SIWAH, or **ΣΙΟΥΑΗ**, a considerable oasis or fertile island, occurring in the Lybian desert, on the route from Egypt or Fezzan. This valley is described by Horneman as fifty miles in circumference, hemmed in on every side by barren rocks. Browne, however, represents the fertile district as not more than six miles in length and four in breadth. The territory is exceedingly well watered by streams descending from the surrounding hills; and the soil, of a sandy loam, yields in the greatest abundance the date, the staple commodity of this part of Africa. Almost every Siwahan possesses a date garden, well inclosed and carefully watered. The dates are piled up in storehouses, and form the object of an extensive trade. Siwah is built upon and around a mass of rock, which, according to tradition, was hollowed out into caves for the abode of the ancient inhabitants. The houses still resemble caves, and are huddled so close together, and in such confusion, that many of them are destitute of light, and the whole forms a labyrinth through which no stranger can

can penetrate without a guide. The general aspect, the crowded population, and the confused hum issuing from its precincts, give it the appearance of a bee-hive. The territory is supposed able to furnish about 1500 men in a condition to bear arms. The government is aristocratic, and very turbulent. It was originally vested in twelve sheiks, who administered public affairs in rotation; but twenty others of the principal citizens have now forced their way into power. The public council is held close to the town wall; but differences often occur, when recourse is speedily had to arms. The people are described as forward and insolent, and so thievishly inclined as to require strict precaution from the traveller to place his goods in security. Siwah, however, in consequence of its situation on the great caravan route, is the theatre of a considerable trade; and a number of the inhabitants are employed in the conveyance of goods between Egypt and Fezzan. Siwah is particularly remarkable as occupying probably the site of the temple of Jupiter Ammon, the most celebrated oracle of antiquity, and to reach which Alexander braved so many dangers. The fertile territory, surrounded by an extensive desert, and the catacombs found in the neighbouring mountains, strongly confirm this opinion. Accordingly, a few miles to the westward, there occurs a remarkable mass of ruins, called by the natives Ummebeda. They are in such a state of dilapidation as to render it difficult to discover the original purpose for which the structure was destined. There are evident remains of a very strong interior wall, about 300 yards in circumference, in the centre of which are found the ruins of what appears to have been the principal edifice. It is about 27 feet in height, 24 in width, and 10 or 12 paces in length. The walls are six feet thick, constructed, particularly in the roof, of very large blocks of stone, cemented with small stones and lime. The interior is decorated with hieroglyphics, and appears to have been partly painted. These concurring accounts of travellers appear to leave little doubt that the present structure formed a part at least of the celebrated shrine above alluded to. Lat. 29. 10. N. long. 26. 35. E.

SIWALON, a rock in the Eastern seas, near the north coast of Java. Lat. 6. 36. S. long. 110. 49. E.

SIX, *adj.* [ʃɪks, Sax., *sex*, Su. Goth., *saihs*, M. Goth., *shesh*, Persian.] Twice three; one more than five.—No incident in the piece or play but must carry on the main design; all things else are like *six* fingers to the hand, when Nature can do her work with five. *Dryden*.

SIX, *s.* The number six.—That of *six* hath many respects in it, not only for the days of the creation, but its natural consideration, as being a perfect number. *Brown*.

Six and seven. To be at *six and seven*, is to be in a state of disorder and confusion. *A ludicrous expression, that has been long in use.*

All is uneven,
And every thing is left at *six and seven.* *Shakspeare.*

In 1538, there sat in the see of Rome a fierce thundering friar, that would set all at *six and seven*, or at six and five, if you allude to his name. *Bacon*.

What blinder bargain e'er was driven,
Or wager laid at *six and seven.* *Hudibras.*

John once turned his mother out of doors, to his great sorrow; for his affairs went on at *sixes and sevens.* *Arbutnot.*

SIX HILLS, a parish of England, in Lincolnshire; 5 miles east-by-south of Market Raisin.

SIX ISLANDS, small islands in the Eastern seas, near the north coast of Java. Lat. 6. 36. S. long. 110. 49. E.

SIX MEN'S BAY, a bay on the north-west coast of the island of Barbadoes.

SIX MEN FORT, a fort of the island of Barbadoes; 1 mile north of Speight's Town.

SIX MILE BRIDGE, a small village of Ireland, in the county of Limerick, pleasantly situated on the river Maig; 102 miles south-west of Dublin.

SIX MILE BRIDGE, a village of Ireland, in the county

of Clare, situated on the river Gearn, which empties itself into the Shannon; 8 miles south-west of Limerick, and 103 west-south-west of Dublin.

SIX MILE WATER, a river of Ireland, which runs into Lough Neagh, at Antrim.

SIX NATIONS, a confederacy of American Indians, so called by the British and Americans, and by the French Iroquois. They are Mohawks, Oneidas, Onondagas, Senecas, Cayugas, and Tuscarawas. A great part of them have removed to Canada; and in 1796, the whole amounted only to 4508. In 1796, a society of Quakers raised a fund towards promoting the civilisation and comforts of these poor people.

SIXAIN, **SIXTH**, or **Sexagena**, in War, an ancient order of battle, in which six battalions being ranged in one line, the second and fifth were made to advance, to form the vanguard; the first and sixth to retire, to form the rear guard; the third and fourth remaining on the spot, to form the corps, or body of the battle.

SIX-CLERKS, officers in chancery of great account, next in degree below the twelve masters; whose business is to enrol commissions, pardons, patents, warrants, &c., which pass the great seal, and to transact and file all proceedings by bill, answer, &c.

SIXFOLD, *adj.* [ʃɪks-ʃeald, Sax.] Six times told.

SIXFOURS, a small town in the south-east of France, department of the Var. Population 2500. It is built on a hill, and has, at some distance, a harbour called St. Senary; 9 miles south-west of Toulon. Lat. 43. 6. 10. N. long. 5. 50. 32. E.

SIXPENCE, *s.* A coin; half a shilling.

The wisest man might blush,

If D—lov'd *sixpence* more than he.

Pope.

SIXPENNY, *adj.* Worth sixpence.—Slave, dost thou think I am a *sixpenny* jug? *Preston*.

SIXSCORE, *adj.* Six times twenty.—*Sixscore* and five miles it containeth in circuit. *Sandys*.

SIXTEEN, *adj.* [ʃɪksʃyne, Saxon.] Six and ten.

SIXTEEN TOWNS, in Hungary. See **ZYPS**.

SIXTEENTH, *adj.* [ʃɪksʃteoda, Saxon.] The sixth after the tenth; the ordinal of sixteen.

SIXTH, *adj.* [ʃɪksa, Saxon.] The first after the fifth; the ordinal of six.

SIXTH, *s.* A sixth part.—Only the other half would have been a tolerable seat for rational creatures, and five-sixths of the whole globe would have been rendered useless. *Cheyne*.

SIXTHLY, *adv.* In the sixth place.—*Sixthly*, living creatures have more diversity of organs than plants. *Bacon*.

SIXTIETH, *adj.* [ʃɪksʃteoda, Saxon.] The tenth six times repeated; the ordinal of sixty.—Let the appearing circle of the fire be three foot diameter, and the time of one entire circulation of it be the *sixtieth* part of a minute, in a whole day there will be but 86400 such parts. *Digby*.

SIXTUS IV., Pope, who assumed the name of Sixtus, instead of Francis della Rovere, was descended from a family of the same name in Savona, in the state of Genoa. He was born in 1414, and at an early age entered into the Franciscan order. He studied in the universities of Pavia and Bologna, and having taken the degrees of doctor of philosophy and theology, he gave public lectures in several of the principal cities of Italy, and acquired great reputation for learning. Having passed through some honourable offices in his order, he was at length raised to the head of it as general; and becoming known to Cardinal Bessarion, through his recommendation, and that of Cardinal Gonzaga, he was promoted by pope Paul II., in 1467, to the purple, by the title of St. Peter ad Vincula. On the death of the pope, in 1471, he was raised to the pontifical chair; but on his coronation a tumult was excited that had nearly proved fatal to him. Escaping from the hands of the mob, he attempted to form a league among the Christian princes against the Turks, who had made themselves masters of Bosnia, Istria, and great part of Dalmatia, and threatened Italy. With this

this view he sent some of his most distinguished cardinals as his legates to different courts, with instructions to endeavour to compose the disputes existing between the several sovereigns; but, as usual in such cases, with small effect. He procured to be fitted out an allied fleet of galleys, which recovered Smyrna from the Turks, but he did little besides. He was more successful at home, in an attempt to expel a number of petty tyrants who had seized upon the cities belonging to the church, and governed them as independent sovereigns. With the aid of Ferdinand, king of Naples, he effectually cleared the ecclesiastical states of these usurpers, and thereby almost doubled his revenue. The year 1475 was that of the Jubilee, which was celebrated with great magnificence by Sixtus, and was dignified by an unusual assemblage of crowned heads, though the resort of pilgrims in general was less than on former occasions.

This pontiff carried the vice of nepotism to as great a degree as any of his predecessors, and it was one of his first objects to make a splendid provision for his natural children, under the name of nephews, out of the dignities and offices of the church. It is said, that one leading motive for his expelling the independent possessors of towns in the ecclesiastical state was, that he might have territories to form principalities for his nephews; and in pursuance of this plan, he sent Giulano de Rovere, afterwards Julius II., to take the city of Castello from Niccolo Vitelli. Niccolo, having obtained the assistance of the duke of Milan and the Florentines, made a vigorous resistance, but was at length obliged to capitulate. This produced an alarm in the neighbouring states, and occasioned a defensive league between the duke of Milan, the Venetians, and the Florentines. The latter people were under the influence of Lorenzo de Medici, whose political conduct could not but be highly displeasing to the pope; and he displayed his resentment by depriving Lorenzo of the office of treasurer of the holy see, which he had conferred upon him in the days of their friendship. This, however, was not sufficient, and he determined upon an attempt entirely to subvert the power of the Medici in Florence. In conjunction with his nephew, Girolamo Riario, he formed a most detestable conspiracy. By means of the powerful family of the Pazzi, rivals to the Medici in Florence, a revolution was to be effected in the government of that city, commencing with the assassination of Lorenzo and Giuliano de Medici, when assisting at mass in one of the churches, and the elevation of the host was to be the signal. Fortunately their plans miscarried, but the pope thundered out an excommunication against Lorenzo and the magistrates of Florence, and laid the city and its territories under an interdict. Having in vain endeavoured by menace to induce the Florentines to deliver up Lorenzo, he formed a league with the king of Naples, whose troops, in conjunction with those of the church, invaded the territory of Florence, and spread devastation through it. They were, however, encountered by an opposite league, and the pope was at length, by the interposition of the king of France, and the alarm excited throughout Italy in consequence of the capture of Otranto by the Turks, obliged to consent to a peace. Italy did not long remain in peace. In 1482, Sixtus joined with the Venetians, in an attempt to dispossess the duke of Ferrara of his territories, for which his motive was a hope of vesting the government of that city in one of his own family. The consequence was an invasion of the ecclesiastical state by the duke of Calabria, son of the king of Naples, which however terminated in the duke's total defeat. The success of the Venetians rendering them formidable to their neighbours, a league was formed against them, which the pope was persuaded to join, and he issued a solemn excommunication against his allies. The confederates, however, receiving proposals from the Venetians, concluded a peace without consulting Sixtus. This affected his holiness so much, that it occasioned a severe fit of the gout, which put an end to his life in 1484, just after he had completed his 70th year, and in the 13th of his pontificate. "Sixtus IV." says his biographer, "ranks among the most unprincipled of the Roman pontiffs with respect to political conduct, which seems

to have been governed by no other motive than the passion for aggrandizing his family, and indulging a rapacious disposition. His concurrence in the detestable conspiracy of the Pazzi, and the eagerness with which he fomented the wars which disquieted Italy almost through the whole of his reign, shew him to have been steeled against all sentiments of public justice and humanity. He has been taxed with avarice, but the imputation has been refuted by recounting the splendid edifices, and the numerous charitable and useful establishments of which he was the founder. He was, in truth, liberal and magnificent in his expenditure; and having like many other arbitrary princes of that character, exhausted his resources, he scrupled no means of replenishing them. In no pontificate were the offices and employments about the papal court more shamelessly set to sale, or the exactions in passing bulls and other official instruments from that court more scandalously augmented. The most favourable light in which he can be viewed, is as a munificent encourager of literature. He may almost be regarded as the founder of the Vatican library; for he not only enriched it with books, collected from various parts of the world, but caused them to be properly disposed for the convenience of the public, to which he opened the library, placed them under the care of men deeply learned in different languages, with competent salaries, and assigned funds for the purchase of new books. It is, on the other hand, to be mentioned, that he was the first who instituted inquisitors of the press, without whose licence no work was suffered to be printed." Sixtus was author of some theological pieces: several of his letters are extant, and he published some decrees, one of which had for its object to put an end to the disputes then subsisting relative to the conception of the Virgin Mary.

SIXTUS V., Pope, was born in 1521, in the Marche of Ancona, at La Grotte, a village in the territory of Montalto. His father, whose name was Peretti, was a vinedresser, who not being able to maintain his son, placed him, when he was only nine years old, in the service of a farmer, by whom he was, at first, chiefly employed in attending to his swine. While he was occupied in this low office, a Franciscan friar passing that way, took the lad for his guide on a journey to Ascolia. Pleased with the boy's vivacity, he caused him to accompany him to his convent, and introduced him to his father guardian, who admitted him into the convent in the quality of a lay brother. He soon manifested a great inclination for learning, and was taught the elements of the Latin language. He was soon admitted into the order, went through the usual courses of philosophy and theology, was ordained priest in 1545, and shortly afterwards, being made a doctor in theology, he was appointed to a professorship at Sienna, under the name of Montalto. He acquired a high reputation as a preacher in several Italian cities, and was in a very short time nominated commissary-general at Bologna, and inquisitor at Venice. In the exercise of the latter office he quarrelled with the senate, always jealous of ecclesiastical authority, and thought proper to make his escape from Venice by night. Going to Rome, he became one of the council of the congregation, and afterwards procurator-general of his order. He accompanied Cardinal Buoncompagno to Spain, in quality of theologian to the senate, and counsellor of the holy-office. Thus elevated, he suddenly changed his demeanour, which had been harsh and petulant, and put on an appearance of extraordinary gentleness and humility. Cardinal Alexandrini, formerly his pupil, being raised to the papal dignity by the name of Pius V., sent him the brief of general of his order, and soon after honoured him with the purple, when he took the name of Cardinal Montalto. The successor of Pius was Gregory XIII., formerly cardinal Buoncompagno.

Montalto, without influence or connections to push him forward at the next vacancy, determined to appear entirely void of wishes and expectation of farther elevation, in order that he might not become an object of jealousy to any party. He accordingly withdrew from all public affairs, shut himself up like one entirely devoted to study and religious retirement,

and

and ever complained of the infirmities of age hanging heavily upon him. Gregory died in 1585, and the cardinals split into factions. Montalto appeared, but in the character of one bending under the weight of years, and as if ready to expire. In the course of the contests, which were long and severe, he was informed that the choice would probably fall on him; to which he replied by averring his own unfitness for the office; that his life would scarcely outlive the conclave; and that if he were elected, he should only be pope in name, while all the authorities must devolve upon others. This sort of argument, which he threw out as a bait to his ambitious brethren, was readily seized upon by them all, as well with the hope of a short pontificate, as with the expectation that they should all strengthen themselves against a new election. Montalto was chosen on the 24th of April, 1585. Scarcely, however, had the tiara been placed on his head, when he threw away his crutches, which had enabled him to assume his former character, walked perfectly erect, and chanted *Te Deum* with a voice so strong, that the roof of the chapel in which the ceremony was performed re-echoed the sound. He also gave his benediction to the people with such an air of vigour, that they could scarcely believe him to be the decrepid cardinal Montalto. It was now that he assumed the name of Sixtus V., and he soon shewed them that his mind was as vigorous as his body. The territory of the church was at this time overrun with banditti, who plundered and even murdered the people with impunity; and in the metropolitan city itself, a relaxed police had encouraged all kinds of disorders. The first object of Sixtus was to exterminate these evils, and no sovereign ever employed the corrective powers with which he was invested with more vigour and effect. It had been usual, for the sake of acquiring popularity, on the election of a new pope, to set the imprisoned criminals at liberty; but the first act of Sixtus was to order four persons to be hanged, on whom were found a few days before, prohibited weapons. This system of rigour he pursued with the most inexorable severity, never, in a single instance, pardoning a criminal. There is no doubt that signal severity was necessary to stop the public disorders, and in that view of the subject, Sixtus was certainly a benefactor to the state; but unfortunately for his character as a just magistrate, in whom compassion should be found tempering the rigour of the law, instances are recorded on the page of history, which go to prove that he took a real pleasure in acts of punishment, and that his soul was insensible to all the emotions of tenderness and pity; which, says a good writer and diligent observer of human nature, "is not an unusual effect of a monastic education."

A Spanish gentleman having been struck by a Swiss guard with his halberd in a church, retaliated by a blow which proved fatal to the soldier. Sixtus, having examined into the affair, gave an order to the governor of Rome to have the offender executed before he should sit down to table. The Spanish ambassador, with four cardinals, waited upon his holiness, not to plead for the criminal's life, but to entreat upon their knees, that, as he was a gentleman by birth, the punishment might be commuted to that of decapitation: this small favour he absolutely refused, and said in a tone of anger, bordering on frantic rage, "he shall be hanged; but to alleviate the disgrace incurred by his family, I will do him the honour to assist at his execution." He accordingly ordered the gallows to be erected before his own house, and was witness to the deed of horror. When the sentence was executed, he turned with the utmost coolness to his domestics, and said, "Bring me my dinner; this act of justice has given me an additional appetite." He caused the heads of all those who had suffered the penalty of death for crimes committed against the state, to be placed on the city gates, and on each side of the bridge of St. Angelo, and sometimes went on purpose to view them; and a request being made by the conservators of the health of the city for their removal, when they, by their numbers and decay, became offensive, he replied, "You are too delicate; the heads of those that rob the public are still more offensive."

Another anecdote is told of him, to shew that he was not

more rigorous to his own subjects, than strenuous in maintaining the rights and authority of the holy see, with respect to foreign powers. When the ambassador of the king of Spain presented him with a beautiful genet and a purse of ducats, as a homage due for the kingdom of Naples, and complimented him in his master's name, Sixtus, in a tone of railleury, said, that the compliment was very fine, but that it would require a deal of eloquence to persuade him to take a horse in exchange for the revenues of a kingdom. At the time of his accession, France was in confusion on account of the machinations of the Catholic league to exclude from the crown Henry, king of Navarre, its presumptive heir. Though Sixtus did not approve the attempts of the Guises, at the head of the league, to obtain a superiority over the king Henry III.; yet he thought it became him, as head of the Catholic religion, to promote the exclusion of a Protestant heir, and he accordingly launched an excommunication against the king of Navarre, depriving him of the right of succession. That prince procured an appeal from this sentence to be fixed on the very gates of the Vatican, which act, Sixtus had the magnanimity to be pleased with, on account of the heroism which it displayed. When Henry III. had caused the duke of Guise to be assassinated, and the cardinal of Guise to be put to death, and the cardinal of Bourbon and the archbishop of Lyons to be imprisoned, the pope, highly incensed at the violation of the ecclesiastical immunities in the persons of the three last mentioned persons, issued a monitory, requiring the king to set at liberty the cardinal and archbishop within ten days, on pain of excommunication; and he afterwards approved, in an open manner, the assassination of Henry by the Dominican Clement. He refused, however, to renew the excommunication of Henry IV., saying, that he would pray for his conversion, and that no prince was more deserving a crown. He had also a high veneration for the character of queen Elizabeth of England, on account of the prudence and vigour of her government, though he was under the necessity of treating her as an enemy on account of her enmity to the Catholic religion. It is said, and the fact is surely quite in character, that he envied her the good fortune in having had the pleasure of taking off a crowned head, by the execution of Mary, queen of Scots. After the defeat of the Spanish armada, he entertained the design of wresting the kingdom of Naples from Philip, but was prevented by death from making the daring attempt.

It was the ruling passion of this pontiff, who, as we have seen, was only a peasant's son, to perpetuate his memory, by which he was led to many vain and ostentatious, and to some great and useful enterprises. He had already, while cardinal, engaged the celebrated architect Fontana, in erecting a splendid chapel in the church of St. Maria Maggiore, which he had been obliged to discontinue, from the withdrawing of his allowance by Gregory XIII.; and now having the means, as well as the good will, he employed the same artist in the arduous task of setting upright the fallen obelisk of Egyptian granite, which had once decorated the Circus of Nero. This was effected by great skill and labour, and the obelisk was dedicated by Sixtus to the Holy Cross. He afterwards caused three other obelisks to be dug out of the ruins among which they lay, and placed before different churches. If mere vanity and ostentation led him to erect useless buildings at his native place; it was universally allowed, that use and ornament were united in most of the works which he executed at Rome. For the supply of water to that metropolis, he directed the collection of a number of springs to one reservoir, at the distance of thirteen miles, whence it was conveyed by an aqueduct to the Quirinal mount. He undertook to rebuild the Vatican library upon an enlarged and more magnificent plan, by his favourite architect Fontana, and erected very near it a very fine printing-office, destined to give splendid as well as correct editions of the fathers, and other works relative to religion. There was not a part of Rome to which he had not given decorations, and perhaps no pope left so many monuments of grandeur after a long reign as Sixtus V., after occupying the papal see little more than five years.

On these objects he must have expended immense sums, yet at his death he left five millions of crowns in the castle of St. Angelo, with an injunction to his successor, that they should be expended only for the service of the church, against Turks and heretics, or to relieve the people in times of famine and pestilence. For the supply of the great expenditure of his reign, and the accumulation of the sums left behind him, he must have had recourse to a system of heavy taxation, although he managed his finances with great economy. He was not free from the papal vice of nepotism. Though never ashamed of the meanness of his origin, which could not be concealed, he was determined to leave his family great. He sent for a sister, the widow of a poor countryman, and instantly gave her the rank of a princess, with a suitable maintenance; and he raised one of her grandsons to the cardinalate, with a very large revenue. He was equally liberal to his other relations. He fixed the number of cardinals to seventy, a number which has been adhered to by his successors; and he decreed, that four at least of the number should be doctors of divinity, chosen from the religious orders. He is said to have been a decided enemy to the Jesuits, and was indignant that they should assume a name that implied, that their founder was the meek and benevolent Jesus; hence he proposed that they should change the name of their order to that of Ignatians. This celebrated pontiff died in August, 1590, having reigned five years and four months. The news of his death was received with every demonstration of joy at Rome, where his government had been oppressive and tyrannical; but the vigour of his administration, and the mighty works which he effected, have thrown a splendour about his name, and gave him rank among the distinguished characters of the age. In the year 1590, a new Latin version of the Bible was made and printed by his order, of which a corrected edition was given in 1590, by Clement VIII.

SIXTY. *adj.* [ἑξήκοντα, Saxon.] Six times ten—When the boats were come within *sixty* yards of the pillar, they found themselves all bound, and could go no farther. *Bacon.*

SIZABLE, *adj.* Of considerable bulk. See **SIZEABLE.**—The whole was drawn out, and digested into a *sizable* volume. *Hurd.*

SIZALISCA, a small river in the north of Greece, in Lividia, which falls into the gulf of Salona.

SIZE, *s.* [perhaps rather *eise*, from *incisa*, Lat. or from *assize*, French.] Bulk; quantity of superficies; comparative magnitude.—If any decayed ship be new made, it is more fit to make her a *size* less than bigger. *Raleigh.*—Objects near our view are thought greater than those of a larger *size*, that are more remote. *Locke.* [*Assise*, old Fr.] A settled quantity. In the following passage it seems to signify the allowance of the table: whence they say a *sizer* at Cambridge.

'Tis not in thee

To grudge my pleasures, to cut off my train,
To bandy hasty words, to scant my *sizés*,
And, in conclusion, to oppose the bolt
Against my coming in. *Shakspeare.*

Figurative too; condition.—This agrees too in the contempt of men of a less *size* and quality. *L'Estrange*—[*Siza* Ital.] Any viscous or glutinous substance.

To **SIZE,** *v. a.* To swell; to increase the bulk of.

Can you confess to your penurious uncle,
In his full face of love, to be so strict
A niggard to your commons, that you're fain
To *size* your belly out with shoulder fees? *Beaumont and Fl.*

To adjust, or arrange according to size.

Two troops so match'd were never to be found,
Such bodies built for strength of equal age,
In stature *siz'd*. *Dryden.*

To settle; to fix.—There was a statute for dispersing the standard of the exchequer throughout England; thereby to *size* weights and measures. *Bacon.*—To cover with glutinous matter; to besmear with size.—When we treat of *sising* and stiffening. *Sir W. Petty.*

SIZED, *adj.* Having a particular magnitude.

What my love is, proof hath made you know,
And as my love is *siz'd*, my fear is so. *Shakspeare.*

SIZEABLE, *adj.* Reasonably bulky; of just proportion to others.—He should be purged, sweated, vomited, and starved, till he come to a *sizeable* bulk. *Arbuthnot.*

SIZELAND, a village of England, in Norfolk; 5 miles from Bungay.

SIZER, or **SERVITOR,** *s.* A certain rank of students in the university of Cambridge. See **SERVITOR.**

They make a scramble for degree:
Masters of all sorts and of all ages:
Keepers, sub-*sizers*, lackeys, pages. *Bp. Corbet.*

SIZERS, *s.* The old word for scissars.
A buttrice and pincers, a hammer and naile,
An apron and *sizers* for head and for taile. *Tusser.*

SIZINESS, *s.* Glutinousness; viscosity.—In rheumatism, the *siziness* passes off thick contents in the urine, or glutinous sweats. *Floyer.*

SIZUN, a small town in the north-west of France, department of Finisterre, containing 2900 inhabitants; 6 miles south-east of Landerneau.

SIZY, *adj.* Viscous; glutinous.—The blood is *sizy*, the alkaliesalts in the serum producing coriaceous concretions. *Arbuthnot.*

SKADALS, Indians of North America, on Cataract river, north of Colombia. Number 200.

SKA'DDLE, *s.* [scæðniffe, Saxon; *scath* is *harm*, thence *scathle*, *scaddle*.] Hurt; damage.

SKA'DDLE, *adj.* Mischievous; ravenous. In Kent, spoken of dogs that are apt to steal; in the north, of young horses that fly out.

SKA'DDONS, *s.* The embryos of bees. *Bailey*

SKAGEN, or **SCAGEN,** a small town of Denmark, in Jutland, bishopric of Aalborg, on the Cattgat. It has a harbour and some fisheries. Population only 900; 18 miles north of Fladstrand. Lat. 57. 46. N. long. 10. 33. E.

SKAGEN, a cape on the north coast of North Jutland, in long. 10. 31. E. lat. 57. 46. N. From this cape the extensive sand bank called Skagen-rack, the reef or bank of Skagen, extends to a great distance into the sea. To enable ships to avoid it, a light-house, 64 feet high, was erected in 1751. The bank is frequented as a fishing station.

SKAGGIE, a small river of Scotland, in Perthshire, which joins the Erne near Crieff.

SKAIN, or **SKEIN,** *s.* [*escaigne*, Fr.] A knot of thread or silk wound and doubled.—Why art thou then exasperate, thou idle immaterial *skain* of sley'd silk, thou tassel of a prodigal's purse? *Shakspeare.*

SKANDA, in Hindoo Mythology, is a name of Kartikya, commander of the celestial armies. He is a reputed son of Siva, and his history and exploits fill many volumes of Eastern poetry, translated into a variety of languages from the Sanscrit.

SKAINSMATE, *s.* [*etymology unknown*.] A messmate; a companion.

Scurvy knave, I am none of his flirt gills;
I am none of his *skainmates*. *Shakspeare.*

SKALE, a small island on the west coast of Scotland, in Loch Fine. Lat. 55. 54. N. long 5. 23. W.

SKALHOLT, or **REINKINRIK,** a small trading town, or rather village of Iceland, on the river Huikaa, formerly the residence of the bishop of the southern part of the island. It has a cathedral, and in the neighbourhood are the famous hot springs called Geysers. Lat. 64. N. long. 16. W.

SKALINGSFELD, a mountain in one of the Faroe islands, which rises to the height of 2100 feet, and is the highest of the whole group.

SKALITZ, or **SKAKOLCZA,** a small town in the north-west of Hungary, on a branch of the Morava, and the borders of Moravia; 48 miles north of Presburg. It stands on a rock,

a rock, and has 4700 inhabitants, a college, a monastery and an hospital. The chief employment in the town is weaving; in the country, cultivating grapes. Lat. 48. 50. 25. N. long. 17. 11. 45. E.

SKALITZ, GROSS, a small town in the north-east of Bohemia; 12 miles north-north-east of Konigingratz. It has 800 inhabitants.

SKALITZ, a small town in the interior of Bohemia, on the Sazawa; 24 miles south-east of Prague.

SKALMIERZ, a petty town in the south-west of Poland; 26 miles east-north-east of Cracow. Population 800.

SKANDERBORG, a petty town of Denmark, in Jutland; 14 miles south-south-west of Aarhus, with only 500 inhabitants, but containing a rural palace, visited occasionally by the kings of Denmark.

SKANIA. See SCANIA.

SKANOR, a small sea-port town in the south-west of Sweden, in Scania, with 600 inhabitants; 20 miles south-south-east of Lund. Lat. 55. 24. 52. N. long. 12. 50. 30. E.

SKANTSLAND. See SVEABORG.

SKAPATAA-JOKLE, a group of mountains in Iceland, from which a dreadful volcanic eruption took place in June, 1785.

SKARA, or SCARA, an old town in the south of Sweden, in West Gothland, situated near the lake of Wener. It was in former ages the residence of the kings of West Gothland; at present it contains hardly 1000 inhabitants, having been in 1719 totally destroyed by fire. It is still, however, the see of a bishop; has a college, with a botanical garden, an hospital, a medical school and a large cathedral, said to have been erected soon after the introduction of Christianity into Sweden. The old palace, which stood near the town, was in 1611 destroyed by the Danes, together with the whole town. Skara gives name to the adjacent government or province; 77 miles north-east of Gottenburg. Lat. 58. 24. N. long. 15. 30. E.

SKARDIN. See SCARDONA.

SKARR WATER, a small river of Scotland, in Dumfries-shire, which rises in the Black hill, on the borders of Ayrshire, and after a winding course for several miles in a south-east direction, joins the Nith, opposite Slate island.

SKARYSZOW, a small town in the south of Poland; 9 miles south-east of Radom, and 60 south of Warsaw, with large cattle fairs.

SKATE, *s.* A sort of shoe armed with iron for sliding on the ice. See SCATE.

To SKATE, To slide on scates. See To SCATE.

SKATE, *s.* A flat sea-fish. See SCATE.

SKAYTF, in Ichthyology, the English name of a species of ray-fish, called by the generality of authors RAI A BATIS.

SKAWA, a small river of Austrian Poland in the circle of Myslenice. It falls into the Vistula to the east of Oswiecim.

SKAWINA, a small town of Austrian Poland, on the small river Skawa; 31 miles south-west of Cracow.

SKEAN, *s.* [Irish and Erse; *jaegen*, Saxon.] A short sword; a knife.—Any man that is disposed to mischief, *skean*, or pistol, to be always in readiness. *Spenser.*

SKECKLING, a parish of England, East Riding of Yorkshire; 2½ miles from Hedon.

SKEEBY, a hamlet of England, North riding of Yorkshire; 2½ miles north-east of Richmond.

SKEEL, *s.* [*schale*, German, *patera*, poculum patulum, vox Longobardica. Wachter.] A shallow wooden vessel for holding milk or cream. Gloucestershire, according to Grose. It is also so employed in other parts of England; and, as he observes under another form of the word, *skiel*, is, in the west, a beer-cooler, used in brewing.

SKEEN, or SKIEN, a small town in the south of Norway, bishopric of Christiana, situated on a river which bears its name. It contains 1800 inhabitants, and has productive mines of iron and copper; 38 miles south-south-west of Christiana.

SKEEN, LOCH, a small lake of Scotland, in Dumfries-shire, about 1100 yards long and 400 broad.

SKEFFINGTON, a parish of England, in Leicestershire; 10 miles east-by-south of Leicester.

SKEFFLING, a parish of England, East Riding of Yorkshire; 22½ miles east-south-east of Kingston-upon-Hull.

SKEG, *s.* A wild plum.

SKEG, in Ship-building, the after-part of the keel, or that part whereon the stern-post is fixed.

SKEG-SHORES, are one or two pieces of four-inch plank, put up endways under the skeg of the ship, to steady the after part a little, when in the act of launching.

SKEGBY, a parish of England, in Nottinghamshire; 3 miles west of Mansfield. Population 453.

SKE'GGER, *s.* Little salmon called *skeggers*, are bred of such sick salmon that might not go to the sea, and though they abound, yet never thrive to any bigness. *Walton.*

SKEGNESS, a parish of England in Lincolnshire, situated on the sea shore; 11 miles east of Spilsby.

SKEILAY, a small island of the Hebrides, near Harris.

SKELEBROOK, a township of England, West Riding of Yorkshire; 7¼ miles south-east of Pontefract.

SKELDEN, a hamlet of England, West Riding of Yorkshire; 6¼ miles west-by-south of Rippon.

SKELDNESS, a cape of Scotland, on the south-west of the island of Shetland. Lat. 60. 12. N. long. 1. 48. W.

SKE'LETON, *s.* [*σκελετος*, Gr.] [In anatomy.] The bones of the body preserved together as much as can be in their natural situation. *Quincy.*

When rattling bones together fly,

From the four corners of the sky;

When sinews o'er the skeletons are spread,

Those cloth'd with flesh, and life inspires the dead. *Dryden.*

The compages of the principal parts.—The great structure itself, and its great integrals, the heavenly and elementary bodies, are framed in such a position and situation, the great skeleton of the world. *Hale.*

SKELFLETE, a small river of England, in Yorkshire, which runs into the Humber, between Haxflete and Bromflete.

SKELL, a small river of England, in Yorkshire, which runs into the Youre, near Rippon.

SKELLAND, a hamlet of England, in Suffolk; 2½ miles from Stowmarket.

SKELLIGS, two small islands on the south-west coast of Ireland, about six or seven miles south-west from Bolus Head. They are distinguished by the appellation of Great and Little: the former, about 2 miles south-west of the latter, lies in long. 10. 23. W. lat. 51. 42. N.

SKELLINGTHORPE, a parish of England, in Lincolnshire; 5½ miles west of Lincoln.

SKELLOWE, a township of England, West Riding of Yorkshire; 5½ miles north-west of Doncaster.

SKE'LLUM, *s.* [*schelme*, Fr.] A knave, rascal. *Unused.*—Sir Richard Grenville (in 1643) having deserted to the king at Oxford, they declared him traitor, rogue, villain, and *skellum*. *Biog. Brit.*

SKELMANTHORPE, a township of England, West Riding of Yorkshire; 7 miles south-east of Huddersfield.

SKELMERSDALE, a township of England, in Lancashire; 4 miles east-south-east of Ormskirk. Population 541.

SKELSMERGH, a hamlet of England, in Westmoreland; 3 miles north-by-east of Kendal.

SKELTON, a parish of England, in Cumberland; 6½ miles north-west of Penrith.

SKELTON, a village of England, East Riding of Yorkshire, situated on the banks of the Ouse; ½ miles south-east of Howden.

SKEITON, a township of England, North Riding of Yorkshire; 3½ miles north-west of York.

SKELTON, a township of England, North Riding of Yorkshire; 4 miles north-east of Gainsborough. Population 717.

SKELTON, a parish of England, West Riding of Yorkshire; 4 miles south-east of Rippon.

SKELWITH, a township of England, in Lancashire; 3½ miles north of Hawkshead.

SKEMATA, a village of Greece, in the plain of Tanagra, in Attica, near the supposed site of Tanagra.

SKENDLEBY, a parish of England, in Lincolnshire; 3 miles north-east of Spilsby.

SKENE, a parish of Scotland, in Aberdeenshire, of an oval form, 6 miles long and 3½ broad. Population 1297.

SKENEATILES, a post village of the United States, in Onondaga county, New York. It is most delightfully situated around the west end of Skeneatiles' lake, and is a large, handsome and flourishing village; 163 miles west of Albany.

SKENEATILES, a lake of the United States, in the west part of Onondaga county, New York, 15 miles long, and from ½ to 1½ broad. Skeneatiles' Creek flows from the north end to Seneca river, about 13 miles, and affords many fine mill seats.

SKENECTADY. See **SCHENECTADY**.

SKENSBOROUGH. See **WHITEHALL**.

SKENFRETH, a parish of England, in Monmouthshire; 7 miles north-north-west of Monmouth. Population 348.

SKENFRETH CASTLE, a fortress of England, in the county of Monmouth, supposed to be the most ancient in the county. It is situated on the banks of the Monnow, about 3 miles distant from Newcastle, and to the north of the Monmouth road. It appears to have been erected for the defence of the river, or to secure the defiles of the adjacent mountains. It has not been much visited by travellers, from its sequestered situation, and the difficulty of access. Its construction is very simple, its area being merely surrounded by a strong curtain wall, flanked with a circular tower at each angle. The area is 160 feet in length, and 170 at the broadest, and 84 at the narrowest part. The style of architecture places it anterior to the Norman period, and the whole aspect of the building indicates it to have been a British structure. Connected with Landeilo and Grosmont castles, and, subsequent to the Norman invasion, generally possessed by the same person, its name but seldom occurs in history, and its history merges into that of the former fortresses, becoming with them part of the duchy of Lancaster, to which it now belongs.

SKENINGE, a small town of Sweden, in East Gothland, on the small river Kena; 20 miles west-by-south of Oderkoping. Population 900. Here is held one of the largest annual fairs in Sweden.

SKEOTISVAY, an island of the Hebrides, about a mile long, lying in East Loch Tarbert, in Harris.

SKEP, *s.* [*scēp*, Saxon.] A sort of basket, narrow at the bottom, and wide at the top to fetch corn in. *Unused*.—A pitchfork, a doongeforke, seeve, *skēp*, and a bin. *Tusser*.—In Scotland, the repositories where the bees lay their honey is still called *skēp*. *Dr. Johnson*.—A bee-hive is also called a *skēp* in some parts of England. [*Sgeip*, Gael. a bee-hive. *Shaw*.

SKEP, in Agriculture, a coarse round farm basket. It is also provincially used to signify a bee-hive.

SKEPSHAM, a small sea-port in the central part of Sweden, province of Medelpadia.

SKEPTICK, *s.* [*σκεπτικός*, Gr.] This word *Dr. Johnson* writes *sceptic*.—He is a *scepticke*, and dares hardly give credit to his senses. *Bp. Hall*.—Bring the cause unto the bar; whose authority none must disclaim, and least of all those *scepticks* in religion. *Dec. of Piety*.

Survey

Nature's extended face, then *scepticks* say,
In this wide field of wonders can you find
No art.

Blackmore.

With too much knowledge for the *sceptick's* side,
With too much weakness for the stoick's pride,
Man hangs between.

