UNIVERSAL DICTIONARY

OF

ARTS, SCIENCES, AND LITERATURE.

S E E

SEE, *s.* [*sedes*, Lat.] The seat of episcopal power; the diocese of a bishop: formerly, the seat of power in a general sense.—Jove laugh'd on Venus from his sov'rainyne *see*. *Spenser*.

You, my lord archbishop,
Whose *see* is by a civil peace maintain'd. *Shakspeare*.

To **SEE**, *v. a.* preter. *I saw*; part. pass. *seen*. [*reon*, Saxon; *sien*, Dutch.] To perceive by the eye.—It was a right answer of the physician to his patient, that had sore eyes: if you have more pleasure in the taste of wine than in the use of your sight, wine is good for you; but if the pleasure of *seeing* be greater to you than that of drinking, wine is naught. *Locke*.—*I see* her sober over a sampler. *Pope*.—To observe; to find.

Such command we had,
To *see* that none thence issu'd forth a spy. *Milton*.

To discover; to descry.

Who is so gross
As cannot *see* this palpable device?
Yet who so bold but says he *sees* it not?
When such ill dealings must be *seen* in thought. *Shakspeare*.

To converse with.—The main of them may be reduced to language, and to an improvement in wisdom and prudence by *seeing* men, and conversing with people of different tempers and customs. *Locke*.

To **SEE**, *v. n.* To have the power of sight; to have by the eye perception of things distant.—Air hath some secret degree of light; otherwise cats and owls could not *see* in the night. *Bacon*.—To discern without deception; with *through*.—Many sagacious persons will find us out, will look under our mask, and *see through* all our fine pretensions, and discern the absurdity of telling the world that we believe one thing when we do the contrary. *Tillotson*.—To inquire; to distinguish.—*See* whether fear doth make thee wrong her. *Shakspeare*.—To be attentive.

Mark and perform it, *see'st* thou; for the fail
Of any point in't shall be death. *Shakspeare*.

Let me *see*, is synonymous with let me consider.

To **SEE** *to*. To behold; to look at.

A certain shepherd lad,
Of small regard to *see to*. *Milton*.

SEE, *interj.* [Originally the imperative of the verb *see*.]
Lo; look; observe; behold.

See, see! upon the banks of Boyne he stands,
By his own view adjusting his commands. *Halifax*.

See! the sole bliss Heav'n could on all bestow,
Which who but feels can taste, but thinks can know? *Pope*.

See what it is to have a poet in your house. *Pope*.

VOL. XXIII. No. 1550.

S E E

SEE AMOL, a small island in the Eastern seas, near the east coast of Borneo. Lat. 5. 27. N. long. 118. 48. E.

SEEASSEE, a small island in the Sooloo archipelago. It is a high island, well wooded, but cleared in many places, and inhabited, and supplied with water. It yields many cowries and small baat, named Seeassee. Lat. 5. 25. N. long. 120. 50. E.

SEEBAH, a town of Hindostan, province of Lahore, and capital of a small district of the same name, belonging to the Seiks. It is fortified, and situated on the bank of a small river. Lat. 31. 39. N. long. 75. 34. E.

SEE BANGOG, a small island in the Eastern seas, near the east coast of Borneo. Lat. 4. 18. N. long. 118. 24. E.

SEE BEEROO, or **SI BIRU ISLE**, an island on the west coast of Sumatra, about 70 miles in length by 10 in average breadth. It lies between the 1st and 2d degrees of south lat., and the 98th and 99th of east long. This island has been commonly omitted in our charts, or denoted to be uncertain. It is inhabited by the Mantaway race, and the inhabitants both of Si Pora and the Pogy isles, consider it as their parent country; but they are, notwithstanding, generally in a state of hostility; and in 1783, no intercourse existed between them. The inhabitants are distinguished only by some variety of the patterns in which their skins are tattooed. This island is rendered conspicuous from a distance, by a volcano mountain.

SEEBERG, a hill of Upper Saxony, to the west and south-west of Gotha, with a celebrated astronomical observatory, in long. 10. 44. 0. E. lat. 50. 56. 8. N.

SEEBGUNGE. There are several towns of this name in the provinces of Bahar and Bengal, &c., but none of any importance.

SEEBURG, a village of Prussian Saxony, situated between the Mansfeld lakes, the one of which has fresh, the other salt water, produced by brine springs; 11 miles west of Halle.

SEEBURG, a small town of East Prussia; 50 miles south of Königsberg. Population 1300. Lat. 53. 57. 54. N. long. 20. 45. 30. E.

SEED, *s.* [ræb, Saxon; *seed*, Danish; *sæd*, Dutch.] The organized particle produced by plants and animals, from which new plants and animals are generated.

If you can look into the *seeds* of time,
And say which grain will grow and which will not,
Speak them to me. *Shakspeare*.

Did they ever see any herbs, except those of the grass-leaved tribe, come up without two *seed* leaves; which to me is an argument that they came all of *seed*, there being no reason else why they should produce two *seed* leaves different from the subsequent. *Ray*.—First principle; original.—The *seed* of whatsoever perfect virtue groweth from us, is a right opinion

opinion touching things divine. *Hooker*.—Progeny; offspring; descendants.

Next him king Lear in happy peace long reign'd;
But had no issue male him to succeed,
But three fair daughters which were well uptrain'd
In all that seemed fit for kingly *seed*.

Spenser.

Race; generation; birth.

Of mortal *seed* they were not held,
Which other mortals so excell'd;
And beauty too in such excess,
As your's, Zelinda! claims no less.

Waller.

To SEED, *v. n.* To grow to perfect maturity so as to shed the seed.

Whate'er I plant, like corn on barren earth,
By an equivocal birth,
Seeds and runs up to poetry.

Swift.

To shed the seed.—It hath already floured, so that I feare it will shortly *seede*. *Lyte's Herbal*.

SEE'D-CAKE, *s.* A sweet cake.

Remember, wife,

The *seed-cake*, the pasties, and furmenty pot. *Tusser*.

SEE'DED, *adj.* Bearing seed; covered thick with seeds. Some hollow tree, or bed Of *seeded* nettles. *Fletcher*.

Interspersed as with seeds.—A blue mantle *seeded* with stars. *B. Jonson*.

SEE'DER, *s.* [*æbepe*, Sax. *seminator*.] One who sows.

SEEDGHUR, a celebrated fortress of Hindostan, province of Bejapore. This place was taken from the Mahrattas by the British in the month of March 1818, with scarcely any loss.

SEE'DLING, *s.* A young plant just risen from the seed.—Carry into the shade such *seedlings* or plants as are for their choiceness reserved in pots. *Evelyn*.

SEE'DLIP, or SEE'DLOP, *s.* [*æð-læp*, Saxon.] A vessel in which the sower carries his seed.

SEE'DNESS, *s.* Seedtime; the time of sowing.

Blossoming time

From the *seedness* the bare fallow brings
To teeming foison. *Shakspeare*.

SEE'DPEARL, *s.* Small grains of pearl.—In the dissolution of *seedpearl* in some acid menstruum, if a good quantity of the little pearls be cast in whole, they will be carried in swarms from the bottom to the top. *Boyle*.

SEE'DPLOT, *s.* The ground on which plants are sowed to be afterwards transplanted.—To counsel others, a man must be furnished with an universal store in himself to the knowledge of all nature: that is, the matter and *seedplot*; there are the seats of all argument and invention. *B. Jonson*.

SEE'DSMAN, *s.* The sower; he that scatters the seed.

The higher Nilus swells

The more it promises: as it ebbs, the *seedsman*

Upon the slime and ooze scatters his grain,

And shortly comes to harvest. *Shakspeare*.

One that sells seeds.

SEE'DTIME, *s.* [*Sax. æð-tima*.] The season of sowing.—If he would have two tributes in one year, he must give them two *seedtimes*, and two harvests. *Bacon*.

Day and night,

Seedtime and harvest, heat and hoary frost,
Shall hold their course, till fire purge all things. *Milton*.

SEE'DY, *adj.* Abounding with seed.

SEEDY ABDEL ABBUS, a village of Tunis, anciently called *Musti*, and where there are still the remains of a beautiful triumphal arch; 16 miles north-east of Keft.

SEEDY ABDELMOUMEN, a small sea-port of Tlemsan, in Algiers, on the coast of the Mediterranean, with a small but good road for vessels. It takes its name from a celebrated prophet, whose tomb the inhabitants hold in great veneration.

SEEDY ABDULLAH, a small sea-port of Morocco, on the coast of the Atlantic; 30 miles north of Mogodor.

SEEDY ABID, a noted sanctuary of Tlemsan, in Algiers, at the conflux of the Arhew and the Shelliff; 30 miles east of Mustygannim.

SEEDY BOSGANNIM, a village of Tunis; 40 miles south-west of Keft.

SEEDY BUSOROCTON, a small sea-port of Morocco, on the coast of the Atlantic; 10 miles north of Mogodor.

SEEDY DOUDE, a sanctuary of Tunis, in Africa, situated at the northern extremity of the peninsula of Dakkul, surrounded with the ruins of the ancient Misua. It received its present name in honour of Doude, or David, a Moorish saint. The people shew a cavity, five yards long, which they pretend to be his sepulchre, though Dr. Shaw is convinced that it is nothing more than a fragment of some Roman *prætorium*. He founds this belief on three tessellated or Mosaic pavements, bearing marks of being the workmanship of that people. They are wrought with the greatest symmetry and exactness; for besides the general design, executed in a great variety of shapes and colours, the many figures of horses, birds, fishes and trees, are so judiciously intermixed and curiously inlaid, that they appear superior to tolerable paintings; 150 miles north-east of Tunis.

SEEDY EESAII, a village of Algiers, anciently called Sava; 25 miles south of Boujeiah.

SEEDY MEDDUB, a village of Tunis, in Africa; 20 miles north of Gabs.

SEEDY NEDJA, a village of Algiers; 26 miles east of Burg Hamza.

SEEDY OCCUBA, a village of the Bled-el-Jereede, to the south of Algiers, on which it is dependent. It is famous for the tomb of an Arabian general of that name, and for that of Seedy Lascar, its tutelary saint; 15 miles south east of Biscara.

SEEDY TERJE, a cape of Algiers, on which is situated a sanctuary, with some Roman ruins.

SEEFELD, a small town of Lower Austria; 39 miles north-by-west of Vienna. Population 1200.

SEEHAUSEN, a small town of Prussian Saxony, in the duchy of Magdeburg, with 1700 inhabitants; 15 miles west of Brandenburg.

SEEHAUSEN, another small town of Prussian Saxony, in the government of Magdeburg, completely surrounded by the river Aland. Population 2100; 70 miles west-north-west of Berlin.

SEEHEIM, a village in the west of Germany, in the grand duchy of Hesse; 7 miles south of Darmstadt, with 800 inhabitants.

SEE'ING, *s.* Sight; vision.—Love adds a precious *seeing* to the eye. *Shakspeare*.

SEE'ING, or SEE'ING *that, adv.* Since; sith; it being so that.—*Seeing* every nation affords not experience and tradition enough for all kind of learning, therefore we are taught the languages of those people who have been most industrious after wisdom. *Milton*.

To SEEK, *v. a.* pret. *I sought*; part. pass. *sought*. [*recan*, Sax.; *soecken*, Dutch; *soekia*, Icel.; *sokja*, M. Goth.] To look for; to search for: often with *out*.—He did range the town to *seek* me out. *Shakspeare*.

I have a venturous fairy, that shall *seek*

The squirrel's hoard, and fetch thee thence new nuts.

Shakspeare.

To solicit; to endeavour to gain.—The young lions roar after their prey, and *seek* their meat from God. *Ps.*—To go to find.

Let us *seek* death, or, he not found, supply
His office. *Milton*.

Since great Ulysses *sought* the Phrygian plains,
Within these walls inglorious silence reigns. *Pope*.

To pursue by machinations.

I had a son,

Now outlaw'd from my blood; he *sought* my life.

Shakspeare.

To SEEK, *v. u.* To make search; to make inquiry.—*Seek* ye out of the book of the Lord, and read. *Isa.*—To endeavour.

Ask not what pains, nor further *seek* to know
Their process, or the forms of law below. *Dryden.*

To make pursuit.—If thy brother's ox or sheep go astray, it shall be with thee until thy brother *seek* after it. *Deut.*—To apply to; to use solicitation.—All the earth *sought* to Solomon to hear his wisdom. *1 Kings.*—To endeavour after.—Being a man of experience, he wished by wisdom to order that which the young prince *sought* for by war. *Knolles.*

To SEEK. [An adverbial mode of speech.] At a loss; without measures, knowledge, or experience.—Being brought and transferred from other services abroad, though they be of good experience in those, yet in these they will be new to *seek*; and before they have gathered experience, they shall buy it with great loss to his majesty. *Spenser.*—Unpractis'd, unprepar'd, and still to *seek.* *Milton.*

But they misplace them all;
And are as much to *seek* in other things,
As he that only can design a tree,
Would be to draw a shipwreck. *Roseomon.*

SEEKER, *s.* One that seeks; an inquirer.—A language of a very witty volatile people, *seekers* after novelty, and abounding with variety of notions. *Locke.*—The name of a sect which professed no determinate religion.—Sir Henry Vane—set up a form of religion in a way of his own; yet it consisted rather in a withdrawing from all other forms, than in any new or particular opinions or forms; from which he and his party were called *seekers.* *Burnet.*

SEEKHONK, a name applied to Pawtucket river, in the United States, below Pawtucket bridge and falls, to its junction with Providence river, a distance of 4 or 5 miles.

SEEKHONK, a post township of the United States, in Bristol county, Massachusetts, on the east side of Pawtucket or Seekhonk river, opposite North Providence; 38 miles south-south-west of Boston.

SEEK-SORROW, *s.* One who contrives to give himself vexation. *Unused.*

Afield they go, where many lookers be,
And thou *seek-sorrow*, Klaius, them among:
Indeed thou saidst it was thy friend to see,
Strephon, whose absence seem'd unto thee long. *Sidney.*

To SEEL, *v. a.* [*siller les yeux*, “to seel or sew up the eyelids; and hence, also, to hoodwink, blind, keep in darkness, &c.” *Cotgrave.*] To close the eyes. A term of falconry; the eyes of a wild or haggard hawk being for a time seeled or closed.—Now she brought them to see a seeled dove, who the blinder she was, the higher she strave. *Sidney.*

Come, *seeling* night,
Scarf up the tender eye of pitiful day. *Shakespeare.*

Some ambitious men seem as screens to princes in matters of danger and envy; for no man will take such parts, unless he be like the seeled dove, that mounts and mounts, because he cannot see about him. *Bacon.*

To SEEL, *v. n.* [*gyllan*, Sax.] To lean on one side.—When a ship *seels* or rolls in foul weather, the breaking loose of ordnance is a thing very dangerous. *Ralegh.*

SEEL, or SEELING, *s.* The agitation of a ship in foul weather. *Ainsworth.*

At His command black tempests rise;
Then mount they to the troubled skies:
Thence sinking to the depths below,
The ship hulls as the billows flow:
And all aboard, at every *seel*,
Like drunkards on the hatches reele. *Sandys.*

SEEL, *s.* [*zæl*, Sax. *opportunitas.*] Season; time.—It is a fair *seel* for you to come at, i. e. a fair season or time: spoken ironically to them that come late. What *seel* of

day? i. e. what time of day? *Essex. Ray, and Grose.*—*Hay-seel*, hay-time; *barley-seel*, wheat-seel, bark-seel. *Norfolk. Grose.*

SEELAND, or ZEELAND, a village of the Netherlands, in North Brabant; 15 miles east of Bois le Duc. Population 900.

SEELAU, a large village of the interior of Bohemia, circle of Czaslau, remarkable for a large monastery, and for the topazes, agates and rock crystals occasionally excavated in the environs.

SEELBURG, or SCHASPELS, a small town in the north-west of European Russia, in the government of Courland, on the left bank of the Dwina, formerly the residence of the bishops of Semigalia; 58 miles south-east of Riga.

SEELINGAN, a small island in the Sooloo archipelago. Lat. 6. 4. N. long. 118. 15. E.

SEELOW, a small town of Prussia, in the Middle Mark of Brandenburg; 11 miles west of Kustrin, and 40 east of Berlin, containing 1300 inhabitants, part of whom are linen weavers.

SEELOWITZ, or ZIDLCHOWICE, a small town of the Austrian states, in Moravia, on the Schwarza; 12 miles south of Brunn. Population 1000.

SEELY, *adj.* [*zæly*, Sax. *happy, prosperous*; from *zæl*, *lucky time.*] Lucky; happy.

My *seely* sheep like well below,
For they been hale enough, I trow,
And liken their abode. *Spenser.*

Silly; foolish; simple; inoffensive.

If thee lust to holden chat
With *seely* shepheard's swayne,
Come downe, and learne the little what,
That Thomalin can sayne. *Spenser.*

Peacock and turkie, that nibbles off top,
Are very ill neighbours to *seely* poor hop. *Tusser.*

To SEEM, *v. n.* [Possibly from the Icel. *sacman*, to become; *zeimen*, Germ. the same. *Todd.*] To appear; to make a show; to have semblance.

My lord, you've lost a friend, indeed;
And I dare swear, you borrow not that face
Of *seeming* sorrow; it is sure your own. *Shakespeare.*

So spake the Omnipotent; and with his words
All *seem'd* well pleas'd; all *seem'd*, but were not all. *Milton.*

To have the appearance of truth.—It *seems* to me, that the true reason why we have so few versions which are tolerable, is because there are so few who have all the talents requisite for translation. *Dryden.*—In *Shakespeare*, to *seem*, perhaps, signifies to be beautiful. *Dr. Johnson.*—Rather, *specious.* *Steevens.*

Sir, there she stands:
If aught within that little *seeming* substance
May fitly like your grace,
She's there, and she is your's. *Shakespeare.*

Pluck the borrowed veil of modesty from the so *seeming* mistress Page. *Shakespeare.*

It SEEMS: it appears; or it is used ironically to condemn the thing mentioned, like the Latin *scilicet*, or the old English *forsooth*. *Id mihi datur negotii scilicet.*

The raven, urg'd by such impertinence,
Grew passionate, it *seems*, and took offence. *Addison.*

Here's another discontented paper,
Found in his pocket too; and this, it *seems*,
Rodorigo meant to have sent. *Shakespeare.*

SEE-MA-KOANG, a Chinese mandarin and philosopher of the eleventh century, who enjoyed the favour of the emperor, and had several important places, which he resigned, and retired to a solitary place, where he wrote a history of China, commencing at the 403d year before the Christian era. He was author likewise of some moral treatises.

SEE/MER, *s.* One that carries an appearance. *Angelo*

Angelo scarce confesses
That his blood flows, or that his appetite
Is more to bread than stone: hence shall we see,
If pow'r change purpose, what our *seemers* be. *Shakspeare.*

SEE'MING, *s.* Appearance; show; semblance.

All good *seeming*,
By thy revolt, oh husband, shall be thought
Put on for villainy. *Shakspeare.*

Fair appearance.

For you there's rosemary and rue; these keep
Seeming and savour all the Winter long. *Shakspeare.*

Opinion.

His persuasive words impregn'd
With reason to her *seeming*. *Milton.*

SEE'MINGLY, *adv.* In appearance; in show; in semblance.

To this her mother's plot,
She *seemingly* obedient, likewise hath
Made promise to the doctor. *Shakspeare.*

They to their viands fell, not *seemingly*
The angels, nor in mist. *Milton.*

SEE'MINGNESS, *s.* Semblance; appearance.—Hypocrisy will obstruct, and put in a prejudice against all things, under the *seemingness* or appearance of evil, which are not only allowed of God, but necessary. *Bp. Taylor.*

SEE'MLESS, *adj.* Unseemly; indecorous.

Thence he her drew
By the faire lockes, and fowly did array
Withouten pity of her goodly hew,
That Artegall himselfe her *seemlesse* plight did rew. *Spenser.*

SEE'MLILY, *adv.* Decently; comelily. *Unused. Hulot, and Sherwood.*

SEE'MLINESS, *s.* Decency; handsomeness; comeliness; grace; beauty.—When substantialness combineth with delightfulness, *seemliness* with portliness, and currentness with stayedness, how can the language sound other than full of sweetness? *Camden.*

SEE'MLY, *adj.* [*soommelig*, Danish; from *soome*, Icelandic, honour or decency.] Decent; becoming; proper; fit.

I am a woman, lacking wit
To make a *seemly* answer to such person. *Shakspeare.*

SEE'MLY, *adv.* In a decent manner; in a proper manner.

There, *seemly* rang'd in peaceful order, stood
Ulysses' arms, now long disus'd to blood. *Pope.*

SEE'MLYHED, *s.* Decent, comely appearance.

Damoselles two
Right yong, and ful of *semelyhede*. *Chaucer.*

SEEMO, a village of Kasson, in Central Africa.

SEEN, *adj.* Skilled; versed.

Petruchio shall offer me, disguis'd in sober robes,
To old Baptista as a schoolmaster
Well *seen* in musick. *Shakspeare.*

SEEND, or SEEN, a pleasantly situated village and parish of England, in Wiltshire, through which the high road to Bath passed till recently, when it was altered to avoid a steep hill. Population 876; 4 miles south-east of Melksham.

SEENGHOO, a town of the Birman empire. It is situated on the banks of the Irrawaddy river; 10 miles south of the city of Paghham.

SEEOB, a town of Hindostan, province of Malwah, belonging to the Mahrattas. It is pleasantly situated on the bank of a small river, and is surrounded by mangoe groves. Lat. 23. 12. N. long. 77. 10. E.

SEEPARRAN, a small island in the Eastern seas, near the east coast of Borneo. Lat. 4. 8. N. long. 118. 23. E.

SE'ER, *s.* [Sax. *sepepe*.] One who sees.—We are in hopes that you may prove a dreamer of dreams, and a *seer* of visions. *Addison.*—A prophet; one who foresees future events.

How soon hath thy prediction, *seer* blest!
Measur'd this transient world the race of time,
Till time stand fix'd? *Milton.*

SEER, *adj.* [*saer*, Su. Goth., an adverb signifying separation. *Ihre.*] Several. *Obsolete.*—They are gone *seer* ways.

SEER, a principality of Arabia, in the province of Ommun, extending from Cape Mussendoon, along the coast of the Persian gulf. It is called by the Persians, the country of Dsjulfar; and Europeans frequenting these seas have given this name to the Arabs who inhabit it. The Arabs, however, call it Seer, from the town of the same name, which has a good harbour, and is the seat of the Schiech. The country not long since acknowledged the sovereign authority of the Iman; but the Schiech has shaken off this dependance, and is often at war with his former masters. He makes some figure among the maritime powers in those parts, and his navy is one of the most considerable in the Persian gulf. His subjects are much employed in navigation, and carry on a pretty extensive trade.

SEERD, a village of Diarbekir, in Asiatic Turkey; 55 miles east of Diarbekir.

SEERDHUNA, a town of Hindostan, province of Delhi, and district of Merat. This place was assigned as a jagier to the infamous Somroo, a German, who, by command of the nabob Cossim Aly Khan, massacred the English prisoners at Patna, in the year 1763, by the Afghan chief named Nujif Khan. The territory, which is 20 miles long by 12 in breadth, is very fertile, and produces all kinds of grain, sugar, cotton, &c. After the death of Somroo, his wife succeeded him, not only in his possessions, but in the command of his army, and distinguished herself on various occasions. She now resides under the British protection at Delhi, having invested her property, which is considerable, in the government funds. Lat. 29. 11. N. long. 77. 28. E.

SEERPORE. There are a number of towns of this name in Hindostan, particularly in the provinces of Bahar and Bengal. It should probably be Sheerpore, which may either signify, "abounding with milk or tigers."

SEE'RWOOD, *s.* Dry decayed wood.

SEE'SAW, *s.* A reciprocating motion.

His wit all *seesaw*, between that and this;
Now high, now low, now master up, now miss,
And he himself one vile antithesis. *Pope.*

To SEE'SAW, *v. n.* To move with a reciprocating motion.—Sometimes they were like to pull John over, then it went all of a sudden again on John's side; so they went *seesawing* up and down, from one end of the room to the other. *Arbuthnot.*

SEESEN, a small town of Lower Saxony, in the duchy of Brunswick; 14 miles west of Goslar. It contains 2000 inhabitants, and has a brisk transit trade, carried on by the roads which pass through the town from different parts of the country.

SEESUCUNDA, a village of Woolly, in Central Africa, on the frontier towards Tenda.

SEETACCOOND, a town of Bengal, district of Chittagong. There is here a warm spring, from which there frequently issues a flame, which the Hindoos consider as an emanation of the deity, and make offerings thereto. The water is very fine, and will keep without smelling for any length of time. Lat. 22. 37. N. long. 91. 36. E.—There is just such another place in the vicinity of Moughir, province of Bahar, and several others in different parts of Hindostan. They are all dedicated to Seeta, the wife of the demigod Ram.

To SEETHE, *v. a.* preterite *I sod* or *sethed*; part. pass. *sodden*. [*seōðan*, Saxon; *zieden*, Dutch; *seiden*, German; *σζειν* and *ζειν*, Gr. *Wachter.*] To boil; to decoct in hot liquor.—He coude roste, and *sethe*. *Chaucer.*—The Scythians used to *sethe* the flesh in the hide, and so do the northern Irish. *Spenser.*

To SEETHE, *v. n.* To be in a state of ebullition; to be hot.

The boiling baths at Cairbadon,
Which *see* the with secret fire eternally,
And in their entrails, full of quick brimstone,
Nourish the flames, which they are warm'd upon. *Spenser.*

SEETHER, *s.* A boiler; a pot.

The fire thus form'd, she sets the kettle on;
Like burnish'd gold the little *see*ther shone. *Dryden.*

SEETHING, or SENGES, a parish of England, in Norfolk; 10½ miles south-east of Norwich.

SEEWEE BAY, or BULL'S HARBOUR, on the coast of South Carolina, lies nearly at an equal distance south-west of Cape Roman, and north-east of Charleston, having several isles which form the bay.

SEEZ, an old town in the north of France, in Normandy, situated on the Orne, in the middle of an extensive and fertile plain. It is tolerably built, and has 5500 inhabitants. It is the see of a bishop, and has a good cathedral. Here are manufactures of woollens, cottons, fustians and stockings; also a traffic in country produce. Veins of manganese have been lately discovered in the neighbourhood; 14 miles north of Alençon, and 126 west of Paris. Lat. 48. 36. 23. N. long. 0. 10. 59. E.

SEEZ, a small river in the west of Normandy, which falls into the sea, to the west of Avranches.

SEFAIRY, a village of Greece, in Attica, near Marathon, at the foot of the mountain called Croton.

SEFAKIN, a small town of Yemen, in Arabia; 60 miles south-east of Loheia.

SEFATIANS, a sect of Mahometans, who held the opposite opinion to the Moatazalites, with respect to the eternal attributes of God.

SEFROI, a village of Fez, in Africa; 20 miles south-east of Fez.

SEFURA, a town of Foota, in Western Africa. Lat. 10. 30. N. long. 10. 25. W.

SEG, *s.* [*see*g, Saxon.] Sedge. Still a Gloucestershire word. It is also in the old Prompt. Parvulorum.—A place where *segges* do grow. *Barret.*

SEGAL, a small island on the north-west coast of France.

SEGA'R, *s.* [*cigarro*, Span.] A little roll of tobacco, smoked without a pipe. *Swinburne.*—Our hostess supplied us with plenty of fruit, and then obligingly smoked a *segar* with me. *Twiss.*

SEGARY, a village of England, in Wiltshire, situated on the Avon, south-east of Malmesbury.

SEGEBERG, a small town of Denmark, in Holstein, on the river Trave. It is built round the base of a high chalk or limestone hill, from the top of which there is a very extensive prospect. The lime obtained from this hill forms an important article of trade. Population 1400; 28 miles north-east of Hamburg. Lat. 53. 53. N. long. 10. 19. E.

SEGED, a village of Sennaar; 30 miles south of Sennaar.

SEGEDIN. See SZEGEDIN.

SEGERA, a village of Hedsjas, in Arabia; 5 miles south of Medina.

SEGERS, or SEGHERS (Gerard), an eminent painter, born at Antwerp, in 1589. He was first a pupil of Henry van Balen, but afterwards entered the school of Abraham Janssens, and had made considerable progress in the art when he went to Italy. On his arrival at Rome, he attached himself as a disciple to Bartolommeo Manfredi; and from him adopted a taste for the vigorous style of Michael Angelo Caravaggio. To the strength of contrast, which he thus adopted, he added somewhat of the tone and colour he had brought with him from his native country; producing the powerful effect of candle-light, though often falsely applied in subjects which appertain to the milder illumination of the day. By skilful productions of this nature, he acquired very considerable fame, and was at length invited by the cardinal Zapara, the Spanish ambassador at Rome, to accompany him to Madrid. He accepted the invitation, and was pre-

sented by the cardinal to the king, who received him in the most gracious manner, and engaged him in his service, with a considerable pension. He employed himself at Madrid in painting several historical subjects, and some musical conversation pieces, which were greatly admired; but after remaining there some years, the desire of revisiting his native country induced him to request permission to retire. His renown had reached Flanders, and his fellow-citizens were impatient to possess some of his productions; yet, when he had arrived there, and executed some paintings in his strong manner, they, whose eyes had been accustomed to the pure brilliant hues, and clear contrasts of Rubens and Vandyke, were unable to yield him that harvest of praise to which he had been accustomed, and he was obliged to change his manner, and adopt a more tender and agreeable style. The facility with which he effected this change, proves his power over the materials of the art, and his judgment in its principles; and many of his latter pictures bear evident testimony in support of his general ability. His most esteemed production is or was the principal altar-piece in the church of the Carmelites at Antwerp, the subject of which is the Marriage of the Virgin. Vandyke painted his portrait among the eminent artists of his country, which is engraved by Pontius. He died in 1651, aged 62.

SEGERS (Daniel), was the youngest brother of Gerard, and born at Antwerp in 1590. His taste leading him to design fruit and flowers, he was placed as a disciple with J. Brughel. At the age of 16 he entered the society of the Jesuits, and abandoned painting during his novitiate, but when that term expired, he obtained permission of his superior to visit Rome, where his brother was then flourishing with distinction; and he also acquired considerable celebrity, by the fidelity and skill with which he imitated the beauty and variety of those objects of creation, as flowers, plants and insects, which he chose for his models.

His productions were sought with avidity, and his talents were not unproductive even to his convent, which received valuable tributes in return for those ingenious and entertaining treasures of art. He appears, indeed, to have painted more for the benefit of the wily society to which he had attached himself, than for his private advantage; and when he had produced his most celebrated picture, at the command of the Prince of Orange, it was presented to that monarch in the name of the society, which was munificently recompensed in return. He frequently painted garlands of flowers, as borders for pictures, which were filled up with historical subjects by the first painters. He died at Antwerp in 1660, aged 70.

SEGESTA, the ancient EGESTA, a once celebrated city of Sicily, of which hardly a vestige now remains, except the ruins of a theatre, and a beautiful temple of Grecian structure; 6 miles from the town of Alcamo.

SEGESTAN. See SEISTAN.

SEGARS, in the manufacture of porcelain and pottery, are cases formed of coarser clays, but which are capable of sustaining the required heat without fusion; in which different kinds of earthenware are baked.

SEGHETTO, a large village of Austrian Dalmatia, on the Adriatic, between the towns of Spalatro and Trau.

SE/GMENT, *s.* [*segment*, Fr., *segmentum*, Lat.] A figure contained between a chord and an arc of the circle, or so much of the circle as is cut off by that chord.—Unto a parallel sphere, and such as live under the poles for half a year, some *segments* may appear at any time, and under any quarter, the sun not setting, but walking round. *Brown.*

SEGMENT of a Circle, in Geometry, a part of a circle, comprehended between an arc and its chord; or, it is a part of a circle comprehended between a right line less than a semi-diameter, and part of the circumference.

SEGMENT-LEAVES, a denomination given by botanists to those leaves that are cut and divided into many shreds, or slices, as fennel, &c.

SEGMENTUM, among the Romans, an ornament of lace used by the women on their shoulders, which, according to some, resembled our shoulder-knots.

Segmenta were likewise a kind of tessellated or Mosaic pavements, made up of pieces of various shapes and colours, but which had an uniform and regular arrangement.

SEGMOIDAL VALVES, are the little valves of the pulmonary artery.

SEGNI (Bernardo), an early Italian historian and man of letters, was born at Florence, about the close of the 15th century. He was educated at Padua, where he pursued with great assiduity the study of the Latin and Greek languages. He then engaged in legal pursuits, which were interrupted by a commission from his father to manage some commercial business at Aquila. Returning to Florence, he was employed in public affairs by the republic, and by duke Cosmo, who in 1541 sent him on an embassy to Ferdinand, king of the Romans. He was, in 1542, appointed consul of the university of Florence, then in very high reputation. He wrote a history of Florence from the year 1527 to 1555, which in every respect is considered as one of the best productions of the age. It was seen by no one during his life, and was not printed till the year 1713, when it appeared, together with a life of Niccolo Capponi, gonfalonier of Florence, Segni's uncle. This writer likewise translated into the Italian language several treatises of Aristotle, which were printed at Florence in 1549-50. He died in 1559.

SEGNI, a town of the Ecclesiastical States, in the Campagna di Roma, situated on a hill of the same name. It is the see of a bishop, and has a handsome cathedral. It is said that organs were first invented in this town; 25 miles south-east of Rome.

SE'GNITY, or **SE'GNITUDE**, *s.* [*segnitas*, Latin.] Sluggishness; inactivity.

SEGNONE, a lofty mountain of the Alps, in the north of Austrian Italy, near the lake of Como; 9200 feet above the level of the sea.

SEGO, a large city, capital of the kingdom of Bambarra, in Central Africa. For our knowledge of its existence, and for the description of it, we are chiefly indebted to Mr. Park, the celebrated traveller. It was here that he first came in view of the Niger, the object of his most anxious inquiry, and which flows through the middle of the city, dividing it into two parts. He found it flowing majestically to the eastward, as broad as the Thames at Westminster. This city is divided into four distinct towns, two of which are on the northern, and two on the southern bank. The former are called Sego Korro and Sego Boo, the latter Sego Soo Korro, and Sego See Korro. The last of these contains the residence of the sovereign. These towns are surrounded with high mud walls; the houses are built of clay, of a square form, with flat roofs; some of them have two stories, and many of them are white-washed. Moorish mosques also are seen in every quarter; and the streets, though narrow, are as broad as can serve any useful purpose in a country where wheel carriages are entirely unknown. According to the best information Mr. Park was able to collect, Sego may contain altogether about 30,000 inhabitants. There is a constant thoroughfare of boats upon the river, the boatmen employed upon which are slaves to the king, who exacts a share of their profits, and derives thence a considerable revenue, though the charge of passage is only ten cowries to each individual. The canoes are singularly constructed, being each formed of the trunks of two large trees, rendered concave, and joined together, not side by side, but endways, the junction being exactly across the middle of the canoe; they are therefore very long, and disproportionably narrow, and have neither decks nor masts; they are, however very roomy; and Mr. Park observed in one of them four horses and several people crossing the river. The view of this extensive city, the numerous canoes upon the Niger, and the cultivated state of the country, formed altogether a splendid prospect of civilization and magnificence. Though the sovereign be a negro, the Moors are numerous and powerful, and very hostile to Europeans. It was supposed to be through their influence, that the king, on learning the arrival of Mr. Park in Sego, sent him 5000 cowries, desiring him to leave the city and its vicinity. On Mr. Park's second

journey, he was not allowed to enter Sego at all, but was permitted to equip his vessel at Sansanding. Lat. 14. 10. N. long. 2. 30. W.

SEGNONET, a large town of the province of Samen, in Abyssinia.

SEGONZAC, a small town in the south-west of France, department of the Charente; 6 miles south-east of Cognac, and 15 west of Angouleme. Population 2500.

SEGORBE, a town in the east of Spain, in Valencia, on the river Murviedro, which takes here the name of Segorbe. It stands in a very pleasant spot, in a fertile valley, is surrounded by gardens, and a number of squares, churches and fountains. It is a bishop's see, founded in the sixth century. Its cathedral has some good paintings; but the best are to be found in the church of the nunnery, which is also the most elegant building in the town. The population, about 15,000, are partly employed in the manufacture of paper, starch and pottery. The chief natural curiosity in this quarter is a fountain near the town, so copious as to turn two mill wheels at its source. Segorbe does not appear to be the same with the ancient Segobria, or Saltibera; it lies 34 miles north-west of Valencia.

SEGOVIA, an inland province of Spain, in Old Castile, lying between the provinces of Madrid and Valladolid. Its territorial extent is 3650 square miles; its population 171,000. Being intersected by the mountain ranges of the Sierra de Guadarama and de Ayllon, it lies in general high. The soil is in many parts sandy or stony, though in some places there are rich tracks well watered, and of considerable fertility. The rivers are the Ebro, the Eresma, the Xarama, and the Duraton. The climate in the plains is mild; in the hills it is less so, but even there the sky is generally clear, and the air healthy. The principal products are corn, wine, hemp and flax. In the mountains are found copper, iron, antimony, also marble and porcelain earth. Sheep, however, form the staple commodity, and wool is the principal article of export. The manufactures are of little account, the chief being that of wool in the town of Segovia.

SEGOVIA, a considerable town in the interior of Spain, in Old Castile, situated on a rocky eminence, between two deep valleys. Its form is commonly compared to that of a ship with the stern towards the east. One of the valleys is watered by the river Eresma, the other by a brook. Segovia being a place of antiquity, is surrounded with a wall in the Moorish style, crowned at intervals with turrets; its circumference, owing to its oblong form, is between 3 and 4 miles, but the inhabitants do not at present exceed 10,000. The streets are narrow, crooked, and in several parts steep: the suburbs are built on more even ground.

Segovia is the chief place of a province, and the see of a bishop. It contains a number of convents and churches, of which the most remarkable is the cathedral, a large pile, partly Grecian, partly Gothic, erected in the 16th century. Among the other ecclesiastical buildings are the convent of the Carmelites, and that of the Capuchins, with a subterranean chapel. The Alcazar or ancient palace is a Moorish building; the apartments are incrustured with mosaic and other ornaments, which are still in the best preservation. It contains the statues of the princes who reigned in Asturias, Leon, and Castile, from the 8th to the 16th century, and serves occasionally for the confinement of state prisoners. But the most remarkable monument of Segovia is the aqueduct, a Roman work of great boldness and grandeur. It is built of freestone without cement; begins about 50 paces from the town, and after extending in a direction at first from north to south, afterwards from east to west, and distributing a copious supply of water to every part of the town, it terminates at the Alcazar. It contains in all 159 arches, supported on pillars, some of which are 80 feet in height.

Segovia, situated in the midst of the finest sheep pastures, has long been noted for its woollen manufactures. The quantity of cloth made at present is about 4000 pieces, coarse and fine, and it probably never was greater. The farther branches of industry are dyeing and the making of pottery, paper and lead. The town contains several hospitals

pitals and an artillery school; 47 miles north-north-west of Madrid.

SEGOVIA NUEVA, a town of the island of Lucon, founded in the year 1598, the see of a bishop, defended by a fort and garrison. It is situated near the north coast of the island, 250 miles north of Manila.

SEGOVIA NUEVA, a small city of Nicaragua, in Guatemala, on the shore of the Yare or Segovia, on the confines of the province of Honduras. It is a small town, and of scanty population; 90 miles north of Leon, and 400 from Mexico. Lat. 13. 45. N. long. 86. 30. W.

SEGOVIA NUEVA. See BARQUISIMETO.

SEGRAVE, a parish of England, in Leicestershire; 3 miles north-east of Mount Sorrel.

SEGRE, a petty town in the north-west of France, department of the Maine and Loire, situated at the angle formed by the junction of the small rivers Oudon and Verzee; 22 miles north-west of Angers.

SEGRE, a large river in the north-east of Spain, which rises among the Pyrenees, flows through Catalonia, and joins the Ebro near Mequinzenza. The Catalans call it Agnavaval.

SEGREANT, a term used in Heraldry for a griffin, when drawn in a leaping posture, and displaying his wings, as if ready to fly.

SEGREGATA, POLYGAMIA, in Botany, the last order of the class syngenesia, in which the flowers are doubly compound, each floret, or assemblage of florets, having a partial calyx.

To SE'GREGATE, *v. a.* [*segrego*, Lat., *segreger*, Fr.] To set apart; to separate from others. *Sherwood*.—*Segregating* heterogeneous bodies, and congregating those that are homogeneous. *Bp. Berkeley*.

SE'GREGATE, *part. adj.* Select.—A kind of *segregate* or cabinet senate. *Wotton*.

SEGREGATION, *s.* [*segregation*, Fr.] Separation from others.—To decline offences, to be careful and conscionable in our several actions, is a purity that every man ought to labour for; which we may well do, without a sullen *segregation*, from all society. *Feltham*.

SEGTON, a village of England, in Lancashire, situated on the Alt, near Crosby.

SEGUATANEIO, or CHEQUETAN, a harbour on the west coast of Mexico, which lies seven leagues west of the rocks of Seguataneio. Between this and Acapulco, to the east, is a beach of sand, of 18 leagues extent, against which the sea breaks so violently, that it is impossible for boats to land on any part of it; but there is a good anchorage for shipping at a mile or two from the shore during the fair season. The harbour of Chequetan is very hard to be traced, and of great importance to such vessels as cruise in these seas, being the most secure harbour to be met with in a vast extent of coast, yielding plenty of wood and water; and the ground near it is able to be defended by a few men. When Lord Anson touched here, the place was uninhabited.

SEGUIN, an island of the United States, on the coast of Maine. There is a light-house on this island, which has a repeating light so constructed as to disappear every minute and a half, which distinguishes it from Portland light. The island rises boldly from the sea into a high hill, about 3 miles from the mouth of Kennebeck river, and 4 east of Cape Small point. Lat. 43. 41. N. long. 69. 42. W.

SEGUENZA [Ital.] is a kind of hymn sung in the Roman church, generally in prose.

SEGUIERIA [so named in honour of Jean François Seguer, secretary to the academy of sciences at Nismes in Languedoc], in Botany, a genus of the class polyandria, order monogynia.—Generic Character. Calyx: perianth five-leaved, spreading; leaflets oblong, concave, coloured, permanent. Corolla none, unless the calyx be taken for it. Stamina: filaments very many, capillary, spreading, longer than the calyx. Anthers oblong, flattish. Pistil: germ oblong, compressed, at top membranaceous with one side thicker. Style very short, at the thicker side of the germ. Stigma simple. Pericarp capsule oblong, augmented

by a very large wing, on the straighter side thicker, with three little wings on each side at the base, one-celled, not opening. Seed one, oblong, smooth.—*Essential Character*. Calyx five-leaved. Corolla none. Capsule one-seeded, terminated by a large wing, and having small lateral ones.

1. *Seguieria Americana*.—This is a shrub about twelve feet in height, with very long, round, green, shining branches, by which it supports itself. Prickles recurved, single on each side of the petiole; but sometimes wanting. Leaves lanceolate ovate, emarginate with a point, shining, petioled, alternate, two or three inches long. Racemes terminating, branched, leafy. Flowers numerous, whitish, ill-scented. The calyx with the increasing germ becomes green. The unripe fruit is like that of *Securidaca*.—Native of South America, about Carthagena in woods and coppices, especially by way-sides: flowering in September.

2. *Seguieria Asiatica*.—Stems shrubby, climbing but without tendrils, branched, round, long, not thick, very tough and fit for binding. Leaves alternate, rough, on short petioles. Flowers greenish-white, void of scent. Calyx of five roundish concave spreading leaflets. Filaments shorter than the calyx. Style still shorter, with a thickish stigma. Capsule ovate, red, two-valved. Seed roundish, pedicelled, connected by a large many cleft wing, the segments of which are linear; but it has not any lateral little wings at the base. Native of Cochinchina, in woods.

SEGULAM, one of the Fox Islands, in the North Pacific Ocean. Lat. 53. 35. N. long. 187. 50. E.

SEGUNDO, a river of the province of Tucuman, which rises in the mountains to the west of Cordova, and running east, enters a lake.

SEGUR, a small town in the south of France, department of the Aveyron, near the river Viour, containing 1600 inhabitants; 12 miles east-south-east of Rhodéz.

SEGURA, a large river in the south-east of Spain, which rises in the borders of Granada, traverses the province of Murcia, and falls into the Mediterranean; 16 miles south-south-west of Alicant.

SEGURA, a small town and castle in the east of Portugal, in the province of Beira, situated on a hill, near the Spanish frontier; 9 miles north of Rosmarinhal, and 24 east-south-east of Castel Branco.

SEGURA, a small town in the north-east of Spain, in the province of Guipuscoa; 21 miles south-south-west of St. Sebastian.

SEGURA, a small town of the north-east of Spain, in Arragon; 50 miles south of Saragossa.

SEGURA DE LA FRONTERA, a city of Mexico, in the intendency of Mexico, built by Cortes in 1520. It is of a mild climate, and situated in a fertile territory. It has upwards of 1000 inhabitants, consisting of Spaniards, Mestizoes, Mulattoes, and Indians; 70 miles from Xalappa.

SEGURA DE LEON, a town in the west of Spain, in Estremadura; 29 miles south-east of Xeres de los Cabelleros.

SEGURA DE LA SIERRA, a walled town in the south-east of Spain, in Murcia; 33 miles north-east of Baeza.

SEGUSIANI, the inhabitants of Segusio.

SEGUSIANI, or SECUSIANI, a people of Gallia Celtica, or Lyonnensis. To the north were the Cœdii and Sequani, to the east and north the Allobroges, and to the west the Averni. Pliny says, that these people were dependent on the Cœdii, in the time of Cæsar; but that they rendered themselves independent under the empire of Augustus.

SEGUSIO, or SUZE, a town formerly not inconsiderable, in Transpadane Gaul, among the mountains, on Duria Minor. Under the Romans it obtained the title of municipal. In later times, its rulers were designated by the title of Marquis. At present it is comprehended in Piedmont. Among other things found in this place is the triumphal arch on which were inscribed the appellations of the people who were subject to Cottius in the time of Augustus.

SEGWIN, a district of Northern Hindostan, province of Nepaul, situated on the banks of the river Teesta, about the 28th degree of north lat. When the Chinese invaded Nenaal in 1792, the chief of this place sought their protection,

tection, and admitted a Chinese garrison into his capital. They were afterwards withdrawn; and during the late war between the Nepaulese and British, the Segwin rajah was taken under the protection of the British, and his independence secured by the last treaty of peace. This territory has not been recently surveyed by any European, but is known to be mountainous and unproductive.

SEHIMA, in Botany, so called by Forskal, from its Arabic name; a genus of that author's, separated from *Ischæmum*, but apparently without sufficient reason.

SEJANT, *adj.* Sitting.

SEJANUS (*Ælius*), celebrated in the history of Rome for the tyranny of his administration, was a native of Vulturnus, in Etruria. Under Tiberius, he rose to great favour, and was appointed governor to young Drusus. When the theatre of Pompey was destroyed by fire, the emperor, at the time that he declared his intention of rebuilding it, pronounced an eulogy on Sejanus before the senate, on which that servile body decreed him a statue, to be placed in the new edifice. Having by his artifices and dissimulation obtained a complete ascendancy over the mind of Tiberius, he applied himself to strengthen the fabric of his power, and pave the way to higher honours. With this view he ingratiated himself as much as possible with the prætorian guards, and he created a great personal interest in the senate, by means of his recommendations to lucrative places, and he is said to have secured the wives of many men of high rank by secret promises of marriage. The imperial family being, as he thought, a considerable obstacle to his projects of ambition, he determined upon their destruction: and, beginning with Drusus, the son of the emperor, who had manifested a jealousy of his influence, he entered into a criminal intrigue with his wife Livia, the sister of Germanicus, by means of whom he was supposed to have caused a slow poison to be administered to that prince, which occasioned his death. He next endeavoured to persuade Tiberius to quit Rome, and retire to a life of repose, that the whole care of government might devolve upon himself, and that nothing should reach the emperor's ears but through a channel subject to his controul. This he effected in the twelfth year of Tiberius's reign, and from that moment Sejanus was master of Rome. The dislike manifested by the emperor to the widow and family of Germanicus was inflamed by the minister, till his persecution of them ended in the banishment and death of Agrippina and her two sons. Every kind of homage was now paid to the minister; Rome was crowded with his statues, and the senators all vied with each other in adulation of the favourite. At length Tiberius began to be suspicious of his designs, but for a time he concealed his suspicions, and even while under the fear of danger, he conferred upon his minister additional marks of his favour, making him his colleague in the consulship. He however gradually withdrew from him the tokens of his confidence, and finding that the symptoms of this change had greatly diminished the crowds that attended his levees, he proceeded, though with much caution, to the measures for his destruction. He now appointed another commander of his prætorians. Sejanus, knowing the extent of his own guilt, began to be alarmed: he called together his friends and followers, and held forth to them the most flattering promises, and having increased the number of his partisans, formed a conspiracy to seize the sovereign power. A powerful league was formed with astonishing rapidity, and great numbers of all descriptions, senators as well as military men, entered into the plot. But he was betrayed by his confidential friend and prime agent of the minister. He sent Macro to Rome with a special commission, and giving him ample powers that might be adapted to all emergencies. Early in the morning of the 15th, before the kalends of November, a report was spread, that letters had arrived at Rome, with the view of augmenting still farther the honours of Sejanus. The senate was summoned to meet in the temple of Apollo, near the imperial place. Sejanus attended without delay, and a party of prætorians followed him. Macro met him in the vestibule of the temple. He approached the minister with all demon-

strations of profound respect, and taking him aside, told him not to be surprised that he had not received a letter from the emperor himself, but, says he, I am this day to deliver the emperor's orders. Sejanus, elated with joy, expecting some unlooked-for dignity, entered into the senate-house, and Macro followed. He opened his commission by reading a long letter in the senate to the consuls from Tiberius, which concluded with an order to seize his person; instantly the whole assembly loaded with insults and reproaches the man at whose feet they lately bent, and the people began to throw down and treat with every indignity the statues before which they had been accustomed to offer sacrifices. His person was seized, and thrown into prison, and being accused of high treason, he was condemned without a single defender. On the same day he was executed, and his body thrown into the Tiber. A massacre of his relations took place, and even his infant children were inhumanly slaughtered. This took place in the year 31 of the Christian era.

SEIBO, a town of the island of Hispaniola, situated on the margin of a small river, and containing, with its jurisdiction, 5000 persons. The church is a handsome structure of stone. It was here the Spanish patriots first assembled to meet the French general Ferrand, who was coming against them; and about two leagues nearer the capital, on the main road, he met with that defeat, on the 7th of November, 1809, which cost him his life, and laid the foundation of their independence; 50 miles east-north-east of St. Domingo.

SEIBOÛSE, a river of Algiers, which falls into the Mediterranean, near Bona.

SEICHE, a small river in the north-east of France, which falls into the Vilaine, near Rennes.

SEICHES, a small town in the south-west of France, department of the Lot and Garonne. Population 1300; 6 miles north-east of Marmande.

SEICHES, a small town in the north-west of France, department of the Maine and Loire, with 1400 inhabitants; 9 miles north-east of Angers.

SEIDA, or SEYDA, a small town of Prussian Saxony; 10 miles east of Wittenberg. Population 800.

SEIDAU, a small town of Saxony, in Lusatia, in the immediate vicinity of Bautzen. Population 1400.

SEIDENBERG, a small town of the Prussian states, in Upper Lusatia, on the borders of Bohemia, and 10 miles south-south-east of Gorlitz. Population 1000.

SEIDORF, a large village of Prussian Silesia, near Hirschberg. Population 1000.

SEIFERSDORF, LANGEN, a large village of Prussian Silesia, near Reichenbach. Population 1000.

SEIFERSHAU, a village of Prussian Silesia; 7 miles west of Hirschberg, and 64 west of Breslau. Population 1100.

SEIFINCOT, a village of England, in Gloucestershire; 4 miles from Stow, and 6 from Campden.

SEIGHFORD, a parish of England, in Staffordshire; 3 miles west-north-west of Stafford. Population 866.

SEIGNE, COL DE LA. See COL.

SEIGNELAY, a small town in the interior of France, in the department of the Yonne, on the Senin. It contains 1300 inhabitants, and is 6 miles north of Auxerre.

SEIGNEURIAL, *adj.* Invested with large powers; independent.—Those lands were *seigneurial*. *Temple*.—They were the statesmen, they were the lawyers; from them were often taken the bailiffs of the *seigneurial* courts. *Burke*.

SEIGNIOR, *s.* [*senior*, Lat., *seigneur*, Fr., *signore*, Ital.] A lord. The title of honour given by Italians.

SEIGNORAGE, or SEIGNOURAGE, *s.* A right or due belonging to a seigneur, or lord.

SEIGNORAGE is particularly used for a duty belonging to the prince for the coming of money, called also coinage.

This duty is not always the same, but changes according to the pleasure of the prince, and the occasions of state.

SEIGNIORY, *s.* [*seigneurie*, Fr.] A lordship; a territory.

Were you not restor'd
To all the duke of Norfolk's *seignories*? *Shakspeare.*

To SEIGNORIZE, *v. a.* [*seigneurier*, Fr.] To lord
over. *Cotgrave, and Sherwood.*

As fair he was as Cytherea's make,
As proud as he that *seignoriseth* hell. *Fairfax.*

SEIL, one of the Hebrides, belonging to Argyleshire. It is about three miles long, and two broad, separated from the mainland by a narrow strait, over which a bridge is thrown. The island is in general flat, but possesses a few eminences, from the tops of which is a pleasant view of the many islands scattered over the ocean, and the distant mountains of Jura and Mull.

SEILHAC, a small town in the interior of France, department of the Correze, with 1300 inhabitants; 6 miles north of Tulle.

SEILLANS, a small town in the south-east of France, department of the Var, containing 2300 inhabitants. The adjacent country is rich in olives, and the town contains a number of oil mills; 14 miles north-east of Dragnignan.

SEILLE, a small river in the east of France, which has its source near Lons le Saunier, and falls into the Saone, near Tournus.

SEILLE LA GRANDE, a small river in the north-east of France, which rises near Dieuze, and falls into the Moselle, not far from Metz.

SEIM, a term used by the farmers of Cornwall to express a certain determinate quantity of sea-sand, which they use as manure to their lands.

SEIMAN, a village of Anatolia, in Asiatic Turkey; 48 miles north-north-east of Alah Shehr.

SEIMARIEH, a village of Irak Arabi, on the Euphrates; 42 miles west of Korna.

SEIN, an island of France, on the coast of Brittany, arrondissement of Quimper. It is inhabited by fishermen, who have retained the language and manners of ancient Brittany in all their purity. It lies in Long. 4. 42. W. Lat. 48. 2. N.

SEINE, *s.* [*jezne*, Saxon; *seine*, *senne*, *seme*, Fr.] A net used in fishing. See SEAN.—They have cock-boats for passengers, and *seine* boats for taking of pilchards. *Carew.*

SEINE, one of the four great rivers of France, and the only one of the four that flows into the English channel. It rises in the mountains of Burgundy, flows northwards through Champagne to Troyes, receives the Aube, and turning to the west, is joined by the Yonne, a river from the south, and before reaching Paris, by the Marne, a larger stream flowing from the west. At Paris, the Seine varies from 300 to 500 feet in width; and it soon after receives an addition to its stream by the influx of the Oise, when, pursuing a winding course to the north-west, it passes Rouen, and discharges itself into the sea, at Havre-de-Grace. Its volume of water is less than that of the Loire or Garonne, and far smaller than that of the Rhone; but its course being in general through a flat country, it is of easy navigation, and communicates by means of canals with several other rivers to the north and south, before reaching Paris. It admits vessels of considerable burden as far as Rouen, and boats as far as Troyes. Its mouth, however, is of difficult navigation, from the accumulation of sand. The length of its course exceeds 400 miles.

SEINE, a department in the north of France, of a circular form, and which, though the smallest in the kingdom, takes the first rank in wealth and population, as it contains Paris. It is in fact nothing more than the capital; and its district forms a track nearly square, of which the breadth is about sixteen miles. Its surface is in general level, its soil fertile, its products partly corn and vines, but more fruit and vegetables for the supply of the capital. It is divided into three arrondissements, viz., Paris, St. Denis to the north, and Sceaux to the south of the capital. It is subject in a judicial sense to the royal court of Paris; in an ecclesiastical, to the archbishop of that capital. The number of villas and
VOL. XXIII. No. 1550.

country seats, though great, is far less considerable than in the district of London; the ground also is laid out more in pasture, and less in corn. The population is about 70,000, exclusive of Paris. For climate and municipal government, see PARIS.

SEINE, LOWER, a department in the north of France, comprising the north-east part of Normandy, and bounded on the north and west by the English channel. Its extent is about 2500 square miles; its population about 660,000, of whom about a twelfth part are Protestants. The surface is in general level, or undulating; the hills seldom attaining the height of mountains. The coast is for the most part bounded with sandy downs. The climate, like that of the south of England, is humid, and suitable to corn and pasture, but by no means to the culture of the vine. The principal fruits are pears and apples; the general drink cider; the exports are horses black cattle, cheese, and butter; the great market is Paris, and, for some articles, England. Hemp, flax, and cole-seed, are cultivated to a great extent. The only large river is the Seine. The fisheries at Dieppe and other parts of the coast supply large quantities of fish for Paris. The department is divided into five arrondissements, viz., Rouen (the capital), Havre-de-Grace, Dieppe, Yvetot, and Neufchatel. For manufactures, see ROUEN.

SEINE AND MARNE, a department in the north-east of France, occupying the western part of Champagne. Its extent is about 2320 square miles; its population about 310,000. Its surface consists of gently undulating plains; its climate is mild, and its soil fertile. The rivers that water the department are the Seine, the Marne, the Great and Little Morin, and a number of lesser streams; the canal of Briare, which connects the Seine with the Loire, likewise traverses the southern cantons. The products here, as in the north of France generally, are wheat, barley, oats, flax, hemp, and in small quantity, vines. Paris affords an ample market for produce, and has caused agriculture and gardening to occupy the inhabitants much more than manufactures. This department is subject, in a judicial sense, to the royal court of Paris; in an ecclesiastical, to the bishop Meaux. It is divided into the arrondissements of Melun (the chief town), Coulommiers, Meaux, Fontainebleau and Provins.

SEINE AND OISE, a department of the north-east of France, adjacent to that of the Oise, and to that of the Seine and Marne. It comprises in an interior circle, the district of Paris, under the name of department of the Seine, and has, exclusive of that district, an extent of 2200 square miles, with a population of 440,000. The surface of this department is level, or gently undulating, the climate temperate, and the soil in general good. Its chief rivers are the Seine, the Marne, and the Oise. Its products are wheat, barley, oats, hemp and flax; also fruit and vegetables, as in the south of England. Vines are reared, but in small quantity: the drink of the peasantry is cider. Paris is the great market for agricultural produce. The chief manufactures are those of printed calicoes at Jouy, of porcelain at Sevres, of arms and clocks at Versailles. In jurisdiction this department is subject to the royal court of Paris, and is divided into the six arrondissements of Versailles (the capital), Mantes, Pontoise, Corbeil, Etampes, and Rambouillet.

SEINE L'ABBAIE, *St.*, a small town in the east of France, department of the Cote d'Or, near the source of the Ouche. Population 800; 12 miles north-west of Dijon.

SEINER, *s.* A fisher with seine nets.—*Seiners* complain with open mouth, that these drovers work much prejudice to the commonwealth of fishermen, and reap small gain to themselves. *Carew.*

SEINSHEIM, or MARKET-SEINSHEIM, a petty town of Germany, in Bavarian Franconia; 19 miles east-south-east of Wurzburg. Population 700.

SEISACHTHEIA, [*σεισάχθεια*, Gr.], a public sacrifice at Athens, in memory of Solon's ordinance, by which the debts of poor people were either entirely remitted, or at least the interest due upon them lessened, and the creditors pre-

vented from seizing upon the persons of their debtors, as had been customary before that time.

The word signifies the shaking off a burden.

SEISDON, a hamlet of England, in Staffordshire, in the neighbourhood of which, on a lofty round promontory, stand the remains of an ancient fortification, called Apewood castle; 6 miles from Wolverhampton.

SEISIN, SEISINA, in Law, signifies possession. In this sense we say, *primer seisin*, for the first possession; &c.

Seisin is two-fold: seisin in fact, and seisin in law. The former is when an actual and corporal possession is taken: and the latter, when something is done, which the law accounted a seisin, as an enrolment.

SEISINA *habendo, quia rex habuit annum, diem et vas-tum*, a writ that lies delivery of seisin to the lord of lands or tenements, after the king, in right of his prerogative, hath had the year, day and waste, on a felony committed.

SEISSENBERG, a small town of Austrian Illyria, in Lower Carniola; 18 miles south-south-east of Laybach.

SEISSENSTETTEN, a small town of Lower Austria, on the river Urla, with 1400 inhabitants; 49 miles west-by-south of St. Polten.

SEISSEN, a town of Saxony, in the circle of Erzgebirg; 18 miles south-south-east of Freyberg. Lat. 50. 35. N. long. 13. 27. E.

SEISTAN, or SEGESTAN, an extensive province in the east of Persia, lying between Candahar and Korassan on the north, Mekran and Balouchistan on the south; about 300 miles in length, and 160 in breadth. It formed anciently part of Ariana, and the country of the Sarangeans, and even in modern times was once flourishing, and rivalled in prosperity the finest provinces of the empire. It was the country of Jumsheid and Rustom, the heroes of the Shah Nama, or great Persian epic, and of Jacob Ben Leth, the conqueror of the caliph of Bagdad. In course of time, however, the winds which blow from the great moving sands of Mekran and Balouchistan, have covered all its fertile plains, and reduced it almost to a state of entire desolation. Its remnant of fertility is alone derived from the river Heermund, which, rising in the mountains of Cabul, traverses a great part of it from east to west, and falls into the lake of Durrah or Zareng. The only recent account of this region is from Captain Christie, who in 1810 traversed it on his route from Balouchistan to Herat. Unless on the banks of the Heermund, the country was little better than a desert, intersected by sand hills; water, however, being never wanting for a greater space than 25 miles. In the way from Nooshky, he did not see a single town or even village; and the only inhabitants of this solitary wild were a few Balouche and Patan shepherds, who lived in tents pitched in the vicinity of the springs. The banks of the Heermund, however, consist of a valley, varying from one to two miles in breadth; while the desert on each side rises in perpendicular cliffs. This valley is irrigated by the waters of the river, and covered with verdure and brush-wood. Along this valley are found an astonishing number of ruined towns, villages and forts, and at one of these, Kulcaupt, a noble palace in a tolerable state of preservation. The remains of a city named Poolkee, are described as immense. The modern capital is Dooshah, forming a small and compact town, in the neighbourhood of which are immense ruins, situated in lat. 31. 8. N. long. 63. 10. E., about eight or nine miles from the river. The western part of Seistan, to which the waters of the Heermund do not reach, consists of a vast and arid plain, intersected with one or two ranges of mountains, in the midst of which is situated the city of Kubbees. There is a path through it, by which couriers can go from Kerman to Herat in eighteen days; but the risk of perishing is so great, that a person of that description demanded two hundred rupees to carry a letter from Mr. Pottinger. Although Seistan forms nominally a province of Persia, it is now entirely independent of that empire, and has no political relations with it. It is divided into a number of small independent states, governed by chiefs who live in fortified villages, situated

principally on the banks of the Heermund. Bahram Khan Kyanee assumes the title of chief of Seistan; but he cannot raise a revenue of above 80,000 rupees, nor bring more than 3000 men into the field.

SEITAN, a name given by Avicenna, and other of the Arabian writers, to a species of prickly tree, often recommended in their prescriptions: probably a species of *ACACIA*.

SEITENDORF, a village of Prussian Silesia, in the circle of Hirschberg, with 900 inhabitants.

SEITIL, in Commerce, a wine measure at Vienna; 168 seitils = 15 English gallons.

SEITSARI, a small island in the gulf of Finland, belonging to Russia. It is a barren spot, surrounded by sand-banks, and inhabited only by fishermen.

SEITZ, or ZAGICZI, a village of the Austrian states, in Moravia, and the circle of Brunn, situated on a hill, and containing 1200 inhabitants.

SEIVA, a small river of New Granada, in the province of Maracaibo, which enters the lake Maracaibo by the north side; 25 miles south-west of Maracaibo.

SEIX, a small town in the south of France, department of the Arriege. In the neighbourhood are quarries of marble, and some mines of silver and copper. Population 2300.

SEIZABLE, *adj.* That may be seized; liable to be seized.

To SEIZE, *v. a.* [*saisir*, Fr., *seisia*, Arm. the same. Serenius.] To take hold of; to gripe; to grasp.

Then as a tiger who by chance hath spy'd
In some purlieu two gentle fawns at play,
Strait couches close, then rising, changes oft
His couchant watch, as one who chose his ground,
Whence rushing he might surest *seize* them both. *Milton.*

To take possession of by force.

At last they *seize*
The sceptre, and regard not David's sons. *Milton.*

To take possession of; to lay hold on; to invade suddenly.

In her sad breast the prince's fortunes roll,
And hope and doubt alternate *seize* her soul. *Pope.*

To take forcible possession of by law.—An escheator of London had arrested a clothier that was outlawed, and *seized* his goods. *Camden.*—To make possessed; to put in possession of.

So th' one for wrong, the other strives for right:
As when a griffin, *seized* of his prey,
A dragon fierce encountereth in his flight,
Through wildest air making his idle way. *Spenser.*

So down he fell before the cruell beast,
Who on his neck his bloody claws did *seize*;
That life nigh crush'd out of his panting brest. *Spenser.*

SEIZE, in Sea Language, is to join two ropes, or the two ends of one rope, together, &c., by several close turns of small rope, line or spun-yarn, round them, with two or more cross-turns.

SEIZER, *s.* One who seizes.

SEIZURE, *s.* The act of seizing. The thing seized. Sufficient that thy prayers are heard, and death,
Then due by sentence when thou did'st transgress,
Defeated of his *seizure*, many days
Given thee of grace. *Milton.*

The act of taking forcible possession.

Thy lands, and all things that thou do'st call thine,
Worth *seizure*, do we seize into our hands. *Shakspeare.*

Gripe; possession.

And shall these hands, so lately purg'd of blood,
Unyoke this *seizure*, and this kind regret? *Shakspeare.*

Catch!—Let there be no sudden *seizure* of a lapsed syllable to play upon it. *Watts.*

SEJUNGIBLE, *adj.* [*sejungo*, Lat.] Capable of being separated. *Unused.*—The spawn and egg are *sejungible*

from the fish and fowl, and yet still retain the prolific power of generation. *Pearson.*

SEJUNCTION, *s.* [*sejunctio*, Lat.] The act of disjoining, or separating. *Unused.*—The constitution of that people was made by a *sejunction* and separation of them from all other nations on the earth. *Pearson.*

SEJUR, a small river of Syria, which rises a little to the north of Antakia, and, after a course of about 30 miles, loses itself in the ground.

SEJUR, a small town of Syria; 15 miles south of Antakia.

SEKE, *adj.* [Jæoc, Sax.] Sick. *Chaucer.*

SEKI, a town of Nippon, in Japan; 20 miles south-south-west of Ixo.

SEKIALE, a village of Nedsjed, in Arabia; 300 miles east of Madian.

SEKIN, a village of Caramania, in Asiatic Turkey; 30 miles south-west of Selifkeh.

SEKMARA, a town described by the Arabian geographers in the 12th century, as situated on the Niger, near the western frontier of Wangara, in Central Africa; but no recent accounts of it have been received.

SEKOOBOOM, a small island in the Sooloo Archipelago. Lat. 5. 5. N. long. 120. 20. E.

SEKUNDR, a town of Hindostan, province of Delhi, district of Merat, belonging to the British. Lat. 28. 38. N. long. 77. 34. E.

SEKUNDR, a town of Hindostan, province of Agra, where there is a magnificent tomb of the emperor Akbar. Lat. 27. 45. N. long. 78. 21. E.

SEKUNDR, a town of Hindostan, province of Aga, and district of Etawah. Lat. 26. 23. N. long. 79. 35. E.—All these places are called after Sekunder (Alexander), the Afghan emperor of Hindostan, who reigned in the beginning of the 16th century. There are several other places named after him.

SEL, a village in the north-west of France, département of the Ille and Vilaine; 16 miles south of Rennes.

SEL HADJAR, a village of Lower Egypt, on the site of the ancient Sais, several remarkable monuments of which may still be traced. The principal consists of a quadrangular inclosure, formed by very lofty earthen walls. Dr. Clarke found here a number of valuable antiquities, among which the most remarkable was a figure in the form of a mummy, composed entirely of porcelain, and bearing a sceptre, in the form of a plough, supposed to represent the ancient plough of Egypt. He found also a *torso*, the finest specimen of Egyptian sculpture he had seen, and now deposited in the university of Cambridge. A tablet, with numerous hieroglyphics, was also discovered; 18 miles south-south-east of Faoua.

SELAGINOIDES, the name of a genus of mosses in the arrangement of Dillenius, a species of lycopodium; the characters of which are these:—the capsules are produced in the alæ of the leaves, in the manner of those in the selago, but they are of a different form, being tricocous, and sometimes quadricocous, and opening, when mature, into so many valves.

Of this genus of moss, we have only one known species; which is the prickly selaginoides, commonly called *seedling mountain moss*. This is found in the mountainous parts of Yorkshire, and in Wales; and loves rocky and moist places.

SELAGO [of Pliny], in Botany, a genus of the class didynamia, order gymnospermia, natural order of aggregata, vitices (*Juss.*)—Generic Character. Calyx: perianth one-leaved, four-cleft (five-cleft), small, permanent: lower segment larger. Corolla one petalled: tube very small, filiform, scarcely perforated: border spreading, five-parted, almost equal; the two upper segments smaller; the lowest larger. Stamina: filaments four, capillary, length of the corolla into which they are inserted; the two upper ones longer. Anthers simple. Pistil: germ roundish. Style simple, length of the stamens. Stigma simple, acute. Pericarp none. Corolla involving the seed. Seed one or two, roundish.—*Essential Character.* Calyx five-cleft. Co-

rolla, tube capillary; border almost equal. Seeds one or two.

1. Selago corymbosa, or fine leaved selago.—These plants are all natives of the Cape of Good Hope.—Stems slender, woody, rising seven or eight feet high, but so weak as to require support: they send out many slender branches. Leaves short, linear, hairy, coming out in clusters. Flowers small, and of a pure white: appearing in July and August, but not followed by seeds in England.

This plant is preserved in gardens more for the sake of variety than beauty.

2. Selago polystachya, or many-spiked selago.—Corymb with spikes, fascicled, leaves filiform, aggregate. Stem fruticose, erect, even, branched, half a foot high.

3. Selago rapunculoides, or rampion-like selago.—Spikes corymb, leaves toothed. Border of the corolla four-parted, with the two outer segments larger.

4. Selago spuria, or linear-leaved selago.—Spike corymb, leaves linear toothletted. Stem suffruticose.

5. Selago fasciculata, or cluster-flowered selago.—Corymb manifold, leaves obovate, smooth, serrate. Stem quite simple, erect, two feet high.

6. Selago coccinea, or scarlet selago.—Spikes corymbed lower leaves linear, quite entire, upper lanceolate subulate somewhat toothed. This much resembles the rapunculoides

7. Selago capitata, or headed selago.—Head terminating leaves fascicled, linear, fleshy, smooth. Stem suffruticose erect, pubescent.

8. Selago fruticosa, or shrubby selago.—Heads roundish, terminating, leaves scattered, linear, obtuse, quite entire, stem shrubby. This is a lofty shrub with unequal branches.

9. Selago divaricata, or spreading selago.—Heads terminating, leaves filiform-linear, fascicled, smooth.

10. Selago canescens, or hoary selago.—Spikes terminating, leaves filiform, fascicled, smooth.

11. Selago geniculata, or jointed selago.—Spikes terminating, leaves linear, fascicled, smooth, with the margin bent back. The branches in this are more spreading and divaricating.

12. Selago triquetra, or three-sided selago.—Spikes terminating, leaves three-sided, imbricate, recurve-reflex, smooth.

13. Selago hispida, or hispid selago.—Spikes terminating, leaves linear, scattered, reflex, hispid.

14. Selago polygaloides, or milkwort-like selago.—Spikes terminating, bracts and calyxes keeled, laminæ rugged, leaves linear, smooth, with a reflex margin.

15. Selago cinerea, or ash-coloured selago.—Corymb compound, leaves linear, fascicled, smooth, reflex at the edge.

16. Selago rotundifolia, or round-leaved selago.—Corymb compound, leaves ovate, smooth, obtuse.

17. Selago ciliata, or fringed selago.—Flowers in spikes, leaves ovate, ciliate, acute.

18. Selago verbenacea, or vervain selago.—Spikes fascicled, leaves oblong, smooth, stem four-cornered, right-angled.

19. Selago hirta, or rough-haired selago.—Rough-haired, spikes very long, leaves obovate.

20. Selago ovata, or ovate-headed selago.—Spikes strobiline, ovate, terminating, leaves scattered, linear, stem shrubby. Flowers white, with a yellow spot on the two uppermost segments, and sometimes on all of them, and an orange spot at the mouth of the tube. It is valuable, not so much on account of its beauty, as the curious structure of the spikes, and the fragrantcy of its flowers.

Propagation and Culture.—Plant cuttings, during any of the summer months, in a bed of fresh earth, covering them close with a bell or hand-glass, shading them from the sun, and refreshing them now and then with water. Harden them gradually, and then transplant them into small pots, placing them in the shade till they have taken root. Place them with other hardy greenhouse plants; and about the end of October remove them into the dry stove. They only require protection from frost, and may be treated in the same manner with the hardier greenhouse plants.

SELAH, a word which occurs no less than seventy times in the Hebrew text in the Psalms, and which has occasioned great difficulty to the critics. The Septuagint renders it *διαψαλμα*, *q. d.* a pause in singing: and this, it must be owned, was greatly wanted before the Psalms were divided into verses.

SELAMA, a village of the island of Ceram, one of the spice islands, situated at the bottom of Sawa Bay, on the north coast, in lat. 2. 56. S.

SELAME, an island, or rather cluster of small islands, near the coast of Arabia, at the entrance of the Persian Gulf, near Cape Mussendoon.

SELANG, a very small island in the Eastern seas, lying off the south coast of the island of Batchian, one of the Moluccas. It is not flat and low, neither is it very high; but the east part slopes down to where it seems to join the mainland of Batchian, the straits there being narrow, and not five feet deep. The island forms two harbours with the mainland, an inner and outer harbour, into either of which there is no danger of running, except what is clearly seen. Lat. 0. 50. S. long. 124. 10. E.

SELANIEH. See **SELENIEH**.

SELANION, in Botany, a name by which some authors have called the common **CROCUS VERNUS**, or the garden spring-flower.

SELB, a town of Bavarian Franconia; 14 miles south-east of Hof. Population 1500.

SELBA, a small rocky island of Austrian Dalmatia, at the entrance of the canal of Zara. It is not fertile, and is inhabited by mariners and fishermen.

SELBISTAN, a town of Persia, in the eastern part of the province of Fars, in a well peopled and cultivated country, bordering on Kerman.

SELBITZ, a small river of Germany, in Bavarian Franconia, which flows into the Saale; 2 miles north-east of Lichtenberg.

SELBITZ, a small town of Bavarian Franconia, near the above river; 3 miles south-south-east of Lichtenberg. Population 1000.

SELBORNE, a parish of England, in Southamptonshire; 4 miles south-by-east of Alton. This parish contained anciently a priory of Black canons, and a house for knights templars. Population 770.

SELBURY-HILL is a high hill of England, in Wiltshire, near the village of Kennet, on the road from Marlborough to Bath. It is an artificial mound, for what purpose raised is unknown; but it is reckoned the largest and most uniform barrow in England.

SELBY, a market town of England, in the West Riding of Yorkshire, situated on the right bank of the river Ouse. It is a small but populous town; and the river here being navigable for vessels of burden, it carries on a considerable trade to London and other places. This trade has been much improved of late years by the opening of a new canal, which communicates from hence with the rivers Aire and Calder. A handsome and very complete wooden bridge has been lately erected over the Ouse here, much admired for the facility with which it can be opened for the admission of vessels, by means of a leaf or swivel in the centre. The principal business within the town consists in ship-building, and in the manufacture of leather, sail-cloth, and iron articles. Selby is a place of great antiquity, and was known in Saxon times by the appellation of Salebia. It was noted as the birth-place of Henry I., son of William the Conqueror. William had, in 1070, erected a monastery here, to which he was shortly after paying a visit along with his queen, when the latter was delivered. The abbey stood at the west end of the town, and was filled with Benedictine monks. It was granted, along with its revenues, to Sir Ralph Sadler, by king Henry VIII. Since that period, the buildings have been appropriated to various purposes, and most of them are now demolished, except the church, which seems to have been a very spacious and elegant structure. From the various styles of its architecture, it appears evidently to have been erected at different periods. The oldest

parts are the body and the nave, which are of Norman origin, and are probably coeval with the foundation of the abbey. The western front, though very irregular, is extremely curious, both in regard to structure and ornaments. The entrance on this side, and also on the northern porch, are particularly worthy of attention. The form of the church is that of a cross, the shaft of which is 267 feet in length, and its transept 100 feet. From the centre of the building rises a massive tower, which was rebuilt in 1702. On each side of the choir are 12 ancient stalls, similar in form and workmanship to those of the cathedral at York. In the windows are considerable remains of stained glass. Selby parish contains 742 houses, and 3363 inhabitants. Market on Monday; 14 miles south-by-east of York, and 181 north-by-west of London. Lat. 53. 46. N. long. 1. 3. W.

SELBY PORT, a township of the United States, in Allegany county, Maryland.

SELCHOW, a village of Prussia, in the Middle Mark of Brandenburg; 12 miles south-by-east of Berlin.

SELCHOW, a village of Prussia, in Pomerania; 18 miles south-by-west of Stettin.

SELCKE, a small river of Germany, in Saxony, which rises in the mountainous district of the Harz, and falls into the larger stream of the Bode.

SELCOUTH, *adj.* [*selb*, rare, Sax. and *couth*, known.] Rarely known; uncommon. *Unused.*

Yet nathemore his meaning she ared,

But wondred much at his so *selcouth* case.

Spenser.

SELDEN (John), a very distinguished scholar, and an eminent political character, called by Grotius "the glory of England," was born at Salvington, in Sussex, in 1584. He was educated at the free-school at Chichester, whence he was sent to Hart-hall, Oxford, where he resided about four years. He then removed to London, for the study of the law, and with this view entered himself in Clifford's-Inn, and about two years after he removed to the Inner Temple, where he soon acquired great reputation by his learning. He had already made himself known by some works of great merit, and he now wrote verses in Latin, Greek and English, upon Mr. William Browne's Britannia's Pastors.

Having been called to the bar, he occasionally pleaded, but was much more employed as a chamber counsellor. The first object of his private studies, was the history and antiquities of his own country, and, in 1607, he drew up a work, entitled "Analecton Anglo-Brittannicon," which was a chronological summary of English history down to the Norman conquest. This work was followed, in 1610, by "England's Epinomis," and "Jani Anglorum Facies altera," a Latin and English treatise on the origin and progress of English law. By these compositions, he became known as a diligent enquirer into the early history and constitution of his country, and acquired the esteem of several eminent literary characters, among whom were Camden, Spelman and Sir Robert Cotton. He was also on familiar terms with Ben Jonson, Drayton, Browne and other poets of that period, who seem to have regarded his learning and talents with great respect, and his own genius appears to have been inclined to poetry. In 1614, he published his largest English work, a treatise on "Titles of Honour," in which he displayed a vast extent of reading, directed by sound judgment. It became a standard authority with regard to all that concerns the degrees of nobility and gentry in this kingdom, in which light it is still referred to; and it abounds in historical information concerning the origin of such distinctions as he traced through other countries. In the year 1617, he entered upon a wider field of literature, and made himself known to the learned throughout Europe, by a celebrated work "De Diis Syris." The chief or leading object of this performance, was to treat on the heathen deities mentioned in the Old Testament; but he extended it to an enquiry into Syrian idolatry in general, with occasional illustrations of the theology of other nations. This work was received with great applause by the learned world, and a

new and improved edition of it was printed at Leyden, under the care of Daniel Heinsius.

Hitherto Selden had passed his life in the tranquillity of a man of letters, engaged in subjects not liable to debate; but his next publication, being "A History of Tythes," printed in 1618, subjected him to much angry opposition, and brought upon him, says his biographer, "a storm from a quarter which has always proved dangerous to free enquirers." In the work alluded to, he had considered the question of the divine right to that impost, advanced by the clergy, and now beginning to be maintained by the English church, and though he only treated of it as a matter of his history, without arguing for or against the right, yet as the sum of his authorities manifestly inclined the balance to the negative side of the question, some of the clergy took offence, and made an accusation against him before king James. That sovereign sent for Mr. Selden, and gave him a lecture on the subject; and being afterwards called before the archbishop of Canterbury, and some other members of the high commission court, he was induced so to degrade himself, as to sign a declaration of his sorrow for what he had done.

Selden was next to shine in the character of an advocate for constitutional liberty, with which his name is now so closely allied. The parliament which James's necessities had obliged him to convoke in 1621, was soon at issue with him on the point of their powers and privileges, all of which the king asserted to have been grants from his predecessors and himself, while they maintained them to be an inheritance from their ancestors. Selden being resorted to by the parliament as the ablest legal antiquarian of his time, for information relative to the ancient privileges of that body, spoke so freely before them against the practices of the court, and was so instrumental in drawing up their spirited protestations, that he was selected as one of the victims to the royal resentment, and committed to custody. His imprisonment was not rigorous, and he was soon discharged upon his own petition. Resuming now his antiquarian studies, he edited, in 1723, the historical work of Eadmer, a monk of Canterbury, with learned notes relative to the laws and customs established by William the Conqueror. In the following year he was elected to the new parliament, as one of the representatives for Lancaster; but nothing occurred to call forth his exertions during that session. He was again a member in the two first parliaments of king Charles, in the second of which he was appointed to support some articles of impeachment of the duke of Buckingham. He afterwards took up the cause of Sir Edward Hampden, who had been imprisoned for refusing to contribute to a forced loan; and, in 1628, he was the person whom the House of Commons employed to produce matter of record to justify its resolutions in favour of the subject's right to his liberty and property. These useful and very honourable labours did not so entirely engross his attention, but that he found time, in 1629, to draw up his learned treatise, entitled "Marmora Arundeliana," the occasion of which was the importation by the earl of Arundel of some very ancient Greek marbles, containing inscriptions of great value in the study of history and chronology. This was another obligation conferred by Selden on the learned world, which was received with due gratitude.

On the dissolution of the parliament, on account of its vigorous proceedings against the measures of the court, Selden was one of the eight members of the House of Commons who were thrown into the prison of the Tower, on a charge of sedition; but in the beginning of 1634, they were fully liberated. During the imprisonment of Selden, his mind was not inactive; his studies were turned to Jewish history and antiquities, and the first fruits of them were shewn in a work, entitled "De successione in bona defuncti ad leges Ebræorum," which was published in 1631, and reprinted in 1636, with the addition of a treatise "De successione in Pontificatum Ebræorum." Selden had long employed his great talents in a work which was intended to assert the maritime usurpations of this country, in opposition to the principles advanced by Grotius in his work, entitled "Mare Liberum."

Vol. XXIII. No. 1551.

Selden's treatise appeared in the year 1635, under the title of "Mare Clausum seu Dominio Maris." In this performance, the author first attempts to prove, by reasoning and example, that the sea is capable of dominion: and then to establish, historically, the British right over the circumjacent, or, as they have been denominated by others, the narrow seas. (See Campbell's Lives of the Admirals, vols. i. ii.) This author, speaking of Mr. Selden and his *Mare Clausum*, says that "he has effectually demonstrated, from the principles of the law of nature and nations, that a dominion over the sea may be acquired, and from the most authentic histories, that such a dominion has been claimed and enjoyed by several nations, and submitted to by others for their common benefit: that this was, in fact, the case of the inhabitants of this island, who, at all times, and under every kind of government, had claimed, exercised, and constantly enjoyed such a dominion, which had been confessed by their neighbours frequently, and in the most solemn manner."

Selden's work was acceptable to all parties, and the king in council ordered copies of it to be kept in the council chest, the court of exchequer, and the court of admiralty, as faithful and strong evidence to the dominion of the British seas. Several following years of Selden's life seem to have been chiefly occupied in Hebrew studies, of which one of the principal products appeared in 1640, under the title "De Jure Naturali et Gentium juxta disciplinam Ebræorum:" Lib. septem. This work is a copious digest of Jewish laws and institutions, as well from the rabbinical writers, as from the writings of the Old Testament, which is generally esteemed a valuable repertory of all the matter afforded by history or tradition relative to the subject.

This year, 1640, the *long* parliament met, and Selden was chosen one of the representatives for the university of Oxford. His name appears in several committees appointed for the correcting of the abuses, and restraining the oppressions of the reign, which parliament was, at this period, resolved to pursue. One of its strong measures, viz., the impeachment of lord Strafford, he did not concur in, not considering that this measure was warranted by the law of the land. Nor did he seem willing to proceed further in the reformation of religion, than to check the usurpations of ecclesiastical power, to which he was a most decided enemy; and he had no wish whatever to abrogate the episcopal form of church government, which he preferred to the presbyterian. So well affected was he, upon the whole, to the existing constitution in church and state, that after the king had withdrawn to York, there was a design of appointing him keeper of the great seal. When the differences between the king and parliament were manifestly tending to an open rupture, Selden opposed the attempts of both parties to gain possession of the power of the sword, hoping that the strong arm of the law might prove sufficient to settle the contest, and when his efforts had proved fruitless, he withdrew, as much as he was able, from public business. He remained, however, in parliament, and was one of the synod which met at Westminster for the establishment of church government. In 1643, he was appointed, by the House of Commons, keeper of the records in the Tower; and, in the next year, he subscribed the Solemn League and Covenant. It is mentioned, to his honour, that he constantly employed his influence, in these contentious times, for the service and protection of learning and learned men; and the university of Oxford, on different occasions, expressed its gratitude for the good offices which he performed for it in times of its distress. He likewise befriended the sister university, in which he was regarded with so much veneration, that he was elected to the mastership of Trinity-hall, though he thought it right to decline the office. His learned labours were still unintermitted, and new works were occasionally issuing from his pen, on the subjects of Hebrew history and antiquity. Selden died in November 1654, having completed his seventieth year. His valuable library and museum now make part of the Bodleian library. After his death, his amanuensis printed a collection of Selden's sayings, entitled "Table Talk," which contains much curious matter, and became popular.

E

"Selden,"

"Selden," says Dr. Aikin, "was one of the most learned men of his time, and though the nature of his subjects, and a harsh and difficult style, have thrown his works out of the ordinary course of reading, yet he has been a considerable benefactor to literature, and his merit, as such, has been freely acknowledged by the most eminent scholars at home and abroad. Grotius, Salmasius, Bochart, Gerard Vossius, Gronovius, Daniel Heinsius, and many other writers of great celebrity, have mentioned him with high encomium, and in England he was looked up to as the head of a literary body. He was liberal in his patronage of men of letters, and appears to have been free from the jealousy and arrogance too frequently accompanying the learned character. Lord Clarendon, though widely different from him in political sentiments, has, in his own life, spoken of him in terms of profound respect and admiration; and from personal knowledge, has testified to the amiable qualities of his heart, and urbanity of his manners, as well as to the powers of his understanding."

SE'LDOM, *adv.* [*selban, rarely; selbon, more rarely; selbotz, Sax., most rarely.*] Rarely; not often; not frequently.

SE'LDOM, *adj.* [*selten, Dutch and Germ.*] Rare; not frequent.—The *seldom* discharge of a higher and more noble office. *Milton.*—His sickness in the later years of his life gave him but short and *seldom* truce. *Fell.*

SE'LDOMNESS, *s.* Uncommonness; infrequency; rareness; rarity. *Unused.*—The strength of delight is in its *seldomness* or rarity. *Brown.*

SE'LDSSHOWN, *adj.* Seldom exhibited to view. *Obsolete, but elegant.*

Seldshown flamins

Do press among the popular throngs. *Shakspeare.*

SELE, a hamlet of England, in Hertfordshire, adjacent to the town of Hertford.

SELE, a river of Italy in the west of the kingdom of Naples, which rises among the Appennines, and flowing through the Principato Citra, discharges itself into the gulf of Salerno.

To SELE'CT, *v. a.* [*selectus, Lat.*] To chuse in preference to others rejected.—The footmen, *selected* out of all the provinces, were greatly diminished, being now scarce eight thousand strong. *Knolles.*

SELE'CT, *adj.* Nicely chosen; choice; culled out on account of superior excellence.

To the nuptial bow'r

I led her, blushing like the morn: all heaven,
And happy constellations, on that hour
Shed their *selectest* influence.

Milton.

Select from vulgar herds, with garlands gay,
A hundred bulls ascend the sacred way.

Prior.

SELECTI JUDICES, in the Roman Republic, were persons appointed by the prætor with the mutual consent of contending parties, and bearing in many respects a remarkable resemblance to our juries; for they were first returned by the prætor, then their names were drawn by lot, till a certain number was completed; then the parties were allowed their challenges; next they struck what we call a tales; and, lastly, the judges, like our jury, were sworn.

SELE'CTION, *s.* [*selectio, Lat.*] The act of culling or chusing; choice.—While we single out several dishes, and reject others, the *selection* seems but arbitrary. *Brown.*

SELE'CTNESS, *s.* The state of being select.

SELE'CTOR, *s.* One who selects.

SELEFKEH, a town of Caramania, in Asia Minor, situated near the mouth of a river called Ghiuk Sooyoo, the ancient *Calidicadnus*. It is the residence of an Aga, under the governor of Cyprus; but the modern town is merely an assemblage of mud and wooden huts. It is chiefly distinguished by being on the site of the ancient Seleucia, considerable vestiges of which are still discovered. They are scattered over a large extent of ground, on the western side of the river. Here are found the remains of a theatre, partly cut out of the side of a hill, and facing the south east; and in

front of it a long line of considerable ruins, with porticos and other large buildings. Farther on is a temple, which had been converted into a Christian church, and several large Corinthian columns, about four feet in diameter a few of which are still standing. A quarter of a mile to the southward of the theatre, near a marble quarry which seems to have supplied all the materials of the town, is an extensive cemetery, containing several sarcophagi of coarse workmanship; and in a vein of soft stone on the northern side of the hill, are some catacombs, which, as usual, have been all opened and emptied. At these two places appear a variety of inscriptions. Near the catacombs there is an enormous reservoir, hewn out of this soft stone. The roof is supported by parallel rows of square pillars. Its dimensions are 150 feet by 75, and 35 in depth. On a hill west of the town are the remains of the citadel, of an oval form, surrounded by a double ditch, and a well built wall, flanked by towers. The interior is full of ruined houses, among which are some columns. Lat. 36. 20. N. long. 33. 55. E.

SELENÆ, [*Σεληναι, Gr.*] in Antiquity, a kind of cakes used in sacrifices, and so called from their being broad and horned, in imitation of the new moon.

SELENDERS, in the Manège, are chaps or mangy sores in the bending of a horse's hough, as the *malanders* are in the knees.

SELENGA, a considerable river of Siberia, in the southern part of the government of Irkoutsk. It rises beyond the frontier, in the country of the Mongols, where it receives the smaller streams of the Kharatale and the Iga. On approaching the frontiers of the empire, it begins to be navigable, then flows from south-east north-west, and falls by three mouths into the lake Baikal. The Russians have founded several towns on its right bank, particularly Veschnei Oudinsk, Selenginsk, and Kiachta, distinguished as the theatre of the commerce with China. A great quantity of a species of white fish, called *omouli*, is taken in the Selenga, particularly towards the end of August.

SELENGINSK, a town of Asiatic Russia, in the government of Irkoutsk, on the right bank of the Selenga. It is situated in a barren and desolate country, consisting chiefly of naked and sandy mountains; and it is ten miles farther down the river before any lands are found fit for the purposes of agriculture. The origin of this place was in 1666, when an ostrog, or wooden fort, was built on the spot, which was afterwards converted into a regular fortress, and gave rise to the town. It does not now contain more than three churches, and 150 houses. Notwithstanding its dreary situation, it is supported by being a thoroughfare for the Chinese trade carried on at Kiachta. A considerable quantity of rhubarb is also brought from the bordering country of Mongolia. Lat. 51. 6. 6. N. long. 107. 3. E.

SELENIEH, or SELANIEH, a village of Lower Egypt, on the right bank of the Nile; 9 miles south-east of Mehallet Kebeer.

SE'LENITE, or SELENI'TES, *s.* [*selenite, Fr., selenites, Lat. from σεληνη, Gr., the moon.*] A sort or fossil. See MINEROLOGY, p. 449.

SELENI'TIC, *adj.* Pertaining to selenites.

SELENOGRA'PHICAL, or SELENOGRA'PHIC, *adj.* [*selenographique, Fr.*] Belonging to selenography.

SELENOGRAPHY, *s.* [*selenographie, Fr., σεληνη and γραφω, Gr.*] A description of the moon.—Hevelius, in his accurate *selenography*, or description of the moon, hath well translated the known appellations of regions, seas and mountains, unto the parts of that luminary. *Brown.*

SELEONES, one of the smaller Shetland isles. Lat. 60. 40. N. long. 1. 22. W.

SELEUCIA, in Ancient Geography, a famous city of Asia, built by Seleucus, one of Alexander's generals, and situated on the western bank of the Tigris, about 45 miles north of ancient Babylon, was the capital of the Macedonian conquests in Upper Asia, and is said to have been the first and principal cause of the destruction of Babylon. Pliny reports, that the intention of the first of the Selucidæ was to

to raise, in opposition to Babylon, a Greek city, with the privilege of being free.

Browné (Travels in Africa, p. 391.) identifies Selucia with Suadea, the port of Antioch, about four hours distant from it. Its former possessors, he says, took immense pains to render it convenient for traffic; but it is now rendered useless, by the negligence of its present masters. A large gate, says this traveller, yet remains entire; it approaches to the Doric order. The rock near it has been excavated into various apartments. A part exists of the thick and substantial wall which defended Seleucia towards the sea. The port must have been commodious and secure, though small, as it was formed by a mole of very large stones. Although it be at present dry, the sand in the bottom appears no higher than the surface of the sea. A little to the north is a remarkable passage, cut in the rock, leading, by a gentle descent, from the summit of the mountain towards the water. It is about 600 common paces long, from 40 to 50 feet high, and above 20 broad. In the middle of it is a covered way, arched through the rock, but both ends are open. A channel for water runs along the side, conveying the pure element down from the mountain to Seleucia. The whole rock above is full of artificial cavities, formed for some purpose now unknown. A Greek inscription of five lines is visible on the south side of the cavern. Towards the sea are some catacombs, ornamented with pilasters, cornices and mouldings.

SELEUCIANS, or SELUCIANI, a sect of ancient heretics, called also Hermiani.

Seleucus and Hermias taught, that God was corporeal; that the elementary matter was co-eternal with him; and that the human soul was formed by the angels of fire and air. They also denied, that Jesus Christ sat at the right hand of God; asserting that he had quitted the right, and had removed his throne into the sun.

SELEUCIDÆ, a race of Greek kings, who reigned as successors of Alexander the Great in Syria, as the Ptolemies did in Egypt. The era of the Seleucidæ, or the Syro-Macedonian era, is a computation of time, commencing from the establishment of the Seleucidæ.

This era we find expressed on a great number of Greek medals struck by the cities of Syria, &c.

SELEUCUS I., surnamed Nicator, king of Syria.—SELEUCUS II., surnamed Callinicus.—SELEUCUS III., surnamed Ceraunus.—SELEUCUS IV., surnamed Philopater. See MACEDON, JEWS, &c.

SELEVITZA, a village of Greece, in the north-west of the Morea, a few miles to the south-west of Dimicizana.

SELF, *pron. pl. selves.* [*silba*, Gothic; *rýlf*, *rýlfa*, Sax., *selve*, Dutch.] Its primary signification seems to be that of an adjective; very; particular; this above others.

Shot another arrow that *self* way
Which you did shoot the first.

Shakspeare.

The cruel ministers, by *self* and violent hands,
Took off her life.

Shakspeare.

On these *self* hills the air is so thin, that it is not sufficient to bear up the body of a bird. *Raleigh.*

At that *self* moment enters Palamon
The gate of Venus.

Dryden.

It is united both to the personal pronouns, and to the neutral pronoun *it*, and is always added when they are used reciprocally, or return upon themselves: as, I did not hurt *him*, he hurt *himself*; the people hiss *me*, but I clap *myself*; thou lovest *thyself*, though the world scorns *thee*. It is sometimes used emphatically in the nominative case: as, *myself* will decide it; *myself* will come; *himself* shall revenge it: but this use of *self*, thus compounded, without the pronoun personal, is chiefly poetical. Compounded with *him*, a pronoun substantive, *self* is in appearance an adjective: joined to *my*, *thy*, *our*, *your*, pronoun adjectives, it seems a substantive. Even when compounded with *him*, it

is at last found to be a substantive, by its variation in the plural, contrary to the nature of English adjectives, as *himself*, *themselves*. *Johnson*.—Though the last reason of *Johnson* is, as Tyrwhitt has shewn, not at all conclusive, yet the simplest mode of considering these compounds is as pronouns substantive.

No more be mention'd then of violence

Against *ourselves*, or wilful barrenness.

Milton.

A horse well bitten which *himself* did dress.

Dryden.

And touched with miseries *myself* have known,
I learn to pity woes so like *my* own.

Dryden.

It often adds only emphasis and force to the pronoun with which it is compounded: as, he did it *himself*.—It signifies the individual, as subject to his own contemplation or action.—Since consciousness always accompanies thinking, and it is that that makes every one to be what he calls *self*; and thereby distinguishes himself from all other thinking things; in this alone consists personal identity, i. e. the sameness of a rational being. *Locke*.—It is much used in composition: thus we have from *Sidney*, the words *self-love*, *self-like*, *self-destruction*.—*Self-consuming* from *Spenser*.—*Self-abuse*, *self-affairs*, *self-charity*, *self-chain* (very chain), *self-born*, *self-affrighted*, *self-mate*, *self-metal* (same metal), *self-same*, *self-willed*, *self-wrong*, *self-subdued*, *self-slaughter*, *self-reproving*, *self-offences*, *self-caparisons*, *self-neglecting*, *self-mettle*, *self-glorious*, *self-harming*, *cum multis aliis*, from *Shakspeare*.—*Self-preservation*, *self-rolled*, *self-esteem*, *self-knowing*, *self-begotten*, *self-left*; from *Milton*.—*Self-delusions*, *self-denial*, *self-denying*, *self-examination*, *self-imposture*, *self-opinioned*, *self-sufficient*; from *South*.—*Self-conscious*, *self-sufficiency*, *self-centered*, *self-born*, *self-kindled*, *self-restrained*; from *Dryden*.—*Self-evidence*, *self-conceitedness*, *self-consciousness*, *self-determination*; from *Locke*.

SELFHEAL, *s.* [*prunella*, Lat.] A plant. See SANCICULA.

SELFISH, *adj.* Attentive only to one's own sensual interest; void of regard for others.

Passions, though *selfish*, if their means be fair,
List unto Reason, and deserve her care;
Those that imparted court a nobler aim,
Exalt their kind, and take some virtue's name.

Pope.

SELFISHNESS, *s.* Attention to his own interest, without any regard to others; self-love.—This sublimer love, being, by an intimate conjunction with its object, thoroughly refined from all base dross of selfishness and interest, nobly begets a perfect submission of our wills to the will of God. *Boyle*.

SELFISHLY, *adv.* With regard only to his own interest; without love of others.

He can your merit *selfishly* approve,
And shew the sense of it without the love.

Pope.

SELFNESS, *s.* Self-love; selfishness.—Wholly her's, all *selfness* he forbears. *Sidney*.—The simple good without all *selfness* or straitness. *More*.—Unused.

SELFSAME, *adj.* Exactly the same.

Behold me punish'd in the *self-same* kind;
Th' ungrateful does a more ungrateful find.

Dryden.

SELGOVÆ, in Ancient Geography, a people of Britain, seated to the west of the Gadeni, in the countries now called Eskdale, Annandale and Nithsdale, lying along the shores of the Solway Frith, which is believed to have derived its name from that of this ancient British nation.

SELI, in Botany, a word formed by an abbreviation of the word *seseli*, and signifying the same plant.

SELIADRIM, a political division or district of the island of Celebes.

SELIKINSKO, a fort of Asiatic Russia, in the government of Tobolsk, on the Yenisei; 260 miles north-north-west of Turuchansk.

SELICHA, a name given by the Arabians to a kind of cinnamon.

SELICO,

SELICO, or SELUGO, a town of western Africa, on the northern bank of the Gambia.

SELIGENSTADT, or SELINGSTADT, a small town in the west of Germany, in Hesse-Darmstadt, on the Maine; 17 miles east-south-east of Frankfort. Population 2300.

SELIGER, or SELIGERO, a lake of the interior of European Russia, in the government of Tver.

SELIM I., a Turkish emperor.—SELIM II., also a Turkish emperor. See TURKEY.

SELIME, a watering place in the desert to the west of Nubia, frequented by the caravans from Cairo to Darfur. The water is excellent; 42 miles south of Shethi.

SELIMPORE, a town of Bengal, district of Burdwan. Lat. 23. 23. N. long. 87. 35. E.

SELIN, a town of Gallam, in Central Africa; 15 miles south of Gallam.

SELIN'S GROVE, a post village of the United States, in Northumberland county, Pennsylvania.

SELING, a city of China, of the second rank, in Quangsee. Lat. 21. 55. N. long. 126. 29. E.

SELINGA. See SELENGA.

SELINO, a small town of European Turkey, on the south-west coast of the island of Candia. In the environs are raised cotton, olives, and fruit of various kinds.

SELINTY, a cape of Caramania, in Asia Minor, formed by a bold romantic headland, on which are the ruins of the ancient Trajanopolis. The hill rises steeply from the plain on one side, and breaks off into a chain of magnificent cliffs on the other. On the highest point of these are the ruins of a castle, which commands the ascent of the hill in every direction, and looks perpendicularly down upon the sea. The ancient line of fortification is marked by a wall, within which there are many remains of houses; while outside of them, between the foot of the hill and the river, the remains of some large buildings are yet standing. The most remarkable of these is a low massy edifice, of about 70 feet by 50, the top of which is flat, and which appears to have been formerly the basement of some splendid superstructure. This edifice stands in the centre of a quadrangle, along each side of which there was a row of thirty small columns; but they have been all broken off close to the ground, and carried away. Lower down the river are the remains of a small theatre, the seats of which have been all removed. Near the mouth of the river are found some baths; and fronting the theatre is a long ruined aqueduct on arches, which, crossing the river, communicates with a distant hill. At the south-east point of the hill are numbers of tombs, containing several Greek inscriptions. The coast here is marked by petrified gravel, which, at a distance, has the appearance of loose stones; but on approaching, proves to be a solid crust of pudding stone. The mistake thus produced may prove dangerous to mariners. The ancient city was originally called Selinus, till the time of Trajan, who gave his own name to it.

SELINUM [*Σελίνιον*, Gr. of Theophrastus and Dioscorides], in Botany, a genus of the class pentandria, order digynia, natural order of umbellatæ or umbelliferæ.—Generic Character. Calyx: umbel, universal manifold, spreading, flat: partial similar. Involucre universal, many-leaved: leaves lanceolate-linear, reflex: partial similar, spreading, length of the corollet. Perianth proper, scarcely observable. Corolla universal uniform. Florets all fertile. Proper of five cordate equal petals. Stamina: filaments five, capillary. Anthers roundish. Pistil: germ inferior. Styles two, reflex. Stigmas simple. Pericarp none. Fruit compressed-flat, oval-oblong, striated in the middle on both sides, bipartite. Seeds two, oval oblong; flat on both sides, striated in the middle, with the sides membranaceous. The seeds vary in form, and the involucre in number of leaflets.—*Essential Character*. Petal cordate, equal. Involucre reflex. Fruit oval-oblong, compressed-flat, striated in the middle.

1. *Selinum sylvestre*, or wild selinum.—Stem even, root fusiform, manifold. The herb is a little milky, with numerous even stems. Leaflets linear. Umbel patulous. Umbellets remote. Seeds oval-oblong, with three raised obtuse

approximating grooves. It has both involucre.—Native of Denmark, Germany, Silesia, France and Piedmont.

2. *Selinum palustre*, or marsh selinum.—Stem striated, three or four feet high, root almost simple, rays of the umbel hispid. The whole plant, when wounded, pours forth a milky thick bitter fetid juice.—Native of the North of Europe, Germany, Austria, Dauphiné, Piedmont and England, in swamps and moors. Known to be indigenous of England till very lately. It flowers in July.

3. *Selinum Austriacum*, or Austrian selinum.—Stem grooved, universal, involucre many-leaved, leaflets wedge-form, gashed. Root perennial, at the beginning of autumn pouring out a moderate quantity of yellowish white milk. Petals white, equal, cordate. All the flowers are not fertile.—Native of Austria, Idria, and perhaps of Dauphiné and Piedmont.

4. *Selinum Sibericum*, or Siberian selinum.—Leaves tri-pinnate, universal and partial involucre colourless, nine-leaved. Root biennial, fusiform. Stem erect, three feet high, hollow, striated, glaucous.—Native of Siberia.

5. *Selinum caruifolia*, or caraway-leaved selinum.—Stem grooved, acute-angled, universal, involucre none, leaflets lanceolate, gashed, mucronate at the top. Root perennial.—Native of Denmark, Germany, Switzerland, Austria and Siberia.

6. *Selinum chabrazii*.—Stem round, striated, universal, involucre none, sheaths of the leaves loose, leaflets filiform-linear. Height from eight inches to a foot.—Native of Germany, Austria, France and Italy.

7. *Selinum seguiera*, or fennel-leaved selinum.—Stem roundish, striated, four feet high, universal, involucre none, leaflets trifid, linear, mucronate. Perennial.—Native of Italy and Carniola.

8. *Selinum monnieri*, or annual selinum.—Umbels clustered, universal, involucre reflex, five membranaceous ribs to the seed. This has the same structure of the seeds as in *laserpitium*; but the habit and every thing else of selinum.—Native of the South of France. Annual.

9. *Selinum decipiens*.—Stem woody, naked below, lower leaves bipinnate, pinnules lanceolate, entire and gashed, serrate.

Propagation and Culture.—These plants are easily propagated by seeds, sown in the autumn. The plants are to be treated in the same way as *Angelica*.

SELINUS, or SELINUNTE, formerly a celebrated city on the south coast of Sicily, at the mouth of the river Heraclea. Its ruins are still seen about seven miles south of Castro Vetrano, and are described as of enormous bulk; every column resembling a turret, and every fragment of a fallen capital a rock. From the traces of the walls, the town appears to have been built in the form of a horse shoe, and to have had a port in the centre; but the latter is now filled up. The most conspicuous of the ruins are two temples, apparently of great extent. A stone of one of them has been lately found to measure 21 feet in length, 5 feet 8 inches in height, and 6 feet 9 inches in breadth. On the west side, the walls are still in a considerable degree of perfection; and there are two vast flights of steps between the port and the upper part of the city. Selinus is said to have been founded B. C. 725.

SE'LION, *s.* [*selio*, low Lat.] A ridge of land. *Ainsworth*.—*Obsolete*.

SELIVRIA. See SILIVRIA.

SELKIRK (Alexander); whose adventures have given rise to a well known and highly esteemed romance, was born at Largo, in Fifeshire, in Scotland, about the year 1676, and was brought up to the sea-service. He left England in 1703, in the capacity of sailing-master of a small vessel called the Cinque-Ports-Galley, Charles Pickering, captain; and in the month of September, the same year, he sailed from Cork in company with another ship of 26 guns, and 120 men, called the St. George, commanded by Captain William Dampier, intended to cruise against the Spaniards in the South sea. On the coast of Brazil, Pickering died, and was succeeded in the command by Lieutenant Stradling. They proceeded

SELINUM SILENE AND SIBBALDIA.

1. *Silene rupestris*. 2. *S. nutans*. 3. 4. 5. 6. *Selinum palustre*. 7. *Sibbaldia procumbens*.

proceeded round Cape Horn to the island of Juan Fernandez, whence they were driven by the appearance of two French ships of 36 guns each, and left five of Stradling's men on shore, who were taken off by the French. Hence they sailed to the coast of America, where Dampier and Stradling quarrelled, and separated by agreement. This was in the month of May 1704; and in the following September Stradling came to the island of Juan Fernandez, where Selkirk and his captain having a quarrel, he determined to remain there alone. But when the ship was ready to sail, his resolution was shaken, and he desired to be taken on board; but now the captain refused his request, and he was left with his clothes, bedding, a gun and a small quantity of powder and ball, some trifling implements, and a few books, with certain mathematical and nautical instruments. Thus left sole monarch of the island, with plenty of the necessaries of life, he found himself at first in a situation scarcely supportable; and such was his melancholy, that he frequently determined to put an end to his existence. It was full eighteen months, according to his own account, before he could reconcile himself to his lot. At length his mind became calm: he grew happy, employed his time in building and decorating his huts, chasing the goats, whom he soon equalled in speed, and scarcely ever failed of catching. He also tamed young kids, and other animals, to be his companions. When his garments were worn out, he made others from the skins of the goats, whose flesh served him as food. His only liquor was water. He computed that he had caught, during his abode in the island, about 1000 goats, half of which he had suffered to go at large, having first marked them with a slit in the ear. Commodore Anson, who went there 30 years after, found the first goat, which they shot, had been thus marked; and hence they concluded that it had been under the power of Selkirk. Though he constantly performed his devotions at stated hours, and read aloud, yet when he was taken from the island, his language, from disuse of conversation, had become scarcely intelligible. In this solitude he remained four years and four months, during which only two incidents occurred which he thought worthy of record. The first was, that pursuing a goat eagerly, he caught at the edge of a precipice, of which he was not aware, and he fell over to the bottom, where he lay some time senseless; but of the exact space of time in which he was bereaved of his active powers he could not form an accurate estimate. When, however, he came to himself, he found the goat lying under him dead. It was with difficulty that he could crawl to his habitation, and it was not till after a considerable time that he entirely recovered from his bruises. The other event was the arrival of a ship, which he at first supposed to be French, but upon the crew's landing, he found them to be Spaniards, of whom he had too great a dread to trust himself in their hands. They, however, had seen him, and he found it extremely difficult to make his escape. In this solitude Selkirk remained until the 2d of February 1709, when he saw two ships come to the bay, and knew them to be English. He immediately lighted a fire as a signal, and he found, upon the landing of the men, that they were two privateers from Bristol, commanded by captains Rogers and Courtney. These, after a fortnight's stay at Juan Fernandez, embarked, taking Selkirk with them, and returned by way of the East Indies to England, where they arrived on the 1st of October, 1711; Selkirk having been absent eight years. The public curiosity being much excited, he, after his return, gave Steele some account of what had occurred during his solitary exile, which the latter published. This Defoe, made the foundation of his well-known work, entitled *Robinson Crusoe*. The time and place of Selkirk's death are not on record. It is said, that so late as the year 1798, the chest and musquet, which Selkirk had with him on the island, were in possession of a grand nephew, John Selkirk, a weaver in Largo, North Britain. The circumstances of Selkirk's seclusion from human society, during his stay on the desolate island, have given birth to a fine poem by

Mr. Cowper, with which our readers are no doubt well acquainted. *Biog. Brit.*

SELKIRKSHIRE, a county in Scotland, situated between 55° 21' and 55° 42' north latitude, and between 2° 48' and 3° 20' west longitude from Greenwich. It has Mid-Lothian, or the county of Edinburgh, on the north; Roxburghshire on the east and south-east; Dumfries-shire on the south; and Peebles-shire, or Tweeddale, on the west. The line which separates it from these counties being on all sides, but the south, exceedingly irregular, its area has been computed very differently; but, according to the latest authorities, it appears to be about 269 square miles, or 172,160 English acres. It includes only two entire parishes, with five parish churches: but seven other parishes belong partly to this, and partly to the adjoining counties.

This is almost entirely a pastoral district, and in many respects bears a resemblance to the higher parts of the contiguous county of Roxburghshire. Like the latter county, its general declivity is towards the north-east and north, where all its streams discharge themselves into the Tweed; and the surface differs principally, in so far as some of the hills are more elevated, its streams smaller, and the valleys in which they flow still more contracted. Several of the hills are more than 2000 feet high; such as Windlestraw Law at the northern extremity, on the confines of Mid-Lothian, Blackhouse Heights and Minchmoor on the borders of Peebles-shire, and Ettrick-penn on the south-west boundary. The lower hills are for the most part green, and afford good pasturage for sheep; but heath prevails on many of the higher grounds, especially towards the south-west. The lowest land is about 300 feet above the level of the sea, and the sites of many of the houses are from 600 to 1000 feet high and upwards.

The rivers are the Tweed, which crosses the north side of the county in its course from Peebles-shire on the west to Roxburghshire on the east; the Gala, which, for some distance, forms the boundary with Roxburghshire on the north-east, and falls into the Tweed, from the north, a little below the village of Galasheils; the Cador, a beautiful stream, which also joins the Tweed from the north; the Ettrick and Yarrow, which have their sources on the confines of Dumfries-shire, and, flowing north-east, almost parallel to each other, join their streams above Selkirk, and afterwards, under the name of Ettrick, passing to the west of that town, and, for a short distance along the boundary with Roxburghshire, enter the Tweed, in which their name is lost, and which then becomes the boundary with that county. The Ale, which rises in the north-east, soon after passes into Roxburghshire, and also the Borthwick, which washes the north-eastern boundary. Next to the Tweed, the most considerable waters are the Ettrick and the Yarrow, which receive, in the first instance, nearly all the other streams that traverse this district. Both have been celebrated in song, and given their names to some plaintive melodies of great beauty and feeling. The scenery on the Yarrow is exceedingly romantic and delightful. Soon after its rise, it passes through two lakes, the Loch of the Lows, and St. Mary's Loch; the latter, which is separated from the former only by a narrow neck of level ground, and is three miles long, having its banks partly covered with coppice-wood, is the finest piece of water in the south of Scotland. From thence the Yarrow flows for eight or nine miles, through sheep-walks, without wood or cultivation; but afterwards the sides of the lofty hills in its course are covered with wood to a considerable height, and its valley is embellished with a variety of bushes and wild flowers. Ettrick, the larger stream, has a wider and more cultivated valley, and a little before it receives the Yarrow, natural wood begins to appear on its banks. It afterwards flows for four miles through a rich tract, sheltered by plantations on the hills, till it loses its name in the Tweed. From this river the whole district has been sometimes called Ettrick Forest; but the name of Forest here, as elsewhere, has long since ceased to denote the existence of extensive woodlands, of which, whatever

may have been the case formerly, there are now scarcely any traces here. Besides the two lakes we have mentioned, a great many smaller ones are scattered over the east and south-east quarters, of which the more considerable are Lochs Ale Moor, the principal source of the Ale, and Oakermoor, noted for the vast quantity of marl which it contains.

The soil of the arable land, which does not much exceed one-twentieth part of the whole, is light, dry and easily cultivated; and produces oats, barley, turnips and potatoes; but very little wheat, for which the country is too elevated, and its climate in general too moist and rigorous. There is no coal, limestone, or sandstone, but a great deal of shell-marl in the lakes and mosses, which, when situated conveniently for the arable land, serves as a valuable manure. The rest of the county is almost exclusively occupied by sheep, which are now, for the most part, of the Cheviot breed, though not often pure, and scarcely, in any instance, equal to those of Roxburghshire. The heath or mountain race still keep their ground near the sources of the streams in the elevated districts on the south-west. There is but a small number of cattle, which are kept chiefly for their milk. The valued rent of the county is 80,307*l.* 15*s.* 6*d.* Scots, and the real rent of the lands and houses in 1812, was 41,162*l.* 10*s.* sterling. In the same year, the land-rent was divided among forty-four estates, of which nine had each a valuation exceeding 2000*l.* Scots, twenty were below 2000*l.* and above 500*l.*, and fifteen below 500*l.*; a division which indicates that most of the district belonged to a few individuals. Two-fifths of the whole are held under entail. The principal proprietors are the Duke of Buccleuch, the Earl of Traquair, Lords Elibank and Napier, and gentlemen of the names of Pringle, Lockhart, Elliot, Murray and Scott.

Selkirk, the county town, and a royal burgh, and the village of Galashiels, contain nearly all that part of the population that is not employed in husbandry; and both are small places. Selkirk is situated on a rising ground below the confluence of the Yarrow and Ettrick, near the borders of Roxburghshire, and is a place of considerable antiquity. Galashiels, on the Gala, north from Tweed, also on the borders of the same county, has been long distinguished for its woollen manufacture, the most considerable of the kind in the south of Scotland; where all the various processes, from the sorting of the fleece to the finishing of the fabric, are conducted with much skill and success. For some time only coarse cloths were made, such as were formerly worn by farm servants, seldom worth more than 3*s.* the yard, and popularly known by the name of *Galashiel greys*; but, within these few years, some very fine broad cloths have been produced, and a hall has been opened for the sale of their cloths, similar to those long established at the woollen manufactories of England. A considerable proportion of the wool of the county finds a market at Galashiels. An inkle work, and some tanneries, are the only other branches carried on for sale out of the county; so that its exports consist chiefly of raw produce, of which its sheep and wool are by far the most considerable articles.

Selkirkshire, which has thirty-eight freeholders, sends one member to Parliament, and Selkirk, along with Peebles, Lanark, and Linlithgow, elect another for the Scottish burghs. Though it is a very thinly peopled district, containing, in 1811, only about twenty-two inhabitants to the square mile, yet poor rates have been long and universally established. The population, according to the census of 1801, was 5070; in 1811 it amounted to 5889; and in 1821 to 6637, of which 3205 were males, and 3432 females. The families employed in agriculture were 421, in all other occupations 409. The increase of population, from 1811 to 1821, was 748; 36 miles south of Edinburgh, 11 north of Hawick, 7 west of Melrose, and 23 east of Peebles.

SELL, *pron.* Retained in Scotland, and the north of England, for *self*; and *sells* in the plural for *selves*.

They turn round like grindle-stones,
Which they dig out fro' the dells,
For their bairns' bread, wives and *sells*. *B. Jonson.*

SELL, *s.* [*selle*, Fr., *sella*, Lat.] A saddle. *Obsolete.*
Turning to that place, in which whilere
He left his lofty steed with golden *sell*
And goodly gorgeous barbes, him found not there. *Spenser.*

[*Selle*, old Fr., "sieg, tribunal de justice." *Lacombe.*] A royal seat; a throne.—The tyrant proud, frown'd from his lofty *sell*. *Fairfax.*—A sill.

SELL, in Building, is of two kinds, viz., ground-sell, which denotes the lowest piece of timber in a timber building, and that on which the whole superstructure is raised.

SELL, WINDOW, called also window-soil, is the bottom piece in a window-frame.

SELL-BED, in Mining, a term used in some parts of England to express some particularly rich parts of the vein of ore.

To SELL, *v. a.* [*M. Goth. saljan*; Sax. *fyllan*, *fellan*; Icel. *selia*,] To give for a price; the word correlative to buy; to vend.

You would have *sold* your king to slaughter,
His princes and his peers to servitude. *Shakspeare.*

To SELL, *v. n.* To have commerce or traffic with one.—I will buy with you, *sell* with you; but I will not eat with you. *Shakspeare.*—To be sold.—Few writings *sell*, which are not filled with great names. *Addison.*

SELLA, among the Romans, a chair in which the old and infirm were carried by servants through the city, and on journeys. Sometimes the physicians prescribed it as an exercise.

SELLA EQUINA, TURCICA, or SPHENOIDES, in Anatomy, is a name given to the four apophyses of the os sphenoides, or cuneiforme, in the brain; in regard of their forming a resemblance of a saddle, which the Latins call *sella*.

They are sometimes also called by the Greek name *clinoides*. In the *sella* is contained the pituitary gland.

SELLA, a river of the north of Spain, in the province of Asturias, which falls into the Bay of Biscay, at Rhio de Sella.

SELLA, a town in the east of Spain, in Valencia, to the north of Alicante. Population 2000.

SELLANDER, *s.* A dry scab in a horse's hough or pastern. *Ainsworth.*

SELLAY, a small island of the Hebrides, in the district of Harris; about 2 miles north from Pabbay. It is about a mile in circumference, and yields excellent pasture for sheep.

SELLE, a small river of French Flanders, which falls into the Scheldt, not far from Valenciennes.

SELLECK, a parish of England, in Herefordshire; 4 miles north-west of Ross.

SELLEF, a village of Irak, in Persia; 110 miles east of Ispahan.

SELLER, *s.* The person that sells; vender.—To things of sale a *seller's* praise belongs. *Shakspeare.*—The name of the agent, of the *seller*, notary and witnesses, are in both instruments. *Addison.*

SELLER-HEAD, a promontory of Scotland, on the east of the isle of Lewis, near Stornoway.

SELLES, a small town in the central part of France, department of the Loir and Cher, on the river Cher. Population 3600. It has some manufactures of woollens; 14 miles south-west of Romorantin, and 25 south of Blois.

SELLHAM, a parish of England, in Sussex; 3½ miles west-south-west of Petworth.

SELLIERA [dedicated by Cavanilles to a Parisian engraver, Natalis Sellier, who executed the plates of Cavanilles' *Icones*, and also of his *monodelphia*], in Botany, a genus of the class pentandria, order monogynia.—Generic Character.

racter. Calyx: perianth superior, permanent, deeply five-cleft. Corolla of one petal, irregular; tube cloven longitudinally to the base; limb ascending, cloven into five, lanceolate segments. Stamina: filaments five, placed in an erect manner on the germen, surrounding the style; anthers ovate, erect. Pistil: germen inferior, ovate, turban-shaped; style simple, incurved, longer than the filaments; stigma globular truncated. Pericarp: berry ovate-turbinate, crowned by the calyx, of one cell and many seeds. Seeds ovate, compressed roughish.—*Essential Character.* Calyx superior, five-cleft. Tube cloven longitudinally to its base. Berry of one cell and many seeds.

Selliera radicans.—Native of the moist maritime parts of Chili: flowering between February and May. Stem prostrate, hairy, a foot high, sending out fibrous roots. Branches scarcely more than an inch long. Leaves alternate, spatulate, entire, clustered at the axils. Flowers blue and white, either terminating the branches, or axillary, on solitary stalks, which have two awl-shaped bracteas in the middle. Cavanilles described this elegant little plant from a dried specimen only. He says that it differs from *Scævola* in its fruit, which he suspects to be succulent, as in *Passiflora*; for after immersing the berry in warm water, he found it abounded with little moist cavities containing a glutinous fluid.

SELLIGA, a name by which some authors have called the *narda Celta*, or Celtic spikenard.

SELLING, a parish of England, in Kent; 4 miles south-south-east of Feversham. Population 458.

SELLINGE, a parish of England, in Kent, with fairs in May and October; 5 miles north-west of Hythe.

SELLYE, or SCHELLE, a small town of the north-west of Hungary, on the Woag, with 1600 inhabitants; 48 miles north-north-west of Comorin. Lat. 48. 9. 47. N. long. 17. 52. 1. E.

SELMA CREEK, a river of Kentucky, which runs into the Ohio, Lat. 38. 54. N. long. 84. 34. W.

SELMAST, a considerable town of Aderbijan, in Persia, containing 2000 inhabitants, principally Nestorian Christians. It is famed for its lofty poplars and delightful gardens; 75 miles west-south-west of Tabreez.

SELMESTON, a parish of England, in Sussex; 5½ miles west-by-south of Haylesham.

SELOKOI, a village of Asiatic Russia, in the government of Tobolsk. Lat. 64. 8. N. long. 76. 14. E.

SELONDA, a small island in the Eastern seas, near the north coast of Cumbava. Lat. 8. 5. S. long. 117. 34. E.

SELONGEY, a small town in the interior of France, department of the Cote d'Or, on the river Venelle. Population 1600; 18 miles north-west of Gray.

SELORICO. See CELORICO.

SELRAIN, a large straggling village of Austria, in Tyrol; 7 miles west-south-west of Innspruck.

SELSEA, or SELSEY, a village and parish of England, situated on a peninsula formed by an inlet of the sea called Selsea harbour. It was formerly a considerable town, with a bishop's see; but the town was swallowed up by the encroachment of the sea, and the bishopric was removed to Chichester, in 1075. Population 648; 7 miles south of Chichester.

SELSER TOWN, or ELLICOTSVILLE, a post township of the United States, in Adam's county Mississippi; about 15 miles north-east of Natchez.

SELSIDE, a hamlet of England, in Westmoreland; 4 miles north-north-east of Kendal.

SELSTEIN, a very lofty mountain of the Rhætian Alps, in Tyrol, 9550 feet in height.

SELSTON, a parish of England, county of Nottingham; 9 miles south-west of Mansfield. Population 1102.

SELTERS, or LOWER SELTERS, a village in the west of Germany, in the duchy of Nassau; 24 miles north of Mentz, and 26 east of Coblenz. In the neighbourhood is one of the most celebrated mineral springs in Europe, commonly known by the name of Seltzer. The water is ex-

ported in stone bottles, each containing about three English pints, and may be conveyed to any distance, without any diminution of its medicinal qualities, some of the Dutch inhabitants of Batavia, in the East Indies, having used it as their ordinary beverage. The ingredients are magnesia, soda, and lime, with a large proportion of common salt; and the water is prescribed in complaints of the stomach, and bowels. See SELTZER-WATER.

SELTZ, a small town in the north-east of France, department of the Lower Rhine, situated at the influx of the Seltzbach into the Rhine. Population 1500. It was the scene of diplomatic conferences between the French and allies, in 1798; 27 miles north of Strasburg.

SELTZER. See SELTERS.

SELTZER-WATER, the name of a mineral water of Germany, which arises near Neider Seltzer, or Lower Seltzer, about ten miles from Francfort-on-the-Mayne, and which is imported into England and many other countries.

This water issues forth at the spring with great rapidity, is remarkably clear and bright, and on pouring it from one bottle into another, discharges abundance of air-bubbles. That which is imported at London is brought over in stone-bottles, closely corked and cemented, containing about three English pints each, by which means this water, as long as the common air is excluded, will retain many of its excellent qualities for several months; but this caution is so necessary, that if too large an empty space is left even in the neck of a bottle, it soon loses in a great degree the brisk, smart, pungent taste, which principally characterizes its excellence, and is more liable to be injured by keeping than any other mineral water.

The Seltzer mineral water contains, besides the mere elementary water, a very small quantity of calcareous earth, and a much greater portion of a native mineral alkali, together with some acid retained a while within the water, but which either evaporates into the open air, or else is soon combined with the mineral alkali: the active virtues of this water depend more on this elastic matter, or fixed air, which it contains in such uncommon abundance beyond other mineral waters, than in any combination of its saline and earthy contents, which are found in such small quantities, as to be incapable of any material service.

SELVA, SAN FRANCISCO DE LA, a town of Chili, capital of the Province of Copiapo. It is an ancient town; and in 1742 it was greatly improved, and was regularly built in strait lines. Lat. 27. 19. 30. S.

SELVA BAXA, a small town of Spain, in Catalonia, near the borders of France, on a bay of the same name, with a small harbour, and 3600 inhabitants. On a height in the neighbourhood stands the small town of Selva Alta. Vines are cultivated in the environs; 31 miles north-east of Gerona, and 43 north-east of Rossa. Lat. 42. 20. N. long. 3. 2. E.

SELVA-PLANA, a village of the Swiss canton of the Grisons, in the Upper Engadine. It stands on a projecting point of land, which divides into two the lake of Selva-plana. At a little distance is another lake called St. Moritz. The banks of these lakes, the scenery of the valley, and the enormous glaciers on the mountains, all concur to render this a most romantic spot; 26 miles south-south-east of Coire.

SELVAGE, or SELVEDGE, [formerly written *selvidge*: *salvus*, Lat. *safe*.] The edge of cloth where it is closed by complicating the threads.—Meditation is like the *selvedge*, which keeps the cloth from ravelling. *Echard*.

SELVAGE, in Sea Language, a sort of hank or skein of rope-yarn tied together at several distances. It is used to fasten round any rope, as a shroud or stay, so that a tackle may be hooked in it, to extend the said shroud or stay, which is called *setting it up*.

SELVEDGED, *adj.* Hemmed; bordered; welted.

SELVES. The plural of *self*.—Consciousness being interrupted, and we losing sight of our past *selves*, doubts are raised whether we are the same. *Locke*.

SELWOOD,

SELWOOD, a track in the east part of the county of Somerset, in England, about 15 miles long by 6 broad. It was formerly a forest. The neighbouring country was called Selwoodshire; and the chief town still bears the name of Frome-Selwood.

SELWORTHY, a parish of England, in Somersetshire; 2½ miles west of Minehead. Population 458.

SEMANA. See **SAMANA**.

SEMAO, an island in the Eastern seas, about 24 miles long from north to south, and from 6 to 10 broad; separated from the south-west end of the island of Timor, by a narrow channel, called the strait of Sema. It is of considerable extent, and moderately elevated. The channel, which is navigable with deep water, affords secure shelter to ships during the strength of the westerly monsoons. Lat 10. 15. S. long. 123. 45. E.

SEMATAI, a town of China, of the third rank, in Pechelee; 55 miles north-east of Pekin.

SEMAU, an island in the Eastern seas; 9 miles south from the island of Timor.

SEMAVAT. See **SAMAVAT**.

SEMAYLA, a rich gold mine of Bambouk, in Central Africa. It is situated in a hillock about 200 feet high, but 5000 in circumference. The gold is contained in a kind of reddish sandstone, extremely hard, which is mixed with a species of calculous emery, and very hard red marble. These substances cannot be subjected to ablation, the only African process for the extrication of the gold, without being first pounded, and reduced completely to powder. This constitutes a very tedious and laborious process, especially as the instruments employed are merely a pestle and mortar of hard wood, which are soon worn by the superior hardness of the pounded substances. At the depth of about 30 feet, the miners find a solid stratum of red marble, richly impregnated with gold, upon which their skill does not enable them to make any impression. These difficulties in working cause the mine of Semayla, though the richest in Bambouk to be considered only of secondary value.

SEMBELLA, among the Romans, a small silver coin, equal in value and weight to half the libella.

SEMBIANI, or **SEMBIANS**, a sect of ancient heretics, denominated from their leader, Sembius, or Sembianus, who condemned all use of wine, as evil of itself; persuaded his followers, that the wine was a production of Satan and the earth, denied the resurrection of the dead, and rejected most of the books of the Old Testament.

SE'MBLABLE, *adj.* [*semblable*, Fr.] Like; resembling.

Then be abhorr'd

All feasts, societies, and throngs of men!
His *semblable*, yea himself, Timon disdains. *Shakespeare*.

With *semblable* reason we might expect a regularity in the winds. *Bacon*.

SE'MBLABLY, *adv.* With resemblance.

A gallant knight he was, his name was Blunt;
Se'mblably furnish'd like the king himself. *Shakespeare*.

SE'MBLANCE, *s.* [*semblance*, Fr.] Likeness; resemblance; similitude; representation.

She's but the sign and *semblance* of her honour;
Behold how like a maid she blushes here!
O, what authority and shew of truth
Can cunning sin cover itself withal! *Shakespeare*.

He with high words, that bore
Se'mblance of worth, not substance, gently rais'd
Their fainting courage, and dispell'd their fears. *Milton*.

Appearance; show; figure.

Be you the soldier; for you likest are,
For manly *semblance* and for skill in war. *Spenser*.

Their *semblance* kind, and mild their gestures were,
Peace in their hands, and friendship in their face. *Fairfax*.

SE'MBLANT, *adj.* [*semblant*, Fr.] Like; resembling; having the appearance of any thing. *Little used*.

Thy picture, like thy fame;
Entire may last; that as their eyes survey
The *semblant* shade, men yet unborn may say,
Thus great, thus gracious look'd Britannia's queen;
Her brow thus smooth, her look was thus serene. *Prior*.

SE'MBLANT, *s.* Show; figure; resemblance; representation. *Not in use*.

Her purpose was not such as she did feign,
Ne yet her person such as it was seen;

But under simple shew, and *semblant* plain,
Lurks false Duessa, secretly unseen. *Spenser*.

SE'MBLATIVE, *adj.* Suitable; accommodate; fit; resembling.

Diana's lip

Is not more smooth and ruby; thy small pipe
Is as the maiden's organ; shrill and sound;
And all is *semblative* a woman's part. *Shakespeare*.

To **SE'MBLE**, *v. n.* [*sembler*, Fr.] To represent; to make a likeness. *Little used*.

Let Europe, sav'd, the column high erect,
Than Trajan's higher, or than Antonine's,
Where *sembling* art may carve the fair effect,
And full achievement of thy great designs. *Prior*.

SEMBRADOR, an engine, invented by Don Jos. de Lucatello, for the evenly sowing of seeds, described in the Philosophical Transactions under the title of the *Spanish Sembrador*.

SEMD, a small town of the west of Germany, in Hesse-Darmstadt, near Umstadt. Population 1000.

SEMECARPUS [from *σημα*, a mark, or *σημειωσις*, to mark, and *καρπος*, a fruit], in Botany, a genus of the class pentandria, order trigynia.—Generic Character. Hermaphrodite.—Calyx: perianth one-leafed, bell-shaped, inferior, half-five-cleft; segments cordate, acute. Corolla: petals five, lanceolate, margined, obtuse, larger than the calyx. Stamina: filaments five-awl-shaped, shorter than the corolla, inserted into the receptacle. Anthers oblong, small. Pistil: germ superior, globular-depressed. Styles three, recurved, incumbent on the germ, and shorter than it. Stigmas club-shaped, retuse. Pericarp none: receptacle erect, fleshy, pear-shaped (or globular-depressed), smooth. Seed a single nut, resting upon the receptacle, heart-shaped, flattened on both sides, smooth and shining. Male flowers on a separate tree, smaller than the hermaphrodites. Calyx and corolla as in the hermaphrodites. Stamina: filaments five, length of the petals; anthers much larger. Pistil none; but in its place a semiglobular, hairy glandulous body. In the younger Linnæus's supplement, the fruit is considered as a drupe.—*Essential Character*. Calyx inferior, five-cleft; corolla five-petalled; nut kidney-form, inserted into a large fleshy flattened receptacle.

Semecarpus anacardium, or marking-nut tree.—This is a large tree, straight, lofty trunk, covered with gray scabrous bark; the bark of the younger parts is smooth, and of a light ash-colour; its inner substance contains in crevices a quantity of a white, soft, almost insipid gum. Branches numerous, spreading. Leaves about the extremities of the branchlets, alternate, petioled, wedge-form, above pretty smooth, below whitish and scabrous, from nine to eighteen inches long, and from four to eight broad. Petiole an inch and half or two inches long, half-round. Panicle terminating, very large; composed of many simple spikes; that of the male tree much more slender, but as large or larger. Bractes many, small, falling. Flowers numerous, small, of a dirty-greenish yellow colour.—It is a native of all the mountainous parts of India: flowering in July and August. The seed is ripe in January and February.

The wood of this tree is reckoned of no use; not only on account of its softness, but also because it contains much acrid juice, which renders it dangerous to cut down and work upon. The fleshy receptacles on which the seed rests are roasted in the ashes, and eaten by the natives: the taste

is exceedingly like that of roasted apples: unroasted they taste astringent and acrid, leaving a painful sensation on the tongue for some time.

It is in general use for marking cotton cloths; the colour is improved and prevented from running, by a little mixture of quick-lime and water. This juice is not soluble in water, and only diffusible in spirits of wine, for it soon falls to the bottom, unless the menstruum be previously alkalinized. The solution is then pretty complete, and of a deep black colour. It sinks in expressed oils, but soon unites perfectly with them; alkaline lixivium acts upon it with no better success than plain water.

SEMEGONDA, a city described by the Arabian geographers as situated in Wangara, in Central Africa, upon the shore of a great fresh water lake.

SEMIOTICA [*σημειωτική*, formed from *σημειον*, *sign*, or *symptom*], that part of medicine which considers the signs or symptoms of diseases.

SEMELA, a village of Tripoli, in Africa; 145 miles south of Mesurada.

SEMELE, in Mythology, the mother of Bacchus.

SEMEN, in Physiology, an animal fluid secreted by the male, the contact of which is necessary to render the germs formed by the female prolific.

SEMENCAN, a town of great Bukharia; 100 miles south-east of Balkh.

SEMENDERY, a town on the south coast of the island of Java. Lat. 7. 1. S. long. 106. 50. E.

SEMENDRIA, a town in the north-west of European Turkey, in Servia, situated on the south side of the Danube, and containing above 9000 inhabitants. It is defended by an old castle, and was, in a remote age, the residence of the kings of Servia. It has been repeatedly taken and retaken by the Turks and their Christian opponents, viz., in 1688, by the Hungarians; in 1690, by the Turks; and again by the Hungarians in 1718, after which it was ceded to the Turks; 20 miles south-east of Belgrade, and 50 south of Temesvar. Lat. 44. 52. N. long. 20. 41. E.

SEMENGE, an instrument used in Arabia by those wandering musicians who accompany the dancing women. It is a sort of bad violin, joined with a drum. The body is commonly a cocoa-nut shell, with a piece of skin extended upon it; three strings of catgut, and sometimes of horsehair, are fitted to it; and it is played with a bow, not less awkward in its form than the Greek lyre.

SEMENNUD, a considerable town of Lower Egypt, the site of which, however, is not marked by any ruins; 53 miles north of Cairo.

SEMENOV, a small town in the north of European Russia; 40 miles north of the town of Niznei-Novgorod. Population only 700.

SEMENTINÆ FERIÆ, feasts held annually among the Romans, to obtain of the gods a plentiful harvest.

SEMER, or SEAMER, a parish of England, in Suffolk; 2 miles south-by-east of Bildeston.

SEMI, *s.* [Latin.] A word which, used in composition, signifies half; as *semicircle*, half a circle.

SEMIA'NNULAR, *adj.* Half round. Another boar tusk, somewhat slenderer, and of a *semiannular* figure. *Grey.*

SEMI-ARIANS, a branch of the ancient Arians, consisting, according to Epiphanius, of such as, in appearance, condemned the errors of that heresiarch, but yet acquiesced in some of his principles, only palliating and hiding them under softer and more moderate terms.

As the zeal of the Arians was chiefly levelled against the second person in the Trinity, that of the Semi-Arians was bent against the third; whence, as the former were sometimes called *Χριστομαχοι*, the latter were denominated *Πνευματομαχοι*.

SEMIBRIEF, or SEMIBREVE, *s.* [*semibreve*, French.] A *semibreve* is a note of half the quantity of a breve, containing two minims, four crotchets, &c. It is accounted one measure or time, or the integer in fractions and multiples,

whereby the time of the other notes is expressed. *Mus. Dict.*

SEMICIRCLE, *s.* [*semicirculus*, Lat.] A half round part of a circle divided by the diameter.

Black brows

Become some women best, so they be in a *semicircle*,
Or a half-moon, made with a pen. *Shakspeare.*

SEMIRCLED, or SEMIRCULAR, *adj.* Half round —The rainbow is caused by the rays of the sun falling upon a rorid and opposite cloud, whereof some reflected, others refracted, beget the *semicircular* variety we call the rainbow. *Brown.*

SEMIRCULAR CANALS, in Anatomy, three small membranous tubes, inclosed in excavations of the bone, and composing part of the labyrinth of the ear. See EAR.

SEMICO'OLON, *s.* [*semi* and *κωλον*.] Half a colon; a point made thus [;] to note a greater pause than that of a comma.

Dr. Ward, formerly professor at Gresham, says, that the semicolon is properly used to distinguish the conjunct members of sentences. Now by a conjunct member of a sentence, he means, such an one as contains at least two simple members.

Whenever, then, a sentence can be divided into several members of the same degree, which are again divisible into other simple members, the former are to be separated by a semicolon.

E. gr. "If Fortune bear a great sway over him, who has nicely stated and concerted every circumstance of an affair; we must not commit every thing, without reserve, to Fortune, lest she should have too great a hold of us."

According to Bishop Lowth, a member of a sentence, whether simple or compounded, that requires a greater pause than a comma, yet does not of itself make a complete sentence, but is followed by something closely depending on it, may be distinguished by a semicolon. E. gr. "But as this passion for admiration, when it works according to reason, improves the beautiful part of our species in every thing that is laudable; so nothing is more destructive to them, when it is governed by vanity and folly." Here the whole sentence is divided into two parts by the semicolon; each of which parts is a compounded member, divided into its simple members by the comma. It is obvious, however, that no rule can be laid down for the use of the semicolon; but its use is a matter partly of taste. The — generally supersedes the frequent use of the semicolon amongst fashionable writers, which is to be regretted, since the hyphen has a proper and peculiar use of its own.

SEMICON, a musical instrument among the Greeks, which had thirty-five strings.

SEMI-CUBICAL PARABOLA, a curve of the second order, in which the cubes of the ordinates are as the squares of the abscisses. Its equation is $x^2 = y$.

SEMICUPIUM, a half bath, in which the patient is only placed up to the waist.

SEMI-DIAMETER, *s.* Half the line which, drawn through the centre of a circle, divides it into two equal parts; a straight line drawn from the circumference to the centre of a circle.—Their difference is as little considerable as a *semi-diameter* of the earth in two measures of the highest heaven, the one taken from the surface of the earth, the other from its centre: the disproportion is just nothing. *More.*

SEMI-DIAPASON, a defective octave; or an octave diminished by a lesser semitone, or four commas.—SEMI-DIAPENTE, a defective fifth, called usually by the Italians *falsa quinta*, and by us a *false fifth*.—SEMI-DIATESSARON, a defective fourth, called, properly a *false fourth*.—SEMI-DITONUS, is used by some writers, as Salinas, for the third minor.

SEMIDIAPHANEITY, *s.* Half transparency; imperfect transparency.—The transparency or *semidiaphaneity* of the superficial corpuscles of bigger bodies may have an interest in the production of their colours. *Boyle.*

SEMIDIA'PHANOUS, *adj.* Half transparent; imperfectly transparent.—Another plate, finely variegated with a *semidiaphanous* grey or sky, yellow and brown. *Woodward.*

SEMIFLORET, *s.* Among florists, an half flourish, which is tubulous at the beginning like a floret, and afterwards expanded in the form of a tongue. *Bailey.*

SEMIFLOSCULOUS, a term used to express the flowers of a certain class of plants, of which the dandelion, hawkweed, and the like, are kinds.

SEMIFLUID, *adj.* Imperfectly fluid.

SEMIGALLIA, a duchy in the north-west of European Russia, forming the eastern part of Courland. Its length is about 110 miles, its breadth in general less than 20. It is separated by the Dwina from the part of Russia situated to the north; on the other sides it is bounded by Courland. Mittau is the capital. See **COURLAND**.

SEMI-JUDAIZERS, a sect of Socinians, consisting of the disciples and friends of Francis Davides, superintendent of the Socinian churches in Transylvania; who, in consequence of his adherence to the opinions he had adopted, was thrown into prison by Christopher Bathoni, prince of Transylvania, where he died, in the year 1579, in an advanced age.

SEMILE, or **SEMILOY**, a small town in the north of Bohemia, on the Iser; 56 miles north-east of Prague. Population 900.

SEMILUNAR, or **SEMILUNARY**, *adj.* [*semilunare*, Fr.] Resembling in form a half moon.—This bay is of a *semilunary* form. *Sir T. Herbert.*—The eyes are guarded with a *semilunar* ridge. *Grew.*

SEMILUNAR, or **SEMILUNARIS**, in Anatomy, an epithet applied, in consequence of their figure, to various parts of the body.

SEMIMEMBRANOSUS, a muscle of the thigh. See **ANATOMY**.

SEMI-METALS, a term formerly applied to those metals not possessing ductility or malleability. In a mechanical point of view, this is doubtless a distinction, but the chemical properties of this numerous class of bodies are so undefined, as to render it obsolete.

SEMINAL, *adj.* [*seminal*, French; *seminis*, Latin.] Belonging to seed; contained in the seed; radical.—Had our senses never presented us with those obvious *seminal* principles of apparent generations, we should never have suspected that a plant or animal would have proceeded from such unlikely materials. *Glanville.*

SEMINAL, *s.* Seminal state. *Not in use.*—The *seminals* of other iniquities. *Brown.*

SEMINALITY, *s.* The nature of seed.—The power of being produced.—In the seeds of wheat there lieth obscurely the *seminality* of darnel. *Brown.*

SEMINARA, a small town of Italy, in the south of Naples, in Calabria Ultra, with 1800 inhabitants. Here is an abbey belonging to the united Greek church. In 1783, the town suffered dreadfully from an earthquake; 12 miles south-south-west of Rossano, and 17 north-north-east of Reggio. Lat. 38. 26. N. long. 16. 18. E.

SEMINARIST, *s.* A Romish priest educated in a seminary. *Seminarists* now come from Rome to pervert souls. *Sheldon.*

To **SEMINARIZE**, *v. a.* To sow or plant. *Not in use.*

SEMINARY, *s.* [*seminaire*, Fr., *seminarium*, from *semino*, Lat.] The ground where any thing is sown to be afterwards transplanted; seed plot.—Some, at the first transplanting trees out of their *seminaries*, cut them off about an inch from the ground, and plant them like quickset. *Mortimer.*—The place or original stock whence any thing is brought.—This stratum is expanded, serving for a common integument, and being the *seminary* or promptuary that furnisheth forth matter for the formation and increment of animal and vegetable bodies. *Woodward.*—Seminal state.—The hand of God, who first created the earth, hath wisely contrived them in their proper *seminaries*, and where they best

maintain the intention of their species. *Brown.*—Principle; causality.—Nothing subministrates apter matter to be converted into pestilent *seminaries*, sooner than steams of nasty folks and beggars. *Harvey.*—Breeding-place; place of education, from whence scholars are transplanted into life.—It was the seat of the greatest monarchy, and the *seminary* of the greatest men of the world, whilst it was heathen. *Bacon.*—A Romish priest educated in a seminary; a seminarist.—O my conscience, a *seminary!* he kisses the stocks. *B. Jonson.*

SEMINARY, *adj.* [*seminaire*, Fr.] Seminal; belonging to seed.—*Seminary* vessels, both preparatory and ejaculatory. *Smith.*

SEMINATION, *s.* [from *semino*, Lat.] The act of sowing.

SEMINED, *adj.* [*semino*, Lat.] Thick-covered as with seeds.—Her garments blue, and *semined* with stars. *B. Jonson.*

SEMINIFICIAL, or **SEMINIFIC**, *adj.* [*semen* and *facio*, Lat.] Productive of seed.—We are made to believe, that in the fourteenth year males are *seminificial* and pubescent; but he that shall inquire into the generality, will rather adhere unto Aristotle. *Brown.*

SEMINIFICATION, *s.* *Seminification* is the propagation from the seed or seminal parts. *Hale.*

SEMINGTON, a hamlet of England, in Wiltshire; 3 miles north-east of Trowbridge.

SEMINOLES, a division of the Creek nation of Indians who inhabit the flat level country on the rivers Appalachi-cola and Flint.

SEMIOPACOUS, *adj.* [*semi* and *opacus*, Lat.] Half dark.—*Semiopacous* bodies are such as, looked upon in an ordinary light, and not held betwixt it and the eye, are not wont to be discriminated from the rest of opacous bodies. *Boyle.*

SEMIORDINATE, *s.* [In conic sections.] A line drawn at right angles to and bisected by the axis, and reaching from one side of the section to another; the half of which is properly the *semiordinate*, but is now called the ordinate. *Harris.*

SEMPALATNOI, a fortress of Asiatic Russia, in the southern part of the government of Tomsk, built with a view of protecting the trade there carried on with the Calmucs and Bucharians. It was built first in 1718; but as the current of the Irtysh, on whose banks it was situated, continually carried away the adjacent ground, it was successively removed to different spots, and is now in its fourth position; but the river is here so shallow, and so obstructed with islets, that it has been found impossible to make a passage to the fort. The rendezvous, therefore, made for the purpose of trade with the Kirghisian and Bucharian caravans, has been fixed about ten miles below, where a smaller fort has been erected for the purpose. The principal fortress forms a square, composed of wooden ramparts, and surrounded by a ditch. There are two villages, one above, and the other below, both palisaded like the fort, and containing about 200 houses. The most profitable trade carried on here, is with the Kirghises, who give their horses and cattle at a very cheap rate, for mere toys and trifles. It is also frequented by traders from Taschkent and Little Bucharia, who bring chiefly cotton goods of inferior quality. The name of Semipalatnoi, which signifies the Seven Palaces, is derived from some ruins situated in the neighbourhood, which are, however, unworthy of such an appellation, and evidently of Bucharian origin. Lat. 50. 29. 45. N. long. 80. 10. E.

SEMI-PARABOLA. See **CONIC SECTIONS**.

SEMIPE'DAL, *adj.* Containing half a foot.

SEMI-PELAGIANS, a name anciently given to such as retained some tincture of Pelagianism.

The leading principles of the Semi-pelagians were the five following. 1. That God did not dispense his grace to one more than another in consequence of predestination, i. e. an eternal and absolute decree, but was willing to save all men.

if they complied with the terms of his gospel. 2. That Christ died for all men. 3. That the grace purchased by Christ, and necessary to salvation, was offered to all men. 4. That man, before he received grace, was capable of faith and holy desires. 5. That man was born free, and was consequently capable of resisting the influences of grace, or of complying with its suggestion. The Semi-pelagians were very numerous; and the doctrine of Cassian, though variously explained, was received in the greatest part of the monastic schools in Gaul, from whence it spread itself far and wide through the European provinces. As to the Greeks, and other eastern Christians, they had embraced the Semi-pelagian doctrine before Cassian, and still adhere firmly to it. In the sixth century, the controversy between the Semi-pelagians and the disciples of Augustine, prevailed much, and continued to divide the Western churches. *Mosheim's Eccl. Hist.* vol. i.

SEMIPELLUCID, *adj.* [*semi* and *pellucidus*, Latin.] Half clear; imperfectly transparent.—A light grey *semipellucid* flint, of much the same complexion with the common Indian agat. *Woodward.*

SEMI-PERIOD, a mark of distinction recommended by Dr. Ward, but not admitted by other grammarians. It is greater than the colon, and supposed to answer the same purpose between the colon and period, as the semicolon does between the comma and colon.

SEMI-PERSPICUOUS, *adj.* [*semi* and *perspicuus*, Lat.] Half transparent; imperfectly clear.—A kind of amethystine flint, not composed of crystals or grains; but one entire massy stone, *semi-perspicuous*, and of a pale blue, almost of the colour of some cows' horns. *Grew.*

SEMI-PROOF, *s.* The proof of a single evidence. *Bailey.*

SEMIQUADRATE, or **SEMIQUARTILE**, *s.* [In astronomy.] An aspect of the planets when distant from each other forty-five degrees, or one sign and a half. *Bailey.*

SEMIQUAVER, *s.* [In music.] A note containing half the quantity of the quaver. *Bailey.*

SEMIQUINTILE, *s.* [In astronomy.] An aspect of the planets when at the distance of thirty-six degrees from one another. *Bailey.*

SEMI-RAMIS. See **ASSYRIA**.

SEMIREVERBERATORY *Fire*, in Chemistry, a term used to express such a reverberatory fire, in which the flame is only beaten back upon the bottom of the vessel.

SEMI-RHOMBUS, in *old* Surgery, a sort of bandage.

SEMISEXTILE, *s.* [In astronomy.] A semi-sixth; an aspect of the planets when they are distant from each other one-twelfth part of a circle, or thirty degrees. *Bailey.*

SEMISICILICUS, a word used by some pharmaceutical writers to express a drachm.

SEMISIDERATUS, an old word for a person struck with hemiplegia.

SEMISOSPIRO, a little pause, or the eighth part of a bar in common time.

SEMISPHERICAL, *adj.* Belonging to half a sphere. *Bailey.*

SEMISPHEROIDAL, *adj.* Formed like half a spheroid.

SEMISPINALIS DORSI, a muscle. See **ANATOMY**.

SEMITA LUMINOSA, a name given to a kind of lucid tract in the heavens, which a little before the vernal equinox, or after the autumnal, may be seen about six o'clock at night, extending from the western edge of the horizon, up towards the Pleiades.

SEMITENDINOSUS, a muscle. See **ANATOMY**.

SEMITERTIAN, *s.* An ague compounded of a tertian and a quotidian. *Bailey.*

SEMITONE, *s.* [*semiton*, French.] in Music, one of the degrees of concinnous intervals of concords. *Bailey.*

SEMITRANSEPT, *s.* The half of a transept.—There is a proportionable lateral projection, or southern *semitranssept*, before we enter the chancel. *Warton.*

SEMIVOWEL, *s.* A consonant which makes an imperfect sound, or does not demand a total occlusion of the mouth.—When Homer would represent any agreeable object,

he makes use of the smoothest vowels and most flowing *semivowels*. *Broome.*

SEMIVULPA, in Zoology, a name by which Gesner, and some others, have called the opossum.

SEMLEY, a parish of England, in Wiltshire; 4½ miles south-by-west of Hindon. Population 546.

SEMLIN, a town of Sclavonia, in the military frontier district near the confluence of the Save and the Danube, and separated from Belgrade by the Save. It is the seat of an arch priest of the Greek church, and the residence of the Austrian commander of the frontier district. It has 8000 inhabitants, and is the principal place for carrying on the transit trade between Turkey and Sclavonia. From the frequent prevalence of the plague in Turkey and the neighbourhood of Belgrade, great precautions are necessary to prevent the introduction of infection: all persons coming from Belgrade must undergo a quarantine here. A market is held daily in a meadow between the two towns, where two rows of palisades separate the dealers; centinels are continually on the watch, to see that no hazardous communication takes place; and all the goods bought from the Turks, must be exposed to the air, and fumigated.

SEMOY, a small river in the south of the Netherlands, which rises near Arlon, in the duchy of Luxemburg, and flows into the Maese.

SEMPACH LAKE, a small lake in the north of Switzerland, canton of Lucerne; 6 miles long, and about 2 broad. It is about 1600 feet above the level of the sea, and its banks are highly beautiful.

SEMPACH, a small town in the interior of Switzerland, canton of Lucerne, situated on the east bank of the preceding lake. It is remarkable for the memorable battle gained by the Swiss over Leopold of Austria, in 1386. It was fought about two miles from the town, and a chapel was erected on the spot, where, on 9th July each year, its anniversary is still celebrated; 7 miles north-west of Lucerne, and 24 south-west of Zurich. Lat. 47. 1. N. long. 8. 6. E.

SEMPERVIVÆ, a natural order of plants, so termed from one of the principal genera; as also perhaps, more especially, in allusion to the tenaciousness of the living principle, common to the whole order; and to which the said genus owes its name.

This is the 83d of Jussieu's orders, the first of his 14th class.

The genera, are *Tillæ*, *Crassula*, *Cotyledon*, *Rhodiola*, *Sedum*, *Sempervivum*, and *Septas*.

SEMPERVIVÆ, *s.* A plant. See **SEMPERVIVUM**.

SEMPERVIVUM [of Pliny, or ever-living evergreen], in Botany; a genus of the class dodecandria, order polygyni, Sempervivum dodecagynia, natural order of succulentæ; *sempervivæ* (*Juss.*)—Generic Character. Calyx perianth six to twelve-parted, concave, acute, permanent. Corolla: petals six to twelve, oblong, lanceolate, acute, concave, a little bigger than the calyx. Stamina: filaments six to twelve (or more), subulate-slender; anthers roundish. Pistil: germs six to twelve, in a ring, erect; ending in as many spreading styles; stigmas acute. Pericarp: capsules six to twelve, oblong, compressed, short, in a ring, acuminate outwards, opening inwards. Seeds many, roundish, small. Being very frequently luxuriant, it becomes greater as to the number, especially as to the female parts of the flower. It is allied to *Sedum*, but differs in having more petals than five.—*Essential Character.* Calyx twelve-parted; petals twelve; capsules twelve, many-seeded.

1. *Sempervivum arboreum*, or tree houseleek.—Tree houseleek rises with a fleshy smooth stalk eight or ten feet high, dividing into many branches, which are terminated by round heads or clusters of leaves lying over each other like the petals of a double rose, succulent, of a bright green, and having very small indentures on their edges. The flower-stalks rise from the centre of these heads; and the numerous bright yellow flowers form a large pyramidal spike, or thyse.—Native of Portugal, the Levant, and Barbary near Algiers: the old walls about Lisbon are covered with it. There is a variety of this with variegated leaves.

2. *Sempervivum Canariense*, or Canary houseleek.—This seldom rises above a foot and half high. The stalk is thick and rugged, chiefly occasioned by the vestiges of decayed leaves. At the top is a very large crown of leaves, disposed circularly like a full blown rose. The flower-stalk comes out from the centre, and rises near two feet high, branching out from the bottom, so as to form a regular pyramid of flowers.—Native of the Canary Islands.

3. *Sempervivum glutinosum*, or clammy houseleek.—Leaves wedge-form, viscid, ciliate, cilia cartilaginous, pressed close. Petals yellow, eight or nine. Stamens sixteen or eighteen. Pistils eight or nine.—Native of Madeira.

4. *Sempervivum glandulosum*, or glandulous-leaved houseleek.—Stem frutescent; leaves orbicular-spatulate, glandular at the edge, glands globular, nectaries wedge-form truncate.—This is also a native of Madeira.

5. *Sempervivum tectorum*, or common houseleek.—Leaves ciliate, offsets spreading. It has a perennial fibrous root. Root-leaves in form of a full-bloom double rose. Flowering-stem upright, from nine inches to a foot in height, round, fleshy, pubescent, having alternate, lanceolate, thinner leaves on it, of a reddish colour, at top branched and forming a sort of corymb; the branches spreading and bending back. Flowers numerous, clustered, upright, pubescent, flesh-coloured, all growing one way.—Native of many parts of Europe on rocks, and on the roofs of buildings, but there not properly indigenous: it flowers in July.

6. *Sempervivum globiserum*, or globular houseleek.—Leaves ciliate, offsets globular. Leaves much narrower, and the heads furnished with a greater number of them than those of the preceding species.—Native of Russia, Austria, Germany and Switzerland.

7. *Sempervivum villosum*, or hairy houseleek.—Leaves spatulate-wedge-form obtuse, villose; nectaries palmate; segments subulate. It is an annual plant.—Native of Madeira.

8. *Sempervivum tortuosum*, or gouty houseleek.—Leaves obovate beneath, gibbous, villose; nectaries two-lobed. This is a shrubby plant of low growth, producing numerous fleshy leaves, growing thickly together.—Native of the Canary Islands.

9. *Sempervivum stellatum*, or starry houseleek.—Stem herbaceous, pubescent; leaves spatulate, scattered. If the synonym of Seguier be right, it is a native of Monte Baldo, where it was found on the rocks by Giovanni Battista Scarella.

10. *Sempervivum arachnoideum*, or cobweb houseleek.—Leaves interwoven with hairs; offsets globular. This has much shorter and narrower leaves than the common houseleek.—Native of the mountains of Switzerland, Dauphiné and Italy.

11. *Sempervivum hirtum*, or rough houseleek.—Stem leaves and ends of the petals rough haired. Root hard, round, perennial; from which there are many rose-like tufts of leaves, as in the next species.—Native of Germany, Silesia and Piedmont,

12. *Sempervivum montanum*, or mountain houseleek.—Leaves quite entire; offsets spreading. This greatly resembles the fifth or common houseleek.—Native of Germany, Silesia, Austria, Switzerland, the South of France and Italy.

13. *Sempervivum sediforme*, or stoncrop-leaved houseleek.—Leaves scattered, lower ones cylindrical, upper ones flattened. All the stems are perpetually and constantly very stiff and standing upright.—Native of the South of Europe.

14. *Sempervivum monanthos*, or clustered houseleek.—Leaves round-club-shaped clustered, peduncles naked, mostly one flowered, nectaries obcordate. The number of the parts of fructification varies from five to eight.—Native of the Canary Islands.

Propagation and Culture.—The first is easily propagated by cutting off the branches, which, when planted, soon put out roots; these should be laid in a dry place for a week before they are planted, that the bottom may be healed over, otherwise they are apt to rot, especially if they have much wet.

The second is propagated by seeds, which should be sown soon after it is ripe in pots filled with light sandy earth, covering them over very lightly with the same earth. These require shelter in winter, all the others, except No. 7, are increased by offsets.

The 3, 4, 7, 8, 14 sorts require the protection of a greenhouse.

SEMPITE'RNAL, *adj.* [*sempiternus*, Lat.] Eternal in futurity; having beginning, but no end.—I hose, though they suppose the world not to be eternal, *à parte ante*, are not contented to suppose it to be *sempiternal*, or eternal, *à parte post*; but will carry up the creation of the world to an immense antiquity. *Hale.*

SEMPITE'RNITY, *s.* [*sempiternitas*, Lat.] Future duration without end.

This silent night, when all things lie in lap of sweet repose, Ye only wake; the powres of sleepe your eyes do never close; To shew the *sempiternitie*, to which their names ye raise, On wings of your immortal verse, that truly merit praise.

Mir. Mag.

SEMPRINGHAM, a decayed parish of England, in Lincolnshire; 3 miles east-south-east of Folkingham.

SEMPRONIUS, a post township of the United States, in Cayuga county, New York; 160 miles west of Albany. Population 3137.

SEMPSTRESS, *s.* [*semstresse*, Sax.] (The word is also often written *sempstress*.) A woman whose business is to sew; a woman who lives by her needle.—Two hundred *sempstresses* were employed to make me shirts, and linen for bed and table, which they were forced to quilt together in several folds. *Swift.*

SEMUR, a small town in the east of France, formerly the place of meeting of the states or parliament of Burgundy. It stands in a picturesque situation among rugged rocks, and is surrounded on three sides by the river Armancon. Its population, including the suburbs, is 4300. Here is a small public library. Semur has considerable manufactures of woollen stuffs, linen and leather, and some trade in corn, wine and cattle; 42 miles north of Autun, and 34 north-west of Dijon. Lat. 47. 32. N. long. 4. 20. E.

SEMYDA, the name of a tree, mentioned by Theophrastus, and by some supposed to be the same with the *betula*, or birch-tree, but very erroneously.

SEMYLE, a fortress of Hindostan, province of Assam. It is situated on the bank of the Brahmapootra river, which it commands. It was taken by the Mahometans in 1662; but in consequence of an epidemical disease, they were compelled to abandon it, and all the other parts of Assam. Lat. not ascertained.

SEN, or **SENS**, *adv.* Since; *Sen* or *sin* is still our northern word; *sens* is Spenser's accommodation to his rhyme.

With boastfull vain pretence
Stept Braggadochio forth, and as his thrall
Her claim'd, by him in battell wonne long *sens*. *Spenser.*

SENA, **SENN**, or **EGYPTIAN CASSIA**, in the *Materia Medica*, a leaf much used in purgative draughts and compositions.

The shrub which bears it is a species of **CASSIA**; which see.

SENA, **Bastard**, in Botany: See **CASSIA**.—**SENA**, **Bladder**: see **COLUTEA**.—**SENA**, **Podded**: see **CORONILLA**.—**SENA**, **Scorpion**, a species of **CORONILLA**; which see.

SENA, a Portuguese settlement in Eastern Africa, about 247 miles up the great river Zambeze. It contains about 2000 inhabitants, is protected by a strong fort, and commands all the settlements on the river. It forms also the centre of the trade carried on there, which consists chiefly in bringing down ivory and gold dust collected in the interior.

SENABA, a village of Lower Egypt, on the left bank of the Nile; 13 miles south of Melani.

SENAC,

SENAC (John), a distinguished French physician, was born in Gascony, about the close of the 17th century. Little is recorded respecting the progress of his education and life; but he is stated to have been a doctor of the faculty of physic of Rheims, and a bachelor of that of Paris; which last degree he obtained in the year 1724 or 1725. He was a man of profound erudition, united with great modesty, and became possessed, by his industry in the practice of his profession, of much sound medical knowledge. His merits obtained for him the favour of the court, and he was appointed consulting physician to Louis XV., and subsequently succeeded Checoyneau in the office of first physician to that monarch. He was also a member of the Royal Academy of Sciences at Paris, and of the Royal Society of Nancy. He died in December, 1770, at the age of about 77 years. This able physician left these works: "Traité de la Structure du Cœur, de son Action, et de ses Maladies," Paris, 1749, in two volumes, 4to., which is still a standard work upon this interesting subject. An essay "De reconditâ februm intermittentium et remittentium natura," Amst. 1759, "Anatomie d'Heister, avec des Essais de Physique sur l'Usage des Parties du Corps Humain," Paris 1724; and afterwards "Discours sur la Méthode de Franco, et sus celle de M. Rau touchant l'Operation de la Taille," 1727. "Traité des Causes, des Accidens, et de la Cure de la Peste," 1744. A work under the assumed name of Julien Morison, entitled "Lettres sur la Choix des Saignées," 1730. A paper in the Memoirs of the Academy of Sciences for 1725, under the title of "Reflexions sur les Noyes," in which he combated some erroneous opinions respecting the cause of death by drowning, and the treatment founded upon them.

SENACIA, so named by him in honour of *Senae*, in Botany, a genus of Commerson's, not however established. It differs from *Celastrus* only in having a longer style and oblong stamens.

SENAMARIBO, a river of Guiana, which runs into the Atlantic. Lat. 5. 30. N. long. 54. 6. W.

SENAN, a township of England, in the county of Cornwall, the most westerly of the kingdom; 5 miles from St. Barien, and $9\frac{1}{2}$ west-south-west of Penzance. Population 495.

SENAN, a village of Algiers; 20 miles south of Oran.

SENAN-FOU, a city of China, of the first rank, in the province of Koitchoo. It is situated on a fine river, in an extensive plain, surrounded on all sides by mountains, to which the inhabitants sometimes betake themselves in times of danger. These mountains are occupied by a barbarous race, who hold little communication with the Chinese. Lat. 27. 56. N. long. 107. E.

SENANLU, a village of Caramania, in Asiatic Turkey; 30 miles north-west of Sefekkeh.

SENAPSE, a village of Upper Egypt, on the left bank of the Nile; 17 miles west of Dendera.

SENAQUIA, a river of the province of Darien, which enters the sea, opposite the Mulatto isles.

SENARICA, a village in the north of the kingdom of Naples, in Abruzzo Ultra, situated in a rugged valley of the Appennines. It has the title of a republic, and chooses its own magistrates; 10 miles south-west of Teramo.

SENARIO, MONTE, a mountain of Italy, about 6 miles from Florence, on the side of which is situated the celebrated palace of the Medicis family, called Pratolino.

SENARY, *adj.* [*senarius*, Lat.] Belonging to the number six; containing six.

SENAS, a village in the south-east of France, department of the Mouths of the Rhone, with 1200 inhabitants; 21 miles south-by-east of Tarascon.

SENATE, *s.* [*senatus*, Latin; *senat*, French; *senat*, Saxon.] An assembly of legislators.

We debate

The nature of our seats, which will in time break ope
The locks o' th' *senate*, and bring in the crows

To peck the eagles.

Shakspeare.

Vol. XXIII. No. 1551.

The senate of ancient Rome was, of all senates, the most celebrated, during the splendour of the republic. Cicero in his oration for Milo, defines it, *templum sanctitatis, amplitudinis, mentis, consiliique publici Romani, caput orbis, ara sociorum, portusque omnium gentium*. The Roman senate exercised no contentious jurisdiction: it appointed judges either out of the senate, or among the knights; but it never stooped to judge any processes in a body. The senate concerted matters of war, appointed who should command the armies, sent governors into the provinces, took order, and disposed of the revenues of the commonwealth. Yet did not the whole sovereign power reside in the senate; it could not alone elect magistrates, make laws, nor decide of war and peace: but in all these cases, the senators were to consult the people. Under the emperors, when the senate became despoiled of most of its other offices, they began to hear causes. For those of less consequence they appointed particular judges; the rest, principally criminal causes, they reserved for their own cognizance, to be judged by them in a body, and that frequently in the emperor's presence. Nero farther committed to the senate the judgment of all appeals; but this did not hold long.

It has been the opinion of some, that under the kings of Rome the choice and nomination of all the senators depended wholly on the will of the prince, without any right in the people, either direct or indirect; and that the consuls, who succeeded to the kingly power, enjoyed the same prerogative, till the creation of the censors, who ever after possessed the sole and absolute right of making and unmaking senators. But Dr. Middleton is of opinion, that the kings, the consuls, and the censors, acted in this affair but ministerially and subordinately to the supreme will of the people, in whom the proper and absolute power of creating senators always resided. And the doctor assures us, upon the strictest search into the state of the present question, as it stood under the kingly government, he cannot but conclude, from the express testimony of the best historians, the concurrence of similar facts, and the probability of the thing itself, that the right of choosing senators was originally and constitutionally vested in the people. Middleton of Rom. Sen. p. 36.

But lord Hervey, who studied the Roman history with care and attention, is of a different opinion. The senate, at its first establishment being, in his opinion, nothing more than the king's council. In this light not only Festus, Eutropius and Livy, represent the senate, but even Dionysius himself. It is therefore highly probable, his lordship says, that each member of this council was merely, as Livy and Plutarch relate, the choice of the king, and not, as Dionysius reports, elected by the people.

On two special occasions the senate was always held without the gates of Rome, either in the temple of Bellona, or of Apollo. 1st. For the reception of foreign ambassadors, and especially of those who came from enemies, who were not permitted to enter the city. 2dly. To give audience, and transact business with their own generals, who were never allowed to come within the walls as long as their commission subsisted, and they had the actual command of an army.

SENATE of four hundred, an ancient senate of Athens, when the city was divided into four tribes, each of which chose a hundred men. This lasted till the time of Solon.

SENATE-HOUSE, *s.* Place of public council.

The nobles in great earnestness are going

All to the *senate-house*; some news is come. *Shakspeare.*

SENATOR, *s.* [*senator*, Lat., *senateur*, Fr.] A public legislator.

As if to ev'ry fop it might belong,

Like *senators*, to censure, right or wrong.

Granville.

There were two orders, or degrees, among the Roman nobility; that of the *senators*, and that of the *knights*; after these two, came the people. The first hundred senators were appointed by Romulus, and called *patres, fathers*. Upon the union with the Sabines, Romulus, or as others say, Tullus, added a second hundred, called *patres majorum gentium*:

H

gentium: this distinguished them from a third hundred added by the elder Tarquin, and called *patres minorum gentium*, fathers of the lower rank.

In ancient Rome, the number of senators is commonly supposed to have been limited to three hundred, from the time of the kings to that of the Gracchi. But this must not be taken too strictly. The senate generally had that number, or thereabout, and upon any remarkable deficiency, was filled up again to that complement by an extraordinary creation. But as the number of the public magistrates increased with the increase of their conquests and dominions, so the number of the senate, which was supplied of course by those magistrates, must have been liable also to some variation. To what number Sylla increased them is not absolutely certain; but in Cicero's time they were not less than four hundred and fifteen, as appears by his letter to Atticus, lib. i. ep. 14.

In the time of Gracchus they were six hundred; during the civil wars they were reduced to three hundred. Julius Caesar augmented that number to nine hundred; the triumvirs to above a thousand: and Augustus reduced them to six hundred, according to Dion Cassius; and to three hundred, according to Suetonius.

To hold the senatorial dignity, a *yearly* revenue of eight hundred thousand sesterces was required, which amounts to between six and seven thousand pounds of our money. Half as much was required for the qualification of the knights. The senators who sunk below this revenue, were discarded, and expunged out of the list by the censor. This qualification was increased by Augustus to twelve hundred thousand, or 10,000*l.* sterling; but this is not taken, by some, for an annual income, but the whole estate of a senator, real and personal, as estimated by the survey and valuation of the censors.

SENATORIAL, or SENATORIAN, *adj.* [*senatorius*, Lat.] Belonging to senators; befitting senators.

Go on, brave youths, till, in some future age,
Whips shall become the senatorial badge. *Warton.*

SENATORIALLY, *adv.* In a solemn manner; in a way becoming a senator.—The mother was cheerful; the father *senatorially* grave. *Drummond.*

SENATORSHIP, *s.* The office or dignity of a senator.—From which step his courage and wisdom raised him by degrees to the sovereignty of Lucca, the *senatorship* of Rome, the special favour of the emperor, and a near hope, only by death prevented, of subduing Florence. *Carew.*

SENATUS-CONSULTUM, a vote, or resolution, of the Roman senate, pronounced on some question, or point of law, proposed to it.

SENCE, a river of England, which rises in Leicestershire, and passing through Warwickshire, falls into the Anker, opposite Atherstone.

SENCE, a small river of the island of Guadaloupe.

To SEND, *v. a.* pret. and part. pass. *sent.* [*senban*, Sax. *senden*, Dutch.] To dispatch from one place to another: used both of persons and things.—He *sent* letters by posts on horseback. *Esther.*

My overshadowing spirit and might with thee
I *send* along. *Milton.*

To transmit by another; not to bring.—They *sent* it to the elders by the hands of Barnabas. *Acts.*—To grant as from a distant place: as, if God *send* life.—I pray thee *send* me good speed this day, and shew kindness unto my master. *Gen.*—To inflict; as from a distance.—The Lord shall *send* upon thee cursing, vexation, and rebuke, in all that thou settest thine hand unto. *Deut.*—To emit; to immit; to produce.—The water *sends* forth plants that have no roots fixed in the bottom, being almost but leaves. *Bacon.*—The senses *send* in only the influxes of material things, and the imagination and memory present only their pictures or images, when the objects themselves are absent. *Cheyne.*—To diffuse; to propagate.

Cherubick songs by night from neighbouring hills
Aereal music *send.*

Milton.

When the fury took her staid on high,
A hiss from all the snaky tire went round:
The dreadful signal all the rocks rebound,
And through the Achaian cities *send* the sound.

Pope.

To let fly; to cast or shoot.

To SEND, *v. n.* To dispatch a message.

I have made bold to *send* into your wife:

My suit is that she will to Desdemona

Procure me some access.

Shakspeare.

To SEND *for.* To require by message to come, or cause to be brought.

He *sent for* me: and, while I rais'd his head,

He threw his aged arms about my neck,

And, seeing that I wept, he press'd me close.

Dryden.

SEND, is used by seamen, when a ship, either at an anchor, or under sail, falls with her head, or stern, deep into the trough of the sea, i. e. into a hollow made between two waves, or billows. They say she *sends* much that way, whether it be a-head or a-stern.

SEND, a parish of England, in Surrey; 3 miles south-west of Ripley. Population 392.

SENDAL, *s.* [*sendalum*, low Lat., *sendal*, Fr. and Span.] A sort of thin silk: a word formerly much in use.—Lined with taffata and with *sendalle*. *Chaucer.*—*Sendale*—was a thinnest stuffe like sarcenet, and of a rawe kynde of sylk or sarcenett. *Thynne's Animadv.* *Chaucer.*

SENDEBAS, a village of Lower Egypt, on the eastern branch of the Nile; 13 miles south of Semennud.

SENDEN AND SENDENHORST, two small towns of Prussian Westphalia, in the government of Munster. The first, 7 miles south-south-west of Munster, has 2000 inhabitants; the second, 11 miles south-south-east of Paderborn, has 1300.

SENDER, *s.* He that sends.

This was a merry message.

—We hope to make the *sender* blush at it.

Shakspeare.

Love that comes too late,

Like a remorseful pardon slowly carried,

To the great *sender* turns a sour offence.

Shakspeare.

Best with the best, the *sender*, not the sent. *Milton.*

SENDESE, a village of Lower Egypt, on the Kalitz il Menhi; 3 miles north of Behnese.

SENDLING, a large village of Germany, in Bavaria, near Munich. In 1705, an armed assemblage of peasants, about 4000 in number, were cut in pieces here by the Austrians.

SENDOMIR. See SANDOMIR.

SENEBIERA, in Botany, a genus of Decandolle's, dedicated to Mr. John Senebier, a Genevan naturalist, who published a work upon Vegetable Physiology, in 1791. Decand. Mem. de la Soc. d'Histoire Naturelle, 142. De Theis, 427.

SENECA (Lucius Annæus), a celebrated philosopher, was born at Corduba, near the commencement of the Christian era. His father was a man of equestrian rank, and an eminent orator, of whom some declamations and controversies are extant. His mother was Helvia, a Spanish lady of distinction. Being educated at Rome, he was early initiated in the study of eloquence by his father, and other masters; but his own propensity led him to devote his talents to the study of philosophy. He first joined the Pythagoreans, whom he soon left for the Stoics: he, however, confined himself to no sect, but extended his inquiries to all the systems of Grecian philosophy. In conformity to the wishes of his father, he pleaded some time in the courts of justice, and acquired by the practice a considerable reputation; but it is thought that he relinquished the bar, through fear of the jealousy of Caligula, who was ambitious of oratorical fame. Entering into public life, he obtained the office of questor, and had risen to some consequence in the

the

the court of Claudius, when, at the instigation of Messalina, he was accused of an adulterous commerce with Julia, the daughter of Germanicus, and was banished to the island of Corsica. In that island he remained in exile eight years, consoling himself with the maxims of philosophy, though never resigned to the severity of his lot, as may be inferred from his complaints, and his abject application to the emperor for pardon.

Upon the marriage of Claudius to his second wife Agrippina, Seneca was, through her influence, recalled, and, after being raised to the prætorship, was appointed preceptor to her son, the afterwards most infamous Nero; while Burrhus was made his governor and military instructor. They are said to have acted with the most perfect unanimity in restraining him from those vices, to which his situation and inclination prompted him; and obtained an ascendancy over him, to which is attributed the flattering promise of the first years of his reign.

When Nero began to display his real character, his quarrels with his mother, who was as violent and wicked as her son, laid his governors under great difficulties. See **ROME**.

At length under the pretence of Seneca's connection with a conspiracy, a military tribune was sent with a band of soldiers to Seneca's house, where he was at supper with his wife Paulina, and two friends. He was, without much ceremony, commanded to put an end to himself. The philosopher heard the sentence with equanimity, and only asked for time sufficient to make his will. This was refused, and turning to his friends, he said, that since he was not allowed to shew his gratitude to them in any other way, he would leave them the image of his life, as the best memorial of their friendship. He then exhorted them to moderate their grief. He embraced Paulina, and endeavoured to comfort her; but she refused any other consolation than that of dying with him. The death which he chose was that by opening his veins, and he expired in the year 65, and in the 12th year of Nero's reign. The emperor would not suffer Paulina to die with her husband; but she never recovered the loss of blood which she had experienced, before the imperial decree arrived.

"If," says one of the philosopher's biographers, "a writer could be estimated by his works, a purer moralist could not easily be found; for their constant tenor is that of solid virtue, tempered with humanity, and exalted by the noblest principles of theism. They are indeed marked with the tumid pride inculcated by the Stoical sect, to which he chiefly adhered, though he freely adopted what he found good in others." Of his writings which have come down to us, the greater part are moral, consisting of epistles, 124 in number, and of distinct treatises on Anger, Consolation, Providence, &c. There are, moreover, seven books on physical topics, entitled "Natural Questions," in which are to be found the rudiments of some notions regarded as fundamental in modern physics.

A number of tragedies are extant, under the name of Seneca, but they are probably not his; nor is it at all known to whom they ought to be ascribed. The editions of Seneca's works are very numerous. Of the works, not including the tragedies, the most esteemed are those of Lipsius; the *Variorum*, 3 vols. 8vo.; the *Leipsic*, 2 vols. 8vo.; and the *Bipontine*. Of the tragedies, are the *Variorum*; that by Heinsius, with notes by Scaliger; and the *quarto Delphin*.

SENECA, a county of the United States, separated from Cayuga county, in 1804. It is bounded north by Cayuga county, east by Cayuga county and lake, south by Tompkins county, and west by Seneca lake and county. It is situated about 186 miles westward of Albany, on the great avenue to the western counties. The surface of this county is either quite level, or but gently undulated with hill and dale: though Hector and Ulysses, the two southern towns, are considerably hilly. The soil is principally a calcareous loam, or a well mixed vegetable mould; and may be called

a good medium, in general, for grain or grass. Population 16,609. Chief towns Waterloo and Ovid.

SENECA, a village of the United States, in Junius county, New York.

SENECA, a township of the United States, in Guernsey county, Ohio. Population 300.

SENECA, a post township of the United States, in Ontario county, New York, on the west side of Seneca lake, 192 miles west of Albany. It contains a glass manufactory. Population 3431.

SENECA CREEK, a river of the United States, in Maryland, which runs into the Potomac; 21 miles west of Washington.

SENECA INDIANS, one of the Six Nations, in the United States. Number 1780. They inhabit on Buffalo creek in the township of Buffalo, on the Genesee and the Allegany in New York, and on French Creek in Pennsylvania.

SENECA LAKE, a lake of the United States, in New York, from 6 to 15 miles west of Cayuga lake. It is 35 miles long, and from 2 to 4 broad. A quarry of excellent marble, beautifully variegated, of an excellent quality, and proof against fire, has lately been discovered on the bank of this lake.

SENECA RIVER, a river of the United States, in New York, which flows from Seneca lake, north-east into the Oswego, in Cicero. Its whole course is about 60 miles, in which it receives the streams which flow from Cayuga, Canandaigua, Owasco, Skeneatiles, and Onondaga lakes. It affords considerable facilities for boat navigation, and furnishes some valuable mill seats.

SENECAL, or **SENECE** (Antoine Bauderon de), a French poet, was born at Maçon in 1643. Voltaire denominated him "a poet of a singular imagination," and says, that his tale of "Kaimac" is a distinguished performance. He also speaks in praise of his *Travaux d'Appollon*." His tale, entitled "La Manière de Filer le parfait Amour," is much esteemed. He was also the author of "Remarques Historiques," with observations on the *Memoirs of Cardinal de Retz*.

SENECIO [of Pliny. From *Senex*, an old man; or *senescere*, to grow old; the flowers going off early, and producing their seeds crowned with a down, like gray hairs], in Botany, a genus of the class syngenesia, order polygamia superflua, natural order of compositæ discoideæ corymbifere (*Juss.*)—Generic Character. Calyx: common calyced, conical, truncate: scales awl-shaped, very many, parallel in a cylinder contracted above, contiguous, equal, fewer covering the base imbricatewise, the tops mortified. Corolla compound, higher than the calyx. Corollets hermaphrodite, tubular, numerous in the disk. Females ligulate in the ray, if any present. Proper in the hermaphrodites funnel-form: border reflex, five-cleft. In the females, if any, oblong, obscurely three-toothed. Stamina in the hermaphrodites, filaments five, capillary, very small. Anther cylindrical, tubular. Pistil in both. Germ ovate. Style filiform, length of the stamens. Stigmas two, oblong, revolute. Pericarp none. Calyx conical-converging. Seeds in the hermaphrodites solitary, ovate. Pappus capillary, long. In the females very like the hermaphrodites. Receptacle naked, flat.—*Essential Character*. Calyx cylindrical, calyced, with the scales mortified at the tip. Down simple. Receptacle naked.

I.—Flowers without a radius.

1. *Senecio reclinatus*, or grass-leaved groundsel.—Corolla naked. Calyx ventricose, somewhat imbricated. Leaves thread-shaped, smooth. Stem herbaceous, about three feet high, wavy, reclined and branched at the top, yellowish-green, round. Leaves sessile, grassy, revolute at the edge, rough. Flowers terminal, panicled, golden-coloured, with a glaucous calyx.—Native of the Cape of Good Hope.

2. *Senecio purpureus*, or purple groundsel.—Corolla naked. Leaves lyrate, hairy; the upper ones lanceolate, toothed

toothed. Root perennial, thick. Stem numerous, erect, a foot high, striated. Leaves alternate, lyrate, obtuse, thickish; the lower ones on long stalks; all beautifully veined. Flowers terminal, corymbose, purple, rather small.—Native also of the Cape.

3. *Senecio cernuus*, or drooping groundsel.—Stem herbaceous, a foot high, erect. Leaves alternate, stalked, veined, rough, with two little angulated stipulas at the base of each footstalk. Flowers solitary, terminal, violet-coloured, on long, generally drooping stalks.

4. *Senecio pseudo-China*, or Chinese groundsel.—Root perennial, tuberous, fleshy, fibrous. Stem none. Leaves radical, large, shaped like those of a turnip, smooth. Flower-stalk slender, more than a foot high, sustaining a few yellow flowers at the top.—Native of the East Indies.

5. *Senecio vulgaris*. Common groundsel or simson.—Root annual, fibrous. Stem erect, branched, leafy, angular, either smooth or clothed with a cottony down like the back of the foliage. Leaves alternate, bright green; radical ones stalked; those of the stem sessile, auriculate. Flowers terminal, scattered or paniced, yellow. Seeds furrowed, pubescent: a common weed.

The remaining species of this section, are, *Senecio angustifolius*, *mucronatus*, *niveus*, *hieracifolius*, *erubescens*, *persicifolius*, *biflorus*, *paniculatus*, *bidentatus*, *scaber*, *vestitus*, *virgatus*, *divaricatus*, *croaticus*, *Japonicus*, *peucedanifolius*, *Arabicus* and *verbenifolius*.

II.—Flowers with a revolute radius.

6. *Senecio viscosus*, or stinking groundsel.—The whole herb is hairy and viscid, with a very fetid smell. Root annual. Stem a foot high, much branched, spreading, furrowed, leafy. Leaves alternate. Flower-stalks solitary, terminal, each bearing a flower of a bright gold-colour.—Common in Great Britain.

7. *Senecio lividus*, or green-scaled groundsel.—This species varies much in the depth of the segments of its leaves. The florets of the radius are not at first revolute, but gradually become so.—Native of Spain and England.

8. *Senecio sylvaticus*, or mountain groundsel.—Root annual. Stem three feet high, leafy, furrowed, rather hairy, many-flowered. Leaves numerous, with an unpleasant smell, and slightly viscid. Flowers yellow.—Found plentifully in England.

The remaining species of this section are *Senecio triflorus*, *Ægyptius*, *Australis*, *lautus*, *crassifolius*, *humilis*, *leucanthemifolius*, *auritus*, *giganteus*, *telephifolius*, *trilobus*, *cinerascens*, *Javanicus*, *coronopifolius*, *multifidus*, *nebrodensis*, *glaucus* and *varicosus*.

III.—Flowers with a spreading radius and pinnatifid leaves.

9. *Senecio hastatus*, or spleen-wort-leaved groundsel.—Stem herbaceous, perennial, about two feet high, branched at the bottom. Leaves stalked, narrow, seven or eight inches long, very glutinous. Flowers terminal, yellow, two or three on each stalk.—Native of the Cape of Good Hope.

10. *Senecio elegans*. Elegant groundsel, or purple jacobæa.—Stem is about eighteen inches high, erect, branched, furrowed. Leaves at the stem-joints, bright green. It occasionally produces white flowers.

11. *Senecio squalidus*, or inelegant rag-wort.—Root annual or biennial. Stem erect, branched, much spreading, sometimes a little hairy. Leaves sessile, deeply pinnatifid, narrow, smooth, rather fleshy, often purplish beneath. Flowers solitary, of a bright golden yellow, on terminal, solitary, bracteated, corymbose stalks. The whole herb has a peculiar smell, somewhat like Tansy or Mug-wort.—Native of England.

12. *Senecio abrotanifolius*, or southern-wood-leaved groundsel.—Stem from one to two feet high, striated upwards. Lower leaves bipinnatifid, stalked: upper pinnatifid, sessile; all dark green above, glaucous beneath. Flowers large and handsome, lemon-coloured, in terminal bunches.—Native of Austria.

13. *Senecio tenuifolius*, or hoary-rag-wort.—Root peren-

nial, rather creeping. Stem erect, wand-like, leafy, corymbose at the top. Leaves numerous, alternate, embracing the stem, cottony beneath, and often white with down. Flowers corymbose, bright yellow.—Native of England.

14. *Senecio Jacobææ*, or common-rag-wort.—Root perennial, fibrous. Stem erect, branched, leafy, corymbose, many-flowered. Leaves mostly smooth, dark green, cut into various, spreading, toothed segments. Flowers very numerous, of a bright, golden yellow, terminal, corymbose.

15. *Senecio aquaticus*, or marsh-rag-wort.—Stem erect, branched, purplish at the base, like the last species. Leaves variable in shape. The flowers are larger, fewer in number, and of a brighter colour.—Native of England.

The remaining species in this section are, *Senecio squamosus*, *incisus*, *carnosus*, *abruptus*, *lyratus*, *spiræifolius*, *pubigerus*, *vernalis*, *montanus*, *rupestris*, *dentatus*, *venustus*, *erucifolius*, *speciosus*, *erosus*, *uniflorus*, *incanus*, *carniolicus*, *parviflorus*, *muricatus*, *lævigatus*, *grandiflorus*, *myrrhifolius*, *diffusus*, *Canadensis*, *delphinifolius*, *auriculatus*, *aureus*, *Balsamitæ*, *obovatus* and *umbellatus*.

IV.—Flowers with a radius. Leaves undivided.

16. *Senecio paludosus*, or great fen rag-wort.—Root perennial, of many long, simple fibres. Stems erect, from three to six feet in height, leafy, striated, hollow, clothed with a loose down. Leaves sessile, scattered, narrow at the base, smooth above, paler and downy beneath. Flowers above an inch in diameter, bright yellow; in a kind of terminal corymb, the lowermost stalks arising from the bosom of the upper leaves.—Native of Europe.

17. *Senecio nemorensis*, or branching groundsel.—Root perennial, fibrous, not creeping. Stems generally single, two or three feet high, erect, slightly angular or grooved towards the top, pale green, purplish here and there. Leaves alternate or scattered, five or six inches long, pointed, smooth above, hairy beneath. Flowers very numerous, yellow, in terminal compound corymbs.—Native of Austria, &c.

18. *Senecio Saracenicus*, or broad-leaved groundsel.—Root perennial, creeping. Stems erect, from three to five feet high, angular, leafy, smooth, corymbose at the top. Leaves alternate, sessile, lanceolate, slightly downy. Flowers bright yellow, in a large, terminal corymb, with narrow, lanceolate, pointed bractæas, and rather downy stalks.—This is one of our rarest British plants.

19. *Senecio doria*, or broad-leaved groundsel.—Root perennial, brownish, bitter, with long white fibres. Stem from two to five feet in height, much branched upwards, striated. Leaves alternate, lower ones stalked; upper sessile; all of them extremely glaucous and ribbed. Flowers rather small, numerous, palish yellow, in terminal, compound corymbs.—Native of Austria.

20. *Senecio doricum*, or Alpine groundsel.—Root perennial, fibrous. Stem perfectly simple, hairy. Radical leaves stalked, thickish, plain or striated on either side of the mid-rib; stem-leaves small, lanceolate, nearly awl-shaped. Flowers large, terminal, mostly solitary, of a deep yellow or orange-colour, on longish, thick, hairy stalks.—Native of the South of Europe.

21. *Senecio lanceus*, or spear-leaved groundsel.—Root perennial, fibrous. Stems numerous, annual, round, smooth; from four to six feet high, streaked with purple. Leaves alternate, somewhat leathery, smooth, glaucous, pointed, veined with purple. Flowers in terminal, thick, compound corymbs, bright yellow; the disk turning brown.

The remaining species of this last and fourth section are, *Senecio linifolius*, *juniperinus*, *rosmarinifolius*, *asper*, *striatus*, *cruciatus*, *rigescens*, *pinnulatus*, *hadiensis*, *ovatus*, *coriaceus*, *orientalis*, *barrelieri*, *arenarius*, *glastifolius*, *oporus*, *longifolius*, *undulatus*, *byzantinus*, *heterophyllus*, *halimifolius*, *marginatus*, *maritimus*, *lanatus*, *mollis*, *quercifolius*, *ilicifolius*, *crispus*, *crenatus*, *angulatus*, *cordifolius*, *repandus*, *rigidus* et *solidaginoides*.

Propagation and Culture.—*Senecio* contains plants of the herbaceous, annual, and perennial kinds, of which the species

species cultivated are; the hieracium-leaved groundsel (*senecio hieracifolius*); the Chinese groundsel (*senecio pseudo China*); the spleenwort-leaved groundsel (*senecio hastatus*); and the elegant groundsel, or purple *Jacobæa* (*senecio elegans*.)

In the fourth species there are varieties with very double purple, and with equally double white flowers. The former is now chiefly cultivated.

And there are other species that may be cultivated for variety.

The first and two last sorts are readily increased by planting cuttings of the branches in pots filled with fine mould in the summer season, shading them till they have taken root; and, as the winter approaches, removing them under the protection of the greenhouse, where they should remain till May, when they may be planted out in the borders or clumps. They may likewise be raised from seed, which should be sown in the spring in pots, and placed in a gentle hot-bed.

The second sort should be more carefully attended to, being raised from offsets, which should be planted in pots in the spring season, and be plunged in the hot-bed of the stove, where the plants should be constantly kept.

The first and two last sorts afford variety in the borders, and among potted plants; and the second in stove collections.

SENECEY, a small town in the east of France, department of the Saone and Loire, with 1800 inhabitants; 11 miles south of Chalons-sur-Saone.—There are three other villages of France of the same name; one in the department of the Cote d'Or, 6 miles east of Verdun-sur-Saone; another, 3 miles south of Dijon; and the third, in the department of the Saone and Loire, north of Macon.

SENECTA ANGUIUM, the exuvix, or sloughs of serpens.

SENEFFE, a small town of the Netherlands, in the province of Hainault, with nearly 3000 inhabitants. It is noted as the scene of a sanguinary but indecisive battle, fought on 11th August 1674, between the prince of Orange and the prince of Conde; 12 miles north-west of Charleroi.

SENEGAL, a large and remarkable river of Africa, the principal one, which falls into the sea on its western coast. In all the early delineations of Africa, it was considered as the same river with the Niger, and was thus delineated as coming from the most distant regions in the interior of the continent. Thus, till the beginning or middle of last century, the words Senegal and Niger were considered as synonymous. The French, however, having fixed their head settlement at St. Louis, at the mouth of the Senegal, penetrated up the river as far as Gallam, where they also established a fort. Tombuctoo, early celebrated as the centre of African wealth, being situated on the Niger, anxious inquiries were made as to the means of penetrating to that city, by ascending the Senegal. The result, however, was not satisfactory. It was found, that about sixty miles above Gallam, the country assumed a mountainous aspect, and the rocks intersected the river in such a manner, as to render it impossible for barks to ascend. This was called the cataract of Felu; and about forty leagues higher were the falls of Govinea, which have not been so carefully examined, but have been reported as equally formidable. These obstacles served to account for the fact, which was soon ascertained, that there was no instance of a vessel sailing between Tombuctoo and Gallam. It was still conceived, however, that by transporting the goods from the rock of Felu, to beyond that of Govinea, the benefit of the navigation of the supposed Niger might be obtained to a great extent. In endeavouring, however, to trace the higher part of its course, they were perplexed by various and contradictory reports. According to some, the Niger, after passing Tombuctoo, continued to flow westward, till it discharged itself into the Atlantic; but others positively asserted, that the river passing Tombuctoo flowed eastward, and had no communication with the Senegal. These last statements appeared so strongly attested, that the learned

French geographers, Delisle and D'Anville, hesitated not, in the course of the century, to make an essential change on the geography of this part of Africa, describing the Senegal as a completely distinct river from the Niger. They derived it erroneously, however, from the lake Maberia, which appears to be the same described by Mr. Park, under the name of Dibbe. At the same time, the governors and the persons best acquainted with the French settlement on the Senegal, continued to cherish the old ideas, and to hope still for a navigable intercourse with Tombuctoo. The geography of this part of the continent was never cleared up, till the journey of Park, who fully ascertained the distinction between the two rivers, the eastward course of the Niger, to which a great portion of what even Delisle and D'Anville had assigned to the Senegal, really belonged. He learned moreover the source of the Senegal itself, in the great range of mountains which traverses Manding and Jallonkadoo, and from the other side of which the Niger takes its rise. From these descend a succession of rivers, of which that called on the spot the Ba Fing, or Black river, is considered as the principal branch of the Senegal. Its source has never been precisely explored; but it may be fixed pretty nearly in 7. 0. W. long. and 11. 50. N. lat. The Faleme, and the Ba Lee, or Kokoro, are also great streams, which, joining the Senegal in the kingdom of Gallam, render it a river of the first magnitude. The whole of the early course of this river, and of its tributaries, is through a broken country, diversified by rugged and precipitous hills, and intersected by numerous streams, the sands of which being copiously impregnated with gold dust, afford a considerable source of wealth. The gold is extricated by the women, by the mere process of agitation in water. After passing Gallam, the Senegal rolls over a level plain, through Foota Torra, the states of the Siratik, and the country of the Foulabs. After passing Podor, about 60 leagues from its mouth, the level is so complete, that Adanson does not conceive it to descend in that space more than two feet and a half. The river in this part of its course is bordered by vast woods, obstructed by thick underwood, and filled with numberless species of birds. The different kinds of monkeys and parrots in particular, are exhibited in vast variety. Crocodiles, and other species of amphibia, abound in the upper parts of the river. The Senegal, in this level part of its course, separates into branches, which form several large islands. Its entrance is obstructed by a very formidable bar, consisting of a ridge of sand, stretching across its mouth at a little distance under water. The mouth of the Senegal is in Lat. 16. 5. N.

SENEGAL, GOVERNMENT OF, the name given by the French to their great African settlement, situated at the mouth of the above river. It was under the reign of Louis XIV., that the energies of France began first to be directed towards colonies and commerce. In 1637, when Jannequin undertook his voyage to the Senegal, he found no settlement by any European nation, and his party were obliged to erect temporary habitations for themselves at the village of Biyutt, on the left bank of the river. It was in 1664 that the first West India Company, being established at Dieppe, directed its operations towards this part of Africa. It was soon involved in bankruptcy; and several similar companies, which followed in succession, were equally unfortunate. Each, however, at their commencement, made vigorous exertions to promote and extend the trade, of which they had obtained the monopoly; so that the settlement soon acquired some degree of prosperity. St. Louis, the capital of the French settlements on the Senegal and in Africa, is situated on an island in the middle of the river, which is here of considerable breadth. The only advantage of this situation is its security, for the island is a mere bank of white and moving sand, entirely arid, and destitute of the least appearance or vegetation. The streets are well arranged, and in general composed of thatched cottages or huts, amongst which are interspersed some stone houses, covered, according to the custom of this part of Africa, with flat roofs. Though producing nothing within itself, it is plentifully supplied

with all necessaries from the opposite continent. The water is brackish and bad, but is rendered potable by the use of filtering stones, brought from the island of Teneriffe. In 1787, the number of white inhabitants permanently established at Fort St. Louis, did not exceed 60, consisting of merchants, mechanics and soldiers, who had retired and intermarried with the mulatto women. The governor, the military, naval and civil officers, and all the European servants, might amount to nearly 600. The free mulatto and negro population was estimated at 2400 individuals. The domestic and labouring slaves, called cottage captives, amounted to nearly the same number. Lastly, during the prevalence of the slave trade, about 1200 unfortunate negroes were always kept in confinement, ready to be embarked for the West Indies. Thus the whole population amounted to about 6000 souls. The negroes here are partly Christians and partly Mahometans; and a recent traveller accuses them of being always ready to change their religion from motives of interest.

The most important branch of the commerce of this settlement, consists in procuring the gum known in commerce by the name of gum Senegal. It has been ascertained by experiment, that this is much superior to all the eastern kinds, and even to that of Arabia; that it is both more mucilaginous and gummy; that in some arts and trades no other gum can be used as a substitute; in short the use of it has become general within the last half century; it is now sought after with avidity, and the increase of the different manufactures has rendered it an object of great importance. The forests of acacia, from which this substance exudes, grow in the track of desert extending northwards from the Senegal. They are in the possession of three tribes of Moors, called Trarshaz, Braknaz and Darmanko, who occupy about seven oases or verdant spots, in that vast track of desert bounded on the south by the Senegal, on the west by the Atlantic, and on the east and north extending indefinitely into the vast expanse of the Sahara. There are three great gum forests called Sahel, Al Fatack and El Hiebar. The former, producing the white gum, which is held in highest estimation, is in the possession of the Trarshaz; while the forest of Al Fatack belongs to the Braknaz, and that of El Hiebar to the Darmanko. These two last produce gum of the red kind. The gum tree of the Senegal is in general not more than eighteen or twenty feet high, and its circumference seldom exceeds three feet. On the banks of the Senegal, the trees have been observed from twenty-five to twenty-eight feet high; but there the soil is covered with a stratum of vegetable earth, and the trees are also few in number. In general too, the gum tree of the desert is crooked, and has a rough and irregular appearance; such an appearance is common to all the productions of this track, which are, as it were, stunted, so that the plants appear rather like bushes than shrubs. The aridity of the soil, and the severity of the winds, are probably the cause of this imperfect growth. The leaves of these trees are alternate, of a dry and dirty green; the branches are thorny at the points where the leaves project, the blossoms are white and very short, the bark is smooth, and of a dark green. The period when the trees begin to give out their gum is about the 10th of November, when the great periodical rains have newly ceased. No artificial incision is necessary; for as soon as the harmattan or hot wind of the desert begins to blow, the drying process is so powerful, that the bark cracks in numberless places. The gum then issues out in various forms, but chiefly in drops about the size of a partridge's egg. The tenacity of the substance, however, is such as to prevent the drops from falling to the ground, when they would be in danger of being buried in the sand. They remain attached to the bark, near the spot whence they issued; they are always transparent and brilliant at the part where they are broken off, and when they have been kept for a few moments in the mouth, have all the clearness, limpidity and transparency of the finest rock crystal. About the beginning of December, the Moors of the three tribes quit their residences in the desert, where they leave only the aged, decrepid and infants, with a few who are necessary to tend the cattle; all

the rest set out in a confused and tumultuous crowd, the kings, princes, and rich men, riding on horses and camels, while the poor march on foot. In twelve days or a fortnight, each tribe reaches the forest which belongs to it, and on the borders of which it forms an encampment. The harvest continues about six weeks, when the gum being collected in heaps, is placed on the backs of camels and oxen, for the purpose of being transported to the banks of the Senegal. The camel generally carries from four to five hundred weight; the ox about a hundred and fifty pounds; and the gum is contained in immense leathern sacks, made of tanned ox hides. The great gum fair is at a spot on the northern bank of the Senegal, about midway between Podor and Fort St. Louis. There is not in the world a more barren and desolate spot; it is merely an immense plain, formed of white and moving sands; not an herb, plant, or shrub, varies the uniformity of this immense solitude. It does not even afford a drop of potable water, which must be brought from the river or from the neighbourhood. Hither, at the usual time, the French merchants repair, to wait the arrival of the Moors. On the morning of their approach, there may be heard, even at a great distance, the confused noise of their armies in motion; and towards noon, this vast and solitary plain appears covered with a multitude of men, women, camels, oxen and goats, all enveloped in clouds of dust. Some of these animals carry the tents and baggage; on others are placed the women, who may be seen in the act of suckling their children. The kings and chiefs are mounted on beautiful horses, while their wives appear seated on a few chosen camels, elegantly caparisoned, in a kind of baskets, covered with an awning. A band of Moors, armed with muskets and lances, escort this ambulatory horde, and vainly attempt to preserve some appearance of order. The air resounds with the voices of men, women, children and animals; and the living creatures who fill the plain appear truly innumerable. At length, when the whole of this barbarous assemblage is collected, the camps are fixed; a canon is then fired as a signal for beginning the fair. In carrying on the treaty there is no artifice to which these Moors do not resort; no lies which they do not invent, to obtain a higher price for their merchandise: address and threats are alternately employed; and the kings and chiefs invent a hundred lies to exact higher prices, and more considerable presents. The most ridiculous pretensions are every year renewed by these artful savages, who purposely raise innumerable difficulties in the course of the negotiation. Europeans are driven almost distracted by the extreme slowness and apathy of the Moors, who incessantly defer the termination of the business. Between the years 1785 and 1787, the quantity of gum actually bought by the French, amounted to 800,000lbs., independent of 400,000 carried to Portendick, and sold to the English. It is purchased in kantars, which originally contained about 500lbs.; but the French, that they might not be behind hand in cheating, gradually increased the size of the kantar, without any observation being made by the Moors, who are entire strangers to this kind of geometry. The kantar thus amounts now to about 2000lbs. It is paid almost exclusively in East India cotton cloths, dyed with indigo, called pieces of guinea; each of these is seven or eight ells long, and half an ell broad. Attempts have been made to make them receive cottons of French manufacture; but the Moors immediately distinguish by the smell, the genuine productions of the East Indies, and will accept of no other. The standard price of the kantar is 15 pieces of guinea; and as these may be averaged at 25 francs, the original price of the kantar will be 365 francs (15s. 7½d.) which gives the pound of gum at nearly 3 sols, 6 deniers (not quite 2d.) The gum has sold in Europe at from 30 to 40 sols (15d. to 20d.); so that, after ample allowance for freight and charges, the profit must still be very great. The trade might admit of considerable extension, as there are two other forests at Guerouf and Gallam, farther up the Senegal, the gum from which might be procured at a cheaper rate, though with greater expense of transport.

Another trade to which the French have devoted a much greater

greater share of attention, and from which they have conceived greater hopes, is that with the interior, by means of their settlement at Gallam, on the upper part of the Senegal. Through it they hoped not only to obtain an establishment in Bambouk, a country so rich in gold, but to extend their intercourse to Tombuctoo, and all the countries on the Niger. A fort was first built in 1700, at Dramanet, called Fort St. Joseph; but no proper measures having been taken to conciliate the natives, they soon rose in insurrection, and though unable to make any impression on European fortifications, yet, by perseverance and cutting off all supplies, they at length obliged the French to evacuate it. In 1713, a new fort was erected a little farther down, and in a very advantageous situation, at Mankanet. Repeated visits were made here by the governors of Senegal, with the view of acquiring information, and extending the trade. They never were able, however, to raise it to any high degree of importance. The excessively winding course of the river, which nearly doubles the distance from St. Louis to Gallam; the extreme unhealthiness of the climate, especially as the voyage can be carried on only in the rainy season; the difficult negotiation with the chiefs who occupy the banks, not to mention the danger of plunder; these circumstances have deterred all, except the most daring, from adventuring upon this voyage. Sanguier, who undertook it, says indeed that trade may be carried on with advantage, and that he made 100 per cent.; but in the way down he was plundered of his whole cargo.

Besides gum, there were exported from the Senegal, in 1786, slaves to the number of 2200, valued at 2,640,000 livres; gold to the amount of 90,000 livres; ivory and miscellaneous articles to 130,000 livres.

Considerable political revolutions have been experienced by this colony. In the war of 1756, it yielded to the victorious arms of Britain, and was ceded to this country at the peace of 1763. The French, however, retook it in 1779, and retained it by the peace of 1783. They lost it again in the revolutionary war; but on the restoration of the Bourbons, it was anew ceded to them. It was in sailing to resume possession of this settlement, that the *Medusa* frigate sustained that terrible shipwreck, which has drawn so much of the notice of the public. This disaster seems to have hitherto paralysed any attempts which the French might make, to restore the importance of their settlements in this part of Africa.

SENEGALIA, or SENEGALLUS, in Ornithology, the *Loxia astrill*. See LOXIA. See also FRINGILLA *Senegala*.

SENEGANTI, a river of South America, in the province of Darien, which runs west, and enters the great river Charquaguai.

SENEKA, or RATTLESNAKE-ROOT. See POLYGALA *Senega*.

SENELEE, a river of North America, which falls into the Tombigbee.

SENEMBL, in Zoology, a name given by Marcgrave to the LACERTA IGUANA; which see.

SENERE, a river of Brazil, in the territory of Matto-Grosso, which runs nearly south, and enters the Itenes or Guapore.

SENE'SCENCE, *s.* [*senesco*, Lat.] The state of growing old; decay by time.—The earth and all things will continue in the state wherein they now are, without the least *senescence* or decay, without jarring, disorder, or invasion of one another. *Woodward*.

SENE'SCHAL, *s.* [*scneschal*, Fr. from *scalck*, or *schalk*, the old Goth. and Germ. word for a *servant*, *senex*, old Lat. forming the first part of the word.] One who had in great houses the care of feasts, or domestic ceremonies.

The *seneschal* rebuk'd, inhaste withdrew;
With equal haste a menial train pursue.

It afterwards came to signify other offices.

Pope.

There eke he placed a strong garrison,
And set a *seneschal* of dreaded might,
That by his powre oppressed every one,
And vanquished all venturous knights in fight. *Spenser*.

SENEZ, a small town in the south-east of France, department of the Lower Alps, situated in a wild and rugged district, on the small river Asse. Population 800; 14 miles south-south-east of Digne.

SENFTEMBERG, a small town of Austria; 3 miles north of Stein, and 40 west-by-north of Vienna.

SENFTEMBERG, a small town of the Prussian states, in Lower Lusatia; 35 miles north-east of Meissen. Population 1000.

SENFTEMBERG, a small town in the east of Bohemia; 70 miles east of Prague. Population 1600.

SENGBEST, a town of Korassan, in Persia; 25 miles south-east of Meshed.

SENGEN, a city of China, of the first rank, in Quang-see, situated in a small and mountainous district. Lat. 23. 24. N. long. 107. 34. E.

SENGILEJEV, a town in the south-east of European Russia, at the confluence of the Wolga and Sengilaika. Population 2500; 29 miles south-by-east of Simbirsk.

SENGLEA, a town, or rather part of the city of Valette, in the island of Malta, divided by a canal from Vittoriosa, which is also a part of Valette. Senglea contains nearly 5500 inhabitants. See VALETTE.

SENGMA, a sea-port of Western Africa, in the country of Calabar; 5 miles north of Cape Formosa.

SENGOA, a village of Aderbijan, in Persia; 48 miles south-east of Tabreez.

SE'NGREEN, *s.* A plant. See SEDUM.

SENGWARDEN, a small town of Westphalia, in the grand duchy of Oldenburg, with 1400 inhabitants; 6 miles east of Jever.

SENICCA, a town in the north of Austrian Italy, in the Brescian, near the lake of Iseo.

SENILE, *adj.* [*senilis*, Lat.] Belonging to old age; consequent on old age.—My green youth made me very unripe for a task of that nature, whose difficulty requires that it should be handled by a person in whom nature, education, and time have happily matched a *senile* maturity of judgment with youthful vigour of fancy. *Boyle*.

SENI'LITY, *s.* [*seniliter*, Lat.] Old age.—Mr. Edwards, when going away, again recurred to his consciousness of *senility*; and, looking full in Dr. Johnson's face, said to him, You'll find in Dr. Young, "O my coevals! remnants of yourselves." Johnson did not relish this at all. *Boswell's Johnson*.

SENIIO, a small river of Italy, in the Ecclesiastical states, which flows into the Argento.

SENIOR, *s.* [*senior*, Lat.] One older than another; one who on account of longer time has some superiority.—How can you admit your *seniors* to the examination or allowing of them, not only being inferior in office and calling, but in gifts also? *Whitgift*.—An aged person.

A *senior* of the place replies,
Well read, and curious of antiquities.

Dryden.

SENIORE, a village of Algiers; 22 miles west of Tiffesh.

SENIORITY, *s.* Eldership; priority of birth.—He was the elder brother, and Ulysses might be consigned to his care, by the right due to his *seniority*. *Broomc*.

SENIORY, *s.* Seniority. *Unused*.

SENI'TZ, a small town of the north-west of Hungary, on the Miava; 37 miles north of Presburg, inhabited by Slovaks.

SENJEN, a large island on the coast of Norway. It is 25 miles in length, and 38 in breadth: the north part consists of hills, which, though seldom above 700 feet in elevation, seem much higher, their sharp peaks being covered nearly to the top with plants, which, in this high latitude, bear the same stunted appearance as among the higher Alps.

The

The chief town, Kloeven, is a small but neat place. Lat. 69. 30. N. long. 17. 0. E.

SENKOV, or ZENKOV, a small town in the interior of European Russia, in the government of Sloboosks-Ukraine; 68 miles east-south-east of Charkov.

SENLIS, a town in the north-east of France, department of the Oise, situated on a rising ground, in the middle of an extensive forest, near the small river Nonette. It has 4300 inhabitants, and, being an old place, its streets are narrow, and its houses ill built. The cathedral is, however, admired for its architecture, and its steeple for its height. Senlis has some trade in corn, wine and wool, with manufactures, on a small scale, of cotton, coarse woollens, paper, lace and porcelain. Its quarries afford good stone for building. Here are two great yearly fairs; one in April, the other in October; 30 miles north of Paris.

SENNA, in Botany: see CASSIA.—SENNA, Bladder: see COLUTEA.—SENNA, Scorpion: see CORONILLA.

SENNA, a town of Diarbekir, in Asiatic Turkey. It is most romantically situated in the bosom of a deep valley, well cultivated, and interspersed with orchards of peach, apricot, pear, apple and cherry trees. It is a flourishing little town, containing a population of about 8000 souls, of which number 2000 are Jews, Armenians and Nestorians, who trade to Mosul, Bagdad and Ispahan. The country round is mountainous, inhabited by wandering tribes of Curds and Iliats; 80 miles south-south-east of Mosul.

SENNAAR, a country of Eastern Africa, having Abyssinia on the east and south, Darfur on the west, Dongola and the independent districts of Nubia on the north. A great part of Sennaar being nearly inclosed between the Nile and the Tacazze, formed what was called by the ancients the island of Meroe, the central seat of the empire of ancient Ethiopia, which repeatedly conquered Egypt, and, according to some, perhaps fanciful traditions, communicated to that country many of its sciences and institutions. The ancient history and revolutions of Ethiopia are involved, however, in deep obscurity. In the early ages of the Christian era, this country, like the neighbouring one of Abyssinia, was converted to the Christian faith, which it appears even to have maintained down to the 12th century, and probably later; but the greater part of the inhabitants are now converted to the Mahometan religion, which they combine with the practices of Paganism, and with some remains of Christian observances. The kingdom of Sennaar is not of high antiquity. It was founded in 1504, by a body of Shilluk negroes, who descended from their settlements in the upper part of the Bahr-el-Abiad, drove before them, or subjected, the Arab inhabitants, and have since reigned over Sennaar. The principle of the government is entirely despotic, to such a degree, that all the courtiers assume *slave* as the highest title of honour. On the accession of a new king, all his brothers who can be found, are, according to a custom prevalent in these barbarous despotisms, immediately put to death. No female is allowed to reign, and the princesses, who are very numerous, meet with little more respect than any other of the female attendants. This absolute power, however, is tempered by a most extraordinary limitation, which is, that the king may lawfully be put to death by a council of the great officers, whenever they choose to decide that his reign is no longer for the public advantage. The execution of the sentence is entrusted to an officer called the sid-el-koom, who is a member of the monarch's own family, master of his household, and carries on an intimate and confidential intercourse with the king, whose days he is likely to be the instrument of bringing to a period. The fact appears to be, that the hereditary kings have sunk into a species of state pageants, kept up merely to amuse the people, and that the real power is now in the hands of the chief officers, particularly the commander of the forces. The troops of Sennaar, stationed immediately around the capital, consist of about 14,000, of a race of negroes called Nuba, from which is derived the general name of Nubia, applied to this region. The infantry are armed merely with a short

javelin and a round shield, and appear to be by no means good troops; but the horse, amounting to 1800, though armed only with coats of mail and a broad Slavonian sword, appeared to Mr. Bruce equal to any in the world. Sennaar has three governments which are tributary to it. One is Kordofan, situated between Sennaar and Darfur, to which latter country it is occasionally subjected. To the south of this is Fazuelo, a mountainous territory, affording a large supply of Gold and slaves, the staples of interior Africa. The government of Sennaar, on conquering this territory, continued its Mek or sovereign in the capacity of governor. The third government is that of El Acie, or Alleis, on the Bahr-el-Abiad, and including the original country of the Shilluk. The inhabitants are all fishermen, and possess a vast number of boats, with large fleets of which they made their successful invasion in 1504.

The territory of Sennaar for several miles from the banks of the river; is of very remarkable fertility. At the time also of the rains, which take place about the end of August and the beginning of September, it assumes a most delightful appearance, resembling the pleasantest parts of Holland. The corn springs up, covers the ground, makes the whole appear a level green track, interspersed with great lakes of water, and ornamental at certain intervals with groups of villages, the conical tops of the houses presenting at a distance the appearance of small encampments. The Nile flows through this immense plain above a mile broad, full to the very brim, but never overflowing. Soon after, however, the rains cease; the dhourra then ripens, the leaves turn yellow and rot, the lakes putrify, smell and are full of vermin; all the beauty disappears, and bare scorched Nubia returns, with all its terrors of poisonous winds and moving sands, glowing and ventilated with sultry blasts.

The dress of the people of Sennaar is extremely simple. A long shirt of blue Surat cloth, called marowty, covers them from the lower part of the neck down to the feet. The neck itself, however, is left open, which alone distinguishes the dress of the men from that of the women; who button this shirt round the neck. The men sometimes tie a sash round the middle; and both sexes, even of the better ranks, go through the house barefooted. The apartments, particularly those of the females, have the floor covered with Persian carpets. In going out, they wear sandals, and a kind of wooden patten, very neatly ornamented with shells. With a view to coolness, they have buckets of water thrown upon them in the middle of the day. In order to preserve themselves from cutaneous eruptions, of which they entertain a peculiar dread, they anoint themselves daily with camel's grease mixed with civet: and, for the same reason, though they put on every day a clean shirt, they lie all night upon one dipt in grease, which forms their only covering, their couch being merely a bull's hide tanned, and very much softened by this constant greasing, though it occasions a smell from which nothing can free them. The principal diet of the poor consists of bread and flour made of millet. The rich make it into a pudding toasted before the fire, with milk and butter; besides which they eat beef, partly roasted and partly raw. Their horned cattle are the largest and fattest in the world; but camel's flesh is the meat chiefly sold in the market. The liver of the animal, and the spare rib, are always eaten raw. Hog's flesh is not sold in the market, but is eaten publicly by the people in general, and secretly by those who pretend to be Mahometans. The diseases prevalent at Sennaar are the dysentery and the bloody flux, frequently accompanied by intermitting fever, for which bark is found a sovereign cure. Epilepsies and schirrous livers are likewise very frequent. Those who live much in camps, or in quarters distant from rivers, have more or less the gravel, occasioned probably by the use of well water; but at Sennaar this malady is rare. The elephantiasis is not known, nor is the small-pox endemic.

Sennaar produces within itself few commodities fit for trade; and that which it carries on consists chiefly in exchanging

changing the productions of interior Africa with those of Egypt and Arabia. The most extensive communication is with Suakin and Jidda, by Shendi, and thence across the track extending from the Nile to the Red Sea. With Egypt the intercourse is conducted by two different routes. One leads along the east of the Nile, and follows the course of that river to Shendi, when the caravans strike across the vast desert of Nubia, where for 500 miles they do not encounter a human habitation, till they arrive at Syene. The other track is west of the Nile. The caravans here, in coming from Egypt, quit the Nile at Siout, then strike across the equally extensive desert to the west of that river. They refresh themselves at Charje or the Great Oasis, then proceed for some time by the same track as the caravans to Darfur, till they rejoin the Nile at Moscho, in the territory of Dongola. After passing through the capital of that kingdom, they come to Korti, where they proceed across the desert of Bahiouda, and joining the Nile at Derri, follow its course to Sennaar. The commodities drawn from interior Africa, for export to Egypt and Arabia, are gold dust, called *tibhar*, ivory, civet, rhinoceros' horns, but above all, slaves. The gold still maintains its reputation as the purest and best in Africa. The foreign commodity chiefly sought after is blue cotton cloth from Surat. They receive also spices, hardware and toys, particularly a species of black beads made at Venice.

