town was destroyed by the Portuguese in the year 1514, and in part rebuilt by the Jews; 40 miles north-east of Mogodor, and 90 west-north-west of Morocco.

TEDSI, a town of Morocco, in the country of Sus, situated to the east of Terodant; 90 miles south-west of Morocco.

TEDSTONE DE LA MERE, a parish of England, in Herefordshire; 3½ miles north-east-by-east of Bromyard.

TEDSTON WAFER, another parish in the above county, half a mile distant from the foregoing.

TEDZEN, a considerable river of Korassan, in Persia, the largest in this part of Asia, next to the Oxus.

TEEBAKAN, a small island in the Eastern seas, near the north coast of Borneo. Lat. 7. 52. N. long. 117. 39. E.

TEEHEENGAN, a small island in the Eastern seas, north of Borneo. Lat. 7. 49. N. long. 117. 30. E.

TEEKOOOL, a small island in the Sooloo Archipelago. Lat. 6. 6. N. long. 120. 25. E.

To TEEM, *v. n.* [*teaman*, Sax. *to procreate*; *team*, *offspring*.] To bring young.

If she must *teem*,
Create her child of spleen, that it may live,
And be a thwart disnatur'd torment to her.

Shakespeare.

To be pregnant; to engender young.

Have we more sons? or are we like to have?
Is not my *teeming* date drunk up with time,
And wilt thou pluck my fair son from mine age?

Shakespeare.

There are fundamental truths the basis upon which a great many others rest: these are *teeming* truths, rich in store, with which they furnish the mind, and, like the lights of Heaven, give light and evidence to other things. *Locke.*—To be full; to be charged as a breeding animal.

To TEEM, *v. a.* To bring forth to produce.

What's the newest grief?
Each minute *teems* a new one.

Shakespeare.

To pour. *A low word*, imagined by Skinner to come from *tommen*, Danish, *to draw out*; *to pour*. The Scots retain it: as, *teem* that water out; hence Swift took this word. *Dr. Johnson.*—What Dr. Johnson has here said, is not accurate. This sense of *teem* is not only still retained in our northern parts of England, but is very old in our language. "The *teeming* or broaching of a vessel, depletio." *Prompt. Parv.* Serenius refers it to the Icel. *tacma*, *to empty*. *Todd.*—*Teem* out the remainder of the ale into the tankard, and fill the glass with small beer. *Swift.*

TEEMBOO, a considerable city of Central Africa, capital of Foota Jallo, the principal kingdom of the Foulahs. It contains about 7000 inhabitants, who manufacture narrow cloths, and work in iron, silver, wood, and leather. The houses are neatly and conveniently built, at a little distance from each other; 160 miles east of Sierra Leone.

TE'EMER, *s.* One that brings young.

TE'EMFUL, *adj.* [*teampul*, Sax.] Pregnant; prolific. Brimful. *Ainsworth.*

TE'EMLESS, *adj.* Unfruitful; not prolific.

Such wars, such waste, such fiery tracks of death,

Their zeal has left, and such a *teemless* earth.

Dryden.

TEEN, *s.* [*teinan*, Sax. *to kindle*; *tenen*, Flemish, *to vex*; *teonan*, Sax. *injuries*.] Sorrow; grief. *Not in use.*

My heart bleeds

To think o' the *teen* that I have turn'd to you. *Shakespeare.*

To TEEN, *v. a.* [*teinan*, Saxon, *to kindle*.] To excite; to provoke to do a thing. *Not in use.*—Why tempt ye me, and *tene*, with such manner speche? *Chaucer.*

TEENS, *s.* The years reckoned by the termination *teen*; as, thirteen, fourteen.

Our author would excuse these youthful scenes,
Begotten at his entrance in his *teens*;

Some childish fancies may approve the toy,
Some like the muse the more for being a boy. *Granville.*

TEENY, a small village of Ireland, in the county of Londonderry; 104 miles north-north-west of Dublin.

TEERAWHITTE, CAPE, a cape forming the southern-most point of the isle of Eaheinomauwe, in Cook's Strait, discovered by Captain Cook, in 1769. Lat. 41. 21. S. long. 184. 12. W.

TEES, a considerable river of England, which rises in the mountains of Westmoreland, and taking an easterly direction, divides the North Riding of Yorkshire from the county of Durham in its whole extent. It passes Barnard Castle, Staindrop, Darlington, Yarm, and Stockton, and falls into the German Ocean, in a wide estuary called the Teesmouth, on the south of Hartlepool.

TEESDALE FOREST, a township of England, in Durham; 11 miles north-by-west of Barnard Castle. Population 998.

TEESE, a large walled town of Central Africa, in the kingdom of Kasson. The Mandingo inhabitants were remarked by Mr. Park for their want of delicacy as to articles of diet, eating without difficulty moles, rats, squirrels, snakes, and locusts. Yet, by a singular caprice, no woman of Teese is allowed to eat an egg; 30 miles north-west of Kooniakary.

TEESGAON, a town of Hindostan, province of Aurungabad, lately, if not still, subject to the Mahrattas. Lat. 19. 13. N. long. 74. 53. E.

TEESGAON, a village of Bengal, 3 miles north of Dacca, in which is situated the bleach grounds of the East India Company.

TEESTA, a considerable river of Bengal. It has its source in the Himmalya mountains; and after separating the Nepaul dominions from those of the Deb rajah, enters the northern region of Rungpoor: it thence continues its course in a south direction, till it joins the Ganges. It is navigable by large boats, and is estimated to be about 400 miles in length.

TEETGAUM,

TEETGAUM, a town of Hindostan, province of Gujerat, district of Neyer. Its inhabitants are Hindoos of the military tribe, and pay tribute to the chief of Theraud. Latitude not ascertained.

TEETH, the plural of *tooth*.—Who can open the doors of his face? his *teeth* are terrible round about. *Job*.

To TEETH, v. n. To breed teeth; to be at the time of dentition.—When the symptoms of *teething* appear, the gums ought to be relaxed by softening ointment. *Arbuthnot*.

TEETON, a hamlet of England, in Northamptonshire; 7 miles from Northampton.

TEFE, or **TEFEE**, a settlement of Brazil, in the government of Para, on the shore of the river of its name, and at the mouth by which it enters the Amazons, and where also a fort has been built for its defence. Lat. 3. 20. S. long. 64. 48. W.

TEFE, a river of Brazil, which rises, as is conjectured, in the country of the Indians, between the Purus to the east, and the Jurua to the west; and after several windings, enters the Amazons.

TEFESSAD, a town of Algiers, on whose site are found extensive ruins, reaching two miles in length, and half a mile in breadth, supposed to be those of the ancient Tipasa; 32 miles south-south-west of Algiers.

TEFETHNE, or **TEFTANE**, a small sea-port of Morocco, situated at the mouth of a river of the same name; 60 miles west of Morocco.

TEFFONT, **EVIAS**, a parish of England, in Wiltshire; 7 miles west of Wilton.

TEFFONT, **MAGNA**, another parish in the same county, half a mile distant from the foregoing.

TEFLIS, or **TIFLIS**, a city of Asia, and capital of the kingdom of Georgia. This city was visited in 1817 by Sir R. Kerr Porter, who describes it as situated on the precipitous and sublime banks of the Kur, at the extremity of a defile formed by two bold ranges of mountains, which gloomily overshadow it. The city has no claim to an antiquity beyond the lapse of a few centuries; having been founded in the year 1063, by the Tzar Liewvang, who wished to derive personal benefit from certain warm springs in its neighbourhood. Till that period it could boast no habitation in the form of a house; unless, perhaps, a few mud hovels for the convenience of the occupiers of a small fortress, which stood on an adjacent height, and protected the valley.

Teflis has been long celebrated for its baths, which are situated at one extremity of the bazar. At this place is a small bridge over a deep ravine, at the bottom of which flows a mountain stream; pure and cold at its fountain-head, but mingling here with the hot springs which take their rise in the adjacent heights, it becomes warm, and derives all the medicinal properties whose fame gave birth to Teflis. Over this steaming flood the public baths are erected. They form not only a resource in sickness to the natives, and to travellers visiting them with the same object, but they are the daily resort of both sexes, as places of luxury and amusement. On one side of the bridge stand those appropriated to the men; and on the other, immediately below the gloomy walls of the citadel, the range intended for the women. The water which supplies these distinct bath-houses is strongly impregnated with sulphur, having the usual offensive smell of such springs. Its degree of heat may be reckoned at from 15 to 36 degrees of Reaumur in the several basons. At the source of the hot stream it is about 42. The basons are excavated in the solid rock, over whose surface the water had originally flowed; and these are divided, under one immense vaulted roof, into different apartments, whence even the smallest egress of day-light is excluded; and which are merely rescued from total darkness by the faint glimmerings of a few twinkling lamps struggling with the vapours from the stream. The place is kept intolerably filthy, and full of disorder and stench. There is not a spot where a bather could lay down his clothes, without the certainty of taking them up again drenched with wet and dirt. These baths are open to all ranks indiscriminately, who may be seen here huddled to-

Vol. XXIII. No. 1614.

gether, scrubbing, scraping, rubbing, shaving, &c.; the offices of each act being done, either by the companions of the bather, or the persons of the bath, who are always in attendance with the necessary requisites. The baths appropriated to the women were also visited by Sir R. K. Porter, who was admitted without the least scruple.

There are several fine churches, of different Christian persuasions, in Teflis; and that which is dedicated to the Roman Catholic mode of worship, is one of the most beautiful. The cathedral of Holy Sion, the great Arminian church, is more extensive, but does not equal its tolerated rival in richness and grace of architecture; yet it has an advantage in situation, which, adding the majesty of nature to the holy sanctity of the place, seems fully to answer the character of its name. The noble waters of the Kur roll near its base, increasing in rapidity and sound as they pour onward amongst the thickening rocks of the suddenly closing in of the bold cliffs which embank the stream. At this narrowed point, a bridge of one single arch connects the town with a considerable suburb called Avlabar. It is chiefly inhabited by a colony of Arminians, who fled from the neighbourhood of Erivan, during the late wars between Russia and the Persian government. Here also are the ruins of an ancient fort, church, and houses; and about two miles further from this side of the city, stand the remains of another sacred edifice of old times, on the summit of a hill so high, that it commands the most extensive view to be found anywhere in the environs of Teflis. From one side it embraces the city, with its citadel, churches, and gardens; on the other to the north, the windings of the Kur, through the varied shores of the valley and plain; and takes also into the same wide landscape, not only the whole chain of mountains from the province of Kahetia to Kasibek, but their tremendous summits, pile above pile, as far as the eye can reach to the north-west, till all are crowned by the pale and cloud-encircled head of Elborus. A Russian officer, who measured this last-named mountain, calculates it to be 16,700 feet above the level of the sea.

Since the conquest of the Russians, it has been the residence of their governor and commander-in-chief, who has always a great force stationed here under him. The troops are quartered, as in Europe, in the houses of the inhabitants; a circumstance which gives extreme disgust to the Georgians, in consequence of their wives and daughters being exposed to the view of strangers. This habitual intercourse with Europeans has effected within the last 20 years a considerable change in the manners of the female Georgians. The higher ranks have lost much of their Asiatic manners; and it is said that in some cases the change not being well understood, the women have become licentious, and have thrown off their former Asiatic restraint, without assuming the reserve and decorum of European manners. Amongst the lower classes this effect of foreign intercourse has been even more decided, as the customary lines of separation between the women and the men, owing to the introduction of Russian soldiers into their houses, could no longer be preserved. When the women walk abroad, they still so far retain the old custom of concealment, as to wear its costume; and they may be seen tripping along, enveloped from head to foot in a large Asiatic veil, called a *chadre*; and, when any of these females happen to be standing at the doors, without this safeguard, they retreat hastily into the house on observing themselves to be attentively looked at by a man. The beauty of the Georgian women cannot be disputed; having fine dark large eyes, very regular features, and a pleasing mild expression of countenance. The dress of the higher ranks is splendid, and carefully adjusted; but the lower order of females, notwithstanding they share the same taste for the ceremonies of the bath, and regularly go through them all, appear often in rags, and always in dirt.

Before its capture in 1797, by Aga Mohammed Khan, Teflis contained 4000 houses, and 22,000 inhabitants. The greater part of the houses are still standing, and are neatly built; but the population does not now exceed 15,000.

Teflis is distant from St. Petersburg 2627 wersts, or about

1752 English miles, in 42. 45. north lat., and 62. 40½. east long, according to Russian calculation.

TEFZA, a town of Morocco, built on the side of a mountain. The surrounding walls are composed of blocks of marble; 70 miles north-east of Morocco.

TEGADOO BAY, a bay on the east coast of the most northern islands of New Zealand, discovered by Captain, (then lieutenant) Cook, in 1789. Lat. 38. 10. S. long. 181. 14. W.

TEGAPATAM, a sea-port town of the south of India, district of Travancore. It is situated at the mouth of a small river, which may be entered by boats. Lat. 8. 15. N. long. 77. E.

TEGERHY, or **TAIGAREA**, the most westerly town of Fezzan, in Africa, 68 miles south of Mourzouk.

TEGEWSE, a village of the Bled el Jereede, in Africa, to the south of the kingdom of Tunis, on the site of the ancient Tichasa; 38 miles south-south-west of Gafsa.

TEGLIO, a small town of Austrian Italy, in the Valteline, on the river Adda, with 1500 inhabitants; 10 miles west of Sondrio.

TEGOMAH, a town of Central Africa, in the kingdom of Asben, on the frontier of Cassina. It lies on the great caravan route from Fezzan to Cassina; 50 miles south of Agades.

TEGORARIN, a village in the southern part of the kingdom of Tunis, on the frontier of the Sahara, 70 miles north-north-west of Gardeiah.

TEGUA, a small river of New Granada, in the province of San Juan de los Llanos, which runs east, and enters the Arico.

TEGUALEMU, an Indian settlement of Chili, in the province of Itatu.

TEGUAS, a settlement of New Granada, in the province of Tunja.

TEGUCIGALPA, a river of Honduras, which enters the sea near the bay of Truxillo.

TEGUE, a settlement of New Granada, in the province of Carthagena, situated in an island formed by the river Cauca.

TEGULET, a city of Abyssinia, in the province of Shoa, said to have been the ancient capital of the kingdom. Lat. 9. 40. N. long. 38. 30. E.

TEGUMENT, *s.* [*tegumentum*, Lat.] Cover; the outward part. This word is seldom used but in anatomy or physics.—In the nutmeg another *tegument* is the mace between the green pericarpium and the hard shell. *Ray*.

TEHAMA, a large belt of sand, which stretches along the eastern shore of the Red Sea, and reaches to the mountains in the interior. It is almost entirely barren, presenting an unvaried picture of desolation.

TEHE'E, *interj.* This is an old expression for a laugh. It is also used in Scotland; and Dr. Janrieson considers it as either derived from the sound, or as allied to *hia*, Su. Goth. and Icel. to sport, to laugh.—*Te-he*, quoth she, and clapt the window to. *Chaucer*.

To **TE'HEE**, *v. n.* To laugh with a loud and more insolent kind of cackinnation; to titter.

They laughed and *te-hee'd* with derision,
To see them take your deposition.

Hudibras.

TEHINCHIEN, a river of Bootan, which, after passing Tassisudon, and being joined by several other streams, enters Bengal, near Buxedwar, and joins the Brahmapootra.

TEHRAUN, a large city of Persia, which, during the two last reigns, has been the capital of the empire, so far at least as the residence of the sovereign confers that character. Its situation is very striking, having to the south the ruins of the immense and ancient city of Rey or Rae; to the north and east the lofty mountain ranges of Elburz and Demavend, and to the west a plain enriched with cultivation and villages. It is about four miles in circumference, surrounded by a strong wall, flanked by innumerable towers, and a broad dry ditch, with a glacis between it and the wall. In the summer season the king pitches his tent in the plains of

Sultania or Unjan, and most of the inhabitants follow the royal camp; so that Tehraun cannot then boast of a population of more than 10,000. In winter, on the contrary, it is supposed to contain 60,000 inhabitants. Lat. 35. 40. N. long. 50. 52. E.

TEHROOT, a small town of Persia, in the province of Kerman, pleasantly surrounded with gardens; 50 miles north-west of Bumm.

TEHRWARRA, a town of Hindostan, province of Gujerat, tributary to a chief named Kumonal Khan. The inhabitants are said to be much addicted to robbery. Lat. 23. 53. N. long. 71. 25. E.

TEHUACAN, a town of Mexico, in the intendancy of Mexico, and one of the most frequented sanctuaries of the Mexicans, before the arrival of the Spaniards. It is populous, having many families of Spaniards, mulattoes, and mestizoes, besides above 2000 Indians. Lat. 18. 30. N. long. 97. 14. 30. W.

TEHUANTEPEC, **TEGUANTEPEQUE**, or **TECOANTEPEQUE**, a sea-port town of Mexico, in the intendancy of Oaxaca, situated in the bottom of the creek formed by the ocean, between the small villages of San Francisco, San Dionisio, and Santa Maria de la Mar. It is about 196 miles south-east of Mexico. Lat. 16. 16. N. long. 94. 58. W.

TEHUANTEPEC, a very large open gulf in the front of the above city, and from which it takes its name. It is also the name of a point of land nearly separated from the shore.

TEHULOTEPEC, a village of Mexico, in the intendancy of Mexico, situated near the great mines of Tasco. Long. 29. 99. W.

TEICHEL, a petty town of the Central part of Germany, in the upper county of Schwarzburg-Rudolstadt. Population 800.

TEICHOPŒUS, *τεῖχοποιός*, Gr., among the Athenians, an officer who had the care of the city walls; their number was the same with that of the tribes, every tribe having the choice of one.

TEIDI, a small river of Paraguay, in the province of Gaira, which enters the Parana between the Yaguini and the Guazigua.

TEIGH, a parish of England, in Rutlandshire; 5½ miles north by west of Oakham.

TEIGN, a river of England, in Devonshire. It consists of two branches, which rise nearly in the centre of the county, and, after uniting, fall into the English channel at Teignmouth.

TEINGRACE, a parish of England, in Devonshire; 2 miles north of Abbot's Newton.

TEIGNMOUTH, a sea-port town of England, in Devonshire, situated at the mouth of the river Teign, a place of great antiquity, and now become one of the principal watering places on the south-western coast. The town stands on a gentle declivity, at the foot of a chain of hills, which shelter it on the east and north-east. It is divided by a small rivulet into two parishes, viz., East and West Teignmouth. The principal resort of visitors is to East Teignmouth, where the public rooms are situated. It is a neat building, containing tea, coffee, assembly and billiard rooms. There are also libraries and reading-rooms in the town. The present theatre has been newly built in West Teignmouth, and is a handsome structure. The view up the river is extremely beautiful, the ground gradually rising into verdant hills, ornamented with wood. The cliffs overhanging the sea have a singular appearance, being mostly of a deep red colour, and rising in rude irregular shapes to the height of 70 or 80 feet. The church of East Teignmouth is a venerable structure, situated near the beach; and, from its architecture, it appears probable that this was one of the earliest structures erected after the coming of the Normans.

The chief trade of Teignmouth consists in the exportation of pipe or potter's clay to Staffordshire, Liverpool, &c. whence are brought back coal, salt, earthenware, &c. A great number of vessels are also sent hence to the Newfoundland fishery. West Teignmouth is a manor of itself, and belongs

belongs to lord Clifford, who, by his deputy, holds annually a court-baron or court-leet in the town or borough, at which a jury is regularly nominated, two constables deputed and sworn, and a portreeve chosen, who is invested with considerable authority. In this court, which has been held here time immemorial, anciently all *petit* causes among the inhabitants were tried, and the culprits amerced according to the pleasure of the lord. East Teignmouth contains the manor of East Teignmouth, or Teignmouth Courtenay, which belongs to lord Courtenay. The dean and chapter of Exeter have also a manor in East Teignmouth, to whom the great tythes and the tythes of fish belong, and who are the lords paramount, Lord Courtenay being the puisne lord. Teignmouth is a place of remote antiquity, and is recorded to have been burnt in the 10th century by the Danes. The parishes of East and West Teignmouth contain about 5000 inhabitants. The market-place has been lately built, and is very commodious; it is well supplied on Saturdays. There are three fairs in the year; the best frequented is in September. The principal inn in the town is the London hotel. There are many handsome seats in the neighbourhood, the principal of which is West Cliff house, belonging to Lord Exmouth; 15 miles south of Exeter, and 185 west-by-south of London. Lat. 50. 33. N. long. 3. 29. W.

TEIGNTON, BISHOP'S, a parish of England, in Devonshire; $1\frac{1}{2}$ mile west-by-north of West Teignmouth. Population 753.

TEIGNTON, DREWS, a parish of England, in Devonshire; 8 miles south-west of Crediton. Population 998.

TEIGNTON, KING'S, a parish of England, in Devonshire; 2 miles north-east of Abbot's Newton. Population 1001.

TEIL, a small town in the south-east of France, in the department of the Ardeche, on the Rhone. Population 1400; 5 miles north of Viviers.

TEIL, *s.* [*tilia*, Lat.] The same with linden or lime tree.

From purple violets and the *teil* they bring
Their gather'd sweets, and rifle all the spring. *Addison.*

TEILLEUL, a small town in the north-west of France, department of La Manche. Population 2400; 9 miles south-south-east of Mortain, and 25 south-east of Avranches.

TEIN, or THEIN, a small town in the interior of Bohemia, on the Mulda; 59 miles south of Prague, and 15 north of Budweis, Population 1900.

TEINT, *s.* [*teinte*, Fr.] Colour; touch of the pencil.—Glaz'd colours have a vivacity which can never be imitated by the most brilliant colours, because the different *teints* are simply laid on, each in its place, one after another. *Dryden.*

TEISSÉ, a large village in the north of France, department of the Orne, with 1500 inhabitants, employed partly on the iron-works of the place.

TEISSHOLZ, or TISZOLTS, a small town in the north-east of Hungary; 92 miles north-north-east of Pest, and 26 east of Libethen, inhabited by Lutheran Slowacs. In the neighbourhood are mines of magnetic iron ore.

TEJUCO, a district of Brazil, of which the town of Tejuco is the capital, around which it extends 16 leagues from north to south, and about 8 from east to west. It was first explored by some enterprising miners from Villa do Principe, a few years after the establishment of that town. These men proceeding north, found an open country, watered by many small rivulets. These rivulets were then washed for gold, and were considered as belonging to the district of Villa do Principe. No idea was first entertained that the rivulets contained diamonds although it is said that some were collected and presented to the then governor of Villa do Principe, as curious bright stones, and were used by him as counters at cards. Soon afterwards a few of them found their way to Lisbon, and were given as pretty pebbles to the Dutch minister, to send to Holland, which was then the principal mart in Europe for precious stones. The lapidaries to whom they were presented for examination, pronounced

these pebbles to be very fine diamonds. Information was accordingly sent to the Dutch consul at Lisbon, who did not fail to profit by the occasion; for he managed the affair with government so well, that he contracted for the precious stones at the same time that he communicated the intelligence. Government afterwards endeavoured to monopolise the diamonds, and made a distinct district of Cerro do Frio, placing it under peculiar laws and regulations. The number of diamonds sent over during the first 20 years after the discovery, is said to be almost incredible, and to exceed 1000 ounces in weight. In its present state the establishment appears to produce much greater wealth than it actually does. During a period of five years, from 1801 to 1806 inclusive, the expenses were 204,000*l.* and the diamonds sent to the treasury at Rio de Janeiro weighed 115,675 carats. The value of gold found in the same period amounted to 17,300*l.* sterling, from which it appears, that the diamonds actually cost government *l.* 13*s.* 9*d.* per carat. These years were esteemed singularly productive; the mines do not in general yield to government more than 20,000 carats annually. Exclusive of this amount, there is a vast quantity smuggled.

TEJUCO, a town of Brazil, and capital of the above district. Owing to its situation by the side of a hill, it is very irregularly built; its streets are uneven, but the houses in general are well constructed and in good condition, compared with those of other towns in the interior. Its name, which, in the Portuguese language, signifies a muddy place, is derived from places of that description in its neighbourhood, which are rendered passable by being covered with large pieces of wood. Owing to the great distance of Tejuco from a sea-port, piano-fortes have not been introduced here, or they would probably be in great demand; for the ladies in general have a taste for music, and touch the guitar with great spirit and elegance. Dancing is a favourite amusement and all appear much pleased and animated with the English country-dance. The ladies seldom go abroad, except to mass, and then they are usually carried in a chair hung with curtains and a canopy, and suspended from a pole borne by two men. The sedentary habits of the females has been thought injurious to their health; but since English saddles have been introduced, they begin to take airings on horseback. Warm baths are very generally used, being considered of great efficacy in removing recent colds, to which all persons here are liable, on account of the peculiar nature of the climate. They are invariably offered at night to travellers, as a means of relieving the pains occasioned by the fatigues of the day. Population 6000.

TEJUCO, or TEJUCA, a small island of Brazil, near the island of St. Catherine's, in lat. 27. 11. S. long. 48. 50. W.

TEJUCOS, BAY OF, on the coast of Brazil, in South America, some miles to the north of the island of St. Catherine's. It is from two to three leagues across, and extends the same distance inland. It is well sheltered, and affords good anchorage, and fine situations for loading timber, with which the mountainous country is thickly clothed, and of which large quantities are felled and embarked for Rio de Janeiro and the river Plata. The bay is esteemed good fishing ground for whales; along the beach of this bay is found a shell of the murex genus, which produces that beautiful crimson dye, so valued by the ancients. It is here called purpura, and, its use is in some degree known to the natives. Lat. 26. 56. S.

TEKELY, a village of Lower Hungary, in the palatinate of Pilis. It gave name to the family of Tekeley, famous for the resistance made by its head to the house of Austria, in the 17th century.

TEKETANOAH, or CYPRUS CREEK, a river of the United States in Alabama, which flows into the Tennessee, a below Florence.

TEKETENGY, a river of the south-east of Transylvania, in the district of Haromszek, which, after flowing through a fertile and beautiful valley, falls into the Aluta.

TEKIN, a village of Caramania, in Asiatic Turkey; 100 miles west of Tocat.

TEKING, a city of China, of the second rank, in Quang-

Quang-tong, near the river Si. Lat. 23. 12. N. long. 111. E.

TEKIR, or TEKIRI DAG, a mountain in the east of European Turkey, in Romania, which is, properly speaking, only a continuation to the eastward of the Argentaro or Rhodope chain. It extends along the north coast of the sea of Marmora, and terminates at the extremity of the Thracian Chersonese, to the north of Constantinople.

TEKOA, a village of Palestine, on the site of which was anciently built a considerable town, of which the ruins are still visible; 9 miles south of Bethlehem.

TEKUPHE, or THEKUPHE, with the Jews, are the times in which the sun proceeds from one cardinal point to the next.

The same term is also applied to the moment in which the sun enters a cardinal point: these four terms, or tekuphæ, into which the Jews divided their solar year, are observed among the Jews with a great deal of ceremony. And hence, they fancy, that if any body drinks the smallest quantity of water at that time, he will infallibly have a dropsy, or some other grievous distemper.

The tekupha of Tisri corresponded to the autumnal equinox; that of Tebeth to the winter solstice; that of Nisan to the vernal equinox; and that of Tamuz to the summer solstice.

TEKUTCH, a small town in the north of European Turkey, in Moldavia, in the district called the Zara de Schoss; 70 miles north-north-west of Calatz, and 76 south of Jessy.

TERY SOUND, on the coast of Georgia, to the south of Savannah river, is a capacious road, where a large fleet may anchor in from 10 to 44 fathoms water, and be land-locked, and have a safe entrance over the bar of the river. The flood tide is generally seven feet.

TELACH, an island of Asiatic Russia, in the Penzinskoi gulf. Lat. 61 35. N. long. 159. 14. E.

TELAMONES, a name given by the Romans to what the Greeks called *Atlantes*; viz. the figures of men supporting entablatures, and other projectures.

The word, according to some, is derived from the Greek *τελαμων*, from *τελαω*, or *τλαω*, *I bear*.

Among the Greeks they were called *Atlantes*, *ατλαντες*, which comes from the same word *ταλαω*, or *τλαω*, by the figure metathesis.

TELANADING ISLANDS, three small islands lying east and west, near the north-west coast of the island of Gilolo. Lat. 2. 18. N. long. 127. 30. E.

TELAPSAR, a village of Diarbekir, in Asiatic Turkey; 20 miles west of Mosul.

TELARUSE, a river of Asia, in the peninsula of Malacca, which forms the northern boundary of the kingdom of Queda, separating it from Lower Siam, and falls into the Eastern seas. Lat. 6. 56. N. long. 99. 42. E.

TELARY, *adj.* [*tela*, Lat., *a web*.] Spinning webs.—The pictures of *telary* spiders, and their position in the web, is commonly made lateral, and regarding the horizon; although we shall commonly find it downward, and their heads respecting the centre. *Brown*.

TELAUGIA, the name of a genus of scrupi, of a glittering appearance, usually containing flakes of talc, and emulating the structure of the granites. *Hill*.

Of this genus we have twelve species.

TELCH, a river of European Turkey, in Wallachia, which rises on the borders of Transylvania, and falls into the Danube.

TELDOM HOTUN, a town of Chinese Tartary, situated on the western bank of the river Sagalien. Lat. 49. 56. N. long. 127. 33. E.

TELEGRAPH, *s.* [*telegraphie*, Fr., from *τελος* and *γραφω*, Gr.] An instrument that answers the end of writing by conveying intelligence to a distance through the means of signals. *Mason*

The earliest decisive proof of telegraphic communications, except those by fires (*πυρσειαι*) being in use among the Greeks, is found in the methods described by Polybius. The Romans had their *vexillarii*, and used flags and other

contrivances for regulating the movements of their armies; and they had hollow tubes constructed in the walls of their cities, by which they could communicate with the several ports or works by sound, as is done in our times in some manufactories by means of pipes or trumpets. Wherever the Romans pitched their camp, an elevated spot was selected for the signal station, to convey intelligence to the foraging parties or detachments, but it is nowhere stated to what extent this was carried. Vegetius alludes to something like a beam in the air, on the same principle perhaps as our Semaphore.

The first telegraph on record in modern times, applicable to universal purposes, is that of Dr. Hooke, described in the *Philosophical Transactions* of the year 1684. He minutely details the mode in which the stations should be selected, their height and intermediate ground, so that the refraction of the air may not disturb the clear appearance of the object; the telescopes to be used; the characters to represent the alphabet, which, he says, may be varied ten thousand ways, and "none but the two extreme correspondents shall be able to discover the information conveyed;" and so convinced is he of the practical efficiency of his telegraph, as to leave no doubt on his mind, "that the same character may be seen at Paris within a minute after it hath been exposed in London." His method consisted in exposing in succession as many different shaped figures or signs, at least, as the alphabet consists of letters. If used in the day-time, they might be squares, circles, triangles, &c., made of deals; if at night, torches or other lights disposed in a certain order. These characters or signs were to be brought forth from behind a screen on rods, as they might be wanted, and exposed to view.

In the year 1795, the Rev. J. Gamble produced two plans of a telegraph; the one consisting of five boards, one above the other, which, by opening and shutting singly, or according to all the combinations of which they were capable, gave a certain number of distinct signals, representing either numbers or letters, as might be deemed most expedient. The other plan was that of five beams of wood, turning on the summit of a post, so as to form five radii of a semicircle at equal angles of 45° with each other. This was the foundation of the present semaphore.

In the same year, Lord George Murray presented his plan of a six-shutter telegraph to the Admiralty, which was the one adopted and made use of during the whole war, and until the year 1816, when it was changed for a simplified semaphore, which will be noticed hereafter.

On the same principle as the radiated telegraph of Mr. Gamble, but differently arranged, the French, on the commencement of the second war in 1803, erected signal-posts along the coast, to which they gave the name of semaphores; being two or three beams of wood on the same post, but turning on different pivots.

In 1807, Colonel Pasley published his *Polygrammatic Telegraph*, which differed only from the French semaphore in having two beams turning on one pivot on the same post, and multiplying the number of posts; which he afterwards (in 1810) changed so far as to place three sets of beams or arms, two in each set, on one post, and thus approached still nearer to the French semaphore.

In the year 1816, Sir Home Popham, who had already introduced a new code of signals into the navy, which was admitted on all hands as a great improvement on the old system, both as regarding the number, the arrangement, and the shape of the flags, now turned his attention to the land semaphore, and proposed one on a construction of the same nature with that of Colonel Pasley, but much simplified. It was, in fact, nothing more than two moveable arms on separate pivots on the same mast.

This machine, on account of its simplicity, had obviously the advantage over all others that had been proposed; and being found of sufficient power and efficiency for all required purposes, it was adopted by the Admiralty, instead of the shutter telegraph, which had been in use since the year 1795.

Colonel Pasley, however, in 1822, still farther simplified this useful machine, at the expense of sacrificing a small portion of its powers, by making the two arms revolve on the same pivot, but fixed at the top of the post, to which he has given the name of the "Universal Telegraph."

TEGLET, or ΜΕΖΟΤΕΛΕΓΓ, a small town in the south-east of Hungary; 12 miles east of Great Waradein, and 40 south-south-east of Debreczin,

TELEMBI, a river of New Granada, in the province of Pasto, which rises near the town of Pasto, and enters the Patia, a little before it runs into the sea.

TELEMBI, SAN LUIS DE, a settlement of New Granada, in the province of Pasto, situated on the shore of the above river.

TELEMEEN, a village of Africa, in the Bled el Jereede, on the site of the ancient Almora.

TELEPHIUM [of Pliny. Τηλεφριον of Dioscorides], in Botany, a genus of the class pentandria, order trigynia, natural order of portulacæ (Juss.).—Generic Character. Calyx: perianth five-leaved; leaflets oblong, obtuse, concave, keeled, length of the corolla, permanent. Corolla: petals five, oblong, obtuse, narrower below, erect, inserted into the receptacle. Stamina: filaments five, awl-shaped, shorter than the corolla; anthers incumbent. Pistil: germ three-sided, acute. Style none. Stigmas three, acute, spreading. Pericarp: capsule short, three-sided, three-valved, one-celled, receptacle free, shorter by half than the capsule. Seeds very many, roundish. *Essential Character*.—Calyx five-leaved. Petals five, inserted into the receptacle. Capsule one-celled, three-valved.

1. *Telephium imperati*, or true orpine.—Root composed of yellowish woody fibres, spreading out wide. Stalks and branches slender, trailing, eight or nine inches long. Leaves small, ovate, grayish, smooth, and pretty stiff, having one longitudinal nerve running through the middle. Flowers terminating, in short thick bunches, reflexed like those of Heliotrope.—Native of the South of France, Spain, Switzerland, Italy, and Barbary.

2. *Telephium oppositifolium*. Leaves opposite.—Native of Barbary,

Propagation and Culture.—Sow the seeds in autumn, on a bed of fresh light earth, in an open situation; for if they be sown in the spring, the plants will not come up till the following spring. Leave them six or eight inches asunder, and clear them well from weeds, which will soon overbear such trailing plants. They do not transplant well, and therefore should be sown where they are to remain. The seeds will soon scatter, and if the ground be not disturbed, plants will come up in plenty.

TELESCOMBE, a parish of England, in Sussex, chiefly inhabited by smugglers; 3 miles north-west of Newhaven.

TELESCOPE, *s.* [*telescope*, Fr., from *τηλε*, *far*, and *σκοπεω*, Gr., *to view*.] A long glass by which distant objects are viewed.—The *telescope* discovers to us distant wonders in the heavens, and shews the milky way, and the bright cloudy spots, in a very dark sky, to be a collection of little stars. *Watts*. See OPTICS.

TELESCOPICAL, or TELESCOPIC, *adj.* Belonging to a telescope; seeing at a distance.—Mr. Molyneux discoursed of *telescopic* sights. *Hist. R. S.*

TELESE, a petty town of Italy; 17 miles east-north-east of Capua, and 24 north-west of Naples.

TELESIO (Bernardino), a modern philosopher, the descendant of an illustrious family at Cosenza, in Naples, was born in the year 1508 or 1509, and he terminated his life in the year 1588. Teslio distinguished himself by his opposition to the physics of Aristotle, and employed mathematical principles in explaining the laws of nature. These were first divulged in a work printed at Rome in 1565, entitled "De Rerum Natura juxta propria principia, Lib. II." and enlarged to nine books in an edition printed at Naples in 1586. The same system was maintained in other treatises, under the titles of "De his quæ in Aere fiunt, et de Terræ Motibus;" "De Mari;" "De Colorum Genere," &c. His

system was in its essence the doctrine of Parmenides, who taught, that the first principles in nature, by means of which all natural phenomena are produced, are cold and heat. Lord Bacon observes, that Telesio, no less than Plato and Aristotle, places abstract notions at the basis of his system, and produces his world of real beings from non-entities. This eminent philosopher, however, characterises him as a lover of truth and a benefactor to science; and one who prepared the way for subsequent improvements.

TELESM, *s.* [*talism*, Arab. See TALISMAN.] A kind of amulet or magical charm.—This is hugely like the consecrated *telesms* of the pagans. *More*.

TELESMA'TICAL, *adj.* Belonging to telesms.—They had a *telesmatical* way of preparation, answerable to the beginnings and mediocrity of the art. *Gregory*.

TELESPHORUS, a deity invoked by the Greeks for health, together with the Esculapius and Hygeia. The figures of these three divinities occur on several medals, and on some we have Telesphorus with Esculapius alone, and on others with Hygeia.

The figure of Telesphorus is that of an infant clothed with a sort of cloak without sleeves, which enfolds its arms, descends below the knees, and has a kind of hood or cowl covering its head.

TELESTIC, *s.* [from *τελος* and *στιχος*, Gr.] A poem, where the final letters of each line make up a name. *Mason*.—Acrostics and *telestics* on jump names. *B. Jonson*.

TELETZKOI, a lake of Siberia, in the government of Kolivan, extending about 52 miles from north to south and 10 from east to west, supplied by a river which rises in Chinese Tartary, and bordered by a lofty chain of mountains, connected with the Altai.

TELFAIR, a county of the United States, in the south-west part of Georgia. Population 744, including 218 slaves.

TELIA, CAPE ST, a promontory on the south coast of Sardinia. Lat. 38. 20. N. long. 9. 20. E.

TELIGUE, a lake of Independent Tartary, in the steppe of the Kirghises, about 150 miles to the east of the Aral.

TELINGANA, an ancient kingdom of Hindostan, now possessed by the British and the Nizam. It was intersected by the river Godavery. The districts lying to the north of that river were called Andhra; those situated on the south of it, Kalinga. The Telinga language is still spoken by the Hindoos. Between Ganjam and Pulicat, it contains a number of Shanscrit words, and has some affinity to the Bengaly.

TELJE, a small town of Sweden, on the lake of Malar, near which is the beginning of the canal intended to be dug between the lake and the Baltic.

TELL (William), a celebrated Swiss, was an inhabitant of middle rank of Burgeln, in the canton of Uri, and son-in-law of Walter Furst. In 1307 he engaged in the conspiracy against the Austrian tyranny. Gesler, the German bailiff, suspecting a plot, artfully contrived a scheme for ascertaining the extent of submission to the Austrian yoke. Accordingly he set up a hat upon a pole, and commanded that obeisance should be paid to it. Tell resisted the command; and, as tradition reports, the arbitrary bailiff ordered him to shoot with an arrow at an apple placed on the head of his son. He cleft the apple without hurting the child; and being observed to have another arrow, he was interrogated what he intended to do with it. He unhesitatingly replied, that if he had wounded his son, the other shaft should have been directed to the bailiff's heart. This bold declaration caused him to be imprisoned. Of this fact there is no doubt; though the incident of the arrow and apple may be fabulous, as it is applied by Saxo Grammaticus to a Dane at an earlier period. The bailiff took Tell with him across the lake of Lucern, designing to convey him to another canton. In the passage, a storm arose, and the vessel being in danger, the fetters of Tell, who was known to be a skilful boatman, were taken off, and the helm was committed to his hands. Availing himself of this circumstance, he steered to a rock and made his escape.

Gesler on landing met with his fate from an arrow of Tell, who afterwards retired to Stauffacher in the canton of Schweiz; and on the following new-year's day, all the Austrian governors were seized and dismissed from the country; and this circumstance is said to be the commencement of Swiss freedom. Tell's death is supposed to have been occasioned by an inundation at Burgeln in the year 1354.

To TELL, *v. a.* preterite and part. pass. *told*. [*tellan*, Saxon; *taeleu*, *tellen*, Dutch; *talen*, Danish.] To utter; to express; to speak.

Thy message might in *telling* wound,
And in performing end us.

Milton.

To relate; to rehearse.

The rest are vanish'd, none repass'd the gate,
And not a man appears to *tell* their fate.

Pope.

To teach; to inform.

Tell me now, what lady is the same,
To whom you swore a secret pilgrimage,
That you to-day, promis'd to *tell* me of.

Shakspeare.

To discover; to betray.—They will *tell* it to the inhabitants. *Numb.*—To count; to number.

Numerous sails the fearfull only *tell*;
Courage from hearts, and not from numbers grows.

Dryden.

To make excuses. *A low word.*

Tush, never *tell* me, I take it much unkindly,
That thou, Iago, who hast had my purse,
As if the strings were thine, should'st know of this.

Shakspeare.

To TELL, *v. n.* To give an account; to make report.

Ye that live and move, fair creatures *tell*,
Tell, if ye saw, how came I thus, how here?

Milton.

To TELL *on*. To inform of. *A doubtful phrase.*—David saved neither man nor woman alive, to bring tidings to Gath, saying, lest they should *tell on* us, saying, so did David. *Sam.*

TELLA PASHNUM, a name given by the people of the East Indies to a kind of white arsenic, found native in the cliffs of rivers among strata of stone.

TELLER, *s.* One who tells or relates.—The nature of bad news infects the *teller*. *Shakspeare.*—One who numbers; a numberer.

TELLER, an officer in the exchequer, of whom there are four: whose business is to receive all monies due to the crown, and thereupon to throw down a bill through a pipe into the tally-court, where it is received by the auditor's clerks, who attend there to write the words of the said bill upon a tally, and then deliver it to be entered by the clerk of the pells, or his clerk.

The tally is then split or cloven by the two deputy chamberlains, who have their seals; and while the senior deputy reads the one part, the junior examines the other part with the other two clerks.

The teller's places are in the king's gift, and they have besides their chief clerk or deputy, and other clerks for the dispatch of business.

TELLES, a small sea-port of Fez, in Africa, on the coast of the Mediterranean, containing a safe harbour; 120 miles east-south-east of Tangiers.

TELLESFORD, a parish of England, in Somersetshire; 6 miles north-north-east of Frome.

TELLICHERY, a sea-port town of the south of India, province of Malabar. Lat. 11. 44. N. long. 75. 36. E.

TELLICO, a post township of the United States, in Blount county, Tennessee, on the north side of the river Tennessee; 50 miles south-west of Knoxville.

TELLICO, a river of the United States, in Tennessee, which flows north-by-west into the Tennessee, just below Tellico.

TELLINA, in the Linnæan system of Conchology, a distinct genus of the class of Vermes, and order of Testacea.

For the characters of this genus, see CONCHOLOGY. Gmelin enumerates ninety-one species.

TELLING, CAPE, a cape on the north-west coast of Ireland. Lat. 54. 40. N. long. 10. 7. W.

TELLO, a town on the west coast of the island of Celebes, Lat. 5. 5. S. long. 119. 30. E.

TELLO, POINT, a cape on the west coast of Sumatra. Lat. 1. 50. S. long. 100. 31. E.

TELLTALE, *s.* One who gives malicious information; one who carries officious intelligence.

You speak to Casca, and to such a man

That is no fearing *telltale*.

Shakspeare.

TELLTALE, *adj.* Blabbing; telling tales; giving malicious information.

Let not the heavens hear these *telltale* women

Rail on the Lord's anointed.

Shakspeare.

TELLURIUM, in Mineralogy, a metal discovered by Klapproth. See MINERALOGY.

TELOBO, a small island in the Eastern seas, near the west coast of Gilolo. Lat. 1. 6. S. long. 127. 15. E.

TELTAU, or TELTOW, or KRON-TELTOW, a small town of Prussia, in Brandenburg, on a lake; 9 miles south-south-east of Berlin. It contains 1800 inhabitants, and is noted for a particular kind of turnips, which form an article of export.

TELTSCHE, a small town of the Austrian States, in Moravia; 50 miles west of Brunn, and 14 south of Iglau. Population 3000.

TEMASCALTEPEC, a town of Mexico, in the intendancy of Mexico, and the place where the duties on mines are paid. It contains 520 families of Spaniards, mulattoes, and mestizoes; 65 miles west-by-south of Mexico.

TEMBEY, a river of Paraguay, which runs south-south-east, and enters the Parana, between the Quirapuy and Pirapopo.

TEMBIO, TAMPIO, or TIMBIO, a river of New Granada, in Popayan, which runs from east to west, and which, receiving the waters, of various tributary streams, enters the Patia, in lat. 2. 12. N.

TEMBLEQUE, an inland town of Spain, in New Castile; 30 miles east-south-east of Toledo, and 46 south of Madrid. It contains 4500 inhabitants. Lat. 36. 41. 0. N. long. 3. 30. 59. W.

TEMBLOR, a river of the province of Buenos Ayres, which rises near the coast, and enters the sea between the river La Plata and the straits of Magellan, close to the river Tandil.

TEMDEGUE KIAMEN, a post of Chinese Tartary, in the Mantchoo country; 10 miles south-east of Tcitchitar.

TEME, or TEAM, a river of England, which rises in Radnorshire, and passing through Salop and Worcestershire, runs into the Severn, 1 mile below Worcester.

TEMEACHI, a settlement of Mexico, in the intendancy of Durango; 31 leagues south-west of the town of Chihuahua.

TEMEH, a village of Upper Egypt, on the left bank of the Nile; 20 miles south-south-east of Siut.

TAMENDFUSE, or METAFUS, a low cape in Algiers, with a small castle, and some Roman ruins; 10 miles east of Algiers.

TEMENEH, a village of Anatolia, in Asiatic Turkey; 52 miles west-north-west of Sinope.

TEMERARIOUS, *adj.* [*temeraire*, Fr., *temerarius*, Lat.] Rash; heady; unreasonably adventurous; unreasonably contemptuous of danger.—Resolution without foresight is but a *temerarious* folly; and the consequences of things are the first point to be taken into consideration. *L'Esrange.*—Careless; heedless; done at random.—Should he find upon one single sheet of parchment, an oration written full of profound sense, adorned with elegant phrase, the wit of man could not persuade him that this was done by the *temerarious* dashes of an unguided pen. *Ray.*

TEMERARIOUSLY, *adv.* Rashly; with unreasonable

able contempt of danger; without heed.—I have ventured, perhaps too *temerariouſly*, to contribute my mite to the learned world. *Swift*.

TEMERITY, *s.* [*temerité*, old French; *temeritas*, Lat.] Rashness; unreaſonable contempt of danger.—Without ſuſpicion of *temerity*. *More*.

TEMES, a navigable river of Hungary, in the bannat of Temesvar, which riſes among the mountains of Wallachia, paſſes by the fortreſs of Temesvar, and after a winding courſe, falls into the Danube at Patschova, below Belgrade. Its courſe being through a level country, it frequently overflows its banks, and forms large marſhes, particularly in the frontier diſtricts.

TEMESVAR, BANAT, or BANNAT OF, a province in the ſouth of Hungary, bounded by Tranſylvania, and by the great rivers the Maroſch, the Theyſs, and the Danube. Its extent is about 9450 ſquare miles; its population above 700,000. In the ſouth-eaſt it contains a range of high mountains, where paſturage and mining form the principal employment of its inhabitants; but the reſt is level, and in many places marſhy or ſandy, though in general of great natural fertility, and only requiring to be well cultivated to make it one of the fineſt provinces in Europe. The inhabitants are a mixture of moſt of the nations on the continent, but the Wallachians are moſt numerous. In 1779, the bannat was declared by the Auſtrian government to form part of Hungary, and divided into the three palatinates of Torontal, Temesvar, and Krassova, and into the military frontier diſtrict of Temesvar.

TEMESVAR, a conſiderable town in the ſouth of Hungary, the capital of the county of the ſame name, and one of the ſtrongeſt fortreſſes of the Auſtrian empire. To the town belongs a track of country, partly level, partly hilly, laid out in ſome meaſure in paſturage, but alſo in the culture of corn, flax, tobacco, and vines; 72 miles north-eaſt of Belgrade, and 160 ſouth-eaſt of Peſt. Lat. 45. 47. 20. N. long. 39. 5. 36. E.

TEMESVAR, a palatinate of Hungary, occupying the central part of the bannat. Its area is 2460 ſquare miles, with 244,000 inhabitants, compoſed of deſcendants of Magyars, Wallachians, Raſcians, and German coloniſts. The chief town is Temesvar.

TEMISCHBERG, a fortreſs of Aſiatic Turkey, in the government of Caucasus; 60 miles weſt of Stanropol.

TEMISSA, a town of Fezzan, the firſt reached by the caravans from Cairo, after croſſing the Lybian deſert; 80 miles eaſt of Mourzouk.

TEMMA, a ſmall ſea-port on the Gold Coaſt of Africa. Lat 5. 45. N. long. 0. 55. W.

TEMNIKOV, a ſmall town in the central part of European Ruſſia, in the government of Tambov, on the ſmall river Mokscha, which is different from the Moskva. In the ſurrounding province is a number of Tartars, partly Mahometans, partly new converts to Chriſtianity. The town has 3300 inhabitants, and is 144 miles north-north-eaſt of Tambov, and 250 eaſt-south-eaſt of Moſcow.

TEMOEL, a cape on the weſt coaſt of the iſland of Celebes, on the line. Long. 119. 25. E.

TEMOGA, a ſettlement of Mexico, in the intendency of Mexico, containing 445 families of Indians.

TEMPE, VALE OR, a valley of Greece, in Theſſaly, extending from eaſt to weſt, and having the mountain range of Olympus on the north, and that of Oſſa on the ſouth. Through this valley the Peneus diſcharges its waters into the gulf of Salonica. It was much celebrated by the poets of antiquity.

TEMPELBERG, a ſmall town of Pruſſia, in Pomerania; 67 miles north of New Stettin, and 17 eaſt of Dramburg. Population 1700.

To TEMPER, *v. a.* [*tempero*, Lat., *temperer*, Fr.] To mix ſo as that one part qualifies the other.

I ſhall temper ſo

Justice with mercy, as may illuſtrate moſt
Them fully ſatisfy'd and Thee appeaſe.

Milton.

To compound; to form by mixture; to qualify as an ingredient.

If you could find out but a man
To bear a poiſon, I would temper it;
That Romeo ſhould upon receipt thereof
Soon ſleep in quiet.

Shakſpeare.

To mingle.—The good old knight, with a mixture of the father and maſter of the family, *tempered* the inquiries after his own affairs with kind queſtions relating to themſelves. *Addiſon*.—To beat together to a proper conſiſtence.

Th' uncivil kerns of Ireland are in arms,
And temper clay with blood of Engliſhmen.

Shakſpeare.

To accommodate; to modify.—Thy ſuſtenance ſerving to the appetite of the eater, *tempered* itſelf to every man's liking. *Wiſd*.—To bring to due proportion; to moderate exceſs.

Theſe ſoft fires with kindly heat.
Of various influence foment and warm,
Temper or nourish.

Milton.

To ſoften; to molify; to aſſuage; to ſoothe; to calm.

Woman! Nature made thee

To temper man: we had been brutes without you.

Otway.

To form metals to a proper degree of hardneſs.

The ſword

Of Michael from the armoury of God
Was given him *temper'd* ſo, that neither keen
Nor ſolid might reſiſt that edge.

Milton.

To govern. *A latinism.*

With which the damned ghoſts he governeth,
And furies rules, and Tartare *tempereth*.

Spencer.

TEMPER, *s.* Due mixture of contrary qualities.—Health itſelf is but a kind of *temper*, gotten and preſerved by a convenient mixture of contrarieties. *Arbutnot*.—Middle courſe; mean or medium.—If the eſtates of ſome biſhops were exorbitant before the reformation, the preſent clergy's wiſhes reach no further than that ſome reaſonable *temper* had been uſed inſtead of paring them ſo quick. *Swift*.—Conſtitution of body.—This body would be increaſed daily, being ſupplied from above and below, and having done growing, it would become more dry by degrees, and of a *temper* of greater conſiſtency and firmneſs. *Burnet*.—Disposition of mind.

Remember with what mild
And gracious *temper* he both heard, and judg'd,
Without wrath or reviling.

Milton.

Conſtitutional frame of mind.

Our hearts,
Of brothers *temper*, do receive you in
With all kind love.

Shakſpeare.

Calmneſs of mind; moderation.

Teach me, like thee, in various nature wiſe,
To fall with dignity, with *temper* riſe.

Pope.

State to which metals are reduced, particularly as to hardneſs.

Here draw I

A ſword, whoſe *temper* I intend to ſtain
With the beſt blood that I can meet withal.

Shakſpeare.

TEMPERAMENT, *s.* [*temperamentum*, Lat.] Conſtitution; ſtate with reſpect to the predominance of any quality.—Bodies are denominat'd hot and cold in proportion to the preſent *temperament* of that part of our body to which they are applied. *Locke*.—Medium; due mixture of oppoſites.—The common law has waſted and wrought out thoſe diſtempers, and reduced the kingdom to its juſt ſtate and *temperament*. *Hale*.

TEMPERAMENTAL, *adj.* Conſtitutional.—That *temperamental* dignotions, and conjecture of prevalent humours,
that

that may be collected from spots in our nails, we concede. *Brown*.—Intellectual representations are received with as unequal a fate upon a bare *temperamental* relish or disgust. *Glanville*.

TEMPERANCE, *s.* [*temperantia*, Lat.] Moderation: opposed to gluttony and drunkenness.

Observe

The rule of not too much; by *temperance* taught
In what thou eat'st and drink'st; seeking from thence
Due nourishment, no gluttonous delight. *Milton*.

Patience; calmness; sedateness; moderation of passion.

What, are you chaf'd?

Ask God for *temperance*, that's the appliance only
Which your disease requires. *Shakspeare*.

TEMPERATE, *adj.* [*temperatus*, Lat.] Not excessive; moderate in degree of any quality.

His sleep

Was airy, light, from pure digestion bred,
And *temperate* vapours bland. *Milton*.

Moderate in meat and drink.—I advised him to be *temperate* in eating and drinking. *Wiseman*.—Free from ardent passion.

So hot a speed with such advice dispos'd;
Such *temperate* order in so fierce a course
Doth want example. *Shakspeare*.

TEMPERATELY, *adv.* Moderately; not excessively.

By winds that *temperately* blow,
The bark should pass secure and slow. *Addison*.

Calmly; without violence of passion.

Temperately proceed to what you would
Thus violently redress. *Shakspeare*.

Without gluttony or luxury.—God esteems it a part of his service if we eat or drink; so it be *temperately*, and as may best preserve health. *Bp. Taylor*.

TEMPERATENESS, *s.* Freedom from excesses; mediocrity.—Calmness; coolness of mind.

Langley's mild *temperateness*,
Did tend unto a calmer quietness. *Daniel*.

TEMPERATIVE, *adj.* Having power to temper.—Living creatures are not only fed by the root of the stomach, but by the air drawn in and sent forth by the breath, which is *temperative* of the heart's heat, nutritive of the animal and vital spirits, and purgative of unnatural vapours. *Granger*.

TEMPERATURE, *s.* [*temperatura*, *tempero*, Lat.; *temperature*, Fr.] Constitution of nature; degree of any qualities.—Memory depends upon the consistence and the *temperature* of the brain. *Watts*.—Mediocrity; due balance of contrarieties.

As the world's sun doth effects beget
Different, in divers places every day;
Here autumn's *temperature*, there summer's heat,
Here flowery spring-tide, and there winter gray. *Davies*.

Moderation; freedom from predominant passion.

In that proud port which her so goodly graceth,
Most goodly *temperature* you may descry. *Spenser*.

TEMPERED, *adj.* Disposed with regard to the passions:

When was my lord so much ungently *tempered*,
To stop his ears against admonishment? *Shakspeare*.

TEMPEST, *s.* [*tempeste*, Fr.; *tempesta*, Lat.] The utmost violence of the wind; the names by which the wind is called according to the gradual increase of its force seem to be, a breeze; a gale; a gust; a storm; a tempest.

I have seen *tempests*, when the scolding winds
Have riv'd the knotty oaks. *Shakspeare*.

Any tumult; commotion; perturbation.

The *tempest* in my mind
Doth from my senses take all feeling else,
Save what beats there. *Shakspeare*.

To TEMPEST, *v. n.* [*tempestare*, Ital.] To storm.—Blind night in darkness *tempests*. *Sandys*.—To pour a tempest on.

Other princes —

Thunder and *tempest* on those learned heads,
Whom Cæsar with such honour doth advance. *B. Jonson*.

To TEMPEST, *v. a.* To disturb as by a tempest.

Part huge of bulk,
Wallowing unwieldy, enormous in their gait,
Tempest the ocean. *Milton*.

TEMPEST-BEATEN, *adj.* Shattered with storms.
In the calm harbour of her gentle breast,
My *tempest-beaten* soul may safely rest. *Dryden*.

TEMPEST-TOST, *adj.* Driven about by storms.
Though his bark cannot be lost,
Yet it shall be *tempest-tost*. *Shakspeare*.

TEMPESTA (Antonio), was an ingenious designer and painter, born at Florence in 1555, and was initiated in the art by Santi di Titi; afterwards he studied under another artist, whose name was Stradanus. Tempesta was gifted with a brilliant and powerful imagination, not, however, of the most correct or exalted kind. His favourite subjects were battles, sieges, cavalcades, huntings, processions, &c.: all of which he arranged and designed in a novel and rich style, and executed with uncommon spirit and energy. He was employed by Gregory XIII. in the Vatican, which he adorned with grotesque inventions, and some few historical productions. He was also employed by the marchese Justiniani in decorating his palace; and in several of the churches of Rome, Tempesta's paintings may be found. He not only exercised his genius and time with the pencil, but devoted much of both to the etching needle; having left behind him nearly 1800 plates of different kinds, and of very considerable merit. He died in 1630, aged 75.

TEMPESTIVE, *adj.* [*tempestivus*, Lat.] Seasonable. *Scott*.

TEMPESTIVELY, *adv.* Seasonably.—Dancing is a pleasant recreation of body and mind, if *tempestively* used. *Burton*.

TEMPESTIVITY, *s.* [*tempestivus*, Lat.] Seasonableness.—Since their dispersion, the constitution of countries admit not such *tempestivity* of harvest. *Brown*.

TEMPESTUOUS, *adj.* [*tempestueux*, Fr.] Stormy; turbulent.

Which of them rising with the sun or falling
Should prove *tempestuous*. *Milton*.

TEMPESTUOUSLY, *adv.* Turbulently; as in a tempest.—Thunderbolts so *tempestuously* shot. *Hammond*.

TEMPESTUOUSNESS, *s.* The state of being tempestuous.

TEMPIO, a small town in the island of Sardinia, with a collegiate church, a college of Piarists, and 5000 inhabitants; 32 miles east of Sassari

TE'MPLAR, *s.* [from the *Temple*, an house near the Thames, anciently belonging to the knights-*templars*, originally from the temple of Jerusalem.] A student in the law.

Wits and *templars* every sentence raise,
And wonder with a foolish face of praise. *Pope*.

TEMPLARS, TEMPLERS, or *Knights of the Temple*, a religious military order, first established at Jerusalem, in favour of pilgrims travelling to the Holy Land.

The original of this order, the first military one in the world, is this: in 1118, some pious and noble persons devoted themselves to the service of God, in the presence of the patriarch of Jerusalem; promising to live in perpetual chastity, obedience, and poverty, after the manner of canons. *Tha*

The two principal persons were Hugo de Paganis, and Geoffry of St. Omers. Baldwin II., then king of Jerusalem, gave them an apartment in his palace, near the temple at Jerusalem.

Their first undertaking, and what they had first in view at their institution, was, to guard the highway against robbers, &c., chiefly for the safety of pilgrims and croises.

In the year 1228, this order acquired stability, by being confirmed in the council of Troyes, and subjected to a rule of discipline drawn up by St. Bernard.

The order of Templars flourished for some time, and acquired by the valour of its knights immense riches, and an eminent degree of military renown: but as their prosperity increased, their vices were multiplied, and their arrogance, luxury, and cruelty, rose at last to such a monstrous height, that their privileges were revoked, and their order suppressed with the most terrible circumstances of infamy and severity. Their accusers were two of their own body, and their chief prosecutor Philip the Fair, of France, who addressed his complaints to Clement V. The pope, though at first unwilling to proceed against them, was under the necessity of complying with the king's desire, so that, in the year 1307, upon an appointed day, and for some time afterwards, all the knights, who were dispersed throughout Europe, were seized and imprisoned. Such of them as refused to confess the enormities of which they were accused, were put to death; and those who, by tortures and promises, were induced to acknowledge the truth of what was laid to their charge, obtained their liberty. In 1312, the whole order was suppressed by the council of Vienne. A part of the rich revenues they possessed was bestowed upon other orders, especially on the knights of St. John, and the rest confiscated to the respective treasuries of the sovereign princes in whose dominions their possessions lay.

It is probable, that king Philip set on foot this bloody tragedy, with a view to gratify his avarice, and glut his resentment against the Templars, and especially against their grand-master, who had highly offended him. The principal cause of this invincible hatred against them was, that in his quarrel with Boniface VIII., the knights espoused the cause of the pope, and furnished him with money to carry on the war. *Mosheim's Eccl. Hist. Bower's Hist. of the Popes.*

TEMPLE (Sir William), a statesman and miscellaneous writer, was the son of Sir John Temple, master of the rolls in Ireland, in the reign of Charles I. and II., and author of a History of the Irish Rebellion, born in London in the year 1628. Having finished his course of classical education, he was entered, at the age of seventeen, at Emanuel college, in the university of Cambridge, under the tuition of the learned Cudworth. Being designed for public life, his principal attention at the university was engaged by the study of the modern languages, French and Spanish; and at the age of twenty, he was sent to finish his education by travelling on the continent. Declining to accept any office under Cromwell, he resided with his father in Ireland, and devoted his time to the study of history and philosophy. At the Restoration he became a member of the Irish parliament, and during the reign of Charles II., he was concerned in a variety of negotiations. After the peace of Breda (July 10, 1667), Sir William went over to Holland, and formed an intimate acquaintance and friendship with De Wit, a man frank and open, and of the same generous and enlarged sentiments with himself; and in consequence of the negotiations of these two able statesmen, a defensive alliance was concluded between Holland and England. Sweden acceded to the confederacy; and thus was formed the triple league, which was generally regarded with equal surprise and approbation. In the conduct of this business, Temple acquired great honour; but to all the compliments that were paid to him on the occasion, he modestly replied, that to remove things from their centre, or proper element, required force and labour; but that of themselves they easily returned to it. The French monarch and the court of Spain were equally displeased; but in the treaty at Aix-VOL. XXIII. No. 1615.

la-Chapelle, where Temple appeared as ambassador extraordinary and mediator, on behalf of England, his address prevailed; the Spanish minister complied with the conditions proposed; and the peace between the contending powers was signed in May, 1668. In consequence of this event, Sir William was nominated ambassador to the States-General, and taking up his residence at the Hague in the month of August of this year, he maintained his intimacy with De Wit, and was also on familiar terms with William, prince of Orange, who had then attained the age of eighteen years. But this triple alliance was of short duration. The corruption and intrigues of the English court produced a recall of Temple in the year 1669, and when it was proposed to him to return and make way for a breach with Holland, he declined, much to his honour, engaging in hostility against a country to which he was attached, and retired from public business to his seat at Sheen, near Richmond. Here he employed himself in the improvement of his mansion, and in the cultivation of his garden; and also in writing his "Observations on the United Provinces," and a part of his "Miscellanea." When the war with the Dutch became unpopular through the nation, and the court and its ministers were under a necessity of bringing it to a termination, Sir William Temple was called out of his retirement to negotiate with the Spanish minister in London: and when the separate peace with Holland was concluded, he was requested in the next year, 1674, to undertake the office of ambassador to the States-General, for the purpose of negotiating a general peace. This he performed, but the peace did not last long.

When the king, in January, 1681, dissolved the parliament without the advice of his privy council, Temple boldly remonstrated against the measure; and at length, wearied with the faction and misgovernment which he had witnessed, he declined the offered return for the university to the new parliament, and retired to Sheen, conveying from thence a message to the king, "that he would pass the rest of his life as good a subject as any in his kingdom, but would never more meddle with public affairs." The king replied to the message, that he bore him no resentment; but his name was expunged from the council. The remainder of his life was spent in retirement and seclusion from all public business; and it is said, that he interfered so little in political matters, as not to know the design of the prince of Orange to engage in the expedition that terminated in the revolution, and to be the last person who gave credit to his landing. After James's abdication, however, he waited on the prince at Windsor, and presented to him his son. King William urged upon him the acceptance of the office of secretary of state; but he maintained his purpose of living in retirement. His son was appointed secretary at war; but in the week in which he assumed the office, he was seized with melancholy, and threw himself into the Thames. His reflection on this afflictive event was that which his stoic philosophy alone could have dictated:—"A wise man might dispose of himself, and render his life as short as he pleased." In his state of retirement, he admitted Swift to be his companion. King William occasionally visited him, and confidentially consulted him on several important affairs. In 1694, he lost his wife; and sinking gradually under increasing infirmities, occasioned by repeated fits of the gout, his life was terminated at Moor park, in January, 1698, in his 70th year. The greatest part of his fortune was bequeathed to the daughters of his unfortunate son by a French lady, under the express condition that they should not marry Frenchmen.

As a writer, he is known by his "Observations upon the United Provinces of the Netherlands," printed in 1672: his "Miscellanea;" "Memoirs;" and an "Introduction to the History of England," published in 1695. His "Letters," in 3 vols., which relate to public transactions, were published after his death by Swift. "All Sir William Temple's writings," says one of his biographers, "display much acquaintance both with books and men, and are entirely free from the licentiousness so prevalent in that age. Their style

is negligent and incorrect, but agreeable, resembling that of easy and polite conversation." *Hume, Gen. Biog.*

TEMPLE, *s.* [tempel, Sax.; temple, Fr.; templum, Lat.] A place appropriated to acts of religion.

Most sacrilegious murder hath broke ope
The lord's anointed temple, and stole thence
The life o' the building.

Shakspeare.

[Tempora, Lat.] The upper part of the sides of the head where the pulse is felt.

Her sunny locks

Hang on her temples like a golden fleece. *Shakspeare.*

To TEMPLE, *v. a.* To build a temple for; to appropriate a temple to.—The heathen, in many places, *temped* and adored this drunken god [Bacchus]. *Feltham.*

TEMPLES, among us, denote two inns of court, thus called, because anciently the dwelling-house of the knights Templars.

At the suppression of that order they were purchased by some professors of the common law, and converted into hospitia, or inns of courts.

They are called the *Inner* and *Middle Temple*, in relation to Essex-house, which was also a part of the house of the Templars, and called the *Outer Temple*, because situate without Temple-Bar.

TEMPLE, a parish of Scotland, in Mid-Lothian, on the south borders of the county. Its greatest length is about nine miles, and its greatest breadth about five. Population 1058.—2. A hamlet of England, in the parish of Broad-Windsor, Dorsetshire.—3. A hamlet of England, in the parish of Dartford, Kent.—4. A township of the United States, in Kennebeck county, Maine; 40 miles north-west of Augusta. Population 482.—5. A post township of the United States, in Hillsborough county, New Hampshire; 13 miles west-south-west of Amherst, and 54 south-south-west of Concord. Population 941.

TEMPLE BAY, a bay on the north-east coast of New Holland, to the south of Cape Grenville.

TEMPLE-COMBE, a village of England, in the parish of Combe Abbas, Somersetshire.

TEMPLE, COWLEY, a hamlet of England, in the parish of Cowley, near Oxford.

TEMPLE, GRAFTON, a parish of England, in Warwickshire; 3 miles from Alcester.

TEMPLE HURST, a village of England, in the parish of Birkin, West Riding of Yorkshire.

TEMPLEMORE, a neat modern well-built village of Ireland, in the county of Tipperary, pleasantly situated on the banks of the Suir. Here is an elegant modern built church, with a fine spire and steeple; 75 miles south-west of Dublin.

TEMPLE NEWSHAM, a hamlet of England, West Riding of Yorkshire; 4 miles east-by-south of Leeds.

TEMPLEPATRICK, a village of Ireland, in the county of Antrim, delightfully situated on the Six Mile Water; 87 miles north of Dublin.

TEMPLET, *s.* A piece of timber in a building.—When you lay any timber or brick-work, as lintels over windows, or *templets* under girders, lay them in loom. *Moxon.*

TEMPLETON, a parish of England, in Devonshire; 5 miles west-by-north of Tiverton.

TEMPLETON, a post township of the United States, in Worcester county, Massachusetts; 60 miles west-north-west of Boston, and 27 north-west of Worcester. Population 1205.

TEMPLEUVE, a small town of the Netherlands, in the province of Hainault. Population 3300; 5 miles north-east of Tournay, and 9 east of Lille.

TEMPLIN, a small town of Prussia, in the province of Brandenburg, situated near the lake of Delgen. In October 1806, it was entered by the French, and the prince of Hohenlohe, who had retired hither after the battle of Jena, was made prisoner here. Population 2100; 42 miles north of Berlin, and 18 west-south-west of Prenzlau.

TEMPO, a smart little village of Ireland, in the county of Fermanagh; 77 miles north-west of Dublin.

TEMPORAL, a settlement of Mexico, in the district of Tampico, which contains 80 families of Indians.

TEMPORAL, *adj.* [temporalis, low Lat.] Measured by time; not eternal.—As there they sustain *temporal* life, so here they would learn to make provision for *eternal*. *Hooker.*—Secular; not ecclesiastical.

This sceptre shews the force of *temporal* power,
The attribute to awe and majesty,
Wherein doth sit the dread of kings.

Shakspeare.

Not spiritual.—There is scarce any of those decisions but gives good light, by way of authority or reason, to some questions that arise also between *temporal* dignities, especially to cases wherein some of our subordinate *temporal* titles have part in the controversy. *Selden.*—[Temporal, Fr.] Placed at the temples, or upper part of the sides of the head.—Copious bleeding, by opening the *temporal* arteries, are the most effectual remedies for a phrensy. *Arbuthnot.*

TEMPORALITIES, or TEMPORALTIES, the temporal revenues of an ecclesiastic; particularly such lands, tenements, or lay-fees, tithes, &c., as have been annexed to bishops' fees by our kings, or other persons of high rank in the kingdom.

TEMPORALITY, or TEMFORALS, *s.* [temporalité, Fr.] Secular possessions; not ecclesiastic rights. Such revenues, lands, and tenements, as bishops have had annexed to their sees by the kings and others from time to time, as they are barons and lords of the parliament. *Cowel.*—The residue of these ordinary finances is casual, as the *temporalities* of vacant bishoprics, the profits that grow by the teneurs of lands. *Bacon.*

TEMPORALLY, *adv.* With respect to this life.—Sinners who are in such a *temporally* happy condition, owe it not to their sins, but wholly to their luck. *South.*

TEMPORALNESS, *s.* Secularity; worldliness. *Cotgrave.*

TEMPORALTY, *s.* The laity; secular people.—The pope sucked out inestimable sums of money, to the intolerable grievance of clergy and *temporalty*. *Abbot.*—Secular possessions.

TEMPORALNEOUS, *adj.* [temporis, Lat.] Temporary. *Dict.*—Those things may cause a *temporaneous* disunion. *Hallywell.*

TEMPORARINESS, *s.* The state of being temporary; not perpetuity.

TEMPORARY, *adj.* [tempus, Lat.] Lasting only for a limited time.—These *temporary* truces were soon made and soon broken; he desired a straiter amity. *Bacon.*

TEMPORIZAION, *s.* The act of complying with times or occasions.—Charges of *temporization* and compliance had somewhat sullied his reputation. *Johnson.*

To TEMPORIZE, *v. n.* [tempus, Lat.] To delay; to procrastinate.—Well, you will *temporize* with the hours, *Shakspeare.*—To comply with the times or occasions.

They might their grievance inwardly complain,
But outwardly they needs must *temporize*.

Daniel.

To comply. *This is improper.*

The dauphin is too wilful opposite,
And will not *temporize* with my entreaties:
He flatly says, he'll not lay down his arms.

Shakspeare.

TEMPORIZER, *s.* [temporiseur, Fr.] One that complies with times or occasions; a trimmer.

I pronounce thee a hovering *temporizer*, that
Canst with thine eyes at once see good and evil,
Inclining to them both.

Shakspeare.

TEMPSFORD, a parish of England, in Bedfordshire; 6 miles north-north-west of Biggleswade. Population 475.

To TEMPT, *v. a.* [tento, Lat.; tenter, Fr.] To solicit to ill; to incite by presenting some pleasure or advantage to the mind; to entice.

'Tis not the king that sends you to the Tower:
My lady Gray *tempts* him to this harsh extremity.

Shakspeare.

To

To provoke.

I'm much too venturous
In *tempting* of your patience. *Shakspeare.*

It is sometimes used without any notion of evil; to solicit; to draw.

Still his strength conceal'd
Which *tempted* our attempt, and wrought our fall. *Milton.*

To try; to attempt; to venture on. I know not whether it was not originally *l'attempt*, which was viciously written to *tempt*, by an elision of the wrong syllable. To prove; to try.

He stayde his hand, and gan himselfe advise
To prove his sense, and *tempt* her feigned truth. *Spenser.*

TEMSE BREAD, or TE'MSEE BREAD, *s.* [*temsen*, Dutch; *tamiser*, Fr.; *tamesare*, Italian, to sift; *tems*, Dutch; *tamis*, French; *tamiso*, Italian, a sieve; all from the Saxon *temefian*. *Lye.*] Bread made of flour better sifted than common.

TEMPTABLE, *adj.* Liable to temptation; obnoxious to bad influence. *Not elegant, nor used.*—If the parliament were as *temptable* as any other assembly, the managers must fail for want of tools to work with. *Swift.*

TEMPTATION, *s.* [*templacion*, old French.] The act of tempting; solicitation to ill; enticement.—All *temptation* to transgress repel. *Milton.*—The state of being tempted. When by human weakness, and the arts of the tempter, you are led into *temptations*, prayer is the thread to bring you out of this labyrinth. *Duppa.*—That which is offered to the mind as a motive to ill.—Set a deep glass of Rhenish wine on the contrary casket; for if the devil be within, and that *temptation* without, he will chuse it. *Shakspeare.*

TEMPTATIONLESS, *adj.* Having no motive. *Not in use.*—An empty, profitless, *temptationless* sin. *Hammond.*

TEMPTER, *s.* One who solicits to ill; an enticer.

Is this her fault or mine?
The *tempter* or the tempted, who sins most?
Not she; nor doth she tempt. *Shakspeare.*

The infernal solicitor to evil.—To this high mountain's top the *tempter* brought our Saviour. *Milton.*

TEMPTINGLY, *adv.* So as to tempt or entice.—These look *temptingly*. *Sir T. Herbert.*—Precious trinkets are lavishly and *temptingly* exposed to view. *Peters.*

TEMPTRESS, *s.* She that tempts or entices. *Huloet.*

Be not jealous,
Euphrania; I shall scarcely prove a *temptress*:
Fall to our dance. *Ford.*

TEMSENA, a large province in the empire of Morocco, bordering on the Atlantic ocean. It is very productive in corn of an excellent quality, and abounds also in cattle. The best cavalry in the empire are found in this province.

TEMUCO, a small river of Chili, which runs west, and enters the Dinguilli.

TE'MULENCY, *s.* [*temulentia*, Lat.] Inebriation; intoxication by liquor. *Bullokar.*

TE'MULENT, *adj.* [*temulentus*, Lat.] Inebriated; intoxicated as with strong liquors.

TE'MULENTIVE, *adj.* [*temulentus*, Lat.] Drunken; denoting the state of intoxication.—The drunkard commonly hath a palsied hand; gouty, staggering legs, that fain would go, but cannot; a drawing, stammering, *temulentive* tongue. *Junius.*

TEN, *adj.* [*tyñ*, Saxon; *tien*, Dutch. *Dr. Johnson.*—M. Goth. *taihun*; Icel. *tiju*: aperto lingu. affin. consensu. Ingeniosè satis Wachterus ab Icel. *tyna*, legere, enumerare, digitos nempè omnes, quibus sine dubio numerabant veteres. *Serenius.*—To this numeration of the fingers Mr. H. Tooke also adverts; and pronounces *ten* the past participle of the Sax. *tyñan*, to enclose, to compass. See Div. of Purl. ii. 201. But the Icel. *tyna*, to reckon, is the more likely etymon.] The decimal number; twice five;

the number by which we multiply numbers into new denominations

Thou shalt have more
Than two *tens* to a score. *Shakspeare.*

Ten is a proverbial number.
There's a proud modesty in merit,
Averse from begging; and resolv'd to pay
Ten times the gift it asks. *Dryden.*

TEN, a settlement of New Granada, in the province of San Juan de los Llanos.

TENA, a settlement of New Granada; 8 leagues from Santa Fe. Population 800.

TENABLE, *adj.* [*tenable*, Fr.] That may be maintained against opposition; that may be held against attacks.—Infidelity has been driven out of all its outworks: the Atheist has not found his post *tenable*, and is therefore retired into Deism. *Addison.*

TENA'CIOUS, *adj.* [*tenax*, Lat.] Grasping hard; inclined to hold fast; not willing to let go: with *of* before the thing held.—You reign absolute over the hearts of a stubborn and free-born people, *tenacious* to madness of their liberty. *Dryden.*—Retentive.—The memory in some is very *tenacious*; but yet there seems to be a constant decay of all our ideas, even of those which are struck deepest, and in minds the most retentive. *Locke.*—[*tenace*, Fr.] Having parts disposed to adhere to each other; cohesive; viscous; glutinous.—Three equal round vessels filled, the one with water, the other with oil, the third with molten pitch, and the liquors stirred alike to give them a vertical motion; the pitch by its tenacity will lose its motion quickly, the oil being less *tenacious* will keep it longer, and the water being least *tenacious* will keep it longest, but yet will lose it in a short time. *Newton.*—Niggardly; close-fisted; meanly parsimonious. *Ainsworth.*

TENA'CIOUSLY, *adv.* With disposition to hold fast.—Some things our juvenile reasons *tenaciously* adhere to, which yet our maturer judgments disallow of. *Glanville.*

TENA'CIOUSNESS, *s.* Unwillingness to quit, resign, or let go.—An invincible *tenaciousness* of ancient customs. *Burke.*

TENA'CITY, *s.* [*tenacitas*, *tenax*, Latin.] Tenaciousness.—The *tenacity* of prejudice and prescription. *Brown.*—Viscosity; glutinousness; adhesion of one part to another.—Substances, whose *tenacity* exceeds the powers of digestion, will neither pass, nor be converted into aliment. *Arbutnot.*

TENACULUM, an instrument used in surgery, for pulling out bleeding vessels that are to be tied by ligatures.

TENACY, *s.* [*tenacia*, low Lat.] Unwillingness to quit, resign, or let go.—Highest excellence is void of all envy, selfishness, and *tenacy*. *Barrow.*

TENANCY, *s.* [*tenancie*, old French; *tenentia*, law Latin.] Temporary possession of what belongs to another.—This duke becomes seised of favour by descent, though the condition of that estate be commonly no more than a *tenancy* at will. *Wotton.*

TENANGO, the capital of a jurisdiction of Mexico, in the intendency of Mexico; 14 leagues south-west of Mexico, now greatly reduced, and scarcely in existence.

TENANT, *s.* One that holds of another; one that on certain conditions has temporary possession and use of that which is in reality the property of another: correlative to *landlord*.

I have been your *tenant*,
And your father's *tenant*, these fourscore years. *Shakspeare.*

One who resides in any place.
O fields, O woods, oh when shall I be made
The happy *tenant* of your shade! *Cowley.*

TENANT *per Statute-Merchant*, he that holds lands forfeited to him by virtue of a statute.

TENANT *in Frank-Marriage*, is he that holds lands or tenements by virtue of a gift of them, made to him upon marriage between him and his wife.

TENANT

TENANT *by Courtesy*, holds for his life, by reason of a child begotten by him of his wife, being an inheretrix, and born alive.

TENANT *in Capite*, or *Chief*, holdeth of the king in right of his crown. See *CAPITE*.

TENANT, or TENAN, in heraldry, is used for something that sustains, or holds up, the shield, or armoury; and is generally synonymous with the word *supporter*.

To TENANT, *v. a.* To hold on certain conditions.—Sir Roger's estate is *tenanted* by persons who have served him or his ancestors. *Addison*.

TENANTABLE, *adj.* Such as may be held by a tenant.—The ruins that time, sickness, or melancholy, shall bring, must be made up at your cost; for that thing a husband is but tenant for life in what he holds, and is bound to leave the place *tenantable* to the next that shall take it. *Suckling*.

TENANTLESS, *adj.* Unoccupied; unpossessed.

O thou, that dost inhabit in my breast,
Leave not the mansion so long *tenantless*;
Lest growing ruinous the building fall,
And leave no memory of what it was.

Shakspeare.

TENANTRY, *s.* Tenancy.—Tenants have taken new leases of their *tenantries*. *Bp. Ridley*.—A body of tenants on an estate.

TENANT-SAW, *s.* [corrupted, I suppose, from *tenon-saw*.] See *TENON*.

TENANZINCO, a settlement of Mexico, in the district of Zoquizingo, containing 800 families of Spaniards, Indians, and mestizoes. It is the name of several other inconsiderable settlements.

TENAYUCA, a settlement of Mexico, in the intendency of Mexico, containing 160 families; 9 miles north-north-west of Mexico.

TENBURY, a market town of England, in the county of Worcester, situated on the river Teme, over which it has a stone bridge of six arches. The town is not very extensive, nor can it boast of much beauty of appearance. The trade consists chiefly of hops and cyder, of which great quantities are produced in the neighbourhood; and here are also some opulent tanners and glovers. Tenbury contains 300 houses, and 1562 inhabitants. Market on Tuesday, and three annual fairs; 15 miles west-by-north of Worcester, and 130 north-west of London.

TENBY, a market town and borough of Wales, in the county of Pembroke, situated in Caermarthen bay, at the mouth of the Bristol channel. It has been long noted for its trade, and of late years has also become a very fashionable resort for sea-bathing. The town stands on a rocky promontory of considerable elevation, which stretches over the sands in a southerly direction, and at high water is inclosed by the sea on every side except the north, where a narrow isthmus connects it with the mainland. The situation is singularly beautiful, and has a very striking effect from every point of approach. Tenby is one of the contributory boroughs, joined with Pembroke, in the return of the parliamentary representative for that place. It is governed by a mayor, besides whom the corporation consists of aldermen and common councilmen, a chamberlain, town-clerk, two sheriffs or bailiffs, two sergeants-at-mace, and 12 constables. The town is divided into two districts, which are called the *in* liberties and the *out* liberties, the former subject to the jurisdiction of the mayor and magistrates of the borough, and the latter to that of the magistrates of the county. The first charter granted to the town on record, is that by William Marshall, the first earl of Pembroke of that name. Various new charters were granted by subsequent monarchs. From the number of ruined buildings and foundations to be seen in the outskirts of the town, it appears to have spread out at one time over a larger space than it now occupies, and to have contained a more numerous population. It contains 265 houses, and 1176 inhabitants. Market on Wednesday and Saturday, and various annual fairs; 7 miles east of Pembroke, and 233 west of London. Lat. 51. 40. N. long. 4. 40. W.

TENCE, a town in the east of France, in Auvergne, department of the Upper Loire, on the small river Liguon. This part of France is mountainous and thinly peopled. Population 4900; 8 miles east of Yssengeaux, and 24 east-by-north of Le Puy.

TENCH, *s.* [tince, Sax.; *tinca*, Lat.] A pond-fish.—Having stored a very great pond with carps, *tench*, and other pond-fish, and only put in two small pikes, this pair of tyrants in seven years devoured the whole. *Halc.*

TENCH'S ISLAND, an island in the Pacific ocean, two miles in circumference: it is low, but entirely covered with trees, many of which are the cocoa-nut; there were likewise others of a large size. These trees reached to the margin of a very fine sandy beach, which entirely surrounds the island. Lat. 1. 39. S. long. 150. 31. E.

To TEND, *v. a.* [contracted from *attend*.] To watch; to guard; to accompany as an assistant or defender.—Go thou to Richard, and good angels *tend* thee. *Shakspeare*.—To attend; to accompany.

Despair

Tended the sick, busiest from couch to couch. *Milton*.

To be attentive to.—Unsucc'd of lamb or kid that *tend* their play. *Milton*.

To TEND, *v. n.* [*tendo*, Lat.] To move towards a certain point or place.

To these abodes our fleet Apollo sends:

Here Dardanus was born, and hither *tends*. *Dryden*.

[*tendre*, Fr.] To be directed to any end or purpose; to aim at.

Admiration seiz'd

All heaven, what this might mean and whither *tend*. *Milton*.

To contribute.—Many times that which we ask would, if it should be granted, be worse for us, and perhaps *tend* to our destruction; and then God, by denying the particular matter of our prayers, doth grant the general matter of them. *Hammond*.—[From *attend*.] To wait; to expect. *Out of use*.

The bark is ready, and the wind at help;

Th' associates *tend*. *Shakspeare*:

To attend; to wait as dependants or servants.

She deserves a lord,

That twenty such rude boys might *tend* upon,
And call her hourly mistress. *Shakspeare*.

To attend as something inseparable. In the three last senses it seems only a colloquial abbreviation of *attend*.—Threelfold vengeance *tend* upon your steps. *Shakspeare*.

TENDA, a small town in the north of Italy, in Piedmont, province of Sospello, situated on the side of a steep hill, near the river Roja. The Piedmontese were defeated near this by the French, in the beginning of May, 1794; 20 miles south of Con, and 25 north-east of Nice.

TENDA, a country of Western Africa, extending along the northern bank of the Gambia. A considerable trade is carried on in ivory and gum.

TE'NDANCE, *s.* Attendance; state of expectation.

Unhappy wight, born to disastrous end,

That doth his life in so long *tendancee* spend. *Spenser*.

Persons attendant. *Out of use*.

His lobbies fill with *tendancee*,

Rain sacrificial whisp'rings in his ear. *Shakspeare*.

Attendance; act of waiting.

She purpos'd,

By watching, weeping, *tendancee*, to

O'creome you with her shew. *Shakspeare*.

Care; act of tending.

They at her coming sprung,

And touch'd by her fair *tendancee* gladlier grew. *Milton*.

TENDENCE, or TENDENCY, *s.* Direction or course towards any place or object.—It is not much business that distracts any man; but the want of purity, constancy, and *tendency*

tendency towards God. *Bp. Taylor*.—Direction or course toward any inference or result; drift.—These opinions are of so little moment, that, like notes in the sun, their *tendeneies* are little noticed. *Locke*.

TENDER, *adj.* [*tendre*, Fr.] Soft; easily impressed or injured; not firm; not hard.—The earth brought forth the *tender* grass. *Milton*.—Sensible; easily pained; soon sore.

Unneath may she endure the flinty street,
To tread them with her *tender* feeling feet. *Shakspeare*.

Effeminate; emasculate; delicate.—When Cyrus had overcome the Lydians, that were a warlike nation, and devised to bring them to a more peaceable life, instead of their short warlike coat he clothed them in long garments, like women; and instead of their warlike music, appointed to them certain lascivious lays, by which their minds were so mollified and abated, that they forgot their former fierceness, and became most *tender* and effeminate. *Spenser*.—Exciting kind concern.

I love Valentine;
His life's as *tender* to me as my soul. *Shakspeare*.

Compassionate; anxious for another's good.—This not mistrust but *tender* love enjoins. *Milton*.—Susceptible of soft passions.

Your tears a heart of flint
Might *tender* make, yet nought
Herein they will prevail. *Spenser*.

Amorous; lascivious.
What mad lover ever died
To gain a soft and gentle bride?
Or for a lady *tender* hearted,
In purling streams or hemp departed? *Hudibras*.

Expressive of the softer passions.
The *tender* accent of a woman's cry
Will pass unheard, will unregarded die. *Prior*.

Careful not to hurt: with *of*.—As I have been *tender* of every particular person's reputation, so I have taken care not to give offence. *Addison*.—Gentle; mild; unwilling to pain.

You, that are thus so *tender* o'er his follies,
Will never do him good. *Shakspeare*.

Apt to give pain.—In things that are *tender* and unpleasing, break the ice by some whose words are of less weight, and reserve the more weighty voice to come in as by chance. *Bacon*.—Young; weak: as, *tender* age.—When yet he was but *tender* bodied, a mother should not sell him. *Shakspeare*.

To **TENDER**, *v. a.* To regard with kindness. *Not now in use*.

I thank you, madam, that you *tender* her:
Poor gentlewoman, my master wrongs her much. *Shakspeare*.