Pope.

The dogmatist is sure of every thing, and the *sceptick* believes nothing. *Watts*.

SKEPTICAL, *adj.* [for **SCEPTICAL**.] May the Father of mercies confirm the *sceptical* and wavering minds, and so prevent us that stand fast, in all our doings, and further us with his continual help. *Bentley*.

SKEPTICALLY, *adv.* [for **SCEPTICALLY**.] There are those who do not abandon themselves to desperate atheism, nor *sceptically* cast off all care of religion. *Goodman*.

SKEPTICISM, *s.* Universal doubt; profession of universal doubt.—I laid by my natural diffidence and *scepticism* for a while, to take up that dogmatick way. *Dryden*.

TO SKEPTICIZE, *v. n.* To doubt of every thing.—You can afford to *scepticize*, where no one else will so much as hesitate. *Ld. Shaftsbury*.

SKERAT, a rock in the Caledonian sea, near the west coast of Skye. Lat. 57. 24. N. long. 6. 40. W.

SKERGULE, a rocky island, near the south-west coast of Mull. Lat. 56. 18. N. long. 6. 21. W.

SKERIVORE ROCKS, rocks in the North sea, west of Scotland. Lat. 56. 19. N. long. 7. 3. W.

SKERNE, a parish of England, East Riding of Yorkshire; 2 miles south-east of Great Driffeld.

SKERNE, a small river of England, in Durham, which runs into the Tees at Crossbridge.

SKERRIES, or **SKERRY ISLES**, three small islands of Shetland, lying 15 miles north-east from the isle of Whalsay, and nearly 20 from the Mainland. In 1792, they contained 11 families, or 70 inhabitants.

SKERRIES, rocks on the north coast of Ireland, near the mouth of the river Bann.

SKERTON, a township of England, in Lancashire, three quarters of a mile from Lancaster. Population 1254.

SKETBY, a small river of Wales, in Merionethshire, which falls into the Irish sea.

TO SKETCH, *v. a.* [*schetsen*, Dutch, or German *schitz* (a sketch), from *schatten*, a shadow.] To draw, by tracing the outline.—If a picture is daubed with many glaring colours, the vulgar eye admires it; whereas he judges very contemptuously of some admirable design *sketched* out only with a black pencil, though by the hand of Raphael. *Watts*.—To plan, by giving the first or principal notion.—The reader I'll leave in the midst of silence, to contemplate those ideas which I have only *sketch'd*, and which every man must finish for himself. *Dryden*.

SKETCH, *s.* [*schets*, Dutch, from the verb *schetsen*.] An outline; a rough draught; a first plan.

As the lightest *sketch*, if justly trac'd,
Is by ill colouring but the more disgrac'd,
So by false learning is good sense defac'd.

Pope.

SKETCHLEY, a hamlet of England, in Leicestershire; 2 miles south-east of Hinckley.

SKEW, *adj.* [*skiaōv*, or *skæv*, Dan.; *skēf*, Goth. from *skā*.] Oblique; distorted.—Here's a gallimaufry of speech indeed.—I remember about the year 1602 many used this *skew* kind of language. *Brewer*.

SKEW, *adv.* Awry.

TO SKEW, *v. a.* To look obliquely upon; figuratively, to notice slightly.

Our service
Neglected, and look'd lamely on, and *skew'd* at
With a few honourable words. *Bacon and Fl.*

To shape or form in an oblique way.—Windows broad within and narrow without, or *skewed* and closed. *Kings*.

TO SKEW, *v. n.* To walk obliquely. *Still used in some parts of the north*.—Child, you must walk strait, without *skewing* and shailing to every step you set. *L'Estrange*.

SKEWER, *s.* [*skerc*, Danish.] A wooden or iron pin, used to keep meat in form.

I once may overlook,

A *skewer* sent to table by my cook.

King.

TO SKEWER, *v. a.* To fasten with skewers.

SKEWSBY,

SKEWSBY, a township of England, North Riding of Yorkshire; 8 miles east-by-north of Easingwold.

SKEYTON, a parish of England, in Norfolk; 3½ miles east-by-south of Aylesham.

SKIACH, Loch, a small lake of Scotland, in Perthshire, well stored with excellent trout.

SKIACK, a small river of Scotland, in Ross-shire, which falls into the sea, close by the church of Kiltearn.

SKIATHL, a small island of the Grecian archipelago, opposite to the mainland of Magnesia, near the entrance of the gulf of Volo. Its form is triangular, its circumference about 30 miles, its climate healthy. Its surface presents a pleasant mixture of hill and plain: the higher grounds are covered with wood, the lower with vines and olives; but cultivation in every shape is much neglected, and the chief support of the inhabitants is derived from their flocks of goats. In the south of the island is a good harbour, called Oraio-Castro, near which, on a small peninsula, stood the ancient town.

SKIATHI, the chief place of the foregoing island, situated at its northern extremity, on a steep and elevated rock, accessible only by means of a wooden bridge. The inhabitants, in number about 1000, were obliged to take this formidable position, to escape the attacks of pirates.

SKIATIC STAY, in Rigging, a contrivance for hoisting and lowering burdens out of or in ships.

SKIBBEREEN, a town of Ireland, in the county of Cork, situated on the river Ilen, on the west bank of which stands the church. The clothing trade and linen manufacture are established here; 10 miles south-east of Bantry, and 34 south-west of Cork.

SKID, in Rural Economy, a term applied to the chain by which the wheel of a waggon is fastened, so as to prevent its turning round, upon descending a steep hill. See **DRAG**.

SKID-BEAMS, in Ship-building, are the beams in the waist, which connect the fore-castle with the quarter deck.

SKIDBROOK, a parish of England, in Lincolnshire; 10½ miles north-east of Louth.

SKIDBY, a township of England, East Riding of Yorkshire; 4 miles south-by-west of Beverley.

SKIDDAW, a mountain of England, in Cumberland, one of the most remarkable in the kingdom for its height, and distinguished also for its grand and romantic scenery, as well as for the lakes in its different hollows, and near its base. According to the trigonometrical survey of England, its highest point is elevated 3022 feet above the level of the sea. Like most of the mountains in this part of the kingdom, Skiddaw consists of numerous inequalities. Its surface presents also a variety of substances, colours, and forms. In some places are vast masses of bare rock; in others, a soft short grass prevails, and heath, furze, and brambles, are also found in different parts. Mildness and grandeur are the general beauties of this alpine region. The mountain in some parts is not difficult of access. The whole of the top is covered with a loose brown slaty stone. It is distant 6 miles from Cockermouth, and Keswick stands near its base.

SKIDS, Boat, square pieces of timber bolted one on each side, and projecting over the stern, with sheaves in their outer ends to hoist the boat up. Boat-skids over the quarters are fixed at the heel, and suspended by a lift at the head; they are made of iron lately in the navy.

SKIDS, Whale, are long square pieces of timber, projecting from the sides of Greenland ships, for the convenience of hoisting and canting the whale out of the water.

SKIELSKIOR, or **SKIELFISKOR**, a small town of Denmark, in the island of Zealand, on the great Belt, with a capacious harbour; 62 miles west-south-west of Copenhagen. Lat. 55. 17. N. long. 11. 20. E.

SKIEN. See **SKEEN**.

SKIERNIEWICE, a small town of Poland, on the Jesowka; 35 miles west south-west of Warsaw, with 1500 inhabitants.

SKIFF, *s.* [*schiff*, German; *esquif*, Fr.; *scapha*, Lat.; *σκαφη*, Gr.] A small light boat.—If in two *skiffs* of cork, a

loadstone and steel be placed within the orb of their activities, the one doth not move, the other standing still; but both steer unto each other. *Brown*.

To SKIFF, *v. a.* To pass over in a small light boat.

They two have cabin'd

In many as dangerous as poor a corner,
Peril and want contending; they have *skift*
Torrents, whose roaring tyranny and power
I' the least of these was dreadful.

Beaum. and Fl.

SKILFUL, *adj.* Knowing; qualified with skill; possessing any art; dexterous; able. It is, in the following examples, used with *of*, *at*, and *in*, before the subject of skill. *Of* seems poetical, *at* ludicrous, *in*, popular and proper.

Say, Stella, feel you no content,
Reflecting on a life well spent;
Your *skilful* hand employ'd to save
Despairing wretches from the grave:
And then supporting with your store
Those whom you dragg'd from death before?

Swift.

SKILFULLY, *adv.* With skill; with art; with uncommon ability; dexterously.—Ulysses builds a ship with his own hands, as *skilfully* as a shipwright. *Broome*.

SKILFULNESS, *s.* Art; ability; dexterousness.—He fed them according to the integrity of his heart, and guided them by the *skilfulness* of his hands. *Psalms*.

SKILGATE, a parish of England, in Somersetshire; 6 miles west-by-south of Wiveliscombe.

SKILL, *s.* [*skil*, Icelandic.] Knowledge of any practice or art; readiness in any practice; knowledge; dexterity; artfulness.

Oft nothing profits more
Than self-esteem grounded on just and right,
Well managed; of that *skill* the more thou know'st,
The more she will acknowledge thee her head.

Milton.

Any particular art.—Learned in one *skill*, and in another kind of learning unskilful. *Hooker*.—Reason; cause. [*reyle*, Saxon.] *This is a very ancient meaning of the word.*

You have

As little *skill* to fear, as I have purpose
To put you to't.

Shakspeare.

To SKILL, *v. n.* [*skilia*, Icelandic.] To be knowing in; to be dexterous at; to know how: not invariable with *of*, as Dr. Johnson has stated it; but usually so.

They that *skill* not *of* so heavenly matter,
All that they know not, envy or admire.

Spenser.

[*Skilia*, Icelandic, signifies also to distinguish.] To differ; to make difference; to interest; to matter. *Not now in use.*

What *skills* it, if a bag of stones or gold
About thy neck do drown thee? raise thy head,
Take stars for money; stars not to be told
By any art: yet to be purchased.

None is so wasteful as the scraping dame,
She loseth three for one; her soul, rest, fame.

Herbert.

To SKILL, *v. a.* To know; to understand. *Obsolete.*—I *skill* not what it is. *Beaum. and Fl.*

SKILLED, *adj.* Knowing; dexterous; acquainted with: with *of* poetically, with *in* popularly.—*Of* these nor *skilled* nor studious. *Milton*.

SKILLESS, *adj.* Wanting skill; artless. *Not now in use; but formerly very common.*

Jealously what might befall your travel,
Being *skilless* in these parts; which to a stranger
Unguided and unfriended, often prove
Rough and unhospitable.

Shakspeare.

SKILLET, *s.* A small kettle or boiler.

When light-wing'd toys
Of feather'd Cupid foil with wanton dullness
My speculative and offic'd instruments,
Let house-wives make a *skillet* of my helm.

Shakspeare.

SKILLINGTON, a parish of England, in Lincolnshire; 3 miles north-west of Colsterworth.

SKILLO, or DAMALA, a cape in Greece, on the east coast of the Morea. Lat. 37. 26. N. long. 23. 36. E.

To SKIM, *v. a.* [*escume*, Fr.] To clear off from the upper part, by passing a vessel a little below the surface.

My coz Tom, or his coz Mary,
Who holds the plough or *skim* the dairy,
My fav'rite books and pictures sell.

Prior.

To take by skimming.

She boils in kettles must of wine, and *skims*
With leaves the dregs that overflow the brims. *Dryden.*

To brush the surface slightly; to pass very near the surface.
Nor seeks in air her humble flight to raise,
Content to *skim* the surface of the seas. *Dryden.*

To cover superficially. *Improper.* Perhaps originally *skin*.

Dangerous flats in secret ambush lay,
Where the false tides *skim* o'er the cover'd land,
And seamen with dissembled depths betray. *Dryden.*

To SKIM, *v. n.* To pass lightly; to glide along.

When Ajax strives some rock's vast weight to throw,
The line too labours, and the words move slow;
Not so when swift Camilla scours the plain,
Flies o'er the unbending corn, and *skims* along the main. *Pope.*

SKIM, *s.* Scum; refuse.—Although Philip took delight in this *skim* of men, [gross flatterers,] yet could they never draw him by their charming to incur those vices which his son ran into. *Bryskett.*

SKIMBLESKAMBLE, *adj.* [A cant word formed by reduplication from *scamble*.] Wandering; wild.

A couching lion and a ramping cat,
And such a deal of *skimbleskamble* stuff,
As puts me from my faith. *Shakspeare.*

SKIM-COULTER, in Agriculture, a sort of coultter, invented by Mr. Duckett, for paring off the surface of coarse grass or other lands, and placing it in the bottom of the furrow, so as to be fully covered and secured.

SKIMMER, *s.* A shallow vessel with which the scum is taken off.—Wash your wheat in three or four waters, stirring it round; and with a *skimmer*, each time, take off the light. *Mortimer.*—One who skims over a book or subject: a ludicrous word.—There are different degrees of *skimmers*: first, he who goes no farther than the title page; secondly, he who proceeds to the contents and index, &c. *Skelton.*

SKIMMIA. [A Japanese vernacular name from *Kæmpfer*.] in Botany, a genus of the class tetrandria, order monogynia.—Generic Character. Calyx: perianth one-leaved, very small, permanent, almost four-parted to the base: segments ovate, acute. Corolla: petals four, ovate, concave, minute. Stamina: filaments four, very short. Pistil: germ superior; style single. Pericarp: berry ovate, umbilicate, indistinctly grooved, smooth, farinaceous-pulpy within, four-valved. Seeds four, subtrigonal or externally convex, oblong, white. Perianth seldom five-parted.—*Essential Character.* Calyx four-parted. Petals four, concave. Berry four-seeded.

1. *Skimmia Japonica.* Stem shrubby, erect, smooth. Branches alternate, four cornered. Leaves at the ends of the branches alternate, frequent, oblong, waved, entire, obscurely crenate towards the top, erect, the margin bent back, a finger's length, above green and wrinkled, beneath pale and dotted, evergreen with an aromatic taste. Petioles semicylindrical, thickish, short. Flowers terminating, in panicles. Peduncles round, thickening, short.—Native of Japan, near Nagasaki and elsewhere. The fruit is ripe in December.

SKIM-MILK, *s.* Milk from which the cream has been taken.—Then cheese was brought: says Slouch, this e'en shall roll; this is *skim-milk*, and therefore it shall go. *King.*

SKIMMINGTON. To ride *skimmington* is a vulgar

phrase, which means a kind of burlesque procession in ridicule of a man who suffers himself to be beat by his wife. In the north, *riding the stang* has a similar meaning. See STANG. *Skimmington* has been supposed to be the name of some notorious scold of the olden time. See *Brand's Pop. Antiq.*

When the young people ride the *skimmington*,
There is a general trembling in a town:
Not only he, for whom the person rides,
Suffers, but they sweep other doors besides;
And by that hieroglyphick does appear,
That the good woman is the master there! *King.*

SKIN, *s.* [*skind*, Danish.] The natural covering of the flesh. It consists of the *cuticle*, outward skin or scarf skin, which is thin and insensible, and the *cutis* or inner skin, extremely sensible.

The priest on *skins* of off'rings takes his ease,
And nightly visions in his slumber sees. *Dryden.*

Hide; pelt; that which is taken from animals to make parchment or leather.

On whose top he strow'd
O wilde goat's shaggy *skin*; and then bestow'd
His own couch on it. *Chapman.*

The body; the person: in ludicrous speech.—We meet with many of these dangerous civilities, wherein 'tis hard for a man to save both his *skin* and his credit. *L'Estrange.*—A husk.

To SKIN, *v. a.* To flay; to strip or divest of the skin.—The beavers run to the door to make their escape, are there entangled in the nets, seized by the Indians, and immediately *skinned*. *Ellis.*—To cover with the skin.

Authority, though it err like others,
Has yet a kind of medicine in itself,
That *skins* the vice o' the top. *Shakspeare.*

To cover superficially.—What I took for solid earth was only heaps of rubbish, *skinned* over with a covering of vegetables. *Addison.*

SKINBURNNESS, a village of England, in Cumberland; 11 miles north-west of Wigton.

SKINDEEP, *adj.* Slight; superficial.—There is a power in virtue to attract our adherence to her before all the transient and *skin-deep* pleasure that we fondly search after. *Feltham.*

SKINFLINT, *s.* A niggardly person.
SKINK, *s.* [*rcenc*, Sax.] Drink; any thing potable; pottage.—Scotch *skink*, which is a pottage of strong nourishment, is made with the knees and sinews of beef, but long boiled. *Bacon.*

To SKINK, *v. n.* [*rcencan*, Sax.] To serve drink. Both noun and verb are wholly obsolete.

SKINKER, *s.* One that serves drink.—I give thee this pennyworth of sugar, clapt even now into my hand by an under *skinker*; one that never spake other English in his life, than eight shillings and sixpence, and you are welcome sir. *Shakspeare.*

SKINLESS, *adj.* Having a slight skin; as, the *skinless* pear.

SKINNAND, a parish of England, in Lincolnshire; 10½ miles north-west of Sleaford.

SKINNED, *adj.* Having skin; hard.—When the ulcer becomes foul, and discharges a nasty ichor, the edges in process of time tuck in, and growing *skinned* and hard, give it the name of callus. *Sharp.*

SKINNER, *s.* A dealer in skins or pelts.

SKINNER, (Stephen), an antiquary, was born about the year 1622, in or near London. He received his academical education at Christ-church college, Oxford, in the year 1638, but the civil war caused him to leave the university without taking a degree. He thence travelled on the continent, and studied at various universities. On his return to his native country, he went to Oxford, and took his degree in arts, and then settled as a physician at Lincoln, where he died in 1667. He

He was a man of very extensive erudition, but is chiefly known by his "Etymologicon Linguae Anglicanae," a work that has always been considered as of high authority among the learned, and is still regarded as a most useful book of reference.

SKINNERSVILLE, a post village of the United States, in Washington county, North Carolina.

SKINNINESS, *s.* The quality of being skinny.

SKINNINGROVE, a township of England, North Riding of Yorkshire, on the coast of the North sea; $7\frac{1}{2}$ miles north-east of Guisborough.

SKINNY, *adj.* Consisting only of skin; wanting flesh.

Her choppy finger laying
Upon her *skinny* lips.

Shakspeare.

SKINOSA, a rocky and desert island in the Grecian archipelago, about 12 miles in circumference; 5 miles south from the island of Naxia. Lat. 36. 55. N. long. 25. 32. E.

SKINTEL, a town of European Turkey, in Moldavia; 10 miles south of Jassi.

SKIOE, a small town of Denmark, in Jutland, near the great maritime inlet the Lumford; 15 miles north-west of Wiborg.

To SKIP, *v. n.* [*squittire*, Ital.; *esquiver*, Fr.] To fetch quick bounds; to pass by quick leaps; to bound lightly and joyfully.

The queen, bound with love's powerful'st charm,
Sat with Pigwiggen arm in arm:
Her merry maids that thought no harm,
About the room were *skipping*.

Drayton.

To SKIP OVER. To pass without notice.—A gentleman made it a rule, in reading, to *skip over* all sentences where he spied a note of admiration at the end. *Swift.*

To SKIP, *v. a.* To miss; to pass. Usually with *over*.

Let not thy sword *skip* one;
Pity not honour'd age for his white beard;
He is an usurer.

Shakspeare.

SKIP, *s.* A light leap or bound.—He looked very curiously upon himself, sometimes fetching a little *skip*, as if he had said his strength had not yet forsaken him. *Sidney.*

SKIPJACK, *s.* An upstart.—A way was opened to every *skipjack*. *Martin.*

SKIPKENNEL, *s.* A lackey; a footboy.

SKPLAM, a hamlet of England, North Riding of Yorkshire, near Kirby-Moorside.

SKIPNESS POINT, a cape of Scotland, on the east coast of Kintyre. Lat. 55. 49. N. long. 5. 24. W.

SKIPORT, LOCH, an arm of the sea on the east coast of South Uist.

SKIPPACK, a township of the United States, in Montgomery county, Pennsylvania. Population 902.

SKIPPER, *s.* A dancer. *Huloet.*—A youngling; a thoughtless person.

Youngling, thou canst not love so dear as I:—

Skipper, stand back; 'tis age that nourisheth. *Shakspeare.*

[*Skipper*, Dutch.] A shipmaster; a shipboy.—Are not you afraid of being drowned too? No, not I, says the *skipper*. *L'Estrange.*—The hornfish, so called in some places.

SKIPPET, *s.* A small boat. *Not used.*

Upon the bank they sitting did espy

A dainty damsel, dressing of her hair,

By whom a little *skippet* floating did appear.

Spenser.

SKIPPINGLY, *adv.* By skips and leaps. *Huloet.*—If one read *skippingly* and by snatches, and not take the thread of the story along, it must needs puzzle and distract the memory. *Howell.*

SKIPPON, a small river of England, in Lancashire, which runs into the Wire, near Thornton.

SKIPSEA, a parish of England, East Riding of York-

shire, upon the coast of the North sea; $10\frac{1}{2}$ miles east-by-south of Great Driffeld.

SKIPTON, a market town of England, in the West Riding of Yorkshire. It forms the chief town of the district of Craven, a portion of the West Riding, on the borders of Lancashire, and remarkable for its lofty mountains, rich valleys, and luxuriant pastures. It is situated in the middle of the vale of Skipton, which is one of the finest and most fertile in England. The town consists chiefly of one wide and long street, where the markets are held, with several straggling lanes on each side of it. The houses are all built of stone, brought from the hills in the neighbourhood, where building stone is very abundant. The church, which is situated at one extremity of the main street, is a spacious structure, with a tower at the west end. This appears, from an inscription on it, to have been rebuilt in 1655, by the celebrated Ann Clifford, countess of Dorset, Pembroke, and Montgomery. Here are inscriptions on plain stones, in memory of the three first earls of Cumberland. Skipton contains a grammar-school, which has a good library; and attached to it is a beautiful house, with a garden and pleasure grounds. A town-house has been lately built, in which the quarter sessions for the West Riding are held once a-year. At a short distance to the eastward of the church, and on the left side of the road leading to Knaresborough, stands Skipton castle. This ancient structure is said to have been originally erected soon after the conquest, by Robert de Romeli, then lord of the honour of Skipton. It is but little calculated, by its situation, for defence, being only slightly elevated above the level of the town, and commanded by heights on the northern side. It is, on the whole, better adapted for an agreeable residence than a fortress, and commands a pleasing view of the town and vale. It appears, notwithstanding, however, to have been of considerable importance during the civil wars between king Charles I. and his parliament. It was first garrisoned in the royal cause, and is said to have held the surrounding country for some time in great awe; but being vigorously besieged by the parliamentary army, it at length surrendered in 1645. In the following year, its works and defences were destroyed by order of parliament. Skipton is a place of considerable trade and business, the increase of which has of late years greatly added to the importance and prosperity of the town. It has become the chief mart in this district, for the different sorts of grain, large supplies of which are brought to market here, and thence dispersed over Craven and the manufacturing county on the north-east part of Lancashire. Upwards of 200 carts are said to attend the market regularly. Great numbers of cattle and sheep are also sold here in the course of the year, at the different fairs, of which there are a great number. Some manufactures are carried on in the town; and here are a paper-mill, a glazing-mill, a considerable twist-mill, a cotton manufactory, &c. The Leeds and Liverpool canal passes close by the town. It has warehouses and wharfs on its banks, for the reception of goods, and has been of great advantage to the place. In 1811, Skipton contained 609 houses, and 2868 inhabitants. Market on Saturday, numerous annual fairs, and a great market for fat and lean cattle on Tuesday, once a fortnight; 44 miles west of York, and 220 north-by-west of London. Lat. 53. 57. N. long. 2. 0. W.

SKIPTON, a hamlet of England, North Riding of Yorkshire; 5 miles south-west of Thirsk.

SKIPWITH, a parish of England, East Riding of Yorkshire; $5\frac{1}{2}$ miles north-north-east of Selby.

SKIRBECK, a parish of England, in Lincolnshire; $1\frac{1}{2}$ mile south-east of Boston. Population 477.

SKIRCOAT, a township of England, West Riding of Yorkshire; $1\frac{1}{2}$ mile south-south-west of Halifax. Population 2823.

SKIRETHORNS, a hamlet of England, West Riding of Yorkshire; $9\frac{1}{2}$ miles north-by-west of Skipton.

SKIRINGLASS, a small island near the west coast of Scotland. Lat. 58. 2. N. long. 5. 10. W.

SKIRINTARSAN,

SKIRINTARSAN, a small island near the east coast of Skye. Lat. 57. 19. N. long. 5. 53. W.

SKIRKY, a cluster of small islands in Kenmare river, on the south-east coast of Kerry; 5 miles east of Lamb's Head.

To SKIRL, *v. n.* To scream out. *Common in the North of England.* Perhaps from *shirl*, our *shrill*. See *SHRILL*.

SKIRLAUGH, NORTH, a township of England, East Riding of Yorkshire; 8 miles east of Beverley.

SKIRLAUGH, SOUTH, a township of England, East Riding of Yorkshire; 8 miles north-north-east of Kingston-upon-Hull.

SKIRLING, a parish of Scotland, in Peebleshire, about 2½ miles in length, and nearly of the same breadth. Population 310.

SKIRLINGTON, a township of England, East Riding of Yorkshire; 12 miles east-south-east of Great Driffield.

SKIRMISH, *s.* [from *ys* and *carm*, Welsh, the shout of war: whence *ysgarm* and *ysgarmes*, old British words.—Junius deduces it from *χαρμν*, Gr., a battle; others from the German verb *schirmen*, to skirmish. Our word approaches nearest in form the ancient French *skermuche*, "petit combat."] A slight fight; less than a set battle.—When we shall wrastle with death, if we winne that *skirmish* we have enough. *Potter.*

One battle, yes, a *skirmish* more there was
With adverse fortune fought by Cartismand;
Her subjects most revolt.

Philips.

A contest; a contention.—There is a kind of merry war betwixt signior Benedick and her: they never meet but there's a *skirmish* of wit. *Shakspeare.*

To SKIRMISH, *v. n.* [*escarmoucher*, Fr.] To fight loosely; to fight in parties before or after the shock of the main battle.

Ready to charge, and to retire at will;
Though broken, scatter'd, fled, they *skirmish* still. *Fairfax.*

SKIRMISHING, *s.* Act of fighting loosely.—Alarum: *skirmishings.* Talbot pursueth the Dauphin. *Shakspeare.*

SKIRMISHER, *s.* He who skirmishes. *Barret.*

SKIRPENBECK, a township of England, East Riding of Yorkshire; 7 miles north-west of Pocklington.

To SKIRR, *v. n.* To scour; to scud; to run in haste This word is used in some parts of the north for to slide swiftly.

We'll make them *skirr* away as swift as stones
Enforced from the old Assyrian slings. *Shakspeare.*

SKIRRET, *s.* [*sisarum*, Lat. Camden calls *skirrets*, skirworts. *Ray.*] A plant.—*Skirrets* are a sort of roots propagated by seed. *Mortimer.* See *Sium*.

SKIRT, *s.* [*skoerte*, Swedish] The loose edge of a garment; that part which hangs loose below the waist.—It's but a nightgown in respect of yours; cloth of gold and cuts, side sleeves and *skirts*, round underborne with a blueish tinsel. *Shakspeare.*—The edge of any part of the dress.—A narrow lace, or a small *skirt* of ruffled linen, which runs along the upper part of the stays before, and crosses the breast, being a part of the tucker, is called the modesty-piece. *Addison.*—Edge; margin; border; extreme part.

Though I fled him angry, yet recall'd
To life prolong'd, and promis'd race, I now
Gladly behold, though but his utmost *skirts*
Of glory, and far off his steps adore.

Milton.

To SKIRT, *v. a.* To border; to run along the edge.
Of all these bounds,
With shadowy forests and with champions rich'd,
With plenteous rivers and wide *skirted* meads,
We make thee lady. *Shakspeare.*

SKIRWITH, a hamlet of England, in Cumberland; 7½ miles east-north-east of Penrith.

SKIT, *s.* [*skats*, Icel. a frolicsome, or pert woman.—A light, wanton wench. The word is also used in Scotland.—[Herod] at the request of a dancing *skit* stroke off the head of

St. John the Baptist. *Howard.*—A reflection [from the Sax. *scatan*, to cast forth. The word is now used for some jeer, or jibe, or covered imputation, thrown or cast upon any one. *H. Tooke.*

To SKIT, *v. a.* To cast reflections on. North. *Grose.*

SKITTISH, *adj.* [*skyc*, Danish; *schew*, Dutch. *Dr. Johnson.*—Su. Goth. *skyg*, shy, as applied to a horse, from *sky*, to avoid, to shun. *Serenius.*] Shy; easily affrighted.—A restiff *skittish* jade had gotten a trick of rising, starting, and flying out at his own shadow. *L'Estrange.*—Wanton; volatile; hasty; precipitate. See *SKIT*.

He still resolv'd, to mend the matter,
T' adhere and cleave the obstinater;
And still the *skittisher* and looser,
Her freaks appear'd to sit the closer.

Hudibras.

Changeable; fickle.
Some men sleep in *skittish* fortune's hall,
While others play the ideots in her eyes. *Shakspeare.*

SKITTISHLY, *adv.* Wantonly; uncertainly; ficklely. *Sherwood.*—The beasts were very plump, and *skittishly* played as they passed by; not knowing whither they were driven. *Sitwat. of Parad.*

SKITTISHNESS, *s.* Wantonness; fickleness.

SKITTLES, *s.* [formerly *keels* or *kayles*, and *kettle-pins*. See *KAYLE*. "When shall our *kittell*-pins return again into the Grecian *skyttals*?" *Sadler.*—Ninépins.

No more the wherry feels my stroke so true;

At *skittles*, in a grizzle, can I play?

Warton.

SKLAVO-CHORI, a petty town of the Morea, in Greece, occupying the site of the ancient *Amyclæ*, and situated at the junction of a small river with the Vasilipotamos or Enrotas. It is the see of a Greek bishop.

SKLENO, or GLASERHAY, a village of the north of Hungary. Here are some very hot mineral springs, and near them a cavern, also of extraordinary heat, without the slightest damp; 90 miles north-east of Presburgh.

SKOG, a small town of Sweden, in the province of Helsingland, on the Ljusna-elf, about 12 miles from the gulf of Bothnia.

SKONCE, *s.* [See *SKONCE*.] Reinard ransacketh every corner of his wily *skonce*, and bestirreth the utmost of his nimble stumps to quit his coat from their jaws. *Carew.*

SKOPELOS, an island of the Grecian archipelago, on the coast of Magnesia, to the east of Skiathi. Though small (only 30 miles in circumference), and of no great natural fertility, it is well cultivated, producing vines, olives, and other fruits, and contains no less than 12,000 inhabitants.

SKOPELOS, the chief place of the foregoing island, situated on a small gulf of the eastern coast. It is built partly on an eminence advancing into the sea, and partly in a plain. It is the see of a bishop, has 12 churches or chapels, and several monasteries. Population about 5000.

SKOPIA, a small town of European Turkey, in Bulgaria, district of Widdin.

SKOTSCHAU, a small town of the Austrian states, in Moravia, on the Vistula. Population 1500; 50 miles west-south-west of Cracow.

SKOUITIAS, a village of Albania, in the valley of Souli, situated in a narrow and difficult defile.

SKREED, in Agriculture, provincially a border or narrow slip of land.

SKREEN, *s.* [*escran*, *escrein*, Fr., which Minshew derives from *secerniculum*, Lat. *Nimis violenter ut solet*, says Skinner, which may be true as to one of the senses; but if the first sense, of *skreen* be a kind of coarse sieve or riddle, it may perhaps come, if not from *cribrum*, from some of the descendants of *cerno*.]—A riddle or coarse sieve.—A skuttle or *skreen* to rid soil fro' the corn. *Tusser.*—Any thing by which the sun or weather is kept off.—To cheapen fans or buy a *screen*. *Prior.*

So long condemn'd to fires and *screens*,

You dread the waving of these greens.

Anonym.
Shelter;

Shelter ; concealment.

Fenc'd from day, by night's eternal *skreen* ;
Unknown to heaven, and to myself unseen.

Dryden.

To SKREEN, *v. a.* To riddle ; to sift. A term yet used among masons when they sift sand for mortar.—To shade from sun or light, or weather.—To keep off light or weather.

The curtains closely drawn, the light to *skreen* :
Thus cover'd with an artificial night,
Sleep did his office.

Dryden.

To shelter ; to protect.

Ajax interpos'd

His sevenfold shield, and *skreen'd* Laertes' son,
When the insulting Trojans urg'd him sore.

Philips.

To SKRINGE, or To SKRUNGE, *v. a.* [perhaps a corruption of *skrew*. See To SCRUIZE.] To squeeze violently : a colloquial word in many parts of England.

SKRIPONERI, a small place of Greece, in Livadia, at the mouth of the canal which connects the lake of Topolias with the sea.

SKRYNE, a village of Ireland, in the county of East Meath. It has a church, and the ruins of an old castle are still remaining ; 19½ miles north-west of Dublin.

SKRYNNA, a small town of Poland ; 57 miles south-west of Warsaw.

SKVIRA, a small town of European Russia, in the government of Kiev, and 80 miles south-west of that town.

SKUE, *adj.* [See SKREW.] Oblique ; sidelong. It is most used in the adverb *askue*—Several have imagined that this *skue* posture of the axis is a most unfortunate thing ; and that, if the poles had been erect to the plane of the ecliptic, all mankind would have enjoyed a very paradise. *Bentley.*

To SKUG, *v. a.* [a corruption of To SCULK.]

To SKULK, *v. n.* To hide ; to lurk in fear or malice. See To SCULK.

Discover'd and defeated of your prey,

You *skulk'd* behind the fence, and sneak'd away. *Dryden.*

SKULKA, in Geography, a mountain of Sweden, in Angermanland ; 10 miles north of Hemosand.

SKULL, *s.* [*skjola*, Icelandic, a head.] The bone that incloses the head : it is made up of several pieces, which, being joined together, form a considerable cavity, which contains the brain as in a box, and it is proportionate to the bigness of the brain. *Quincy.*

Some lay in dead men's *skulls* ; and in those holes,

Where eyes did once inhabit, there were crept,

As 'twere in scorn of eyes, reflecting gems. *Shakspeare.*

[*ſceole*, Saxon, a company.] A shoal. See SCULL.—Repair to the river where you have seen them swim in *skulls* or shoals. *Walton.*

SKULLCAP, *s.* A headpiece.—[*cassida*, Lat.] A plant.

SKULL-CAP, in Botany. See SCUTELLARIA.

SKUPOPING, a lake of the United States, in North Carolina. Lat. 85. 45. N. long. 76. 42. W.

SKUPPERNONG, a river of the United States, in North Carolina, which communicates by means of a canal, with the lake in Dismal Swamp.

SKURR-CHOINICH and SKURR-DHONUIL, two mountains of Scotland, in Argyleshire, in the parish of Ardnamurchan, the former elevated 2364 feet, and the latter 2730 feet above the level of the sea.

SKUTE, *s.* [*schuyt*, Dutch.] A boat or small vessel.—They carried with them all the *skutes* and boats that might be found. *Sir R. Williams.*

SKUTSCH, a town of Bohemia, containing 2500 inhabitants, employed chiefly in weaving linen ; 70 miles east-by-south of Prague.

SKUTTOCK HILLS, eminences on the coast of Maine, which afford sailing marks into Goulsborough harbour.

SKWIRZINA. See SCHWERIN.

SKY, *s.* [*sky*, Danish ; from *skya*, Su. Goth. to cover.] The region which surrounds this earth beyond the atmosphere. It is taken for the whole region without the earth.—Raise all thy winds, with night involve the *skies*. *Dryden.*
—The heavens.

The thunderer's bolt you know
Sky planted, batters all rebelling coasts. *Shakspeare.*

The weather ; the climate.—Thou wert better in thy grave, than to answer with thy uncovered body this extremity of the *skies*. *Shakspeare.*—[*Sky*, Su. Goth.] A cloud ; a shadow.

She passeth, as it were a *sky*,

All clean out of the lady's sight.

Gower.

SKY'COLOUR, *s.* An azure colour ; the colour of the sky.—A solution as clear as water, with only a light touch of *skycolour*, but nothing near so high as the ceruleous tincture of silver. *Boyle.*

SKY'COLOURED, *adj.* Blue ; azure ; like the sky.—This your Ovid himself has hinted, when he tells us that the blue water-nymphs are dressed in *skycoloured* garments. *Addison.*

SKY'DYED, *adj.* Coloured like the sky.—There figs, *skydyed*, a purple hue disclose. *Pope.*

SKYE, one of the most considerable of the Hebrides, on the coast of Scotland, and in the county of Inverness, separated from the mainland of Scotland by a channel three leagues broad, but at the ferry of Glenelg not more than half a mile from the nearest part of the mainland. It lies between 57. and 57. 38. north lat. and between 5. 33. and 6. 40. west long. ; is 54 miles in its greatest length, and in breadth from 35 to 3 miles, being on an average 13. It contains 342,400 English acres, of which about 30,000 are arable ; the rest, consisting of mountain and hill pasture, lakes, morasses, rocks, and other waste lands, may be 750 square miles, deeply indented with inlets of the sea ; and those inlets are so distributed, that no spot in the island is four miles from salt water. The climate is mild, in proportion to its latitude and the height of the mountains, some of which are computed to be 3000 feet above the level of the sea : but the weather, on the whole, is not agreeable ; for one half of the year is deluged with rain. The air seldom continues long of the same temperature ; sometimes it is dry, oftener moist, and, in the latter end of winter, and early in the spring, cold and piercing. Three days in the year are scarcely free from clouds and rain. The clouds, attracted by the hills, sometimes break in useful and refreshing showers ; at other times, suddenly bursting like a water spout, pour down their contents with tremendous noise, deluging the plains below, and often destroying the hopes of the husbandman. The crops also suffer by the stormy winds, which set in about the end of August and beginning of September. To this variable temperature of the air and weather agues, fevers, rheumatism, and dysenteries, the prevailing distempers, may be ascribed. That the climate, however, is far from being unhealthy, the long life of the inhabitants sufficiently testifies.