SENNAAR, a city, capital of the above kingdom, situated on the shore of the Bahr-el-Azrek, a river of Abyssinia, about 200 miles previous to its junction with the Bahr-el-Abiad, or main branch of the Nile. It stands upon ground merely high enough to secure it against the rise which takes place during the rainy season, at which time the river rises to the level of the street. The city is large, and is supposed to contain 100,000 inhabitants, though the houses are in general poorly built, and do not usually consist of more than one story. Bruce, however, found the habitations of all the great officers raised to the height of two stories. They have flat roofs, which form agreeable terraces; a construction peculiar to this city, as throughout the tropic in general, the roofs are made conical, in order that the violent rains to which these climates are subject, may run off without injuring the edifice. The moderation of these rains is also indicated by the sparing mixture of straw with the clay, of which all the houses are built. The king's palace is surrounded with a lofty brick wall, but the edifices which compose it are not arranged with any degree of order or taste. The apartments, however, are richly adorned with carpets. The soil around Sennaar is composed of a rich black earth, the most fertile that can be conceived; it has even been asserted, though doubtless with exaggeration, to yield three hundred for one. The crops of dhourra and millet are immense; and wheat and rice are also produced. There appears to be something, however, either in the air, or in this rank vegetation, which is pernicious to animal life. Mr. Bruce assures us, that no domestic animal of any description ever bred in the town, or in any district for several miles round; none of them, whether horse, mule, ass, or of any other description, can live there for all the year round, but must be carried every half year to the sands, three or four miles distant. Here Adelan, the general and actual ruler, kept his stud, which he maintained in the most perfect condition. There is also a constant mortality among the children in the city, and the numbers could not be kept up, unless by the constant introduction of slaves from the southward. The men are strong and large, but short-lived; which, however, may perhaps be sufficiently accounted for by the excesses in which they indulge. Neither rose, nor any species of jessamin, grows near the city; nor any tree, except the lemon. Lat. 13. 34. 36. N. long. 33. 30. 30. E.

SENNE, a small slow flowing river of the Netherlands, in the province of the Hainault, which passes through Brussels, and falls into the Dyle.

SENNERAT, an island near the west coast of West Greenland. Lat. 61. 28. N. long. 47. 35. W.

SENNERTUS (Daniel), a learned physician, was born on

the 25th of November, 1572, at Breslaw, in Silesia, where his father was a shoe-maker. He received his early education in his native city, under the direction of his mother, and was then sent to the university of Wittenberg, in the year 1593, where he exhibited such proofs of acuteness of mind and solidity of judgment, that every opportunity was afforded him, by visiting the other celebrated universities of Germany, especially those of Leipsic, Jena, Francfort-on-the-Oder, and Berlin, of cultivating his talents. He returned to Wittenberg in 1601, and received the degree of Doctor in September of that year, and in the same month of the following year was appointed to a professorship of medicine. In this office his eloquence and knowledge were calculated to raise him to a high reputation, and his luminous method of teaching brought crowds of pupils to his lectures. His reputation became so extensive, that patients came to him from all parts of the world, and he refused his assistance to nobody. He took what was offered for his trouble, but demanded nothing, and even returned to the poor what they gave him. The plague prevailed seven times at Wittenberg, while he was professor there; but he never retired, nor was ever known to refuse to visit the poorest sick. George I., elector of Saxony, whom he had cured of a dangerous illness in 1626, appointed him one of his physicians in ordinary; but with the permission to remain at Wittenberg, that the world might continue to derive the benefit of his public instructions. He was three times married, and had seven children by his first wife, three of whom survived him. He was at length carried off by an attack of the plague, which was raging in Wittenberg, in the month of July, 1637, in the sixty-fifth year of his age.

Sennertus was a voluminous writer, and has been characterized, by some critics, as a mere compiler from the works of the ancients; for his writings contain an epitome of the learning of the Greeks and Arabians, which renders them, even at this day, of considerable value as books of reference. His various works have been collected together, and published at different times and places, under the title of "Opera omnia;" but they were principally promulgated by himself under the following titles:—"Questionum Medicarum controversarum Liber;" 1609. "Institutiones Medicæ, et de Origine animarum in Brutis;" 1611. "Epitome Scientiæ Naturalis;" 1618. "De Febris Libri quatuor;" 1619. "De Scorbuto Tractatus;" 1624. "Practiciæ Medicinæ Liber primus;" 1628. Five other books of the same work were successively published. "Tractatus de Arthritide;" 1631. "Epitome Institutionum Medicarum disputationibus 18 comprehensa;" 1631. "Epitome Inst. Med. et Librorum de Febris;" 1634. "Hypomnemata physica;" 1635; and one or two small works of less note. Almost all these works have passed through many editions and translations. See Eloy Dict. Hist. de la Méd. Vita Dan. Sennerti, prefixed to his "Opera omnia."

SENNFELD, a village of Bavarian Franconia; 2 miles south-east of Schweinfurt. Population 800.

SE'NNIGHT, *s.* [Contracted from *sevensnight*.] The space of seven nights and days; a week.—Time trots hard with a young maid between the contract of her marriage and the day it is solemnized; if the interim be but a *sevensnight*, time's pace is so hard that it seems the length of seven years. *Shakspeare*.

SENNIT, [of *seven* and *knit*,] a sort of flat, braided cordage, formed by plating five or seven rope-yarns together. This is beaten smooth and flat with a hammer, and serves to keep the ropes to which it is applied from galling.

SENNOJE, a small town in the west of European Russia, in the government of Mohilev, on a lake of the same name. It is inhabited chiefly by Jews.

SENO'ULAR, *adj.* [*seni* and *oculus*, Lat.] Having six eyes. Most animals are binocular, spiders octonocular, some *senocular*. *Derham*.

SENONCHES, a small town in the north of France, department of the Eure and Loir. Population 1800; 13 miles north of Nogent-le-Rotrou.

SENONES, in Ancient Geography, a people of Gallia Cæltica,

Celtica, who occupied nearly the whole extent of the diocese of Sens and that of Auxerre, according to the ancient divisions of France. According to Cæsar, they were confined to Belgica. This author says of them: "est civitas in primis firma, et magnæ apud Gallos auctoritatis."—Also, a people of Italy, in Gallia Cispadana, upon the borders of the Adriatic sea. Their arrival in Italy may be fixed in the year before the vulgar era 397. They were overpowered in the year of Rome 463, by M. Curius Gentalus and P. Cornelius Rufinus; and were afterwards driven from the whole country which they occupied, from the Cæsis to the Rubicon. A colony was sent into their country, which assumed the name of "Sena Gallia." Seven years afterwards they were almost entirely exterminated by Dolabella.

SENONES, a small town in the east of France, department of the Vosges. It contains 1600 inhabitants, and has some woollen manufactures; 33 miles south-west of Strasburg.

SENON LENIC, a small well-built town of Upper Egypt, a few miles to the south of Benisuef.

SENOSECZ, a small town of Austrian Illyria, in Carniola, in the mountainous district called the Karst; 9 miles south-west of Czirknitz.

SENRA, SENREA, or SERRA, in Botany, a genus of Cavanilles, upon which different authors have bestowed the above appellations. We are ignorant of its derivation. See CAVAN, Diss. 2, 83. It appears to be allied both to MALVA and GOSSYPIUM.

SENS, a considerable town in the interior of France, department of the Yonne, situated on the side of a hill, in a pleasant spot, watered by the Yonne and the Vanne. It contains a population of 8000, and is the see of an archbishop. Its cathedral is admired both for its exterior and interior: it contains the tomb of the Dauphin, son of Louis XV., and of Dupradt, chancellor of France. To the college belong a museum and library. Sens has manufactures of woollens, velvet, stockings, gloves and leather. Its trade consists in corn, wine, wood, coal and hemp. Several ecclesiastical councils have been held here; among others that of 1140, in which the well-known Abelard was condemned. It was taken by an allied force, chiefly Austrian, on 11th February, 1814, but evacuated soon after; 34 miles west of Troyes, and 84 south-east of Paris. Lat. 48. 11. 55. N. long. 3. 16. 59. E.

SENSAON, a town of Africa, in the kingdom of Fez, situated near a mountain of the same name; 25 miles south of Tetuan.

SE'NSATED, *part. adj.* Perceived by the senses.—As those of the one are *sensated* by the ear, so those of the other are by the eye. *Hooke.*

SENSA'TION, *s.* [*sensatio*, school Lat.] Perception by means of the senses.—Diversity of constitution, or other circumstances, vary the *sensations*; and to them of Java pepper is cold. *Glanville.*—This great source of most of the ideas we have, depending wholly upon our senses, and derived by them to the understanding, I call *sensation*. *Locke.*—The happiest, upon a fair estimate, have stronger *sensations* of pain than pleasure. *Rogers.*

SENSBURG, a small town of East Prussia; 63 miles south-south-east of Königsberg. Population 1400.

SENSE, *s.* [*sens*, Fr., *sensus*, Lat.] Faculty or power by which external objects are perceived; the sight; touch; hearing; smell; taste.

This power is *sense*, which from abroad doth bring
The colour, taste, and touch, and scent, and sound,
The quantity and shape of every thing
Within earth's centre, or heav'n's circle found:
And though things sensible be numberless,
But only five the *sense's* organs be;
And in those five, all things their forms express,
Which we can touch, taste, feel, or hear or see.

Davies.

Then is the soul a nature, which contains
The power of *sense* within a greater power,
Which doth employ and use the *sense's* pains;
But sits and rules within her private bower.

Davies.

Both contain
Within them every lower faculty
Of *sense*, whereby they hear, see, smell, touch, taste.

Milton.

Of the five *senses*, two are usually and most properly called the *senses* of learning, as being most capable of receiving communication of thought and notions by selected signs; and these are hearing and seeing. *Holder.*—Perception by the senses; sensation.

If we had nought but *sense*, then only they
Should have sound minds which have their senses sound;
But wisdom grows when senses do decay,
And folly most in quickest *sense* is found.

Davies.

Sensibility; quickness or keenness of perception.

He should have liv'd,
Save that his riotous youth, with dangerous *sense*,
Might in the times to come have ta'en revenge. *Shakspeare.*

Understanding; soundness of faculties; strength of natural reason.

There's something previous ev'n to taste; 'tis *sense*,
Good *sense*, which only is the gift of heaven.
And though no science, fairly worth the seven. *Pope.*

Reason; reasonable meaning.—Opinion; notion; judgment.

I speak my private but impartial *sense*
With freedom, and, I hope, without offence. *Roscommon.*

Consciousness; conviction.—In the due *sense* of my want of learning, I only make a confession of my own faith. *Dryden.*—Moral perception.—Some are so hardened in wickedness, as to have no *sense* of the most friendly offices: *L'Estrange.*—Meaning; import.

My hearty friends,
You take me in too dolorous a *sense*. *Shakspeare.*

SE'NSED, *part.* Perceived by the senses. *A word not in use.*—Let the sciolist tell me, why things must needs be so as his individual senses represent them: is he sure that objects are not otherwise *sensed* by others, than they are by him? And why must his *sense* be the infallible criterion? It may be, what is white to us, is black to negroes. *Glanville.*

SE'NSEFUL, *adj.* Reasonable; judicious. *Not used.*
The lady, hearkning to his *sensefull* speech,
Found nothing that he said unmeet nor geason. *Spenser.*

SE'NSELESS, *adj.* Wanting sense; wanting life; void of all life or perception.

The charm and venom, which they drunk,
Their blood with secret filth infected hath,
Being diffused through the *senseless* trunk,
That through the great contagion direful deadly stunk.

Spenser.

Unfeeling; wanting sympathy.—The *senseless* grave feels not your pious sorrows. *Rowe.*—Unreasonable; stupid; doltish; blockish.

She saw her favour was misplac'd;
The fellows had a wretched taste:
She needs must tell them to their face,
They were a *senseless* stupid race.

Swift.

Other creatures, as well as monkeys, little wiser than they, destroy their young by *senseless* fondness, and too much embracing. *Locke.*—Wanting sensibility; wanting quickness or keenness of perception. *Not in use.*—To draw Mars like a young Hippolytus, with an effeminate countenance, or that hot-spurred Harpalice in Virgil, proceeded from a *senseless* and unconscionable judgment. *Peacham.*—Wanting knowledge; overcausious; with of.

The wretch is drench'd too deep;
His soul is stupid, and his heart asleep,
Fatten'd in vice: so callous and so gross,
He sins and sees not, *senseless* of his loss.

Dryden.

SE'NSELESSLY,

SENSELESSLY, *adv.* In a senseless manner; stupidly; unreasonably.

SENSELESSNESS, *s.* Folly; unreasonableness; absurdity; stupidity.

SENSIBILITY, *s.* [*sensibilité*, Fr.] Sensibleness; perception. *Unused.*—Quickness of sensation; quickness of perception; delicacy.—Modesty is a kind of quick and delicate feeling in the soul: it is such an exquisite *sensibility*, as warns a woman to shun the first appearance of every thing hurtful. *Addison.*

SENSIBILITY, in Physiology, the power of receiving an impression, and transmitting it to the brain, so as to cause sensation or feeling. The question whether any part be sensible is, therefore, whether by acting on it in any way, feeling can be excited. Sensibility in this, its common acceptation, obviously refers to the internal feeling or act of consciousness resulting from its exercise. Some physiologists have used the word in a more extensive sense, to denote all impressions produced on our organs, even those which are not felt; as that of the blood on the heart, the food on the alimentary canal, &c. Thus Bichat calls the former *animal sensibility*, because it is peculiar to living beings: and distinguishes the latter by the name *organic*, as it belongs to those parts where motions are involuntary, and which constitute the automatic or organic life.

SENSIBLE, *adj.* [*sensible*, Fr., *sensilis*, Lat.] Having the power of perceiving by the senses.—A blind man conceives not colours, but under the notion of some other *sensible* faculty. *Glanville.*—Perceptible by the senses.

Come let me clutch thee:

I have thee not, and yet I see thee still —

Art thou not, fatal vision, *sensible*

To feeling as to sight?

Shakespeare.

Air is *sensible* to the touch by its motion, and by its resistance to bodies moved in it. *Arbuthnot.*—Perceived by the mind.—Idleness was punished by so many stripes in public, and the disgrace was more *sensible* than the pain. *Temple.*—Perceiving by either mind or senses; having perception by the mind or senses.—The versification is as beautiful as the description complete: every ear must be *sensible* of it. *Broome.*—Having moral perception; having the quality of being affected by moral good or ill.

If thou wert *sensible* of courtesy,

I should not make so great a shew of zeal.

Shakespeare.

Having quick intellectual feeling; being easily or strongly affected.

Even I, the bold, the *sensible* of wrong,

Restrain'd by shame, was forc'd to hold my tongue.

Dryden.

Convinced; persuaded. *A colloquial use.*—They are very *sensible* that they had better have pushed their conquests on the other side of the Adriatic; for then their territories would have lain together. *Addison.*—In conversation it has sometimes the sense of reasonable; judicious; wise.—I have been tired with accounts from *sensible* men, furnished with matters of fact which have happened within their own knowledge. *Addison.*

SENSIBLE, *s.* Sensation: a poetical conversion of the adjective into the substantive.

Our torments also may in length of time
Become our elements; these piercing fires
As soft as now severe, our temper chang'd
Into their temper; which must needs remove
The *sensible* of pain.

Milton.

Whatever is perceptible around us.

The creation

Of this wide *sensible*.

More.

SENSIBLENESS, *s.* Possibility to be perceived by the senses.—Actual perception by mind or body.—Sensibility.

The *sensibleness* of the eye renders it subject to pain, as also unfit to be dressed with sharp medicaments. *Sharp.*

SENSIBLY, *adv.* Perceptibly to the senses.

He is your brother, lords; *sensibly* fed
Of that self-blood, that first gave life to you. *Shakespeare.*

A sudden pain in my right foot increased *sensibly*. *Temple.*
—The salts of human urine may, by the violent motion of the blood, be turned alkaline, and even corrosive; and so they affect the fibres of the brain more *sensibly* than other parts. *Arbuthnot.*—With perception of either mind or body.—Externally; by impression on the senses.—That church of Christ, which we properly term his body mystical, can be but one; neither can that one be *sensibly* discerned by any, inasmuch as the parts thereof are some in heaven already with Christ. *Hooker.*—With quick intellectual perception.

What remains past cure

Bear not too *sensibly*; nor still insist

To afflict thyself in vain.

Milton.

[In conversation.] Judiciously; reasonably.

SENSITIVE, *adj.* [*sensitif*, Fr.] Having sense, but not reason or perception.

SENSITIVE PLANT, *s.* [*mimosa*, Lat.] A plant.

Whence does it happen, that the plant which well
We name the *sensitive*, should move and feel?

Whence know her leaves to answer her command,

And with quick horror fly the neighbouring hand? *Prior.*

The *sensitive plant* is so called, because, as soon as you touch it, the leaf shrinks. *Mortimer.* See MIMOSA.

SENSITIVELY, *adv.* In a sensitive manner.—The sensitive faculty, through the nature of man's sense, may express itself more *sensitively* towards an inferior object than towards God: this is a piece of frailty. *Hammond.*

SENSORIUM, in Physiology, the part which feels and perceives, the common centre, to which sentiments are conveyed, and from which volition emanates; in other words, the brain. In medical and physiological writings, this expression is used as synonymous with brain; thus we read of affections of the sensorium; of sensorial power and influence, &c. *Sensorium commune*, is the imaginary point of the brain, the residence of the metaphysical soul, to which every sensation is brought, and from which all determinations of the will proceed. The like nonsense is inseparable from all those who attempt to class the soul under our ordinary conceptions of quantity.

SENSUAL, *adj.* [*sensuel*, Fr.] Consisting in sense; depending on sense; affecting the senses.—Men in general are too partial, in favour of a *sensual* appetite, to take notice of truth when they have found it. *L'Estrange.*—Pleasing to the senses; carnal; not spiritual.—The greatest part of men are such as prefer their own private good before all things, even that good which is *sensual* before whatsoever is most divine. *Hooker.*—Devoted to sense; lewd; luxurious.

From amidst them rose

Belial, the dissolutes spirit that fell,

The *sensuallest*; and, after Asmodai,

The fleshiest incubus.

Milton.

SENSUALIST, *s.* A carnal person; one devoted to corporeal pleasures.—Let atheists and *sensualists* satisfy themselves as they are able; the former of which will find, that, as long as reason keeps her ground, religion neither can nor will lose her's. *South.*

SENSUALITY, *s.* [*sensualité*, Fr. Cotgrave.] Devotedness to the senses; addiction to brutal and corporeal pleasures.—Impure and brutal *sensuality* was too much confirmed by the religion of those countries, where even Venus and Bacchus had their temples. *Bentley.*

To SENSUALIZE, *v. a.* To sink to sensual pleasures; to degrade the mind into subjection to the senses.—Not to suffer one's self to be *sensualized* by pleasures, like those who were changed into brutes by Circe. *Pope.*

SENSUALLY, *adv.* In a sensual manner.—She had lived most corruptly and *sensually*. *Id. Herbert.*

SENSUOUS, *adj.* Sensual.—The soul by this means of overbodying herself, given up to fleshly delights, bated her wing

wing apace downward; and finding the ease she had from her visible and *sensuous* colleague the body, in performance of religious duty, her pinions now broken and flagging, shifted off from herself the labour of high soaring any more. *Milton*.—Harmonious, or appealing to the sense.—To this poetry would be made precedent, as being less subtle and fine; but more simple, *sensuous* and passionate. *Milton*.

SENT. The participle passive of *sens*.

SENTENCE, *s.* [*sentence*, Fr., *sententia*, Lat.] Determination or decision, as of a judge civil or criminal.—If matter of fact breaks out with too great an evidence to be denied, why, still there are other lenitives, that friendship will apply, before it will be brought to the decretory rigours of a condemning *sentence*. *South*.—It is usually spoken of condemnation pronounced by the judge; doom.—By the consent of all laws, in capital causes, the evidence must be full and clear; and if so, where one man's life is in question, what say we to a war, which is ever the *sentence* of death upon many? *Bacon*.—A maxim; an axiom, generally moral.—An excellent spirit, knowledge, understanding, and shewing of hard *sentences* were found in Daniel. *Dan*.—A *sentence* may be defined a moral instruction couched in a few words. *Broome*.—A short paragraph; a period in writing.—A simple *sentence* has but one subject and one finite verb: a compounded *sentence* has more than one subject or one finite verb, either expressed or understood; or it consists of two or more simple *sentences* connected together. *Lowth*.

To SENTENCE, *v. a.* [*sentencier*, Fr.] To pass the last judgment on any one.

After this cold consideration, *sentence* me;
And, as you are a king, speak in your state,
What I have done that misbecame my place. *Shakspeare*.

To condemn; to doom to punishment.—Idleness, *sented* by the decurions, was punished by so many stripes. *Temple*.—To relate, or express, in a short and energetic way. *Unused*.—The best way for speech, is to be short, plain, material. Let me hear one wise man *sentence* it, rather than twenty fools, garrulous in their lengthened tale. *Feltham*.

SENTENTIAL, *adj.* Comprising sentences.—Dr. Geddes is an advocate for a translation, which is not literal or verbal, but "*sentential*;" that is, where every sentence of the English corresponds as exactly to the Hebrew as the difference of the two idioms will permit. *Abp. Newcome*.

SENTENTIOSITY, *s.* Comprehension in a sentence. *Unused*.—Vulgar precepts in morality carry with them nothing above the line, or beyond the extemporary *sententiousness* of common conceits with us. *Brown*.

SENTENTIOUS, *adj.* [*sentencieux*, Fr.] Abounding with sentences, axioms and maxims, short and energetic.—He is very swift and *sententious*. *Shakspeare*.

Eloquence, with all her pomp and charms,
Foretold us useful and *sententious* truths. *Waller*.

Comprising sentences.—The making of figures being tedious, and requiring much room, put men first upon contracting them; as by the most ancient Egyptian monuments it appears they did: next, instead of *sententious* marks, to think of verbal, such as the Chinese still retain. *Grew*.

SENTENTIOUSLY, *adv.* In short sentences; with striking brevity.—They describe her in part finely and elegantly, and in part gravely and *sententiously*: they say, look how many feathers she hath, so many eyes she hath underneath. *Bacon*.

SENTENTIOUSNESS, *s.* Pithiness of sentences; brevity with strength.—The Medea I esteem for the gravity and *sententiousness* of it, which he himself concludes to be suitable to a tragedy. *Dryden*.

SENER HARBOUR, a cove in the north-west part of Lake Winnepisegee.

SENTERY, *s.* [This is commonly written *sentry*, corrupted from *sentinel*.] One who is set to watch in a garrison, or in the outlines of an army.

What strength, what art can then
Suffice, or what evasion bear him safe
Through the strict *senteries*, and stations thick
Of angels watching round? *Milton*.

SENTIENT, *adj.* [*sentiens*, Lat.] Perceiving; having perception.—This acting of the *sentient* phantasy is performed by a presence of sense, as the horse is under the sense of hunger, and that without any formal syllogism presseth him to eat. *Hale*.

SENTIENT, *s.* He that has perception.—If the *sentient* be carried, *passibus æquis*, with the body, whose motion it would observe, supposing it regular, the remove is insensible. *Glanville*.

SENTIMENT *s.* [*sentiment*, Fr.] Opinion; properly on moral topics; but it has been carelessly used for any opinion.—The consideration of the reason, why they are annexed to so many other ideas, serving to give us due *sentiments* of the wisdom and goodness of the sovereign Disposer of all things, may not be unsuitable to the main end of these inquiries. *Locke*.

Alike to council or the assembly came,
With equal souls and *sentiments* the same. *Pope*.

A striking sentence in a composition.—Those who could no longer defend the conduct of Cato, praised the *sentiments*. *Dennis*.—Sensibility; feeling.—He pretends to and recommends *sentiment* and liberality; but I know him to be artful, close and malicious: in short, a sentimental knave. *Sheridan*.

SENTIMENTAL, *adj.* Abounding with sentiment; affecting sensibility, in a contemptuous sense.—Shall we imitate the *sentimental* and deep-searching Barrow? *Langhorne*.—Petrarch has described the perplexities of a lover's mind, and his struggles betwixt hope and despair, a subject most fertile of *sentimental* complaint, by a combination of contrarities; a species of wit highly relished by the Italians. *Warton*.

SENTIMENTALITY, *s.* Affectation of fine feeling or exquisite sensibility.—She has even the false pity and *sentimentality* of many modern ladies. *Warton*.

SENTINEL, *s.* [*sentinelle*, Fr. from *sentio*, Lat.] One who watches or keeps guard to prevent surprise.

Norfolk, hie thee to thy charge;
Use careful watch, chuse trusty *sentinels*. *Shakspeare*.

First, the two eyes, which have the seeing power,
Stand as one watchman, spy, or *sentinel*,
Being plac'd aloft, within the head's high tow'r;
And though both see, yet both but one thing tell. *Davies*.

SENTINEL, GREAT, an island in the Eastern seas, about 10 miles in circumference; 20 miles south-west from the Greater Andaman. Lat. 11. 36. N. long. 92. 40. E.

SENTINEL, LITTLE, a small island in the Eastern seas; about 8 miles from the Little Andaman. Lat. 10. 59. N. long. 92. 23. E.

SENTINO, a small river of Italy, in the Ecclesiastical States, which rises in the duchy of Urbino, and falls into the Esino.

SENTIPAC, the capital of a district of the same name, in the kingdom of Mexico, and intendency of Guadalajara. Its population consists of 58 families of Spaniards, mulattoes, and a mixed race of both, and 105 Indians.

SENTOU, a town of China, of the third rank, in Setchuen, on the river Kincha.

SENTRY, *s.* [corrupted from *sentinel*.] A watch or sentinel.

One goose they had, 'twas all they could allow,
A wakeful *sentry*, and on duty now. *Dryden*.

Guard; watch; the duty of a sentry.
Here toils and death, and death's half-brother, sleep,
Forms terrible to view, their *sentry* keep. *Dryden*.

SENURIS, a village of Fayoum, in Egypt, near the Birket il Cairun.

SENZARSKAIA, a fortress of Asiatic Russia, in the government of Tobolsk; 80 miles south of Yalutorousk.

SEODA,

SEPIA.

1. *S. Octopus*. 2. under Surface of *S. media*. 3. Back of the same.

J. Pons sc.

SEODA, a sea-port on the southern coast of Nippon, in Japan; 105 miles east of Meaco.

SEOUJI KIAMEN, a post of Chinese Tartary, in the country of the Mongols; 23 miles south-west of Karhotun.

SEOUNY, a town of Hindostan, province of Gundwaneh, belonging to the rajah of Nagpore. Lat. 22. 4. N. long. 83. 3. E.

SEOUNY, a town of Hindostan, province of Khan-deish, belonging to the Mahrattas. Lat. 22. 21. N. long. 77. 1. E.

SEPARABILITY, *s.* The quality of admitting disunion or discription.—*Separability* is the greatest argument of real distinction. *Glanville*.—The greatest argument of real distinction is *separability*, and actual separation; for nothing can be separated from itself. *Norris*.

SEPARABLE, *adj.* [*separable*, Fr., *separabilis*, Lat.] Susceptive of disunion; discriptible.—The infusions and decoctions of plants contain the most *separable* parts of the plants, and convey not only their nutritious but medicinal qualities into the blood. *Arbuthnot*.—Possible to be disjoined from something: with *from*.—Expansion and duration have this farther agreement, that though they are both considered by us as having parts, yet their parts are not *separable* one from another. *Locke*.

SEPARABLENESS, *s.* Capableness of being separated. *Used by Boyle*.

To SEPARATE, *v. a.* [*separo*, Lat., *separer*, Fr.] To break; to divide into parts. To disunite; to disjoin.

I'll to England.

—To Ireland, I: our *separated* fortunes
Shall keep us both the safer.

Shakspeare.

To sever from the rest.—Can a body be inflammable from which it would puzzle a chymist to *separate* an inflammable ingredient? *Boyle*.—To set apart; to segregate.—*Separate* me Barnabas and Saul, for the work whereunto I have called them. *Acts*.—David *separated* to the service those who should prophesy. *Chron*.—To withdraw.—*Separate* thyself from me: if thou wilt take the left, I will go to the right. *Gen*.

To SEPARATE, *v. n.* To part; to be disunited.—When there was not room enough for their herds to feed, they by *separate* separated, and enlarged their pasture. *Locke*.

SEPARATE, *adj.* Divided from the rest; parted from another.—'Twere hard to conceive an eternal watch, whose pieces were never *separate* one from another, nor ever in any other form. *Burnet*.—Disjointed; withdrawn.—Eve *separate* he wish'd.—Secret; secluded.

In a secret vale the Trojan sees
A *separate* grove.

Dryden.

Disunited from the body; disengaged from corporeal nature. *An emphatical sense*.—Whatever ideas the mind can receive and contemplate without the help of the body, it can retain without the help of the body too: or else the soul, or any *separate* spirit, will have but little advantage by thinking. *Locke*.

SEPARATED FLOWERS, in Botany, are so called when the stamens and pistils are situated in different flowers of the same species. Hence it appears that separated flowers are confined to such plants as are either monoecious, dioecious, or polygamous. They are termed by Linnaeus, *DICLINES*.

SEPARATELY, *adv.* Apart; singly; not in union; distinctly; particularly.—It is of singular use to princes, if they take the opinion of their council, both *separately* and together, for private opinion is more free, but opinion before others is more reserved. *Bacon*.

SEPARATENESS, *s.* The state of being separate.

SEPARATION, *s.* [*separatio*, Lat.] The act of separating; disjunction.—They have a dark opinion, that the soul doth live after the *separation* from the body. *Abbot*.—The state of being separate; disunion.—As the confusion of tongues was a mark of *separation*, so the being of one language was a mark of union. *Bacon*.—Chemical analysis,
VOL. XXIII. No. 1552.

or the operation of disuniting things mingled.—A fifteenth part of silver, incorporate with gold, will not be recovered by any matter of *separation*, unless you put a greater quantity of silver, which is the last refuge in *separations*. *Bacon*.—Divorce; disjunction from a married state.

Did you not hear

A buzzing of a *separation*

Between the king and Catherine.

Shakspeare.

SEPARATION BAY, a bay in the straits of Magellan, on the coast of Terra del Fuego; 10 miles south-east of Cape Pillar.

SEPARATIST, *s.* [*separatiste*, Fr.] One who divides from the church; a seceder.—The anabaptists, *separatists*, and sectaries' tenets are full of schism, and inconsistent with monarchy. *Bacon*.

SEPARATOR, *s.* One who divides; a divider.

SEPARATORY, *adj.* Used in separation.—The most conspicuous gland of an animal is the system of the guts, where the lacteals are the emissary vessels, or *separatory* ducts. *Cheyne*.

SEPARATRIX, in Arithmetic, denotes the point, or comma, which separates and distinguishes decimals from integers; thus, 465,32 or 465.32.

SEPET, or CAPE DE SEPET, a promontory in the south-east of France, near Toulon, with a small fort, which defends the entrance of Toulon harbour.

SEPHIROS, a word used by Paracelsus and his followers, to express a sort of dry and hard imposthume, or kind of spurious scirrhus.

SEPHIROTH, a Hebrew word signifying *brightnesses*; and the cabalists give the name of sephiroth to the most secret parts of their science.

SEPHOURY, a village of Palestine, on the site of the ancient city of Sephor, or Sephoris, once the strongest in all this country, and the capital of Galilee. It contains the ruins of a church, and on a hill about half a mile distant, those of a castle. About a mile to the south is the fine fountain of Sephoury, probably the same where the kings of Jerusalem, during the holy war, encamped their armies, on account of the great plenty of forage and water. There is a chapel here, belonging to the Greek church; 12 miles north-west of Tabaria.

SEPHTON, a parish of England, in Lancashire; 7 miles north of Liverpool. Population 2852.

SEPIA, the Cuttle-fish, a genus of the Vermes Mollusca class and order, of which the Generic Character is as follows: the body is fleshy, receiving the breast in a sheath, with a tubular aperture at its base; it has eight arms, beset with numerous warts or suckers, and in most species two pedunculated tentacula; the head is short; the eyes large: the mouth resembling a parrot's beak.

These animals inhabit various seas, and in hot climates some of them grow to an enormous size: they are armed with a dreadful apparatus of holders furnished with suckers, by which they fasten upon and convey their prey to the mouth; they have the power of squirting out a black fluid resembling ink, and which is said to be an ingredient in the composition of Indian ink; the bone in the back is converted into pounce: the eggs are deposited upon sea-weed, and exactly resemble a bunch of grapes; at the moment the female deposits them they are white, but the males pass over them to impregnate them, and they then become black; they are round, with a little point at the end, and in each of them is enclosed a living cuttle-fish, surrounded by a gelatinous fluid. There are eight species, of which the 1st, 2d, 5th, 6th, and 7th, are natives of this country.

1. *Sepia octopus*.—The Specific Character of this species is, that the body has no tail or appendage; it has no pedunculated tentacula. It is found in the Mediterranean and Indian seas, in the latter of which it sometimes grows to a vast size; the arms are said to be eight or nine fathoms long. In these seas the Indians never venture out without hatchets in their boats, to cut off the arms, should it attempt to fasten upon them under water. This
L species

species is characterized by the shortness of the body, which is rounded behind: the arms taper to a point, joined at the base by a membrane or web, and covered within with two rows of alternate suckers. When opened this animal is said to exhibit so brilliant a light as to illuminate a large room.

2. *Sepia officinalis*.—Body without tail or appendage, and surrounded by a margin; it has two tentacula, or longer arms. This is found on our own coasts, and also in other oceans, and is frequently the prey of the whale tribe, and of plaice; its arms are frequently eaten by the conger-eel, and are reproduced; the bony scale on the back is that which is sold in the shops; and the black matter which it squirts out to darken the waters round it, and elude the pursuit of its enemies, is sometimes used as ink. The body was eaten by the ancients, and it is even now used as food by the Italians. The body of this species is ovate, the margin crenate and interrupted at the bottom; eight of the arms are short and pointed; the two tentacula are four times as long as the others; they are rounded, and the tips are very broad, and furnished within with numerous suckers.

3. *Sepia unguiculata*.—The body of this is without a tail or appendage; the arms are furnished with hooks, and it is found in the Pacific Ocean. The body is rounded behind; the arms are furnished with hooks, which are retractile within their proper sheaths instead of suckers.

4. *Sepia hexapus*.—The body of this is tailed, four or five-jointed; arms only six in number. This also is found in the Pacific Ocean. The body is about half a foot long, and the thickness of a finger; arms furnished with very minute suckers, which stick fast to whatever it fixes on.

5. *Sepia media*.—Body long, slender, cylindrical; the tail is finned, pointed, and carinate on each side; it has two long arms.—It inhabits the ocean, and in some respects it resembles the *Sepia officinalis*. The body ends in a point, and is furnished with a membrane on each side, commencing about the middle of the body.

6. *Sepia loligo*, or the Calamary.—The body of this is subcylindrical, subulate, and furnished with a flattish sharp-edged rhombic membrane at the tail on each side. This is found in divers parts of the ocean, and is from nine to twelve inches long. The body is of a reddish-brown, with two longer arms or tentacula; the eyes are of a fine blue; the cartilaginous plate or bone in the back is long, lance-shaped, and transparent; it has sometimes been placed as a species of the *pennatula*.

7. *Sepia sepiola*.—The body of this species has two rounded wings or processes behind.—It is found in the Mediterranean and European seas, and is very small. The body is short, rounded behind, with a round membrane or fin at the lower extremity; it has two long arms.

8. *Sepia tunicata*.—The body of this species is entirely enclosed in a black pellucid membrane, with two semicircular wings or processes behind.—This is an inhabitant of the Pacific Ocean. The body is very large, and is said sometimes to weigh one hundred and fifty pounds, and is convertible into palatable and pleasant food.

SEPLACE, in Italian Music, signifies that the part it is joined to may be repeated or not, at pleasure.

SEPIBILE, *adj.* [*sepio*, Lat.] That may be buried. *Unused. Bailey.*

SEPIMENT, *s.* [*sepimentum*, Lat.] A hedge; a fence. *Unused. Bailey.*—A farther testimony and *sepiment* to which, were the Samaritan, Chaldee, and Greek versions. *Lively Oracles.*

SEPINO, a small town of Italy, in the north of the kingdom of Naples, in the province of Molise, with 3300 inhabitants, and a bishop's see, now united to that of Bojano. In the neighbourhood are found the ruins of the ancient SEPINUS; 17 miles north-by-west of Benevento.

To SEPOSE, *v. a.* [*sepono*, *sepositus*, Lat.] To set apart.—God *seposed* a seventh of our time for his exterior worship. *Donne.*

SEPOSITION, *s.* [*sepono*, Lat.] The act of setting apart; segregation.—We must contend with prayer, with

actual dereliction and *seposition* of all our other affairs. *Bp. Taylor.*

SEPOURY, or SPRY, a town and fortress of Hindostan, province of Agra, and district of Gohud. It was taken by the British in 1781, but they were shortly after compelled to retreat. It now belongs to the Mahratta chief Sindia; it is situated 18 miles south-west of Narwa.

SEPOY, *s.* [*sipah*, Pers. an army, soldiers.] An Indian native who is a soldier in the infantry of the East-India Company.

SEPRIO, a thriving village of Austrian Italy, on the river Olona; 20 miles north-west of Milan.

SEPS, *s.* A kind of venomous eel.

SEPSI, or SCHEPSI, a district of Transylvania, in the province of the Szeklers, now united to that of Haromzek.

SEPT, *s.* [*septum*, Lat.] A clan; a race; a family; a generation. A word used generally with regard or allusion to Ireland.—The English forces were ever too weak to subdue so many warlike nations, or *septs* of the Irish as did possess this island. *Davies.*—The true and ancient Russians, a *sept* whom he had met with in one of the provinces of that vast empire, were white like the Danes. *Boyle.*

SEPTA, in Antiquity, were inclosures, or rails made of boards, through which persons went in to give their votes in the assemblies of the Romans.

SEPTALIUS, or SETTALA (Louis), an Italian physician of celebrity, was born at Milan, in February, 1552. He evinced from his early childhood, a strong inclination to the pursuits of literature, and at the age of sixteen defended some theses on the subject of natural philosophy with an acuteness of reasoning far above his years, and which excited the surprise of the audience, among whom was the archbishop of Milan. It was now supposed that he would follow the steps of his ancestors, both maternal and paternal, who had been much distinguished at the bar; but his inclination led him to the medical profession, and he accordingly repaired to Pavia, for the purpose of commencing the study of it. Here he proceeded with the same success, and obtained the degree of doctor in his 21st year, and was even appointed to a chair in this celebrated university in his 23d year. In his professorial capacity, though so young, he gave so many demonstrations of his talents and acquirements, that he soon became known to the most distinguished men of his time. Nevertheless, at the end of four years from the time of his appointment, he determined to relinquish the professorial dignity, for the purpose of exercising his medical skill in his native city. Though Philip III., king of Spain, selected him for his historiographer, the elector of Bavaria invited him to a professorship in the university of Ingoldstadt; the grand duke of Pisa, to a chair at that place; the city of Bologna to a similar appointment in their schools; and the senate of Venice by still more considerable offers both of honour and reward laboured assiduously to bring him to the university of Padua. He declined all these opportunities of elevation, content with the esteem and affection of his fellow-citizens. The only honour which he accepted was the appointment of chief physician to the state of Milan, which Philip IV. conferred upon him in 1627, as a reward for his virtues and talents. In the year 1628, the plague visited Milan. Septalius gave all the aid in his power to his fellow-citizens, and in the midst of his labours to alleviate the distresses occasioned by this fatal calamity, he was himself seized with the disease. He had scarcely recovered from this attack, when he was suddenly surprised by a fit of apoplexy, which left him speechless, and paralytic on one side. From this, however, he in a great measure recovered, and lived several years afterwards, but in a state of feebleness and imperfect health. He died in September 1633, in consequence of an attack of dysentery, at the age of 81. Septalius was a man of acute powers and solid judgment, and was reputed extremely successful in his practice. He was warmly attached to the doctrines of Hippocrates, whose works he never ceased to study. He was author of the following works: "In Librum Hippocratis Cui, de Aeribus, Aquis, et Locis Commentarii

Commentarii quinque," 1590; "In Aristotelis Problemata Commentaria Latina," tom. i. 1602, ii. 1607; "De Nævis Liber," 1006. "Animadversionum et Cautionum Medicarum Libri duo, septem aliis additi," 1629. This is a valuable work, the result of 40 years of practice, and equal to any of its contemporaries of the 17th century. "De Margaritis Judicium," 1618; "De Peste et Pestiferis Affectibus Libri V." 1622; "Analyticarum et Animasticarum Dissertationum Libri II." 1626; "De Morbis ex mucronata Cartilagine evenientibus, Liber unus," 1632, &c. *Eloy*. *Dict. Hist. de la Médecine.*

SEPTANA, a word used by the ancient physicians for a septenary fever, or one that performs its regular period in seven days.

SEPTANGULAR, *adj.* [*septum* and *angulus*, Latin.] Having seven corners or sides.

SEPTARIÆ, the name of a large class of fossils, called by some *ludus Helmontii*, and by others the *waxen veins*. They are defined to be fossile bodies not inflammable, nor soluble in water, naturally found in loose detached masses of a moderately firm texture and dusky hue, divided by several septa, or thin partitions, and composed of a sparry matter greatly debased by earth, not giving fire with steel, fermenting with acids, and in great part dissolved by them, and calcining in a moderate fire.

SEPTAS [from *septem*: the number seven prevailing in the fructification], in Botany, a genus of the class heptandria, order heptagynia, natural order of succulentæ, sempervivæ (*Juss.*)—Generic Character. Calyx: perianth seven parted, spreading, acute, permanent. Corolla: petals seven, oblong, equal, twice as long as the calyx. Stamina: filaments seven, awl-shaped, length of the calyx. Anthers subovate, erect. Pistil: germs seven, oblong, ending in awl-shaped styles, the length of the stamens. Stigmas bluntish. Pericarp: capsules seven, oblong, acute, parallel, one-valved. Seeds very many.—*Essential Character*. Calyx seven-parted. Petals seven. Germs seven. Capsules seven, many-seeded.

Septas Capensis, or round-leaved septas.—Leaves radical, four, blunt, crenate; opposite, subpetioled, roundish. Scape filiform, naked, terminated by a simple umbel, composed of seven or eight filiform, one-flowered, naked peduncles, with a very small involucret. In the natural orders it approaches to saxifraga and sedum.—Native of the Cape of Good Hope.

SEPTEMBER, *s.* [Latin; *Septembre*, Fr.] The ninth month of the year; the seventh from March.—*September* hath his name as being the seventh month from March: he is drawn with a merry and cheerful countenance, in a purple robe. *Peacham*.

The Roman senate would have given this month the name of *Tiberius*, but that emperor opposed it; the emperor Domitian gave it his own name *Germanicus*; the senate under Antoninus Pius gave it that of *Antoninus*; Commodus gave it his surname *Herculeus*, and the emperor Tacitus his own name *Tacitus*. But these appellations are all gone into disuse.

SEPTENARY, *adj.* [*septenarius*, Lat.] Consisting of seven.—Every controversy has seven questions belonging to it; tho' the order of nature seems too much neglected by a confinement to this *septenary* number. *Watts*.

SEPTENARY, *s.* The number seven.—The days of men are cast up by *septenaries*, and every seventh year conceived to carry some altering character in temper of mind or body. *Brown*.

SEPTENNIAL, *adj.* [*septennis*, Lat.] Lasting seven years.—The dreadful disorders of frequent elections have also necessitated a *septennial* instead of a triennial duration of parliaments. *Burke*.—Happening once in seven years.—Being once dispensed with for his *septennial* visit, by a holy instrument from Petropolis, he resolved to govern them by subaltern ministers. *Howell*.

SEPTE'NTRION, *s.* [French; *septentrio*, Lat.] The north.

Thou art as opposite to every good,
As the antipodes are unto us,
Or as the south to the *septentrion*.

Shakspeare.

SEPTE'NTRION, or SEPTE'NTRIONAL, *adj.* [*septentrionalis*, Latin; *septentrional*, Fr.] Northern.

Back'd with a ridge of hills,
That screen'd the fruits of th' earth and seats of men
From cold *septentrion* blasts.

Milton.

If the Spring
Preceding should be destitute of rain,
Or blast *septentrional* with brushing wings
Sweep up the smoaky mists and vapours damp,
Then woe to mortals.

Philips.

SEPTE'NTRIONALITY, *s.* Northerliness.

SEPTE'NTRIONALLY, *adv.* Towards the north; northerly.

To SEPTE'NTRIONATE, *v. n.* [from *septentrio*, Lat.] To tend northerly.—Steel and good iron, never excited by the loadstone, *septentrionate* at one extreme, and australize at another. *Brown*.

SEPTEONS, a small town in the south-west of France, department of the Tarn and Garonne, with 1000 inhabitants.

SEPTERION, [*Σεπτεριον*, Gr.] in Antiquity, a Delphic festival, celebrated every ninth year, in memory of Apollo's victory over Python. The chief part of the solemnity was a representation of Python pursued by Apollo.

SEPTICAL, or Σεπτικ, *adj.* [*σηπτικός*, Gr., *septique*, Fr.] Having power to promote or produce putrefaction.—As a *septical* medicine, Galen commended the ashes of a salamander. *Brown*.

SEPTICS, among Physicians, an appellation given to all such medicines as promote putrefaction.

From the many curious experiments made by Dr. Pringle to ascertain the septic and antiseptic virtues of natural bodies, it appears that there are very few substances of a truly septic nature even on the dead body; and as there is never any putrefaction in the living body it is clear that all such medicines are deceipts.

SEPTIER, or SETIER, a French measure, differing according to the species of the things measured.

For dry measure, the septier is very different in different places and different commodities; as not being any vessel of measure, but only an estimation of several other measures.

The septier is also a liquid measure at Paris and in other parts of France, and at Geneva. A muid of wine at Paris and in some other parts of France, contains 36 septiers, or 71½ English gallons.

At Geneva, the septier is = about 12 English gallons.

SEPTILATERAL, *adj.* [*septem* and *lateris*, Lat.] Having seven sides.—By an equal interval they make seven triangles, the bases whereof are the seven sides of a *septilateral* figure, described within a circle. *Brown*.

SEPTIMONTIUM, among the Romans, a festival celebrated in December, on all the seven hills of Rome; whence also it had this name, being otherwise called *Agoualia*.

SEPTIZON, or SEPTIZONIUM, in the Ancient Architecture, a term almost appropriated to a famous mausoleum of the family of the Antonines, which, Aur. Victor tells us, was built in the tenth region of the city of Rome, being a large insulated building, with seven stages or stories of columns.

SEPTUAGENARY, *adj.* [*septuagenarius*, Lat., *septuagenaire*, Fr.] Consisting of seventy.—The three hundred years of John of times, or Nestor, cannot afford a reasonable encouragement beyond Moses's *septuaginary* determination. *Brown*.

SEPTUAGE'SIMA, *s.* [Lat.] The third Sunday before Lent.

SEPTUAGE'SIMAL, *adj.* [*septuagesimus*, Lat.] Consisting of seventy.—In our abridged and *septuagesimal* age, it is very rare to behold the fourth generation. *Brown*.

SEPTUAGINT,

SEPTUAGINT, *s.* [*septuaginta*, Lat.] The old Greek version of the Old Testament, so called as being supposed the work of seventy-two interpreters.—Which way soever you try, you shall find the product great enough for the extent of this earth; and if you follow the *septuagint* chronology, it will still be far higher. *Burnet*.

SEPTUM, in Anatomy, a name applied to various parts of the body; generally such as separate contiguous cavities. The SEPTUM *Auricularum* in the heart is placed between the two auricles. SEPTUM *Cerebri* and *Cerebelli*, the falci-form processes of the dura mater, &c.

SEPTUPLE, *adj.* [*septuplex*, Lat.] Seven times as much. *A technical term*.

SEPU, a village of Asiatic Turkey, in the government of Sivas; 40 miles south-east of Sivas.

SEPU'LCHRAL, *adj.* [*sepulchral*, Fr.; *sepulchralis*, from *sepulchrum*, Lat.] Relating to burial; relating to the grave; monumental.

Sepulchral lies our holy walls to grace,
And new-year odes.

Pope.

SE'PULCHRE, *s.* [*sepulcre*, Fr.; *sepulchrum*, Lat.] A grave; a tomb.

To entail him and his heirs unto the crown,
What is it but to make thy *sepulchre*? *Shakspeare.*

Flies and spiders get a *sepulchre* in amber, more durable than the monument and embalming of any king. *Bacon.*

To SE'PULCHRE, *v. a.* [accented on the second syllable by Shakspeare and Milton.] To bury; to entomb.

Go to thy lady's grave, and call her thence;
Or, at the least, in her's *sepulchre* thine. *Shakspeare.*

I am glad to see that time survive,
When merit is not *sepulchre'd* alive;
Where good men's virtues them to honours bring,
And not to dangers. *B. Jonson.*

Thou so *sepulchre'd* in such pomp do'st lie,
That kings for such a tomb would wish to die. *Milton.*

Disparted streams shall from their channels fly,
And, deep surcharg'd, by sandy mountains lie,
Obscurely *sepulchre'd*. *Prior.*

SEPULTURE, *s.* [*sepulture*, Fr.; *sepultura*, Lat.] Interment; burial.—In England *sepulture*, or burial of the dead, may be deferred and put off for the debts of the person deceased. *Ayliffe*.

SEPULVEDA, a small town of Spain, in Old Castile, province of Segovia, on a height near the river Duraton. It contains 1600 inhabitants, and the environs produce quantities of flax and hemp; 24 miles east-north-east of Segovia.

SEQUA'CIOUS, *adj.* [*sequacis*, Lat.] Following; attendant.—Rather a *sequacious* and credulous easiness. *Bp. Taylor.*

Orpheus could lead the savage race,
And trees uprooted left their place,
Sequacious of the lyre;
But bright Cecilia rais'd the wonder higher:
When to her organ vocal breath was giv'n,
An angel heard and straight appear'd,
Mistaking earth for heaven. *Dryden.*

Ductile; pliant.—In the greater bodies the forge was easy, the matter being ductile and *sequacious*, and obedient to the hand and stroke of the artificer, and apt to be drawn, formed, or moulded. *Ray*.

SEQUA'CIOUSNESS, *s.* State of being sequacious.—That servility and *sequaciousness* of conscience. *Bp. Taylor.*

SEQUA'CITY, *s.* [*sequax*, Lat.] Ductility; toughness.—Matter, whereof creatures are produced, hath a closeness, lenter, and *sequacity*. *Bacon*.—Act of following.—Liberty of judgment seemeth almost lost either in lazy or blind *sequacity* of other men's votes. *Whitlock*.

SEQUATCHEE, a river of the United States, in Tennessee, which rises in Bledsoe county, runs south-west, passing through the western part of the Cherokee country, and flows into the Tennessee.

SEQUATUR *sub suo periculo*, a writ that lies, when a *summons ad warrantandum* is awarded, and the sheriff returns that the party hath nothing by which he may be summoned: then goes forth an *alias* and a *pluries*; and if he comes not on the *pluries*, this writ shall issue.

SE'QUEL, *s.* [*sequela*, Fr.; *sequela*, Lat.] Conclusion; succeeding part.—Consequence inferred.—Was he not a man of wisdom? Yes, but he was poor: but was he not also successful? True, but still he was poor: grant this, and you cannot keep off that unavoidable *sequel* in the next verse, the poor man's wisdom is despised. *South*.—Consequence; event.

In these he put two weights,
The *sequel* each of parting and of fight. *Milton.*

What *sequel* is there in this argument? An archdeacon is the chief deacon: ergo, he is only a deacon. *Whitgift*.

SE'QUENCE, *s.* [*sequence*, old Fr., from *sequor*, Lat.] Order of succession.

How art thou a king,
But by fair *sequence* and succession? *Shakspeare.*

The inevitable *sequences* of sin and punishment. *Bp. Hall*.—Series; arrangement; method.—The cause proceedeth from a precedent *sequence*, and series of the seasons of the year. *Bacon*.

SE'QUENT, *adj.* [*sequent*, old Fr.; *sequens*, Lat.] Following; succeeding.

Let my tryal be mine own confession:
Immediate sentence then, and *sequent* death,
Is all the grace I beg. *Shakspeare.*

Either I am
The forehorse in the team, or I am none
That draw i' the *sequent* trace. *Beaum. and Fl.*

There he dies, and leaves his race
Growing into a nation; and now grown
Suspected to a *sequent* king, who seeks
To stop their overgrowth. *Milton.*

Consequential.
SE'QUENT, *s.* A follower. *Not in use*.—Here he hath framed a letter to a *sequent* of the stranger queen's, which accidentally miscarried. *Shakspeare*.

To SEQUE'STER, *v. a.* [*sequestrer*, Fr.; *secrestar*, Spanish; *sequestro*, low Lat.] To separate from others for the sake of privacy.

To the which place a poor *sequester'd* stag,
That from the hunter's aim had ta'en a hurt,
Did come to languish. *Shakspeare.*

In shady bowers,
More sacred and *sequester'd*, though but feign'd,
Pan or Sylvanus never slept. *Milton.*

To put aside; to remove.—Although I had wholly *sequestered* my civil affairs, yet I set down, out of experience in business, and conversation in books, what I thought pertinent to this affair. *Bacon*.—To withdraw; to segregate.—A thing as seasonable in grief as in joy, as decent being added unto actions of greatest weight and solemnity, as being used when most *sequester* themselves from action. *Hooker*.—To set aside from the use of the owner to that of others: as, his annuity is *sequestered* to pay his creditors.—To deprive of possessions.—It was his taylor and his cook, his fine fashions and his French ragou's, which *sequestred* him; and, in a word, he came by his poverty as sinfully as some usually do by their riches. *South*.

To SEQUE'STER, *v. n.* To withdraw; to retire.—To *sequester* out of the world into Atlantic and Eutopian politics, which can never be drawn into use, will not mend our condition. *Milton*.

SEQUE'STRABLE, *adj.* Subject to privation.—Capable

pable of separation.—Hartshorn, and divers other bodies belonging to the animal kingdom, abound with a not uneasily sequestrable salt. *Boyle.*

To SEQUESTRATE, *v. n.* To sequester; to separate.—In general contagions more perish for want of necessaries than by the malignity of the disease, they being sequestrated from mankind. *Arbutnot.*

SEQUESTRATION, *s.* [*sequestration*, Fr.] Separation; retirement.

His addiction was to courses vain,
I never noted him in any study,
Any retirement, any sequestration
From open haunts and popularity.

Shakspeare.

There must be leisure, retirement, solitude, and a sequestration of a man's self from the noise of the world; for truth scorns to be seen by eyes much fixt upon inferior objects. *South.*—Disunion; disjunction.—The metals remain unsevered, the fire only dividing the body into smaller particles, hindering rest and continuity, without any sequestration of elementary principles. *Boyle.*—State of being set aside.

Since Henry Monmouth first began to reign,
Before whose glory I was great in arms,
This loathsome sequestration have I had.

Shakspeare.

Deprivation of the use and profits of a possession.—If there be a single spot in the glebe more barren, the rector or vicar may be obliged, by the caprice or pique of the bishop, to build upon it, under pain of sequestration. *Swift.*

SEQUESTRATOR, *s.* One who takes from a man the profit of his possessions.—I am fallen into the hands of publicans and sequestrators, and they have taken all from me. *Bp. Taylor.*—By their sequestrators, men for the most part of insatiable hands and noted disloyalty, those orders were commonly disobeyed. *Milton.*—We have complained of armies, committees, sequestrators, triers, and decimators. *South.*

SEQUESTRO HABENDO, a writ judicial for the discharging a sequestration of the profits of a church benefice, granted by the bishop at the king's commandment, in order to compel the parson to appear at the suit of another. The parson, upon his appearance, may have this writ for the release of the sequestration.

SEQUIN, ZECAIN, or *Zeechino*, a gold coin struck at Venice, Genoa, Rome, Milan, Piedmont and Tuscany, and in several parts of the grand signior's states.

SEQUIN, a village of Caramania, in Asiatic Turkey; 105 miles south of Konieh.

SERA, a town of the south of India, province of Mysore, and capital of a district of the same name. Little rain is said to fall in this district, on which account the cultivation is inferior to that of other places. This town was taken by the Mahometans in 1664, and became afterwards the residence of a military collector belonging to the Nizam; but it frequently changed masters. It was taken by Hyder Aly in 1761; subsequently to that period by the Mahrattas; and afterwards in 1773 by Hyder again. By the war of 1799 it came into possession of the British, and was made over to the rajah of Mysore, as part of his territory. Lat. 13. 37. N. long. 76. 55. E.

SERAB, a village of Aderbijan, in Persia; 15 miles east of Tabreez.

SERACH, in the Turkish Military Orders, an officer who holds the stirrup of the caia of the janizaries in charge, attends him when he goes out on horseback, and serves him as a messenger on all occasions. After this office he has the title of *chous*; and after he has passed through this, he has the same office under the aga of the janizaries. *Pocoeke's Egypt.*

SERACORRO, a town of Bambara, in Central Africa; 80 miles west-north-west of Sego.

SERAES, or SERKAS, a town of Korassan, in Persia; 180 miles north north-west of Herat.

SERA'GLIO, *s.* [Italian, is derived from the Persian *serai*, a large hall or house: the French *serrail*, was formed.] Vol. XXIII. No. 1553.

merly our word, and not the Italian *serraglio*. "I could adde much more concerning the enormities of Rome, and your *serrail*." Sheldon, Mir. of Antiehr. 1616. "In that stately *serail* he discerned a prince." Situation of Parad. 1683. Cotgrave renders *serrail*, "the palace wherein the Great Turke mueth up his concubines." A house of women kept in the East for debauchery.—There is a great deal more solid content to be found in a constant course of well living, than in the voluptuousness of a *seraglio*. *Norris.*

SERAGLIO, formed of the Turkish word *serai*, which is borrowed from the Persian *seraw*, signifying a house, among the Levantines denotes the palace of a prince or lord.

At Constantinople they say, the seraglio of the ambassador of England, of France, &c.

The seraglio is used, by way of eminence, for the palace of the grand seignior at Constantinople, where he keeps his court, and where his concubines are lodged, and where the youth are trained up for the chief posts of the empire.

It is a triangle about three Italian miles round, wholly within the city, at the end of the promontory Chrysoceras, now called the Seraglio Point. The buildings run back to the top of the hill, and from thence are gardens that reach to the edge of the sea. It is inclosed with a very high and strong wall, upon which there are several watch towers: and it has many gates, some of which open towards the sea-side, and the rest into the city: but the chief gate is one of the latter, which is constantly guarded by a company of capoochees, or porters; and in the night it is well guarded towards the sea.

The outward appearance, du Loir tells us, is not beautiful, in regard the architecture is irregular, being cantoned out into separate edifices and apartments, in manner of pavilions and domes.

The old seraglio is the place where the emperor's old mistresses, who have died or who have been deposed, and the sultanas that have belonged to the deceased grand seigniors, are kept.

They are here fed and maintained with some luxury, and served with much attention, but they can no longer go out of this place of retirement.

The *harem* is that quarter of the seraglio in which the females are kept. This is soon replenished, because traders come from all parts to offer young slaves, and the pachas and great men are eager to present beauties capable of fixing the attention of the sovereign; thus hoping to obtain instantly his good graces, and place about his person the women who at some future time may be useful to them.

It is very difficult, and perhaps impossible, to learn exactly the manner in which the female slaves are treated in the harem of the grand seignior: never has the eye of the observer penetrated into this abode of hatred, jealousy and pride; into this abode where pleasure and love have so seldom resided. But, according to the account of the women, whose profession calls them thither, the reader may represent to himself three or four hundred black eunuchs, malicious, peevish, tormented by their impotence, cursing their nullity, endeavouring to counteract the female slaves intrusted to their charge; then a considerable number of young women, whose hearts would willingly expand, whose senses are moved at the idea of the pleasures which they wish in vain to know, jealous of the happiness which they are persuaded that their rivals enjoy, cursing the overseers who perplex them, solely taken up with their toilet, with their dress and with all the nonsense which idleness and ignorance can suggest to them; seeking, rather from vanity than from love, every means of pleasing a master, too frequently disdainful. We may represent to ourselves, in short, a sultan, young or old, mastered by ridiculous prejudices, without delicacy, often whimsical or capricious, alone in the midst of five or six hundred women, all equally beautiful, in whom he gives birth to desires which he is unable to gratify, who enjoys with them no pleasures but such as are too easy and without prelude, in which the heart has no share, and we shall

shall have a true idea of what passes in the harem of the grand seignior.

The chief of the black eunuchs, called *kistar-aga*, is one of the greatest personages of the empire: he it is who carries to the female slaves the will of his master: he it is who announces to them the happiness which they have to please him. Independently of the authority which he exercises in the harem, he has the superintendance of all the imperial mosques; he is charged with the general administration of all the pious foundations which relate to them; he has the pre-eminence over the chief of the white eunuchs, and, what is more flattering to a slave, he more frequently approaches his master, and more commonly enjoys his confidence. His income is very considerable.

The *keasne-vekili* is the second eunuch of the seraglio; he replaces the *kistar-aga*, when he dies, or is turned out of office. He has the general administration of the interior imperial treasure, which must be distinguished from the private treasure of the grand seignior, administered by the *khasnadar-aga*, one of the pages of confidence. There are some other eunuchs raised in dignity, such as he who belongs to the queen-mother, he to whom the care of the princes is entrusted, those who serve the royal mosque of the sultana Validai, whither the slaves of the grand seignior go to say their prayers; he who has the particular superintendance of the apartment of the *hasseke*; and a few others whose functions are less important.

The white eunuchs do not approach the women: they are employed out of the harem, and in the particular service of the sultan.

Balzac observes, that the seraglio at Constantinople is only a copy of that which Solomon anciently built at Jerusalem, for his wives and concubines. For a particular description of the seraglio, see Greave's Works.

SERAGLIO. See BOSNA SERAJO.

SERAI, a village of Anatolia, in Asiatic Turkey; 24 miles east of Castamena.

SERAI, a village of the desert of Syria; 30 miles east of Aleppo.

SERAING, a very large village of the Netherlands, on the Maese, with 2000 inhabitants. Here is a castle belonging to the bishop of Liege, and a number of villas; 3 miles south of Liege.

SERAMICA, or SURAMACA, a large river of South America, which rises in the mountains of Guiana, and, after a winding course of about 100 miles, falls into the Atlantic Ocean. It is from two to four miles broad, and is much encumbered with shallows, rocks and falls, so that it is hardly navigable for vessels of any burden.

SERAMPEI, a country or district in the interior of the island of Sumatra, bounded on the north and north-west by Korinchi, on the east, south-east, and south, by Pakalang, Jambee, and Sungei-tenang; and on the west and south-west by the greater Ayer Dikit river, and chain of high mountains bordering on the Sungei-ipu country. It comprehends 15 fortified and independent villages, besides talangs, or small open ones. Their intrenchments consist of large trees laid horizontally between stakes driven into the ground, about seven feet high, and six feet thick, with loopholes for firing through. The inhabitants further defend themselves by planting *ranjaus*, which are small sharp pointed rods in the paths, and carefully concealed, which wound the feet in a distressing manner. They decapitate the bodies of their enemies, stick the heads on poles, and address abusive language to them. Those taken alive are made slaves. In general the inhabitants seem to be quiet and inoffensive. The women are ugly, and their manners are uncouth. These people are apparently very strong, being capable of carrying heavy loads during journeys of 20 or 30 days. They acknowledge themselves the subjects of the sultan of Jambec, who sometimes, but rarely, exacts a tribute from each village, of a buffalo, a tail of gold, and an hundred bamboos of rice. This country produces cocoa nuts and cassia, which latter is to be obtained in quantities. The rhinoceros is common, and in the woods are myriads

of small insects, described to be leeches, which, dropping from the leaves, immediately fix on the skin, and there gorge themselves with blood. They do not exceed an inch in length, and are as slender as a needle; therefore they can penetrate any part of the clothes, and travellers must sometimes strip, and go into the water in order to wash them off. Part of Serampey is hilly; it is intersected by several rivers, and contains hot springs, near which columns of smoke are seen to issue from the earth. The inhabitants are Mahometans.

SERAMPORE, a town of Bengal, belonging to the Danes. It is pleasantly situated on the western bank of the Bhaggarutty or Hoogly river; 12 miles north of Calcutta. Its territory extends about a mile along the river, by half a mile in breadth. The houses are built of brick, plastered with mortar, and have flat roofs, with balconies and Venetian windows, but few of them are more than two stories high. There is a handsome church, and a battery of twelve pieces of cannon near the flag-staff, but the town is not fortified. It carries on a trifling trade with Europe, China, &c., but is principally supported by the missionaries, and British subjects who take refuge here from their creditors. About the year 1676 the Danes obtained this situation for their factory, from the Nabob Shaista Khan, who gave great countenance to European and other merchants, and encouraged them to settle in the vicinity of Hoogly. During the short war with the Danes, it was taken possession of by the British, but soon after restored. Lat. 22. 45. N. long. 88. 26. E. There are several other places of this name in Hindostan, called after Siri Ram, one of the Hindoo deities.

SERAN, a small river of Savoy, which rises near Chamberri, and joins the Rhone above Seissel.

SERANGANI, a cluster of small islands in the Eastern seas, situated about five leagues from the southern extremity of Magindanao, and between the 5th and 6th degrees of north latitude. There are three principal islands; the largest, named Hummock, is about 30 miles, and the next in size about 25 miles in circumference. There is also another of inferior dimensions. This island, which is the most westerly, is very high, making a sugar loaf. Its north coast is bold. It is well cultivated, and is called Belk. It produces most of the tropical fruits, and also rice, sugar-canes, pine-apples, mangoes, sour oranges, limes, jacks, plantains, cocoa-nuts, sago, sweet potatoes, tobacco, Indian corn and honey. The eastern has not near so good an appearance, neither are there any cocoa-nut trees to be seen on it, though they are so numerous on the western island. These islands abound in refreshments, with which they abundantly supply the ships that pass by them. The articles most in request among the natives are white or printed cottons, such as loose gowns or jackets, coloured handkerchiefs, clasp-knives, razors, and bar iron. Metal buttons are also much in demand, and a coat is soon stripped. The inhabitants speak the same language, and are of the same description, as those on the sea coast of Magindanao, being complete Malays, both in appearance and disposition. They have canoes, and also larger boats, armed with small brass cannon, and, like the other natives of the eastern isles, are much addicted to piracy. Their prows are covered with an awning of split bamboos, and can conceal a great many men. The Dutch East India Company claimed a sovereignty over these islands, but do not appear to have exercised any of its functions, or established any settlement on them.

SERANGODES, a word used originally as an epithet for the pumice-stone, and expressing cavernous, spongy, or full of holes. It has been hence applied to sinuous ulcers, and to all sorts of things that are cavernous, or of a spongy texture.

SERAPH, *s.* [שרפ, Heb.] One of the orders of angels.

As full, as perfect in vile man that mourns,
As the wrapt *seraph* that adores and burns.

Pope.

SERAPH is also said to be the name of a Turkish gold coin, worth about 5s. sterling.

SERAPH'S HEAD, in Heraldry, is used to denote a child's

child's head, with three pair of wings, viz., two in chief, two in fesse, and two in base.

SERA'PHIC, or SERA'PHICAL, *adj.* Angelic; angelical.—Love is curious of little things, desiring to be of angelical purity, of perfect innocence, and *seraphical* fervour. *Bp. Taylor*.—*Seraphic* arms and trophies. *Milton*.—Pure; refined from sensuality.

'Tis to the world a secret yet,
Whether the nymph, to please her swain,
Talks in a high romantic strain;
Or whether he at last descends
To like with less *seraphic* ends.

Swift.

SERAPHIM, *s.* [This is properly the plural of *seraph*, and therefore cannot have *s* added; yet, in compliance with our language, *seraphims* is sometimes written.] Angels of one of the heavenly orders.—To thee cherubim and *seraphims* continually do cry. *Com. Prayer*.—Then flew one of the *seraphims* unto me, having a live coal in his hand. *Isa*.—Of *seraphim* another row. *Milton*.

SERAPHIM, ORDER OF, in Heraldry, otherwise sur-named of *Jesus*, was instituted in Sweden, in 1334, by Magnus II. king of Sweden, in memory of the siege of the metropolitan city of Upsal.

SERAPIAS [from *serapis*, one of the Egyptian idols], in Botany, a genus of the class gynandria, order diandria, natural order of orchideae.—Generic Character. Calyx: spathes wandering. Spadix simple. Perianth none. Corolla: petals five, ovate-oblong, from erect patulous, converging upwards. Nectary, length of the petals, excavated at the base, melliferous, ovate, gibbous below, trifid, acute: the middle segment cordate, obtuse, three-toothed at the base with a bifid scar. Stamina: filaments two, very short, placed on the pistil. Anthers erect, under the upper lip of the nectary. Pistil: germ oblong, contorted, inferior. Style growing to the upper lip of the nectary. Stigma obsolete. Pericarp: capsule obovate, bluntly three-cornered, with three keels adjoined, three-valved, opening under the keels, one celled. Seeds numerous, sawdust-form. Receptacle linear, adjoined to each valve of the pericarp.—*Essential Character*. Nectary ovate, gibbous, with an ovate lip.

1. *Serapias latifolia*, or broad leaved helleborine.—Roots creeping; perennial, leaves ovate, embracing, flowers drooping, lip entire, pointed, shorter than the petals.—Native of Europe, in woods, groves and hedges: flowering in July and August.

2. *Serapias palustris*, or marsh helleborine.—Roots creeping; leaves lanceolate, embracing, flowers drooping, lip crenate, obtuse, equal to the petals.—Native of Europe, in swampy meadows, watery places, marshes, morasses and bogs.

3. *Serapias ensifolia*, or sword-leaved helleborine.—Root fibrous, leaves sword-shaped, bractes much shorter than the germ, flowers erect, lip obtuse, half as long as the petals.—Native of several parts of Europe.

4. *Serapias grandiflora*, or white helleborine.—Root creeping, leaves elliptic-lanceolate, bractes longer than the germ, flowers erect, lip obtuse, rather shorter than the petals.—Native of Europe in woods and thickets.

5. *Serapias nivea*, or snowy helleborine.—Leaves lanceolate, flowers loosely racemed, erect, bractes very small, lip obtuse, twice as short as the petals.—Native of Algiers, on hills.

6. *Serapias polystachya*, or many-spiked helleborine.—Roots fibrous, stem subdivided, jointed, leaves oblong-lanceolate, raceme compound, terminating, lip of the nectary ovate, recurved.—Native of Jamaica and Hispaniola.

7. *Serapias flava*, or yellow helleborine.—Roots fibrous, stem subdivided, jointed, leaves oblong-lanceolate, racemes compound axillary, lip of the nectary erect, acuminate.—Native of Jamaica.

8. *Serapias rubra*, or purple helleborine.—Root creeping, leaves lanceolate, bractes longer than the germ, flowers erect, lip acute, marked with waving lines.—Native of Europe.

9. *Serapias Lingua*, or narrow-leaved helleborine.—Bulbs roundish, lip of the nectary trifid, acuminate, smooth, longer than the petals.—Native of France, Switzerland, Carniola, Italy and Africa near Algiers.

10. *Serapias cordigera*, or heart-lipped helleborine.—Bulbs roundish, lip of the nectary trifid, acuminate, very large bearded at the base.—Native of Spain, Italy, the Levant and Africa, about Algiers: flowering early in the spring.

11. *Serapias Capensis*, or Cape helleborine.—Leaves conduplicate-ensiform, stem almost naked above, sheaths spatheous.—Native of the Cape of Good Hope.

12. *Serapias erecta*, or upright helleborine.—Leaves ovate, embracing, flowers erect.—Native of Japan.

13. *Serapias falcata*, or sickle-leaved helleborine.—Leaves ensiform, convoluted, sickle-form, flowers erect.—Native of Japan, on the mountain Fakona: flowering in April.

14. *Serapias regularis*.—Bulbs ovate, fibrous, leaves sheathing ensiform, keeled, scape erect, spiked, corollas six-petalled.—Native of New Zealand.

Propagation and Culture.—These plants being difficult to preserve and propagate, few have attempted to keep them in gardens. They may be taken up from the places where they grow naturally when their leaves begin to decay, and planted in a shady moist place, where they will thrive and flower.

SERAPIS, in Mythology, an Egyptian deity, who was worshipped under various names and attributes, as the tutelary god of Egypt in general, and as the patron of several of their principal cities.

SERAVALLE, a town in the east of Austrian Italy, in the district of Treviso, on the small river Mischio, with a population of 5000. It has manufactures of woollen and silk stuffs, and carries on a brisk trade with Germany; 20 miles east-by-north of Asolo.

SERAVALLE, a small town of the north-west of Italy, in the Sardinian part of the Milanese, on the Scrivia. It is slightly fortified, and has a population of 2400; 18 miles north of Genoa.

SERAVEZZA, a hill of Italy, in the Ecclesiastical States, near Carrara, remarkable for its beautiful marble, which is variegated with white and purple.

SERAVI, a village of Egypt, on the Eastern branch of the Nile; 21 miles north of Cairo.

SERARWA, a town of Abyssinia, in the province of Avergale, on a sandy plain.

SERASKER, a Turkish word, composed of *ser*, which in Persian signifies head, and *asker*, i. e. soldiers. This is a military degree, that admits of no superior, somewhat like generalissimo, and is a title given to those who command on the frontiers, or are detached with a considerable body of troops.

SERASS, in Ornithology, a bird of the genus *COLUMBA*, which comes yearly to Surat, in the East Indies, from Mount Caucasus, and is distinguished by a plication of the *asperia arteria*.

SERAVAN, in Ornithology, the name given by Buffon to the *LOXIA Astrild*; which see.

SERAWOOLLIES, a people of Gallam, in Central Africa, called by the French Saracolets. They are black as jet, active and intelligent. The trade of this part of Africa is entirely in their hands, and they are every way fitted for conducting it. Mr. Park says, they are tolerably fair in their dealings, though fond of money, esteeming a man almost wholly in proportion to the amount of his property. Saugnier, however, cautions those who deal with them, to carry on their transactions in a room cleared of all property, otherwise it would run an imminent risk of disappearing. They are also very jealous of the respect paid to them, and expect that, while present, they shall be the exclusive object of attention. Their language is less harmonious than that of the Foulahs, but is generally spoken in this part of the continent.

SERBADJE, a village of Egypt, on the eastern bank of the Nile; 20 miles north of Cairo.

SERBAH,

SERBAH, a village of Mekran, in Persia; 50 miles north-north-west of Kej.

SERBAJEE, in the Eastern military Orders, is a captain in the horse, in the service of the grand seignior.

SERBERNIDSCHÉ, or **SREBERNIK**, a town in the north-west of European Turkey, in Bosnia, situated between the Save, the Bosna and Drino. Here are some silver mines, 30 miles north-west of Zvornik.

SERBRAXOS, a village of Abyssinia, in the province of Gondar, which was the scene of a great battle between the king and the Galla, in consequence of which the king was obliged to abandon his capital.

SERBURA, the name of a dog, assigned by the mythological legends of the Hindoos, as an attendant on Yama, the regent of their infernal regions.

SERCHIO, a river of Italy, which rises in the duchy of Modena, flows through that of Lucca, and falls into the Mediterranean; 4 miles north-north-west of Pisa.

SERD, a village of Aderbijan, in Persia; 15 miles north of Tabreez.

SERDOBOL, a small town in the north of Russia, in Finland, on the north bank of the lake of Ladoga. The inhabitants are in number only 600; 66 miles north-north-east of Wiborg.

SERDOBSK, a town of European Russia, government of Saratov, on the Serdoba; 84 miles north-west of Saratov. Population 2500.

SERE, *adj.* [jeaman, Sax. *to dry.*] Dry; withered; no longer green. See **SEAR**.

The muses, that were wont green bays to wear,
Now bringen bitter elder-branches *sere*. *Spenser.*

He is deformed, crooked, old, and *sere*,
Ill-fac'd, worse bodied, shapeless every where;
Vicious, ungentle. *Shakspeare.*

Ere this diurnal star
Leave cold the night, how we his gather'd beams,
Reflected, may with matter *sere* foment. *Milton.*

They *sere* wood from the rotten hedges took,
And seeds of latent fire from flints provoke. *Dryden.*

On a *sere* branch,
Low bending to the bank, I sat me down,
Musing and still. *Rowe.*

SERE, *s.* [the old Fr. *serre*, "a hawk's talon." *Cotgrave.*] Claw; talon.

Two eagles,
That, mounted on the winds, together still
Their strokes extended; but arriving now
Amidst the council, over every brow
Shook their thick wings, and threatening death's cold fears,
Their necks and cheeks tore with their eager *seres*. *Chapman.*

SEREFCON, a river of Guiana, which runs south, and enters Caroni.

SERED. See **SERT**.

SEREEK, a town of Mekran, in Persia, situated four miles from the coast, near the entrance of the Persian gulf. It is the residence of the chief of Jask, and contains a large mud fort and six hundred huts; 105 miles north of Jask.

SEREGIPPE, or **SERGIPPE**, a province of Brazil, bounded north by the province of Pernambuco, south by the province of Todos Santos, east by the sea, and west by the deserts of the interior. It is very fertile and well cultivated, abounding particularly in cattle, grain, tobacco and sugar, in all of which it carries on a flourishing trade. Its ports do not admit large vessels. Population 20,000.

SEREGIPPE, the capital of the above province, situated on the shore of the river Vazabaris, five miles from the coast. It has a parish church, which is very handsome. It is the residence of the Portuguese governor. Its population is now reduced to 500 housekeepers. Lat. 11. 40. S. long. 37. 30. W.

SEREGIPPE, a river of the same province and kingdom, which rises in the mountains that lie between the rivers Real

and the Rio Francisco, runs south-south-east, and enters the bay.

SEREGNO, a small town of Austrian Italy, in the Milanese, with a population of 3300.

SEREIL, Feathers of a Hawk, the name which answers to pinions in any other fowls.

SEREIMA, a native African tribe, occupying part of the country behind Mosambique. During Mr. Salt's late visit to that settlement, it was governed by a female in alliance with the Portuguese. She could bring fifteen hundred men into the field.

SERENA, **GUTTA**, in Medicine, the same as amaurosis. See *Gutta Serena*, in **SURGERY**.

SERENA'DE, *s.* [*serenade*, Fr.; *serenata*, Ital.] Music or songs with which ladies are entertained by their lovers in the night.

Mixt dance, or wanton mask, or midnight ball,
Or *serenate*, which the starv'd lover sings
To his proud fair; best quitted with disdain. *Milton.*

Foolish swallow, what do'st thou
So often at my window do,
With thy tuneless *serenade*? *Cowley.*

To **SERENA'DE**, *v. a.* To entertain with nocturnal music.—He continued to *serenade* her every morning, till the queen was charmed with his harmony. *Spectator.*

To **SERENA'DE**, *v. n.* To perform a serenade.—A man might as well *serenade* in Greenland as in our region. *Tatler.*

SERE'NE, *adj.* [*seren*, Fr.; *serenus*, Lat.] Calm; placid; quiet.

Spirits live inspher'd
In regions mild, of calm and *serene* air. *Milton.*

The moon, *serene* in glory, mounts the sky. *Pope.*—
Unruffled; undisturbed; even of temper; peaceful or calm of mind; shewing a calm mind.

There wanted yet a creature might erect
His stature, and upright with front *serene*
Govern the rest. *Milton.*

Applied as a title of respect.—To the most *serene* Prince Leopold, Archduke of Austria, &c. *Milton.*

Gutta SERE'NA, *s.* A disease of the optic nerve, *Amaurosis*.

These eyes that roll in vain,
So thick a drop *serene* hath quench'd their orbs. *Milton.*

SERE'NE, *s.* [*seren*, or *serain*, Fr.; "fair, clear, calm weather; also the harmful dews of some summer's evenings; also the fresh cool air of the evening." *Cotgrave.*] A calm damp evening.—The fogs and the *serene* offend us. *Daniel.*—He hath felt the excess of heat, the dangerous *serains*. *Howell.*

To **SERE'NE**, *v. a.* [*sereno*, Lat.] To calm; to quiet. She, where she passes, makes the wind to lye
With gentle motion, and *serenes* the skye. *Fanshaw.*

To clear; to brighten.

Take care
Thy muddy beverage to *serene*, and drive
Precipitant the baser ropy lees. *Philips.*

SERE'NELY, *adv.* Calmly; quietly.—With unruffled temper.—The setting sun now shone *serenely* bright. *Pope.*

The nymph did like the scene appear,
Serenely pleasant, calmly fair:
Soft fell her words as flew the air. *Pope.*

SERE'NESS, *s.* Serenity. *Unused.*

SERENES, a small and frequented sea-port of Bursin, in Western Africa.

SERE'NITUDE, *s.* Calmness; coolness of mind. *Not in use.*

SERE'NITY, *s.* [*serenité*, Fr.; from *serenus*, Lat.] Calmness; mild temperature.

Pure

Pure *serenity* apace

Induces thought, and contemplation still. *Thomson.*

Peace; quietness; not disturbance.—A general peace and *serenity* newly succeeded a general trouble and cloud throughout all his kingdoms. *Temple.*—Evenness of temper; coolness of mind.—I cannot see how many men should ever transgress those moral rules, with confidence and *serenity*, were they innate, and stamped upon their minds. *Locke.*—Highness; title of respect.—The sentence of that court, now sent to your *serenity*, together with these letters, positively declares, &c. *Milton to Prince Leopold.*

SERENUS (Sammonicus, Quintus), a Roman physician, in the reigns of Severus and Caracalla, who was assassinated at a banquet, by the order of the last-mentioned emperor. He left an immense library, said to contain twenty thousand volumes, to his son, who was preceptor to the younger Gordian, to whom he presented this valuable bequest. Serenus was the author of several works on history and the products of nature; and also of a medical work in verse, which has passed through a multitude of editions, under the title of "Carmen de Medicina." He was superstitious in the choice of his remedies, and especially in that which he proposed for the Semitertian fever, which consisted in wearing about the neck, suspended by a linen thread, a piece of paper, on which was written the word *Abraçadabra*, in the form of a triangle. *Eloy. Dict. Hist. de la Méd.*

SÉRERES, a rude tribe of the Jolop nation, in Western Africa, inhabiting the country in the vicinity of Cape Verd. They are dispersed into several small republics, which unite into one body against a common enemy. They go naked, and appear to have few ideas on the subject of religion. They seem to be an inoffensive people, and hospitable to strangers; industrious, and unacquainted with strong liquors.

SERES, or SIRUS, a large inland town of European Turkey, in Macedon, situated in an elevated plain, at some distance to the east of the river called anciently Strymon, now the Carasou or Pondus. It is tolerably well built, has a number of handsome mosques, baths and other public edifices, and is said to contain a population of 30,000. Its manufactures of towels and other strong linen cloth, are the most noted in the Levant; and those of cotton stuffs are very extensive, consuming annually about 1000 bales of that article. The surrounding district is fertile, producing cotton, tobacco, and different kinds of corn and fruit. It is to this fertility; and the health of the situation, that the town owes its increase, having no harbour, and being out of the great road to Constantinople. It is the residence of a Greek archbishop; 45 miles north-east of Salonica.

SERETH, a large and navigable river of European Turkey, which rises at the foot of the Carpathians, flows through the Buckowine and Moldavia, and falls into the Danube at Brailow; 4 miles south of Galacz.

SERETH, or SIRET, a small town of Austrian Galicia, in the Buckowine, on the river Sereth, with 2000 inhabitants; 80 miles west-north-west of Jassy.

SERETKINA, a village of Irkoutsk, in Asiatic Russia, on the Angara.

SERF, *s.* [*serf*, old Fr.; *servus*, Lat.] A slave.—A great part of them were *serfs*, and lived in a state of absolute slavery or villainage. *Hume.*

SERFIA, or SERFIDSCHÉ, a town of European Turkey, in Romania, on the small river Indschekara; 45 miles west-south-west of Salonica.

SERFO. See SERPHANTO.

SERGATSCII, a small town of the interior of European Russia. Population 1800; 75 miles south-east of Niznci-Novgorod.

SERGE, *s.* [*serge*, Fr., or *serge*; Germ. *a mat.*] A kind of woollen cloth.—The same wool one man felts into a hat, another weaves into cloth, another into kersey or *serge*, and another into arras. *Hale.*

SER'GEANT, *s.* [*sergent*, Fr.; *sergente*, Ital.; from *serviens*, Lat.] An officer whose business it is to execute

the commands of magistrates.—A petty officer in the army.

This is the *sergeant*,
Who, like a good and hardy soldier, fought. *Shakspeare.*

A lawyer of the highest rank under a judge.—None should be made *sergeants*, but such as probably might be held fit to be judges afterwards. *Bacon.*—It is a title given to some of the king's servants: as, *sergeant churgeons*; that is, a chirurgion *servant* to the king.

SER'GEANTRY, *s.* Grand *sergeantry* is that where one holdeth lands of the king by *service*, which he ought to do in his own person unto him: as to bear the king's banner or his spear, or to lead his host, or to be his marshal, or to blow a horn, when he seeth his enemies invade the land; or to find a man-at-arms to fight within the four seas, or else to do it himself, or to bear the king's sword before him at his coronation, or on that day to be his sewer, carver, butler or chamberlain. Petit *sergeantry* is where a man holdeth land of the king, to yield him yearly some small thing toward his wars; as a sword, dagger, bow, knife, spear, pair of gloves of mail, a pair of spurs, or such like. *Cowel.*

SER'GEANTSHIP, *s.* The office of a sergeant.

SERGIEY, a village of Tobolsk, in Asiatic Russia, on the Yenisei; 72 miles north of Yeniseisk.

SERGIEVSK, a town of Asiatic Russia, in the government of Oufa; 180 miles west of Oufa.

SERGIEUSKAI A NOVA, a fortress of Oufa, in Asiatic Russia, on the Samara; 56 miles north-west of Orenbourg.

SERGIEVSKY-POSAD, a large village of European Russia, in the government of Moscow; 45 miles north north-east of Moscow.

SERGILUS, in Botany, a genus formed by Gærtner, v. 2. 409. t. 174. f. 6, of the Linnæan *Culea scoparia*, *Chrysocoma*, n. 2, Browne Jam. 316. t. 34. f. 4.

SERGINES, a small town in the central part of France, department of the Yonne, with 1500 inhabitants; 13 miles south of Provins.

SERGNA, a small town in the north of the kingdom of Naples, province of Molise. It is a bishop's see.

SERIANA [designed to commemorate a person of the name of Sergeant], in Botany, a genus of the class *Ocandria*, order trigynia, natural order of trihilatæ, sapindi (*Juss.*)—Generic Character. Calyx: perianth inferior, of five ovate, concave, spreading, permanent, unequal leaves. Corolla: petals four, obovate-oblong, twice the length of the calyx, furnished with claws; two of them more distant than the rest. Nectaries two; one of four oblong scales, inserted into the claws of the petals; the other of four glands at the base of the petals. Stamina: filaments eight, simple, shortish; anthers small, ovate, two-lobed. Pistil: germen superior, stalked, obovate, with three furrows; styles three, combined at the base, recurved; stigmas simple, obtuse. Pericarp: capsules three, globose, combined longitudinally, each of one cell, not bursting, dilated at the base into a half-ovate membranous wing. Seeds solitary ovate.—*Essential Character.* Calyx of five unequal leaves. Petals four. Nectaries of four scales and four glands. Capsules three, globose, combined, not bursting, each with a dilated wing at the base. Seeds solitary.—The fruit only distinguishes this genus from PAULLINIA, however similar the flowers, and habits of the plants.

1. *Seriana sinuata.*—Wings of the capsules dilated below their insertion. Leaves ternate; leaflets ovate-lanceolate, sinuated and toothed.—Native of South America. The stem is angular, furrowed and downy, climbing by means of tendrils. Leaves alternate, stalked; leaflets about two inches long, veiny, tapering at the base; roughish to the touch, though somewhat shining, above; paler beneath. Flowers small, in compound downy clusters. Wing of each capsule near an inch long.

2. *Seriana divaricata.*—Native of the woods of Jamaica. Stem climbing to a great height, zig-zag, with a few distant slight prickles, angular, smooth. Footstalks two inches long,

furrowed, smooth. Leaflets stalked, the stalks of the middle one winged. Tendrils axillary, divided at the extremity. Panicles from the same point, on long stalks, their branches racemose, alternate, spreading. Flowers white.

3. *Seriana Caracasana*.—Native of the Caraccas. The numerous stems climb by tendrils to a great height. Leaves smooth; leaflets elliptic-oblong, two or three inches in length. Flowers white, in compound cylindrical clusters, each cluster on a long stalk, accompanied by two strong revolute tendrils at the top of the stalk.

4. *Seriana racemosa*.—Native of Vera Cruz. Leaves acute. Footstalks scarcely bordered. Panicle (or compound cluster) with two tendrils. *Schumacher*.

5. *Seriana spectabilis*.—Native of the West Indies. This has much of the habit of *Seriana Caracasana*, but the winged footstalks, and obtuse leaflets, distinguish it essentially.

6. *Seriana Mexicana*.—Native of Mexico. Akin to the last, but the entire leaflets, and compound inflorescence distinguish it. The clusters, each of which is simple, are ranged alternately, in one large panicle.

7. *Seriana angustifolia*.—Leaves twice ternate; leaflets linear-lanceolate, acute, entire. Footstalks winged.—Native of South America.

8. *Seriana lupulina*.—Native of South America. Clusters almost simple, the length of the leaves, and accompanied by two tendrils. *Schumacher*.

9. *Seriana lucida*.—Native of Santa Cruz. The upper surface of the leaves is highly polished, and strongly veined. Clusters in some measure compound, accompanied by two spiral tendrils. Communicated by Sir J. Banks, to the younger Linnæus.

10. *Seriana triternata*.—Native of South America, or the West Indies. The clusters are not accompanied by tendrils, but form a sort of panicle, as in *Seriana Mexicana*.

There seem to be more species, of which incomplete specimens or descriptions exist, but with which we are not sufficiently acquainted to reduce them to order.

SERIATO, a town of Austrian Italy, in the Bergamasco, on the Serio; 3 miles east-south-east of Bergamo.

SERICH, the name of a seed used in the food of the Egyptian Coptics.

SERICUM, or SILK.

SERICUM is also a name given by old chemical writers to the flowers of zinc raised by sublimation in an inclined open crucible. These flowers are not reducible into zinc again, and are of a fibrous texture, and a beautiful bright white colour. This has made them be called also the *philosophic cotton*, and others have named them the *aqua sicca philosophorum*.

SERIDIA, in Botany, a generic name given by Jussieu to those species of Centaurea, which are included under the sixth section of that genus.

SERIES, *s.* [*serie*; Fr.; *series*, Lat.] Sequence; order.—The chasms of the correspondence I cannot supply, having destroyed too many letters to preserve any *series*. *Pope*.—Succession; course.

This is the *series* of perpetual woe,
Which thou, alas! and thine are born to know. *Pope*.

SERIGNI, a sea-port town of the island of Java, in the straits of Sunda, belonging to the king of Bantam.

SERIKOTCHE, a town of Korassan, in Persia; 195 miles north of Herat.

SERIMSAH, a village of Lower Egypt; 16 miles south Damietta.

SERINAGUR, or GERWALL, a principality of Northern Hindostan, situated chiefly between the 30th and 32d degrees of northern latitude, and between the 77th and 79th of eastern longitude. It is estimated at 140 miles in length by 60 in breadth. The whole face of the country is an assemblage of hills or mountains, some of which are covered with trees, the others bare rocks. The valleys are fertile, but very confined. It produces the oak, and several other European

trees and fruits; and a number of elephants are found in the woods. Previous to the invasion of Serinagur by the Nepaulese, the revenue was estimated at £65,000 per annum, and was governed by a Hindoo prince, whose authority was absolute. It produces a considerable quantity of copper, some gold, and carries on a trifling commerce with the neighbouring countries. The animals used for the transport of this traffic are sheep and goats, each of whom are loaded with a small sack, containing about 12 pounds of borax-salt, or grain, &c., and travel in flocks of 100 or 200, guarded by dogs and a few shepherds, led on by a stout ram, bearing a large bell, and travel at the rate of 10 or 15 miles per day. The natives are, generally speaking, Hindoos. This country does not appear to have been ever conquered by the Mahometans; but tribute was frequently exacted from it; and in the year 1568, Aurungzebe compelled the rajah to deliver up his nephew, the prince Soliman, who had taken refuge with him.

In the year 1791, the Nepaulese invaded Serinagur; but the rajah having collected about 5000 men, armed with matchlocks, bows and arrows, &c., defended the passes and a fortress called Sunggur, with such perseverance, that the invaders were compelled to retreat, upon the promise of an annual tribute; but in the year 1803, the rajah of Nepal marched in person at the head of his army, and was met at the village of Gurudwara, by the Serinagur chief, with a very inferior force. A bloody battle ensued, in which the latter, with a number of his followers, were killed, and the rest compelled to fly. After this untoward event, the Nepaulese became complete masters of the country, and divided it into numerous subdivisions, over each of which they appointed a native superintendant, leaving an army at the capital to keep them in proper subjection. During the war between the Nepaulese and the British, in 1815 and 1816, a relation of the late rajah having joined the latter, was admitted as an auxiliary, and at the conclusion of the peace, was re-established in his principality, and the Nepaulese compelled to resign every claim on the country. Serinagur may be therefore now considered as entirely under the British protection and influence; but it is too poor to support a resident at its court.

SERINAGUR, the capital of the above-mentioned province. It is situated in the centre of a valley of three miles in length, watered by the river Alcananda. The town is about three quarters of a mile in length. The houses are built of rough stone and mud, and are covered with slate, but are seldom more than two stories high. The palace of the rajah is, however, an exception, and is elevated to four stories. The streets are narrow and dirty, but there are some good shops. The river is about 80 yards wide in the dry season, and is crossed by means of a bridge of ropes. There are about 70 Mahometan families settled in the town, and the remainder of the inhabitants are Hindoos. On the opposite side of the river is a celebrated temple dedicated to Ishwara, which is attended by a number of dancing girls, who are said to be very licentious. The air of Serinagur is unfavourable to foreigners; on which account many of the merchants forsake it during the rainy season. Lat. 30. 11. N. long. 79. 18. E.

SERINGAPATAM, a celebrated city of the south of India, and for a considerable period the capital of the province of Mysore. It is situated at the upper end of an island of four miles in length, by one and a half in breadth, in the river Cavéry. Its proper name is Siri Runga Patan. It has existed as a fortress from a very early period; but in the year 1610, was taken from the viceroy of the fallen dynasty of Bijanagur, by rajah Wadeyar, and made the capital of Mysore. His successors continued to enlarge the town, and increase the fortifications; but it was not till the reigns of Hyder Aly and his son Tippoo Sultan, that it attained that degree of splendour and strength, to attract the cupidity, and often foil the attacks of the neighbouring powers. It was frequently besieged by the Mahrattas, and by the Nizam's troops, but without any other effect than compelling

compelling Hyder to pay sums of money. In the month of February 1792, it was invested by the British and allied armies, under the command of lord Cornwallis, amounting, with their followers, to the immense number of 400,000 men. Terrified by such a host, and dispirited by a defeat, Tippoo Sultan relinquished half his dominions, and paid the sum of three and a half millions sterling to the conquerors. In the year 1790, a war having again broken out between the British and Mysore, Seringapatam was again invested by the British and Nizam's forces, on the 14th of April, and was stormed about two o'clock in the afternoon of the 4th of May. On this occasion, Tippoo Sultan, and nearly 8000 of his followers, are reported to have fallen, and the whole of his family and treasures were taken by the conquerors. Previous to the siege, the city and island are said to have contained 150,000 inhabitants, including the garrison; but in the following year, the number of inhabitants were reduced to less than 32,000. Seringapatam has of course declined exceedingly in consequence; and having proved unhealthy to the European part of the garrison, it has been in contemplation to demolish the fortifications, as the province contains several places of greater strength. By the treaty made with the allied powers, Seringapatam became the property of the British, and is now protected by a strong garrison, and is the residence of a judge, collector, &c. Besides the city, the island contains a very celebrated temple, dedicated to Vishnu, and a handsome garden called the Loll Bang, in which are deposited the remains of Hyder Aly and his son Tippoo Sultan, under a handsome mausoleum, which is kept in repair at the expense of the Madras government. Further information respecting Seringapatam, may be found in the article **MYSOORE**. Lat. 12. 26. N. long. 76. 51. E.

SERINGHAM, an island of the district of Trichinopoly, in the south of India. It is situated on the river Cavery, and is celebrated on account of its Hindoo temples, the largest of which is situated about a mile from the western extremity of the island, and is surrounded by seven square inclosures built of brick. These inclosures are at the distance of 350 feet from each other, and have each four gates opposite the cardinal points. The outward wall is nearly four miles in circumference, and its gateway to the south is ornamented with pillars, several of which are single stones, 33 feet long, and 5 in diameter. The temple is built in the Egyptian style, and is dedicated to Vishnu; but the British pay such deference to the superstition of the attendant Brahmins, that no European has yet entered it. Pilgrims from all parts of India resort to this place for absolution from their sins; and as a considerable tax is levied upon them, this fund, besides supporting a great number of Brahmins, dancing girls, &c., yields a considerable and fair revenue to government. In the year 1751, during the siege of Trichinopoly, the French and their allies took possession of the island of Seringham; but they neither profaned, nor in any manner injured the temple. Early in the following year, the whole of the French forces were captured in the island by the British, under Major Lawrence, who also respected the rites and superstitions of the Hindoos. This island is situated in the middle of the river Cavery, half a mile north of the fortress of Trichinopoly.

SERINHAIM, a small river of Brazil, in the province of Todos Santos, which runs east, and enters the Atlantic.

SERINO, a town of Italy, in the central part of the kingdom of Naples, in the Principato Ultra, with 7500 inhabitants. Here are the remains of an ancient aqueduct, and in the neighbourhood the ruins of the Roman town of Sebastia; 12 miles north-by-east of Salerno.

SERINPALE, a small town of Western Africa, on the Senegal, in an island formed by two branches of that river; 80 miles north-east of St. Louis.

SERINZA, a settlement of New Granada, in the province of Tunja, peopled by 100 Indians and a few whites. There is another settlement of the same name in this province, containing 300 housekeepers.

SERIO, a river of Austrian Italy, in the Milanese, which rises on the borders of the Vatteline, flows through the Bergamasco, and falls into the Adda.

SERIO, a small town of Austrian Italy, in the Milanese, district of Bergamo, on the lake of Serio.

SERIOIA [a little vessel, jar or pot], in Botany, a genus of the class syngenesia, order polygamia æqualis, natural order of compositæ semiflosculosæ, cichoraceæ (*Juss.*).—Generic Character. Calyx common, simple: leaflets linear, almost equal, erect. Corolla compound, imbricate, uniform. Corollets hermaphrodite, equal, numerous. Proper one-petalled, ligulate, linear, truncate, five-toothed. Stamina: filaments five, capillary, very short. Anther cylindrical, tubulous. Pistil: germ ovate. Style filiform, length of the stamens. Stigmas two, reflex. Pericarp none. Calyx unchanged. Seeds oblong, length of the calyx. Pappus capillary, stipitate; with ten rays, hairy at the sides. Receptacle chaffy, length of the calyx, deciduous.—*Essential Character.* Calyx simple. Pappus subplumose. Receptacle chaffy.

1. *Seriola lævigata*, or smooth seriola.—Smoothish, leaves obovate, toothed. Roots perennial, long, twisted, the thickness of the little finger, covered at top with brown scales from the withered petioles.—Native of the island of Candia, and of Barbary, in the clefts of rocks.

2. *Seriola æthnensis*, or rough seriola.—Hispid, leaves obovate, somewhat toothed. Root annual.—Native of Italy, and of Barbary near Mascar.

3. *Seriola Cretensis*, or Cretan seriola.—Rough-haired, with runcinate leaves.—Native of the island of Candia or Crete.

4. *Seriola urens*, or stinging seriola.—Stinging; leaves toothed, stem branched.—Native of Sicily and other parts of the south of Europe.

SERIOUS, *adj.* [*serieux*, Fr.; *serius*, Lat.] Grave; solemn.—Important; weighty; not trifling.—I'll hence to London on a *serious* matter. *Shakspeare.*

There's nothing *serious* in mortality;
All is but toys.

Shakspeare.

SERIOUSLY, *adv.* Gravely; solemnly; in earnest; without levity.

All laugh'd to find
Unthinking plainness so o'erspread thy mind
That thou could'st *seriously* persuade the crowd
To keep their oaths, and to believe a God.

Dryden.

SERIOUSNESS, *s.* Gravity; solemnity; earnest attention.—The youth was received at the door by a servant, who then conducted him with great silence and *seriousness* to a long gallery, which was darkened at noon-day. *Addison.*

SERIPHIIUM [*Σερίφιον* of Dioscorides], in Botany, a genus of the class syngenesia, order polygamia segregata, natural order of compositæ nucamentaceæ, corymbifereæ (*Juss.*).—Generic Character. Calyx: outer perianth of five roundish, imbricate, tomentose leaflets. Inner of five erect, acuminate, awl-shaped, very smooth, scarious leaflets, twice as long as the others; one-flowered. Corolla one-petalled, funnel-form, shorter than the inner calyx; border five-toothed. Stamina: filaments five, capillary. Anther cylindrical. Pistil: germ inferior to the corollet, superior to the calyx. Style filiform. Stigma sub-bifid. Pericarp none. Calyx unchanged, closed. Seed solitary, oblong.—*Essential Character.* Calyx imbricate. Corolla one-petalled, regular. Seed one, oblong; below the corolla.

1. *Seriphium cinereum*, or heath-leaved seriphium.—Flowers whorl-spiked, one-flowered, leaves spreading. Branches in whorls.

2. *Seriphium plumosum*.—Flowers in spikes, six-flowered, leaves granulate-ovate.

3. *Seriphium fuscum*, or brown seriphium.—Flowers capitate, one-flowered, leaves imbricate.

4. *Seriphium ambiguum*, or doubtful seriphium.—Flowers in spikes, three-flowered, leaves linear.—All the species are natives of the Cape of Good Hope.

SERIPHOS,

SERIPHOS. See SERPHANTO.

SERISSA, in Botany, a genus of Jussieu's, separated from Lycium.

SERJEANT, or SERGEANT, a term in our Law, applied to sundry offices. *Serjeant-at-law*, or *of the coif*, is the highest degree taken in the common law, as that of doctor is in the civil law.

The first mention which judge Blackstone has met with of serjeants or *countors*, is in the stat. of West. 1. 3 Edw. c. 29. But M. Paris, in his life of John II. abbot of St. Alban's, which he wrote in 1255, 39 Hen. III. speaks of advocates at the common law, or countors (*quos banci narratores vulgariter appellamus*) as of an order of men well known; and the antiquity of the coif appears from the same author's Hist. of England, A. D. 1259. Serjeants were anciently called *servientes ad legem*, and *servientes narratores*; Mr. Selden adds, that they were also called *doctores legis*; though others are of opinion, that the judges are more properly the *doctores legis*, and serjeants, the *bachelors of law*.

Spelman observes, that however a serjeant may be richer than all the doctors of the Commons, yet a doctor is superior in degree to a serjeant, for the very name of a doctor is ministerial, but that of a serjeant ministerial. Hence, the doctors are seated and covered when they plead, but the serjeants stand uncovered at the bar, excepting for their coif.

As these are supposed the most learned and experienced, there is one court appropriated for them to plead in by themselves, which is the Common Pleas, where the common law of England is most strictly observed; but they are not prohibited pleading in other courts; and all judges, who, by custom, must first be serjeants, call them *brothers*.

SERJEANTS-AT-ARMS, are officers appointed to attend the person of the king, to arrest traitors, and persons of quality offending, and to attend the lord high steward when he sits in judgment on any traitor, &c.

SERJEANT, COMMON, an officer in the city of London, who attends the lord mayor and court of aldermen on court days, and is in council with them on all occasions, within and without the precincts, or liberties of the city.

SERJEANTS OF THE HOUSEHOLD, are officers who execute several functions within the king's household, mentioned in the stat. 33 Hen. VIII. c. 12.

SERJEANT, or SERGEANT, in War, is a non-commissioned or inferior officer in a company of foot, or troop of dragoons; armed with an halberd, and appointed to see discipline observed, to teach the soldiers their exercise and other duty. He receives the orders from the adjutant, which he communicates to his officers.

Each company has generally two serjeants.

SERJEANT, COVERING, a non-commissioned officer, who, during the exercise of a battalion, regularly stands or moves behind each officer, commanding or acting with a platoon or company. When the ranks take open order, and the officers move in front, the covering serjeants replace their leaders; and when the ranks are closed, they fall back in their rear.

SERJEANT, DRILL, an expert and active non-commissioned officer, who, under the immediate direction of the serjeant-major, instructs the raw recruits of a regiment in the first principles of military exercise. When awkward or ill-behaved men are sent to drill, they are usually placed under the care of the drill-serjeant.

SERJEANT, LANCE, a corporal who acts as serjeant in a company, but only receives the pay of corporal.

SERJEANT, PAY, an honest, steady, non-commissioned officer, who is a good accountant, and writes well, that is selected by the captain of a company in the infantry to pay the men twice a-week, and to account weekly to him, or to his subaltern, for all disbursements. He likewise keeps a regular statement of the necessities of the men, and assists in making up the monthly abstract for pay, allowances, &c.

SERJEANT, QUARTER-MASTER, a non-commissioned officer, who acts under the quarter-master of a regiment: he ought to be steady, a good accountant, and well acquainted with the resources of a country town or village.

SERJEANT, TRUMPET. An officer under the Lord Chamberlain, whose duty it is to attend (with his sixteen trumpeters and kettle drum) on coronations, royal marriages, christenings, funerals, proclamations and installations. On inspection of his patent it will appear that his duties and privileges were formerly very extensive; being summoned to attend the [sheriffs and judges on the circuit; nor could any concert or theatrical performance take place, without his licence and authority. The two great theatres accordingly paid him a fee, till the time of Sheridan, who broke through the custom.

SERJEANTY, or SERGEANTY, in Law, a service anciently due to the king for lands held of him, and which could not be due to any other lord.

It is divided into *grand* and *petit* serjeanty. See SEARJEANTY.

SERJIHEY ODOUK, a town of Chinese Tartary, in the country of the Mongols. Lat. 42. 15. N. long. 102. 34. E.

SERKA, a village of Sennaar; 200 miles south of Sennaar.

SERKIS, a village of Caramania, in Asiatic Turkey; 50 miles west of Konieh.

SERLE'S ISLAND, in the South Pacific Ocean, seven or eight miles long, and four or five broad, with a lagoon in the middle. A dangerous surf beats on the shore, which consists of ridges of coral rock. Fish is particularly abundant; and there are various species of trees. Most of the soil consists of white coral sand, intermixed with decayed vegetable matter, and this seems peculiarly favourable to the growth of plants. It does not appear to be permanently inhabited, though visitors have found evidence that men have dwelt there. Lat. 18. 13. S. long. 223. E.

SERLEBY, a township of England, in Nottinghamshire; 2½ miles south-south-west of Bawtry.

SERLIO (Sebastiano), an eminent architect, was a native of Bologna, who flourished in the early part of the sixteenth century, at Venice. He travelled through Italy, and resided a considerable time at Rome, where he studied the fine arts, and made many drawings of edifices, ancient and modern, and he is said to have been the first who examined, with the eye of a man of science, the remains of ancient architecture. The knowledge which he acquired was given to the public in a complete treatise of architecture, of which he planned several books, and the first that appeared was the fourth in order, comprehending the general rules of architecture, which he printed at Venice in 1537, dedicated to Hercules II. duke of Ferrara. The other six books appeared successively at different intervals, and the different editions made of them prove their popularity. Serlio, in 1541, was invited to France, by Francis I., and was, by that sovereign, employed in the erections at Fontainebleau, where he thenceforth resided, and where he died, at an advanced age, in 1578. Though, as an author, he was much attached to the principles of Vitruvius, in his designs as an artist he very much neglected them. His school of St. Roch, and palace Grimani, at Venice, are built in a grand and magnificent style. *Gen. Biog.*

SERMATTA, an island in the Eastern seas; about 22 miles long, and 6 broad. Lat. 8. 9. S. long. 129. 13. E.

SERMESOK, an island near the west coast of West Greenland. Lat. 61. 50. N. long. 47. 45. W.

SERMIONE, a small town of Austrian Italy, in the district of Brescia, situated on a neck of land projecting into the lake of Garda. Population 1800. It has a castle, and was the birth-place of Catullus, the poet; 16 miles west of Verona.

SERMOCINATION, *s.* [*sermocinatio*, Lat.] The art or practice of making speeches. *Unused.*—The orator conveyeth

veyeth his speech either to prosopopeia, *sermocination*, &c. *Peacham*.—No *sermocinations* of ironmongers, felt-makers, cobblers, broom-men! *Bp. Hall*.

SERMOCINATOR, *s.* [*sermocinator*, Lat.] A preacher; a speechmaker.—These obstreperous *sermocinators* make easy impression upon the minds of the vulgar. *Howell*.

SERMOLOGUS, or SERMOLOGUE, an ecclesiastical book composed of sermons, or homilies of popes, and other persons of eminence and sanctity, formerly read at the feasts of the Confessors, the Purification, All Saints, and on every day from Christmas to the octave of the Epiphany.

SE'RMON, *s.* [*sermon*, Fr.; *sermo*, Lat.] A religious discourse pronounced by a divine from the pulpit.

This our life, exempt from public haunt,
Finds tongues in trees, books in the running brooks,
Sermons in stones, and good in every thing. *Shakspeare*.

Sermons he heard, yet not so many

As left no time to practise any:

He heard them reverently, and then

His practice preach'd them o'er again.

Crashaw.

Many, while they have preached Christ in their *sermons*, have read a lecture of Atheism in their practice. *South*.

To SE'RMON, *v. a.* [*sermoner*, Fr.] To discourse as in a sermon. *Unused*.—Some would rather have good discipline delivered plainly by way of precept, or *sermoned* at large, than thus cloudily unwrapped in allegorical devices. *Spenser*.—To tutor; to teach dogmatically.

Come, *sermon* me no farther:

No villainous bounty yet hath pass'd my heart. *Shakspeare*.

To SE'RMON, *v. n.* To compose or deliver a sermon. *Unused*.—A weekly charge of *sermoning*. *Milton*.

SERMONES, the title which Horace gives his Satires. See SATIRE.

Critics are divided about the reason of the name; the opinion of father Bossu seems best grounded. A mere observance of feet and measure, such as we find in Terence, Plautus, and in Horace's Satires, he thinks is not sufficient to constitute verse, to determine the work to be poetical, or to distinguish it from prose; unless it have some farther air, or character of poetry; somewhat of the fable or the sublime.

Hence he judges it is, that Horace calls his Satires *prose*, or *sermons*: his Odes have quite another air, and are therefore called *poems*, *carmina*.

SERMONETA, a small town of the States of the Church, in the Campagna di Roma, situated on a hill difficult of access. It is supposed by some to stand on the site of the ancient Sora, by others on that of Salmona; 13 miles south of Veletri.

SE'RMONING, *s.* Discourse; instruction; advice; persuasion.

I trow there nedeth litle *sermoning*

To maken you assenten to this thing.

Chaucer.

Canons and quaint *sermonings*, interlined with barbarous Latin. *Milton*.

SERMONIUM, in Old Records, a kind of interlude or historical play, which the inferior orders of clergy, assisted by boys, &c., used at times to act in the body of the church, suitable to the solemnity of some festival or high procession day.

This is supposed to have been the origin of the modern drama.

To SE'RMONIZE, *v. n.* To preach.—Under a pretence of *sermonizing*, they have cast off God's solemn worship on this day:—the primitive church never thought preaching the sole work of the Lord's day. *Bp. Nicholson*.—To inculcate rigid rules.—If you consider them as the dictates of a morose and *sermonizing* father, I am sure they will be not only unattended to, but unread. *Ld. Chesterfield*.

SE'RMOUNTAIN, *s.* [*sermontain*, Fr.] A plant. See SESELI.

SERNANIELHE, a small but tolerably well-built town

in the central part of Portugal, province of Beira; 13 miles south-south-west of St. Joao de Pesqueira, and 19 south-east of Lamego.

SERNIN, *Str.*, a small town in the south of France, department of the Aveyron, situated on an eminence near the Rance. Population 1000. In the neighbourhood are mines of alum; 21 miles east of Alby.

SEROGLASOVSKAIA, a fortress of Asiatic Russia, in the government of Caucasus, on the Volga; 24 miles north-west of Astracan.

SERON, a measure: of almonds, 2 cwt.; of anniseed, from 3 to 4 cwt.

SERONGE, a town of Hindostan, province of Malwah, belonging to the Mahrattas. It is a large open town, situated in a fertile country, and celebrated for its manufacture of Chintzes, but from its exposed situation, has been often plundered by contending parties. In the year 1804, it was made over by Holkar, to the celebrated freebooter Ameer Khan, who some years after gave himself up to the British, and received a grant of lands in Goorackpore. At this period Seronge, with the dependent district, was estimated at about 6000*l.* per annum. Lat. 24. 8. N. long. 78. E.

SEROOSKERKE, a village of the Netherlands, in the province of Zealand, containing 800 inhabitants.

SERO'SITY, *s.* [*scrosité*, Fr.] Thin or watery part of the blood: the serum.

SEROUGE, a village of Diarbekir, in Asiatic Turkey; 80 miles south-west of Diarbekir.

SE'ROUS, *adj.* [*sereux*, Fr., *scrosus*, Lat.] Thin; watery. Used of the part of the blood which separates in congelation from the grumous or red part. Adapted to the serum.—This disease is commonly an extravasation of *serum*, received in some cavity of the body; for there may be also a dropsy by a dilatation of the *serous* vessels, as that in the ovarium. *Arbuthnot*.

SEROWICZ, a small town in the south of Bohemia; 25 miles east-south-east of Tabor. Population 1800.

SERPA, a small but strong frontier town in the south-east of Portugal, in the province of Alentejo, situated on a rocky height near the Guadiana, with about 4000 inhabitants. There is a fertile district adjacent, full of clumps of fig and olive trees; 17 miles south-west of Mourao, and 100 south-east of Lisbon.

SERPEISK, a small town in the central part of European Russia, in the government of Kaluga, with 1000 inhabitants; 53 miles west of Kaluga.

SERPENS HYPNOTICUS. See HYPNOTICUS.

SERPENS RUBESCENS, the RED SERPENT FISH, in Ichthyology, the name of a fish, properly of the *tænia* kind.

SERPENS TERRENUS, the EARTH-SERPENT, a name given by some of the chemical writers to nitre.

SE'RPENT, *s.* [*serpens*, Lat.] A well-known creeping animal that moves without legs.

She was arrayed all in lily white,
And in her right hand bore a cup of gold,
With wine and water filled up to the height;
In which a *serpent* did himself enfold,
That horror made to all that did behold.

Spenser.

A sort of firework.

In fireworks give him leave to vent his spite,
These are the only *serpents* he can write.

Dryden.

A bass musical instrument.

SERPENT CUCUMBER, in Botany. See TRICHOSANTHES.

SERPENT ISLANDS, small islands near the north coast of Lake Huron. Lat. 46. 2. N. lat. 82. 45. W.

SERPENT-STONES. See SNAKE-STONES.

SERPENT'S-TONGUE, in Botany, a genus of the cryptogamia filices class; comprehending five species.

SERPENTS' TONGUES. The island of Malta abounds with glossopetræ, or the petrified teeth of sharks, which, from their resemblance to a tongue, are by the vulgar supposed

posed to be the tongues of serpents turned into stone by some miracle of St. Paul, when he was there.

SERPENT, in Mythology, was a very common symbol of the sun, and he is represented biting his tail, and with his body formed into a circle, in order to indicate the ordinary course of this luminary; and under this form it was an emblem of time and eternity.

SERPENTARA, GRANDE and PICOLA, two small islands in the Mediterranean, at the south-east point of the island of Sardinia.

SERPENTARIUS, in Astronomy, a constellation of the northern hemisphere, called also *Ophiuchus*, and anciently *Æsculapius*.

The stars in the constellation Serpentarius, in Ptolemy's catalogue, are 29; in Tycho's, 15; in Hevelius's, 40; in the Britannic catalogue, they are 74.

SERPENTES, in Natural History, the second order in the class amphibia. They are thus commonly characterized: they are footless; their eggs are connected in a chain; the penis is double, and mucicate.

These animals are sufficiently distinguished from reptiles by their total want of feet. The distinction of species in this numerous tribe is, according to Dr. Shaw, frequently very difficult. Linnæus thought that an infallible criterion might be found in the number of scaly plates on the abdomen, and beneath the tail; and accordingly attempted, in the *Systema Naturæ*, to discriminate the species by this mark alone. This is now found to be, by much, too uncertain and variable for a specific test.

The distinction of serpents into poisonous and innocuous, can only be known by an accurate examination of their teeth; the fangs, or poisoning teeth, being always of a tubular structure, and calculated for the conveyance or injection of the poisonous fluid from a peculiar reservoir, communicating with the fang on each side of the head: the fangs are always situated in the anterior and exterior part of the upper jaw, and are generally, but not always, of much larger size than the other teeth; they are also frequently accompanied by some smaller or subsidiary fangs, apparently destined to supply the principal ones, when lost either by age or accident. The fangs are situated in a peculiar bone, so articulated with the rest of the jaw, as to elevate or depress them at the pleasure of the animal. In a quiescent state, they are recumbent, with their points directed inwards or backwards; but when the animal is inclined to use them as weapons of offence, their position is altered by the peculiar mechanism of the above-mentioned bone, in which they are rooted, and they become almost perpendicular.

In the edition of the *Systema Naturæ*, by Gmelin, seven genera are enumerated and described, viz.:—*Acrochordus*, *amphisbæna*, *anguis*, *boa*, *cæcilia*, *coluber* and *crotalus*.

In our alphabetical arrangement, a description of the above genera will be found. It remains only to introduce here a short account of the anatomical structure of the order.

The skeleton of serpents consists of the bones of the head, the vertebræ and the ribs.

Each of the vertebræ is composed of a *body*, a *superior spinous* process, two *transverse* processes, and an *inferior spinous* process. Of these, the last is formed in the boa, of two laminae arising from the sides of the vertebral body, and uniting as they descend. It is very long in this genus, which is otherwise remarkable for having two distinct inferior spinous processes on the second vertebræ, which are moveable. In all other serpents, the inferior spinous process assumes the form of a long spur.

The bodies of the vertebræ are articulated to each other by segments of spheres; so that were there no lateral articulations, the axes of the vertebræ might be bent in all directions, and might describe circles in any of those bendings. But, in the first place, the lateral articulations whose plane surfaces are horizontal, prevent very much the immediate flexion of the vertebræ on another; and, secondly, the superior spinous apophyses are so long with most of these

reptiles, as to stop that flexion upwards which the lateral articulations would permit. Flexion downwards is, however, limited only by the lateral articulations, for the inferior spinous apophyses are very long and straight, and receive only *flectent* muscles.

The ribs, which are very numerous, are articulated pretty strongly to the bodies of the vertebræ under the transverse processes. They are not, as in quadrupeds, inserted *between* the vertebræ, but each rib is attached to one vertebral body. As they are not fixed inferiorly, their extremities can describe circles proportional to their intervals; and as these intervals are very large, and as, on account of the variations in their respective curves, one rib may pass into another, the flexion downwards is left very free, and motion laterally still more so: the latter motion is facilitated also by the horizontal planes of the lateral articulations; and this motion is evidently the most extensive: the majority of serpents creeping by horizontal undulations.

The parietal bone folding under until it meets the sphenoid, forms the lateral wall of the cranium. The point of the sphenoid is prolonged very far forwards, and meets the frontals, which curve backwards, to meet it near the median line.

On the side of the head, two bones are articulated which form points of attachment for the muscle, that move the lower jaw. They are in serpents with very moveable chops, capable of considerable motion in the cranium; and they assume, where the jaw acts, such a position that the point of resistance in biting is at the superior and hind part of the cranium. There is no temporal bone.

The blood-worm, and the genus *amphisbæna*, have the occipital bone articulated to the spine by two condyles: the other genera by one only.

In these two genera, the diminutive condition of the eye coincides with the want of the posterior frontal bone in the cranium, and of the lacrymal bone in the face.

A number of very strong muscles, placed on the spine in that space that intervenes between the spinous and transverse processes, serve to move in powerful undulations the bodies of serpents. But, independently of this, they have powerful means of locomotion in their ribs and intercostal muscles. This apparatus is particularly well seen in the coluber, whose spine is, perhaps, the least capable of flexion of any of this order. It was an observation made by Sir Joseph Banks, during the exhibition of a coluber of unusual size, that first led to this discovery. While it was moving briskly along the carpet, he said, "he thought he saw the ribs come forward in succession, like the feet of a caterpillar; and on putting the hand under its belly, while the snake was in the act of passing over the palm, the ends of the ribs were distinctly felt pressing upon the surface in regular succession, so as to leave no doubt of the ribs forming so many pairs of levers by which the animal moved its body from place to place."

The following is the description of the muscles which act on the ribs for the purpose of progressive motion:—

The muscles which bring the ribs forward, consist of five sets; one set (fig. 1, A), from the transverse process of each vertebra to the rib immediately behind it; which rib is attached to the next vertebra. The next set (B), goes from the rib a little way from the spine, just beyond where the former terminates; it passes over two ribs sending a slip to each, and is inserted into the third: there is a slip also connecting it with the next muscle in succession.

Under this is the third set (C), which arises from the posterior side of each rib, passes over two ribs sending a lateral slip to the next muscle, and is inserted into the third rib behind it.

The fourth set (D), passes from one rib over the next, and is inserted into the second rib.

The fifth set (E), goes from rib to rib.

On the inside of the chest, there is a strong set of muscles attached to the anterior surface of each vertebra, and, passing obliquely forwards over four ribs to be inserted into the fifth

SERPENTES.

J. Pass sc.

The locomotive muscular system of Serpents.

fifth nearly at the middle part between the two extremities (see F, fig. 2).

From this part of each rib, a strong flat muscle (G), comes forward on each side before the viscera, forming the abdominal muscles; and which is only laterally connected to it by loose cellular membrane, is external to the belly of the animal, and is used for the purpose of progressive motion; while that half of each rib next the spine, as far as the lungs extend, is employed in respiration. At the termination of each rib is a small cartilage (H, H), in shape corresponding to the rib, only tapering to the point. Those of the opposite ribs have no connection; and when the ribs are drawn outwards by the muscles, they are separated to some distance, and rest through their whole length on the inner surface of the abdominal scuta, to which they are connected by a set of short muscles: they have also a connection with the cartilages of the neighbouring ribs by a set of short straight muscles.

These observations apply to snakes in general: but the preceding figures and remarks are taken from an account of a boa-constrictor, published in the Philosophical Transactions, by Sir Everard Home.

In all snakes, the ribs are continued to the anus, but the lungs seldom occupy more than one-half of the extent of the cavity covered by the ribs. Consequently, these lower ribs can be employed for the purpose of progressive motion, and, therefore, correspond in that respect with the ribs in the draco-volans superadded to form the wings.

The parts, of which a description has been attempted, will be better understood by an inspection of figs. 1 and 2, in the annexed plate.

When the snake begins to put itself in motion, the ribs of the opposite sides are drawn apart from each other, and the small cartilages at the ends of them are bent upon the upper surfaces of the abdominal scuta, on which the ends of the ribs rest; and as the ribs move in pairs, the scutum under each pair is carried along with it. This scutum, by its posterior edge, lays hold of the ground, and becomes a fixed point from whence to set out anew. This motion is beautifully seen when a snake is climbing over an angle to get upon a flat surface.

When the animal is moving, it alters its shape from a circular or oval form, to something approaching to a triangle, of which the surface on the ground forms the base.

The coluber and boa having large abdominal scuta, which may be considered as hoofs or shoes, are the best fitted for this kind of progressive motion; there is, however, a similar structure of ribs and muscles in the anguis and amphibæna; but in the anguis, the ribs are proportionally weaker, and have nothing that corresponds with the scuta.

The rings of the amphibæna, on the other hand, are a near approach to the large scuta.

SE'RPENTINE, *adj.* [*serpentin*, old Fr., *serpentinus*, Lat.] Resembling a serpent.

Nothing wants, but that thy shape
Like his, and colour *serpentine*, may shew
Thy inward fraud.

Milton.

Winding like a serpent; anfractuious.

Nor can the sun

Perfect a circle, or maintain his way
One inch direct; but where he rose to-day
He comes no more, but with a cozening line
Steals by that point, and so is *serpentine*.

Donne.

To SE'RPENTINE, *v. n.* To wind like a serpent; to meander.

In those fair vales by nature form'd to please,
Where Guadalquivir *serpentes* with ease.

Harte.

SE'RPENTINE, *s.* An herb. *Ainsworth*.

SERPENTINE, in Chemistry, a worm, or pipe of copper or pewter, twisted into a spiral, and ascending from the bottom of the alembic to the capital, and serving in the distillation of spirit of wine.

SERPENTINE, in Mineralogy, a stone, which derives its name from the variety of its colours, supposed to resemble

those of the serpent. The ancients called this stone *ophites*, from the Greek *οφις*, *serpent*, as being speckled like a serpent's skin. The most prevailing colour is green of different shades, spotted with red, or with dark green, and also clouded and veiny. Some serpentines are red, varying from a peach-bloom to a blood-red or scarlet. In rich variety of colours, this stone far exceeds any other of the great rock-formations. It will receive a high polish, and is nearly indestructible by fire or acids, and is therefore eminently suited for ornamental sculpture or architecture. The hardness of serpentine is variable: some kinds scarcely yield to the knife, others are easily worked. It is infusible by the blow-pipe; the fracture is splintery, passing into small conchoidal fragments, which are translucent at the edges; the lustre is somewhat resinous, and when powdered, it has an unctuous soapy feel. The specific gravity varies from about 2.6 to 2.7. Serpentine seems nearly allied to the mineral called *hornblende*, from which it differs in its constituent parts by containing more magnesia and less iron. Chrome has been found in some serpentines. The analysis of different serpentines shews a considerable variation in the proportion of their constituent parts,

from 45 to 29 silex,
18 23 alumine,
23 34 magnesia,
3 4 iron,
11 10 water and loss.

Some serpentines contain 6 per cent. of lime.

To SE'RPENTIZE, *v. n.* To meander; to serpentine.—Between these hills, in the richest of valleys, the Lüne *serpentes* for many a mile, and comes forth ample, and clear, through a well wooded and richly pastured fore-ground. *Mason*.

SE'RPET, *s.* A basket. *Ainsworth*.

SERPANT, a village of Syria, supposed to be the ancient Sarepta; 14 miles south-south-west of Said.

SERPANTO, SERFANTO, or SERFO, the ancient *Seriphos*, an island of European Turkey, in the Archipelago, between the island of Paros and the gulf of Engia. It is a rugged and barren spot, producing little else than saffron, and pasture for sheep. The inhabitants, who are Greeks, and in number only 1000, live chiefly in the small town of Serphanto, which has a harbour. The Romans made this island a place of banishment.

SERPICULA [*a serpendo*, from creeping, a little creeping plant], in Botany, a genus of the class monoecia, order tetrandria, natural order of inundatæ, onagræ (*Juss.*)—Generic Character.—Male flowers solitary, peduncled—Calyx: perianth very small, four-toothed, erect, acute, permanent. Corolla: petals four, oblong, obtuse, sessile. Stamina: filaments four, very short. Anthers oblong, length of the petals.—Female flowers on the same plant—Calyx: perianth superior, four-parted, very small, permanent. Corolla none. Pistil: germ inferior, ovate, grooved. Style none. Stigma none. Pericarp: nut cylindrical, with eight cartilaginous swellings, one-celled, deciduous. Seed single, oblong.—*Essential Character*. Male—Calyx four-toothed. Corolla four-petalled. Female—Calyx four-parted. Pericarp: nut tomentose.

1. *Serpicula verticillata*.—Leaves in whorls, aculeate-serate.—Native of the East Indies.

2. *Serpicula repens*.—Leaves alternate, linear. The herb has the appearance of *veronica serpyllifolia*, but is smaller. Stem creeping. Leaves mostly alternate, linear, seldom serrate.—Native of the Cape of Good Hope.

SERP'GINOUS, *adj.* Diseased with a serpigo.—The skin behind her ear downwards became *serpiginous*, and was covered with white scales. *Wiseman*.

SERPIGO, in Medicine, from *serpere*, to creep, is nearly synonymous with *herpes*, and signifies, in the language of the older writers, any spreading tetter, or excoriation of the skin. See PATHOLOGY.

For thy own bowels, which do call thee sire,
Do curse the gout, *serpigo*, and the rheum,
For ending thee no sooner,

Shakspeare
SERPOOR

SERPOOR, the name of several towns of Hindostan, but none of any consequence.

SERPUCHOV, a town of European Russia, in the government of Moscow, on the Oka. It contains no fewer than 19 churches or chapels, besides several public buildings, and has 5700 inhabitants. Its trade is chiefly in corn, cattle, butcher's meat, hides, and honey; also in manufacturing canvas; 62 miles south of Moscow. Lat. 55. N. long. 37. 2. E.

SERPULA, in Conchology, a genus of the order testacea, of which the Generic Character is:—animal a terebella: shell univalve, tubular, and generally adhering to other substances; often separated internally by divisions at uncertain distances. There are about fifty species included in this genus, of which the 5th, 6th, 7th, 10th, 16th and 39th to 47th, are found in our own country.

1. *Serpula nautiloides*.—Shell flattish, minute, confluent, verrucose, spiral, with very thin semilunar internal divisions.—It is found in the seas about Norway, adhering to the *Madrepora prolifera*, is very minute, brownish, or white; of an uncertain figure, sometimes rather oblong, sometimes more orbicular; the divisions are parallel, the aperture very narrow.

2. *Serpula semilunum*.—The shell of this is regular, loose, glabrous.—It is found in the Adriatic and Red seas, and sometimes it is obtained fossile. The shell is scarcely larger than a grain of sand, white and yellowish; the whorls are pressed close together; the aperture is narrow, and compressed.

3. *Serpula planorbis*.—In this species the shell is orbicular, regular, flat, equal.—It is found adhering to shells. The shell resembles a round scale, and when broken horizontally it exhibits the appearance of a spire in minute concentric circles.

4. *Serpula spirillum*.—Shell regular, spiral, orbicular, pellucid, with round gradually decreasing whorls.—It inhabits the ocean, on zoophytes, *fertulariæ*, and other marine substances; it resembles the next, which is a native of this country, but is much less than it.

5. *Serpula spirorbis*.—Shell regular, spiral, orbicular, the whorls slightly caniculate above and inwardly, and growing gradually less towards the centre.—It inhabits most seas, adhering to fuci and zoophytes. There is a variety; the shell is white, without polish, not complicated, but disposed singly on the substance to which it is attached; the aperture is circular.

6. *Serpula triquetra*.—The shell of this is creeping, flexuous, triangular.—It inhabits the ocean, adhering to marine substances, stones, and the bottoms of ships; is from half an inch to an inch long. The shell is white, pellucid, irregularly twisted, carinate on the back, sometimes denticulate, with a narrow circular aperture.

7. *Serpula intricata*.—Shell filiform, rough, round, intricately twisted.—It inhabits the European and Indian seas, and often on our own coasts, upon shells. The shell is of a greenish-white, a little rugged and coarse.

8. *Serpula filigrana*.—Shell capillary, fasciculate, in branched complications, and cancellate.—It inhabits the Mediterranean; is four inches long, and forms a beautiful kind of net-work.

9. *Serpula granulata*.—The shell of this is round, spiral, glomerate, with elevated ribs on the upper side.—It inhabits the North seas, in large masses, adhering to stones, shells, &c. The shell is white, and the size of a coriander seed.

10. *Serpula contortuplicata*.—The shell is angular, rugged, and irregularly entwined.—It is found in the European and American seas, and on our own coasts; is from three to four inches long; and sometimes it is as large as a goose-quill: the shell is white, cinereous, or yellowish-brown; within it is smooth, transversely striate.

11. *Serpula glomerata*.—The shell of this species is round, glomerate, with decussate wrinkles.—It inhabits the European and Atlantic seas, in large masses. The shell is white, grey, or brownish; within it is smooth.

12. *Serpula lumbicalis*.—The shell of this is round, flexuous, with a spiral acute tip. There are three varieties of this species, which are found in the Atlantic and Indian seas, in large masses. The shell is from three to five inches long, transversely ribbed and longitudinally wrinkled.

13. *Serpula polythalamia*.—The shell of this is likewise round, diaphanous, smooth, straightish, with numerous internal divisions.—It inhabits the Mediterranean and Indian seas, under the sand. The shell is outwardly white, transversely wrinkled, and annulate; the inside is separated by imperforated convex and concave divisions, making it appear as if it consisted of numerous united tubes.

14. *Serpula arenaria*.—Shell jointed, entire, distinct, flattish beneath.—It is found in India, and divers parts of the coast of Africa. It is probably a teredo, hereafter to be described. The shell is white, with pale brown undulate rays, or whitish, the outside cancellate, within it is smooth; spirally twisted: there are about a hundred striæ, which are sometimes nedulous.

15. *Serpula anguina*.—Shell roundish, sub-spiral, with a longitudinal jointed cleft.—It inhabits the Indian ocean: varies much in figure, being sometimes round and sometimes angular; it is more or less flexuous, glabrous or rough, with the joints of the cleft often obsolete. There is a variety of this species.

16. *Serpula vermicularis*.—Shell round, tapering, curved, wrinkled.—It inhabits the European seas, and is from two to three inches long. The shell is whitish, ending in an obtuse point; the inhabitant is of a bright scarlet, with elegantly feathered tentacula, from the middle of which arises a trumpet-shaped tube, and a lesser simple one.

17. *Serpula penis*.—The shell of this is round, straight, taper, with a dilated radiate larger extremity; the disk is covered with cylindrical pores. This is denominated the *watering-pot*.—It is found chiefly in the Indian ocean. The shell is white or cinereous, with a faint shade of red; smoothish, tapering, and open at the small end; the dilated margin at the larger end terminating in numerous small tubes; the disk is convex, and covered with round perforations, with a longitudinal one in the middle.

18. *Serpula echinata*.—Shell roundish, flexuous, rosy, with numerous rows of prickles, obtuse at the end. It is the size of a crow's quill; the aperture is margined.

19. *Serpula ocrea*.—The shell of this is roundish, striate, brown.—It inhabits the Indian ocean, usually affixed to corals.

20. *Serpula protensa*.—Shell polished, smoothish, with annulate plaits, a little tapering towards the end.—It is found in the Indian and American seas, and is the size of a quill. The shell is ivory, whitish or blueish, either straight or partly bent.

21. *Serpula decussata*.—Shell round, with decussate striæ, slightly wrinkled, flexuous, red, within smooth and white.

22. *Serpula proboscidea*.—The shell is smooth and white; the broader part is straight and transversely plaited. The shell is from two to four inches long, white, or of a dusky brown.

23. *Serpula afro*.—Shell sub-striate, yellowish-brown, round, twisted into three whorls, with a central tip.—It is found about the coasts of the island of Goree.

24. *Serpula cereolus*.—Shell round, smooth, yellowish, many times twisted.—It inhabits America. The shell is long and narrow.

25. *Serpula cornucopiæ*.—Shell conic, spirally twisted, yellowish, with brown bands; the middle is round and twisted; the aperture is orbicular. The shell, as to form, is obtuse at the tip.

26. *Serpula Goreensis*.—The shell is round, cancellate, yellow, within horned.—It is found at Goree, fixed to testaceous substances and wood; if from eight to nine inches long, with elevated striæ; the longitudinal ones are crowded.

27. *Serpula intestinalis*.—Shell triangular, twisted, fragile, tuberculate, with hollow dots.—This is found on the African coast

SERPULA AND TEREDO.

1. *S. penis*. 2. *S. triquetra*. 3. *S. vermicularis*. 4. 2. & 3. mixed. 5. *S. reticulata*.
6. *S. papillosa*. 7. *S. filiformis*. 8. *S. sanguinea*. 9. *T. navalis*.

J. Euss sc.

coast. The shell is whitish, singularly twisted, sub-umbilicate, within glabrous.

28. *Serpula infundibulum*.—The shell is round, white, transversely striate, and thrice twisted; the first bend appearing as if composed of five funnels placed on each other.

29. *Serpula pyramidalis*.—Shell cinereous, above convex, beneath flat, pyramidal, hence its specific name, and it is many times twisted, the bends decreasing inwardly.—It is found in the Indian sea, adhering to testaceous substances about an inch long, open at the narrower end; sometimes it is straightish, or a little bent.

30. *Serpula denticulata*.—The shell of this is white, round, subulate, straight, toothed at the sides, with a longitudinal glabrous rib in the middle; the tip is a little incurved and glabrous.—It is found adhering to the *Lepas tintinnabulum*, and is about three-quarters of an inch long.

31. *Serpula melitensis*.—Shell roundish, twisted, umbilicate, with decussate striæ, and longitudinal nodulous ribs, within smooth, with numerous divisions.—It is found fossile in Malta. The two first bends are placed on each other.

32. *Serpula Norwegica*.—The shell of this is round, smooth, incurved, with a nearly obsolete undulate base: the mouth is obliquely truncate.—It is found, as its specific name denotes, in Norway.

33. *Serpula porrecta*.—Shell round, smooth, polished, ascending in a flexuous manner from the spiral base.—It inhabits the North seas. The shell resembles the *serpula spirillum*, but is whiter, pellucid, and not rugged; the inhabitant is short, with a red back and paler sides.

34. *Serpula vitrea*.—The shell is round, regular, spiral, orbicular, pellucid, shining, wrinkled, with a thickened aperture.—This species is found in the Greenland seas, on *sertulariæ*, fuci, stones, and divers marine substances. It resembles the *serpula glomerata*; the shell is thick, umbilicate, not a line in diameter, and sometimes it is of a reddish colour.

35. *Serpula cancellata*.—Shell spiral, glomerate, with three grooves, the lower groove interrupted by transverse lines.—It inhabits the Greenland seas, and resembles the *serpula granulata*. Shell white, grey or greenish, the aperture is two-toothed.

36. *Serpula stellaris*.—Shell sub-orbicular, umbilicate, convex, radiate with wrinkles.—This also is found in the Greenland seas, on *sertulariæ* and stones. The shell is scarcely larger than a needle, violet, reddish-brown, or yellowish radiate with white; beneath it is flat, with a single whorl or bend; the aperture is very minute.

37. *Serpula gigantea*.—The shell of this is somewhat triangular, with a little bend, gradually tapering, violet, within smooth, pale yellow, the aperture is white, with undulate striæ, and armed with a conic tooth.—It inhabits Africa and America, attached to rocks and corals. The shell is six inches high, and as thick as the little finger. The inhabitant is whitish.

38. *Serpula cinerea*.—The shell is filiform, glabrous, conglomerate, perforated.—It inhabits the shores of Massilia; it is glabrous, of a greyish-white, and flexuous.

39. *Serpula sulcata*.—Shell with two whorls, deeply and spirally grooved.—It inhabits the coasts of Pembrokeshire, on the roots of the *fucus digitatus*. It is a minute shell, of a greenish colour.

40. *Serpula ovalis*.—Shell sub-oval, imperforated.—It is found at Tenby. The shell has two bends, which form an oval; it is never perforated, and is minute.

41. *Serpula reflexa*.—The shell is regular, rounded, with a reflected margin at the aperture.—This is found on the Pembrokeshire sands. It is minute; shell glossy, white, perforated; the aperture is above the plane of the spire.

42. *Serpula cornea*.—The shell is regular, rounded, and pellucid, with three whorls.—This also is an inhabitant on the Pembrokeshire coast. It is brown and horny.

43. *Serpula bicornis*.—Shell semilunar, ventricose, white, opaque, glossy.—It is found at Sandwich and Reculver, and is minute.

44. *Serpula perforata*.—Shell semilunar, perforated, white, opaque, glossy.—It inhabits Sandwich, as do all those that will be hereafter described. This is, however, as well as the next, very rare and minute.

45. *Serpula lactea*.—The shell is ovate, thin, smooth, pellucid, with milky veins.

46. *Serpula lagena*.—Shell rounded, striate, grooved, with a narrow neck. This is described, as are all those which are found in this country, in Adams's work on the Microscope. The shell of this is exactly shaped like an oil-flask, and is whitish.

47. *Serpula retorta*.—Shell rounded, margined, with a slender recurved neck. The shell is white, opaque, shaped something like the retort used by chemists.

48. *Serpula incurvata*.—The shell is straight, with three close whorls at the smaller end. The shell is white and transparent, and resembles, in some respects, the *nautilus semilituus*.

SERPILLUM, in Botany, sometimes written *Serpillum*, [so called from its humble creeping mode of growth], a name for THYMUS.

To SERR, *v. a.* [*serrer*, French.] To drive hard together; to crowd into a little space. *Unused*.—The frowning and knitting of the brows is a gathering or *serring* of the spirits, to resist in some measure; and also this knitting will follow upon earnest studying, though it be without dislike. *Bacon*.—Heat attenuates and sends forth the spirit of a body, and upon that the more gross parts contract and *serr* themselves together. *Bacon*.

SERRA PISCIS, in Ichthyology, a name given by many authors to the *pristis* or *saw-fish*.

SERRA is also a name given by Pliny to the trumpet-fish.

SERRA, the general name of assemblages of mountains in Portugal, more particularly of a chain; *serra* meaning, as in Latin, a saw. The principal of these are the Serra de Azenhao, St. Miguel, and St. Salvador in Alentejo; Culdeira and Monchique between Alentejo and Algarva; Alcoba in Beira; Estrica in Entre Douro e Minho; Falperra, Marram, and Rebardeos, in Tras os Montes.

SERRA SAN CHIRICO and SERRA PETRONA, two small towns in the east of Italy, in the marquisate of Ancona.

SERRA CAPRIOLA, a small town of Italy, in the east part of the kingdom of Naples, province of Capitanata.

SERRAIN, a small town of Hedsjas, in Arabia; 40 miles south-west of Mecca.

SERRAINA, a cape of the Mediterranean, on the south coast of the island of Sardinia. Lat. 39. 23. N. long. 9. 31. E.

SERRANA, or PEARL ISLAND, a small island in the Caribbean sea, so called from Serrana, commander of a Spanish vessel in the time of Charles V., who was shipwrecked on the coast, and who had lived on the island for four years. Lat. 14. 50. N. long. 78. 50. W.

SERRANILLA ISLANDS, a cluster of small islands in the bay of Honduras. Lat. 16. 10. N. long. 80. 10. W.

SERRATA, a name given by some of the Roman authors to the *SERRATULA*, or saw-wort.

SERRATE, or SERRATED, *adj.* [*scrattus*, Lat.] Formed with jags or indentures like the edge of a saw.—All that have *serrate* teeth are carnivorous. *Ray*.—The common heron hath long legs for wading, a long neck answerable thereto to reach prey, a wide throat to pouch it, and long toes with strong hooked talons, one of which is remarkably *serrate* on the edge. *Derham*.

SERRATE FLIES, a name given by authors to certain flies, distinguished from all the other kinds by their having a weapon resembling a double saw, placed at the hinder part of the body; this serves several species of them to make holes in the branches of trees, in which they deposit their eggs.

SERRATI, a name anciently given to Syrian, Roman consular, and some few other coins, which were ornamented by cutting out regular notches on the edges. Tacitus says, that the Germans preferred these to other Roman coins. But the old forgers imitated this kind of incision, which was

intended to prevent forgery by shewing the inside of the metal.

SERRATION, *s.* Formation in the shape of a saw.

SERRATULA [so named from the finely serrated leaves of the common sort. The name is found in Pliny], in Botany, a genus of the class syngenesia, order polygamia æqualis, natural order of compositæ capitatæ, cinarocephalæ (*Juss.*)—Generic Character. Calyx: common, oblong, subcylindrical, imbricate, with lanceolate, acute or obtuse, awnless scales. Corolla: compound, tubulous, uniform. Corollets hermaphrodite, equal. Proper one-petalled, funnel-form: tube bent in; border ventricose, five-cleft. Stamina: filaments five, capillary, very short. Anther cylindrical, tubulous. Pistil: germ ovate. Style filiform, length of the stamens. Stigmas two, oblong, reflex. Pericarp none. Calyx unchanged. Seeds solitary, obovate. Pappus sessile, feathered. Receptacle chaffy, flat.—*Essential Character.* Calyx subcylindrical, imbricate, awnless.

1. *Serratula tinctoria*, or common saw-wort.—Leaves serrate, subciliate, lyrate-pinnatifid; terminating lobe very large; florets uniform; pappus somewhat rugged.—Native of Europe, in woods, thickets, hedges and bushy pastures: flowering in July and August.

2. *Serratula coronata*, or Siberian saw-wort.—Leaves lyrate-pinnatifid; terminating pinna very large; florets of the ray female longer. Native of Italy, Silesia and Siberia.

3. *Serratula Japonica*, or Japanese saw-wort.—Leaves lyrate-pinnatifid, rugged; calyx-scales dilated at the point and membranaceous.—Native of Japan.

4. *Serratula Alpina*, or Alpine saw-wort.—Calyxes somewhat hairy, ovate; leaves undivided, woolly beneath; pappus feathered.—Native of the high mountains of Lapland, Norway, Austria, Switzerland, Silesia, Siberia, Wales and Scotland.

5. *Serratula salicifolia*, or willow-leaved saw-wort.—Leaves linear-lanceolate, alternate, hoary beneath, sessile, quite entire.—Native of Siberia.

6. *Serratula multiflora*, or many-flowered saw-wort.—Leaves lanceolate, villose underneath, subdecurent, quite entire; stem corymb; calyxes cylindrical.—Found in Siberia, Silesia, and China near Canton.

7. *Serratula noveboracensis*, or long-leaved saw-wort.—Leaves lanceolate-oblong, serrate, pendulous.—Native of North America.

8. *Serratula præalta*, or tall saw-wort.—Leaves lanceolate-oblong, serrate, spreading, hirsute beneath.—Native of Virginia, Carolina, Pennsylvania, and most other parts of North America.

9. *Serratula glauca*, or glaucous-leaved saw-wort.—Leaves ovate-oblong, acuminate, serrate; flowers corymb; calyxes roundish.—Native of Maryland, Virginia and Carolina.

10. *Serratula squarrosa*, or rough-headed saw-wort.—Leaves linear; calyxes squarrose, subsessile, acuminate, lateral.—Native of Virginia, and most of the provinces of North America.

11. *Serratula scariosa*, or ragged-cupped saw-wort.—Leaves lanceolate, quite entire; calyxes squarrose, peduncled, obtuse.—Native of Virginia.

12. *Serratula pilosa*, or hairy-leaved saw-wort.—Leaves linear, hairy; flowers axillary, on long peduncles.—Native of North America.

13. *Serratula speciosa*, or hairy-cupped saw-wort.—Leaves linear-sickled; flowers sessile, spiked; calycine leaflets, rough-haired, acute; the inner ones elongated, coloured at the point.—Native of Carolina and Georgia.

14. *Serratula spicata*, or spiked saw-wort.—Leaves linear, ciliate at the base; flowers in spikes, sessile, lateral; stem simple.—Native of North America.

15. *Serratula amara*, or bitter saw-wort.—Leaves lanceolate; calycine scales scariosæ at the point, blunt, patulous, coloured; flowers terminating.—Native of Siberia.

16. *Serratula centauroides*, or century-like saw-wort.—Leaves pinnatifid, oblique, acute, smooth, unarmed; calycine scales mucronate; the inner ones scariosæ.—Native of Siberia.

17. *Serratula mucronata*, or pointed-cupped saw-wort.—Smooth; leaves entire, lanceolate; stem few-flowered; calycine scales scariosæ at the point; acuminate, reflex.—Native of Barbary, near Mascar.

18. *Serratula humilis*, or dwarf saw-wort.—Leaves pinnatifid, tomentose beneath; head simple, one-flowered; calyx-leaves subulate, loose.—Native of Mount Atlas, near Tlemsen.

19. *Serratula scordium*.—Leaves lanceolate, serrate, half-embracing; flowers fastigiæ; root creeping.—Native of China and Cochinchina.

20. *Serratula arvensis*.—Corn saw-wort, or way thistle.—Leaves sessile, pinnatifid, spiny; stem paniced; calyxes ovate, spinulose. It is one of the worst pests of arable lands, having strong creeping roots, striking down to a great depth, and then branching out horizontally, so that it is very difficult to root it out where it has once got possession, and every small piece of it will grow.

Propagation and Culture.—The saw-worts are hardy perennial plants, and will thrive in the open air in England. The first is rarely admitted into gardens, but the other sorts are frequently preserved in the gardens of the curious. The 10th, 11th and 14th sorts, have large knobbed roots; these are propagated only by seeds, which seldom ripen in England, so that the seeds must be procured from abroad. These should be sown on an east-angled border, where the morning sun only comes; for if the seeds are exposed to the mid-day sun, they seldom succeed well.

The other perennial sorts may be propagated by parting of the roots; the best time for doing this is in autumn, when their stalks begin to decay; for when they are removed in the spring, if the season should prove dry, their roots will not be sufficiently established to flower well the same year.

SERRATUM, and **SERRULATUM**, *Folium*, in Botany, [so called from *serra*, a saw, the teeth of which are imitated in their margins], or serrate edged-leaf.

SERRATUS, a name given to different muscles attached to the ribs. See **ANATOMY**.

SERRATURE, *s.* Indenture like teeth of saws.—These are serrated on the edges; but the *serratures* are deeper and grosser than in any of the rest. *Woodward.*

SERRAVEZZA, **VALLE DI**, a valley in the grand duchy of Tuscany, about 10 miles from Carrara, containing quarries of white marble, whence Michael Angelo drew the materials for the Medici statues at Florence.

SERRE, a river in the north-east of France, department of the Ardennes, which falls into the Oise, not far from La Fere.

SERRE, a small town in the south-west of the kingdom of Naples, in the Principato Citra, with 1600 inhabitants; 25 miles south-east of Salerno.

SERRE, a river of Brazil, in the country of Matto-grosso, which runs north, and enters the Itenes.

SERRE (I. A.), a miniature painter and musician of Geneva, who has analysed the "Guida Armonica" of Gemiani, the "Basse fondamentale" of Rameau, and the Treatises of Tartini, with his discovery of the "Terzo Suono." These celebrated works M. Serre has critically examined in two ingenious essays, published in 1753 and 1763, in which there are likewise many curious remarks on disputable points in the theory and practice of harmony, which will both amuse and instruct musical students.

SERRE, [Fr.] close intervals in music, such as the enharmonic quarter tones in the ancient Greek music; and in French music, short and quick.

SERRES (John de), a Protestant Minister, was born in the south of France, and studied at Lausanne. Having made himself known by various works, he became rector of the college of Nismes, and a minister of that city, and he was employed on several important occasions by Henry IV.; that prince having asked Serres if it were possible for a person to be saved in the communion of the church of Rome, he answered in the affirmative, whence he has been accused of promoting Henry's change of religion. Notwithstanding this decision, he was a warm controversialist against

against the Catholics, and made a very severe attack upon the Jesuits, entitled "*Doctrinæ Jesuiticæ precipua capita.*" As a learned author, he is chiefly known by an edition of Plato in three volumes folio, printed by Henry Stephens in 1578, with notes and a new Latin version, which however, is not remarkable for correctness. The principal of his other works are as follow: "Commentariorum de statu Religionis et Rei-publicæ in Regno Franciæ," comprising the events from 1557 to 1576: "Mémoire de la Troisième Guerre civile sous Charles IX.;" "Recueil des Choses memorables avenues en France sous Henri II., François II., Charles IX., et Henri III.;" and "Inventaire Général de l'Histoire de France." Serres towards the end of his life, engaged in the hopeless design of uniting the Catholic and reformed churches, which brought on him the contempt of one party and the enmity of the other. He died in 1598.

SERRES (Oliver de), an eminent agriculturist, was born in 1539, at Villeneuve de Berg, in the Vivarais. Serres wrote works which rendered him the oracle of the cultivators in that age, and many of his ideas have been copied by later writers without acknowledgment. His "*Théâtre d'Agriculture, et Menage des Champs,*" 1600, has been several times reprinted. It has been described by Haller as "a great and valuable work, written by an experienced man, fond of simplicity, and not at all attached to expensive methods." He published treatises on the management of silk-worms, the collection of the silk, and the culture of the white mulberry-tree, which he introduced into France.

SERRES, a small town in the south-east of France, department of the Upper Alps, with 1100 inhabitants. It has some small manufactures of hats, cloth, and leather; 24 miles west-south-west of Gap.

SERRET, a village of Anatolia, in Asiatic Turkey; 30 miles west of Castamena.

SERREY, or SIERAJE, a small town in the north-east of Poland, in the palatinate of Augustow. Population 1100; 37 miles north of Grodno.

SERRIERES, a small town in the south-east of France, department of the Ardecho, on the Rhone. Population 1700; 15 miles north of Tournon.

SERRIERES, a village in the north of Switzerland, on the lake of Neufchatel, with some manufactures of paper and hardware; 2 miles south-west of Neufchatel.

SERRIS, a town of Hindostan, province of Bahar, and district of Rhotas. It is the chief town of a small district called Serris Columbah. Lat. 24. 50. N. long. 84. 18. E.

SERROPALPUS, in Entomology, a genus of insects, of the order Coleoptera, whose Generic Character, is as follows: antennæ setaceous; four unequal feelers; the anterior ones are the longer, and deeply serrate, composed of four joints, the last very large, truncate, compressed, patelliform; the posterior ones are subclavate; thorax margined, concealing the head, with a prominent angle on each side; the head is deflected; and the feet formed for digging. There are two species:—

1. *Serropalpus striatus.*—The body of this insect is brown; the shells striate.—It inhabits the island of Runsale, and is described in the Stockholm Transactions for the year 1786; where it is said to be found chiefly on old wooden buildings, in the evening in autumn, and is about the size of the *Elater aterrimus.*

2. *Serropalpus lævigatus.*—This species is characterized by a black body, and smooth shells.—It inhabits different parts of Europe, and is likewise described in the volume of the Stockholm Transactions already referred to.

SERRURIA, in Botany, a name altered by Mr. Salisbury and Mr. Brown, from the *Serraria* of professor John Burmann, who in his *Plantæ Africanæ*, 266, establishes the latter appellation, in honour of Dr. Joseph Serrurier, Professor at Utrecht. It comprehends chiefly those plants described under the Linnæan term, *PROTEA.*

To SE'RRY, *v. a.* [*serrer*, French; *serrato*, Italian. Dr. Johnson.—*Sera* is the Cornish term for *lock*, or *shut up.*] To press close; to drive hard together. The participle only is used.

With them rose
A forest huge of spears; and thronging helms
Appear'd, and *serried* shields in thick array.

Milton.

Foul dissipation follow'd, and forc'd rout;
Nor serv'd it to relax their *serried* files.

Milton.

SERSALISIA, separated by Mr. Brown, in his Prodr. Nov. Holl., from the Linnæan *Sideroxylon*; but the character does not seem very clear.

SERT, a town of Kurdistan, in Asiatic Turkey. Its name and position, as well as the tradition of the inhabitants, point it out as the ancient *Tigranocerta*, the capital of Tigranes, who peopled it chiefly by prisoners seized during his invasion of Syria and Cappadocia. In the year 69 A.C. it was taken and plundered by Lucullus, but retained its importance till after the Saracen invasion. It is now only a large village, containing about 3000 inhabitants, partly Mahometans, partly Armenian Christians, accommodated with three small mosques, a college, and Armenian church. It is situated in a small plain, surrounded on every side by high mountains, and is washed by the river Kabour. There are no remarkable monuments of any kind, the country affording no durable materials. The surrounding territory is in a comparatively improved state of culture. The chief of Sert possesses almost absolute authority, and is in every respect a powerful feudal lord; 75 miles south-east of Diarbekir.

SERTORIUS (Quintus), a distinguished Roman commander, was a native of Nursia, in the Picentine region of Italy. He made his first campaign under Servilius Cæpio, against the Cimbrians and Teutones in Gaul. In an early engagement he was severely wounded, and would have lost his life, if he had not possessed sufficient vigour to swim across the Rhone, when encumbered with his armour. He next served under Marius, and exhibited proofs of valour and talents, which much ingratiated him with that general. Spain was the next great theatre of his exertions, where he served under Didius, and acquired much reputation in the campaign. On his return to Rome, he was made questor in Cisalpine Gaul; and when the social war broke out, he brought a well-timed reinforcement to the Roman army. In a battle that ensued, he lost an eye, a mark of bravery in which he always gloried, and which pointed him out to the plaudits of the people, whenever he appeared in the theatre, and other public places. He was candidate for the tribuneship, but was disappointed in his hopes by the overbearing interest of Sylla: he accordingly joined the party of Marius in the succeeding civil war. He commanded one of the three armies which invested Rome, and honourably distinguished himself by abstaining from all those acts of cruelty which disgraced the arms of Cinna and Marius. When Sylla gained the ascendancy in Italy, Sertorius withdrew to Spain, of which country he had been appointed pretor. Here he hoped to be able to revive his cause, and with this view he detached a body of troops to seize the passes of the Pyrenees; but the murder of their commander induced them to abandon their post, and consequently laid Spain open to Sylla's officers. After some various adventures, chiefly of the disastrous kind, Sertorius went into Africa, and assisted the Mauritanians to throw off the yoke of a tyrannical king; defeating one of Sylla's generals, by whom he was supported. His reputation now caused him to be invited to Lusitania; and sailing thither with a small body of Romans and Africans, he obtained such an ascendancy over the natives that he soon had the command of the whole Lusitanian nation. He exercised them in the arts of warfare, and introduced a rigid discipline among them; but Roman tactics being unsuitable to them, he adopted a service better suited to the nature and circumstances of the country. He defeated, with his new trained armies, several Roman generals, who were sent against him, and instituted a senate in competition with that of Rome, and imitated all the forms of the republic. He foiled the attempts of that eminent commander, Metellus, to reduce him; continually harassing his troops by sudden attacks and skirmishes,

skirmishes, and intercepting his convoys. He adopted the liberal policy of civilizing the Lusitanians and neighbouring Spaniards, and familiarizing them with Roman letters and customs. For this purpose he established a great school in the city of Osca, at which the sons of men of distinction were gratuitously educated, and at the same time kept as hostages for the fidelity of their parents. Feeling that his power was not sufficiently firm, without the aid of superstition, which ever captivates the ignorant and uncivilized, he trained a white fawn, that had been presented to him, to such a degree of tameness, that it followed him whithersoever he went, and was his constant companion; and he encouraged the belief that the animal was the gift of Diana, and intended by that goddess to convey him information of the designs of his enemies. At length the famous Pompey was nominated to the command against him; and when he arrived, he found that all the Roman troops, which, after the death of Lepidus, had been carried to Spain by Perseus, with the design of setting up there for himself, had joined Sertorius, who was now at the head of a considerable army. Pompey proceeded against him with a superior force; but Sertorius took a town in his presence, and afterwards defeated him at the battle of Sucro. He gave him a second defeat; but Metellus routed a separate division, and Sertorius was glad to take to the mountains. He then offered to lay down his arms, provided the proscription against him might be taken off, and he were permitted to return to Rome. Soon after he received an embassy from Mithridates, the formidable foe of the Romans, offering him an advantageous alliance, provided he were suffered to repossess the provinces from which he had been expelled by Sylla. But Sertorius would not agree to more than his recovery of Bithynia and Cappadocia, without touching upon the Roman province of Asia; and upon these terms the treaty was concluded. A conspiracy was now formed against Sertorius by the Roman patricians in his army, and they succeeded in exciting a revolt in several Lusitanian towns. Incensed at this defection, he caused several of the children, whom he kept as hostages at Osca, to be slain, and others to be sold as slaves. This is said to have been the only act of cruelty by which his memory is tarnished. In revenge for the loss of their sons, the conspirators formed a plot against the life of Sertorius; in consequence of which he was basely assassinated, while he was at a feast. This event took place in the year 73 B. C. "The great qualities and military talents of this eminent person would undoubtedly have raised him to the first rank among the chiefs of his country, had he not been a leader of a party, instead of a commander for the state. With nothing to support him but the resources of his own mind, he created a powerful kingdom among strangers, and defended it a long time against the arms of Rome, although wielded by the ablest generals of his time; and he displayed public and private virtues, which would have rendered a people happy under his rule at a less turbulent period." *Univer. Hist.*

SERTULARIA, in Natural History, a genus of the class Vermes, and order Zoophytes. The Generic Character is this: the animal grows in the form of a plant; the stem is branched, producing polypes from cup-shaped denticles, or minute cells. There are nearly four-score species, divided into two sections.

1.—Stem horny, tubular, fixed to the base, beset with cup-shaped denticles, and furnished with vesicles, or ovaries, containing polypes, eggs, or living young.

1. *Sertularia rosacea*.—This species is panicled, with opposite, tubular, truncate denticles, and alternate branches; the vesicles are crowned with spines.—It inhabits the European seas, and our own coasts, growing on shells, or creeping up other corallines; it is white; the vesicles resemble the blossom of the pomegranate.

2. *Sertularia pumila*.—The denticles of this species are opposite, pointed, and recurved; the vesicles are obovate; the branches loose and irregular.—It is found in the ocean, on fuci, particularly on the serratus.

3. *Sertularia operculata*.—Denticles opposite, pointed, and nearly erect; the vesicles are obovate, covered with a lid; the branches are alternate.—It inhabits the European and American seas, on fuci and shells. The twigs are about five inches long; the denticles are bicuspidate, with a short bristle on each side.

4. *Sertularia tamarisca*.—Denticles nearly opposite, truncate, three-toothed; vesicles ovate, two-toothed, with a short tube in the centre; the branches are alternate.—This is found in most of the European seas, and is the largest of its kind. It is about four inches long, and is found adhering to shells.

5. *Sertularia abietina*.—Denticles nearly opposite, tubular, oval; the vesicles are oval, and the branches alternate.—It is found in the British and other European seas, and the Mediterranean, growing to shells. It is five inches long, and often covered with small serpulæ; the branches are frequently pinnate.

6. *Sertularia nigra*.—Denticles nearly opposite, minute; vesicles large, placed all on one side, oval, quadrangular; the branches are pinnate.—This is found on the Cornish coast, adhering to the *Mytilus margaritiferus*. It is four inches long, blackish.

7. *Sertularia fuscescens*.—Denticles nearly opposite, tubular; the vesicles are numerous, placed all on one side, minute, with three tubercles on each; the branches are pinnate.—This is also an inhabitant of the Cornish coast. It resembles the last, but is of a greyish-brown colour.

8. *Sertularia obsoleta*.—Denticles generally placed in eight rows, ovate, slightly heart-shaped, and disposed in a quincunx form; the branches are alternate and pinnate.—It is an inhabitant of the Frozen ocean, is about five inches high, and of a horn colour, with the joints becoming more and more obsolete towards the top.

9. *Sertularia pinus*.—Denticles sub-spinous, generally disposed in six rows; the vesicles are bottle-shaped, turgid, subdiaphanous, with a simple mouth; the branches are pinnate, nearly alternate.—It inhabits the White sea, fixed to shells.

10. *Sertularia cupressoides*.—Denticles simple, obliquely truncate, with a slightly protuberant mouth; the vesicles are ovate, with a subtubular mouth; the branches are dichotomous, loose, and with the trunk joined with two rings at the junctures. This is found in the White sea; is subdiaphanous, yellowish, and nearly half a foot long.

11. *Sertularia cupressina*.—Denticles nearly opposite, obliquely truncate, and a little pointed; vesicles obovate, two-toothed; branches panicled, and very long.—It is common in all the European seas, and is found in a long pointed loose panicle.

12. *Sertularia argentea*.—Denticles nearly opposite, pointed; vesicles oval; branches alternate, panicled.—This is an inhabitant of the European and American seas; very much resembles the last, but the branches are shorter and looser, and the panicle is more obtuse.

13. *Sertularia rugosa*.—Denticles nearly opposite, obsolete; vesicles much wrinkled, and three-toothed; the branches are scattered.—This species inhabits the European seas, and is found growing on the *Flustra foliacea*, and other sertulariæ.

14. *Sertularia halecina*.—Denticles alternate, tubular, and two-jointed; the vesicles oval, each united along the side to a small tubular stalk; the stem is alternately branched and pinnate.—This is found in the European and Mediterranean seas. It is horny, and of a yellowish-grey; the denticles are nearly obsolete.

15. *Sertularia thuja*.—The denticles in this species are arranged in two rows, closely adhering to the stem; the vesicles obovate, margined; stem waved and stiff, with a tuft of dichotomous branches near the tip.—It is found on the northern coasts of England, and in the Mediterranean, and is about half a foot long.

16. *Sertularia myriophyllum*.—The denticles are truncate, all leaning one way on the stem; the stem itself is gibbous on the side opposite the branches; the branches lean all one way. This is found in most European seas, and in the Mediterranean;

Mediterranean; it is about three inches long, is pale and horny; the stem is rather angular, with arched protuberances opposite the branches; the denticles are seated in a socket furnished with a short spine on the lower part.

17. *Sertularia hypnoides*.—Denticles pointing one way, campanulate, toothed, and beaked; stems with pinnate branches, and very crowded subdivisions.—It inhabits the Indian ocean, is six inches high; in colour it is brown, with yellowish imbricate radicles.

18. *Sertularia speciosa*.—Denticles campanulate, effuse, toothed, and stipulate; the stem is pinnate, rigid, with incurved branches, mostly pointing one way.—It is found in the Indian ocean, adhering to the tubular radicles of gorgoniae; it is brown, horny, and from three to four inches long.

19. *Sertularia falcata*.—The denticles of this species point all one way; they are imbricate and truncate; the vesicles are ovate; the branches are pinnate and alternate. There is a variety of this species described by Ellis, in his work on Corallines.—It inhabits the European and Indian seas, and is from three inches to a foot long; the stem is a little flexuous; the denticles in a single row.

20. *Sertularia pluma*.—In this the denticles point one way, they are imbricate and campanulate: the vesicles are gibbous and crested; the branches are pinnate, alternate, and lanceolate.—It is found on most European coasts, climbing up fuci; the branches are jointed; the denticles are serrate at the margin, and supported in front by a small hollow spine; the vesicles have a denticulate margin, and generally five oblique crested ribs.

21. *Sertularia echinata*.—Denticles opposite, pointing one way, campanulate; the vesicles are crested; the branches pinnate, alternate, and lanceolate.—It inhabits chiefly the shores of Sweden, on fuci.

22. *Sertularia antennina*.—The denticles are verticillate, in fours, setaceous; vesicles obliquely truncate, verticillate; the stems are generally simple. There is a variety which is branched.—They are both found on the British coasts, often nearly a foot high; it is yellow, with very fine capillary yellowish radicles; the stem is surrounded with small incurved setaceous branches, on the upper sides of which are rows of small cup-shaped denticles; the vesicles are placed on pedicles obliquely open towards the stem, and placed round it at the insertion of the branches.

23. *Sertularia verticillata*.—The denticles in this are obsolete; the vesicles campanulate, toothed round the rim, on long twisted pedicles, and placed in fours round the stem; the branches are alternate.—It is found on the British coasts; stem ribbed, very loosely branched; the denticles are not visible; the vesicles are nearly erect, and glutinous; the ovaries are oval, ending in a tubular mouth.

24. *Sertularia gelatinosa*.—Vesicles campanulate: stem with numerous decomposite spreading branches.—It is found on the coasts of the Netherlands; is half a foot long, and of a greyish-brown colour.

25. *Sertularia volubilis*.—The denticles in this are obsolete; the vesicles are alternate, campanulate, toothed round the rim, on long, twisted pedicles; the branches are alternate.—It inhabits the European seas, climbing up other *Sertularia*; it is whitish and minute; the ovaries are egg-shaped and smooth, or transversely wrinkled.

26. *Sertularia syringa*.—Denticles obsolete; vesicles cylindrical, mostly alternate, and placed on short twisted pedicles.

27. *Sertularia cuscata*.—Denticles obsolete; vesicles oval, axillary; branches opposite and simple.—It is found in the European seas, adhering to fuci.

28. *Sertularia pustulosa*.—Stem with alternate dichotomous branches, obsoletely denticulate on the upper part.—It inhabits the shores of the Isle of Wight, and is four inches long. The stem is seen rising into alternate dichotomous joints, with small denticles, having a circular rim, with a point in the middle of each towards the upper part of each joint.

29. *Sertularia frutescens*.—Denticles cylindrical, campanulate, placed in a single row on the inside of the branches; Vol. XXIII. No. 1554.

the branches are alternate, and pinnate.—This is chiefly found on the British shores; rather hard, blackish with brown branches; the stem is composed of small united tubes.

30. *Sertularia pinaster*.—In this species the denticles are opposite, sessile, with an incurved tubular tip; the vesicles are large, ovate, quadrangular; the angles terminating in a spine, and furnished with a tubular mouth in the centre, placed in a row along the branches; the branches are alternate.

31. *Sertularia pennatula*.—The denticles in this are in a single row, crenate on the rim, and supported by a slender, truncate, incurved horn; the branches are opposite.—It is found in the Indian ocean; is five or six inches long; yellowish-brown; the denticles have two opposite spines on the rim.

32. *Sertularia filicula*.—Denticles opposite, ovate, with a single erect one at the junctures of the branches; vesicles obovate, with a tubular mouth in the centre; the stem is zig-zag, with alternate branches.—It inhabits the British shores, is very tender, and the stem is much branched.

33. *Sertularia quadridentata*.—Denticles in fours, opposite, at the joints of the stem; the stem is simple, with the joints tapering and twisted towards the base.—It inhabits the African shores on the fucus *lendigerus*.

34. *Sertularia spicata*.—Denticles in three, cylindrical, terminal, and nearly closed at the mouth; vesicles ovate, axillary; stem tubular, panicled, annulate, with trichotomous branches disposed in whorls round the rings.

35. *Sertularia Evansii*.—The denticles are short and opposite; the vesicles are lobed, arising from the branches which are opposite.—It inhabits the British coasts, and is found on fuci: it is two inches high, very slender, and yellow, with fulvous vesicles.

36. *Sertularia muricata*.—The denticles of this species are pedicled, proceeding alternately from the joints of the branches; vesicles oval, spinous; the stem is jointed.—It is found on the shores of Scotland; the vesicles are nearly globular, placed on pedicles, and full of pointed spines from crested ribs.

37. *Sertularia secundaria*.—Denticles in a single, campanulate; the vesicles are axillary; the stem is minute, white and incurved.—This species is found in the Mediterranean: it is scarcely three lines high, and not thicker than a fine bristle.

38. *Sertularia misenensis*.—The denticles are alternate, very thin, spreading; the vesicles are oval, peduncles axillary; stem much branched, dichotomous.—It inhabits the Mediterranean, is very slender, pellucid towards the tip, and sometimes covered with the cancer linearis.

39. *Sertularia purpurea*.—Denticles sub-ovate, tubular, in four imbricate rows; the vesicles are erect and campanulate; the branches are dichotomous and square.—It inhabits the sea round Kamtschatka, and is of a blackish-purple.

40. *Sertularia articulata*.—Denticles pressed together; the vesicles are ovate, rather large, covered with the lid, and placed in a single row; the stem is jointed and pinnate.—It is found in the Atlantic ocean, creeping on shells, and is about two inches long; pale yellow.

41. *Sertularia filicina*.—Denticles imbricate, placed on one side only; vesicles jointed; stem granulate, branched and pinnate, the subdivisions alternate.—It inhabits the Indian ocean, is pale, and about three inches long.

42. *Sertularia fruticans*.—The denticles of this species are in a single row on one side, semi-campanulate; the stem is granulate, woody, with alternate setaceous subdivisions.—It inhabits the American seas in tufts, on shells: it is six inches long, and of a yellowish-grey.

II.—The species of this division have a crustaceous stem, inclining to stone, and composed of rows of cells; they have no vesicles, but in the place of these there are small globules.

43. *Sertularia bursaria*.—Denticles opposite, compressed and truncate; the stem is branched, and dichotomous.—It is found

found on the British coasts, adhering to fuci; it is minute, flexile, hyaline; the denticles are carinate, with a small clavate tube at the top.

44. *Sertularia loriculata*.—Denticles opposite, obliquely truncate, and nearly obsolete; the branches are erect and dichotomous.—It inhabits the British coasts, on old sertulariæ.

45. *Sertularia fastigiata*.—Denticles alternate, pointed; branches dichotomous, erect.—This is found in the British seas; the denticles are marked with a black spot in the middle.

46. *Sertularia aricularia*.—The denticles all point one way, nearly opposite, and furnished with two mucronate appendages; the globules appendaged; the stem is branched and dichotomous.—It is found in the European seas; is from one to two inches long; in colour it is of a dirty grey. It is very brittle.

47. *Sertularia neritina*.—The denticles are alternate, acute, and pointing one way; the branches are dichotomous, unequal, and straight.—It is found in the European and American seas. It is soft; the globules have an opening, surrounded by a dark-coloured margin.

48. *Sertularia scruposa*.—Denticles alternate, angular, spinous; the branches are dichotomous and creeping.—It inhabits most seas; is very brittle, linear, and pale, with a double row of cells.

49. *Sertularia pilosa*.—The denticles are alternate, oblique, with a long mouth; the branches are dichotomous, fastigiata, and strong.—It is found in the Mediterranean, and is not half an inch long.

50. *Sertularia crispa*.—This species is very much branched, dichotomous, elongated, and crisp; with depressed ovate joints, furnished with cells on one side.—It inhabits the East, is large, flexile, and of a pale-grey colour.

51. *Sertularia floccosa*.—This is very much branched, dichotomous, fastigiata, with wedge-shaped joints, having cells on one side.—This is found chiefly in the Indian ocean; is large, whitish, with greyish flexile joints.

52. *Sertularia reptans*.—Denticles alternate, two-toothed; the branches are dichotomous and creeping.—This is found in the European seas, adhering to the flustra foliacea; it is not an inch long; white or pale-grey.

53. *Sertularia parasitica*.—The denticles of this species are verticillate, turbinate, ciliate, and parasitical.—It is found in the Mediterranean and North seas, adhering to other sertulariæ and corallines; in colour it is dull red, with terminal denticles.

54. *Sertularia ciliata*.—Denticles alternate, ciliate, funnel-form; branches dichotomous and erect.—It inhabits the European seas, on marine substances; not half an inch high; it is whitish; the cells have wide mouths.

55. *Sertularia eburnea*.—The denticles are alternate, truncate, a little prominent; the vesicles are gibbous, with a tubular beak on one side; the branches spreading.—This inhabits the European and Mediterranean seas, and is found growing upon other sertulariæ and fuci; is about an inch high, and white.

56. *Sertularia anguina*.—The stem is very simple, without denticles, but beset with very simple, obtuse, clavate arms, each with a lateral opening.—This is found climbing up marine substances; it is white, soft, flexile, varying in form, and appears to connect the sertulariæ and hydræ; the arms are testaceous.

57. *Sertularia flabellum*.—This species is stony, branched, jointed, dichotomous; the joints are somewhat wedge-shaped, and have cells on one side.—It inhabits the Bahama Islands, is about two inches high, white, growing in tufts; the joints are convex and striate on one side; the others are flat, with a triple row of cells.

SERVA, a small river of the Sardinian states, in Piedmont, which falls into the Sesia to the north of Vercelli.

SERVAN, St., a considerable town in the north-west of France, department of the Ille and Vilaine, situated at the mouth of the river Rance; about a mile to the south of St. Malo, from which it is separated by a narrow arm of the sea,

dry at low water. It is tolerably built, contains a population of 9000, but covers a space of ground more than proportionally large. It has a fine port, divided into two parts by a rock, on which stands the tower of Solidor. One of these divisions is fitted for men-of-war, or large merchantmen; the other for smaller vessels. Its manufactures, consisting chiefly of linen, sail-cloth, soap and tobacco, are considerable; provisions, and consequently labour being cheap here; ship-building is likewise carried on to some extent. This place is the resort in peace of a number of English families. In time of war it sends out a number of privateers.

SERVANDONI (John Nicholas), an eminent architect, was born at Florence in 1695. He was employed by several of the sovereigns in Europe on occasions of magnificent public spectacles, in which he displayed a very fertile invention, with nobleness of ideas, and a correct taste. As an architect he has left a fine specimen of his taste in the portico and front of the church St. Sulpice.

SERVANT, *s.* [*servus*, Lat.] One who attends another, and acts at his command. The correlative of master. Used of man or woman.

I had rather be a country *servant* maid,
Than a great queen with this condition.

Shakspeare.

He disdain'd not
Thenceforth the form of *servant* to assume.

Milton.

A word of civility used to superiors or equals.—This subjection, due from all men to all men, is something more than the compliment of course, when our betters tell us they are our humble *servants*, but understand us to be their slaves. *Swift*.

The first sort of servants, acknowledged by the laws of England, comprehends *menial* servants; so called from being *intra mania*, or *domestics*. The contract between them and their masters arises upon the hiring: if the hiring be general, without any particular time limited, the law construes it to be hiring for a year (Co. Litt. 42. F. N. B. 168.); but the contract may be made for any larger or smaller term. All single men between twelve years of age and sixty, and married ones under thirty years of age; and all single women between twelve and forty, not having any visible livelihood, are compellable by two justices to go out to service in husbandry, or certain specific trades, for the promotion of honest industry: and no master can put away his servant, or servant leave his master after being so retained, either before or at the end of his term, without a quarter's warning, unless upon reasonable cause, to be allowed by a justice of the peace (stat. 5 Eliz. c. 4.); but they may part by consent, or make a special bargain.

A master may maintain, i. e. abet or assist his servant in any action at law against a stranger; he may also bring an action against any man for beating or maiming his servant, assigning his damage by the loss of service, and proving the loss upon the trial: he may likewise justify an assault in defence of his servant, and a servant in defence of his master (2 Roll. Abr. 546.): and if any person hire or retain my servant, being in my service, I may have an action for damages against both the new master and the servant, or either of them; but if the master did not know that he is my servant, no action lies, unless he afterwards refuse to restore him upon information and demand. F. N. B. 167, 168.

As for those things which a servant may do in behalf of his master, they seem to be grounded on this principle, that the master is answerable for the act of his servant, if done by his command, either expressly given or implied; therefore, if the servant commit a trespass by the command or encouragement of his master, the master shall be guilty of it; if any inn-keeper's servants rob his guests, the master is bound to restitution (Noy's Max. c. 43.); and if the drawer at a tavern sells a man bad wine, by which his health is injured, he may bring an action against the master. (1 Roll. Abr. 95.) In the same manner, whatever a servant is permitted to do in the usual course of his business, is equivalent to a general

general command; if I pay money to a banker's servant, the banker is answerable for it; if a steward lets lease of a farm without the owner's knowledge, the owner must stand to the bargain: a wife, friend, or relation, that used to transact business for a man, are, *quoad hoc*, his servants, and the principal must answer for their conduct. Farther, if a servant, by his negligence, does any damage to a stranger, the master shall answer for his neglect: if a smith's servant lames a horse while he is shoeing him, an action lies against the master and not against the servant. A master is chargeable if any of his family layeth or carrieth any thing out of his house into the street, or common highway, to the damage of an individual, or the common nuisance of his majesty's liege people. In case of fire the servant is accountable. *Blackst. Comm. book. i.*

To SERVANT, *v. a.* To subject. *Not in use.*

My affairs

Are *servanted* to others: though I owe
My revenge properly, remission lies
In Volscian breasts.

Shakspeare.

To SERVE, *v. a.* [*servio*, Latin.] To work for.—Because thou art my brother, should'st thou therefore *serve* me for nought? *Genesis.*—To attend at command.

A goddess among gods ador'd, and *serv'd*
By angels numberless, thy daily train.

Milton.

To obey servilely or meanly.

When wealthy, shew thy wisdom not to be
To wealth a servant, but make wealth *serve* thee. *Denham.*

To supply with food ceremoniously.

Others, pamper'd in their shameless pride,
Are *serv'd* in plate, and in their chariots ride. *Dryden.*

To bring meat as a menial attendant: with *in* or *up*: with *in*, as meat dressed in the kitchen is brought *into* another room; with *up*, as the room of repast is commonly higher than the kitchen.—Bid them cover the table, *serve* in the meat, and we will come in to dinner. *Shakspeare.*

Some part he roasts; then *erves* it up so drest,
And bids me welcome to this humble feast:
Mov'd with disdain,

I with avenging flames the palace burn'd.

Dryden.

To be subservient or subordinate to.

Bodies bright and greater should not *serve*
The less not bright.

Milton.

To supply with any thing: as, the curate *serv'd* two churches.—They that *serve* the city shall *serve* it out of all the tribes of Israel. *Ezek.*—To obey in military actions: as, he *serv'd* the king in three campaigns.—To be sufficient to.—If any subject, interest or fancy has recommended, their reasoning is after their fashion; it *erves* their turn. *Locke.*—To be of use to; to assist; to promote.—When a storm of a sad mischance beats upon our spirits, turn it into some advantage, by observing where it can *serve* another end, either of religion or prudence. *Bp. Taylor.*

He consider'd every creature—

Most opportune might *serve* his wiles.

Milton.

To help by good offices.

Shall he thus *serve* his country, and the muse
The tribute of her just applause refuse?

Tate.

To comply with; to submit to.—They think herein we *serve* the time, because thereby we either hold or seek preferment. *Hooker.*—To satisfy; to content.—As the former empty plea *serv'd* the sottish Jews, this equally *erves* these to put them into a fool's paradise, by feeding their hopes, without changing their lives. *South.*—Nothing would *serve* them then but riding. *L'Estrange.*

One half-pint bottle *erves* them both to dine,
And is at once their vinegar and wine.

Pope.

To stand instead of any thing to one.

The dull flat falsehood *erves* for policy,
And in the cunning, truth itself's a lie.

Pope.

[*Se servir de*, French.] To SERVE *himself* of. To make use of. An unadopted Gallicism.—They would *serve themselves* of this form. *Taylor.*—I will *serve myself* of this concession. *Chillingworth.*—It is much more easy for men to *serve* their own ends of those principles, which they do not put into men, but find there. *Tillotson.*—To treat; to requite: in an ill sense: as, he *serv'd* me ungratefully.—To worship the Supreme Being.—Matters hid—leave thou to God; Him *serve* and fear. *Milton.*

To SERVE a warrant. To seize an offender, and carry to justice.

To SERVE an office. To discharge any public duty.

To SERVE, *v. n.* To be a servant, or slave.—Israel *serv'd* for a wife, and for a wife he kept sheep. *Hosea.*—To be in subjection.—Thou hast made me to *serve* with thy sins; thou hast wearied me with thine iniquities. *Isa.*—To attend; to wait.—Martha was cumbered about much *erving*, and said, Lord, dost thou not care that my sister hath left me to *serve* alone? *St. Luke.*—To engage in the duties of war under command.

Both more or less have given him the revolt;
And none *serve* with him but constrained things,
Whose hearts are absent too.

Shakspeare.

Many noble gentlemen came out of all parts of Italy, who had before been great commanders, but now *serv'd* as private gentlemen without pay. *Knolles.*—To produce the end desired.—The look bewrayed, that as she used these ornaments, not for herself, but to prevail with another, so she feared that all would not *serve.* *Sidney.*—To be sufficient for a purpose.

Take it, she said; and when your needs require,
This little brand will *serve* to light your fire.

Dryden.

To suit; to be convenient.

As occasion *erves*, this noble queen
And prince shall follow with a fresh supply. *Shakspeare.*

To conduce; to be of use.

Who lessens thee, against his purpose *erves*
To manifest the more thy might.

Milton.

Fashion is, for the most part, nothing but the ostentation of riches; and therefore the high price of what *erves* to that, rather increases than lessens its vent. *Locke.*—To officiate or minister: as, he *serv'd* at the public dinner.

In sea language, To *serve* a rope, is to lay spun-yarn, rope-yarn, sennit, a leather, a piece of canvas, or the like upon it, which is rolled fast round about the rope, to keep it from fretting or galling in any place.

SERVERETTE, a small town of the south of France, department of the Lozère. Population 9000; 11 miles north-by-west of Mende.

SERVETISTS, a sect said to be the disciples or followers of Michael Servetus, the ringleader of the Anti-Trinitarians of his age: but Servetus, in reality, had not any disciples, as being burnt, together with his books, before his dogmas had time to take root. But the name Servetists has been given to some of the modern Anti-Trinitarians, because they follow the footsteps he had marked out.

SERVETUS (Michael), was born at Villanueva, in Arragon, in 1509. His father was a notary-public, and he himself was sent to the academy of Toulouse, where he studied the law during the space of three years. About this period his attention was turned to the study of the sacred scriptures, to which he was probably excited by the reformers of that day. He soon discovered many errors and abuses in the church of Rome, in the tenets of which he had been brought up, and laid then the foundation of his opinions concerning the doctrine of the Trinity. He fixed his residence at Basil, in the year 1530. Here he was on a footing of friendly intimacy with Ecolampadius, with whom he often conversed about various religious topics, but to whose peculiar opinions he would not yield, in the smallest degree, any notions which he had previously adopted. An unbending disposition with regard to matters of small moment, alienated many

many persons from Servetus who had formed a high opinion of his talents and integrity. While he was at Basil, he put into the hands of a bookseller a manuscript, "De Trinitatis Erroribus," which was printed in the year 1531. This, as well as his work—"Dialogorum de Trinitate Libri duo," in which he explained and defended his opinions, were very obnoxious to the reformers with whom he was associated. And Melancthon, in speaking at this time of Servetus, says, "he unquestionably speaks like a madman about justification; about the Trinity, *περι της τριδος*, you know that I have been always apprehensive that similar things sooner or later would break out. Good God! what tragedies will this question excite among posterity."

The circumstances of Servetus being low, he engaged for some time with the Frellons, eminent booksellers at Lyons, as corrector of the press. From Lyons he went to Paris, where he studied physic; graduated at Paris, and delivered public lectures in geography and some branches of mathematics, while he followed the profession of a physician. At Paris he quarrelled with the faculty, and wrote an "Apology," which was suppressed by the parliament. After quitting that capital he practised physic at Charlieu, near Lyons, whence, at the invitation of the Archbishop of Vienne, he removed to that city, and had apartments near the palace. He had previously to this, viz., in 1542, superintended the printing of a Latin Bible at Lyons, to which he added marginal notes, under the name of Villanovanus.

During this time, Servetus was in constant correspondence with Calvin, with whom he discussed various points of controversy, and to whom he opened himself freely and without reserve concerning his particular notions, and consulted him respecting his writings. Calvin afterwards made a base use of this confidence, by actually producing his letters and manuscripts as matters of accusation against him on his trial. It must not, however, be concealed, that Calvin does not appear to have encouraged Servetus to this exposition of his sentiments, for he frequently sent him in reply angry and severe letters. In 1553 Servetus published his matured theological system under the title of "Christianismi Restitutio." Conscious of the danger of the author to such a work in a Catholic country he concealed his name, but Calvin took care that the magistrates of Vienne should be informed of it. He was in consequence thrown into prison, and his death would have added another example to the numberless cruelties of Roman Catholic persecutions, had he not made his escape. His effigy and his books were condemned to the flames. Servetus, purposing to go to Naples to practise in his profession, imprudently went through Geneva. Calvin, who was acquainted with the plans of the traveller, and who was on the watch to entrap him, gave information to the magistrates the moment he arrived within the gates of the city. He was accordingly seized, thrown into prison, and a charge of blasphemy and heresy was preferred against him by Calvin's own servant. In order to ensure conviction and condemnation, no less than thirty-eight articles of accusation were brought against him, for which not only his last work, but all his other writings were ransacked. As a proof of the malice and unfairness with which he was treated, it is mentioned that one of the charges was extracted from his preface to an edition of Ptolemy's Geography, published twenty years before, in which he had asserted, that Judea had been falsely extolled for its beauty and fertility, since modern travellers had found it to be sterile and unsightly. As he refused to retract his opinions, he was, notwithstanding his pleas, condemned to the flames as an obstinate heretic, which sentence was carried into execution on the 27th of October, 1553, when he was in the forty-fourth year of his age. His sufferings were particularly severe, and the fire was so managed, that the unfortunate man lingered in excruciating pain more than two hours.

That this bloody persecution was disapproved by many at the time, is rendered very probable by the apology for the Genevan magistrates, published by Calvin, in which he undertook to prove that it was lawful to punish heretics with death. The mild and otherwise moderate and benevo-

lent Melancthon sanctioned the deed by a congratulatory letter addressed to the magistrates of Geneva. The conduct of Calvin in this business, as instigated not only by bigotry, but personal hatred, has impressed an indelible stain on his memory.

The theological system of Servetus is described as singular in the highest degree. According to Mosheim's account, he conceived that the genuine doctrine of Christ had been entirely lost, even before the Council of Nice; and he was moreover of opinion, that it had never been delivered with a sufficient degree of precision in any period of the church. To these extravagant assertions he added another still more so, even that he himself had received a commission from above to reveal anew this divine doctrine, and to explain it to mankind. His notions with respect to the Supreme Being, and a Trinity of persons in the godhead were very obscure and chimerical, and amounted in general to the following propositions:—That the Deity, before the creation of the world, had produced within himself two personal representations or manners of existence, which were to be the medium of intercourse between him and mortals, and by whom, consequently, he was to reveal his will, and to display his mercy and beneficence to the children of men: that these two representatives were the Word and the Holy Ghost: that the former was united to the man Christ, who was born of the Virgin Mary, by an omnipotent act of the Divine Will; and that, on this account, Christ might be properly called *God*: that the Holy Spirit directed the course, animated the whole system of nature, and more especially produced in the minds of men wise counsels, virtuous propensities, and divine feelings; and, finally, that these two representations were to cease after the destruction of this terrestrial globe, and to be absorbed into the substance of the Deity, from whence they had been formed.

Servetus is numbered, among those anatomists who made the nearest approach to the doctrine of the circulation of the blood. The passage cited to this effect is contained in his latest and fatal work, "De Restitutione Christianismi." It clearly states the circulation of the blood through the lungs. He pursued in his medical studies, anatomical researches with the greatest ardour.

Servetus was a man of great erudition and unfeigned piety; his mind was stored with a variety of knowledge, and he stood very high, in the estimation of his contemporaries, for his talents and for his discoveries in the profession of medicine.

The affability of the manners of Servetus, and his vast learning, had procured him numerous friends in France, in Germany, and in Italy; and his name will be handed down to the latest posterity with commiseration and respect.

SERUG, a village of Diarbekir, in Asiatic Turkey; 12 miles south of Ourfa.

SERVI, a small island of Greece, near the south-east coast of the Morea, at the entrance of the gulf of Coron; 6 miles north of Cerigo. Lat. 36. 28. N. long. 22. 55. E.

SERVIA, an extensive province in the North of European Turkey, corresponding to the Mæsia Superior of the Romans. Its form is nearly oblong, its length being about 190 miles, its breadth 100, its superficial extent 19,000 square miles, or somewhat more than the half of Scotland. Its population is not known with certainty, but calculated at nearly 1,000,000. It is an inland province, bounded on the north by a part of the Hungarian frontier, but on all other sides by portions of the Turkish territory, viz., on the west by Bosnia, on the east by Bulgaria, and on the south by Albania.

Face of the Country.—Servia is a very uneven and even mountainous country; its surface containing a number of extensive forests, and large uncultivated heaths. The mountains in the south extend in a regular chain, but throughout the chief part of the province they have no regular connection. One of the highest is that called Haloga, situated to the south-west of Belgrade. The rivers of Servia are on its frontiers, viz., the Save and Danube on the

the north: the Morawa on its eastern, the Dwina on its western boundary, both flow to the northward, until falling into the Danube, after collecting the waters of a number of inferior streams. The Danube, in this part of its course through Servia, is in many places bordered by lofty rocks, some rising almost perpendicular from the river, others appearing to hang suspended above its channel. Some are bare, others covered with wood, but the scenery, different from the scenery of this river in other countries, is picturesque, and even wild.

Climate and Soil.—The climate of Servia, though temperate, is less mild than might be expected in the 43d and 44th degree of north lat., the winter being of considerable length, and spring not beginning till April. This is owing partly to the height of the great ridge of the Argentario or Glubotin mountains, extending along its southern boundary; partly to the number of forests, and the general neglect of cultivation in its interior. In the month of June the south-west winds generally bring on periodical rains, which are succeeded in July and August by days of great heat, although the nights are generally cool and pleasant. September is often a rainy month; but in October and November, the weather is in general pleasant, and on the whole, the climate of Servia is healthy. Its soil also is in general fertile, the cultivated tracks producing abundant crops; but a small proportion of the country is as yet under tillage. The most common products are wheat, barley, oats, rice, hemp, flax and tobacco; also vines, and fruit of various kinds. Cotton is raised in the valleys and other warm spots. Timber is abundant, and would form, with the aid of water communication, a great article of export. Mines of iron have been discovered in several parts; but like the mines of salt and other minerals, they are almost entirely neglected, the productive industry of this country being as yet in so backward a state as to be confined to the raising and export of a few articles, such as hemp, wool, flax and tobacco; to these is added an annual export of cattle and hogs; the latter fed in the woods. The manufactures, still more limited in extent, are of woollen, cotton and hardware; the whole for home consumption. Improvement is retarded equally by the insecurity of property under so unenlightened a government as the Turkish, as by the total want of canals, and even of carriage roads, except in the immediate vicinity of large towns. Of the latter, Servia reckons only Belgrade, Semendria, and Nissa: the other places are villages meanly built, and thinly peopled. There are, however, spread over the country many vestiges of antiquity, in particular castles resembling forts, said to have been erected by the Romans.

Manners and Language.—The inhabitants of Servia are divided into Servians, Turks and Jews; the last two are found only in the towns. The Servians, who inhabit almost exclusively the open country, are originally a tribe of Sclavonians from Galicia, in Poland, supposed to be of the same race as the Russians. They are not confined to the territory strictly called Servia, but are spread over other parts of Europe, and form a considerable proportion of the population of Hungary. The language of the country has a great resemblance to the Russian; it is spoken not only by the Servians, but by the Bosnians, the modern Bulgarians, the Morlachians, the Sclavonians proper, the Dalmatians and the Ragusans; all which tribes are sometimes comprised under the general denomination of Illyrians. The Servians are reported to be little improved by civilization, and sadly debased by bigotry and superstition. Still they appear to possess much natural activity, and the beautiful specimens of their poetry recently published in this country shew that they are by no means wanting in the higher orders of genius.

History.—Servia, on the decline of the Roman empire, shared the fate of the other frontier provinces, and was occupied by invaders, from a tribe of whom, called Serbis or Serbi, it received its present name. It formed in the middle age a separate and independant kingdom, but yielded to the Turks, when, about the year 1365, their arms extended in this direction. The Servians have since experienced not unfrequently the hardships of a frontier province, and still

oftener those of a government accustomed to allow its pachas and other provincial governors to practise extortions, and its military to live at the expense of the inhabitants. A sense of these injuries, and the implacable hatred of the Turks, inspired by their religion and the instigation of their leaders, led to an insurrection on the part of the Servians about the year 1801. This insurrection, at first partial, soon became general, and the Servians flocked round the standard of Czerni Georges, previously known only as the head of a band of robbers, but now honoured with the name of avenger of his country. This chieftain at first confined himself to the forests, and attacked only detached parties of the Turks. In time his followers increased, and found themselves of sufficient strength to meet the enemy in the open country. In December 1806, he besieged Belgrade, took it after an obstinate resistance, and, in a great measure, expelled the Turks from the country, which he ruled with the authority of a sovereign. The Turks brought, from time to time fresh forces against him. These he resisted with various successes until 1814, when he judged proper to withdraw into Russia; and by a convention concluded between his country and the Porte in 1815, the Servians acknowledged the sovereignty of the sultan, but observed the free exercise of their religion, as well as their civil rights. Every father of a family pays a ducat of yearly tax to the Porte, and every other individual a piastre; no Servian can settle in Turkey, nor travel in that country, except for commercial purposes. The Turkish division of the country is into four sandgiacats, viz., Belgrade, Semendria, Novibassar and Kratow.

SERVIA, or NEW SERVIA, a district in the south-west of European Russia, in the government of Ekaterinoslav, between the Dnieper and the Bog. It takes its name from a number of Servian hussars and Pandours, who emigrated hither in 1754, from Moldavia, Wallachia and Hungary. Being a frontier province of the administration, it has a military form. The territory is divided into ten districts, each occupied by a regiment; and on the southern frontier there is also a regiment of cossacks.

SERVIAN, a small town in the south of France, department of the Herault, with a population of 2200; 6 miles north-east of Beziers.

SERVICE, *s.* [ʃɛrˈvɪs, Sax.] Menial office; low business done at the command of a master.

The banish'd Kent, who in disguise
Follow'd his king, and did him *service*
Improper for a slave. *Shakspeare.*

Attendance of a servant.

Both fell by our servants, by those men we lov'd most:

A most unnatural and faithless *service.* *Shakspeare.*

Place; office of a servant.—I have served prince Florizel;
but now I am out of *service.* *Shakspeare.*

By oppressing and betraying me,

Thou might'st have sooner got another *service.* *Shakspeare.*

These that accuse him are a yoke of his discarded men;
very rogues, now they be out of *service.* *Shakspeare.*—A court, properly a fair, the end of it trade and gain; for none would go to *service* that thinks he has enough to live well of himself. *Temple.*—Any thing done by way of duty to a superior.

That *service* is not *service*, so being done,
But being so allow'd. *Shakspeare.*

Attendance on any superior.—Riches gotten by *service*, though it be of the best rise, yet when gotten by flattery, may be placed amongst the worst. *Bacon.*—Profession of respect uttered or sent.

I am a woman, lacking wit
To make a seemly answer to such persons,
Pray do my *service* to his majesty. *Shakspeare.*

Obedience; submission.

Thou, Nature, art my goddess; to thy law
My *services* are bound. *Shakspeare.*

Act on the performance of which possession depends.—
R Although

Although they built castles and made freeholders, yet were there no tenures and *services* reserved to the crown; but the lords drew all the respect and dependency of the common people unto themselves. *Davies*.—Actual duty; office.—The order of human society cannot be preserved, nor the *services* requisite to the support of it be supplied, without a distinction of stations, and a long subordination of offices. *Rogers*.—Employment; business.—If stations of power and trust were constantly made the rewards of virtue, men of great abilities would endeavour to excel in the duties of a religious life, in order to qualify themselves for public *service*. *Swift*.—Military duty.—When he cometh to experience of *service* abroad, or is put to a piece or pike, he maketh a worthy soldier. *Spenser*.—A military achievement.—Such fellows will learn you by rote where *services* were done, at such and such a breach. *Shakspeare*.—Purpose; use.—All the vessels of the king's house are not for uscs of honour, some be common stuff, and for mean *services*, yet profitable. *Spelman*.—Useful office; advantage conferred.—Gentle streams visit populous towns in their course, and are at once of ornament and *service* to them. *Pope*.—Favour.

To thee a woman's *services* are due,
My fool usurps my body.

Shakspeare.

Public office of devotion.—According to this form of theirs, it must stand for a rule, no sermon, no *service*. *Hooker*.—A particular portion of divine service sung in cathedrals or churches.—Those hymns which church-musicians call by the technical name of *services*, by which they mean the *Te Deum*, *Magnificat*, &c., which the rubric appoints to be sung after the first and second lessons at morning and evening prayer. *Mason*.—Course; order of dishes. Cleopatra made Anthony a supper sumptuous and royal; howbeit there was no extraordinary *service* seen on the board. *Hakewill*.—A tree and fruit. See *SORBUS*.—October is drawn in a garment of yellow and carnation; in his left hand a basket of *services*, medlars and other fruits that ripen late. *Peacham*.

SERVICE, or **SERVAGE**, *Servitium* in Law, a duty which the tenant, by reason of his fee, owes to the lord.

SERVICE, **REAL**, is either *urbane* or *rustic*; which two kinds differ, not in the place, but the thing. The first is that due from a building or house, in whatever place situate, whether in city or in country, as keeping a drain, a vista, or the like.

SERVICES, **RUSTIC**, are those due for grounds, where there is no building; such is the right of passage through ways, &c.

There are also *natural services*. For instance, if a man cannot gather the produce of his lands, without passing through his neighbour's grounds, the neighbour is obliged to allow a passage as a natural service.

SERVICE, **FRANK**, *Servitium liberum*, a service done by the feudatory tenants, who were called *liberi homines*, and distinct from vassals; as was likewise their service; for they were not bound to any base services, but only to find a man and horse to attend the lord into the army or court.

SERVICE, **Base**: see **VILLENAGE**.—**SERVICE**, **Board**: see **BOARD SERVICE**.—**SERVICE**, **Heriot**: see **HERIOT**.—**SERVICE**, **Ovelty** of: see **OVELTY**.—**SERVICE**, **Suit** of: see **SUIT**.

SERVICEABLE, *adj.* Active; diligent; officious.

I know thee well, a *serviceable* villain;

As duteous to the vices of thy mistress

As badness could desire.

Shakspeare.

Useful; beneficial.—A book to justify the revolution, archbishop Tillotson recommended to the king as the most *serviceable* treatise that could have been published then. *Swift*.

SERVICEABLY, *adv.* So as to be serviceable.

SERVICEABLENESS, *s.* Officiousness; activity.—He might continually be in her presence, shewing more humble *serviceableness* and joy to content her than ever before. *Sidney*.—Usefulness; beneficialness.—All action being for some end, its aptness to be commanded or forbidden must be founded upon its *serviceableness* or disserviceableness to some end. *Norris*.

SERVICE-TREE, in Botany, a corruption of the Latin *SORBUS*; see that article, as well as *PYRUS*.

SERVICE-TREE, *Wild.* See *CRATÆGUS*.

SERVIENT, *adj.* [*serviens*, Lat.] Subordinate.—Then *servient* youth, and magisterial *eld.* *Dyer*.

SERVIERES, a small town in the south-west of France, department of the Correze, with 1500 inhabitants; 13 miles south-east of Tulle.

SERVILE, *adj.* [*servilis*, Lat.] Slavish; dependant; mean.

Fight and die, is death destroying death:

Where fearing dying, pays death *servile* breath. *Shakspeare.*

Ev'n fortune rules no more a *servile* land,

Where exil'd tyrants still by turns command.

Pope.

Fawning; cringing.—The most *servile* flattery is lodged the most easily in the grossest capacity; for their ordinary conceit draweth a yielding to their greater, and then have they not wit to discern the right degrees of duty. *Sidney*.

SERVILE, in Hebrew Grammar, the denomination of a class of letters used in contradistinction to radical. The latter constitute roots (which see), and the former constitute derivatives, or branches from these roots, and are employed in all the different flexions. Of all the twenty-two letters of the alphabet, any of which may be radicals, there are properly only eleven letters that can claim this title, because they never can be serviles. The serviles are the other eleven letters, by means of which the whole business of flexion, derivation, numbers, genders, persons and tenses, is accomplished. But even these letters are somewhat limited in their servile power. For only two of them, viz., and ך can be inserted or ingrafted between radical letters; the others must be either prefixed or postfixed to the root.

SERVILELY, *adv.* Meanly; slavishly.

T' each changing news, they chang'd affections bring,

And *servilely* from fate expect a king.

Dryden.

He affects a singularity in his actions and thoughts, rather than *servilely* to copy from the wisest. *Swift*.

SERVILENESS, or **SERVILITY**, *s.* Subjection; involuntary obedience.—What, besides this unhappy *servility* to custom, can possibly reconcile men that own Christianity to a practice widely distant from it?—Meanness; dependance; baseness.—Submission from fear.—The angels and demons, those by their subserviency, and these by the *servility* of their obedience, manifestly declared Christ and his apostles to be vested with an authority derived from their Lord. *West*.—Slavery; the condition of a slave.

To be a queen in bondage, is more vile

Than is a slave in base *servility*;

For princes should be free.

Shakspeare.

SERVIN (Louis), a celebrated lawyer in France, who flourished at the sixteenth and beginning of the seventeenth centuries, was descended from a good family in the Vendomois. He distinguished himself by his zealous support of the liberties of the Gallican church, and his opposition to the pretensions of the court of Rome. His printed pleadings were honoured with the censure of the Sorbonne, and with a virulent attack by a Jesuit of Provence. The title of his work was "Actions notables et Plaidoyers." In 1590 he published a work in favour of Henry IV., who had succeeded to the crown, entitled, "Vindiciæ secundum Libertatem Ecclesiæ Gallicanæ, et Defensio Regii Status Gallo-Francorum sub Henrico IV. Rege." In 1598, being joined in a commission for the reformation of the university of Paris, he delivered "a remonstrance" on the subject, which was printed. To him also is attributed a work in favour of the republic of Venice, in the affairs of the Interdict. In the reign of Lewis XIII., at a bed of justice holden in 1620, he made strong and animated remonstrances in favour of the right of parliament to register royal edicts. On another similar occasion, for the purpose of compelling the registry of some financial edicts, as he was firmly but respectfully making fresh remonstrances to his majesty, he suddenly fell and expired at the king's feet.

SERVING—

SERVING-MAID, *s.* A female servant.—They never acknowledged her mistress-ship over them, or themselves to be her *serv-ing-maids*. *Bp. Bull.*

SERVING-MALLET, a cylindrical piece of wood with a handle in the middle, used for serving rope.

SERVING-MAN, *s.* A menial servant.

Just in the nick; the cook knock'd thrice,
And all the waiters in a trice

His summons did obey;

Each *serv-ing-man*, with dish in hand,
March'd boldly up, like our train'd band,

Presented and away.

Suckling.

SERVISTAN, a village of Persia, in the province of Fars; 35 miles south-east of Schiras.

SERVITA, a settlement of South America, in the kingdom of New Granada, and provinces of Pamplona. It contains 400 whites, and 200 Indians.

SERVITES, an order of religious, so denominated from their vowing a peculiar attachment to the service of the Virgin.

The order was founded by seven Florentine merchants, who, about the year 1233, began to live in community on Mount Senar, two leagues from Florence.

SERVITIUS *Acquietandis*, a writ judicial that lies for a man distrained for services to one, when he owes and performs them to another, for the acquittal of such services.

SERVITOR, *s.* [*serviteur*, Fr.] Servant; attendant. *A word obsolete*

Thus are poor *servitors*,

When others sleep upon their quiet beds,
Constrain'd to watch in darkness, rain and cold. *Shakspeare.*

One who acts under another; a follower.—Our Norman conqueror gave away to his *servitors* the lands and possessions of such as did oppose his invasion. *Davies.*—One who professes duty and obedience.

My noble queen, let former grudges pass,

And henceforth I am thy true *servitor*.

Shakspeare.

One of the lowest order in the university of Oxford; similar to the sizer in that of Cambridge.—His learning is much of a size with his birth and education; no more of either than what a poor hungry *servitor* can be expected to bring with him from his college. *Swift.*

SERVITORS OF BILLS, denote such servants or messengers of the marshal of the King's Bench, as were sent abroad with bills or writs, to summon men to that court. They are now commonly called tip-staves.

SERVITORSHIP, *s.* Office of a servitor.—Dr. Johnson, by his interest with Dr. Adams, master of Pembroke College, Oxford, where he was educated for some time, obtained a *servitorship* for young M'Aulay. *Boswell.*

SERVITUDE, *s.* [*servitude*, Fr., *servitus*, Lat.] Slavery; state of a slave; dependance.

You would have sold your king to slaughter,

His princes and his peers to *servitude*,

His subjects to oppression and contempt.

Shakspeare.

Unjustly thou deprav'st it with the name

Of *servitude*, to serve whom God ordains,

Or nature; God and nature bid the same,

When he who rules is worthiest.

Milton.

• Servants collectively. *Not in use.*

After him a cumbrous train

Of herds, and flocks, and numerous *servitude*.

Milton.

Under the declension of the Roman empire, a new kind of servitude was introduced, different from that of the ancient Romans: it consisted in leaving the lands of subjugated nations to the first owners, upon condition of certain rents, and servile offices, to be paid in acknowledgment. Hence the names of *servi censiti*, and *ascriptitii*, and *addicti glebæ*; some of which were taxable at the reasonable discretion of the lord; others at a certain rate agreed on; and others were mainmortalable, who, having no legitimate children, could not make a will to above the value of five-pence, the lord being heir of all the rest; and others were prohibited marrying, or going to live out of the lordship. Most of

which services still subsist in one province or other of France; though they are all abolished in England. Such, however, was the original of our tenures, &c.

SERVITZA, a large village of European Turkey, in Thessaly, the chief place of a district of the same name, stretching along a coast of the gulf of Salonica, to the north of Mount Olympus. It is a commercial place, being one of the chief points of communication between Larissa and Salonica; 40 miles north-by-east of Larissa.

SERVIVS (Maurus-Honoratus), a grammarian and critic, who flourished in the reigns of Arcadius and Honorius, is principally known by his Commentaries on Virgil, which, however, are considered rather as a collection of ancient remarks and criticisms on that poet than as made by himself. They contain many valuable notices of the geography and arts of antiquity.

SERVIVS (Sulpicius Rufus), an eminent Roman jurist and statesman, was descended from the illustrious patrician family of Sulpicii. He was contemporary with Cicero, and born probably about a century before the birth of Christ. He cultivated polite literature from a very early period, especially philosophy and poetry, and wrote some pieces in the latter class, which were marked with the licentiousness of the time. He bore arms in the Marsic war; but finding himself better pleased with the arts of peace, he appeared a pleader at the bar in the 25th year of his age. The professions of advocate and lawyer were then so distinct, that the former were accustomed to consult jurists upon all difficult points. Servivus having once applied for that purpose to Quintus Mucius, a very eminent lawyer, the latter perceiving that Servivus did not comprehend his explanations, asked him if it were not a shame that he, a patrician and pleader, should be ignorant of the law upon which he was frequently called to speak. This reproach is said to have had such an effect upon him, that Servivus quitted the bar, and gave all his attention to legal studies; and such was his success, that Cicero said of him, "If all, in every age, who in this city have acquired a knowledge of the law, were brought together, they would not be to be compared with Sulpicius Servivus;" and he further adds, that, "he was not less the oracle of justice than of the law: he always referred to principles of equity and obvious interpretation what he deduced from the civil code, and was less desirous of finding grounds for actions than of settling disputes." There was a great intimacy formed between these two personages, and there are several letters extant from Cicero to Sulpitius, and two from Sulpicius to Cicero, of which one is a well-known consolatory epistle on the death of Tullia.

When Cæsar was taken off he acted with the party who aimed at the restoration of public liberty. During the siege of Modena, by Mark Antony, he was urged by the senate to undertake a legation to him, which, after pleading his age and infirmities, he accepted: but he foresaw it would be fatal to him, and he died in Antony's camp in the year 43 B. C. Cicero's ninth Philippic is entirely employed in pleading for a brass statue to the memory of this excellent man. Servivus was author of a great number of volumes on legal topics, none of which have been preserved; but quotations from some of them are extant in A. Gellius.

SERVIVS (Tullius), the sixth king of Rome: see **ROME**.

SERULA, the name of a web-footed sea-bird, a kind of mergus, very common about Venice, and called by Mr. Ray *mergus cirratus fuscus*, the brown-crested, or lesser-toothed diver, and supposed to be the *anas longirostra*, or long-beaked duck of Gesner. This is the red-breasted merganser of Pennant.

SERVIVS, *s.* The thin and watery part that separates from the rest in any liquor, as in milk the whey from the cream.—The part of the blood, which in coagulation separates from the crassamentum or grume.

SERVOLO, *St.*, or **SERF**, a maritime village of Austrian Illyria, in Carniola; 4 miles south-east of Trieste. Here is made a large quantity of bay salt.

SERVONG, a town on the north coast of Sumatra. Lat. 5. 3. N. long. 96. 18. W.

SERWELL,

SERWELL, a small district of Afghanistean, province of Cabul. It is situated between the 34th and 35th degrees of north lat. but is very imperfectly known to Europeans.

SERWOY, a name given by Theodore de Bry, and others, to the animal called by us the Opossum.

SESA, a village of Nubia, on the Nile; 210 miles south-south-west of Syene.

SE'SAME, *s.* [σησαμη, Gr.] A white grain or corn growing in India, of which an oil is made. *Ainsworth.*

SESAMION, a word among the ancients to express a cake made of sesamum, honey and oil.

SESAMOID, a name given to some small bones of the thumb and great toe. See ANATOMY.

SESAMOIDES, in Botany, a name first published by Clusius, as applied at Salamanca to two very different plants, neither of them bearing any evident resemblance to sesamum. These are *silencotites* and *reseda sesamoides*: see RESEDA and SILENE.

SESAMUM [of Pliny. *Σησαμιν* of Theophrastus and Dioscorides], in Botany, a genus of the class didynamia, order angiospermia, natural order of *luridæ*, *bignoniæ* (*Juss.*)—Generic Character. Calyx: perianth one-leafed, five-parted, erect, equal, very short, permanent: segments lanceolate, the upper one shorter. Corolla one-petalled, bell-shaped: tube roundish, almost the length of the calyx: throat inflated, spreading, bell-shaped, very large, declined: border five-cleft; segments four, patulous, almost equal, and a fifth, which is the lowest, a little longer, ovate, straight. Stamina: filaments four, springing from the tube, shorter than the corolla, ascending, setaceous, the two inner shorter, with the rudiment of a fifth filament. Anthers oblong, acute, erect. Pistil: germ ovate, hirsute. Style filiform, ascending, a little longer than the stamens. Stigma lanceolate, two-parted: lamellæ parallel. Pericarp: capsule oblong, obscurely four-cornered, compressed, acuminate, four-celled. Seeds very many, subovate. It has the flower of *digitalis*, but the fruit is very different.—*Essential Character.* Calyx five-parted. Corolla bell-shaped, five-cleft, the lower lobe larger. Rudiment of a fifth filament. Stigma lanceolate. Capsule four-celled.

1. *Sesamum Orientale*, Oriental sesamum or oily-grain.—This is an annual plant, rising with an herbaceous four-cornered stalk about two feet high, sending out a few short side-branches. Leaves opposite and a little hairy. Flowers in loose terminating spikes, small, of a dirty white colour, shaped somewhat like those of the foxglove.—Native of the East Indies.

2. *Sesamum Indicum*, Indian sesamum or oily-grain.—The second sort grows naturally in India, and is also an annual plant. The stalk rises higher than that of the former; the lower leaves are cut into three parts; and these are the only differences between them. There is a variety of this which grows naturally in Africa, and is also an annual plant, with a taller and more branched stalk than either of the former. All the leaves are cut into three parts.

3. *Sesamum luteum*, or yellow sesamum.—Leaves lanceolate on long petioles; corollas hispid on the outside.

Propagation and Culture.—In England, these plants are preserved in botanic gardens as curiosities. Their seeds must be sown in the spring upon a hot-bed, and when the plants are come up, they must be transplanted into a hot-bed to bring them forward. After they have acquired a tolerable degree of strength, they should be planted into pots filled with a rich, light, sandy soil, and plunged into another hot-bed, managing them as has been directed for amaranthuses.

SESBAN, a barbarous generic name given by Poirer to a genus selected by him out of *ÆSCHYNOMENE*: see that article.

SESELI [of Pliny. *Σεσέλι* of Theophrastus and Dioscorides], in Botany, a genus of the class pentandria, order digynia, natural order of *umbellatæ* or *umbelliferæ*.—Generic Character. Calyx: umbel universal, rigid; partial very short, manifold, globular. Involucre universal, none; partial of one or two leaflets, linear, acuminate, length of the

umbellet. Proper perianth scarcely observable. Corolla universal, uniform. Florets all fertile. Proper of five inflex-cordate petals, flattish. Stamina: filaments five, awl-shaped. Anthers simple. Pistil: germ inferior. Styles two, distant. Stigmas blunt. Pericarp none. Fruit ovate, small, striated, bipartite. Seeds two, ovate, convex and striated on one side, flat on the other.—*Essential Character.* Umbels globular. Involucre of one or two leaflets. Fruit ovate, striated.

1. *Seseli filifolium*, or thread-leaved meadow saxifrage.—Leaves filiform, stem flexuose, erect.—Native of the Cape of Good Hope.

2. *Seseli pimpinelloides*.—Stem declined, umbels before they flower nodding. Root perennial.—Native of the south of Europe.

3. *Seseli montanum*, or long-leaved meadow saxifrage.—Stem erect, near two feet high, sending out branches from the side. Leaves short, divided into small segments like hog's-fennel; at the foot-stalk of each a bellied membrane embracing it. Flowers white.—Native of Italy and France.

4. *Seseli striatum*.—Petioles branchy, membranaceous, emarginate, stem striated, pinnas awl-shaped, grooved.—Native of the Cape of Good Hope.

5. *Seseli glaucum*, or glaucous meadow saffron.—Root perennial, running deep in the ground, and sending out slender smooth stalks near two feet high. Leaves long and narrow, composed of seven or eight pairs of pinnas. They have a membrane embracing the petiole, and are of a gray colour. The stalks are terminated by umbels of flowers, which are purple on their outside and white within.—Native of France, Austria, Carniola, Silesia and Piedmont.

6. *Seseli aristatum*, or bearded-leaved meadow saxifrage.—Root biennial. Leaves bipinnate, with the leaflets very narrow, and finely divided. Stems strong, a foot and half high, with shining pinnate leaves, and terminated by pretty large umbels of whitish flowers.—Native of the Pyrenean mountains.

7. *Seseli annuum*, or annual meadow saxifrage.—Stem stiff, a span high and more, striated. Leaves bipinnate, lacinate. Flowers whitish with a tinge of violet.—Native of France, Germany, Hungary, Austria, Switzerland and Piedmont.

8. *Seseli chærophyloides*, or chervil-leaved meadow saxifrage.—Petioles branchy, membranaceous, ventricose, entire, stem dichotomous, panicled; leaves super-decompound, smooth.—Native of the Cape of Good Hope.

9. *Seseli ammoides*, or milfoil-leaved meadow saxifrage.—Root-leaves with the leaflets imbricate. This is an annual plant.—Native of Portugal and Italy.

10. *Seseli tortuosum*, or hard meadow saxifrage.—Stem lofty, rigid, leaflets linear in bundles. The flowers are small and yellow.

11. *Seseli Turbith*.—Universal, involucre one-leafed, seeds striated, villose, styled.—Native of the south of Europe.

12. *Seseli Hippomarathrum*, or various-leaved meadow saxifrage.—Involucres connate-one-leafed. Leaves bipinnate; the first trifid and linear. Stem rushy, glaucous, as is the rest of the plant.—Native of Austria, Carniola, Silesia and Germany.

13. *Seseli Pyrenæum*, or Pyrenean meadow saxifrage.—Leaves doubly pinnate, leaflets gashed, acute, involucrets bristle-shaped, longer than the umbellet. Stem a foot high, round, striated.—Native of the Pyrenees.

14. *Seseli saxifragum*.—Stem filiform, divaricating, a foot high, leaves doubly ternate, linear, umbels subsexfid.—Native of Germany, and the borders of the Lake of Geneva.

15. *Seseli elatum*.—Stem a foot and half high, the thickness of a pigeon's quill, subdichotomous, with the branches divaricating; the uppermost very narrow. Leaves super-decompound; the upper ones only ternate.—Native of France, Austria and Silesia.

Propagation and Culture.—Sow the seeds in autumn, and they will rise the following spring; whereas when they are sown in the spring, they frequently lie in the ground till the next year before they grow. Drill them eighteen inches asunder,

under, in a bed of fresh earth, where they are designed to remain; thin the plants to the distance of six inches; keep them clear from weeds; and in the second season they will produce seeds. The perennial sorts should have the ground gently dug every spring between the rows, taking care not to injure their roots with the spade. These plants love a moist soil.

SESEME QUIAN, a river of the United States, in Indiana, which runs into the Illinois. It is 60 yards wide at the mouth, and navigable for boats 60 miles.

SESERINUS, in Ichthyology, a name given by Rondeletius, and some others, to the stromateus.