To render susceptible of soft passions: a colloquial expression in some parts of England.

To **TENDER**, *v. a.* [*tendre*, Fr.] To offer; to exhibit; to propose to acceptance.

I crave no more than what your highness offer'd;
Nor will you *tender* less. *Shakspeare*.

To hold; to esteem.
Tender yourself more dearly;
Or not to crack the wind of the poor phrase,
Wringing it thus, you'll *tender* me a fool. *Shakspeare*.

TENDER, *s.* Offer; proposal to acceptance.
Then to have a wretched puling fool,
A whining mammet, in her fortune's *tender*,
To answer I'll not wed. *Shakspeare*.

Regard; kind concern. *Not used*.
Thou hast shew'd thou mak'st some *tender* of my life,
In this fair rescue thou hast brought to me. *Shakspeare*.

A small ship attending on a larger.

TENDER-HEARTED, *adj.* Of a soft compassionate disposition.—Be ye kind to one another, *tender-hearted*. *Eph*.

TENDERHEARTEDNESS, *s.* A compassionate disposition. *Sherwood*.

TENDERLING, *s.* The first horns of a deer. A fondling; one who is made soft by too much kindness.—Our *tenderlings* complain of rheums. *Harrison*.

TENDERLY, *adv.* In a tender manner; mildly; gently; softly; kindly; without harshness.
She embrac'd him, and for joy
Tenderly wept. *Milton*.

With a quick sense of pain.—[This] the chancellor took very heavily; and the lord Falkland, out of his friendship to him, more *tenderly*, and expostulated it with the king with some warmth. *Ld. Clarendon*.

TENDERNESS, *s.* [*tendresse*, Fr.] The state of being tender; susceptibility of impressions; not hardness.—Pied cattle are spotted in their tongues, the *tenderness* of the part receiving more easily alterations than other parts of the flesh. *Bacon*.—State of being easily hurt; soreness.—A quickness and *tenderness* of sight could not endure bright sunshine. *Locke*.—Susceptibility of the softer passions.

Weep no more, lest I give cause
To be suspected of more *tenderness*
Than doth become a man. *Shakspeare*.

Kind attention; anxiety for the good of another.—Having no children, she did, with singular care and *tenderness*, intend the education of Philip and Margaret. *Bacon*.—Scrupulousness; caution.

My conscience first receiv'd a *tenderness*,
Scruple, and prick, on certain speeches utter'd
By th' bishop of Bayon. *Shakspeare*.

Cautious care.—There being implanted in every man's nature a great *tenderness* of reputation, to be careless of it is looked on as a mark of a degenerate mind. *Gov. of the Tongue*.—Soft pathos of expression.—We must not expect to trace the flow of Waller, the landscape of Thomson, the fire of Dryden, the imagery of Shakspeare, the simplicity of Spenser, the courtliness of Prior, the humour of Swift, the wit of Cowley, the delicacy of Addison, the *tenderness* of Otway, and the invention, the spirit and the sublimity of Milton, in any single writer. *Shenstone*.

TENDINOUS, *adj.* [*tendinis*, Latin.] Sinewy; containing tendons; consisting of tendons.—Nervous and *tendinous* parts have worse symptoms, and are harder of cure than fleshy ones. *Wiseman*.

TENDON, *s.* [*tendo*, Lat.] A sinew; a ligature by which the joints are moved.—A struma in her instep lay very hard and big amongst the *tendons*. *Wiseman*.

TENDMENT, *s.* Act of tending; care. *Not in use*.
Whether ill *tendment*, or recureless pain,
Procure his death. *Bp. Hall*.

TENDRE, **MONT**, a petty town of the west of France, department of the Lower Charente, with 900 inhabitants; 7 miles north-west of Montlieu.

TENDRIL, *s.* [*tendrillon*, Fr.] The clasp of a vine, or other climbing plant.

In wanton ringlets wav'd,
As the vine curls her *tendrils*; which imply'd
Subjection. *Milton*.

TENDRIL, *adj.* Clasping or climbing as a tendril.
The curling growth
Of *tendril* hops, that flaunt upon their poles. *Dyer*.

TENDRING, a parish of England, in Essex; 5½ miles south-south-east of Manningtree. Population 619.

TENE'BRICOSE, or **TENE'ROUS**, *adj.* [*tenebricosus*, *tenebrosus*, Lat.] Dark; gloomy.

The most dark *tenebrous* night
Is fain to flee and turn her back. *J. Hall*.
10 R **TENE'BRIO**,

TENEBRIO, in Entomology, a genus of the Coleoptera order of insects, the generic character of which is, that the antennæ are moniliform, with the last joint rounded; the thorax plano-convex, margined; the head exerted, and wing-sheaths stiffish.

In the insects of this genus the body is oblong-oval, and in most species somewhat pointed at the extremity. Several species are also destitute of wings. This is a numerous genus, and is divided by Fabricius and others into several distinct genera, under the appellations of *Pimelia*, *Bleps*, *Aturnus*, &c. In Gmelin's edition of Linnæus it comprehends 63 species.

I. Six filiform Feelers; anterior Legs formed for digging, palmate-dentated; including the *Scaritæ* of Fabricius and Pallas.

1. *Tenebrio complanatus*.—Black, with a subquadrate thorax, and smooth shells or wing-sheaths; of a large size.—Found at Cayenne.

2. *Tenebrio marginatus*.—Black, with a subquadrate thorax; sulcated shells; blue margin.—Found at Cayenne.

3. *Tenebrio giganteus*.—Black, with sulcated mandibles, and smooth shells.—Found in Africa: nearly allied to the next species, but thrice as large.

4. *Tenebrio subterraneus*.—Black, with the fore-part of the head sulcated, and striated shells.

5. *Tenebrio cyaneus*.—Blue, very smooth; antennæ and feet black.—Found in New Holland.

6. *Tenebrio fossor*.—Pitchy.—Found in sand-hills, which it perforates.

7. *Tenebrio cursor*.—Brown; oblong thorax; five angles denticulated.—Found as the former.

8. *Tenebrio Arabs*.—Black; serrated thorax; antennæ and feet testaceous.—Found in the East.

9. *Tenebrio minutus*.—Black; thorax margined; antennæ clavated, and feet pitchy.—Found in Sweden, and twice as large in Saxony.

10. *Tenebrio collaris*.—Black, with shells punctate-striated, and head brown; antennæ and feet pitchy; the anterior spinous.—Found at Berlin.

11. *Tenebrio bucephalus*.—Wholly brown, punctated, eyes black.—Found in India.

II. With unequal filiform Feelers.

12. *Tenebrio atratus*.—Wholly black, smooth.—Found in Egypt.

III. With four Feelers; the anterior subclavate: the posterior filiform; the *Tenebriones* of Fabricius, and *Mylarides* of Pallas.

13. *Tenebrio laminatus*.—Black; thorax subquadrate, smooth; shells sulcated; anterior legs incurvated at the apex, and ferruginous lamina acute.—Found in India; the largest of the genus.

14. *Tenebrio gigas*.—Black; shell striated; thorax smooth.—Found in Surinam.

15. *Tenebrio punctatulus*.—Black; thorax quadrate; margin subdenticulate; shells striate-punctated.—Found in India; of a large size.

16. *Tenebrio serratus*.—Black, smooth; shells striated; posterior legs striated.—Found in Sierra Leone.

17. *Tenebrio molitor*.—Wholly black; thighs anterior, thicker:—an insect often seen in houses, one of the smaller kinds, proceeding from a larva commonly known by the name of meal-worm, from its being so frequently found in flour, &c.; it is of a yellowish-white colour, about an inch long, slender bodied, and of a highly polished surface, and is considered as the favourite food of the nightingale, in its captive state, and said to remain two years before it changes into a chrysalis.

18. *Tenebrio luridus*.—Black, with brown feet.—Found in Brazil.

19. *Tenebrio chalybeus*.—Violet, with feet and antennæ pitchy.—Found in Guinea.

20. *Tenebrio Mauritanicus*.—Black, beneath pitchy; mar-

gins of the thorax anterior and posterior angulated.—Found in Algiers.

21. *Tenebrio variegatus*.—Oblong, with varied brown and cinereous.—Found in Africa.

22. *Tenebrio abbreviatus*.—Ovate, black, with shell striated, and head tuberculated.—Found in India.

23. *Tenebrio Capensis*.—Ovate, black; shell striated; anterior legs dentated-spinous.—Found at the Cape of Good Hope.

24. *Tenebrio cornutus*.—The margins of the double-horned thorax crenated, and the angles projecting.—Found in Smyrna.

25. *Tenebrio sanguinipes*.—Black, with antennæ and feet sanguineous.—Found in New Holland.

26. *Tenebrio buprestoides*.—Black thorax; oval margined; the connate shells smooth.—Found at the Cape of Good Hope.

27. *Tenebrio dermestoides*.—Black; thorax oval, margined; shells striated.—Found in Saxony.

28. *Tenebrio culinaris*.—Ferruginous; shells striated; shield emarginated.—Found in Spain and Sweden.

29. *Tenebrio barbarus*.—Black, very smooth; thorax orbiculated; the shield of the head on the fore-part, with the margin elevated.—Found in Mauritania.

30. *Tenebrio erraticus*.—Black; the antennæ, suborbiculate thorax, and shells ferruginous; brown at the apex.

31. *Tenebrio pallens*.—Palely testaceous; thorax transverse.—Found, of a small size, at the Cape of Good Hope.

32. *Tenebrio ferrugineus*.—Ferruginous, with shells striated, testaceous.—Found in Africa.

33. *Tenebrio villosus*.—Brown, cinereous-villose, shells smooth and ferruginous.

34. *Tenebrio carboides*.—Black; thorax oval, margined; shells striated.

35. *Tenebrio brunipes*.—Black, smooth; shells striated; antennæ and feet ferruginous.—Found at Dresden.

36. *Tenebrio lævigatus*.—Oblong, black, with smoothish shells.—Found in Africa, of a less size than the molitor.

37. *Tenebrio gibbosus*.—Subovate, wholly brassy, shells gibbous-convex; the very fine striæ crenulated.—Found in Brazil.

38. *Tenebrio spinimanous*.—Thorax margined, smooth, shells very smooth; posterior obtuse; fore legs produced with a very strong arched spine.—Found in Southern Russia.

39. *Tenebrio uncinous*.—Apterous, black; thorax margined, sub-equal; shells striated, punctated and angulate; thighs anterior, clavated, very large, buncinate.—Found in Spain.

40. *Tenebrio piceus*.—Depressed, black; beneath pitchy; shells striated.—Found in Saxony.

41. *Tenebrio cylindricus*.—Very black; thorax with elevated points; antennæ brown; the tarsi beneath yellow-haired.—Found at Berlin.

42. *Tenebrio montanus*.—Wholly black; shells opaque.—Found in Hungary.

43. *Tenebrio tristis*.—Black, sub-opaque, varied with excavated points.—Found in Carniola.

44. *Tenebrio pomonæ*.—Above pitchy, beneath black; shells with five elevated striæ.—Found in Carniola.

45. *Tenebrio capræ*.—Black; points impressed on the thorax, and shells testaceous.—Found in Carniola and Switzerland.

46. *Tenebrio flavus*.—Yellow, with black eyes.—Found in Carniola.

47. *Tenebrio æstivus*.—Black; feelers and feet yellow.—Found in Denmark.

48. *Tenebrio striatus*.—Black; the abdomen beneath densely striated.—Found in Denmark.

49. *Tenebrio festinans*.—Wholly black, smooth; thorax ferruginous.

50. *Tenebrio globosus*.—Black; thorax globose; two rough lines elevated.—Found in Siberia.

51. *Tenebrio incurvatus*.—Wholly pitchy; shells striated across the middle.—As the last.

52. *Tenebrio*

TENEBRIO, TENTHEDO THRIPS AND TIPULA.

J. Pass. sc.

1 *Tene gigas*. 2 *Tene femoratus*. 3 *Tene molitor*. 4 *Tene curvipes*. 5 *Tent bimaculata*.
 6 *Tent femorata*. 7 *Tent fulciformis*. 8 *Tip riroca*. 9 *Tip variegata*. 10 *Tip plumosa*.
 11 *Tip ichneumonina*. 12 *Tip hortorum*. 13 *Tip phosphorus*. 14 *Tip juniperina*.

52. *Tenebrio ovatus*.—Ovate, blackish-brown; shells with eight striæ, smooth.

53. *Tenebrio rotundatus*.—Black, wholly smooth: the coleoptera rotundata.

54. *Tenebrio subvillosus*.—Wholly ferruginous, subvillose.

55. *Tenebrio glaber*.—Wholly ferruginous, smooth.—The four last found in France.

56. *Tenebrio lignarius*.—Thorax with two cavities; shells violet or red; antennæ and feet ferruginous.

57. *Tenebrio lardarius*.—Oblong, yellow-fulvous; eyes black; shells with punctated striæ.—Found in Belgium.

58. *Tenebrio curvipes*.—Ovate, pitchy; shells punctated-striate; thighs crenated; the hinder beneath ciliated.

59. *Tenebrio bicolor*.—Ovate; shells striated; above black; the antennæ beneath and feet, ferruginous.

60. *Tenebrio ater*.—Black; antennæ ferruginous.

61. *Tenebrio lunatus*.—Black; depressed thorax lunated; shells striated; feet ferruginous.

62. *Tenebrio hispidus*.—Black, rough; shells striated; a spot at the base on both sides red; the antennæ and legs red.

63. *Tenebrio glaber*.—Ferruginous; head and thorax smooth, and shells black; these striated; mouth ferruginous; feet livid.

TENEBRIO MORTISAGUS, a species of the *PIMELIA*, (which see,) in the Gmelinian edition of the Linnæan system, thus described by Dr. Shaw:—It is a coal-black insect, measuring about an inch in length, of rather slow motion, and distinguished by the remarkably pointed appearance of the wing-sheaths, which, at their extremities, project a little beyond the abdomen; they are also perfectly connate or undivided, forming a complete covering to the body, and being carried over the sides to some distance beneath, and the insect is totally destitute of real or under wings. It is usually found in dark neglected places, beneath boards, in cellars, &c., and if handled, especially if crushed, diffuses a very unpleasant smell.

TENE'BRIOUS, *adj.* Gloomy; tenebrous.

Were moon and stars for villains only made
To guide yet skreen them with *tenebrious* light? *Young*.

TENE'BRIOUSITY, *s.* [*tenebrosité*, old French; from *tenebræ*, Lat.] Darkness; gloom.—Peculiar signs of head melancholy, from the motion alone, and *tenebrosity* of spirits. *Burton*.

TENEDOS, a small rocky island of the Grecian archipelago, close to the coast of Asia Minor, and at a small distance from the entrance of the Dardanelles. It is mentioned by Homer under the same name which it now bears, and its position tends to identify the site of the plain of Troy. It continued always to derive an importance from its situation near the mouth of the Hellespont. Tenedos was anciently famous for its earthenware, fragments of which are found in the district of Troas. A mountainous ridge incloses the port, and the town stands on the slope of a hill. It is supposed to contain 600 Turkish, and 300 Greek families. Lat. 39. 53. N. long. 26. E.

TENEMBER, an island in the Eastern seas; 12 miles long and 3 broad. Lat. 6. 30. S. long. 132. 45. E.

TENEMENT, *s.* [*tenementum*, law Lat.] Any thing held by a tenant.

Treat on, treat on, is her eternal note,
And lands and *tenements* glide down her throat. *Pope*.

TENEME'NTAL, *adj.* To be held by certain tenure. *Mason*.—The other *tenemental* lands they distributed among their tenants. *Blackstone*.

TENEME'NTARY, *adj.* Usually let out; denoting tenancy. *Cowel*.—Ceorls among the Saxons were of two sorts; one hired the lord's *tenementary* land, like our farmers. *Spelman*.

TENENE, a settlement of South America, in the province of Tucuman, on the shore of the river Coromoros.

TEN'ENT, *s.* See **TENET**.

TENERIFFE, a considerable island, forming part of the group of the Canaries, situated off the western coast of Africa. It is of a triangular form, each side being about 36 miles in length. As a natural object, it is chiefly remarkable by that lofty peak, of the sloping sides of which the island actually consists. The lofty height to which it rises, the distance from which it is perceived at sea, and the volcanic eruptions which issue from its sides, have long rendered it an object of curiosity to naturalists. By none, however, has it been so carefully examined as by Humboldt, on his way to the American continent. The climate of Teneriffe is peculiarly delightful and salutary. By the rapidity of its rise, it presents, within a very short distance, every variation of temperature, from the colder climates of Europe to those of the equinoctial regions. The port of Santa Cruz, indeed, from which the principal trade is carried on, is intensely hot, not only from the lowness of its situation, but from the reflection of the basaltic rocks that rise above it. Laguna, however, elevated about 2000 feet above it, is cool and agreeable, and being placed on a wood-crowned hill, surrounded by gardens, forms a delightful residence.

The view from the top of the Peak appears characterised by peculiar beauty. The traveller, placed on the summit of such colossal mountains, sees usually only their own barren steeps; while the plains, covered with rich vegetation, appear in the immensity of distance. But the slender form and rapid rise of this mountain causes the cultivated and wooded parts of the island to be seen in very close proximity.

The summit of the Peak may be considered as a solfatara or extinguished volcano, having remained tranquil during many ages, and presenting no symptom threatening a new eruption, which, however, cannot be considered as impossible. From its flanks several violent eruptions have taken place in the course of the present century.

The commercial importance of Teneriffe depends chiefly on its wine, which, though of an inferior quality to that of Madeira, yet being afforded at a cheaper rate, is in considerable demand. From 10,000 to 15,000 pipes are annually exported. The island derives also great advantage, in consequence of its port of Santa Cruz forming a great place of refreshment, or, as Humboldt terms it, a grand caravansery, between Spain and the Indies. For this purpose it affords beef and fish in plenty, and excellent water. A considerable trade is also carried on between this island and the Spanish West Indies.

TENERIFFE, a town of New Grenada, in the province of Santa Martha, founded on the shore of the river Magdalena, in the year 1536. It was formerly a large and commercial town; but is now reduced to a miserable village; 97 miles south-south-west of Santa Martha. Lat. 9. 45. N. long. 74. 33. W.

TENERITY, *s.* [*teneritas*, *tener*, Lat.] Tenderness. *Ainsworth*.

TENE'SMUS, *s.* The stone shutting up the orifice of the bladder, is attended with a *tenesmus*, or needing to go to stool. *Arbuthnot*.

TENET, *s.* [from *tenet*, Lat., *he holds*. It is sometimes written *tenent*, or *they hold*.] Position; principle; opinion.

They wonder men should have mistook
The *tenets* of their master's book. *Prior*.

TENFOLD, *adj.* Ten times increased.—Fire kindled into *tenfold* rage. *Milton*.

TENGALLE, a sea-port town of Ceylon. It is situated near the south-east extremity of the island, having a small bay, and tolerably good anchoring ground. It contains about 300 inhabitants, many of whom are fishermen. It formerly possessed a small fort, but which is now in ruins. Lat. 6. 3. N. long. 80. 48. E.

TENGAN, a city of China, of the first rank, in the province of Houquang. It is situated in a very fertile district, on a river which falls into the Yangtsee-kiang. It is distinguished for a species of white wax, peculiarly adapted for making candles. Lat. 31. 20. N. long. 113. 17. E.

TENGO,

TENGO, a cape of Italy, on the east coast of the kingdom of Naples. Lat. 41. 47. N. long. 16. 10. E.

TENG-TCHOUEN, a town of China, of the second rank, in Yunan. Lat. 26. 2. N. long. 99. 49. E.

TENGUE, a river of Quito, in the province of Guayaquil, which enters the Pacific Ocean, in the gulf of Guayaquil, opposite the island of Puna.

TENGUILEN, a small river of Chili, in the district of Guadalabquen, which runs south-south-east.

TENJO, a settlement of New Granada, in Bogofa, containing 200 housekeepers, and 100 Indians.

TEN JURISDICTIONS, LEAGUE OF THE, the name of one of three districts or leagues, into which the Swiss canton of the Grisons is divided. It occupies the north part of the canton, and contains about 15,000 inhabitants. Notwithstanding its name, it consists of only seven jurisdictions, of which six and a half are inhabited by German Calvinists; the remaining half belongs to Catholics of Italian descent.

TENIERS (David), the elder, was born at Antwerp in 1582. He received his education in painting in the school of Rubens, and under that great artist's immediate tuition obtained the mode of preparing his grounds, and managing his materials. Intending to continue the study of historic painting, he went to Rome; but there abandoned it, and attached himself to his countryman, Adam Elsheimer, under whom he continued for six years to study landscape, and from him most probably acquired the neatness of penciling for which his works are esteemed.

On his return to his native country, he blended the styles of both his masters, and employed the compound in a novel and ingenious manner, upon subjects original and at the same time agreeable; such as merry-makings, both interior and at the doors of cabarets; rural sports, cattle, sheep, and those who tended them; numerous groups and grotesque combinations; such as the temptation of St. Anthony, &c. For pictures of these kinds, he was fortunate enough to find admirers and purchasers; and they would still have been the theme of admiration, had not his son, following the same track, have proved how possible it was to proceed infinitely farther. He died in 1649, aged sixty-seven.

TENIERS (David), the younger, son of the foregoing artist, was born at Antwerp in 1610, and was initiated in the art of painting by his father; but he afterwards became a disciple of Adrian Brauwer, and is also said to have had the happiness and honour of receiving instructions from Rubens. The subjects and the style he adopted were, as we have said, the same with those employed by his father; but with a more fertile imagination, he produced compositions infinitely more varied and ingenious, with colouring and effect more vivid and engaging, more rich and transparent; and with a facility of execution perfectly enchanting. It is true they seldom exhibit much research of character or expression; what there may be of those qualities, was more probably a fortunate hit, than any result of meditation or intention. In this respect Jan Stein, and our own Wilkie have as much the superiority over Teniers, as he possesses by the power of his execution.

At the first display of his powers he was not so successful as he merited, but it was not long that he lay neglected: the archduke Leopold, being made acquainted with his merits, immediately distinguished him by his patronage; appointed him his principal painter; honoured him by making him a gentleman of his bed-chamber; presented him with a chain of gold, to which his portrait was affixed; and gave him the superintendance of his gallery of pictures, which contained works of the most distinguished masters of the Italian and Flemish schools. Of this gallery, Teniers made several pictures, in which he imitated the manners of the various masters so successfully, as to obtain the name of the Proteus of painting. He also amused himself by making compositions in the styles of different painters of renown, as Titian, Tintoretto, the Bassans, Rubens, &c., and in their execution endeavoured to imitate the touch of those great men. These imitations are generally known under the name of pasticcios,

and have frequently been mistaken for originals; and sold as such.

These were the amusements or indulgencies of idle fancy; his fame rests for more full and honourable support upon his original productions in his own proper style. He was a constant and faithful observer of nature; and in his favourite subjects, village festivals, fairs, and merry-makings, he has exhibited, with a most engaging freedom, the manners and characters of his countrymen. That he might conveniently mingle with the scenes he chose to represent, he established himself in the village of Perk, between Antwerp and Mechlin, and there, with a painter's eye, he observed the undigested impulse of the natural character of the lower class among the people, and has left many beautiful and pleasing remembrances of occurrences uninteresting, nay sometimes disgusting in themselves, but rendered engaging by his delightful mode of representing them. One peculiar charm there is to be found in the best pictures of Teniers more perfectly obtained than in the works of other artists, and that is, the complete effect of atmosphere, silvery, pure, and natural. Claude de Lorraine himself does not surpass him; and this truth, though yielded on simple materials, in scenes flat and insipid in their forms, yet makes amends for their natural want of interest by its truth and simplicity.

In the interior of apartments, of the cottage, the cabaret, the guard-room, or chemist's laboratory, he is not less admirable by his clearness and precision than in his exteriors. He surpassed Ostade in his knowledge of perspective, and in his freedom, as much as he is excelled by the latter in truth of tone and completion of character. His pencil is exceedingly light and dexterous; and by continual practice upon the same system, he had acquired a promptness almost unparalleled. This freedom of execution enabled him to paint an immense number of pictures: it was not unusual for him to finish a picture in a day; and he used jocosely to observe, that to contain all the pictures he had painted, it would be necessary to have a gallery two leagues long. He not unfrequently assisted the landscape painters of his day, by putting figures into their pictures: and many works of Artois, Van Uden, Breughel, and many others, owe an increased value to this circumstance. His works are numerous in the collections of this country, and still bear very high prices. Teniers lived to the advanced age of eighty-four, and died at Brussels in 1694.

He had a younger brother named Abraham, who also painted the same kind of subjects in the same style, and from this circumstance his works are sometimes mistaken for those of David, though they are much inferior in taste and execution.

TENMENTALE, or TENMANTALE, in our ancient customs, originally signifies the number of ten men, which number, in the time of the English Saxons, was called a decennary; and ten decennaries made what we call an hundred.

These ten men were bound for each other to preserve the public peace; and if any of them was found guilty of a breach of it, the other nine were either to make satisfaction, or to bring the criminal before the king.

TENMENTALE was also used for a duty, or tribute paid to the king, consisting of two shillings for each plough-land; probably thus called, because each person of the decennary was bound to see it paid.

TENNE, TENNY, or TAWNY, in Heraldry, a bright colour, made of red and yellow mixed; sometimes also called *brusk*, and expressed in engraving by diagonal lines drawn from the dexter to the sinister side of the shield, traversed by perpendicular lines from the chief; and marked with the letter T.

In the coats of all below the degree of nobles, it is called *tenny*; but in those of nobles, it is called *hyacinth*; and, in princes' coats, the *dragon's head*.

TENNESBERG, a large village of Bavaria, in the Upper Palatinate; 37 miles north-by-east of Ratisbon, and 7 east of Pfreimt. Population 800.

TENNESSEE, one of the United States, bounded north by Kentucky, east by North Carolina and Virginia, south by Georgia, Alabama territory, and Mississippi State, and west by the Mississippi. Lat. 35. to 36. 30. N. long. 81. 28. to 91. 37. W.; 420 miles long and 102 broad, containing 40,000 square miles.

This state is divided by the Cumberland mountains into two divisions, East Tennessee and West Tennessee.

The counties and population are exhibited in the following table:—

East Tennessee.—Anderson, 3,959; Bledsoe, 8,839; Blount, 3,259; Campbell, 2,668; Carter, 4,190; Claiborne, 4,798; Cocke, 5,154; Granger, 6,397; Greene, 9,713; Hawkins, 7,643; Jefferson, 7,309; Knox, 10,171; Rhea, 2,504; Roane, 5,581; Sevier, 4,595; Sullivan, 6,847; Washington, 7,740.—Total: Counties, 17; Population, 101,367.

West Tennessee.—Bedford, 8,242; Davidson, 15,608; Dickson, 4,516; Franklin, 5,730; Giles, 4,536; Hickman, 2,583; Humphries, 1,511; Jackson, 5,401; Lincoln, 6,104; Montgomery, 8,021; Maury, 10,359; Overton, 5,643; Robertson, 7,270; Rutherford, 10,265; Sumner, 13,792; Smith, 11,649; Stuart, 4,262; Wilson, 11,952; Williamson, 13,153; White, 4,028; Warren, 5,725.—Total: Counties, 21; Population, 160,350.

This country is marked by bold and varied features. It is washed by the great river Mississippi on the west; and the fine rivers Tennessee and Cumberland pass through it in very serpentine courses. The western part is undulating; some of it level; in the middle it is hilly; and the eastern part, known by the name of East Tennessee, abounds in mountains, many of them lofty, and presenting scenery peculiarly grand and picturesque. Of these mountains, the Cumberland, or great Laurel ridge, is the most remarkable. Stone, Yellow, Iron, Bald, Smoky, and Unaka mountains, join each other, and form, in a direction nearly north-east and south-west, the eastern boundary of the state. North-west of these, and separated from each other by valleys of from five to fifteen miles wide, are Bay's mountain, Copper ridge, Clinch mountain, Powell's mountain, and Welling's ridge. The last four terminate north by Tennessee river. They are all encircled by valleys, which open passages for rivers and roads, and which, together with the numerous cascades, render the views very sublime. In the Cumberland mountains there are caverns of great extent, with fine streams running through them several hundred feet. In the free-stone rocks there are also numerous excavations called coves, from which issue fine springs of water.

TENNESSEE, a large and navigable river of the United States, in Tennessee, which rises in the mountains of Virginia and Carolina, traverses the eastern parts of this state in a south-west direction, then passing into the Alabama and Mississippi countries, forms a great bend there, crosses the western parts of Tennessee in a northern direction, and after flowing 60 miles through Kentucky, joins the Ohio, 57 miles from the Mississippi, by an outlet 600 yards wide.

TENNESSEE RIDGE, mountains in the state of Tennessee, in the United States, between the rivers Tennessee and Cumberland.

TENNIS, *s.* [this play is supposed by Skinner to be so named from the word *tenez*, take it, hold it, or there it goes, used by the French when they drive the ball.] A play at which a ball is driven with a racket.—The barber's man hath been seen with him, and the old ornament of his cheek hath already stuffed tennis balls. *Shakspeare.*

To TENNIS, *v. a.* To drive as a ball. *Not used.*—Those four garrisons issuing forth upon the enemy, will so drive him from one side to another, and tennis him amongst them, that he shall find no where safe to keep his feet in, nor hide himself. *Spenser.*

TENNIS, the ruins of a large city of Lower Egypt, situated on an island formed by the Lake Menzaleh, which bears sometimes the name of Tennis. The remains are now almost entirely subterranean, the columns and other monuments of architecture having been carried away for the ornament of

Damietta and the neighbouring cities; 28 miles south-east of Damietta. Lat. 31. 2. N. long. 32. 14. E.

TENNIS, or TNISS, a sea-port of Tlemsan, in Algiers, at the mouth of a river which falls into the Mediterranean, and has a small island at its mouth; 110 miles west of Algiers. Lat. 36. 33. N. long. 1. 10. E.

TENNSTADT, a small town of Prussian Saxony; 15 miles north-north-west of Erfurt, and 15 east-south-east of Muhlhausen. It contains 3000 inhabitants, whose chief employment, after agriculture, is the manufacture of flax. This was the native place of Ernesti, the well-known philologist.

TENO, a river of Chili, in the district of Chauco, which runs east, and enters the Martaquino.

TENOCHTITLAN, the ancient name of Mexico.

TE'NON, *s.* The end of a timber cut to be fitted into another timber.—The *tenant saw* being thin, had a back to keep it from bending. *Moron.*

TENOS, TINE, or ISTENDIL, an island of the Cyclades group, in the Grecian archipelago, between Myconi and Andros. The chief products are silk, wine, figs, oranges, and honey. The quantity of corn raised is scarcely sufficient to supply the wants of the inhabitants, who pay an annual tribute to the Porte. The island has no good harbour. St. Nicolo is the chief town.

TE'NOUR, *s.* [*tenor*, Lat.] Continuity of state; constant mode; manner of continuity; general currency.

Still I see the *tenor* of man's woe

Hold on the same, and from woman to begin. *Milton.*

Sense contained; general course or drift.

By the stern brow and gaspish action,
Which she did use as she was writing of it,
It bears an angry *tenor*. *Shakspeare.*

A sound in music.

Water and air he for the *tenor* chose,
Earth made the base, the treble flame arose. *Cowley.*

TENSA, a settlement of New Granada, in the province of Tunja, containing 400 housekeepers and 100 Indians; 10 leagues south-east of Tunja.

TENSAW, the eastern outlet of the river Mobile, in Louisiana, in the United States. It branches off six or seven miles below Fort Stoddart, and flows into Mobile bay five or six miles east of the western branch. Its channel is deeper and wider than that of the western branch.

TENSAW, a small river of the United States, in Louisiana, which flows south-south-west a few miles from the Mississippi, and falls into the Washita at the same point with the Catahoola. It communicates with the Mississippi low lands by the intervention of various creeks and lakes.

TENSAW, NINE BROTHERS OF, a channel in the United States, which unites the north end of Lake Chetimaches with the Atchafalaya.

TENSAW, a post township of the United States, in Washington county, Alabama, near Mobile bay.

TENSE, *s.* [*tempus*, Lat. In grammar.] *Tense*, in a strict speaking, is only a variation of the verb to signify time. *Clarke.*—Ladies, without knowing what *tenses* and participles are, speak as properly and as correctly as gentlemen. *Locke.*

TENSE, *adj.* [*tensus*, Lat.] Stretched; stiff; not lax.—For the free passage of the sound into the ear, it is requisite that the tympanum be *tense*, and hard stretched, otherwise the laxness of the membrane will certainly dead and damp the sound.

TE'NSENESS, *s.* Contraction; tension: the contrary to *laxity*.—Should the pain and *tenseness* of the part continue, the operation must take place. *Sharp.*

TENSIBLE, *adj.* [*tensus*, Lat.] Capable of being extended.—Gold is the closest, and therefore the heaviest of metals, and is likewise the most flexible and *tensible*. *Bacon.*

TE'NSILE, *adj.* [*tensilis*, Lat.] Capable of extension.—All bodies ductile and *tensile*, as metals, that will be drawn into wires, have the appetite of not discontinuing. *Bacon.*

TEN'SION, *s.* [*tension*, Fr., *tensus*, Lat.] The act of stretching; not laxation.—It can have nothing of vocal sound, voice being raised by stiff *tension* of the larynx; and on the contrary, this sound by a relaxed posture of the muscles thereof.—*Holder*.

The state of being stretched; not laxity.
Still are the subtle strings in *tension* found,
Like those of lutes to just proportion wound,
Which of the air's vibration is the force. *Blackmore*.

TEN'SIVE, *adj.* [*tensus*, Latin.] Giving a sensation of stiffness or contraction.—From cholera is a hot burning pain; a beating pain from the pulse of the artery; a *tensive* pain from distension of the parts by the fulness of humours. *Flower*.

TEN'SURE, *s.* [*tensus*, Lat.] The act of stretching, or state of being stretched; the contrary to laxation or laxity.—This motion upon pressure, and the reciprocal thereof, motion upon *tensure*, we call motion of liberty, which is, when any body being forced to a preternatural extent, resto eth itself to the natural. *Bacon*.

TEN-TCHEOU, a city of China, of the first rank, in the province of Shantung. It is a sea-port, with a convenient harbour, and is defended by a strong garrison, and by several ships of war; 250 miles south-east of Peking. Lat. 37. 48. N. long. 120. 44. E.

TENT, *s.* [*tentorium*, Lat., from *tendo*, to stretch.]—A soldier's movable lodging place, commonly made of canvass extended upon poles.—The Turks, the more to terrify Corfu, taking a hill not far from it, covered the same with *tents*. *Knolles*.—Any temporary habitation; a pavilion.

He saw a spacious plain, whereon
Were *tents* of various hue: by some were herds
Of cattle grazing. *Milton*.

[*tente*, Fr.] A roll of lint put into a sore.
Modest doubt is call'd
The beacon of the wise; the *tent* that searches
To th' bottom of the worst. *Shakspeare*.

[*vino tinto*, Spanish.] A species of wine deeply red, chiefly from Galicia in Spain.

While the tinker did dine, he had plenty of wine,
Rich canary with sherry and *tent* superfine. *Old Ballad*.

To TENT, *v. n.* To lodge as in a tent; to tabernacle.
The smiles of knaves
Tent in my cheeks, and schoolboys' tears take up
The glasses of my sight. *Shakspeare*.

To TENT, *v. a.* To search as with a medical tent.
I'll *tent* him to the quick; if he but blench,
I know my course. *Shakspeare*.

TENTAGE, *s.* An encampment. *Not in use*.—Upon the mount the king his *tentage* fixed. *Drayton*.

TENTA'TION, *s.* [*tentatio*, Latin.] Trial; temptation.—If at any time, through the frailty of our wretched nature and the violence of *tentation*, we be drawn into a sinful action, yet let us take heed of being leavened with wickedness. *Bp. Hall*.

TENTATIVE, *adj.* [*tento*, Latin.] Trying; essaying.—This is not scientific but *tentative*. *Berkeley*.

TENTED, *adj.* Covered with tents
These arms of mine till now have us'd
Their dearest action in the *tented* field. *Shakspeare*.

TENTER, *s.* [*tendo*, *tentus*, Latin; *тентерзан*, Sax. torquere.] A hook on which things are stretched.—Every term he sets up a *tenters* in Westminster hall, upon which he racks and stretches gentlemen like English broad-cloth. *Overbury*.

To be on the TENTERS. To be on the stretch; to be in difficulties; to be in suspense.
In all my past adventures,
I ne'er was set so on the *tenters*,
Or taken tardy with dilemma,
That ev'ry way I turn does hem me. *Hudibras*.

To TENTER, *v. a.* To stretch by hooks.—A blown bladder pressed riseth again, and when leather or cloth is *tentered*, it springeth back. *Bacon*.

To TENTER, *v. n.* To admit extension.—Woollen cloth will *tenter*, linen scarcely. *Bacon*.

TENTERDEN, a market town of England, in the county of Kent, situated near the river Rother, and about six miles from the edge of Romney marsh. Tenterden was incorporated by letters patent of Henry VI. who at the same time annexed it as a member to the town and port of Rye, in Sussex, to which it is yet subject. Queen Elizabeth, in her 42d year, granted the inhabitants a new charter, by which, in place of a bailiff, &c., the government of the town was vested in a mayor, 12 jurats, 12 common councilmen, a chamberlain, and town-clerk. Tenterden was one of the first places in which the woollen manufacture was established in the reign of Edward III. Market on Friday, and a large annual fair on the first Monday of May; 24 miles south-west of Canterbury, and 56 east-by-south of London. Lat. 51. 5. N. long. 0. 42. E.

TENTERGATE, a hamlet of England, in the West Riding of Yorkshire, in the parish of Knaresborough.

TENTERGROUND, *s.* Ground on which tenters are erected for stretching cloth.—I entered Kendal almost in the dark, and could distinguish only a shadow of the castle on a hill, and *tenter-grounds* spread far and wide round the town. *Gray*.

TENTH, *adj.* [τεοδα, Sax.] First after the ninth; ordinal of ten.—It may be thought the less strange if others cannot do as much at the *tenth* or twentieth trial, as we did after much practice. *Boyle*.

TENTH, *s.* The tenth part.
Of all the horses,
The treasure in the field achiev'd, and city,
We render you the *tenth*. *Shakspeare*.
Tithe.

With cheerful heart
The *tenth* of thy increase bestow, and own
Heav'n's bounteous goodness, that will sure repay
Thy grateful duty. *Phillips*.

Tenths are that yearly portion which all livings ecclesiastical yield to the king. The bishop of Rome pretended right to this revenue by example of the high priest of the Jews, who had *tenths* from the Levites, till by Henry the Eighth they were annexed to the crown. *Cowel*.

TENTHLY, *adv.* In the tenth place.
TENTHREDO, in Entomology, a genus of the Hymenoptera, order of insects, the characters of which are, that the mouth has a horny, arcuated mandible, within dented; a straight jaw, obtuse at the apex; a cylindrical, trifid lip, with four unequal filiform feelers; the wings flat, and tumid or slightly inflated; the piercers consisting of two serrated scarcely prominent laminæ; and the scutellum with two distant granules.

The larvæ of this genus resemble those of the order Lepidoptera, or real caterpillars; but are distinguished from them by their more numerous feet, which are never fewer than sixteen, exclusive of the three first or thoracic pairs. When disturbed or handled, they usually roll themselves into a flat spiral. They feed, like the caterpillars of the lepidoptera, on the leaves of plants; and undergo their chrysalis state in a strong gummy case or envelopement, prepared in autumn, out of which, in the ensuing spring, emerges the complete insect. The tenthredines form a numerous genus, and are divided into tribes or sections, according to the form of the antennæ. Gmelin reckons 143 species.

I. Antennæ elevated.

1. *Tenthredo femorata*.—Antennæ yellow; black body; hinder thighs largest; the larva green, with a blueish line on the back, and yellow at the sides.

2. *Tenthredo marginata*.—Antennæ yellowish at the apex; black body; the hinder segments of the abdomen white at the margin.

3. *Tenthredo*

3. *Tenthredo lutea*.—Antennæ yellow; segments of the abdomen mostly yellow. This insect proceeds from a large green larva, of a finely granulated surface, with a double row of black specks on each side, and a dusky dorsal line bounded on each side by yellow. It feeds on various species of willow, alder, and beech. The parchment-like case in which it envelopes itself in autumn is of a pale yellowish-brown colour; and the chrysalis, which is of a pale dusky or brownish cast, exhibits the limbs of the future fly, in size equal to a common wasp, and of a yellow colour, bound with black; the antennæ rather short, and strongly clavated.

4. *Tenthredo amerinæ*.—Body cinereous; abdomen beneath red; white lip. This insect is somewhat smaller than the preceding: its caterpillar, like that of the former, is of a green colour, and of a finely roughened surface, powdered with numerous whitish specks. Feeds on the willow.

5. *Tenthredo tristis*.—Black, with yellow antennæ, and wings brown at the apex; green larva, with an azure line on the back, black and yellow fringed.

6. *Tenthredo vitellinæ*.—Abdomen above black; sides red; hinder thighs dentated; larva greenish.

7. *Tenthredo lucorum*.—Antennæ black; body villous black.—Found on the beech and alder.

8. *Tenthredo fasciata*.—Black; antennæ black; primary wings with a brown band.

9. *Tenthredo sericea*.—Antennæ yellow; thorax black; abdomen brassy; larva green, with two yellow lines.

10. *Tenthredo obscura*.—Body smooth and black.—Found in the groves of Sweden.

11. *Tenthreda connata*.—Black; abdomen with yellow bands.—Found on the alder.

12. *Tenthredo nitens*.—Antennæ yellow; abdomen green-blueish, shining. Suggested to be a variety of the *sericea*.

II. Antennæ exarticulate; the outer ones thicker.

13. *Tenthredo clavicornis*.—Black; abdomen yellow; apex black.—Found in North America.

14. *Tenthredo annulata*.—Black; abdomen yellow; hinder tarsi black, annulated with white.

15. *Tenthredo enodis*.—Antennæ smooth; body black-blueish; larva green, spotted with black, a rough lateral line yellow, sharp tail.

16. *Tenthredo ciliaris*.—Antennæ beneath ciliated; hinder legs white.—Found in Germany.

17. *Tenthredo ustulata*.—Body black; abdomen blueish; legs pale. On the canine rose. Larva green, with two white lines; head testaceous; obscure band.

18. *Tenthredo cyanocrocea*.—Head and thorax bright blue; abdomen saffron-coloured.

19. *Tenthredo atrata*.—Black; back, zone, and three arcs, yellow-greenish.

20. *Tenthredo bicolor*.—Black-blue; abdomen and base of the wings yellow; wings with a black band.—Found in Austria.

21. *Tenthredo melanochra*.—Black; abdomen yellow; a small black line on both sides of the anus; legs and soles yellow; wings with a black spot.

22. *Tenthredo tricolor*.—Head and thorax black; wings and feet brown; abdomen yellow.

23. *Tenthredo ochropus*.—Head, thorax, middle of the breast, and apex of the hinder legs, black; abdomen and feet yellow.

III. Antennæ pectinated.

24. *Tenthredo cephalotes*.—Black; abdomen with four yellow zones or belts.—Found in Germany.

25. *Tenthredo dorsata*.—Whitish; head and back of the thorax and abdomen black.

IV. Antennæ pennated.

26. *Tenthredo pini*.—Antennæ lanceolate, and thorax subvillous; larva blueish, and yellow at the tail end.

27. *Tenthredo juniperi*.—Antennæ obtuse; thorax smooth; larva green, pointed with black.

V. Antennæ filiform, with from seven to nine joints.

28. *Tenthredo Americana*.—Thorax yellow; abdomen blue; wings black.—Found in Surinam.

29. *Tenthredo costalis*.—Black, with the rib of the wings ferruginous.—Found in Germany.

30. *Tenthredo lateralis*.—Black; middle of the back red; sides white.—Found on the flowers of Sweden.

31. *Tenthredo arcuata*.—Abdomen black; five arcs, with a band at the base and sides, yellow-greenish.

32. *Tenthredo rustica*.—Black; abdomen with three yellow belts, the hinder two interrupted; larva cinereous, with triangular brown spots on the back.

33. *Tenthredo scrophulariæ*.—Antennæ yellow; abdomen with five yellow belts, the first more distant.

34. *Tenthredo abietis*.—Body black, with four ferruginous segments of the abdomen,

35. *Tenthredo Germanica*.—Body black; thorax before and abdomen red.—Found in the groves of Germany.

36. *Tenthredo padi*.—Black, with thighs and legs white.

37. *Tenthredo cynipiformis*.—Green brassy; yellow feet; hinder thighs brassy.

38. *Tenthredo cerasi*.—Body black; scutellum and feet yellow; larva gelatinous, black.

39. *Tenthredo salicis*.—Body variegated.—Found on the elder and willows.

40. *Tenthredo flavicornis*.—Yellow; head and tail black.—Found in Germany and Italy.

41. *Tenthredo luteicornis*.—Black, with antennæ, mouth, base of the abdomen, and legs, yellow.

42. *Tenthredo mesomelas*.—Abdomen yellowish; back black; arcs yellowish.

43. *Tenthredo punctum album*.—Body black; abdomen at the sides white; hinder thighs red.—Found in Germany.

44. *Tenthredo blanda*.—Black; abdomen in the middle red; hinder thighs with a white spot.

45. *Tenthredo quadrimaculata*.—Black; hinder feet red; two spots at the base white.

46. *Tenthredo rufipes*.—Body black; abdomen with two yellow belts; feet red.

47. *Tenthredo campestris*.—Body black; abdomen with an unequal yellow belt; antennæ and legs yellow.

48. *Tenthredo atra*.—Body black; feet red.

49. *Tenthredo viridis*.—Body green; abdomen above brown.

50. *Tenthredo ovata*.—Body black; thorax above red; larva greenish, sprinkled with a kind of white powder.

51. *Tenthredo alni*.—Body black; head and thorax red.

52. *Tenthredo cærulescens*.—Violet; abdomen yellow; wings with a brown spot.

53. *Tenthredo pavidæ*.—Black; the abdomen with three segments, and feet ferruginous; larva green, sprinkled with white farina; head yellow.

54. *Tenthredo rosæ*.—Black; abdomen yellow, and ridge of the primary wings black; larva yellow, pointed with black.

55. *Tenthredo bicincta*.—Body black; belt of the abdomen, anus, mouth, and legs yellow.

56. *Tenthredo cincta*.—Body black; the abdomen with a white belt; perhaps a variety of the former.

57. *Tenthredo livida*.—Body black; antennæ before the apex white.

58. *Tenthredo albicornis*.—Black; antennæ at the apex white; legs testaceous; wings at the apex brown.—Found in Italy.

59. *Tenthredo gonogra*.—Body black; knees testaceous.—Found in Germany.

60. *Tenthredo nigra*.—Whole body black.—Found at Upsal.

61. *Tenthredo æthiops*.—Smooth, black; with the four legs pale.

62. *Tenthredo rapæ*.—Body black; belly, feet, and scutellum whitish.

63. *Tenthredo septentrionalis*.—Feet posterior, compressed and dilated; larva gregarious, green, spotted with black; yellow apices.

64. *Tenthredo*

64. *Tenthredo opaca*.—Black; thorax with a spot on both sides, red at the apex.—Found in the gardens of Sweden.
65. *Tenthredo Carbonaria*.—Black, with a white mouth; fore-legs testaceous.—Found in Germany.
66. *Tenthredo nassata*.—Yellow; scutellum and point of the wings white.
67. *Tenthredo 12-punctata*.—Body black, with twelve white points.
68. *Tenthredo capreae*.—Yellow; head, thorax, and abdomen above, black; wings with a yellow point.
69. *Tenthredo morio*.—Black; with pale feet.—Found in Germany.
70. *Tenthredo annularis*.—Black, shining; antennæ white at the apex; legs ferruginous.—In the gardens of Austria, perhaps a variety of the *livida*.
71. *Tenthredo ferruginea*.—Antennæ black, annulated with white; body ferruginous; thorax, breast, and vertex black.—Found as the last.
72. *Tenthredo crassa*.—Black; feet and double points under the scutellum elevated, red.—In Austria and Carniola.
73. *Tenthredo albicincta*.—Black; the belt at the base of the abdomen and legs with a ring milky.—In Austria and France.
74. *Tenthredo vespiformis*.—Antennæ yellow; all the segments of the abdomen with yellow margins.—In Austria.
75. *Tenthredo semicincta*.—Black; the belt of the abdomen broken behind, yellowish; the feet of the abdomen beneath yellow.—In Austria.
76. *Tenthredo Viennensis*.—Black; abdomen with five yellow belts; the base of the antennæ fulvous.—In Vienna.
77. *Tenthredo ribis*.—Black; legs and apophyses of hinder thighs white at the exterior side.—In Austria.
78. *Tenthredo fuliginosa*.—Black, with fuliginous wings.—In Austria.
79. *Tenthredo dealbata*.—Black; the abdomen on both sides marked with a white spot, hinder thighs clavated, yellowish.—In Austria.
80. *Tenthredo alneti*.—Yellow; abdomen above black.—In Austria.
81. *Tenthredo hæmatodes*.—Black, thorax before on both sides red.—In Austria.
82. *Tenthredo erythrogonia*.—Black; the apex of the thighs and base of the legs red.—In Austria.
83. *Tenthredo fulviventris*.—Black; with red and deep yellow abdomen.—Found in Austria and Carniola.
84. *Tenthredo fulvivenia*.—Black; with the exterior margin of the wings fulvous, or deep yellow.—Found at Vienna.
85. *Tenthredo sulphurata*.—Black; antennæ subclavated; four fore-feet sulphureous: the hinder soles with three intermediate white joints.
86. *Tenthredo flaveola*.—Antennæ subclavated, black; base, mouth, sides, and five first segments of the abdomen and feet, yellow.
87. *Tenthredo annulata*.—Yellow; antennæ subclavated, black; apex of the thighs and soles annulated with black.
88. *Tenthredo rubiginosa*.—Black; antennæ subclavated, and base with feet yellow; third, fourth, and fifth segments of the abdomen ferruginous.
89. *Tenthredo subulata*.—Black; antennæ subulate at the apex; second to the fifth segments of the abdomen, as far as the hinder margin, legs and soles, yellow, and these annulated with black.
90. *Tenthredo mucronata*.—Black, with the seven-knotted antennæ and abdomen yellow; the last segments from the second to the fourth black; the apex of the wings brown.
91. *Tenthredo varia*.—Black; mouth, scutellum, and scutellar spots, white; the hinder segments of the abdomen and feet ferruginous.
92. *Tenthredo sanguinolenta*.—Black; with the hinder feet sanguineous.
93. *Tenthredo dealbata*.—Black; the three last joints of the antennæ and jaws white; legs and soles yellow.
94. *Tenthredo canescens*.—Grey-downy, brown, with grey wings.
95. *Tenthredo bifasciata*.—Brown, with black thorax; mouth, scutellum, and four spots at the scutel, white; abdomen with two interrupted yellow bands; margin of the wings and feet yellow.
96. *Tenthredo braccata*.—Black, with red thighs: the base of the four hinder legs, and the three penultimate joints of the antennæ, white.
97. *Tenthredo rufipes*.—Black; the base of the abdomen with a spot on both sides, and jaws, white; four fore-legs red.
98. *Tenthredo melanoleuca*.—Black; mouth, thorax with a small line on both sides before the wings; a spot on the hinder thighs; legs, the sides of the abdomen from five to seven segments, and apex, white.
99. *Tenthredo melanochra*.—Black; mouth, four fore-feet, and base-flexure of the hinder thighs, yellow.
100. *Tenthredo leucopus*.—Black; the base flexures of the thighs white; four anterior legs without, and middle of the hinder, white.
101. *Tenthredo varicornis*.—Black, with red feet; fourth and fifth joints of the antennæ and hinder legs at their base, white.
102. *Tenthredo obscura*.—Brown; with the rib of the wings as far as the spot and feet testaceous.
103. *Tenthredo limbata*.—Black; the hinder margins of the segments of the abdomen white; feet reddish.
104. *Tenthredo exalbida*.—Black; with feelers and fore-legs obsoletely white.
105. *Tenthredo ferruginosa*.—Black; the antennæ ferruginous forwards; the base and anterior margin of the wings, the first and fifth segment of the abdomen, the legs and soles white.
106. *Tenthredo angusta*.—Black; body narrow, and grey-downy.
107. *Tenthredo lutescens*.—Black; with the abdomen beneath and feet yellow-reddish.
108. *Tenthredo albipes*.—Black: with legs and soles white.
109. *Tenthredo flaviventris*.—Black; mouth white; abdomen yellow; back and apex black; feet testaceous.
110. *Tenthredo picea*.—Pitchy; anterior legs before, spot of the hinder thighs, and base, white; hinder feet red; the knees and soles black.
111. *Tenthredo fuscipes*.—Black; feet red; posterior soles brown.
112. *Tenthredo bimaculata*.—Pale; eyes, abdomen above the base, breast and two spots, black.
113. *Tenthredo lata*.—Broad, black; the posterior segments of the abdomen white, from the second to the fifth interrupted.
114. *Tenthredo annalicornis*.—Pale, the antennæ spotted with black at the base; vertex of a branchy figure, eyes, and the conjugate points at the back of the thorax and abdomen black.
115. *Tenthredo scripta*.—Pitchy; mouth, and on the middle of the fore-part of the thorax the mark resembles V; the spot on both sides the scutellum white; two scutellar points white; feet, and under margin of the segments of the belly, yellow.
116. *Tenthredo literata*.—Black: segments of the abdomen from the second to the fifth in the back, ovated spot on both sides and margins white; anterior feet, and four hinder legs on the fore-part, white.
117. *Tenthredo melanorhœa*.—Black, with yellow abdomen; the transverse spots of the back and anus black.
118. *Tenthredo geminata*.—Black, with geminated antennæ, and joints and legs pale.
119. *Tenthredo ochrogustes*.—Pitchy; with the abdomen beneath and feet yellow.
120. *Tenthredo ruficapilla*.—Head and thorax red; the posterior margin of the latter and eyes black; the abdomen and feet yellow.
121. *Tenthredo dubia*.—Black; thorax before red; joints whitish.
122. *Tenthredo pallescens*.—Black; mouth and feet pale.

VI. Antennæ setaceous; many joints.

123. *Tenthredo erythrocephala*.—Body cæruleous; head red.
124. *Tenthredo sylvatica*.—Body black; feet and marks of the thorax yellow.
125. *Tenthredo nemoralis*.—Body black; segments of the abdomen white at the side.
126. *Tenthredo cynosbati*.—Body black; feet ferruginous, hinder annulated with white and black.
127. *Tenthredo signata*.—Pale; thorax and three dorsal longitudinal spots black.—Found in Germany.
128. *Tenthredo populi*.—Black-blueish; mouth, feelers, and legs yellow.
129. *Tenthredo vafra*.—Head black, variegated with white; feet testaceous.—Found in Sweden.
130. *Tenthredo reticulata*.—Wings varied with pale and brown, with elevated veins, white and reticulated.—Found in Finland.
131. *Tenthredo betulæ*.—Body red; thorax, anus, and eyes black; wings behind brown.
132. *Tenthredo flava*.—Yellow, with the spot on the wings ferruginous.
133. *Tenthredo hæmorrhoidalis*.—Black; with the anus and feet testaceous.—In Germany.
134. *Tenthredo nemorum*.—Middle of the abdomen red; scutellum and point on the wings white.
135. *Tenthredo depressa*.—Head and thorax black; marks yellow; abdomen and feet ferruginous.—In Austria and France.
136. *Tenthredo linearis*.—Black; legs, and five bands of the filiform abdomen, yellow.—In Austria.
137. *Tenthredo bipunctata*.—Antennæ sub-setaceous; nine joints black, and two points of the black scutellum white.

VII. Of doubtful order.

138. *Tenthredo intertinctus*.—Black; with yellow feet subclavated antennæ.
139. *Tenthredo rumicis*.—Found on the dock.
140. *Tenthredo ulmi*.—Found on the leaves of the wild elder.
141. *Tenthredo pruni*.—Found on the plum-tree.
142. *Tenthredo loniceræ*.—Brown, tomentose, shining, with subclavated antennæ, and subferruginous wings.
143. *Tenthredo polygona*.—Black; antennæ subclavated with eighteen knots; the hinder margin of the segments of the abdomen from the third to the fifth yellow greenish: the thighs black; the face anterior at the apex and the anterior yellow; the hinder at the apex black: the linear abdomen compressed.
- TENTUGINOUS**, *adj.* [*tentigo*, Lat.] Stiff; stretched.
- TENTOLI**, a town of the island of Celebes, near the north extremity, on the west coast, which gives name to a road. Lat. 1. N.
- TENTORY**, *s.* [*tentorium*, Lat.] The awning of a tent. *Mason*—The women who are said to weave hangings and curtains for the grove, where no other than makers of *tentories*, to spread from tree to tree. *Evelyn*.
- TENTSMOOR POINT**, a cape of Scotland, on the coast of Fife, at the mouth of the Tay. Lat. 56. 25. N. long. 2. 55. W.
- TENTUGAL**, a small town of Portugal, in the province of Beira, with 1200 inhabitants; 11 miles west-north-west of Coimbra.
- TENTWORT**, *s.* [*adiantum album*, Lat.] A plant. *Ainsworth*.
- TENTZELL** (William Ernest), a German antiquary and historian, was born in 1659, at Greussen in Thuringia, and finished his education at Wittenberg, directing the course of his studies to philosophy and the Oriental languages, and also to history, both sacred and profane. In 1685 he was appointed a teacher in the gymnasium at Gotha, and entrusted with the care of the Duke's collection of antiquities and coins. In order to qualify him-

self for the more honourable discharge of his duties as historiographer to the house of Saxony of the Ernestine line, to which office he was appointed in 1696, he visited various courts in Germany, and carried on an epistolary correspondence with many distinguished foreigners. In 1702, he removed to Dresden, where he was made historiographer to the king of Poland, by whom he was honoured with the title of counsellor; but his manners not being adapted to a court, he obtained leave to retire. What remained of his life was devoted to literary pursuits; and he died, very poor, in November 1707, in his 49th year. His works were numerous, among which we may reckon the following: viz. "De Phenice," Vitemb. 1682, 4to.; "De Ritu Lectionum Sacrorum," Vitemb. 1685, 4to., a work highly commended by Bayle; "Judicia Eruditorum de Symbolo Athanasiano studiosè collecta et inter se collata," Francs. et Lips. 1687 12mo.; "Animadversiones in Casimiri Ordinis Supplementum de Scriptoribus Ecclesiasticis," 1688, 12mo.; "Casparis Sagittarii Historici Saxonici Historia Gothona plenior, &c." Jena 1700, 4to.; "Supplementum Historiæ Gothonæ," ibid. 1701, 4to.; "Supplementum Hist. Goth. secundum," ibid. 1701, 4to.; "Saxonia Numismatica, Pars I." Francs. et Lips. 1705, 4to.; "Pars II." 1705. Tentzel was also a contributor to several literary journals. *Gen. Biog.*

TENUIFOLIUS, *adj.* [*tenuis* and *folium*, Lat.] Having thin leaves.

TENUITY, *s.* [*tenuitas*, from *tenuis*, Latin.] Thinness; exility; smallness; minuteness; not grossness.—At the height of four thousand miles the æther is of that wonderful *tenuity*, that if a small sphere of common air, of an inch diameter, should be expanded to the thinness of that æther, it would more than take up the orb of Saturn, which is many million times bigger than the earth. *Bentley*.—Poverty; meanness. *Not used*.—The *tenuity* and contempt of clergymen will soon let them see what a poor carcass they are, when parted from the influence of that supremacy. *King Charles*.

TENUOUS, *adj.* [*tenuis*, Lat. Glanville writes it *tenuious*.] Thin; small; minute.

Could I but follow where you lead,
Disrob'd of earth and plum'd by air,
Then I my *tenuous* self might spread
As quick as fancy every-where.

J. Hall.

TENURE, *s.* [*teneo*, Lat., *tenure*, Fr., *tenure*, law Lat.] The manner whereby tenements are holden of their lords.—In Scotland are four *tenures*, the first is *pura eleemosina*, which is proper to spiritual men, paying nothing for it, but *devota animarum suffragia*; the second they called *feu*, which holds of the king, church, barons, or others, paying a certain duty called *feudi firma*; the third is a holding in blanch by payment of a penny, rose, pair of gilt spurs, or some such thing, if asked; the fourth is by service of word and relief, where the heir being minor is in the custody of his lord, together with his lands, and lands holden in this manner is called *feudum de hauberk* or *haubert*, *feudum militare* or *loricatum*. *Tenure* in gross is the *tenure* in capite; for the crown is called a seignory in gross, because a corporation of and by itself. *Cowel*.—The service follows the *tenure* of lands; and the lands were given away by the kings of England to those lords. *Spenser*.

TEODORA, *Str.*, a small island near the north coast of Candy; 8 miles north-west of Canea.

TEOLO, a small town of Austrian Italy, in the government of Venice. Population 1600; 10 miles south-west of Padua, and 15 south-south-east of Vicenza.

TEOLOYUCA, a settlement of Mexico, near the city of Mexico.

TEOMAHAL, a small island in the Sooloo archipelago. Lat. 6. 15. N. long. 120. 51. E.

TEONA, a small island of Scotland, in Inverness-shire, in the opening of the arm of the sea called Loch Moidart.

TEORA, a small town in the south of Italy, in the central

part of the kingdom of Naples, province of the Principato Ultra. Population 3300.

TEOTALCO, a town of Mexico, and capital of a district of the same name, in the intendency of Mexico.

TEOTIHUACAN, a town of Mexico, and capital of a district of the same name, in the intendency of Mexico; 23 miles north-east of Mexico. Lat. 19. 41. N. long. 98. 48. W.

TEOTIHUACAN, a river of Mexico, on which the former capital of Mexico was situated.

TEOWENISTA, a stream of the United States, which falls into the Allegany river.

TEOZAPOTLAN, a settlement of Mexico.

TEOZAQUALCO, or TEOCOCUILCO, a town of Mexico, in the intendency of Oaxaca, and capital of a district of the same name; 204 miles south-east of Mexico. Lat. 17. 27. N. long. 96. 12. W.

TEPACI, a river of South America, in Paraguay, which runs east, and enters the Paraguay.

TEPEACA, a town of Mexico, in the district of Tlaxcala. The principal square is large; and in the middle of it is a fort, which served as a retreat and place of defence to Cortez and his army, upon his retiring from Mexico. Its population consists of 700 families of Spaniards, Indians, and mulattoes; 66 miles east-by-south of Mexico, and 15 south-south-east of Puebla de los Angeles. Lat. 19. N. long. 98. 2. W.

TEPEFACTION, *s.* [*tepefacio*, Lat.] The act of warming to a small degree.

TEPEHUACAN, a settlement of Mexico, in the intendency of Mexico, containing 550 families.

TEPEL, or TOEPEL, a small town of the north-west of Bohemia, at the source of a small river also called Tepel, which joins the Eyra, near Carlsbad; 66 miles west of Prague, and 27 north-west of Pilsen.

TEPEMAXALCO, a settlement of Mexico, in the intendency of Mexico.

TEPETLACINCO, a settlement of Mexico, in the intendency of Vera Cruz, containing 470 families of Indians—It is also the name of another insignificant settlement of Mexico.

TEPETLASTOC, a settlement of Mexico, in the intendency of Mexico; 4 miles north-east of Tezcucó, containing 875 families of Indians, mestizoes, and Spaniards.

TEPEXI, a town of Mexico, in the intendency of Puebla, inhabited by 100 families of Spaniards, mestizoes, and mulattoes, and by 1570 Mexican Indians; 91 miles south-east of Mexico. Lat. 18. 21. N. long. 97. 59. W.

TEPIC, a town of Mexico, and capital of a district of the same name. It has a Franciscan convent; and is 97 miles north-north-west of Guadalajara, and 344 north-west of Mexico. Lat. 21. 36. N. long. 104. 45. W.

TEPID, *adj.* [*tepidus*, Lat.] Lukewarm; warm in a small degree.

The *tepid* caves, and fens, and shores,
Their brood as numerous hatch.

Milton.

TEPIDITY, *s.* [*tepidite*, old Fr.] Lukewarmness.—This kindness, it seems, is not so well improved by her as it deserved; but she is surprized by another fit of drowsy negligence and *tepidity*. *Bp. Richardson.*

TEPIQUE, an abundant river of Mexico, which has its rise near the settlement of Santiago de Calimaya; 14 leagues from Mexico. It runs more than 200 leagues from east to west, until it unites itself with the Guadalaxara. Its course, however, is not well ascertained.

TEPIRU, a settlement of South America, in the province of Tucuman, on the shore of the river Dolce.

TEPITITLAN, two settlements of Mexico, in the intendency of Mexico.

TEPLICSKA, a village of the north of Hungary; 10 miles south-west of Kesmark, with 1200 inhabitants, chiefly Catholics.

TEPLITZ, TOEPLITZ, or TEPLICE, a small town of Bohemia; 45 miles north-west of Prague, and 14 west-north-

west of Leutzmeritz. Near this the Austrians defeated the Prussians in 1762. Lat. 50. 38. 23. N. long. 13. 51. E.

TEPLITZ, which is derived from TOEPEL, a hot spring, is the name of several small towns and villages of the Austrian states, all of which have warm mineral springs.

TEPLIWODA, a small town of Prussian Silesia; 21 miles south of Breslau, and 8 north-west of Munsterburg.

TEFLOW (Gregory Nicolaivitch), a Russian writer, educated in a seminary at Novogorod, where he distinguished himself by a Latin translation of prince Cantemir's *Satires*, and a work on the geography of Russia, neither of which was ever printed. In 1740, he was employed in the Academy of Sciences, and in forming a catalogue of objects contained in the Cabinet of Natural History. He thus acquired a taste for that science, and particularly for botany; in consequence of which he was made an adjunct of the society in 1741, and in the following year delivered lectures on moral philosophy, that were much approved. The empress Elizabeth appointed him tutor and travelling companion to her favourite, count Rasumovsky, who, on his return from his travels in 1746, was made president of the Academy of Sciences. Teflow then became an honorary member, directed the institution in the name of the president, and drew up rules for its better regulation. At the time of the empress's death, he was a counsellor of state; but as he was an enemy to Peter III., he was arrested; afterwards he was restored to favour; nevertheless, two months after his being made a member of the council of state, it was discovered that he had joined in a conspiracy to dethrone that unfortunate prince. After the deposition of Peter, he published manifestations, in order to render him odious, and, as Busching says, was the principal agent in putting him to death. For this service he is said to have received a reward of 20,000 rubles. The empress afterwards made him a privy-counsellor and member of the senate, and honoured him with the orders of Alexander Newsky and St. Ann. He died in March, 1779; and his works in the Russian language, are, "A General View of Philosophy;" "Instructions to his Son;" "A Collection of Songs, with Melodies for three Voices;" "Instructions for the Cultivation of foreign Tobacco, in Lesser Russia," distributed by order of the empress through that province, in 1763. *Gen. Biog.*

TEPOLULA, a settlement of Mexico, in the intendency of Mexico, containing 178 families of Indians, besides a numerous population of mestizoes and mulattoes.

TEPOR, *s.* [*tepor*, Lat.] Lukewarmness; gentle heat.—The small pox, mortal during such a season, grew more favourable by the *tepor* and moisture in April. *Arbuthnot.*

TEPOTE, a river of Paraguay, which runs west, and enters the Paraguay.

TEPOXTLAN, a settlement of Mexico, in the intendency of Mexico, containing 960 families of Indians.

TEPOZCOLULA, a town of Mexico, and capital of a district of the same name; 150 miles south-south-east of Mexico. Lat. 71. 16. N. long. 79. 51. W.

TEPWIA, a town on the west coast of the island of Celebes. Lat. 1. 4. S. long. 119. 10. E.

TEQUALTICHI, a town of Mexico, and capital of a district of the same name; 33 miles east of Guadalaxara. Lat. 21. 10. N. long. 102. 30. W.

TEQUENDAMA, CATARACT OF, a remarkable fall of the Rio Bogota, in South America. This river has its rise in the great plain in which is situate the city of Bogota, and which is separated from the surrounding country by steep precipices, or very deep ravines, down which the river Bogota is precipitated. The face of the rock, which finishes and borders the vast plain of Bogota, near the cataract, is so steep, that it takes three hours to descend from the river Funza to the Rio Meta; and the basin or gulf cannot be approached very close, as the rapidity of the water, the deafening noise of the fall, and dense mass of vapour, render it impossible to get nearer the edges of the abyss than 4 or 500 feet. The loneliness of the spot, the dreadful noise, and the beauty of the vegetation, render this situation one of the

the wildest and most picturesque scenes that are to be observed in the Andes.

TEQUEPA, a port of Mexico, in the province of Mechoacan, on a river near the Pacific Ocean; 80 miles south-east of Zacatula. Lat. 17. 50. N. long. 102. 26. W.

TEQUERY BAY, on the south-east part of the coast of the island of Cuba, between Cape Cruz and Cape Maizi, at the east end. It affords good anchorage and shelter for ships, but is not much frequented.

TEQUIA, a settlement of New Granada, in the province of Tunja, containing 1500 housekeepers.

TEQUIARI, a river of Peru, in the province of Pomabamba, which runs east, and enters the Beni.

TER, a river in the north-east of Spain, in Catalonia, which rises among the Pyrenees, and flows southwards to Vique, where it takes an eastern direction, till it falls into the Mediterranean below Cabo de Cruz.

TERABLE, a fort of South America, in Terra Firma; 29 miles east-north-east of the city of Panama.

TERAKACO, a peninsula on the east coast of New Zealand, of which Cape Table forms the eastern point.

TERAMA ALTA, a settlement of New Granada, in the province of Tunja, containing 600 housekeepers.

TERAMNUS [*Τεραμνος*, the same with *τεραμνω* and *τερων*, Gr., *soft*; properly predicated of legumes and seeds which are made tender by boiling], in Botany, a genus of the class diadelphia, order decandria; natural order of papilionaceæ or leguminosæ.—Generic Character. Calyx: perianth one-leafed, two lipped; upper lip a little larger, bifid; lower three-toothed, teeth acute, erect, approximating. Corolla: papilionaceous; standard obcordate, spreading, erect, bent down a little; wings length of the standard, erect, approximating, rounded at the tip; keel very small, concealed at the base by the calyx between the lower part of the wings, bipartite, covering the stamens. Stamina: filaments ten; five very small and barren, alternate with the others, which are fertile, longer, and united at the base; anthers roundish. Pistil: germ elongated, pubescent; style none; stigma round-headed. Pericarp: legume linear, compressed, margined. Seeds, many, roundish, compressed, retuse at the end.—*Essential Character*. Keel very small, concealed within the calyx. Stamina alternate; five barren. Stigma sessile, headed.

1. *Teramnus volubilis*.—This creeping or climbing plant is pretty common in the lower hills of Jamaica, and runs generally the length of six or seven feet from the root. The leaves are oblong, and covered moderately with down. The flowers are small, and disposed in slender spikes at the axils of the leaves. The seed-vessels are long, slender and compressed.

2. *Teramnus uncinatus*.—Leaves oblong, obtuse, silky beneath.—Native of Jamaica.

TERAMO, a town of Italy, in the north of the kingdom of Naples, in the Abruzzo Ultra, on the river Tordino. It has some manufactures of woollens, and is the see of a bishop; 28 miles north-north-east of Aquila, and 115 north of Naples.

TERANE, a town of Egypt, situated in the district to the west of the Nile, containing the lakes of Natron.

TERAPEA, or TARAPIA, a small town of European Turkey, about 10 miles north-north-east of Constantinople, and much admired for the beauty of its situation.

TERAPIN, *s.* A kind of tortoise. *Phillips*.—It is observed, that though the heads of snakes, *terrapins*, and such like vermine, be cut off; yet the head will not die in a long time after. *Hist. of Virginia*.

TERATOLOGY, *s.* [*τερατος* and *λεγω*, Gr.] Bombast, affection of false sublimity. *Bailey*.

TERBURGH (Gerard), a painter of domestic scenes of exquisite skill, was born at Zwoil in the province of Overyssel, in 1608. He was the son of a painter little known, from whom he received the rudiments of the art. He began his career as a painter of portraits in small, and had acquired considerable reputation, when he determined upon travelling

through Germany and Italy. Unengaged by the sublimer beauties of art which the latter country offered to his view, he never changed his style, but went thence to Paris to practise it; and there met with considerable success. From thence he returned to Holland, and was highly appreciated, and fully employed. He attended the congress assembled at Munster in 1648, for the negotiation of the treaty of peace, and there painted his celebrated picture containing portraits of the plenipotentiaries and principal personages assembled on that occasion, which is regarded as his master-piece; and of which there is a print by Suyderhoef. While engaged upon this work, he was invited by count Pigorandor, the Spanish ambassador at the congress, to visit Spain, and went there in consequence; where he was most favourably received, and much employed. The king conferred upon him the order of knighthood, and rewarded him munificently for the pictures he painted. Besides portraits, which constituted the principal part of his practice, he frequently painted conversations, musical parties, ladies at their toilette, and domestic subjects, which he executed with a free, but rather a heavy pencil, not equal to the brilliancy of Metz and Netscher, but nevertheless, exceedingly meritorious and agreeable; particularly in the close imitations of his draperies. He died in 1681, at Deventer where he settled on his return from Spain.

TERCE, *s.* [*triens*, Lat.] A vessel containing forty-two gallons of wine; the third part of a butt or pipe. *Ainsworth*.

In the poet's verse

The king's fame lies, go now deny his tierce. *B. Jonson*.

TERCEL, *s.* A hawk. See TASSEL.

TERCERA, an island near the coast of Africa, forming part of the group of the Azores. The Portuguese are said to have given this name to it, from its being the third in succession that was discovered. The people of Tercera are reckoned mild, benevolent, and superior in civilization to those of the other islands. The police is better enforced, and the manners of Lisbon generally prevail. The only two places of consequence are Angra and Praya.

TERCERO, a river of South America, in the province of Tucuman, which rises in the mountains to the south-west of the city of Corduba. It runs east, collecting the waters of a smaller river, called Saladillo. It enters the river Parana just above the town of Rossario, and 73 miles south of the city of Santa Fe.

TERDOPPIO, a small river in the north of Italy, which rises near the southern extremity of the Lago Maggiore, and falls into the Po; 12 miles east-south-east of Lumello.

TEREBELLA, in Natural History, a genus of the Mollusca order of Vermes; the characters of which are, the body oblong, creeping; naked, furnished with branchiæ at the sides, more frequently in the tube; the mouth labiated, toothless, and projecting a clavated proboscis; the tentacula or feelers about the mouth numerous, capillary, and ciliated.

1. *Terebella cirrata*.—Round, body with triple lateral pencils.—Found in the sandy bottom of the Iceland sea.

2. *Terebella lapidaria*.—With eight cirri at the anterior parts of the body, about the mouth four.—Found in the Mediterranean sea, within the clefts of rocks.

3. *Terebella conchilega*.—Whitish, with numerous filiform cirri at the mouth, the upper longest; the branchiæ very red.—Found in the sea washing the coast of Holland.

4. *Terebella complanata*.—Depressed mouth with four cirri; the lateral pencil-bearing warts of the body arranged on both sides in a two-fold series.

5. *Terebella carunculata*.—Depressed-quadrangular with a four-fold series of ventral pencils, and no cirri.—Found in the American and Indian seas.

6. *Terebella rostrata*.—Tetraedrous, with a quadruple series of pencils from the body, and palate elongated.—Found in the Indian sea.

7. *Terebella flava*.—Depressed, with thirty-seven branchiæ

chiæ on both sides, and bifurcated tail.—Found in the Indian sea.

8. *Terebella rubra*.—Red, depressed; tail terminating with two cirri; the head with two horny moveable jaws.—Found in the sea surrounding the islands of Zeland.

9. *Terebella aphroditois*.—Round, gradually attenuated backwards, below somewhat depressed with an obsolete furrow; no branchiæ in the eight first segments, in the following three simple, in the last sensibly greater, one being turned, pinnated.—Found in the Indian sea.

10. *Terebella bicornis*.—With a simple terminal two-horned disc of the proboscis.—Found in the American ocean.

11. *Terebella stellata*.—With a perfoliated triple disc of the proboscis; the anterior armed with a truncated horn, radiated with prickles.—Found in the American ocean.

TEREBELLA, (dim. of *terebra*.) in Surgery, a trepan, or circular saw, for removing portions of the skull.

TEREBES, or TREBISSOW, a small town in the north of Hungary; 22 miles east-south-east of Caschau, situated on the river Bodrog.

TEREBINTH, *s.* [*terebinte*, Fr.; *τερεβινθος*, Gr.] The turpentine tree.

Here grows melampode every where, And *terebinth*, good for goats.

Spenser.

TEREBINTHINATE, or TEREBINTHINE, *adj.* [*terebinthine*, French; *terebinthum*, Lat.] Consisting of turpentine; mixed with turpentine.—Salt serum may be evacuated by urine, by *terebinthinates*, as tops of pine in all our ale. *Flower.*

TO TEREBRATE, *v. a.* [*terebro*, Lat.] To bore; to perforate; to pierce.—Consider the threefold effect of Jupiter's trisulc, to burn, discuss, and *terebrate*. *Brown.*

TEREBRATION, *s.* [from *terebrate*.] The act of boring or piercing.—*Terebration* of trees makes them prosper better; and also it maketh the fruit sweeter and better. *Bacon.*

TEREDO, in Natural History, a genus of the Testacea order of Vermes, the characters of which are, that the animal is a *terebella*, with two hemispheric calcareous valves, cut off before, and two lanceolated; the shell is round, flexuous, and capable of penetrating wood.

Teredo navalis.—The shell very slender, cylindric and smooth.

The head of the *Teredo navalis*, called by Linnæus *calamitas navium*, is well prepared by nature for the hard offices it is to undergo, being coated with a strong armour, and furnished with a mouth like that of the leech; by which it pierces wood, as that animal does the skin; a little above this it has two horns, which seem a kind of continuation of the shell; the neck is as strongly provided for the service of the creature as the head, being furnished with several strong muscles; the rest of the body is only covered by a very thin and transparent skin, through which the motion of the intestines is plainly seen by the naked eye; and by means of the microscope, several other very remarkable particulars become visible there.

This creature is wonderfully minute when newly excluded from the egg, and, at its utmost bigness, is a foot long; three or four inches are however its more frequent length.

When the bottom of a vessel, or any other piece of wood constantly under water, is inhabited and injured by ever so great a number of these worms, there is no sign of the damage to be perceived on the surface, nor are the creatures visible till the outer part of the wood is cut or broken away; then their shelly habitations come in sight: these lie so near the surface, however, as to have an easy communication with the water, and there is a multitude of little perforations in the very surface through which the inhabitant insects throw out the extremities of their little shelly horns; these are of a reddish colour, and may be distinguished by an accurate observer in form of so many red prominent points; they are all retracted on the least touch, and

are thrown out again as soon as all is quiet. From these points, or the small apertures which give them a way out, are the cells of the teredines to be traced. They are composed of a pearly or shelly matter, which forms a long tube with various windings and turnings, which mark the abode of the creature; but which usually neither adheres to the body of the animal nor to the wood. These cases or tubes are always more or less loose in the wood, and there is ever a large space within them, for the body of the animal to be surrounded every way with water. They are very smooth on the inner surface, and somewhat rougher without; and are much harder and firmer in the cells of the older and larger animals than in those of the young ones.

These shelly tubes are composed of several rings, or annular parts; but these differ greatly in their length. There is an evident care in these creatures, never to injure one another's habitations; by this means each tubule or case is preserved entire, and in such pieces of wood as have been found eaten by them into a sort of honey-comb, there never is seen a passage or communication between any two of the tubules, though the woody matter between them often is not thicker than a piece of writing paper.

The vast increase of these animals, and their shelly tubules, naturally lead to a consideration of the manner of their generation; and when we consider that each of these creatures is, from the time when it is produced from the egg, immediately lodged in a cell, in which it lives without the least possibility of getting into that of another animal of its own kind, of receiving one of them in its own, it is not easy to account for the propagation of the species in the common way. This however, is solved by an accurate anatomical observation of the animals themselves, since in every individual the parts of generation in both sexes, and both the semen and ovula are found. Each individual therefore evidently serves by itself for the propagation of the species; and this is probably very often the case in earth-worms, and other of the hermaphrodite animals. All the yet known kinds of these being soft-bodied; and probably, though they often meet one another, and copulate in pairs, yet when they have not opportunity, the parts copulate in the individual.

Eggs are found in great plenty in the bodies of these animals in June, and are discharged with the water into the sea, where the far greater part of them, doubtless, become food for other small marine animals; and the few that affix themselves to any piece of wood they are washed against, hatch and get into its substance in the manner of their parents.

The kind of wood in which these worms are lodged, makes a great difference in the appearance of their cells, as they work much more speedily and successfully in some kinds than in others. The fir and alder are the two kinds they seem to eat with the greatest ease, and in which they grow to the greatest size. In the oak they seem to make but a very slow progress, and usually appear very small, and poorly nourished. The colour of their shelly tubules is often brown in this wood; which seems plainly owing to the effect of its juices.

Poisonous ointments are also found to be of some use in destroying them, on rubbing over the wood: some have thought that burning the surface was an effectual way of preserving them, but this has been found to be otherwise. The surest method of avoiding them in particular works, is the using of bitter or very solid woods; the first kind they are found never to touch, and in the other they make but slow progress. Mixtures of lime, sulphur, and colocynth, with pitch, for covering over the surfaces of boards, &c., have been found of some use.

It seems very evident, that boards and other pieces of wood have been subject to be eaten by these animals, from all times that we have any knowledge of; for the stone called *lapis syringoides* is evidently no other than wood thus eaten, petrified by long lying in the earth, together with the tubules of the worms. The masses of this with the grain of wood

wood yet plain in them, are common in many places among sea-shells, and other marine remains at great depths, and have evidently been brought thither in very distant times, and before those changes were made in the surface of the earth, of which we have no accounts in our earliest histories.

2. *Teredo utriculus*.—Shell solid, cylindrical and undulated.

3. *Teredo clava*.—Shell clavated at one end, the other curved, narrower, obtuse, and perforated in the middle. Sellii Hist. Natur. *Teredinis*.

TEREK, a considerable river of Asiatic Russia, in the government of Caucasus. It rises amid snow-covered mountains, in the loftiest part of the Caucasian chain, on the frontier of Circassia and Georgia. After passing Kizlar, it divides into three branches, and falls into the Caspian.

TEREMENDO, a settlement of Mexico, in the intendency of Valladolid, inhabited by 90 families of Indians.

TERENCE (Publius Terentius), a Latin writer of comedies, was born, as it is supposed, at Carthage about the year of Rome 560 (B. C. 194.) Being brought to Rome as a slave, when young, he was in the service of a person named Terentius, a senator, from whom he derived his name. The purity and politeness of his language evince his having enjoyed the benefit of a good Roman education. After his emancipation, he was honoured with the friendship of several Romans of rank, such as Scipio Africanus the younger, and the younger Lelius. His comedies were founded upon the Greek model, and translated, either wholly or in part, from the Greek. The first comedy which he is said to have brought upon the stage, was the "Andrio," represented in the year before Christ 166. But though this was the first of his comedies that was acted, it appears that it was not the first which he had written. The six comedies of Terence that are still extant were exhibited at Rome from the year before Christ 166 to 160. They were heard with great applause; the "Eunuchus" was repeated twice in the same day, and he is said to have received for it 8000 sesterces (about 64*l.*) Scipio and Lelius, as tradition reports, had a great part in the composition of Terence's comedies. Terence himself in a prologue seems tacitly to acknowledge the fact. But modern writers and critics, who have reasoned on this fact, think it very improbable. Generals and statesmen were not persons likely to possess the habit of dramatic composition, whatever previous hints or subsequent corrections they might furnish; and besides it is observed, that no writings more strongly indicate by their style and manner that they are the production of a single hand than those of Terence. After he had presented these comedies to the public he departed for Greece, and never returned to Rome. Some have accounted for this circumstance, by supposing that he perished by shipwreck; others affirm that he died in Greece, from the grief he experienced on account of the loss of his baggage and some new comedies, which he had composed, by an accident at sea.

The judgment of critics on the performances of Terence, has been very different, though their real merit is said not to be of difficult estimation. It is generally allowed that he is defective in invention and originality of observation. This sufficiently appears from his having Greek manners and characters in all his plays. He was likewise a plagiarist, with regard to the sentiments, as well as to the plots and incidents of his pieces; but a very competent judge observes, "that he is justly entitled to the praise of judicious selection, happy disposition, and purity and neatness of language; and that, as a Latin writer, in a style of elegance, of which there are so few examples, he was highly prized in his own times, and is invaluable in ours. Cicero, who speaks of him as a translator of Menander, applauds him as the only one who had expressed in the Latin language, all the politeness and amenity of the original; and Cæsar, in some well-known lines, calls him 'the lover of pure diction;' and also by the epithet of the *Halved Meander*; and his regret that Terence did not possess the *vis comica*, as well as the

VOL. XXIII. No. 1616.

other excellencies of his model, points out his deficiencies." Of the numerous editions of Terence, the most esteemed are the following; viz., the "Variorum," Amst. and Lugd. Batav. 1686; "Bentleii," Cantab. 4to. 1726; "Westerhovii," Hag. C. 4to. 1726; "Zeunii," Lips. 8vo. 1774; "Brunckii," Basil, 4to. 1779. Voss. Poet. Lat. *Gen. Biog.*

TERESA, a small town in the east of Spain, in Valencia, with 2200 inhabitants; 10 miles west-by-north of Segorbe.

TERESA, St., a town of New Granada, at the conflux of the Meta and Orinoco; 300 miles east of Santa Fe de Bogota.

TERESA, St., a town of New Mexico, in the province of Cinaloa; 95 miles north-east of Cinaloa.

TERESA, St., a fort of the province of Buenos Ayres, situate near the sea coast, about 80 miles north-east of Maldonado. Lat. 33. 58. S. long. 53. 34. W.

TERESPOL, a small town in the east of Poland; 3 miles south-south-west of Brzesc, and 103 east-by south of Warsaw, inhabited by the descendants of German settlers.

TERRET, *adj.* [*terres, teretis*, Lat.] Round. *Not in use*.—To the stars Nature hath given no such instruments, but made them round and *teret* like a globe. *Fotherby*.

TERFOWI, a watering place in the desert of Nubia; 150 miles south of Syene.

TERGE/MINOUS, *adj.* [*tergeminus*, Lat.] Threefold.

To TERGIVE/RSATE, *v. n.* [*tergum*, the back, and *verto*, (*versus*,) to turn, Lat.] To boggle; to shift; to use evasive expressions. *Bailey*.

TERGIVERSA'TION, *s.* [*tergiversation*, Fr. Cotgrave; *tergin* and *verto*, Lat.] Shift; subterfuge; evasion.—Writing is to be preferred before verbal conferences, as being freer from passions and *tergiversations*. *Bramhall*.—Change; fickleness.—The colonel, after all his *tergiversations*, lost his life in the king's service. *Clarendon*.

TERGLOU, one of the highest mountains of Germany, situated among the Julian Alps, in the north-west of Carniola. It is 10,855 feet above the sea, and is covered with continual snow on the north side, where there are immense glaciers.

TERGOVISTA, or TIRGOWISCHT, a town of European Turkey, in Wallachia, in the district called Zara de Suss, situated in a pleasant track on the river Jalomiza; 64 miles south-east of Hermanstadt, and 180 east-north-east of Belgrade. Lat. 45. 3. N. long. 25. 29. E.

TERHALTEN, a small island near the coast of Terra del Fuego. Lat. 55. 20. S.

TERHEYDEN, a small inland town of the Netherlands, in the province of north Brabant. Population 1900; 3 miles north of Breda.

TERKAT, a village of Asia Minor, in the government of Sivas; 20 miles north-west of Tocat.

TERKI, a fortress built by Russia, at the mouth of the Tumenka, which forms one of the branches by which the Terek falls into the sea.

TERKUL, a river of Asiatic Russia, which falls into the Oural at Oursk.

TERLING, a parish of England, in Essex; 3½ miles west of Witham. Population 766.

TERLIZZI, a considerable town of Italy, in the south-east of the kingdom of Naples. Terlizzi stands 20 miles south of the site of Cannæ, and 60 north-west of Tarentum.

TERM, *s.* [*terminus*, Lat.] Limit; boundary.—Corruption is a reciprocal to generation; and they two are as nature's two *terms* or boundaries and the guides to life and death. *Bacon*.—[*Terme*, Fr.] The word by which a thing is expressed. A word of art.—To apply notions philosophical to plebeian *terms*, or to say where the notions cannot fitly be reconciled, that there wanteth a *term* or nomenclature for it, be but shifts of ignorance. *Bacon*.—Words; language.

Would curses kill, as doth the mandrakes groan,
I would invent as bitter searching *terms*,
As curst, as harsh, as horrible to hear.

Shakspeare.