The surface is very irregular. In several districts are bleak elevated ridges of hills, covered with heath ; and below are valleys watered by rapid streams, fresh-water lakes, morasses in which trunks of trees are found, gently sloping declivities, and level fields. The bare rocks often appear near the summits of the hills ; brown heath darkens their declivities ; the morasses are covered with grey moss ; and spots of lively verdure are thinly interspersed. Most of the hills in the central and southern quarters were anciently clothed with wood ; but little forest timber now remains in the island, except on the south-east coast of Sleat, where there is still some natural wood. There is every diversity of soil, except pure sand. In the fine district of Trotternish, there are 4000 acres of loam, and loam and clay, upon a bottom of gravel. In Sleat and Strath, and what is called Macleod's country, are extensive tracts of light friable mould upon gravel, and also some loam mixed with peat earth, well calculated for the established rotations of crops on the best of soils ; notwithstanding, improvements in agriculture have hitherto made

little progress in this island. The quantity of grain raised in favourable seasons, is reckoned not to exceed 9000 bolls; 500 tons of kelp are annually manufactured; and 3000 cattle are exported. The promontories, or headlands, are rocks of immense height. In some parts are basaltic columns, resembling those of Staffa. About a mile south of Talysker, on the south-west coast, there is a high hill, having in front a series of basaltic columns, above 20 feet in height, and consisting mostly of five angles. At a small distance from them on the slope of a hill, is a track of several roods, formed of the tops of columns, close set, and exhibiting a reticulated series of amazing beauty. There is abundance of freestone, limestone, granite, with some veins of marble, and appearances of lead and iron ore in various places. In the parish of Snizort there is a perpendicular rock or obelisk, about 360 feet in circumference at the base, and terminating in a sharp point, perhaps 300 feet in height; and, in the same side of the parish, there is a beautiful cataract about 90 feet high, with an arched hollow path in the middle across the rock, along which five or six persons may walk abreast with perfect safety. Agriculture is still in a very backward state; and if the land were inclosed, drained, and sheltered, the aspect of the country would be entirely altered. The crooked spade is almost the only utensil used by the common class of tenants, for labouring the ground. There are excellent carriage roads in the island. One executed by the parliamentary commissioners, jointly with the proprietors, from the point of Sleat, continues in a line along the whole coast on the east, till it reaches Portree near the north end; thence it takes a westerly direction till it terminates on the confines of the district of Bracadale on the west. Other improvements in the island have lately advanced considerably. The island is well watered by a number of rivers, abounding with trout and salmon. In the small rivers Kilmartin and Ord, is found the great horse muscle, in which pearls are formed. There is also a number of fresh water lakes, well stored with trout and eel. The largest of these lakes takes its denomination from St. Columba, to whom a chapel, which stands on a small island in the lake, is dedicated. The coasts are in general bold and rocky, abounding with many safe and commodious bays. The most considerable of those are Snizort and Fullart on the north coast, Bracadale on the west, and Portree on the east coast. Snizort loch, or bay, contains a group of islets called Asorib. Loch Bracadale forms a beautiful landlocked harbour, abounding in safe creeks and islets. The basin south of the village of Portree, in Trotternish, on the sound of Raasay, would answer well for a dry dock, where damaged vessels might be easily repaired. Many curious grottos, druidical monuments, and ancient forts, are found in this island. At Struan are the remains of a circular fort, 42 feet in diameter, on the top of a rock. The castle of Dunvegan is situated on a high rock at the bottom of Loch Fallart bay, on the west coast. It forms two sides of a small square, and on the third side there is a Danish tower; between this castle and Talysker, on the west coast, is the ruin of a thick wall, and the traces of a dike quite round a steep rock, accessible on one side; and on the summit of another rock is a Danish circular inclosure, composed of excellent masonry without cement. The diameter of the inside is 42 feet; and within are vestiges of five small circular apartments. The walls of the enclosure are of considerable height, and the entrance is six feet high, covered with flags. About two miles northward are two large cairns. Duntuil castle, i. e. the castle of the round grassy eminence, originally a seat of the Macdonalds, now lies in ruins, on the verge of a lofty precipice, near the northern extremity of the island. There are several agreeable seats and villages planted on the coasts and borders of lakes. Opposite to Hunish, the northern promontory, there is a rapid current; and at no great distance are the dangerous rocks of Sker-na-mili. Many valuable minerals have been discovered, but none have been wrought to any advantage. In many places the hills exhibit marks of volcanic fire. In the parish of Strath, limestone and marl are abundant, and there is some marble of an inferior quality. Near the village of Sleat are found marcasites of various

kinds, and finely variegated pebbles. A valley near Loch Fallart produces fine agates, and many of the rivulets contain topazes, washed down from the hills in mountain torrents. Rock crystals and other precious stones are also found, after heavy rains, among the debris at the foot of the hill. The south and west coasts abound with coral, both red and white. The island is divided into seven parochial districts, which contain upwards of 18,000 inhabitants, who dwell for the most part in scattered villages, as convenience of situation invites. It belonged formerly to lord Macdonald, the laird of Macleod, and the laird of Mackinnon; but now there are many other proprietors in it—Macallister of Strathaird, Macdonald of Lyndale, Macdonald of Scalpa, Mr. C. Grant of Vaternish, M. P., and several others.

SKY'ED, *adj.* Enveloped by the skies.—This is unauthorized, and inelegant.

The pale deluge floats

O'er the *sky'd* mountain to the shadowy vale. *Thomson.*

SKY'EY, *adj.* Ethereal.—[Not very elegantly formed.]

A breath thou art,

Servile to all the *skyey* influences,

That do this habitation, where thou keep'st,
Hourly afflict. *Shakspeare.*

SKY'ISH, *adj.* Coloured by the ether; approaching the sky.

Of this flat a mountain you have made,

T' o'er top old Pelion, or the *skyish* head,

Of blue Olympus.

Shakspeare.

SKY'LARK, *s.* A lark that mounts and sings.—He next proceeded to the *skylark*, mounting up by a proper scale of notes, and afterwards falling to the ground with a very easy descent. *Spectator.*

SKY'LIGHT, *s.* A window placed in a room, not laterally, but in the ceiling.—A monstrous fowl dropt through the *skylight*, near his wife's apartment. *Arbutnot.*

SKYRO, SKYROS, or SCHIRI, an island of the Grecian archipelago, to the east of Negroponte. It is about 60 miles in circumference, and is extremely rugged, being covered with steep and naked rocks; these are, however, separated by some fruitful spots, producing wheat, barley, and tolerably good wine, and affording pasture to flocks of goats and sheep. Agriculture is, however, much neglected, and the 2000 Greeks who inhabit the island, live in a state of extreme poverty. In a wretched village of the same name resides a Greek bishop. Lat. 38. 52. N. long 24. 33. E.

SKYRO-POULO, a small island of the Archipelago, between Skyros and the coast of Negroponte; 6 miles west of the former.

SKY'ROCKET, *s.* A kind of fire-work, which flies high, and burns as it flies.—I considered a comet, or, in the language of the vulgar, a blazing star, as a *skyrocket* discharged by an hand that is almighty. *Addison.*

SKYTTE (Benedict), was born in 1614, and studied at Upsal. In 1629 he accompanied the Swedish ambassador, general Spence, to England, where on taking his leave, he was knighted by king Charles I. After this he continued his studies at Dorpat, and travelled for his improvement, during which queen Christiana gave him a place in her household. He enjoyed for several years the favour of his sovereign; but afterwards fell into disgrace, and was brought to trial, but he made such an able defence that he was acquitted, and all the proceedings against him were annulled. He was restored to his seat as senator, and in 1665 was appointed governor of Esthonia. He was employed on an important mission by king Charles Gustavus to the Duke of Courland, and he managed the business so well, that he received the approbation and cordial thanks of his sovereign. His good fortune again deserted him; he was dismissed from his offices at the diet held in 1664, and declared incapable of ever being employed either at home or abroad. After this he retired to his estate, and spent his time in literary pursuits till his death, in 1683. He was a man of great learning, and made himself known by various works, among which were the following: "Dissertatiuncula de Argumento quod Fæminæ, Officium Legati mandari possit," 4to.: "Oratio qua probatur

probatur Utilitatem pro Justitia, in Administratione Rerum publicarum colendam." *Gen. Biog.*

SLAB, *adj.* [A word, probably of the same original with *slabber*, or *slaver*. See *To SLABBER*. The Teut. *slabbe* is a slabbering-bib.] Thick; viscous; glutinous.

Nose of Turk, and Tartar's lips;
Finger of birth-strangled babe,
Ditch-deliver'd by a drab;
Make the gruel thick and *slab*.

Shakspeare.

SLAB, *s.* A puddle. *Ainsworth*.—They must be diligently cleansed from moss, *slab*, and ooze. *Evelyn*.—A plane of stone: as, a marble *slab*.—The outside plank of a piece of timber when sawn into boards. *Ray*.

To SLABBER, *v. a.* [Teut. *slabben*, *slabbcren*.] *To sup up hastily*.—*To slabber* pottage up half hot and cold. *Barret*.—*To smear with spittle*.—He *slabbered* me all over, from cheek to cheek, with his great tongue. *Arbutnot*.—*To shed; to spill*.

The milk-pan and cream-pot so *slabber'd* and tost,
That butter is wanting, and cheese is half lost.

Tusser.

To SLABBER, *v. n.* *To let the spittle fall from the mouth; to drivel*.—*To shed or pour on any thing*.

SLABBERER, *s.* One who slabbers; an idiot.

SLABBY, *adj.* Thick; viscous. *Not used*.—In the cure of an ulcer, with a moist intemperies, *slabby* and greasy medicaments are to be forborn, and drying to be used. *Wiseman*.—*Wet; floody; in low language*.

When waggish boys the stunted besom ply,
To rid the *slabby* pavements, pass not by.

Gay.

SLAB-LINE, in Sea Language, a small cord passing up behind a ship's main-sail or fore-sail, and being reeved through a block attached to the lower part of the yard, is then transmitted into two branches to the foot of the sail to which it is fastened.

It is used to truss up the sail as occasion requires, and more particularly for the convenience of the pilot or steersman, that they may look forward beneath it as the ship advances. *Falconer*.

SLABTOWN, a village of the United States, in Burlington county, New Jersey; 7 miles east of Burlington.

SLACK, *adj.* [pleac, Saxon; *slak*, Su. Goth.; *slaken*, Icelandic; *yslack*, Welsh; *laxus*, Lat.] Not tense; not hard drawn; loose.—The vein in the arm is that which Aretæus commonly opens; and he gives a particular caution in this case to make a *slack* compression, for fear of exciting a convulsion. *Arbutnot*.—Relaxed; weak; not holding fast.

All his joints relax'd:

From his *slack* hand the garland wreath'd for Eve
Down dropp'd, and all the faded roses shed.

Milton.

Remiss; not diligent; not eager; not fervent.

Rebellion now began, for lack
Of zeal and plunder, to grow *slack*.

Hudibras.

Not violent; not rapid.

Their pace was formal, grave, *slack*:
His nimble wit outran the heavy pack.

Dryden.

Not intense.—A handful of *slack* dried hops spoil many pounds, by taking away their pleasant smell. *Mortimer*.

To SLACK, or *To SLACKEN*, *v. n.* [placian, Sax.] *To be remiss; to neglect*.—When thou shalt vow a vow unto the Lord, *slack* not to pay it. *Deut.*—*To lose the power of cohesion*.—The fire in lime burnt, lies hid, so that it appears to be cold; but water excites it again, whereby it *slacks* and crumbles into fine powder. *Moxon*.—*To abate*.

Whence these raging fires

Will *slacken*, if his breath stir not their flames.

Milton.

To languish; to fail; to flag. *Ainsworth*.—*Slacking* in such care and desire. *Necessary Erudit. of a Chris. Man.*

To SLACK, or *To SLACKEN*, *v. a.* *To loosen; to make less tight*.

Ah! generous youth, that wish forbear;
Slack all thy sails, and fear to come.

Dryden.

To relax; to remit.

Taught power's due use to people and to kings,
Taught not to *slack* nor strain its tender strings.

Pope.

To ease; to mitigate. Philips seems to have used it by mistake for *slake*.

If there be cure or charm

To respite or deceive, or slack the pain
Of this ill mansion

Milton.

To remit for want of eagerness.—With such delay well pleas'd, they *slack* their course. *Milton*.—*To cause to be remitted; to make to abate*.

Extol not riches then, the toil of fools,
The wise man's cumbrance, if not snare; more apt
To slacken virtue and abate her edge,
Than prompt her to do aught may merit praise.

Milton.

To relieve; to unbend.

Here have I seen the king, when great affairs
Gave leave to *slacken* and unbend his cares,
Attended to the chase by all the flower
Of youth, whose hopes a nobler prey devour.

Denham.

To withhold; to use less liberally.—He that so generally is good, must of necessity hold his virtue to you, whose worthiness would stir it up where it wanted rather than *slack* it where there is such abundance. *Shakspeare*.—*To crumble; to deprive of the power of cohesion*.—Some unslack'd lime cover with ashes, and let it stand till rain comes to *slack* the lime; then spread them together. *Mortimer*.—*To neglect*.

Why might not you, my lord, receive attendance
From those that she calls servants, or from mine?

—If then they chanc'd to *slack* ye,

We could control them.

Shakspeare.

To repress; to make less quick or forcible.—I should be griev'd, young prince, to think my presence unbent your thoughts, and *slacken'd* 'em to arms. *Addison*.

SLACK, *s.* [This substantive is called *slake* in the north of England.] Small coal; coal broken in small parts: as, *slack'd* lime turns to powder.

SLACK, *s.* A valley or small shallow dell. *Northern*.
SLACKLY, *adv.* [pleaclice, Sax.] Loosely; not tightly; not closely.—Negligently; remissly.

That a king's children should be so convey'd,
So *slackly* guarded, and the search so slow
That could not trace them.

Shakspeare.

Tardily. *Cotgrave, and Sherwood*.

SLACKNESS, *s.* [pleacneffe, Sax.] Looseness; not tightness.—Negligence; inattention; remissness.

These thy offices,

So rarely kind, are as interpreters
Of my behind-hand *slackness*.

Shakspeare.

Tardiness.—When they have no disposition to shoot out above their lips, there is a *slackness* to heal, and a cure is very difficultly effected. *Sharp*.—Weakness; not force; not intensity.—Through the *slackness* of motion, or long banishment from the air, it might gather some aptness to putrefy. *Brerewood*.

SLACK-WATER, in Sea Language, denotes the interval between the flux and reflux of the tide, or between the last of the ebb and the first of the flood, during which the current is interrupted, and the water apparently remains in a state of rest.

SLADE, *s.* [plæð, Sax. vallis, Somner; via in montium convallibus, Lye. But Lye adds the Icel. *slæd*, a valley.] A flat piece of ground lying low and moist; a little den or valley.

The thick and well-grown fog doth matt my smoother *slades*;
And on the lower leas, as on the higher hades,
The daintie clover grows. *Drayton.*

SLADE POINT, a cape on the north-east coast of New Holland; 15 miles south-east of Cape Hillsborough.

SLAG, *s.* The dross or recrement of metal.—Not only the calces but the glasses of metal may be of differing colours from the natural colour or the metal, as I have observed about the glass or *slag* of copper. *Boyle.*

SLAGELSE, a town of Denmark, in the island of Zealand. Population 1800; 50 miles west-south-west of Copenhagen. Lat. 55. 27. N. long. 11. 22. 45. E.

SLAIDBURN, a parish of England, West Riding of Yorkshire; 11½ miles south-west of Kettle. Population 2175.

SLAIE, *s.* [ʃlæ, Saxon. Dr. Johnson cites this word, without any etymology, merely from Ainsworth. It was in use long before. See it in Sherwood. It is properly *sley*, though sometimes written also *slay*. See SLEY.] A weaver's reed.

SLAIN. The participle passive of *slay*. [ʃlægen, Saxon.]
The king grew vain,
Fought all his battles o'er again;
And thrice he routed all his foes, and thrice he slew the *slain*.
Dryden.

SLAINS, a parish of Scotland, in Aberdeenshire, on the sea coast of Buchan, of a triangular figure, about 5 miles long, and 3 broad. Population 1065.

SLAITHWAIT, a township of England, West Riding of Yorkshire, on the banks of the Huddersfield canal; 5½ miles west-south-west of Huddersfield. Population 2277.

To SLAKE, *v. a.* [from *slæk*, Skinner; from *slæcra*, Icelandic, to quench, Lye.] To quench; to extinguish.

If I digg'd up thy forefather's graves,
And hung their rotten coffins up in chains,
It could not *slake* mine ire, nor ease my heart. *Shakspeare.*

It is used of lime; so that it is uncertain whether the original notion of to *slack* or *slake* lime be to powder or quench it.—That which he saw happened to be fresh lime, and gathered before any rain had fallen to *slake* it. *Woodward.*

To SLAKE, *v. n.* To grow less tense; to be relaxed.

If she the body's nature did partake,
Her strength would with the body's strength decay;
But when the body's strongest sinews *slake*,
Then is the soul most active, quick, and gay. *Davies.*

To abate.—The fever *slaketh*. *Barret.*—To go out; to be extinguished.

She perceiving that his flame did *slake*,
And lov'd her only for his trophy's sake. *Brown.*

SLAKE, *s.* See SLACK.

SLALEY, a parish of England, in Northumberland; 5 miles south-east of Hexham. Population 558.

To SLAM, *v. a.* [Icel. *slaemra*, levitèr verberare, cædere: aliis cognatum creditur, Icel. *lemia*, verberare. *Serenius.*] To slaughter; to crush. *A word not used but in low conversation.* It is used in the north both for to beat or cuff a person, and also to push violently: as, he *slamm'd* to the door. See *Grose*. It is also used at cards: as, he is *slammed*, that is, beaten without winning one trick.

SLAM, *s.* Defeat: applied at cards, to the adversary who has not reckoned a single point. *A low phrase.*

Thus all the while a club was trump,
There's none could ever beat the rump;
Until a noble general came,
And gave the cheaters a clear *slam*. *Loyal Songs.*

SLAMANNAN, or ST. LAWRENCE, a parish of Scotland, in Stirlingshire, about 5 miles long, and from 3 to 4 broad. Population 993.

SLAMKIN, or SLAMMERKIM, *s.* [perhaps from the German *schlam*, dirt.] A slatternly woman; a trollop. *A vulgar word.*

To SLANDER, *v. a.* [*esclander*, old French, the same.] To censure falsely; to belie.

Slander Valentine

With falsehood, cowardice, and poor descent. *Shakspeare.*

SLANDER, *s.* [*esclandre*, old Fr. from the verb.] False invective.

When *slanders* do not live in tongues;
When cut-purses come not to throngs. *Shakspeare.*

Disgrace; reproach.

Thou *slander* of thy mother's heavy womb!
Thou loathed issue of thy father's loins! *Shakspeare.*

Disreputation; ill name.

You shall not find me, daughter,
After the *slander* of most step-mothers,
Ill-ey'd unto you. *Shakspeare.*

SLANDERER, *s.* One who belies another; one who lays false imputations on another.—Thou shalt answer for this, thou *slanderer*. *Dryden.*

SLANDEROUS, *adj.* Uttering reproachful falsehoods.

What king so strong

Can tie the gall up in the *slanderos* tongue? *Shakspeare.*

Containing reproachful falsehoods; calumnious.—I was never able till now to choke the mouth of such detractors, with the certain knowledge of their *slanderos* untruths. *Spenser.*

We lay these honours on this man,

To ease ourselves of divers *slanderos* loads. *Shakspeare.*

SLANDEROUSLY, *adv.* Calumniously; with false reproach.—I may the better satisfy them who object these doubts, and *slanderosly* bark at the courses which are held against that traitorous earl and his adherents. *Spenser.*

SLANDEROUNESS, *s.* State or quality of being reproachful. *Scott.*

SLANE, a town of Ireland, in the county of Meath, delightfully situated on the left bank of the Boyne, over which there is a bridge. This town, though now reduced to a village, constituted formerly one of the boroughs in the palatinate of Meath. Here was very early an abbey of regular canons. We are told that Dagobert, king of Austria, when only ten years old, was seized by Grimoald Mayor, shorn as a monk, and confined in this abbey, where he remained 20 years, when he was recalled to his kingdom. This town suffered much from the invasions of the Danes. In 1170 and 1175 it was taken, sacked, and burned by the English under earl Strongbow; 3 miles west of Drogheda.

SLANEY, a river of Ireland, which runs into Wexford harbour.

SLANG. The preterite of *sling*.—David *slang* a stone, and smote the Philistine. *1 Sam.*

SLANO, *S.*, a small sea-port of Austrian Dalmatia; 20 miles north-west of Ragusa.

SLANGE (Nicholas), a Dutch historian of considerable celebrity, was born at Slagelse in the year 1657, of which place his father was the minister, and he was afterwards bishop of Viborg. Nicholas travelled at an early period, and in 1679 he paid a visit to Oxford, and in the year following he went to Cambridge. On his return he became, in 1681, secretary to the Danish chancery, and after going through various gradations of rank and office, he was ennobled in the year 1731. He died in 1737. He wrote "A History of Christian IV." which was published at Copenhagen in 1749, in two volumes, folio. It was afterwards translated into the German language. *Gen. Biog.*

SLANK, *s.* [*alga marina*.] An herb. *Ainsworth.*

SLANT, or SLANTING, *adj.* [from *slanghe*, a serpent; Dutch. *Skinner*. Dr. Johnson. — From the Swedish, *slant*, of *slinta*, to slip, to miss one's step. *Serenius.*] Oblique; not direct; not perpendicular.

Late the clouds

Justling, or push'd with winds, rude in their shock,
Time the *slant* lightning; whose thwart flame driven down;
Kindles the gummy bark of fir and piñe. *Milton.*

SLANT,

SLANT, in Commerce, a copper coin of Sweden; 96 double slants, or 192 single slants pass for 1 specie riksdaler: and this, commonly called the Swedish dollar, is worth 4s. 7½d. sterling.

SLA'NTLY, or SLA'NTWISE, *adv.* Obliquely; not perpendicularly; a slope.

Some maketh a hollowness half a foot deep,
With flower sets in it, set *slantwise* asleep. *Tusser.*

SLAP, *s.* [*schlap*, German.] A blow. Properly with the hand open, or with something rather broad than sharp.—What defence can be used in such a despicable encounter as this, but either the *slap* or the spurn? *Milton.*

SLAP, *adv.* With a sudden and violent blow.—Peg's servants complained; and if they offered to come into the warehouse, then strait went the yard *slap* over their noddle. *Arbutnot.*

To SLAP, *v. a.* To strike with a slap.

Dick, who thus long had passive sat,
Here strok'd his chin, and cock'd his hat;
Then *slapp'd* his hand upon the board,
And thus the youth put in his word. *Prior.*

SLA'PDASH, *interj.* All at once: as any thing broad falls with a *slap* into the water, and *dashes* it about. *A low word.*

And yet, *slapdash*, is all again
In every sinew, nerve, and vein. *Prior.*

SLAPE, *adj.* Slippery; and also smooth. Applied to ale in Lincolnshire, and the North of England. See *Skinner*, *Ray* and *Grose*.

SLAPSTON, a parish of England, in Northamptonshire; 3½ miles west-south-west of Towcester.

SLAPTON, a parish of England, in Buckinghamshire, on the Grand Junction canal; 3 miles north by west of Ivinghoe.

SLAPTON, a parish of England, in Devonshire; 5½ miles south-west of Dartmouth.

To SLASH, *v. a.* [*slasa*, to strike, Icelandic.] To cut; to cut with long cuts.—*Slashing* and pinking their skin and faces. *Sir T. Herbert.*—The long pocket, *slashed* sleeve. *Guardian.*—To lash. *Slash* is improper.

Daniel, a sprightly swain, that us'd to *slash*
The vigorous steeds that drew his lord's calash. *King.*

To cause to make a sharp sound.—She *slash'd* a whip which she had in her hand; the cracks thereof were loud and dreadful. *More.*

To SLASH, *v. n.* To strike at random with a sword; to lay about him.

The knights with their bright burning blades
Broke their rude troops, and orders did confound,
Hewing and *slashing* at their idle shades. *Spenser.*

Not that I'd lop the beauties from his book,
Like *slashing* Bentley with his desperate hook. *Pope.*

SLASH, *s.* Cut; wound.—Some few received some cuts and *slashes* that had drawn blood. *Clarendon.*—A cut in cloth.

What! this a sleeve?

Here's snip and nip, and cut, and slish and *slash*,
Like to a censor in a barber's shop. *Shakspeare.*

To SLAT. See To SLATTER.

SLATCH, *s.* [A sea term.] The middle part of a rope or cable that hangs down loose. *Bailey.*—A transitory breeze of wind; an interval of fair weather: a sea term. At certain times in the winter season, they take their *slashes* of hood and ebb according to their occasions, the effects of the tide being manifest quite cross the Streight; and ships ordinarily seen becalmed, &c. *Sir H. Shere.*

SLATE, *s.* [from *slit*: *slate* is in some counties a crack; or from *esclate*, a tile, French.] A grey stone, easily broken into thin plates, which are used to cover houses, or to write

upon.—A square cannot be so truly drawn upon a *slate*, as it is conceived in the mind. *Grew.*

To SLATE, *v. a.* To cover the roof; to tile.

Sonnets and elegies to Chloris,
Would raise a house about two stories,
A lyric ode would *slate*. *Swift.*

To SLATE, or To SLETE, *v. n.* [perhaps from *plætunge*, Sax. *vestigia ferarum*.] To set a dog loose at any thing, as sheep, swine, &c. A northern word. Ray gives it in the form of *slete*, *Grose* of *slate*.

SLATE MOUNT, a mountain of the United States, in Virginia; 6 miles west of Richmond. Lat. 37. 35. N. long. 72. W.

SLATE, POINT OF, the southern extremity of the island of Skye. Lat. 57. 1. N. long. 6. W.

SLATE RIVER, a river of the United States, in Virginia, which runs into James river. Lat. 37. 40. N. long. 78. 54. W.

SLA'TER, *s.* One who covers with slates or tiles.

SLATOPOL, a small town of European Russia, in the government of Cherson, inhabited chiefly by Jew traders.

SLATTE'E, an African appellation of free black merchants, often traders in slaves.

To SLA'TTER, *v. n.* [Icel. and O. Sueth. *slacde*, vir habitu et moribus indecorus; en *sladdra*, incompta. *Serenius*.] To be slovenly and dirty.—A dirty, *slattering* woman. *Ray.*—To be careless or awkward; to spill carelessly: a northern word, and sometimes spoken *slat*.

SLA'TTERN, *s.* A woman negligent, not elegant or nice.

Without the raising of which sum,
You dare not be so troublesome
To pinch the *slatterns* black and blue,
For leaving you their work to do. *Hudibras.*

To SLA'TTERN, *v. a.* To consume carelessly or negligently.—All that I desire is, that you will never *slattern* away one minute in idleness. *Ld. Chesterfield.*

SLA'TTERNLY, *adj.* Not clean; slovenly.—A very *slatternly*, dirty, but at the same time very genteel French maid is appropriated to the use of my daughter. *Ld. Chesterfield.*

SLA'TTERNLY, *adv.* Awkwardly; negligently.—A fine suit ill made, and *slatternly* or stiffly worn, far from adorning, only exposes the awkwardness of the wearer. *Ld. Chesterfield.*

SLA'TY, *adv.* Having the nature of slate.—All the stone that is *slaty*, with a texture long, and parallel to the site of the stratum, will split only lengthways, or horizontally; and, if placed in any other position, 'tis apt to give way, start, and burst, when any considerable weight is laid upon it. *Woodward.*

SLAVE, *s.* [*esclave*, French.] One mancipated to a master; not a freeman; a dependant.

The banish'd Kent, who in disguise
Follow'd his enemy king, and did him service,
Improper for a *slave*. *Shakspeare.*

One that has lost the power of resistance.—When once men are immersed in sensual things, and are become *slaves* to their passions and lusts, then are they most disposed to doubt of the existence of God. *Wilkins.*—It is used proverbially for the lowest state of life.—Power shall not exempt the kings of the earth, and the great men, neither shall meanness excuse the poorest *slave*. *Nelson.*

To SLAVE, *v. a.* To enslave.—Fear,—a disease of a life long, which every day *slaves* a man to whatever ill he meets with. *Feltham.*

To SLAVE, *v. n.* To drudge; to toil; to toil.

Had women been the makers of our laws,
The men should *slave* at cards from morn to night. *Swift.*

The Romans called their slaves, *servi*, from *servare*, to keep, or save; as being such as were not killed, but saved to yield money, either by sale, or by their work. Though

other authors are of opinion, that the Roman name *servi* might come from that of *serbi*; as that of slaves from *Sclavi*, a people.

The term for a slave born and bred in the family, was *verna*; equivalent to *scurra*, denoting the petulance and impudence of these slaves. They seem to have been entitled by custom to privileges and indulgences beyond others.

Among the Romans, when a slave was set at liberty, he changed his name into a surname; he took the nomen or premen of his master, to which he added the cognomen he had been called by when a slave.

Among those who were denominated slaves in the more lax and general use of the term, we may reckon those who were distinguished among the Romans by the appellation of "mercenarii," so called from the circumstance of their *hire*. These were free-born citizens, mentioned in the law-books by the name of *liberi*, and thus contradistinguished from the *alieni*, or foreigners, who, from the various contingencies of fortune, were under a necessity of recurring for support to the service of the rich. To this class belonged those who, both among the Jews and Egyptians, are recorded in the sacred writings (Gen. ch. xlvii. Levit. xxv. 39, 40). The Grecian *Thetes* (*θητες*, see Hom. Odyss. Δ. 642), were also of this description. The situation of these persons resembled that of our servants; a contract subsisting between the parties, and most of the subordinate dependants having a right to demand and obtain their discharge if they were ill used by their masters.

Among the ancients there was another class of servants, which consisted wholly of those who had suffered the loss of liberty from their own imprudence. Such were the Grecian *prodigals*, who were detained in the service of their creditors, till the fruits of their labour were equivalent to their debts; the *delinquents*, who were sentenced to the oar; and the German *enthusiasts*, mentioned by Tacitus, who were so addicted to gaming, that when they had parted with every thing, also staked their liberty and their persons. "The loser," says the historian, "goes into a voluntary servitude; and though younger and stronger than the person with whom he played, patiently suffers himself to be bound and sold. Their perseverance in so bad a custom is styled *honour*. The slaves thus obtained, are immediately exchanged away in commerce, that the winner may get rid of the scandal of his victory." The two classes now enumerated, comprehend those that may be called *voluntary slaves*, and they are distinguished from those denominated *involuntary slaves*.

The connection between victory and servitude, which prevailed among the nations of antiquity, has uniformly existed, in one country or another, to the present day. Accordingly, the first class of *involuntary slaves*, included those who were "prisoners of war." The practice of reducing prisoners of war to the condition of slaves, subsisted both among the eastern nations and the people of the West; for as the Helots became the slaves of the Spartans, merely from the right of conquest, so prisoners of war were reduced to the same situation by the other inhabitants of Greece. The Romans, also, were actuated by the same principle; and all those nations which contributed to overturn the empire, adopted a similar custom; so that it was a general maxim in their polity, that those who fell under their power as prisoners of war, should immediately be reduced to the condition of slaves.

The slaves of the Greeks were generally, or very commonly, barbarians, and imported from foreign countries.

By the civil law, the power of making slaves is esteemed a right of nations, and follows, *jure gentium*, as a natural consequence of captivity in war. "Jure gentium servi nostri sunt, qui ab hostibus capiuntur." Justinian, l. i. 5. 5. i.

This is the first origin of the right of slavery assigned by Justinian, Inst. i. 3; 4., whence slaves are called *mancipia quasi manu capti*.

The Lacedæmonians, say some, or, as others say, the Assyrians, first introduced the practice; which the Romans not only approved of, but they even invented new manners of

making slaves: for instance, a man born free among them might sell his freedom, and become a slave. This voluntary slavery was first introduced by a decree of the senate in the time of the emperor Claudius, and at length was abrogated by Leo.

The Romans had power of life and death over their slaves, which no other nations had; but this severity was afterwards moderated by the laws of the emperors; and by one of Adrian it was made capital to kill a slave without a cause.

The slaves were esteemed the proper goods of their masters, and all they got belonged to them: but if the master were too cruel in his domestic corrections, he was obliged to sell his slave at a moderate price.

The custom of exposing old, useless, or sick slaves in an island of the Tyber, there to starve, seems to have been pretty common in Rome; and whoever recovered after having been so exposed, had his liberty given him, by an edict of the emperor Claudius, in which it was likewise forbidden to kill any slave merely for old age or sickness. (Suet. in Claud.) Nevertheless, it was the professed maxim of the elder Cato, to sell his superannuated slaves for any price, rather than maintain what he deemed an useless burthen. (Plut. in Caton.) The *ergastula*, or dungeons, where slaves in chains were forced to work, were very common all over Italy. Columella (l. i. c. 6.) advises that they be always built under ground; and recommends it as the duty of a careful overseer, to call over every day the names of these slaves, in order to know when any of them had deserted. Sicily was full of *ergastula*, and was cultivated by labourers in chains. Eunus and Athenio excited the servile war, by breaking up these monstrous prisons, and giving liberty to 60,000 slaves.

In the ancient and uncivilized ages of the world, "piracy" was regarded as an honourable practice; and this was supposed to give a right of making slaves. "The Grecians," says Thucydides (l. i.) "in their primitive state, as well as the contemporary barbarians, who inhabited the sea-coasts and islands, addicted themselves wholly to it: it was, in short, their only profession and support." The writings of Homer are sufficient to establish this account; as they shew that this was a common practice at so early a period as that of the Trojan war. The reputation which piracy seems to have acquired among the ancients, was owing to the skill, strength, agility, and valour, which were necessary for conducting it with success; and the erroneous notions that were thus entertained concerning it led to other consequences immediately connected with the slavery of the human species. Avarice and ambition availed themselves of these mistaken notions; and people were robbed, stolen, and even murdered, under the pretended idea that these were reputable adventures. But in proportion as men's sentiments and manners became more refined, the practice of piracy lost its reputation, and began gradually to disappear. The practice, however, was found to be lucrative; and it was continued, with a view to the emolument attending it, long after it ceased to be thought honourable, and when it was sinking into disgrace. The profits arising from the sale of slaves presented a temptation which avarice and interest could not resist; many were stolen by their own countrymen, and sold for slaves; and merchants traded on the different coasts in order to facilitate the disposal of this article of commerce. The merchants of Thessaly, if we may credit Aristophanes, (Plut. Act ii. Sc. 5.) who never spared the vices of the times, were particularly infamous for this latter kind of depredation; the Athenians were notorious for the former; for they had practised these robberies to such an alarming degree of danger to individuals, that it was found necessary to enact a law, which punished kidnappers with death. From the above statement it appears, that among the ancients there were two classes of involuntary slaves; one consisting of those who were taken publicly in a state of war; and another composed of those who were privately stolen in a state of peace. To which might be added a third class, comprehending the children and descendants of the former.

The

The condition of slaves, and their personal treatment, were sufficiently humiliating and grievous; and may well excite our pity and abhorrence. They were beaten, starved, tortured, and murdered at discretion; they were dead in a civil sense; they had neither name nor tribe: they were incapable of judicial process; and they were, in short without appeal. To this cruel treatment, however, there were some exceptions. The Egyptian slave, though perhaps a greater drudge than any other, yet if he had time to reach the temple of Hercules (Herodotus, l. ii. 143.), found a certain retreat from the persecution of his master; and he derived additional comfort from the reflection that his life could not be taken with impunity. But no place was so favourable to slaves as Athens when declining. Here they were allowed a greater liberty of speech; they had their convivial meetings, their amours, their hours of relaxation, pleasantries, and mirth; they were treated in such a manner as to warrant the observation of Demosthenes, in his second Philippic, "that the condition of a slave at Athens was preferable to that of a free citizen in many other countries." And here, if persecution exceeded the bounds of lenity, they had their temple, like the Egyptian, for refuge; where the legislature was so attentive, as to examine their complaints, and to order them, if these were founded in justice, to be sold to another master. Besides, they were allowed an opportunity of working for themselves; and if their diligence had procured them a sum equivalent to their ransom, they could immediately, on paying it down, demand their freedom for ever. To this privilege Plautus alludes, in his "Casina," where he introduces a slave, speaking in the following manner:

"Quid tu me vero libertate territas?
Quod si tu nolis, filiusque etiam tuus
Vobis invitis, atque amborum ingratiis,
Una libella liber possum fieri."

Thus we find to the eternal honour of Egypt and Athens, that they were the only places, if we except the cities of the Jews, where slaves were considered with any humanity at all. The inhabitants of all other parts of the world seemed to vie with each other in the debasement and oppression of these unfortunate people.

This commerce of the human species, which produced so pernicious an effect on the nature and state of man, commenced at a very early period. The history of Joseph, recorded in the book of Genesis, leads us to a very remote era for the introduction of this nefarious traffic. In his time it seems to have been prevalent, and to have been carried on in a manner, that sufficiently indicated its having been long before established. Egypt seems to have been at this time the principal, as it was probably the first market for the sale of the human species. It was, indeed, so famous, as to have been known, within a few centuries from the time of Pharaoh, both to the Grecian colonies in Asia, and the Grecian islands. Homer mentions Cyprus and Egypt as the common markets for slaves, about the time of the Trojan war. (Odys. l. xvii. 448. l. xxvi.) Egypt is also represented, as we have already intimated, in the book of Genesis, as a market for slaves, and in Exodus (ch. i.) as famous for the severity of its servitude. Homer also, in the place above cited, points out to us Egypt as a market for the human species, and by the epithet of "bitter Egypt," alludes in the strongest manner to that severity and rigour, of which the sacred historian transmitted to us the first account. The Odyssey of Homer shews farther, that this species of traffic was practised in many of the islands of the Ægean sea; and the Iliad informs us, that it had taken place among those Grecians on the continent of Europe, who had embarked from thence on the Trojan expedition. To this purpose, at the end of the seventh book, a fleet is described, as having just arrived from Lemnos, with a supply of wine for the Grecian camp. The merchants are described also, as immediately exposing it to sale, and as receiving in exchange, among other articles of barter, "a number of slaves." Tyre and Sidon, as we learn from the book of Joel, ch. iii. 3, 4, 6, were notorious for the

prosecution of this trade. This custom appears also to have existed among other states; it travelled all over Asia; it spread through the Grecian and Roman world; it was in use among the barbarous nations, which overturned the Roman empire; and was therefore practised, at the same period, throughout the whole of Europe. However, as the northern nations were settled in their conquests, the slavery and commerce of the human species began to decline, and on their full establishment they were abolished. Some writers have ascribed their decline and abolition to the prevalence of the feudal system; whilst others, much more numerous, and with less strength of argument, have maintained, that they were the natural effects of Christianity. The advocates of the former opinion allege, that "the multitude of little states, which sprung up from one great one at this era, occasioned infinite bickerings and matter for contention. There was not a state or seignior, which did not want all the hands they could muster, either to defend their own right, or to dispute that of their neighbours. Thus every man was taken into the service: whom they armed they must trust: and there could be no trust but in free men. Thus the barrier between the two natures was thrown down, and slavery was no more heard of in the west."

Within two centuries after the suppression of slavery in Europe, the Portuguese, in imitation of those piracies which existed in the uncivilized ages of the world, made their descents on Africa, and committing depredations on the coast, first carried the wretched inhabitants into slavery. This practice, thus inconsiderable at its commencement, became general; and our own ancestors, together with the Spaniards, French, and most of the maritime powers of Europe, soon followed the piratical example: and thus did the Europeans, to their eternal infamy, revive a custom, which their own ancestors had so lately exploded, from a consciousness of its impiety. The unfortunate Africans fled from the coast, and sought, in the interior part of the country, a retreat from the persecution of their invaders; but the Europeans still pursued them; they entered their rivers, sailed up into the heart of the country, surprised the Africans in their recesses, and carried them into slavery. The next step, which the Europeans found it necessary to take, was that of settling in the country; of securing themselves by fortified posts; of changing their system of force into that of pretended liberality; and of opening, by every species of bribery and corruption, a communication with the natives. Accordingly they erected their forts and factories; landed their merchandize; and endeavoured, by a peaceable deportment, by presents, and by every appearance of munificence, to allure the attachment and confidence of the Africans.