SESHA, or SESHNAGA, a name of a mighty mythological serpent among the Hindoos. Images of Naga, or Sessa, in brass, are said to be invoked in cases of ill health, with appropriate ceremonies, and according to the author of the Hindoo Pantheon, they are very common in India, where the idea of the medicinal virtues of snakes appears to be of very old date. A Hindoo, attacked by a fever, or other disease, makes an image of Naga in brass, clay or wax, and performs appropriate ceremonies in furtherance of his recovery. Such ceremonies are particularly efficacious when the moon is in the nakshatra, or asterism, called Sarpa, or the serpent. We have observed that the snake, in all mythological language, is an emblem of immortality; its endless figure, when its tail is inserted in its mouth, an astrological mysticism common to Asia and Europe; and the annual renewal of its skin and vigour afford symbols of continued youth, of duration, and eternity; and its supposed medicinal virtues, or life-preserving qualities, may also have contributed to the fabled honours of the serpent tribe. In the mythological machinery of India, Egypt and Greece, these coincidences are numerous.

SESHI-MATRIYA, a name of Kartikya, the mythological commander of the celestial armies of Hindoo fable. The name means having *six mothers*.

SESIA, a river of the Sarnadian states, in the Milanese, which rises among the Alps on the borders of the Valais, flows through an extensive valley to which it gives name, and dividing into two branches, falls into the Po between Casal and Valenza. It has a course of about 80 miles, but is not navigable.

SESIAL, a town on the north-west coast of Timor. Lat. 8. 54. S. long. 125 26. E.

SESLERIA, in Botany, received that appellation from Scopoli. Linnæus reduced the plant to PRIMULA; which see.

SESMA, a small town of the north-east of Spain, in Navarre, between the Ebro and the Ega; 36 miles south-south-west of Pampeluna.

SESOSTRIS, king of Egypt. See EGYPT.

SESQUI, a particle often used by old masters and theorists, in Music, in the composition of words to express different kinds of measure. They called sesquialter measures those which contain notes equal to one-third more than their usual value; that is, when equal to three notes of less value, instead of two. This happened in what was called *perfect time*, before the use of points or dots, when the breve was equal to three semibreves, the semibreve to three minims, &c.

In Italian treatises by old theorists, sesqui is much used to express a kind of ratio, particularly in different species of triples; that is, when the greater term contains the less once, and some small quantity more; as 3 : 2, when the first term contains the second, and unity over, which is the half of 2. So that if the part remaining be just half the less term, as 4 : 3, the ratio is called *sesqui tercia*, or *tertia*; if a fourth, or 5 : 4, the ratio is *sesqui quarta*, and so on to infinity; still adding to sesqui the ordinal number of the less term.

SESQUIALTER, or SESQUIALTERAL, *adj.* [*sesquialterc*, Fr., *sesquialter*, Lat.] In Geometry, is a ratio, where one quantity of number contains another once and half as much more, as 6 and 9.

VOL. XXIII. No. 1554.

SESQUIALTER, is a stop in the organ, implying a whole and a half. In large organs, this stop has usually five ranks of pipes, each note having one sound in unison with the diapason, one with the principal, one with the twelfth, and one with the fifteenth.

SESQUIDITONE, in Music, a concord, resulting from the sounds of two strings, whose vibrations, in equal times, are to each other in the ratio of 5 to 6.

SESQUIDUPLICATE RATIO, is when of two terms, the greater contains the less twice, and half the less remains; as 15 and 16; 50 and 20.—SESQUI-OCTAVE, is a kind of triple, marked C_3 , called by the Italians *nonupla di crome*, where there are 9 quavers in every measure or bar, in lieu of 8.—SESQUI-QUADRATE, an aspect, or position of the planets, when at the distance of four signs and a half, or 135 degrees, from each other.—SESQUI-QUARTA, DUPLA, is a kind of triple, marked C_3 , called by the Italians *nonupla di semiminime*, where there are 9 crotchets in each measure, instead of 4; that is, three crotchets to each time.—SESQUIQUINTLE, an aspect of the planets, when 108 degrees distant from each other.—SESQUITERTIONAL PROPORTION. When any number or quantity contains another once and one-third, they are sesquitertional proportions.

SESQUIPE'DAL, or SESQUIPE'DALIAN, *adj.* [*sesquipedalis*, Lat.] Containing a foot and a half.—As for my own part, I am but a *sesquipedal*, having only six foot and a half of stature. *Addison*.

SESQUPLICATE, *adj.* [In mathematics.] Is the proportion one quantity or number has to another, in the ratio of one and a half to one.—The periodical times of the planets are in *sesquuplicate* proportion, and not in duplicate proportion of the distances from the centre or the radii; and consequently the planets could not be carried about by an harmonically circulating fluid. *Cheyne*.

SESQUITERTIAN. [In mathematics.] Having such a ratio, as that one quantity or number contains another once and one third part more; as between 6 and 8.

SESQUITTE, a settlement of New Granada, in the province of Guatavita, which contains 100 housekeepers; 9 leagues north of Santa Fe.

SESS, *s.* for ASSESS. Rate; tax.—His army was so ill paid and governed, as the English suffered more damage by the *sess* of his soldiers than they gained profit or security by abating the pride of their enemies. *Davies*.

SESSA, an Indian philosopher and mathematician, and the inventor of the game of chess, which he communicated to his sovereign Scheram, who was so pleased with it, that he ordered him to demand what he pleased as a reward for his ingenuity. Sessa asked only for a single grain of wheat to be laid on the first square, two on the second, four on the third, and so on in progression through the sixty-four squares. The king, offended that he should demand so mean a gift, directed that he should have just what he asked, and no more; but upon coming practically to the business, it was, in a very short time, found that all the granaries in the kingdom would not supply the demand. Scheram, astonished at the fact, crowned Sessa with very high honours. He lived about the eleventh century.

SESSA, or SEZZA, a town in the north-west part of the kingdom of Naples, in the Terra di Lavoro, situated at the foot of Mount Massico. Though small, and indifferently built, it is the see of a bishop. Several vestiges of Roman antiquities are found in the neighbourhood. Population only 3800; 29 miles north-north-west of Naples, and 72 south-east of Rome.

SESSAY, a parish of England, North Riding of Yorkshire; 5½ miles north-west of Easingwold.

SESSE, or SEZZA, a small town of Italy, in the Ecclesiastical States, situated on an eminence near the Pontine marshes. It was called Setia or Setinum by the ancients; and was celebrated by Martial and Juvenal for its wines, which are now, however, of very middling quality. In the neighbourhood are vestiges of an ancient temple of Saturn. The surrounding district, though, from insalubrity, ill cultivated,

tivated, claims the attention of the naturalist by its products, viz., Indian figs, aloes, and fruit of various kinds. Population 5000; 35 miles south-east of Rome.

SESSEA [dedicated by the authors of the Flora Peruviana, to the honour of a Spanish botanist, named Martin Sessé], in Botany, a genus of plants of the class pentandria, order monogynia, natural order of luridæ, solanææ (*Juss.*)—Generic Character. Calyx: perianth inferior, of one leaf, tubular, with five angles, each angle terminating in an oval tooth, permanent. Corolla of one petal, funnel-shaped; tube as long again as the calyx; throat globular; limb plaited, in five deep, straight, oval segments, revolute at their margin. Stamina: filaments five, inserted towards the middle of the tube, curved and downy at their base, as long as the tube; anthers oval, of two cells. Pistil: germen superior, small, oblong; style terminal, thread-shaped, the length of the stamens; stigma of two unequal lobes. Pericarp: capsule cylindrical, slightly curved, as long again as the calyx, of one cell, and two cloven valves. Seeds numerous, imbricated, oblong, compressed, each encompassed with a membranous border.—*Essential Character.* Corolla funnel-shaped. Calyx tubular, with five angles, and five teeth. Stamens simple. Stigma of two unequal lobes. Capsule of one cell and two cloven valves. Seeds numerous, bordered.

1. *Sessea stipulata*.—A fetid shrub, five or six feet high, having the aspect of a cestrum. The branches are straight, leafy, alternate. Leaves alternate, stalked, mostly lanceolate, heart-shaped at the base. Stipulas at the base of the footstalks, equal to them in length, opposite, large, oval, obtuse, sessile, a little heart-shaped at the bottom, deflexed at the sides, deciduous. Panicles terminal, composed of straight, downy clusters, with corymbose stalks, of yellow, downy flowers, accompanied by small, awl-shaped, deciduous bractæas.

2. *Sessea dependens*.—A tree, twenty-five or thirty feet high, agreeing in many respects with the foregoing, but the leaves are very powdery at the back, and the clusters very long, simple and pendulous, slightly zig-zag. The flowers are usually placed three together, in alternate, sessile tufts. Calyx powdery. Corolla with a black tube, and yellowish limb, externally downy. Capsules black.

Both species are esteemed emollient and anodyne.

SESSILE, in Botany, a term applied to any part of the herbage or flowers of a plant, that is not elevated on any kind of stalk; from the Latin *sessilis*, sitting close.

SESSION, *s.* [*sessio*, Lat.] The act of sitting.—He hath as man, not as God only, a supreme dominion over quick and dead; for so much his ascension into heaven, and his *session* at the right hand of God do import. *Hooker*.—A stated assembly of magistrates or senators.

Summon a *session*, that we may arraign
Our most disloyal lady.

Shakspeare.

Of their *session* ended they bid cry
The great result!

Milton.

The space for which an assembly sits, without intermission or recess.—It was contrary to the course of parliament, that any bill that had been rejected should be again preferred the same *session*. *Clarendon*.—The second Nicene council affords us plentiful assistance, in the first *session*, wherein the pope's vicar declares that Meletius was ordained by Arian bishops, and yet his ordination was never questioned. *Stillingfleet*.—Many decrees are enacted, which at the next *session* are repealed. *Norris*.—A meeting of justices: as the *sessions* of the peace.

Quarter-sessions, called *general sessions*, or *open sessions*, stand opposite to *especial*, otherwise called *petty sessions*, which are procured upon some special occasion, for the more speedy dispatch of justice.

Statute-sessions, are those kept by a high-constable of a hundred, for the placing of servants, &c.

SESSIONS for *Weights and Measures*. In London, four justices from among the mayor, recorder and aldermen

(of whom the mayor or recorder is to be one), may hold a sessions to inquire into offences of selling by false weights and measures, contrary to the statutes; and to receive indictments, punish offenders, &c. Char. K. Cha. I.

SESSION, *The Court of*, otherwise called the college of justice, is the supreme court in Scotland. See SCOTLAND.

SESSOLO, a small town of the continental Sardinian states, duchy of Montferrat, district of Alba, near the Bormida.

SESTERCE, or SESTERTIUM, was the fourth part of the denarius, and originally contained two asses and a half.

The sesterce was at first denoted by LLS; the two L's signifying two libræ, and the S half. But the librarii, afterwards converting the two L's into an H, expressed the sesterce by HS.

The word *sestertius* was first introduced by way of abbreviation for *semistertius*, which signifies two, and a half of a third, or, literally, only half a third; for in expressing half a third, it was understood that there were two before. Hence *sestertius* came to be the great estimate of Roman money.

Some authors make two kinds of sesterces: the less, called *sestertius*, in the masculine gender; and the great one, called *sestertium*, in the neuter: the first, that which we have already described; the latter containing a thousand of the other.

This matter has been accurately stated by Mr. Raper, in the following manner:—The substantive to which *sestertius* referred is either *as*, or *pondus*; and *sestertius as* is two asses and a half; *sestertium pondus*, two pondera and a half, or two hundred and fifty denarii. When the denarius passed for ten asses, the sesterce of two asses and a half was a quarter of it; and the Romans continued to keep their accounts in these sesterces long after the denarius passed for sixteen asses; till, growing rich, they found it more convenient to reckon by quarters of the denarius, which they called *nummi*, and used the words *nummus* and *sestertius* indifferently, as synonymous terms, and sometimes both together, as *sestertius nummus*; in which case, the word *sestertius* having lost its original signification, was used as a substantive; for *sestertius nummus* was not two nummi and a half, but a single nummus of four asses. They called any sum under two thousand sesterces so many *sestertii* in the masculine gender; two thousand sesterces they called *duo* or *бина sestertia*, in the neuter; so many quarters making five hundred denarii, which was twice the *sestertium*; and they said *dena*, *vicena*, &c., *sestertia*, till the sum amounted to a thousand *sestertia*, which was a million of sesterces. But, to avoid ambiguity, they did not use the neuter *sestertium* in the singular number, when the whole sum amounted to no more than a thousand sesterces, or one *sestertium*. They called a million of sesterces, *decies nummus*, or *decies sestertium*, for *decies centena millia nummorum*, or *sestertium* (in the masculine gender), omitting *centena millia*, for the sake of brevity. They likewise called the same sum *decies sestertium* (in the neuter gender) for *decies centies sestertium*, omitting *centies* for the same reason; or simply *decies*, omitting *centena millia sestertium*, or *centies sestertium*; and with the numeral adverbs, *decies*, *vicies*, *centies*, *millies*, and the like, either *centena millia*, or *centies*, was always understood. These were their most usual forms of expression; though for *бина*, *dena*, *vicena sestertia*, they frequently said *бина*, *dena*, *vicena millia nummum*. If the consular denarius contained sixty troy grains of fine silver, it was worth somewhat more than eightpence farthing and a half sterling; and the *as*, of sixteen to the denarius, a little more than a half-penny. To reduce the ancient sesterces of two asses and a half, when the denarius passed for sixteen, to pounds sterling, multiply the given number by 5454, and cut off six figures on the right hand for decimals. To reduce *nummi sestertii*, or quarters of the denarius, to pounds sterling; if the given sum be consular money, multiply it by 8727, and cut off six figures on the right

right hand for decimals; but for imperial money, diminish the said product by one-eighth of itself. *Phil. Trans.* vol. lxi. part ii. art. 48.

To be qualified for a Roman knight, an estate of four hundred thousand sesterces was required; and for a senator, of eight hundred thousand.

Authors also mention a copper sesterce, worth about one-third of a penny English.

SESTERCE, *Sestertius*, was also used, in Antiquity, for a thing containing two wholes and a half of another: as *as* was taken for any whole, or integer.

SESTINO and SESTO, two small towns of the grand duchy of Tuscany, in the Florentine territory.

SESTO (Cesare), named by the name of *Cesare Milanese*, was a native of Milan, and flourished about the year 1500. He is one of those painters by whom probably were executed some of the many pictures attributed to Lionardo da Vinci; and in the Ambrosian library was a head by him often attributed to Lionardo. In some of his works he also imitated Raphael, to whom he was known. He died at Milan in 1524.

SESTO, a small but fortified town of Austrian Italy, in the Milanese, situated on the Ticino, near where that river flows out of the Lake Maggiore. A number of inscriptions and other antiquities were found here in the 16th century; 28 miles west-north-west of Milan.

SESTOLA, a small inland town of Italy, situated on a hill; 17 miles south of Modena.

SESTOS, a fortress (formerly a town) of European Turkey, opposite Abydos, at the narrowest part of the Hellespont. Lat. 40. 6. N. long. 26. 25. E.

SESTRA, a river of Russia, which separates Finland from the government of St. Petersburg, and falls into the gulf of Finland.

SESTRABEK, a small town of European Russia, in the south of Finland, at the mouth of the Sestra; 23 miles west-north-west of St. Petersburg. On the other side of the river there is a very large manufactory of arms of different kinds; also of anchors and other instruments, and articles of iron, the whole employing about 6000 persons.

SESTRI DI LEVANTE, a small town of the north-west of Italy, situated on a peninsula in the gulf of Genoa. It is defended by a castle, and on the west side of the peninsula is a large bay, which forms a good roadstead. The Genoese have here a number of country houses, and the environs are delightful. Quarries of marble are wrought in the neighbourhood. Population 4000; 12 miles west of Brugnello.

SESTRI DI PONENTI, a small town of the north-west of Italy, situated on the coast of the gulf of Genoa. In the neighbourhood are mines of chalk and alabaster; 4 miles west of Genoa.

SESTRO, CRO, a large and beautiful village on the Grain coast of Africa, where good water may be procured.

SESTRO, GREAT, one of the largest and most populous towns on the Grain coast of Guinea, carrying on a great trade in Guinea pepper and ivory. The French had once a settlement there, which they have now abandoned.

SESTRO, LITTLE, a small town situated eight miles to the south of the Rio Sestro.

SESTRO, RIO, a river of Western Africa, which crosses the Grain coast, and falls into the Atlantic, in Lat. 5. 30. N. about 20 miles north-west of the river Sangwin. It affords good anchorage, and its environs are very fertile but unhealthy.

SESUVIUM, in Botany, a genus of the class icosandria, order trigynia, natural order of succulentæ, ficoideæ (*Juss.*)—Generic Character. Calyx: perianth one-leafed, bell-shaped, five-parted; segments ovate, acute, coloured within, shrivelling. Corolla none. Stamina: filaments very many, awl-shaped, inserted into the calyx below the segments, and shorter than the calyx. Anthers roundish. Pistil: germ oblong, in the bottom of the calyx, three-cornered above. Styles often three, capillary, erect, length of the stamens. Stigmas simple. Pericarp: capsule ovate, three-celled, cut

round. Seeds roundish, flattish, having a beak at the margin.—*Essential Character.* Calyx five-parted, coloured. Petals none. Capsule ovate, three-celled, cut round, many-seeded.

Sesuvium Portulacastrum.—Root perennial. Stems herbaceous, four or five inches long, decumbent, succulent. Leaves wedge-shaped, on very short petioles, opposite, thick, smooth, bright green. Petioles sheathing, embracing, with membranaceous edges. Peduncles solitary, axillary, shorter than the leaves. Flowers green on the outside, white and blood-red within.—Native of the West Indies.

To SET, *v. a.* preterite *I set*; part. pass. *I am set*. [*settan, sætan, Sax.*]. To place; to put in any situation or place; to put.

Ere I could.

Give him that parting-kiss which I had *set*
Betwixt two charming words, comes in my father. *Shakspeare.*

But that my admirable dexterity of wit, counterfeiting the action of an old woman, delivered me, the knave constable had *set* me i' the common stocks for a witch. *Shakspeare.*
—He that hath received his testimony, hath *set* to his seal that God is true. *St. John.*—They have *set* her in a bed in the midst of the slain. *Ezek.*—To put into any condition, state or posture.—They thought the very disturbance of things established an hire sufficient to *set* them on work. *Hooker.*

That man that sits within a monarch's heart,
Would he abuse the count'nance of the king,
Alack! what mischiefs might he *set* abroad! *Shakspeare.*

This present enterprize *set* off his head,
I do not think a braver gentleman
Is now alive. *Shakspeare.*

The shipping might be *set* on work by fishing, by transportations from port to port. *Bacon.*

By his aid aspiring
To *set* himself in glory above his peers. *Milton.*

Jove call'd in haste
The son of Maia with severe decree,
To kill the keeper, and to *set* her free. *Dryden.*

This river,
When Nature's self lay ready to expire,
Quench'd the dire flame that *set* the world on fire. *Addison.*

To make motionless; to fix immovably.
Struck with the sight, inanimate she seems,
Set are her eyes, and motionless her limbs. *Garth.*

To fix; to state by some rule.—The town of Bera has handsome fountains planted, at *set* distances, from one end of the streets to the other. *Addison.*—To regulate; to adjust.—In court they determine the king's good by his desires, which is a kind of *setting* the sun by the dial *Suckling.*—Our palates grow into a liking of the seasoning and cookery, which by custom they are *set* to. *Locke.*

He rules the church's blest dominions,
And *sets* men's faith by his opinions. *Prior.*

To fit to music; to adapt with notes.—*Set* thy own songs, and sing them to thy lute. *Dryden.*

Grief he tames that fetters it in verse;
But when I have done so,
Some man, his heart or voice to show,
Doth *set* and sing my pain;
And by delighting many, frees again
Grief, which verse did restrain. *Donne.*

To plant, not sow.
I prostrate fell,
To shrubs and plants my vile devotion paid,
And *set* the bearded leek to which I pray'd. *Prior.*

To intersperse or variegate with any thing.
As with stars, their bodies all
And wings were *set* with eyes. *Milton.*
High

High on their heads, with jewels richly *set*,
Each lady wore a radiant coronet.

Dryden.

To reduce from a fractured or dislocated state.—Can honour *set* to a leg? no: or an arm? no: honour hath no skill in surgery then? no. *Shakspeare*.—Credit is gained by course of time, and seldom recovers a strain; but if broken, is never well *set* again. *Temple*.—To fix the affection; to determine the thoughts.—*Set* your affection on things above, not on things on the earth. *Col.*

Some I found wonderous harsh,
Contemptuous, proud, *set* on revenge and spite. *Milton.*

Set not thy heart
Thus overfond on that which is not thine. *Milton.*

Men take an ill-natured pleasure in disappointing us in what our hearts are most *set* upon. *Addison*.—To pre-terminate; to settle.—He remembers only the name of Conon, and forgets the other on *set* purpose, to shew his country swain was no great scholar. *Dryden*.—To establish; to appoint; to fix.—For using *set* and prescribed forms, there is no doubt but that wholesome words, being known, are aptest to excite judicious and fervent affections. *Jeon Basilike.*

Though *set* form of prayer be an abomination,
Set forms of petitions find great approbation. *Denham.*

To appoint to an office; to assign to a post.—Am I a sea, or a whale, that thou *settest* a watch over me? *Job*.—To exhibit; to display; with *before*.—Through the variety of my reading, I *set before* me many examples both of ancient and later times. *Bacon.*

A spacious veil from his broad shoulders flew,
That *set* the unhappy Phaeton to view:
The flaming chariot and the steeds it shew'd,
And the whole table in the mantle glow'd. *Addison.*

To propose to choice.—All that can be done is to *set* the thing *before* men, and to offer it to their choice. *Tillotson*.—To value; to estimate; to rate.—The backwardness parents shew in divulging their faults, will make them *set* a greater value on their credit themselves, and teach them to be the more careful to preserve the good opinion of others. *Locke*.—If we act by several broken views, and will not only be virtuous, but wealthy, popular, and every thing that has a value *set* upon it by the world, we shall live and die in misery. *Addison.*

Though the same sun, with all diffusive rays,
Blush in the rose and in the diamond blaze,
We prize the stronger effort of his pow'r,
And always *set* the gem above the flow'r. *Pope.*

To stake at play.
What sad disorders play begets!
Desperate and mad, at length he *sets*
Those darts, whose points make gods adore. *Prior.*

To offer a wager at dice to another.—Who *sets* me else? I'll throw at all. *Shakspeare*.—To fix in metal.—He may learn to cut, polish, and *set* precious stones. *Locke*.—To embarrass; to distress; to perplex.—Those who raise popular murmurs and discontents against his majesty's government, that they find so very few and so very improper occasions for them, shewing how hard they are *set* in this particular, represent the bill as a grievance. *Addison*.—To fix in an artificial manner, so as to produce a particular effect.—The proud have laid a snare for me, they have *set* gins. *Psalms*.—To apply to something, as a thing to be done.—Unto thy brother thou shalt not lend upon usury, that the Lord may bless thee in all that thou *settest* thine hand to. *Deuteronomy.*

With what'er gall thou *set'st* thyself to write,
Thy inoffensive satires never bite. *Dryden.*

To let; to grant to a tenant.—They care not how high they sell any of their commodities, at how unreasonable rates they *set* their grounds. *Bp. Hall*.—To place in order; to frame.—After it was framed, and ready to be *set* together, he was,

with infinite labour and charge, carried by land with camels, through that hot and sandy country. *Knolles*.—To station; to place.

Cœnus has betray'd
The bitter truths that our loose court upbraid:
Your friend was *set* upon you for a spy,
And on his witness you are doom'd to die. *Dryden.*

To oppose.—Will you *set* your wit to a fool's? *Shakspeare*.—To bring to a fine edge: as, to *set* a razor.—To point out, without noise or disturbance: as, a dog *sets* birds.

To *SET* about. To apply to.—They should make them play-games, or endeavour it, and *set* themselves about it. *Locke.*

To *SET* against. To place in a state of enmity or opposition.—The king of Babylon *set* himself against Jerusalem. *Ezekiel*.—The devil hath reason to *set* himself against it; for nothing is more destructive to him than a soul armed with prayer. *Duppa.*

To *SET* against. To oppose; to place in rhetorical opposition.—This perishing of the world in a deluge is *set* against, or compared with, the perishing of the world in the conflagration. *Burnet.*

To *SET* apart. To neglect for a season.—They highly commended his forwardness, and all other matters for that time *set* apart. *Knolles.*

To *SET* aside. To omit for the present.—*Set* your knighthood and your soldiery aside, and give me leave to tell you that you lie in your throat. *Shakspeare*.—In 1585 followed the prosperous expedition of Drake and Carlike; in the which I *set* aside the taking of St. Jago and St. Domingo, as surprizes rather than encounters. *Bacon*.—My highest interest is not to be deceived about these matters; therefore, *setting* aside all other considerations, I will endeavour to know the truth, and yield to that. *Tillotson.*

To *SET* aside. To reject.—I'll look into the pretensions of each, and shew upon what ground 'tis that I embrace that of the deluge, and *set* aside all the rest. *Woodward.*

To *SET* aside. To abrogate; to annul.—Several innovations made to the detriment of the English merchant, are now entirely *set* aside. *Addison.*

To *SET* by. To regard; to esteem. *Unused*.—David behaved himself more wisely than all, so that his name was much *set* by. *1 Sam.*

To *SET* by. To reject or omit for the present.—You shall hardly edify me, that those nations might not, by the law of nature, have been subdued by any nation that had only policy and moral virtue; though the propagation of the faith, whereof we shall speak in the proper place, were *set* by, and not made part of the case. *Bacon.*

To *SET* down. To explain; or relate in writing.—They have *set* down, that a rose set by garlick is sweeter, because the more fetid juice goeth into the garlick. *Bacon.*

To *SET* down. To register or note in any book or paper; to put in writing.—I cannot forbear *setting* down the beautiful description Claudian has made of a wild heast, newly brought from the woods, and making its first appearance in a full amphitheatre. *Addison.*

To *SET* down. To fix on a resolve.—Finding him so resolutely *set* down, that he was neither by fair nor foul means, but only by force, to be removed out of his town, he inclosed the same round. *Knolles.*

To *SET* down. To fix; to establish.—This law we may name eternal, being that order which God before all others hath *set* down with himself, for himself to do all things by. *Hooker.*

To *SET* forth. To publish; to promulgate; to make appear.

My willing love,
The rather by these arguments of fear,
Set forth in your pursuit. *Shakspeare.*

The poems, which have been so ill *set* forth under his name, are as he first writ them. *Waller.*

To *SET* forth. To raise; to send out on expeditions.—
Our

Our merchants, to their great charges, *set forth* fleets to desecrate the seas. *Abbot.*

To SET forth. To display; to explain; to represent.—So little have these false colours dishonoured painting, that they have only served to *set forth* her praise, and to make her merit further known. *Dryden.*

To SET forth. To arrange; to place in order.
Up higher to the plain, where we'll *set forth*
In best appointment all our regiments. *Shakspeare.*

To SET forth. To show; to exhibit.
When poor Rutilus spends all his worth,
In hopes of *setting* one good dinner *forth*,
'Tis downright madness. *Dryden.*

To SET forward. To advance; to promote.—They yield that reading may *set forward*, but not begin the work of salvation. *Hooker.*—Amongst them there are not those helps which others have to *set them forward* in the way of life. *Hooker.*

To SET in. To put in a way to begin.—If you please to assist and *set me in*, I will recollect myself. *Collier.*

To SET off. To decorate; to recommend by contrast; to adorn; to embellish.

Like bright metal on a sullen ground,
My reformation, glittering o'er my fault,
Shall shew more goodly, and attract more eyes,
Than that which hath no foil to *set it off.* *Shakspeare.*

The prince put thee into my service for no other reason than to *set me off.* *Shakspeare.*

To SET on or upon. To animate; to instigate; to incite.
He upbraids Iago, that he made him
Brave me upon the watch; whereon it came
That I was cast; and even now he spake
Iago *set him on.* *Shakspeare.*

The skill used in dressing up power, will serve only to give a greater edge to man's natural ambition: what can this do but *set men on* the more eagerly to scramble. *Locke.*

To SET on or upon. This sense may, perhaps, be rather neutral. To attack; to assault.—There you missing me, I was taken up by the pirates, who putting me under board prisoner, presently *set upon* another ship, and maintaining a long fight, in the end put them all to the sword. *Sidney.*—Of one hundred ships there came scarce thirty to work: howbeit with them, and such as came daily in, we *set upon* them, and gave them the chase. *Bacon.*

To SET on. To employ as in a task.—*Set on* thy wife to observe. *Shakspeare.*

To SET on or upon. To fix the attention; to determine to any thing with settled resolution.—It becomes a true lover to have your heart more *set upon* her good than your own, and to bear a tenderer respect to her honour than your satisfaction. *Sidney.*

To SET out. To assign; to allot.—The rest, unable to serve any longer, or willing to fall to thrift, should be placed in part of the lands by them won, at better rate than others, to whom the same shall be *set out.* *Spenser.*

To SET out. To mark by boundaries or distinctions of space.—Time and place, taken thus for determinate portions of those infinite abysses of space and duration, *set out*, or supposed to be distinguished from the rest by known boundaries, have each a twofold acceptation. *Locke.*

To SET out. To adorn; to embellish.—An ugly woman, in a rich habit *set out* with jewels, nothing can become. *Dryden.*

To SET out. To raise; to equip.—The Venetians pretend they could *set out*, in case of great necessity, thirty men of war, a hundred galleys, and ten galeasses. *Addison.*

To SET out. To show; to display; to recommend.—Barbarossa, in his discourses concerning the conquest of Africk, *set him out* as a most fit instrument for subduing the kingdom of Tunis. *Knolles.*

To SET out. To show; to prove.—Those very reasons *set out* how heinous his sin was. *Atterbury.*

VOL. XXIII. No. 1555.

To SET up. To erect; to establish newly.—There are many excellent institutions of charity lately *set up*, and which deserve all manner of encouragement, particularly those which relate to the careful and pious education of poor children. *Atterbury.*

To SET up. To enable to commence a new business.
Who could not win the mistress woo'd the maid,
Set up themselves, and drove a separate trade. *Pope.*

To SET up. To build; to erect.
Their ancient habitations they neglect,
And *set up* new: then, if the echo like not,
In such a room they pluck down those. *B. Jonson.*

To SET up. To raise; to exalt; to put in power.—He was skillful enough to have lived still, if knowledge could be *set up* against mortality. *Shakspeare.*—Homer took all occasions of *setting up* his own countrymen the Grecians, and of undervaluing the Trojan chiefs. *Dryden.*

To SET up. To establish; to appoint; to fix.—Whatever practical rule is generally broke, it cannot be supposed innate; it being impossible that men should, without shame or fear, serenely break a rule which they could not but evidently know that God had *set up.* *Locke.*

To SET up. To place in view.—He hath taken me by my neck, shaken me to pieces, and *set me up* for his mark. *Job.*—Scarecrows are *set up* to keep birds from corn and fruit. *Bacon.*

Thy father's merit *sets thee up* to view,
And shows thee in the fairest point of light,
To make thy virtues or thy faults conspicuous. *Addison.*

To SET up. To place in repose; to fix; to rest.—Whilst we *set up* our hopes here, we do not so seriously, as we ought, consider that God has provided another and better place for us. *Wake.*

To SET up. To raise by the voice.
My right eye itches, some good luck is near;
Perhaps my Amaryllis may appear;
I'll *set up* such a note as she shall hear. *Dryden.*

To SET up. To advance; to propose to reception.—The authors that *set up* this opinion were not themselves satisfied with it. *Burnet.*

To SET up. To raise a sufficient fortune; to set up a trade; to set up a trader.—In a soldier's life there's honour to be got, and one lucky hit *sets up* a man for ever. *L'Estrange.*

To SET, v. n. To fall below the horizon, as the sun at evening.
That sun once *set*, a thousand meaner stars
Gave a dim light to violence and wars. *Waller.*

A gathering and serring of the spirits together to resist maketh the teeth to *set* hard one against another. *Bacon.*—Ahijah could not see, for his eyes were *set*, by reason of his age. *Kings.*—To fit music to words.

That I might sing it, madam, to a tune,
Give me a note: your ladyship can *set.*—
—As little by such toys as may be possible. *Shakspeare.*

To become not fluid; to concrete.—That fluid substance in a few minutes begins to *set*, as the tradesmen speak; that is, to exchange its fluidity, for firmness. *Boyle.*—To begin a journey.

So let him land,
And solemnly see him *set on* to London. *Shakspeare.*
On Wednesday next, Harry, thou shalt *set forward*,
On Thursday we ourselves will march. *Shakspeare.*

To put one's self into any state or posture of removal.—He, with forty of his galleys, in most warlike manner appointed, *set forward* with Solyman's ambassador towards Constantinople. *Knolles.*—To catch birds with a dog that *sets* them; that is, lies down and points them out; and with a large net.—When I go a hawking or *setting*, I think myself beholden to him that assures me, that in such a field there is a covey of partridges. *Boyle.*—To plant, not sow

In gard'ning ne'er this rule forget,
To sow dry, and *set* wet.

Old Proverb.

It is commonly used in conversation for *sit*, and, though barbarous, is sometimes found in good authors.

If they *set* down before's, 'fore they remove,
Bring up your army. *Shakspeare.*

To apply one's self.—If he *sets* industriously and sincerely to perform the commands of Christ, he can have no ground of doubting but it shall prove successful to him. *Hammond.*

To *SET about*. To fall to; to begin.—How preposterous is it, never to *set about* works of charity, whilst we ourselves can see them performed. *Atterbury.*

To *SET in*. To become settled in a particular state.—When the weather was *set in* to be very bad, I have taken a whole day's journey to see a gallery furnished by great masters. *Addison.*

To *SET off*. To set out on any pursuit; to set out from the barrier at a race; to start.

To *SET on* or *upon*. To begin a march, journey, or enterprise.

Be it your charge

To see perform'd the tenor of our word:
Set on.

Shakspeare.

He that would seriously *set upon* the search of truth, ought to prepare his mind with a love of it. *Locke.*

To *SET on*. To make an attack.

Hence every leader to his charge;
For on their answer we will *set on* them. *Shakspeare.*

To *SET out*. To have beginning.—If an invisible casualty there be, it is questionable whether its activity only *set out* at our nativity, and began not rather in the womb. *Brown.*

To *SET out*. To begin a journey or course.—These doctrines, laid down for the foundations of any science, were called principles, as the beginnings from which we must *set out*, and look no farther backwards. *Locke.*

To *SET out*. To begin the world.—He, at his first *setting out*, threw himself into court. *Addison.*—Eugenio *set out* from the same university, and about the same time with Corusodes. *Swift.*

To *SET to*. To apply himself to. I may appeal to some, who have made this their business, whether it go not against the hair with them to *set to* any thing else. *Gov. of the Tongue.*

To *SET up*. To begin a trade openly.—A man of a clear reputation, though his bark be split, yet he saves his cargo; has something left towards *setting up* again, and so is in capacity of receiving benefit not only from his own industry, but the friendship of others. *Gov. of the Tongue.*

To *SET up*. To begin a scheme in life.—A severe treatment might tempt them to *set up* for a republic. *Addison.*

To *SET up*. To profess publicly.

Scow'ring the watch grows out-of-fashion wit;
Now we *set up* for tilting in the pit. *Dryden.*

Those who have once made their court to those mistresses without portions, the muses, are never like to *set up* for fortunes. *Pope.*

SET, part. adj. Regular; not lax; made in consequence of some formal rule.

Rude am I in my speech,
And little bless'd with the *set* phrase of peace. *Shakspeare.*

The indictment of the good lord Hastings,
In a *set* hand fairly is ingross'd. *Shakspeare.*

Set speeches, and a formal tale,
With none but statesmen and grave fools prevail. *Dryden.*

In ten *set* battles have we driven back
These heathen Saxons, and regain'd our earth. *Dryden.*

SET, s. A number of things suited to each other; considered as related to each other; a number of things of

which one cannot conveniently be separated from the rest.—Sensations and passions seem to depend upon a particular *set* of motions. *Collier.*

'Tis not a *set* of features or complexion,
The tincture of a skin, that I admirè. *Addison.*

He must change his comrades;
In half the time he talks them round,
There must another *set* be found. *Swift.*

They refer to those critics who are partial to some particular *set* of writers to the prejudice of others. *Pope.*—Any thing not sown, but put in a state of some growth into the ground.—'Tis raised by *sets* or berries, like white thorn, and lies the same time in the ground. *Mortimer.*—The apparent fall of the sun, or other bodies of heaven, below the horizon.

When the battle's lost and won.
—That will be ere *set* of sun. *Shakspeare.*

A wager at dice.

That was but civil war, an equal *set*,
Where piles with piles, and eagles eagles fight. *Dryden.*

A game.

When we have match'd our rackets to these balls,
We will, in France, play a *set*
Shall strike his father's crown into the hazard. *Shakspeare.*

SET-OFF, s. [in Law.] To this head may be referred the practice of what is called a *set-off*, whereby the defendant acknowledges the justice of the plaintiff's demand on the one hand; but on the other sets up a demand of his own, to counterbalance that of the plaintiff, either on the whole or in part. *Blackstone.*—Any counterbalance.—A recommendation; a decoration. See *To SET off.*—Used chiefly in conversation.

SETACEOUS, adj. [seta, Latin.] Bristly; set with strong hairs; consisting of strong hairs.—The parent insect, with its stiff *setaceous* tail, terebrates the rib of the leaf when tender, and makes way for its egg into the very pith. *Derham.*

SETAH, a name used by the oldest writers for the acacia. It is an original Hebrew word, and is explained by the lexicographers, by a thorn growing in the desert.

SETAPORE, the name of several towns in Hindostan, but none of any consequence.

SETARIA, in Botany [from *seta*, a bristle], a name given by Acharius, in his *Prodromus Lichenographiæ Suecicæ*, to the 27th tribe of the great genus *Lichen*. It comprehends seven species, of what have usually been termed filamentous lichens, as *jubatus*, *chalybeiformis*, &c. See *LICHENES*.

SETBY, a village of England, in Lincolnshire; 4 miles from Wragby.

SETCHEOU, a city of China, of the first rank, in the province of Koeitchoo. The surrounding district is full of mountains, which yield cinnamon and mercury. The inhabitants are rude in their manners, and almost wholly ignorant of the Chinese sciences. Lat. 27. 10. N. long. 108. E.

SETCHIN, a city of China, of the second rank, in Quangsee. Lat. 22. 48. N. long. 136. 31. E.

SETCHING, a city of China, of the first rank, situated in a mountainous district of the province of Quangsee, bordering on Yunan. Lat. 24. 17. N. long. 105. 54. E.

SETCHLEY, a village of England, in Norfolk; 5 miles south of Lynn Regis.

SETCHUEN, a province of China, on the western frontier, bounded on the north by Chen-si, on the east and south by Houquang and Yunan, and on the west by Tibet. This province is mountainous, yet being traversed from west to east by the great river Yang-tse-kiang, it is highly fertile, and in a state of complete cultivation. It is particularly noted for its sugar cane, silk, orange and lemon trees, and its rhubarb is the best in China. The mountains produce

produce iron, tin, lead, excellent loadstone, and lapis lazuli. It has a breed of small but handsome and swift horses, which are highly esteemed; and it abounds with the animal that produces the musk. Among a variety of other birds is a species of hen, with wool like that of sheep, instead of feathers. Salt is procured by evaporation, from wells among the mountains. This province contains 10 cities of the first rank, with 88 of the second and third, besides a great number of fortified places. The population was stated to Sir George Staunton at 27 millions.

SETEEF, a town of Algiers, the ancient *Sitipha*, once the capital of a part of Mauritania, and distinguished by the obstinate resistance it made against the Saracens. The old city is now in a state of complete ruin, presenting scarcely one fragment of the Roman walls, pillars, or cisterns. The fountains, which continue to flow very plentifully near the centre of the city, are equally delightful and convenient; 50 miles south-west of Constantina.

SETEGANTI, a river of South America, in the province of Darien, which enters the river Cupe.

SETENIL, a small town in the south of Spain, in Granada, beautifully situated on a rocky eminence; 11 miles north of Ronda.

SETERRA, or SETRES, a small sea-port on the Grain coast of Africa.

SETFOIL, *s.* An herb: See *TORMENTILLA*.

SETHIAMS, SETHEDIANS; *Sethiani*, or *Sethimiani*, a branch of the ancient Gnostics, thus called, because of their pretending to deduce their origin from Seth, son of Adam, whom they called Jesus and Christ, from an opinion, that Seth and Jesus were the same person, who came down from heaven at two several times.

SETHRON, a village of Lower Egypt, on the southern bank of the Lake Menzaleh.

SETIA, or SETTIA, a small town on the north coast of the island of Candia or Crete, situated on a bay of the same name, with 4000 inhabitants. It was anciently called *Cythæum*, and is the see of a Greek archbishop; 44 miles east-south-east of Candia. Lat. 35. 3. N. long. 26. 3. E.

SETLE, a village of Turkish Armenia; 30 miles south-west of Akalzike.

SETMURTHY, a hamlet of England, above Derwent, in Cumberland; 4 miles east-north-east of Cockermouth.

SETON, a skein of silk or thread, introduced through a part of the flesh by means of a needle, and left there so as to keep up a continual discharge of matter, and a degree of counter-irritation, with a view of relieving or curing a variety of diseases.

SETRA-JETA, the name, in Hindoo romance, of the father of one of the favourite wives of the popular deity Krishna.

SETSCH, a small town of the east of Bohemia; 9 miles west-south-west of Chrudim.

SETSE, the name of a Chinese tree, called also *chitse*, and much esteemed by the people of that country for its beauty and for the goodness of its fruit. In the provinces of Cantong and Honan there are whole plains covered with these trees, many of which grow to the size of our walnut-trees. The fruit ripens every where in the east, where the tree grows, but it is of a much more delicious flavour in some places than in others. The leaves are of the colour and shape of those of the walnut-tree, only that they are more round at the ends. The fruit is sometimes round, sometimes pointed at one end, sometimes oval, sometimes flat, and not unfrequently composed of two pieces, as it were, and resembling two apples, cut and joined together. The rind is always green, never changing yellow or red, and the fruit keeps its freshness all the winter. They are about the size of the orange, the skin is very tender and thin, and the fruit has a mixed taste of the sharp and the luscious. It is very wholesome and good.

SETTALA, a small town of Austrian Italy, in the Milanese, situated between the river Adda and Milan.

SETTE, a country or district of Western Africa, in the

track of country between Benin and Loango. It is governed by a mani, or chief, who pays homage to the king of Loango. It is traversed by a river of the same name, on the banks of which is a town also of the same name, situated about 160 miles to the north of Loango. The river falls into the Atlantic, in Lat. 2. 15. S.

SETTE COMMUNI, or THE SEVEN COMMUNES, a district of Austrian Italy, situated between the Brenta and the Astico, and extending from the neighbourhood of Vicenza to the frontier of Tyrol. Its territorial extent is about 100 square miles, and it consists of lofty mountains and cliffs, intersected with narrow and sterile vales. The soil being throughout extremely poor, the pasture in the valleys and on the sides of the mountains is, with the exception of wood, the only valuable product of the district; the chief branch is the breeding of cattle, whom in the winter months it is necessary, to drive to the low country for food. The inhabitants amount to about 30,000.

SETTEE, *s.* A large long seat with a back to it.—A vessel, very common in the Mediterranean, with one deck, and a very long and sharp prow. *Chambers*.

SETTEE, in Sea Language, a vessel, very common in the Mediterranean, with one deck, and a very long and sharp prow. They carry, some two masts, some three, without top-masts. They have generally two masts, and are rigged and navigated like xebecs or galleys, with settee sails instead of lateen sails. The least of them are of sixty tons burden. They serve to transport cannon and provisions for ships of war, and the like. These vessels are peculiar to the Mediterranean sea, and are usually navigated by Italians, Greeks or Mahometans.

SETTER, *s.* One who sets.—When he was gone I cast this book away: I could not look upon it but with weeping eyes, in remembering him who was the only *setter* on to do it. *Aschan*.—One who sets forth; a proclaimer.—He seemeth to be a *setter* forth of strange gods. *Acts*.—A dog who beats the field, and points the bird for the sportsmen.—They point, as so many *setters* at a partridge. *Atterbury*.—Whatever sets off, decorates, or recommends.—They come as refiners of thy dross; or gilders, *setters off*, of thy graces. *Whitlock*.—One who adapts words to music.

Thy soule upon so sweet an organ plays,
As makes the parts she plays as sound, as sweet,
Which sounds the heavenly *setter's* and thy praise.

Davies.

SETTERWORT, *s.* An herb; a species of *VERATRUM*.

SETTIMO TORIN, a small town of Piedmont, province of Turin, situated on the river Sangal. Population 2300.

SETTIMO VITONE, another small town of Piedmont, with 1700 inhabitants.

SETTING, *s.* Apparent fall of the sun, or other heavenly bodies, below the horizon.—The *setting* of the pleiades and seven stars. *Brown*.—Enclosure.—Thou shalt set in it *settings* of stones, even four rows of stones. *Exod*.—In naval language, direction of the current or sea.

SETTING, in Seamanship. To set the land or the sun, by the compass, is to observe how the land bears on any point of the compass, or on what point of the compass the sun is; likewise the act of observing the situation of any distant object by the compass, in order to discover the angle which it makes with the nearest meridian: as at seven *post* meridian, we set the tower of Arabia near the port of Alexandria, and it bore south-south-east distant four leagues by estimation. When two ships sail in sight of one another, to mark on what point the chased bears, is termed *setting the chase by the compass*.

SETTING-DOG, *s.* A dog taught to find game, and point it out to the sportsman.—Will. obliges young heirs with a *setting-dog* he was made himself. *Addison*.

SETTLE, a market town of England, in the West Riding of Yorkshire, very pleasantly situated on the eastern bank of the river Ribble, at the bottom of an almost perpendicular rock of limestone, from the top of which is a fine prospect of an extensive vale, bounded on all sides by craggy mountains.

mountains. This vale, which, from being watered by the Ribble, has acquired the name of Ribblesdale, is not surpassed by any in England for richness of verdure. Like most of the other towns and villages in this district, Settle is mostly built of stone, brick being only used for the chimneys. The buildings are irregularly laid out, but there is a spacious market-place. The parish church is on the opposite side of the river at Giggleswick, in which parish the town is situated. The cotton mills here and in the vicinity employ a great many hands, especially in winter. Market on Tuesday, and also on every other Monday, for fat and lean cattle. Here are also various fairs, which are generally well attended, and are noted for large supplies of cattle. Population 1153; houses 274; 58 miles west-by-north of York, and 232 north-west-by-north of London. Lat. 54. 4. N. long. 2. 15. W.

SE'TTLE, *s.* [Goth. *sittls*; Sax. *siel setol*.] A seat; a bench; something to sit on.—From the bottom to the lower *settle* shall be two cubits. *Ezek.*

The man, their hearty welcome first express,
A common *settle* drew for either guest,
Inviting each his weary limbs to rest.

Dryden.

To SE'TTLE, *v. a.* [from the Sax. verb *siethlan*, *siethlan*, to compose, to reconcile; *siæte*, peace.] To place in any certain state after a time of fluctuation or disturbance.

In hope to find
Better abode, and my afflicted powers
To *settle* here.

Milton.

To fix in any way of life.
The father thought the time drew on
Of *settling* in the world his only son.

Dryden.

To fix in any place.
Yet as I swiftly sail'd the other day,
The *settled* rock seem'd from his seat removed. *P. Fletcher.*
Settled in his face I see
Sad resolution.

Milton.

To establish; to confirm.
Justice submitted to what Abra pleas'd:
Her will alone could *settle* or revoke.
And law was fix'd by what she latest spoke.

Prior.

To determine; to affirm; to free from ambiguity.—This exactness will be troublesome, and therefore men will think they may be excused from *settling* the complex ideas of mixed modes so precisely in their minds. *Locke.*—To make certain or unchangeable.—This, by a *settled* habit in things, whereof we have frequent experience, is performed so quick, that we take that for the perception of our sensation which is an idea formed by our judgment. *Locke.*—To fix; not to suffer to continue doubtful in opinion, or wavering in conduct.—A pamphlet that talks of slavery, France and the pretender; they desire no more: it will *settle* the wavering and confirm the doubtful. *Swift.*—To make close or compact.—Cover ant-hills up, that the rain may *settle* the turf before the Spring. *Mortimer.*—To fix unalienably by legal sanctions.—I have given him the parsonage of the parish, and, because I know his value, have *settled* upon him a good annuity for life. *Addison.*—To fix inseparably.—Exalt your passion by directing and *settling* it upon an object, the due contemplation of whose loveliness may cure perfectly all hurts received from mortal beauty. *Boyle.*—To affect so as that the dregs or impurities sink to the bottom.

So do the winds and thunders cleanse the air;
So working seas *settle* and purge the wine.

Davies.

To compose; to put in a state of calmness.—When thou art *settling* thyself to thy devotions, imagine thou hearest thy Saviour calling to thee, as he did to Martha, Why art thou so careful? *Duppa.*

To SE'TTLE, *v. n.* To subside; to sink to the bottom and repose there.—That country became a gained ground by

the mud brought down by the Nilus, which *settled* by degrees into a firm land. *Brown.*—To lose motion or fermentation; to depositæ faces at the bottom.

Your fury then boil'd upward to a foam;
But since this message came, you sink and *settle*,
As if cold water had been pour'd upon you.

Dryden.

A government, upon such occasions, is always thick before it *settles*. *Addison.*—To fix one's self; to establish a residence.—The Spinetæ, descended from the Pelasgi, *settled* at the mouth of the river Po. *Arbuthnot.*—To chuse a method of life; to establish a domestic state.

As people marry now, and *settle*,
Fierce love abates his usual mettle;
Worldly desires, and household cares,
Disturb the godhead's soft affairs.

Prior.

To become fixed so as not to change.—The wind came about and *settled* in the West, so as we could make no way. *Bacon.* To quit an irregular and desultory for a methodical life.—To take any lasting state.—According to laws established by the divine wisdom, it was wrought by degrees from one form into another, till it *settled* at length into an habitable earth. *Burnet.*—Chyle, before it circulates with the blood, is whitish: by the force of circulation it runs through all the intermediate colours, till it *settles* in an intense red. *Arbuthnot.*—To rest; to repose.—When time hath worn out their natural vanity, and taught them discretion, their fondness *settles* on its proper object. *Spectator.*

Warm'd in the brain the brazen weapon lies,
And shades eternal *settle* o'er his eyes.

Pope.

To grow calm.
'Till the fury of his highness *settle*,
Come not before him.

Shakspeare.

To make a jointure for a wife.—He sighs with most success that *settles* well. *Garth.*—To contract.—One part being moist, and the other dry, occasions its *settling* more in one place than another, which causes cracks and *settlings* in the wall. *Mortimer.*

SE'TTLEDNESS, *s.* The state of being settled; confirmed state.—We have attained to a *settledness* of disposition. *Bp. Hall.*

SE'TTLEMENT, *s.* The act of settling; the state of being settled. The act of giving possession by legal sanction.

My flocks, my fields, my woods, my pastures take,
With *settlement* as good as law can make.

Dryden.

A jointure granted to a wife.
Strephon sigh'd so loud and strong,
He blew a *settlement* along;
And bravely drove his rivals down
With coach and six, and house in town.

Swift.

Subsidence; dregs.—Fuller's earth left a thick *settlement*. *Mortimer.*—Act of quitting a roving for a domestic and methodical life.—Every man living has a design in his head upon wealth, power, or *settlement* in the world. *L'Estrange.*—A colony; a place where a colony is established.—Such were the clamours of his enemies, and the ingratitude of the court of Spain, that after discovering the continent, and making a *settlement* in the islands of America, he [Columbus] was treated like a criminal, and carried over to Europe in irons. *Guthrie.*

SE'TTLEMENT, ACT OF, in British History, a name given to the statute 12 and 13 W. III. cap. 2., by which the crown was limited to his present majesty's illustrious house; and some new provisions were added, at the same fortunate era, for better securing our religion, laws and liberties; which the statute declares to be the birth-right of the people of England, according to the ancient doctrine of the common law.

SE'TTLER, *s.* One who fixes in a place where a colony is established.

SETTLEWOOD,

SETTLEWOOD, a hamlet of England, in Gloucestershire, adjoining the town of Hawkesbury.

SETTLING, *s.* [ˈsetlɪŋ, Sax.] The act of making a settlement. Settlement; dregs.

'Tis but the lees,
And *settlings* of a melancholy blood.

Milton.

SETTRINGTON, a parish of England, East Riding of Yorkshire; 4 miles east-by-south of New Malton. Population 729.

SETUBAL, or ST. UBES, a considerable town of Portugal, on a bay of the Atlantic, at the mouth of the river Sado; 16 miles south-south-east of Lisbon. In the dreadful earthquake of 1755, it was almost entirely levelled with the ground, but was soon rebuilt, and in a much better style, the limits of the old town being extended, and the whole fortified with a mound, a citadel called San Felipe, and several small forts. The streets are now paved, the harbour commodious, the quays broad and spacious. The town contains five churches, eleven monasteries, an hospital, and an arsenal. Its trade is active, consisting in the export of the products of Portugal, such as lemons, olives, oil, wine (particularly a species of muscadell), and, above all, in bay salt, of which no less than 200,000 tons are made annually here. It often happens that vessels, after discharging their cargoes in the ports of the Mediterranean, come here to take in a return cargo of this article. Population 12,000.

SETUNA, a small sea-port on the Grain coast of Africa.

SETWAL, *s.* An herb. See VALERIANA.

SETZDORF, a small town of Austrian Silesia, in the circle of Troppau, with 1600 inhabitants.

SEU, a river of Malacca, which falls into the sea of China. Lat. 6. 45. N. long. 10. 19. E.

SEVAJEE, a distinguished person in the history of Hindoostan, the founder of the modern Mahratta empire, was the son of Shawjee, who, from an humble situation, had raised himself by his talents to be guardian to a minor of the house of Nizam Shah. On a Mogul invasion of the country, being closely pursued by the troops of his father-in-law, Jadoo Row, with whom he was at enmity, Shawjee escaped with an infant son, and left a pregnant wife to fall into the hands of her father. She was kindly received, and was delivered of her second son, Sevajee, the subject of this article, in the month of May, 1626, and finally separated from her husband.

Sevajee, at the age of 17, placed himself at the head of a body of banditti, who pillaged all the neighbouring districts, which so affected the person who had been entrusted with the care of his education, that he put an end to his life. Upon this, Sevajee took possession of the property accumulated from his father's estate, and increased the number of his followers, so as to become a most formidable freebooter. His exploits soon rendered him dangerous to the government of Visiapour, which sent a powerful army against him, and brought him to submission. Sevajee asked pardon for his offences, and by the humility of his deportment, threw the general sent against him off his guard, till he found an opportunity to stab him to the heart with a concealed dagger; in consequence of which the army dispersed. Shawjee, the father of this desperate young man, was now high in office at Visiapour, and though he pretended entirely to have renounced his son, a correspondence between them was suspected, and a plan was formed for seizing his person, and putting him to death. He was, however, saved by the intercession of a patron, and at length restored to office. But he was resolved to have ample revenge for the affront, and caused Sevajee to murder the chief who had seized him, and his whole family. After this Shawjee paid a visit to his son at Poona in great state, and manifested much affection and respect for him.

Sevajee now proceeded in a career of successful predatory war, and in 1664 pillaged the rich city of Surat. Having, in 1672, laid the king of Golconda under a heavy contribution, he afterwards entered into an alliance with other potentates against the Mogul and the king of Visiapour, the object

of which was the expulsion of all the Mahometan powers from the Deccan; and marching with a great army, in 1677, towards Golconda, he took possession of many fortresses, and pillaged the whole country. His half-brother, Ecojee, was now king of Tanjore; and the different branches of the family were possessed of a large portion of India.

The principal dominions of Sevajee were in the tract called Concan, extending from the south of Surat to the south of Goa, which rendered him completely master of the western Gauts; from which he was, at all times, able to issue and ravage the plain country, while it was impossible to force him from his fastnesses: hence he was denominated by Aurungzebe, the mountain rat. Sevajee continued this course of action till his death, in 1680, when he was succeeded in his conquests by his son Sambajee.

SEVASTOPOL, a town of the south of European Russia, in the Crimea, on a small bay of the Euxine. This was one of the chief mercantile towns of the ancient kingdom of Colchis, but in modern times was known only as a petty Tartar village, called Achtiar, which has been erected into a town since the Crimea was seized by Russia. Its increase has been rapid; it now contains above 3000 inhabitants, is the station of a part of the Russian fleet, and has several good establishments, such as hospitals, docks and dock-yards, barracks, an arsenal, a lazaretto, a large market-place, &c. The harbour is excellent, and is compared to those of Malta and Port Mahon. The principal bay runs up between four and five miles into the land, is from 600 to 800 fathoms in width, and from 10 to 11 fathoms deep, is perfectly sheltered, and without a single shoal; 42 miles south of Eupatoria, and 42 south-west of Simferopol. Lat. 43. 41. 30. N. long. 34. 11. E.

SEUDRE, a river in the south-west of France, department of the Lower Charente, which falls into the sea opposite to the south point of the island of Oleron. It is navigable for ships of 200 tons, to 11 miles from its mouth.

SEVE, or SIEVE, a river of Tuscany, which rises among the Appennines, and falls into the Arno.

SEVE, a small river of Hanover, in the principality of Luneburg, which falls into the Elbe near Harburg.

SEVEN, a small river of England, in Yorkshire, which runs into the Derwent, between Cotehouse and Wickham.

SEVEN, *adj.* [ˈsevn, Saxon.] Four and three; or more than six. It is used in poetry as one long syllable, being one of the rare examples in our language of two *short* syllables.

Let ev'ry man be master of his time
Till *seven* at night.

Shakspeare.

'Sev'n bullocks, yet unyok'd, for Phœbus chuse;
And for Diana *sev'n* unspotted ewes.

Dryden.

SEVENAER, a small inland town of the Netherlands, in the province of Gelderland, with 900 inhabitants; 10 miles north of Cleves.

SEVEN AGES, rocks in the Carribean sea, near the south-east coast of the island of Blanca.

SEVENBECK, a small inland town of the Netherlands, in the province of East Flanders, with 1400 inhabitants.

SEVENBERGEN, a small inland town of the Netherlands, in the province of North Brabant, with 3200 inhabitants; 8 miles north-west of Breda.

SEVEN BROTHERS, a cluster of small islands near the north coast of Hispaniola. They lie opposite the mouth of Monte Christ river, or Grand Yaqui; they have occasioned several wrecks, and prove a shelter to privateers. Lat. 19. 53. N. long. 72. 35. W.

SEVENFOLD, *adj.* Repeated seven times.

Upon this dreadful beast with *sevenfold* head,
He set the false Duessa for more awe and dread.

Spenser.

The *sevenfold* shield of Ajax cannot keep
The battery from my heart.

Shakspeare.

SEVENFOLD, *adv.* In the proportion of seven to one.
U
—Whosoever

—Whosoever slayeth Cain, vengeance shall be taken on him *sevenfold*. *Gen.*

SEVENHAMPTON, a hamlet of England, in Wiltshire; $1\frac{1}{2}$ mile south-east of Highworth.

SEVENHAMPTON, a parish of England, in Gloucestershire; 4 miles south-by-east of Winchcombe.

SEVEN HEADS, rocks on the south coast of Ireland, and county of Cork; 7 miles south-west from the Old Head of Kinsale.

SEVEN ISLANDS, a cluster of small islands on the north-west coast of France, department of the Cotes du Nord, opposite to Treguier, between Brest and St. Maloe. Lat. 48. 54. N. long. 3. 23. W.

SEVEN ISLANDS, a cluster of very small isles, in the Eastern seas, extending along the north coast of the island of Banca, from which they are separated by a navigable channel. Lat. 1. 10. S. long. 105. 20. E.

SEVEN ISLANDS, a cluster of islands near the west coast of Sumatra, lying off Padang.

SEVEN ISLANDS, a cluster of small islands in the English channel, near the coast of France. Lat. 48. 54. N. long. 3. 23. W.

SEVEN ISLANDS, small islands of Virginia, in James river. Lat. 37. 40. N. long. 78. 32. W.

SEVEN ISLANDS, a cluster of small islands near the coast of Canada, in the gulf of St. Lawrence. Lat. 50. 10. N. long. 66. 5. W.

SEVEN ISLANDS BAY, a bay of Canada, on the north side of the river St. Lawrence. Lat. 50. 5. N. long. 66. 25. W.

SEVENNES, a chain of mountains in the south of France, extending over the departments of the Upper Loire, Ardeche, and Gard, and connected with the mountains of the Vivarais and Gevandun. Though not so lofty as the mountains of Auvergne, they are as rugged, and almost as cold. They are remarkable in French history as the retreat of the Protestants in the end of the 17th and beginning of the 18th century.

SEVENNIGHT, *s.* A week.—Rome was either more grateful to the beholders, or more noble in itself, than just with the sword and lance, maintained for a *sevensnight* together. *Sidney*.—We use still the word *sevensnight* or *se'night* in computing time: as, it happened on Monday was *sevensnight*, that is, *on the Monday before last Monday*; it will be done on Monday *sevensnight*, that is, *on the Monday after next Monday*.—This comes from one of those untucker'd ladies whom you were so sharp upon on Monday was *se'night*. *Addison*.

SEVEN OAKS, a market town of England, in the county of Kent, so named from seven large oak trees which stood near it when it was first built. It is situated near the river Darent, and is a great thoroughfare on the road to Rye. The town consists chiefly of two wide streets, in one of which stands the ancient market-house, where the assizes were frequently held during the reign of Queen Elizabeth, and where the petty sessions for the lathe of Sutton-at-Hone are still held. The houses are well-built, and many of them are large and respectable mansions, inhabited by independent families. The principal public building is the church, which forms a conspicuous object for several miles round the country. Here is also a hospital for the maintenance of aged people, with a free-school, founded by William Seven Oaks, lord mayor of London, in 1418, who is said to have been a foundling, charitably educated by a person of this town. It possesses six exhibitions to either university. The school-house was re-built in 1727, at which period the hospital was also substantially repaired. The latter affords an asylum to 32 elderly trades-people, who have a weekly allowance in money. Seven Oaks town and parish constitute a liberty, governed by a warden or bailiff, and four assistants, who are not empowered, however, to hold any court of record for pleas. By the returns of 1811, this liberty contained 638 houses, and 3444 inhabitants, of whom about 1500 reside in town. Market on Saturday. Fairs July 10th and October 12th; 16 miles west-by-north

of Maidstone, and 33 south-east of London. Lat. 51. 16. N. long. 0. 11. E.

SEVEN PAGODAS, a collection of very large Hindoo temples on the Coromandel coast, situated near Sadras, about 30 miles south of Madras.

SEVENSCORE, *adj.* Seventimes twenty; an hundred and forty.—The old countess of Desmond, who lived till she was *sevenscore* years old, did dentize twice or thrice; casting her old teeth, and others coming in their place. *Bacon*.

SEVENTEEN, *adj.* [σεπτονεινε, Saxon.] Seven and ten; seven added to ten.

SEVENTEENTH, *adj.* [σεπτοντειθα, Saxon.] The seventh after the tenth; the ordinal of seventeen.—The conquest of Ireland was perfected by the king in the *seventeenth* year of his reign. *Judge Hale*.

SEVENTH, *adj.* [σεποθαν, Saxon.] The ordinal of seven; the first after the sixth.—The child born in the *seventh* month doth commonly well. *Bacon*.—Containing one part in *seven*.

SEVENTHLY, *adv.* In the seventh place; an ordinal adverb.—*Seventhly*, living bodies have sense, which plants have not. *Bacon*.

SEVENTIETH, *adj.* The tenth seven times repeated; the ordinal of seventy.

SEVENTY, *adj.* [ηανσεποντιζ, Saxon.] Seven times ten.

Worthy Marcius,

Had we no quarrel else to Rome, but that
Thou art thence banish'd, we would muster all,
From twelve to *seventy*. *Shakspeare*.

The weight of *seventy* winters prest him down,
He bent beneath the burthen of a crown. *Dryden*.

To SEVER, *v. a.* [severer, Fr., separo, Lat.] To part by violence from the rest.

Forgetful queen, who *sever'd* that bright head,
Which charm'd two mighty monarchs to her bed. *Granville*.

To divide; to part; to force asunder.

Our force by land
Hath nobly held; our *sever'd* navy too
Have knit again, and float. *Shakspeare*.

To separate; to segregate; to put in different orders or places.

He, with his guide, the farther fields attain'd;
Where *sever'd* from the rest the warrior souls remain'd. *Dryden*.

To separate by chemical operation. To divide by distinctions.—This axiom is of large extent, and would be *severed* and refined by trial. *Bacon*.—To disjoin; to disunite.

How stiff is my vile sense,
That I stand up and have ingenious feeling
Of my huge sorrows! better I were distract,
So should my thoughts be *sever'd* from my griefs;
And woes by wrong imaginations; lose
The knowledge of themselves. *Shakspeare*.

To keep distinct; to keep apart.
Three glorious suns, each one a perfect sun;
Not separated with the racking clouds,
But *sever'd* in a pale clear shining sky. *Shakspeare*.

I will *sever* Goshen, that no swarms of flies shall be there. *Exod*.

To SEVER, *v. n.* To make a separation; to make a partition.—Better from me thou *sever* not. *Milton*.—To suffer disjunction.

Fortune, divorce
Pomp from the bearer, 'tis a sufferance panging,
As soul and body's *severing*. *Shakspeare*.

SEVER, *Str.*, a considerable town in the south-west of France, the chief place of an arrondissement in the thinly peopled

peopled department of the Landes. It is not a sea-port, but stands on the Adour, has 9000 inhabitants, and carries on a considerable trade in the chief products of this part of France, viz., wine and brandy; 24 miles east of Dax, and 73 south-by-east of Bourdeaux.

SEVER, *Str.*, a small town of France, in Normandy, department of Calvados, near the forest of St. Sever. Population 1500; 6 miles west of Vire, and 31 south-west of Caen.

SEVERAC LE CHATEL, a small town in the south of France, department of the Aveyron. Population 1500; 21 miles east of Rhodéz.

SEVERAL, *adj.* [*several*, old French, divers, plusieurs, qui est séparé; Roq. from *severer*, separer.] Different; distinct from one another.—The conquest of Ireland was made piece and piece, by *several* attempts, in *several* ages. *Davies*.

Four *several* armies to the field are led,
Which high in equal hopes four princes head. *Dryden*.

Divers; many. It is used in any number not large, and more than two.—This country is large, having in it many people, and *several* kingdoms. *Abbot*.—Particular; single.

Each *several* ship a victory did gain,
As Rupert, or as Albemarle were there. *Dryden*.

Distinct; appropriate.

Each might his *several* province well command,
Would all but stoop to what they understand. *Pope*.

Separate; disjointed.

Be *several* at meat and lodging; let him have
Board-wages. *Beaum. and Fl.*

SEVERAL, *s.* A state of separation, or partition.

More profit is quieter found,
Where pastures in *several* be,
Of one silly aker of ground
Than champion maketh of three. *Tusser*.

Each particular singly taken.
There was not time enough to hear
The *severals*. *Shakspeare*.

That will appear to be a methodical successive observation of these *severals*, as degrees and steps preparative the one to the other. *Hammond*.—Any enclosed or separate place. *Unused*.—They had their *several* for heathen nations, their *several* for the people of their own nation, their *several* for men, their *several* for women, their *several* for their priests, and for the high priest alone their *several*. *Hooker*.—A piece of open land, adjoining to a common field; and a kind of joint property of the landholders of a parish.—Not to take and pale in the commons, to enlarge their *severalles*. *Holinshed*.—There is no beast, if you take him from the common, and put him into the *several*, but will wax fat. *Bacon*.

SEVERAL TAIL, or INHERITANCE, in Law. See INHERITANCE.

SEVERAL TENANCY, *Tenura separalis*, a plea, or exception taken to a writ that is laid against two persons as joint tenants, who are *several*.

SEVERALITY, *s.* Each particular singly taken; distinction.—The *severalities* of the degrees prohibited. *Bp. Hall*.

To SEVERALIZE, *v. a.* To distinguish. *Unused*.

SEVERALLY, *adv.* Distinctly; particularly; separately; apart from others.—We ought not so much to love likeness as beauty, and to cluse from the fairest bodies *severally* the fairest parts. *Dryden*.

SEVERALTY, Estates in. He that holds lands or tenements in *severalty*, or is sole tenant of them, is he who holds them in his own right only, without any other person being connected with him in point of interest, during his estate therein.

SEVERALTY, *s.* State of separation from the rest.—

The jointure or advancement of the lady was the third part of the principality of Wales, the dukedom of Cornwall, and earldom of Chester, to be set forth in *severalty*. *Bacon*.

SEVERANCE, *s.* Separation; partition.—Those rivers enclose a neck of land, in regard of his fruitfulness, not unworthy of a *severance*. *Carcw's Cornwall*.

SEVERANCE, in Law, the singling or severing two or more that join, or are joined, in the same writ or action.

As if two join in a writ, *de libertate probanda*, and the one be afterwards nonsuited; here *severance* is permitted, so as, notwithstanding the nonsuit of the one, the other may *severally* proceed.

SEVERE, *adj.* [*severus*, Lat.] Sharp; apt to punish; censorious; apt to blame; hard; rigorous.—Let your zeal, if it must be expressed in anger, be always more *severe* against thyself than against others. *Bp. Taylor*.—Rigid; austere; morose; harsh; not indulgent.

Am I upbraided? not enough *severe*
It seems, in thy restraint. *Milton*.

Cruel; inexorable.—His *severe* wrath shall he sharpen for a sword. *Wisdom*.—Regulated by rigid rules; strict.

Truth, wisdom, sanctitude, *severe* and pure,
Severe, but in true filial freedom plac'd. *Milton*.

Exempt from all levity of appearance; grave; sober; sedate.

His grave rebuke,
Severe in youthful beauty, added grace. *Milton*.

Taught by thy practice steadily to steer
From grave to gay, from lively to *severe*. *Pope*.

Not lax; not airy; close; strictly methodical; rigidly exact.—Their beauty, I leave it rather to the delicate wit of poets, than venture upon so nice a subject with my *severe* style. *More*.—Painful; afflictive.—These piercing fires as soft as now *severe*. *Milton*.—Close; concise; not luxuriant.—The Latin, a most *severe* and compendious language, often expresses that in one word, which modern tongues cannot in more. *Dryden*.

SEVERELY, *adv.* Painfully; afflictively.—We have wasted our strength to attain ends different from those for which we undertook the war, and often to effect others, which after a peace we may *severely* repent. *Swift*.—Ferociously; horridly.

More formidable Hydra stands within;
Whose jaws with iron teeth *severely* grin. *Dryden*.

Strictly; rigorously.—To be or fondly or *severely* kind. *Savage*.

SEVERIANS, or SEVERIANI, in Ecclesiastical History. There were two sects of heretics thus called: the first, who are as old as the beginning of the third century, were an impure branch of the Gnostics; thus called from their chief, Severus.

The second, by some called Severites, were a sect of Monophysites, or Eutychians. Severus was preferred to the see of Antioch in 513, where he did his utmost to set aside the council of Chalcedon.

SEUERIK, a village of Diarbekir, in Asiatic Turkey; 50 miles west of Diarbekir.

SEVERIN, a small town of Austrian Illyria, in Croatia, to the west of Carlstadt, on the river Kulpa.

SEVERINA, *Str.*, a considerable town in the south part of the kingdom of Naples, in Calabria Ultra, situated on a rocky eminence near the Neto. It is tolerably built, is the see of an archbishop, and contains 6000 inhabitants; 18 miles south of Cosenza, and 93 north-east of Reggio.

SEVERINO, *Str.*, a town of the Popedom, in the marquisate of Ancona, on the small river Potenza. Though small, it is the see of a bishop; 30 miles south-south-west of Ancona, and 83 north-north-east of Rome.

SEVERINO, *Str.*, a small town in the south-west part of the kingdom of Naples, in the Principato Citra, with 2100 inhabitants; 5 miles north of Salerno.

SEVERINUS (Marcus Aurelius), a distinguished physician,

cian, was born at Tarsia, in Calabria, in the year 1580. His early inclination led him to the study of the law; but he subsequently abandoned that pursuit for the profession of medicine, and received the degree of doctor in the university of Naples. He became ultimately one of the most celebrated professors of that school, and taught anatomy and surgery with such reputation, as to attract a crowd of students to the university. His method of treating surgical subjects in his writings was highly commended by Bartholin. He was, however, a harsh practitioner, and censured the inertness of his contemporaries, for neglecting the cautery and the knife, as employed by the ancients, and himself carried the use of the actual cautery to a great extent. He died at Naples, on the 15th of July, 1656, at the age of seventy-six. He was a man of bold and original mind, but somewhat attached to paradox; and was the author of several publications, of which we have the following catalogue. "Historia Anatomica, Observatioque medica viscerati hominis;" 1629. "De recondita abscessuum naturâ Libri octo;" 1630; which passed through many editions. "Viperâ Pythiâ, id est, de Viperâ natura, veneno, et medicina;" 1643. "Zootomica Democritea, id est, Anatome generalis totius animantium, Lib. v." 1645; containing the result of his dissection of a great many animals. "De efficaci Medicina, Libri iii." 1646. In this work he extols the advantages of fire and steel in the cure of diseases. "De Lapide fungifero, de Lapide fungimappa, Epistolæ duæ;" 1649. "Therapeuta Neopolitana, sive curandarum Februm et Morborum internum Methodus;" 1653. "Tri-membris Chirurgia;" 1653. "Seilo-Phlebotome castigata, sive de Venâ Salvatellæ usu et abusu censura;" 1654. "De Aqua Pericardii, cordis adipe, poris choledocis;" 1654. At the time of his death, Severinus was preparing for publication some papers, which he meant to illustrate by engravings; they were published together, and entitled, "Antiperipatias, hoc est, adversus Aristoteleos de respiratione piscium Diatriba." "Commentarius, in Theophrastum de piscibus in sicco viventibus." "Phoca anatomicè spectatus;" 1661. A sort of extract or abridgment of his writings on surgery was also published in 1664, with the title of "Synopsis Chirurgicæ Libri vi." See Eloy. Dict. Hist.

SEVERITY, *s.* [*severité*, old Fr. *severitas*, Lat.] Cruel treatment; sharpness of punishment.—Never were so great rebellions expiated with so little blood, as for the *severity* used upon those taken in Kent, it was but upon a scum of people. *Bacon*.—Hardness; power of distressing.—Though nature hath given insects sagacity to avoid the winter cold, yet its *severity* finds them out. *Hale*.—Strictness; rigid accuracy.—Confining myself to the *severity* of truth I must pass over many instances of your military skill. *Dryden*.—Rigour; austerity; harshness; want of mildness; want of indulgence.

Strict age, and sour *severity*,

With their grave saws, in slumber lie.

Milton.

SEVERN, a large and important river of England, second only to the Thames, and also the principal river of Wales. It rises in Plinlimmon hill, on the borders of Montgomery and Cardigan shires, not far from the coast of Cardigan bay, and after a very circuitous course, passing through the counties of Montgomery, Shropshire, Worcester and Gloucester, loses itself in the Bristol channel. Descending from the mountains, it bears the name of the Haffen river, till it arrives at Llanidloes, and flowing towards Newtown, between hills pleasantly fringed with wood, it assumes its proper name of the Severn. From thence its course is almost due north, through the delightful vale of Montgomeryshire. Beyond Welchpool it enters the great plain of Shropshire, and after making a considerable compass, turns abruptly to the south-east. It then almost encircles the town of Shrewsbury, and continuing the same direction, passes Colebrookdale, soon after which it flows southward to Bridgenorth, Bewdley, Worcester and Gloucester, dividing near the latter city into two channels, which re-uniting soon afterwards, constitute a great tide river. Below Gloucester its course is chiefly to the

south-west. The character of this river does not much assimilate with its mountainous origin; it soon loses its native rapidity, forming large vales, and generally burying itself within deep banks. At Llanidloes it ceases to be a torrent, and forms a delightful valley, more like the extensive vales of England, than those stripes of cultivation which prevail within the mountains of Wales. Below Colebrookdale the scenery along the banks becomes very picturesque, but it soon relapses into its former sameness of appearance, till it reaches Bewdley. At Stourport it is joined by those numerous canals which bear all the commerce of Birmingham, Kidderminster, and the various trading towns of Warwick, Stafford, and Worcester shires; this being their principal port, and the outlet for their various productions. Crowded with barges, the river now rolls through a pleasant country, and is a broad and tranquil stream towards Worcester. After this it almost disappears between its banks, in the midst of the vast plain of Gloucestershire, until it again emerges, and gradually widens into the great estuary of the Bristol channel. From its source in Pimlimmon-hill to the sea, the Severn runs about 200 miles. It is navigable to Pool Quay, in Montgomeryshire, and by means of its numerous canals this navigation is extended into the very heart of the kingdom, being united with the Thames on the east, and with the Trent, the Humber and the Mersey towards the north; thus forming the grand outlet and channel for the commerce of the kingdom on the south-west. The navigation of the river itself, however, is in many parts very imperfect, being interrupted by shallows, and the great irregularities of the water; the inconveniences of which various plans have been proposed to remove. The vessels chiefly used in this navigation are barges, trows, wherries and boats. For further particulars regarding the Severn, see the different counties and towns through which it passes.

SEVERN, a river of the United States, in Maryland, which runs into the Chesapeak, a little below Annapolis.

SEVERN, a river of North America, which runs into Hudson's Bay, with a settlement at the mouth, called Severn House. Lat. 56. N. long. 88. W.

SEVERN, a river of North America, which runs from Lake Simcoe to Lake Huron.

SEVERN, a river of the United States, in Virginia, which runs into the Chesapeak Bay. Lat. 37. 23. N. long. 76. 27. W.

SEVERN, VALE OF, an extensive and fertile vale in England, in the county of Gloucester, extending along the banks of the river Severn. It is the rich pasture of this vale which furnishes to the kingdom those quantities of cheese, for which this country is so famous. The air is so mild, even in winter, that the vale seems to enjoy a different climate from the adjoining Cotswold hills. See GLOUCESTER.

SEVERNDRUOG, a small rocky island of Hindostan, on the coast of the Concan. It is joined to the continent by a reef of rocks, which forms a safe bay for vessels on the south side. This place was taken by the Mahrattas from the king of Bejapore, in the 17th century, but during the reign of Sahoo Rajah, about the year 1730, Conajee Angria, his admiral, revolted, and established this place as the headquarters of a gang of pirates. It was taken by the British in 1756, by a small force under commodore James, and was then restored to the Mahrattas, but has probably been again taken during the late war. Lat. 17. 47. N. long. 73. 13. E.

SEVERNSTOKE, or STOKE-UPON-SEVERN, a parish of England, in Worcestershire; 3 miles from Upton, and 112 from London. Population 600.

SEVERO, ST., a small town in the east part of the kingdom of Naples, in the Capitanata. It is the see of a bishop; 26 miles west-south-west of Manfredonia, and 77 north-east of Naples.

SEVERUS (Lucius-Septimius), a Roman emperor. See ROME.

SEVESE, a small town of Austrian Italy, on the river Luro; 8 miles north-north-west of Milan.

SEVIER, a county of the United States, in the east part of East Tennessee. Population 4495, including 294 slaves.

SEVIER-

SEVIERVILLE, a post town and capital of the United States, in Sevier county, Tennessee, on a branch of the French Broad; about 30 miles south-east of Knoxville.

SEVIGNAC, a small town in the north-west of France, department of the Cotes-du-Nord. Population 2100.

SEVIGNE (Marie Rabutin), Marquise de, a distinguished lady, was born in 1626. Her father, baron of Chantal and Bourbilly, died while she was very young, leaving her heiress of the house of Bussy Rabutin. Her rank, and the graces of her person and conversation, procured her many admirers, and in 1644 she married the Marquis de Sevigné who in 1651 was killed in a duel. She from this time devoted herself to her children, and to the cultivation of her own mind. She had an extraordinary affection for her daughter, who, in 1669, married the Count de Grignan, and accompanied him to his government of Provence, and this separation gave rise to the greater part of the letters which have gained her so high a reputation, though she had many other correspondents. Many of M. de Sevigné's letters are of a domestic nature, but others are enlivened with court anecdotes, remarks on men and books, and topics of the period in which they were written, which render them very amusing; and in point of style, they are models of epistolary writing, which, perhaps, have never been surpassed. In her letters to her daughter, the reader sometimes is hurt with the excess of flattery on her talents and beauty, which latter quality appears to have been a principal source of her maternal tenderness, and the preservation of it the great object of her anxiety. This lady died in 1696, at the age of 70. Though endowed with much penetration, and, to a certain degree, with a cultivated understanding, she did not rise much above the level of her age and sex in taste and principles. She was attached to rank and splendour, loved admiration, and was apt to be taken with frivolous accomplishments in preference to solid worth. She had a deep sense of religion, but wished to conciliate it with the polite world, the manners and maxims of which, according to the rigid system of the Catholics, were entirely at variance with it. She has been censured for want of taste in her insensibility to the poetical merit of Racine, but this has been imputed to her prepossessions in favour of Corneille.

SEVIGNE, a small river in the south-west of France, which falls into the Charente.

SEVIGNE, a small town in the north-east of France, department of the Ardennes. Population 800.

SEVILLA, a river of Cuba, which rises near the south coast, runs south, and enters the sea, forming a good port at its mouth.

SEVILLE, a province in the south-west of Spain, forming the western half of Andalusia, and still retaining the title of kingdom, from its having been a distinct and independent state in the time of the Moors. Its form, though irregular, is on the whole compact, containing an area of 9500 square miles, with a population, in 1800, of 750,000; a number which, considering the repeated attacks of a pestilential disease in the sea-ports, and the general indolence of the people, must have since experienced a very slow increase. The ecclesiastical division of this province is into two dioceses, the civil into ten districts. The chief towns are—

	Population.
Seville, the capital	100,000
Cadiz	70,000
Ecija	28,000
Xeres	20,000
Ossuna	15,000
St. Mary's, near Cadiz	12,000

Face of the Country, and Climate.—This province, particularly in the south, abounds with fine scenery, the surface being diversified, not only with lofty mountains, but with vines and the finest fruit trees. The principal mountain chains are the Sierra Morena, the Sierra de Ronda, the Sierra de Constantina; but none are of great elevation, and they consist in various places of hills, either bare or covered with cork-

trees. They are intersected in some parts by ravines, in others by fertile valleys. The chief rivers of this province are the Guadalquivir, the Guadiana, the Xenil, the Tinto and the Odiel. The climate is warm, and even hot; but the extremes are tempered by cool breezes from the sea or from the mountains, so that the heat is less intense than in the adjacent province of Granada. The *solano*, or hot African wind, though not so prevalent as in other provinces, is at times so scorching as to blight the crop on the ground in a few hours, and to produce injurious effects on the human constitution. Thunder storms are not frequent, and the chief hazards to the labours of the husbandmen arise from drought. The winter may be compared to a mild spring in the south of England, or the north of France.

Products.—Mines of gold and silver are said to have been formerly wrought in this province, but at present there is nothing of the kind; the basis of most of the mountains is limestone or marble. The soil differs greatly according to situation, being in some places hard and stony, in others a fine black mould. Agriculture is extremely backward; the spade and hoe being often used in situations where their place ought to be supplied by the plough and harrow. The pasturages are good in those situations where the frequency of rain, the height of the ground, or the use of irrigation, protect the soil from the intense heats. The climate is very favourable to vines; the environs of Xeres produce the well-known sherry wine; those of Rota, tent wine (*vino tinto*); those of St. Lucar, the wine called in Spain *mancinillo*. Large tracks in the southern districts are covered with the fruit trees of a warm climate, oranges, lemons, citrons, limes; but other tracks of equal extent are almost desolate; thus, on going from Algesiras to Chiclana, a distance of 40 miles, the traveller sees only a few villages and scattered cottages. This is in a great measure the consequence of the old provincial laws and usages, than which nothing could be more adverse to improvement. Thus, though the climate is well adapted to olives, the culture of them has as yet been comparatively insignificant, the privilege of extracting oil from that fruit having long been confined to certain individuals. The price of oxen in country parts is moderate, but the town dues on butcher's meat at Seville make it cost as much in that market as in London. The chief export of the province is the bay salt, prepared and shipped from Cadiz, and the neighbourhood.

Manufactures.—The silk manufacture is said to have been formerly flourishing in this part of Spain, but its extent was probably never greater than at present. The silk looms are chiefly in the capital. There are also in this province manufactures on a small scale of coarse woollen, linen, leather, soap, pottery and hats, all for home consumption. The export trade of the province is carried on at Cadiz, and consists chiefly in the export of wine to England, and of miscellaneous articles to Spanish America. The chief sea-port in the south of the province is Algesiras.

Inhabitants.—The national characteristics of the Andalusians (see that article), belong also to the inhabitants of the province of Seville. Less serious in their demeanour than the Castilians, and enjoying in a very scanty degree the advantage of education, the extent of their country has been such as to furnish one or two eminent men in almost every age. Among these were, in the time of the Romans, Balbus, the historian of Augustus, and Columella, the well-known writer on agriculture; in the Gothic ages, St. Isidore, bishop of Seville, in the 7th century; and, at a less remote date, Cervantes, Murillo, and the benevolent Las Casas. The general characteristic of the inhabitants is a kind of apathy, which was not roused to exertion even by the invasion of Buonaparte. Institutions for education are not wanting; but what benefit can be expected from them, in a country where the philosophy of Bacon and Newton is hardly yet introduced, or in nautical schools where the teachers are unacquainted with the method of finding the latitude by two observations of the sun's altitude. To the bad government and other drawbacks common to Spain in general, this province has to add causes of peculiar suffering; the disturbances since 1810, in the colo-

nies with which its trade is carried on; and the repeated occurrence of pestilential disease in Cadiz and the neighbouring ports.

SEVILLE, a large city in the south-west of Spain, in Andalusia, the capital of the preceding province. It stands in a fine plain on the left bank of the Guadalquivir (which is here a great river). It is surrounded by an old wall of considerable height, which is entered by 12 gates, and contains 166 turrets. The environs affording no stone, the wall was built of cement, which has long since acquired great hardness and solidity, without, however, being defensible against a modern army, its circuit being between 5 and 6 miles. The population of the town, not correctly ascertained, is commonly stated at 100,000. The interior is built in a great measure in the Moorish style, the streets being often so narrow that a person can touch the houses on either side by extending his arms. This closeness of building was adopted for the sake of coolness, and to prevent the rays of the sun from penetrating. The streets are in general badly paved; the squares are neither numerous nor spacious; most of them have a fountain in the centre; but as the water is seldom cool, the inhabitants are in a great measure supplied from stalls in different parts of the town, for the sale of filtered water. There are here several beautiful public walks, one in particular on the bank of the Guadalquivir, which is frequented by the higher classes. The suburbs are tolerably built; one situated on the west side of the river, called Triana, communicates with the city by a bridge of boats.

Edifices.—The houses of Seville generally cover a large space, there being in the middle of each a court with a fountain. On the side towards the streets they have often a mean appearance, the Moors being accustomed to confine their embellishments to the interior. There are here, however, a number of public edifices, no less than 30 churches, 84 convents, and 24 hospitals, great and small. The cathedral is a large and magnificent Gothic pile, built in the 15th century, and containing so many as 82 altars. Its tower, 250 feet in height, is reckoned the finest in Spain. Of the other churches and convents, several are elegant, but their chief attraction consists in their paintings. A convent called De Buenavista, situated on the opposite side of the Guadalquivir, is remarkable for its prospect, which, in this clear atmosphere, takes in an extent that is surprising to persons accustomed to a cloudy sky; the spectator being enabled to distinguish the mountains of Ronda at a distance of 70 miles to the east, and the Sierra Morena at nearly the same distance to the north-west.

Of the edifices not ecclesiastical, the most conspicuous are the Alcazar or palace, the Longa or exchange, the artillery school, and the mint. The Alcazar, a Moorish building, was extended by several Christian princes in the same style. Though the outside is mean, the inside is very different, containing several courts, with fountains, galleries and baths; the garden, said to have remained unchanged since the time of the Moors, has also its fountains, ever-greens and walks paved with marble. In one of the saloons is a collection of Roman antiquities, brought from the ancient town of Italica in the vicinity. The Lonja, a modern edifice, is of the Tuscan order, and finely situated in the centre of a square. It was built by the merchants for an exchange, but now serves chiefly as a deposit for the old official correspondence with America, distributed formerly in several public buildings. Here are collections of letters from Cortez, Pizarro, and other invaders of the new world.

Seville being one of the most ancient cities of Spain, contains several objects of interest to the antiquary. Water is brought from a distance of 8 miles by a Roman aqueduct of very old date. A large house, formerly the residence of a Moorish chief, is in complete preservation; the principal rooms are in the form of a double cube, being 60 feet in height, and about 30 in breadth and width. The walls are covered with a sort of net-work of exquisite workmanship, on a plaster which does not exhibit a single flaw, though above five centuries old.

Seminaries.—Seville had an academy and public library in the time of the Moors, and at present it has an academy for the physical sciences, another for the fine arts, and a medical society. To these is to be added a university founded in 1502, but almost as backward in science as at the time of its constitution, the teachers having little idea of the discoveries and improvements familiar to professors in British, French and German universities. The number of under graduates is about 200. A humbler institution called St. Elmo, is appropriated to the education of young men for the sea service, and was founded by the son of Christopher Columbus; but the teachers here are equally backward. There is a public library in the cathedral, and another in the archbishop's palace. Seville being the residence of provincial nobility and gentry, has a genteel society; and the Spanish manners are exhibited here more conspicuously than at a town of foreign intercourse like Cadiz.

Manufactures and Trade.—The silk manufactures of Seville are said to have been formerly considerable, but to have declined in the middle and end of the 17th century. In the 18th they recovered, and the number of looms at present at work varies from 2000 to 3000; the silk is brought chiefly from the provinces of Granada and Valencia. Woollens of the coarser kind are also made here, but from the awkwardness of the machinery, are dearer than English cloth. There is here a considerable manufactory of leather for private account, and a very conspicuous one of tobacco and snuff for account of government. The latter is carried on in one of the largest buildings in the city, a structure in the style of the age of Charles V., 200 yards in length, and 105 in breadth; the interior consists of no less than 28 courts, around which are arranged the different rooms for the processes. The mills, to the number, it is said, of 100, are all driven by horses and mules; and a similar want of mechanical power exists in a cannon foundry, carried on also for government account.

Seville was, after the discovery of America, invested with the monopoly of the trade between that country and Spain, but the difficulty of navigating the Guadalquivir with large vessels, led to its transfer to Cadiz. Vessels drawing more than 10 feet water are obliged to load and unload 8 miles below Seville; and the largest vessels stop at St. Lucar, at the mouth of the river. The navigation is limited partly from this cause, more from a want of industry in the inhabitants, who in general confine their exertions to the supply of their immediate wants. Among the exports are wool, the skins of goats and kids, fruit, and, in a small quantity, oil and silk. The imports are various manufactures from England, Nuremberg wares from Germany, iron from Bilbao, and colonial produce from America. It is not probable that the former trade of Seville, whatever may be the allegations of Spanish writers, was greater than at present. The adjacent country is of great fertility, and the markets plentifully supplied; but the lowness of the ground exposes it to inundations, and to vapours which engender agues and malignant fevers. The heat of summer and autumn is sometimes very oppressive, particularly on the occurrence of the solano, a scorching wind that blows from the sandy deserts of Africa.

History.—Seville stands on the site of the *Hispolis* of the Romans, the birth-place of the emperors Trajan, Adrian, and Theodosius. The date of its foundation is unknown; it opened its gates to the Moors in 711, soon after their invasion of Spain, and continued in their possession above five centuries, being the seat first of a regal, afterwards of an aristocratical government. It was taken from them by the Christians in 1247, after one of the most obstinate sieges mentioned in Spanish history. Since then it has seldom been the scene of military exploits. In 1729 a treaty was concluded here between Spain, England, France, and Holland. In 1755 the city felt the shock of the dreadful earthquake of Lisbon, its cathedral having sustained considerable injury. In the autumn of 1809, it was visited by the pestilential fever which caused such mortality at Cadiz; it was computed that between 12th August and 1st November of that

that year, Seville lost nearly a fourth of its inhabitants, but half the sufferers were Gitanos or gypsies, inhabiting the suburb of Triana. On the invasion of Spain by Buonaparte in 1808, Seville asserted the national independence, and received the junta, when driven from Madrid. It surrendered, however, to the French, on 1st February, 1810, and remained in their hands till 27th August, 1812, when they were compelled to leave it, in consequence, not of insurrection on the part of the inhabitants, but of the general evacuation of the south of Spain consequent on their defeat at Salamanca; 254 miles south-by-west of Madrid, and 45 north of Cadiz. Lat. 37. 24. 26. N. long. 5. 38. 37. W.

SEVILLE PLANTATION, a place on the north coast of Jamaica, a little to the west of Mammee bay. Here are the ruins of an ancient town called Sevilla Nueva, founded by Esquivel, on the spot where Columbus resided after his shipwreck in 1503.

SEVIN (Francis), a man of letters, born in the diocese of Sens, was educated at Paris, where he pursued, with great ardour, the study of the learned languages, in company with the abbé Fourmont, the elder. He became an associate of the Academy of Belles-Lettres in Paris, in 1714. He was sent in 1728, by the king's command, with the abbé Fourmont, the younger, to Constantinople, in search of MSS., of which he brought back a great number, and was, in 1737, presented with the place of keeper of MSS. in the king's library. His letters, descriptive of this journey, were published in 1801, in 1 vol. 8vo. These contain several interesting details concerning Turkey, Egypt, &c. Sevin died in 1741. Several of his papers are published in the "Mémoires de l'Acad. des Inscriptions."

SEVINGTON, a parish of England, in Kent, situated near the river Stour; 2 miles from Ashford.

SEVION, or SENTON, a small river of Wales, in Flintshire, which runs into the Cluyd near Ragland.

SEVIR, among the Romans, an officer who, according to Ptitiscus, commanded a whole wing of horse; though others make him only the commander of a troop, *turmis*, a division answering to our regiments.

SEVIRI were also magistrates in the colonies, so called, from their being six in number.

SEVOCA'TION, *s.* [*sevoco*, Lat.] The act of calling aside.

SEVRE NANTAISE, a small river in the north west of France, in the department of the Two Sevres, which falls into the Loire near Nantes. It is not navigable.

SEVRE NOIRTAISE, a river in the north-west of France, in the department of the Two Sevres, which falls into the sea; 7 miles west of Marance.

SEVRES, a small town in the north of France; 4 miles west-by-south of Paris. Population 2700. Its glass-works are in high repute, but are surpassed by its potteries, which are supposed to produce the finest porcelain in the world. It is remarkable both for the fineness of the materials, and for the beauty of the painting; 4 miles west-by-south of Paris.

SEVRES, DEPARTMENT OF THE TWO, a department in the north-west of France, comprising about a third of the old province of Poitou, and bounded by the departments of the Maine and Loire, the Charente, and the Vendee. Its superficial extent is 2450 square miles; its population 260,000, of whom above 32,000 are Protestants. The department is watered by the Two Sevres, the Dive, the Loire, the Thoue, and a number of inferior streams. Its surface is uneven, being intersected from north-east to south-west by a chain of lofty mountains covered with wood; in the south-west it is marshy, but in the rest of the department the soil is fertile, and the climate favourable. The products are wheat, barley, rye, oats, buck wheat and maize; hops grow wild, particularly in the neighbourhood of Niort. Tobacco is partially cultivated; chesnuts abound in different situations; and almonds in the warmer exposures. The tracks of pasture are considerable, the climate being more humid than in the interior of France; hence a larger proportion of horses, cattle and sheep. The mines in the high

grounds afford iron, antimony, saltpetre; here are also quarries of marble. The manufactures are on a small scale consisting of pottery, saltpetre, leather, woollens, cotton and paper. This department suffered severely in the Vendean war. It is divided into the four arrondissements of Niort the capital, Bressuire, Parthenay and Melle.

SEURRE, a small town in the east of France, department of the Cote d'Or, on the Saone. Population 2700. It has some trade in corn, wine and fruit; 25 miles south of Dijon.

SEVSK, a small town in the east of European Russia, situated near the river Seva and the lake of Moriza, with 2200 inhabitants; 63 miles south-south-west of Oriol.

SEVYNVEY, a river of Wales, in Pembrokehire, which runs into the Clethy, near Llanhadon.

To SEW, *v. a.* [*suivre*, Fr.] To follow; to pursue. *Sew* is the Cornish word for *follow*.—If me thou deign to serve and *sew*. *Spenser*.—It was a knight which now her *sewde*. *Spenser*.

To SEW, *v. n.* [*suo*, Lat.; *syc*, Su. Goth. and Danish; *siujan*, M. Goth.] To join any thing by the use of the needle.—A time to rent and a time to *sew*. *Eccl*.

To SEW, *v. a.* To join by threads drawn with a needle.—No man *seweth* a piece of new cloth on an old garment. *St. Mark*.

To SEW *up*. To enclose in any thing sewed.—If ever I said loose-bodied gown, *sew me up* in the skirts of it. *Shakspeare*.

To SEW, *v. a.* To drain a pond for the fish. *Ainsworth*. *Obsolete*.

SEW, in Sea Language, the situation of a ship when the water first leaves her resting on the ground, or blocks in a dock. Thus, if a ship runs a-ground on the tide of ebb, or by the reflux of the tide she rests on her blocks; and if it be required to know she has sewed, or how much she has sewed, the mark the water-line has made on her bottom when afloat is examined, and as much as is the difference above the surface of the water and this mark, so much she is said to have sewed.

SEWAD, an extensive district of Afghanistan, situated about the 34th degree of northern latitude, and in part bounded by the river Indus. This district formerly comprehended Bembher and Bijore. It consists of mountains covered with snow, and fertile valleys producing all the finest fruits of Europe, particularly grapes. Sewad proper is about 70 miles in length, by 40 in breadth, and contains 25 valleys, each watered by a separate stream. It is principally inhabited by the tribe of Yusufzies, who are a brave and independent people, fully capable of defending the strong territory, and paying little more than a nominal subjection to their sovereign; but ready to contribute their quota of troops for any plundering expedition, or in the general defence of the country.

SEWALIC, a range of mountains in Hindostan, which divide the province of Delhi from Serinagur. The elevation is trifling when compared to their northern neighbours the Himalaya mountains. It is, however, through the former that the majestic Ganges enters on the plains of Hindostan, at a place called Hurdwar. These hills rise with a moderate though unequal slope from the plains, and are skirted by deep forests abounding with valuable timber, only, inhabited by elephants, but which seldom exceed seven feet in height, and are not considered valuable, and therefore only pursued for the sake of their teeth, or to prevent their destroying the cultivation on the skirts of the mountains.

SEWAN, called also ALIGUNGE, a town of Hindostan, province of Bahar, district of Sarun. It is pleasantly situated on the eastern side of the Dar, which in the rainy season communicates both with the Ganges and Gundock rivers. It is celebrated for the manufacture of black crockery-ware, made in imitation of that of Staffordshire. Lat. 26. 11. N. long. 84. 25. E.

SEWARD (Thomas), an English divine of the Church of England, was born in 1708. He became rector of Eyam,

in Derbyshire, and prebendary of Litchfield, where he died in 1790. He was a man of taste and learning, and of considerable talents for poetry and polite literature. He published an edition of Beaumont and Fletcher's works, and was author of a treatise on the "Conformity between Popery and Paganism." Some of his poems are in Dodsley's collection.

SEWARD (Anna), daughter of the preceding, a poetess of distinguished elegance, was born about the year 1745. Her infant mind was nourished by her father with the vivid and sublime imagery of Milton, and her early education amidst the wild and alpine scenery of the Peak, enhanced the enthusiasm of feeling to which she was naturally disposed. In her seventh year, her father being appointed canon residentiary of Litchfield, she removed with the family to that city, which thenceforth became her residence during the whole of her life. The fruit of her father's instructions appeared in some early efforts at poetical composition, which, however, met with discouragement from her mother; and Mr. Seward was afterwards induced to withdraw the countenance he had given to her literary pursuits; so that several years of her youth elapsed with only stolen and interrupted attempts to cultivate an art of which she had so strongly imbibed the rudiments. As she advanced in life, she of course followed more freely the bent of her genius, and in 1780 she published an "Elegy on Captain Cook," a performance of great merit, as well from the harmony of its versification, as the beautiful and appropriate imagery with which it abounds, and the force and delicacy of its sentiments. The contrast between the different mourners on this event, queen Obera, and the wife of the great navigator, is peculiarly striking. In the following year she gave the world a "Monody on Major Andre." With this lamented young officer she was intimately acquainted: she accordingly wrote with peculiar pathos on the occasion, and expressed a glowing and just indignation against the actors in that tragedy: the laws of what are called civilized war do not and ought not to suppress the feelings of humanity. Miss Seward made herself known as a writer on many other topics: in 1790 she published "Llangollen Vale," with other poems; and, in 1804, she gave the public "Memoirs of the Life of Dr. Darwin." This is a desultory performance, but it contains much entertaining matter, enriched with some judicious criticism on Dr. Darwin's poetical character. Miss Seward died in March, 1809. A collection of her letters has been published since her decease, in 6 vols. 12mo. *Athenæum*.

SEWARD (William), was the son of a brewer in London, and born in 1797. He received his education at the Charter House, which he completed at Oxford; this place he left without taking a degree. Having a good fortune, he devoted his life to literary ease, and antiquarian researches. He is known as an author by five volumes of "Anecdotes of distinguished Persons," extracted from curious books, to which he added a supplement, in two volumes, under the title of "Biographiana."

SEWARDSTONE, a hamlet of England, in Essex; 2 miles south of Waltham Abbey. Population 580.

SEWDLEY, a village of England, in Gloucestershire, situated on a brook that runs into the Avon near Winchcomb.

SEWEE BAY, or BULL'S HARBOUR, a bay of the Atlantic, on the coast of South Carolina. Lat. 32. 58. N.

SEWEL, denotes any thing that is set or hung up, to keep deer out of any place.

SEWEL-CORONDE, a name given by the natives of Ceylon to a species of cinnamon, which, when chewed, is of a mucilaginous nature, like the cassia: this dries well, and is very firm and hard, and has the appearance of a very fine cinnamon; but it has very little taste, and a disagreeable smell. The natives take advantage of the handsome appearance of this kind of cinnamon, and are very apt to mix it with the good kind.

SE'WER, *s.* [*escuyer*, old Fr.] An officer who serves

up a feast.—Sir Fulke Grevil, being cup-bearer, gave it on his knee; Mr. Mildmay was carver; Captain Preston sometimes *sewer*. *Sir T. Herbert*.

Marshall'd feast,
Serv'd up in hall with *sewers* and seneshals;
The skill of artifice or office mean.

Milton.

A passage for water to run through, now corrupted to *shore*.—The fenmen hold that the *sewers* must be kept so, as the water may not stay too long in the spring till the weeds and sedge be grown up. *Bacon*.

As one who long in populous city pent,
Where houses thick, and *sewers* annoy the air,
Forth issuing on a summer's morn, to breathe
Among the pleasant villages and farms
Adjoin'd, from each thing met conceives delight. *Milton*.

He that uses a needle.

SEWERBY, a township of England, in the East Riding of Yorkshire, remarkable for the number of goats bred near it. It is situated between Bridlington and Flamborough Head, on the shore; 209 miles from London.

SEWICKLY, a river of the United States, in Pennsylvania, which runs west into the Youghiogauy; 9 miles above the Monongahela.

SEWICKLY, NEW, a township of the United States, in Beaver county, Pennsylvania. Population 788.

SEWICKLY, NORTH, a township of the United States, in Beaver county, Pennsylvania. Population 1321.

SEWIS, or SÆWIS, a large village in the east of Switzerland, canton of the Grisons; 6 miles east-by-south of Meyenfeld.

SEWL, provincially a plough. It is sometimes written *sule*.

SE'WSTER, *s.* A woman that sews or spins. *Obsoleto*.

At every twisted thrid my rock let fly
Unto the *sewster*, that did sit me nigh. *B. Jonson*.

SEWESTERN, a hamlet of England, in Leicestershire; 10 miles east-north-east of Melton Mombay.

SEX, *s.* [*sexus*, Lat.] The property by which any animal is male or female.—These two great *sexes* animate the world. *Milton*.—Shame is hard to be overcome; but if the *sex* once get the better of it, it gives them afterwards no more trouble. *Garth*.

SEXA'GENARY, *adj.* [*sexagenaire*, Fr.; *sexagenarius*, Lat.] Threescore.—*Sexagenary* fair-ones, and upwards, whether they were handsome or not in the last century, ought at least in this to reduce themselves to a decency and gravity of dress suited to their years. *Ld. Chesterfield*.

SEXAGE'SIMA, *s.* [Latin.] The second Sunday before Lent.

SEXAGE'SIMAL, *adj.* [from *sexagesimus*, Lat.] Sixtieth; numbered by sixties.

SEXA'NGLED, or SEXA'NGULAR, *adj.* [from *sex*, Lat., and *angular*.] Having six corners or angles; hexagonal.

The grubs from their *sexangular* abode
Crawl out unfinish'd like the maggot's brood. *Dryden*.

SEXA'NGULARLY, *adv.* With six angles; hexagonally.

SEXE'NNIAL, *adj.* [*sex* and *annus*, Lat.] Lasting six years; happening once in six years.—This evil was not so much the vice of their constitution itself; as it must be in your new contrivance of *sexennial* elective judicatories. *Burke*.

SEXT, a small town of the Sardinian States, in Savoy, on the Isere; 2 miles south-east of Saint Morice.

SEXTAIN, *s.* [from *sextans*, *sex*, Lat.] A stanza of six lines.

SEXTANS, or SEXTANT, a sixth part of certain things. The Romans divided their *as*, which was a pound of brass,

brass, into twelve ounces: the ounce was called *uncia*, from *unum*; and two ounces *sextants*, as being the sixth part of a pound.

SEXTANS was also a measure which contained two ounces of liquor, or two cyathi. Hence,

"Sextantes, Caliste, duos infundi Falerni."

SEXTANS, the *Sextant*, in Astronomy, a constellation of the southern hemisphere, made by Hevelius out of unformed stars. In Hevelius's catalogue it contains 11, but in the Britannic catalogue 41 stars.

SEXTANT, *s.* [*sextant*, Fr.] The sixth part of a circle. An astronomical instrument made in that form.—At the beginning of the eclipse the moon was in the zenith, so that it was found most convenient to make use of the *sextant*. *Cook and King's Voyage*.

The use and application of the sextant is the same with that of the quadrant.

SEXTARIUS, an ancient Roman measure, containing two cotylæ, or two hemina.

SEXTARY, or SEXTRY, *s.* The same as sacristy. *Johnson*.

SEXTEN, a large village of Austria, in Tyrol, near the source of the Drave, with some well frequented mineral springs.

SEXTERY-LANDS, lands given to a church, &c., for maintenance of the sexton.

SEXTILE, *adj.* [*sextilis*, Lat.] Is such a position or aspect of two planets, when at 60 degrees distant or at the distance of two signs from one another, and is marked thus *.
Harris.

Planetary motions and aspects,
In *sextile*, square and trine.

Milton.

The moon receives the dusky light we discern in its *sextile* aspect from the earth's benignity. *Glanville*.

SEXTON, *s.* An under officer of the church, whose business is to dig graves.—A stool and cushion for the *sexton*. *Shakspeare*.—When any dies, then by tolling a bell, or bespeaking a grave of the *sexton*, the same is known to the searchers corresponding with the said *sexton*. *Graunt*.

The office of sexton in the pope's chapel, is appropriated to the order of the hermits of St. Augustine, and he is generally a bishop. When the pope is sick, he administers to him the sacrament of extreme unction, &c., and enters the conclave, in quality of first conclavist.

SEXTON'S RIVER, a river of the United States, in Vermont, which rises in Grafton, and runs into the Connecticut; 2 miles south of Bellows Falls.

SEXTONSHIP, *s.* The office of a sexton.

SEXTULA, a word used by some old pharmaceutic writers to express the sixth part of an ounce, that is, four scruples, or one drachm and one scruple.

SEXTUPLE, *adj.* [*sextuplus*, Lat.] Sixfold; six times told.—Man's length being a perpendicular from the vertex unto the sole of the foot, is *sextuple* unto his breadth, or a right line drawn from the ribs of one side to another. *Brown*.

SEXTUS, or SIXTH, in the Canon Law, denotes a collection of decretals, made by pope Boniface VIII., usually thus called from the title, which is "Liber Sextus;" as if it were a sixth book added to the five books of decretals, collected by Gregory IX.

SEXTUS (Empiricus), a Roman physician, of the *empiric* sect, who followed Heraclides and others in the adoption of that system which Serapion and Philinus begun. He is said to have been the pupil of Herodotus, the physician, and the preceptor of Saturninus. There are two works extant, with the name of Sextus attached to them; but Le Clerc believes, that they are not both the production of this physician, who only composed that which is entitled "Sexti Placiti."

SEXUAL, *adj.* [*sexuel*, Fr.] Distinguishing the sex; belonging to the sex.—There is a wonderful spirit of sociality in the brute creation, independent of *sexual* attachment. *Barrington*.

Vol. XXIII. No. 1555.

SEXUAL SYSTEM. See BOTANY.

SEXUNX, in old Pharmacy, the weight of six ounces, or half a pound troy.

SEYCHELLES. See SECHELLES.

SEYEROE, a small island of Denmark, to the north-west of Zealand; 6 miles in length, and 1 in breadth.

SEYLAND, a considerable island on the north coast of Norwegian Lapland, in lat. 70. 30. N. long. 23. 0. E. It is covered with lofty mountains, and is scarcely inhabited.

SEYMAN, a small island in the Red Sea. Lat. 15. 20. N. long. 57. 30. E.

SEYMOUR'S CANAL, an inlet on the east coast of Admiralty island, extending in a north-west direction for about 29 miles.

SEYNE, a town in the south-east of France, department of the Var. It is well built, contains 5700 inhabitants, has a harbour with neat quays, and carries on an extensive sardel and tunny fishery; 3 miles south-west of Toulon.

SEYNE, a small town in the south-east of France, in the department of the Lower Alps. It has some cotton manufactures. Population 2500; 12 miles south-south-west of Barcelonetta, and 15 north of Digne.

SEYSSSEL (Claude de), an historical and political writer, who flourished in the beginning of the sixteenth century, was brought up to the law, which he practised with great applause at Turin. He obtained the places of master of requests and counsellor under Lewis XII. of France. He attended in the name of that prince at the council of Lateran, and was promoted to the bishopric of Marseilles in 1510, and to the archbishopric of Turin in 1517. He died in 1520, leaving behind him a great number of works, on theological, juridical, and historical subjects. He also translated into the French language Eusebius's Ecclesiastical History, Thucydides, Appian, Diodorus, Xenophon, Justin and Seneca. He is said to have been the first who alleged the Salic law as influencing the succession to the crown of France. His "Grand Monarchie de France," published in 1519, and translated by Sleidan into the Latin language, maintains that the French constitution is a mixed monarchy, and that the king is dependent on the parliament. In his "Histoire de Louis XII. Pere du Peuple," he is the perpetual panegyrist of that prince, but gives some curious facts respecting the reign of Lewis XI., whose vices are exposed by way of contrast.

SEYSSSEL, a town in the south-east of France, department of the Ain. The Rhone divides it into two parts, and here becomes navigable, which renders Seyssel the principal entrepot of the commodities exported from the south-east part of France to Switzerland. Population 2300; 13 miles north of Belley.

SEYSUMAH, a town of Hindostan, province of Malwah, district of Mundesor, belonging to the Mahrattas, situated on the eastern side of the river Chumbul. Lat. 24. 55. N. long. 75. 37. E.

SEY-SUR-SAONE, a small town in the east of France, on the river Saone.

SEZANE, or CEZANE, a small town of the Sardinian States, in Piedmont, on the Doria; 7 miles east of Briançon.

SEZANNE, a small but ancient town in the north-east of France, department of the Marne, situated on the small rivers Auges and Morin. It has some manufactures of woollens, caps and leather, and a considerable trade in wine, corn and wood. An action took place between the Austrians and French here, on the 14th of March, 1814. Population 4200; 30 miles south-west of Chalons-sur-Marne.

SEZENICZ, a small town in the east of Bohemia, on the Elbe, containing 1000 inhabitants; 10 miles north of Chrudim.

SEZYPE. See ZYPPE.

SEZZA. See SESSE.

SEZZE ET VILLA FRANCA, a small town in the east of the Sardinian States, province of Alessandria, on the Bormida, with a population of 2300.

Y

SFACCHIA,

SFACCHIA, a small town of European Turkey, in the island of Candia.

SFASACA, a town of Niphon, in Japan; 18 miles east of Amanguchi.

SFAX, a neat thriving city of Tunis, in Africa, surrounded with walls. A considerable trade in oil and cloth is here carried on; 45 miles south-south-east of Kairwan.

SFORZA (Giacomuzzo), named also Attendolo, founder of the illustrious house of Sforza, was born in 1369 at Cotignola, in Romagna. He is said to have been originally a peasant, and, according to a traditionary report, being one day at work, he was solicited to enlist for a soldier, when throwing his spade on a tree, he said he would enter if the spade did not fall down again, which proving to be the case, he immediately engaged in that military life which rendered him famous. He first served under general Alberic de Barbiano, and had for his comrade in arms the celebrated Braccio. These, in the early part of their career, were as intimate as brothers, but as they advanced in the profession, jealousy intervened, and they became at length such determined enemies, that when one engaged in the service of a prince or state, it was a sufficient motive for the other to engage on the opposite side. Sforza was soon distinguished for his bravery, and for a disposition to seize by force whatever booty fell in his way. Braccio and he perfectly agreed in selling their services as dearly as possible, and in considering war as a trade which was to be kept up for their benefit. From the command of 100 men he rose to that of 7000: he obtained the office of gonfalonier to the holy see, and by pope John XXIII, he was created count Cotignola, an honour that was given by way of payment of a sum of money due to him. He commanded in the kingdom of Naples against Alphonso of Arragon, and was made constable of the kingdom. In marching to the relief of Aquila, he was drowned in the passage of the river Aterno or Pescara, in the year 1424. He is represented to have been robust in body, and when elevated to his highest rank, that he preserved the peasant's disregard of luxury, and frankness of manners.

SFORZA (Francesco), first duke of Milan of that family, natural son of the preceding, was born in 1401. In 1421 he was viceroy to Louis, duke of Anjou, who had been adopted by queen Joan II. of Naples, and in 1424, he defeated the troops of Braccio; but his father, as we have seen, being drowned, he could make no advantage of his success. Although an illegitimate son, Joan conferred upon him all his father's estates, and he served successfully against the Aragonese commanders. He afterwards entered into the service of the duke of Milan, and defeated a fleet of the Venetians in the Po, in 1431. After the death of the queen, in 1435, he attached himself to her heir, René, duke of Anjou, and made himself master of several places in the Marche of Ancona. He even seized some of the pope's possessions, which brought on him an excommunication from Eugenius IV., whom he had formerly served. He had long wished to marry Bianca, the natural daughter of Philip-Maria Visconti, duke of Milan, and being in the Venetian service against that prince, he gained such advantages as induced Philip, who had often deceived him, to enter into a treaty in 1441, by which he made peace with the Venetians, and gave his daughter to Sforza, with Cremona and its territory for her portion.

The father and son-in-law did not long continue united, and Sforza commanded, as general, the troops of the pope, Venetians, and Florentines, in a war against Philip. He was, however, at length, induced to go over to the party of the duke of Milan, who, in 1447, died without legitimate issue. Sforza was now ambitious of succeeding him, and took a commission, as general of the troops of Milan, against the Venetians. But he soon made a treaty with the latter, and then led an allied army to the gates of Milan, to which he laid siege. The distress of the city occasioned a popular commotion, the leaders of which proposed the electing of Sforza for their duke. The majority concurred in the proposal, and in February, 1450, he was received with great ac-

clamations in that quality. Sforza remained in possession of the duchy, and in 1464 made himself master of Genoa, Lewis XI. of France having made over to him all the right of France to that city. Sforza died in 1466, and transmitted the sovereignty to his son. He had shewn himself a brave and skilful commander; but with several traits of grandeur in his character, he was not a man of principle, and was ready to change sides as suited his interest. *Mod. Univ. Hist.*

SFORZA (Catherine), an heroine of the same family, the natural daughter of Galeazzo Sforza, duke of Milan, who was assassinated in 1476. She married Jerome Riario, lord of Forli and of Imola, which was her own dowry; but she was left a widow at the age of twenty-two, with several children. In 1500 Forli was besieged by the duke of Valentinois, son of pope Alexander VI.; but she defended the fortress with the greatest bravery, though the besiegers threatened to put her children to death, who were in their hands. At length the place was taken, and Catherine sent prisoner to Rome, but she soon recovered her liberty, and was married to John de Medicis, to whose family she rendered very eminent services.

SFRONDATI (Francis), a senator of Milan, and counsellor of state to the emperor Charles V. On the death of his wife he entered into orders, and was elevated to the cardinalship. He died in 1550, aged 56. A poem of his, on the "Rape of Helen," was printed at Venice in 1559. His son Nicholas became pope by the name of Gregory XIV. There was another cardinal of this name and family, who wrote several works against the liberties of the Gallican church. He died in 1696.

SGIGATA, or STORA, a town of Algiers, in Africa, the ancient RUSICADA, situated near the Mediterranean. This city possessed anciently great splendour, which is now only attested by the ruins of a few cisterns.

To SHAB, *v. n.* To play mean tricks. *A low cant word.*

SHAB. See SHEB.

SHABAMOUSHWAN LAKE, a lake of Canada; 210 miles north-north-west of Quebec. Lat. 49. 10. N. long. 75. W.

SHA'BBILY, *adv.* Meanly; reproachfully; despicably; paltrily.

SHA'BBINESS, *s.* Meanness; paltriness.—He exchanged his gay *shabbiness* of clothes fit for a much younger man, to warm ones that would be decent for a much older one. *Spectator.*

SHABBINGTON, a parish of England, in Buckinghamshire; 12 miles west-south-west of Aylesbury

SHA'BBY, *adj.* [*Etymology unknown.*] Mean; paltry.—They were very *shabby* fellows, pitifully mounted, and worse armed. *Ld. Clarendon.*

The dean was so *shabby*, and look'd like a ninny, That the captain suppos'd he was curate of Jenny. *Swift.*

SHABOUR, in Persia. See SHAPOUR.

SHABOUR, a considerable town of Lower Egypt, situated in the district called Bahireh, on the western or Rosetta branch of the Nile. It is supposed to be the ancient Andropolis; 48 miles south-east of Alexandria.

SHABRAN, a village of Shirwan, in Persia; 40 miles north-east of Schamachie.

SHACK, in Ancient Customs, a liberty of winter-pasturage. In the counties of Norfolk and Suffolk, the lord of the manor has shack, i. e. a liberty of feeding his sheep at pleasure, in his tenants' lands, during the six winter months.

In Norfolk, shack also extends to the common for hogs, in all men's grounds, from the end of harvest till feeding-time. Whence to go a shack, is to feed at large.

SHACK, provincially, to shed as grain at harvest.

SHACKERSTONE, a parish of England, in Leicestershire; 10 miles from Hinckley.

SHA'CKLE, *s.* Stubble. Herefordshire. *Pegge.*

To SHA'CKLE, *v. a.* [*schaeckelen*, Teut.] To chain; to

to fetter; to bind.—You must not *shackle* and tie him up with rules about indifferent matters. *Locke.*

So the stretch'd cord the *shackled* dancer tries,
As prone to fall as impotent to rise. *Smith*

SHACKLEFORD, a post village of the United States, in King and Queen county, Virginia.

SHACKLEWELL, a hamlet of England, in the parish of Hackney, Middlesex.

SHA'CKLES, *s.* wanting the singular. [*ŕceacul*, Sax., *schaekkel*, Teut.] Fetters; gyves; chains for prisoners.

Himself he frees by secret means unseen,
His *shackles* empty left, himself escaped clean. *Spenser.*

A servant commonly is less free in mind than in condition; his very will seems to be in bonds and *shackles*, and desire itself under durance and captivity. *South.*

The forge in fetters only is employed;
Our iron mines exhausted and destroyed
In *shackles*. *Dryden.*

SHACKLES, in Ship-Building, the small ring-bolts driven through the ports, or scuttles, and through which the lashings or an iron hook passes when the ports are barred in. There are also shackles put upon billow-bolts, for confining seamen, &c., who have deserved corporal punishment.

SHAD, *s.* A kind of fish. See CLUPEA.—She will cry strawberries; — nay, *shads* and mackarel. *B. Jonson.*

SHADDINGFIELD, a parish of England, in Suffolk; 4½ miles south of Beccles.

SHA'DDOCK, *s.* A kind of orange. *Chambers.*
SHADE, *s.* [*Sax.* *ŕcabu ŕcabð*; Dutch, *schade*. Said to be the past participle of *ŕceaban*, to separate, to divide. *H. Tooke.*—The cloud or opacity made by interception of the light.

Spring no obstacle found here nor *shade*,
But all sunshine. *Milton.*

Darkness; obscurity.
The weaker light unwillingly declin'd,
And to prevailing *shades* the murmuring world resign'd. *Roscommon.*

Coolness made by interception of the sun.—Antigonus, when told that the enemy had such volleys of arrows that hid the sun, said, "That falls out well; for this is hot weather, and so we shall fight in the *shade*." *Bacon.*—An obscure place, properly in a grove or close wood by which the light is excluded:

Let us seek out some desolate *shade*, and there
Weep our sad bosoms empty. *Shakspeare.*

Regions of sorrow, doleful *shades*. *Milton.*

The parts of a picture not brightly coloured.
'Tis every painter's art to hide from sight,
And cast in *shades* what seep would not delight. *Dryden.*

A colour; gradation of light.—White, red, yellow, blue, with their several degrees, or *shades* and mixtures, as green, come in only by the eyes. *Locke.*—The figure formed upon any surface corresponding to the body by which the light is intercepted; the shadow.—Envy will merit as its *shade* pursue. *Pope.*—The soul separated from the body; so called as supposed by the ancients to be perceptible to the sight, not to the touch. A spirit; a ghost; manes.

Ne'er to these chambers where the mighty rest,
Since their foundation, came a nobler guest;
Nor e'er was to the bow'rs of bliss convey'd
A fairer spirit or more welcome *shade*. *Tickell.*

To SHADE, *v. a.* [*ŕcaban*, *ŕceaban*, Sax.] To over-spread with opacity.

Thou *shad'st*
The full blaze of thy beams, and through a cloud
Thy skirts appear. *Milton.*

To cover from the light or heat; to overspread.

And after these, came arm'd with spear and shield
An host so great, as cover'd all the field;
And all their foreheads like the knights before,
With laurels ever-green were *shaded* o'er. *Dryden.*

To shelter; to hide.
Ere in our own house I do *shade* my head,
The good patricians must be visited. *Shakspeare.*

To protect; to cover; to screen.
Leave not the faithful side
That gave thee being, still *shades* thee and protects. *Milton.*

To mark with different gradations of colours.
The portals shone inimitable on earth
By model, or by *shading* pencil drawn. *Milton.*

To paint in obscure colours.
SHADE, a river of the United States, in the Ohio, which flows into the Ohio; 10 miles below the Hockhocking.
SHADE MOUNTAIN, a mountain of the United States, in Pennsylvania, north-east of Lewistown.

SHA'DER, *s.* Whoever or whatever obscures.—In every age virtue has its *shaders* or maligners. *Carleton.*

SHADFORTH, a township of England, county of Durham; 5 miles east-south-east of Durham.

SHA'DINESS, *s.* The state of being shady; umbrageousness.

SHADMAN, a town of Great Bucharia; 36 miles north-east of Termed.

SHA'DOW, *s.* [*ŕcabu*, Saxon; *schaduwe*, Dutch; a shade, *ŕcabepan*, to shadow.] The representation of a body by which the light is intercepted.—Poor Tom! proud of heart, to ride over four-inch'd bridges, to course his own *shadow* for a traitor. *Shakspeare.*

Life's but a walking *shadow*, a poor player,
That struts and frets his hour upon the stage,
And then is heard no more. *Shakspeare.*

Opacity; darkness; shade.
By the revolution of the skies
Night's sable *shadows* from the ocean rise. *Denham.*

Shelter made by any thing that intercepts the light, heat, or influence of the air.

In secret *shadow* from the sunny ray,
On a sweet bed of lilies softly laid. *Spenser.*

Obscure place.
To the secret *shadows* I retire,
To pay my penance till my years expire. *Dryden.*

Dark part of a picture.—A *shadow* is a diminution of the first and second light. The first light is that which proceeds immediately from a lightened body, as the beams of the sun. The second is an accidental light spreading itself into the air or medium proceeding from the other. *Shadows* are three-fold: the first is a single *shadow*, and the least of all; and is proper to the plain surface where it is not wholly possessed of the light. The second is the double *shadow*, and it is used when the surface begins once to forsake your eye, as in columns. The third *shadow* is made by crossing over your double *shadow* again, which darkeneth by a third part. It is used for the inmost *shadow*, and farthest from the light, as in gulfs, wells, and caves. *Peacham.*—After great lights there must be great *shadows*. *Dryden.*—Any thing perceptible only to the sight; a ghost; a spirit, or shade.

Hence, terrible *shadow!*
Unreal mockery, hence! *Shakspeare.*

An imperfect and faint representation; opposed to *substance*.—If substance might be call'd that *shadow* seem'd. *Milton.*—In the glorious lights of heaven we perceive a *shadow* of his divine countenance. *Raleigh.*—Inseparable companion.—Sin and her *shadow*, death. *Milton.*—Type; mystical representation.—Types and *shadows* of that destin'd seed. *Milton.*—Protection; shelter; favour.—Keep
me

me under the *shadow* of thy wings. *Psalms*.—For the laws of the distribution of shadows; see *OPTICS*.

To SHA'DOW, *v. a.* [*rcabepan*, Saxon.] To cover with opacity.

The warlike elf much wondered at this tree,
So fair and great, that *shadowed* all the ground. *Spenser*.

The Assyrian was a cedar with fair branches, and with a *shadowing* shroud. *Ezek.*—To cloud; to darken.

Mislike me not for my complexion;
The *shadow'd* livery of the burning sun
To whom I am a neighbour. *Shakspeare*.

Why sad? —

I must not see the face I love thus *shadowed*. *Beaum. and Fl.*

To conceal under cover; to hide; to screen.

Let every soldier hew him down a bough,
And bear't before him; thereby shall we *shadow*
The number of our host, and make discovery
Err in report of us. *Shakspeare*.

To protect; to screen from danger; to shroud.

God shall forgive your Cœur de Lion's death,
The rather, that you give his offspring life,
Shadowing their right under your wings of war. *Shakspeare*.

To mark with various gradations of colour, or light.—From a round globe of any uniform colour, the idea imprinted in our minds is of a flat circle, variously *shadowed* with different degrees of light coming to our eyes. *Locke*.—To paint in obscure colours.—If the parts be too much distant, so that there be void spaces which are deeply *shadowed*, then place in those voids some fold to make a joining of the parts. *Dryden*.—To represent imperfectly.

Whereat I wak'd and found
Before mine eyes all real, as the dream
Had lively *shadow'd*. *Milton*.

To represent typically.—The shield being to defend the body from weapons, aptly *shadows* out to us the continence of the emperor, which made him proof to all the attacks of pleasure. *Addison*.

SHA'DOWGRASS, *s.* A kind of grass.

SHADOWING, *s.* Shade in a picture; gradation of light or colour.—I like not praising, when 'tis too loud: a little is as *shadowings* to a well limned piece: it sets it off the better; but when it is too deep, it dulls the native life, and renders its air unpleasant. *Feltham*.

SHA'DOWY, *adj.* [*rcæbþɪɣ*, Sax.] Full of shade; gloomy.

This *shadowy* desert, unfrequented woods,
I better brook than flourishing peopled towns. *Shakspeare*.

Not brightly luminous.

More pleasant light
Shadowy sets off the face of things. *Milton*.

Faintly representative; typical; unsubstantial; unreal.—*Milton* has brought into his poems two actors of a *shadowy* and fictitious nature, in the persons of sin and death; by which he hath interwoven in his fable a very beautiful allegory. *Addison*.—Dark; opaque.

By command, ere yet dim night
Her *shadowy* cloud withdraws, I am to haste
Homeward. *Milton*.

SHADOXHURST, a parish of England, in Kent; 4 miles south-west of Ashford.

SHADWELL (Thomas), a dramatic writer, and poet-laureat to king William III., was descended of an ancient family in Staffordshire, and was born about the year 1640, at Lauton-hall, in Norfolk, a seat belonging to his father, who was bred to the law, but having an ample fortune did not practice, choosing rather to serve his country as a magistrate. He was in the commission for three counties, viz., Middlesex, Norfolk and Suffolk, and discharged the duties of the office with distinguished ability, and the most perfect in-

tegrity. In the civil wars he had been a considerable sufferer for the royal cause, so that having a numerous family, he was reduced to the necessity of selling and spending a considerable part of his estate to support it. In these circumstances he resolved to educate his son to his own profession. He was sent for preparatory studies to Caius college, Cambridge, and was afterwards entered at the Temple, but becoming acquainted with some of the wits of that time, he deserted his profession and devoted himself to literature. It was not long before he became eminent in dramatic poetry, and he appeared before the public as the writer of a comedy entitled "The sullen Lovers," or "The Impertinents," which was acted in the duke of York's theatre, and in 1668 it was printed. The success of this piece encouraged the author to proceed, and he from this period rapidly brought out plays, chiefly of the comic kind, till he had reached the number of seventeen. His model was Ben Jonson, whom he imitated in drawing humorous characters, rather from his own conceptions than from nature; and though his name has not been transmitted to posterity with much encomium, and his works have long since disappeared from the stage, yet some of his delineations are said to display much real humour. Lord Rochester has given him a respectable place among his contemporaries; he says,

"None seem to touch upon true comedy,
But hasty Shadwell and slow Wycherly."

As every one in those days was of necessity a party man, Shadwell ranked himself among the Whigs, and in consequence of this he was set up as a rival to Dryden. Hence there grew a mutual dislike between them, and upon the appearance of Dryden's tragedy, entitled the "Duke of Guise," in 1683, Shadwell was charged with having the principal hand in writing a piece, entitled "Some Reflections on the pretended Parallel in the Play, called the Duke of Guise, in a Letter to a Friend," which was printed the same year. Dryden wrote a vindication of the Parallel, and a considerable storm was raised both against Shadwell and his friend Hunt, who assisted him in it, and who, on this occasion, was forced to fly into Holland. Dryden, by way of revenge upon Shadwell, wrote the bitterest satire against him that ever was penned; this was the celebrated Mac-Flecknoe.

In 1688, Shadwell was appointed to succeed his rival Dryden in the laureatship, an honour which he did not enjoy many years. He died suddenly in the year 1692, in the fifty-second year of his age, at Chelsea, and was interred in the church there. Dr. Nicholas Brady preached his funeral sermon, in which he assures us, "that the subject of his discourse was a man of great honesty and integrity, and had a real love of truth and sincerity; an inviolable fidelity and strictness to his word; an unalterable friendship wherever he professed it; and a much deeper sense of religion, than many others have who pretend to it more openly." The titles of Shadwell's plays are given in the Biographia Dramatica. An edition of his works, consisting of those plays and miscellaneous poems, was printed in 1720, in four vols. 8vo. The earl of Rochester, in speaking of Shadwell, says, "If he had burnt all he had written, and printed all he spoke, he would have had more wit and humour than any other poet."

SHADWELL, a parish of England, in Middlesex; 2½ miles east-by-south of St. Paul's cathedral, London, and included within the bills of mortality. Here is a fine medicinal spring. The inhabitants are mostly employed in the sea-faring line. Population 9855.

SHADWELL, a village of England, in Salop, south-west of Bishop's Castle.

SHADWELL, a hamlet of England, West Riding of Yorkshire; 5½ miles north-north-east of Leeds.

SHADY, *adj.* [*rcæbþɪɣ*, Sax.] Full of shade; mildly gloomy.

The wakeful bird
Sings darkling, and in *shadiest* covert hid
Tunes her nocturnal note. *Milton*.

Secure

Secure from the glare of light, or sultriness of heat.—Cast at also that you may have rooms *shady* for summer, and warm for winter. *Bacon.*

To SHAFFLE, *v. n.* [perhaps a corruption of *shuffle*.] To move with an awkward or irregular gait; to hobble. *Used in the North.*

SHAFFLER, *s.* One who limps, or walks lamely. *Obsolete.—Huloet.*

SHAFT, *s.* [ꝛcept, Sax.] An arrow; a missive weapon.

To pierce pursuing shield

By parents train'd, the Tartars wild are taught,

With shafts shot out from their back-turned bow. *Sidney.*

[*Shaft*, Dutch.] A narrow, deep, perpendicular pit.—They sink a *shaft* or pit of six foot in length. *Carew.*—

Suppose a tube, or, as the miners call it, a *shaft*, were sunk from the surface of the earth to the centre. *Arbutnot.*—

Any thing strait; the spire of a church.—Practise to draw small and easy things, as a cherry with the leaf, the *shaft* of a steeple. *Peacham.*—[*schaft*, Germ.; *shaft*, Su. Goth.] Handle of a weapon.—Pole of a chaise.

SHAFTED, *adj.* Having a handle: a term of heraldry, applied to a spear-head, when there is a handle to it.

SHAFTESBURY, a township of the United States, in Bennington county, Vermont. It is flourishing, and contains an academy. Population 1973.

SHAFTMENT, *s.* [ꝛcept-mund, Sax.] Measure of about six inches with the hand; a span.

SHAFTOE, EAST and WEST, two hamlets of England, in Northumberland; 13 miles west-south-west of Morpeth.

SHAFTON, a hamlet of England, West Riding of Yorkshire; 5 miles north-east of Barnesley.

SHAFTSBURY, a market town and Borough of England, in the county of Dorset, very pleasantly situated on a lofty eminence, which commands an extensive prospect over the three adjoining counties of Dorset, Somerset and Wilts. The air is pure, and healthy, but bleak, owing to the height of the place. The town has but an indifferent appearance, many of the buildings being mean, and the streets mostly irregular. The houses are chiefly built of a stone dug out of the neighbouring eminences. In ancient times, when its celebrated monastery was in a flourishing condition, it was of much more importance than at present. It contained, besides the abbey church, twelve other churches, several chantries and fraternities, and a priory or hospital of St. John the Baptist. Of these buildings, only four churches now remain, dedicated respectively to St. Peter, the Holy Trinity, St. James and St. Rumbold. Of these, St. Peter's is the principal. It is of considerable antiquity, and exhibits much elegance in its proportions and ornaments, but is greatly defaced by modern alterations. Shaftsbury abbey was founded by the great Alfred; and the charter of foundation creating his daughter Ethelgeda abbess, is still extant. It was originally dedicated to the Virgin Mary, and soon became one of the richest and best endowed nunneries in England. It occupied a great extent of ground, and contained a vast variety of offices and apartments within its precincts. The abbess was one of those that held of the king a whole barony, on which account she was liable to be called to parliament, but was excused on account of her sex. She had writs, however, directed to her, to send her quota of men into the field, according to her knights' fees. After the conquest, this convent was for some time neglected; but by the patronage of succeeding monarchs, it again rose to its former celebrity, and acquired extensive donations in land. Scarcely a vestige of the abbey is now visible, the whole having been demolished soon after the dissolution, except the high embattled wall, supported by buttresses, which formerly enclosed the park, and is still in part standing on the side next the town. Besides its churches, Shaftsbury contains meeting-houses for Presbyterians, methodists and quakers. The other public buildings of the town are the town-hall, a handsome edifice, built on five arches; a free-school, but moderately endowed; and two alms-houses. The town is but indifferently supplied with water, which has to be brought

from a distance on carts and horses. Shaftsbury is a very ancient borough by prescription, and its privileges have also been confirmed by charters of Elizabeth, James I. and Charles II. The government of the town is by these vested in a corporation, consisting of a mayor, recorder, 12 aldermen, a bailiff and common council men. The borough has sent two members to parliament since the 25th Edward I. They are elected by the inhabitants paying scot and lot, who are reckoned at 300 in number, and are returned by the mayor. Shaftsbury is a place of great antiquity, and much diversity of opinion prevails as to its origin, some ascribing its foundation to the ancient British kings previous to the birth of Christ, and others to Alfred the Great. That it was known to the Romans, is inferred from many coins of that people being found here, and from other circumstances. It is only, however, from the foundation of the monastery by Alfred, that the prosperity of the town is to be dated. The manor appears from Domesday Survey to have been very anciently divided between the crown and the abbey. The abbey manor was surrendered in the 30th of Henry VIII., whose successor granted it to Thomas Wriothesley, earl of Southampton, together with the town, borough and monastery. It afterwards passed to Sir Thomas Arundel, and from him to the earls of Pembroke, by one of whom, Philip, the royalty of the manor and borough manor were sold to Anthony Ashley Cowper, earl of Shaftsbury, in whose family they still continue. By the returns of 1811, Shaftsbury contained 515 houses, and 2159 inhabitants. Market on Saturday, and one annual fair; 28 miles east-north-east of Dorchester, and 101 west-south-west of London. Lat. 50. 59. N. long. 2. 9. W.

SHAG, *s.* [ꝛeaczga, Sax. Su. Goth. *shaeg*, barba.] Rough woolly hair.

Full often like a *shag*-hair'd crafty kern,

Hath he conversed with the enemy;

And given me notice of their villanies.

Shakspeare.

True Witney broad cloth, with its *shag* unshorn,

Be this the horseman's fence.

Gay.

A kind of cloth.—Loth we are to be under the yoke of restraint, though it be lined with velvet and *shag* of ease and innocence. *Waterhouse.*

SHAG, *adj.* Hairy; shaggy.

A well proportion'd steed,—

Round-hoof'd, short-jointed, fetlocks *shag* and long.

Shakspeare.

To SHAG, *v. a.* To make shaggy or rough; to deform.

Other scenes,

Of horrid prospect, *shag* the trackless plain.

Thomson.

SHAG, *s.* A sea bird.—Among the first sort we reckon *shags*, duck and mallard. *Carew.*—See PELICANUS GRACULUS.

SHAG ISLAND, an island in Christmas Sound, on the south coast of Terra del Fuego, so named by Captain Cook, from the numbers of shags which were observed to breed in the cliffs.

SHA'GGED, or SHA'GGY, *adj.* [ꝛeaczgeb, Sax. comatus; Dan. *skagged*, barbatus, *skag*, barba. Rugged; roughly; hairy.

A lion's hide he wears;

About his shoulders hangs the *shaggy* skin,

The teeth and gaping jaws severely grin.

Dryden.

From the frosty north

The early valiant Swede draws forth his wings,

In battailous array, while Volga's stream

Sends opposite, in *shaggy* armour clad,

Her borderers; on mutual slaughter bent.

Philips.

Rough; rugged.

They pluck'd the seated hills with all their load,

Rocks, waters, woods, and by the *shaggy* tops

Uplifting bore them in their hands.

Milton.

SHA'GGEDNESS, *s.* State of being shagged.—The inhabitants

inhabitants could not inform him of the colour, *shag-gedness*, and other qualities of the dog. *More*.

SHAGOMIGON, a large peninsula which projects into Lake Superior, upwards of 60 miles.

SHAGR, a village of Syria, in the pachalic of Aleppo; 40 miles west of Aleppo.

SHAGRE'EN, *s.* [An eastern word, *sagri*, *soghre*, and *shagrain*.] The skin of a kind of fish, or skin made rough in imitation of it.

To SHAGRE'EN, *v. a.* [*chagriner*, Fr.] To irritate; to provoke. It should be written *chagrin*.

SHAGUM, a river of North America, which runs into Lake Erie.

SHAH, the Persian title corresponding to king, and superior to khan. The most absolute Persian monarchs, who have never assumed any other title than that of shah, have permitted the governors of provinces in their empire to take that of khan.

SHAHABAD, an extensive and fertile district of Hindostan, province of Bahar. It is most advantageously situated between the rivers Soane and Ganges, as they approach their confluence. It is estimated to contain more than a million of inhabitants, in the proportion of 19 Hindoos to one Mahometan. Its towns are Chunar, Boujepore and Arrah. It now constitutes one of the Bahar collectorships, and is governed by a judge, who is amenable to the court of circuit of Patnah. Its capital is Arrah.

SHAHABAD, a town of Hindostan, province of Oude, and district of Kyrabad, situated on the eastern side of the Gurrah river. It was formerly a large place, but is now much fallen to decay. Lat. 27. 39. N. long. 79. 55. E.

SHAHABAD, a town of Hindostan, province of Delhi, belonging to the Seiks, formerly a place of much more consequence than at present. Lat. 30. 12. N. long. 76. 28. E.

SHAHALA INDIANS. Indians of North America, on the rapids of the Columbia. Population 2000.

SHAIBAZPORE, a town of Hindostan, province of Allahabad, district of Corah. Lat. 26. N. long. 80. 46. E.

SHAHDORAH, a town of Hindostan, province of Delhi, and district of Saharunpore. Lat. 30. 26. N. long. 77. E.

SHAHGUNGE.—There are several places of this name in Hindostan: it signifies the King's Granary.

SHAHIGIAN. See MERU SHAH JEHAN.

SHAHISABI, a town of Korassin, in Persia, on the borders of Bucharia; 80 miles north of Meru.

SHAHJEHANABAD, the Mahometan name of Delhi, the former capital of Hindostan. See DELHI.

SHAHJEHANPORE, a town of Hindostan, province of Delhi, district of Bareilly; situated on the east side of the Gurrah river. Lat. 27. 51. N. long. 79. 53. E.

SHAHJEHANPORE, a town of Hindostan, province of Malwah, belonging to the Mahrattas, situated on the banks of the Sagormuty river, and a place of considerable consequence, being the capital of a district. Lat. 23. 38. N. long. 76. 18. E.—Both these towns are called after the emperor Shah Jehan, who reigned in the middle of the 17th century; and there are several other places of the same name.

SHAHNOOR, SANORE or *Sevanoor*, an extensive district of Hindostan, province of Bejapore, belonging to the Mahrattas. It is situated between the rivers Kistna and Tungbudra, and about the 15th degree of northern latitude. The country is extremely fertile, and under a good government would be very productive. Its political history will be found in the description of its capital.

SHAHNOOR, SANORE or *Savanoor*, a city of Hindostan, and capital of the above mentioned district. It was formerly fortified, and contained a palace and many good buildings, the greater part of which are now in ruins. It is said now to have been taken by the Mahometans so early as the year 1397, and in the course of time became the capital of one of the innumerable nabobs who arose into power on the decline of the empire of Delhi. The first who is mentioned in our histories, is the person who attended the Nizam Nasir Jung, when he entered the Carnatic in 1749,

and in the following year took a part in mutiny or rebellion, which cost Nasir Jung his life; and in the year 1751 was himself killed in a second rebellion. The successor of this nabob seems to have sought protection from the Mahrattas against the viceroy; for in 1746 we find a French army in the service of the Nizam Salbut Jung, advancing to Savenore, to exact the tribute due from the nabob; but by the intrigues of Morari Row, this Mahratta chief, this object was frustrated.

In the year 1763, Hyder Aly sent an agent to Abdal Hakeem, nabob of Shalnoor, to solicit his alliance, and that of the two other Afghan nabobs of Cuddapah and Kurnoul, against the Mahrattas; but the former having rejected this overture, Hyder Aly invaded his dominions in the following year, totally defeated him in a general engagement, and compelled him to submit to very humiliating terms. The unfortunate situation of this little territory, lying between Mysore and the Mahratta states, involved the helpless nabob in continual difficulties, being always compelled to submit to, and join the strongest party. Subsequent to his defeat by Hyder, his country was invaded by the Mahrattas, who took permanent possession of one half his domains. In 1779 Hyder Aly compelled the nabob to enter into a double marriage with his family, the nabob taking Hyder's sister for wife, and giving his daughter to Kereem Sahib, the second son of Hyder, now a state prisoner in Calcutta. This alliance, however, could not save the nabob from the merciless treatment of Tippoo Sultan, who, in the year 1786, took Shalnoor, plundered it of every thing valuable, and forced the nabob to take refuge again with the Mahrattas. At the conclusion of the war between Tippoo Sultan and the allied powers in 1792, Shalnoor was included in the portion of territory assigned to the Mahrattas; but instead of restoring Abdal Hakeem to his authority, they settled a pension on him, which, however, was so badly paid, that the British ambassador at the court of Poonah in 1804 was obliged to intercede in his behalf, and succeeded in obtaining some relief for the distressed family. Shalnoor now forms one portion of the Mahratta territory added to the British dominions by the late events in India. Lat. 15. 1. N. long. 75. 22. E.

SHAHNUAZ, a town of Hindostan, province of Moultan, belonging to the Seiks. Lat. 30. 41. N. long. 72. 39. E.

SHAHPOOR, a town of Hindostan, province of Gundwah, district of Singrowla. It is situated on the banks of the Rhair river, in the middle of a fertile plain. The town is about a mile in extent, and has a small citadel, built of stone and mud. Lat. 23. 34. N. long. 83. 23. E.

SHAHPOOR, a town of Hindostan, province of Lahore. It is situated on the south-east side of the river Ravey, and belongs to the Seiks. Lat. 32. 19. N. long. 74. 45. E.—There are several other places of this name, which signifies *King's town*, in Hindostan, but none of any consequence.

SHAHPOORAH, a town of Hindostan, province of Ajmeer, and district of Harowty. It is a large town, surrounded by a strong stone wall and ditch, which can be filled at pleasure from a large reservoir. It contains some good houses, and a public college. This place, with the adjoining territory, belongs to a Hindoo chief, who is tributary to the Ranah of Odeypore. A division of the British forces was encamped at this place in February 1818. Lat. 25. 43. N. long. 75. 9. E.

SHAHR-E-VAN, a town of Irak Arabi, on the high road from Bagdad to Hamadam, on the site of the ancient Appolonia. It is a handsome little town, watered by two canals from the river Diala, on which it stands, and peopled by about 4000 Turks and Kurds; 50 miles south-east of Bagdad.

SHAHZADPORE, a town of Hindostan, province of Allahabad. It was named after the late emperor of Delhi, when prince royal. It is situated on the western side of the Ganges, and was formerly surrounded by a brick wall, having round towers at the angles. Lat. 25. 42. N. long. 81. 41. E.

SHAH-

SHAHZADPORE, a town of Bengal, district of Nattore. Lat. 24. 12. N. long. 89. 43. E.

SHAIGI, a village of Nubia, situated on an island in the Nile; 130 miles east of Dongola.

SHAIGOL, a town of Korassan in Persia; 10 miles south-west of Meru.

To SHAIL, *v. n.* [Teut. *schaht*, obliquous.] To walk sideways: *A low word. Unused.*—Child, you must walk strait, without skiewing and *shailing* to every step you set. *L'Estrange.*

SHAIMA, a small sea-port of Mekran, in Persia; 200 miles west-south-west of Kej.

SHAINT, or HOLY ISLES, three small islands of the Hebrides, lying in the channel betwixt the isles of Lewis and Sky, and in the district of the former. One is called Hlan Moair, or St. Mary's island, and has a chapel on it, which was dedicated to the Virgin Mary. These islands are famous for pasturing sheep and black cattle. One family resides on the largest of them, for the purpose of tending the cattle.

SHAIRGUR, a town of Hindostan, province of Delhi, and district of Bareilly. Lat. 28. 40. N. long. 79. 21. E.

SHAIZAK, a village of Syria, in the Orontes, in the pahalic of Damascus; 20 miles north of Hamah.

SHAK, a village of Shirvan, in Persia; 20 miles north-west of Schamachie.

To SHAKE, *v. a.* pret. *shook*; part. pass. *shaken*, or *shook*; and formerly *shaked*. [ꝑcacan, ꝑecacan, Sax. *schocken*, Teut.] To put into a vibrating motion; to move with quick returns backwards and forwards; to agitate.—I will *shake* mine hand upon them, and they shall be a spoil to their servants. *Ecch.*—The stars fell unto the earth, even as a fig-tree casteth her untimely figs when she is *shaken* of a mighty wind. *Rev.*

He *shook* the sacred honours of his head:
With terror trebled heav'n's subsiding hill,
And from his *shaken* curls ambrosial dews distil. *Dryden.*

To make to totter or tremble.

Wert thou some star, which from the ruin'd roof
Of *shak'd* Olympus by mischance didst fall? *Milton.*

The rapid wheels *shake* heaven's basis. *Milton.*—To throw down by a violent motion.

The tyrannous breathing of the North
Shakes all our buds from blowing. *Shakspeare.*

He looked at his book, and, holding out his right leg, put it into such a quivering notion, that I thought he would have *shaked* it off. *Tatler.*—To throw away; to drive off.

'Tis our first intent

To *shake* all cares and business from our age. *Shakspeare.*

To weaken; to put in danger.—When his doctrines grew too strong to be *shook* by his enemies, they persecuted his reputation. *Atterbury.*—To drive from resolution; to depress; to make afraid.—A sly and constant knave, not to be *shak'd*. *Shakspeare.*

Not my firm faith

Can by his fraud be *shaken* or seduc'd. *Milton.*

To SHAKE hands. This phrase, from the action used among friends at meeting and parting, sometimes signifies to *join with*, but commonly to *take leave of*.

With the slave,

He ne'er *shook* hands, nor bid farewell to him,
Till he unseam'd him from the navé to the chops. *Shakspeare.*

Nor can it be safe to a king to tarry among them who are *shaking* hands with their allegiance, under pretence of laying faster hold of their religion. *Icon Basilike.*

To SHAKE off. To rid himself of; to free from; to divest of.

Be pleas'd that I *shake off* these names you give me:
Antonio never yet was thief or pirate. *Shakspeare.*

If I could *shake off* but one seven years,
From these old arms and legs,
I'd with thee every foot. *Shakspeare.*

To SHAKE, *v. n.* To be agitated with a vibratory motion. To totter.

Under his burning wheels
The stedfast empyrean *shook* throughout. *Milton.*

To tremble; to be unable to keep the body still.

Thy sight, which should
Make our eyes flow with joy, hearts dance with comforts,
Constrains them weep, and *shake* with fear and sorrow. *Shakspeare.*

What said the wench, when he rose up again?
—Trembled and *shook*, for why, he stamp'd,
As if the vicar meant to cozen him. *Shakspeare.*

To be in terror; to be deprived of firmness.

He short of succours, and in deep despair,
Shook at the dismal prospect of the war. *Dryden.*

SHAKE, *s.* Concussion suffered.

But the great soldier's honour was compos'd
Of thicker stuff, which could endure a *shake*. *Herbert.*

Impulse; moving power.—The freeholder is the basis of all other titles: this is the substantial stock, without which they are no more than blossoms that would fall away with every *shake* of wind. *Addison.*—Vibratory motion.—Several of his countrymen probably lived within the *shake* of the earthquake, and the shadow of the eclipse, which are recorded by this author. *Addison.*—Motion given and received.—Our salutations were very hearty on both sides, consisting of many kind *shakes* of the hand. *Addison.*—In music the alternate prolation of two notes in juxtaposition to each other, with a close on the note immediately beneath the lower of them.—A Scottish song admits of no cadence; I mean by this, no fanciful or capricious descant upon the close of the tune. There is one embellishment, however, which a fine singer may easily acquire, that is, an easy *shake*. *Tytler.*

SHAKEFORK, *s.* A fork to toss hay about. *Unused.*

SHAKER, *s.* The person or thing that shakes.

Go then, the guilty at thy will chastise,
He said; the *shaker* of the earth replies. *Pope.*

SHAKER-PIGEON, a kind of pigeons of which there are two sorts, the broad-tailed, and the narrow-tailed. See COLUMBA.

SHAKERS, a sect which originated in Lancashire, with some deserters from the society of Quakers, or Friends, about the year 1747, and which continued for some time unconnected with every denomination of Christians. During this period, their testimony, derived, as they fancied and pretended, from what they saw by vision and revelation from God, was, "that the second appearing of Christ was at hand, and that the church was rising in her full and transcendent glory, which would effect the final downfall of Antichrist." From the shaking of their bodies in religious exercises, they were denominated Shakers, and by some persons they were called Shaking Quakers. The sect seems to have made no great progress until the year 1770, when the testimony originally announced was fully opened, according to the special gift and revelation of God through Ann Lee, who was born of obscure parentage, at Manchester, about the year 1736; and who, having joined the society in 1758, became afterwards a distinguished leader among them. Her exercises, both of body and of mind, were singularly trying and severe for about the term of nine years; but she was thus prepared for receiving the testimony of God, against the whole corruption of man, in its root and every branch. Accordingly, her testimony was in the power of God, attended with the word of prophecy, and such energy of the Spirit, as penetrated into the secrets of the heart, and was irresistible, especially in those with whom she was united.

In 1774, Ann Lee, with some of her followers, having been thought mad, and sorely persecuted, settled their temporal affairs in England, and set sail from Liverpool for New York. James Wardley and his wife remaining behind, were removed into an almshouse, and there died. The others, we are told, "being without leader or protection, lost their power, and fell into the common course and practice of the world!" Ann Lee and the brethren reached New York, after working a sort of miracle, for the ship sprung a leak on the voyage, and it is more than hinted, that had it not been for their exertions *at the pump*, the vessel would have gone down to the bottom of the ocean! She, however, left New York, and fixed her residence up the Hudson river, eight miles from the city of Albany. In this retired spot, her followers greatly multiplied, but she was not without bitter reproaches and manifold persecutions. She and the elders would delight in missionary journeys, being out for two or three years, and returning with wonderful accounts of their success.

Another tribe of these visionaries collected together at Water-Vliet, where they were visited by great numbers from distant parts of the state of New York, Massachusetts, Connecticut, New Hampshire, and the district of Maine, who received faith; and through the power and gifts of God, which were abundantly manifested for the destruction of sin, and the salvation of souls, many were filled with joy unspeakable and full of glory, and increased in their understanding of the way and work of God.

Ann Lee died on the eighth day of the ninth month 1784. From the year 1780 to 1787, the credit of this sect revived in America, and the number of its adherents considerably increased.

The creed of the Shakers is very obscurely and mystically expressed. They seem to be believers neither of the Trinity nor of the Satisfaction. They deny also the imputation of Adam's sin to his posterity, as well as the eternity of future punishment. The tenets on which they most dwell are those of human depravity, and of the miraculous effusion of the Holy Ghost! Their leading practical tenet is the abolition of marriage, or indeed the total separation of the sexes. This circumstance of course attracts great attention, and they pride themselves on their superior purity. The essence of their argument is, that the resurrection spoken of in the New Testament means nothing more than conversion; our Saviour declares that in the resurrection they neither marry nor are given in marriage, therefore, on conversion or the resurrection of the individual, marriage ceases!!! To speak more plainly, the single must continue single, and the married must separate. Every passage in the gospel and in the epistles is interpreted according to this strange and unnatural hypothesis.

The system of the Shakers is pretty plainly described by themselves; and they make no scruple of attributing to Ann Lee, the same authority as Christ was possessed of.

SHAKERSTONE, a hamlet of England, in Leicestershire; $3\frac{1}{2}$ miles north-west of Market Bosworth.

SHAKERSTOWN, a township of the United States, in Mercer county, Kentucky. Population 298.

SHAKER TOWN, a township of the United States, in Knox county, Indiana, a little east of the Wabash; about 15 miles north of Vincennes.

SHAKES, in Ship-Building, a name given to the cracks or rents in a plank, &c., occasioned by the sun or weather.

SHA'KING, *s.* Vibratory motion.—There was a noise, and behold, a *shaking*; and the bones came together, bone to his bone. *Ezek.*—Concussion.—There shall be a great *shaking* in the land of Israel. *Ezek.*—State of trembling.

A *shaking* through the limbs they find,
Like leaves saluted by the wind.

Waller.

SHAKING, a disease in sheep, consisting of a weakness in their hind quarters, so that they cannot rise up

when they are down. There has not hitherto been found any remedy for this disease. It is probably of the nature of palsy, and to be removed by strong nervous stimulant remedies.

SHAKRA, a village of Nedsjed, in Arabia; 120 miles north-east of Faid.

SHAKSPEARE (William), the poet, was born on the 23d of April, 1564, at Stratford-upon-Avon. His father John; was, according to some, a butcher; according to others, a woolstapler; but these accounts are not contradictory, since the two trades were, formerly, often united. It is said that his family were in respectable circumstances, and that he was sent to a free-school; but these facts rest only on the traditions collected some years after his death by Aubrey and others. Aubrey says, moreover, that he killed a calf in high style, and on such an occasion always made a speech over it to the surrounding country-folk; and (on the authority of a Mr. Beeston) that he was for some short time a country-schoolmaster. Let us add that his frequent and correct use of law-terms has induced some to think that Shakspeare spent some time in an attorney's office, and we have stated all that is to be gathered from any source concerning his education.

About the age of 18, he married Ann Hathaway, who bore him a son and two daughters, and soon after he left Stratford for London. It is reported that he was obliged to fly the place, on account of his having engaged in stealing venison from the park of Sir Thomas Lucy, and afterwards lampooning that gentleman. But there is no authority for this fact. The presumption that the character of Justice Shallow in Henry the Fourth was intended to represent Sir Thomas is weakened by the circumstances, that that character is simply foolish and impotent, and not at all imperious or harsh, as we may suppose the persecutor would have been represented by the oppressed; and that no deer-stealing incident, or any thing like it is introduced. This derogatory aspersion is still further rendered improbable by the fact, that *robbers* are never drawn by Shakspeare in the favourable light so many other authors have delighted to portray them. He disgraces and destroys Pistol, Bardolph, &c., and never for a moment encourages an idea that a thief of any sort can be a fit or decent member of society. This is important, because with his powers he might have drawn the picture entirely in his own favour: offences against the game-laws never were, nor will be held disgraceful, except by those who have game to lose. He might have so favourably depicted the boldness and independence of the deer-stealer, and so contrasted it with the petty and legal oppression of the knight, that public admiration, as well as laughter, would have been on his own side. And can it be supposed for a moment, that a poet, a man of quick feelings, driven from his home and family, secure by time, distance and circumstances from his opponent, would not have indulged the natural rancour of his pen, and lavished his hatred and indignation on a character intended to represent his early and bitter foe?

It is surmised with more probability, that the infidelity of his wife disgusted Shakspeare with his home, and determined him to go to London, where he had a relative established, named Thomas Green, a famous comedian; through whose means he, no doubt, obtained an introduction to the stage. The slight manner in which his wife is mentioned in his will, the fact that he did not live with her after 1684, and that an entry occurs in the Stratford parish register of the burial of a child named Thomas Green, *alias Shakspeare*, render it highly probable that a domestic injury of this kind was the cause of his departure. Circumstances had already occurred to render the stage a desirable situation. Travelling companies of players had visited Stratford on more than twenty occasions, between 1569 (when our poet was under six years of age,) and 1587, and Burbage and Green, two celebrated London actors, were his townsmen, so that even from childhood, his attention must have been attracted to the stage. When, therefore, his views in life were

J. Pass sc.

SHAKSPEARE.

Engraved for the Encyclopædia Londinensis, 1827.

were unavoidably altered; it was natural that the Theatre should present itself to his mind, as his best asylum; he directed his steps to the metropolis, he became a player, and in the end, a writer for the stage. The tale of Shakspeare's attending at the Globe, on his first arrival in London, to take charge of gentlemen's horses, during the performance, is absurd; but it seems likely that the first office he held in the Theatre, was that of *call-boy*, or prompter's attendant. He did not long continue in that capacity, being soon admitted to perform minor parts. Shakspeare followed the profession of an actor upwards of seventeen years, and till within about thirteen years of his death; but we have good reason to suppose that *six shillings and eight pence a week* was the highest reward of his dramatic efforts. Of his merit as an actor, we have no positive data on which to found an opinion. From some satirical passages in the writings of his contemporaries, we may fairly suppose that he was not a favourite performer with the public. His instructions to the players in Hamlet, however, bespeak so deep a study of the art, that it is possible his unpopularity may be attributed as much to the bad taste of his auditors, as to a deficiency in his own powers. The only characters which we know with certainty to have been personated by Shakspeare, are the Ghost in Hamlet, and Adam in As You Like it: his name appears in the list of Players attached to Ben Jonson's Sejanus, and Every Man in his Humour; but it is sufficiently evident that he never sustained any very important part. His first attempts at authorship were confined to the adaptation of the older dramas to the stage, and hence probably arose that habit of borrowing plots and incidents which so remarkably characterizes him. No portion of his history is more obscure than the period at which he first ventured to rely on the resources of his own mind, and produce an original drama on the stage, which he had so often trod unnoticed. Every attempt to select from the long list of his wonderful productions the one which paved his way to future eminence, has ended in uncertainty. The Comedy of Errors, and The Two Gentlemen of Verona, have each been pitched upon as the first, but any other might have been named with an equal probability. Our bard, however, was well known as a dramatic writer in 1592, and there is reason to suppose that all his compositions for the stage were written between 1590 and 1613, a period of about twenty-three years, and when it is considered that we possess thirty of his plays which are indisputably genuine, besides several, the authenticity of which is doubtful, the marvellous power and range of his intellect will be sufficiently evident. According to the chronological order in which the critics have placed his dramas, his genius appears in full vigour from its first flight to its last. A Midsummer Night's Dream is said to have been his second production. It is a mortifying fact that of Shakspeare's method of writing we know nothing. The story that is related of his telling Ben Jonson that he had "never blotted out a line," seems to show that he wrote with astonishing facility, and of this indeed there is strong internal evidence in all his writings. Yet it is also probable that many of his far extended puns, quibbles and plays on words were the result of some toil, and that his finer speeches must have undergone many retouchings. This, however, is mere conjecture. Of his art, or the order of his productions, nothing certain has been discovered.

The following, however, is the order his plays were written in, according to the surmises of Malone and Chalmers:—

	According to Malone.	According to Chalmers.
The Third Part of Henry VI. was written in	1591	1595
A Midsummer Night's Dream	1592	1598
Comedy of Errors	1593	1591
Taming of the Shrew	1594	1598
Love's Labour's Lost	1594	1592
Two Gentlemen of Verona	1595	1595
Romeo and Juliet	1595	1592
Hamlet	1596	1597
King John	1596	1598

VOL. XXIII. No. 1557.

	According to Malone.	According to Chalmers.
King Richard II.	1597	1596
King Richard III.	1597	1595
First Part of Henry IV.	1597	1596
Second Part of Henry IV.	1598	1597
Merchant of Venice.	1598	1597
All's Well that Ends Well.	1598	1599
King Henry V.	1599	1597
Much ado about Nothing.	1600	1599
As You Like it	1600	1599
Merry Wives of Windsor	1601	1596
King Henry VIII.	1601	1613
Troilus and Cressida	1602	1600
Measure for Measure	1603	1604
The Winter's Tale	1604	1601
King Lear	1605	1605
Cymbeline	1605	1606
Macheth.	1606	1606
Julius Cæsar	1607	1607
Antony and Cleopatra.	1608	1608
Timon of Athens.	1609	1601
Coriolanus	1610	1609
Othello	1611	1614
The Tempest	1612	1613
Twelfth Night	1614	1613

Shakspeare, like most men of pre-eminent talents, is said to have been much assailed by the attacks of envious rivals, notwithstanding that gentleness and good nature were the peculiar characteristics of his personal deportment. Among those who are said to have treated him with hostility was the celebrated Ben Jonson; but though Jonson was arrogant of his scholarship, and publicly professed a rivalry of Shakspeare, he was in private his friend and associate.

The opposition or rivalry of Shakspeare and Jonson produced, as might naturally be expected, much contention, concerning their relative merits, between their respective friends and admirers; and it is not a little remarkable, that Jonson seems to have maintained a higher place in the estimation of the public in general than our poet, for more than a century after the death of the latter. Within that period Jonson's works are said to have passed through several editions, and to have been read with avidity, while Shakspeare's were comparatively neglected till the time of Rowe. This circumstance is in a great measure to be accounted for on the principle that classical literature and collegiate learning were regarded in those days as the chief criteria of merit. Accordingly Jonson's charge against Shakspeare was the want of that species of knowledge, that "he knew little Latin and less Greek;" and upon his own proficiency in these languages, he arrogated to himself a superiority over him. That all classical scholars, however, did not sanction Jonson's pretensions, is certain; for among the greatest admirers of Shakspeare, was one of the most learned men of his age, Hales. On one occasion, the latter, after listening in silence to a warm debate between Sir John Suckling and Jonson, is reported to have interposed by observing, "that if Shakspeare had not read the ancients, he had likewise not stolen any thing from them; and that if he (Jonson) would produce any one topic finely treated by any one of them, he would undertake to shew something on the same subject, at least as well written, by Shakspeare; which of course could very easily be done."

Shakspeare, unlike most authors of his time, became wealthy. He combined author and actor in his own person; this in some degree alleviated his pecuniary difficulties, and his superlative merits as a poet soon advanced him in the regard of the great and the noble. The players in his time were constantly denominated and treated as servants; and wherever the actor visited his patron's mansion, the only place he expected admittance to, was the *buttery*. On the contrary, the friendship of the poet was frequently sought by the opulent: even noblemen made him their companions, and chose him at once as the object of their bounty and esteem. In this manner, Shakspeare became the bosom associate of

the accomplished Lord Southampton. That nobleman's father-in-law, Sir Thomas Heminge, was treasurer of the queen's chamber, in which capacity it was his duty to reward the actors employed at court; thus plays and players were almost forced upon the notice of Lord Southampton, and the hold theatrical amusements had on his mind, is evident, even at a late period of his life, from his shunning the court for a diurnal attendance at the Globe; his entertainment of Cecil with "plaies;" and his ordering Richard the Second to be performed on the night previous to the rebellion of the Earl of Essex. Shakspeare's intimacy with Southampton commenced when the latter was about twenty years of age, and from the dedication prefixed to *Venus and Adonis* in 1593, it is apparent that their friendship was cemented by great liberality on the part of the patron; for Rowe tells us, on the authority of Davenant, that in order to enable Shakspeare to complete a purchase, Southampton at one time presented him with a thousand pounds, a gift very exorbitant. The tradition derives credit from the wealth which the dramatist is known to have possessed in a few years subsequently to his arrival in London; for it is contrary to probability, that his opulence could have arisen from his emoluments either as actor or author, since all his original productions were sold absolutely to the theatre, and he did not publish his plays; for though some of his dramas were printed in his life-time, this was done surreptitiously, and was at once a fraud on the author and the reader. Of Shakspeare's comparative opulence, however, there can be no doubt: in 1597, he purchased the most respectable mansion in his native Stratford, and went to considerable expence in alterations and repairs.

Several of the nobility, particularly the Earls of Pembroke and Montgomery, vied with Southampton in conferring favours on Shakspeare, and he was distinguished in a most flattering manner by the favour of two successive sovereigns. We are told that the Merry Wives of Windsor (the first draught of which was finished in a fortnight) was written expressly at the command of the *Virgin Queen*, who being highly delighted with Falstaff's humour in Henry the Fourth, wished him to be exhibited under the influence of love. The author's reputation was no doubt increased by the approbation of his royal mistress, which in all likelihood was the only advantage he obtained from her notice. Rowe celebrates "the many gracious marks of her favour" which Shakspeare received; but no traces of any pecuniary reward from her munificence is to be found. In James the First the stage found a warm and generous supporter. In 1599 he gave protection to a company of English comedians in his Scottish capital; and he had no sooner ascended the British throne, than he effected an absolute change in the theatrical world. In the first year of his reign an act of Parliament passed, which took from the nobility the privilege of licensing comedians, and all the smaller companies then existing were immediately united into three regular establishments patronized by the royal family. Though Elizabeth and James were particularly fond of dramatic representations, it does not appear that they ever visited the public theatres; they gratified their taste by commanding the comedians to perform plays at court. These entertainments were usually given at night, an arrangement which suited the actors, as the theatres were generally open in the morning. The ordinary fee for such a performance in London was 6*l.* 13*s.* 4*d.*, and an additional 3*l.* 6*s.* 8*d.* was sometimes added by the royal bounty.

In 1603 Shakspeare, together with Fleteher, Burley and others obtained a licence for the enacting of plays at the Globe Theatre, and he soon became important in the management. It is impossible to estimate his income from this source: we are ignorant into how many shares this theatrical property was divided, nor can we tell what portion was enjoyed by the poet. If, however, he was equal with Hemings, who is joined with him in the licence, we are authorized by his partner to assert that it produced "a good yearly income." This worldly elevation soon induced him to quit the drudgery of an actor, an employment which he

mentions in his sonnets with disgust, and henceforth he seems to have yielded all the powers of his comprehensive mind to the improvement of dramatic literature. The affectionate wish which Shakspeare formed in early life, to return after his brilliant career, to his native Stratford, and die at home, induced him to purchase New Place in 1597. In the pleasure ground of that unassuming mansion, he planted, with his own hand, a mulberry tree, which flourished for many years, and was regarded with reverence. To this favourite spot, in 1613 or 14, he retired from the applauses and the bustle of the world, to the genuine repose and unsophisticated pleasures of a country life. Aubrey informs us that it was our bard's custom to visit Stratford yearly; but, previous to 1596, the place of his residence in London has not been discovered. He then lodged near the Bear Garden in Southwark, and it is not improbable that he remained there till his final retirement from the metropolis.

Shakspeare retired from the metropolis at a period a little past the prime of life. He executed his will, yet extant in the Prerogative Office, on the 25th of March, 1616, and died on the 23d of April, being the 52d anniversary of his birth.

His body was buried on the north of the chancel of the great church at Stratford, and over his remains was erected a flat stone bearing this inscription, supposed, on account of the *my* in the last line, to have been written by himself:—

"Good friend, for Jesus' sake forbear
To dig the dust enclosed here!
Blest be the man that spares these stones,
And curst be he that moves *my* bones."

Many anecdotes of the drunken frolics, and the witticisms of Shakspeare have been handed down by loose tradition. As they are not entertaining, and the evidence they rest on insufficient, we have abstained from inserting them. Our remarks on the general merits of Shakspeare, and on his particular works, are contained in the article *POETRY*.

It would occupy some pages to give even a list of the editions that have been published of this author. His plays have probably had a larger circulation than any book in the world, if we except the Bible, and the demand progressively increases. Yet it is remarkable that we still want a good edition of his works. There are certainly many things in Shakspeare, that require clearing up and explaining, and many others which give scope for interesting and amusing remarks. So that mere reprints of the text, (of which so many have lately been produced) is obviously not enough for enlightened readers. On the other hand the bulky accumulations of the commentators are tedious to all readers, and are too expensive for many. It is astonishing what a deal of obscurity has been created by making difficulties of very obvious things. A printer of the name of Zackariah Jackson, published in 1818, proposals for publishing Seven hundred Errors in Shakspeare, and it is really amusing to see how often by transposing a letter, and dividing two words differently (matters that his business naturally rendered him expert at), he clears up in the simplest manner, points long disputed, or quite unsettled; and there is no doubt that a man of plain sense, proceeding in this way and selecting also from Johnson, Pope, &c., their best remarks, might edit a very desirable edition of Shakspeare at a cheap rate.

SHAKY, *adj.* An appellation given by builders to timber, which is cracked either with the heat of the sun or the drought of the wind. *Chambers*.

SHAL, a district of Balochistan, in Persia, to the south of Kelat. It is remarkable for its fruits, which are very fine, and sold amazingly cheap. The climate is warmer, and the soil more sandy than that of Kelat.

SHALBOURN, a parish of England, in Berkshire; 4 miles south-by-west of Hungerford. Population 807.

SHALBOURN, WEST, a hamlet of England, in Berkshire; within half a mile of the foregoing.

SHALDEN, a parish of England, in Southamptonshire; 2½ miles north-west of Alton.

SHALE, *s.* [Sax. *scala*, *gluma*.]—A husk; the case of seeds in siliqueous plants.

Behold yon poor and starved hand,
And your fair shew shall suck away their souls,
Leaving them but the *shales* and husks of men. *Shakspeare.*

A black slaty substance, or a clay hardened into a stony consistence, and so much impregnated with bitumen, that it becomes somewhat like a coal. It forms large strata in Derbyshire. *Chambers.*—Coals and aluminous earths, or *shale*. *Philos. Trans.*

To SHALE, *v. a.* To peel; to shell: a northern word. *Grose.*

SHALES, a village of England, situated on the Barbeck, west of Orton.

SHALFLEET, a parish of England, in the Isle of Wight, Southamptonshire. The church is large, and of Norman architecture, with some painted glass in the windows; $3\frac{1}{2}$ miles east-by-south of Yarmouth. Population 709.

SHALFORD, a parish of England, in Essex, situated on the Blackwater; 5 miles north-north-west of Braintree. Population 539.

SHALFORD, a parish of England, in Surrey; $1\frac{1}{2}$ mile south-south-east of Guildford. Population 620.

SHALL, *v. defective.* [*scéal*, Sax. is originally *I owe*, or *I ought*. In Chaucer, the faith *I shall* to God, means, the faith *I owe* to God: thence it became a sign of the future tense. The French use *devoir, dois, doit*, in the same manner, with a kind of future signification; and the Swedes have *skall*, and the Icelanders *skal*, in the same sense. It has no tenses but *shall* future, and *should* imperfect.—The explanation of *shall*, which foreigners and provincials confound with *will*, is not easy.

I SHALL love. It will so be that I must love; I am resolved to love.

SHALL I love? Will it be permitted me to love? will you permit me to love? will it be that I must love?

Thou SHALT love. I command thee to love; it is permitted thee to love: [in poetry or solemn diction] it will be that thou must love.

SHALT thou love? Will it be that thou must love? Will it be permitted to thee to love.

He SHALL love. It will be that he must love; it is commanded him that he love.

It is a mind, that *shall* remain.

——— *Shall* remain!

Hear you this triton of the minnows? Mark you His absolute *shall*? *Shakspeare.*

See Romulus the great:
This prince a priestess of your blood *shall* bear,
And like his sire in arms he shall appear. *Dryden.*

SHALL he love? Is it permitted him to love? In solemn language, will it be that he must love? The plural persons follow the signification of the singulars.

SHALLOON, *s.* [from *Chalons*, a town in Champagne, where this kind of stuff was made.] A slight woollen stuff.

In blue *shalloon* shall Hannibal be clad,
And Scipio trail an Irish purple plaid. *Swift.*

SHALLOP, *s.* [*chaloupe*, Fr.] A small boat.
Our hero set

In a small *shallop*, fortune in his debt. *Waller.*

SHALLOT, *s.* An *eschalot*.

SHALLOT CREEK, a river of North Carolina, which runs into the Atlantic. Lat. 33. 53. N. long. 78. 28. W.

SHALLOW, *adj.* [this word is probably compounded of *shoal* and *low*. *Dr. Johnson.*] Not deep; having the bottom at no great distance from the surface or edge.—I had been drowned, but that the shore was shelvy and *shallow*; a death that I abhor. *Shakspeare.*—In *shallow* furrows vines securely grow. *Dryden.*—Not intellectually deep; not profound; not very knowing or wise; empty; trifling; futile; silly.

I'll shew my mind,
According to my *shallow* simple skill. *Shakspeare.*

One would no more wonder to see the most *shallow* nation of Europe the most vain, than to find the most empty fellows in every nation more conceited than the rest. *Addison.*—Not deep of sound.—If a virginal were made with a double concave, the one all the length of the virginal, and the other at the end of the strings, as the harp hath, it must make the sound perfecter, and not so *shallow* and jarring. *Bacon.*

SHALLOW, *s.* A shelf; a sand; a flat; a shoal; a place where the water is not deep.

I should not see the sandy hour-glass run,
But I should think of *shallows* and of flats;
And see my wealthy Andrew dock'd in sand,
Veiling her high top lower than her ribs,
To kiss her burial. *Shakspeare*

To SHALLOW, *v. a.* To make shallow.

That thought alone thy state impairs,
Thy lofty sinks, and *shallows* thy profound. *Young.*

SHALLOW WATER, POINT, a cape on the west coast of North America. Lat. 63. N. long. 197. 8. E.

SHALLOW-BRAINED, *adj.* Foolish; futile; trifling; empty.—It cannot but be matter of just indignation to all good men to see a company of lewd *shallow-brained* buffs making atheism, and contempt of religion, the sole badge of wit. *South.*

SHALLOWLY, *adv.* With no great depth.—The load lieth open on the grass, or but *shallowly* covered. *Carew.*—Simply; foolishly.

Most *shallowly* did you these arms commence,
Fondly brought here, and foolishly sent hence. *Shakspeare.*

Want of depth; want of thought; want of understanding; futility; silliness; emptiness.

By it do all things live their measur'd hour:

We cannot ask the thing which is not there,
Blaming the *shallowness* of our request. *Herbert.*

SHALM, *s.* [*scahlmey*, Teut., *chalemie* or *chalemelle*, old Fr., from *calamus*, Lat. Our word is also written and pronounced *shawn*.] A kind of musical pipe.—Every captain was commanded to have his soldiers in readiness to set forward upon the sign given, which was by the sound of a *shalm* or hoboy. *Knolles.*

SHALSTONE, a parish of England, in Buckinghamshire; 4 miles north-west of Buckingham.

SHALT. Second person of *shall*.

To SHAM, *v. a.* [*shommi*, Welsh, to cheat. *Dr. Johnson.*—Or from the Teut., *schimpen*, to jeer, to scoff; *schimp*, joke, sport.] To trick; to cheat; to fool with a fraud; to delude with false pretences. *A low word.*—Men tender in point of honour, and yet with little regard to truth, are sooner wrought upon by shame than by conscience, when they find themselves fooled and *shammed* into a conviction. *L'Estrange.*—To obtrude by fraud or folly.—We must have a care that we do not, for want of laying things and things together, *sham* fallacies upon the world, for current reason. *L'Estrange.*

To SHAM, *v. n.* To make mocks.

Then all your wits that flee and *sham*,
Down from Don Quixote to Tom Tram,
From whom I jests and puns purloin,
And slyly put them off for mine,
Fond to be thought a country wit. *Prior.*

SHAM, *s.* Fraud; trick; delusion; false pretence; imposture. *A low word.*

That in the sacred temple needs would try
Without a fire the unheated gums to fry,
Believe who will the solemn *sham*, not I. *Addison.*

SHAM, *adj.* False; counterfeit; fictitious; pretended.

Never join the fray,
Where the *sham* quarrel interrupts the way. *Gay.*

SHAMBE, a small river of West Florida, which empties into

into Pensacola Bay. It admits shallows some miles up, and boats upwards of 50 miles.

SHA'MBLES, *s.* [from the Sax., *rcamel*, a bench or table, on which the meat is laid.] The place where butchers kill or sell their meat; a butchery.—He warned a flock of sheep, that were driving to the *shambles*, of their danger; and, upon uttering some sounds, they all fled. *Arbuthnot.*

SHA'MBLING, *s.* Act of moving awkwardly and irregularly. *A low bad word.*—By that *shambling* in his walk, it should be my rich banker, Gomez, whom I knew at Barcelona. *Dryden.*

SHA'MBLING, *adj.* Moving awkwardly and irregularly. So when nurse Nokes to act young Ammon tries, With *shambling* legs, long chin, and foolish eyes, With dangling hands he strokes th' imperial robe, And with a cuckold's air commands the globe. *Smith.*

SHAMBURG, a township of the United States, in Washington county, Mississippi.

SHAME, *s.* [*rceam rcama*, Sax., *skam*, Su Goth., from *skaman*, M. Goth., *erubescere*, to blush. *Serenius.*]—The passion felt when reputation is supposed to be lost; the passion expressed sometimes by blushes.—In the schools men are allowed, without *shame*, to deny the agreement of ideas; or out of the schools, from thence have learned, without *shame*, to deny the connection of ideas. *Locke.*—The cause or reason of shame; disgrace; ignominy.

O *shame* to manhood! shall one daring boy
The scheme of all our happiness destroy? *Pope.*

Reproach; infliction of shame.—A foul *shame* is upon the thief. *Ecclus.*

Applause

Turn'd to exploding hiss, triumph to *shame*,
Cast on themselves from their own mouths. *Milton.*

To SHAME, *v. a.* To make ashamed; to fill with shame. Who *shames* a scribbler, breaks a cobweb through; He spins the slight self-pleasing thread a-new. *Pope.*

To disgrace.

Certes, sir knight, ye been too much to blame,
Thus for to blot the honour of the dead,
And with foul cowardice his carcass *shame*. *Spenser.*

To SHAME, *v. n.* To be ashamed.

Great shame it is, thing so divine in view,
Made for to be the world's most ornament,
To make the bait her gazers to embrew;
Good *shames* to be to ill an instrument. *Spenser.*

SHA'MEFACED, *adj.* [*rcamfært*, Sax. And so our word was anciently *shamfast* and *shamefastness*.] Modest; bashful; easily put out of countenance.—Conscience is a blushing *shamefaced* spirit, that mutinies in a man's bosom; it fills one full of obstacles. *Shakspeare.*

SHA'MEFACEDLY, *adv.* Modestly; bashfully.—He would have us live soberly, that is to say, honestly, *shamefastly*, chastely, temperately and frugally. *Woolton.*

SHA'MEFACEDNESS, *s.* Modesty; bashfulness; timidity.—None but fools out of *shamefacedness*, hide their ulcers, which, if shown, might be healed. *Dryden.*

SHA'MEFUL, *adj.* Disgraceful; ignominious; infamous; reproachful.

The knave of diamonds tries his wily arts,
And wins, O *shameful* chance! the queen of hearts. *Pope.*

Full of indignity or indecency; raising shame in another.

Phœbus flying so most *shameful* sight,
His blushing face in foggy cloud implies,
And hides for shame. *Spenser.*

SHA'MEFULLY, *adv.* Disgracefully; ignominiously; infamously; reproachfully.—Those who are ready enough to confess him, both in judgment and profession, are, for the most part, very prone to deny him *shamefully* in their

doings. *South.*—With indignity; with indecency; so as ought to cause shame.

None but that saw, quoth he, would ween for truth,
How *shamefully* that maid he did torment. *Spenser.*

SHA'MELESS, *adj.* [*rcamleas*, Sax.] Wanting shame; wanting modesty; impudent; frontless; immodest; audacious.

Such *shameless* bards we have; and yet 'tis true,
There are as mad abandon'd critics too. *Pope.*

SHA'MELESSLY, *adv.* Impudently; audaciously; without shame.—He must needs be *shamelessly* wicked that abhors not this licentiousness. *Hale.*

SHA'MELESSNESS, *s.* [*rcamleagneffe*, Sax.] Impudence; want of shame; immodesty.—He that blushes not at his crime, but add *shamelessness* to his shame, hath nothing left to restore him to virtue. *Bp. Taylor.*

SHA'MER, *s.* Whoever or whatever makes ashamed. My means and my condition are no *shamers*
Of him that owes 'em. *Bœaum.*

SHAMLY, a town of Hindostan, province of Delhi, and district of Saharunpore. This place is nearly two miles in circumference, and was formerly of considerable consequence. It still contains some good houses. The bazars are well stocked. The streets are regular, and have gates at their entrances, which are shut at night to defend the inhabitants against robbers, with which the neighbouring country was, till it came into the British possession, much infested. Lat. 29. 33. N. long. 77. 10. E.

SHA'MMER, *s.* A cheat; an impostor. *A low word.*

SHA'MOIS, *s.* [*chamois*, Fr.] A kind of wild goat. See CHAMOIS.

I'll bring thee
To clustering filberds, and sometimes I'll get thee
Young *shamois* from the rocks. *Shakspeare.*

SHAMOKIN, a Moravian settlement in Pennsylvania, near Sunbury.

SHAMOKIN, CREEK, a river of Pennsylvania, which runs into the Susquehanna. Lat. 40. 51. N. long. 76. 53. W.

SHA'MROCK, *s.* The Irish name for three-leaved grass.—If they found a plot of watercresses or *shamrocks*, there they flocked as to a feast for the time. *Spenser.*

SHANDAKIN, a township of the United States, in Ulster county, New York; 20 miles west of Kingston. Population 1602.

SHANEDI, a village of Nubia, on the right bank of the Nile.

SHANESVILLE, a village of the United States, in Tuscarawas county, Ohio, on Sugar creek, recently laid out.

SHANGALLA, a race of savage negroes, inhabiting the northern frontier of Abyssinia, particularly on the lower part of the Mareb and the Tacazze. The track which they occupy consists of a belt varying in breadth, though averaging about 40 miles. Numberless streams, descending from the high country, water and inundate it, producing a rank excess of vegetation, which unfits it for the production of any useful vegetable. It is entirely covered with deep and almost impenetrable forests, fit only for the production of wild animals, and still wilder men. The Shangalla are complete savages, who go naked, neither sow nor plant, and have no fixed habitations. During the dry half of the year, they live under the shade of trees, the lowest branches of which they cut near the stem, on the upper part, planting the ends of the branches in the earth. Having then covered them with the skins of wild beasts, and cut away the superfluous interior branches, they form a spacious pavilion, which at a distance appears like a tent, the trunk serving for the pole, and the large top overshadowing it, so as to make a very picturesque appearance. During this season, every tree is a house, peopled by a family of black inhabitants. In the time of the rainy season, the soil dissolves so completely into mire, that it is no longer possible to live above

above ground. The Shangalla then seek their winter quarters in caves dug in the heart of the mountains, from a soft gritty sandstone, easily excavated, and formed into different apartments. Here they make their abode during the rainy months, living upon the flesh which they have dried and prepared during the more favourable season. Their food is procured by hunting. The elephant is taken and killed by various devices, as is the rhinoceros, and the other large animals. Those who reside where water abounds, kill the hippopotami or river horses, which are exceedingly numerous in the pools of the stagnant rivers. In sandy tracks, ostriches, and a beautiful species of lizard, form the principal food. Some feed chiefly upon locusts; others live in districts abounding with a considerably greater variety of game. These various tribes have been correctly described by Ptolemy, according to their food, under the titles of Rhizophagi, Elephantophagi, Acridophagi, &c. The meat thus caught in the fair season is cut into thongs as thick as a man's thumb, like so many ropes, and hung up on the surrounding trees. The sun dries and hardens it almost to the consistence of leather, or the hardest Newfoundland fish. In winter, when preparing it for use, they first beat it with a wooden mallet, then boil it, and then roast it upon the embers. The Shangalla are subject to little subordination, though there is an union of families and tribes for common defence in danger. They are continually exposed to a most serious calamity during the dry season; this being the only part of Abyssinia favourable for hunting, the princes undertake expeditions on a great scale for that purpose. Along with the elephant and rhinoceros, they hunt also the Shangalla, for the purpose of carrying them off as slaves. These unfortunate savages, destitute both of horses and fire-arms, maintain a very unequal warfare; yet by their native valour they often prevail, and have even invaded and occupied the neighbouring provinces of Tigre.

SHANK, *s.* [*œcanc*, *œcanc*, *Sax.*, *schink*, *Germ.*, *sehenkel*, *Dutch.*] The middle joint of the leg; that part which reaches from the ankle to the knee.—A stag says, if these pitiful *shanks* of mine were but answerable to this branching head, I can't but think how I should defy all my enemies. *L'Estrange*.—The bone of the leg.

Shut me nightly in a charnel-house,
O'er cover'd quite with dead men's rattling bones,
With reeky *shanks*, and yellow chapless skulls. *Shakspeare*.

Leg or support of any thing.—In Somersetshire they have a way of setting their mows of corn on a frame, standing upon four stones cut with a *shank*. *Ray*.—The long part of any instrument.—The *shank* of a key, or some such long hole, the punch cannot strike, because the *shank* is not forged with substance sufficient. *Moxon*.—[*bryonia*, *Lat.*] An herb.

SHANK, the Shanscrit name of that species of shell, which gives its name in Europe to this branch of natural history. French and foreign writers spell the word *chank*. The easy substitution of a hard for a soft initial, has led to a supposition that *conch* may, by early writers, have been taken from the same source as *shank*, or even derived from it. The *shank*, or *chank*, or *conch*, is the large buccinum, and is often seen beautifully coloured like a pheasant's breast.

The shells in question are articles of commerce in India, to no inconsiderable extent. A *chank* fishery on the island of Ceylon is noticed by Mr. Cordiner. It is in the neighbourhood of Manaar (see MANAAR), and yields, Mr. Cordiner says, a considerable revenue to government. The shells, he says, are brought from the depth of two fathoms by divers, who in a calm day can, from a boat, see them crawling at the bottom. Such as are of a spiral form, are chiefly exported to Bengal, where they are sawed into rings of various sizes, and worn on the arms, legs, fingers and toes of the Hindoos, both male and female. A *chank* opening to the right, that is, with its spiral line contrary to its usual direction, is rarely met with, and is highly valued by mystics and zealots.

Vol. XXIII. No. 1556.

SHANK, or SHANK-PAINTER, in a Ship, is a short chain fastened under the foremast-shrouds, by a bolt, to the ship's sides, having at the other end a rope fastened to it. On this shank-painter the whole weight of the aft-part of the anchor rests, when it lies by the ship's side. The rope by which it is hauled up, is made fast about a timber-head.

SHANK, SHEEP, a sort of knot made on backstays, &c., to shorten them.

SHANK'S ISLAND, an island in the South Pacific Ocean, about 15 miles from east to west, and 18 from north to south; discovered in 1802. Lat. 28. S. long. 163. E.

SHA'NKED, *adj.* Having a shank.

SHA'NKER, or CHA'NCRE. A venereal excrescence.

SHANKLIN, a parish of England, in the Isle of Wight, Southamptonshire; 7 miles south-east of Newport.

SHANNON, the chief river in Ireland, which takes its rise from Lough Clean, and pursuing a south and south-west direction, divides the provinces of Leinster and Munster from Connaught. It passes Limerick, where it turns nearly to the west, and 60 miles below this city, falls into the Atlantic Ocean, between Kerry Head and Cape Lean, after a course of 200 miles. It is navigable nearly to Limerick for ships of the greatest burden, and for smaller vessels throughout the whole extent of its course. It traverses several large lakes, and forms many extensive bays and estuaries, interspersed with beautiful islands. The largest lakes through which it passes, are Lough Boffin, Lough Ree or Regith, and Lough Derg or Dergart. The first, which is about 10 square miles in extent, is situated at the confines of the counties of Leitrim, Longford and Roscommon. Lough Ree extends nearly from Lanesborough to Athlone, a distance of about 16 miles, and is from two to five miles in breadth: it contains above fifty islands, many of which are covered with wood and good pasture. Lough Derg is 18 miles long, and from 2 to 7 broad: it is diversified with about sixty islands, one of which, called Innismore, contains above a hundred acres of good land; and on another, called the Holy Island, are the ruins of seven churches, and a round tower. This lake extends nearly from Portumna to Killaloe. There is also below Limerick, at the confluence of the Fergus river, an immense estuary or frith, of many square miles in extent, interspersed with several rich and romantic islands. The Shannon receives above thirty other rivers in its course, and diffuses verdure and fertility over the banks of ten counties, namely, Leitrim, Roscommon, Galway and Clare, on the right; and on the left Longford, Westmeath, King's County, Tipperary, Limerick and Kerry. The principal rivers that fall in from the right bank, or Connaught side, are the Key, Suck, Scariff and Fergus. The confluence of the Key is at Carrick, and the Suck, which divides the counties of Roscommon and Galway, flows in at Clonfert, above Banagher. Several smaller rivers fall in from the county of Galway; and from Clare flow the Scariff and Fergus; but the great weight of water comes from the other side, by rivers running from east to west. The Inny is the first great river on the left bank: it is the boundary between the counties of Longford and Westmeath, and falls into Lough Ree, where it forms a large estuary. The second river on this side is the Great Brosna, which forms a fine confluence with the Shannon above Banagher; and the Lesser Brosna, united with the Birr river, falls in a few miles below that town. From hence to Limerick many smaller rivers flow in on the Ormond side, and below that city there are some larger ones: the principal are the Maig, Deel, Ovan, Cummage, Feale, Gale and Cashin. Several of the above are navigable to a considerable distance from the Shannon. From such an accumulation of rivers, lakes and springs, the mouth of the Shannon is increased to an immense magnitude, being nearly 10 miles in breadth for the last 15 miles, and from 20 to 30 fathoms deep. The principal towns situated on its banks are Leitrim, Carrick, Jamestown, Lanesborough, Athlone, Banagher, Portumna, Killaloe, Castleconnel, Tarbert and Kilrush; besides the city of Limerick, which it encompasses by different branches, and in some measure insulates. The tides in the mouth of the Shannon rise from 9 to 14 feet perpendicular

pendicular height; and they increase as the river becomes narrower, insomuch that at the pool of Limerick they are from 12 to 20 feet high. The current of the tide varies considerably in different parts of the stream, running at the rate of from two to five miles an hour. It is not, however, perceptible far above the city, owing to several cataracts. There are many fine bays on the Clare side, which afford safe anchorage and good shelter for shipping. The principal are Kilbahan, Carigahault, Clonderlaw and Labisheda, besides the commodious harbour of Poolanishary, near Kilrush, and Tarbert bay on the Kerry side. The navigation between the Upper and Lower Shannon was formerly impeded by the noted cataract near Castleconnel, called the Salmon Leap; but of late years canals have been drawn round this rock, as well as others called the Falls. An important communication has been likewise opened between the Shannon and Dublin, by means of the Grand Canal, which forms its junction above Banagher. The Shannon nearly insulates Connaught with the county of Clare; and if a canal of about four miles in length were cut from Lough Clare to the river Bonnet, which falls into Sligo Bay, the insular boundary would be complete, and the Shannon rendered navigable from sea to sea. The bridges over this river are chiefly at the forementioned towns, but there are none below Limerick. In this city there are three, one of which, called Thomond bridge, contains 14 arches; and about 10 miles higher is O'Brian's bridge, which has 19 arches. The fisheries on the Shannon are numerous and productive, particularly for salmon, which is of the finest flavour. Pikes are also numerous, and rise to the weight of 50lbs. each; trout, bream, eel, gillaroos, &c., are large and abundant; and perch are plentiful.

SHANNON, a small river of Upper Canada, which falls into the bay of Quinti, in Lake Ontario.

SHANSCRIT, SANSKRIT, *Samskrit*, *Samscretam*, or *Hanscrit language*, is the original language of the Hindoos or Gentoos.

The grand source of Indian literature, the parent of almost every dialect, from the Persian gulf to the China seas, says the learned Halhed, in the Preface to his Grammar of the Bengal Language, is the Shanscrit; a language of the most venerable and unfathomable antiquity, which, although at present shut up in the libraries of Bramins, and appropriated solely to the records of their religion, appears to have been current over most part of the oriental world; and traces of its original extent may still be discovered in almost every district of Asia. It is astonishing to find the similitude of Shanscrit words with those of Persian and Arabic, and even of Latin and Greek; and those not in technical and metaphorical terms, which the fluctuation of refined arts and improved manners might have occasionally introduced; but in the main ground-work of language, in monosyllables, in the names of numbers, and in the appellations of such things as would be first discriminated in the immediate dawn of civilization. The coins of Assam, Napaul, Cashmere, and many other kingdoms, are all stamped with Shanscrit letters, and mostly contain allusions to the old Shanscrit mythology: the same conformity is also observable in the impressions of seals from Bootan and Thibet. Besides, the arrangement of the Shanscrit alphabet is very different from that of any other quarter of the world. This extraordinary mode of combination still exists in the greatest part of the East, from the Indus to Pergu, in dialects now apparently unconnected, and in characters completely dissimilar; and affords a forcible argument that they are all derived from the same source. Moreover, the names of persons and places, of titles and dignities, which are open to general notice, and which are found even to the furthest limits of Asia, present manifest traces of the Shanscrit.

Shanscrita is the passive participle of a compound verb, formed by prefixing the preposition *sam* to the crude verb *cri*, and by interposing the letter *s*, when this compound is used in the sense of embellishment. Its literal meaning then is "adorned;" and when applied to a language, it signifies "polished." *Pracrita* is a similar derivative from the same

crude verb, with *pra* prefixed: the most common acceptation of this word is "outcast, or man of the lowest class:" as applied to a language, it signifies "vulgar." *Apabhhransa* is derived from *bhras*, to fall down: it signifies a word, or dialect, which falls off from correct etymology. Grammarians use the *Sanscrita* as signifying "duly formed or regularly inflected;" and *Apabhhransa* for false grammar.

The languages of India are all comprehended in these three classes. The first contains Shanscrit, a most polished tongue, which was gradually refined until it became fixed in the classic writings of many elegant poets, most of whom are supposed to have flourished in the century preceding the Christian era. It is cultivated by learned Hindoos throughout India, as the language of science and of literature, and as the repository of their law, civil and religious. It evidently draws its origin (and some steps of its progress may even now be traced) from a primeval tongue, which was gradually refined in various climates, and became Shanscrit in India; Pahlavi in Persia; and Greek on the shores of the Mediterranean. Like other very ancient languages, Shanscrit abounds in inflexions, which are, however, more anomalous in this, than in the other languages here alluded to; and which are even more so in the obsolete dialect of the Vedas, than in the polished speech of the classic poets. It has nearly shared the fate of other tongues, and is now become almost a dead language; but there seems no good reason for doubting, that it was once universally spoken in India. Its name, and the reputed difficulty of its grammar, have led many persons to imagine, that it has been refined by the concerted efforts of a few priests, who set themselves about inventing a new language; not like all other tongues, by the gradually improved practice of good writers and polite speakers. The exquisitely refined system by which the grammar of Shanscrit is taught, has been mistaken for the refinement of the language itself. The rules have been supposed to be anterior to the practice, but this supposition is gratuitous. In Shanscrit, as in every other known tongue, grammarians have not invented etymology, but have only contrived rules to teach what was already established by approved practice.

There is one peculiarity of Shanscrit compositions which may also have suggested the opinion, that it could never be a spoken language. Mr. Colebrooke alludes to what might be termed the euphonical orthography of Shanscrit. It consists in extending to syntax the rules for the permutation of letters in etymology. Similar rules for avoiding incompatible sounds in compound terms exist in all languages; this is sometimes effected by a deviation from orthography in the pronunciation of words, sometimes by altering one or more letters to make the spelling correspond with the pronunciation. These rules have been more profoundly investigated by Hindoo grammarians than by those of any other nation, and they have completed a system of orthography, which may be justly termed euphonical. They require all compound terms to be reduced to this standard, and Shanscrit authors, it may be observed, delight in compounds of inordinate length; the whole sentence too, or even whole periods, may, at the pleasure of the author, be combined like the elements of a single word, and good writers generally do so. In common speech this could never have been practised. None but well-known compounds would be used by any speaker who wished to be understood, and each word would be distinctly articulated, independently of the terms which precede and follow it. Such indeed is the present practice of those who still speak the Shanscrit language; and they deliver themselves with such fluency as is sufficient to prove, that Shanscrit may have been spoken in former times with as much facility as the contemporary dialects of the Greek language, or the more modern dialects of the Arabic tongue.

The father of Shanscrit grammar, who first composed those grammatical institutes in which this language is formed, or by which words are correctly formed or inflected, was Panini, who lived in so remote an age, that he ranks among those ancient sages, whose fabulous history occupies a conspicuous place

place in the "Puranas," or Indian theogonies. According to the Puranica legends, Panini was the grandson of Devala, an inspired legislator; but whatever may be his history, to him the Sutras, or succinct aphorisms of grammar, are attributed by universal consent.

His system is grounded on a profound investigation of the analogies in both the regular and the anomalous inflexions of the Shanscrit language. He has combined those analogies in a very artificial manner; and has thus compressed a most copious etymology into a very narrow compass. His precepts are indeed numerous, but they have been framed with the utmost conciseness; and this great brevity is the result of very ingenious methods which have been contrived for this end, and for the purpose of assisting the student's memory. In Panini's system the mutual relation of all the parts marks that it must have been completed by its author; it certainly bears internal evidence of its having been accomplished by a single effort, and even the corrections, which are needed, cannot be interwoven with the text. It must not be hence inferred, that Panini was unaided by the labours of earlier grammarians; in many of his precepts he cites the authority of his predecessors, sometimes for a deviation from a general rule, often for a grammatical canon which has universal cogency. He has even employed some technical terms without defining them, because, as his commentators remark, those terms were already introduced by earlier grammarians. None of the more ancient works, however, seem to be now extant; being superseded by his, they have probably been disused for ages, and are now perhaps totally lost.

The inaccuracies of the Paniniya grammar were corrected by Catyayana, an inspired saint and lawgiver, whose history is involved in the impenetrable darkness of mythology. The amended rules of grammar have been formed into memorial verses by Bhartri-hari, whose metrical aphorisms, entitled "Carica," have almost equal authority with the precepts of Panini, and emendations of Catyayana. Bhartri-hari is said to have lived in the century preceding the Christian era. The text of Panini being concise and ambiguous, many commentaries were composed to elucidate it, of the chief of which Mr. Colebrooke has given an account. The best and most concise commentary now extant, is entitled the "Casica vritti," or commentary composed at Varanasi. Within a few centuries past, a grammar, well adapted for aiding the student in acquiring a critical knowledge of the Shanscrit tongue, has been compiled by Ramachandra, entitled "Pracriyacaumudi."

When Shanscrit was the language of Indian courts, and was cultivated not only by persons who devoted themselves to religion and literature; but also by princes, lawyers, soldiers, physicians and scribes; in short, by the first three tribes, and by many classes included in the fourth; an easy and popular grammar must have been needed by persons who could not waste the best years of their lives in the study of words. Such grammars must always have been in use; those, however, which are now studied are not, we believe, of very ancient date. The most esteemed is the "Saraswata," together with its commentary named "Chandrica." It seems to have been formed on one of the Caumudis, by translating Panini's rules into language that is intelligible, independently of the gloss, and without the necessity of adverting to a different context.

Another popular grammar, which is in high repute in Bengal, is entitled "Mugd'habod'ha," and is accompanied by a commentary. It is the work of Vopadeva, and proceeds upon a plan grounded on that of the Caumudis; but the author has not been content to translate the rules of Panini, and to adopt his technical terms. He has, on the contrary, invented new terms, and contrived new abbreviations. The same author likewise composed a metrical catalogue of verbs alphabetically arranged. It is named "Cavicalpadruma," and is inteded as a substitute for the "D'hatupata."

The best and most esteemed vocabulary of the Shanscrit is the "Amera cosha," which, like most other Shanscrit

dictionaries, is arranged in verse to aid the memory. Numerous commentaries have been written on this vocabulary; the chief object of which is to explain the derivations of the nouns, and to supply the principal deficiencies of the text. Shanscrit etymologists scarcely acknowledge a single primitive amongst the nouns. When unable to trace an etymology which may be consistent with the acceptation of the word, they are content to derive it according to grammatical rules from some root to which the word has no affinity in sense. At other times they adopt fanciful etymologies from Puranas or from Tantras. But in general the derivations are accurate and instructive.

Amera's dictionary does not contain more than ten thousand different words. Yet the Shanscrit language is very copious. The insertion of derivatives, that do not at all deviate from their regular and obvious import, has been very properly deemed superfluous. Compound epithets, and other compound terms, in which the Shanscrit language is peculiarly rich, are likewise omitted; excepting such as are especially appropriated, by a limited acceptation, either as titles of deities, or as names of plants, animals, &c. In fact, compound terms are formed at pleasure, according to the rules of grammar; and must generally be interpreted in strict conformity with those rules. Technical terms too are mostly excluded from general dictionaries, and consigned to separate nomenclatures. The "Ameracosh" then is less defective than might be inferred from the small number of words explained in it. Still, however, it needs a supplement. The remaining deficiencies of the Ameracosh are supplied by consulting other dictionaries and vocabularies, which are very numerous.

The Shanscrit language is very copious and nervous; but the style of the best authors wonderfully concise. It far exceeds the Greek and Arabic in the variety of its etymology, and, like them, has a prodigious number of derivatives from each primary root. The grammatical rules are also numerous and difficult, though there are not many anomalies. "The Shanscrit language," says Sir William Jones, (Asiat. Res. vol. i. p. 422.) "whatever be its antiquity, is of a wonderful structure, more perfect than the Greek, more copious than the Latin, and more exquisitely refined than either; yet bearing to both of them a stronger affinity, both in the roots of verbs, and in the forms of grammar, than could possibly have been produced by accident; so strong, indeed, that no philologer could examine them all three without believing them to have sprung from some common source, which, perhaps, no longer exists. There is a similar reason, though not quite so forcible, for supposing that both the Gothic and the Celtic, though blended with a very different idiom, had the same origin with the Shanscrit, and the old Persian might be added to the same family."

The fundamental part of the Shanscrit language is divided into three classes; viz., *dhaat*, or roots of verbs, *shabd*, or original nouns, and *evya*, or particles. The latter are always indeclinable, as in other nations; but the words comprehended in the two former classes must be prepared by certain additions and inflexions to fit them for a place in composition. Here the art of the grammarian interposes, as not a syllable, nor a letter, can be added or altered but by regimen, nor the most trifling variation of the sense in the minutest subdivision of declension or conjugation can be effected without the application of several rules; and all the different forms for every change of gender, number, case, person, tense, mood or degree, are methodically arranged for the assistance of the memory; resembling, though on an infinitely more extensive scale, the compilations of *propria que maribus* and *as in present*.

In the Shanscrit language, the three distinctions of genders, viz., masculine, feminine, and neuter, are preserved in their common number and order. A Shanscrit noun, in its first formation from the general root, exists equally independent of case as of gender. It is neither nominative, nor genitive, nor accusative, nor is impressed with any of those modifications, which mark the relation and connexion between the several members of a sentence. In this state it is called an *imperfect*

imperfect, or *crude* noun. To make a nominative to any noun, the termination must be changed, and a new form supplied. Thus we see that, in the Shanscrit at least, the nominative has an equal right with any other inflexion to be called case. The Shanscrit has seven declensions of nouns, which are all used in the singular, dual and plural number, and differently formed, as they terminate with a consonant, and with a long or short vowel; and also as they are of different genders. The seven changes of inflexion are exclusive of the vocative, and therefore the Shanscrit comprehends two more than even those of the Latin: they are as follow, viz.:—1. The nominative, or *agent* in a sentence. 2. The passive case, or *subject* of the action. 3. The *causal* case, pointing out the cause *by* which a thing is done; or the instrument *with* which it is done; or the subject *in* or *by* which it is suffered. 4. The dative, with the sign *to* or *for*. 5. The ablative, implying the subject *from* whence any thing proceeds. 6. The *possessive* case, called by us the genitive. 7. The *locative* case, definitive of situation, and generally known by the sign *in*. The vocative is excluded from the number of cases, as no inflexion is employed in its formation.

The Shanscrit, the Arabic, the Greek, and the Latin verbs are furnished with a set of inflexions and terminations so comprehensive, and so complete, that by their form alone they can express all the different distinctions both of person and time. Three separate qualities are in them perfectly blended and united. Thus by their root, they denote a particular act; and by their inflexion, both point out the time when it takes place, and number of the agents. Every Shanscrit verb has a form equivalent to the middle voice of the Greek, used through all the tenses with a reflective sense; and the former is even the most extensive of the two in its use and offices; for in Greek the reflective idea can only be adopted intransitively, when the action of the verb descends to no extraneous subject; but in Shanscrit the verb is both reciprocal and transitive at the same time. The verb substantive of the Shanscrit very nearly resembles those of the Greek and Latin; but perhaps it would not be suspected that all the verbs in *mi* are formed exactly upon the same principle with the Shanscrit conjugations, even in the minutest particulars. All the terms which serve to qualify, to distinguish, or to augment either *substance* or *action*, are classed by the Shanscrit grammarians under a head, literally signifying *increase* or *addition*. According to this arrangement, a simple sentence consists of three numbers: the agent, the action, and the subject; which, in a grammatical sense, are reduced to two, viz., the noun (whether agent or subject) and the verb. All such words as tend to specificate or to amplify the noun, are denominated by a term which signifies *adjectives* or *epithets*; and such as are applied to denote relation or connexion, are called *connectives of nouns*, and by European grammarians, *prepositions*; those particles which in any manner affect the verb are denominated *attributes of verbs*.

The Shanscrit alphabet contains fifty letters; and it is one boast of the Bramins, that it exceeds all other alphabets in this respect. But when we consider that of their thirty-four consonants, nearly half are combined sounds, and that six of their vowels are merely the correspondent long ones to as many which are short, the advantage seems to be little more than imaginary. The Shanscrit character, used in Upper Hindoostan, is said to be the same original letter that was first delivered to the people by Brihma, and is called *Diewnagur*, or the language of angels; whereas the character used by the Bramins of Bengal is by no means so ancient, and is evidently a corruption of the former. In the four beids, or *vedas*, which constitute the original and sacred text of the great Hindoo creator and legislator Brihma, the length of the vowels is expressed by a musical note or sign placed over every word; and in reading the beids, these distinctions of tone and time must be nicely observed; so that they produce all the effect of a laboured recitative. It is remarkable, that the Jews in their synagogues chant the Pentateuch in the same kind of melody, and it is supposed that this usage has descended to them from the remotest ages. Some

writers have erroneously asserted, that the four beids are *in* verse; whereas they are written in a kind of measured prose; and they are now scarcely intelligible to the most learned pundits or lawyers; they are also scarce, and difficult to be found. However, comments have been written upon them from the earliest periods; of which one of the most ancient and approved was composed by Bishesht Mahamomè, or the Most Wise, a great writer and prophet, who is said to have lived in the suttee jogue, or first age of the world. See Halhed's Preface to his translation of the Code of Gentoo Laws, printed in 1776.

Dr. Leyden, in his account of the languages and literature of the Indo-Chinese nations, (*Asiatic Researches*, vol. x.) has shewn, that the "Pali," as it is generally written, or "Bali" language, as it is commonly pronounced, occupies the same place among the Indo-Chinese nations, which Shanscrit holds among the Hindoos, or Arabic among the followers of Islam. Throughout the greater part of the maritime countries, which lie between India and China, it is the language of religion, law, literature and science, and has had an extensive influence in modifying the vernacular language of those regions. La Loubere, on the authority of d'Herbelot, has stated that the ancient Persic language was termed *Pahalevi* (*Pahlavi*), and that the Persians do not distinguish in writing between *Pahali* and *Bahali*. P. Paulinus, however, applies this term *Bali* inaccurately to the square *Bali* character, instead of the language. This language, notwithstanding its extensive use among so many nations, and the degree of cultivation which it has received from the different tribes by whom it is employed, has hitherto attracted little attention among Europeans. The *Bali* alphabet, according to Dr. Leyden, seems, in its origin, to be a derivative from the *Deva-nagari*, though it has not only acquired considerable difference of form, but has been also modified to a certain degree, in the power of the letters, by the monosyllabic pronunciation of the Indo-Chinese nations. The form of the *Bali* character varies essentially among the different nations by whom it is used.

The *Bali* is an ancient dialect of Shanscrit, which sometimes approaches very near the original. When allowance is made for the regular interchange of certain letters, the elision of harsh consonants, and the contraction of similar syllables, all the vocables which occur in its ancient books, seem to be purely Shanscrit. In *Cheritas* and later compositions, however, some words of the popular languages of the country sometimes insinuate themselves, in the same manner as *Tamul*, *Telinga*, and *Canara* vocables occasionally occur, in the latter Shanscrit compositions of the *Dekhin*. The *Bali*, while it retains almost the whole extent of Shanscrit flexions, both in nouns and verbs, nevertheless employs this variety rather sparingly in composition, and affects the frequent introduction of the preterite participle, and the use of impersonal verbs. It also uses the cases of nouns in a more indeterminate manner than the Shanscrit, and often confounds the active, neuter, and passive tenses of verbs. Like other derivative dialects, it occasionally uses Shanscrit nouns and particles in an oblique sense; but notwithstanding all these circumstances, it approaches much nearer the pure Shanscrit, than any other dialect, and exhibits a close affinity to the *Prakrit*, and the *Zend*.

These three dialects, the *Prakrit*, the *Bali*, and the *Zend*, are probably the most ancient derivatives from the Shanscrit. The great mass of vocables in all the three, and even the forms of flexions, both in verbs and nouns, are derived from the Shanscrit, according to regular laws of elision, contraction, and permutation of letters. Sometimes they differ considerably, sometimes one, and sometimes another of them approaches nearest to the original Shanscrit. Their connection with this parent language was perceived, and pointed out by Sir W. Jones, and has also been alluded to by P. Paulinus, who derives his information, concerning the *Bali*, from *Carpanius*, and *Mantegatius*. The fate of these three languages is also, in some degree, similar. The *Prakrit* is the language which contains the greater part of the sacred books of the *Jainas*; the *Bali* is equally revered among the followers

Followers of Budd'ha; while the Zend, or sacred language of ancient Iran, has long enjoyed a similar rank among the Parsis, or worshippers of fire, and been the depository of the sacred books of Zoroaster. It is perhaps, however, more accurate to consider all the three, rather as different dialects of the same derivative language, than as different languages; and conformably to this idea, the Bali itself may be reckoned a dialect of Prakrit. The term Prakrit, both in books, and in common use among the Bramins, is employed with some degree of latitude. Sometimes the term is confined to a particular dialect employed by the Jains, as the language of religion and science, and appropriated to females, and respectable characters of an inferior class, in dramas. Sometimes it includes all the dialects derived immediately from the Shanscrit, whether denominated Prakrit, Magad'hi, Suraseni, Paisachi, or Apabbransa; and sometimes it is even extended to the Desa-b'hashas, or popular tongues of India, as Mahrasht or Mahratta, Canara, Telinga, Udia and Bengali. According to the extended use of the term Prakrit, it may certainly include both Bali and Zend; and if more extensive research should justify the idea derived from an imperfect investigation, Dr. Leyden apprehends that the Bali may be identified with the Magad'hi, and the Zend with the Suraseni; of Shanscrit authors.

These three dialects, the Prakrit, Bali and Zend, have been regularly cultivated and fixed by composition. The same laws of derivation are applicable to the formation of all the three; but yet there is often considerable diversity in the forms which particular words assume, as appears from the comparative specimen given by Dr. Leyden.

The learned Mr. Colebrooke has published in the 10th volume of the Asiatic Researches, an elaborate essay on Shanscrit and Prakrit poetry. He observes, that the prosody of Shanscrit will be found, from the examples which he has adduced, to be richer than that of any other known language, in variations of metre, regulated either by quantity or by number of syllables, both with and without rhyme, and subject to laws imposing in some instances rigid restrictions, in others allowing ample latitude. The rules relative to Prakrit prosody, are applicable, for the most part, to Shanscrit prosody also; since the laws of versification in both languages are nearly the same.

Shanscrit prosody admits of two sorts of metre; one governed by the number of syllables; and which is mostly uniform or monoschematic in profane poetry, but altogether arbitrary in various metrical passages of the Vedas. The other is in fact measured by feet, like the hexameters of the Greek and Latin; but only one sort of this metre, which is denominated *Arya*, is acknowledged to be so regulated; while another sort is governed by the number of syllabic instants or *matras*.

The most common Shanscrit metre is the stanza of four verses, containing eight syllables each; and denominated from the name of the class "Anushtubh," for an account of which, and of other kinds of metres, we refer *ubi supra*.

The Shanscrit writers notice different species of prose. They discriminate three and even four sorts, under distinct names. 1. Simple prose, admitting no compound terms. It is denominated "Muctaca." This is little used in polished compositions; unless in the familiar dialogue of dramas. It must undoubtedly have been the colloquial style, at the period when Shanscrit was a spoken language. 2. Prose, in which compound terms are sparingly admitted. It is called "Culaca." This and the preceding sort are by some considered as varieties of a single species named Churnica. It is of course a common style of composition; and, when polished, is the most elegant as it is the chastest. But it does not command the admiration of Hindoo readers. 3. Prose abounding in compound words. It bears the appellation of "Utalica praya." Examples of it exhibit compounds of the most inordinate length: and a single word exceeding a hundred syllables is not unprecedented. This extravagant style of composition, being suitable to the taste of the Indian learned, is common in the most elaborate works of their favourite authors. 4. Prose modulated so as fre-

quently to exhibit portions of verse. It is named "Vrittangand'hi." It will occur without study, and even against design, in elevated compositions; and may be expected in the works of the best writers.

Some of the most elegant and highly wrought works in prose are reckoned among poems, as already intimated, in like manner as the "Telemache" of Fenelon. The most celebrated are the "Vasavadatta" of Suband'hu, the "Dasa Cumara" of Dandi, and the "Cadambari" of Vana.

SHANTY, *adj.* [perhaps a corruption of *janty*.] Showy; gay. *Used in the north of England.*

SHAOSUMRE, a town of Hedsjas, in Arabia; 25 miles north of Calaat-el-Moilah.

SHAOWN, a village of Hedsjas, in Arabia; 45 miles south of Yambo.

To SHAPE, *v. a.* preter. *shaped*; part. pass. *shaped* and *shapen*; anciently *shope*. [recepian, rcapan, Sax. *scheppen*, Teut., *skapa*, Su. Goth., *creare*, formare: vox antiquissima, omnibusque lingu. Septentr. usitatissima. *Serenius*.] To form; to mould with respect to external dimensions.

I that am not *shap'd* for sportive tricks,
Nor made to court an amorous looking-glass;
I, that am rudely stamp'd, and want love's majesty,
To strut before a wanton ambling nymph. *Shakspeare.*

Mature the virgin was, of Egypt's race;
Grace *shap'd* her limbs, and beauty deck'd her face. *Prior.*

To mould; to cast; to regulate; to adjust.
Drag the villain hither by the hair,
Nor age nor honour shall *shape* privilege. *Titus Andronicus.*

Charm'd by their eyes, their manners I acquire,
And *shape* my foolishness to their desire. *Prior*

To imagine; to conceive.—When fancy hath formed and *shaped* the perfected ideas of blessedness, our own more happy experiences of greater must disabuse us. *Boyle*.—To make; to create. *Obsolete*.—I was *shapen* in iniquity, and in sin did my mother conceive me. *Ps.*

To SHAPE, *v. n.* To square; to suit.

Their dear loss,
The more of you 'twas felt, the more it *shap'd*
Unto my end of stealing them. *Shakspeare.*

SHAPE, *s.* Form; external appearance.

The other *shape*,
If *shape* it may be call'd that *shape* had none,
Distinguishable in member, joint or limb. *Milton.*

In vegetables and animals the *shape* we most fix on, and are most led by. *Locke*.—Make of the trunk of the body.—Fathers and mothers, friends and relations, seem to have no other wish towards the little girl, but that she may have a fair skin, a fine *shape*, dress well, and dance to admiration. *Law*.—Being; as moulded into form.

Before the gates there sat,
On either side a formidable *shape*. *Milton.*
Idea; pattern.

Thy heart
Contains of good, wise, just, the perfect *shape*. *Milton.*

SHAPE, *Inflammation of the*, among neat cattle, an affection in cows, arising in hot weather, and which is shewn by a swelling of the parts with boils or eruptions. It is analogous to pseudo-syphilis in men.

SHA'PELESS, *adj.* Wanting regularity of form; wanting symmetry of dimensions.

You are born
To set a form upon that indigest,
Which he hath left so *shapeless* and so rude. *Shakspeare.*

SHA'PESMITH, *s.* One who undertakes to improve the form of the body. *A burlesque and obsolete word.*

No *shapessmith* yet set up and drove a trade,
To mend the work that providence had made. *Garth.*

SHAPELINESS, *s.* Beauty or proportion of form.

SHAPELY, *adj.* Symmetrical; well formed.—*Shapelich* or to ben an alderman. *Chaucer*.—The *shapely* column. *Dr. Warton*.

SHAPINSHAY, one of the Orkney islands, about 3 miles north from the Mainland. It is about 7 miles long and 5 broad, somewhat in the form of a cross, and contains in all about 10 square miles of surface. All around the shore, which, from the many indentations of the sea, is very extensive, the land is pretty level to a considerable distance inland, and bears rich crops of grass and corn. Towards the interior the land rises high, and never having been under culture, is in its present state only fit for the pasture of sheep. Of this useful animal, there were formerly about 3000 kept on the island, and thence it is thought to have derived its name; but from extremely harsh treatment, they are now reduced to half that number. The cattle amount to 800, the horses to 250, and the swine to a number unknown. The state of agriculture is wretched, exhausting the soil by alternate crops of oats and barley, and denying it the advantage of rest or summer fallow. The Standing Stone of Shapinshay, and the Black Stone of Odin, are supposed to be the remains of places of Scandinavian worship. A small bay bears the name of Grucula, which tradition reports is owing to a Roman vessel, one of Agricola's ships, in his celebrated voyage round the island of Britain, being here stranded in a violent storm. This tradition is rendered more probable, from some Roman coins having been found lately near the place. There are several of those subterraneous habitations called Picts' houses. The harbour of Elwick is the only one of the island. About 120 tons of kelp are annually burnt on the shores. Shapinshay forms a parochial district of itself, which contained, in 1801, 744 inhabitants; in 1811, 726.