10 U

Condition;

Condition; stipulation.—Well, on my *terms* thou wilt not be my heir? *Dryden*.—[*Termine*, old French.] Time for which any thing lasts; a limited time.

I am thy father's spirit,
Doom'd for a certain *term* to walk the night. *Shakspeare*.

[In law.] The time in which the tribunals are open to all that list to complain of wrong, or to seek their right by course of law; the rest of the year is called vacation. Of these *terms* there are four in every year, during which matters of justice are dispatched: one is called Hilary *term*, which begins the twenty-third of January, or, if that be Sunday, the next day following, and ends the twenty-first of February; another is called Easter *term*, which begins eighteen days after Easter, and ends the Monday next after ascension day; the third is Trinity *term*, beginning the Friday next after Trinity Sunday, and ending the Wednesday-fortnight after; the fourth is Michaelmas *term*, beginning the sixth of November, or, if that be Sunday, the next day after, and ending the twenty-eighth of November. *Cowel*.

What are these to those vast heaps of crimes,
Which *terms* prolong. *Dryden*.

These terms are supposed by Mr. Selden to have been instituted by William the Conqueror; but Sir H. Spelman hath shewn that they were gradually formed from the canonical constitutions of the church; being no other than those leisure seasons of the year, which were not occupied by the great festivals or fasts, or which were not liable to the general avocations of rural business. Throughout all Christendom, in very early times, the whole year was one continued term for hearing and deciding of causes. For the Christian magistrates, in order to distinguish themselves from the Heathens, who were very superstitious in the observation of their *dies fasti* and *nefasti*, administered justice upon all days alike; till at length the church interposed, and exempted certain holy seasons from being profaned by the tumult of forensic litigations; as, particularly, the time of Advent and Christmas, which gave rise to the winter vacation; the time of Lent and Easter, which created that in the spring; the time of Pentecost, which produced the third and long vacation, between Midsummer and Michaelmas, which was allowed for the hay-time and harvest. All Sundays also, and some peculiar festivals, as the days of the Purification, Ascension, &c., were included in the same prohibition, which was established by a canon of the church, A. D. 517, and fortified by an imperial constitution of the younger Theodosius, comprised in the Theodosian code. Afterwards, when our own legal constitution was established, the commencement and duration of our law terms were appointed, with a view to these canonical prohibitions; and it was ordered by the laws of King Edward the Confessor, that from Advent to the octave of the Epiphany, from Septuagesima to the octave of Easter, from the Ascension to the octave of Pentecost, and from three in the afternoon of all Saturdays till Monday morning, the peace of God and holy church shall be kept throughout the whole kingdom.

And so extravagant was afterwards the regard paid to these holy times, that though the author of the *Mirror* mentions only one vacation of considerable length, containing the months of August and September, yet Britton says, that in the reign of King Edward I., no secular plea could be held, nor any man sworn on the Evangelists, in the time of Advent, Lent, Pentecost, harvest, and vintage, the days of the great litanies, and all solemn festivals. He adds, that the bishops and prelates granted dispensations for taking assizes and juries in some of these holy seasons, upon reasonable occasions; and soon after a general dispensation was established in parliament by stat. Westm. 1. 4 Edw. 1. cap. 51, that assizes of novel disseisin, mort d'ancestor, and darrein presentment, should be taken in Advent, Septuagesima, and Lent, as well as inquests; at the special request of the king to the bishops. The portions of time that were not included

within these prohibited seasons, fell naturally into a fourfold division; and from some festival or saint's day, that immediately preceded their commencement, were denominated the terms of St. Hilary, of Easter, of the Holy Trinity, and of St. Michael: which terms have been since regulated and abbreviated by several acts of parliament; particularly Trinity term by stat. 32 Hen. VIII. c. 2., and Michaelmas term by stat. 16 Car. I. c. 6., and again by stat. 24 Geo. II. c. 38. *Blackst. Com.*

At Oxford, Hilary or Lent term begins January 14th, and ends the Saturday before Palm-Sunday. Easter term begins the tenth day after Easter, and ends the Thursday before Whitsunday. Trinity term begins the Wednesday after Trinity-Sunday, and ends after the act, or 6th of July, sooner or later, as the vice-chancellor and convocation please. Michaelmas term begins October 10th, and ends December 17th.

At Cambridge, Lent term begins January 14th, and ends the Friday before Palm-Sunday. Easter term begins the Wednesday after Easter-week, and ends the week before Whitsunday. Trinity term begins the Wednesday after Trinity-Sunday, and ends the Friday after the commencement, or 2d of July. Michaelmas term begins October 10th, and ends December 16th.

In Scotland, Candlemas term begins January 23d, and ends February 12th. Whitsuntide term begins May 25th, and ends June 15th. Lammas term begins July 20th, and ends August 8th. Martinmas term begins November 3d, and ends November 29th.

In Ireland the terms are the same as at London, except Michaelmas term, which begins October 13th, and adjourns to November 3d, and thence to the 6th.

To TERM, *v. a.* To name; to call.—Men *term* what is beyond the limits of the universe imaginary space, as if no body existed in it. *Locke*.

TERMAGANCY, *s.* Turbulence; tumultuousness.—By a violent *termagancy* of temper, she may never suffer him to have a moment's peace. *Barker*.

TERMAGANT, *adj.* [търм and маган, Saxon, *eminently powerful*.] Tumultuous; turbulent.—'Twas time to counterfeit, or that hot *termagant* Scot had paid me scot and lot too. *Shakspeare*.—Quarrelsome; scolding; furious.—The eldest was a *termagant*, imperious, prodigal, profligate wench. *Arbuthnot*.

TERMAGANT, *s.* A scold; a brawling turbulent woman. It appears to have been anciently used of men. It was a kind of heathen deity extremely vociferous and tumultuous in the ancient farces and puppet shows.—This terrible *termagant*, this Nero, this Pharaoh. *Bale*.—I would have such a fellow whipt for o'erdoing *termagant*; it outheroed's Herod. *Shakspeare*.—She threw his periwig into the fire: well, said he, thou art a brave *termagant*. *Tatler*.

TERMER, *s.* One who travels up to the term.—Let the buyer beware, saith the old lawbeaten *termmer*. *Milton*.—One that holds for a term of years or life. *Cowel*.

TERMES, a small town of Turkey in Europe, in Macedonia, near the gulf of Salonica.

TERMES, in Entomology, a genus of the Aptera order of insects. Its characters are, that it has six legs formed for running; two eyes; setaceous antennæ, and a mouth with two jaws. According to Gmelin, the characters are, that the mouth has two horny jaws, with a horny, quadrifid lip, linear acute fringes, four equal filiform feelers, or palpi, antennæ (mostly) moniliform, and two eyes. Linnæus enumerates three, and Gmelin eight species.

1. *Termes fatale*.—Above brown; thorax with three segments; wings pallid, and costa, or rib, testaceous. This is the destructor of Degeer, and *termes bellicosum* of Smethman.—It is found in the shady parts of the equinoctial regions of India and Africa.

2. *Termes destructor*.—Above testaceous; head black; antennæ yellow.—Found in the islands opposite to South America, Africa, and India.

3. *Termes arda*.—Black; abdomen with segments white at

at the apex; legs pallid.—Found in the equinoctial parts of Africa.

4. *Termes mordax*.—Black; the segments of the abdomen white at the apex; legs black.—Found in the equinoctial parts of Africa.

5. *Termes Capense*.—Yellow, with hyaline wings; brown at the margin.—Found in India and Southern Africa.

6. *Termes fatidicum*.—Abdomen ovate; mouth pallid; brown eyes; antennæ setaceous.—Found in Europe, chiefly the southern part.

7. *Termes pulsatorium*.—Abdomen oblong; mouth red; eyes yellow; antennæ setaceous.—Found in Europe and America.

8. *Termes divinatorium*.—Abdomen transversely sulcated; brown mouth, and black eyes.—Chiefly found in books; very lively, irritable, and whitish.

It is observed, that the European species of termes are very small, compared with those of the warmer regions of Africa and America; and instead of being gregarious, as in those climates, are usually found single. Of these, the most known is the *termes pulsatorius* of Linnæus, a small insect of a whitish colour, and distinguished by Derham and some other naturalists, by the appellation of "*Pediculus pulsatorius*." During the months of summer, it is common in houses, particularly in decayed wainscots, and is remarkable for emitting a long-continued sound, resembling the ticking of a watch; it is commonly met with in collections of dried plants, &c., to which it is very injurious. It cannot bear, on account of its tender frame, the slightest pressure, and it is very quick in its motion. When magnified, the head appears large, the eyes very conspicuous, of a beautiful golden colour, and divided into innumerable hexagonal convexities; the antennæ long and setaceous; the palpi two in number, moderately long, and terminating in a large club-shaped top; the thorax rather narrow, and the abdomen obtusely oval; the thighs, or first joints of the legs, thick, the remaining ones slender, and the feet furnished with very small claws. The whole animal is beset with scattered hairs. This insect, according to the observations of Derham, when first hatched from the egg, is white, oval, and very small, exactly resembling the common mite; furnished with eight legs, and beset with long hairs. After a certain time it casts its skin, and appears in the form already described. Degeer has found on each side of the thorax the appearances of rudiments of wings, resembling a pair of oblong scales; and Dr. Shaw affirms, from his own observations, that some individuals of this species become winged at their full growth; the wings, four in number, being very large, of a slightly indistinct appearance, and variegated with blackish and brown clouds or spots. In the beginning of July this change takes place, and several insects may be seen with the wings half-grown; in a few days they gain their full size.

Dr. Derham is of opinion, that the ticking sound of this animal is analogous to the call of birds to their mates during the breeding season; and this opinion is very probable. This sound, says Dr. Shaw, as well as that produced by the "*Ptinus fatidicus*," or death-watch, seems to prove in a convincing manner, that insects possess the faculty of hearing, though this be denied by some naturalists.

Of the exotic termites, the most remarkable is the *termes bellicosus*. The animals of this species have been minutely described by Mr. Smeathman, from whose account the following particulars are extracted.

The termites, which have been taken notice of by various travellers in different parts of the torrid zone, and called by the name of white ants, resemble the ants in their manner of living, which is in communities, forming extraordinary nests in the surface of the ground, and various subterraneous passages, and also in their provident and diligent labour; but in both respects much surpass them. The termites are represented by Linnæus as the greatest calamity of both Indies, because of the havoc they make in all kinds of wooden buildings, utensils, and furniture, so that nothing but metal or stone can escape their destructive jaws.

Smeathman observes, that the insect in its perfect state has four wings without any sting, and should therefore be ranged under the *neuroptera*, and not under the *aptera* of the Linnæan system. The communities of termites consist of one male and one female, generally the parents of all the rest, and of three orders of insects, apparently of very different, though really of the same species. Those of the first order are the working insects, or labourers; the second comprehends the fighting insects, or soldiers, which do no labour; and the third are the winged ones, or perfect insects, which are male and female, and capable of propagation, but neither labour nor fight; the kings and queens belong to this order, and within a few weeks after they are elected and elevated to this rank, they migrate, and either establish new kingdoms, or perish within a day or two. The largest species, called *termes bellicosus*, is the best known on the coast of Africa; it erects immense buildings of well-tempered earth or clay, which are constructed with signal ingenuity: it does infinite mischief in one respect, and in another it is peculiarly important and useful, by destroying those vegetable or animal substances which encumber the earth, and are noxious on account of their putridity. The buildings (usually termed hills) which these insects erect, are in their general form like sugar-loaves, and about ten or twelve feet high; and consist of an exterior part, which is large and strong, intended partly for defence, and partly for preserving a regular degree of warmth in order to hatch the eggs and cherish the young; and an interior, which is the habitable part, divided into many apartments for the residence of the king and queen, the nursing of their progeny, the accommodation of the soldiers and labourers, or magazines of provision. The royal chamber, in the interior building, or that occupied by the king and queen, is situated near the centre, and usually in the shape of a semi-oval within.

In the infant state of the colony, it is not more than about an inch in length, but in time it is enlarged to six or eight inches in the clear, being in size adapted to that of the queen. It has doors or entrances, at pretty equal distances from each other, which entrances are of a size not to admit any animal larger than the soldiers and labourers: so that the king and queen, when once immured, can never go out. The royal chamber is surrounded by many others of different sizes, shapes, and dimensions; and they either open into each other, or communicate by passages suitably contrived. These apartments are connected with the magazines, formed altogether of clay, and nurseries. The provisions lodged in the former appear, by the microscope, to consist principally of the gums or inspissated juices of plants. The nurseries are composed entirely of wooden materials, joined together apparently with gums. These nurseries are occupied by the eggs, and young insects, which appear at first in the shape of labourers, but white as snow. They are very compact, and divided into small chambers, not one of which is to be found of half an inch in width. They are placed round and near the royal apartments. As the queen enlarges, her chamber is also enlarged; and new apartments are fitted up for her attendants; and also new nurseries at a remoter distance. Thus, says Mr. Smeathman, they continually enlarge their apartments, pull down, repair, and rebuild, according to their wants, with a degree of sagacity, regularity, and foresight, not even imitated by any other kind of animals or insects which he has ever heard of. These nurseries are always found slightly overgrown with or plentifully sprinkled with small white globules, about the size of a small pin's head, first supposed to be the eggs, but found by the microscope to be small mushrooms. The royal chamber is situated at about a level with the surface of the ground, at an equal distance from all the sides of the building, and in every direction surrounded by the apartments of labourers or soldiers, for the purpose of attendance. These apartments compose an intricate labyrinth, extending a foot or more in diameter, from the royal chamber on every side. Here the nurseries and magazines of provisions commence, and being separated by small empty chambers or galleries,

are

are continued on all sides to the outward shell, and reaching up within it two-thirds or three-fourths of its height. All these chambers, and passages leading to and from them, being arched, help to support one another: and the exterior building supports them on the outside. Our limits will not allow our describing all the subterranean galleries or passages, and the manner in which they are artfully made to communicate with different parts of the building, and to suit the convenience of the labourers and soldiers, as thoroughfares for passing and repassing with their loads of materials and provisions.

There are other nests or habitations constructed by other species, which are in the form of turrets, or upright cylinders, and contain a number of cells: they are of two sizes, for the accommodation of a larger and smaller species: and again another kind of nests, which is the habitation of a distinct species; this is generally spherical or oval, and built in trees.

Of the three orders above-mentioned, the labourers, which are about one-fourth of an inch long, and twenty-five of them weigh about a grain, are the most numerous; e. g. in the termes bellicosus, there seem to be at least one hundred labourers to one of the fighting insects or soldiers. The soldiers are about half an inch long, and equal in bulk to fifteen of the labourers; the mouth of the latter is evidently calculated for gnawing and holding of bodies, whereas that of the former, or soldiers, has its jaw shaped like two sharp awls, a little jagged, and as hard as a crab's claws, so that they are incapable of any thing but piercing or wounding: in insects of the third order, which have arrived at their perfect state, the head, thorax, and abdomen, are wholly different from those of the other orders, and they are furnished with four large brownish transparent wings; their length is six or seven-tenths of an inch, and each is equal in bulk to thirty labourers: they have now two eyes which are visible, whereas if they had them before they are not distinguishable. These insects are gathered and eat by the inhabitants, and reckoned both delicious and nourishing food. The king and queen are lodged in apartments, which are closed up, so that a passage remains merely for the ingress and egress of the labourers and soldiers, but at which (as we have already said) neither of the royal pair can come out: and in the business of propagation the abdomen of the female extends to an enormous size, so that an old queen's will be fifteen hundred or two thousand times the bulk of the rest of her body, and twenty or thirty thousand times the bulk of a labourer, and by its peristaltic motion, are protruded eggs to the amount of sixty in a minute, or eighty thousand and more in twenty-four hours: the eggs are removed by the attendants into the nurseries, and after they are hatched, the young are provided with every thing necessary till they are able to shift for themselves. It is remarkable of all the different species of termites, that the working and fighting insects never expose themselves to the open air; but either travel under ground, or within such trees or substances as they destroy, or through pipes made of the same materials with their nests. The termites which build in trees, frequently construct their nests within the roofs and other parts of houses, to which they do considerable damage, unless soon extirpated; and the larger species enter under the foundations of houses, through the floors, or bore through the posts of buildings, making lateral perforations and cavities, as they proceed. They are equally destructive when they get into a trunk containing clothes and other things, and into stores, &c.

Upon opening the hills in which the termites lodge, the behaviour of the soldiers excites admiration. When a breach is made, however quickly it be done, a soldier will run out, and walk about the breach, as if to see whether the enemy is gone, or to examine what is the cause of the attack. He will sometimes return again, as if to give the alarm; but in a short interval he is followed by two or three others, running as fast as they can, and these are followed by a large body, others also succeeding them, as long as any one continues to

batter their building: nor is it easy to describe the rage and fury which they manifest on the occasion; biting every thing in their way, and making a vibrating noise, like the ticking of a watch, perceptible at the distance of three or four feet. If they get hold of any one who attacks their habitation, they will in an instant suck out blood enough to weigh against their whole body; and if they chance to wound the leg, the stain upon the stocking will be seen to extend an inch in width. They make their hooked jaws to meet at the first stroke, nor will they quit their hold, but suffer themselves to be pulled away leg by leg, and piece after piece, without the least attempt to escape. If, however, they are left to themselves undisturbed, they will, in less than half an hour, retire into the nest, as if they conceived their castle to be secure. Before they all get in, the labourers will be seen in motion, hastening to bring materials for repairing the breach. This they do without mutual obstruction, though their number be immense, and the work is soon finished. While the labourers are thus employed, the soldiers take no part with them. On a renewed attack, the labourers run with celerity into the numerous pipes and galleries with which the building is perforated; and the soldiers rush out as numerous and as vindictive as before. One circumstance more deserves to be mentioned; and that is the loyalty and fidelity displayed by the labourers and soldiers in their attendance on the royal chamber. This chamber is a large nest, is capacious enough to hold many hundreds of the attendants, besides the royal pair, and it is always found full. These faithful subjects never abandon their charge in the last distress, but rather die in their defence than desert them. If in an attack upon the hill, you stop short of the royal chamber, and cut down about half of the building, and leave open some thousands of galleries and chambers, they will all be shut up with their sheets of clay before the next morning. If even the whole is pulled down, and the different buildings are thrown together in a heap of confused ruins, provided the king and queen are not destroyed or taken away, every interstice between the ruins, at which either cold or wet can possibly enter, will be so covered, as to exclude both; and if the insects are left undisturbed, in about a year they will raise the building to nearly its pristine size and grandeur.

There is another species, called the *marching* termites, which is much larger, and seems to be less frequent than the other.

TERMIGNON, a small town of Savoy, district of Maurienne, near the river Arcq. Population 1100. Here is an iron forge and a manufacture of anchors; 12 miles east-north-east of St. Andre.

TERMINABLE, *adj.* Limitable; that admits of bounds.

TERMINALIA, in Antiquity, feasts celebrated by the Romans, in honour of the god Terminus.

Varro is of opinion, that this feast took its name from its being at the term or end of the year; but Festus is of a different sentiment, and derives it from the name of the deity in whose honour it was held.

TERMINALIA [so named, it is presumed, from the leaves in clusters terminating the branches, with spikes of flowers intermixed,] in Botany, a genus of the class polygamia, order monoecia, natural order of elæagni (*Juss.*)—Generic Character. Hermaphrodite flowers, at the lower part of the raceme, flowering first.—Calyx: perianth one-leafed, superior, five-cleft, coloured within; segments ovate, acute, equal. Corolla none. Nectary pitcher-shaped, in the bottom of the calyx, consisting of five small hispid corpuscles. Stamina: filaments ten, awl-shaped, from erect spreading, longer than the calyx, and inserted into the bottom of it. Anthers roundish, erect. Pistil: germ inferior, ovate-oblong. Style filiform, erect, length of the stamens. Stigma simple. Pericarp: drupe oval, depressed, two-grooved; or compressed, acuminate. Seed nut oval-oblong, two-valved; kernel oblong. Males superior, flowering later. Calyx, as in the hermaphrodites. Corolla none. Nectary, as in the hermaphrodites. Stamina, as in the hermaphrodites.—*Essential Character.*

Character. Calyx five-parted. Corolla none. Stamina ten. Hermaphrodite: style one. Drupe inferior, boat-shaped.

1. *Terminalia catappa*.—Leaves obovate, tomentose beneath. This is a large tall leafy tree, with spreading branches in whorls. Racemes among the leaves, very many, round. Bracts oblong, caducous, cordate.—Native of the East Indies.

2. *Terminalia glabrata*.—Leaves obovate, smooth on both sides.—This also is a lofty widely-branching tree, with a straight stem clear of branches to a great height; the branches mostly opposite, round, spreading, smoothish, with a cinereous cloven bark.—Native of the Society and Friendly isles in the South Seas.

3. *Terminalia latifolia*.—Leaves obovate, subserrate; drupes fleshy. This tree has a very large trunk, and grows to a vast height, covered with a gray or very light-brown bark.—It grows in all the inland great woods of the island of Jamaica.

4. *Terminalia arbuscula*.—Leaves ovate-lanceolate, entire, pubescent; branches dichotomous; racemes erect.—This also is a native of Jamaica.

5. *Terminalia chebula*.—Leaves ovate, naked; petioles biglandular above; racemes simple. This tree scarcely exceeds three or four times the height of a man, and is not much diffused. Branches scattered, covered with an ash-coloured bark.—Native of the East Indies.

6. *Terminalia angustifolia*.—Leaves lanceolate, pubescent.—Native of the East Indies.

To **TERMINATE**, *v. a.* [*termino*, Lat.; *terminer*, Fr.] At first our word was *terminer*: "He *termineth* sum dai." Wicliffe, Heb. iv. 7.] To bound; to limit.—Bodies that are solid, separable, *terminated*, and moveable, have all sorts of figures. *Locke*.—To put an end to: as, to *terminate* any difference.

To **TERMINATE**, *v. n.* To be limited; to end; to have an end; to attain its end.

Ere I the rapture of my wish renew,
I tell you then, it *terminates* in you.

Dryden.

TERMINATION, *s.* The act of limiting or bounding; bound; limit.—Its earthly and salinous parts are so exactly resolved, that its body is left imporous, and not discreted by atomical *terminations*. *Brown*.—End; conclusion; last purpose.—It is not an idol *ratione termini*, in respect of *termination*; for the religious observation thereof is referred and subservient to the honour of God and Christ: neither is it such *ratione modi*, for it is kept holy by the exercise of evangelical duties. *White*.—[In grammar; *terminatio*, Lat.; *terminaison*, Fr.] End of words as varied by their significations.—Those rude heaps of words and *terminations* of an unknown tongue, would have never been so happily learnt by heart without some smoothing artifice. *Watts*.—Word; term. *Not in use*.—She speaks poniards, and every word stabs; if her breath were as terrible as her *terminations*, there were no living near her, she would infect the North star. *Shakspeare*.

TERMINATION ISLAND, an island in the South Pacific ocean, so named by Captain Vancouver, as being the termination of his researches on the south-west coast of New Holland, near which it lies. Lat. 34. 32. S. long. 122. 8. E.

TERMINATIVE, *adj.* Directing termination.—This objective, *terminative* presence flows from the fecundity of the divine nature. *Bp. Rust*.

TERMINATIVELY, *adv.* Absolutely; so as not to respect any thing else.—Whoever worships the image of any thing, cannot possibly worship that image *terminatively*, for the very being of an image is relative. *Bp. Taylor*.

TERMINI, a considerable sea-port of Sicily, in the Val di Mazzara, situated on the north coast, at the mouth of the river Termini; 18 miles east-south-east of Palermo. Lat. 38. 5. N. long. 13. 45. E.

TERMINI, a river of the island of Sicily, which flows towards the north, in the Val di Mazzara, to the south-east of Palermo.

VOL. XXIII. No. 1616.

TERMINISTS, or **TERMINISTÆ**, in Ecclesiastical History, a sect or party among the Calvinists, whose particular tenets are reducible to five points:—

1. That there are several persons, both in and out of the church, to whom God has fixed a certain term before their death, after which he no longer wills their salvation, how long soever they live afterwards. 2. That God has fixed this fatal term of grace by a secret decree. 3. That this term once elapsed, he makes them no farther offer of repentance or salvation, but takes away from his word all the power it might have to convert them. 4. That Pharaoh, Saul, Judas, most of the Jews, and many of the Gentiles, were of this number. 5. That God still bears with several of this sort of people, and even confers benefits on them after the term is expired; but that he does not do it with any intention they should be converted.

TERMINOS, a lake or bay on the coast of Tabasco, in the bay of Campeachy. Lat. 18. 12. N. long. 92. 46. W. Its mouth is a secure port, and has secured many vessels from being wrecked.

TERMINTHUS, *s.* [*τερμινθος*, Gr.] A tumour.—*Terminthus* is of a blackish colour; it breaks, and within a day the pustule comes away in a slough. *Wiseman*.

TERMLESS, *adj.* Unlimited; boundless.—These betraying lights look not up towards *termless* joys, nor down towards endless sorrows. *Raleigh*.

TERMLY, *adj.* Occurring every term.—The clerks are partly rewarded by that means also, besides that *termly* fee which they are allowed. *Bacon*.

TERMLY, *adv.* Term by term; every term.—The fees or allowances that are *termly* given to these deputies I preterm. *Bacon*.

TERMOLI, a town of Italy, in the east part of the kingdom of Naples, in the province called Capitanata; 40 miles south-east of Ortona a Mare, and 90 north-north-east of Naples. Lat. 42. 2. N. long. 15. 5. E.

TERNA, a small town of Austrian Italy, in the delegation of Como, which gives name to a small lake in the neighbourhood; 30 miles north-west of Milan.

TERNARY, *adj.* [*ternarius*, Lat.] Proceeding by threes; consisting of three.

TERNARY, or **TERNION**, *s.* [*ternarius*, and *ternio*, Lat.] The number three.—These nineteen consonants stood in such confused order, some in *ternaries*, some in pairs, and some single. *Holder*.

TERNATE, the northernmost of a chain of islands on the west coast of Gilolo, and formerly the seat of sovereignty over all the adjacent Molucca islands, Tidore, Bachian, Motir, and Machian. The king of Ternate is still the most powerful of the Molucca princes, possessing the northern part of Gilolo, with Morty, Bachian, Motir, &c., and part of Papua, whence he receives a tribute of gold, amber, and birds of paradise.

TERNERA, a settlement of New Granada, in the province of Carthagenia; 6 miles north of Carthagenia.

TERNETH, a small town of the Netherlands, in South Brabant, near Brussels, with 1500 inhabitants, and large breweries and distilleries.

TERNEUSE, a small town of the Netherlands, in the province of Zealand, situated on the banks of the Hondt or Western Scheldt. Population 1100; 12 miles south-east of Flushing, and 20 north-north-east of Ghent.

TERNI, a town of Italy, in the State of the Church, situated in a luxuriant valley, between two branches of the river Nera. The cascades of the Evelino, called the *Caduta delle Marmore*, about four miles from Terni, are considered among the finest in the world. They consist of several streams, which, after running with great impetuosity, precipitate themselves from the brink of a rock, upwards of 300 feet in height, and fall into the Nera with a noise like thunder. The neighbouring scenery is highly picturesque. Terni gave birth to several emperors, and to Tacitus the historian; 12 miles south of Spoleto, and 45 north of Rome

TERNOE, a small island in the Baltic, on the coast of Blekingen, in Sweden, near Carlshafen.

TERNOIS, a small river in the north-east of France, department of the north. It joins the Canche at Hesdin, and the adjacent district is called the Ternois.

TERNOVA, an inland town in the north of European Turkey, in Bulgaria, the see of a Greek archbishop; 50 miles south-east of Nicopolis, and 110 north-north-west of Adrianople. Lat. 43. 20. N. long. 25. 24. E.

TERNSTROEMIA [so named by Mutis, in memory of one Ternstroem], in Botany, a genus of the class polyandria, order monogynia, natural order of columniferae, aurantia (*Juss.*)—Generic Character. Calyx: perianth one-leaved, five-parted, upon which two smaller scales are incumbent: all the segments are orbicular, concave, and permanent. Corolla one-petalled, bell shaped; tube none; border five-parted; segments orbicular, concave, emarginate, longer than the calyx. Stamina: filaments numerous, filiform, inserted in a double row into the base of the corolla, and shorter than it. Anthers linear, erect, length of the filaments. Pistil: germ superior, roundish. Style cylindrical, length of the stamens. Stigma capitate. Pericarp: berry juiceless, ovate, even, two-celled. Seeds about eight, convex on one side, flat on the other.—*Essential Character.* Calyx five-parted. Corolla one-petalled, wheel-shaped, with the border bell-shaped, five or six-parted. Anthers thick at the tip. Berry juiceless, two-celled.

1. *Ternstroemia meridionalis*.—Leaves obovate, emarginate quite entire; peduncles axillary. This is a tree with determinate branches, and more simple stiffish branchlets, with an ash-coloured bark. Berry dry, falling when ripe without splitting. The flowers are whitish below, but yellow above, and the seeds scarlet.—Found in New Granada, and Jamaica, Nevis and Dominica.

2. *Ternstroemia elliptica*.—Leaves elliptic, quite entire. The branches have a smooth wrinkled bark. Peduncles towards the top, a little above the leaves, scattered, an inch long, one-flowered, purplish.—Native of the West Indies, Guadaloupe, St. Vincent's, &c.

3. *Ternstroemia punctata*.—Leaves oblong, quite entire, subemarginate, dotted at the edge; peduncles axillary. This is a tree of about twenty-five feet in height, and branching in a scattered manner at the top.—Native of Guiana, in the woods of Serpent mountain.

4. *Ternstroemia Japonica*.—Leaves ovate-lanceolate serrulate at the tip. Stem arboreous, branched, smooth all over. Flowers axillary, one, two, or three together, on drooping, one-flowered peduncles, half an inch long.—Native of Japan.

5. *Ternstroemia dentata*.—Leaves oblong, acuminate, tooth-serrate; peduncles axillary and lateral. A tree, of the height of about twenty feet.—Native of the woods of Guiana, flowering in August and September.

TERODANT, or **TARUDANT**, a city of Morocco, capital of the province of Sus. The population is reckoned at 25,000; 110 miles south-south-west of Morocco.

TERRA, CAPO DI, a cape on the north coast of Naples, between Sorrento and Massa.

TERRA AUSTRALIS, the ancient name of New Holland, revived by Flinders, who applies it to the whole continent, in contradistinction to New Holland and New South Wales, which he applies to different divisions of this extensive island.

TERRA AUSTRALIS DEL ESPIRITU SANTO, an island in the South Pacific ocean, and the most westerly, as well as the largest, of those called New Hebrides; discovered by Quiros, and visited by Captain Cook, in the year 1774; 60 miles in length, and 30 in breadth. The land of it, especially the west side, is exceedingly high and mountainous; and in many places the hills rise directly from the sea. Besides the bays of St. Philip and St. Jago, the isles which lie along the south and east coast cannot, in the opinion of Captain Cook, fail of forming some good bays or harbours. Lat. 14. 40. to 15. 40. S. long. 166. 45. to 167. 32. E.

TERRABY, a township of England, in Cumberland; 2 miles north-east of Carlisle.

TERRACE, *s.* [*terraccia*, Ital.] A mount of earth covered with grass, or gravel.—He made her gardens not only within the palaces, but upon *terrasses* raised with earth over the arched roofs, planted with all sorts of fruits. *Temple*.—A balcony; an open gallery.

Fear broke my slumbers, I no longer stay,
But mount the *terrace*, then the town survey. *Dryden*.

To **TERRACE**, *v. a.* To open to the air or light.—The reception of light into the body of the building must now be supplied, by *terracing* any story which is in danger of darkness. *Wolton*.—Clermont's *terraced* height and Esher's groves. *Thomson*.

TERRACINA, a town of Italy, in the State of the Church, situated at the southern extremity of the Pontine marshes. The present population of Terracina is about 9000. It is the see of a bishop, and is 50 miles south-east of Rome, and 55 north-west of Naples. Lat. 41. 18. 14. N. long. 13. 13. 22. E.

TERRÆ-FILIUS, *s.* [Latin.] Formerly a satirical orator at the public acts in the university of Oxford, not unlike the prevaricator at Cambridge.—The gay part of the university have great expectation of a *terræ-filius*, who is to lash and sting all the world in a satirical speech. *Guardian*..

TERRA FIRMA, an extensive track of country in South America, which comprehended the three provinces of Darien, Veragua, and Panama or Terra Firma proper. Its length from east to west is about 150 leagues, but if measured along the coast it is above 200. It is 90 leagues wide in the broadest part; and at the isthmus of Darien, where it is narrowest, its breadth is only eight leagues. Rivers, the most considerable of which are the Chagre, Bayano, Atrato, and Tiura, intersect it, and it consists for the most part of craggy and mountainous territory, with some fertile valleys interspersed.

TERRA FIRMA or **MINGAN**, a seigniorly partly in Lower Canada, which extends from Cape Cormorant along the northern shore of the Labrador channel, to Goynish river.

TERRA DEL FUEGO, a large island, separated from the southern extremity of America, by a narrow sea called the straits of Magellan; so called from the volcanoes observed on it. The aspect of the country is represented as dreary and uncomfortable, consisting of a chain of stupendous rocks, and continually covered with snow. The inhabitants are said to be naturally as fair as Europeans, but they go naked, and paint their bodies with the most gorgeous colours. Those on the south side are said to be uncivilized, treacherous, and barbarous; while those on the opposite side are simple, affable, and perfectly harmless. The skins of wild animals are sometimes used to cover their bodies, upon occasions of extraordinary pomp; and their tents are made of poles, disposed in a conical form, covered with skins, or the bark or leaves of trees. Lat. 52. 30. to 55. 35. S. long. 51. 20. to 58. W.

TERRA NIEVA, a bay in Hudson's bay. Lat. 62. 4. N. long. 67. W.

TERRA NOVA, a small town on the east coast of the island of Sardinia, situated on a fine bay to which it gives name. It has a good harbour; 50 miles east-by-north of Sassari.

TERRA NOUVA, a considerable sea-port on the south coast of Sicily, in the Val di Noto, situated at the mouth of a river to which it gives name. Its population is about 9000. Wine, corn, and fruits of various kinds, form articles of export; 19 miles east of Licata, and 50 west of Syracuse. Lat. 37. N. long. 14. 10. E.

TERRA NOUVA, a small town of Italy, in Tuscany, province of Florence, situated in the valley of the Arno; 15 miles west-north-west of Arezzo, and 25 south-east of Florence.

TERRA

TERRA NUOVA, a small town in the south of the kingdom of Naples, in Calabria Citra; 50 miles south-east of Policastro.

TERRA'QUEOUS, *adj.* [*terra* and *aqua*, Lat.] Composed of land and water.—The *terraqueous* globe is, to this day, nearly in the same condition that the universal deluge left it. *Woodward.*

TERRAR, *s.* [*terrarium*, low Lat., from *terra*, land.] A terrier or register of lands.—In the Exchequer there is a *terrar* of all the glebe-lands in England, made about 11 Edw. III. *Cowel.*

TERRASON, a small town in the south of France, department of the Dordogne, situated on a hill, watered by the small river Vezere. Population 2400; 20 miles north of Sarlat, and 27 east of Perigueux.

TERRAUBE, a small town in the south-west of France, department of the Gers. Population 1200; 4 miles south-west of Lectoure, and 16 north of Auch.

To **TERRE**, *v. a.* To provoke. See *To* **TAR**. But *terre* is the old and more correct word.—*Fadris*, nyle ye *terre* your sonnes wrathe. *Wieliffe.*

TERREBONE, a village in Lower Canada. It is situated on a point of land projecting into the St. Lawrence, having several islands in front, remarkable for their romantic scenery. It is about 16 miles north of Montreal.

TERREBORNE, a seigniory of Lower Canada, in the district of Montreal.

TERREGLES, a parish of Scotland, in the stewartry of Kirkcudbright, about 5 miles long, and 3 broad. Population 534.

TERRE HAUTE, a village of the United States, in Sullivan county, Indiana, on the Wabash; 2 miles below Fort Harrison.

TER'REMOTE, *s.* [*teremuet*, old Fr.; *terre motus*, Lat.] An earthquake. *Obsolete.*

All the halle quoque,
As it a *terremote* were.

Gower.

TERRE NAPOLEON, a track of coast on the south shore of New Holland, first explored by the French navigator, Captain Baudin, in *Le Geographe*. According to Captain Flinders, it is comprised between lat. 37. 36. and 33. 40. S. and between long. 140. 10. and 138. 58. E.

TERRE-BLUE, *s.* [*terre* and *bleu*, Fr.] A sort of earth.—*Terre-blue* is a light, loose, friable kind of lapis armenus. *Woodward.*

TERRE-VERTE, *s.* A sort of earth.—*Terre-verte* owes its colour to a slight admixture of copper. *Woodward.*

TERRE'NE, *adj.* [*terrenus*, Latin.] Earthly; terrestrial.

Our *terrene* moon is now eclips'd,
And it portends alone the fall of Antony. *Shakspeare.*

TERRE'NE, *s.* The surface of the whole earth.

Over many a tract
Of heav'n they march'd, and may a province wide,
Tenfold the length of this *terrene*. *Milton.*

TER'REOUS, *adj.* [*terreus*, Lat.] Earthly; consisting of earth.—There is but little similitude betwixt a *terreous* humidity and plantal germinations. *Glanville.*

TERRE'STRIAL, *adj.* [*terrestris*, Lat.] Earthly; not celestial.

Terrestrial heaven! danc'd round by other heavens
That shine, yet bear their bright officious lamps,
Light above light. *Milton.*

Consisting of earth; terreous. *Improper.*—I did not confine these observations to land or *terrestrial* parts of the globe, but extended them to the fluids. *Woodward.*

TERRE'STRIALLY, *adv.* After an earthly manner.—They fancying it as *terrestrially* modified, though called a celestial or spiritual body in Scriptures, as that body is which we put into the grave. *More.*

To **TERRE'STRIFY**, *v. a.* [*terrestris* and *facio*, Latin.] *To* reduce to the state of earth.—Though we should affirm,

that heaven were but earth celestified, and earth but heaven *terrestrified*; or, that each part above had an influence on its divided affinity below; yet to single out these relations is a work to be effected by revelation. *Brown.*

TERRE'STRIOUS, *adj.* [*terrestris*, Lat.; *terrestre*, Fr.] Terreous; earthy; consisting of earth.—This variation proceedeth from *terrestrious* eminences of earth respecting the needle. *Brown.*

TERRIA, or **TELLIA GURHY**, a small town of Hindostan. It is situated in the pass which divides the provinces of Bengal and Bahar, formed by a range of hills composed of rock, approaching very near the Ganges. Lat. 25. 15. N. long. 87. 37. E.

TERRIANI, a considerable district of Hindostan, which divides the province of Bengal from Nepal, part of which belongs to the British, part to the nabob of Oude, and the remainder to Nepal.

TER'RIBLE, *adj.* [from *terribilis*, Lat.] Dreadful; formidable; causing fear.

Was this a face to be expos'd
In the most *terrible* and nimble stroke
Of quick, cross lightning?

Shakspeare.

Great so as to offend: a *colloquial hyperbole*.—Being indisposed by the *terrible* coldness of the season, he reposed himself till the weather should mend. *Clarendon.*

TERRIBLE, **MON**, a chain of mountains in what was once the bishopric of Bale (now in the Swiss canton of Bern), which brings the Jura mountains into connection with the Vosges.

TER'RIBLENESS, *s.* Formidableness; the quality of being terrible; dreadfulness.—Having quite lost the way of nobleness, he strove to climb to the height of *terribleness*. *Sidney.*

TER'RIBLY, *adv.* Dreadfully; formidably; so as to raise fear.

The polish'd steel gleams *terribly* from far,
And every moment nearer shows the war. *Dryden.*

Violently; very much. The poor man squalled *terribly*. *Swift.*

TERRIER, *s.* [*terra*, Lat., *earth*.] A dog that follows his game under-ground.—The fox is earthed, but I shall send my two *terriers* in after him. *Dryden.*—[*Terrier*, Fr.] A survey or register of lands.—King James's canons require that the bishops procure a *terrier* to be taken of such lands. *Ayliffe.*—[*Terebro*, Lat.] A wimble; auger or borer. *Ainsworth.*

TERRIFIC, *adj.* [*terrificus*, Lat.] Dreadful; causing terror.

The serpent, subtlest beast of all the field,
Of huge extent sometimes, with brazen eyes
And hairy mane *terrific*. *Milton.*

The British navy through ocean vast
Shall wave her double cross, t' extremest climes
Terrific. *Philips.*

To **TER'RIFY**, *v. a.* [*terror* and *facio*, Lat.] *To* fright; to shock with fear; to make afraid.—Thou scarest me with dreams, and *terrifyest* me through visions. *Job.*

TERRINGTON, a parish of England, North Riding of Yorkshire; 8 miles west-by-south of New Malton. Population 641.

TERRINGTON, **ST. CLEMENT'S**, a parish of England, in Norfolk; 5 miles west-by-north of Lynn Regis. Population 1211.

TERRINGTON, **ST. JOHN'S**, another parish in the above county, adjoining the foregoing. Population 483.

TERRIORE, a town and fortress of the south of India, province of the Carnatic. Lat. 11. 12. N. long. 78. 48. E.

TERRIT'ORIAL, *adj.* Belonging to a territory.—The church universal in general causes; each particular and private church for special, and particular, and *territorial* questions. *Montagu.*

TER'RITORY, *s.* [*territorium*, low Latin; *territoire*, Fr.]

Fr.] Land; country; dominion; district.—Linger not in my *territories* longer than swiftest expedition will give thee time to leave our royal court. *Shakspeare.*

TE'RROR, *s.* [*terror*, Lat.; *terreur*, Fr.] Fear communicated.

The thunder when to roll
With *terrou* through the dark aerial hall. *Milton.*

Fear received.

It is the cowish *terrou* of his spirit
That dares not undertake. *Shakspeare.*

The cause of fear.—So spake the grisly *terrou*. *Milton.*

TERROWFH, a town and fortress of Hindostan, province of Allahabad, and district of Bundelcund. Lat. not ascertained.

TERRY VILLE, a post village of the United States, in Mecklenburg county, Virginia.

TERSE, *adj.* [*ters*, Fr.; *tersus*, Lat.] Smooth. *Not in use.*—Many stones precious and vulgar, although *terse* and smooth, have not this power attractive. *Brown.*—Cleanly written; neat; elegant without pompousness.

To raw numbers and unfinish'd verse,
Sweet sound is added now to make it *terse*. *Dryden.*

TERSELY, *adv.* Neatly: used ironically by Ben Jonson.—Fastidious Brisk, a courtier,—speaks good remnants; swears *tersely*, and with variety! *B. Jonson.*

TERSENESS, *s.* Smoothness or neatness of style.—They [Ogden's Sermons] display that perfect propriety and purity of English diction, that chastised *terseness* of composition, which has scarcely been equalled by any writer. *Wakefield.*

TE'RTIAN, *s.* [*tertiana*, Lat.] Is an ague intermitting but one day, so that there are two fits in three days.—*Tertians* of a long continuance do most menace this symptom. *Harvey.*

To TE'RTIATE, *v. a.* [*tertio*, *tertius*, Lat.] To do any thing the third time.

TERTRE (John Baptist du), a missionary, and writer of history, was born at Calais in 1610; and having served in the army in early life, he joined the Dominicans at Paris, and made his profession in 1635, assuming the name of John-Baptist instead of James. About five years afterwards, he was sent as a missionary to the French American islands, where he collected materials for the work which engaged his attention after his return to France in 1658; that was his "Histoire Generale des Antilles habitées par les François;" 4 vols. 4to., 1667—71. After having filled various posts in the houses of his order, he died at Paris in 1687. *Moreri.*

TERTULLIAN (Quintus Septimius Florens Tertullianus), generally reckoned the most ancient Latin father extant, was born at Carthage, not long after the middle of the second century. He was the son of a proconsular centurion, or military officer under the proconsul of Africa, and well acquainted with the Roman laws, though he does not seem to have practised the law as a profession. He was also intimately conversant with the Greek and Roman poets, historians, orators, and philosophers, and other heathen writers of every description. His skill in Greek was so considerable, that he wrote several books in that language. It has been inferred from his parentage, and from some expressions in his works, that he was once a Heathen; but the time and circumstances of his conversion to Christianity are not known. Cave supposes that he embraced Christianity about the year 185, and was made a presbyter of the church of Carthage about the year 192. According to Du Pin, he flourished chiefly from about the year 194 to 216. Tillemont is of opinion that he was born in 160, and that he died about the year 245, when he was between 80 and 90 years of age, having lived, as St. Jerome says, to an extreme, or decrepit, old age. Cave conjectures that he died about the year 220. It is said that he was married, probably after his conversion to Christianity. Having been a member of the Catholic church for many years, he separated from it and became a Montanist, as Cave says, about the year 199, but about 205, according to Tille-

mont. Different accounts have been given of this change; but the most probable seems to be, that the specious pretences of the Montanists to greater mortification in fasts and continence had an influence on his temper, which was severe. But whatever might have been his reasons for adopting the principles of Montanism, they seem to have made so little alteration in him as an author, that there are several of his pieces, concerning which it is not easy to determine, whether they were written by Tertullian a Montanist, or Tertullian still a Catholic. Although, in consequence of this change, his reputation sunk in the church, yet it produced no separation between him and other Christians, except in point of discipline, which, agreeably to his temper, he wished to be harsh and rigorous. His doctrine remained the same with that of the Catholics. In process of time, however, he believed the divine inspiration of Montanus and his two prophetesses, Priscilla and Maximilla, and that they were thus enabled to make further discoveries than had before been made, for the greater perfection of Christians. He approved of the longer, more strict, and more frequent fasts of the Montanists; he condemned all second marriages; and denied that the church was authorised to receive again into communion any who were chargeable with fornication, adultery, or any such offences, after baptism. He often arrogantly calls his own people *spiritual*, and the Catholics, as contemptuously, animal or *carnal*. We have already observed that his knowledge was extensive; his fancy also was lively; and though his temper was severe, and his mode of expression vehement and positive, yet his writings frequently manifest unaffected humility and modesty. The character given of his style by Lactantius must be universally allowed; that it is "rugged and unpolished, and very obscure;" and yet, as Cave observes, "it is lofty and masculine, and carries a kind of majestic eloquence along with it, that gives a pleasant relish to the judicious and inquisitive reader." His books still extant, though many are lost, are numerous, some of which were written before and others after he embraced the errors of Montanism. Of these, the Apology is reckoned his principal work; and has been highly commended both by ancient and modern writers; whilst his other performances are written with wit and force, and are edifying and instructive. The time when his "Apology" was written has been differently stated by various authors; some refer it to the year 200, others to 203 and 205; but Mosheim, after laborious examination, concludes that it was composed in the year 198. All allow that it was written before he joined the Montanists. Learned men generally agree, that it was not addressed to the senate of Rome, but to the governors of provinces, or perhaps to the proconsul of Africa, and the chief magistrates residing at Carthage, where it was written, according to Lardner; though others are of opinion that it was written at Rome. From this Apology, it appears that Christians underwent a variety of grievous sufferings; they were, as he says, "crucified, hung upon stakes, burnt alive, thrown to wild beasts, condemned to the mines, and banished into desert islands." That this was the case, appears also from Tertullian's book to the proconsul Scapula, not written before the year 211 or 212. The "Apology" is written for the purpose of shewing the injustice of the persecutions inflicted upon Christians, and the falsehood of the charges brought against them; and likewise to display the excellence of the Christian religion, and the folly and absurdity of that of the Heathens. His two books "Ad Nationes" are connected with his Apology, and indicate his characteristic vehemence. His address to Scapula, already mentioned, was written under the emperor Caracalla, and contains an avowal of admirable principles. "It ought," he says, "to be left to the free choice of men, to embrace that religion which seems to them most agreeable to truth. No one is injured or benefited by another man's religion: it is not an act of religion to force religion, which ought to be adopted spontaneously, not by compulsion." He proceeds to vindicate the conduct of Christians, and to shew that their religious principles induced them to pay entire obedience to the emperors, and that therefore they did not deserve to incur the penalties of treason.

treason. Another work of Tertullian has been often cited, viz.: "De Præscriptionibus adversus Hæreticos." In this work he treats of heresy in general, and then discusses particular heresies in his five books against Marcion, in others against Praxeas, in defence of the Trinity, and against Hermogenes, and the Valentinians. In his book "On the Soul," he inquires into the nature of the soul and its properties. In his treatise "On Baptism," he absurdly maintains that the moral stain of the soul is effaced by the external washing of the body, and that punishment is likewise remitted; a doctrine which some later divines have zealously supported. Baptism by heretics he considers as no baptism, and contends that it ought to be repeated. In cases of necessity, he thinks infant-baptism to be allowable, but he recommends deferring rather than hastening the administration of this sacrament. His book "On Penance" refutes the opinion advanced by the Montanists, that sins committed after baptism cannot be absolved by the church. In his treatise "On Idolatry," he extends this crime to practices that are almost unavoidable in society; such as bearing arms for the defence of the empire, adorning houses in honour of the prince, and using customary expressions that have any reference to Heathen mythology. In his work "De Corona Militis," he applauds a Christian soldier who refused to place a crown or garland on his head. In another work he considers "flight in time of persecution" as prohibited, and also giving money to escape it. In his treatise "De Spectaculis," he dissuades Christians from attending public shows. In his moral tracts is an exhortation to "patience," in which, as well as in a discourse addressed to martyrs, or confessors, he dwells in an eloquent strain on the motives which should bind a Christian to the practice of that virtue. After his union with the Montanists, Tertullian wrote four books in opposition to the discipline of the Catholic church; viz., "On Modesty;" "On Monogamy;" "An Exhortation to Charity;" and "A Treatise on Faith."

Tertullian, in his various writings, has afforded plain testimonies to all the books of the New Testament, commonly received by Christians at this time, except the Epistle of James, the 2d of Peter, the 2d and 3d of John. The Epistle to the Hebrews he ascribes to Barnabas. This ancient father has been much admired: Cyprian calls him "my master." Some persons, however, have doubted whether he has done more good or harm in the Christian church. His character is judiciously appreciated by one of his biographers (*Gen. Biog.*) in the following manner. Tertullian "was certainly a man of lively parts and large acquisitions, of copious invention, and warm feelings. In his reasonings, however, he displayed more fancy and subtilty than sound judgment; and the ardour of his temper inclines him to violence and exaggeration, while a propensity to superstition renders him weakly credulous and gloomily austere." His works have been frequently printed both separately and collectively. Of his whole works, the editions of Rigaltius, fol. Paris, 1641, and of Semler, Hal. Magd. 6 vols. 1770—76, are most esteemed. *Dupin. Lardner. Mosheim.*

TERTZENA, or TREZNA, a small town of Greece, in the west of the Morea. It is inhabited by Greeks; and the environs are very productive in wine and olives; 12 miles north of Dimiczana.

TERUEL, a town of the north-east of Spain, in the province of Arragon, at the confluence of the rivers Guadalaviar and Alhambra. It stands on a hill, and is defended by a citadel; 87 miles south-by-east of Saragossa, and 13 east-south-east of Abarrazana.

TERUNCIUS, a very small brass coin in use among the Romans. The inconvenience of such very small pieces being soon found, the teruncius became disused, but its name is still retained in reckoning, and thus it became a money of account.

TERVENGARY, a town of the south of India, province of Malabar. Near to this place, a decisive victory was obtained by the British troops over those of Tippo Sultan, in 1790. Lat. 11. 2. N. long. 76. E.

VOL. XXIII. No. 1617.

TERVISO, a small town of Austrian Illyria, in Istria; 8 miles west of Mitterburg.

TERVUREN, a small town of the Netherlands, in the province of South Brabant. Population 1500; 6 miles east of Brussels.

TERWICH, a parish of England, in Sussex, near Midhurst.

TERZA, LA, a small town in the south of the kingdom of Naples, in the Terra d'Otranto; 25 miles west of Taranto.

TESCHEN, a circle of Austrian Silesia, comprehending the eastern part of that province, with an area of 740 square miles, and 152,000 inhabitants. It is very hilly on the south side, where the Carpathian chain commences, but the north is flat and marshy, so that throughout it is better adapted for grazing than tillage. The inhabitants are mostly of Slavonian origin. The greatest part of this circle is formed of the ancient duchy of Teschen, which belongs to the emperors in their quality of kings of Bohemia.

TESCHEN, a town of Austrian Silesia, and the chief place of the foregoing circle and principality, is surrounded with a wall, and situated on the river Elsa; 32 miles east-south-east from Troppau, and 62 east-north-east of Olmutz.

TESCHEN, a small town in the south-east of Bohemia; 59 miles south-south-east of Prague, and 14 south-east of Tabor. Population 800.

TESEGDELT, a village of Morocco, situated on a lofty rock, supposed to be impregnable; 20 miles south of Mogodor.

TESENI, a village of Anatolia, in Asiatic Turkey; 34 miles south-east of Dëgnizlu.

TESIA, a settlement of Mexico, in the province of Cinaloa.

TESORO, a small island in the Spanish Main, near the coast of South America. Lat. 10. 8. N. long. 75. 46. W.

TESSARACONTA, *τεσσαρακοντα*, among the Athenians, were forty men who went their circuits round the several boroughs, and had cognizance of all controversies about money, if not above ten drachms; as also of actions of assault and battery. *Potter.*

TESSARACOSON, *τεσσαρακωσον*, Gr. in Antiquity, a solemnity kept by women on the fortieth day after child-birth, when they went to the temple, and paid some grateful acknowledgments for their safe delivery. *Pott. Archæol. Græc.*

TESSELARII, among the Romans, artificers of checker or mosaic work.

Tesselated pavements were much used in the tents of the Roman generals.

TESSLATED, *adj.* [*tessella*, Latin.] Variegated by squares.—Van Helmont produced a stone very different from the tessellated pyrites. *Woodward.*

TESSERA, in Roman antiquity, denoted in its primary sense a cube or dye; so called from the Greek word *τεσσαρα*, or *τεσσερα*, *four*; respect being had to its number of sides, distinct from the two horizontal planes, above and below. And it was thus distinguished from the *talus*, which, being round at each end, contained only four planes or faces on which it could stand; and, therefore, when thrown, had no more than two side faces in view. Hence *ludere talis et ludere tessæris* are spoken of by Roman writers as two different games.

TESSERATIC, *adj.* [*tessera*, Latin.] Variegated by squares; tessellated.—Some of the *tesseraic* work of the Romans has lately been dug up. *Sir R. Athyns.*

TESSERMUIT, an island near the south-west coast of East Greenland. Lat. 59. 59. N. long. 44. 20. W.

TESSIN (Charles Gustavus), a Swedish count and considerable statesman, was born at Stockholm in 1695, and received the rudiments of his education under his father. In 1714, he set out on his travels, and continued them through various countries of Europe for five years, availing himself of every opportunity that occurred of acquainting himself with their respective constitution and laws. At the age of twenty-five he was deputed to the courts of Great Britain,

Denmark, and France, and also to the States of Holland, to announce the accession of Frederic I. to the Swedish throne; and in 1725 he was sent to Vienna, to solicit the attention of that court to the new treaty of alliance between Sweden and Russia. On the death of his father, in 1728, he succeeded him as principal intendant of the court, and in order to qualify himself for the office, he undertook a new tour at his own expense. In 1735, he was again dispatched to the court of Vienna, where he remained two years. He was chosen by the nobility speaker at the famous diet of 1738, on which occasion he obtained, in recompence of his conduct, a gold medal, bearing on one side his crest, and on the other the motto "Conscius Recti." He was appointed in 1739 to conduct an embassy from this diet to France, and resided at Paris till the year 1742, concluding during this interval an advantageous treaty of commerce with the king of the two Sicilies, and terminating a subsidiary treaty of alliance with France, by which Sweden was to receive, in the course of three years 27 tons of gold. In 1743 he was sent to Denmark, and in the following year to Berlin, on business of great importance. At Berlin he was honoured with the Prussian order of the Black Eagle. He occupied several other stations of dignity and trust, the duties of which he discharged with singular wisdom and fidelity. But the most important office assigned him, was that of preceptor to the crown prince, Gustavus III., to which he was appointed in 1747. On this occasion he wrote his "Letters addressed to a Young Prince," for the use of his royal pupil, which were afterwards translated into most of the languages of Europe. Retiring from public business in 1761, he lived on his estate till the time of his death, which happened in January 1770. *Gen. Biog.*

TESSIURSAK, an island near the west coast of West Greenland. Lat. 61. 10. N. long. 47. 30. W.

TESSOWA, a considerable town of Fezzan, in Central Africa; 100 miles east-south-east of Mourzouk.

TESSY, a small town in the north-west of France, department of La Manche. Population 1700; 12 miles south of St. Lo, and 17 east of Coutances.

TEST, *s.* [*test*, Fr.; *testa*, Ital.] The cupel by which refiners try their metals.—Our ingots, *tests*, and many things mo. *Chaucer*.—Trial; examination: as by the cupel.

All thy vexations

Were but my trials of thy love, and thou
Hast strangely stood the *test*.

Shakspeare.

Let there be some more *test* made of my metal,
Before so noble and so great a figure
Be stamp't upon it.

Shakspeare.

Means of trial.

To be read for herself she need not fear:
Each *test*, and every light, her muse will bear.

Dryden.

That with which any thing is compared in order to prove its genuineness.

Unerring Nature, still divinely bright,
One clear, unchang'd, and universal light,
Life, force, and beauty, must to all impart,
At once the source, and end, and *test* of art.

Pope.

Discriminative characteristic.

Our penal laws no sons of yours admit,
Our *test* excludes your tribe from benefit.

Dryden.

Judgment; distinction.

Who would excel, when few can make a *test*,
Betwixt indiff'rent writing and the best?

Dryden.

TESTA (Pietro), called *Il Lucchesino*, from having been born at Lucca. His birth took place in 1611, and he was first instructed in painting by Pietro Paolini; afterwards he studied at Rome, under Domenichino and Pietro da Cortona. The principal objects of his study were antique marbles, and the remains of ancient architecture; in which employment such was his assiduity, that few vestiges of antiquity were

known which had escaped his pencil. His extreme poverty made him morose and melancholy. From this state of trouble he was relieved by Sandrart, who clothed and entertained him, and introduced him to the prince Justiniani. After this he succeeded; and the great freedom and ease of his pencil procured him many patrons. Several of the churches and palaces at Rome are adorned with his productions: the best are esteemed to be the Death of St. Angelo, in the church of St. Martino a Monti, and the Death of Iphigenia, in the Palazzo Spada. His works, however, are more frequently to be met with at Lucca. As a designer, Pietro Testa was unequal: he frequently tacked to antique torsos ignoble heads, and extremities copied from vulgar models. Of female beauty he appears to have been ignorant, though he adopted a character and form which are peculiar to himself. Of his compositions, generally perplexed and crowded, the best known and most correct is that of Achilles dragging Hector from the walls of Troy to the Grecian fleet. He delighted in allegoric subjects, and produced many of picturesque effect and attitudes: but in their meaning, as obscure as the occasions to which they allude. Of expression, he only knew the extremes, grimace, or loathsomeness and horror. As a colourist, he was frequently rich and effective, harmonious and warm; and his execution bears the stamp of incredible freedom; while his chiaro-scuro is managed with great breadth and depth. His just character is that of a powerful machinist. He was drowned in the Tyber, in 1650, endeavouring to recover his hat, which the wind had blown into the water; though some suspect that he threw himself in, in a fit of despondency, to which he was prone.

He was an eminent engraver as well as a painter, and the number of his works in both arts attest his industry and ingenuity, considering the short period of his life.

TE'STABLE, *adj.* [*testable*, Fr.] Capable of witnessing or bearing witness. *Cotgrave.*

TESTA'CEOUS, *adj.* [*testaceus*, Lat.; *testacée*, Fr.] Consisting of shells; composed of shells. Having continuous, not jointed shells: opposed to *crustaceous*.—Several shells were found upon the shores, of the crustaceous and *testaceous* kind. *Woodward.*

TESTAMENT, *s.* [*testament*, Fr.; *testamentum*, Lat.] A will; any writing directing the disposal of the possessions of a man deceased.—He ordained by his last *testament*, that his *Æneid* should be burnt. *Dryden*.—The name of each of the volumes of the Holy Scripture.—It is not out of any satiety that I change from the Old *Testament* to the New: these two, as they are the breasts of the church, so they yield milk equally wholesome, equally pleasant unto able nurselings. *Bp. Hall.*

TESTAMENTARY, *adj.* [*testamentaire*, Fr.; *testamentarius*, Lat.] Given by will; contained in wills.—How many *testamentary* charities have been defeated by the negligence or fraud of executors? by the suppression of a will? the subornation of witnesses, or the corrupt sentence of a judge? *Atterbury.*

TESTAMENTA'TION, *s.* The act or power of giving by will.—By this law the right of *testamentation* is taken away, which the inferior tenures had always enjoyed. *Burke.*

TE'STATE, *adj.* [*testatus*, Lat.] Having made a will.—By the canon law, the bishop had the lawful distribution of the goods of persons dying *testate* and intestate. *Ayliffe.*

TESTA'TION, *s.* [*testatio*, Lat.] Witness; evidence.—How clear a *testation* have the inspired prophets of God given of old to this truth. *Bp. Hall.*

TESTA'TOR, *s.* [*testator*, Lat.; *testateur*, Fr.] One who leaves a will.—He bringeth arguments from the love or good will which always the *testator* bore him. *Hooker.*

TESTA'TRIX, *s.* [Lat.] A woman who leaves a will.

TE'STED, *adj.* Tried by a test.—Not with fond shekels of the *tested* gold. *Shakspeare.*

TE'STER, *s.* [The Italians and French had their *testone*, and *teston*; the latter of which *Cotgrave* states to be of the value of eighteen-pence. Our word was also *teston*, and *testern*.

testern. "You cannot give him less than a shilling in conscience; for the book he had it out of cost him a *teston* at least." *B. Jonson.*—"Such another piece as our *testerne.*" *Latimer.*—It was of the value of a shilling in our eighth Henry's time, and sunk first to nine-pence, then to six-pence in Edward the sixth's.] A sixpence.—Come manage me your caliver: hold, there is a *tester* for thee. *Shakspeare.*—The cover of a bed.

Each hole and cupboard they explore,
Each creek and cranny of his chamber,
Run hurry-skurry round the floor,
And o'er the bed and *tester* clamber.

Gray.

TE'STERN, *s.* A sixpence. See TESTER.

To TE'STERN, *v. a.* To present with sixpence. *Not in use.*—To testify your bounty, I thank you, you have *tested* me. *Shakspeare.*

TESTERTON, a parish of England, in Norfolk; 2½ miles south-east-by-south of Fakenham.

TESTI (Fulvio, Count), an Italian poet, was born in 1593, at Ferrara, and settling, when young, at Modena, he rose to the highest offices and honours of the state. Nevertheless, alternate prosperity and adversity visited him: inconstant and ambitious, he fell into disgrace with Francis I., who imprisoned him in the citadel of Modena, where he died in 1646. His poems are chiefly of the lyric class. The productions of his maturer judgment are distinguished above those of his contemporaries for vigour and poetical spirit; and some of them, with respect to elevation of sentiment and beauty of imagery, will bear comparison with the productions of the best Italian poets. He also attempted tragedy, in two compositions, intitled "Arsinda," and "L'Isola d'Alcina;" but their style is lyric rather than dramatic composition. *Tiraboschi. Gen. Biog.*

TESTICLE, *s.* [*testiculus*, Lat.] Stone.—That a beaver, to escape the hunter, bites off his *testicles* or stones, is a tenet very ancient. *Brown.*

TESTIFICATION, *s.* [*testificatio*, Lat.] The act of witnessing.

TESTIFICATOR, *s.* [from *testificor*, Lat.] One who witnesses.

TESTIFIER, *s.* One who testifies.

To TESTIFY, *v. n.* [*testificor*, Lat.] To witness; to prove; to give evidence.

Th' event was dire,
As this place *testifies.*

Milton.

To TESTIFY, *v. a.* To witness; to give evidence of any point.—We speak that we do know, and *testify* that we have seen, and ye receive not our witness. *St. John.*

TESTIGOS, *Los*, a cluster of small islands, about ten leagues from the continent of South America, and the same distance from the island of Grenada. Lat. 11. 25. N. long. 62. 5. W.

TESTILY, *adv.* Fretfully; peevishly; morosely.

TESTIMONIAL, *s.* [*testimonial*, Fr.; *testimonium*, Lat.] A writing produced by any one as an evidence for himself.—Hospitable people entertain all the idle vagrant reports, and send them out with passports and *testimonials*, and will have them pass for legitimate. *Gov. of the Tongue.*

TESTIMONY, *s.* [*testimonium*, Lat.] Evidence given; proof by witness.—If I bring you sufficient *testimony*, my ten thousand ducats are mine. *Shakspeare.*—Public evidences.—We maintain the uniform *testimony* and tradition of the primitive church. *White.*—Open attestation; profession.

Thou for the *testimony* of truth hast borne
Universal reproach.

Milton.

To TESTIMONY, *v. a.* To witness. *A word not used.*—Let him be but *testimonied* in his own bringings forth, and he shall appear a scholar, a statesman, and a soldier. *Shakspeare.*

TESTINESS, *s.* Moroseness; peevishness.—He may be a little angry for my so rough usage; but my mother, having

power of his *testiness*, shall turn all into my commendations. *Shakspeare.*

TESTON, *s.* [*teston*, Fr.] A sixpence; a tester. See TESTER.

Lo! what it is that makes white rags so deare,
That men must give a *teston* for a queare.

Bp. Hall.

Testoons, or shillings, were first coined in Scotland about the year 1553, and they bore the bust of the queen and the arms of France and Scotland on the reverse: they were of the same intrinsic value with those of England, and were worth four shillings; the half-testoon two; Scottish money. The silver testoon of Mary, chiefly of 1553 or 1562, with her bust, are rare, and now worth about 30s.; half still more rare, valued at 3*l.* *Pinkerton on Medals.*

The teston, testoon, or tester, among us, succeeded the groat, which was introduced by Edward III. in 1354. It was also called shilling, and first coined by Henry VII. in 1503; and was rated at 12d. in the reign of Henry VIII., and afterwards reduced to 6d. The testoon of the first year of Edward VI. is extremely rare.

TESTON, a parish of England, in Kent; 4 miles west-by-south of Maidstone.

TESTOON, or TESTONE, a silver coin in Italy, and also in Portugal. In Florence, the testoon, or testone, as a money of account and a silver coin, is worth two lire, or three paoli. The testoon is a money of account at Lisbon, and is valued at 100 rees. And of the gold coins struck since 1722, there are the Dezeseis testoon of 1600 rees, and the Oito testoon of 800 rees. The silver coins are testoons of 100 and halves of 50 rees.

TESTU'DINATED, *adj.* [*testudo*, Latin.] Roofed; arched.

TESTUDINEOUS, *adj.* [*testudo*, Latin.] Resembling the shell of a tortoise.

TESTUDO, in Antiquity, was particularly used among the poets, &c., for the ancient lyre, or lyre of Amphion; because it was said to have been originally made, by its inventor Mercury, of the back or hollow shell of a *testudo aquaticæ*, or sea-tortoise, which he accidentally found on the banks of the river Nile.

Mr. Molyneux has an express discourse, in the Philosophical Transactions, to shew that the tortoise-shell was the basis of the ancient lyre, and that the whole instrument had thence the denomination *testudo*; which account throws some light on an obscure passage in Horace, ode iii. lib. 4., mistaken by all the commentators:—

"O, *testudinis aureæ*
Dulcem quæ strepitum, Pieri, temperas!
O mutis quoquæ piscibus
Donaturæ cygni, si libeat, sonum!"

TESTUDO, THE, was also a kind of cover, or screen, which the soldiers, e. gr. a whole company, made themselves of their targets, by holding them up over their heads, and standing close to each other.

Thus, if we suppose the first rank to have stood upright on their feet, and the rest to have stooped lower and lower by degrees, till the last rank kneeled down on their knees, so that every rank covering with their targets the heads of all in the rank before them, they represented a tortoise-shell, or a sort of sloping roof.

TESTUDO, Tortoise, in Zoology, a genus of animals of the class of Amphibia and order of Reptiles; the generic characters of which are, that the body is furnished with a tail, and defended by a bony or coriaceous integument above and below, or above by scales; and that the upper mandible of the mouth closes over the lower; without distinct or proper teeth, the teeth, as they are called in the generality of tortoises, being no other than the serratures of the mandibles.

I.—Marine Tortoises, or Turtles with pinniform feet, the former being longer.

The animals of this class are distinguished from the land tortoises

tortoises by their very large and long fin-shaped feet, in which are inclosed the bones of the toes, the first and second on each foot being furnished with visible or projecting claws, the others not appearing beyond the edge. The shield, as in the land tortoises, consists of a strong bony covering, in which are imbedded the ribs, and which is coated externally by hard horny plates, in one or two species much thicker and stronger than those of the land tortoises. Mr. Schœpf, cited by Dr. Shaw, observes, that the apparent number of claws or projecting extremities on the feet of the marine tortoises, appears to be no certain criterion of the species; but, on the contrary, is found to vary so as to contradict the Linnæan specific characters.

1. *Testudo coriacea*, or coriaceous tortoise.—Striated lengthwise; or brown turtle, paler beneath, with coriaceous shell, marked by five longitudinal tuberculated ribs. This is the largest of the marine tortoises, being found eight feet long, and one thousand pounds weight. It is larger than others of its tribe, and its external covering differs by not being horny, but resembling strong leather, marked over the surface into small, obscurely subhexagonal and pentagonal divisions, without destroying its general smoothness. The longitudinal ribs or ridges are five; and comprehending those that border the sides, the number is seven. It has no under or thoracic shell; the head is large, and the upper mandible notched at the tip, so as to exhibit the appearance of two large teeth, between which, when the mouth is closed, is received the tip of the lower mandibles; the fins are large and long, and covered with a tough leathery skin; the tail is rather short and sharp-pointed.—This species is a native of the Mediterranean, and has occasionally been taken on the coasts both of France and England. It is also found, not only in the European seas, but in those of South America, and about some of the African coasts. The Greeks, according to Cépède, were well acquainted with this specimen, and used it in the construction of the lyre or harp. Pennant says, that this species is extremely fat, but the flesh coarse and bad; but the Carthusians will eat no other species. The small sea tortoise described by Pennant in the Phil. Trans. for 1771, is said to be the young of this animal. Gmelin mentions this and another as varieties.

2. *Testudo imbricata*.—The imbricated or variegated turtle with thirteen imbricated scales on the disk; these lap over each other at the extremities like tiles on the roof of a building. The head is smaller than in other turtles; the neck longer; and the beak narrower, sharper, and more curved, so as considerably to resemble the bill of a hawk, and from this circumstance the animal derives its popular name of the "hawkbill turtle."—This turtle is a native of the Asiatic and American seas, and is sometimes found in the Mediterranean. It has been often known to measure five feet in length, and to weigh 5 or 600 pounds. In the Indian Ocean it attains a prodigious size. Its shell was anciently used for a shield, and still serves for that purpose among barbarous nations. The flesh is not esteemed as a food; the lamellæ or plates of the shell, being much stronger, thicker, and clearer than those of any other kind, constitute its sole value.

3. *Testudo Mydas*.—Brownish turtle, with thirteen scales on the disk; the green turtle of some writers, with two nails on the fore-feet, and single ones on the hind-feet. This common green turtle (esculent turtle), is so named from the green tinge, derived from the vegetable substances on which it feeds, often exhibited by its fat, when the animal is in its highest perfection. It is one of the largest of this genus, often measuring above five feet in length (sometimes more than six), and weighing more than 500 or 600 pounds. Its colour is a dull palish brown, variegated with deeper undulations, but not exhibiting the beautiful colours which distinguish the *testudo imbricata*. Its flesh, however, is in such estimation, that the inhabitants of the West Indian islands have long considered it as one of the most excellent articles of food, and have introduced a similar taste into some of the European nations. In our own country it is much esteemed, and considerable quantities of it are imported to

supply the luxury of the metropolis. Its introduction, however, cannot be traced farther than about 50 or 60 years backward. Sir Hans Sloane informs us in his History of Jamaica, that forty sloops were employed by the inhabitants of Port Royal, in Jamaica, for catching them, and that the markets there are supplied with turtle, as ours are with butcher's meat. The method of taking them at the Bahama islands, is by striking them with a small iron peg two inches long, put in a socket at the end of a staff twelve feet long. Two men usually set out for this work in a little light boat or canoe, one to row and gently steer the boat, while the other stands at the head of it with his striker. The turtle are sometimes discovered by their swimming with their head and back out of the water, but they are oftenest discovered lying at the bottom, a fathom or more deep. If a turtle perceives he is discovered, he starts up to make his escape, the men in the boat pursuing him, endeavour to keep sight of him, which they often lose, and recover again by the turtle putting his nose out of the water to breathe: thus they pursue him, one paddling or rowing; while the other stands ready with his striker. It is sometimes half an hour before he is tired; then he sinks at once to the bottom, which gives them an opportunity of striking him, which is by piercing him with an iron peg, which slips out of the socket, but is fastened with a string to the pole. If he is spent and tired by being long pursued, he tamely submits, when struck, to be taken into the boat or hauled ashore. There are men who by diving will get on their backs, and by pressing down their hind parts, and raising the fore-part of them by force, bring them to the top of the water, while another slips a noose about their necks.

The sea tortoises or turtles, says Catesby, never go on shore but to lay their eggs, which they do in April: they then crawl up from the sea above the flowing of high water, and dig a hole above two feet deep in the sand, into which they drop in one night above an hundred eggs, at which time they are so intent on nature's work, that they regard none that approach them; but will drop their eggs into a hat if held under them; but if they are disturbed before they begin to lay, they will forsake the place, and seek another. They lay their eggs at three, and sometimes at four different times; there being fourteen days between every time; so that they hatch and creep from their holes into the sea, at different times also. When they have laid their compliment of eggs, they fill the hole with sand, and leave them to be hatched by the heat of the sun, which is usually performed in about three weeks. It may be proper to add, that the eggs are about the size of tennis-balls, round, white, and covered with a smooth parchment-like skin. Gmelin mentions several varieties of this species.

4. *Testudo caretta*.—The variegated turtle with fifteen dorsal scales, those of the middle range gibbous towards their tips. This species is larger than any yet discovered, except perhaps, the *coriacea*. It is called the "loggerhead turtle;" and though it resembles the last species, or green turtle, it is distinguished by the superior size of the head, the proportional breadth of the shell, and by its deeper and more variegated colours: but the principal distinction consists in the number of dorsal segments or scutella of the shell, which amount constantly to fifteen. The fore-feet are very large and long; the hind feet much shorter, though broad. In a commercial view, this species is of little importance; its flesh being rank and coarse, and the laminæ of the shell too thin for general use. It is said, however, to afford a good quantity of oil, which may be used for lamps, &c. This turtle is very strong and fierce, and even dangerous.—It is an inhabitant of the same seas with the green turtle, but has been found in remote latitudes, even in the Mediterranean, and particularly about the coasts of Italy and Sicily.

5. *Testudo macropus*.—With an ovate, carinate, emarginate shield, and the feet very large and bifariouly unguled.

11.—Fluviatile, with palmated feet, shell joined with the sternum by a membrane, and supported in the middle on both sides, by two processes of the sternum.

6. *Testudo orbicularis*.—The *testudo* Europea of Schneider, with oval, flattish, smooth, dark brown shell, marked with very numerous, yellowish specks and streaks. This speckled tortoise of the "Naturalist's Miscellany," or *testudo inleagrís*, is of small size, the shell measuring about four or five inches in length, and its disk composed of thirteen, and the margin of twenty-five pieces; the under shell whiteish-yellow, tinged towards the joints with brown; the head ovate, somewhat convex above, and flattish on each side and beneath; the skin of the neck lax and wrinkly; the legs short and scaly, feet webbed, fore feet having five toes and hinder only four; the claws on all the feet sharp-pointed, and crooked; the tail nearly half as long as the body, thin, attenuated, compressed and scaly, and also spotted like the body.

This elegant species is a native of many parts of Europe, being found in Italy, Sardinia, France, Hungary, Prussia, &c., inhabiting lakes and muddy waters, and feeding on aquatic plants, insects, snails, and small fish. The flesh is said to be good as food, for which purpose it is sold in the markets, and occasionally kept in ponds, and fed or fattened with lettuce-leaves, bread, &c. &c. It may be conveniently kept in a cellar, and fed with oats, scattered on the floor, which it greedily eats when they begin to germinate. It deposits its eggs in sandy and sunny places in the beginning of spring, which are not hatched, as it is pretended, till the succeeding spring.

7. *Testudo membranacea*.—With three claws on the feet, and well striated on the back, membranaceous, ovate, and grey.—Found in the sea that washes Guiana.—See *Testudo* *ferox*.

8. *Testudo triunguis*.—With three claws on the feet; the disk of the back rugose and orbiculated, the lower border smooth, and nostrils in a cylinder elevated above and projecting beyond the head.—Found rarely in the Nile, and supposed to be the same with the former.

9. *Testudo cartilaginea*.—Shell orbicular, membranaceous, striated on the back; three claws on the feet, and nose cylindrical and prolonged. This is the *testudo* Boddaerti and a rare species. See the next article.

10. *Testudo ferox*, or fierce tortoise.—With ovate, cartilaginous shell; three claws on the feet, and tubular, prominent nostrils. Dr. Shaw queries whether the *testudo* rostrata of Schœpf, the *testudo* with palmated feet, &c. of Thunberg, the *testudo* cartilaginea of Boddaert, the *testudo* Boddaerti of Schneider, the *testudo* triunguis of Forskall, and the *testudo* membranacea of Blumenberg, do not belong to this species. This is a remarkable species, and distinguished by the unusual nature of its shield, which is hard and osseous only in the middle part, while the edges gradually degenerate into a flexible coriaceous verge; obscurely marked with five or six transverse bands, and granulated with small warts or prominences, gradually enlarging as they approach the flexible edge; the head rather small, somewhat trigonal, with the snout much lengthened, and the upper part drawn out into a sub-cylindric form, terminated by the nostrils, and projecting much beyond the lower mandible; the neck, when retracted, thick, and surrounded with many folds of skin, but when exerted, equal in length to that of the whole shell; the legs short, thick, and covered with a wreathed skin; the feet furnished with strong and broad webs, connecting the three last toes of each; the three first on each foot furnished with strong claws, and the remaining ones unarmed; having, besides the proper toes, two spurious ones on the hind and one on the fore feet, strengthening and expanding the web; the tail short, pointed and curving inwards; the eyes very small and round; the colour above deep-brownish olive, and below white; the shell marked beneath in a very elegant manner, with ramifications of vessels.

This species is found in Pennsylvania, Carolina, &c. &c.; and is possessed, differently from most others of the tribe, of

considerable vigour and swiftness of motion, springing towards its assailant, when attacked, with great alacrity and fierceness; about a foot and half long, and fifteen inches broad. It was first described by Dr. Garden. Its flesh is said to be extremely delicate, being equal, if not superior even to that of the green turtle. The great soft-billed turtle, described by Mr. Bartram in his travels, appears to be the same with this.—Found in all the rivers, lakes, and pools of East Florida, weighing from 30 to 40 pounds. The *testudo* rostrata of Thunberg seems to be the young of the species above described; and the *testudo* triunguis of Forskall, is allied to the same species. *Shaw*.

11. *Testudo scabra*.—With smooth discoloured head, and shield, oval, convex, carinated and rough. The *scabra* of Linnæus is described as having palmated feet and flattish shell, with all the intermediate scutella elevated on the back. The shell of this species is figured by Seba; it measures about two inches and a half in length, and nearly two inches in breadth; being of a cordated figure, or somewhat pointed at the bottom. Its colour is light-reddish variegated on the head and shell with white lines and spots, the feet marked with red specks, and having each five toes with sharp claws; the head prominent, and eyes small. *Shaw*.

12. *Testudo squamata*, or scaly tortoise.—With ovate body, smooth beneath, but covered above, together with the neck, feet, and tail, with numerous scales. According to Bontius, in his history of Java, this singular species is an inhabitant of fresh waters, where it burrows under the banks, in order perhaps to deposit its eggs. The Javanese call it *taunah*, or the digger, and the Chinese *lary*, or the runner, a burlesque title given to it on account of its slow pace. Its flesh is said to be extremely delicate; and the Chinese use the pulverized scales, dissolved in water, as a remedy in dysenteric cases and against the cholera. It is said to prey on small fish. This species seems to connect the lizard and tortoise tribes. *Shaw*.

13. *Testudo lutaria*; mud or brown tortoise.—With flattish shell, and tail half the length of the body; carinated, says Gmelin, behind with three scutella. This species is said to be common in many parts of Europe, as well as Asia, being found in India, Japan, &c. According to Cépède, it is not more than seven or eight inches from the tip of the nose to that of the tail, and about three or four inches in breadth; the disk consists of thirteen pieces, striated and slightly punctated in the centre, and along the middle range, runs a longitudinal carina; the margin consists of twenty-three pieces, bordered with slight striæ; the colour of the shell is blackish and also of the skin; the feet are webbed, with five toes before, and four behind; the exterior toe of each foot is unarmed; the tail is stretched out in walking, from which circumstance the animal has been called "Mus aquatilis." Like other tortoises, it sometimes utters a kind of broken hiss.—This animal is common in France, and particularly in Languedoc and many parts of Provence; and in a lake situated in the plain of Durance, such numbers were found as to supply the neighbouring peasantry for more than three months. Although the species be aquatic, it always lays its eggs on land, digging a hollow and covering them with mould. This animal is useful in a garden, which it frees from noxious animals, without doing any mischief itself. It may be domesticated, and kept in a basin or receptacle of water, so contrived on the edges as to give it a ready egress, when it wishes to wander about for prey. In fish ponds, it is destructive. *Shaw*. Gmelin mentions two varieties, viz., *testudo tabulata* and *testudo campanulata*.

14. *Testudo scorpioides*.—See *Testudo fimbriata*.

15. *Testudo hermanni*.—With four claws on the feet, and the tip of the tail unguiculated.—See *Testudo Tricarinata*. Gmelin mentions several varieties of this species.

16. *Testudo Carolina*.—With digitated feet, gibbous shell, and no tail. This is the *testudo* clausa, or close tortoise of Linnæus and other writers, with blackish shell, irregularly spotted with yellow, with obtuse dorsal carina, and bivalve

under-shell completely closing the upper, whence it obtains its name. The under part of the shell is so continued round the margin, that when the animal withdraws its head and legs it is able accurately to close all parts of the shell together, so as to be perfectly secure. The defence of this little animal, which rarely exceeds four or five inches in length, is such, that it is uninjured by a weight of 500 or 600 pounds, and able to walk under this heavy load.—It is a native of many parts of North America, found chiefly in marshy situations, and occasionally in the driest and hottest places. It is principally sought for on account of its eggs, which are reckoned a delicacy. It feeds on small animals, as beetles, mice, and even serpents, which it draws into its shell, and crushes to death; and also on various vegetable substances.

17. *Testudo palustris*.—With depressed shell, five claws on the fore-feet, and four on the hind-feet; found in the stagnant waters of Jamaica, and seeking food in the adjoining meadows. This is the *testudo terrapin* of Schœpf, and the *testudo concentrica* of other writers, with sub-depressed, sub-carinated, oval yellow shell, with the scutella marked by concentric brown zones. The shell measures from four to six inches, or more.—It is a native of North America, and sold in the markets at Philadelphia, and elsewhere, under the name of "Terrapin," which name is indiscriminately applied in America to several other species. It is common, as we have already said, in Jamaica, and first described by Dr. Browne, in his "History of Jamaica," who says it is a wholesome and even delicate food. *Shaw*.

18. *Testudo caspica*.—With orbicular shell, scaly head, five claws on the fore-feet, four on the hind, and naked tail. The pieces composing the disk are sub-quadrate; those of the border parallelogrammic; the colour variegated with black and green; the lower shell blackish, spotted with white.—Gmelin represents it as a native of Hircania, inhabiting fresh waters, and sometimes growing to a vast size.

19. *Testudo clausa*. See *Testudo Carolina*, *supra*.

20. *Testudo Pennsylvanica*.—Tortoise, according to Schœpf, with smooth, elliptic, brown shell, with flattish back, the middle range of scutella sub-rhomboid and sub-imbricated, the first sub-triangular; and according to Gmelin, with five claws on the fore-feet and four on the hind, and the apex of the tail horny and acute. This is the small mud tortoise of Edwards; the shell measuring three or four inches in length. The head on the parts surrounding the jaws and eyes, is of a reddish-yellow colour; the upper part, as well as the neck, legs, and tail, dusky; feet webbed; the tail small.—It is a native of North America, and is found in Pennsylvania, &c., inhabiting muddy waters. When living, it is said to exhale a strong musky odour. Mr. Schœpf mentions a variety. *Shaw*.

21. *Testudo serpentina*.—The snake tortoise, characterised by Schœpf as having an ovate, depressed, triply carinated, sharp-scaled shell, rounded and acutely serrated at the posterior margin; and by Gmelin as having digitated feet, sub-carinated shell, behind obtuse, and acutely quindentated. This is the serrated tortoise of Pennant. The head is large, depressed, triangular, and covered with a scaly and warty skin; the orbits of the eyes are oblique; the mouth wide; the mandibles sharp; the neck covered by scaly warts; the toes distinct; the tail straight, and about two-thirds the length of the shell; and the under part of the body covered by a loose, wrinkled skin, beset with smallish soft scales and granules. This animal conceals itself in muddy water, leaving out only a part of its back, and thus appearing to be a stone or other inanimate object, more easily obtains its prey.—It is a native of North America, inhabiting stagnant waters, growing to the weight of fifteen or twenty pounds, or more, preying on fish, ducklings, &c., seizing its prey with great force, and at the same time stretching out its neck, and hissing. In New York, it is known by the title of the "snapping tortoise."

22. *Testudo spengleri*. See *Testudo Serrata*, *infra*.

23. *Testudo fimbriata*.—Tortoise, according to Bruguiere,

with oval, sub-convex, triply carinated shell, sub-digitated feet, cylindrical snout, and neck fimbriated on each side. This is an animal of very singular and disagreeable appearance. The shell is about fifteen inches or more in length, and its breadth eleven; but the whole animal, from the nose to the end of the tail, is two feet three inches. The head is large and flat, rounded in front, and edged on the sides with warty and wrinkled membranaceous appendages, about five inches wide, and covered behind by a three-lobed prominence; the nose resembles a proboscis, cylindrical, ten lines long, truncated, pierced by the nostrils, at the tip, where they are separated by a cartilaginous division; the eyes are round; seated at the base of the proboscis, and ten lines distant from each other; the mandibles are equal in length, and entire; the gape of the mouth is wide; the neck seven inches long, and four and a half broad; above flat and warty, and furnished on each side with six fimbriated membranaceous appendages disposed lengthwise, and alternately larger and smaller; the under part of the neck is beset with four similar appendages, placed opposite to the two on the head, and increased by two longitudinal wrinkles: the fore-feet are scaly and warty, having five indistinct toes, with as many longish sharp claws, convex above and flat beneath; the hind-feet are also scaly, with less distinct toes, having four claws, the fifth toe being unarmed, and very short: the tail is an inch long, bent slightly, and covered with a granulated skin; all the thirteen semicircular pieces, of which the shell consists, are wrinkled and irregularly notched at the hind part; the twenty-five marginal pieces are almost square, radiated on the surface with oblique wrinkles, and toothed in the interior edge. The colour of the whole is brown, somewhat paler beneath.—This animal is said to be a native of Guiana, but is now rare in the rivers of Cayenne, as it has been plentifully taken by fishermen, it being considered as excellent food. It feeds on aquatic plants, and wanders by night to some distance in search of pasture. It has been suggested, but without certainty, that this is the *testudo scorpoidea* of Linnaeus. *Shaw*.

24. *Testudo picta*.—Tortoise with plane shell, marked on both sides with a double spot of a black-blueish colour; scutella surrounded with a yellow margin, and neck striated longitudinally with yellow and black; or tortoise with oblong, slightly convex, smooth, brown shell, with the scutella bordered with yellow. This is the cinereous tortoise of Brown's Zoology, and sufficiently distinguished from all others by the remarkable colours of the shield.—This is a fresh-water species, and inhabits slow and deep rivers in North America, and should have been referred by Gmelin to his second class. In clear sunny weather, these animals are said to assemble in multitudes, sitting on the fallen trunks of trees, stones, &c., and immediately plunging into the water on the least disturbance. They are said to swim very swiftly, but to walk slowly; to be able to continue many hours entirely beneath the water, but not to survive many days if kept out of their favourite element. They are very voracious, destroying ducklings, &c., which they seize by the feet, and drag under water. They are sometimes used as a food. The colour, as has been above observed, varies; being sometimes of a blackish-brown, at other times of a reddish-chestnut: the yellow markings are also either pale or deep in different individuals, and sometimes whitish; the inferior, or under edges of the upper shell, as well as the upper edges, or commissures of the lower, are elegantly streaked with black, as if artificially painted, and this variegation is continued over the skin of the sides of the body. *Shaw*.