The Portuguese erected their first fort at D'Elmina, in the year 1481, about 40 years after Alonzo Gonzales had pointed out to his countrymen the southern Africans as articles of commerce.

The scheme succeeded: an intercourse took place between the Europeans and Africans, attended with a confidence highly favourable to the views of ambition and avarice. In order to render this intercourse permanent as well as lucrative, the Europeans having discovered the chiefs of the African tribes, paid their court to these; and at length a treaty of peace and commerce was concluded; in which it was agreed, that the kings, on their part, should, from this period, sentence prisoners of war and convicts to European servitude; and that the Europeans should supply them, in return, with the luxuries of the north. This agreement immediately took place, and laid the foundation of that horrible commerce, which is not yet abolished.

As if this trade were not in itself sufficiently criminal, its abettors added to it hypocrisy—the ostensible reason for introducing the Africans, in particular, as labourers into the newly discovered parts of the western world, and placing them under European masters, being *the duty of converting the heathen*. A system of severity sprung up, as it related to their treatment, which became by degrees still

more cruel and degrading; so that when in after-times the situation of master and slave came to be viewed, as it existed in practice between the two, the masters seemed to have attained the rank of monarchs, and the slaves to have gone down to the condition of brutes. Hence, very early after the commencement of the slave-trade, the objects of it began to be considered as an inferior species, and even their very colour as a mark of it. "The punishments for crimes of slaves," says Sloane (1707), "are usually, for rebellions, burning them, by nailing them down on the ground with crooked sticks on every limb, and then applying the fire by degrees from the feet and hands, burning them gradually up to the head, whereby their pains are extravagant. For crimes of a lesser nature, gelding, or chopping off half of the foot with an axe. These punishments are suffered by them with great constancy." The author proceeds as coolly to describe "usual" whipping and other punishments, and concludes thus. "After they are whipped till they are raw, some put on their skins pepper and salt, to make them smart; at other times their masters will drop melted wax on their skins, and use several very exquisite torments. These punishments are sometimes merited by the blacks, who are a very perverse generation of people; and though they appear harsh, yet are scarce equal to some of their crimes, and inferior to what punishments other European nations inflict on their slaves in the East Indies, as may be seen by Moquet, and other travellers." They continued to be transported for years and years, till different persons, taking an interest in their sufferings, produced such an union of public sentiment in their favour in England, that the parliament there were obliged, as it were, to consider their case, by hearing evidence upon it. It is from this evidence, as from the highest authority, which was heard in the years 1791 and 1792, that we shall chiefly give our account of the trade in question.

The treaty to which we have referred, stipulated to supply the Europeans with captives and convicts; but these were not sufficient for their demand, on the establishment of their western colonies. In order, therefore, to augment the number, not only those who were fairly convicted of offences, were now sentenced to servitude, but even those who were suspected; and with regard to prisoners of war, they delivered into slavery not only those who were taken in a state of public enmity and injustice, but those also who, conscious of no injury whatever, were taken in the arbitrary skirmishes of the venal sovereigns of Africa. Wars were made, not as formerly, from motives of retaliation and defence, but for the sake of obtaining prisoners alone, and the advantages resulting from the sale of them. When an European ship came in sight, this was considered as a motive for war, and a signal for the commencement of hostilities. The despotic sovereigns of Africa, influenced by the venal motives of European traffic, first made war upon the neighbouring tribes, in the violation of every principle of justice; and if they did not thus succeed in their main object, they turned their arms against their own subjects. The first villages at which they arrived were immediately surrounded, and afterwards set on fire; and the wretched inhabitants seized, as they were escaping from the flames. These, consisting of whole families, fathers, brothers, husbands, wives, and children, were instantly driven in chains to the merchants, and consigned to slavery. Many other persons were kidnapped, in order to glut the avarice of their own countrymen, who lay in wait for them; and they were afterwards sold to the European merchants: while the seamen of the different ships, by every possible artifice, enticed others on board, and transported them to the regions of servitude.

The collectors of slaves were distributed into several classes. The first consisted of such black traders as preserved a regular chain of traffic, and a regular communication with each other, from the interior parts of the country to the sea-shore. Many of the slaves thus driven down, are reported to have travelled at least 1200 miles from the place where they were first purchased. A pistol or a sword

may have been the full value of one of these slaves, at the first cost; but this price advances, as he travels towards the sea-shore. The second class of slave-traders is composed of such as travel inland, but have no chain of commerce or communication with the shore. At a certain distance they strike off in a line parallel to the shore, and visiting the fairs and villages in their way, drop down occasionally to the coast, as they have procured slaves. The third class consists of such as travel by water up the great rivers, in their canoes, which are very long, well-armed, and carry from 50 to 70 hands. These often proceed to the distance of 1000 miles, and bring down from 60 to 120 slaves at a time. The fourth class includes those who, living near the banks of the rivers, or the sea-shore, scarcely travel at all, but coming by some means or other into the possession of slaves, either drive them, or send them immediately to the ships and factories. Most of the traders now described traffic on their own account; but there are some of the poorer sort, who travel for the ships. The different sorts of goods, with which the traders deal for slaves in the inland country, may be divided into three sorts, viz., East Indian, home-made or colonial, and Venetian. The first consists of cowries, or small shells, which pass for money on some parts of the coast; blue and white bafis, romals, bandanoes, and other cloths and productions of the East. The second consists of bar-iron, muskets, powder, swords, pans and other hardware; cottons, linens, spirits in great abundance, with other articles of less note. The third consists totally of beads. Almost every ship carries the three sorts of articles now stated, but more or less of one than of the other, according to the place of her destination; every different part of the coast requiring a different assortment, and the Africans, like the Europeans, repeatedly changing their taste. This is particularly the case with respect to beads. The same kind of beads, which finds a market one year in one part of the coast, will probably not be saleable there the next. At one time the green are preferred to the yellow, at another the opaque to the transparent, and at another the oval to the round.

The slave-trade, at the time of its subsistence, may be said to have begun at the great river Senegal, and to extend to the farther limits of Angola, a distance of many thousand miles. On the rivers Senegal and Gambia, the Europeans proceed in their ships till they come to a proper station, and then send out their boats armed to different villages; and on their approach to them, fire a musket, or beat a drum, to apprise the inhabitants that they are in want of slaves. The country people supply them in part, and they also procure them from the large canoes above mentioned.

The Moors, who inhabit the left bank of the river Senegal, are notorious for depredations of this sort. They cross the river without any previous provocation, and make war upon those on the other side of it, and bring them in as prisoners, and sell them at Fort St. Louis for slaves. Mr. Kiernan has seen the remains of villages, which they had broken up in such expeditions.

Captains Hills and Wilson, and Mr. Wadstrom, and Lieutenant Dalrymple, and other more recent travellers, inform us, that the kings in this part of the country do not hesitate to make war upon their own subjects, when in want of money. They send out their soldiers in the night, who lying before, or attacking or burning a village, seize such as come out of it, and return with them as slaves.

On the river Sierra Leona there were several private factories, belonging to the merchants of Europe, in which their agents, being white people, resided. These agents kept a number of boats, which were sent up the river for slaves; and thus they procured for the factories a regular supply.

On the Windward Coast, which reaches from Cape Mount to Cape Palmas, the natives, when they have any slaves to sell, generally signify it by fires. Practices similar to those already recited prevail from the river Gambia to the end of the Windward Coast. Lieutenant Storey says, that public robbery is here called war. Mr. Bowman, another evidence,

dence, says, that when parties of robbers were setting fire to villages, war was said to be carrying on. This account is confirmed by Mr. Town and Sir George Young, and all of them concur in stating, that these parties go out at night, break up villages, and carry off the inhabitants as slaves. Messrs. Town, Bowman and Storey, have seen them set out upon such expeditions; and the latter, to satisfy himself, accompanied them on one occasion. These came to a town in the dead of the night, set fire to it, and took away many of the inhabitants. The above practice is so common, that both up the river Scassus, Sierra Leona and Junk, and at Cape Mount and Bassau, the remains of burnt and deserted villages are to be seen, on which such attacks have been made, and that the natives are found to be constantly armed. In one of the towns, two or three houses only are described to have been left standing, and two plantations of rice, which were ready for cutting down, but which the inhabitants, by being carried off, had been deprived of enjoying. Lieutenant Simpson, of the royal marines, another evidence, understood that the villages on the Windward Coast were always at war; and the reason given was, that the kings were in want of slaves. Mr. Morley, another evidence, speaks in the same language. Slaves, he says, are generally made by robbers going from village to village in the night.

The Gold Coast, which is next to the Windward Coast, presents us with the same melancholy scene. The Rev. Mr. Quakoo, who had resided as chaplain to one of the factories there for many years, informed Lieutenant Simpson that wars were often made for the sole purpose of making slaves. Dr. Trotter says, by prisoners of war, the traders mean such as are carried off by robbers, who ravage the country for that purpose; the Bush-men making war to make trade, being a common way of speaking among them; and in a large cargo of slaves, he could only recollect three who had not been so obtained. Surgeon Falconbridge defines the term war, when used by the slave-dealers on this part of the coast, to mean a piratical expedition for making slaves. Mr. Morley says, what they call war, is putting the villages in confusion, and catching the inhabitants, whom they carry down to the coast and sell, where, it is well known, no questions are asked how they had been obtained. Indeed, a slave-captain, when examined by the House of Commons, acknowledged, that he believed a captain would be reckoned a fool by any trading man, to whom he should put such a question. And Mr. Marsh, the resident at Cape Coast Castle, told Mr. How, that he did not care how the slaves he purchased had been obtained; and shewed him instruments which were put into the slaves' mouths, to prevent their crying out for assistance, while the robbers were conveying them through the country.

From the end of the Gold Coast to the extremity of Angola, which is the boundary of the slave-trade, and which vast district comprehends many navigable rivers, we are shocked by the repetition of the same atrocious practices. Here, as before, going to town in the night, setting them on fire, and seizing the people, or putting the villages in confusion, and catching the inhabitants, are called war. These piratical expeditions are frequently made by water in these parts. Mr. Douglass says, when a slave-ship arrives, the king sends his war-canoes up the river, where they surprise and seize all they can. Surgeon Falconbridge, Mr. Morley and Mr. Isaac Parker, confirm the account. Up the great rivers Bonny and Calabar the king sends fleets of canoes, with armed men, which return with slaves. Mr. I. Parker was twice up the river Calabar in one of these fleets, and perhaps the only white person who was ever permitted to go with them. In the day-time, he says, when they approached a village, they lay under the bushes; but at night flew up to it, and seized every one they could catch. In this way they proceeded up the river, till they had gotten forty-five persons, which they brought back to New Town, and sold to the European ships. About a fortnight afterwards, he was allowed to accompany them on another expedition. Here, he says, they plundered other villages

higher up the river than before, taking, men, women and children, as they could catch them in their huts. They seized on much the same number, and brought them to New Town, as before.

On the Gold Coast, a vessel seeking slaves, generally anchors at Annamaboe. A certain quantity of gold must be included in the articles designed for purchasing slaves, or else none can be obtained. At Whidah, Bonny, Calabar, Benin and Angola, gold is not demanded in exchange; and boats are unnecessary, except for reaching the shore, wooding and watering, and services of a similar kind. This is particularly the case at Calabar and Bonny, which have been the greatest markets for slaves. The traders of the first class, after an absence of about nine days, have returned frequently with 1500 or 2000 slaves at a time.

The number of slaves that have been annually transported from the African coast has fluctuated according to circumstances. In the year 1768, 104,000 natives of Africa were taken from their own continent; and it continued much the same for the next five years. During the American war it was diminished. In the year 1786 the numbers may be stated at 100,000, and the ships that conveyed them to the colonies at 350. The trade, before the abolition, was confined to the English, Dutch, Danes, Portuguese and French. England, in 1786, employed 130 ships, and carried off about 42,000 slaves. These were fitted out from the ports of London, Bristol and Liverpool; the latter of which alone sent out 90 vessels.

The unhappy slaves are divided by Mr. Clarkson into seven classes. The most considerable, and that which contains at least half of the whole number transported, consists of kidnapped people. This mode of procuring them includes every species of treachery. Mr. Wadstrom tells us, that at Dakard lived one Ganna, who was a notorious man-stealer, and employed as such by the merchants there. He saw a boy and a woman there in confinement, both of whom had been stolen. The boy had been privately taken from his parents, in the interior part above Cape Rouge; and the woman from her husband and children at Rufisque. He saw afterwards many of the natives, who had been thus taken, brought to Goree. At Sallum the king sent for a poor woman, under pretence of buying her millet, and then seized and sold her. General Rooke, who was governor of Goree, detected three young persons who had been stolen and brought there; and at their request, he sent them back to their friends. The same governor was applied to by three slave-captains, to kidnap one hundred and fifty men, women and children, the king of Cayor's subjects, who had come to Goree in consequence of the friendly intercourse which had subsisted between him and that king. He refused, and was much shocked by the proposition; but the captain said, such things had been done by a former governor of the place. Captain Wilson says, that in his time, when he commanded the Racehorse ship of war, such private robberies were frequent on the continent, opposite to Goree. His predecessor, Captain Lacy, had sent one of the natives into the country with dispatches on his Britannic Majesty's account; but the poor man was soon way-laid, seized, and sold. Captain Wilson rescued him afterwards from the hold of a slave-vessel, where his life had been endangered by the inhumanity of the French captain. So generally prevalent were these robberies, that they were acknowledged by all. It was the first principle of the natives, never to go out unarmed while a slave-vessel was upon the coast, for fear of being stolen.

The second order of slaves, and that not inconsiderable, consists of those whose villages have been depopulated for obtaining them. The third class consists of such as are said to have been convicted of crimes. Captain Wilson says, that such as are sold on this account are sold for the benefit of their kings or judges. On asking king Damel's officer, who had brought down a culprit for sale, whether the man was guilty of the crime imputed to him, he was answered by the officer, that this was of no consequence. Mr. Town says, it is not uncommon to impute crimes falsely, or to

bring on palavers, that is, accusations or trials, in order to make slaves. Mr. Morley remembers a woman sold on pretence of adultery at Old Calabar; and in the river Ambris, says Mr. Falconbridge, a king's officer wanting brandy and other goods, but having no slave with which to purchase them, accuses a man of extortion in the sale of his fish, and after a summary trial on the spot, procures him to be condemned and sold.

The fourth class includes prisoners of war; being either such as are the produce of wars that have originated in common causes; or such as have been supplied by wars made solely for the purpose of obtaining them. The fifth class comprehends those who are slaves by birth. Some traders on the coast, it is said, who have slaves in their possession, make a practice of breeding from those, for the purpose of selling to others. After having been brought up to a certain age, they are reckoned saleable. The sixth class is composed of those, who have sacrificed their liberty to gaming. The seventh and last class consists of those, who, having run into debt are seized according to the laws of the country, and sold to their creditors. The two last classes are very inconsideable, and scarcely deserve mention.

Having lost their liberty in one or other of the ways now described, they are conveyed to the banks of the rivers, or to the sea-coast. Some are found to have belonged to the neighbourhood; others to have lived farther up the country; and others in very distant parts. It has been calculated, that some of the latter have been brought 1000 miles from their homes. Of those who come from a distance, many have travelled by water, many have been made to walk also over land. These march in droves, or cauffles, as they are called. They are secured from rising or running away, by pieces of wood, which, attach the necks of two and two together; or by other pieces, which are fastened by staples to their arms. They are made to carry their own water and provisions, and some of them elephants' teeth, and other commodities, which their masters may have picked up on their route. They are watched and followed by drivers, who make the weak keep up with the strong. As they pass through different places, others, who have been reduced to slavery in a similar manner, are purchased, and added to the cauffle. Many in these cauffles speak different languages, and cannot at all understand one another.

When they reach the banks of the rivers on the coast, they are offered for sale: some to land factories, or depôts kept for that purpose by the Europeans; others, where the rivers are small and shallow, to ships' boats and tenders, which are constantly plying about to purchase them; and others immediately to the ships themselves. In the rivers Senegal and Gambia, from ten to forty are brought down at a time; in the rivers Bonny and Calabar, from a thousand to fifteen hundred; and on the Windward Coast, perhaps a solitary individual, or only two or three at a time; so that slaving, as it is called, is very tedious in that quarter. All those who are thus offered for sale, undergo previous examination by a surgeon; and none are taken but such as are free from disorder, and in the prime of life. Indeed 25 years of age is the standard, beyond which the purchasers do not like to take them. In making their bargains, the goods as well as the slaves are valued by a medium, which is known to the parties concerned.

When the slaves are conveyed to the shore, they are carried in boats to the different ships whose captains have purchased them. The men are immediately confined two and two together, either by the neck, leg or arm, with fetters of solid iron. They are then put into their apartments; the men occupying the fore-part, the women the after-part, and the boys the middle of the vessel. The tops of these apartments are grated for the admission of light and air, and they are stowed like any other lumber, occupying such quantity of room as has been allotted to them. Many of them, whilst the ships are waiting for their full lading, and whilst they are near their native shore, from which they are to be separated for ever, have manifested great appearance of oppression and distress; and in some cases have re-

curred, for relief, to suicide; others have been affected with delirium and madness; others, again, have been actuated by a spirit of revenge, and have resolved on punishing their oppressors at the hazard of their own lives. In the day-time, if the weather be fine, they are brought upon deck for air. They are placed in a long row of two and two together, on each side of the ship; a long chain is then made to pass through the shackles of each pair, by which means each row is at once secured to the deck. In this state they take their meals, which consist chiefly of horse-beans, rice and yams, with a little palm-oil and pepper.

When the number of slaves is completed, the ships weigh anchor, and begin what is termed the *Middle* passage, to carry them to their respective colonies. The vessels in which they are transported are of different dimensions, from 11 to 800 tons, and they carry from 30 to 1500 slaves at a time. The height of the apartments is different, according to the size of the vessel, but may be stated to be from six feet to less than three; so that it is impossible to stand erect in most of the vessels that transport them, and in some scarcely to sit down in the same posture.

When the vessel is full, their situation is truly pitiable. A grown-up person is allowed, in the best regulated ships, but sixteen English inches each in width, two (English) feet eight inches in height, and five feet eleven inches in length. Surgeon Falconbridge declares, that he has known slaves go down apparently in health, and brought up dead in the morning. He once opened one of them surgically, to discover with certainty what was the cause of his death; and found, from the appearance of the thorax and abdomen, that it was from suffocation. He says, that once on going below, he found that twenty of the slaves had fainted. He got them instantly hauled up on deck; but notwithstanding the quickness of his movements on this occasion, two or three of them died. And once, though he was only fifteen minutes in their room below, he became so ill himself, that he could not get up again to the deck without help; and he never was below many minutes together, but his shirt was as wet as if it had been dipt in water. He says, also, that as the slaves, whether well or ill, always lie on the bare planks, the motion of the ship rubs the flesh from the prominent parts of their body, and leaves the bones almost bare. And when the slaves have the flux, which is frequently the case, the whole place becomes covered with blood and mucus like a slaughter-house; and as they are fettered and wedged close together, the utmost disorder arises from endeavours to get to three or four tubs, which are placed among them for necessary purposes: and this disorder is still further increased, by the healthy being not unfrequently chained to the diseased, the dying and the dead. Dr. Trotter, speaking on the same subject, gives us an equal melancholy account. When the scuttles, says he, in the ship's sides, are obliged to be shut in bad weather, the gratings are not sufficient for airing the rooms. He never himself could breathe freely below, unless immediately under the hatchway. He has seen the slaves drawing their breath with all that laborious and anxious effort for life, which are observed in expiring animals, subjected by experiment to foul air, or in the exhausted receiver of an air-pump. He has also seen them when the tarpaulings have been thrown over the gratings, attempting to heave them up, crying out, "We are dying." Most of them have been recovered, by being brought upon deck; but some have perished, and this entirely by suffocation.

During the time that elapses from the slaves being put on board, on the African coast, to the time when the receivers leave the colonies, after having disposed of their cargoes, about one-fifth, or nearer one-fourth of the number put on board are destroyed.

This horrible traffic could not, however, exist long, without exciting hatred and indignation in all those not personally interested in its continuance. The first persons who bore their testimony against the trade in their successive writings

writings up to the year 1787, were, among the poets—Pope, Thomson, Shenstone and Cowper; among the divines—Bishop Warburton, Richard Baxter, Beattie, Wesley, Whitfield, Wakefield and Paley; among the others, were—Montesquieu, Hutchinson, Wallis, Burke, Postlethwaite, Day, Hartley, Millar and Granville Sharp. The last, however, is to be particularly distinguished from the rest; for whereas the others had only handed down the traffic in question as infamous, by the mention made of it in their respective works, this good man spent whole years in bringing the cruelty and wickedness of it into public notice. He tried, at his own expence, the famous case of Somerset, and several others, in our courts of law. He was, in fact, the first labourer in the cause. He began to be the public advocate of the oppressed Africans in 1765, and was waiting for opportunities for farther exertion, when he died. See SHARP.

Next the Quakers in England passed a public censure upon the traffic at their yearly meeting in London, in 1727. This they followed up, by other resolutions as a body, in 1758, 1761, 1763 and 1772, when they had become inveterate against it as against a crime of the deepest dye: In 1783 they petitioned parliament against its continuance. In this year certain members of the society thought it their duty to make their fellow countrymen at large acquainted with the horrible nature of it: these were, Thomas Knowles, George Harrison, Samuel Hoare, John Lloyd, Joseph Woods, and William Dillwyn. They formed themselves into a committee in London for this purpose; they wrote and circulated books; they conveyed also information on the subject through the London and country newspapers. It was not known, however, from whom the information came, as their names were concealed from the public. In this manner they continued to work their way from 1783 to 1787.

Next came the Quakers and others in North America. The Quakers there entertained the same opinion as their brethren in England on this subject. In 1696 and in 1711, they condemned, as a religious body, this cruel traffic; and in 1754, 1755, 1774, 1776 and 1778, they not only passed resolutions against it, as far as their own members were concerned, but also against slavery itself. In process of time, however, individuals rose up out of this benevolent body, and became public labourers in the cause of the unhappy Africans. The two principal of these were John Woolman and Anthony Benezet. The former travelled many hundred miles on foot, to converse with planters and others, on the iniquity of holding their fellow creatures in bondage; and the latter laboured for years in collecting information concerning Africa and the slave trade, and in handing it to the world. At this time other people, of other religious denominations, came forward in North America, and contributed to increase the odium which the Quakers had been the first to excite there against the traffic; when, in 1774, James Pemberton, a pious Quaker in Pennsylvania, and Dr. Rush, an eminent physician, and a man of weight among the Presbyterians in the same province, formed a committee, in which persons of different religious sects joined for the purpose of abolishing both the slave-trade and slavery on their own continent. This committee was obliged to suspend its operations during the war with Great Britain, but afterwards resumed its functions. In 1787 it added considerably to its numbers, and took in, among others, the celebrated Dr. Franklin, who was its first president in its renovated state.

Our limits do not permit us to introduce to our readers all the numerous and ardent supporters of the abolition of the slave-trade. Independent of all the liberal party in England, France and America, large numbers of methodists and other religionists took up the cause with an enthusiasm that was astonishing. Mr. Clarkson especially deserves commemoration. After travelling to all the slave ports, obtaining, at incredible pains, histories of the voyages of the slave-ships, specimens of handcuffs, models of the construction of the vessels, &c., for the purpose of bringing the horrible details before the House of Commons, he proceeded to re-

duce to a legible form the whole mass of evidence, and published it. Not content with this, he actually set forth to wait personally upon every person in every county in the kingdom, to whom the book had been sent, to get others of the town or neighbourhood to meet him there, to converse with them on the subject, to treat their individual perusal of the abridgment, and their united efforts in lending it out judiciously, and in seeing that it was read, and he travelled 6000 miles in the execution of this plan.

At length the public mind having been brought to the due pitch of excitement, Mr. Wilberforce introduced the question into the Commons. This was on the 2d of April, 1792. After a speech of four hours, during which he added a profusion of new light to the subject, and during which he endeavoured, in the most mild and persuasive manner, to do away objections and prejudices, he moved, "That it is the opinion of this house that the African slave-trade ought to be abolished." Two divisions took place. In the first, there were 193 votes for gradual abolition, and 125 for immediate; and in the second, there were 230 for gradual, and 85 for no abolition at all. In this state the question was left till the 23d of April, when Mr. Dundas (afterwards Lord Melville) came forward and proposed a plan conformable with the resolutions of the house, that eight years should be allowed the planters to stock themselves with negroes, and therefore moved that the year 1800 should be the epoch, after which no more slaves should be imported from Africa in British vessels to the West Indies. This gradual abolition was agreed upon for 1796, and a committee of the Commons carried the resolution to the Lords. On the 8th of May the Lords met to consider it, but agreed to hear new evidence.

Nothing could be more distressing than this; first, because there was no saying how many years the hearing of the evidence might take; and secondly, because the abolitionists had the laborious work to do over again, of finding out and keeping up a respectable body of witnesses on their own side of the question. In 1793, the only step taken was bringing before it its own vote of the former year, by which the slave-trade was to be abolished in 1796, in order that this vote might be re-considered and renewed. Accordingly Mr. Wilberforce moved the house upon the subject. It is only necessary to state, that his motion was most furiously opposed, and actually lost by a majority of 61 to 53. By this determination the Commons actually refused to sanction their own vote. Mr. Wilberforce was not dismayed. In the month of May, he moved for leave to bring in a bill to abolish that part of the trade by which the British merchants supplied foreigners with slaves. His motion was carried, but only by a majority of 7; and, on the third reading, it was lost by a majority of 31 to 29! During all this time the examination of witnesses had been going on in the House of Lords. Only seven witnesses, however, had been heard there in the course of the whole session.

After this most cruel session, the abolitionists were at a loss how to act for the advantage of their cause. One measure, however, was obviously necessary, viz., to endeavour to keep up a respectable body of evidence to oppose that which should be heard against the abolition in the Lords. For this purpose, Mr. Clarkson, at the request of the committee, once more traversed the kingdom. He began his journey in September, and returned in February, 1794. Mr. Wilberforce, in the interim, moved in the Commons for leave to renew his former bill for the abolition of the foreign slave-trade, as carried on by British subjects. He carried it, though with great difficulty, in all its stages, through the House of Commons; but it was almost directly lost in the House of Lords.

The question was now in a very desperate state, for if the House of Commons would not renew its own resolution, and if the Lords would not abolish even the foreign part of the slave-trade, what hope was there of success? But neither were Mr. Wilberforce nor the committee to be deterred by the prospect. Accordingly this gentleman moved in the Commons, in the session of 1795, for leave to bring in a bill for

for the abolition of the slave-trade. This motion was now necessary, and justifiable on that account, if the trade, according to a former resolution of that house, was to cease in 1796; but it was lost by a small majority.

In the session of 1796, Mr. Wilberforce resolved upon trying the question again, but in an entirely new form. He moved that the slave-trade be abolished in a limited time, but without assigning to its duration any specific date. He wished the house to agree to this as a general principle. After much opposition the principle was acknowledged; but when, in consequence of this acknowledgment of it, he brought in a bill, and attempted to introduce into one of the clauses the year 1797, as the period when the trade should cease, he lost it by a majority of 74 to 70.

He judged it prudent, after mature consideration, to let the session of 1797 pass without any parliamentary notice of the subject, but in that of 1798 he renewed his motion for abolition in a limited time. This, however, met with the same fate as the former.

In 1799, he tried the same motion again, when there appeared for it 74, and against it 82 votes. Soon after, Mr. Henry Thornton brought in a bill, at his request, to abolish a small part of the slave-trade. It may be remembered, that a colony had been established at Sierra Leona, to promote agriculture and a new species of commerce in its neighbourhood. Now, while the slave-trade was carried on all around it, it was found that these objects could be but little advanced. The bill, therefore, of Mr. Thornton, went only so far as to say that the slave-trade should not be carried on within a certain distance of that colony. This bill was carried through the Commons, but though it only asked that an infant establishment, founded on the principles of liberty, and this by parliamentary sanction, should be protected from the ravages of the slave-trade, it was lost in the House of Lords. This latter circumstance was indeed truly disheartening; yet amidst the clouds which darkened the horizon, one gleam of hope appeared; for the question had been so argued, so sifted, and put into such various lights, that it began now to be understood. The consequence was, that conviction flashed upon many, among whom were three planters, Mr. Ellis, Mr. Barham, and Mr. Vaughan. These gentlemen had the candour to rise up in the House of Commons, and express themselves in favour of the abolition, in one of the last debates.

The question had been now tried and lost in almost every possible shape; Mr. Wilberforce and the committee, therefore, suffered the years 1800, 1801, 1802 and 1803, to pass over without noticing it. In 1804, in consequence of the union with Ireland, a great number of Irish members, who were friends to the negroes, were added to the British parliament. Mr. Wilberforce, therefore, under these circumstances, asked leave to renew his bill for the abolition of the slave-trade within a limited time. This motion was as violently opposed as any of the former, but was carried at length in a very handsome manner: no less than 124 divided in favour of it, and but 49 against it. The bill was opposed in its second reading, for which however there were 100, and against it but 42. When a motion was made for going into a committee it was opposed, but carried by a majority of 69 to 36. It was taken up to the Lords, but on a motion by Lord Hawkesbury (now Earl Liverpool) the discussion there was put off till next session.

In the session of 1805, Mr. Wilberforce renewed his former motion. Leave was at length given him to bring in the bill, but not till after a most furious opposition. On the second reading of it an amendment was proposed, viz., to put it off to that day six months. This amendment was carried by a majority of 77 to 70.

On the 31st of March, 1806, this great question was ushered again into parliament, but under new auspices, namely, under the *administration* of Lord Grenville and Mr. Fox. It was thought proper that Mr. Wilberforce should be as it were in the back-ground on this occasion, and that the attorney-general, as a conspicuous officer of the government, should introduce it. The latter accordingly brought in a bill,

one of the objects of which was to prohibit British merchants and British capital from being employed in the foreign slave-trade. This bill passed both houses of parliament, and was therefore the first that dismembered this cruel traffic. In the debate which ensued upon it, it was declared in substance, both by Lord Grenville and Mr. Fox, in their respective houses, that they would do every thing to effect the abolition, and should they succeed in such a noble work, they would regard their success as entailing more true glory on their administration, and more honour and advantage on the country, than any other measure in which they could be engaged. Conformably with this sentiment, Mr. Fox himself, on the 10th of June, in a speech most luminous and pathetic, followed up the victory which had been just gained, by moving a resolution, "that this house, considering the African slave-trade to be contrary to the principles of humanity, justice and policy, will, with all practical expedition, take effectual measures for the abolition of it, in such manner and at such a period as may be deemed most advisable." This motion produced an opposition as before, and an interesting debate. It was supported by Sir Ralph Milbank, Mr. Francis, Sir Samuel Romilly, Mr. Wilberforce, Lord Henry Petty (now Marquis of Lansdown), Sir John Newport, Mr. Canning, and Mr. William Smith. It was carried by a majority of 114 to 15. Mr. Wilberforce directly moved an address to his Majesty, "praying him to direct a negotiation to be entered into, by which foreign powers should be invited to co-operate with his Majesty, in measures to be adopted for the abolition of the African slave-trade." This was also carried, but without a division. On the 24th of June, the Lords met to consider both the resolution and address. A proposition was directly made in that house (in order to create delay), that counsel and evidence should be heard. This, however, was happily over-ruled. The resolution and address were both carried, by a majority of 41 to 20. After this a belief was generally prevalent, that the slave-trade would fall in the next session. This occasioned a fear in the abolitionists, lest it should be carried on in the interim, being, as it were, the last harvest of the merchants, to a tenfold extent, and therefore with tenfold murder and desolation to Africa. It was therefore thought necessary, as the session was about to close, to introduce another bill into parliament, and this as quickly as possible, that no new vessel should be permitted to go to the coast of Africa for slaves. Accordingly a bill to that effect was prepared, and it passed both houses. In the month of October following, after these great and decisive victories, died the Right Honourable Charles James Fox, one of the noblest champions of this noble cause.

The session of 1807 had not long commenced, when the contest was renewed. Lord Grenville judged it expedient, at this particular crisis, to reverse what had been hitherto the order of proceeding, that is, to agitate the question first in the House of Lords. On the 2d of January he presented a bill there, which he called an act for the abolition of the African slave-trade. It was very short; he proposed that it should be printed, and that it should then lie on the table for a while, that it might be maturely considered before it was discussed. On the 4th, no less than four counsel were heard against it. On the 5th the debate commenced. Lord Grenville took a brilliant part in it. He was supported by his Highness the Duke of Gloucester, the Bishop of Durham (Dr. Barrington), the Earls Moira, Selkirk, and Rosslyn, and the Lords Holland, King, and Hood. The bill was at length carried, at four in the morning, by a majority of 100 to 36. On the 10th of February it went to the Commons. On the 20th counsel were heard against it there. On the 23d a debate ensued upon it, on the motion of Lord Viscount Howick (formerly Mr. Grey, and now Lord Grey), who urged the Commons to confirm it. The other speakers in favour of it were Mr. Roscoe, Mr. Fawkes, Mr. Lushington, the Lords Mahon and Milton, Sir Samuel Romilly, Sir John Doyle, Mr. Wilberforce, and Earl Percy; and it was carried by the vast majority of 283 to 16. On the 6th of March the blanks were filled up. It was proposed, first, that no vessel

vessel should clear out for slaves from any port within the British dominions, after the 1st of May following, that is 1807, and that no slave should be landed in the British colonies after the 1st of March, 1808. This and almost every other proposition were opposed, but happily without effect. Suffice it to say, that on the 18th the bill, with the blanks filled up, was carried back to the Lords; that in consequence of various amendments, it passed and re-passed from one house to the other, but always with opposition; that on the 24th it passed both houses; and that on the 25th, at half past eleven in the morning, it received the royal assent. Thus passed, after a twenty years' hard struggle, during which the field had been disputed inch by inch, and won at last by the arms of reason, this magna charta for Africa in Britain, under the administration of Lord Grenville, an administration which, on account of its noble exertions in behalf of the oppressed African race, will pass to posterity, living through successive generations, in the love and gratitude of all the most virtuous of mankind. The news of this great event gave uncommon joy throughout the kingdom, and this joy was farther heightened by authentic news just then received from North America, that the government there had passed a similar bill, which was to be observed as a law through the United States.

In France, on the re-establishment of the Bourbon dynasty, it was proposed to abolish the slave-trade at a distant period. Upon the return of Buonaparte from Elba, an order was issued for its immediate abolition; and a decree to the same purpose was passed after the expulsion of Napoleon, in the reign of Louis XVIII.

The effect of this decree has, however, not gone so far as might be expected in the abolition of the slave-trade. Either from the carelessness or perfidy of the French government, or from the difficulty of restraining capital from taking any direction which is profitable, it is notorious that French ships and French money are but too instrumental in this horrid traffic. A mistaken notion of national honour prevents the French and Americans from allowing the ships we keep engaged in the prevention of the slave-trade, to search their vessels within all latitudes; and the consequence is, that opportunities for smuggling slaves on board are continually offered. Our government has been actively engaged in endeavouring to prevent the slave-trade in every possible way, but it still continues to a distressing extent.

The abolition of the slave-trade is, however, but performing a part of our duty. The utter annihilation of all slavery is imperiously commanded by conscience and reason. That the sordid wretches who oppress Jamaica, and who are removed from the civilization and politeness of the mother country, should in their natural arrogance fancy that they have a right to trample on their fellow-creatures, is not surprising. But that they have met with one unbribed Englishman to uphold their most abhorrent principle is surprising. A Jamaica planter is, generally speaking, so besotted, that he actually fancies a black being of another and inferior genus of animals compared to himself. He really thinks that the term *purity of blood*, which is used here metaphorically as applied to persons of birth, has an actual and literal meaning. He believes it as impossible that a black woman can become a fit consort for a white man, or the mulatto meet on equal terms in science or manners the white, as for a sea-weed to grow on a mountain. He knows nothing, sees nothing, and will hear nothing but his own inexplicable greatness, and the natural deformity, bodily and corporeal, of his unfortunate slave. But how can it happen that any man should so far annul the exercise of his reason, as not to see that to permit slavery is to justify the precedence of might over right; for the hordes of Russia have as just a right to capture this country and to carry us all off into slavery, as we have thus to treat the Indians. No expediency, no interest, nothing short of actual starvation justifies robbery in any nation. What expediency, what interest can then justify us in the eyes of God or of mankind, when we rob a man of his richest property, —his country, his family, and his freedom? The people

of England now feel this truth, and consequently the more cunning of those who live by the wretchedness of their fellow creatures, have shifted their ground. They have shewn that they have so terribly degraded the slaves under their care, that these poor creatures are really unfit for any thing but slavery; that an emancipated negro commonly becomes a drunkard or a thief, and consequently that immediate and universal freedom would be attended with the worst effects. Granting this, the obvious step would be to emancipate all the children and give them a proper education, and to allow no more slaves to be made. But then the planters say they must have *compensation* for the loss of their slaves. That is, the property which is gained by violence is as sacred as if gained by the honestest means. That is as though they should say, "we (or our ancestors, which is the same thing,) stole these slaves; therefore if you take them from us, you should give us an equivalent." This plea would be agreeable to pickpockets and the like class of persons, but the enslavers deny their identity with this class. They say, "some of us have bought land and slaves, trusting to the promises of our government that this property shall not be rendered valueless." Then the reply would be, "You have committed a mistake in your bargains; you should have calculated that no government but an absolute one can promise anything. In free countries, the government of to-day contradicts the government of yesterday. This uncertainty you should have contemplated. To demand compensation because your property is deteriorated by a just act, and one which you ought to have anticipated, is less reasonable than if a merchant should ask compensation of his government for the loss of his cargo by shipwreck."

The preceding question is ever and anon agitated in parliament. The declaimers have here full scope for their displays, while the interested shield themselves under the mask of caution, and, utterly unable to defend the principle of slavery, try to procrastinate its abolition. Amidst the long argumentations of either side, the question, however, lies in a nutshell.—Slavery is unjust. Slavery is also inexpedient, since it does not enrich the mass of the people. Ergo, it should be abolished. So slow, however, is the progress of moral improvement, that one almost sickens at the dreary prospect. Even in America, which boasts so much her freedom, there are slaves; and this to her is perhaps a still greater disgrace than to England, since though the weakness and corruption of our government allows the demon of oppression to walk abroad in our colonies, the general sense of the people have banished it from our own shores.

SLAVE COAST. See GUINEA.

SLAVE FALLS, a cataract of North America, in Winnipeg river: 100 yards wide, and 20 feet high. Lat. 50. 6. N. long. 95. 20. W.

SLAVE LAKE, a lake in the north-west part of North America.

SLAVEBORN, *adj.* Not inheriting liberty.