SHAPLEIGH, a post township of the United States, in York county, Maine, on the Piscataqua; 108 miles north-east of Boston. Population 2362.

SHAPOUR, **RUINS OF**, are situated at the end of the valley of Kazeroon, in the province of Fars, in Persia. The city is said to have existed prior to Alexander the Great, and to have been destroyed by him, but was rebuilt with augmented splendour by Sapor, who made it the capital of his dominions, and erected there a magnificent palace. Though entirely deserted, yet the breadth and circumference of the ramparts, and the remains of some public buildings, shew it to have been a city of great extent and magnificence. It is situated immediately under a range of mountains, on the banks of a small but rapid river, and in a wild romantic spot, amidst rocks and precipices, many of which are decorated with pieces of sculpture similar to those near Persepolis. The most remarkable of these are small groupes of figures, cut into compartments, and tolerably well executed. The hero of the piece is mounted on horseback, and crowned with a tiara. The hills in the immediate vicinity of these ruins appear to have been formerly fortified, and an extraordinary cavern farther up the river, has given rise to many fabulous stories; 18 miles west of Kazeroon.

SHAPWICH, a parish, formerly a market town of England, on the river Stour, Dorsetshire; 5 miles south-east of Blandford Forum. Population 395.

SHAPWICH, a parish of England, in Somersetshire; 6 miles west-by-south of Glastonbury. Population 418.

SHARAF BENI GATEI, a town of Hedsjas, in Arabia; 25 miles north of Madian.

SHARBASHI, a village of Turkish Armenia; 18 miles south-east of Moush.

SHARBIN, a village of Lower Egypt; 16 miles south-south-west of Damietta.

SHARD, *s.* [The past participle of the Sax. *rcipan*, to cut; to divide; to separate.] "*Shards*, pieces of stones broken and scattered." *Huloet*.—A fragment of an earthen vessel, or of any brittle substance.

For charitable prayers,
Shards, flints and pebbles should be thrown on her;
Yet here she is allow'd her virgin crants,
Her maiden strewments.

Shakespeare.

The splinters and *shards* of so violent a jousting. *Milton*.
SHARD, or **SHERD**, is our ancient word for a *scale* or outward covering, a case or sheath.

— A dragon—

Whose *scherdes* shynen as the sunne.

Gower.

[*Chard*.] A plant.

Shards or mallows for the pot,
Keep the loosen'd body sound.

Dryden.

It seems in Spenser to signify a frith or strait. It is used, says Upton, in the west, for a *gap*, as it is in some parts of the north for a *prospect through an avenue*.

Upon that shore he spied Atin stand,
There by his master left, when late he far'd
In Phedria's fleet bark, over that perl'ous *shard*.

Spenser.

A sort of fish.

SHA'RDBORNE, *adj.* Borne along the air by shards or sheathed wings.

Ere to black Hecat's summons
The *shardborne* beetle with his drowsy hums
Hath rung night's yawning peal, there shall be done
A deed of dreadful note.

Shakespeare.

SHA'RDED, *adj.* Having a scaly covering; sheath-winged.

With his sword, and with his spere,
He might not the serpent dere (i. e. hurt),
He was so *sherded* all about,
It held all edge toole withoute.

Gower.

Often shall we find
The *sharded* beetle in a safer hold,
Than is the full-wing'd eagle.

Shakespeare.

SHARDLOW, a township of England, in Derbyshire; 7 miles south-east of Derby.

To SHARE, *v. a.* [reapan, rcipan, Sax. Serenius considers it, in all its significations, as derived from the Su. Gothl. *skaera*, to divide; to separate; to cut.] To divide; to part among many.

Good fellows all,
The latest of my wealth I'll *share* amongst you.

Shakespeare.

Any man may make trial of his fortune, provided he acknowledge the lord's right, by *sharing* out unto him a toll. *Carew*.—To partake with others; to seize or possess jointly with another.

In vain does valour bleed,
While avarice and rapine *share* the land.

Milton.

Go, silently enjoy your part of grief,
And *share* the sad inheritance with me.

Dryden.

To cut; to separate; to sheer.

Scalp, face and shoulders the keen steel divides,
And the *shar'd* visage hangs on equal sides.

Dryden.

To SHARE, *v. n.* To have part; to have a dividend.

Had greater haste these sacred rites prepar'd,
Some guilty mouths had in your triumphs *shar'd*,
But this untainted year is all your own.

Dryden.

SHARE, *s.* Part; allotment; dividend obtained.

If every just man, that now pines with want,
Had but a moderate and beseeching *share*,

Of that which lewdly-pamper'd luxury
Now heaps upon some few with vast excess.

Milton.

To go shares; to partake.—By being desirous that every one should have their full *share* of the favours of God, they would not only be content, but glad to see one another happy in the little enjoyments of this transitory life. *Law*.—A part contributed.—These, although they bear a *share* in the discharge, yet have different offices in the composition. *Brown*.—[reap, Sax.] The blade of the plow that cuts the ground.

Nor laws they knew, nor manners, nor the care
Of labouring oxen, nor the shining *share*.

Dryden.

SHA'REBONE, *s.* The os pubis; the bone that divides the

the

the trunk from the limbs.—The cartilage bracing together the two ossa pubis, or *sharebones*, Bartholine saith, is twice thicker and laxer in women than men. *Derham*.

SHARMAN'S CREEK, a river of Pennsylvania, which runs into the Susquehanna. Lat. 40. 20. N. long. 77. 5. W.

SHA'RER, *s.* One who divides or apports to others; a divider; a partaker; one who participates any thing with others.

Most it seem'd the French king to import,
As *sharer* in his daughter's injury.

Daniel.

People not allowed to be *sharers* with their companions in good fortune, will hardly agree to be *sharers* in bad. *L'Estrange*.

SHARESHILL, a village of England, in Staffordshire, near the entrance of which are traces of several Roman encampments; 5 miles north-north east of Wolverhampton.

SHA'RING, *s.* Participation.—By good means of some great ones, and privy *sharings* with the officers of other some, he receiveth his debt. *Spenser*.

SHARINGTON, a parish of England, in Norfolk; 4 miles west-south-west of Holt.

SHARK, *s.* A voracious sea-fish. See SQUALUS.

His jaws horrific arm'd with threefold fate,
The direful *shark*.

Thomson.

A greedy artful fellow; one who fills his pockets by sly tricks. [Su Goth. *skurk*, *skurka*, homo nequissimus. *Serenius*.]—A low word.—Parasites, jugglers, delators, cheaters, *sharks* and shifting companions. *Bp. Reynolds*.—Trick; fraud; petty rapine. A low word.—Wretches who live upon the *shark*, and other men's sins, the common poisoners of youth, equally desperate in their fortunes and their manners, and getting their very bread by the damnation of souls. *South*.

To SHARK, *v. a.* To pick up hastily or slyly.

Young Fontinbras,
Of unimproved mettle, hot and full,
Hath in the skirts of Norway, here and there,
Shark'd up a list of landless resolute.

Shakespeare.

To SHARK, *v. n.* To play the petty thief; to practise cheats; to live by fraud. A low word.—The *sharking* officer that receives bribes, and spares neither the king nor the subject. *Dr. White*.—Prove to day, who shall *shark* best. *B. Jonson*.—To fawn for a dinner; to beg.—Gayton lived afterwards in London in a *sharking* condition, and wrote trite things merely to get bread to sustain him and his wife. *Wood*.

SHARK, hammer-headed: see SQUALUS ZYGÆNA, a fish called also the *balance-fish*.—SHARK, long-tailed: see SQUALUS VULPES.—SHARK, spotted: see SQUALUS CATULUS.—SHARK, lesser spotted: see SQUALUS CATULUS.—SHARK, smooth: see SQUALUS MUSTELUS.—SHARK, the tope: see SQUALUS GALEUS.—SHARK, the angel, or monk-fish: see SQUALUS SQUATINA.

SHARK RIVER, a river of New Jersey, which runs into the Atlantic. Lat. 40. 10. N. long. 74. 4. W.

SHA'RKER, *s.* One who lives upon the shark; an artful fellow.—A hungry renegado, a dirty *sharker* about the Romish court, who only scribbles that he may dine. *Sir H. Wotton*.

SHA'RKING, *s.* Petty rapine; trick.—Thou wouldst never be thus covetous, thou wouldst never use this *sharking*, nor these dishonest tricks, if thou didst believe. *Dr. Westfield*.

SHARLESTON, a township of England, West Riding of Yorkshire; 4½ miles east-by-south of Wakefield.

SHARM EL KIMAN, a harbour in the Red Sea, on the coast of Egypt. Lat. 24. 44. N.

SHARMA, a small sea-port of Hadramaut, in Arabia; 30 miles east-north-east of Sahar.

SHARMAGOL, a village of Korassan, in Persia; 12 miles south of Nesa.

SHARMALIC, a village of Diarbekir, in Asiatic Turkey; 15 miles south-west of Orfa.

SHARNBROOK, a parish of England, in Bedfordshire; 8½ miles north-west of Bedford. Population 644.

SHARNFORD, a parish of England, in Leicestershire; 4 miles south-east of Hinckley. Population 394.

SHARON, New, a post township of the United States, in Kennebeck county, Maine; 27 miles north-north-west of Augusta. Population 944.

SHARON, a township of the United States, in Hillsborough county, New Hampshire; 18 miles west-south-west of Amherst. Population 446.

SHARON, a township of the United States, in Windsor county, Vermont. Population 1363.

SHARON, a township of the United States, in Norfolk county, Massachusetts; 17 miles south-south-west of Boston. Population 1000.

SHARON, a township of the United States, in Litchfield county, Connecticut. Population 2606.

SHARON, a township of the United States, in Schoharie county, New York; 16 miles west of Schoharie. Population 3751.

SHARON, a township of the United States, in Franklin county, Ohio. Population 450.

SHARP, *adj.* [Jceapp, Sax.; *scherpe*, Dutch.] Keen; piercing; having a keen edge; having an acute point; not blunt.

She hath tied

Sharp tooth'd unkindness like a vulture here. *Shakespeare.*

With edged grooving tools they cut down and smoothen away the extuberances left by the *sharp* pointed grooving tools, and bring the work into a perfect shape. *Mozon*.—Terminating in a point or edge; not obtuse.—To come near the point, and draw unto a *sharper* angle, they do not 'only speak and practice truth, but really desire its enlargement. *Brown*.

Their embryon atoms

Light arm'd or heavy, *sharp*, smooth, light or slow.

Milton.

Acute of mind; witty; ingenious; inventive.—Now as fine in his apparel as if he would make me in love with a cloak, and verse for verse with the *sharpest* witted lover in Arcadia. *Sidney*.—Quick, as of sight or hearing.

As the *sharpest* eye discerneth nought,
Except the sun-beams in the air do shine;
So the best soul, with her reflecting thought,
Sees not herself, without some light divine.

Davies.

To *sharp-eyed* Reason this would seem untrue;
But reason I through love's false optics view.

Dryden.

Sour without astringency; sour, but not austere; acid.

So we, if children young diseased we find,
Anoint with sweets the vessel's foremost parts,
To make them taste the potions *sharp* we give;
They drink deceiv'd, and so deceiv'd they live.

Spenser.

Shrill; piercing the ear with a quick noise; not flat.—For the various modulation of the voice, the upper end of the windpipe is endued with several cartilages to contract or dilate it, as we would have our voice flat or *sharp*. *Ray*.—Severe; harsh; biting; sarcastic.—How often may we meet with those who are one while courteous, but within a small time after are so supercilious, *sharp*, troublesome, fierce and exceptional, that they are not only short of the true character of friendship, but become the very sores and burdens of society! *South*.—Severe; quick to punish; cruel; severely rigid.

There, gentle *Hermia*, may I marry thee;
And to that place the *sharp* Athenian law
Cannot pursue us.

Shakespeare.

Eager; hungry; keen upon a quest.

My falcon now is *sharp* and passing empty,
And 'till she stoop, she must not be full gorg'd;
For then she never looks upon her lure.

Shakespeare.

The *sharp* desire I had
Of tasting.

Milton.

Painful;

Painful; afflictive.

That she may feel
How *sharper* than a serpent's tooth it is,
To have a thankless child.

Shakspeare.

Fierce; ardent; fiery.

Their piety feign'd,
In *sharp* contest of battle found no aid.

Milton.

A *sharp* assault already is begun;
Their murdering guns play fiercely on the walls.

Dryden.

Attentive; vigilant.

Sharp at her utmost ken she cast her eyes
And somewhat floating from afar descries.

Dryden.

Acrid; biting; pinching; piercing, as the cold.—The windpipe is continually moistened with a glutinous humour, issuing out of small glandules in its inner coat, to fence it against the *sharp* air. *Ray*.—Subtile; nice; witty; acute:—*Sharp* and subtile discourses procure very great applause; but being laid in the balance with that which sound experience plainly delivereth, they are overweighed. *Hooker*.—[Among workmen.] Hard.—They make use of the *sharpest* sand, that being best for mortar, to lay bricks and tiles in. *Moron*.—Emaciated; lean.—His visage drawn he felt to *sharp* and spare. *Milton*.

SHARP, *s.* A sharp or acute sound.

It is the lark that sings so out of tune,
Straining harsh discords and displeasing *sharps*.

Shakspeare.

A pointed weapon; small sword; rapier. *Low word*.—If butchers had but the manners to go to *sharps*, gentlemen would be contented with a rubber at cuffs. *Collier*.

To SHARP, *v. a.* To make keen.

Whom the whetstone *sharps* to eat,
They cry millstones are good meat.

B. Jonson.

To render quick.

Much more me needs—

To *sharp* my sense with sundry beauties' view,
And steal from each some part of ornament.

Spenser.

To SHARP, *v. n.* To play thievish tricks.—I live upon what's my own; whereas your scandalous life is only cheating or *sharping* one half of the year, and starving the other. *L'Estrange*.

SHARP (Abraham), an eminent mathematician, mechanist and astronomer, was descended from a family of Little Horton, near Bradford, in Yorkshire, where he was born about 1651. After he had received a good education, he was put apprentice at Manchester, but being steadily attached to mathematical pursuits, he quitted business and removed to Liverpool. Here he applied with great diligence to his favourite study, and to procure a subsistence he opened a school, where he taught writing and the elements of arithmetic. He next went to London, with the view of associating with Mr. Flamstead, by whose interest he obtained a profitable employment in the dock-yard at Chatham, where he remained till he was invited to become the assistant of Flamstead at the Royal Observatory at Greenwich. In this situation he continued to make observations, and had a large share in forming a catalogue of 3000 fixed stars, with their longitudes and magnitudes; their right ascension and polar distance, and the variations of the same, while they change their longitude by one degree. In this employment he injured his health, and was obliged to retire to his native air, at Horton, where he fitted up an observatory of his own, having constructed a very curious machine for turning all kinds of work in wood and brass. He constructed most of the tools used by joiners, clock-makers, opticians, and mathematical instrument-makers. He manufactured entirely his own telescopes and other astronomical instruments.

He next materially assisted Mr. Flamstead in calculating most of the tables in the second volume of his "Historia Celestis," and made curious drawings of the constellations, which were sent to Amsterdam to be engraved, and though

executed by a masterly hand, the originals were said to have exceeded the engravings in beauty and accuracy. In 1689 Mr. Flamstead completed his mural arc at Greenwich, in which he had been greatly assisted by his friend Mr. Sharp, who had been some time in the observatory as his amanuensis. Mr. Smeaton, in a paper published in the philosophical Transactions for the year 1786, speaking of this mural arc, says, it may be considered as the first good instrument of the kind, and that Mr. Sharp was the first person who cut accurate and delicate divisions upon astronomical instruments.

In 1717, Mr. Sharp published a work entitled "Geometry Improved," in which he engraved the figures as well as composed the work. This treatise contains, 1. A large and accurate table of segments of circles, with the method of its construction, and various uses in the solution of difficult problems. 2. A concise treatise of polyhedra, or solid bodies of many bases, both the regular and irregular ones, to which are added twelve new ones, with various methods of forming them, and their exact dimensions in words or species, and also in numbers. In the year 1699, he undertook, for his own private amusement, the quadrature of the circle, deduced from two different series, by which the truth of it was demonstrated to 72 places of figures. Mr. Sharp maintained an epistolary correspondence with the most eminent mathematicians and astronomers of the day; among these were the illustrious Newton, Dr. Halley and Dr. Wallis. It appears from a great variety of letters which remained after his death, written to him by these celebrated men, that he spared neither pains nor time to promote the interests of real science. Being justly reckoned one of the ablest calculators of his time, his assistance was required by, and freely given to Flamstead, Sir Josias Moore, Dr. Halley and others, in all difficult calculations. When he quitted Mr. Flamstead, he retired to Little Horton, in Yorkshire, where he spent the remainder of his days, and where he died in July 1742, in the 91st year of his age. He was of very retired habits, and admitted few visitors, excepting two gentlemen, at Bradford, one a mathematician, and the other an ingenious apothecary. Many of his singularities are recorded in the General Biography, and also in Hutton's Mathematical Dictionary, to which the reader is referred.

SHARP (John), archbishop of York, a celebrated divine of the church of England, was the son of a respectable tradesman at Bradford, in Yorkshire, where he was born in 1644. He was admitted of Christ's college, Cambridge, in 1660, and in 1667 he commenced master of arts, and was ordained. He was now appointed private tutor to the four sons of Sir Heneage Finch, a station which he occupied about five years, when he obtained, through his patron's recommendation, the archdeaconry of Berkshire. When Sir Heneage was raised to the post of keeper of the great seal, he manifested such confidence in the fidelity and judgment of his friend, as to commit to him the scrutiny of the characters of applicants for church livings in the gift of the crown. A sermon which he preached in 1674, reflecting upon those who dissented from the church, gave rise to a controversy, in which Dodwell, Baxter and others engaged. In 1677 he was instituted to the rectory of St. Giles-in-the-Fields, in which parish he resided ten years. Among his parishioners was Richard Baxter, who, though he was himself a preacher on Sunday evenings, was a constant hearer of the rector in the mornings; and these two excellent men, notwithstanding their differences in some points, lived together upon the most friendly terms. In 1679 Mr. Sharp commenced D. D., and in 1681 he was promoted to the deanery of Norwich. On the death of Charles II., to whom he had been a chaplain, he drew up the address of the grand-jury of London to his successor, to whom he was also nominally chaplain. After this he preached against popery, and thus exciting the royal displeasure, he was obliged to quit the metropolis, and reside altogether at his deanery. He employed himself in forming a cabinet of coins, chiefly British, Saxon and English. Being wearied with his exclusion from his function at London,

J. Pass sc

GRANVILLE SHARP.

Engraved for the Encyclopædia Londinensis. 1827.

don, he presented a very humble petition to the king, in consequence of which, he was allowed to return to his duty in the metropolis, and he was extremely careful never after to give offence, as he had done before. After the abdication of the monarch, Dr. Sharp irritated the adherents to William, by some offensive passages in a prayer and sermon, which he delivered before the house of commons, who at first refused him their accustomed thanks, which, however, were voted afterwards. In 1689, Dr. Sharp was appointed the successor to Dr. Tillotson in the deanery of Canterbury, and he was nominated one of the commissioners for revising the liturgy. At this period several bishops had been deprived of their fees for refusing to take the oaths to William and Mary, and Dr. Sharp might have succeeded to almost any of them, but he refused, not through any scruple of conscience, but on account of his friendship for the persons deprived. When, however, the archbishopric of York became vacant in a different way, he readily accepted the high office, and he was consecrated in July 1691. He filled this exalted station in a manner, which has caused him to be represented as a model of prelatial virtues, and which procured him general respect and esteem. He died at Bath in 1714, in the 69th year of his age. His only writings were sermons, of which were published two volumes, consisting of such occasional discourses as he had printed during his life time, and five others, that were selected after his decease. He was reckoned an excellent preacher, and his style and doctrine are said to be equally of the standard purity. *Biog. Brit.*

SHARP (Thomas), younger son of the preceding, was born in Yorkshire, and admitted of Trinity college, Cambridge, about 1703, when he was of the age of 15. He obtained a fellowship in 1729, and took his doctor's degree the same year. Archbishop Dawes appointed him his chaplain, and in 1720, he was collated to the rectory of Rothbury, in Northumberland. He was afterwards preferred to a prebend in Durham cathedral, and also to the archdeaconry of Northumberland. He died in 1758. Dr. Sharp wrote two dissertations concerning the etymology of the Hebrew words Elohim and Berith.—“Discourses on the Antiquity of the Hebrew Tongue and Character.”

SHARP (Granville), son of the preceding, a most distinguished philanthropist and friend to the liberties of mankind, was born in the year 1734. He was educated for the bar, but did not practise at it. When he quitted the legal profession, he obtained a place in the ordnance office, which he resigned at the commencement of the American war; the principles of which were abhorrent from his mind. He now took chambers in the Temple, and devoted himself to a life of study; at the same time, laying himself out for public utility. He first became known to the public in the case of a poor and friendless Negro, of the name of Somerset. This person had been brought from the West Indies to England by a master, whose name we should gladly hand down to the execration of posterity; if it were in our power; and falling into bad health, was abandoned by him as a useless article of property, and turned into the streets, either to die, or to gain a miserable support by precarious charity. In this destitute state, almost, it is said, on the point of expiring on the pavement of one of the public streets of London, Mr. Sharp chanced to see him. He instantly had him removed to St. Bartholomew's hospital, attended personally to his wants, and in a short time had the happiness to see him restored to health. Mr. Sharp now clothed him, and procured him comfortable employment in the service of a lady. Two years had elapsed, and the circumstance almost, and the name of the poor Negro, had escaped the memory of his benefactor, when Mr. Sharp received a letter from a person, signing himself Somerset, confined in the Poultry Compter, stating no cause for his commitment, but entreating his interference to save him from a greater calamity even than the death from which he had rescued him. Mr. Sharp instantly went to the prison, and found the Negro, who in sickness and

misery had been discarded by his master, sent to prison as a runaway slave. The excellent patriot went immediately to the lord mayor, William Nash, Esq., who caused the parties to be brought before him; when, after a long hearing, the upright magistrate decided that the master had no property in the person of the Negro, in this country, and gave the Negro his liberty. The master instantly collared him, in the presence of Mr. Sharp and the lord mayor, and insisted on his right to keep him as his property. Mr. Sharp now claimed the protection of the English law, caused the master to be taken into custody, and exhibited articles of peace against him for an assault and battery. After various legal proceedings, supported by him with most undaunted spirit, the twelve judges unanimously concurred in an opinion that the master had acted criminally. Thus did Mr. Sharp emancipate for ever the race of blacks from a state of slavery, while on British ground, and in fact banished slavery from Great Britain. Such an incident could not fail deeply to impress a benevolent mind; and slavery, in every shape and country, became the object of his unceasing hostility. In 1769 he published a work, entitled “A Representation of the Injustice and dangerous Tendency of Tolerating Slavery, or of admitting the least Claim of private Property in the Persons of Men in England.” Having succeeded in the case of an individual Negro, he interested himself in the condition of the many others, who were seen wandering about the streets of London, and at his own expense collected a number of them, whom he sent back to Africa, where they formed a colony on the river Sierra Leone. He performed a still more essential service to humanity, by becoming the institutor of the “Society for the Abolition of the Slave Trade;” which, after contending against a vast mass of opposition, at length (1807) gloriously succeeded, as far as this country was concerned in the horrible traffic.

Mr. Granville Sharp is mentioned in connection with this business, in terms of the highest commendation, by Mr. Clarkson, in his “History of the Abolition of the Slave Trade.” The following short account of him is extracted from the Edinburgh Review, vol. xii.

“We think it a duty to mention the name of Mr. Granville Sharp. Regardless of the dangers to which he exposed himself, both in his person and his fortune, Mr. Sharp stood forward in every case as the courageous friend of the poor Africans in England, in direct opposition to an opinion of York and Talbot, the attorney and solicitor-general for the time being. This opinion had been acted upon; and so high was its authority, that, after it had been made public, it was held as the settled law of the land, that a slave, neither by baptism, or arrival in Great Britain or Ireland, acquires freedom, but may be legally forced back to the plantations. Discouraged by judge Blackstone, and several other eminent lawyers, Mr. Sharp devoted three years of his life to the English law, that he might render himself the more effectual advocate of these friendless strangers. In his work, entitled ‘A Representation of the Injustice and dangerous Tendency of tolerating Slavery in England,’ published in the year 1769, and afterwards in his learned and laborious ‘Inquiry into the Principles of Villenages,’ he refuted the opinion of York and Talbot by unanswerable arguments, and neutralized their authority by the counter opinion of the great lord chief justice. Holt, who many years before had decided, that as force could be used against no man in England without legal process, every slave coming into England became free, inasmuch as the laws of England recognized the distinction between person and property as perpetual and sacred. Finally, in the great case of Somerset, which was argued at three different sittings, in January, in February, and in May, of the year 1772, (the opinion of the judges having been taken up on the pleadings), it was at last ascertained and declared to be the law of the land, that as soon as ever any slave set his foot upon English territory, he became free. Among the heroes and sages of British story, we can think of few whom we should feel a greater glow of honest pride in claiming as an

ancestor, than the man to whom we owe our power of repeating with truth,

' Slaves cannot breathe in England ; if their lungs
Receive our air, that moment they are free :
They touch our country and their shackles fall.' "

Similar principles led Mr. Sharp to use his endeavours to restrain the arbitrary practice of marine impressment ; and a citizen of London having been carried off by a press-warrant, Mr. Sharp obtained a *habeas corpus* from the court of king's bench, to bring him back from a vessel at the Nore ; and by his arguments obliged the court to liberate him. In his political principles he was always the ardent and zealous friend to liberty, and he neglected no opportunity to defend its principles, and assert the rights of the people. He was the warm advocate of "parliamentary reform," and published, in 1778, the second edition of an excellent little work, full of constitutional knowledge and sound reasoning, entitled "A Declaration of the People's natural Right to a Share in the Legislature, which is the fundamental Principle of the British Constitution of State." He was, in 1794, as zealously attached to the cause as he had been twenty years before ; though, perhaps, he did not feel himself sufficiently active to engage in it as a partizan, when it was a subject of obloquy. He was not, however, an unconcerned spectator of the dreadful tyranny, which, but for the intervention of an honest English jury, would have overwhelmed the land. He sent, to one of the persons at that time confined in the Tower of London, a copy of the work referred to, with assurances of a readiness to do any thing in his power to stem the torrent setting in against the liberties of the country.

Mr. Sharp's plan of reform recommended to the public, was founded on the earliest principles and practices of the British constitution. He proposed to restore the ancient *tythings*, *hundreds*, &c. ; and the whole body of the people were to form a national militia, each thousand to constitute a regiment, the alderman or magistrate to be the colonel ; and each hundred to constitute a company, the constable of each for the time being to be their captain. So many of the thousands to be summoned once in every year, by their magistrate, as would have a right to vote in their respective hundreds, before the constable, in the choice of their part of the representative legislature. Mr. Sharp has shewn that the division of this kingdom into *tythings* and hundreds was instituted by the immortal Alfred ; that such a division is consistent with the most perfect state of liberty that man is capable of enjoying, and yet fully competent to answer all the purposes of mutual defence, to secure the due execution of the laws, and maintain public peace.

Mr. Sharp was educated in the principles of the established church, and through life shewed a warm attachment to them. He always, even at the close of life, had a thorough dread of Popery, but was candid and liberal to Protestant dissenters of all parties. His zeal for the established religion of the country, led him to recommend an episcopal church in America ; and he introduced the first bishops from that country to the archbishop of Canterbury for consecration.

Mr. Sharp died in July, 1813, and, like Cato, though advanced to the age of 79, he pursued his studies with all the ardour of youth. He was an able linguist, deeply read in theology, and was well acquainted with the scriptures in the original tongues. He was pious and devout, without gloom, strictly moral and temperate, a great lover of music, and cheerful in conversation. His services to humanity were very distinguished, and few persons in private life have deserved a higher or more honourable commemoration.

As a writer, his pieces are very numerous. From these we learn that he was a believer in the doctrines as set forth in the articles of the church, as that of original sin, the existence and operations of the devil on the human mind, and of the Athanasian mystery of the Trinity. He also, from studying the book of Revelation, fully expected the commencement of the *Millenium*, or personal reign of Christ on earth, in the spring of 1811 ; but he lived long enough

to see his error. He possessed a very extensive library, in which the theologian, lawyer, classical scholar, politician, antiquary, and orientalist, might find almost every thing of which they could stand in need ; and his collection of bibles was esteemed the best in the kingdom.

The principal works of Mr. Sharp, besides those already mentioned, are "Remarks on several very important Prophecies ;" "Remarks on the Uses of the definitive Article in the Greek of the New Testament, containing many new Proofs of the Divinity of Christ," &c. This occasioned "Six more Letters" to be addressed to him, in vindication of his theory ; and also "Six more Letters, &c." by Gregory Blunt, Esq., which is a work of great talent, profound learning, and masterly wit. It has long since been out of print, and the author is probably known only to two or three persons ; the designation Blunt being assumed to conceal the real name. Mr. Sharp's last work was entitled "Remarks on the 68th Psalm, addressed to the Consideration of the House of Israel."—*Clarkson's Hist. of the Abolition of the Slave Trade.*

SHARP (Samuel), an able and distinguished surgeon in the middle of the last century, was a pupil of the celebrated Cheselden, and afterwards studied his profession with great zeal at the hospitals of Paris. He is said to have commenced his profession rather late in life ; nevertheless, after settling in London, and obtaining an appointment as surgeon of Guy's hospital, his genius and assiduity soon obtained for him a high degree of celebrity, and extensive practice. He was elected a fellow of the Royal Society, and a foreign member of the Academy of Surgery at Paris ; and he contributed to the improvement of his art by two valuable publications, which passed through many editions, and were translated into several foreign languages. The first of these was "A Treatise on the Operations of Surgery, with a Description and Representation of the Instruments ; and an Introduction on the Nature and Treatment of Wounds, Abscesses, and Ulcers ;" first printed in 1739. Our edition, printed in 1751, is the sixth. The second work was entitled "A critical Inquiry into the present State of Surgery ;" first printed, we believe, in 1750. Our edition of 1761 is the fourth. See *Eloy Dict. Hist. de la Méd., and Sharp's Works.*

SHARPE (Gregory), a learned divine, was born in Yorkshire, in the year 1713. He received his education first at Westminster school, and afterwards at Aberdeen, under the learned Blackwell. Upon his entering orders, he became minister of St. Margaret's chapel, Westminster ; after this, he was appointed chaplain to the king, and master of the Temple. He was also elected a fellow of the Royal and Antiquarian Societies ; and died in 1771. He united to great learning a taste for the fine arts, and etched several plates in the edition of Dr. Hyde's *Syntagma*. His own works are:—1. A Review of the Controversy about the Meaning of the Demoniacs in the New Testament. 2. A Defence of Dr. Clarke against Leibnitz. 3. Two Dissertations upon the Origin of Languages, and the Power of Letters ; with a Hebrew Lexicon. 4. A Dissertation on the Origin and Structure of the Latin Language. 5. Two Arguments in Defence of Christianity. 6. Translation of Holberg's Introduction to Universal History. 7. Sermons.

To SHA'RPEN, *v. a.* [rceappan, rceppan, Sax.] To make keen ; to edge ; to point.—The grating of a saw, when *sharpen'd*, offends so much as it setteth the teeth on edge. *Bacon.*

The squadron bright, *sharpening* in mooned horns
Their phalanx.

Milton.

To make quick, ingenious, or acute.—Overmuch quickness of wit, either given by nature, or *sharpen'd* by study, doth not commonly bring greatest learning, best manners, or happiest life in the end. *Ascham.*—To make quicker of sense.

The air—*sharpen'd* his visual ray
To objects distant far.

Milton.

To

To make eager or hungry.—Such an assurance as will *sharpen* men's desires, and quicken their endeavours for obtaining a lesser good, ought to inspire men with more vigour in pursuit of what is greater. *Tillotson*.—To make fierce or angry.—Mine enemy *sharpeneth* his eyes upon me. *Job*.—To make biting, sarcastic or severe.

My haughty soul would swell;
Sharpen each word, and threaten in my eyes. *Smith*.

To make less flat; more piercing to the ears.—Enclosures not only preserve sound, but increase and *sharpen* it. *Bacon*.—To make sour.

To SHARPEN, *v. n.* To grow sharp.—Now she *sharpens*; well said, whetstone. *Shakspeare*.

SHARPENHOE, a hamlet of England, in Bedfordshire; 4 miles south-south-west of Silsoe.

SHARPER, *s.* A tricking fellow; a petty thief; a rascal.—*Sharppers*, as pikes, prey upon their own kind. *L'Estrange*.

—He should retrench what he lost to *sharppers*, and spent upon puppet-plays, to apply it to that use. *Arbutnot*.

SHARPERTON, a township of England, in Northumberland; 16½ miles west-south-west of Alnwick.

SHARPLES, a township of England, in Lancashire; 3 miles north of Great Bolton. Population 1374.

SHARPLING, the English name of the *GASTEROSTEUS*.

SHARPLY, *adv.* [*reappple*, Sax.] With keenness; with good edge or point. Severely; rigorously; roughly.

—They are more *sharply* to be chastised and reformed than the rude Irish, which being very wild at the first, are now become more civil. *Spenser*.—Keenly; acutely; vigorously.

—The mind and memory are more *sharply* exercised in comprehending another man's things than our own. *B. Jonson*.—Afflictively; painfully.—At the arrival of the English ambassadors, the soldiers were *sharply* assailed with wants. *Hayward*.—With quickness.—You contract your eye when you would see *sharply*; and erect your ear when you would hear attentively. *Bacon*.—Judiciously; acutely; wittily.

SHARPNESS, *s.* [*reapppere*, Sax.] Keeness of edge or point.—Palladius neither suffering us nor himself to take in hand the party till the afternoon; when we were to fight in troops, not differing otherwise from earnest, but that the *sharpness* of the weapons was taken away. *Sidney*.

—Not obtuseness.—Force consisteth in the roundings and raisings of the work, according as the limbs do more or less require it; so as the beholder shall spy no *sharpness* in the bordering lines. *Wotton*.—Sourness without austereness. Severity of language; satirical sarcasm.

There's gold for thee,
Thou must not take my former *sharpness* ill,
I will employ thee back again. *Shakspeare*.

Painfulness; afflictiveness.

At this time
We sweat and bleed; the friend hath lost his friend;
And the best quarrels in the heat are curst
By those that feel their *sharpness*. *Shakspeare*.

Intellectual acuteness; ingenuity; wit.—Till Arianism had made it a matter of great *sharpness* and subtility of wit to be a sound believing Christian, men were not curious what syllables or particles of speech they used. *Hooker*.—Quickness of senses.—If the understanding or faculty of the soul be like unto bodily sight, not of equal *sharpness* in all; what can be more convenient than that, even as the dark-sighted man is directed by the clear about things visible, so likewise in matters of deeper discourse the wise in heart doth shew the simple where his way lieth. *Hooker*.

SHARPS, an island of the United States, in Dorchester county, Maryland, in the Chesapeake.

SHARP-SET, *adj.* Hungry; ravenous.

The seely dove
Two *sharp-set* hawks do her on each side hem,
And she knows not which way to fly from them. *Brown*.

Eager; vehemently desirous.—Basilus forced her to stay, tho' with much ado, she being *sharp-set* upon the fulfilling of a shrewd office, in overlooking Philoclea. *Sidney*.

SHARP-SIGHTED, *adj.* Having quick sight.

If she were the body's quality,
Then would she be with it sick, maim'd, and blind;
But we perceive where these privations be,
An healthy, perfect, and *sharp-sighted* mind. *Davies*.

SHARP-VISAGED, *adj.* Having a sharp countenance.—The Welsh that inhabit the mountains are commonly *sharp-visaged*. *Hale*.

SHARP-WITTED, *adj.* Having an acute mind.—I have known a number of dull-sighted, very *sharp-witted* men. *Wotton*.

SHARPSBURG, a post township of the United States, in Washington county, Maryland, about 2 miles from the Potomac. Population 1500.

SHARPTOWN, a post township of the United States, in Salem county, New Jersey.

SHARROW, a township of England, West Riding of Yorkshire; 1½ mile east-by-north of Rippon.

SHARUM, a village of Hadramaut, in Arabia; 15 miles south-west of Keschim.

SHASH. See SASH.

SHASSAIR, a village of the Bled-el-Jereede, bordering on the south-western extremity of the territory of Algiers; 7 miles north-west of Fighig.

SHASTAH, SHASTER, or SASTRA, which latter is said to be the correct spelling and pronunciation, the name of a sacred book, in high estimation among the idolaters of Hindoostan, containing all the dogmas of the religion of the Bramins, and all the ceremonies of their worship, and serving as a commentary on the Vedam.—The Banians deliver, that this booke called by them the *shaster*, or the booke of their written word, consisted of these three tracts. The first whereof contained their moral law:—the second unrolled their ceremonial law:—the third distinguished them into certain casts or tribes, &c. *Lord*.

SHASUMAN, a village of Mazanderan, in Persia; 30 miles east of Astrabad.

SHAT-EL-FRAATE, a name given by the Arabs to the Euphrates.

SHAT-KRATU, in Mythology, one of the names of the Hindoo Indra, regent of the firmament. It means the hundred sacrifices; that is, he to whom a hundred sacrifices are offered; or rather, perhaps, he who has offered them.

SHAT-UL-ARAB, a large river, or rather canal, formed by the united streams of the Euphrates and Tigris, before entering the Persian gulf. It forms a most noble stream, and is navigable as far as Bassora, 70 miles from its mouth, for vessels of 500 tons burden. In all this space it is bordered by large plantations of date trees. It has been generally supposed that this river entered the Persian gulf by several mouths; but Mr. Kinneir seems to have ascertained, that it enters by one channel only, and that the other estuaries are formed by branches of the river Karoon.

SHATNUF, a village of Lower Egypt, on the right bank of the Nile; 9 miles north of Cairo.

To SHATTER, *v. a.* [*reapetan*, Sax.; *schetteren*, Teut.] To break at once into many pieces; to break so as to scatter the parts.

He rais'd a sigh so piteous and profound,
That it did seem to *shatter* all his bulk,
And rend his being. *Shakspeare*.

Black from the stroke above, the smouldering pine,
Stands as a *shatter'd* trunk. *Thomson*.

To dissipate; to make incapable of close and continued attention.—A man of a loose, volatile, and *shattered* humour, thinks only by fits and starts. *Norris*.

To SHATTER, *v. n.* To be broken, or to fall, by any force applied, into fragments.—Of bodies some are fragil; and

and some are tough and not fragil; and in the breaking, some fragil bodies break: but where the force is; some *shatter* and fly in many places. *Bacon.*

SHATTER, s. One part of many into which any thing is broken at once.—Stick the candle so loose, that it will fall upon the glass of the sconce, and break it into *shatters*. *Swift.*

SHATTERBRAINED, OF SHATTERPATED, adj. Inattentive; not consistent. *A low word.*—You cannot, without doing violence to your discretion, but conclude, that religion and devotion are far from being the mere effects of ignorance and imposture, whatever some *shatterbrained* and debauched persons would fain persuade themselves and others. *Goodman.*

SHATTERY, adj. Easily broken into many parts; loose of texture.—A brittle *shattery* sort of spar, found in form of a white sand chiefly in the perpendicular fissures amongst the ores of metal. *Woodward.*

SHATTON, a township of England, in Derbyshire; 6 miles north-east of Tideswell.

SHAVAKAT, a town of independent Tartary, on the Silon or Jaxartes; 20 miles south of Taschkent.

SHAUBAKO, a village of Upper Egypt, on the left bank of the Nile; 16 miles south of Cairo.

To SHAVE, v. a. preterite *shaved*, part. *shaved* or *shaven*. [*ꝛaꝑau, ꝛaꝑan, Saxon; schaeven, Dutch.*] To pare off; as with a razor.—Zelim was the first of the Ottomans that did *shave* his beard: a bashaw ask'd, why he alter'd the custom of his predecessors? He answered, Because you bashaws may not lead me by the beard, as you did them. *Bacon.*

The bending scythe
Shaves all the surface of the waving green.

Gay.

To skim by passing near, or slightly touching.

He *shaves* with level wing the deep; then soars
Up to the fiery concave towering high.

Milton.

To cut in thin slices.—Make some medley of earth, with some other plants bruised or *shaven* in leaf or root. *Bacon.*—To strip; to oppress by extortion; to pillage.

SHAVE GRASS, s. An herb.

SHA'VELING, s. A man shaved; a friar, or religious. Used in contempt; and introduced into the language about the time of the Reformation by the protestants, in order to designate a Romish priest.—*Shavelynges* of prodigious beastliness. *Bale.*—Of elves, there be no such things; only by bald friars and knavish *shavelings* so feigned. *Spenser.*

SHA'VEY, s. [*Sax. ꝛaꝑeꝛe.*] A man that practises the art of shaving.—The *shaver* might easily have cut his [*Sampson's*] throat, being asleep. *Bp. Richardson.*—A man closely attentive to his own interest.

My lord
Was now dispos'd to crack a jest,
And bid friend Lewis go in quest;
This Lewis is a cunning *shaver*.

Swift.

A robber; a plunderer.—They fell all into the hands of the cruel mountain-people, living for the most part by theft, and waiting for wrecks, as hawks for their prey: by these *shavers* the Turks were stript of all they had. *Knolles.*

SHAUGH, a hamlet of England, in Devonshire; 5 miles north of Plympton Earls. Population 485.

SHA'VING, s. A thin slice pared off from any body.—By electrick bodies I do not conceive only such as take up *shavings*, straws, and light bodies, but such as attract all bodies palpable whatsoever. *Brown.*

SHAVINGTON, a hamlet of England, in Cheshire; 4½ miles east of Nantwich.

SHAVINGTON, a village of England, in Salop, north-west of Drayton.

SHAVOYA, or SHAWIA, an inland province of Morocco, having Temsena on the west, Morocco Proper on the

south, Fez on the north, and Tedla on the east. It is very fertile in corn and cattle; but a great part of it consists of mountains, inhabited by a rude and lawless race, who subsist chiefly by robbery and violence.

SHAUR, a small island in the Red Sea. Lat. 27. 20. N. long. 34. 58. E.

SHAW, s. [*ꝛcua, Sax. a shade: schawe, Dutch; skugga, Icel.*] A small shady wood in a valley: an old word, and still common in many parts of England, especially in Kent and Surrey.—I will abide under the *shawe*. *Gower.*—Whither ridest thou under this grene *shaw*? *Chaucer.*—When *shaws* been sheene. *Old Ballad of Robin Hood.*

SHAW, a parish of England, in Berkshire, near the river Lamborn; 1 mile north-east of Speenhamland. Population 480.

SHAW (Thomas), was born at Kendal, in or about the year 1692. He was educated at the grammar-school of that town, and, in 1711, was admitted of Queen's college, Oxford. Soon after he had taken orders, he was appointed chaplain to the English factory at Algiers, in which station he remained several years, making use of the opportunity which it afforded of travelling into various parts of Barbary, and into Egypt. In 1727, he was elected fellow of his college; in 1733, he commenced D.D., and, in the following year, he was elected a member of the Royal Society in London. In 1738, he published his "Travels, or Observations on several Parts of Barbary and the Levant," to which a supplement was added in 1746; and about ten years afterwards the whole appeared in a second edition, with considerable improvements. Few books of the kind stand higher in reputation than Dr. Shaw's Travels, which contain many learned dissertations respecting the countries which he had visited, with divers remarks on their manners and customs, and valuable observations in natural history. They have been regarded as particularly useful in illustrating the scriptures by comparisons between the ancient and modern state of the eastern regions. Dr. Shaw, on his return from his travels, brought back a large collection of dried plants. He presented to the university of Oxford some relics of antiquity which he had collected, of three of which engravings were made in the "Marmora Oxoniensis." In the year 1740, he was chosen principal of St. Edmund's Hall, and was at the same time presented to the vicarage of Bramley, in Hampshire. Soon after, the regius professorship was conferred upon him, which he held till his death, in 1751. His travels have been translated into various modern languages. An attack was made on them by Dr. Pocock, which led the author to defend them in his supplement, and in a letter of Dr. Clayton, bishop of Clogher.

SHAW (Peter), a physician, and contemporary of the former, was the author of several works, which enjoyed a considerable reputation in their day. His first publication was entitled "New Practice of Physic," in two volumes, and first printed in 1726: it contained a brief description of diseases and the methods of treating them. His next work was an "Enquiry into the Virtues of Scarborough Spaw Waters," which he visited during the season; it was printed in 1734. In the same year he published also "Chymical Lectures publicly read in London 1731, 1732, and Scarborough 1733." This was deemed a scientific and valuable work, and was translated into French. He published some minor works, "A Portable Laboratory," 1731; "On Scurvy," 1736; "Essays in Artificial Philosophy," 1731; "On the Juice of the Grape," 1724; and he edited the "Dispensary of the College of Physicians of Edinburgh," in 1727. See *Eloy Dict. Hist. de la Med.*

SHAW (George), the younger of two sons of the reverend Timothy Shaw, was born December 16th, 1751, at Berton, in Buckinghamshire, of which place his father was vicar. He shewed, at a very early age, a great propensity to study, and when he was only four years old, instead of following the amusements common to young children, he usually entertained himself with books, or by the side of ditches

ditches and rivulets catching insects, and taking them home, and would spend all his leisure time in watching their motions and examining their structure. He was educated entirely by his father, and before he was fourteen years of age, his proficiency was such as allowed him to enter with great advantage upon a course of college studies. In 1765 he was entered at Magdalen-hall, Oxford, where he was no less distinguished by the regularity of his conduct, than by an uncommonly diligent application to his studies. In 1769 he was admitted to the degree of B.A. and in May 1772 to that of M.A. In order that he might assist his father in his clerical duties, he took orders, and was ordained deacon in 1774, at Buckden, by Dr. Green, bishop of Lincoln, and regularly performed the duty at Stoke and Buckland, two chapels, each three miles apart from the mother church. As soon as an opportunity offered, he laid aside his theological career, which was never quite congenial to his mind, and went to Edinburgh, to qualify himself for the profession of physic. Having attended the lectures of Black, Cullen, and other eminent professors for three years, he returned to Oxford, where he was appointed deputy botanical lecturer. In this office he acquired much celebrity. He had been appointed to his office by Dr. Sibthorp, the botanical professor, who was then upon the eve of setting out upon his travels into Greece. Upon the death of this gentleman, Dr. Shaw became candidate for the vacant professorship, in which he would unquestionably have been successful, had not an old statute been found, which prohibits a person in orders from filling the office. In 1787 he was admitted to the degrees of bachelor and doctor of medicine: it appears that at this time he had removed from Magdalen-hall to Magdalen college. In the same year he removed to London, where he practised as a physician. Shortly after this, several gentlemen, distinguished for their attachment to the study of, and eminent for their acquirements in natural history, established a society for the advancement of this science, under the denomination of the Linnæan Society. Dr. (now Sir James) Smith was elevated to the presidency, and Dr. Shaw was nominated one of the vice-presidents. To the Transactions of this Society Dr. Shaw contributed the following papers:—"Description of the *STYLEPHORUS Cordatus*;" "Description of the *CANCER Stagnalis*;" "Remarks on the *SCOLOPENDRA Electrica* and *SCOLOPENDRA Subterranea*;" "A Note to Mr. Kirby's Description of the new Species of *Hirudo*;" "Account of a minute *Ichneumon*;" "Description of the Species of *Mycteria*;" "Description of the *Mus Bursarius*, and *Tubularia Magnifica*."

Dr. Shaw at this period delivered a course of lectures at the Leverian Museum, and never failed, as well before, as after, that rich and magnificent collection was removed from Leicester Fields, to attract very large and scientific audiences. In 1789 Dr. Shaw began to publish "The Naturalist's Miscellany," which came out in monthly numbers, and continued till his decease, when 286 parts had been published, and, according to the biography of the author given in the Gentleman's Magazine, a posthumous number, with an index, was to terminate the work, which is described as a most beautiful and extensive production, comprising, in 1064 plates, figures of the more curious and remarkable productions of the three kingdoms of nature, more particularly of the animal kingdom, with descriptions in Latin and English. In this year Dr. Shaw was elected a fellow of the Royal Society, and in 1790 he projected a work in 4to. entitled "Speculum Linnæum; or Linnæan Zoology," but it probably did not promise success, as a single number only appeared. In 1791 Dr. Shaw became a candidate for the office of a librarian in the British Museum, and his qualifications, which were of the first order, procured him the appointment of assistant keeper of the natural history. He now quitted the duties of physician, and devoted himself entirely to researches in natural science. Between the years 1792—6, appeared the following work: "Musæi Leveriani explicatio Anglicæ et Latine, opera et studio Georgii Shaw, M.D. F. R. S. Adduntur figure elegantè sculptæ et

coloratæ. Impensis Jacobi Parkinson. In 1794 Dr. Shaw, in conjunction with Dr. Smith and Mr. Sowerby, engaged in a splendid publication, illustrative of the accessions which had been made to natural science on the shores of New Holland. The animals peculiar to that country were described by Dr. Shaw in a work entitled "The Zoology of New Holland;" the figures were delineated by Mr. Sowerby; and the botanical part was written by Dr. Smith, and published under the title of "The Botany of New Holland."

Sixty large plates published by Miller, the editor of the Gardener's Dictionary, under the title of "Various Subjects in Natural History, wherein are delineated Birds, Animals, and many curious Plants," being judged defective from want of letter-press, Dr. Shaw supplied the deficiency in a work entitled "Cimelia Physica: Figures of rare and curious Quadrupeds, Birds, &c., together with several most elegant Plants, engraved and coloured from the Subjects themselves: with Descriptions by George Shaw, M.D. F. R. S."

In the year 1800, Dr. Shaw began his great work, entitled "General Zoology, or Natural History, with Plates from the best Authorities, and most select Specimens." This work had proceeded to the eighth volume during the life-time of the author, and a ninth was left ready for the press. In this work he intended to comprise the whole of the history of the animal world. It began with quadrupeds, and had proceeded through fishes, amphibia, insects, and part of the birds. The Linnæan arrangement, with occasional variations, has been pursued throughout.

In the years 1806 and 1807, Dr. Shaw delivered a course of zoological lectures, which were published in 1809 in two large volumes 8vo. In the first nine lectures the author has compressed the substance of what he had delivered in the General Zoology, and in the three remaining lectures is a sketch of what, had his life been spared, he intended to accomplish in completing the General Zoology. In 1807, upon the death of Dr. Gray, keeper of Natural History in the British Museum, Dr. Shaw was promoted to that office. An abridgment of the Transactions of the Royal Society was begun in 1809, of which the department of natural history fell to the lot of Dr. Shaw. It is said he abridged 1500 distinct articles, which he rendered still more interesting than the originals, by the insertion of Linnæan and specific names, and by occasional annotations, and considerable references to subsequent authors of much celebrity, who had treated on these subjects. This was the last work in which he engaged. His time was wholly occupied upon the "Naturalist's Miscellany" and the "General Zoology," when death terminated his active and very useful life on the 22d of July, 1813, in the 62d year of his age. His illness was but of a few days' continuance: his senses and his recollection only forsook him with his breath. He died, as he had lived, with philosophic composure and serenity of mind, which neither the acute pains which he endured, nor the awful change which he was well aware he was about to experience, could in any degree disturb.

"As few men have left behind them a character more estimable, his name will be transmitted to posterity among those who give lustre to their age and country, who do honour to human nature by their virtues, and who contribute to the advancement of science, and the interests of literature, by their superior talents. Endowed by nature with considerable intellectual parts, and these improved by assiduous cultivation, he acquired a vast stock of general knowledge. His extensive information was treasured up without confusion, applied in his works with discernment, and communicated to every enquirer with cheerfulness and freedom." *Gentleman's Magazine*, 1813.

SHAWIA [so named by Forster, in memory of Thomas Shaw, D. D., who published travels into Barbary and the Levant], in Botany, a genus of the classsyngenesia, order polygamia segregata.—Generic Character. Calyx: perianth imbricate, cylindrical: scales five or six, oblong; three inner longer, almost equal. Corolla one-petalled, funnel-form,

short: border five-cleft, linear, spreading. Stamina: filaments five, capillary. Anther cylindrical, tubular. Pistil: germ oblong. Style filiform, longer than the corolla. Stigma bifid, spreading. Pericarp none. Calyx unchanged, perivious. Seed solitary, oblong. Down capillary, pubescent at the base. Receptacle naked.—*Essential Character.* Calyx imbricate, with five or six scales, three interior, longer. Corolla five-cleft. Seed one, oblong.

Shawia paniculata.—Native of New Zealand.

SHAW'S ISLAND, a small island in the North Pacific Ocean, at the entrance of Cook's inlet. Lat. 59. N. long. 207. 16. E.

SHAWANESE, Indians inhabiting on the river Au Glaize, and west of the Mississippi. Number 1600.

SHAWANGUNK, a post township of the United States, in Ulster county, New York. Population 3062.

SHAWANGUNK, a mountain of the United States, in New York; 25 miles south-west of Kingston.

SHAWANNEE. See CUMBERLAND.

SHAWANNETOWN, a village of the United States, in the state of the Illinois, on the Ohio, 9 miles below the mouth of the Wabash. It contains 30 or 40 log buildings. The inhabitants live by the profits of the salt trade. The growth of the town has been greatly retarded in consequence of the United States having reserved to themselves the property of the site of this place, the salt licks, as well as the intermediate track between this and Saline river, nine miles distant. It is a place of great resort for boats, and in time will, no doubt, become a place of consequence, as the lands in its vicinity are of a good quality. Here formerly stood an Indian village of the Shawanne nation.

SHAWBURY, a parish of England, in Salop; 7 miles north-east of Shrewsbury. Population 1364.

SHAWBURY, a village of England, in Salop; 3 miles from Ellesmere.

SHAWDON, a hamlet of England, in Northumberland; 8 miles west of Alnwick.

SHAWELL, a parish of England, in Leicestershire; 3 miles south of Lutterworth.

SHAWFORD, a village of England, in Southamptonshire, situated on the Itching; 2 miles below Winchester.

SHA'WFOWL, *s.* An artificial fowl made by fowlers on purpose to shoot at.

SHAWL, *s.* A part of modern female dress, brought from India into this country; a kind of cloak.—Negro nymphs in linsey-wolsey shawls. *Boswell.*

SHA'WM, *s.* [*schalmei*, Teut.] A hautboy; a cornet: written likewise *shalm*.—With trumpets also and shawms. *Comm. Prayer.*

SHAWS, a village of England, in Cumberland. It is noted for a medicinal fountain called Holywell, impregnated with sulphur, issuing from the foot of a rock, near Naworth.

SHAWSHEEN, a river in the United States, in Massachusetts, which runs north-east into the Merrimack, in the north part of Andover.

SHE, *pronoun.* In oblique cases *her*. [Norman, *sche*; Sax. *ſcæ*, *ſcœ*. Lye. The ancient Eng. word is *scho*; and *shoo*, according to Grose, is continued in some parts of the north.]—The female pronoun demonstrative; the woman; the woman before mentioned.

She, of whom the ancients seem'd to prophesy,
When they call'd virtues by the name of *she*;
She, in whom virtue was so much refin'd,
That for allay unto so pure a mind
She took the weaker sex.

Donne.

It is sometimes used for a woman absolutely, with some degree of contempt.

The *shes* of Italy shall not betray
Mine interest, and his honour.

Shakspeare.

The female; not the male.—He-lions are hirsute, and have great manes, the *shes* are smooth like cats. *Bacon.*

SHEAF, *s.* *sheaves*, plural. [*ſceap*, Sax. *ſchoof* Dutch; from *ſceopan*, to shove or thrust together. *Junius.*]—A

bundle of stalks of corn bound together, that the ears may dry.

These be the *sheaves* that honour's harvest bears,
The seed thy valiant acts, the world the field. *Fairfar.*

Any bundle or collection held together.—In the knowledge of bodies, we must glean what we can; since we cannot, from a discovery of their real essences, grasp at a time whole *sheaves*; and in bundles comprehend the nature of whole species. *Locke.*

To SHEAF, *v. n.* To make sheaves.—They that reap, must *sheaf* and bind. *Shakspeare.*

To SHEAL, *v. a.* To shell. See SHALE.—That's a *shealed* peasecod. *Shakspeare.*

SHEALLINGS, in Rural Economy, the portions of rich grass-land in the more hilly and mountainous parts of the country, which were fixed upon, and taken possession of, by the farming inhabitants at an early period of society, for the purpose of retiring to, and grazing their cattle-stock upon, at certain seasons of the year.

To SHEAR, *preter. shored*, or *sheared*; *part. pass. shorn*. [*ſceapan*, *ſcipan*, Sax. See To SHARE.—*Potshare* was anciently *potſcar*. *Ray.*—This word is more frequently written *sheer*].—To cut between two blades.—The sharp and toothed edge of the nether chap strikes into a canal cut into the bone of the upper; and the toothed protuberance of the upper into a canal in the nether: by which means he easily *sheers* the grass whereon he feeds. *Grew.*—To cut down as by the sickle; to reap. *North.*—[*Skaera*, Su. Goth.] This is also old in our language.

She pulleth up some [herbs] by the roote,
And many with a knife she *shereth*.

Gower.

To SHEAR, *v. n.* To make an indirect course. To pierce.—As a *sheering* wind, it killeth all in the bud. *Sir E. Sandys.*

SHEARD, *s.* [*ſceapþ*, Sax.] A fragment. It is now commonly written *shard*, and applied chiefly to fragments of earthen ware.—There shall not be found in the bursting of it a *sheard* to take fire from the hearth, or to take water without of the pit. *Isa.*

SHEA'RER, *s.* One that clips with shears; particularly one that fleeces sheep.

Of other care they little reckoning make,
Than how to scramble at the *shearers'* feast,
And shove away the worthy bidden guest.

Milton.

In the north of England, a reaper.

SHEA'RMAN, *s.* He that shears.

Thy father was a plaisterer,

And thou thyself a *shearman*.

Shakspeare

SHEARS, *s. pl.* The denomination of the age of sheep.—When sheep is one *shear*, they will have two broad teeth before; when two *shear*, four; when three, six; when four, eight; and after that, their mouths break. *Mortimer.*—An instrument to cut, consisting of two blades moving on a pin, between which the thing cut is intercepted.—*Shears* are a larger, and *scissors* a smaller instrument of the same kind. Pope used *shears* for *scissors*.

Why do you bend such solemn brows on me?

Think you I bear the *shears* of destiny?

Have I commandment on the pulse of life? *Shakspeare.*

The fates prepar'd their sharpen'd *sheers*. *Dryden.*

That people live and die, I knew

An hour ago, as well as you;

And if fate spins us longer years,

Or is in haste to take the *shears*,

I know, we must both fortunes try,

And bear our evils, wet or dry.

Prior.

Any thing in the form of the blades of *shears*.—Wings, in Spenser.

Two sharp-wing'd *sheers*
Deck'd with divers plumes, like painted jays,
Were fix'd at his back to cut his airy ways.

Spenser.

SHEARSBY,

SHEARSBY, or **SHERESBY**, a hamlet of England, in Leicestershire; 7 miles north-east of Lutterworth.

SHEARWATER, *s.* A fowl. See **PROCELLARIA**.

SHEAT, or **SHEET**, a name by which some call a young hog.

SHEAT, or **SHEATS**, in a Ship. See **SHEET**.

SHEATS, in a Ship, also, are those planks under water which come along her run, and are closed into the sternpost: so also that part within board, in the run of the ship, is called the stern-sheets.

SHEAT OF A PLOUGH, in Agriculture, that part of the plough which passes through the beam, and is fastened to the share. It is sometimes called sheath.

SHEATH, *s.* [*ſcæðe*, Sax., *schede*, Teut., *scheyd*, Germ. from *scheiden*; to separate; *ſcæðan*, Sax. the same. Wachter, and Mr. H. Tooke.] The case of any thing; the scabbard of a weapon.

The dead knight's sword out of his *sheath* he drew,
With which he cut a lock off all their hair. *Spenser*.

Doth not each look a flash of light'ning feel,
Which spares the body's *sheath*, yet melts the steel?

Cleveland.

SHEATH, in Botany, is synonymous with spathe, perichætiæ and vagina. In the first instance it belongs to the single-leaved covering, bursting longitudinally, which Linnaeus reckons a kind of calyx, differing from a perianthium in being more or less remote from the flower. Such occurs in galanthus, narcissus, allium, and others of the hexandrous class; as also in arum; and more especially in the natural order of palmæ. The **PERICHÆTIUM**, see that article, is the scaly sheath, or calyx of Mosses. Vagina, which will be further explained in its place, is the sheathing part of a leaf.

To SHEATH, or **To SHEATHE**, *v. a.* To inclose in a sheath or scabbard; to inclose in any case.

Is this her hate to him, his love to me!
'Tis in my breast she *sheaths* her dagger now. *Dryden*.

The left foot naked, when they march to fight,
But in a bull's raw hide they *sheath* the right. *Dryden*.

The leopard, and all of this kind as goes, keeps the claws of his forefeet turned up from the ground and *sheathed* in the skin of his toes, whereby he preserves them sharp for rapine, extending them only when he leaps at the prey. *Grew*.—To obtund any acrid particles.—Those active parts of a body are of differing natures when *sheath'd* up, or wedged in amongst others in the texture of a concrete; and when extricated from these impediments. *Boyle*.—To fit with a sheath.

There was no link to colour Peter's hat,
Walter's dagger was not come from *sheathing*. *Shakspeare*.

To defend the main body by an outward covering.—It were to be wished that the whole navy throughout were *sheathed* as some are. *Raleigh*.

SHEATHING OF A SHIP, is the casing that part of her hull which is to be under water with something to keep the worms from eating into her planks.

It is usually done by laying tar and hair, mixed together, all over the old plank, and then nailing on thin new boards. The sheathing with copper is a still later invention, and answers better than any other.

SHEATHLESS, *adj.* Without a sheath.

The fatal cause was now at last explor'd,
Her veil she knew, and saw his *sheathless* sword. *Eusden*.

SHEATHWINGED, *adj.* Having hard cases which are folded over the wings.—Some insects fly with four wings, as all vaginipennis, or *sheathwinged* insects, as beetles and dorrs. *Brown*.

SHEATHY, *adj.* Forming a sheath.—With a needle put aside the short and *sheathy* cases on earwig's backs, and you may draw forth two wings. *Brown*.

SHEAVE, a cylindrical wheel, made of hard wood or metal, moveable round a pin as its axis in a mortise, as being

used to raise or increase the mechanical powers as a pulley, applied to remove or lift weighty bodies:

SHEA'VED, *adj.* Made of straw.

Her hair, nor loose nor ty'd in formal plait,
Proclaim'd in her a careless hand of pride;
For some, untuck'd, descended her *sheav'd* hat,
Hanging her pale and pined cheek beside. *Shakspeare*.

SHEB, a watering place in the extensive desert of Nubia, to the west of the Nile, through which the caravans pass on the route from Cairo to Darfur. The water is indifferent, but is found at the depth of a few feet. A large quantity of native alum is here produced; 175 miles north of Charje.

SHEBBEAR, a parish of England, in Devonshire; 7½ miles west-north-west of Hatherleigh. Population 738.

SHEBSHIR, a village of Egypt; 9 miles south of Amrus.

SHECATICA, a bay of very irregular shape and breadth, on the coast of Labrador, in North America, having an island of its name at its mouth. It is situated between Lat. 51. 14. and 51. 28. N. and between long. 58. 16. and 58. 22. W.

SHECHALLION, a mountain of Scotland, in Perthshire which rises in a conical form from a broad and circular base, to the height of 3564 feet.

SHECHARY, a lake of New North Wales, formed like a bow. It receives Churchill river from the south-west, and at its north-east end has communication with Berbazon lake, which lies due north and south. At the south end of the latter, the waters of both lakes run east, under the name of Seal river, which empties into Hudson's bay at Churchill fort, between Button's bay on the North, and Cape Churchill on the south-east. Both lakes are long and narrow.

SHE'CKLATON, *s.* A corruption of the Fr. *cyclaton*, which originally signified a circular robe of state, from the low Lat. *cyclas*; and afterwards the cloth of gold, of which such robes were generally made. Spenser was therefore perhaps mistaken in his notion that the quilted Irish jacket had any resemblance to this robe in which Chaucer had dressed Sir Thopas.—He went to fight against the giant in his robe of *shecklaton*, which is that kind of gilded leather with which they use to embroider the Irish jackets. *Spenser*.

To SHED, *v. a.* [*ſcæban*, Sax.] To effuse; to pour out; to spill.

The painful service, and the drops of blood
Shed for my thankless country, are required
But with that surname of Coriolanus. *Shakspeare*.

Cromwell, I did not think to *shed* a tear
In all my miseries. *Shakspeare*.

Some think one general soul fills ev'ry brain,
As the bright sun *sheds* light in ev'ry star. *Davies*.

To scatter; to let fall.—Trees that bring forth their leaves late, and cast them late, are more lasting than those that sprout their leaves early, or *shed* them betimes. *Bacon*.

To SHED, *v. n.* To let fall its parts.—White oats are apt to *shed* most as they lie, and black as they stand. *Mortimer*.

SHED, *s.* [*ſcæb*, Sax. a shade.] A slight temporary covering.

Though he his house of polish'd marble build,
With jasper floor'd, and carved cedar ceil'd;
Yet shall it ruin like the moth's frail cell,
Or *sheds* of reeds, with summer's heat repel. *Sandys*.

In composition; effusion; as blood-*shed*.
SHE'DDER, *s.* A spiller, one who sheds.—A *shedder* of blood shall surely die. *Ezek*.

SHEDIAC, a harbour on the eastern coast of New Brunswick, and on the west side of the gulf of St. Lawrence; 53 miles south-east of Miramichi bay.

SHEDVAN. See **SCHEDUAN**.

SHEE, or **BLACKWATER**, a river of Scotland, in Perthshire, which rises from the union of three small streams at Spittal of Glenshee, the Lochty, Tatnich, and Beg, from the

the mountains on the borders of Aberdeenshire, and after a southerly course of several miles, unites with the Ardlie at Rochalzie, in forming the Ericht.

SHEEN, or **SHEE'NY**, *adj.* [Fr.; the Sax. *ſcen*, *ſcene*, bright, clear, shining; and anciently written *shene*.] Bright; glittering; shewy; fair. *A word used only in poetry.*

When he was all dight, he took his way
Into the forest, that he might be seen
Of the wild beasts, in his new glory *sheen*.

Spenser.

Now they never meet in grove or green,
By fountain clear or spangled star-light *sheen*.

Shakspeare.

Up rose each warrior bold and brave,
Glistering in filed steel and armour *shéén*.

Fairfax.

Or did of late earth's sons besiege the wall
Of *sheeny* heaven?

Milton.

SHEEN, *s.* Brightness; splendour. *A poetical word.*

Mercy will sit between;
Throned in celestial *sheen*.

Milton.

Far above, in spangled *sheen*,
Celestial Cupid, her fam'd son advanc'd,
Holds his dear Psyche sweet entranc'd.

Milton.

SHEEN, a parish of England, in Staffordshire; 8 miles east-north-east of Leeke. Population 414.

SHEEN, EAST, a hamlet of England, in Surrey, seated on an eminence near the Thames, between Richmond and Roehampton.

SHEEP, *s.* plural likewise *sheep*. [*ſceap*, Saxon; of which the plural was *ſcep*.] The animal that bears wool.

Fire the brambles, snare the birds, and steep
In wholesome water-falls the fleecy *sheep*.

Dryden.

Of substances there are two sorts of ideas; one of single substances, as they exist separately, as a man or *sheep*. *Locke*.—[In contempt.] A foolish silly fellow. *Ainsworth*.—For a full description of Sheep, see *Ovis*; their diseases, *ibid.* p. 100 to 103; their varieties, breeding and general management, see *HUSBANDRY*, pp. 497 to 502, and 522 to 525.

SHEEP ISLAND, an island near the north coast of Ireland; 6 miles west-north-west of Fairhead. Lat. 55. 15. N. long. 6. 11. W.

To **SHEE'PBITE**, *v. n.* To use petty thefts.—Shew your knave's visage, with a pox to you; shew your *sheep-biting* face, and be hanged. *Shakspeare*.

SHEE'PBITER, *s.* A petty thief.—His gate like a *sheepbiter* fleeing aside. *Tusser*.—There are political *sheepbiters*, as well as pastoral: betrayers of publick trusts, as well as of private. *L'Estrange*.

SHEEPCADE, *s.* A name provincially applied to the large sheep-louse.

SHEE'COT, *s.* A little inclosure for sheep.

Up to a hill anon his steps he rear'd,
From whose high top to ken the prospect round,
If cottage were in view, *sheepcot* or herd;
But cottage, herd, or *sheepeot* none he saw.

Milton.

SHEEP-FESCUE GRASS, in Agriculture. See *FESTUCA OVINA*.

SHEE'PFOLD, *s.* The place where sheep are enclosed.

The bear, the lion, terrors of the plain,
The *sheepfold* scatter'd and the shepherd slain.

Prior.

SHEEPHALL, a parish of England, in Hertfordshire; 2 miles south-east of Stevenage.

SHEEPHAVEN, a bay on the north coast of Ireland, to the east of Hornhead. Lat. 55. 12. N. long. 7. 45. W.

SHEE'PHOOK, *s.* A hook fastened to a pole by which shepherds lay hold of their sheep.—The one carried a crosier of balm-wood, the other a pastoral staff of cedar like a *sheep-hook*. *Bacon*.

SHEE'PISH, *adj.* Relating to sheep. *Not in use*.—

How to chuse the best tar; to bring in the idle stragglers; how to excell in *sheepish* surgery; how to please Pan, and enchant the rural gods with your melodie. *Stafford's Niobe*.—Bashful; over-modest; timorously and meanly diffident.—Wanting change of company, he will, when he comes abroad, be a *sheepish* or conceited creature. *Locke*.

SHEE'PISHLY, *adv.* Timorously; with mean diffidence.—It is the part of a good-natured man, neither so rigidly to insist upon the punctilios of his liberty and property, as to refuse a glass recommended to him by civility; nor yet on the other side *sheepishly* submit himself to be taxed in his drink. *Goodman*.

SHEE'PISHNESS, *s.* Bashfulness; mean and timorous diffidence.—*Sheepishness* and ignorance of the world, are not consequences of being bred at home. *Locke*.—Without success, let a man be never so hardy, he will have some degree of *sheepishness*. *Grew*.

SHEE'PMASTER, *s.* A feeder of sheep.—A nobleman was a great grazier, and *sheepmaster*. *Bacon*.

SHEEP-NOSE-WORMS, a species of fly-worm, found in the noses of sheep, goats and stags, and produced there from the egg of a large two-winged fly.

SHEEP-SCABIOUS, in Botany. See *JASIONE*.

SHEEPSCOT, a river of the United States, in Lincoln county, Maine, which runs into the Atlantic, on the east side of Wiscasset, forming a bay at its mouth.

SHEEPSHOT, a post village of the United States, in Lincoln county, Maine.

SHEEP'S EYE, *s.* A kind of leer, a wishfull glance.—Cast a *sheep's eye* behind you: in, before me. *Dryden*.

Hard is our lot, who, seldom doom'd to eat,

Cast a *sheep's eye* on this forbidden meat.

Warton.

SHEEP-SHANK, in Sea Language, is a sort of knot, or hitch, cast on a rope, to shorten it as occasion requires; particularly to increase the sweep or length of a tackle, by contracting its runner. By this contrivance the body, to which the tackle is applied, may be hoisted much higher, or removed much farther, in a shorter time. *Falconer*.

SHEEPSHEAD, a parish of England, in Leicestershire; 3 miles from Loughborough. Population 3026.

SHEEPSHEAD, a cape on the south coast of Ireland, between Bantry bay and Dunmannus bay. Lat. 51. 29. N. long. 9. 45. W.

SHEEP'SHEARER, *s.* One who shears sheep.—Judah went up unto his *sheepshearers* to Timnah. *Gen*.

SHEEPSHEA'RING, *s.* The time of shearing sheep; also a feast made when sheep are shorn.—There happening a great and solemn festivity, such as the *sheepshearings* used to be. *South*.

SHEEP'STEALER, *s.* A thief who takes away sheep.—A *sheepstealer* is hanged for stealing. *Burton*.

SHEEP'S TOR, a hamlet of England, in Devonshire; 7 miles south-east of Tavistock.

SHEEP'S-TROTTERS, a refuse material procured from fell-mongers, which is made use of in some places as a manure to be turned into the land.

SHEE'PWALK, *s.* Pasture for sheep.

He beheld a field,

Part arable and tilth; whereon were sheaves

New reap'd; the other part *sheepwalks* and folds.

Milton.

SHEEPWASH, a parish of England, in Devonshire; 4 miles west-north-west Hatherleigh. Population 378.

SHEEPWASH, a hamlet of England, in Northumberland; 4½ miles east of Morpeth.

SHEEPY, GREAT and LITTLE, two small villages of England, in Leicestershire; 5½ miles west-by-south of Market Bosworth. Population 455.

SHEER, *adj.* [*ſcipe*, *ſcep*, Sax. *sehier*, Germ.] Pure; clear; unmingled.

Having viewed in a fountain *sheer*

His face.

Spenser.

Thou *sheer*, immaculate, and silver fountain. *Shakspeare*.—*Sheer* argument is not the talent of the man; little wrested

wrested sentences are the bladders which bear him up, and he sinks downright, when he once pretends to swim about them. *Atterbury.*

SHEER, *adv.* Clean; quick; at once. *Not now in use.*

Thrown by angry Jove

Sheer o'er the crystal battlements; from morn
To noon he fell, from noon to dewy eve,
A summer's day; and with the setting sun,
Drop'd from the zenith, like a falling star,
On Lemnos.

Milton.

Due entrance he disdain'd, and in contempt
At one slight bound high overleap'd all bound
Of hill or highest wall, and *sheer* within
Lights on his feet.

Milton.

To **SHEER**, *v. a.* See **SHEAR**.

I keep my birth-day: send me Phillis home
At *sheering*-time.

Dryden.

SHEER, in Ship-Building, the fore and aft curve or hang of a ship's sides or decks.

SHEER-DRAUGHT, the plan of elevation of a ship, on which is described the out-board works, as the sheer-rails, wales, ports, drifts, head, quarter, post, and stern, &c. The hang or sheer of each deck inside, the height of the water-lines, &c.

SHEER-HOOKS, are large iron hooks used when a ship designs to board another.

SHEER-HULK, is an old ship of war of 74 guns, cut down to the lower deck, or nearly so, and fitted up so as to fix or take out the lower masts of ships in the royal navy, as occasion requires.

SHEER-STRAKE, the upper strake or strakes on the topside in midships. It forms the chief strength of the topside, and is therefore thicker, and continued the whole length parallel to the top timber-line and scarfs at the butts between the drifts.

SHEER-WALES, those strakes of thick stuff in the topside of three-decked ships, which are wrought between the middle and lower deck ports. Sometimes they are called middle-wales.

To **SHEAR OFF**, *v. n.* To steal away; to slip off clandestinely.

SHEERGOTTA, a town of Hindostan, province of Bahar. It stands at the foot of a steep and narrow pass cut through the Ramgur hills, being part of the great military road leading from Calcutta to Benares. It takes its name from the number of tigers which formerly infested this route. Lat. 24. 32. N. long. 84. 55. E.

SHEERGUR. There are several towns of this name in Hindostan, which signifies *the resort of tigers*.

SHEERHORN, a very lofty mountain of the Swiss canton of Uri; 10 miles south-east of Altorf. It rises to the height of 10,700 feet, and at the top is divided into two parts, from which it probably derives its name. It is covered with glaciers of great extent. Lat. 46. 49. 50. N. long. 8. 40. 5. E.

SHEERING, or **SHEARING**, in Sea Language, a term used for the motion of a ship, when she deviates from the line of the course, either to the right or left.—To sheer off, is to remove to a greater distance.

SHEERING, a parish of England, in Essex; 8 miles from Epping.

SHEERLY, *adv.* At once; quite; absolutely. *Unused.*

Search through all the memories of mankind,
And find me such a friend; he has outdone all,
Outstrip them *sheerly*.

Beaumont and Fl.

SHEERNESS, a market town of England, and sea-port, in the county of Kent, situated on the isle of Sheppey, at the mouth of the river Medway, and noted for its strong and commanding fortress. This work was begun in the reign of Charles II. when it was deemed advisable to form a fort here, to protect the entrance of the river. Subsequent to this, the Dutch attacked this point, destroyed the fortifications, and sailed with their fleet up the Medway, as far as

Upnor castle. The spot, however, being deemed of importance, government after this directed some strong works to be formed here. A regular fortress was soon constructed, and mounted with a line of large and heavy cannon; several smaller forts, being at the same time built at different stations, on the banks of the river. Since that period, the fort has been greatly enlarged and strengthened, new works have been added, and such improvements made as to command effectually the entrance of the river. It now also constitutes a regular garrison commanded by a governor, lieutenant-governor, a fort major, and other inferior officers. The ordnance establishment is under the controul of a store-keeper, a clerk of the cheque, and a clerk of the survey. Adjoining the fort is the king's yard or dock, which is chiefly used for repairing ships that have been slightly damaged. A resident commissioner, with two clerks, a master ship-wright, and other officers, with labourers, are stationed here. A modern chapel has been erected at Sheerness, at the expense of government: but the town is subordinate in ecclesiastical rites and privileges, to the parish church of Minster. Several old ships of war have been stationed on the shore as breakwaters; their hulls are occupied by 70 or 80 families; and the chimnies, being raised of brick from the lower gun decks, they have altogether a very singular appearance. The fort and inhabitants of the town having for a long period experienced a great scarcity of fresh water, the chief supply being brought from Chatham, it was at length determined by the board of ordnance, to attempt to sink a well within the fort. This work was attended with many difficulties, but was at last completely successful, and furnishes at the same time a curious fact in the natural history of springs, and of the mineral strata of the earth. Having dug to the vast depth of 328 feet, the augur with which the workmen were boring suddenly dropt down, and the water immediately rushed up with such violence, that the men could hardly be drawn up in time to escape with their lives. In a few days, it stood within eight feet of the top, and has ever since produced a constant supply. The quality of the water is fine and soft; and it supplies not only the garrison and inhabitants, but also the shipping in the Medway. By the return of 1811, Sheerness contained 134 inhabited houses, and 96 uninhabited, with 1685 inhabitants, including the convicts in the hulks, but independent of the garrison. Market on Saturday; 3 miles north of Queenborough, and 46 east of London. Lat. 51. 26. N. long. 0. 46. E.

SHEERPORE. There are several towns of this name, which signifies *abounding with tigers*, in Hindostan.

SHEERS, *s.* See **SHEARS**.

SHEERS, in Ship-Building, are two masts or spars, set across at the upper end of each other, and there lashed together with tackles depending from the intersection; and they are kept upright by guys extending each way from the heads. By this contrivance very heavy bodies are raised, such as the stem, stern, stern-frame, and the frame-timbers of ships: likewise ships are masted by sheers, or have their masts taken out where there is no sheer-hulk.

SHEET, *s.* [ʃeæt, ʃeet, ʃeýt, Sax. (sicut Angl. *sheet*,) propriè est lodix, vel linteum planum atque *expansum*: postea tamen translata est vox ad plures alias res in *latum effusas*; ut, a *sheet* of lead, paper, &c. *Lyc.* edit. Manning. *Sheet*, (whether a *sheet* for a bed, a *sheet* of water, a *sheet* of lightning, a *sheet* anchor, &c.) is the participle ʃeæt of ʃeýtan, to cast forth, to throw out. Horne Tooke.] A broad and large piece of linen.—He saw heaven opened, and a vessel descending unto him, as a great *sheet*, knit at the four corners. *Acts*.—The linen of a bed.

If I die before thee, shroud me
In one of these same *sheets*.

Shakspeare.

[*Ecoutes*, Fr. *echoten*, Dutch.] In a ship are ropes bent to the clews of the sails, which serve in all the lower sails to hale or round off the clew of the sail; but in topsails they draw the sail close to the yard arms. *Dict*.—The little row behind the back, and undoing whisper, like pulling

off a *sheet*-rope at sea, slackens the sail. *Suckling*.—As much paper as is made in one body.

As much love in rhyme,
As could be cramm'd up in a *sheet* of paper,
Writ on both sides the leaf, margin and all. *Shakspeare*.

A single complication or fold of paper in a book.—Any thing expanded.

Such *sheets* of fire, such bursts of horrid thunder
I never remember to have heard. *Shakspeare*.

Rowling thunder roars,
And *sheets* of lightning blast the standing field. *Dryden*.
An azure *sheet* it rushes broad,
And from the loud resounding rock below,
Dash'd in a cloud of foam. *Thomson*.

Sheets in the plural is taken for a book.—To this the following *sheets* are intended for a full and distinct answer. *Waterland*.

SHEET, in Sea Language, a rope fastened to one or both the lower corners of a sail, to extend and retain it in a particular station. When a ship sails with a lateral wind, the lower corner of the main and fore-sail are fastened by a tack and a sheet; the former being to windward, and the latter to leeward; the tack, however, is entirely disused with a stern wind, whereas the sail is never spread without the assistance of one or both of the sheets. The stay-sails and studding-sails have only one tack, and one sheet each; the stay-sail tacks are always fastened forward, and the sheet drawn aft; but the studding-sail tack draws the under clue of the sail to the extremity of the boom, whereas the sheet is employed to extend the inmost. *Falconer*.

SHEET, a hamlet of England, in Southamptonshire, adjacent to Petersfield.

To **SHEET**, *v. a.* To furnish with sheets. To unfold in a sheet.

The *sheeted* dead
Did squeak and gibber in the Roman streets. *Shakspeare*.
To cover as with a sheet.

Like the stag when snow the pasture *sheets*,
The barks of trees thou browsed'st. *Shakspeare*.

SHEET-ANCHOR, *s.* [Formerly *shoot-anchor*, as Mr. H. Tooke has observed; which continued to be in use much later than he has stated.] In a ship is the largest anchor; which, in stress or weather, is the mariners' last refuge, when an extraordinary stiff gale of wind happens. *Bailey*. See **SHEET**.—This saying they make their *shootanker*. *Abp. Cranmer*.—His majesty did ever seeke to settle his establishment upon the faith of protestants in generalitie, as the most assured *shoote-ancr*. *Proceed. against Garnet*.

SHEETING, *s.* Cloth for making sheets.—Diapers were made in one town or district, damasks in another, *sheeting* in a third. *Bp. Berkeley*.

SHEETING, a term signifying the flooring of jointed planks, under the lock-gates of a canal, and at the tail of every lock and sluice, &c.

SHEFFIELD (John), Duke of Buckinghamshire, son of the earl of Mulgrave, was born in the year 1649. At the death of his father he succeeded to his title: this was in the year 1658. At an early age he dismissed his governor, but supplying the want by his own industry, he acquired a considerable proficiency in literature. His martial ardour broke out at the age of seventeen, when he engaged in the first Dutch war as a volunteer. The indications which he gave of the love of pleasure, united with literary talents, which had a peculiar value in the reign of Charles II., rendered him a favourite at court, and he materially assisted in the obtaining for Dryden the appointment to the post of laureat. At the commencement of the second Dutch war, he was a volunteer in the fleet commanded by the Duke of York, and was present at the battle of Solebay, in which he behaved with so much gallantry, that on his return he was made captain of a second-rate ship of war. In the follow-

ing year he was appointed colonel of a regiment of foot under general Schomberg. In 1674, he was decorated with the order of the Garter. He was, in 1679, appointed lord-lieutenant of Yorkshire, and governor of Hull, in which year he wrote a piece, entitled "The Character of a Tory, in answer to that of a Trimmer." In this we have an avowal of his political principles, which were those of the party in whose name he wrote, and to which he adhered during life. In 1680, he went out with a force to the relief of Tangier, then invested by the Moors. In this expedition he completely succeeded, and with it ended the military services of lord Mulgrave. On the accession of James II. he was chosen of the privy-council, and made lord-chamberlain of the household. He returned these favours by a zealous attachment to his master, which led him to take a seat in the ecclesiastical commission; but in this he opposed those measures of the priests which brought on the speedy ruin of that infatuated prince. Though inimical to the revolution, yet he voted for the conjunct sovereignty of king William with Mary. In 1694, he was made marquis of Normanby; notwithstanding this, and his admission into the cabinet, with a pension, yet he still had a great dislike to the king. On the accession, however, of queen Anne, his former attachment to the court was revived, and he experienced her favour by an appointment to the privy-seal, and by other honours, which were terminated in 1703, by a nomination to the dukedom of Buckinghamshire. Jealous of the influence of the duke of Marlborough, he resigned the office of privy-seal, and remained out of office several years, during which he built the house in St. James's Park, on the site of which his present Majesty's new palace is now erecting. At the great change of the ministry in 1710, he was again introduced, first as steward of the household, and then as president of the council. After the death of queen Anne, he was an opponent of the court, and employed his time chiefly in literary pursuits, till his death, in 1721.

The duke had been thrice married, and each time to a widow: his last wife was a natural daughter of James II., by whom he had a son that survived him. Following the example of the court of Charles II., he freely indulged in licentious amours; nevertheless, it has been said that he had occasionally serious thoughts of religion, though probably not restricted to any particular party. The following is the epitaph which he composed for himself: "Dubius sed non improbus vixi: incertus morior, sed inturbatus: humanum est nescire et errare. Christum adveneror: Deo confido omnipotenti, benevolentissimo: Ens entium miserere mei." This was inscribed on his magnificent monument in Westminster Abbey, with the exception of the clause respecting Christ, which bishop Atterbury rejected, thinking simple veneration a derogatory expression applied to the second person in the Trinity.

In the capacity of poet, the duke of Buckinghamshire does not rank very high; his compositions are on a variety of topics, of which, however, the chief is "An Essay on Poetry," which, according to Dr. Johnson, contains judicious precepts, which are sometimes new, and often happily expressed, but with many weak lines, and some strange instances of negligence. In his "Essay on Satire," he is supposed to have been assisted by Dryden, who, for some peculiarities in it, had the misfortune to be taken as the real author.

The duke of Buckinghamshire composed two tragedies, entitled "Julius Cæsar," and the "Death of Brutus;" for the latter of which, at his request, Pope wrote two chorusses: of these Warburton says, that they have the usual effect of ill-placed ornaments,—they make the meanness of the piece more conspicuous.

SHEFFIELD, a large and populous manufacturing town of England, in the West Riding of Yorkshire. It is beautifully situated on an eminence, at the confluence of the rivers Sheaf and Don, the former, from which the town takes its name, bounding it on the east, and the latter on the north. It is surrounded by hills of considerable height, which command fine prospects of the town and vicinity, and add greatly

greatly to the romantic situation of the place. Over the Don is a stone bridge of five arches, called Lady's bridge, built in 1485, and repaired in 1762; and over the Sheaf is another of one arch. The town extends about a mile from north to south, and above three quarters from east to west. Few places can boast of more handsome and regular streets. The houses are well built, and many of them elegant: they are now mostly of brick; but stone was at one time the only building material in use. Though the smoke of the numerous manufactories tends to give the town a sombre appearance, it is yet far from being dull, and is abundantly furnished with all the conveniences and elegances of life. The public buildings are not particularly remarkable for architectural beauty, and are rather calculated for utility than show. The principal of these are the churches belonging to the establishment, the town-hall, cutlers'-hall, the general infirmary, and assembly-room, and the theatre. The churches are four in number, viz., St. Peter's church, St. Paul's, St. James's and the chapel of the duke of Norfolk's hospital. St. Peter's, the parish church of Sheffield, stands near the centre of the town, and was erected in the reign of Henry I. It is a Gothic building, with a spire rising from the middle. On the south side of the chancel is the Shrewsbury chapel, which contains four monuments to the memory of the earls of Shrewsbury, of the family of Talbot. At the entrance to the chancel are deposited the remains of William Walker of Darnal, in this parish, supposed to have been the executioner of Charles I.; "but," says the recent historian of Sheffield, the reverend J. Hunter, "with better reason supposed to have been the translator of the *Vindicia contra Tyrannos*. St. Paul's church is an elegant modern building, in the Grecian style. It was begun in 1720, but not finished till 1771. St. James's church is a more modern structure; it was built by subscription, and opened about the year 1790. The chapel at the duke of Norfolk's hospital was opened in 1777. It is of an octagonal form, and calculated to contain a large congregation. Besides the churches, the town contains seven meeting-houses for Protestant dissenters, one for Unitarians, two for Methodists, one for Quakers, and a Roman Catholic chapel. The town-hall is a handsome new edifice, built of stone, and situated near the fish market-place in Castle-street. The cutlers'-hall is on the south side of St. Peter's church-yard, and was built in the year 1726. The general infirmary is situated about half a mile to the west of the town. It is a large and commodious building, begun in 1793, and finished in a few years, the expence being defrayed by subscriptions and legacies. The situation is healthy, and the plan of the building well adapted to promote the recovery of patients. Indeed in these points, as well as in the provision for medical aid, and the comfortable treatment of the patients, this institution is universally allowed to equal any establishment of a similar kind in the kingdom. The assembly-room and the theatre comprise an elegant building in Norfolk-street, in the south part of the town. This was first erected in 1762, but has been since taken down, and rebuilt on a larger scale. The town contains several other buildings deserving of notice. The duke of Norfolk's hospital stands on the eastern bank of the Sheaf. It was founded and endowed in 1670, by Henry earl of Norwich, and received a considerable accession of property by Edward duke of Norfolk, in 1770. On the north side of the town is an hospital, founded by Mr. Thomas Hollis, merchant in London, in 1703, for poor cutlers' widows. On the north-east of the town, and near the banks of the Don, are the military barracks, which were built about the same time with the general infirmary. They form a noble pile of building, with a fine esplanade in front. The rooms are of a proper size, and conveniently arranged; and the whole structure is well adapted for the accommodation of troops. The free grammar-school was erected in 1649. Near it is a writing school for poor boys; and here are also two charity schools, one for boys and another for girls. A large market-place, with extensive and commodious shambles, and other accommodations, was formed

and finished in 1786. The works of the Sheffield gas-light Company, erected in 1819, form a highly creditable addition to the public buildings of Sheffield. They stand near the Sheaf bridge; and not far from them, the basin, warehouse, and wharfs of the new canal from Tinsley, opened in 1819, present a further example of the public spirit of the inhabitants of Sheffield, having been finished at an immense expence. Sheffield can also boast of two of the first schools in the kingdom, on Bell and Lancaster's systems. The former provides instruction for 450 boys and 450 girls; the latter for 700 boys and 600 girls.

Sheffield has been long noted for its manufactures, for which it is well adapted by its situation, the neighbourhood abounding in coals and iron, and the river Don affording an extensive navigation through different parts of the kingdom. The staple manufactures are those of hardware, which are very various and extensive, and constitute indeed the chief support of the town, and the great source of its opulence and prosperity. They comprise two great divisions, viz., those of cutlery and plated goods; and these branch out into numerous ramifications, each of which constitutes a distinct business, though some manufacturers carry on several of them together. To the first division belong the trades of making edge-tools, combs, cases, buttons, fenders, files, anvils, joiners' tools, lancets, forks, hafts, ink-stands, nails, pocket-knives, pen-knives, razors, snuffers, common scissors, fine scissors, saws, scythes, and hay and straw knives, sickles, sheers, awl-blades, bellows, &c.; and also the refining of steel. The trade of plated goods comprises an endless variety of articles, such as tea-urns, coffee-pots, sauce-pans, tankards, cups, candlesticks, and other pieces of table furniture, &c. The latter manufactures are wholly confined within the town, but those of cutlery goods are also carried on in all the villages and hamlets in the neighbourhood, to the distance of seven miles. Besides these manufactures, there are in the town and its vicinity, several extensive foundries for iron, brass, and white metal. In 1625, the master manufacturers of Sheffield were incorporated under the title of the "Company of Cutlers of Hallamshire," the name of the district or liberty in which the town is situated. This corporation is governed by a master elected annually, six searchers, and 24 assistants, and is the only body of tradesmen incorporated in the town. It contains at present about 600 members. Sheffield appears to have been noted so early as in the 13th century, as a staple for iron manufactures; and Chaucer, who wrote in the reign of Edward III. mentions the "Sheffield whittle" in one of his poems. For several centuries, however, its trade was inconsiderable, consisting almost entirely of sheath knives, scissors, sickles, and scythes; and it was not till the year 1750, that the town began to make any great figure as a manufacturing place. In that year, Mr. Joseph Broadbent opened a direct trade with the continent, the business of the town having been previously confined entirely to Great Britain; and in 1751, the Don was rendered navigable to within three miles of the town, which gave new facilities both to foreign and domestic intercourse. The navigation, as already intimated, is now complete to the verge of the town. Soon after this, Mr. Thomas Bolsover began to plate brass and copper buttons with silver; and in 1758, the silver plating manufactory was begun on an extensive scale, by Mr. Joseph Hancock. Since that time the town has advanced rapidly in population and wealth, and the progress of luxury and improvement has kept pace with its increasing prosperity. In 1760, a stage coach to London was set up, and a coffee-room was begun in 1765. A bank was opened in 1770. About the year 1786, the first steam-engine grinding wheel was opened. In 1793, the first hackney coach was set up.

The origin and remote history of Sheffield are unknown: in former times it was distinguished for its castle, a strong fortress, situated on the north-east of the town, near the confluence of the two rivers, and supposed to have been built during the reign of Henry III. This castle descended from the

the Lovetots to the Nevils, lords Furnival, and passed from them to the Talbots, earls of Shrewsbury, and subsequently to the Howards, dukes of Norfolk, in whose family the lordship of the manor is still vested. During the civil wars in the time of Charles I., Sheffield castle sustained a long siege for the king, but at last surrendered upon honourable terms, and was soon afterwards ordered to be demolished, and scarcely a vestige of it can now be discerned. Population 50,012. Market on Tuesday and Saturday; 36 miles south of Leeds, and 162 north-north-west of London. Lat. 53. 22. N. long 1. 29. W.

SHEFFIELD, a post township of the United States, in Caledonia county, Vermont. Population 388.

SHEFFIELD, a post township of the United States, in Berkshire county, Massachusetts; 125 miles west-south-west of Boston. It is watered by the Housatonic. Population 2439.

SHEFFIELDIA [so called by Forster in honour of the Rev. Mr. Sheffield, whom he designates as the chief botanist at Oxford], in Botany, a genus of plants. The genus in question is now sunk in *SAMOLUS*: see that article.

SHEFFORD, a township of England, in Bedfordshire; 5 miles south-west of Biggleswade. Population 536.

SHEFFORD, WEST, a parish of England, in Berkshire; 5 miles north-east of Hungerford. Population 421.

SHEFFORD, EAST, a parish in the same county, half a mile distant from the foregoing.

SHEFFORD, a township of Lower Canada, in the county of Richlieu. Population 500.

SHEHERON, a village of Irak, in Persia, 15 miles east of Kermanshaw.

SHEHERVERD, a village of Irak, in Persia; 30 miles south-west of Sultania.

SHEHOLA, a post township of the United States, in Wayne county, Pennsylvania.

SHEHOUN, a small town of Syria, under the jurisdiction of an independent Aga, called anciently *CAPPAREAS*; 18 miles north of Hamah.

SHEHRIDGHERD, a village of Irak, in Persia; 33 miles west-south-west of Koom.

SHEHRISTAN, a village of Korassan, in Persia; 210 miles west of Herat.

SHEHRISTAN, a village of Khusistan, in Persia; 50 miles north-west of Shiras.

SHEHRZOUR, a town of Persia, in the eastern part of Koordistan, capital of a district; 150 miles north of Bagdad.

SHEIB, a lake of Egypt; 48 miles east-north-east of Cairo.

SHEIK, or **SCHEIK**, the person who has the care of the mosques in Egypt: his duty is the same as that of the imams at Constantinople. There are more or fewer of these to every mosque, according to its size or revenues. One of these is head over the rest, and answers to a parish-priest with us, and has under him, in large mosques, the readers and people who cry out to go to prayers; but in small mosques the sheik is obliged to do all this himself. In such it is their business to open the mosque, to cry to prayers, and to begin their short devotions at the head of the congregation, who stand rank and file in great order, and make all their motions together. Every Friday the sheik makes an harangue to his congregation.

SHEIK-BELLET, the name of an officer in the oriental nations.

In Egypt the sheik-bellet is the head of a city, and is appointed by the pacha. The business of this officer is to take care that no innovation be made, which may be prejudicial to the Porte, and that they send no orders which may hurt the liberties of the people. But all this authority depends on his credit and interest, not his office: for the government of Egypt is of such a kind, that often the people of the least power by their posts have the greatest influence; and a caia of the janizaries or Arabs, and some-

times one of their meanest officers, an oda-basha, finds means, by his parts and abilities, to govern all things.

SHEIKPORE, a town of Hindostan, province of Babar. Lat. 25. 8. N. long. 85. 4. E.

SHEIKH-UL-JEBAL, Dominions of, or lord of the mountains (commonly called the Old Man of the Mountain) comprised the whole of that elevated tract in the province of Azerbaijan in the Persian empire, which runs parallel with the course of the Kizilozain and the greater part of Ghilan. When destroyed by Holaku, the Housseines or Assassins, possessed upwards of 100 strong-holds; but the residence of the prince was generally confined to the castles Roudbar and Allah Ahmaut, both of which are situated in the Kohr Caucasian, near Kazween.

SHEK ABDALLAH, a village of Syria, in the pachalic of Aleppo; 20 miles south-east of Aleppo.

SHEK ABU ENNUR, a village of Upper Egypt; 7 miles south of Benisuef.

SHEK AMMER, a village of Upper Egypt, on the Nile; 17 miles north of Syene.

SHEK EMBADE, a village of Upper Egypt, on the left bank of the Nile; 16 miles south-south-east of Girge.

SHEK EREDI, or **HARADI**, a village of Upper Egypt, on the eastern bank of the Nile, distinguished by the tomb of a Turkish saint; 8 miles north-north-east of Achmim.

SHEK FADLE, a village of Upper Egypt, on the Nile 10 miles south of Abu Girge.

SHEK IL ETMAN, a village of Egypt, on the Nile; 7 miles south-south-west of Cairo.

SHEK ZEINEDDIN, a village of Upper Egypt, on the Nile; 3 miles north of Tahta.

SHEKARPORE, a town of Afghanistan, province of Sewistan, on the Indus. This place has never been visited by a European; but it is described as a large and fortified town, having seven gates. It is governed by a Mahometan chief, who pays tribute both to the Afghans and Ameers of Sinde. Lat. 28. 47. N. long. 69. 40. E.

SHEKEL, **SHEKLE**, **SHECKLE**, or **SICLUS**, an ancient Hebrew silver coin, which was originally a didrachm, but, after the Maccabees, about the value of the Greek tetradrachm, or four Attic drachmas, or four Roman denarii, allowing the drachma and denarius to be of the same value; and according to Mr. Raper's valuation of the drachma at 9d. 286, equal to 37d. 144.

In the Bible, the shekel is sometimes also rendered *solidus* and sometimes *stater*.

The Jewish doctors are in great doubt about the weight of the shekel; and it is only by conjecture, and by the weight of the modern shekel, that the ancient one is judged equal to four Attic drachmas.

SHEKKA, a village of the Bled el Jereede, bordering on Tunis, the *Cerbeia* of Ptolemy; 18 leagues west-south-west of Gafsa.

SHEKOABAD, a considerable town of Hindostan, province of Agra, and district of Etawah. It was formerly fortified, and a place of considerable consequence. The vicinity produces very fine indigo; with which, and cotton, it carries on a considerable trade. This town is said to have been founded by the unfortunate Dara Sheko, the elder brother of Aurungzebe. Lat. 27. 6. N. long. 78. 38. E.

SHEKY MOUNTAINS, mountains of Ireland in the county of Cork; 15 miles west of Bandonbridge.

SHELBROOK, a hamlet of England, West Riding of Yorkshire; 7 miles from Doncaster.

SHELBURN BAY, a bay on the north coast of New Holland, between Oxfordness and Cape Grenville.

SHELBURNE, a post township of the United States, in Chitterdon county, Vermont, on Lake Champlain. Population 987.

SHELBURNE, a township of the United States, in Coos county, New Hampshire, on the Androscoggin. Population 176.

SHELBURNE, a township of the United States, in Franklin

Franklin county, Massachusetts; 100 miles west of Boston. Population 961.

SHELBY, a township of the United States, in Bath county, Kentucky.

SHELBY, a county of the United States, in the north part of Kentucky, bounded north by Henry, west by Bullet, east by Franklin, and south by Nelson. It is fertile, and copiously watered by several creeks running into Salt river. Population 14,778, including 3114 slaves.

SHELBYVILLE, the principal town of Shelby county, in the United States, situated on Brashan's creek; 12 miles above its junction with Salt river. It contains a court-house, a bank, and a meeting-house. Population 424.

SHELBYVILLE, a post township of the United States, and capital of Bedford county, Tennessee, on Duck river. It is flourishing, and contains a court-house.

SHELDAFLE, *s.* [*sheld*, speckled: An old Suffolk word. Ray.] The chaffinch.

SHELDERTON, a hamlet of England, in Salop; 8 miles west-north-west of Ludlow.

SHELDESLEY, BEAUCHAMP and KING'S, two hamlets of England, in Worcestershire, on opposite sides of the river Teme, north-west of Clitheroe.

SHELDON, a hamlet of England, in Derbyshire; 3½ miles west-by-north of Bakewell.

SHELDON, a village of England, in Devonshire; 6½ miles east-north-east of Columpton.

SHELDON, a parish of England, in Warwickshire; 4½ miles south-west of Coleshill. Population 388.

SHELDON, formerly HUNGERFORD, a post township of the United States, in Franklin county, Vermont, on the Michiscoui; 16 miles east of Lake Champlain. Population 883.

SHELDON, a township of the United States, in Genesee county, New York; 270 miles west of Albany. Population 1415.

SHELDRAKE, *s.* A bird that preys on fishes; a kind of wild duck.—Teals, *sheldrakes*, and speckled fowls, that come hither in winter out of Scandia, Muscovy, &c. *Burton.*

SHELDUCK, *s.* A kind of wild duck. See SHELDRAKE.—To preserve wild ducks, and *shelducks*, have a place walled in with a pond. *Mortimer.*

SHELDWICK, a parish of England, in Kent; 2½ miles south-by-west of Feversham. Population 449.

SHELE, a small river of England, which runs into the Tyne, near its head.

SHELF, *s. pl.* *Shelves.* [*ʃɛl*; *ʃɛlf*, Sax.] A board fixed against a supporter, so that any thing may be placed upon it. Bind fast, or from their *shelves*
Your books will come and right themselves. *Swift.*

A sand bank in the sea; a rock under shallow water.—Our transported souls shall congratulate each other on their having now fully escaped the numerous rocks, *shelves*, and quick-sands. *Boyle.*

SHELF, a term used by the miners in many parts of England, to express a distinction of the inner structure of the earth, so little known to philosophers, that they have no word to express it by. These workmen sometimes also express it by the term fast ground or fast country. What they mean by this is, that part of the earth, which they find lying even, and in an orderly manner, and evidently having retained its primitive form and situation.

SHELFANGER, a parish of England, in Norfolk; 2½ miles north of Diss. Population 398.

SHELFE, a township of England, West Riding of Yorkshire; 3 miles north-east of Halifax. Population 1553.

SHELFORD, a small town of England, in Bedfordshire, lying between two rivulets, which, uniting their streams, fall into the Ouse. Market on Friday; 9 miles south of Bedford, and 41 north of London.

SHELFORD, a parish of England in Nottinghamshire; 6 miles east-north-east of Nottingham. Population 366.

VOL. XXIII. No. 1558.

SHELFORD, GREAT, a parish of England, in Cambridgeshire; 3 miles south-by-east of Cambridge. Population 593.

SHELFORD, LITTLE, another parish in the same county, about a mile distant from the foregoing. Population 357.

SHELIFY, *adj.* Full of hidden rocks or banks; full of dangerous shallows.

Glides by the syren's cliffs a *shelify* coast,
Long infamous for ships and sailors lost,
And white with bones.

Dryden.

In this passage, stony.—The tillable fields are in some places so tough, that the plough will scarcely cut them; and in some so *shelify* that the corn hath much ado to fasten its root. *Carew.*

SHELL, *s.* [*ʃɛl*, *ʃɛll*, Sax. *schale*, *schelle*, Teut. *schale*, Germ., *skal*, Icel., *skalja*, M. Goth., a shell, a scale. See also SHALE.] The hard covering of any thing; the external crust.—Whatever we fetch from under ground is only what is lodged in the *shell* of the earth. *Locke.*—The covering of a testaceous or crustaceous animal.

Her women wear

The spoils of nations in an ear;
Chang'd for the treasure of a *shell*,
And in their loose attires do swell.

B. Jonson.

The covering of the seeds of siliquous plants.—Some fruits are contained within a hard *shell*, being the seeds of the plants. *Arbuthnot.*—The covering of kernels.

Chang'd loves are but chang'd sorts of meat;
And when he hath the kernel eat,
Who doth not throw away the *shell*?

Donne.

The covering of an egg.

Think him as a serpent's egg,
Which, hatch'd, would, as his kind, grow mischievous,
And kill him in the *shell*.

Shakspeare.

The outer part of an house.—The marquis of Medina Sidonia made the *shell* of a house, that would have been a very noble building, had he brought it to perfection. *Addison.*—It is used for a musical instrument in poetry, from *testudo*, Latin; the first lyre being said to have been made by straining strings over the shell of a tortoise.

Less than a god they thought there could not dwell
Within the hollow of that *shell*,
That spoke so sweetly, and so well.

Dryden.

The superficial part.—So devout are the Romanists about this outward *shell* of religion, that if any altar be moved, or a stone of it broken, it ought to be reconsecrated. *Ayliffe.*—In artillery, a bomb.

SHELLS, *Collecting and cleaning of.* See CONCHOLOGY.

SHELLS, *Figures and Colours, &c. of.* It is observed, that river-shells have not so agreeable or diversified a colour as the land and sea-shells; but the variety in the figure, colours, and other characters of sea-shells, is almost infinite. The number of distinct species we find in the cabinets of the curious is very great; and doubtless the deep bottoms of the sea, and the yet unsearched shores, contain multitudes more, yet unknown to us. Even the same species differ in some degree in almost every individual, so that it is rare to find any two shells which are alike in all respects. *Bonan. Recreat. Ment. et Ocul.*

This wonderful variety, however, is not all the produce of one sea, or one country; the different parts of the world afford us their different beauties. Bonani observes, that the most beautiful shells we are acquainted with come from the East Indies, and from the Red sea. This is in some degree countenanced by what is found to this day; from the general observations of the curious, it seems that the sun, by the great heat that it gives to the countries near the line, exalts the colours of the shells produced there, and gives them

them a lustre and brilliancy, that those of colder climates always want; and it may be, that the waters of those vast seas, which are not subject to be weakened by fresh rivers, give a nourishment to the fish, that may add to the brilliancy of their shells.

The shores of Asia furnish us with the pearl oysters and scallops in great perfection. About Amboyna are found the most beautiful specimens of the cabbage-shell, the arrosoir, the ducal mantle, and the coral oysters, or echinated oysters. Here also are found a great variety of extremely beautiful muscles, tellinæ, and volutæ; some fine buccinums, and the shell called the *Ethiopian crown*, in its greatest perfection.

The dolia, the murices, and the cassandræ, are also found on these coasts in great beauty. Many elegant snails and screw-shells are also brought from thence; and finally the serapion and spider-shells. *Hist. Nat. Eclairc.*

The Maldivæ, and Philippine islands, Bengal, and the coast of Malabar, abound with the most elegant of all the species of snails, and furnish many other kinds of shells in great abundance and perfection.

China abounds in the finest species of porcelain shells, and has also a great variety of beautiful snails.

Japan furnishes us with all the thicker and larger bivalves; and the isle of Cyprus is famous above all other parts of the world, for the beauty and variety of the patella, or limpet, found there.

America affords many very elegant shells, but neither in so great abundance nor beauty as the shores of Asia.

Panama is famous for the cylinders or rhombi, and we have beside, from the same place, some good porcelains, and a very fine species of dolium, or *concha globosa*, called from this place the *Panama purple shell*. One of the most beautiful of the cylinders is also known among our naturalists under the name of the *Panama shell*.

SHELL, *Arabian*, a name given by some to a species of porcelain shell, not because it is found on the coast of Arabia, but because its lines and variegations are supposed to represent the figures of Arabic characters.

SHELL, *Aurora*, a very remarkable species of shell-fish, found in cabinets of the curious. It is of the figure of a bird, having a head, wings and tail, and is of a flame-colour; it owes much of its beauty, however, to art and accident; the shell is an oyster of a peculiar variation of figure from the common one; the head of the bird is the cardo or hinge; the wings are the body of the shells; and the tail is a peculiar process, like that of the marteau, only single.

It is naturally of a dusky brown on the outside, and pearly within, but when its rough coat is taken off, it appears of this beautiful flame-colour.

SHELL, *Caterpillar*: see TURBO.—SHELL, *Centre*: a name given to the *balanus marinus*.—SHELL, *Chalice*, or *Cup-shell*: a species of the *balanus*.—SHELL, *China-letter*: a name given by many to the *chama Arabica*. It is of a pale brownish ground, and is variegated with a great number of black lines, which are as slender as the strokes of a pen, and are of such odd figures, that they represent some of the Arabic, or, as others fancy, Chinese characters.—SHELL, *Crown Imperial*: a species of the *voluta*.—SHELL, *Dog-tooth*: a species of *dentalis*.—SHELL, *Guinea*: the English name for a very beautiful variegated species of *voluta*.—SHELL, *Helmet*: the name of a kind of *murex*, of which there are several species. They all approach somewhat towards a triangular figure, and are free from any long spines.—SHELL, *Leopard*: the English name of the *pardus*, a kind of *voluta*, so called from its resembling those of a leopard.—SHELL, *Lightning*: a name given by some authors to a species of *murex*, with variegations on its body, resembling the pictures we commonly see of flashes of lightning.—SHELL, *Map*: the name given by some to a peculiar species of porcelain shell, the figures on which represent the lines on a map.—SHELL, *Old Wife*: the name given by some to a species of *chama*, which the French also have called *vielle ridce*.—SHELL, *Saddle*: the name of a species

of oyster, which in some degree represents a saddle in its shape.—SHELL, *Scorpion*: the name of a species of *murex*.—SHELL, *Small-pox*, a name given to a remarkable kind of *concha venerea*, or porcelain shell.—SHELL, *Strawberry*: a name given by collectors of shells to a very beautiful species of *cordiformis*.—SHELL, *Swallow*: a name given by authors to a species of *ostrea*, which in some degree represents the figure of a small bird flying.—SHELL, *Tiger*: the name of a species of *concha venerea*.—SHELL, *Turtle*: the name of two species of shells.

SHELL-APPLE, in Ornithology, an English name for the *loxia* or cross bill, given from his manner of splitting an apple, and feeding on the kernels, leaving the shell of the pulp untouched.

SHELL-DRAKE, a common English name for the *tadorna*.

SHELL-FISH, a collective name for fishes naturally inclosed in shells. These animals are in general oviparous, very few instances having been found of such as are viviparous.

SHELL-TOOTHED, an appellation given to a horse that from four years old to old age, naturally, and without any artifice, still keeps in all his fore-teeth that hollow place with the black mark, which is called in French *germe de feve*, i. e. *the eye of a bean*, inasmuch, that at twelve or fifteen he appears with the mark of a horse that is not yet six; for in the nippers of other horses, the hollow place is filled, and the mark disappears towards the sixth year, by reason of the wearing of the tooth. About the same age it is half worn out in the middling teeth, and towards the eighth year it disappears in the corner teeth, but after a shell-toothed horse has marked, he marks still equally in the nippers, the middling and the corner teeth; which proceeds from this, that having harder teeth than other horses, his teeth do not wear, and so he does not lose the black spot.

Among the Polish, Hungarian and Croatian horses, we find a great many of them hollow-toothed, and generally the mares are more apt to be so than the horses.

SHELLS, MESSAGE, are howitz-shells, within which are inclosed a letter, or other papers; the fuze-hole is stopped up with wood or cork, and the shells are fired into a garrison or camp.

SHELL of a Block, in Mechanics, is the outer frame or case, in which the sheave or wheel is contained, and traverses about its axis.

SHELL-ROOM, in Ship-Building, a compartment in a bomb-vessel, fitted up with strong shelves, excavated so as to receive the bomb-shells when charged; it is therefore built as secure as possible, to prevent accident from fire.

To SHELL, *v. a.* [Sax. *arcealian*, *arçilian*, to peel.] To take out of the shell; to stripe of the shell.

To SHELL, *v. n.* To fall off as broken shells.—The ulcers were cured, and the scabs *shelled off*. *Wiseman*.—To cast the shell.

SHELL ISLAND, a small island near the coast of Carolina, in Pamlico sound. Lat. 34. 50. N. long. 76. 30. W.

SHELL KEY, a small island or rock in the gulf of Mexico. Lat. 29. 48. N. long. 89. 15. W.

SHELLA, a small ruined town of Morocco, in the province of Benihassen, about four miles to the east of Rabat. It is supposed to have been anciently the capital of all the Carthaginian colonies on the western coast of Africa. Many Roman and ancient African coins are still found there. It is considered also by the Moors as a sacred asylum, and contains many tombs held by them in great veneration.

SHELLAM, a district in the south of India, province of the Upper Carnatic, between Lat. 11. and 12. N. It is now inclosed in the collectorship of Kistnaghery.

SHELLAM, the capital of the abovementioned district, generally called Great Shellam. It was formerly fortified. Lat. 11. 39. N. long. 78. 23. E.—There are two other towns of this name in the Carnatic, but neither of consequence.

SHELLAND,

SHELLAND, a parish of England, in Suffolk; 3 miles west-north-west of Stow Market.

SHELLDRAKE RIVER, a river of Canada, which runs into the river St. Lawrence. Lat. 50. 20. N. long. 64. 50. W.

SHELLDUCK. See SHELDUCK.

SHELLEY (Percy Bysshe), a poet of considerable eminence. No biography of this author has at present been published, though it is still expected from one of his friends. It seems that he received his school education at Harrow, where he was one of the associates of Lord Byron. In early life he visited the most beautiful scenes of England and Ireland, and here probably imbibed that passionate love for, and minute acquaintance with, nature, which constitute the peculiarity and charm of his writings. He afterwards travelled through Switzerland and Italy, and in the latter, on account of his ill health, made a long sojourn. He was drowned in the Mediterranean, as he was returning from Leghorn to Spezzia, in the year 1823. Of his private life, some scandalous stories were insinuated in the Quarterly Review, which received, however, the unqualified contradiction of his friends; and, indeed, they seem to have been merely the result of party malice.

His works consist of so many fragments, detached pieces, &c., that we cannot enumerate them.

His poetry displays great depth of feeling, alternating with puerile conceit and common-place declamation. His command of language was great, but either carelessness or want of sustained power, continually plunged his ideas into impenetrable obscurities of expression. He seems, in many instances, to have had a most refined ear for the music of versification, and yet many of his poems might be read as prose. His most prevalent fault is a want of accuracy and clearness in his ideas. But there is a charm not easily described about his writings, which redeems the errors more obvious to criticism, and which will render him long a favourite and profitable study for the poet, though he may never become generally admired; for the public cannot cull flowers, and select the riper from the cruder fruits. They must have all the sweets of poetry served up in order, and adorned with art.

SHELLEY, a parish of England, in Essex; 1½ mile north of Chipping Ongar.

SHELLEY, a parish of England, in Suffolk; 3 miles north-east of Stoke.

SHELLEY, a township of England, West Riding of Yorkshire; 5½ miles south-west of Huddersfield. Population 1057.

SHELLFISH, *s.* [ʃɛl-ʃɪʃ, Sax.] Fish invested with a hard covering, either testaceous, as oysters, or crustaceous, as lobsters.—The shells, being sound, were so like those they saw upon their shores, that they never questioned but that they were the exuviae of shellfish, and once belonged to the sea. Woodward.

SHELLIFF, a river of Algiers, the most considerable in that kingdom, and the *Chinalaph* of the ancient geography. It rises among the mountains of Atlas, in a place called the Seventy Fountains. It flows north during the first part of its course, then turns west, and runs nearly parallel to the sea. Its whole length is about 200 miles. In its early course it forms the lake of Titterie.

SHELLINGFORD, a parish of England, in Berkshire, near Farringdon.

SHELLMEAT, *s.* Food consisting of shellfish. *Un-used.*—*Shellmeats* may be eaten after foul hands, without any harm. Fuller.

SHELLOW BOWELLS, a parish of England, in Essex; 5 miles north-east of Chipping Ongar.

SHELLY, *adj.* Abounding with shells.

The ocean rolling, and the shelly shore,
Beautiful objects, shall delight no more.

Prior.

Consisting of shells.

The snail, whose tender horns being hit,
Shrinks backward in his shelly cave with pain.

Shakspeare.

SHELLWORK, *s.* Work made of or trimmed with shells.

SHELLEY WALSH, a parish of England, in Worcestershire; 10 miles north-west of Worcester.

SHELTER, *s.* [Of this word the etymology is unknown: Skinner deduces it from *shell*, Davies from *ʃɛlb*, a shield, Saxon. Dr. Johnson.—Serenius also refers to the Saxon word. The Icel. *skioldr*, a shield, is still nearer to our *shelter*.]—A cover from any external injury or violence.

They wish the mountains now might be again

Thrown on them, as a shelter from his ire.

Milton.

The healing plant shall aid,

From storms a shelter, and from heat a shade.

Pope.

A protector; a defender; one that gives security.—Thou hast been a shelter for me, and a strong tower from the enemy. *Ps.*—The state of being covered; protection; security.

Low at his foot a spacious plain is plac'd,
Between the mountain and the stream embrac'd;

Which shade and shelter from the hill der^v23

While the kind river wealth and beauty gives. Denham.

To SHELTER, *v. a.* To cover from external violence.—We besought the deep to shelter us. Milton.—To defend; to protect; to succour with refuge; to harbour.

What endless honour shall you gain,

To save and shelter Troy's unhappy train.

Dryden.

To betake to cover.—They sheltered themselves under a rock. *Abbot.*—To cover from notice. *Inproper.*

In vain I strove to check my growing flame,
Or shelter passion under friendship's name;
You saw my heart.

Prior.

To SHELTER, *v. n.* To take shelter.

There the Indian herdsman, shunning heat,
Shelters in cool.

Milton.

To give shelter.

Then seeks the farthest ooze, the sheltering weed,

The cavern'd bank, his old secure abode.

Thomson.

SHELTER ISLAND, an island of the United States, near the east end of Long Island; 100 miles east of New York. Population 329. It is 7 miles long, and 5 broad. This island, united with Great-Hog-Neck island, constitutes a township.

SHELTERLESS, *adj.* Harbourless; without home or refuge.

Now sad and shelterless, perhaps, she lies,

Where piercing winds blow sharp.

Rowe.

SHELTERY, *adj.* Affording shelter.—They spend their winters under the warm and shelterly shores of Gibraltar and Barbary. *White's Selborne.*

SHELTIE, *s.* A small horse, so called in Scotland.—*Shetland* produces little horses, commonly called *shelties*; and they are very sprightly, though the least of the kind to be seen any where. *Martin.*

SHELTON, a parish of England, in Bedfordshire; 13½ miles north-by-west of Bedford.

SHELTON, a parish of England, in Norfolk; 3 miles south-east of St. Mary Stratton.

SHELTON, a parish of England, county of Nottingham; 6 miles south-by-west of Newark.

SHELTONBOROUGH, a post village of the United States, in Pittsylvania county, Virginia.

To SHELVE, *v. a.* To place on shelves.—Here he glanceth wittily at the delicacy of this scholar; from whence he descendeth to the too accurate disposing or shelving of his books. *Comment. on Chaucer.*

SHELVE, a parish of England, in Salop; 7 miles north-by-east of Bishop's Castle.

SHELIVING, *adj.* Sloping; inclining; having declivity.

Amidst

Amidst the brake a hollow den was found,
With rocks and shelving arches vaulted round. *Addison.*

SHELVINGS, a name applied to the moveable side-rails of a waggon or cart, which are occasionally put on for top loads.

SHELVY, *adj.* Shallow; rocky; full of banks.—I had been drowned, but that the shore was *shelvy* and shallow. *Shakspeare.*

SHELWICK, a township of England, in Herefordshire; 2½ miles north-north-east of Hereford.

SHENANDOAH, a county of the United States, in Virginia, bounded north by Frederick county, south-east by Culpeper and Maddison counties, south-west by Rockingham county, and west by Hardy county. Population 13,646, including 1038 slaves. Chief town Woodstock.

SHENANDOAH, a river of the United States, in Virginia, which rises in Augusta county, and after a course of 200 miles, joins the Potomac, in Lat. 38. 4. N. just before the latter bursts through the Blue Ridge. It is composed of four branches, South, Middle, and North rivers, and Shenandoah. It waters a fertile country, and is navigable for boats 100 miles.

SHENANDOAH FORK, a post village of the United States, in Shenandoah county, Virginia.

SHENANGO, a township of the United States, in Beaver county, Pennsylvania. Population 679.—2d. Of Crawford county, Pennsylvania. Population 727.—2d. Of Mercer county, Pennsylvania. Population 634.

To **SHEND**, *v. a.* preter. and part. pass. *shent* [Jenban, Saxon; *schenden*, Dutch.]—To ruin; to spoil.

Provide for thy wife, or else look to be *shent*,
Good milch-cow for winter, another for Lent. *Tusser.*

Such a dream I had of dire portent,
That much I fear my body will be *shent* ;
It bodes I shall have wars. *Dryden.*

To disgrace; to degrade; to blame; to reproach. *Unused.*

Debateful strife, and cruel enmity,
The famous name of knighthood foully *shend*. *Spenser.*

Sore bruised with the fall, he slow uprose,
And all enraged him loudly *shent* ;
Disleal knight, whose coward courage chose
To wreak itself on beast. *Spenser.*

To overpower; to crush; to surpass. *Unused.*

She pass'd the rest as Cynthia doth *shend*
The lesser stars. *Spenser.*

SHENEVAS CREEK, a river of the United States, in New York, in Otsego county, which runs south-west 25 miles, and joins the Susquehanna.

SHENFIELD, a parish of England, in Essex; 1 mile north-east of Brentwood. Population 555.

SHENLEY, a parish of England, in Hertfordshire; 5 miles north-west of Chipping Barnet. Population 990.

SHENLEY, a parish of England, county of Buckingham; 3 miles west-north-west of Fenny Stratford.

SHENLEY, a township of Lower Canada, in the county of Buckingham.

SHENNINGTON, a parish of England, in Gloucestershire; 6½ miles west-north-west of Banbury.

SHENSHILL, a village of Upper Egypt, on the right bank of the Nile; 2 miles north of Achmim.

SHENSTONE (William), a poet of celebrity, was born at Hales Owen, in Shropshire, in the year 1714. His father was an uneducated gentleman farmer, who cultivated an estate of his own called the Leasowes, which the son afterwards rendered celebrated. William received the elements of instruction from a village dame, whom he finely described in one of his poems. After this he was sent to the grammar-school at Hales Owen, whence he was removed to that of a clergyman at Solihull, from whom he not only acquired

solid learning in classical knowledge, but a cultivated taste. In 1732 he was entered of Pembroke College, Oxford, where he did not make a large acquaintance, but he was one of a few who met at each other's rooms to read and examine the best works in English literature. Here it was he discovered his poetical genius, and produced some compositions of considerable merit, and he had thoughts of taking his degrees, and proceeding to study for a profession, but coming, by the death of his father, into the full possession of his paternal property, he gave himself up to literary ease, and rural retirement, abandoning at once all intentions of active pursuits; hence his biographer justly remarks, "that nothing is more unfavourable to the exertion of those energies which lead to a useful and honourable station in society, than the early possession of a fortune just sufficient to gratify present wishes, and preclude the necessity of immediate entrance into any vigorous course of action." An acquaintance which Shenstone formed with Mr. Graves, of Mickleton, in Gloucestershire, inspired him with an affection for that gentleman's sister; but the passion of love, which, in some minds, operates as a stimulus to enterprize, seems in him to have wasted its force on plaintive elegies, and other effusions of sentimental poetry. To one species of employment, he was probably animated by his visit to Mr. Graves,—that of rural embellishment,—which he afterwards bestowed on his favourite place of the Leasowes, with a taste that conduced more to his celebrity than to his comfort.

In 1737 he printed, but without his name, a small volume of juvenile poems, which obtained scarcely any notice. In 1740 he came to London, and was introduced to Dodsley, who printed his poem of "The Judgment of Hercules," dedicated to Lord Littleton. This was followed by "The School-mistress," of which the heroine was the village-dame already referred to. This is thought, by some very respectable critics, to stand at the head of Shenstone's compositions.

Shenstone, from this time, devoted himself to improving the picturesque beauties of the Leasowes, and sometimes exercising his pen in effusions of verse and prose. The celebrity of this place led him into expenses which his fortune was unequal to, and he was perpetually under the pressure of poverty; which, with the deficiency of regular employment, and the perpetual desire of doing more, and appearing better off, than his means admitted, preyed on his spirits, and rendered him the miserable inhabitant of the Eden which his taste and genius had created. Grey has described him in the following sentence, which may in some respects be rather a caricature likeness. "Poor man! he was always wishing for money, for fame, and for other distinctions; and his whole philosophy consisted in living against his will in retirement, and in a place which his taste had adorned, but which he only enjoyed when people of note came to see and commend it." It has been thought a matter of surprise, considering his connections, that nothing was done to place him in easier circumstances. An application was said to have been made to Lord Bute to procure him a pension from the privy purse, but before the wishes of his friends could be realized he died. This event took place in February, 1763, when he was in the 50th year of his age: he was interred in the churchyard of Hales Owen.

Of his poetical compositions many were inserted in Dodsley's collection of original pieces; and after his death, his "Works in Verse and Prose," were published in two vols. 8vo. in 1764, and a third volume, consisting of "Letters," was published in 1769. "Of his poetry," says the critic, "the general opinion was almost uniform; it is regarded as commonly elegant, melodious, tender, and correct in sentiment, and often pleasing and natural in description, but verging to the languid and feeble, and never exhibiting either the powers of the imagination, or the energy and splendour of diction, that characterize compositions of the higher order. His prose writings display good sense and a cultivated taste, and contain just and sometimes new and acute observations on mankind." *Gen. Biog.*

SHENSTONE,

SHENSTONE, a parish of England, in Staffordshire; 3 miles south of Lichfield. Population 1378.

SHENTON, a hamlet of England, in Leicestershire; 2½ miles south-west of Market Bosworth.

SHENTON, a parish of England, in Salop, near Bridgenorth.

SHEPARDINE, a hamlet of England, in Gloucestershire; near Thornbury.

SHEPAUG, a river of the United States, in Connecticut, which runs south into the Quinebaug, in the west part of Southbury.

SHEPARD'S ISLANDS, a cluster of small islands in the South Pacific Ocean, belonging to the New Hebrides. Lat. 17. S. long. 168. 40. E.

SHE'PHERD, *s.* [*ŕceap*, sheep, and *hýrð*, a keeper, Saxon, *ŕceapahýrð*.] One who tends sheep in the pasture.

I am *shepherd* to another man,
And do not shear the fleeces that I graze. *Shakspeare.*

A swain; a rural lover.

If that the world and love were young,
And truth in every *shepherd's* tongue,
These pretty pleasures might me move
To live with thee, and be thy love. *Raleigh.*

SHEPHERDS OF EGYPT, **SHEPHERD KINGS**, or **ROYAL SHEPHERDS**, in Ancient History, the denomination of a class of inhabitants of a part of Egypt, concerning whose origin, place of abode, and migration, ancient and modern writers have entertained different opinions. See **EGYPT**.

SHEPHERD'S CREEK, a river of the United States, in Louisiana, which runs into the Missouri; 83 miles west of Mississippi.

SHEPHERDESS, *s.* A woman that tends sheep; a rural lass.

She like some *shepherdess* did shew,
Who sat to bathe her by a river's side. *Dryden.*

His doric dialect has incomparable sweetness in its clownishness, like a fair *shepherdess* in country russet. *Dryden.*

SHEPHERD'S Needle, *s.* Venus' comb. An herb.— See **SCANDIX**.

SHEPHERD'S, *Purse*, or *Pouch*, *s.* A common weed. See **THLASPUS**.

To him, that hath a flux, of *shepherd's-purse* he gives,
And mouse-ear unto him whom some sharp rupture grieves. *Drayton.*

SHEPHERD'S Rod, *s.* Teasel, of which plant it is a variety.

SHEPHERDISH, *adj.* Resembling a shepherd; suiting a shepherd; pastoral; rustic. *Not in use.*—He would have drawn her eldest sister, esteemed her match for beauty, in her *shepherdish* attire. *Sidney.*

SHEPHERDLY, *adj.* Pastoral; rustic.—We read Rebekah, in the primitive plainness and *shepherdly* simplicity of those times, accepted bracelets and other ornaments, without any disparagement to her virgin modesty. *Bp. Taylor.*

SHEPHERDSTOWN, a post township of the United States, in Jefferson county, Virginia, on the Potomac. Population 1033, mostly of German descent.

SHEPHERDSVILLE, a post township of the United States, in Bullet county, Kentucky, on Salt river, 14 miles from its junction with the Ohio. Population 100.

SHEPLEY, a township of England, West Riding of Yorkshire; 6 miles south-south-east of Huddersfield. Population 793.

SHEPOORY, a town of Hindostan, province of Agra, belonging to the Mahrattas, district of Narwar. Lat. 25. 25. N. long. 77. 10. E.

SHEPPERTON, a village and parish of England, in the county of Middlesex, situated on the banks of the Thames. Vol. XXIII. No. 1558.

From the Thames having altered its course, a detached part of the parish remains in Surrey, and the river now passes over the foundation of its ancient church. Near the bridge over the river at Walton are Cowey stakes, supposed to be the remains of those drove into the river by the Britons, to prevent Cæsar's army from fording it. One of them is preserved in the British Museum. It is recorded that the learned Erasmus passed much of his time in the parsonage house here, his preceptor being rector of the parish. Population 751; 4 miles from Staines.

SHEPPEY ISLE or, an island of England, in the county of Kent, situated at the mouth of the Thames and Medway, and separated from the mainland of the county by an arm of the sea called the Swale, which is navigable for vessels of 200 tons burden. It extends about 11 miles in length and 8 in breadth. About four-fifths of the island consist of marsh and pasture lands; the remainder is arable. The prevailing soil is a deep strong clay of great stiffness. The marshes have also a thick clay beneath, but are covered with a rich black vegetable mould, arising from the quantities of sheep which have been regularly fed on them for many years. The arable lands are in a high state of cultivation, and have been greatly improved by the manure of cockle-shells, great quantities of which are continually thrown on the shores by the sea. Beans and wheat are grown alternately on these lands, a fallow being occasionally substituted for the bean crop. The wheat is excellent, and frequently weighs 64 pounds the Winchester bushel. Much clover is also grown here, and on the few gravelly tracks on the higher ground, oats and barley are sown. The clover is generally mown twice, once for hay, and a second time for seed. The upland pastures are applied to the feeding of lambs and young lean sheep. The sheep are mostly of the Romney Marsh breed, and the cattle almost wholly of the Welsh sort. The horses are somewhat smaller than those of the other parts of Kent. They are of a kind that has been bred in the island from time immemorial. The cliffs which skirt the north and north-east sides of the island are frequently undermined by the sea. These cliffs contain an abundance of extraneous fossils and petrifications, as well as pyrite or copperas stone, which last are collected by some people on the shore, till a sufficient quantity is obtained to load a vessel. The principal towns in the island are Sheerness and Queenborough.

SHEPRETH, a parish of England, in Cambridgeshire; 5½ miles north-by-west of Royston.

SHEPREVE (John), an English poet, was born in Berkshire, and educated at Corpus Christi College, Oxford, where he took his degrees in arts, and became Hebrew professor about the year 1538. He had a most surprising memory, and was one of the most learned men in his time. He died in the year 1542. His works are "Summa et Synopsis Novi Test." &c.; "Hippolytus Ovidianæ Phædræ respondens," &c. *Wood.*

SHEPTON BEAUCHAMP, a parish of England, in Somersetshire; 3½ miles north-east of Ilminster. Population 559.

SHEPTON GEORGE, a hamlet of England, in Dorsetshire; 3 miles east-by-south of Bridport.

SHEPTON MALLET, a market town and parish of England, in the county of Somerset, situated in a low valley, well-watered with rivulets. It consists of about 20 streets and lanes, most of which are narrow and dirty. The church, which stands on the east side of the market-place, is a large and handsome building, in the pointed style of architecture, having a tower at the west end, surmounted by a spire. The pulpit and font are each cut out of one solid stone. The market-cross is a very curious structure, consisting of five arches supported by pentagonal columns. In the centre is a large hexagonal pillar, standing on two rows of steps, and supporting a flat roof, over which rises a lofty pyramidal spire, adorned with Gothic arches, and crowned with an oblong entablature, on which is a figure of Christ on the cross, between two malefactors. The cross, according to an inscription on it, was erected in the year 1500, "by Walter Bucklord and Agnes his wyff;" and considerable

lands are appropriated to keep it in repair. Besides the church, here are places of worship for Methodists, Presbyterians, and Quakers. Shepton Mallet has long been famous for its manufactures of woollen cloth and knit stockings. These now afford employment to upwards of 2000 persons in the town and vicinity. The town is governed by a constable. Shepton Mallet in ancient times formed part of the manor of Pilton, which King Ina gave to the abbey of Glastonbury, A. D. 705. Soon after the conquest, it came into the possession of the barons Mallett, from whom it derived the latter part of its name. After various changes, the manor was divided into two moities, one of which came to the crown, and the other was annexed to the duchy of Cornwall, to which it still belongs. This town is noted as the birthplace of Hugh Inge, D. D., archbishop of Dublin, and chancellor of Ireland; Dr. Walter Charleton, and Simon Browne. The parish contains 1129 houses, and 4638 inhabitants. Market on Friday, and an annual fair on 8th August; 5 miles east of Wells, and 115 west-by-south of London. Lat. 51. 12. N. long. 2. 38. W.

SHEPTON MONTAGUE, a parish of England, in Somersetshire; 2½ miles south of Bruton. Population 371.

SHER, a town of Hindostan, province of Malwah, belonging to the Mahrattas. Lat. 23. 58. N. long. 76. 55. E.

SHERARD (William), a very learned and munificent botanist, on whom the titles of prince and Mœccnas of botany have been, more justly than usual, bestowed, was the son of George Sherwood, (for so it seems the name was written by the father,) of Bushby, in Leicestershire. He was born in 1659; educated first at Merchant Taylors' School, and then at St. John's College, Oxford. He cultivated the friendship and correspondence of the most able men on the continent, such as Boerhaave, Hermann, Tournefort, Vaillant, Micheli, &c. He is universally believed to have been the author of a 12mo. volume, entitled "Schola Botanica," published at Amsterdam in 1689, and reprinted in 1691 and 1699. This is a systematic catalogue of the Paris garden. Its preface, dated London, Nov. 1688, is signed S. W. A., which the French writers have interpreted Samuel Wharton, Anglus, under which name the book occurs in Hailer's "Bibliotheca Botanica," vol. i. 643. But as no one ever heard of such a botanist as Wharton; and the preface in question displays the objects and acquisitions of one of the first rank, who could certainly not long remain in obscurity, the above initials are presumed to mean William Sherard, to whom alone indeed, with or without a signature, that preface could belong. Its writer is described as having attended three courses of Tournefort's botanical lectures, in 1686, 87, and 88, all which years, he says, he spent at Paris. In the summer of 1688 he describes himself as having passed some time in Holland, collecting specimens of plants from the rich gardens of that country and getting them named by Professor Hermann himself, who allowed him to peruse the manuscript rudiment of his "Paradisus Batavus," to examine his herbarium, and to compose a Prodomus of that work, which is subjoined to the little volume now under our consideration. All this can apply to Sherard only, who became the editor of Hermann's book itself, and who in its preface, dated from Geneva in 1697, appears under his own name, and speaks of himself as having long enjoyed the friendship and the communications of that eminent man, whose judgment and talents he justly commemorates, and of whose various literary performances, as well as of his botanical principles, he gives an account.

Sherard communicated to the Royal Society, in 1700, a paper relative to the making of Chinese or Japan varnishes, which is printed in the Philosophical Transactions, vol. xxii. The information which it contains was sent by the Jesuits to the Grand Duke of Tuscany, and probably obtained by our author at Florence.

The most ostensible and splendid service to botany, though it for a long time yielded but little fruit, was rendered by the will of Dr. William Sherard, who left 3000*l.* to found and support a botanical professorship at Oxford.

The herbarium of Sherard is perhaps, except that of Lin-

næus, the most ample, authentic, and valuable botanical record in the world. In it may be seen original specimens from Tournefort, and all the writers of that day, named by themselves, accompanied by remarks, or by queries scarcely less instructive. He collected also copies of original drawings, from botanists whose specimens were not to be had, such as Plumier. The most rare, and even unique, books are to be found in his library, as the first volume of Rudbeck's *Campi Elysii*. All these precious collections are still in good preservation, though the noble stone building, originally constructed to receive them, was sacrificed a few years since to public convenience, that the adjoining street might be widened.

SHERARDIA [so named by Dillenius, in honour of his patron William Sherard, LL. D. consul at Smyrna], in Botany, a genus of the class tetrandria, order monogynia, natural order of stellatæ; rubiaceæ (*Juss.*)—Generic Character. Calyx: perianth small, six-toothed, superior, permanent. Corolla one-petalled, funnel-form; tube cylindrical, long; border four-parted, flat, acute. Stamina: filaments four, placed at the top of the tube. Anthers simple. Pistil: germ twin, oblong, inferior. Style filiform, bifid at top. Stigmas headed. Pericarp none. Fruit oblong, crowned, separable longitudinally into two seeds. Seeds two, oblong, marked at the apex with three points, convex on one side, flat on the other.—*Essential Character*. Corolla one-petalled, funnel-form, superior. Seeds two, three-toothed.

1. *Sherardia arvensis*, field or blue sherardia, or little field madder.—All the leaves in whorls; flowers terminating. Root annual, with many reddish-brown fibres. The whole plant branched, diffused, rough and hairy, from four to seven inches high.—Native of many parts of Europe, among corn and on fallows: flowering during the greatest part of the summer.

2. *Sherardia muralis*, or wall sherardia.—Root annual. Stems decumbent. Leaves ovate-lanceolate, six in the lower, four in the middle whorls, two only together at top. Flowers in pairs on their proper peduncles, pale, flat. Fruits oblong, hispid. Seeds bowed a little, with little or no crown.—Native of Italy.

3. *Sherardia fruticosa*, or shrubby sherardia.—Leaves in fours, equal; stem shrubby.—It is one of the very few plants which the island of Ascension affords.

SHERATON, a hamlet of England, county of Durham; 11 miles north of Stockton-on-Tees.

SHERAVEND, a town of Ghilan, in Persia, on the Caspian.

SHERBET, or **SHERBIT**, a compound drink, first brought into England from Turkey and Persia, consisting of fair water, lemon-juice, sugar, amber, and other ingredients.

Another kind of it is made of violets, honey, juice of raisins, &c.

The word sherbet, in the Persian language, signifies pleasant liquor.

SHERBORNE, or **SHERBOURNE**, a market-town and parish of England, in the county of Dorset, pleasantly situated, partly on the acclivity of a hill, and partly in the fertile vale of Blackmore. It is a place of great antiquity, and is supposed by some to have been a station of the Romans, but more probably arose from a religious house founded here soon after the conversion of the Saxons to Christianity. It was anciently distinguished as the seat of an episcopal see, having been constituted such A. D. 704. Herman, the 26th bishop, attempted, without success, to remove its seat to Malmesbury; but succeeded, in 1075, in transferring it to Old Sarum. About this time the place had declined in importance, but in the time of Lleland it seems to have considerably recovered, as he describes it as the most frequented town in the county, and that in which the woollen trade was turned to the best account. This branch of business, however, afterwards declined, and the manufacture of buttons, haberdashery goods, and bone lace, was introduced in its stead. These trades have also decreased, and the silk and linen manufactures form now the chief occupation

occupation of the inhabitants. The church of Sherborne, which is the only public building of any importance in the town, is a magnificent pile of building, and, from its magnitude and ornamental architecture, resembles a cathedral. It is built entirely of freestone, and in the form of a cross. It was originally built by Bishop Aldhelm, but afterwards underwent great alterations, and was almost wholly renewed in the time of King Henry VI. It displays various styles of architecture, but chiefly the pointed style of the latter age. The pillars supporting the tower, the south porch, and the chapel of Our Lady, are all of early Norman origin, and the large lancet window at the eastern end of the chapel, with some smaller fragments in other parts, seem to be of the same date with Salisbury cathedral, viz., 1220. All the later parts of the church are richly ornamented with tracery work, vine leaves, and flowers. The interior is light, lofty, and spacious. The piers between the windows on each side are supported by light flying buttresses, stretching over the side aisles. The roof is of stone, and is supported by numerous groins springing from the side aisles; and between the tracery work is a number of shields, bearing different arms, with roses, portullises, and cut devices. Within the church are the ashes of many persons of distinction, among whom are Ethelbald, King of Wessex, and his brother Ethelbert. The only modern monuments of note are those of John, Earl of Bristol, who died in 1698, and of a son and daughter of William Lord Digby, on the latter of which are inscribed some beautiful lines by Pope. Sherborne church was made parochial after the dissolution of the abbey. Besides the church, here were formerly two meeting-houses for dissenters, but there is now only one in Long-street. The other public buildings are the market-house, the work-house, an alms-house, and a free grammar-school. The alms-house was formerly an hospital of St. Augustine, and has a chapel attached to it, which seems to have been erected in the 15th century. It contains a curious ancient painting in oak, in high preservation. The free grammar-school was founded and endowed by Edward VI., and the government of it vested by charter in 20 principal inhabitants of Sherborne. At present there are two masters belonging to this school, who must be clergymen and graduates of one or other of the universities. The buildings occupy the site of part of the ancient abbey, some parts of which still remain. This school has been governed by able teachers, and has produced eminent characters. The plan of education is similar to that adopted at Eton. The town contains, besides, two charity-schools on a small scale, three benefit societies, two for men and one for women, and a peculiar kind of society called the Green Girls' Society, in which the members pay a small sum weekly till they are of a certain age, and wear also a green dress, with straw hats. At the age of 18 they are at liberty to leave the society, and if any of the girls be married before 25, she receives 12*l.* on the wedding-day. If she continues unmarried till 25, and has not been imprudent in her conduct, she then receives the same sum. Sherborne, though no borough, sent on one occasion members to parliament in the reign of Edward III. At that time the assizes were regularly held here, though the practice was afterwards discontinued. The general quarter sessions for the peace are still held here once a year, on Tuesday after the close of Easter. Sherborne parish extends about 3½ miles in length, and 2½ in breadth, and contains, according to the returns of 1811, 597 houses, and 3370 inhabitants, of whom above 2000 reside in the town. Market on Saturday, and four annual fairs; 18 miles north-by-west of Dorchester, and 117 west-south-west of London. Lat. 50. 56. N. long. 2. 30. W.

SHERBORNE, a parish of England, in Warwickshire; 2½ miles south-west of Warwick.

SHERBORNE, a parish of England, in Gloucestershire; 5 miles east of North Leach. Population 506.

SHERBORNE, a parish of England, in Norfolk; 7 miles from Burnham.

SHERBORNE, ST. JOHN, a parish of England, in South-

amptonshire; 2½ miles north-west of Basingstoke. Population 515.

SHERBORNE, MONKS, a parish of England, in Southamptonshire; 3 miles north-north-west of Basingstoke. Population 313.

SHERBOURNE, a township of England, county of Durham; 3½ miles east by-south of Durlham.

SHERBRO, a county of Western Africa, at the northern extremity of what is called the Grain or Pepper coast of Guinea. It is situated on a river of the same name, with a large island at its mouth. It is navigable 20 leagues up, for ships of burden, and vessels of 70 or 80 tons may ascend 250 miles from its mouth. The channel, however, is much enumbered with rushes, and the navigation-interrupted by frequent tornados. The country abounds in grain, fruits, and poultry, and the banks contain a species of pearl oyster, which, however, is dangerous to come at.

SHERBURN, a market town of England, in the West Riding of Yorkshire, pleasantly situated on the road from Doncaster to York. It was formerly a place of much more importance than at present, and had at one time a palace of the archbishop of York, no vestige of which, however, now remains. Here is a good stone church, and a free school founded by Robert Hungate. This place is noted for its cherry orchards, and also for a particular species of plum, called the winesour, which grows in the neighbourhood. The town contains 188 houses, and 958 inhabitants. Market on Friday, but little frequented; and one annual fair: 14 miles south-west of York.

SHERBURN, a parish of England, East Riding of Yorkshire; 12½ miles east-north-east of New Malton.

SHERBURNE (Edward), an ingenious writer, was born in London in 1618, and educated under Farnaby; after which he went abroad, but returned in 1641, and succeeded, on the death of his father, to the office of clerk of the ordinance. He was imprisoned for some time by the parliament, and, on recovering his liberty, joined the king, whom he served with fidelity and great bravery, by which he suffered considerably in his estate. After the battle of Edgehill he went to Oxford, where he was created master of arts. At the restoration he recovered his situation under government, was knighted, and made commissary-general of the artillery. He died in 1702. He translated Seneca's tragedies, the Sphere of Marcus Manilius, and other works, into the English language, and was author of a volume of poems.

SHERBURNE, formerly KILLINGTON, a township of the United States, in Rutland county, Vermont. Population 116.—2*d.* Of Middlesex county, Massachusetts; 22 miles south-west of Boston. Population 770.—3*d.* Of Chenango county, New York; 98 miles west of Albany. It is watered by the Chenango, and contains a handsome village.

SHERBURNE. See NANTUCKET.

SHERBURNE MILLS, a post village of the United States, in Fleming county, Kentucky.

SHERD, *s.* [ʃeəpəð, Saxon. A fragment of broken earthenware. See SHARD.

The trivet-table of a foot was lame;

She thrust beneath the limping leg a *sherd*. *Dryden.*

SHEREBATOF (Prince), a learned Russian nobleman, who published several works in his own language, the chief of which is "The History of Russia from the earliest Times," which is said to be well arranged, and faithfully drawn up. Mr. Coxe, in speaking of this writer, says several persons have published collections of state-papers and other documents, but the honour of composing a complete history of Russia is probably reserved for Prince Sherebatof; who, if we except Mr. Muller, has contributed more than any other person towards illustrating the Russian annals. This learned nobleman is editor of "A Journal of Peter the Great," in 2 vols. 4*to.*, which he found in the archives, and published by order of the Empress; of "The Russian History, by an ancient Annalist, from the Beginning of the Reign of Vladimir

mir Monomaca in 1114 to 1472;" "The Life of Peter the Great," in the Russian language, first published at Venice, which the Prince reprinted in 1774, and, according to his usual custom, enriched with many historical observations. Of his History, already referred to, our author says, "I have read the German translation of this performance, which appears to me a most valuable addition to the history of the North. The author has had access to the imperial archives; he draws his information from the most ancient and unquestionable sources, is particularly exact in quoting his authorities, and ranges the events in a chronological series with great perspicuity." *Coxe's Travels.*

SHEREFORD, a parish of England, in Norfolk; 2 miles west-by-south of Fakenham.

SHEREGUR, a town of Hindostan, province of Moulton, belonging to the Seiks. Lat. 30. 55. N. long. 73. 24. E.

SHERFIELD, a parish of England, in Southamptonshire; 3½ miles north-east of Basingstoke. Population 520.

SHERFIELD, ENGLISH, a parish in the above county; 5 miles west-north-west of Romsey.

SHERFORD, a parish of England, in Devonshire; 3 miles east of Knightsbridge. Population 366.

SHERFORD, a hamlet of England, in Warwickshire, near Coventry.

SHERIDAN (Thomas), was born probably about the year 1684, in the county of Cavan, where his parents lived in such a state of indigence, as not to be able to afford him the advantages of a liberal education; but being observed to give early indications of genius, he attracted the notice of a friend to his family, who sent him to the college of Dublin, and contributed towards his support, while he remained there. Afterwards he proceeded to a doctor's degree, and took orders, and set up a school in Dublin, which long maintained a very high degree of reputation, as well for the attention bestowed on the morals of the scholars, as for their proficiency in literature. He does not appear to have had any considerable preferment; but his intimacy with Swift procured for him, in 1725, a living in the south of Ireland, worth about 150*l.* per annum, which he went to take possession of; and, by an act of inadvertence, it is said, destroyed all his future expectations of rising in the church: for being at Cork on the 1st of August, the anniversary of the king's birth-day, he preached from the text "Sufficient for the day is the evil thereof." The report of the fact was spread abroad: he was struck out of the list of chaplains to the lord-lieutenant, and forbidden the castle. He afterwards changed his living for that of Dunboyno, which by the knavery of the farmers, and power of the gentlemen in the neighbourhood, fell in value to 80*l.* per annum. He willingly resigned it for the free-school of Cavan, where he might have lived well; but the air being moist, and as he thought unhealthy, and being disgusted with some of his parishioners, he sold the school for about 400*l.*; and having spent the money, he fell into ill health, and died September 10th, 1758, in the 55th year of his age. He is thus characterized by lord Corke: "Dr. Sheridan was a schoolmaster, and in many instances perfectly adapted to that station. He was deeply versed in the Greek and Roman languages, and in their customs and antiquities. He had that kind of good nature, which absence of mind, indolence of body, and carelessness of fortune, produce; and though not over-strict in his own conduct, yet he took care of the morals of his scholars, whom he sent to the university remarkably well grounded in all kinds of classical learning, and not ill instructed in the social duties of life. He was slovenly, indigent, and cheerful. He knew books much better than men, but he knew the value of money least of all. In this situation, and with this disposition, Swift fastened upon him as upon a prey, with which he intended to regale himself, whenever his appetite should prompt him." Dr. Sheridan published a prose translation of Persius, to which he added the best notes of former editors, together with some very judicious ones of his own. He also translated the *Philoctetes* of Sophocles.

SHERIDAN (Thomas), son of the preceding, was born at Quilea, in the county of Cavan, in Ireland; and he had for his god-father Dean Swift. The early part of his education he received from his father, who afterwards sent him to Westminster School, and at a time when he could very ill afford it. Here, upon examination, he attracted notice; and although a mere stranger, he was elected a king's scholar, on account of his merit. But their maintenance sometimes running short, the doctor was so poor that he could not add fourteen pounds, to enable his son to finish the year; which if he had been able to have done, he would have been removed to a higher class, and in another year would have been sent off to a fellowship at college. Being thus recalled to Dublin, he was sent to the university, where he obtained an exhibition, and in 1738 he took his degree of M.A. Having no interest in the church, nor the means of preparing himself for one of the liberal professions, he resolved to seek a support on the stage. He was received with great applause, and in a short time became manager of the Dublin theatre; in which capacity he successfully understood the curbing of that licentiousness, which had long reigned with an almost unlimited empire behind the scenes, and the putting a stop to the liberties daily taken by the young men with the female actresses. During eight years Mr. Sheridan possessed this important office of manager of the Dublin theatre with all the success, both with respect to fame and fortune, that could well be expected, when an unfortunate circumstance led him to oppose the wishes of the public, which obliged him to withdraw from the management of the theatre, and even to quit the country. He continued in England till the year 1756, when he returned to Dublin, and was again received on the stage with the highest applause; but he did not continue long in that situation, being opposed and ruined by rival actors.

In 1757 he published a plan, in which he proposed to the Irish the establishment of an academy, for the accomplishment of youth in every qualification necessary for a gentleman. In the formation of this design he included oratory, as one of the essentials; and in order to give a stronger idea of the utility of that art, he opened his plan to the public in some orations, which were so well written, and so admirably delivered, as to give the highest proofs of the ability of the proposer, and his fitness for the office of superintendent of such an institution, for which post he had offered himself. Nevertheless, though the plan was, in a measure, carried into execution, Mr. Sheridan was excluded from any share in the conduct of it. He now came again to England, and delivered lectures on elocution and oratory in the theatres of Oxford and Cambridge, to very numerous audiences, and with the highest reputation. From thence he again came to London, where he was engaged as an actor and a lecturer. In 1778 he published "A pronouncing Dictionary of the English Language;" and after this he became a manager of the Drury-lane theatre, under his son, Brinsley Sheridan, who was then one of the patentees. He died in August, 1788. His works are as follow:—1. "A Dictionary of the English Language." 2. "Lectures on the Art of Reading." 3. "British Education, or the Source of the Disorders of Great Britain." 4. "A Dissertation on the Causes of the Difficulties which occur in learning the English Tongue." 5. "A Course of Lectures on Elocution." 6. "The Life of Swift," prefixed to an edition of his works, edited by Mr. Sheridan. 7. "Elements of English." His wife Frances, whose maiden name was Chamberlaine, was a very ingenious woman, and was author of a novel, entitled "Sidney Biddulph;" a moral romance, entitled "Nour-jahad;" "The Discovery," a comedy; and another, entitled "The Dupe."

SHERIDAN (Richard Brinsley), the excellent comic writer and famous orator, was the second son of the subject of the preceding article. He was born in Dublin, in October, 1751. His earliest education he received in common with his brother Charles, from his accomplished mother. She

She soon, however, consigned her sons as two of the "most impenetrable dunces" she had ever met with, to the care of Mr. Samuel Whyte, a man of considerable abilities; but under whose tuition the boys attained little more progress than they had done under their mother. In 1762, Brinsley was removed to Harrow. Dr. Sumner, then master of the school, seems to have had no great opinion of his scholar; and though Dr. Parr stated, after Sheridan's exaltation in after-life, that he had discovered and assisted his latent genius, it does not appear that our hero was distinguished at all as a classic. Nor is this surprising. It is scarcely possible to conceive, that any one who had much of the vivacity of wit in his composition, could see any thing very meritorious in mastering the tedious translations, exercises and nonsense verses of a grammar school; and, with respect to idleness, there is no probability that Sheridan ever laboured very hard in after-life, and, therefore, nothing to render marvellous the inertness of his youth. There is an anecdote related of him, however, during this period of his life which, if true, is a greater honour to him than all the praises of all the pedagogues that ever flagellated the boys of Harrow. Unfortunately this, as most school-boy stories, is not very well authenticated, and bears a suspicious similitude to a hundred others of the same class. It runs, however, as follows:—

"A schoolmaster had been presumptuous enough to open a classical seminary within a short distance of the ancient established public school at Harrow. The boys broke the windows, and did considerable mischief to the premises. Panting after revenge, he had recourse to an unworthy stratagem to discover the offenders. With this view he invited some of the delinquents to his house, and, after solemnly promising an amnesty, and treating them with great apparent hospitality, he demanded the names of his new friends. This request was immediately complied with by all but 'knowing Dick,' who from a suspicion of guile, or some other motive, either declined a discovery, or gave a false appellation. Immediately on their departure, a letter was transmitted to Dr. Sumner, enclosing a list of the culprits, and all but Sheridan were called out, for the express purpose of experiencing the classical ceremony of a flagellation, as regulated *more majorem*, by the enlightened practice of Monkish times. When every thing was ready, and the sentence about to be executed, in the presence of the whole school, young Sheridan stepped forward and demanded, if his name was included in the catalogue? He then addressed the head master, as follows:—'You perceive, Dr. Sumner, that I cannot possibly be actuated by the base motive of fear, for I am not liable to punishment; yet, I am to the full as guilty as the others, and desire to share their fate, if they should be condemned; but let it be recollected, Sir, that an act of oblivion took place on the part of the school-master; that we entered his house on conditions, and that he extorted the names of my companions, amidst the rights of hospitality, and under the sacred promise of forgiveness. I trust, therefore, Dr., that you will not give the sanction of your respectable name to such a complicated act of baseness and treachery.' It is almost unnecessary to add, that the boys were all forgiven, in consequence of this timely and generous interposition."

Having quitted Harrow, at the age of eighteen, the next step, of course, was a removal to Oxford, or Cambridge; but his father's circumstances denied this gratification. A considerable interval now occurred in the life of Mr. Richard Sheridan, which is difficult to be accounted for on the part of a biographer. It has been suggested, that he made a visit of considerable duration to a friend at Bristol; that he was employed by his own father in declaiming at Bath; that he was partly occupied in translating the Epistles of Aristænetus from the Greek; and that he consumed a large portion of this period in courting his future wife.

But, from 1769, when he left school, to the 6th of April, 1773, when he entered himself of the Middle Temple, there is a lapse of two or three years; and, when the "RES ANGSTA DOMI" is considered, it may be difficult to point out the mode in which he obtained the means of support. It has been suggested, that he occa-

sionally wrote for the papers; and, indeed, it is a well-known fact, that he kept up a close and constant intercourse with the editors and publishers of our diurnal prints during the whole of his life, and that he advocated their cause, with effect, in the House of Commons, when one of them was most unjustly refused admission into the Society of Lincoln's Inn.

It appears, also, from Moore's remarks, that he had, during this period of his life, projected a volume of "*Crazy Tales*," which are supposed to have been of a licentious character (these, however, are fortunately lost); and that among his early essays, was a scheme which for wildness of the ideas, and the extravagance of the language, is a perfect curiosity. It is a letter to the queen, recommending the establishment of an Institution for the instruction and maintenance of young females in the better classes of life; her majesty was to be the chancellor of the College; some of the first ladies in the kingdom sub-chancellors; the professors, except for the languages were to be women; the practical parts of the sciences were to be taught; the ladies were to read history in order to discover that there were other passions in man besides love, and some novels were to be recommended, but romances infinitely more. The most wonderful part of the scheme, however, was, that the king was to give up Hampton Court or some other palace for the College. The writer was in his 23d year. We give the passages:—

"The dispute about the proper sphere of women is idle. That men should have attempted to draw a line for their own orbit, shows that God meant them for comets, and above our jurisdiction. With them the enthusiasm of poetry and the idolatry of love is the simple voice of nature." He next proceeds to remark to her Majesty, that in those countries where "man is scarce better than a brute, he shows his degeneracy by his treatment of women," and that "the influence that women have over us is as the medium through which the finer arts act upon us. The incense of our love and respect for them creates the atmosphere of our souls, which corrects and meliorates the beams of knowledge."

In showing how much less women are able to struggle against adversity than men, he says,—"As for us, we are born in a state of warfare with poverty and distress. The sea of adversity is our natural element, and he that will not buffet with the billows deserves to sink. But you, oh you, by nature formed of gentler kind, can you endure the biting storm? shall you be turned to the nipping blast, and not a door be open to give you shelter?"

After describing, with evident seriousness, the nature of the institution of Madame de Maintenon, at St. Cyr, he adds the following strange romantic allusion:—"Had such a charity as I have been speaking of existed here, the mild *Parthenia* and my poor *Laura* would not have fallen into untimely graves."

The practical details of his plan, in which it is equally evident that he means to be serious, exhibit the same flightiness of language and notions. The King, he supposes, would have no objection to "grant Hampton-court, or some other palace for the purpose," and "as it is (he continues, still addressing the queen) to be immediately under your Majesty's patronage, so should your Majesty be the first member of it. Let the constitution of it be like that of a University—your Majesty, Chancellor; some of the first ladies of the kingdom, sub-chancellors; whose care it shall be to provide instructors of real merit. The classes are to be distinguished by age,—none by degree. For, as their qualification should be gentility, they are all on a level. The instructors should be women, except for the languages. Latin and Greek should not be learned—the frown of pedantry destroys the blush of humility. The practical part of the sciences, as of astronomy, &c., should be taught. In history they would find that there are other passions in man than love. As for novels, there are some I would strongly recommend; but romances infinitely more. The one is a representation of the effects of the passions as they should be, though extravagant; the other as they are. The latter is falsely called nature, and is a picture of depraved and corrupted

rupted society; the other is the glow of nature. I would, therefore, exclude all novels that show human nature depraved; however well executed, the design will disgust."

It is well remarked by a writer in the Westminster Review, that "Sheridan was extremely ignorant, and these were the visions of a fasting mind; in the provinces of wit and fancy he contrived to do without knowledge, but whenever we find him committing himself to paper argumentatively on grave subjects, we observe a lamentable crudity and a lack of bottom. It may be objected, that it is unfair to found any opinion on performances not published by the writer, and perhaps not intended for publication; we cannot but think, however, that such rough sketches as those to which we allude, furnish indications of the furniture of a mind."

But from the abovementioned source, "Moore's Life of Sheridan," we learn that, in an early essay of Chesterfield's Letters, a passage exists from the pen of our author that deserves to be written in letters of gold. He says, "His (Lord Chesterfield's) frequent directions for constant employment are entirely ill-founded: a wise man is formed more by the action of his own thoughts than by continually feeding it. 'Hurry,' he (lord C.) says, 'from play to study; never be doing nothing.' *I say, frequently be unemployed; sit and think.* There are, on every subject, but a few leading and fixed ideas; their tracks may be traced by our own genius, as well as by reading: a man of deep thought, who shall have accustomed himself to support or attack all he has read, will soon find nothing new." It is remarkable, that this profound remark has been made, in a work just now quoted with praise (The Westminster Review), the subject of an attack on Sheridan. It is assumed there, however, that Sheridan deemed information might be thus easily acquired; but the passage bears no such interpretation. It can be held only to apply to reflexion; and here it is most undeniably true. *Facts* cannot be discovered by sitting still and thinking; but these, once acquired, we dare to assert with Sheridan, that a man may advance more safely and rapidly by sitting unemployed, and reflecting upon them, than by filling up his time with hunting out the conclusions of other people. Let us add, that such a proposition from one so young and so uninstructed in philosophy, is strong evidence of a powerful and original mind.

In 1775, he projected and partly accomplished a reply to Johnson's slavish book "Taxation no Tyranny." Such a work might of course easily have been blown to atoms; but this task was not performed by our author.

We must return to Sheridan's private affairs.

In consequence of his father's residence for a time at Bath, Mr. Sheridan saw, and had become enamoured with Eliza, the daughter of Mr. Charles Linley, a celebrated musician and composer, who had been bred up under Mr. Chilcot, the organist of the Abbey Church. She was born in 1754, and, like the rest of the family, evinced, at a very early age, both a talent and a passion for the art in which her father excelled. After two duels with Mr. Matthews, the latter of which is said to have been of a desperate nature, Mr. Richard Sheridan triumphed over all his rivals, among whom was included his elder brother, Charles Francis, by obtaining possession of the heart of "the Syren," as this lady was then usually termed. But marriage was a measure that could not receive the countenance of either family; however, as prudence is seldom to be found in the catalogue of good qualities appertaining to fond lovers, an elopement to France took place. Old Linley instantly pursued the fugitives thither, and gladly brought back his daughter, on whose voice and talents so much of his present prosperity depended. Notwithstanding this, the ceremony soon after took place in due form, on the 13th of April, 1773, Richard being in his twenty-second, and she in her nineteenth year.

Such was the exquisite delicacy of the young husband, that it was not without great difficulty he permitted his bride to fulfil her antecedent engagement to sing at the Worcester musical meeting; and, when this was over, he immediately

returned the money. He refused, nearly at the same time, the sum of one thousand pounds, with a benefit valued at the same amount, at the Pantheon; but his determination to seclude her entirely, and for ever, from the public gaze, appears to have nowhere found either countenance or support, except from the great lexicographer, who exclaimed, "He is a brave man! he has resolved wisely and nobly! I know not if I should not prepare myself for a public singer as readily as let my wife be one."

This, however, was at least a bold and daring undertaking; for all that Mr. Sheridan now possessed in the world, was the sum of one thousand pounds, being the amount of an award paid by a Mr. Long, a rich old gentleman, then resident at Bath, for a breach of promise of marriage to Miss Eliza Linley. However trifling this dowry may be considered, it was the first large sum that had ever come into possession of the subject of this memoir; and certain it is, that he acted as if it had been an inexhaustible treasure! When this was dissipated, which occurred in the course of a few months, some other fund was to be recurred to. The law presented an equivocal and uncertain aspect; temporary and fugitive essays for the periodical press could afford but a scanty and inadequate supply: the theatre alone held out a golden prospect of speedy and immediate supply. Accordingly, the comedy of "The Rivals" was brought out at Covent Garden, in January 1775, about eighteen months after this union, and, although at first but badly received, it gave a promise of superior talents. "The Duenna," which followed soon after, was ushered in with such a long-continued and uninterrupted burst of applause, that, in point of success, it rivalled, if it did not surpass, "The Beggar's Opera."

Mr. Sheridan now began to be considered as a man of extraordinary talents, and seems to have occupied a situation in society somewhat similar to that of Sir Richard Steele, or rather, perhaps, one of the great wits in Charles the Second's day. His conversation was full of point; his dialogue attic; his manners fascinating. Those who could not bear the father, loved the son; and two men, who appear to have in some measure regulated the taste of the town, partly on his own account, and partly on that of his most amiable and excellent mother, took great delight in serving him.—Dr. Johnson, who had quarrelled with the elder Sheridan, introduced him to the literary club; while Garrick, who was also on bad terms with him, afforded a far more substantial proof of his favour. Being at length resolved to retire not only from the stage, but also from the management of Drury-Lane, he smoothed the way, at least, for the introduction of his young friend, who actually became one of the joint patentees, along with Messrs. Linley and Ford, by means of borrowed money, secured by mortgage on the property.

Mr. Richard Sheridan, who had acted hitherto only as a dramatic writer, now presided over the theatre, and soon after brought forward the "School for Scandal:" the best and the most popular of his productions. It is justly esteemed the first genteel comedy we have; alike remarkable for the conciseness and polish of the language, the refinement of the thoughts, the easy conduct of the plot, and the natural pourtraiture of the characters. The morality of the piece has been much objected to by critics, because, like Tom Jones, this production tends to place licentiousness of conduct in too favourable a light. But we cannot think this censure well grounded, for great care is shewn to distinguish the errors of Charles from any thing like gross sensual indulgence; and since such a distinction is true in experience, where is the harm of describing it. It is no argument to say that we afford an excuse to vice, because we depict it in moderate instead of outrageous hues of darkness. The reverse might rather be maintained. Besides, it cannot be expected that a play is to satirise all vices at once. The object of the School for Scandal is to shew that censoriousness, malignant detraction and hypocrisy are deeper grades of iniquity than sensual indulgencies which *may* arise from mere thoughtlessness,

and

and that while a character prone to the latter failings may frequently be reformed, there is little hope of amendment in calculating and sentimental rogues. Who will deny that this object is accomplished?

This play, like all our author's productions, seems to have been the result of considerable pains taking. Every thought was committed to paper in several different modes, the best methods of setting it observed. Much wit was stolen, but rarely without an improvement that rendered it original. The characters of Tom Jones and Blifil are said to have served as the prototypes of Charles and Joseph Surface, yet the difference is most striking. Moliere's "Misanthrope" seems to have furnished materials for the famous scandal-scene at Lady Sneerwell's, and the incidents of Sir Oliver's return from India are obviously borrowed from "Sidney Biddulph," his mother's novel.

The following are Moore's judicious remarks on the School for Scandal:—"With but little interest in the plot, with no very profound or ingenious development of character, and with a group of personages, not one of whom has any legitimate claims upon either our affection or esteem, it yet, by the admirable skill with which its materials are managed; the happy contrivance of the situations, at once both natural and striking; the fine feeling of the ridiculous that smiles throughout, and that perpetual play of wit which never tires, but seems, like running water, to be kept fresh by its own flow; by all this general animation and effect, combined with a finish of the details, almost faultless, it unites the suffrages, at once, of the refined and the simple, and is not less successful in ministering to the natural enjoyment of the latter, than in satisfying and delighting the most fastidious tastes among the former. And this is the true triumph of genius in all the arts, whether in painting, sculpture, music, or literature, those works which have pleased the greatest number of people of all classes, for the longest space of time, may without hesitation be pronounced the best; and, however mediocrity may enshrine itself in the admiration of the select few, the palm of excellence can only be awarded by the many."

The "modern Congreve," as he was now called, reaped both fame and profit from this sprightly effort of his dramatic muse; and in 1778, by the purchase of Mr. Lacy's moiety of the patent, which appears to have been merely the transfer of a mortgage, burdened with two additional annuities, he obtained a most valuable property.

As he was but an indifferent manager, although an admirable writer of comedies, he now resigned the sceptre of old Drury to his own father; but, after his reign of a few months, as has been already stated, he abdicated in disgust; and the royal treasury, notwithstanding the boasted success of this triple monarchy, seemed to be emptied, rather than filled by long-continued prosperity.

Indifferent to wealth, and even to ruin, Mr. Sheridan gladly averted his eyes from his own concerns to those of the state. He now aspired to be a senator, and possessing an ample qualification for a seat in Parliament, in consequence of his rent-charge on Drury-lane, through the friendship of Lord John Townshend, he was introduced to Mr. Fox, and in 1780, being elected for the borough of Stafford, entered on his parliamentary career. His first appearance before the public as a political character was in conjunction with Mr. Fox at the beginning of the year 1780, when the famous Resolutions on the State of the Representation, signed by Mr. Fox as chairman of the Westminster Committee, together with a Report on the same subject from the Subcommittee, signed by Sheridan, were laid before the public. Annual Parliaments and Universal Suffrage were the professed objects of this meeting; and the first of the Resolutions, subscribed by Mr. Fox, stated, that, "Annual Parliaments are the undoubted right of the people of England."

Notwithstanding this strong declaration, it may be doubted whether Sheridan was, any more than Mr. Fox, a very sincere friend to the principle of Reform. Deeming the scheme of Cartwright and others, which these Resolutions recommended, impracticable, he always took refuge in it

when pressed upon the subject, and would laughingly advise his political friends to do the same:—"Whenever any one," he would say, "proposes to you a specific plan of Reform, always answer that you are for nothing short of Annual Parliaments and Universal Suffrage; there you are safe." He also had evident delight, when talking on this question, in referring to a jest of Burke, who said that there had arisen a new party of Reformers, still more orthodox than the rest, who thought Annual Parliaments far from being sufficiently frequent; and who, founding themselves upon the latter words of the statute of Edward III., that "a parliament shall be holden every year once, and more often if need be," were known by the denomination of the "Oftener-if-need-be." "For my part," he would add, in relating this, "I am an Oftener-if-need-be."

During the busy interval that passed between his first appearance and his appointment under the Rockingham administration in 1782, Sheridan rarely took part in the debates. The impeachment of Hastings raised Sheridan to the summit of fame as an orator. Against the former, the first two charges had been made. The third was brought forward by Sheridan on the 7th of February, 1787, in the most famous speech ever delivered in Parliament. The reader of that speech finds in it, however, a sad prolixity; a display of oriental knowledge, not necessary, and not bearing on the point in question; more unsupported invective than intelligent men, even of that age, might *a priori* have been supposed likely to admire; and some similes, that instead of illustrating the orator's ideas, must have distracted the attention of his audience. Yet the Commons thought so highly of this oration, that they adjourned, because they deemed it unjust to proceed to vote under its overwhelming impression. It had occupied all the family, and Mrs. Sheridan in particular had laboured so much at it, as materially to have injured her health. Another speech was made on the Renaus charge, on the 2d of April, and on the 15th, Sheridan began his famous summing up of the charge concerning the Begums of Oude, which occupied the house five days, and was still more prolix but nearly as effectual as the one he had delivered the preceding year.

When the king was taken ill, and the whigs so far forgot in their private friendship their public principles, as to talk of the prince of Wales's right to the regency, Sheridan fell into the same servile course. At the period of the French Revolution, Burke quarrelled with Fox and Sheridan, a circumstance which called forth a famous sarcastic speech from the last. He continued tolerably attentive to his duties, and on the occasions of the public reporters being excluded from Lincoln's Inn, by his defence of them; and of the mutiny in the fleet, when he supported a ministry he hated, manifested his liberality of feeling and his conscientiousness.

The last great epoch in his life, was the time when a negotiation was carried on with Lords Grey and Grenville, in 1811, to bring them into the ministry. At this time, Sheridan seems to have felt little affection towards his whig friends, and to have been wholly bent on inveigling himself into the Prince's good graces. He accordingly proceeded to satirize his old party, and to his great dishonour, suppressed a most important communication, that he had been charged to make them. Lords Grey and Grenville had refused to accept office, unless the Prince's household should go out. Lord Yarmouth requested Sheridan to inform those noblemen, that the household would resign. He not only suppressed this message, but when Mr. Tierney asked him a question on the subject, offered to bet five hundred guineas no such resignation was contemplated.

Sheridan had long laboured under pecuniary difficulties, and the dissolution of parliament in 1812, deprived him at once of his political consequence and of a protection from his duns. He failed in his attempt to get elected for Stafford, and thereby increased his distress. At this period his royal master did not desert him, but transmitted 3 or 4000 pounds to him through Lord Moira's hands, to purchase a seat for Wootton Bassett. The negotiation was all but concluded.

nothing

nothing being wanting but Sheridan's presence on the spot. On three successive evenings, Mr. Cocker, with whom the money had been deposited by his lordship, dined with Sheridan at a hotel in Albemarle-street, a chaise being on each night waiting at the door to convey them down to Wootton Bassett: on each night Sheridan, after his wine, postponed the journey to the next day, and on the fourth day, he altogether abandoned the project of purchasing a seat in Parliament, received the four thousand pounds, and applied them, as he was warranted to do by the permission of the donor, to his private uses. This did not save him long from distress: his irregular habits, his pride not to reduce his expenditure, involved him still further in embarrassments, and drove him to many miserable tricks to relieve himself. The regent either disgusted with his faults or considering that every thing had been done that honour could require towards a mere boon companion, withdrew from him his countenance; his other great friends betrayed the same coldness, and at length, apparently deserted by all but Rogers, Moore and a few others, he fell sick and died on the 7th of July, 1816.

He was a charming companion, social not only in the common meaning of the word, but in the finer relations of life. And his irregularities may be considered rather as the result of bad habits and the evil society he had fallen into, than of any other cause. Gambling, drinking, running into debt, were vices common enough among his theatrical acquaintance, and not quite unknown among his genteel and noble friends. Could it be expected that the son of the actor, not educated in solid knowledge, and confident in the resources of his genius, should grow a little giddy at his unparalleled elevation? He is no example for imitation either as a parliamentarian, for he knew nothing; nor as a man, for he lived dishonourably; but he may be pitied. He was worth all the fair-famed place-hunters that lived in his time under the shade of obscurity; and morality must rejoice in his existence were it only for his writing the *School for Scandal*.

SHERIF, in Egypt, the relations of Mahomet, the same tribe of persons called emir by the Turks.

The word is Persian, and signifies great or noble; and these persons have the privilege of being exempt from appearing before any judge but their own head; and if any of the military orders are obliged to punish them for any misdemeanor, they first take off their green turban, in respect to their character; and the same is done even when they are punished by their own magistrate.

SHERIFABAD, a town of Hindostan, province of Delhi.

SHERIFF, *s.* [шѣрефеѣра, Saxon, from шѣре, a shire, and шеѣ, a steward. It is sometimes pronounced *shrieve*, which some poets have injudiciously adopted. An officer to whom is intrusted in each county the execution of the laws.

He is called in Latin *vice-comes*, as being the deputy of the earl or comes, to whom the custody of the shire is said to have been committed at the first division of this kingdom into counties: but the earls being afterwards unable, by reason of their high employments, and attendance on the king's person, to transact the business of the county, the labour was committed to the sheriff; who now performs all the king's business in the county; and though he be still called *vice-comes*, yet he is entirely independent of, and not subject to, the earl: the king, by his letters patent, committing *custodiam comitatus* to the sheriff.

Sheriffs were formerly chosen by the inhabitants of the several counties; in confirmation of which, it was ordained by 28 Edw. I. c. 8. that the people should have election of sheriffs in every shire, where the sheriffalty is not of inheritance; for anciently in some counties the sheriffs were hereditary, as judge Blackstone apprehends they were in Scotland, till the statute 20 Geo. II. c. 43. and still continue in the county of Westmoreland to this day: the city of London having also the inheritance of the sheriffalty of Middlesex vested in their body by charter. This election, says the same author, was, in all probability, not absolutely vested in the commons, but required the royal approbation. For

in the Gothic constitution, the judges of their county-courts (which office is executed by our sheriff) were elected by the people, but confirmed by the king; and the form of their election was thus managed: the people, or *incolæ territorii*, chose twelve electors, and they nominated three persons, *ex quibus rex unum confirmabat*. But with us in England, these popular elections growing tumultuous, were put an end to by the statute 9 Edw. II. st. 2. which enacted, that the sheriffs should from thenceforth be assigned by the chancellor, treasurer, and the judges, as being persons in whom the same trust might with confidence be reposed. By statutes 14 Edw. III. c. 7, 23 Hen. VI. c. 8, and 21 Hen. VIII. c. 20, the chancellor, treasurer, president of the king's council, chief justices, and chief baron, are to make this election on the morrow of All-Souls in the exchequer: and the king's letters patent, appointing the new sheriffs, used commonly to bear date the sixth day of November. 12 Edw. IV. c. 1.

And the custom now is, which has obtained since the time of Henry VI. that all the judges, together with the other great officers, meet in the exchequer chamber on the morrow of All-Souls yearly (which day is now altered to the morrow of St. Martin, by the last act for abbreviating Michaelmas term), and then and there propose three persons to the king, who afterwards appoints one of them to be sheriff.

This custom of the twelve judges proposing three persons, seems borrowed from the Gothic constitution before-mentioned; with this difference, that among the Goths the twelve nominees were first elected by the people themselves: which usage of our's was probably founded upon some statute, though not now to be found among our printed laws. But notwithstanding an unanimous resolution of all the judges of England to this purpose, entered in the council-book of 3d March, 34 Hen. VI. and the statute 34 and 35 Hen. VIII. cap. 26. sect. 61., which expressly recognizes this to be the law of the land; some of our writers have affirmed, that the king, by his prerogative, may name whom he pleases to be sheriff, whether chosen by the judges or not. This is grounded on a very particular case in the fifth year of queen Elizabeth, when, by reason of the plague, there was no Michaelmas term kept at Westminster, so that the judges could not meet there in *crastino animarum*, to nominate the sheriffs; upon which the queen named them herself, without such previous assembly, appointing for the most part one of the two remaining in the last year's list. And this case, so circumstanced, is the only authority in our books for making these extraordinary sheriffs.

However, it must be acknowledged, that the practice of occasionally naming what are called pocket-sheriffs, by the sole authority of the crown, hath uniformly continued to the reign of his late Majesty George III., in which, says Blackstone, few, if any, instances have occurred.

By four several statutes it is enacted, that no one shall be sheriff, except he was sufficient land within the shire to answer the king and the people in any manner of complaint. 9 Edw. II. st. 2. 4 Edw. III. c. 9. 5 Edw. III. c. 4. 13 and 14 Car. II. c. 21.

SHERIFF POINT, a cape in Columbia river, on the west coast of North America. Lat. 46. 5. N. long. 237. 11. E.

SHERIFFALTY, **SHERIFFDOM**, **SHERIFFSHIP**, or **SHERIFFWICK**, *s.* The office or jurisdiction of a sheriff.—There was a resumption of patents of gaols, and reannexing to them *sheriffwicks*; privileged officers being no less an interruption of justice than privileged places. *Bacon*.—Holding by patent the inheritance of the *sheriffdom*. *Selden*.

SHERIFFHALES, a parish of England, in Salop and Staffordshire; 2 miles north-by-east of Shiffnal. Population 809.

SHERIFF HUTTON. See **HUTTON**, **SHERIFF**.

SHERIFF-MUIR, or **SHERIFF-MOOR**, a plain of Scotland, near the Grampian mountains, in the county of Perth, where a battle was fought between the army of George I. and the rebels under the Earl of Marr.

SHERING, a parish of England, in Essex; 3 miles north-east-by-east of Harlow.

SHERINGHAM, a parish of England, in Norfolk, near the sea-shore; 5 miles west of Cromer. Population 539.

SHERINGTON, a parish of England, in Wiltshire; 4½ miles north-east of Hindon.

SHERIPORAM, a town of Hindostan, in the Northern Circars, and district of Rajamundry. Lat. not ascertained.

SHERLOCK (William), an eminent divine in the English church, was born in London in 1641. He was educated at Eton, and thence he went to Peter-house, Cambridge, when he published "A Discourse concerning the Knowledge of Christ, and our Communion with Him," being intended as a confutation of the Antinomian doctrine, which brought upon him several antagonists, against whom he vindicated himself with judgment and zeal. In 1680 he took the degree of D.D., and in the following year he obtained a prebend in the cathedral of St. Paul's. The discovery of what was called the Rye-house plot, having called forth the spirit of loyalty, Dr. Sherlock appeared as an assessor of the doctrine of non-resistance, in a work entitled "The Case of Resistance to the supreme Powers stated, and resolved according to the Doctrines of the Holy Scriptures." In this piece he maintained that the authority of the sovereign was in his person, and not in the law:—that he does not receive his authority from the laws, but that the laws receive their power from him;—and that it does not become a man who can reason to all to talk of the authority of the laws in derogation to the authority of the sovereign power. From these slavish principles he did not in the least swerve, even after the accession of James II. had still more endangered the public liberties and religion of the country.

After the revolution, Dr. Sherlock for some time remained firm in his high monarchical principles; and refusing to take the oaths to the new government, was suspended from all his preferments, among which was the mastership of the Temple. It was during this suspension from his labours as a preacher, that he published the treatise on "Death," to which he is chiefly indebted for celebrity as an author.

Not long after the publication of this work, Dr. Sherlock's scruples with respect to government gave way; he took the oaths, and was reinstated in all his preferments. This step of course exposed him to the censure of the party with whom he had long acted, and to vindicate himself he published a piece, entitled "The Case of the Allegiance due to sovereign Powers stated and resolved." In 1690 he published his "Vindication of the Doctrine of the Holy and Ever-blessed Trinity;" and in 1704 "Discourse on the Immortality of the Soul," in which he made an attack on Locke's opinion concerning innate ideas. He died in 1707, in the 67th year of his age.

SHERLOCK (Thomas), a distinguished prelate, and son of the preceding, was born in London in 1678. He received his classical education at Eton, and from thence he removed to Catharine-hall, Cambridge. Being promoted to the deanery of Chichester in 1726, he soon after made his first appearance in print, as a champion of the establishment, in "A Vindication of the Corporation and Test Acts, in answer to the Bishop of Bangor's Reasons for the Repeal of them." This was replied to by the worthy prelate, and supported in a rejoinder by the dean.

Dr. Sherlock's next work was entitled "The Use and Intent of Prophecy in the several Ages of the World," which was the substance of some sermons preached in the Temple church, occasioned by the controversy between Collins and several divines on the subject of prophecy. In 1728 he was promoted to the see of Bangor, in which he succeeded his antagonist Hoadly. As a member of the upper house, he took an active part in its debates, and was always a supporter of the interests of the crown and the church. He accepted the see of London in 1749; in 1753 resigned the mastership of the Temple, and was very soon

Vol. XXIII. No. 1559.

after incapacitated for any very active service. The bishop died in 1761, in the 84th year of his age.

SHERMA, a small province of Morocco, to the south of Morocco proper, and east of Duquella, abounding in cattle, particularly goats.

SHERMAN, a township of the United States, in Fairfield county, Connecticut. Population 949.

SHERMANBURY, a parish of England, in Sussex; 6 miles north-east of Staying.

SHERONA, a village of Upper Egypt, on the Nile; 8 miles north of Abu Girge.

SHERARDS, a hamlet of England, in Worcestershire; 7 miles south-west of Worcester.

SHERRINGHAM, a composer of songs in parts during the reign of Henry VII., which have been preserved with those of other contemporary composers in the Fairfax MS.

SHERRINGTON, a parish of England, in Buckinghamshire; 2 miles north-north-east of Newport Pagnell. Population 773.

SHERRINGTON, a township of Lower Canada, in the county of Huntingdon.

SHERRIS, SHERRIS Sack, or SHERRY, s. [from Xeres, a town of Andalusia in Spain.] A kind of Spanish wine.—Your *sherris* warms the blood, which before, cold and settled, left the liver white, which is the badge of pusillanimity; but the *sherris* makes its course from the inwards to the parts extreme. *Shakspeare*.—Good *sherris sack* ascends me into the brain, dries me there all the foolish dull vapours, and makes it apprehensive. *Shakspeare*.

While the tinker did dine, he had plenty of wine,
Rich canary with *sherry*, and tent superfine.

Old Ballad, Percy's Rel.

SHERSHELL, a considerable town of Algiers, in Africa, situated in a most fertile and delightful country. It is generally supposed to be the city anciently called *Jol*, and to which the younger Juba gave the name of *Cæsarea*, in compliment to Augustus. The ruins here are not inferior to those of Carthage; and fine pillars, capitals, spacious cisterns, and beautiful Mosaic pavements, give the highest idea of its ancient magnificence. The city is said to have been anciently destroyed by an earthquake; and the port, formerly large and commodious, to have been ruined in consequence of the arsenal and other contiguous buildings being precipitated into it. This tradition seems confirmed by the present aspect of the cothon or artificial harbour; for when the sea is calm, and the water low, its area appears covered over with massy pillars and fragments of walls, which could only, it would appear, have been transported thither by such a concussion. The port is nearly of a circular form, 200 yards in diameter; but the securest part of it, which, till of late, was towards the cothon, is now filled up with a daily increasing bank of sand. However, there still lies in the mouth of it a small rocky island, which is the main shelter and defence against the northern tempest. In 1730, when Dr. Shaw visited this place, it was in great reputation for the manufacture of steel, earthen vessels, and such iron tools as are wanted in the neighbourhood. In 1738, it was seriously injured by an earthquake. Lat. 36. 35. N. long. 2. 30. E.

SHERSTON, GREAT and LITTLE, two adjoining villages in Wiltshire; 6½ miles west-by-south of Malmesbury. Population 1141.

SHERVEND, a village of Irak, in Persia; 32 miles north of Consar.

SHERWELL, a parish of England, in Devonshire; 2 miles north-east of Barnstaple. Population 533.

SHESEBQUIN, a post village of the United States, in Bradford county, Pennsylvania.

SHETE, a small river of England, in Kent, which runs into the Medway, at Twyford bridge.

SHETLAND, or ZETLAND ISLES, the north-east division of the Scottish Northern isles, about 15 leagues north-

east of the Orkneys. The nearest part of the continent of Europe is Bergen in Norway, from which they lie 44 leagues west. The southern promontory of the Mainland (as the largest of the Shetland islands is termed), lies in 59. 48 $\frac{1}{2}$. of north latitude, and the northern extremity of Unst, the most remote of them all, in the latitude of 60. 52. north. The meridian of London passes through this last island. The islands belonging to this division are about 86 in number, of which 40 are inhabited, and the others small holms or rocky islets, used only for pasturage. The principal inhabited islands are the Mainland, Yell, Unst, Whalsay, Bressay, Burray, House, Trondray, Fetlar, Papa Stour, Mickle and Little Rhoe, Skerries, Noss, &c., with the small islands of Foula and Fair Isle, which lie in the strait between the clusters of Orkney and Shetland. The climate of these islands cannot be said to be agreeable. The longest day in the island of Unst, is 18 hours and 35 minutes; and, of consequence, the shortest day is 5 hours and 25 minutes. The weather is humid and variable, though by no means hurtful to the health of those who have been accustomed to it. In the months of February and March, cold northerly and easterly winds generally prevail, and there is hardly the smallest appearance of spring till the end of April, and little genial warmth sooner than the middle of June. In autumn, the weather, four years in five, is extremely uncertain; and winter generally commences about the middle of October, and may be said to occupy six months in the year. Snow, however, seldom lies long, nor is frost ever very intense. The changes are sudden, the winds tempestuous, and the rains heavy. The sea swells and rages in such a manner, that for five or six months their ports are almost inaccessible, and of course, during that space, the people have very little communication with the rest of the world. That gloomy season, however, as in other countries in high northern latitudes, is frequently enlivened by the corruscations of the aurora borealis. In favourable seasons, the harvest is all over in September, though that does not often happen. At other times, the harvest is not finished before the middle of November; in which case, that part of the crop then abroad is often so much damaged, that it does not afford wholesome food either for man or beast. This, however, is sometimes the case in other districts of the British isles, as well as in Shetland. Seed-time commences at different times in different parts of the country, but commonly begins about the middle of March; though, in some districts, through prejudice, the farmers will not sow oats till the middle of April. It is earliest in the parishes of Tingwall and Dunrossness, where the surface is dry, and a good deal of the land incumbent on a limestone bottom. In such a high latitude as that of Shetland, the seed process, however, should always commence as early as possible, taking advantage of the dry weather as soon as March sets in. In these islands there is great diversity of soil; often deep moss on a bottom of sand, and sometimes the moss or peat is only a foot thick on a bed of clay. Those tracks which have been longest under cultivation, chiefly consist of a mixture of clay and small stones. The general appearance is a scene of ruggedness and sterility. Some patches of miserably cultivated soil relieve the eye of a traveller; but no tree nor shrub is to be seen. The western parts are peculiarly wild, dreary and desolate; consisting of grey rocks, stagnant marshes and pools, broken and precipitous coasts, excavated into vast natural arches and deep caverns. There are, it is computed, 25,000 English acres of arable land, and about 23,000 of good meadow and pasture in Shetland. There are sometimes, for miles together, pleasant flat spots, very fertile both in pasture and corn. A greater proportion of the country might easily be cultivated; but agriculture is here at a very low ebb, and is generally neglected for the fishery. The implements of husbandry are of the rudest construction, the farm-houses for the most part wretched hovels, and the roads in general are footpaths. The little fields of the inhabitants are, however, tolerably fertile, even under the worst practice of husbandry. In the kitchen gardens, red cabbage, savoy, leeks, with artichokes,

thrive exceedingly. In the whole country there is scarce the vestige of a tree, and hardly any shrubs, except juniper; but it is probable that the country was formerly overgrown with woods, as roots of large trees have been, and still are, dug up in many parts; and in some, and those too almost inaccessible places, the mountain ash is still found growing wild. That this defect, viz., the want of wood, does not arise entirely either from the soil or climate, appears from several late experiments; some gentlemen having raised ash, maple, horse-chesnuts, &c., in their gardens on the Mainland. There is plenty of peat and turf for fuel. Great numbers of horses are bred in Shetland, though they are of very small size, the ordinary height being from nine to ten hands, whilst the largest do not exceed eleven hands. These little animals, however, are full of spirit, and bear fatigue much better in proportion to their size, than larger horses, and evidently proceed from the Norway horse, though reduced in size, perhaps in some degree, by scanty fare. The cattle of Shetland are also of a small size, though in point of shape perhaps inferior to the west Highland cattle only, of all our native breeds. When fat, some of the cows will weigh from two to three hundred weight, and the oxen from three hundred weight to four; though the common run be much lighter. The quantity of milk which these little cows yield is inconsiderable, not exceeding one and a half Scots pints, or three English quarts, per day, at the utmost, on the common pastures of the country, though on good pasture they give twice that quantity and more. The Shetland sheep is the *ovis cauda brevi* common to Norway, Sweden and Russia, and which, till within the last forty years, was the only breed of sheep of the interior Highlands of Scotland. It is still found there, and in several other districts of Scotland, in small flocks. The number of sheep in all the Shetland islands, is calculated to be between 70,000 and 80,000, though this is probably considerably above the real number at present. If the wool of the present breed of Shetland sheep ever prove of much value, it will probably be when attached to the skin of the animal, and that dressed as a species of fur; for the quantity is very small, even for the small carcase of the animal; and, though some of it be fine, it is of a quality unfit for any general purpose of manufacture, and the price low in manufacturing districts, or it is rather almost unsaleable there. The breed is debased by almost every possible means of maltreatment, instead of being carefully improved; and it is wonderful that the wool, which is only partially coarse and hairy, has not become long ago as shaggy as the coat of a Welsh goat. Of game, there is neither grouse nor partridge, but the corn-rail is frequently heard; and there are multitudes of the aquatic birds, such as snipe, plover, curlew, duck, swan, goose, heron; also wild pigeons. The birds of prey are eagles (extremely destructive to the lambs), hawks, ravens and crows. The lakes, which generally have a pretty direct communication with the sea, afford trout and flounder; the surrounding ocean a vast variety of fish, and which are well attended to by the inhabitants. All the islands are well supplied with water. They have indeed no rivers, but many pleasant rivulets, which are sufficient to drive their corn-mills, and contain a few trout and salmon. The inhabitants are a hardy, robust and laborious race, and hospitable to strangers. They have few manufactures. They make a coarse cloth for their own use, and a little linen; they likewise export great quantities of stockings wrought upon wires, manufactured from their own wool; some of which are so fine, that they equal silk in price, and can be drawn through a finger ring. Their chief trade is to Leith, London, Dublin and Barcelona, but they also deal some little by barter with the Dutch fishermen who visit their islands. They export annually 1000 tons of cod, tusk and ling, and 500 tons of kelp, and about 5000*l.* worth of stockings and mittens. Their whole exports may be estimated at 35,000*l.* They have ten vessels of 768 tons, navigated by 53 men. Granite, freestone and limestone are abundant, as well as a beautiful and comparatively rare kind of stone, named diallage

lage rock. There are several varieties of schist, which answer for roofing-slate. A copper mine was formerly worked at Sandlodge, near the southern extremity of the Mainland; but from the expense exceeding the returns, the undertaking was necessarily discontinued.³ At Dunrossness there is a thick bed of iron-pyrites, and another of micaceous iron-ore. Bog iron-ore abounds over the whole of the country. Very recently the chromate of iron has been found in Unst. This rare and valuable substance has been usually obtained at a considerable expense from America. It is employed by the manufacturing chemists of London and elsewhere, for the purpose of extracting the chrome, which forms the principal ingredient in a yellow pigment used by coach-makers and house-painters. At Unst and at Fetlar there are slight indications of copper. In other parts of the islands several beautiful minerals are procured; among these are cyanite, actinolite, asbestos, amianthus, some varieties of garnet, steatite, chlorite and magnetic iron, staurolite and epidote; but the most curious of these is the native hydrate of magnesia, hitherto observed only at New Jersey. Porcelain-earth is found at Fetlar, Unst, and on the Mainland, but whether so pure as to deserve an introduction among the potteries, remains yet to be determined. There are two towns, viz., Lerwick and Scalloway; the latter is, however, by far the most ancient, and was formerly the capital. Near it are the remains of the large castle of the earls of Orkney and Shetland, bearing the date 1600, with a Latin inscription over the principal door. Near Lerwick is Fort Charlotte, garrisoned by a company of invalids. The most remarkable antiquities are the small round castles, named Pictish Burghs, which are disposed along the whole of the coasts. It has been a matter of dispute from whence the first inhabitants of these islands came. The history of the country becomes more certain from the 9th century. Shetland was then peopled by a number of Norwegians, who had fled to it for refuge, after they had been defeated by Harold Harfagre, the usurper of the crown of Norway. These exiles then retorted upon the monarch, by numerous piracies on the coasts of his kingdom. Accordingly, Harold fitted out a powerful fleet without delay, and landed on the island of Fetlar; but as he could not there procure safe anchorage for his fleet, he sailed to the island of Unst, to a bay which still retains his name, being called Harold's Wick. Harold made an easy conquest of these islands; and they became tributary to the crown of Norway till the end of the 15th century. They were ceded to the crown of Scotland, in lieu of dowry, when the princess of Norway was married to King James III. (as mentioned under the article SCOTLAND.) Shetland unites with Orkney in forming a stewartry, which sends one member to parliament. The whole country is divided into 12 parishes. See SCOTLAND.

SHETUCKET, a river of the United States, in Connecticut, which joins the Yantic at Norwich, to form the Thames.

SHEVAGUNGA, a town of the south of India, province of the Carnatic, and district of Little Marawar. The government of this town and adjoining country had, according to the Nair custom, been from time immemorial in the hands of a female, styled the Ranny, till about the middle of the last century, when two brothers named Murdoo, of low birth, usurped the power, first under the title of *Dewan*, or ministers, but subsequently assuming that of rajah. They were expelled by the nabob of Arcot, but afterwards, through bribery, restored to their powers. Again proving refractory, they were attacked by a British detachment, and defended themselves in the fortress of Callarcoil, for five months. It was at length taken by storm, and the usurpers hanged. Of the old Shevagunga family there remained no lineal heir; the place was therefore given to a female, a relation of the late Ranny's, and the tribute continued at the former sum of 50,000 pagodas, each pagoda being in value 8s. 4d: Lat. 9. 54. N. long. 78. 30. E.

SHEVAGUNGA, a town of the south of India, province of Mysore. Lat. 13. 6. N. long. 77. 13. E.

SHEVAGURRY, a town of the south of India, district of Tinnevely. Lat. 9. 23. N. long. 77. 32. E.

SHEVELPATORE, a town of the south of India, province of the Carnatic, and district of Tinnevely. This was a place of considerable consequence in former times, but is now of little importance. Lat. 9. 31. N. long. 77. 43. E. —There are several other inconsiderable places of this name in India.

SHEVINGTON, a township of England, in Lancashire; 2½ miles north-west of Wigan. Population 726.

SHEVIOCK, a parish of England, in Cornwall; 2 miles south-by-east of St. German's. Population 428.

SHEVOCK, a small rivulet of Scotland, in Aberdeenshire, which joins the Gadie near its confluence with the Ury.

SHEW. See **SHOW**.

To SHEW. See *To SHEW*.

SHEW-BREAD, "bread of faces, or of the faces." This denomination was given to the loaves of bread, which the priest of the week placed every Sabbath-day on the golden table in the sanctuary, before the Lord.

SHEWER, *s.* One who sheweth or teacheth what is to be done.

SHIAB, a town of Hedsjas, in Arabia; 84 miles south-east of Calaat el Moilah.

SHIANSHIA, a village of Lower Egypt; 45 miles north-north-east of Cairo.

SHIANT ISLANDS, a cluster of small islands among the Western islands of Scotland; about 6 miles from the south-east coast of Lewis. Lat. 57. 53. N. long. 6. 20. W.

SHIBBOLETH, or **SIBBOLETH**, a Hebrew word, which signified *spica*, or an ear of corn. It was used by way of distinguishing the Ephraimites from the men of Gilead. For the latter having killed a great number of the former, set guards at all the passes of Jordan; and when an Ephraimite, who had escaped, came to the water-side, and desired to pass over, they asked him if he was not an Ephraimite? If he said no, they bade him pronounce Shibboleth. But he pronouncing it Sibboleth, according to the manner of the Ephraimites, and thus not enunciating the first letter, was killed on the spot: on this occasion, 42,000 Ephraimites were killed. By thus not distinguishing between the *v* and the *w*, the schin and the sin, they exposed themselves to this massacre: hence the terms have been used to denote the trivial grounds on which contending parties, particularly in theological disputes, often differ, and proceed to think ill of, and actually to persecute, one another.

SHIBKAH, an extensive plain of saltish ground in the southern part of the province of Tlemsan, in Algiers. It is inhabited by the Arab tribes called Ammer.

SHIDE, *s.* [*scide*, Sax. *scindula*; probably from *scaban*, to divide; *scheiden*, Germ. and *scheyden*, Teut. the same.] A piece split off, spoken of wood, a cleft *shide*. —*Gloucestershire, according to Grose*. In some places it also means a small solid piece of wood, a billet; not a slip or splinter.

SHIEL, **LOCH**, a lake of Scotland, in Inverness-shire, about 10 miles long and 2 broad, which discharges itself into the western sea by the river Shiel. There is a small island in it called Finan, on which are the ruins of a church dedicated to St. Finan.

SHIELD, *s.* [*scylb*, Sax.] A buckler; a broad piece of defensive armour held on the left arm to ward off blows.

Now put your *shields* before your hearts, and fight
With hearts more proof than *shields*. *Shakspeare*.

Defence; protection.—One that gives protection or security.

The terror of the Trojan field,
The Grecian honour, ornament, and *shield*,
High on a pile th' unconquer'd chief is plac'd. *Dryden*.

The shield was that part of the ancient armour on which the persons of distinction in the field of battle always had their arms painted; and most of the words used at this time to express the space that holds the arms of families, are derived

river from the Latin name for a shield, *scutum*. The French *escu*, and *escussion*, and the English word, *escutcheon*, or, as we commonly speak it, *scutcheon*, is evidently from this origin; and the Italian *scudo* signifies both the shield of arms, and that used in war.

The Latin name *clypeus*, for the same thing, seems also to be derived from the Greek word *γλυφειν*, to engrave; and it had this name from the several figures engraved on it, as marks of distinction of the person who wore it.

The shield in war, among the Greeks and Romans, was not only useful in the defence of the body, but it was also a token or badge of honour to the wearer, and he who returned from battle without it, was always treated with infamy afterwards.

The form of the shield has not only been found different in various nations, but even people of the same nation, at different times, have varied its form extremely; and among several people there have been shields of several forms and sizes in use, at the same period of time, and suited to different occasions.

The most ancient and universal form of shields, in the earlier ages, seems to have been the triangular, vulgarly called the heater shield, from its resemblance to that instrument of housewifery. This we see instances of in all the monuments and gems of antiquity: our own most early monuments shew it to have been the most antique shape also with us, and the heralds have found it the most convenient for their purposes, when they had any odd number of figures to represent; as if three, then two in the broad bottom part, and one in the narrow upper end, it held them very well or if five, they stood as conveniently, as three below, and two above. Most of the monumental figures of cross-legged knights are armed with triangular shields, which are generally a little convex, or curved in their breadth; their upper extremity terminated by a line parallel to the horizon, and their sides formed by the intersection of the segments of two circles. Such are generally represented on ancient seals and windows: sometimes, though not often, their surfaces are flat. On the inside of the Norman shields were two or more loops of leather, or wooden handles, through which the arm and hand were passed, when the shield was braced, and prepared for use; at other times it was carried by a leathern thong worn round the neck. The other form of a shield, now universally used, is square, rounded, and pointed at the bottom: this is taken from the figure of the Samnitic shield used by the Romans, and since copied very generally by the English, French, and Germans.

The shield, though it was not entirely relinquished so long as the use of the long and cross bows continued, seems to have undergone some alteration in its form; the triangular, or heater shield, gradually giving place to those of a circular or rectangular figure. Shields were first left off by the cavalry; they were, however, used in the army of king Edward I., at the siege of Karlaverok, in the year 1300. A sort of shields was worn by the Scots at the battle of Musselborough, in the first year of Edward VI. Shields or bucklers seem to have been used in affrays and private quarrels, by persons in the civil line, as late as the reigns of Elizabeth and king James I. The common appellation for a quarrelsome or fighting fellow about that period was a swash-buckler, that is, a breaker or clasher of bucklers. Maurice, prince of Orange, was a great advocate for the shield, and even attempted to revive the use of it. His company of Dutch guards was armed with targets and roundels, and he formed a regular plan of exercise for them. The target and broad sword were the favourite arms of the Scotch Highlanders as late as the year 1746, and even after. Swords and bucklers were anciently borne before great military officers, as insignia of their dignity: those carried before king Edward III. in France, are shewn in Westminster Abbey. The shield borne before the commander of the forces on board the Spanish Armada, is preserved in the Tower, and a sword was borne before the bishop of Norwich, as commander of

the troops with which he intended to serve king Richard II. Most of the ornamented metal shields, and many of the very large swords, were designed for this use.

The Spaniards and Portuguese have the like general form of shields, but they are round at the bottom, without the point; and the Germans, beside the Samnite shield, have two others pretty much in use; these are, 1. The bulging shield, distinguished by its swelling or bulging out at the flanks; and, 2. The indented shield, or shield chancree, which has a number of notches and indentings all round its sides. The use of the ancient shield of this form was, that the notches served to rest the lance upon, that it might be firm while it gave the thrust; but this form being less proper for the receiving armorial figures, the two former have been much more used in the heraldry of that nation.

Another form of shield derived its name roundel, or rondacha, from its circular figure; it was made of osiers, boards of light wood, sinews or ropes, covered with leather, plates of metal, or stuck full of nails, in concentric circles, or other figures. The shields and roundels of metal, particularly those richly engraved or embossed, seem rather to have been insignia of dignity, anciently borne before generals or great officers, than calculated for war; most of them being either too heavy for convenient use, or too slight to resist the violence of a stroke either from a sword or battle-axe. Although most roundels are convex, we meet with many that are concave; but these have commonly an umbo. The handles are placed as in the shield and target. The roundel seems, in many instances, to resemble the Roman parma.

TO SHIELD, *v. a.* [*scýlðan*, Sax.] To cover with a shield.—To defend; to protect; to secure.

Shouts of applause ran ringing through the field,

To see the son the vanquish'd father shield.

Dryden.

To keep off; to defend against; prevent.—Out of their cold caves and frozen habitations, into the sweet soil of Europe, they brought with them their usual weeds, fit shield the cold, to which they had been inured.

Spenser.

My lord, I must intreat the time alone.

—God shield I should disturb devotion.

Shakspeare

SHIELD, CAPZ, a low point on the coast of New Holland, in the gulf of Carpentaria, which projects six miles from the body of the land. Lat. 13. 19 $\frac{1}{2}$. S. long. 136 23. E.

SHIELDS, NORTH, a market town and sea-port of England, in the county of Northumberland, situated near the entrance of the river Tyne, on its northern bank. It has of late years increased greatly in size and population, and improvements have been carried on upon an extensive scale in its streets, buildings, &c. It now contains many handsome streets, and two elegant squares, besides the market-place, which may rival that of any provincial town in the kingdom. On one side is a spacious quay, with a crane for the delivery of goods, where ships of 300 tons may load and unload with perfect safety; and another side is adorned with a noble stone building, which is now used as an inn, and is surmounted with the Percy arms. The parish church is that of Tynemouth; and the town contains places of worship for almost every class of dissenters. An elegant Catholic chapel has been built near the north entrance of Shields; and a spacious Scotch church; and a large building which now belongs to the Independents. The remaining buildings and establishments are a large school-house, on the Lancasterian system, erected in commemoration of the royal jubilee; a theatre, a dispensary, a subscription library, which contains an extensive collection of valuable books; an asylum for sick and friendless seamen, a lying-in hospital, and many well conducted and flourishing benefit societies. The harbour of North Shields is calculated to accommodate 2000 sail of ships; and in spring tides, vessels of 500 tons burden can pass the bar in safety. The want of an independent custom-house is considered as the great desideratum of this port; all vessels being on this account

account obliged to clear out from Newcastle, a distance of 8 miles from that place. The principal trade of North Shields, as that of the Tyne in general, consists in the exportation of coals to London, and other places along the eastern coast, both of England and Scotland. Some vessels are also employed in the Baltic and American trade; and during the late wars, a great number were employed by government in the transport service. North Shields carries on various manufactures, chiefly those of the coarser kind, and such as depend on the shipping interest, as ship-building, boat-building, rope and sail-cloth making, brewing, baking, &c. Here is a cast-iron foundry, an extensive tannery, a skinnery, a tobacco manufactory, a glove manufactory, and five hat manufactories. North Shields is a place of considerable antiquity, and owes its origin to the monks of Tynemouth priory, who erected a number of houses here, and encouraged the settlement of ship owners and tradesmen, early in the reign of Edward I. The situation being well adapted for a seaport, they also formed a harbour, and established a weekly market and fairs; but its privileges being disputed by the corporation of Newcastle, they were inhibited by a decree of the itinerant judges; and the town continued on this account a mere fishing village, till the middle of the 17th century, when Cromwell undertook its improvement and revival. He caused an act of parliament to be passed, ordering quays and other accommodations to be built, and a market to be held two days in the week. At the restoration, however, the rights of the corporation of Newcastle were resumed; and it was only towards the end of the last century that the unjust restrictions that had retarded the prosperity of the town, were in some measure removed. In 1804, the town obtained, by petition of the inhabitants to the duke of Northumberland, the lord of the manor, the privilege of holding a weekly market and fairs; and since that time the trade and business of the place have greatly increased. North Shields contains, according to the census of 1811, 804 houses, and 7699 inhabitants. Market on Wednesday. Half a mile west of Tynemouth, and 279 north-by-west of London. Lat. 55. 0. N. long. 1. 25. W.

SHIELDS, SOUTH, a market town of England, in the county of Durham, situated at the mouth of the river Tyne, directly opposite to North Shields. Most of the streets are narrow, and the houses indifferently built. The church, which is dedicated to St. Hilda, is a chapel of ease to Jarrow, and was altogether rebuilt in 1810 and 1811, except the steeple, which is a plain square tower. The expense amounted to upwards of 5000*l.* Its outward appearance is rather heavy; but it is remarkably neat and commodious within. There are also some dissenting meeting-houses, the most important of which is that of the Methodists: it was opened 26th February 1809, and cost 3800*l.* It is capable of holding 1700 people. The town-house is a respectable building, situated in the centre of the market-place, which is a spacious square. In this building the magistrates hold the petty sessions for the east division of Chester ward; also a court leet and court baron are held, the one for making presentments to, and the other for the recovery of small debts; it is also appropriated for the use of an exchange for the town. In this town are not less than 30 benefit societies; there are also several public schools, and a theatre. South Shields, like North Shields, has of late years greatly increased in size and population; but it wants many of the advantages possessed by the other; and though it depends, like it, chiefly on the coal trade and shipping, it carries on a greater proportion of manufactures. It was formerly famous for its salt works, which were carried on by several of the most opulent families of the neighbourhood; and about 60 years ago, nearly 200 large pans were employed in this manufacture. This business has, however, greatly declined, being at present confined to four or five pans; but the loss is amply repaid by the increase of other trades. The ground formerly occupied by the pans has been converted into yards and docks for building and repairing ships, which, from the number of ships that rendezvous here, are

almost constantly employed. The dry docks are 11 in number: they are commodious, and large enough to contain 16 vessels. About 50 or 60 years ago, the number of ships belonging to this town is said to have been only four; they now amount to upwards of 500. The manufactures of the town are ship-building, glass-works, soap-works, sal-ammoniac works, several extensive breweries, and some large roperies. There are also several machines for taking ballast out of the ships; and one lately erected by Messrs. Newmarch and Company, which conveys it several hundred yards, by means of a tunnel. The life-boat owed its origin to a society of gentlemen belonging to this town, the utility of which is now known in almost all the maritime towns of the globe, and for which Mr. Greathead, the inventor, was rewarded with 1200*l.* voted to him by the House of Commons. On the point of land called the Saws, near South Shields, which forms the southern entrance into the Tyne, a Roman station is supposed to have been situated. Various Roman coins, broken inscriptions, and the remains of a hypocaust or sudatory, were dug up in 1796. On the low bank facing the sea is a guard-house and a battery, which formerly mounted four guns, but which have been removed within these five years. According to the census of 1811, South Shields contained 528 houses, and 9001 inhabitants. The houses have been increasing, and the inhabitants are now above 10,000. There are two market days, Wednesday and Saturday; also annual fairs, held 24th June and 1st September; but none of these seem to flourish; 21 miles north-north-east of Durham, and 278 north-north-east of London.

SHIELDS RIVER, a river of North America, which runs into the Missouri; 7 miles below the Great Falls.

SHIELDSBOROUGH, a township of the United States, in Hancock county, territory of the Mississippi, on the bay of St. Louis; 39 miles by land east-north-east of New Orleans, and 60 by water. It has a very pleasant and healthy situation, elevated from 20 to 40 feet above tide water, contains about 60 houses, and is a place of considerable resort from New Orleans during the sickly season. A college has been lately incorporated here. The bay is navigable to the town for vessels drawing seven feet.

SHIERE, or **SHIRE**, a parish of England, in Surrey; 6 miles east-by-south of Guildford. Population 918.

SHIFFNAL, or **SHEFFNAL**, a market town and parish of England, in the county of Salop. It is a great thoroughfare on the mail road from London to Holyhead. The church is an ancient building, and here is also a small charity school. Population 4061. Market on Friday; 9 miles north-east of Bridgenorth, and 136 north-west of London.

SHIFFORD, a hamlet of England, in Oxfordshire; 5½ miles east-by-south of Witney.

To **SHIFT**, *v. n.* [the Sax. *scýrcan*, to divide, to distribute. Our old lexicography also thus illustrates the word: "To *shiftyn*, or *departen asunder*, or *divide*." Prompt. Parv.—To change place.—Vegetables being fixed to the same place, and so not able to *shift* and seek out after proper matter for their increment, it was necessary that it should be brought to them. *Woodward*.—To change; to give place to other things.—If the ideas of our minds constantly change and *shift*, in a continual succession, it would be impossible for a man to think long of any one thing. *Locke*.—To change clothes, particularly the linen.—She begs you just would turn you while she *shifts*. *Young*.—To find some expedient; to act or live, though with difficulty.—Since we desire no recompence nor thanks, we ought to be dismissed; and have leave to *shift* for ourselves. *Swift*.—To practise indirect methods.—All those schoolmen, though they were exceeding witty, yet better teach all their followers to *shift* than to resolve by their distinctions. *Ralegh*.

To **SHIFT**, *v. a.* To change; to alter.

Come, assist me, muse obedient;
Let us try some new expedient;
Shift the scene for half an hour,
Time and place are in thy power.

Swift.
To

To transfer from place to place.
Pare saffron between the two St. Mary's days,
Or set or go *shift* it that knowest the ways.

To put by some expedient out of the way.

I *shifted* him away,
And laid good 'scuses on your ecstasy. *Shakspeare.*

To change in position.—Neither use they sails, nor place
their oars in order upon the sides; but carrying the oar loose
shift it hither and thither at pleasure. *Raleigh.*

We strive in vain against the seas and wind;
Now *shift* your sails. *Dryden.*

To change, as clothes.—As it were to ride day and night,
and not to have patience to *shift* me. *Shakspeare.*

To *SHIFT* off. To defer; to put away by some expedient.—Struggle and contrive as you will, and lay your
taxes as you please, the traders will *shift* it off from their own
gain. *Locke.*

SHIFT, *s.* Change.—My going to Oxford was not
merely for *shift* of air. *Wotton.*—They had three or four
shifts of very good scenes. *Drummond.*—Expedient found
or used with difficulty; difficult means.

Not any boast of skill, but extreme *shift*
How to regain my sever'd company,
Compell'd me to awake the courteous echo,
To give me answer from her mossy couch. *Milton.*

Indirect expedient; mean refuge; last resource.—To say,
where the notions cannot fitly be reconciled, that there
wanteth a term, is but a *shift* of ignorance. *Bacon.*—
Fraud; artifice; stratagem.

Know ye not Ulysses' *shifts*?
Their swords less danger carry than their gifts. *Denham.*

Evasion; elusory practice.—As long as wit, by whetting
itself, is able to find out any *shift*, be it never so slight,
whereby to escape out of the hands of present contradiction,
they are never at a stand. *Hooker.*—A woman's under
linen.

SHIFT, a term in Music, used for conducting the hand on
the finger-board of violins, and other instruments with a neck.

SHIFT, in Ship Building, a term applied to disposing the
butts of the planks, &c., so that they may over-launch each
other, without reducing the length, and thus gain the most
strength

SHIFTED, in Sea Language, denotes the state of a ship's
ballast or cargo, when it is shaken from one side to
the other, when under a great pressure of sail.

SHIFTER, *s.* One who changes, or alters the position of
a thing; as, a scene *shifter*. One who plays tricks; a man
of artifice.

'Twas such a *shifter*, that, if truth were known,
Death was half glad when he had got him down. *Milton.*

SHIFTER, a person appointed to assist the ship's cook,
particularly in washing, steeping and shifting the salt provisions.

SHIFTING, *s.* Act of changing; act of putting by
some expedient out of the way.—The wisdom of all these
later times, in princes' affairs, is rather fine deliveries, and
shiftings of dangers and mischiefs when they are near, than
solid and grounded courses to keep them aloof. *Bacon.*
—Evasion; fraud.

Nought more than subtile *shiftings* did me please,
With bloodshed, craftie, undermining men. *Mir. for Mag.*

SHIFTING, in Ship Building, the act of setting off the
length of the planks, &c. of a ship, so that the butts may
over-launch each other, as to produce a good shift.

SHIFTINGLY, *adv.* Cunningly; deceitfully.

SHIFTFLESS, *adj.* Wanting expedients; wanting
means to act or live. *Unused.*—He [Aubrey] was a *shift-
less* person, roving and maggotty-headed, and sometimes
little better than crased. *Life of A. Wood.*

SHIHOB, a savage tribe of Abyssinia, inhabiting the
coast of the Red sea, near Masuah.

SHITES, in the Mahometan Sects, were the opponents

of the *Kharejites*. This name properly signifies sectaries
or adherents in general, but is peculiarly used to denote those
of Ali Ebn Abi Tâleb; who maintain him to be lawful
caliph and iman, and that the supreme authority, both in
spirituals and temporals, of right belongs to his descendants,
notwithstanding that they may be deprived of it by the
injustice of others, or their own fear. They also teach, that
the office of iman is not a common thing, depending on the
will of the vulgar, so that they may set up whom they
please; but a fundamental affair of religion, and an article
which the prophet could not have neglected, or left to the
fancy of the common people; nay some, thence called Ima-
mians, go so far as to assert, that religion consists solely in
the knowledge of the true iman. The principal sects of the
Shiites are five, which are subdivided into an almost incre-
dible number; so that some understand Mohammed's pro-
phesy of the seventy odd sects, of the Shiites only.

SHIJASHKOTAN, one of the Kurile islands, at the
eastern extremity of Asiatic Russia, in the ocean south of
Kamtschatka. Lat. 49. 15. N. long. 154. 39. E.

SHILACON, a village of Egypt, on the eastern bank of
the Nile; 8 miles north of Cairo.

SHILBOTTLE, a parish of England, in Northumberland;
3 miles south-by-east of Alnwick. Population 1104.

SHILDON, a hamlet of England, in Durham; 3½ miles
south-east of Bishop's Auckland.

To *SHILL*, *v. a.* To separate: to shell. *Used in the
north.* To put under cover: more properly *sheal*: as,
shilling sheep. *Used also in the north.*

SHILLAY, a small island near the west coast of the island
of Lewis; 5 miles west-south-west of Toe Head. Lat. 54.
48. N. long. 7. 14. W.

SHILLELAA, a village of Algiers, in Africa, the ancient
Turaphilum; 10 miles south-west of Burg Hamza.

SHILLER-STONE, or *SHILLER-SPAR*, in Mineralogy,
the diallage metalloide of Haüy, a mineral nearly allied to
serpentine. See *SERPENTINE*.

SHILLING, *s.* [jcylling, Sax. and Erse, *shelling*,
Dutch.] A coin of various value in different times. It is
now twelve pence.

The Saxon laws reckoned the pound in the round num-
ber at fifty shillings, but they really coined out of it only
forty-eight; the value of the shilling was five-pence; but it
was reduced to four-pence above a century before the
Conquest; for several of the Saxon laws made in Athelstan's
reign, oblige us to take this estimate. Thus it continued
to the Norman times, as one of the Conqueror's laws suf-
ficiently ascertains; and it seems to have been the com-
mon coin by which the English payments were adjusted.
After the Conquest, the French solidus of twelve-pence,
which was in use among the Normans, was called by the
English name of shilling; and the Saxon shilling of four-
pence took a Norman name, and was called the *groat*, or
great coin, because it was the largest English coin then known
in England.

The Dutch, Flemish and Germans, have likewise their
shilling, called *schelin*, *schilling*, *scalin*, &c.; but these,
not being of the same weight or fineness with the English
shilling, are not current at the same value.

SHILL-I-SHALL-I, a corrupt reduplication of *shall I*?
The question of a man hesitating. To stand *shill-I-shall-I*,
is to continue hesitating and procrastinating.—I am some-
what dainty in making a resolution, because when I make
it, I keep it; I don't stand *shill-I-shall-I* then; if I say 't,
I'll do 't. *Congreve.*

SHILLINGDON, or *SHITLINGTON*, a parish of England,
in Bedfordshire; 8½ miles from Luton. Population 870.