25. *Testudo guttata*.—Tortoise spotted, with oblong, moderately convex, smooth, brown shell, with scattered yellow spots. This is *testudo punctata* of Schœpf.—It is rather a small species, and a native of North America, inhabiting rivers and lakes. The young are scarcely larger than pigeon's eggs, and are very black, beautifully spotted with gold colour.

26. *Testudo longicollis*, or long-necked tortoise.—Smooth, ovate,

1. *T. fontinalis*. 2. *T. emarginata*. 3. *T. guttata*. 4. *T. picta*. 5. *T. angustata*. 6. *T. imbricata*.

Engraved for the Encyclopædia Londinensis, 1827.

ovate, with extremely long neck.—This species is a native of New Holland, and is of the river or fresh-water kind. The colour of the whole animal above is deep olive-brown; beneath paler, and inclining to whitish. *Shaw*.

III.—Land tortoises, with clavated unguiculated feet, convex shell, and bony commissures joined with the sternum.

27. *Testudo denticulata*.—Tortoise with sub-digitated feet, and orbicularly-cordated shell, with denticulated marginal segments. The shell is of a pale yellowish-brown colour, about four inches long and three broad, covered on the disk by broad hexagonal and pentagonal scutella, of a flattened form, with a large distinct middle space, granulated by small tubercles, and the remainder marked by five lines or furrows. The edge of the shell consists of twenty-three pieces, projecting in a serrated manner round the outline.—It is supposed to be a native of North America. The feet, in Gmelin's edition of the *Systema Naturæ*, are said to be without distinct toes; and the tail short.

28. *Testudo Græca*.—The common land tortoise, with sub-digitated feet, hinder part of the shell gibbous, lateral margin very obtuse, and scutella flattish. *Gmelin*.

It is described by others as the tortoise with hemispheric black and yellow shell, gibbous behind; the pieces composing the disk convex, and the sides obtuse. This tortoise is supposed to be a native of almost all the countries bordering on the Mediterranean sea, and to be more frequent in Greece than in other regions.—It is found in the European Archipelago islands, and in Corsica and Sardinia, and also in many parts of Africa. In Greece, it is an article of food; the eggs are eaten boiled, and the blood is often swallowed recent. In September, the animal hides itself under ground, and emerges in February: it lays its eggs in June, in a small hole on a sunny spot, out of which, after the first rains of September, the young are hatched. In England, it retires about the end of October, and re-appears about the middle of April; but these seasons vary with the climate and weather, &c. The males often fight, butting at each other with a noise that may be heard at a considerable distance. This animal lives to a most extraordinary age, exceeding the period of even a century.

One of the most remarkable instances, is that of a tortoise introduced into the archiepiscopal garden at Lambeth, in the time of archbishop Laud, and as near as can be collected from its history, about the year 1633, which continued to live there till the year 1753, when it was supposed to have perished rather from accidental neglect on the part of the gardener, than from the mere effect of age. This tortoise has had the honour of being commemorated by Derham, and many other writers, and its shell is preserved in the library of the palace at Lambeth.

The general manners of the tortoise, in a state of domestication in this country, are very agreeably detailed by Mr. White, in his *History of Selbourn*. "A land tortoise, which has been kept thirty years in a little walled court, retires under ground about the middle of November, and comes forth again about the middle of April. When it first appears in the spring, it discovers very little inclination for food, but in the height of summer grows voracious; and then, as the summer declines, its appetite also declines; so that for the last weeks in autumn it hardly eats at all. Milky plants, such as lettuces, dandelions, sowthistles, &c., are its principal food.

"The tortoise is totally a diurnal animal, and never stirs after it becomes dark. The tortoise," adds Mr. White, "like other reptiles, has an arbitrary stomach, as well as lungs, and can refrain from eating, as well as breathing, for a great part of the year. I was much taken with its sagacity, in discerning those that do it kind offices; for as soon as the good old lady comes in sight who has waited on it for more than thirty years, it hobbles towards its benefactress with awkward alacrity; but remains inattentive to strangers. Thus, not only 'the ox knoweth his owner, and the ass his master's crib,' but the most abject and torpid of beings dis-

tinguishes the hand that feeds it, and is touched with the feelings of gratitude. This creature not only goes under the earth from the middle of November to the middle of April, but sleeps great part of the summer; for it goes to bed in the longest days at four in the afternoon, and often does not stir in the morning till late. Besides, it retires to rest for every shower, and does not move at all in wet days. When one reflects on the state of this strange being, it is a matter of wonder that Providence should bestow such a seeming waste of longevity on a reptile that appears to relish it so little as to squander away more than two-thirds of its existence in a joyless stupor, and be lost to all sensation for months together in the profoundest of all slumbers! Though he loves warm weather, he avoids the hot sun; because his thick shell, when once heated, would, as the poet says of solid armour, 'scald with safety.' He therefore spends the more sultry hours under the umbrella of a large cabbage leaf, or amid the waving forests of an asparagus bed. But as he avoids heat in the summer, so in the decline of the year he improves the faint autumnal beams, by getting within the reflection of a fruit-tree wall; and though he has never read that planes inclining to the horizon receive a greater share of warmth, he inclines his shell by tilting it against the wall, to collect and admit every feeble ray."

The tortoise is said to be more tenacious of life than any other of the amphibia; many experiments performed upon them by Redi, of a cruel nature, such as opening their shells, taking out the brain, cutting off the head, evince their tenaciousness of life, and that the vital principle is very slowly discharged from these animals. *Shaw*.

29. *Testudo carinata*.—Tortoise with digitated feet, and gibbous shell, with the four first dorsal scutella carinated, and entire sternum.—Found in warm regions, but very little known.

30. *Testudo geometrica*.—Shell ovated, with all the elevated scutella above plane, marked with a yellow striæ issuing from the centre in form of a star: or, according to others, this is the tortoise with ovate black shell, and elevated scutella radiated with yellow; the *testudo tessellata* minor of Ray. The pieces of which the disk of the shell consists are very prominent, striated, or furrowed pretty distinctly with numerous lines on their sides, and terminated above by a yellowish, flat, square, or rather hexagonal roughened space or centre, from which proceed, in a radiated direction, several well-defined yellow streaks towards the edge; thus constituting a beautiful kind of geometrical appearance on the black ground colour on which they are disposed. The marginal pieces, which are commonly twenty-four, sometimes twenty-six, in number, are also streaked with yellow, but in a somewhat different style.

The native country of this beautiful tortoise is, perhaps, not truly ascertained; though the shell is more frequently seen in Europe than that of almost any other kind. It is said, however, to inhabit Asia and Africa, and even to be found in America. According to Thunberg, it is particularly common in shrubby places about the Cape of Good Hope. It is said to lay about twelve or fifteen eggs at a time. The Count de Cépède supposes this species to be the *Terapin* of Dampier, which that navigator represents as very beautifully variegated, and as delighting in moist and marshy places; adding, that its flesh is esteemed as a food, and that it is found in plenty on the coasts of the Pine islands, between the continent of America and Cuba: they are found in the forests, where they are easily taken: the hunters mark them on the shield, and let them wander about the woods; being sure to find them again at no great distance, every one easily recognizing his own property, and afterwards carrying them to Cuba. *Shaw*.

31. *Testudo pusilla*, or little tortoise.—With sub-digitated feet, and hemispheric shell, with convex, trapezial, scutella, striated on the margin, and punctated on the disk. This is the African land tortoise of Edwards, and thus described by him from a specimen obtained from West Barbary. "The iris of the eye is of a reddish hazel colour; the lips hard, like

like the bill of a bird; the head covered with scales of a yellowish colour; the neck, hind legs, and tail, covered with a flexible skin of a dirty flesh-colour; the fore-legs covered with yellow scales on their outsides, which are partly exposed when the legs are drawn in; the shell round, and pretty much rising on its upper side, and flat beneath; the pieces or compartments are of a yellowish colour, clouded and spotted with large and small irregular dusky or blackish spots, and are also furrowed or creased, the creases lessening, one within the other, till they reach the top or middle part of each; the tail is thick, scaly, and about an inch in length; and the vent is situated within the tail itself near the base: there are five claws on the fore-feet, and four on the hind, all strong, black, rather bowed, and sharp-pointed.—This species is found at the Cape of Good Hope, and much resembles the *testudo græca*.

32. *Testudo Indica*.—Tortoise with brown shell, reflected above the neck, and marked with a tubercle on the three upper scutella. This is the great Indian tortoise, first described by Perrault in the "History of Animals," published by the Royal Academy of France; and confounded by M. Cépède with the *testudo græca*.—It is found in India, on the coast of Coromandel, &c. Of this there are two varieties; one brought from the Cape of Good Hope, and another from the Southern Islands.

33. *Testudo sulcata*.—Tortoise with a tail, digitated feet, gibbose shell, and scutella lined and circumscribed with a furrow; or tortoise with brown ovate shell, with furrowed scutella yellow on each side. This is one of the larger species of land tortoise, being about a foot or more in length from the nose to the tip of the tail. The shell is very convex, and has the general habit of the *græca* and *geometrica* as to shape.—This species is said to be a native of the West Indies, and perhaps may be the "Hicatee" of Brown, described in his History of Jamaica. Dr. Shaw suggests that this species may be the same with *testudo tabulata*.

34. *Testudo planairia*.—Tortoise with digitated feet, and shell oval, convex, and smooth.—Found at Surinam.

35. *Testudo Americana terrestris*.—Tortoise with oval, gibbose shell; scutella yellow in the middle of the disk; the margin marked with shining black, furrowed, lateral polygons. This is conjectured by Gmelin to be the Jaboti of the Brazilians, and the cagoda of the Portuguese.—Found in South America.

36. *Testudo tabulata*.—Tortoise with oblong, gibbose, brown shell, with the scutella of the disk rectangular and furrowed; with yellowish centres. This was first described and figured in Seba's "Thesaurus," and there said to be a native of Brazil, though it is believed to be rather an African species. The general length of the shell is about five or six inches: suspected to be the same species with *testudo sulcata*, *supra*. Shaw.

37. *Testudo marginata*.—Tortoise with blackish-brown, oblong, gibbose shell, variegated with yellow, widened and depressed on the hind part.—The true native country of this species is not very distinctly known. Mr. Schæpf inclines to think that it is an American species. Cépède has confounded it with the *testudo græca*. Shaw.

38. *Testudo radiata*.—Tortoise with ovate black shell, and flattish scutella radiated with yellow. This is the great chequered tortoise-shell of Grew's Mus. Reg. It has been concluded by some persons, from a general resemblance in the pattern of the shell, and a similarity in colours, that this is the same species with *testudo geometrica*, or a variety of it. But Dr. Shaw has pointed out a variety of differences between them, and such as warrant our stating that the two shells are perfectly distinct. Grew, who has described this species, says that its native country is Madagascar; but Dr. Shaw suggests that it is also a native of Jamaica, and that in characters and size it agrees with the "Hicatee" tortoise mentioned in Brown's Zoology. Shaw.

39. *Testudo rugosa*.—A tortoise wrinkled, with black wrinkled shell, mottled and variegated with yellow; with the middle dorsal pieces subpanduriform, or fiddle-shaped.

40. *Testudo elegans*.—Tortoise with orbicular, convex, yellow shell, with transverse, oval, brown spots. Seba has described it under the name of the *testudo terrestris Ceylonica elegans minor*. Shaw.

41. *Testudo areolata*.—Tortoise with moderately convex shell, with subquadrangular, elevated, deeply furrowed scutella, and depressed rough areola. This is described by Seba under the appellation of *testudo terrestris Brasiliensis*.

42. *Testudo serrata*.—Tortoise with depressed yellowish shell, minutely freckled with dusky specks; all the scutella of the disk carinated, and the hinder margin of the shell serrated. This is supposed by Dr. Shaw to be the *testudo splengleri* of Gmelin's Linnean System.

43. *Testudo tricarinata*.—Tortoise with oval, slightly convex shell, with entire margin, and all the scutella of the disk carinated. This species agrees, in shape and other particulars, with Linnæus's description of his *testudo orbicularis*. Shaw.

44. *Testudo scripta*.—Tortoise with orbicular depressed shell, with all the scutella marked by variously-formed characters, and the marginal pieces spotted beneath. This is the *testudo scabra* of Thunberg.—Its native place is not ascertained. Shaw.

45. *Testudo galeata*.—Tortoise with depressed oval shell, with the three middle scutella sharply carinated, and twenty-four marginal pieces.—The native place of this species is not known; but it was brought to Retzius from India, and lived two years kept in fresh water: it subsisted on bread, &c., and sometimes on flies. From the beginning of October in the middle of May it remained without food, scarcely elevating its head above the water. It delighted in sunshine, and endeavoured to climb up the sides of the vessel occasionally, in order to enjoy its influence. It is doubtful, whether this be the *testudo scabra* of Linnæus. It is called *galeata* by Retzius, from the armed or cataphracted covering of the head. Shaw.

46. *Testudo granulata*, or chagrin tortoise.—With orbicular, flattish, granulated shell, with cartilaginous border. This species seems to be allied to the *testudo ferox*, having the shield furnished with a cartilaginous and flexible border. It is described by M. Cépède, and was brought from India by M. Sonnerat. Shaw.

Dr. Shaw, among the sea-tortoises or turtles, has described the turtle with green variegated shell, so named by the Count de Cépède.—These turtles are said to be found in great numbers in the Southern Ocean, and about Cape Blanco, in New Spain. They also occur in the gulf of Mexico, and many of the large American rivers, both above and below the line; but they have never been discovered in the seas of the Old Continent. The flesh is said to be very delicate; and is even preferred in some places to that of the common turtle. M. Bomare is said by Cépède to have first described this species.

The "trunk turtle" is mentioned by Catesby, who says, without ever having seen it, from the report of others, that these turtles grow to a very large size, of a narrow form, but very deep, the upper shell being more convex than in other kinds of turtle. Their flesh is rank, but affords a large quantity of oil, which constitutes their value.

The "rhinoceros turtle," or *la tortue nasicornne*, has not been accurately described. Count de Cépède says, that it is a native of the American seas, and bears a general resemblance to the common or green turtle; but is distinguished by having a large soft tubercle on the tip of the snout, in which are situated the nostrils. It is eaten in the same manner as the green turtle, and is chiefly found in the equatorial regions. Shaw.

TESTUDO *Veliformis Quadrabilis*, an hemispherical vault or ceiling of a church, &c., in which four windows are so contrived, as that the rest of the vault is quadrable, or may be squared.

TESTY, *adj.* [*testiu*, Fr.; *testoso*, Ital., both rendered headstrong, as well as testy, by Cotgrave and Florio; thus pointing to the head, *teste*, *testa*, as the origin of the word.]

Fretful;

Fretful; peevish; apt to be angry.—Must I stand and crouch under your *testy* humour? *Shakspeare*.

TETAUS, Indians of the United States, in Louisiana, near the sources of Red river and the Platte. Number 8200.

TETBURY, a market town of England, in the county of Gloucester, a large and respectable town, pleasantly situated on a rising ground, and in a healthy air, near the source of the river Avon. The market, which is principally for yarn, is held in a large market-house in the middle of the town: cheese, butter, &c., are sold at a smaller market-house. Tetbury has a manufacture of woollen cloth, and is a considerable thoroughfare; the direct road from Bath and Bristol to Cirencester passing through the town, as also the road from Gloucester and Stroud to Bath, Devizes, Salisbury, and Southampton. To the north of the town there is a petrifying spring. Market on Wednesday; 25 miles east-north-east of Bristol, and 99 west of London.

TE/TCHY, *adj.* Froward; peevish; a corruption of *testy* or *touchy*.

A grievous burthen was thy birth to me,
Tetchy and wayward was thy infancy. *Shakspeare*.

TETCOT, a parish of England, in Devonshire; 5 miles south-by-west of Holsworthy.

TETE, *s.* [French.] False hair; a wig worn by ladies. *Unused*.—An old baronet fell in love with a young lady of small fortune for her beautiful brown locks. He married her on a sudden: but was greatly disappointed upon seeing her wig or *tete* the next morning thrown carelessly upon her toilette, and her ladyship appearing at breakfast in a very bright red hair, a colour the old gentleman happened to have a particular aversion to. *Graves*.

TETE-A-TETE, *s.* [French.] Private; applied to a company of only two persons.

Long before the squire and dame
Are *tête-à-tête*. *Prior*.

TETELA, a town of Mexico, in the intendency of Puebla, and capital of a jurisdiction of the same name, containing 100 families of Mexican Indians; 60 miles south-east of Mexico.

TETEROW, a small town in the north of Germany, in Mecklenburg-Schwerin; 15 miles east of Gastrow, and 26 south-east of Rostock.

TETFORD, a parish of England, in Lincolnshire; 6 miles north-east-by-east of Horncastle.

TE/THER, *s.* [See TEDDER.] A string by which horses are held from pasturing too wide.

Hamlet is young,
And with a larger *tether* may he walk
Than may be given you. *Shakspeare*.

To TE/THER, *v. a.* To confine with a tether

TETHERINGTON, a village of England, in Cheshire, near Macclesfield.—Also a small village in Gloucestershire, near Thornbury.

TETAUROA, a small island in the South Pacific ocean, subject to Otaheite, composed of six or seven low islets near each other, not many feet above the level of the sea. The inhabitants are about 3000, chiefly employed in catching fish, which they bring to Otaheite, and exchange for bread-fruit; 24 miles north-west of Point Venus. Lat. 17. 4. S. long. 149. 30. W.

TETJUSCHI, a small town of European Russia, in the government of Kasan, on the Wolga, with 1000 inhabitants.

TETNANG, a small town in the south-west of Germany, in Wirtemberg; 19 miles east of Constance.

TETNEY, a parish of England, in Lincolnshire; 10½ miles north-by-east of Louth. Population 489.

TETON, a hamlet of England, in Northamptonshire; 8 miles north-north-west of Northampton.

TETON, a river of the United States, in Louisiana, which runs into the Missouri; 1263 miles from the Mississippi.

TETONS, Indians of the United States, on the Missouri, below the river Teton. Number 11,500.

VOL. XXIII. No. 1617.

TETRACERA [*Tetragas* and *kegas*, quadruplex cornu. The seed-vessel, in some species, being composed of four capsules, like horns], in Botany, a genus of the class polyandria tetragynia, order icosandria tetragynia, of Schreb, natural order of rosaceæ (*Juss.*)—Generic Character. Calyx: perianth one-leaved, five or six parted, (five or six-leaved,) spreading, permanent; segments roundish, a little unequal. Corolla: petals three to five, or none? (four or five) roundish, concave, inserted into the calyx. Stamina: filaments numerous, capillary, widening at the top, permanent, inserted into the calyx. Anthers twin, with the cells disjoined. Pistil: germs three or four, sometimes solitary, ovate, oblique, diverging. Styles simple, permanent. Stigmas obtuse. Pericarp: capsules as many (four) as there are germs, ovate, divaricating, opening by the inner side. Seeds solitary or few, surrounded by a rayed aril.—*Essential Character*. Calyx five or six-leaved. Corolla four or five-petalled. Filaments widening above, and anther-bearing on each side. Capsules four, opening on the side. Seed arilled at the base.

I.—Flowers one-styled.

1. *Tetracera sarmentosa*.—See DELIMA.
2. *Tetracera tomentosa*.—Leaves ovate, acuminate, toothed, smooth above, tomentose beneath; flowers one-styled.—It is a native of Guiana: flowering in January.
3. *Tetracera aspera*.—Leaves roundish, superband, rugged; flowers one-styled.—A shrub, native of Guiana, where it grows in woods.
4. *Tetracera doliacarpus*.—Leaves oblong, acuminate, toothed at the end; peduncles axillary, one-flowered; flowers one-styled.—A shrub, native of Surinam.
5. *Tetracera stricta*.—Leaves ovate-lanceolate, toothed; flowers terminating, one-styled; stem strict.—A shrub, native of Surinam.
6. *Tetracera calinea*.—See DOLIOCARPUS CALINEA.
7. *Tetracera obovata*.—See MAPPIA GUIANENSIS.
8. *Tetracera nitida*.—Leaves lanceolate-oblong, rugged, quite entire; flowers one-styled. Branches round, smooth; germ ovate, acute, smooth.—Found in the island of Trinidad.

II.—Flowers mostly four-styled.

9. *Tetracera Euryandra*.—See EURYANDRA.
 10. *Tetracera volubilis*.—Leaves very rugged, serrate; flowers four-styled. This has a woody stalk, rising to the height of twelve or fourteen feet, covered with a grey bark, and sending out several slender woody branches which twine about any neighbouring support.—Native of South America.
 11. *Tetracera lævis*.—Leaves oblong, even, almost quite entire, acuminate; flowers terminating. Branchlets flexuose, with an ash-coloured bark, smooth, somewhat angular.—Native of the East Indies.
 12. *Tetracera alnifolia*.—Leaves oblong, acute, almost quite entire, somewhat rugged beneath; panicle terminating; branches round, smooth.—Native of Guiana.
- Propagation and Culture*.—The seeds being procured from the countries where the plant naturally grows, should be sown in pots filled with light earth, and plunged into a moderate hot-bed of tanner's-bark, where they must be treated in the same way as other exotic seeds from the same countries.

TE/TRAD, *s.* [*tetras*, *tetradis*, Lat.] The number four; a collection of four things.—Four here takes place again in the assignment of the masculine and feminine numbers; whence I further conceive, that, under the number of this more complex *tetrad*, he [Pythagoras] taught his disciples the mystery of the whole creation. *More*.

TETRA/GONAL, *adj.* [*τετραγωνος*, Gr.] Four square.—From the beginning of the disease, reckoning on unto the seventh day, the moon will be in a *tetragonal* or quadrate aspect, that is, four signs removed from that wherein the disease began; in the fourteenth day it will be an opposite aspect, and at the end of the third septenary *tetragonal* again. *Brown*.

TETRAGONIA [abbreviated by Linnæus, from *Tetragonocarpus*, a name of Commelin's, given from the four-cornered form of the fruit.], in Botany, a genus of the class icosandria, order pentagynia, natural order of succulentæ, ficoideæ (*Juss.*)—Generic Character. Calyx: perianth four-leaved, superior; leaflets four, ovate, bent down and flat, rolled back at the edge, coloured, permanent. Corolla none, unless the calyx be called so. Stamina: filaments twenty, capillary, shorter than the calyx. Anthers oblong, incumbent. Pistil: germ roundish, five-cornered, inferior. Styles four, awl-shaped, recurved, length of the stamens. Stigmas longitudinal of the style, pubescent. Pericarp: drupe coriaceous, four-cornered, with four longitudinal wings, the opposite angles narrower, not opening. Seed one, bony, four-celled; kernels oblong.—*Essential Character.* Calyx three to five-parted. Petioles none. Drupe inferior, inclosing a nut from three to eight-celled.

1. *Tetragonia fruticosa*, or shrubby tetragonia.—Shrubby; leaves linear; fruits winged. Flowers axillary, at every joint towards the ends of the branches, solitary, or two or three together.—This and all the species except the two last are natives of the Cape of Good Hope.

2. *Tetragonia decumbens*, or trailing tetragonia.—Shrubby; leaves obovate; fruits winged. This has larger stalks than the preceding, but they branch out in like manner.

3. *Tetragonia herbacea*, or herbaceous tetragonia.—Herbaceous, even; leaves ovate, petioled; fruits winged.

4. *Tetragonia hirsuta*, or hairy tetragonia.—Herbaceous, hirsute, procumbent; leaves ovate, villose; flowers axillary, tern, sessile.

5. *Tetragonia spicata*, or spiked tetragonia.—Smooth, herbaceous, erect; lower leaves ovate, uppermost lanceolate, smooth; flowers racemed.

6. *Tetragonia echinata*, or hedge-hog tetragonia.—Herbaceous, leaves rhomb-ovate; fruits echinate. Root biennial.

7. *Tetragonia expansa*, or horned tetragonia.—Herbaceous, leaves ovate-rhomboid; fruits four-horned.—Native of New Zealand, by the sides of woods in bushy sandy places; also within the tropics on the shore of the island Tongatabu; and in Japan.

8. *Tetragonia crystallina*, or diamond tetragonia.—Herbaceous, frosty; leaves ovate, sessile; fruits unarmed; root annual.—Found in Chancaye, a province of Peru, by Dombey, whence he sent the seeds to the Paris garden, where it flowers and fruits during the summer, growing up and perishing in a few months.

Propagation and Culture.—All the Cape plants may be propagated by cuttings, which should be cut off from the plants a few days before they are planted, that the part where they are cut may be healed, otherwise they will rot, for the leaves and stalks are very full of moisture. The best time to plant these cuttings is in July, that they may have time to make good roots before winter. The two last species are more tender, especially the eighth, and must be kept in the tan-stove. They are propagated only by seeds.

TETRAMETER, *s.* [*tetrametrum*, Lat.] A verse consisting of four feet.—The first are couplets interchanged of sixteen and fourteen feet; the second of equal *tetrameters*. *Selden.*

TETRAMETER, *adj.* Having four metrical feet.—Every reader who has an ear for metre will easily perceive, that it is written very exactly in verses of fifteen syllables without rhyme, in imitation of the most common species of the Latin *tetrameter* iambic. *Tyrwhitt.*

TETRANTHUS [so named from having four flowers within one common calyx.], in Botany, a genus of the class syngenesia, order polygamia segregata, natural order of capitata, cinarocephalæ (*Juss.*)—Generic Character. Calyx: common five-leaved, four-flowered; leaflets linear, erect, ciliate, at the base of the florets. Perianth proper, one leaved, tubulous, attenuated at the base, compressed, oblique at the throat, ciliate at the edge, one-flowered, many times longer than the common calyx. Corolla: compound, uniform,

equal. Corollets four, hermaphrodite. Proper one-petalled, funnel-form; tube gradually widening; border five-cleft, unequal; the two upper segments smaller and less divided, the three lower more spreading, oblong, obtuse. Stamina: filaments five, from the base of the corollets, half the length of the tube. Anther tubulous. Pistil: germ from the bottom of the perianth, under the filaments, oblong. Style longer than the stamens and corolla, filiform, divided beyond the middle. Stigmas reflexed, linear, obtuse. Pericarp none. Perianth proper, unchanged, permanent, including. Seed oblong, striated, crowned with the membranaceous ciliate margin of the apex. Receptacle very small, naked.—*Essential Character.* Calyx common, four-flowered. Perianth proper, one-leaved. Seeds crowned.

Tetranthus littoralis.—It is an annual plant.—Native of Hispaniola.

TETRAO, in Ornithology, a genus of the Gallinæ order of birds; the characters of which are, that it has a spot near the eyes naked, or papillose, or rarely covered with feathers. It comprehends sixty-seven species, classed under several divisions and subdivisions.

I.—With the naked spot above the eyes, and hairy legs.

LAGOPODES.—With four-toed feet.

1. *Tetrao urogallus.*—With roundish tail, and white axillæ. This is the cock of the wood of Ray and Willughby, and wood grouse of Pennant and Latham.

2. *Tetrao phasianellus.*—With wedge-shaped tail; head, neck, and body above, testaceous, and black-banded.—Found in Hudson's Bay and the uncultivated parts of Virginia.

3. *Tetrao tetrix.*—With bifurcated tail, secondary quills white towards the base. This is the urogallus minor of Brisson and Gesner, and black cock, black game, or black grouse of Ray, Willughby, Pennant, and Latham.—Found in the woods, heaths, &c. of the cold parts of Europe and Siberia. See GROUSE.

4. *Tetrao nemesianus.*—With red tail, spotted with black; black tip, and body varied with black and red: the Nemesian grouse of Latham.

5. *Tetrao betulinus.*—With black tail, varied with black transverse spots; and rump whitish, with black bands: the birch grouse of Latham.

6. *Tetrao Canadensis.*—With black tail-feathers, yellow at the tip, and two white streaks at the eyes: the black and spotted heath-cock of Edwards.

7. *Tetrao canace.*—With entire tail, and white spot near the ears and nostrils.—Found at Hudson's Bay.

8. *Tetrao lagopus.*—Cinereous; hairy toes; white quills; black tail-feathers, tipped with white; the intermediate white; this is the white game of Willughby, and ptarmigan of Pennant and Latham.—Found in Siberia and the northern parts of Europe.

9. *Tetrao albus.*—Orange, varied with black bands and white streaks; hairy toes; tail-feathers black, tipped with white; the intermediate wholly white: this is the white partridge of Ellis and Edwards, and the white grouse of Pennant and Latham.—Found gregarious in the forests of North America, Europe, and Asia.

10. *Tetrao rupestris.*—Orange, varied with black bands and white streaks; plumose toes; black tail-feathers tipped with white; the intermediate wholly white with black lores: this is the rock grouse of Pennant.—Found at Hudson's Bay.

11. *Tetrao lapponicus.*—With naked scaly legs; with a superciliary scarlet line covered with a membrane of the same colour; the primary quill-feathers and tail-feathers tipped with white.

12. *Tetrao cupido.*—With succenturiate cervical wings: the attinga Americana of Brisson, and pinnated grouse of the Arctic Zoology and of Latham.—Found in North America.

13. *Tetrao umbellus.*—With the cervical umbo exstant: this is the ruffed heath-cock of Edwards, and ruffed grouse of Latham.—Found in North America.

14. *Tetrao togatus.*—With the greater axillary feathers black-azure: this is the bonasia major canadensis of Brisson and

and shoulder-knot grouse of Forsters and of Latham.—Found at Hudson's Bay.

15. *Tetrao bonasia*.—The tail-feathers cinereous, with black points and band; the two intermediate excepted.—Found among the hazels of Europe and Western Siberia.

16. *Tetrao canus*.—Body grey, undulated with brown; the beak and legs black.—Found in Sweden.

17. *Tetrao alchata*.—Above varied; the two intermediate tail-feathers twice longer than the others, and subulate.—Found in Europe, Africa, and Asia.

18. *Tetrao namaqua*.—Above spadiceous, with the two intermediate tail-feathers longer and subulate: the Namaqua grouse of Latham.—Found in Africa amid the dry deserts inhabited by the Namaquis, flying gregarious to fountains.

19. *Tetrao Indicus*.—Front white, surrounded by a wreath behind black; the body above yellowish-red, varied with black lunules: the Indians grouse of Latham.—Found at Coromandel.

20. *Tetrao arenarius*.—Ruff, abdomen, and vent black; tail-feathers with brown and grey bands, tipped white; the two intermediate yellowish: the sand grouse of Latham.—Found about the Volga near Astrachan.

With three-toed Feet.

21. *Tetrao paradoxus*.—With three-toed feet; toes hairy, almost joined at the apex: this is the heteroclitous grouse of Latham.—Found in the Southern Tartarian desert.

II.—With papillose skin about the eyes; and naked legs.—With the feet of the male spurred. *PERDICES*, or Partridges.

22. *Tetrao francolinus*.—Abdomen and throat black, and wedge-formed tail.—Found in the south of Asia and Europe, and in Africa, of the size of the partridge, feeding on seeds, emitting a hissing sound, flesh delicious.

23. *Tetrao Madagascariensis*.—Abdomen black, varied with large red spots; throat white; the two intermediate tail feathers reddish with black bands.

24. *Tetrao rufus*.—Legs and beak sanguineous; throat white, surrounded with a band black, white pointed.—Found gregarious in the woody mountains of Europe, Asia, and Africa, much larger than the partridge.

25. *Tetrao perdix*.—With a naked scarlet spot under the eyes; tail ferruginous; breast brown; and legs whiteish: this is the common partridge. Of this species there are several varieties, differing chiefly in colour.

26. *Tetrao Damascenus*.—With a naked scarlet spot under the eyes; tail ferruginous; breast brown; and legs yellow. This species migrates in flocks through the middle of Europe, and is allied to the partridge, but less, with a longer beak.

27. *Tetrao montanus*.—Legs and beak red; throat reddish and dingy: the *perdix montana* of Brisson.—Found in the mountains of Europe.

28. *Tetrao rubricollis*.—Legs, beak, chin, and throat naked, all red: the red-necked partridge of Latham.—Found in Africa.

29. *Tetrao petrosus*.—Beak and legs red; body brown, and ferruginous spot on the breast: the rufous-breasted partridge of Latham.—Found amid the rocks and mountains near Gambia.

30. *Tetrao perlatus*.—Legs and eye-brows red; beak blackish; throat white; and body varied with brown.—Found in China: and it has a variety with beak and legs brown, eye-brows spotted with white and black, at the Cape of Good Hope.

31. *Tetrao bicalcaratus*.—With double-spurred feet, and black eye-brows: the Senegal partridge of Latham.—Found near the Senegal.

32. *Tetrao Zeylo nensis*.—With double-spurred feet; beak and naked area of the eyes red; tail round and brown.

33. *Tetrao spadiceus*.—With two-spurred feet red; beak yellow; and body spadiceous or bright red-coloured: the brown African partridge of Latham.—Found in Madagascar.

34. *Tetrao nudicollis*.—With two-spurred feet, and naked throat red.

35. *Tetrao gingicus*.—Bill black; rump and tail red, grey and black mixed; and eye-brows white.—Found near Gingi, in Coromandel.

36. *Tetrao Pondicerianus*.—Bill black; two intermediate tail-feathers red, numerous angulated lines brown; and four bands ochre-coloured: the Pondicherry partridge of Latham.—Found in Coromandel.

37. *Tetrao nævius*.—Legs and bill reddish; body brown, variegated with yellow.—Found in the temperate parts of New Spain.

Coturnices, or Quails.—With four toes.

38. *Tetrao ferrugineus*.—Legs and beak brown; body beneath diluted light red, above ferruginous-brown; feathers of the neck longer and acutely tipped.—Found in China.

39. *Tetrao Javanicus*.—Legs flesh-coloured; front, spot on the hind head, and abdomen, orange; beak, breast, and tail cinereous, varied with black: Javan partridge of Latham.

40. *Tetrao viridis*.—Green; legs and beak reddish; area of the eyes red; wings spadiceous.

41. *Tetrao Virginianus*.—With a black band above and below the eyes; vertical line yellow.—Found among the trees of America.

42. *Tetrao marilandus*.—With white eye-brows; neck pointed with white and black.

43. *Tetrao kakelik*.—Bill, eye-lids and legs scarlet; breast cinereous; back undulated with white and cinereous.—Found in Bucharica, &c.

44. *Tetrao caspius*.—Cinereous, spotted with light-red; the nostrils, orbits, and temples dusky.—Found near Astrabad, in Persia.

45. *Tetrao Mexicanus*.—Legs and bill sanguineous; the superciliary line white.

46. *Tetrao Falklandicus*.—Variegated with brown spots and curved striæ; beneath white; bill lead-coloured; legs brown; temples spotted with white.—Found in the Falkland islands.

47. *Tetrao Novæ Hispaniæ*.—Legs and bill black; crested head, and head variegated with white and black; body and quill feathers yellow, the latter tipped with white.—Found in New Spain.

48. *Tetrao coyolcos*.—With yellow legs; crown and neck fasciated with white and black; body above yellow, varied with white. This is the *coturnix mexicana* of Brisson; the *coyolcozquo* of Ray and Willughby; the *coyolcos* of Buffon; and lesser Mexican quail of Latham: the eyes are black.

49. *Tetrao suscitator*.—Variegated with yellowish, red, black and grey; bill longer. This is the *coturnix javensis* of Brisson; the *coturnix indica Bontii* of Ray and Willughby; the *reveil-matin* or *caille de Java* of Buffon; and noisy quail of Latham.—Found in the woods of Java.

50. *Tetrao striatus*.—With reddish legs; white eye-brows; tail, throat, lower breast and abdomen black, white guttated: the Madagascar quail of Latham.

51. *Tetrao griseus*.—With black legs and bill; body dilutely and sordidly grey, black banded.—Found in Madagascar.

52. *Tetrao Coromandelicus*.—Head black; vertex and ocular fascia red and yellow; throat white, surrounded with a black stria; body striated; quill-feathers brown.

53. *Tetrao Novæ Guineæ*.—Brown; greyish legs; black quill-feathers, the covers of the wings obsolete yellow.

54. *Tetrao Manillensis*.—Above black; legs and bill black; throat white; breast grey, spotted black; abdomen yellow, black-banded.

55. *Tetrao cristatus*.—The dependent crest and throat yellow.—Found in Guiana and New Spain.

56. *Tetrao sinensis*.—Body spotted grey; throat black, with a white bow.—Found in China and the Philippine isles.

57. *Tetrao coturnix*.—Body spotted grey; eye-brows white; the margin and lunule of the tail-feathers ferruginous.

With

With three toes.

58. Tetrao Gibraltaricus.—With pale legs; black bill; quill-feathers and tail black.

59. Tetrao Andalusicus.—Red, variegated with black; beneath reddish-white; legs and bill flesh-coloured.

60. Tetrao nigricollis.—Body above cinereous, variegated with red and black beneath; legs and bill cinereous; chin and throat black; quill-feathers brown.

61. Tetrao luzonniensis.—Head, neck, and throat variegated with white and black; throat and breast bay; abdomen yellowish; legs and bill dilutely grey.—Found in the Manilla islands.

III.—With the area about the eyes covered with feathers, but naked and tetradactyle. TINAMAU.

62. Tetrao Guianensis.—With legs and bill brown; back variegated with cinereous brown and blackish streaks; throat cinereous; abdomen palely orange and brown.

63. Tetrao major.—Legs yellowish and brown; bill black; vertex red; body olivaceous; spots on the back and tail black.—Found in South America.

64. Tetrao cinereus.—Cinereous-brown.

65. Tetrao variegatus.—Legs and bill brown; head and neck black; body above variegated with transverse lines, light red and black; beneath red; throat and middle of the abdomen white.—Found in Guiana.

66. Tetrao suvi.—Legs and bill yellow; head and neck black; body above brown; beneath red.—Found in Guiana.

TETRAPETALOUS, *adj.* [τεσσαρες and πεταλον, Gr.] Such flowers as consist of four leaves round the style: plants having a *tetrapetalous* flower constitute a distinct kind. *Miller.*—All the *tetrapetalous* siliquose plants are alkalescent. *Arbutnot.*

TETRAPHIS. See MNIUM.

TE'TRARCH, *s.* [tetarcha, Lat.; tetarque, Fr.; τετραρχης, Gr.] A Roman governor of the fourth part of a province.

All the earth,

Her kings, and *tetrarchs*, are their tributaries:

People and nations pay them hourly stipends. *B. Jonson.*

TETRA'RCHATE, or TE'TRARCHY, *s.* [τετραρχια, Gr.; *tetrarchat*, Fr.] A Roman government of a fourth part of a province.—After his death, the kingdom was divided by Augustus into *tetrarchies*; Archelaus being made tetrarch of Judea, and the rest of the country divided between Philip and Antipas. *Patrick.*

TETRA'RCHICAL, *s.* Belonging to a tetrarchy.—The whole isle was lately *tetrarchical*, four several kings swaying their ebony scepters in each toparchy. *Sir T. Herbert.*

TETRASTATER, τετραστατηρ, in ancient Coinage, a Grecian gold coin of Lysimachus, Antiochus III., and of some of the Egyptian monarchs. It was the quadruple clirusus (χρυσος), weighing about 530 grains, and current for 80 drachmas of silver, valued at about 3*l.*, now worth 4*l.* sterling.

TETRA'STICK, *s.* [τετραστιχος, Gr.] An epigram or stanza of four verses.—The *tetrastick* obliged Spenser to extend his sense to the length of four lines, which would have been more closely confined in the couplet. *Pope.*

TE'TRASTYLE, *s.* [tetrastyle, Fr.; τετραστα and στυλος, Gr.] A building with four pillars in front.

TETRASYLLABLE, *s.* [tetrasyllabe, Fr.; τετραστα, Gr.; and *syllable*.] A word of four syllables.

TETRAX, in Ornithology, the name of a bird of the otis or bustard kind, called by some authors *anas campestris*, or the field-duck, and also little bustard; and by some others, the canna. See OTIS.

TETRICAL, or TE'TRICOUS, *adj.* [tetricus, Lat.; *tetricue*, Fr.] Froward; perverse; sour.—In this the *tetrical* bassa finding him to excel, gave him as a rare gift to Solyman. *Knolles.*

TETRICITY, *s.* [tetricité, old Fr.] Sourness; perverseness. *Cockeram.*

TE'TRICK, *adj.* [tetricue, Fr.] Sour; harsh; perverse;

morose.—In a thick and cloudy air men are *tetrick*, sad, and peevish. *Burton.*

TETRODON, in Ichthyology, a genus of the Branchiostegi order of fishes, according to the arrangement of Gmelin; the characters of which are, that the jaws are long, divided at the tip; the branchiæ or gills have a linear aperture; the body is roughened beneath, and the ventral fins are wanting. The fishes of this genus, like the Chiodon, have the power of inflating their bodies at pleasure, by means of an internal membrane, and during this time the small spines of the sides and abdomen rise so as to be a defence against their enemies. They live principally on crustaceous and testaceous animals. Gmelin enumerates thirteen species.

1. Tetrodon sceleratus, or the noxious tetrodon.—Tetragonal, with very large head; length two feet or more.—Found in the American and Pacific oceans, and considered as highly noxious, producing, when eaten, very severe symptoms.

2. Tetrodon testudineus, or tortoise-shell tetrodon.—Abdomen plane, smooth, and back with white curved sutures; length two feet; colour rufous-brown above, marked by numerous round pale blue spots; beneath blueish or ash-coloured, beautifully varied by longitudinal brown streaks; fins and tail bright, ferruginous; the whole abdomen is furnished with numerous small spines, which, when the animal is undisturbed, are imbedded in corresponding cavities in the skin, but elevated, when the fish is alarmed and disturbs its body.—Found in the Indian seas.

3. Tetrodon lagocephalus, or hare tetrodon.—Abdomen aculeated; smooth body, and prominent shoulders; length twelve inches; thick in front; hinder parts tapering suddenly towards the tail; colour above yellowish-brown, beneath whitish with a silvery cast; across the back marked with short, black, or dark-brown bars, and over the sides with many, scattered, round, blackish spots; sides and abdomen beset with radiated spines; fins small, and tail slightly rounded.—Found in the Indian and American seas; and straying into northern latitudes, are taken about the British coasts. This fish has the power of inflating the abdomen to a large size; and derives its name from the resemblance of its head to that of a hare.

4. Tetrodon lineatus.—With brown and pale bands; length ten or twelve inches, square shape; and when inflated, like the last, body beset with small spines; colour grey on the abdomen, with longitudinal, deep brown streaks; fins and tail as in the last species.—Found in the Indian and American seas, and also in the river Nile.

5. Tetrodon electricus.—With red, green, and white spots; above brown, and beneath sea-green; yellow at the sides, and green fins; length seven or eight inches; eyes large, with red circles.—Found in the Indian and American seas, among coral rocks; and when touched with the hand, affecting it with an electric or galvanic shock.

6. Tetrodon ocellatus.—Ocellated on the shoulder-band; length six or eight inches; thick, ovate shape, contracting towards the tail; colour deep green above, paler on the sides and abdomen, which are whitish; across the middle of the back, as far as each pectoral fin, a broad black crescent, edged with yellow; dorsal fin situated on a round black spot with yellow edges; lateral line from beneath the eyes to the tail, which is small and roundish; under parts beset with many spines.—Found in the Indian seas and adjoining rivers, particularly those of China and Japan; very poisonous in its nature, and it is prohibited to be eaten under very severe penalties by the emperor of Japan.

7. Tetrodon lævigatus, or smooth tetrodon.—With the abdomen aculeated in front; a large species; blueish above, with two white stripes on each side; under parts white; from the mouth to the end of the pectoral fins aculeated; the other parts being smooth.—Found in the American seas.

8. Tetrodon hispidus.—Entirely hispid, with bristly papillæ; length two feet; shape, when inflated, like that of tetrodon lagocephalus; colour whitish; upper parts marked across

TETRAO.

1. *T. Montanus*. 2. *T. Umbellus*. 3. *T. Viridis*. 4. *T. Major*. 5. *T. Variatus*. 6. *T. Pictus*.

Engraved for the Encyclopædia Londinensis 1827.

the back by three or four semi-decurrent brown bands; whole body beset with small spines.—Found in the Mediterranean and Indian seas. Small remains of this species are said to occur among the petrifications of mount Bolca near Verona.

9. *Tetrodon mola*.—Unarmed, sharp, compressed, rounded; a very short rounded tail; dorsal fin annexed to the anal with oval spiracles. Dr. Shaw has made a distinct genus of the sun-fish under the name of *cephalus*, the characters of which are, that the jaws are bony, and body terminating abruptly, so as to resemble the head of a fish. This genus comprehends the mola, or short sun-fish; the oblong sun-fish, with truncated body, or oblong diodon of Pennant; the variegated, with whitish undulations and spots; and the Palladian *cephalus* or silvery sun-fish, with brownish back, and spiny carinated abdomen.—The mola or short sun-fish, is a native of the European seas. Its general colour is brown, with a silvery cast on the sides and abdomen; the skin rough; the pectoral fins small, rounded, and placed horizontally; the dorsal and anal fins placed opposite, and of a lengthened shape, with rounded tips continued into the tail fin. This fish is sometimes seen lying on its side, on the surface of the water, when it may be easily taken. In the Northern seas it arrives at a vast size, of the length of eight or even of ten feet, and 500 pounds in weight: it is supposed to feed principally on shell-fish, and in the night it is said to exhibit a high degree of phosphoric splendour.

Of this there is a variety, viz. the *truncatus*, unarmed, smooth, compressed, oblong, with a very short tail, the dorsal and anal fins annexed, with lunated spiracles. This is the oblong sun-fish of Pennant.

10. *Tetrodon punctatus*, or spherical brown tetrodon.—With black specks, whiteish abdomen, and very narrow dorsal fin: the tetrodon pointellé of Cépède. Resembling the former.—Found in the Indian seas.

TETSCHEN, DACZIN, or WARTHA, a small town in the north of Bohemia, on the Elbe; 18 miles north of Leutmeritz, and 48 north-by-east of Prague. Population 1600.

TETSO, a small town in the north-east of Hungary; 40 miles north of Nagy-Banya.

TETSWORTH, a parish of England, in Oxfordshire, situated on the river Thames, over which is a bridge which divides it from Wheatley. Population 426; 12½ miles east-south-east of Oxford.

TETTER, *s.* [τετηρ, Sax.] A scab; a scurf; a ring-worm.

A most instant tetter bark'd about
Most lazar like, with vile and loathsome crust,
All my smooth body. *Shakspeare.*

To TETTER, *v. a.* To infect with a tetter.

As for my country I have shed my blood,
Not fearing outward force, so shall my lungs
Coin words till their decay, against those measles,
Which we disdain should tetter us. *Shakspeare.*

TETTIGES, τετιγες, Gr., grasshoppers, a title the Athenians assumed to themselves.

TETTIGOMETRA, a name by which the ancients called the nymph of the cicada, or tetter.

TETTIGONIA, a word used by the ancients to express the smaller species of Cicada.

TETTISH, *adj.* [perhaps a corruption of *tetchy*. *Unused.*] Captious; testy; ill-humoured.—This rogue, if he had been sober, sure had beaten me, he's the most tettish knave. *Beaumont and Fl.*

TETTON, or TEETON, a hamlet of England, in Cheshire; 3 miles west-north-west of Sandbach.

TETTUA MOTU, a cape on the east-coast of New Zealand, the north-east point of Poverty bay. Lat. 38. 36. N. long. 181. 30. W.

TETUAN, a considerable sea-port of Morocco, in the province of El Garb, on the Mediterranean, immediately within the straits of Gibraltar. A branch of the Atlas, passing

through the province of Tedla, comes to within a few miles of the town. The environs are carefully planted with vineyards and gardens; the grapes are exquisite, and the oranges reckoned by some superior to any in the world. Our fleets entering the Mediterranean, often water and victual in the bay of Tetuan. The coast, however, though safe in a west wind, must be avoided when the wind blows from the east; 30 miles south-east of Tangiers. Lat. 35. 50. N. long. 5. 20. W.

TETWORTH, a hamlet of England, in Huntingdonshire; 6 miles south-by-east of St. Neot's.

TETUAN HEAD, a cape on the west coast of the island of Mindanao. Near it is a harbour, the entrance without danger, except such as may be seen. Lat. 7. 20. N. long. 124. 36. E.

TEUCHITES, in Botany, a name used by some for the *scænanthus* or *schænanthus*; which see.

TEUCRIUM [so named from Teucer, son of Scamander, and father-in-law of Dardanus, king of Troy,] in Botany, a genus of the class didynamia, order gymnospermia, natural order of verticillatæ (*Juss.*)—Generic Character. Calyx: perianth one-leaved, half-five-cleft, acute, almost equal, gibbous at the base on one side, permanent. Corolla one-petalled, ringent; tube cylindrical, short, ending in an incurved throat; upper lip erect, acute, deeply two-parted beyond the base, the segments at the sides distant; lower lip spreading, trifid; the lateral segments of the same form with the upper lip, almost erect; the middle one very large, and somewhat rounded. Stamina: filaments four, awl-shaped, longer than the upper lip of the corolla and ascending in the cleft of it, prominent. Anthers small. Pistil: germ four-parted. Style filiform, situation and size of the stamens. Stigmas two, slender. Pericarp none. Calyx unchanged, fostering the seeds at the bottom. Seeds four, roundish.—The upper lip of the corolla, divided beyond the base and gaping, resembles a corolla destitute of an upper lip.—*Essential Character.* Corolla: upper lip two-parted beyond the base, divaricating where the stamens are.

1. *Teucrium campanulatum*, or small-flowered germander.—Leaves multifid; flowers lateral, solitary.—Native of the Levant, and of Apulia, in moist ground.

2. *Teucrium orientale*, or great-flowered germander.—Leaves multifid, flowers racemed.—Native of the Levant.

3. *Teucrium botrys*, or cut-leaved annual germander.—Leaves multifid; flowers lateral in threes, peduncled. Root annual.—Native of the South of Europe, and of Barbary about Algiers.

4. *Teucrium chamæpitys*, or ground pine.—Leaves trifid, linear, quite entire; flowers sessile, lateral, solitary; stem diffused. Root small, branched, annual.—Native of many parts of Europe, the Levant, Barbary and Virginia. In England, it abounds in Kent and Surry, but otherwise it is a scarce plant.

5. *Teucrium nissolianum*, or trifid-leaved germander.—Leaves trifid and quinquefid, filiform; flowers peduncled, solitary, opposite; stem decumbent.—This is an annual plant.—Native of Spain and Portugal.

6. *Teucrium pseudo-chamæpitys*, or bastard ground pine.—Leaves three-parted, trifid, linear; flowers racemed; stem rough-haired.—Native of Spain, Portugal, the South of France about Marseilles, and Algiers in Barbary.

7. *Teucrium iva*, or musky germander.—Leaves three-cusped, linear; flowers sessile, lateral, solitary. Annual.—Native of the South of Europe, and of Barbary.

8. *Teucrium Mauritanum*, or Moorish germander.—Leaves pinnate-multifid; stem quite simple, erect; bractes subulate-palmate.—Found in Barbary.

9. *Teucrium fruticans*, or narrow-leaved tree germander.—Leaves quite entire, elliptic, tomentose beneath; flowers lateral, solitary, peduncled.—Native of Spain, Sicily, and Corsica, near the coast.

10. *Teucrium latifolium*, or broad-leaved tree germander.—Leaves quite entire, rhombed, acute, villose, tomentose beneath.

11. *Teucrium resupinatum*, or resupine-flowered germander.—Villose, leaves lanceolate, deeply serrate; flowers solitary, sessile; corollas resupine. Roots annual.—Native of Barbary, near Mascar, in clayey fields.

12. *Teucrium ramosissimum*, or branched germander.—Hoary, stem fruticlose, very much branched; branchlets filiform; leaflets obovate, crenate; flowers solitary, axillary.—Native of Barbary, near Cassa, in clefts of rocks; also of Spain.

13. *Teucrium Creticum*, or Cretan germander.—Leaves lanceolate-linear, quite entire; flowers racemed.—Native of Candia and Egypt.

14. *Teucrium marum*, common marum or cat-thyme.—Leaves quite entire, ovate, acute, petioled, tomentose beneath; flowers racemed, all directed one way.—Native of Spain.

15. *Teucrium multiflorum*, or many-flowered germander.—Leaves ovate, smooth above, serrate-toothed; flowers racemed, whorls six-flowered.—Native of Spain.

16. *Teucrium laxmanni*.—Leaves ovate-oblong, quite entire, sessile; flowers solitary, sessile.—Found in Siberia. It is a native also of Hungary and Sclavonia.

17. *Teucrium Sibiricum*, or Siberian germander.—Leaves serrate, ovate; peduncles solitary, three-flowered, the middle flower sessile; bractes linear-lanceolate.—Native of Siberia. Perennial.

18. *Teucrium salicifolium*, or willow-leaved germander.—Leaves lanceolate-elliptic, bluntish, quite entire; calyxes quadrifid, solitary.—Native of the Levant.

19. *Teucrium Asiaticum*, or Asiatic germander.—Leaves lanceolate, repand-serrate, rectangular at the base; flowers solitary.—Native place not known.

20. *Teucrium Cubense*, or Cuba germander.—Leaves wedge-shaped, serrate-gashed, smooth, attenuated into the petiole; flowers solitary, peduncled.—Native of Cuba in moist hedges and meadows; flowering in December and the following months.

21. *Teucrium arduini*.—Leaves ovate, serrate; raceme spiked round, sessile, terminating.—Its native place not known.

22. *Teucrium Canadense*, or nettle-leaved germander.—Leaves ovate-lanceolate, serrate; stem erect; raceme round, terminating; whorls six-leaved.—Native of North America.

23. *Teucrium Virginicum*, or Virginian germander.—Leaves ovate, unequally serrate; racemes terminating.—Native of Virginia.

24. *Teucrium inflatum*, or three-spiked germander.—Leaves oblong, acuminate, unequally serrate, pubescent; spikes sessile, terminating; calyxes inflated, villose.—It is a native of Jamaica, and pretty frequent in the lower parts of St. Mary's, where it grows very luxuriantly.

25. *Teucrium hircanicum*, or betony-leaved germander.—Leaves cordate-oblong, obtuse; stem brachiate, dichotomous; spikes very long, terminating, sessile, spiral.—Native of Persia.

26. *Teucrium abutiloides*, or mulberry-leaved germander.—Leaves cordate, toothed, acuminate; racemes lateral, nodding.—Native of Madeira.

27. *Teucrium scorodonia*, sage-leaved germander, or wood sage.—Leaves cordate, serrate, petioled; racemes lateral, directed one way; stem erect. Root perennial, creeping. Stems a foot and half or two feet high, four-cornered, nearly upright, hairy, leafy, hard, often purple, panicle-racemed. Leaves opposite, wrinkled, hairy, veiny and wrinkled like sage, somewhat glutinous, strong-smelling, bitter. Flowers in pairs, on long opposite naked racemes, pedicelled. Corolla straw-coloured, woolly; tube longer than the calyx, upper lip none, but the top of the tube slightly cleft. Stamens violet-coloured.—Native of Europe and Morocco, in woody and hilly situations, among bushes and under hedges, where the soil is dry and stony: in such places frequent in most parts of Great Britain; flowering from July to September.

28. *Teucrium pseudo-scorodonia*, or bastard wood sage.

—Shrubby; leaves cordate, toothed, petioled, hoary beneath; racemes directed one way.—Native of Barbary.

29. *Teucrium massiliense*, or sweet-scented germander.—Leaves ovate, wrinkled, gash-crenate, hoary; stems erect; racemes straight, directed one way.—Native of the South of France, Candia, and Cochinchina.

30. *Teucrium betonicum*, or hoary germander.—Leaves lanceolate, crenate, tomentose, hoary beneath; racemes terminating, flowering stem brachiate.—Native of Madeira.

31. *Teucrium scordium*, or water germander.—Leaves oblong, sessile, tooth-serrate; flowers axillary, in pairs, peduncled; stem diffused.—Native of many parts of Europe.

32. *Teucrium chamædrys*, common or wall germander.—Leaves subovate, petioled, gash-crenate; flowers axillary, peduncled, tern; stem round, hairy. Root perennial, creeping. Stems bushy, almost upright, six or eight inches high, round, leafy, hairy. Leaves hairy, attenuated at the base, where they are entire, in the other parts deeply cut: from each axil a bunch of smaller leaves. Flowers from the upper axils, often three together, but sometimes single, opposite, pedicelled, forming a leafy spike.—Native of many parts of Europe, the islands of the Archipelago, and Palestine near Jerusalem. In England scarcely indigenous, being found chiefly on ruins of old buildings. There are also *Teucrium heterophyllum*. *Teucrium lucidum*. *Teucrium flavum*. *Teucrium bracteatum*. *Teucrium montanum*. *Teucrium supinum*. *Teucrium Pyrenaicum*. *Teucrium polium*. *Teucrium capitatum*. *Teucrium pumilum*. *Teucrium spinosum*. *Teucrium corymbiferum*. *Teucrium lævigatum*. *Teucrium trifoliatum*. *Teucrium Gnaphalodes*. *Teucrium villosum*. *Teucrium undulatum*. *Teucrium thea*. *Teucrium trifidum*. *Teucrium parviflorum*. *Teucrium brevifolium*. *Teucrium regium*. *Teucrium Japonicum*. *Teucrium salviastrum*. *Teucrium scordioides*. *Teucrium nitidum*. *Teucrium thymifolium*. *Teucrium rotundifolium*. *Teucrium buxifolium*. *Teucrium flavescens*. *Teucrium valentinum*. *Teucrium Lusitanicum*. *Teucrium pycnophyllum*. *Teucrium verticillatum*. *Teucrium libanitis*. *Teucrium angustissimum*. *Teucrium cœleste*.

Propagation and Culture.—All the species may be propagated by seeds, cuttings, or parting the roots, always remembering to treat them according to the climate from which they originally came.

TEVERONE, the ancient *Anio*, a river of Italy, in the State of the Church, which joins the Tiber, a short distance above Rome.

TEVERSALL, a parish of England, in Nottinghamshire; $4\frac{1}{2}$ miles west-by-north of Mansfield.

TEVERSHAM, a parish of England, in Cambridgeshire; 4 miles north-east-by-east of Cambridge.

TEVESAR, a town on the west coast of the island of Celebes. Lat. 2. 2. S. long. 119. 21. E.

TEUFFEN, a large and finely situated village of the Swiss canton of Appenzel, in what is called the Outer Rood; 2 miles south-south-east of St. Gall. It contains, with the surrounding parish, 3300 inhabitants, who are chiefly employed in spinning and weaving cotton.

TEVIOT, or ΤΙΒΙΟΤ, a river of Scotland, in Roxburghshire, which has its rise in Moss-paul, on the confines of Dumfriesshire; takes a course nearly north-east, being joined by Allan water at Raesknows, by Borthwick water at Martin-house, by the Slittrick at Hawick, the Rule at Cavers, the Ale below Aucrum, the Jed two miles below Jedburgh, the Oxnam near Crailing, the Kale at Eckford, and other tributary streams, and unites with the Tweed at Kelso. From this river, the county of Roxburgh has its ancient name of Teviotdale.

TEVIOTDALE, a district of Scotland, so named from the river Teviot.

TEURERT, or TEVRERT, a town of Fez, on the borders of Algiers; 40 miles east-north-east of Teza.

TEUSACA, formerly a city of New Granada, in the province of Bogota, of which nothing now remains but a miserable village of Indians.

TEUSCHNITZ, a small town of the interior of Germany, in Bavaria; 20 miles east-north-east of Coburg.

TEUSCARUTZ, a petty town of Germany, in Bavarian Franconia, with 700 inhabitants; 21 miles north-east of Coburg, and 19 north of Culmbach.

TEUTATES, a name or attribute of the Supreme Being, which was worshipped by the Gauls and Britons as a particular divinity. It is evidently compounded of the two British words "Deu-tatt," which signify God the parent or creator.

"Et quibus immifis placetur sanguine divo
Teutatus; horrensque feris altanibus Hesus."

Lucan.

TEUTHIS, in the Linnæan system of Ichthyology, a genus of the abdominal fishes; the characters of which are, that the head is a little truncated on the fore part; that the branchiostege membrane has five rays; and that the teeth are equal, rigid, and near each other, and forming a regular chain. Linnæus and Gmelin mention two species; viz., *hepatus*, and *javus* or *java*. This genus is now annulled, and the species are transferred to *Acanthurus* and *Chaetodon*.

TEUTILA, a town of Mexico, in the intendency of Oaxaca, containing 164 families of Indians; 29 leagues east-south-east of Mexico.

TEUTILAN, a town of Mexico, and capital of a district of the same name, in the intendency of Oaxaca. It contains 237 families of Indians, besides some Spaniards and mestizoes. Lat. 17. 2. N. long. 96. 30. W.

TEUTLEBEN, a village in the central part of Germany, in the duchy of Saxe-Gotha; 4 miles west of Gotha.

TEUTO'NIC, *adj.* Spoken by the Teutones, or ancient Germans.—Our knowledge of the northern literature is so scanty, that of words undoubtedly *Teutonic* the original is not always to be found in any ancient language. *Dr. Johnson*.

TEUTO'NIC, *s.* The language of the Teutones: by ellipsis.—The Icelandic is the mother of the modern Swedish and Danish tongues, in like manner as the Anglo-Saxon is the parent of our English. Both these mother-tongues are dialects of the ancient Gothic or *Teutonic*. *Bp. Percy*.

TEUTONIC, something belonging to the Teutones, an ancient people of Germany, inhabiting chiefly along the coast of the German ocean.

The Teutonic language is the ancient language of Germany, which is ranked among the mother tongues. It is now called the German, or Dutch, and is distinguished into *upper* and *lower*.

The *upper* has two notable dialects; viz., 1. The Scandinavian, Danish, or perhaps Gothic; to which belongs the languages spoken in Denmark, Norway, Sweden, and Iceland. 2. The Saxon, to which belong the several languages of the English, Scots, Frisian, and those on the north of the Elbe.

To the *lower* belong the Low Dutch, Flemish, &c., spoken through the Netherlands, &c.

The learned Mr. Whitaker has lately, in his History of Manchester, controverted the opinion of those who affirm the English language to be genuinc and unmixed Teutonic, and asserted it to be of Celtic origin. Mr. Drake, in his Essay on the Origin of the English Language, Archæol. vol. 5., has endeavoured to support the former opinion, by comparing part of Ulfhila's Gothic version of the gospel of St. John, executed above 1400 years ago, with the same in our present translation, and evincing the striking affinity between the two languages; notwithstanding the different mediums through which they have descended, and the many ages that have elapsed since they have been separated. Every circumstance, he observes, that constitutes the true genius of language, is visibly derived to the English from the Goths and Saxons. The articles, flexure of the genitive case, prepositions and auxiliary verbs, are all absolutely Teutonic. The English, he says, is clearly the natural descendant of the Gothic or Teutonic; and he challenges the deepest inquirer into the Celtic to produce so decisive a proof of any affinity

of that tongue with ours. The British, he adds, has little or no resemblance to the English. Many of their terms may have gained admission among us, as, from the vicinity and long intercourse we have had with that people, may necessarily be imagined, but their idioms and genius are as radically and essentially different as any two languages can possibly be.

TEUTONIC ORDER, a military religious order of knights, established towards the close of the twelfth century; and thus called, because it consisted principally of Germans, or Teutones.

The origin, &c. of this order were thus: the Christians, under Guy of Lusignan, laying siege to Acre, or Acon, a city of Syria, on the borders of the Holy Land, at which siege were present, Richard king of England; Philip Augustus of France, &c., some Germans of Bremen and Lubec, touched with compassion for the sick and wounded of the army, who wanted common necessities, set on foot a kind of hospital under a tent, which they made of a ship's sail; and here betook themselves to a charitable attendance on them.

The habit of this order was a white mantle, with a black cross.

TEUW, a small island in the Eastern seas. Lat. 7. 11. S. long. 129. 20. E.

TEUZITLAN, a town of Mexico, and capital of a district of the same name, containing about 600 families of Mexican Indians, Spaniards, mestizoes, and mulattoes; 120 miles east-north-east of Mexico.

TEW, *s.* [*towe*, a hempen rope, Dutch.] Materials for any thing. *Skinner*.—An iron chain. *Ainsworth*.

To **TEW**, *v. a.* [*capian*, Sax.] To work; to beat so as to soften: of leather we say to *taw*. This is a naval expression applied to hemp: to *taw* hemp.—To tease; to tumble over or about; to pull.

Do not anger 'em,

But go in quietly, and slip in softly,
They will so *tew* you else.

Beaum. and Fl.

TEW, GREAT, a parish of England, in Oxfordshire; 3½ miles north-north-east of Neat Enstone. Population 457.

TEW, LITTLE, a township in the foregoing parish.

TEW'WEL, *s.* [*tuyau* or *tuyal*, Fr.] In the back of the forge, against the fire-place, is fixed a thick iron plate, and a taper pipe in it above five inches long, called a *tewel*, or *tewel* iron, which comes through the back of the forge; into this *tewel* is placed the bellows. *Moron*.

Soche a smoke—

As—where that men melte lead,
Lo, all on high from the *tewwel*.

Chaucer.

TEWENHAVEN, a harbour of the Baltic, on the east coast of the island of Dago, on the coast of Esthonia, near Revel.

TEWIN, or **TEWING**, a parish of England, in Herefordshire; 3¼ miles east-south-east of Welwyn. Population 438.

TEWKESBURY, a market town and borough of England, in the county of Gloucester, situated in a delightful and fertile vale on the eastern bank of the river Avon, near its confluence with the Severn, and between two other streams called the Carron, and the Swillgate, which flow into the Avon, the one just above the town, and the other a short distance below it. The access to the town is by several commodious bridges. That over the Avon is a stone structure of considerable length. The town is pretty large, handsome, and populous. Tewkesbury abbey was founded in the year 715, by two Saxon brothers, Dodo and Odo, who were then dukes of great opulence and high consideration in the kingdom of Mercia, and the first lords of the manor here. Besides the church, Tewkesbury contains meeting-houses for Independents, Quakers, Baptists, and Methodists. The town-hall is a handsome building. Tewkesbury was formerly famous for its manufactures; it had once a considerable share in the elthing business, but this trade has long since declined. It was likewise noted for its mustard. At present the

the chief manufacture carried on in the town is that of stocking frame-work knitting, particularly in cotton. A considerable trade is also carried on in malting, and some business in the making of nails. Tewkesbury was incorporated by a charter granted by queen Elizabeth, and confirmed by James I.; but in the reign of James II., the corporate officers surrendered their seal to that monarch, who in his second year re-incorporated them by the names of the mayor, aldermen, and common council. The revolution which immediately followed prevented the charter from being carried into effect, and the town remained in a state of uncertainty as to its government till the 13th of William III., when the present form was ordained. By this the government of the town is vested in two bailiffs and four justices, annually chosen, and a recorder. The corporate body consists of 24 principal burgesses, and the same number of assistants; but as each principal burgess holds also the office of assistant, the members of the corporation are now uniformly confined to 24 persons, instead of 48, as formerly. The town sends two members to parliament, the privilege of which was obtained from James I. in 1609. The right of election is possessed by the freemen and freeholders, who amount to about 500. It was at Tewkesbury that the last battle was fought between the adherents of the houses of York and Lancaster. This battle, it is well known, proved fatal to the Lancastrians. The field on which it was fought is still called the Bloody Meadow, and is situated about half a mile from the town. In the civil wars in the reign of Charles I., Tewkesbury was the scene of many severe contests between the contending forces. Markets on Wednesday and Saturday, and various annual fairs; 10 miles north of Gloucester, and 102 west-north-west of London. Lat. 51. 59. N. long. 2. 8. W.

TEWKESBURY, a township of Lower Canada, in the county of Quebec, on the north side of the St. Lawrence, except a small part, which is in the county of Northumberland.

TEWKSBURY, a post township of the United States, in Middlesex county, Massachusetts, 23 miles north of Boston. Population 943.

TEWKSBURY, a township of the United States, in Hunterdon county, New Jersey. Population 1308.

To TEWTAW, *v. a.* [formed from *teu* by reduplication.] To beat; to break.—The method and way of watering, pilling, breaking, and *tewtawing* of hemp and flax, is a particular business. *Mortimer.*

TEXAS, a track of country of North America, claimed by the United States, as a part of Louisiana, and by Spain as a part of the Internal Provinces, and included in the intendency of San Louis Potosi. It is bounded north by Red river, east by the state of Louisiana, south by the gulf of Mexico, and west by the Del Norte; containing upwards of 100,000 square miles.

TEXEL, an island of the Netherlands, at the entrance of Zuyder Zee, separated from the continent of North Holland by the narrow channel called the Mars-diep. Its form is oblong; 12 miles in length, and about 6 in breadth. It is secured from the sea by strong dikes. Its soil is well fitted for sheep-pasture, and it has long been noted for its cheese. Besides the petty town of Texel, it contains six villages, and has in all about 5000 inhabitants.

TEXMELUCAN, a settlement of Mexico, in the intendency of Mexico, containing 150 families of Spaniards, mestizoes, and mulattoes, and 94 Indians.—There is another settlement of the same name in the same intendency, containing 91 families of Indians.

TEXT, *s.* [*texte*, Fr.; *textus*, Lat.] That on which a comment is written.

We expect your next
Should be no comment but a *text*,
To tell how modern beasts are vext.

A sentence of Scripture.

In religion
What error but some sober brow
Will bless it, and approve it with a *text*.

Waller.

Shakspeare.

To TEXT, *v. a.* To write as a text.

Indifferent judges might condemn me for
A most malicious slanderer, nay *text* it
Upon my forehead.

Beaum. and Fl.

TEXT-HAND, *s.* A particular kind of large handwriting: so called, because formerly the *text* was ever written in a large hand, and the comment in small. *Pegge.*

Once she writ only *text-hand*, when
She scribbled giants, and no men.

Cleveland.

TEXTILE, *adj.* [*textilis*, Lat.] Woven; capable of being woven.—The placing of the tangible parts in length or transverse, as in the warp and woof of *textiles*. *Bacon.*—The materials of them were not from any herb, as other *textiles*, but from a stone called amiantus. *Wilkins.*

TEXTMAN, *s.* A man ready in quotation of texts.—Men's daily occasions require the doing of a thousand things, which it would puzzle the best *textman* readily to bethink himself of a sentence in the Bible, clear enough to satisfy a scrupulous conscience of the lawfulness of. *Sanderson.*

TEXTORIAL, *adj.* [*textorius*, Lat.] Belonging to weaving.—From the cultivation of the *textorial* arts among the orientals came Darius's wonderful cloth. *Warton.*

TEXTURINE, *adj.* [*texturina*, Lat.] Relating to weaving.—It is a wonderful artifice how newly hatched maggots, not the parent animal, because she emits no web, nor hath any *texturine* art, can convolve the stubborn leaf, and bind it with the thread it weaves from its body. *Derham.*

TEXTUAL, *adj.* [*textuel*, Fr.] Contained in the text.—They seek to rout and disarray the wise and well-couched order of St. Paul's own words, using a certain *textual* riot to chop off the hands of the word presbytery. *Milton.*—Serving for texts.—Here shall your majestie find—speculation interchanged with experience, positive theology with polemical, *textual* with discursive. *Bp. Hall.*

TEXTUALIST, *s.* One ready in citing texts.—How nimble *textualists* and grammarians for the tongue the rabbins are, their comments can witness. But, as in Chaucer, "the greatest clerks are not the wisest men;" so, among them, these that are so great *textualists* are not best at the text. *Lightfoot.*

TEXTUARY, *adj.* Contained in the text.—He extends the exclusion unto twenty days, which in the *textuary* sense is fully accomplished in one. *Brown.*—Serving as a text; authoritative.—I see no ground why his reason should be *textuary* to ours, or that God intended him an universal headship. *Glanville.*

TEXTUARIST, or TEXTUARY, *s.* [*textuaire*, Fr.] One ready in the text of Scripture; a divine well versed in Scripture.—Common *textuaries* abolish laws, as the rabble demolish images; in the zeal of their hammers oft violating the sepulchres of good men. *Milton.*

TEXTUIST, *s.* One ready in quotation of texts.—I remember the little that our Saviour could prevail about this doctrine of charity against the crabbed *textuists* of his time. *Milton.*

TEXTURE, *s.* [*texture*, Fr., *Cotgrave*; *textus*, Lat.] The act of weaving.—Skins, although a natural habit unto all before the invention of *texture*, was something more unto Adam. *Brown.*—A web; a thing woven.

Others, far in the grassy dale,
Their humble *texture* weave.

Thomson.

Manner of weaving with respect either to form or matter.—A veil of richest *texture* wrought she wears. *Pope.*—Disposition of the parts of bodies; combination of parts.

Spirits—nor in their liquid *texture* mortal wound
Receive, no more than can the fluid air.

Milton.

TEXUPA, a settlement of Mexico, in the province of Oaxaca, which contains 192 families of Indians, and some of Spaniards, mestizoes and mulattoes.

TEY, THEY, or TEISE, a small river of England, in Sussex, which runs into the Beala.

TEY, GREAT, a parish of England, in the county of Essex

Essex. Population 552; 3½ miles north-east-by-east of Great Coggeshall.

TEY, LITTLE, a hamlet in the foregoing parish.

TEY, MERKS, another parish in the same county, so called from the family name of Merks, its ancient proprietors; half a mile east of Little Tey.

TEYNHAM, a parish of England, in Kent; 4 miles east of Sittingbourn. Population 498.

TEYNYA, a small island in the Eastern seas, near the south-west coast of Mindanao. Lat. 6. 52. N. long. 121. 40. E.

TEYSING, or TAUZIM, a small town of Bohemia; 25 miles north-north-west of Pilsen, and 60 west of Prague. Population 1300.

TEYUPA, a small river of South America, in Paraguay, which runs south-south-west, and enters the Yaquini.

TEZA, a town of Fez, in Africa, on the borders of the province of Rif; 50 miles north-north-east of Fez.

TEZCUCO, one of the five lakes in the valley of Mexico, at the extremity of which, about three miles distant, the city is placed.

TEZCUCO, a town of Mexico, in the intendency of Mexico. It is situated on Lake Tezcuco. It contains 500 inhabitants, Spaniards and Indians. Lat. 19. 31. N. long. 98. 52. W.

TEZCUCA, a settlement of Mexico, in the district of Tezcuco, containing 186 Indian families.

TEZONTEPEC, a settlement of Mexico, in the intendency of Oaxaca, containing 180 families of Indians.—There are two other inconsiderable settlements of this name in Mexico.

TEZONTLA, a settlement of Mexico, in the intendency of Mexico, containing 116 families of Indians.

TEZYOUTE, an assemblage of magnificent ruins, in the southern part of the province of Constantina, in Algiers. Besides the splendid remains of the city gates, seven of which are still standing, there are the seats and upper part of an amphitheatre; the frontispiece of a beautiful Ionic temple, dedicated to Esculapius; a large oblong chamber, with a great gate on each side of it, intended perhaps for a triumphal arch; and the Cubbel Ar-rasah, that is, "the cupola of the bride," as the Arabs call a beautiful little mausoleum, built in the form of a dome, supported by Corinthian pillars; 70 miles south-south-west of Constantina. Lat. 35. 24. N. long. 5. 58. E.

TFENI, a village of Lower Egypt, on the Nile; 10 miles south-east of Rosetta.

THACK, *s.* [ðace, Sax.] Thatch: a common northern word, and old in our language. Hence also a *thackster*, a thatcher. *Prompt. Parv.*

They would in houses of *thacke*
Their lives leade.

Chaucer.

THADA, a settlement of New Granada, in the province of Choco.

THAHAR KIEMEN, a post of Chinese Tartary; 15 miles north-east of Teitchitar.

THAKEHAM, a parish of England, in Sussex; 6½ miles north-west of Steyning. Population 522.

THAL, a large village of the north-east of Switzerland, in the canton of St. Gall; 1 mile west-north-west of Rheineck.

THALAMA, a settlement of New Granada, in the province of Antioquia, on the shore of the river of its name.

THALAMEGUS, among the Ancients, a ship of pleasure, or yacht, used by princes. It was always provided with a good cabin, or bed-chamber.

THALAMI *Nervorum Opticorum*, in Anatomy, two eminences in the brain.

THALAMII, or THALAMITÆ, among the Ancients, those rowers who sat in the lowest part of the ship.

THALAMIUM, a port-hole, through which the oars of the rowers in the bottom of the ship went.

THALAMUS, in Botany, a term used to express that part of the flower in the capitated or flosculous-flowered plants, where the embryo fruits of every separate floscule are lodged, and where afterwards the seeds are contained. This is the

bottom of the cup, in the central part of which it adheres to the stalk.

THALE, a large village of Prussian Saxony, in the principality of Halberstadt. Population 1200.

THALERN, a large village of Lower Austria, on the Danube, near Mautern. In the neighbourhood there are some coal mines.

THALES, the founder of the Ionic school, and of the scientific method of philosophising among the Greeks, was born of Phœnician parents, at Miletus, in the first year of the 35th Olympiad, or about the year 580 B.C. He acquired wealth and distinction among his countrymen, and was employed at an early age in public affairs. In search of wisdom, he travelled to Crete, and afterwards to Egypt. From the priests at Memphis in the latter country, he is said by several writers to have gained his knowledge of philosophy and mathematics. Upon his return to Miletus, he was universally respected for his extraordinary wisdom and learning; and his acquaintance was eagerly courted by all who wished to improve in knowledge or to be ranked among philosophers. He was not prevented, however, by these engagements from prosecuting his mathematical, philosophical, and metaphysical studies. In this course of improvement and usefulness, and of imparting, as well as of acquiring knowledge, he protracted his life to the great age of ninety years, and died, through mere infirmity, whilst he was attending the Olympic games. Thales was ranked among the seven wise men of Greece, and might justly be reckoned one of this number, whether we consider his scientific attainments, or the moral maxims and aphorisms which are ascribed to him.

THALETAS of Crete, a famous lyric poet, celebrated by all antiquity as a *medical* musician, is said to have delivered the Lacedæmonians from the pestilence by the sweetness of his lyre.

THALGAU, a market town of upper Austria, in the circle of Salzburg, in the valley of the same name.

THALHEIM, a large village in the west of Germany, in Wirtemberg, with 1100 inhabitants, all Protestants; 5 miles south of Heilbronn.

THALIA, [so named by Linnæus, in memory of John Thalius, a physician at Nordbuys], in Botany, a genus of the class monandria, order monogynia, natural order of scitaminae, cannæ (*Juss.*)—Generic Character. Calyx: perianth, scales three, very small, ovate, ciliate, permanent, crowning the germ. Corolla: petals five, superior, shrivelling, in a double row; three outer longer, oblong, waved, connate at the base, spreading; two inner smaller, from erect spreading, oblong, connate with each other and the nectary at the base. Nectary petal-shaped, opposite to the smaller petals, lanceolate, acuminate, concave. Stamina: filament one, awl-shaped, inserted into the nectary; anther club-shaped. Pistil: germ turbinate, crowned with the calyx; style filiform, bent in; stigma leafy, bent in. Pericarp: drupe oblong, gibbous, one-celled. Seed one, awl-shaped, bent in.—*Essential Character.* Calyx three leaved. Corolla five petalled; two inner petals less. Nectary lanceolate, concave. Drupe with a one-celled nut.

1. *Thalia geniculata*.—Corollas five-petalled, nectary lanceolate. Leaves alternate, ovate oblong, with transverse parallel nerves. Stem taller than a man, quite simple. The American Indians use it for a dart wherewith to kill animals.

2. *Thalia cannæformis*.—Corollas six-petalled, nectary bifid, erect. Culm solid, round smooth, branched. Branches jointed, divaricating. Leaves on the stem, alternate, spreading.—Native of Mallicollo, one of the New Hebrides, in Australasia; and found in the Andaman isles, and at Rangoon.

THALICTRUM [of Pliny, from *Thallos* vireo: to flourish or look green], in Botany, a genus of the class polyandria, order polyginia, natural order of multisiliquæ, ranunculaceæ (*Juss.*)—Generic Character. Calyx, none, unless the corolla be taken for it. Corolla: petals four, roundish, obtuse, concave, caducous. Stamina: filaments

very many, wider at top, compressed, longer than the corolla. Anthers oblong, erect. Pistil: styles very many, very short. Germs many, commonly pedicelled, roundish. Styles none. Stigmas thickish. Pericarp, none. Seeds many, grooved, ovate, tailless. *Thalictrum tuberosum* and *cornutum* have a five-petalled corolla.—*Thalictrum dioicum* has the sexes distinct. *Thalictrum aquilegifolium* and *contortum* have the seeds pedicelled, pendulous, and three-sided with wings. Number of stamens and pistils different in the several species.—*Essential Character.* Calyx none. Petals four or five. Seeds tailless.

1. *Thalictrum Alpinum*, or Alpine meadow rue.—Stem quite simple, almost naked; raceme simple terminating. The root consists of a few simple fibres, and creeps just below the surface by horizontal runners. It is a delicate little plant, scarcely a span high, and truly alpine.—Native of Lapland, Wales, and Scotland, in wet black mould in the clefts of rocks, or on the spongy margins of little rills on very high mountains, and not rare in such situations. It is perennial, and flowers early in summer.

2. *Thalictrum fetidum*, or fetid meadow rue.—Stem panicled, filiform very branching, leafy. Stem about six or seven inches high. Flowers in loose panicles, small, and of an herbaceous white colour.—Native of the South of France, Switzerland, the Valais and Piedmont.

3. *Thalictrum tuberosum*, or tuberous-rooted meadow rue.—Flowers five-petalled, root tuberous. This has knobbed roots.—Native of Spain.

4. *Thalictrum cornuti*, or Canadian meadow rue.—Flowers dioecious, leaflets ovate trifid, panicles terminating. Height three feet. Flowers in many pale-purple heads, five petalled, white. There is a variety of this, which is somewhat smaller, and has pale purple filaments, which in the other are white.—Native of North America.

5. *Thalictrum dioicum*, or dioecious meadow rue.—Flowers dioecious, leaves roundish cordate lobed, lobes obtuse, peduncles axillary shorter than the leaf. Height scarcely a foot. Stem straight.—Native of North America.

6. *Thalictrum elatum*, or tall meadow rue.—Leaflets ovate, subcordate, subtrifid; panicled terminating; flowers erect; stem roundish.—Native of Hungary.

7. *Thalictrum majus*, or great meadow rue.—Leaflets roundish, subcordate trifid, glaucous beneath; panicle leafy, flowers drooping.—Native of Austria and Hungary in woody places. It has been discovered in England, by Mr. Robson, on a bushy hill at Baysdale near Darlington, and also on the margin of Ullswater in Cumberland.

8. *Thalictrum medium*, or middle meadow rue.—Leaflets oblong, wedge-shaped, acute trifid, the uppermost undivided lanceolate, flowers nearly upright.—Native of Hungary on hills.

9. *Thalictrum minus*, or small meadow rue.—Leaves tripinnate, leaflets trifid glaucous, flowers panicled drooping. Root fibrous. Stem almost upright, a foot high, flexuose, grooved; glaucous with a blueish bloom, leafy panicled. Lower leaves very large, patulous, tripinnate almost from the base; leaflets cordate or wedge-shaped, trifid, sometimes gashed, smooth, glaucous. Panicle spreading, compound. Flowers pedicelled, drooping. Petals four, elliptic, glaucous-purple. Seeds grooved.—Native of many parts of Europe, in meadows. In Britain it occurs in various parts of the country in calcareous soils; but being found only in such, it is by no means a common plant.

10. *Thalictrum rugosum*, or rough meadow rue.—Stem striated, leaves wrinkled veined, lobules blunt.—Native of North America.

11. *Thalictrum Sibiricum*, or Siberian meadow rue.—Leaves three-parted, leaflets subreflexed, sharply cut, flowers drooping.—Native of Siberia and Armenia.

12. *Thalictrum squarrosum*.—Leaflets trifid and undivided, petioles embracing, membranaceous winged flowers drooping.—Native of Siberia.

13. *Thalictrum purpurascens*.—Leaves three-parted, stem twice as high as the leaves, flowers drooping.—Native of Canada.

14. *Thalictrum angustifolium*, or narrow-leaved meadow rue.—Leaflets lanceolate-linear, quite entire.—Native of Germany, Switzerland, Carniola, and Italy.

15. *Thalictrum flavum*, or common meadow rue.—Leaves bipinnate, leaflets trifid, stem grooved, panicled branched very much, and contracted, flowers erect. Root yellow. Stem two or three feet high, upright, simple below, panicled above, smooth, so strongly furrowed, as to be almost angular, leafy. Leaves alternate, twice compounded in a ternate order; their common footstalk with a short sheathing base and a toothed intrafoliaceous stipule; leaflets somewhat wedge-shaped, commonly trifid, but sometimes undivided, entire, varying much in breadth and sharpness, veiny; glaucous beneath.—Native of Europe: frequent with us in wet meadows, and on the banks of rivers and ditches: flowering in June.

Thalictrum simplex. *Thalictrum lucidum.* *Thalictrum aquilegifolium.* *Thalictrum contortum.* *Thalictrum petaloideum.* *Thalictrum styloideum.* *Thalictrum Japonicum.*

Propagation and Culture.—These plants are generally propagated by parting their roots in September, when the leaves begin to decay, and they may take fresh root before frost comes on. They may be planted in almost any soil or situation, provided it be not very hot and dry; but they mostly prefer a fresh light soil, and a shady situation.

THALLITE, in Mineralogy. See MINERALOGY.

THALMESSINGEN, a petty town of the south-west of Germany, in Bavaria; 13 miles north of Eichstadt.

THALWEIL, a large village of Switzerland, in the canton of Zurich, on the west coast of the lake of Zurich, and 6 miles from that town.

THAME, a market town and parish of England, in the county of Oxford. It is situated on a river of the same name, which is navigable for barges, and runs into the Thames at Dorchester, in this county. The parish contains about 4600 acres of land, and is divided into six hamlets or liberties, termed Old Thame, New Thame, Priestend, Thame Park, Moreton, and North Weston. A school, once of much celebrity, and some alms-houses, were founded here by John, lord Williams. The school-house is a large and handsome building, situated near the church; and the school-room is of noble dimensions, and of very appropriate form.

During the civil wars of the 17th century, it was unhappily surrounded by garrisons of the contending parties, and experienced its full share of the miseries of the period. Antony Wood, the Oxford antiquary, who was at that time a student in the town, has left a minute account of several skirmishes, to which he was witness. The celebrated lord chief justice Holt was a native of this place. Market on Tuesday, and two annual fairs; 13 miles east of Oxford, and 45 north-west of London. Lat. 51. 45. N. long. 0. 59. W.

THAMES, one of the most noted rivers of Great Britain, whether we consider the length of its course, its body of water, or the vast commerce of which it is the centre. The source of this celebrated river has given rise to some dispute, its origin having been ascribed to different springs on the borders of Gloucestershire and Wiltshire; which form their union previous to their reaching Oxfordshire. Cricklade in Wiltshire is the central town of this district, and some will have the source of the Thames to be a clear fountain in its vicinity, while others again take the rivulets which advance from Swindon and Highworth in Wiltshire (one of which is called the Rey); and many argue for the Churn of Gloucestershire, which rises in the hilly track of the Cotteswold, encircling the vale of Cheltenham, and flows to the south-east, by Cirencester, and through the extensive woods of Lord Bathurst, to Cricklade. The dispute is not of consequence, as none of these fountains in their origin differ materially from a common rivulet. These inconsiderable streams unite near Lechlade, where the river becomes navigable for barges. About a mile below its source the river may properly be said to form a constant current; which, though not more than nine feet wide in the summer, yet, in the winter, becomes such a torrent, as to overflow the meadows for many miles round. But, in the summer,

summer, the Thames-head is so dry, as to appear nothing but a large dell, interspersed with stones and weeds. From Somerford the stream winds to Cricklade, where it unites with many other rivulets. Approaching Kemsford, it again enters its native county, dividing it from Berks, at Inglesham. It widens considerably in its way to Lechlade; and being there joined by the Lech and Coln, at the distance of 138 miles from London, it becomes navigable for vessels of 90 tons. After this junction the stream bears the classic name of the Isis. At Ensham, in its course north-east to Oxford, is the first bridge of stone, a handsome one of three arches. After receiving the Windrush and the Evenlode, the river passes by the ruins of Godstow nunnery, and reaches Oxford, turning round the city towards the north-east. It is here joined by the Charwell, which, flowing from the north by Banbury, and passing on the eastern side of Oxford, through the magnificent bridge of Magdalen, almost along with the Isis, insulates the city and university of Oxford. After its junction with the Charwell, it proceeds to Abingdon, and thence to Dorchester, where it receives the Thame. Continuing its course south-east by Wallingford to Reading, and forming a boundary to the counties of Berks, Bucks, Surrey, Middlesex, Essex, and Kent, it washes the towns of Henley, Marlow, Maidenhead, Windsor, Eton, Egham, Staines, Laleham, Chertsey, Weybridge, Shepperton, Walton, Sunbury, East and West Moulsey, Hampton, Thames-Ditton, Kingston, Teddington, Twickenham, Richmond, Isleworth, Brentford, Kew, Mortlake, Barnes, Chiswick, Hammersmith, Putney, Fulham, Wandsworth, Battersea, Chelsea, and Lambeth. Then, on the north bank of the river are Westminster and London; and, on the opposite side, Southwark; forming together one continued city, extending to Limehouse and Deptford; and hence the river proceeds to Greenwich, Erith, Greenhithe, Gray's-Thurrock, Gravesend, and Leigh, into the ocean. It receives, in its course from Dorchester, the rivers Kennet, Loddon, Coln, Wey, Mole, Wandle, Lea, Roding, Darent, and Medway.