This vain world—a noble stage,

Where *slave-born* man plays to the scoffing stars.

Drummond.

SLAVELIKE, *adj.* Becoming a slave.

Why this spade? this place?

This *slavelike* habit?

Shakspeare.

SLAVENSK, a small town of the south of European Russia, in the government of Slobodsk-Ukraine; 98 miles east-north-east of Ekaterinoslav. In the neighbourhood are salt lakes and springs.

SLA'VER, *s.* [*saliva*, Lat., *slæfe*, Icel., *glæferion*, Welsh.] Spittle running from the mouth; drivel.

Of all mad creatures, if the learn'd are right,

It is the *slaver* kills, and not the bite.

Pope.

To SLA'VER, *v. n.* To be smeared with spittle.

Should I

Slaver with lips, as common as the stairs

That mount the capitol; join gripes with hands

Made hard with hourly falsehood as with labour.

Shakspeare.

To

To emit spittle.—Miso came with scowling eyes to deliver a *slavering* good-morrow to the two ladies. *Sidney*.

Why must he spatter, spawl, and *slaver* it,
In vain, against the people's fav'rite? *Swift*.

To SLAVER, *v. a.* To smear with drivel.

Twitch'd by the sleeve, he mouths it more and more,
Till with white froth his gown is *slavèr'd* o'er. *Dryden*.

SLA'VERER, *s.* [*slabbaerd*, Dutch; from *slaver*.] One who cannot hold his spittle; a driveller; an idiot.

SLA'VERINGLY, *adv.* With slaver, or drivel. *Cotgrave*.

SLA'VERY, *s.* Servitude; the condition of a slave; the offices of a slave.—If my dissentings were out of error, weakness, or obstinacy, yet no man can think it other than the badge of *slavery*, by savage rudeness and importunate obtrusions of violence to have the mist of his error dispelled. *King Charles*.

SLAUGHAM, a parish of England, in Sussex; 4 miles north-west of Cuckfield. Population 759.

SLAUGHTEN VALE, in England, near Aldborough, Suffolk. There is a considerable fishery here for herrings and sprats.

SLA'UGHTER, *s.* [on'plauzt, Saxon, from *plægan*, *plægan*, to strike or kill.] Massacre; destruction by the sword.

Sinful Macduff,

They were all struck for thee!
Not for their own demerits, but for mine,
Fell *slaughter* on their souls. *Shakespeare*.

To SLA'UGHTER, *v. a.* To massacre; to slay; to kill with the sword.

Your castle is surpriz'd, your wife and babes
Savagely *slaughter'd*. *Shakespeare*.

To kill beasts for the butcher.

SLAUGHTER, UPPER and LOWER, adjoining parishes of England, in Gloucestershire; 3 miles south-west of Stow-on-the-Wold.

SLAUGHTER CREEK, a bay of the United States, on the coast of Maryland, in the Chesapeake.

SLAUGHTER RIVER, a river of North America, which runs into the Missouri; 121 miles below the Great Falls.

SLA'UGHTERER, *s.* One employed in killing.

Thou dost then wrong me; as the *slaughterer* doth,
Which giveth many wounds, when one would kill. *Shakespeare*.

SLAUGHTERFORD, a hamlet of England, in Wiltshire; 5 miles west by north of Chippenham.

SLA'UGHTERHOUSE, *s.* House in which beasts are killed for the butcher.

Away with me, all you whose souls abhor
Th' uncleanly savour of a *slaughterhouse*;
For I am stifled with the smell of sin. *Shakespeare*.

SLA'UGHTERMAN, *s.* One employed in killing.

The mad mothers with their howls-confus'd
Do break the clouds; as did the wives of Jewry,
At Herod's bloody hunting *slaughtermen*. *Shakespeare*.

SLA'UGHTEROUS, *adj.* Destructive; murderous.

I have sapt full with horrors:
Direness familiar to my *slaughterous* thoughts
Cannot once start me. *Shakespeare*.

SLAVIN, a lake of Prussia, in the New Mark of Brandenburg, on the borders of Pomerania.

SLA'VISH, *adj.* Servile; mean; base; dependant.

You have among you many a purchas'd slave,
Which, like your asses, and your dogs and mules,
You use in abject and in *slavish* part,
Because you bought them. *Shakespeare*.

Slavish bards our mutual love rehearse
In lying strains and ignominious verse. *Prior*.

SLA'VISHLY, *adv.* Servilely; meanly.—The nature

of base people is such, as either they obey *slavishly*, or command insolently. *Raleigh*.

SLA'VISHNESS, *s.* Servility; meanness.—Detaining them in more than Egyptian *slavishness*. *Fotherby*.

SLAWATYCZE, a small town of Poland, on the Bog; 105 miles east-south-east of Warsaw.

SLAWKOW, a small town in the south-west of Poland; 26 miles west-north-west of Cracow. Population 1600.

SLAWSTON, a parish of England, in Leicestershire; 5½ miles north-east of Market Harborough.

To SLAY, *v. a.* preter. *slew*; part. pass. *slain*. [*slahan*, Gothic; *slahon* German; *plæan*, Saxon; *slaen*, Dutch; *slaa*, Dan. and Icel.] To kill; to butcher; to put to death.

Her father's brother

Would be her lord; or shall I say her uncle?
Or he that *slew* her brothers and her uncle? *Shakespeare*.

SLAY. See SLEY.

SLA'YER, *s.* Killer; murderer; destroyer.

Witness the guiltless blood poured off on ground;
The crowned often slain, the *slayer* crown'd. *Spenser*.

The *slayer* of himself yet saw I there;

The gore congeal'd was clotted in his hair:
With eyes half clos'd and gaping mouth he lay,
And grim as when he breath'd his sullen soul away.

Dryden.

SLEAFORD, NEW, a market town of England, in the county of Lincoln, pleasantly situated on a small rivulet, called the Sleas, which rises in the vicinity, and soon joins the Witham. It is a flourishing town, and is daily improving both in its buildings and population. The church is a handsome and spacious Gothic structure. From a manuscript found in the parish chest, it appears to have been built in the year 1271, by Roger Blunt and Roger Brickham of Sleaford, merchants. It consists of a chancel, nave, transept, and two aisles, with a tower crowned by a spire, which rises to the height of 144 feet. In the chancel are several monuments to the family of Carr, by one of whom a free school was erected and liberally endowed in 1603, and also an hospital for 12 poor men. Opposite the west front of the church is the market place, which is rather small. There was formerly a castle at Sleaford, built in the year 1112 by Alexander, bishop of Lincoln, probably on the site of a Roman castrum. The castle was standing in Leland's time, and is described by him at length. It is now wholly levelled with the ground; many Roman coins have been found here, chiefly of the family of Constantine; and from this and other circumstances, Dr. Stukely conjectures that this was a Roman town. In 1811, Sleaford contained 385 houses, and 1781 inhabitants. Market on Monday, well supplied with provisions of all sorts; 16 miles south of Lincoln, and 116 north of London. Lat. 53. 1. N. long. 0. 13. W.

SLEAFORD, OLD, a hamlet of England, in Lincolnshire, within a mile of the town of New Sleaford.

SLEAFORD BAY, a bay on the south coast of New Holland.

SLEAT, a parish of Scotland, in Inverness-shire, in the island of Skye; 17 miles long, and from 1 to 3½ broad. Population 1936.

SLEAVE, *s.* [Icel. *slefa*, fila tenuia. *Serenius*.] The ravelled knotty part of the silk. *Heath*.

I on a fountain light,
Whose brim with pinks was platted,
The banks with daffadillies dight
With grass like *slave* was matted. *Drayton*.

To SLEAVE, *v. a.* To separate into threads; to sleid. See To SLEID.—The more subtle, and more hard to *slave* a-two, silken thread of self-seeking, is that dominion over consciences. *Whitlock*.

SLE'AVED, *adj.* Raw; not spun; unwrought.—Eight wild men all apperelled in green moss made with *slaved* silk. *Holinshed*.

SLE'AZY, *adj.* [often written *sleazy*. And also *slasy*.] Weak;

Weak; wanting substance. This seems to be of the same race with *leave*, or from to *sley*. *Dr. Johnson*.—*Sleasy* holland is so called, because made in *Silesia*, in Germany; which from its slighthness, occasions all thin, slight, ill-wrought hollands to be called *sleasy*. *Chambers*.—I cannot well away with such *sleazy* stuff, with such cobweb compositions. *Howell*.

SLEBECK, a parish of Wales, in Pembrokeshire; 6 miles from Narberth.

SLEBEZE, or SLYBZE, a small island in the straits of Sunda. Lat. 5. 54. S. long. 105. 24. E.

SLECK, in Rural Economy, a provincial term applied to the small of pit-coal; also to the black matter of smutty grain.

SLED, *s.* [*slæd*, Danish; *sledde*, Dutch.] A carriage drawn without wheels.

Upon an ivory *sled*

Thou shalt be drawn upon the frozen poles. *Tamburlaine*.

SLEDDALE, LONG, a township of England, in Westmoreland; 8 miles north-by-west of Kendal.

SLEDDALE, WEST, a hamlet in the above county; 5½ miles north-north-west of Orton.

SLEDDDED, *adj.* Mounted on a sled.

So frown'd he once when in an angry parle,
He smote the *sledded* Polack on the ice. *Shakspeare*.

SLEDGE, *s.* [*plæçz*, *plæçz*, Saxon; *sleggia*, Icel.] A large heavy hammer.

They him spying, both with greedy force,

At once upon him ran, and him beset,

With strokes of mortal steel, without remorse,

And on his shield like iron *sledges* bet. *Spenser*.

A carriage without wheels, or with very low wheels; properly a *sled*. See SLED.—In Lancashire they use a sort of *sledge* made with thick wheels, to bring their marl out, and drawn with one horse. *Mortimer*.

SLEDGE ISLAND, a small island in the north Pacific Ocean, close to the north-western shore of the American coast; it is about four leagues in circuit. "The surface of the ground (says Captain Cook), is composed chiefly of large loose stones, that are in many places covered with moss and other vegetables, of which there were above twenty or thirty different sorts, and most of them in flower; but I saw neither shrub nor tree, either upon the island, or on the continent. On a small low spot, near the beach where we landed, was a good deal of wild purslain, pease, long-wort, &c.; some of which we took on board for the pot; we saw one fox, a few plovers, and some other small birds; and we met with some decayed huts that were partly built below ground. People had lately been on the island: and it is pretty clear that they frequently visit it for some purpose or other, as there was a beaten path from the one end to the other. We found a little way from the shore where we landed, a sledge, which occasioned this name being given to the island; it seems to be such a one as the Russians in Kamtschatka make use of to convey goods from place to place, over the ice or snow. It was ten feet long, twenty inches broad, and had a kind of rail-work on each side, and was shod with bone: the construction of it was admirable, and all the parts neatly put together; some with wooden pins, but mostly with thongs or lashings of whalebone, which made me think it was entirely the workmanship of the natives." Lat 64. 30. N. long. 193. 57. E.

SLEDMERE, a township of England, East Riding of Yorkshire; 8 miles north-west of Great Driffild.

SLEEK, *adj.* [*sleyck* and *slicht*, Teut., planus, from *slechten*, planare. This word was formerly written *slick*, and is still our northern word.]—Smooth; nitid; glossy.

Let me have men about me that are fat,

Sleek-headed men, and such as sleep a-nights. *Shakspeare*.

Not rough; not harsh.

Those rugged names to our like mouths grow *sleek*,
That would have made Quintilian stare and gasp. *Milton*.

SLEEK, *s.* That which makes smooth; varnish. *Not in use*.—My face, which you behold so seeming red, is done over with ladies' licks, *slicks*, and other painting stuff of the Levant. *Transl. of Boecolini*.

To SLEEK, *v. a.* To comb smooth and even.

By dead Parthenope's dear tomb,
And fair Ligea's golden comb,
Wherewith she sits on diamond rocks,
Sleeking her soft alluring locks. *Milton*.

To render soft, smooth or glossy.

Gentle my lord, *sleek* o'er your rugged looks;
Be bright and jovial 'mong your guests to night.

Shakspeare.

SLEKBURN, EAST and WEST, adjoining hamlets of England, in Durham; 6 miles east-south-east of Morpeth.

SLEEK'LY, *adv.* Smoothly; glossily.—Let their heads be *sleekly* combed, and their blue coats brushed. *Shakspeare*.

SLEE'KNES, *s.* Smoothness.—We may live to the spectacle and the bearing-staff, to the stooping back, to the snow or to the *sleekness* of the declining crown: but how few are there that can unfold you a diary of so many leaves! More die in the spring and summer of their years, than live till autumn or their gowned winter. *Feltham*.

SLEE'KSTONE, *s.* A smoothing stone.—The purest pasteboard, with a *sleek-stone* rub smooth, and as even as you can. *Peacham*.

SLEE'KY, *adj.* Of a sleek or smooth appearance.

Sweet, *sleeky* doctor, dear pacific soul!

Lay at the beef, and suck the vital bowl! *Thomson*.

To SLEEP, *v. n.* [*slepan*, Gothic; *slæpan*, Sax., *slaepan*, Dutch. *Dr. Johnson*.—Serenius deduces the word from the Su. Goth., *slapp*, remissus.] To take rest by suspension of the mental and corporeal powers.

I've watch'd and travell'd hard:

Some time I shall *sleep* out; the rest I'll whistle. *Shakspeare*.

To rest; to be motionless.

How sweet the moonlight *sleeps* upon this bank!

Here will we sit, and let the sounds of music

Creep in our ears. *Shakspeare*.

To live thoughtlessly.—We *sleep* over our happiness, and want to be roused into a quick thankful sense of it. *Atterbury*.—To be dead; death being a state from which man will some time awake.—If we believe that Jesus died and rose again, even so them also which *sleep* in Jesus will God bring with him. 1 *Thessal*.—To be inattentive; not vigilant.

Heaven will one day open

The king's eyes, that so long have *slept* upon

This bold, bad man. *Shakspeare*.

To be unnoticed or unattended: as the matter *sleeps*.

See SLEEPING.

SLEEP, *s.* [*slep*, Goth., *slæp*, Sax.] Repose; rest; suspension of the mental and corporeal powers; slumber.

Methought I heard a voice cry, Sleep no more!

Macbeth doth murder *sleep*; the innocent *sleep*;

Sleep that knits up the ravell'd sleeve of care;

The birth of each day's life, sore labour's bath,

Balm of hurt minds, great nature's second course,

Chief nourisher in life's feast. *Shakspeare*.

SLEEPE, a hamlet of England, in Hertfordshire, near St. Albans.

SLEE'PER, *s.* [Sax., *slæpepe*.] One who sleeps; one who is not awake.

Sound, music; come my queen, take hand with me,

And rock the ground whereon these *sleepers* be.

Shakspeare.

A lazy inactive drone.—He must be no great eater, drinker, nor *sleep*, that will discipline his senses, and exert his mind; every worthy undertaking requires both. *Grew*.—

That

That which lies dormant, or without effect.—Let penal laws, if they have been *sleepers* of long, or if grown unfit for the present time, be by wise judges confined in the execution. *Bacon*.—A fish. [*erocatus*.] *Ainsworth*.—[In architecture.] A strip of solid timber (or some substantial substitute) which lies on the ground to support the joist of a floor. *Mason*.—The length of hips and *sleepers*. *Evelyn*.
SLEEPER, in Building, a name used for the oblique rafter, that lies in a gutter.

SLEEPERS, in the Glass Trade, are the large iron bars crossing the smaller ones, and hindering the passage of the coals, but leaving room for the ashes.

SLEEPERS, in Ship-Building, pieces of long compass-timber, fayed and bolted diagonally upon the transoms and timbers adjoining withinside, to strengthen the buttock of the ship. There are from two to three pairs.

SLEEPFUL, *adj.* [Sax. *flappul*. See also SLEEPFULNESS.] Overpowered by desire to sleep.—Distrust will cure a lethargy; of a *sleepful* man it makes a wakeful one, and so keeps out poverty. *Scott*.

SLEEPFULNESS, *s.* [*flappulnī*, Sax. *Lye*.] Strong desire to sleep

SLEEPILY, *adv.* Drowsily; with desire to sleep. Dully; lazily.—I rather chuse to endure the wounds of those darts, which envy casteth at novelty, than to go on safely and *sleepily* in the easy ways of ancient mistakings. *Raleigh*.—Stupidly.—He would make us believe that Luther in these actions pretended to authority, forgetting what he had *sleepily* owned before. *Atterbury*.

SLEEPINESS, *s.* Drowsiness; disposition to sleep; inability to keep awake.—Watchfulness precedes too great *sleepiness*, and is the most ill boding symptom of a fever. *Arbuthnot*

SLEEPING, *s.* The state of resting in sleep. The state of not being disturbed, or noticed.

You ever
Have wish'd the *sleeping* of this business, never
Desir'd it to be stir'd. *Shakspeare*.

SLEEPLESS, *adj.* Wanting sleep; always awake.
The field
To labour calls us, now with sweat impos'd,
Though after *sleepless* night. *Milton*.

SLEEPLESSNESS, *s.* Want of sleep.—Lipsius—conceives an impossibility of an absolute *sleeplessness*. *Bp. Hall*.

SLEEPY, *adj.* Drowsy; disposed to sleep.
From his feet, even, to his *sleepie* head,
She made her poison canker-like to spread. *Mir. for Mag.*
Not awake.

Why did you bring these daggers from the place?
They must lie there. Go, carry them and smear
The *sleepy* grooms with blood. *Shakspeare*.

Soporiferous; somniferous; causing sleep.—We will give you *sleepy* drinks, that your senses unintelligent of our insufficiency, may, though they cannot praise us, as little accuse us. *Shakspeare*.—Dull; lazy.

'Tis not *sleepy* business,
But must be look'd to speedily and strongly. *Shakspeare*.

SLEEPY CREEK, a river of the United States, in North Carolina, which runs into the Atlantic. Lat. 76. 44. N. long. 76. 44. W.

SLEET, *s.* [perhaps from the Danish, *slet*. Dr. Johnson.—*Sleet* is the past participle *ple-es*, *plees*, *pleet*, of *plean*, Sax. *projicere*; and has no connexion with the Danish *slet*, which means smooth, polished. Mr. H. Tooke, Div. of Purl. ii. 334.—Serenius, however, notices the Dan. *slud*, which means *sleet*; and also the Icel. *sletta*, *liquida dispergere*. The Sax. *plihit*, says Todd, is a shower.] A kind of smooth small hail or snow, not falling in flakes, but single particles.

Now van to van the foremost squadrons meet,
The midmost battles hastening up behind,
Who view, far off, the storm of falling *sleet*,
And hear their thunder rattling in the wind. *Dryden*.

Shower of any thing falling thick.
[They] flying, behind them, shot
Sharp *sleet* of arrowy showers against the face
Of their pursuers. *Milton*.

To SLEET, *v. n.* To snow in small particles intermixed with rain.

SLEETS, in Gunnery, are the parts of a mortar, passing from the chamber to the trunnions, for strengthening that part.

SLEETY, *adj.* Bringing sleet.
The *sleety* storm returning still,
The morning hoar, and evening chill. *Warton*.

SLEEVE, *s.* [*plýf*, Saxon; formerly called *eam-plife*, that with which the arm is covered. The part of a garment that covers the arms.

Once my well-waiting eyes espy'd my treasure,
With *sleeves* turn'd up, loose hair, and breast enlarged,
Her father's corn, moving her fair limbs, measure. *Sidney*.

SLEEVE, in some provinces, signifies a knot or skein of silk, which is by some very probably supposed to be its meaning in the following passage:—Sleep that knits up the ravell'd *sleeve* of care. *Shakspeare*.—To laugh in the *sleeve*. This proverbial phrase Dr. Johnson ascribes to the Dutch *sleeve*, a cover, any thing spread over. It is more likely, as Mr. Bagshaw observes, to be taken from the large sleeves which our countrymen formerly wore, by which they might easily conceal part of the countenance, and so laugh unperceived.—John laughed heartily in his *sleeve* at the pride of the esquire. *Arbuthnot*.—To hang on a *sleeve*; to make dependent. Probably from the custom noticed by Spenser, under the first definition, of wearing a lady's sleeve; which was in token of dependance on her love.—It is not for a man which doth know, or should know what orders, and what peaceable government requireth, to ask why we should hang our judgment upon the church's *sleeve*, and why in matters of orders more than in matters of doctrine. *Hooker*.—[*Lolligo*, Lat.] A fish. *Ainsworth*.

SLEEVED, *adj.* Having sleeves.
SLEEVELESS, *adj.* Wanting sleeves; having no sleeves.

Behold yon isle by palmers, pilgrims trod,
Grave mummers! *sleeveless* some, and shirtless others. *Pope*.

Wanting reasonableness; wanting propriety; wanting solidity. *Obsolete*.—No more but no, a *sleeveless* reason. *Milton*.

To SLEID, *v. a.* To prepare for use in the weaver's *sley*, or *slay*. See To SLEY. *Percy*.

She weav'd the *sleided* silk
With fingers long. *Shakspeare*.

SLEIDAN (John), a celebrated historian, was born in 1506 at Sleidan, a small town at Cologne. He is chiefly known as an author by a work, entitled "De Statu Religionis et Reipublicæ Carolo Quinto Cæsare, Commentaria, Lib. XXV.," which was first published in 1555. It comprehends the history of his own times, from 1517 to the year of its publication, and has always been in great credit among the Protestants; though it has been charged with partiality by Catholic writers, and by the adherents of the emperor Charles. "Much of it," says his biographer, "is extracted from public records, and from the archives of the city of Strasburg, with which he was furnished by his friend J. Sturmius." De Thou speaks of it as a work drawn up "exacta fide et diligentia," and he praises very highly the writer's learning and talents for business. This work has been translated into several modern languages: the French version was made by Le Courayer. Another celebrated

celebrated work of Sleidan's is a compendium of ancient history, entitled "De quatuor Summis Imperiis, Lib. tres," which has gone through a great number of editions. He published likewise a Latin translation of the History of Philip de Comines, and an abridgment of that of Froissart, besides versions of other works on general history and politics.

SLEIGHT, *s.* [Sax. *sl̥ið* or *sl̥iðð*, *deceitful*, whence our *slily*.] Artful trick; cunning artifice; dexterous practice: as, *slight* of hand; the tricks of a juggler. This is often written, but less properly, *slight*.

Upon the corner of the moon,
There hangs a vaporous drop, profound;
I'll catch it ere it come to ground;
And that distill'd by magick *slights*,
Shall raise such artificial sprights,
As, by the strength of their illusion,
Shall draw him on to his confusion.

Shakspeare.

SLEIGHT, *adj.* [*sl̥iðð*, Sax.] Deceitful; artful.

Thus I hurle

My powder'd spells into the spongie air,
Of power to cheat the eye with *slight* illusion.

Milton.

SLEIGHTFUL, *adj.* Artful; cunning.—*Sleightful* otters left the purling rill. *W. Browne.*

SLEIGHTLY, *adv.* Craftily; cunningly. *Huloet.*

SLEIGHTY, *adj.* Crafty; artful. *Huloet.*—Though it [truth] be darkened with men's *slightye* juggling and counterfeit craftes, as it were with certain mists, for a while; yet at the time of God appointed, it bursteth out again, and sheweth itself clerely like the sunne. *Transl. of Bp. Gardiner's De Ver.*

SLEITAL, **LOCH**, a lake of Scotland, in Sutherlandshire, noted for its excellent trout.

SLEIVE. See **SLEAVE**.

SLENDER, *adj.* [*slinder*, Dutch.] Thin; small in circumference compared with the length; not thick.

So thick the roses blushing round
About her glow'd; half stooping to support
Each flower of *slender* stalk.

Milton.

: Small in the waist; having a fine shape.

Beauteous Helen shines among the rest,

Tall, *slender*, straight, with all the graces blest:

Dryden.

Not bulky; slight; not strong.

Love in these labyrinths his slaves detains,
And mighty hearts are held in *slender* chains.

Pope.

Small; inconsiderable; weak.

Where joy most revels, grief doth most lament;
Grief joys, joy grieves, on *slender* accident.

Shakspeare.

Sparing; less than enough: as, a *slender* estate and *slender* parts.

At my lodging,

The worst is this, that at so *slender* warning,

You're like to have a thin and *slender* pittance.

Shakspeare.

Not amply supplied.

The good Ostorius often deign'd.

To grace my *slender* table with his presence,

Philips.

In obstructions inflammatory, the aliment ought to be cool, *slender*, thin, diluting. *Arbuthnot.*

SLENDERLY, *adv.* Without bulk; slightly; meanly.

—If the debt be not just, we know not what may be deemed just, neither is it a sum to be *slenderly* regarded. *Hayward.*

SLE'NDERNESS, *s.* Thinness; smallness of circumference.—Small whistles give a sound because of their extreme *slenderness*: the air is more pent than in a wider pipe. *Bacon.*—Want of bulk or strength.—It is preceded by a spitting of blood, occasioned by its acrimony, and too great a projectile motion, with *slenderness* and weakness of the vessels. *Arbuthnot.*—Slightness; weakness; incon-

siderableness.—The *slenderness* of your reasons against the book, together with the inconveniences that must of necessity follow, have procured a great credit unto it. *Whitgift.*—Want of plenty.—As the coarseness of the raiment, so the *slenderness* of the diet, is equally to pretend towards a rigid and austere condition of life. *Gregory.*

SLENINGFORD, a township of England, West Riding of Yorkshire; 5 miles north-west of Rippon.

SLENISH MOUNTAINS, mountains of Ireland, in the county of Antrim; 12 miles north-north-east of Antrim.

SLEPE, a hamlet of England, in Dorsetshire; 5 miles east-by-south of Wareham.

SLEPT. The preterite of *sleep*.

Silence: coeval with eternity,

Thou wert ere nature first began to be,

'Twas one vast nothing all, and all *slapt* fast in thee. *Pope.*

SLESWICK, or **SCHLESSWIG**, a duchy or province of the Danish dominions, which has Jutland to the north, and Holstein to the south, while on the east and west it is bounded by the sea. Its form is oblong: its length is about 72 miles; its breadth, without including the islands to the east or west, varies from 30 to 56 miles. Like Jutland, it has no mountains, and not many elevations entitled to the name of hills. It is consequently not rich in Minerals, but most parts of it are fit for tillage. The products are barley, oats and rye, with comparatively little wheat, hemp, or flax. Sleswick corresponds in latitude to the northern counties of England; also in humidity of climate, rain being produced there frequently by easterly, and still more frequently by westerly winds. The weather is very variable, the atmosphere often cloudy, the extremes of cold and heat seldom intense or of long continuance. Unfortunately great part of the interior is dry and sandy, so that the population (300,000 on the mainland, and 40,000 on the islands), is not large for a surface of 3600 square miles. On the superior soils, the freshness of the pasture is such as, with little skill on the part of an ignorant peasantry, to give a size and strength to the horses and horned cattle, which render them of value to foreigners, and lead to a regular, if not a large export. Butter and cheese are likewise abundant, and form articles of export; sheep have not been improved with equal success, their wool being short and coarse.

The inhabitants of Sleswick are of mixed descent, particularly of Danish, Saxon, and Friesland origin, each speaking their own dialect; but the prevalent languages are German and Danish. The principal river is the Eyder, which, joined to the canal of Kiel affords a direct navigation from the north sea to the Baltic. The chief towns are—

	Population.
Flensborg	15,000
Kiel	7,100
Sleswick	7,000
Tondern	2,600
Tonningen	2,000

Kiel and Tonningen have the benefit of the trade carried on by the canal and the Eyder; Flensborgh is an improving place; but the rest of the country exhibits little activity or increase of productive industry. The chief manufactures, woollen and linen, are carried on not in collective establishments, but in the cottages of the manufacturer. The lace manufactures at Tondern and other places, as well as those of stockings, have suffered by the general introduction of machinery in other countries. Fishing forms a considerable occupation on the coast, as well as in the arms of the sea.

In regard to law, Sleswick, like Holstein, preserves its ancient usages and institutions. The state of the peasantry is here somewhat less backward than in Jutland; but it was only in 1805 that feudal vassalage was definitively abolished. Sleswick has for many centuries been in close connection with Denmark, and governed sometimes directly by the king, at other times as a dependency, by a brother of the reigning sovereign—a separation attended at last with such pretensions

to independency as to determine the Danish government to unite it in 1720, completely and definitively to the crown.

SLESWICK, the capital of the duchy of the same name, is situated in a pleasant country, on the river Sley. It is a long irregular town, containing nearly 7000 inhabitants. The houses are in general of brick, and resemble in neatness those of Dutch towns. The objects of interest are the cathedral, with its altar and the monuments of the princes; the town-house, a neat structure; the orphan-house, the work-house, and the nunnery of St. John; also five churches. Here are manufactures of refined sugar, earthenware, leather, and sail cloth. Its commerce has been considerably improved since rendering the Sley navigable by the aid of a canal. Sleswick is the seat of the chief court of justice, and of the provincial government of the duchies of Sleswick and Holstein. In the 9th century, Sleswick was a town of some note; in the 10th it was destroyed and rebuilt; in the 15th it shared the like fate. In its vicinity stands the castle of Gottorp; 8 miles north of Kiel, and 126 south-west of Copenhagen. Lat. 54. 32. N. long. 9. 35. E.

SLEW. The preterite of *slay*.

SLEY, *s.* [flæ, Sax.] A weaver's reed.

Strait to their posts appointed both repair,
And fix their threaded looms with equal care:
Around the solid beam the web is ty'd,
While hollow canes the parting warp divide:
Through which with nimble flight the shuttles play,
And for the woof prepare a ready way;
The woof and warp unite press'd by the toothy *sley*.

Crowall.

To **SLEY**, *v. n.* To separate; to part or twist into threads; to sieid.

SLEY, a small river of Denmark, in the duchy of Sleswick, which passes by the towns of Gottorp and Sleswick, and falls into the Baltic.

SLEYDINGHE, an inland town of the Netherlands, in East Flanders, with 5200 inhabitants.

To **SLICE**, *v. a.* [flican, Sax.] To cut into flat pieces.—Their cooks make no more ado, but *slicing* it into little gobbets, prick it on a prong of iron, and hang it in a furnace. *Sandys*.—To cut into parts.

Nature lost one by thee, and therefore must

Slice one in two to keep her number just. *Cleveland.*

To cut off in a broad piece.

When hungry thou stood'st, staring, like an oaf,
I *slie'd* the luncheon from the barley loaf.

Gay.

To cut; to divide.—Princes and tyrants *slice* the earth among them. *Burnet*.

SLICE, *s.* [flīce, Saxon.] A broad piece cut off.

He from out the chimney took,
A flitch of bacon off the hook,
And freely, from the fattest side,
Cut out large *slices* to be fry'd.

Swift.

A broad piece.

Then clap four *slices* of pilaster on't,
That, laced with bits of rustic, makes a front.

Pope.

A broad head fixed in a handle; a peel; a spatula.—The pelican hath a beak broad and flat, much like the *slice* of apothecaries, with which they spread plaisters. *Hakewill*.

SLICES, in Ship-Building, tapering pieces of plank, used for setting up a ship on her ways for launching, &c.

SLICK, *adj.* [slicht, Teut.] Sleek.—Glass attracts but weakly; some *slick* stones, and thick glasses indifferently. *Brown*. See **SLEEK**.

SLICKENBURGH, a small island near the north-west coast of Borneo. Lat. 3. 59. N. long. 112. 31. E.

SLID. The preterite of *slide*.

At first the silent venom *slid* with ease,
And seiz'd her cooler senses by degrees.

Dryden.

SLI'DDEN. The participle passive of *slide*.—Why is this people *slidden* back, by a perpetual backsliding? *Jer*.

To **SLI'DDER**, *v. n.* [flībejan, flībjan, Sax.; *slid-deren*, Teut.] To slide with interruption.

Go thou from me to fate,
Now die; with that he dragg'd the trembling sire,
Slid'dring through clotted blood.

Dryden.

SLI'DDER, or **SLI'DDERY**, *adj.* [flībboj, Sax.] Slippery; *slidder* is an old word; *slidderly*, still a vulgar one.—To a drunken man the way is *slider*. *Chaucer*.

To **SLIDE**, *v. n.* *slid*, pret. *slidden*, part. pass. [flīban, Sax.] To pass along smoothly; to slip; to glide.

Ulysses, Sthenelus, Tisander *slide*

Down by a rope, Machaon was their guide.

Denham.

To move without change of the feet.

He that once sins, like him that *slides* on ice,
Goes swiftly down the slippery ways of vice:
Though conscience checks him, yet those rubs gone o'er
He *slides* on smoothly, and looks back no more. *Dryden*.

To pass inadvertently.—Make a door and a bar for thy mouth: beware thou *slide* not by it. *Ecclus*.—To pass unnoticed.—In the princess I could find no apprehension of what I said or did, but with a calm carelessness, letting every thing *slide* justly, as we do by their speeches, who neither in matter nor person do any way belong unto us. *Sidney*.—To pass along by silent and unobserved progression.

Thou shalt

Hate all, shew charity to none;
But let the famish'd flesh *slide* from the bone,
Ere thou relieve the beggar.

Shakspeare.

To pass silently and gradually from good to bad.—Nor could they have *slid* into those brutish immoralities of life, had they duly manured those first practical notions and dictates of right reason. *South*.—To pass without difficulty or obstruction.

Begin with sense, of every art the soul,
Parts answering parts shall *slide* into a whole;
Nature shall join you, time shall make it grow
A work to wonder at.

Pope.

To move upon the ice by a single impulse, without change of feet.

The gallants dancing by the river side,
They bathe in summer, and in winter *slide*.

Waller.

To fall by error.—The discovering and reprehension of these colours cannot be done but out of a very universal knowledge of things, which so cleareth man's judgment, as it is the less apt to *slide* into any error. *Bacon*.—To be not firm.

Ye fair!

Be greatly cautious of your *sliding* hearts.

Thomson.

To pass with a free and gentle course or flow.

To **SLIDE**, *v. a.* To put imperceptibly.—Little tricks of sophistry by *sliding* in, or leaving out, such words as entirely change the question, should be abandoned by all fair disputants. *Watts*.

SLIDE, *s.* [flībe, Sax.] Smooth and easy passage.—Kings that have able men of their nobility shall find ease in employing them; and a better *slide* into their business; for people naturally bend to them. *Bacon*.—Flow; even course.—There be, whose fortunes are like Homer's verses, that have a *slide* and easiness more than the verses of other poets.

SLI'DER, *s.* [flībop, Sax.] The part of an instrument that slides; this is the Saxon meaning.—Fitting to their size the *slider* of his guillotine. *Burke*.—One who slides.

SLI'DING, *s.* Transgression: hence *back-sliding*.

You seem'd of late to make the law a tyrant,
And rather prov'd the *sliding* of your brother
A merriment than a vice.

Shakspeare.

SLIDING-GUNTER-SAIL, a triangular sail, used in boats, bent at its foremost leech to loops or grommets that slide

slide on the lower mast: the peak or head is attached to a small top-mast, that slides up in the direction of the lower mast, through two hoops fixed at its head, about three feet asunder. When the top-mast is lowered, the sail furls up close to the lower mast.

SLIDING-PLANKS, are the flat forms upon which the bilgeways slide in launching the ship.

SLIDING-RULE, a mathematical instrument, serving to work questions in gauging, measuring, &c., without the use of compasses; merely by the sliding of the parts of the instrument one by another, the lines and divisions of which give the answer, by inspection.

To understand the use of this instrument we must recur, to what is already familiar to the reader—the nature and use of logarithms; namely, the rapid manner in which multiplication, division, and the like may be performed by simple addition or subtraction.

Now the abbreviation of arithmetical calculations, usually attained by the use of logarithms, is also attainable by the employment of lines as *the representatives of logarithms*; so that by measuring these lines with their sums, differences or multipliers on a given scale, we may obtain a tolerable degree of accuracy. A farther improvement consists in graduating a line of convenient length *logometrically*, that is dividing it so that the distance of each division from the beginning of the line which is marked with unity, shall measure on a given scale of equal parts, the logarithm of the number which is affixed to it; this is Gunter's scale.

The divisions which are situated at equal distances, being marked by numbers whose logarithms have equal differences, it follows that the spaces intervening between any two numbers are proportional to the differences between their respective logarithms; or are the measures of the ratios between each of these numbers. The same use may therefore be made of such a scale as of a table of logarithms with regard to operations to be performed on their correspondent numbers. Thus it will be found that the portion of the scale extending from one to three, added to that extending from one to four, is equal to that between one and twelve, shewing that the logarithm of three, added to the logarithm of four, is equal to the logarithm of twelve, or that the ratio of one to three, added to the ratio of one to four, composes the ratio of one to twelve, or that twelve is the product of three and four. The excess of the interval between one and twenty-four, over that between one and six, or which is the same thing, the interval between six and twenty four, will be equal to that between one and four, shewing that four is the quotient of twenty-four divided by six. This comparison of intervals is further facilitated by the addition of a second scale exactly marked like the first, but capable of being slid along its side. Now, supposing the sides coincident, and the slider the lowest, if we push the slider on to any given distance, each of its divisions will be brought under those of the fixed scale, which are before situated further forward by an interval equal to that given distance. Every number of the upper will then have a constant ratio to every number of the slider; a ratio indicated by the number under which unity or the commencement of the slider is found placed.

The upper numbers then will, by multiples of the inferior, bring this constant number. So that by adjusting the slider till unity stands under any given multiplier or divisor, the upper line will exhibit the series of products of all the subjacent numbers, by the given multiplier; and consequently the slider exhibits the series of the quotients resulting from the division of the numbers immediately above them by the given divisor. For in every position of the slider, all the fractions formed by taking all the numbers on the upper line as numerators, and those just under them as denominators, are equal.

This instrument has been modified, and applied to the mensuration of timber and other solid bodies, to gauging, by Dr. Wollaston to the determination of chemical equivalents, and by Dr. Rojet to the involution and evolution of numbers. For the last, which is extremely

important, we must refer to the author's excellent paper in the *Phil. Trans.* 1815., Part I.

SLIEBH-AN-ERIN, mountains of Ireland, in the county of Leitrim; 13 miles north-north-east of Carrick.

SLIEBH-BAUGH, mountains of Ireland, in the counties of Monaghan and Tyrone; 3 miles south of Clogher.

SLIEBH BAUGHTA, mountains of Ireland, in the counties of Clare and Galway; 20 miles south-east of Galway.

SLIEBH-BEARNA, mountains of Ireland, in the county of Down, near the sea coast; 14 miles east of Newry.

SLIEBH-BLOOM, mountains of Ireland, in King's and Queen's counties. The high and steep mountains of Sliebbloom form so impracticable a barrier between King's and Queen's counties, that in a range of 14 miles, they afford but one, and that a very difficult and narrow pass into King's county, called *the Gap of Glandine*. In this great ridge are the sources of the Barrow and the Nore.

SLIEBH-BONN, mountains of Ireland, in the county of Roscommon; 8 miles north-north-east of Roscommon.

SLIEBH-BUY, mountains of Ireland, in the county of Wexford; 9 miles west of Newborough.