SHILLINGFORD, a parish of England, in Berkshire;
2½ miles south-east of Great Faringdon.

SHILLINGFORD, St. GEORGE, a parish of England,
in Devonshire, on the river Ken; 3 miles south-south-west
of Exeter.

SHILLINGFORD, a hamlet of England, in Oxfordshire,
near the river Thames; 2½ miles from Wallingford.

SHILLINGSTONE OKEFORD, a parish of England,
in

in Dorsetshire; $6\frac{1}{2}$ miles north-west of Blandford Forum. Population 385.

SHILLUK, a country on the higher part of the Bahr el Abiad, to the south of Sennaar, in Africa. The inhabitants are all black, and pagans; they have no other covering than bands of long grass, which they pass round the waist and between the thighs. They have the command of the river, and exact a toll from all vessels that pass up and down. The term Shilluk is not Arabic, and its meaning is unknown. They are represented as shewing hospitality to those who come peaceably among them, and as never betraying those to whom they have once promised protection. In the beginning of the sixteenth century the Shilluks conquered Sennaar, over which country their descendants now reign. See SENNAAR.

SHILOH, in Scripture Criticism, a term that occurs in Jacob's celebrated prophecy concerning the Messiah; concerning the etymology and application of which, biblical commentators have differed in opinion, some regarding the word as meaning "the deliverer," and suppose it to have been applied to Jesus Christ. The Jews expect the Shiloh is still to come.

SHILTON, a parish of England, in Berkshire; $2\frac{1}{2}$ miles south-south-east of Burford.

SHILTON, a parish of England, in Warwickshire; 6 miles north-east of Coventry.

SHILVINGTON, a hamlet of England, in Northumberland; 6 miles south-west of Morpeth.

SHILY, *adv.* Not familiarly; not frankly.

SHIM (*provincial*), an implement for breaking sods, loosening the earth, and clearing away weeds.

SHIMENE, PORT, on the north side of the island of St. John, in the gulf of St. Lawrence. Its entrance, west of St. Peter's harbour, is very narrow; but the basin within is very spacious.

To **SHIMMER**, *v. n.* [*rcympian*, Sax.; *schimmern*, Germ. to shine.] To gleam.—"A litel *shemering* of light." *Chaucer*.—In the north, it is *skimmer*.

SHIMPLING, a parish of England, in Norfolk; $3\frac{1}{2}$ miles north-east of Diss.

SHIMPLINGTHORNE, a parish of England, in Suffolk; 7 miles from Sudbury. Population 393.

SHIN, *s.* [*rcina*, Sax.; *schien*, Germ.] The forepart of the leg.—I bruised my *shin* the other day with playing at sword and dagger. *Shakspeare*.—The *shin* bone, from the knee to the instep, is made by shadowing one half of the leg with a single shadow. *Peacham*.

SHIN, LOCH, a lake of Scotland, in the county of Sutherland, about 20 miles long from north-west to south-east, and from 1 to 2 broad; the banks of which, especially on the south side, are covered with natural wood. It discharges itself, at its eastern extremity, by the river Shin, which, after a course of 6 or 8 miles, during which it forms several cascades, falls into the head of the frith of Dornoch, at a small village called Invershin.

SHINAAS, a small sea-port on the Persian gulf, situated between the town of Sinja and Cape Bastana. Refreshments may be obtained here.

SHINCLIFF, a hamlet of England, county of Durham; 2 miles south-east of Durham.

To **SHINE**, *v. n.* pret. *I shone*, *I have shone*; sometimes *I shined*, *I have shined*. [*Goth. skeinan*; *Icel. skyma*, splendere, *skin*, fulgur; Sax. *rcinan*.] To have bright resplendence; to glitter; to glisten; to gleam.

To-day the French,
All clinquant, all in gold, like heathen gods,
Shone down the English; and to-morrow they
Made Britain India; every man that stood,
Shew'd like a mine. *Shakspeare*.

Fair daughter, blow away these mists and clouds,
And let thy eyes *shine* forth in their full lustre. *Denham*.

To be without clouds.

The moon *shines* bright: in such a night as this,
When the sweet wind did gently kiss the trees,
And they did make no noise. *Shakspeare*.

To be glossy.—Fish with their fins and *shining* scales. *Milton*.—The colour and *shining* of bodies is nothing but the different arrangement and refraction of their minute parts. *Locke*.—To be gay; to be splendid.

So proud she *shined* in her princely state,
Looking to heaven; for earth she did disdain. *Spenser*.

To be beautiful.

Of all the enamell'd race, whose silvery wing
Waves to the tepid zephyrs of the Spring,
Or swims along the fluid atmosphere,
Once brightest *shin'd* this child of heat and air. *Pope*.

To be eminent or conspicuous.

Her face was veil'd; yet to my fancied sight
Love, sweetness, goodness in her person *shin'd*
So clear, as in no face with more delight. *Milton*.

To be propitious. To give light real or figurative.

Celestial light
Shine inward, and the mind through all her powers
Irradiate. *Milton*.

To **SHINE**, *v. a.* To cause to shine.—So *schyme* your light before men, that they see your gode workis. *Wicliffe*.

SHINE, *s.* [*rcine*, Sax. bright.] Fair weather.—Be it fair or foul, or rain or *shine*. *Dryden*.—He will accustom himself to heat and cold, and *shine* and rain; all which if a man's body will not endure, it will serve him to very little purpose. *Locke*. Brightness; splendour; lustre.

Say, in what mortal soil thou deign'st to grow?
Fair opening to some court's propitious *shine*,
Or deep with diamonds in the flaming mine? *Pope*.

SHINESS, *s.* Bashfulness; reserve; (in horses) restiveness.—They were famous for their justice in commerce, but extreme *shiness* to strangers: they exposed their goods with the price marked upon them, and then retired. *Arbutnot*.—An incurable *shiness* is the vice of Irish horses; and is hardly ever seen in Flanders, because the winter forces the breeders there to house and handle their colts. *Temple*.

SHINFIELD, a parish of England, in Berks and Wiltshire; $3\frac{1}{2}$ miles south-by-east of Reading. Population 948.

SHINGARIN, a salt mine situated near the southern extremity of the great desert of Sahara, in Central Africa; about 400 miles west-north west of Tombuctoo.

SHINGEIAT, a town of Bergoo, in Central Africa; 90 miles west of Wara.

SHINGEY, a parish of England, in Cambridgeshire; $6\frac{1}{2}$ miles north-west of Royston.

SHINGHAM, a parish of England, in Norfolk; 5 miles south-west of Swaffham.

SHINGLE, *s.* [*schindel*, Germ.] A thin board to cover houses; a sort of tiling.—The best to cleave, is the most useful for pales, laths, *shingles*, and wainscot. *Mortimer*.—I reached St. Asaph, a bishop's see, where there is a very poor cathedral church, covered with *shingles* or tiles. *Ray*.

To **SHINGLE**, *v. a.* To cover with tiles or shingles.—*Unused*.—They *shingle* their houses with it. *Evelyn*.

SHINGLE, is a term sometimes applied to the thinnings of fir and other timber trees, in the northern districts, and which are of much use for various purposes in farming, as the making of fences, &c.—A substance found and collected on the sea-beach, or shore, which is used for several purposes, as ballasting of ships, filling hollow drains, protecting the foundations of embankments, and other similar uses.

SHINGLES, *s.* [*cingulum*, Lat.] A kind of tetter or herpes that spreads itself round the loins.—Such are used successfully in erysipelas and *shingles*, by a slender diet of decoctions

Decoctions of farinaceous vegetables, and copious drinking of cooling liquors. *Arbutnot.*

SHINGLES, a ridge of rocks on the coast of England, lying off the west corner of the Isle of Wight.

SHINGLING, in the Iron-Works, in many parts of England, is the operation of hammering the sow, or cast-iron, into blooms. The tongs, used for holding the iron in this operation, are called shingling-tongs, and the iron to be thus wrought is called a loop.

SHININGNESS, *s.* Brightness; splendour. *Scott.*

SHINNEL, a romantic and picturesque stream of Scotland, in the parish of Penpont, Dumfries-shire, which rises in the Black hill, on the confines of Kirkcudbrightshire, and, after a south-east course of some miles, joins its waters to the Scarr at Capenock. At the point of their union there is a remarkable ridge of precipitous rocks, over which the Shinnel rushes with the greatest impetuosity.

SHINTON, a parish of England, in Salop; $2\frac{1}{2}$ miles north-by-west of Much Wenlock.

SHINY, *adj.* Bright; splendid; luminous.

When Aldeboran was mounted high,
Above the *shiny* Cassiopei's chair,
One knocked at the door, and in would fare.

Spenser.

The night
Is *shiny*, and they say we shall embattle
By the second hour o' the morn.

Shakespeare.

SHIOBERT EL YEMENI, a village of Lower Egypt, on the right bank of the Nile; 8 miles south-east of Mehallet Kibeer.

SHIP, *s.* [*scip*, Sax.; *schiff*, Germ.] A large vessel moved on the water by sails. Some, indeed, have lately ventured to use the term *steam-ship*; but this idea of the word does not seem likely to become general.

— All my followers to the eager foe
Turn back and fly like *ships* before the wind. *Shakespeare.*

Ships are of various kinds; they differ both as to form and dimensions. The chief division arises, however, out of the use to which they are applied; namely, into ships of war and merchant vessels. Our men-of-war were formerly of all sorts of shapes and sizes, scarcely any two ships being perfectly similar in all their parts; so that parts of the one never would be available for the wants of the other. Laterly, the importance of uniformity has been perceived, and it has been resolved to make nearly all ships, of a particular rate, on the same model. We have, at present, six kinds of ships of war:—

The 1st rate includes all three-deckers, in as much as all sea going ships of that description carry 100 guns and upwards: furnished with 900, 850 or 800 men.—The 2d rate includes all ships of 80 guns and upwards, on two decks: 700 or 650 men.—The 3d rate includes all ships of 70 guns and upwards, and less than 80 guns: 650 or 600 men.—The 4th rate includes all ships of 50 guns and upwards, but less than 70 guns: 450 or 350 men.—The 5th rate includes all ships from 36 to 50 guns: 300 or 280 men.—The 6th rate includes all ships from 24 to 36 guns: 175, 145 or 125 men.—Of sloops, the complements established according to their size, to consist of 135, 125, 95 or 75 men.—Brigs, not sloops, cutters, schooners, and bombs, with 60 or 50 men.

Besides the different kinds of ships abovementioned, which are denominated from the purpose for which they are employed, vessels have also, in general, been named according to the different manner of rigging them. It would be an endless, and at the same time an unnecessary task, to enumerate all the different kinds of vessels with respect to their rigging; and, therefore, a few only are here taken notice of. Fig. 1. Pl. I. is a *ship* which would be converted into a *bark* by stripping the mizen-mast of its yards and the sails belonging to them. If each mast, its corresponding top-mast and top-gallant-mast, instead of being composed of separate pieces of wood, were all of one continued piece, then this vessel,

with very little alteration, would be a *polacre*. Fig. 2. represents a *snow*; fig. 3. a *bilander*; fig. 4. a *brig*; fig. 5. a *ketch*; fig. 6. a *schooner*; fig. 7. a *sloop*; fig. 8. a *zebec*; fig. 9. a *galliot*. Pl. II. fig. 1. a *dogger*; fig. 2. a *galley* under sail; fig. 3. ditto, rowing.

OF THE PARTS OF A SHIP.

We shall divide our description of a ship into two heads:—First, That concerning the parts for the propulsion of the vessel; namely, the masts, sails, rigging, &c. Secondly, the floating and carrying part or body of the vessel. In a ship with three masts, the mast nearest the head of the vessel is called the *fore-mast*, the hindmost is called the *mizen-mast*, the middle one of the three the *main-mast*. By reference to the annexed plate, it will be seen, that each of these is again divided into three parts, of which the lowest is called the *lower-mast*, the middle the *top-mast*, and the highest the *top-gallant-mast*; a fourth part, called a *royal-mast*, has been superadded to these; but it is now disused. Some masts, called *pole-masts*, are made of one entire piece, but still have all of these divisions.

The three parts of a mast are secured to each other by *caps*, *a, a, a* (fig. 1. Pl. III), and by *blocks*, *b, b, b*; to which are attached the *trussle trees*.

The long poles that run horizontally across the masts, are called *yards*; and these take their name from the mast to which they are attached, as, *lower fore-yard*, *main top-sail-yard*, *royal yard*, &c. When a yard is suspended against its mast, the halves into which it is divided by the intersection of that mast, is called the *yard-arm*.

The large beam protruding from the fore-part of the ship, is denominated the *bowsprit*; it has attached to it the *jib-boom*. And both these parts have *yards*.

Of the Sails.—Twelve square sails derive their names from these masts. Thus: the principal sail extended upon the main-mast, is called the *main-sail*, or *main-course*, 1, (fig. 4. Pl. II.) That upon the main-topmast is termed the *main-topsail*, 2: that upon the main-topgallant mast is named the *main-topgallant sail*, 3: and the main-topgallant *royal*, 4, is so called from its being spread athwart the head of the main-topgallant mast. The *fore-sail*, or *fore-course*, 5, is so denominated from the fore-mast; the *fore-topsail*, 6, from the fore-top-mast; the *fore-topgallant sail*, 7, from the fore-topgallant mast; and the fore-topgallant *royal*, 8, from its being spread on the upper part of the fore-topgallant mast. The *mizen-course*, 9, from the mizen-mast; the *mizen-topsail*, 10, from the mizen-topmast; the *mizen-topgallant sail*, 11, from the mizen-topgallant mast; and the mizen-topgallant *royal*, 12, from its being spread on the upper part of the mizen-topgallant mast. The *main-staysail*, 1 (fig. 5.), from the main-staysail-stay; the *main-topmast-staysail*, 2, from the main-topmast-preventer-stay; the *middle staysail*, 3, from the middle staysail-stay; and the *main-topgallant-staysail*, 4, from the main-topgallant-staysail-stay. These *staysails* are between the main and fore-masts. The staysails before the fore-mast, are, the *fore-staysail*, 5, the *fore-topmast-staysail*, 6, and *jib*, 7. East India ships have two jibs. The staysails between the main and mizen-masts, are, the *mizen-staysail*, 8, the *mizen-topmast-staysail*, 9, and sometimes a *mizen-topgallant-staysail*, 10, above the latter. The sails under the bowsprit, are, the *sprit-sail*, or *course*, 13, and that under the jib-boom, the *sprit-topsail*, 14. The *driver*, or *spanker-sail*, 11, is hoisted abaft the mizen-mast. The *studding-sails*, being extended beyond the different yards of the main and fore-masts, are likewise named according to their stations. Those to the fore-mast, are, the *fore-lower-studding-sail*, 15, *fore-topmast-studding-sail*, 16, *fore-top-gallant-studding-sail*, 17. Those to the main-mast, are, the *lower main-studding-sail*, 18, *main-topmast-studding-sail*, 19, and *main-top-gallant-studding-sail*, 20. The seare thesails generally used to vessels of three masts.

The sails of a vessel of two masts, are, in a *snow*, similar to those on the fore and main-masts of a ship, except the sail called

Vessels of various kinds.

J. Tassie sc.

1

2

J. Pass sc.

called a *trysail*, used instead of a mizen-course, which it resembles; it is extended towards the stern, and is fastened by hoops round a small mast, called a *trysail-mast*, fixed near the aft-side of the main-mast.

The sails of a brig with two masts, are also similar to those on the main and fore-masts of a ship, excepting the main-sail, which is set in the plane of her keel, and is extended by a *gaff* at the head, and a *boom* on the foot; the fore-leech being fastened by hoops round the main-mast.

Vessels with one mast, as sloops, cutters, smacks, hoys, &c., have a main-sail abaft the mast, as the brigs; before the mast they have a *square-sail*, or *cross-jack*, and above the cross-jack, a small sail called a *save-all-topsail*; above that a topsail, which, on account of the hollow at the foot to clear the stay, is called a *swallow-tailed-topsail*, and above it is the topgallant-sail. Some large sloops have a royal above the topgallant-sail, and studding-sails set beyond the leeches of the square-sail. Before the mast is a fore-sail, a jib, and a flying-jib. Abaft the after-leech of the main-sail, in calm weather, is hoisted a *ring-tail-sail*; over the head of the main-sail, a *gaff-topsail*; and over the stern, under the boom, a *water-sail*.

There is an additional part added occasionally to the foot of some sails, called a *bonnet*: it is laced to the foot of the fore-sail, trysail, and storm main-sails, of some vessels with one mast, in moderate winds. It is made to correspond with the foot of the sail it is intended for, and has lachings in the upper part, by which it fastens through holes, made for that purpose along the foot of the above sails.

Of *boats*, some have a main-sail, fore-sail, and jib, as sloops; others have *lug-sails*. Some have sprit-sails, others *latteen* or *settee-sails*, according to their various uses, the fancy of their owners, or the country to which they belong.

The rigging consists of the tackle or ropes by which the sails are hoisted and furled, the masts steadied, means of ascension furnished to the sailors, and the ship fixed to or loosened from her anchors. The *shrouds* are a series of powerful ropes attached on the one hand to the sides of the ship and on the other to the mast. They steady the mast laterally and being somewhat behind the mast prevent any strain forwards. The hindermost parts of the shrouds are called *swifters*. The shrouds are connected together and the horizontal ropes which connect them are called *ratlines*. See 20, 23, 24, 25, (fig. 1. Pl. III.) The *futtock* shrouds 26, 27, 28. And the upper shrouds 41, 42, 43. *Stays* are the ropes which prevent strains of the masts backwards, and serve for the attachment of stay-sails. They are fixed inferiorly to parts anterior to their respective masts: at fig. 1. Pl. III. is seen the *fore-stay* (7), the *fore-preventer* stay (8), the *main* stay (9), the *main-preventer* stay (10), the *mizen-stay* (11). Then we have the *fore-topmast* stay 52 and *fore-topmast preventer* stay (53), *main-topmast* stay (54), and the *main-topmast preventer* (55), the *mizen* topmast stay 56. The *fore-top* gallant stay 64, the *main-topgallant* stay 65, the *mizen-topgallant* stay 66. The bowsprit has attached to it *Horses* 15, *Gammoning* 16, 17. *Bobstays* 18, 19, *shrouds* 20; the uses of the bobstays and shrouds are to draw down and secure laterally the bowsprit, as well as to counteract the raising tendency of the foremast stay.

The *yards* are hoisted to their masts by ropes called *jeers*, the fall of which passes to the capstan; so far the main parts of the rigging and sails may fairly be understood from the engraving, but the tackle for hoisting, spreading, furling and altering the direction of the sails is necessarily so complex that we fear we shall not be able to give our readers very clear notions of the subject. The inspection of a ship or model, however, immediately render the uses of all these lines sufficiently clear.

Fig. 2. of Pl. III. contains the rigging in question; *a, a, a, a, a*, point out the *horses*; these are for the sailors to stand upon when furling or loosing the sails. The short lines that attach these ropes to the yards are called *stirrups*—short horses at the end of the yards, are called *Flemish horses*; *b, b, b, b, b*, are *lifts* to raise or depress the yards; *c, c, c, c, c*, are *traces*; they serve to alter the direction of

the yards; *d, d, d, d*, are *yard tackle pendants*; *e, e, e, e*, *reef tackle pendants*; *f, f*, *guy pendants*; *g, g*, *tracing lines* to draw up the yard tackles out of the way; *h, h, h*, *jeers*, to support the yards; *i*, the *heel or top rope*; *k*, the *trouller*; *l, l*, *quarter-blocks*; *m, m*, *tye-blocks*. The description of the interior of the ship belongs properly to SHIP-BUILDING, which see.

SHIP: [ʃɪp; ʃɪp; Sax.; *schap*, Dutch.] A termination noting quality or adjunct, as *lordship*: or office, as *stewardship*.

To SHIP, *v. a.* [Sax. *scipian*.] To put into a ship.

My father at the road.

Expects my coming, there to see me *shipp'd*. *Shakspeare*.

A breeze from shore began to blow,
The sailors *ship* their oars, and cease to row;
Then hoist their yards a-trip, and all their sails
Let fall. *Dryden*.

To transport in a ship.

The sun no sooner shall the mountains touch,
But we will *ship* him hence. *Shakspeare*.

Andronicus, would thou wert *shipt* to hell,
Rather than rob me of the people's hearts. *Titus Andronicus*.

It is sometimes enforced by *off*.

A single leaf can waft an army o'er,
Or *ship off* senates to some distant shore. *Pope*.

In naval language, to receive into the ship: as to *ship* a heavy sea.

SHIP COVE, a cove in Queen Charlotte's sound, in the southern island of New Zealand. "This harbour," says Captain Cook, "is not inferior to any in the sound, either for convenience or safety. It lies on the west side of the sound, and is the southernmost of three coves that are situated within the island of Motuara, which bears east of it. Ship Cove may be entered either between Motuara and a long island called by the natives Hamote, or between Motuara and the western shore. In the last of these channels are two ledges of rocks, three fathoms under water, which may easily be known by the sea-weed that grows upon them." Lat. 41. 10. S. long. 175. 6. E.

SHIP ISLAND, a small island of North America, which lies between Horn and Cat island, on the coast of West Florida, and is about 10 miles south of the bay of Biloxi. It is 9 miles long and 2 broad, produces pine trees and grass, and has a tolerable well of water in it.

SHIPBOARD, *s.* See BOARD.—This word is seldom used but in adverbial phrases: a *shipboard*, on *shipboard*, in a ship.

Friend,

What do'st thou make a *shipboard*? To what end?

Dryden.

Ovid, writing from *on shipboard* to his friends, excused the faults of his poetry by his misfortunes. *Dryden*.—The plank of a ship.—They have made all thy *shipboards* of fir-trees, and brought cedars from Lebanon to make masts. *Ezek*.

SHIPBORNE, a parish of England, in Kent; 3½ miles north-north-east of Tunbridge.

SHIPBOY, *s.* Boy that serves in a ship.

Few or none know me: if they did,
This *shipboy's* semblance hath disguis'd me quite.

Shakspeare.

SHIPBROOK, a hamlet of England, in Chester; 2 miles south-east of Norwich.

SHIP-BUILDING, *s.* The art of building navigable vessels. The beginning of this noble art was, of course, a most perfect contrast with its present state. The first navigable vessels were neither strong nor durable; but consisted only of a few planks laid together, without beauty or ornament, and just so compacted as to keep out the water. In some places, they were only the hulks or stocks of trees hollowed, and then consisted only of one piece of timber. Nor was wood alone applied to this use; but any other buoyant materials

materials, as the Egyptian reed papyrus; or leather, of which the primitive ships were frequently composed; the bottom and sides being extended on a frame of thin battens or scantlings, of flexible wood, or begirt with wickers, such as we have frequently beheld amongst the American savages. In this manner they were often navigated upon the rivers of Ethiopia, Egypt, and Sabæan Arabia, even in latter times. But in the first of them, we find no mention of any thing but leather or hides sewed together. In a vessel of this kind, Dardanus secured his retreat to the country afterwards called *Troas*, when he was compelled by a terrible deluge to forsake his former habitation of Samothrace. According to Virgil, Charon's infernal boat was of the same composition.

But as the other arts extended their influence, naval architecture likewise began to emerge from the gloom of ignorance and barbarism; and as the ships of those ages were increased in bulk, and better proportioned for commerce, the appearance of the floating citadels of unusual form, full of living men, flying with seemingly expanded wings over the surface of the untravelled ocean, struck the ignorant people with terror and astonishment: and hence, as we are told by Aristophanes, arose the fable of Perseus flying to the Gorgons, who was actually carried thither in a ship! Hence, in all probability, the famous story of Triptolemus riding on a winged dragon is deduced, only because he sailed from Athens, in the time of great dearth, to a more plentiful country, to supply the necessities of his people. The fiction of the flying horse Pegasus may be joined with these, who, as several mythologists report, was nothing but a ship with sails, and thence said to be the offspring of Neptune, the sovereign of the sea; nor does there appear any other foundation for the stories of griffins, or of ships transformed into birds and fishes, which we so often meet with in the ancient poets. So acceptable to the first ages of the world were inventions of this nature, that whoever made any improvements in navigation or naval architecture, building new ships better fitted for strength or swiftness than those used before, or rendered the old more commodious by additional contrivances, or discovered countries unknown to former travellers, were thought worthy of the greatest honours, and often associated into the number of their deified heroes. Hence we have, in astronomy, the signs of Aries and Taurus, which were no other than two ships: the former transported Phryxus from Greece to Colchos, and the latter Europa from Phœnicia to Crete. Argo, Pegasus, and Perseus, were likewise new ships of a different sort from the former, which, being greatly admired by the barbarous and uninstructed people of those times, were translated amongst the stars, in commemoration of their inventors, and metamorphosed into constellations by the poets of their own and of succeeding ages.

The chief parts, of which ships anciently consisted, were three, viz. the belly, the prow, and the stern: these were again composed of other smaller parts, which shall be briefly described in their order. In the description, we chiefly follow Scheffer, who has so copiously treated this subject, and with such industry and learning collected whatever is necessary to illustrate it, that very little room is left for enlargement by those who incline to pursue this investigation.

1. In the belly, or middle part of the ship, there was *τροπις*, *carina*, or the "keel," which was composed of wood: it was placed at the bottom of the ship, being designed to cut and glide through the waves, and therefore was not broad, but narrow and sharp; whence it may be perceived that not all ships, but only the *μακραί*, which ships of war were called, whose bellies were straight, and of a small circumference, were provided with keels, the rest having usually flat bottoms. Around the outside of the keel were fixed pieces of wood, to prevent it from being damaged when the ship was first launched into the water, or afterwards struck on any rocks; these were called *χελουσματα*, in Latin *cunei*.

Next to the keel was *φαλκίς*, the "pump well, or well-room," within which was contained the *αντλιον*, or "pump," through which water was conveyed out of the ship.

After this, there was *δευτερω τροπις*, or the "second keel," somewhat resembling what is now called *kelson*; it was placed beneath the pump, and called *λεσβιον*, *χαλκηνε κλειτοποδιον*; by some it is falsely supposed to be the same with *φαλκίς*.

Above the pump was an hollow place, called by Herodotus *κοιλη της νηος*, by Pollux *κυτος* and *γαστρα*, because large and capacious, after the form of a belly; by the Latins *testudo*. This was formed by crooked ribs, with which it was surrounded, which were pieces of wood rising from the keel upwards, and called by Hesychius *νομεις*, and by others *εγκοιλια*, the belly of the ship being contained within them: in Latin, *costæ*; and in English, *timbers*. Upon these were placed certain planks, which Aristophanes calls *εντερωνας*, or *εντερωνιδα*.

The *πλευραι*, *latera*, or "sides" of the ship, encompassed all the former parts on both hands; these were composed of large rafters extended from prow to stern, and called *ζωστηρες*, and *ζαμιαματα*, because by them the whole fabric was begirt or surrounded.

In both these sides the rowers had their places, called *τοιχοι* and *εδωλια*, in Latin *fori* and *transtra*, placed above one another; the lowest was called *θαλαμος*, and those that laboured therein *θαλαμοι*; the middle, *ζολα*, and the men *ζυλιοι*; the uppermost *θρανιοι*, whence the rowers were termed *θρανιται*. In these apartments were spaces through which the rowers put their oars: these were sometimes one continued vacuity from one end to the other, called *τραφης*, but more usually distinct holes, each of which was designed for a single oar; these were styled *τρομαίαι*, *τρομηματα*, as also *οφθαλμοι*, because not unlike the eyes of living creatures. All of them were, by a more general name, termed *εγκωπα*, from containing the oars; but *εγκωπιον* seems to have been another thing, signifying the spaces between the banks of oars on each side, where the passengers appear to have been placed. On the top of all there was a passage or place to walk, called *ταράδος*, and *παραθρανος*, as joining to the *θρανιοι*, or uppermost bank of oars.

2. *Πρωρα*, the "prow, or fore-deck," whence it is sometimes called *μετωπον*, and commonly distinguished by other metaphorical titles taken from human faces. In some ships there is mention of two prows, as also two sterns; such as Danaus's ship adorned by Minerva when he fled from Egypt. It was usual to beautify the prow with gold and various sorts of paint and colours; in the primitive times, red was most in use; whence Homer's ships were generally dignified with the titles of *μιλτοπαρηι*, and *φινικοπαρηι*, or "red faced;" the blue, likewise, or sky-colour, was frequently made use of, as bearing a strict resemblance to the colour of the sea; whence we find ships called by Homer *κυανοπρωροι*, by Aristophanes *κυανεμβολοι*. Several other colours were also made use of; nor were they barely varnished over with them, but very often annealed by wax melted in the fire, so that neither the sun, winds, nor water, were able to deface them. The art of doing this was called from the wax *κηρογραφια*, from the fire *εγκαυστικη*, which is described by Vitruvius, and mentioned in Ovid.

————— *Picta coloribus ustis
Cœruleam matrem concava puppis habet.*

The painted ship with melted wax anneal'd
Had Tethys for its deity —————

In these colours, the various forms of gods, animals, plants, &c., were usually drawn, which were likewise often added as ornaments to other parts of the ships, as plainly appears from the ancient monuments presented to the world by Baysius.

The sides of the prow were termed *περα*, or "wings," and *παρια*, according to Scheffer, or rather *παλειαι*; for, since the prow is commonly compared to a human face, it will naturally follow that the sides should be called *cheeks*. These are now called *bows* by our mariners.

3. *Πορπη*, "the hind-deck or poop," sometimes called *οσρα*, the "tail," because the hindmost part of the ship; it was of a figure more inclining to round than the prow, the extremity of which was sharp, that it might cut the waters;

it was also built higher than the prow, and was the place where the pilot sat to steer; the outer-bending part of it was called *επισειον*, answering to our term *quarter*.

They had various ornaments of sculpture on the prow; as helmets, animals, triumphal wreaths, &c.—The stern was more particularly adorned with wings, shields, &c. Sometimes a little mast was erected whereon to hang ribbands of divers colours, which served instead of a flag to distinguish the ship; and a weather-cock, to signify the part from whence the wind blew.

On the extremity of the prow was placed a round piece of wood, called the *πύχης*, from its bending; and sometimes *οφθαλμος*, the "eye" of the ship, because fixed in the fore-deck; on this was inscribed the name of the ship, which was usually taken from the figure painted on the flag. Hence comes the frequent mention of ships called *Pegasi*, *Scyllæ*, *bulls*, *rams*, *tigers*, &c., which the poets took the liberty to represent as living creatures that transported their riders from one country to another.

The whole fabric being completed, it was fortified with pitch, and sometimes a mixture of rosin, to secure the wood from the waters; whence it comes that Homer's ships are everywhere mentioned with the epithet of *μελαναι*, or "black." Pitch was first used by the inhabitants of Phœacia, since called Corsica; sometimes wax was employed for the same purpose, whence Ovid,

Cærulea ceratos accipit unda rates.

The azure waves receive the waxed ships.

After all, the ship being bedecked with garlands and flowers, the mariners also adorned with crowns, she was launched into the sea with loud acclamations and other expressions of joy; and being purified by a priest with a lighted torch, an egg and brimstone, or after some other manner, was consecrated to the god whose image she bore.

The ships of war of the ancients, were distinguished from other kinds of vessels by various trarrets and accessions of building, some to defend their own soldiers, and others to annoy the enemy; and from one another, in latter ages, by several degrees or ranks of oars, the most usual number of which was four or five, which appear not to have been arranged, as some imagine, on the same level in different parts of the ship; nor yet, as others have supposed, directly above one another's heads; but their seats being placed one behind another, ascended gradually, like stairs. Ptolemy Philopater, urged by a vain-glorious desire of exceeding all the world besides in naval architecture, is said to have farther enlarged the number of banks to 40; and the ship being otherwise in equal proportion, this raised her to such an enormous bulk, that she appeared at a distance like a floating mountain or island; and, upon a nearer view, like a prodigious castle on the ocean. She was 280 cubits long, 38 broad, and 48 high (each cubit being 1 English foot $5\frac{1}{2}$ inches), and carried 400 rowers, 400 sailors, and 3000 soldiers. Another, which the same prince made to sail on the Nile, we are told, was half a stadium long. Yet these were nothing in comparison of Hiero's ship, built under the direction of Archimedes; on the structure of which, Moschion wrote a whole volume. There was wood enough employed in it to make 50 galleys; it had all the variety of apartments of a palace; such as banqueting-rooms, galleries, gardens, fish-ponds, stables, mills, baths, and a temple to Venus. The floors of the middle apartment were all inlaid, and represented in various colours the stories of Homer's *Iliad*. The ceilings, windows, and all other parts, were finished with wonderful art, and embellished with all kinds of ornaments. In the uppermost apartment, there was a spacious gymnasium, or place for exercise, and water was conveyed to the garden by pipes, some of hardened clay, and others of lead. The floors of the temple of Venus were inlaid with agates and other precious stones; the inside lined with cypress wood; the windows adorned with ivory paintings and small statues. There was likewise a library. This vessel was adorned on all sides with fine paintings. It had 20 benches of oars, and was encompassed with an iron

rampart, eight towers, with walls and bulwarks, furnished with machines of war, particularly one which threw a stone of 300 pounds, or a dart 12 cubits long, the space of half a mile; with many other particulars related by Athenæus. Caligula likewise built a vessel adorned with jewels in the poop, with sails of many colours, and furnished with large porticoes, bagnios, and banqueting-rooms, besides rows of vines, and fruit-trees of various kinds. But these, and all such monstrous fabrics, served only for show and ostentation, being rendered by their vast bulk unwieldy and unfit for service. Athenæus informs us, the common names they were known by, were *Cyclades*, or *Ætna*, i. e. "islands, or mountains," to which they seemed nearly equal in bigness; consisting, as some report, of as many materials as would have composed 50 triremes, or ships of three banks.

The vessels employed by the northern nations, appear to have been still more imperfect than those of the Romans; for a law was enacted in the reign of the emperor Honorius, 24th September, A. D. 418, inflicting capital punishment on any who should instruct the barbarians in the art of ship-building; a proof at once of the great estimation in which this science was then held, and of the ignorance of the barbarians with regard to it.

The object to be gained in ship-building is to unite the form most admirable for quickly passing through the water, with the structure best capable of resisting shocks and strains, and with the form best calculated to elude the effects of storms. In merchant-ships we must endeavour to render these objects compatible with dimensions fitted for carrying the greatest cargoes. In men-of-war, we have to consider what disposition is the best fitted for carrying, securing, and rendering rapidly available the artillery.

In order to smooth the way in this difficult science, thought so incomprehensible, our readers must be made familiar with the several *draughts and plans* whence the form and dimensions of the several timbers, and every particular part that enters into the construction, are to be obtained.

As a ship has length, breadth and depth, three different plans at least are necessary to represent the form of the several parts of her; these are the *sheer-plan*, the *body-plan*, and the *half-breadth plan*.

The *sheer-plan* (Pl. I.), or, as it is called in civil architecture, the *plan of elevation*, is a vertical section, passing through the vessel in its whole length, or fore and aft. Upon this plan the length and depth of the keel are represented, also the height and rake of the stem and stern-post; the situation and height of the midship and other frames; the water-lines; heights of the decks, gun-ports, and wales; the centres of the masts; the situation of the channels; length and depth of the head and rails, quarter-galleries, rudder.

The *body-plan*, or *plan of projection* (Pl. II. fig. 1.), is a transverse section of the ship at the midship-frame, or broadest place perpendicular to the keel. The several breadths, and the particular form of every frame-timber, are described on this plan. Now as the two sides of the ship are, or should be, exactly similar to each other, it is therefore unnecessary to represent both: hence the frames contained in the fore-body, between the midship-frame and the stem, are described on the right-hand side of the middle line, and the aftermost frames on the left of the said middle line.

The *half-breadth* or *floor-plan* (Pl. II. fig. 2.), or, as it is frequently called, the *horizontal-plan*, contains the several half-breadths at every frame-timber, at the different heights of the water-lines, main-breadth, top-side, ribband-lines, &c.

We proceed to the consideration of the 74-gun ship, which is preferred as the medium between the first-rate and the frigate, and is esteemed the most useful of all others.

Now, the first thing to be determined, is the length on the gun-deck; and here sufficient distance must be allowed for the ports, which are fifteen in number, three feet five inches wide, or fore and aft, each, so as to have a sufficient distance between each port for working the guns, which is about seven feet eight inches; likewise room forward, between the foremost-port and the stem, for the manger; and also

also abaft the after-port, to the transoms: these considered make the length of the gun-deck 180 feet.

Draw therefore, as in sheer-plan, (Pl. I.) a straight line, which represents the upper edge of the keel, and in naval ships the upper edge of the rabbet (East India ships and merchant-ships in general have the rabbet in the middle of the keel), leaving under this line sufficient space for the main and false keels, scale, and half-breadth plan. Upon this line square up a perpendicular towards the right hand, leaving a sufficient space to represent the head, and call it the foremost-perpendicular; then, at $22\frac{1}{2}$ inches abaft it, square up the after-perpendicular, which is 180 feet, by one-eighth of an inch to a foot, or the length on the gun-deck, from the aft-side of the rabbet of the stem to the fore-side of the rabbet at the stern-post. Below the upper edge of the keel, and parallel thereto, set down two feet for the main and false keel, and under it draw the scale of equal parts, of one-eighth of an inch to a foot, and from this scale set off all the following dimensions. Observe, draughts in general are drawn from a scale of one quarter of an inch to a foot, but this to one-sixteenth.

The length between the foremost and aftermost perpendiculars, in merchant-ships, is given from the aft-side of the stern-post, at the height of the wing-transom, to the fore-side of the stem, at the same height.

The stern, or fore-boundary of the ship, may now be drawn, and a segment of a circle for its lower part has long been considered as the best form for dividing the fluid; therefore, fix its centre so that the aft-side of the rabbet (which is in the middle of the stem, towards the upper part) may intersect the foremost perpendicular at the height of the gun-deck: thus, set aft from the foremost perpendicular, as in Pl. I. upon an horizontal line, 24 feet above the upper edge of the keel, 24 ft. 3 in.; and from thence, as the centre, draw an arc of a circle from the upper edge of the keel-line, and another arc 18 inches before it, from the same centre; then will the moulding, or fore and after-sides of the stem, be represented: sweep likewise the rabbet, as in Pl. I.; then set up 36 feet for the height of the head of the stem, and at that height set forward 15 inches from the foremost-perpendicular; from thence draw a faint curve, to intersect with the foremost segment, and the fore-part of the stem will be shewn: continue upwards another parallel thereto, and the aft-side or whole stem is completed, except the lower end or boxing, which will be determined hereafter.

The stern-post, or after-boundary under water, may be next drawn; thus, set up from the upper edge of the keel-line 26 ft. 10 in., which is the upper side of the wing-transom at the after-perpendicular, and upon that line set aft from the perpendicular 1 ft. 10 in., and upon the upper edge of the keel, six inches before the after-perpendicular; then a line drawn through these points will represent the aft-side of the stern-post; another line, drawn at fourteen inches before the aft-side of the stern-post, at the wing-transom, and at two feet one inch on the upper edge of the keel, will be the aft-side of the rabbet; and another line parallel four inches before it (or at the thickness of the bottom plank) is the fore-side of the rabbet, which will intersect the after-perpendicular of the gun-deck. Thus far the stern-post at present.

Having fixed on the length of the gun-deck, the next principal dimension to be considered is the main-breadth, and this, in ships of war in general, is about three-elevenths of the said length for their moulded breadth, and in merchant-ships about three-twelfths of their length; excepting cutters and smaller vessels. The moulded breadth given in Pl. I. of the 74-gun ship, is 48 feet.

Now as to the best breadth and its best situation, those who would diminish the breadth have alleged, and truly, that a narrow vessel meets with less resistance in passing through the water, and by increasing in length, the vessel will drive less to leeward. On the contrary, a ship's being broader at the line of floatation will admit of being narrower on the floor, particularly at the fore and after parts; and by being broader it can carry more sail, and more readily rise upon the waves than a narrow one.

It is agreed that judiciously placing the midship-bend is of the utmost consequence in the construction of ships' bodies; in the Plate it is placed at 69 feet abaft the foremost-perpendicular, consequently this is the broadest part of the ship, called the midships, or dead-flat, known by this character \oplus , and where all the heights in midships are set up.

The dead-flat in Plate I. is a single timber, and the perpendicular, marked \oplus , the middle of it: therefore, for the joints of the annexed frames set off before \oplus , two feet nine inches for the joint of (A), and two feet nine inches abaft \oplus for the joint of (1), square up perpendiculars from the upper edge of the keel; then from (A) continue setting off five feet six inches for the joints of frame B, C, D, to X, in the fore-body, and the same distance abaft (1) for the joints of frame (3), 2, 4, 6, to 36 in the after-body, as shewn in Plate I. Now \oplus , (A), (1), (2), and (3), are called flats, as they are the timbers which are placed in the flat part of the ship amidships, have no bevellings, and consequently do not partake of the rising.

The lower height of breadth is an imaginary line, not only to assist in the construction of the body, but a line confining the greatest breadths in the ship, all fore and aft, and should next be determined upon. Its height at \oplus is 21 feet 3 inches above the upper edge of the keel; and that the said height of breadth should be higher afore and abaft is only reasonable as a reserve, to be a support to the vessel when heeling by the pressure of the wind upon the sails; for when a ship is close-hauled by the wind, and lies much over, the weather-side would lose much of the breadth, whereas, on the contrary, the lee-side would then gain considerably, and meeting with a greater resistance, be enabled to carry the greater sail; therefore forward at the rabbet of the stem its height is 29 feet, and abaft at the counter-timber 29 feet 6 inches; and all the heights between should form a fair curve, like the ticked line in the sheer-draught, Plate I.

It may here be remarked, that flat-floored ships do not require their height of breadth to be raised so high forward and aft, for by their construction they are stiffer under sail, and carry their weight of cargo low down.

The body below the lower height of breadth may now be formed, as the frames or bends, when put together, and the joint placed to the fore-mentioned perpendiculars, the sides of every part will be formed so as to cut none of the principal timbers, and are so disposed as to weaken the ship as little as possible.

The half-breadth plan must be next drawn: draw a straight line as in Plate I., the whole length of the ship, and parallel to the upper edge of the keel, which line will represent the middle line of the ship, at any height passing fore and aft, or lengthwise; observing to keep the said middle line sufficiently below the scale, so as to admit of the main half-breadth line coming clear of it.

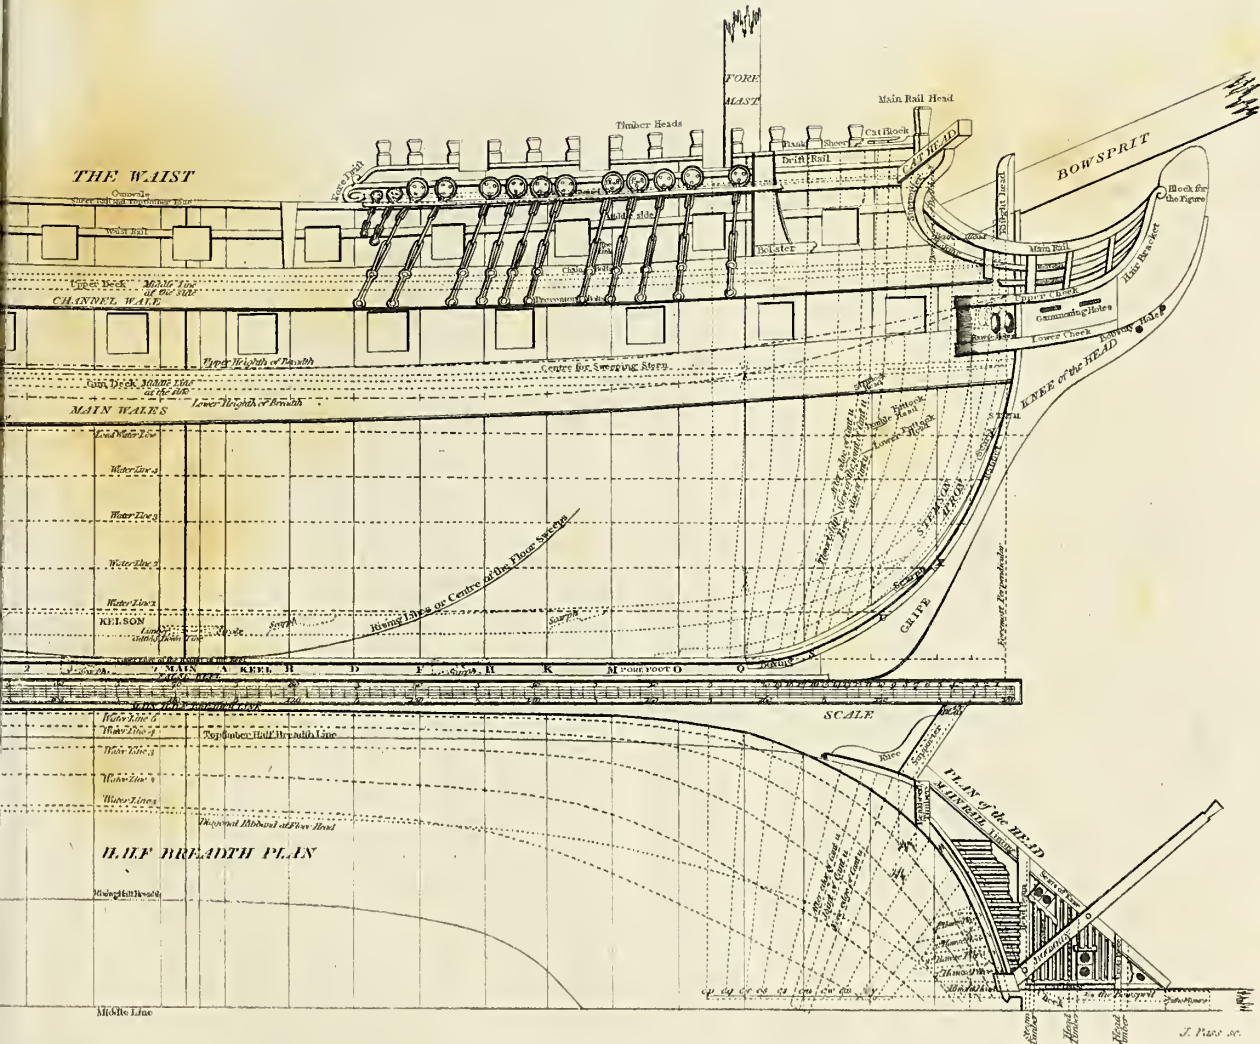

Then square down from the sheer-plan all the perpendiculars or joints of the frame-timbers, to the middle line of the half-breadth plan, and likewise the foremost and after-perpendicular. The main half-breadth line may now be drawn, by setting-off from the middle line in the plan the following half-breadths at each respective timber; thus, at \oplus , 24 feet; at F, 23 feet $11\frac{1}{2}$ inches; at H, 23 feet 11 inches; at K, 23 feet 10 inches; at M, 23 feet $5\frac{1}{2}$ inches; at O, 23 feet; at Q, 22 feet 2 inches; at S, 20 feet 4 inches; at U, 17 feet 6 inches; at X, 12 feet 6 inches; and to end this line at the fore part, let the height of the breadth-line in the sheer-plan, where it intersects the aft-side of the rabbet at the stem, be squared down to the middle line in the half-breadth plan, and likewise the fore part of the stem: upon the lines last squared down, set off the half-siding of the stem from the middle line and parallel thereto, which is ten inches; then, with compasses, take the thickness of the bottom plank, which is four inches, and describe the rabbet of the stem by the triangle shewn in the half-breadth plan; from thence a fair curve line drawn through the half-breadths set off, forms the half-breadth line to \oplus . In the same manner set off the half-breadths abaft \oplus , and draw in the remainder

SHIP B...

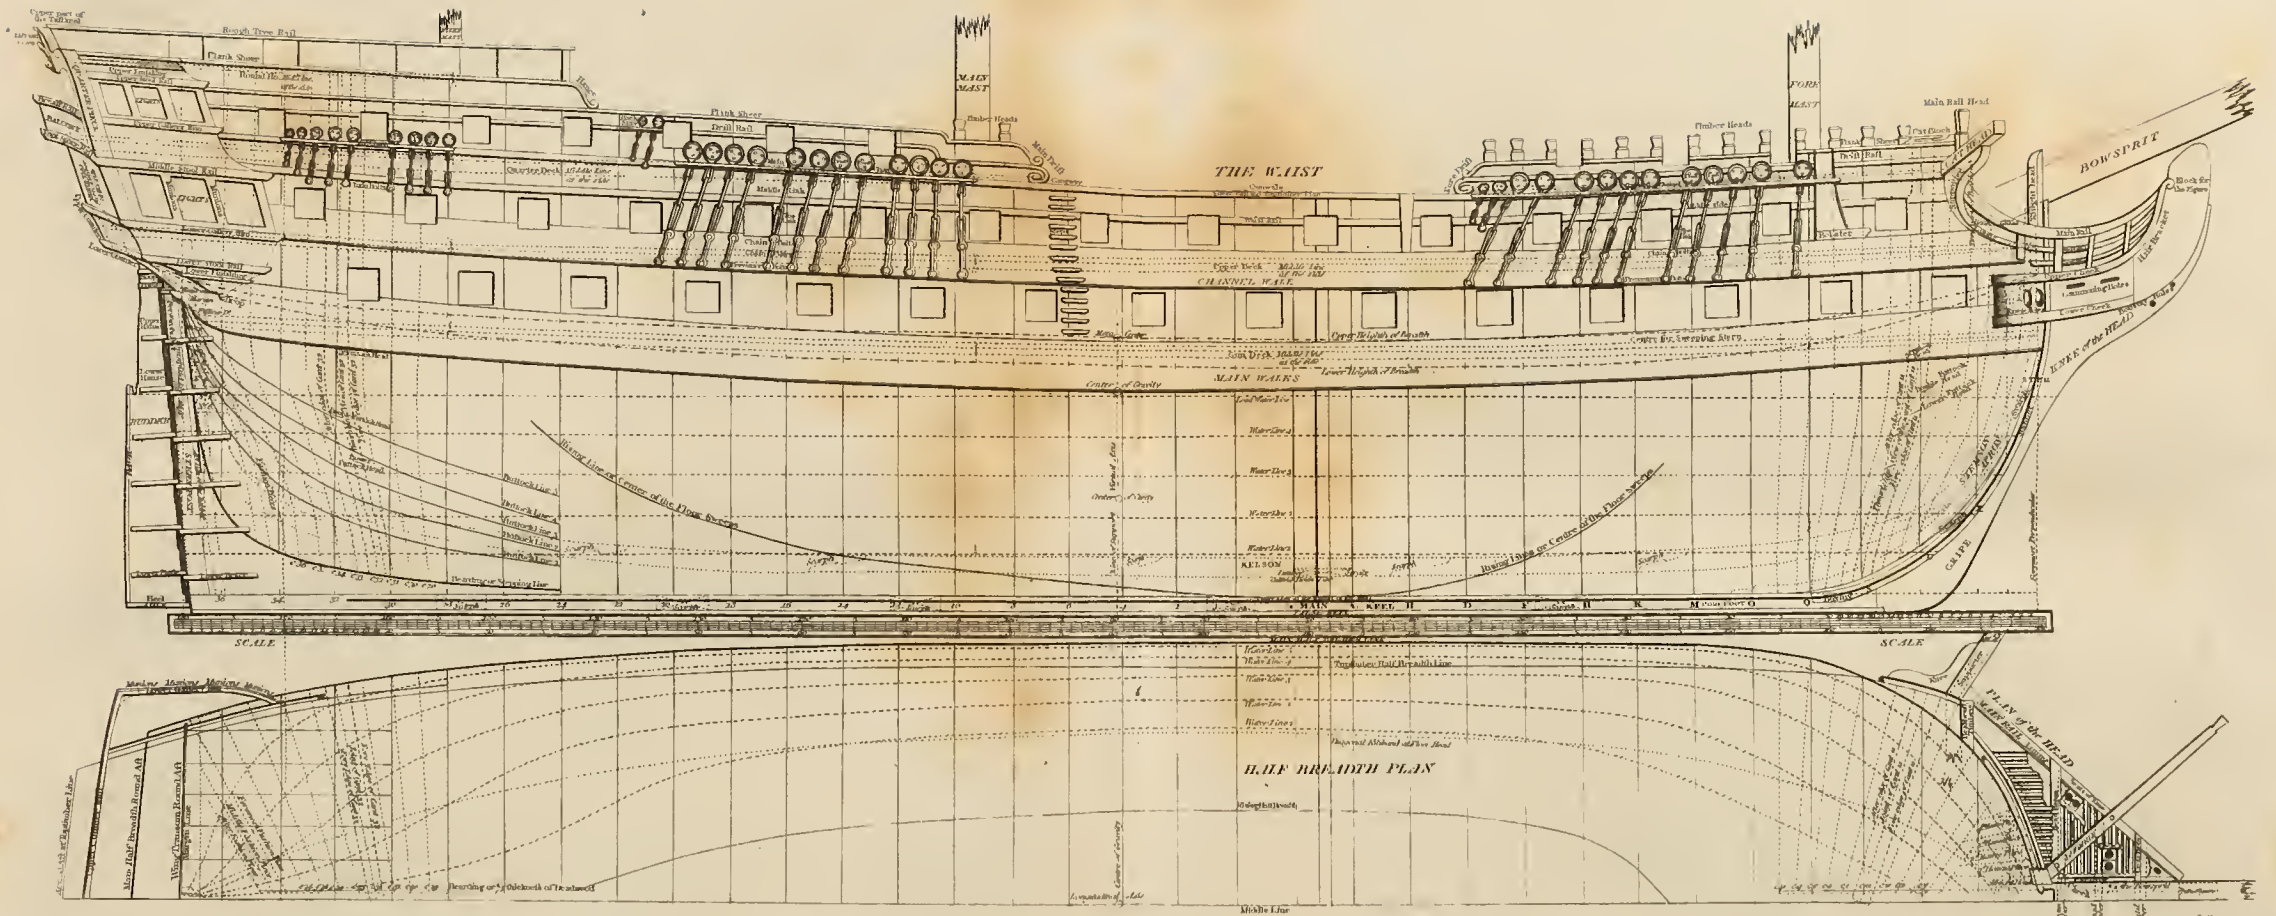

Figured for the Navy...

In London, 1877.

SHIP BUILDING.

PLATE I

of the half-breadth line, as the ending of it abaft will be described hereafter.

Observe, the various curves represented on the several plans used in ship-building, except where they are segments of circles, such as the fore part of the main half-breadth, &c., are drawn by small pliable battens confined thereto by weights, or by thin moulds made of pear-tree veneers, whose edges are made to geometrical curves of all kinds.

Now the main half-breadth line being drawn, we have a half section of the ship lengthwise at the broadest place, that is at the height, and in the direction of the lower height of breadth line in the sheer-plan.

Proceed now to draw the plan of projection, or body-plan, thus: draw an horizontal line equal to the proposed breadth of the ship—this is the base line. Draw thereto at each end a perpendicular at right angles—these are the side lines. Between these square up another perpendicular, which is the middle line to both bodies respectively; then the line prolonged from the upper edge of the keel is the base line of the body-plan. Draw in the horizontal lines, as may be seen in the body-plan, at the lower heights of breadth, by transferring their heights from the sheer-plan at the several frame-timbers: those before the dead-flat, set up in the body-plan to the right of the middle line, which are to represent the fore-body, and those heights abaft dead-flat, to the left hand for the after body. Then from the half-breadth plan take the main half breadth of each frame, and set it off from the middle line in the body-plan, upon its corresponding height of breadth-line; and from thence set off towards the middle line the length of their respective lower-breadth sweeps: thus, to describe the midship-timber, or dead-flat, extend the compasses to 18 feet 6 inches, the radii of lower-breadth sweeps at dead-flat, and draw part of a circle downwards, intersecting its main breadth at its horizontal height.

Then the centre heights of the floor-sweeps in the body-plan must be taken from the curve-line representing their heights in the sheer-plan, which at dead-flat will be found to intersect the upper edge of the keel; but in the body-plan, its height at dead-flat is 11 feet 6 inches, and there an horizontal line is drawn to the distance of the centre, or its half-breadth from the middle line, and all the heights of centres are respectively set upwards above this line, on perpendiculars squared upwards at the half-breadth of the centre of each floor-sweep of its corresponding frame or timber, as taken from the half-breadth plan; and the reason for not keeping the said curve-line or heights in the sheer-plan as in the body-plan, is because it would interfere with the curve-lines above. Now, by inspecting the Plate, it will be readily seen, that by raising the heights of those centres in the sheer-plan, consequently in the body-plan, and by narrowing their half-breadths in the half-breadth plan, their centres would be brought nearer the middle line in the body-plan, the floor-rising would become quicker, and the ship have less bearing, and *vice versa*, more full and burthensome; thus must the rising and narrowing of the centres be adjusted till the body of the vessel has the capacity required for whatever service she may be designed.

But as in this mode of construction the centres only, and not the length of the floor-sweeps, are given, a diagonal ribband must be drawn in the half-breadth plan, as in Plate I. by setting off from the middle line at \oplus , 16 feet; at B, 15 feet 9 inches; at D, 15 feet 5 inches; at F, 15 feet 1 inch; at H, 14 feet 7 inches; at K, 14 feet; at M, 13 feet $\frac{1}{2}$ an inch; at O, 11 feet 11 inches; at Q, 10 feet 4 inches; at S, 8 feet 6 inches; at U, 6 feet 1 inch; and at X, 2 feet 5 inches. Then in the after-body set off at 2, fig. 1, Plate II., 15 feet $11\frac{1}{2}$ inches; at 4, 15 feet $10\frac{1}{2}$ inches; at 6, 15 feet 9 inches; at 8, 15 feet 6 inches; at 10, 15 feet 4 inches; at 12, 15 feet 1 inch; at 14, 14 feet 11 inches; at 16, 14 feet 5 inches; at 18, 14 feet; at 20, 13 feet $3\frac{1}{2}$ inches; at 22, 12 feet 5 inches; at 24, 11 feet 7 inches; at 26, 10 feet 5 inches; at 28, 9 feet 1 inch; at 30, 6 feet 7 inches; at 32, 5 feet 10 inches; at 34, 4 feet; and at 36, 2 feet.

Vol. XXIII. No. 1560.

Now to end this diagonal, it must be drawn in the body-plan thus; set up the middle line from the base 12 feet 2 inches, and on the base, from each side of the middle line, 11 feet 9 inches, then draw the diagonal ticked line, as shewn in Plate I. In draughts, diagonal lines are distinguished by red ink. Then in the body-plan draw the half-siding of the stem in the fore-body, and the half-siding of the stern-post in the after-body: for the latter set up 26 feet above the base, and at that height set off from the middle line 10 inches in the half-siding of the post at the head, and 9 inches in the forebody, the half siding of the stem at that height; and on the base line $7\frac{1}{2}$ inches from each side of the middle line, the half-siding of post and stem at the heel; then draw straight lines to each spot set off, and the half-siding of the stern-post and stem will be represented in the body plan. Now to complete or end the diagonal line on the half-breadth plan, its height or intersection at the post and stem must be taken in the body-plan, and transferred respectively to the foreside of the rabbet of the stem, and aft-side of the rabbet of the post in the sheer-plan, and from thence let them be squared down to the middle line of the half-breadth plan; then take with compasses the half thickness of the post and stem in the body-plan, in the direction of the said diagonal line, and set them off respectively from the middle line in the half-breadth plan on the lines last squared down; and from the intersection as a centre, sweep an arc towards the midships, with compasses opened to the thickness of the rabbet taken diagonally; then a fair curve drawn through all the spots as above set off, touching the back of the arcs, will form the diagonal line at the floor-heads as shewn in the half-breadth plan.

Now may the timbers, as far as the floor sweeps are useful, be completed in the body-plan below the lower height of breadth, beginning a dead flat: thus, take the half-breadth of the floor diagonal at \oplus in the half-breadth plan, and set it down the diagonal from the middle line in the body-plan; then take the half-breadth of the floor-sweeps in like manner, and set it off from the middle line in the body-plan on the horizontal line before drawn at its height, and from the intersection extend the compasses to the half-breadth of the floor diagonal, and sweep an arc upwards from the dead-rising, which is six inches at \oplus ; then with the reconciling-sweep, which is of a long radius compared with the others, unite the lower-breadth sweep and floor-sweep together; for the more the midship-frames deviate from the segment of a circle, the less will be the rolling motion of the ship; unite the floor-sweep with the upper edge of the rabbet of the keel with a curve or straight line, and the midship-timber will be formed below the lower breadth. In the same manner may be formed the frame-timbers B, D, F, H, and K, in the fore-body and 2, 4, 6, 8, 10, to 24 in the after-body by setting off the half-breadth of each frame's diagonal as at \oplus , their corresponding heights of breadths, main half-breadths, and centres of each sweep, as before directed, and by reconciling the lower-breadth sweeps and floor-sweeps together, and ending them into the rabbet at the keel; thus the midship part of the body will be formed from K forward to 24 abaft.

Hence it may be readily conceived, that bodies full or sharp, either for burthen or velocity, may be constructed by altering the radii of the different sweeps; and unless bodies of ships could be constructed from some geometrical figure, a more certain method than the above cannot be given.

The body being thus far formed, that is from K forward to 24 abaft, proceed to prove it by horizontal lines, and finish the remaining part forward and aft. These lines are generally called water-lines, as the ship's bottom at the surface of the water, supposing the keel kept parallel thereto, would be of the same figure as those lines represented in the half-breadth plan, with the addition of the thickness of the bottom plank in that direction. The upper one is called the load-water line, or line of floatation, when the vessel is supposed fit for sea; the other water-lines may be equally divided between the upper or load-water line, and upper edge of the keel or rabbet. Although a ship may draw more water abaft

than forward for her best sailing trim, yet to keep the several water-lines horizontal, or parallel with the upper edge of the keel, is the most useful in construction; and the water-lines, as represented in the half-breadth plan, form curves, limiting the various half-breadths of the ship at the heights of their corresponding lines in the body-plan. They are generally drawn with green ink, but in our Plate with corresponding dotted lines, and are represented by straight lines in the sheer-plan; and if parallel with the keel they will be horizontal lines in the body-plan, but if the vessel is to be constructed to draw much more water aft than forward, the water-lines will not of course be parallel with the upper edge of the keel; then owing to their various heights at each timber in the sheer-plan, they will form curves at those heights in the body-plan, and the more they vary from an horizontal line, the less accurate will the limits of their half-breadths be described in the half-breadth plan.

In the Plate, the upper horizontal water-line is 20 feet above the lower edge of the keel; and between that and the upper edge of the rabbet of the keel, are equally divided four more water-lines, as in the sheer-plan. The water-lines may now be drawn in the half-breadth plan from the body-plan, as far as the timbers are there formed; thus continue the water-lines aft from the sheer-plan across the body-plan, then take off with compasses, or a slip of paper, and pencil, their various half-breadths from the middle line, to the places where the several timbers intersect each water-line, and set them off on their corresponding timbers from the middle line in the half-breadth plan; then to end each water-line square down where they intersect the fore-part of the rabbet at the stem, and aft-part of the rabbet at the stern-post in the sheer-plan to the middle-line of the half-breadth plan; then take the half-siding of the stem and the stern-post at each water-line from the middle line in the body-plan, and set them respectively on the lines last squared down from the middle line in the half-breadth plan; from thence, as the centre, with compasses opened to the thickness of the bottom plank, make a sweep, the back of which is the ending of the line. Then complete the fore and after ends of each water-line with curves, as in the half-breadth plan, avoiding all inflected curves or hollow water-lines at the fore part, as they may be drawn by arcs of circles, although their centres may be without the limits of the plates of ship-building.

Now the whole of the body may be completed under the lower height of breadth, observing to sweep each timber below its height of breadth, as before directed: then by taking off the half-breadth of each timber, where they intersect the water-lines from the middle line in the half-breadth plan, and setting them off on their corresponding water-lines from the middle line in the body-plan, curves passing through those spots will shape the timber; but to end them into the rabbet, or complete the heeling, the keel must be drawn in the body-plan; thus set off nine inches on the base line from each side of the middle line, being the half-siding of the keel, and also 18 inches below the base line, which squared will represent the thwartship section of the keel in midships: then, with compasses opened to the thickness of the bottom plank, fix one leg where the keel intersects the base line, which is the upper side of the rabbet, and sweep an arc within the keel to intersect the side, and from that intersection sweep another arc upwards; then a triangle drawn within those arcs, represents the rabbet of the keel in midships, and all the timbers along the midships, until the rabbet opens, and where the rabbet intersects the base line; but when the rabbet opens the timbers rising forward and aft, they will end over the back of the sweep to the inner edge of the rabbet. The timbers near the after-end of the keel must be ended agreeably to the tapering of the keel, which tapers in the siding from frame 24 to 15 inches at the after-end; this must be set off from the middle line in the half-breadth plan, and the half-siding of the keel taken at each timber, and set off on the upper-edge of the keel from the middle line in the body-plan; then set within the half-siding of the keel the thickness of the bottom plank,

and that ends the timber. But as the frames in the fore-body before O heel upon the stem, their heights must be taken in the sheer-plan, where they intersect the lower part of the rabbet, and those heights set up in the body-plan upon the half-thickness of the stem; then with compasses opened to the thickness of the bottom plank, fix one leg in the heights last set off, and sweep a circle within the siding, and the heel passes over the back of the circle, and the rabbet completed by a square applied to the line of the timber, so as to intersect the height set up, as shewn in the plan of the fore-body, (Pl. II.)

Now, as a further proof of the correctness of the after-body, draw four or five perpendicular sections, or, as they are commonly called, buttock-lines; but first prove the heels of the after-timbers by the bearding-line, thus: represent the half-thickness of the dead or rising wood in the body-plan, by drawing a perpendicular from the base line to the head of the stern-post. Then from the base line take the heights where the after-timbers cross the half-thickness of the dead wood, and set them up from the upper edge of the rabbet on their corresponding timbers in the sheer-plan; then draw a curve through those heights, to break in fair with the fore-side of the rabbet on the stern-post, and this curve will represent the bearding-line in the sheer-plan, and limits the heels of the stern-timbers, as far as they cut off or fay against the dead wood.

The heels of the timbers being found to agree with the bearding-line, from the fairness of its curve (observe, the term fair, so often used in the delineation of the several plans of a ship, signifies that the variety of curved lines therein used have no inequalities in them, but are even as a circle struck from its centre, as most of the lines in the formation of ships' bodies are curves, but many of their centres are too distant for application; and the fairness required is, that where every different curve unites no angle may be discoverable), proceed to prove the after timbers by the buttock-lines; thus, square up from the base line in the after-body plan five perpendiculars, equally divided between the outside of the wing-transom, and the half-thickness of the dead-wood; that is, the outer buttock-line at 15 feet 10 inches, and the intermediate four at 3 feet 2 inches asunder.

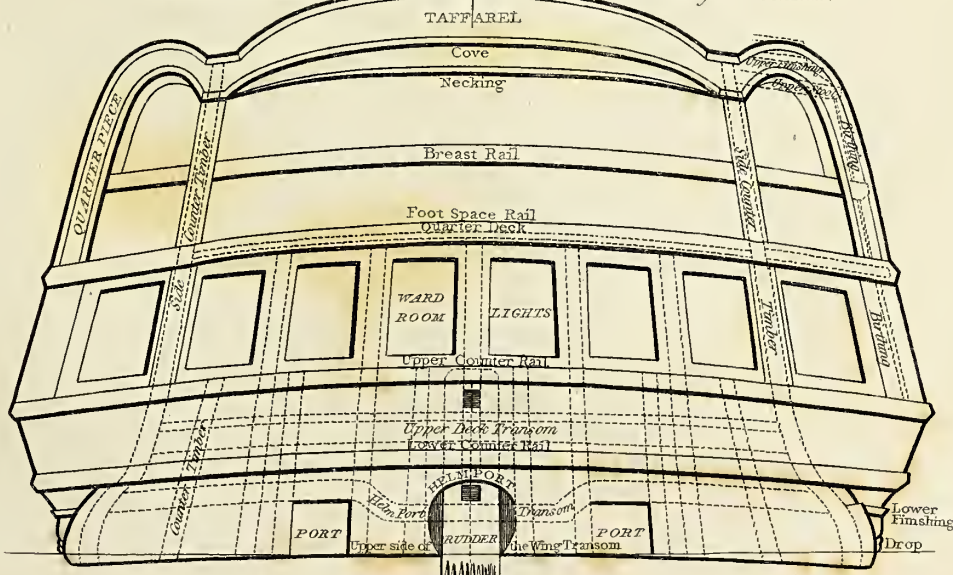

Then take the heights at the first buttock-line, or that next the post, at the intersection of each timber from the base line in the after-body, and set them up from the upper edge of the rabbet on the corresponding timbers in the sheer-plan; and to end the buttock-lines, the upper side of the wing-transom and margin-line must be drawn in the several plans; thus, set up 26 feet 10 inches for the height of the upper side of the wing-transom in the sheer and body-plans, drawing a horizontal line at the stern-post and across the body-plan; then from the middle line set off 16 feet 6 inches, the half-breadth of the wing-transom, and that place set down, below the upper side of the wing-transom, six inches, and sweep the arc, whose centre will be in the middle line; and the round-up of the upper side of the wing-transom will be represented as in the body-plan, (Pl. II.); from the same centre sweep another arc six inches below the upper side of the wing-transom, which is called the margin-line. Then, in the half-breadth plan, sweep in the round aft or aft-side of the wing-transom; thus, square down from the sheer-plan the fore-side of the rabbet of the stern-post, where it cuts the upper side of the wing-transom, to the half-breadth plan, and upon the line so squared down, set off the half-breadth of the wing-transom from the middle line, and at that place set forward seven inches, and sweep the arc representing the round aft of the wing-transom, the centre of which is in the middle line.

Draw an horizontal line at six inches below the upper side of the wing-transom in the sheer-plan, and upon it square up the round forward of the wing-transom from the half-breadth plan; and from thence draw a line to the upper side of the wing-transom at the rabbet of the post, and the upper side of the wing-transom will be shewn, both to its round
down

BODY PLAN
Center of the Stern Below.

PERPENDICULAR VIEW of the STERN.

down and forward in the sheer plan. Transfer the height of the margin-line from the body to the sheer-plan, and there draw a line parallel to the upper side of the wing-transom last drawn, and unite them at the fore part of the wing-transom by a line parallel to the rabbet of the post. The margin-line must next be shewn in the half-breadth plan; by squaring it down from the sheer-plan, and making it a parallel curve to the aft-side of the wing-transom; the distance, however small, being equal to the rake of the rabbet of the post, in the depth of the margin at the aft-side of the wing-transom. The margin-line being drawn in every plan, proceed to end the buttock-lines in the sheer-plan; thus, take the distance of the buttock-lines square from the middle-line of the body-plan, and set them off the same from the middle line in the half-breadth plan, drawing lines parallel thereto from the aft-side of the wing-transom to the after square timber, which will represent the buttock-lines in the half-breadth plan: then, where those lines intersect the margin-line in the half-breadth plan, square up spots to the margin-line in the sheer-plan, which spots will give the true ending of the buttock-lines, also square up the intersection of the buttock-lines with the water-lines from the half-breadth to the sheer-plan; then transfer all the heights of the buttock-lines, where the timbers cross them in the body-plan, to the sheer-plan, as before directed, and draw fair curves through all the spots set off to the endings, and the after part of the ship will be represented in the sheer-plan, as cut by those perpendicular sections.

Now if the buttock-lines make fair curves, the after-timbers will be proved correct, and likewise the water-lines abaft in the half-breadth plan; but if the buttock-lines to be made fair curves deviate from the spots as set off, then must the timbers be altered accordingly, and consequently the water-lines. But as a further proof as to the correctness of the buttock, or that part of the body close aft, square up one or two imaginary or proof-timbers, equally between the after frame-timber 37 and the wing-transom at the side, as represented by the ticked lines in the sheer-plan. Then take the heights on a perpendicular from the upper edge of the keel in the sheer-plan, where the proof-timbers intersect the buttock-lines and bearding-line, and transfer them to the body-plan above the base line upon each corresponding buttock-line, and half-thickness of the dead-wood; take also the half-breadth of the proof-timbers where they intersect the water-lines in the half-breadth plan, and transfer them to their respective water-lines in the body-plan; but though the proof-timbers cross the stern-post, their heels may be set off as before directed for the after-timbers; then if the spots so set off produce fair curves, as the ticked timber shewn in the body-plan, we may conclude that the after-body is sufficiently proved and its fairness accurate. The fore-body may be proved by vertical sections, in a similar manner as described above, only their ending will be determined by squaring up their intersections with the main-breadth line, from the half-breadth plan to the sheer-plan.

We now proceed to draw all the decks in the sheer-plan, beginning with the lower, or gun-deck. The height of the lower sills of the gun-deck ports should be 2 feet 4 inches above the gun-deck plank, which is four inches thick; consequently the upper side of the beam along the side must be 2 feet 8 inches below the sills; add six inches to that for the round-up of the beam; and the under side of the gun-deck at the middle line in midships will be 22 feet 2 inches above the upper edge of the keel; at the foremost perpendicular set up 24 feet, and at the after-perpendicular 24 feet 8 inches; then a segment of a circle drawn through these three heights will represent the under side of the gun-deck at the middle line. (These kinds of sweeps are drawn by thin veneers of pear-tree wood, called sweep-moulds, struck from a long radius on purpose, or by a drawing-bow.) Now set up four inches, the thickness of the gun-deck plank, above the line last drawn, and let another line be drawn parallel thereto, and the gun-deck will be described at the middle line in the sheer-plan.

Next proceed to draw the upper deck; set up 7 feet

2 inches, being the height from the upper side of the gun-deck plank to the under side of the upper deck plank, along the middle line, through which heights draw a curve parallel to the gun-deck, and another curve three inches parallel above it, and the upper deck will be represented at the middle line of the sheer-plan.

The stern-timbers should be next drawn, to shew the boundaries of the sheer-plan above the wing-transom. Set up above an horizontal line drawn at the upper side of the wing-transom at the middle line four feet, upon a perpendicular 6 feet 10 inches abaft the aft-side of the wing-transom, which will be the height and knuckle of the lower counter at the middle line; from thence draw a curve, about six inches hollow, to the upper side of the wing-transom, where the fore part of the rabbet of the stern-post intersects it; and that curve will represent the lower counter at the middle line.

In the same manner, set up the height of the upper counter 7 feet 5 inches upon a perpendicular nine feet abaft the aft-side of the wing-transom, which will be the height and knuckle of the upper counter at the middle line; then drawing a curve about one inch hollow from thence to the knuckle of the lower counter, the upper counter will likewise be described at the middle line.

Having the upper and lower counters drawn at the middle line, the upper part of the stern-timber is straight above the upper counter, and must be drawn as follows:

Set up 23 feet 8 inches, upon a perpendicular 14 feet abaft the aft-side of the wing-transom, as before, and then drawing a straight line from the knuckle of the upper counter to pass through the said spot, the upper part of the stern-timber will be shewn at the middle line, by which the rake of the stern will be described.

As the stern rounds two ways, both up and aft, (or forward from the timber already drawn), the stern-timber at the side must alter so much from that at the middle line, and therefore remains to be represented. Set down from the knuckle of the upper counter on its perpendicular 9 inches, and draw an horizontal line before it at that place, and set off thereon 15 inches from the said perpendicular, which will be the knuckle of the upper counter at the side the 9 inches is the round-up, and the 16 inches the round-aft at the upper counter. Then proceed in like manner for the lower counter, by setting down 9 inches, and forward 15 inches, and knuckle for the lower counter at the side will be produced; then, by drawing a curve from the knuckles at the side (similar to the curve or hollow at the middle line), observing the lower counter at the side is drawn to intersect the touch of the wing-transom at the side, the side stern-timber only wants the upper part to complete it. But as the straight line, which remains to be drawn for the upper part of the side-timber, should not be parallel to that at the middle line, the following method will determine the exact rake thereof.

Draw a straight line at pleasure, as the ticked line under the body-plan, on which set off the breadth of the stern at the upper counter, or 13 feet 4 inches, equally on each side of the middle line; and there square up a perpendicular on each side: set up from the straight line 16 inches, the round-aft of the upper counter on each perpendicular, and draw a segment of a circle that shall intersect those spots and the straight line at the middle, and the round-aft of the stern will be described at any part of the breadth above the upper counter: thus, take the breadth of the stern at the top timber-line, which is 24 feet 8 inches above the wing-transom, which is 24 feet, and set it off equally on each side the middle, to where it shall intersect the round-aft under the body-plan; thence draw a line parallel to that first drawn, and the distance between the two lines, $13\frac{1}{2}$ inches, is the distance that the side-timber will be from the middle-timber: on an horizontal line, at the height of the top timber-line, draw a straight line through the last spot set off to intersect the knuckle of the upper counter at the side, and that will be the rake of the side counter-timber, as shewn by the ticked lines in the sheer-plan.

The rake of the stern-timbers being determined, proceed to

to finish the decks. Set up from the upper side of the upper deck 6 feet 10 inches at the middle stern-timber, and 6 feet 8 inches fore part at frame 8, and above that 3 inches, drawing curves as before, and the quarter-deck at the middle line will be represented.

Proceed in the same manner with the round-house abaft. Set up from the upper side of the quarter-deck 6 feet 8 inches at the middle stern-timber, and 6 feet 6 inches at fore part or frame 24, and above that $2\frac{1}{2}$ inches. The fore-castle forward is represented in the same way, by drawing curves, one parallel to the upper side of the upper deck 6 feet 7 inches above it, and another at 3 inches from the head-head to frame D.

All the decks having been drawn, representing their heights at the middle line, their heights at the sides differ from the former, agreeable to the round of the beam in the breadth of the ship: to do which correctly, take the round-up of the beam of its respective deck, say the gun-deck, 6 inches, and set it up in the middle of any straight line, so that the half-breadth in midships at the height of the gun-deck may be set off on each side on the line. Then raise the segment of a circle that shall intersect the round-up at the middle, with the spots at the breadth, and the round-up of the deck will be described at any part of its breadth. Thus, take the half-breadth at the height of the deck at any timber in the body-plan, and set it off equally from the middle of the round-up till it intersects the curve: whence draw a line parallel to that first drawn, and the distance between the last line to the round-up in the middle is what the beam rounds at that place: thus may the round-up be taken at as many timbers as may be found necessary, and set below the under side of the deck, at its respective timber in the sheer-plan; then a curved line passing through those spots, will represent the deck at the side: but observe, that the decks are to have a sufficient round abaft, to correspond with the round-up of the stern above the lights, and the additional round wanted to be set down at the side line.

The sheer or top timber-line may be next drawn, by setting up its height in the sheer-plan afore in midships, and abaft: thus, at timber X forwards, 37 feet 8 inches; at \oplus in midships, 35 feet 4 inches; and at the side stern-timber abaft, 41 feet 6 inches: then, by drawing a curve through these spots, the sheer of the ship, or top timber-line, will be represented.

The ports may now be drawn in the sheer-plan, thus: draw two curves in pencil parallel to the deck at the side, fore and aft, adding the thickness of the deck to that already drawn, as that represents the under side of the deck, or upper side of the beam. The gun-deck ports are to be 2 feet 4 inches from the upper side of the gun-deck plank to the upper side of the lower sills, 2 feet 8 inches deep, and 3 feet 5 inches fore and aft, or from the fore to the after sides, which may now be squared up between the lines last drawn; placing the fore-side of the foremost port 1 foot 5 inches abaft timber X, and 3 feet 1 inch only on athwartship line; the aft-side of the after-port to be 14 inches afore timber 32, and the fore-side 3 feet 5 inches afore it, or in the clear; and the remaining 13 to be 7 feet 7 inches asunder. In the same manner draw in the upper deck ports, which are from the plank to the port-sill 1 foot 11 inches, 2 feet 8 inches deep, and fore and aft 3 feet; and are to be placed equally between and over the gun-deck ports, as circumstances will admit, as shewn in the sheer-plan, Plate I. The ports on the quarter-deck, round-house, and fore-castle, must be placed hereafter where there is a vacancy between the dead eyes to admit of them, observing to place them as nearly as possible at equal distances.

To know the heights, round-up, &c. &c. of the other decks, take them with compasses, in like manner, as the gun-deck was set off from the given dimensions; and by applying them to the scale of feet, much repetition will be avoided.

The round-house deck being drawn, draw a line parallel to the top timber-line, and another line three inches above it, which is of the thickness of the plan-sheer, corresponding with the fore-part of the round-house, so as to make both

plank-sheer and water-way; so will the extreme height of the top-side be described abaft: the plank-sheer, which completes the height of the side to the fore part of the quarter-deck, is four feet four inches to the under side above the top timber-line, and parallel thereto. The fore part abreast the main-mast hances down eleven inches for seven feet abaft the gangway or fore part of the quarter-deck.

The drift-rail may now be drawn, the under side of which is two feet ten inches above the top timber-line, and parallel thereto from the hance of the plank-sheer at the main-mast to the quarter-gallery. The drift-rail is four and a half inches deep, and drawn parallel to the under side last drawn, and hances as the plank-sheer abreast the main-mast, and stops with a scroll upon the sheer-rail at the gangway. The sheer-rail may next be drawn: it is six inches deep, and parallel to the top timber-line from the cat-head to the quarter-gallery. The plank-sheer and sheer-rail at the fore part of the ship delineate the height of the top-side there: the under-side of the plank-sheer is two feet nine inches above the top timber-line and the under side of the drift-rail one foot eight inches, and turns off with scrolls at the after part of the fore-castle, but in other respects the same as those at the quarter-deck.

It is the practice in the navy of late years, to have square drifts instead of scrolls or hances of any kind.

The upper part of the ship being thus far complete, we have at one view the utmost extent of the sheer, as seen on a plane.

It now remains to be drawn in the finishing parts, as the wales, stern, head, rails, &c.

Proceed to represent the main wails by setting up their lower edge, at the rabbet of the stem or fore part, above the upper edge of the keel 22 feet 6 inches, in midship or dead-flat 18 feet 8 inches, and at timber 34, 23 feet, and draw the curve as in sheer-plan, Plate I. Above that, and parallel thereto, draw another curve at 4 feet 4 inches, the breadth of the main wales.

Next draw in the channel wales, set up as before, at the rabbet of the stem 30 feet 2 inches, in midships 27 feet 3 inches, and at timber 34, 31 feet 6 inches. Set up their breadth 3 feet, and draw curves as in sheer-plan, Plate I.

The waist-rail may be next drawn: its distance below the top timber-line is one foot ten inches, the upper side and its depth six inches, and it is drawn parallel to the top-timber line all fore and aft.

Now, before the channels and dead-eyes can be drawn, the centres and raking of the masts must be determined; their centres on the gun-deck being fixed upon in proportion to the length of the gun-deck, thus: the centre of the fore-mast is 21 feet 4 inches abaft the aft-side of the stem, or half its diameter before the one-ninth of the length on the gun-deck: the centre of the main-mast 101 feet 4 inches abaft the aft-side of the stem, or half its diameter abaft the five-ninths of the length of the gun-deck; and the centre of the mizen-mast 27 feet before the rabbet of the stern-post, or half its diameter before the one-seventh of the length of the gun-deck. The centre being fixed, the fore-mast rakes aft (or inclines from a perpendicular with the keel) one-eighth of an inch in every yard of its length; the main-mast rakes aft one inch in every yard in the length; and the mizen-mast one inch and a half in every yard of its length, as drawn in the sheer-plan, Plate I.

Now draw the channels, placing their upper edges next the side in a line with the upper edge of the sheer-rail; or, which is much better, since the rails on the side are discontinued, rather lower down, clear of the seam. The fore channel to be 36 feet long, and so placed as to take the anchor-lining and bill-board for stowing the anchor at its fore end, thus; get the length of the anchor to the bill, or extent of the arm, and allow for the cat-block; then with that distance sweep upwards from the channel-wale to the channel, from the outer end of the cat-head nearly, and the curve that the bill of the anchor is supposed to make, will give the middle of the lining: the aft-side from the channel may be perpendicular, and the fore part follow the curve made by the anchor.

The bill-board may then be carried upwards from the upper side of the channel to the top of the side. The anchor-lining commences at the upper side of the bolster, which rests on the channel-wale, and is long enough at the fore-part for a man to stand upon.

The main channel is 29 feet 6 inches long, placed in the same range as the fore channel, and its fore-end before the centre of the mast about six inches.

The mizen channel is 16 feet 4 inches long, placed like the former, but it is more convenient when placed, as it now is, above the quarter-deck ports.

The dead-eyes may now be drawn, observing to place them in such a manner that the chains may be sufficiently clear of the ports. All the preventer-plates must be so placed on the channel-wales, and of such a length, that the centre of the chain-bolt may come about six inches below the upper edge, and the preventer-bolt about four inches above the lower edge of the channel-wales. The dead-eyes in the main and fore channels are sixteen inches in diameter, and eleven in number in the fore and twelve in the main, though lately another is added in each. In the mizen are seven, of eleven inches diameter; the centre of the foremost dead-eye is placed at or just abaft the centre of the mast, and the centres of the others are placed so as to clear each other about three inches, which will admit of four dead-eyes between each port. It must also be observed to give each of the chain and preventer-plates a proper rake; that is, to let them range in the direction of the shrouds, which may be done in the following manner: draw a pencil line upwards at the centre of each mast, upon which set off its length to the lower part of the head; then, by drawing straight lines from that height through the centre of each dead-eye, the direction of each chain will be obtained by the direction of its corresponding line. The dead-eyes for the backstays are so similar to the former, that it need only be observed, that for the raking of them, the height of the top-mast to its head must be added to the lower mast, and that they are fixed at the after-end of the channel, or on stools, if need be, above the channels, as in the sheer-plan.

The quarter-deck and fore-castle ports can now be determined, as they must be placed clear of the shrouds, and equally asunder, or nearly so, as circumstances will admit: thus, there are three on each side on the fore-castle, made by the timber-heads there shewn, having also a timber-head between. But the practice now is to have a rail upon the heads of the timbers, and the sides birthed up on each side to the under side of the rail between the ports, and only three or four timber-heads run up, one in particular before the bill-board for the shank-painter. On the quarter-deck are seven ports of a side, and four on the round-house, placed as clear as possible of the shrouds.

The chest-tree for hauling home the main-tack must be placed near the after-end of the fore channel, or half the length of the main yard before the centre of the main-mast, and drawn from the top of the side down to the upper edge of the channel-wale.

The steps on the side may next be drawn: they must be placed at the fore part of the main drift or gangway, about three feet in length, six inches asunder in the clear, and five inches deep: the upperstep to be eleven inches from the top of the side, continuing the others to the upper edge of the wale.

To complete the sheer-plan, the head and stern only remain to be drawn, the beak-head however is getting disused, and the bow continued to the top of the side. The figure of the stem is commonly square as represented at Fig. 2, Pl. II., but Sir Robert Seppings has introduced round stems. These, though not approved by all, seem nevertheless improvements. Sir Robert's reasons for their adoption are thus stated:—

They give additional strength to the whole fabric of a ship.

They afford additional force in point of defence.

They admit of the guns being run out in a similar way to those in the sides.

VOL. XXIII. No. 1560.

From the circular form and mode of carrying up the timbers, an additional protection against shot is obtained, if the ship should be raked.

The stern being equally strong as the bow, no serious injury can accrue in the event of the ship being pooped; and the ship may be moored, if so required, by the stern.

A ship will sail better upon a wind, from the removal of the projections of the quarter galleries.

Ships of the line have now a stern walk protected by a veranda, and so contrived that the officers can walk all round, can observe the set of the sails, and the fleet in all directions.

The compass timber heretofore expended for transoms is substituted with straight timber, and worked nearly to a right angle, which affords a considerable saving in the consumption of timber.

The counter being done away by the circular stern, the danger which arose from boats being caught under it is obviated.

The rudder may now be represented in the sheer-plan, observing, that the head is continued above the upper deck, high enough to receive a tiller about four inches above the deck; then allow for two hoops above the hole, making the upper part of the head 2 feet 6 inches above the deck. Continue upwards the aft-side of the stern-post, which represents the fore-side of the rudder, from whence its breadth or aft-side is set off; and as this should not be more nor less than sufficient to direct the course of the vessel, the common practice is to make the breadth at the heel, or lower end, one-eighth of the breadth, which will be six feet for ships having a clean run abaft; but for merchant-ships, or those constructed chiefly for burthen, it may be one-seventh. The height of the lower hance may be fixed at the load-water-line, or about six inches above it, and its breadth there should be five-sevenths of the breadth at the heel, back included; set forward from thence 10 inches, or reduce the breadth to 3 feet 5 inches. The upper hance may be at one-third the height of the lower hance, and the breadth of the rudder there should be five-sevenths of the breadth at the lower balance, or 3 feet 1 inch; there reduce the breadth 5 inches, which makes it 2 feet 8 inches, from whence a straight line may be continued to the head, which is 2 feet 4 inches fore and aft, or larger, if the piece will admit of it: each hance should be reduced with mouldings, as in sheer-draught, Plate I., and $3\frac{1}{2}$ inches drawn parallel to the aft-side to represent the thickness of the back. The heel of the rudder, at the fore part, should be 9 inches short of the under side of the false keel, and 11 inches at the aft-part, the sole included, which is 6 inches deep.

The pintles and braces may be now represented, placing the upper brace about four inches above the wing-transom, that the straps may clasp round the standard on the gun-deck. The second brace should be so placed as to fasten on the middle of the gun-deck transom. The lower brace may be placed 15 inches above the upper side of the keel, and the intermediate ones, four in number, to be equally placed between the two latter, making seven in all. The length of the braces may be governed by a straight line drawn from the third brace, which should be 4 feet 6 inches afore the rabbet of the post to the lower one, which is to be six feet.

The length of all the straps of the pintles, which come upon the rudder immediately above the braces (except the thickness of the bur or saucers), may extend within four inches of the aft-side: the pintles are $3\frac{1}{2}$ inches in diameter, and all 14 inches long, except the lower one, which is 2 inches longer. The straps of the braces and pintles are five inches broad.

The length and breadth of the rudder being represented in the sheer-plan, Plate I., it is evident the breaks or hances are merely to produce the breadth as it rises towards the head, the greatest breadth being only required below the water, where it feels the motion of the ship.

The fluid in passing to the rudder, exactly follows the outlines of the bottom; and supposing the rudder to make

an angle of 45 degrees with the keel, it may be readily seen, by the water-lines abaft in the half-breadth plan, that the immediate shock it receives from the water increases as it approaches to the load-water-line, where they become nearly at right angles with the side of the rudder in that position, and this holds good, whatever angle the rudder makes with the keel; hence some are of opinion, that the rudder should be made broader near the line of floatation, and narrower towards the keel; but the present method of making the rudder with increasing breadth downwards is only in proportion to the obliquity of impulse the water acts against it near the keel. It must be observed, that the above force strikes the rudder obliquely, and only strikes it with that part of its motion which, according to the sine of incidence, forces it in a contrary direction, with a momentum which not only depends on the velocity of the ship's course, by which this current of water is produced, but also upon the extent of the sine of incidence. This force is by consequence composed of the square of the velocity with which the ship advances, and that square of the sine of incidence, which will necessarily be greater or smaller according to circumstances; so that if the vessel increases her velocity three or four times faster, the absolute shock of the water upon the rudder will be nine or sixteen times stronger, under the same incidence; and if the incidence is increased, it will yet be augmented in a greater proportion, because the square of the sine of incidence is more enlarged.

Many useful discoveries may be made by blocks or models of ships, and with as great certainty as by the nicest calculations. For it must be allowed, as before observed, that in calculating from a draught drawn from a quarter of an inch scale, it will be liable to some inaccuracies, which cannot be obviated in practice, by reason of various little alterations which may be made in laying off the ship in the mould-loft; consequently the draught and the ship will, in those points, disagree. And likewise, upon strict examination, we shall be enabled to find, that there are not many ships that have both their sides exactly equal in every respect.

Let the block, or model, be constructed to a scale of one-quarter of an inch to a foot of the corresponding parts on the ship; and care should be taken to provide the wood as light and dry as possible.

The model being accurately constructed, it may be also proved by suspending it by a line, fastened to a hook in any part of a straight line, drawn from the middle line of the stem to that of the stern-post. This hook may be moved forward and aft to different places in the middle line, and a weight may be suspended from the upper part of the middle line, on the post. If the two sides be exactly of equal dimensions, and homogeneous, they will then be of equal weight. A plane passing through these three lines, whatever part of the middle line the hook be in, will likewise pass through the middle line of the keel, stem, and post: therefore, if the model stands this proof, it will be as true to work from as the nicest calculations.

The model, having stood this test, may be suspended by the same line, or silk, in different positions, until it points out the centre of gravity; which will be found, when the block hangs in a state of equilibrium. This practice is, doubtless, very simple; but it will be found very convenient. Further, the model being suspended by the hook, the lines hanging at the stem and post corresponding to their middle lines, and to that which suspends the block, we may hold a batten out of winding with the line that suspends it, and, with a pencil, draw a line upon it. A plane passing through this pencil line, at right angles to the keel, and passing likewise through the line that suspends the block, will likewise pass through the centre of gravity, which, therefore, must be somewhere in this plane. Again, move the hook to some other part of the middle line, and let the block be suspended from that point; draw also another pencil line, out of winding with this last line of suspension, and the intersection of the two lines will give the height of the centre of gravity

above the keel, and likewise its distance from the post and stem; and if the hook be moved to any other part of the middle line, and a pencil line be drawn as before, it will likewise intersect in the same point; or, let there be ever so many points assumed in the middle line, and the block suspended by each, and pencil lines drawn, they will all intersect in the same point; and as the centre of gravity will always be in the plane which passes through the middle line of the keel, stem, and post, it may with certainty be marked on the draught.

Of the Timbers of a Ship.—Of all large machines destined to undergo severe shocks, a ship is perhaps the least skilfully and artificially contrived. Her several parts are put together on a principle so much opposed to that which constitutes strength, that if a ship, on the old construction, should be put upon wheels, and drawn over a rough pavement, the action of a day would shake her in pieces; but being destined to move in an element that closes upon her, and presses her equally on all sides, she is prevented from falling in pieces outwards, and her beams and decks preserve her from tumbling inwards. Whoever has observed a ship *in frame*, as it is called, on the stocks, that is, with only her timbers erected, must forcibly be reminded of the skeleton of some large quadruped, as of a horse or ox, laid on its back; the keel resembling the back-bone, and the curved timbers the ribs, which is, in fact, the name by which they sometimes go. These ribs, issuing at right angles from the keel, consist, in a 74-gun ship, of about 800 different pieces, the space between each rib seldom exceeding five inches. These ribs are covered with planks of different thickness within and without, also at right angles to the ribs, and fixed to them by means of wooden pins or tree-nails. In the inside three or four tier of beams cross the skeleton from side to side, at right angles to both planks and ribs. These beams support the decks. At right angles to the beams are pieces of wood called carlings, and at right angles to these other pieces called ledges, and upon these the planks of the deck are laid in a direction of right angles to the beams, and parallel to the planking of the sides. From this sketch it will be perceived, that all the parts of a ship are either parallel or at right angles to each other. The ribs form a right angle with the keel, the planks inside and out are at right angles to the ribs, the beams at right angles to these, the carlings to the beams, the ledges to the carlings, and the planks of the decks to the ledges, the beams, and the ribs.

Now, it is well known to every common carpenter that this disposition of materials is the weakest that can be adopted—consequently, when a ship of the old construction is first launched into the water, it is invariably found that the two extremities, being less water-borne than the middle, drop, and give to the ship a convex curvature upwards, an effect which, from its resemblance to the shape of a hog's back, is usually called *hogging*. In very weak or old ships this effect may be discovered in all the port-holes of the upper-deck, by their having taken the shape of lozenges declining different ways from the centre of the ship to each extremity.

We are indebted to Sir Robert Seppings for remedying this defect. He applied the principle so familiar to carpenters, that of placing a diagonal brace across all the right angles formed by the timbers, and thus rendered them immovable. The expense is great, but it amply repays itself in the greater security and durability of the vessel. Sir Robert, in order to give a continuity of strength to the whole machine, and leave no possible room for play, filled the spaces between the frames with old seasoned timber cut into the shape of wedges; but recently with a prepared cement, thus rendering the lower part of the ship or floor one solid complete mass, possessing the strength and firmness of a rock.

The same principle of trussing is carried from the gun-deck upwards, from whence, between every port, is introduced a diagonal brace, which completely prevents the tendency

Plan of the Gun & Upper Decks.

gency of ships to stretch, or draw asunder their upper works. The decks, too, are made subservient to the securing more firmly the beams to the sides of the ship, by the planks being laid diagonally in contrary directions, from the midships to the sides, and at an angle of 45° with the beams, and at right angles with the ledges.

In frigates and smaller vessels, iron plates, lying at an angle of 45° with the direction of the trusses, are substituted for the diagonal frame of wood in ships of the line.

By this mode of construction, the ceiling, or internal planking, is wholly dispensed with, and a very considerable saving of the finest oak timber thereby effected; and what is more important, those receptacles of filth and vermin between the timbers, which were before closed up by the planking, entirely got rid of. This is not the least important part of the improvement, either as it concerns the soundness of the ship, or the health of the crew.

The first ships on which the new principle was tried, were those rebuilt or repaired in docks, from which they were quietly floated out without any shock from launching; but several of them sustained severe gales of wind, without showing the least symptoms of weakness, but quite the contrary, not even a crack appearing in the white-wash with which their sides within were covered. If these experiments were not satisfactory, the launching of two of the largest ships in the navy established the fact of superior strength beyond the possibility of a doubt—the Nelson and the Howe. The Nelson, constructed on the old principle, was probably, in every respect, the best built ship in modern times; the timber sound and well seasoned; the workmanship admirable; and no pains were left unemployed by Mr. Sison, the builder, to have her as perfect as she could be made; and her motion, when launched from the stocks, was slow, easy and majestic, without a shake or a plunge; yet the Nelson was found to have arched, after launching, no less than 9 inches. The Howe is a sister ship to the Nelson, but built on the new principle; and after launching, she was found to have arched only three inches and five-eighths. The St. Vincent, built on the old principle, and the same in every respect as the Howe, likewise hogged on launching nine inches and a quarter; and the whole fabric, in both cases, was found, on examination, to be greatly disturbed; whereas the Howe exhibited no such symptoms. The Plate III. will shew the mode of trussing ships of the line according to the plans of Sir Robert Seppings, now universally adopted in the British navy.

Fig. 1., where A. A. shews the timber strake and additional keelson forming abutments for the lower part of the diagonal frame. B. B. The timbers of the diagonal frame. C. The longitudinal pieces. E. The trusses. F. The abutment for trusses between ports. G. Trusses. Fig. 2. is the deck constructed on the same principle. Fig. 3. a transverse section of the ship, with her four decks and their supporters.

It has been a subject of discussion among ship-builders, whether tree-nails or metallic fastenings are to be preferred. The objection to iron bolts is, their rapid corrosion from the gallic acid of the wood, the sea-water, and perhaps by a combination of both; in consequence of which, the fibres of the wood around them become injured, the bolts wear away, the water oozes through, and the whole fabric is shaken and deranged. This corrosion of iron fastenings was most remarkable when the practice of sheathing ships with copper became general, and when iron nails were made use of to fix it: by the contact of the two metals and the sea-water, both were immediately corroded. Mixed metal nails are now used for this purpose; and copper bolts are universally employed below the line of floatation, though it is found that in these also oxidation takes place to a certain degree, and causes partial leaks. Various mixtures of metals have been tried, but all of them are considered to be liable to greater objections than pure copper. It would appear, then, that tree-nails, if properly made, well seasoned, and driven tight, are the least objectionable, being seldom found

to occasion leaks, or to injure the plank or timbers through which they pass. This species of fastening has at all times been used by all the maritime nations of Europe. The Dutch were in the habit of importing them from Ireland, it being supposed that the oak grown in that country was more tough and strong than any which could be procured on the Continent, and in all respects best adapted for the purpose. "Under all circumstances," says Mr. Knowles, "it appears that the present method of fastening ships generally with tough well seasoned tree-nails, with their ends split, and caulked after being driven, and securing the butts of each plank with copper bolts well clenched, is liable to fewer objections, and more conducive to the durability of the timber, than any other which has been tried, or proposed to be established."

In the principle of the diagonal bracing another gentleman preceded Sir R. Seppings. Mr. John Walters proposed a plan of a similar kind, differing indeed only in this, that he placed his braces externally to the ship timbers. This has been tried and with success, but it is obvious it takes up more timber (if timber were used), than the internal bracing. Whether it is stronger we know not, but it leaves more room in the ship's hold. It is considered best to make Mr. Walters's braces of gun-metal.

Among the recent improvements for the preservation of ships' bottoms, perhaps the most remarkable is Sir Humphrey Davy's plan of protecting the copper from the influence of the acid of sea-salt, by the superposition of iron bars, which thereby exert a galvanic agency on the decomposition of the salt in question. His experiment succeeded; but an unlooked for circumstance has arisen to overthrow its practical utility. The muriate of copper formed naturally on the copper, was found formerly to protect the bottoms from the adhesions of marine animals. This poison removed by the new plan, such multitudes of remora were collected on the ship as to impede her progress and renders the cleaning of her hull a matter of much difficulty, and one which consumed a considerable portion of time. Consequently the advantages gained one way were lost another.

The brief account of ship-building we have here attempted may serve to give our readers a general idea of the principles of this fine science, and of its most famous improvements. But in the limits of a work of this kind, it obviously cannot be treated with any practical fulness. We may refer, however, to the very excellent modern work of Sir R. Seppings, as containing every thing at present known on the subject.

SHITDAM, a parish of England, in Norfolk; $4\frac{1}{2}$ miles south-west of East Dereham. Population 1412.

SHIPFUND, SHIPPOND or SCHIPSFUND, in Commerce, a large weight in Holland, Germany, Denmark and Sweden, containing a different number of pounds in different places.

SHIPHAM, a village and parish of England, in the county of Somerset. Most of the inhabitants are miners, employed in raising lapis calaminaris. The mines are worked even in the streets and gardens of the houses, the usual depth of the shafts being from 6 to 12 fathoms. Population 539; 2 miles from Axbridge.

SHIPLAKE, a parish of England, in Oxfordshire; 3 miles south of Henley-upon-Thames. Population 485.

SHIPLESS, *adj.* Without ships.—It is by no means a *shipless* sea, but every where peopled with white sails. *Gray.*

SHIPLEY, a parish of England, in Derbyshire; $9\frac{1}{2}$ miles north-east of Derby. Population 563.

SHIPLEY, a hamlet of England, in Northumberland; $4\frac{1}{2}$ miles north-west of Alnwick.

SHIPLEY, a parish of England, in Sussex; $6\frac{1}{2}$ miles south-south-west of Horsham. Population 1011.

SHIPLEY, a township of England, West Riding of Yorkshire; $4\frac{1}{2}$ miles from Huddersfield. Population 793.

SHIPLEY, a township of England, West Riding of Yorkshire, situated at the junction of the Bradford canal with

with the Leeds and Liverpool navigation. Population 1214; 3½ miles north-north-west of Bradford.

SHIPMAN, *s.* Sailor; seaman.

I myself have the very points they blow,
All the quarters that they know
I' the *shipman's* card.

Shakspeare.

SHIPMASTER, *s.* Master of the ship.—The *shipmaster* came to him, and said unto him, What meanest thou, O sleeper! arise, call upon thy God. *Jon.*

SHIPMEADOW, a parish of England, in Suffolk; 3 miles west-by-south of Beccles. Population 387.

SHIP-MONEY, *s.* An imposition formerly levied on port towns and other places for fitting out ships; revived in king Charles the first's time, and abolished in the same reign.—Mr. Noy brought his *ship-money* first for maritime towns; but that was like putting in a little auger, that afterwards you may put in a greater. *Selden.*

SHIPPEN, *s.* [*ſcypen*, Sax., *stabulum*.] A stable. In Lancashire, a cow-house.—*Shepencs* and dairies. *Chaucer.*

SHIPPENSBURG, a post township of the United States, in Cumberland county, Pennsylvania, situated on a branch of the Conedowinet creek; 140 miles west of Philadelphia. Population 1159.

SHIPPIGAN ISLAND, an island in the gulf of St. Lawrence, on the south side of Chaleur bay.

SHIPPING, *s.* Vessels of navigation; fleet.—Before *Cæsar's* invasion of this land, the Britons had not any *shipping* at all, other than their boats of twigs, covered with hides. *Ralegh.*—Passage in a ship.—They took *shipping* and came to Capernaum, seeking for Jesus. *St. John.*

“The whole of our naval history,” say the Commissioners for Revising the Civil Affairs of the Navy, “may be divided into three periods. The first, comprehending all that preceded the reign of Henry VIII. The second, ending with the Restoration of Charles II.; and the third, coming down from the Restoration to the present day.”

To what size, and to what amount the English ships or vessels were carried, which supported so many contests with the invading Danes, in the ninth century, our naval history has not preserved any record. We are told, however, that Alfred increased the size of his galleys, and that some of them were capable of rowing thirty pair of oars. These galleys were chiefly employed in clearing the Channel of the nests of pirates by which it was infested. It is also said, as a proof of his attention to naval matters, that under his auspices, one Ochter undertook a voyage into the Arctic Regions, made a survey of the coasts of Lapland and Norway, and brought to Alfred an account of the mode pursued by the inhabitants of those countries to catch whales. It is, moreover, on record, that his two sons, Edward and Athelston, fought many bloody actions with the Danes, in which several kings and chiefs were slain; and that Edgar had from 3000 to 5000 ships, divided into three fleets, stationed on three several parts of the coast, with which, passing from one fleet or squadron to the other, he circumnavigated the island; that after this he called himself “Monarch of all Albion, and Sovereign over all the adjacent Isles.” Some notion, however, may be formed of the size of the vessels which composed his fleets, from the imposition of a land-tax, which required certain proprietors to furnish a stout galley of three rows of oars to protect the coast from the Danish pirates. The more effectually to check these marauders, and protect the coasts of the kingdom, William the Conqueror, in 1066, established the Cinque Ports, and gave them certain privileges, on condition of their furnishing 52 ships with 24 men in each for 15 days, in cases of emergency. We should not, perhaps, be far amiss in dating the period of our naval architecture from the Conquest. “The Normans,” says Sir Walter Ralegh, “grew better shipwrights than either the Danes or Saxons, and made the last conquest of this land; a land which can never be conquered whilst the kings thereof keep the dominion of the seas.” But Ralegh does not describe what the ships were which the Normans taught

us to build; nor can it now be known in what kind of vessels William transported his army across the Channel, or what was the description of the hundred large ships and fifty galleys of which the naval armament of Richard I. consisted on his expedition to the Holy Land. We are told, however, that having increased his fleet at Cyprus to 250 ships, and 60 galleys, he fell in with a ship belonging to the Saracens, of such an extraordinary size, that she was defended by 1500 men, all of whom, with the exception of 200, Richard, after taking possession of her, ordered to be thrown overboard and drowned.

There can be no doubt that the nations of the Mediterranean, particularly the Genoese and Venetians, introduced many improvements as to the capacity and stability of their ships, in consequence of the crusades and the demands for warlike stores and provisions, which such vast and ill-provided armies necessarily created; but these improvements would seem not to have reached, or, at least, to have made but a tardy progress in Great Britain. King John, it is true, stoutly claimed for England the sovereignty of the sea, and decreed that all ships belonging to foreign nations, the masters of which should refuse to strike to the British flag, should be seized and deemed good and lawful prize. And this monarch is said to have fitted out no less than 500 sail of ships, under the earl of Salisbury, in the year 1213, against a fleet of three times that number, prepared by Philip of France, for the invasion of England; of which the English took 300 sail, and drove 100 on shore, Philip being under the necessity of destroying the remainder, to prevent their falling also into the hands of the English. Of the kinds of ships of which his fleet consisted, some notion may be formed by the account that is related of an action fought in the following reign with the French, who, with “80 stout ships,” threatened the coast of Kent. This fleet being discovered by Hubert de Burgh, governor of Dover Castle, he put to sea with 40 English ships, and having got to the windward of the enemy, and run down many of the smaller ships, he closed with the rest, and threw on board them a quantity of quicklime, which blinded them so effectually, that all their ships were either taken or sunk.

Whatever the size and the armaments of our ships were, the empire of the sea was bravely maintained by the Edwards and the Henrys in many a gallant and glorious sea-fight with the fleets of France, against which they were generally opposed with inferior numbers. The temper of the times, and the public feeling, were strongly exemplified in the reign of Edward I. by the following circumstance:—An English sailor was killed in a Norman port, in consequence of which a war commenced, and the two nations agreed to decide the dispute on a certain day, with the whole of their respective naval forces. The spot of the battle was to be the middle of the Channel, marked out by anchoring there an empty ship. The two fleets met on the 14th of April, 1293; the English obtained the victory, and carried off above 250 sail.

In an action with the French fleet off the harbour of Sluys, Edward III. is said to have slain 30,000 of the enemy, to have taken 200 great ships, “in one of which, only, there were 400 dead bodies.” This is no doubt an exaggeration. The same monarch, at the siege of Calais, is stated to have blockaded that port with 730 sail, having on board 14,956 mariners; 25 only of which were of the Royal navy, bearing 419 mariners, or about 17 men each. In various other sea actions did this great sovereign nobly support the honour of the British flag. But though we then, and ever after claimed, the “dominion of the seas,” that dominion, says Ralegh, “was never absolute until the time of Henry the Eighth.” It was a maxim of this great statesman, that “whosoever commands the sea, commands the trade of the world; whosoever commands the trade, commands the riches of the world, and consequently the world itself.”

The reign of Henry V., however, was most glorious, in maintaining the naval superiority over the fleets of France.

From

From a letter of this sovereign to his Lord Chancellor, dated 12th of August, 1417, discovered by the late Mr. Lysons among the records in the Tower, and of which the following is a copy, it would appear that there was something like an established Royal Navy in his reign, independently of the shipping furnished by the Cinque Ports and the merchants, for the king's own use, on occasion of any particular expedition. The letter appears to have been written nine days after the surrender of the castle of Touque, in Normandy, from whence it is dated.

“ *Au revénd pere en Dieu L'evesque de Duresme nre Chancellor D'Engleterre.* ”

“ Worshipful fader yn God We sende you closed within this letter a cedula conteynynge the names of certein Maistres for owr owne grete Shippes Carrakes Barges and Balyngers to the whiche Maistres We have granted annuitees such as is appointed upon eche of hem in the same Cedula to take yerely of owre grante while that us lust at owr Exchequer of Westmre. at the termes of Michelmasse and Ester by even porcions. Wherefore We wol and charge yow that unto eche of the said Maistres ye do make under owr grete seel beyng in yowre own letters patentes severales in due forme after th'effect and pourport of owr said grante. Yeven under owr signet atte owr Castle of Touque the xij day of August.”

Extract from the Schedule contained in the preceding Letter.

vj. li. xiijs. iiijd. La Grande Nief ap- pelle le dont John William est Maistre	} vj. Mariners porla sauf garde deink Hamult.
vj. li. xij. iiijd. La Trinate Royale dont Steph' Thomas est Maistre	} vi. Mariners.
vj. li. xiijs. iiijd. La Holy gost dont Jor- dan Brownynge est Maistre	} vj. Mariners.
vj. li. xiijs. iiijd. La Carrake appellee le Petre dont John Gerard est Maistre	} vj. Mariners.
vj. li. xiijs. iiijd. La Carrake appellee le Paul dont William Payne est Maistre	} vj. Mariners.
vj. li. xiijs. iiijd. La Carrak appelle le Andrewe dont John Thornyng est Maistr'	} vj. Mariners
vj. li. xiijs. iiijd. La Carrak appellee le Xpofre dont Tendrell est Maistr'	} vj. Mariners
vj. li. xiijs. iiijd. La Carrak appelle le Marie dont William Richeman est Maistr'	} vj. Mariners.
vj. li. xiijs. iiijd. La Carrak appellee le Marie dont William Hethe est Maistre	} vj. Mariners.
vj. li. xiijs. La Carrak appellee le George dont John Mersh est Maistr'	} vj. Mariners.

The remainder, to whose masters pensions were thus granted, consist of seventeen “niefs, barges, and ballyngers,” some with three, and others two mariners only. But history informs us, that about this time Henry embarked an army of 25,000 men at Dover on board of 1500 sail of ships, two of which carried purple sails, embroidered with the arms of England and France; one styled the King's Chamber, the other his Saloon, as typical of his keeping his court at sea, which he considered as a part of his dominions. Still we are left in the dark as to the real dimensions of his ships, and the nature of their armament; they were probably used only as transports for his army. It would appear, however, from a very curious poem, written in the early part of the reign of King Henry the Sixth, that the navy of his predecessor was considerable, but that, by neglect, it was then reduced to the same state in which it had been during the preceding reigns. The poem here alluded to is entitled, “The English policie, exhorting all England to keep the sea, and namely the Narrow Sea; showing what profit cometh thereof, and also what worship and salvation to England and to all Englishmen,” and is

Vol. XXIII. No. 1560,

printed in the first volume of Hackluyt's “Collection of Voyages.” It was evidently written before the year 1438, when the Emperor Sigismond died, as appears by the following passage in the prologue:—

“ For Sigismond, the great Emperour,
Which yet reigneth, when he was in this land,
With King Henry the Fifth, Prince of Honour,
Here much glory, as him thought, he found
A mightie land, which had take in hand
To werre with France, and make mortalitie,
And ever well kept round about the sea.”

The part of the poem which alludes to the navy of King Henry the Fifth, is entitled, “Another incident of keeping the Sea, in the time of the marvelous werrour and victorious Prince, King Henrie the Fifth, and of his great Shippes.”

The following are the most remarkable passages:—

“ And if I should conclude all by the King
Henrie the Fift, what was his purposing,
Whan at Hampton he made the great *dromons*
Which passed other great ships of the Commons;
The *Trinitie*, the *Grace de Dieu*, the *Holy Ghost*,
And other moe, which as nowe be lost.
What hope ye was the Kings great intent
Of thoo shippes, and what in mind he meant:
It was not ellis, but that *he cast to bee*
Lorde round about environ of the sea.
And if he had to this time lived here,
He had been Prince named withouten pere:
His great ships should have been put in preefe,
Unto the ende that he ment of in chiefe.
For doubt it not but that he would have bee
Lord and master about the round see:
And kept it sure, to stoppe our enemies hence,
And wonne us good, and wisely brought it thence,
That no passage should be without danger,
And his licence on see to move and sterre.”

Shortly after the time when this poem must have been written, it appears from the Parliament Roll (20th Hen. VI. 1442), that an armed naval force, consisting only of eight large ships, with smaller vessels to attend them, was to be collected from the ports of London, Bristol, Dartmouth, Hull, and Newcastle, Winchelsea, Plymouth, Falmouth, &c.; and, of course, the Royal ships of 1417, the names of which are contained in the foregoing schedule, were then either gone to decay or dispersed. We are not to judge of the size of these ships from the few mariners appointed to each. These were merely the ship-keepers, or harbour-duty men, placed on permanent pay, to keep the ships in a condition fit for the sea when wanted.

It is very probable that, until our merchants engaged in the Mediterranean trade, and that the attention of the government was turned in the reign of Henry VII. (about 1496), to imitate Portugal in making foreign discovery, under the skilful seaman Sebastian Cabot, very little was added to the capacity or the power of the British ships of war. It is said, however, that on the accession of Henry VII. to the throne in 1485, he caused his marine, which had been neglected in the preceding reign, to be put into a condition to protect the coasts against all foreign invasions; and that, in the midst of profound peace, he always kept up a fleet ready to act. In his reign was built a ship called the Great Harry, the first on record that deserved the name of a ship of war, if it was not the first exclusively appropriated to the service of the state. This is the same ship that Camden has miscalled the Henry Grace de Dieu, and which was not built till twenty years afterwards, under the reign of Henry VIII. The Great Harry is stated to have cost 14,000*l.*, and was burnt by accident at Woolwich in 1553.

We now come to that period of our naval history in which England might be truly said to possess a military marine, and of which some curious details have been left us by that extraordinary man of business Mr. Pepys, a commissioner of the navy, and afterwards secretary to Charles II., at a time

when the King executed in person the office of Lord High Admiral, and also to James II. until his abdication. His minutes and miscellanies relative to the navy are contained in a great number of manuscript volumes, which are deposited in the Pepysian Library in Magdalene College, Cambridge. From these papers it appears, that in the thirteenth year of Henry VIII., the following were the names and the tonnage of the Royal Navy:—

	Tons.
Henry Grace de Dieu	1500
Gabriel Royal	650
Mary Rose	600
Barbara	400
Mary George	250
Henry Hampton	120
The Great Galley	800
Sovereign	800
Catherine Forteleza	550
John Baptist	400
Great Nicholas	400
Mary James	240
Great Bark	250
Less Bark	180

Two row-barges of 60 tons each—making, in the whole, 16 ships and vessels measuring 7260 tons.

The Henry Grace de Dieu is stated in all other accounts, and with more probability, to have been only 1000 tons; the rule for ascertaining the measurement of ships being still vague and liable to great error, was probably much more so at this early period. This ship was built in 1515 at Erith, in the river Thames, to replace the Regent of the same tonnage, which was burnt in August, 1512, in action with the French fleet, when carrying the flag of the Lord High Admiral. There is a drawing in the Pepysian papers of the Henry Grace de Dieu, from which a print in the *Archæologia* has been engraved, and of which a copy has been taken as a frontispiece to Mr. Derrick's "Memoirs of the Rise and Progress of the Royal Navy." From these papers it appears, that she carried 14 guns on the lower deck, 12 on the main deck, 18 on the quarter-deck and poop, 18 on the lofty fore-castle, and 10 on her stern ports, making altogether 72 guns. Her regular establishment of men is said to have consisted of 349 soldiers, 301 mariners, and 50 gunners, making altogether 700 men. Some idea may be formed of the awkwardness in manœuvring ships built on her construction or similar to her, when it is stated that, on the appearance of the French fleet at St. Helens, the Great Harry, built in the former reign, and the first ship built with two decks, had nearly been sunk, and that the Mary Rose, of 600 tons, with 500 or 600 men on board, was actually sunk at Spithead, occasioned, as Raleigh says, "by a little sway in casting the ship about, her ports being within sixteen inches of the water." On this occasion the fleets cannonaded each other for two hours; and it is remarked as something extraordinary, that not less than 300 cannon-shot were fired on both sides in the course of this action. From the prints above-mentioned, which agree very closely with the curious painting of Henry crossing the Channel in his fleet, to meet Francis on the "Champ de drap d'Or," near Calais, (and now in the great room where the Society of Antiquaries hold their meetings in Somerset-House,) it is quite surprising how they could be trusted on the sea at all; their enormous poops and fore-castles making them appear loftier and more awkward than the large Chinese junks, to which, indeed, they bear a strong resemblance.

Henry VIII. may justly be said to have laid the foundation of the British navy. He established the dock-yards at Deptford, Woolwich, and Portsmouth; he appointed certain commissioners to superintend the civil affairs of the navy, and settled the rank and pay of admirals, vice-admirals, and inferior officers; thus creating a national navy, and raising the officers to a separate and distinct profession. The great officers of the navy then were, the Vice-Admiral of England; the Master of the Ordnance; the Surveyor of the Marine Causes; the Treasurer, Comptroller, General Sur-

veyor of the Victualling, Clerk of the Ships, and Clerk of the Stores. Each of these officers had their particular duties, but they met together at their office on Tower-Hill once a week, to consult, and make their reports to the Lord High Admiral. He also established the fraternity of the Trinity-House, for the improvement of navigation and the encouragement of commerce, and built the castles of Deal, Walmer, Sandgate, Hurst &c., for the protection of his fleet and of the coast.

At the death of Henry VIII., in 1547, the Royal Navy consisted of about 50 ships and vessels of different sizes, the former from 1000 to 150 tons, and the latter down to 20 tons, making in the whole about 12,000 tons, and manned by about 8000 mariners, soldiers, gunners, &c. In the short reign of his son Edward, little alteration seems to have taken place in the state and condition of the Royal navy. But the regulations which had been made in the reign of his father, for the civil government of naval affairs, were revised, arranged, and turned into ordinances, which form the basis of all the subsequent instructions given to the commissioners for the management of the civil affairs of the navy. In the reign of Mary the tonnage of the navy was reduced to about 7000 tons; but her Lord High Admiral nobly maintained the title assumed by England of "Sovereign of the Seas," by compelling Philip of Spain to strike his flag that was flying at the main-top-mast head, though on his way to England to marry Queen Mary, by firing a shot at the Spanish Admiral. He also demanded that his whole fleet, consisting of 160 sail, should strike their colours and lower their top-sails, as an homage to the English flag, before he would permit his squadron to salute the Spanish monarch.

The reign of Elizabeth was the proudest period of our naval history, perhaps surpassed by none, previous to the Revolution. She not only increased the numerical force of the regular navy, but established many wise regulations for its preservation; and for securing adequate supplies of timber and other naval stores. She placed her naval officers on a more respectable footing, and encouraged foreign trade and geographical discoveries, so that she acquired justly the title of the "Restorer of Naval Power, and Sovereign of the Northern Seas." The greatest naval force that had at any previous period been called together was that which was assembled to oppose the "Invincible Armada," and which consisted, according to the notes of Mr. Secretary Pepys, of 176 ships, with 14,992 men; but these were not all "Shippes Royal," but were partly composed of the contributions of the Cinque Ports and others. The number actually belonging to the navy is variously stated, but they would appear to have been somewhere about 40 sail of ships, manned with about 6000 men. At the end of her reign, however, the navy had greatly increased, the list in 1603 consisting of 42 ships of various descriptions, amounting to 17,000 tons, and manned with 8346 men. Of these two were of the burden of 1000 tons each, three of 900 tons, and ten from 600 to 800 tons.

James I. was not inattentive to his navy. He warmly patronized Mr. Phineas Pett, the most able and scientific shipwright that this country ever boasted, and to whom we undoubtedly owe the first essential improvements in the form and construction of ships. The cumbrous top-works were first got rid of under his superintendance. "In my owne time," says Raleigh, "the shape of our English ships hath been greatly bettered—in extremity we carry our ordnance better than we were wont—we have added crosse pillars in our royall shippes, to strengthen them; we have given longer floors to our shippes than in older times," &c. The young Prince Henry was so fond of naval affairs, that Phineas Pett was ordered, by the Lord High Admiral, to build a vessel at Chatham in 1604 with all possible speed, for the young Prince Henry to disport himself in, above London Bridge; the length of her keel was 28 feet, and her breadth 12 feet. In 1610 Pett laid down the largest ship that had hitherto been built. She was named the Prince Royal; her burden 1400 tons; her keel 114 feet; and armed with 64 pieces of great ordnance; "being in all respects," says Stowe, "the greatest

greatest and goodliest ship that was ever built in England." He adds, "the great work-master in building this ship was Mr. Phineas Pett, gentleman, sometime Master of Arts, of Emanuel College, in Cambridge."

This excellent man, as appears from a manuscript account of his life in the British Museum, written by himself, was regarded by the shipwrights of the dock-yards, who had no science themselves, with an eye of jealousy, and a complaint was laid against him before the King, of ignorance in laying off a ship, and of a wasteful expenditure of timber and other matters. The king attended at Woolwich with his court, to inquire in person into the charges brought forward, and, after a painful investigation, pronounced in favour of Mr. Pett. One of the charges was, that he had caused the wood to be cut across the grain; but the king observed, that, as it appeared to him, "it was not the wood, but those who had preferred the charges, that were cross-grained."

The state of the navy at the King's death is variously given, by different writers, but on this subject the memoranda left by Mr. Secretary Pepys are most likely to be correct. From them it appears, that, in 1618, certain commissioners were appointed to examine into the state of the navy; and, by their report, it appears there were then only 39 ships and vessels, whose tonnage amounted to 14,700 tons; but in 1624, on the same authority, the numbers had decreased to 32 or 33 ships and vessels, but the tonnage increased to about 19,400 tons. The commissioners had, in fact, recommended many of the small craft to be broken up or sold, and more ships of the higher rates to be kept up.

The navy was not neglected in the troublesome reign of Charles I. This unfortunate monarch added upwards of 20 sail to the list, generally of the smaller kind; but one of them, built by Pett, of a description, both as to form and dimensions, far superior to any that had yet been launched. This ship was the celebrated "Sovereign of the seas," which was launched at Woolwich in 1637. The length of her keel was 128 feet, and main breadth 48 feet, and from stem to stern 232 feet. In the description of this ship by Thomas Heywood, she is said to have "bore five lanthorns, the biggest of which would hold ten persons upright; had three-flush decks, a forecastle, half-deck, quarter-deck, and round-house. Her lower tier had 30 ports for cannon and demi-cannon; middle tier, 30 for culverines and demi-culverines; third tier, 26 for other ordnance; forecastle, 12; and two half decks, 13 or 14 ports more within board, for murdering pieces, besides 10 pieces of chace ordnance, forward, and 10 right aft, and many loop-holes in the cabins for musquet-shot. She had 11 anchors, one of 4400 pounds weight. She was of the burthen of 1637 tons." It appears, however, that she was found, on trial, to be too high for a good serviceable ship in all weathers, and was, therefore, cut down to a deck less. After this she became an excellent ship, was in almost all the great actions with the Dutch; was rebuilt in 1684, and the name changed to that of "Royal Sovereign;" was about to be rebuilt a second time at Chatham in 1696, when she accidentally took fire, and was totally consumed. In this reign the ships of the navy were first classed, or divided into six rates; the first being from 100 to 60 guns; the second from 54 to 36, &c.

In 1642 the management of the navy was taken out of the King's hands, and in 1648 Prince Rupert carried away 25 ships, none of which ever returned; and such, indeed, was the reduced state of the navy, that at the beginning of Cromwell's usurped government, he had only 14 ships of war of two decks, and some of these carried only 40 guns; but under the careful management of very able men, in different commissions which he appointed, such vigorous measures were pursued, that in five years, though engaged within that time in war with the greatest naval power in Europe, the fleet was increased to 150 sail, of which more than a third part had two decks; and many of which were captured from the Dutch; and upwards of 20,000 seamen were employed in the navy. Our military marine was, indeed, raised by Cromwell to a height which it had never

before reached; but from which it soon declined under the short and feeble administration of his son.

Though Cromwell found the navy divided into six rates or classes, it was under his government that these ratings were defined and established in the manner nearly in which they now are; and it may also be remarked, that, under his government, the first frigate, called the Constant Warwick, was built in England. "She was built," says Mr. Pepys, "in 1649, by Mr. Peter Pett (son of Phineas), for a privateer for the Earl of Warwick, and was sold by him to the state. Mr. Pett took his model of this ship from a French frigate, which he had seen in the Thames."

During the first period of our naval history, we know nothing of the nature of the armament of the ships. From the time of Edward III., they might have been armed with cannon, but no mention is made of this being the case. According to Lord Herbert, brass ordnance were first cast in England in the year 1535. They had various names, such as cannon, demi-cannon, culverins, demi-culverins, sakers, mynions, falcons, falconets, &c. What the calibre of each of these were is not accurately known, but the cannon is supposed to have been about 60 pounders, the demi-cannon 32, the culverin 18, falcon 2, mynion 4, saker 5, &c. Many of these pieces, of different calibres, were mounted on the same deck, which must have occasioned great confusion in action in finding for each its proper shot.

On the Restoration of Charles II. the Duke of York was immediately appointed Lord High Admiral; and by his advice, a committee was named to consider a plan, proposed by himself, for the future regulation of the affairs of the navy, at which the Duke himself presided. By the advice and able assistance of Mr. Pepys, great progress was speedily made in the reparation and increase of the fleet. The Duke remained Lord High Admiral till 1673, when, in consequence of the test required by Parliament, to which he could not submit, he resigned, and that office was in part put in commission, and the rest retained by the King. Prince Rupert was put at the head of this commission, and Mr. Pepys appointed Secretary to the King in all naval affairs, and of the admiralty; and by his able and judicious management, there were in sea-pay, in the year 1679, and in excellent condition, 76 ships of the line, all furnished with stores for six months, eight fire-ships, besides a numerous train of ketches, smacks, yachts, &c., with more than 12,000 seamen; and also 30 new ships building, and a good supply of stores in the dock-yards. But this flourishing condition of the navy did not last long. In consequence of the dissipation of the King, and his pecuniary difficulties, he neglected the navy on account of the expenses; the Duke was sent abroad, and Mr. Pepys to the Tower. A new set of commissioners were appointed, without experience, ability, or industry; and the consequence was, as stated by the commissioners of revision, that "all the wise regulations, formed during the administration of the Duke of York, were neglected; and such supineness and waste appear to have prevailed, that, at the end of not more than five years, when he was recalled to the office of Lord High Admiral, only 22 ships, none larger than a fourth rate, with two fire ships, were at sea; those in harbour were quite unfit for service; even the 30 new ships which he had left building had been suffered to fall into a state of great decay, and hardly any stores were found to remain in the dock yards."

The first act on the Duke's return was the re-appointment of Mr. Pepys as secretary of the admiralty. Finding the present commissioners unequal to the duties required of them, he recommended others. Sir Anthony Dean, the most experienced of the ship-builders then in England, was joined with the new commissioners. To him, it has been said, we owe the first essential improvement in the form and qualities of ships of the line, having taken the model of the *Superbe*, a French ship of 74 guns, which anchored at Spithead, and from which he built the *Harwich* in 1664. Others, however, are of opinion that no improvement had at this time been made on the model of the *Sovereign* of the seas after she was cut down. The new commissioners under-

took,

took, in three years, to complete the repair of the fleet, and furnish the dock-yards with a proper supply of stores, on an estimate of 400,000*l.* a year, to be issued in weekly payments; and in two years and a half they finished their task, to the satisfaction of the King and the whole nation; the number of ships repaired and under repair being 108 sail of the line, besides a considerable number of vessels of smaller size. The same year the King abdicated the throne, at which time the list of the navy amounted to 173 sail, containing 101,892 tons, carrying 6930 guns, and 42,000 seamen.

The naval regulations were wisely left unaltered at the Revolution, and the business of the Admiralty continued to be carried on chiefly, for some time, under the immediate direction of King William, by Mr. Pepys, till the arrival of Admiral Herbert and Captain Russel from the fleet, into whose hands, he says, "he silently let it fall." Upon the general principles of that system, thus established with his aid by the Duke of York, the civil government of our navy has ever since been carried on.

In the second year of King William (1690), no less than 30 ships were ordered to be built, of 60, 70, and 80 guns each; and in 1697, the king, in his speech to Parliament, stated that the naval force of the kingdom was increased to nearly double what he found it at his accession. It was now partly composed of various classes of French ships which had been captured in the course of the war, amounting in number to more than 60, and in guns to 2300; the losses by storms and captures on our side being about half the tonnage and half the guns we had acquired. At the commencement of this reign, the navy, as we have stated, consisted of 173 ships, measuring 101,892 tons; at his death, it had been extended to 272 ships, measuring 159,020 tons, being an increase of 99 ships and 57,128 tons, or more than one-half both in number and in tonnage.

The accession of Queen Anne was immediately followed by a war with France and Spain, and in the second year of her reign, she had the misfortune of losing a vast number of her ships by one of the most tremendous storms that was ever known; but every energy was used to repair this national calamity. In an address to the House of Lords in March 1707, it is declared as "a most undoubted maxim, that the honour, security and wealth of this kingdom does depend upon the protection and encouragement of trade, and the improving and right encouraging its naval strength . . . therefore, we do in the most earnest manner beseech your Majesty, that the sea-affairs may always be your first and most peculiar care." In the course of this war were taken or destroyed about 50 ships of war, mounting 3000 cannon; and we lost about half the number. At the death of the queen, in 1714, the list of the navy was reduced in number 247 ships, measuring 167,219 tons, being an increase in tonnage of 8199 tons.

George I. left the navy pretty nearly in the same state he found it. At his death, in 1727, the list consisted of 233 ships, measuring 170,862 tons, being a decrease in number of 14, but an increase in tonnage of 3643 tons.

George II. was engaged in a war with Spain in 1739, in consequence of which the size of our ships of the line ordered to be built was considerably increased. In 1744, France declared against us; but on the restoration of peace in 1748, it was found that our naval strength had prodigiously increased. Our loss had been little or nothing, whilst we had taken and destroyed of the French 20, and of the Spanish 15 sail of the line, besides smaller vessels. The war with France of 1755 added considerably to the list, so that, at the king's decease in 1760, it consisted of 412 ships, measuring 321,104 tons.

In the short war of 1762, George III. added no less than 20 sail of the line to our navy. At the conclusion of the American war, in 1782, the list of the navy was increased to 600 sail; and at the signing of the preliminaries in 1783, it amounted to 617 sail, measuring upwards of 500,000 tons; being an increase of 185 ships and 157,000 tons and upwards since the year 1762. At the peace of Amiens, the list of the fleet amounted to upwards of 700 sail, of which

144 were of the line. The number taken from the enemy, or destroyed, amounted nearly to 600, of which 90 were of the line, including 50 gun ships, and upwards of 200 were frigates; and our loss amounted to about 60, of which 6 were of the line, and 12 frigates.

The recommencement and long continuance of the revolutionary war, and the glorious successes of our naval actions, the protection required for our extended commerce, of which, in fact, we might be said to enjoy a monopoly, and for the security of our numerous colonies, contributed to raise the British navy to a magnitude to which the accumulated navies of the whole world bore but a small proportion. From 1808 to 1813, there were seldom less than from 100 to 106 sail of the line in commission, and from 130 to 160 frigates, and upwards of 200 sloops, besides bombs, gun-brigs, cutters, schooners, &c., amounting in the whole to about 500 sail of effective ships and vessels; to which may be added 500 more in the ordinary, and as prison, hospital and receiving ships; making at least 1000 pendants, and measuring from 800,000 to 900,000 tons. The commissioners appointed to inquire into the state and condition of the woods, forests and land revenues of the Crown, state in their report to Parliament, in the year 1792, that "at the accession of his Majesty (George III.) to the throne, the tonnage of the royal navy was 321,104 tons, and at the end of the year 1788, it had risen to no less than 413,467 tons." In 1808 it had amounted to the enormous extent of 800,000 tons, having nearly doubled itself in twenty years.

It must not, however, be supposed that the effective navy consisted of more than half this amount of tonnage. Since the conclusion of the war, it would appear that at least one-half of the number of ships then in existence have been sold or broken up as unfit for the service; and as, by the list of the navy at the beginning of the year 1821, the number of ships and vessels of every description in commission, in ordinary, building, repairing, and ordered to be built, has been reduced to 609 sail, we may take the greatest extent of the present tonnage at 500,000 tons; but the greatest part, if not the whole, of this tonnage may be considered as efficient, or in a state of progressive efficiency.

According to the printed list of the 1st January 1821, the 609 sail of ships and vessels appear to be as under:—

	No.
1st Rates from 120 to 100 guns	23
2d Rates — 86 — 80 do. . . .	16
3d Rates — 78 — 74 do. . . .	90
4th Rates — 60 — 50 do. . . .	20
5th Rates — 48 — 22 do. . . .	107
6th Rates — 34 — 24 do. . . .	40
Sloops — 22 — 10 do. . . .	136

Making a total of 432

To which being added gun-brigs, cutters, schooners, tenders, bombs, troop-ships, store-ships, yachts, &c. 177

Grand total 609

The increase in the size of our ships of war was unavoidable. France and Spain increased theirs, and we were compelled, in order to meet them on fair terms, to increase the dimensions of ours; many of theirs were, besides, added to the list of our navy.

The following sketch will show the progressive rate at which ships of the first rate, or of 100 guns and upwards, were enlarged in their dimensions.

In 1677, the first rates were from 1500 to 1600 tons. In 1720, they were increased to 1800 tons. In 1745, we find them advanced to 2000 tons. During the American war they were raised to 2000 tons. In 1795, the Ville de Paris, of 110 guns, measured 2350 tons. In 1804, the Hibernia, of 110 guns, was extended to 2500 tons; and in 1808, the Caledonia, carrying 120 guns, measured 2616 tons, and here we stopped.

SHIPPINGPORT, a village of the United States, in Jefferson county, Kentucky, on the Ohio, 2 miles below Louisville. Here are a ship-yard, rope-walk, and a flour-mill. It is the landing-place for all goods ascending the rivers to Kentucky, and also for such goods as are intended for the country above the falls. After descending the rapids, boats generally put in at this place to procure supplies.

SHIPPON, or **SHIPSTON**, a hamlet of England, in Berkshire, adjacent to Abingdon.

SHIP-SHAPE, in Sea Language, denotes the fashion of a ship, or the manner of an expert sailor: thus, they say, the mast is not rigged *ship-shape*, and trim your sails *ship-shape*.

SHIPSTON, or **SHIPSTON-UPON-STOUR**, a market town of England, in the county of Worcester, situated on the river Stour, in a detached part of the county. Though the neighbouring district is much improved and well cultivated, yet the town cannot boast much of its appearance, containing a great number of small, poor looking houses, and the streets being badly paved. The name is derived from its being formerly noted as one of the greatest sheep markets in the kingdom. At present the town has no trade of any consequence; its manufactory of shags is on the decline, but it has a large market on Friday. Population 1377; 11 miles south-south-west of Stratford-upon-Avon, and 83 north-west of London.

SHIPTON, a hamlet of England, in Buckinghamshire, adjacent to Winslow.

SHIPTON, a parish of England, in Salop; 7 miles south-west of Much Wenlock.

SHIPTON, or **SHIPTON BELLINGER**, a parish of England, in Southamptonshire; 9 miles west-by-north of Andover.

SHIPTON, a township of England, East Riding of Yorkshire, near Market Weighton.

SHIPTON, a hamlet of England, North Riding of Yorkshire; 5½ miles north-west of York.

SHIPTON, a township of Lower Canada, in the county of Buckingham. Population 1000.

SHIPTON CLIFF, a parish of England, in Gloucestershire; 6 miles north-west of North Leach.

SHIPTON MOYNE, a parish of England, in Gloucestershire; 2½ miles south-by-west of Tetbury.

SHIPTON-UPON-CHARWELL, a parish of England, in Oxfordshire; 2 miles east of Woodstock.

SHIPTON-LEE, or **LEE-GRANGE**, a hamlet of England; 5½ miles south-west of Winslow.

SHIPTON SOLERS, a parish of England, in Gloucestershire; 5½ miles north-west of North Leach.

SHIPTON-UNDER-WICHWOOD, a parish of England, in Oxfordshire; 4 miles from Burford. Population 395.

SHIPWRECK, *s.* The destruction of ships by rocks or shelves.

Bold were the men, which on the ocean first
Spread their new sails, when *shipwreck* was the worst.

Waller.

The parts of a shattered ship.—They might have it in their own country, and that by gathering up the *shipwrecks* of the Athenian and Roman theatres. *Dryden*.—Destruction; miscarriage.—Holding faith and a good conscience, which some having put away, concerning faith, have made *shipwreck*. *1 Tim.*

To **SHIPWRECK**, *v. a.* To destroy by dashing on rocks or shallows.

Whence the sun 'gins his reflection,
Shipwrecking storms and direful thunders break.

Shakspeare.

To make to suffer the dangers of a wreck.
Thou that can'st still the raging of the seas,
Chain up the winds, and bid the tempests cease,
Redeem my *shipwreck'd* soul from raging gusts
Of cruel passion and deceitful lusts.

Prior.

To throw by loss of the vessel.
Vol. XXIII. No. 1561.

Shipwreck'd upon a kingdom, where no pity,
No friends, no hope! no kindred weep for me. *Shakspeare.*

SHIPWRIGHT, *s.* A builder of ships.

As when a *shipwright* stands his workmen o'er,
Who ply the wimble some huge beam to bore,
Urg'd on all hands it nimbly spins about,
The grain deep piercing, till it scoops it out.

Pope.

SHIRA, a small river of Scotland, in Argyleshire, which rises in the mountains behind Inverary, and, after forming a small deep lake, called Loch Dubb, falls into Loch Fyne, near the town of Inverary. The Shira gives the name of Glenshira to the district through which it runs.

SHIRAS, a great city of Persia, capital of the province of Fars, and at several periods of the whole empire. Although, however, the Persian historians refer its origin to a high antiquity, there seems no satisfactory evidence of its possessing at least any importance before the establishment of the Mahometan power. It presents in fact no ruins similar to those of Persepolis, Shapour and Susa, to attest its ancient greatness. Under the dynasty of the Abbassides, it shared with Ispahan the residence of the sovereign; and the city, as well as the country round, were studiously improved and embellished. After the overthrow of the power of the caliphs, and the accession of the Turkish dynasty of Seljuck, Shiras fell into the possession of a petty dynasty of Attabegs. It was afterwards ruled by four princes of the Mozaffar family, who were driven out by one of the sons of Timur. Shiras continued to share in the perpetual revolutions of the Persian empire, and suffered particularly by the invasion of the Afghans; but it revived under Kurreem Khan, who, during his reign of 22 years, made it the seat of his empire, and not only fortified, but embellished it with a great variety of public buildings. In the dreadful civil wars which followed his death, Shiras not only suffered neglect, but was taken by Aga Mahommed, who levelled all its fortifications to the ground, leaving only a mud wall for the defence of the city.

The environs of Shiras are described as almost unrivalled in point of beauty and fertility. They are laid out to a great extent in magnificent gardens, the flowers and fruits of which form a favourite theme of eastern poetry. Hafiz, the Anacreon of the East, was a native of Shiras, and composed most of his productions in these delightful retreats. He is buried in a small garden, about half a mile from the town, and a tomb has been erected to him by Kurreem Khan, consisting merely of a block of white marble in the form of a tomb, on which are inscribed two of his poems, and the date of his death. His works are not, as has been stated, chained to the tomb; but a splendid copy of them is always kept in an adjoining house. Near this spot is the garden of Jehan Nama, the most beautiful in the neighbourhood of this place, and known in the time of Kurreem, by the title of the Vakeel's garden. Adjoining are the stream of Racknabad, and the bower of Mossella, so celebrated in the verses of the poet; the former consisting merely of a small rivulet of the clearest water, not more than two feet wide; while of the bower not a shrub now remains, and its site is only marked by the ruins of an ancient tower. The appearance of Shiras, seen amid this beautiful scenery, is rather pleasing than grand. The lofty domes of the mosques, discovered from afar amid the trees, diversify and enrich the view. The internal aspect of the place presents a striking contrast, usually observed in oriental cities, particularly those of Persia. The narrow, winding and dirty streets, and the paltry houses, excite no idea answering to the second city of Persia, and one of the most celebrated in the east. Its magnificence consists solely in a few public buildings, of which the most remarkable is the great bazar, or market-place, built by Kurreem Khan. It is in length about a quarter of a mile, made of yellow burnt brick, and arched at the top, having numerous skylights, which, with its doors and windows, always admit sufficient light and air, whilst the sun and rain are completely excluded. This

bazar is allotted to the different traders of the city, all of whom have their assigned quarters, which they possess under strict regulations. The ark, or citadel, which forms the residence of the governor, is a fortified square, of eighty yards. The royal palace within is far from being an elegant structure; and some pillars, which were its greatest ornament, were removed by Aga Mahommed, to adorn his palace at Jehraun. Shiras still boasts a population of 40,000, and carries on an extensive commerce, which, during the tranquillity of the last few years, has greatly increased. It consists chiefly in receiving from Bushire the spices and cotton goods of India, and transmitting them to Ispahan and Yezd. The sides also of the hills which bound the plain of Shiras, produce a wine which has the highest reputation of any in Persia, or even in the east. Lat. 29. 36. N. long. 52. 44. E.

SHIRAVERT, a village of Ghilan; 30 miles south of Astara.

SHIRBEY, a village of Syria, in the pachalic of Aleppo; 15 miles east of Aleppo.

SHIRBORN, a small river of England, in Warwickshire, which runs into the Sow at Whitby.

SHIRBORNE, a parish of England, in Oxfordshire; 4 miles south-by-east of Tetsworth.

SHIRCOAT, a township of England, West Riding of Yorkshire, adjoining to Halifax. Population 2823.

SHIRE, *s.* [сиръ, from сѣпан, to divide, Sax.] A division of the kingdom; a county; so much of the kingdom as is under one sheriff.

His blazing eyes, like two bright shining shields,
Did burn with wrath, and sparkled living fire;

As two broad beacons, set in open fields,
Send forth their flames far off to every shire. *Spenser.*

SHIREBURN. See *SHERBORNE*.

SHIRE-CLERK, he that keeps the county court; and his office is so incident to that of the sheriff, that the king cannot grant it away.

SHIREHAMPTON, a hamlet of England, in Gloucestershire; 5 miles north-west of Bristol.

SHIRE-MAN was anciently the judge of the shire, by whom trials for land, &c. were determined.

SHIREMOT, *s.* [сиръ-мотъ, Sax. See *MOTE*.] Anciently a county court; a meeting of the persons of the county on an extraordinary occasion.—If the matter was of great importance, it was put in the full *shiremote*; and if the general voice acquitted or condemned, this was final in the cause. *Burke*.

SHIRENEWTON, a village and parish of England, in Monmouthshire; 4½ miles west of Chepstow. Population of the parish, 622.

SHIRE-REVE. See *SHERIFF*.

To SHIRK, *v. n.* To shark; to practise mean or artful tricks. See *To SHARK*. *Sherking*, an eager desire to cheat another. *Exm.* Dialect. *Grose*.—*Sherking* and raking in the tobacco-shops. *Harbottle Grimstone*.

To SHIRK, *v. a.* To procure by mean tricks; to steal.—Tell me, you that never heard the call of any vocation, that are free of no other company than your idle companions, that *shirke* living from others, but time from yourselves; tell me, may it not be said of idleness, as of envy, that it is its own scourge? *Bp. Rainbow*.—To avoid: a modern and vulgar colloquial term.

SHIRL, *adj.* Shrill. *Huloet*. See *SHRILL*. The *shirl-cock* is the Derbyshire word for the throstle or song-thrush *Pegge*.

SHIRLAND, a parish of England, in Derbyshire; 2½ miles north-by-west of Alfreton. Population 1197.

SHIRLEY (Anthony), a celebrated traveller, was born in 1565. He studied at Oxford, where he took his bachelor's degree in 1581, after which he joined the English troops, which, at that time, were serving in Holland. In 1596 he was one of the adventurers who went to annoy the Spaniards in their settlements in the West Indies, and on his return he

was knighted. After this he was sent by the queen into Italy in order to assist the people of Ferrara in their contest with the pope: before, however, he arrived, all the disputes were accommodated, and peace was signed; he accordingly proceeded to Venice, and travelled from thence to Persia, where he came in great favour with Shah Abbas, by whom he was sent ambassador to England in 1612. By the Emperor of Germany he was raised to the dignity of Count, and by the king of Spain he was appointed admiral of the Levant seas. He died in Spain about the year 1630. There is an account of his West Indian expedition in the third volume of Hacluyt's Collection, under the following title: A true Relation of the Voyage undertaken by Sir Anthony Shirley, Knight, in 1596, intended for the Island San Tome, but performed to St. Jago, Dominica, Margarita, along the Coast of Terra Firma to the Isle of Jamaica, the Bay of Honduras. Thirty Leagues up Rio Dolce, and homewards by Newfoundland, with the memorable exploits achieved in all this Voyage." His travels into Persia are printed separately, and were published in London in 1613; and his travels over the Caspian Sea, and through Russia, were inserted in Purchas's Pilgrimages.

SHIRLEY (James), a poet and dramatic writer, was born in London about the year 1594. He received the early part of his education at Merchant Taylors' School, from which place he was removed to Oxford. He was, on account of his talents, patronized by Dr. Laud, who, however, would not consent to his taking orders, by reason of his being disfigured by a large mole on his cheek, which in his estimation according to the canons of the church, rendered him unfit to officiate in clerical duties. Shirley therefore left Oxford without a degree; but he afterwards removed to Cambridge, and meeting with no farther obstacle, he took orders, and obtained a curacy. His religious creed was not sufficiently settled, and he went over to the church of Rome, abandoned his cure, and opened a grammar-school at St. Alban's. After some time he deserted this employment, and became a writer for the stage. His productions were successful, and he acquired a reputation which caused him to be taken into the service of queen Henrietta-Maria. When the civil war broke out, he accompanied the earl of Newcastle in his campaigns, and also assisted him in the composition of several of his plays. On the ruin of the king's cause he came to London, and resumed his occupation of a school-master, in which he met with considerable encouragement, and he shewed his attention to the duties of his office, by publishing some works on grammar.

During the Commonwealth, theatrical amusements being suspended, Shirley had no room in which he could display his dramatic talents; but after the Restoration, several of his pieces appeared again on the stage. The death of this author is thus described: his house in Fleet-street being burnt in the great fire of London, in the year 1666, he was forced with his wife to retreat to the suburbs; in consequence of the loss and the alarm which this occasioned, both himself and wife died within a few hours of each other, and they were buried in the same grave.

Mr. Shirley was author of thirty-seven plays, consisting of tragedies and comedies, and of a volume of poems, published in 1646. He had the reputation of being the chief among the second-rate poets of his time, and though his works have disappeared from the stage, there are critics who think highly of them.

SHIRLEY, a township of England, in Derbyshire; 4½ miles north-east of Ashborne.

SHIRLEY, a post township of the United States, in Middlesex county, Massachusetts; 41 miles west-north-west of Boston. Population 814.—2d. Of Huntingdon county, Pennsylvania. Population 862.

SHIRLEYSBURG, a post village of the United States, in Huntingdon county, Pennsylvania.

SHIRT, *s.* [Mr. Horne Tooke asserts that *shirt* is the past participle of the Sax. сирпан, to shear, to divide. Junius and Skinner derive it from the Sax, rýpe (which Dr. Johnson has inaccurately

inaccurately given ρεῖπε,) whence our *sark*. But *shirt* is, undoubtedly, the Lat. *scyrta*, indusium.] The under linen garment of a man. *Dr. Johnson*.—And formerly, he might have added, of either sex.

When we lay next us what we hold most dear,
Like Hercules, envenom'd *shirts* we wear,
And cleaving mischiefs.

Dryden.

Several persons in December had nothing over their shoulders but their *shirts*.

Addison.

To *SHIRT*, *v. a.* To cover; to clothe as in a shirt.

Ah! for so many souls, as but this morn
Were cloath'd with flesh, and warm'd with vital blood,
But naked now, or *shirted* but with air.

Dryden.

SHIRTLESS, *adj.* Wanting a shirt.

Linsey-woolsey brothers,
Grave mummers! sleeveless some, and *shirtless* others.

Pope.

SHIRVAN, a province in the north of Persia, forming the largest and most important division of the southern Caucasus. It consists of a large triangular peninsula, the point of which stretches into the Caspian. In consequence of this form, it varies extremely in breadth, which, at the extremity of the peninsula, is scarcely 16 miles, while in the interior part it amounts to 160. It is bounded on the north and east by Georgia and Daghestan; on the south by the Kur, which separates it from Ghilan and Aderbijan. The northern part consists of an extensive plain, inclosed by the mountains that extend towards the sea near Derbend. Numerous streams from the mountains greatly contribute towards the fertility of this plain, at the same time that they render the passage of an army extremely difficult. They branch off in various directions, are uncommonly rapid, and being shallow, have a wide channel, with a rough and sandy bed. The plain is interspersed with small woods and clumps of bushes, and the villages are surrounded with orchards, vineyards, and plantations of mulberries. The second division of Shirvan extends from the coast to the plain watered by the Kur, and is bounded by a higher range of mountains, which run in a south-east course through the province. The higher districts are here the most fertile: the part towards the sea is barren and devoid of water, and to the north of Baku is a desert track of considerable extent. The plain along the Kur is about 140 miles in length, and from 40 to 50 in breadth. It is in a great degree surrounded with mountains, and being exposed to frequent inundation, is greatly overgrown with rushes. The most elevated track in Shirvan is that which extends towards Lesghistan. It varies much in breadth, and is intersected by narrow valleys, in many of which are small lakes, which continue filled, even in the greatest heat of summer. Shirvan may in general be esteemed a fertile country, being watered by numberless rivers, some of which fall into the Khur, and others into the Caspian. The most considerable are the Samur, Deli, Sagaite, and Persagat. This province was annexed to the Persian empire in 1500, by Shah Ismael the First, and continued subject till the decline of the Sefi dynasty, when the native princes, taking advantage of the weakness of Persia, re-established their independence. Recently, however, the Russians have obtained possession of all the sea-coast, though the interior remains in the hands of the chiefs of Lesghistan. The principal towns are Schamachi and Baku.

SHISDRA, a small town of the interior of European Russia, in the government of Kaluga, on the river Shisdra, which joins the Oka. Population 1900; 77 miles south-west of Kaluga.

SHITAKOONTHA, a name of the Hindoo deity Siva. It means the blue-throated; the fable stating that he had swallowed poison in despair.

SHITTLINGTON, a hamlet of England, in Northumberland; 7 miles from Hexham.

SHITTLINGTON, a township of England, West Riding

of Yorkshire; 4½ miles south-west of Wakefield. Population 1410.

SHITTAH, or *SHITTIM*, *s.* A sort of precious wood, of which Moses made the greatest part of the tables, altars, and planks belonging to the tabernacle. The wood is hard, tough, smooth, without knots, and extremely beautiful. It grows in Arabia. *Calmet*.—I will plant in the wilderness the *shittah*-tree. *Isa*.—Bring me an offering of badgers' skins and *shittim*-wood. *Exodus*.

SHITTEN BAY, a bay on the west coast of the island of St. Christopher.

SHITTERTON, a hamlet of England, in Dorsetshire, near Wareham, in the neighbourhood of which is an obelisk, and various remains of a Roman encampment.

SHITTLE, *adj.* [probably from the Germ. *schütteln*, to shake.] Wavering; unsettled: as a *shittle*-headed or *shittle*-brained person, which Sherwood gives in his dictionary and which Cotgrave explains by *light*-headed and *giddy*-headed.

We passe not what the people say or thinke:
Their *shittle* hate makes none but cowards shrinke. *Mir*.

SHITTLECOCK, *s.* [from *schütteln*, Germ., to shake; and called a cock from its feathers, or perhaps softened by frequent and rapid utterance from *cork* to *cock*.] A cork stuck with feathers, and driven by players from one to another with battledoors.—You need not discharge a cannon to break the chain of his thoughts: the pat of a *shittlecock*, or the creaking of a jack, will do his business. *Collier*.

SHITTLENESS, *s.* Unsettledness; inconstancy; lightness.—The vain *shittleness* of an unconstant head. *Barret*.

SHIVE, *s.* [*schyf*, Dutch, a round slice, *schyven*, plur. Our word was anciently *sheeve*: and it may be referred to the Sax. *ƿearpan*, to shave, whence *ƿearþa*, segmen, assula.] A slice of bread.—A *sheeve* of bread as brown as nut. *Warner*.

Easy it is
Of a cut loaf to steal a *shive*. *Titus Andronicus*.

A thick splinter or lamina cut off from the main substance.—Shavings made by the plain are in some things differing from those *shives*, or thin and flexible pieces of wood, that are obtained by borers. *Boyle*.

To *SHIVER*, *v. n.* To fall at once into many parts or shives.

Had'st thou been aught but gossamer, feathers, air,
So many fathom down precipitating,
Thoud'st *shiver'd* like an egg. *Shakspeare*.

To *SHIVER*, *v. a.* To break by one act into many parts; to shatter.—The ground with *shiver'd* armour strown. *Milton*.

Showers of granado's rain, by sudden burst
Disploding murderous bowels; fragments of steel
A thousand ways at once, the *shiver'd* orbs
Fly diverse, working torment. *Philips*.

To *SHIVER*, *v. n.* [Icel. *skeftur*, concussion; Germ. *schauren*, tremere. *Serenius*.] To quake; to tremble; to shudder, as with cold or fear.—Why stand we longer *shivering* under fear. *Milton*.

The man that *shiver'd* on the brink of sin,
Thus steel'd and harden'd, ventures boldly in. *Dryden*.

SHIVER, *s.* One fragment of many into which any thing is broken.

As brittle as the glory is the face;
For there it is crack'd in an hundred *shivers*. *Shakspeare*.

A thin slice; a little piece.—Of your white bread a *shiver*. *Chaucer*.—The mote [is] a small thin *shiver* of wood. *Hammond*.—A shaking fit; a tremor; a spindle. *Hist*.—In naval language a wheel fixed in a channel or block.

SHIVERING, *s.* Act of trembling.—Panic fears and *shiverings* oftentimes attend bloodguilty men, as long as they live. *Goodman*.—Division; dismemberment.—Upon the

the breaking and *shivering* of a great state, you may be sure to have wars. *Bacon.*

SHIVERS, in a Ship, the seamen's term for those little round wheels in which the rope of a pulley or block runs.—In *Rope-making*, the foul particles taken from the hemp, when hatchelling.

SHIVERY, *adj.* Loose of coherence; incompact; easily falling into many fragments.—There were observed incredible numbers of these shells thus flattened, and extremely tender, in *shivery* stone. *Woodward.*

SHOA, a province in the southern extremity of Abyssinia, having Ambara on the north, and Efat on the east. It is fertile, and furnishes a great body of cavalry, equally brave and well equipped. This province was at one time the royal residence, and contains Tegulet, the ancient capital. At the present moment, Shoa and Efat form a kingdom, still under the government of an Abyssinian prince, while the Galla occupy all the surrounding countries, including Gondar, the capital.

SHOAD, in Mining, a term for a train of metalline stones mixed with earth, sometimes lying near the surface, sometimes at considerable depths, but always serving to the miners as a proof that the load or vein of the metal is thereabout. The deeper the shoad lies, the nearer is the vein.

SHOADSTONE, *s.* *Shoadstone* is a small stone, smooth without, of a dark liver colour, and of the same colour within, only with the addition of a faint purple. It is a fragment broke off an iron vein. *Woodward.*—The loads or veins of metal were by this action of the departing water made easy to be found out by the *shoads*, or trains of metallic fragments borne off from them, and lying in trains from those veins towards the sea, in the same course that water falling thence would take. *Woodward.*

SHOAD-STONES, a term used by miners, to express such loose masses of stone, as are usually found about the entrances into mines.

SHOAL, *s.* [*iceole*, Sax., a multitude.] A croud; a great multitude; a throng.

Around the goddess roll
Broad hats, and hoods, and caps, a sable *shoal*,
Thick, and more thick the black blockade extends. *Pope.*

A shallow; a sand-bank. [a contraction of *shallow*.] The haven's mouth they durst not enter, for the dangerous *shoals*. *Abbot.*

To **SHOAL**, *v. n.* To croud; to throng.—The wave-sprung entrails, about which fauns and fish did *shole*. *Chapman.*—To be shallow; to grow shallow.

What they met
Solid or slimy, as in raging sea,
Tost up and down, together crouded drove,
From each side *shoaling* towards the mouth of hell. *Milton.*

SHOAL, *adj.* Shallow; obstructed or incumbered with banks. Applied by Spenser to one of his personified rivers.

Molanna, were she not so *shole*,
Were no less faire and beautiful than she. *Spenser.*

SHOAL BAY, a bay on the east coast of New Holland, in lat. 29. 26½. S.

SHOAL CREEK, a river of the United States, in Illinois, which has a course south-by-west of about 70 miles, and joins the Kaskaskia, in lat. 38. 27. N. It is a fine and rapid stream, and is navigable for boats about 30 miles.

SHOAL INLET, a channel of the United States, between two small islands, on the coast of North Carolina. Lat. 34. 5. N. long. 77. 58. W.

SHOALINESS, *s.* Shallowness; frequency of shallow places.

SHOALNESS, a low point on the west coast of North America: Captain Cook, who met with several of the natives on this coast, thus describes their character and manners:—"While we lay here, 27 men of the country, each in a canoe, came off to the ships, which they approached with great caution, hallooing and opening their arms as

they advanced. This, we understand, was to express their pacific intentions. At length some approached near enough to receive a few trifles that were thrown to them. This brought on a traffic between them and our people, who got dresses of skins, bows, arrows, darts, wooden vessels, &c.; our visitors taking in exchange whatever was offered them. They seemed to be the same kind of people that we had lately met with along this coast; wore the same ornaments in their lips and noses, but were far more dirty, and not so well clothed. They appeared to be wholly unacquainted with people like us; knew not even the use of tobacco; nor was any foreign article seen in their possession, unless a knife may be considered as such. This indeed was no more than a piece of common iron fitted into a wooden handle. They however knew the value and use of this instrument so well, that it seemed to be the only article they wished for. Most of them had their hair shaved or cut short off, leaving only a few locks behind, or on one side. As a covering for the head they wore a hood of skins, and a bonnet apparently of wood. One part of their dress was a kind of girdle, very neatly made of skin, with trappings depending from it, and passing between the legs, so as to conceal the adjoining parts. By the use of such a girdle, it should seem that they sometimes go naked, even in this high latitude, for they hardly wear it under their own clothing. The canoes were made of skins, like all the others we had lately seen; except that these were broader, and the hole in which the man sits was wider than in any I had before met with." Lat. 60. N. long. 198. 12. E.

SHOALS, ISLES OF, or SMITH'S ISLANDS, seven islands on the coast of New Hampshire; 11 miles south-east of Portsmouth. Lat. 42. 59. N. long. 70. 33. W. Staten island, on which is the town of Gosport, belongs to New Hampshire; the rest belong to Maine. They are inhabited by about 100 fishermen.

SHOAL-WATER BAY, a bay on the east coast of New Holland, visited by Capt. Flinders in 1802, who mentions that it offers no advantages to ships which may not be had on any other part of the coast, except that the tides rise higher, and that in the winter season fish are more plentiful than farther to the south. Long. of Aken's Island, situated at its entrance, 150. 15. E. Lat. 22. 21. 35. S.

SHOAL-WATER BAY, a bay on the west coast of North America. Lat. 46. 50. N. long. 124. 10. W.

SHOAL-WATER CAPE, a high and bluff headland on the north-west coast of North America, so called by Captain Mears. Lat. 46. 47. N. long. 235. 11. E.

SHOALY, *adj.* Full of shoals; full of shallow places.

The watchful hero felt the knocks, and found
The tossing vessel sail'd on *shoaly* ground. *Dryden.*

SHOBA, a town of Darfur, in Central Africa; 42 miles west-south-west of Cobbe.

SHOBDON, a village and parish of England, in the county of Hereford. The church here has been elegantly rebuilt at the expense of Lord Viscount Bateman, who has an elegant seat in the neighbourhood, called Shobdon Court. Population 501; 8 miles from Leominster.

SHOBROOKE, a parish of England, in Devonshire; 2 miles east-north-east of Crediton. Population 724.

SHOBURY, NORTH and SOUTH, two villages of England, in Essex, near the mouth of the Thames, and opposite the buoy of the Nore. South Shobury is situated on a point of land called Shobury Ness; 2½ miles from the rising village of Southend. It contains only about 200 inhabitants, but it is recorded to have been anciently a town of some consequence, and many remains of Danish intrenchments are still visible.

SHOCCOE SPRINGS, mineral springs in the United States, in Warren county, North Carolina, which are much resorted to.

SHOCHIE, a small river of Scotland, in the county of Perth, which falls into the Tay at Luncartie.

SHOCK, *s.* [*choc*, old Fr. as our word was also sometimes written. See *ШОК*. The Teut. word is *schock*, *con-*
cusus.]

cussus.] Conflict; mutual impression of violence; violent concourse.

Through the *shock*
Of fighting elements on all sides round
Environ'd, wins his way.

Milton.

Concussion; external violence.

Such is the haughty man, his towering soul,
'Midst all the *shocks* and injuries of fortune,
Rises superior and looks down on Cæsar.

Addison.

The conflict of enemies.

The adverse legions, not less hideous join'd
The horrid *shock*.

Milton.

Offence; impression of disgust.—Fewer *shocks* a statesman gives his friend. *Young*.—[*shockc*, Teut. strues.] A pile of sheaves on corn.

Behind the master walks, builds up the *shocks*,
Feels his heart heave with joy.

Thomson.

[From *shag*.] A rough dog.—I would fain know why a *shock* and a hound are not distinct species. *Locke*.

To *SHOCK*, *v. a.* [Sax. *ſceacan*; Germ. *schocken*: Fr. *chocquer*.] To shake by violence; to meet force with force; to encounter.

These her princes are come home again:
Come the three corners of the world in arms,
And we will *shock* them.

Shakspeare.

To offend; to disgust.

My son,

I bade him love, and bid him now forbear:
If you have any kindness for him, still
Advise him not to *shock* a father's will.

Dryden.

To *SHOCK*, *v. n.* To meet with hostile violence.

And now with shouts the *shocking* armies clos'd,
To lances lances, shields to shields oppos'd;
Commuted death the fate of war confounds,
Each adverse battle gor'd with equal wounds.

Pope.

To be offensive.—The French humour, in regard of the liberties they take in female conversations, is very *shocking* to the Italians, who are naturally jealous. *Addison*.

To *SHOCK*, *v. n.* To build up piles of sheaves.

Reap well, scatter not, gather clean that is shorn,
Bind fast, *shock* apace, have an eye to thy corn. *Tusser*.

SHOCKINGLY, *adv.* So as to disgust; offensively.—It would be *shockingly* ill-bred in that company; and indeed not extremely well bred in any other. *Ld. Chesterfield*.—In my opinion, the shortness of a triennial sitting would have the following ill effects; it would make the member more shamelessly and *shockingly* corrupt; it would increase his dependence on those who could best support him at his election; it would wrack and tear to pieces the fortunes of those who stood upon their own fortunes and their private interests; it would make the electors infinitely more venal; and it would make the whole body of the people who are, whether they have votes or not, concerned in elections, more lawless, more idle, more debauched: it would utterly destroy the sobriety, the industry, the integrity, the simplicity of all the people; and undermine, I am much afraid, the deepest and best laid foundations of the commonwealth. *Burke*.

SHOCKLACH CHURCH, a village of England, county of Chester; 13½ miles south-by-east of Chester.

SHOCKLACH OVIAT, a village in the above county; 1 mile south-by-east of the foregoing.

SHOD, for *shoed*, the preterite and participle passive of *To shoe*.—Strong axle-treed cart that is clouted and *shod*. *Tusser*.

SHOE, *s.* plural *shoes*, anciently *shoan*. [ſco, Sax. *schu*, Germ. *shohs*, M. Goth. "adjecto sibilo ad antiquissimo *hua*, *hya*, obtegere." *Stiernh. and Serenius*.] The word, therefore, to which *Stiernhielm* refers, is properly *skya*, to cover. But *Watcher* objects to this, as *skya* means to cover us with a shadow, from the Gr. *σκια*, a shadow;

Vol. XXIII. No. 1561.

whereas a *shoe* is the apparel of the foot, Gr. *σκηνη*, indumentum; and he thinks that at first the word was *ſot-sko* (as *hand-schuh* then used for a glove,) and afterwards by aphæresis *ske*. The plural *shoon* is still used in the north of England.] The cover of the foot: of horses as well as men.—Your hose should be ungartered, your *shoe* untied, and every thing about you demonstrating a careless desolation. *Shakspeare*.

Pliny tells us (lib. vii. c. 56.) that one *Tychius*, of *Bœotia*, was the first who used shoes.

M. Nilant, in his remarks on *Baudoin*, observes that he quotes *Xenophon* wrongly, to shew that even in his time they still wore shoes of raw skins.

Xenophon relates, that the ten thousand Greeks, who had followed the young *Cyrus*, wanting shoes in their retreat, were forced to cover their feet with raw skins, which occasioned them great inconveniences.

Nilant will not even allow, that the shoes of the country people, called *carbatine*, and *peroncæ*, were of crude skin, without any preparation.

The patricians, among the Romans, wore an ivory crescent on their shoes: *Heliogabalus* had his shoes covered over with a very white linen, in conformity to the priests of the sun, for whom he professed a very high veneration: this kind of shoe was called *oidos*, *udo*, or *odo*. *Caligula* wore shoes enriched with precious stones. The Indians, like the Egyptians, wore shoes made of the bark of the papyrus.

A patent for making shoes, by rivetting instead of sewing was taken out in 1809 by Mr. David Mead *Randolf*, an American. The *last* which is used for this method, has the lower part or sole covered with a plate of iron or steel, about the same thickness as a stout sole leather. The making of the shoe is conducted in the usual manner, until it is ready for putting on the last. To do this, the inner sole is put upon the iron sole of the last; then the upper leathers are put upon the opposite part, and the edges of the leather are turned down over the edges of the inner sole: the outer sole is then applied over the turning down, and fastened in a temporary manner upon the last. Now, to unite the two soles to the upper-leathers, holes are pierced all round the edges of the sole, and small nails are driven in, which are of sufficient length to penetrate through the sole and the turning-in of the upper-leathers, and also through the inner sole, so as to reach the metal face of the last, and being forcibly driven, their points will be turned by the iron, so as to clench withinside, or rive through the leather, and serve instead of the sewing or stitching commonly employed to unite the sole to the upper-leathers.

Mr. *Brunel* has invented machines for making shoes. He has established at *Battersea* an extensive manufactory of shoes, chiefly intended to supply the army, where all the operations are performed by the aid of machines, which act with such facility, that they can be managed by the invalid soldiers of *Chelsea Hospital*, who are the only workmen employed, the most of them disabled by wounds, or the loss of their legs, from any other employment.

The shoes made by these machines are different from the common shoes, in the circumstance of the sole being united to the upper-leathers by a number of small rivets instead of sewing, in the same manner as those we have mentioned of *Randolf's*. The leather is cut out by stamps, and is hardened by passing it between rollers, to produce the same effect as hammering does in the ordinary method of shoe-making, and all the other processes are subjected to the operations of machinery.

To *SHOE*, *v. a.* preterite *I shod*; participle passive *shod*. To fit the foot with a shoe: used commonly of horses.—He doth nothing but talk of his horse; and makes it a great appropriation to his own good parts, that he can *shoe* him himself. *Shakspeare*.—To cover the bottom.

The wheel compos'd of crickets' bones,
And daintly made for the nonce,
For fear of rattling on the stones,
With thistle down they *shod* it.

Drayton.

SHOE, a small island in the Pacific Ocean, near the coast of Waygoo. Lat. 0. 1. S. long. 130. 53. E.

SHOE/BLACK, *s.* One who cleans shoes. Dr. Johnson calls such an one a *shoeblicker*.

SHOE/BOY, *s.* A boy that cleans shoes.—If I employ a *shoeboy*, is it in view to his advantage, or my own convenience? *Swift*.

SHOE/ING-HORN, *s.* A horn used to facilitate the admission of the foot into a narrow shoe; any thing by which a transaction is facilitated; any thing used as a medium: in contempt.—I have been an arrant *shoeing-horn* for above these twenty years. I served my mistress in that capacity above five of the number before she was shod. Though she had many who made their applications to her, I always thought myself the best shoe in her shop. *Spectator*.

SHOE/MAKER, *s.* One whose trade is to make shoes.—A cobbler or *shoemaker* may find some little fault with the latchet of a shoe that an Appelles had painted, when the whole figure is such as none but an Appelles could paint. *Watts*.

SHO/ER, *s.* [*rcoepe*, Sax., a maker of shoes.] One who fits the foot with a shoe: used, in some places, of a farrier.

SHOE/STRING, *s.* A string with which shoes are tied.

Bending his supple hams, kissing his hands,
Honouring *shoestrings*.

Randolph.

SHOE/TYE, *s.* The ribband with which women tie their shoes.

I wish her beauty,
That owes not all its duty,
To gaudy tire, or glistering *shoe-ty*.
Madam, I do as is my duty,
Honour the shadow of your *shoetye*.

Crashaw.

Hudibras.

SHOG, *s.* Violent concussion.

Another's diving bow he did adore,
Which, with a *shog*, casts all the hair before. *Dryden.*

To SHOG, *v. a.* To shake; to agitate by sudden interrupted impulses.—The boat in the myddil of the see was *schoggid* with wawis, for the wynd was contrarie. *Wicliffe*.

To SHOG, *v. n.* To move off; to be gone; to jog. *A low obsolete word.*

These fained words agog
So set the goddesses, that they in anger gan to *shog*. *Hall.*

Will you *shog* off? *Shakspeare.*

SHO/GGING, *s.* Concussion; agitation.—Through the violence of such *shoggings* [they] are leapt out of the coach. *Harmar.*

To SHOGGLE, *v. a.* To shake about; to joggle. *Northern.*

SHOKET, a village of Syria, in the pachalic of Damascus, on the Orontes; 140 miles north of Damascus.

SHOLAPOOR, a district of Hindostan, province of Bejapore, situated about the 18th degree of northern latitude. Part of it belongs to the Nizam, the remainder to the Mah-rattas. It is advantageously situated between the rivers Kistna and Beemah, and under a good government would be very productive.

SHOLAPOOR, the capital of the above-mentioned district. It is a fortified town, and was formerly a place of considerable consequence. It is delightfully situated on the northern bank of the river Kistna, and belongs to the Nizam. It was taken by the army of Aurungzebe, from the King of Bejapore, and was then considered as the strongest bulwark of the capital towards Ahmednagur. Lat. 17. 43. N. long. 75. 40. E.

SHOLAVANDEN, a town of the south of India, province of the Carnatic. Lat. 9. 50. N. long. 78. 10. E.

SHOLDEN, a hamlet of England, in Kent; $1\frac{1}{2}$ mile west of Deal.

SHOLINGUR, a town of the south of India, province of the Carnatic, rendered famous by the defeat of Hyder Aly, in

November, 1781, by a very inferior British force under the command of Sir Eyre Coote. Lat. 13. 8. N. long. 79. 30. E.

SHONE. The preterite of *shine*.—All his father in him *shone*. *Milton.*

SHOOK. The preterite and in poetry participle passive of *shake*.

Taxallan, *shook* by Montezuma's pow'rs,
Has, to resist his forces, call'd in ours.

Dryden.

SHOON. The old plural of *shoe*.
To SHOOT, *v. a.* preterite, *I shot*; participle, *shot* or *shotten*. [*rcotian*, Sax., *skiota*, Icel. to dart; an ancient word, common to all the northern dialects. *Serenius*.—To discharge any thing so as to make it fly with speed or violence.

Light
Shoots far into the bosom of dim night
A glimmering dawn.

Milton.

To discharge as from a bow or gun.
I owe you much, and, like a witless youth,
That which I owe is lost; but if you please
To *shoot* an arrow that self way.

Shakspeare.

To let off; used of the instrument.—The two ends of a bow *shot* off, fly from one another. *Boyle*.—To strike with any thing shot.—Not an hand shall touch the mount, but he shall be stoned or *shot* through. *Ex*.—To emit new parts, as a vegetable.—A grain of mustard groweth up and *shooteth* out great branches. *St. Mark*.—To emit; to dart or thrust forth.

Fir'd by the torch of noon, to tenfold rage,
Th' infuriate hill forth *shoots* the pillar'd flame. *Thomson.*

To push suddenly. So we say, to *shoot* a bolt or lock.

The liquid air his moving pinions wound,
And, in the moment, *shoot* him on the ground. *Dryden.*

To push forward.—They that see me *shoot* out the lip, they shake the head. *Psalms*.—To fit to each other by planing. *A workman's term*.—Strait lines in joiner's language are called a joint; that is, two pieces of wood that are *shot*, that is planed or else paired with a pairing-chissel. *Moxon*.—To pass through with swiftness.

Thus having said, she sinks beneath the ground,
With furious haste, and *shoots* the Stygian sound. *Dryden.*

To SHOOT, *v. n.* To perform the act of shooting, or emitting a missile weapon.

A shining harvest either host displays,
And *shoots* against the sun with equal rays. *Dryden.*

To germinate; to increase in vegetable growth.—Such trees as love the sun do not willingly descend far into the earth; and therefore they are commonly trees that *shoot* up much. *Bacon*.

The monarch oak, the patriarch of the trees,
Shoots rising up, and spreads by slow degrees. *Dryden.*

To form itself into shape.—If the menstruum be over-charged, metals will *shoot* into crystals. *Bacon*.—That rude mass will *shoot* itself into several forms, till it make an habitable world; the steady hand of Providence being the invisible guide of all its motions. *Burnet*.—To be emitted.

There *shot* a streaming lamp along the sky,
Which on the winged light'n'ng seem'd to fly. *Dryden.*

The grand ætherial bow
Shoots up immense. *Thomson.*

To protuberate; to jet out.—This valley of the Tyrol lies enclosed on all sides by the Alps, though its dominions *shoot* out into several branches among the breaks of the mountains. *Addison*.—To pass as an arrow.

Thy words *shoot* through my heart,
Melt my resolves, and turn me all to love. *Addison.*

To

To become any thing by sudden growth.

Materials dark and crude,
Of spirituous fiery spume, till touch'd
With Heaven's ray, and temper'd, they shoot forth
So beauteous, opening to the ambient light. *Milton.*

To move swiftly along.—A shooting star in autumn
thwarts the night. *Milton.*

The broken air loud whistling as she flies,
She stops and listens, and shoots forth again,
And guides her pinions by her young one's cries. *Dryden.*

To produce a quick glancing pain.—They found these
noses one day shoot and swell extremely. *Tatler.*

SHOOT, *s.* The act or impression of any thing emitted
from a distance.—The Turkish bow giveth a very forcible
shoot, insomuch as the arrow hath pierced a steel target two
inches thick; but the arrow, if headed with wood, hath
been known to pierce through a piece of wood of eight inches
thick. *Bacon.*—The act of striking, or endeavouring to
strike with a missive weapon discharged by any instrument.

But come the bow; now mercy goes to kill,
And shooting well is then accounted ill.
Thus will I save my credit in the shoot,
Not wounding, pity would not let me do't. *Shakspeare.*

[*Scheuten*, Dutch.] Branches issuing from the main
stock.

I saw them under a green mantling vine,
Plucking ripe clusters from the tender shoots. *Milton.*

A young swine. *Unused.*

SHOOTE, among Neat Cattle, an affection of the bowel
kind, with which calves are often attacked a few days after
calving. The usual symptoms are, first, a colic or pain that
is more or less violent, and is frequently very severe and dan-
gerous, especially when it is contagious. This colic is ter-
minated, and the calf relieved, by a discharge taking place
from the bowels; though this sometimes proves fatal before
the shoote appears. Secondly, a loathing and refusing of
food, even previous to the discharge; which decreases and
increases according to the duration and violence of the dis-
order. Where the disease prevails, the best medicine which
can be administered is that of eggs and flour properly blended
with oil, melted butter, and aniseed, linseed, or similar mu-
cilaginous vegetable matters; and milk simply mulled with
eggs may be often given with much advantage.

SHOOTER, *s.* One that shoots; an archer; a gunner.
—Some shooters take in hand stronger bows than they be
able to maintain. *Ascham.*

SHOOTER'S HILL, a village of England, in the county
of Kent, situated on a hill of the same name, beyond Black-
heath, on the road to Dartford. The hill commands a most
extensive view of London, the Thames, and into Essex, Kent,
and part of Surrey. Its name is supposed to have been
derived from the exercise of archery carried on in the neigh-
bouring woods in former times. On the summit of the hill
are some pleasant houses. The neighbourhood was former-
ly noted for robberies, till the road was widened, and
much of the coppice wood cut down; 8 miles east-south-
east of London.

SHOOTER'S HILL, a hill of England, in Kent, 446 feet
in height.

SHOOTING, *s.* [ʃu:ʊŋ, Sax.] Act of emitting as
from a gun or bow.—Wrestling, shooting, and other such
active sports, will keep men in health, *Sprat.*—Sensation
of quick pain.—I fancy we shall have some rain, by the
shooting of my corns. *Goldsmith.*

SHOOTING POINT, a cape of Scotland, on the south
coast of the county of Fife and east side of Largo bay.

SHOP, *s.* [ʃeɒpə, Sax, a magazine; *eschoppe*, Fr.;
shopa or *schoppa*, low Lat.] A place where any thing is
sold.

Our windows are broke down,
And we for fear compell'd to shut our shops. *Shakspeare.*

A room in which manufactures are carried on.

Your most grave belly thus answer'd;
True is it, my incorporate friends,
That I receive the general food at first,
Which you do live upon; and fit it is,
Because I am the storehouse and the shop
Of the whole body. *Shakspeare.*

To SHOP, *v. n.* To frequent shops: as, they are shop-
ping. *A colloquial phrase.*

SHO'BOARD, *s.* Bench on which any work is done.
That beastly rabble that came down
From all the garrets in the town,
And stalls, and shopboards, in vast swarms,
With new chalk'd bills, and rusty arms. *Hudibras.*

SHO'BOOK, *s.* Book in which a tradesman keeps his
accounts. *Unused.*—They that have wholly neglected the
exercise of their understandings, will be as unfit for it as one
unpractised in figures to cast up a shopbook. *Locke.*

SHOPE, old pret. of *shape*; shaped. She—this further
purpose to him *shope*. *Spenser.*—See *SHAPE*.

SHO'KEEPER, *s.* A trader who sells in a shop.—
Nothing is more common than to hear a *shopkeeper* desiring
his neighbour to have the goodness to tell him what is a
clock. *Addison.*

SHOPLAND, a parish of England, in Essex; 1½ mile
north-east of Prittlewell.

SHO'PLIFTER, *s.* One who under pretence of buying
takes occasion to steal goods out of a shop.—He looked like
a discovered *shoplifter*, left to the mercy of the Exchange-
women. *Swift.*—See *LIFT*.

SHO'PLIFTING, *s.* The crime of a shoplifter.

SHO'PLIKE, *adj.* Low; vulgar. *Unused.*—Be she
never so *shoplike* or meretricious. *B. Jonson.*

SHO'PMAN, *s.* One who serves in a shop.—For my
part, I have enough to mind in weighing my goods out, and
waiting on my customers; but my wife, though she could be
of as much use as a *shopman* to me, if she would put her
hand to it, is now only in my way. *Idler.*

SHORE, the preterite of *shear*.

I'm glad thy father's dead:
The match was mortal to him, and pure grief
Shore his old thread in twain. *Shakspeare.*

SHORE, *s.* [ʃo:pe, Sax. Dr. Johnson. From *reipjan*,
to divide, to separate.—The shore being the place where the
continuity of the land is interrupted, or *separated*, by the
sea or the river.]—The coast of the sea or bank of the
river.

Sea cover'd sea;

Sea without shore. *Milton.*

Beside the fruitful shore of muddy Nile,
Upon a sunny bank outstretched lay,
In monstrous length, a mighty crocodile. *Spenser.*

A drain; properly *sewer*. [*schoore*, Teut. a prop.]
The support of a building; a buttress.—When I use the
word *shore*, I may intend thereby a coast of land near the
sea, or a drain to carry off water, or a prop to support a
building. *Watts.*

To SHORE, *v. a.* [*schooren*, Teut.] To prop; to
support.—They undermined the wall, and, as they wrought,
shored it up with timber. *Knolles.*—To set on shore.
Not in use.—I will bring these two moles, these blind ones
aboard him; if he think it fit to *shore* them again,—let him
call me rogue. *Shakspeare.*

SHORE (Jane), the concubine of king Edward IV., was
the wife of Mr. Matthew Shore, a goldsmith in Lombard-
street, London. Historians represent her as extremely
beautiful, cheerful, and generous. The king, it is said, was
no less captivated with her temper than her person; she
never made use of her influence over him to the prejudice
of any one; her importunities were always in favour of the
unfortunate. After the death of Edward, she attached
herself to the lord Hastings; and when Richard III. cut off
that

that nobleman as an obstacle to his ambitious schemes, Jane Shore was arrested as an accomplice, on the accusation of witchcraft. For this she was doomed to a public penance, and to the loss of her property. She was alive, but probably in a very wretched state, under the reign of Henry VIII., when she was seen by Sir Thomas More, poor and old, and without the smallest trace of her former beauty. Mr. Rowe, in his tragedy of Jane Shore, has adopted the popular story, related in this ballad, of her perishing with hunger in a place where Shoreditch now stands. But Stowe assures us, that this place had its name long before her time.

SHO'RED, *adj.* Having a bank or shore.

A ground lying low is soone overflowen,
And shored cannot long continue. *Mir. for Mag.*

SHOREDITCH, a parish of England, in Middlesex, situated on the north-eastern extremity of the metropolis, on the road to Hackney, and $1\frac{1}{2}$ mile from London bridge. Population 43,930.

SHOREHAM, a parish of England in Kent; 23 miles east of Chichester, and $55\frac{1}{2}$ south-by-west of London. Population 806.

SHOREHAM, a post township of the United States, in Addison county, Vermont, on Lake Champlain; 49 miles south of Burlington. Population 2033.

SHOREHAM, OLD, a parish of England, in Sussex, half a mile north of New Shoreham.

SHOREHAM, NEW, a market town and borough of England, in the county of Sussex, situated on the coast of the English channel, on the east side of the river Adur. This town owes its origin to the decay of Old Shoreham, which is now a very trifling village, but appears anciently to have been a place of very considerable importance. The town stands about one mile from the sea, and has a long wooden bridge across the river, for the convenience of travelling between Chichester, Arundel, Brighton, &c. The church here is a curious and interesting specimen of ancient Norman architecture. At present only the east end is fitted up and appropriated to divine service, as the nave or part westward of the tower has been entirely destroyed. It consisted of a nave, transept, tower, and choir; and, by the style of architecture, appears to have been built near the end of the 12th century. Within the church the architectural details are remarkable for their elegance, richness, and diversity; and the building may be altogether considered as an excellent school for the study of our ancient architecture. Besides the church, the only other public building deserving of notice is the market-house, situated in the middle of the town, and supported by Doric pillars. Before the reformation, New Shoreham had a priory of Carmelites, or White Friars, founded by Sir John Mowbray; and also a hospital dedicated to St. James. Shoreham is noted for ship-building, which, with its dependent branches, forms the principal business carried on in the town. Vessels of 700 tons burden have been launched here. The harbour of Shoreham, which is a tide-harbour, is not very commodious, and is rendered dangerous from the frequent shifting of the sands, and by a long flat rock visible at low water. In spring tides it has about 18 feet water, about 12 in common, and not more than 3 feet at ebb. It runs along by the town, parallel with the sea, with which it communicates about half a mile eastward of the place. Notwithstanding these inconveniences, being the best of this part of the coast, it is frequented by ships of considerable burden, and has a custom-house, with a collector, comptroller, and clerk. New Shoreham is governed by two constables annually elected. It is a borough by prescription, and has sent members to parliament since the year 1295, the 23d of Edward I. In 1771, a remarkable scene of corruption was developed in the election of members; the majority of the electors having formed themselves into a society called the Christian club, but the real object of which was to sell their votes to the highest bidder. In consequence of this, an act of parliament was passed, disfranchising every member of the Christian society, and extending the votes for Shoreham to the whole

rape of Bramber; so that the right of election was imparted to about 1300 freeholders. Shoreham is noted in history for being built on the spot where Ella the Saxon landed with supplies from Germany, in aid of his countrymen Hengist and Horsa. According to the population returns of 1811, the parish contained 168 houses, and 770 inhabitants. Market on Saturday; 16 miles north-north-west of Newhaven, and 56 south-by-west of London. Lat. 50. 50. N. long. 0. 16. W.

SHOREHAM, NEW, a post township of the United States, in Newport county, Rhode Island, on Black Island. Population 722.

SHORELAND, a small hamlet of England, in Kent; $4\frac{1}{2}$ miles from Ashford.

SHO'RELESS, *adj.* Having no coast; boundless.

The short channels of expiring time,
Or shoreless ocean of eternity. *Young.*

SHORESWOOD, a hamlet of England, belonging to the county of Durham, though locally situated in the northern extremity of Northumberland; 6 miles south-west of Berwick-upon-Tweed.

SHORLING, *s.* The felt or skin of a sheep shorn.

SHORLING and MORLING, in our Old Writers, words used to distinguish fells of sheep; *shorling* being the fells after the fleeces are shorn off the sheep's back; and *morling* the fells flayed off after they die or are killed. In some parts of England they understand by a *shorling*, a sheep whose fleece is shorn off; and by a *morling*, a sheep that dies.

SHORN, the participle passive of *shear*: with *of*.

So rose the Danite strong,
Shorn of his strength. *Milton.*

He plunging downward shot his radiant head;
Dispell'd the breathing air that broke his flight;
Shorn of his beams, a man to mortal sight. *Dryden.*

SHORNE, a village and parish of England, in the county of Kent. Its situation is very pleasant and romantic. In the chancel of the church are some antique monuments, and here is a curious old octangular font of Petworth marble. Population 624; $3\frac{1}{2}$ miles south-east of Gravesend.

SHORT, *adj.* [rocopt, Sax.] Not long in extent or in duration.

Though short my stature, yet my name extends
To heaven itself, and earth's remotest ends. *Pope.*

Short were her marriage joys: for in the prime
Of youth her lord expired before his time. *Dryden.*

Repeated by quick iterations.

Thy breath comes short, thy darted eyes are fixt
On me for aid, as if thou wert pursu'd. *Dryden.*

Not adequate; not equal: with *of* before the thing with which the comparison is made.—Immoderate praises the foolish lover thinks *short* of his mistress, though they reach far beyond the heavens. *Sidney.*—If speculative maxims have not an actual universal assent from all mankind, practical principles come *short* of an universal reception. *Locke.*—Defective; imperfect; not reaching the intended point.—Not far distant in time.—He commanded those, who were appointed to attend him, to be ready by a *short* day. *Clarendon.*—Scanty; wanting.—The English were inferior in number, and grew *short* in their provisions. *Hayward.*

They short of succours, and in deep despair,
Shook at the dismal prospect of the war. *Dryden.*

To turn *short*; not fetching a compass.

He seiz'd the helm, his fellows cheer'd,
Turn'd short upon the shelves, and madly steer'd. *Dryden.*

For turning short, he struck with all his might
Full on the helmet of th' unwary knight. *Dryden.*

Not going so far as was intended.

As one condemn'd to leap a precipice,
Who sees before his eyes the depth below,
Stops *short*.

Dryden.

Defective as to quantity.

When the fleece is shorn,
When their defenceless limbs the brambles tear,
Short of their wool, and naked from the shear. *Dryden.*

Narrow; contracted.—Men of wit and parts, but of *short* thoughts and little meditation, are apt to distrust every thing for a fancy. *Burnet.*

They, since their own *short* understandings reach
No farther than the present, think ev'n the wise
Like them disclose the secrets of their breasts. *Rowe.*

Brittle; friable.—His flesh is not firm, but *short* and tasteless. *Walton.*—Marl from Derbyshire was very fat, though it had so great a quantity of sand, that it was so *short*, that wet you could not work it into a ball, or make it hold together. *Mortimer.*—Not bending.

The lance broke *short*, the beast then bellow'd loud,
And his strong neck to a new onset bow'd. *Dryden.*

Laconic; brief: as, a *short* answer.

SHORT, *s.* A summary account.—To see whole bodies of men breaking a constitution; in *short*, to be encompassed with the greatest dangers from without, to be torn by many virulent factions within, then to be secure and senseless, are the most likely symptoms, in a state, of sickness unto death. *Swift.*

SHORT, *adv.* [Only used in composition.] Not long.

Beauty and youth,
And sprightly hope and *short*-enduring joy. *Dryden.*

To SHORT, *v. n.* [*shorten*, Germ. *ze-rcyrtan*, Sax.] To fail; to be deficient; to decrease. *Unused.*—His syght wasteth, his wytte mynyseth, his lyf *shorteth*. *The Book of Good Manners.*

To SHORT, *v. a.* [*rcyrtan*, Sax.] To abbreviate; to shorten. *Unused.*—Sorrow *shorteth* the life of many a man. *Chaucer.*

SHORT (Thomas), a physician of the early part of the last century, and the author of many works relating to chemistry, meteorology, and medicine. Few particulars are recorded of his life, which seems to have been spent more in the pursuit of science, than in the exercise of his profession. He was a member of the Royal Society. The following are the principal works which he left. "Memoir on the Natural History of Medicinal Waters," 1725. "A Dissertation on Tea," 1730. "Natural History of the Mineral Waters of Yorkshire, Lincolnshire, and Derbyshire," 1733. "A General Chronological History of the Air, Weather, Seasons, Meteors, &c., for the Space of 250 Years," 1749. "Discourses on Tea, Sugar, Milk, made Wines, Spirits, Punch, Tobacco, &c." 1749. "New Observations, Natural, Moral, Civil, Political, and Medical, on Bills of Mortality," 1750. See *Eloy. Dict. Hist.* and the Works of Short.

SHORT (James), an eminent optician, was born at Edinburgh in the year 1710. At the age of ten he lost his parents, and being left in a state of indigence, he was admitted into Heriot's Hospital, where he soon shewed a fine mechanical genius, by constructing for himself a number of curious articles with common knives, or such other instruments as he could procure. At the age of twelve he was removed from the hospital to the High-school, where he shewed a considerable taste for classical learning, and he soon became at the head of his forms. He was intended for the church, but after attending a course of theological lectures, he gave up all thoughts of a profession, which he found little suited to his talents, and from this period he devoted his whole time to mathematical and mechanical pursuits. He was pupil to the celebrated Maclaurin, who perceiving the bent of his genius, encouraged him to prosecute those particular studies for which he seemed best

qualified by nature. Under the eye of his preceptor he began, in 1732, to construct Gregorian telescopes; and, as the professor observed, by attending to the figure of his specula, he was enabled to give them larger apertures, and to carry them to greater perfection, than had ever been done before him.

In 1736 Mr. Short was invited to London by queen Caroline, to instruct William, duke of Cumberland, in the mathematics; and on his appointment to this office, he was elected a member of the Royal Society, and patronized by the earls of Macclesfield and Morton. In the year 1739 he accompanied the former to the Orkney islands, where he was employed in making a survey of that part of Scotland. On his return to London he established himself as an optician, and in 1743, he was commissioned by Lord Thomas Spencer to make a reflector of twelve-feet focus, for which he received 600 guineas. He afterwards made several other telescopes of the same focal distance, with improvements and higher magnifiers: and in 1752 he completed one for the king of Spain, for which, with the whole apparatus, he received 1200*l.* This was the noblest instrument of the kind that had ever been constructed, and has probably not been surpassed, unless by the grand telescopes manufactured by Dr. Herschel.

Mr. Short was accustomed to visit the place of his nativity once every two or three years during his residence in London, and in the year 1766 he paid his last visit to Scotland. He died in June 1768, after a very short illness, when he was in the 58th year of his age.

SHORT Sails, in a *Man of War*, are the same with *fighting sails*, being the fore-sail, main-sail, and fore-top-sail, which are all that are used in fight, lest the rest should be fired and spoiled: besides the trouble of managing them when a ship gives chase to another.

SHORTDATED, *adj.* Having little time to run.—The course of thy *short-dated* life. *Sandys.*

To SHORTEN, *v. a.* [*Sax. rcyrtan*.] To make short, either in time or space.—To *shorten* its way to knowledge, and make each perception more comprehensive, it binds them into bundles. *Locke.*—To contract; to abbreviate.

We *shorten'd* days to moments by love's art,

Whilst our two souls
Perceiv'd no passing time, as if a part
Our love had been of still eternity.

Suckling.

To confine; to hinder from progression.—Here, where the subject is so fruitful, I am *shortened* by my chain, and can only see what is forbidden me to reach. *Dryden.*—To lop.

Dishonest with lopt arms the youth appears,
Spoil'd of his nose, and *shorten'd* of his ears. *Dryden.*

SHORTFORD, *q. d. fore-close*, an ancient custom in the city of Exeter, when the lord of the fee cannot be answered rent due to him out of his tenement, and no distress can be levied for the same. The lord is then to come to the tenement, and there take a stone, or some other dead thing, off the tenement, and bring it before the mayor and bailiff, and thus he must do seven quarter-days successively, and if on the seventh quarter-day the lord is not satisfied his rent and arrears, then the tenement shall be adjudged to the lord to hold the same a year and a day; and forthwith proclamation is to be made in the court, that if any man claims any title to the said tenement, he must appear within the year and day next following, and satisfy the lord of the said rent and arrears: but if no appearance be made, and the rent not paid, the lord comes again to the court, and prays that, according to the custom, the said tenement be adjudged to him in his demesne as of fee, which is done accordingly, so that the lord hath from thenceforth the said tenement, with the appurtenances, to him and his heirs.

SHORTGRAVE, a hamlet of Essex, in Essex; 2 miles from Saffron Walden.

SHORTHAND, *s.* A method of writing in compendious characters.

In *shorthand* skill'd, where little marks comprise
Whole words, a sentence in a letter lies.

Creech.

SHORT-JOINTED, a horse is said to be short-jointed,
that has a short pastern.

SHORTLIVED, *adj.* Not living or lasting long.

Unhappy parent of a *shortliv'd* son!

Why loads he this embitter'd life with shame.

Dryden.

Admiration is a *shortliv'd* passion, that immediately de-
cays upon growing familiar with its object, unless it be still
fed with fresh discoveries. *Addison.*

SHORTLY, *adv.* [*ʃeopɹɪtʃe*, Sax.] Quickly; soon;
in a little time. It is commonly used relatively of future
time, but Clarendon seems to use it absolutely.—The armies
came *shortly* in view of each other. *Clarendon.*—The time
will *shortly* come, wherein you shall more rejoice for that
little you have expended for the benefit of others, than in that
which by so long toil you shall have saved. *Calamy.*—
In a few words; briefly.—I could express them more *shortly*
this way than in prose, and much of the force as well as
grace of arguments, depends on their conciseness. *Pope.*

SHORTNESS, *s.* [*ʃeopɹɪʃɪtʃe*, Sax.]—The quality
of being short, either in time or space.

I'll make a journey twice as far, t' enjoy

A second night of such sweet *shortness*, which

Was mine in Britain.

Shakspeare.

They move strongest in a right line, which is caused by the
shortness of the distance. *Bacon.*—Fewness of words; bre-
vity; conciseness.—The necessity of *shortness* causeth men
to cut off impertinent discourses, and to comprise much
matter in a few words. *Hooker.*—Want of reach; want of
capacity.—Whatsoever is above these proceedeth of *short-
ness* of memory, or of want of a stayed attention. *Bacon.*
—Deficiency; imperfection.—Another account of the *short-
ness* of our reason, and easiness of deception, is the forward-
ness of our understanding's assent to slightly examined conclu-
sions. *Glanville.*

SHORTRIBS, *s.* The ribs below the sternum.—A gen-
tleman was wounded in a duel; the rapier entered into his
right side, slanting by his *shortribs* under the muscles.

Wiseman.

SHORTSIGHTED, *adj.* Unable to see far.—*Short-
sighted* men see remote objects best in old age, therefore they
are accounted to have the most lasting eyes. *Newton.*—Un-
able by intellectual sight to see far.

The foolish and *shortsighted* die with fear

That they go no where, or they know not where.

Denham.

SHORTSIGHTEDNESS, *s.* Defect of sight, proceeding
from the convexity of the eye.—The ordinary remedy for
shortsightedness is a concave lens, held before the eye;
which, making the rays diverge, or at least diminishing
much of their convergency, makes amends for the too great
convexity of the crystalline. *Chambers.*—Defect of intel-
lectual sight.—Cunning is a kind of *shortsightedness*, that
discovers the minutest objects which are near at hand, but is
not able to discern things at a distance. *Addison.*

SHORTWAISTED, *adj.* Having a short body.

Duck-legg'd, *shortwaisted*; such a dwarf she is,

That she must rise on tip-toes for a kiss.

Dryden.

SHORWELL, a village and parish of England, in the
Isle of Wight, beautifully situated in a valley. The church
has a neat spire and a stone pulpit, and contains several
handsome monuments of the Leigh family. Population 561;
5 miles from Newport.

SHORTWINDED, *adj.* Shortbreathed; asthmatic;
pursive; breathing quickly.—Sure he means brevity in
breath; *shortwinded*. *Shakspeare.*

With this the Mede *shortwinded* old men eases,
And cures the lungs unsavory diseases.

May.

SHORTWINGED, *adj.* Having short wings.

Shortwing'd, unfit himself to fly,

His fear foretold foul weather.

Dryden.

SHORTWITTED, *adj.* Simple; without sense.—Piety

doth not require at our hands, that we should be either *short-
witted* or beggarly, but hath its part in all the blessings of this
world, whether it be of soul or body, or of goods.. *Hales.*

SHO'RY, *adj.* Lying near the coast. *Unused.*—There
is commonly a declivity from the shore to the middle part of
the channel, and those *shory* parts are generally but some
fathoms deep. *Burnet.*

SHOSHONEES. See SNAKE INDIAN.

SHOSTACK, in Commerce, a money of account in
Poland and Hungary.

SHOT. The preterite and participle passage of *shoot*.—
Their tongue is an arrow *shot* out, it speaketh deceit. *Jeremi-
miah.*—The same metal is naturally *shot* into quite different
figures, as quite different kinds of them are of the same figure.
Woodward.

He prone on ocean in a moment flung,

Stretch'd wide his eager arms, and *shot* the seas along.

Pope.

SHOT *of part.* Discharged; quit; freed from: a *col-
loquial expression*, as he cannot get *shot* of it.

SHOT, *s.* [*ʃot*, Dutch.] The act of shooting.—
A *shot* unheard gave me a wound unseen. *Sidney.*—He
caused twenty *shot* of his greatest cannon to be made at the
king's army. *Clarendon.*—The missile weapon emitted by
any instrument.

I shall here abide the hourly *shot*

Of angry eyes.

Shakspeare.

Sometimes bullets; but more commonly the smaller bodies
used for shooting birds.—At this booty they were joyful, for
that they were supplied thereby with good store of powder
and *shot*. *Hayward.*—Any thing emitted, or cast forth.—
Violent and tempestuous storm and *shots* of rain. *Ray.*—
[*Escot*, French; *ʃeat*, Sax., *schat*, Teut., *skatts*, Goth.
money, a piece of money.] A sum charged; a reckoning.
—A man is never welcome to a place, till some certain *shot*
be paid, and the hostess say welcome. *Shakspeare.*

As the fund of our pleasure, let each pay his *shot*;

Far hence be the sad, the lewd fop, and the sot.

B. Jonson.

SHOTE, *s.* [*ʃeota*, Saxon] A fish; a species of
salmon.—The *shote*, peculiar to Devonshire and Cornwall,
in shape and colour resembleth the trout; howbeit, in bigness
and goodness cometh far behind him. *Carew.*

SHOTERY, a hamlet of England, in Warwickshire, west
of Stratford-upon-Avon.

SHOTFORD, or SCOTFORD BRIDGE, a hamlet of
England, in Norfolk; 1½ mile east-south-east of Harleston.

SHOTFREE, *adj.* Clear of the reckoning.—Though I
could 'scape *shotfree* at London, I fear the shot here; here's
no scoring but upon the pate. *Shakspeare.*—Not to be in-
jured by shot.—He is as mad that thinks himself an urinal,
and will not stir at all for fear of cracking, as he that believes
himself to be *shotfree*, and so will run among the hail of a
battle. *Feltham.*—Unpunished.

SHOTLEY, a township of England, in Northumberland;
10 miles south-east of Hexham. Population 517.

SHOTLEY, a parish of England, in Suffolk; 7 miles
south-east of Ipswich.

SHOTLEY BRIDGE, a small village of England,
county of Durham, situated upon the banks of the Derwent;
14 miles north-west of Durham.

SHOTOVER, a hamlet of England, in Oxfordshire;
4 miles east-by-north of Oxford. Shotover forest and
hill, in the neighbourhood, is remarkable for its large
timber, and for the excellent ochre found in it, a sort of
earth similar in its quality to fullers' earth, for taking grease
out of clothes. It is also noted for an excellent kind of
tobacco-pipe clay, which is much used in modelling.

SHOTOVER HILL, a hill of England, in Oxfordshire,
599 feet high.

SHOTT, an extensive plain, situated on the southern ex-
tremity of the territory of Algiers, bordering on the Sahara.
This plain, which is 50 miles in length, and about 12 in
breadth, is, according to the season of the year, either cov-
ered with salt or overflowed with water. Several parts of
it

it consists of a light oozy soil, which, after sudden rains, or the overflows of the adjacent rivers, are changed into many quicksands, and occasion serious danger to the unwary traveller. A considerable number of streams, both from the north and south, empty themselves into the Shott.

SHOTTEN. *adj.* Having ejected the spawn.—Go thy ways, old Jack; die when thou wilt, if good manhood be not forgot upon the earth, then am I a *shotten* herring. *Shakspeare.*—Curdled by keeping too long.—Shooting out into angles.

I will sell my dukedom,
To buy a slobbery and a dirty farm
In that nook-*shotten* isle of Albion. *Shakspeare.*

Sprained; dislocated.—His horse, shoulder *shotten.* *Shakspeare.*

SHOTTESBROOK, a parish of England, in Berkshire; 5 miles south-west of Maidenhead.

SHOTTISHAM, ALL SAINTS, and ST. MARY'S, adjoining parishes of England, in Norfolk; 4½ miles north-east of St. Mary Stratton. Population 723.

SHOTTISHAM, a parish of England, in Oxfordshire; 4 miles south-east of Woodbridge.

SHOTTLE, a township of England, in Derbyshire; 8 miles north-by-west of Derby. Population 636.

SHOTTON, a village of England, county of Durham; 5½ miles north-east of Barnard Castle.

SHOTTON, another village in the same county; 8½ miles east-by-south of Durham.

SHOTTON, a village of England, in Northumberland; 6 miles south-by-east of Morpeth.

SHOTTS, a parish of Scotland, in the north-east corner of the county of Lanark. It is 10 miles in length, by 7 in breadth, and is of a rectangular form. Population 2933.

SHOTTSWELL, a parish of England, in Warwickshire; 7 miles south-east of Kineton.

SHOTWICK, a parish of England, in Cheshire, situated on the banks of the river Dee, which is here nearly a mile over. Here are the remains of a castle, an ancient palace belonging to the king of England; 6 miles north-west of Chester.

To SHOVE, *v. a.* [*scupan, scofan, Sax. schuyffen, schuyven, Teut. skuffa, Su. Goth. Our old form of the word was also shofe, to push by main strength. "Part of the banke he shofe down right."*—The hand could pluck her back, that *shov'd* her on. *Shakspeare.*—To push; to rush against.

Behold a reverend sire
Crawl through the streets, *shov'd* on or rudely press'd
By his own sons. *Pope.*

To SHOVE, *v. n.* To push forward before one.—The seamen towd, and I *shoved* till we arrived within forty yards of the shore. *Swift.*—To move in a boat, not by oars but a pole.

He grasp'd the oar,
Receiv'd his guests aboard, and *shov'd* from shore. *Garth.*

SHOVE, *s.* The act of shoving; a push.—I was forced to swim behind, and push the boat forward with one of my hands; and the tide favouring me, I could feel the ground; I rested two minutes, and then gave the boat another *shove*. *Swift.*

SHOVEL, *s.* [*scopl, Sax. schoeffel, school, Teut. similar to the latter of which is our provincial word school, Exam. dialect, and shawl or showl in other places.*] An instrument consisting of a long handle and broad blade with raised edges.—A handbarrow, wheelbarrow, *shovel* and spade.—*Tusser.*

To SHOVEL, *v. a.* To throw or heap with a shovel.
I thought
To die upon the bed my father died,
To lie close by his honest bones; but now
Some hangman must put on my shrowd, and lay me
Where no priest *shovels* in dust. *Shakspeare.*

To gather in great quantities.—Ducks *shovel* them up as they swim along the waters; but divers insects also devour them.—*Derham.*

SHOVEL, SIR CLOUDESLEY, a British naval hero. See ENGLAND.

SHOVELBOARD, *s.* A long board on which they play by sliding metal pieces at a mark.

So I have seen, in hall of lord,
A weak arm throw on a long *shovelboard*;
He barely lays his piece. *Dryden.*

SHOVELLER, or SHOVELARD, *s.* A bird.—This formation of the wizzon is not peculiar to the swan, but common unto the platea, or *shovclard*, a bird of no musical throat.—*Brown.*

SHOUGH, *s.* A species of shaggy dog; a shock.
In the catalogue ye be for men,
As hound and greyhounds, mungrels, spaniels, curs,
Shoughs, water-rugs, and demi-wolves are 'cleped
All by the name of dogs. *Shakspeare.*

SHOULD, *v. n.* [*scelban, Sax. schuld, Teut. old Engl. schulde, pl. shulden.*]

This is a kind of auxiliary verb used in the conjunctive mood, of which the signification is not easily fixed.

I SHOULD go. It is my business or duty to go.

If I SHOULD go. If it happens that I go.

Thou SHOULD'ST go. Thou oughtest to go.

If thou SHOULD'ST go. If it happens that thou goest.

The same significations are found in all the other persons singular and plural.

It was used for *would*, formerly; and in later times for *could, may, might, must*. It has been well observed, that this sign respects time variously; the present, the past, and the future. When it respects the present, it generally implies duty or obligation, fitness, propriety, decency, or reasonableness; is often used in the way of supposition, and of comparison upon supposition; often also marks conduct or event as involuntary or accidental; often carries doubt in it; and seems frequently to mark the power, energy, influence, or force of things upon the speaker, or otherwise; and it follows interjections of grief. In denoting time past, it either implies doubt or marks the event as involuntary or accidental. But of all the other periods of time, the future seems to be that, in which *should* most frequently makes its appearance. It marks the hypothetical, and denotes the common future; in both cases it is still conditional, never absolute. It refers to the hypothetical future; and, in doing so, marks the event either as doubtful and precarious, or as conditional and preparatory to somewhat else, or as highly probable but fit to be prevented, or as predetermined. Whilst it respects the common future, it either puts the event in the way of supposition, or marks it as precarious, or as certain in the highest degree, or as conditionally certain, or as certain but improper, or as certain but involuntary, or threatens, or follows verbs of desire or wishing, or denotes the event to be fit or proper.

Should is sometimes omitted, as when it marks the event as precarious.

I pray you, sir, receive the money now,
For fear you ne'er see chain, nor money more. *Shakspeare.*

SHOULD be. A proverbial phrase of slight contempt or irony.—I conclude, that things are not as they *should be*. *Swift.*—The girls look upon their father as a clown, and the boys think their mother no better than she *should be*. *Addison.*

SHOULD have. This sign barely points at the supposed existence of an event, or circumstance of conduct, in former time; or places that supposed behaviour as the result of something that preceded or might have preceded it; and, in doing this, either puts the event in the way of supposition, or marks it as accidental, or as involuntary, or as certain, or as morally or naturally fit and becoming; and is also found in the hypothetical future, or marking an imaginary event or behaviour as proceeding from or succeeding in course

course of time to some other action; or other incident, imaginary or otherwise; and thus marks the event, or action, either as precarious, or as accidental, or in a comparative view, or as certain; and carries in it frequently an intimation of natural or civil right and title to a thing, and gives the highest assurance.—*White*.

There is another signification now little in use, in which *should* has scarcely any distinct or explicable meaning. *It should be* differs in this sense very little from *it is*. There is a fabulous narration, that in the northern countries there *should be* an herb that groweth in the likeness of a lamb, and feedeth upon the grass.—*Bacon, Nat. Hist.*

SHO'ULDER. *s.* [*rculbje*, Saxon; *sehoulder*, Teut.—The joint which connects the arm to the body. The head of the *shoulder*-bone being round, is inserted into so shallow a cavity in the scapula, that, were there no other guards for it, it would be thrust out upon every occasion.—*Wiseman*. The upper joint of the foreleg of edible animals, —He took occasion from a *shoulder* of mutton, to cry up the plenty of England.—*Addison*. The upper part of the back.

Emily dress'd herself in rich array;
Fresh as the month, and as the morning fair,
Adown her *shoulders* fell her length of hair. *Dryden*.

The *shoulders* are used as emblems of strength, or the act of supporting.

Ev'n as thou wilt, sweet Warwick, let it be;
For on thy *shoulders* do I build my seat. *Shakspeare*.

A rising part, a prominence. *A term among artificers*. —When you rivet a pin into a hole, your pin must have a *shoulder* to it thicker than the hole is wide, that the *shoulder* slip not through the hole as well as the shank.—*Moron*.

SHOULDER, in Block-Making, a projection made upon the surface of blocks, pins, &c. by reducing one part to a less substance.

To SHO'ULDER, *v. a.* To push with insolence and violence.

You debase yourself,
To think of mixing with th' ignoble herd:
What, shall the people know their god-like prince
Headed a rabble, and profan'd his person,
Shoulder'd with filth? *Dryden*.

So vast the navy now at anchor rides,
That underneath it, the press'd waters fail,
And with its weight it *shoulders* off the tides. *Dryden*.

To put upon the *shoulder*.—Archimedes's lifting up Marcellus's ships finds little more credit than that of the giants *shouldering* mountains.—*Glanville*.

SHO'ULDERBELT, *s.* A belt that comes across the *shoulder*.

Thou hast an ulcer, which no leech can heal,
Though thy broad *shoulderbelt* the wound conceal. *Dryden*.

SHO'ULDERBLADE, *s.* The scapula; the blade bone to which the arm is connected.—If I have lifted up my hand against the fatherless, when I saw my help in the gate, then let my arm fall from my *shoulderblade*, and mine arm be broken from the bone.—*Job*.

SHOULDER-BLOCK, a large single block, left nearly square at the lower end, of the block, and cut sloping in the direction of the sheave. *Shoulder*-blocks are used on the lower yard-arms, to lead in the topsail-sheets, and on the topsail-yards, to lead in the top-gallant-sheets; and by means of the *shoulder* they are kept upright, and prevent the sheets jaming between the block and the yard: they are also used at the lower outer end of the boomkins, to lead in the fore-tacks.

SHO'ULDERCLAPPER, *s.* A bailiff. *Stevens. Unused*.

A back friend, a *shoulderclapper*, one that commands
The passages of alleys. *Shakspeare*.

Fear none but these same *shoulderclappers*. *Decker*.

SHOULDERKNOT, *s.* An epaulette; a knot of lace or

riband worn on the *shoulder*.—Before they were a month in town, great *shoulderknots* came up: strait, all the world was *shoulderknots*!—*Swift*.

SHOULDER-OF-MUTTON SAIL, a triangular sail, similar to the lateen sail; but attached to a mast instead of a yard.

SHO'ULDERSHOTTEN, *adj.* Strained in the *shoulder*.

SHO'ULDERSLIP, *s.* Dislocation of the *shoulder*.—The horse will take so much care of himself as to come off with only a strain or *shoulderslip*.—*Swift*.

SHOULDHAM, a parish of England, in Norfolk; 6 miles north-east of Market Downham. Population 507.

SHOULDHAMTHORPE, a parish in the above county; within a mile of the foregoing.

SHOUMSHU, or CHOUMACHOO, one of the Kurile islands, the nearest to Asia; 36 miles long, and 20 broad. The eastern coast is very steep; there are large lakes abounding with fish, and an herb from which the natives extract brandy. There are mines, from which a small quantity of silver has recently been extracted. There are counted only 44 male inhabitants paying tribute to Russia; 10 miles south from the northern point of Kamtschatka.

SHOUT, *s.* A *shout* is no other than the Saxon participle *scete*, (of *scican*, to cast forth,) differently spelled, and applied to sound *thrown forth* from the mouth.—*Horne Tooke*.—A loud and vehement cry of triumph or exhortation.

Thanks, gentle citizens:
This general applause and cheerful *shout*,
Argues your wisdom and your love to Richard. *Shakspeare*.

To SHOUT, *v.* To cry in triumph or exhortation. They *shouted* thrice: what was the last cry for? *Shakspeare*.

To SHOUT, *v. a.* To treat with noise and shouts: with *at*.—As common, so old, fashions are in disgrace: that man would be *shouted at* that should come forth in his great-grand-sire's suit, though not rent, not discoloured! *Bp. Hall*.

SHO'UTER, *s.* He who shouts.
A peal of loud applause rang out,
And thinn'd the air, till even the birds fell down
Upon the *shouters'* heads. *Dryden*.

SHO'UTING, *s.* Act of shouting; loud cry.—He shall bring forth the head-stone thereof with *shoutings*, crying, Grace, grace unto it. *Zech*.—There are noises, huntings, *shoutings*. *B. Jonson*.—Nothing but howlings and *shoutings* of poor naked men. *More*.—Shrieks and *shoutings* rend the suffering air. *Dryden*.

To SHOW, *v. a.* pret. *showed* and *shown*; part. pass. *shown*. [*scapan*, Sax.; *sehowen*, Dutch. This word is frequently written *shew*.] To exhibit to view, as an agent.

If I do feign,
O let me in my present wildness die,
And never live to *shew* the incredulous world
The noble change that I have purposed. *Shakspeare*

I through the ample air, in triumph high,
Shall lead hell captive, maugre hell, and *show*
The powers of darkness bound. *Milton*.

To afford to the eye or notice; as a thing containing or exhibiting.

Nor want we skill or art, from whence to raise
Magnificence; and what can Heav'n *show* more? *Milton*.

To make to see.
Not higher that hill, nor wider, looking round,
Whereon for different cause the tempter set
Our second Adam in the wilderness,
To *show* him all earth's kingdoms and their glory. *Milton*:

To make to perceive.
The inclement seasons, rain, ice, hail, and snow,
Which now the sky with various face begins
To *show* us in this mountain, while the winds
Blow moist and keen. *Milton*.

To make to know.

Him the most High
Rapt in a balmy cloud with winged steeds
Did, as thou saw'st, receive, to walk with God
High in salvation and the climes of bliss,
Exempt from death; to *show* thee what reward
Awaits the good.

Milton.

To give proof of; to prove.

I'll to the citadel repair,
And *show* my duty by my timely care.

Dryden.

To publish; to make public; to proclaim.—Ye are a
chosen generation, that ye should *shew* forth the praises of
him who hath called you out of darkness. 1 *Pet.*—To in-
form; to teach: with *of*.—I shall no more speak in proverbs,
but *shew* you plainly *of* the Father. *St. John.*—To make
known.

Nothing wants, but that thy shape,
Like his, and colour serpentine, may *show*
Thy inward fraud, to warn all creatures from thee. Milton.

To conduct.—To *show*, in this sense, is to *show* the way.
—She taking him for some cautious city-patient, that came
for privacy, *shews* him into the dining-room. *Swift.*—To
offer; to afford.—Thou shalt utterly destroy them; make no
covenant with them, nor *shew* mercy unto them. *Deut.*—
To explain; to expound.—Forasmuch as knowledge and
shewing of hard sentences, and dissolving of doubts, were
found in the same Daniel, let him be called. *Dan.*—To
discover; to point out.

Why stand ye longer shivering under fears,
That *show* no end but death?

Milton.

With *off*.—To set off.

I like your silence; it the more *shows off*
Your wonder. Shakspeare.

To SHOW, *v. n.* To appear; to look; to be in appear-
ance.—Just such she *shows* before a rising storm: *Dryden.*
—To have appearance; to become well or ill.

My lord of York, it better *shew'd* with you,
When that your flock, assembled by the bell,
Encircled you to hear with reverence
Your exposition on the holy text,
Than now to see you here an iron man,
Cheering a rout of rebels with your drum. Shakspeare.

SHOW, *s.* A spectacle; something publicly exposed to
view for money.—I do not know what she may produce me;
but, provided it be a *show*, I shall be very well satisfied.
Addison.—Superficial appearance; not reality.

Mild Heaven
Disapproves that care, though wise in *show*,
That with superfluous burden loads the day. Milton.

Ostentatious display.

The radiant sun
Sends from above ten thousand blessings down,
Nor is he set so high for *show* alone. Granville.

Object attracting notice.—The city itself makes the noblest
show of any in the world: the houses are most of them
painted on the outside, so that they look extremely gay and
lively. *Addison.*—Public appearance: contrary to *conceal-*
ment.

Jesus, rising from his grave,
Spoil'd principalities and powers, triumph'd
In open *show*, and with ascension bright
Captivity led captive. Milton.

Semblance; likeness.

When devils will their blackest sins put on,
They do suggest at first with heavenly *shows*. Shakspeare.

Speciousness; plausibility.

The kindred of the slain forgive the deed;
But a short exile must for *show* precede. Dryden.

VOL. XXIII. No. 1561.

External appearance.

Fierce was the fight on the proud Belgians' side,
For honour, which they seldom sought before;
But now they by their own vain boasts were ty'd,
And forc'd, at least in *shew*, to prize it more. Dryden.