The tide flows up the Thames as high as Richmond, which, following the winding of the river, is 70 miles from the ocean; a greater distance than the tide is carried by any other river in Europe. The water is esteemed extremely wholesome, and fit for use in long voyages, in which it will work itself perfectly fine.

THAMES, a river of New Zealand.

THAMES, a river of the United States, in Connecticut, which is formed by the Shetucket and Yantic, at Norwich, and flows south into Long Island sound, 2 miles below New London. It is navigable through its whole course.

THAMES, formerly called RIVERIE A LA FRANCHE, a river of Upper Canada, which rises in the interior, and after pursuing a serpentine course, in a direction nearly south-west, discharges itself into Lake St. Claire.

THAMESBRUCK, or THOMASBRUCK, a small town of Prussian Saxony, in the government of Erfurt, on the Unstrut; 11 miles east-south-east of Muhlhausen.

THAMMUZ, in Mythology, is a name under which the Phœnicians worshipped Adonis or Osiris.

THAMMUZ, in Chronology, a name given by the Jews to the tenth month of the civil year, containing twenty-nine days, and answering to our June.

THAMYRIS, in Mythology, called by Homer Κίθαριστής, one who plays on the cithara, was the son of Philammon. Plutarch, in his Dialogue on Music, tells us that Thamyris was born in Thrace, the country of Orpheus, and had the sweetest and most sonorous voice of any bard of his time. Homer, in his catalogue of ships, where he speaks of the cities under the dominion of Nestor, mentions Dorion as the place where Thamyris contended with the Muses, whom he had the arrogance to challenge to a trial of skill in poetry and music. The conditions and consequences of this contention are fully described by the poet.

“And Dorion, fan'd for Thamyris' disgrace,
Superior once of all the tuneful race,
Till, vain of mortals' empty praise, he strove
To match the seed of cloud-compelling Jove!”

Too daring bard! whose unsuccessful pride
Th' immortal Muses in their art defy'd:
Th' avenging Muses of the light of day
Depriv'd his eyes, and snatch'd his voice away;
No more his heav'nly voice was heard to sing,
His hand no more awak'd the silver string.” *Iliad.*

THAN, *conjunction*, [*than*, Goth.; *þanne*, Sax.] A particle placed in comparison after the comparative adjective or adverb, noting a less degree of the quality compared in the word that follows *than*: as, Monarchy is better than anarchy. The hawk flies more swiftly than the pigeon.

Were we not better to fall once with virtue,
Than draw a wretched and dishonour'd breath? *B. Jonson.*

THANE, *s.* [*þegn*, Sax.; meaning originally a *servant*. The (Anglo-Saxon) nobles were called *thanes* or *servants*, for “as it was honourable to be followed by a numerous train, so it was honourable in a secondary degree to be a follower of a man of consideration; and this honour was the greater in proportion to the quality of the chief, and to the nearness of the attendance upon his person.” *Burke, Abridg. Eng. Hist.*] An old title of honor, perhaps equivalent to baron.

By Sinel's death I know I'm *thane* of Glamis;
But how of Cawdor? the *thane* of Cawdor lives. *Shakspeare.*

Skene makes thane to have been a dignity equal with that of the son of an earl: Camden will have it, that thanes were only dignified by the offices which they bore.

There were two kinds or orders of thanes; the *king's* thanes, and the *ordinary* thanes. The first were those who attended our English-Saxon kings in their courts, and who held lands immediately of the king: whence, in Domesday-book, they are promiscuously called *thani*, and *servientes regni*. Soon after the Conquest this name was disused.

THANELANDS, *s.* Such lands as were granted by charters of the Saxon kings to their thanes with all immunities, except the threefold necessity of expedition, repair of castles, and mending of bridges. *Cowel.*

THANESHIP, *s.* [*þegen-jepe*, Sax.] The office and dignity of a thane; the seigniorship of a thane.—The *thaneship* of Glamis was the ancient inheritance of Macbeth's family. *Steevens.*

THANET, ISLE OF, a district of England, in the county of Kent, situated at the mouth of the Thames, and forming the north-eastern angle of the county. It is separated from the mainland by the river Stour on the south, which was at one time a wide estuary, and by a branch of it called the Nethergong on the west. It extends about nine miles from east to west, and eight from north to south. It contains within its limits 10 parishes, of which only seven of the churches now remain; also the towns of Ramsgate, Margate, and Broadstairs, all noted for sea-bathing. The island is divided into the manors of Minster and Monkton, by St. Mildred's Lynch, a narrow slip of land left unploughed, which extends across Thanet, from Westgate by Woodchurch and Cleve Court, and terminates at Sheriff's Court. The coast of this island terminating in a perpendicular cliff of chalk, the soil is dry, and the air remarkably pure and bracing. The name of Thanet is supposed by some to be derived from the British word Tene or Fire, on account of the beacons or fires which were here kept, to give notice of Danish or other pirates, from whose incursions the natives are said to have retired to the numerous caves that are still found along the sea-coast. Scarcely any ancient families are now resident in Thanet, most of their estates having been alienated from various causes, and their seats converted into farm-houses. Those of the inhabitants who reside near the sea, are chiefly employed in maritime operations, one principal branch of which consists in going off to ships with provisions, and assisting them when in distress, on which latter occasion they frequently evince undaunted courage, and are the means of preserving many valuable lives. In Camden's time, agricultural and sea-faring pursuits were united in the same persons, but are now, as in other places, generally separated. The chalk cliffs which surround the coast of the island,

island, abound in fossils, among which the Cornua Ammonis has been found measuring upwards of three feet in diameter.

To **THANK**, *v. a.* [*ðancian*, Sax.; *dancken*, Dutch; *thanken*, Germ.] To return acknowledgments for any favour or kindness.

For your stubborn answer
The king shall know it, and, no doubt, *thank you*.

Shakspeare.

It is used often in a contrary or ironical sense.

Ill fare our ancestor impure,
For this we may *thank Adam*.

Milton.

THANK, or **THANKS**, *s.* [*ðanc*, *ðancaf*, Sax.; *dancke*, Dutch.] Acknowledgment paid for favour or kindness; expression of gratitude. *Thanks* is commonly used of verbal acknowledgment; *gratitude*, of real repayment. It is seldom used in the singular.—The poorest service is repaid with *thanks*. *Shakspeare*.—Some embrace suits which never mean to deal effectually in them; but they will win a *thank*, or take a reward. *Bacon*.—The tiller shall root up all that burdens the soil without *thank* to your bondage. *Milton*.

THANKFUL, *adj.* [*ðancful*, Sax.] Full of gratitude; ready to acknowledge good received.—In favour, to use men with much difference is good; for it maketh the person preferred more *thankful*, and the rest more officious. *Bacon*.

THANKFULLY, *adv.* With lively and grateful sense of good received.—Here is better than the open air; take it *thankfully*. *Shakspeare*.

THANKFULNESS, *s.* Gratitude; lively sense or ready acknowledgment of good received.—Sweet prince, you learn me noble *thankfulness*. *Shakspeare*.

THANKLESS, *adj.* Unthankful; ungrateful; making no acknowledgment.

That she may feel
How sharper than a serpent's tooth it is,
To have a *thankless child*.

Shakspeare.

Not deserving, or not likely, to gain thanks.

Wage still their wars,
And bring home on thy breast more *thankless scars*.

Crashaw.

THANKLESSNESS, *s.* Ingratitude; failure to acknowledge good received.

Not t' have written then, seems little less
Than worst of civil vices, *thanklessness*.

Donne.

THANKOFFERING, *s.* Offering paid in acknowledgment of mercy.—A thousand *thankofferings* are due to that Providence which has delivered our nation from these absurd iniquities. *Watts*.

THANKOTE, a town of Hindostan, province of Nepaul. It is situated on an eminence, and is fortified. Lat. 27. 41. N. long. 84. 54. E.

To **THANKSGIVE**, *v. a.* To celebrate; to distinguish by solemn rites. *Not in use*.—To *thanksgive* or bless a thing in way to a sacred use, he took to be an offering of it unto God. *Mede*.

THANKSGIVER, *s.* A giver of thanks.—We find our never-to-be-forgotten example, the devout *thanksgiver*. David, continually declaring the great price he set upon the divine favours. *Barrow*.

THANKSGIVING, *s.* Celebration of mercy.—Of old there were songs of praise and *thanksgiving* unto God. *Neh.*

THANKWORTHY, *adj.* Deserving gratitude; meritorious.—This is *thankworthy*, if a man endure grief. 1 *Pet.*

THANN, a town in the north-east of France, in Alsace on the small river Thuron. It has 4200 inhabitants, and manufactures on a small scale, of linen, cotton, leather; also of iron. The neighbouring country admits of favourable situations for the culture of the vine; 22 miles south-west of Colmar.

THANNHAUSEN, a small town of Germany, in Bavaria, on the Mindel; 20 miles west-south-west of Augsburg, with 1500 inhabitants.

THANNHEIM, a large village in the west of Germany, in Wirtemberg, near Ochsenhausen, with 1000 inhabitants.

THANNINGTON, a parish of England, in Kent, situated on the banks of the Stour; 1½ mile south-west-by-west of Canterbury.

THAPSIA [of Pliny. *Θαψια* of Dioscorides: from *Thapsus*, a town of Africa], in Botany, a genus of the class pentandria, order digynia, natural order of umbellatæ or umbelliferæ.—Generic Character. Calyx: umbel universal, large, of about twenty rays, almost equal in length; partial of as many rays, almost equal. Involucre universal none; partial none. Perianth proper scarcely to be observed. Corolla universal uniform. Florets all fertile. Proper of five petals, lanceolate, curved in. Stamina: filaments five, capillary, length of the corolla. Anthers simple. Pistil: germ oblong, inferior. Styles two, short. Stigmas obtuse. Pericarp none. Fruit oblong, girt longitudinally by a membrane, bipartite. Seeds two, very large, oblong, convex, acuminate at both ends, girt with a margin flat on both sides, entire and large, emarginate at top and bottom.—*Essential Character*. Fruit oblong, surrounded by a membrane.

1. *Thapsia villosa*—Leaflets toothed, villose, coadunate at the base. Roots thick, fleshy, in shape of a carrot, blackish on the outside, but white within, bitter and very acrid, with a little aromatic taste. Stem spongy, rising about two feet high, dividing upwards into two or three small branches, each terminated by a large umbel of yellow flowers.—Native of Spain, Portugal, the South of France, Italy and Algiers.

2. *Thapsia foetida*.—Leaflets multifid, narrowed at the base. The leaves of this sort are cut into many narrow segments, almost as small as those of the garden carrot, but rough and hairy.—Native of Spain and Italy.

3. *Thapsia asclepium*.—Leaves digitate; leaflets bipinnate, setaceous, multifid.—Native of Apulia and the Levant.

4. *Thapsia garganica*.—Leaves pinnate; leaflets pinnatifid; segments lanceolate.—Native of Barbary.

5. *Thapsia trifoliata*.—Leaves ternate, ovate.—Native of North America.

6. *Thapsia polygama*.—Leaves decomposed; leaflets acute; involucre pinnatifid at the tip; central flowers abortive.—Native of Barbary, near Bone by the sea coast.

Propagation and Culture.—These plants are all propagated by seeds, which should be sown in autumn: for if they are kept out of the ground till spring, they often miscarry, or if they grow, they commonly lie a whole year in the ground before the plants come up; whereas those seeds which are sown in autumn, generally grow the following spring. These should be sown in drills, in the place where they are designed to remain.

THARANT, a small town of Saxony; 8 miles west-by-south of Dresden.

THARM, *s.* [*ðeapm*, Sax.; *darm*, Dutch, *the gut*.] Intestines twisted for several uses.

THARSTON, a parish of England, in Norfolk; 1 mile north-west of St. Mary Stratton. Population 369.

THASOS, **THASSUS**, or **TASSO**, an island in the north of Greece, in the gulf of Conessa, only 4 miles from the mainland, in lat. 40. 46. 40. N. long. 24. 39. 9. E. It is of an irregular shape, about 12 miles long and 8 broad.

THAT, *pronoun*, [*that*, *thata*, Gothic; *ðæt*, Sax.; *dat*, Dutch.] Not this, but the other.—He wins me by *that* means I told you. *Shakspeare*.—Which; relating to an antecedent thing.—The sinner makes an aberration from the scope or mark *that* is set before him. *Perkins*.

You'll rue the time
That clogs me with this answer.

Shakspeare.

Who; relating to an antecedent person. [In our management of the relatives *who*, *which*, *that*, it may be a good general rule to apply *who* to persons, *which* to things, and *that* to things chiefly. But when the antecedent is the second person, not only *that*, but *which*, is used for *who* by our best writers. And this use, which is enough authorised, may be worth retaining, not merely for the grace of variety, but for the convenience of pronunciation. *Bp. Hurd*.—It

is thou, O king, *that* art become strong. *Dan.*—It sometime serves to save the repetition of a word or words foregoing.—I'll know your business, *that* I will. *Shakspeare.*
—Opposed to *this*, as *the other* to *one*.

This is not fair; nor profitable *that*;
Nor t' other question proper for debate. *Dryden.*

When *this* and *that* relate to foregoing words, *this* is referred like *hic* or *ccci* to the latter, and *that* like *ille* or *cela* to the former.

In this scale gold, in t' other fame does lie,
The weight of *that* Mounts *this* so high. *Cowley.*

Such as.—By religion is meant a living up to those principles, *that* is, to act conformably to our best reason, and to live as becomes those who believe a God and a future state. *Tillotson.*—That which; what.

Sir, I think the meat wants *that* I have,
— Basting. *Shakspeare.*

The thing.—The Nazarite hath vowed, besides *that* that his hand shall get. *Numb.*—The thing which then was.

Secure proud Nabas slept,
And dreamt, vain man, of *that* day's barbarous sport. *Cowley.*

By way of eminence.
This is *that* Jonathan, the joy and grace,
That Jonathan in whom does mixt remain
All that fond mothers wish. *Cowley.*

In *THAT*. Because; in consequence of.—Things are preached not *in that* they are taught, but *in that* they are published. *Hooker.*

THAT, conjunction, [*thatei*, Goth.] Because.—Forgive me *that* I thus your patience wrong. *Cowley.*—Noting a consequence.

That he should dare to do me this disgrace,
Is fool or coward writ upon my face? *Dryden.*

Noting indication.—We answered, *that* we held it so agreeable, as we both forgot dangers past and fears to come, *that* we thought an hour spent with him was worth years of our former life. *Bacon.*—Noting a final end.

Treat it kindly, *that* it may
Wish at least with us to stay. *Cowley.*

THATCH, *s.* [*ðace*, Sax., *straw*, *Skinner*; from *ðac*, a roof. Formerly *thack*.] Straw laid upon the top of a house to keep out the weather.

Then came rosy Health from her cottage of *thatch*,
Where never physician had lifted the latch. *Smart.*

To *THATCH*, *v. a.* [*ðaccian*, Sax.] To cover as with straw.

Make false hair, and *thatch*
Your poor thin roofs with burthens of the dead. *Shakspeare.*

THATCHAM, a parish of England, formerly a market town, in Berkshire, with an endowed school, and containing 11,491 acres of land. Population 2104; 3 miles east of Newbury.

THATCHER, *s.* One whose trade is to cover houses with straw.

You merit new employments daily;
Our *thatcher*, ditcher, gard'ner, baily. *Swift.*

THATCHER'S ISLAND, a small island of the United States, on the coast of Massachusetts, about a mile east of Cape Ann.

THAU, a salt water lake in the south of France, on the coast of the department of the Herault, separated from the sea by a narrow tongue of land, but communicating with it by an inlet. It is about 35 miles long, and receives the waters of the great canal of Languedoc.

THAUMATURGICAL, *adj.* Exciting wonder.—Indian pictures made of feathers, China works, frames, *thaumaturgical* motions, exotic toys. *Burton.*

Vol. XXIII. No. 1618.

THA'UMATURGY, *s.* [*Θαυμα, θαυματος*, Gr, a wonder, and *εργον*, a work.] Act of performing what may excite wonder.—This art, with others of the experimental kind, the philosophers of those times were fond of adapting to the purposes of *thaumaturgy*. *Warton.*

To *THAW*, *v. n.* [*θapan*, Sax.; *degen*, Dutch.] To grow liquid after congelation; to melt.

It on firm land
Thaws not, but gathers heap, and ruin seems
Of ancient pile; all else deep snow and ice. *Milton.*

To remit the cold which had caused frost.
To *THAW*, *v. a.* To melt what was congealed.
Bring me the fairest creature northward born,
Where Phœbus' fire scarce *thaws* the isicles. *Shakspeare.*

THAW, *s.* Liquefaction of any thing congealed.—A man of my kidney, that am as subject to heat as butter; a man of continual dissolution and *thaw*. *Shakspeare.*—Warmth such as liquifies congelation.—I was the prince's jester, and duller than a great *thaw*. *Shakspeare.*

THAXTED, a market town of England, in the county of Essex, situated near the source of the river Chelmer, in a dry gravelly soil. The town has but little trade, and is chiefly remarkable for its parish church; this is a very large and beautiful structure in the Gothic style. It appears, from the various arms and cognizances on its several parts, to have been built at different times in the 14th century. The market which had for a long period been discontinued, has of late years been revived, but is not much frequented. It appears to have been granted to Bartholomew lord Badlesmere, by Edward II. Market on Friday, and two annual fairs; 20 miles north-west of Chelmsford, and 43 north-east of London. Lat. 51. 56. N. long. 0. 18. E.

THE, article. [*ðe*, Sax., articulus. Præfigitur nomibus per omnes casus utriusque numeri, haud secus ac apud nos ipsa *the*; præsertim verò apud scriptores Normanno-Saxonicos. *Lye*, edit. Manning.] The article noting a particular thing.

Your son has paid a soldier's debt;
He only liv'd but till he was a man,
The which no sooner had his prowess confirm'd,
In *the* unshrinking station where he fought,
But like a man he died. *Shakspeare.*

Th' adoring thee with so much art
Is but a barb'rous skill,
'Tis like the pois'ning of a dart,
Too apt before to kill. *Cowley.*

It is used by way of consequential reference.—*The* longer sin hath kept possession of the heart, *the* harder it will be to drive it out. *Wh. Duty of Man.*—In the following passage *the* is used according to the French idiom. As all the considerable governments among the Alps are commonwealths, so it is a constitution *the* most adapted of any to the poverty of these countries. *Addison.*

THEA, [from *Teh* or *Theh* of the Chinese, or *Tsia* of the Japanese], in Botany, a genus of the class polyandria, order monogynia trigynia, natural order of columifereæ, aurantia. (*Juss.*)—Generic Character. Pericarp: five-parted, very small, flat, inferior, permanent; segments roundish, obtuse, equal. Corolla: petals three to nine, roundish, concave, large, of which two are exterior and a little smaller. Stamina: filaments numerous, (more than two hundred) filiform, shorter than the corolla, inserted into the receptacle. Anthers cordate, fastened by the back. Pistil: germ globular-trigonal. Styles three, united at the base, at bottom erect, closely approximating, and as it were united into one, above the stamens diverging, somewhat recurved at the top, after flowering separated to the very base, reflexed at the top. Stigmas simple. Pericarp: capsule tricoccos, trilocular, gaping at the top, in three directions. Seeds solitary, globose, angular on the inward side.—The parts of the flower vary much in number, for sometimes the calyx is six-parted: the corolla has three petals or more as far as nine, of which the six inner ones are larger and equal, the three outer

outer a little smaller: stamens as far as two hundred and eighty. In *Thea Japonica*, the calyx is five-leaved, with ovate obtuse concave leaflets: the corolla six-petalled; petals ovate, very blunt, three lower ones smaller. Germ somewhat scaly: style filiform, erect, very short: stigmas three, filiform, erect, length of the filaments.—*Essential Character.* Corolla six or nine-petalled. Calyx five or six-leaved. Capsule tricocous.

1. *Thea*.—The tea tree is commonly about the height of a man. It is described indeed by different authors as varying much in size from that just mentioned to thirty and even two hundred feet. Probably it may attain the height of thirty feet or more when left to itself; but in general the trees are cut down periodically, that they may make stronger shoots, and therefore are seldom seen to be above five or six feet high. The trunk is branching and round: the branches alternate or vague, stiffish, inclining to an ash-colour, but reddish towards the end. Leaves alternate, elliptic, smooth, glossy, of a firm texture, bluntly serrate except near the base, blunt and for the most part slightly emarginate at the end, veined on the under side; on very short petioles, round and gibbous beneath, flattish and slightly channelled above. Stipules to the leaves none. Peduncles axillary, alternate, single, curved, one-flowered, incassate, having at the base a single stipule or bracte, which is awl-shaped, erect, elliptic, obtusely serrate, with the edges between the teeth recurved. Corolla white, varying in the number and size of the petals. Stamens, according to Loureiro, inserted rather into the base of the corolla than into the receptacle. There are two varieties: *Thea viridis*, and *Thea bohea*.

The distinctions chiefly regarded in Europe are the following:—

Green Teas.—1. Bing, imperial or bloom tea, with a large loose leaf, of a light green colour, and a faint delicate smell.

2. Hy-tiann, hikiong, hayssuen or heechun, known to us by the name of hyson tea: the leaves are closely curled and small, of a green colour verging towards blue. Another hyson tea, with narrow short leaves, is called hyson-utchin. There is also a green tea named globe, with long narrow leaves.

3. Song-lo or singlo, which name it receives, like several others, from the place where it is cultivated.

Bohea Teas.—1. Soo-chuen, sut-chong, sou-chong, or su-chong, called by the Chinese saa-tyang, and fact-chaon or sy-tyann, is a superior kind of cong-fou tea. It imparts a yellowish-green colour by infusion, and has its name from a place or province in China. Padre sutchong has a finer taste and smell; the leaves are large and yellowish, not rolled up, and packed in papers of half a pound each. It is generally conveyed by caravans into Russia: without much care it will be injured at sea. It is rarely to be met with in England.

2. Cam-ho, or soum-lo, called after the name of the place where it is gathered: a fragrant tea with a violet smell; its infusion is pale.

3. Cong-fou, congo, or bong-fo: this has a larger leaf than the following, and the infusion is a little deeper coloured. It resembles the common bohea in the colour of the leaf.

There is also a sort called lin-kisam, with narrow rough leaves. It is seldom used alone, but mixed with other kinds. By adding it to congo, the Chinese sometimes make a kind of Pekoe tea.

4. Pekao, pecko, or pekoe, by the Chinese called back-ho, or pack-ho: it is known by having the appearance of small white flowers intermixed with it.

5. Common bohea, or black tea, called moji or mo-ee by the Chinese, consists of leaves of one colour. The best is named Tao-kyon. An inferior kind is called An-kai, from a place of that name. In the district of Honam, near Canton, the tea is very coarse, the leaves yellow or brownish, and the taste the least agreeable of any. By the Chinese it is named honam-te, or kuli-te.

But besides these, tea, both bohea and green, is sometimes imported in balls, from two ounces to the size of a nutmeg

and of peas. The Chinese call it poncul-teha. The smallest in this form is well known under the name of gunpowder tea.

And sometimes the succulent leaves are twisted like pack-thread, an inch and a half, or two inches long; three of these are usually tied together at the ends by different coloured silk threads. Both green and bohea teas are prepared in this manner.

THEAKIKI, the east head-quarter of Illinois river, which has its rise in Canada.

THEAKSTON, a hamlet of England, North Riding of Yorkshire; 3 miles south-east-by-east of Bedale.

THEALBY, a hamlet of England, in Lincolnshire; 10½ miles west-by-south of Barton-upon-Humber.

THEALE, a township of England, in Berkshire; 4 miles west-by-south of Reading.

THEANTHROPOS, [*Θεανθρωπος*, Gr.] thus formed from *Θεος*, *God*, and *ανθρωπος*, *man*, and was sometimes used in the schools to signify Jesus Christ, who was regarded as God-man.

THEARNE, a hamlet of England, East Riding of Yorkshire; 3½ miles south-east-by-east of Beverley.

THE'ATIN, *s.* [French.] One of an order of priests among the catholics, so called from a superior of their order, who was archbishop of Chieti in Naples, anciently *Theate*.—The *Theatins* [were] a sect of priests in credit about pope Clement the seventh's time, and of more antiquity by some few years than the Jesuits. *Cotgrave*.

THE'ATINE, *s.* One of an order of nuns conforming to the rules of the Theatins.

THE'ATRAL, *adj.* [*theatralis*, Lat.] Belonging to a theatre.—In *theatral* actions he personates Herod in his majesty. *Comment. on Chaucer*.

THE'ATRE, *s.* [*theatrum*, Lat.] A place in which shews are exhibited; a playhouse.

This wise and universal *theatre*,
Presents more woful pageants than the scene
Wherein we play.

Shakspeare.

A place rising by steps or gradations like a theatre.

Shade above shade, a woody *theatre*
Of stateliest view.

Milton.

THE'ATRIC, or THE'ATRICAL, *adj.* [*theatrum*, Lat.] Scenic; suiting a theatre; pertaining to a theatre.

Load some vain church with old *theatrical* state,
Turn arcs of triumph to a garden gate.

Pope.

THE'ATRICALLY, *adv.* In a manner suiting the stage.

Dauntless her look, her gesture proud,
Her voice *theatrically* loud.

Pope.

THEAVE, *s.* An ewe or sheep of three years old. *North.* Bailey says, of one year. *Pegge*.

THEBAID, the early name of Upper Egypt, for which that of Sahid or Said has long been substituted.

THEBEN, or DEVEN, a small town in the west of Hungary, at the confluence of the great rivers March and Danube; 6 miles above Presburg.

THEBERTON, a parish of England, in Suffolk; 4 miles east-south-east of Saxmundham. Population 440.

THEBES, RUINS OF, the remains of a great city, which at an early period was the capital of Egypt. There are not to be found in the world any monuments more remarkable, both by their stupendous magnitude, and by the high antiquity to which they ascend. The glory of Thebes belongs to a period prior to the commencement of authentic history. It is recorded only by the dim lights of poetry and tradition, which might be suspected of fable, did not such mighty witnesses remain to their truth. History has preserved no distinct record of those powerful and conquering sovereigns, who held their capital in Upper Egypt. See EGYPT.

THEDDINGWORTH, a parish of England, in Leicestershire; 4¼ miles west-by-south of Market Harborough.

THEDING-HAUSEN, a small town in the north of Germany, in the duchy of Brunswick, and the chief place of a district

district situated in the province of Hoya, in Hanover, to the south of the Weser, at a great distance from any other part of the states of Brunswick. This petty place has 1500 inhabitants, and is 14 miles south-east of Bremen, and 59 north-west of Hanover.

THEDLETHORPE, EAST, a parish of England, in Lincolnshire; 9½ miles north-north-east of Alford.

THEDLETHORPE, WEST, another parish in the above county; about a mile distant from the foregoing.

THEE, the oblique singular of *thou*.

Poet and saint, to *thee* alone were given
The two most sacred names of earth and heaven. *Cowley*.

To **THEE**, *v. n.* [Goth. *theihan*; Sax. *ðean*.] To thrive; to prosper. *Obsolete*.—Faire mote he *thee*! *Spenser*.

THEFT, *s.* [δύπτει, Sax., from *thieve*.] The act of stealing.—*Theft* is an unlawful felonious taking away of another man's goods against the owner's knowledge or will. *Cowel*.

Their nurse Euriphile,
Whom for the *theft* I wedded, stole these children.
Shakspeare.

The thing stolen.—If the *theft* be certainly found in his hand alive, whether ox, ass, or sheep, he shall restore double. *Exod.*

THEFTBOTE, the receiving a man's goods again from a thief, or other amends, by way of composition, and to prevent prosecution, that the felon may escape unpunished; the punishment of which is fine and imprisonment.

THEGONEC, ST., a town in the north-west of France, department of Finisterre. Population 3300; 6 miles south-west of Morlaix, and 13 east-north-east of Landernau.

THEIR, *pron.* [ðeopa, of *them*, Sax.; *theirra*, Icel. *the same*.] Of them: the pronoun possessive, from *they*.

The round world should have shook
Lions into civil streets, and citizens into *their* dens.
Shakspeare.

Theirs is used when any thing comes in construction between the possessive and substantive.

The penalty to thy transgression due,
And due to *theirs* which out of thine will grow. *Milton*.

THEISM, *s.* [*theisme*, Fr.; from Θεός, Gr.] The acknowledgment of a God, as opposed to atheism; deism.—Having laid down in this manner the general principles of *theism*, he says nothing of the particular doctrines of Christianity except in one verse. *Lord Monbodo*.

THEISS, or **TISZA**, a large river of Hungary, which rises from two springs in the county of Marmaros, on the north-east frontier of the kingdom. The two streams called the Black and the White Theiss soon unite, and after flowing above 100 miles in a western direction, it turns to the south, and either touches or divides ten distinct counties or districts, before flowing into the Danube at Salankemen, below Titul.

THEIST, *s.* [*theiste*, Fr.] A deist.—The word deist, or *theist*, in its original signification, implies merely the belief of a God, being opposed to atheist; and so there may be deists of various kinds. *Waterland*.

THEISTIC, or **THEISTICAL**, *adj.* Belonging to theists; deistical, which see.—The *theistical* club have set this up as a principle. *Lestie*.—It must appear at first sight, that nothing could be more contradictory to the first principles of the Christian religion, than those of the atheistical or sceptical sects, which at that time prevailed very much both among the Greeks and the Romans; nor shall we find that the *theistical* sects were much less at enmity with it, when we consider the doctrines they held upon the nature of God and the soul. *Ld, Lyttleton*.

THELBRIDGE, a parish of England, in Devonshire; 7 miles east-by-south of Chulmleigh.

THELEPHORA, a genus of Fungi. See **HELVELLI**.

THELNETHAM, a parish of England, in Suffolk; 14 miles north-east of Bury St. Edmund's. Population 445.

THELVERTON, or **THELTON**, a parish of England, in Norfolk; 1½ mile north-by-east of Scole.

THELWALL, a hamlet of England, in Cheshire, supposed to have been anciently a large town; 9½ miles north-west-by-north of Nether-Knutsford.

THELYGONUM [ἑργυ γονν, Gr., *genus femineum*.—It is a name from Pliny], in Botany, a genus of the class monœcia, order polyandria, natural order of scabridæ, urticæ. (*Juss.*)—Generic Character.—Male flower. Calyx: perianth one-leaved, turbinate, semibifid, segments revolute. Corolla none. Stamina: filaments very many (twelve or more), erect, length of the corolla. Anthers simple.—Female flower on the same plant. Calyx: perianth one-leaved, very small, erect, bifid, permanent at the side of the germ. Corolla none. Pistil: germ globular. Style filiform, long. Stigma simple. Pericarp: capsule coriaceous, globular, one-celled. Seed one, globular, with a callous appendice.—*Essential Character*.—Male. Calyx bifid. Corolla none. Stamina commonly twelve.—Female. Calyx bifid. Corolla none. Pistil one. Capsule coriaceous, one-celled, one-seeded.

Thelygonum cynocrambe, purslain-leaved *thelygonum*, or dog's cabbage.—It is an annual plant, which decays as soon as the seeds are ripe. The stalks trail on the ground like those of chickweed; they grow about a foot long, their joints are pretty close, and have ovate acute-pointed leaves, on pretty long bordered foot-stalks. One of these leaves is placed at each joint, and from the same point come out several smaller leaves of the same shape, on shorter foot-stalks. Flowers axillary in clusters sitting very close, small, and of an herbaceous white colour, male and female from the same joint.—Native of the South of France, near Montpellier; Italy in the island of Caprea, county of Nice, &c., and Sicily.

Propagation and Culture.—Sow the seeds in autumn, when the plants are to remain, for when sown in the spring, the plants rarely come up the same year. They require no culture but to be kept clean from weeds, and to be thinned where they are too close.

THEM, the oblique of *they*, [*thaim*, Goth.] The materials of *them* were not from any herb. *Wilkins*.

THEMAR, a small town in the central part of Germany, in the duchy of Saxe-Coburg, on the Werra, with 1100 inhabitants. It is the chief place of a bailiwick, which was long the common property of the houses of Saxe-Coburg and Saxe-Gotha; 11 miles south-east of Meinungen.

THEME, *s.* [*theme*, Fr.; from the Gr. θέμα.] A subject on which one speaks or writes.

Two truths are told,
As happy prologues to the swelling act
Of the imperial *theme*. *Shakspeare*.

A short dissertation written by boys on any topic.—Forcing the empty wits of children to compose *themes*, verses, and orations. *Milton*.—The original word whence others are derived.—Let scholars daily reduce the words to their original or *theme*, to the first case of nouns, or first tense of verbs. *Watts*.

THEMILTHORPE, a parish of England, in Norfolk; 3 miles west-north-west of Reepham.

THEMIS, in Mythology, the daughter of Cœlum and Terra, or of Uranus and Titania, the eldest sister of Saturn, and aunt of Jupiter.

THEMISTIUS, surnamed **EUPHRADES**, or the fine speaker, an Eclectic philosopher, was born in an obscure village of Paphlagonia, about the year 317, and having fixed his residence at Constantinople, taught eloquence and philosophy with great reputation and success. His disciples, both Pagan and Christian, were numerous; to the former class belonged Libanius, and to the latter, Gregory Nazianzen. By the emperors he was highly esteemed, and they conferred upon him distinguished honours. In the year 355, Constantius admitted him into the senate; and in return for an eloquent eulogium,

eulogium, presented him with a brazen statue. Julian corresponded with him as a friend; and in 362, appointed him præfect of Constantinople. His character and eloquence induced other emperors to bestow upon him peculiar favours. When Jovian issued his edict of toleration, Themistius was deputed by the senate to express its loyalty; and on this occasion he expatiated with elegance and liberality on the rights of conscience, and the independence of the human mind. Of his candour and liberality, the following memorable instance is recorded by Socrates, Sozomen and other ecclesiastical historians. The emperor Valens, who favoured the Arian party, treated the Trinitarians with great severity. Themistius, disapproving the measures which the emperor pursued, addressed him in an eloquent speech, stating that the diversity of opinions among Christians was inconsiderable, compared with that of the Pagan philosophers; and urging upon his attention, that this diversity could not be displeasing to God, since it did not prevent men from worshipping him with true piety. By such arguments, Themistius, it is said, prevailed upon the emperor to treat the Trinitarians with greater lenity. What an example does this Pagan philosopher exhibit even to Christian divines! In the year 376, Themistius visited Rome, but though solicited to take up his abode there, he preferred returning to Constantinople. It redounds very much to the honour of this philosopher, and also to the liberal sentiments of Theodosius the Great, that during his visit to the Western empire, the emperor entrusted Themistius, notwithstanding difference of religion, with the care and education of his son Arcadius. After a long course of civil honours, he withdrew about the year 387, at an advanced age from public business; and soon after died. His "Orations," which were 36, and of which 33 are still remaining, are strongly marked with liberal characters. The best editions of his Orations are those of Petau, Gr. and Lat. Paris, 4to., 1618; and of Hardouin, Gr. and Lat. Paris, fol. 1684. *Fabr. Bib. Græc. Brucker by Enfield. Gibbon. Lardner's Works.*

THEMISTOCLES, an Athenian statesman and commander. See GREECE.

THEMSELVES, *s.* [See **THEY** and **SELF**.] These very persons: in this sense it is nominative.—Whatsoever evil befalleth in that, *themselves* have made themselves worthy to suffer it. *Hooker*.—The oblique case of *they* and *sees*.—*They* open to *themselves* at length the way. *Milton*.

THEN, *adv.* [*than*, Gothic; *ðan*, Sax.; *dan*, Dutch.] At that time.—*Then*, *then* a boy, within my arms I laid. *Dryden*.—Afterwards; immediately afterwards; soon afterwards.—If an herb be cut off from the roots in winter, and *then* the earth be trodden down hard, the roots will become very big in summer. *Bacon*.—In that case; in consequence.

Had not men been fated to be blind,
Then had our lances pierc'd the treach'rous wood. *Dryden*.

Therefore; for this reason.

If *then* his providence
Out of evil seek to bring forth good. *Milton*.

At another time: as *now* and *then*, at one time and other.—Now shaves with level wing the deep, *then* soars. *Milton*.—One while the master is not aware of what is done, and *then* in other cases it may fall out to be his own act. *L'Estrange*.—That time: it has here the effect of a noun.

Till *then* who knew
The force of those dire arms? *Milton*.

THENAR, in Anatomy. The eminence in the palm of the hand, formed by the muscles of the thumb, has been called thenar: and some of the muscles have been described under the same name.

The thenar of Riolan and Winslow includes the abductor pollicis brevis, and the opponens pollicis.

THENCE, *adv.* [contracted, according to Minshew, from *there hence*.] From that place.
Fast by the oracle of God; I *thence*
Invoke thy aid. *Milton*.

From that time.—There shall be no more *thence* an infant of days. *Isa*.—For that reason.

Not to sit idle with so great a gift
Useless, and *thence* ridiculous about him. *Milton*.

From *thence* is a barbarous expression, *thence* implying the same, yet it wants not good authorities.

From *thence*; from whom, whose daughter
His tears proclaim'd his parting with her; *thence*
We have cross'd. *Shakspeare*.

THE'NCEFORTH, *adv.* From that time.

Thenceforth this land was tributary made
T'ambitious Rome. *Spenser*.

From *thenceforth* is a barbarous corruption, though it has crept into books where it ought not to be found.

Avert

His holy eyes; resolving from *thenceforth*
To leave them to their own polluted ways. *Milton*.

THENCEFORWARD, *adv.* On from that time.—When he comes to the Lord's table, every communicant professes to repent, and promises to lead a new life *thenceforward*. *Kettlewell*.

THENCEFROM, *adv.* From that place. *Not in use, nor proper*.—In the space of an hundred years, or thereabout, all the living upon the face of the earth are driven *thencefrom* by the stroke of death. *Smith*.

THENEZAY; a small town in the west of France, department of the Two Seves, with 1500 inhabitants, employed partly in manufactures, partly in the cultivation of wine; 14 miles north-east of Parthenay, and 34 north-east of Niort.

THENFORD, a parish of England, in Northamptonshire; 5½ miles north-west-by-west of Brackley.

THENINGEN, a neat village in the south-west of Germany, in Baden, on the Elz, with 1100 inhabitants; 10 miles north-by-west of Freyburg.

THENON, a small town in the south of France, department of the Dordogne. Population 1400; 6 miles north-west of Montignac, and 20 east of Perigueux.

THENSA, among the Romans, a veil or canopy, used in the chariots of games; and likewise to cover a seat of state.

Thensæ could not be granted to any but by the express allowance of the senate. *Hist. Acad. Inscript.*

THEOBALD (Lewis), a professed writer, was the son of an eminent attorney at Sittingbourn, in the county of Kent, and is here noticed as one of the numerous editors of Shakspeare. Of his various works, critical, poetical, and dramatic, it is needless to give any account, as they have sunk into oblivion. He had the misfortune of becoming, to an undue degree, the object of Mr. Pope's contempt and satire, and of having the first place assigned him in the Dunciad, though he was afterwards superseded by Cibber. His edition of Shakspeare was preceded by a work entitled "Shakspeare Restored," and published in 1726; and also by that of Mr. Pope. It is thus characterised by Dr. Johnson: "Pope was succeeded by Theobald, a man of narrow comprehension and small acquisitions, with no native and intrinsic splendour of genius, with little of the artificial light of learning, but zealous for minute accuracy, and not negligent in pursuing it. He collated the ancient copies, and rectified many errors. A man so anxiously scrupulous might have been expected to do more; for what little he did was commonly right." Of the tragedy which he brought on the stage, and which is entitled "The Double Falsehood," the greater part is ascribed by him to Shakspeare; but Dr. Farmer has proved that this is a mistake.

THEOBALD'S, a hamlet of England, in Hertfordshire, situated on the New River, noted as the favourite residence of James I. who had here a magnificent seat, and gardens, originally built by lord treasurer Burleigh; 4 miles west-by-north of Chipping Barnet.

THEOBROMA [Θεων βρομα, Gr., *the food of the gods*], in Botany, a genus of the class polyadelphia, order decandria, natural order of columiferæ, malvaceæ. (*Juss.*)—Generic Character. Calyx: perianth five-leaved; leaflets lanceolate,

lanceolate, acute, spreading, deciduous. Corolla: petals five, smaller than the calyx; claws wide, arched, concave like a helmet, emarginate at the tip, scored internally with a thick triple line, inserted into the nectary at the base; borders roundish, acuminate, spreading, each narrowed at the base into a small claw, which is from upright recurved, and fastened into the claw. Nectary a short little pitcher, putting forth five little horns, which are awl-shaped, long, erect, acuminate, bent in and converging, decurrent along the pitcher. Stamina: filaments five, filiform, erect, bent outwards at top, lying within the claws of the petals, growing externally to the nectary, alternate with and shorter than the horns. Anthers on each filament two (one on each side at the tip); vertical, one cell superior, the other inferior. Pistil: germ ovate. Style filiform, (striated, Aubl.) a little longer than the stamens. Stigma five-cleft. Pericarp: capsule oblong, coriaceous, unequal, five-cornered, five-celled, valvless, not opening. Seeds very many, subovate, nestling in a buttery pulp, fastened to a central columnar receptacle.—*Essential Character.* Calyx five-leaved. Petals five, arched. Nectary five-horned. Filaments five, within the calyx of the petals, growing externally to the nectary, having two anthers on each.

Theobroma cacao, or chocolate-nut tree.—The cacao or chocolate-nut tree grows in a very handsome form, to the height of twelve or sixteen feet: the trunk is upright and about as high as a man before the head spreads out: the wood is light and of a white colour, and the bark is brownish and even. Leaves lanceolate-oblong, bright green, quite entire, alternate, from nine to sixteen inches long, and three or four inches wide at most, on a petiole an inch in length, and thickened at both ends. Flowers small, reddish, inodorous. Fruits smooth, yellow, red, or of both colours, about three inches in diameter: rind fleshy, near half an inch in thickness, flesh-coloured within: pulp whiteish, the consistence of butter, separating from the rind in a state of ripeness, and adhering to it only by filaments, which penetrate it and reach to the seeds. Hence it is known when the seeds are ripe, by the rattling of the capsule when it is shaken. The pulp has a sweet and not unpleasant taste, with a slight acidity; it is sucked and eaten raw by the natives: it may be easily separated into as many parts as there are seeds, to which it adheres strongly, and they are wrapped up in it, so that each seed seems to have its own proper pulp. The seeds are about twenty-five in number: when fresh, they are of a flesh-colour: gathered before they are ripe, they preserve them in sugar, and thus they are very grateful to the palate: they quickly lose their power of vegetation, if taken out of the capsule, but kept in it, they preserve that power for a long time. The tree bears leaves, flowers and fruit all the year through; but the usual seasons for gathering the fruit, are June and December. In two years from the seed it is above three feet high, and spreads its branches, not more than five of which are suffered to remain: before its third year is complete, it shows for fruit. A tree yields from two to three pounds of seeds annually.

These seeds are remarkably nourishing, and agreeable to most people; which occasions them to be commonly kept in most houses in America, as a necessary part of the provisions of the family: they are generally ground or pounded very fine, and made into paste: they are much charged with oil, but mix well with milk or water. Chocolate is much esteemed in all the southern colonies of America; and well known to make the principal part of the nourishment of most old people in those parts, as well as of a great number of Jews. It was in use among the native Indians, before the arrival of the Spaniards.—Native of South America, and found in great plenty in several places between the tropics, but particularly at Caracca and Carthagena, on the river Amazons, the isthmus of Darien, at Honduras, Guatemala, and Nicaragua.

Propagation and Culture.—In order to cultivate this plant in Europe, by way of curiosity, it will be necessary to have the nuts planted into boxes of earth (in the countries

where they grow) soon after they are ripe; because if the nuts are sent over, they will lose their vegetative powers before they arrive. These boxes should be placed in a shady situation, and must be frequently watered, in order to forward the vegetation of the nuts.

When the plants arrive in England, they should be carefully taken out of the boxes, and each transplanted into a separate pot filled with light rich earth, and plunged into a moderate hot-bed of tanner's bark. When the trees are obtained, they may be increased by cuttings, in the same manner as the gardenia.

THEOCATAGNOSTÆ, formed from the Gr. Θεός, *God*, and καταγιγνώσκω, *I judge*, or *condemn*, a sect of heretics who found fault with certain words and actions of God, and to blame many things in the Scriptures.

THEOCRACY, *s.* [*theocratic*, Fr.; Θεός and κρατος, Gr.] Government immediately superintended by God.—A quiet calm subordination of saints and angels under that great *theocracy*. *Hammond.*—The characters of the reign of Christ are chiefly justice, peace, and divine presence or conduct, which is called *theocracy*. *Burnet.*

THEOCRATIC, or THEOCRATICAL, *adj.* [*theocratique*, Fr.] Relating to government administered by God.—The government is neither human nor angelical, but peculiarly *theocratical*. *Burnet.*

THEOCRITUS, a Greek poet, esteemed as the model of pastoral poetry, was a native of Syracuse, and the son of Praxagoras and Philina. The time in which he flourished is ascertained by two of his poems, one addressed to Hiero, king of Syracuse, who began his reign about the year B. C. 265, and the other to Ptolemy Philadelphus, whose reign comprehended the interval between 281 and 246 B. C. Although Hiero is reported to have been a patron of literature, persons of rank, as we may infer from Theocritus's poem, did not follow his example, at least in granting encouragement to poets; and therefore Theocritus left Sicily, and visited the court of Ptolemy Philadelphus at Alexandria, on whom he pronounces a splendid eulogy. The compositions of this poet are denominated "Idylls;" they are written in the Doric or rustic dialect, and few of them are pastorals, though most of them relate to rural life and manners. The purely pastoral are distinguished by the truth and simplicity of the manners, descending sometimes even to coarseness, and the pleasing description of natural objects, drawn from the life. To those who have a taste for genuine simplicity, and the beauties of nature, the poetry of Theocritus is highly agreeable. The most esteemed editions of his works, are D. Heinsius's 4to. Commel. 1604; R. West's, Oxon. 8vo. 1699; Th. Warton's, Oxon. 2 vols. 4to. 1770; Valkenaer's, cum Bione et Moscho, Lugd. Bat. 8vo. 1779. *Suidas. Vossius. Gen. Biog.*

THEO'DOLITE, *s.* [*theodolite*, Fr.] A mathematical instrument for taking heights and distances by measuring horizontal and vertical angles.

THEODORE (Lascaris), a Greek emperor, the son-in-law of Alexius Angelus. See *ROME*.

THEODORE, bishop of Mopsuestia in Cilicia, was priest, and probably native, of Antioch, a disciple of Diodorus, and an intimate friend of John Chrysostom. He was ordained bishop in 392 or 394, and died in 428 or 429. He wrote commentaries probably upon all the books of the Old and New Testament, though two or three of them are not particularly mentioned: and in these commentaries, as Photius says, he avoided all allegorical interpretations, and confined himself to the historical and literal sense. He defended this mode in a work concerning allgory and history against Origen. Some have charged him with treating the book of Job, the Canticles, and the Psalms, with disrespect. The book of Job he is said to have represented as written in a fabulous manner, though founded on truth; the Canticles he is said to have considered as a nuptial poem, and the Psalms as chiefly referring to the history of the times. Most of Theodore's works are now lost, but some fragments of them may be found, chiefly in Latin, and perhaps not fairly represented, in the Acts of the second general council of Constantinople.

tinople, or the fifth general council, held in 553, and also in Facundus, and in the Greek Chains. Fabricius assures us, that his commentary upon the Twelve Prophets is still extant in manuscript in the emperor's library at Vienna; and Montfaucon speaks of its being in the library of St. Mark at Venice, as well as in the library at Vienna, and in the Vatican. Some learned moderns have charged Theodore with adopting sentiments concerning the person of Christ similar to those of the present Unitarians; but of this fact there is no satisfactory evidence. *Mosheim. Lardner.*

THEODORE of Tarsus, a monk of that city, was ordained bishop by pope Vitalian, and being sent into England in the year 668, at the desire of king Egbert, was appointed to govern the church of Canterbury. With a view to the restoration of the neglected discipline of penance, he published a book of canons, under the title of "Penitential." In this book, sins were distributed into various classes, according to their respective nature and aggravation; and various kinds of penance were assigned to them; forms of consolation, exhortation, and absolution were prescribed, and other such matters respecting discipline were regulated. It is still extant, in an imperfect state; and an edition of it was published at Paris by Petit, in 1679, 4to., with notes and dissertations. *Dupin.*

THEODORET, a learned prelate of the Greek church, was born at Antioch about the year 386. Theodoret bears a high rank among the ancients, as a commentator on the scriptures, for the purity of his Attic style, and the clearness and good sense of his explanations. He wrote commentaries upon most parts of the sacred scriptures. His "Ecclesiastical History," comprised in five books, may be considered as a supplement to those of Socrates and Sozomen; beginning where that of Eusebius ends, at the rise of Arianism in 322 or 323, and terminating in 428. Its style, according to Photius, is clear and sublime, but too much abounding in metaphors. His "Philotheus," or treatise on the monastic life, the genuineness of which some have questioned without sufficient reason, relates the actions and extols the piety of the Eastern monks, and abounds with instances of the credulity and superstition of the times. In his work entitled "Of Heretical Fables," in five books, he distributes the different heresies into classes, and concludes with a statement of the faith of the Catholic church. "The Cure of the false Opinions of the Heathens," in twelve discourses, is a learned and valuable apology for Christianity. Lardner has given copious extracts from this performance, which merit high commendation.

THEODORIC. See **ROME** and **GOTHS.**

THEODOSIA, Sr., a small island in the North Pacific Ocean. Lat. 62. 20. N. long. 192. 0. E.

THEODOSIUS. See **ROME.**

THEODOSIUS, an eminent mathematician, was born at Tripoli, and flourished about the second or third century. On the doctrine of the Sphere, he wrote three books, containing a considerable number of propositions, demonstrated in the pure geometrical manner of the ancients, and establishing the geometrical principles of astronomy. Ptolemy and succeeding writers availed themselves of these books, which were translated by the Arabians from the original Greek into their own language. They were afterwards translated from the Arabic into Latin, and printed at Venice; but the defects of the Arabic version were supplied in a more complete edition, published in Greek and Latin, at Paris, in 1556, 4to., by John Pena, regius professor of astronomy. *Montucla Hist. des Mathem.*

THEOGAMIA [*Θεογαμία*, Gr.], in Antiquity, a Sicilian festival, in honour of Proserpine, which seems to have been instituted in memory of her marriage with Pluto.

THEOGNIS, a Greek poet, was a native of Megara, in Attica, and flourished about the year B. C. 546. He has been denominated "Gnomologus," or the writer of sentence: and we have extant a work written by him, without orders, consisting of moral maxims or precepts, simply expressed and destitute of poetical ornaments, versified, probably, for assisting the memory. Athenæus reckons him

among the advocates for licentious pleasures; and Suidas refers to a work of his composition, entitled "Exhortations" or "Admonitions," which contained various impurities. In the verses that now remain, nothing of this kind appears. "The Sentences of Theognis" have been often printed by themselves, and with the works of other minor Greek poets. Among the best editions, are those of Camerarius and Sylburgius. *Gen. Biog.*

THEOGONY [formed from the Gr. *Θεός*, God, and *γονή*, geniture, seed, offspring], that branch of the heathen theology which taught the genealogy of their gods.

Hesiod gives us the ancient theogony, in a poem under that title. See **POETRY** and **HESIOD.**

THEO'GONY, s. [*theogonie*, Fr.; *Θεογονία*, Gr.] The generation of the gods. *Cockeram.*—The *theogony* of the heathens could admit of such different turns and figurative expressions, as suited the fancy and judgment of each philosopher or poet. *Id. Shaftesbury.*

THEO'LOGASTER, s. A kind of quack in divinity, as a medicaster in physic; a low writer or student in divinity.—*Theologasters* are not contented to see the sun and moon, measure their site and biggest distance in a glass, calculate their motions, or visit the moon in a poetical fiction; but will transcend spheres, soar higher yet, and see what God himself doth. The Jewish thalmudists take upon them to determine how God spends his whole time. *Burton.*

THEO'LOGER, or THEOLO'GIAN, s. [*theologicus*, Fr.; *theologus*, Lat.] A divine; a professor of divinity.

They to their viands fell: nor seemingly
The angel, nor in mist, the common gloss
Of *theologians*, but with keen dispatch
Of real hunger.

Milton.

THEOLO'GIC, or THEOLO'GICAL, adj. [*theologicus*, Fr.; *theologia*, Lat.] Relating to the science of divinity.—Although some pens have only symbolized the same from the mystery of its colours, yet are there other affections might admit of *theological* allusions. *Brown.*

THEOLO'GICALLY, adv. According to the principles of theology.—Such things as exceed the faculty and possibility of nature, are properly and *theologically* miracles. *Dr. Westfeild.*

THEO'LOGIST, or THE'OLOGUE, s. [*theologus*, Lat.] A divine; one studious in the science of divinity.—The cardinals of Rome, which are *theologues*, friars, and schoolmen, call all temporal business, of wars, embassages, shirery, which is under-sheriffies. *Bacon.*

A *theologue* more by need than genial bent;
Int'rest in all his actions was discern'd.

Dryden.

THEOLOGIUM [formed from the Gr. *θεός*, and *λόγος*, speech, or discourse], in the ancient theatre, was a place, or little stage, above that on which the ordinary actors appeared. It was the place where their gods appeared: thus there was a theologium required for the representation of the Ajax of Sophocles, and the Hippolitus of Euripides. *Scal. Poet.*

To **THEO'LOGIZE, v. a.** To render theological.—School-divinity was but Aristotle's philosophy *theologized*. *Glanville.*

THEO'LOGY, s. [*theologic*, Fr.; *θεολογία*, Gr.] Divinity.—The whole drift of the Scripture of God, what is it but only to teach *theology*? *Theology*, what is it but the science of things divine? *Hooker.*

THEO'MACHIST, s. One who fights against the gods. *Bailey.*

THEO'MACHY, s. [*θεός* and *μαχή*, Gr.] The fight against the gods by the giants. It is used also for opposition to the divine will.—To have all men happy or unhappy as they were our friends or enemies, and to give form to the world according to our own humours, is the true *theomachy*. *Bacon.*

THEON, a mathematician of the Platonic school, was a native of Smyrna, and flourished under the emperors Trajan and Adrian. His mathematical treatises are said to have

been

been written for the purpose of elucidating the philosophy of Plato; and his discourses, treating of geometry, arithmetic, music, astronomy, and the harmony of the universe, may serve to throw some light upon the Pythagorean system. Part only of his work, "De iis quæ Mathematicis ad Platonis lectionem utilia sunt," or that which relates to arithmetic and music, has been published. The remainder, which pertained to astronomy and geometry, is said to have been preserved in the Ambrosian library, at Milan. Ptolemy refers to his astronomical observations. *Brucker by Enfield. Montucla Hist. des Math.*

Another mathematician of the same name belonged to the Alexandrian school, and flourished about A. D. 365.

THEOPHANES, a Greek historian and poet. About the commencement of the Mithridatic war, he is supposed to have come to Rome in his youth; and when Pompey was appointed to the chief command against Mithridates, he took Theophanes with him to record his exploits. The most important of his writings, was a "History of the Wars of the Romans, in different Countries under the Command of Pompey." Of this work there remain only five fragments, quoted by Strabo, Plutarch, and Stobæus; but Plutarch is supposed to have made great use of his authority in his life of Pompey, though he does not speak favourably of his character. Of the poetry of Theophanes, which was celebrated in his time, there remain only two epigrams, inserted in the *Anthologia Vossius*.

THEOPHANES (George), a Constantinopolitan Greek, of a rich and noble family, married young, but from superstitious motives lived in a state of celibacy. He afterwards became a monk. At the general council held in 787, he was present, and was treated with respect. When Nicephorus, patriarch of Constantinople, was exiled by the emperor Leo the Armenian, Theophanes paid him extraordinary honours, and was himself banished to the isle of Samothrace, where he died in 818. His chronicle, commencing where that of Syncellus terminated, was extended to the commencement of the reign of Michael Curopalata. This was printed at Paris, with the Latin version and notes of F. Goar, under the care of Combèsis, in 1665, fol. It is valuable for its facts, but displays the credulity and weak judgment of a superstitious mind. *Vossius*.

THEOPHANES (Prokopovitch), the son of Procopius, archbishop of Novogorod, a learned Russian historian, and miscellaneous writer, was born at Koif in the year 1681, and having studied under his uncle Theophanes at the Bratskoi convent in Kiof, travelled into Italy in his eighteenth year. His works were sermons and theological tracts, a treatise on rhetoric, and rules for composing Latin and Slavonian poetry, Latin verses, and more especially the Life of Peter the Great, terminating with his battle of Pultawa. *Coxe's Travels in Russia*.

THEOPHANIA [Θεοφανεία, formed from the Gr. Θεός, God, and φανω, I appear], in Antiquity, a festival observed by the Delphians upon the day on which Apollo first manifested himself to them.

THEOPHILUS, emperor of Constantinople, was the son of Michael the Stammerer, and succeeded his father in 829. See **ROME**.

THEOPHRASTA [so named in honour of the celebrated Grecian philosopher and botanist, Theophrastus Eresius], in Botany, a genus of the class pentandria, order monogynia, natural order of apocineæ, (*Juss.*)—Generic Character. Calyx: perianth one-leaved, five-parted, permanent; segments oblong, ciliate at the edge. Corolla one-petalled, permanent; tube length of the calyx, bell-shaped; segments oblong, erect, spreading. Stamina: filaments five, below the middle of the tube, inserted into a membrane which surrounds the bottom internally, shorter than the corolla. Anthers acuminate. Pistil: germ roundish. Style length of the stamens, thick. Stigma blunt, perforated. Pericarp: fruit large, roundish, corticose, one-celled, many-seeded. Seeds oblong, shining, fastened to a fleshy juicy receptacle which is situated at the base.—*Essential Character*. Co-

rolla bell-shaped, with oblong, erect, spreading segments. Fruit one-celled, very large, roundish, many-seeded.

1. **Theophrasta Americana**.—Leaves repand-toothed, sharpish. Stem frutescent, one or two feet high, erect, leafy from the middle to the top. Racemes short, terminating, from the middle of the terminating leaves, many-flowered; peduncles numerous, curved, short, one-flowered. Seeds black, hard, fastened at the base but free above.—Native of South America; in dry coppices of Hispaniola.

2. **Theophrasta longifolia**.—Leaves mucronate-toothed, acuminate.—This is very like the preceding, but yet it is distinct, in having the leaves attenuated at both ends, with the teeth acute and mucronate.—Native of America, at the Caraccas.

THEOPHRASTICS, a name given to the followers of Paracelsus, from his name Theophrastus.

THEOPHRASTUS, a distinguished Greek philosopher, the favourite pupil of Aristotle, and nominated by him as his successor in the school of the Lyceum, was born at Eresium, a maritime town of Lesbos, in the second year of the 102d Olympiad, B. C. 371. His first rudiments of education were received under Alcippus in his own country, and being sent by his father to Athens, he became first a disciple of Plato and afterwards of Aristotle. After he undertook the Peripatetic school in the year B. C. 323, his reputation was so distinguished, that the number of his scholars was about 2000. His erudition and engaging manners recommended him to the notice of Cassander and Ptolemy: by the former he was invited to Macedon, and by the latter to Egypt; and among the Athenians he was so great a favourite, that, when he was accused by one of his enemies of teaching impious doctrines, the accuser could not without difficulty escape the punishment which he endeavoured to bring upon Theophrastus. Theophrastus is no less highly celebrated for his generosity and public spirit, than for his industry, learning, and eloquence. He is said to have twice saved his country from the oppression of tyrants; and he contributed liberally towards defraying the expence of public meetings held by philosophers for learned and ingenious conversation. In the public schools he appeared, after the manner of Aristotle, in an elegant dress, and was very attentive to the graces of elocution: and hence it is said he obtained the appellation of Theophrastus, the divine speaker. Towards the close of life, which was prolonged to the age of 85 years, he became very infirm, and was conveyed to the school in a carriage. In contemplating the shortness of life, he expressed great regret; complaining that long life was granted to stags and crows, to whom it was of little value, but was denied to man, who, if it were of longer duration, might attain the summit of science: whereas now, as soon as he arrives within sight of it, he is taken away. His last advice to his disciples was, that since it is the lot of man to die as soon as he begins to live, they should take greater pains to enjoy life as it passes, than to acquire posthumous fame.

Few of his works, of which Diogenes Laertius enumerates more than 200, have reached our time: of these, the most famous is entitled "Characters," describing different moral classes of men, such as the flatterer, the impudent, the discontented, the garrulous, the superstitious, &c.; so distinguished and described, as to shew great knowledge of mankind. Of his other works on natural history, the principal are his "History of Plants," in nine books, which Haller has particularly recommended to the notice of botanical students; "On the Causes of Plants," relating chiefly to the natural and artificial means of bringing them to maturity; to agriculture and horticulture; to the tastes and odours of vegetables; "On Stones;" "On Winds;" "On Fire;" "On Honey;" "On the Signs of Fair Weather, and of Tempests and Rain;" "On Animals which change their Colour;" "On Animals which are born suddenly;" "On Fish which live out of Water." Theophrastus ranks amongst the most distinguished of the ancients for comprehensive genius and diligent inquiry into nature. The last edition of the

the whole extant works of Theophrastus, is that of Dan. Heinsius, Greek and Latin, fol. Lugd. Bat. 1613. Of his "History of Plants," the most complete is that of Budæus, Greek and Latin, fol. Amst. 1644. Among the most esteemed editions of his "Characters," which are numerous, we may reckon those of Is. Casaubon, of Needham, with the notes of Duport, Cantab. 1712, and of I. Fr. Fischer, Coburg. 1763. *Diog. Laert. Brucker by Enfield.*

THEOPHYLACT, named **SIMOCATTA**, a Greek historian, a native of Greece, but of Egyptian origin, flourished about A. D. 612. His history of the reign of the emperor Maurice is comprehended in eight books, and terminates with the massacre of this prince and his children by Phocas. Casaubon reckons Simocatta one of the best of the later Greek historians. The work just mentioned was printed at the Louvre, in 1647, fol. and forms a part of the Byzantine historians.

THEOPNEUSTÆ [Θεοπνευσται, formed from the Gr. of Θεος, *God*, and πνευα, *I breathe*], an epithet given to enthusiastic divines.

THEOPOLIS, in Ancient Geography, a town of Gallia Narbonnensis, belonging to the Aventici, north-east of Forum Novum.

THEOPROPRIA [Θεοπροπρια, formed from the Gr. of Θεος, *God*, and προπρια, *I conceal*], a designation given to oracles.

THEORBO, *s.* [*tiórba*, Italian; *tuorbe*, Fr.] A large lute for playing a thorough bass, used by the Italians. *Bailcy.*
He wanted nothing but a song,
And a well tun'd *thorbo* hung
Upon a bough, to ease the pain
His tugg'd ears suffer'd with a strain. *Butler.*

THEOREM, *s.* [*thorcmc*, Fr.; Θεωρημα, Gr.] A position laid down as an acknowledged truth.—Having found this the head *theorem* of all their discourses, who plead for the change of ecclesiastical government in England, we hold it necessary that the proofs thereof be weighed. *Hooker.*—A position proposed to be demonstrated. It is used by mathematicians in this sense as well as the other. *Malone.*

THEOREMATICAL, **THEOREMAT'IC**, or **THEOREM'IC**, *adj.* Comprised in theorems; consisting in theorems.—*Theoremic* truth, or that which lies in the conceptions we have of things, is negative or positive. *Grew.*

THEORETICAL, **THEORET'IC**, **THEORICAL**, or **THEORIC**, *adj.* [*thorctique*, French; from Θεωρητικός, Gr.; *thorrique*, Fr., from Θεωρια, Gr.] Speculative; depending on theory or speculation; terminating in theory or speculation; not practical.—For *theoretical* learning and sciences there is nothing yet complete. *Burnet.*—The *theoretical* part of the inquiry being interwoven with the historical conjectures the philosophy of colours will be promoted by indisputable experiments. *Boyle.*—Admirably well turned, not only for the *theoretic*, but also the practical behaviour of cunning fellows. *Tatler.*

THEORETICALLY, or **THEORICALLY**, *adv.* Speculatively; not practically.—Able to discourse *theoretically* of the dimensions, situation, and motion, of the whole terrestrial globe. *Boyle.*

THEORIA [Θεωρια, Gr.], a solemn annual voyage to Apollo's temple in the island of Delos, performed by the Athenians always in the same ship in which Theseus went. For the particularities of this naval procession, see *Potter's Archæol. Græc.* lib. ii.

THEORIC, *s.* Speculation, not practice.

The bookish *thorick*,
Wherein the toged consuls can propose
As masterly as he; meer prattle, without practice,
Is all his soldieryship. *Shakspeare.*

THEORIC MONEY was what was raised, by way of tax on the people, to defray the expences of theatrical representations, and other spectacles. By a law of Eubulus it was

made a capital crime to pervert the theoric money to any other use; even to employ it in the occasions of war.

THEORIST, *s.* A speculatist; one given to speculation.—The greatest *theorists* have given the preference to such a government as that which obtains in this kingdom *Addison.*

THEORY, *s.* [*thorie*, Fr.; Θεωρια, Gr.] Speculation; not practice; scheme; plan or system yet subsisting only in the mind.—If they had been themselves to execute their own *theory* in this church, they would have seen, being nearer. *Hooker.*

THEORY, *Atomic*, in Chemistry, the means of explaining the composition and decomposition of chemical bodies, by considering their ultimate atoms or particles as peculiar and distinct elementary solids, never changing in their figure, weight, or volume, under any circumstances.

It would be difficult to conceive the existence of any compound without supposing it to have originated by union, in some way or other, of particles of its elementary constituents; but the prevalence of a doctrine, which has been generally advanced by mathematicians, viz., the infinite divisibility of matter, has never allowed philosophers to conclude that the circumstance of compounds being made up of particles, must necessarily limit the proportions in which the elements combine. If the elementary bodies be conceived infinitely divisible, the molecules, or compound particles, may be conceived infinitely small, and the number of mean compounds existing between any two given extremes may be also considered infinite.

If such were the nature of elementary matter, and no other causes interferred, there could be no limitation to the proportions in which simple matter would combine. This, however, is contrary to fact; as it is a fact known from the earliest dawnings of chemical knowledge, that bodies are limited in the proportions of their elements; the most striking of these facts being the mutual saturation which takes place between an acid and an alkali, and the uniform proportions afforded in the analysis of many native compounds.

Philosophers were always satisfied to consider this fact of the limitation of the proportions of bodies as one of the hidden secrets of nature, as difficult to conceive as the nature of the attraction by which their elements were held together. Berthollet appears to have been the first to attempt this arduous task, in his ingenious work, entitled "Chemical Statics." He supposes that the particles of bodies, when brought within the sphere of attraction, combine without controul till the compound assumes some definite form, by which it is withdrawn from the situation in which it was formed. He supposes the chemical affinity of bodies to be distinct from that power on which their cohesion depends, and also that power by which they tend to an elastic state.

Hence he concludes, that every solid compound is determined by the cohesion which takes place at some limit in the proportion of its elements; such he supposes to be the case with salts and other crystallizable compounds. On the other hand, he supposes the limitations of the proportions of the elements of gaseous compounds to arise from the elastic form which they assume in certain stages of combination. This hypothesis was supported by so many striking facts, that it was thought by some to explain in general the cause of limited proportions. All agreed, that whatever might be the true theory, the causes pointed out by Berthollet had considerable influence in the composition and decomposition of bodies, but they saw at the same time numerous cases in which this hypothesis failed to explain the facts.

Chemists have, from the earliest times, been acquainted with those points of limitation which we call mutual saturation, and have been long familiar with those limited augmentations of their proportions, called by some doses and by others particles. Among the oxyds of metals, which had been little examined before the time of Lavoisier, it was found, that instead of having an infinite number of means between the lowest and highest stages of oxydation, only a certain

certain number of oxyds of each metal could be formed, in which the ratio of the metal to the oxygen is uniform. Many of the salts in the same way are formed by limited doses of acid. Some of the facts in the latter have been explained on Berthollett's hypothesis, while its application to the former facts is totally insufficient. Long previous to the true cause of these limited doses, the facts were so conspicuous, that a decided nomenclature was adopted for the purpose of expressing these different stages of combination. The oxyds have been distinguished by the Greek numerals *prot, deut, trit, &c.* The salts containing two doses of acid have been called *super-salts*; and those containing an extra dose of base, have been called *sub-salts*.

Although chemists have frequently used a language which appeared to shew their acquaintance with the real cause of the definite proportions, such as one compound being forced by one proportion, dose, or particle of one of its elements, and another with two proportions, doses, or particles: on the other hand, we find expressions which would favour the idea of indefinite proportions; such as bodies losing a small portion of their oxygen, or absorbing a little oxygen from the atmosphere. Salts are sometimes said to contain a slight excess of acid, or a small excess of base.

The most decided language used in any chemical work before the discoveries of Mr. John Dalton, giving any idea that the doses are limited by distinct atoms, will be found in a work by Mr. Higgins, entitled "A Comparative View of the Phlogistic and Antiphlogistic Theories."

This work was written for the express purpose of combatting the phlogistic theory, and principally, in answer to Mr. Kirwan's treatise of phlogiston. In order to shew the contradictions and absurdities of the phlogistic doctrine, which, under the name of phlogiston, confounded a number of bodies which were very different, he exhibited by diagrams a number of chemical operations, in which he supposed the elementary bodies concerned to be ultimate particles, and their immediate compounds molecules. He in the same diagrams also used numbers, which he supposed to be estimates of the strength of affinity of the combining particles. By this means he very successfully shewed many of the inconsistencies which must be admitted to explain the phenomena on the phlogistic theory. In this mode of proceeding, however, the numbers expressing the relative attractions, served his purpose much more than the consideration of the proportions being caused by distinct atoms; and the language which would induce the belief that he had such a conception of the nature of elementary matter, occurs only in a very few parts of his work.

After concluding that it is unnecessary to admit the existence of the imaginary substance of phlogiston in sulphur, he concludes, in page 36, that sulphurous acid is compounded of one ultimate particle of sulphur with one of oxygen, and that sulphuric acid consists of one of sulphur and two of oxygen.

In the same page he also observes, that water is formed by one ultimate particle of water united to one of oxygen.

In page 81, he supposes sulphuretted hydrogen to consist of nine ultimate particles of sulphur with five of hydrogen. Previous, however, to this conclusion, he believes that the sulphur and hydrogen are not chemically combined, but that the sulphur is dissolved in hydrogen, as a salt dissolves in water.

After using arguments to shew, in answer to Mr. Kirwan, that the nitric acid does not contain what was thought to be phlogiston, he concludes, in page 132, with giving what he conceives to be its constituents, *viz.*, that the nitrous oxyd consists of one ultimate particle of azote and one of oxygen; nitrous gas, of one of azote and two of oxygen; red nitrous vapour, one of azote and three of oxygen; straw-coloured nitrous acid, one of azote to four of oxygen; and lastly, that the nitric acid is constituted by one of azote and five of oxygen. These facts are certainly very remarkable, as they agree with the conclusions in the present time, and give a strong proof of Mr. Higgins's genius at the time he wrote.

He does not, however, lay any stress upon these remarks, and was not probably aware that they would be confirmed by future research. We are induced to think so, from the manner in which he expresses himself in other parts of his work, in which he frequently speaks of the absorption of small portions of oxygen, and of bodies having a small portion of oxygen more than they can retain. This vague manner of speaking is sufficient to shew that Mr. Higgins had no fixed notions of the cause of definite proportions, and that the language in which he has used the words ultimate particles and molecules, was employed rather with a view to illustrate his examples, than to broach any new theory to explain indefinite proportions. Indeed it would have been inconsistent to have treated two subjects, so very different in their objects, in their same pages.

It was not enough to know that compound bodies were formed of particles, to enable us to explain the cause of definite proportions; and we want no greater proof of this, than the fact of the true cause not being known till twenty-eight years after Mr. Higgins had told us that one particle of sulphur and one of oxygen formed sulphurous acid, and that one to two formed sulphuric acid. These loose expressions were but a small step indeed towards the discovery of the atomic theory in its present form, which has placed chemistry on the same ground with that on which the discovery of the laws of gravity placed the science of astronomy.

We are inclined to believe that the first step towards this important discovery was given by Richter. He found, in the double decomposition of salts, that the acid of one salt was always just sufficient to saturate the base of the other, and *vice versa*. He also ascertained, that when one metal was precipitated by another, the oxygen of the precipitated metal was just what was required by the precipitating metal.

The inference to be drawn from these facts was, that if A combine with x to saturation, and B with y to the same; then, if A should be found to saturate y , B would also saturate x . This inference may be still further extended; for if A be a body capable of combining with B, they will mutually saturate each other.

It is the means of drawing these inferences arising from the mutual fitness of those parts of bodies which combine, that constitutes the importance of the atomic theory, and it is for the establishment of this new principle that we are indebted to Mr. John Dalton.

When Mr. Dalton's book was first before the public, very few chemists understood the true spirit of the atomic theory; and those who conceived they did understand it, in general discarded it. All knew that he considered compounds to be formed of atoms united 1 to 1, 1 to 2, 1 to 3, &c.; but it was not till the reciprocal fitness of these atoms with each other was found to agree with analysis, that it was generally received. When they saw that the numbers, which Dalton called the weights of the atoms, expressed the simple proportions in which bodies combine, they knew it could not be the effect of chance, and have willingly joined in the research. It is for this part of the discovery that Mr. Dalton justly merits the fame he has acquired.

The French chemists have adopted the atomic theory under another form, which will be found to agree with the language given by Berzelius, who uses the word *volume* for atom.

Gay Lussac several years ago published a new law respecting the combination of gaseous bodies. He held that gases which combine chemically, either unite in equal volumes, or 1 to 2, or some multiple of 1, by a whole number. Although a number of facts seemed to agree with this law, the truth of it was doubted by some chemists, and principally because no apparent reason appeared for such a law.

There is a curious coincidence between the specific gravity, and the weight of atoms of the gases, which has since been taken notice of by Dr. Prout in Dr. Thompson's Annals. In order that the weights of the atoms may be equal to their specific gravities, it is there stated, that the number of particles in equal volumes of all gases must be equal, and the distance between

between the centres of the particles of all gases the same, so that the weights of equal volumes of different gases, would be as the weights of the atoms.

This would also require, that the attraction between the particles should either be the same in all, or that it should be nothing; and the distance of the particles be at points where the repulsion of the calorific atmosphere is balanced by the incumbent pressure.

The state here supposed, however, is not the case, since we find that the weights of the atoms of the gases generally are not equal to the specific gravity, when reduced to the same standard, although it is strictly the case with a great proportion of them. And in those cases where they are not equal, the one is said to be some multiple of the other, by a whole number.

This circumstance favours the hope that some general law exists, by which the weights of the atoms of bodies are intimately connected with their specific gravities in the elastic form. When the specific gravity is double the weight of the atom, as is the case with oxygen, we have to suppose, that the particles are nearer each other in the proportion of 2 to 1, or that two particles come together, and are surrounded by the calorific, which belongs to one of them in their single state.

It would appear that the oxygen puts on this single state of existence in the formation of carbonic oxyd, because that gaseous body contains only one atom of oxygen; hence its specific gravity is the same as if it were formed from a gaseous oxygen of half the real specific gravity united to an atom of carbon without any change of volume, the same as takes place when sulphur or carbon is burned in oxygen gas. Hence we may explain the great tendency that oxygen has to combine in double doses with bodies, as is the case with carbon, sulphur, phosphorus, iron, and many other bodies.

We have also an instance of a compound gaseous body becoming of double the specific gravity which would be expected in olefacient gas, which is composed of an atom of carbon and an atom of hydrogen. The specific gravity (hydrogen being 1) ought to be $1 + 5.4 = 6.4$; but in fact it is about the double of this. Hence we should conclude, that the repulsion between the particles is halved, or that the compound atoms have united in pairs, by which the density is doubled.

THEOSO'PHICAL, or **THEOSO'PHIC**, *adj.* [$\Theta\epsilon\omicron\varsigma$ and $\sigma\phi\omicron\varsigma$. Gr.] Divinely wise. *Coles.*—There is a various intertexture of *theosophical* and philosophical truths. *More.*

THEOSOPHISTS, the denomination of a class of philosophers, who professed to derive their knowledge of nature from divine revelation.

THEOXENIA [$\Theta\epsilon\omicron\zeta\epsilon\nu\alpha$, Gr.], in Antiquity, a festival in honour of all the gods, and celebrated in many cities of Greece, but especially Athens.

THERAH, a town of Hindostan, province of Gujerat, and district of Khakreze. It is a large open town, and subject to a Hindoo chief called Zalim Sing. Lat. 24. 30. N. long. 71. 57. E.

THERAPEUTÆ, $\theta\epsilon\rho\alpha\pi\epsilon\upsilon\tau\alpha\iota$, a Greek term signifying servants, more especially those employed in the service of God. The Greeks gave the appellation *therapeutæ* to such as applied themselves to a contemplative life, whether it were from the great concern they had for their souls, or from the particular mode and manner of their religion; the word $\theta\epsilon\rho\alpha\pi\epsilon\upsilon\epsilon\upsilon$, whence *therapeutæ*, signifying the care a physician takes of his patient, or the service any one renders another.

THERAPEUTICAL, or **THERAPE'UTIC**, *adj.* [*theραπευτικη*, Fr.; $\theta\epsilon\rho\alpha\pi\epsilon\upsilon\tau\iota\omicron\varsigma$, Greek.] Curative; teaching or endeavouring the cure of diseases.—This remedy, in my opinion, should rather be prophylactical, for prevention of the disease, than *therapeutical*, for the cure of it. *Ferrand.*

THERAPHIM, or **TERAPHIM**, an Hebrew term, which has given great exercise to the critics. We meet with it thirteen or fourteen times in Scripture, where it is commonly interpreted *idols*; but the rabbins are not contented to have it simply signify idols, but will have it denote a peculiar

sort of idols or images intended for the knowledge of futurity, i. e. oracles.

THERAUD, an extensive district of Hindostan, province of Gujerat, of which it forms the north-west frontier. It contains 32 villages; but as water is very scarce, there not being a river in the whole district, the cultivation is but scanty.

THERAUD, the capital of the above mentioned district, and residence of the chief. Lat. 24. 37. N. long. 71. 58. E.

THERE, *adv.* [*thar*, Gothic; $\zeta\alpha\rho$, Saxon; *daer*, Dutch; *der*, Danish.] In that place.

If they come to sojourn at my house,
I'll not be *there*.

Shakspeare.

It is opposed to *here*.—To see thee fight, to see thee traverse, to see thee *here*, to see thee *there*.

Shakspeare.

An exclamation directing something at a distance.

Your fury hardens me.

A guard *there*; seize her.

Dryden.

It is used at the beginning of a sentence with the appearance of a nominative case, but serves only to throw the nominative behind the verb: as, a man came, or, *there* came a man. It adds however some emphasis, which, like many other idioms in every language, must be learned by custom, and can hardly be explained. It cannot always be omitted without harshness: as, in old times *there* was a great king.—Wherever *there* is sense or perception, there some idea is actually produced. *Locke.*—In composition it means *that*: as *thereby*, *by that*.

THEREABOUT, or **THEREABOUTS**, *adv.* [*Lye*, with *Hickes*, considers *there*, in composition, as the genitive dative, and ablative, of the Sax. article $\delta\alpha\rho$; and thus explain *thereafter* by *post hoc, hæc*, vel *ea*; *thereof*, by *de vel ex eo, ea, iis*, &c. thus excluding the adverb, strictly speaking, from the several combinations. *Thereabouts* is therefore less proper.] Near that place.—One speech I lov'd; 'twas Æneas's tale to Dido; and *thereabout* of it especially where he speaks of Priam's slaughter. *Shakspeare.*—Nearly; near that number, quantity, or state. Find a house to lodge a hundred and fifty persons, whereof twenty or *thereabouts* may be attendants. *Milton.*—Concerning that matter.—As they were much perplexed *thereabout*, two men stood by. *St. Luke.*

THEREAFTER, *adv.* According to that; accordingly.

If food were now before thee set,
Would'st thou not eat? *thereafter* as I like
The giver.

Milton.

After that. [$\delta\alpha\rho$ - $\alpha\epsilon\tau\epsilon\rho$, Sax., *post hoc*.]
Herself then tooke he by the slender wast
In vaine loud crying, and into the flood
Over the castle walle adowne her cast,
And there her drowned in the dirty mud.—
Thereafter all that mucky pelfe he tooke,
The spoile of people's evil gotten good,
The which her sire had scrap'd by hooke and crooke.

Spenser.

THEREA'T, *adv.* At that; on that account.—Every error, is a stain to the beauty of nature; for which cause it bluseth *thereat* but glorieth in the contrary. *Hooker.*—At that place.—Wide is the gate and broad is the way that leadeth to destruction, and many go in *thereat*. *St. Matt.*

THEREBY, *adv.* By that; by means of that; in consequence of that.—Some parts of our liturgy consist in the reading of the word of God, and the proclaiming of his law, that the people may *thereby* learn what their duties are towards him. *Hooker.*—Near or by that place.

There was an holy chappell edifyde,
Wherein the hermite dewly went to say
His holy things each morne and eventyde:
Thereby a christall streame did gently play,
Which from a sacred fountaine welled forth alway. *Spenser.*

THE'REFORE,

THE'REFORE, *adv.* Formerly accented indifferently on either syllable.—For that; for this; for this reason.

This is the latest parley we will admit;
Therefore to our best mercy give yourselves. *Shakspeare.*

Consequently.—He blushes; *therefore* he is guilty. *Spec-tator.*—In return for this; in recompence for this or for that.—We have forsaken all and followed thee, what shall we have *therefore*. *St. Matt.*—For that purpose. *Not in use.*

So to his steed he got, and gan to ride
As one unfit *therefore*, that all might see
He had not trayned bene in chivalree. *Spenser.*

THEREFRO'M, *adv.* From that; from this.—The leaves that spring *therefrom* grow white. *Mortimer.*

THEREIN, *adv.* In that; in this.—*Therein* our let-ters do not well agree. *Shakspeare.*

THEREINTO, *adv.* Into that.—Though we shall have occasion to speak of this, we will now make some entrance *thereinto*. *Bacon.*

THEREOF, *adv.* Of that; of this.—I shall begin with Greece, where my observations shall be confined to Athens, though several instances might be brought from other states *thereof*. *Swift.*

THEREO'N, *adv.* On that.
You shall bereave yourself
Of my good purposes, and put your children
To that destruction which I'll guard them from,
If *thereon* you rely. *Shakspeare.*

THEREO'UT, *adv.* Out of that.
Thereout a strange beast with seven heads arose,
That towns and castles under her breast did cour. *Spenser.*

THERESE, *Str.* ISLE OF, an island in the St. Lawrence, formed by the confluence of the Rivieres des Prairies, which bounds the northern shore of the island of Montreal.

THERESIENFELD, a small town of Lower Austria, to the south of Vienna.

THERESIENSTADT, or **MARIEN THERESIENSTADT**, a large town of the south of Hungary, in the palatinate of Bacs. This, like Debreczin, is an assemblage of villages, or rather one vast overgrown village, consisting of 3000 cottages, inhabited by 22,000 inmates, partly of Servian, partly of Rascian descent. Lat. 46. 5. 46. N. long. 19. 40. 42. E.

THERESIENSTADT, a fortified place of the north of Bohemia, situated in the angle formed by the Elbe and the Egra, at their junction; 31 miles north-north-west of Prague, and 1 south-east of Leutmeritz.

THERESIOPEL, a small town in the south of Hungary, a little to the north of Temesvar, inhabited by a Bulgarian colony.

THERETO', or **THEREUNTO'**, *adv.* To that.—Next *thereunto* did grow a goodly tree. *Spenser.*

THEREUNDER, *adv.* Under that.—Those which come nearer unto reason, find paradise under the equinoctial line, judging that *thereunder* might be found most pleasure and the greatest fertility. *Raleigh.*

THEREUPON, *adv.* Upon that; in consequence of that.

He hopes to find you forward,
And *thereupon* he sends you this good news. *Shakspeare.*
Immediately.

THEREWHILE, *adv.* At the same time. *Not in use.*
—Of this bodily reverence of God in his church, the govern-ment is moderate; God grant it be not loose *therewhile*.
Abp. Laud.

THEREWI' TH, *adv.* With that.
Therewith at last he forc'd him to untie
One of his grasping feet, him to defend thereby. *Spenser.*
Immediately.

THEREWI' TH' AL, *adv.* Over and above.
Therewithal the execrable act
On their late murther'd king they aggravate. *Daniel.*

At the same time.

Well, give her that ring, and give *therewithal*
That letter. *Shakspeare.*

With that.

His hideous tail then hurled he about,
And *therewithal* enwrapt the nimble thighs
Of his froth-foamy steed. *Spenser.*

The compounds of *there* meaning *that*, and of *here* meaning *this*, have been for some time passing out of use, and are no longer found in elegant writings, which is to be regretted, seeing their great utility and euphony.

THERF-BREAD, *s.* [vet. Angl. Boreal. *derf-brode*; ðæpp vel ðeopp, Sax., *panis azymus*. Lye.] Unleavened bread. *Obsolete.*—The fest of *therf-loaves*. *Wicliffe.*

THERFIELD, a parish of England, in Hertfordshire; 2½ miles south-west-by-south of Royston. Population 692.

THER'RIAC, *s.* [from *θηριακα*, Gr., various compositions esteemed good against poisons.] A remedy against poisons; treacle.—When the disease was young, it was mitigated with rob of elder; with crabs-eyes; spirits of hartshorn; *theriac* and vinegar. *The Student.*

THERIACA [*θηριακα*, Gr., *treacle*], in Medicine, a name given by the ancients to various compositions esteemed good against poisons; but afterwards chiefly restrained to what, by way of distinction, has been called *theriaca Andromachi*, or *Venice treacle*: but now altogether out of use.

This was a compound of no less than sixty-four drugs, prepared, pulverized, and reduced, by means of honey, into an electuary. The basis or foundation of the composition was viper's flesh. M. Charas has written a particular history of the animals, plants, and minerals, which entered the composition of this famed remedy.

THERI'ACAL, *adj.* [*θηριακα*, Gr.; *theriaca*, Lat.] Medicinal; physical.—The virtuous bezoar is taken from the beast that feedeth upon the mountains, where there are *theriacal* herbs. *Bacon.*

THERIOMA [from the Gr. *θησιω*, *to rage*], in Surgery, a malignant ulcer.

THERMÆ [*θερμαι*, Gr.], in Architecture, ancient build-ings, furnished with baths, especially of the hot kind.

Among the noblest monuments of ancient Rome, are reckoned the thermæ, or baths of Dioclesian.

THERMAL, *adj.* [*thermal*, Fr., from *θερμος*, Gr. *warm*.] Relating to warm baths, natural or artificial; as *thermal* waters.

THERMIA, a small island of European Turkey, in the Archipelago, belonging to the Cyclades, and situated about 40 miles north-west of the island of Faros, and 25 south-south-east of Cape Colonna, the southern point of Attica. Lat. 37. 20. N. long. 24. 32. E.

THERMO'METER, *s.* [*thermometric*, Fr.; *θερμος* and *μετρον*, Gr.] An instrument for measuring the heat of the air, or of any matter.—The greatest heat is about two in the afternoon, when the sun is past the meridian, as is evident from the *thermometer*, or observations of the weather-glass. *Brown.*

THERMOME'TRICAL, *adj.* Relating to the measure of heat.—His heat raises the liquor in the *thermometrical* tubes. *Cheyne.*

THERMOPYLÆ, a pass in the north-east of Greece, at the base of Mount Oeta, famous for the fate of Leonidas and his 300 Spartans. It consists of a narrow passage, between high cliffs on one side, and on the other the sea, or an impassable marsh, formed by alluvial deposits. It is of great length, extending on the whole not less than five miles; but the breadth of the passable ground, only 50 or 60 paces in the time of the ancient Greeks, is now nearly double, from the retiring of the sea and the deposit of farther alluvial soil.

THERMOP'SIS. See **SOPHORA**.