SLIEBH-CROOBE, mountains of Ireland, in the county of Down; 9 miles west-north-west of Downpatrick.

SLIEBH-DHAM, mountains of Ireland, in the county of Sligo; 16 miles south-west of Sligo.

SLIEBH-DONALD, mountains of Ireland, in the county of Down, near the sea-coast, said to be above 3000 feet higher than the level of the sea; 14 miles east of Newry.

SLIEBH-EAN, mountains of Ireland, in the county of Antrim; 18 miles north of Antrim.

SLIEBH-EN-EWR, mountains of Ireland, in the north-west part of the county of Leitrim; 10 miles north-north-east of Sligo.

SLIEBH-GALLAN, mountains of Ireland, in the county of Londonderry; 5 miles west of Magherafelt.

SLIEBH-GALLEN, mountains of Ireland, in the southern part of the county of Armagh; 5 miles north of Dundalk.

SLIEBH-LEAGUE, mountains of Ireland, in Donegalshire; 8 miles west of Killybegs.

SLIEBH-LOGHER, mountains of Ireland, county of Kerry; 9 miles south-east of Killarney.

SLIEBH-MISH, mountains of Ireland, in the county of Kerry, between Tralee and Miltown; 4 miles south of Tralee.

SLIEBH-MORE, mountains of Ireland, in the county of Mayo, near the western extremity of Achil island, near Achil Head.

SLIEBH-NA-COILTRA, mountains of Ireland, in the county of Wexford; 2 miles south-east of New Ross.

SLIEBH-NA-MAN, mountains of Ireland, in the county of Tipperary; 7 miles north-east of Clonmel.

SLIEBH-RUSSEL, mountains of Ireland, in the counties of Cavan and Fermanagh; 12 miles south of Enniskillen.

SLIEBH-SNAGHT, mountains of Ireland, in the county of Donegal; 13 miles north of Londonderry.

SLIEDRECHT, a small inland town of the Netherlands, in the province of South Holland, with 2400 inhabitants.

SLIGHT, *adj.* [*slicht*, Dutch.] Small; worthless; inconsiderable.

Their arms, their arts, their manners I disclose,
Slight is the subject, but the praise not small,
If Heaven assist, and Phœbus hear my call.

Dryden.

Not important; not cogent; weak.—Some firmly embrace doctrines upon *slight* grounds, some upon no grounds, and some contrary to appearance. *Locke.*—Negligent; not vehement; not done with effort.

He in contempt
At one *slight* bound high overleap'd all bound,

Milton.

Foolish; weak of mind.

No beast ever was so *slight*
For man, as for his God, to fight.

Hudibras.

Not strong; thin: as, a *slight* silk.

SLIGHT,

SLIGHT, *s.* Neglect; contempt; act of scorn.—People in misfortune construe unavoidable accidents into *slights* or neglects. *Richardson*.—Artifice; cunning practice.—As boisterous a thing as force is, it rarely achieves any thing but under the conduct of fraud: *slight* of hand has done that, which force of hand could never do. *South*.

SLIGHT, *adv.* Slightly.—Is Cæsar with Antonius priz'd so *slight*? *Shakspeare*.

To SLIGHT, *v. a.* To neglect; to disregard.—If they transgress and *slight* that sole command. *Milton*.—To throw carelessly, unless in this passage *to slight* be the same with *to sling*.—The rogues *slighted* me into the river, with as little remorse as they would have drowned puppies. *Shakspeare*.—[*slichten*, Dutch.] To overthrow; to demolish.—The castle was *slighted* by order of the parliament. *Ld. Clarendon*.

To SLIGHT over. To treat or perform carelessly.

His death and your deliverance

Were themes that ought not to be slighted over. *Dryden*.

To SLIGHTEN, *v. a.* To neglect; to disregard. *Not now in use*.

It is an odious wisdom to blaspheme,

Much more to *slighten* or deny their powers. *B. Jonson*.

SLIGHTER, *s.* One who disregards.—I do not believe you are so great an undervaluer or *slighter* of it, as not to preserve it tenderly and thriftily. *Bp. Taylor*.

SLIGHTINGLY, *adv.* Without reverence; with contempt.—If my sceptic speaks *slightingly* of the opinions he opposes, I have done no more than became the part. *Boyle*.

SLIGHTLY, *adv.* Negligently; without regard.

You were to blame

To part so *slightly* with your wife's first gift. *Shakspeare*.

Scornfully; contemptuously.—He spoke *slightly* and reflexively of such a lady: that is, perhaps he treated her without a compliment, and spoke that of her which she had rather a great deal practise, than hear or be told of. *South*.—Weakly; without force.

Scorn not

The facil gates of hell too *slightly* barr'd. *Milton*.

Without worth.

SLIGHTNESS, *s.* Weakness; want of strength. Negligence; want of attention; want of vehemence.

Where gentry, title, wisdom,

Cannot conclude but by the yea and no

Of gen'ral ignorance, it must omit

Real necessities, and give way the while

To unstable *slightness*.

Shakspeare.

SLIGHTY, *adj.* Trifling; superficial.—Let them shew where any thing is advised or commanded after this slothful and *slighty* way. *Echard*.

SLIGO, a county of Ireland, in the province of Connaught, bounded on the east by the county of Leitrim, on the south by Roscommon, on the south-west and west by Mayo, and on the north by the bay of Donegal. Its greatest length, from Bunduff in the north, to the Curlew mountains in the south, is 39½ English miles, and the greatest breadth 37. It contains 397,060 acres, or 620 square miles, English. The number of houses in 1793 was 11,509, supposed to contain 60,060 inhabitants; but the documents of which this is stated were very imperfect, and the increase must have been since considerable. There are 39 parishes, of which 16 only had churches when Dr. Beaufort published his valuable work: they lie in the bishoprics of Elphin, Achonry, Killala, and Ardagh. This county and the town of Sligo are represented in parliament by three members. The soil is generally light, sandy, gravelly loam, or moory, mixed with round stones on a strong gravelly bottom tolerably productive of potatoes, barley, and oats. In some parts the lands are rich and fertile, equally adapted for tillage or for fattening the heaviest oxen. Nearly the third part of this county is an improveable waste. In the northern district,

lying between the county of Leitrim and the sea, are the mountains of Benbulb and Samore. A chain of rough hills extends from Lough Gilly to the bounds of Roscommon and Leitrim. The barony of Tyreragh, though level along the coast, is intersected by large bogs; and the southern part of it is bounded by the Ox mountain, Slibh-Dham, and a great range of desolate hills, that extend across the middle of the county; whilst the Curlews and other mountains cover much of the southern part of it. Among these hills there are many large lakes, and abundance of rivers. The principal lakes are Lough Gill or Gilly, Temple House lake, Lough Talla, and Lough Arva or Arrow. Lough Arrow is about eight miles long, full of islands, and of a very irregular form: a river of the same name proceeds from it, and running northward to Ballysadere, rushes at once into the sea in a stupendous cataract. Lough Garra, on the borders of Roscommon, in the most southern part of the county, communicates with Lough Key by the river Boyle, which joins the Shannon. Lough Gilly exhibits a variety of beautiful prospects. On the river by which the waters of this lake are discharged into the bay of Sligo, stands the town of Sligo, the only town of note in the county. There are, however, ports at Ballysadere and Eskey-bridge, at the mouths of the rivers Arrow and Eskey. The most considerable rivers are the Sligo, the Bonnet, the Owenmore, the Unshion, the Cooloney, the Eskey, and the Moy which for many miles separates Mayo from Sligo. Lead, iron, silver, and copper ores, have been discovered in different places. The mountains near Lough Gill exhibit strong indications of coal. The linen manufacture is rapidly and universally thriving in this county. All its rivers communicating with the sea, abound in salmon, and the coasts teem with a variety of the most delicious fish.

SLIGO, a town of Ireland, chief town of the county of the same name, and a sea-port, pleasantly situated at the mouth of the river which flows from Lough Gilly to Sligo bay. Vessels of 200 tons come up to the quays, and the trade of Sligo has been increasing for many years. Its public buildings consist of a jail, a barrack, a court-house, an infirmary, and a charter school, liberally endowed by the Wiune family. This town owes the origin of its existence to a castle and an abbey, erected here by Maurice Fitzgerald, lord justice of Ireland, about the year 1262. The protection thus afforded, together with the goodness of the harbour, gradually attracted numbers of inhabitants, and thus the town progressively increased. In the year 1277, this castle was destroyed; but it was again rebuilt in 1310. Its ruins now evince its former splendour. The county assizes are held here, and Sligo sends one member to the imperial parliament. In 1788, the number of houses was 916, and the population 8000; but they have since increased; 105 miles north-west of Dublin, and 66 north-north-east of Galway. Lat. 54. 16. N. long. 8. 20. W.

SLILY, *adv.* Cunningly; with cunning secrecy; with subtle covertness.

Were there a serpent seen with forked tongue,

That *slily* glided towards your majesty,

It were but necessary you were wak'd.

Shakspeare.

SLIM, *adj.* [Serenius refers it to the Icel. *slaemr*, vilis et invalidus. See also *slim*, Teut. in Killian, which is described as an ancient word, and rendered *vilis*.] Weak; slight; unsubstantial.—The church of Rome indeed was allowed to be the principal church. But why? Was it in regard to the succession of St. Peter? No: that was a *slim* excuse. *Barrow*.—Now how vain and *slim* are all these, [arguments of fatalists, &c.] if compared with the solid and manly encouragement which our religion offers. *Killingbeck*.—Slender; thin of shape.—Worthless. [*slim*, Teut. and *schlim*, Germ. are both applied to denote an evil person.] It is generally used, in the north, according to Grose, in the same sense with *slly*.

SLIMBRIDGE, a parish of England, in Gloucestershire, near the Severn; 3½ miles north-by-west of Dursley. Population 794.

SLIME,

SLIME, *s.* [plm, Saxon; *slign*, Dutch.] Viscous mire; any glutinous substance.

The higher Nilus swells
The more it promises: as it ebbs, the seedsman
Upon the *slime* and ooze scatters his grain. *Shakspeare.*

SLIMINESS, *s.* Viscosity; glutinous matter.—Divers little creatures are procreated by the sun's heat, and the earth's *sliminess*. *Austin.*

SLIMNESS, *s.* State or quality of being slim.

SLIMY, *adj.* [Sax. plmiz.] Overspread with slime.

My bended hook shall pierce
Their *slimy* jaws; and, as I draw them up,
I'll think them every one an Antony. *Shakspeare.*

Viscous; glutinous.

Then both from out hell-gates, into the waste,
Wide anarchy of Chaos, damp and dark,
Hovering upon the waters, what they met
Solid or *slimy*, as in raging sea,
Tost up and down, together crowded drove. *Milton.*

SLINDON, a parish of England, in Sussex; 3½ miles west-by-north of Arundel. Population 437.

SLINESS, *s.* Designing artifice.—By an excellent faculty in mimicry, my correspondent can assume my air, and give my taciturnity a *sliness*, which diverts more than any thing I could say. *Addison.*

SLINFOLD, a parish of England, in Sussex; 4 miles west-by-north of Horsham. Population 549.

SLING, *s.* [*sliunga*, Su. Goth.; *slinghe*, Teut. See also *To SLING*.] A missile weapon made by a strap and two strings; the stone is lodged in the strap, and thrown by loosing one of the strings.

The Tuscan king
Laid by the lance, and took him to the *sling*;
Thrice whirl'd the thong around his head, and threw
The heated lead, half melted as it flew. *Dryden.*

A throw; a stroke,

At one *sling*
Of thy victorious arm, well-pleasing son,
Both sin and death, and yawning grave at last
Through chaos hurl'd, obstruct the mouth of hell. *Milton.*

A kind of hanging bandage, in which a wounded limb is sustained.

To SLING, *v. a.* [*slinghen*, Teut.; plngan, Sax.] To throw by a sling.—To throw; to cast.

Ætna's entrails fraught with fire,
That now casts out dark fumes and pitchy clouds,
Incens'd, or tears up mountains by the roots,
Or *slings* a broken rock aloft in air. *Addison.*

To hang loosely by a string.
From rivers drive the kids, and *sling* your hook;
Anon I'll wash e'm in the shallow brook. *Dryden.*

To move by means of a rope.
Cœnus I saw amidst the shouts
Of mariners, and busy care to *sling*
His horses soon ashore. *Dryden.*

SLINGELANDT (Peter Van), a painter, was born at Leyden in 1640. He was a laborious disciple of Gerard Dow, and wrought in the highly finished style of that master; and is as neat in his execution. His pictures, however, do not possess the relish found in those of Gerard, either in composition or colour; and they are tasteless in design. He is said to have been most patiently persevering and industrious, employing months and years upon one performance; and never being satisfied till he found every individual part imitated, however trivial, of any object which he had chosen to represent. His works are often passed off for those of his master, and of Mieris; and it sometimes demands a considerable portion of connoisseurship to discover the imposition. He died in 1691.

VOL. XXIII. No. 1571.

SLINGER, *s.* One who slings or uses the sling.—The *slingers* went about it; and smote it. *2 Kings.*

SLINGER'S BAY, a bay of the Eastern Indian ocean, on the north coast of New Ireland. Lat. 3. S. long. 151. E.

SLINGER'S BAY, an inlet of the Pacific Ocean, between the island of Ramos and St. Juan.

SLINGLEY, a township of England, in Durham; 5½ miles south-west of Sunderland.

SLINGSBY, a parish of England, North Riding of Yorkshire; 6 miles west-north-west of New Malton. Population 464.

To SLINK, *v. n.* preter. *slunk*. [plnca, Saxon, *to creep*.] To sneak; to steal out of the way.—We will *slink* away in supper time, disguise us at my lodging, and return all in an hour. *Shakspeare.*

To SLINK, *v. a.* To cast; to miscarry of. *A low word.*—To prevent a mare's *slinking* her foal in snowy weather, keep her where she may have good spring water to drink. *Mortimer.*

SLINK, *adj.* Produced before its time: applied to the young of a beast.—This membrane does not properly appertain to dogs, &c.; yet it may be found in *slink* calves. *Student.*

To SLIP, *v. n.* [plpan, Sax.; *slippen*, Dutch; *schlipfen*, Germ., from *schlipfe*, superficies lubrica, Sax. plpe, *lubricum*. Wachter] To slide; not to tread firm.—A skilful dancer on the rope *slips* willingly, and makes a seeming stumble that you may think him in great hazard, while he is only giving you a proof of his dexterity. *Dryden.*—To slide; to glide.—Oh, Ladon, happy Ladon! rather slide than run by her, lest thou should'st make her legs *slip* from her. *Sidney.*—To move or fly out of place.—Sometimes the ancle-bone is apt to turn out on either side by reason of relaxation, which though you reduce, yet, upon the least walking on it, the bone *slips* out again. *Wiseman.*—To sneak; to slink.

From her most beastly company
I again refrain, in mind to *slip* away,
Soon as appear'd safe opportunity. *Spenser.*

To glide; to pass unexpectedly or imperceptibly.
Slipping from thy mother's eye thou went'st
Alone in the temple; there wast found
Among the gravest rabbies disputant,
On points and questions fitting Moses' chair. *Milton.*

To fall into fault or error.

If he had been as you,
And you as he, you would have *slipt* like him;
But he like you would not have been so stern. *Shakspeare.*

To creep by oversight.—Some mistakes may have *slipt* into it; but others will be prevented. *Pope.*—To escape; to fall away out of the memory.—Use the most proper methods to retain the ideas you have acquired; for the mind is ready to let many of them *slip*, unless some pains be taken to fix them upon the memory. *Watts.*

To SLIP, *v. a.* To convey secretly.—In his officious attendance upon his mistress he tried to *slip* a powder into her drink. *Arbuthnot.*—To lose by negligence.

Let us not *slip* the occasion, whether scorn
Or satiate fury yield it from our foe. *Milton.*

For watching occasions to correct others in their discourse, and not to *slip* any opportunity of shewing their talents, scholars are most blamed. *Locke.*—To part twigs from the main body by laceration.—The runners spread from the master-roots, and have little sprouts or roots to them, which being cut four or five inches long, make excellent sets: the branches also may be *slipped* and planted. *Mortimer.*—To escape from; to leave shily.

This bird you aim'd at, though you hit it not.
—Oh, sir, Lucentio *slipp'd* me like his greyhound,
Which runs himself, and catches for his master. *Shakspeare.*

To let loose.

On Eryx altars lays
A lamb new fallen to the stormy seas;
Then *slips* his haulsers, and his anchors weighs. *Dryden.*

To let a dog loose.

The impatient greyhound, *slipt* from far,
Bounds o'er the glebe, to course the fearful hare. *Dryden.*

To throw off any thing that holds one.—Forced to alight, my horse *slipped* his bridle, and ran away. *Swift.*—To pass over negligently.—If our author gives us a list of his doctrines, with what reason can that about indulgences be *slipped* over. *Atterbury.*

To SLIP on, *v. a.* [*rlepan* on, Sax. *inducere.*] To put on rather hastily: a colloquial expression: as, to *slip* on one's clothes.

SLIP, *s.* [*rlipe*, Sax. See the verb neuter.] The act of slipping; false step.—Error; mistake; fault.

There put on him

What forgeries you please: marry, none so rank
As may dishonour him.
But, sir, such wanton, wild, and usual *slips*,
As are most known to youth and liberty. *Shakspeare.*

A twig torn from the main stock.

So have I seen some tender *slip*,
Sav'd with care from winter's nip,
The pride of her carnation train,
Pluck'd up by some unheedy swain. *Milton.*

A leash or string in which a dog is held, from its being so made as to slip or become loose by relaxation of the hand.

I see you stand like greyhounds in the *slips*,
Straining upon the start. *Shakspeare.*

An escape; a desertion. I know not whether to give the *slip* be not originally taken from a dog that runs and leaves the string or *slip* in the leader's hand. *Dr. Johnson.*—Rather, perhaps, from *slip*, a counterfeit piece of money. See the next sense.

The more shame for her goodyship,
To give so near a friend the *slip*. *Hudibras.*

A counterfeit piece of money; being brass covered with silver. *Steevens.*

Rom. What counterfeit did I give you?
Mer. The *slip*, sir, the *slip*. *Shakspeare.*

A long narrow piece.—Between these eastern and western mountains lies a *slip* of lower ground, which runs across the island. *Addison.*—The stuff found in the troughs of grindstones, on which edge-tools have been ground.—The filings of steel, and such small particles of edge-tools as are worn away upon the grindstone, commonly called *slipp*, is used to the same purpose in dyeing of silks. *Sir W. Petty.*—A particular quantity of yarn. [*forago*, Lat.] *Barrett.*

SLIPBOARD, *s.* A board sliding in grooves.—I ventured to draw back the *slipboard* on the roof, contrived on purpose to let in air. *Swift.*

SLIPKNOT, *s.* A bowknot; a knot easily untied.—They draw off so much line as is necessary, and fasten the rest upon the line-rolwl with a *slipknot*, that no more line turn off. *Moxon.*

SLIPPER, or SLIPSHOE, *s.* [*rlipeper*, Sax.] A shoe without leather behind, into which the foot slips easily.

Thrice rung the bell, the *slipper* knock'd the ground,
And the press'd watch return'd a silver sound. *Pope.*

[*Crespis*, Lat.] An herb.

SLIPPER, *adj.* [*rlipep*, Sax.] Slippery; not firm. *Obsolete.* Perhaps never in use but for poetical convenience. *Dr. Johnson.* This may be doubted, as the word is in our old lexicography, viz., in Huloet's Dict.

The last is slow, or *slipper* as the slime,
Of changing names of innocence and crime. *Mir. for Mag.*

SLIPPER ISLAND, a small island in the Eastern seas.
Lat. 14. 8. N. long. 93. 30. E.

SLIPPERED, *adj.* Wearing slippers.—The lean and *slipped* pantaloons. *Shakspeare.*

SLIPPERILY, *adv.* In a slippery manner.

SLIPPERINESS, *s.* State or quality of being slippery; smoothness; glibness.—We do not only fall by the *slipperiness* of our tongues, but we deliberately discipline them to mischief. *Gov. of the Tongue.*—Uncertainty; want of firm footing.—Let his ways be darkneses and *slipperiness*. *L. Addison.*

SLIPPERY, *adj.* [*rlipep*, Sax.; *sliperig*, Swedish.] Smooth; glib.—They trim their feathers, which makes them oily and *slippery*, that the water slips off. *Mortimer.*—Not affording firm footing.

Did you know the art o' the court,
As hard to leave as keep; whose top to climb,
Is certain falling; or so *slippery*, that
The fear's as bad as falling. *Shakspeare.*

His promise to trust to as *slippery* as ice. *Tusser.*—Hard to hold; hard to keep.

Thus surely bound, yet be not overbold,
The *slippery* god will try to loose his hold;
And various forms assume, to cheat thy sight,
And with vain images of beasts affright. *Dryden.*

Not standing firm.

When they fall, as being *slippery* standers,
The love that lean'd on them as *slippery* too,
Doth one pluck down another, and together
Die in the fast. *Shakspeare.*

Uncertain; changeable; mutable; instable.

Oh world, thy *slippery* turns! Friends now fast sworn,
Whose double bosoms seem to wear one heart,
Whose hours, whose bed, whose meal and exercise,
Are still together; who twine, as 'twere, in love
Unseparable, shall within this hour
On a dissension of a doit, break out
To bitterest enmity. *Shakspeare.*

Not certain in its effect.—One sure trick is better than a hundred *slippery* ones. *L'Estrange.*—[*Lubrique*, Fr.] Not chaste.—My wife is *slippery*. *Shakspeare.*

SLIPPERY ROCK, a township of the United States, in Mercer county, Pennsylvania. Population 789.

SLIPPERY ROCK, a township of the United States, in Butler county, Pennsylvania. Population 658.

SLIPPY, *adj.* [*Dr. Johnson*; who calls this term a barbarous provincial word, and gives an example only from Floyer. The word is pure Saxon, *rlipep*, and also of old English usage.] Slippery; easily sliding.—From it, being moist and *slippie*, she doth slip. *Davies.*

SLIPSHOD, *adj.* Having the shoes not pulled up at the heels, but barely slipped on.

The *slipshod* 'prentice from his master's door
Had par'd the dirt, and sprinkled round the floor. *Swift.*

SLIPPSLOP, *s.* Bad liquor. A low word, formed by reduplication of *slop*.

SLIPSTRING, or SLIPTHRIFT, *s.* One who has loosened himself from restraint; a prodigal; a spendthrift.—Young rascals or scoundrels, rakehells, or *slipstrings*. *Cotgrave.*

SLIPTON, a parish of England, in Northamptonshire; 3 miles west-by-north of Thrapston.

SLISH, *s.* A low word, formed by reduplicating *slash*.

What! this a sleeve?

Here's snip and nip, and *slish* and slash,
Like to a censer in a barber's shop. *Shakspeare.*

SLISHCARROW, mountains of Ireland, in the county of Sligo; 4 miles south-east of Sligo.

To SLIT, *v. a.* pret. and part. *slit* and *slitted*. [*rlihan*, Saxon; *slita*, Icel.] To cut longwise.—To make plants medicinal, *slit* the root, and infuse into it the medicine, as hellebore, opium, scammony, and then bind it up. *Bacon.*—To cut in general.

Comes

Comes the blind Fury with the abhorred shears,
And *slits* the thin-spun life.

Milton.

SLIT, *s.* [slit, Saxon.] A long cut, or narrow opening.

Where the tender rinds of trees disclose
Their shooting gems, a swelling knot there grows:
Just in that place a narrow *slit* we make,
Then other buds from bearing trees we take;
Inserted thus, the wounded rind we close.

Dryden.

SLITTER, *s.* One who cuts or slashes. *Cotgrave, and Sherwood.*

SLITTRICK, a small river of Scotland, in Roxburghshire; which, after a northerly course of about 17 miles, unites with the Teviot at Hawick.

To **SLIVE**, or To **SLIVER**, *v. a.* [slivan, Saxon. To *slive* or rive asunder is in the old Prompt. Parv.] To split; to divide longwise; to tear off longwise.

Liver of blaspheming Jew,
Gall of goat, and slips of yew,
Sliver'd in the moon's eclipse.

Shakspeare.

To cut or cleave in general,
To **SLIVE**, *v. n.* [*sløver*, Dan., to creep.] To sneak.
SLIVER, *s.* Formerly a branch torn off; now a slice cut off.

There on the pendant boughs, her coronet weed
Clamb'ring to hang, an envious *sliver* broke,
When down her weedy coronet and herself
Fell in the weeping brook.

Shakspeare.

SLOANE (Sir Hans), immortalized as the principal founder of the British Museum, was born at Killaleagh in the county of Down, Ireland, April 16, 1660. His family is said to have been of Scottish extraction; but whatever their situation in life might be, they were destined to acquire more honour from him, than he derived from them; though, by the education which he received, his circumstances appear to have been far from indigent. He is said to have been attached, from his youth, to the study of nature, and this led him perhaps to that of medicine, as a profession. A spitting of blood confined him at home for three years, and it was not till his 19th year that he was able to enter on a regular course of medical education at London. To this he devoted the four succeeding seasons, during which he was introduced to the acquaintance, and even the friendship, of Boyle and Ray. Returning to London late in 1684, Dr. Sloane became a favourite and inmate of the great Sydenham, who seems to have intended taking him by the hand as a physician. He was soon chosen a fellow of the Royal Society, and in April 1687, entered into the College of Physicians.

A desire of investigating the natural history of the West Indies, induced Dr. Sloane to embark for Jamaica, in September 1687, as physician to the duke of Albemarle. He made ample collections of natural history, bringing home from Jamaica, Barbadoes, Nevis, and St. Kitt's, about 800 species of dried plants, enriched with a most abundant store of information respecting their qualities and uses. He arrived in London, May 29, 1689, where he directly resumed his medical occupations, with which he happily and successfully associated his literary pursuits. In 1694 he became physician to Christ's hospital, and in 1695 was elected secretary to the Royal Society: he immediately revived the publication of its Philosophical Transactions, which had for six years been neglected. He was no less attentive to his medical duties in the College, and he projected and established a dispensary for the poor.

In 1696, the subject of our memoir published his Latin Catalogue of the Plants of Jamaica, a closely printed octavo of 232 pages. He follows Ray's system of arrangement, and is content with referring his species, as well as he could, like that great writer himself in his catalogues of British plants, to some popularly received genus. This catalogue was not followed up, till the year 1707, by the pub-

lication of the first volume of the great work; to which it was a kind of *Prodromus*, and which is entitled "A Voyage to the Islands Madera, Barbados, Nieves, St. Christopher's and Jamaica, with the Natural History of the Herbs and Trees, four-footed Beasts, Fishes, Birds, Insects, Reptiles, &c., of the last of those islands." To this volume is prefixed an introduction, of 164 pages, containing an account of the history and climate of Jamaica, the manners, domestic economy, food, trade, &c., of the inhabitants, and particularly an ample detail of their diseases; and is full of curious and instructive matter. The whole is illustrated by 256 plates, chiefly of plants, very imperfect as to botanical details, though characteristic in their general appearance.

The statistical part of this book is valuable, but there are some remarks relative to the management of slaves, which are still worth referring to, especially as the question of the slave-trade calls for all the vigilance of the Christian moralist and politician, to defeat the machinations of its advocates, and secret promoters.

The second volume of Sloane's Jamaica did not appear till the year 1725. By some accident, this is much the most common of the two.

The collections of natural history, made by Sloane in his voyage, seem to have laid the foundation of that museum, which became gradually so famous. A brother collector and friend, Mr. Courten, in 1702, left his own acquisitions to augment it, on condition of the payment of certain debts and legacies, to an amount much below the value of what was thus bequeathed. How soon curiosities of art were included in Dr. Sloane's museum, or whether such made a part of Mr. Courten's, we know not; but the whole collection was now very considerable, and continued increasing during the long life of its owner, who, the year before he died, reckoned up the articles of natural history, exclusive of 200 volumes of dried plants, as amounting to more than 30,600. Sir Hans in 1719 was elected president of the College of Physicians, and president of the Royal Society, on the death of Sir Isaac Newton, in 1727. He expired in the 92d year of his age, and was buried, along with his lady, in a vault, at the south-east corner of Chelsea church-yard, where a handsome, and very conspicuous monument to his memory still exists.

The person of Sir Hans Sloane was tall and handsome; his manners easy, polite and cheerful. He delighted in exhibiting and explaining to strangers, and especially foreigners, whatever he possessed, and is said to have kept an open table once a week, for his friends, particularly such as belonged to the Royal Society. That his reception of the great Linnæus was not peculiarly flattering, has often been mentioned with regret; nor can we account for it otherwise, than by recollecting that the opulent patron and collector, who had risen to eminence by his own means, felt no inclination to go to school to a poor Swedish student, hardly superior in his eyes to a working gardener. Few men can be serviceable in many different ways. The merits of Sir Hans Sloane were transcendent in his own line. He neglected no means, that appeared to him eligible, for promoting literature or science. On purchasing his great estate at Chelsea, he presented the Apothecaries' Company with the fee simple of the garden which they had already made there, on a condition, equally beneficial to their fame and to science, that it should for ever continue a *botanic* garden. "He was governor," says Dr. Pulteney, "of almost every hospital in London; and to each, after having given an hundred pounds in his life-time, he left a more considerable legacy at his death. He was ever a benefactor to the poor, who felt the consequences of his death severely. He was zealous in promoting the establishment of the colony of Georgia, in 1732; and formed, himself, the plan for bringing up the children in the Foundling Hospital, in 1739."

Nor was the pen of this active philosopher idle, amid his other occupations. To particularize even the titles of his papers, printed by the Royal Society, amounting to 35, would lead us too far. However curious and useful the contents of most of the rest may be, the last in the list, on In-

oculation

oculation, vol. xix. 516, is pre-eminently important, as recording the introduction of that practice into England, and displaying the candour, as well as good sense, of the writer, in every thing relative to the subject.

He bequeathed his museum to the public, on condition of a payment, to his heirs of 20,000*l.* a sum said barely to equal the intrinsic value of the precious metals and gems, of the medals and mineral specimens.

SLOANEA [so named by Plumier, in memory of Sir Hans Sloane, Bart.], in Botany, a genus of the class polyandria, order monogynia, natural order of amentaceæ, tiliaceæ (*Juss.*)—Generic Character. Calyx: perianth one-leaved, five-parted: segments ovate, a little unequal. Corolla none. Stamina: filaments numerous (above 100) very short, inserted into a villose receptacle. Anthers oblong, growing to the side of the filaments. Pistil: germ oblong, angular. Style simple. Stigmas five-cleft, acute. Pericarp: capsule large, roundish, echinate, with deciduous prickles, five-celled, five-valved: partitions opposite to the valves. Seeds solitary or in pairs, oblong, involved in a berried aril. The number of parts varies from three to six. *Aubl. Sw.—Essential Character.* Calyx one-leaved, from five to nine cleft. Corolla none. Anthers growing to the filaments below the top. Capsule echinate, from three to six-celled, from three to six-valved. Seeds two in a berried aril.

1. *Sloanea dentata*.—Leaves ovate; stipules cordate-triangular, serrate. The trunk of this tree rises to forty or fifty feet, and is two feet in diameter. The leaves are large like those of the chesnut. The flowers also are very large, indented at the edge, oval, and ending in a point, on a long pedicel, having two stipules deeply toothed at the base. They grow in bunches from the axils.—Native of South America.

2. *Sloanea Massoni*.—This is a tall tree, with alternate leaves more than a foot long, angular-toothed, nerved, smooth on both sides, somewhat coriaceous, on long round pubescent petioles. Flowers in axillary racemes towards the end of the branchlets, much shorter than the leaves, many-flowered, nodding, on long peduncles mostly two together, bearing each one biggish green flower. It differs from the preceding in having the leaves rounded at the end; the stipules linear; the flowers smaller with the calyx commonly five-leaved; and the capsules with longer bristles.—Native of the West Indies.

3. *Sloanea sinemariensis*.—Leaves roundish-ovate, quite entire; capsules ovate, bristly, opening from the top. Height forty or fifty feet, with a cloven ferruginous or cinereous bark. Racemes axillary, shorter than the petioles, many-flowered. Flowers small, on short one-flowered peduncles, with a single little bracte at the base. Capsule the size of a large walnut, four or five celled and valved, the valves red within. Seeds solitary, covered with a red pulpy aril.—Native of South America and the West Indian Islands.

SLOATH, or **SLOTH**, the name of an animal remarkable for its slow motion. Of this animal there are two species. See **BRADYPUS**.

SLOATS, *s.* Of a cart, are those underpieces which keep the bottom together. *Bailey.*

To **SLO'BBER**, *v. a.* [*slobberen*, Teut.] To slaver; to spill upon; to slabber. See To **SLABBER**.

SLO'BBER, *s.* Slaver; liquor spilled.

SLO'BBERY, *adj.* [*slobberen*, Teut. *lavum sive flaccidum esse.*] Moist; dank; floody.

I will sell my dukedom,
To buy a *slobberry* and dirty farm
In that nook-shotten isle of Albion.

Shakspeare.

SLOBODSKOI, a town of the east of European Russia, in the government of Viatka, on the river Viatka. It contains about 4700 inhabitants, who carry on a pretty active traffic with Archangel, in corn, tallow, flax, and furs. They have some manufactures of soap and leather, and in the environs there are several forges. The rearing of cattle and

of bees is carried on in the neighbouring country, to a very considerable extent; 20 miles north-north-east of Viatka. Lat. 58. 40. N. long. 50. 44. E.

To **SLOCK**, or To **SLO'CKEN**, *v. n.* [*slockna*, Su. Goth. *sloekka*, Icel.] To slake; to quench. *Slocken* is our northern word.

SLODTZ (René Michael), surnamed Michael Angelo, a sculptor, was born at Paris in 1705. He studied under his father, who was a native of Antwerp, after which he went to Rome, and upon his return he was admitted a member of the academy of Paris, where he died in 1764. One of his most considerable works is the monument of Languet, in the church of St. Sulpice.

SLOE, *s.* [fla, Saxon; *slee*, Danish.] The fruit of the blackthorn, a small wild plum.

The fair pomegranate might adorn the pine,
The grape the bramble, and the *sloe* the vine. *Blackmore.*

SLOKUM'S ISLAND, one of the Elizabeth's islands, on the coast of the United States, in Buzzard's bay, Massachusetts.

SLOLEY, a parish of England, in Norfolk; 3 miles north-north-east of Coltishall.

SLONIM, a town of Russian Lithuania, in the government of Grodno, of which it was for some years the capital. It is tolerably built for so backward a country, contains 4500 inhabitants, and has some trade in corn, leather, and potash. Its best building was formerly a Jesuits' college; 44 miles south-south-west of Novogrodek. Lat. 52. 50. N. long. 25. 19. E.

SLOOM, or **SLOUM**, *s.* [Teut. *sluymen*, leviter dormire Kilian. Sax. plumeþuan.] A gentle sleep or slumber. North. *Grose.*

SLOO'MY, *adj.* [*lome*, Teut. tardus, piger.] Sluggish; slow. *Skinner.*

SLOOP, *s.* [*chaloupe*, Fr.] A small ship, commonly (but not always) with only one mast.

SLOOTEN, a village of the Netherlands, near Amsterdam.

SLOOTEN, a village of the Netherlands, in the province of Friesland, on a lake of the same name, near the Zuyder Zee. Population 1200; 10 miles east of Stavereen.

To **SLOP**, *v. a.* To drink grossly and greedily.—To soil by letting water or other liquor fall.

SLOP, *s.* Mean and vile liquor of any kind. Generally some nauseous or useless medicinal liquor.

But thou, whatever *slops* she will have bought,
Be thankful.

Dryden.

Soil or spot made by water or other liquors fallen upon the place.

SLOP, *s.* [probably from the Sax. *flopen*, *loose*; *ro-plupen*, *relaxatus*. The word was formerly used in the singular number: as in Chaucer, "His overest *sloppe* is not worth a mite," Chan. Yem. Prol. And in Barret's Alv. 1580. "A *slop* or an over stock:" applied to female dress also; as *slops* had before been by Huloet, and as that word is used in our Homilies.] Trowsers; large and loose breeches; drawers.—What said master Dombledon about the satin for my short cloak and *slops*? *Shakspeare.*

Six great *slops*,
Bigger than three Dutch hoys!

B. Jonson.

Ready-made clothes. See **SLOP-SELLER**.

SLOP-SELLER, *s.* One who sells ready-made clothes.—The *slop-seller* is a person crept into the navy, I mean to monopolize the vending of clothing only, but since the restoration of king Charles the Second; nor, then, but by degrees, as he could make interest, and have interest in the affair. *Maydnam.*

SLOP-SHOP, *s.* Place where ready-made clothes are sold.

SLOPE, *adj.* [This word is not derived from any satisfactory original. Mr. Tooke calls it the past participle of the

Sax.

Sax. *slapan*, to slip, and Serenius refers it to the Su. Goth. *slæpa*, "oblique et indirecte ferri." Oblique; not perpendicular. It is generally used of acclivity or declivity; forming an angle greater or less with the plane of the horizon.

Murmuring waters fall

Down the *slope* hills, dispers'd, or in a lake,
That to the fringed bank with myrtle crown'd
Her crystal mirror holds, unite their streams. *Milton.*

SLOPE, *s.* An oblique direction; any thing obliquely directed.—Declivity; ground cut or formed with declivity.

My lord advances with majestic mien,
And when up ten steep *slopes* you've dragg'd your thighs,
Just at his study door he'll bless your eyes. *Pope.*

SLOPE, *adv.* Obliquely; not perpendicularly.

Uriel

Returned on that bright beam, whose point now rais'd
Bore him *slope* downward to the sun, now fall'n. *Milton.*

To **SLOPE**, *v. a.* To form to obliquity or declivity; to direct obliquely.

All night I slept, oblivious of my pain;
Aurora dawn'd, and Phæbus shin'd in vain:
Nor till oblique he *slop'd* his evening ray,
Had Somnus dry'd the balmy dews away. *Pope.*

To **SLOPE**, *v. n.* To take an oblique or declivous direction.

Betwixt the midst and these the gods assign'd
Two habitable seats for human kind;
And cross their limits cut a *sloping* way.
Which the twelve signs in beautiful order sway. *Dryden.*

SLOPENESS, *s.* Obliquity; declivity; not perpendicularity.—The Italians give the cover a graceful pence of *slopeness*, dividing the whole breadth into nine parts, whereof two shall serve for the elevation of the highest ridge. *Wotton.*

SLOPEWISE, *adj.* Obliquely; not perpendicularly.—The Wear is a frith, reaching *slopewise* through the Ose from the land to low-water mark, and having in it a bent or cod with an eye-hook; where the fish entering, upon their coming back with the ebb, are stopped from issuing out again, forsaken by the water, and left dry on the Ose. *Carew.*

SLOPINGLY, *adv.* Obliquely; not perpendicularly.—These atoms do not descend always perpendicularly, but sometimes *slopingly*. *Digby.*

SLOPPY, *adj.* Miry and wet; perhaps rather *slabby*. See **SLAB**.