Exhibition to view.

I have a letter from her;
The mirth whereof's so larded with my matter,
That neither singly can be manifested,
Without the *shew* of both. Shakspeare.

Pomp; magnificent spectacle.—As for triumphs, masks,
feasts, and such *shews*, men need not be put in mind of
them. *Bacon.*—Phantoms; not reality.

What you saw was all a fairy *show*;
And all those airy shapes you now behold,
Were human bodies once. Dryden.

Representative action.—Florio was so overwhelmed with
happiness, that he could not make a reply, but expressed in
dumb *show* those sentiments of gratitude that were too big
for utterance. *Addison.*

SHO'WBREAD, or SHEWBREAD, *s.* Among the Jews,
they thus called loaves of bread that the priest of the week
put every sabbath-day upon the golden table, which was in
the sanctuary before the Lord. They were covered with
leaves of gold, and were twelve in number, representing
the twelve tribes of Israel. They served them up hot, and
at the same time took away the stale ones, and which could
not be eaten but by the priest alone. This offering was ac-
companied with frankincense and salt. *Calmet.*—Set upon
the table *showbread* before me. *Ex.*

SHO'WER, *s.* One who shows.

SHO'WER, *s.* [ʃu:p, ʃu:p, Sax. *scheure*, Teut., from
scheuren, or *schoren*, to break, to burst through.] Rain
either moderate or violent.

If the boy have not a woman's gift,
To rain a *shower* of commanded tears,
An onion will do well for such a shift. Shakspeare.

Storm of any thing falling thick.

I'll set thee in a *shower* of gold, and hail
Rich pearls upon them. Shakspeare.

Any very liberal distribution.

He and myself
Have travell'd in the great *shower* of your gifts,
And sweetly felt it. Shakspeare.

To SHO'WER, *v. a.* To wet or drown with rain.

Serve they as a flowery verge to bind
The fluid skirts of that same watery cloud,
Lest it again dissolve, and *shower* the earth? Milton.

To pour down.

These, lull'd by nightingales, embracing slept;
And on their naked limbs the flowery roof
Shower'd roses, which the morn repair'd. Milton.

To distribute or scatter with great liberality.—After this
fair discharge, all civil honours having *showered* on him be-
fore, there now fell out occasion to action. *Wotton.*

Cæsar's favour,

That *show'rs* down greatness on his friends, will raise me
To Rome's first honours. *Addison.*

To SHO'WER, *v. n.* To be rainy.

SHO'WERLESS, *adj.* Without showers.
Scarce in a *showerless* day the heavens indulge
Our melting clime. *Armstrong.*

SHO'WERY, *adj.* Rainy.—A hilly field, where the
stubble is standing, set on fire in the *showery* season, will
put forth mushrooms. *Bacon.*

The combat thickens, like the storm that flies
From westward, when the *show'ry* scuds arise. Dryden.

SHO'WILY, *adv.* In a short way.

SHO'WINESS, *s.* State of being showy.
SHO'WISH, *adj.* *Unused.*—Splendid; gaudy.—The escutcheons of the company are *showish*, and will look magnificent. *Swift.*—Ostentatious.

SHOWN, pret. and part. pass. of *To show.* Exhibited.—Mercy *shown* on man by him seduc'd. *Milton.*

SHO'WY, *adj.* Splendid; gaudy.—The men would make a present of every thing that was rich and *showy* to the women whom they most admired. *Addison.*—Ostentatious.—Men of warm imaginations neglect solid and substantial happiness for what is *showy* and superficial. *Addison.*

SHOZAW. See SKOTSCHAU.

To SHRAG, *v. a.* [*ſcraean*, Sax., *to shred.*] To lop; to trim; as to *shrag* trees. *Prompt. Parv. Hulot and Barret.*—This is what in some parts is still called to *shroad.* *Unused.*

SHRAG, *s.* A twig of a tree cut off. *Hulot. Unused.*

SHRA'GGER, *s.* A lopper; one that trims trees. *Hulot. Unused.*

SHRAHEEN, a mountain of Ireland, in the county of Mayo; 11 miles north-north-east of Castlebar.

SHRANK. The preterite of *shrink.*—The children of Israel eat not of the sinew which *shrank* upon the hollow of the thigh. *Gen.*

SHRAP, or SHRAPE, *s.* A place baited with chaff to entice birds. *Phillips. Unused.*—You fell, like another dove, by the most chaffy *shrap* that ever was set before the eyes of winged fowl. *Bp. Bedell.*

SHRAVEY LAND, in Agriculture, a term used in some districts, as those of Sussex, and some others, to signify that of a strong, gravelly, or flinty nature. The scars or holes on the sides of steep hills, where the turf or sward has slipped away, and laid bare the soil on the South Down, are sometimes called *shraves.* See SOIL.

SHRAWARDINE, a parish of England, in Salop; 6½ miles west-north-west of Shrewsbury.

SHRAWLEY, a parish of England, in Worcestershire, situated on the banks of the Severn; 7½ miles north-north-west of Worcester. Population 530.

To SHRED, *v. a.* pret. *shred.* [*ſcraean*, Sax.] To cut into small pieces. Commonly used of cloth or herbs: formerly applied to lopping or trimming trees; as, "*schregging* or *schredynge* of trees." *Prompt. Parv.*—Well shrubbed and *shred.* *Anderson.*—One gathered wild gourds, and *shred* them. *2 Kings.*

Where did you whet your knife to-night, he cries,
And *shred* the leeks that in your stomach rise. *Dryden.*

SHRED, *s.* A small piece cut off.

The mighty Tyrian queen that gain'd
With subtle *shreds* a tract of land,
Did leave it with a castle fair
To his great ancestor. *Hudibras.*

A fragment.

Shreds of wit and senseless rhimes
Blunder'd out a thousand times. *Swift.*

SHRE'DDING, *s.* [*Sax.*, *ſcraeanung.*] What is cut off.—It hath a number of short cuts or *shreddings*, which may be better called wishes than prayers. *Hooker.*

To SHREW, *v. a.* [*ſcraean*, Sax., to beguile, may perhaps be the origin of this word. From this forgotten verb, no doubt, the substantive *shrew* is derived; which anciently was applied to either sex; and in Robert of Gloucester denotes a tyrant, according to Hearne's Glossary. In Chaucer, it is used for an evil, a detestable, or a *cursed* person; and also for a tyrant or cruel.] To *beshrew*; to *curse.* *Obsolete.*—O nice proud churl, I *shrewe* his face. *Chaucer.*

SHREW, *s.* [*ſchreien*, Germ., to clamour. *Dr. Johnson.*—From the Sax., *ſcraean* (not to beguile, to lay snares for.) A peevish, malignant, clamorous, spiteful, vexatious, turbulent woman; formerly applied also to a worthless or wicked man.

There dede of hem vor hunger a thousand and mo,
And yat nolde the *screwen* to none pes go.

Robert of Gloucester.

Punish the *shrewes* and misdoers, and—defende the goode men. *Chaucer.*

Be merry, be merry, my wife has all;
For women are *shrews* both short and tall. *Shakspeare.*

By this reckoning he is more *shrew* than she. *Shakspeare.*
SHREW, or SHREW-MOUSE, in Zoology, the common name of the SOREX ARANEUS of Linnæus; which see.

SHREWD, *adj.* [the participle of the verb *shrew*; originally meaning evil, perverse, hurtful, dangerous. "Where is envie and stryf, there is unsteadfastnesse and al *schrewid* werk." *Wicliffe.*]—Having the qualities of a shrew; malicious; troublesome; mischievous.

Her eldest sister is so curst and *shrewd*,
That till the father rides his hands of her,
Your love must live a maid. *Shakspeare.*

Cunning; artful; clever.—It was a *shrewd* saying of the old monk, that two kind of prisons would serve for all offenders, an inquisition and a bedlam: if any man should deny the being of a God, and the immortality of the soul, such a one should be put into the first, as being a desperate heretic; but if any man should profess to believe these things, and yet allow himself in any known wickedness, such a one should be put into bedlam. *Tillotson.*—A spiteful saying gratifies so many little passions, that it meets with a good reception; and the man who utters it is looked upon as a *shrewd* satirist. *Addison.*—Corruption proceeds from employing those who have the character of *shrewd* worldly men, instead of such as have had a liberal education, and trained up in virtue. *Addison.*—Marked; painful; pinching; dangerous; mischievous.

Every of this number,
That have endur'd *shrewd* nights and days with us,
Shall share the good of our returned fortune. *Shakspeare.*

SHRE'WDLY, *adv.* Mischievously; destructively.—This practice hath most *shrewdly* past upon thee. *Shakspeare.*—At Oxford, his youth and want of experience in maritime service, had somewhat been *shrewdly* touched, even before the sluices of popular liberty were set open. *Wotton.*—Vexatiously.—The obstinate and schismatical are like to think themselves *shrewdly* hurt, forsooth, by being cut off from that body which they choose not to be of. *South.*—Cunningly.—Four per cent. increases not the number of lenders; as any man at first hearing will *shrewdly* suspect it. *Locke.*

SHRE'WINESS, *s.* Mischievousness; petulance.—In their houses is iniquitee and *shrewdnesse.* *Chaucer.*—Sly cunning; archness.

The neighbours round admire his *shrewdncss*,
For songs of loyalty and lewdness. *Swift.*

SHRE'WISH, *adj.* Having the qualities of a shrew; forward; petulantly clamorous.

Angelo, you must excuse us;
My wife is *shrewish* when I keep not hours. *Shakspeare.*

SHRE'WISHLY, *adv.* Petulantly; peevishly; clamorously; forwardly.—He speaks very *shrewishly*; one would think his mother's milk were scarce out of him. *Shakspeare.*

SHRE'WISHNESS, *s.* The qualities of a shrew; forwardness; petulance; clamorousness.

I have no gift in *shrewishness*,
I am a right maid for my cowardice;
Let her not strike me. *Shakspeare.*

SHREWLEY, a hamlet of England, in Warwickshire; 4½ miles north-west of Warwick.

SHRE'WMOUSE, *s.* [*ſcraepa*, Sax.] A mouse. See MUS.

SHREWSBURY, an ancient market town and borough of England, in the county of Salop, and the chief town of the

the county. It is beautifully situated on the banks of the Severn, in a kind of peninsula made by a bend of the river. The air is salubrious; and, standing on several gentle eminences, the town has a bold and commanding appearance, and from every approach presents a pleasing variety of view; the spires of two of the churches, and the massive towers of the castle, adding greatly to the beauty of the prospect. A margin of garden and meadow ground interposes between the buildings and the river, except at the points where it is crossed by the bridges. On the west of the town, between St. Chad's new church and the river, is a very fine public walk, called the Quarry, along the banks of the Severn, overarched by magnificent lime-trees, which meet at their tops, and form a beautiful kind of Gothic vault. The exterior circle of the town is lined with a continued range of well built houses, which command in many places beautiful views of the adjacent country. The interior of the town is far from corresponding with its external appearance. The streets are intricately arranged, many of them steep and narrow, and all indifferently paved. The houses present a strange mixture of ancient and modern building. The public buildings, however, are much more respectable and well deserving of attention, both for their architecture and antiquity. The castle, which stands on a narrow neck of land on the Severn, was greatly enlarged by Roger de Montgomery, the Norman, who cleared away 51 houses for this purpose. Here he fixed one of the seats of his baronial power, and the castle continued in the possession of his sons, until the reign of Henry I. when it became by forfeiture a royal fortress. After the final submission of the Welsh, being no longer necessary as a military station, it gradually fell to decay. In the reign of James II. it was stripped of its cannon, musquets and ammunition; and probably at the same time the outworks were demolished, together with its ancient chapel. From its present state little idea can be formed of its former extent and grandeur. The buildings of it now remaining consist of two round towers and a curtain, the work of Edward I., built perhaps on the site of the Norman keep; the walls of the inner court, now a garden; and the great arch of the interior gateway, 18 feet high, the only remaining part of Roger de Montgomery's work. These remains now form a handsome dwelling-house, consisting of two round towers, embattled and pierced, and connected by an oblong building, about 100 feet long, and about half that height. The castle was defended by ramparts of stone thrown across the peninsula, from the castle to the river. Ramparts and walls also defended the town on its southern and eastern sides, considerable traces of which remain. The shire-hall is a modern building, finished in 1786, and exhibits a handsome stone front. Here are held all meetings of the corporation and county; also the courts of justice for the town and county. Of the churches, which are six in number, St. Giles's is a small plain building, a part of which is of considerable antiquity. It consists of a nave, chancel and north aisle, &c. St. Chad's church is of modern erection, having been built between 1790 and 1792, in lieu of the old collegiate church, which fell down in 1788, its repair having been too long neglected. It is built on a plan extremely novel, the body of the church being externally a circle 100 feet in diameter. Its appearance is very striking, the effect, however, being more owing to the fineness of the stone of which it is built, and the splendour of the ornaments, than the harmonious proportion and disposition of its parts. St. Mary's church, which was likewise collegiate, stands at the north-eastern part of the town. It is a large venerable building, in the form of a cross, and consists of a nave, side aisles, transept, chancel, choir and chapels, with a western steeple. The exterior presents various styles of architecture, from the era of the Norman conquest, or earlier, to that of queen Elizabeth. The nave is divided from the side aisles by semicircular arches; but those separating it from the choir are lofty and pointed. The chancel, transepts and chapels, display chiefly the pointed style. At the extremity of the former is a spacious window, in the later pointed style, which is

nearly filled with stained glass, from the ruins of Old St. Chad's church. From the tower, which is very large, and 74 feet high, rises a lofty and beautiful spire, which forms a conspicuous object from the surrounding country, and a great ornament to the town. It is elevated 138 feet above the tower. St. Alkmund's church was formerly collegiate; but the college was dissolved in the reign of king Stephen. The old church was taken down in 1793, and the present building raised in its stead. It presents a most wretched imitation of the ancient pointed architecture. Lastly, St. Julian's church is a plain substantial building, rebuilt in 1750. Besides these churches, and the Abbey church not yet described, Shrewsbury contains a Roman Catholic chapel, and meeting-houses for Presbyterians, Unitarians, Baptists, Methodists, and Quakers. Of the charitable institutions of Shrewsbury, the infirmary is one of the oldest provincial establishments of the kind in England, having been opened in 1747. The house is a plain but respectable brick building, with stone corners. It stands in a healthysituation, and in respect of internal arrangements, is equal to any other of the kind in the kingdom. The house of industry was originally a founding hospital, and was only converted to its present uses in 1784. It is governed by directors chosen from among the inhabitants of the town. About 275 persons are at an average maintained in the house. The internal arrangements are extremely judicious. The town contains also an hospital, founded by Mr. James Millington, draper, in 1734, together with several aims-houses. The free grammar school was founded and endowed by Edward VI., and afterwards augmented by queen Elizabeth. This institution having declined, an act of parliament was passed in 1798, for its improvement and better government. Its management was by this act committed to the bishop of Lichfield and Coventry, as visitor, and to 13 trustees or governors, of whom the mayor is one. The school is a large, lofty and substantial building of freestone, forming two sides of a square court. Several of the masters have been distinguished for their talents and learning; and many celebrated characters have been educated here. Bowdler's charity school was founded in 1724; Allatt's charity school in 1798, and the subscription charity school in 1708. The town and county jail and bridewell now form one building, which stands near the castle. Its situation is healthy and beautiful; and though it cannot boast of much elegance in its external appearance, it is spacious and airy, and every way adapted for its intended purposes. It is on the plan of Howard, a bust of whom, by Bacon, stands on a freestone arched gateway in front of the building. The market-house is one of the largest and most magnificent buildings of the kind in England. It was erected in the reign of queen Elizabeth, in the year 1595. It is built entirely of freestone. The principal front is towards the west; and in the centre, over a spacious portal, are the arms of queen Elizabeth, in high relief, under a rich canopy. On each side of this portal is an open arcade of three large circular arches, supported by columns. The north and south ends of the building are also ornamented with large open arches, over one of which stands a statue of Richard, duke of York. Adjoining the market-place is a conduit, which supplies great part of the town with water. The market-cross was a strong building of brick and stone, having a reservoir over it. It was taken down in 1819, the reservoir removed backwards, and a handsome new market-house erected by subscription. The theatre is part of the palace that formerly belonged to the barons of Powis. It is tolerably fitted up within. There are two bridges over the Severn at Shrewsbury, the Welsh bridge and the English or East bridge, both of them of recent erection, and in the place of older ones which had gone to decay, and from their narrowness were extremely incommodious. The Welsh bridge consists of five elegant arches, about 266 feet in the whole length, 20 feet high, and 30 broad. Adjoining to it is a quay, with warehouses. The English bridge extends 400 feet in length, and consists of seven semicircular arches, built of fine freestone.

stone. The central arch is 60 feet span, and 40 high. The breadth between the ballustrades is 25 feet, and the ornaments are light and graceful. In the suburb called the Abbey Foregate, are the remains, though now inconsiderable, of the abbey dedicated to St. Peter (to whom St. Paul was afterwards added), founded by Roger de Montgomery, and at one time a great resort of people from all parts of the kingdom, to the shrine of St. Winefrid, of which the monks here had got possession. The ground on which the abbey stood is now a garden. A curious part of the ruins is a small octagonal building, generally called the stone pulpit. It is overhung with ivy, and is reckoned a valuable antique. Its use is not very obvious, and has been a subject of much conjecture among antiquaries. The church was a spacious and magnificent building. The only part that remains is the nave, which is now used as a parish church, under the name of the Holy Cross, and in which the beauty of the ancient structure may still be traced in many parts. Besides the abbey, Shrewsbury had formerly a convent of Augustine friars, founded about the year 1256; two other convents, and five chapels, dedicated to their respective saints. Shrewsbury is a place of considerable trade. Flannels used to be the staple articles, and a coarse kind of woollen cloth made in Montgomeryshire, called Welsh webs, which were bought up in all parts of the country, often to the value of 1000*l.* per week, and dressed here for exportation, chiefly to Holland, Germany, North and South America, and the West Indies. The flannels were made in Montgomeryshire, and the neighbouring parts of Shropshire. They were bought at Welshpool by the Shrewsbury drapers, and were chiefly re-sold to London merchants for exportation. The webs are made in Merionethshire and Denbighshire, and were formerly brought to Shrewsbury market, but of late years they are bought up in the country. This trade in flannels, of which Shrewsbury had formerly a kind of monopoly, is now open to other parts of the county, but the town still continues a common mart for all sorts of commodities for Wales. About 20 vessels are employed on the Severn, between Shrewsbury, Gloucester, and Bristol. Some manufactures are also carried on in the town, viz., two large manufactories of linen yarn, a porter brewery, and an extensive iron foundry. Shrewsbury is famous for its excellent bran, which is sent to various parts of the kingdom. Salmon is somewhat scarce in the Severn, owing to weirs erected below Gloucester; but both that and other fish, as well as provisions of all sorts, are plentiful; and from the beauty of the situation, and other advantages, the town forms a very agreeable residence, and is inhabited by a great many genteel families. Shrewsbury is a corporation, both by charter and prescription. By the charter of Charles I. now in force, the corporation consists of a mayor, a recorder, steward, town-clerk, 24 aldermen, 48 assistants or common councilmen, and other officers. Besides the general corporation, here are 16 chartered companies, of which the drapers and mercers are the principal. Shrewsbury sends two members to parliament, and has done so from the earliest period of representation. They are chosen by the inhabiting burgesses, and the mayor is the returning officer. Shrewsbury is a place of great antiquity, and of considerable note in history. Its origin is referred to the 5th century, when the Britons are thought to have established themselves here, on account of the security afforded by the situation. It soon became the capital of the princes of Powis, and remained in the hands of the Britons for some ages, until they were dispossessed by the Saxons. In the reign of Alfred, it was numbered among the principal cities of his dominions. Being esteemed the most important town and fortress on the marches of Wales, it continued for many centuries to be one of the principal places of rendezvous for the English armies. It was hence often visited by the English monarchs, became the scene of many military events, and took uniformly an active share in the various contests of these turbulent periods. In 1215, it is said to have been retaken by the Welsh, who are supposed to have retained it till 1221, but there is no good authority for this assertion. In 1277, Edward I. made this

the principal seat of his court, while he was engaged in the final subjection of Wales; and till the conclusion of that war he removed hither the courts of exchequer and king's bench. About two miles from the town was fought the famous battle of Shrewsbury, in which Henry V., then prince of Wales, first distinguished himself in the field, and the brave Hotspur was slain. In the civil wars of Charles I. the king came hither, and was cordially welcomed by the inhabitants; but, in 1645, the army of the parliament succeeded in surprising and taking the town, an event which gave a severe blow to the royal cause, as it cut off the king's communication with North Wales, and put an end to a loyal association then forming among the western counties. At the entrance of the town from London is a splendid column of freestone (with appropriate inscriptions), erected by subscription in the town and county, and finished in the year 1816, at the total expence of above 6000*l.* to commemorate the military achievements of the gallant Shropshire hero, Lord Hill. Population return, 3229 houses, and 16,606 inhabitants, which includes those parts of the town parishes which lie in the country. Markets on Wednesday and Saturday; 40 miles west of Lichfield, and 154 north-west of London. Lat. 52. 42. N. long. 2. 45. W.

SHREWSBURY, a post township of the United States, in Rutland county, Vermont. Population 990.

SHREWSBURY, a post township of the United States, in Worcester county, Massachusetts; 38 miles west of Boston. Population 1210.

SHREWSBURY, a post township of the United States, in Monmouth county, New Jersey; 77 miles north east of Philadelphia, and 47 north-east of Trenton. The compact part is pleasantly situated, and contains an Episcopal church and a Friends' meeting-house. It is a place of resort for company from Philadelphia and New York, in the summer. The township is extensive. Population 3773. Lat. 40. 21. N. long. 73. 21. W.

SHREWSBURY, a post township of the United States, in York county, Pennsylvania. Population 1792.

SHREWSBURY, a post township of the United States, in Lycoming county, Pennsylvania. Population 294.

SHREWSBURY, a post township of the United States, in Kenhaway county, Virginia.

SHREWSBURY, a river of the United States, in New Jersey, which runs into the Atlantic. Lat. 40. 22. N. long. 74. 2. W.

SHREWTON, a parish of England, in Wiltshire; 5½ miles west-north-west of Amesbury.

To SHRIEK, *v. n.* [*skraeka*, Icel. *skrika*, Su. Goth., from *skrya*, to cry out; *schreien*, Germ., the same.] To cry out inarticulately with anguish or horror; to scream.

On top whereof ay dwelt the ghastly owl,

Shrieking his baleful note.

Spenser.

It was the owl that *shriek'd*, the fatal belman

Which gives the sternest good-night.

Shakspeare.

SHRIEK, *s.* An inarticulate cry of anguish or horror.

Time has been my senses wou'd have cool'd,

To hear a night *shriek*, and my fell of hair

Wou'd at a dismal treatise rouse and stir

As life were in't.

Shakspeare.

SHRIEVAL, *adj.* Belonging to the *shrieve* or *sheriff*.

Chaste were his cellars; and his *shrieval* board

The grossness of a city-feast abhor'd.

Absalom and Achitophel.

SHRIEVE, *s.* A corruption of *sheriff*.

SHRIEVALTY, *s.* Sheriffalty.

SHRIFT, *s.* [*sc̄ift*, Sax.] Confession made to a priest. A word out of use.

Off with

Bernardine's head: I will give a present *shrift*,

And will advise him for a better place.

Shakspeare.

The duke's commands were absolute,

Therefore my lord, address you to your *shrift*,

And be yourself; for you must die this instant.

Rowe.

SHRIGHT,

SHRIGHT, for *shrieked*.

Dame Pertelote *shright*

Ful louder than did Hasdruballes wife.

Chaucer.

She hid her face, and lowly *shright*.

Spenser.

SHRIGHT, *s.* A shriek.—That ladies loud and piteous *shright*. Spenser.

SHRIGLEY, a village of England, in Cheshire; $4\frac{1}{2}$ miles north-north-east of Macclesfield.

SHRIKE, in Ornithology, an English name for several species of the LANIUS; which see.

SHRILL, *adj.* [from *schoerl* and *skrall*, Su. Goth. and Icel. an outcry; *skraela*, *skralla*, to make a noise or clamour. The old form of this word is *shirl* or *shirle*.] Sounding with a piercing, tremulous or vibratory sound.

Thy hounds shall make the welkin answer them,
And fetch *shrill* echoes from the hollow earth. Shakspeare.

The cock that is the trumpet to the morn,
Doth with his lofty and *shrill*-sounding throat
Awake the god of day. Shakspeare.

Look up a height, the *shrill*-gorg'd lark so far
Cannot be seen or heard. Shakspeare.

To SHRILL, *v. n.* To pierce the ear with sharp and quick vibrations of sound. *Unused*.

The sun of all the world is dim and dark;

O heavy herse,

Break we our pipes that *shrill'd* as loud as lark,

O careful verse.

Spenser.

A *shrilling* trumpet sounded from on high,
And unto battle bade themselves address. Shakspeare.

The females round,

Maids, wives and matrons, mix a *shrilling* sound. Pope.

To SHRILL, *v. a.* To express in a shrill manner; to cause to make a shrill sound. *Unused*.

Hark, how the minstrels gin to *shrill* aloud

Their merry music.

Spenser.

How Hecuba cries out!

How poor Andromache *shrills* her dolours forth!

Shakspeare.

SHRILLA, a small town of Ludamar, in Central Africa; 38 miles east-south-east of Benowm.

SHRILLNESS, *s.* The quality of being shrill.—These parts first dispose the voice to hoarseness or *shrillness*. Smith.

SHRILLY, *adv.* With a shrill noise.—Mount up aloft, my muse; and now more *shrilly* sing. More.

SHRIMP, *s.* [*schrump*, a wrinkle, German: *scrympe*, Danish.] A small crustaceous vermicated fish.—Of shell-fish there are wrinkles, *shrimps*, crabs. Carew.—Hawks and gulls can at a great height see mice on the earth, and *shrimps* in the waters. Derham.—A little wrinkled man; a dwarf.—So *scrimp* is the Scottish adjective for deficient, scanty, narrow; and to *scrimp*, is to straiten, to limit.

It cannot be, this weak and writhled *shrimp*
Should strike such terror in his enemies. Shakspeare.

He hath found,

Within the ground,

At last, no *shrimp*,

Whereon to imp

His jolly club.

B. Jonson.

SHRIMP, in Natural History, is the CANCER CRANGON of Linnæus; which see.

The white shrimp, or *cancer squilla*, is the prawn. (See CANCER SQUILLA.) It inhabits the coast of Kent.

By 30 Geo. II. c. 21., white shrimps in the river Thames and Medway are only to be taken from Bartholomew day to Good Friday; and red shrimps in the river Medway only from April 25 to July 1.

To SHRIMP, *v. a.* To contract. *Unused*.—Such things as these go for wit, so long as they continue in Latin; but what dimly *shrimped* things would they appear, if turned into English! Echard.

Vol. XXIII. No. 1562.

SHRINE, *s.* [from Sax. *scrinium*, Lat.] A case in which something sacred is reposed.—Lovers are in rapture at the name of their fair idol; they lavish out all their incense upon that *shrine*, and cannot bear the thought of admitting a blemish therein. Watts.

To SHRINK, *v. n.* pret. I *shrank*, or *shrank*; part. *shrunken*, [from *scun*, Sax.] To contract itself into less room; to shrivel; to be drawn together by some internal power.

But to be still hot summer's tantlings, and
The *shrinking* slaves of winter. Shakspeare.

I am a scribbled form, drawn with a pen
Upon a parchment, and against this fire
Do I *shrink* up. Shakspeare.

To withdraw as from danger.

Nature stands aghast;

And the fair light which gilds this new made orb,
Shorn of his beams, *shrinks* in. Dryden.

All fibres have a contractile power, whereby they shorten; as appears if a fibre be cut transversely, the ends *shrink*, and make the wound gape. *Arbutnot*.—To express fear, horror, or pain, by shrugging, or contracting the body.

The morning cock crew loud,

And at the sound it *shrank* in haste away,
And vanish'd from our sight. Shakspeare.

I'll embrace him with a soldier's arm,
That he shall *shrink* under my courtesy. Shakspeare.

To fall back as from danger.

I laugh, when those who at the spear are bold
And venturous, if that fail them, *shrink* and fear
To endure exile, ignominy, bonds. Milton.

Fall on: behold a noble beast at bay,
And the vile huntsmen *shrink*. Dryden.

To SHRINK, *v. a.* part. pass. *shrunken*, *shrank*, or *shrunken*. To make to shrink.

O mighty Cæsar! dost thou lie so low?

Are all thy conquests, glories, triumphs, spoils,
Shrunk to this little measure? Shakspeare.

SHRINK, *s.* *Unused*.—Corrugation; contraction into less compass.—There is in this a crack, which seems a *shrink*, or contraction in the body since it was first formed. Woodward.—Contraction of the body from fear or horror.

This public death, receiv'd with such a cheer,
As not a sigh, a look, a *shrink* bewrays
The least felt touch of a degenerate fear. Daniel.

SHRI'NKER, *s.* One who shrinks.

We are no cowardly *shrinkers*,
But true Englishmen bred. Old Sea-Song.

SHRI'NKING, *s.* Act of falling back as from danger, or of drawing back through fear.—If a man accustoms himself to slight or pass over these first motions to good, or *shrinkings* of his conscience from evil,—conscience will by degrees grow dull and unconcerned. South.

SHRI'VALTY, *s.* Corrupted for SHERIFFALTY; which see.

To SHRIVE, *v. a.* [from *scruvan*, Saxon; *skrifsta*, Su. Goth. from the Lat. *scribo*, to write; the priests anciently giving to those whom they confessed, a *written* direction or form of penance.] To hear at confession. *Not in use*.

What, talking with a priest, lord chamberlain?
Your honour hath no *shriving* work in hand. Shakspeare.

If he had the condition of a saint, and the complexion of a devil, I had rather he should *shrive* me than wive me. Shakspeare.

To SHRIVE, *v. n.* To administer confession.—Where holy fathers went to *shrive*. Spenser.

To SHRI'VEL, *v. n.* It is perhaps only another form of *rivel*. See To RIVEL.] To contract itself into wrinkles.—

If she smelled to the freshest nosegay, it would *shrivel* and wither as it had been blighted. *Arbutnot.*

To SHRIV'EL, *v. a.* To contract into wrinkles.

When the fiery suns too fiercely play,
And *shrivel'd* herbs on with'ring stems decay,
The wary ploughman, on the mountain's brow,
Undams his watery stores.

Dryden.

SHRIVENHAM, a village of England, in Berkshire; $3\frac{1}{2}$ miles south-west of Great Farringdon. Population 639.

SHRI'VE'R, *s.* A confessor. *Not in use.*

The ghostly father now hath done his shift,
When he was made a *shrivel* twas for shift.

Shakspeare.

SHRI'VING, *s.* Shrift.—Better a short tale, than a bad long *shriving*. *Spenser.*

SHROPHAM, a parish of England, in Norfolk; 4 miles north-by-west of East Harding. Population 400.

SHROPSHIRE, or SALOP, an inland county of England, on the borders of Wales, bounded on the north by Denbighshire, the detached part of Flintshire, and Cheshire, on the east by Staffordshire, on the south by Worcestershire and Herefordshire, and on the west by Radnorshire, Montgomeryshire, and Denbighshire. It lies nearly within the parallels of 52° and 53° north latitude, and the meridians of 2° and 3° west longitude. Its figure is that of an irregular parallelogram, somewhat approaching to an oval, and extending about 44 miles in length from north to south, and 28 miles in breadth from east to west. Its circumference is 134 miles, and it contains 1403 square miles, or 898,000 acres, with 143 inhabitants to each mile. It is divided into 14 hundreds, and 222 parishes; contains 16 market towns, viz., Shrewsbury, Bishop's Castle Bridgenorth, Ludlow, Wenlock, Church-Stretton, Cleobury, Drayton, Ellesmere, Madely, Newport, Oswestry, Shiffnal, Wellington, Wem, and Whitchurch; and sends 12 members to Parliament, two for the county, and two for each of the boroughs of Shrewsbury, Ludlow, Bridgenorth, Wenlock, and Bishop's Castle. Shropshire is an extremely interesting county, from its note in history, its numerous remains of antiquity, the variety and beauty of its scenery, its richness in mineral productions, and its extensive system of inland navigation, which has contributed to render it a great emporium of the inland trade between England and Wales. The aspect of the country is greatly diversified, and comprehends every variety of picturesque landscape. From Shrewsbury northwards, extends with little interruption, over the whole breadth of the county, a vast plain, termed the plain of Salop, which, though flat compared with the surrounding hills, possesses yet a very varied surface. This low land extends also southward of Shrewsbury, nearly to Church Stretton, and also from Wellington, along the south-eastern boundary of the county, to Ludlow, leaving towards the south-west a district of high and mountainous land, being a lateral branch of the great range of mountains on the west. Many of these hills rise to a great height; and, according to the trigonometrical survey, Brown Cleehill is elevated 1805 feet above the level of the sea, Longmynd 1674 feet, and the noted Wrekin, to the east of Shrewsbury, and south of Wellington, 1320 feet. The river Severn runs through the very middle of Shropshire, and is the great glory and ornament of the county, winding beautifully through deep romantic valleys, covered with wood. Entering from Montgomeryshire, as its confluence with the Vyrnwy, it runs eastward to Shrewsbury, and then bending towards the south, and passing Wroxeter, Colebrook Dale, and Bridgenorth, leaves the county near Bewdley, on the borders of Staffordshire and Worcestershire. Its course within Shropshire is estimated at nearly 70 miles in length, in every part of which it is navigable, except in the height of summer, for barges, trams, wherries, and boats, and is supplied with salmon, and various other kinds of fish. The contributory streams to this great river belonging to the county are the Camlet, the Vyrnwy, the Perry, the Meole Brook or Rea, the Tern, the Cund Brook, the Warf, the Morbrook, the Bore Brook, and Dowles Brook. The other rivers

of any consequence in the county are the Teme, the Shelbrook, the Elf Brook, the Weaver, the Clun, the Ony, and the Corve. Shropshire contains also various lakes, which, though none of them are of any great extent, still add considerable variety to its landscapes. Ellesmere, which is the largest, covers about 116 acres of land. The climate of Shropshire varies with the elevation of the county; but the air is every where salubrious. On the eastern side of the county, where the land is warm and flat, harvest frequently begins a fortnight sooner than near the middle of the county, where the vales are extensive, but the surface less light, and the bottom often clayey; and hay and grain are both gathered earlier there than on the western side, where the vales are narrow, and the high lands extensive. Easterly winds prevail most in the spring; those from the west in autumn. The soil and surface of Shropshire are exceedingly various, and have been also variously described; so that every general account of them must be taken with considerable limitation. According to Bishton's Survey, on the north and north-east of the Severn a turnip soil chiefly prevails, intermixed with a tolerable proportion of meadow and pasture land. The banks of the Severn, which are often overflowed, produce hay in great plenty. On the south-west side of the Severn, from Alberbury, about eight miles wide, down to Cressage, the lands are in general pretty good, and contain pasture, wheat, and turnip land, but very variable. From Cressage, about six miles wide, to Bridgenorth, and from thence to Cleobury and Ludlow, there is chiefly a mixed soil upon clay, and partly thin. The remainder of the county, more to the south-west, is very variable, mostly thin soil, on clay or rock, with extensive tracks of hills and waste. On the whole, all sorts of land are to be found in the county, except chalk and flint. According to another account, in the hundred of Oswestry a deep loam and gravelly soil prevail; and in those of North Bradford and East Brimstree, a light or sandy loam. Pimhill hundred contains a mixture of boggy land and of sandy soil, with a greater proportion of sound wheat land. In the other hundreds, clays of different consistence form the most general soil; but there are numerous patches, both of deep and sandy loam, gravel, &c. Shropshire though no way remarkable for the excellence of its agriculture, is in general well cultivated, producing large quantities of grain of various kinds, much of which is sent down the Severn for exportation. Many cattle are fed in the level parts of the county; and much of the cheese sold under the name of Cheshire, is made here. The hilly district is chiefly devoted to the pasture of sheep, whose wool is of fine quality, and is employed in the manufactories of Wales. The neighbourhood of the Wrekin and Bridgenorth, and also that of Clun, are reckoned to yield wool equal to that of Leinster. Farms are in general of a large size; a very few are held in leases for life, others for 7, 10, or 21 years, and many from year to year only. All the ordinary white and green crops are generally cultivated; hops, hemp, flax, and cabbages, are also raised, but in small quantities, and the hops chiefly on the Herefordshire and Worcestershire border. The growth of hay, and the improvement of pasture lands, are rather neglected. Notwithstanding large annual falls of timber, there still remain in Shropshire some fine woods of oak, and a vast number of good hedgerow trees, chiefly ash and oak. In the south-west district, birches are common, both as trees and fences. There are also in the county many large tracts of coppice wood, which is in great demand at the iron-works, for charcoal; and several extensive modern plantations. Shropshire is comparatively free of waste lands. Most of the cultivated districts are enclosed, and the commons are every year decreasing. It contains several large mosses, and many small ones. The chief district of moorland is that near Kinnerley.

But it is its mineral riches, and the trade and manufactures to which they have given rise, by which Shropshire is chiefly distinguished. Coal is found in great abundance, and of excellent quality, in different parts of the county. The principal coal field lies in the district near Colebrook Dale extending about 8 miles in length, and 2 in breadth. Beginning

SHROPSHIRE.

Engraved for the Encyclopædia Londinensis, 1827.

J. Pass

ing in the parishes of Barrow and Much Wenlock, on the west of the Severn, the boundary runs through those of Broseley, Madeley, Little Wenlock, Wellington, Dawley, Shiffnal, and Lilleshall. In every part of this track coal is found at various depths, and of excellent quality, and the coal strata are found alternating with ironstone, sandstone, and various other matters. In Madeley parish, the strata dip towards the east, and near Wellington and Lilleshall to the north and north-east. On the east the coal district is bounded by a long broad range of sandstone, beginning north of Shiffnal, and accompanying the course of the Severn till it quits the county; and on the south and west it is bounded by limestone, and the basalt of the hill of Wrekin. The limestone on the south forms the northern extremity of a long range which passes Wenlock in a south-west direction to Hope Bowdlerhill, near Church Stretton, and from thence southwards to the neighbourhood of Ludlow. In this district, as in other coal fields, the continuity of the strata is often broken by fissures or dikes, on the one side of which the strata have been either raised greatly above, or sunk greatly below those on the other, with which they have been at one time in contact. The principal of these disruptions run nearly north-east and south-west. Two of them have thrown the strata on the east and west sides from 100 to 200 yards lower than they are in the middle; and it is in this middle district, which the convulsion has of course brought nearer to the surface, that by far the greatest part of the coal and ironstone have been found. The ironstone is not rich; but the abundance of coal and of limestone with which it is accompanied, renders the working of it, notwithstanding, an object of profit; and it is this conjunction with the ore of both the fuel and the flux, to extract the purer metal, that has rendered Colebrook Dale and the adjoining country the seat of the most extensive iron works in the kingdom, and which have proved the source of vast wealth to individuals, as well as the permanent support of a numerous population. In this coal field is a remarkable spring of petroleum or mineral tar, which has yielded a vast quantity of that substance but is now much diminished. The petroleum also exudes from the freestone rock at Pitchford, seven miles south-south-east of Shrewsbury, where the stone approaches the surface in many places. From this rock is extracted an oil, known by the name of Betton's British oil. In this district is also a brine spring. Another bed of coal occurs near the north-west boundary of the county, extending parallel with the Welsh border, from the Dee southwards to the Severn. The coal in many parts of this track is wrought to a considerable extent, and besides its domestic use, is largely employed in the limeworks of Chirk and Llanymynech. On the west this coal field is bounded, and rests on an irregular band of limestone, which in some places rises at least 500 feet above the plain, and in others scarcely appears above the surface of the soil. In many parts, especially near Oswestry, it is in the state of perfect marble; and small quantities both of lead and copper have been found in it throughout. On the east the coal field is bounded by a ridge of freestone or sandstone, running from Ellesmere along the Perry, crossing the Severn, and terminating in the high grounds at Bicton and Onslow. To the east of this line, and the north of Shrewsbury and Newport, the whole county rests on an almost entire mass of red sandstone or freestone, which joins the sandstone on the east of the district of Colebrook Dale. A third considerable coal district is situated in the southern part of the county. The coal here, however, is not contained in one great field, but is disposed into various little beds or hollows, in each of which the strata dip, from the circumference downwards towards the centre, spreading out along the bottom and sides of the hollow or basin. These are mostly situated on the Brown Clee hill and the Titterston Clee hill, which are the highest hills in Shropshire, and, particularly the latter, have proved treasures to this part of the county. In the Brown Clee hill the coal lies in thin strata, and is only wrought by poor colliers on a small scale. On Titterston, the principal stratum is six feet thick; and here

are six coal fields, of which the most extensive and valuable is the Cornbrook, extending a mile long, and half a mile broad; and next to this are the Newbury and Hillwork coal fields. In the other parts of the county, intermediate between the coal fields, the rocky masses that occur are chiefly sandstone, limestone, trap-rocks, and schistus; and the principal minerals which they contain are lead and calamine. From the Wrekin proceeds southwards across the Severn a range of trap mountains, consisting, besides the Wrekin, of the hills of Acton Burnel, Frodesley, the Lawley, Caer Caradoc, and Hope Bowdler hills. The vale in which Church Stretton is situated separates these mountains from a very singular mass of hills called the Longmyud, which appear to be a kind of schistus. Between the road from Shrewsbury to Bishop's Castle and the vale of Montgomery, rises a high rocky track, the most elevated peak of which is called the Stiperstones; and it is here that the lead mines of the county are situated. This metal is procured in considerable quantity from various parts of the Stiperstones, but chiefly from the Hope and Snailbeach mines. The matrix of the ore is crystallised quartz, sulphate and carbonate of barytes, and carbonate of lime. The ore is sulphuret of lead, carbonate of lead, red lead ore, and blende, which yields also calamine or zinc. The lead ore is reduced at Minsterley and other places near the mines. It is then sent by land carriage to Shrewsbury, and there shipped, together with the raw calamine, in the Severn barges, and sent down to Bristol. The sandstone, which occurs so extensively in this county, affords an excellent building stone: it is chiefly of the red kind, but occurs also in some places white, especially at Grinshill, where it has been quarried in great quantities for the bridges, churches, and other public buildings in Shrewsbury. In the lordship of Cardington is found a quartz and clay, the former of which is said to be superior to that imported from Caermarthenshire for the Staffordshire potteries.

Of the manufactures of Shropshire, the most extensive are the iron-works, which are carried on in different parts of the great coal and iron district east of Shrewsbury, chiefly at Ketley, Oaken-gates, and in Colebrook Dale, a romantic glen winding between two immense wooded hills. A cast iron-bridge thrown over the Severn here, and the first of the kind erected in the kingdom, forms, by its elegant appearance a great ornament to this part of the county. In the Dale a work is carried on for obtaining coal-tar from the condensed smoke of the coal; and considerable potteries have also been established in this district. At Broseley, garden pots and other vessels of a coarse fabric are made; and this place is also noted for the manufacture of excellent tobacco pipes. At Chaughley is a china manufacture of great excellence. At Coalport coloured china of all sorts is made, and also Queen's or Wedgewood's ware. Shropshire also contains several mills for dyeing woollen cloths, and some cotton and linen manufactories. The great commercial importance of Shrewsbury, at an earlier period of history, arose from its trade in Welsh cloth, which was brought hither by the manufacturers, and hence dispersed over the kingdom, and to many parts of the continent. But the Shrewsbury monopoly of this important article has ceased for more than 30 years. Other dealers found their way into the country where these goods are made; the Shrewsbury drapers were obliged to do the same; and there is no market for the commodity now held in the town; but it still retains a share in the business. The trade, manufactures, and even the agriculture of Shropshire, have been greatly advanced by its canals, which, though of late introduction, owing perhaps to the natural advantages which it enjoyed by means of the navigation of the Severn, have been carried here to a great extent. The Shropshire canal begins at Donnington Wood, and terminates at Coalport on the Severn, running through an extensive assemblage of coal and iron works. The Ketley canal, from the Oaken-gates to the iron-works at Ketley, joins the Shropshire canal. These two canals are distinguished by a peculiar feature, that of inclined planes, which were first introduced here on the Ketley canal, as a substitute

substitute for locks. The boats are conveyed from a lower to a higher level on a double railway, one boat as it descends drawing another up by its preponderating weight. The Shrewsbury canal runs from Shrewsbury, by Wellington, to the coal works at Oaken-gates. It has in its line a tunnel, an aqueduct, and an inclined plane. The Ellesmere canal may be considered as a great system of canal navigation, extending through that large and fertile track of country which lies between the Severn and the Mersey on the one hand, and between the confines of North Wales and those of Staffordshire on the other. Its grand object, is to unite the Severn, the Dee, and the Mersey, and thus to open a communication with Bristol on the south, and Liverpool on the north. The navigation of the Severn, though of vast advantage to this county, is yet subject to great inconvenience and frequent interruption, from the rise and fall of the waters, which, in the time of floods, rush with unmeasured impetuosity, and at other seasons afford no adequate supply for floating vessels of any burden over the shoals. Different plans have been proposed to remedy this evil, but none of them have hitherto been carried into effect. The obvious improvement, however, is now beginning to be adopted, of constructing a pathway along the banks of the river, and of employing horses instead of men in the laborious operation of towing. The turnpike roads of this county are tolerable, but the parish roads are in general bad, the repair of them being neglected.

At the time of the Roman invasion, in the reign of Claudius, Shropshire was inhabited by the two tribes of the Ordovices and Cornavii. After the defeat of Caractacus, which most contend took place in this county, it became part of the province of Flavia Cæsariensis, and while the Romans remained in Britain, seems to have enjoyed undisturbed tranquillity, but afterwards became the theatre of war between the Britons and the Saxons. For some centuries it constituted part of the kingdom of Powisland, of which Pengwern, near Shrewsbury, was the capital; but in the reign of the great Offa it fell under the dominion of the Saxons, and an immense rampart of earth was formed by the conqueror for its security, extending 100 miles along the confines of Wales. After the Norman conquest, nearly the whole of Shropshire was bestowed on Roger de Montgomery. In the subsequent reigns, the lords of the marches of Wales exercised here, as well as in the neighbouring counties, an authority almost absolute, which was considerably controlled, however, in the later times; and after the union of England and Wales, became quite subordinate to that of the crown. During the various revolts that occurred after the death of Edward I., and also during the wars of York and Lancaster, Shropshire was occasionally the scene of military events, the principal of which was the battle of Shrewsbury. In the civil wars of Charles I. it was distinguished for its loyalty. Of the antiquities of Shropshire, the chief Roman stations in it were Uriconium, now Wroxeter, Ruturinum, thought by some to be near Wem. Watling-street enters the county in the east, near Crackley Wood, and passes through it with a bending line to Leintwardine, on the southern border. Of the Norman and subsequent ages, many remains exist in the castles, priories, and churches of the county, which contain also various encampments. Population returns:—

Shrewsbury, is the chief town.

SHROUD, *s.* [ʃrɒʊd, Saxon.] The Sax. ʃrɒʊd means apparel, garments; from ʃrɒʊþan, to clothe, as Dr. Jamieson also has observed, who adds that Verelius gives the Icel. *skraut*, pomp, elegance, as the origin; *skrud*, which is also Icelandic, denoting elegant dress, or that used on occasions of ceremony.] A shelter; a cover.

It would warm his spirits,
To hear from me you had left Anthony,
And put yourself under his *shroud*, the universal landlord.
Shakspeare.

By me invested with a veil of clouds,
And swaddled, as new-born, in sable *shrouds*,
For these a receptacle I design'd.
Sandys

The dress of the dead; a winding-sheet.
Now the wasted brands do glow;
Whilst the screech-owl screeching loud,
Puts the wretch that lies in woe
In remembrance of a *shroud*.
Shakspeare.

The ropes extending from the masts to the sides of the ship. It seems to be taken sometimes for the sails.—I turned back to the mast of the ship; there I found my sword among some of the *shrouds*. *Sidney.*

Soft o'er the *shrouds* aerial whispers breathe,
That seem'd but zephyrs to the croud beneath.
Pope.

The branch of a tree.—We are led to suspect, that our author in some of these instances has an equivocal reference to *shrouds* in the sense of the branches of a tree, now often used. *Warton.*

To SHROUD, *v. a.* To shelter; to cover from danger as an agent.—Under your beams I will me safely *shroud*. *Spenser.*—To shelter as the thing covering.—One of these trees, with all his young ones, may *shroud* four hundred horsemen. *Raleigh.*—To dress for the grave.

Whoever comes to *shroud* me, do not harm
That subtle wreath of hair about mine arm.
Donne.

To clothe; to dress. To cover or conceal.
That same evening, when all *shrouded* were
In careless sleep, all, without care or fear,
They fell upon the flock.
Spenser.

To defend; to protect.
So Venus from prevailing Greeks did *shroud*
The hope of Rome, and sav'd him in a cloud.
Waller.
[ʃrɒʊðan, Sax. See To SHRAG.] To cut or lop off the top branches of trees.

To SHROUD, *v. n.* To harbour; to take shelter.
If your stray attendance be yet lodg'd,
Or *shroud* within these limits, I shall know
Ere morrow wake.
Milton.

SHROU'DY, *adj.* Affording shelter.
If your stray attendance be yet lodg'd
Within these *shroudy* limits.
Milton.

To SHROVE, *v. n.* To join in the processions, sports, and feastings, anciently observed at *shrovetide*.

'Twill be rarely strange
To see him stated thus, as though he went
A *shroving* through the city, or intended
To set up some new wake.
Beaum. and Fl.

SHRO'VETIDE, or SHRO'VE-TUESDAY, *s.* [from *shrove*, the preterite of *shrive*.] The time of confession; the day before Ash-Wednesday or Lent, on which anciently they went to confession.
At *shrovetide* to shroving.
Tusser.

'Tis merry in hall, when beards wag all,
And welcome merry *shrovetide*.
Shakspeare.

SHRO'VING, *s.* The festivity of shrovetide.—Eating, drinking, merry-making, — what else, I beseech you, was the whole life of this miserable man here, but in a manner a perpetual *shroving*? *Hales.*

SHRUB, *s.* [ʃrɒʊb, Saxon; and *scrub* or *scrob* is our old word for *shrub*, yet retained in the name "Wormwood-scrubs," a place near London. The Gael. *scraban*, likewise means a stunted bush.] A bush; a small tree.—Trees generally shoot up in one great stem or body; and then at a good distance from the earth spread into branches; thus gooseberries

gooseberries and currants are *shrubs*; oaks and cherries are trees. *Locke*.

He came into a gloomy glade,
Cover'd with boughs and *shrubs* from heaven's light.
Spenser.

A liqueur, probably from the Arabic *sharab*, syrup.
To SHRUB, *v. a.* To rid from bushes or trees. *Unused*.
—Though they be well *shrubbed* and shred, yet they begin even now before the spring to bud, and hope again in time to flourish as the green bay-tree. *Anderson*.

SHRUBBERY, *s.* A plantation of shrubs.—He placed a cast of the Medicean Venus in his *shrubbery*; and one of the piping Fawn in a small circle of firs, hazels, and other elegant shrubs. *Graves*.

SHRUBBY, *adj.* Resembling a shrub.—Plants appearing withered, *shrubby* and curled, are the effects of immoderate wet. *Mortimer*.—Full of shrubs; bushy.

Gentle villager,
What readiest way would bring me to that place? —
Due west it rises from this *shrubby* point. *Milton*.

Consisting of shrubs.
On that cloud-piercing hill
Plinlimmon, the goats their *shrubby* browse
Gnaw pendent. *Philips*.

SHRUFF, *s.* Dross; the refuse of metal tried by the fire. *Unused*. *Johnson*.

To SHRUG, *v. n.* [*shricken*, Dutch; to tremble. — *Sueth*. *skruka*, to lift up the shoulders; from *schrick*, Dutch, *skrack*, Su., a trembling.] To express horror or dissatisfaction by motion of the shoulders or whole body.—Like a fearful deer that looks most about when he comes to the best feed, with a *shrugging* kind of tremor through all her principal parts, she gave these words. *Sidney*.

To SHRUG, *v. a.* To contract or draw up.—Let me shroud and *shrug* myself into my shell, as a tortoise. *Florio*.

He *shrugg'd* his sturdy back,
As if he felt his shoulders ake. *Hudibras*.

SHRUG, *s.* A motion of the shoulders, usually expressing dislike or aversion.

And yet they ramble not to learn the mode,
How to be drest, or how to lisp abroad,
To return knowing in the Spanish *shrug*. *Cleveland*.

As Spaniards talk in dialogues,
Of heads and shoulders, nods and *shrugs*. *Hudibras*.

SHRULE, a river of Ireland, which runs into the Mourne; 5 miles south of Strabane.

SHRUNK, the preterite and part. passive of *shrink*.—Leaving the two friends alone, I *shrunk* aside to the Banqueting-house, where the pictures were. *Sidney*.

SHRUNKEN, the part. passive of *shrink*.—If there were taken out of men's minds vain opinions, it would leave the minds of a number of men, poor *shrunk* things, full of melancholy. *Bacon*.

SHUBENACADIE, a river of Nova Scotia, which rises within a mile of the town of Dartmouth, on the east side of Halifax harbour, and empties into Cobequid bay, taking in its course the Slewiack and Gay's rivers. The great lake of the same name lies on the east side of the road which leads from Halifax to Windsor, and about seven miles from it, and 21 miles from Halifax.

SHUCK, in Agriculture, provincially a stack, or twelve sheaves of corn set up together in the harvest field.

SHUCKBURGH, UPPER, a parish of England, in Warwickshire; 3 miles east of Southam.

SHUCKBURGH, LOWER, a parish in the above county; 2 miles east of the foregoing.

To SHUDDER, *v. n.* [*schuttern*, Germ. freq. of *schuten*, to tremble; *schudden*, Teut. the same.] To quake with fear, or with aversion.

VOL. XXIII. No. 1562.

All the other passions fleet to air,
As doubtful thoughts, and rash embrac'd despair,
And *shuddering* fear. *Shakspeare*.

SHUDDER, *s.* A tremor; the state of trembling.—Into strong *shudders*, and to heavenly agues. *Shakspeare*.

SHUDY CAMPS, a parish of England, in Cambridge-shire; 4 miles east of Linton.

To SHUFFLE, *v. a.* [*jeÿjeling*, Sax. a bustle, a tumult. *Dr. Johnson*.—Rather from *rcufan*, to shove, to push with violence, to drive forward; *schuyffen*, *schuyffelen*, Teut. the same.] To throw into disorder; to agitate tumultuously, so as that one thing takes place of another; to confuse; to throw together tumultuously.—In most things good and evil lie *shuffled*, and thrust up together in a confused heap; and it is study which must draw them forth and range them. *South*.—We shall in vain, *shuffling* the little money we have from one another's hands, endeavour to prevent our wants; decay of trade will quickly waste all the remainder. *Locke*.—To change the position of cards with respect to each other.—The motions of *shuffling* of cards, or casting of dice, are very light. *Bacon*.—To remove, or introduce with some artificial or fraudulent tumult.

Her mother,
Now firm for Doctor Caius, hath appointed
That he shall likewise *shuffle* her away. *Shakspeare*.

To SHUFFLE *off*. To get rid of.
In that sleep of death, what dreams may come,
When we have *shuffled off* this mortal coil,
Must give us pause. *Shakspeare*.

To SHUFFLE *up*. To form tumultuously, or fraudulently.—They sent forth their precepts to convene them before a court of commission, and there used to *shuffle up* a summary proceeding by examination, without trial of jury. *Bacon*.

To SHUFFLE, *v. n.* To throw the cards into a new order.
Cards we play

A round or two; when us'd, we throw away,
Take a fresh pack: nor is it worth our grieving
Who cuts or *shuffles* with our dirty leaving. *Granville*.

To play mean tricks; to practise fraud; to evade fair questions.—I myself, leaving the fear of heaven on the left hand, and hiding mine honour in my necessity, am fain to *shuffle*. *Shakspeare*.—Though he durst not directly break his appointment, he made many a *shuffling* excuse. *Arbuthnot*.—To struggle; to shift.

Your life, good master,
Must *shuffle* for itself. *Shakspeare*.

To move with an irregular gait.

Mincing poetry,
'Tis like the forc'd gait of a *shuffling* nag. *Shakspeare*.

SHUFFLE, *s.* The act of disordering things, or making them take confusedly the place of each other.—Is it not a firmer foundation for contentment, to believe that all things were at first created, and are continually disposed for the best, than that the whole universe is mere bungling, nothing effected for any purpose, but all ill-favourably cobbled and jumbled together, by the unguided agitation and rude *shuffles* of matter. *Bentley*.—A trick; an artifice.—The gifts of nature are beyond all shams and *shuffles*. *L'Estrange*.

SHUFFLEBOARD, *s.* The old name of SHOVELBOARD; which see.

SHUFFLECAP, *s.* A play at which money is shaken in a hat.—He lost his money at chuckfarthing, *shufflecap*, and all-fours. *Arbuthnot*.

SHUFFLER, *s.* One who plays tricks, or shuffles.

SHUFFLING, *s.* Act of throwing into disorder; confusion.—Children should not lose the consideration of human nature in the *shufflings* of outward conditions: the more they have, the better humoured they should be taught to be. *Locke*.—Trick; artifice.—His own book is a perpetual detail of his own *shufflings* or mistakes. *Bentley*.—An irregular gait.

SHUFFLINGLY, *adv.* With an irregular gait.—I may go *shufflingly*, for I was never before walked in trammels; yet I shall drudge and moil at constancy, till I have worn off the hitching in my pace. *Dryden.*

SHUG, in Agriculture, a term used to imply the shaking of any thing, as hay, &c.

SHUGGINS, a word signifying that which is shed or scattered, as grain at harvest, &c.

SHUJAWULPORE, a considerable town of Hindostan, province of Mulwah, belonging to the Mahrattas. It consists of a fortified town or citadel, and extensive suburbs, in which are some good houses. It carries on very considerable trade; and a quantity of opium is grown in the neighbourhood. It is pleasantly situated on the banks of the Jumary river. Lat. 23. 43. N. long. 76. 45. E.

SHUJUHABAD, a town of Hindostan, province of Moultan, situated 18 miles from the city of Moultan.

SHUK, in Agriculture, a term sometimes provincially applied to a husk or shell.

SHUKASKU, a large village of Irak Arabi, on the western bank of the Euphrates, in the territory of the powerful tribe of Montefidge. It is a flourishing place, and carries on a great traffic with Bassora, the Euphrates being navigable up to this place for large boats. The surrounding pastures are very rich, and numerous horses are reared, for which Shukasku is a great mart. A little below this place, the Euphrates unites its waters with those of the Tigris, forming the Sbat ul Arab.

SHUME, or **ASSHUME**, a violent hot wind of Africa, or as they are called, *Oncas*, which in the intermediate journies between several parts of the Desart or Sahara, occasions great inconvenience and distress to travellers. It sometimes wholly exhales the water carried in skins by the camels for the use of the passengers and drivers: on which occasions the Arabs and people of Soudon affirm, that 500 dollars have been given for a draught of water, and that 10 or 20 are commonly given, when a partial exhalation has occurred.

SHUMLA. See **SCHUMLA**.

SHUMSABAD, a town of Hindostan, province of Lahore, belonging to the Seiks. It is situated on the east side of the river Jhylum. Lat. 32. 16. N. long. 72. 15. E.

SHUMSHAIRABAD, a town of Hindostan, province of Agra, and district of Furruckabad. It was formerly chiefly inhabited by Afghans of the tribe of Bungush, most of whom have emigrated since it came under the British controul. It is situated 5 miles south-east of Mow.

SHUMUM, a village of Lower Egypt, on the Nile; 13 miles north-west of Cairo.

To SHUN, *v. a.* [*runian, Saxon.*] To avoid; to decline; to endeavour to escape; to eschew.

Birds and beasts can fly their foe:

So chanticler, who never saw a fox,

Yet *shun'd* him as a sailor *shuns* the rocks. *Dryden.*

To SHUN, *v. n.* To decline; to avoid to do a thing.

The lark still *shuns* on lofty boughs to build,

Her humble nest lies silent in the field.

Waller.

SHUNA, a small island near the west coast of Scotland. Lat. 56. 13. N. long. 5. 33. W.

SHUNAITE EZZAILLE, a village of Upper Egypt; 30 miles south-west of Girge.

SHUNDRABANDY, a town of the south of India, province of the Carnatic, district of Tinnevely. Lat. 9. 35. N. long. 77. 45. E.

SHU'NLESS, *adj.* Inevitable; unavoidable.

Alone he enter'd

The mortal gate of the city, which he painted.

With *shunless* destiny.

Shakspeare.

SHUNNOR FELL, a mountain of England, in Yorkshire, 2329 feet above the level of the sea.

SHURBA, a village of Anatolia, in Asiatic Turkey; 30 miles east-south-east of Boli.

SHURDINGTON, a hamlet of England, in Gloucestershire; 3½ miles south-west of Cheltenham.

SHURIRY, LOCH, a small lake of Scotland, in the county of Caithness, which gives rise to the river Forse.

SHURLOCH, a hamlet of England, in Cheshire; 1½ mile east-south-east of Norwich.

SHUS, a large mass of ruins in the province of Khusistan, in Persia, extending for the space of about 12 miles from the Kerah to the Alzal. They occupy an immense extent of ground; and, like the ruins of Ctesephon, Babylon and Cufa, consist of hillocks of earth and rubbish, covered with broken pieces of brick and coloured tile. The two largest and most remarkable of these mounds stand at the distance of about two miles from the Kerah. The first, at the lowest computation, is a mile in circumference, and nearly a hundred feet high; and the other, though not quite so high, has double the circumference. These mounds bear some resemblance to the pyramids of Babylon, with this difference, that instead of being entirely formed of brick, they consist of clay and pieces of tile, with irregular layers of brick and mortar, five or six feet thick, intended, it should seem, as a kind of prop to the mass. The Arabs, in digging for hidden treasure, often discover here large blocks of marble, covered with hieroglyphics. The reasonings of Major Rennell, joined to the observations of Mr. Kinneir, seem to fix this site as that of the ancient capital of Susa, instead of Shuster, according to the common opinion.

SHUSTER, the principal district of the province of Khusistan, in Persia, and composing a government by itself. It forms the fairest portion of the ancient Susiana, being watered by four noble rivers, and a number of smaller streams, which traverse the plain in every direction. The oppression of the governor, however, joined to the depredations of the wandering tribes who occupy the fortresses of the neighbouring mountains, have reduced this fine territory almost to a desert. Even in the few districts which enjoy any degree of fertility, the corn is chiefly raised by the officers of government, and the richer citizens.

SHUSTER, a city of Persia, capital of the province of Khusistan, at the foot of a range of mountains, and on an eminence overlooking the rapid course of the Karoon. It is defended on the western side by the river, and on the other sides by the old stone wall, now fallen into decay. The houses are good, being principally built of stone, but the streets are narrow and dirty. The population exceeds 15,000, Persians and Arabs; and there is a considerable manufactory of woollen stuffs, which are exported to Bassora, in return for the Indian commodities brought from thence. This city has been generally believed to be the ancient Susa; but there seems ground for placing this rather on the site of Shus. Shuster, however, contains ruins which testify it to have been a place of vast extent, and considerable magnificence. The most remarkable are the castle, built on a small hill at the eastern extremity of the town; the dyke erected by Sapor, across the Karoon, with the view of directing the waters into a channel more advantageous to agriculture; and the bridge, built of hewn stone, and consisting of thirty-two arches, twenty-eight of which are still entire. Lat. 32. N. long. 48. 59. E.

SHUSTOCK, a hamlet of England, in Warwickshire; 3½ miles east-north-east of Coleshill.

To SHUT, *v. a.* preterite, *I shut*; part. pass. *shut*. [*scutan, Saxon*; *schutten, Dutch.*] To close so as to prohibit ingress or regress; to make not open.—We see more exquisitely with one eye *shut* than with both open; for that the spirits visual unite more, and become stronger. *Bacon.*—To inclose; to confine.—Before faith came, we were kept under the law, *shut* up unto the faith, which should afterwards be revealed. *Gal.*—They went in male and female of all flesh; and the Lord *shut* him in. *Gen.*—To prohibit; to bar.

Shall that be *shut* to man, which to the beast
Is open?

Milton.

To

To exclude.

On various seas, not only lost,
But *shut* from every shore, and barr'd from every coast.

Dryden.

To contract; not to keep expanded.—Harden not thy heart, nor *shut* thine hand from thy poor brother. *Deut.*

To SHUT out. To exclude; to deny admission to.—Sometimes the mind fixes itself with so much earnestness on the contemplation of some objects, that it *shuts out* all other thoughts. *Locke.*

To SHUT up. To close; to make impervious; to make impassable, or impossible to be entered or quitted. *Up* is sometimes little more than emphatical.—His mother *shut up* half the rooms in the house, in which her husband or son had died. *Addison.*

To SHUT up. To confine; to inclose; to imprison.—Lucullus, with a great fleet, *shut up* Mithridates in Pitany. *Arbuthnot.*

To SHUT up. To conclude.

The king's a-bed,

He is *shut up* in measureless content.

Shakespeare.

To leave you blest, I would be more accurst
Than death can make me; for death ends our woes,
And the kind grave *shuts up* the mournful scene. *Dryden.*

To SHUT, *v. n.* To be closed; to close itself: as, flowers open in the day, and *shut* at night.

SHUT. Participle adjective. Rid; clear; free. *Obsolete.*—We must not pray in one breath to find a thief, and in the next to get *shut* of him. *L'Estrange.*

SHUT, *s.* Close; act of shutting.

I sought him round his palace, made inquiry
Of all the slaves; but had for answer,
That since the *shut* of evening none had seen him. *Dryden.*

Small door or cover.—The wind-gun is charged by the forcible compression of air, the imprisoned air serving, by the help of little falls or *shuts* within, to stop the vents by which it was admitted. *Wilkins.*

SHUTE, a parish of England, in Devonshire; 2 miles north of Colyton. Population 584.

SHUTESBURY, a township of the United States, in Franklin county, Massachusetts; 80 miles west of Boston. Here is a medicinal spring, opened by an earthquake in 1815. It is much resorted to in all cutaneous complaints.

SHUTFORD, EAST and WEST, adjoining hamlets of England, in the parish of Swacliffe, Oxfordshire; 5 miles west of Banbury.

SHUTLANGER, a hamlet of England, in Northamptonshire; 7 miles from Stony Stratford.

SHUTTER, *s.* One that shuts; a cover; a door.

The wealthy, —

Sleep at ease; the *shutters* make it night.

Dryden.

SHUTTINGTON, or SHUTTENDON, a parish of England, in Warwickshire; $3\frac{1}{2}$ miles east-by-north of Tamworth.

SHUTTLE, *s.* [*schietspoole*, Teut., *skutul*, Icelandic; from *skiuta*, Sweth. to shoot, to push, to drive through. *Sercnius.*] The instrument with which the weaver shoots the cross threads.

Like *shuttles* through the loom, so swiftly glide
My feather'd hours.

Sandys.

This instrument, with a thread it contains, either of woollen, silk, flax, or other matter, serves to form the woofs of stuffs, cloths, linen, ribbands, &c., by throwing the shuttle alternately from left to right, and from right to left, across between the threads of the warp, which are stretched out lengthways on the loom.

In the middle of the shuttle is a kind of cavity, called the eye or chamber of the shuttle; in which is enclosed the spool, which is a part of the thread destined for the woof; and

this is wound on a little tube of paper, rush, or other matter.

The ribband-weaver's shuttle is very different from that of most other weavers, though it serves for the same purpose; it is of box, six or seven inches long, one broad, and as much deep; shod with iron at both ends, which terminate in points, and are a little crooked, the one towards the right, and the other towards the left, representing the figure of an ∞ horizontally placed.

SHUTTLECOCK, *s.* A cork stuck with feathers, and beaten backward and forward. See SHUTTLECOCK.

With dice, with cards, with billiards far unfit,

With *shuttlecocks* misseeming mauly wit.

Spenser.

SHUTUP, POINT, a cape in the straits of Magellan, on the South American shore. Lat. 53. 54. S. long. 71. 32. W.

SHY, *adj.* [*schoww*, Teut. as, "*schow* or *schowigh* peerd," a shy or timid horse; *skij skyg*, Su. Goth., applied also to a horse. See Kilian, and Junius. Serenius cites the Su. Goth. *skij*, to avoid, to shun; which agrees with the Teut. *schowen*, or *schuwen*.] Reserved; not familiar; not free of behaviour.—What makes you so *shy*, my good friend? There's no body loves you better than I. *Arbuthnot.*—Cautious; wary; chary.

We grant, although he had much wit,

H' was very *shy* of using it,

As being loth to wear it out,

And therefore bore it not about.

Hudibras.

Suspicious; jealous; unwilling to suffer acquaintance.—Princes are, by wisdom of state, somewhat *shy* of their successors; and there may be supposed in queens regnant a little proportion of tenderness that way more than in kings. *Wotton.*

SHY'LY, or SHILY, *adv.* Not familiarly.

SHY'NESS, *s.* Unwillingness to be familiar; unsociableness; reservedness.—Mr. Loveday used to style *shyness* the English madness. If indulged, it may be the cause of madness, by driving men to shun company, and live in solitude; which few heads are strong enough to bear; none, if it be joined with idleness. Or it may be the effect of madness, which is misanthropic and malignant: some say, pride is always at the bottom. *Bp. Horne.*

SI, a town of China, of the third rank, in Honan.

SI, or SIA, a town of China, of the second rank, in Chan-si. Lat. 36. 40. N. long. 110. 31. E.

SIABERSDASJOLK, a considerable river of Norwegian Lapland, which joins the Altenelv, a larger stream that falls into the northern ocean at Altengard.

SIABISCH, a river of Asiatic Russia, which falls into the Abakan, near Bankalova, in the government of Koliwan.

SIACHOQUE, a settlement of South America, in New Granada, and in the province of Tunja; half a league north-east of Tunja. Population 600, one-half Indians.

SI-ACTION, in law, the conclusion of a plea to the action, when the defendant demands judgment, if the plaintiff ought to have his action, &c.

SIAK, a river of Sumatra, and one of the largest in the island, which discharges itself into the sea nearly opposite Malacca, in lat. 1. 40. N. It was recently surveyed by Mr. Lynch, under the orders of the British government of Prince of Wales island. From the place where it discharges itself into the straits of Campar, or Bancalis, to the town of Siak, is about 65 miles, and from thence to a place called Pakanbharu, where the survey discontinues, is about 100 more. The width of the river is in general from about half to three quarters of a mile, and its depth from 7 to 15 fathoms; but on the bar at low water there are only 15 feet, and several shoals near its mouth; the tides about 11 feet at the town. Not far within the river is a small island, on which the Dutch had formerly a factory. According to the information of the natives, the river is navigable for sloops to a place called Panti Chermin, being eight days' sail, with the assistance of the tide, and within half a day's journey by land,

land, of another named Patapahan, which boasts also of 10 to 20 tons reach in two days. This is a great mart of trade with the interior, and here its merchants resort with their gold. Pakanbharu, the limit of Mr. Lynch's voyage, is much lower down, and the above-mentioned places are consequently not noticed by him. The shores are flat on both sides, to a considerable distance up the country, and the whole of the soil is probably alluvial. According to Mr. Lynch, ship-timber of any dimensions or shape may be procured and loaded on its shores.

SIAM, a town and district of Sumatra, extending about 450 miles along the north-east coast. The trade is considerable, and is carried on in vessels from the coast of Coromandel, which supply cargoes of piece goods, and also raw silk, opium, and other articles, which they provide at Pinang or Malacca; in return for which they receive gold, wax, sago, salted fish and fish-roses, elephants' teeth, gambir, camphor, rattans and other canes. The maritime power of the kingdom of Siak has always been considerable, and in the history of the Malayan states, we repeatedly read of expeditions fitted out from thence, making attacks upon Johor, Malacca, and various other places on the two coasts of the peninsula. Most of the neighbouring states (or rivers) on the eastern coast of Sumatra, from Langat to Jambi, are said to have been brought in modern times under its subjection. Little information was procured relative to the town. In 1808, it was governed by the brother of the rajah who ruled over the country.

SIAL, a small island, forming a harbour in the Red Sea, near the coast of Egypt. Lat. 24. 30. N. long. 35. 2. E.

SIALAGOGUES, in Medicine, from *σιαλος*, *saliva*, and *αγο*, *I excite*, comprehend all such medicines as increase the flow of saliva.

SIALISMUS, formed from *σιαλον*, *saliva*, a word used by the ancients to express a discharge of saliva, brought on by the holding hot things in the mouth; and by us for a salivation by mercury.

SIALO, a town on the east coast of the island of Sibiu. Lat. 9. 58. N. long. 123. 30. E.

SIALOCHI, a term used by the ancients to express such persons as had a plentiful discharge of saliva, by whatever means. Hippocrates uses it for a person having a quinsy, who discharges a very large quantity of saliva. Others express by it persons, whose mouths naturally abound with a bitter saliva; and others, such persons as, from having a very large tongue, spit into people's faces while talking with them.

SIAM, a country of Asia, the name of which is of uncertain origin, but probably derived from the Portuguese, in whose orthography Siam and Siao are the same; so that Sian, or Siang, might be preferable, as Loubere has suggested, to Siam; and the Portuguese writers in Latin call the natives "Siones." The Siamese style themselves "Tai," or freemen, and their country "Meuang Tai," or the kingdom of freemen. The Portuguese might possibly derive the name Siam from intercourse with the Peguese. "Shan," however, is the oriental term. Before the recent extension and encroachments of the Birman empire, the rich and flourishing monarchy of Siam was regarded as the chief state of exterior India; but some of its limits are not now easily ascertained. On the west of the Malayan peninsula some few possessions may remain to the south of Tanaserim; and on the eastern side of that Chersonese, Ligor may mark the boundary. On the west, a chain of mountains divides Siam, as formerly, from Pegu; but the northern province of Yunshan seems to belong to the Birmans; who extended their territory, in this part, to the river Maykang; and the limits may perhaps (says Pinkerton) be a small ridge running east and west above the river Anan. To the south and east the ancient boundaries are fixed; the ocean, and a chain of mountains, dividing Siam from Laos and Cambodia: so that, according to the ancient description of this kingdom, it may be considered as a large vale between two ridges of mountains. The northern boundaries, as defined by Loubere, evince that Siam has lost little

in that quarter. His city Chiamai is probably Zamee, fifteen days' journey beyond the Siamese frontier. The northern limit is therefore at 19°, and not at 22°, as he erroneously states its latitude; and therefore the length of the kingdom may be about 10°, or near 700 British miles, and about one-half of this not above 70 miles in medial breadth. Or its admeasurement may be more accurately stated from about 11° of north lat. to 19°; being in length of about 550 British miles, by a breadth of 240.

This kingdom is divided into ten provinces, viz., Suphia, Bancok, Porcelon, Pipli, Camphine, Rappri, Tanaserim, Ligor, Cambouri, and Concacema, each of which has its governor respectively. Of these provinces we have the following short notices. Bancok is situated above seven leagues from the sea, and in the Siamese language is called Fou. Its environs are embellished with delicious gardens that furnish the natives with fruit, which is their chief nourishment.

Tanaserim is a province abounding in rice and fruit trees; it has a safe and commodious harbour, admitting vessels of all nations; and in this province the people find more ample resources of subsistence than in the other parts of the monarchy. Cambouri, on the frontiers of Pegu, carries on a considerable trade in the commodity called by the French eagle-wood, elephants'-teeth, and horns of the rhinoceros. The finest varnish is also procured from this province. Ligor affords a kind of tin, called by the French calain, the calain of the Portuguese. Porcelon was formerly a distinct sovereignty, and produces dyeing woods and precious gums.

The capital city of the kingdom has been called Siam, by the ignorance of Portuguese navigators. In the native language the name approaches to the European enunciation of Yuthia, or Juthia; it is situated on an isle formed by the river Meinam or Menan. Its walls in Loubere's time were extensive; but not above a sixth part was inhabited. Its condition since it was delivered from the Birman conquest in 1766, has not been described. The royal palace was on the north, and on the east there was a causeway, affording the only free passage by land. Distinct quarters were inhabited by the Chinese, Japanese, Cochinchinese, Portuguese, and Malays. The temples, pyramids, and royal palaces seem to have been much inferior in all respects to those of the Birmans.

The other chief towns in the Siamese dominions are Bancok, at the mouth of the Meinam, Ogmo, and others on the eastern coast of the gulph of Siam. On the western, D'Anville marks Cham, Cini, and others as far as Ligor. Along the banks of the great river at Louvo and Porselouc, with others of inferior note. Louvo was a royal residence for a considerable part of the year. In general, these towns were only collections of hovels, sometimes surrounded with a wooden stockade, and rarely with a brick wall. In the south-west, Tanaserim and Merghi may be regarded as possessions belonging to the Birman empire, and the remaining fragment of the Siamese territory in that quarter presents no considerable town; though villages appear in Junkseylon and some of the other isles. Kämpfer, in an account of his voyage to Japan in 1690, describes two remarkable edifices near the capital; the first is a famous pyramid, and called Puka Thon, erected for the commemoration of a victory obtained, on the spot where it stands to the north-west, over the king of Pegu.

This magnificent structure is enclosed by a wall, and is 120 feet high, varying in form at its different stages, and terminating in a slender spire; the second edifice consists of two squares to the east of the city, surrounded by a wall, and separated by a channel of the river. These squares contain many temples, convents, chapels, and columns, particularly the temple of Berklam, with a grand gate ornamented with statues and various carvings; the other decorations appear by Kämpfer's account to have been exquisite.

Our principal sources of information with regard to Siam are the publications of La Loubere, who went as ambassador from Louis XIV. to the king of Siam, and those of the French missionaries, of which, that from the papers of the bishop of Tabraca by Turpin, in 1771, is the most important. According to the account of the latter writer, the people of Laos and Pegu

Pegu have established a considerable colony in Siam, since their countries were ravaged by the Birmans. Here are also many Malays, and the ancient kings had a guard of Japanese, which exhibits, in a striking point of view, the intercourse that subsisted among oriental nations.

With regard to the history of Siam, we shall content ourselves with observing, that previously to the Portuguese discoveries, this country was unknown to Europeans. According to Loubere's account, the first king of the Siamese commenced his reign in the year 1300 of their epoch, or about 756 years after the Christian era. Since the Portuguese discovery, their wars with Pegu, and occasional usurpations of the throne, constitute the principal topics of their history. In 1568 the Peguese king declared war on account of two white elephants, which the Siamese refused to surrender: and after prodigious slaughter on both sides, Siam became tributary to Pegu: but about the year 1620, Raja Hapi delivered his crown from this servitude. In 1680, Phalcon, a Greek adventurer, being highly favoured by the king of Siam, opened an intercourse with France, for the purpose of supporting his ambitious designs; but they were punished by his decapitation in 1689, and the French connection was thus terminated. From Turpin, who has extended the history of Siam to the year 1770, we learn, that the first king began to reign about 1444 years before Christ, and that he had forty successors before the epoch of the Portuguese discovery, or the year 1546, many of whom were precipitated from the throne on account of their despotism. Nevertheless, as these forty kings cannot be supposed to have reigned more than ten years each, at a mean computation, the first historical date cannot ascend beyond the year 1100 after Christ, instead 1444 years before Christ. One of the most remarkable events, after the French had evacuated Siam, is the war against the kingdom of Cambodia, which was reduced to the necessity of seeking the protection of Cochin-china. The Siamese army, having advanced too far into the country, was destroyed by famine; and their fleet, though it destroyed the town of Ponteamas, with 200 tons of elephant's teeth, had little success. In 1760 a signal revolution happened in Siam, preceded by violent civil wars between two rival princes. According to Turpin's statement, the Birmans, a people of the kingdom of Ava, had in 1754, languished five years under the Peguese domination. Having lost by death their king, queen, and most of their princes, they lamented their humiliation and servitude, and anxiously sought for a deliverer. With this view they selected one of their companions, named Manlong, a gardener, who, singularly qualified for the office they devolved upon him, by corporeal and mental endowments, undertook to rescue them from the yoke of tyrants, on condition of their cutting off the heads of all the little subaltern tyrants whom the Peguese had sent to oppress them. They readily submitted to his terms; and after the massacre, Manlong was proclaimed king. Having prepared a force, and established a discipline which rendered the Birmans almost invincible, he began by the capture and complete ruin of the city and port of Siriam, which took place about the year 1759: and advancing to Martavan and Travail, the new monarch received information of the riches of Siam, and formed the design of its conquest. He began by sending 30 ships to pillage the cities of Merghi and Tanaserim, and this success led him to flatter himself that he should be able, with great ease, to subdue the whole kingdom of Siam. The court of Siam, hearing of this irruption, sent to the bishop of Tabraca, to request that he would arm the Christians, who amounted only to the number of 100, and yet acquitted themselves with greater honour than the pusillanimous multitude. The Birman sovereign, being at the distance of three days' march from Yuthia, the capital, died in consequence of an abscess. The suburbs, however, on the Dutch quarter were ravaged and burnt; and the surrounding country was exposed to a thousand cruelties. The death of Manlong delivered the Siamese capital; the youngest of his sons having assumed the sceptre found himself under the necessity of regaining his own kingdom, in order to stifle any revolt. The Siamese sovereign, however, having rashly pronounced a sentence of death

against the favourite of his brother, was forced to abdicate the throne; and in consequence of this event he became a Talapoin, or monk, in May 1762, and many of his nobles followed his example. Siam remained in a state of security, upon the report that the new prince of the Birmans had been dethroned upon his return to Ava; and that his elder brother who had succeeded, had no wish to make conquests. This pacific monarch dying suddenly, a pretence of war was afforded by the assistance which the Siamese had given to a rebel Birman governor. In January 1765, the Birmans attacked Merghi and took it; and then proceeded to Tanaserim, which they reduced to ashes. Flushed with success, the general of the Birmans marched against Yuthia, not doubting that the conquest of the capital would induce other cities to submit. The provinces on the north-west of the royal city were ravaged; and the inhabitants saved themselves from death or slavery by dispersion into forests, where they participated the food of wild beasts. The Siamese, threatened with speedy and total destruction, reunited their forces; but though they fought with ardour, their sanguinary defeat subjected their country to the power of their conqueror. The fields, ravaged by the consuming flames, presented nothing to them but ashes, and famine became more terrible than war. The victorious Birmans built, at the confluence of two rivers, a town, or rather a fortified station, which they called Michoug. The Siamese, on their part attempted to fortify the capital, and earnestly solicited the assistance of two English vessels which happened to arrive. The captain of one of them consented to defend the capital, on condition of being supplied with cannon and ammunition: but the jealous Siamese insisted that he should first lodge his merchandizes in the public magazine. With this condition he complied, and going on board his ship, harassed the enemy, and destroyed their forts, so that every day was marked either by defeat or flight. But demanding more ammunition, the dastardly court became afraid, that the English captain, with his single ship, would conquer this ancient monarchy. Its indignant captain withdrew, after seizing six Chinese vessels, whose officers received from him orders upon the king of Siam to the amount of the merchandizes which had been lodged in the public treasury. Upon his retreat, the Birmans, finding no opposition, spread universal desolation, and consigned even their temples to the flames. Instead of recurring to arms, the superstitious monarch and his ministers reposed their whole confidence in their magicians. A Siamese prince, indeed, who had been banished to Ceylon, raised a little army, and returned to the assistance of his country; but the distracted court of Siam sent forces to oppose their deliverer. Many of the Siamese, justly provoked by this conduct, joined the Birmans, who in March, 1766, again advanced, after having been repulsed by the English captain, to within two leagues of the capital. In September, 1766, the Birmans seized a high tower, at the distance of about a quarter of a mile from the city, and raised a battery of cannon, which gave them an absolute command of the river. In this state of urgent danger, 6000 Chinese were charged with the defence of the Dutch factory, and of a large adjacent temple. The Birmans, in consequence of previous skirmishes and a subsequent assault, seized on five considerable temples, which they converted into fortresses; but in another assault they were compelled to retire. The Siamese officers, eager to secure the magazines of grain, as a future resource, produced an immediate famine; which, followed by a contagious disorder or pestilence, occasioned the most dreadful devastation. The Dutch factory was in vain defended by the Portuguese and Chinese; and after a siege of eight days, it was taken and reduced to ashes. The whole Christian quarter of the city shared the same fate; and the virgins were obliged to marry the first young men that presented themselves, in order to be protected by the matrimonial tie, which the Birmans reverence. The Birmans, demanding an unconditional surrender, assaulted the city, and captured it on the 28th of April, 1767. The wealth of the palaces and temples was consumed by the flames, or abandoned by the soldiery; the golden idols were melted, and the

victors, finding that their avarice had been sacrificed to their fury, recurred to acts of violation and cruelty. The great officers of the kingdom were laden with irons, and condemned to the galleys. The king, attempting to escape, was massacred at the gate of his palace; when nothing remained for these conquerors to destroy, they resumed their march to Pegu, accompanied, among other captives, with the remaining princes and princesses of the royal blood of Siam. In June the Birmanians quitted Siam, after having burnt the town of Michoug, soon after its construction.

When the Birmanians evacuated their conquest, the Siamese issued from their forests, and superstitiously directed their first rage against their gods, for having abandoned them to a destructive enemy. Availing themselves of the wealth which accrued from the statues, filled by superstitious persons with gold and silver, who expected to find them when they revisited this world, they proceeded to elect a leader; and Phai-Thaé, an officer of acknowledged ability, was the object of their choice. This new prince displayed considerable bravery and talents; and in the year 1768 suppressed a rebellion that was instigated against him. The Birmanians in vain attempted to renew their incursions into the Siamese territory: they were always repulsed.

Every thing we are told respecting the government, the laws, the literature, the arts, and personal qualities of the Siamese, indicates a corresponding state of advancement with that of the Birmanians. That the religion of the Siamese is the same with that of the Birmanians, and derived from the same origin as that of the Hindoos, there seems to be sufficient evidence. Sommona-Codam, mentioned by Loubere as the chief idol of Siam, is interpreted by competent judges to be the same with the Boodh of Hindostan. The sacred language called Bali is of the same origin: the most esteemed book seems to be the Vinac, and the precepts of morality are chiefly five; viz., not to kill, not to steal, not to commit uncleanness, not to lie, and not to drink any intoxicating liquor. Loubere has given a translation of a more minute code of morals, chiefly compiled for the use of persons dedicated to religion, whom he calls Talapoinis. Their laws are said to be in high reputation all over the East; and it is not certain, whether, like those of the Birmanians, they are of Hindoo, or of indigenous birth. Their system of legislation is represented, by all writers on this country, as extremely severe; death or mutilation being punishments of unimportant offences. The Siamese imitate the Chinese in their festival of the dead; and in some other of their rites. The government of Siam is despotic, and the sovereign, as among the Birmanians, is revered with honours almost divine. The succession to the crown is hereditary in the male line. The population has not been accurately ascertained, nor have we any documents for this purpose. Allowing to the Birman empire more than fourteen millions, as some have stated, the Siamese dominions may probably be peopled by about eight millions. However, Loubere assures us in his time, that from actual enumeration, there were only found, of men, women, and children, 1,900,000. Loubere says that the Siamese had no army, except a few royal guards; but Mandelslo estimated the army, which may be occasionally raised, at 60,000, with no less than 3000 or 4000 elephants. The navy is composed of a number of vessels of various sizes, which display a singular fantastic elegance, like those of the Birmanians; and naval engagements frequently occur. The revenues of this sovereignty are of uncertain computation. Mandelslo describes them as arising from the third of all inheritances, from trade, conducted by royal agents, annual presents from the governors of provinces, duties imposed on commerce, and the discovery of gold, which seems to be a royal claim. Tin is also a royal metal, except that found in Junkseylon, which is abandoned to the adventurers. Loubere adds a kind of land-tax, and other particulars, among which is the royal domain.

Now that the Birmanians have become dangerous to our possessions in Bengal, our alliance with Siam is highly serviceable.

As to the manners and customs of the Siamese, as they

have embraced a branch of Hindoo faith, they are rather Hindoostanic than Chinese. Loubere has given a detailed account of the Siamese manners. The females are under few restraints, and marry at an early age, and are past parturition at forty. Marriages are conducted by female mediation, and a priest or magician is usually consulted concerning the propriety of an alliance. On the third visit the parties are considered as wedded, after the exchange of a few presents, without any farther ceremony, civil or sacred. Polygamy is allowed, more from ostentation than any other motive; and one wife is always acknowledged as supreme. Royal marriages, from considerations of pride, are sometimes incestuous; nor does a king hesitate to espouse his own sister. Divorce is seldom practised; but the rich may chuse a more compliant wife without dismissing the former. Few women become nuns, till they are advanced in years. The Siamese funerals resemble those of the Chinese. On this occasion, the Talapoinis sing hymns in the Bali tongue. After a solemn procession the body is burnt on a funeral pile of precious woods, erected near some temple; and the magnificence of the spectacle is enhanced by theatrical exhibitions, in which the Siamese are said to excel. The tombs are pyramidal, and those of the kings are large and lofty. The common food of the Siamese consists of rice and fish; they also eat lizards, rats, and several kinds of insects. The buffaloes yield rich milk; but butter would melt and become rancid; and cheese is unknown.

In Siam little animal food is used; the mutton and beef being very bad. The doctrine of Boodh inspires the Siamese with horror at the effusion of blood. The houses are small, and constructed of bamboos, upon pillars, in order to guard against inundations, which are common. The palaces only exceed common habitations by occupying a wider space, and being constructed of timber, with a few ornaments. They are also more elevated, but have never more than one floor. With regard to their persons, the Siamese are rather small, but well made. The figure of the countenance, says Kæmpfer, both of men and women, has less of the oval than of the lozenge form, being broad, and raised at the top of the cheeks; and the forehead suddenly contracts, and is almost as pointed as the chin. Their eyes, rising towards the temples, are small and dull; and the white is commonly completely yellow. Their cheeks are hollow; mouth very large, with thick pale lips, and teeth blackened by art; the complexion coarse, brown mixed with red, to which the climate greatly contributes. From this description the Siamese appear to be much inferior in personal appearance to the Birmanians; and to approach rather to the Tartaric or Chinese features.

The dress of the Siamese is slight; clothes being rendered almost unnecessary by the warmth of the climate. A muslin shirt, with wide sleeves, and a kind of loose drawers, are almost the only garments of the rich; a mantle being added in winter, and a high conic cap upon the head. The women use a scarf instead of the shirt, and the petticoat is of painted calico; but with this slight dress they are extremely modest.

The Siamese are said to excel in theatrical amusements; the subjects being taken from their mythology, and from traditions concerning their ancient heroes. Their ordinary amusements consist of races of oxen, and those of boats, the combats of elephants, cock-fighting, tumbling, wrestling, and rope-dancing, religious processions, illuminations, and beautiful exhibitions of fire-works. The men are generally very indolent, and fond of games of chance; while the women are employed in works of industry. Although the Siamese are indolent, they are ingenious, and some of their manufactures deserve praise; nevertheless, the ruinous and despotic avarice of the government crushes industry by the uncertainty of property. They are little skilled in the fabrication of iron or steel, but excel in that of gold, and sometimes in miniature painting. The common people are mostly occupied in procuring fish for their daily food, while the superior classes are engaged in a trifling traffic.

The language of the Siamese, called "T'hay," according to Dr. Leyden's account of it (*Asiatic Researches*, vol. x. p. 244), appears to be in a great measure original; but there is reason to conjecture, that it is not different from that of the Birman. To this purpose it is alleged, that Siamese dramatists used to perform in the Birman dominions, which is not probable, unless the language were common. Dr. Leyden says, that it is more purely monosyllabic, and more powerfully accented, than any of the Indo-Chinese languages. It certainly is connected, in some degree, with some of the Chinese dialects; especially the Mandarin or Court language, with which its numerals, as well as some other terms, coincide, but these are not very numerous. It borrows words freely from the Bali, but contracts and disguises more the terms which it adopts, than either the Ruk'heng or the Barma. In its finely modulated intonations of sound, in its expression of the rank of the speaker, by the simple pronouns which he uses, in the copiousness of the language of civility, and the mode of expressing esteem and adulation, this language resembles the Chinese dialects, with which also it coincides more nearly in construction than either Barma or Ruk'heng. Its construction is simple and inartificial, depending almost solely on the principle of juxta-position. Relative pronouns are not in the language; the nominative regularly precedes the verb, and the verb precedes the case which it governs. When two substantives come together, the last of them is for the most part supposed to be in the genitive. This idiom is consonant to the Malayu, though not to the Barma or Ruk'heng, in which, as in English, the first substantive has a possessive signification. Thus, the phrase, *a man's head*, is expressed in Barma and Ruk'heng, *lu-k'haung*, which is literally *man-head*; but, in Siamese, it is *kua-khon*, and in Malayu, *kapala orang*, both of which are literally *head-man*. A similar difference occurs in the position of the accusative with an active verb, which case in Barma and Malayu generally precedes the verb, as *tummaing cha*, literally *rice eat*; but in Siamese follows it, as *ken kaw*, literally *eat rice*, which corresponds to the Malayu, *makan nasi*. The adjective generally follows the substantive, and the adverb the word which it modifies, whether adjective or verb. Whenever the name of an animal, and, in general, when that of a species or class, is mentioned, the generic or more general name of the genus to which it belongs, is repeated with it, as often happens in the other monosyllabic languages, as well as in the Malayu. In the position of the adverbial particle, the Malayu often differs from the Siamese; as *Mana pargi*, literally *where go*, but in Siamese, *pai hnei*, *go where*. The Siamese composition is also, like that of the Barma, a species of measured prose, regulated solely by the accent and the parallelism of the members of the sentence; but in the recitative the Siamese approaches more nearly to the Chinese mode of recitation, and becomes a kind of chaunt, which different Brahmins assured Dr. Leyden is very similar to the mode of chanting the Samaveda.

The Siamese are not deficient in literature, and their modes of education are well explained by Loubere.

From Mandelslo we learn, that the commerce of the capital of Siam consisted in cloths imported from Hindoostan, and various articles from China; in exports of jewels, gold, benjoin, lacca, wax, tin, lead, &c., and particularly deer-skins, of which more than 150,000 were sold annually to the Japanese. Rice was also exported in great quantities to the Asiatic isles. The king was, by a ruinous policy, the chief merchant, and had factors in most of the neighbouring countries. The royal trade consisted in cotton cloths, tin, ivory, saltpetre, rack, and skins sold to the Dutch. A late writer informs us, that the productions of this country are prodigious quantities of grain, cotton, benjamin; sandal, aguello, and Japan woods; antimony, tin, lead, iron, load-stones, gold and silver; sapphires, emeralds, agates, crystal; marble, and tambac. Siam, in respect of fertility, loco-position, and productive labour, possesses commercial advantages of the same nature with those of the

Birman empire; but on the coast at least, the climate is far from being healthy.

The two first months of the Siamese year, corresponding with our December and January, form their whole winter; the third, fourth and fifth belong to that portion which is called their little summer; and the seven others to their great summer. As they lie north of the line, their winter corresponds with our's, but it is almost as warm as a French summer. Their little summer is their spring; autumn is unknown in their calendar; the winter is dry, and is distinguished by the course of the wind, which almost constantly blows from the north, and is refreshed with cold from the snowy mountains of Thibet, and the bleak wastes of Mongolia.

We have already described this country as a wide vale between two high ridges of mountains; but compared with the Birman empire, the cultivated land is not above half the extent either in breadth or length. Less industrious than the Birman, the agriculture of the Siamese does not extend far from the banks of the river, or its branches; so that towards the mountains there are vast aboriginal forests filled with wild animals, whence they obtain the skins which are exported. The rocky and variegated shores of the noble gulf of Siam, and the size and inundations of the Meinam, conspire with the rich and picturesque vegetation of the forests, illumined at night with crowds of brilliant fire-flies, to impress strangers with admiration and delight.

The soil towards the mountains is parched and infertile; but on the shores of the river consists, like that of Egypt, of a very rich and pure mould, in which a pebble can scarcely be found; and the country would be a terrestrial paradise, if its government were not so despotic as to be justly reckoned far inferior to that of their neighbours the Birman. Rice of excellent quality is the chief product of their agriculture; wheat is not unknown; pease and other vegetables abound; and maize is confined to their gardens. The fertility of Siam depends in a great degree, like that of Egypt on the Nile, on their grand river Meinam, and its contributory streams: for an account of which, see MEINAM.

Of the lakes of this country little is known: a small one, however, lies in the east of the kingdom, which is the source of a river that flows into that of Cambodia. To its extensive ranges of mountains, inclosing the kingdom on the east and west, we have already referred. A small ridge also passes from east to west, not far north of Yuthia, called by Loubere Taramamon. The forests of the country are large and numerous, and produce many valuable woods. Its chief animals are elephants, buffaloes and deer. The elephants in particular are distinguished for their sagacity and beauty; and those of a white colour are treated by the Siamese with a kind of adoration, as they believe the soul of such is royal. Wild boars, tigers and monkeys are numerous. The reports of the mineralogy of Siam are various. Mandelslo, or rather his translator Wicquefort, who added, about the year 1670, the accounts of Pegu, Siam, Japan, &c., informs us, that Siam contains mines of gold, silver, tin and copper; and Loubere suggests, that they were anciently more diligently wrought, as the ancient pits indicate; not to mention the great quantity of gold, which must have been employed in richly gilding the idols, pillars, ceilings, and even roofs of their temples. In his time no mine of gold or silver, worth the labour of being wrought, could be found. The mines chiefly wrought by the Siamese were those of tin and lead. The tin, called "calin" by the Portuguese, was sold throughout the Indies; but it was soft and ill refined. Near Louvo was a mountain of load-stone, and another of inferior quality in Junkseilon.

The Siamese, though of a melancholy turn, have no objection to lively music. They have often parties on the water, which they render very pleasant by a number of voices, and the clapping of hands, with which they beat time.

The instrument in the highest favour with them produces a sound similar to two violins perfectly in tune, played at the same time. But there is nothing more disagreeable than its

its diminutive, the kit of this instrument, which is a kind of rebec, or violin with three brass strings.

Their copper trumpets very much resemble, in tone, the cornets with which the peasants of France call their cows. Their flutes are not much sweeter. They make likewise a kind of carillon with small bells, which are lively, and not disagreeable, when not accompanied by their iron drum, which stuns every one that is not accustomed to its noisy harshness. They have drums made of *terra cotta*, a baked clay, with a long and very narrow neck, but open at the bottom: they cover the drum with a buffalo's hide, and beat it with the hand in such a manner, that it serves for a bass in their concerts. Their voices are not disagreeable, and if we were to hear them sing some of their airs, we should not be displeas'd.

SIAM, more properly called JUTHIA or OZIA, the capital of the kingdom of Siam, situated on the river Menam. Its former position was lower down, where Bancock stands now; but it was removed to its present site, on a low island about four miles in circumference. The surrounding country is very flat, and intersected by numerous canals or branches from the river, through which the people are continually passing in boats. The city is surrounded with a brick wall, which, on the north and south sides, is about 25 feet high, well turreted, and in good condition; but the other sides are lower, and considerably decayed. Small gates open in many places towards the river. At the lower end of the city is a large bastion running some distance into the stream, which as well as several small ones, being well furnished with cannon, commands the channel. To secure the city wall from being injured by the current, a narrow bank or quay is left, which is built upon in many places. The city is intersected by several large canals, generally running at right angles to each other, with many smaller ones branching out from them. The streets run along the canals, so that ships from the river may enter the town, and land their cargoes near the principal houses. Some of the streets are tolerably large, but most of them are narrow and very dirty; and a few are liable to be inundated. The first street, after entering the city, running westward along the canal, is that which contains the best houses, and where the European factories were formerly situated. The middle street, running north, is well inhabited and full of tradesmen and artificers' shops. Numerous Chinese and Moors reside here in very small and low stone houses, covered with flat tiles; while those of the natives are generally composed of timber and bamboos, roofed with palm leaves. The numerous bridges over the canals are built, the larger of stone, and the smaller of wood. There are three royal palaces in the city, the principal of which is built according to the Chinese architecture, with many gilded roofs, and containing the stables for the elephants. The second palace is square, but small, and generally inhabited by the elder prince. There is a third palace, smaller than either. Round the city are many suburbs, some of which, as on the Chinese rivers, consist of inhabited vessels, each containing two or three families. The houses on firm ground are generally built of bamboos, planks, and mats; those on the banks of the river stand on posts about six feet high, that the water may pass freely under them. Each house is furnished with steps to come down in dry weather, and with a boat to go about when the rivers are swollen.

SIAM, GULF OF, a great bay of the Eastern ocean, having on the west part of the peninsula of Malacca, and on the east the kingdom of Cambodia. At its head or northern extremity it touches on the kingdom of Siam, and receives the great river Menam. It extends from about the 9th to the 14th degree of north latitude, and from the 100th to the 104th of east longitude.

SIAN, or CIO, a town of Melinda, in Eastern Africa.

SIANCAS, a river of South America, in the province of Tucuman, which rises near the city of Salta, runs west, and enters the Vermejo.

SIANG, a town of China, in Quangsee, of the second rank. Lat. 23. 58. N. long. 109. E.

SIANG CHAN, a town of China, of the third rank, in Tchekiang.

SIANG-HIAN, a town of China, of the third rank, in Houquang.

SIANGTAN, a town of China, of the third rank, in Chan-si.

SIANG-YANG, a city of China, of the first rank, in the province of Houquang. Being situated on the river Han, it has the opportunity of carrying on a considerable trade. Some gold dust is found in the rivers, and veins of this metal might probably be discovered in the neighbouring mountains, were it permitted to open them. Lat. 32. 5. N. long. 111. 39. E.

SIANICZA, a small town in the north of European Turkey, in Servia, with a population of 1800; 100 miles south-west of Belgrade.

SIANKE, or SYNKE, in Natural History, a name given by the people of some parts of the East Indies to the caryophyllus, or clove-spice.

SIAO, a town of China, of the third rank, in Kiangnan.

SIAO ISLE, an island about 35 miles in circumference, situated off the north-eastern extremity of the island of Celebes. On this island there is a volcano, which, during its eruptions, covers the neighbouring islands with cinders. The land is high but fruitful, and provisions are cheap. The Dutch had formerly here a small garrison, with a schoolmaster to instruct the children of the natives. Provisions are plentiful. Lat. 2. 44. N. long. 125. 5. E.

SIAO-CHAN, a town of China, of the third rank, in Tchekiang.

SIAO-HE-CHAN, a small island near the coast of China. Lat. 41. 43. N. long. 120. 39. E.

SIAO-NON-HOTUN, a town of Chinese Tartary; 550 miles east-north-east of Peking.

SIAO-PI-HOTUN, a town of Corea; 438 miles east of Peking.

SIAO-TEIN, a river of China, which falls into the Eastern seas. Lat. 37. 21. N. long. 118. 44. E.

SIARMAN, a village of Mazanderan, in Persia, on the coast of the Caspian; 12 miles east-south-east of Fehrabad.

SIAS, a river and canal of European Russia. The canal joins the river to the Volchov; the river Sias ultimately joins the Wolga, and thus forms a communication between the east of the empire and St. Petersburg. This canal was begun in 1766, and after being laid aside for many years, was resumed in 1797, and completed in 1801.

SIATISTA, an inland town of European Turkey, in the southern part of Macedon, built on the spot where Gordyna anciently stood, and where at present the roads from Grebna to Philurina, and from Castoria to Servitza, cross each other. Population 4000; 55 miles west-south-west of Salonica.

SIB, *adj.* [rib, Sax.] Related by blood. *Obsolete.*—[He] was *sibbe* to Arthour of Breteigne. *Chaucer.*

He is no faery born, ne *sib* at all

To elves.

Spenser.

SIB, *s.* A relation. *Obsolete.*—Our puritans, very *sibs* unto those fathers of the society, [the Jesuits.] *Mountagu.*

SIB, a small sea-port of Ommon, in Arabia; 30 miles west-north-west of Mascat.

SIBABA, a small island in the Eastern seas, near the south coast of Mindanao. Lat. 6. 36. N. long. 122. 25. E.

SIBÆ, or SOBII, called also IBÆ or SABÆ, in Ancient Geography, a people of India, on this side of the Ganges, and one of the first nations that encountered Alexander on the banks of the Acesines.

SIBALDES, a cluster of small islands near the coast of Patagonia. Lat. 50. 53. N. long. 59. 35. W.

SIBATTA, a town of Niphon, in Japan; 15 miles south-east of Nambu.

SIBB, a district of Mekran, in Persia, consisting of a plain surrounded by barren and rocky mountains, and governed by a chief who resides in a small town of the same name. A river, nearly dry, flows through the centre of this plain, in

in the bed of which are several groves of date trees; but the country, generally speaking, is quite barren; 70 miles north-east of Bunpoor.

SIBBALDIA [so named by Linnæus, in memory of Sir Robert Sibbald, professor of physic at Edinburgh], in Botany, a genus of the class pentandria, order pentagynia, natural order of senticosæ, rosacæ (*Juss.*)—Generic Character. Calyx: perianth one-leaved, half-ten cleft, with an erect base; segments half-lanceolate, equal, spreading, alternately narrower, permanent. Corolla: petals five, ovate, inserted into the calyx. Stamina: filaments five, capillary, shorter than the corolla, inserted into the calyx. Anthers small, obtuse. Pistil: germs five, ovate, very short. Styles from the middle of the side of the germs, length of the stamens. Stigmas headed. Pericarp none. Calyx converging, concealing the seeds within its bosom. Seeds five, somewhat oblong. It sometimes, but very seldom, becomes luxuriant, by doubling the number of pistils, on the same plant.—*Essential Character.* Calyx ten-cleft. Petals five, inserted into the calyx. Styles from the side of the germ. Seeds five.

1. *Sibbaldia procumbens*, or procumbent *sibbaldia*.—Stem procumbent; leaflets three-toothed wedge form.—Native of the mountains of Lapland, Switzerland, Scotland and Siberia.

2. *Sibbaldia erecta*, or upright *sibbaldia*.—Stem upright; leaves linear multifid. The leaves are very finely jagged, and the flowers flesh coloured.—Native of Siberia.

3. *Sibbaldia altaica*.—Leaves linear-filiform, three-parted. Stem an inch high or more, almost naked, having only one flower, or else terminated by a corymb of from three to five flowers.

Propagation and Culture.—Growing on moist ground in high mountains, it is with difficulty preserved in gardens, and rarely produces seeds there; the plants therefore must be procured from the places where they grow naturally, and if they are planted in a moist soil and shady situation, they will thrive tolerably well and produce flowers.

SIBBENS, or **SIVVENS**, in Medicine, an infectious disease, of a chronic nature, prevalent in the western parts of Scotland. It is said to be so denominated from the appearance of a fungous exuberance from some of the cutaneous sores, not unlike a raspberry; the word *sibben*, or *sivven*, being the Highland appellation for a wild raspberry. Whence it has also been sometimes confounded with the yaws, a disease of tropical climates, brought from Africa, and so denominated by the Negroes from the same fruit.

SIBBERTOFT, a parish of England, in Northamptonshire; 16 miles north-north-west of Northampton.

SIBBUL, a village of Barca, in Northern Africa; 25 miles west of Augila.

SIBDON, a parish of England, in Salop; 7 miles south-east of Bishop's Castle.

SIBERIA, is that part of the immense territory of the Russian empire, which lies to the east of the Ural chain of mountains, by which the empire is intersected from north to south, and thus divided into two parts, differing from each other both as to dimensions and quality. Siberia is described as a flat tract of land of considerable extent, declining imperceptibly towards the Frozen ocean, and by equally gentle gradations rising towards the south; where at last it forms a great chain of mountains, constituting the boundary of Russia on the side of China. The large portion of the habitable globe, now distinguished by the appellation of Asiatic Russia, extends from about the 37th degree east longitude to more than 190° or 170° west longitude; and assuming the degree in this high northern latitude at 30 miles, the length may be computed at 4590 geographical miles. The greatest breadth from the cape of Cevero Vostochnoi, called in some maps Taimara, to the Altaian mountains south of the sea of Baikal, may be estimated at 28°, or 1980 geographical miles. In British miles the length, at a gross computation, may be stated at 5350, and the breadth at 1960, which extent exceeds that of Europe.

VOL. XXIII. No. 1563.

The vast country of Siberia, says Mr. Tooke, contains, by calculation, upwards of 10½ millions of square versts, comprehending within it several kingdoms, taken by roving Kozaks (Cossacks) on their own account, and then surrendered to the czar, who completed the conquest; at present this country consists of several of the most extensive governments. The farthest eastern boundary is that of Asia, and the seas of Kamtschatka and Ochotsk, and the northern is the Arctic ocean. On the west the frontiers correspond with those between Asia and Europe, and the southern limits may be stated more at large in the following manner: The river Cuban, part of the Caucasian chain, and an ideal line, divide the Russian territory from Turkey and Persia. The boundary then ascends along the north of the Caspian through the steppe or desert of Issim, and the eastern shore of the river Ob, to its source in the Altaian mountains, where it meets the vast empire of China, and proceeds among that chain to the sources of the Onon, where it includes a considerable region called Daouria, extending about 200 miles in breadth, to the south of the mountains called Yablonnoy; the limit between Russia and Chinese Tartary being partly an ideal line, and partly the river Argoon, which joined with the Onon constitutes the great river Amur. Thence the boundary returns to the mountainous chain, and follows a branch of it to a promontory on the north of the mouth of the Amur.

The population of Asiatic Russia may be regarded as primitive, except a few Russian colonies recently planted; and the Techuks in that part which is opposite to America, supposed to have migrated from that continent, in their persons and customs are different from those of the Asiatic tribes. Next to the Techuks, most remotely north, are the Yukagirs, a branch of the Yakuts, and further west the Samoyedes. South of the Techuks are the Koriaks, and further south the Kamtschadales, who are a distinct people, and speak a different language. The Lamutes are a branch of the Mandshures or Tunguses, who are widely diffused between the Yenisei and Amur, and the southern tribes, ruled by a khan, conquered China in the 17th century. The Ostiaks, and other tribes of Samoyedes, have penetrated considerably to the south between the Yenisei and the Irtsch, and are followed by various tribes of the Monguls, as the Kalmucks, Burats, &c., and by those of the Tartars or Huns, as the Teluts, Kirguses, and others. The radically distinct languages amount to seven, independently of many dialects and mixtures.

The vast extent of northern Asia was first known by the name of Sibir, or Siberia; but the appellation is gradually passing into disuse. When the Monguls established a kingdom in these northern regions, the first residence of the princes was on the river Tura, on the scite of the town now called Tiumen, about 180 miles south-west of Tobolsk; but they afterwards removed to the eastern shore of the Irtsch, and there founded the city of Isker near Tobolsk. This new residence was also called Sibir, of unknown etymology, and the name of the city passed to the Mongul principality. Although this is doubted by Coxe, Pallas says that the ruins of Sibir are still visible 23 versts from Tobolsk, and that it gave name to the rivulet Sibirka, and the whole of Siberia. When the Russians began the conquest of the country, they were unapprized of its extent; and the name of this western province was gradually diffused over the half of Asia. The principality established by the Monguls under Shebuni in 1242 in the western part of Siberia, around Tobolsk and the river Tura, from which it has been sometimes called Tura, has been already mentioned. The actual conquest of Siberia commenced in the reign of Ivan Vassillievitch II., who ascended the Russian throne in 1534. Induced by the prospect of establishing a traffic for Siberian furs, he determined to undertake the conquest of the country, and in 1553 added to his titles that of lord of Sibir, or Siberia. Yarmak, a Cossack chief, being driven, by the Russian conquests in the south, to take refuge, with 6000 or 7000 of his followers, near the river Kama, afterwards marched

down the Ural-chain, defeated the Tartar Kutchun, khan of Sibir, and pressed forwards to the Tobol and the Irtisch, and also to the Oby, and in this astonishing expedition, subjugated Tartars, Vogules, and Ostiaks. Finding it impossible to maintain and complete his conquests with his small army, he surrendered them in 1581, by a formal capitulation, to the tzar Ivan Vassilievitch, who nobly rewarded his magnanimity and exertions. This conqueror of Siberia, however, did not live to witness the full accomplishment of this enterprise. He died in 1584; and after his death the discovery and conquests which he had made were prosecuted by regiments of Donskoi Cossacks, sent thither for that purpose, as far as the eastern ocean and the mountains of China; and in the middle of the 17th century this whole part of the world had become a Russian province. A person, whose name was Cyprian, was appointed first archbishop of Sibir in 1621, and at Tobolsk, where he resided, he drew up a narrative of the conquest. About the middle of the 17th century the Russians had extended east as far as the river Amur; but Kamtschatka was not finally reduced till the year 1711. Behring and other navigators afterwards proceeded to discover the other extreme parts of Asia. In his first voyage of 1728, Behring coasted the eastern shore of Siberia as high as latitude $67^{\circ} 18'$, but his important discoveries were made during his voyage of 1741. The Aleutian isles were visited in 1745; and in the reign of the empress Catharine II., other important discoveries followed, which were completed by Captain Cook. In the south the Mongul kingdom of Kazan was subdued in 1552, and that of Astrakan in 1554, and the Russian monarchy extended to the Caspian sea. In 1727, after previous conflicts, the Russian limits were continued westward from the source of the Argoon to the mountain Sabyntaban, near the conflux of two rivers with the Yenisei; the boundary being thus ascertained between the Russians and the Monguls subject to China. The trade with China has been conducted at Zuruchaitu, on the river Argoon, north lat. 50° east long. 337° , and at Kiachta, about 90 miles south of the sea of Baikal, north lat. 51° east long. 106° . This boundary between two states is the most extensive on the globe, reaching from about the 65th to the 145th degree of longitude; 80° (lat. 50°) yielding, by the allowance of 39 geographical miles to a degree, 3120 miles.

The most curious antiquities in Siberia seem to be the stone tombs which abound on some steppes, particularly near the river Yenisei, representing in rude sculpture human faces, camels, horsemen with lances, and other objects. Here are also found, besides human bones, those of horses and oxen, with fragments of pottery and ornaments of dress. The most singular ancient monument in Siberia is found on the river Abakan, not far from Tomsk, being a large tomb with rude figures.

The religion of the Greek church, which is professed by the Russians, has made no great progress in their Asiatic dominions. Many of the Tartar tribes in the south-west are Mahometans, and others are votaries of the superstition of Dalai Lama. But the religious sentiments of the Schamanians are the most prevalent; particularly among the Tartars, Finns, Samoyedes, Ostiaks, Mandshurs, Burats, and Tunguses; and they have been adopted by the Koriaks, Tschuks, and people of the eastern isles. On the eastern coast of the sea of Baikal, is the rock of the Schamans, an idol of a peculiar shape: whilst the Schamanians admit one chief infernal deity and his subalterns, authors of evil, they also believe in one supreme uncreated beneficent being, who commits the management of the universe to inferior deities, and they delegate portions of it to subaltern spirits. See SCHAMANS.

The archiepiscopal see of Tobolsk is the metropolitan of Russian Asia in the north, and that of Astrakhan in the south. There is another see, that of Irkutsk and Nerzhinsk, and some others of more recent origin.

Siberia is divided into two great governments, those of Tobolsk in the west, and Irkutsk in the east. The smaller

provinces are Kolivan, Nerzhinsk, Yakutsk and Ochotsk. In the south-west is the government of Caucasus, with one or two other divisions, blending Europe and Asia.

The population of Siberia cannot be computed at above $3\frac{1}{2}$ millions. The political importance and relations of this part of the Russian empire principally relate to China and Japan. The manners and customs of Asiatic Russia vary with the numerous tribes by whom it is peopled. The Tartars are the most numerous; next to these in importance are the Monguls, one tribe of whom, viz., the Kalmucks, are found to the west of the Caspian, while the others, called Burats, Torgats, &c., are chiefly round the sea of Baikal. Further to the east are the Mandshurs or Tunguses. See these denominations respectively.

The languages of all the original nations of Asiatic Russia are radically different; and among the Tunguses, Monguls, and Tartars, there are some traces of literature, and not a few MSS. in their several languages.

The principal city of Asiatic Russia is Astrakhan, which see. Azof (which see) derives its importance chiefly from its being a fortified post. The chief towns on the Asiatic side of the Volga, are Samara and Stauropol. At the mouth of the river Ural, or Jaik, stands Gurief; but the chief place after Astrakhan is Orenburg, founded in the year 1740, and the seat of a considerable trade with the tribes on the east of the Caspian. Beyond the Uralian chain the first city that occurs is Tobolsk; which see. Kolyvan is a town of some consequence on the river Ob, having in its vicinity some silver mines of considerable produce, and north to this is Tomsk. Farther to the east the towns become of less consequence. On the river Yenisei is a small town of the same name, and another called Sayansk. On the river Angara stands Irkutsk, supposed to contain 12,000 inhabitants, the chief mart of the commerce between Russia and China, and the seat of supreme jurisdiction over eastern Siberia. On the wide and frozen Lena stands Yakutsk; which see.

The chief commerce of this part of the Russian empire consists in furs and other valuable furs, for which the Chinese return tea, silk and nankcen. That with the Kirguses consists in exchanging the Russian woollen cloths, iron and household articles, for horses, cattle, sheep and beautiful sheep-skins. On the Black Sea there is some commerce with Turkey, the exports being furs, kaviar, iron, linen, &c., and the imports wine, fruit, coffee, silks, rice. In the trade on the Caspian the exports are the same, and the return chiefly silk. The principal Russian harbours are Astrakhan, Gurief, and Kisliar, near the mouth of the Terek, but the best haven is Baku, belonging to the Persians. The Tartars, on the east of the Caspian, bring the products of their country and of Bucharia, as cotton-yarn, furs, stuffs, hides and rhubarb; but the chief article is raw silk from Shirvan and Ghilan, on the west of the Caspian.

In Asiatic Russia the climate extends from the vine at the bottom of the Caucasus, to the solitary lichen on the rocks of the Arctic ocean. Through the greater part of Siberia, the most southern frontier being about 50° , and the northern ascending to 78° , the general climate may be considered rather as frigid than temperate; being in three quarters of the country on a level with that of Norway and Lapland, untempered by the gales of the Atlantic. To the south of the sea of Baikal, the climate corresponds with that of Berlin, and the north of Germany. The chains of high mountains, which form the southern boundary of these provinces, contribute also to increase the cold; so that the sea of Baikal is commonly entirely frozen from December till May. The finest climate in these eastern parts is that of Daouria, or the province around Nerzhinsk: and the numerous towns on the Amur evince the great superiority of what is called Chinese Tartary, which is comparatively a fertile and temperate region. The change of the seasons is very rapid; the long winter is almost instantaneously succeeded by a warm spring; and the quickness and luxuriance of the vegetation exceed description.

The greater part of Siberia, that is, the middle and southern latitudes of it, as far as the river Lena, is extremely fertile, and fit for every kind of produce; but the northern and eastern parts, being encumbered with wood, are destitute of this advantage, being unfit both for pasturage and culture. The whole of this part, as far as the 60th degree of north latitude, and to the Frozen ocean, is full of bogs and morasses covered with moss, which would be absolutely impassable, if the ice, which never thaws deeper than seven inches, did not remain entire beneath it. In the central parts vegetation is checked by the severe cold of so wide a continent. Towards the south there are vast forests of pine, fir, larch and other trees, among which is a kind of mulberry, which might thrive in many climates that are now destitute of it. The sublime scenes around the sea of Baikal are agreeably contrasted with the marks of human industry, the cultivated field and the garden. Many parts of Siberia are totally incapable of agriculture; but in the southern and western districts the soil is remarkably fertile. North of Kolyvan, barley generally yields more than twelve-fold, and oats commonly twenty-fold. Exclusive of winter wheat, most of the usual European grains prosper in southern Siberia. In some parts flax grows wild; and hemp is prepared from the nettle. Woad is found in Siberia, and saffron near the Caucasus. The best rhubarb abounds on the banks of the Ural or Jaik, in the southern districts watered by the Yenisei, and in the mountains of Daouria. But it is not possible that agriculture should flourish while the peasantry are slaves, and sold with the soil. Nevertheless, an intelligent traveller was surprised at the abundance of buckwheat, rye, barley, oats and other grain which he observed to the south of Tobolsk; where the cattle were also very numerous, and in the winter fed with hay. The large garden strawberry, called hautbois, is found wild in the territory of Irkutsk; and on the Altaian mountains the red currant attains the size of a common cherry, ripening in large bunches of excellent flavour. Near the Volga and the Ural are excellent melons of various kinds.

Some of the largest rivers of Asia belong to the Russian empire; such are the Ob, of 1900 British miles in course; the Yenisei, about 1750; and Lena, 1570. To these we may add the Irtisch, the Angara, the Selinga, the Yaik, &c. The lakes of this country are numerous. The most considerable in the north of Siberia is that of Piazinsko; that of Baikal, described under that article; a large lake between the rivers Ob and the Irtisch, 170 miles long, divided by an island into two parts, called the lakes of Tchang, and Soumi. In this quarter there are many smaller lakes, and others to the north of the Caspian, some of which are salt, particularly that of Bogdo. To these we may add the Altan Nor, or golden lake, and the lake of Altyn, called by the Russians Teletako. The mountains are the Uralian, the Altaian, Bogdo Alim, or the Almighty mountain, Sinnaia-Sepka, Schlangenberg, which is the richest in minerals, the Sayansk mountains, the mountains of Nerzhinsk or Russian Daouria, the chain of Stanvooi or mountains of Ochotsk, and Caucasus.

Siberia has hitherto been found to possess scarcely any genera of plants; and even all the species of any considerable importance, are those trees which are common to it with the north of Europe. Under the head of the zoology of Asiatic Russia, we may enumerate the rein-deer, which performs the offices of the horse, the cow and the sheep; the dogs of Kamtschatka, which are used for carriage; the horse, which is found wild, a species of ass, the urus or bison, the argali or wild sheep, the ibex or rock-goat, large stags, the musk or civet, and wild boar; wolves, foxes and bears; the sable, several kinds of hares, the castor or beaver, the walrus and the common seal. But it would be superfluous to enlarge: Siberia is so rich in zoology and botany, that, as Mr. Pennant observes, even the discovery of America has scarcely imparted a greater number of objects to the naturalist. The mineralogy of Siberia is equally fertile, and displays many singular and interesting objects. The chief gold mines of Siberia are those of Catherinburg or Ekatherin-

burg, on the east of the Uralian mountains, about north lat- 57°: the mines of Nerzhinsk, discovered in 1704, are principally of lead, mixed with silver and gold; and those of Kolyvan, chiefly in the Schlangenberg, or mountain of serpents, so called by the Germans, began to be wrought in 1748. The gold mines of Beresof are the chief in the empire; those of Kolyvan and Nerzhinsk being denominated silver mines. Besides the copper mines in the Uralian mountains, there are some in those of Altai. But the iron mines of Russia are of the most solid and lasting importance, particularly those which supply the numerous founderies of the Uralian mountains. Rock-salt is chiefly found near the Ilek, not far from Orenburg. Coal is scarcely known; but sulphur, alum, sal ammoniac, vitriol, nitre and natron, are abundant. Siberia possesses a variety of gems, particularly in the mountain Adunstollo, near the river Argoon, in the province of Nerzhinsk or Daouria. Common topazes are found here, and also the jacinth. The kind of jade called mother of emerald is a Siberian product; and beryl or aqua marinus is found in Adunstollo, and in greater perfection in the gem mines of Moursintsky, near Catherinburg, along with the chrysolite. Red garnets abound near the sea of Baikal. The ruby-coloured schorl has been discovered in the Uralian Mountains. The green felspar of Siberia is a beautiful stone, and carved by the Russians into a variety of ornaments. The Daourian mountains, between the Onon and the Argoon, afford elegant onyx. The beautiful stones called the hair of Venus and Thetis, being limpid rock crystals containing capillary schorl, red or green, are found near Catherinburg. The alliance stone consists of a greyish porphyry, united, as if glued together, with transparent quartz. Great quantities of malaclite have also been found in the Uralian mountains; one piece of which is said to have weighed 107 poods, or 3852 pounds. Siberia affords beautiful red and green jaspers; and lapis lazuli is found near Baikal. The Uralian chain presents fine white marble; and in the numerous primitive ranges there are many varieties of granite and porphyry. The chief mineral waters of Russia are those of Kamtschatka.

The islands belonging to Asiatic Russia may be distributed into the Aleutian, Andrenovian and Kurilian groups, with the Fox isles, which extend to the promontory of Alaska in North America. See these articles respectively. For further particulars respecting Siberia or Asiatic Russia, see RUSSIA.

SIBERTSWOLD, a parish of England, in Kent; 5 miles north-west of Dover.

SIBFORD FERRIS, a hamlet of England, in Oxfordshire; 7 miles west-south-west of Banbury.

SIBFORD GOWER, a hamlet in the above county, nearly adjoining to the foregoing.

SIBIDOOLOO, a town of Manding, in Africa, on the frontier towards Bambarra. It is situated in a fertile valley, surrounded by high rocky hills, and is so strong, that it has never once been plundered.

SIBIDISHER, a village of Fezzan, so called from the tomb of a saint to whom it is dedicated; 16 miles east of Mourzouk.

SIBIL EL MULSIH, a town of Hedsjas, in Arabia; 120 miles north-north-west of Mecca.

SIBILANT, *adj.* [*sibilans*, Latin.] Hissing.—It were easy to add a nasal letter to each of the other pair of hisping and *sibilant* letters. *Holder.*

SIBILATION, *s.* [from *sibilo*, Lat.] A hissing sound.—Metals, quenched in water, give a *sibilation* or hissing sound. *Bacon.*

SIBILLETA, a village of Mexico, situated on the Rio del Norte. It is a regular square, appearing like a large mud wall on the outside; the doors, windows, &c., facing the square. It is one of the neatest and most regular of the Spanish villages in this quarter. From this place the road passes along the Rio del Norte, through a desert, for more than 200 miles, as far as the flourishing town of Papa.

SIBIRIJOA, or СИБИРЬЮА, a settlement and mining station

station of Mexico, in the province of Cinaloa, situated on the shore of the river Fuerte. The mines have ceased to be worked.

SIBNIBAS, a town of Bengal, district of Nuddea. During the rainy season there is a short passage for boats from the north-east parts of Bengal to Calcutta, but which is dry in the hot weather. It is possible that a canal might be cut from the Ganges to the Hoogly river by this route. Lat. 23. 25. N. long. 88. 49. E.

SIBOCKOO, a town on the east coast of the island of Borneo. Lat. 4. 24. N. long. 117. 12. E.

SIBOURE, a small town in the south-west of France, department of the Lower Pyrenees, on the Nivelle, opposite to St. Jean de Luz. Population 1900.

SIBSEY, a parish of England, in Lincolnshire; 6 miles north-north-east of Boston. Population 1151.

SIBSEY ISLAND, a small island on the south coast of New Holland, in Spencer's gulf.

SIBSIB, in Zoology, an animal of the empire of Morocco, abounding in the mountains of the province of Suse; of an intermediate species between the cat and the squirrel; somewhat similar to the ichneumon in form, but smaller.

SIBSON, a hamlet of England, in Huntingdonshire, situated on the river Nev; $7\frac{1}{2}$ miles north-west of Stilton.

SIBSON, or SIBBESTON, a parish of England, in Leicestershire; 4 miles west-south-west of Market Bosworth.

SIBTHORP (John), an eminent botanist and traveller, was the youngest son of Dr. Humphrey Sibthorp, professor of botany at Oxford, where the subject of the present article was born, October 28, 1758. He received the first rudiments of his education at Magdalen school, from whence he was removed to the school at Lincoln. In due time he entered at Lincoln college, Oxford; but upon obtaining the Radcliffe travelling fellowship, he became a member of University college. Being intended for the medical profession, he was sent to Edinburgh to complete that branch of his education; but he took the degree of doctor of physic in his own university. The taste he had early imbibed for natural history, especially botany, was cultivated at Edinburgh, and indulged in a tour to the Highlands of Scotland. After his return from thence, he visited France and Switzerland, spending a considerable time at Montpellier, where he formed an intimacy with the amiable Broussonet, collected many plants of that country, and communicated to the Academie des Sciences of Montpellier, of which he became a member, an account of his numerous botanical discoveries in the neighbourhood. The death of an elder brother of his father, by which a considerable estate devolved on the latter, occasioned Dr. J. Sibthorp to return to England in 1783, when, on his father's resignation, he was appointed to the botanical professorship.

Dr. Sibthorp passed a portion of the year 1784, at Göttingen, where he projected his first tour to Greece; the botanical investigation of which celebrated country, and especially the determination of the plants mentioned by its classical authors, had, for some time past, become the leading object of his pursuits. He first visited the principal seats of learning in Germany, and surveyed some of its mountains and forests; but it was impossible to quit this part of the world without a considerable stay at Vienna. There he cultivated the friendship of the two professors Jacquin, father and son; he studied with peculiar care the celebrated manuscript of Dioscorides, which has so long been preserved in the imperial library; and procured a most excellent draughtsman, Mr. Ferdinand Bauer, to be the companion of his expedition. On the 6th of March, 1786, they set out together from Vienna, and passed through Carriola to Trieste, Venice, Bologna, Florence, Rome and Naples, examining every thing that was curious, and keeping an exact record of their botanical observations. After viewing the celebrated environs of Naples, they sailed from thence early in May, and touching at Messina, as well as at the Isle of Milo, they proceeded to Crete.

Having narrowly escaped shipwreck, in returning to Milo,

by one of the country vessels, Dr. Sibthorp and Mr. Bauer touched successively at several islands of the Archipelago, visited Athens, and remained for a while at Smyrna. Dr. Sibthorp's residence at Constantinople, or in the neighbouring isle of Karki, proved favourable to his investigations of the fishes and birds of those regions, by which he was enabled to throw much light on the writings of ancient naturalists.

A stay of five weeks at Cyprus enabled Dr. Sibthorp to draw up a Fauna and Flora of that island. The former consists of 18 Mammalia, 85 Birds, 19 Amphibia, and 100 Fishes; the latter comprehends 616 species of plants. The particular stations, domestic and medical uses, and reputed qualities of these last, are amply recorded; and the vernacular names of the animals, as well as of the economical plants, are subjoined. The same method is pursued, in a subsequent part of this journal, respecting the plants and animals of Greece, with every thing that could be collected relative to the medicine, agriculture and domestic economy of that country and the circumjacent isles. The illustration of the writings of Dioscorides, in particular, was Dr. Sibthorp's chief object. The names and reputed virtues of several plants, recorded by that ancient writer, and still traditionally retained by the Athenian shepherds, served occasionally to elucidate, or to confirm their synonymy. The first sketch of the *Flora Græca* comprises about 850 plants. "This," says the author, "may be considered as containing only the plants observed by me in the environs of Athens, on the snowy heights of the Grecian Alp Parnassus, on the steep precipices of Delphis, the empurpled mountain of Hymettus, the Pentele, the lower hills about the Piræus, the olive grounds about Athens, and the fertile plains of Bœotia. The future botanist, who shall examine this country with more leisure, and at a more favourable season of the year, before the summer sun has scorched up the spring plants, may make a considerable addition to this list. My intention was to have travelled by land through Greece; but the disturbed state of this country, the eve of a Russian war, the rebellion of its bashaws, and the plague at Larissa, rendered my project impracticable." Of the Mammalia of Greece, 37 are enumerated, with their modern names, 25 reptiles and 82 birds. All these catalogues were greatly augmented by subsequent observations, inasmuch that the number of species collected from an investigation of all Dr. Sibthorp's manuscripts, and specimens for the materials of the *Prodromus Floræ Græcæ*, amounts to about 3000.

The constitution of Dr. Sibthorp, never very robust, had suffered materially from the hardships and exertions of his journey. But his native air, and the learned leisure of the university, gradually recruited his strength. His merits procured an augmentation of his stipend, with a rank of a Regius professor; both which advantages were, at the same time, conferred on his brother professor at Cambridge. He became a fellow of the Royal Society in 1789, and was among the first members of the Linnæan Society, founded in 1788.

On the 20th of March, 1794, Dr. Sibthorp set out from London, on his second tour to Greece. He reached Constantinople on the 19th of May, not without having suffered much from the fatigues of the journey, which had brought on a bilious fever. He soon recovered his health at Constantinople, where he was joined by his friend Mr. Hawkins from Crete.

He died at Bath, February 8th, 1796, in the thirty-eighth year of his age, and lies interred in the abbey church, where his executors have erected a neat monument to his memory.

By his will, dated Ashburton, January 12, 1796, he gives a freehold estate in Oxfordshire to the university of Oxford, for the purpose of first publishing his *Flora Græca*, in 10 folio volumes, with 100 coloured plates in each, and a *Prodromus* of the same work, in 8vo., without plates.

The only work which professor John Sibthorp published in his life-time is a *Flora Oxoniensis* in one volume 8vo., printed in 1794. It has the merit of being entirely founded

on his own personal observation. The species enumerated amount to 1200, all gathered by himself, and disposed according to the Linnæan system, with the alterations of Thunberg.

SIBTHORPE, a parish of England, in Nottinghamshire, $5\frac{1}{2}$ miles south-south-west of Newark.

SIBTHORPIA [so named by Linnæus, in honour of Humphrey Sibthorp, M. D., Professor of Botany at Oxford], in Botany, a genus of the class didynamia, order angiosperma, natural order of pediculares (*Juss.*).—Generic Character. Calyx: perianth one-leafed, turbinate, five-parted, spreading; leaflets ovate, permanent. Corolla, one-petalled, five-parted, spreading, equal, length of the calyx: segments rounded. Stamina: filaments four, capillary: two approximating. Anthers cordate-oblong. Pistil: germ roundish, compressed. Style cylindrical, thicker than the filaments, length of the flower. Stigma simple, capitate, depressed. Pericarp: capsule compressed, orbicular, two-bellied, with the sides acute, two-valved, two-celled: partition transverse. Seeds roundish-oblong, convex on one side, flat on the other. Receptacle globular, fastened to the middle of the partition.—*Essential Character.* Calyx five-parted. Corolla five-parted, equal. Stamina in remote pairs. Capsule compressed, orbicular, two-celled, with the partition transverse.

Sibthorpia Europæa, or Cornish money-wort.—Root fibrous, perennial. Stems prostrate, creeping. Leaves alternate, on footstalks, horizontal, with shallow distant notches, hairy. Peduncles axillary, one-flowered, hairy. Calyx hispid. Corolla pale yellow, with a purplish tinge in the three upper segments.—Native of Portugal and England, in shady places and about springs; in Devonshire and Cornwall, plentiful, and about Longsledale in Westmoreland.

Propagation and Culture.—Planted or sown in pots, placed in the shade and kept moist, it will thrive very well in gardens.

SIBTON, a parish of England, in Suffolk; 2 miles north-west of Yoxford. Population 503.

SIBU, one of the Philippine islands, about 240 miles in circumference. The principal productions are a species of grain called borona, which serves instead of rice; cotton, tobacco, wax, and civet. This island was discovered by Magellan in 1521. Lat. 10. 41. N. long. 123. 30. E.

SIBU, **ЗІВУ**, or **СОВУ**, a town in the island of Sibiu, containing 5000 houses; the see of a bishop, and residence of a governor. In this town, some say Magellan, the celebrated circumnavigator, died. Lat. 10. 35. N. long. 123. 44. E.

SIBUCO, a town on the west coast of Mindanao. Lat. 7. 3. N. long. 122. 10. E.

SIBULTIQUI, a river of Mexico, which runs into the Pacific Ocean. Lat. 13. 35. N. long. 89. 16. W.

SIBUN, a river of South America, which falls into the bay of Honduras, in long. 91. 10. W. lat. 13. 8. N. It flows towards the sea, with a bold and rapid course, and vast quantities of mahogany are floated down it, and from the many branches and creeks with which it is united.

SIBUNDOI, a settlement of Quito, in the province of Succumbios, on the shore of the river Putumayo. Lat. 1. 7. N.

SIBUYAN ISLE, a small island, one of the Philippines, from 30 to 40 miles in circumference, and situated due south of Luzon. Lat. 12. 30. N. long. 122. 30. E.

SIBYL, *s.* [*sibylla*, Latin.] A prophetess among the pagans.

It was my dismal hap to hear

A sibyl old, bow-bent with crooked age,
That far events full wisely could presage.

Milton.

Authors do not agree about the number of the Sibyls, though their existence is allowed, as sufficiently established by antiquity: Capella reckons but two, viz., Erphyle of Troo, called Sibylla Phrygia; and Sinuachia of Erythræ, called Sibylla Erythræa. Solinus mentions three; viz.,

Cumæa, Delphica, or the Sibyl of Sardis, and Erythræa; and of this opinion is Ausonius, who thus describes them:—

“Et tres fatidicæ nomen commune Sibyllæ,
Quarum tergemini fatalia carmine libri.”

Ælian makes their number four; viz., the Erythræan, th Egyptian, the Sibyl born at Samos, and another of Sardis in Lydia; and Varro increases it to ten, denominating them from the places of their birth; the Persian, called Sabetha by the Persians; Libyan, according to Euripides, the daughter of Jupiter and Latona; Delphic, named Daphne, by Diodorus Siculus, who says that she was born at Thebes, in Bœotia; Cimmerian; Erythræan, who prophesied to the Greeks, that were going to besiege Troy, the happy success of their enterprise, and who lived, according to Eusebius, not in the time of the Trojan war, as Varro believes, but under the reign of Romulus; Samian, called, according to Suidas, Pitho or Persuasion, and according to Eusebius, Eriphile; Cumæan, named Amalthæa by some authors, and by others Demophile or Hierophyle, who is said to have offered to Tarquin the Elder a collection of Sibylline verses, in nine books; Hellespontic or Troiad, born at Marpesus, near the town of Gorgis, in Troas, who lived, according to Heraclides, in the time of Cyrus and Solon; Phrygian, who gave her oracles at Ancyra, the place of her residence; and Tiburtine, named Albumæa, and honoured as a divinity in the vicinity of the river Anio. Of these, the most celebrated are, the Erythræan, Delphic and Cumæan Sibyls.

Some modern authors, without regarding the authority of Varro, or that of the other ancients, are for uniting all the Sibyls in one; so that, according to them, different names were given to one and the same Sybil from the different places where she uttered her oracles. She first published her predictions in the city of Erythræa, the place of her nativity; then rambled about the world; and closed her life at Cumæ, in Italy.

The Sibylline oracles were held in great veneration by the more credulous among the ancients; but they were much suspected by many of the more knowing. The books in which they were written were kept by the Romans with infinite care; and nothing of moment was undertaken without consulting them. Tarquin first committed them to the custody of two patrician priests, instituted for that purpose. How, when, or by whom this collection was made, are circumstances which authentic history has not ascertained. It is not likely that the Sibyls prophesied in verse, far less that they themselves kept their predictions, and digested them into order. All that we know concerning them is, that a woman came to Tarquin the Elder, as Varro says, or, according to Pliny, to Tarquin the Proud, offering him a collection of these verses, in nine books, or three according to Pliny; and that she demanded for them 300 pieces of gold; that when the prince refused to give that sum, she threw three of them into the fire, and asked the same sum for the remaining six, which being refused, she burned three more, and persisted in asking the same sum for those that were left: at length the king, fearing that she would burn the other three, gave her the sum which she demanded. Although this story has very much the air of a romance, it is attested by many authors; and it is certain that the Romans had in their possession a collection of the Sibylline verses.

These books were carefully kept till the civil wars of Sylla and Marius: when the Capitol being accidentally set on fire, and burnt down to the ground, these books were burnt with it. This happened in the year before Christ 83. But the Capitol being again rebuilt about seven years after this period, the senate determined to restore the Sibylline oracles; and having procured many that were said to be of this kind, laid them up in the Capitol, in order to supply the place and office of those that were lost. However, the books thus obtained had been dispersed in the hands of many, and were, therefore, by being thus vulgarly known, unfit for the use which the Romans proposed to make of them. On this account a law was passed, which required the surrender of

them, and prohibited any from retaining copies of them, under pain of death. Augustus, when he assumed the high-priesthood of Rome, revived this law, and destroyed a great multitude of copies which were brought in. Tiberius caused many more to be burnt, and preserved only those which were found more worthy of approbation for that service of the state for which they were originally intended; and to these, as long as Rome remained heathen, they had constant recourse; till at length Honorius the emperor, A.D. 399, issued an order for destroying them; in pursuance of which, Stilico burnt all these prophetic writings, and demolished the temple of Apollo, in which they were repositd.

SIBYLLINE, *adj.* [*sibyllinus*, Lat.] Of or belonging to a sibyl.—The genuine *sibylline* oracles — in the first ages of the church were easily distinguished from the spurious. *Addison*.

SICABA, a town on the north-west coast of the island of Negroes. Lat. 11. 26. N. long. 123. 2. E.

SICAMORE, or **SYCAMORE**, *s.* [*sicomorus*, Latin; *icomop*, Sax.] A tree.—Of trees you have the palm, olive, and *sicamore*. *Peacham*.

SICANDRO, a small uninhabited island in the Grecian archipelago, near the island of Policandro.

SICARD (Claude), a Jesuit missionary, was born at Aubergne, near Marseilles, in 1677. He entered into the society of Jesus in the year 1699, and for several years taught the classics and rhetoric in their schools. He was at length sent on a mission to Syria, and thence to Egypt where he died at Cairo, in 1726. He was a man of deep as well as extensive learning, and an exact observer of what was remarkable in the countries he visited. His first publication was "An easy Method of learning Greek," translated into French from the Latin of Peter Gras, with additions. When abroad, he sent home several curious letters, which were published in the "Nouveaux Mémoires des Missions de la Compagnie de Jesus dans le Levant;" in which are likewise published his "Plan of a Work on Egypt, ancient and modern," and "A Dissertation on the Passage of the Red Sea, and Journey of the Israelites."

SICARII, in Ancient History, assassins of Judea, who went about the country for the accomplishment of their nefarious purposes, with short swords concealed under their clothes.

SICASICA, a province formerly of Peru, but since included in the viceroyalty of Buenos Ayres. It is a very extensive track, of nearly a hundred leagues in length, and contains some silver mines, two of which are worked. The far greater part of this district lies among the mountains, and it has Cochabamba to its west, Oruro to the south, Paria to the east, and La Paz to the north. Those parts which consist of plains or valleys, are extremely hot, and produce great quantities of coca or betel, with which the neighbouring provinces are supplied. The mountains feed large herds of cattle, and flocks of vicuñas, guanacos, &c. Its forests afford several sorts of valuable wood, and it is said to contain two rich gold mines. The inhabitants make the wool of their sheep into various kinds of stuffs.

SICAYAP POINT, a cape on the north-west coast of Mindanao. Lat. 8. N. long. 123. 30. E.

SICCA, a town on the north coast of the island of Sumatra. Lat. 1. 32. N. long. 110. 40. E.

To SICCATE, *v. a.* [*siccus*, Latin.] To dry. *Unused, but a good word.*

SICCATION, *s.* The act of drying.

SICCHOS, a settlement of South America, in Quito, and province of Tacunga, in which are some silver mines, now abandoned; 20 miles west of Lacatunga.

SICCA'FICK, *adj.* [*siccus* and *fic*.] Causing dryness.

SICCITY, [*siccité*, Fr., *siccitas*, from *siccus*, Latin.] Dryness; aridity; want of moisture.—That which is coagulated by a fiery *siccity* will suffer colliqution from aqueous humidity, as salt and sugar. *Brown*.

SICCOMARIO, a district in the east of the Sardinian states, in the Milanese, consisting of a small but fruitful

stripe of land, near the junction of the Po and the Tanaro. It contains 15 petty towns and villages.

SICE, *s.* [*six*, French.] A gambling term; the number six at dice.

My study was to cog the dice,
And dextrously to throw the lucky *sice* ;
To shun ames-ace, that swept my stakes away. *Dryden*.

SICERA, in the Jewish Antiquities. The Hellenist Jews give this name to any inebriating liquor. St. Chrysostom, Theodoret, and Theophilus of Antiöch, who were Syrians, and who therefore ought to know the signification and nature of *sicera*, assure us, that it properly signifies palm-wine.

SICGENI, a small town of the island of Malta, with 2300 inhabitants.

SICH, *adj.* The old word for **SUCH**.

I thought the soul would have made me rich ;
But now I wote it is nothing *sich* ;
For either the shepherds been idle and still,
And led off their sheep what they will. *Spenser*.

SICHEM, a small inland town of the Netherlands, in South Brabant, on the Demer. Population 1500; 14 miles north-east of Louvain.

SICIGNANO, a small town of Italy, in the south-west of the kingdom of Naples. in the Principato Citra, containing, with the village of Galdo di Sicignano, a population of 3400. In 1806 it was partly burned by the French, on account of the resistance made by the inhabitants.

SICILIANA, in Botany, a name given by Dodonæus, and some other authors, to the great androsæmum.

SICILIANE, or **PASTORALE**, a kind of simple rural music, resounding in Christmas time through all quarters of Naples, and executed by Abruzzese or Calabrian shepherds, upon a species of bag-pipes, called in Abruzzo *zampagne*, and *ciaramelli* in Calabria. The tunes vary, according to the provinces: in the south, they have three different airs; the northern shepherds have only two, to which they add any variations which the boldness of their own genius inspires.

SICILIES, **TWO**, **KINGDOM OF THE**, the title assumed for their dominions by the royal family of Naples, since the early part of the 18th century. See the close of the succeeding article; see also **NAPLES**.

SICILY, the largest island of the Mediterranean, situated between Italy and the coast of Africa, and extending from long. 12. 42. to 16. 10. E. lat. 36. 30. to 38. 12. N. Its form is that of an irregular triangle; its length from east to west is 180 miles, its greatest breadth 130. Its extent, including the small islands along its coast, is about 12,500 square miles, or somewhat more than one-third of the size of Ireland.

Divisions and Population.—Modern Sicily has long been divided into three parts, the Val di Mazzara, or western part; the Val di Demona, or north-eastern; the Val di Noto, or southern: of these, the first is the most extensive. But since 1815, Sicily has been divided into seven intendancies, viz., Palermo, Messina, Catania, Girgenti, Syracuse, Trapani, and Calatanissetta, each corresponding in size to one of our larger counties, such as Somerset or Essex. The population of Sicily in former ages has been rated very high; but after making allowances for the uncertainty and tendency to exaggeration in ancient records, there seems little probability that it ever equalled the present number, viz., 1,660,000. Certain it is, that three centuries ago it did not exceed the half of it.

Chief towns in the Val di Mazzara:

Palermo	150,000	Naro	12,000
Marsala	25,000	Corleo	12,000
Trapani	24,000	Licatanè	12,000
Termini	20,000	Castel Vetrano	12,000
Girgenti	14,000	Sciacca	11,000
Salemi	12,000	Mazzara	10,000
Alcamo	12,000		

Val di Noto :

Modica	24,000	Agosta	12,000
Ragusa	20,000	Vittoria	11,000
Noto	16,000	Scieli	11,000
Syracuse	14,000	Castro Giovanni	10,000

Val di Demona :

Messina	90,000	Randuzzo	12,000
Catania	80,000	Cefalu	10,000
Nicosia	13,000		

Face of the Country.—Sicily is separated from the Italian continent by a strait called the Faro di Messina, from 12 to 15 miles over in the broadest part, and in the narrowest not exceeding two. It has been often asserted that the island was originally joined to the continent, and separated from it by a great convulsion, the principal chain of mountains, extending from east to west, being apparently a continuation of the Appennines. There are, however, other ranges braunching off from north to south, and a few insulated mountains, of which by far the greatest is Etna. This mixture of mountain and valley causes a corresponding variety of products and scenery, the low grounds being appropriated to maize, wheat, and other corn, the higher to pasture and plantations. The most extensive plains are those of Melazzo and Catania in the north-east, of Syracuse in the south-west, of Terra Nova in the south. Along the northern coast the surface is level for nearly 100 miles to the east of Trapani: it is level also near the gulf of Castello Mare, on the opposite side of Sicily. Considerable as is the population, there are extensive tracks, particularly in the west, devoid both of cultivation and inhabitants. There are no carriage roads except in the vicinity of Palermo, and the only mode of travelling is on the backs of mules or horses.

Sicily is well watered; but of all its streams, three only deserve the name of rivers, viz., the Fiume Grande, the Salso, and the Giaretta, the *Simatius* of antiquity. There are very few bridges, either over these or over the rivulets, which, in the rainy seasons, are soon swelled to the size of torrents. Of lakes, Sicily has only two worth notice, the Biviere, about eight miles south of Catania, which in winter has a circumference of 20 miles, while in summer it is reduced to one-half, leaving a swampy track, of the most pernicious operation on the health of the surrounding district. The other lake, Pergusa, near Castro Giovanni, in the centre of the island, is only five miles in circumference.

Climate and Soil.—The climate of Sicily is very pleasant, the winter corresponding to our spring, and the heat of summer being tempered by the fresh breezes from the sea. Snow is confined to the lofty mountains; the low grounds exhibit the banana, the aloe, the sugar cane, and other southern productions. Of the seasons, the spring is the most agreeable. The sky of Sicily is comparatively cloudless, its vegetation luxuriant, its scenery finely diversified. The drawbacks on these advantages are the unhealthiness of particular districts, the occasional occurrence of earthquakes, particularly in the neighbourhood of Messina, and the debilitating effect of the *sirocco*, or south wind, during a few days of July and August. Sicily has always been noted for its fertility, an advantage long ascribed to the volcanic matter contained on its surface; but this matter appears, by late surveys, to be confined to the vicinity of Etna, the soil in the rest of the island being a calcareous loamy mould. It descends in general to a considerable depth, and liberally rewards the active hand of industry. The want of rain in the beginning of summer is supplied by copious dews towards June; the snow accumulated on the mountains begins to melt, and affords, in a number of rivulets, the means of irrigating the land under tillage. Still the state of cultivation in Sicily is very backward, owing to the unfortunate absorption of landed property by

the barons and clergy, and to the general poverty of the peasantry. Tracks of many miles in extent, which, with a little labour, might be made highly productive, are left uncultivated; and in a land of great natural plenty, one-third of the inhabitants may be said to be in a state of beggary. The products of the island are maize, wheat, and other corn; flax, hemp, vines, olives, saffron, and cotton. For silk the climate is highly favourable; also for the rich fruit of a southern latitude. Potatoes were introduced in the 18th century, and are cultivated in many parts, though not in great quantities. The extent of high lying ground, and the frequency of rain, make the pastures of Sicily very different from the parched continental tracks in the same latitude; hence a considerable supply of milk, cheese, and butter. A farther source of wealth, the extension of plantations, has been entirely neglected; and the oak, elm, ash, and pine, which cover many parts of the mountains, are turned to little account, being deemed in law the exclusive property of the crown. It was only in 1819 that the export of corn from this island was declared free.

In minerals Sicily is equally rich. Iron and copper are found in various parts, particularly in the north-east quarter, the region of Etna. Marble is very general, and stone for building is found in almost every part of the island. Agate, jasper, porphyry and alabaster, are likewise found. Salt mines have been discovered near Castro Giovanni, in the centre of the island; and near Messina is a large coal mine.

Animals.—The labour of the fields, and even the dragging of carts and waggons on the roads, is in Sicily generally performed by oxen. For travelling, recourse is had to mules, who here, as in other parts of the south of Europe, discover great steadiness in traversing a wretched road, and no less patience in supporting fatigue. In general the breed of cattle and horses has been much neglected, and is at present advancing very slowly towards improvement. Game is found in abundance, and most of the wild animals of the continent of Europe exist in this island.

Manufactures and Trade.—The only manufacturing establishments of extent are at the three large towns of Palermo, Messina and Catania: they consist of silk, cotton and linen; in part also of woollens, though the wool of the island is of indifferent quality. If to these we add a few articles, such as hats, cutlery, harness, carriages and household furniture, made at Palermo and the principal towns, we have the amount of the Sicilian manufactures. A number of articles for the peasantry, are in this, as in other backward countries, made at their own houses, without the benefit of machinery or division of labour. Hence comparatively few exchanges, a slow intercourse between town and country, and in general those symptoms of stagnation which strike an Englishman so forcibly on visiting a foreign country.

In respect to commerce, Sicily, from the variety of its products, the excellence of several of its harbours, and the general safety of its coast for navigation, would, under an enlightened government, acquire great importance. As yet, however, the exports and imports are comparatively small, neither exceeding 1,500,000*l.* for the whole island. Here are no banks, no insurance companies, and very little confidence in government. The interior trade is cramped by the want of roads, the navigation by the quarantine laws, which are said to be enforced very unequally, and to be unfairly dispensed with in favour of those who are in connection with the public officers. The occupancy of the island by the British troops, from 1806 to 1816, was a source of considerable advantage; and in the latter year, a treaty was concluded between the courts of Naples and London, affording considerable privileges to the British. The chief exports of Sicily are silk, corn, salt, olive oil, sumac, wine, fruits of various kinds; also goat, kid and other skins. The imports consist of colonial produce, hardware, jewellery, lead and manufactured articles in great variety, but small quantity. Of the fisheries carried on along the coast, the principal

cipal is the tunny fishery. Money accounts are here kept in ounces, taris and grains.

1 grain is equal to $\frac{1}{4}d.$ sterling.
20 grains = 1 tari or $5d.$ sterling.
30 taris = 1 ounce or 12s. 6d.

Inhabitants, Education, Religion.—The Sicilians resemble the Spaniards and Italians in the darkness of their complexion, and not less in the indolence of their habits. Their backwardness arises, not from heaviness, for they appear quick and ingenious, but from the want of education and personal exertion. A vindictive spirit, and the extremes to which it leads, are as remarkable here as in Italy or Portugal. The vices of the Sicilians are not intemperance, for they are as sparing in the use of drink and victuals as the Spaniards; but the vices engendered by indolence, namely, a passion for public amusements, a rage for gaming, and a licence in gaming.

The Sicilian language approaches greatly to the Italian; and until the end of the 18th century, printed compositions generally appeared in the latter. Of late, attempts have been made to raise the Sicilian from a provincial to a national tongue. A dictionary has been printed, and several poets, have published in their native language. In ancient times, Sicily produced several writers of note, as Theocritus, Empedocles, Stesichorus, Epicarmus; also painters and sculptors, not unworthy of competition with those of Greece. In modern times, or rather since the beginning of the 17th century, there have appeared some successful candidates in the field of belles-lettres, poetry and natural history; and at present Palermo, Catania and Messina, contain individuals of distinguished attainments; but their efforts have been discouraged by the want of a free press, the inadequacy of the public libraries, and the difficulty of intercourse with the more enlightened part of Europe. Education may be said to be in almost the same incipient state: there has yet been no general establishment of elementary schools; and the colleges at Palermo, Catania and other large towns, have been conducted on a very antiquated plan, Latin and the doctrines of the Catholic church having excluded every branch of useful knowledge. The schools called *Scuoli Normali*, established in 1789, are on a better footing, the pupils being limited in number, and the teachers subjected to a previous examination. Girls, as in other Catholic countries, are put, at the age of eight or ten, into a convent or *retiro*, where, during six or eight years, they are taught little else than reading, writing, or the ceremonies of the Catholic faith. Fortunately the plan of teaching of Bell and Lancaster has found its way into Sicily. The religion of Sicily is the Catholic: the number of ecclesiastics in Sicily is said to amount to 70,000, exclusive of a still greater number of monks and nuns; all, or almost all, marked by one uniform character of ignorance, credulity and superstition.

Government.—Sicily has long had an assembly dignified with the name of parliament, but until a very late date (1810) it was merely a feudal institution, possessing hardly any marks of the elective franchise. It was composed of three branches: the nobles to the number of 227; the prelates in number 61; the demanial or deputies from universities, cities, and crown estates, to the number of only 43. Its authority was in a great measure nominal, and it did little or nothing towards repressing the abuses which prevailed notoriously in every branch of administration. The public officers are so inadequately paid, as necessarily to have recourse to peculation. The hospitals and other public establishments, even when well endowed, are in a very uncomfortable state. As to the administration of justice, the laws, however good in the letter, are inoperative against a delinquent of influence or fortune. The judges are open to corruption; civil suits are protracted from year to year, in a manner not surpassed even in Poland; and the nature of the verdict often depends on the comparative influence of the parties. The rarity of capital punish-

ment would claim our praise, were it not accompanied, in cases of doubtful evidence, by a recourse to torture: in short, no country could be more in want of that political reform which was begun by the British government when in possession of the island, and is now carried on by the inhabitants themselves.

The Revenue and Military Establishments.—The revenue of Sicily is computed at £1,000,000 sterling; a sum that would not be exorbitant, were the taxes judicious in their nature, and equal in the mode of levying; but until lately, the barons or landholders were to a certain degree exempt, and the burden was unmercifully imposed on the commons. The executive branch is subject to no inquiry or responsibility in regard to the application of the public funds. The Sicilian army in time of peace does not exceed 10,000 men; the pay of the soldiers, adequate only to their subsistence in a plentiful year, makes them dependant on public charity in a season of dearth and scarcity. A number of the officers are foreigners. The Sicilian navy is limited to one ship of the line, two frigates, five sloops: the gun-boats are numerous; but the whole is in a poor state of discipline and equipment.

History.—Sicily is said to have been originally called Sicania, and to have derived its present name from the Siculi, a people who invaded it from Italy. It was called also, from its triangular form, Trinaeria. Of foreign nations, the first acquainted with it were the Phœnicians, who appear to have carried on a commerce of a very primitive kind, with the inhabitants of the sea-coast. The Greeks soon after resorted to it, as to the south of Italy and the coast of Asia Minor, for the purpose of colonizing: hence the prevalence of the Greek language, the erection of structures in the Greek style, and a political connection with Corinth, Athens, and other sea-ports of the mother country. The occupancy of the western and northern coast by the Carthaginians, took place about 500 years before the birth of our Saviour, but the eastern and southern remained to Greek settlers: for the siege of Syracuse, so unfortunate for the Athenians, occurred only 414 years before the Christian era. About a century and a half after, took place the long military contest between the Romans and Carthaginians, for the possession of the island, on the termination of which Sicily remained in possession of the former during many centuries, the inhabitants being permitted to retain their own usages and forms of worship. At last, in the 8th and 9th centuries, the Saracens succeeded in conquering Sicily, and, making Palermo their capital remained in possession of the island about 200 years. They, or rather their rulers, gave way to the Normans, who, attracted to Sicily, on their progress to the crusades, made the conquest of the island in the 11th century. After being for a short time subject to the emperor Anjou, a French prince, in 1266; and it was in 1282 that the massacre of the French, so well known by the name of Sicilian Vespers, took place. After this catastrophe, the inhabitants transferred the sovereignty of their island to Spain, with whom it long remained, as well as that of the Neapolitan territory, to which Sicily became united in 1430. Both were subject to the crown of Spain in 1700, when the death of the reigning king led to the grand contest called the "war of the succession." In 1707, the Austrians obtained possession of Naples and Sicily; and by the peace of Utrecht in 1713, while Naples was confirmed to them, Sicily was given to the duke of Savoy, with the title of king. But in 1720 the Austrians prevailed on the new possessor of Sicily to exchange it for Sardinia, and added the former to the kingdom of Naples, a union of which they were not fated to reap the fruits—the war of 1734, carried on by France and Spain against Austria, transferring the crown of Naples, or, as it was now termed, of the Two Sicilies, to a branch of the royal family of Spain. In their hands it remained without interruption, until the progress of the French revolutionists led, in January 1799, to the expulsion of the royal family from Naples. The latter took refuge in Sicily, and being restored by the success of the allies in the ensuing campaign, remained

remained at Naples until the beginning of 1806, when, in revenge for the part taken against France in the preceding autumn, they were once more compelled to take refuge in Sicily. Here they were threatened by their successors, Joseph Buonaparte and Murat, with a descent; and the acquisition of Sicily was, as appeared from the British negotiation at Paris in 1806, a first rate object with Napoleon. But an attempt at invasion, made in September 1810, was baffled by the British troops. Sicily remained safe; and in 1815, the overthrow of Murat by the Austrians, led to the restoration of the legitimate family to the throne of Naples, which they continue to possess. The royal prerogative, is, since the failure of the revolution, quite unlimited.

SICK, *adj.* [Goth. *siks*; Sax. *seoc*; old Engl. *seke*. " [He] them hath holpen, when that they were *seke*." Chaucer, C. T. Prol.] Afflicted with disease: with *of* before the disease.—O Cassius, I am *sick of* many griefs. *Shakespeare*.—Disordered in the organs of digestion; ill in the stomach; corrupted.

What we oft do best;
By *sick* interpreters, or weak ones, is
Not ours, or not allow'd: what worst, as oft
Hitting a grosser quality, is cried up
For our best act.

Shakespeare.

Disgusted.

Why will you break the sabbath of my days,
Now *sick* alike of envy and of praise?

Pope.

To **SICK**, *v. n.* To sicken; to take a disease. *Not in use.*

A little time before

Our great grandsire Edward *sick'd* and died.

Shakespeare.

To **SICKEN**, *v. a.* To make sick; to disease.

Why should one earth, one clime, one stream, one breath,
Raise this to strength, and *sicken* that to death?

Prior.

To weaken; to impair.

Kinsmen of mine have

By this so *sicken'd* their estates, that never
They shall abound as formerly.

Shakespeare.

To **SICKEN**, *v. n.* To grow sick; to fall into disease.

—The judges that sat upon the jail, and those that attended,
sicken'd upon it, and died. *Bacon*.—To be satiated; to be filled to disgust.

Though the treasure

Of nature's germins tumble all together,
Ev'n till destruction *sicken*, answer me
To what I ask you.

Shakespeare.

To be disgusted, or disordered with abhorrence.

The ghosts repine at violated night,
And curse th' invading sun, and *sicken* at the sight.

Dryden.

To grow weak; to decay; to languish.

So *sicken* waining moons too near the sun,
And blunt their crescents on the edge of day.

Dryden.

SICKER, *adj.* [Written also *siker*; Su. Goth. *siker*, *seker*; Germ. *sicher*; Welsh, *sicer*; Irish, *sokair*; Lat. *securus*.] Sure; certain; firm. *Obsolete*. Retained in our northern word *sickerly*.

Being some honest curate, or some vicar,
Content with little in condition *sicker*.

Spenser.

SICKER, *adv.* Surely; certainly. *Obsolete*.

Sicker thou'st but a lazy loord,
And rekes much of thy swink,
That with fond terms and witless words,
To bleer mine eyes do'st think.

Spenser.

SICKERLY, *adv.* Surely; a northern word.—That men may more *sickerly* be evil.

Robinson.

SICKERNESS, *s.* Security. *Obsolete*.

Lightly she leaped, as a wight forlore,
From her dull horse, in desperate distresse,
And to her feet betooke her doubtful *sickerness*.

Spenser.

SICKERSREUT, a village of Germany, in Franconia; 3 miles south-east of Bayreuth, remarkable only for a mineral

spring resorted to for the relief of gout, rheumatism, and gravel.

SICKISH, *adj.* Somewhat sick; inclined to be sick.—Not the body only, but the mind too, which commonly follows the temper of the body, is *sickish* and indisposed.

SICKLAGULLY, a celebrated pass in the range of hills which separate Bengal from Bahar; about 18 miles north-by-west from Rajemal. It was formerly fortified, but never seems to have been of much utility, as it has been frequently taken; and there are several other passes in the hills. It would, however, delay an enemy for some time if properly guarded. It is situated on the south-west side of the Ganges, in Lat. 25. 12. N. long. 87. 40. E.

SICKLE, *s.* [Icol, Sax.; *sicket*, Dutch, from *secale*, or *sicula*, Latin.] The hook with which corn is cut; a reaping-hook, with a serrated edge.

O'er whom Time gently shakes his wings of down,
Till with his silent *sickle* they are mown.

Dryden.

SICKLED, *adj.* Supplied with a sickle; carrying a sickle.

When autumn's yellow lustre gilds the world,
And tempts the *sickled* swain into the field.

Thomson.

SICKLEWORT, *s.* [Icol-pýpɔ, Sax.] A plant.

SICKLEMAN, or **SICKLER**, *s.* A reaper.

You sunburnt *sickleman*, of August weary,
Come hither from the furrow, and be merry.

Shakespeare.

Their *sicklers* reap the corn another sows.

Sandys.

SICKLINESS, *s.* Disposition to sickness; habitual disease.

Impute

His words to wayward *sickliness* and age.

Shakespeare.

SICKLINGHALL, a village of England, West Riding of Yorkshire; 2½ miles west of Wetherby.

SICKLY, *adv.* Not in health.

We wear our health but *sickly* in his life,
Which in his death were perfect.

Shakespeare.

SICKLY, *adj.* Not healthy; not sound; not well; somewhat disordered.

Time seems not now beneath his years to stoop,
Nor do his wings with *sickly* feathers droop.

Dryden.

When on my *sickly* couch I lay,
Impatient both of night and day,
Then Stella ran to my relief.

Swift.

Faint; weak; languid.

The moon grows *sickly* at the sight of day,
And early cocks have summon'd me away.

Dryden.

To **SICKLY**, *v. a.* To make diseased; to taint with the hue of disease.

The native hue of resolution

Is *sickled* o'er with the pale cast of thought.

Shakespeare.

SICKNESS, *s.* State of being diseased.

I do lament the *sickness* of the king,
As loth to lose him.

Shakespeare.

Trust not too much your now resistless charms;
Those age or *sickness* soon or late disarms.

Pope.

Disorder in the organs of digestion.

SICKREE. There are several places of this name in Hindostan.

SICON, a settlement of Cuba; 125 miles west-south-west of Havannah.

SICU-LEUVU, a river of Chili, in the province of Maule, which runs south, and forms the lake of Huenchun.

SICULI, in Ancient Geography, a people originally of Dalmatia, who established themselves in Italy about the 16th century B. C. They formed a numerous nation, and had possession of a considerable extent of country; as they peopled Umbria, Sabina, Latium, and all the cantons, the occupiers of which were afterwards known under the name of Opici. The Siculi passed into Sicily, and gave it their name. This event is said to have taken place, according to

Hellanicus of Lesbos, 80 years before the siege of Troy, or 1364 years B. C., according to the chronology of Thucydides. The name of Siculi, which comprehended all the people who diffused themselves from the Tiber to the eastern extremity of Italy, the country occupied by the Liburni excepted, was gradually abolished by the separate leagues and distinctions of the Sabines, Latins, Samnites, Oenotrians, and Italians. Herodotus, Thucydides, Plato, and Aristotle, mention these people.

SICULIANA, a considerable town on the south coast of Sicily, in the Val di Mazzara, situated at the mouth of the small river Canna. It has a harbour, and exports some wheat; also quantities of sulphur, obtained from mines in the neighbourhood. Population 6000; 8 miles west-by-north of Girgenti.

SICUM, a town of Illyria, on the coast of Dalmatia, between Scardona and Salone, according to Ptolemy and Pliny. The latter says, that the Emperor Claudius sent hither his veteran soldiers.

SICUS, in Ichthyology, a name used by some authors to express *albula nobilis*. This, in the Linnæan system, is a species of *salmo*.

SICUT ALIAS, in Law, a writ sent out in the second place, where the first was not executed.

SICYEDON [from *σικυος*, a cucumber], in Surgery, a transverse fracture.

SICYON, a town of Greece, and capital of a small state in the gulf of Corinth, and not far distant from it. It was anciently called *Ægiatæ*, from *Ægialeus*, its supposed founder and first monarch. It is not certain whether the whole kingdom, or only its metropolis, was called by that name, but it was exchanged for Apia, from Apis its fourth king; and in process of time it acquired that of Sicyon, who was the 19th monarch. He reigned about 740 years after its supposed foundation; and from that time not only the kingdom, but the whole peninsula of Peloponnesus, was called Sicyonia until its dissolution.

This little kingdom lay on the north part of the Peloponnesus, since called the bay of Corinth. On the west it had the province of Achaia, and on the east the isthmus, which joins the peninsula to the continent of Greece. Its extent has not been ascertained. Its capital is supposed to have been situated upon the river Asopus, having the bay of Corinth on the north, and the rest of the Peloponnesus at the three other points. Strabo and Livy say, that it was parted from the kingdom of Corinth by the river Nemia; and Ptolemy adds that it was first called Micone, and afterwards *Ægiali*; he gave it two cities, Platius and Sicyon, both of which he placed at some distance from the sea.

The territory of this small state was rich, abounding with corn, vines, olive-trees, and other commodities, besides some iron mines. Its metropolis was, in process of time, very much adorned by Sicyon and his successors, with temples, altars, monuments, and statues of all their gods and ancient monarchs. This would be justly deemed the most ancient monarchy in the world, not excepting those of Egypt and Assyria, if it were true that its founder lived about 150 years after the flood, or about 200 years before Noah's death; as some have computed it from Eusebius, who affirms this monarchy to have been founded 1313 years before the first Olympiad, or 2089 B. C. But other chronologers have corrected this mistake, and made him contemporary with Terah, Abraham's father, and stated the commencement of his reign about the year of the world 1915, or even later, about A. M. 1236; by which computation it is brought somewhat lower than the year of the flood 900. This kingdom is said to have had, during an interval of 962 years, a succession of 26 kings, but their reigns are distinguished by no memorable action or conquest. The first king was *Ægialeus*, and the last Zeuxippus or Deuxippus; but in Blair's chronology the last king is Charidemus, with whom they end, 1089 years B. C., or 15 years after the return of the Heraclidæ into Peloponnesus. In the list of kings, the most remarkable is Sicyon, who gave name to the state, and who is supposed to have built, or at least enlarged, the

metropolis of the kingdom, and to have called it by his own name. Accordingly it was not only one of the noblest cities in Greece, on account both of its magnificent edifices and ingenious workmen, but it was a considerable place when the Venetians were masters of the Morea, under the new name of "Basilica," though it has been for near the two last centuries reduced to a heap of ruins, containing only three Turkish, and about as many Christian families. The town was situated on the top of a hill, about three miles from the gulf of Lepanto; and has still several monuments of its ancient as well as modern grandeur, particularly the walls of its famous citadel, of some fine churches and mosques, and a large ancient edifice, called the royal palace, with aqueducts to supply it with water, all which, with other old remains, are described by Sir George Wheeler, Voy.

After the death of Zeuxippus, the last king of Sicyon, this state is said to have been governed by the priests of Apollo Carneus, five of whom held the sovereignty only during one year each; after which the Amphictyons swayed the sceptre nine years successively, and Charidemus, the last of them, continued in it 18 years. After this hierarchy had lasted 32 years, the Heraclidæ, who were at that time returned from Peloponnesus, became masters of it, or according to Pausanias, the kingdom was incorporated with the Doreæ, and became subject to that of Argos, the next kingdom to that of Sicyon in respect of antiquity. *An. Un. Hist.* vol. v.

SICYONII, among the Romans, were shoes of a more delicate form, and better ornamented than ordinary, and chiefly worn by the ladies and the gallants.

SICYOS [*σικυος* of Theophrastus], in Botany, a genus of the class monoecia, order syngenesia, natural order of Cucurbitaceæ.—Generic Character. Male flowers—Calyx; perianth one-leaved, bell-shaped, five-toothed; toothlets awl-shaped. Corolla, five-parted, bell-shaped, fastened to the calyx; segments ovate. Stamina: filaments three, united. Anthers as many, sepalate. Female flowers on the same plant—Calyx: perianth as in the male, superior, deciduous. Corolla as in the male. Pistil: germ ovate, inferior. Style cylindrical. Stigma thickish, trifid. Pericarp: berry ovate, set with spines, one-celled. Seed single, subovate.—*Essential Character*. Calyx five-toothed, Corolla five-parted. Male filaments three. Female style trifid. Drupe one-seeded.

1. *Sicyos angulata*, angular-leaved sicyos, or single-seeded cucumber.—Leaves angular. This is an annual plant, which rises with two large seed-leaves like those of the cucumber; the stalk is trailing, and has tendrils, by which it fastens itself to neighbouring plants, and will rise fifteen or sixteen feet high, dividing into many branches, with angular leaves on them like those of the cucumber. Flowers sulphur coloured.—Native of North America.

2. *Sicyos laciniata*, or jagged-leaved sicyos.—This is also an annual plant, with trailing stalks like the former; but the leaves are cut into several segments. The flowers are larger and of a deeper colour. The fruit is not quite so large, nor so closely armed with prickly hairs.—Native of the West Indies.

3. *Sicyos Garcini*, or Garcin's sicyos.—Leaves cordate, five-parted with the sinuses obtuse: segments sinuate with mucronate teeth. Fruit sessile, solitary, ciliate, pressed to the stem.—Native of Ceylon.

Propagation and Culture.—If the seeds be permitted to scatter, the plants will come up in the spring better than when sown by hand, and require no other care but to keep them clean from weeds. These plants ramble, and take up too much room in small gardens; they should therefore be allowed a place near a hedge, upon which they may climb; they do not bear transplanting well, unless when they first come up.

Sow the seeds upon a hot-bed in the spring, and treat the plants in the same way as cucumbers and melons, keeping them under frames. They require more room, so that a plant or two will be enough for curiosity.

SIDA [*Σιδη* of Theophrastus], in Botany, a genus of the

the class monadelphia, order polyandria, natural order of columniferae, malvaceae (*Juss.*)—Generic Character. Calyx: perianth one-leaved, angular, half-five-cleft, permanent. Corolla: petals five, wider above, emarginate, fastened below to the tube of the stamens. Stamina: filaments very many, united below into a tube, in the apex of the tube divided. Anthers roundish. Pistil: germ orbicular. Styles five or more, or else one, many cleft. Stigmas headed. Pericarp: capsule roundish-angular, composed of five or more cells, (corresponding with the number of the styles or stigmas,) two-valved, awnless, acuminate or horned, opening above, or close, and finally separating. Seeds solitary, two, three, or five, roundish, mostly acuminate, convex on one side, angular on the other, fastened to the interior suture.

I.—With long narrow lanceolate oblong and ovate leaves.

1. *Sida linifolia*, or flax-leaved sida.—Leaves linear, quite entire; racemes terminating; capsules almost awnless. This genus, which contained only twenty-seven species in the 14th edition of the *Systema Vegetabilium* by Murray, is thus enlarged chiefly by the labours of Cavanilles, whose species have been adopted by Willdenow, with new specious characters. It contains either shrubs or herbs, with a few trees; the herbaceous species are mostly annual or biennial.—Native of Peru and the island of Cayenne.

2. *Sida angustifolia*, or narrow-leaved sida.—Leaves linear-lanceolate, toothed; peduncles sub-solitary, axillary; capsules two-cusped. This rises with a slender woody stalk about two feet high, sending out many erect branches. The flowers come out singly from the axils, are small and of a pale yellow colour.—Native of Brasil and the island of Bourbon.

3. *Sida spinosa*, or prickly sida.—Leaves ovate-lanceolate, obsolete cordate, toothed; peduncles subsolitary axillary; stipules bristle-shaped, longer than the peduncle; capsules two-beaked. Stems hairy, branching, near three feet high.—Native of the East Indies, Arabia Felix, Senegal, Jamaica and Guiana. Annual.

4. *Sida carpinifolia*, or hornbeam-leaved sida.—Leaves ovate-oblong subduplicate serrate; peduncles axillary, four-flowered or thereabouts; capsules two-beaked. Branches spreading in two rows and hairy.—Cultivated in the island of Madeira.

5. *Sida maculata*, or spotted-flower sida.—Leaves ovate obtuse serrate, tomentose; peduncles axillary, racemed at the top of the stem; capsules two-horned. Corolla middle-sized, yellow, with five red spots at the base. Capsules nine.—Native of the West Indies.

6. *Sida suberosa*, or corky sida.—Leaves ovate, toothed; peduncles axillary, one flowered twice as long as the petiole; capsules two-horned; stem corky at the base.—Native of Hispaniola.—The other species of this section are *Sida acuta*, *Canariensis*, *lanccolata*, *frutescens*, *Jamaicensis*, *orientalis*, *glomerata*, *Capensis*, *microphylla*, *micans*, *pusilla*.

II.—With wedge-shaped leaves.

7. *Sida rhombifolia*, or rhomb-leaved sida.—Leaves oblong lanceolate, toothed wedge-form at the base quite entire, peduncles much longer than the petioles; capsules two, horned.—Native of the East Indies and Jamaica. Cultivated in the Eltham Gardens in 1732.

8. *Sida canescens*, or hoary-leaved sida.—Leaves rhomb-ovate toothed at the top, tomentose beneath; peduncles longer than the leaf.—Native of Senegal.

9. *Sida ciliaris*, or ciliated sida.—Leaves lanceolate truncate, toothed, somewhat wedge-shaped at the base; stipules linear, ciliate, longer than the flower; flowers solitary subsessile; capsules awnless, mucronate.—Native of Jamaica and St. Domingo.—The remaining species of this section are *Sida retusa*, and *alnifolia*.—Stems many, trailing.

III.—With cordate quite entire leaves.

10. *Sida periplocifolia*, or great bindweed-leaved sida.—Leaves cordate-lanceolate, acuminate, quite entire, tomentose beneath; peduncles subdivided, longer than the petioles; capsules awned. Root annual. Stem from two to four feet high.—Native of the West Indies and Ceylon.

11. *Sida nudiflora*, or naked-flowered sida.—Leaves roundish-cordate acuminate, almost quite entire, tomentose beneath; panicle terminating, racemed; capsules awnless.—Native of Peru and St. Domingo.—The other species of this section, are *Sida excelsior*, and *hernandioides*.

IV.—With cordate toothed leaves, and one-flowered peduncles.

12. *Sida triquetra*, or triangular-stalked sida.—Leaves cordate acuminate scruclate; peduncles solitary, capsules awnless, truncate; branches three-sided. This is a shrub three feet in height, with sub-tomentose branches, having each of the three sides hollowed out with a blunt groove.—Native of the West Indies.

13. *Sida fragrans*, or sweet sida.—Leaves roundish-cordate, acuminate, crenate, hirsute-viscid; peduncles solitary, shorter than the petioles; capsules two-bristled.—Native of Hispaniola.

14. *Sida multiflora*, or many-flowered sida.—Leaves ovate-cordate, bluntish, toothed, tomentose; peduncles solitary, longer than the petiole; capsules two-beaked. Fruit within the calyx. Capsules nine, with long beaks in bundles.—Native of Brasil.

15. *Sida crispa*, or curled sida.—Leaves oblong-cordate, acuminate, crenate, the upper ones sessile; peduncles solitary, longer than the petiole, the fruiting ones bent down; capsules inflated, awnless, waved and curled.—Native of Carolina and the Bahama islands.

16. *Sida sylvatica*, or wood sida.—Leaves ovate-cordate, acuminate, crenate; peduncles geminate, much longer than the petiole; capsules awnless headed.—Native of Peru, in woods, near the river Maragnon. Shrubby.

17. *Sida arborea*, or tree-sida.—Leaves orbicular-cordate, crenate, tomentose; peduncles in pairs, longer than the petiole, capsules awnless, truncate; stem arborescens. This is a small tree, remarkable for its large bell-shaped flowers, whitish or pale sulphur-coloured.—Native of Peru.

18. *Sida Mauritiana*, or Mauritius sida.—Leaves roundish-cordate, acuminate, toothed, tomentose beneath; peduncles solitary, longer than the petiole; capsules two-beaked, truncate, longer than the calyx. This differs from *Sida abutilon*, especially by its very long peduncles, which in that are three times shorter than the petioles. Flowers orange-coloured. It is an annual plant.—Native of the island of Mauritius.

19. *Sida abutilon*, or broad-leaved sida.—Leaves roundish-cordate, acuminate, toothed, tomentose; peduncles solitary, shorter than the petiole; capsules two-awned, truncate. Height about four feet, putting out some side branches towards the top. Annual.—Native both of the East and West Indies, Virginia and Siberia.—The other species of this section, are *Sida lignosa*, *reflexa*, *humilis*, *repens*, *bivalvis*, *ulmifolia*, *microperma*, *viscosa*, *fætida*, *calycina*, *Persica*, *occidentalis*, *Americana*, *abutiloides*, *Asiatica*, *populifolia*, *hirta*, *Indica*, *mollissima*, *sonneratiana*, *pubescens*, *altheæfolia*, *glutinosa*, *extipularis*, *nutans*, *borbonica*, *flavescens*, *radicans*, *arguta*, *multicaulis*, *pilosa*, *rotundifolia*, *supina*, *truncata*, *herbacea*, *emarginata*, *alba*, *cordifolia*, *hederæfolia*.

V.—With cordate toothed leaves, and many-flowered or racemed peduncles.

20. *Sida urens*, or stinging sida.—Leaves ovate-cordate, acuminate toothed; peduncles axillary many-flowered, glomerate; capsules awnless. Stem a foot high and more, suffrutescent, simple or branched, hirsute.—Native of Jamaica in dry coppices.

21. *Sida umbellata*, or umbelled sida.—Leaves roundish-cordate, toothed, somewhat angular, acute; peduncles four-flowered or thereabouts, umbelled, axillary; capsules two-awned. Capsules from six to eleven, three seeded.—Native of Jamaica. Annual.

22. *Sida paniculata*, or panicked sida.—Leaves ovate-cordate, toothed; racemes panicked; capsules two-beaked. Stem herbaceous, erect, two feet high, somewhat hirsute.—Native of the calcareous rocks of Jamaica, of Peru and Brasil.

23. *Sida*

23. *Sida terminalis*.—Leaves ovate-lanceolate, cordate, toothed; raceme terminating, elongated, bracted; capsules awnless in heads larger than the calyx.—Native of Brasil.—The remaining species of this section are *Sida verticillata*, *pyramidata*, *dumosa*, *ramosa*, *spicata*.

VI.—With cordate leaves, three-cusped or angular at the base.

24. *Sida crassifolia*, or thick-leaved sida.—Leaves ovate-cordate, toothed, somewhat three-cusped; peduncles solitary, axillary, length of the petioles; capsules two awned. This is a shrub, tomentose all over and strong smelling.—Native of Hispaniola.

25. *Sida biflora*, or two-flowered sida.—Leaves ovate-cordate, acuminate, toothed, three-cusped; peduncles geminate, axillary, equal to the petiole; capsules several; shrubby.

26. *Sida gigantea*, or giant sida.—Leaves roundish-cordate, crenate, acuminate, three-cusped; flowers panicled; corollas reflexed. This is a tree growing to twenty feet in height. Capsules ten to twelve, truncate, acuminate, villose.—Native of the Caraccas.

27. *Sida hastata*, or halbert-leaved sida.—Lower leaves cordate, acuminate, five-cornered, somewhat toothed, obtuse; upper hastate, acuminate, somewhat toothed at the base; peduncles solitary, axillary, length of the leaves. Root annual.—Native of Mexico and Lima in most places.

28. *Sida cristata*, or crested sida.—All the leaves crenate; lower roundish-cordate, obtuse, somewhat five-cornered; upper rounded-hastate acuminate; peduncles solitary, axillary longer than the leaf. Root annual. Flower of the same size as in *Lavatera Olbia*.—Native of Mexico.—These follow in this section, *Sida vesicaria*, *obtusa*, *Javansis*, and *delleveana*.

VII.—With lobed leaves, palmate or compound.

29. *Sida triloba*, or three-lobed sida.—Leaves cordate, toothed three-lobed; with the middle lobe acute and longer; peduncles axillary solitary; capsules awnless.—Native of the Cape of Good Hope.

30. *Sida ternata*, or three-leaved sida.—Leaves ternate; leaflets lanceolate, remotely serrate.—Native also of the Cape, where it was found by Thunberg.

31. *Sida pterosperma*, or winged-fruited sida.—Leaves three-parted; segments linear, repand-sinuate; flowers subracemed; capsules winged. Capsules twenty five, one-seeded, winged. Corolla white.—Native of Peru.

32. *Sida jatrophioides*, or jatropha-like sida.—Leaves subpeltate, seven-lobed palmate; lobes lanceolate, acuminate, pinnatifid, toothed; peduncles many flowered; capsules two-awned.—Found in the province of Chancaye in Peru.—The other species in this section, are *Sida ricinoides*, *Phyllanthus*, *Napæa*, and *dioica*, (the latter two have been already described under *Napæa*.)

Propagation and Culture.—These plants are many of them annual in England, but some are of longer duration in their native countries, and might be so here, if they were placed in a warm stove in winter.

They are propagated by seeds, which should be sown upon a temperate hot-bed the beginning of April, and transplanted to another hot-bed, four inches distant every way; they must be shaded from the sun till they have taken new root, and then they must have a large share of free air admitted to them when the weather is mild, to prevent their drawing up weak; they will also require water pretty frequently.

It is an annual plant hardy enough to come up in the common ground, and to perfect its seeds without any trouble.

SIDAIGO, a village on the north-east coast of Java, at the entrance of the straits of Madura, where the Dutch have a small settlement.

SIDARI, or SIDERO CAPE, the north extremity of the island of Corfu, in the Mediterranean. Lat. 37. 53. N. long. 19. 52. E.

SIDBURY, a parish of England, in Devonshire; 3 miles north-north-east of Sidmouth. Population 1359.

SIDBURY, a hamlet of England, in Salop; 6 miles south-south-west of Bridgenorth.

SIDDEE, an ambiguous title, which means either Negroes or Nobles. It was given to, or assumed by the Ethiopian and other African slaves, who were first introduced into India by Barbek Shah, king of Bengal, about the middle of the 15th century. He had at one period 8000 of them, well mounted and armed, in his service; and having by experience found them courageous and attached, he promoted several of them to high rank in his army, and to other important situations. This example was afterwards imitated by the sovereigns of Gujerat; and the Dekkan, and many of these people, who, if they had fallen into the hands of Europeans, would have been condemned to servile drudgery, became the associates of princes and governors of provinces. Nay, even their females were much esteemed for their fidelity and amiable manners. They also became ready converts to the Mahometan religion. In the course of time the men lost their character of fidelity, and even usurped the authority of their masters. In Bengal several of them attained sovereignty; but the persons most conspicuous in history are those who were employed by the kings of Bejapore, and afterwards by the Mogul emperors, as admirals of the fleet. The first of these, named Sidde Jore, was not only admiral, but military governor of the town of Dundah Rajipore, and the fortress of Gingerah, with a considerable extent of territory along the sea-coast. He was assassinated by order of the king of Bejapore. On this event, which took place in 1661, his successor, Sidde Sambole, deserted, and made an offer of his services, and that of the fleet manned by his countrymen, to the emperor Aurungzebe, on condition of retaining the whole of the territory in their possession. This overture was readily accepted, and Sidde Sambole was appointed the Mogul's admiral, with a large stipend on the revenues of Surat. They were of considerable service to Aurungzebe in his wars with the Mahrattas; but were excessively troublesome to all their other neighbours, frequently entering the harbour of Banbay, and remaining there in spite of the British. In 1679, Sidde Cossim succeeded to the command, and seems to have been a man of much milder manners than his predecessors. His fleet consisted of 2 large ships, 3 frigates, and 15 stout gallivats or rowing vessels, with 700 soldiers on board. Besides their vessels of war, they had a number of ships employed in traffic; and although they acknowledged the admiral as their chief, the captains preserved the distinct command of their own crews and dependents, whilst an aristocratical council determined the general welfare of this singular republic.

The decline of the Mogul authority, internal dissensions, and the rise of European power, have reduced the Siddees to a very insignificant state. And although they still possess a small portion of the sea-coast, and the town of Dundah Rajipore, this territory may be considered merely as a private estate; and they are now subject to the British authority. As they generally intermarried, they are easily distinguished from the natives of Hindostan, although they have not the woolly hair of negroes. They still continue to carry on a traffic with Arabia and Africa; but their vessels seldom visit the European ports of India.

SIDDINGTON, a village of England, in Cheshire; 5 miles north-by-west of Congleton. Population 448.

SIDDINGTON, a parish of England, in Gloucestershire; 2 miles south-south-east of Cirencester.

SIDDO, a harbour on the west coast of the island of Sumatra. Lat. 5. 8. N. long. 95. 27. E.

SIDE, *s.* [jise, Sax; *sjide*, Dutch.] The parts of animals fortified by the ribs.

When two boars with rankling malice meet,
Their gory *sides* fresh bleeding fiercely fret. *Spenser.*

Ere the soft fearful people to the flood
Commit their woolly *sides*. *Thomson.*

Any part of any body opposed to any other part.—The tables

tables were written on both their *sides*, on the one *side* and on the other.—The right or left.

The lovely Thais by his *side*
Sat like a blooming eastern bride
In flow'r of youth, and beauty's pride.

Dryden.

Margin; edge; verge.

Poor wretch! on stormy seas to lose thy life;
For now the flowing tide
Had brought the body nearer to the *side*.

Dryden.

Any kind of local aspect.

They looking back, all the eastern *side* beheld
Of Paradise.

Milton.

Party; interest; faction; sect.

Their weapons only
Seem'd on our *side*; but for their spirits and souls,
This word rebellion, it had froze them up,
As fish are in a pond.

Shakspeare.

Any part placed in contradistinction or opposition to another. It is used of persons, or propositions respecting each other.—There began a sharp and cruel fight, many being slain and wounded on both *sides*. *Knolles*.—It is used to note consanguinity; as, *he's cousin by his mother's or father's side*.

Yet here and there we grant a gentle bride,
Whose temper betters by the father's *side*,
Unlike the rest that double human care,
Fond to relieve, or resolute to share.

Parnel.

SIDE, *adj.* Lateral.—Take of the blood, and strike it on the two *side* posts, and on the upper door post of the houses. *Ex.*—Oblique; indirect.—He not only gives us the full prospects, but several unexpected peculiarities, and *side* views, unobserved by any painter but Homer. *Pope*.—My secret enemies could not forbear some expressions, which by a *side* wind reflected on me. *Swift*.—[*rībe*, *rīb*, Sax. *side*, Dan.] Long; broad; large; extensive. *A northern word*.—Cloth of gold—set with pearls, down sleeves, *side* sleeves, and skirts round. *Shakspeare*.—His branch'd cossock, a *side* sweeping gown. *B. Jonson*.

To SIDE, *v. n.* To lean on one side.—All rising to great place is by a winding stair; and if there be factions, it is good to *side* a man's self whilst rising, and balance himself when placed. *Bacon*.—To take a party; to engage in a faction.

Vex'd are the nobles who have *sided*
In his behalf.

Shakspeare.

Terms rightly conceived, and notions duly fitted to them, require a brain free from all inclination to *siding*, or affection to opinions for the authors' sakes, before they be well understood. *Digby*.

To SIDE, *v. a.* To be at the side of; to stand at the side of. *Unused*.

The pair, which do each other *side*,
Though yet some space doth them divide,
This happy night must both make one.

B. Jonson.

If Clara *side* him, and will call him friend,
I would the difference of our bloods were such
As might with any shift be wip'd away. *Beaum. and Fl.*

To suit; to pair. *Unused*.—He [Mr. John Hales] had sure read more, and carried more about him in his excellent memory, than any man I ever knew, my lord Falkland only excepted, who I think *sided* him. *Ld. Clarendon*.

SIDE, *RUINS OF*, situated on a promontory upon the coast of Asia Minor. The place is now entirely deserted; but there are considerable remains of its walls, gates, and of several temples. But the most remarkable monument is the theatre, one of the largest and best preserved of any in Asia Minor. It is situated on a gentle declivity, and the lower half only has been excavated; the upper being composed of a great structure of masonry. It is shaped like a horse-shoe, having an exterior diameter of 409 feet, an area

of 125, above which the seats rise to the height of 79 feet. It contains 49 rows of seats, 26 below, and 23 above a broad platform, which forms a gallery of communication round the interior. The seats are of white marble, and admirably wrought; they are 16½ inches high, and 32½ broad; but as they project 8½ feet over each other, they leave a clear breadth of only 24 inches. It has been calculated that this theatre would afford regular seats to 13,370 persons; while those standing or sitting on the steps might raise the audience to 15,240. The area is now overgrown with bushes, and choaked up with stones and earth; the structure, however, is in a very perfect state; few of the seats have been disturbed, and even the stairs are in general passable; but the proscenium has suffered considerably, the columns have been broken down, the decorations destroyed, and a part only of the walls are left standing. There are a great number of other ruins, both without and within the walls of Side; but they are so covered by thorns and brambles, that they can with difficulty be distinguished. There are remains of two harbours, formed by large moles; and also of a very extensive aqueduct. Lat. 36. 50. N. long. 31. 30. E.

SIDEBOARD, *s.* A piece of furniture.

At a stately *sideboard* by the wine
That fragrant smell diffus'd.

Milton.

No *sideboards* then with gilded plate were dress'd,
No sweating slaves with massive dishes press'd.

Dryden.

SIDEBOX, *s.* Enclosed seat on the side of the theatre. Why round our coaches crowd the white-lov'd beaus?
Why bows the *sidebox* from its inmost rows?

Pope.

SIDDEFLY, *s.* An insect.—From a rough whitish maggot, in the intestinum rectum of horses, the *sidefly* proceeds. *Derham*.

SIDELING CREEK, a river of the United States, in Maryland, which flows on the east side of Sideling mountains, and runs into the Potomac.

SIDELING MOUNTAINS, a range of mountains of the United States, extending through Huntingdon and Bedford counties, Pennsylvania, and Allegany county, Maryland.

SIDELONG, *adj.* Lateral; oblique; not in front; not direct.

She darted from her eyes a *sidelong* glance,
Just as she spoke, and, like her words, it flew;
Seem'd not to beg what she then bid me do.

Dryden.

SIDELONG, *adv.* Laterally; obliquely; not in pursuit; not in opposition.

As if on earth

Winds under ground, or waters, forcing way,
Sidelong had push'd a mountain from his seat,
Half sunk with all his pines.

Milton.

On the side.—If it prove too wet, lay your pots *sidelong*; but shade those which blow from the afternoon sun. *Evelyn*.

SIDENHAM, a parish of England, in Oxfordshire; 2½ miles east of Tetsworth.

SIDER, *s.* One who joins a party, or engages in a faction. *Unused*.—Such converts—are sure to be beset with diverse sorts of adversaries; as the papists, and their *siders*. *Sheldon*.

SIDER. So spelled for *CIDER*.

SIDERAL, (poetice *SID'ERAL*), *adj.* Starry; astral.

The musk gives

Sure hopes of racy wine, and in its youth,
Its tender nonage, loads the spreading boughs
With large and juicy offspring, that defies
The vernal nippings and cold *sideral* blasts.

Philips.

SIDERATED, *adj.* Blasted; planet-struck.—Parts cauterized, gangrenated, *siderated*, and mortified, become black; the radical moisture, or vital sulphur, suffering an extinction. *Brown*.

SIDERATION, *s.* A sudden mortification, or, as the common people call it, a blast; or a sudden deprivation of sense, as in an apoplexy.

SIDE'REAL, *adj.* [*sidereus*, Lat.] Astral; starry; relating to the stars.—The Egyptians called their heroes by the names of their *sideral* and elementary deities. *Shuckford*.

SIDERITE, *s.* *sideritis*, Lat.] A loadstone.—Upon which he hangs in a cord a *siderite* of Herculean stone. *Brewer*.

SIDERITIS [of Pliny. *Σιδηριτις* of Dioscorides. From *σίδηρος*, *iron*], in Botany, a genus of the class didynamia, order gymnospermia, natural order of verticillata, labiata (*Juss.*)—Generic Character. Calyx: perianth, one-leafed, tubular, oblong, about half five-cleft: segments acute, almost equal. Corolla: one petalled; almost equal: tube cylindrical, oblong: throat oblong, roundish: upper lip erect, bifid, narrow: lower lip trifid; lateral segments sharper, commonly smaller than the upper lip; middle segment roundish crenate. Stamina: filaments four, within the tube of the corolla; shorter than the throat, two of which are smaller. Anthers roundish, two twin. Pistil: germ four-cleft. Style filiform, usually longer than the stamens; stigmas two: upper cylindrical, concave, truncate; lower membranaceous, shorter, sheathing the upper. Pericarp none. Calyx cherishing the seeds in its bosom. Seeds four.—*Essential Character.* Calyx five cleft. Corolla ringent: upper lip bifid; lower three parted. Stamina, within the tube of the corolla. Stigma, the shorter involving the other.

I.—Without bractes.

1. *Sideritis Canariensis*, or Canary iron-wort.—Stem five or six feet high, sending out several woody branches covered with a soft down. Leaves on long footstalks, five or six inches long, and two and a half broad near their base; they are very woolly, especially on their under side, which is white, but their upper surface is of a dark-yellowish green. The flowers, which grow in thick whorled spikes at the end of the branches, are of a dirty white, and appear early in June. The plants frequently produce flowers again in autumn.—Native of the Canaries and of Madeira.

2. *Sideritis candicans*, or mullein-leaved iron wort.—Shrubby, tomentose; leaves ovate-lanceolate, cordate, attenuated at the top, snow-white beneath; whorls about eight-flowered, remote.—Native of Madeira.

3. *Sideritis Cretica*, or Cretan iron-wort.—Shrubby, tomentose, leaves cordate-oblong, obtuse, petioled; branches divaricating; spikes whorled. Flowers about eight in each whorl.—Native of the island of Crete or Candia.

4. *Sideritis montana*, or mountain iron-wort.—Herbaceous without bractes, calyxes larger than the corolla spiny, upper lip trifid. This is an annual plant, with a stem decumbent at bottom and then upright, a foot in length.—Native of Italy, Austria and Silesia.

5. *Sideritis elegans*, or dark-flowered iron-wort.—Herbaceous without bractes, villose; stem diffused; segments of the calyxes almost equal, spinulose.—The native place of growth not known.

6. *Sideritis Romana*, or Roman iron wort.—Herbaceous, decumbent, without bractes; calyxes spiny; upper lip ovate. The roots seldom continue longer than two years in England. Flowers small, whitish, in small, compact, remote whorls, having two very short leaves immediately under them, which end in a sharp spine.—Native of the South of Europe, and Barbary.

II.—Bracted, with the bractes quite entire.

7. *Sideritis Syriaca*, or sage-leaved iron-wort.—This has a short woody stem, with a few branches about a foot long. Leaves thick, wedge-shaped, very downy and white. Flowers in whorls towards the end of the branches, yellow with smooth downy calyxes.—Native of the Levant.

8. *Sideritis Taurica*, or Tauric iron-wort.—Suffruticose tomentose; leaves lanceolate, crenate; flowers whorl-spiked, whorls approximating, bractes, cordate, acuminate netted-nerved. Stem suffruticose.—Native of the Chersonesus Taurica.

9. *Sideritis distans*, or distant-whorled iron-wort.—Suffruticose hoary; leaves lanceolate, quite entire, acute; flowers whorl-spiked, whorls distant, bractes acuminate, mucronate, netted-nerved.—Native place not known, but perhaps from the Levant; shrubby.

10. *Sideritis perfoliata*, or perfoliate iron-wort.—Herbaceous, hispid-hairy; upper leaves lanceolate, embracing toothletted; bractes cordate, acuminate, netted-nerved, hairy at the edge. Root (perennial, but) seldom continuing longer than two years in England.—Native of the Levant.

11. *Sideritis ciliata*, or ciliated iron-wort.—Herbaceous; leaves petioled, ovate, serrate; bractes nerved, ciliate.—Native of Japan.

III.—Bracted, with bractes toothed.

12. *Sideritis incana*, or lavender-leaved iron-wort.—Suffruticose, tomentose; leaves lanceolate-linear, quite entire, bractes toothed; lateral lobes of the upper lip of the corolla acute.—Native of Spain.

13. *Sideritis virgate*, or rod-like iron-wort.—Suffruticose, tomentose; leaves linear, quite entire; bractes toothed; lateral lobes of the upper lip of the corolla obtuse.—Native of Barbary, on sandy hills near Mascar.

14. *Sideritis glauca*, or glaucous iron-wort.—Herbaceous, perennial, pubescent, hoary; leaves linear-spatulate, quite entire; bractes toothed; lateral lobes of the lower lip of the corolla acute.—Native of Spain, in the kingdom of Valencia.

15. *Sideritis hyssopifolia*, or hyssop-leaved iron-wort.—Leaves lanceolate, smooth, quite entire; bractes cordate, tooth-spiny; calyxes equal.—Native of Switzerland, Italy and the Pyrenees.

16. *Sideritis scordioides*, or crenated iron-wort.—Leaves lanceolate, somewhat toothed, smooth above; bractes ovate, tooth spiny; calyxes equal. Root perennial. Stems a foot long.—Native of the south of France, and of Spain. *Sideritis hirta* of Roth, is only a variety of the *scordioides*, there being intermediate specimens which connect them.

17. *Sideritis spinosa*, or thorny iron-wort.—Hirsute, leaves lanceolate, with the bractes cordate, tooth-spiny. Stem perennial at the base, very much branched, hirsute, a foot high, spiny.—Native of Spain.

18. *Sideritis hirsuta*, or hairy iron-wort.—Leaves lanceolate, obtuse, toothed hairy; bractes tooth-spiny; stems hirsute, decumbent. Root perennial.—Native of the South of Europe.

19. *Sideritis ovata*, or ovate-leaved iron-wort.—Herbaceous, pubescent; leaves petioled, elliptic, obtuse, crenate; spike four-cornered; bractes ovate; tooth-spiny.—Native of Peru. Perennial.

20. *Sideritis lanata*, or woolly iron-wort.—Leaves cordate, obtuse, villose; calyxes awnless woolly; spike long; stem erect.—Root annual. Plant a span high.

Propagation and Culture.—The first sort is generally kept in green-houses in England, but in moderate winters the plants live abroad without cover in a warm dry border. It is propagated by seeds which should be sown in autumn, for those which are sown in the spring seldom succeed, or if they do, the plants rarely come up the first year.

Most of the sorts are hardy enough to thrive in the open air in England: they are propagated by seeds, which, if sown in autumn, will succeed better than those which are sown in the spring.

The annual sorts (n. 4. 5.) should not be removed, but the plants thinned and left in the place where they were sown, keeping them clean from weeds.

The sixth and seventh sorts, though properly green-house plants, will often live through the winter in the open air, if their seeds are sown upon dry rubbish.

SIDERO, a village of European Turkey, on the west coast of the Morea, situated on a small rivulet to the left of the road from Gastuni. It occupies the site of the ancient Scyllurus, and was the residence of Xenophon in his latter years.

SIDERO CAPSA, a small town of Turkey in Europe, in Macedon. It adjoins a hilly district, and has furnaces for smelting metals; 32 miles east-south-east of Salonichi.

SIDEROCHITA, a class of crustated ferruginous bodies, of a moderately firm and compact texture, composed of ferruginous mixed with earthy matter, and formed of repeated incrustations, making so many coats or crusts round a softer or harder nucleus, or round loose earths, or an aqueous fluid.

SIDERODENDRUM [iron tree], in Botany, a genus of the class titrandria, order monogynia, natural order of dumosæ, sapotæ (*Juss.*)—Generic Character. Calyx: perianth one-leaved, very small, four-toothed, acute, placed on the germ. Corolla, one-petalled. Tube cylindrical, curved, long. Border four-cleft: segments oblong, obtuse, flat, reflexed, shorter by half than the tube. Stamina: filaments four, very short, arising below the divisions of the border. Anthers oblong, erect. Pistil: germ roundish, inferior, Style filiform, length of the tube of the corolla. Stigma oblong, obtuse, thickish. *Jacqu.* Pericarp: berry dicoccous, crowned with the calyx, two-celled, with the partition contrary. Seeds solitary, on one side convex, wrinkled; on the other flat, margined, fastened to the partition.—*Essential Character.* Corolla: one-petalled, salver-shaped. Calyx: five-toothed. Berry dicoccous, two-celled. Seeds solitary.

Siderodendrum triflorum.—This is a tall branching tree, with ovate-lanceolate, acute, quite entire, shining, petioled, opposite leaves, half a foot long. Peduncles axillary, very short, often three-flowered. Flowers small, rose-coloured on the outside, white within.—Found in the mountain woods of Martinico and Montserrat.

SIDEROMANTIA [*Σιδρομαντρία*, Gr.], in Antiquity, a kind of divination performed with a red-hot iron, upon which they laid an odd number of straws, and observed what figures, bendings, sparkings, &c., they made in burning.

SIDEROXYLON [iron wood], in Botany, a genus of the class pentandria, order monogynia, natural order of dumosæ, sapotæ (*Juss.*)—Generic Character. Calyx: perianth, five-cleft, small, erect, permanent. Corolla: one-petalled, wheel-shaped: segments five, roundish, concave, erect. Toothlet cusped, serrate at the base of each division of the petal, tending inwards. Stamina: filaments five, awl-shaped, length of the corolla, alternate with the toothlets. Anthers oblong, incumbent. Pistil: germ roundish. Style awl-shaped, length of the stamens. Stigma simple, obtuse. Pericarp: berry roundish, one-celled. Seeds five. **Sideroxylon decandrum** differs in having ten stamens. The teeth are wanting in the corolla of **Sideroxylon mite**, **melanophlæum**, and some others.—*Essential Character.* Corolla five cleft. Nectary (in most) five-leaved. Stigma simple. Berry five-seeded.

1. **Sideroxylon mite.**—Unarmed, flowers sessile. The flowers have no teeth between the stamens.—It is a native of Africa.

2. **Sideroxylon inerme**, or smooth ironwood.—Unarmed; leaves perennial, obovate; peduncles round. At the Cape of Good Hope, where this tree is a native, it rises to the height of an English apple tree; but in Europe it is rarely more than eight or ten feet high. The wood is so heavy as to sink in the water, and being very close and hard, the name of iron-wood has been given it, and hence the generic appellation of **Sideroxylon**.

3. **Sideroxylon melanophlæum**, or laurel-leaved ironwood.—Unarmed, leaves perennial lanceolate, peduncles angular. This tree bears a great resemblance to the preceding: it has thick branches like that, but without any streaks or warted dots. The leaves are perennial; and the peduncles very short, but not round. Native of the Cape of Good Hope.

4. **Sideroxylon cymosum.**—Unarmed, leaves opposite petioled, cymes compound and decomposed. This is a small shrub, native of the Cape of Good Hope.

5. **Sideroxylon sericeum**, or silky ironwood.—Unarmed, leaves ovate, tomentose-silky beneath.—Native of New South Wales.

6. **Sideroxylon argenteum**, or silvery ironwood.—Unarmed, leaves ovate, retuse, tomentose; flowers peduncled. Native of the Cape of Good Hope.

7. **Sideroxylon tomentosum.**—Unarmed; leaves oblong, acuminate, obtuse, the younger ones tomentose; peduncles aggregate, axillary, length of the petiole. A small tree, with an erect trunk, covered by an ash-coloured bark. Peduncles axillary, numerous, short, downy, bowing, undivided, one-flowered. Flowers small, dirty white. Calyx inferior, five-leaved; leaflets imbricate, downy, permanent.—Native of the East Indies, on the tops of mountains: flowering during the hot season.

8. **Sideroxylon lycioides**, or willow-leaved ironwood.—Spiny, leaves deciduous. Native of Canada.

9. **Sideroxylon decandrum.**—Spiny; leaves deciduous, elliptic. This is a tree with axillary solitary spines and alternate leaves. Peduncles axillary, one-flowered, very many, a little longer than the petioles. Calyx five-cleft, obtuse. Native of South America.

Propagation and Culture.—These plants being natives of warm countries, cannot be preserved in England, unless they are placed in a moderate stove. They are propagated by seeds, when these can be procured from abroad. These must be sown in pots filled with light rich earth, and plunged into a good hot-bed in the spring, in order to get the plants forward early in the season. When the plants are fit to transplant, they should be each put into a separate small pot filled with good earth, and plunged into a fresh hot-bed while they are young. In winter they must be plunged into the tan-bed in the stove, and treated in the same manner as has been directed for tender plants from the same countries.

SIDERS, a small town in the south-west of Switzerland, in the Valais, situated on a rivulet; 8 miles east of Sion. The environs are fertile.

SIDESADDLE, *s.* A woman's seat on horseback.

Another with a cradel,
And with a *syde-sadel*.

Skelton.

The use of riding in coaches, and of *side-saddles*, [is] since the time of Richard the II. here with us. *Hakewill.*

SIDES-MEN, properly called synods-men, or quest-men, persons who formerly were in large parishes, appointed to assist the church-wardens in inquiring into the manners of inordinate livers, and in presenting offenders at visitations.

SIDESTRAND, or **SIDISTROND**, a parish of England, in Norfolk; 3 miles south east of Cromer.

SIDETAKING, *s.* Engagement in a faction or party.—What furious *sidetakings*, what plots, what bloodsheds!
Bp. Hall.

SIDWAYS, or **SIDWISE**, *adv.* Laterally; on one side.

The fair blossom hangs the head
Sideways, as on a dying bed;
And those pearls of dew she wears,
Prove to be presaging tears.

Milton.

SIDFORD, a parish of England, in Devonshire, adjacent to Sidmouth.

SIDI, in Hindoo Mythology, is the name of one of the two wives of Ganesa or Pollear, the god of prudence and policy.

SIDI BEN TUBU, a village of Algiers; 30 miles east-south-east of Meliana.

SIDI ESA, a village of Algiers; 30 miles south of Boujeiah.

SIDI GAZI, a village of Anatolia, in Asiatic Turkey; 4 miles north-east of Kiutaiah.

SIDI IBRAHIM, a village of Algiers; 30 miles west of Tubnah.

SIDI MEDHAB, a village of Tunis, in Africa; 20 miles north of Gabs.

SIDI SHEHRI, a town of Caramania, in Asiatic Turkey; 6 miles east of Beishehri.

SIDIALIEL, a village of Sennaar; 55 miles north of Sennaar.

SIDING,

SIDING, *s.* Engagement in a faction. *Unused*.—As soon as discontents drove men into *sidings*, as ill humours fall to the disaffected part, which causes inflammations, so did all, who affected novelties, adhere to that side. *Icon Basilike*.

SIDLAW, or **SUDLAW HILLS**, a ridge of hills in Scotland, which extends in a direction from west to east, through the counties of Perth and Angus, beginning at Kin-noul, and terminating near Brechin. This ridge forms the south side of the valley of Strathmore, and receives its name from that circumstance; Sudlaws being the Gaelic name for south hills. The mountains of the ridge are of various height; the elevation of the Sidlaw hill is 1406 feet above the level of the sea.

To SIDLE, *v. n.* To go with the body the narrowest way.—I passed very gently and *sidling* through the two principal streets. *Swift*.—To lie on the side.—A fellow nailed up maps in a gentleman's closet, some *sidling*, and others upside down, the better to adjust them to the pannels. *Swift*.—To saunter. *Northern*.

SIDLESHAM, a village and parish of England, in the county of Sussex. The church is a handsome building, with a good tower. Here is a convenient quay, situated on Pagham harbour, for the use of vessels in the coasting trade. Population 865; $4\frac{1}{2}$ miles from Chichester.

SIDMONTIN, a parish of England, in Southamptonshire; 7 miles north-by-west of Whitchurch.

SIDMONTON, a hamlet of England, in Berkshire; 2 miles from Kingsclere.

SIDMOUTH, a market town of England, in the county of Devon, situated in a valley between two high hills, on the banks of the river Sid, which falls into a bay of the English channel. It was formerly a sea-port of some importance, but declined in consequence of the harbour becoming clogged and choaked up with pebbles; so that no vessels except pleasure boats and fishing smacks could approach the shore. Of late years, however, its buildings and population have increased, from the number of visitors who arrive in summer for the sea bathing. The air is healthy; the bathing accommodations are good; and a ball-room, billiard-room and tea-room, have been erected for the use of the company. Near the beach is an ancient stone building, with very thick walls, firmly cemented, said by tradition to have been a chapel of ease when Otterton was the mother church; and in a part leading from Sidmouth to Otterton, called Gochurch, is an ancient cross. The parish in 1811, contained 349 houses, and 1618 inhabitants; 12 miles south-east of Exeter, and 158 west-by-south of London. Lat. 50. 41. N. long. 3. 14. W.

SIDNEY (Sir Philip), the eldest son of Sir Henry Sidney, by a daughter of the duke of Northumberland, was born at Penshurst in Kent, in the year 1554. He was named Philip in compliment to the king of Spain, the husband of queen Mary. In very early life he manifested a sedate, studious disposition; and he sedulously improved every advantage for gaining knowledge, which he enjoyed, first at Shrewsbury school, and afterwards at Oxford, where he was entered at Christchurch college in 1569, and also at Cambridge. At the age of 18, the queen, according to the then existing custom, granted him a licence to travel abroad; and he first visited Paris, where he was introduced, by his maternal uncle, the earl of Leicester, to Sir Francis Walsingham, the English ambassador. Charles IX., who was then king of France, wishing to shew respect to Leicester, and probably with the perfidious design of lulling into security the Protestant party in France, previously to the horrid massacre of St. Bartholomew's, appointed Sidney one of the gentlemen of his bed-chamber. When the fatal day arrived, Sidney, together with several of his countrymen, found a refuge in the house of the English ambassador. Soon afterwards he pursued his tour to Germany; and at Frankfort formed an intimate acquaintance and friendship with Hubert Languet, then resident for the elector of Saxony, whose communications were singularly useful to our young traveller. After visiting Vienna, Hungary, Venice and Padua,

in company with his friend Languet, he returned through Germany and Flanders, and arrived in England in 1755; with those accomplishments, and with his moral principles in untainted purity, which rendered him the admiration and delight of his countrymen. In the following year, being only in the 22d year of his age, he was dispatched as ambassador to the court of Vienna, to condole with and congratulate the new emperor Rodolph II.; and entrusted with a commission to engage the Protestant princes of Germany in a league with each other, or with England. He was also entrusted to demand the repayment of the sum advanced by Elizabeth to the elector palatine. In the discharge of these several trusts, he acquitted himself with singular reputation, and with satisfaction to all the parties concerned in the objects of his embassy. After his return, he received no other honorary recompence besides the office of cup-bearer to the queen. With a temper somewhat irascible, and a high sense of honour, blended in some degree with the spirit of chivalry, few characters in that age were so unexceptionable as that of Sidney. Of his disinterested patriotism, we have a striking instance in his remonstrance addressed to queen Elizabeth on her projected marriage with the duke of Anjou; and such was the estimation in which he was held by the queen, that she did not manifest her displeasure against Sidney, though others suffered for their interference. Actuated by the spirit of chivalry, he exhibited his skill in military manœuvres at a tournament held, in 1580, in honour of the queen; and in the same year, he asserted his rank as a gentleman, against an insult offered him at a tennis-court by Vere, Earl of Oxford. In order to compose his mind, which had been thus disquieted, he retired to the house of his brother-in-law, the Earl of Pembroke, at Wilton, and engaged in the composition of his well known romance, called "Arcadia," which was not published till after his death. In 1581, his name appears as one of the knights of the shire for the county of Kent, and as one of the committee for drawing up acts, with a view to the security of the kingdom against the Pope and his adherents. His "Defence of Poetry," written about this time, contributed more to his literary reputation than Arcadia. Of this treatise, one of his biographers says, that it may be "considered as the earliest piece of criticism in the English language worthy of attention, and reckoned by some the best written of his works. In a simple and unaffected style, it displays much learning and judgment, and a true relish of the excellences of that art which he undertakes to patronize and illustrate." In the year 1583, he married the only daughter and heiress of Sir Francis Walsingham, a lady, as it is said, of great beauty and merit. On occasion of being nominated by the prince palatine of the Rhine his proxy at the installation of the garter in 1584, he received from the queen the honour of knighthood; an honour which she was not lavish in conferring. When Sir Francis Drake was projecting a secret naval expedition, Sir Philip Sidney wished to join him; and with this view to equip a land and naval armament against the Spanish settlements in America; but the queen interposed, and absolutely prohibited the execution of his design. Of his nomination as a candidate for the vacant crown of Poland, upon the death of Stephen Bathori in 1585, we shall say nothing; as one of his biographers has stated several particulars, which render the fact very improbable. In the year just mentioned, Sir Philip had a seat in the privy council; and queen Elizabeth determining to assist the Low Countries in their revolt, on condition of their putting into her hands some cautionary towns, indulged his martial disposition by appointing him governor of Flushing. As soon as he had taken possession of his charge, he was made colonel of all the Dutch regiments, and captain of a band of English soldiers. He was soon joined by his uncle Leicester, as general of the auxiliary forces, and Sir Philip was appointed general of the horse, under his command. It soon appeared that Leicester was unfit for the trust reposed in him; his nephew was dissatisfied, and endeavoured to allay the discontents which prevailed among the subordinate commanders. Sir Philip in his

first exploit, which was the surprise and capture of Axell, in July, 1586, without the loss of a man, was singularly successful; but in the month of September he fell in with a convoy sent by the enemy to Zutphen, and having one horse shot under him, he mounted another; and while charging the foe with great vigour, he received a musket bullet above the knee, which broke the bone and penetrated deep into the thigh. On his way from the field to Leicester's camp, whither he was conveyed, he found himself faint and thirsty, and called for water; but as he was preparing to drink, he observed a soldier in the agonies of a mortal wound; he resigned the draught to him, with an expression which entails permanent honour on his memory: "This man's necessity is still greater than mine!" Upon his arrival at Arnheim a mortification ensued, and on the 17th of October, after exhibiting the most unaffected piety, exemplary composure, and self-possession, he expired with tranquillity at the early age of 32 years. His death was universally regretted by his enemies as well as friends, and abroad as well as at home. The queen directed his body to be brought to London, and after lying in state, he was interred with all the solemnity of a public funeral in St. Paul's Cathedral; and although no monument was erected over his remains, James, king of Scotland, composed an epitaph to celebrate his memory, and both universities furnished some collections of verses to record his fame. But his name will ever live in the records of history, as "one of those who have reflected the highest honour on his country." Of his "Arcadia," we shall merely observe, that it was one of the earliest specimens of grave or heroic romance; that it was left in scattered fragments of MS.; which his sister collected and published; and from this circumstance, it was denominated "The Countess of Pembroke's Arcadia." It became very popular, and was translated into foreign languages. Lord Orford (Horace Walpole) speaks of it very contemptuously; but Dr. Zouch has more candidly and more justly appreciated its value. *Biog. Brit. Zouch's Mem. of Sir Philip Sidney. Gen. Biog.*

SIDNEY, or SYDNEY (Algernon), the second son of Robert, Earl of Leicester, by Dorothy, eldest daughter of Henry Piercy, Earl of Northumberland, was born in 1621 or 1622, and carefully educated under his father's inspection. In early life he was destined to the military profession, and in 1641, he had a commission in his father's own regiment of horse, when he was appointed lord-lieutenant of Ireland. During the rebellion in that kingdom, he entered immediately into active service, and had many opportunities of exhibiting his courage. In 1643, upon the commencement of the war in England between the king and parliament, he obtained permission to return. He and his brother, upon their landing, were intercepted, and placed under guard: and the king, conceiving (justly, as the event proved) that they had been taken by their own contrivance, was much offended; and not without reason, for they both joined the parliamentary army. In 1644, the Earl of Manchester appointed Algernon to the command of a troop of horse in his own regiment; and in the following year, Fairfax promoted him to the colonelcy of a regiment of horse. Having been present in several actions, he was entrusted with the government of Chichester. In 1646, he accompanied his brother to Ireland, and was advanced to the post of lieutenant-general of the cavalry and governor of Dublin. For his services in that kingdom he received the thanks of parliament, and returning to his own country was made governor of Dover. Although he was nominated, in 1648, a member of the high court of justice for the trial of the king, he was neither present when sentence was pronounced, nor did he sign the warrant for his execution. This part of his conduct, it is supposed, was owing to the particular request of his father; for it appears, from his general conduct, that his principles would not have induced him to condemn this act. When he was afterwards a voluntary exile in Denmark, and charged by his father with the violence of his political sentiments, his father writes to this purpose: "It is

said that the university of Copenhagen brought their *album* to you, desiring you to write something therein, and that you did *scribere in albo* these words:

"Manus hæc, inimica tyrannis
Ense petit placidam sub libertate quietem,"

and put your name to it; also, that a minister, being there in company with you, said, 'I think you were none of the late king's judges, nor guilty of his death.' 'Guilty!' said you; 'Do you call that guilt? Why, it was the justest and bravest action that ever was done in England, or any where else.'" Consistently with the sentiments avowed on this occasion, Sidney actually opposed the designs of Cromwell; and he afterwards refused to act under him and under his successor Richard. During this period he passed a retired life at Penshurst, and employed himself, as it is said, in writing his Discourses on Government. But when the Long Parliament regained its power, Sidney hoping for the establishment of a republic, to which form of government he was ardently attached, became an active partisan, and was nominated one of the council of state. He also accepted the office of one of the commissioners for mediating a peace between Denmark and Sweden, and was actually engaged in this embassy at the period of Charles II.'s restoration. Although he was solicited by general Monk and others to return to England, he could repose no confidence in the royal party, but remained in exile for seventeen years, finding that the few supplies which he received from home were insufficient to support him in a manner suitable to his birth and rank. He was, however, treated with respect and civility in various places, and particularly at Rome; and he employed his many leisure hours in making addition to the ample stock of knowledge which he had already acquired. In 1677 his father, being advanced in life, was anxious to see him, and employed his interest in obtaining the king's permission for his return, to which permission was annexed a pardon for all his past offences. When he afterwards joined in cabals against the court, he incurred the censure of those who were disposed to take offence; and Mr. Hume has charged him with acting counter to the moral principles of gratitude and with a breach of faith: others, however, have vindicated him, alleging that, unconscious of guilt, he might consider the royal permission to return, after so long an absence, as a reparation of injustice rather than an act of clemency, and that personal obligation ought not to influence his public conduct, when he conceived the great interests of his country in danger. At the time of his return, parliament was urging the king to commence a war with France; but Charles, being a pensioner of the French court, wished from selfish motives to avoid it; but as he was actuated by no sound principles, it was apprehended that he would appear to concur with the wishes of the nation, that he might have a plea for raising supplies, for his own personal gratification, in the prosecution of his pleasures or his designs to render himself arbitrary. The English patriots were averse from war, and some of their leaders intrigued with Barillon, the French ambassador, for preventing it. In the list of those persons in England who were at this time pensioners in France, the name of Sidney appears. When this discovery was made, by Sir J. Dalrymple's publication of Barillon's papers, the friends of liberty were astonished and grieved; and they hesitated in admitting this dishonourable charge. In vindication of Sidney, some have suggested, that Barillon falsified his accounts of the money with which he had been entrusted; whilst others have satisfied themselves with that persuasion of Sidney's honour and integrity which was founded on his general conduct, and with the assurance that he always adopted and pursued those political measures which appeared to him, all circumstances considered, most beneficial to his country. Upon his father's death, he joined the opposition party without disguise, and offered himself for a seat in parliament; but he was twice defeated by the influence of the court. Thus exasperated, and apprehending the liberty of his country to be in danger,

as well as dreading a popish successor, the ardour of his mind urged him to associate with the duke of Monmouth and his party; and in the history of the Rye-house plot he was charged with being one of six who were promoting an insurrection. But the part which he was supposed to have taken in a conspiracy for assassinating the king, was the plea for arresting him, together with Russell and several others, in June, 1683. When Lord Russell was sacrificed, the next victim selected by the court was Sidney; and he was brought to trial for high treason, before that judge whose infamous character is indelibly recorded in the page of history, chief-justice Jefferies. Lord Howard, who was a disgrace to the title he bore, and to that rank in society with which he was connected, was the only direct evidence against him; but the law required two witnesses for conviction on a charge of treason. In order to supply this defect, the attorney-general produced some passages from discourses found in manuscript in his closet, in which the writer maintained the lawfulness of resisting tyrants, and his preference of a free to an arbitrary government; and without decisive proof that they were written by him, or that they were even communicated to any living person, this kind of evidence was admitted, in defiance of law and common sense, as equivalent to the testimony of a second witness. His defence was of no avail, and a servile jury pronounced him guilty. From respect to his family, the disgraceful part of his sentence was omitted, and exchanged for beheading. On the 7th of December he was executed on Tower-hill, at the age of about sixty-one years, delivering to the sheriff's a paper which proved the injustice of his condemnation, and offering a prayer for that "old cause" in which he had been from his youth engaged. This paper was afterwards printed, and made great impression on the public mind. It is given at full length in the *Memoirs of his Life*. He suffered with the firmness, as it is said, of an old Roman. After the revolution, one of the first acts was the reversal of his attainder, and his name has been held in high esteem and veneration by all the avowed friends of free government.