THERMOSCOPE, *s.* [*thermoscope*, Fr.; *θερμος* and *σκοπεω*, Gr.] An instrument by which the degrees of heat are discovered; a thermometer.—By the trial of the *thermo-scope*, fishes have more heat than the element which they swim in. *Arbuthnot.*

THEROUENE,

THEROUENNE, a petty town in the north of France, department of the Pas de Calais. It was in ancient times the capital of the Morini, and was a fortress so lately as 1553, when it was taken by the Austrians, and demolished.

THESE, *pron.*, the plural of *this*. [*ῥα*, Sax.; *desc.* Dutch; *thesser*, Icel. Lye.] Opposed to *those*, or to some others.

Did we for *these* barbarians plant and sow
On *these*, on *these* our happy fields bestow?

Dryden.

These relates to the persons or things last mentioned; and *those* to the first.—More rain falls in June and July than in December and January; but it makes a much greater shew upon the earth in *these* months than in *those*, because it lies longer upon it. *Woodward.*

THE'SIS, *s.* [*these*, Fr.; *ῥεσις*, Gr.] A position; something laid down, affirmatively or negatively.

The truth of what you here lay down,
By some example should be shewn.
An honest, but a simple pair,
May serve to make this *thesis* clear.

Prior.

THESIUM [of Pliny. Derivation unknown], in Botany, a genus of the class pentandria, order monogynia, natural order of vepreculæ, elæagni (*Juss.*)—Generic Character. Calyx: perianth one-leafed, turbinate, permanent, half-five-cleft; segments half-lanceolate, erect, obtuse. Corolla none, unless the calyx internally coloured may be regarded as such. Stamina: filaments five, awl-shaped, inserted into the base of the calycine segments, shorter than the calyx. Anthers roundish. Pistil: germ inferior, growing upon the base of the calyx. Style filiform, length of the stamens. Stigma thickish, obtuse. Pericarp none. The calyx contains the seed in its bottom, and does not open. Seed one, roundish, covered.—*Essential Character.* Calyx: one-leafed, into which the stamens are inserted. Nut inferior, one-seeded.

1. Thesium linophyllum, flax-leaved thesium, or bastard toad-flax.—Spike branched; bracts in threes; leaves linear-lanceolate; calyx-tube very short. Root woody, branched, crooked, whitish, perennial. Flowers in spikes. It has several varieties.—Native of Europe, Siberia and Barbary, chiefly in a calcareous soil: it flowers in July.

2. Thesium Alpinum, or Alpine thesium.—Raceme leafed, leaves linear. Root perennial, fibrous, of a dirty white colour.—Native of the mountains of Italy, Germany, Austria, Switzerland, the South of France, Mount Atlas and Siberia.

3. Thesium humile, or dwarf thesium.—Leaves linear, somewhat fleshy; flowers axillary, sessile, five-cleft.—Native of the kingdom of Tunis.

4. Thesiumlineatum.—Leaves linear; stem round, angular, leafless below; branches erect, divaricating; flowers axillary, peduncled.—Native of the Cape of Good Hope.

5. Thesium squarrosum.—Leaves linear, subulate, recurved and reflexed; stem round; flowers axillary, sessile.—Found at the Cape.

6. Thesium frisea.—Flowers subspliked, directed one way, ciliate-woolly; leaves awl-shaped.—Found at the Cape.

Thesium funale. Thesium spicatum. Thesium capitatum. Thesium strictum. Thesium umbellatum. Thesium fragile. Thesium scabrum. Thesium paniculatum. Thesium amplexicaule. Thesium triflorum. Thesium euphorbioides. Thesium colpoon. Thesium spinosum.

THE'SMOTHETE, *s.* [*thesmothete*, Fr.; *ῥεσμοθητης*, and *ῥεσμος τιθεμι*, Gr.] A lawgiver.

THESPIS, the supposed inventor of tragedy, flourished 580 B. C. See the article **POETRY**.

THESSALONICA. See **SALONICHI**.

THESSALY, an extensive province in the north of Greece, extending in an oblong form from north to south, and bounded on the east by the part of the Ægean which forms the gulf of Salonica; on the west by high mountains of the Pindus range. By the Turkish division of Greece, it is comprehended in the sandjiaçat or government of Tricala, an inland town situated to the west. It is one of the finest provinces of Greece, containing fertile plains, watered by streams

descending from the mountains in the west, and flowing into the Ægean.

THETA, Θ, one of the Greek letters. It was used as a mark on the ballots of judges, by which they condemned the person to death, it being the first letter of the word *Θάνατος*, death. Whence it had the epithet of *niger* and *infelix*, thus:—

“O multum ante alias infelix litera theta.”

THETFORD, a market town of England, in the county of Norfolk, situated in a pleasant open country, on the river Ouse, at its confluence with the Thet, which runs through it. The greater part of the town is in Norfolk, but part of it is also in Suffolk. The Suffolk side contains now only a few houses, but on the Norfolk side there are several streets of considerable extent; and of late years the town is much improved in its general appearance. Thetford is a very ancient burgh; but its charter of incorporation, by which it is still governed, was granted by queen Elizabeth in the year 1573. The corporation consists of a mayor, 10 aldermen, 20 common-councilmen, a recorder, town-clerk, sword-bearer, and two serjeants-at-mace. It sends two members to parliament. The town has been honoured with the presence of many of our sovereigns, particularly Henry I. and Henry II. Several charters granted by the former monarch bear date at Thetford. In 1821, Thetford contained 402 houses, and 2922 inhabitants. Market on Saturday, and two annual fairs; 29 miles south-west of Norwich, and 80 north-north-east of London. Lat. 52. 25. N. long. 0. 43. E.

THETFORD, a hamlet of England, in Cambridgeshire; 2 miles south-hy-west of Ely.

THETFORD, a township of Lower Canada, in the county of Buckingham.

THETICAL, *adj.* Laid down.—This law—was merely *thetical* or positive, not indispensable and natural. *More.*

THETTAU, a village of Bavarian Franconia, in the principality of Bamberg, near Lauenstein, with 800 inhabitants.

THEVENOT (John), a traveller in the Levant, was born in Lorraine, and after repeated journies, died in Persia, in 1667. He is said to have introduced the use of coffee into France. His “Voyage in Asia” was published in 1664, which is a work considerably esteemed, and has been often re-edited. The Amsterdam edition in 12mo., 1727, is comprised in 5 vols. *Novv. Dict. Histor.*

THEVENOT (Nicholas Melchisedec), a writer of travels, was born in 1621, probably at Paris, and having finished his studies, indulged his propensity for visiting foreign countries, confining himself chiefly to various parts of Europe. The result of his observations and inquiries was published in a “Collection of Voyages and Travels,” comprised in 4 vols. fol. from 1663 to 1672. From various MSS. in the royal library, he compiled “The Works of Ancient Mathematicians,” an edition of which was published after his death. *Moreri.*

THEVET (Andrew), a traveller and writer, was born at Angouleme in 1502; and being desirous of visiting foreign countries, he obtained, by the interest of the cardinal of Lorraine, an opportunity of going to Jerusalem. His travels in the Levant occupied him from 1549 to 1554; and after his return to France, he accompanied the sieur de Villegaignon, in 1555, to found a colony in Brazil. In 1556 he took the habit of an ecclesiastic, and was appointed almoner to queen Catharine de Medicis. He also obtained the titles of historiographer and cosmographer royal, and died at Paris in 1590, at the advanced age of 88 years. Besides other works, he published “Cosmographie du Levant,” 1554, 4to.; “Les Singularités de la France Antarctique,” 1588, 4to.; and “Cosmographie Universelle,” 2 vols. fol. 1575; but unfortunately his veracity is questionable. *Moreri.*

THEURGICAL, or **THEUR'GIC**, *adj.* [*theurgique*, Fr.] Relating to theurgy. See **THEURGY**.—All his endeavour to purge his soul by these *theurgic* consecrations was frustrated. *Hallywell.*

THE'URGIST, *s.* One who is addicted to theurgy.—
More

More refined necromancers or magicians call themselves *theurgists*; thinking to have to do only with good spirits. *Hallywell.*

THE'URGY, *s.* [*θεουργία*, Gr.; *thurgic*, Fr.] The power of doing supernatural things by lawful means, as by prayer to God. Also it is a species of magic, in old times, which was employed in the worship of angels for their assistance to effect wonderful things.—Porphyry and some others did distinguish these two sorts, so as to condemn indeed the grosser, which they called magic or goety; but allowed the other, which they termed *theurgy*, as laudable and honourable, and as an art by which they received angels, and had communion with the gods. Yet St. Austin assures us, they are both damnable. *Hallywell.*

THEUX, a small town of the Netherlands, in the province of Liege, with 3100 inhabitants; 4 miles north-north-west of Spa, and 13 east-south-east of Liege.

THEW, *s.* [ðeap, Sax.] Quality; manners; customs; habits of life; form of behaviour. *Obsolete.*

From mother's pap I taken was unfit,
And streight deliver'd to a fairy knight,
To be upbrought in gentle *thewes* and martial might.

Spenser.

In Shakspeare it seems to signify brawn, or bulk, from the Saxon ðeop, *the thigh*, or some such meaning.

Nature crescent does not grow alone
In *thews* and bulk; but, as this temple waxes,
The inward service of the mind and soul
Grows wide withal.

Shakspeare.

THE'WED, *adj.* Educated; habituated; accustomed. *Obsolete.*—*Thewed*, in our northern dialect, is docile, towardsly. *Ray, Lye, and Grose.*

But he was wise and wary of her will,
And ever held his hand upon his heart;
Yet would not seem so rude, and *thewed* ill,
As to despise so courteous seeming part.

Spenser.

THEY, *pron.*, in the oblique case *them*, the plural of *he* or *she*. [*thai*, Goth.; *hi*, Saxon.] The men, the women; the persons.—*They* are in a most warlike preparation. *Shakspeare.*—Those men; those women: opposed to some others.

Only *they*

That come to hear a merry play,
Will be deceiv'd.

Shakspeare.

It is used indefinitely; as the French *on dit*.

There, as *they* say, perpetual night is found
In silence brooding on th' unhappy ground.

Dryden.

[The plural of *this*, *that*, or *it*.] The things.

Why do you keep alone?

Of sorriest fancies your companions making,
Using those thoughts, which should indeed have died
With them *they* think on.

Shakspeare.

THEYA, a small town of Lower Austria, on the river Theya; 69 miles west north-west of Vienna, and 3 north of Waidhoven.

THEYA, or **TAJA**, a river of Germany, which consists at first of two branches, the Moravian Theya, which rises near Teltsch, in the circle of Iglau, and the German, which rises in Upper Austria. The two unite near Raps in that province, and they fall into the great absorbent of the rivers of this country, the Morawa.

THEYDON, or **THOYDON**, **BOIS**, a parish of England, in Essex: 14 miles from London.

THEYDON, **GARNON**, another parish in the same county, half a mile distant from the foregoing. Population 612.

THEYDON, **MOUNT**, also a parish in Essex, about three quarters of a mile from the preceding one.

THEYS, a small town in the south-east of France, department of the Isere, on the Theys. Population 1800.

THIAGUR, or **TIAGUR**, a celebrated fortress of the south of India, province of the Carnatic. It is situated on a mountain. Vol. XXIII. No. 1619.

tain, and consists of two fortifications and a town. Lat. 11. 45. N. long. 79. 12. E.

THIACOURT, a small town in the north-east of France, department of the Meurthe, on the small river Madive. Population 1100; 25 miles north-west of Nancy.

THIBAULT VI., count of Champagne and king of Navarre, deserves to be recorded as one of the earliest French song-writers. In 1234 he succeeded to the crown of Navarre, on the death of his maternal uncle. Upon his return from the East, whither he went as one of the crusaders, he cultivated literature, and particularly poetry. He died at Pampelona in 1253, having acquired the somewhat inconsistent titles of the Great and the Song-maker. Under the latter character he obtained permanent reputation, degraded, however, by the occasional licentiousness of his imagery. He was the first, it is said, who blended masculine with feminine rhymes:—a capital invention in French versification. *Moreri.*

The songs of this prince are placed by some at the head of those that have been preserved in the French language, as those by Guillaume IX., duke of Aquitaine, are in that of Provence. There were indeed songs written in both languages before these princes had done poetry the honour to make it their favourite amusement; but the chief part of those of higher antiquity than the time of these patriarchs of Provençal and French versification are either lost, or thought of little value.

THIBERVILLE, a petty town in the north of France, department of the Eure, on the small river Arve. Population 1200; 11 miles east of Lisieux.

TH'BLE, *s.* A slice; a scummer; a spatula. *Ainsworth.*

THICK, *adj.* [ðicce, Sax.; *dick*, Dutch; *dyck*, Dan.; *thickr*, Icel.] Not thin; dense; not rare; gross; crass.—God caused the wind to blow, to dry up the abundant slime of the earth, make the land more firm, and cleanse the air of *thick* vapours and unwholesome mists. *Raleigh.*—Not clear; not transparent; muddy; feculent.

Why hast thou lost the fresh blood in thy cheeks,
And given my treasures and my rights of thee,
To *thick* ey'd musing and curs'd melancholy? *Shakspeare.*
Encumber'd in the mud, their oars divide
With heavy strokes the *thick* unwieldy tide.

Addison.

Great in circumference; not slender.—My little finger shall be *thicker* than his loins. 1 *Kings.*—Deep; noting the third dimension: as, a plank four feet long, two feet broad, and five inches *thick*. Noting comparative bulk: as, the door was three inches *thick*. Frequent; in quick succession; with little intermission.

Not *thicker* billows beat the Lybian main,
Not *thicker* harvests on rich Hermus rise,
Than stand these troops.

Dryden.

Close; not divided by much space; crowded.

Conquests he strew'd where'er he came,
Thick as the galaxy with stars is sown.

Dryden.

Not easily pervious; set with things close to each other.

He through a little window cast his sight,
Though *thick* of bars that gave a scanty light.

Dryden.

Coarse; not thin.—It tasteth a little of the wax, which in a pomegranate, or some such *thick*-coated fruit, it would not. *Bacon.*—Without proper intervals of articulation.

Speaking *thick*, which nature made his blemish,
Became the accents of the valiant,
To seem like him.

Shakspeare.

Stupid.—Gross-headed, *thick*-witted, illiterate, shallow. *Milton.*—Dull; not quick: as, *thick* of hearing: a colloquial expression. Intimate; familiar: a *vulgarism*.

THICK, *s.* The thickest part, or time when any thing is thickest. A thicket; a place full of bushes.

Mists and rotten fogs
Hang in the gloomy *thicks*, and make unsteadfast bogs.

Drayton.

THICK

THICK and *thin*. Whatever is in the way.

Through perils both of wind and limb,
Through *thick* and *thin* she followed him. *Hudibras*.

THICK, *adv.* [It is not always easy to distinguish the adverb from the adjective.] Frequently; fast.

'Tis some disaster,
Or else he would not send so *thick*. *Denham*.
Closely.

The neighbouring plain with arms is cover'd o'er;
The vale an iron harvest seems to yield,
Of *thick* sprung lances in a waving field. *Dryden*.

To a great depth.—If you apply it *thick* spread, it will eat to the bone. *Wiseman*.

THICK and *threefold*. In quick succession; in great numbers.—They came *thick* and *threefold* for a time, till one experienced stager discovered the plot. *L'Estrange*.

To **THICK**, *v. n.* To grow dense.

But see, the welkin *thicks* apace,
And stooping Phœbus steeps his face:
It's time to haste us homeward. *Spenser*.

To **THICKEN**, *v. a.* [ðiccian, Sax.] To make thick. To make close; to fill up interstices.—Waters evaporated and mounted up into the air, *thicken* and cool it. *Woodward*.—To condense; to make to concrete.—The white of an egg gradually dissolves by heat, exceeding a little the heat of a human body; a greater degree of heat will *thicken* it into a white, dark-coloured, dry, viscous mass. *Arbuthnot*.—To strengthen; to confirm.

'Tis a shrewd doubt, though it be but a dream;
And this may help to *thicken* other proofs,
That do demonstrate thinly. *Shakespeare*.

To make frequent. To make close or numerous; as, to *thicken* the ranks.

To **THICKEN**, *v. n.* To grow thick. To grow dense or muddy.

Thy lustre *thickens*
When he shines by. *Shakespeare*.

To concrete; to be consolidated.

Water stopt gives birth
To grass and plants, and *thickens* into earth. *Prior*.

To grow close or numerous.

The press of people *thickens* to the court,
The impatient crowd devouring the report. *Dryden*.

To grow quick.

The combat *thickens*, like the storm that flies
From westward when the showery scuds arise,
Or pattering hail comes pouring on the main,
When Jupiter descends in harden'd rain. *Dryden*.

THICKET, *s.* [ðicceƿe, Saxon.] A close knot or tuft of trees; a close wood or copse.

I drew you hither,
Into the chiefest *thicket* of the park. *Shakespeare*.

THICKLEY, a hamlet of England, in the county of Durham; 4 miles south-east of Bishops Auckland.

THICKLY, *adv.* [ðiclice, Sax.] Deeply; to a great quantity.—Mending cracked receivers, having *thickly* overlaid them with diachylon, we could not perceive leaks. *Boyle*.—Closely; in quick succession.

THICKNESS, *s.* The state of being thick; density. Quantity of matter interposed; space taken up by matter interposed.—In the darkened room, against the hole at which the light entered, I could easily see through the whole *thickness* of my hand the motions of a body placed beyond it. *Boyle*.—Quantity laid on quantity to some considerable depth.—Poll a tree, and cover it some *thickness* with clay on the top, and see what it will put forth. *Bacon*.—Consistence; grossness; not rareness; spissitude.—Nitre mingled with water to the *thickness* of honey, and anointed on the

bud after the vine is cut, it will sprout forth. *Bacon*.—Imperviousness; closeness.—The banks of the river and the *thickness* of the shades drew into them all the birds of the country. *Addison*.—Want of sharpness; want of quickness.—A person found in himself, being at some times subject to a *thickness* of hearing, the like effect. *Holder*.—What you write is printed in large letters; otherwise between the weakness of my eyes and *thickness* of hearing, I should lose the greatest pleasure. *Swift*.

THICKSCULL, *s.* A dolt; a blockhead. *Johnson*.

THICKSCULLED, *adj.* Dull; stupid.

They're pleas'd to hear their *thickscull'd* judges cry.
Well mov'd! oh finely said! *Dryden*.

THICKSET, *adj.* Close planted.

His eye-balls glare with fire, suffus'd with blood,
His neck shoots up a *thickset* thorny wood;
His bristled back a trench impal'd appears,
And stands erected, like a field of spears. *Dryden*.

THICKSKIN, *s.* A coarse gross man, a numscull.

The shallowest *thickskin* of that barren sort,
Who Pyramus presented in their sport,
Forsook his scene and euter'd in a brake. *Shakespeare*.

THICKTHORN, a hamlet of England, in the parish of Hetherset, Norfolk.

THIEF, *s.* [thiubs, Goth.; ðief, ðeor, Saxon; dief, Dutch. It was anciently written *thiof*, and so appear-eth to have been of two syllables; *thie* was wont to be taken for *thrift*, so that *thie of* is he that takes of or from a man his *thie*, that is, his *thrift* or *means* whereby he *thrives*. *Dr. Johnson*.—Wachter and Serenius derive it from the Goth. *thiwe*, or *thive*, a servant; and illustrate this derivation by the analogy of the Latin *fur*, which meant a servant before it meant a thief. The Germ. *dieb* is both a male or female servant, and a thief. The reason, Wachter says, of transferring the sense, was because, in ancient times, servants were generally thieves.] One who takes what belongs to another: *the thief* steals by secrecy, and *the robber* by violence; but these senses are often confounded.—Take heed, have open eye; for *thieves* do foot by night. *Shakespeare*.—An excrescence in the snuff of a candle.—Where you see a *thief* in the candle, call presently for an extinguisher. *Bp. Hall*.

THIEF-CATCHER, **THIEF-LEADER**, or **THIEF-TAKER**, *s.* One whose business is to detect thieves, and bring them to justice.—A wolf passed by as the *thief-leaders* were dragging a fox to execution. *L'Estrange*.

THIEL, a neat little town of the Netherlands, the capital of a district in the province of Gelderland, situated in a fertile country, near the great river Waal. It has 4100 inhabitants, employed partly in manufactures, partly in a traffic in corn and provisions; 18 miles west of Nimeguen, and 20 south-east of Utrecht.

THIELT, a considerable town of the Netherlands, in the province of West Flanders, situated at the foot of an eminence, with a castle, and 9800 inhabitants; 18 miles west-south-west of Ghent.

THIEMENDORF, a large village of Prussian Silesia, near Lowenberg, with 1200 inhabitants.

THIENGEN, a small town of the west of Germany, in Baden, formerly the capital of the district called the Clettgau. Population 900; 18 miles west of Schaffhausen, and 3 east of Waldshut.

THIERS, a considerable town of France, in Auvergne, in the department of the Puy de Dome, situated on the declivity of a hill, watered by the small river Durolle. It has a population of 10,600. The buildings in the outskirts of the town have a pleasing appearance, being painted in fresco in the Italian style; but the interior presents nothing but dark, crowded, and winding streets, bordered with gloomy and ill built houses; 22 miles east of Riom, and 25 east-by-north of Clermont. Lat. 45. 52. N. long. 3. 38. E.

THIERSTEIN, a small town of Germany, in Bavaria, principality

principality of Bareith; 20 miles south-south east of Hof, and 75 north of Ratisbon.

TO THIEVE, *v. n.* [ðeoƿian, Sax.] To steal; to practise theft.

THIEVERY, *s.* The practice of stealing; theft.

Do villainy, do, since you profess to do't,
Like workmen; I'll example you with *thievery*. *Shakspeare.*

THIEVISH, *adj.* Given to stealing; practising theft.

What, would'st thou have me go and beg my food?
Or with a base and boisterous sword enforce
A *thievish* living on the common road. *Shakspeare.*

Secret; sly; acting by stealth.

Four-and-twenty times the pilot's glass
Hath told the *thievish* minutes how they pass. *Shakspeare.*

Relating to what is stolen.—By astrology he resolved *thievish* questions with great success; that was his utmost sole practice. *Lilly.*

THIEVISHLY, *adv.* Like a thief.

They lay not to live by their worke,
But *thievishly* loiter and lurke. *Tusser.*

THIEVISHNESS, *s.* Disposition to steal; habit of stealing.

THIGH, *s.* [ðeoh, Sax.; *thio*, Icel.; *die*, Dutch.] The *thigh* includes all between the buttocks and the knee. The *thigh-bone* is the longest of all the bones in the body: its fibres are close and hard: it has a cavity in the middle: it is a little convex and round on its foreside, but a little hollow, with a long and small ridge on its backside. *Quincy.*—He touched the hollow of his *thigh*, and it was out of joint. *Genesis.*

THILK, *pron.* [ðilc, ðýlc, ðýllc, i. e. ðý he, *the like*. *Lye.*] That same. *Obsolete.*

I love *thilk* lass: alas, why do I love!
She deigns not my good will, but doth reprove,
And of my rural music holdeth scorn. *Spenser.*

THILL, *s.* [ðille, Saxon, a piece of timber cut.] The shafts of a waggon; the arms of wood between which the last horse is placed.—More easily a waggon may be drawn in rough ways if the fore wheels were as high as the hinder wheels, and if the *thills* were fixed under the axis. *Mortimer.*

THILL-HORSE, or **THILLER**, *s.* The last horse; the horse that goes between the shafts.—What a beard hast thou got! thou hast got more hair on thy chin, than Dobbin, my *thill-horse*, has on his tail. *Shakspeare.*

THIMBLE, *s.* [This is supposed by Minsheu to be corrupted from *thumb bell*.] A metal cover by which women secure their fingers from the needle when they sew.

Your ladies and pale-visag'd maids,
Like Amazons, come tripping after drums;
Their *thimbles* into armed gantlets change,
Their needles to lances. *Shakspeare.*

THIMBLE, a parish of England, in Lincolnshire; 1½ mile north-west of Horncastle.

THIMBLE ISLANDS, small islands of the United States, near the coast of Connecticut. Lat. 41. 11. N. long. 72. 42. W.

THIMBLEBY, a hamlet of England, North Riding of Yorkshire; 6 miles east-north-east of Northallerton.

THIMBRIC-KOUY, a village of Asiatic Turkey, in Anatolia, on the site of the ancient Thymbra, some considerable ruins of which are still found, particularly of a temple of Apollo.

THIME, *s.* [*thymus*, Lat.; *thym*, Fr.] A fragrant herb from which the bees are supposed to draw honey. This should be written *thyme*.—Fair marigolds, and bees' alluring *thyme*. *Spenser.*

THIN, *adj.* [ðinn, Sax.; *thunnr*; Icel.; *dunn*, Dutch.] Not thick.—Beat gold into *thin* plates, and cut it into wires. *Exod.*—Rare; not dense.

Understand the same
Of fish within their watery residence;

Not hither summon'd, since they cannot change
Their element, to draw the *thinner* air. *Milton.*

Northward, beyond the mountains we will go,
Where rocks lie cover'd with eternal snow,
Thin herbage in the plains, and fruitless fields,
The sand no gold, the mine no silver yields. *Dryden.*

Not closely compacted or accumulated.—Seven *thin* ears blasted with the east wind sprung up. *Gen.*—Exile; small.

I hear the groans of ghosts;
Thin, hollow sounds, and lamentable screams. *Dryden.*

Not coarse; not gross in substance: as, a *thin* veil.—Not abounding.—Ferrara is very large, but extremely *thin* of people. *Addison.*—Not fat; not bulky; lean; slim; slender.—A slim *thin*-gutt'd fox made a hard shift to wriggle his body into a hen-roost, and when he had stuffed his guts well, the hole was too little to get out again. *L'Estrange.*—Slight; unsubstantial: we apply it, in colloquial language, to a person of weak mind.—A *thin* suspicion. *Chaucer.*

THIN, *adv.* Not thickly.
Fame is the spur that the clear spirit doth raise,
That last infirmity of noble mind,
To scorn delights, and live laborious days;
But the fair guerdon when we hope to find,
And think to burst out into sudden blaze,
Comes the blind fury with th' abhorred sheers,
And slits the *thin*-spun life. *Milton.*

TO THIN, *v. a.* [from the adjective; Sax. ðinnian.] To make thin or rare; to make less thick. *Pr. Parv.*—The serum of the blood is neither acid nor alkaline; oil of vitriol thickens, and oil of tartar *thins* it a little. *Arbuthnot.*—To make less close or numerous.

T' unload the branches, or the leaves to *thin*,
That suck the vital moisture of the vine. *Dryden.*

To attenuate.
The vapours by the solar heat
Thinn'd and exhal'd rise to their airy seat. *Blackmore.*

THINE, *pronoun.* [*theiu*, Gothic; ðin, Saxon; *dijn*, Dutch.] Belonging or relating to thee; the pronoun possessive of *thou*. It is used for *thy* when the substantive is divided from it: as, this is *thy* house; *thine* is this house; this house is *thine*.

Thou hast her, France; let her be *thine*, for we
Have no such daughter. *Shakspeare.*

THING, *s.* [ðing, Saxon; *ding*, Dutch and German; deduced from *thun*, facere, to make.] Whatever is; not a person. *A general word.*

Do not you chide; I have a *thing* for you.
— You have a *thing* for me?
It is a common *thing* —
— Ha?
— To have a foolish wife. *Shakspeare.*

It is used in contempt.—I have a *thing* in prose, begun above twenty-eight years ago, and almost finished; it will make a four-shilling volume. *Swift.*—It is used of a person in contempt, or sometimes with pity.

See, sons, what *things* you are! how quickly nature
Falls to revolt, when gold becomes her object!
For this the foolish over-careful fathers
Have broke their sleeps with thought, their brains with care. *Shakspeare.*

It is used by Shakspeare in a sense of honor.
I lov'd the maid I married; never man
Sigh'd truer breath; but that I see thee here,
Thou noble *thing*! more dances my wrapt heart. *Shakspeare.*

THINGHILL, GREAT and LITTLE, hamlets of England, in the parish of Withington, Herefordshire.

THINGWALL, a village of England, in Cheshire; 5½ miles north-by-west of Great Neston.

TO THINK, *v. n.* preter. *thought*. [*thankgan*, Goth.; ðencean,

Dencean, Dincan, Sax.; *dencken*, Dutch.] To have ideas; to compare terms or things; to reason; to cogitate; to perform any mental operation, whether of apprehension, or judgment.

What am I? or from whence? for that I am
I know, because I *think*; but whence I came,
Or how this frame of mine began to be,
What other being can disclose to me?

Dryden.

To judge; to conclude; to determine.—Can it be *thought* that I have kept the gospel terms of salvation, without ever so much as intending, in any serious and deliberate manner, either to know them or keep them? *Law*.—To intend.

Thou *thought'st* to help me, and such thanks I give,
As one near death to those that wish him life. *Shakspeare.*

To imagine; to fancy.

Something since his coming forth is *thought* of, which
Imports the kingdom so much fear and danger,
That his return was most requir'd. *Shakspeare.*

To muse; to meditate.

You pine, you languish, love to be alone,
Think much, speak little, and in speaking sigh. *Dryden.*

To recollect; to observe.

We are come to have the warrant.
— Well *thought* upon; I have it here about me.

Shakspeare.

To judge; to be of opinion.—If your general acquaintance be among ladies, provided they have no ill reputation, you *think* you are safe. *Swift*.—To consider; to doubt; to deliberate.—Any one may *think* with himself, how then can any thing live in Mercury and Saturn. *Bentley.*

To THINK on. To contrive; to light upon by meditation. Still the work was not complete,
When Venus *thought* on a deceit. *Swift.*

To THINK of. To estimate.—The opinions of others whom we know and *think* well of, are no ground of assent. *Locke.*

To THINK *v. a.* To imagine; to image in the mind; to conceive.—*Think* nought a trifle, though it small appear. *Young*.—To believe; to esteem.—Nor *think* superfluous others' aid. *Milton.*

To THINK much. To grudge.—He *thought* not much to clothe his enemies. *Milton.*

To THINK scorn. To disdain. He *thought* scorn to lay hands on Mordecai alone. *Esth.*

Me THINKETH. It seems to me. Me THOUGHT. It appeared to me.—These are anomalous phrases of long continuance and great authority, but not easily reconciled to grammar. In *me thinketh*, the verb being of the third person, seems to be referred not to the thing, and is therefore either active, as signifying *to cause to think*; or has the sense of *seems, me thinks it seems to me*.—*Me thought* I saw the grave where Laura lay. *Sidney.*

THINKER, *s.* One who thinks in a certain manner.—If a man had an ill-favoured nose, deep *thinkers* would impute the cause to the prejudice of his education. *Swift.*

THINKING, *s.* Imagination; cogitation; judgment.—He put it by once; but, to my *thinking*, he would have fain have had it. *Shakspeare.*

If we did think

His contemplations were above the earth,
And fix'd on spiritual objects, he should still
Dwell in his musings; but I am afraid
His *thinkings* are below the moon, nor worth
His serious considering. *Shakspeare.*

THINLY, *adv.* Not thickly.

The wide domain
Now green with grass, now gilt with grain,
In russet robes of clover deep,
Or *thinly* veil'd, and white with sheep.

Shenstone.

Not closely; not numerously.

Our walls are *thinly* mann'd, our best men slain:
The rest an heartless number, spent with watching. *Dryden.*

THUNNESS, *s.* [ðinneſſe, Saxon.] The contrary to thickness; exility; tenuity.—Tickling is most in the soles, arm-holes and sides, because of the *thinness* of the skin. *Bacon*.—Paucity; scarcity.

The buzzard

Invites the feather'd Nimrod of his race
To hide the *thinness* of their flock from sight,
And all together make a seeming goodly flight. *Dryden.*

Rareness; not spissitude.—Those pleasures that spring from honour the mind can nauseate, and quickly feel the *thinness* of a popular breath. *South.*

THIONVILLE, a town in the north-east of France, the capital of an arrondissement, and situated on the Moselle, over which it has a fine wooden bridge, defended by a horn-work; 17 miles north of Metz, and 22 south of Luxemburg.

THIRD, *adj.* [ðriðða, Saxon.] The first after the second; the ordinal of three.—This is the *third* time; I hope good luck lies in odd numbers. *Shakspeare.*

THIRD, *s.* The third part.

To thee and thine hereditary ever,
Remain this ample *third* of our fair kingdom. *Shakspeare.*

The protestant subjects of the abbey make up a *third* of its people. *Addison*.—The sixtieth part of a second.—Divide the natural day into twenty-four equal parts, an hour into sixty minutes, a minute into sixty seconds, a second into sixty *thirds*. *Holder.*

THIRD, POINT, a cape on the east coast of Sumatra, in the straits of Banca. Lat. 2. 24. S. long. 105. 39. E.

THIRDBOROUGH, *s.* An under-constable.

All the wise of the hundred;
Old Rasi' Clench of Hamstead, petty constable;
In-and-In Medley, cooper of Islington,
And headborough, with loud To-Pan the tinker
Or metal-man of Belsie, the *thirdborough*. *B. Jonson.*

THIRDLY, *adv.* In the third place.—First, metals are more durable than plants; secondly, they are more solid; *thirdly*, they are wholly subterranean. *Bacon.*

THIRKLEBY, a township of England, East Riding of Yorkshire; 10 miles east-by-south of New Malton.

THIRKLEBY, another township in the same Riding; 5½ miles north-east of Kingston-upon-Hull.

THIRKLEBY, a parish of England, North Riding of Yorkshire; 4½ miles south-east of Thirsk.

To THIRL, *v. a.* [ðirliæn, Saxon.] To pierce; to perforate. It is now pronounced and written *thrill*. *Dr. Johnson*.—Not universally: *thirl* is still a northern word, in this sense.

THIRLBY, a township of England, North Riding of Yorkshire; 5 miles east-north-east of Thirsk.

THIRLWALL, a hamlet of England, in Northumberland, near the borders of Cumberland, where the Picts' wall passed the river Tippil, near the Irthing.

THIRNE, or THORNE, a township of England, North Riding of Yorkshire; 4 miles south-west-by-west of Bedale.

THIRSK, a market town and borough of England, in the North Riding of Yorkshire. It is a pleasant and well built town, and is agreeably situated in a plain, almost surrounded with hills, on the banks of a brook called Coatbeck, over which there are two small but substantial stone bridges. Old Thirsk is a borough by prescription, and returns two members to parliament. The right of election is vested in the burgage tenements, now only 50 in number, of which 49 belong to Sir Thomas Frankland, baronet. Market on Monday, and eight annual fairs. Contains 743 houses, and 2155 inhabitants; 20 miles north-west of York, and 220 north-by-west of London. Lat. 54. 14. N. long. 1. 20. W.

THIRST, *s.* [ðyprst, Saxon; *dorst*, Dutch.] See *To THIRST*.—The pain suffered for want of drink; want of drink.

Thus accurs'd,
In midst of water I complain of *thirst*. *Dryden.*
Eagerness;

Eagerness; vehement desire: with *of*, *for*, or *after*.—Thou hast allay'd the *thirst* I had *of* knowledge. *Milton*.—*Draught*.

The rapid current,—through veins
Of porous earth with kindly *thirst* up drawn,
Rose a fresh fountain. *Milton*.

To THIRST, *v. n.* [δύψρον, Saxon; *dersten*, Dutch; *thaurusjan*, Goth.; from *thaurusus*, aridus, dry. *Serenius*.] To feel want of drink; to be thirsty or athirst: with *for*.—They, as they *thirsted*, scoop the brimming stream. *Milton*.—To have a vehement desire for any thing: with *for* or *after*.

But furious *thirsting* thus *for* gore,
The sons of men shall ne'er approach thy shore. *Pope*.

To THIRST, *v. a.* To want to drink. This structure is not usual.

Untam'd and fierce the tyger still remains:
For the kind gifts of water and of food,
He seeks his keeper's flesh, and *thirsts* his blood. *Prior*.

THIRSTINESS, *s.* The state of being thirsty.—Next they will want a sucking and soaking *thirstiness*, or a fiery appetite to drink in the lime. *Wootton*.—A vehement desire for any thing.—Carried and transported with an over-desire and *thirstiness* after fame. *Naunton*.

THIRSTON, EAST and WEST, hamlets of England, in Northumberland; 9 miles south of Alwicks.

THIRSTONLAND, a township of England, West Riding of Yorkshire; 5 miles from Huddersfield. Population 868.

THIRSTY, *adj.* [δύψρηξ, Saxon.] Suffering want of drink; pained for want of drink.

Thy brother's blood the *thirsty* earth hath drank,
Broach'd with the steely point of Clifford's lance.
Shakspeare.

Possessed with any vehement desire: as, blood *thirsty*.

THIRSTY SOUND, an inlet or bay on the east coast of New Holland, so called by Captain Cook, from its want of fresh water. It is exposed to the north-east and east winds. Lat. 22. 6. 53. S. long. of the northernmost, 150. 0. 10. E.

THIRTEEN, *adj.* [δρεοιτνε, Saxon.] Ten and three.—Speaking at the one end, I heard it return the voice *thirteen* times. *Bacon*.

THIRTEEN ISLANDS, a cluster of small isles in the North Pacific Ocean.

THIRTEENTH, *adj.* [δρεοτεοδα, Sax.] The third after the tenth.

If she could prove a *thirteenth* task for him
Who twelve achiev'd, the work would me beseeem.

Beaumont.

THURTIETH, *adj.* [δμυτεροδα, Saxon.] The ten thrice told; the ordinal of thirty.—Henry shall espouse the lady Margaret ere the *thirtieth* of May next ensuing. *Shakspeare*.

THIRTY, *adj.* [δμυτιξ, Saxon.] Thrice ten.
I have slept fifteen years.

—Ay, and the time seems *thirty* unto me. *Shakspeare*.

THIRTY MILE, or DEAD RIVER, a river of the United States, in Maine, which joins the Androscoggin, in Livermore.

THIS, *pronoun*. [διξ, Saxon.] That which is present; what is now mentioned.—Must I endure all *this*? *Shakspeare*.—The next future.—Let not the Lord be angry, and I will speak but yet *this* once: peradventure ten shall be found there. *Gen*.—*This* is used for *this time*.—By *this* the vessel half her course had run. *Dryden*.—The last past.

I have not wept *this* forty years; but now
My mother comes afresh into my eyes. *Dryden*.

It is often opposed to *that*.

As when two winds with rival force contend,
This way and *that*, the wavering sails they bend,
While freezing Boreas and black Eurus blow,
Now here, now there, the reeling vessel throw. *Popc*.

VOL. XXIII. No. 1619.

When *this* and *that* respect a former sentence, *this* relates to the latter, *that* to the former member. See THOSE.—Their judgment in *this* we may not, and in *that* we need not follow. *Hooker*.—Sometimes it is opposed to *the other*.

With endless pain *this* man pursues
What if he gain'd he could not use:
And *t'other* fondly hopes to see
What never was, nor e'er shall be. *Prior*.

THISTLE, *s.* [διξελ, Saxon; *diestel*, Dutch; *carduus*, Lat.] A prickly weed growing in fields.—Thorns also, and *thistles* it shall bring thee forth. *Milton*.

THISTLE GOLDEN, *s.* A plant. *Miller*.

THISTLE'S ISLAND, an island on the south coast of New Holland, at the mouth of Spencer's Gulf. Lat. 34. 56. S. long. of the north end, 136. 3½. E.

THISTLE-TAKE, a custom in the hundred of Halton, in the county of Chester, whereby, if in driving beasts over the common, the driver permits them to graze, or take but a thistle, he shall pay a half-penny a beast to the lord of the fee.

At Fiskerton, in Nottinghamshire, by ancient custom, if a native, or cottager, killed a swine above a year old, he paid the lord one penny, which was also called thistletake.

THISTLETON, a hamlet of England, in Lancashire; 4½ miles north-north-west of Kirkham.

THISTLETON, a village of England, in Rutlandshire; 8 miles north-east of Oakham.

THISTLY, *adj.* Overgrown with thistles.

Wide o'er the *thistly* lawn as swells the breeze,
A whitening shower of vegetable down
Amusive floats. *Thomson*.

THITHER, *adv.* [διδειρ, Saxon.] To that place: it is opposed to hither.—We're coming *thither*. *Shakspeare*.—To that end; to that point.

THITHERTO, *adv.* To that end; so far.

THITHERWARD, *adv.* [διδειρπειρδ, Sax.] Towards that place.

Madam, he's gone to serve the duke of Florence:
We met him *thitherward*, for thence we came. *Shakspeare*.

THIVA, or STIBES, the ancient *Thebes*, a well known city of ancient Greece, which, in its days of prosperity, contained 40,000 inhabitants.

THIVIERS, a small town in the south of France, department of the Dordogne, with 1600 inhabitants, and some manufactures of paper, leather, and stone-ware; 20 miles north-west of Perigueux.

THIXENDALE, or THISTENDALE, a hamlet of England, East Riding of Yorkshire; 8½ miles south-south-east of New Malton.

THIZY, a small town in the south-east of France, department of the Rhone, situated on an eminence. Population 1000. It has some manufactures of cotton and linen; 20 miles west-by-north of Villefranche.

THLASIAS, a term used by the ancients to express an enuch made by a compression or contusion of the testicles, not by the cutting them out.

THLASIS, a word used by the ancients to express either a contusion without a wound, or a wound made by some blunt instrument, which contused the parts.

THLASMA, a word sometimes used like *thlasis*, to express a contusion either with or without a wound; sometimes applied particularly to a recess of the cranium inward without a fracture, an accident principally affecting children.

THLASPI [of Pliny. Θλασπι of Dioscorides, perhaps from *θλαω*, comprimo. The seed vessel being compressed or flatted], in Botany, a genus of the class tetradynamia, order siliculosa, natural order of siliquosa or cruciformes, crucifera (*Juss.*)—Generic Character. Calyx: perianth four-leaved; leaflets ovate, concave, from erect patulous, deciduous. Corolla four-petalled, cruciform; petals obovate, twice as long as the calyx, with narrow claws. Stamina: filaments six, shorter by half than the corolla. Anthers acuminate. Pistil: germ roundish, compressed, emarginate. Style

simple, length of the stamens. Stigma obtuse. Pericarp: silicle compressed, obcordate, emarginate, with the style the length of the notch, two-celled; partition lanceolate; valves boat-shaped, margined and keeled. Seeds several, nodding, fastened to the sutures.—*Essential Character*. Silicle emarginate, obcordate, many-seeded; valves boat-shaped, margined, and keeled.

1. *Thlaspi peregrinum*, or foreign bastard cress.—Silicles suborbiculate; leaves lanceolate, quite entire. Stems a span high; flowers small, red, with ovate entire petals.—Native of Carniola.

2. *Thlaspi Arabicum*, or Arabian bastard cress.—Silicles oval styled; lower leaves wedge-shaped; upper cordate, oblong, embracing. Stems herbaceous.

3. *Thlaspi arvense*, field bastard cress, penny cress, or smooth mithridate mustard.—Silicles orbicular, compressed, even; leaves oblong, toothed, smooth. Root annual, small. Herb smooth. Stem a foot or more in height, having a few branches at top. Flowers small, in racemes. Peduncles alternate, nearly horizontal, one-flowered. Petals white.—Native of Europe and Japan, in corn-fields.

4. *Thlaspi alliaceum*, or garlic bastard cress.—Silicles subovate, ventricose; leaves oblong, obtuse, toothed, smooth.—Native of Austria and Germany.

5. *Thlaspi Psychine*, or long-styled bastard cress.—Silicles obovate-deltoid, styled; leaves lanceolate, cordate, toothed, embracing, pubescent.—Native of Barbary, near Mayane, on the borders of fields.

6. *Thlaspi saxatile*, or rock bastard cress.—Silicles roundish; leaves lanceolate-linear, obtuse, fleshy.—Native of the south of Europe.

7. *Thlaspi hirtum*, or hairy bastard cress.—Silicles elliptic-oblong, hairy, undotted, margined above; stem-leaves sagittate, villose.—Native of Italy, the south of France, and Austria.

8. *Thlaspi campestre*, wild bastard cress or common mithridate mustard.—Silicles roundish, glandular, dotted, margined above; leaves sagittate, toothed, hoary.—Native of Europe and Barbary, in corn-fields; it has two varieties.

9. *Thlaspi montanum*, or mountain bastard cress.—Silicles obcordate; leaves smooth; root-leaves somewhat fleshy, obovate, quite entire; stem-leaves oblong, embracing, subsagittate; corollas larger than the calyx.—Native of Germany, Austria, the south of France, and Italy.

10. *Thlaspi alpinum*, or alpine bastard cress.—Silicles obcordate; stem-leaves cordate, smooth, quite entire; petals twice as long as the calyx, stem simple.

11. *Thlaspi perfoliatum*, perfoliate bastard cress, or shepherd's purse.—Silicles obcordate; stem-leaves sagittate-cordate, embracing; stem branched; style very short.—Native of Germany, Switzerland, Austria, the south of France, Italy, and England.

12. *Thlaspi alpestre*, dwarf bastard cress, or shepherd's purse.—Silicles obovate, retuse, many-seeded; stem-leaves sagittate; stems simple; style stretched out.—Native of Germany, Switzerland, Austria, the south of France, Italy, and England.

13. *Thlaspi bursa pastoris*, common shepherd's purse, or pouch.—Hirsute; silicles deltoid-obcordate; root-leaves pinnatifid. Root annual, fibrous. Stem about a foot high, upright, round, branched, leafy, rough, pinnatifid, the segments varying much in form. Stem-leaves oblong, embracing, toothed. All more or less hairy. Flowers in corymbs, lengthening out into racemes.—This plant, which grows naturally in most parts of the world, is a strong instance of the influence of soil and situation; sometimes not being more than two or three inches high, when it flowers and perfects its seeds, whilst in other situations it attains the height of as many feet. On walls and in dry situations the root-leaves are more deeply divided, and the segments become much narrower; in cultivated ground they are broader and less jagged; in a dry barren chalk the plant becomes very small with a single undivided stem, and the leaves all entire.

14. *Thlaspi ceratocarpon*, or Siberian bastard cress.—Very smooth; stem grooved; leaves sagittate, lanceolate, subseriate; silicles two-lobed.—Native of the salt plains of Siberia.

Propagation and Culture.—Sow the seeds where the plants are to remain, either in spring or autumn; but the latter season is to be preferred. When the plants come up, thin them where they are too close, and keep them clean from weeds.

Shepherd's purse is a common weed every where. It increases so fast by seeds, that a garden is not easily cleared of it, when they are permitted to shed.

THLIBIÆ, a kind of Eunuchs. See THLASIAS.

THLIPSIS, [θλίσις, Gr.] is used by anatomists, for the compression of any vessel or aperture, by which its cavity is lessened.

THNETOPSYCHITES, composed of θνήτος, *mortal*, and ψυχή, *soul*, in Ecclesiastical History; a sect in the ancient church, who believed the soul of man perfectly like that of brutes; and taught that it died with the body.

THO, *adv.* [ða, Saxon; tha, Icel.] Then.—*Tho* to a hill his fainting flock he led. *Spenser*—*Tho* contracted for *though*.

THOA, in Botany, a genus of the class monoecia, order polyandria, natural order of urticæ (*Juss.*)—*Generic Character*.—Male: flowers in spikes.—Calyx none. Corolla none. Stamina: filaments at the top of each joint in the spike, numerous, short. Anthers very small.—Female: flowers, at the base of the spike, one on each side sessile.—Calyx none. Corolla none. Pistil: germ ovate. Style scarcely any. Stigma three or four-cleft, very small. Pericarp oblong, brittle, one-celled. Seed one, oblong, in a brittle shell, covered with very small rigid pungent bristles, weaved into a sort of dry aril.—*Essential Character*. Calyx and corolla none.—Male: stamens numerous, at the joints of the spike. Female: germs two, at the base of the male spike, one on each side sessile.—Stigma three or four-cleft. Seed in a brittle shell, covered with a bristly web.

Thoa urens.—This is a shrub, rising with a tortuous stem to about the length of ten feet, and emitting several twisted and climbing branches upon the neighbouring trees; the bark is rough and greyish; the wood white and spongy; the leaves opposite, smooth, green, entire, and oval, terminating in a sharp point; the largest are about five inches and a half long, and about three inches wide; the spikes of male flowers spring from the bosoms of the leaves and the tips of the branches, and on each side the base of the male flowers is a female one. The native name of the plant is thoa, found in Guiana.

THOARD, a small town in the south-east of France, department of the Lower Alps, near the small river Raduge. Population 1000; 6 miles north-west of Digne.

THOCKRINGTON, or TOCKERINGTON, a hamlet of England, in Northumberland; 10½ miles north-by-east of Hexham.

THOGRAL, a Persian of Ispahan, who was grand vizier to the sultan Malich Mashud, is celebrated for his poetical talents, a specimen of which is given by Poccocke; and for a commentary upon the republic of Plato, to whom the Saracens paid little attention. After a strange reverse of fortune, Thograi was put to death by order of the sultan, in the year 1121.

THOISSEY, a small town in the east of France, department of the Ain, on the small river Chalaronne. Population 1400; 11 miles south of Macon.

THOKES, in our old writers, fish with broken bellies, forbid by statute to be mixed or packed with tale-fish. 22 Ed. IV. cap. 2.

To THOLE, *v. a.* [*thulan*, Goth.; ðolian Sax.] To bear; to endure; to undergo.—So mochel woe as I have with you *tholed*. *Chaucer*.

To THOLE, *v. n.* [*tola*, Su. Goth.] To wait a while: a *northern expression*.

THOLE, *s.* [*tholus*, Lat.] The roof of a temple.—Let altars smoke, and *tholes* expect our spoils. *Fuimus*.—See THOWL.

THOLEN, or TER THOLEN, a town of the Netherlands, in the province of Zealand, in the island of Tholen; 4 miles north-west of Bergen-op-Zoom, and 22 north-north-west of Antwerp.

THOLEN, a small island of the Netherlands, near the mouth of the Scheldt, belonging to the province of Zealand; it is about 12 miles long and 6 broad.

THOLES, denote small pins driven perpendicularly into the

the upper edge of a boat. In rowing, the oar passes between the two tholes, in the space called the row-lock.

THOLIMAN, a settlement of Mexico, in the intendancy of Queretaro, containing 132 families of Indians.

THOLTHORPE, a township of England, North Riding of Yorkshire; 4 miles west-south-west of Easingwold.

THOMÆANS, THOMEANS, or THOMITES, a people of the East Indies, in Cochin, and upon the coast of Malabar and Coromandel, who, according to tradition, received the Gospel from the apostle St. Thomas.

THOMAR, a town in the central part of Portugal, in Estremadura, near the river Nabao. It is regularly built, contains 5000 inhabitants, and has an establishment for spinning cotton, some soap-works, and a little trade in olive oil; 17 miles north-north-west of Abrantes.

THOMAS (Antony Leonard), a distinguished French writer, was born in the diocese of Clermont, in Auvergne, in the year 1732, and designed for the profession of the law; but his attachment to literature, induced him to prefer a professorship in the college of Beauvais. His career as a writer commenced in 1756, by "Reflections, historical and literary, on Voltaire's poem on Natural Religion." His eulogies, particularly those on Descartes and Marcus Aurelius, were highly commended. His "Essai sur les Caractères, les Mœurs, et l'Esprit des Femmes," 1772, is a sprightly performance, in which fine writing and philosophical observation are combined. As a poet he appears to advantage in his "Épître au Peuple," his "Ode sur les Temps," and his "Poème de Jumonville." His epic poem, entitled "Le Pétreide," the hero of which was czar Peter, was left unfinished. His death took place in September, 1785, at the age of 53. His works, in prose and verse, were published at Paris, in 7 vols. 8vo. *Gen. Biog.*

THOMAS (Christian), an eclectic philosopher of the German schools, who deserves notice on account of the boldness with which he threw off the yoke of human authority, and the perseverance with which, against much opposition, and in many vicissitudes of fortune, he maintained and exercised the right of free inquiry. He was born at Leipsic, in the year 1655, and finished his course of education in the university of his native city. Upon a perusal of Puffendorf's Apology for rejecting the scholastic principles of morals and law, he renounced implicit deference to all ancient dogmas; and engaged in reading lectures on the subject of natural law, first from the text of Grotius, and afterwards from that of Puffendorf, in the full exercise of his own judgment, with prudent caution while his father lived, but after his death with a boldness which incurred the violent resentment of theologians and professors. In 1687, he published an "Introduction to Puffendorf," in which he deduced the obligation of morality from natural principles, and thus gave great offence. In the following year he became still more unpopular, by commencing a monthly literary journal, entitled "Free Thoughts; or, Monthly Dialogues on various Books, chiefly new;" containing a severe attack upon many of his contemporaries. Soon after he published another satirical work, "On the Divine Right of Kings," "A Defence of the Sect of the Pictists," and some other eccentric works of the same general character, for which he was threatened with imprisonment; but obtaining permission from the elector of Brandenburg to retire, he became a voluntary exile from Leipsic; and soon after was appointed public professor of jurisprudence, first in Berlin, and afterwards at Halle. In these situations he indulged his satirical humour, and his inclination for controversy, as long as he lived; persevering in his endeavours to correct and subdue the prejudices of mankind, and to improve the state of philosophy. He died at Halle, in the year 1728. His principal philosophical works are, "An Introduction to Aulic Philosophy; or Outlines of the Art of Thinking and Reasoning," Leips. 1688; "Introduction to Rational Philosophy;" "A Logical Praxis," Hal. 1691; "Introduction to Moral Philosophy," 1692; "A Cure for irregular Passions, and the Doctrine of Self-knowledge," 1696; "The new Art of discovering the secret Thoughts of

Men;" "Divine Jurisprudence;" "Foundations of the Law of Nature and Nations;" "Dissertation on the Crime of Magic;" "Essay on the Nature and Essence of Spirit, or Principles of Natural and Moral Science," 1699; and "History of Wisdom and Folly."

THOMAS CREEK, a river of the United States, in South Carolina, which runs into the Great Pedee.

THOMAS, ST., THE APOSTLE, a parish of England, in the vicinity of Exeter. Population 2538.

THOMAS, ST., STREET, a hamlet of England, in Cornwall, on the south-east side of the borough of Launceston.

THOMAS, ST., a pretty considerable island in the Gulf of Guinea, off the coast of Africa, being about 100 miles west from the mouth of the Rio Gabon. It appears to be about 40 miles in length, and 30 in breadth. This island is situated immediately under the line. Lat. 0. 5. to 0. 50. N. long. 6. 25. E.

THOMAS, ST., a settlement of Mexico, in the intendancy of Valladolid, containing 593 families of Indians.—2d. A settlement of New Granada, in the province of Cartagena, on the shore of the river Magdalena.—It is the name of several other inconsiderable settlements in Spanish America.

THOMAS, ST., the principal of the Virgin islands, in the West Indies, about 18 miles in circumference, belonging to the Brandenburgers and Danes, the former under protection of the latter. It abounds with potatoes, millet, manioc, and most sorts of fruits and herbage, especially sugar and tobacco. The value of its exports, when in possession of the British, amounted to above £800,000, and its imports to above £300,000. Lat. 18. 22. N. long. 64. 50. W.

THOMAS, ST., a small village of Mexico, in America, situated on the Rio del Norte.

THOMAS, ST., a village of Lower Canada, delightfully situated on the southern bank of the St. Lawrence, where it is joined by the Riviere du Sud.

THOMAS, ST., a parish of the United States, in Charleston district, South Carolina.

THOMAS'S BAY, on the west coast of the island of Antigua. It affords some shelter from the south and south-east winds.

THOMAS'S ISLAND, an island on the west coast of Mexico. Lat. 20. 10. N.

THOMAS'S, ST., LAKE, a lake of Canada; 96 miles west of Quebec. Lat. 47. 10. N. long. 73. 35. W.

THOMAS, PORT ST., a harbour of the bay of Honduras, on the Spanish Main, which is very secure, and much frequented.

THOMAS, SAN, a city of Guiana, situated on the right bank of the river Orinoco, about 244 miles west of its mouth. It is of a hot temperature, and very unhealthy, from the damps arising from the stagnant waters left by the floodings of the Orinoco. Lat. 8. 7. N. long. 63. 55. W.

THOMASIIUS (Jacobus), a writer in history and philosophy, professor of eloquence in the university of Leipsic, and chiefly distinguished as the preceptor of the illustrious Leibnitz, was born at Leipsic, in the year 1622. Among his numerous works, the principal are "Antiquities of Philosophical and Ecclesiastical History;" "Dissertations on the Stoical Philosophy, and on other subjects relating to the History of Philosophy;" and "A Dissertation on Literary Plagiarism, with a List of 100 Plagiaries," all in Latin. He died in the year 1684. *Brucker. Moreri.*

THOMASIIUS (Christian), son of the preceding, an eminent jurist, was born at Leipsic, in 1655. Having studied the law at Francfort on the Oder, he was made a doctor in that faculty in 1679; and returning to his native city, he attended the bar, and wrote some treatises on the law. He was the friend of Puffendorf. By opposing the scholastic philosophy in a German journal, commenced in 1688, he excited opposition, and raised against himself many enemies. He died in 1728. Mosheim has given this character of Thomasius. "His views were vast; he aimed at the reformation of philosophy in general, and of the Peripatetic system in particular; and he assiduously employed both the power of exhortation and the influence of example, in order to persuade the Saxons to reject the Aristotelian system, which he had

had never read, and which most certainly he did not understand. The scheme of philosophy which he substituted in its place was received with little applause, and soon sunk into oblivion; but his attempt to overturn the system of the Peripatetics, and to restore the freedom of philosophical inquiry, was attended with remarkable success, made in a little time the most rapid progress, and produced such admirable effects, that Thomasius is looked upon to this day, as the chief of those bold spirits who pulled down philosophical tyranny from its throne in Germany, and gave a mortal blow to what was called the Sectarian philosophy in that country."

THOMASTOWN, a town of Ireland, in the county of Kilkenny, pleasantly situated on the river Nore, over which a beautiful bridge is constructed. It was a borough previous to the union of Ireland with Great Britain; 8 miles south east of Kilkenny.

THOMASTOWN, a post township of the United States, in Lincoln county, Maine, on the east side of the river St. George, and on the west side of Penobscot bay. It is a flourishing township, and contains two churches, one for Congregationalists, and one for Baptists; 7 miles south of Camden, and 190 north-east of Boston. Population 2100.

THOME, Sr., a settlement on a plain of the island of St. Domingo, not far from the source of the river Antibonito.

THOME, Sr., a river of Brazil, which turns south-south-west, and enters the Uruguay near its source.

THOMIST, s. A schoolman following the opinion of *Thomas Aquinas*, in opposition to the Scotists. See **SCOTIST**.—The university was filled with the jargon and disputes of the Scotists and *Thomists*. *Warton*.

THOMPSON (Sir Benjamin), Count of Rumford, distinguished by his assiduity and zeal in the promotion of science, and in devising and executing schemes of public utility, was born at the village of Rumford, in New England, in the year 1752; and with the assistance afforded him by a professor of natural philosophy in the American university of Cambridge, acquired in early life such a degree of knowledge, as enabled him to give instruction to others. By an advantageous marriage, while he was young, his advancement was accelerated, so that he obtained the rank of a major in the militia of his native district. When the war broke out between the mother-country and her colonies, he took part with the former, and by means of his local knowledge, he rendered himself useful to the British generals in America. In process of time he repaired to England, and recommending himself to lord George Germaine, the chief minister in the American department, he obtained a place in his office. Towards the close of the war, the same nobleman, with a view of securing for him a permanent provision, sent him to New York, where he raised a regiment of dragoons, and by being appointed lieutenant-colonel, became entitled to half-pay. Upon his return to England, his Majesty, in 1784, conferred upon him the honour of knighthood; and for some time he occupied the post of one of the under-secretaries of state. Soon after he made a tour to the continent, and being warmly recommended by the prince of Deux-Ponts, afterwards king of Bavaria, to his relation the reigning elector palatine, and duke of Bavaria, he was admitted into his service, and occupied an eminent station. He had thus an opportunity of effecting many important and useful reforms in the departments of the state, both civil and military, especially in the suppression of mendicity, which prevailed not only at Munich, the capital, but through the whole country, to an alarming extent. For his services, Sir Benjamin was decorated by the Bavarian sovereign with several orders, promoted to the rank of lieutenant-general, and created a count by the title of his native place, Rumford. During his abode at Munich, he commenced his experiments upon the improvement of fire-places, with respect to the economy of fuel, and the convenience of cooking; and also his plans for a cheaper and more nutritive mode of feeding the poor, which gave him peculiar celebrity. Having quitted Bavaria in 1799, he resided for some time in this country, pursuing a variety of experiments on the nature and applica-

tion of heat, and the construction of chimneys, grates, and fire-places. He also promoted science both by his own researches and experiments, and by liberally exciting emulation in others upon a more enlarged plan. For the latter purpose, he transferred, on an occasional visit to this country in 1796, to the Royal Society of London, of which he was a member, 1000*l.* 3 per cent. stock, the interest of which was to be applied every second year as a premium to the author of the most important discovery on the subjects of heat and light in any part of Europe during the two preceding years; the preference to be always given to such discoveries as, in the opinion of the president and council, tend most to the benefit of mankind; which indeed was the leading object of all his researches. He also suggested the plan, and assisted in the formation of the Royal Institution.

In the year 1802, he left England for Paris, which became his fixed residence; and he obtained permission from the king of Bavaria to continue in France, and to enjoy his pension of 1200*l.* a-year. He lived in a state of retirement, until an attack of low fever carried him off in August, 1814, in his 63d year. By his first wife he had one daughter.

Although Count Rumford was not a learned man, he acquired by his knowledge of the French and German languages, and by his extensive acquaintance, and frequent conversation with literary men, a large stock of literature and science. The papers which he communicated both to the Royal Society and French Institute, and which are published in their Transactions and Memoirs, are numerous. The only separate publication of Count Rumford was a series of "Essays, Experimental, Political, Economical, and Philosophical," commencing with the year 1796, and continued to 18 in number, and occupying 4 vols. 8vo. *Gent. Mag.*

THOMPSON, a parish of England, in Norfolk; 3 miles south-by-east of Watton. Population 366.

THOMPSON, WINTERRORNE, a parish of England, in Dorsetshire; 7 miles south-by-east of Blandford Forum.

THOMPSON, a post township of the United States, in Windham county, Connecticut, in the north-east corner of the state; 51 miles south-west of Boston. Population 2467.

THOMPSON, a post township of the United States, and capital of Sullivan county, New York. It is watered by the Neversink, and contains the villages of Thompson, Monticello, and Bridgeville. The county buildings are at Monticello; 83 miles west of Newburgh. Population 1290.

THOMPSON'S CREEK, a river of North America, which runs into the Missouri, 148 miles below the Great Falls.

THOMPSON'S CREEK, a river of the United States, in South Carolina, which runs south-east into the Great Pedee, below Chatham.

THOMPSON'S CREEK, a river of the United States, in Mississippi, which runs into the Mississippi. Lat. 30.59. N. long. 91.30. W.

THOMPSON'S HARBOUR, in Hudson's Bay. Lat. 60.20. N. long. 78. W.

THOMPSON'S ISLAND, a small island of Upper Canada, at the entrance of the river St. Claire.

THOMPSONTOWN, a township of the United States, in Oxford county, Maine.

THOMPSONTOWN, a post township of the United States, in Mifflin county, Pennsylvania.

THOMSON (James), a popular English poet, was born at Ednam, near Kelso, in Scotland, in the year 1700, being one of the nine children of the minister of that place. Whilst he was at school at Jedburgh, he manifested no powers superior to those of other boys, except in a taste for poetry, which he betimes indulged, and which introduced him, during his vacations, to the society of some neighbouring gentlemen. Of his productions, however, he thought so humbly, that on New-year's day he committed to the flames those of each preceding year. From Jedburgh he was removed to the university of Edinburgh, where he persevered in the cultivation and exercise of his poetical talents; and after spending some time as private tutor in the family of lord Binning, he determined, at the suggestion of a lady, who was his mother's friend, to try his fortune in London.

In 1725 he came to London, and meeting with his college acquaintance, Mallet, he shewed him his poem of "Winter," in an imperfect state; who advised him to finish and publish it. Mr. Millar, a well-known London bookseller, bought it for a small sum, and published it in 1726. At first it attracted little attention; but Mr. Whately, a gentleman of acknowledged taste, giving a favourable account of it, brought the poem and its author into notice. The author was introduced to Pope, and recommended by bishop Rundle to lord chancellor Talbot. In 1727 he published his "Summer," and in the same year "A Poem sacred to the Memory of Sir Isaac Newton," just deceased, and also his "Britannia." His "Spring" was published in 1728; and in 1730 the Seasons were completed by "Autumn," and published collectively. In 1721 Thomson, aspiring to the popularity and emolument of dramatic composition, succeeded in introducing upon the stage of Drury-lane his tragedy of "Sophonisba." Its reception, however, was not very flattering. Soon after he was appointed, by the recommendation of Dr. Rundle, travelling companion to the Hon. Mr. Talbot, the eldest son of the chancellor, and had an opportunity of visiting most of the courts and countries of the European continent. During this tour, the idea of his poem on "Liberty" was suggested to him, and he employed two years in completing it. In consequence of this excursion, he obtained, by the interest of Mr. Talbot, the place of secretary of the briefs, which, being almost a sinecure, afforded him leisure for his private literary pursuits. His poem on "Liberty" was more coolly received than the nature of the subject led him to expect. When lord Hardwick succeeded the lord chancellor Talbot, Thomson lost his place; but upon being questioned by the prince of Wales, to whom he was introduced by Mr. (afterwards lord) Lyttleton, as to his circumstances, a pension of 100*l.* a-year was granted to him.

Upon the introduction of his second tragedy, "Agamemnon," to Drury-lane, in 1738, he was so anxious concerning its success, that he is said to have been thrown into a copious perspiration. His "Edward and Eleonora" was prevented from appearing by the interference of the lord chamberlain.

The "Masque of Alfred," performed before the prince at Cliefden-house, in 1740, was the joint production of himself and Mallet; and in this piece was introduced the famous song of "Rule Britannia," the production of one or other of these two persons. The most successful of Thomson's dramatic pieces was his "Tancred and Sigismunda," which appeared at Drury-lane in 1745; but his "crowning performance," as one of his biographers calls it, was "The Castle of Indolence," published in 1746. Our poet was now rendered independent by the interest of Mr. Lyttleton, who obtained for him the office of surveyor-general of the Leeward islands, which, after payment of a deputy, yielded him about 300*l.* a-year. Death, however, in consequence of a fever occasioned by a cold, deprived him, in August, 1748, of the comparative affluence derived from this appointment. His remains were interred in Richmond church, without any memorial; but in 1762 a monument was erected in Westminster Abbey, the expense of which was defrayed out of the profits of an edition of his works, published by Mr. Millar. His "Coriolanus" was brought on the stage by his executors, in 1749, for the benefit of the surviving branches of his family. The prologue, composed by Lyttleton, was very feelingly delivered by Quin, the intimate friend of Thomson.

Thomson's person was large and awkward, and his countenance unanimated; nor did his appearance or manners indicate genius or refinement. He was indolent and self-indulgent in his habits; yet, as his biographer says, "no one has deserved more praise for the moral tenor of his writings. Unbounded philanthropy, enlarged ideas of the dignity of man, and of his rights, love of virtue, public and private, and a devotional spirit, narrowed by no views of sect or party, give soul to his verse when not merely descriptive.

THONE, a river of England, in Somersetshire, which passes by Taunton.

THONES, a small town of the Sardinian states, in Savoy, province of Genevois, on the river Fier. It has 2200 inhabitants.

bitants, and some manufactures of silk and leather; 10 miles east of Annecy, and 22 south-south-east of Geneva.

THONG, *s.* [ðpɑŋ, ðpɔŋ, Saxon; *thweing*, Icel. *thwong*, old Engl.] A strap, or string of leather.

The tuscan king

Laid by the lance, and took him to the sling;

Thrice whirl'd the *thong* about his head, and threw

The heated lead half melted as it flew.

Dryden.

THONG, NETHER, a township of England, West Riding of Yorkshire; 4½ miles south-by-west of Huddersfield. Population 787.

THONG, UPPER, a township of England, West Riding of Yorkshire; 6½ miles south south-west of Huddersfield. Population 1015.

THONON, a small town of Savoy, district of Chablais, situated on a hill on the Lake of Geneva; 20 miles east-north-east of Geneva.

THOPHAIL (Abu Giafer), a celebrated Peripatetic philosopher and physician, was a native of Seville, in Spain, and preceptor to Maimonides and Averroes. This philosopher applied the Aristotelian doctrine to the purposes of enthusiasm, in the elegant tale still extant of "Hai Ebr Yockdan;" a youth who, having been exposed when an infant on the sea-coast, was nourished by a hind, and grew up in the woods, without any intercourse with human beings; and and who, by the unaided exertions of his own powers, attained to the knowledge of things natural and supernatural, and arrived at the felicity of an intuitive intercourse with the divine mind. This piece is written with such elegance of language and vigour of imagination, that, notwithstanding the improbability of the story, it has been universally admired. It exhibits a favourable specimen of Peripatetic philosophy, as it was taught among the Saracens; and, at the same time, affords a memorable example of the unnatural alliance which was now so generally established between philosophy and fanaticism. This work was translated by Edward Pococke, jun. from the Arabic into Latin, under the title of "Philosophus Autodidactus," and printed in 4to., at Oxford, in 1700. It was also translated into English by S. Hoadley, professor of Arabic in Cambridge, ed. Lond. 1711, 8vo., and also into Dutch. Thophail is said to have written several other works, and died at Seville in 1175. *Brucker by Enfield.*

THOR, in Mythology, a deity worshipped by the ancient inhabitants of the northern nations; particularly by the ancient Scandinavians and Celts. The authority of this deity extended over the winds and seasons, and particularly over thunder and lightning: and in the Icelandic mythology, he is considered as the defender and avenger of the gods. He always carried a mace, or club, which as often as he discharged it returned to his hand of itself; he grasped it with gauntlets of iron, and was possessed of a girdle which had the virtue to renew his strength as often as was needful. With these formidable arms he overthrew the monsters and giants, when the gods sent him to oppose their enemies.

There was a day consecrated to Thor, which still retains his name in the Danish, Swedish, English, and Low Dutch languages, viz., *Thursday.*

THOR, a small town in the south-east of France, department of the Vaucluse, situated in a plain near the river Sorgues; 9 miles east-by south of Avignon. Population 1800.

THOR, DAS HOHE, *i. e.* the *High Gate*, a high mountain of Upper Austria, in the circle of Salzburg, 7720 feet above the level of the sea.

THORACIC, *adj.* Belonging to the breast.—The chyle grows grey in the *thoracick* duct. *Arbuthnot.*

THORAL, *adj.* [from *thorus*, Lat.] Relating to the bed.—The punishment of adultery, according to the Roman law, was sometimes made by a *thoral* separation. *Ayliffe.*

THORALBY, a township of England, North Riding of Yorkshire; 9 miles west-by-south of Middleham.

THORAME, or TORAME, UPPER, a small town in the south-east of France, department of the Lower Alps, on the

small river Verden. Quantities of fruit are produced here and exported; 13 miles east of Digne.

THORAX, *s.* [Latin.] The breast; the chest.—Besides those remote helpers, the *thorax*, the muscles, the nerves, &c., there are three several kinds of organs that do more immediately, and yet distinctly and gradually conduce to the production of vocal music. *Smith.*

THORDA, or **THORENBURG**, a county of Transylvania, in the province belonging to the Magyars or Hungarians.

THORDA, or **THORENBURG**, the capital of the above county, is a considerable town, situated near the river Aranjós, and divided by a smaller stream, called the Salz-bach, into two parts, called Old and New Thorda. The Hungarian language is spoken here in great purity; 17 miles south-south-east of Clausenburg. Lat. 46. 31. 58. N. long. 23. 48. 17. E.

THORDO (Diaconus or Legifer), descended from an ancient family, was provincial judge in North Jutland, and flourished in the time of Waldemar III., or about the year 1350. He was the author of the following work; "Constitutio Voldemari Regis, per Thordonem Legiferum, &c." Ripis, 1504, et Havn. 1508, 4to.; translated into Latin, together with Waldemar's Jutland Laws, and afterwards published in Ludewig's "Reliquiæ MSS." tom. xii. and also in German by Eric Krabbe, in "Westphal's Monuments." *Gen. Biog.*

THORSEN, (or **THRODORI STURLA**, called also *Frode* or *Polyhistor*), was born in Iceland, about the beginning of the 13th century. His father was Thordor Sturluson, brother to the celebrated Snorro. He is represented to be one of the greatest Icelandic poets of his time, as well as an eminent lawyer and historian. His talents excited enemies, so that he was forcibly carried away from the island in 1263, and conveyed to Norway, where he was favourably received by the king Magnus Lagebæter, admitted into his council, and appointed his historian and dapifer, one of the highest offices at the Norwegian court. Afterwards, however, he returned to Iceland, and having been chief justice of the country for many years, died in 1284. His works are "Landnama Saga," or "Liber Originum Islandiæ," published entire by bishop Thordur Thorlaksen, Skalholt, 1688, 4to., and by J. Finnæus, Havn. 1774, 4to. :—A continuation of "Sturlunga Saga," or the history of the Sturla family, and almost the whole of Iceland, during his time, which was begun by the learned bishop Brand. "The History of king Haager Haagensen," published at the expence of the crown-prince Frederick :—"The History of king Magnus Lagebæter," compiled from the public records of the kingdom, the greater part of which has been lost. *Gen. Biog.*

THORESBY, **NORTH**, a parish of England, in Lincolnshire; 9 miles north-by-west of Louth. Population 342.

THORESBY, **SOUTH**, a parish of England, in Lincolnshire; 3½ miles west-by-north of Alford.

THORSTHORPE, a hamlet of England, in Lincolnshire; about a mile north-east of Alford.

THORESWAY, a parish of England, in Lincolnshire; 4 miles south-east of Caistor.

THORGANBY, a parish of England, in Lincolnshire; 6 miles east-south-east of Caistor.

THORGANBY, a township of England, East Riding of Yorkshire; 10 miles south-east-by-south of York.

THORIGNY, a small town in the north-west of France, department of La Manche, near the river Vire; 9 miles south-east of St. Lo.

THORLBY, a hamlet of England, West Riding of Yorkshire; 2 miles north-west of Skipton.

THORLEY, or **THORNLEY**, a parish of England, in Hertfordshire; 2 miles south-west-by-south of Bishop's Stortford.

THORLEY, a parish of England, in the Isle of Wight; 1 mile east-south-east of Yarmouth.

THORMANBY, a parish of England, North Riding of Yorkshire; 4 miles north-west-by-north of Easingwold.

THORN, a considerable town of West Prussia, in the government of Marienwerder, pleasantly situated on the

Vistula, about 90 miles from the mouth of the river, over which it has a wooden bridge of uncommon length. The well-known Copernicus was born at Thorn, in 1472; 92 miles south of Dantzic, and 113 west north-west of Warsaw. Lat. 53. 1. N. long. 23. 48. E.

THORN, a small town of the Netherlands, in the province of Limburg, formerly the seat of a richly endowed abbey; 7 miles south-south-west of Ruremonde.

THORN, *s.* [*thaurns*, Goth. *ðorn*, Sax. *doorne*, Dutch.] A prickly tree of several kinds.—*Thorns* and thistles shall it bring forth. *Gen.*—A prickly growing on the thorn bush.—Flowers of all hue, and with *thorn* the rose. *Milton.*—Any thing troublesome.

The guilt of empire; all its *thorns* and cares
Be only mine.

Southern.

THORNABY, a township of England, North Riding of Yorkshire; 4 miles north-east of Yarm.

THORNAGE, a parish of England, in Norfolk; 2½ miles south-west of Holt.

THORNAPPLE, *s.* A plant. *Mortimer.*

THORNBAC, *s.* [*raia clavata*, Lat.] A sea fish.—The *thornback*, when dried, tastes of sal ammoniac, *Arbutus*.—See **RAIA CLAVATA**.

THORNBOROUGH, a parish of England, in Buckinghamshire; 3½ miles east of Buckinghamshire. Population 539.

THORNBOROUGH, a hamlet of England, in Northumberland, near Corbridge.

THORNBOROUGH, a hamlet of England, North Riding of Yorkshire; 2½ miles north-north-east of Thirsk.

THORNBURY, a market town and borough of England, in the county of Gloucester, situated in the vale of Gloucester, near the Severn, on a rivulet that runs into it. The situation is low, but healthy. The town consists chiefly of three streets, disposed in the form of the Roman letter Y. The houses are mostly old. The church, dedicated to the Virgin, is spacious and handsome. The tower is lofty, and ornamented with rich open work battlements, and also with pinnacles. Here are, besides, a free school, and four almshouses. Thornbury is a borough by prescription, and is governed by a mayor and 12 aldermen; but the power of these officers is much limited by disuse. Market on Saturday, and three annual fairs; 24 miles south-south-west of Gloucester, and 121 west of London.

THORNBURY, a parish of England, in Devonshire; 5 miles north-east-by-east of Holsworthy. Population 383.

THORNBURY, a parish of England, in Herefordshire; 4 miles north-north-west of Bromyard.

THORNBUT, *s.* [*rhombus aculeatus*, Lat.] A sort of sea fish, Ainsworth; which he distinguishes from thornback.]—A birt or turbot.

THORNB, or **THURNBY**, a parish of England, in Northamptonshire; 11½ miles north-north-west of Northampton.

THORNCOMBE, a parish of England, in Devonshire; 8 miles west-by-north of Beamister. Population 1189.

THORNCOT, a hamlet of England, in Bedfordshire; 3 miles north-west of Biggleswade.

THORNDON, a parish of England, in Suffolk; 3 miles south-by-west of Eye. Population 580.

THORNDON, a hamlet of England, in Kent; 3 miles from Canterbury.

THORNE, a market town of England, in the West Riding of Yorkshire. It is situated about a quarter of a mile from the south bank of the river Don, within the district called Marshland island, a track encompassed by the rivers Don, Aire, Ouse, and another small river which divides it from the isle of Axholm, in Lincolnshire. These marshes have of late years been greatly improved by draining, and the fen commons inclosed; 31 miles south of York, and 166 north of London. Lat. 53. 37. N. long. 0. 59. W.

THORNE FALCON, or **THORNE PARVA**, a parish of England, in Somersetshire; 3½ miles east-by-south of Taunton.

THORNE,

THORNE, GRAFTON, a township of England, in Northumberland; 10 miles west-by-north of Hexham.

THORNE, ST. MARGARET'S, a parish of England, in Somersetshire; 3 miles west of Wellington.

THORNER, a township of England, West Riding of Yorkshire; 6½ miles south-by-west of Wetherby. Population 621.

THORNEY, a parish of England, in the county of Cambridge; 10 miles north-by-west of March.

THORNEY, a parish of England, in Nottinghamshire; 8½ miles east-by-north of Tuxford.

THORNEY, a hamlet of England, in the parish of Kingsbury Episcopi, Somersetshire.

THORNEY, WEST, a parish of England, in Sussex; 7 miles west-by-south of Chichester.

THORNEY-BURN, a hamlet of England, in the parish of Simonburn, Northumberland.

THORNFORD, a parish of England, in Dorsetshire; 3½ miles south-west-by-south of Sherborne.

THORN-GREEN, a parish of England, in Bedfordshire; 2½ miles north-west-by-north of Dunstable.

THORN-GUMBOLD, a hamlet of England, East Riding of Yorkshire; 10 miles east-by-south of Kingston-upon-Hull.

THORNHAM, GREAT and LITTLE, adjoining parishes of England, in Suffolk; 3 miles west-by-south of Eye.

THORNHAM, a parish of England, in Kent; 4 miles north-east-by-north of Maidstone. Population 406.

THORNHAM, a township of England, in Lancashire; 3½ miles south of Rochdale. Population 1098.

THORNHAM, a parish of England, in Norfolk; 6 miles west-by-north of Burnham Westgate. Population 483.

THORNHAUGH, a parish of England, in Northamptonshire; 1 mile north-west of Wandsford.

THORNHILL (Sir James), may be called the father of historic painting in England. He was the son of a gentleman of an ancient family in Dorsetshire, and was born at Weymouth in 1676. His family having fallen in fortune, he was obliged to resort to some profession for support, and guided by an early taste for painting, fixed upon that art as a base on which to raise a fortune and a name. He came to London, and was assisted by the celebrated physician Sydenham, who placed him under the tuition of an artist of little note, whose name is not known, and to whom, from the state of the art at the time, he must have been far less indebted for the progress he made, than to his own ingenuity and industry. After having practised for a while with some celebrity, he travelled to Holland and to Flanders; and thence visited France, but did not proceed to Italy. Most probably his object in this journey was only to acquire a knowledge of colouring; and he might have satisfied his mind on composition and form, by having spent three years in copying the cartoons of Raphael, which he was permitted to do by the favour of the earl of Halifax. These copies are in oil, and were bought after his death by the then duke of Bedford; and by his grace's successor, the late duke, were presented to the Royal Academy. They are wrought with care, but lack the delicacy of character and feeling observable in the originals. On his return to England, his reputation was increased, and honour and employment accompanied it. Queen Anne commissioned him to paint the interior of the cupola of St. Paul's, which he did in eight compartments. The subject assigned him was the history of St. Paul; and he treated it with considerable grandeur of style, both as to composition and execution; but his design wanted chastity and simplicity, and the heads of his figures have not sufficient refinement of expression. It was, however, the first attempt by an Englishman of the kind, and fully justified the preference given to him over La Guerre and La Pousse, who were then painting the halls and staircases of our nobility. He was afterwards employed to decorate an apartment at Hampton Court, with emblematical allusions to the history of the queen, and her union with her consort, George, prince of Denmark. But his grand work is the great hall at Greenwich Hospital, where he has painted naval trophies and

allegorical figures in great profusion; and if much praise cannot be given to the purity of the design, it ought not to be withheld from the brilliancy and vigour of the execution. Altogether, it is a work unrivalled in its kind here, and well entitled him to the honour of knighthood, which George I. soon after conferred upon him. This was some compensation to him for the mortification of having his demand for these paintings contested, and being in the end paid only at the labourer's rate of so much per square yard, (40s.)

He had the honour of so far re-establishing his family influence as could be effected by being chosen to represent his native town in parliament; but he did not enjoy his honours long, as he died at the early age of 57, leaving a son, named also James, for whom he had procured the appointment of serjeant-painter to the king, and a daughter married to Hogarth.

THORNHILL, a village of Scotland, in Dumfries-shire, in the parish of Morton. It is pleasantly situated on a dry rising ground, half a mile east from the river Nith; 14 miles north of Dumfries, 8 east of Minniehive, 12 south-by-east of Sanquhar, and 61 south-west of Edinburgh.

THORNHILL, a village of Scotland, in Perthshire, joined to the village of Norriestown; 10 miles west of Stirling. Population of both, 626.

THORNHILL, a township of England, in Derbyshire; 6½ miles north-east-by-north of Tideswell.

THORNHILL, a parish of England, West Riding of Yorkshire; 5½ miles west-by-south of Wakefield. Population 4705.

THORNHOLME, a hamlet of England, East Riding of Yorkshire; 5 miles south-west-by-west of Bridlington.

THORNLEY, a hamlet of England, county of Durham; 5½ miles south-east-by-east of Durham.

THORNLEY, a township of England, in Lancashire; 8 miles west-by-south of Clitheroe. Population 433.

THORNIE BANK, a manufacturing village of Scotland, in Renfrewshire, in the parish of Eastwood, about 5 miles south from Glasgow, where calico printing is carried on to a great extent.

THORNSBURG, a post township of the United States, in Spotsylvania county, Virginia, on the Mattapony; 18 miles south of Fredericksburg.

THORNSCOE, a village of England, West Riding of Yorkshire; 7 miles from Doncaster.

THORNSETT, a township of England, in Derbyshire; 5½ miles north-west-by-north of Chapel-in-le-Frith.

THORNSHIP, or **THORN SHAP**, a hamlet of England, in Westmoreland; 5½ miles north-west of Orton.

THORNTON, a village of England, in the county of Lincoln; 3 miles south-east of Barton-upon-Humber.—2. A parish of England in Buckinghamshire; 4½ miles east north-east of Buckingham.—3. A township of England, in Durham; 4½ miles south-west of Berwick-upon-Tweed.—4. A township of England, in Lancashire, 1½ mile north-by-east of Poulton. Population 739.—5. Another township in the above county; 7 miles north-by-west of Liverpool.—6. A parish of England, in Leicestershire; 5½ miles north-east of Market Bosworth.—7. A parish of England, in Lincolnshire; 1½ mile west of Horncastle.—8. A parish of England, East Riding of Yorkshire; 4 miles south-west of Pocklington.—9. A township of England, West Riding of Yorkshire; 4½ miles west of Bradford. Population 3016.

THORNTON, BAXBY, a township of England, North Riding of Yorkshire; 3 miles north-by-east of Easingwold.—2. **THORNTON IN THE BEANS**, a township of England, North Riding of Yorkshire; 3½ miles south-east-by-east of Northallerton.—3. **THORNTON, Bishop's**, a township of England, West Riding of Yorkshire; 6 miles south-west-by-south of Rippon. Population 1546.—4. **THORNTON BRIDGE**, or **Thornton-upon-Swale**, a township of England, North Riding of Yorkshire; 4 miles north-east-by-north of Boroughbridge.—5. **THORNTON, Childer**, a township of England, in Cheshire; 8 miles north-north-west of Chester.—6. **THORNTON-UPON-CLAY**, a township of England, North

North Riding of Yorkshire; 11½ miles north-north-east of York.—7. THORNTON IN CRAVEN, a township of England, West Riding of Yorkshire; 6 miles west-south-west of Skip-ton.—8. THORNTON DALE, a parish of England, North Riding of Yorkshire; 3 miles east-by-south of Pickering. Population 1171.—9. THORNTON, *East*, a township of England, in Northumberland; 7 miles west of Morpeth.—10. THORNTON IN LONSDALE, a township of England, West Riding of Yorkshire; 12 miles north-west of Settle. Population 1152.—11. THORNTON, *Mayow*, a township of England, in Cheshire; 2½ miles north-north-east of Great Neston.—12. THORNTON IN THE MOOR, a township of England, North Riding of Yorkshire; 4½ miles north-west-by-north of Thirsk.—13. THORNTON IN THE MOORS, a township of England, in Cheshire; 5½ miles west-south-west of Frodsham.—14. THORNTON LE MOOR, a parish of England, in Lincolnshire; 6 miles west-south-west of Caistor.—15. THORNTON, *Rust*, a township of England, North Riding of Yorkshire; 11 miles west-by-north of Middleham.—16. THORNTON STEWARD, a parish of England, North Riding of Yorkshire; 4 miles east-by-south of Middleham.—17. THORNTON IN THE STREET, a township of England, North Riding of Yorkshire; 3 miles north-north-west of Thirsk.—18. THORNTON WATLAS, a township of England, North Riding of Yorkshire; 3 miles south-west of Bedale.—19. THORNTON, *West*, a township of England, in Northumberland; 7 miles west-by-north of Morpeth.—20. THORNTON, a post township of the United States, in Grafton county, New Hampshire; 11 miles north of Plymouth.—21. THORNTON'S GAP, a post village of the United States, in Culpeper county, Virginia.

THORNVILLE, a hamlet of England, West Riding of Yorkshire; 5 miles south by-east of Boroughbridge.

THORNWAITE, a hamlet of England, West Riding of Yorkshire; 12 miles west-by-north of Knaresborough.

THORNWOOD, a hamlet of England, in Essex; 2½ miles north-north-east of Epping.

THORNY, *adj.* Full of thorns; spiny; rough; prickly.

They on the bleaky top
Of rugged hills, the *thorny* bramble crop. *Dryden.*

Pricking; vexatious.

No dislike against the person
Of our good queen, but the sharp *thorny* points
Of my alleged reasons drive this forward. *Shakespeare.*

Difficult; perplexing.—By how many *thorny* and hard
ways they are come thereunto, by how many civil broils.
Spenser.

THOROTON, a village of England, in Nottinghamshire; 8 miles south-south-west of Newark.

THO'ROUGH, *prepos.* [The word *through* extended into two syllables. *Dr. Johnson.*—Saxon, *ðupuh*, as well as *ðuph, per.* See also THROUGH.] By way of making passage or penetration.—By means of.

Mark Antony will follow
Through the hazards of this untrod state,
With all true faith. *Shakespeare.*

THO'ROUGH, *adj.* [The adjective is always written *through*, the preposition commonly *through*.] Complete; full; perfect.—A *through* translator must be a *through* poet. *Dryden.*—Passing through.—Let all three sides be a double house, without *through* lights on the sides. *Bacon.*

THO'ROUGHFARE, *s.* A passage through; a passage without any stop or let.