To **SLOT**, *v. a.* [*sluta*, Swed., to shut, applied to a door; *sluyten*, Teut., the same from *slot*, a bolt.] To strike or clash hard; to slam: as, to *slot* a door. An old Lincolnshire word.

SLOT, *s.* [*slod*, Iceland. *vestigia ferarum in nive*. Lye, and Serenius. Saxon, *plæncge*, *vestigia ferarum*. Mr. Tooke pronounces *slot* the past participle of the Sax. *slitan*, to slit. As *slot* is the print of the hoof upon the ground, this derivation seems just. Drayton, in the following passage, explains *slot* in the margin by "the tract of the foot."] The track of a deer. Milton uses it for track discoverable by the scent.

Often from his [the hart's] feed

The dogs of him do find, or thorough skilful heed
The huntsman by his *slot*, or breaking earth, perceives,
Where he hath gone to lodge. *Drayton.*

He leaves the noisome stench of his rude *slot* behind him. *Milton.*

SLOTH, *s.* [*slæþð*, *slæþð*, Saxon.] Mr. Tooke considers *sloth* as the third person singular of the verb *slapan*, to slow or make slow; i. e. that which *sloweth*. Our word was anciently written *slowth*, and also *slouth*.—Slowness; tardiness:

These cardinals trifle with me: I abhor
This dilatory *sloth* and tricks of Rome. *Shakspeare.*
Vol. XXIII. No. 1571.

Laziness; sluggishness; idleness.

False of heart, light of ear, bloody of hand,
Hog in *sloth*, fox in stealth. *Shakspeare.*

An animal.—The *sloth* is an animal of so slow a motion, that he will be three or four days at least in climbing up and coming down a tree; and to go the length of fifty paces on plain ground, requires a whole day. *Grew*. See **BRADYPUS**.

To **SLOTH**, *v. n.* To slug; to lie idle. *Obsolete.* *Prompt.*

Some time he *sloutheth* on a daie,
That he never after gete maie. *Gower.*

SLOTHFUL, *adj.* Idle; lazy; sluggish; inactive; indolent; dull of motion.

Flora commands those nymphs and knights,
Who liv'd in *slothful* ease and loose delights,
Who never acts of honour durst pursue,
The men inglorious knights, the ladies all untrue. *Dryden.*

SLOTHFULLY, *adv.* Idly; lazily; with sloth.

SLOTHFULNESS, *s.* Idleness; laziness; sluggishness; inactivity. *Slothfulness* casteth into a deep sleep, and an idle soul shall suffer hunger. *Prov.*

SLOTTERY, *adj.* [*slodderen*, Teut.; *flaccescere*.] Squalid; dirty; untrimmed. Mr. Tyrwhitt reads *slotery* in the following passage, and explains it by *floating*, as hair dishevelled may be said to float upon the air. Mr. Urry and Mr. Warton both read *slotery*. The Italian *rabbuffata*, which Mr. Tyrwhitt cites, certainly means *dishevelled*, but also *shagged* or rough.

Palamon

With *slotery* berde, and ruggy ashy heres,
In clothes black. *Chaucer.*

Foul; wet: as, *slottery* weather: a Cornish expression. *Pryce.*

SLOUCH, *s.* [Dr. Johnson gives the Danish *sløff*, stupid, as the origin. Mr. Tooke calls it the Sax. past participle *plæc*, (meaning *slack* or *slow*), from *pleacian*, tardare. Serenius gives "*slok*, Sueth. homo vagus et negligens; *sloka*, propendere, caput demittere." This is in unison with our ancient usage of the word, viz., that of a lubber, a lazy fellow. See Sherwood in **V. SLOUCH**, and Cotgrave.] An idle fellow; one who is stupid, heavy, or clownish.

Begin thy carols then, thou vaunting *slouch*;
Be thine the oaken staff, or mine the pouch. *Gay.*

A downcast look; a depression of the head; an ungainly, clownish gait or manner.—Our doctor has every quality which can make a man useful; but, alas! he hath a sort of *slouch* in his walk. *Swift.*

To **SLOUCH**, *v. n.* To have a downcast clownish look, gait, or manner. The awkward, negligent, clumsy, and *slouching* manner of a booby. *Ld. Chesterfield.*

To **SLOUCH**, *v. a.* To depress; to press down: as, to *slouch* the hat.

SLO'VEN, *s.* [*slœf*, Dutch; *yslyvn*, Welsh, "*Slowen*, *slouen*, *sloven* the past participle of the Sax. *slapan*, to slow, make slow, or cause to be slow." H. Tooke.] A man indecently negligent of cleanliness; a man dirtily dressed.

You laugh, half beau, half *sloven* if I stand;
My wig half powder, and all snuff my band. *Pope.*

SLO'VENLINESS, *s.* Indecent negligence of dress; neglect of cleanliness.—*Slovenliness* is the worst sign of a hard student, and civility the best exercise of the remiss; yet not to be exact in the phrase of compliment, or gestures of courtesy. *Wotton*.—Any negligence or carelessness.—Vander Cabel seems to have been a careless artist; and discovers great *slovenliness* in many of his works; but in those which he has studied, and carefully executed, there is great beauty. *Gilpin.*

SLO'VENLY, *adj.* Negligent of dress; negligent of neatness; not neat; not cleanly: coarse.—A *slovenly* wincer of a confutation. *Milton*.—Æsop at last found out
4 F a *slovenly*

a *slovenly* lazy fellow, lolling at his ease as if he had nothing to do. *L'Estrange*.

SLO'VENLY, *adv.* In a course inelegant manner.—As I hang my clothes on somewhat *slovenly*, I no sooner went in but he frowned upon me. *Pope*.

SLO'VENRY, *s.* Dirtiness; want of neatness.

Our gayness and our gilt are all besmirch'd
With rainy marching in the painful field:
There's not a piece of feather in our host,
And time hath worn us into *slovenry*. *Shakspeare*.

SLOUGEA, a village of Tunis, on the northern bank of the Megesdah; 12 miles north-east of Tunis.

SLOUGH, *s.* [flog, Saxon; the past participle of fleacian, fleacian, to slow or cause to be slow; *ch* being changed into *gh*; flog, i. e. *slow* (water). Mr. H. Tooke.] A deep miry place; a hole full of dirt.

The ways being foul, twenty to one,
He's here stuck in a *slough*, and overthrown. *Milton*.

The skin which a serpent casts off at his periodical renovation. [perhaps from *sleek*. Neither Dr. Johnson, nor other lexicographers, give an etymon of this meaning.]

When the mind is quicken'd,
The organs, though defunct and dead before,
Break up their drowsy grave, and newly move,
With casted *slough* and fresh legerity. *Shakspeare*.

It is used by Shakspeare simply for the skin.
As the snake, roll'd in a flowery bank,
With shining checker'd *slough*, doth sting a child,
That for the beauty thinks it excellent. *Shakspeare*.

The part that separates from a foul sore.—At the next dressing I found a *slough* come away with the dressings, which was the sordes. *Wiseman*.

To SLOUGH, *v. n.* To part from the sound flesh. A surgical term.

SLOUGH, a village of England, in Buckinghamshire. The celebrated Dr. Herschell has here his residence and observatory, where he has for many years pursued his astronomical studies. The village is noted for its inns. Market on Thursday; 21 miles west of London.

SLO'UGHA, *adj.* Miry; boggy; muddy.—That custom should not be allowed, of cutting scraws in low grounds *sloughy* underneath, which turn into bog. *Swift*.

SLOW, *adj.* [flap, flæp, Saxon, which Mr. Tooke considers as the past participle of fleacian. Dr. Johnson notices the ancient Frisick *sleuw*: to which may be added the Swed. *sloe*, and Icel. *slour*.] Not swift; not quick of motion; not speedy; not having velocity; wanting celerity.

Me thou think'st not *slow*,
Who since the morning-hour set out from heaven,
Where God resides and on mid-day arriv'd
In Eden, distance inexpressible. *Milton*.

Late; not happening in a short time.
These changes in the heav'ns, though *slow*, produc'd
Like change on sea and land. *Milton*.

Not ready; not prompt; not quick.—Mine ear shall not be *slow*, mine eye not shut. *Milton*.—Dull; inactive; tardy; sluggish.

Fix'd on defence, the Trojans are not *slow*
To guard their shore from an expected foe. *Dryden*.

Not hasty; acting with deliberation; not vehement.—The Lord is merciful, and *slow* to anger. *Common Prayer*.—Dull; heavy in wit.—The blockhead is a *slow* worm. *Pope*.

SLOW, in composition, is an adverb, *slowly*.—For eight *slow*-circling years by tempests tost. *Pope*.

Some demon urg'd
T' explore the fraud with guile oppos'd to guile,
Slow-pacing thrice around the insidious pile. *Pope*.

To SLOW, *v. a.* To omit by dilatoriness; to delay; to procrastinate. *Not now in use*.

Now do you know the reason of this haste?
—I would I knew not why it should be *slow*. *Shakspeare*.

SLOW, *s.* [rhp, Saxon, tinea.] A moth. *Obsolete*. "It is a *slowe*." *Chaucer*.

SLOWAKS, or **SLAWENZI**, one of the principal races of Slavonian descent, settled in the Austrian empire, and supposed to be descendants of the Bohemians and Moravians, who, in the middle ages, extended their settlements over a considerable track of country. They are found in the north-west of Hungary, in the east and south of Moravia, and in Austrian Silesia; they are traced also, but in smaller proportions, in Austrian Poland and the Buckowine. Their settlement in Hungary took place in the 14th and 15th centuries. They are in general an uneducated and ignorant race, piquing themselves on a display of finery, and exhibiting, on their great festivals, a curious assemblage of grotesque ornaments. See **SCLAVONIA**.

SLOWBACK, *s.* A lubber; an idle fellow. *Cotgrave*, and *Sherwood*.—The *slowbacks* and lazie bones will none of this. *Favour*.

SLOWLY, *adv.* [Sax. flaulice.] Not speedily; not with celerity; not with velocity.

The gnome rejoicing bears her gifts away,
Spreads his black wings, and *slowly* mounts to day. *Pope*.

Not soon; not early; not in a little time.—The poor remnant of human seed peopled their country again *slowly* by little and little. *Bacon*.

Our fathers bent their baneful industry
To check a monarchy that *slowly* grew;
But did not France or Holland's fate foresee,
Whose rising power to swift dominion flew. *Dryden*.

We oft our *slowly* growing works impart,
While images reflect from art to art. *Pope*.

Not hastily; not rashly: as, he determines *slowly*. Not promptly; not readily: as he learns *slowly*. Tardily; sluggishly.—The chapel of St. Laurence advances so very *slowly*, that 'tis not impossible but the family of Medicis may be extinct before their burial-place is finished. *Addison*.

SLOWNESS, *s.* Smallness of motion; not speed; want of velocity; absence of celerity or swiftness.—Motion is the absolute mode of a body, but swiftness or *slowness* are relative ideas. *Watts*.—Length of time in which any thing acts or is brought to pass; not quickness.—Tyrants use what art they can to increase the *slowness* of death. *Hooker*.—Dulness to admit conviction or affection.—Christ would not heal their infirmities, because of the hardness and *slowness* of their hearts, in that they believed him not. *Bentley*.—Want of promptness; want of readiness. Deliberation; cool delay. Dilatoriness; procrastination.

SLOWWORM, *s.* [flap-worm, Saxon.] The blind worm; a small kind of viper, not mortal, scarcely venomous.—Though we have found formed snakes in the belly of the caecilia, or *slowworm*, yet may the viper emphatically bear the name. *Brown*.

To SLU'BBER, *v. a.* To do any thing lazily, imperfectly, or with idle hurry.—Nature shewed she doth not like men, who *slubber* up matters of mean account. *Sidney*.

Bassanio told him, he would make some speed
Of his return: he answer'd, Do not so,
Slubber not business for my sake. *Shakspeare*.

To stain; to daub. [This seems to be from *slobber*, *slabber*, or *slaver*.]—You must be content to *slubber* the gloss of your new fortunes with this more stubborn and boisterous expedition. *Shakspeare*.

O love, how sweet thou look'st now, and how gentle!
I should have *slubber'd* thee, and stain'd thy beauty. *Beaumont and Fl.*

Lady, I ask your pardon, whose virtue I have
Slubbered with my tongue. *Beaumont and Fl.*

To cover coarsely or carelessly. This is now not in use, otherwise than as a low colloquial word.—A man of secret ambitious ends of his own, and of proportionate counsels, smothered under the habit of a scholar, and *slubbered* over with a certain rude and clownish fashion that had the semblance of integrity. *Wotton*.

To SLU'BBER, *v. n.* To be in a hurry; to move with hurry.—Which answers are to be done not in a huddling or *slubbering* fashion. *Herbert.*

SLU'BBERDEGULLION, *s.* [A cant word, probably without derivation.] A paltry, dirty, sorry wretch.

Quoth she, although thou hast deserv'd,
Base *slubberdegullion*, to be serv'd
As thou didst now to deal with me,
If thou hadst got the victory.

Hudibras.

SLU'BBERINGLY, *adv.* In an imperfect or slovenly manner.—And *slubberingly* patch up some slight and shallow rhyme. *Drayton.*

SLUCK, a town of Russian Lithuania, in the government of Minsk, formerly the capital of a duchy. The dwelling-houses are built of wood, as is usual in this country, but the churches and convents are of stone. It has three castles, and a central school, in which are taught the natural and mathematical sciences, Latin and German. The Calvinists have here also a high school; 52 miles south of Minsk. Lat. 52. 20. N. long. 27. 50. E.

SLUDGE, *s.* [I suppose from *flog*, *slough*, Saxon.] Mire; dirt mixed with water.—The earth I made a mere soft *sludge* or mud. *Mortimer.*

SLUG, *s.* [*slug*, Danish, and *stock*, Dutch, signify a glutton, and thence one that has the sloth of a glutton. Dr. Johnson.—Tooke refers *slug*, the reptile, to *flog*, Sax. *slow*, the past participle of *pleaxian*, *tardare*, to slow, to make or cause to be slow.] An idler; a drone; a slow, heavy, sleepy, lazy wretch.—Fie, what a *slug* is Hastings, that he comes not! *Shakspeare.*—As for all other sorts of the Turks, both foot and horse, they are but *slugs*. *Fuller.*—An hindrance; an obstruction.—Usury dulls and damps all improvements, wherein money would be stirring, if it were not for this *slug*. *Bacon.*—A kind of slow creeping snail.—We must ascribe it to the brutes, not excepting the most stupid of them, the *slug* and the beetle. *Search.*—[*pleeg*, a *hammerhead*, Sax.] A large bullet.—Shooting arrows dipt in poison, and discharging *slugs* against our neighbour's reputation. *Barrow.*

To SLUG, *v. n.* To lie idle; to play the drone; to move slowly.

All he did was to deceive good knights,
And draw them from pursuit of praise and fame,

To *slug* in sloth and sensual delights,
And end their days with irrenowned shame. *Spenser.*

To SLUG, *v. a.* To make sluggish.—It worsens and *slugs* the most learned. *Milton.*

SLUG-A-BED, *s.* One who is fond of lying in bed; a drone. *Sherwood.*

Why, lady! fie, you *slug-a-bed!*—
What, not a word? *Shakspeare.*

SLU'GGARD, *s.* An idler; a drone; an inactive lazy fellow.

Cry mercy, lords, and watchful gentlemen,
That you have ta'en a tardy *sluggard* here. *Shakspeare.*

SLU'GGARD, *adj.* Lazy; sluggish.
Sprightly May commands our youth to keep
The vigils of her night, and breaks their *sluggard* sleep.
Dryden.

To SLU'GGARDIZE, *v. a.* To make idle; to make dronish.

Rather see the wonders of the world abroad,
Than, living dully *sluggardiz'd* at home,
Wear out thy youth with shapeless idleness. *Shakspeare.*

SLU'GGISH, *adj.* Dull; drowsy; lazy; slothful; idle; insipid; slow; inactive; inert.

Sluggish idleness, the nurse of sin,
Upon a slothful ass she choose to ride. *Spenser.*

SLU'GGISHLY, *adv.* Dully; not nimbly; lazily; idly; slowly.

SLU'GGISHNESS, *s.* Dulness; sloth; laziness; idleness; inertness.—It is of great moment to teach the mind to shake off its *sluggishness*, and vigorously employ itself about what reason shall direct. *Locke.*

SLU'GGY, *adj.* Sluggish. See the Prompt. Parv. It is once used by Chaucer.

SLUICE, *s.* [*sluyse*, Dutch; *escluse*, Fr.; *sclusa*, Ital.; from *clausus*, Lat. *shut up*. *Slusa* is used in the Salic law for *clausura*, according to Kilian.] A watergate; a floodgate; a vent for water.

Two other precious drops that ready stood,
Each in their crystal *sluice*, he ere they fell
Kiss'd, as the gracious signs of sweet remorse,
And pious awe, that fear'd to have offended. *Milton.*
Divine Alpheus, who, by secret *sluice*,
Stole under seas to meet his Arethuse. *Milton.*

To SLUICE, *v. a.* To emit by floodgates.

Like a traitor coward,
Sluic'd out his inn'cent soul through streams of blood.
Shakspeare.

SLUTCY, *adj.* Falling in streams as from a sluice or floodgate.

And oft whole sheets descend of *sluicy* rain,
Suck'd by the spongy clouds from off the main:
The lofty skies at once come pouring down,
The promis'd crop and golden labours down. *Dryden.*

SLUIN, a small town of the Austrian states, in Croatia; 23 miles south of Carlstadt.

SLUIS, a petty town of French Flanders, on the small river Seneet.

To SLU'MBER, *v. n.* [*plumepian*, Sax.; *sluymeren*, Dutch; after which form our word was anciently written "To *slomeryn*." Prompt. Parv.] To sleep lightly; to be not awake nor in profound sleep.—He that keepeth Israel shall neither *slumber* nor sleep. *Psalms.*—To sleep; to repose. *Sleep* and *slumber* are often confounded.

Have ye chosen this place,
After the toil of battle, to repose
Your wearied virtue, for the use you find
To *slumber* here? *Milton.*

To be in a state of negligence and supineness.
Why *slumbers* Pope, who leads the tuneful train,
Nor hears that virtue which he loves complain? *Young.*

To SLU'MBER, *v. a.* To lay to sleep.—To *slumber* his conscience in the doing, he [Felton] studied other incentives. *Wotton.*—To stupify; to stun.

Then up he took the *slumber'd* senseless corse,
And ere he could out of his swoon awake,
Him to his castle brought. *Spenser.*

SLU'MBER, *s.* Light sleep; sleep not profound.
And for his dreams, I wonder he's so fond
To trust the mock'ry of unquiet *slumbers*. *Shakspeare.*

Sleep; repose.
Boy! Lucius! fast asleep? It is no matter;
Enjoy the honey-heavy dew of *slumber*. *Shakspeare.*

Ev'n lust and envy sleep, but love denies
Rest to my soul, and *slumber* to my eyes:
Three days I promis'd to attend my doom,
And two long days and nights are yet to come. *Dryden.*

SLU'MBERER, *s.* [*plumep*, Sax.] One who slumbers.—A *slumberer* stretching on his bed. *Donne.*

SLU'MBERING, *s.* State of repose.—God speaketh, yet man perceiveth it not: in a dream, in a vision of the night, when deep sleep falleth upon men, in *slumberings* upon the bed. *Job.*

SLU'MBEROUS, *adj.* Inviting to sleep; soporiferous; causing sleep.

The timely dew of sleep,
Now falling with soft *slumberous* weight, inclines
Our eyelids. *Milton.*

SLU'MBERY,

SLUMBERY, *adj.* Sleepy; not waking. *Unused.*—A great perturbation in nature! to receive at once the benefit of sleep, and do the effects of watching: in this *slumbery* agitation, what have you heard her say? *Shakspeare.*

SLUNG. The preterite and participle passive of *sling*.

SLUNK. The preterite and participle passive of *slink*.

Silence accompany'd; for beast, and bird,
They to their grassy couch, these to their nests,
Were *slunk*.

Milton.

To SLUR, *v. a.* [*slorig*, Teut. nasty; *sloore*, a slut. We had formerly *slory*, to make filthy, to sully. It then became *slurry*; and lastly, *slur*.] To sully; to soil; to contaminate.—They impudently *slur* the gospel, in making it no better than a romantic legend. *Cudworth.*—To pass lightly; to balk; to miss. Commonly with *over*.

Studious to please the genius of the times,
With periods, points, and tropes, he *slurs* his crimes;
He robb'd not, but he borrow'd from the poor,
And took but with intention to restore.

Dryden.

To cheat; to trick.

What was the publick faith found out for,
But to *slur* men of what they fought for?

Hudibras.

SLUR, *s.* Faint reproach; slight disgrace.—No one can rely upon such an one, either with safety to his affairs, or without a *slur* to his reputation; since he that trusts a knave has no other recompence, but to be accounted a fool for his pains. *South.*—Trick.

All the politicks of the great
Are like the cunning of a cheat,
That lets his false dice freely run,
And trusts them to themselves alone;
But never lets a true one stir
Without some fing'ring trick or *slur*.

Butler.

[In Music.] A mark denoting a connection of one note with another.

SLUR, in Music, a mark like the arc of a circle, drawn from one note to another, comprehending two or more notes in the same or different degrees.

SLUPZE, a town of Prussian Poland; 41 miles east-by-south of Posen. Population 1100.

SLUSE (René Francis), an eminent mathematician, was born of a noble family at Vise, a small town in the bishopric of Liege, in 1622. He was educated for the church, and was a man of great learning in jurisprudence, medicine, and in the Greek, Hebrew, Arabic, and other Oriental languages. His principal work is entitled "Mesolabium et Problemata Solida," 4to. In this work M. Sluse rendered great service to the mathematical sciences, by simplifying some parts of the analysis of Des Cartes, which had engaged the attention of many eminent geometricians. He is author of a method, by which any solid equation being proposed, it may be constructed in an infinite variety of ways by means of the circle and any one of the conic sections. He first gave a specimen of this method in the above work, but concealed the analysis till he published the second edition of it in 1688. An account of it is given by Montucla, in his "History of the Mathematics." This author remarks, that Sluse's Geometrical Miscellanies, which appeared in this second edition, do honour to the author, and afford a proof of the great progress he had made in analysis. Sluse's papers in the Philosophical Transactions are, 1. "A short and easy method of drawing Tangents to all Geometrical Curves," vol. vii. 2. "A demonstration of the same," vol. viii. 3. "On the Optic Angle of Alhazen."

SLUSZEWO, a town of Poland; 10 miles south of Thorn. Population 1050.

SLUT, *s.* [Teut. *slodde* and *slet*. Tooke considers it as the past participle of *slapian*, to slow; *slowed*, *slow'd*, *sloud*, *slout*, *slut*; and observes, that the word was formerly applied to males. Hence, in an old Homily, "Men, when they intend to have their friends or neighbours to come to their houses to eat or drink with them,—will have their houses to be clean and fine, lest they should be counted

sluttish, or little to regard their friends."] A dirty person; now confined to a dirty woman.

Among these other of *sloutes* kinde,
Whiche all labour set behinde,
And hateth all business,
There is yet one, which Idleness
Is cleped:—

In wynter doth he nought for colde,
In somer maie he nought for hete!

Gower.

The veal's all rags, the butter's turn'd to oil;
And thus I buy good meat for *sluts* to spoil.

King.

A word of slight contempt to a woman.

Hold up, you *sluts*,
Your aprons mountant; you're not oathfable,
Although I know you'll swear.

Shakspeare.

SLUTTERY, *s.* The qualities or practice of a slut.—A man gave money for a black, upon an opinion that his swarthy colour was rather *sluttery* than nature, and the fault of his master that kept him no cleaner. *L'Estrange.*

SLUTTISH, *adj.* Nasty; not nice; not cleanly; dirty; indecently negligent of cleanliness.—Albeit the mariners do covet store of cabbins, yet indeed they are but *sluttish* dens that breed sickness in peace, serving to cover stealths, and in fight are dangerous to tear men with their splinters. *Ralegh.*—It is used sometimes for *meretricious*.—She got a legacy by *sluttish* tricks. *Holiday.*

SLUTTISHLY, *adv.* In a sluttish manner; nastily; dirtily.

SLUTTISHNESS, *s.* The qualities or practice of a slut; nastiness; dirtiness.

SLUYS, or ECLUSE, a fortified town of the Netherlands; Cadsand, near the province of Zealand, situated on an arm of the sea. Its harbour, formerly deep and capacious, is now unfit for receiving any but small vessels. It is furnished with sluices for laying the surrounding country under water, from which its present name is derived. It was taken by the French in 1794. Population 1200; 10 miles north of Bruges, and 20 north-east of Ostend. Lat. 51. 18. 35. N. long. 3. 23. 9. E.

SLY, *adj.* [rlið, Sax., *slippery*, and, metaphorically, deceitful; *slaegr*, Iceland. versutus; and thus *slygh* was an ancient form of our word: "*slygh* as serpentis." *Wicliffe.*—Meanly artful; secretly insidious; cunning.

And for I doubt the Greekish monarch *sly*,
Will use with him some of his wonted craft.

Fairfax.

His proud step he scornful turn'd,
And with *sly* circumspection.

Milton.

Slight; thin; fine. *Not in use.*—Lids devis'd of substance *sly*. *Spenser.*

SLYLY, or SLILY, *adv.* With secret artifice; insidiously.

Hypocrites,
That *slyly* speak one thing, another think.

Philips.

SLYME HEAD, a cape on the west coast of Ireland. Lat. 53. 23. N. long. 10. 14. W.

SLYNE, a hamlet of England, in Lancashire; 2½ miles north of Lancaster.

SLYNESS, or SLINESS, *s.* But *slyness* is to be preferred. Addison so writes it. See SLINESS.

To SMACK, *v. n.* [mæccan, Saxon; *smæcken*, Dutch.]—To have a taste; to be tingured with any particular taste.—[It] *smacketh* like pepper. *Barret.*—To have a tincture or quality infused.

All sects, all ages, *smack* of this vice, and he
To die for it!

Shakspeare.

To make a noise by separation of the lips strongly pressed together, as after a taste.—He that by a willing audience and attention doth readily suck it [slander] up, or who greedily swalloweth it down by credulous approbation and assent; he that pleasingly relisheth it, and *smacketh* at it; as he is a partner in the fact, so he is a sharer in the guilt.

Barrow.

Barrow.—To kiss with a close compression of the lips, so as to be heard when they separate.—He gives a *smacking* buss. *Pope*.

To SMACK, *v. a.* To kiss.

So careless flowers, strow'd on the waters' face,
The curled whirlpools suck, *smack*, and embrace,
Yet drown them.

Donne.

To make to emit any quick smart noise.

More than one steed must Delia's empire feel,
Who sits triumphant o'er the flying wheel;
And as she guides it through the admiring throng,
With what an air she *smacks* the silken thong!

Young.

SMACK, *s.* [ɹmæc, Sax. *smaeck*, Dutch; from the verb.]—Taste; savour.—Tincture; quality from something mixed.

As the Pythagorean soul
Runs through all beasts, and fish and fowl,
And has a *smack* of ev'ry one,
So love does, and has ever done.

Hudibras.

A pleasing taste.

Stack pease upon hovel;
To cover it quickly let owner regard,
Lest dove and the cadow there finding a *smack*,
With ill stormy weather do perish thy stack.

Tusser.

A small quantity; a taste.

Trembling to approach
The little barrel, which he fears to broach,
H' essays the wimble, often draws it back,
And deals to thirsty servants but a *smack*.

Dryden.

The act of parting the lips audibly, as after a pleasing taste.—A loud kiss.

He took

The bride about the neck, and kiss'd her lips
With such a clamorous *smack*, that at the parting
All the church echo'd.

Shakspeare.

[*snacca*, Saxon; *sneckra*, Icelandic.] A small ship.—A blow, given with the flat of the hand: as, a *smack* on the face.

SMALAND, a province in the south of Sweden, lying between the Baltic and the province of Halland. It now forms the governments of Jonkioping and Cronoberg, also part of that of Calmar, having a superficial extent of 7750 square miles, with a population of 315,000. Smaland is well watered, both by rivers and lakes: of the former, the chief are the Nissa, the Laga, and the Aem; of the latter, the Wetter, the Som, the Vidoester, and the Moekel. Few countries can boast of more picturesque scenery than the neighbourhood of Jonkioping and some other places in this province; but the greater part consists of barren rocks, forests, marshes, and heaths, and the corn land is confined to tracks lying between these unproductive wastes. This accounts in part for the comparative thinness of the inhabitants. Honey forms no insignificant article of rural produce; but the chief object is the breeding of cattle in the extensive pastures. The forests and mines furnish materials for a considerable export trade in wood, tar, pitch, iron, and copper; some silver and lead are occasionally to be found, but no mines of these metals are wrought. This province had the honour of giving birth to Linnaeus.

SMALCALDEN, a district in the west of Germany, belonging to Hesse-Cassel, but lying considerably to the east of the rest of the electorate, being adjacent to Saxe-Gotha and Saxe-Meinungen. Its territorial extent is 115 square miles; its population 22,000, almost all Lutherans. It is a very mountainous country, and contains mines of iron and coal, which, with the manufacture of salt from brine springs, affords employment to the inhabitants. The exports consist chiefly of hardware, potash, and white lead.

SMALCALDEN, the chief town of the above district, is situated on a river of the same name, not far from the Werra. It contains a castle, three suburbs, and 4700 inhabitants.

VOL. XXIII. No. 1571.

About four miles from the town is a hill called Stahlberg, with mines of iron, which is converted into steel, and manufactured in the town into knives, awls, needles, and other hardware. In the neighbourhood there are several salt-works. In the 16th century, the Protestant princes of the empire held several meetings here, in which they adopted resolutions of great importance to their cause: it was in 1531 that they formed here the famous league to defend the liberties of the empire against the encroachments of Charles V., and sanctioned the confession of faith drawn up by Luther. Cellarius, the well known geographer, was a native of this place; 56 miles south-west of Cassel, and 9 north of Meinungen.

SMALCALDEN, LITTLE, a town of Germany, in the Henneberg; 4 miles west from Smalcalden. It is divided by a rivulet into two parts, one of which, containing 900 inhabitants, belongs to the elector of Hesse; the other, containing 600, to Saxe-Gotha. The inhabitants manufacture hardware.

SMALCIUS (Valentine), a celebrated writer in favour of Unitarianism, was born in Thuringia, and died at Cracow, in Poland, in 1622. His principal work was "A Treatise on the Divinity of Christ," written in the Latin language, and printed in 1608.

SMALESMOUTH, a hamlet of England, in Northumberland; 21 miles north-west of Hexham.

SMALL, *adj.* [ɹmal, Saxon; *smal*, Dutch; *smaa*, Icelandic.]—Little in quantity.

Death only this mysterious truth unfolds,
The mighty soul how *small* a body holds.

Dryden.

All numeration is but still the adding of one unit more, and giving to the whole together a distinct name, whereby to distinguish it from every *smaller* or greater multitude of units. *Locke*.—The ordinary *smallest* measure we have is looked on as an unit in number. *Locke*.—Little in degree.—There arose no *small* stir about that way.—Little in importance.—Is it a *small* matter that thou hast taken my husband? *Genesis*.—Some men's behaviour is like a verse, wherein every syllable is measured: how can a man comprehend great matters that breaketh his mind too much to *small* observations? *Bacon*.—*Small* is the subject, but not so the praise. *Pope*.—Little in the principal quality: as *small* beer; not strong; weak.—Gentle; soft; melodious.

The company answered all
With voices sweet entuned, and so *small*,
That me thought it the sweetest melody,
That ever I heard in my life soothly.

Chaucer.

SMALL, *s.* The narrow part of any thing. It is particularly applied to the part of the leg below the calf.—Her garment was cut after such a fashion, that though the length of it reached to the ancles, yet in her going one might sometimes discern the *small* of her leg. *Sidney*.

To SMALL, *v. a.* To make little or less. *Obsolete*.

SMALL ISLES, a parish of Scotland, in the Hebrides, comprehending the islands of Eigg, Rum, Canna, and Muck. Population 1547.

SMALL KEY, a small island in the Eastern seas. Lat. 10. 37. N. long. 247. 16. W.

SMALL POINT, a point of the United States, on the coast of Lincoln county, forming the east limit of Casco bay.

SMALL POINT, CAPE, a cape of North America, on the coast of Maine. Lat. 43. 38. N. long. 69. 50. W.

SMALLBURGH, a parish of England, in Norfolk; 5½ miles north-east of Coltishall. Population 638.

SMALLCOAL, *s.* Formerly little wood coals used to light fires; now the dust of the larger coal.—A *smallcoal* man, by waking one of these distressed gentlemen, saved him from ten years' imprisonment. *Spectator*.

SMALLCRAFT, *s.* A little vessel below the denomination of ship.

Shall he before me sign, whom t' other day
A *smalcraft* vessel hither did convey;
Where stain'd with prunes, and rotten figs, he lay. *Dryden*.

SMALLEY, a township of England, in Derbyshire; 6½ miles north-east of Derby. Population 646.

SMALL HOLM, a parish of Scotland, in the county of Roxburgh, of an irregular triangular form, and in length about 4 miles. Population 455.

SMA'LLISH, *adj.* Somewhat small.
His shulderis of large brede;
And, *smalish* in the girdelstede,
He semed like a putreiture. *Chaucer*.

SMALLPOX, *s.* An eruptive distemper of great malignity; *variola*. See PATHOLOGY.—He fell sick of the *smallpox*. *Wiseman*.

SMALLS, THE, rocks in the Irish sea, on which a lighthouse is erected for the direction of seamen, about 15 miles south-west from St. David's Head. Lat. 51. 44. N. long. 5. 33. W.

SMALLWOOD, a township of England, county of Cheshire; 3 miles east-by-south of Sandbach. Population 496.

SMA'LLY, *adv.* In a little quantity; with minuteness; in a little or low degree. *Unused*.—A child that is still, and somewhat hard of wit, is never chosen by the father to be made a scholar, or else, when he cometh to the school, is *smallly* regarded. *Ascham*.

SMA'LNESSE, *s.* Littleness; not greatness.—The parts in glass are evenly spread, but are not so close as in gold; as we see by the easy admission of light, and by the *smalness* of the weight. *Bacon*.—The *smalness* of the rays of light may contribute very much to the power of the agent by which they are refracted. *Newton*.—Want of strength; weakness.—Gentleness; softness: as, “the *smalness* of a woman's voice.” *Barret*.

SMALT, *s.* [*smalto*, Ital., *smelta*, *smelta*, to melt, Su. Goth.]—A beautiful blue substance, produced from two parts of zaffre being fused with three parts common salt, and one part potash. *Hill*.—Blue glass.

SMA'RAGD, *s.* [*smaragde*, old French; *σμαραγδος*, Gr.] The emerald.—The fourth was of a *smaragde* or an emerald. *Bale*.

SMA'RAGDINE, *adj.* Made of emerald; resembling emerald.

SMARAGDUS MONS, in Ancient Geography, a mountain of Egypt, on the coast of the Arabic gulf, between Nechesia and Lepte Extrema, according to Ptolemy.

SMARDEN, a village and parish, formerly a market town of England, in Kent, situated by the Medway; 8 miles north-east of Carnbrook, and 56 south-east-by-east of London. Population 890.

SMARIS, in Ichthyology, the name of a small fish caught in the Mediterranean, and common in the markets of Rome, Venice, and elsewhere, and sold to the poorer sort of people at a very small price. This, in the Linnæan system, is a species of the SPARUS; which see.

It is seldom of more than a finger's length, and of a round, not flattened body, of a dusky blackish-green on the back and sides, and not marked with any variegations, but having on each side, near the middle of the body, one large black spot; its gill-fins and tail are of a faint red; the iris of the eyes is of a brownish-white, and the tail is forked.

SMART, *s.* [*μεορτα*, Saxon; *smert*, Dutch; *smarta*, Swedish.]—Quick, pungent, lively pain.—Then her mind, though too late, by the *smart*, was brought to think of the disease. *Sidney*.—Pain; corporal or intellectual.—It increased the *smart* of his present sufferings, to compare them with his former happiness. *Atterbury*.

To SMART, *v. n.* [*μεορταν*, Saxon; *smerten*, Dutch.] To feel quick lively pain.—When a man's wounds cease to *smart*, only because he has lost his feeling, they are nevertheless mortal. *South*.—To feel pain of body or mind.

No creature *smarts* so little as a fool.
Let peals of laughter, Codrus! round thee break,
Thou unconcern'd canst hear the mighty crack. *Pope*.

SMART, *adj.* Pungent; sharp; causing smart.—How *smart* a lash that speech doth give my conscience! *Shakespeare*.—Quick; vigorous; active.—That day was spent in *smart* skirmishes, in which many fell. *Clarendon*.—Producing any effect with force and vigour.

After showers,
The stars shine *smarter*, and the moon adorns,
As with unborrow'd beams, her sharpen'd horns. *Dryden*.

Acute; witty.—It was a *smart* reply that Augustus made to one that ministered this comfort of the fatality of things: this was so far from giving any ease to his mind, that it was the very thing that troubled him. *Tillotson*.—Brisk; vivacious; lively.—You may see a *smart* rhetorician turning his hat in his hands, during the whole course of his harangue. A deaf man would think he was cheapening a beaver. *Addison*.

SMART, *s.* A fellow affecting briskness and vivacity. *An old cant word*.

SMART (Peter), a native of Warwickshire, was educated at Westminster School, from whence he removed to Oxford, and became a student of Christchurch. After entering orders, he obtained a prebend in Durham cathedral, where he distinguished himself by his opposition to the ceremonies in religion, and the removal of the altar from the middle of the choir to the east end of the church. He preached and printed some sermons on the vanity and downfall of superstition and popish ceremonies, for which he was degraded from the ministry, and imprisoned. He died in 1642. He was likewise author of poems, Latin and English.

SMART (Christopher), a poet, born in 1722, at Shipbourne, in Kent, was educated at Maidstone and Durham schools, and at Pembroke Hall, Cambridge. He died in 1771, leaving behind him a widow and two daughters, who settled as booksellers at Reading. His works consist of fables, sonnets, odes, prize-poems, &c., printed at Reading, in 2 vols. 12mo. 1791. He published a prose translation of the works of Horace, and translations in verse of the Psalms, and of the fables of Phædrus. Recently (1827), a work by this author, and which has been long lost, has been discovered and published. It is said to contain passages of considerable beauty.

To SMA'RTEN, *v. a.* To make smart or showy: an unauthorized term.

To SMA'RTLE, *v. n.* To smartle away, is to waste or melt away. *North*.

SMA'RTLY, *adv.* After a smart manner; sharply; briskly; vigorously; wittily.—The art, order, and gravity of those proceedings, where short, severe, constant rules were set, and *smartly* pursued, made them less taken notice of. *Clarendon*.

SMARTNESS, *s.* The quality of being smart; quickness; vigour.—What interest such a *smartness* in striking the air hath in the production of sound, may in some measure appear by the motion of a bullet, and that of a switch or other wand, which produce no sound, if they do but slowly pass through the air; whereas if the one do *smartly* strike the air, and the other be shot out of a gun, the celerity of their percussions on the air puts it into an undulating motion, which, reaching the ear, produces an audible noise. *Boyle*.—Liveliness; briskness; wittiness.—I defy all the clubs to invent a new phrase, equal in wit, humour, *smartness*, or politeness, to my set. *Swift*.