The following sketch of his character is given by bishop Burnet. "He was a man of most extraordinary courage, steady even to obstinacy, sincere, but of a rough and boisterous temper that could not bear contradiction. He seemed to be a Christian, but in a particular form of his own; he thought it was to be like a divine philosophy in the mind, but he was against all public worship, and every thing that looked like a church. He was stiff to all republican principles, and an enemy to every thing that looked like monarchy. He had studied the history of government in all its branches beyond any man I ever knew; and had a particular way of insinuating himself into people that would hearken to his notions, and not contradict him." Of this character, it is said, in the Notes to the *Memoirs of his Life*, that it was roughly and inaccurately drawn. Sidney's "Discourses on Government" were first printed in 1698, fol., reprinted in 1704 and 1751, and in 4to. 1772, at the expense of Thomas Hollis, Esq., with his letters, trial, and memoirs of his life prefixed. Lord Orrery says of them, "they are admirably written, and contain great historical knowledge, and a remarkable propriety of diction; so that his name, in my opinion, ought to be much higher established in the temple of literature than I have hitherto found it placed." *Biog. Brit. Gen. Biog. Memoirs, &c., prefixed to Hollis's edition.*

SIDNEY, a post township of the United States, in Kennebeck county, Maine, on the Kennebeck, opposite Vassalborough; 178 miles north-north east of Boston. Population 1558.

SIDNEY, a post township of the United States, in Delaware county, New York, on the Susquehannah. Population 1388.

SIDONIUS (Caius, Sollius Apollinaris), in Biography, was born at Lyons in or about the year 430, of a distinguished family, his father and grandfather having exercised the office of pretorian-prefect in Gaul. He was liberally edu-

cated, and obtained great reputation for his literary talents, and especially his skill in the poetical art. Coming to the capital he was raised to the highest offices by several successive emperors. He married Papiannilla, daughter of the emperor Avitus, whose accession he celebrated by a long panegyric in verse, which was rewarded by a brass statue of him placed in the portico of Trajan. On the deposition of Avitus, he was made a prisoner at Lyons by the emperor Majorian; whose favour he afterwards obtained by a new panegyric. He was now employed by Majorian to negotiate a treaty with Theodoric, king of the Visigoths, of whose person and manners he has left us a curious description. For this service he was rewarded with the title of count. Under Severus Ricimer he defended with the most complete success Auvergne against the incursions of the barbarians. On the accession of Anthemius he was ready with another panegyric, and was in this requisited by the government of Rome, and the dignity of patrician was conferred upon him. In the year 472 he renounced all his secular employments, and became a bishop. He is said to have conducted himself with singular piety in his new office, to have been exemplary for charity, and all the episcopal virtues, and to have fed 4000 Burgundians, when under the pressure of famine. He was a great sufferer at the siege of Clermont, and was forced to fly at its surrender, but was very soon restored to his see. He afterwards underwent some trouble from two factious priests, who contested with him the government of the church, and also from some who were deemed by him as heretics; and to this has been ascribed his death, in 487, which has been called a martyrdom. Of the writings of Sidonius, there are extant twenty-four pieces in verse, marked with the debased character of the age, and nine books of Epistles, containing much curious information relative to the learning and history of his times. The best editions of his works are those by Savaron in 1609, and by Sirmond in 1652. *Moreri. Gibbon, vol. vi.*

SIDRA, an extensive gulf of this name in the eastern part of the territory of Tripoli, in the interior of which are extensive quicksands, celebrated in antiquity under the appellation of *Syrtis*, from a corruption of which the modern name is derived. It extends from lat. 30. 30. to 32. 30. N. and from long. 15 30. to 19. 30. E.

SIDRECAISSI, a small town of European Turkey, in Salonica, with some silver mines in the neighbourhood.

SIDRO, a promontory of Greece, in Livadia, on the gulf of Negroponte.

SIEBEN, UHREN BERG, a high ridge of mountains on the Moselle. On the 7th July, 1820, a vast mass of earth and rock became loose, and fell into the Moselle with great violence, forcing the water out of its channel.

SIEBENGEbirge, a group of hills near the Lower Rhine, in the government of Cologne, so called from seven points which are more elevated than the rest. The highest, called Lowenberg, is about 2,000 feet above the level of the sea.

SIEBENLEHN, or SIEBELN, a small town of Germany, in Saxony; 17 miles west-south-west of Dresden. Population 1,000.

SIEBENLINDEN, or HETHARS, a small town in the north-east of Hungary, on the river Torissa; 15 miles north-west of Eperies.

SIECHAM-HOTUN, a town of Corea, situated on the Japanese sea; 230 miles north of King-kitao.

SIECICHOWICE, a small town of Poland; 14 miles north-by-east of Cracow.

SIEDLCE, a small town in the central part of Poland, the chief place of the palatinate of Podlachia. It stands on the river Muchawica. Population 2200; 55 miles east of Warsaw.

SIEG, a river in the west of Germany, in Westphalia, which, after flowing from east to west, falls into the Rhine, nearly opposite Bonn. Its banks were the scene of military operations in 1795 and 1796.

SIEGBERG, a small town of Prussian Westphalia, in the

the duchy of Berg, on the river Sieg; 6 miles north-east of Bonn. Population 1500.

SIEGE, *s.* [*siege*, Fr.] The act of besetting a fortified place; a leaguer.

Our castle's strength

Will laugh a *siege* to scorn: here let them lie,
Till famine eat them up.

Shakspeare.

Any continued endeavour to gain possession.—Give me so much of your time, in exchange of it, as to lay an amiable *siege* to the honesty of Ford's wife. *Shakspeare.*—[*Siege*, French.] Seat; throne.

Drawing to him the eyes of all around,
From lofty *siege* began these words aloud to sound.

Spenser.

Place; class; rank. *Obsolete.*

I fetch my life and being

From men of royal *siege*.

Shakspeare.

[*Siege*, Fr.] Stool.—It entereth not the veins, but taketh leave of the permeant parts, as the mouths of the meseraicks, and accompanieth the inconvertible portion unto the *siege*. *Brown.*

To **SIEGE**, *v. a.* To besiege. *A word not used.*

Him he had long oppress with tort,
And fast imprisoned in *sieged* fort.

Spenser.

SIEGEN, a small town of Prussian Westphalia, on the river Sieg, formerly the chief town of the principality of Nassau-Siegen. It contains 4000 inhabitants, with manufactures of woollens, cotton, and leather. In the neighbourhood are some iron and copper foundries. The chief part of the principality of Nassau-Siegen was given to Prussia in 1815; 42 miles east of Bonn.

SIEGENI, a small town in the island of Malta, containing 2300 inhabitants. Pomegranates are raised in the neighbourhood in quantities.

SIEGE-PIECES, in Coinage, a division of modern coins, consisting of those that have been issued upon urgent necessity, during a *siege*, by any city or town.

SIEGERSDORF, a neat village in Lower Austria, near Vienna, with linen manufactures.

SIEGHARDS, a small town of Lower Austria; 6 miles east of Waidhofen, and 61 west-north-west of Vienna. Population 1508.

SIEMIATYCE, a small town of Russian Poland; 7 miles south-south-west of Belez, and 51 south-by-west of Bialystok. Population 2800. Here is a college, or large central school, where a number of young men are educated gratis; also a castle, with a collection of objects of natural history, formed by prince Jablonowski, but now belonging to the government.

SIENIAWA, a small town of Austrian Poland, on the river San; 20 miles south-east of Krzeszow.

SIENITE, Granitelle of Saussure, in Geology, a rock nearly resembling granite, but composed of felspar and hornblende, and occasionally containing quartz and mica.

SIENNA, TERRITORIO DI SIENNA, or SIENNESE, a province of the grand duchy of Tuscany, bounded by the Florentine and the territory of Pisa. It is 62 miles in length, and of nearly an equal breadth; its superficial extent is about 3100 square miles. It is divided into two districts, called Upper and Lower; the former enjoying, from its elevation, a pure and healthy atmosphere, the latter marshy, and affected with the *mal aria*. This province contains level tracks of great fertility, and several of its mountains contain mineral products. Its population is estimated at 190,000.

SIENNA, or **SIENA**, an ancient and considerable city of Tuscany, the capital of the province of Sienna, situated in a pleasant and healthy district. Its population amounts to 24,000. The approach to it from the southern road is through a fine avenue planted with trees, and affording, from a distance, a view of the town too favourable to be realized on entering it. Sienna being built on three eminences, the streets are extremely uneven, winding, and nar-

row, so that the chief part of the town is impassable for carriages. The houses are in general of brick, and the streets are paved with the same materials. The only handsome public square is that in which is the town-house, and which contains a beautiful fountain. The piazza here is one of the principal attractions for strangers: it is a large square, well laid out with walks, and planted with statues. In the evening, the time for walking in Italy, it may be called a miniature of Hyde Park. The esplanade is a fine shady avenue leading to the citadel, the ramparts of which, planted with trees, and laid out in the form of terraces, afford several interesting points of view.

The cathedral of Sienna is a magnificent marble structure in the Gothic style, and accounted inferior to none in Italy, except St. Peter's at Rome. Its nave is supported by rows of beautiful columns; its pavement is embellished with mosaics, and with delineations of subjects in sacred history. Several of the chapels and altars of this stately edifice are deserving of attention, being decorated with beautiful paintings and statues. The town-house is a large building, also in the Gothic style, and surrounded with porticos. Adjoining is the theatre, rebuilt since 1750. There are in Sienna several family mansions, or, as they are termed, palaces, but none of remarkable architecture.

The manufactures of Sienna comprise woollen, leather, paper, and hats, but all on a small scale. Some traffic is carried on in corn; and the valuable marble of the environs might be made an object of export, did this part of the country possess water conveyance. This town is the seat of a university, founded so long ago as 1321, and still reckoning so many as 60 professors; but their charges are in a great measure nominal, and the seminary is of little repute. Here are several academies, among which those of physics and natural history have acquired some note from their published memoirs. The Siennese having comparatively little trade, and reckoning among their number a large proportion of gentry and literati, lay claim to a reputation for politeness, and to a taste in learning and the arts, in particular for speaking Italian with great purity. This town has, from first to last, supplied seven occupants of the papal chair, but it gave birth also to Socinius, the founder of a sect which may be considered almost deistical.

Sienna lays claim to great antiquity, its origin being almost as ancient as that of Rome. It was long, however, a petty place. Augustus sent thither a colony, and Pliny mentions the town under the name of Colonia Senensis. Its prosperity, like that of Pisa, was greatest during the middle ages, when it enjoyed an extensive commerce, and is said to have been much more populous than at present. It long maintained itself as an independent republic; but intestine divisions favouring the designs of foreign powers, it became successively subject to French and Spanish invaders, and, in the latter part of the 16th century, was ceded along with its territory to Florence, by Philip II. of Spain. Since then it has had no separate government. It is the see of an archbishop, and is situated 30 miles south-by-east of Florence. Lat. 43. 22. N. long. 11. 10. 15. E.

SIENNE, a small river of France, in Normandy, which falls into the English channel near Havre.

SIENNICA, a small town in the north-east of Poland; 28 miles east-by-south of Warsaw.

SIENNO, a small town in the interior of Poland; 30 miles north-by-west of Sendomir, and 25 south-by-east of Radom.

SIEN-YEOU, a town of China, of the third rank, in Fokien.

SIYOU, a city of China, of the second rank, in Kiangnan. Lat. 33. 45. N. long. 117. 32. E.

SIEOU-GIN, a town of China, of the third rank, in Quangsee.

SIEOU-OU, a town of China, of the third rank, in Honan.

SIEOU-YUEN-HOTUN, a port of Chinese Tartary. Lat. 40. 18. N. long. 122. 51. E.

SIERADZ, a small town in the west of Poland, on the Wartha;

Wartha; 29 miles east-south-east of Kalisch, and 108 west-south-west of Warsaw. It is said to have been at one time a considerable place, but its population is now only 1600.

SIERAKOW, or CZIRKE, a small town of Prussian Poland, on the Wartha, with 1300 inhabitants; 40 miles north-west of Posen.

SIEREK, a small town in the north-east of France, department of the Moselle, and situated on that river. Population 1000; 25 miles north-by-east of Metz.

SIERPZ, a small town in the north-west of Poland; 22 miles north of Plock, with 1300 inhabitants.

SIERRA, the eastern part of New Castile, so called from its mountains. The word *Sierra* is a general name for mountain in Spain, and the distinctive appellations are often given from the neighbouring towns.

SIERRA DE CANATAGUA, a chain of mountains in America, which runs across the extremities of the two provinces of Veragua and Panama, in about long. 80. 50. W., and which divides the northern from the southern continent of America.

SIERRA DE LAS GRULLAS, a chain of the Andes, which commences at the northern extremity of Mexico.

SIERRA DE GUADALUPE. See GUADALUPE.

SIERRA LEONE, a country of Western Africa, situated on the Atlantic, and distinguished for the colony formed there by the British nation, rather from motives of generosity and philanthropy, than from those of political and commercial advantage. This country is traversed by a considerable river, derived from an unknown source in the interior, called the Mitomba or Sierra Leone. The extent to which this last name may be applied, either to the north or south of the river, or in the interior, is very indefinite; indeed there seems in the country itself to be scarcely any principle of unity, being occupied by a number of small independent tribes. The name is derived from a long ridge of mountains, which rises at no great distance from the southern bank of the river, that on the northern bank being low and flat. From these mountains descend many streams or torrents, a number of which unite in a place called the bay of France, into a large basin, which affords the best watering place in all Guinea, and where a ship may fill a thousand casks in the day. This is described as a most delightful spot, being shadowed by tall trees, mingled with rocks, which make a most picturesque appearance.

This country fully equals, in point of fertility and populousness, any other in this part of Africa. Cultivation, however, has made a very slender progress, unless so far as it has been introduced by Europeans. It consists generally of one vast, almost impenetrable forest, only particular spots of which have been cleared and cultivated. Even at a few steps from the shores and villages, the ground becomes so encumbered with trees and shrubs, as to be impassable, unless by narrow paths formed by the natives to their lugars or cleared fields. The houses are low, little huts, built with wooden posts fastened in the ground, of a round or square form, and thatched with straw. The villages consist of thirty or forty of such huts, and are moved without the least difficulty from place to place, as convenience or fancy direct. Rice is raised wherever the ground is sufficiently watered for its production, and forms the constant food of the rich; but the poor content themselves with millet, yams, and plantains. There is great abundance of the most delicate fruits. The pine-apple is pre-eminent; to which are added oranges, lemons, limes, and a fruit resembling a melon. The palm tree yields a liquor which is eagerly drunk, and possesses intoxicating qualities. The elephant's teeth brought to the coast here are valued above any other on the same coast, being remarkably clean, white, and free from specks, though they occur elsewhere of larger size. A considerable quantity of civet is brought to market, the produce of a peculiar species of cat. The woods and mountains are much infested with wild animals, particularly lions, from the multitude of which the country appears to have derived its name. Apes move about in vast bodies, and would de-

stroy the plantations, were they not carefully guarded. The exuberance of life in a tropical climate, gives rise also to numerous and troublesome swarms of insects, flies, mosquitoes, and particularly ants, the white species of which commit extraordinary devastation. The same cause multiplies the serpent species to a remarkable degree. The rivers, besides yielding an ample supply of fish for food, contain large alligators, and a species called the manatea or sea cow.

The natives of this country are not of so deep black a complexion as those of Cape Verd, nor have they the flat nose of the negro race to such a degree. The character of the different tribes varies greatly. Some of them are considered superior in point of intelligence and regular conduct to most of those on the coast; while others have the reputation of extreme ferocity, and are even charged with cannibalism, though this is probably a false and exaggerated charge. The office of the king consists chiefly in administering justice, which he does with the advice of the Solatesquis or great men, being placed on an elevated seat, in a sort of gallery in front of his palace, which consists merely of a collection of round huts. Polygamy is admitted to any extent that great men may find convenient, though the first wife has many honours that are denied to the others. As usual among savage tribes, the women are obliged to perform all the laborious tasks; tilling the ground, making palm oil and spinning cotton: nay, if they have any leisure from these, the husband will employ them in braiding his hair, or otherwise in embellishing his person. Gross idolatry prevails, but without any fixed regulations or priesthood. Every one, according to his fancy, chooses his idol or *fetiche*; a crab's claw, a nail, a flint, a snail's shell, a bird's or a root. To these they look for prosperity in all their undertakings, and make daily offerings to propitiate their favour. They are very difficult to convert to Christianity, though not quite so much so as the Moors or Mahometans.

The Portuguese were the first who discovered and formed settlements in the river of Sierra Leone; but afterwards all the nations of Europe found their way thither. The English established their factory upon Bance island, situated in the middle of the river, being merely a rock ascended by steps, and possessing no advantage except that of security. The fort was substantially built of stone and lime, defended by 10 or 12 guns, and garrisoned by about 20 whites, and 30 Grumettas or free negroes. The main object of this, as of every other establishment on the same coast, was that which it has since been made so active an instrument in overthrowing, the slave trade; and the supply here afforded, of these unfortunate victims of European cupidity, was very considerable.

It was not till towards the close of the 18th century, that the British nation began to turn their views towards Sierra Leone, with a view to colonization. The idea was suggested by Dr. Smeathman in 1783, and supported in the following year by the Reverend Mr. Ramsay, but vehemently opposed by the West India planters, who saw in such a measure the probable depreciation of their staple commodities. In 1785, the essays of Mr. Clarkson, called forth by the question proposed by the university of Cambridge, began to excite a strong interest throughout the nation, on the subject of the slave trade. Then it was that Wilberforce began that series of persevering efforts, which were at last crowned with merited success. An important instrument for this purpose appeared to be the already suggested plan of an African colony, the execution of which was hastened by accidental circumstances. The streets of London happened to be infested by a number of negroes recently dismissed from the army and navy, into which, by different means, they had found their way during the American war. A committee was formed for the relief of the black poor, the affairs of which were chiefly conducted by those excellent men, Jonas Hanway, Granville Sharp, and Dr. Smeathman. The latter drew up and published the plan of a settlement, in consequence of which were collected above 400 blacks, with about 60 whites,

60 whites, the latter of whom, however, were by no means of the best description. These were embarked on board transports furnished by government, provided with arms, provisions, and agricultural implements, and conveyed to Sierra Leone, where they arrived on the 9th of May, 1787. In consequence of Dr. Smeathman's death, the formation of the colony devolved on Captain Thomson of the *Nautilus*. The purchase of a piece of ground about 20 miles square, was effected from king Naimbanna, and his vassal chiefs. A proper site for a town was immediately chosen, on a rising ground fronting the sea, and a distribution of land was made among the colonists. Unfortunately their habits and character very ill qualified them for the arduous situation in which they were now placed. Their indolence prevented them not only from the requisite cultivation of the ground, but even from the erecting huts to secure them against the rainy season. A dreadful mortality was the consequence, which soon reduced their numbers to 276. Lastly, in November, 1789, the town was plundered by an African chief, the colony dispersed, and its inhabitants obliged to seek refuge in Bance island. Such, however, was the zeal felt at home for the civilization of Africa, that in the beginning of 1791, Mr. Falconbridge was sent out with a supply of stores, to collect the dispersed colonists, and form them anew into a regular settlement. That gentleman found the colonists extremely willing to resume their former situation; and the only difficulty was with the native chiefs, who, however, were at length persuaded to cede afresh the former territory. A new site was chosen at Granville town. Meantime, the original association for the improvement of Africa, was incorporated by act of parliament, and under the title of the Sierra Leone Company, received a charter for 31 years, commencing 1st July, 1791. Besides sending-out immediately five vessels with stores, articles of trade, and some new settlers, their activity discovered a new mode of recruiting the numbers. In consequence of the American revolution a number of free negroes, who adhered to the loyal standard, were obliged to take shelter in Nova Scotia. Here they were destitute of property or means of subsistence, while the white society refused to treat them as on a footing with themselves. They most cheerfully agreed, therefore, to the offer made of being transported to Sierra Leone; and 1200 were embarked by Lieutenant Clarkson, and arrived in March, 1792. Operations were now carried on with increased vigour; Freetown, the original position, was again made the capital of the colony; Nordenskiold and Afzelius, two able botanists, were sent into the interior to search after plants which might be useful for culture and trade. This prosperity was interrupted by many disasters and discontents, especially after the departure of Mr. Clarkson. The Nova Scotians at one time presented a formal petition to the court of directors, complaining of the promises made to them not having been fulfilled, of the low wages of labour, and the high rate of the company's goods. After these discontents had been appeased, the colony was exposed to a dreadful external disaster. In September 1794, the town was plundered and entirely destroyed by a French squadron, this causing at once an immense loss of property, and throwing the colonists into the most destitute condition. Even this disaster was repaired by the active exertions of the company; the settlement resumed its prosperity, extended its survey over the neighbouring coasts, and received embassies even from remote African states. The company, however, exhausted by its losses, and by that profusion to which such establishments are liable, finally found it expedient to make an arrangement with government, by which Sierra Leone was placed under its immediate jurisdiction, like other colonies. About the same time, the African institution was set on foot by a number of excellent and distinguished individuals, for the purpose of devoting their efforts to the general improvement of this great continent. Sierra Leone appeared the most advantageous centre from which their efforts might emanate; and it was therefore placed under their entire management. The character of the members was a

sufficient pledge for the purity of that zeal with which they would pursue every object tending to the improvement of the colony, and the general benefit of Africa. This, is moreover, fully evinced in the successive reports which they have published on the subject. Yet in these they candidly admit the obstacles which have obstructed the full accomplishment of the objects in view. The volatile and turbulent disposition of the native powers renders them always prompt to take offence, and to embark in hostilities; and this unfriendly disposition is increased by the abolition of the slave trade, to which they were accustomed to look as the chief means of purchasing European luxuries. It has thus been found impossible to avoid repeated ruptures, the effects of which were always pernicious to the interests of the colony. One mode of recruiting its numbers was derived from the negroes captured on their way to the West Indies, by the vessels destined to put a stop to the slave trade; but the disposal of these was attended with considerable difficulty. The first plan was to make them purchase their liberty by a temporary bondage, under the name of indenture; but it was naturally objected, that this was running into the very evil which the colony was established to prevent; and the practice has been properly discontinued. Still, to preserve the requisite order and propriety among such a motley population left at full liberty, has not been found an easy task. The introduction of the forms of English law, a measure in itself so salutary, seems to have produced rather injurious effects upon this African race. It has inspired them with an unbounded rage for litigation, and called forth innumerable petty suits for assault and defamation, in which it appears that the female sex are usually in the proportion of four to one. Lastly, the distance from Britain, the unhealthy nature of the settlement, and the very moderate amount of the salaries, render it very difficult to procure respectable and duly qualified persons to fill the different official situations. Notwithstanding all these disadvantages, a gradual but decided improvement has taken place, and is becoming more sensible, as experience teaches the best modes of administering such an establishment. Within the last eight or nine years, both the extension and improvement of the colony have been particularly remarkable. With the efforts of the institution have been combined those of the church missionary society, who have introduced, with great advantage, the British system of education. Its first establishment was in the country schools; and in Freetown, where a different method had been originally employed, there occurred considerable obstacles to its introduction, from the murmurs of the parents, and the disinclination of the children. At length, however, the plan was completely successful, and the schools contain now 350 boys and girls; and 180 adults. In consequence of the great increase of population from disbanded soldiers, and still more from captured negroes, a number of new towns have been founded in different parts of the territory. The principal of these is Regent's town, which was found in 1816, by Mr. Johnson, the missionary teacher, in a state of the utmost barbarism. It contained 1100 captured negroes, belonging to 22 nations in all different parts of the continent, without any tie to each other, and many of them separated by deadly enmity. Some would live in the woods, apart from society; others, particularly those of the Eho nation, subsisted chiefly by thieving and plunder, stealing fowls and eating them raw. One of them having stolen a litter of nine pigs, was traced by the owner, who found that the animals had been all thrown alive, into a pot of boiling water. Another having lost a dog and pot, discovered the thief, and found the dog boiling in the pot for dinner. It was some time before any impression could be made on this savage population; but at length the labours of the excellent missionary, seconded by those of some intelligent negroes, produced the happiest effects. In the course of the few years which have since elapsed, an entirely new scene has arisen. The town itself is laid out with regularity; nineteen new streets are formed and levelled, with good roads round the place; a large stone church-rises in the

midst of the habitations; a government-house, a parsonage-house, school-houses, store-houses, a bridge of several arches, some native dwellings, and other buildings, all of stone, are either finished, or on the point of being so. The state of cultivation farther manifests the industry of the people: all are farmers; gardens fenced in are attached to every house; all the land in the immediate neighbourhood is under cultivation; and there are fields even to the distance of three miles; vegetables and fruits are raised in abundance; and there is a good supply of domestic animals. Many of them, besides the cultivation of the ground, carry on trades; fifty are masons and bricklayers, forty carpenters, thirty sawyers, thirty shingle makers, twenty tailors, four blacksmiths and two butchers. In these various ways, upwards of 600 of the negroes provide for their own maintenance. The appearance and manners of the people have improved in an equal degree. They are all now decently clothed: almost all the females have learned to make their own clothing; about 400 couple are married; the attendance on public worship is regular and large, comprising on an average not less than 1200 or 1300 negroes, while Mr. Johnson's first congregation amounted only to nine; and the schools, which opened with 140 children, and 60 adults, now contain upwards of 500 scholars. In the more immediate vicinity of Freetown, there are also the townships of Charlotte, Leopold, Gloucester, and Wilberforce. These, with Freetown, contain upwards of 2000 scholars, adults and children, in a course of regular instruction. Within the last two years, in consequence of the accessions to the population, four new and more distant stations have been formed; Waterloo, bordering on the Timmanees, and containing already 700 inhabitants; Wellington, near to Kissey; and Hastings, not yet risen to any importance. These are on the eastern side of the colony, while on the south-western is York, bordering on the Sherbros, where a settlement called Kent, had already been formed. Connected also with the colony, a settlement has been formed called Bathurst, at St. Mary's, on the Gambia. The population is increasing. The climate is said to be healthy, and provisions much cheaper than at Sierra Leone; and the opportunity afforded of communicating with the populous countries on that river, renders it extremely valuable.

The following is the distribution and amount of the population of Sierra Leone, according to a census taken on the 8th July, 1820:—

Freetown and suburbs,	4785
Leopold,	469
Charlotte,	268
Bathurst,	469
Gloucester,	563
Regent and vicinity,	1218
Kissey and neighbourhood,	1033
Wilberforce,	409
Kent and vicinity,	296
Waterloo,	353
Hastings,	195
Wellington,	456
York,	297
Leicester hamlet,	78
Villages in Peninsula,	1468
Peninsula and isles in river,	115
Gambia island,	37
	12,509
Of these, there are	
Men,	5796
Women,	3020
Boys,	2015
Girls,	1678
	12,509

According to nations, the above population is classed as follows:—

Europeans,	120
Nova Scotians,	730
Maroons,	594
Natives,	2989
Liberated negroes,	8076

These statements are exclusive of the military (European and native) and their families. The increase since the census of 31st December, 1818, is 2944, chiefly arising from the liberated negroes and discharged soldiers.

The following are the number of scholars educating according to the national system, in the different establishments:—

Freetown and suburbs,	575
Leopold,	144
Charlotte,	106
Bathurst,	113
Gloucester,	258
Regent town,	432
Kissey,	158
Wilberforce,	75
Kent,	77
Waterloo,	86
Hastings,	57
Wellington,	16

2097

SIERRA MADRE, a great ridge of mountains in North America, forming part of that vast chain which, under the different appellations of the Andes and Rocky Mountains, runs through the whole extent of the American continent, beginning at Terra del Fuego, and ending at the Icy Ocean in the north. The term of Sierra Madre, or Topia, is however, more strictly applied to that elevated part of this immense ridge which commences near Guadalaxara, and extends 450 miles in a northerly direction into New Mexico. The breadth of all its ridges or parallel crests, at this part, is sometimes 120 miles, where the chain is called more distinctively by the appellation of Sierra Madre, or Mother Ridge, on account of its great altitude above the other parts. It has by some writers been compared with the Cordillera of Peru; and the chasms and precipitous terminations of its sides are said to present the most sublime specimens of mountain scenery that can anywhere be found. This part of the chain, and indeed nearly the whole of it, is in general densely covered with forests of the most gloomy appearance, composed principally of pines and oaks. In these impracticable wilds, birds of every description, peculiar to the country, inhabit; and their variegated and beautiful plumage throws a ray of lustre on the sombre scene. On the summits of some of these mountains snow eternally lodges, and the cold in consequence is intense. Many rivers take their rise in the sides and near the tops of this Cordillera, and rush with impetuous force into the valleys below, whence they take their courses to the Atlantic and Pacific Oceans. During the rainy season (from June to September), and when the upper snows lose their solidity and become fluid, these rivers, and the smaller streams, are turned into torrents, inundating the low lands; and their devastations, to the distance of 10 or 12 miles, are inconceivable. During this period, when the natives are forced to much manual labour and bodily exertion in the open air, to repress the ravages of the waters, these pests of warm climates, the mosquitoes become intolerable. The Sierra Madre sends off a branch in the west part of the province of New Mexico. This ramification, the summits of which are very lofty, is called Gemes, and bears a south-easterly direction; whilst on the eastern side it throws off another arm, called the ridge of Nahmi, which is, however, of inferior height, and of shorter duration, than that of Gemes. From the shore of the Pacific to the great Topian ridge, the general distance may be computed at 140 miles; in many places, however, it is greater, and in some, where the continent begins to straighten its bounds, not one half that distance. The

Topian

Topian chain takes the name of Sierra de las Grullas from 38. to 40. north lat.; beyond that, to 42. north lat., it receives the name of Sierra Verde. During its southern course it bears several distinct names, besides the general one of Sierra Madre.

SIERRA DE QUINERÓPUCA and **PACARAIMO**, a chain of the Andes, in New Granada, which branches eastward from the main chain, near the Lake Parima and the Amazons. It stretches towards the mountains of French Guiana, where its form is little known, as the interior of that country is inhabited by Carribs and negroes, who keep the settlers at bay. The rivers of Berbice, Surinam, Marony, and Essequibo, rise in this part of the chain.

SIERRA MORENA. See **MORENA.**

SIERRA SALADA, a river of Brazil, in the province of Seara, which runs into the Atlantic.

SIETE, a small river of Quito, in the province of Cuença, which enters the sea in the gulf of Guayaquill.

SIEVE, *s.* [rife, rufe, Sax.] Hair or lawn strained upon a hoop, by which flour is separated from bran, or fine powder from coarse; a boulder; a searce.

Thy counsel

Falls now into my ears as profitless

As water in a sieve.

Shakspeare.

A basket.—It is well known, that *sieves* and half-sieves are baskets to be met with in every quarter of Covent-Garden market.—Dr. Farmer adds, that, in several counties of England, the baskets used for carrying out dirt, &c., are called *sieves*. *Stevens.*

SIEVERNOIPESOCK, a small sandy island in the Frozen ocean, near the continent of Asiatic Russia. Lat. 76. 54. N. long. 105. 14. E.

SIEVERO VOSTACHNOI, a cape on the northern coast of Asiatic Russia, called by Captain King Cape Taimura. Lat. 78. N. long. 101. 14. E.

SIEVERO ZAPADNOI, a cape on the northern coast of Asiatic Russia. Lat. 77. N. long. 94. 14. E.

SIEVERSDORF, a large village of Prussia, in the Middle Mark of Brandenburg, near Ruppın, with 1100 inhabitants.

SIEVERHAUSEN, a petty village of Germany, in Hanover; 19 miles north-west of Gottingen, remarkable for a battle in 1553, between Albert of Brandenburg and the celebrated Maurice of Saxony, in which the latter received a mortal wound.

SIEWIERZ, a town of Poland, situated near a large lake; 40 miles north-west of Cracow, with 1300 inhabitants.

SIEZETH, a populous town of Austrian Galicia, in the Bukowina, on the river Sereth, near the frontiers of Turkish Moldavia.

SIFEED ROOD, the name given to the Kizilozen a river of Persia, during the latter part of its course.

SIFFLET, [Fr.] A cat-call. According to M. Laborde, it was during the reign of Augustus that clapping of hands and cat-calls were introduced in the Roman theatres. *Essai sur la Musique.*

To **SIFT**, *v. a.* [rīftan, Saxon; *siften*, Dutch.] To separate by a sieve.—In the *sifting* of such favour, all that came out could not be expected to be pure meal, but must have a mixture of padar and bran. *Wotton.*—To separate; to part.

When yellow sands are *sifted* from below,
The glittering billows give a golden show.

Dryden.

To examine; to try.—We have *sifted* your objections against those pre-eminences royal. *Hooker.*

SIFTER, *s.* One who sifts.

SIG was used by the Saxons for victory: *Sigbert*, famous for victory; *Sigward*, victorious preserver; *Sigard*, conquering temper: and almost in the same sense as Nicocles, Nicomyachus, Nicander, Victor, Victorinus, Vincentius, &c. *Gibson.*

SIGAGIK, a small sea-port of Anatolia, in Asiatic Turkey; 14 miles south-west of Smyrna

SIGAH-GUSH, or **SIYAH-GHUSH**, or Black-Ear, in Zoology, the name of a Persian animal.

SIGEAN, or **SIJEAN**, a small town of the south of France, department of the Aude, situated on the river Berre, near the Etang of Sigean. It has considerable salt-works; and is 9 miles south of Narbonne. Population 1800.

SIGEAN, ETANG DE, an inlet of the sea, on the south coast of France, department of the Aude. Lat. 43. 5. N. long. 3. 5. E.

SIGER, a small river of Silesia, in the principality of Glogau, which falls into the Oder, 6 miles below Beuthen.

SIGESBECKIA [so named from John George Siegesbeck, a German botanist], in Botany, a genus of the class syngenesia, order polygamia superflua, natural order of compositæ, oppositifoliæ, corymbifere (*Juss.*)—Generic Character. Calyx: common exterior five-leaved: leaflets linear, round, spreading very much, longer than the lower, permanent: interior subquincangular; leaflets many, ovate, concave, obtuse, equal. Corolla: compound, half-radiate. Corollets hermaphrodite, many in the disk: female five or fewer in the ray, only on one side of the flower. Proper of the hermaphrodite funnel-form, exceeding the calyx in length, five-toothed or three-toothed. Female ligulate, wide, three-toothed, very short; or funnel-shaped, trifold, the interior division deeper. Stamina, in the hermaphrodites: filaments five or three, very short. Anther cylindrical, tubular. Pistil, in the hermaphrodites: germ oblong, curved in, size of the calyx. Style filiform, length of the stamens. Stigma bifid.—In the females: germ oblong, curved in, size of the calyx. Style filiform, length of the hermaphrodite. Stigma bifid. Pericarp none. Calyx unchanged. Seeds in the hermaphrodites solitary, oblong, obtusely four-cornered, thicker above, obtuse, naked. Pappus none.—In the females very like the others. Receptacle chaffy: chaffs very like the scales of the calyx, concave, wrapping up the seeds on one side and deciduous.—*Essential Character.* Calyx exterior five-leaved, proper, spreading. Ray halved. Pappus none. Receptacle chaffy.

1. *Sigesbeckia orientalis*, or oriental *Sigesbeckia*.—Petioles sessile, exterior calyxes linear, larger, spreading. Plant annual, near four feet high, sending out many branches. Flowers terminating, small, yellow. Stem upright. Leaves ovate, acuminate at both ends, finishing in the petioles, opposite, three-nerved, veined, serrate. Branches from each upper axil, shorter than the stem. Peduncles terminating and lateral from the upper branches solitary, brachiate, sustaining a fulvous flower, in form of a spider, with a spreading involucre, fenced by five hispid rays, or hairs having a clammy head on the top of each. When the ripe seeds are gathered, they move in the hand as if they were alive. It is remarkable for having the ray of the flower on one side, as in *Milleria*. Receptacle narrow, flat. Seeds inversely pyramidal, rugged with tubercles, glutinous, brown, bald, smooth, of a livid lead-colour, or brown.—Native of India, China, Media, Otaheite and New Zealand. Cultivated in 1730, by Mr. Miller. It flowers in July and August.

2. *Sigesbeckia occidentalis*, or American *Sigesbeckia*.—Petioles decurrent; calyxes naked.

3. *Sigesbeckia flosculosa*, or small-flowered *Sigesbeckia*.—Floscules three-toothed; the hermaphrodites three-stamened. Plant annual, three feet high. Stem very much branched, round, slightly striated, somewhat villose, jointed, the thickness of a reed, dusky purple: branches opposite, when flowering dichotomous, diffused, striated, marked with rings, villose, purplish. Leaves opposite, embracing, remote, spreading, ovate, acute, unequally serrate, with appendages surrounding the stem at the base, three-nerved, veined, wrinkled, the upper surface shining, the lower paler, two-inches long and fifteen lines wide. On the flowering branchlets the leaves are alternate, sessile, but not margined at the base, ovate-lanceolate, gradually less and less. Panicle terminating, very loose, leafy, dichotomous, from the stem itself. Flowers within the forkings of the branchlets or opposite to a leaf, solitary, peduncled, the upper ones closely heaped in a sort of corymb, herbaceous with a yellow disk. Peduncles

Peduncles erect, filiform, villose four inches long. Calyx glandular-hairy; exterior five-leaved, interior ten-leaved, converging, angular. Compound corolla almost uniform, resembling a floscular flower, globular; having many hermaphrodite florets in the disk, and five female in the ray. Seeds to both florets obovate, curved in, somewhat rugged, brown. This species is distinguished at first sight from the *orientalis* by its floscular-like flowers, and dichotomous, diffused branches. Perhaps it is the only plant which is triandrous, in the class syngenesia.—Native of Peru, whence it was sent by Dombey. It is an annual plant, flowering in June and July; and was introduced in 1784 by Chevalier Thunberg.

Propagation and Culture.—1. Sow the seeds on a hot-bed, and set out the plants in a warm border the beginning of June, supplying them with water in dry weather.

2. Is a perennial hardy plant.

3. Soon ripens its seeds, and may be propagated by them or by cuttings.

SIGETH, NAGY, or SZIGETHVAR, a market town in the west of Hungary, near the river Almasch, situated among marshes, from which it takes its name, Szigeth signifying an island. It has a Catholic and a Greek church, a Catholic and Calvinist seminary, and 3000 inhabitants. It is divided into the fortress, which stands in a marsh now drained; the town properly so called, and the suburb. It has been repeatedly besieged by the Turks; 44 miles south-east of Canischa, and 160 south-south-east of Vienna. Lat. 46. 31. 5. N. long. 17. 48. 48. E.

SIGETH, or SZIGETH, a small town of Hungary, and the chief place of the county of Marmarosch, situated at the confluence of the Itza and the Theyss. It has 6500 inhabitants, with a Catholic, a Calvinist, and a United Greek church. It has also a government office for the salt-works of the mines of Rhonaszek; 48 miles north-by-east of Nagy-Banya, and 243 east-by-north of Pest.

SIGG, or СИГГЕ, a river in the western part of Algiers, which rises in the Atlas, and unites with the Habran, when their combined stream falls into the Mediterranean, near Oran.

SIGGESTON, a village of England, in the North Riding of Yorkshire; 4 miles east-north-east of Northallerton.

SIGGLESTHORPE, a village of England, East Riding of Yorkshire; 10 miles north-east of Beverley.

SIGGU, a town of Niphon, in Japan; 65 miles north-east of Meaco.

To SIGH, v. n. [*ſican, ſicetan, Saxon; ſuchten, Dutch.*] And thus the old Eng. pret. was *sight*; as in Chaucer, "privily he *sighte*," Man of Lawes Tale; and in Spenser, "Full many a one for me deep groan'd and *sight*," F. Q. vi. viii. 20. Pronounced *si*.] To emit the breath audibly, as in grief.

I lov'd the maid I married; never man
Sigh'd truer breath.

Shakspeare.

I'll not be made a soft dull-ey'd fool,
To shake the head, relent, and *sigh*, and yield
To Christian intercessors.

Shakspeare.

To SIGH, v. a. To lament; to mourn. *Not in use.*

Ages to come, and men unborn,
Shall bless her name and *sigh* her fate.

Prior.

SIGH, *s.* A violent and audible emission of the breath which has been long retained, as in sadness.

Love is a smoke rais'd with the fume of *sighs*;
Being purg'd, a fire sparkling in lovers' eyes.

Shakspeare.

SIGHER, *s.* One who sighs.

I could wish myself a sigh to be so chid,
Or at least a *sigher* to be so comforted.

Beaum. and Fl.

SIGHILL, or SEDGEHILL, a village of England, in Northumberland; 6 miles north-west of North Shields.

SIGHING, *s.* The act of emitting the breath audibly, as in grief.—For the oppression of the poor, for the *sighing* of the needy will I arise. *Ps.*

SIGHING is an effort of nature, by which the lungs are put into greater motion, and more dilated, so that the blood passes more freely, and in greater quantity, to the left auricle, and thence to the ventricle. Hence we learn, says Dr. Hales, how sighing increases the force of the blood, and consequently proportionately cheers and relieves nature, when oppressed by its too slow motion, which is the case of those who are dejected and sad. *Hale's Statistical Ess.*

SIGHT, *s.* [*ſeide, Sax.; ſicht, geſicht, Dutch.*] Perception by the eye; the sense of seeing.—If bees go forth to a right place, they must needs have *sight*. *Bacon.*—Open view; a situation in which nothing obstructs the eye.

Undaunted Hotspur

Brings on his army, eager unto fight,
And plac'd the same before the king in *sight*.

Daniel.

Act of seeing or beholding; view.

Nine things to *sight* required are;
The power to see, the light, the visible thing,
Being not too small, too thin, too nigh, too far,
Clear space and time the form distinct to bring.

Davies.

Notice; knowledge.—It was writ as a private letter to a person of piety, upon an assurance that it should never come to any one's *sight* but her own. *Wake.*—Eye; instrument of seeing.

From the depth of hell they lift their *sight*,
And at a distance see superiour light.

Dryden.

Aperture pervious to the eye, or other point fixed to guide the eye: as, the *sights* of a quadrant.

Their armed staves in charge, their beavers down,
Their eyes of fire, sparkling through *sights* of steel.

Shakspeare.

Spectacle; show; thing to be seen.

Thus are my eyes still captive to one *sight*;
Thus all my thoughts are slaves to one thought still.

Sidney.

Them seem'd they never saw a *sight* so fair
Of fowls so lovely, that they sure did deem
Them heavenly born.

Spenser.

SIGHTED, *adj.* Seeing in a particular manner. It is used only in composition, as *quicksighted, shortsighted.*—As they might, to avoid the weather, pull the joints of the coach up close, so they might put each end down, and remain as discovered and open *sighted* as on horseback. *Sidney.*—The king was very quick *sighted* in discerning difficulties, and raising objections, and very slow in mastering them. *Clarendon.*

SIGHTFULNESS, *s.* Perspicuity; clearness of sight. *Not in use.*

SIGHTLESS, *adj.* Wanting sight; blind.

The latent tracts, the giddy heights explore,
Of all who blindly creep, or *sightless* soar.

Pope.

Not sightly; offensive to the eye; unpleasing to look at. Full of unpleasing blots, and *sightless* stains,—
Patch'd with foul moles, and eye-offending marks.

Shakspeare.

Invisible.

You murdering ministers,
Wherever in your *sightless* substances
You wait on nature's mischief!

Shakspeare.

SIGHTLINESS, *s.* Appearance pleasing or agreeable to the eye.—Glass-eyes may be used, though not for seeing, for *sightliness*. *Fuller.*

SIGHTLY, *adj.* Pleasing to the eye; striking to the view.

It lies as *sightly* on the back of him,
As great Alcides shews upon an ass.

Shakspeare.

A great many brave *sightly* horses were brought out, and only one plain nag that made sport. *L'Estrange.*

SIGIL, *s.* [*ſigillum, Lat.*] Seal; signature.

Sorceries

Sorceries to raise the infernal pow'rs,
And *sigils* fram'd in planetary hours.

Dryden.

SIGILLARIA, a solemn feast held among the ancient Romans; thus called from a custom which obtained therein, of sending little presents from one to another, consisting of seals, little figures, and sculptures, made of gold, silver, brass, or even earthenware, and of devoting them to Saturn, as an atonement for themselves and their friends.

SIGILLATA TERRA, a name given to several kinds of medicinal earths formerly marked with seals, to express their being genuine.

SIGILLATIVE, *s.* [*sigillatif*, Fr., from *sigillum*, Lat.] Fit to seal; belonging to a seal; composed of wax. *Un-used.*

SIGILLO, in Geography, a town of Italy, in Umbria; 12 miles north of Nocera.

SIGILLUM MARIE, or **LADY'S SEAL**, in Botany, a name by which some authors have called the *bryonia nigra*, or black bryony.

SIGMARINGEN, a small town in the south-west of Germany, on the Danube, with 800 inhabitants. It is the residence of the princes of Hohenzollern-Sigmaringen; 29 miles north of Constance.

SIGMARINGEN, (the principality). See **HOHENZOLLERN**.

SIGMOID, in Anatomy, an epithet applied to various parts of the body, from their figure being similar to that of the Greek letter σ . Thus, we have the sigmoid cavities of the ulna, sigmoid flexure of the colon, and sigmoid valves of the aorta and pulmonary artery. See **ANATOMY**.

SIGMOIDAL, *adj.* [*sigmoidal*, Fr.; from the Greek letter called *sigma*, and *eidōs*, *figure, form*.] Curved, like the Greek letter already named; a medical term.—It must necessarily thrust the blood through the open passage of the vena arteriosa, where the *sigmoidal* portals hindering its return, it must pass through the strainer of the lungs. *Smith.*

SIGN, *s.* [$\text{[ʒɛgn]$, Sax.; *signe*, Fr.; *signum*, Lat.] A token of any thing; that by which any thing is shown.—*Signs* for communication may be contrived from any variety of objects of one kind appertaining to either sense. *Holder.*—When any one uses any term, he may have in his mind a determined idea which he makes it the *sign* of, and to which he should keep it steadily annexed. *Locke.*—A wonder; a miracle; a prodigy.—If they will not hearken to the voice of the first *sign*, they will not believe the latter *sign*. *Exod.*—Compell'd by *signs* and judgments dire. *Milton.*—A picture or token hung at a door, to give notice what is sold within.—Underneath an alehouse' paltry *sign*. *Shakspeare.*

True sorrow's like to wine,
That which is good does never need a *sign*. *Suckling.*

A monument; a memorial.—An outward and visible *sign* of an inward and spiritual grace. *Common Prayer.*—A constellation in the zodiac.

There stay until the twelve celestial *signs*
Have brought about their annual reckoning. *Shakspeare.*

Note or token given without words.—They made *signs* to his father. *Luke.*—Mark of distinction; cognizance.

The ensign of Messiah blaz'd,
Aloft by angels borne, his *sign* in heaven. *Milton.*

Typical representation; symbol.—The holy symbols or *signs* are not barely significative; but what they represent is as certainly delivered to us as the symbols themselves. *Brerewood.*—A subscription of one's name; as, a *sign* manual.

To **SIGN**, *v. a.* [$\text{[ʒɛgn]$, Sax.; *signer*, Fr.; *signo*, Lat.] To mark.—We receive this child into the congregation of Christ's flock, and do *sign* him with the sign of the cross. *Common Prayer.*—To denote; to show.

VOL. XXIII. No. 1564.

You *sign* your place and calling in full seeming
With meekness and humility; but your heart
Is cramm'd with arrogancy.

Shakspeare.

To ratify by hand or seal. [To *sign*, as to sign a writing, is an expression drawn from the practice of our ancestors the Anglo-Saxons, who, in attesting their charters, prefixed the *sign* of the cross to their names.—Hence it comes to pass, that when a person that cannot write is to make his mark, he usually makes a cross. And I apprehend that such Saxons as could not write, made their crosses; and the scribe wrote their names. *Pegge. Anonym.*]

Be pleas'd to *sign* these papers: they are all
Of great concern!

Dryden.

To betoken; to signify; to represent typically.—The sacraments and symbols are just such as they seem; but because they are made to be signs of a secret mystery, they receive the names of what themselves do *sign*. *Bp. Taylor.*

To **SIGN**, *v. n.* To be a sign, or omen.

Musick ↑ the air?—Under the earth.—

—It *signs* well, does't not?—No.

Shakspeare.

SIGNAL, *s.* [*senñale*, Spanish.] Notice given by a sign; a sign that gives notice.

The weary sun hath made a golden set,
And, by the bright track of his fiery car,

Gives *signal* of a goodly day to-morrow. *Shakspeare.*

SIGNAL, *adj.* [*signal*, Fr.] Eminent; memorable; remarkable.—The Thames frozen twice in one year, so as men to walk on it, is a very *signal* accident. *Swift.*

SIGNALITY, *s.* Quality of something remarkable or memorable.—Of the ways whereby they enquired and determined its *signality*, the first was natural, arising from physical causes. *Brown.*

To **SIGNALIZE**, *v. a.* [*signaler*, Fr.] To make eminent; to make remarkable.—Some one eminent spirit, having *signalized* his valour and fortune in defence of his country, or by popular arts at home, becomes to have great influence on the people. *Swift.*

SIGNALLY, *adv.* Eminently; remarkably; memorably.—Persons *signally* and eminently obliged, yet missing of the utmost of their greedy designs in swallowing both gifts and giver too, instead of thanks for received kindnesses, have betook themselves to barbarous threatenings. *South.*

SIGNAN, a village and castle of the Swiss canton of Bern, in the Emmenthal; 12 miles south-east of Bern.

SIGNATION, *s.* [from *signo*, Lat.] Sign given; act of betokening.—A horseshoe Baptista Porta hath thought too low a *signation*, he raised unto a lunary representation. *Brown.*

SIGNATURE, *s.* [*signatura*, from *signo*, Lat.] A sign or mark impressed upon any thing; a stamp; a mark.

Vulgar parents cannot stamp their race
With *signatures* of such majestic grace.

Pope.

A mark upon any matter, particularly upon plants, by which their nature or medicinal use is pointed out.—All bodies work by the communication of their nature, or by the impression and *signatures* of their motions: the diffusion of species visible, seemeth to participate more of the former, and the species audible of the latter. *Bacon.*—Proof drawn from marks.—The most despicable pieces of decayed nature are curiously wrought with eminent *signatures* of divine wisdom. *Glanville.*—[Among printers.] Some letter or figure to distinguish different sheets.

SIGNATURIST, *s.* One who holds the doctrine of *signatures*. A word little used.—*Signaturists* seldom omit what the ancients delivered, drawing unto inference received distinctions. *Brown.*

SIGNER, *s.* One that signs.

SIGNES, a small town in the south-east of France, department of the Var, on a river called the Tay. Population. 1500; 11 miles north of Toulon.

3 F

SIGNET,

SIGNET, *s.* [*signette*, Fr.] A seal commonly used for the seal-manual of a king.

I've been bold
To them to use your *signet* and your name. *Shakspeare.*

Here is the hand and seal of the duke: you know the character, I doubt not, and the *signet*. *Shakspeare.*

SIGNETT, a hamlet of England, in Oxfordshire; 1 mile south-by-west of Burford.

SIGNIFICANCE, or SIGNIFICANCY, *s.* Power of signifying; meaning.—If he declares he intends it for the honour of another, he takes away by his words the *significance* of his action. *Stillingfleet*.—Force; energy; power of impressing the mind.—The clearness of conception and expression, the boldness maintained to majesty, the *significance* and sound of words, not strained into bombast, must escape our transient view upon the theatre. *Dryden*.—Importance; moment; consequence.—How fatal would such a distinction have proved in former reigns, when many a circumstance of less *significance* has been construed into an overt act of high treason? *Addison*.

SIGNIFICANT, *adj.* [*significans*, Lat.] Expressive of something beyond the external mark: Betokening; standing as a sign of something.—It was well said of Plotinus, that the stars were *significant*, but not efficient. *Raleigh*.—Expressive or representative in an eminent degree; forcible to impress the intended meaning.—Whereas it may be objected, that to add to religious duties, such rites and ceremonies as are *significant*, is to institute new sacraments. *Hooker*.—Important; momentous. *A low word*.

SIGNIFICANT, *s.* That which expresses something beyond the external mark.

Since you are tongue-tied, and so loth to speak,
In dumb *significants* proclaim your thoughts. *Shakspeare.*

A token; that which stands as a sign of something.—An erect and forward stature, a large breast, neat and pliant joints, and the like, may be good *significants* of health, of strength, or agility; but are very foreign arguments of wit. *Wotton*.

SIGNIFICANTLY, *adv.* With force of expression.—Christianity is known in Scripture by no name so *significantly* as by the simplicity of the Gospel. *South*.

SIGNIFICATION, *s.* [*significatio*, Lat.] The act of making known by signs.—A lie is properly a species of injustice, and a violation of the right of that person to whom the false speech is directed; for all speaking, or *signification* of one's mind, implies an act or address of one man to another. *South*.—Meaning expressed by a sign or word.—An adjective requireth another word to be joined with him, to show his *signification*. *Accidence*.

SIGNIFICATIVE, *adj.* Betokening by an external sign.—The holy symbols or signs are not barely *significative*, but what by divine institution they represent and testify unto our souls, is truly and certainly delivered unto us. *Brewerwood*.—Forcibly; strongly expressive.—Neither in the degrees of kindred they were destitute of *significative* words; for whom we call grandfather, they called caldfader; whom we call great-grandfather, they called thirda-fader. *Camden*.

SIGNIFICATIVELY, *adv.* So as to betoken by an external sign.—This sentence must either be taken tropically, that bread may be the body of Christ *significatively*, or else it is plainly absurd and impossible. *Abp. Usher*.

SIGNIFICATOR, *s.* A significatory.—They are principal *significators* of manners. *Burton*.—See whether the *significators* in her horoscope agree with his. *Burton*.

SIGNIFICATORY, *s.* That which signifies or betokens.—Here is a double *significatory* of the spirit, a word and a sign. *Bp. Taylor*.

To SIGNIFY, *v. a.* [*signifer*, Fr.; *significo*, Lat.]

To declare by some token or sign; sometimes simply to declare.

The maid from that ill omen turn'd her eyes,
Nor knew what *signify'd* the boding sign,
But found the pow'rs displeas'd. *Dryden.*

To mean; to express.

Life's but a walking shadow; a poor player,
That struts and frets his hour upon the stage,
And then is heard no more! It is a tale,
Told by an idiot, full of sound and fury,
Signifying nothing. *Shakspeare.*

To import; to weigh. This is seldom used but interrogatively, *what signifies?* or with *much*, *little* or *nothing*.—*What signifies* the people's consent in making and repealing laws, if the person who administers hath no tie. *Swift*.—To make known; to declare.

I'll to the king, and *signify* to him,
That thus I have resign'd to you my charge. *Shakspeare.*

To SIGNIFY, *v. n.* To express meaning with force.—If the words be but comely and *signifying*, and the sense gentle, there is juice; but where there wanteth, the language is thin. *B. Jonson*.

SIGNINUM, among the Romans, a kind of pavement much esteemed: it was made of powdered shells mixed with lime.

SIGNIOR, *s.* [*signore*, Ital.] A title of respect, among the Italians: with the Turks the grand signior is the emperor.—Who is he comes here? This is *signior* Antonio. *Shakspeare*.

To SIGNORIZE, *v. n.* To exercise dominion over; to subject.—[If] love held me not so enthralled and subject to his laws as he doth, and to the eyes of the ungrateful fair whose name I secretly mutter, then should the eyes of this beautiful damsel presently *signiorize* my liberty. *Shelton*.

To SIGNIORIZE, *v. n.* To have dominion.—At the time that He was to come, Judah must lose the sceptre; not then to rule *signorize* in Judah. *Hewyt*.

SIGNIORY, *s.* [*signoria*, Ital.] Lordship; dominion.

At that time
Through all the *signiories* it was the first,
And Prospero the prime duke. *Shakspeare.*

It is used by Shakspeare for seniority.

If ancient sorrow be most reverent,
Give mine the benefit of *signiory*,
And let my griefs frown on the upper hand. *Shakspeare.*

SIGNORELLI (Luca), was born at Cortona in 1439, and was a disciple of Pietro della Francesca. He was among the first of the Italian artists who designed the naked figure with fidelity and accuracy; though still impeded by the shackles of stiffness and formality, and too much adherence to common nature. His greatest work is his celebrated fresco in the chapel of the Virgin in the cathedral at Orvieto, representing the final dissolution and judgment of the world; a work of extraordinary quality, in which variety and originality of ideas are rendered with force and effect. Vasari, who was related to Signorelli, says that Michael Angelo adopted, in his Last Judgment, many of the ideas of this artist; of which most probably he only took the characters of actions, and clothed them with his own emphatic style of design.

Though grace of form, and harmony of colouring, are not the most prominent features in the style of Signorelli, yet one of his works is extolled by Lanzi as possessing these qualities in a superior degree; viz., his Communion of the Apostles, in the church del Gesa at Cortona. He was invited to Rome to assist in decorating the apartments of the Sistine,

Sistina, where he painted the Journey of Moses and Ziporah, and the Promulgation of the old Law; exhibiting a superior arrangement of composition. He painted at Urbino, Volterra, Arezzo, Siena, and Florence, and established a name among the most eminent of the Florentine painters. He died in 1521, aged 82.

SIGNPOST. *s.* That upon which a sign hangs.—This noble invention of our author's hath been copied by so many *signpost* daubers, that now 'tis grown fulsome, rather by their want of skill than by the commonness. *Dryden.*

SIGNY LE GRAND, a small town in the north-east of France, department of the Ardennes, on the Vaux. Population 2100; 14 miles north-west of Mezieres.

SIGNY LE PETIT, a village in the north-east of France, department of the Ardennes, with 1700 inhabitants; 11 miles west of Rocroy.

SIGONIO (Carlo), was born of a good family at Modena, about the year 1524. At the age of seventeen he went to Bologna, where he passed three years in the study of philosophy and medicine, to which last profession he was destined by his father. But having no turn for physic, he spent a year at Pavia, and then entered into the service of cardinal Grimani. At the age of twenty-two he was taken by invitation from his native city to occupy the chair of Greek, vacant by the departure of Poita, the master under whom he had formerly studied. In 1550 he made himself advantageously known to the learned world by publishing the "Fasti Consulares," with a commentary, which quickly went through several editions. In 1552 he was invited to the professorship of belles-lettres at Venice, and in that city he published seven discourses on important topics of literature, and his valuable notes and conjectural emendations of Livy. In 1560 he was removed to the chair of eloquence at Padua, then the most celebrated of the Italian universities, but in 1563 he accepted an invitation to Bologna, which was from this time the usual place of his residence. In this situation he rendered himself so acceptable to the city, that he was presented with its freedom, together with a large increase of salary. Here he employed himself in the composition of learned works, which have handed down his name to posterity with high honour, and he was so well satisfied with his condition, that he refused a very flattering proposal from Stephen, king of Poland, to occupy a professorship in that country. He visited Rome in 1578, where he was honourably received by pope Gregory XIII., by whom he was engaged to compose an ecclesiastical history. Of this, however, he executed no more than some learned illustrations of Sulpicius Severus; for he died at Modena in the year 1584. He was a most able and successful elucidator of ancient history and antiquities. He was indefatigable in searching to the bottom all subjects which he undertook to examine, so that in many he left little to be added by later enquirers, and his works are all carefully composed in a pure, and even an elegant, Latin style. Besides the pieces already mentioned, he published many valuable tracts on the Roman laws and customs, also on the republics of the Hebrews, Athenians, and Lacedæmonians. He composed twenty books of a history relating to the western empire, from the time of Dioclesian to its final destruction, and he performed the more arduous task of framing from the rude and obscure chronicles of the times, a history of the kingdom of Italy, from the arrival of the Lombards to the year 1286. Sigonio was involved in several controversies, in one of which he is supposed to have disgraced himself. About twelve months before he died, an intimate friend of his edited a pretended treatise of Cicero, entitled "Consolatio." Its authenticity was immediately impugned by critics, and there is now no doubt that it was not genuine; but Sigonio wrote so warmly in defence of it, that he is generally supposed to be the author. The works of this learned man were published collectively in 1732-3, by Argelati, at Milan, in six vols. fol. with his Life, by Muratori, prefixed.

SIGRAMMA, two small islands of the Hebrides, on the west coast of the Isle of Lewis.

SIGRI, CAPR, the north-west point of the island of Mitylene. Lat. 39. 26. N.

SIGTUNA, a small town of Middle Sweden, in the province of Upland, on a creek of the lake of Malar. It was anciently a place of note, and is supposed by some antiquaries to have been founded by the celebrated Odin or Sigge. It was at one time pillaged by the Norwegians; at another by the Russians; and having long been deserted by the Swedish nobility, for Stockholm, it is now a petty place, with hardly 500 inhabitants; 10 miles north of Stockholm.

SIGUAN-GUYACU, a small river of Quito, in the province of Mainas, which runs north-north-west, and enters the Yana.

SIGUAS, a river of South America, in the province of Veragua, which enters the Pacific Ocean.

SIGUENZA, anciently **SEGONTIUM**, a city of Spain, in Old Castile, province of Guadalaxara, situated on the edge of a mountain near the source of the Henares. It contains 5000 inhabitants, is the see of a bishop, and was the seat of an university founded in 1441, by cardinal Ximenes, but suppressed in 1807. It contains three churches, three convents, two hospitals, a castle, and an arsenal. In the environs there are salt springs. A battle was fought here between Pompey and Sertorius; and, in the beginning of the 7th century, the Goths were defeated here by a Roman army; 75 miles north-east of Madrid, and 95 south-south-east of Burgos. Lat. 40. 58. N. long. 2. 57. W.

SIGUETTE, in the Manége, was a semicircle of hollow and vaulted iron, with teeth like a saw, to be put upon the nose of a fiery horse, in order to keep him in subjection.

SIHAM, a town of China, of the third rank, in Chan-si.

SIHO, a town of China, of the third rank, in Chan-si.

SIHOA, a town of China, of the third rank, in Honan.

SIHON, or **SIRR**, the ancient *Javartes*, a large river of Independent Tartary, rising on the western side of the mountains which separate that region from Cashgar, in Chinese Tartary. After a long course, chiefly to the north-west, it falls into the Aral sea, on its eastern side. The country through which it flows, though little known, is described as very fertile; and on its banks are the great cities of Koukan Khojund, Taschkent, and others.

SIHUTLA, a town of Mexico, in the province of Mechoacan; 25 miles west of Zacatula. Lat. 18. 45. N. long. 103. 26. W.

SI KAKAP, a strait in the Eastern seas, separating the Pogy or Nassau islands, two miles long, and a quarter of a mile in width, containing several islets, and forming a safe road for ships.

SIK, or **SIKE**, *adj.* Such. Retained in the north of England: as, *sik* a thing; *siklike*. See **SUCH**.

Sike mister bene all misgone,
They heapen hills of wrath;
Sike syrlie shepherds han we none,
They keepen all the path.

Spenser.

SIKAR, a town of Hindostan, province of Ajmeer, subject to the rajah of Jyenagur. Lat. 27. 32. N. long. 75. 5. E.

SIKARIA, or **SAKARIA**, a considerable river of Asia Minor, which rises in the heart of Caramania, near Sevrihissar and the Salt Lakes. For a long time it pursues a north-west course, passing near Eskishehr and Isnik, then turns to the north-east, and falls into the gulf of Erekli, in the Black Sea. Lat. 41. 10. N. long. 30. 45. E.

SIKE, *s.* [sic, rich, Sax., a water-furrow; *sijke*, Icel., a streamlet.] A small stream or rill; one which is usually dry in summer. A water-furrow, and a gutter. *Used in the north of England.*

SIKER, *adj.* and *adv.* The old word for *sure* or *surely*. Mr. Mason affects to doubt that, though Spenser frequently uses

uses the word as an adverb, he ever uses it as an adjective; and imagines that Dr. Johnson was misled by the explanatory word *sure* in some glossaries to Spenser, where it was certainly intended for the adverb. The impropriety of this assertion will be obvious by referring to *sicker*, the same word; which is Spenser's adjective, which in older writers is *siker*, and is common enough, though Mr. Mason knew not an instance of it as an adjective.—[They] holden the *siker* way. *Chaucer*.—A lord is *syker* that hath a true advocate. *Lib. Fest.*

SICKERNESS, *s.* Sureness; safety.—See SICKERNESS.

Brotelnesse

They finden, when they wenen *sikernesse*. *Chaucer*.

SIKEVI, a small sea-port of Circassia, on the Black Sea; 30 miles south east of Anapa.

SIKHS, or SEIKS, an appellation formed of the Sanscrit term *Sikh*, or *Siesha*, denoting a disciple or devoted follower, and in the Panjabi corrupted into *Sikh*, which is applicable to any person that follows a particular teacher. See HINDOSTAN.

SIKI, a town of Caramania, in Asiatic Turkey, on the Draganto; 27 miles west of Selefkeh.

SIKIANG, or WEST RIVER, a river of China, which rises near Fong-tcheou, in Quang-tong, and falls into the sea to the south of Canton.

SIKIATSKOI, a village of Asiatic Russia, on the Lena; 140 miles north of Gigansk.

SIKINO, a small island of the Grecian Archipelago, between Polyandro and Nio. It was long famous for its wine, and at present produces wheat, figs, and some cotton. Its petty capital, also called Sikino, is situated on a rock overhanging the sea. Lat. 36. 43. N. long. 25. 10. E.

SIKINO, the ancient *Enoe*, a small island of the Grecian Archipelago. It is hilly, but contains several fruitful valleys, producing both pasturage and fruit of different kinds. It has a small town of the same name, with a harbour, and 900 Greek inhabitants; 18 miles south of Paros.

SIKKE. See SIGG.

SIKLOS, a market town of the south-west of Hungary. It is remarkable chiefly for the wine produced in the environs. Here are also marble quarries and a mineral spring; 16 miles south-by-east of Funfkirchen, and 118 south of Pest.

SIKOVOE, a small island in the Eastern Seas. Lat. 7. 12. S. long. 131. 51. E.

SIKSO. See SZIKSCO.

SIL, in Natural History, a name given by the ancients to a red ochre, of which they had three distinct kinds, the *sil syricum*, *sil atticum*, and *sil marmorosum*; all of which are to be had at this time, and all very valuable paints.

SIL, a small but rapid river of Switzerland, which rises in the canton of Schweitz, and falls into the Limmat near Zurich.

SIL, a river in the north-west of Spain, which rises in the province of Asturias, and joins the Minho in Galicia. It yields occasionally grains of gold; and the Romans, in order the more easily to obtain them, dug a new passage for the river through the mountains of Laronco or Furado, in Galicia, by which it still flows.

SILA. See GEIL.

SILACH, a word used by old medical authors for a disorder of the eye-lid, consisting in a preternatural thickness of it, or a swelling without inflammation.

SILADING, a small island in the Eastern Seas, near the north coast of Celebes. Lat. 1. 21. N. long. 124. 25. E.

SILALI, an abundant river of Quito, which enters the Cahuapana to join the Amazons.

SILAKANI, a small sea-port of Madagascar, the inhabitants of which are mild and tractable; 30 miles south-east of Mouzangaie.

SILAMBOE, a town on the south coast of the island of Java. Lat. 7. 33. S. long. 107. 15. E.

SILANCHI, a river of Quito, in the province of Esme-

raldas, which, after a winding course, joins the Caoni, with which it enters the river Blanco by the north part, in lat. 9. S.

SILAO, a settlement of Mexico, in the province of Mechoacan, containing 1000 families of Indians, Spaniards, mestizoes and mulattoes.

SILARO, a small river in the east of Italy, in the district of Ravenna, which falls into an arm of the Reno.

SILATUM, a word used by the ancient Romans to express a morning's draught of wine. This was usually of a wine medicated with the plant sili, or seseli, and thence had its name. It has always been the custom to medicate the morning draughts of any strong liquor; we do it with wormwood, or the common bitter tincture; the Indians with ginger.

SILAVENGA, a small town in the east of the continental Sardinian states, on the river Sesia; 10 miles north-west of Novara.

SILAUM, in Botany, a name used by some authors for the *saxifraga pratensis*, or common meadow saxifrage.

SILBE, a village of Western Africa, on the Senegal, in the country of the Foulahs. Lat. 17. 5. N.

SILBERBERG, a small town of Prussian Silesia. It stands on a hill, contains 1600 inhabitants, and took its name from a mine of lead and silver in the neighbourhood, the working of which is now relinquished. In 1777, a strong fortress was erected here, which includes six elevations, and is capable of containing 5000 men; 11 miles north of Glatz, and 40 south-south-west of Breslau.

SILBERSCHLAG (John Isaiah), a German mathematician and mechanist, was born in 1721. He studied at the college of Klosterberge, near Magdeburg, and afterwards went through a course of theology at Halle, from which place he returned to the college at which he had been before, where he taught natural philosophy and mathematics for nine years. After this he became pastor of one of the churches at Berlin, and rector of the royal school. He was a member of the Academy of Sciences in that city; and, besides writing various works on mechanical and mathematical subjects, constructed a great many machines, instruments, and models, for the use of the students in the seminary which had been placed under his care. He died in November 1791. He left behind him a great number of works, among which are, "A Treatise on the warlike Machines of the Ancients," "Letters on the Northern Lights;" "A Treatise on Hydraulic Architecture;" "The Chronology of the World rectified by the Scriptures." *Gen. Biog.*

SILBERSTRASSE, a large village of Germany, in Saxony, on the Mulda; 4 miles south-south-east of Zwickau. It has a beautiful bridge across the Mulda.

SILBURY HILL, one of the largest barrows or tumuli in England, and probably in the world, is situated on the Marlborough Downs, about six miles west of the town of Marlborough, in Wiltshire. The origin, appropriation, and history of this extraordinary mound of earth, are alike unknown to the topographer and antiquary. In the vicinity of the immense druidical temple at Avebury. It is rationally supposed to have been originally connected with that structure: and as the most remote antiquities of this island, and of the civilized world, have given rise to much fabulous dissertation, and fanciful hypothesis, so the barrow now called Silbury Hill has been referred to various tribes of people, applied to different purposes, and attributed to the most remote origin. Dr. Stukeley was of opinion that its present name is of Saxon derivation, and signifies "the great or marvellous hill;" while others contend that it is either a corruption for Sil-barrow, which they translate "the peaceful grave;" or of Sel barrow, meaning "the large or elevated barrow." The most common supposition respecting its nature ranks it among the sepulchral class of monuments. Stukeley calls it the tomb of Cunedha, whom he characterizes as a celebrated British king, who resided at Cunetio (then supposed to have been Marlborough),

borough), and gave his name to that town, and to the river Kennet, or Kunnet. The Rev. Samuel Greathead, in a letter to Mr. Britton, printed in the account of Wiltshire, in the 15th volume of the "Beauties of England and Wales," regards Silbury as the burial-place of Prydain, a later king of the Britons, to whom he ascribes the union of the British tribes under one monarchy, and the construction of Avebury, as a place of assembly for the chiefs and people on great national occasions. Another opinion respecting this tumulus is, that it was the mount on which the Druids lighted up fires, when they wished to give notice to the surrounding country of some intended religious ceremonial. This view of the subject is of course confined to those who consider Avebury as having been a druidical temple; among whom is the Rev. Edward Davies, author of "Celtic Researches," and of "The Mythology and Rites of the British Druids." To these opinions relative to Silbury Hill may be added a third, which may be regarded as equally probable with any of the conjectures above stated. It is, that, like the Tinwald of the Isle of Man, and the Moote-hill of Scone, it was the mount of justice, the eminence from the summit of which the king promulgated the laws enacted in the national assemblies, and on which he and his judges sat to decide all important causes, whether of a civil or criminal nature.

SILCHESTER, a village and parish of England, in the county of Hants; 7 miles from Basingstoke. This is supposed to have been at one time a populous city, called by the Romans Segontiaci, and by the Britons Caer Segont, and by the Saxons Silchester, or the great city. According to Leland, the walls were two miles in compass, and contained 80 acres of ground. They still remain, and consist of nine unequal sides, formed of rows of stones and flints alternately, being about 13 feet high and 15 thick. The remains of the ditches are in some places 12 yards over, with the appearance of having had four principal gates. Many British coins have been dug up here at different times. Without the walls on the north-east is a pond, which was the site of an amphitheatre. A military road called Loanbank and Grimside, pitched with flints, runs from the south gate to Winchester; and another called the Portway, leads from the south gate by Andover, to Old Sarum.

SILE, a small river of the Venetian territory, which rises near Treviso, and joining an arm of the Piave, takes the name of the Piavecello, and falls into the gulf of Venice.

To SILE, *v. a.* [*sila*, Su. Goth.] To strain, as fresh milk from the cow: used in the north of England: whence a *sile*-dish, a strainer. *Siled* milk is also sometimes another term for *skimmed* milk. To *sile* is likewise used for *subside*, or *sink down*, from the primary meaning.

SILEBY, a parish of England, in Leicestershire; 1½ mile east of Mount Sorrel. Population 1200.

SILENCE, *s.* [*silentium*, Lat.] The state of holding peace; forbearance of speech.

Speech submissively withdraws
From rights of subjects, and the poor man's cause,
Then pompous *silence* reigns, and stills the noisy laws.
Pope.

Habitual taciturnity; not loquacity.
I think the best grace of wit will shortly turn into *silence*,
And discourse grow commendable in none but parrots.
Shakspeare.

Secrecy. Stillness; not noise.
Hail happy groves, calm and secure retreat
Of sacred *silence*, rest's eternal seat.
Roscommon.

Not mention; oblivion; obscurity.
Nameless in dark oblivion let them dwell;
For strength from truth divided, and from just,
Illaudable, nought merits but dispraise
And ignominy; yet to glory aspires,
Vain-glorious, and through infamy seeks fame;
Therefore eternal *silence* be their doom.
Milton.

SILENCE, *interj.* An authoritative restraint of speech.
Vol. XXIII. No. 1565.

Sir, have pity; I'll be his surety.—

—*Silence*; one word more

Shall make me chide thee, if not hate thee. Shakspeare.

To SILENCE, *v. a.* To oblige to hold peace; to forbid to speak.

Silence that dreadful bell: it frights the isle
From her propriety. Shakspeare.

To still.

The thund'rer spoke, nor durst the queen reply;
A reverend horror *silenc'd* all the sky. Pope.

SILENE [so named by Linnæus, from *Σιαλος*, *Σιαλεις*, or *Σιελος*, Gr., *spuma*; saliva, foam or spittle], in Botany, a genus of the class decandria, order monogynia, natural order of caryophyllei, caryophylleæ (*Juss.*)—Generic Character. Calyx: perianth one-leaved, ventricose, five-toothed, permanent. Corolla: petals five: claws narrow, length of the calyx, margined: border flat, obtuse, often bifid. Nectary composed of two toothlets in the neck of each petal, forming a crown at the throat. Stamina: filaments ten, awl-shaped, alternately inserted into the claws of the petals, and later than the other five. Anthers oblong. Pistil: germ cylindrical. Styles three, simple, longer than the stamens. Stigmas bent contrary to the sun's apparent motion. Pericarp: capsule cylindrical, covered, one or three-celled, opening at the top into five or six parts. Seeds very many, kidney-form. It differs from cucubalus in the nectarous crown of the corolla.—*Essential Character.* Calyx ventricose. Petals five, with claws, crowned at the throat. Capsule three-celled.

I.—Flowers solitary, lateral.

1. *Silene Anglica*, or English catchfly.—Hirsute viscid; petals emarginate; flowers lateral, erect, alternate; lower fruits divaricate-reflexed. Root annual, fibrous. Stem erect.—Native of England and France, in sandy fields: flowering in June and July.

2. *Silene Lusitanica*, or Portugal catchfly.—Hirsute; petals toothed, undivided; flowers erect; fruits divaricate-reflexed, alternate. It is an annual plant.—Native of Portugal and Barbary.

3. *Silene quinquevulnera*, or variegated catchfly.—Hirsute; petals roundish, quite entire; flowers lateral, alternate, and fruits erect. From a small fibrous annual root arise several flaccid spreading stems, round, hairy, and a little viscid.—Native of the South of Europe, Siberia and Barbary.

4. *Silene ciliata*, or fringed catchfly.—Root simple, filiform. Stems somewhat branched, a finger's length, pubescent. Root-leaves roundish-spatulate. Stem-leaves oblong, acute. Flowers erect, on very short peduncles.—Native of the island of Candia.

5. *Silene sericea*, or silky silene.—Petals bifid; flowers opposite, peduncled, erect; leaves oblong-spatulate, silky-hoary. Root annual, not very fibrous. Stem round, divided from the bottom alternately or forked into procumbent branches.—Native of Piedmont, on the sandy coast between Oneglia and Porto Maurizio.

6. *Silene nocturna*, or spiked night-flowering catchfly.—Flowers in spikes, alternate, directed one way; sessile; petals bifid. This is an annual plant with a low branching stem.—Native of France and Spain. There remain in this section *Silene gallica* and *cerastoides*.

II.—Flowers lateral, in clusters.

7. *Silene mutabilis*, or changeable catchfly.—Petals bifid; calyxes angular, peduncled; leaves lanceolate-linear. Stem eighteen inches high, round, hairy, red towards the bottom. It is annual plant.—Native of the south of Europe.

8. *Silene chlorantha*, or pale-flowered catchfly.—Petals linear, bifid; flowers lateral, directed one way, drooping; root-leaves rugged at the edge. Root perennial.—Native of Germany.

9. *Silene nutans*, or Nottingham catchfly.—Flowers panicled, directed one way, drooping; petals two-parted, with
3 G linear

linear segments; leaves lanceolate, pubescent. Root somewhat woody, perennial. Stems several, simple, a foot or more in height.—Native of several parts of Europe, chiefly on limestone rocks; also of Barbary, on hills about Algiers, in England; on the walls of Nottingham castle and thereabout; and in other countries. Mr. Woodward has since observed it on rocks in Dovedale, Derbyshire; Archdeacon Pierson, about Knaresborough, Yorkshire; Mr. Pennant, near Gloddaeth, in Caernarvonshire. Mr. Mackay observed it in Scotland, in 1793, near North Queen's-ferry. It flowers in June and July.—This section also contains *Silene amoena*, *paradoxa*, *maritima*, *fruticosa*, *bupleuroides*, *longiflora*, *gigantea*, *crassifolia* and *viridiflora*.

III.—Flowers from the forks of the stem.

10. *Silene conoidea*, or conoid catchfly.—Calyxes of the fruit globular, acuminate, with thirty streaks; leaves smooth; petals entire. Annual, with an upright branching stalk, a foot and half high, having swelling viscid joints.—Native of France, Spain and Italy, among corn.

11. *Silene conica*. Conic or corn catchfly.—Stem dichotomous; petals bifid; leaves soft; calyxes of the fruit conical, with thirty streaks. Root annual, small, somewhat branched. Stem erect, round, pubescent, leafy, dichotomous.—Native of Germany, France, Spain, Italy, the Levant, and Barbary. In England, it is found only in Kent.

12. *Silene bellidifolia*, or daisy-leaved catchfly.—Calyxes cylindrical-conic, pubescent, erect; petals bifid; racemes geminate, terminating, directed one way; the middle flower peduncled; leaves lanceolate, pubescent. This has an upright, round, subvillose, and rather glutinous simple stem, slightly dichotomous at the top, with but few flowers.—It is an annual, rising from a slender root.

13. *Silene dichotoma*, or forked catchfly.—Calyxes ovate, viscid-hairy, erect; petals bifid; racemes geminate, terminating, directed one way; middle flower peduncled; leaves petioled, ovate-lanceolate, ciliate at the base. This is an annual or biennial plant.—Native of Hungary.—This section contains also *Silene vespertina*, *behen*, *stricta*, *pendula*, *procumbens*, *noctiflora*, *ornata*, *undulata*, *Virginica*, *antirrhina*, *sedoides*, *apetala*, *rubella*, *inaperta*, *clandestina*, *portensis*, *Cretica*, *muscipula* and *polyphylla*.

IV.—Flowers terminating.

14. *Silene armeria*. Common or lobel's catchfly.—Panicles dichotomous, fastigate, many-flowered; petals emarginate, acutely crowned; upper leaves cordate; smooth. This is an annual plant with erect stalks, a foot and half high, for more than an inch below each joint very glutinous.—Native of Denmark, Germany, France, Switzerland, Carniola, Piedmont and England.

15. *Silene orchidea*, or orchis-flowered catchfly.—Petals two-lobed; the borders having on each side of the base an awl-shaped process; leaves even; the lower roundish-spatulate; petioles ciliate. Root annual. Stem erect.—Native of the Levant.

16. *Silene Ægyptiaca*, or Egyptian catchfly.—Petals emarginate, toothed on both sides; leaves subtomentose. Stem herbaceous, a palm high, brachiate, very slightly tomentose.—Native of Egypt.

17. *Silene Catesbæi*, or Catesby's catchfly.—Calyxes cylindrical; petals four-cleft, acute; panicle terminating; leaves lanceolate.—Native of Carolina.

18. *Silene cordifolia*, or heart-leaved catchfly.—Calyxes pubescent, angular, cylindrical; petals bifid; flowers terminating; leaves roundish, acute, nerved, hairy. Root fibrous, perennial. Stems many, forming a tuft, filiform, a finger's length and a half.—Native of the higher rocks of Piedmont, the county of Nice and the Col de Tende.

19. *Silene chlorefolia*, or yellow-wort-leaved catchfly.—Calyxes smooth, club-shaped; petals semibifid; leaves glaucous; lower oval; upper cordate embracing.—Native of Armenia.

20. *Silene alpestris*, or Austrian catchfly.—Petals four-toothed; stem dichotomous; capsules ovate-oblong; leaves

linear-lanceolate, smooth, erect; peduncles viscid. Root perennial—Native of the mountains of Austria.

21. *Silene rupestris*, or rock catchfly.—Flowers erect; petals emarginate; calyxes round; leaves lanceolate; glaucous smooth. This is a little plant which spreads and branches out dichotomously. Flowers small, funnel-shaped. It is biennial. The crown is scarcely apparent; and the hollow or funnel shape of the calyx and corolla distinguishes this species.—Native of Lapland, Sweden, Germany, Dauphiné, Piedmont and Siberia.—There are also in this section, *Silene saxifraga*, *vallisnia*, *pumilio* and *acaulis*. Species from Desfontaines: *Silene hispida*, *imbricata*, *reticulata*, *bipartita*, *psuedo-atocion*, *ramosissima*, *arenaria*, *cinerea*, *patula*, *arenarioides*.

Propagation and Culture.—Most of these plants are hardy annuals, which rise easily from seeds sown in the autumn, or spontaneously from scattered seeds. The perennial species may be raised by slips or cuttings. *Silene ornata* and *undulata*, require the shelter of the greenhouse.

SILENI, in Ancient Geography, a people of India, placed by Pliny in the vicinity of the river Indus.

SILENI, in Antiquity, a sort of heathen demigods, the same with satyrs, which were called *Sileni* when they came to be advanced in age.

Yet was there one principal Silenus, elder than any of the rest. He is represented as having a long tail hanging behind, which is likewise an attribute of all his posterity. The poets always mount him on an ass, always drunk, and hardly able to support himself; "titubantem annisque moroque," as Ovid (*Met.* l. v.) says. Upon all the antiques that represent him, he has the air of a drunken man dozing over his wine; and when Virgil, in one of his *Eclogues*, describes him, it is like a man gorged with wine as usual:

"Inflatum hesterno venas ut semper iaccho."

Some ancient authors, however, express more favourable sentiments of him. Silenus, according to their account, was a profound philosopher; and the drunkenness so often mentioned was merely mystical, signifying that he was profoundly immersed in speculation. Cicero, Plutarch, and many others, had formed the same idea of Silenus, and always regarded him as a very ingenious man, and a great philosopher.

SILENT, *adj.* Not speaking; mute.

Silent, and in face

Confounded, long they sat as stricken mute. *Milton.*

Not talkative; not loquacious.—Ulysses, adds he, was the most eloquent and most *silent* of men; he knew that a word spoken never wrought so much good as a word concealed *Broome*.—Still; having no noise.

Now is the pleasant time,
The cool, the *silent*, save where silence yields
To the night-warbling bird. *Milton.*

Wanting efficacy.

The sun to me is dark,
And *silent* as the moon,
When she deserts the night,
Hid in her vacant interlunar cave. *Milton.*

Not mentioning.

This new created world, whereof in hell
Fame is not *silent*. *Milton.*

Not making noise or rumour.

The pious youth; more studious how to save
His aged sire, now sinking to the grave,
Prefer'd the power of plants, and *silent* praise
Of healing arts, before Phœbean bays. *Dryden.*

SILENTIARY, *s.* [*silentarius*, low Lat.] One who is appointed to take care that silence and proper order be kept in court. One who is sworn not to divulge secrets of state.—The emperor afterwards sent his rescript by Eustathius, the *silentiary*, again confirming it. *Barrow.*

SILENTIARY,

SILENTIARY (*Silentiarius*), an officer among the ancient Roman slaves; being, according to some authors, a slave placed over the rest, to prevent any noise and uproar, and to keep them silent.

SILENTLY, *adv.* Without speech.

For me they beg, each *silently*
Demands thy grace, and seems to watch thy eye. *Dryden.*

Without noise.

You to a certain victory are led;
Your men all arm'd stand *silently* within. *Dryden.*

Without mention.—The difficulties remain still, till he can show who is meant by right heir, in all those cases where the present possessor hath no son: this he *silently* passes over. *Locke.*

SILENTNESS, *s.* State or quality of being silent. *Ash.*

SILESIA, a large and highly important province of the Prussian dominions, situated between Poland on the east, and Bohemia on the west, and extending from lat. 49. 40. to 51. 59. N., and from long. 14. 25. to 18. 12. E. The county of Glatz, and a portion of Lusatia, are now annexed to it. The form of the whole is oblong, extending in length, from south-east to north-west, 210 miles, in breadth about 100. It contains an area computed at 15,000 square miles, with a population of more than 2,000,000. Silesia was formerly divided into Upper and Lower, and sub-divided into a number of smaller principalities or duchies; but these distinctions are now abolished, and this province is placed on the same footing with the rest of Prussia. It forms a military division along with Posen, and is divided into the four governments of Breslau, Reichenbach, Liegnitz and Oppeln. The chief towns are—

	Population.
Breslau, the capital	63,000
Liegnitz	10,000
Glogau	9,500
Neisse	9,000
Schweidnitz	8,000
Langen-Bielau	6,800
Glatz	6,700
Hirschberg	6,000
Jauer	4,600
Frankenstein	4,200
Schneideberg	3,800
Oels	3,600
Oppeln	3,500
Leobschutz	3,400
Reichenbach	3,350
Landshut	3,000

Face of the Country, Soil and Climate.—A long range of mountains bearing different names, such as the Riesengebirge, the Glatz mountains, Moravian mountains, &c., but all included in the Sudetic chain, divides Silesia from Bohemia and Moravia. From Hungary it is separated by the Carpathians. The Sudetic mountains are steep, and full of narrow defiles, particularly on the north-west; but they become broader as they stretch to the southward, till they in a manner cover the surface of the county of Glatz. The effect of so great an extent of high ground on the climate is very sensible, the south of Silesia being often covered with snow, while over Breslau, and farther to the north, the progress of spring is very sensibly felt. After these mountains, the great natural feature of Silesia is the Oder, which flowing from south to north, traverses it nearly in the middle, passes Breslau, and receives all the lesser rivers flowing from east and west, such as the Bober, the Queiss, the Bartsch. The country to the east of the Oder is called the Polish side: it is perfectly level, with a soil often sandy or marshy, and consequently unproductive; while the western or German side, though hilly, and even mountainous, is cultivated by a more improved race, and is superior not only in mineral,

but in vegetable products. It is in fact the best portion of the Prussian territory, containing mines of coal and iron, and, on a smaller scale, mines of copper, vitriol and cobalt. This is likewise a great manufacturing country, so that the population requires an annual import of corn and cattle. The linen manufactures being as general here as in Normandy or the north of Ireland, great attention is bestowed on the culture of flax, the quality of which is equal to that of any part of Europe. The wool of this province has also been improved since the latter part of the 18th century, by the introduction of the Spanish breed. Foxes and other beasts of game abound in the forests: the lynx is sometimes found in the mountains, as well as the beaver, but the latter is now rare. The forests, though too remote from water conveyance to be subservient to ship-building, are of great importance to the local manufactures, affording an abundant supply of fuel.

Manufactures.—The extent of the linen manufacture of Silesia, conducted as it is with little aid from machinery, is surprising, the value annually made being estimated at 1,500,000*l.* sterling, of which more than half is exported. It is a received notion, that the water on the Silesian side of the Sudetic mountains, is better calculated for bleaching than that on the Bohemian side. The linen made in different parts of the continent, in particular in the north of France, is, and has been for many ages, of a thick texture; but the Silesian linen is in general as light as the Irish. The spinning of flax for so large a manufacture, necessarily occupies a great number of hands. In many houses it is the sole occupation; and almost every family is employed, either in spinning or weaving. The distaff, and not the wheel, is generally employed, it being a traditional notion that the threads formed by the latter are harder, less glossy, and less fit for bleaching. All this industry is carried on with a very limited capital. There are here no factories or collective establishments. Every one works at home, and on his own account, selling his thread or his linen to the itinerant dealer, who makes periodical visits for that purpose, according to the practice of Scotland nearly a century ago:

After linen, woollens are the chief object of manufacture, but they are in general coarse, and the value as yet made in Silesia is computed at little more than half a million sterling: they are made chiefly at Goldberg and Grunberg. Cotton works date only from the latter part of the 18th century, and hardware has been made extensively only within the same period. Of tanneries, there are hardly enough to supply the consumption of the country. The total annual value of manufacture in this province is computed at 3,000,000*l.* sterling. In these, and in the raw produce of the country, coal, timber, and madder, Silesia carries on a considerable traffic. The Oder affords a ready conveyance to Frankfort, and other towns in Prussia: to the Baltic, its course from Silesia is not short of 300 miles; still it is the best channel for the conveyance of bulky commodities, part of which are warehoused at Stettin and Swinemundy, to be re-shipped for various ports, while part are sent direct to Dantzic in the east, and to Lubeck or Hamburg in the west. The imports into Silesia are various; hemp, lint-seed, and hides from Russia; wine, potash, and hardware from Austria; colonial produce, silk, and the fruits of southern climates from different countries, all, or almost all, conveyed by the Oder.

Character, Religion, Education.—The Silesians are in general a people of good moral habits, with little information; sober, attentive to their duty, but credulous, and impressed with a blind veneration for aristocracy and the minutiae of etiquette. The gentry, or, as they are styled, the *noblesse*, are here as numerous and as poor as in any part of Germany: a number of them find employment in the military service of Prussia. As to religion, the reformation was introduced here early, and with considerable success. In 1609, Rodolph II. found it necessary to grant the Protestants full liberty of conscience. His successors, however, revoked the concession, and began a persecuting course, the effect

overran

of which was to deprive Silesia of a number of its industrious inhabitants. In 1708, when the Swedes under Charles XII. overran Poland, occupied Saxony, and threatened Austria, the emperor, to ward off this formidable assailant, consented to restore to the Protestants of Silesia the free exercise of their worship. On the conquest of Silesia by Prussia, Frederick II. put all religious creeds on an equal footing. The proportion of Protestants, long inferior to that of Catholics, has of late begun to exceed it. Each counts nearly a million of followers; of Jews, the number in Silesia is about 12,000.

Education was in a very backward state on the acquisition of this country by Prussia: a number of parish schools were founded by the aid of government; but on the eastern or Polish side, there still prevails much ignorance. At Breslau there is an university, partly Protestant, partly Catholic. In the provincial towns there are six gymnasia or high schools, seven Protestant colleges, and four seminaries for educating Catholic priests. The common language of the country is German, though in the mountainous districts of the south, and on the tracks bordering on Poland, the ancient dialect of the country, which holds a middle rank between the Polish and Bohemian, is still preserved.

History.—The Aborigines of Silesia appeared to have been the tribes called the Quadi and Lygii, who, like their brethren in Bohemia, seem to have yielded in the 6th century, to a Sclavonic tribe who bore or adopted the name of Zlesy. At present the Polish name of this country is Zlesien, and for a long time it remained a province of Poland. It was afterwards ceded to the sons of Boleslaus, II., the expelled king of Poland, in the 11th century; and being thus divided and subdivided, was without much difficulty subdued by the kings of Bohemia in the 14th century. The inhabitants were allowed to retain their laws, usages, and a semblance of a representative body; the crown, however, seizing as vacant fiefs, the possessions of such of the great families as became extinct. Silesia passed with Bohemia to the house of Austria, in the early part of the 16th century, and continued in its undisturbed possession, until the death of the emperor Charles VI., in 1740, led to a general attack on dominions considered comparatively defenceless when transmitted to a female. Of these assailants the first in the field was Frederick II., who revived a long dormant claim to the western part of Silesia, viz., the principalities of Leignitz, Brieg, and Wohlau, supporting it by an immediate invasion. Austria took up arms, and on being attacked on another side by Bavaria and France, received the aid of England. The result was a military contest, conducted with alternate success, but terminated, as far as regarded Silesia, by the cession of that country to Prussia. But the proud house of Austria had no intention of definitively relinquishing this valuable province. It formed in 1756, against Prussia, a coalition of France, Russia, Saxony, and Sweden, which threatened the entire subversion of that kingdom. From that danger Prussia was saved by the talents of its sovereign, the aid of England, and a heavy sacrifice of its wealth and population. The peace of Hubertsburg in 1763, left Silesia conclusively in the hands of Frederick. It was now allowed to breathe from its ravages, and enjoyed a peace of 40 years, the Prussian government aiding the inhabitants to rebuild their villages, and inviting colonists from Germany and Poland, to repair the havoc of war. In 1807, Silesia was overrun by the French, but it was not separated at the peace of Tilsit, from the Prussian territory.

It has been questioned by German writers whether this province properly formed a part of the empire, having no vote at the diet. It is, however, comprised in the official returns of territory and population, made in 1815 by Prussia, of her possessions.

SILESIA, AUSTRIAN, that part of Silesia which was retained by Austria in 1742, when the province described in the foregoing article was ceded to Prussia. It has an area of 1845 square miles, with nearly 350,000 inhabitants. It is divided into the circles of Troppau and Teschen, and is now completely incorporated with Moravia, being subject

to the same courts of appeal, and the same military and civil administration. It is hilly, and does not produce a sufficiency of corn for its population; but it has good pasturage, abundance of flax and hemp, and flourishing manufactures of linen and woollen.

SILEX, [*Kieselerde*, Germ.,] in Mineralogy, a species of earth. See **MINERALOGY**.

SILFIELD, a parish of England, in Norfolk, near Wyndham.

SILHET, an extensive district of Bengal, lying between the 24th and 26th degrees of northern latitude. It is situated on the east side of the Brahmapootra river, and constitutes the north-east boundary of Bengal. It is not more than 350 miles in a direct line from China; but the intervening space, with the exception of Cachar, being occupied by barren mountains or unhealthy woods and swamps, there is no communication between the two countries, nor is it the interest of the British that there should be. Silhet is composed either of steep mountains or level plains. The latter are, during the rainy season, generally inundated, and produce prodigious crops of coarse rice; but the price of it is so very low, that the revenue of the district is very trifling, when compared with others. In consequence of the cheapness of food, the price of labour is extremely small, and the current money is *cowries*, a small shell, about 800 of which go to a rupee. Being intersected by several rivers, it also abounds with fish; and during the inundation, large boats may sail over great part of the country. Besides rice, its only exports are lime, ivory, timber, and oranges. Boat-building was formerly a source of emolument; and the honourable D. Lindsay, while collector of the district, built a ship of 400 tons, which was first floated down the rivers to Chittagong, and from thence proceeded to Calcutta; but the experiment was not found to answer, and has not been repeated. Elephants are found in the woods, but they are not reckoned valuable. The Megnah and Soomah are the principal rivers, and Silhet and Azmurgunge the chief towns. This district, when called Azmurdun, was first invaded by the Mahometans in 1254. Under the Mogul government it was one of the frontier military stations dependent on Dacca; and as two-fifths of the inhabitants are now Mussulmans, it appears they were very successful in making proselytes. It is now a separate collectorship.

SILHET, properly **SIRIHAT**, the capital of the above-mentioned district, and the residence of the judge, collector, &c., who are answerable to the court of circuit of Dacca. Lat. 24. 55. N. long. 91. 40. E.

SILLI, in Botany, a name given by the old Greeks to a plant called also *seseli*.

SILICA. See **MINERALOGY**.

SILICEOUS, in Mineralogy, denotes composed principally of silex.

SILICEOUS SCHISTUS, the hornstone slate of some geologists; flinty slate of Jameson; a rock of the nature of slate, but containing a great portion of siliceous earth. See **MINERALOGY**.

SILICIATE, in Mineralogy, a term introduced by professor Berzelius, to denote the combination of silex with other earths or oxyds, in which the silex is supposed to act as an acid. These substances he denominates siliciates.

SILICIOUS, *adj.* Made of hair.—The *silicious* and hairy vests of the strictest orders of friars, derive their institution from St. John and Elias. *Brown*.—[*Siliceus* or *silicicus*, Lat. from *silex*, a flint.—Flinty; full of stones.—*Silicious* earth is often found in a stony form, such as flint or quartz; and still more frequently in that of a very fine sand, such as that whereof glass is made. *Kirwan*.

SILICULA, in Botany, the diminutive of **SILICUA**, (see that article), is a Pouch, or pod of a short, or rounded figure, along both the edges of whose partition the seeds are inserted; witness the *Draba verna*, or Whitlow-grass, and the *Thlaspi Bursapastories*.

SILICULOSA, the first of the two orders of the 15th class in the Linnæan system. See **BOTANY**.

SILICULOSE,

SILICULOSE, *adj.* [*silicula*, Lat.] Husky; full of husks. *Dict.*

SILIFREY. See **JILLIFREE**.

SILIGINOSE, *adj.* [*siliginosus*, Lat.] Made of fine wheat. *Dict.*

SILICON, in Botany, a name given by some of the old Latin writers to the carob tree, *siliqua dulcis*. The Latins borrowed this name from the Greek *xyloglycon*, ξυλογλυκων, the sweet, or sweet-fruited tree.

SILIN, or **ABU AIT**, a village of Upper Egypt; 12 miles south-south-east of Siut.

SILING, a town of China, of the third rank, in Quang-see.

SILINO, a small island among the Philippines, near the north coast of Mindanao. Lat. 9. 2. N. long. 121. 40. E.

SILING-DISH, *s.* A strainer; a colander. *Barret.*

SILIPICA, a settlement of South America, in the province of Tucuman, on the shore of the river Dulce; 20 miles south of St. Jago del Estero.

SILLIQUA, *s.* [Latin.] [With gold-finers.] A carat of which six make a scruple. [*Silique*, Fr., with botanists.] The seed-vessel, husk, cod, or shell of such plants as are of the pulse kind. *Johnson.*

SILLIQUA, [*κεφαλον*, Gr.] among the ancients, the third part of an obolus, or, what comes to the same, the sixth part of a scruple.

SILLIQUA NABATHÆA. See **NABATHÆA SILLIQUA**.

SILLIQUA, in Botany, a Pod, is a sort of **PERICARP**. (See that article.) The *Siliqua* is a solitary seed-vessel, of an elongated form, and dry substance, consisting of two parallel valves, separated by a parallel linear partition, or receptacle, along each of whose edges the seeds are ranged in alternate order.

SILLIQUA. See **CAROA**.

SILLIQUASTRUM, the appellation of the Judas-tree in Tournefort and preceding authors, alluding to its partial resemblance to the fruit of the Carob, which was called *Siliqua*, the Pod, by way of eminence. See **CERATONIA** and **CERCIS**.

SILLIQUASTRUM, in Natural History, the name given by Mr. Lhuys, and others, to the bony palates of fishes, when found fossil.

SILLIQUATICUM, among the Romans, a custom or toll paid for merchandize. This the Greeks called *ceratistimus*.

SILLIQUOSA, in Botany, the second order of the Linnean 15th class, *Tetradynamia*; which order is characterized by the oblong form of the seed-vessel. See **SILLIQUA** and **SILICULA**.

SILLIQUOSÆ, the 39th natural order, among the *fragmenta* of Linnaeus, exactly analogous to the **CRUCIFERÆ** of Jussieu. See **BOTANY**.

SILLIQUOSE, or **SILLIQUOUS**, *adj.* [from *siliqua*, Lat.] Having a pod or capsula.—All the tetrapetalous *siliquose* plants are alkaliescent. *Arbutnot.*

SILISTRIA, or **DRISTRIA**, a large town in the north of European Turkey, in Bulgaria, situated on the Danube, on its south bank, at the influx of the small river Missovo. It is well fortified, tolerably built, has several handsome mosques and baths, and contains a population of 20,000. Being out of the usual road from Turkey to Germany, it is rarely visited by travellers. In the environs are to be seen the ruins of the wall erected by the Greek emperors, against the incursions of the barbarians. It is at present one of the frontier towns of Turkey; and in 1773 several sharp actions took place here between the Russians and Turks. It is the see of an archbishop; 155 miles north-north-east of Adrianople. Lat. 44. 15. N. long. 27. 6. E.

SILIUS ITALICUS (Caius), an Italian poet, was born about the year 15 of the Christian era. He has been supposed to have been a native of Italica in Spain; but his not being claimed as a fellow countryman by Martial, who has bestowed upon him the highest praises, renders the

supposition improbable. It is certain that he lived chiefly in Italy, in which he possessed several estates. The knowledge of him come down to these times is derived from a letter of Pliny the Younger to Caninius Rufus, announcing his death. From this it appears that he incurred some reproach in the reign of Nero, as having been forward in accusations, and that he was consul at the time of the tyrant's death; that he made a discreet and humane use of the friendship of Vitellius; and that having acquired much honour, from his conduct in the proconsulate of Asia, he thenceforth withdrew from public offices, and maintained the rank of the principal persons of the city without power and without envy. It appears, likewise, that he passed his time chiefly in literary conversations, and in composing verses, which he sometimes recited in public. He had great taste for elegance, and purchased a number of villas, which, after enjoying for a time, he deserted for new ones. He collected a number of statues, books, and busts, to some of the latter of which he paid a kind of religious veneration. This was particularly the case with respect to that of Virgil, whose birth-day he kept with much more ceremony than his own, and whose tomb was included in one of his villas. He is said also to have possessed a villa that had been Cicero's. In his latter years he retired altogether to his seat in Campania, which he did not quit upon any account; and the general tide of his prosperity did not cease to flow, except in the instance of the death of the younger of his two sons, which was in some degree compensated by the consular dignity of the elder. In his 75th year he was attacked with an incurable ulcer, and he is said to have put an end to his life, by abstaining from food.

The work of Silius, which has come down to the present time, is an epic poem on the second Punic war. In this he scarcely deviates from Livy, in the narration of transactions; but occasionally introduces a machinery, copied from Virgil, of whose style and manner he is an imitator. Pliny says, that "he writes with more diligence than genius." The best editions of this work are those of Drakenborch, 1717; and of Lefebvre de Villebrune, 4 vols. 12mo., 1782.

SILIVRI, or **SELIVREA**, the ancient *Selymbria*, a seaport of European Turkey, in Romania, near the sea of Marmora, situated on the western side of a promontory. It contains 6000 inhabitants, of whom 1500 are Greeks, and 200 Jews. It commands a beautiful prospect of the Propontis, but its harbour admits only small vessels; 32 miles west of Constantinople.

SILJAN, a small town in the middle part of Sweden, in Dalecarlia, on a lake to which it gives name; 29 miles north-west of Fahlun.

SILK, *s.* [Æolc, Saxon. "Vocabulum Anglicanum *selk*, Lat. *sericum*,—nuncupatum est quasi *selik*, pro *serik*, literæ *r* in *l* facili commut. fact." *Seren.*] The thread of the worm that turns afterwards to a butterfly.

The worms were hallow'd that did breed the *silk*;

And it was dy'd in mummy, which the skilful

Conserv'd of maidens' hearts.

Shakspeare.

The stuff made of the worm's thread.—Let not the creaking of shoes, or rustling of silks betray thy poor heart to woman. *Shakspeare.*

SILK is a very soft, fine, bright, delicate thread; the work of an insect, called *bombyx*, or the silk-worm.

The ancients were but little acquainted with the use and manufacture of silk; they took it for the work of a sort of spider or beetle, who spun it out of his entrails, and wound it with its feet about the little branches of trees. This insect they called *ser*, from *Scres*, a people in Scythia, whom we now call the Chinese, who, as they thought, bred it; whence the silk itself they called *sericum*. But this *ser* of theirs has very little affinity with our silk-worm, the former living five years; but the latter dying annually enveloped in a yellowish bag or ball, which, wound out into little threads, makes what we call silk.

It was in the isle of Cos that the art of manufacturing it

was first invented; and Pamphila, daughter of Piatis, is honoured as the inventress. The discovery was not long unknown to the Romans. Silk was brought them from Serica, where the worm was a native. But so far were they from profiting by the discovery, that they could not be induced to believe so fine a thread should be the work of a worm; and thereupon formed a thousand chimerical conjectures of their own.

Silk was a very scarce commodity among them for many ages: it was even sold weight for weight with gold; inso-much that Vopiscus tells us, the emperor Aurelian, who died A. D. 275, refused the empress, his wife, a suit of silk, which she solicited of him with much earnestness, merely on account of its dearness.

Others, however, with greater probability, assert that it was known at Rome so early as the reign of Tiberius, about A. D. 17.

Galen, who lived about the year of our Lord 173, speaks of the rarity of silk, being no where but at Rome, and only among the rich.

Heliogabalus, the emperor, who died A. D. 220, is said by some to be the first person who wore a holosericum, i. e. a garment of all silk.

The Greeks of Alexander the Great's army are said to have been the first who brought wrought silk from Persia into Greece, about 323 years before Christ; but the manufacture of it was confined to Berytus and Tyre, in Phoenicia, whence it was dispersed over the West.

At length, two monks, coming from the Indies, to Constantinople, in 555, under the encouragement of the emperor Justinian, brought with them great quantities of silk-worms, with instructions for the hatching of their eggs, rearing and feeding the worms, and drawing out the silk, and spinning and working it. Upon this, manufactures were set up at Athens, Thebes, and Corinth. The Venetians, soon after this time, commencing a commerce with the Greek empire, supplied all the western parts of Europe with silks for many centuries; though sundry kinds of modern silk manufactures were unknown in those times, such as damasks, velvets, sattins, &c.

About the year 1130, Roger II., king of Sicily, established a silk manufactory at Palermo, and another in Calabria; managed by workmen, who were a part of the plunder brought from Athens, Corinth, &c., of which that prince made a conquest in his expedition to the Holy Land. By degrees, Mezeray adds, the rest of Italy and Spain learned, from the Sicilians and Calabrians, the management of the silk-worms, and the working of silk; and at length the French got it by right of neighbourhood, a little before the reign of Francis I., and began to imitate them. Thuanus, indeed, in contradiction to most other writers, makes this manufacture of silk to be introduced into Sicily two hundred years later, by Robert the Wise, king of Sicily, and count of Provence.

It appears by 33 Hen VI. cap. 5. that there was a company of silk-women in England so early as the year 1455; but these were probably employed in needle-works of silk and thread; and we find that various sorts of small haberdashery of silk were manufactured here in 1482; but Italy supplied England, and all other parts, with the broad manufacture, till the year 1489. In Spain, indeed, the culture and manufacture of silk seem to have been introduced in an early period by the Moors, particularly in Murcia, Cordova, and Granada. The silk manufactures of this last town were very flourishing, when it was taken by Ferdinand, &c., at the close of the fifteenth century.

In 1521, the French, being supplied with workmen from Milan, commenced a silk manufacture; but it was long after this time before they could obtain raw silk from the worms; and even in the year 1547, silk was scarce and dear in France; and Henry II. is said to have been the first who wore a pair of silk knit stockings; though the first invention originally came from Spain, whence silk stockings were brought over to Henry VIII. and Edward VI. After the civil wars in France, the plantations of mulberry-trees were

greatly encouraged by Henry VI. and his successors; and the produce of silk is at this day very considerable.

The great advantage which the new manufacture afforded, made our king James I. very earnest for its being introduced into England: accordingly it was recommended several times from the throne, and in the most earnest terms, particularly in the year 1608, to plant mulberry-trees, &c., for the propagation of silk-worms; but unhappily without effect; though from the various experiments we meet with in the Philosophical Transactions, and other places, it appears that the silk-worm thrives and works as well, in all respects, in England, as in any part of Europe.

However, towards the latter end of this king's reign, i. e. about the year 1620, the broad silk manufacture was introduced into this country, and prosecuted with great vigour and advantage. In 1629, the silk manufacture was become so considerable in London, that the silk throwsters of the city, and parts adjacent, were incorporated under the name of master, wardens, &c., of the silk throwsters; and in 1661, this company of silk-throwsters employed above forty thousand persons. The revocation of the edict of Nantes, in 1685, contributed in a great degree to promote the silk manufacture in this kingdom; as did also the invention of the silk throwing machine at Derby, in 1719; for an account of which, see *SILK, Manufacture of*.

So high in reputation was the English silk manufacture, that even in Italy, as Keysler (*Travels*, vol. i. p. 289.) informs us, in 1730, the English silks bore a higher price than the Italian.

The silk-worm is an insect not more remarkable for the precious matter it furnishes for divers stuffs, than for the many forms it assumes, before and after its being enveloped in the rich cod or ball which it weaves for itself. From a small egg, about the size of a pin's head, which is its first state, it becomes a pretty big worm, or caterpillar, of a whitish colour, inclining to yellow. In this state it feeds on mulberry-leaves, till, being come to maturity, it winds itself up in a silken bag, or case, about the size and shape of a pigeon's egg; and becomes metamorphosed into an aurelia: in this state it remains without any signs of life, or motion; till at length it awakes to become a butterfly, after making itself a passage out of its silken sepulchre; and, at last, dying indeed, it prepares itself a successor, by an egg which it casts, which the warmth of the summer weather brings to life.

As soon as the silk-worm, or caterpillar, is arrived at the size and strength necessary for beginning his cod, he makes his web; for it is thus they call that slight tissue, which is the beginning and ground of this admirable work. This is his first day's employment. On the second, he forms his folliculus, or ball, and covers himself almost over with silk. The third day, he is quite hid; and the following days he employs himself in thickening and strengthening his ball; always working from one single end, which he never breaks by his own fault; and which is so fine, and so long, that those who have examined it attentively, think they speak within compass, when they affirm that each ball contains silk enough to reach the length of six English miles.

In ten days' time, the ball is in its perfection; and it is now to be taken down from the branches of the mulberry-trees, where the worms have hung it. But this business requires a great deal of attention; for there are some worms more lazy than others; and it is very dangerous waiting till they make themselves a passage, which usually happens about the fifteenth day.

The first, finest, and strongest balls are kept for the breed; the rest are carefully wound. If there be no more than can be well wound at once, they lay them for some time in an oven, moderately hot, or else expose them, for several days successively, to the greatest heats of the sun, in order to kill the insect; which, without this precaution, would not fail to open itself a way to go and use those new wings abroad, which it has acquired within. Ordinarily, they only wind the more perfect balls. Those that are double, or too weak, or too coarse, are laid aside; not as altogether

altogether useless, but that, being improper for winding, they are reserved to be drawn out into skeins. The balls are of different colours; the most common are yellow, orange-colour, isabella, or flesh-colour. There are some also of a sea-green, others of a sulphur colour, and others white; but there is no necessity for separating the colours and shades, to wind them apart, as all these colours are to be lost in the future scouring and preparing of the silk.

SILK, MANUFACTURE OF. In England, where silk is not produced in any quantities to be employed by the manufacturer, he must commence his operations upon the raw silk, with no other preparation than that of being wound off into skeins or hanks from the balls, or cocoons, which the silk-worms form.

In this state the silk is imported from those countries where it is produced, as Italy, Flanders, Spain, Portugal, Turkey, the East Indies and China. A thread of this raw silk, drawn from the skein, is found to be composed of an assemblage of several of the fine fibres or threads produced by the worms; the fibres being united together by a natural gum, which is in the silk, and which is soluble in the hot water in which the cocoons are immersed when the silk is wound off.

To prepare this raw silk for use, it is wound from the skeins upon bobbins; the compound thread is then twisted, to unite the constituent fibres more firmly than they can be by the gum alone; and afterwards, being wound again upon fresh bobbins, two or three threads are twisted together to produce a stronger thread, fit for the weaver, who warps and finally weaves the silk into various articles of ornaments or utility, by processes very similar to the weaving of cotton or linen, but more delicately conducted.

In the countries where the silk is produced, the manufacture may be more properly said to commence with the operation of winding or reeling off the threads into skeins from the cocoons, or balls, in which the worms envelope themselves. These balls become an article of trade, as soon as the insect within them is killed by exposing them to heat, either of the sun, or in an oven, or by the steam of boiling water; and, in general, the breeders of silk-worms sell them, in this state, to persons who make a business of the operation of winding. In Piedmont, where capital silk is produced, it is conducted, as follows, by the aid of the silk reel represented in Plate *Silk Manufacture*, fig. 1.

The balls are thrown into hot water, contained in a copper basin or boiler, A, which is about eighteen inches in length and six deep, set in brick-work, so as to admit a small charcoal fire beneath it; or if a fire of wood is intended to be made, the fire-place must have a small flue or chimney of iron plate to carry off the smoke. At the side of the boiler is placed the reel, which is very simple. BB marks the wood-framing which sustains its parts: these are, the reel D, upon which the silk is wound; the layer a, which directs the thread upon it; and the wheel-work b c, which gives motion to the layer. The reel, D, is nothing more than a wooden spindle, turned by a handle at the end; and within the frame, at each end, it has four arms mortised into it, to support the four battens or rails on which the silk is wound. The rails are parallel to the axis, and at such a distance, that they will form a proper-sized skein by the winding of the silk upon them, (it is usually a yard for each revolution.) One of each of the four arms is made to fold in the middle of its length with hinges, so as to cause the rail, which these two arms support, to fall in or approach the centre, and thus diminish the size of the reel, and admit the skeins of silk to be taken off at the end of the reel when the winding is finished.

Upon the end of the wooden spindle of the reel, and within the frame B, is a wheel of twenty-two teeth, to give motion to another wheel, c, which has about twice the number of teeth, and is fixed upon the end of an inclined axis, c b; this, at the opposite end, carries a wheel, b, of twenty-two teeth, which gives motion to an horizontal cog-wheel of thirty-five teeth. This wheel turns upon a pivot fixed

in the frame, and has a pin fixed in it, at a distance from the centre, to form an excentric pin or crank, and give a backward and forward motion to the slight wooden rail or layer a, which guides the threads upon the reel: for this purpose, the threads are passed through wire-loops or eyes, a, fixed into the layer, and the end thereof opposite the wheel and crank, b, is supported in a mortise or opening made in the frame, B, so that the revolution of the crank will cause the layer to move and carry the threads alternately towards the right or left. There is likewise an iron bar, e fixed over the centre of the boiler at e, and pierced with two holes, through which the threads pass to guide them.

To describe the operation of reeling, it should be understood, that if the thread of each ball or cocoon was reeled separately, it would be totally unfit for the purposes of the manufacturer; in the reeling, therefore, the ends or threads of several cocoons are joined, and reeled together out of warm water, which softens their natural gum, and makes the fibres stick together, so as to form one strong smooth thread; and as often as the thread of any single cocoon breaks or comes to an end, its place is supplied by a new one, so that by continually keeping up the same number, the united thread may be wound to any length. The single threads of the newly added cocoons are not joined by any tie, but simply laid on the compound thread, to which they will adhere by their gum; and their ends are so fine, as not to occasion the least perceptible unevenness in the place on which they are laid.

The woman who conducts the reeling is seated before the basin A, and employs a boy or girl to turn the handle of the reel: a fire is lighted beneath the basin A; and when the water becomes nearly boiling hot, she throws into the basin two or three handfuls of cocoons, and leaves them some minutes, to soften that natural gum with which the silk is impregnated; then she stirs up or brushes the cocoons with a wisk of birch or of rice-straw, about six inches long, cut stumpy, like a worn-out broom; the loose threads of the cocoons stick to the wisk, and are drawn out: she then disengages these threads from the wisk, and by drawing the ends through her fingers, cleans them from that loose silk which always surrounds the cocoon, till they come off entirely clean: this operation is called *la battue*: and when the threads are quite clean, she passes four or more of them, if she intends to wind fine silk, through each of the holes in the thin iron bar e, which is placed horizontally over the centre of the basin A; afterwards she twists the two compound threads (which consist of four cocoons each) twenty or twenty-five times round each other, that the four ends in each thread may the better join together by crossing each other, and that the thread of the silk may be round, which otherwise would be flat.

The threads, after passing through the holes in the iron bar e, and being twisted together, are passed through the eyes of the loops, a, of the layer, and thence being conducted to the reel, are made fast to one of its rails. The child who turns the reel, gives it the most rapid movement possible, and thus draws off the threads from the cocoons in the basin A. The slow traversing motion of the layer prevents the threads lying over each other upon the reel, until it has made so many revolutions in the air as to dry the gum of the silk so far, that the threads will not adhere together. After the reel is covered for about the breadth of three inches, by the gradual progression of the layer, it returns and directs a second course of threads over the first laid, and so on until the required length for the skeins is obtained. The machine winds two skeins at one time. As it is essential to the production of good silk, that the thread should have lost part of its heat and gumminess before it touches the bars of the reel, the Piedmontese are by law obliged to have a distance of thirty-eight French inches between the guides a, and the centre of the reel: and the layer must also, under a penalty, be moved by cog-wheels instead of an endless cord, which is sometimes used in Italy, and which, if suffered to grow slack, will cause the layer to stop and not lay the threads distinctly, and that

part of the skein will be glued together, whereas the cog-wheels cannot fail.

When the skeins are quite dry the reel is removed from the frame, and by the folding of two of its arms the skeins are taken off. A tie is made with some of the refuse silk on that part of each skein where it bore upon the bars of the reel, and another tie on the opposite part of the skein; after which it is doubled into a hank, and usually tied round near each extremity, when it is laid by for use or sale.

This operation appears very simple, but to produce a good thread requires much attention. The reeler must not wait until the thread of a cocoon is entirely exhausted before she joins on another, because the threads near the end have not above a quarter of their full thickness. The cocoons produce a very unequal length; some may be met with which yield 1200 ells, whilst others will scarcely afford 200 ells. In general the production of a cocoon may be estimated from 500 to 600 ells in length. As often as the cocoons she winds are exhausted, or break, or only diminish, she joins fresh ones to keep up the requisite number, or the proportion; because, as the cocoons wind off, and the thread becomes finer, she must join two cocoons half wound to replace a new one. Thus she can wind three new ones and two half wound, and the silk will be equal to that produced from four to five cocoons. When she would join a fresh thread she must lay one end on her finger, throw it lightly on the other threads which are winding, and the gum will join it immediately, and it will continue to go up with the rest. She must not wind off her cocoons to the last, because when they are near at an end the husk of the worm joins in with the other threads, and makes the silk foul. The silk may be wound of any size from one cocoon to 100, but it is difficult to wind more than thirty in a thread.

The nicety of the operation, and that part in which lies the greatest difficulty, is to wind an even thread, because as the cocoon winds off the end is finer, and other cocoons must be joined on to keep up the same size. This difficulty of keeping the silk always even is so great, that (excepting a thread of two cocoons, which is called such) they do not say a silk of three, four or six cocoons; but a silk of three to four, four to five or six to seven cocoons. In a coarser silk it cannot be calculated even so nearly as to four cocoons more or less; they say, for example, from 12 to 15, from 15 to 20, and so on.

During the operation of winding, the woman must always have a bowl of cold water by her, to dip her fingers in, and to sprinkle frequently upon the iron bar *e*, that the heat of the basin may not burn the threads, also to cool her fingers every time she dips them in the hot water, and to pour into the basin when necessary, that is, when the water begins to boil. The water must be just in a proper degree of heat; for when it is too hot, the thread is dead, and has no body; and when too cold, the ends which form the thread do not join well, and form a harsh silk. The heat of the water from which the cocoons are wound, causes that adhesion of the fibres which compose the silk: a thread can with difficulty be wound off when cold water is employed; but in this manner the adhesion is very slight, and the thread breaks with a slight force, or the least moisture will separate the fibres; but the silk wound from hot water cannot be separated except by hot water.

The old cocoons require the water to be very hot: if the threads break very frequently, it may be concluded that the water is too cold; or, on the other hand, if the silk comes off entangled, and in the state of wool, the water is too hot. When the first parcel of cocoons is finished, the basin, *A*, is cleaned, taking out all the striped worms, as well as the cocoons, on which there remains a little silk: these are thrown into a basket, into which the loose silk that comes off in making the battue is likewise put as waste silk, to be carded and spun into threads. The water in the basin must be changed four times a day for coarse silk, and twice only for good cocoons of fine silk: if the water is not changed, the silk will not be bright and glossy, because the worms contained in the cocoons foul it very con-

siderably. The reeler must endeavour to wind as much as possible with clear water, for if there are too many worms in it, the silk will be covered with a kind of dust, which afterwards attracts moths, which destroys the silk.

From the gummy or viscid material which silk gives out to water when the cocoons are infused in it, Chappe found that he was able to blow up the water into bubbles, or small balloons, far more permanent than those of soap and water, and offering all the colours of the rainbow. So close, indeed, is the texture of these silky bladders, that even the most subtile gas does not penetrate them. Chappe filled many of them, the diameter of each not exceeding three inches, with hydrogen gas, and found several of them continued in a state of suspension, in an apartment, for considerably more than twenty-four hours. It is not all silk, however, that is sufficiently glutinous for this purpose; that which is of a very deep yellow will not answer the same purpose. This silk, from its colour, is supposed to be produced by the worm in a peculiar disease, yet this is a state by no means uncommon.

All kind of silk which is simply drawn from the cocoons by the reeling, is called raw silk, but it is denominated fine or coarse according to the number of fibres of which the thread is composed. In general, the raw silk requires dyeing; to prepare for which the thread is very slightly twisted, to render it strong, and more able to bear the action of the hot liquor, without separating the fibres or furring up. Silk-yarn, which is employed by the weavers for the woof or weft of the stuffs which they fabricate, is composed of two or more threads of the raw silk, slightly twisted in a machine; and the thread employed by the stocking weaver is of the same quality, but composed of a greater number of threads, according to the thickness desired. Organzine silk is composed of two, three or four threads of raw silk twisted, and so combined as to obtain the greatest strength: for this purpose, each thread of raw silk is twisted separately upon itself by a mill: the twist is given in a right-handed direction, and extremely tight. By a second operation of twisting, two of these threads are combined together, the twist being given in a contrary direction, and not above half as tight: this forms a thread similar to a rope. This description of silk, used for the warp of stuffs, is of the utmost importance to the manufacturer, for none of the principal articles can be fabricated without it. The Italians, from whom we formerly imported the silk in the state of organzine, for a long time kept the art of throwing it a profound secret. It was introduced into this country by the enterprise and skill of Messrs. Thomas and John Lombe, the latter having, at the risk of his life, and with wonderful ingenuity, taken a plan of one of these complicated machines in the king of Sardinia's dominions, from which, on his return, they established a similar set of mills in the town of Derby. In consideration of the great hazard and expence attending the undertaking, a patent was granted to Sir Thomas Lombe in 1718, for securing to him the privilege of working organzine for the term of fourteen years; but the construction of buildings and engines, and the instruction of the workmen, took up so much time, that the fourteen years were nearly expired before he could derive any advantage from it; in consequence of which he petitioned parliament, in 1731, to grant him a further term: but parliament, considering it an object of national importance, granted him the sum of £14,000 on condition that he should allow a perfect model of the machinery to be taken, and deposited in the Tower of London for public inspection.

The process which the silk undergoes to bring it into this state, consists of six different operations. 1. The silk is wound from the skein upon bobbins in the winding machines. 2. It is then sorted into different qualities. 3. It is spun or twisted on a mill in the single thread, the twist being in the direction of from right to left, and very tight. 4. Two or more threads thus spun are doubled or drawn together through the fingers of a woman, who at the same time cleans them, by taking out the slubs which may have been

SILK MANUFACTURE.

been left in the silk by the negligence of the foreign reeler. 5. It is then thrown by a mill, that is, the two threads are twisted together, either slack or hard, as the manufacture may require; but the twist is in an opposite direction to the first twist, and it is wound at the same time in skeins upon a reel. 6. The skeins are sorted according to their different degrees of fineness, and then the process is complete.

The first operation which the raw silk undergoes is winding, that is, drawing it off from the skeins in which it is imported, and winding it upon wooden bobbins, in which state it can go to the other machines. The winding-frame is shewn at fig. 2. of the plate, or rather a part of it, which will wind six threads at once, and by increasing the length it may be made to receive any number. Each of the skeins is extended upon a slight reel AA, called a swift; it is composed of four small rods, fixed into an axis, and small bands of string are stretched between the arms to receive the skein, but at the same time the bands admit of sliding to a greater or less distance from the centre, so as to increase the effective diameter of the reel, according to the size of the skein, because the skeins, which come from different countries, vary in size, being generally an exact yard, or other similar measure, of the country where the silks are produced. The swifts are supported upon wire pivots, upon which they turn freely when the silk is drawn off from them; but in order to cause the thread to draw with a gentle force, a looped piece of string, or wire, is hung upon the axis withinside the reel and a small leaden weight, *c*, being attached to it, will cause a sufficient friction. B, B, are the bobbins which draw off the threads; they are received in the frame, and are turned by means of a wheel beneath each, the bobbin having a small roller upon the end of it, which bears by its weight upon the circumference of the wheel, and the bobbin is thereby put in motion to draw off the silk from the swift. D is the layer, a small light rod of wood, which has a wire-eye fixed into it, opposite to each bobbin, so as to conduct the thread thereupon; and as the layer moves constantly backwards and forwards, the thread is regularly spread upon the length of the bobbin. The motion of the layer is produced by a crank fixed upon the end of a cross-spindle, E, which is turned by means of a pair of bevelled wheels from the end of the horizontal axle, upon which the wheels for turning all the bobbins are fixed.

These winding machines are usually situated in the top building of the mill, the frames being made of great length, and also double, to contain a row of bobbins and swifts at the back as well as in front. Two of these double frames are put in motion by cog-wheels from the vertical shaft, F, which ascends from the lower apartments of the mill, where the twisting-machines are placed. The winding-machines require a constant attendance of children to mend the ends or threads which are broken; or when they are exhausted, they replace them by putting new skeins upon the swifts. When the bobbins are filled they are taken away, by only lifting them up out of their frame, and fresh ones are put in their places.

A patent was taken out by Messrs. Gent and Clarke, for a new construction of the swifts for winding-machines: they were made with six single arms instead of four double ones; and the arms are small flat tubes, made to contain the stems of wire forks, which receive the skein instead of the bands of string in the common swifts. These forks admit of drawing out from the tubes until the swift is sufficiently enlarged to extend it; but as they extend the skein at six points instead of four, as in the common one, the motion is more regular. Instead of the weight which causes the friction, a spring is used to press upon the end pivot of the axis, and make the requisite resistance.

The twisting of the silk is always performed by a spindle and bobbin, with a flyer, but the construction of the machine which puts the spindle in motion is frequently varied. The limits of our plate do not admit a representation of the great machines, or throwing-mills, such as are used at Derby,

and at almost all the other great silk-mills in England. In fig. 3. we have given a drawing of a small machine, which is similar in the parts which act upon the silk; and indeed many mills employ such machines constructed on a large scale. The one in our plate contains only thirteen spindles, and is intended to be turned by hand, a method which is too expensive for this country, but is common in the south of France, where many artisans purchase their silk in the raw state, and employ their wives or children to prepare it by these machines, which they call ovals, because the spindles *b, b*, are arranged in an oval frame, G H. B is the handle by which the motion is given; it is fixed on the end of a spindle, R, which carries a wheel, D, to give motion to a pinion upon the upper end of a vertical axle, E: this, at the lower end, has a drum or wheel F, to receive an endless strap or band, *a, a*, which encompasses the oval frame G, and gives motion to all the spindles at once. The spindles *b, b*, are placed perpendicularly in the frame G H, their points resting in small holes in pieces of glass, which are let into the oval plank G; and the spindles are also received in collars affixed to an oval frame H, which is supported from the plank, G, by blocks of wood; *d* and *a* are small rollers, supported in the frame G H, in a similar manner to the spindles: their use is to confine the strap, *a*, to press against the rollers of the spindles with sufficient force to keep them all in motion.

The thread is taken up as fast as it is twisted by a reel, K, which is turned by a wheel, *h*, and a pinion, *i*, upon the end of the principal spindle, R. The threads are guided by passing through wire-eyes, fixed in an oval frame, L, which is supported in the frame of the machine by a single bar or rail, *l, l*, and this has a regular traversing motion backwards and forwards, by means of a crank, or excentric pin, *k*, fixed in a small cog-wheel, which is turned by a pinion upon the vertical axis E; the opposite end of the rail, *l*, is supported upon a roller, to make it move easily. By this means the guides are in constant motion, and lay the threads regularly upon the reel K, when it turns round, and gathers up the silk upon it, as shewn in the figure.

One of the spindles is shewn at *r* without a bobbin, but all the others are represented as being mounted and in action. A bobbin, *e*, is fitted upon each spindle, by the hole through it being adapted to the conical form of the spindle, but in such manner, that the bobbin is at liberty to turn freely round upon the spindle: a piece of hard wood is stuck fast upon each spindle, just above the bobbin, and has a small pin entering into a hole in the top of the spindle, so as to oblige it to revolve with the spindle; this piece of wood has the wire-flyer, *b*, fixed to it: the flyer is formed into eyes at the two extremities; one is turned down, so as to stand opposite the middle of the bobbin *e*; and the other arm *b*, is bent upwards, so that the eye is exactly over the centre of the spindle, and at a height of some inches above the top of the spindle. The thread from the bobbin, *e*, is passed through both the eyes of this wire, and must evidently receive a twist when the spindle is turned; and at the same time, by drawing up the thread through the upper eye, *b*, of the flyer, it will turn the bobbin round and unwind therefrom. The rate at which the thread is drawn off from the bobbin, compared with the number of revolutions which the flyers make in the same time, determines the twist to be hard or soft; and this circumstance is regulated by the proportion of the wheel *h*, to the pinion *i*, from which it receives motion; and these can be changed when it is required to spin different kinds of silk. The operation of the machine is very simple; the bobbins filled with silk in the winding-machine, fig. 1, are put loose upon the spindles at *e*, and the flyers are stuck fast upon the top of the spindles: the threads are conducted through the eyes of the flyers *b*, and of the layers L, and are then made fast to the reel K, upon which it will be seen that there are double the number of skeins to that of the spindles represented, because one-half of the number of the spindles is on the opposite side of the oval frame, so that they are hidden. With this preparation the machine is put in motion, and continues

to spin the threads by the motion of the flyers, and to draw them off gradually from the bobbins, until the skeins upon the reel are made up to the requisite lengths. This is known by a train of wheel-work at *n o p*, consisting of a pinion, *n*, fixed upon the principal spindle *R*, turning a wheel *o*, which has a pinion fixed to it, and turning a larger wheel *p*; this has another wheel upon its spindle, with a pin fixed in it, which at every revolution raises a hammer, and strikes upon a bell, *s*, to inform the attendant that the skeins are made up to a proper length. When this machine is employed for the first operation of twisting the organzine, the wheel, *h*, must be larger, and the pinion, *i*, smaller than represented, in order that the reel, *K*, may be turned slowly, and threads will therefore receive a stronger and closer twist. Also, the handle *B* is turned in an opposite direction to that in which it must move for the final throwing off the two or three twisted threads together; and as it must also move for twisting the raw threads together for the warp of silk-stuffs, and for weaving stockings, this reverse movement makes no alteration in the machine, except that it will give twist in a contrary direction; for it is always necessary, when two or more twisted threads are combined by twisting, that the twist of the original threads shall be in the opposite direction to that twist which unites them into one thread, in the same manner as for making ropes, organzine silk being in fact small rope, and stocking-silk or warp being only yarn. The silk which is intended to be dyed, is previously twisted very slightly in this machine, and of course in that direction which will suit the purpose for which it is ultimately intended, viz., whether for yarn or organzine.

The great mills for twisting silk, originally introduced by Messrs. Lombe, though very complicated, are simple in their operation, because the complexity arises from the great number of spindles which are actuated by the same movement, every one of which produces its effect independent of the others, and in the same manner as the oval which we have described. A machine is contained in a circular frame, of which the diameter varies from 11 to 13, 15, and even 17 feet; but 15 feet is the general size of the original Piedmontese machines. In the centre of the frame is a perpendicular axis or spindle, coming up through the floor of the chamber, and rising to the ceiling; it is put in motion by a communication of wheelwork from a water-wheel or otherwise from a horse-wheel. The axis has upon it two, three, or four horizontal wheels, according to the height of the machine, which revolve with it, and are of a sufficient size to fill nearly all the interior of the circular frame, and act upon the pulleys or rollers of the spindles, which are supported vertically in the frame, and arranged round the machine, at equal distances, in a circle, the number being proportioned to the dimensions of the machine. The spindles are also arranged in as many different stages of height as there are wheels upon the vertical spindle; for the circumference of each wheel presses against the rollers of the spindles which are arranged round it; and thus, when the wheel revolves, it gives a very rapid motion to all the spindles at once, by the contact of the edge of the wheel, but without any strap, as in the oval. Each spindle has a bobbin, filled with silk, fitted upon the top of it, and from this the silk is carried up to a horizontal reel, which is turned round slowly by the machine, and draws off the thread gradually from the bobbin: the flyer, being all the while in rapid motion, twists the thread upon itself, or, if two or three threads are previously wound together upon the bobbin, they will be twisted round each other. Each reel serves to take up the thread from several spindles which are situated beneath it: thus, in a mill of fifteen feet diameter, there will be six spindles beneath each reel.

To explain this machine more clearly, we will give a description of one of thirteen feet diameter, which has four large wheels and stages of spindles, two of which are for giving the first preparation to the organzine: the spindles revolve in a direction from right to left. The spindles of the other two stages are for the finishing the twist; and also for

twisting the single threads which are to be used for warp or stocking-weaving: they revolve in a contrary direction to the former. The frame of the machine consists of two wooden circles of thirteen feet diameter, one placed upon the floor of the mill, and the other at a height of fifteen feet above, the two being united by fourteen upright pillars of wood, which altogether compose a large cylindrical frame or lantern. Each stage contains eighty-four iron spindles, placed vertically, and supported in the stage, which is formed of two wooden circles, extended round between the fourteen uprights of the lantern, and fixed one above the other, at about a distance of four inches asunder, so as to support the spindles between them, in the same manner as the pieces, *G, H*, of the oval last described.

The circles of the stage are of a rather less diameter than the two circles which compose the top and bottom of the lantern; so that the spindles will be rather within the circle of the frame of the lantern, and admit the wheels of the central axis to act upon them. For this purpose, each of the circles of the stage is made up by fourteen segments fixed between the uprights, and each segment supports six spindles, making up the number of eighty-four in the whole circle. The spindles, like those of the oval, are sharp-pointed at the lower end, and the points rest in small holes made in pieces of glass, which are let into the lower circle of the stage, whilst the upper circle sustains the spindle at a height of four or five inches above the point, leaving full one-third of the length of the spindle projecting above, for the purpose of fitting the bobbing upon it. The upper circle of the stage is rather smaller than the lower, because the spindles do not pass through it, but through holes in small pieces of hard wood, which project from it, so as to be exactly above the pieces of glass which sustain the points of the spindles. Each spindle has a small roller fixed upon it in the space between the two circles of the stage, and it is the contact of the rim of the great wheel upon these that causes the revolution of the spindles when the wheel revolves. In order to make the contact certain, the exterior rim of the great central wheel is made in several segments, and each segment has a constant tendency to recede from the central axis by the action of a weight, and thus press against the rollers of the spindles. In order to give the reverse movement of the spindles, which we have before spoken of in the description of the oval, the great wheels for two of the stages are made differently from those which we have just described, so that the segments of the rim will act upon the outsides of the rollers of the spindles, instead of the insides; for this purpose the wheels are made larger than the stages in which the spindles are placed, and from the rim of the wheel small pillars rise up to support the segments, which act upon the rollers of the spindles in front or withoutside of the circles, instead of the inside, as is the case with the other stages, in consequence of which the spindles of these stages turn in opposite directions. The reels are placed over the bobbins, to take up the threads when twisted; and the rollers of the different spindles are made smaller or larger, as is required, to give more or less twist to the silk operated upon by them; for the velocity with which the spindles revolve, compared with the rate at which the reels take up the thread, determines the degree of twist which the thread will have; and to render this equable, the reels which draw off the silk from the bobbins of the spindles are turned regularly with the motion of the machine by means of wheel-work, which is more easily conceived than described: it is sufficient to state that it receives its motion from the central vertical axis. There is also a layer adapted to each reel, with a wire-eye to receive each thread; and the layers having a slowly reciprocating motion, distribute the threads regularly upon the reels, in a similar manner to that first described for the oval. One of these reels is placed between each of the uprights of the machine, so as to make fourteen reels in the whole circle of each stage, and every reel serves to take the silk from the bobbins of six spindles. The whole machine in the four stages contains 336 spindles.

A machine of four stages is so high, as to reach through two floors of the mill, and for this purpose the upper floor is made with a large round opening, to admit the machine: this floor serves the people who attend the machine, and change the bobbins when exhausted, and also remove the finished silk from the reels.

The spindles in the upper stages are usually devoted to the first twisting of the single threads for the organzine, and therefore turn the reverse way, as before mentioned: and as the silk is afterwards to be thrown, or re-twisted, they are drawn off from the bobbins by large bobbins of three inches diameter, and four inches long, instead of the reels. These bobbins are stuck six together upon a long spindle, situated horizontally, and turned by similar wheel-work to that which actuates the reels; they have similar layers to conduct the silk regularly upon the bobbins from one end to the other, so that the operation is not at all different.

In many of the best silk-mills, they have abandoned the original method of turning the spindles, for the preparation of organzine, the reverse way, by making the action of the wheels upon the outside, instead of the inside, of the circle of spindles. Instead of them they employ two different machines, one for the first operation on organzine, and the other for the second operation, both of them constructed with the wheels withinside: but the motion of the two machines is reversed to each other.

Fig. 5. represents a single spindle of a throwsting machine, which, though the same in its action as the great mill, is different in its construction. G and H represent portions of the rails or circles of the stage which support the spindle, and *a a* is a part of the rim of the great wheel of the central axle. This wheel is not made in segments, as before described, but is made very truly circular, and covered with leather on the edge, that it may act with more force to turn the roller, *t*, of the spindle. The point of the spindle rests in a glass cap, supported by the rail G, and the roller, *t*, is always made to press against the rim of the great wheel, *a a*, by a small lever, *d*, and a string, which, after turning over a pulley, has the weight, *c*, made fast to it, to press the spindle always towards the wheel. In this machine, instead of the reel, the thread is taken up by a bobbin, K, is put into a frame, *m*, which moves on pivots, and by a weight, *n*, is pressed down so as to make the bobbin bear upon the edge of a wheel, *h*, which is kept in constant and regular motion, by the same kind of movement which turns the reels of the great machine. The intention of this is, that the action of the wheel, *h*, to turn the bobbin, being communicated by pressure against the part upon which the silk is to wind, will be constant, and will not draw more when the bobbin is large and full, or less when it is empty, as must be the case when the motion is given to the axis of the bobbin.

After the silk is twisted in a right-hand direction, if it is intended for yarn, or for dyeing; or in a left-hand direction, if it is prepared for organzine; it must be wound on fresh bobbins, with two or three threads together, preparatory to twisting them into one thread. In the original machines at Derby this was done by women, who, with hand-wheels, wound the threads from two or three of the large bobbins, upon which the silk is gathered, instead of the reels, and assembled them two or three together upon another bobbin, of a proper size to be returned to the twisting mill. We have seen an attempt for a machine to perform the doubling, which is represented in fig. 4. The whole machine itself is very similar to the winding-machine, fig. 2, but instead of the swift, the bobbins from the throwsting-mill are placed in front at A, fig. 4, two or three in a row. The threads from these are passed over the rail *m*, and beneath a piece of wood, *n*, both which, being covered with cloth, have the same effect to clean the silk by drawing through them, as the fingers of the winder. B is the bobbin upon which the two or three threads are to be wound together; it is turned by a wheel, F, upon which it rests, the same as the bobbins of the winding-machine; and D is the layer, which, for convenience, is in this case placed behind the bobbin, B;

and the wire-eye, *d*, which receives the three threads, is made to reach over to the front. The additional apparatus consists of a small piece of wood, *e*, which slides freely up and down, in a hole, through a fixed board, *f*. On the top of the slider, *e*, is an eye of wire, through which one of the single threads of silk passes in its passage from between the pieces *m*, *n*, to the bobbin B: there is one of these sliders, *e*, to each of the three threads; *t v* is a lever moving on the centre *w*; the end *t* is immediately beneath the small sliders *e*, and the end *v* is formed to a hook, to catch into the notches which are made in the end of the bobbin B. A small counter weight, *x*, always causes the hook, *v*, of this lever to recede from the bobbin; but if any one of the three threads break, it suffers the slider *e*, which belongs to it, to descend upon the end, *t*, of the lever, and depresses the end of the lever, so as to bring the hook, *v*, in a situation to catch a tooth of the bobbin B, and stop its motion. By this means the winding of the three threads together is rendered equally certain with the winding of one; for when any one breaks, the operation of winding on that bobbin stops, until the attendant repairs the broken thread, and puts the machine again in motion. We have lately been informed, that a machine for winding two and three threads together is becoming common in the silk-mills, but we do not know if it is the same with this one, which however is not evidently impracticable.

The bobbins, being thus filled with double or triple threads, are carried back to the throwsting machine, and are there spun or twisted together, the manner of doing which does not differ from the operation which we have before described. In this second operation the silk is taken up by reels instead of bobbins, and is thus made up into skeins. The degree of twist varies with the purpose for which the silk is intended; and the wheels which give motion to the reels are for this purpose adapted to the degree of twist which the silk is desired to have. The silk, being now spun, requires only the preparation of boiling to discharge the gum, and render the silk fit to receive the dye, and also to render it soft and glossy. The silk is boiled for about four hours, in a boiler filled with water, into which a small quantity of soap is put; this operation dissolves the gum, which before could be felt upon the silk, and rendered it harsh. After the boiling, it is well washed in a current of clear water, and when dried, will be found to have lost about one-fourth of its weight: at the same time the volume of the silk is sensibly increased, and it has acquired that soft texture and glossiness, which are the principal beauties of silk. This change is produced by the dissolution of the gum, which, in the first instance, was the only adherence of the fibre to form a thread, but by the operation of the twisting the fibres are firmly united, and no longer require the gum. It is also necessary, in order to give a fine dye to the silk, that the gum should be removed, because it would prevent the entrance of the dyeing matter to the centre of the thread, and thus impair the beauty of the colour. If the silk was thus boiled before the twisting, nothing but a fine entangled down or wool would be obtained, and it would require spinning, by a similar process to that of cotton, before a thread could be obtained. This, indeed, is necessary for that portion of waste silk which is drawn from the cocoons in the first operation of reeling; also for those cocoons which are reserved for breeding, and from which the moths eat their way out by holes, which render it impracticable to wind off the silk. This waste silk, when carefully spun by a spinning wheel, is called spun silk, and the thread is not inferior to the regular silk which is wound off; indeed, the winding off the silk into a thread united by its gum, is of no advantage farther than as a preparation for spinning, from which process the thread obtains its strength.

The silk is now in a state for use: if it is for stocking-weaving, or sewing, or if intended for weaving into stuff, it only requires warping to be put into the loom. The operation of warping is to put together all the threads which are to compose the warp of the intended piece of stuff, and lay them

them parallel, so that the warp, being put into the loom, will have no slack threads, nor any which are strained too tight. Formerly, this operation was performed by stretching the threads out at length in a field, or by extending them in a frame, and winding them backwards and forwards over pegs. The warping machine now universally employed is shewn in fig. 6, where A A is a tressel or stool, which supports the small bobbins *b, b*, upon which the silk is wound. The number of these is equal to the number of threads which the warp of the intended piece of stuff is to have in its breadth. The threads from all these bobbins are drawn over wires *d, d*, which are in front of the bobbins, and are then all brought together, and passed through an opening in a piece of wood D; this conducts the threads all together upon a large reel E E, which is supported in a frame F F F, and turned round by means of a pulley at the lower end of its axle, from which an endless band is continued to a second wheel G, mounted on a spindle, and turned by a handle. This latter spindle is supported in a sort of stool H, upon which a child sits down, and at the same time turns the handle and puts the reel in motion, so as to draw the warp or assemblage of threads off from the several bobbins, and lay it upon the reel E. The piece of wood D is fitted upon one of the upright pieces, F, of the frame, to slide freely up and down upon it, and is suspended by a cord, which, after passing over a pulley *f*, is wrapped round the spindle of the machine at *c*: by this means, the motion of the reel, E, draws the cord, and raises up the piece D, so as to lay the warp upon the circumference of the reel, in a regular spiral, from one end to the other, and prevent the coils lapping one upon another. When the required length of warp is wound upon the reel, the ends of all the threads are cut off, tied together, and thus drawn off from the reel and rolled up into a large ball, in which state the weaver takes it, and mounts it in his loom.

For the subsequent operations of weaving, we shall refer to the article WEAVING.

Statement of the quantities of raw and thrown Silk, imported into all the ports of Great Britain; the official values assigned in each of the eleven years, 1814—1824:—

Years.	Quantities.		Quantities.	
	Thrown.	Official Val.	Raw.	Official Val.
	lbs.	£.	lbs.	£.
1814.	645,722	774,867	1,634,501	703,009
1815.	357,739	429,287	1,442,594	601,968
1816.	192,130	230,590	945,792	365,219

The act of 7 Geo. IV. cap. 53., entitled, "An Act to regulate the Importation of Silk Goods until the 10th of October, 1828, and to encourage the Silk Manufactures by the Repeal of certain Duties," enacts, that from and after the 5th of July 1826, until the 10th of October 1828, the following rates of duties shall be payable, viz.:—

SILK; raw, knubs or husks.	£	s.	d.
ib.	0	0	1
Thrown	not dyed	Singles	2 0
		Tram	3 0
	dyed	Organzine & Crape	5 0
		Singles or Tram	4 0
	dyed	Organzine & Crape	6 8

Manufactures of SILK only, or whereof ninth parts are of Silk, and no part is of Gold, Silver, or other Metal £ lb. wt.

	£.	s.	d.	£.	s.	d.	
Stuffs	Plain	0	15	0	1	10	
		1	0	0	1	16

and further $\frac{1}{2}$ lb. if with figured or laced work	0	12	0
Stocking web	$\frac{1}{2}$ lb.	0	12
Gloves	0	15	0
Plain silk lace, called net or tulle	$\frac{1}{2}$ square yard	0	1

Silks, the produce of and imported from places within the limits of the East India Company's Charter, viz.:—
Bandannoes

	£.	s.	d.
Bandannoes and all other handkerchiefs, in pieces not exceeding 6 yards in length	per piece	0	6 0
Exceed 6 yards in length, but not exceeding 7 yards	..	0	7 0
And further, for every additional length, not exceeding a yard	..	0	1 0
Taffaties and other plain or figured Silks, not otherwise described	per lb.	0	10 0
Canton or China crapes	..	0	10 0
If flowered or tamboured with Silk	..	1	4 0
All piece goods, whether otherwise enumerated or not, and however imported, if entered for Home Use before the 5th of January 1827	per cent. on Value.	30	
Millinery of Silk, or of which the greater part of the material is of Silk	each	2	10 0
Dresses	..	1	5 0
Hats or bonnets	..	0	15 0
Turbans or caps	..	0	15 0
Or, and at the option of the officers of Customs	per cent. on Value.	50	
Manufactures of Silks, or of Silk and any other material, and also articles of manufactures of Silk, or of Silk and any other material, wholly or in part made up not particularly enumerated or otherwise charged with Duty	per cent. on Value.	30	

RESTRICTIONS ON IMPORTATION.

Ports of Importation.—Wrought Silks shall not be imported into any Port other than the Port of London till after the 5th day of July 1827: except into the Port of Dublin direct from the Port of *Bordeaux*:

And except—Silks the produce of and imported from places within the limits of the *East India Company's Charter*, into any Port into which goods in general, the produce of such places may be imported:

And except—Crape, gauze, lace, net or tulle, fancy net or tricot, millinery and dresses, imported into the Port of *Dover*, or into any Port into which goods, the produce of places within the limits of the *East India Company's Charter* may be imported:

And except—Silks imported to be warehoused for exportation only, into Ports into which goods, the produce of places within the limits of the *East India Company's Charter* may be imported.

Tonnage of Vessels.—Wrought Silks shall not be imported in vessels of less burthen than 70 tons, except direct from the Port of *Calais* into the Port of *Dover*, in vessels of 60 tons or upwards:

Wrought Silks shall not be imported unless in packages, each of which shall contain at least 100lbs. weight of wrought Silk:

Or, (being crape, gauze, lace, net or tulle, fancy net or tricot, millinery or dresses), in packages, each of which shall be of the capacity of 9 cubic feet at least, and shall contain only such Silks:

Being broad Silks or ribbons (except handkerchiefs, shawls, scarfs, net or tulle, fancy net or tricot, and except Silks the produce of and imported from places within the limits of the *East India Company's Charter*), shall not be imported for Home Use, unless in pieces or half pieces, of the respective lengths hereinafter mentioned; (that is to say),

Lengths.—Broad Silks in pieces, not less than 60 yards in length, nor more than 66 yards, or, (being velvet, or Silks mixed with other materials), in half pieces not less than 29 yards in length, nor more than 32 yards in length:

Ribbons, in pieces not less than 35 yards in length, nor more than 37 yards; or in half pieces not less than 17 yards in length, nor more than 19 yards.

All such pieces and half pieces shall be separate and entire, and each of uniform quality throughout; and, if of broad Silks, shall be finished in the loom with ferrels or marks at each end wove in:—Wrought Silks in pieces wound or rolled, whether on blocks or rollers, or not, shall

not be imported for Home Use:—except—Silks, the produce of and imported from places within the limits of the *East India Company's Charter*.

The following articles, although partly composed of Silk, shall not be subject to the regulations or restrictions contained in this table (that is to say);

Artificial flowers and other similar imitations:
Umbrellas, parasols, fans, screens, and other articles not for dress or furniture:

Articles of materials, other than Silk made up with Silk, or to which Silk is only applied by needle work or embroidery:

Stuffs, of the materials of which Silk shall not amount to one-tenth part.

Sec. 3. of the above Act provides, that "nothing in this Act contained shall extend to prohibit the entering, for Home Use, of any wrought Silks which shall have been warehoused before the 15th day of March, 1826; nor to prevent any passenger coming into the United Kingdom from bringing with him or her, into any Port, any wrought Silks, in pieces which may legally be imported for Home Use, and any articles made up, whether worn or not, although not in packages of the weight or size hereinbefore required, provided such piece of such articles be *bona fide* for his or her own use, and not for sale, and the quantity in the whole be not more than *ten pounds weight*: provided also, that the duties on such articles, whether worn or not, be paid, and be in all cases ascertained according to the value thereof."

SILKEBORG, a small town of Denmark, in Jutland; 18 miles west of Aarhus.

SILKEN, *adj.* [æolcen, Sax.] Made of silk.

Now, will we revel it
With *silken* coats, and caps, and golden rings.
Shakspeare.

Soft; tender.
All the youth of England are on fire,
And *silken* dalliance in the wardrobe lies.
Shakspeare.

Dressed in silk.
Shall a beardless boy,
A cocker'd, *silken* wanton, brave our field,
And flesh his spirit in a warlike soil,
Mocking the air with colours idly spread,
And find no check?
Shakspeare.

To SILKEN, *v. a.* To make soft or smooth.
If your sheep are of Sulurian breed,
Nightly to house them dry, on fern or straw,
Silkening their fleeces.
Dyer.

SILKINESS, or SILKNESS, *s.* Softness; effimnaey; pusillanimity.

Sir, your *silkiness*
Clearly mistakes Mecænas and his house,
To think there breathes a spirit under his roof
Subject unto these poor affections
Of undermining envy and detraction,
Moods only proper to base groveling minds.
B. Jonson.

Smoothness.—The claret had no *silkiness*. *Ld. Chesterfield.*

SILKMAN, *s.* A dealer in silk.—Master Smooth's, the *silkman*. *Shakspeare.*

SILKME'RCER, *s.* A dealer in silk.—Being born without prospect of hereditary riches, he was sent to London in his youth, and placed apprentice to a *silkmercer*. *Johnson.*

SILKSTONE, a village of England, West Riding of Yorkshire; 4 miles west-by-south of Barnesly. Population 555.

SILKSWORTH, a village of England, county of Durham; 3 miles south-west of Sunderland.

SILKWEA'VER, *s.* One whose trade is to weave *silken* manufactures.—The Chinese are ingenious *silkweavers*. *Watts.*

SILK WILLOUGHBY, a parish of England, in Lincolnshire; 5 miles from Keighley.

SILKWORM, *s.* The worm that spins silk.

Broad were the banners, and of snowy hue,
A purer web the *silk-worm* never drew.

Dryden.

SILK-WORM, or **BOMBYX**. This insect, a species of the *PHALÆNA*, (the *P. Mori*.) consists of eleven rings, and each of these of a great number of other small ones, joined to each other; and the head, which terminates these rings, is furnished with two jaws, which work and cut the food, not by a perpendicular but a lateral action.

The humours found in the body of this creature all seem approaching to the nature of the silk which it spins; for on being rubbed in the hands, they leave a hard or solid crust behind them. Under the skin there is always found a mucous rosy-coloured membrane, enveloping the animal, and supposed to be the new skin in which it is to appear, on throwing off the old one. The heart of this creature reaches from the head to the tail, running the whole length of the body; it is, indeed, rather a series of many hearts connected together, than one: the motion of systole and diastole is very evident in this whole chain of hearts; and it is an elegant sight to observe the manner of the vital fluid's passing from one of them to the other. The stomach of this animal is as long as the heart, reaching, like it, from one end of the body to the other. This large receptacle for food, and the sudden passage of it through the animal, are very good reasons for its great voracity.

In the sides of the belly, all about the ventricle, there is deposited a vast number of vessels, which contain the silky juice: these run with various windings and meanders to the mouth, and are so disposed, that the creatures can discharge their contents at pleasure at the mouth; and, according to the nature of the juices that they are supplied with, furnish different sorts of silk from them, all the fluid contents of these vessels hardening in the air into that sort of thread, of which we find the web or balls of this creature consist.

These creatures never are offended at any stench, of whatever kind; but they always feel a southern wind, and an extremely hot air always makes them sick. *Malpighi de Bombyce.*

SILKY, *adj.* Made of silk.—In *silky* folds each nervous limb disguise. *Shenstone.*—Soft; tender. Dr. Johnson has noticed *silky* as *tender*, only in the sense of *pliant*, by a citation from Shakspeare's *Dear*, where the true word is "*silky* ducking observants," not *silky*.

Silky soft

Favonius breathe still softer.

Young.

SILL, *s.* [*pile*, Sax.] The timber or stone at the foot of the door.—He can scarce lift his leg over a *sill*. *Burton.*

The farmer's goose,
Grown fat with corn and sitting still,
Can scarce get o'er the barn-door *sill*:
And hardly waddles forth.

Swift.

The bottom piece in a window frame Shafts of a waggon; thills.

SILLA, a large town of Bambarra, in Central Africa, situated on the southern bank of the Niger, only two days journey above Jenno. Here Mr. Park was obliged to terminate his first journey, after having penetrated 1090 miles in a direct line east from Cape Verd. Lat. 14. 48. N. long. 1. 34. W.

SILLA POINT, a cape on the north-west coast of the island of Mindanao. Lat. 9. N. long. 123. 51. E.

SILLA DE CARACCAS, an elevated peak of that chain of the Andes which stretches across the country of the Caraccas. It is in the vicinity of the city of Caraccas, which raises itself to the height of 8420 feet, and forms an enormous and frightful precipice fronting the Carribean sea. Lat. 10. 31. 15. long. 74. 40. 55. W.

SILLABAR, or **CELLABAR**, a sea-port town on the west coast of the island of Sumatra, with a good and safe harbour; 30 miles south-south-east of Bencoolen.

SILLABUB, *s.* Curds made by milking upon vinegar.

This is Dr. Johnson's definition, in conformity to his derivation of the word; which after all is very obscure. A *sillabub* usually means a liquor made of milk and wine or cider, and sugar.

Joan takes her neat rubb'd pail, and now
She strips to milk the sand-red cow;
Where, for some sturdy foot-ball swain,
Joan strokes a *sillabub* or twain.

Wotton.

SILLAH MEW, a considerable town of the Birman empire, situated on the eastern bank of the river Irrawaddy. The houses are all built of wood, and raised several feet from the ground; but there are several handsome temples built of brick, dedicated to Godama or Boodh. It has a considerable manufacture of silk, tartans, &c. The raw material is chiefly brought from Yunan, the south-west province of China. The colours are bright and beautiful, and the texture very strong. But not the least remarkable circumstance in this manufacture is, that the weavers are all women, the men considering such employment as beneath their dignity. Lat. 20. 50. N. long. 94. 30. E.

SILLE LE GUILLAUME, a small town of the interior of France, department of the Sarthe, near the source of the Vegre. It has manufactures of linen, and in the neighbourhood, iron mines. Population 2000.

SILLEE, the capital of a small district of the same name in Bengal. Lat. 23. 22. N. long. 85. 56. E.

SILLERY, a seigniory of Lower Canada, in the country of Quebec.

SILLEYRO, a promontory of Spain, on the west coast of Galicia. Lat. 42. 7. N. long. 8. 54. W.

SILLIAN, a neat town of Austria, in Tyrol, on the Drave; 60 miles east-south-east of Inspruck.

SILLILY, *adv.* In a silly manner; simply; foolishly.

I wonder much, what thou and I

Did till we lov'd? were we not wean'd till then,

But suck'd on childish pleasures *sillily*?

Or slumber'd we in the seven sleepers' den?

Donne.

SILLINESS, *s.* Simplicity; weakness; harmless folly.—The *silliness* of the person does not derogate from the dignity of his character. *L'Estrange.*

SILLON, in Fortification, an elevation of earth, made in the middle of the moat, to fortify it, when too broad.

The *sillon* is more usually denominated an envelope.

SILLS, in Agriculture, a term signifying the shafts of a cart, waggon, &c.

SILLY, *adj.* [Dr. Johnson merely cites the German *selig*, from Skinner. Our word *scely* or *sely*, at first meaning fortunate, also was used for silly, simple, inoffensive.] Harmless; innocent; inoffensive; plain; artless.—There was a fourth man in a *silly* habit. *Shakspeare.*—Weak; helpless.

After long storms,

In dread of death and dangerous dismay,

With which my *silly* bark was tossed sore,

I do at length descry the happy shore.

Spenser.

Foolish; witless.

Perhaps their loves, or else their sheep,

Was that which did their *silly* thoughts so busy keep.

Milton.

Weak; disordered; not in health.—"You look main *silly* to day, i e. you look ill in health." *Pegge.*

SILLY, a small town of the Netherlands, in the province of Hainault, with 2000 inhabitants. It has some breweries and distilleries.

SILLYHOW, *s.* [Perhaps from *relij*, happy, and *heopz*, the head. *Dr. Johnson.*] The membrane that covers the head of the fœtus.—Great conceits are raised of the membranous covering called the *sillyhow*, sometimes found about the heads of children upon their birth. *Brown.*

SILONG, a city of China, of the second rank, in Quang-see. Lat. 24. 34. N. long. 105. 18. E.

SILOS,

SILOS, a settlement of South America, in New Granada, and province of Pamplona. Population 200, Indians and Spaniards.

SILOXERUS, [so named by Labillardiere, from *συλος*, the style, and *ογκησος*, swelling; on account of the tumid base of that part], in Botany, a genus of the tumid base of that part, in Botany, a genus of the class syngenesia, order polygamia-segregata, natural order of compositæ, nomenclaturæ (Linn.) Corymbiferæ (Juss.)

Siloxerus humifusus, is a small, diffuse, herbaceous plant, with a tapering, apparently annual root. Stems several, spreading, simple, leafy, an inch or two long. Leaves mostly opposite, simple, linear, obtuse, smooth, near an inch in length; several of them crowded under the heads of flowers, which are terminal, solitary, ovate or nearly globular, scarcely an inch long. Nothing is mentioned concerning the colour, scent or properties of this little inconspicuous, but singular, plant.

SILPHA, in Entomology, a genus of insects of the order Coleoptera, of which the generic character is, antennæ clavate, the club perfoliate; shells margined; head prominent; thorax somewhat flattened and margined. This genus of insects, from its habits, is known by the trivial name of the carrion-beetle. The several species are commonly found among decayed animal or vegetable substances, frequenting also dung-hills, carrion, and other offensive matter: they lay their eggs chiefly in the dead and putrid carcasses of animals. The larvæ are of a lengthened shape, and of an unpleasant appearance, being generally roughened with minute spines and protuberances. There are about 120 species, in eight separate divisions or sections. The following are most worthy of notice:—

I. is characterised by a dilated and bifid lip, and a one-toothed jaw; in which, among others, are the following:

1. *Silpha Surinamensis*.—Black; shells with a yellow band behind; hind-thighs toothed.—It is found in South America.

2. *Silpha littoralis*.—This is a black insect; the shells are naked, with three raised lines; thorax rounded and polished.—This is an European insect, and found in our own country.

3. *Silpha livida*.—This is brown; thorax, shells and legs livid.—It is found in Germany.

4. *Silpha Indica*.—This, as its name imports, is an Indian insect; it is black; the shells are marked with two ferruginous bands; thorax one-toothed before.

5. *Silpha micans*.—Black, with a green polish; shells striate, truncate, one-toothed.—This is an inhabitant of the Cape of Good Hope. Tail rufous; shells black, with three elevated striæ, one-toothed at the suture.

6. *Silpha Americana*.—This, as its name shews, is found in divers parts of America. It is depressed and black; thorax is yellow and black in the centre. The shells are rugged and immaculate.

7. *Silpha thoracica*.—This is black; the shells are marked with a single elevated line; the thorax is testaceous.—This and the following are English insects. According to Mr. Donovan's figure and description, the shells of this species have three raised lines. It is distinguishable by its red thorax, every other part being black.

8. *Silpha rugosa*.—Blackish; the shells are ridged with three raised lines; the thorax is ridged and sinuate behind. This insect consumes dead carcasses, fish, and flesh of all kinds: when caught it emits a very fetid humour.

9. *Silpha astrata*.—This is of a size similar to the thoracica, but is totally black, and has the wing-sheaths marked by three rising lines; its larva, which may be found in gardens, is of a lengthened shape, and of a black colour.

10. *Silpha levigata*.—Black; shells smooth and sub-punctured. The shells are without raised lines.

11. *Silpha obscura*.—Black; the shells are punctured, with three raised lines; the thorax is truncate before. This species is figured by Donovan. The thorax has a bluish gloss.

12. *Silpha opaca*.—This is brown; the shells have three raised lines; the thorax is truncate before.

13. *Silpha sinuate*.—The thorax of this species is emarginate and rough; the shells have three raised lines, sinuate at the tip. This is a beautiful species; the thorax is brown, with a silvery gloss; it is rough, with raised dots.

14. *Silpha 4-punctata*.—The thorax is yellow, with a large black spot; the shells are yellow with four black spots.

15. *Silpha grisea*.—Grey; the shells are smooth; the thorax is emarginate.

II. is distinguished by an entirely rounded lip, and a one-toothed jaw.

16. *Silpha 4-maculata*.—Thorax and shells black, the latter with two rufous spots; the body is rufous; the antennæ are ferruginous, brown before the tip; shells striate.

17. *Silpha multipunctata*.—Rufous; shells substriate, with numerous rufous dots.—This is chiefly found in Sweden.

18. *Silpha picea*.—Pitchy; shells striate, black, the base and band behind are ferruginous.—This is a very small insect, and is found in Germany.

19. *Silpha metallica*.—This is of a brassy colour; the legs are ferruginous.—It is found in divers parts of Saxony.

III.—Lip horny, entire; the jaw is bifid.

20. *Silpha notata*.—Black; the shells are truncate, with two rufous spots.—It is found in some parts of Germany. The antennæ are long; the five last joints are perfoliate; the shells are a little shorter than the body; the abdomen is acute.

21. *Silpha pustulosa*.—Black, polished; edge of the thorax and spots on the shells are sanguineous.—It is found in New Holland; the shells are truncate, shorter than the abdomen.

22. *Silpha agaricina*.—This also is black and polished; the antennæ and legs are yellow.—It is found in many parts of Europe, but not in our own country. The shells are truncate, shorter than the abdomen; the body is black and immaculate; the abdomen pointed.

IV.—Lip emarginate, conic; jaw bifid.

23. *Silpha fasciata*.—Black; the shells are marked with two rufous bands, the fore-one spotted with black.—It inhabits North America, and is a rather large insect; though less than the

24. *Silpha grandis*, which is an African insect, and so named on account of its size. This is black, and the shells are marked with two rufous spots.

25. *Silpha pustulata*.—Black; the shells are marked with two ferruginous dots.—This is found in England, and in many other parts of Europe. The larva is long, hairy, and grey.

26. *Silpha pustulata*.—Black; shells striate, with three rufous spots.—This is found chiefly in the northern parts of Europe. It is reckoned a very beautiful species; the antennæ are pitchy; the thorax is ferruginous at the edge; spot at the base of the shells sinuate, the middle one is uniform; that at the tip is small and round; the body beneath is rufous.

27. *Silpha nigripennis*.—Rufous; the antennæ, shells, and breast are black.—This is found chiefly on trees.

28. *Silpha rufipes*.—This is a black insect; the head, thorax, and legs are ferruginous. The abdomen is black.

29. *Silpha ænea*.—This is of a fine scarlet colour; the shells are brassy and immaculate.

30. *Silpha rufifrons*.—Black; but the front, two spots on the shells, and legs, are ferruginous.—This is found in divers parts of England, and is reckoned a small insect.

V.—The insects of this section are characterised by a heart-shaped lip, emarginate and crenate.

31. *Silpha Germanica*.—Black; front and edge of the shells are ferruginous. Sometimes the shells are marked with a ferruginous

a ferruginous spot or two. It deposits its eggs in the carcasses of other insects, and buries them under ground. It is very like the

32. *Silpha vespillo*.—This insect, which is not uncommon in our own country; is the most remarkable of the European species. It is distinguished by having the wing-sheaths considerably shorter than the abdomen, or as if cut off at the tips; they are also marked by two waved, orange-coloured transverse bars, the rest of the insect being black; the general length of the animal is about three quarters of an inch. The vespillo seeks out some decaying animal substance in which it may deposit its eggs, and in order to their greater security, contrives to bury it under ground. Three or four of these insects, working in concert, have been known to drag under the surface, the body of a mole in the space of an hour, so that not a trace of it has appeared above ground. The eggs are white, and of an oval shape: from these are hatched the larvæ, which, when full grown, are about an inch long, of a yellowish-white colour, with a scaly orange-coloured shield, or bar, across the middle of each division of the body. Each of these larvæ forms for itself an oval cell in the ground, in which it changes to a yellowish chrysalis, resembling that of a beetle; out of which, in the space of three weeks, proceeds the perfect insect. This species is reckoned very elegant in form, but it generally diffuses a very strong and unpleasant smell; it flies with strength and rapidity, and is usually seen on the wing during the hottest part of the day.

33. *Silpha mortuorum*.—Black; shells marked with two ferruginous bands; the club of the antennæ is black; the hind-thighs are unarmed.—This is found in many parts of Germany, preying on carcasses and fungi.

VI.—Lip square and emarginate.

34. *Silpha scarabæoides*.—Oval, black; the shells are marked with two ferruginous spots.

35. *Silpha lunata*.—Oval, black; shells with a lunate yellow spot at the tip. It is about the size of the last, and is found in Germany.

36. *Silpha colon*.—Yellow; the spots on the thorax, and marginal spot on the shells, black.—It is found in Sweden. The head is black; the antennæ are yellow; the club is black; the thorax is downy, with six spots disposed in a streak; the abdomen is black, edged with yellow.

37. *Silpha atomaria*.—This insect is smooth and black; the shells have crenate striæ; the legs are pale.

38. *Silpha melanocephala*.—This is black and smooth; the shells are grey, with a common black spot at the base.

39. *Silpha unipuncta*.—This is black; shells yellowish, with a common black spot. The shells are sometimes immaculate.

40. *Silpha fimetaria*.—Black, immaculate; the shells are very smooth.—It is found chiefly in dung.

41. *Silpha minuta*.—This is black and small; the shells are striate; legs of the same colour.—It is found in many parts of England.

42. *Silpha pulicaria*.—This is oblong and black; the shells are abbreviated; the abdomen pointed.—This is found chiefly among flowers.

VII.—The insects of this section have a long and entire lip; the antennæ are serrate.

43. *Silpha saxicornis*.—Smooth, polished, and of a chestnut colour; the antennæ are black.

44. *Silpha depressa*.—Smooth, ferruginous; the shells are sub-striate, and the body is depressed.—It is found under the bark of oak-trees.

VIII.—Lip and jaw unknown.

Of this section there are no English species; it will be sufficient to mention the following:—

45. *Silpha insignita*.—Black; shells obsoletely striate, with two large scarlet spots.—Common at Berlin; as is the next.

46. *Silpha nigricans*.—Blackish; the shells are smooth, with four yellow spots.

47. *Silpha histeroides*.—Black; the antennæ and legs are red; the shells are abbreviated with a red spot.—It inhabits Upsal, and is the size of a louse.

SILPHIUM [of Pliny. *Σιλπιον* of Dioscorides], in Botany, a genus of the class syngenesia, order polygamia, necessaria, natural order of compositæ, oppositifoliæ, corymbifera (Juss.)—Generic Character. Calyx, common ovate, imbricate, squarrose: scales ovate-oblong, bent back in the middle, prominent every way, permanent. Corolla, compound radiate. Corollets hermaphrodite in the disk many: females in the ray fewer. Proper of the hermaphrodites one-petalled, funnel-form, five-toothed; the tube scarcely narrower than the border:—of the females lanceolate, very long, often three-toothed. Stamina in the hermaphrodites: filaments five, capillary, very short. Anther cylindrical, tubular. Pistil in the hermaphrodites: germ round, very slender. Style filiform, very long, villose. Stigma simple:—in the females, germ obovate. Style simple, short. Stigmas two, bristle-shaped, length of the style. Pericarp. none. Calyx unchanged. Seeds in the hermaphrodites none: in the females solitary, sub-membranaceous, obovate, with the edge membranaceous, two-horned, emarginate. Receptacle chaffy: chaffs linear.—*Essential Character*. Calyx squarrose. Seed-down margined-two-horned. Receptacle chaffy.

1. *Silphium laciniatum*, or jagged-leaved silphium.—Leaves alternate, pinnate-sinuate. Root perennial. Stem twice the height of a man, as thick as the thumb, quite simple, smooth below, above rugged with brown tubercles and white spreading hairs, round. Leaves petioled, two feet in length and a foot in breadth, embracing at the base, pinnatifid; margin of the upper leaves purplish. Calyx of ten scales, ending in large awl-shaped spines. Petals of the ray thirty, length of the calyx, with a bifid slender style. Florets of the disk yellow, many, separated by chaffs, attenuated at the base, with a simple style. Seeds in the ray membranaceous, oval, emarginate, with two small awns:—in the disk columnar, four-cornered, abortive.—Native of North America.

2. *Silphium terebinthinum*, or broad-leaved silphium.—Leaves alternate, ovate, serrate, rugged; root-leaves cordate. The terminal flower on the stem flowers first, and when this begins to seed the lateral peduncles of the panicle begin to extend and proceed to flower.—Native of North America.

3. *Silphium perfoliatum*, or square-stalked silphium.—Leaves opposite deltoid, petioled, perfoliate; stem four-cornered, even, taller than a man. Root perennial.—Native of North America.

4. *Silphium connatum*, or round-stalked silphium.—Leaves opposite, sessile, perfoliate. Root perennial. Stem the height of a man, as thick as the thumb, erect.—Native of North America.

5. *Silphium Asteriscus*, or hairy-stalked silphium.—Leaves undivided, sessile, opposite; lower alternate. Root perennial. Stem four or five feet high, thick, solid, set with prickly hairs, and having many purple spots.—Native of North America.

6. *Silphium trifoliatum*, or three-leaved silphium.—Leaves in threes. Root perennial and woody. Stems annual, rising five feet high or more in good land, of a purplish colour, and branching towards the top. Flowers upon pretty long peduncles, solitary. Calyx of three rows of imbricate leaves, the outer row smallest.—Native of many parts of North America.

7. *Silphium trilobatum*, or three-lobed silphium.—Leaves opposite, sessile, wedge form. This is a weakly plant, creeping far among other vegetables, but more luxuriant and upright towards the top.—Native of the West Indies. Frequent in Jamaica, in low marshy lands.

8. *Silphium arborescens*, or tree silphium.—Leaves lanceolate, alternate, rugged, slightly serrate; stem shrubby.—Native of Vera Cruz, in New Spain.

Propagation and Culture.—All these plants except the last, may

may be increased by parting the roots, in the same manner as is practised for the perennial sun flower. To increase which, slip off the young shoots in July, plant them in a pot filled with light loam, plunge it in a gentle hot-bed, covering the pot closely with a bell or hand-glass, and shade it from the sun. When the slips are rooted, plant each in a separate pot; place them, during the warm months, in the open air, in a warm situation; but in winter keep them in a moderate stove.

SILPHOE, a village of England, North Riding of Yorkshire; 6 miles north-west of Scarborough.

SILSDEN ON THE MOOR, a village of England, West Riding of Yorkshire; 4 miles north-by-west of Keighley. Population 1608.

SILSOE, or **SILVISHOE**, a village, and formerly a market town of England, in Bedfordshire, with annual fairs in May and September; 10½ miles south-by-east of Bedford, and 14½ north-north-west of London. Population 480.

SILT, *s.* Mud; slime.—In long process of time, the *silt* and sands shall so choak and shallow the sea in and about it. *Sir T. Brown.*

SILTON, a parish of England, in Dorsetshire; 8 miles north-west of Shaftesbury.

SILTON, NETHER and OVER, adjoining villages of England, North Riding of Yorkshire; 7 miles north-by-east of Thirsk.

SILVAN, *adj.* Woody; full of woods.

Betwixt two rows of rocks, a *silvan* scene
Appears above, and groves for ever green.

Dryden.

SILVER, *s.* [*silubr*, Goth.; *jeolpep*, Sax.; *silber*, Germ.; *silver*, Dutch.] *Silver* is a white and hard metal, next in weight to gold. *Watts*.—Any thing of soft splendour. See **MINERALOGY**.

Pallas, piteous of her plaintive cries,
In slumber clos'd her *silver* streaming eyes.

Pope.

Money made of silver.

SILVER, *adj.* Made of silver.—The *silver*-shafted goddess of the place. *Pope*.—White like silver.

Old Salisbury, shame to thy *silver* hair,
Thou mad misleader of thy brain-sick son.

Shakspeare.

Having a pale lustre.

So sweet a kiss the golden sun gives not
To those fresh morning drops upon the rose,
As thy eye beams, when their fresh rays have smote
The night of dew that on my cheeks down flows;
Nor shines the *silver* moon one half so bright,
Through the transparent bosom of the deep,
As doth thy face through tears of mine give light.

Shakspeare.

Soft of voice; soft in sound. This phrase is Italian, *voce argentina*.

It is my love that calls upon my name,
How *silver* sweet sound lovers' tongues by night,
Like softest music to attending ears.

Shakspeare.

Soft; gentle; quiet.

The whyles his lord in *silver* slumber lay,
Like as the evening star adorn'd with dewy ray.

Spenser.

To **SILVER**, *v. a.* To cover superficially with silver.

There be fools alive, I wis,
Silver'd o'er, and so was this.

Shakspeare.

To adorn with mild lustre.

Here retired the sinking billows sleep,
And smiling calmness *silver'd* o'er the deep.

Pope.

SILVER BLUFF, a headland on the coast of South Carolina, at the mouth of the river Savannah, about 30 feet higher than the low lands of the opposite shore. It extends about two miles on the river, and is about one mile wide. It is of a fertile soil, and exhibits vestiges of antiquity.

SILVER BUSH, in Botany, a species of **ANTHYLLIS**; which see.

VOL. XXIII. No. 1566.

SILVER CREEK, a river of Kentucky, which runs into the river Kentucky. Lat. 37. 41. N. long. 84. 40. W.

SILVER FIR, the name of a tree of the pine kind. See **PINUS**.

SILVER GRAIN, in Vegetable Physiology, is described by Mr. Knight, Phil. Trans. for 1801, 344, as consisting of numerous thin plates, "diverging in every direction from the medulla to the bark, having little adhesion to each other at any time, and less during spring and summer, than in autumn and winter; whence the greater brittleness of wood in the former seasons." The same writer remarks, that these plates are visible in every wood which he had examined, except some of the Palm tribe; but are of a different width in different kinds, lying between, and pressing upon, the sap-vessels of the albumum. It may be observed, that in the oak, "every tube is touched by them at short distances, and slightly diverted from its course. If these," continues Mr. Knight, "are expansible under changes of temperature, or from any cause arising from the powers of vegetable life, I conceive that they are as well placed as is possible, to propel the sap to the extremities of the branches; and their restless temper, after the tree has ceased to live, inclines me to believe, that they are not made to be idle whilst it continues alive." In support of this opinion, we would remark, that the plates in question are found where the spiral coats of the sap-vessels either no longer exist, or have lost their elasticity.

SILVER LAKE, a post village of the United States, in Luzerne county, Pennsylvania.

SILVER RIVER, a river of Ireland, in King's county, which runs into the Brosna; about 8 miles north-east of Banagher.

SILVER TREE, in Botany. See **PROTEA**.

SILVER WEED, a species of **POTENTILLA**; which see.

SILVERBEATER, *s.* One that foliates silver.—*Silver-beaters* chuse the finest coin, as that which is most extensive under the hammer. *Boyle.*

SILVERDALE, a village of England, in Lancashire; 10½ miles north-by-west of Lancaster.

SILVERHILL, the name of a strong military post in England, in the county of Sussex; 6 miles from Battle. It commands an extensive view of the surrounding country.

SILVERING, the covering of any work with a thin coating of silver.

The only metals to which silvering is applied are copper and brass, and very rarely iron; and there are three modes of performing this operation, viz., by amalgamation, by muriated silver, and by silver in substance. The first mode is performed by adding plates of copper to a solution of nitrated silver, which will precipitate the silver in its metallic state, and very finely divided; scrape this from the copper, and let it be well washed and dried. With half an ounce of this powder, of common salt and sal ammoniac two ounces, and one drachm of corrosive sublimate, well rubbed together, make a paste by the addition of a little water, then clean the vessel to be silvered with a small quantity of diluted aquafortis, or by scouring it with a mixture of common salt and tartar. Rub it, when perfectly clean, with the paste already mentioned, until it is entirely covered with a white metallic coating; which coating is an amalgam produced by the decomposition of the corrosive sublimate by means of the copper, to the surface of which it applies very closely and expeditiously. The copper thus silvered over is then to be washed, dried, and heated nearly red, for the purpose of driving off the mercury: the silver remains behind and adheres firmly to the copper, in a state capable of receiving a high polish. The second method of silvering is that by luna cornea. For this purpose, prepare the luna cornea in the usual manner, by pouring a solution of common salt into nitrate of silver, as long as any precipitation occurs, and boiling the mixture; then mix the white curdy matter thus obtained with three parts of good pearl-ash, one part of washed

whiting, and a little more than one part of common salt. After the surface of the brass, cleared from scratches, has been rubbed with a piece of old hat and rotten stone, in order to remove any grease, and then moistened with salt and water, a little of the composition, being now rubbed on with the finger, will presently cover the surface of the metal with silver. Then wash it well, rub it dry with soft rag, and then, as the coat of silver is very thin, cover it with transparent varnish to preserve it from tarnish. As this kind of silvering is very imperfect, it is only used for the faces of clocks, the scales of barometers, or similar objects. The third mode of performing this operation is by means of silver in substance: and of doing this there are three different methods. The first is by mixing together 20 grains of silver precipitated by copper, two drachms of tartar, two drachms of common salt, and half a drachm of alum. Now rubbing this composition on a perfectly clean surface of copper or brass will cover it with a thin coating of silver, which may be polished with a piece of soft leather. Another and better method, called French plating, consists in burnishing down upon the surface of the copper successive layers of leaf-silver to any required thickness. Although the silver in this operation is more solid than in any of the former modes, the process is tedious, nor can the junctures of the leaves of silver be always entirely concealed.

Brass may be silvered, by boiling it with filings of good pewter and white tartar, in equal quantities.

Silvering in the cold is performed by the following compositions: 3lbs. of cream of tartar; 3lbs. of common salt; and 1 oz. of muriate of silver, which is the precipitate formed by adding common salt to nitrate of silver, till no more is precipitated. This composition is made into a pulp. The surface of the copper or brass to be silvered must first be cleaned with diluted acid, and then made dry, and kept free from grease. The surface, being now rubbed with the above paste, will assume a white colour, by the silver adhering to it. This process is generally employed for silvering clock-faces, and the scales of instruments. The surface should always be varnished to prevent its tarnishing, as the silver is too thin to bear cleaning.

SILVERING of Mirrors, is the application of a coating of quicksilver to their posterior surface. A perfectly flat slab of free-stone (or sometimes of thick wood), a little larger than the largest plate, is inclosed in a square wooden frame or box, open at the top, and with a ledge rising a few inches on three sides, and cut down even with the stone on the fourth. A small channel or gutter is cut at the bottom of the wooden frame, serving to convey the waste mercury down into a vessel below, set to catch it. The slab is also fixed on a centre pivot, so that one end may be raised by wedges (and of course the other depressed) at pleasure, when working freely in the box.

The slab being first laid quite horizontal, and covered with grey paper stretched tight over it, a sheet of tin-foil, a little bigger than the plate to be silvered is spread over it, and every crease smoothed down carefully; a little mercury is then laid upon it, and spread over with a tight roll of cloth, immediately after which as much mercury is poured over it as will lie on the flat surface without spilling. That part of the slab which is opposite the cut-down side of the wooden frame is then covered with parchment, and the glass plate is lifted up with care and slid in (holding it quite horizontally) over the parchment, and lodged on the surface of the slab. The particular care required here is, that the under surface of the glass should from the first just dip into the surface of the mercury (skimming it off as it were), but without touching the tin-leaf in its passage, which it might tear. By this means no bubbles of air can get between the glass and the metal, and also any little dust or oxyd floating on the mercury is swept off before the plate without interfering. The plate being then let go, sinks on the tin-foil, squeezing out the superfluous mercury, which passes into the channel of the wooden frame above-mentioned. The plate is then covered with a thick flannel, and is loaded over the whole surface with lead or iron,

weights, and at the same time is tilted up a little, by which still more of the mercury is squeezed out. It remains in this situation for a day, the slope of the stone slab being gradually increased to favour the dripping of the mercury. The plate is then very cautiously removed, touching it only by the edges and upper side, and the under side is found uniformly covered with a soft pasty amalgam, consisting of the tin-leaf thoroughly soaked with the quicksilver, and about the thickness of parchment. It is then set up in a wooden frame, and allowed to remain there for several days, the slope of its position being gradually increased, till the amalgam is sufficiently hardened to adhere so firmly as not to be removed by slight scratches, after which the plate is finished and fit for framing.

SILVERLING, s. A silver coin.—A thousand vines, at a thousand *silverlings*, shall be for briars and thorns. *Isaiah.*

SILVERLY, adv. With the appearance of silver.

Let me wipe off this honourable dew
That *silverly* doth progress on thy checks. *Shakspeare.*

SILVERMINES, a village of Ireland, now ruinous and deserted, though bearing evident marks of having formerly been populous. In the stupendous mountains overhanging this village, rich veins of lead ore have been discovered, and for some considerable time profitably wrought; 77 miles west-south-west of Dublin.

SILVERSMITH, s. One that works in silver.—Demetrius, a *silversmith*, made shrines for Diana. *Acts.*

SILVERSTONE, a village of England, in Northamptonshire; 3 miles from Towcester. Population 696.

SILVERTHISTLE, s. [*acanthium vulgare*, Lat.] A plant. *Miller.*

SILVERTON, a parish of England, in Devonshire; 5½ miles south-west of Columpton.

SILVERY, adj. Besprinkled with silver.

Of all the enamell'd race whose *silvery* wing
Waves to the tepid zephyrs of the spring,
Once brightest shin'd this child of heat and air. *Pope.*

SILVES, a small town of the south of Portugal, in Algarva, on the river Silves, which is navigable as far as this town. It has only 2000 inhabitants, but its circuit is capable of containing, as it formerly did, a much greater number. It was also a bishop's see for 400 years, but this dignity was transferred to Faro in 1580. The environs are very pleasant; 24 miles east-north-east of Lagos, and 45 west-north-west of Tavira.

SILVESTRE GRANUM, or **COCCUS SILVESTRIS,** a term used by some authors to express the *coccus Polonicus*; and by others, for a coarse or bad kind of cochineal.

SILVINGTON, a parish of England, in Salop; 8½ miles north-east of Ludlow.

SILURES, or according to the orthography of Ptolemy, *Sylures*, a people of the isle of Albion, who possessed, besides the two English counties of Hereford and Monmouth, Radnorshire, Brecknockshire, and Glamorganshire, in South Wales. The northern part of Herefordshire has been supposed by some to belong to the Ordovices. The name of this ancient British nation is derived, by some of our antiquaries, from *coil*, a wood, and *ures*, men, because they inhabited a woody country; and by others, from the British words *es heuil ilir*, which signify brave or fierce men. Tacitus has conjectured, with little probability, and no sufficient evidence, that the Silures had come originally from Spain, grounding the conjecture on a supposed, or perhaps fancied resemblance between them and the ancient Spaniards, in their persons and complexions.

SILURUS, [from the words *σειω*, to move or shake, and *ογα*, a tail; this fish, being almost continually moving its tail in the water,] in Ichthyology, a genus of fishes of the order abdominales, of which the Generic Character is as follows:—The head is naked, large, broad, and compressed; the mouth is furnished with cirri, resembling the feelers of insects;

SILURUS, STERNOPTYX, STROMATEUS, AND STYLEPHORUS.

J. Ross sc.

1 *Str. cinerius*. 2 *Sty. chordatus*. 3 *Stern. diaphana*. 4 *Sil. larias*. 5 *Sil. fossilis*.

insects; the gape is very large, extending almost the whole length of the head; the lips are thick, jaws furnished with teeth; the tongue thick, smooth, and very short; the eyes are small; the gill-membrane is characterized with from four to seventeen rays; body elongated, compressed, with scales, mucous; lateral line near the back; the first ray of the dorsal or pectoral fins serrate, with reversed spines. There are twenty-eight species, divided into sections, according to the number of their cirri, as follows:—

I.—Two Cirri.

1. *Silurus militaris*.—The specific character of this is, that its second dorsal fin is fleshy; cirri bony, toothed.—It inhabits many rivers in Asia; feeds on smaller fishes, and grows to a large size. It is from twelve to eighteen inches long; the head and fore-parts are broad and depressed; the mouth is very wide; the teeth are small and numerous; the eyes are large; on each side the head, near the nostrils, a very strong subcrest, spine, or bony process; first ray of the dorsal fin excessively large, strong, and sharply serrated, both on the middle part and towards the tip; the tail slightly bilobate, with rounded lobes. It is a native of the Indian rivers.

2. *Silurus inermis*.—Second dorsal fin fleshy; fins unarmed. It inhabits the rivers of Surinam. This is denominated by some naturalists the subolivaceous silurus. It is transversely banded with brown spots, with unarmed fins, and flexuous lateral lines. It is about twelve inches in length; the head is bony, but smooth, and it is destitute of spiny processes.—It is a native of the Indian and South American rivers.

II.—Four Cirri.

3. *Silurus asotus*.—The back of this fish has only one fin: it inhabits Asia: there are two cirri above the mouth, and two beneath; the teeth are numerous; the dorsal fin is without spinous rays; the first ray of the pectoral is serrate: the anal fin is long, and connected with the caudal.

4. *Silurus Chilensis*.—Second dorsal fin fleshy; the tail is lanceolate:—it inhabits the fresh waters of Chili: it is about ten inches long; the body is brown; beneath it is white. The flesh is said to be excellent.

5. *Silurus bagre*.—Second dorsal fin fleshy; first ray of the dorsal and pectoral fins setaceous.—It inhabits South America.

6. *Silurus callichthys*.—Second dorsal fin one-rayed; a double row of scales on the sides.—It inhabits the small running streams of Europe, and when these are dried up, it crawls across meadows in search of water: it is said to perforate the sides of reservoirs, for the purpose of making its escape.

III.—Six Cirri.

7. *Silurus glanis*, or European *Silurus*.—This is also called the great or common silurus, and may be considered as the largest of all European river-fish, growing, in some cases, to the length of eight, ten, twelve, or even fifteen feet, and to the weight of 300 pounds. Its more general length, however, is from two to four feet. The head is broad and depressed; the body thick, and of a lengthened form, with the abdomen very thick and short. It is of a sluggish disposition, being rarely observed in motion, and commonly lying half imbedded in the soft bottom of the rivers which it frequents, under the protecting roots of trees, rocks, logs, or other substances. In this situation it remains, with its wide mouth half open, gently moving about the long cirri situated on each side the jaws, which the smaller fishes mistaking for worms, and attempting to seize, become a ready prey to the silurus. The colour of this species is dark olive, varied with irregular spots of black; the abdomen and lips are of a pale flesh-colour, and the fins are tinged with violet.—It is an inhabitant of the larger rivers Europe, as well as some parts of Asia and Africa, but it

appears to be most plentiful in the north of Europe. It is not much esteemed as food, the flesh being of a glutinous nature; but from its cheapness, it is in much request among the inferior ranks of society, and is eaten either fresh or salted. The skin, which is smooth, and destitute of apparent scales, is dried and stretched, and after rubbing with oil, becomes of a horny transparency and strength, and is used in some of the northern regions instead of glass for windows. The silurus is not a very prolific fish, depositing a small quantity of spawn, consisting of large globules or ova; these, as well as the newly hatched young, are frequently the prey of other fishes, frogs, &c., and thus the great increase of the species is prevented. The ova are said to be hatched in about a week after their exclusion.

8. *Silurus electricus*.—The dorsal fin is single and fleshy. The head is depressed; the eyes are moderate, covered with the common skin; the teeth are crowded, small, and sharp in each jaw; the nostrils are very minute; each side approximate; upper lip bearded with two cirri, the lower with four, of which the exterior ones are longer.—It inhabits the rivers of Africa. It is about twenty inches long; the body is long and broad on the fore part, depressed, pale ash-colour, with a few blackish spots towards the tail; when touched, it communicates a trifling shock, attended with a sort of trembling and pain in the limbs, but less violent than that given by the torpedo.

9. *Silurus torpedo*, otherwise named *GYMNOTUS ELECTRICUS*, which see.

10. *Silurus felis*.—The second dorsal fin of the fish of this species is fleshy; it has 23 anal rays; the tail is bifid.—It is found in Carolina; the body above is blueish.

11. *Silurus galeatus*.—The second dorsal fin of this fish is fleshy; it has 24 anal rays, and the tail is entire.—It inhabits South America. The head is covered with a hard coriaceous shield; the spinous rays of the pectoral and dorsal fins are rigid.

12. *Silurus carinatus*.—Second dorsal fin fleshy; the lateral line is spinous; the cirri under the lower lip are connected.—It inhabits Surinam; the body is compressed.

13. *Silurus niloticus*.—The second dorsal fin of this is fleshy; the anal rays are ten in number.—It is found in the Nile; is fourteen inches and a half long; the body is of a brownish-grey; the sides of the head are blueish; the end of the nose, under part of the head, pectoral fins and cirri, are tinged with red: there is a semicircle of reddish at the commencement of the tail.

14. *Silurus clarius*.—Second dorsal fin fleshy; anal rays eleven.—It inhabits the rivers of South America and Africa; is from twelve to fifteen inches long; the body is of a blackish-ash, beneath it is hoary; it is said to inflict venomous wounds with the serrated pectoral fin.

15. *Silurus fasciatus*.—Second dorsal fin fleshy; the anal rays are thirteen.—It inhabits Surinam and the Brazils: the body is black, with white bands on each side, beneath it is white; the flesh is in high esteem; the head is depressed, rounded on the fore part; a third part as long as the whole body; the fins are all spotted with black.

16. *Silurus ascita*.—The second dorsal fin fleshy; it has eighteen anal rays.—It inhabits India, and appears to be of a mixed kind between oviparous and viviparous.

17. *Silurus costatus*.—Second dorsal fin is fleshy; a single row of scales on the sides; the tail is bifid.—It inhabits South America and India.

18. *Silurus cataphractus*.—Second dorsal fin of one ray; a single row of scales on the sides; the tail is entire.—It inhabits South America.

IV.—Eight Cirri.

19. *Silurus aspredo*.—Dorsal fin single, five-rayed.—It is found in the rivers of America. The base of the lateral cirri broad; the back carinate; the anal fin reaching to the tail; the tail is forked.

20. *Silurus mystus*.—The dorsal fin is single, and single-rayed.—It inhabits the Nile; the tail is forked.

21. *Silurus anguillaris*.—Dorsal fin single, seventy-rayed.

—It is found in the Nile; the upper part of the head is greenish; the body above the lateral line is marbled with blackish and grey; the belly and lower jaw are of a reddish-grey; the pectoral fins are transversely divided by a broad red band.

22. *Silurus batrachus*.—Dorsal fin is single, and sixty-rayed.—It inhabits Asia and Africa: the tail entire.

23. *Silurus undecimalis*.—The dorsal fin is single, and eleven-rayed.—It inhabits Surinam: the tail is forked.

24. *Silurus catus*.—Second dorsal fin fleshy, anal twenty-rayed.—It inhabits Asia and America.

25. *Silurus cous*.—Second dorsal fin fleshy, and eight-rayed; tail forked.—It inhabits Syria: the cirri are shorter than the head.

26. *Silurus docmac*.—Second dorsal fin fleshy, anal ten-rayed. The length of the fish of this species is about three feet. It is of a grey colour, whitish beneath: the head is depressed; body convex above; mouth furnished with eight beards, the exterior ones of the upper lip extending half the length of the body; the lateral line is straight, and situated nearer the back than the abdomen; the first ray of the dorsal and anal fins long and serrated, with a soft tip.—It is a native of the lower Nile, towards the Delta.

27. *Silurus bajad*.—Second dorsal fin fleshy, anal twelve-rayed. It is about a foot in length; the colour is glaucous; the head obtuse, depressed, and marked on each side, before the eyes, by an unequal pit or depression; the upper jaw is longer than the lower; exterior beards of the upper lip very long: lateral line at first descending, then straight; above the pectoral fins on each side is a very strong spine, serrated in a reversed direction; the fins are rufous; the second dorsal or adipose fin is long; the tail is long, dilated towards the tip, and forked.—It is a native of the Nile.

V.—Without Cirri.

28. *Silurus comutus*.—First ray of the first dorsal fin serrate; pectoral unarmed. It is not more than eight or nine inches long; the shape is oval; body carinated beneath; the snout is straight, compressed, a little recurved at the tip, and about half the length of the body; the first ray of the first dorsal fin extending as far as the middle of the tail, and serrated beneath for about half its length.—It is a native of the Mediterranean.

29. *Silurus imberbis*.—The gill-covers with two spines on the hind part.—It inhabits Japan, and is about six inches long; the body is funnel-shaped, and coated with scales.—It is a native of the Indian and South American rivers.

SILURUS is also a name given by some authors to the sturgeon, called by others *accipenser*.

SILYBUM, in Botany, a name borrowed from Dioscorides, whose *σικυβον* is described as a large kind of thistle, eatable when young, if dressed with oil and salt. Gärtner, has applied the name to a genus of his own, under which he brings together *Carduus marianus* and *Cnicus cernuus* of Linnæus.

SIMA, or *CYMA*, in Architecture, a term used by Wolfius, and some other writers, for what we otherwise call *cymatium*, or *simatium*.

SIMABA, in Botany, the name of a shrub in Guiana, described by Aublet, 400. t. 153; for which, being barbarous, Schreber has substituted *ZWINGERA*; see that article.

SIMAGRE, *s.* [*simagrée*, Fr. “a wry mouth, or filthy face, the countenance of a jester or clown in a play, made to provoke laughter; also an hypocritical look.” *Cotgrave*.] Grimace: used by Dryden but not adopted.

The Cyclops—felt the force of love,—

Assum'd the softness of a lover's air;

Now with a crooked sithe his beard he sleeks,

And mows the stubborn stubble of his cheeks;

Now in the chrysal stream he looks, to try

His *simagres*, and rolls his glaring eye.

Dryden.

SIMANA, a small river of South America, in New Granada, and province of Santa Martha, which enters the Rio Magdalena.

SIMANCAS, a small town in the north of Spain, in the province of Valladolid, situated on an eminence where the river Pisuerga falls into the Douro. It has a castle, in which, on account of its strength, the ancient archives of Castile are kept. It is a place of antiquity. The Moors received a signal defeat here in 931, and took the town in 967. Population 1000; 15 miles south-west of Valladolid.

SIMANCHI, a river of Quito, in the province of Jaen de Bracamoros, which unites itself with the Palanda to enter the Amazons.

SIMAND, a village in the east of Hungary, in the palatinate of Arad. This village was formerly inhabited solely by blind and lame persons, who went about the country as singers, had a language of their own, and were free of all taxes. This singular community was tolerated so late as the middle of the 16th century; 18 miles south-south-east of Gyula.

SIMAR, *s.* A robe.

The ladies dress'd in rich *simars* were seen,
Of Florence satin, flower'd with white and green. *Dryden.*

SIMARA, a small river of Guiana, which runs east, and enters one of the arms by which the Orinoco runs into the sea.

SIMARA, one of the smaller Philippine islands; 24 miles east of Mindanao. Lat. 12. 51. N. long. 121. 40. E.

SIMARONA, a name given by the Spaniards in America to a species of vanilla. See *VANILLA*.

SIMAROUBA, or *SIMARUBA*, in Botany, is the bark of the roots of a tree, first imported into Europe in the year 1713, but since botanically ascertained to be a species of the *QUASSIA*; which see.

SIMARUM MUSCULUS, a name given by some of the old writers to a muscle, called by the moderns the *serratus magnus*.

SIMATIUM, or *SIMAISE*, in Architecture.

Simatium and *cymatium* are generally confounded together, yet they ought to be distinguished; the latter being the genus, and the former the species.

Simatium, or *sima*, camous, according to Felibien, is the last and uppermost member of grand corniches, called particularly the great *doucine*, or *gula recta*; and by the Greeks, *epititheta*.

In the antique buildings, the *simatium*, at the top of the Doric cornice, is generally in form of a cavetto, or semi-scotia; as we see particularly in the theatre of Marcellus. This some modern architects have imitated; but, in the Ionic order, the *simatium* is always a *doucine*.

The *simatium*, or *doucine*, then, is distinguished from the other kinds of *cymatia*, by its being camous or flat-nosed.

SIMATLAN, a river of Mexico, in the province of Teocoatepec, which enters the Pacific Ocean, between the river Capalita and the port of Salinas.

SIMBALATH, a name given by Avicenna and others to the spikenard, or *nardus Indica*.

SIMBANI, a track of desert and wooded wilderness in Western Africa, extending north-east from the Gambia, and separating the kingdom of Woolly from that of Bondou. On the north it has the kingdom of Foota Torra, and on the south-west that of Tenda. The natives, in journeying through this desert, are accustomed to hang up scraps of cloth, as saphies, to secure a prosperous journey.

SIMBING, a village of Ludamar, in Central Africa, on the frontier of Kaarta. From this place Major Houghton wrote his last letter, falling a victim soon after to the treachery and ferocity of the Moors.

SIMBIRSK, a government or province of European Russia, on the borders of Asia. It lies along both sides of the Wolga, being between 52. and 57. of north lat., having the government of Kasan on the north, and that of Saratov on the south. Its superficial extent is calculated at 30,000 square miles; its population at 850,000. The latter are of various origin, consisting of Russians, Tartars of six or seven distinct

distinct tribes, Persians, Arminians, and descendants of German colonists. The majority profess the religion of the Greek church, but a number are Mahometans and Arminians. The surface of the country is generally flat; the only hills are ramifications of the Oural mountains towards the east of the province, but these are not of great height. Large tracks consist of unproductive steppes, but between these there are also districts of great fertility; and the climate being in general good, it is very seldom necessary to import corn. Flax, hemp, and various kinds of fruit, thrive here very well; and iron, salt, and sulphur mines, are found in the hilly districts. The principal rivers are the Wolga and the Sura. The lakes are very numerous, being said to amount, great and small, to the number of 566. The province contains a few manufactures, chiefly of leather and linen; but the general employment, particularly of the Tartar tribes, is grazing. The exports are very various; hemp, leather, cattle, distilled spirits, and in good years, some corn. The province is divided into ten circles.

SIMBIRSK, the capital of the above government, is situated at the confluence of the Sviaga and the Wolga; 410 miles east-south-east of Moscow, and 730 south-east of St. Petersburg. It is a town of considerable size, having between 11,000 and 12,000 inhabitants, and contains 10 churches or chapels, and several other public buildings. It stands partly on a plain, partly on a hill, the height of which, with the number of large buildings and spires in the town, the gardens that surround it, and the size of the Wolga, here nearly two miles wide, give it an imposing appearance. Its position is favourable to trade. The chief articles of export are corn and fish. Wood is unluckily scarce in the neighbourhood, and is brought by the Wolga from a considerable distance.

SIMCOE, a lake of Upper Canada, communicating with Lake Huron.

SIMELIUM, a Latin term, used by some to signify a tale, with ranges of little cavities in it, for the disposing of medals in chronological order.

The word is but ill written; it should rather be *cimelium*, as being formed of the Greek *κειμηλιον*, curiosities, or a cabinet of precious things.

SIMEON, named **STYLITES**, a distinguished person in the annals of fanaticism, was born about the year 392 at Sison, a town on the borders between Syria and Cilicia. He was the son of a shepherd, and followed the same occupation to the age of thirteen, when he entered into a monastery. After some time he left it, in order to devote himself to a life of greater solitude and austerity, and he took up his abode on the tops of mountains, or in caverns of rocks, fasting sometimes, it is said, for weeks together, till he had worked himself up to a due degree of extravagance. He then, to avoid the concourse of devotees, but probably to excite still greater admiration, adopted the strange fancy of fixing his habitation on the tops of pillars, whence the Greek appellation; and with the notion of climbing higher and higher towards heaven, he successively migrated from a pillar of 6 cubits to one of 12, 20, 36, and 40. This feat was considered as a proof of extraordinary piety, and multitudes flocked from all parts to pay their veneration to the holy man. Simeon passed 47 years upon his pillars, exposed to all the inclemency of the seasons. At length an ulcer put an end to his life, at the age of 69. His body was taken down from his last pillar by the hands of bishops, and conveyed to Antioch, with an escort of 6000 soldiers; and he was interred with a pomp equal to any thing that had been displayed for the most potent monarchs. These honours produced imitators, whose performances surpassed the original. One of them inhabited his pillar 68 years. The madness remained in vogue till the twelfth century, when it was suppressed.

SIMEREN, a river which runs through the desert track on the northern border of Syria, and falls into the Euphrates at Roumkala.

SIMFEROPOL, or **AKMETSCHEP**, a small town of European Russia, in the Crimea, and the seat of the government of Taurida. It stands on the river Salgir, at the foot

of a chain of mountains which extend quite across the peninsula from Kaffa. Under the Tartars it was the residence of the Kalgha sultan, or commander of the khan's army, and was sometimes called Sultan Sarai. At present it is an insignificant place, with 1600 inhabitants; 136 miles south-by-east of Cherson. Lat. 45. 12. N. long. 24. 8. E.

SIMI. See **SYMI**.

SIMIA, a genus of the class and order of Mammalia Primates, of which the Generic Character is, that the individuals have four front teeth in each jaw, which are approximate; the tusks are solitary, longer, and more remote; the grinders obtuse. The animals of this genus greatly resemble man in the uvula, eye-lashes, hands, feet, fingers, toes, nails, and other parts of the body; they, however, differ widely in the total want of reason: they have retentive memories, are imitative, and full of gesticulations; chatter with their teeth, and grin: they macerate their food in the cheeks before they swallow it: they are filthy, lascivious, thieving, gregarious, and the prey of leopards and serpents, the latter pursuing them to the summits of trees and destroying them.

This race of animals, which is very numerous, is almost confined to the torrid zone; they fill the woods of Africa, from Senegal to the Cape, and from thence to Ethiopia: a single species is found beyond that line, in the province of Barbary: they are found in all parts of India, and its islands; in Cochinchina, in the south of China, and in Japan; and one kind is met with in Arabia: they swarm in the forests of South America, from the isthmus of Darien as far as Paraguay.

These animals, from the structure of their members, have many actions in common with the human kind; most of them are fierce and untameable; some are of a milder nature, and will shew a degree of attachment: they feed on fruits, leaves, and insects; inhabit woods, and live in trees: they go in large companies. The different species never mix with each other, but always keep apart: they leap with great activity from tree to tree, even when loaded with their young, which cling to them: they are not carnivorous, but, for the sake of mischief, will rob the nests of birds of the eggs and young; and it is observed, that in those countries where apes most abound, the feathered tribe discover singular sagacity in fixing their nests beyond the reach of these invaders.

Mr. Ray first distributed the animals of this genus into three classes, viz., the *simia*, or apes, such as wanted tails; the *cercopithecii*, or monkies, such as had tails; and *papiones*, or baboons, those with short tails.

From Ray, Linnæus formed his method, which was followed by M. de Buffon, who made a farther sub-division of the long-tailed apes, or true monkies, into such as had prehensile tails, and such as had not.

The genus is divided into the following sections:

- Section I. APES without any tail.
- II. BABOONS with short tails.
- III. MONKIES. Tails long, not prehensile; cheeks pouched; haunches naked.
- IV. SAJAPOUS. Tails prehensile; no cheek pouches, and their haunches are covered.
- V. SAGOINS. Tails not prehensile; no cheek pouches; haunches covered.

Of the whole genus, says Dr. Shaw, it may be observed that the baboons are commonly of a ferocious and sullen disposition. The larger apes are also of a malignant temper, except the orang-outang and the gibbons. The monkies, properly so called, are extremely various in their dispositions; some of the smaller species are lively, harmless, and entertaining; while others are as remarkable for the mischievous malignity of their temper, and the capricious uncertainty of their manners. It is no easy task to determine with exact precision the several species of this extensive genus; since, exclusive of the varieties in point of colour, they are often so nearly allied as to make it difficult to give real and distinctive characters. We shall, as usual, follow Gmelin's

Systema Naturæ of Linnæus, in which there are sixty-four species delineated.

I.—Apes without Tails.

1. *Simia troglodytes*, or Angola ape.—The Generic Character is, that the head is conic, body brawny, back and shoulders hairy, the rest of the body smooth.

2. *Simia satyrus*, or orang-outang.—Rusty-brown, hair of the fore-arms reversed, haunches covered. Besides this there are two varieties: 1. Without cheek-pouches, or callosities on the haunches. This variety always walks erect. Its trivial name is Pongo.—It inhabits Java and Guinea, and is from five to six feet high. 2. The other variety resembles the former, but is above half as high: it is docile, gentle, and grave, and by some thought to differ from the other only in age.

Of these animals, the species which has most excited the attention of mankind is the orang-outang, or, as it is often denominated, the satyr, great ape, or wild man of the woods.—It is a native of the warmer parts of Africa and India, and also of several of the Indian islands, where it resides principally in the woods, and is supposed to feed, like most other of this genus, on fruits. The orang-outang appears to admit of considerable variety in point of colour, size, and proportion; and there is reason to believe, that in reality there may be two or three kinds, which, though nearly approximated as to general similitude, are yet specifically distinct. The specimens imported into Europe have rarely exceeded the height of two or three feet, though full-grown ones are said to be six feet in height. The general colour seems to be of a dusky brown; the face is bare; the ears, hands, and feet nearly similar to the human; and the whole appearance is such as to exhibit the most striking approximation to the human figure. The likeness, however, is only general, and will not bear the test of examination; and the structure of the hands and the feet, when observed with anatomical correctness, seems to prove that the animal was principally designed by nature for walking on four legs, and not for an upright posture, which is only occasionally assumed, and which is thought to be the effects of instruction rather than truly natural.

The manners of the orang-outang, when in captivity, are gentle, and perfectly void of that disgusting ferocity which is often conspicuous in some of the larger baboons and monkeys. It is mild and docile, and may be taught to perform a variety of actions in domestic life. But, however docile and gentle when taken young, and instructed in its behaviour, it is possessed of great ferocity in its native state, and is considered a very dangerous animal, capable of readily overpowering the strongest man. Its swiftness is equal to its strength; and hence it can rarely be obtained in its full-grown state.

M. Vosmaer's account of the manners of the orang-outang brought into Holland in 1776, and presented to the Prince of Orange, is nearly as follows:—It was a female, about 2½ Rhenish feet. It shewed no symptoms of fierceness and malignity, and was of rather a melancholy appearance. It was fond of company, and shewed a marked preference to those who took daily care of it, of which it seemed very sensible. When the company retired, it would frequently throw itself on the ground, as if in despair, uttering lamentable cries, and tearing in pieces the linen within its reach. Its keeper having sometimes been accustomed to sit near it on the ground, it took the hay off its bed and laid it by its side, and seemed, by every demonstration, to invite him to be seated near. Its usual manner of walking was on all fours, but it could walk on its two hinder feet only. One morning it got unchained, and was seen to ascend the beams and rafters of the building with wonderful agility, and it was with the utmost difficulty retaken and secured. During its state of liberty it had taken out the cork from a bottle of Malaga wine, which it drank to the last drop. It would eat every thing that was offered, but was not observed to hunt for insects like other monkeys; it was fond of eggs,

but fish and roasted meat seemed its favourite food. It had been taught to eat with a spoon and fork. Its common drink was water, but it would drink any kind of wine. At the approach of night it lay down to sleep, and prepared its bed by shaking well the hay on which it slept, and putting it in proper order, and lastly covering it with a coverlet. This animal lived seven months in Holland. On its first arrival, it had but little hair, except on its back and arms, but on the approach of winter it became well covered, and the hair on the back was full three inches long. The whole animal then appeared of a chesnut-colour; the skin of the face, &c., was of a mouse-colour, but about the eyes and round the mouth it was of a dull flesh-colour. It was imported from the island of Borneo.

In Dr. Gmelin's edition of the Systema Naturæ, says Dr. Shaw, the smaller variety, or the jocko, in its less shaggy or more naked state, is given as a distinct species under the name of *Simia troglodytes*. The print published many years past, by the name of Chimpanzee, is of this kind. The animal described in the 59th volume of the Philosophical Transactions is by Gmelin referred to the orang-outang; but Mr. Pennant describes it under the title of Golok. It has a pointed face; long and slender limbs; arms, when the animal is upright, not reaching lower than the knees; head round, and full of hair; grows to the height of a man. It inhabits the forests of Mevat, in the interior parts of Bengal. In its manners it is gentle and modest, distinguished from the orang-outang by its slender form. In colour it is entirely black. In the Philosophical Transactions the description is as follows:—"The animal is said to be the height of a man, the teeth white as pearls; the arms in due proportion, and the body very genteel."

3. *Simia lar*, or long-armed ape, has its haunches naked; its arms as long as its body: it is found in India, is gentle, slothful, impatient of cold and rain, and is four feet high. There are two other varieties, of which the first is about eighteen inches high, the face and body brown. The second has its body and arms covered with silvery hair; the face, ears, crown, and hands, are black.—It inhabits the forests of Deval, in Bengal; is playful, gentle, and elegant: about three feet high. The lar, or, as it is sometimes denominated, the gibbon, is distinguished by the length of its arms, which, when the animal stands upright, are capable of touching the ground with its fingers; hence its trivial name. Notwithstanding the apparent ferocity of the lar, and the deformity of its figure, which is extremely well given by Dr. Shaw, it is of a tractable and gentle nature, and has even been celebrated for the decorum and modesty of its behaviour. Considered with respect to the rest of the genus, it ranks among the genuine apes, or those which have not the least vestige of a tail; and, says the naturalist already quoted, alarms the pride of mankind, by too near an approach to the real primates of the creation.

4. *Simia sylvanus*, or pigmy.—Haunches naked; head roundish; arms shorter.—It inhabits Africa and the island of Ceylon; is mild and easily tamed; it uses threatening gestures when it is angry, chatters when pleased, salutes after the manner of the Hottentots, and drinks from the palm of the hand. The face is short and flat; the forehead transversely projecting at the regions of the eye-brows; the skin is rough; the hair on the neck and fore-arms reversed: it is about eighteen inches high.

5. *Simia innus*, or denominated by Buffon the Magot, and by Pennant the Barbary Ape.—Its haunches are naked, and the head oblong.—Inhabits Africa, is fond of the open air, deformed, dirty, and melancholy. It a good deal resembles the *Simia sylvanus*, but its snout is longer, colour paler, nails rounded, and is about three feet and a half high. This is what is commonly seen in the exhibition of such kind of animals: it is not remarkable for docility or good temper; but, by force of discipline, it is made to exhibit a greater degree of intelligence than many others. Its colour is an olivaceous-brown, paler or whiter beneath; the face is of a swarthy flesh-colour. The hands and feet have nails resembling the human. It is destitute of any real tail, but there

1 *S. satyrus*. 2 *S. lar*. 3 *S. sinus*. 4 *S. sphyus*.

there is commonly a short skinny appendix in the place of one.

This animal inhabits many parts of India, Arabia, and all parts of Africa, except Egypt, and a small number is found on the hill of Gibraltar, which breed there. These apes are very ill-natured, mischievous, and fierce, agreeing with the character of the ancient *ynocephali*: they are often exhibited to play tricks; assemble in great troops in India; and will attack women going to market, and rob them of their provisions. The females carry their young in their arms, and will leap from tree to tree with them.

6. *Simia suilla*, or hog-faced ape.—Nose blunt, truncate, resembling that of a hog.

II.—Baboons with short Tails.

7. *Simia nemestrina*.—Beard thin; colour grey; eyes hazel; haunches naked.—It inhabits Sumatra and Japan; is lively, gentle, tractable, and impatient of cold. The face is naked and tawny; the nose is flat; lips thin, with hairs resembling whiskers; hair on the body olive-black; belly reddish-yellow: it is about two feet high. This species is figured by Mr. Edwards, who was in possession of the living animal, and who, in order to compare his specimen with a much larger animal of the same species, carried it to Bartholomew fair, and he said they seemed highly delighted with each other's company, though it was the first time of their meeting: the best figure of this species is said to be that given by Buffon.

8. *Simia apedia*, or little baboon.—Thumb close to the fingers; nails oblong, thumb-nails rounded; haunches covered.—This is an inhabitant of India. The nails are oblong and compressed, except the thumb and great toenails, which resemble those of a man; the tail is scarcely an inch long; the face is brown, with a few scattered hairs.

9. *Simia sphinx*, or great baboon.—Mouth with whiskers; nails acuminate; haunches naked.—This is found in the island of Borneo; it is lascivious, robust, and fierce; it feeds on fruits and seeds; it makes great havoc in the produce of cultivated lands. The head is oblong, resembling that of a dog, but more obtuse; the neck is long; the tail is short and erect; the haunches red, edged with purple; it is from three to four feet high in its sitting posture. It is extremely strong and muscular in its upper parts, and slender towards the middle. It is, says Dr. Shaw, ferocious in its manners, and its appearance is at once grotesque and formidable. The region surrounding the tail to a considerable distance on each side is bare and callous.—It is a native of Borneo, and inhabits the hotter parts of Africa.