Th' Hyrcanian deserts are as *throughfares* now
For princes to come view fair Portia. *Shakespeare.*

Power of passing.
Hell, and this world, one realm, one continent
Of easy *throughfare*. *Milton.*

THO'ROUGHLY, *adv.* Completely; fully.—Look into this business *throughly*. *Shakespeare.*

THO'ROUGH PACED, *adj.* Perfect in what is undertaken; complete; thoroughsped. *Generally in a bad sense.*

—When it was proposed to repeal the test clause, the ablest of those who were reckoned the most staunch and *thorough*, *paced* Whigs fell off at the first mention of it. *Swift.*

THO'ROUGHSPED, *adj.* Finished in principles; thoroughpaced: commonly, finished in ill.—Our *thoroughsped* republic of Whigs, which contains the bulk of all hoppers, pretenders, and professors, are most highly useful to princes. *Swift.*

THO'ROUGHSTITCH, *adj.* Completely; fully. *A low word.*—Perseverance alone can carry us *thoroughstitch*. *L'Estrange.*

THOROUT, an inland town of the Netherlands, in the province of West Flanders; 11 miles south-south-west of Bruges, and 12 south-east of Ostend.

THOROZKO, or TAROCZKO, a small town of Transylvania, in the county of Thorda, the chief place of a mining district.

THORP, *s.* [See also DORP.] *Thorp, throp, threp, trep, trop,* are all from the Saxon *þopp*, which signifies a village. *Gibson.*—Within a little *thorp* I stay'd. *Fairfax.*

THORPE, a parish of England, in Derbyshire; 3 miles north-west-by-north of Ashborne.—2. A parish of England, in Lincolnshire; 6½ miles south-east-by-east of Spilsby.—3. A parish of England, in Norfolk; 2½ miles east-by-south of Norwich. Population 452.—4. A parish of England, in Norfolk; 9½ miles south-west of Great Yarmouth.—5. A hamlet of England, East Riding of Yorkshire; 1½ mile north-by-east of Howden.—6. A parish of England, in Nottinghamshire; 3 miles south-west of Newark.—7. A parish of England, in Surrey; 2 miles north-west-by-north of Chertsey. Population 523.—8. A township of England, North Riding of Yorkshire; 1½ mile north-east of Greta Bridge.—9. A township of England, West Riding of Yorkshire; 12 miles from Settle.—10. A parish of England, in Suffolk; 5½ miles west-by-south of Framlingham.—11. A hamlet of England, in the parish of Rippon, West Riding of Yorkshire.

THORPE, ABBOTS, a parish of England, in Norfolk; 3 miles east-by-north of Scole.—2. THORPE ACRE, a hamlet of England, in Leicestershire; 1 mile west-north-west of Loughborough.—3. THORPE ARCH, a parish of England, East-Riding of Yorkshire; 2½ miles south-east-by-east of Wetherby.—4. THORPE, *Arnold*, a parish of England, in Leicestershire; 1½ mile east-north-east of Melton Mowbray.—5. THORPE, *Audling*, a township of England, West-Riding of Yorkshire; 4½ miles south-south-east of Pontefract.—6. THORPE IN BALNE, a township of England, West-Riding of Yorkshire; 5½ miles north-by-east of Doncaster.—7. THORPE, *Basset*, a parish of England, East-Riding of Yorkshire; 5½ miles east-by-north of New Malton.—8. THORPE, *Bochart*, a parish of England, in Nottinghamshire; 10 miles south-by-east of Nottingham.—9. THORPE, *Brantingham*, a township of England, East-Riding of Yorkshire; 3 miles south-south-west of North Cave.—10. THORPE, *Bulmer*, a township of England, in Durham; 12½ miles north-by-east of Stockton-upon-Tees.—11. THORPE, *Constantine*, a parish of England, in Staffordshire; 4 miles north-east of Tamworth.—12. THORPE, *East*, a hamlet of England, East-Riding of Yorkshire; 2½ miles north-by-east of Market Weighton.—13. THORPE-ON-THE-HILL, a parish of England, in Lincolnshire; 6½ miles south-west-by-west of Lincoln.—14. THORPE-ON-THE-HILL, a township of England, West-Riding of Yorkshire; 5 miles north-by-west of Wakefield.—15. THORPE, *Little*, a parish of England, in Norfolk.—16. THORPE, *Malsor*, or *Malsoveres*, a parish of England, in Northamptonshire; 2 miles west-by-north of Kettering.—17. THORPE, *Mandeville*, a parish of England, in Northamptonshire; 7 miles north-west-by-north of Brackley.—18. THORPE, *Market*; a parish of England, in Norfolk; 4½ miles north-west-by-north of North Walsham.—19. THORPE, *Moricur*, a parish of England, in Suffolk; 4 miles north-west of Bildeston.—20. THORPE-UNDER-THE-MOUNTAIN, a township of England, West Riding of Yorkshire,

shire; $8\frac{1}{2}$ miles north-by-east by Skipton.—21. **THORPE, Sacheville**, a township of England, in Leicestershire; $5\frac{1}{2}$ miles south-by-west of Melton Mowbray.—22. **THORPE, Salvin**, a parish of England, West-Riding of Yorkshire; 13 miles south-west of Bawtry.—23. **THORPE-LE-SOKEN**, a parish of England, in the county of Essex. Population 1033; 8 miles south-east-by-east of Manningtree.—24. **THORPE-IN-THE-STREET**, a township of England, East-Riding of Yorkshire; 2 miles north-west-by-west of Market Weighton.—25. **THORPE, Thewles**, a township of England, in Durham; 6 miles north-west of Stockton-upon-Tees.—26. **THORPE, Tinley**, a township of England, in Lincolnshire; 7 miles north-north-east of Sleaford.—27. **THORPE, Underwood**, a hamlet of England, in Northamptonshire; 5 miles west-north-west of Kettering.—28. **THORPE-UNDER-WOODS**, a township of England, West-Riding of Yorkshire; $6\frac{1}{2}$ miles south-east of Aldborough.—29. **THORPE-BY-WATER**, a township of England, in Rutlandshire; 5 miles south-east-by-south of Uppingham.—30. **THORPE, Waterville**, a township of England, in Northamptonshire; $2\frac{1}{2}$ miles north-east of Thrapston.—31. **THORPE, West**, a parish of England, in Lincolnshire; $8\frac{1}{2}$ miles north-west-by-north of Lincoln.—32. **THORPE, Willoughby**, a township of England, West-Riding of Yorkshire; $2\frac{1}{2}$ miles west-south-west of Selby.

THORRINGTON, a parish of England, in Suffolk; 3 miles south-east of Halesworth.

THORRINGTON, a parish of England, in Essex; 8 miles south-east-by-east of Colchester.

THORSHAVEN, a petty town of the Faroe Islands, in Stromoe, the largest of the group. It is built on a tongue of land, the water on each side of which affords anchorage for vessels, by the aid of large iron ranges fixed in the rocks. The inhabitants, only 600 in number, obtain their subsistence by fishing. Their houses are of wood, roofed with birch bark and turf, and arranged in no regular plan.

THORVERTON, a parish of England, in Devonshire; $5\frac{1}{2}$ miles east-by-north of Crediton. Population 1248.

THOSE, *pronoun*. The plural of *that*.

Make all our trumpets speak, give them all breath,
Those clamorous harbingers of blood and death.

Shakspeare.

Those refers to the former, *these* to the latter noun.

Neither their sighs nor tears are true,

Those idly blow, *these* idly fall,

Nothing like to ours at all,

But sighs and tears have sexes too.

Cowley.

THOU, *pron.* [Thu, Saxon; du, Dutch; in the oblique cases singular *thee*, ðe, Saxon; in the plural *ye*, ze, Saxon; in the oblique cases plural *you*, eop, Saxon.] *You* is now commonly used for the nominative plural.—The second pronoun personal.

Is this a dagger which I see before me,
The handle tow'rd my hand? Come let me clutch *thee*.
I have *thee* not, and yet I see *thee* still.
Art *thou* not, fatal vision, sensible
To feeling as to sight?

Shakspeare.

It is used only in very familiar or very solemn language. When we speak to equals or superiors, we say *you*; but in solemn language, and in addresses of worship, we say *thou*. [Familiar:—Here's to *thee* Dick. *Cowley*.—[Solemn]:—

For though in dreadful whirls we hung

High on the broken wave,

I know *thou* wert not slow to hear,

Not impotent to save.

Addison.

To **THOU**, *v. a.* To treat with familiarity; to address in a kind of contempt.

Avaunt, catyfe, dost *thou* me?

I am come of good kynne.

Old Morality.

THOU, James Augustus de, (Thuanus,) an eminent magistrate and historian, was the son of Christopher de Thou, president of the parliament of Paris, distinguished for

Vol. XXIII. No. 1620.

integrity and patriotism, and born at Paris in the year 1553. In the college of Burgundy, where he was placed at the age of ten years, his education was interrupted by a fever, which seemed for some time to have proved fatal to him; but upon his recovery he studied the civil law, first at Orleans, and afterwards at Valence, under the celebrated Cujacius, in which latter place he commenced an intimate acquaintance with Joseph Scaliger, which was continued through life. Upon his return to Paris in 1572, he witnessed the horrors of the massacre of St. Bartholomew, and this scene impressed him with an eternal detestation of bigotry and intolerance. He was originally destined for the church, with the prospect of valuable preferments, which his uncle, the bishop of Chartres, intended to resign to him. In the mean while he travelled to Italy, the Low Countries, and Germany; but upon the death of his brother, his views were changed, and the law became his destined profession. After the death of his father, whose memory he held in high veneration, he was made master of requests in 1584; and in 1587, he married Marie Barbanson, a lady of a noble family. Upon the revolt of Paris, on occasion of the league, in 1586, he repaired to Henry III. at Chartres, and was deputed by him to confirm the province of Normandy in its allegiance. On the assassination of the duke of Guise, his family at Paris received public insults, which made it necessary for his wife to make her escape in disguise, and he went to the king at Blois, who was almost deserted, and induced him to form a coalition with Henry, king of Navarre. Being at Venice, he was informed of the assassination of Henry III., after which he immediately joined the legitimate successor to the crown, Henry IV., at Chateaudun. The king, fully apprized of his excellent qualities, reposed confidence in him, and employed him in many interesting negotiations. On the death of Amyot, the king's principal librarian, De Thou was nominated his successor; and in 1594 he succeeded his uncle as "president à mortier." He officiated as one of the Catholic commissioners at the theological conference of Fontainebleau between Du Perron and Du Plessis Mornai; and in the regency of Mary de Medicis, he was one of the directors-general of the finances. At the conference of Loudun, he acquired distinguished reputation by his virtue and ability; and he was joined with cardinal Du Perron in a commission for the reform of the university of Paris, and the construction of the college-royal, the edifice of which was begun under his superintendance. The work which has established his permanent fame, is "The History of his own Times," the first part of which appeared in 1604. The condemnation of this interesting work reflects indelible discredit on Henry IV. and his court. De Thou has annexed "Commentaries or Memoirs of his own Life."

Having lost his first wife in 1601, whose virtues he celebrated in a Latin poem; and having no issue, he married, in 1603, a second wife, of a noble family, by whom he had three sons and three daughters, and she died in 1616. This loss, and the calamities that befel his country on the murder of Henry IV., are supposed to have hastened his own death, which happened in 1617, at the age of 64 years. His library, which was very valuable, and which by his will was to have been kept undivided in his family, was nevertheless sold after the death of one of his sons. The most complete edition of De Thou's History is that published at London in 1733, by Buckley, in 7 vols. fol. with memoirs of his life, and other pieces not before published.

THOUARCE, small town in the west of France, department of the Maine and Loire, on the river Thouaret. Population 1500; 14 miles south of Angers.

THOUARS, a small town in the west of France, the capital of an arrondissement in the department of the Two Sevres, on the river Thouet; 40 miles north-west of Poitiers.

THOUGH, *conjunction*. [ðeah, Saxon; tho, Icel. and old Swed. Mr. Tooke pronounces *though* the imperative of the Sax. verb ðapian, ðapgian, to allow. Dr. Jamieson, however, observes that there is not the same evidence here as with respect to some other conjunctions illustrated by this acute and ingenious writer; and that it certainly is no in-

considerable objection to this hypothesis, that it is not supported by analogy in the other northern languages. *Jamieson*, in *V. ALLTHOCHTE*.] Notwithstanding that; although.—Not that I so affirm, *though* so it seem. *Milton*.

As THOUGH. As if; like as if.—In the vine were three branches; and it was *as though* it budded. *Gen*.—It is used in the end of a sentence in familiar language: however; yet.

You shall not quit Cydaria for me:

'Tis dangerous *though* to treat me in this sort,
And to refuse my offers, *though* in sport.

Dryden.

THOUGHT, the *pret.* and *part. pass.* of *think*. [ðohʧe. Sax.; *thahita*, M. Goth.] I told him what I *thought*.

THOUGHT, *s.* [from the preterite of *to think*; Sax. ðeahʧ.] The operation of the mind; the act of thinking, And cards are dealt, and chessboards brought,
To ease the pain of coward *thought*.

Prior.

Idea; image formed in the mind.

For our instruction to impart
Things above earthly *thought*.

Milton.

Sentiment; fancy; imagery; conceit.—*Thought*, if translated truly, cannot be lost in another language; but the words that convey it to our apprehension, which are the image and ornament of that *thought*, may be so ill chosen as to make it appear unhandsome. *Dryden*.—Reflection; particular consideration.

Why do you keep alone?

Of sorriest fancies your companions making,
Using those *thoughts* which should indeed have died
With them they think on.

Shakespeare.

Conception; preconceived notion.

Things to their *thought*
So unimaginable as hate in heaven.

Milton.

Opinion; judgment.—They communicated their *thoughts* on this subject to each other; and therefore their reasons are little different. *Dryden*.—Meditation; serious consideration.

Pride, of all others the most dangerous fault,
Proceeds from want of sense or want of *thought*.

Roscommon.

Design; purpose.—Nor was godhead from her *thought*.
Milton.—Silent contemplation.

Who is so gross
That cannot see this palpable device?
Yet who so bold, but says, he sees it not?
Bad is the world; and all will come to nought,
When such ill dealings must be seen in *thought*.

Shakespeare.

Solicitude; care; concern.—Adam took no *thought*, eating his fill. *Milton*.—Expectation.

The main descry
Stands on the hourly *thought*.

Shakespeare.

A small degree; a small quantity. *It seems a loose term, but is used by good writers*.—My giddiness seized me, and though I now totter, yet I think I am a *thought* better. *Swift*.

THOUGHTFUL, *adj.* Contemplative; full of reflection; full of meditation.

On these he mus'd within his *thoughtful* mind,
And then resolv'd what Faunus had divin'd.

Dryden.

Attentive; careful.

Thoughtful of thy gain, I all the live-long day
Consume in meditation deep.

Philips.

Promoting meditation; favourable to musing.
War, horrid war, your *thoughtful* walks invades,
And steel now glitters in the muses' shades.

Pope.

Anxious; solicitous.

In awful pomp, and melancholy state,
See settled reason on the judgment-seat;

Around her crowd distrust, and doubt, and fear,

And *thoughtful* foresight, and tormenting care. *Prior*.

THOUGHTFULLY, *adv.* With thought or consideration; with solicitude.

THOUGHTFULNESS, *s.* Deep meditation. Suitable to the gravity of a Spaniard, or the silence and *thoughtfulness* of an Italian. *Swift*.—Anxiety; solicitude.

THOUGHTLESS, *adj.* Airy; gay; dissipated; negligent; careless.—It is something peculiarly shocking to see gray hairs without remorse for the past, and *thoughtless* of the future. *Rogers*.—Stupid; dull.

His goodly fabric fills the eye,
And seems design'd for *thoughtless* majesty;
Thoughtless as monarch oaks that shade the plain,
And spread in solemn state supinely reign.

Dryden.

THOUGHTLESSLY, *adv.* Without thought; carelessly; stupidly.

In restless hurries *thoughtlessly* they live,
At substance oft unmov'd, for shadows grieve.

Garth.

THOUGHTLESSNESS, *s.* Want of thought; absence of thought.—What is called absence, is a *thoughtlessness* and want of attention about what is doing. *Ld. Chesterfield*.

THOUGHTSICK, *adj.* Uneasy with reflection.

Heaven's face doth glow
With tristful visage; and, as 'gainst the doom,
Is *thoughtsick* at the act.

Shakespeare.

THOUINIA [so named by Dr. Smith, in honour of Mons. André Thouin, fellow of the National Institute, and Professor of Horticulture in the French Museum], in Botany, a genus of the class pentandria, order monogynia, natural order of convolvuli (*Juss.*)—Generic Character. Calyx five-leaved, permanent; leaflets roundish, three outer thicker wrinkled, naked, two inner membranaceous at the edge, silky at the back. Corolla one-petalled, bell-shaped, plaited, twice as long as the calyx, five-cleft; the segments very blunt, hispid on the outside, with very frequent rigid, fulgid bristles; within and along the edge between the plaits smooth, tomentose-ciliate at the top. Stamina: filaments five, round, naked, twice as long as the corolla, declining. Anthers biggish, cordate, two-lobed, smooth. Pistil: germ ovate, very hairy, superior. Style: length, form and situation of the stamens. Stigma simple, obtuse. Pericarp: drupe globular, size of a plum, supported by the permanent calyx.—*Essential Character*. Corolla one-petalled, bell-shaped, inferior, hispid on the outside. Style simple.

Thouinia spectabilis.—This is a tree with a hard wrinkled bark: the branches are round, silky towards the top, terminated by leaves and flowers in bundles. Leaves scattered, obovate-lanceolate, smooth, with a stout midrib; petioles short, channelled, when young silky. Stipules none. Flowers axillary, solitary, large and handsome, nodding a little, on roundish peduncles thickened at the top, silky towards the base, having in the middle two small acute silky opposite bractes.—Native of Madagascar.

THOURG, a small town in the north of France, department of the Eure and Loir, with 1100 inhabitants, and manufacturers of cotton, caps, stockings, and gloves; 3 miles east of Janville.

THOUSAND, *adj.* or *s.* [ðyʊənd, Saxon; *thusund*, Icel. from *tiu*, Icel. ten, and *hund*, M. Goth. hundred. *Serenius*.] The number of ten hundred.—About three *thousand* years ago, navigation of the world for remote voyages was greater than at this day *Bacon*.—Proverbially, a great number.

For harbour at a *thousand* doors they knock'd,
Not one of all the *thousand* but was lock'd.

Dryden.

Search the herald's roll,
Where thou shalt find thy famous pedigree,
Drawn from the root of some old Tuscan tree,
And thou, a *thousand* off, a fool of long degree.

Dryden.

THOUSAND ISLANDS, a cluster of islands in the Straits of Sunda. Lat. 5. 33. S. long. 106. 33. E.

THOUSAND

THOUSAND ISLANDS, a number of small islands in the river St. Lawrence, a little below Lake Ontario; the part of the river being called Thousand Island Lake.

THOUSAND LAKES, a name given to a number of small lakes in America, near the river Mississippi; 60 miles above St. Anthony's Falls.

THOUSAND ROCKS, rocks on the river St. Lawrence; 72 miles south-west of Montreal.

THOUSANDTH, *adj.* The hundredth ten times told; the ordinal of a thousand: proverbially, very numerous.—He that will divide a minute into a thousand parts, and break but a part of a *thousandth* part in the affairs of love, it may be said of him, that Cupid hath clapt him o' th' shoulder, but I'll warrant him heart whole. *Shakspeare.*

THOWL, *s.* [ðol, Saxon, "scalnus á quo pendet remus." Lye.] One of two small sticks or wooden pins, driven into the edge of a boat, by which oars are kept in their places when rowing. *Ainsworth.*

THOYDON, **BOIS**, a parish of England, in Essex; 3 miles south of Epping.

THOYDON, **GARNON**, a parish of England, in Essex; 2 miles south-south-east of Epping. Population 612.

THOYDON, **MOUNT**, another parish in the above county; 3½ miles south-east of Epping.

THOYNARD (Nicholas), a native of Orleans, was born in 1629, and at an early age a proficient in the learned languages, and in medallist science. His own original works were few, but he was liberal in the assistance he afforded to other writers. He published two short Latin dissertations on particular medals, and notes upon "Lactantius de Mortibus Persecutorum," and also a Critique on R. Simon's translation of the New Testament; but his principal performance was "A Concord of the Four Evangelists," in Greek and Latin, which was printing at the time of his death at Paris, in 1706, and appeared in 1707, with learned notes, chronological and historical. In this work he maintains that St. Matthew, of all the evangelists, paid the least regard in his narrative to the order of time. This work was printed at considerable expense, and is now rare. *Moreri.*

To THRACK, *v. a.* [*tracht*, a load, German; from *tragen*, to carry] To load; to burthen.—Certainly we shall one day find, that the strait gate is too narrow for any man to come bustling in, *thrack'd* with great possessions and greater corruptions. *South.*

THRAEVE, or **THRIVE**, a small island of Scotland, in Kirkcudbright shire, formed by the river Dee, on which is situated the stately castle of the same name, formerly the residence of the lords of Galloway.

THRALL, *s.* [ðræl, ðpall, Sax. *thrael*, Icel. a bond-servant, Mr. Ellis considers it is derived from the Saxon ðrullian, to bore; and refers to Exod. xxi. vi. ðrulle hiþ eape miþ auum æle, "drill his ear with an awl; a custom retained by our forefathers, and executed on their slaves at the church door." *Specimens of the early Engl. Poets*, vol. i. p. 20.] A slave; one who is in the power of another. *Not much in use.*—Look gracious on thy prostrate *thrall*, *Shakspeare.*—Bondage; state of slavery or confinement.

Her men took land,
And first brought forth Ulysses, bed, and all
That richly furnish'd it; he still in *thrall*
Of all subduing sleep.

Chapman.

THRALL, *adj.* Bond; subject.

Withstood

The fiend that you would maken *thrall* and bond.

Chaucer.

To THRALL, *v. a.* To enslave; to bring into the power of another. *Out of use.*

Let me be a slave t' atchieve the maid,
Whose sudden sight hath *thrall'd* my wounded eye.

Shakspeare.

The author of nature is not *thrall'd* to the laws of nature.
Drummond.

THRALDOM, *s.* Slavery; servitude.—How far am I inferior to thee in the state of the mind? and yet know I

that all the Heavens cannot bring me to such *thraldom*.
Sidney.

He swore with sobs,
That he would labour my delivery.
—Why, so he doth, when he delivers you
From this earth's *thraldom* to the joys of Heaven.

Shakspeare.

THRANDESTON, a parish of England, in Suffolk; 3 miles north-west-by-north of Eye.

THRANG. See **THRONG**.

THRANITÆ, in the Roman Trireme-gallies, or those which had three benches, the rowers of the upper row were called by this name, the second the *zygitæ*, and the lowest the *thalamitæ*.

THRA'PPLE, *s.* The wind pipe of any animal. They still retain it in the Scottish dialect; we say rather *throttle*.

THRAPSTON, a market town of England, in the county of Northampton, situated in a pleasant valley on the southern bank of the river Nen, over which there is a handsome bridge of several arches. The situation is extremely pleasant, and the surrounding country possesses all the advantages of a country retirement; 18 miles north-east of Northampton, and 75 north-north-west of London.

To THRASH, *v. a.* [ðæpʃan, Saxon; *derschen*, Dutch; *therskia*, Icel. Our word is written *thrash* or *thresh*; but according to the etymology, *thresh* is most correct.] To beat corn to free it from the chaff.—First *thrash* the corn, then after burn the straw. *Shakspeare.*—To beat; to drub.—Thou scurvy valiant ass; thou art here but to *thrash* Trojans, and thou art bought and sold among those of any wit like a Barbarian slave. *Shakspeare.*

To THRASH, *v. n.* To labour; to drudge.

I rather wou'd be Mævius, *thresh* for rhimes
Like his, the scorn and scandal of the times,
Than that Philippick fatally dvine,
Which is inscrib'd the second, should be mine. *Dryden.*

THRA'SHER, *s.* One who thrashes corn.

Our soldiers, like a lazy *thrasher* with a flail,
Fell gently down, as if they struck their friends. *Shakspeare.*

THRA'SHINGFLOOR, *s.* An area on which corn is beaten.

In vain the hinds the *thrashing-floor* prepare,
And exercise their flails in empty air. *Dryden.*

THRASIMENE, or **THRASYMENE**, the ancient name of a lake in the central part of Italy, now called the lake of Perugia, and famous for the victory gained by Hannibal, over the Romans under Flaminius.

THRASO'NICAL, *adj.* [from *Thraso*, a boaster in old comedy.] Boastful; bragging.—His humour is lofty, his general behaviour, vain, ridiculous, and *thrasonical*. *Shakspeare.*

THRASO'NICALLY, *adv.* Boastfully.—To brag *thrasonically*, to boast like Rodomonte. *Johnson.*

THRAVE, or **THREAVE**, *s.* [ðraf, Sax. *trafwe*, Su. Goth. *trava*, low Lat. *thrave*, Norm. Fr.] A herd; a drove; a heap. In some parts of England applied to twenty-four sheaves of corn; in others to a certain quantity of straw.

They come

In *threaves* to frolic with him.

B. Jonson.

THREAD, *s.* [ðræð, Saxon; from ðrapan, *tothrow*, *to twist*.] A small line; a small twist; the rudiment of cloth.

Let not Bardolph's vital *thread* be cut
With edge of penny cord and vile reproach. *Shakspeare.*

Any thing continued in a course; uniform tenor.—The eagerness and trembling of the fancy doth not always regularly follow the same even *thread* of discourse, but strikes upon some other thing that hath relation to it. *Burnet.*

To THREAD, *v. a.* To pass through with a thread.—The largest crooked needle, with a ligature of the size of that I have *threaded* it with in taking up the spermatic vessels.

vessels. *Sharp*.—To pass through; to pierce through.—Thus out of season *threading* dark-ey'd night. *Shakspeare*.

THRE'ADBARE, *adj.* Deprived of the nap; wore to the naked threads.—The clothier means to dress the Commonwealth, and set a new nap upon it; so he had need; for 'tis *threadbare*. *Shakspeare*.—Worn out; trite.

A hungry lean-fac'd villain,
A mere anatomy, a mountebank,
A *threadbare* juggler, and a fortune-teller. *Shakspeare*.

THRE'ADBARENESS, *s.* State of being threadbare.—There was much significance in his look with regard to the coat; it spoke of the sleekness of folly, and the *threadbareness* of wisdom. *Man of Feeling*.

THRE'ADEN, *adj.* Made of thread.

Behold the *threaden* sails,
Borne with the invisible and creeping wind,
Draw the huge bottoms through the furrow'd sea.
Shakspeare.

THRE'ADY, *adj.* Like thread; slender.—Branches like the small and *threddie* roots of a tree. *Granger*.—Containing thread.

From hand to hand
The *theady* shuttle glides along the lines. *Dyer*.

THREALS, a township of England, in Lancashire, adjoining to Kirkham. Population 671.

To **THREAP**, *v. a.* [Sax. *þreapian*.] To argue; to contend; still a northern word.—Some crye upon God, some other *threpe* that he hathe forgotten theym. *Bp. Fisher*.

To **THREAT**, or **THREATEN**, *v. a.* [ðreatian Saxon: *threat* is seldom used but in poetry.] To menace; to denounce evil.

Death to be wish'd
Though *threaten'd*, which no worse than this can bring.
Milton.

To menace; to terrify, or attempt to terrify, by shewing or denouncing evil. It has *with* before the thing threatened, if a noun; *to*, if a verb.

What *threat* you me *with* telling of the king?
Tell him and spare not. *Shakspeare*.

To menace by action.

Void of fear,
He *threaten'd* with his long pretended spear. *Dryden*.

THREAT, *s.* Menace; denunciation of ill.—There is no terror, Cassius, in your *threats*. *Shakspeare*.

THRE'ATENER, *s.* [formerly *threater*. Prompt. Parv.] Menacer; one that threatens.

Be stirring as the time; be fire with fire;
Threaten the *threatener*, and outface the brow
Of bragging honour. *Shakspeare*.

The fruit, it gives you life
To knowledge by the *threat'ner*. *Milton*.

THRE'ATENING, *s.* A menace; a denunciation of evil.

Æneas their assault undaunted did abide,
And thus to Lausus, loud with friendly *threat'ning*, cry'd.
Dryden.

THRE'ATENINGLY, *adv.* With menace; in a threatening manner.

The honour that thus flames in your fair eyes,
Before I speak, too *threat'ningly* replies. . . . *Shakspeare*.

THRE'ATFUL, *adj.* Full of threats; minacious.
Like as a warlike brigandine applide
To fight, lays forth her *threatful* pikes afore,
The engines which in them sad death do hide. *Spenser*.

THRECKINGHAM, a parish of England, in Lincolnshire; 2 miles north of Folkingham.

THREE, *adj.* [ðre, ðre, Sax.; *dry*, Dutch; *tri*, Welsh and Erse; *tres*, Lat.] Two and one.

Prove this a prosperous day, the *three-nook'd* world
Shall bear the olive freely. *Shakspeare*.

Proverbially a small number.—Away, thou *three-inch'd* fool; I am no beast. *Shakspeare*.

THREE BRETHREN, a hill of Scotland, in the parish and county of Selkirk, elevated 1978 feet above the level of the sea.

THREE BROTHERS, three small islands on the coast of Guiana, in the mouth of the Essequibo.—2. Three small islands in the Atlantic, near Prince's island. Lat. 1. 32. N. long. 7. E.—3. Three hills on the north-east coast of Terra del Fuego; 9 miles west of Cape Diego.—4. Three islands on the Spanish Main, near the Mosquito shore. Lat. 11. N. long. 82. 52. W.—5. Three islands in the Indian Ocean. Lat. 3. 44. S. long. 62. 25. E.—6. Three islands in the Eastern seas. Lat. 10. 42. N. long. 108. E.—7. Three small islands in the Eastern seas, near the east coast of Madagascar. Lat. 13. 20. S. long. 51. 10. N.—8. Three small islands in the Eastern seas. Lat. 5. 30. S. long. 132. 15. E.—9. Three small islands in the Eastern seas, near the west coast of Amboyna. Lat. 3. 39. S. long. 128. 18. E.—10. Small islands in the Eastern seas, near the south-west coast of Celebes. Lat. 5. 25. S. long. 119. 38. E.—11. Small islands in the bay of Gunong Tellu, on the coast of Celebes. Lat. 1. S. long. 120. 27. E.—12. Small islands in the Eastern seas. Lat. 6. S. long. 71. 36. E.—13. Three hills on the east coast of New Holland, so called by Captain Cook. The northernmost is visible 50 miles from a ship's deck at sea, and is in lat. 31. 43. S. long. 152. 45. E.

THREE CREEK RUN, a river of Virginia, which runs into the Nottoway. Lat. 36. 36. N. long. 77. 12. W.

THRE'EFOLD, *adj.* [ðreofeald, Sax.] Thrice repeated; consisting of three.

A *threefold* off'ring to his altar bring,
A bull, a ram, a boar. *Pope*.

THREE HILLS ISLAND, one of the New Hebrides, in the South Pacific Ocean, about 12 miles in circumference. Lat. 17. 7. S. long. 168. 35. E.

THREE HUMMOCK ISLAND, a small island on the east coast of New Holland, separated by a channel two miles wide.

THREE HUMMOCK ISLAND, an island on the north coast of Van Diemen's Land. Lat. 40. 45. S. long. 145. E.

THREE ISLANDS, small islands in the Eastern seas, near the east coast of Bintag. Lat. 1. 10. S. long. 105. 2. E.

THREE ISLANDS, a name given to some small islands in the Indian Ocean, near the eastern coast of Africa. Lat. 4. 50. S.

THREE ISLANDS BAY, or **HARBOUR**, a bay on the east coast of the island of St. Lucia.

THREE ISLAND HARBOUR, a bay on the coast of Patagonia, in the straits of Magellan; 8 miles north-north-west of Batchelor's river.

THREE KINGS, three small islands in the South Pacific Ocean, near the north coast of New Zealand, discovered by Tasman. A singular circumstance respecting these little islands is, that they abound in the centipede, which reptile is entirely unknown in New Zealand, though only 15 miles distant. Lat. 34. 13. S. long. 172. 12. E.

THRE'EPENCE, *s.* A small silver coin, valued at thrice a penny.

A *threepence* bow'd would hire me,
Old as I am to queen it. *Shakspeare*.

THRE'EPENNY, *adj.* [*triobolaris*, Lat.] Vulgar; mean.

THRE'EPILE, *s.* An old name for good velvet.
THRE'EPILED, *adj.* Set with a thick pile; in another place it seems to mean piled one on another.—Thou art good velvet; thou'rt a *threepil'd* piece: I had as lief be English kersey, as be pil'd as thou art. *Shakspeare*.

THREE POINTS CAPE, the north head of the entrance into Broken Bay, on the east coast of New Holland. Lat. 33. 32½. S. long. 151. 23½. E.

THREE POINTS CAPE, on the east coast of America, in the bay of Honduras. Lat. 15. 56. N. long. 90. 16. W.

THREE POINTS CAPE, a cape on the north coast of South America. Lat. 10. 40. N. long. 62. 56. W.

THREE POINTS CAPE, a cape on the east coast of Patagonia. Lat. 46. 50. S.

THREE RIVERS, DISTRICT OF, one of the divisions of Lower Canada.

THREE RIVERS, a town of Lower Canada, situated on the north-west side of the river St. Maurice, at its confluence with the St. Lawrence. It derives its name from the entrance into the former river being separated by two islands lying at the mouth, into three channels. Three Rivers ranks as the third town in the province; but compared with either of the others, it is small indeed, containing only about 320 houses, with a population not much exceeding 2500 souls. It sends two members to the provincial parliament.

THREE RIVERS HARBOUR, a bay on the east coast of the island of St. John, in the gulf of St. Lawrence. Lat. 46. 8. N. long. 62. 10. W.

THREESCORE, *adj.* Thrice twenty; sixty.—*Threescore* and ten I can remember well. *Shakspeare.*

THREE SISTERS, three small islands on the west side of Chesapeak bay, north of Parker's island.

THREE SISTERS, small islands in the Eastern seas. Lat. 5. 42 N. long. 105. 42. E.

THREAPLAND, a hamlet of England, in Cumberland; 6 miles north-by-east of Cockermouth.

THRELKELD, a township of England, in Cumberland; 4 miles east-north-east of Keswick.

THRENE, *s.* [*ἄρνος*, Gr.] Lamentation; complaint. *Obsolete.*

It made this *threne*

To the phenix and the dove,
As chorus to their tragic scene.

Shakspeare.

THRE'NODY, *s.* [*ἄρνοδια*, Gr.] A song of lamentation.—They carry the body to the grave;—and for seven days the next of kin watch, to keep, if possible, the evil angel from his grave; incessantly warbling out elegiac *threnodies*, as the last expression of love they can shew. *Sir T. Herbert.*

To THRESH, *v. a.* [*ῥῆσαν*, *ῥῆσαν*, Sax. See *To THRASH.*] To beat corn to free it from the chaff.—Gideon was taken from *threshing*, as well as Cincinnatus from the plough, to command armies. *Locke.*

THRE'SHER, *s.* [*ῥῆρσεpe*, Sax.] One who threshes corn.

Here too the *thresher* brandishing his flail,
Bespeaks a master.

Dodsley.

A fish; the sea-fox.—The flail-finn'd *thresher*, and steel-beak'd swordfish. *Donne.*

THRESHFIELD, a township of England, West Riding of Yorkshire, situated on the river Wharfe; 9½ miles north of Skipton.

THRESHINGFLOOR, *s.* An area on which corn is beaten.

The careful ploughman doubting stands,
Lest on the *threshing-floor* his sheaves prove chaff. *Milton.*

THRE'SHOLD, *s.* [*ῥῆρσαλδ*, Sax.] The ground or step under the door; entrance; gate; door.

Many men, that stumble at the *threshold*,
Are well foretold that danger lurks within. *Shakspeare.*

THRESTON, EAST and WEST, two hamlets of England, in Northumberland; 9 miles from Morpeth.

THREW, preterite of *throw*.

A broken rock the force of Pyrrhus *threw*;
Full on his ankle fell the pond'rous stone,
Burst the strong nerves, and crash'd the solid bone. *Pope.*

THREXTON, a parish of England, in Norfolk; 2½ miles west-by-south of Watton.

THREZTJAN, a village in Transylvania, on the south-east point of the county of Sarand, with a considerable gold mine.

THRICE, *adv.* Three times.

Thrice within this hour

I saw him down; *thrice* up again and fighting. *Shakspeare.*

A word of amplification.

Thrice noble lord, let me intreat of you

To pardon me.

Shakspeare.

To THRID, *v. a.* [this is corrupted from *thread*; in French *enfiler*.] To slide through a narrow passage.

Some *thrid* the mazy ringlets of her hair,

Some hang upon the pendants of her ear.

Pope.

THRID, *s.* Thread.

Sad Clotho held the rocke the whiles the *thrid*

By griesly Lachesis was spun with paine,

That cruell Atropos eftsoones undid,

With cursed knife cutting the twist in twaine;

Most wretched men whose dayes depend on *thrids* so vaine.

Spenser.

THRIFT, *s.* Profit; gain; riches gotten; state of prospering.

You some permit

To second ills with ills, each worse than other,

And make them dreaded to the doer's *thrif*. *Shakspeare.*

Had I but the means

To hold a rival place with one of them,

I have a mind presages me such *thrif*,

That I should be fortunate.

Shakspeare.

Parsimony; frugality; good husbandry.

Thus Heaven, though all-sufficient, shows a *thrif*

In his oeconomy, and bounds his gift.

Dryden.

A plant.

The marygold above, to adorn the arched bar;

The double daysie, *thrif*, the button-bachelor. *Drayton.*

THRIFTILY, *adv.* Frugally; parsimoniously; carefully; with good husbandry.—Preserve it tenderly and *thriftily*; fence it against sun, dust, air, and fire. *Bp. Taylor.*—Cromartie after fourscore went to his country-house to live *thriftily*, and save up money to spend at London. *Swift.*

THRIFTINESS, *s.* Frugality; husbandry.

If any other place you have,

Which asks small pains but *thriftness* to save. *Spenser.*

THRIFTLESS, *adj.* Profuse; extravagant.

He shall spend mine honour with his shame,

As *thrifless* sons their scraping father's gold. *Shakspeare.*

THRIFTY, *adj.* Frugal; sparing; not profuse; not lavish.

Nature never lends

The smallest scruple of her excellence,

But like a *thrifty* goddess she determines

Herself the glory of a creditor,

Thanks and use.

Shakspeare.

Well-husbanded.

I have five hundred crowns,

The *thrifty* hire I sav'd under your father. *Shakspeare.*

THRIGBY, a parish of England, in Norfolk; 4 miles west-by-north of Caister.

To THRILL, *v. a.* [*ῥύπλιαν*, Sax.; *drilla*, Swedish.]

To pierce; to bore; to penetrate; to drill.

A servant that he bred, *thrill'd* with remorse,

Oppos'd against the act; bending his sword

To his great master.

Shakspeare.

To THRILL, *v. n.* To have the quality of piercing.

The knight this *thrilliant* spear again assay'd,

In his brass-plated body to emboss.

Spenser.

To pierce or wound the ear with a sharp sound.

The piteous maiden, careful, comfotless,

Does throw out *thrilling* shrieks, and shrieking cries.

Spenser.

To

To feel a sharp tingling sensation.

To seek sweet safety out,
In vaults and prisons; and to *thrill* and shake,
Ev'n at the crying of our nation's crow,
Thinking his voice an armed Englishman. *Shakspeare.*

To pass with a tingling sensation.

A faint cold fear *thrills* through my veins,
That almost freezes up the heat of life. *Shakspeare.*

THRILL, *s.* The breathing place or hole.—The bill of the dodo hooks and bends downwards; the *thrill* or breathing-place is in the midst. *Sir T. Herbert.*—A piercing sound.

THRIMBY, a hamlet of England, in Westmoreland; $9\frac{1}{2}$ miles north-north-west of Orton.

THRIMSA, in Antiquity, a silver coin, the value of which has occasioned a variety of conjectures. Lambard, who gave the first estimate of it, makes it a *three-shilling* piece, in which opinion he is followed by Sir Henry Spelman. Bishop Nicholson apprehends, that it was the name of their common coin, and that the thrimsa sceata, and penny, were all of them the same. Somner, from the import of the word, and the value given to the thrimsa in the Saxon laws, rates it at *three-pence*. Selden, Brady, and Hickes, are of opinion, that this coin was either the last remissis of the Franks and Germans, and consequently *four-pence*, or the third part of the Saxon shilling, i. e. three half-pence and one-third of a halfpenny in their money.

THRIN, a river of England, in Norfolk, which runs into the sea, near Yarmouth.

THRINAX [$\Theta\rho\rho\nu\nu\alpha\zeta$ or $\tau\rho\rho\nu\nu\alpha\zeta$, Gr., a *trident* or *three-tined fork*, from $\tau\rho\rho\epsilon\iota\varsigma$, *three*], in Botany, a genus of the class hexandria, order monogynia, natural order of palms.—Generic Character. Calyx: spathe universal, compound. Spadix simply branched, imbricate with proper spathes, in decussated spikes. Perianth minute, six-toothed. Corolla none. Stamina: filaments six, short, filiform, inserted into the base of the germ. Anthers large (larger than the pistil), erect, bifid at the base and top. Pistil: germ half-inferior, ovate, surrounded by the calyx. Style thickish, short. Stigma wideish, compressed, retrue, emarginate. Pericarp: berry one-celled, naked. Seed a single kernel covered with a bony shell.—*Essential Character*. Calyx six-toothed. Corolla none. Stigma funnel-form, oblique. Berry one-seeded.

Thrinax parviflora, palmeto royal, or palmeto thatch.—Trunk from ten to twenty feet high, swelling at the base, unarmed. Fronds terminating, palmate-plaited, from one to two feet long; divisions lanceolate, nerved and marked with lines, rigid, almost equal. Flowers pedicelled, opposite or in threes, placed on the rachis; small, hermaphrodite. Berry roundish, the size of a small pea, almost juiceless. Kernel white within, red in the middle.—Native of Jamaica and Hispaniola, on the coast and in dry places.

To **THRING**, *v. a.* [$\delta\rho\rho\nu\nu\alpha\zeta$, Sax.] To press; to thrust. still used in some parts of the north. It is, in fact, no other than *throng*; and in our old language, is both active and neuter.

There was many a birde singing,
Throughout the yerde al *thringing*. *Chaucer.*

THRINGSTONE, a township of England, in Leicester; 5 miles east of Ashby-de-la-Zouch. Population 948.

THRINTOFT, a township of England, North Riding of Yorkshire; $2\frac{1}{2}$ miles west-by south of Northallerton.

THRIPLOW, a parish of England, in Cambridgeshire; $5\frac{1}{2}$ miles north-north-east of Royston. Population 319.

THRIPS, a name used among the ancients to express a sort of worm hatched from the egg of a beetle.

THRIPS, a genus of the order of Hemiptera, the characters of which are, that the rostrum is obsolete, being hidden within the mouth; the antennæ filiform, and as long as the thorax: the body slender, and of equal thickness; the abdomen reflexible, and often bent upwards; the four wings extended, incumbent, narrow, and crossing one another at

some distance from their base. The thrips has six feet, and the tarsus of each foot has only two articulations. Gmelin enumerates the following eleven species.

1. *Thrips paradoxa*.—Brown, with abbreviated wings, and antennæ pectinate, fissile and filiform.—Found in China, but Gmelin doubts whether it be of this genus.

2. *Thrips physapus*.—With glaucous elytra or shell-wings, and black body.—Found frequently on flowers in Europe.

3. *Thrips minutissima*.—With glaucous elytra and body, and brown eyes.—Found as the former.

4. *Thrips juniperina*.—With snowy elytra and brown body.—Found in the galls of the juniper.

5. *Thrips ulmi*.—Black, with snowy ciliated wings, and acuminate anus.—Found gregarious on the bark of the elm.

6. *Thrips urticae*.—Yellow, with whitish elytra.—Found solitary on the leaves of the nettle, vine, and hazle.

7. *Thrips fasciata*.—With elytra banded with white and black, and brown body.—Found on flowers in Europe.

8. *Thrips fusca*.—Blackish, with glaucous elytra.—Found in Denmark: the female probably fasciated?

9. *Thrips obscura*.—Yellowish, with palish elytra, and eyes and wings of the abdomen black.—Found in Denmark.

10. *Thrips rufa*.—Red.—Found on the spikes of wheat; if it be not the larva of the minutissima.

11. *Thrips variegata*.—Variegated.—Found on flax.

The thrips is highly injurious and destructive to many sorts of fine fruited trees, but particularly so to those of the grape or vine kind. The best and most effectual means of preventing its mischievous effects, in such cases, is probably that of frequent good washing of the trees with common water, by the engine or otherwise. It has lately been advised that this should be done every evening, as, when performed in the heat of the sun, the vines are materially injured. Indeed all such trees should, it is supposed, be well washed every evening, until the berries begin to colour, whether infested with insects or not, but especially in the former state; after which it is to be wholly discontinued.

Where there is a neglect of washing the trees in this or some other way, the thrips, for the most part, makes its appearance. In such cases, these insects may without much difficulty be destroyed by the fumigation of tobacco and damp hay; the plants or trees being well washed after it by pure water.

The white bug is another insect which is often very hurtful to peach-trees and vines in forcing-houses; and the cause of which is believed to be much owing to the trees not being daily properly washed in the above manner. Each of these sorts of trees stand in need of particular management in clearing them of this insect.

The brown-bug too occasionally makes its appearance on, and is hurtful to peach-trees in such situations, especially when they are shaded, or approach near the flues of the houses. Proper washing of the trees, in these cases, with lime-water, in the winter season; and syringing them with it as soon as the leaves have fallen off, are often very effectual in removing such insects.

The green-fly is also very destructive to peach-trees, especially when in the forcing state. These are the most effectually destroyed by means of well washing the trees daily in a regular manner, after the work of forcing is begun. It is the common practice of most gardeners to discontinue such washings as soon as the flowers begin to make their appearance, but others have lately continued them with supposed advantage, and not found to prevent the fruit from setting. If any flies of this sort present themselves, they may be kept under by proper watering or washing, as above, and by carefully picking off the first buds on which they appear, which is found to prevent them from breeding, and to render the use of tobacco-smoke unnecessary. Fumigations of this substance are, however, sometimes beneficial in these cases in removing the vermin.

This and the blue-fly too are often very injurious to plum-trees, especially after they have been affected with the honey-dew. The manner of getting rid of them in such cases,

cases, which has lately been recommended, is that of watering the trees in a plentiful manner two or three times a week, if the weather be dry; and during the continuance of the above sort of dew upon the trees, preparing the water with a little common salt and the fluid part of a good portion of broom that has been boiled. This mixture, it is said, effectually kills the flies, while it does no injury to the trees, if care has been taken not to use too large a proportion of salt. This practice also tends to make the trees shoot stronger, and to hinder such insects from breeding.

There is another insect which has lately been found to be greatly injurious to apple and other fruit trees, but which is yet only little known to gardeners. It is the Tortrix wæberana, which may be seen well described in the second volume of the "Transactions of the Horticultural Society of London." It is there stated to be occasionally very hurtful to such trees, not only in the larva state, but others; and that its attacks are by no means confined to the diseased parts of such trees. The insect, in its perfect state, is a small moth, which is very abundant in gardens and fruit grounds.

In what regards the means of removing and destroying such insects when their attacks become injurious, the hints given below are thrown out. The first and most essential process evidently is, it is thought, to cut away the edges of the cankerly parts where they are chiefly found, making the wound smooth, and covering it with any composition likely to prevent the moth from depositing her ova or eggs there again. One precaution is necessary, which is to put into boiling-water, or to bury at a considerable depth, the cut-out pieces of decayed bark containing the larvæ; which, if left near the tree, would soon crawl from their holes or other places, and remount it; thus defeating the labour of the horticulturalist, who often, from neglecting a slight additional trouble, loses the benefit of more painful exertions. Where the larvæ are found to have insinuated themselves generally into the rough bark of old trees, it would probably, it is thought, be advisable to scrape off the whole of the lifeless bark, and such portions of the alburnum as are injured, as suggested by Mr. Knight on another occasion; a process which, there can be no doubt, it is said, would be advantageous to the tree in other respects, as pointed out by the above writer. And where projecting saw-dust-like masses shew that the larvæ has attacked even smooth-barked trees, the insertion of a blunt pricker into the hole would probably, in most cases, suffice to destroy it, and do less injury to the tree than suffering it to attain its growth. But the mode which is most to be recommended is this, as in the case of almost all insects hurtful to fruit or other trees, is, it is said, to destroy the moths themselves, by collecting them from off the trees, or other places, during the summer months, which might be done by children properly directed and provided with suitable means for the purpose, or in other ways. The destruction of every female moth, before the deposition of its eggs, may, it is said, be fairly calculated to prevent the existence of some hundreds of larvæ; and thus, in any garden or fruit-ground not in the neighbourhood of others, where the same methods are neglected, the whole race might, it is supposed, be extirpated in a few years.

To THRIVE, v. n. pret. *throve*, and sometimes less properly *thrived*, part. *thriven*. [Of this word there is found no satisfactory etymology: in the northern dialect they use *throdde*, to make grow; perhaps *throve* was the original word, from *throa*, Icelandic, to encrease.] To prosper; to grow rich; to advance in any thing desired.

If lord Percy *thrive* not, ere the king
Dismiss his power he means to visit us. *Shakspeare.*

THRIVER, s. One that prospers; one that grows rich.—He had so well improved that little stock his father left, as he was like to prove a *thrifer* in the end. *Hayward.*

THRIVINGLY, adv. In a prosperous way.

THRIVING, or THRIVINGNESS, s. Growth; increase.—A careful shepherd not only turns his flock into a common pasture, but with particular advertence observes the *thriving* of every one. *Dec.*

THRO', contracted by barbarians from *through*.
What thanks can wretched fugitives return,
Who scatter'd *thro'* the world in exile mourn. *Dryden.*

THROAPHAM, a parish of England, West Riding of Yorkshire; 10 miles south-west-by-west of Bawtry.

THROAT, s. [ἄροτε, ἄροτα, Sax.] The forepart of the neck; the passages of nutriment and breath.

Wherefore could I not pronounce, amen?
I had most need of blessing, and amen
Stuck in my *throat*. *Shakspeare.*

The main road of any place.
Her honour and her courage try'd,
Calm and intrepid in the very *throat*
Of sulphureous war, on Teniers dreadful field. *Thomson.*

To cut the THROAT. To murder; to kill by violence.—These bred up amongst the Englishmen, when they become kern, are made more fit to cut their throats. *Spenser.*

THRO'ATPIPE, s. The weasand; the windpipe.
THROATWORT, s. A plant. *Dr. Johnson.*—The right botanical name is *trachelium*: it is also called *flos cardinalis*. *Mason.*

My muse grows hoarse, and can no longer sing,
But *throatwort* haste her kind relief to bring:
The colleges with dignity enstal
This flower, at Rome he is a cardinal. *Tate's Cowley.*

THROATY, adj. Guttural. The conclusion of this rambling letter shall be a rhyme of certain hard *throaty* words. *Howell.*

To THROB, v. n. [from ἄροβειν, Gr.] Minshew and Junius; formed in imitation of the sound, Skinner; perhaps contracted from *throw up*.—To heave; to beat; to rise as the breast with sorrow or distress.—Here may his head live on my *throbbing* breast. *Shakspeare.*

My heart *throbs* to know one thing:
Shall Banquo's issue ever reign? *Shakspeare.*

—To beat; to palpitate.—In the depending orifice there was a *throbbing* of the arterial blood, as in an aneurism, the blood being choked in by the contused flesh. *Wiseman.*

THROB, s. Heave; beat; stroke of palpitation.
Thou talk'st like one who never felt
Th' impatient *throbs* and longings of a soul,
That pants and reaches after distant good. *Addison.*

THROCKING, or THORRING, a parish of England; in Hertfordshire; 2 miles west-north-west of Buntingford.

THROCKINGTON, a village of England, in Northumberland; 9 miles from Corbridge.

THROCKLEY, a township of England, in Northumberland; 6½ miles west-north-west of Newcastle-upon-Tyne.

THROCKMORTON, a hamlet of England, in Worcestershire; 3 miles north-east of Pershore.

To THRODDEN, v. n. To grow; to thrive; to encrease. North. Grose. See *To THRIVE*.

THROE, s. [from ἄροπιαν, Saxon, to suffer.] The pain of travail; the anguish of bringing children: it is likewise written *throw*.

Lucina lent not me her bed,
But took me in my *throws*. *Shakspeare.*

Any extreme agony; the final and mortal struggle.
O man! have mind of that most bitter *throë*,
For as the tree does fall so lies it ever low. *Spenser.*

To THROE, v. a. To put in agonies.
The setting of thine eye and cheek proclaim a birth,
Which *throcs* thee much to yield. *Shakspeare.*

THROGGY, a river of England, in Monmouthshire, which falls into the Severn, at Trinity Chapel; about 4 miles south-west of Chepstow.

THROMBUS [from ἄρομπος, Gr. *coagulated blood*], a clot of blood, or *echymosis*.

THRONE, s. [*throne*, old French; *thronus*, Lat., ἄρονος, Gr.]—A royal seat; the seat of a king.

Boundless intemperance hath been
Th' untimely emptying of the happy *throne*,
And fall of many kings. *Shakspeare.*

The seat of a bishop.—Bishops preached on the steps of
the altar standing, having not as yet assumed the state of a
throne. *Ayliffe.*

One highly exalted; spoken of angelical beings.

Hear, all ye angels, progeny of light,
Thrones, dominations, principedoms, virtues, powers. *Milton.*

To *THRONE*, *v. a.* To enthrone; to set on a royal seat.

They have, as who have not, whom their great stars
Thron'd and set high? *Shakspeare.*

THRONG, *s.* [ðpanʒ, Saxon, from ðpanʒan, *to press*.]—
A crowd; a multitude pressing against each other.

Let us on heaps go offer up our lives:
We are enow yet living on the field,
To smother up the English in our *throngs*. *Shakspeare.*

THRONG, *adj.* Much occupied; very busy; a northern
expression, sometimes spoken *thrang*.

To *THRONG*, *v. n.* To crowd; to come in tumultuous
multitudes.

I have seen
The dumb men *throng* to see him, and the blind
To hear him speak. *Shakspeare.*

To *THRONG*, *v. a.* To oppress or incommode with
crowds or tumults.

I'll say, thou hast gold:
Thou wilt be *throng'd* too shortly. *Shakspeare.*

THRONGLY, *adv.* In crowds; in multitudes.—God
had so contrived, by his infinite wisdom, that matter, thus or
thus prepared, should by a vital congruity attract propor-
tional forms from the world of life, which is every where
nigh at hand, and does very *throngly* inequitate the moist
and unctuous air. *More.*

THROPPLE, a township of England, in Northumber-
land; 5 miles west-by-north of Morpeth.

THROPTON, a township of England, in Northumber-
land; 13 miles south-west-by-west of Alnwick.

THROSTLE, *s.* [ðpɒɹtʃle, Saxon.] The thrush; a sing-
ing bird.

The *throstle* with his note so true,
The wren with little quill. *Shakspeare.*

THROSTON, a hamlet of England, in Durham; 11½
miles north-north-east of Stockton-upon-Tees.

THROTTLE, *s.* The windpipe; the larinx.—At the
upper extreme it hath no larinx or *throttle* to qualify the
sound. *Brown.*

To *THROTTLE*, *v. a.* To choak; to suffocate; to kill
by stopping the breath.

I have seen them shiver and look pale,
Make periods in the midst of sentences,
Throttle their practis'd accents in their fears,
And, in conclusion, dumbly have broke off. *Shakspeare.*

THROVE, the preterite of *thrive*.—England never *throve*
so well, nor was there ever brought into England so great
an increase of wealth since. *Locke.*

THROUGH, *prep.* [ðʊph, Saxon; *door*, Dutch; *durch*
German; *thairh*, Goth. Dicitur de transitu per locum in
omnibus dialectis. Wachter. Mr. Tooke derives it from
the Goth. substantive *dauro*, (Teut. *thuruh*, the same,) a
door, gate, passage.] From end to end of; along the whole
mass or compass.—Noting passage.

Through the gate of ivory he dismiss'd
His valiant offspring. *Dryden.*

By transmission.—*Through* these hands this science has
passed with great applause. *Temple*.—By means of; by
agency of; in consequence of.—The strong *through* plea-
sure soonest falls, the weak *through* smart. *Spenser.*

THROUGH, *adv.* From one end or side to the other.

You'd be so lean, that blasts of January
Would blow you *through* and *through*. *Shakspeare.*

To the end of any thing; to the ultimate purpose; to the
final conclusion.—Every man brings such a degree of this
light into the world with him, that though it cannot bring
him to heaven, yet it will carry him so far, that if he follows
it faithfully he shall meet with another light, which shall
carry him quite *through*. *South.*

THROUGHBRED, *adj.* [commonly *throughbred*.]
Completely educated; completely taught.—A *through-
bred* soldier weighs all present circumstances, and all
possible contingents. *Grew.*

THROUGHLIGHTED, *adj.* Lighted on both sides.—
That the best pieces be placed where are the fewest lights;
therefore not only rooms windowed on both ends, called
throughlighted, but with two or more windows on the
same side, are enemies to this art. *Wotton.*

THROUGHLY, *adv.* It is commonly written *thorough-
ly*, as coming from *thorough*.—Completely; fully; en-
tirely; wholly.

The sight so *thoroughly* him dismay'd,
That nought but death before his eyes he saw. *Spenser.*

No less wisdom than what made the world can *thoroughly*
understand so vast a design. *Tillotson*.—Without reserve;
sincerely.—Though it be somewhat singular for men truly
and *thoroughly* to live up to the principles of their religion,
yet singularity in this is a singular commendation. *Tillotson.*

THROUGHOUT, *prep.* Quite through; in every part of.

O for a clap of thunder, as loud
As to be heard *throughout* the universe,
To tell the world the fact, and to applaud it. *B. Jonson.*

THROUGHOUT, *adv.* Every where; in every part.
Subdue it, and *throughout* dominion hold
Over fish of the sea and fowl of the air. *Milton.*

THROUGH PACED, *adj.* Perfect; complete.—He is
very dextrous in puzzling others, if they be not *throughpaced*
speculators in those great theories. *More.*

To *THROW*, *v. a.* preter. *threw*, part. pass. *thrown*.
[ðpʌpən, Saxon.] To fling; to cast; to send to a distant
place by any projectile force.

He fell
From Heaven, they fabled, *thrown* by angry Jove
Sheer o'er the crystal battlements. *Milton.*

To toss; to put with any violence or tumult. It always
comprises the idea of haste, force, or negligence.
To threats the stubborn sinner oft is hard,
Wrapp'd in his crimes against the storm prepar'd;
But when the milder beams of mercy play,
He melts, and *throws* his cumb'rous cloak away. *Dryden.*

To lay carelessly, or in haste.—His majesty departed
to his chamber, and *threw* himself upon his bed, lamenting
with much passion, and abundance of tears, the loss of an
excellent servant. *Clarendon.*

At th' approach of night,
On the first friendly bank he *throws* him down,
Or rests his head upon a rock till morn. *Addison.*

To venture at dice.
Learn more than thou trowest,
Set less than thou *throwest*. *Shakspeare.*

To cast; to strip; to put off.
There the snake *throws* the enamell'd skin,
Weed wide enough to wrap a fairy in. *Shakspeare.*

To emit in any careless or vehement manner.
To arms; for I have *thrown*
A brave defiance in king Henry's teeth. *Shakspeare.*

To spread in haste.
O'er his fair limbs a flow'ry vest he *threw*,
And issu'd like a god to mortal view. *Pope.*

To overturn in wrestling.—If the sinner shall not only
wrestle

wrestle with this angel, but *throw* him too, and win so complete a victory over his conscience, that all these considerations shall be able to strike no terror into his mind, he is too strong for grace. *South*.—To drive; to send by force.

Myself distrest, an exile, and unknown,
Debarr'd from Europe, and from Asia *thrown*,
In Libyan deserts wander thus alone.

Dryden.

To make to act at a distance.

Throw out our eyes for brave Othello,
Even till we make th' aerial blue
An indistinct regard.

Shakspeare.

To repose.—In time of temptation be not busy to dispute, but rely upon the conclusion, and *throw* yourself upon God, and contend not with him but in prayer. *Bp. Taylor*.—To change by any kind of violence.—A new title, or an unsuspected success, *throws* us out of ourselves, and in a manner destroys our identity. *Addison*.—To turn. [*tornare*, Lat.] As, balls *thrown* in a lathe. *Ainsworth*.

To *THROW away*. To lose; to spend in vain.

The next in place and punishment are they
Who prodigally *throw* their souls *away*,
Fools who, repining at their wretched state,
And loathing anxious life, suborn'd their fate.

Dryden.

To *THROW away*. To reject.—He that will *throw away* a good book because not gilded, is more curious to please his eye than understanding. *Bp. Taylor*.

To *THROW by*. To reject; to lay aside as of no use.

It can but shew

Like one of Juno's disguises; and
When things succeed, be *thrown by*, or let fall. *B. Jonson*.

To *THROW down*. To subvert; to overturn.

Must one rash word, the infirmity of age,
Throw down the merit of my better years;
This the reward of a whole life of service.

Addison.

To *THROW off*. To expel.

To *THROW off*. To reject; to discard: as to *throw off* an acquaintance.

'Twould be better

Could you provoke him to give you th' occasion,
And then to *throw* him *off*.

Dryden.

To *THROW out*. To exert; to bring forth into act.—She *throws out* thrilling shrieks and shrieking cries. *Spenser*.

To *THROW out*. To distance; to leave behind.

When e'er did Juba, or did Portius, show

A virtue that has cast me at a distance,
And *thrown* me out in the pursuits of honour.

Addison.

To *THROW out*. To eject; to expel.—The other two whom they had *thrown out*, they were content should enjoy their exile. *Swift*.

To *THROW out*. To reject; to exclude.—The oddness of the proposition taught others to reflect a little; and the bill was *thrown out*. *Swift*.

To *THROW up*. To resign angrily.

Bad games are *thrown up* too soon,
Until they're never to be won.

Hudibras.

To *THROW up*. To emit; to eject; to bring up.—Judge of the cause by the substances the patient *throws up*. *Arbutnot*.—This is one of the words which is used with great latitude; but in all its uses, whether literal or figurative, it retains from its primitive meaning some notion of haste or violence.

To *THROW*, *v. n.* To perform the act of casting: To cast dice.

To *THROW about*. To cast about; to try expedients.

Now unto despair, I 'gin to grow,
And mean for better wind *about* to *throw*.

Spenser.

THROW, *s.* A cast; the act of casting or throwing.

He heav'd a stone, and rising to the *throw*,
He sent it in a whirlwind at the foe;

VOL. XXIII. No. 1621.

A tower assaulted by so rude a stroke,
With all its lofty battlements had shook.

Addison.

A cast of dice; the manner in which the dice fall when they are cast.

If Hercules and Lichas play at dice
Which is the better man, the greater *throw*
May turn by fortune from the weaker hand;
So is Alcides beaten by his page.

Shakspeare.

The space to which any thing is thrown.

Like to a bowl upon a subtle ground
I've tumbled past the *throw*, and in his praise
Have almost stamp'd the leasing.

Shakspeare.

A short space of time; a little while. [ðpah, Sax.]—They danced but a little *throw*. *Chaucer*.

Down himself he lay'd

Upon the grassy ground to sleepe a *throw*.

Spenser.

Stroke; blow.

So fierce he laid about him, and dealt blows
On either side, that neither mail could hold,
Ne shield defend the thunder of his *throws*.

Spenser.

Effort; violent sally.

Your youth admires

The *throws* and swellings of a Roman soul;
Cato's bold flights, the extravagance of virtue.

Addison.

The agony of child-birth: in this sense it is written *throce*. See *THROE*.

But when the mother's *throws* begin to come,
The creature, pent within the narrow room,
Breaks his blind prison.

Dryden.

THROWER, *s.* One that throws.

Fate, against thy better disposition,
Hath made thy person for the *thrower* out
Of my poor babe.

Shakspeare.

A throwster; which see,

THROWLEY, a parish of England, in Kent; 4 miles south-west-by-south of Feversham.

T-RROWLEY, a parish of England, in Devonshire; 6½ miles east-south-east of Oakhampton.

THROWLEY, a township of England, in Staffordshire, near Waterfall, where the river Manifold receives the Hanse out of the ground.

THROWSTER, *s.* One whose business is to prepare silk for the weaver, by cleansing and twisting it.—*Throwsters* is written *throwsters* in the charter of incorporation of the silk *throwsters*. *Pegge*.

THROXENBY, or *THRISTONBY*, a hamlet of England, North Riding of Yorkshire; 2½ miles west of Scarborough.

THRUM, *s.* [*thraum*, Icelandic, the ends of any thing; *thrommes*, Norm. Fr. thrums of woollen yarn.] The ends of weavers' threads.—Any coarse yarn.

O fates, come, come,

Cut thread and *thrum*,

Quail, crush, conclude and quell.

Shakspeare.

To *THRUM*, *v. a.* To weave; to knot; to twist; to fringe.—There's her *thrumm'd* hat and her muffler too. *Shakspeare*.

To *THRUM*, *v. a.* [probably from *To drum*, which is used in the sense of to tinkle.] To grate; to play coarsely.—Blunderbusses planted in every loop hole, go off constantly at the squeaking of a fiddle and the *thrumming* of a guitar. *Dryden*.

THRUM CAP ISLAND, a small circular island in the South Pacific ocean, not more than one mile in circumference. Lat. 18. 35. S. long. 139. 48. W.

THRUMPTON, a township of England, in Nottinghamshire; 7 miles south-west of Nottingham.

THRUPP, a village of England, in Oxfordshire; 2 miles north of Great Faringdon.

THRUPWICH, or **THORPE-WICK**, a village of England, in Berkshire; $1\frac{1}{2}$ mile east of Abingdon.

THRUSH, *s.* [θρῦς, Saxon; *turdus*, Latin.] A small singing bird.—Pain, and a fine *thrush*, have been severally endeavouring to call off my attention; but both in vain. *Pope*.—A disease, indicated by small red eruptions, especially in the mouth, which is named from the Fr. *rouge*, red, prefixing the English *the*, hence *thrush*.

THRUSHEL, a river of England, in Devonshire, which runs into the Tamar, opposite Launceston.

THRUSHELTON, a hamlet of England, in Devonshire; 10 miles south-west-by-west of Oakhampton. Population 385.

THRUSSINGTON, a parish of England, in Leicestershire; 8 miles north-north-east of Leicester.

To **THRUST**, *v. a.* [*trusito*, Lat.; *thrijsta*, *trudere*; *Serenius*; Old Eng. *threst*. "This lettre down she *threst*, under his pillow." *Chaucer*.] To push any thing into matter, or between close bodies.—*Thrust* in thy sickle and reap. *Rev.*—To push; to move with violence; to drive. It is used of persons or things.

Lock up my doors; and when you hear the drum,
Clamber not you up to the casements then,
Nor *thrust* your head into the public streets. *Shakspeare*.

To stab.—Phineas *thrust* both of them through. *Numb*.—To compress.—He *thrust* the fleece together, and wringing the dew out of it. *Judg.*—To impel; to urge.—We make guilty of our disasters the sun, the moon, and stars, as if we were villains on necessity, and all that we are evil in, by a divine *thrusting* on. *Shakspeare*.—To obtrude; to intrude.

Who's there, I say? How dare you *thrust* yourselves
Into my private meditations. *Shakspeare*.

To **THRUST**, *v. n.* To make a hostile push; to attack with a pointed weapon.—To squeeze in; to put himself into any place by violence.

I'll be a Spartan while I live on earth;
But when in heaven, I'll stand next Hercules,
And *thrust* between my father and the god. *Dryden*.

To intrude.
Not all,
Who like intruders *thrust* into their service,
Participate their sacred influence. *Rowe*.

To push forwards; come violently; to throng; to press.

Young, old, *thrust* there,
In mighty concourse. *Chapman*.

THRUST, *s.* Hostile attack with any pointed weapon. That *thrust* had been mine enemy indeed,
But that my coat is better than thou know'st. *Shakspeare*.

Assault; attack.—There is one *thrust* at your pure, pretended mechanism. *More*.

THRU'STER, *s.* He that thrusts.

THRU'STLE, *s.* Thrush; throstle.

No *thrustles* shrill the bramble-bush forsake;
No chirping lark the welkin sheen invokes. *Gay*.

THRUXTON, a parish of England, in Herefordshire; $6\frac{1}{2}$ miles south-west-by-west of Hereford.

THRUXTON, a parish of England, in the Isle of Wight, Southamptonshire; 6 miles west of Andover.

THRYALLIS [Θρυαλλίς, *elychnium*, a *wick*: hence a plant so named, because the leaves are fit to make wicks for lamps], in Botany, a genus of the class decandria, order monogynia, natural order of tricocœæ, *acera* (*Juss.*)—Generic Character. Calyx: perianth five-parted; segments lanceolate, erect, permanent. Corolla: petals five, roundish, spreading. Stamina: filaments ten, awl-shaped, longer than the calyx. Anthers roundish. Pistil: germ obtuse. Style filiform, length of the stamens. Stigma simple. Pericarp: capsule three-sided, triangular, obtuse, tripartite; cells opening by the exterior angle. Seeds solitary, very smooth, obovate, obtuse at the base, mucronate and

curved inwards.—*Essential Character*. Calyx five-parted. Petals five. Capsule tricoccos.

Thryallis Brasiliensis.—This is a little shrub, with round jointed branches. Leaves opposite, petioled, ovate, entire, Stipules bristle-shaped. Raceme terminating, from the fork of the branches, simple, a foot long: with very short bristle-shaped bractes; and filiform pedicels, longer than the flower. Flowers small, yellow. Fruits tricoccos or three-grained.—Native of Brasil.

THRYBERGH, a parish of England, West Riding of Yorkshire; 3 miles north-east of Rotherham.

To **THRYFA'LLOW**, *v. a.* To give the third plowing in summer.

Thryfallow betime for destroying of weed,
Lest thistles and docke fal a blooming and seed. *Tusser*.

THUCYDIDES, a celebrated Greek historian, was born in the 77th Olympiad, about 470 B. C. The name of his father was Olorus, or Orolus, that of a Thracian prince, indicating a connection with Thrace, in which he seems to have possessed gold-mines, and to have had influence over its chiefs. He belonged to one of the principal families at Athens, and was related to that of Miltiades. His education was that which distinguished Athenians of rank: Antiphon being his preceptor in rhetoric, and Anaxagoras in philosophy. When he heard Herodotus recite his history at the Olympic festival, he is said to have shed tears; and Herodotus observing it, congratulated Olorus on his son's disposition. At the commencement of the Peloponnesian war he was at Athens, and shared in the calamity of pestilence that then occurred; and in the eighth year of that war he had a command in Thrace, and was opposed to the Spartan general Brasidas, who surprised the town of Amphipolis, for the loss of which Thucydides was punished by banishment, though it does not appear that he could have prevented it. During the twenty years of his exile, he devoted himself to literary researches and observations through different parts of Greece, and thus collected materials for the history which he was projecting. He resided for a considerable time in Thrace, but the place and the time of his death are not ascertained. Dodwell conjectures that he passed his 80th year, and died in Thrace. His history comprehends the transactions of the first twenty years of the Peloponnesian war, disposed in eight books; more limited in its compass than that of Herodotus, but not merely rivalling but surpassing it in historical merit, more especially if we admit what a modern writer says of it, "that the first page of Thucydides is the commencement of real history." The distinguishing characteristics of this historian are diligence of research, and the selection of the best authorities, and perfect impartiality. To these qualities we may add sagacity in investigating causes and effects, and a philosophical spirit in forming a discriminating judgment of human affairs. His narration is occasionally very interesting, and indicates the writer of genius. His style, which has undergone much criticism, is of that kind which the ancients termed the austere, aiming at force and brevity rather than harmony, elegance, or perspicuity. Its conciseness and frequent transpositions render it frequently obscure, nor is this defect compensated by its energy and elevation. The most valued editions of this work are Hudson's, Oxon. 1696; Wasse and Ducker's, Amst. fol. 1731; and the Leipzig, 2 vols. 4to. 1790—1804. *Voss, Hist. Græc. Gen. Biog.*

THUEITS, a small town in the south of France; 11 miles north-west of Argentiere, and 20 west-south-west of Privas.

THUIN, a small town of the Netherlands, in the province of Hainault, on the Sambre. Population 3000; 8 miles south-west of Charleroi, and 16 east-south-east of Mons.

THUIN, an old mining town of Germany, in Saxony, on a hill; 40 miles west-south-west of Dresden and 9 south of Chemnitz. Population 1400.

THUIN, a small town of the Austrian states, in Croatia, near the river Ostorie, and the great road called the Josephinerstrasse. In the neighbourhood is a large and remarkable cave; 19 miles south-south-west of Carlstadt.

THUIR,

THUIR, a small town in the south of France, department of the Eastern Pyrenees, on the small river Canal. Population 1500; 9 miles south-west of Perpignan.

THUJA [corrupted from *Thuja* of Theophrastus, *Thya* of Pliny], in Botany, a genus of the class monoecia, order monadelphia, natural order of coniferæ.—Generic Character. Male flower—Calyx: ament ovate, composed of a common rachis, on which opposite flowers are placed in a triple opposition. Each flower has for its base a subovate, concave, obtuse scale. Corolla none. Stamina: filaments (in each floret) four, scarcely manifest. Anthers as many, fastened to the base of the calycine scale. Female flower on the same plant—Calyx: strobile common, subovate, surrounded with opposite florets; composed of two-flowered, ovate, convex scales, converging longitudinally. Corolla none. Pistil: germ very small. Style awl-shaped. Stigma simple. Pericarp: strobile ovate-oblong, obtuse, opening longitudinally with oblong scales, almost equal, convex outwardly, obtuse. Seeds: oblong, girt longitudinally with a membranaceous wing, emarginate.—*Essential Character*. Male—Calyx, scale of an ament. Corolla none. Stamina four. Female—Calyx, of a strobile with a two-flowered scale. Corolla none. Pistil one. Nut one, girt with a membranaceous wing.

1. *Thuja occidentalis*, or American arbor-vitæ.—Strobiles smooth with blunt scales, branches spreading. The common arbor-vitæ has a strong woody trunk, which rises to the height of forty feet or more; the bark, while young, is smooth and of a dark brown colour, but as the trees advance, the bark becomes cracked and rough; the branches are produced irregularly on every side, standing almost horizontal, and the young slender shoots frequently hang down. The young branches are flat, and the small leaves are placed over each other like the scales of fish. The flowers are produced from the side of the young branches, pretty near to the foot-stalk: the males grow in oblong catkins, and between these the females are collected in form of cones. When the former have shed their farina, they soon drop off; but the latter are succeeded by oblong cones or strobiles, having obtuse smooth scales, containing one or two oblong seeds. Being reckoned the most durable wood in Canada, inclosures of all kinds are scarcely made with any other wood; especially the posts which are driven into the ground. The palisades round the forts are made of this wood. It furnishes planks or boards for houses. The thin narrow pieces which form the ribs and bottom of the bark-boats commonly used in Canada are taken from this tree, because it is pliant enough for the purpose, especially whilst it is fresh, and because it is very light. It is reckoned one of the best woods for the use of the lime-kilns. The branches are used all over Canada for besoms, which the Indians bring to the towns for sale. The fresh branches have a peculiar agreeable scent, which is perceived strongly in houses where such besoms are used.

2. *Thuja orientalis*, or Chinese arbor-vitæ.—Strobiles squarrose with sharp scales, branches erect. The branches of the Chinese arbor-vitæ grow closer together, and being much more adorned with leaves, which are of a brighter green colour, make a much better appearance than the former. The branches cross each other at right angles. The leaves are flat, but the single divisions are slender, and the scales are smaller, and lie closer over each other than those of the first sort. The cones (strobiles) are also much larger, of a beautiful gray colour, and their scales end in acute reflexed points.—Native of China and Japan.

3. *Thuja articulata*, or African arbor-vitæ.—Strobiles four-cornered, four-valved, fronds compressed, jointed, leafless. Height from two to six feet, in a dry soil a low shrub.—Native of Mount Atlas, and barren hills in Barbary.

4. *Thuja dolabrata*, or Japanese arbor-vitæ.—Strobiles squarrose, leaves imbricate three ways, beneath excavated and snow white. This is a very large and lofty tree, and the handsomest of all the evergreens. Branches and branchlets alternate, compressed, covered with imbricate leaves, which are disposed by threes; they are ovate, obtuse, entire,

compressed, above shining green and smooth, convex with a groove in the middle, beneath concave, margined, snow white.—Native of Japan.

Propagation and Culture.—These trees may be propagated by seeds, layers, or cuttings.

THULDEN (Theodore Van), was one of the most distinguished among the pupils of Rubens, whom he assisted in forwarding the pictures of the Luxembourg gallery. He was born at Bois-le-Duc, in 1607. He painted a considerable number of large works for the churches and public buildings of the principal towns and cities in Flanders; some of which have been honoured by being considered as from the hand of Rubens. Among the best of them are the Martyrdom of St. Sebastian, at Mechlin; the Martyrdom of St. Adrian, at Ghent; and the Assumption of the Virgin, formerly in the church of the Jesuits, at Bruges. He was engaged at Paris, which he visited in 1633, to paint a series of pictures of the life of the patron saint of the Mathurins, St. John of Matha, which he afterwards etched and published in twenty-four plates. He is also the author of several other etchings from his own works and those of others; particularly of 58 plates of the life of Ulysses, from pictures painted at Fontainebleau by Primaticcio, of most of which there is now no other remembrancer than his etchings. He died in 1676, at the age of 69.

THULE, a river of Wales, in Glamorganshire, which runs into the Llogher, near its mouth.

THULE, a name given by the ancients to the most northern part of Europe.

THULE, SOUTHERN, a part of Sandwich Land, in the South Atlantic ocean, and the most southerly land yet discovered. Lat. 59. 34. S. long. 27. 45. W.

THUM, a small town of the central part of Germany, in Saxony, with 1350 inhabitants; 40 miles west-south-west of Dresden.

THUMB, *s.* [ðuma, Saxon.] The short strong finger answering to the other four.

Here I have a pilot's thumb,
Wreck'd as homeward he did come. *Shakspeare.*

To **THUMB**, *v. a.* To handle awkwardly. To soil with the thumb.—A treatise that shall make a very comely figure on a bookseller's shelf;—never to be *thumb'd* or *greas'd* by students. *Swift.*

THUMB-BAND, *s.* A twist of any materials made thick as a man's thumb.—Tie *thumb-bands* of hay round them. *Mortimer.*

THUMBED, *adj.* Having thumbs.—Fingered and *thumbed*. *Skelton.*

THUMB-RING, *s.* A ring worn on the thumb.—I could have crept into an alderman's *thumb-ring*. *Shakspeare.*

THUMBSTALL, *s.* A thimble; a sheath of leather to put on the thumb.—Gloves cut into *thumb-stalls*. *Gayton.*

THUMP, *s.* [*thombo*, Ital.] A hard, heavy, dead, dull blow with something blunt.

Before, behind, the blows are dealt; around
Their hollow sides the rattling *thumps* resound. *Dryden.*

To **THUMP**, *v. a.* To beat with dull heavy blows.

Those bastard Britons whom our fathers
Have in their own land beaten, *bobb'd* and *thump'd*.
Shakspeare.

To **THUMP**, *v. n.* To fall or strike with a dull heavy blow.—A watchman at midnight *thumps* with his pole. *Swift.*

THUMPER, *s.* The person or thing that thumps.—Any thing wond'rous great: *a cant expression.*

Let me ring the fore bell;
And here are *thumpers*, chequins, golden rogues.
Beaum. and Fl.

THUMPING, *adj.* Great; huge: a *thumping* boy, *i. e.* a large child. Exm. and different counties. *Grose. It is a low word.*

THUN, a small town of Switzerland, situated on both sides

sides of the Aar, near its influx into the lake of Thun. Population 1200; 16 miles south-south-east of Berne.

THUN, a lake of Switzerland, which separates the Oberland, or mountainous part of the canton of Berne, from the middle and more fertile part. It is 12 miles long and 3 broad; and is joined to the lake of Brienz by the Aar.

THUNBERGIA [so named by Retzius, in honour of Charles Peter Thunberg, M. D., professor of botany in the university of Upsal], in Botany, a genus of the class didynamia, order angiospermia, natural order of personatæ, acanthi (*Juss.*)—Generic Character. Calyx: perianth double, outer two-leaved; leaflets ovate, obtuse, five-nerved, almost the length of the tube: inner one-leaved, many-parted; segments about twelve, awl-shaped, three times as short as the outer perianth. Corolla one-petalled, bell-shaped; tube widening gradually; border five-cleft; segments equal, ovate, very obtuse, three times as short as the tube. Stamina: filaments four, inserted into the tube above the base, unequal: the two lower shortest, the two upper shorter than the tube.—Anthers ovate, adnate. Pistil: germ superior. Style filiform, a little shorter than the tube, erect. Stigma two-lobed. Pericarp: capsule globular, beaked, smooth, two-celled, opening longitudinally; beak compressed, grooved, linear, obtuse; partition obovate, emarginate, perforated below the top, membranaceous at the sides, permanent. Seeds in each cell two, reniform, wrinkled, convex on one side, concave on the other with a longitudinal groove.—*Essential Character.* Calyx double; outer two-leaved; inner twelve-toothed. Corolla bell-shaped. Capsule beaked, two-celled.

1. *Thunbergia Capensis*.—Leaves ovate, obtuse; stem dif-fused.—Native of the Cape of Good Hope.

2. *Thunbergia fragrans*.—Leaves cordate, acuminate, somewhat angular-toothed at the base, stem scandent.—This plant is common in hedges, among bushes, on the banks of water-courses, about Samulcotah, in the East Indies.

THUNDER, *s.* [ðunðep, ðunop, Saxon; *dunder*, Swedish; *donder*, Dutch; *tonnere*, Fr.] *Thunder* is a most bright flame rising on a sudden, moving with great violence, and with a very rapid velocity, through the air, according to any determination, upwards from the earth, horizontally, obliquely, downwards, in a right line, or in several right lines, as it were in serpentine tracts, joined at various angles, and commonly ending with a loud noise or rattling. *Muschenbroek*.—In popular and poetic language, *thunder* is commonly the noise, and lightning the flash; though *thunder* is sometimes taken for both.

The *thunder*

Wing'd with red lightning and impetuous rage,
Perhaps hath spent his shafts, and ceases now
To bellow through the vast and boundless deep. *Milton.*

Any loud noise or tumultuous violence.

So fierce he laid about him, and dealt blows
On either side, that neither mail could hold
Ne shield defend the *thunder* of his throws. *Spenser.*

To THUNDER, *v. n.* To make thunder.

His nature is too noble for the world;
He would not flatter Neptune for his trident,
Nor Jove for's power to *thunder*. *Shakspeare.*

To make a loud or terrible noise.

His dreadful name late through all Spain did *thunder*,
And Hercules' two pillars standing near,
Did make to quake and fear. *Spenser.*

To THUNDER, *v. a.* To emit with noise and terror.

Oracles severe
Were daily *thunder'd* in our general's ear,
That by his daughter's blood we must appease
Diana's kindled wrath. *Dryden.*

To publish any denunciation or threat.—An archdeacon, as being a prelate, may *thunder* out an ecclesiastical censure. *Ayliffe*.—To urge violently; to inflict with vehemence.

Therewith they gan, both furious and fell,
To *thunder* blows, and fiercely to assaile
Each other, bent his enemy to quell. *Spenser.*

THUNDER BAY, a bay on the north part of Lake Superior.

THUNDER BAY, a bay on the west coast of Lake Huron, in Canada, which lies about half way between Sagana bay and the north-west corner of the lake. It is about 9 miles across either way, and is thus called, from the thunder frequently heard there.

THUNDER RIVER, a river of North America, which falls into Lake Huron, in Thunder Bay, about half way between Michilimackinac and the outlet of Lake Huron.

THUNDERBOLT, *s.* Lightning; the arrows of heaven.—If I had a *thunderbolt* in mine eye, I can tell who should down. *Shakspeare*.—Fulmination; denunciation, properly ecclesiastical.—He severely threatens such with the *thunderbolt* of excommunication. *Hakewill.*

THUNDERCLAP, *s.* Explosion of thunder.
When some dreadful *thunderclap* is nigh,
The winged fire shoots swiftly through the sky;
Strikes and consumes ere scarce it does appear,
And, by the sudden ill, prevents the fear. *Dryden.*

THUNDERER, *s.* The power that thunders.
How dare you, ghosts,
Accuse the *thunderer*, whose bolt you know,
Sky-planted, batters all rebelling coasts? *Shakspeare.*

When the bold Typhæus
Forced great Jove from his own heav'n to fly,
The lesser gods, that shar'd his prosp'rous state,
All suffer'd in the exil'd *thunderer's* fate. *Dryden.*

THUNDERING, *s.* The emission of thunder.—Entreat the Lord that there be no more mighty *thunderings* and hail. *Exod.*—The act of publishing any threat; any loud or violent noise.—That church shall always have enemies, and shall still be tormented in the sea of this world with the *thunderings* of Antichrist. *Bp. Hooper.*

THUNDEROUS, *adj.* Producing thunder.
Look in and see each blissful deity,
How he before the *thunderous* throne doth die. *Milton.*

THUNDERSHOWER, *s.* A rain accompanied with thunder.—The conceit is long in delivering, and at last it comes like a *thundershower*, full of sulphur and darkness, with a terrible crack. *Stillingfleet.*

THUNDERSLEY, a parish of England, in Essex; 2 miles south-west-by-west of Bayleigh.

THUNDERSTONE, *s.* A stone fabulously supposed to be emitted by thunder; thunderbolt.

Fear no more the lightning flash,
Nor th' all-dreaded *thunderstone*. *Shakspeare.*

To THUNDERSTRIKE, *v. a.* To blast or hurt with lightning.

The overthrown he rais'd, and as a herd
Of goats or timorous flock, together throng'd,
Drove them before him *thunderstruck*. *Milton.*

To astonish with any thing terrible.
Fears from our hearts took
The very life; to be so *thunderstrooke*
With such a voice. *Chapman.*

THUNDRIDGE, a parish of England, in Hertfordshire, on the river Rib; 2 miles north-by-east of Ware. Population 517.

THUNGEN, a petty town of Bavarian Franconia; 11 miles north of Wurzburg. Population 1000.

THUNGERSHEIM, a small town of Germany, in Bavaria, near Wurzburg. Population 1300.

THUNGFELD, a large village of Germany, in Bavaria, near Schlusselfeld.

THUNSTETTEN, a large village in the interior of Switzerland, in the canton of Berne.

THUR, a rapid river of Switzerland, which rises near the village

village of Wildenhaus, in the canton of St. Gall, and after flowing through the long valley of the Toggenburg, and the cantons of Thurgovia and Zurich, falls into the Rhine. Though its stream be large, it is not navigable.

THUR, a small town in the east of Hungary; 21 miles south-east of Szolnok, and 76 east-south-east of Pest.

THURCASTON, a parish of England, in Leicester; 3 miles south-by-west of Mount Sorrel.

THURGARTON, a parish of England, in Norfolk; 5 miles south-west-by-south of Cromer.

THURGARTON, a parish of England, in Nottinghamshire; 3 miles south-by-west of Southwell.

THURGOLAND, a township of England, West Riding of Yorkshire; 5 miles south-west-by-south of Barnsley. Population 652.

THURGOVIA, or THURGAU, a canton in the north-east of Switzerland, adjoining the lake of Constance and the course of the river Thur. Its extent is 350 square miles; its population 77,000, of whom one-fourth only are Catholics, the others Calvinists.

THURIA, an ancient town of the Morea, in Messenia, towards the eastern frontier, the ruins of which are still extensive, covering a hill at the foot of the ridge of Taygetus.

THUR'IBLE, *s.* [*turribulum*, low Lat.] A censor; a pan to burn incense in. *Cowel.*

THURIFEROUS, *adj.* [*thurifer*, Lat.] Bearing frankincense.

THURIFICATION, *s.* [*thuris* and *facio*, Latin.] The act of fuming with incense; the act of burning incense.

The way of *thurification*,

To make fumigation.

Skelton.

THURINGIA, the former name of an extensive track of country in the central part of Germany, in Saxony, having Franconia on the west, and the country of Meissen on the east.

THURINGIA, FOREST OF, a hilly and woody track of country in the interior of Germany, extending through a number of petty principalities, Eisenach, Gotha, Weimar, Coburg, &c.

THURLASTON, a hamlet of England, in Warwickshire; 1 mile west of Dunchurch.

THURLBY, a parish of England, in Lincolnshire; 10 miles south-west of Lincoln.

THURLBY, a hamlet in the same county; 2½ miles east of Alford.

THURLBY, another parish in the same county; 5 miles north-north-west of Market Deeping.

THURLEBEER, or THURLBURY, a parish of England, in Somersetshire; 3 miles south-east of Taunton.

THURLEIGH, or THURLEY, a parish of England, in Bedfordshire; 6 miles north of Bedford. Population 457.

THURLES, a large straggling town of Ireland, in the county of Tipperary, consisting of one long street, which is nearly divided into two equal portions by the river Suir; 70 miles south-west of Dublin.

THURLESTON, a parish of England, in Suffolk; 2½ miles north-north-west of Ipswich.

THURLESTON, a parish of England, in Devonshire; 4 miles west-by-south of Kingsbridge. Population 392.

THURLMERE, a river of England, in Cumberland, which runs from a lake of the same name into the Derwent, near Keswick.

THURLOE (John), secretary of state to the Protectorate, was born in 1616. He was brought up to the law, and in 1644-5, by the interest of Oliver St. John, was appointed one of the secretaries to the parliamentary commissioners at the treaty of Uxbridge. Advancing through other offices, he went as secretary to lord chief justice St. John, and Mr. Strickland, in their embassy to the States-General. In 1652, he rose to the office of secretary to the council of state; and when Cromwell, in 1653, assumed the protectorate, he was nominated his secretary, on whom he reposed peculiar confidence. In 1655, he was entrusted with the management of the post-office; and in 1656, he represented the isle of

Ely in parliament. On the death of Cromwell, he signed the order for proclaiming Richard, and in the following parliament was returned member for the university of Cambridge. He retained his office of secretary under Richard, and also under the parliament that deposed him. On the restoration, he was accused of high treason and examined, but soon set at liberty. He then retired to his seat in Oxfordshire, and visited London, at his chambers in Lincoln's Inn, in term-time. Charles II. often invited him to take a part in his administration: but he declined it, alleging that perhaps he should not be able to serve the king, as he had done the protector, in connection with men of different characters and principles; the protector, as he told his majesty, was used "to seek out men for places, and not places for men." The abilities of Thurloe for public life were distinguished, and his character in private life no less amiable. He died in Lincoln's Inn, where he was master of the bench, in 1667-8, and was interred in the chapel. His state papers formed a valuable historical collection, and were published by Dr. Birch, in 7 vols. fol. 1742. *Biog. Brit. Gen. Biog.*

THURLOW, GREAT and LITTLE, adjoining parishes of England, in Suffolk; 7 miles north-west-by-west of Clare.

THURLOW'S ISLAND, a narrow island in the Pacific ocean, near the coast of North America; about 24 miles in length from east to west. Lat. 50. 24. N. long. 233. 35. E.

THURLOXTON, a parish of England, in Somersetshire; 5 miles south-south-west of Bridgewater.

THURLSTONE, a hamlet of England, in Leicester; 6 miles north-east-by-east of Hinckley.

THURLSTONE, a township of England, in the West Riding of Yorkshire; 9½ miles west-by-south of Barnsley. Population 1282.

THURLTON, a parish of England, in Norfolk; 10 miles south-west-by-west of Great Yarmouth.

THURMASTON, NORTH and SOUTH, adjoining parishes of England, in Leicestershire; 3 miles north-north-east of Leicester. Population 842.

THURNAU, a small town of Germany, in Bavarian Franconia, and the chief place of a lordship consisting of 84 square miles, with 13,000 inhabitants. The town has a lyceum with three professors, a castle, and 1300 inhabitants; 6 miles south-west of Culmbach, and 12 north-west of Bareith.

THURNBY, a parish of England, in Leicestershire; 4 miles east-by-south of Leicester.

THURNE, a parish of England, in Norfolk; 3½ miles north-by-east of Acle.

THURNHAM, a township of England, in Lancashire; 5 miles south-south-west of Lancaster. Population 403.

THURNING, a parish of England, in Huntingdon and Northampton shires; 7½ miles south-west-by-west of Stilton.

THURNING, a parish of England, in Norfolk; 4½ miles north-by-west of Reepham.

THURNSCOE, a parish of England, West Riding of Yorkshire; 8 miles east of Barnsley.

THURLOTZ, a palatinate in the north-west of Hungary, lying between those of Trentsin and Zolyom. It has a territorial extent of 440 square miles, with 40,000 inhabitants, chiefly Slovacs.

THURROCK, GRAY'S, a market town and parish of England, in the county of Essex, situated in a small creek of the Thames, which is navigable for boats and vessels of small burden. The town consists principally of one irregular street, in which is the market-place, and over it the room where the petty sessions are held. It contains 213 houses, and 1055 inhabitants. Market on Thursday, and a fair on the 23d May; 22 miles east of London.

THURROCK, LITTLE, or *East*, a parish of England, in Essex; 1 mile east-by-south of Gray's Thurrock.

THURROCK, WEST, another parish in the above county; 1 mile west of Gray's Thurrock. Population 785.

THURSBY, or THOR'S TOWN, a village of England, in Cumberland; 6½ miles south-west of Carlisle.

THURSCROSS, a township of England, West Riding of Yorkshire; 14 miles west-by-north of Knaresborough.

THURSDAY, *s.* [*thorsday*, Danish; from *thor*. *Thor*

was the son of Odin; yet, in some of the northern parts, they worshipped the Supreme Deity under his name, attributing the power over all things, even the inferior deities, to him. *Stillingfleet.*] The fifth day of the week

THURSFORD, a parish of England, in Norfolk; 3½ miles south-east-by-east of Little Walsingham.

THURSLEY, a parish of England, in Surrey; 5½ miles south-west-by-west of Godalming. Population 564.

THURSO, a parish of Scotland, in the county of Caithness, which extends three miles round the town of Thurso, in every direction. Population of the town and parish, 3462.

THURSO, a town of Scotland, in the above parish; 20 miles north-west of Wick, 18 west of Johnny Groat's-house, and 290 north of Edinburgh, situated on the north coast of the county, at the head of a spacious bay at the estuary of the river Thurso. It contains 2225 inhabitants. Besides the parish church, there are Congregational, Antiburgher, and Baptist places of worship.

THURSO RIVER, a river of Scotland, in the county of Caithness, which rises from some springs on the borders of Sutherlandshire, passes through Loch More, and, after a rapid impetuous course over a rocky channel, through a fertile country, falls into the Pentland frith at the town of Thurso.

THURSTANTON, a parish of England, in Cheshire; 5 miles north-west-by-north of Great Neston.

THURSTON, a parish of England, in Suffolk; 5½ miles east-by-north of St. Edmund's Bury. Population 360.

THURSTON-MERE, a river of England, in Cumberland, and Lancashire, which runs into the Fosse, near Crakeford.

THURTON, a parish of England, in Norfolk; 8½ miles south-east of Norwich.

THURWASTON, a township of England, in Derbyshire; 7½ miles west-north-west of Derby.

THURY HARCOURT, a small town in the north of France, department of Calvados, on the river Orne. Population 1100; 15 miles south-south-west of Caen.

THUS, *adv.* [ðʊf, Saxon.] In this manner; in this wise. To be *thus* is nothing; But to be safely *thus*. *Shakspeare.*

To this degree; to this quantity.

THUSIS, or TOSSANA, a small town of the Swiss canton of the Grisons, near the confluence of the Albula and the Hinter Rhine; 10 miles south-south-west of Coire.

THUXTON, or THURSTON, a parish of England, in Norfolk; 5½ miles south-east-by-south of East Dereham.

To THWACK, *v. a.* [ðaccian, Saxon.] The Saxon word was perhaps used ironically, otherwise its strict meaning was to touch lightly. To *thack* is the old English word: "This carter *thakketh* his horse upon the croupe." *Chaucer.* To strike with something blunt and heavy; to thresh; bang; to labour. *A ludicrous word.*

He shall not stay;

We'll *thwack* him hence with distaffs. *Shakspeare.*

THWACK, *s.* A heavy hard blow.

But Talgol first with hardy *thwack*
Twice bruis'd his head, and twice his back. *Hudibras.*

THWAITE, *s.* [Camden. *Twaite*, Norm. Fr.] Any plain parcel of ground, from which wood has been grubbed up, enclosed and converted into tillage: *a northern word.*—It being a stony and mountainous country, is not every where so fit for tillage or meadow; but in several parts and parcels, as they are marked by nature, differing in form and quality of soil, or otherwise enclosed by the inhabitants from the barren waste of the fells, such parts or parcels are now and were of old called *thwaits*, sometimes with the addition of their quality; as *Brachenthwaite*, of brackens or fern growing there; *Stonethwaite*, of rocks; and such like. *Nicholson and Burn, Hist. of Cumberland.*

THWAITE, a parish of England, in Norfolk; 4½ miles north-by-east of Aylesham.—2. Another parish in the same county; 12 miles south-east-by-south of Norwich.—3. A parish of England, in Suffolk; 4½ miles south-west-by south of Eye.

—4. A township of England, in Cumberland; 10 miles south-east of Ravenglass.

THWART, *adj.* [ðwǽrt, Saxon; *dwaers*, Teut. obliquus; *thwer*, Icel. transversus, oppositus. *Serenius.*] Transverse; cross to something else.

This else to several spheres thou must ascribe,
Mov'd contrary with *thwart* obliquities. *Milton.*

Perverse; inconvenient; mischievous. [*thairs*, Goth. iratus; *ðreop*, Sax.; *thwere*, Icel. contrarius, rebellis. *Serenius.*]

If she must teem,

Create her child of spleen; that it may live,
And be a *thwart* disnatur'd torment to her. *Shakspeare.*

THWART, *adv.* Obliquely.

Yet whether *thwart* or flatly it did lyte,
The tempred steele did not into his braynepan byte. *Spenser.*

To THWART, *v. a.* To cross; to lie or come cross any thing.

Swift as a shooting star

In autumn *thwarts* the night. *Milton.*

To cross; to oppose; to traverse; to contravene.

Some sixteen months and longer might have staid,
If crooked fortune had not *thwarted* me. *Shakspeare.*

To THWART, *v. n.* To be in opposition to.—It is easy to be imagined what reception any proposition shall find, that shall at all *thwart* with these internal oracles. *Locke.*

THWART THE WAY. See MIDDLE ISLAND.

THWARTER, TREMBLING, or *Leaping-Ill*, a disease in sheep, of the convulsive kind.

THWARTING, *s.* The act of crossing; the act of opposing.—Socrates knew before he married her, that his Xantippe was a scold insufferable; yet he wittingly did marry her, to exercise his patience, that, by the practice of enduring her shrewish heats, he might be able to brook all companies; the brawls, the scorns, the sophisms, and the petulancies of rude and unskilful men; the frettings, the *thwartings*, and the excruciations of life. *Feltham.*

THWARTINGLY, *adv.* Oppositely; with opposition.

THWARTNESS, *s.* Untowardness; perverseness.—Can any man be so unreasonable as to defend it lawful, upon some unkind usages or *thwartness* of disposition, for a parent to abandon and forsake his child, or the son to cast off his parent? much less therefore may it be thus betwixt an husband and wife: "They two are one flesh." *Bp. Hall.*

THWING, a township of England, East Riding of Yorkshire; 8½ miles west-north-west of Bridlington.

To THWITE, *v. a.* [ðwitan, Sax.] To cut, chip, or hack with a knife: used in the north, and is in the old dictionary of Huloet.

A bow—full even—

And it was painted well and *thwitten*. *Chaucer.*

THWITTLE, *s.* [hwitel, Sax. whence our *whittle*; but *thwittle* is the older English word. See To THWITE.] A kind of knife: *this is also a northern word.*—A Sheffield *thwitel* bare he in his hose. *Chaucer.*

THY, *pronoun.* [ðin, Saxon.] Of thee; belonging to thee; relating to thee: the possessive of *thou*. See THOU.—These are *thy* works, parent of good. *Milton.*

THYNE WOOD, *s.* A precious wood.—The merchandize of gold and all *thyne wood* are departed from thee. *Rev.*

THYLACION, a word used by the ancient medical writers, to express the bag formed by the membranes of the fetus at the orifice of the pudenda, before the birth.

THYMBRA, in Botany, a genus of the class didynamia, order gymnospermia, natural order of verticillatæ or labiatæ.—Generic Character. Calyx: perianth one-leafed, subcylindrical, keeled at the sides, two-lipped at the mouth: upper lip wider, half-three-cleft, equal, converging; lower narrower, two-parted. Corolla ringent; tube subcylindrical; upper lip flat, straight, half-two-cleft, obtuse; lower three-cleft, almost equal, flat. Stamina: filaments four, filiform, approaching by pairs; the two lower ones shorter. Anthers two-lobed; lobes remote, under the upper lip of the corolla.

corolla. Pistil: germ four-cleft. Style filiform, half-two-cleft. Stigmas two, acute. Pericarp none. Calyx unchanged. Seeds four.—*Essential Character.* Calyx subcylindrical, two-lipped, scored on each side with a villose line. Style semibifid.

1. *Thymra spicata*, or spiked thymra.—Flowers in spikes. This is a low shrubby plant, like heath, branching out into slender woody stalks, which are six or eight inches long, covered with a brown bark, and garnished with narrow acute-pointed leaves about half an inch long, sitting close to the stalks opposite; they have an aromatic odour when bruised.—Native of Mount Libanus, Macedonia, Spain, and the county of Nice.

2. *Thymra verticillata*, or whorled thymra.—Flowers in whorls. This has a shrubby stalk which seldom rises much more than a foot high, putting out many small woody branches, which have narrow spear-shaped leaves, with many punctures; they stand opposite, and are of an aromatic flavour.—Native of Spain and Italy.

3. *Thymra ciliata*, or headed thymra.—Flowers in heads; leaves linear, ciliate. This is an elegant, upright and very branching shrub.—Native of Barbary, on dry barren hills near Mascar.

Propagation and Culture.—Sow the seeds in the spring on a bed of light earth, and the plants will appear in six or eight weeks. Keep them clean from weeds, and remove them in July, some into small pots, and others into a warm dry border; shading them from the sun, and supplying them with water till they have taken new root. If the winter should prove very severe, cover the plants in the border with mats or other covering. The pots should be sheltered under a common frame in winter, where they may enjoy the free air in mild weather, and be protected from frost.

THYME, *s.* [*thymus*, Lat.] A plant.

No more, my goats, shall I behold you climb
The steepy cliffs, or crop the flow'ry thyme. *Dryden.*

THYMELEÆ, the twenty-fifth of Jussieu's Natural Orders, or the second of his sixth class, thus named from an ancient synonym of the genus *Daphne*, which makes a principal figure herein. See *DAPHNE*.

THYMELEICI, among the Romans, were musicians, who sung in the interludes, or who danced and kept time with their gestures. The place where they performed was called thymele, whence Juvenal, vi. 66.

"Attendit thymele, thymele nunc rustica discat."

THYMIAMATA, a kind of fumigations among the ancients, the ingredients of which were so various, that it appears the ancients always consulted utility as well as pleasure, in their composition of them.

THYMUS, in Anatomy, a glandular body, occupying the upper and anterior part of the chest, and neighbouring portion of the neck, very large in the fœtus, and diminished or nearly disappearing in the adult.

The thymus is large in the fœtus; nearly equal to the heart or one of the lungs. In a fœtus of six months, this gland was to the kidney as 4 to 6. It not only does not increase after birth, but it becomes less, contains less fluid, is harder, and is nearly lost in the surrounding fat. In the mature fœtus it weighed 160 and 180 grains; at twenty-eight years, 90 grains. In a calf it was 16 ounces; in a full-grown cow, 9 ounces.

It is of considerable size, even in the adult, in some animals, as the rat: the same may be observed of the Arctic bear. It is large in setaceous animals.

THYMUS [*Θυμος* of Theophrastus and Dioscorides. From *θυμος*, Gr.], in Botany, a genus of the class didynamia, order gymnospermia, natural order of verticillatæ or labiatæ.—Generic Character. Calyx: perianth one-leafed, tubular, half-five-cleft into two lips, permanent, having the throat closed with villose hairs: upper lip wider, flat, erect, three-toothed; lower lip two-bristled, of equal length. Corolla: one-petalled, ringent; tube length of the calyx;

throat small: upper lip shorter, flat, erect, emarginate, obtuse; lower lip longer, spreading, wider, trifid, obtuse; middle segment wider. Stamina: filaments four, curved in, two of which are longer. Anthers small. Pistil: germ four-parted. Style filiform. Stigma bifid, acute. Pericarp none. Calyx narrowed at the neck, cherishing the seeds in its bosom. Calyx small, roundish.—*Essential Character.* Throat of the two-lipped calyx closed with villose hairs.

1. *Thymus serpyllum*, or wild thyme.—Flowers in heads; stems decumbent; leaves flat, ovate, obtuse, ciliate at the base. Root woody, fibrous, brown, perennial.—Native of Europe, on heaths and dry downs, flowering in July and August.

The whole plant of wild thyme is fragrant, and yields an essential oil that is very heating. There are many varieties.

2. *Thymus lanuginosus*, or woolly wild thyme.—Flowers in heads; stems creeping, hirsute; leaves obtuse, villose.—It grows naturally in the forest of Fontainebleau.

3. *Thymus lævigatus*, or smooth thyme.—Flowers in heads; stems procumbent; leaves linear, obtuse, sessile, narrowed at the base.—Native of Arabia Felix, on mount Chadra.

4. *Thymus vulgaris*, or garden thyme.—Flowers whorl-spiked; stems erect; leaves ovate, rolled back. Garden thyme is more hoary, higher, harder and more woody than the serpyllum, or wild thyme; the leaves are whiter and narrower; and the flowers smaller.—Native of the South of Europe and Siberia; flowering from May to August.

5. *Thymus lanceolatus*, or lance-leaved thyme.—Flowers whorl-spiked; stem suffruticose, erect; leaves oblong, flat, pubescent.—Native of Mount Atlas, about Tlemsen.

6. *Thymus Numidicus*, or Barbary thyme.—Flowers in heads; calyxes hirsute; bractes ovate-lanceolate, ciliate; stem fruticulose, erect; leaves linear, patulous, smooth. This is a branching shrub.—Native of Barbary, near La Calle.

7. *Thymus zygis*, or linear-leaved thyme.—Flowers whorl-spiked; stem suffruticose, erect; leaves linear, very blunt, nerveless, rolled back at the edge; ciliate at the base.—Native of Spain.

8. *Thymus marschallianus*, or marshall's thyme.—Flowers whorl-spiked; stem suffruticose, erect; leaves linear-lanceolate, bluntish, flat, obscurely triple-nerved, ciliate at the base.—Found in Tauria.

9. *Thymus inodorus*, or scentless thyme.—Stem shrubby, very much branched; leaves needle-form, bundled, shorter than the flower.—Native of dry barren hills, near Algiers.

10. *Thymus acinos*, or basil thyme.—Whorls six-flowered; peduncles simple; stem ascending, branched; leaves acute, serrate; calyx gibbous. Root annual, simple, fibrous.—Native of Europe, in dry hilly fields, especially in a calcareous soil: flowering in July and August. There are, also, in this genus, as follows:—

Thymus patavinus, or great-flowered thyme. *Thymus Alpinus*, or Alpine thyme. *Thymus montanus*, or mountain thyme. *Thymus piperella*. *Thymus browni*, or Jamaica thyme. *Thymus filiformis*, or small-leaved thyme. *Thymus cephalotus*, or great-headed thyme. *Thymus striatus*, or striated thyme. *Thymus villosus*, or hairy thyme. *Thymus mastichina*, or mastic thyme. *Thymus tragoriganum*, or goat's-thyme. *Thymus Virginicus*, Virginian, or savory thyme.

Propagation and Culture.—The common mother of thyme, or wild thyme, is very frequent on dry pastures, and is very rarely admitted into gardens. Thyme may be propagated either by seeds or parting the roots; the season for either is in March or October.

THY'MY, *adj.* Abounding with thyme.

Guide my way

Through fair Lyceum's walk, the green retreats
Of Academus, and the *thymy* vale,
Where oft enchanted with Socratic sounds
Ilissus pure devolv'd his tuneful stream
In gentler murmurs.

Akenside.
THYNNIA,

THYNNIA [*Θυννια*, Gr.], a sacrifice offered to Neptune by the fishermen, after a plentiful draught. It comes from *Θυννος*, a *tunny*, that being the sacrifice offered.

THYNNUS, a genus of the Hymenoptera order of insects: the characters of which are, that the mouth is horny; the mandible bent, with a short jaw, straight; the lip larger than the jaws, with the apex membranaceous; trifid; the intermediate fringes emarginate; the tongue very short or folded; the four palpi filiform and equal; the antennæ filiform. Gmelin enumerates three species.

1. *Thynnus dentatus*.—With black abdomen; the second, third, and fourth segments marked with two white points.—Found in New Holland.

2. *Thynnus emarginatus*.—With black abdomen, the segments having a yellow interrupted band; the scutellum emarginate.—Found in New Holland.

3. *Thynnus integer*.—Black, with the segments of the abdomen villose-cinereous at the margin, and the anus entire.—Found in New Holland.

THYOS [*Θυος*, Gr.], an offering of fruits, leaves, or acorns, which were the only sacrifices at first in use.

THYROID [*thyroideus*, or more properly *thyreoides*, from the Gr. *θυρεοειδης*, compounded of *θυρεος*, a *shield*, and *ειδος*, *form*], a name given to one of the cartilages of the larynx; to a gland situated near that cartilage; and to the arteries and veins of the gland. See **ANATOMY**.

THYRSUS [*Θυρσος*, Gr.], the sceptre which the ancient poets put in the hands of Bacchus, and with which they furnished the Mænades in their Bacchanalia.

The thyrsus was originally a lance or spear, wrapped up in vine leaves; with which Bacchus is said to have armed himself and his soldiers in his Indian wars, to amuse and deceive the unpracticed Indians, and make them suspect no hostilities.

THYSANOTUS [*θυσανωτος*, Gr. *fringed*.] See **CHLAMYSPORUM**.

THYSANUS [from *θυσανος*, Gr. a *fringe*, because of the fringed tunic of the seed.] A genus introduced by Loureiro, very nearly related to the *Cnestis* of Jussieu and Willdenow; see that article.

THYSELF, *pronoun reciprocal*.—It is commonly used in the oblique cases, or following the verb.

Come high or low,
Thyself and office deftly show. *Shakspeare.*

In poetical or solemn language it is sometimes used in the nominative.—These goods *thyself* can on *thyself* bestow. *Dryden.*

THYSIUS, *Thys* (Antony), a philologist, was born at Leyden, in 1603, and became professor of eloquence and poetry in the university of his native city, and public librarian. Besides two or three works of his own, he was the editor of several editions of classics called "Variorum;" of which were "Valerius Paterculus," "Sallust," "Valerius Maximus," "Seneca, the Tragedian," "Lactantius," and "Aulus Gellius." He died in 1670.

THYSSAGETÆ, a people who inhabited the territory near the Sarmatæ, where was the source of the river Tanais. Ammianus Marcellinus says, that these people had their abode in large forests, and lived by the chase. Their wives and children they had, he says, in common. Herodotus says they were a numerous nation, and governed by their own laws. Hardouin, in his notes on Pliny, says, that they inhabited the banks of the Tanais, towards that bend of the river where it most nearly approaches the Wolga, and which is now the territory of Astrachan.

TIAHUANACU, or **TIAGUANUCO**, a territory of South America, to the south of Cuzco, and to the east of Lake Titicaca.

TIAMANCHU, a river of Quito, in the province of Moxos, which runs from south-west to north-east, and enters the Marmore, in lat. 14. 13. S.

TIAN, a river of Honduras, which runs north, and enters the Atlantic.

TIANGUISTENGO, a settlement of Mexico, in the intendancy of Mexico, which contains 249 families of Indians. There is another settlement of this name in Mexico, which contains 250 families of Indians.

TIAR, or **TIARA**, *s.* [*tiare*, Fr.; *tiara*, Lat. *Dr. Johnson.*—The Saxons had *tyr* in a similar sense; and *tiar* is much older than the time of Milton, *Dr. Johnson's* earliest authority.] A dress for the head; a diadem.

His back was turn'd, but not his brightness hid;
Of beaming sunny rays a golden *tiar*
Circled his head. *Milton.*

The tiara was at first an ornament, or habit, with which the ancient Persians covered their heads; and which the Armenians and kings of Pontus wear on medals: these last, because descended from the Persians.

Latin authors call it indifferently *tiara* and *cidaris*.

Strabo says, the tiara is in form of a tower; and the scholiast on Aristophanes's comedy, *Αχαρνες*, (act i. scene 2,) affirms, that it was adorned with peacock's feathers. Some moderns, however, fancy the scholiast is here speaking of the casque which the ancient Persians wore in war, rather than of the habit which they wore on the head in the city.

The kings of Persia alone had the right of wearing the tiara straight and erect; the priests and great lords wore it depressed or turned down on the fore-side. Xenophon, in his *Cyropædia*, says, that the tiara was sometimes encompassed with the diadem, at least in ceremonials; and had frequently the figure of a half-moon embroidered on it: others are of opinion that the diadem was in figure of a moon; and that it was hence the *tiara* was called *lunata*. Lastly, others think that the tiara itself was made sometimes in form of a half-moon. From what we have said, it appears that there were different forms of tiaras; and in effect, Paschalieri, De Coronis, distinguishes no less than five different kinds.

The ancient tiara of the popes was a round high cap.—Boniface VIII. first encompassed it with a crown. Benedict XII. added a second crown; and John XXIII. a third.

TIARELLA [Dimin. from *tiara*], in Botany, a genus of the class decandria, order digynia, natural order of succulentæ, saxifragæ (*Juss.*)—Generic Character. Calyx: perianth one-leaved, five-parted; segments ovate, acute, permanent. Corolla: petals five, oblong, permanent, entire, inserted into the calyx. Stamina: filaments ten, filiform, longer than the corolla; inserted into the calyx. Anthers roundish. Pistil: germ bifid, ending in two very short styles. Stigmas simple. Pericarp: capsule oblong, one-celled, two-valved; valves flattish, one twice as long as the other. Seeds numerous, ovate, shining.—*Essential Character.* Calyx five-parted. Corolla five-petalled, inserted into the calyx; petals entire. Capsule one-celled, two-valved, with one valve larger.

1. *Tiarella cordifolia*, or heart-leaved tiarella.—This has a perennial fibrous root, which creeps. Leaves of a light green colour, unequally indented on their edges, on slender foot-stalks, three inches long, arising immediately from the root. Flower-stalks slender, naked, about four inches long, arising also from the root between the leaves, and terminated by a loose spike of small herbaceous white flowers, which appear in May, but are seldom followed by seeds in England.—Native of North America.

2. *Tiarella trifoliata*, or three-leaved tiarella.—Leaves ternate. This also has a perennial fibrous root, from which spring up a few trifoliate petioled leaves, like those of the bilberry, but much smaller.—Native of the northern parts of Asia.

Propagation and Culture.—These plants are propagated by parting the roots, which spread in the ground, and shoot up heads, which may be taken off and transplanted in the autumn. They love a moist soil and a shady situation, and require no other care but to keep them clean from weeds.

TIARINI,

TIARINI (Alessandro), an historical painter, who was born at Bologna, in 1577. He was first a disciple of Prospero Fontana, but on the death of that master, he received instructions from Bartolomio Cesi, from whom, being obliged to leave Bologna on account of a quarrel, he went to study under Passignano at Florence. After some time, about seven years, as the influence of the circumstance which had driven him from his native city subsided, he ventured to return there, and became a pupil of the Caracci; and he principally attached himself to Ludovico, more for the improvement of his style, than for practice.

He had, during his residence at Florence, acquired considerable fame, and painted several pictures for churches and convents in places within and round about that city. On his return to Bologna, his talents acquired him considerable employment.

The colouring adopted by Tiarini in his best time, is clear and rich; his design tasteful and agreeable, though of a serious cast; and his expression just and natural: and there are not many artists who have done more credit to the Bolognese school. He died in 1668, at the advanced age of 91.

TIAUME, a river of Quito, in the province of Esmeraldas, which runs from south to north, and enters the river of Esmeraldas, near its mouth, in lat. 0. 56. N.

TIBACULI, a settlement of New Granada, in the province of Panchcs, which contains 100 house-keepers, and 60 Indians; 30 miles west of Santa Fe.

TIBALDI (Pellegrino), was born at Bologna, in 1527. He was the pupil of Bagnacavallo, and copied with much attention the works of Vasari, in the refectory of S. Michele in Bosco. At the age of twenty, he went to Rome, chiefly to study the works of Michael Angelo. The pictures he produced at Rome obtained for him the patronage of the cardinal Poggi, who employed him in ornamenting his Vigna, near the Porto del Popolo, with works in fresco, and then sent him back to Bologna, to assist in the completion of his palace there, both as architect and painter; and in both characters it remains as the principal testimonial of his powers remaining in Italy. He also constructed and adorned a chapel for his patron in the church of S. Giacomo Maggiore. One of the paintings he executed there, was the Preaching of St. John, and another, the Last Judgment; where, in the opinion of the Caracci, he almost equalled the majesty of Michael Angelo, and it was preferred by them to all the other works of Pellegrino, and served them and their scholars as a model of study.

From Bologna, the cardinal sent him to Loretto, to superintend the erection of a chapel in the church of La Madonna, which he also ornamented with stuccoes and paintings of the Nativity, the Presentation in the Temple, the Transfiguration, and the Decollation of St. John. From thence he went to Ancona, where he wrought in the churches of S. Agostino and Ciriaco; and in the great hall of the merchants he painted one of his most celebrated pictures, the subject of which is Hercules overthrowing monsters. He also superintended, as military architect, the fortifications of the place, about the year 1560; and two years afterwards visited Pavia, where he constructed the palace of the Sapienza; he then went to Milan, and there built the temple of S. Fidele, and before the year 1570, was elected architect of the cathedral.

Here he disencumbered the dome of numerous Gothic monuments, sepulchral urns and trophies, and embellished it in their stead with various chapels and a majestic choir. He soon after received a commission from Philip II. to prepare designs and plans for adorning the Escorial, both architectural and pictorial. He followed them to Spain himself in 1586. There he superintended the work for nine years, painting a great number of pictures, particularly some in fresco in the lower cloister, whence he expunged the unsuccessful productions of F. Zucchero. The subjects were from scripture; the Purification; the Flight into Egypt; the Murder of the Innocents; Christ tempted in the Wilderness; the Election of the Apostles; the Resurrection of

Lazarus; the Expulsion of the Money Changers from the Temple; and the Resurrection of our Saviour. Besides these, he painted during his residence in Spain, several pictures for other places, particularly for the great church at Madrid, where there are five pictures by him. But his most renowned work, and which most contributed to establish his fame in Spain, was the ceiling of the library of the Escorial, where he appears to have rivalled the composition of the school of Athens by Raphael; with beautiful groups of children and figures supporting the cornices and festoons in great varieties, and foreshortenings worthy of an imitator of the style of Michael Angelo. For the extraordinary talents which he exhibited in these great works, Philip loaded him with riches and honours, and even gave him patents of nobility, creating him Marquis of Valdelsa; a district in which his father and his uncle had laboured in the humble capacity of masons. He lived to an advanced age, but the exact year of his death is not known, though it is thought to have been about 1600.

Pellegrini Tibaldi is considered, and with sufficient evidence from his works, as the greatest designer of the Bolognese and Lombard schools. He approaches the line of Michael Angelo nearer than all the rest of his imitators; but as he had decidedly adopted the technic without always penetrating the moral principles of his model, the manner of the master frequently became the style of the pupil; though it cannot be denied that he often united energy of attitude and grandeur of line, with sublimity of conception and dignity of motive. Of these he has given nowhere more signal proofs than in the ceilings and the compartments of the Academical Institute at Bologna. They represent various scenes from the Odyssey; among them, Polypheme waking under the pangs of the fiery point, though painted with a sentiment of original expression, is evidently imitated from the newly created figure of Adam in the Sistine; but the same Cyclops groping at the entrance of his cave to prevent the escape of Ulysses and his associates, is in conception of the whole, and in the detail of the parts, an original invention; a form, than which Michael Angelo himself never conceived one of greater energy, with expression, attitude, and limbs more in unison. With this may be placed that wonder of foreshortening, eccentricity, and rotundity, the figure of Elpenor, on one of the architraves of the Salotto, represented in the moment when, yet dreaming, he leaves his hold, and is precipitated from the roof. The air of originality which this figure in every view presents, and the elegance with which the imitator has reversed the figure in the Last Judgment of Michael Angelo, from which he borrowed the principal limbs of his own, place him on a level with the inventor.

It was, however, less for the powers exerted by Pellegrino, in the decorations of the Institute, than for the eclectic principle which they discovered in his subsequent works, that the Caracci gave him the epithet of *Michel Angelo riformato*, and commended

“Del Tibaldo il decoro e il fondamento.”

The compositions of the chapel Poggi, in St. Giacomo, where the imitation of Michael Angelo is blended with that of Raphael, Corregio, and D. da Volterra, contain the rudiments of their own system.

Pellegrino Tibaldi is more known by his works in fresco than by his pictures in oil, which are extremely scarce: one of the earliest is the Nativity, already mentioned, in the Palace Borghese, of which the cartoon still exists in a private collection of drawings. It is painted in a sober unaffected tone, and considered as the work of an artist jealous of his line, with great mellowness of touch. The figures of this are considerably less than the size of life; but there are pictures of his to be met with of diminutive dimensions, with all the finish of miniatures, though rich in figures, touched with great spirit and equal vivacity of colour: they are generally set off by backgrounds drawn from his favourite branch of art, architecture. *Fuseli's Pilkington.*

TIBBERMUIK, or **TIPPEMUIR**, a parish of Scotland, in

11 O

Perthshire,

Perthshire, about eight miles long, and from one to three broad. Population 1587.

TIBBERTON, a parish of England, in Gloucestershire; $3\frac{1}{2}$ miles south-east of Newent.—2. A parish of England, in Worcestershire; 4 miles east-north-east of Worcester.—3. A parish of England in Herefordshire; 10 miles west of Hereford.—4. A hamlet of England, in Salop; 4 miles west-by-north of Newport.

TIBBO, the name of a native African people inhabiting the vast desert tract which extends along the southern frontier of Fezzan, thence eastward towards Egypt, and along the north of Bornou. They are small in stature, have quick eyes, thick lips, a small turned-up nose, and well-shaped limbs. Their complexion is not perfectly black, and their hair is long, less curled than that of the negroes.

TIBENHAM, a parish of England, in Norfolk; 5 miles west-south-west of St. Mary Stratton. Population 512.

TIBER, a celebrated river of Italy, which rises in the Appennines, flows to the west and south, receives a number of smaller streams, passes by Rome, and falls into the Mediterranean about 15 miles below that city, in lat. 41. 47. N. long. 11. 8. E.

TIBER CREEK, a small stream in the United States, which runs south through the city of Washington, and falls into the Potomac.

TIBERIUS (Claudius Nero), a Roman emperor, born in the year B. C. 42. See **ROME**.

TIBERIUS (Constantine), emperor of the East, was a Thracian by birth, and by office captain of the guards to Justin II. By the recommendation of the empress Sophia, he was raised to the rank of Cæsar, A. D. 574, and in 578, when Justin died, succeeded to the imperial throne. See **ROME**.

TIBERON, or **TIBURON**, a bay and village on the south-west part of the island of St. Domingo. The bay is formed by the cape of its name on the north-west, and Point Burgau on the south-east, a league and three-fourths apart. The cape is in lat. 18. 20. 30. N. long. 64. 28. 40. W.

TIBESTI, the largest place belonging to the Rock Tibbo, situated in a mountainous country, which, though suffering from the want of rain, abounds in springs. The valleys, therefore, produce some corn, and excellent pasturage. Senna of superior quality is raised for the markets of Fezzan, and the camels are reckoned superior to any in Africa. The huts of the natives are circular, formed of stakes, covered with brush-wood.

TIBET, **TIBBET**, or **THIBET**, a country of Asia, and part of Independent Tartary, extending from the source of the Indus to the borders of China, and from Hindostan to the deserts of Cobi; in length, from east to west, about 1500 miles; the breadth is unequal, and in many parts not known. It is called by the natives *Puc*, or *Puekachim*; *Pue* signifying northern, and *Koachim*, snow; an appellation given on account of the coldness of the climate, by the teachers who went from India to preach among them. The distinguishing feature of this extensive country is its great and general elevation, being part of that track in which arise not only the great rivers of India and China, but those also of Siberia and Tartary.

Tibet strikes a traveller at first sight, as one of the least favoured countries under heaven, and appears to be in a great measure incapable of culture. It exhibits only low rocky hills, without any visible vegetation, or extensive arid plains, both of the most stern and stubborn aspect, promising full as little as they produce. The usual crops are wheat, peas, and barley; in many parts these grains never ripen, owing to the severity of the climate, but are cultivated as forage for cattle, when the plains become bare of grass, and they are hindered from going abroad during the depth of winter. The periodical rains give birth to a little herbage, whose growth stops immediately as they cease; from the extreme dryness of the air, the grass then begins to wither, and at this time it may be crumbled between the fingers into dust; yet large droves of cattle are fed in this neighbourhood; for though the pasture be short and dry, it is

esteemed singularly sweet and nutritive. Animals ranging in a state of nature are found to prefer it to the more exuberant herbage of milder climates. It is the practice of the cultivators in Tibet to flood the low lands on the approach of winter with water, which freezes and covers their surface with a sheet of ice, and thus prevents their being stripped of their scanty soil by violent winds.

The temperature and seasons which prevail in Tibet possess a remarkable uniformity, both in their periodical elevation, and in their return. The same division of them takes place here, as in the more southern region of Bengal. The spring is marked from March to May, by a variable atmosphere; heat, thunder-storms, and occasionally refreshing showers. From June to September is the season of humidity, when heavy and continued rains fill the rivers to their brim, which run off from hence with rapidity, to assist in inundating Bengal. From October to March, a clear and uniform sky succeeds, seldom obscured either by fogs or clouds. For three months of this season, a degree of cold is felt, far greater perhaps than is known to prevail in Europe. Its extreme severity is more particularly confined to the southern boundary of Tibet, near that elevated range of mountains which divides it from Assam, Bootan, and Nepal. The summits of these are covered all the year with snow, and their vicinity is remarkable, at all seasons, for the dryness of the winds. The range of these mountains is confined between the 26th and 27th degrees of north lat. From the severity of the cold, the inhabitants seek refuge in sheltered valleys and hollows, or amid the retreats among the rocks.

Tibet, though barren of vegetable produce, teems with animal life. The variety and abundance of wild fowl, game, and beasts of prey, flocks, droves, and herds, is astonishing; all of which are described under their several names.

In their domestic habits and life, the Tibetians are rude and ignorant, and, like all others in that situation, they are content with little. The peasant's house is of mean construction, and resembles a brick kiln in shape and size. It is built of rough stones, heaped upon each other without cement, and, on account of the strong winds that perpetually prevail here, it has never more than three or four small apertures to admit light. The roof is a flat terrace, surrounded with a parapet wall two or three feet high; on this are commonly placed piles of loose stones, intended to support a small flag, or the branch of a tree; or else as a fastening for a long line, with scraps of paper, or white rag, strung upon it like the tail of a kite. This being stretched from one house to another, is a charm against evil genii, as infallible in its efficacy as horse shoes nailed upon a threshold, or as straws thrown across the path of a reputed witch.

The knowledge of the Tibetians is, as may be supposed, very limited. It is asserted, however, that the art of printing has from a remote age been practised in Tibet, although limited in its use by the influence of superstition.

Tibet enjoys but the shadow of independence, being ruled by Chinese sovereigns, who obtained their ascendancy over it in 1720, by interfering in the intestine commotions, by which the country was agitated. In 1792 Tibet was invaded by the Nepaulese, who quickly overran the country, and appeared before Teshoo Loomboo so suddenly as scarcely to allow time for the escape of the lama and his gylongs across the Brahmapootra. The Nepaulese were pursued by the Chinese, who defeated them in several actions, and forced them to an ignominious peace. Since this period the influence of China over Tibet has increased. The Chinese maintain residents at the court of Lassa, who are invested with all the real power, and who keep up a constant communication with Pekin.

TIBIA, in Anatomy, the large bone of the leg.

TIBIÆ Pares et Impares, in the Dramatic Music of the Ancients. It has been long doubted, whether *pares* and *impares* meant double and single flutes, or equal and unequal in point of length and size. But though in preferring either of these acceptations, some sense and meaning is acquired, yet we should incline to the latter. For in none of the

the representations in ancient painting or sculpture, which we have yet seen, does it appear that the tibicen, either at sacrifices or in the theatre, plays on a single flute, though we as often see double flutes of different lengths in his hands, as of the same length; and as harmony, or music in different parts, does not appear to have been practised by the ancients, the flutes of equal length may naturally be supposed to imply unisons; and unequal, such as are octaves to each other.

TIBIALIA, among the Romans, a kind of swaths with which they used to cover their legs.

TIBIALIS, in Anatomy, a name applied to various organs situated in the neighbourhood of the tibia. There is an anterior and a posterior tibial artery, an anterior and posterior tibial nerve.

TIBIGI, a river of Brazil, in South America, which flows into the Parana. It is rich in diamonds.

TIBIQUARI, a river of Paraguay, in South America, which enters the Paraguay.

TIBIRITA, a settlement of New Granada, in the province of Tunja. Population 100 housekeepers, and 60 Indians.

TIBSHELF, a parish of England, in Derbyshire; 4 miles north-east-by-north of Alfreton. Population 705.

TIBTHORPE, a township of England, East Riding of Yorkshire; 5 miles west-south-west of Great Driffeld.

TIBULLUS (Albius), a Roman poet of the Augustan age. For an account of his works, see **POETRY**.

TIBURON, an island in the Gulf of California, off the province of Sonora; about 60 miles in length.

TIBURON, a point of land on the coast of Brazil, in the province of Espiritu Santo.—There is also another of the same name in the province of Seara.

TIBURON, a point of the north coast of the province of Darien, forming the semicircle of the bay or great gulf of Uraba.

TIBURON, a small island in the Pacific ocean, discovered by Magellan in 1520. Lat. 9. 13. 14. 15. and 17. S.

TIBURON, CAPE, a cape on the coast of South America, at the entrance of the gulf of Darien. Lat. 9. 25. N. long. 77. 10. W.

TIBURON, CAPE, a cape on the south-west coast of the island of Hispaniola. Lat. 18. 21. N. long. 74. 29. W.

TIBURONES, or MAIN CAPE REEF, two small islands surrounded with rocks, near the coast of Honduras. Lat. 15. 10. N. long. 82. 8. W.

TICAO ISLE, one of the Philippine islands, situated due south of the large island of Luzon. Lat. 12. 36. N. long. 123. 40. E.

To TICE, *v. a.* [from *enticc*. *Dr. Johnson*.—This is an old English verb, and is also used in Scotland. Mr. Chalmers observes, that Dr. Johnson gives no derivation of *enticc*, to which he refers *tice*; and that the roots of both are probably *titcan*, Sax. *suadere*, *solicitare*. Dr. Jamieson notices this Saxon etymon, as also Fr. *attiser*, Ital. *tizzare*, *accendere*, together with the Arm. *tis*, a train, and Su. Goth. *tussa*, to incite. But it is, no doubt, merely an abbreviation of the old French *enticer*, which is the origin of our *enticc*. *Todd*.] To draw; to allure.—These two have *tic'd* me hither to this place. *Titus*.

TICEHURST, a parish of England, in Sussex; 4 miles east-south-east of Wadhurst.

TICEMENT, *s.* [*enticement*, old French.] Allurement. *Obsoléc. Hulcét.*

TICHBOURNE, a hamlet of England, in Southampton. Tichbourne-house, in the neighbourhood, is supposed to have been built in the reign of Henry II.; from which time a gift of 2*d.* in bread or money has been bestowed on Lady-day, on all who come; 2 miles south-west of New Alresford.

TICHFIELD, a market town of England, in the county of Southampton, pleasantly situated near the Tichfield river. The town is small, but inhabited by many respectable families. The church is a spacious fabric, the work of different ages. The north side is reported to have been built by William of Wyckham; the south side is more ancient. At a short distance from the town are the ruins of Tichfield-house,

the ancient seat of the Wriothesleys. It was erected by Sir Thomas, the first earl, on the site, and with the materials, of an abbey, founded in the year 1231, and of which the possessions were granted by Henry VIII. to his favourite secretary Wriothesley. The building is now in a very dilapidated state, the entrance gateway being the principal part left standing. In Tichfield-house Charles I. was concealed, after his escape from Hampton Court, in 1647, and previous to his again resigning himself to the power of Colonel Hammond, who conducted him to the Isle of Wight. Market on Saturday, and four annual fairs. Tichfield contains 553 houses, and 3227 inhabitants; 3 miles west of Fareham.

TICHFIELD, a town of Jamaica, on the north coast; 22 miles north-east of Kingston. Lat. 18. 12. N. long. 76. 10. W.

TICHVIN, a small town in the interior of European Russia, in the government of Novgorod, on the river Tichvinka; 107 miles east-by-south of Petersburg, and 104 north-north-east of Novgorod.

TICINETTO, a small town in the north of Italy, in Piedmont, province of Casale. Population 1000; 9 miles south-east of Casale.

TICINO, a considerable river of the north of Italy, which has its source in Switzerland, on Mount St. Gothard, and after traversing the canton of Ticino, flows into Lago Maggiore.

TICINO, or TESSIN, a considerable district in the south of Switzerland, situated between the central cantons and the frontier of Lombardy. Population of the whole canton, 89,000.

The area of the whole 1130 square miles, is equal to a middle sized English county. It lies on the south side of the Alpine chain, is watered in all its extent by the Ticino, and is extremely mountainous, the ramifications of the Alps dividing it into more than 20 distinct valleys. The soil is fertile, and the climate mild.

TICK, *s.* [This word seems contracted from *ticket*, the ancient word for trust, or score; which Mr. Malone considers to have been the token given by the creditor to the debtor, to ascertain the debt. "You may swim in twentie of their boates over the water upon *ticket*." *Dekker, Gull's Horn-booke*, 1609.] Score; trust.

If thou hast the heart to try't,
I'll lend thee back thyself awhile,
And once more for that carcase vile
Fight upon tick.

Hudibras.

[*Tique*, Fr., *teke*, Dutch.] The louse of dogs or sheep.—Would the fountain of your mind were clear again, that I might water an ass at it! I had rather be a *tick* in a sheep, than such a valiant ignorance. *Shakspeare*.—The case which holds the feathers of a bed.

To TICK, *v. n.* To run on score.—To trust; to score.—The money went to the lawyers; counsel won't *tick*. *Arbutnot*.

To TICK, *v. a.* [*tikken*, Dutch.] To note by regular vibration, as a watch or clock. I do not suppose that the ancient clocks *ticked* or noticed the seconds. *Tollet*.

TICK, *s.* The sound made in ticking.—Its noise is more agreeable to the leisurely and constant *tick* of the death-watch. *Ray*.

TICK, a nasty little animal of a livid colour, with a blunt and roundish tail, elevated antennæ, a globose-ovate form, and full of blood; which infests cows, swine, goats, sheep, and dogs. The tick or ricinus is, in the Linnean system, a species of *acarus* in the aptera order of insects.

It is stated in a paper in the third volume of the "Transactions of the Highland Society of Scotland," that the tick, or *acarus reduvius*, is a distinct species or sort of vermin of this kind from that of the kid, or *hippobosca ovina*, the former of which harasses the lambs and sheep in the spring season, while the latter molests all sorts and ages, but particularly hogs or young sheep, and chiefly such as are in a lean state. The former always adheres close to the bare spots of the shoulders, thighs, or ears, draining and drawing away

away the blood from them; and for the most part drops off about Midsummer: but the latter harbours in the wool, bite the sheep, and sucks their blood. Smearing with tar, it is said, expels it from the skin, and it soon afterwards drops from the wool. Tobacco-juice is fatal to it almost instantaneously, and mercurial ointment destroys it. The former, or tick, is removed by the same remedies as the kid, and it is wholly prevented by having the young sheep in good condition.

TICKARY, a town of Hindostan, province of Bahar. Lat. 24. 58. N. long 84. 50. E.

TICKELL (Thomas), an English poet, was the son of a clergyman in Cumberland, and born at Bridekirk, near Carlisle, in the year 1686. He contributed to the periodical publications of the "Spectator" and "Guardian," in the latter of which, all the papers on pastoral poetry, except one by Pope, are ascribed to him. During the negotiations which terminated in the peace of Utrecht, he published a very popular poem, entitled "The Prospect of Peace," which was highly commended by Addison, in return for which commendation he wrote his lines on the "Cato" of that author. On the accession of the Hanover family, to which he was attached, he presented George I., on his arrival, with a piece called "The Royal Progress;" and he served the cause still more effectually by two satirical poems on the Jacobite party, viz., "An Imitation of the Prophecy of Nereus;" and "An Epistle from a Lady in England to a Gentleman at Avignon." Tickell accompanied Addison to Ireland, and was there initiated in public business with a view to future preferment. On occasion of Pope's publication of the first volume of his translation of Homer's Iliad, Tickell published a translation of the first book of that poem, which was patronised by Addison, so as to occasion an interruption of his friendship with Pope. When Addison was made secretary of state, Tickell was under-secretary, and continued in office under his successor Craggs. On the death of Addison, Tickell was entrusted with the charge of publishing his works, to which he prefixed a valuable life of the author. In 1725, he was appointed to the lucrative post of secretary to the lords-justices of Ireland, and retained it till his death, which happened at Bath in 1740. Tickell had been married and left a family.

Tickell is ranked by his biographers among English poets of the second order; equalled by few of his contemporaries in eloquence of diction and harmony of versification, and without lofty flights maintaining a decent elevation by a cultured style, and by just and ingenious thoughts. His funeral poem on Addison is pronounced by Dr. Johnson to be more sublime and elegant than any that is to be found in the whole compass of English literature. His "Ode to the Earl of Sunderland," and his "Colin and Lucy," are highly commended.

TICKEN or **TICKING**, *s.* The same with *tick*. A sort of strong linen for bedding. *Bailey*.—Dimitics, *tickens*, checks, and the like stuffs. *Guthrie*.

TICKENCOTE, a village and parish of England, in the county of Rutland; 2½ miles from Stamford, and within a quarter of a mile of the great north road.

TICKENHAM, a parish of England, in Somersetshire; 9 miles west-by-south of Bristol.

TICKENHURST, a hamlet of England, in the parish of North-Bourne, Kent.

TICKET, *s.* [*etiquet*, Fr.] A token of any right or debt, upon the delivery of which admission is granted, or a claim acknowledged.

Let fops or fortune fly which way they will,
Disdains all loss of *tickets* or codille.

Pope.

To TICKET, *v. a.* [*etiqueté*, Fr. ticketed. *Cotgrave* and *Sherwood*.] To distinguish by a ticket.—In that lottery a few glittering prizes, 1000, 5000, 10,000 pounds among infinity of blanks, drew troops of adventurers; who, if the whole fund had been equally *ticketed*, would never have come in. *Bentley*.

TICKFAH, a river of the United States, which rises in Mississippi, enters Louisiana, and flows into Lake Maurepas; 4 miles north-east of the mouth of the Amite.

TICKHILL, a market town of England, in the West Riding of Yorkshire. A little to the west of the town, in a deep valley, are seen the ruins of an ancient priory of Augustins, founded in the reign of Henry III. Tickhill contains 286 houses, and 1508 inhabitants. Market on Friday, with a fair on the 21st August; 5 miles south of Doncaster, and 155 north-by-west of London.

To TICKLE, *v. a.* [*titillo*, Lat.] To affect with a prurient sensation by slight touches.

Dissembling courtesy! How fine this tyrant
Can *tickle* where she wounds.

Shakspeare.

To please by slight gratifications.

Such a nature

Tickled with good success, disdains the shadow
Which it treads on at noon.

Shakspeare.

To TICKLE, *v. n.* To feel titillation.

He with secret joy therefore

Did *tickle* inwardly in every vein,
And his false heart, fraught with all treason's store,
Was fill'd with hope, his purpose to obtain.

Spenser.

TICKLE, *adj.* [Etymology unknown.] Tottering; unfixed; unstable; uncertain; easily overthrown.—Thy head stands so *tickle* on thy shoulders, that a milk-maid, if she be in love, may sigh it off. *Shakspeare*.

TICKLE HARBOUR, a harbour on the east coast of Newfoundland.

TICKLE ME QUICKLY, a name given by the English to an excellent bay on the coast of the isthmus of Darien, situated amid high rocks, with a good anchorage and secure landing place, being guarded by rocks, and by the Samballas islands.

TICKLENESS, *s.* Unsteadiness; uncertainty.—Hoard hath hate; and climbing, *tickleness*. *Chaucer*.

TICKLER, *s.* One that tickles. *Scott*.

TICKLING, *s.* The act of affecting by slight touches; the act of pleasing by slight gratifications.

Aspiring sons,

Who with these hourly *ticklings* grow so pleas'd,
And wantonly conceited of themselves.

B. Jonson.

TICKLISH, *adj.* Sensible to titillation; easily tickled.—The palm of the hand, though it hath as thin a skin as the other parts, yet is not *ticklish*, because it is accustomed to be touched. *Bacon*.—Tottering; uncertain; unfixed.—Ireland was a *ticklish* and unsettled state, more easy to receive dis-temperers and mutations than England was. *Bacon*.—Difficult; nice.

How shall our author hope a gentle fate,
Who dares most impudently not translate;

It had been civil in these *ticklish* times,
To fetch his fools and knaves from foreign climes.

Swift.

TICKLISHNESS, *s.* The state of being ticklish.

TICKHALL, a parish of England in Derbyshire; 5½ miles north-by-west of Ashby-de-la-Zouch. Population 1166.

TICKTON, a hamlet of England, East Riding of Yorkshire; 2 miles north-east of Beverley.

TICKTACK, *s.* [*trictac*, Fr.] A game at tables. See also **TICKTRACK**.—*Tick-tack* sets a man's intentions on their guard. Errors in this and war can be but once amended. *Hall*.

TICONDEROGA, a township of the United States, in Essex county, New York, on the west side of the south end of Lake Champlain, and at the north end of Lake George; 12 miles south of Crown Point, and 95 north of Albany. Population 958. It has a valuable mine of iron ore.

TICONDEROGA, a fort of the United States, built by the French, in 1756, in Essex county, New York, in the township of the same name.

TICOO,

TICOO, a cluster of small islands near the west coast of Sumatra. They are small and woody; about $1\frac{1}{2}$ mile distant from each other, and the innermost $1\frac{1}{2}$ from the main.

TICOPORO, a river of New Granada, in the province of Maracaibo, which enters the Apure.—There is a settlement of the same name on its banks.

TICOS, a small island in the Pacific ocean, near the east coast of the island of Luçon. Lat. 14. 10. N. long. 124. E.

TICUNAS, POISON OR, is an active poison prepared by the native Indians, on the borders of the river of the Amazons, in three or four degrees of south latitude, which together with that of Lamas, Pevas, and Yameos, is extracted by fire from plants, called by the French lianes, and used in poisoning their arrows. See an account of the nature and effects of these poisons by M. Herrissant, in Phil. Trans. vol. xlvi. art. 12., and by M. Fontana, in Phil. Trans. vol. lxx. part 1., Append. art. 2.; and also Fontana sur les Poisons, &c. Florence, 4to.

TID, *adj.* [τῆδης, Sax.] Tender; soft; nice.

TID, **St. MARY**, a parish of England, in Lincolnshire; 8 miles south-east of Holbeach. Population 629.

TID, **St. GILES**, a parish in the same county; $1\frac{1}{2}$ mile from the foregoing. Population 534.

TIDBIT, *s.* A dainty.

TIDCOMBE, a parish of England in Wiltshire; $5\frac{1}{2}$ miles north-north-east of Ludgershall.

To **TIDDER**, or to **TIDDLER**, *v. a.* To use tenderly; to fondle.

TIDE, *s.* [τῆδ, τῆδ, Saxon; *tijd*, Dutch and Icelandic.] Time; season; while.

What hath this day deserv'd,
That it in golden letter should be set
Among the high *tides* in the kalendar. *Shakspeare.*

Alternate ebb and flow of the sea.—That motion of the water called *tides* is a rising and falling of the sea: the cause of this is the attraction of the moon, whereby the part of the water in the great ocean which is nearest the moon, being most strongly attracted, is raised higher than the rest; and the part opposite to it being least attracted, is also higher than the rest; and these two opposite rises of the surface of the water in the great ocean following the motion of the moon from east to west, and striking against the large coasts of the continents, from thence rebound back again, and so make floods and ebbs in narrow seas and rivers. *Locke.*—Commotion; violent confluence.—As in the *tides* of people once up there want not stirring winds to make them more rough, so this people did light upon two ringleaders. *Bacon.*—Stream; course.

Thou art the ruins of the noblest man,
That ever lived in the *tide* of times. *Shakspeare.*

When the motion of the water is against the wind, it is called a windward-tide; when wind and tide go in the same direction, leeward-tide; when it runs very strong, it is called a tide-gate.

When the moon is in the first and third quarter, i. e. when she is new and full, the tides are high and swift, and are called spring-tides; when she is in the second and last quarter, the tides are lower and slower, and called neap-tides. For the rationale of the tides, see **ASTRONOMY**.

To **TIDE**, *v. a.* To drive with the stream.

Their images, the relics of the wreck,
Torn from the naked poop, are *tided* back
By the wild waves, and rudely thrown ashore. *Dryden.*

To **TIDE**, *v. n.* To pour a flood; to be agitated by the tide.

When, from his dint, the foe still backward shrunk,
Wading within the Ouse, he dealt his blows,
And sent them, rolling, to the *tiding*-Humber. *Philips.*

TIDEGATE, *s.* A gate through which the tide passes into a bason. *Bailey.*

TIDENHAM, a parish of England, in Gloucestershire; 2 miles north-east-by-north of Chepstow. Population 918.

Vol. XXIII. No. 1622.

TIDESMAN, *s.* A tidewaiter or custom-house officer, who watches on board of merchant-ships till the duty of goods be paid and the ships unloaded. *Bailey.*

TIDESWELL, a market town of England, in the county of Derby, situated on a small clear stream which runs through the town. Tideswell contains 1219 inhabitants; 22 miles north-west of Derby, and 158 north-north-west of London.

TIDEWAITER, *s.* An officer who watches the landing of goods at the custom-house.—Employments will be in the hands of Englishmen; nothing left for Irishmen but vicarages and *tidewaiters'* places. *Swift.*

TIDI, a river of England, in the county of Cornwall, which rises near Leskeard, and passing St. Germans, joins the Lynker, and falls along with it into the Tamar.

TIDILY, *adv.* Neatly; readily.

TIDINESS, *s.* Neatness; readiness.

TIDINGS, *s.* [τίβαν, Saxon, *to happen, to betide; tidende*, Icelandic.] News; an account of something that has happened; incidents related.—I shall make my master glad with these *tidings*. *Shakspeare.*

TIDINGTON, a parish of England, in Oxfordshire; 2 miles north-north-west of Tetsworth.

TIDMARCH, a parish of England, in Berkshire; 6 miles west-north-west of Reading.

TIDMINGTON, a parish of England, in Worcestershire; $2\frac{1}{2}$ miles south-by-east of Shipton-upon-Stour.

TIDONE, a small river of the north of Italy, in the Sardinian states, which falls into the Po, not far from Piacenza.

TIDORE, one of the Molucca islands, in the Eastern seas; about 21 miles in circumference. It is situated on the west coast of Gilolo, and is three leagues south from Ternate, from which it is separated by a safe channel, with good anchorage near the town, on the east side of the island. It is remarkably well watered by streams from the mountains, which are high, and generally covered with clouds. It is very populous. Lat. 0. 45. N. long. 127. 25. E.

TIDWEL, a hamlet of England, in Devonshire, noted for a warm spring of water, which continues bubbling when all the neighbouring ones are frozen.

TIDWORTH, **NORTH**, a parish of England, in Wiltshire, on the borders of Southamptonshire; $2\frac{1}{2}$ miles south-west-by-west of Ludgershall.

TIDWORTH, **SOUTH**, a parish of England, in Southamptonshire, adjoining to the foregoing.

TIDY, *adj.* [*tidt*, Icelandic, frequens. The primary sense is from the Sax. τῆδ, *tide, season*. Wicliffe uses *tideful* in this sense: "*tideful* fruit." *James.*—So *tydigh*, Teut. *tempestivus, maturus*.] Seasonable; timely.

What a hap had I,
And what a *tide* fortune, when my fate
Flung me upon this bear-whelp! *Beaum. and Fl.*

Neat; ready. [*tidig*, Su. Goth. decorus, decens.]

Whenever by you barley-mow I pass,
Before my eyes will trip the *tidy* lass. *Gay.*

It seems to be here put by mistake or irony for *untidy*. *Dr. Johnson.*—Rather perhaps by mistake for *tiny*. The word is applied to Falstaff. *Tidy* is used in the north, according to Grose, for *small*.—Thou whoreson *tidy* Bartholomew boar-pig, when wilt thou leave fighting? *Shakspeare.*

To **TIE**, *v. a.* [τῆαν, τῆαν, Sax.] To bind; to fasten with a knot.—Thousands of men and women, *tied* together in chains, were, by the cruel Turks, enforced to run as fast as their horses. *Knolles.*—To knit; to complicate.—We do not *tie* this knot with an intention to puzzle the argument; but the harder it is *tied*, we shall feel the pleasure more sensibly when we come to loose it. *Burnet.*—To hold; to fasten; to join so as not easily to be parted.

In bond of virtuous love together *tied*,
Together serv'd they, and together died. *Fairfax.*

To hinder; to obstruct: with *up*, intensive.
Death, that hath ta'en her hence to make me wail,
Ties up my tongue, and will not let me speak. *Shakspeare.*

To oblige; to constrain; to restrain; to confine.

It is the cowish terror of his spirit,
That dares not undertake; he'll not feel wrongs
Which *tie* him to an answer. *Shakspeare.*

It may be observed of *tie*, that it has often the particles *up* and *down* joined to it, which are, for the most part, little more than emphatical, and which, when united with this word, have at least consequentially the same meaning.

TIE, *s.* Knot; fastening. See TVE.—Bond; obligation.—The rebels that had shaken off the great yoke of obedience, had likewise cast away the lesser *tie* of respect. *Bacon.*—A knot of hair.

The well-sworn *ties* an equal homage claim,
And either shoulder has its share of fame. *Young.*

TIEDEMAN (Dieterich), a philosophical writer, was born April 1748, at Bremorvorde, in the duchy of Bremen, and educated in the school of his native place in the Greek and Latin languages, in which he made very considerable proficiency. Devoting himself to the church, he removed to the school of Verden, and from thence to the Athenæum at Bremen, where he formed an intimate friendship with Meiners, afterwards professor at Gottingen. In 1767, he settled at Gottingen, and here he renounced the study of theology, because he disapproved of the system there taught, and applied to mathematics, classical literature, and philosophy. His works were numerous, and relate chiefly to the history of philosophy, and its different systems. They afford ample evidence of his assiduity and labour. *Gen. Biog.*

TIEFFENBRUNN, a petty town of the south-west of Germany, in Baden; 7 miles south-east of Pfortzheim. Population 800.

TIEFKARTMANN-DORF, a small town of Prussia, in Silesia; 50 miles west-by-south of Breslau. Population 1400.

TIEGENHOF, a small town of West Prussia; 20 miles east-south-east of Dantzie, and 11 west-north-west of Elbing. Population 1800.

TIELLEN HARBOUR, a bay in Ireland, on the north side of Donegal bay; 7 miles east-south-east of Tiellen Head.

TIELLEN HEAD, a cape of Ireland, on the north side of the entrance into Donegal bay, and the south-west extremity of the county of Donegal; 25 miles west of Donegal. Lat. 54. 40. N. long. 8. 25. W.

TIEN, or LIEN, a city of China, of the second rank, in Quangong. Lat. 24. 50. N. long. 111. 49. E.

TIEN, a city of China, of the second rank, in Kiangsee. Lat. 23. 46. N. long. 106. 19. E.

TIENNE, a small town of Austrian Italy; 9 miles north-west of Vicenza.

TIEN-TSIN-ONEI, a city of China, of the second rank, in Pe-che-lee; 63 miles south-east of Peking.

TIEPLO (Giovanni Batista), was one of the last of the eminent Venetian painters. He was born at Venice in 1697, and was a scholar of G. Lazzarini; but he afterwards studied the works of P. Veronese. He possessed a quick invention, and great freedom of hand, and was admirably qualified for the execution of large fresco works upon ceilings, &c.; where great facility of handling, and richness of colouring, will often apologize for the want of higher qualities, particularly in allegoric or grotesque subjects. Tieplo was employed in many of the palaces in Italy, but most honoured by the employment he received from the king of Spain, who engaged him to adorn his palace at Madrid. He died at Madrid in 1770, at the age of 73. He etched many of his own designs with great neatness and taste.

TIER, *s.* [*tiere, tieire*, old Fr.; *tuyer*, Dutch.] A row; a rank.—Fornovius, in his cholera, discharged a *tier* of great ordinance amongst the thickest of them. *Knolles.*

TIERCE, *s.* [*tiers, tiercier*, Fr.] A vessel holding the third part of a pipe.—Go now deny his *terce*. *B. Jonson.*

TIERCE, in Music, a 3d. The highest stop in an organ,

called the tierce, is a major 3d above the 15th, every sound being a 17th above the diapason.

TIERCE DE PICARDIE, the French Music, and indeed all choral music of old masters in a minor key, is terminated with a sharp 3d, which the French now call *terce de Picardie*, on account of the great number of cathedrals in that province, where it continues still in use.

TIERCE, in Fencing, the third position of defence, or that in which the point of the sword is raised and the nails turned down.

TIERCED, or TIBRCE, in Heraldry, denotes the shield to be divided by any of the partition lines into three equal parts, of different colours or metals.

TIERCET, *s.* [from *tiers*, Fr.] A triplet; three lines.

TIERMAS, a small town of Spain, in the province of Arragon, at the foot of the Pyrenees; remarkable for its warm springs.

TIERRA BOMBA, a small island near the coast of South America, at the entrance of the harbour of Carthagena, where, in 1741, the English erected a battery.

TIERRA LLANA, PUNTA DE, a cape on the east coast of Patagonia. Lat. 41. S.

TIE-TCHEOU, a town in the eastern part of Chinese Tartary, in the country of Kokonor. Lat. 33. 56. N. long. 102. 54. E.

TIETE, a river of Paraguay, which falls into the Parana, on the west side, about 12 miles above the mouth of the Securiu.

TIEZ, or TUEZNO, a small town of West Prussia; 12 miles west-south-west of Deutsche Kron, and 24 south of Tempelburg. Population 900.

TIFF, *s.* [*A low word*, I suppose without etymology.] Liquor; drink.

I, whom griping penury surrounds,
And hunger, sure attendant upon want,
With scanty offals, and small acid *tiff*,
Wretched repast! my meagre corps sustain. *Philips.*

A fit of peevishness or sullenness; a pet.

To TIFF, *v. n.* To be in a pet; to quarrel. *A low word.*

To TIFF, *v. a.* To dress; to deck.—Is the Miss under a force when she culls among her trinkets with curious toil to *tiff* herself out in the most engaging manner? *Search.*

TIFFANY, *s.* [*tiffer*, old Fr., *to dress up*.] *Skinnee.* Very thin silk.—The smoke of sulphur will not black a paper, and is commonly used by women to whiten *tiffanies*. *Brown.*

TIFFESH, or TIFAS, a town of Algiers, in the province of Constantina, the ancient *Theveste*.

TIFFIELD, a parish of England, in Northamptonshire; 2½ miles north-by-east of Towcester.

TIFFLIN, a township of the United States, in Adam's county, Ohio. Population 1529.

TIFTALA, a small barren island, belonging to Orkney, in the Pentland frith, near which are several dangerous whirlpools.

TIG, *s.* [from *tekan*, Goth., *to touch*.] A play, in which children try to touch each other last.

TIGA, a small island in the Eastern seas, near the north-west coast of the island of Borneo. Lat. 6. 25. N. long. 112. 14. E.

TIGAON, an island in the Indian sea, near the north-west coast of the island of Borneo. Lat. 6. 10. N. long. 128. 48. E.

TIGE, *s.* The shaft of a column from the astragal to the capital. *Bailey.*

TIGELLIUS, a musician, born in Sardinia, in great favour at Rome in the time of Julius Cæsar. Horace has handed him down to posterity as a merciless spendthrift, and an egregious coxcomb.

“Ambubajaram collegia Pharmacopolæ
Mendici, Mimæ, Balatrones, hoc genus omne
Mæstum, ac sollicitum est cantoribus morte Tigelli:
Quippe benignus erat.”—*Sat.*

Tigellius

Tigellius was not only much in favour with Julius Cæsar, but afterwards with Cleopatra and Augustus: he was an able musician, an ingenious buffoon, and a subtle courtier.

TIGER, *s.* [*tigris*; Lat.] A fierce beast of the feline kind.

When the blast of war blows in your ear,
Then imitate the action of the *tiger*:
Stiffen the sinews, summon up the blood. *Shakspeare.*

TIGER or **TIGRIS**, in the Linnæan system of Zoology, is a species of **FELIS Tigris**; which see.

TIGER, an island of Guiana, at the mouth of the river Essequibo. It is in a high state of cultivation, and produces coffee and sugar.

TIGER, a small island in the Spanish Main, near the coast of Darien. Lat. 8. 35. N. long. 77. 30. W.

TIGER'S CREEK, a small stream of the United States, which enters the Ohio, in the territory of Kentucky.

TIGER'S VALLEY, a post village of the United States, in Harrison county, Ohio; 16 miles from Clarksburg.

TIGER VALLEY RIVER, the name by which the east branch of the Monongahela river, in the United States, is sometimes distinguished.

TIGHT, *adj.* [From the Sax. *sian*, to tie; or *bygan*, to bind.] Tense; close; not loose.—Every joint was well grooved; and the door did not move on hinges, but up and down like a sash, which kept my closet so *tight* that very little water came in. *Swift*.—Free from fluttering rags; less than neat.

O Thomas, I'll make a loving wife;
I'll spin and card, and keep our children *tight*. *Gay.*

Handy; adroit.

My queen's a squire
More *tight* at this than thou. *Shakspeare.*

TIGHT, *pret. of To tie.* *Obsolete.*

And thereunto a great long chaine he *tight*,
With which he drew him forth even in his own despight. *Spenser.*

To TIGHTEN, *v. a.* To straiten; to make close.

TIGHTER, *s.* A riband or string by which women straiten their cloaths.

TIGHTLY, *adv.* Closely; not loosely. Neatly; not idly; briskly; cleverly; adroitly.

Hold, sirrah, bear you these letters *tightly*:
Sail, like my pinnace, to these golden shores. *Shakspeare.*

TIGHTNESS, *s.* Closeness; not looseness.—The bones are inflexible, which arises from the greatness of the number of corpuscles that compose them, and the firmness and *tightness* of their union. *Woodward*.—Neatness.

TIGIOCA, a point on the coast of South America, which forms with the point of Maguari, in the island of Marajo, the second mouth of the great river Amazons.

TIGITAS, a small river of the Caraccas, in the province of Venezuella, which rises south of the town of La Conception de Pao, and unites itself with the Galamotel.

TIGLA, a river of the province of Darien, which enters the Tarena.

TIGLAGANTI, a river of the province of Darien, which enters the sea in the gulf of Atrato.

TIGLIOLE, a small town in the north-west of Italy, in Piedmont. Population 2600; 9 miles west-by-north of Asti.

TIGRANES, the Great, king of Armenia. See **ROME**.

TIGRE, a large and abundant river of New Granada, which rises in the province of Quixos and Macas. It is joined by the Nahuapo, and after running nine miles farther, it falls into the great river Amazons, in lat. 4. 53. S.

TIGRE, an extensive province of Abyssinia, which has now communicated its name to almost all the north-eastern districts of that great country. It is composed, in a great measure, of very steep and lofty mountains, interspersed, however, with fertile valleys and extensive plains.

TIGRE, a small island in the Pacific ocean, at the entrance into Amapalla bay. Lat. 13. 10. N. long. 88. 44. W.

TIGRE, a river of South America, in the government of the Caraccas, and province of Cumana, which falls into the Guarapiche.

TIGRE, a river of Quito, in the province of Chimbo, which runs very rapidly north, until it unites itself with the Tinto and the San Christoval, and enters the Ojiva. Lat. 1. 46. N.

TIGRE, a small island of the Pacific ocean, near the coast of the province and government of Nicaragua.

TIGRE, a small island of the Pacific ocean, in the gulf of Panama, near the island of Otoque.

TIGRESS, *s.* The female of the tiger.—It is reported of the *tigress*, that several spots rise in her skin when she is angry. *Addison*.

TIGRIS, a large and celebrated river of Western Asia, flowing along the boundaries of the Turkish and Persian empires. It rises in the mountains of Armenia, about 50 miles to the north of Diarbekir, and 15 to the east of the source of the Euphrates.

TIGRIS, or **BOCCA TIGRIS**, the name given to a branch of the river of Canton, formed by an island, near its junction with the sea. Canton itself lies on the Eastern side of this branch, to the entrance only of which European vessels are allowed to proceed.

TIGRISH, *adj.* Resembling a tiger.—Let this thought thy *tigrish* courage pass. *Sidney*.

TIGUA, a river of Quito, in the province of Esmeraldas, which runs north-west, and enters the Toachi, in lat. 19. S.

TIGUA, a point of land in New Granada, on the coast of the province of Carthagen.

TIGUARA, a river of Portuguese Guiana, which enters the Negro.

TIGUIL, a river of Kamtschatka, which rises in the district of Niznei Kamtschatka, and falls into the Penjinskaia gulf.

TIHANY, a small town of the south-west of Hungary, on a peninsula on the lake Balaton, with a fortified castle, and a Benedictine abbey; 12 miles south-by-west of Veszprim.

TIHARA, a town of Hindostan, province of Delhi, belonging to the Seiks. Lat. 30. 48. N. long. 75. 21. E.

TIHOE, a bay on the south coast of the island of Bourou. Lat. 3. 44. S. long. 126. 27. E.

TIIB, EL, a small town of Khusistan, in Persia, on the river Karoon; 140 miles south-east of Bagdad.

TIJELENKING, or **CHILLINGCHING**, a small Malay village in the island of Java, on the west coast, intersected by a river; 10 miles east of Batavia.

TIKE, *s.* [*tik*, Swedish; *teke*, Dutch; *tique*, Fr.] The louse of dogs or sheep. See **TICK**.—Lice and *tikes* are bred by the sweat close kept, and somewhat aerefyed by the hair. *Bacon*.—A dog; a cur. [*tijk*, Runic, a little or worthless dog.]

Avant, you curs!—

Hound or spaniel, brache or lym,
Or bobtail *tike*, or trundle-tail. *Shakspeare.*

A clown; a vulgar person; a blunt or queer fellow: a northern word.

If you can like
A Yorkshire *tike*.

H. Carey.

TIKITHOCKTHOCK, a settlement on the east coast of Labrador. Lat. 56. 15. N. long. 60. 5. W.

TIKOV, a town of Bengal, district of Ramghur. It is advantageously situated at the junction of four roads, and formerly possessed a small fort. Lat. 23. 29. N. long. 84. 85. E.

TIL, a village of Aderbijan, in Persia; 60 miles north-west of Tauris.

TILBROOK, a parish of England, in Bedfordshire; 14 miles north-by-east of Bedford.

TILBURG, an inland town of the Netherlands, in the province of North Brabant, with a large castle, and about 10,000

10,000 inhabitants; 14 miles east of Breda, and 15 south-west of Bois le Duc.

TILBURY, EAST, a village and parish of England, in the county of Essex. On the bank of the Thames, in this parish opposite Gravesend, is Tilbury fort, originally built as a kind of block-house by Henry VIII., but enlarged into a regular fortification by Charles II. in the year 1667, after the Dutch fleet had sailed up the river, and burned three English men of war at Chatham. At the place intended for the water bastion, which was never built, stands a high tower erected by queen Elizabeth, called the block-house. Various additions have been made to this fort, which is now mounted with a great number of guns, and strongly garrisoned; 22½ miles south-by-west of Chelmsford, and 28 east-by-south of London.

TILBURY, WEST, a parish adjoining to the above. It appears to have been an episcopal seat of Cedda, bishop of the East Saxons, who, some time in the 7th century, spread the Christian religion in this country, and built churches in several places.

TILBURY, a parish of England, in Essex; 4 miles north-north-west of Castle Hedingham.

TILCAXETE, a settlement of Mexico, in the intendency of Oaxaca, containing 260 Indian families.

TILDIZ DAGH, a mountain of Asiatic Turkey; 10 miles south of Tokat.

TILDSLEY, a township of England, in Lancashire; 8 miles north-east-by-east of Newton in Makersfield. Population 3492.

TILE, *s.* [tile, Saxon; *tegel*, Dutch; *tuile*, Fr.; *tegola*, Italian.] Thin plates of baked clay used to cover houses.—In at the window he climbs, or o'er the tiles. *Milton.*

To **TILE**, *v. a.* To cover with tiles.

Sonnets or elegies to Chloris

Might raise a house above two stories;

A lyric ode wou'd slate; a catch

Wou'd *tile*, an epigram wou'd thatch.

Swift.

To cover as tiles.

The rafters of my body, bone,
Being still with you, the muscle, sinew and vein,
Which *tile* this house, will come again.

Donne.

TILEHURST, a parish of England, in Berkshire; 2½ miles west of Reading. Population 1521.

TILE-KILN-GREEN, a hamlet of England, in the parish of Great Hallingbury, Essex.

TILER, *s.* [*tuilier*, Fr.] One whose trade is to cover houses with tiles.—A Flemish *tiler*, falling from the top of a house upon a Spaniard, killed him; the next of blood prosecuted his death, and when he was offered pecuniary recompence, nothing would serve him but *lex talionis*; whereupon the judge said to him, he should go up to the top of the house, and then fall down upon the *tiler*. *Bacon.*

TILEY, a hamlet of England, in the parish of Great Mintern, Dorsetshire.

TILGHMAN'S ISLAND, an island of the United States, in the Chesapeak, Maryland, at the mouth of the Choptank, containing about 1720 acres.

TILGUN, a village of Asiatic Turkey; 36 miles east-north-east of Akshehr.

TILIA [of Pliny, &c. Derivation uncertain], in Botany, a genus of the class polyandria, order monogynia, natural order of columniferae, tiliaceae (*Juss.*)—Generic Character. Calyx: perianth five-parted, concave, coloured, almost the size of the corolla, deciduous. Corolla: petals five, oblong, obtuse, crenate at the tip. Stamina: filaments numerous (thirty and more), awl-shaped, length of the corolla. Anthers simple. Pistil: germ roundish. Style filiform, length of the stamens. Stigma a blunt pentagon. Pericarp: capsule coriaceous, globular, five-celled, five-valved, opening at the base. Seeds solitary, roundish.—*Essential Character.* Calyx five-parted. Corolla five-petalled. Capsule coriaceous, globular, five-celled, five-valved, opening at the base, one-seeded.

1. *Tilia Europaea*, or European lime tree.—Flowers destitute of a nectary, leaves cordate, at the branches of the veins villose underneath. The lime or linden is a tall upright tree, with smooth spreading branches. There are six varieties.—Native of Europe.

Lime-tree wood is turned into light bowls and dishes, and into boxes for the apothecaries. With the twigs they make baskets and cradles. Formerly the bark was used for writing tablets. Shoemakers make dressers of the plank to cut leather on. The truncheons make a far better coal for gunpowder than that of alder itself; and also scribbles for painters' first draughts. The wood is soft, light and smooth, close grained, and not subject to the worm. The most elegant use to which it is applied, is for carving. Many of Gibbons's beautiful works in lime-tree are dispersed about the kingdom, in our churches and palaces; as in the choir of St. Paul's, the Duke of Devonshire's at Chatsworth, Trinity College Library at Cambridge, &c.

2. *Tilia Americana*, or broad-leaved American lime tree.—Flowers furnished with nectaries; leaves deeply cordate, sharply serrate, smooth. This was brought from New England by the name of black lime; the branches being covered with a dark brown bark.—Native of Virginia and Canada.

3. *Tilia pubescens*, or pubescent Carolina lime tree.—Flowers furnished with nectaries; leaves truncate at the base, oblique, toothlet-serrate, pubescent underneath. This tree seems to be of much smaller growth than either of the former; the branches spread more horizontally.—Native of Carolina.

4. *Tilia alba*, or white lime tree.—Leaves deeply cordate, subsinuate, toothed, tomentose underneath.—Native of North America.

Propagation and Culture.—All these trees are easily propagated by layers, which in one year will take good root, and may then be taken off, and planted in a nursery, at four feet distance row from row, and two feet asunder in the rows. The best time to lay them down and to remove them, is at Michaelmas, or soon after, when their leaves begin to fall, that they may take root before the frost comes on, though they may be laid and transplanted any time from September to March, in open weather; but if the soil is dry, it is much the better way to remove them in autumn, because it will save a great expense in watering them, especially if the spring should prove dry.

TILING, *s.* The roof covered with tiles.—They went upon the house-top, and let him down through the *tiling* with his couch before Jesus. *St. Luke.*

TILKERODE, a village of Germany, in the principality of Anhalt Bernburg, with large iron-works.

TILL, *s.* [*tul*, Pers. bursa sartorum; seu pera, in qua digitalia, acum, fila, conduit. *Lyc.*] A money-box in a shop; a tiller.

They break up counters, doors, and *tills*,
And leave the empty chests in view.

Swift.

TILL, *prep.* [til, Sax.] To the time of.

Unhappy slave, and pupil to a bell,

Unhappy *till* the last, the kind releasing knell.

Cowley.

To. North. *Ray, and Grose.*—She that buylded a college royall to the honour of the name of Crist Jhesu, and lefte *till* her executours another to be buylded to maynteyn his fayth and doctrine. *Bp. Fisher.*

TILL now. To the present time.—Pleasure not known *till now.* *Milton.*

TILL then. To that time.—The earth *till then* was desart. *Milton.*

TILL, conjunction. To the time when.

Woods and rocks had ears

To rapture, *till* the savage clamour drown'd
Both harp and voice.

Milton.

To the degree that.—Goddess, spread thy reign *till* Isis elders reel. *Pope.*

To **TILL**, *v. a.* [tilan, Saxon; *teelen*, Dutch.] To cultivate; to husband: commonly used of the husbandry of the plow.

This

This paradise I give thee, count it thine,
To *till*, and keep, and of the fruit to eat.
Send him from the garden forth, to *till*
The ground whence he was taken.

Milton.

Milton.

The husbandman *tilleth* the ground, is employed in an honest business that is necessary in life, and very capable of being made an acceptable service unto God. *Law*.—To procure; to prepare. [This is the primary meaning of the Sax. verb. *tilian*.]

Nor knows he how to digge a well,

Nor neatly dresse a spring :

Nor knows a trap or snare to *till*.

W. Browne.

TILL, a river of England, in the county of Northumberland, which rises among the Cheviot hills, runs southwards to Chillingham, and thence westwards, and falls into the Tweed; 2 miles below Coldstream.

TILLABLE, *adj.* Arable; fit for the plow.—The *tillable* fields are so hilly, that the oxen can hardly take sure footing. *Carew*.

TILLÆA [so named by Micheli, in honour of Michael Angelo Tilli, M.D. F.R.S., born 1653, professor of Botany at Pisa], in Botany, a genus of the class tetrandria, order tetragynia, natural order of succulentæ, sempervivæ (*Juss.*)—Generic Character. Calyx: perianth four-parted, flat; segments ovate, large. Corolla: petals four, ovate, acute, flat, commonly smaller than the calyx. Stamina: filaments four, simple, shorter than the corolla. Anthers small. Pistil: germs four. Styles simple. Stigmas obtuse. Pericarp: capsules four, oblong, acuminate, reflexed, length of the flower, opening longitudinally upwards. Seeds in pairs, ovate.—*Essential Character*. Calyx three or four-parted. Petals three or four, equal. Capsules three or four, many seeded.

1. *Tillæa aquatica*, or water tillæa.—Stem upright; leaves linear; flowers sessile. These plants are all annuals. The flowers are commonly four-cleft and four-stamened.—Native of Lapland, and very abundant near Upsal, where water stagnates on the mountains.

2. *Tillæa prostrata*, or prostrate tillæa.—Stem prostrate; leaves lanceolate; flowers peduncled; peduncles shorter than the leaf.—Native of Germany.

3. *Tillæa Vaillantii*, or Vaillant's tillæa.—Stem upright, dichotomous; leaves oblong, acute, shorter than the peduncled flower.—Native of France, in moist places.

4. *Tillæa Capensis*, or Cape tillæa.—Leaves somewhat oblong; flowers four-cleft.—Native of the Cape of Good Hope.

5. *Tillæa perfoliata*, or perfoliate tillæa.—This and two following are also natives of the Cape.

6. *Tillæa umbellata*, or umbelled tillæa.—Leaves subpetioled, ovate, obtuse, entire; stem capillary, upright; flowers umbelled.

7. *Tillæa decumbens*, or decumbent tillæa.—Decumbent; leaves awl-shaped; petals shorter than the calyx.

8. *Tillæa muscosa*, or mossy tillæa.—Stems procumbent; flowers sessile, mostly trifid.—Native of Italy, Sicily, France and England, in dry, barren, sandy and gravelly soil; flowering from the end of May to October.

Although this plant is commonly triandrous, yet as the other species of tillæa have four stamens, it must continue with them in the fourth class, where Linnæus has placed them.

TILLAGE, *s.* Husbandry; the act or practice of plowing or culture.—*Tillage* will enable the kingdom for corn for the natives, and to spare for exportation. *Bacon*.

Bid the laborious hind,

Whose harden'd hands did long in *tillage* toil,

Neglect the promis'd harvest of the soil.

Dryden.

TILLANDSIA [so named by Linnæus, in memory of Tillandsius, professor of physic at Abo], in Botany, a genus of the class hexandria monogynia, natural order of corollariæ, bromeliæ (*Juss.*)—Generic Character. Calyx: perianth one-leaved, trifid, oblong, erect, permanent; segments oblong-lanceolate, acuminate. Corolla tubular, one-petalled; tube long, ventricose; border trifid, obtuse, erect, small. Stamina: filaments six, as long as the tube of the corolla. Anthers acute, in the neck of the corolla, incumbent. Pistil: germ oblong, acuminate both ways. Style filiform, length of the stamens. Stigma trifid, obtuse. Pericarp: capsule long, obtusely three-cornered, acuminate, one or two-celled, three-valved. Seeds many, fastened to a very long capillary pappus.—*Essential Character*. Calyx trifid, permanent. Corolla trifid, bell-shaped. Capsules one-celled. Seeds comose.

1. *Tillandsia utriculata*, or bottle tillandsia.—Many brown fibrils encompass the arms, or take firm hold on the bark of the trunk of trees, not as misleto, entering the bark or wood to suck nourishment, but only weaving and matting themselves among one another, and thereby making to the plant a firm and strong foundation, whence rise several leaves on every side, like those of aloes or ananas, which has given occasion to its name of wild pine. They are folded or inclosed one within another, each three feet and a half long, and three inches broad at the base, but ending in a point, having a very hollow or concave inward side, and a round or convex outward one, forming a bason or cistern, containing about a quart of water, which in the rainy season falls upon the upper parts of the spreading leaves, and being conveyed down them by channels, lodges in the bottom as in a bottle; for the leaves having swelled out at the base, bend inwards close to the stalk, thus hindering the evaporation of the water by the heat of the sun. From the midst of the leaves rises a round, smooth, straight, green stalk, three or four feet high, having many branches, and when wounded yielding a clear white mucilaginous gum. The flowers come out here and there on the branches. Dampier says he has many times to his great relief stuck his knife into the leaves just above the roots, and let out the water into his hat.—Native of South America.

2. *Tillandsia serrata*, or serrate-leaved tillandsia.—Leaves serrate-spiny above; spike comose.—This is also a native of South America, and common in Jamaica.

3. *Tillandsia lingulata*, or tongue-leaved tillandsia.—Leaves lanceolate-tongue-shaped, quite entire, ventricose at the base.—Native of South America, Jamaica and Martinico, where it is called ananas-de bois, or wood pine-apple.

There are, besides, in this genus, the following:—*Tillandsia tenuifolia*. *Tillandsia flexuosa*. *Tillandsia setacea*. *Tillandsia paniculata*. *Tillandsia fasciculata*. *Tillandsia nutans*. *Tillandsia polystachya*. *Tillandsia monostachya*. *Tillandsia pruinosa*. *Tillandsia canescens*. *Tillandsia angustifolia*. *Tillandsia recurvata*. *Tillandsia usneoides*.

TILLE CHATEL, a small town in the east of France, in Burgundy, situated on a hill watered by the small rivers Tille and Ignon. Population 1000.

TILLEMANS (Peter), was born at Antwerp in 1684, and visited England in 1708, where he attracted attention by his excellent copies from the pictures of Bourgognone and Teniers, of whose works he preserved the freedom and spirit. He also painted landscapes, with small figures, views of gentlemen's seats, sea-ports, &c. and met with very considerable employment. The duke of Devonshire favoured him, and for him he painted a picture of Chatsworth, which gained him considerable eclat. He died here in 1734.

INDEX TO THE ARTICLE SPAIN.

ALBUERA, battle of, *page* 421.
 Angouleme, duke of, enters Spain at the head of the French army, 431.
 Auto-da-fé, 445.