10. *Simia mormon*, or tufted ape.—Beard thin; cheeks tumid, naked, blue, obliquely furrowed; haunches naked, red.—It inhabits India. This, in an upright posture, is full five feet high. It is the most remarkable of the whole genus for brilliancy and variety of colour. The general tinge is a rich and very deep yellowish-brown; the hairs, if viewed near, are speckled with yellow and black. The form of the face is long, with the snout ending somewhat abruptly; the whole length of the nose, down the middle, is of a deep blood-red; but the parts on each side are of a fine violet blue, marked by several oblique furrows. The remainder of the face is of a pale whitish-yellow. On the top of the front the hair rises, in a remarkable manner, into a pointed form, and beneath the chin is a pointed beard of a light orange-yellow. Round the back of the neck the hair is much longer than in other parts, and inclines downwards and forwards, somewhat in the manner of a wreath or tippet. The hands and feet are of a dusky colour, and are furnished with broad pointed claws.—It is a native of the interior parts of Africa, but has been found in India.

11. *Simia maimon*, or ribbed-nose ape.—Beard thin; cheeks blue, striate; haunches naked.—It inhabits Guinea; weeps and groans like men, when in trouble; it is libidinous, ugly and disgusting. The general likeness which it bears to the former species is such as to give the idea of the same animal in a less advanced state of growth, and with less brilliant colours. The chin is furnished with a small sharp-

pointed beard of a pale orange colour. The feet are armed with claws, and have no flattened nails. This baboon is not uncommon in exhibitions of animals.

12. *Simia porcaria*, or hog baboon.—The head of this species resembles that of a hog; the snout is naked; the body of an olive-brown; the haunches are covered, and the nails are acuminate. It is said to be three feet six inches in length; its colour is of a deep olive-brown; the face is large and black; the nose is truncated at the end, somewhat like that of a hog.

13. *Simia sylvatica*, or wood baboon.—Face, hands and feet naked, black, smooth; nails white.—It inhabits Guinea, and is about three feet high. It is of a robust frame. Its general colour is ferruginous, owing to the alternate blackish-brown rings with which every hair is marked, and which give a kind of speckled appearance to the whole. The nails on the hands are somewhat long, but rounded at their extremities; those on the toes longer and acuminate. The space on each side the tail is large, bare and red: the tail is about three inches long.

14. *Simia variegata*, or yellow baboon.—This species is of a bright yellow colour, mixed with black; the face is long, black, naked; the hands are covered on the back with hair. It very much resembles the *sylvatica*, and is found in Africa. Above the eyes are several long dusky hairs: it is about two feet high.

15. *Simia cinerea*, or cinereous baboon.—The face of this is dusky; the beard is of a pale brown; the crown is variegated with yellow; the body is cinereous.—It is found in divers parts of Africa, and is about two feet high.

16. *Simia livea*, or blue-faced baboon.—The face of this species is blueish; it has two broad flat fore-teeth; the head is pale brown. Over the eyes are long hairs; the ears with a tuft of hair behind each; the hair is black mixed with cinereous and rusty-brown: this is three feet high.

17. *Simia platypygos*, or brown baboon.—The face is of a dirty white, surrounded with short straight hairs. The upper part of the body is brown, under cinereous; tail tapering, almost bare; it is naked beneath. This species, according to La Cépède, is the same with the long-legged baboon described in the additions to Buffon. The figure there given is the same with that in Mr. Pennant's *Quadrupeds*. The distinguishing character of the animal seems to be the great length of its limbs.

18. *Simia cristata*, or crested baboon.—In this species the hair on the crown of the head and cheeks is long and dishevelled. The body is covered with long black hair; the breast is whitish; the face, hands and feet are black and naked; the tail is tapering, and about seven inches long; the animal is two feet high.—It is an inhabitant of India.

III.—Monkeys with long tails, that are not prehensile; the cheeks are pouched, and the haunches naked.

19. *Simia cynosurus*, or dog-tailed monkey.—It has no beard; the face is long; the forehead sooty; it has a whitish band over the eyes; male genitals coloured; the nails are convex. It is about two feet high, and is said to be faithless, restless and lascivious. The face of this animal appears uncommonly mild and placid. It was very fond of snuff, which it would occasionally rub over its body in a very ridiculous style.

20. *Simia hamadryas*, or Tartarian monkey.—This is described as cinereous; the ears are hairy; the nails sharpish; the haunches red.—It inhabits Africa, is fierce and very singular in its appearance. The face is prominent; the nose smooth and red; the ears are pointed, and almost hidden in fur; the hair on the sides of the head, and so far as the waist, long and shaggy; the nails of the fingers are flat; those of the toes acute and narrow: it is about five feet high. There is a variety, of which above the forehead is prominent, terminating in a ridge.—It inhabits the Cape of Good Hope, is very gregarious, pillages gardens, and is watchful of surprise; the head is large; the nose is long and thick; the ears short; the crown is covered with long upright hairs; the body is rough and hairy; the tail is about half the length

length of the body, arched at the end; the nails are flat and rounded; the haunches are red, and the animal is from four to five feet high.

21. *Simia veter*, or lowando. The beard is black; the body is white. There is a variety with a white beard.—It is found in Ceylon, is wild, ferocious and mischievous. The tusks of this species are long and large; the head is surrounded with a broad mane; the body is long and tapering; it is between three and four feet high.

22. *Simia siliens*, or wanderu.—The beard of this animal is long and black; and the body is black. There are three other varieties of this species. The first has a bushy beard, is found in Ceylon, and other parts of India. The second is of a jet black colour; the beard is white, and very long: it inhabits Guinea, and is about two feet high. The third has a white beard, which is triangular, short and pointed, extending on each side beyond the ears.—It inhabits Ceylon, is harmless, and lives in the woods; it feeds on leaves and buds, and is easily tamed; the body is black; the face and hands are purple; the tail is long, ending in a dirty white tuft.

23. *Simia faunus*, or malbrouck.—This species is bearded; the tail is bushy at the end.—It is an inhabitant of Bengal; the face is grey; the eyes are large; the eye-lids are flesh-coloured; forehead with a grey band, instead of eye-brows; the ears are large, thin, flesh-coloured; body is blackish; the breast and the belly are white; the beard is hoary and pointed: it is scarcely a foot high.

24. *Simia cynomolgus*, or long-tailed beardless monkey, with callosities behind, rising bifid nostrils, and arched tail.—This by Pennant is called the hare-lipped monkey, who includes in the species the cynomolgus and cynocephalus of Linnaeus. It is of a thick clumsy form, resembling the Barbary ape, except in having a long tail. It varies in size very greatly; some specimens scarcely exceed the size of a cat, while others are full as large as a grey-hound. The colour also is various, being sometimes olive-brown, at other times grey-brown. The head is large; the eyes are small; the nose thick, flat and wrinkled; on each side the tail is a bare space; the under sides of the body, and the insides of the limbs, of a light ash-colour.—It is a native of Guinea and Angola. The nostrils are divided like those of a hare.

25. *Simia cynocephalus*, or dog-monkey.—This has no beard: it is of a yellowish colour, has a projecting mouth, a straight tail, and bald haunches.—It is found in divers parts of Africa, and resembles the *simia inuus*, except that it has a tail.

26. *Simia diana*, or spotted monkey.—This species is bearded; the forehead is projecting; the beard is pointed. This is described by Mr. Pennant as of a middling size, and of a reddish colour on the upper parts, as if singed, and marked with white specks; the belly and chin whitish; the tail is long. According to Linnaeus, it is of the size of a large cat, and is black, spotted with white; the hind part of the back is ferruginous; the face is black; from the top of the nose is a white line, passing over each eye to the ears in an arched direction.

27. *Simia sabæa*, or green monkey.—This animal has no beard; it is a yellowish-green colour; the face is black; the tail is grey; the haunches naked.—It inhabits the Cape de Verd islands, the Cape of Good Hope, and other neighbouring countries. The body in the upper parts is a mixture of grey, green and yellowish; throat, breast, belly and thighs are white; the hairs are long and reversed: the eye-brows are black and bristly; the tail is straight, as long as the body, and hoary; the feet are cinereous; the nails round, those of the hands ovate. It is about the size of a cat.

28. *Simia cephus*, or moustache.—Tailed; cheeks bearded; crown yellowish; feet black; tail rusty at the point.—It inhabits Guinea. The body above is brown; beneath it is of a blueish-white; the head with white erect hairs; eye-brows with a white transverse arch; upper eye-lids white; hair on the cheeks standing out; the mouth is blueish; under the ears are two large tufts of yellow hairs, like mustachios.

29. *Simia æthiops*, or white eye-lidded monkey.—This is without tail and beard; the fore-top is white, erect; the arch of the forehead is white. There is a variety, of which the neck and cheeks are surrounded with a broad collar of white hair.—It is found in Madagascar. Its face is thick and broad; the eyes are surrounded by a prominent ring; the eye-lids are naked, very white; the ears are black, almost naked; the tail is arched, covered with long bushy hair: it is about eighteen inches high.

30. *Simia aygula*, or egret.—This is tailed; the beard is scanty; the colour is grey; crown with an erect tuft of hair reversed longitudinally.—It inhabits India and Java. The body is a good deal like that of a wolf; the throat, breast, and belly whitish; the tail is longer than the body, cinereous and tapering; the face is flattish, whitish, naked; the nose is depressed, short, and distant from the mouth, with a double furrow on the upper lip; the cheeks are a little bearded; the hairs are turned back; the eye-brows are gibbous, bristly, prominent; the feet are black, semi-palmate: the nails of the thumbs and great toes are rounded, the rest oblong; the ears are pointed; an arched suture from the ears towards the eyes and back to the base of the lower jaw, and a longitudinal seam on the fore-arm. There is a variety that has a rounder head; the face is less black; the body is of a paler brown.

31. *Simia nictitans*.—Tailed, beardless, black, sprinkled with pale spots; the nose is white; the thumb very short; the haunches are covered. This is called the nodding monkey. There is a variety of it having a long white beard.—It inhabits Guinea, is playful, and continually nodding its head; the face is hairy; the mouth short; the orbits naked; the irids of a pale yellow; the hair is black, with a few pale rings; lips and chin whitish; the tail is straight, cylindrical, longer than the body; the thumb is no longer than the first joint of the fore-finger.

32. *Simia sinica*, or Chinese monkey.—Tailed, beardless; fore-top horizontally placed, and shading the whole head. There is a fore-top erect, having the appearance of a round black bonnet; the body is brown; the legs and arms black.—This species is found in Bengal, and the variety in India. The tail is longer than the body; the nails of the thumbs and great toes are rounded, the rest oblong; the upper parts of the body are pale brown, and mixed with yellow; the lower whitish. It is about the size of a rat.

33. *Simia nemæus*, or Cochin-china monkey.—This is without tail and beard; the cheeks are bearded; and the tail white.—It inhabits, as its trivial name imports, Cochin-china: also Madagascar, and other places. The face and ears are of a light red; the forehead is marked with a double brown band, covered with black hair; the hair surrounding the face is whitish, mixed with yellow; neck, on the upper part, with a wreath of the same colour as that of the forehead; the shoulders and upper parts of the arms black; hands and groin whitish; thighs on the upper part and toes black; feet to the knees brown; it is from two to four feet high. From this species is procured the bezoar of the ape.

34. *Simia mona*, or varied monkey.—This species is tailed and bearded; it has a prominent, whitish-grey, semi-lunar arch over the eye-brows.—It inhabits Morocco, and the warmer parts of Asia; is gentle, docile and patient of cold. The head is small and round; the face is bright, and of a tawny brown; the hair on the crown is yellow, mixed with black; it has a dark band from the eyes to the ears, and to the shoulders and arms; tail is greyish-brown; the rump is marked with two white spots on each side. It is eighteen inches high.

35. *Simia rubra*, or red monkey.—This species is tailed and bearded; the cheeks are bearded; the crown, the back, and the tail, are of a deep blood-red. There are two other varieties; the first has a yellow beard; the band over the eyes is black: the second has a white beard; the band over the eyes is white. This is found in Senegal, Congo, and other hot parts of Africa. The crown is flat; the body and legs are long; the hair on the upper parts is of a bright red, beneath

beneath it is of a yellow-grey; over the eyes to the ears is a band. One variety is black; and another is white; the tail is longer than the body. It is from eighteen inches to two feet in height.

36. *Simia talapoia*.—This is tailed and bearded; the cheeks are bearded; the ears, nose and soles of the feet black.—It inhabits India. The body is of a brownish-green, and elegant. A variety is of a black colour. The head is roundish; the face is tawny, with a few black hairs; the ears are like those on the human subject: the breast, belly and thighs on the inside are of a dusky flesh-colour; it is extremely gentle and playful, and is of the size of a cat.

37. *Simia petaurista*, or agile monkey.—This animal is tailed and bearded; its back, upper part of the tail, anterior parts of the legs, dark olive; its face is black, and the nose is marked with a triangular white spot.—It inhabits Guinea; and is, like the last, gentle and docile; it is little more than a foot high, though the tail is twenty inches long.

38. *Simia maura*, or negro monkey.—This is tailed and bearded; the cheeks, whole face, except the region extending from the eyes to the tip of the nose, are bearded; the body is of a reddish brown.—It inhabits Ceylon and Guinea; is active and gentle. The tail is longer than the body; the face is tawny and flesh-coloured; the feet and hands are black, naked and soft. In a sitting posture it is only about seven inches high.

39. *Simia rolowa*.—This species is tailed and bearded; the head, back, and outside of the hands and feet, are black; the inside, belly, and circular beard, enclosing a triangular face, are white.—This is an inhabitant of Guinea; is gentle and docile. The beard is long and forked: it is eighteen inches long, with a tail of the same length.

40. *Simia nasua*.—This has no beard; the face is long, slender, naked, flesh-coloured; the nose is projecting.—It inhabits Africa, and is good tempered. The head is covered with thick longish hair, falling backwards; the ears are small, pointed, and almost naked; the hair on the upper parts and limbs is long, rusty-brown mixed with black; on the breast and belly it is ash-coloured; the tail is very long: in a sitting posture it is only two feet high.

41. *Simia luteola*, or yellow monkey.—In this species the tusks are very large; the ears also are large, black, naked; the cheeks have long pale-yellow locks reversed.—It inhabits Guinea. The crown, upper parts of the body, arms and thighs, are of an ash-colour, mixed with yellow; the lower parts are cinereous; the face is black, with long hairs over the eyes; the throat and breast are of a yellowish-white; the hair is coarse; the tail is as long as the body, and it is about the size of a fox.

42. *Simia fulva*, or tawny monkey.—This has tusks in the lower jaw, which are long; the face is long, and of a flesh-colour; the nose is flattish. The hair on the upper part of the body is pale tawny, though cinereous at the roots; the hind part of the back is of an orange-colour; the legs are cinereous and the belly white. It is of the size of a cat.—It inhabits India. Pennant, who seems to be the only describer of this animal, took the description from one in an exhibition in London, which was an extremely ill-tempered animal. It is said to vary with a black face, and long black hairs on the cheeks; the body is of a dull pale-green; the limbs are grey and the tail dusky.

43. *Simia viridens*.—The face of this is black; the cheeks have long black hairs; the body is of a pale-green; the limbs are grey; the tail is dusky. It is thought by some naturalists not to be a distinct species, but a variety of the *Simia fulva*.

44. *Simia hircina*.—Face naked, blue, obliquely ribbed; the beard is long, and like that of a goat; the tail is long, and the body of a deep brown.

45. *Simia regalis*.—To this species there is no thumb; the head, cheeks, throat and shoulders, are covered with long coarse flowing hairs.—It inhabits the forest of Sierra Leona. The head is small; the face is short, black, naked; the toes are long and slender; the nails are narrow and pointed; the

tail is long, covered with snow-white hairs, and a tuft at the end; the body and limbs are slender: it is three feet high. The skin of this animal is, by the natives, made into pouches and gun cases.

46. *Simia bodia*, or bay monkey.—This has no thumbs; the tail is long, slender and black; the body and limbs are slender.—It inhabits Sierra Leona. The crown is black; the back is of a deep bay; limbs on the outside black; cheeks, under parts of the body, and legs, of a bright bay.

47. *Simia fusca*, or brown monkey.—The tail shorter than the body, alternately annulate with dark and light-brown. The face is flat; the cheeks and forehead are covered with long hairs; the body above is of a tawny-brown, belly cinereous; hands black and naked.

IV.—Tails prehensile; no cheek-pouches; haunches covered. These are denominated Sapajous.

48. *Simia Beelzebul*, or bearded black monkey.—By Pennant it is denominated the preacher monkey. It is tailed, bearded and black. The tail at the tip and feet are brown.—It inhabits South America; wanders in herds at night, and howls hideously; it is exceedingly fierce; the beard is round and black; the hair long, black and smooth.

49. *Simia seniculus*, or old man of the woods.—This is tailed and bearded; the colour is red. The body is uniformly of a dirty red; it has a mouth like that of the human subject, placed in the anterior part of the face; the chin is prominent and it is as large as a middling-sized calf. This, which by some has been regarded as a variety of the *Simia beelzebul*, is denominated by Mr. Pennant the royal monkey. There were formerly two in the Leverian Museum, which were probably young, being of the size of a squirrel. They were entirely of a very bright ferruginous or reddish chesnut colour, with the face naked and black, surrounded on the lower parts by a straggling beard of black hairs, and the tail was strongly prehensile.—This species is common in Cayenne, but very rare in Brazil: on the contrary, the former species is very common in Brazil, but is not found in Guiana. Both species have the same voice and manners. The following is an interesting description given by an observer, who had seen and kept these animals at Cayenne:—

“The *Allouates*, or howlers, inhabit the moist forests, in the neighbourhood of waters or marshes. They are commonly found in the woody islets of large flooded savannahs, and never on the mountains of the interior of Guiana. They go in small numbers, often in pairs, and sometimes singly. The cry, or rather horrible rattling scream which they make, may well inspire terror, and seems as if the forest contained the united howlings of all its savage inhabitants together. It is commonly in the morning and evening that they make this clamour: they also repeat it in the course of the day, and sometimes in the night. The sound is so strong and varied, that one often imagines it produced by several of the animals at once, and is surprised to find only two or three, and sometimes only one. The *allouate* seldom lives long in a state of captivity: it in a manner loses its voice, or at least does not exert it in the same manner when wild. The male is larger than the female, which latter always carries her young on her back.

“Nothing is more difficult than to kill one of these animals. It is necessary to fire several times in order to succeed, and as long as the least life remains, and sometimes even after death, they remain clinging to the branches by the hands and tail. The sportsman is often chagrined at having lost his time and ammunition for such wretched game; for, in spite of the testimony of some travellers, the flesh is not at all good; it is almost always excessively tough, and is, therefore, excluded from all tables: it is merely the want of other food that can recommend it to needy inhabitants and travellers.”

50. *Simia paniscus*—This is the four-fingered monkey of Pennant; it is tailed, black, beardless, and without a thumb; hence its trivial name. This animal is distinguished by the gracility of its body and limbs; its uniform black colour,

except on the face, which is of a dark flesh-colour; and by want of thumbs on the fore-feet, instead of which are very small projections or appendices. It is one of the most active and lively of animals, and is besides, of a gentle and tractable disposition in a state of confinement.—It inhabits the woods of South America; associating in great multitudes, assailing such travellers as pass through their haunts with an infinite number of sportive and mischievous gambols, chattering and throwing down dry sticks, swinging by their tails from the boughs, and endeavouring to intimidate the passengers by a variety of menacing gestures. This is the Coaita of Buffon.

51. *Simia exequina*.—Bearded; back variegated with black and yellow; throat and belly white.—It inhabits South America. In size and disposition it resembles the *Simia paniscus*.

52. *Simia trepida*.—Tailed, but without a beard: the fore-top is erect; hands and feet are blue; the tail is hairy. A variety has the hair round the face grey; it is brownish-yellow on the body.—It inhabits Surinam, is nimble, dexterous and amusing, and about twelve inches high. The body is brown, beneath it is rusty; the hair of the head is formed into a black erect hemispherical tuft; the tail is hairy; the nails are rounded; the face and ears downy and flesh-coloured; the eyes are approximate chestnut.

53. *Simia fatuellus*.—The horned sapaïou is tailless and without beard; two tufts on the head resembling horns.—It is found in several parts of South America, is harmless and gentle. The face, sides, belly and front part of the thighs, are brown; the crown, the middle of the back, tail and feet, and hind part of the thighs, are black; the nails are long and blunt; the tail is spiral.

54. *Simia apella*. Brown sapaïou, or saïou of Buffon.—This also is without tail and beard; the body is brown; the feet are black.

55. *Simia Capucina*. Capuchin monkey, or sai of Buffon, and weeper of Pennant.—This has no beard; the skin is brown; the hair and limbs are black; the tail is shaggy and the haunches are covered. There is a variety of this, of which the hair on the breast, throat, round the ears, and cheeks, is white. The face is sometimes black, sometimes flesh-coloured on the forehead; the tusks are approximate; the nose is carinate towards the eyes; a black varicose retractile wrinkle just under the hair of the forehead; the tail is long, always curved, and covered with long shaggy hair; it is of the size of a cat.—It inhabits divers parts of South America; it is mild, docile, timid; walks on its heels, and does not skip. It has a crying wailing voice, and repels its enemies by horrid howlings; it shrieks sometimes like a cricket. When made angry it will yelp like a puppy; it carries the tail spirally rolled up, which is often coiled round the neck: it smells of musk.

56. *Simia sciurea*. Orange monkey, or saimiri of Buffon.—Beardless; the hind part of the head is prominent; the nails of the four smaller toes unguulate; the haunches are covered. The body is of a greenish-grey, under parts whitish; the legs and arms are rusty; the tail is shaggy, black at the tip, and twice as long as the body; the nails of the thumbs and great toes are rounded; the face of a blueish-brown; the eye-brows are bristly; the ears are scantily covered with whitish hairs; it is of the size of a squirrel.—It is found in South America; is pleasant in its disposition, beautiful and graceful; it rests by lying on its belly. It looks full in the face of such as speak to it. It is impatient of European climates.

57. *Simia morta*.—Without beard, but it has a tail; it is of a chestnut colour; the face is brown; the tail is naked and scaly.—It is found in different parts of America. It differs from the *Simia sciurea* only in being less, and on that account it has been supposed to be of the same species.

58. *Simia syricta*.—This is without tail and beard; the mouth and eye-brows are covered with long hairs. This is an obscure and doubtful species.

59. *Simia variegata*.—The hair on the sides and back is

mixed with orange and black.—It inhabits Antigua, is lively, docile, and full of amusing tricks.

V.—Monkeys with tails that are not prehensile; that have no cheek-pouches; the haunches are covered. These are denominated Sagoins.

60. *Simia pithecia*, or fox-tailed monkey.—Tailed, but without beard; the hairs of the body are long and black at the tips; the tail is black, and very shaggy.—It inhabits South America; is very amusing, and easily tamed. It is entirely of a dusky brown colour, with a slight ferruginous cast, except on the head and face. This is the Saki of Buffon.

61. *Simia jacchus*. Striated monkey, or ouistiti of Buffon, and sanglin or cagui minor of Edwards.—This is tailed; its ears are hairy, broad; tail curved, very hairy; nails subulate, those of the thumbs and great toes are rounded. There is a variety, which is of a yellowish colour, smelling like musk.—It inhabits Brazil; is active, restless, climbing like a squirrel; it feeds on insects, fruits, milk, bread and small birds; it gnaws the bark of trees, is untameable, biting, tormenting cats by fixing under their bellies, and emits a hissing cry.

62. *Simia œdipus*, or red-tailed monkey.—This is tailed and beardless; locks hanging; the tail is red; nails subulate. The body is grey, underneath it is white; the head has long white hanging locks; its face is black, and it has a few white hairs behind the ears; a wart on each cheek; the irides are rusty; the ears are roundish, black and naked; nails subulate, except the thumb; the tail is twice as long as the body, and is a little hairy, black, red at the base; the region of the anus is red.—It inhabits South America, is active, brisk, imitating the lion in its gestures. It is something less than the *Simia jacchus*; it smells of musk, and the voice resembles that of a mouse.

63. *Simia rosalia*, or silky monkey.—Tailed; beardless; the head is hairy; circumference of face and feet are red; the nails are subulate. This species derives its trivial name from the appearance of its hair, which is very fine, soft, long, and of a bright yellow colour, resembling yellow silk. Round the face the hair is much longer than in other parts, so as to form a large mane, like that of a lion; near the face this mane is of a reddish colour, and it grows paler as it recedes from the cheeks; the face itself is of a dusky purple; the ears are round and naked; the hands and feet are also naked, and of the same dull purple colour as the face; the claws are small and sharp; the tail is very long, and rather bushy at the extremity.—It is a native of Guiana, and is a lively, active species, and gentle in a state of confinement. This is the marikina of Buffon.

64. *Simia Midas*, or tamarin.—This species is tailless; beardless; the upper lip is cleft; the ears are square and naked; the nails are subulate. The tamarin, or great-eared monkey, is about the size of a squirrel; it is a coal-black, except on the lower part of the back, which is of a reddish colour, and on the hands and feet, which are orange-coloured; the face is naked and flesh-coloured; the ears are very large, naked, of a squarish form, and of a dusky flesh-colour; the tail is very long and black.—It inhabits the hotter parts of South America. The claws are small and sharp. It sometimes varies in having the face black, instead of flesh-coloured.

SIMIA MARINA, the Sea-Ape, a species of *Squalus*.

SIMICON, in Antiquity, an ancient musical instrument of the stringed kind, with thirty-five strings.

SIMICUS, an ancient Greek musician, said to have been a great improver of music. He lived after Homer, and has the reputation of having invented the instrument above-mentioned; but Plutarch says, that the ancient Fables attribute this instrument to Pythocleus. He also informs us, that the Argians fined the first person that used it; but does not tell us how it was used, or whether there was a complete scale for every one of the genera: 35 notes in the diatonic scale would mount it above the additional compass of modern piano-fortes.

S I M I A.

1. *S. maimon*. 2. *S. nemestrina*. 3. *S. thlops*. 4. *S. micra*.

SIMILAR, or **SIMILARY**, *adj.* [*similaire*, Fr., from *similis*, Lat.] Homogeneous; having one part like another; uniform.—Minerals appear to the eye to be perfectly *similar*, as metals; or at least to consist but of two or three distinct ingredients, as cinnabar. *Boyle*.—Resembling; having resemblance.—The laws of England, relative to those matters, were the original and exemplar from whence those *similar* or parallel laws of Scotland were derived. *Hale*.

SIMILARITY, *s.* Likeness; uniformity.—The blood and chyle are mixed, and by attrition attenuated; by which the mixture acquires a greater degree of fluidity and *similarity*, or homogeneity of parts. *Arbutnot*.

SIMILARLY, *adv.* With resemblance; without difference; in the same manner.—The two pictures of the same object are formed upon points of the retina which are not *similarly* situate. *Reid*.

SIMILE, *s.* A comparison by which any thing is illustrated or aggrandized.

Their rhimes,

Full of protest, of oath, and big compare,
Want *similes*.

Shakspeare.

SIMILITUDE, *s.* [*similitudo*, Lat.] Likeness; resemblance.—*Similitude* of substance would cause attraction, where the body is wholly freed from the motion of gravity; for then lead would draw lead. *Bacon*.—Comparison; simile.—Plutarch, in the first of his tractates, by sundry *similitudes*, shews us the force of education. *Wotton*.

SIMILITUDE, in Arithmetic, Geometry, &c., denotes the relation of two things similar to each other, or which are only distinguishable by comprehension.

SIMILITUDINARY, *adj.* Denoting resemblance or comparison. *Unused*.—It is *similitudinary*. *Coke*.

SIMILOR is a name given to an alloy of red copper and zinc, made in the best proportions to imitate the colour of gold.

SIMLER (Josias), was born at Cappel, in Switzerland, in the year 1530. He was minister at Zurich, and a professor of the school of that town. He wrote several controversial works against some of the heretical sects, as they were esteemed, and denominated by him. He taught mathematics with great reputation, illustrating his lessons by various machines of his own invention. Of his writings the principal were "De Helvetiorum Republica," which contained an account of the original constitution of the Swiss confederacy; "Vallesie Descriptio," being an account of the Valais, and the adjacent Alps; and an abridgement of the Bibliotheca of Conrad Gesner, with the life of that distinguished person. In this last work he has not only given a good summary of the original, but has rendered it more complete, by the addition of a number of books. He died at Zurich in 1576, at the time when he was preparing a history of his native country.

SIMITAR, *s.* A crooked or falcated sword with a convex edge.

SIMLASORE, a town of Hindostan, district of Chuta Nagpore, province of Gundwaneh, belonging to the rajah of Nagpore. Lat. 20. 29. N. long. 80. 55. E.

SIMMENTHAL, a valley of Switzerland, in the canton of Bern, surrounded by lofty mountains, and traversed by the small river Simme. It is 24 miles long, and is divided by the river into Upper and Lower Simmenthal, the latter sometimes called Wimmis, from its chief town. The soil is productive in corn and in pasturage; and the chief occupations of the inhabitants are rearing cattle, and making cheese for sale.

To **SIMMER**, *v. n.* [*etymology unknown*.] To boil gently; to boil with a gentle hissing.—Place a vessel in warm sand, increasing the heat by degrees, till the spirit *simmer* or boil a little. *Boyle*.

SIMMERING, a village of Lower Austria; 2 miles south-east of Vienna. It has, including its parish, 2500 inhabitants, and a large cannon foundry.

SIMMERN, a small town of the Prussian province of the Lower Rhine, formerly the chief place of a principality. In 1689, it was almost entirely destroyed by the French, but was repaired after the peace of Ryswick. Population 1500; 23 miles south-south-west of Coblentz.

SIMMINGTON, a village of England, in Wiltshire; 1 mile south-east of Melksham.

SIMMON'S ISLAND, a small island in the United States, on the coast of South Carolina. Lat. 32. 38. N. long. 80. 10. W.

SIMNEL, *s.* [*simenel*, ancient French; *simnellus*, low Lat.] In our old lexicography, a kind of sweet bread or cake; a cracknell.—Sodden bread, which be called *simnels* or cracknells, be verie unwholsome. *Bullein*.

SIMOGA, a town of the south of India, province of Mysore, district of Bednoor. It is situated on the bank of the Tunga or Toom river. It is fortified, but not capable of withstanding a regular attack, and has a manufacture of cotton cloths. It also contains the temple and convent of Kudali Swami, the high priest of a sect of Mahratta Bramins. In the year 1790, a battle was fought in the vicinity of this place, between one of the armies of Tippoo Sultan and the Mahrattas, aided by a British detachment under the command of Captain Little, in which the latter were victorious. On this occasion the Mahrattas plundered the town, and carried off several of the women; they also plundered the convent of Kudali Swami, who thereon threatened to excommunicate the peshwa, but was appeased by a present of 400,000 rupees. This unfortunate town was again plundered by the Mahrattas in 1798. In the following year, after the capture of Seringapatam, it was made over to the young rajah of Mysore, and is now recovering its prosperity. Lat. 13. 51. N. long. 75. 35. E.

SIMOIS, a river of Asia Minor, in the Lesser Phrygia, the source of which was in mount Ida, and which discharged itself into the Xanthus, or the Scamander, according to Pliny. The source of the Simois lies south-west of Cotylus; it flows nearly to the west, traverses a space of from twelve to fifteen leagues; receives the Andrius above Inchavi, and several other rivulets, and discharges itself into the Hellespont, half a league to the north-north-east of cape Sigeum. This stream is not now sufficiently considerable to deserve the name of river; it is rather a torrent swelled by the rains, at the end of the autumn, in winter, and in the spring, or by the sudden melting of the snow, which falls on mount Ida and Cotylus.

SIMOJOSIKI, one of the smaller Japanese islands, near the south-west coast of Ximo.

SIMON (Richard), a biblical critic, was born at Dieppe in 1638. He received his early education in the college of the Fathers of the Oratory in that place, and afterwards entered into that congregation. Quitting the college in a very short time, he pursued the study of theology, and of the Oriental languages, in which he made a great proficiency. He entered himself again a member of the Oratory in 1662, when his singular turn of thinking, and unaccommodating temper, involved him in differences, which had nearly caused him to abandon the society for that of the Jesuits. These were, after a time, compromised, and he was sent as professor of philosophy to one of their colleges. The house of the Oratory in Paris possessing a library rich in Oriental writings, Simon was engaged to draw up a catalogue of them, on which occasion he became known to M. de Lamignon, first president of the parliament of Paris. Having performed the task, he returned to his professorship, and there employed himself in literary labours. In the year 1670 he was ordained priest, and in the same year he gave a proof of the liberality of his mind, by undertaking the defence of the Jews at Metz, who had been accused of sacrificing the child of Christian parents. In 1674 he published, under the name of Richard Simeon, "A Treatise on the Ceremonies and Customs at present preserved among the Jews, translated from the Italian of Leo of Modena, with a Supplement respecting the Sects of the Caraites and Samaritans."

Samaritans." It was reprinted in 1681, with a supplement, containing "A Comparison between the Ceremonies of the Jews and Discipline of the Church." In 1678 he published "A Critical History of the Old Testament," which, by the boldness of some of its opinions, gave a considerable degree of offence.

He published a number of works, and in addition to those already noticed, we may mention, "Histoire critique du Texte du Nouveau Testament;" "Histoire critique des Versions du Nouveau Testament;" "Histoire critique des principaux Commentateurs du Nouveau Testament;" "Nouvelles Observations sur le Texte et les Versions du Nouveau Testament;" "Une Traduction Française du Nouveau Testament avec Remarques Litérales et Critiques," 2 vols. 8vo. This was condemned in the pastoral letters of Noailles, archbishop of Paris, and Bossuet, bishop of Meaux. "Bibliothèque Critique," 4 vols. published under the name of Soinjore, a work suppressed by order of council. "Nouvelle Bibliothèque Choisie," being a sequel to the former. "Lettres Critiques," 4 vols. "Critique de la Bibliothèque des Auteurs Ecclesiastiques de M. Dupin, et des Prolegomenes sur la Bible du même," 4 vols. 8vo. "Histoire Critique de la Croyance et des Coutumes des Nations du Levant." M. Simon left his MSS. and a number of printed books, with marginal notes written with his own hand, to the cathedral library of Rouen.

There was another Simon of some celebrity, a doctor of laws, the author of "A Dictionary of the Bible," explaining the geography of the Old and New Testament, and the ceremonies of the Jews, first printed at Lyons in 1693, and again in 1703, with considerable additions, forming two vols. folio.

SIMON, a great musician among the ancients, who, rejecting former rules of his art, invented a new mode, which was called "Simodia," from his name, in the same manner as the genus invented by Lyses, was called Lysodia.

SIMON, a small island in the gulf of California, near the coast.

SIMON, a river of Quito, in the province of Moxos which runs into the Itenes.

SIMON, ST., a town of the north-east of France, in the department of the Aisne, on the Somme; 7 miles south-south-west of St. Quentin.

SIMON, ST., the name of various settlements in different parts of South America, all inconsiderable, consisting chiefly of a few Indian families.

SIMON'S, ST., the easternmost of the three large islands situated at the mouth of the Alatomaha river, in Georgia, having on the north-north-east Little St. Simon's island; and between these is the eastern mouth of the river. The southern end of the island is near the north mouth of the Alatomaha. It formerly had a strong battery erected here, for the defence of Jekyl sound, in which 10 or 12 forty-gun ships may ride in safety. This island is about 45 miles in length, and from two to four in breadth, has a rich and fruitful soil, full of oak and hickory trees, intermixed with meadows and old Indian fields. In the middle of the island is the town of Frederica. The bar or entrance of St. Simon's is south-by-west, 19 leagues from Tybee inlet.

SIMON'S BAY, a bay of Southern Africa, in the territory of the Cape of Good Hope, forming the head of False bay, and bounding on the east the Cape peninsula. Lat. 34. 12. S.

SIMONBURN, a township of England, in Northumberland; 9 miles north-west of Hexham. Population 498.

SIMONDLEY, a village of England, in the High Peake of Derbyshire; 10 miles north-by-west of Chapel-in-le-Frith.

SIMONETTA, a castle of Austrian Italy, about 4 miles from Milan, with a remarkable echo, which at first repeats the three last syllables of a word pronounced, and afterwards the last alone.

SIMONETTA (Giovanni), an historian, was a native of Cassaro, in Sicily. In 1414 he entered into the service of

Francesco Sforza, duke of Milan, of whom his brother Cicco was the confidential minister. After the death of Francesco, he attached himself to his son Galeazzo Maria, to whom he, with his brother, continued so faithful, that when Ludovico Sforza usurped the dukedom, they were arrested and sent prisoners to Pavia. Cicco, in the following year was beheaded, and Giovanni was banished to Vercelli. He, however, returned to Milan, where he was buried about the year 1491. Simonetta composed in Latin "A History of the actions of Francesco Sforza from 1423 to 1466," which is accounted one of the best works of that time. It was several times printed. It is also found in Muratori's collection of Italian historians.

SIMONIA'CAL, *adj.* Guilty of buying or selling ecclesiastical preferment.

SIMON'NIAC, *s.* [*simoniaque*, Fr.; *simoniacus*, Lat.] One who buys or sells preferment in the church.

SIMONI'ACALLY, *adv.* With the guilt of simony.

SIMONIANS, or SIMONITES, a sect of ancient heretics, the first that ever disturbed Christianity; if they might be said to do so, who were little more than mere philosophers, and chiefly made profession of magic.

Simon Magus, so often mentioned in the Acts, was their leader, and died under the emperor Nero; St. Peter still surviving; so that Clemens Alexandrinus is mistaken, when he makes Simon posterior to Marcion.

SIMONIDES, a celebrated Grecian poet, born in the isle of Chios, was the son of Leoprepes, and flourished in the fifth century before the Christian era. He excelled in various kinds of poetry, but especially in the elegiac, for which, as we learn from Horace and Quintilian, he was almost proverbially famous in antiquity. One of his most famous compositions was entitled "The Lamentations," of which a small fragment is all that remains.

Simonides was endowed with a most extraordinary memory, and some have attributed to him the invention of the art of mnemonics. The introduction of some of the compound letters of the Greek alphabet is also ascribed to him. He lived to an advanced age, and at the age of eighty gained a prize for poetry. According to Pliny, Simonides added the eighth string to the lyre. In his old age, he became somewhat mercenary and avaricious. He was frequently employed by the victors at the games to write panegyrics and odes in their praise, before his pupil Pindar had exercised his talents in their behalf; but Simonides would never gratify their vanity in this particular, till he had first tied them down to a stipulated sum for his trouble; and, upon being upbraided for his meanness, he said, that he had two coffers, in one of which he had, for many years, put his pecuniary rewards; the other was for honours, verbal thanks, and promises; that the first was pretty well filled, but the last remained always empty. And he made no scruple to confess, in his old age, that of all the enjoyments of life, the love of money was the only one of which time had not deprived him. It is mentioned as a subject of dispraise, that Simonides was one of the first who wrote verses for money, and that he travelled through the cities of Asia, selling eulogies on the victors in the public games. He paid a visit, in advanced life, to Hiero, king of Syracuse, to whom he gave the celebrated answer respecting the nature of God that has been handed down from generation to generation to the present time in the writings of Cicero. Hiero having asked his opinion on the subject, he requested a day to consider of it; when this was expired, he doubled the time, and thus he did repeatedly, till the monarch desired to know his reason for this proceeding: "It is," said he, "because the longer I reflect on the question, the more difficult it appears to be." Undergoing shipwreck on a voyage, while the other passengers encumbered themselves with their most valuable effects, he left his behind him, saying, "I carry with me all that is mine;" and when he arrived safe at Clazomene, his fellow sufferers being either drowned or pillaged, he met with a citizen acquainted with his poetry, who liberally supplied all his wants. It was a witty

witty reply which this author made to Hiero's queen, who demanded of him whether knowledge or wealth was most to be preferred: "Wealth," said he; "for I see every day learned men at the doors of the rich." When he was accused of being so sordid, as to sell part of the provisions with which his table was furnished by Hiero, he said he had done it, in order "to display to the world the magnificence of that prince, and his own frugality." In justification of his passion for wealth, he said, "I choose rather to be useful to my enemies after I am dead, than burdensome to my friends while I am living." He is said to have been sufficiently eloquent to reconcile two princes extremely irritated against each other, and actually at war. He was unquestionably one of the most conspicuous characters of his time. Of his numerous works only a few fragments remain, which are published in the *Corpus Poetarum Græcarum*.

SIMONOR, a small island in the Sooloo archipelago. Lat. 4. 59. N. long. 119. 50. E.

SIMONSBURG, a post village of the United States, in Southampton county, Virginia.

SIMONSHALL, a hamlet of England, in Gloucestershire, adjoining to Wootton-under-Edge.

SIMONSHILL, in Northumberland, England, 1407 feet high.

SIMONSTONE, a village of England, in Lancashire; 5 miles west-by-north of Burnley.

SIMONSWOOD, a hamlet of England, in Lancashire; 5 miles south-by-east of Ormskirk.

SIMONY, *s.* The crime of buying or selling church preferment.—Many papers remain in private hands, of which one is of *simony*; and I wish the world might see it, that it might undeceive some patrons, who think they have discharged that great trust to God and man, if they take no money for a living, though it may be parted with for other ends less justifiable. *Walton*.

No *simony* nor sinecure is known;
There works the bee, no honey for the drone.

Garth.

The word *Simony* or *Simonia*, is borrowed from Simon Magus, who is mentioned in the Acts of the Apostles, as offering to buy the power of working miracles with money: Judge Blackstone, says, 1. That to purchase a presentation, the living being actually vacant, is open and notorious simony.

2. That for a clerk to bargain for the next presentation, the incumbent being sick and about to die, was simony, even before the statute of queen Anne; and now, by that statute, to purchase, either in his own name or another's, the next presentation, and be thereupon presented at any future time to the living, is direct and palpable simony.

But, 3. It is held, that for a father to purchase such a presentation, in order to provide for his son, is not simony; the son not being concerned in the bargain, and the father being by nature bound to make a provision for him.

4. That if a simoniacal contract be made with the patron, the clerk not being privy thereto, the presentation for that turn shall indeed devolve to the crown, as a punishment of the guilty patron; but the clerk who is innocent, does not incur any disability or forfeiture.

5. That bonds given to pay money to charitable uses, on receiving a presentation to a living, are not simoniacal, provided the patron or his relations be not benefited thereby; for this is no corrupt consideration, moving to the patron.

6. That bonds of resignation in case of non-residence, or taking any other living, are not simoniacal, there being no corrupt consideration therein, but such as is only for the good of the public. So also bonds to resign, when the patron's son comes to canonical age, are legal; upon the reason before given, that the father is bound to provide for his son.

7. Lastly,—general bonds to resign at the patron's request are held to be legal; for they may possibly be given for one of the legal considerations before-mentioned, and where there is a possibility that the transaction may be fair, the law will not suppose it iniquitous without proof; but if the

VOL. XXIII. No. 1567.

party can prove the contract to have been a corrupt one; such proof will be admitted, in order to shew the bond simoniacal, and therefore void. Neither will the patron be suffered to make an ill use of such a general bond of resignation; as by extorting a composition for tithes, procuring an annuity for his relations, or by demanding a resignation wantonly, and without good cause, such as is approved by the law, as for the benefit of his own son, or on account of non-residence, plurality of livings, or gross immorality in the incumbent. *Blackst. Comm.*

SIMONY is also committed by buying or selling the sacrament, baptism, ordination, or absolution.

SIMONYTORNIA, or **SIMONTHURM**, a small town in the south-west of Hungary, at the confluence of the Kaproneza and the Sio; 57 miles south-south-west of Buda, with 2800 inhabitants.

SIMORRE, a town in the south of France, department of the Gers. There are some lead mines in the neighbourhood. Population 1400; 13 miles south-east of Auch.

To **SIMPER**, *v. n.* [from *rymbelan*, Saxon, to keep holiday.] To smile; generally to smile foolishly.—A made countenance about her mouth between *simpering* and smiling, her head bowed somewhat down, seemed to languish with over-much idleness. *Sidney*.

SIMPER, *s.* Smile; generally a foolish smile.

Great Tibbald nods: the proud Parnassian sneer,
The conscious *simper*, and the jealous leer,
Mix on his look.

Pope.

SIMPERER, *s.* One who simpers.—A *simperer*, that a court affords. *Neville*.

SIMPERINGLY, *adv.* With a foolish smile.—Why looks neat Curus all so *simperingly*? *Marston*.

SIMPLE, *adj.* [*simplex*, Latin; *simple*, Fr.] Plain; artless; unskilled; undesigning; sincere; harmless.—Were it not to satisfy the minds of the *simpler* sort of men, these nice curiosities are not worthy the labour which we bestow to answer them. *Hooker*.

They meet upon the way,
A *simple* husbandman in garments gray.

Spenser.

In *simple* manners all the secret lies,
Be kind and virtuous, you'll be blest and wise.

Young.

Uncompounded; unmingled; single; only one; plain; not complicated.—*Simple* philosophically signifies single, but vulgarly foolish. *Watts*.—Silly; not wise; not cunning.—The *simple* believeth every word; but the prudent man looketh well to his going. *Proverbs*.

SIMPLE, *s.* A single ingredient in a medicine; a drug. It is popularly used for an herb.

He would ope his leathern scrip,
And shew me *simples* of a thousand names,
Telling their strange and vigorous faculties.

Milton.

To **SIMPLE**, *v. n.* To gather simples. *Unused*.
As once the foaming boar he chas'd,
Lascivious Circe well the youth survey'd,
As *simpling* on the flowery hills she stray'd.

Garth.

SIMPLE-MINDED, *adj.* Having a simple, unskilled, and artless mind.

[They,] bending off their sanctimonious eyes,
Take homage of the *simple-minded* throng.

Akenside.

SIMPLENESS, *s.* The quality of being simple.

I will hear that play:
For never any thing can be amiss,
When *simpleness* and duty tender it.

Shakspeare.

SIMPLER, *s.* A simplist; an herbarist.—An English botanist will not have such satisfaction in shewing it to a *simpler*. *Barrington*.

SIMPLESS, *s.* [*simplesse*, Fr.] Simplicity; silliness; folly. *Obsolete*.

Their weeds been not so nighly were,
Such *simplesse* mought them shend,
They been yclad in purple and pall,
They reign and rulen over all.

Spenser.

SIMPLETON, *s.* A trifler; a foolish fellow. *A low word.*—Those letters may prove a discredit, as lasting as mercenary scribblers, or curious *simpletons* can make it. *Pope.*

SIMPLICIAN, *s.* [Lat. *simplex, simplicis.*] An undesigning, unskilled person: opposed to *politician*, one of deep contrivance.—Sometimes the veriest *simplicians* are most lucky, the wisest politician least, especially where orders are unobserved. *Archdeacon Arnway.*

SIMPLICITY, *s.* [*simplicitas*, Latin; *simplicité*, Fr.] Plainness; artlessness; not subtilty; not cunning; not deceit.—They keep the reverend *simplicity* of ancients times. *Hooker.*

In low *simplicity*,
He lends out money gratis, and brings down
The rate of usance.

Shakspeare.

Plainness; not subtilty; not abstruseness. Plainness; not finery.—They represent our poet, when he left Mantua for Rome, dressed in his best habit, too fine for the place whence he came, and yet retaining part of its *simplicity*. *Dryden.*—Singleness; not composition; state of being uncompounded.—Mandrakes afford a papaverous unpleasant odour in the leaf or apple, discoverable in their *simplicity* and mixture. *Brown.*—Weakness; silliness.—How long, ye simple ones, will ye love *simplicity*, and fools hate knowledge? *Prov.*

SIMPLICIUS, a Greek philosopher of the sixth century, was a native of Cilicia. He was a disciple of Ammonius the Peripatetic, and Damascius the Stoic; but in his own mode of philosophising, he endeavoured to unite the Platonic and Stoical doctrines with those established by Aristotle. Of this combination of heterogeneous tenets, his "Commentary upon the Enchiridion of Epictetus" is said to be a good example. Of this work, Fabricius affirms there is nothing in pagan antiquity better calculated to form the morals, or afford juster views of divine providence. *Simplicius* wrote commentaries upon Aristotle. He was one of the philosophers who took refuge with Chosroes, king of Persia, from an apprehended persecution by Justinian; but they returned to Athens, upon a truce between the Romans and Persians in 549, having stipulated for a toleration. His commentaries upon Aristotle have been several times published in Greek. Those on Epictetus were published in Greek and Latin, with the notes of Wolsius and Salmasius. They have been translated into the English and French languages.

SIMPLIFICATION, *s.* Act of reducing to simplicity, or uncompounded state.—This *simplification* of the principles of languages renders them less agreeable to the ear. *A. Smith.*

To **SIMPLIFY**, *v. a.* [*simplifier*, Fr., *simplex* and *facio*, Lat.] To render plain; to bring back to simplicity.—Philosophers have generally advised men to shun needless occupations, as the certain impediments of a good and happy life: they bid us endeavour to *simplify* ourselves, or to get into a condition requiring of us the least that can be to do. *Barrow.*

SIMPLIFYING, in Ecclesiastical Matters, is the taking away of a cure of souls from a benefice, and dispensing the beneficiary from residence.

SIMPLIST, *s.* One skilled in simples.—A plant so unlike a rose, it hath been mistaken by some good *simplists* for amomum. *Brown.*

SIMPLOCE, in Rhetoric, a figure which comprehends both the anaphora and epistrophe. In this figure the several members begin and end with the same word. Thus St. Paul: Are they Hebrews? So am I. Are they Israelites? So am I. Are they the seed of Abraham? So am I. 2 *Cor. xi. 22.*

SIMPLON, or **SIMPELN**, a great mountain in the south

of Switzerland, which separates the canton called the Valais, from the Piedmontese territory, and which, high as it is, forms the least difficult communication over the Alpine barrier. The old road across it being impracticable for heavy carriages, a new one was formed at the joint expence of France and the kingdom of Italy, in the reign of Buonaparte. This was a work of great labour, and occupied several years; to avoid steepness of ascent, it was made more circuitous than the preceding; and from the small town of Glis or Glys, near Brieg, where it begins, to Domo d'Ossola on the Italian side, where it ends, the distance is about 36 English miles, which may be travelled in 11 hours with a change of horses, or in 15 hours with the same, allowing an interval for rest. The breadth of the road is nowhere less than 25 feet, and parapets are erected along the brinks of these precipices, around which it frequently winds. The hazard to the traveller, particularly in spring, is from the occasional descent of avalanches from the higher part of the mountain. From this cause, and from the masses of earth and stone detached from the high grounds after heavy rains, the road is exposed to periodical injury, and an expence of from 2000*l.* to 3000*l.* a-year would be necessary to keep it in repair. But neither the Swiss nor the Piedmontese government seem inclined to make any sacrifice for preserving this, the only road over the Alps that can be passed by artillery. It forms the usual access to the central part of Lombardy, in the same manner as Mont Cenis to the west of Piedmont. The traveller, on proceeding from Switzerland, sees little remarkable except forests and bridges over mountain streams, until arriving at the small village of Simpel. The latter half of his journey is more picturesque. The scenery becomes awful, and the road goes through no less than six galleries or passages, cut through the superimpendent rocks. Though the ascent is every where gradual, the highest point of the road is nearly 6000 feet above the level of the sea, and the top of the mountain is seen rising to 11,000 feet above the same level.

SIMPLY, *adv.* Without art; without subtilty; plainly; artlessly.

Accomplishing great things by things deem'd weak;
Subverting worldly strong and worldly wise,
By *simply* meek.

Milton.

Of itself; without addition.—This question about the changing of laws concerneth only such laws as are positive, and do make that now good or evil, by being commanded or forbidden, which otherwise of itself were not *simply* the one or the other. *Hooker.*—Merely; solely.

I will eat and drink, and sleep as soft
As captain shall; *simply* the thing I am
Shall make me live.

Shakspeare.

Foolishly; sillily.

SIMPLUDIARIA, in Antiquity, a kind of funeral honours paid to the deceased at their obsequies.

The word is formed from the Latin *simplex*, and *ludus*; whence *simpludaria*, or *simpliludaria*, *q. d.* simple games. Some will have *simpludaria* to be the funerals at which games were exhibited: such is the sentiment of Paulus Diaconus. Festus says, they were those, in the games of which nothing was seen but dancers and leapers, called *corvitores*; who, according to M. Dacier, were persons who run along the masts and yards of vessels or boats, called *corbes*.

In other respects, those two authors agree as to the kind of funerals called *simpludaria*; viz., that they were opposite to those called *indictiva*; in which, besides the dancers and leapers observed in the *simpludaria*, there were desultores, or people who vaulted on horses; or perhaps horse-races, in which the cavaliers leaped from horse to horse at full speed.

SIMPRIN, a parish of Scotland, in Berwickshire, united to that of Swinton in 1761. Also a small village in that parish.

SIMPSON (Thomas), a celebrated self-taught mathematician, was born at Market-Bosworth, in Leicestershire, in

in 1710. His father, who was a weaver in that town, intended to bring him up to his own trade, and took little heed of his education. Nature, however, had endowed him with fine talents, and an ardour of disposition, which excited him to nobler pursuits. At an early period he gave indications of his turn for study, by eagerly perusing every book that fell in his way, and omitting no opportunity to acquire instructions from others. His father, finding that he was thus led to neglect his work, endeavoured to restrain him from what he regarded as idle pursuits; but after some fruitless attempts, a difference was produced between them, which at length terminated in an open rupture, and Thomas left his father's house, and married the widow of a tailor, with whom he resided at Nuneaton, where he continued some time working at his trade, and improving his knowledge. Here he became acquainted with a travelling pedlar, who lodged in the same house, and who, to the profession of an itinerant merchant, had united the more profitable one of a fortune-teller. An intimacy was formed between them; and as the pedlar was going to Bristol, he lent, during his absence, Cocker's Arithmetic to Simpson, to which was subjoined a short appendix on Algebra; and a book on Genitures, by Partridge, the almanack-maker. These books he studied so closely, that on the pedlar's return, he was astonished to find that Simpson was little inferior to himself in the art of calculating nativities; and he predicted that he would shortly be his superior. Encouraged by this prophecy, he at first determined to embark in the trade of a fortune-teller; and by this occupation, and teaching a school, he found means to support himself without weaving, which he now entirely abandoned, and was soon regarded as the oracle of the neighbourhood. From this time he seems to have lived very comfortably, till an unfortunate event involved him in a deal of trouble. Having undertaken to raise the devil, in order to answer certain questions to a young woman, who consulted him respecting her sweetheart, then absent at sea, the credulous girl was so frightened on the appearance of a man from beneath some straw, who represented the devil, that she fell into violent fits, from which she was with difficulty recovered, and which for a considerable time threatened insanity or fatuity. In consequence of this exertion of his art, he was obliged to leave the place, and he removed to Derby, where he remained a few years, working at his trade by day, and instructing pupils in the evening. He became a writer in the *Lady's Diary* in the year 1736: his first questions were stated in verse, and are of such a kind as shew that at this period he had made some progress in mathematical knowledge. He from this time applied himself with great ardour to every branch of the analytic science, and acquired a deep insight into the doctrine of fluxions, upon which he afterwards published a work, which is even now regarded as among the best, if not the very best, existing in our language. After he had given up astrology, and its emoluments, he found himself reduced to great straits, notwithstanding his industry to provide a subsistence for his family at Derby; and on that account he determined to remove to London, which he did in the year 1736. When he arrived at the capital, unknown and without recommendation, he for some time followed his business in Spitalfields, and taught mathematics in the evening, and at other spare hours. His exertions were attended with such success, that he returned to the country, and brought to town his wife, with her three children. The number of his scholars increased, and he was encouraged to make proposals for publishing by subscription "A New Treatise of Fluxions." The book was printed in 1737. In the year 1740 he published "A Treatise on the Nature and Laws of Chance." This is a very thin and small quarto; and to this treatise are annexed full and clear investigations of two important problems, added to the second edition of De Moivre's Book of Chances, as also two new methods for the summation of series. Mr. Simpson's next publication was a volume, in quarto, of "Essays on several curious and interesting Subjects in speculative and mixed Mathematics," printed in

1740. Soon after the publication of this book, he was chosen member of the Royal Academy at Stockholm. This was followed by a smaller volume, on "The Doctrine of Annuities and Reversions, deduced from general and evident Principles, with useful Tables, shewing the Values of single and joint Lives." Next year came out an "Appendix, containing Remarks on De Moivre's Book on the same Subject, with Answers to some personal and malignant Representations, in the Preface to it." In 1743 he published his "Mathematical Dissertations on a variety of physical and analytical Subjects." Shortly after this he published "A Treatise on Algebra," which in the year 1755 he enlarged and considerably improved. After this he gave the public his "Elements of Geometry," with their application to mensuration, to the determination of maxima and minima, and to the construction of a great variety of geometrical problems. This work has passed through many editions, and is still read in some places devoted to the education of the young; though generally it has been superseded by other treatises of more modern date. The first edition of this book occasioned some controversy between Mr. Thomas Simpson and Dr. Robert Simson, the author of a well-known edition of Euclid's Elements.

In the year 1748, Mr. Simpson published "Trigonometry, plane and spherical, with the Construction and Application of Logarithms." In 1750 he published a new edition of his "Treatise on Fluxions," which, however, he wished to be considered rather as a new work than a new edition of an old one. In 1752 appeared in 8vo. a work, entitled, "Select Exercises for young Proficients in Mathematics;" and in 1757 he published his last work, entitled "Miscellaneous Tracts,"—"which," says Dr. Hutton, "was a valuable bequest, whether we consider the dignity and importance of the subjects, or the sublime and accurate manner in which they are treated." Such are the scientific works of Mr. Simpson. Through the interest of Mr. Jones, the father of the celebrated Sir William Jones, Mr. Simpson was, in 1743, appointed to the professorship of mathematics, then vacant, in the Royal Academy of Woolwich; and in 1745 he was admitted a fellow of the Royal Society. On this occasion, in consequence of his very moderate circumstances, he was excused his admission fees, and from giving bond for the settled future annual payments. As a professor, he exerted all his talents in instructing the pupils committed to his care. He had, it has been said, a peculiar and happy method of teaching, which, united to a great degree of mildness, engaged the attention, and conciliated the esteem and friendship of his scholars. Mr. Simpson died in the year 1761, in the 51st year of his age. Besides the works already mentioned, he wrote several papers, which were read before the Royal Society, and printed in their Transactions. He was not only a contributor to, but for some years editor of, the *Lady's Diary*, during which, viz., from the year 1754 to 1760, he raised that work to a high degree of respectability. In 1760, when a plan was in agitation for erecting Blackfriars bridge, he was consulted by the committee in regard to the best form for the arches. On this occasion he preferred the semicircular form; and besides his report to the committee, he wrote some letters on the subject, which were afterwards published in the *Gentleman's Magazine*.

SIMPSON, a parish of England, in Buckinghamshire, near Fenny-Stratford. Population 372.

SIMPSON, a township of Lower Canada, in the county of Buckingham.

SIMPSON'S ISLAND, a small island in the South Pacific Ocean, discovered by Captain Carteret in 1767; 4 miles west from Carteret's island. Lat. 8. 26. S. long. 159. 20. E.

SIMPSONVILLE, a post village of the United States, in Montgomery county, Maryland.

SIMPULUM, among the Romans, a vessel with a long handle, and made like a cruet. It was used in sacrifices and libations, for taking a very little wine at a time.

SIMSBURY, a post township of the United States, in Hartford

Hartford county, Connecticut; 11 miles north-west of Hartford. Population 1966.

SIMSIA [so called by Mr. Brown, in honour of Dr. John Sims], in Botany, a genus of the class tetrandria, order monogynia, natural order of proteaceæ (*Juss.*)—Generic Character. Calyx none, unless the corolla be taken for such. Corolla: petals four, inferior, linear-oblong, equal, deciduous; reflexed at the extremity. Nectary none. Stamina: filaments four, awl-shaped, prominent, inserted into the disk of each petal; anthers roundish, cohering, so that the adjoining lobes of each make one common cell, at length separating. Pistil: germen superior, obovate; style cylindrical; stigma dilated, concave. Pericarp: nut inversely conical, of one cell, naked.—*Essential Character.* Petals four, equal, reflexed, without nectariferous glands. Stamens prominent; anthers cohering; their adjoining lobes making a common cell. Stigma dilated, concave. Nut inversely conical.

1. *Simsia tenuifolia*, or slender leaved *Simsia*.—Heads naked, mostly solitary on each branch of the panicle, accompanied by small partial bracteas.—Found in New Holland.

2. *Simsia anethifolia*, or fennel-leaved *Simsia*.—Heads numerous in each panicle, and about as long as its partial branches, accompanied by imbricated involucreal leaves.—Gathered on the sandy sea-shores of the same country.

SIMSON (Robert), was born in the year 1637, of a very respectable family, in the county of Lanark. He was educated in the university of Glasgow, where he made great progress in his studies, and acquired in every branch of science a large stock of information, which, if it had never been greatly augmented afterwards, would have done great credit to any professional man. He became, at an early period, an adept in what was denominated the philosophy and theology of the schools, and was able to supply with great credit the place of a sick relation in the class of oriental languages. While he was pursuing a course of theology, as preparatory to his entering into orders, mathematics took hold of his fancy, and he would, in after-life, say that he amused himself in his favourite pursuit, while he was actually preparing his exercises for the divinity hall. When fatigued with speculations, in which he could not meet with certainty to reward his labours, he relieved his mind, ardent in the pursuit of truth, by turning to mathematics, with which he never failed to meet with what would satisfy and refresh him. For a long time he restricted himself to a very moderate use of the cordial, fearing that he should soon exhaust the stock which so limited and abstract a science was capable of yielding; at length, however, his fears were dissipated on this head, for he found that the more he learned, and the farther he advanced, the more there was to learn, and a still wider field opened to his view. He accordingly determined to make the mathematics the profession of his life, and gave himself up to the study without reserve. It is said, that his original incitement to this science as a treat, as something to please and refresh the mind in the midst of severer tasks, gave a particular turn to his mathematical pursuits, from which he could never deviate. He devoted himself chiefly to the ancient method of pure geometry, and felt a decided dislike to the Cartesian method of substituting symbols for the operations of the mind, and still less was he willing to admit symbols for the objects of discussion, for lines, surfaces, solids, and their affections. He was rather disposed in the solution of an algebraical problem, where quantity alone is to be considered, to substitute figure and its affections for the algebraical symbols, and to convert the algebraic formula into an analogous geometrical theorem. In so little respect did he come at last to consider algebraic analysis, as to denominate it a mere mechanical knack, in which he would say we proceed without ideas of any kind, and obtain a result without meaning, and therefore without any conviction of its truth.

About the age of twenty-five Dr. Simson was chosen professor of mathematics in the university of Glasgow. He immediately went to London, and there formed an acquaintance with the most eminent men who at that time flourished in the metropolis. Among these was the celebrated Halley, of whom he always spoke with the most marked respect, saying

that he had more acute penetration, and the most just taste in that science, of any man he had ever known. Dr. Simson also admired the masterly steps which Sir Isaac Newton was accustomed to take in his investigations, and his manner of substituting geometrical figures for the quantities which are observed in the phenomena of nature. He was accustomed to say, that the 39th proposition of the first book of the Principia, was the most important proposition that had ever been exhibited to the physico-mathematical philosopher, and he used to illustrate to the higher classes of his pupils, the superiority of the geometrical over the algebraic analysis, by comparing the solution given by Newton, of the inverse problem of centripetal forces, in the 42d proposition of that book, with the one given by John Bernoulli, in the memoirs of the Academy of Sciences at Paris, for the year 1713.

Returning to his mathematical chair, Dr. Simson discharged the duties of a professor, for more than half a century, with great honour to the university and to himself. It is scarcely necessary to add, that in his lectures he always made use of the geometry of Euclid, in preference to those works which he thought leaned too much to analysis. His method of teaching was simple and perspicuous, his elocution clear, and his manner easy and impressive. He uniformly engaged the respect and affection of his pupils.

It was owing to the advice of Dr. Halley that our author so early directed his efforts to the restoration of the ancient geometers. He had recommended this to him as the most certain means of acquiring a high reputation, as well as to improve his taste, and he presented him with a copy of Pappus's Mathematical Collections, enriched with his own notes. The perspicuity of the ancient geometrical analysis, and the elegance of the solutions which it affords, induced him to engage in an arduous attempt, which was nothing less than the entire recovery of this method. His first task was the restoration of Euclid's Porisms, from the scanty and mutilated account of that work in a single passage of Pappus. He, however, succeeded, and so early as 1718, seems to have been in possession of this method of investigation, which was considered by the eminent geometers of antiquity as their surest guide through the intricate labyrinths of the higher geometry. In 1723, Dr. Simson gave a specimen of this discovery in the Philosophical Transactions; and after that period he continued with unremitting assiduity to restore those choice porisms which Euclid had collected, as of the most general use in the solution of difficult problems. Having obtained the object of which he was in pursuit, he turned his thoughts to other works of the ancient geometers, and the Porisms of Euclid had now only an occasional share of his attention. The Loci Plani of Apollonius were the next task in which he engaged, and which he completed in the year 1738; but after it was printed he was far from being satisfied that he had given the identical propositions of that ancient geometer; he withheld the impression several years, and it was with extreme reluctance that he yielded to the entreaties of his mathematical friends in publishing the works in 1746, with some emendations in those cases in which he thought he had deviated the most from the author. Anxious for his own reputation, and fearing that he had not done justice to Apollonius, he soon recalled all the copies that were in the hands of the booksellers, and the impression lay by him several years. He afterwards revised and corrected the works, and even then did not, without some degree of hesitation, allow it to come into the world as the restoration of Apollonius. The work was, however, received by the public with great approbation; the author's name became better known; and he was now considered as among the very first and most elegant geometers of the age. He had, previously to this, published his Conic Sections, a treatise of uncommon merit, whether considered as a complete restitution of the celebrated work of Apollonius Pergæus, or as an excellent system of this useful branch of mathematics. This work was intended as an introduction, or preparatory piece, to the study of Apollonius, and he has accordingly accommodated it to this purpose. The intimate acquaintance which Dr. Simson had now acquired with all the

the original works of the ancient geometers, as well as with their commentators and critics, encouraged him to hope that he should be able to restore to its original state that most useful of them all, the Elements of Euclid, and under the impression of this idea, he began seriously to make preparation for a new and more perfect edition. The errors which had crept into this celebrated work appeared to require the most careful efforts for their extirpation; and the data also, which were in like manner the introduction to the whole art of geometrical investigation, seem to call for the noblest exertions of a real master in the science. The data of Euclid have fortunately been preserved, but the work was neglected, and the few ancient copies, which amount only to three or four, are said to be wretchedly mutilated and erroneous. It had, however, been restored, with some degree of success, by previous authors; but Dr. Simson's view of the whole analytical system pointed out to him many parts which still required amendment. He therefore made its restitution a joint task with that of the Elements, and all lovers of geometry are ready gratefully to acknowledge their obligations to him for his edition, which contains the Elements and the Data, and which has gone through many impressions in quarto and octavo, in the Latin and English languages.

Another work on which Dr. Simson bestowed great labour and pains, was the Sectio Determinata of Apollonius, which, though begun early, was not given to the world till after his death, when it was printed with the work on Porisms of Euclid, at the expense of the late Earl Stanhope, who was himself deeply read in mathematics, and who for many years had kept up a constant correspondence with Dr. Simson; and at the death of the professor, in 1768, the noble lord engaged Mr. Clow, professor of logic in the university of Glasgow, to whose care he had left all his papers, to make a selection of such as might serve to support and extend his well-earned reputation as the restorer of ancient geometry.

"The life of a literary man," says his biographer, "is seldom marked with much variety; and a mathematician immersed in study, is more abstracted, perhaps, than any other person from the ordinary occurrences of life, and even the ordinary topics of conversation. Such was the case with Dr. Simson. As he never entered into the marriage state, and had no occasion for the commodious house in the university to which as professor he was entitled, he contented himself with chambers, spacious enough for his own accommodation, and for containing his large, but well-selected, collection of books, but without any decoration, or even convenient furniture. His official servant acted as valet, footman, and bed-maker; and as this retirement was entirely devoted to study, he entertained no company at his chambers, but on occasions, when he wished to see his friends, he repaired to a neighbouring house, where an apartment was kept sacred to him and his guests. He enjoyed a long course of uninterrupted health, but towards the close of life he suffered from acute disease, which obliged him to employ an assistant in his professional labours. He died in 1768, at the age of 81, leaving to the university his valuable library, which is now kept apart from the rest of the books. It is still regarded as the most complete collection of mathematical works and manuscripts in the kingdom, many of them being rendered doubly valuable by the addition of Dr. Simson's notes. It is open for the public benefit, but the use of it is limited by particular rules and restrictions. Dr. Simson was of a good stature, and he had a fine countenance, and even in his old age he retained much gracefulness and dignity of manner. He was naturally disposed to cheerfulness, and though he seldom made the first advances towards acquaintance, he always behaved with great affability to strangers." See Dr. William Trail's Account of the Life and Writings of Dr. Simson.

SIMULACHRE, *s.* [*simulacrum*, Lat.] An image. *Not in use.* *Bullokar.*—Phidias made of ivory the *simulachre* or image of Jupiter. *Sir T. Elyot.*

SIMULAR, *s.* [from *simulo*, Latin.] One that counterfeits.

Hide thee, thou bloody hand,
Thou perjur'd, and thou *simular* of virtue,
That art incestuous.

Shakspeare.

SIMULAR, *part. adj.* [*simulatus*, Lat.] Feigned; pretended.—They had vowed a *simulate* chastity. *Bale.*

To SIMULATE, *v. a.* [*simulo*, Lat.] To feign; to counterfeit.—I have known many young fellows, who, at the first setting out into the world, have *simulated* a passion which they did not feel. It has been used by medical writers for diseases putting on the appearance of others. *Ld. Chesterfield.*

SIMULATION, *s.* [*simulation*, French; *simulatio*, from *simulo*, Lat.] That part of hypocrisy which pretends that to be which is not.—For distinction sake, a deceiving by word is commonly called a lie; and deceiving by actions, gestures, or behaviour, is called *simulation* or hypocrisy. *South.*

SIMULTANEOUS, *adj.* [*simultaneus*, Latin.] Acting together; existing at the same time.—Let not the distinct touches be so *simultaneous*, but that it may appear where the word begins, and where it ends. *Dalgarno.*

SIMULTANEOUSLY, *adv.* At the same time; together; in conjunction.—He introduces the deities of both acting *simultaneously*. *Shenstone.*

SIMULTY, *s.* [*simultas*, Lat., *secret hatred*.] Private quarrel: a word used by Ben Jonson, but not adopted, and hardly worthy of notice.—In things unknown to a man, not to give his opinion;—nor seek to get his patron's favour, by embarking himself in the factions of the family; to enquire after domestic *simulties*, their sports, or affections. *B. Jonson.*

SIMUS, in Ichthyology, the name used by some authors for the nasus, or nose, a fish common in the large rivers in Germany, and somewhat resembling our chud, and in some respects our common rudd.

SIN, *s.* [jyn, Sax.] An act against the laws of God; a violation of the laws of religion.

It is great *sin* to swear unto a *sin*,
But greater *sin* to keep a sinful oath.

Shakspeare.

Habitual negligence of religion.

Sin, death, and hell, have set their marks upon him,
And all their ministers attend on him.

Shakspeare.

It is used by Shakspeare emphatically for a man enormously wicked.

Thy ambition,
Thou scarlet *sin*, robb'd this bewailing land
Of noble Buckingham.

Shakspeare.

To SIN, *v. n.* To neglect the laws of religion; to violate the laws of religion.—Many also have perish'd, err'd, and *sinn'd* for women. *Esdr.*—To offend against right.

I am a man,
More *sinn'd* against than *sinning*.

Shakspeare.

SIN, *adv.* [*sen*, *sedan*, Swedish.] Since. *Used in the north.*

But when as Calidore was comen in
And gan aloud for Pastorell to call,
Knowing his voice, although not heard long *sin*
She sudden was revived therewithall.

Spenser.

SIN, a town of China, of the third rank, in Shantung.
SIN, or **BURSIN**, a small kingdom of Western Africa, extending about 10 leagues along the Atlantic, and containing a surface of about 140 square leagues. The territory, being very fertile, supports a population of about 60,000. There are three anchoring places on the coast, the best of which is at Joal, whence oxen, poultry, and provisions are shipped in considerable quantities for Goree. The other ports are Serena and Faghioup.

SINA, a cape of the Mediterranean, on the east coast of Sardinia. Lat. 40. 7. N. long. 9. 58. E.

SINAAB, the ruins of an ancient city of Algiers, in the province

province of Tlemsan, nearly three miles in circumference, and situated on the eastern side of the Shelliff; 72 miles south-west of Algiers.

SINAI, a mountain of Arabia, near the head of the Red Sea, celebrated in scripture history as the spot whence the law was given to Moses. It is situated in the heart of a vast and gloomy desert, the few inhabited spots of which are occupied by hordes of Arabs, who subsist by plunder, and render the road impassable, unless for a large and well defended caravan; but the range to which Sinai belongs is called by the Arabs Jibbel Musa, and consists of several lofty summits, the valleys of which are composed of frightful gulleys, between rugged and precipitous rocks. At the foot of the mountain is the Greek convent of St. Catharine, which was found there in 1331, by William Bouldesell, and has ever since continued to afford hospitality to the few pilgrims whose zeal impels them to brave the perils of this road. It is situated on the slope of the mountain, and requires the traveller to ascend considerably before he reaches it. The edifice is 120 feet in length, and almost as many in breadth, built entirely of hewn stone, which, in such a desert, must have cost prodigious labour and expense. The monks are kept, as it were, imprisoned in this convent by the wild Arabs of the surrounding country. The gate of entrance, which is in a small adjoining building, is never opened, unless on occasion of the visit of the archbishop. At all other times, men, as well as provisions, are introduced by a basket drawn up by a cord and pulley, to the height of 30 feet. The Arabs often fire upon the convent from the adjacent rocks, and seize the monks when they find them without the walls, refusing to release them without a considerable ransom. They take advantage of the entry of the archbishop, to accompany him in great numbers, and prove most unwelcome visitors, the monks being obliged to subsist them for a considerable time. There is an excellent garden at a little distance from the convent, which is reached by a subterraneous passage, secured by iron-gates. It produces fruits, plants and vegetables, in the utmost profusion. The climate is temperate, in consequence of the elevation; and snow even falls in winter. The interior of the convent presents little remarkable, all the apartments and chapels being built of rough stone, without symmetry or order, communicating by crooked and dark passages. The church of the Transfiguration alone possesses any pretension to magnificence. It is 80 feet long, and 53 broad, paved with marble, adorned with a variety of figures. The event to which it relates is represented in Mosaic. There are many lamps of gold and silver, and the great altar is gilt over, and embellished with jewels.

From the convent, the ascent of Mount Sinai is steep, and rendered practicable only by steps cut in the rock, or loose stones piled in succession. After a short ascent, the traveller comes to a most delightful spring of fresh and cold water, a little above which is a chapel dedicated to the Virgin Mary, and where pilgrims were formerly obliged to confess themselves, and obtain absolution, before they were allowed to proceed farther. Higher up is shewn the impression made by the foot of the camel on which Mahomet was carried up to heaven, under the guidance of the angel Gabriel; but the Greeks acknowledge that this impression was made by themselves, in order to inspire the Mahometans with a reverence for the mountain, which otherwise they would never have entertained. The summit of Sinai is marked at once by a Christian church and a Turkish mosque, the former of which was once much more extensive, but is now greatly dilapidated. It commands a most extensive view over the Red Sea and the opposite coast of the Thebais; immediately beneath being the port of Tor, once the main channel by which the commodities of India were conveyed to Egypt. The descent is still steeper and rougher than the ascent, and terminates at the monastery of the Forty Saints, which has suffered still more deeply from the depredations of the Arabs, who, according to the most recent accounts, have now driven out the monks, and obtained

entire possession of it. On the other side of it is the mountain of St. Catharine, still loftier than Sinai, which many pilgrims ascend; 150 miles south-east of Suez.

SINALUNGA, a small town of Italy, in Tuscany, in the province of Sienna.

SINAMARI, a large river of French Guiana, which falls into the Atlantic, between the river Marowine and the island of Cayenne, in Lat. 5. 39. N.

SINAN, a small and winding river of Algiers, distinguished by the flight of the elder Barbarossa, who strewed his treasure, on its banks, in the vain hope of retarding the pursuit of the Spaniards. It falls into the Wed el Mailah, about five miles before its junction with the sea.

SINANO, a village of Greece, in the Morea, supposed to occupy the site of the ancient Megalopolis. The ruins of a theatre, and of the stadium, still remain; but the modern village is merely an assemblage of mud huts.

SINAPI PERSICUM, or Persian Mustard, a name by which some botanical authors have called the thlaspi, or treacle mustard.

SINAPIS [*Σινητι*, of Theophrastus and Dioscorides], in Botany, a genus of the class tetradynamia, order siliquosa, natural order of siliquosa or cruciformes, cruciferae (*Juss.*)—Generic Character. Calyx: perianth four-leaved, spreading; leaflets linear, concave-channelled, cruciform-spreading, deciduous. Corolla: four-petalled, cruciform. Petals roundish, flat, spreading, entire: claws erect, linear, scarcely the length of the calyx. Nectarious glands four, ovate: one on each side between the shorter stamen and the pistil; and one on each side between the longer stamens and the calyx. Stamina: filaments six; awl-shaped, erect: two of them opposite, the length of the calyx, and four longer. Anthers from erect spreading, acuminate. Pistil: germ cylindrical. Style length of the germ, height of the stamens. Stigma capitate, entire. Pericarp: silique oblong, torose below, rugged, two-celled, two-valved: partition for the most part twice the length of the valves, large, compressed. Seeds many, globular. Hence *sinapis* differs from *brassica*, in having the calyx spreading, but the claws of the corolla erect. Crantz unites this genus with *raphanus*.—*Essential Character*. Calyx spreading. Corolla, claws erect. Gland between the shorter stamens and pistil, and between the longer stamens and calyx.

1. *Sinapis arvensis*, wild mustard, or charlock.—Root annual, fusiform; stem from nine inches or a foot to a foot and a half in height, upright, rough with a few stiff hairs or bristles bent somewhat downwards; branches spreading. Leaves petioled, rugged, serrate, sometimes entire, but most frequently jagged at the base, and sometimes lyriate or pinatifid. Flowers at the ends of the stem and branches, each on a pedicel the length of the calyx and slightly hispid. Corolla always yellow. Siliques spreading, slightly hairy or sometimes smooth, torose or swelling, ending in a short, compressed, ensiform, grooved beak. Seeds dark brown, shining, eight or nine.—Native of Europe, in corn fields: flowering in May and June, and perfecting its seeds before harvest; it is therefore very abundant in spring corn.

Its classical name in English is wild mustard; but it is known among husbandmen by the names of Charlock, Garlock, Warlock, Chadlock, Cadlock, and Kedlock, all evidently the same name originally, only variously pronounced in different counties.

The young plants, and particularly the tender tops before they flower, are boiled and eaten as greens by the peasants in Scandinavia, Ireland, and many parts of England.

2. *Sinapis Orientalis*, or Oriental mustard.—Like the preceding, but the beak only of the pod smooth.—Native of the Levant.

3. *Sinapis brassicata*, or cabbage mustard.—Leaves obovate tooth-letted even. Stature of cabbage or lettuce, but the calyx of mustard. Stem a foot and a half high, very smooth. Flower very like that of the common cabbage. Calyx yellow, scarcely emarginate. Pod like that of cabbage.—Native of China.

4. *Sinapis*

4. *Sinapis alba*, or white mustard.—Root annual. That and the stem nearly as in the *arvensis*.—Native of Germany, France, Flanders, Switzerland and Britain.

White mustard is generally cultivated in gardens as a salad herb, with cresses, raddish, &c., for winter and spring use. The seeds have nearly the same properties with those of common mustard.

5. *Sinapis nigra*, common, or black mustard.—Root annual, small. Stem upright, round, streaked, three or four feet in height, with many distant spreading branches.—Native of Europe.

6. *Sinapis Pyrenaica*, or Pyrenean mustard.—Siliques streaked, rugged; leaves runcinate, even. Root biennial. Flowers racemed, small, yellow.—Native of the Pyrenees, Mount Cenis, the Alps of the Vaudois and di Viu. There is a variety of this species.—Native of the coast of Uneglia, the descent of the Col di Tenda and the following mountains towards Nice, &c.

The remaining species of this genus are *Sinapis pubescens*, *hispida*, *Chinensis*, *juncea*, *allioni*, *erucoides*, *cernua*, *Hispanica*, *Japonica*, *incana*, *frutescens*, *radicata* and *lævigata*.

Propagation and Culture.—All the species, when they are weeds among corn, being annuals, may be destroyed, or at least checked, by spring-feeding with sheep, or by weeding with the hook, to prevent their flowering. The seed will lie in the ground, till turned up within the sphere of vegetation; by which means they may be destroyed on fallows.

White mustard is chiefly cultivated in gardens for a salad herb in the winter and spring. For this purpose sow the seeds very thick in drills, upon a warm border, or in very cold weather upon a moderate hot-bed.

Common mustard is cultivated only for the seeds, which should be sown in the same way as those of the preceding, and treated in the same manner, only allowing the plants twice as much room, or hoeing them out to the distance of eighteen inches.

The other sorts are cultivated only for variety, and may be treated in the same way.

SINAPISIS, a word used by some writers as a name for Armenian bole.

SINAPISM [σινάπισμος, Gr.], in Pharmacy, a cataplasm formed of equal parts of mustard seed and linseed meal.

SINAPISTRUM, in Botany, Tourn. 231. t. 116, a name of Hermann's, alluding to the resemblance of the plant, or at least of its pods, to *Sinapis*, or Mustard. See **CLEOME**.

SINARA, the name of the male dancers, who according to the mythology of the Hindoos, amuse their god Indra regent of the firmament.

SINARUCO, or **SINARUCA**, a large river of New Granada, in the province of San Juan de los Llanos, which rises at the foot of the snowy desert of Chiggas, in the mountains of Bogota. It receives an accession to its waters from the overflowings of the Apure and the Arauca, and enters the Orinoco between the Capanapa and the Meta.

SINASBARIUM, in Botany, a name given by some authors to the sisymbrium, or water-mint, common in all our ditches and watery places.

SINASSE, a village of Abyssinia; 40 miles north-east of Mine.

SINAY, a large village of the Netherlands, in East Flanders, with 3400 inhabitants; 16 miles north-east of Ghent.

SINAY, a small island near the west coast of the island of Lucon. Lat. 18. 11. N. long. 120. 36. E.

SINGAPORE, or **SINGAPORA**, an island, with a town of the same name, near the south coast of Malacca, which gives name to the narrow sea called the straits of Singapura. The depth of water through these straits is generally from 16 to 17 fathoms, and the scenery along the shores is highly beautiful. The port of Singapore is extremely fine, and through its straits pass multitudes of vessels from various countries. Sir Stamford Raffles formed a British settlement there in 1819, which is so rapidly increasing that it promises to eclipse the

older one of Pulo-fenang, and indeed to become one of the greatest emporiums of the Eastern world. Its being a free port, of course conduces as much to its success as its beauty and situation. Lat. 1. 12. N. long. 103. 30. E.

SIN-CARPOU, a port of Chinese Tartary; 555 miles east-north-east of Peking.

SINCE, *conj.* [formed by contraction from *sithence*, or *sith thence*, from *sith*, Saxon.] Because that.

Since truth and constancy are vain,
Since neither love, nor sense of pain,
Nor force of reason can persuade,
Then let example be obey'd.

Granville.

From the time that.—He is the most improved mind *since* you saw him that ever was. *Pope.*

SINCE, *adv.* Ago; before this.—A law was made no longer *since* than the twenty-eighth of Henry the eighth. *Davies.*

SINCE, *preposition.* After; reckoning from some time past to the time present.—He *since* the morning hour set out from heaven. *Milton.*

SINCENY, a small town of France, department of the Aisne, on the Oise, near Chauny, with a large manufacture of stoneware.

SINCE'RE, *adj.* [*sincerus*, Lat.; *sincere*, Fr.] Unhurt; uninjured.

He try'd a tough well-chosen spear;
The inviolable body stood *sincere*.

Dryden.

Pure; unmingled.

Pardon my tears, 'tis joy which bids them flow;
A joy which never was *sincere* till now;
That which my conquest gave, I could not prize,
Or 'twas imperfect till I saw your eyes.

Dryden.

Honest; undissembling; uncorrupt.

This top-proud fellow,
Whom from the flow of gall I name not, but
From *sincere* motions by intelligence,
I do know to be corrupt.

Shakespeare.

SINCE'RELY, *adv.* Perfectly; without alloy.

Joy shall overtake us as a flood,
When every thing that is *sincerely* good
And perfectly divine,

With truth, and peace, and love, shall ever shine. *Milton.*

Honestly; without hypocrisy; with purity of heart.—The purer and perfecter our religion is, the worthier effects it hath in them who stedfastly and *sincerely* embrace it. *Hooker.*

SINCE'RENESS, *s.* Sincerity. *Unused.*

SINCE'RITY, *s.* [*sincerité*, French.] Honesty of intention; purity of mind.—Jesus Christ has purchased for us terms of reconciliation, who will accept of *sincerity* instead of perfection; but then this sincerity implies our honest endeavours to do our utmost. *Rogers.*—Freedom from hypocrisy.

In thy consort cease to fear a foe;
For these she feels *sincerity* of woe.

Pope.

SINCIPUT, in Anatomy, the fore-part of the head, in opposition to occiput.

SINCLAIR'S BAY, a bay on the east coast of Scotland, in the county of Caithness. Lat. 58. 28. N. long. 2. 58. W.

SINCLAIR'S ROCKS, four small rocky islets off the coast of New Holland, included by Captain Flinders in Nuyt's archipelago.

SINCLAIRTOWN, a village of Scotland, in Fifeshire, immediately adjoining Pathhead, containing in 1811, 947 inhabitants, who are mostly weavers.

SIND, in Agriculture, provincially to rinse or wash out, as a milking pail, dish, &c.

SINDANGAN BAY, a bay on the north-west coast of Mindanao, extending from north to south about 100 miles. Lat. 8. 15. N. long. 123. 5. E.

SINDE,

SINDE, an extensive province of Hindostan, formerly included in that of Moultan, and situated on both sides of the river Indus, lying principally between the latitudes of 24. and 27. N. This country bears a very striking resemblance to Egypt. It consists of a level plain, with a noble river fertilising the banks as far as the inundation extends, after which the face of the earth becomes a sandy desert, beyond which rises a range of barren mountains. During the months of June, July and August, while the rains are falling in other parts of India, the sky becomes overcast with clouds; but it is seldom that the rain falls. During these months the thermometer ranges from 90° to 100°; but in the northern parts it is cool from August to March. The islands in the Delta of the Ganges are composed of sand, and are covered with a prickly shrub, very nourishing to camels, on which account a great number are bred in this district. The cultivation in Sinda depends on the proper management of the irrigation by means of canals and drains from the river, from which the water is frequently raised by wheels. The produce is sugar, indigo and all kinds of grain; they have also extensive pasturage; but agriculture and commerce have both much declined since the accession of the present rapacious rulers of Sinda, whose government is that of military despotism; and their revenues are supposed not to exceed 525,000*l.* per annum. The principal towns are Hyderabad the capital of Tatta, Bhukor and Corachie: the latter is the chief port, the river being now unnavigable for ships up to Tatta, and Lary or Lahary Bunder, having fallen to decay, in consequence of the impediments in the navigation. Sinda produces but few articles of commerce. Its exports are confined to rice, butter, pot-ash, hides, saltpetre, assafœtida, frankincense, indigo, horses and camels. Its imports are sugarcandy, spices, pepper, cocoa-nuts, ivory, metals of all kinds, Bengal and China silks, porcelain and pearls. The present rulers of Sinda do not keep up a standing army, but there are 42 tribes who hold their lands on a military tenure, and are obliged to furnish a certain number of cavalry when called on, by which means a numerous army is shortly collected. They have also a considerable number of fortresses dispersed throughout the country, and garrisoned by local troops. The natives of Sinda are now mostly Mahometans of the Soony sect. The men are generally of a middle size, well made, and more robust than those of the South of India. The women are also much fairer, and some of them handsome.

Of the ancient history of Sinda, little is known from the period when it was overrun by the Greeks under Alexander, till about the middle of the 6th century. It was then governed by a dynasty who bore the title of Sasee, whose dominions are said to have extended as far north as Cabul, and to the south-east as far as Surat. During the reign of Suheer Sing, an army of Persians invaded Sinda, and having killed the rajah in a general engagement, returned home loaded with plunder and captives. After three successive reigns, the dynasty of Sasee was put an end to by a Brahmin named Chuch, who mounted the throne, and is said to have died in the year 671. He was quietly succeeded by his son Daher, but his repose was soon disturbed by an invasion of Arabs, who are said to have been instigated by an affront offered to the dignity of the khalif. This event took place in A. D. 712; the Arabs were commanded by Mohammed Ben Kasim; a general engagement took place, the rajah was killed, and his troops entirely routed. From this period till the end of the 10th century, Sinda was governed by a viceroy nominated by the khalifs; but during the reign of Kadir Billah, he found it requisite to withdraw the troops from Sinda, for the defence of his own dominions. On this event, Sinda was for many years the scene of extreme anarchy and confusion, owing to the numerous competitors for the sovereignty, till at length the Hindoo family of Soomrah acquired the superiority over all their rivals, and became masters of the southern districts, while Moultan and the northern parts became subject to the Afghans. The Soomrah dynasty were succeeded in the beginning of the 14th century, by a Hindoo, who took the title of Jam, the

fourth person in succession from whom was converted to the Mahometan faith, and took the title of Salah addeen, the purifier of religion. One of his successors named Jam Babeenah was taken prisoner by the army of Feroze III., emperor of Delhi, in the year 1364, but was permitted to govern Sinda as viceroy of the Afghan monarch; which system continued under their respective successors, till the beginning of the 16th century, when the throne of Hindostan was transferred to the Moguls. On this event, Sinda was taken possession of by a Mahometan named Meerza Eesa Toorkhan, under the modest title of nabob. His successors continued to pay tribute to the Moguls, till the decline of their empire, when a tribe of Arabian descent obtained the superiority in Sinda. They were styled the Kulora or Calore nabobs, and paid or withheld the tribute, according to the exigency of the case. In 1739, all the territories west of the river Indus were ceded by the emperor Mohammed Shah, to the Persian usurper Nadir Shah. The assassination of that person in the year 1747, liberated the rulers of Sinda from their allegiance to Persia, and they again nominally professed themselves subjects of the court of Delhi. In 1756, the feeble emperor of Hindostan, Alumgeer II. made over the provinces of Sinda and Punjab, to the Afghan prince Timour, as the dower of his daughter; but political events did not permit the Afghans to take possession. In the month of June 1779, a Mahometan tribe of Balooch origin, called Talpoories, rebelled against the authority of the Kulora nabob of Sinda, and after putting some hundreds of his adherents to death, compelled him to flee to Cabul. Timour Shah immediately dispatched an army to reinstate the nabob in his rights, in which they succeeded without difficulty; but no sooner had the Afghans returned home, than the Talpoories again rebelled and were victorious. In consequence of this success, they were enabled to raise a considerable force, and to set the Afghans at defiance. It was not till the year 1786, that Timour Shah again attempted to interfere with the politics of Sinda: the Afghans were, however, completely routed; after which a negotiation was set on foot, which terminated in the Sindian chiefs acknowledging themselves feudatories of Cabul, and agreeing to pay an annual tribute, while the Shah issued a commission to Futteh Aly and his three brothers, constituting them Ameer, or rulers of Sinda, on his behalf. A little more than three years elapsed before the Ameer declined paying any tribute, and the Afghans were not then at leisure to enforce it. As soon as Zeman Shah found himself firm on the throne of his father, he marched in the year 1793, with a powerful army, to the boundaries of Sinda; but finding the Ameer very powerful, he accepted 350,000*l.*, being a quarter of his demand, and returned to his own dominions. The frequent revolutions at the court of Cabul, enabled the Sindians to accumulate their riches and strength; and it was not till 12 years afterwards that they could be compelled to pay a further tribute of about 400,000*l.* On the nomination by Timour Shah in 1786, of Futteh Aly to the supreme authority of Sinda, that chief made over extensive tracts of country to different branches of his own family who had assisted him in usurping the government, and these chiefs are now become independent of the supreme authority. On the death of Futteh Aly, the three remaining brothers agreed to govern the province conjointly, and that their successors should continue the same system. The whole of the revenue, amounting to about 460,000*l.*, was divided in four shares; two of which were assigned to Ghoolam Aly, the eldest, on condition of his paying the permanent civil and military expenses; each of the other brothers received a share. In 1812, Ghoolam Aly was killed by accident, on which event his son, took the lower seat in the triumvirate, and the two brothers ascended a step each. It is difficult to conjecture how long this very peculiar system of government may endure, but at present the members appear to act with great concord and unanimity. The total amount of the revenues of Sinda may be calculated at 700,000*l.* per annum; but as the chiefs are gradually extending their territories, they are supposed to be increasing. In the strong fortress of Amerkote,

kote, situated in a desert, 30 miles east of the Indus, they have placed all their treasures. The tribute to Cabul, is about 40,000*l.* per annum, but is never paid unless enforced; so that five-sixths of the amount is still due. In the year 1808, the Bombay government sent an embassy to the Ameers of Sinde; and a native agent, or *chargé d'affaires*, resides at Hyderabad, on the part of the East India Company.

SINDE, a river of Hindostan. This river has its rise in the province of Malwah, and after a winding course, falls into the Jumna; 7 miles below the town of Calpie.

SINDE SAGOR, a district of Hindostan, province of Lahore, belonging to the Seiks. It is principally situated between the 31st and 32d degrees of northern latitude. It is bounded on three sides by the rivers Indus, Ravy, and Jhy-lum, and on the north by a range of mountains. Under a good government it would be extremely productive.

SINDELFFINGEN, a small town of the south-west of Germany, in Wirtemberg; 9 miles south-west of Stutgard. It contains 3000 inhabitants, and was once the seat of an Augustinian monastery, the funds of which were applied in 1477, to the establishment of the university of Juingen. The environs are uncommonly fertile.

SINDERBY, a hamlet of England, North Riding of Yorkshire; 4 miles west-by-south of Thirsk.

SINDI, a people of Asiatic Sarmatia, in the number of those who inhabited the Cimmeric Bosphorus. *Strabo*.

SINDIA, a town of Asia Minor, in Lycia. *Steph. Byz.*

SINDIANI, a Scythian people who inhabited the vicinity of the Palus Mæotis, according to Lucian.

SINDION, a village of Lower Egypt, on the western bank of the Nile; 4 miles north of Faoua.

SINDKERA, a town of Hindostan, province of Khandesh, belonging to the Mahrattas. Lat. 21. 11. N. long. 74. 40. E.

SINDON, *s.* [Most take *sidinim*, (Heb.) from whence the word *indon* seems to come, for such linen cloths as the whole body may be wrapped in. *Patrick on Judges.*] A fold; a wrapper.—There were found a book and a letter, both written in fine parchment, and wrapped in *indons* of linen. *Bacon*.—Others say the word properly signifies a shroud, and is thus used by the evangelist to denote the linen cloth in which Joseph of Arimathea wrapped the body of Jesus, after its embalment, &c.

“ Ridebis ventos, hoc munere tectus, et imbres
Nec sic in Syria Sindone tectus eris.” Mart. l. iv. ep. 19.

SINDON, in old Surgery, was a little round piece of linen, or silk, or lint, used in dressing the wound after trepanning.

SINDOURY, a town of Hindostan, province of Gund-waneh, belonging to the Nagpore rajah. Lat. 22. 7. N. long. 82. 40. E.

SINDSCAR. See SINJAR.

SINE, *s.* [*sinus*, Latin.] A right *sine*, in geometry, is a right line drawn from one end of an arch perpendicularly upon the diameter drawn from the other end of that arch; or it is half the chord of twice the arch. *Harris*.—Whatever inclinations the rays have to the plane of incidence, the *sine* of the angle of incidence of every ray, considered apart, shall have to the *sine* of the angle of refraction a constant ratio. *Cheyne*.

SINE DIE, in Law. When judgment is given against the plaintiff, he is said to be *in misericordia pro falso clamore suo*; and for the defendant, it is said, *eat inde sine die*; i. e. he is dismissed the court.

The phrase is also used in parliament, for the adjournment of any debate, without fixing the day when it shall come on again; which is looked upon as a genteeler dismissal of the thing in question.

SINECURE, *s.* [*sine* without, and *cura*, care, Latin.] An office which has revenue without any employment.

No simony nor *sinecure* is known,
There works the bee, no honey for the drone. *Garth*.

SINEGAR CREEK, a river of the United States, in Maryland, which runs into the Potomac. Lat. 39. 8. N. long. 77. 33. W.

VOL. XXIII. No. 1567.

SINEMAHONING, a north-western branch of the Susquehanna river.

SINEPUXENT, a long and narrow bay on the south-east coast of Maryland and Virginia, in the United States, extending north-north-east and south-south-west, parallel with the sea coast. It is separated from the Atlantic by Asatigue, a long and narrow island. This inlet is situated in about Lat. 38. 11. 30. N.

SINES, a small sea-port in the south-west of Portugal, province of Alentejo. It contains 1400 inhabitants, and has some fisheries; but is more noted for having given birth to the celebrated navigator Vasco de Gama; 40 miles south of Setubal. Lat. 37. 57. 30. N. long. 8. 44. 45. W.

SINEU, a town of the Spanish dominions, in the interior of the island of Majorca; 20 miles east of Palma. It is situated in one of the finest and richest districts of the island, and contains 5500 inhabitants, with a handsome church, a convent, and a monastery. It was a town so far back as the time of the Romans; afterwards the residence of the Moorish princes, and finally of the Christian kings of Majorca.

SINEW, *s.* [ἰνῆψ, ἰνῆψα, Sax.; *sinewen*, Dutch.] A tendon.

The torrent roar'd and we did buffet it
With lusty *sinews*.

Shakspeare.

Applied to whatever gives strength or compactness: as, money is the *sinews* of war.—Some other *sinews* there are, from which that overplus of strength in persuasion doth arise. *Hooker*.—Nerve. *But this is improper.*

The feeling power, which is life's root,
Through every living part itself doth shed

By *sinews*, which extend from head to foot;
And, like a net, all o'er the body spread.

Davies.

To SINEW, *v. a.* To knit as by sinews. *Not in use, but elegant.*

Ask the Lady Bona for thy queen;
So shalt thou *sinew* both these lands together.

Shakspeare.

SINEW RIVER, a river of North America, which rises in the Rocky Mountains, between the 55th and 56th degrees of north latitude, and falls into the Peace river, after a course of about 100 miles.

SINEWED, *adj.* Furnished with sinews.—Strong *sinewed* was the youth, and big of bone. *Dryden*.—Strong; firm; vigorous.

He will the rather do it when he sees
Ourselves well *sinewed* to our defence.

Shakspeare.

SINEWLESS, *adj.* Having no sinews; without power or strength. *Huloet*.—All that ever was said against these helps to beauty, seems to many women weak and *sinewless*. *Bp. Taylor*.

SINEW SHRUNK, *adj.* A horse is said to be *sinew-shrunk* when he has been overridden, and so fatigued that he becomes gauntbellied by a stiffness and contraction of the two sinews which are under his belly. *Farrier's Dict.*

SINEWY, *adj.* Consisting of a sinew; nervous. The nerves and sinews are in poetry often confounded.

The *sinewy* thread my brain lets fall
Through every part,
Can tie those parts, and make me one of all.

Donne.

Strong; nervous; vigorous; forcible.

And for thy vigour,
Bull-bearing Milo his addition yields
To *sinewy* Ajax.

Shakspeare.

The northern people are large, fair-complexioned, strong, *sinewy*, and courageous. *Hale*.

SINFARS, a small town of Portugal, in the province of Beira, with 2500 inhabitants.

SINFAN, a hamlet of England, in Derbyshire; 3½ miles south-by-west of Derby.

SINFUL, *adj.* [ἰνῆψ, Saxon.] Alien from God; not holy; unsanctified.

Drive out the *sinful* pair,
From hallow'd ground the unholy.

Milton.

Wicked ; not observant of religion ; contrary to religion.
It is used both of persons and things.

Thrice happy man, said then the father grave,
Whose staggering steps thy steady hand doth lead,
And shews the way his *sinful* soul to save,
Who better can the way to heaven aread ?

Spenser.

SINFULLY, *adv.* Wickedly ; not piously ; not according to the ordinance of God.

All this from my remembrance brutish wrath
Sinfully pluckt, and not a man of you
Had so much grace to put it in my mind.

Shakspeare.

SINFULNESS, *s.* Alienation from God ; neglect or violation of the duties of religion ; contrariety to religious goodness.—Peevishness, the general fault of sick persons, is equally to be avoided for the folly and *sinfulness*. *Wake.*

To SING, *v. n.* preterite *I sang*, or *sung* ; participle *pass. sung*. [*ſingān*, Saxon ; *ſingia*, Icelandic ; *ſinghen*, Dutch.] To form the voice to melody ; to articulate musically.

They rather had beheld
Dissentious numbers pestering streets, than see
Our tradesmen *singing* in their shops, and going
About their functions friendly.

Shakspeare.

To utter sweet sounds inarticulately.—You will sooner
bind a bird from *singing* than from flying. *Bacon.*—To
make any small or shrill noise ; to tell in poetry.

Bid her exalt her melancholy wing,
And rais'd from earth, and sav'd from passion, *sing*
Of human hope by cross event destroy'd,
Of useless wealth and greatness unenjoy'd.

Prior.

To SING, *v. a.* To relate in poetry.

I sing the man who Judah's sceptre bore,
In that right hand which held the crook before.

Cowley.

Arms and the man *I sing*. *Dryden.*—To celebrate ; to
give praises to, in verse.

The last, the happiest British king,
Whom thou shalt paint or I shall *sing*.

Addison.

To utter harmoniously.

Inces, caddisses, cambricks, lawns, why
He *sings* them over as they were gods and goddesses.

Shakspeare.

SING, or SIGN, a small town and fortress of Austrian Dalmatia, on a steep hill called Vukuschitza. It was built by the Turks in 1686, but taken by the Venetians, who strengthened its fortifications ; 18 miles north of Spalatro, and 9 miles north of Clissa.

SINGAN, a city of China, of the first rank, in the frontier province of Shan-si. It formed at one time the imperial residence, and is still one of the largest and finest cities in China. Being situated on the Tartar frontier, it is the rendezvous of the troops appointed to defend the empire on its north-western side. The inhabitants are taller and more robust than in the other provinces. The mules of the surrounding country are so much esteemed, that they sell for a high price at Pekin. Lat. 35. 14. N. long. 108. 29. E.

SINGAN, a town of China, of the third rank, in Pechelée.

SINGBHOOM, a district of Hindostan, province of Orissa, situated between the 22d and 23d degrees of northern latitude. It is extremely hilly and full of woods ; consequently badly cultivated, and far from populous. It belongs to various Hindoo chiefs, who are tributary to the Mahrattas, but seldom pay without compulsion. Many of the inhabitants are said to make robbery their profession ; and they used formerly to make predatory excursions into Bengal.

SINGBHOOM, the capital of the abovementioned district, belonging to a native chieftain, who is tributary to the rajah of Nagpore. Lat. 22. 37. N. long. 85. 55. E.

To SINGE, *v. a.* [*ſrængān*, Saxon ; *ſengen*, Teut.] To scorch ; to burn slightly or superficially.

They bound the doctor,
Whose beard they have *sing'd* off with brands of fire.

Shakspeare.

I singed the toes of an ape through a burning-glass, and he never would endure it after. *L'Estrange.*

SINGE, *s.* A slight burn.

SINGEN, a village of the south-west of Germany, in Baden, adjacent to Hohentwiél, and 17 miles west-north-west of Constance. Population 1000.

SINGEPOORAM, a town of Hindostan, province of Orissa. It belongs to a Hindoo chief, who is tributary to the Nagpore Mahrattas. Lat. 19. 35. N. long. 83. 24. E.

SINGER, *s.* One that sings ; one whose profession or business is to sing.—His filching was like an unskilful *singer*, he kept not time. *Shakspeare.*

SINGHEA, or SINGEE, a town of Hindostan, province of Bahar, district of Hajypore. It is situated on the eastern bank of the river Gunduck, and is surrounded by land, which produces the finest saltpetre. The East India Company have long had a factory here, and now monopolize the whole of that article throughout their provinces. Near to Singhea is the site of an ancient city, supposed to have been Lukhore, where there stands a remarkable pillar, with a Sanscrit inscription, stating that it was built by a person who, having no children, wished to hand down his name to posterity. Lat. 25. 52. N. long. 85. 15. E.

SINGHERICONDA, a town of the south of India, province of the Carnatic, and district of Ongole. Lat. 15. 14. N. long. 80. 2. E.

SINGING, *s.* Act of modulating the voice to melody ; musical articulation ; utterance of sweet sounds.—The time of the *singing* of birds is come. *Cantic.*

SINGING-BOOK, *s.* A book of tunes.—When shall we hear a new set of *singing-books*, or the viols ? *Brewer.*

SINGINGING, a small island in the Eastern seas, near the east coast of the island of Nassau. Lat. 3. 50. S. long. 100. 2. E.

SINGINGLY, *adv.* With a kind of tune.—Counterfeite courtiers which simper it in outward shewe, making pretie mouthes, and marching with a stalking pace like cranes, spetting over their own shoulder, speaking lispingly, and answering *singingly*, with perfumed gloves under their girdles ! *North* (1575).

SINGING-MAN, *s.* One who is employed to sing ; a term still used in our cathedrals.—The prince broke thy head for liking his father to a *singing-man* of Windsor. *Shakspeare.*

SINGING-MASTER, *s.* One who teaches to sing.—He employed an itinerant *singing-master* to instruct them rightly in the tunes of the Psalms. *Addison.*

SINGLE, *adj.* [*ſingulus*, Latin.] One ; not double ; not more than one.—The words are clear and easy, and their originals are of *single* signification without any ambiguity. *South.*—Particular ; individual.—If one *single* word were to express but one simple idea, and nothing else, there would be scarce any mistake. *Watts.*—Not compounded.—As simple ideas are opposed to complex, and *single* ideas to compound, so propositions are distinguished : the English tongue has some advantage above the learned languages, which have no usual word to distinguish *single* from simple. *Watts.*—Alone ; having no companion ; having no assistant.

Servant of God, well hast thou fought
The better fight, who *single* hast maintain'd
Against revolted multitudes the cause
Of truth.

Milton.

Unmarried.—Is the *single* man therefore blessed ? no : as a walled town is more worthy than a village, so is the forehead of a married man more honourable than the bare brow of a bachelor. *Shakspeare.*—Not complicated ; not duplicated.—To make flowers double is effected by often removing them into new earth ; as, on the contrary, double flowers, by

by neglecting and not removing, prove *single*. *Bacon*.—Pure; uncorrupt; not double minded; simple. *A scriptural sense*.—The light of the body is the eye; if thine eye be *single*, thy whole body shall be full of light. *St. Matt*.—That in which one is opposed to one.

He, when his country, threaten'd with alarms,
Shall more than once the Punick bands affright,
Shall kill the Gaulish king in *single* fight. *Dryden*.

Singular; particular; small.

They will scarce

Serve to beg *single* beer. *Beaum. and Fl.*

Weak; silly.—Is not your voice broken? your wind short? your chin double? your wit *single*? *Shakspeare*.—He utters such *single* matter, in so infantly a voice. *Beaum. and Fl.*

To SINGLES, *v. a.* To choose out from among others.

I saw him in the battle range about,
And how he *singled* Clifford forth. *Shakspeare*.

To sequester; to withdraw.—Yea simply, saith Basil, and universally, whether it be in works of nature, or of voluntary choice, I see not any thing done as it should be, if it be wrought by an agent *singling* itself from consorts. *Hooker*.—To take alone.—Many men there are, than whom nothing is more commendable when they are *singled*; and yet, in society with others, none less fit to answer the duties which are looked for at their hands. *Hooker*.—To separate.—Hardly they herd, which by good hunters *singled* are. *Sidney*.

SINGLEBOROUGH, a hamlet of England, in Buckinghamshire; 3 miles north of Winslow.

SINGLENESS, *s.* Not duplicity or multiplicity; the state of being only one.—Simplicity; sincerity; honest plainness.—It is not the deepness of their knowledge, but the *singleness* of their belief, which God accepteth. *Hooker*.—State of being alone.

Hear next, that Athelwold's sad widow swears
Never to violate the holy vow
She to his truth first plighted; swears to bear
The sober *singleness* of widowhood
To her sad grave. *Mason*.

SINGLETON, a parish of England, in Sussex; 5½ miles south-by-west of Midhurst.

SINGLETON, a township of England, in Lancashire; 2½ miles east-by-south of Poulton.

SINGLY, *adv.* Individually; particularly; only; by himself.

Look thee, 'tis so; thou *singly* honest man,
Here take: the gods out of my misery
Have sent thee treasure. *Shakspeare*.

Without partners or associates.

Belinda

Burns to encounter two adventurous knights,
At ombre *singly* to decide their doom. *Pope*.

Honestly; simply; sincerely.

SINGROWLA, a district of Hindostan, province of Gundwaueh, situated about the 24th degree of northern latitude, and bounded on the east by the province of Bahar. It is mountainous, and abounds with woods; consequently poorly cultivated, and thinly inhabited. It is governed by Hindoo chieftains, who are tributary to the Nagpore Maharrattas. Some of the hills produce iron, and others of them contain several mythological excavations and images, but very inferior to those of Ellora, or the south of India. The principal of the native chieftains is the rajah of Shahpoor.

SING-SING, a village and landing place of the United States, in West Chester county, New York, finely situated on a rising bank on the Hudson, where the river is about three miles wide; 36 miles north of New York.

SING-SONG, *s.* A contemptuous expression for bad singing.—Campanella tells us, that the German and Gallican heresy began with *sing-song*, and is carried on by comedy and tragedies. *Rymer*.

SINGULAR, *adj.* [*singulier*, Fr.; *singularis*, Latin.] Single; not complex; not compound.—That idea which represents one particular determinate thing is called a *singular* idea, whether simple, complex, or compound. *Watts*.—[In grammar.] Expressing only one; not plural.—If St. Paul's speaking of himself in the first person *singular* has various meanings, his use of the first person plural has a greater latitude. *Locke*.—Particular; unexampled.

So *singular* a sadness

Must have a cause as strange as the effect. *Denham*.

Having something not common to others. It is commonly used in a sense of diapprobation, whether applied to persons or things.

His zeal

None seconded, as *singular* and rash. *Milton*.

Alone; that of which there is but one.—These busts of the emperors and empresses are all very scarce, and some of them almost *singular* in their kind. *Addison*.

SINGULAR, *s.* Particular; single instance.—We cannot o'er run through all *singulars*. *More*.

SINGULARIST, *s.* One who affects singularity.

SINGULARITY, *s.* [*singularité*, Fr.] Some character or quality by which one is distinguished from all, or from all, from most others.—Pliny addeth this *singularity* to that soil, that the second year the very falling down of the seeds yieldeth corn. *Ralegh*.—Any thing remarkable; a curiosity; uncommon character or form.—I took notice of this little figure for the *singularity* of the instrument: it is not unlike a violin. *Addison*.—Particular privilege or prerogative.—Catholicism, which is here attributed unto the church, must be understood in opposition to the legal *singularity* of the Jewish nation. *Pearson*.—Character or manners different from those of others.—The spirit of *singularity* in a few ought to give place to public judgment. *Hooker*.

To SINGULARIZE, *v. a.* [*se singulariser*, French.] To make single.

SINGULARLY, *adv.* Particularly; in a manner not common to others.—Solitude and singularity can neither daunt nor disgrace him, unless we could suppose it a disgrace to be *singularly* good. *South*.—So as to express the singular number.—Tertullian spake of bishops by succession, which were still *singularly* one by one. *Bp. Morton*.

SINGULT, *s.* [*singultus*, Latin.] A sigh.

So when her tears were stopt from either eye,
Her *singults*, blubbrings, seem'd to make them fly
Out at her oyster-mouth, and nostrils wide. *Brown*.

SINGULTUS, in Medicine, a spasmodic affection of the diaphragm, which, from the sound which accompanies it, is commonly called *hickup*. See *PATHOLOGY*.

SINGUMNERE, a district of Hindostan, province of Aurungabad, belonging to the Maharrattas. It is situated about the 20th degree of northern latitude, and, although hilly, is supposed to yield a revenue of 125,000*l.* per annum. The chief towns are Singunnere, Batowal, and Bejapore.

SINGUMNERE, the capital of the above-mentioned district, and residence of the Mahratta collector. Lat. 19. 46. N. long. 74. 40 E.

SINHOA, a small sea-port of Cochin-china. Lat. 17. N. long. 88. 14. E.

SINIA, a small river of Siberia, which falls into the Obi; 52 miles north of Beresof.

SINIGALLIA, a town of Italy, in the Ecclesiastical State, duchy of Urbino, situated on the Misa, at its influx into the Adriatic. It is well built, and surrounded with a mound and bastions, but fresh water is unfortunately scarce, and the air is, in some seasons, unhealthy; so that the population does not exceed 6200. Its cathedral, of the Corinthian order, and some other churches, are worth notice. The principal source of its wealth is its well known fair, held annually in July, and resorted to at one time by foreigners from almost all parts of Europe, but now considerably decayed. It is sometimes called Senogallia, a name derived from

from the Galli Senones; 17 miles south-east of Pesaro. Lat. 43. 43. 16. N. long. 13. 11. 45. E.

SIN-ING, a town of Corea; 25 miles east-south-east of Long-Kouang.

SIN-ING, a town of Corea; 8 miles north-east of Sing-cheou.

SINING, a city of China, of the second rank, in Chan-si. It is one of the fortified places constructed for the defence of the great wall. Lat. 36. 40. N. long. 101. 24. E.

SINISTER, *adj.* [*sinister*, Latin.] Being on the left hand; left; not right; not dexter. It seems to be used with the accent on the second syllable, at least in the primitive, and on the first in the figurative sense.

My mother's blood
Runs on the dexter cheek, and this *sinister*
Bounds in my sire's.

Shakspeare.

Bad; perverse; corrupt; deviating from honesty; unfair. —The Duke of Clarence was soon after by *sinister* means made clean away. *Spenser.*—[*sinistre*, Fr.] Unlucky; inauspicious. The accent is here on the second syllable.

Tempt it again; that is thy act, or none:
What all the several ills that visit earth,
Brought forth by night, with a *sinister* birth,
Plagues, famine, fire, could not reach unto,
The sword, nor surfeits, let thy fury do.

B. Jonson.

SINISTER-HANDED, *adj.* Left-handed; unlucky.
That which still makes her mirth to flow,
Is our *sinister-handed* woe.

Lovelace.

SINISTERLY, *adv.* Perversely; corruptly; unfairly.
—Persons which most *sinisterly* and maliciously labour.
Injunctions of 2. Eliz.

SINISTRUM, a sect of ancient heretics, thus called, because they held the left hand in abhorrence.

SINISTROUS, *adj.* [*sinister*, Lat.] Absurd; perverse; wrong-headed: in French *gauche*.—Many, who are *sinistrous* unto good actions, are ambidexterous unto bad.

Brown.

SINISTROUSLY, *adv.* With a tendency to the left.—Many in their infancy are *sinistrously* disposed, and divers continue all their life left-handed, and have but weak and imperfect use of the right. *Brown.*—Perversely; absurdly.—Fall not—to accuse, calumniate, backbite, or *sinistrously* interpret others. *Brown.*

SINJAR, a range of lofty mountains, situated in Diarbekir, in Asiatic Turkey, on which stood the ancient fortress of Sangara, surrendered to the Persians by the pusillanimous successor of Julian. They are occupied and infested by a tribe called Yezedi, the mortal enemies of the Turks, and who have been completely subdued by them. They abound in pasturage, and yield grain sufficient for the use of the rude inhabitants. These mountains occur in the route between Mosul and Merdin.

To SINK, *v. n. pret.* *I sunk*, anciently *sank*; part. *sunk* or *sunken*. [*rencan*, *rencan*, Saxon; *sinken*, German; *sigcan*, M. Goth. from *sigan*, to subside, to fall down. Junius, and Serenius.] To fall down through any medium; not to swim; to go to the bottom.

In with the river *sunk*, and with it rose,
Satan, involv'd in rising mist; then sought
Where to lie hid.

Milton.

To fall gradually.—The arrow went out at his heart, and he *sunk* down in his chariot. 2 *Kings.*—To enter or penetrate into any body.—David took a stone and slang it, and smote the Philistine, that the stone *sunk* into his forehead. 1 *Sam.*—To lose height; to fall to a level.

In vain has nature form'd
Mountains and oceans to oppose his passage;
He bounds o'er all, victorious in his march;
The Alps and Pyreneans *sink* before him.

Addison.

To lose or want prominence.—What were his marks?—A lean cheek, a blue eye and *sunken*. *Shakspeare.*—To be overwhelmed or depressed.

Our country *sinks* beneath the yoke;
It weeps, it bleeds, and each new day a gash
Is added to her wounds.

Shakspeare.

To be received; to be impressed.—Let these sayings *sink* down into your ears. *St. Luke.*—Truth never *sinks* into these men's minds, nor gives any tincture to them. *Locke.*
—To decline; to decrease; to decay.

Then down the precipice of time it goes,
And *sinks* in minutes which in ages rose.

Dryden.

To fall into any state worse than the former; to tend to ruin.

Nor urg'd the labours of my lord in vain,
A *sinking* empire longer to sustain.

Dryden.

To SINK, *v. a.* To put under water; to disable from swimming or floating.—A small fleet of English made an hostile invasion, or incursion, upon their havens and roads, and fired, *sunk*, and carried away ten thousand ton of their great shipping. *Bacon.*—To delve; to make by delving.—At Saga in Germany they dig up iron in the fields by *sinking* ditches two feet deep, and in the space of ten years the ditches are digged again for iron since produced. *Boyle.*
—To depress; to degrade.—Trifling painters or sculptors bestow infinite pains upon the most insignificant parts of a figure, 'till they *sink* the grandeur of the whole. *Pope.*—To plunge into destruction.

Heaven bear witness,
And if I have a conscience, let it *sink* me,
Ev'n as the axe falls, if I be not faithful.

Shakspeare.

To make to fall.—These are so far from raising mountains, that they overturn and fling down some before standing, and undermine others, *sinking* them into the abyss. *Woodward.*—To bring low; to diminish in quantity.

When on the banks of an unlook'd-for stream,
You *sunk* the river with repeated draughts,
Who was the last in all your host that thirsted?

Addison.

To crush; to overbear; to depress.—That Hector was in certainty of death, and depressed with the conscience of an ill cause: if you will not grant the first of these will *sink* the spirit of a hero, you'll at least allow the second may. *Pope.*—To diminish; to degrade.—They catch at all opportunities of ruining our trade, and *sinking* the figure which we make. *Addison.*—To make to decline. To suppress; to conceal; to invert.—If sent with ready money to buy any thing, and you happen to be out of pocket, *sink* the money, and take up the goods on account.

Swift.

SINK, *s.* [unc, Saxon, a heap, a collection, which Serenius conjectures to be derived from the Su. Goth. *sanka*, to collect. Our word is rather perhaps from *rencan*, Sax., *sinken*, Germ. to go to the bottom.] A drain; any place where corruption is gathered.

Should by the cormorant belly be restrain'd,
Who is the *sink* o' the body.

Shakspeare.

Gather more filth than any *sink* in town. *Granville.*
Our soul, whose country's heav'n, and God her father,
Into this world, corruption's *sink*, is sent.

Donne.

SINKEL, a town of Sumatra, situated on a river of the same name. This town stands on the west coast, about 40 miles from the sea, and the natives carry on a good deal of trade in benjamin, camphor, bees' wax, and gold dust, which are frequently adulterated. Their business is not transacted at the town, but at a small woody island called South Leaga. They have the character of being treacherous. Lat. 2. 15. N. long. 98. 2. E.

SINKEL, a river of Sumatra, the largest on the western coast, which rises in the mountains of Dalholi, in the territory of Achin, and, after a long course, empties itself into the sea, by a mouth three quarters of a mile wide. It overflows a considerable portion of the low country during the rains, but there is a bar at the mouth, with shallow water.

SINKING

SINKING SPRING, or **MIDDLETOWN**, a post village of the United States, in Highland county, Ohio.

SINKOUAN, a town on the west coast of Sumatra. Lat. 1. 12. N. long. 98. 13. E.

SINLESS, *adj.* [mleap, Sax.] Exempt from sin.

Infernal ghosts and hellish furies round
Environ'd thee; some howl'd, some yell'd, some shriek'd,
Some bent at thee their fiery darts, while thou
Satt'st unappall'd in calm and *sinless* peace. *Milton.*

SINLESSNESS, *s.* Exemption from sin.—We may then admire at his gracious condescensions to those, the *sinlessness* of whose condition will keep them from turning his vouchsafements into any thing but occasions of joy and gratitude. *Boyle.*

SIN-LO, a town of China, of the third rank, in Pechelee.

SINN, a small river of Germany, which falls into the Franconian Saale, near Gemunden.

SINN, a village of Diarbekir, in Asiatic Turkey; 40 miles south-east of Diarbekir.

SINNER, *s.* One at enmity with God; one not truly or religiously good. An offender; a criminal.—Here's that which is too weak to be a *sinner*, honest water, which ne'er left man i' th' mire. *Shakspeare.*

Over the guilty then the fury shakes
The sounding whip, and brandishes her snakes,
And the pale *sinner* with her sisters takes. *Dryden.*

To **SINNER**, *v. n.* To act the part of a sinner. *Unused.*

Whether the charmer *sinner* it or saint it,
If folly grows romantic, I must paint it. *Pope.*

SINNINGTON, a parish of England, North Riding of Yorkshire; 4 miles west-north-west of Pickering.

SINO, a small sea-port on the Grain coast of Africa; 30 miles south-east of Sanguin.

SIN-OFFERING, *s.* An expiation or sacrifice for sin.—The flesh of the bullock shalt thou burn without the camp; it is a *sin-offering*. *Ex.*

SINON, a small river of Persia, in the province of Mazanderan, which falls into the Caspian; 5 miles east of Fehrabad.

SINONGI, a town of Ximo, in Japan; 20 miles south-west of Sanga.

SINOOTS, a town of Ximo, in Japan; 20 miles east of Taisero.

SINOPE, a sea-port on the northern coast of Asia, anciently the capital of Pontus, and a place of great wealth and importance. At present it is greatly reduced, and being deserted by all its Greek inhabitants, contains a population of not more than 5000. It is situated on a promontory stretching into the sea, which, on the southern side, incloses an excellent road, with docks for the Turkish imperial marine. There is still a considerable exportation of rice, fruits, hides, and timber. Lat. 41. 6. N. long. 35. E.

SINOPER, or **SINOPE**, *s.* [terra pontica, Latin.] A species of earth; ruddle. *Ainsworth.*

SINOPE, or **SENOPE**, in Heraldry, denotes *vert*, or the green colour in armories; thus called by the ancient heralds.

SINOPOLI, a small town of Italy, in the south of the kingdom of Naples, in Calabria Ultra; 5 miles south-west of Oppido.

SINOS, a small river of Brazil, in the province of Rey, which runs west into the river Grande.

SINPING, a town of China, of the third rank, in Yunan.

SINSI, a town of Corea; 30 miles north-north-east of Kingkitao.

SINSCATE, a settlement of South America, in the province of Tucuman; 36 miles north of Cordova, on the shore of the river Primero.

SINSILIN, a village of Ghilan, in Persia; 23 miles west-north-west of Reshd.

SINSIN, a village of Irak, in Persia; 120 miles north of Ispahan.

Vol. XXIII. No. 1567.

SINSO, a province of Angola, in Western Africa, to the north of Loanda.

SINTAL SHEEROS, a town of the south of India, province of the Carnatic, district of Ongole. Lat. 15. 44. N. long. 79. 18. E.

SINTON, a hamlet of England, in Worcestershire; 6 miles south-west of Worcester.

SINU, a river of the province of Carthagera, in South America, which runs north, and enters the Carribean Sea, in lat. 9. 29. N. There is a settlement of the same name on its shores.

To **SINUATE**, *v. a.* [*sinuo*, Latin.] To bend in and out.—Another was very perfect, somewhat less with the margin, and more *sinuated*. *Woodward.*

SINUATION, *s.* A bending in and out.—The human brain is, in proportion to the body, much larger than the brains of brutes, in proportion to their bodies, and fuller of anfractus, or *sinuations*. *Hale.*

SINUOSITY, *s.* The quality of being sinous.—There was no need—of any *sinuosity* or protuberance whatsoever. *Biblioth. Bibl.*

SINUOUS, *adj.* [*sinueux*, Fr., from *sinus*, Lat.] Bending in and out.—Try with what disadvantage the voice will be carried in an horn, which is a line arched; or in a trumpet, which is a line retorted; or in some pipe that were *sinuous*. *Bacon.*

SINUS, *s.* [Lat.] A bay of the sea; an opening of the land.—Plato supposeth his Atlantis to have sunk all into the sea: whether that be true or no, I do not think it impossible that some arms of the sea, or *sinuses*, might have had such an original. *Burnet.*—Any fold or opening.—There was no *sinus* or inequality, or perhaps so much as one pore left open, according to this hypothesis of the figure of the ark. In surgery a burrowing abscess. *Biblioth. Bibl.*

SINUS, in Surgery, a small canal leading down to an abscess.

SINWELL, a township of England, in Gloucestershire; 1 mile from Wooton. Population, including the adjoining village of Bradley, 1558.

SINZHEIM, a small town of the west of Germany, in Baden. Population 2200; 14 miles south-south-east of Heidelberg.

SINZHEIM, a large village of the west of Germany, in Baden. Population 1200; 7 miles south of Rastadt.

SINZIG, a small town of the Prussian province of the Lower Rhine, near the river Rhine. Population 800; 14 miles south-south-east of Bonn.

SIO, a small sea-port of Zanquebar, in Eastern Africa.

SIOCON, a town on the west coast of the island of Mindanao. Lat. 7. 25. N. long. 122. 12. E.

SION, or **SITTEN**, a small town in the south of Switzerland, the chief place of the canton called the Valais, and the see of a bishop. It stands on the banks of the Rhone, in the widest part of the valley watered by that river, and is traversed by the Sitten, a small brook which descends from an adjacent glacier. It has pleasant environs, and is tolerably well built. It contains 5000 inhabitants, and has an episcopal palace, a cathedral, several churches and monasteries, a town-house, and a public school. It cannot boast of manufactures, and its trade is only in transit from Italy to Switzerland. The town of Sion is very ancient, and, among other monuments, has several inscriptions which prove it to have been the *civitas Sedunorum* of the Romans. On the hill behind the town are three castles, one of which, called Majoria, is the usual episcopal residence, and the place of meeting of the diets of the canton. The bishop presides at these, and has, in other respects, very important privileges; 60 miles east of Geneva, and 50 south-by-west of Bern. Lat. 46. 14. 15. N. long. 7. 21. 45. E.

SION, a town and fortress of Hindostan, on the island of Bombay, situated about 9 miles from the city of that name, and at the opposite extremity of the island. The fort is situated on the top of a conical hill, where it commands the passage to the neighbouring island of Salsette, and was of great importance while the Mahrattas retained that island,

but now is of little consequence. In the vicinity of this place, a stone causeway has recently been constructed, with a draw-bridge in the centre, which now unites the two islands, and will be of great utility whenever Salsette shall be properly cultivated. Lat. 19. 7. N. long. 72. 40. E.

SION, a settlement of Peru, in the province of Caxamarquilla, on the shore of the river Guallaga.

SION, a hill of Palestine, celebrated as the site of the ancient citadel of Jerusalem.

SION was also one of the names of Mount Hermon, or rather of a chain of mountains, called Mountains of Hermon, from Mount Hermon, the principal of them.

SIONE, a river of America, which runs into Lake Erie. Lat. 42. 22. N. long. 82. 52. W.

SIOPE, a river of Brazil, which runs into the Atlantic. Lat. 3. 20. S. long. 40. W.

SIOTO. See SCOTO.

SIIOLE, a small river in the south-east of France, department of the Puy de Dome, which joins the Allier at Echerolles; 2 miles north of St. Pourçain.

SIOUT. See SIUT.

SIUOX, a powerful Indian tribe of North America, the dread of whose power is extended over all the savage tribes from the confluence of the Mississippi and the Missouri, to the Raven river on the former, and to the Snake Indians on the latter. The nation of the Sioux is supposed to amount to 10,000.

SIUOX, GREAT, a river of the United States, in Louisiana, which runs south into the Missouri, 253 miles above the Platte. It is about 110 yards wide at its confluence with the Missouri, and is navigable for 200 miles to the falls, and even beyond them.

SIUOX, LITTLE, a river of the United States, in Louisiana, which runs into the Missouri, 733 miles from the Mississippi. At its confluence it is 80 yards wide.

To SIP, *v. a.* [*sipan*, Saxon; *sippen*, Dutch.] To drink by small draughts.

Soft yielding minds to water glide away,
And sip with nymphs their elemental tea.

Pope.

To drink in small quantities.

Find out the peaceful hermitage;
The hairy gown and mossy cell,
Where I may sit and rightly spell
Of every star that heaven doth shew,
And every herb that sips the dew.

Milton.

To drink out of.

The winged nation o'er the forest flies:
Then stooping on the meads and leafy bowers,
They skim the floods and sip the purple flowers.

Dryden.

To SIP, *v. n.* To drink a small quantity.

She rais'd it to her mouth with sober grace;
Then, sipping, offer'd to the next.

Dryden.

SIP, *s.* A small mouthful.

One sip of this

Will bathe the drooping spirits in delight,
Beyond the bliss of dreams.

Milton.

SIPAPU, a river of Guiana, which enters the Orinoco near its mouth, swelled by the accession of other streams.

SIPATUBA, a small river of Brazil, in the province of Maranhão, which runs north-north-east into the Atlantic.

To SIPE, *v. n.* [*sippen*, Teut.] To ooze or drain out slowly. *North.*

SIPHANTO, or SIPHNO, an island of Greece, belonging to the Archipelago, and situated to the west of Paros. It is nearly 30 miles in length, and about 7 in breadth. It has no good harbour, but its atmosphere is pure and healthy. Its soil, where not covered with marble and granite, is of considerable fertility, producing maize and wheat; also mulberries, olives, vines, figs, and cotton. Its gold and silver mines are no longer known; but mines of iron and lead have been traced, and might be wrought under a better government. Here are several quarries of beautiful marble.

The population, about 4000, are all Greeks. The chief place, a village called Siphanto, stands on a high rock.

SIPHON, *s.* [*σιφον*; *sipho*, Lat.; *siphon*, Fr.] A pipe through which liquors are conveyed.

Beneath th' incessant weeping of these drains
I see the rocky siphons stretch'd immense,
The mighty reservoirs of harden'd chalk,
Of stiff compacted clay.

Thomson.

SIPHONANTHUS, [From *σιφον*, a siphon or tube; and *ανθος*, a flower], in Botany a genus of the class tetrandria, order monogynia, natural order of borragineæ (*Juss.*)—Generic Character. Calyx: perianth one-leafed, five-parted, wide, permanent. Corolla: one-petalled, funnel-form: tube filiform, very narrow, several times as long as the calyx: border four-parted, spreading, less than the calyx. Stamina: filaments four, longer than the border of the corolla. Anthers oblong, triangular. Pistil: germ four-cleft, very short, superior. Style filiform, length of the stamens, recurved at the tip. Stigma simple. Pericarp: berries four, with the spreading calyx, roundish. Seeds solitary, roundish.—*Essential Character.* Corolla: one-petalled, funnel-form, very long, inferior. Berries four, one-seeded.

1. *Siphonanthus Indica.*—Stem herbaceous; quite simple. Leaves opposite and alternate; linear-lanceolate. Flowers in axillary corymbs; three or four together. Border of the corolla flat, with the segments spreading and acute. Anthers triangular, sagittate. Stigma undivided; thickish.—Native of South America.

2. *Siphonanthus angustifolia.*—Border of the corolla two-lipped; stigma bifid.—This has leaves like those of the preceding, but much narrower, and by threes. Flowers axillary in bifid corymbs, six-flowered or three-flowered. Tube of the corolla curved in; segments of the corolla blunt; three of them bent back, the uppermost erect, as in a labiate flower. Anthers roundish. Stigma bifid.

SIPHONIA. See JATROPHA.

SIPID, *adj.* [an old form of *SAPID*, which see.] Savoury: this seems not an improper word, as opposed to *insipid*, and is in the vocabulary of Cockeram.

SIPIRI, or ESECURE, a river of Quito, in the province of Moxos, which runs north, and enters the Marmore Grande.

SIPOLTO, a small town in the east part of the kingdom of Naples, province of Capitanata, near Manfredonia, situated on a bay called from it the bay of Sipolto.

SIPOMO, a river of Guiana, which runs north, and enters the Caura.

SIPONIMA, in Botany. See CIPONIMA and SYMPLICOS. SI PORAH, or GOOD FORTUNE ISLAND, a woody island of the Eastern Seas, north-west of the Pogy or Nassau islands, and inhabited by the same race of people. It contains several villages, but is not known to have been visited recently.

SIPPER, *s.* One that sips.

SIPPET, *s.* A small sop.—Your sweet sippets in widows' houses. *Milton.*

SIPPO, a river of the United States, in the Ohio, which flows into the Scioto; 5 miles below Circleville.

SIPSEY, a river of the United States, in Alabama territory, which runs into the Tombigbee. Lat. 32. 22. N. long. 87. 51. W.

SIPUNCULUS, or TUBE-WORM, in Vermiology, a genus of the Vermes Intestina class and order, of which the Generic Character is as follows: body round, elongated; mouth cylindrical at the end, and narrower than the body; the aperture at the side of the body, and veruciform. There are only two.

1. *Sipunculis nidus.*—The body of this species is covered with a close skin, and globular at the lower end. It is described and figured by Pennant, Barbut, and Martin.—It inhabits European seas, under stones; and is about eight inches long. The body is conic, and broader on the fore part; the mouth is much slenderer than the body, and armed with fleshy, three-pointed papillæ; the aperture is near the upper extremity.

2. *Sipunculus*

2. *Sipunculus saccatus*.—Body covered with a loose skin, and rounded at the lower end.—It inhabits the American and Indian seas. It is shaped like the nidus, except in being enclosed as it were in a loose bag, and in not having the lower end globular.

S'QUIS, *s.* [Latin; meaning, *if any one*.] An advertisement or notification. Formerly a bill pasted on a wall, door, post, &c.—Saw'st thou ever *siquis* patch'd on Paul's church-door? *Bp. Hall*.

A merry Greeke set up a *siquis* late,
To signifie a stranger come to town.

Wroth.

SIR, *s.* [*sire*, Fr., from the Goth., *sihor*. *Ld. Hickes*. Icel. *saer*, *syrr*, *sir*, the same. *Serenius*. Some carry it to *sar*, Heb., a prince.] The word of respect to gentlemen.

Speak on, *sir*,

I dare your worst objections: if I blush,
It is to see a nobleman want manners.

Shakspeare.

The title of a knight or baronet. This word was anciently so much held essential, that the Jews in their addresses expressed it in Hebrew characters.—*Sir* Horace Vere, his brother, was the principal in the active part. *Bacon*.—The court forsakes him, and *sir* Balaam hangs. *Pope*.—Formerly the title of a priest. Hence, as Mr. Tyrwhitt has observed, a *Sir John* came to be the nick-name of a priest.—“A priest was the third of the three *syrrs*, which only were in request of old; (no barron, viscount, earle, nor marquesse, being then in use;) to wit, *Sir* King, *Sir* Knight, and *Sir* Priest.” *Watson's Docacord. of Quodlib. Quest.* 1602. p. 53.—Are there not women that would tell as good a tale as the best *Sir John*, i. e. Parson. *Harborowe*.

Let me thy tale borowe

For our *Sir John* to say to-morrowe.

Spenser.

But this good *Sir* did follow the plain word,
Ne meddled with their controversies vain;
All his care was, his service well to sain.

Spenser.

A title given to the loin of beef, which they say one of our kings knighted in a fit of good humour.—He lost his roast-beef-stomach, not being able to touch a *sir-loin* which was served up. *Addison*.

SIR BIBY'S ISLAND, a small island in Hudson's Bay. Lat. 61. 55. N. long. 93. 40. W.

SIR CHARLES HARDY'S ISLAND, an island in the Southern Pacific Ocean, discovered by Captain Carteret, in the year 1767. It is of considerable extent, and appears to be flat, green and pleasant. Lat. 4. 38. S. long. 154. 6. E.

SIR CHARLES HARDY'S ISLANDS, a cluster of small islands in the South Pacific Ocean, discovered by Captain Cook in 1770. Lat. 11. 55. S. long. 217. W.

SIR CHARLES SAUNDERS'S ISLAND, or **TAPOO-MANOO**, an island in the South Pacific Ocean, discovered by Captain Wallis in the year 1767. The island is about six miles in length, and has a mountain of considerable height in the centre, which appeared to be fertile. The inhabitants did not appear to be numerous. Lat. 17. 28. S. long. 150. 40. W.

SIR HENRY MARTIN'S ISLAND, an island in the Pacific Ocean, discovered by Lieutenant Hergest, commander of the *Dædalus* store-ship, in 1792, about 16 miles in circuit. It is the most considerable and most fertile of the whole group to which it belongs. The south-eastern cape, which he named Point Martin, forms, with the coast to the westward of it, a deep bay, well sheltered, and bordered by sand beaches. At the head of the bay was observed, either a deep cove, or the mouth of a considerable stream. Two leagues farther westward is a fine harbour, with a sandy bottom, shoaling from 24 fathoms to 7, within a quarter of a mile of the shore. A stream of excellent water runs into it, and it is well sheltered from all winds. A beautiful plain extends for a mile and a half from the beach. The country is populous, and well cultivated. The people appeared to be lighter than those of Ohittahoo, and varied considerably from

them in other respects. More than 1500 were assembled on the shores of this harbour, which was named Port Anna Maria. They received some people who landed from the *Dædalus* very hospitably, and sent off all kinds of provisions to the ship. The western side of the island was less populous. Lat. 80. 51. S. long. 220. 19. E.

SIR ISAAC POINT, a cape on the south coast of New Holland. Lat. 34. 27. S. long. 135. 10. E.

SIR JOSEPH BANKS' GROUP, a cluster of small islands in Spencer's gulph, on the south coast of New Holland.

SIR ROGER CURTIS ISLES, an island, with two smaller ones near it, on the south coast of New Holland; 22 miles south-east of Wilson's promontory. It is the first island to the westward of Eimeo, and about 48 miles south-south-east of Huahaine. It stretches from east to west about six miles, with a double peaked mountain in the centre. It is in general fertile, abounding in cocoa-nuts, but does not seem populous. It is dependent on Huahaine.

SIR THOMAS HAY'S POINT, a cape on the north-west coast of Portland, one of Queen Charlotte's islands, in the South Pacific Ocean. Lat. 10. 42. S. long. 164. 14. E.

SIR THOMAS ROE'S WELCOME, a large bay in the north part of Hudson's bay.

SIR WILLIAM GRANT CAPE, a rocky head on the south coast of New Holland.

SIRADIA. See **SIERADZ**.

SIRAF, a small sea-port of Laristan, in Persia, chiefly inhabited by Arabians; 30 miles south-west of Lar.

SIRAGUAY a town on the west coast of the island of Mindanao. Lat. 7. 15. N. long. 122. 9. E.

SIRANCAPE, a small river of Mosambique, in Eastern Africa, with a town of the same name at its mouth. Lat. 13. 4. S.

SIRANI (Giovanni Andrea), a painter of the school of Guido Rheni. He was born at Bologna in 1610, and was a favourite disciple of his master, whose style he imitated with great success. After the death of Guido, he was employed to finish many of his works, left incomplete in different churches, at Bologna; particularly the large picture of St. Brunone, in the Certosini. He usually painted upon a large scale, and with a free pencil, but in general his manner is too strong and dark, like that of Caravaggio. He died in 1670, at the age of 60.

SIRANI (Elizabetta), was the daughter of Giovanni Andrea Sirani, and born at Bologna in 1638. She learned the rudiments of the art from her father, but endeavoured to imitate the best style of Guido. At so early a period as her fifteenth year, she had acquired considerable renown for her performances. Her first public work was painted when she was only seventeen. In general she wrought upon a large scale, and in a most finished manner; with a rich and natural tone of colour. Her compositions are tasteful, and the airs of her heads graceful, and noble in character. Her portraits have greatly the air of nature, with an unaffected character of expression and action.

Her brilliant career was interrupted by poison; by whom administered is not exactly known, though it is supposed by her servant. This melancholy event happened in 1664, when she had only attained her twenty-sixth year; yet such had been her industry, that she had produced, according to Malvasia, from a register of her own keeping, 150 works: the most admired of which were painted for the churches and palaces at Bologna. They are elsewhere scarce.

SIRAVAN, a village of Khusistan, in Persia; 48 miles north-north-east of Shuster.

SIRE, a mountainous province or district of Tigre, in Abyssinia, reaching from Axum to the Tacazze. It is famous for a manufacture of coarse cotton cloths, which pass as money in all the provinces of Tigre. The capital, which is also called Sire, is built in the form of a half moon, on the brink of a very steep narrow valley; it is larger than Axum: all the houses are of clay, and thatched, the roofs are conical, according to the general custom of Abyssinia. The surrounding country is rich and beautiful, but suffers under a pestilential

pestilential fever of the very worst kind. Lat. 14, 4. 35. N. Long. 38. 0. 15. E.

SIRE, *s.* [*sire*, Fr.; *senior*, Lat.] The word of respect in addressing the king.—A father. *Used in poetry.*

He, but a duke, would have his son a king,
And raise his issue like a loving *sire*. *Shakspeare.*

Whether his hoary *sire* he spies,
While thousand grateful thoughts arise,
Or meets his spouse's fonder eye. *Pope.*

It is used in common speech of beasts: as, the horse had a good *sire*, but a bad dam.—It is used in composition: as, grand-*sire*, great-grand-*sire*.

To SIRE, *v. a.* To beget; to produce.—Cowards father cowards, and base thing *sire* the base. *Shakspeare.*

SIREN, *s.* [Latin. Bochart calls it a Phœnician word, meaning a *songstress*. So the Heb. *syren*, a song.] A goddess who enticed men by singing, and devoured them; any mischievous alluring women.

Oh train me not, sweet mermaid, with thy note,
To drown me in thy sister's flood of tears;
Sing, *siren*, to thyself, and I will dote;
Spread o'er the silver waves thy golden hair,
And as a bed I'll take thee, and there lie. *Shakspeare.*

SIREN, *adj.* Alluring; bewitching like a siren.—By the fair insinuating carriage, by the help of the winning address, the *syren* mode of mien, he can inspire poison, whisper in destruction to the soul. *Hammond.*—Lulled with *syren* song. *Young.*

SIREN, in Natural History, a genus of the class Amphibia, order Reptilia, of which the Generic Character is: body two-footed, tailed, naked; the feet are placed in the manner of arms, and furnished with claws. There is only a single species mentioned by Gmelin, but Dr. Shaw notices three species:—

1. *Siren lacertina*.—Body eel-shaped; branches ramified. This species stands eminently distinguished in the list of animals, by the ambiguity of its characters, which are such as to induce the great Linnaeus to institute it for a new order of Amphibia, under the title of MEANTES. The genus with which the siren has the nearest affinity is the *lacerta*, or *lizard*, which see. It resembles the larva, or first state of a *lacerta*; and it is even still doubtful whether it may not really be such: yet it has never been observed in any other state, having two feet only, without any appearance of a hind pair. The feet are also furnished with claws, whereas the larvæ of the *lacertæ* are observed to be without claws; the mouth has several rows of small teeth; the body is eel-shaped, but slightly flattened beneath, marked on the sides by several wrinkles, and slightly compressed towards the extremity of the tail, which is edged with a kind of soft skin, or adipose fin; on each side the neck are three ramified branchial processes, resembling, but on a larger scale, those belonging to the larvæ of water-newts, and at the base are the openings into the gills; the eyes are very small, and blue. The general colour of the animal is a deep or blackish-brown, scattered over, especially on the sides, with numerous minute whitish specks. It is frequently found of the length of two feet, or even more. It is a native of North America, and more particularly of South Carolina, where it is not uncommon in muddy and swampy places, living generally under water, but sometimes appearing on dry land. It has a kind of squeaking or singing voice; hence it was distinguished by the name of siren. This curious animal was first discovered and described by Dr. Garden, who resided many years in Carolina, and who gave the utmost attention to the science of natural history, which he enriched by many highly interesting observations, and by the discovery of many new facts. The doctor communicated specimens of the siren to Linnaeus, with particulars relative to its history and manners. The great Swedish naturalist, in his letter to Dr. Garden on this subject, declares that nothing had ever exercised his thoughts so much, nor was there any thing he so much desired to know, as the real

nature of so extraordinary an animal. Mr. Hunter has given an anatomical description of the siren in the 56th vol. of the Philosophical Transactions, to which the reader is referred.

The siren, if thrown on the ground with any degree of violence, will sometimes break in two or three pieces; and in this particular it resembles the *Anguis fragilis*, or slow-worm. It may also be observed, that though in some respects it resembles the larva of the lizard, yet no lizard, of which it may be supposed the larva, has ever yet been discovered in those parts of Carolina where it is most frequent. The species to which it seems most allied is the *lacerta teguin* of Linnaeus, which is a native of South America.

2. *Siren anguine*, or four-footed siren.—With eel-shaped body, and ramified branchiæ. This has been denominated the *Proteus anguinus* by some naturalists, and by others the Austrian siren. This animal is found in a very singular situation, being an inhabitant of the celebrated romantic lake Zirknitz, in the duchy of Carniola, in Austria. From this lake the water regularly retires during the summer, by numerous subterraneous outlets at the bottom; leaving the ground dry, and fit for pasture, as well as for various kinds of hunting, and other amusements: but in the month of October it again returns with great force, springing out of the passages before mentioned, from a vast depth, till the lake is completely filled. It is situated in a valley, surrounded by rocky and woody mountains, in which are vast caverns, and it is principally supplied by eight rivulets running into it from the adjoining mountainous region. See *Phil. Trans.* vol. xvi.

This species of siren is extremely rare, and is found in the spring, and towards the decline of summer, in some particular parts of the above-mentioned lake, and measures from ten to twelve or thirteen inches in length, and about three quarters of an inch in diameter. It is entirely of a pale rose-colour, or even nearly white, except the three pair of ramified branchial fins on each side the neck, which are of a bright red or carmine colour. Its general shape is that of an eel; the body being cylindrical till towards the end of the tail, where it becomes flat, and is attenuated, both above and below, into a kind of fatty fin, scarcely distinguishable from the rest of the tail; the skin is very smooth and even; the head is of a somewhat depressed form, with a lengthened obtuse, and widish snout, and it has no external eyes; the mouth is moderately wide, and furnished with a row of very minute teeth; the legs are three quarters of an inch long, and the feet of the fore-legs are furnished with three toes, without claws; the feet of the hind-legs have only two toes. The motions of this animal, when taken out of the water, are in general extremely slow and languid; as is also the case, when kept in a vessel of water; but in its native lake, it is sometimes observed to swim briskly, waving its body in a serpentine direction, not unlike that of a leech. The *Anguine* siren is figured and very accurately described by Laurenti, in his work entitled "*Specimen Medicum, exhibens Synopsis Reptilium.*" The real nature of the animal is not completely ascertained; some imagining it to be the larva of some species of lizard, while others contend that it is a perfect animal *sui generis*. It is evidently of a predacious nature, feeding on the smaller kind of aquatic animals; since one of them, which was kept alive in a vessel of water, was observed to discharge from its stomach several small shells of the genus *Helix*; and in the stomach of one, which was dissected, were found the head and bones of a small fish. Its voice is a strong hiss, much louder than might be expected from the size of the animal.

Dr. Schreibers, who has most diligently investigated the nature and anatomy of this animal, says, "there can be no doubt that it bears a great affinity to the siren *lacertina*, having both gills and lungs; and therefore it leaves us in equal uncertainty as to its being a perfect animal in itself, or the larva of another animal. It is, however, remarkable that notwithstanding the most careful researches during many years, and the frequent fishing which takes place in the lakes and caverns of the neighbouring country, at all seasons of the year, no animal

animal has hitherto been found of which it can possibly be supposed the larva."

3. *Siren pisciformis*, or ferruginous-brown siren.—Spotted with black, with finely ramified branchiæ, tetradactylous fore and pentadactylous hind-feet. This animal, in the Naturalist's Miscellany, is denominated *Gyrinus Mexicanus*, or Mexican tadpole. According to the description given in that work, it is a native of Mexico, and, if only the larva of some large American lizard, is scarcely a less singular and curious animal than the siren. In its general appearance it bears some resemblance to the larva of the *Rana paradoxa*, but is furnished with gills, opening externally in the manner of a fish; the openings are very large, and the external flap is continued from the sides of the head across the throat beneath, so as completely to insulate the head from the breast; the gills themselves consist of four semicircular bony or cartilaginous arches, which are denticulated or serrated on their internal or concave part, like those of fishes; on the opercula, or external flaps, are situated three very large and elegant branchial fins, or ramified parts, divided and subdivided into a vast number of slender or capillary processes. In these particulars it resembles the siren lacertina, except that in the latter animal the external opening to the gills is very small; the mouth is furnished in front with a row of extremely minute teeth; the tongue is large, smooth, and rounded at the tip; the rictus, or gape, when the mouth is closed, appears considerably wider than it really is, owing to a lateral sulcus proceeding from each corner to some distance; the feet are entirely destitute of webs, and they are furnished with rather weak claws; the front feet have four toes, and those behind five. Independently of the general colour of the animal, the whole skin, when minutely examined, appears to be scattered over with very minute white specks, resembling those on the surface of the siren lacertina. The sides of the body are marked by several strong rugæ or furrows, and an impressed lateral line or sulcus is continued from the gills to the tail.

SIREN is also a name given by Muffet, and other authors, to a species of bee; of which they distinguish two kinds, a larger and a smaller. These differ greatly from the common bee, in that they live solitary, and never unite into swarms, or build nests, or make combs.

To SIRENIZE, *v. n.* To practise the allurements of a siren. *Cockerham.*

SIREX, or tailed wasp, in Entomology, a genus of insects of the order hymenoptera, of which the Generic Character is, mouth with a thick, horny, truncate, short, denticulate mandible; four feelers, the hind ones longer, and thicker upwards; antennæ filiform, of more than twenty equal articulations; the sting is exerted, serrate and stiff; the abdomen is sessile, terminating in a point; wings lanceolate, incumbent, the lower ones shorter.

The larvæ of this genus are six-footed, soft, cylindrical; the head rounded; they perforate wood, and frequently eat their way into the bowels of other insects, and their larvæ, living upon them till they have utterly consumed their entrails; the pupa is folliculate; the perfect insect lives on the nectar of flowers. There are about twenty-six species, of which the most remarkable are:

1. *Sirex gigas*.—The abdomen of this species is yellow at the base and tip; the body is black-blue. This is the largest species in the whole genus: it surpasses a hornet in size, and is principally observed in the neighbourhood of pines and other cone-bearing trees: it is of a black colour, with the eyes, the base, and lower half of the abdomen, of a bright orange-yellow; the thorax is villose, and the wings of a transparent yellowish-brown; the sting, or terminal tube, is very conspicuous. The larva, which measures about an inch and a quarter in length, is of a yellowish-white colour, and inhabits decayed firs and pines; at first view it bears some resemblance to the larvæ of the beetle tribe, but is thinner in proportion, and furnished, at the tip of the abdomen, with a short black spine or process. It changes to a chrysalis in the month of July; first enveloping itself in a slight silken web of a whitish colour. The chrysalis is of a lengthened

shape, with the antennæ, legs and terminal tube or process, very distinctly characterized. If the change to chrysalis takes place, as it sometimes does, in summer, the fly proceeds from it in the space of about three weeks; but if at the close of autumn, the animal continues a chrysalis the whole winter, emerging in the following spring. The male insect is considerably smaller than the female, and may be farther distinguished by the want of the caudal tube or process, so conspicuous in the female insect; the tip of the abdomen is also of a black colour. The eggs, which are deposited by the female in the decayed parts of the trees already mentioned, are very small, and of a lengthened oval shape, with pointed extremities.

2. *Sirex Psyllius*.—Abdomen yellow at the base and before the tip; the body is black.—It inhabits different European countries, and is half the size of the last. The antennæ and legs are yellow, and the thighs black; the head is black, with a yellow spot on each side, behind the eyes; certain segments of the abdomen yellow.

3. *Sirex Columba*.—This is an American species, and is distinguished by its black body, marked by testaceous bands. The Specific Character is as follows: thorax villous, ferruginous; abdomen black, the sides are spotted with yellow; the antennæ are short and black, ferruginous at the base; the abdomen beneath is black, with a yellow streak; the projection is short, acute, serrate, yellow tipped with black; the legs are yellow; hind-thighs black.

4. *Sirex magnus*.—Black, thorax villous; tip of the antennæ, lateral spots on the abdomen, shanks and base of the tarsi, are white. It is of the size of the *Sirex gigas*, and is found in many parts of Saxony. The abdomen beneath is white in the middle; the wings are dusky.

5. *Sirex nigricornis*.—Thorax villous, blueish-black; abdomen ferruginous, blue at the base.—It is found in North America. The head is shining blue-black; the antennæ are black; the legs are piceous; thighs yellow; sting pitchy.

6. *Sirex flavicornis*.—Thorax villous, black, immaculate; four bands on the abdomen, antennæ and legs yellow.—It is found at Labrador, in America. The head is black; the upper part of some of the segments is yellow; the appendage serrate, yellow; the sting is black.

7. *Sirex fuscicornis*.—Thorax villous, black; abdomen with eight yellow bands; the antennæ are black; the legs are yellow.—This, which is of the size of the *gigas*, inhabits Saxony. The wings are substestaceous; the sting is black, with a yellow sheath; the horn of the abdomen is subulate, yellow, tipped with black; the thighs are black.

8. *Sirex spectrum*.—The abdomen of this species is black; the thorax is villous, with a yellow stripe before the wings. It is found in this country, and in many other parts of Europe. The antennæ are black or yellow, and the legs are yellow.

9. *Sirex juvenicus*.—The abdomen is blueish-black; the thorax villous, immaculate.—This also is a native of England and other European countries. The antennæ are black or yellow; the legs are yellow.

10. *Sirex phantoma*.—Abdomen above yellow, with black belts; the head and legs are yellow.—It inhabits Germany. The mouth is black; the thorax yellowish before, beneath black; the abdomen beneath is black.

11. *Sirex cyanus*.—This is of a shining blue colour; the legs are yellow.—It inhabits North America. The antennæ are black; the thorax sub-villous; the wings are hyaline.

12. *Sirex albicornis*.—Black; head with a white spot on each side; the antennæ are white in the middle.—It is a native of North America. The antennæ are black at the tip; the abdomen with a white dot on each side on the last segment but one; the legs are black; the shanks and ends of the tarsi are white.

13. *Sirex nigrita*.—This is of a black-blue, immaculate; the hind-legs are compressed.—It is a native of Saxony, and is of the same size as the *sirex mariscus*, hereafter to be noticed.

14. *Sirex camelus*.—The abdomen is black, the sides spotted with white; the thorax smooth.—This is found in England and other European countries.

15. *Sirex emarginatus*.—Black; thorax emarginate before, and pale at the sides; the fore-legs are rufous.—It inhabits Germany. The antennæ are black; the head is black, with a pale spot on each side: the sides of the thorax are slightly serrate. The four front legs are rufous; the shanks are tipped with black; the hind ones are black; the thighs rufous.

16. *Sirex dromedarius*.—Abdomen black, rufous in the middle, with a white dot on each side. The shanks are pale at the base.—It is chiefly found at Kiel, and resembles the *sirex camelus*. The head is black, with two white lines; the thorax is black, with a white dot before the wings; some of the segments of the abdomen are black, some rufous, one black, with a white spot on each side, and one is altogether black.

17. *Sirex pacca*.—Abdomen black, two of the segments are rufous, the rest dotted with white.—This also is found at Kiel, and is the size of the *sirex camelus*. The antennæ are black, a little thicker towards the tip; the thorax is villous and black, with two minute white spots on the fore margin; the horn of the abdomen yellowish, sting rufous; legs compressed, black.

18. *Sirex similis*.—Black; first segment of the abdomen at the base and second rufous, the rest with five yellow spots.—It inhabits the Cape of Good Hope. The head is black; the orbits yellow; antennæ ferruginous; the base and tip black; the thorax black, with a yellow dot on each side: the legs are rufous, the thighs black; the tail is pointed, without any projection.

19. *Sirex vespertilio*.—Black; abdomen ferruginous, the base is black.—This is a small insect, and is found in divers parts of Germany. The antennæ are black, with a whitish ring; the tail is black beneath, without the appendage: the upper wings are white, with a broad brown patch before the tip, and white marginal dots; the legs are black, tip of the thighs and base of the shanks white.

20. *Sirex mariscus*.—Of this species the abdomen is testaceous, the two last segments are black; the thorax villous.—This is found in divers parts of Europe. Antennæ yellow; head with a yellow callous dot behind the eyes; the abdomen beneath is black, spotted with yellow; it has no sting.

21. *Sirex troglodyta*.—Smooth, black: abdomen with seven yellow dots, and two bands.—It inhabits Saxony. The legs are yellow; the thighs black.

22. *Sirex noctilia*.—This is of a black-blue colour; the antennæ are black; the thorax is villous; the abdomen testaceous in the middle.—It inhabits several parts of Germany, and is about the size of the *sirex mariscus*. Thorax blue; abdomen blue at the base and tip; wings yellowish; legs yellow; hind ones compressed, black, the thighs yellow.

23. *Sirex compressa*.—Black; abdomen compressed, ferruginous; the first and last segments are black.—It inhabits Barbary, and is very small. Legs white; thighs black; hind ones black; the shanks are compressed, black, with two yellow dots, and three bands.

24. *Sirex pygmaeus*.—Abdomen compressed, black, with two yellow dots and three bands.—It is a native of this country, and of other parts of Europe. This is one of the smallest of the European species, being, according to Linnaeus, about the size of a gnat, with a black abdomen, marked by three yellow bands, the middle of which is interrupted.—It is found in Sweden.

25. *Sirex macilentus*.—Black; abdomen compressed, yellow at the sides. It inhabits Barbary, and resembles the next. The head is black with two yellow dots between the eyes. The thorax black, with a yellow dot, and a larger one beneath; the abdomen is yellow at the sides, and projecting into two bands on the back; the wings are hyaline; the rib black beyond the middle; the legs are black; the fore-thighs are yellowish.

26. *Sirex tabidus*.—Black; sides of the abdomen dotted with yellow; fore shanks testaceous.—It inhabits England, and a specimen is in the British Museum.

SIRGOOJAH, a district of Hindostan, province of Gundwanah, situated about the 23d degree of north lat., and bounded on the east by the province of Bahar. It is hilly, and abounds with woods; consequently is poorly cultivated and thinly inhabited. It belongs to several Hindoo chiefs, who are tributary to the Nagpore Mahrattas.

SIRGOOJAH, the capital of the above mentioned district, situated about 12 miles from the British frontier. It belongs to a native chief, who pays a small tribute to the rajah of Nagpore, but is now under the British protection. Lat. 23. 5. N. long. 83. 50. E.

SIRGOULIN, a town of Chinese Tartary. Lat. 41. 53. N. Long. 119. 14. E.

SIRHIND, an extensive district of Hindostan, province of Delhi, and situated between the 30th and 31st degrees of north lat. It is naturally a very barren and sandy country, and in many places destitute of water; but being near the capital, the Afghan emperor, Ferose III. caused several canals to be cut from the rivers Jumna and Suttuleje, in order to fertilize it. He also built a fortress called Sirhind, for the purpose of protecting the canals; but both fortress and canals are now fallen to decay. The country is at present possessed by the Seiks; its principal towns are Patiala and Tahnesir.

SIRHIND, the ancient capital of the above mentioned district, which was either built or repaired by sultan Ferose, about the year 1357, and for several centuries was a flourishing city, ornamented with innumerable mosques and beautiful gardens, all of which are now fallen to decay. Between this place and the city of Delhi are extensive plains, containing the towns of Panniput and Carnoul, renowned as the scene of great battles, both in ancient and modern times. Sirhind now belongs to a Seik chief named Bing Singh. Lat. 30. 40. N. long. 75. 55. E.

SIRI, among the Romans, were subterranean caves or vaults, in which wheat could be kept sound and fresh for fifty years.

SIRI (Vittorio), a writer in politics and history, was born at Parma about the year 1607: he was educated for the study of theology, and took the habit of the Benedictine order, in the monastery of St. John, and there began to publish a work entitled "Mercurio Politico," by which he acquired some temporary celebrity. Fifteen volumes of this work appeared successively, containing an account of the public events from 1635 to 1655. After this he added to it "Memoriæ Reconditæ," in eight vols., which going back to 1601 come to 1640. The author not only records facts, but endeavours to investigate causes in the secret negotiations of cabinets, and to give the documents confirming his narrative. Of these pieces, a great number is to be found in his publications, communicated by popes, nuncios and the ambassadors of different crowned heads, and especially by the ministers of Louis XIV. Through the influence of Cardinal Mazarin, he was invited by that monarch to Paris, and presented to a secular abbey, on which occasion he quitted his religious habit for that of an ecclesiastic. He assumed to himself the title of counsellor, almoner, and historiographer to his Most Christian Majesty, and he spent all the latter years of his life at Paris, where he died in the year 1685, at the age of 78. He is characterized by biographers as a man without any fixed principles, who had a venal pen, which was always ready to justify and defend any cause, provided he was liberally paid for his services; yet the opportunities he possessed of gaining information from authentic sources, and the number of original documents published by him, have given a marked value to his works as materials for the history of his time. The circumstances of his being a foreigner, and writing in Italian voluminous publications little read in France, are said by Le Clerc to have induced him to speak more freely of Louis XIII., his brother and ministers, than the French writers have done. The first four volumes of his "Memoriæ Reconditæ" are extremely rare. A translation into the French language, of the

the most important parts of all his works, has been published in several volumes by M. Requier. Siri is said also to have written, under a feigned name, some pieces respecting the war of Montserrat.

SIRIA, a village of Syria, in the pachalic of Aleppo.

SIRIAN. See SYRIAM.

SIRIASIS, so named by the older writers, an inflammation of the brain.

SIRINAGUR, a town of Hindostan, province of Allahabad, district of Bundelcund. Lat. 25. 6. N. long. 79. 55. E. There are several other places of this name in Hindostan.

SIRIUS, [*σειριος*, Gr.] in Astronomy, the *Dog-star*, a very bright star of the first magnitude, in the mouth of the constellation Canis Major, or the Great Dog.

SIRIUS, an island in the South Pacific Ocean, discovered and so called by Lieutenant Ball, in 1790; it is about 18 miles in circumference. Lat. 10. 52. S. long. 162. 30. E.

SIRLOIN, *s.* The loin of beef.

SIRNAME. See SURNAME.

SIRNING, a small town of Upper Austria; 4 miles west of Steyer, and 15 south of Linz. Hardware and much cotton are made here and in the surrounding district.

SIROCC, or SIROCCO, a south-east wind of Sicily, particularly at Palermo, attended with an uncommon degree of heat, and singularly relaxing and oppressive in its effects. The blast of it is represented as resembling burning steam from the mouth of an oven: the whole atmosphere, during its continuance, seems to be in a flame. Its effect is described by Brydone like that of one of the subterranean sweating stoves at Naples; but it was much hotter. In a few minutes, those who are exposed to it find every fibre relaxed in a most inconceivable manner, and the pores opened to such a degree, that they expect immediately to be thrown into a most profuse sweat. At this time the thermometer, which stood in a room only at 73, rose immediately in the open air to 110, and soon after to 112. The air was thick and heavy, but the barometer was little affected, having fallen only about a line. The sun did not appear during the whole day; otherwise the heat, says Mr. Brydone, must have been insupportable; and on that side that was exposed to the wind, it could not be borne without difficulty for a few minutes. Upon exposing pomatum to it, the heat of the wind melted it as if it had been laid before the fire. This wind is more or less violent, and of longer or shorter duration at different times: however, it seldom lasts more than 36 or 40 hours, so that the walls of the houses are not warmed throughout, or else it is apprehended that it would be insupportable. Whilst it lasts, the people of the country confine themselves within; their windows and doors are shut close, to prevent the external air from entering; and where window-shutters are wanting, they hang up wet blankets on the inside of the window. The servants are constantly employed in sprinkling water through all the apartments, in order to preserve the air in as temperate a state as possible; and for this purpose, each house in the city of Palermo is provided with a fountain. By these means the people of fashion suffer very little from this wind, except the strict confinement to which it obliges them. Notwithstanding the scorching heat of the sirocco, it has never been known to produce any epidemical disorders, or to do any injury to the health of the people. They feel, indeed, very weak and relaxed after it; but a few hours of the Tramontane, or north wind, which generally succeeds it, soon braces them up again, and restores them to their former state.

SIROLO, a small town of the east of Italy, in the Ecclesiastical state, delegation of Anconia.

SIRRAH, *s.* [*sir, ha! Minshcu.*] A compellation of reproach and insult. [*Sirrah*, there's no room for faith, troth, or honesty in this bosom of thine. *Shakspeare.*

SIRSEY, a town or Hindostan, province of Bahar. Lat. 25. 26. N. long. 85. 35. E.

SIRT, *s.* [*syrtis*, Lat.] A bog; a quicksand. *Unused.*—They discovered the immense and vast ocean of the courts

to be all over full of flats, shelves, shallows, quicksands, crags, rocks, gulfs, whirlpools, *sirts*, &c. *Transl. of Boccalini*, (1626).

SIR'OP, SYRUP or SIRUP, *s.* [Arabic.] The juice of vegetables boiled with sugar.

Not poppy, nor mandragora,
Nor all the drowsy *sirups* of the world
Shall ever med'cine thee to that sweet sleep,
Which thou owned'st yesterday. *Shakspeare.*

SIRUNT, a village of Seistan, in Persia; 40 miles east of Zareng.

SIRUPED, *adj.* Sweet, like sirup; bedewed with sweets. Yet, when there haps a honey fall,
We'll lick the *syrup* leaves:
And tell the bees that their's is gall. *Drayton.*

SIRUPY, *adj.* Resembling sirup.—Apples are of a *sirupy* tenacious nature. *Mortimer.*

SIRUS. See SERES.

SIS, a village of Asia Minor, in the government of Sivas; 24 miles south of Tocat.

SIS, a village of Caramania, in Asiatic Turkey; 150 miles east-south-east of Konieh.

SISAL, a port of Merida de Yucatan, in the province of Yucatan. It has a castle and a small harbour, with an immense sand-bank opposite its entrance. Lat. 21. 10. N. long. 89. 59. 30. W.

SISAPONGO, a very lofty snow-clad mountain of South America, in the Cordillera of the kingdom of Quito.

SISAR, CAPE, a cape on the north-west coast of the island of Borneo. Lat. 13. 40. N. long. 112. 20. E.

SISARGA, or ZIZARGA, a small island in the north-west coast of Spain, on the coast of Galicia, near the mouth of the bay of Cornuna.

SISE, *s.* [Corrupted from *assize*.]

You said, if I returned next *siz*e in lent,
I should be in remitter of your grace. *Donne.*

SISIBOU, or SISSIBOU, a town of Nova Scotia, on the west coast; 25 miles south-south east of Annapolis.

SISIDIN, a small river of Guiana, which enters the Orinoco.

SISINILLA, a settlement of the island of Cuba; 12 miles east-north-east of Trinidad.

SISKIN, *s.* [*sytken*, Teut.] A bird; the green-finch.—The canary, the linnet, the *siskin*, and the bullfinch, seem natural musicians. *Buffon.*

SISON [*Σισων*, of Dioscorides], in Botany, a genus of the class pentandria, order digynia, natural order of umbellatæ or umbelliferæ.—Generic Character. Calyx: umbel universal with fewer than six rays, unequal: partial with fewer than ten rays, unequal. Involucre universal, mostly four-leaved, unequal: partial consimilar. Perianth scarcely manifest. Corolla, universal uniform. Florets all fertile. Proper, equal: petals five, lanceolate, inflected, flattish. Stamina: filaments five, capillary, length of the corolla. Anthers simple. Pistil: germ subovate, inferior. Styles two, reflected. Stigmas obtuse. Pericarp none. Fruit ovate, striated, bipartite. Seeds two, ovate, convex and striated on one side, flat on the other.—*Essential Character.* Involucres mostly four-leaved. Fruit ovate, striated.

1. Sison amomum, hedge honewort, or bastard stone parsley.—Root annual or biennial, spindle-shaped, with lateral branches. Stem erect, two or three feet high, branched and spreading, round, furrowed, leafy. Leaves pinnate with a terminating lobed leaflet, unequally serrate: the lower ones have seven or nine leaflets, ovate, serrate; the upper ones have the leaflets narrower, deeper cut, and often pinnatifid. Umbels numerous, terminating, solitary, erect when in flower, composed of four, unequal rays; with a small four-leaved general involucre.—Native of England, Germany, the South of France, Carniola and Piedmont. With us not unfrequent in moistish spots under hedges, where the soil is marly or chalky: flowering in the latter part of summer.

2. *Sison segetum*, or corn honewort.—Leaves pinnate; leaflets roundish numerous; umbels drooping irregular. Root small but strong, annual in general but often biennial. Stems very much branched, round, striated, slender and rush-like, leafy.—Native of Switzerland and England, in corn fields in a chalk and clay soil, but not very frequently.

3. *Sison canadense*, or three-leaved honewort.—Root perennial. Radical leaves ternate, serrate; the middle leaf trifid, the two side ones bifid. Stem-leaves ternate, serrate, lanceolate, shining. Umbel four-cleft, unequal, without any involucre. Umbellets mostly seven-flowered, with a very small involucre. Petals white, equal.—Native of North America and Japan.

4. *Sison Ammi*.—Leaves tripinnate; root-leaves linear; stem-leaves bristle-shaped; stipular-leaves longer.—Root annual.—Native of Portugal, Apulia and Egypt.

5. *Sison inundatum*, or water honewort.—Leaves pinnate gashed; those under water cut as fine as hairs into many parts, umbels five-flowered, bifid. Root annual or biennial. Stems creeping, floating, round.—Native of the North of Europe, Britain, Germany, Switzerland and Dauphine.

6. *Sison salsum*.—Leaves only radical, in bundles, shorter, pinnate: pinnas opposite, oblong; the first pair decomposed, the rest not.—Native of Siberia, in the salts near the Wolga.

7. *Sison crinitum*.—Root-leaves triplicate-pinnate; stem-leaves bipinnate; leaflets bristle shaped; universal involucre many-leaved bipinnate.—Native of Siberia.

Propagation and Culture.—Sow the seeds in autumn, in a moist shady spot of ground; or permit the seeds to scatter, and the plants will rise without care.

SISONBY, a parish of England, in Leicestershire; 1 mile west-by-south of Melton Mowbray.

SISACH, a small town of the Swiss canton of Bale, on the river Ergelz, with 1600 inhabitants. It has a seminary for training schoolmasters on Pestalozzi's plan; 13 miles south-east of Bale.

SISSECK, a small town of the Austrian states, in Croatia, near the influx of the river Kulpa into the Save, fortified with a wall and ditch; 5 miles north-east of Petrinia, and 38 east of Carlstadt.

SISONE, a small town in the north-east of France, department of the Aisne, on the Souche, with 1100 inhabitants; 10 miles east of Laon.

SISSOPOLI, or SIZEPOLI, the ancient Apolonia, a town of European Turkey, in Romania, situated on a point of land which projects into the Black Sea. It has the best roadstead in the whole gulph, where men-of-war may anchor in perfect safety. The inhabitants are almost all Greeks, and the chief articles of trade are wine and wood; 115 miles north-north-west of Constantinople. Lat. 42. 30. N. long. 27. 44. E.

SISTER, *s.* [ꝛꝛeoꝛep, Sax.; *zuster*, Dutch. *M. Goth. suistar*; Icel. *syster*; from *syst*, uterus.] A woman born of the same parents; correlative to brother. *Shakspeare*.—I have said to corruption, Thou art my father; to the worm, thou art my mother and my sister. *Job*.—Woman of the same faith; a christian. One of the same nature, human being.—If a brother or sister be naked, and destitute of food, and you say unto them, Depart in peace, be ye warmed and filled: notwithstanding you give them not those things which are needful to the body, what doth it profit. *James*.—A female of the same kind.

He chid the sisters,
And bade them speak to him. *Shakspeare*.

One of the same kind; one of the same condition.
There grew two olives, closest of the grove,
With roots entwined, but branches interwove:
Alike their leaves, but not alike they smil'd
With sister-fruits; one fertile, one was wild. *Pope*.

SISTER-IN-LAW, *s.* A husband or wife's sister.—Thy sister-in-law is gone back unto her people: return thou after thy sister-in-law. *Ruth*.

To SISTER, *v. a.* To resemble closely.

She — with her needl composes
Nature's own shape, of bud, bird, branch, or berry,
That even her art sisters the natural roses. *Shakspeare*.

To SISTER, *v. n.* To be akin; to be near to.

A hill, whose concave womb reworded
A plaintful story from a *sistering* vale. *Shakspeare*.

SISTER-BLOCKS, in Block-Making, are blocks made of ash, similar to two single blocks, and turned out of a solid piece.

SISTERHOOD, *s.* The office or duty of a sister.

She abhor'd
Her proper blood, and left to do the part
Of sisterhood, to do that of a wife. *Daniel*.

A set of sisters.—There is a kind of natural equality in *sisterhood*. *Bp. Hall*.—A number of women of the same order.—A woman who flourishes in her innocence, amidst that spite and rancour which prevails among her exasperated *sisterhood*, appears more amiable. *Addison*.

SISTERLY, *adj.* Like a sister; becoming a sister.

After much debatement,
My sisterly remorse confutes mine honour,
And I did yield to him. *Shakspeare*.

SISTERON, a small town in the south-east of France, the capital of an arrondissement in the department of the Lower Alps, situated at the base of rocks on the banks of the Durance. It is a place of antiquity, and has long been the see of a bishop. It is defended by a strong castle, has a fine cathedral, and contains nearly 4000 inhabitants. Wine is cultivated in the neighbourhood; 45 miles north-east of Aix.

SISTERS, two small islands in the Great Southern ocean, lying in the strait between Van Diemen's Land and south-west of New Holland.

SISTON, a village of England, in Gloucestershire, situated in a pleasant vale, on the banks of a rivulet which runs into the Avon. Tin ore has been found in the neighbourhood, and the village contains a manufactory of brass, and another of salt-petre. Population 833; 6 miles east-by-north of Bristol.

SISTOVA, SZISTOW, or SCHISTAR, a large town in the north of European Turkey, in Bulgaria, on the right bank of the Danube. It has a citadel, and is said to contain 20,000 inhabitants. Its trade, promoted by the navigation of the Danube, consists chiefly in the leather and cotton supplied by the adjacent country. A number of the traders are Armenians and Greeks. In history it is remarkable for the conference held here in 1791, between the Turks and Austrians, which separated the latter from their co-operation with Russia; 25 miles east of Nicopoli. Lat. 43. 45. N. long. 24. 44. E.

SISTRUM, a sacred musical instrument with the ancient Egyptians. See Music.

SISYMBRIUM [of Pliny. *Σισυμβριον* of Theophrastus. *Σισυμβρα* of Nicander], in Botany, a genus of the class tetradynamia, order siliquosa, natural order of siliquosæ, cruciformes or cruciferæ.—Generic Character. Calyx: perianth four-leaved: leaflets lanceolate-linear, spreading, coloured, deciduous. Corolla: four-petalled, cruciform. Petals oblong, spreading, commonly less than the calyx, with very small claws. Stamina: filaments six, longer than the calyx: of these two opposite a little shorter. Anthers simple. Pistil: germ oblong, filiform. Style scarcely any. Stigma obtuse. Pericarp: siliqua long, incurved, gibbous, round, two-celled, two-valved: valves in opening straightish: partition a little longer than the valves. Seeds very many, small.—*Essential Character*. Siliqua opening with straightish valves. Calyx and corolla spreading.

I.—Siliques declined short.

1. *Sisymbrium nasturtium*, or common water cress.—Roots perennial, consisting of long white fibres, the lowermost fixed in the soil, the rest suspended in the water. Stems spreading, declining or floating, branched, leafy. Flowers

SISON. SPERGULA. STELLARIA. SORBUS.

1. 2. *St. inodatum*. 3. *Sp. nodosa*. 4. *St. cerastoides*. 5. *Sa. hybrida*.

The history of the United States is a complex and multifaceted story that spans centuries. It begins with the early Native American civilizations, such as the Mayans, Aztecs, and Incas, who developed advanced societies in the Americas. The arrival of European explorers, including Christopher Columbus and John Cabot, marked the beginning of a new era of discovery and colonization. The United States was founded on the principles of liberty, democracy, and the rule of law, as outlined in the Declaration of Independence and the Constitution. The nation's growth and expansion were shaped by westward migration, the Industrial Revolution, and the Civil War, which ultimately led to the abolition of slavery and the unification of the states. The 20th century saw the United States emerge as a global superpower, playing a central role in the world's affairs through its economic, military, and cultural influence. Today, the United States continues to face challenges and opportunities, striving to uphold its founding principles and promote peace and prosperity for all.

Flowers white, in a corymb, soon lengthened out into a spike. Pods shortish, on horizontal pedicels, but the pods themselves recurved upwards. Stigmas nearly sessile.—Native of Europe, Asia, Africa and America, in springs, pools and rivulets; flowering in June and July.

2. *Sisymbrium sylvestre*, or creeping water rocket.—Leaves pinnate; leaflets lanceolate, gash-serrate. Root perennial. Stems numerous, a foot high. Corolla small, yellow or gold-coloured; petals obtuse, a little longer than the calyx. Nectary of four deep-green glands, united in a circle. Filaments yellow; anthers incumbent.—Native of Sweden, Britain, Germany, France, Switzerland, Carniola, Piedmont and Siberia.

3. *Sisymbrium terrestre*, or annual water rocket.—Leaves pinnatifid, unequally toothed; root simple; petals shorter than the calyx.—Common in England.

4. *Sisymbrium amphibium*, or great water rocket.—Leaves oblong, pinnatifid or serrate; petals longer than the calyx.—Root perennial, fibrous. Stems elongated, rooting, somewhat flexuose, leafy, grooved, little branched.—In rivers and brooks, and sometimes on the banks that are seldom overflowed, in most parts of Europe: flowering from June to August.—The remaining species of this section are *Sisymbrium Pyrenaicum*, *tanacetifolium*, *ceratophyllum*, *coronopifolium*, *tenuifolium*, *sagittatum* and *amplexicaule*.

II.—Siliques sessile, axillary.

5. *Sisymbrium supinum*, or decumbent wild rocket.—Siliques solitary; leaves tooth-sinuate.—This is an annual plant.—Native of the South of Europe: flowering in June and July.

6. *Sisymbrium polyceratum*, or dandelion-leaved wild rocket.—Siliques awl-shaped; aggregate; leaves repand-toothed. It is an annual.—Native of the South of France, Italy, and Switzerland.

7. *Sisymbrium filifolium*, or thread-leaved wild rocket.—Leaves linear. This is a very small annual, not more than an inch and a half or two inches in height. Flowers small. Petals white, linear, obtuse, a little longer than the calyx.—Native of Siberia, by the river Kuma.

8. *Sisymbrium bursifolium*, or shepherd's purse-leaved wild rocket.—Raceme flexuose; leaves lyrate; stem erect, leafy. Annual.—Native of Italy, in moist places on mountains.

9. *Sisymbrium torulosum*, or swollen-podded wild rocket.—Raceme erect; siliques sessile, pubescent; leaves lanceolate, toothed. There are often some racemes of flowers from the root. It flowers early in spring.—Native of the kingdom of Tunis, in fallows.

III.—Stem naked.

10. *Sisymbrium murale*, or wall wild rocket.—Almost stemless; leaves lanceolate; sinuate-serrate; smoothish; scapes, somewhat rugged, ascending.—Native of France, Italy and England.

11. *Sisymbrium monense*, or procumbent sea rocket.—Siliques almost upright; leaves pinnatifid, somewhat hairy; stems quite simple, almost naked, smooth. Root perennial and strong.—Native of Britain.

12. *Sisymbrium repandum*, or sinuate-leaved sea rocket.—Stemless; leaves oblong, repand-sinuate, smooth; scapes smooth; siliques compressed-four-cornered.—Native of Provence, Dauphine and Piedmont.—There remains in this section *Sisymbrium tillieri*, *vimineum*, *barrelieri*, *arenosum* and *valentinum*.

IV.—Leaves pinnate.

13. *Sisymbrium parra*, or Brasil wild rocket.—Root annual or biennial. Leaves radical, spreading in a ring, a span long, runcinate. The upper surface, especially the edge, mucronated with warts, or scattered mucronate tubercles, having a transparent point.—Native of Brasil.

14. *Sisymbrium asperum*, or rough-podded wild rocket.—Siliques rugged; leaves pinnatifid; pinnae linear-lanceolate,

somewhat toothed; corollas longer than the calyx.—Root annual. Stems half a foot long and almost trailing.—Native of the South of France and marshes about Estremadura.

15. *Sisymbrium Sophia*, or flix-weed.—Leaves pinnate-decompounded, somewhat hairy; petal smaller than the calyx. Root annual, small, tapering. Stem a foot and a half or two feet high, upright, round, much branched and very leafy. Leaves alternate, spreading, three inches long and two inches broad, very finely divided. Flowers in corymbs, very small, numerous, frequently more than a hundred in a single corymb. Petals pale yellow.—It is common in most parts of Europe, on walls, among rubbish, about church-yards, waste ground, hedges and dunghills: flowering in June and July.—The remaining species of this section, are *Sisymbrium lavigatum*, *millefolium*, *album*, *cinereum*, *altissimum*, *echartsbergense*, *panonicum*, *erysimoides*, *irio*, *columnæ*, *loeselii*, *obtusangulum*, *orientale*, *barbareæ*, *lyratum*, *catholicum*, *heterophyllum* and *glaciale*.

V.—Leaves lanceolate, entire.

16. *Sisymbrium strictissimum*, or spear-leaved wild rocket.—Leaves oblong-lanceolate, toothed pubescent; petioled; siliques spreading. Root perennial.—Native of Germany, Austria, Switzerland and Italy.

17. *Sisymbrium pendulum*, or pendulous wild rocket.—Leaves lanceolate, gash-toothed, hispid; siliques pendulous. Stem somewhat branched, upright. Flowers yellow.—Native of Barbary, near Cassa, in sands.

18. *Sisymbrium Hispanicum*, or Spanish wild rocket.—Leaves lanceolate, toothed, sessile, smooth; siliques pressed close; stem branched, divaricating. Root biennial.—Native of Spain.

19. *Sisymbrium pumilum*, or dwarf wild rocket.—Leaves lanceolate, toothed, sagittate embracing, pubescent; siliques from erect spreading. Root annual. Plant a finger or a span in length.—Native of the northern parts of Persia.

20. *Sisymbrium salsuginosum*, or salt wild rocket.—Leaves lanceolate, quite entire, cordate, embracing smooth; siliques spreading. Root annual.—Native of salt-marshes in Siberia.

21. *Sisymbrium integrifolium*, or entire-leaved wild rocket.—Leaves linear, quite entire; peduncles glutinous-hispid. Root annual. Stem a finger's length. Flowers biggish, white. Siliques linear.—Native of Siberia. It varies, according to Gmelin, with yellow flowers.

22. *Sisymbrium Indicum*, or Indian wild rocket.—Leaves lanceolate-ovate, serrate petioled even; siliques slightly bowed. Root annual.—Native of the East Indies.

23. *Sisymbrium hispidum*, or hairy wild rocket.—Cauliscent; leaves petioled, oblong, toothed hispid; stem also hispid.—Native of Egypt.

Propagation and Culture.—Water Cress is generally gathered for a spring salad in ditches or other standing or slow-flowing waters; and is also cultivated to supply the London markets. This may be easily done, by taking some of the plants from the places of their natural growth early in the spring, being careful to preserve their roots as entire as possible, and plant them in mud, letting water in upon them by degrees. They will soon flourish, and spread over a large compass; they should not be cut the first season, but suffered to run to seed; for the seeds will fall into the water, and furnish a sufficient supply of plants.

Where the water is so deep that it is not easy to plant it, procure a quantity of plants in July, just as their seeds are ripening, and throw them on the surface of the water, where they are designed to grow: the seeds will ripen, fall to the bottom and take root there without any farther care.

The other water-rockets may be propagated in the same manner, or by seeds sown on the banks of ditches or streams.

Those which grow on dry land may easily be propagated, by sowing the seeds in autumn, or by permitting them to

scatter; thinning them, and keeping them clean from weeds. Most of them prefer a dry soil, and some flourish best on walls.

SISYRINCHIUM [of Pliny. *Σισυρινχίον* of Theophrastus. From *υς* sus, and *φυρξος* rostrum. Swine's snout. From the form of the flower], in Botany, a genus of the class monadelphia, order triandria, natural order of ensatae, Irides (*Juss.*)—Generic Character. Calyx: spathe common ancipital, two-leaved: valves compressed, acuminate. Proper several, lanceolate, concave, obtuse, one-flowered. Corolla, one-petalled, superior, six-parted: segments obovate with a point, from erect spreading: three outer alternate a little wider. Stamina: filaments three, united into a subtriquetrous tube shorter than the corolla, distinct at the top. Anthers bifid below; fastened by the back. Pistil: germ obovate, inferior. Style three-sided, length of the tube. Stigmas three thickish; awl-shaped at the top, erect. Pericarp: capsule obovate, rounded-three-sided, three-celled, three-valved; with the partitions contrary. Seeds several, globular.—*Essential Character.* Spathe two-leaved. Calyx none. Petals six, almost equal, style one. Capsule three-celled, inferior.

1. *Sisyrrinchium elegans*.—Scape round, one-flowered, simple; leaf radical, linear, acuminate shorter; petals oblong acute.—Native of the Cape of Good Hope.

2. *Sisyrrinchium collinum*.—Scape round, somewhat branched; stem-leaf linear-acuminate shorter; petals oblong, acute.—Native of the hills near the Cape, where it is very abundant.

3. *Sisyrrinchium grandiflorum*, or great-flowered *sisyrrinchium*.—Scape round; simple; spathe subtriflorous; petals obovate, obtuse; leaves lanceolate, plaited. Root bulbous.—Native of Peru.

4. *Sisyrrinchium Bermudiana*, or iris-leaved *sisyrrinchium*.—Scape ancipital, branched, leafy; spathe subquadriflorous; shorter than the flowers; petals mucronate; leaves ensiform.—Native of Bermuda.

5. *Sisyrrinchium anceps*, or narrow-leaved *sisyrrinchium*.—Scape ancipital, winged simple, almost leafless; spathe subquadriflorous unequal, longer than the flowers; petals mucronate, leaves ensiform.—Native of Virginia and other parts of North America.

6. *Sisyrrinchium micranthum*, or small-flowered *sisyrrinchium*.—Scape ancipital, branched, leafy; spathe subtriflorous unequal, nearly equal to the flowers; petals linear, acuminate; leaves grassy, channelled.—Native of Peru.

7. *Sisyrrinchium palmifolium*, or palm-leaved *sisyrrinchium*.—Scape ancipital; flowers in spikes; leaves ensiform, nerved and plaited.—Native of Brasil.

8. *Sisyrrinchium striatum*.—Scape ancipital, leafy; flowers in spikes; petals roundish-ovate acute; leaves linear-ensiform. Root tuberous.—Supposed to be a native of Mexico.

9. *Sisyrrinchium xixioides*.—Scape compressed, panicled at top; petals flat, the outer ones smaller by half; leaves ensiform nerved. Root fibrous.—Native of New Zealand.

10. *Sisyrrinchium narcissoides*.—Stem erect, round; spathe two-valved subquadriflorous; flowers drooping; leaves linear-ensiform.—Native of the straits of Magellan.

Propagation and Culture.—The first and second species must be kept in the dry stove, and the rest in the bark bed. They may all be increased by the root.

SISZKO, a small town of Prussia Poland, on the Wartha; 26 miles north-north-west of Posen. Population 1700.

To **SIT**, *v. n.* preterite, *I sat*. [*sitan*, Gothic; *πικταν*, Sax.; *setten*, Dutch.—To rest upon the hisch-bone.—Their wives do *sit* beside them carding wool. *May*.—To perch.—To be in any local position.

I should be still

Plucking the grass to know where *sits* the wind:

Peering in maps for ports.

Shakspeare.

Those

Appointed to *sit* there had left their charge.

Milton.

The ships are ready, and the wind *sits* fair.

A. Philips.

To rest as a weight or burthen.—Your brother's death *sits* at your heart. *Shakspeare*.—When God lets loose upon us a sickness, if we fear to die, then the calamity *sits* heavy on us. *Bp. Taylor*.—To toss and fling, and to be restless, only galls our sores, and makes the burthen that is upon us *sit* more uneasy. *Tillotson*.

Fear, the last of ills, remain'd behind,
And horreur, heavy *sat* on every mind.

Dryden.

Our whole endeavours are intent to get rid of the present evil, as the first necessary condition to our happiness. Nothing, as we passionately think, can equal the uneasiness that *sits* so heavy upon us. *Locke*.—To settle; to abide.

That this new comer shame,
There *sit* not and reproach us.

Milton.

When Thetis blush'd, in purple not her own,
And from her face the breathing winds were blown;
A sudden silence *sate* upon the sea,
And sweeping oars, with struggling, urg'd their way.

Dryden.

He to the void advanc'd his pace,
Pale horreur *sat* on each Arcadian face.

To brood; to incubate.—As the partridge *sitteth* on eggs, and hatcheth them not, so he that getteth riches not by right, shall leave them in the midst of his days. *Jer*.—The egg laid and severed from the body of the hen, hath no more nourishment from the hen; but only a quickening heat when she *sitteth*. *Bacon*.—She mistakes a piece of chalk for an egg, and *sits* upon it in the same manner. *Addison*.—To be adjusted; to be with respect to fitness or unfitness, decorum or indecorum. [*sied*, old Fr. "cet accoustrement luy *sied* bien," this garment becomes, *sits*, &c. Cotgrave.]

How ill it *sits* with that same silver head
In vain to mock!

Spenser.

This new and gorgeous garment, majesty,
Sits not so easy on me as you think.

Shakspeare.

Heav'n knows,
By what by-paths, and indirect crook'd ways
I met this crown; and I myself know well,
How troublesome it *sate* upon my head;
To thee it shall descend with better quiet.

Shakspeare.

Your preferring that to all other considerations does, in the eyes of all men, *sit* well upon you. *Locke*.—To be placed in order to be painted.—One is under no more obligation to extol every thing he finds in the author he translates, than a painter is to make every face that *sits* to him handsome. *Garth*.—To be in any situation or condition.—As a farmer cannot husband his ground so well, if he *sit* at a great rent; so the merchant cannot drive his trade so well, if he sit at great usury. *Bacon*.—Suppose all the churchlands were thrown up to the laity; would the tenants *sit* easier in their rents than now? *Swift*.—To be convened, as an assembly of a public or authoritative kind; to hold a session: as, the parliament *sits*: the last general council *sate* at Trent.—To be placed at the table.—Whether is greater, he that *sitteth* at meat, or he that serveth? *St. Luke*.—To exercise authority.—The judgment shall *sit*, and take away his dominion. *Daniel*.—Asses are ye that *sit* in judgment. *Judges*.

Down to the golden Chersonese, or where
The Persian in Ecbatan *sate*.

Milton.

One council *sits* upon life and death, the other is for taxes, and a third for the distributions of justice. *Addison*.

Assert, ye fair ones, who in judgment *sit*,
Your ancient empire over love and wit.

Rowe.

To be in any solemn assembly as a member.—Three hundred and twenty men *sat* in council daily. 1 *Maccabees*.

To **SIT** down. *Down* is little more than emphatical.—Go and *sit* down to meat. *St. Luke*.—When we *sit* down to our meal, we need not suspect the intrusion of armed uninvited guests. *Dec. of Chr. Piety*.

To

To *SIT* down. To begin a siege.—Nor would the enemy have *sate* down before it, till they had done their business in all other places. *Clarendon*.

To *SIT* down. To rest; to cease as satisfied.—Here we cannot *sit* down, but still proceed in our search, and look higher for a support. *Rogers*.

To *SIT* down. To settle; to fix abode.—From besides Tanais, the Goths, Huns and Getes *sat* down. *Spenser*.

To *SIT* out. To be without engagement or employment.—They are glad, rather than *sit* out, to play very small game, and to make use of arguments, such as will not prove a bare inexpediency. *Bp. Sanderson*.

To *SIT* up. To rise from lying to sitting.—He that was dead *sat* up, and began to speak. *St. Luke*.

To *SIT* up. To watch; not to go to bed.

Be courtly,

And entertain, and feast, *sit* up, and revel;
Call all the great, the fair and spirited dames
Of Rome about thee, and begin a fashion
Of freedom.

B. Jonson.

Some *sit* up late at winter-fires, and fit
Their sharp-edg'd tools.

May.

Most children shorten that time by *sitting* up with the company at night. *Locke*.

To *SIT*, *v. a.* To keep the seat upon.

Hardly the muse can *sit* the head-strong horse,
Nor would she, if she could, check his impetuous force.

Prior.

[When the reciprocal pronoun follows *sit*, it seems to be an active verb.] To place on a seat.

The happiest youth viewing his progress through,
What perils past, what crosses to ensue,
Would shut the book, and *sit* him down and die. *Shakspeare*.

He came to visit us, and calling for a chair, *sat* him down,
and we sat down with him. *Bacon*.

Thus fenc'd,

But not at rest or ease of mind,
They *sat* them down to weep.

Milton.

To be settled to do business: this is rather neuter.—The court was *sat* before Sir Roger came, but the justices made room for the old knight at the head of them. *Addison*.

SITA, in Hindoo Mythology, is a celebrated incarnation of the goddess Lakshmi, celestial consort of Vishnu, in his avatara, or descent in the form of Rama. In the language of Hindoo fable, she was his sakti, or energy; and numberless poems have been written in honour of her beauty, merits, and deeds.

SITALA, a river of Mexico, which runs into the Pacific Ocean. Lat. 17. 38. N. long. 101. 40. W.

SITANG, a large river of the Birman empire, province of Pegu. It rises in a range of mountains about the 20th degree of northern latitude, passes the ancient city of Pegu, and falls into the gulph of Martaban; but on account of shoals, and very strong tides, it is excessively unsafe, and therefore little known to Europeans.

SITE, *s.* [*situs*, Lat.] Situation; local position.

The city self he strongly fortifies,
Three sides by *site* it well defended has.

Fairfax.

Manifold streams of goodly navigable rivers, as so many chains, environed the same *site* and temple. *Bacon*.—If we consider the heart in its constituent parts, we shall find nothing singular, but what is in any muscle. 'Tis only the *site* and posture of their several parts that give it the form and functions of a heart. *Bentley*.

Before my view appear'd a structure fair,
Its *site* uncertain if on earth or air.

Pope.

It is taken by Thomson for posture, or situation of a thing with respect to itself; but improperly.

And leaves the semblance of a lover fix'd
In melancholy *site*, with head declin'd,
And love-dejected eyes.

Thomson.

SIT'ED, *adj.* Placed; situated.

It *sitcd* was in fruitful soyle of old,
And girl in with two walls on either side.

Spenser.

Above were *sitcd* the masquers, over whose heads he devised two eminent figures. *B. Jonson*.

SIT'FAST, *s.* A hard knob growing under the saddle. *Farrier's Dict*.

SITH, *conj.* [riddē, Sax.] Since; seeing that. *Obsolete*.—What ceremony of odours used about the bodies of the dead! after which custom notwithstanding, *sith* it was their custom, our Lord was contented that his own most precious blood should be entombed. *Hooker*.

I thank you for this profit, and from hence
I'll love no friend, *sith* love breeds such offence. *Shakspeare*.

SITHCUNDMAN, in our Old Writers, one whose province it was to lead the men of a town or parish. *Leg. Ina*. cap. 56.

Dugdale says, that in Warwickshire the hundreds were formerly called *sythecosa*, and that *sithcundman*, and *sithcundman*, was the chief officer within such a division, i. e. the high constable of the hundred.

SITHE, *s.* Time. *Obsolete*.—A thousand *sithes* I cease that careful houre. *Spenser*.

The foolish man thereat woxe wondrous blith,—
And humbly thanked him a thousand *sith*.

Spenser.

SITHENCE, *adv.* [riddan, riddēn, Saxon. Chaucer, *sithen*.] Since; in latter times.—This over-running and wasting of the realm was the beginning of all the other evils which *sithence* have afflicted that land. *Spenser*.

SITHESOCA, in our Old Writers, is used to denote the district now called a hundred. The word is Saxon, signifying a *franchise*, or liberty.

SITHNEY, a parish of England, in Cornwall; 2½ miles north-west of Helstone. Population 1552.

SITIGNAK, one of the Fox islands, in the North Pacific Ocean. Lat. 53. 30. N. long. 117. 14. E.

SITIPITI, a river of Peru, in the province of Pataz, which runs north, and joins the Maxamerique, to enter the Pango.

SITOE, *CAPE*, a cape on the west coast of the island of Sumatra. Lat. 2. 12. N. long. 97. 11. E.

SITONÆ, [*Σιτωναι*, Gr.] among the Athenians, officers appointed to lay in corn for the use of the city, for which purpose the *ταμισες της διοικουσεως*, or the public treasurer, was to furnish them with as much money as they had occasion for. *Potter*.

SITONES, the name of one of the three principal classes of people who inhabited Scandinavia, beyond mount Savos, and bounded by the sea to the west and to the south.

SITOPHYLAX, *Σιτοφυλαξ*, formed from *σιλος*, *corn*, and *φυλαξ*, *keeper*, in Antiquity, an Athenian magistrate, who had the superintendance of the corn; and was to take care that nobody bought more than was necessary for the provision of his family.

SITTA, the *Nuthatch*, in Ornithology, a genus of birds of the order Picæ, of which the Generic Character is, bill subulate, roundish, straight, entire; the upper mandible is a little longer, compressed, and angular at the tip; tongue jagged, short, horny at the tip; the nostrils are small, covered with bristles; the feet are formed for walking; the hind-toe is long. Gmelin reckons twelve.

I. *Sitta Europæ*, or European nuthatch.—Cinereous, beneath reddish; the tail-feathers black; the four lateral ones beneath are tipped and white. It weighs nearly an ounce; its length is five inches; the bill is strong and straight, and about three-quarters of an inch long; the upper mandible is black, the lower white; the irides hazel; the crown of the head, back, and coverts of the wings, are of a fine blueish-grey; a black stroke passes over the eye from the mouth; the cheeks and chin are white; the breast and belly are of a dull orange-colour; the quill-feathers are dusky; the wings underneath are marked with two spots, one white, at the root of the exterior quills, the other black, at the joint of the bastard-wing; the tail consists of twelve feathers, the

two

two middle are grey, the two exterior feathers tipped with grey, then succeeds a transverse spot, beneath that the rest is black; the legs are of a pale yellow; the back toe very strong, and the claws large. Such is Mr. Pennant's description of the European nuthatch, who adds, that "this bird runs up and down the bodies of trees like the woodpecker tribe, and feeds not only on insects but on nuts, of which it lays up a considerable quantity, as winter provision, in the hollows of trees. It breeds likewise in the hollows of trees; and if the entrance be too large, it stops up part of it with clay, leaving only room enough for admission. It autumn it begins a chattering noise, being silent the greater part of the year. This bird makes its nest of dead leaves, mostly of the oak, which it heaps together without much order. It lays six or seven eggs, which are white, spotted with rust colour, so exactly like those of the great titmouse, that it is almost impossible to distinguish them. No persecution will force this little bird from its habitation, when sitting: it defends its nest to the last extremity, strikes the invader with its bill and wings, and makes a hissing noise; and after every effort of defence, will suffer itself to be taken in hand, rather than quit its post."

"The nuthatch," says Colonel Montague, in his Ornithological Dictionary, "is more expert in climbing than the woodpecker; for it runs in all directions up and down a tree, whereas the other is never observed to descend: the stiff tail of those birds support them in the act of climbing and hacking. The flexible tail of the nuthatch gives it no such advantage, nor does it seem to want it; for its most favourite position, when breaking a nut, is with the head downwards. In autumn it is no uncommon thing to find, in the crevices of the bark of an old tree, a great many broken nut-shells, the work of this bird, who repeatedly returns to the same spot for this purpose. When it has fixed the nut firmly in a chink, it turns on all sides, in order to strike it with the most advantage. This, with the common hazel-nut, is a work of some labour; but it breaks the filberd with ease. In defect of such food, insects and their larvæ are sought after among the moss on trees, and old thatched buildings. It is commonly met with about orchards, and is sometimes seen, in the cider season, picking the seeds from the refuse of the pressed apples. The note is various: in the spring it is a remarkably loud shrill whistle, which ceases after incubation; in autumn it is a double reiterated cry." There is a variety, called the little nuthatch, which is much smaller than the common nuthatch, and of a more noisy disposition. It resides in similar situations, and is equally solitary; associating only with its mate, and attacking any other it may happen to see.

2. *Sitta Canadensis*, or Canada nuthatch.—Cinereous, beneath pale rufous; eye-lids white. This is of the size of the European species; the bill is blackish; crown of the head, hind part of the neck, and shoulders, black; the back and rump are of a light grey; over each eye is a white line; the cheeks are white; larger quill-feathers dusky, with grey edges; breast and belly pure white; the two middle tail-feathers are grey, the rest black, with a white spot at the tip; the vent is ferruginous, and the legs are brown. It is, as its specific name imports, a native of Canada, and extends its journeys as far south as New York. Mr. Pennant makes it a mere variety of the European nuthatch; but by Linnæus and Latham it is regarded as a distinct species.

3. *Sitta Carolinensis*, or black-headed nuthatch.—Cinereous, beneath whitish; lower part of the belly reddish; head and neck above black; lateral tail-feathers white, varied with black.—It is a native of the temperate parts of America, and of the island of Jamaica.

4. *Sitta Jamaicensis*, or Jamaica nuthatch.—Cinereous, beneath white; crown black; lateral tail-feathers blackish, tipped with transverse white lines. This has been described by Sir Hans Sloane in his natural History of Jamaica. It is of the size of the common nuthatch, the length being five inches and a half; the bill nearly an inch long, and black; the head is large, with a black crown. It is, as its specific name

imports, a native of the island of Jamaica. It has also been found in many parts of South America, feeding on insects, and having the character of a stupid bird, easily suffering itself to be taken. From the size of its head, it is known in Jamaica by the name of loggerhead. There is a variety much less.

5. *Sitta pusilla*, or small nuthatch.—Cinereous, beneath dirty white; the head is brown, with a dirty white spot behind; the lateral tail-feathers are black.—It inhabits North America, and is said to be found in Carolina throughout the whole year.

6. *Sitta major*, or great nuthatch.—Grey, beneath whitish; the chin is white; the quill and tail-feathers brown, edged with orange. This is described by Sir Hans Sloane in the History of Jamaica; it is seven inches and a half long; the bill is thickest in the middle, and curved at the end; the head and back are grey; the under parts are whitish; the wings and tail are brown, with orange edges. It is a native of Jamaica, and feeds on worms, insects, &c.

7. *Sitta nævia*, or spotted nuthatch.—Above it is of a lead-colour, beneath glaucous; the chin is white; the wing-coverts are spotted with white. This bird is described by Edwards under the title of wall-creeper of Surinam, who says, the bill is long in proportion, straight, somewhat compressed sideways, a little hooked at the point, and of a dusky brownish colour; the head, the hinder side of the neck, back, rump, tail, and wings, are of a dark blueish-lead colour; all the covert-feathers on the upper side of the wings are tipped with white; the insides of the quills and under side of the tail feathers are ash-coloured, lighter than they are above; the throat is white; the breast, belly, thighs, and coverts beneath the tail, are of a blueish-ash colour, lighter than the upper side of the bird; from the throat, as far as the legs, the breast is marked with white lines, drawn down the middle of each feather, which end in points; the legs and feet are of a dusky brown colour. The length of this bird is about six inches. It is, as its trivial name imports, a native of Surinam.

8. *Sitta Surinamensis*, or Surinam nuthatch.—Reddish-chestnut, beneath it is of a dirty white; middle of the back white; wings and tail black; wing and tail-coverts tipped, and secondary quill-feathers edged, with white. This is a very small species, not much more than three inches in length; the bill is of a dusky brown, and a little curved; the hind-head and neck are marked with oblong black spots. It is, as its specific name imports, a native of Surinam.

9. *Sitta Caffra*, or Cape nuthatch.—Body beneath is yellow, above yellow, varied with black; the legs are black.—It inhabits the Cape of Good Hope. This was described by Sparrmann, and is by him said to be nine inches in length, with a straight blueish-black bill; the front, hind part of the neck, and back, mixed with brown and yellow; cheeks, neck, breast, and under parts, are of a dusky yellow, as are also the edges and tips of the wing-feathers; the tail is dusky black, beneath olive; the two middle feathers longer than the rest; the legs are black.

10. *Sitta sinensis*, or Chinese nuthatch.—The Specific Character of this, according to Gmelin, is, that the lower eye-lid is purple. But Dr. Shaw denominates it the ferruginous nuthatch, with black head and neck, white breast and abdomen, a red spot behind the eye, and another white one. This bird is described by Latham as something larger than the goldfinch; the bill and head are black; the back is of a deep blueish-ferruginous; the throat, breast, and belly, are white, but the throat is encompassed by a black band, descending from the sides of the head, which is black and crested; near the eye is a small scarlet spot, succeeded by a large white one; the rump is yellow; the tail blackish, with a white tip; the bill and legs are black. It is, as its name denotes, a native of China, where it is said to be much esteemed on account of the elegance of its colours, and is a frequent ornament on Chinese papers. "It appears," says Dr. Shaw, "to be much allied to the *Lanius jocosus*, or red-vented shrike, and may perhaps prove, on future investigation, to be no other than the same bird."

11. *Sitta longirostra*, or long-billed nuthatch.—Blueish, beneath, pale rufous; primary quill-feathers tipped with brown; the lores are black. This species is described by Dr. Latham, and is said to measure nine inches; the bill is above an inch long, and black, but the base is pale or whitish; the crown of the head and whole upper parts of the bird are of a pale blueish-grey, but the cheeks and forehead are white, and a black streak passes through each eye, along the sides of the neck; the wings are tipped with brown, and the under parts of the bird are pale tawny; the legs are of a pale brown.—It inhabits Batavia.

12. *Sitta chloris*, or green nuthatch.—Above green, beneath white; the tail is black, tipped with yellowish; the bill is longer than the head, and blackish towards the tip: quill-feathers brown, outer edge greenish, yellowish in the middle, forming a yellowish band on the wings; the rump is yellowish, and the tail short.—It is a native of the Cape of Good Hope, and is of the size of the Surinam nuthatch.

SITTARD, an inland town of the Netherlands, in the province of Limburg, on the small river Gheete. Population 3300; 12 miles north-north-east of Maastricht.

SITTER, *s.* One that sits.—The Turks are great *sitters*, and seldom walk; whereby they sweat less, and need bathing more. *Bacon*.—One that watches, or goes not to bed.—Not a-bed ladies? you're good *sitters up*. *Beaum. and Fl.*—A bird that broods.—The oldest hens are reckoned the best *sitters*; and the youngest the best layers. *Mortimer*.

SITTING, *s.* The posture of sitting on a seat. The act of resting on a seat.—Thou knowest my down-sitting and mine up-rising. *Psalms*.—A time at which one exhibits himself to a painter.—Few good pictures have been finished at one *sitting*; neither can a good play be produced at a heat. *Dryden*.—A meeting of an assembly.

I'll write you down;

The which shall point you forth at every *sitting*,
What you must say. *Shakespeare.*

I wish it may be at that *sitting* concluded, unless the necessity of the time press it. *Bacon*.—A course of study uninterrupted.—For the understanding of any one of St. Paul's epistles, I read it through at one *sitting*. *Locke*.—A time for which one sits, as at play, or work, or a visit.

What more than madness reigns,
When one short *sitting* many hundreds drains,
And not enough is left him to supply
Board-wages, or a footman's livery.

Dryden.

Incubation.—Whilst the hen is covering her eggs, the male bird takes his stand upon a neighbouring bough, and amuses her with his songs, during the whole time of her *sitting*. *Addison*.

SITTINGBOURNE, a market town of England, in the county of Kent, and a great thoroughfare on the road from London to Dover. It consists chiefly of one wide street, running along the high road, which here descends towards the east. It depends chiefly for its support on the resort of travellers. The inns are numerous, and some of them equal in elegance to any provincial inns in the kingdom. The church is a spacious building, consisting of a nave, two aisles, a chancel, two chapels, and a tower rising at the west end. With the exception of the tower, the whole has been rebuilt since the year 1762, when it was destroyed by fire. Sittingbourne is a place of considerable antiquity. King Henry V. on his return from France, was magnificently entertained here at the Red Lion Inn, by a gentleman of the name of Northwood. Queen Elizabeth incorporated the town by charter; conferred on it the privileges of a weekly market and fairs, and invested the corporation with the right of sending members to parliament. These privileges, however, seem never to have been exercised, except that of the fairs, which are still kept annually. The parish is of small extent, and contained in 1811, 239 houses, and 1362 inhabitants; 11 miles south-east of Rochester, and 40 east-by-south of London.

Vol. XXIII. No. 1568.

SITTIVICA, a town of the island of Ceylon, noted for being the chief place of intercourse between Candy and Columbo. It is situated on a branch of the Malivaddy river, and formerly possessed a fort, which is now in ruins. Lat. 7. 2. N. long. 80. 13. E.

SITUATE, *part. adj.* [from *situs*, Lat.] Placed with respect to any thing else.—He was resolved to chuse a war, rather than to have Bretagne carried by France, being so great and opulent a duchy, and *situate* so opportunely to annoy England. *Bacon*.

Within a trading town they long abide,
Full fairly *situate* on a haven's side.

Dryden.

The eye is a part so artificially composed, and com-mo-diously *situate*, as nothing can be contrived better for use, ornament, or security. *Ray*.—Placed; consisting.

Earth hath this variety from heaven,
Of pleasure *situate* in hill or dale.

Milton.

SITUATION, *s.* [*situation*, Fr.] Local respect; position.—Prince Cesarini has a palace in a pleasant *situation*, and set off with many beautiful walks. *Addison*.—Condition; state.—Though this is a *situation* of the greatest ease and tranquillity in human life, yet this is by no means fit to be the subject of all men's petitions to God. *Rogers*.—Temporary state; circumstances. *Used of persons in a dramatic scene.*

SITZENDORF, a small town of Austria; 33 miles north-west of Vienna. Population 1400.

SITZIKAMMA, a district in the eastern part of the territory of the Cape of Good Hope, between Plettenburg bay and Camtoos river. It consists chiefly of impenetrable forests, abounding with the elephant, the buffalo, and the rhinoceros.

SIVA, in Hindoo Mythology, is a personification of one of the three great powers of the deity. Siva is usually deemed the third person in the Hindoo triad, and represents the *destructive energy*.

SIVANO SAMUDRA, a remarkable island, situated in the river Cavery, in the province of Coimbeetoor, in the south of India. It is nine miles in length, and contains an extraordinary cataract, 150 feet perpendicular. This island was formerly connected to the opposite shore, by a handsome stone bridge, which is now in ruins. There are also the remains of many Hindoo temples, and much sculpture of various sorts: in one apartment, there is an image of Vishnu, seven feet high, executed in the best style of Indian carving. The island is in general rocky, and but little cultivated.

SIVAS or **SIWAS**, a considerable city of Asia Minor, capital of a pachalic which comprehends the whole eastern part of that territory. It still retains the name of Roum, or Rumiya, which formerly applied to the whole Turkish empire. Its general character is that of a mountainous and wooded country, interspersed with fine valleys; and it contains the important cities of Amasia, Tocat, and Trebisond. The town is situated on the great river Kizil Irmak, not far from its source, and on the northern side of a plain watered by it. It is dirty and ill built, and the strong castle by which it was formerly defended is now in ruins. The inhabitants are described as a coarse and rude people; but travellers vary so much as to their number, that we cannot form any certain conclusion. Not far from the town is a celebrated Armenian monastery. A great number of horses are bred in the neighbourhood. This place was originally called Cabira, afterwards Sebaste, in honour of Augustus. It is celebrated as being the theatre of the great contest between Bajazet and Timur, in which the former was finally defeated and taken prisoner. Lat. 38. 55. N. long. 37. E.

SIVINSK, a village of the east of European Russia, in the inland province of Pensa, with iron works on a large scale.

SIVITA, a small island belonging to Turkey in Europe, situated in the Ionian sea, on the coast of Epirus.

SIVRY, a small inland town of the Netherlands, province.

of Hainault, with 2200 inhabitants; 18 miles south-south-west of Charleroi.

SIUM [of Pliny: *σι σιεται*, from its being shaken by the stream in which it grows.], in Botany, a genus of the class pentandria, order digynia, natural order of umbellatæ, or umbelliferæ.—Generic Character. Calyx: umbel universal, various in different species: partial spreading, flat. Involucre universal, many-leaved, reflex, shorter than the umbel, with lanceolate leaflets: partial many-leaved, linear, small. Perianth proper, scarcely observable. Corolla: universal uniform: floscules all fertile. Proper of five inflex-cordate, equal petals. Stamina: filaments five, simple. Anthers simple. Pistil: germ very small, inferior. Style two, reflex. Stigmas obtuse. Pericarp none. Fruit subovate, striated, small, bipartite. Seeds two subovate, convex and striated on one side, flat on the other.—*Essential Character*. Involucre many-leaved. Petals cordate. Fruit subovate, striated.

1. *Sium filifolium*, or thread-leaved water parsnep.—Leaves filiform; involucre elongated.—Native of the Cape of Good Hope.

2. *Sium latifolium*, or broad-leaved water parsnep.—Leaves pinnate, leaflets oblong-lanceolate, equally serrate.—Native of many parts of Europe, and of Siberia.

3. *Sium angustifolium*, or narrow-leaved water parsnep.—Leaves pinnate, leaflets unequally lobed and serrate, umbels peduncled opposite to the leaves; stem erect. Root perennial, creeping, so as to occupy much space.—Native of most parts of Europe.

4. *Sium nodiflorum*, or procumbent water parsnep.—Leaves pinnate, leaflets ovate equally serrate, umbels sessile opposite to the leaves; stem procumbent. Flowers small, greenish white, with slight traces of a calyx. Fruit ovate.—Native of many parts of Europe.

5. *Sium repens*, or creeping water parsnep.—Leaves pinnate, leaflets roundish, tooth-gashed, umbels peduncled opposite to the leaves; stem creeping.—Native of Bohemia in wet meadows, Austria and England.

6. *Sium verticillatum*, or whorled water parsnep.—Leaflets multifid-capillary in whorls. Root perennial, consisting of several oblong tubers, tapering to a point. Stem from twelve to eighteen inches high, erect. Leaves mostly radical and very remarkable, consisting of a simple rib, along which are arranged pairs of deeply cloven leaflets.—Native of Germany, France, the Pyrenees, and Britain.

7. *Sium sisarum*, or skirret.—Leaves pinnate, floral leaves ternate. The root of the common Skirret is composed of several fleshy tubers as large as a man's little finger, and joining together in one head. The stalk rises a foot high, and is terminated by an umbel of white flowers, which appear in July, and are succeeded by striated seeds like those of parsley, which ripen in autumn.

Our English name *Skirret* seems to be a corruption from the old name *Skirwort*.—Native of China and Cochinchina, in watery places.

8. *Sium rigidius*, or Virginian water parsnep.—Leaves pinnate, leaflets lanceolate almost entire. Stem stiffish. Flowers small.—Native of Virginia.

9. *Sium Japonicum*, or Japanese water parsnep.—Leaves pinnate, leaflets gashed, umbels terminating. Stem erect, flexuose, branched at top.—Native of Japan, in the island Nipon.

10. *Sium falcaria*, or decurrent water parsnep.—Leaflets linear, decurrent, connate. Roots creeping, and spreading very far under ground, thick, fleshy, and tasting like those of Eryngo.—*Sium falcaria* is a native of many parts of Europe; also of Asia and Africa.

11. *Sium grandiflorum*, or great-flowered water parsnep.—Leaves bipinnate, leaflets roundish, gash-toothed.—Native of the Cape of Good Hope, as are the two following.

12. *Sium paniculatum*, or paniced water parsnep.—Leaves bipinnate, leaflets linear, gash-pinnatifid.

13. *Sium patulum*, or spreading water parsnep.—Leaves bipinnate, leaflets trifid, branches diffused.

14. *Sium Græcum*, or Grecian water parsnep.—Leaves

bipinnate, leaflets lanceolate, serrate, the uppermost confluent. Flowers yellow.—Native of Greece.

15. *Sium decumbens*, or prostrate water parsnep. Stem decumbent, dwarfish.—Native of Japan, on the island of Nipon, near Jedu and Fakona.

16. *Sium Siculum*, or Sicilian water parsnep.—Radical leaves ternate, stem-leaves bipinnate. Of a lucid green. Stem two feet high, terminated, in July, by an umbel of yellow flowers.—Native of Sicily and the hills near Algiers.

17. *Sium asperum*, or rough water parsnep.—Leaves tripinnate, peduncles and pedicels rugged.—Native of the Cape of Good Hope, as are the two following.

18. *Sium hispidum*, or shaggy water parsnep.—Leaves tripinnate, petioles and peduncles rugged.

19. *Sium villosum*, or villose-leaved water parsnep.—Leaves tripinnatifid, segments ovate, gash-serrate villose.

Propagation and Culture.—The first six being marsh or water plants, if cultivated in gardens, must be placed in tubs filled with water, having earth in the bottom, or by the sides of canals or ponds.

The seventh is cultivated two ways; first by seeds, and afterwards by slips from the root.

Of the tenth the least part of the roots will grow, so that it will soon multiply of itself.

Sow the seeds of the sixteenth soon after they are ripe.

SIUT, a large town of Upper Egypt, on the western bank of the Nile. The country round is exceedingly fertile, and produces in abundance all the fruits to be found in Egypt, particularly apricots and water-melons. A great quantity of hemp is also cultivated, not for manufacture, but for the intoxicating quality which the seed possesses when smoked. The inhabitants consist chiefly of Copts, in whose hands almost all the commercial transactions of Egypt are placed. They are employed in an extensive manufacture of blue cloth. Siut is also the rendezvous of the caravans which proceed from Egypt southwards into the interior of Africa, to Sennaar and Darfur; from which countries they bring a considerable quantity of slaves and gold. The rich Copts immure their females, and live nearly in the same style as the Mahometans, except that they indulge in the use of brandy. Siut is the see of a Coptic bishop. It is built at the distance of about half a mile from the river, with which it communicates by a canal, crossed by a bridge of three arches. Siut is supposed to be the ancient Lycopolis; but the only remarkable antiquity which it presents, consists in the excavations made in the neighbouring mountains. They are numerous, and many of the chambers are thirty feet high, covered with hieroglyphics of elegant workmanship, and exhibiting symbolical figures. Various conjectures have been formed as to their origin, but the most probable seems to be, that they were excavated for sepulchral purposes; and some of them, in fact, contain fragments of the jars or urns in which were deposited animals considered as sacred, or slain to attend their master in the other world. Lat. 27. 10. 14. N. long. 31. 13. 20. E.

SIUTCHEI, a small island, one of the Kuriles, in the Eastern ocean. Lat. 50. 15. N. long. 155. 14. E.