To SMASH, *v. a.* [*smaccare*, Ital. to crush; *schmeissen*, Germ. to throw, to cast down.] To break in pieces.

To SMATCH, *v. n.* To have a taste. *Obsolete*.

SMATCH, in Ornithology, a name by which the common *œnanthe* is called in many parts of England.

To SMA'TTER, *v. n.* [corrupted from *smack* or *taste*, according to Dr. Johnson. Serenius and Jamieson refer it to the Icel. *smætr*, contemptus; diminutus, from *smad*, *smatt*, small.] To have a slight taste; to have a slight, superficial, and imperfect knowledge. To talk superficially or ignorantly.

In proper terms, such as men *smatter*,
When they throw out and miss the matter. *Hudibras*,
SMA'TTER,

SMATTER, *s.* Superficial or slight knowledge.—All other sciences were extinguished during this empire, excepting only a *smatter* of judicial astrology. *Temple.*

SMATTERER, *s.* One who has a slight or superficial knowledge. *Huloet.*—*Smatterers* in other men's matters, talebearers. *Burton.*—Every *smatterer* thinks all the circle of arts confined to the closet of his breast. *Bp. Hall.*

SMATTERING, *s.* Superficial knowledge.—A quarrelsome man in a parish, especially if he have gotten a little *smattering* of law, is like a colic in the guts, that tears, and wrings, and torments a whole township. *Bp. Hall.*—A *smattering* in knowledge (which is the measure of a wit) disposes men to atheism; whereas a full proportion would carry them through to the sense of God and religion. *Goodman.*

To **SMEAR**, *v. a.* [*meapz*, Saxon; *smeeren*, Teut. From *meapz*, Sax. marrow; *merghe*, Teut.; *merg*, Su. Goth. the same; the Icel. *smior*, Germ., &c., omnis generis pinguedo, as butter, ointments, &c., being from the same root, as marrow, Dr. Jamieson well observes, would be the first fat substance known.] To overspread with something viscous and adhesive; to besmar.

Then from the mountain hewing timber tall,
Began to build a vessel of huge bulk,
Smeared round with pitch.

Millon.

To soil; to contaminate.

Why had I not, with charitable hand,

Took up a beggar's issue at my gates?

Who *smeared* thus, and mir'd with infamy,

I might have said no part of it is mine.

Shakspeare.

SMEAR, *'s.* An ointment; any fat liquor or juice. *Unuscd.*

SMEAR-DAB, a fish.

SME'ARY, *adj.* Dawby; adhesive.

A *smeary* foam works o'er my grinding jaws,
And utmost anguish shakes my labouring frame.

Rowe.

SMEATH, *s.* A sea-fowl.

SMEATON (John), an eminent civil engineer, was born on the 28th of May, 1724, at Austhorpe, near Leeds. The strength of his understanding, and the originality of his genius, appeared at an early age. When he was under fifteen years of age, he made an engine for turning, and worked several things in ivory and wood, which he presented to his friends. He made all his own tools for working in wood and metals, and he constructed a lathe, by which he cut a perpetual screw in brass, a thing but little known, and which was the invention of Mr. Henry Hindley of York, with whom Mr. Smeaton became acquainted, and indeed extremely intimate. Mr. Smeaton, by the time that he was eighteen years of age, acquired, by the strength of his genius and indefatigable industry, an extensive set of tools, and the art of working in most mechanical trades, without the assistance of a master. A part of every day was usually occupied in forming some ingenious piece of mechanism. His father was an attorney, and being desirous to bring up his son to the same profession, he brought him up to London with him in 1742, and attended the courts in Westminster-Hall; but after some time, finding that the law was not suited to his disposition, he wrote a strong memorial to his father on the subject, who immediately desired the young man to follow the bent of his inclination. In 1751 he began a course of experiments to try a machine of his own invention to measure a ship's way at sea, and also made two voyages, in company with Dr. Knight, to try the effect of it, and also for the purpose of making experiments on a compass of his own construction, which was rendered magnetical by Dr. Knight's artificial magnets. In 1753 he was elected a fellow of the Royal Society; and the number of papers which he published in their Transactions, will shew how highly he deserved the honour of being enrolled a member of that body. In 1759 he received from the council of the Royal Society, by an unanimous vote, their gold medal for his paper, entitled

"An Experimental Inquiry concerning the natural Powers of Water and Wind to turn Mills and other Machines, depending on a circular Motion." The paper was the result of experiments made on working models in the years 1752 and 1753, though not communicated to the society till 1759; and in the interval he had opportunities of carrying into effect several of his inventions and theories, which rendered his paper of much more real value to the society and the public at large. In 1755, Eddystone Light-house was burnt down, and Mr. Smeaton being recommended to the proprietors of that building as an engineer in every way calculated to rebuild it, he undertook the work, which was completed in 1759, much to the satisfaction of the parties concerned. Still he was not fully employed as a civil engineer, for in the year 1764, while he was in Yorkshire, he offered himself as a candidate for the office of receiver to the Derwent-water estate; and in the course of the year he obtained the appointment in a manner most flattering to himself, inasmuch as his own merit carried the point in opposition to two other candidates who were strongly recommended and powerfully supported. He was very happy in this appointment, particularly in the assistance which he received from Mr. Walton, the other receiver, who took upon himself the management of the accounts, leaving Mr. Smeaton leisure and opportunity to exert his abilities on public works. In the year 1773, he had so much business as a civil engineer, that he wished to resign this appointment; but his friends prevailed on him to continue in office two years longer. After this, Mr. Smeaton was employed on many works of great public utility. He made the river Calder navigable, a work that required talents of the very first order, owing to the impetuous floods in that river; he planned and attended to the execution of the great canal in Scotland, for conveying the trade of the country either to the Atlantic or German Ocean; and as a proof of the disinterestedness of his habits, having brought it to the place originally intended, he declined a handsome yearly salary, in order that he might attend to other business. On the opening of the great arch at London-bridge, the excavation around and under the starlings was so considerable, that the bridge was thought to be in great danger of falling. Mr. Smeaton was then in Yorkshire, and was sent for express, and he arrived without any delay. "I think," says his biographer, "that it was on a Saturday morning when the apprehension of the bridge was so general, that few persons would venture to pass over or under it." Mr. Smeaton applied himself immediately to examine it, and to sound about the starlings as minutely as possible, and the committee being called together, adopted his advice, which was to repurchase the stones that had been taken from the middle Pier, then lying in Moorfields, and to throw them into the river to guard the starlings. In this way Mr. Smeaton probably saved London-bridge from falling, and secured it till more effectual methods could be adopted."

Mr. Smeaton was appointed engineer to Ramsgate harbour, and brought it into a state of great utility by various operations, of which he published an account in 1791. The variety of mills which Mr. Smeaton constructed, shews the great uses which he made of his experiments already referred to; for it was a rule with him, from which he never willingly deviated, not to trust to theory in any case, where he could have an opportunity to investigate a subject by real trial. He built a steam-engine at Austhorpe, and made a vast number of experiments with it to ascertain the power of Newcomen's engine which he improved and brought to a far greater degree of perfection, both in its construction and powers, than it was before. Mr. Smeaton, during many years of his life, was a frequent attendant upon parliament, his opinion on various works begun or projected being continually called for. And in these cases the strength of his judgment and perspicuity of expression had full scope. It was his constant custom, when applied to plan or support any measure, to make himself fully master of the subject, to understand its merits and probable defects, before he would engage

engage in it. By this caution, added to the clearness of his expression, and the integrity of his heart, he seldom failed to obtain for the bill which he supported the sanction of an act of parliament. No one was ever heard with more attention, nor had any one ever more confidence placed in his testimony. In the courts of law he had several compliments paid him from the bench by Lord Mansfield and other judges, for the new light that he always threw upon difficult subjects. About the year 1785, the health of this excellent man began to decline, and he took the resolution to avoid all the business he could, in order that he might have leisure to publish an account of his inventions, improvements, and works, by which he conceived he should be doing a public benefit to his country and the world. In September 1792, he had a paralytic seizure, which put a period to his life in about six weeks.

In all the social duties of life he was exemplary: his manners were simple, and his mode of life abstemious. He was singularly moderate in his pecuniary concerns. He was a friend and encourager of merit wherever he discerned it, and many persons were indebted to him for important assistance on their entrance into life. Mr. Smeaton was the institutor, in 1771, of a society of civil engineers, which was dissolved at his death, but afterwards renewed; they published, in 1797, a volume of his Reports. For his works in constructing bridges, mills, harbours, engines, &c., see his Reports, in 3 vols. 4to.

SMEATON, GREAT, a village of England, North Riding of Yorkshire; 7 miles north-by-west of Northallerton.

SMEATON, LITTLE, a hamlet of England, North Riding of Yorkshire; about 2 miles from the foregoing.

SMEATON, KIRK, and **SMEATON, LITTLE**, two townships of England, West Riding of Yorkshire; 6½ miles south-east of Pontefract.

SMEDMORE, a small hamlet of England, in the isle of Purbeck, Dorsetshire, near the Channel.

SMEETH, a parish of England, in Kent; 5 miles south-east of Ashford.

To SMEETH, or SMUTCH, v. a. [ʃmiððe, Saxon.] To smoke; to blacken with smoke. *Not in use.*

SMEETON WESTERBY, a township of England, county of Leicester; 5 miles north-west of Market Harborough.

SME'GMATIC, *adj.* [σμηγμα, Gr.] Soapy; detergent.

To SMELL, v. a. pret and part. *smelt.* *Etymology unknown.* To perceive by the nose.—Their neighbours hear the same music, or *smell* the same perfumes with themselves: for here is enough. *Collier.*—To find out by mental sagacity.—The horse *smelt* him out, and presently a croquet came in his head how to countermine him. *L'Estrange.*

To SMELL, v. n. To strike the nostrils.—The king is but a man as I am: the violet *smells* to him as it does to me; all his senses have but human conditions. *Shakspeare.*—To have any particular scent: with *of.*—Honey in Spain *smelleth* apparently of the rosmary or orange, from whence the bee gathereth it. *Bacon.*—To have a particular tincture or smack of any quality.

My unsoil'd name, the austereness of my life,
Will so your accusation overweigh,
That you shall stifle in your own report,
And *smell* of calumny.

Shakspeare.

To practice the act of smelling.—I had a mind to know whether they would find out the treasure, and whether *smelling* enabled them to know what is good for their nourishment. *Addison.*—To exercise sagacity.

Down with the nose, take the bridge quite away,
Of him that his particular to forefend,
Smells from the general weal.

Shakspeare.

SMELL, s. Power of smelling; the sense of which the nose is the organ.

Next in the nostrils she doth use the *smell*,
As God the breath of life in them did give;
So makes he now this power in them to dwell,
To judge all airs, whereby we breath and live. *Davies.*

Scent; power of affecting the nose.—There is a great variety of *smells*, though we have but a few names for them: the *smell* of a violet and musk, both sweet, are as distinct as any two smells. *Locke.*

SME'LLER, s. One who smells. One who is smelled.

These left-handed rascals,
The very vomit, sir, of hospitals,
Bridewells, and spittal-houses; such nasty *smellers*,
That if they'd been unfurnish'd of club-truncheons,
They might have cudgell'd me with their very stinks.

Beaum. and Fl.

The organ of smelling.

SME'LLFEAST, s. A parasite; one who haunts good tables.

Smellfeast Vitellio

Smiles on his master for a meal or two.

Bp. Hall.

SMELLIE (William), M.D., an eminent teacher and practitioner of midwifery, was a native of Scotland. After having successfully practised this art in a small town of that country for a period of nineteen years, he removed to London, and in 1741 was living in Pall-Mall, where Dr. William Hunter resided with him. This circumstance implies, that he had already risen to considerable eminence in his line, and he was in fact in high repute as a lecturer, being attended by a numerous concourse of pupils of both sexes. This reputation, indeed, he appears to have merited by his talents and assiduity; for he was the first in proposing many of the practical improvements, which modern experience has admitted into the practice of midwifery, and by his mechanical skill he contributed materially to the improvement of the instruments employed to facilitate delivery in difficult cases, and to the disuse of those which were less safe and convenient; and he established some useful rules for their application. He was the first, writer, who, by accurately determining the shape and size of the pelvis, and of the head of the fœtus, and comparing their proportions, and the true position of the fœtus in utero, pointed out clearly the whole progress of the child during parturition: and his opinions were subsequently confirmed, especially by Dr. Hunter, from observations made after death, where parturition had not been completed. The improvement which he made in the forceps, which has since been universally adopted, is well known, and he taught the present manual mode of using them. He abolished many superstitious notions and erroneous customs that prevailed in the management of parturient women and of the children; and he had the satisfaction to see the greater part of his maxims adopted, not only in this island, but by many of the most respectable practitioners in Europe.

In the year 1752, he published the substance of his lectures, in the improvement and correction of which he affirms, that he had spent six years, in one volume 8vo., under the title of "A Treatise on Midwifery;" to which, in 1754, he added a second volume of cases, intended to illustrate the precepts laid down in the former. An additional volume of cases, which he promised in his preface, did not appear till about five years after his death, in 1768. The whole formed the most complete system of the art of midwifery, which had then appeared and was regarded as the best authority: it was, in fact, the result of an extensive experience of forty years, and contained a very comprehensive view of the various circumstances, that usually occur, with instructions respecting the best means of obviating them. In 1754, Dr. Smellie likewise published a set of anatomical plates, of a large folio size, and thirty-six in number, which were intended farther to elucidate the doctrines of his lectures. He was remarkably candid and modest in his demeanour, and upright and disinterested in

all his concerns. His reputation and success were the result of his merit alone; for his awkwardness of person and unpolished manners prevented him from rising to the highest line of practice; but he was much esteemed by his pupils, and by those who employed him. He ultimately retired to Lanark, where he spent the latter years of his life, and died in 1763, at an advanced age.

SME'LLING, *s.* The sense by which smells are perceived.—If the whole body were an eye, where were the hearing? if the whole were hearing where were the *smelling*? *1 Cor.*

SMELT. The pret. and part. pass of *smell*.

A cudgel he had felt,

And far enough on this occasion *smelt*. *King.*

SMELT, *s.* [*melt*, Saxon.] A small sea-fish.—Of round fish there are brit, sprat, barn, *smelts*. *Carew.*—A salmon in its first year: so called in the north of England.

To SMELT, *v. n.* [*smalta*, Icel.; *smaelta*, *smelta*, Su. Goth., *smelten*, Dutch.] To melt ore, so as to extract the metal.—He [Ray] added the way of *smelting* and refining such metals and minerals as England doth produce. *Derham.*

SME'LTR, *s.* One who melts ore.

To SMERK, *v. n.* [*smęcjan*, Saxon.] To smile wantonly, or pertly; to seem highly pleased; to seem favourable; to fawn.—Certain gentlemen of the gown, whose aukward, spruce, prim, sneering, and *smirking* countenances have got good preferment by force of cringing. *Swift.*

SMERK, or **SMIRK**, *s.* [*smęrc*, Saxon, *risus*.] A kind of fawning smile.—A constant *smirk* upon the face, and a whiffling activity of the body, are strong indications of futility. *Chesterfield.*

SMIRKY, or **SMIRK**, *adj.* Nice; smart; jaunty.

Seest, how brag yon bullocke bears,
So *smirke*, so smoothe, his prickled ears:
His horns been as rainbow bent,
His dew-lap as lithe as lass of Kent.

Spenser.

SME'RLIN, *s.* A fish; *cobitis aculeata*.

SMERWICK, a village of Ireland, in the county of Kerry. This place gives name to a place called Smerwick Harbour, between Ballydavid Head and Dunorling Head. Here was a fortress built by the Spaniards, who made good their landing, called *Fort del Orc*, in the year 1579, and enlarged in 1580, on the edge of a cliff, which formed a small isthmus, cut through to form an island, and the communication kept by a drawbridge. In the latter year it was taken by the English. According to the tradition of the country people, the Pope's consecrated banner was buried near this place, with a considerable quantity of treasure. Some corselets of gold were discovered some years ago, about a mile from the fort. Lat. 52. 11. N. long. 10. 16. W.

SMESTALL, a small river of England, in Staffordshire, which runs into the Stour, above Stourton Castle.

SMETHCOTT, a parish of England, in Salop; 9½ miles south-south-west of Shrewsbury.

SMETHWICK, a township of England, in Cheshire; 3½ miles north-east of Sandbach.

To SMICKER, *v. n.* [*smickra*, Swed. *blandire*.] To smirk; to look amorously or wantonly. *Kersey. Unused.*

SMICKERING, *s.* A look of amorous inclination. *Unused.*—We had a young doctour, who rode by our coach, and seemed to have a *smickering* to our young lady of Pilton. *Druden.*

SMICKET, *s.* [Diminutive of *smock*, *smocket*, *smicket*.] The under garment of a woman.

SMIDARY, a town of Bohemia; 49 miles east-by-north of Prague. Population 800.

SMIDDY, *s.* [*schimide*, German; *smrðde*, Sax. See **SMITH**.] The shop of a smith. This word is still used in the north of England.—His pate is his anvil, the forge his study; so as I may properly apply those antient verses, upon this occasion, to our truant chanteryman:

VOL. XXIII. No. 1571.

That scholar well deserves a widdie,

Who makes his study of a *smiddie*. *Comment on Chaucer.*

To SMIGHT. For *smite*.

As when a griffon, seized of his prey,
A dragon fierce encountreth in his flight,
Through widest air making his idle way,
That would his rightful ravin rend away:
With hideous horror both together *smight*,
And souce so sore that they the heavens affray. *Spenser.*

SMILAX [of Pliny. *Smilax* of Dioscorides. Derivation unknown], in Botany, a genus of the class dioecia, order hexandria, natural order of sarmentaceæ, asparagi (*Juss.*)—Generic Character. Male—Calyx: perianth six-leaved, spreading, bell-shaped; leaflets oblong, approximating at the base, bent back and spreading at the tip. Corolla none, unless the calyx be taken for it. Stamina: filaments six, simple. Anthers oblong. Female—Calyx as in the male, deciduous. Corolla none. Pistil: germ ovate. Styles three, very small. Stigmas oblong, bent back, pubescent. Pericarp: berry globular, three celled. Seeds two, globular.—*Essential Character.* Calyx six-leaved. Corolla none. Female: styles three. Berry three-celled. Seeds two.

I.—Stem prickly, angular.

1. *Smilax aspera*, or rough smilax.—Stem prickly, angular; leaves toothed and prickly, cordate, nine-nerved. Roots perennial, composed of many thick fleshy fibres, spreading wide, and striking deep. Stems several, slender, angular, armed with short crooked spines, and having clasps on their sides, by which they fasten themselves to any neighbouring plant for support, and rise five or six feet high. Flowers axillary, in short bunches, small and whitish. Those on the female plants are succeeded by red berries which ripen in autumn. The berries are sometimes black; and there is a variety which has the leaves eared at the base.—Native of the South of France, Italy, Spain, Carniola; near Tripoli, and between Rama and Joppa.

2. *Smilax excelsa*, or tall smilax.—Stem prickly, angular; leaves unarmed, cordate, nine-nerved. Roots like those of the preceding. The flowers and fruits are like those of the first sort.—Native of Syria.

3. *Smilax Zeylanica*, or Ceylon smilax.—Stem prickly, angular; leaves unarmed; stem-leaves cordate; branch-leaves ovate-oblong.—Native of Ceylon.

4. *Smilax sarsaparilla*, or medicinal smilax or sarsaparilla.—Stem shrubby, prickly, angular; leaves unarmed, ovate, retuse, mucronate, three-nerved. Root perennial. Flowers lateral, usually three or four together upon a common peduncle.—Native of America, Peru, Brasil, Mexico and Virginia.

5. *Smilax oblongata*.—Stem prickly, angular; leaves oblong, acuminate, smooth, three-nerved; nerves prickly underneath.—Native of the West Indies, in the Carribee islands and St. Vincent.

II.—Stem prickly, round.

6. *Smilax China*, or Chinese smilax.—Stem prickly, roundish; leaves unarmed, ovate-cordate, five-nerved. Flowers in close bunches. Berries red.—Native of China, Cochinchina and Japan.

7. *Smilax rotundifolia*, or round-leaved smilax.—Stem prickly, round; leaves unarmed, cordate, acuminate, five or seven-nerved.—Native of Canada.

8. *Smilax laurifolia*, or bay-leaved smilax.—Stem prickly, round; leaves unarmed, ovate-lanceolate, three-nerved. Flowers axillary in round bunches, and succeeded by black berries.—Native of Virginia and Carolina.

9. *Smilax tamnoides*, or black briony-leaved smilax.—Stem prickly, round; leaves unarmed, cordate, oblong, seven-nerved. The flowers come out in long loose bunches from the sides of the stalks, and the berries are black.—Native of North America.

10. *Smilax caduca*, or deciduous smilax.—Stem prickly, round; leaves unarmed, ovate, three-nerved. Umbels of flowers below the leaves, on peduncles which are scarcely

longer than the petiole.—Native of Canada and of the woods of Cochin-china.

III.—Stem unarmed, angular.

11. *Smilax bona nox*, or ciliated smilax.—Stem unarmed, angular; leaves ciliate-prickly.—Native of North America.

12. *Smilax herbacea*, or herbaceous smilax.—Stem unarmed, angular; leaves unarmed, ovate, seven-nerved.—Native of North America.

13. *Smilax tetragona*, or square-stalked smilax.—Stem unarmed, four-cornered; leaves cordate, five-nerved, acuminate, unarmed.

IV.—Stem unarmed, round.

14. *Smilax lanceolata*, or spear-leaved smilax.—Stem unarmed, round; leaves unarmed, lanceolate.—Native of Virginia, Carolina and Cochin-china.

15. *Smilax pseudo-China*, or bastard Chinese smilax.—Stem unarmed, round; leaves unarmed; stem-leaves cordate; branch-leaves ovate-oblong, five-nerved. Stem shrubby, very long; slender, with a few scandent branches.—Native of Virginia, Jamaica, China and Cochin-china.

16. *Smilax ripogonum*.—Stem unarmed, round, rooting; leaves ovate-lanceolate, acuminate, five-nerved; flowers hermaphrodite.—Native of New Zealand.

17. *Smilax purpurata*.—Stem shrubby, unarmed, round, dichotomous; leaves cordate-acute, acuminate, clawed, quite entire, five-nerved; peduncles axillary, umbelliferous.—Native of New Caledonia.

18. *Smilax aristolochiaefolia*.—Stem prickly, round; leaves unarmed, sagittate, bluntish, three-nerved.—Found at Vera La Cruz, in New Spain.

19. *Smilax spinosa*.—Stem prickly, round; leaves ovate-lanceolate; nerves of the leaves prickly underneath.—Found at La Vera Cruz.

20. *Smilax Virginiana*.—Stem prickly, angular; leaves lanceolate, unarmed, acuminate.—Grows naturally in Jamaica.

21. *Smilax canellæfolia*.—Stem unarmed, round; leaves unarmed, ovate, three-nerved.—Grows naturally in Jamaica.

22. *Smilax humilis*.—Stem unarmed, round; leaves unarmed, ovate-cordate, three-nerved; flowers corymb.—Grows naturally in Carolina.

23. *Smilax hederæfolia*.—Stem unarmed, round; leaves unarmed; stem-leaves cordate; racemes ovate-oblong.—Grows naturally in Jamaica and also in Maryland.

Propagation and Culture.—These plants are many of them preserved in the gardens of the curious for the sake of variety, but some of them may so be disposed as to make them ornamental, because those sorts which grow naturally in North America, and the two first sorts are so hardy as to thrive in the open air in England; and as they retain their verdure all the year, if the plants are placed on the borders of woods or groves in gardens, and their branches properly supported, they will screen the nakedness of the ground under the trees from sight, and in winter, when their leaves are in beauty, they will make a pleasing variety, when the plants are properly intermixed with other evergreens; and as some of the sorts will rise five or six feet high, they will shut out from view any disagreeable objects.

Those sorts which require a stove to protect them in winter are little esteemed, because they require much room; and as their flowers have no beauty to recommend them, few persons care to be at the trouble of preserving them for that of their leaves.

They are all propagated by seeds, which must be procured from the countries where they naturally grow, for there are none of these plants which produce ripe seeds here.

To SMILE, *v. n.* [*smuylen*, Teut.; *smila*, Dan. and Swed. *subridere*. *Serenius*.] To expand the face with pleasure; to express kindness, love, or gladness, by the countenance.—A fool lifteth up his voice with laughter, but a wise man doth scarce smile a little. *Ecclus.*

The smiling infant in his hand shall take
The crested basilisk and speckled snake.

Pope.

To express slight contempt by the look.
Should some more sober critic come abroad,
If wrong, I smile; if right, I kiss the rod.

Pope.

To look gay or joyous.

For see the morn,
All unconcern'd with our unrest, begins
Her rosy progress smiling.

Milton:

The desert *smil'd*,
And paradise was open'd in the wild.

Pope.

To be favourable; to be propitious.

Then let me not let pass

Occasion which now smiles.

Milton.

To SMILE, *v. a.* To awe with a contemptuous smile.
Unused.

The courtly Roman's smiling path to tread,
And sharply smile prevailing folly dead.

Young.

SMILE, *s.* A slight expansion of the face; a look of pleasure or kindness.

Sweet intercourse

Of looks and smiles: for smiles from reason flow,
To brute denied, and are of love the food.

Milton.

Gay or joyous appearance.

Yet what avail her unexhausted stores,
Her blooming mountains and her sunny shores,
With all the gifts that heav'n and earth impart,
The smiles of nature and the charms of art.

Addison.

SMILER, *s.* One who smiles.

Know, *smiler*, at thy peril thou art pleas'd;
Thy pleasure is the promise of thy pain.

Young.

SMILINGLY, *adv.* With a look of pleasure.

His flav'd heart,

'Twixt two extremes of passion, joy and grief,
Burst smilingly.

Shakspeare.

To SMILT, *v. n.* [corrupted from *smelt*.] Having too much water, many corns will *smilt*, or have their pulp turned into a substance like thick cream. *Mortimer.*

SMINTHEAN, SMINTHEUS, *σμιθνευς*, in Antiquity, an epithet given to Apollo; from the Greek *σμιθος*, a rat. There are two different accounts of the origin of this appellation: the first is, that, in the city of Chrysa in Mysia, was a priest of Apollo, called *Crinis*, with whom that god being offended, sent a herd of rats to spoil all his lands; but *Crinis* appeasing the deity, he came in person to his assistance, took up his lodgings with *Crinis's* shepherd, told him who he was, and destroyed all the rats with his arrows; in memory of which *Crinis* built a temple to his deliverer, under the name of *Apollo Smintheus*.

To SMIRCH, *v. a.* To cloud; to dusk; to soil.

I'll put myself in poor and mean attire,

And with a kind of umber *smirch* my face.

Shakspeare.

SMIRHILL, a township of England, in Derbyshire; 4 miles south-south-west of Bakewell.

To SMIRK, *v. n.* To look affectedly soft or kind. See SMERK.

SMIT. The participle passive of *smit*.

Fir'd with the views this glitt'ring scene displays,

And *smit* with passion for my country's praise,

My artless reed attempts this lofty theme,

Wherc sacred Isis rolls her ancient stream.

Tickell.

To SMITE, *v. a.* pret. *smote*; part. pass. *smit*, *smitten*. [*smitan*, Saxon; *smijten*, Dutch.] To strike; to reach with a blow; to pierce.

So sweet a kiss the golden sun gives not
To those fresh morning drops upon the rose,
As thy eye-beams, when their fresh rays have *smote*
The night of dew that on my cheeks down flows.

Shakspeare.

The sword of Satan with steep force to *smite*,
Descending.

Milton.

To

To kill; to destroy.—The servants of David had *smitten* of Benjamin's men, so that three hundred and threescore died. *2 Sam.*—To afflict; to chasten. *A scriptural expression.*—Let us not mistake God's goodness, nor imagine, because he *smites* us, that we are forsaken by him. *Wake.*—To blast. Also *scriptural.*—And the flax and the barley was *smitten*, but the wheat and the rye not. *Exod.*—To affect with any passion. *This is almost the only modern use of the word.*

I wander where the Muses haunt,
Clear spring, or shady grove, or sunny hill,
Smit with the love of sacred song.

Milton.

To SMITE, *v. n.* To strike; to collide.—The heart melteth, and the knees *smite* together. *Nahum.*

SMITE, *s.* A blow. *Used in the midland counties.*

SMIT'ER, *s.* One who smites.—I gave my back to the *smiters*, and my cheeks to them that plucked off the hair. *Isaiah.*

SMITH, *s.* [ʃmɪð, Saxon; ʃmɪtan, to beat, to strike.] One who forges with his hammer; one who works in metals.

He doth nothing but talk of his horse, and can shoe him:
I am afraid his mother played false with a *smith*.

Shakspeare.

He that makes or effects any thing.

The doves repented, though too late,
Become the *smiths* of their own foolish fate.

Dryden.

To SMITH, *v. a.* [ʃmɪðian, Sax.] To beat into shape, as a smith. See SMITHING.

A smith, men callen dan Gerveis,
That in his forge *smithed* plow-harneys.

Chaucer.

SMITH (Adam), a distinguished writer in moral and political philosophy, was born in the year 1723, at Kirkaldy, in Fifeshire, where his father held the comptrollership of the customs. He received his early education under the care of his mother, then a widow, at the school of Kirkaldy, where he was noticed for an extraordinary passion for reading. At the age of fourteen he was removed to the university of Glasgow, in which he spent three years, attending, among the other lectures, those of the celebrated professor Hutcheson. In 1740 he was sent as a pensioner to Balliol college, Oxford. Here he spent seven years, and it is thought that during this period he employed himself chiefly in acquiring an exact knowledge of the languages, ancient and modern, and in cultivating an English style, by the practice of translating works of high reputation into his own language. Upon quitting the university he abandoned all thoughts of entering into the English church, for which purpose he had been sent thither, and went to Edinburgh, and found a friend and patron in Lord Kaimes. In 1751 he was elected professor of logic at Glasgow, from which he was removed, in the following year, to that of moral philosophy. He now felt that he was in a situation accommodated to his talents and disposition, and in later life he was accustomed to speak of his residence and employment at Glasgow as the most useful and happiest portion of his life. His lectures, both logical and moral, were extremely popular; and his manner of delivering them, if not graceful, was said to be highly impressive. In those on moral philosophy were contained the rudiments of his two most celebrated works as an author. Of these, the first is entitled "The Theory of Moral Sentiments," and appeared in the year 1759. The fundamental principle is sympathy, which the author makes the source of our feelings concerning the propriety or impropriety of actions, and their good or ill desert. To this work he afterwards subjoined "A Dissertation on the Origin of Languages." These works were extremely well received, and gave him a place among the best writers of the time. They also made him known to several eminent characters; and it was in consequence of the reputation thus acquired, that he was engaged to accompany the Duke of Buccleugh in his travels. He of course resigned his office as professor, and in the beginning of the year

1764, he set out for the continent. He had now an opportunity of comparing the ideas which he had already formed respecting political economy, with those of the ablest men in foreign countries, and also with facts that presented themselves to his observation in the course of his travels. A long residence in France introduced him to the acquaintance of Turgot, Quesnai, Necker, D'Alembert, Helvetius, Marmontel, and others, to whose particular notice he was recommended by his countryman David Hume, with whom he had long been in habits of friendship. He returned to his own country in the autumn of 1766, and the following ten years he passed in retirement with his mother at the obscure town of Kirkaldy. Here he was habitually employed in reading, the fruits of which were at length given to the world in his celebrated "Inquiry into the Nature and Causes of the Wealth of Nations." This work has long been a standard work, not only in our own country, but throughout Europe. It has been studied and referred to by all who pay attention to the important political topics on which it treats. After the publication of this "Inquiry," he spent a great part of two years in London, where his society was courted by persons of the highest rank in the philosophical and literary world. In the year 1778 he obtained, through the interest of the Duke of Buccleugh, the lucrative place of a commissioner of the customs of Scotland, in consequence of which he removed to Edinburgh, which was thenceforth the place of his residence. His mother, who lived to a great age, spent her last days with him here. After the death of his friend, Mr. Hume, he published that philosopher's memoirs of his own life, with some additions, in which he expressed himself so favourably with regard to the character and opinions of the deceased, that it was readily inferred his own sentiments with respect to revealed religion could not be very different from those of his friend, which drew upon him an attack in an anonymous letter, since known to have been from the pen of the late Dr. Horne, afterwards bishop of Norwich. In 1787 he was appointed rector of the university of Glasgow, and in 1790 he died, at the age of sixty-seven. A few days before his death he caused all his papers to be burnt, except a few Essays, which have since been published.

Dr. Smith was a man of great simplicity of character, subject to absence of mind in society, and fitter for speculative than active life. He was much beloved by his friends, and possessed a calm and benignant disposition. Of the originality and comprehensiveness of his views, the extent, variety, and the correctness of his information, and the inexhaustible fertility of his invention, he has left lasting monuments behind him. To his private worth, the most certain of all testimonies may be found in that confidence, respect, and attachment, which followed him through all the various relations of life. When perfectly at ease, and when warmed with conversation, his gestures were animated and not ungraceful; and in the society of those whom he loved, his features were often brightened by a smile of inexpressible benignity.

SMITH (Sir Thomas), an eminent scholar and statesman of the 15th century, was born at Saffron-Walden, in Essex, in 1524. He was educated for, and sent early to, Queen's college, Cambridge, and by his proficiency in learning obtained a pension as king's scholar. He was sent on various embassies to the court of France, and during one of his residences in that country he composed his work "On the Commonwealth of England," by which he is chiefly known.

SMITH, a township of the United States, in Washington county, Pennsylvania. Population 1646.

SMITH, a county of the United States, on the north side of West Tennessee. Population 11,649, including 2201 slaves. Chief town, Dixon's Springs.

SMITH'S ISLAND, an island of the United States, in North Carolina, at the mouth of Cape Fear river. Cape Fear is the south-east point of it.

SMITH, CAPE, a cape on the east coast of Hudson's Bay. Lat. 61. N. long. 79. 40. W.

SMITH'S

SMITH'S INLET, a bay on the west coast of North America. The entrance is nearly closed by rocky islets, some producing shrubs and small trees, others none; with innumerable rocks, as well beneath as above the surface of the sea, rendering it a very intricate and dangerous navigation for shipping. Within the islets and rocks, the northern shore appeared the clearest. From the entrance into the inlet, whose north point lies from its south point north 20 east, about a league distant, it extends nearly in an east direction about six leagues: here it takes a turn to the north-eastward, and terminates in Lat. 51. 44. N. long. 232. 47½. E. About three leagues within the entrance, the inlet is contracted to a general width of about half a mile; though in particular places it is near twice that distance from shore to shore; both of which are formed by high rocky precipices covered with wood. This inlet was visited by Captain Vancouver, who discovered, about half way up the canal, a village of the natives, supposed to contain 200 or 250 persons. It was built upon a detached rock, connected to the main by a platform, and constructed for defence. A great number of its inhabitants, in about 30 canoes, visited Captain Vancouver's party, and used every endeavour they thought likely to prevail on them to visit their habitations. Lat. 51. 20. N. long. of the entrance 232. 12. E.

SMITH'S ISLAND, a small island near the east coast of Antigua.

SMITH'S ISLAND, a small island in the Atlantic, near the coast of Virginia. This is one of a cluster collectively called Smith's Islands. Lat. 37. 15. N. long. 75. 52. W.

SMITH'S POINT, a cape of the United States, on the coast of Virginia, forming the south limit of the Potomac. Lat. 37. 54. N.

SMITH'S POND, a lake of the United States, in Walworth, New Hampshire; 3 miles long.

SMITH'S RIVER, a river of the United States, in New Hampshire, which runs into the Merrimack, in the north part of New Chester.

SMITH'S RIVER, a river of the United States, in Rockingham county, North Carolina, which runs into the Dan.

SMITH'S RIVER. See **STAUNTON**.

SMITH'S RIVER, so called by Captains Lewis and Clarke, in honour of the American secretary of the navy. This river falls into the Missouri, on the south side, above the falls, and is about 80 yards wide. It takes its rise in the Rocky Mountains.

SMITH'S SOUND, a bay on the east coast of Newfoundland, bounded by Cape Bonavista.

SMITHCRAFT, *s.* [ʃmɪθkræft, Sax.] The art of a smith.—Inventors of pastorage, *smithcraft*, and music. *Raleigh*.

SMITHERY, *s.* The shop of a smith. Work performed in a smith's shop.—The din of all his *smithery* may some time or other possibly wake this noble duke. *Burke*.

SMITHFIELD, a hamlet of England, in Staffordshire, with a considerable pottery, situated near Newcastle-under-Lyne.

SMITHFIELD, a post township of the United States, in Providence county, Rhode Island, on the Pawtucket; 12 miles north of Providence. It contains a bank, and 10 cotton manufactories, besides others.—2d. Of Madison county, New York. It contains the village of Peterborough. Population 2651.—3d. A township of Lycoming county, Pennsylvania. Population 1084.—4th. Of Fayette county, Pennsylvania.—5th. (Lower) of Wayne county, Pennsylvania.—6th. (Lower) a township of Northampton county, Pennsylvania. Population 1236.—7th. A post township of the Isle of Wight county, Virginia, on Pagan Creek, about 6 miles above its entrance into James River.—8th. A post township and capital of Johnson county, North Carolina, on the Neuse; 110 miles north-west of Newbern. It contains a court-house and jail.—9th. Of Johnson county, North Carolina.—10th. Of Guernsey county, Ohio.—11th. Of Jefferson county, Ohio. Population 1228.—12th. Of Trumbull county, Ohio.—13th. Of Somerset county, Pennsylvania.

SMITHIA [so named in honour of James Edward Smith M.D. F.R.S., &c., president of the Linnean Society], in Botany, a genus of the class diadelphia, order decandria, natural order of papilionaceæ or leguminosæ.—Generic Character. Calyx: perianth one-leaved, two-lipped: segments ovate-lanceolate, almost equal. Corolla: papilionaceous. Standard obcordate. Wings oblong, obtuse, a little shorter than the standard. Keel linear-oblong, cloven at the base, length of the wings. Stamina: filaments ten, united into two equal bodies. Anthers oblong. Pistil: germ contracted at the base of the calyx. Style capillary, permanent. Stigma simple. Pericarp: legume inclosed within the calyx, composed of from four to seven joints; distinct, connected by the permanent style, orbicular, mucicated, one-seeded. Seeds kidney-form, compressed, smooth.—*Essential Character*. Legume with distinct one-seeded joints, connected by the style. Stamina divided into two equal bodies.

Smithia sensitiva, or annual *smithia*.—Root annual. Stem decumbent, round, even. Branches spreading very much. Leaves alternate, abruptly pinnate, composed of from four to ten obovate-oblong leaflets, bristly on the edge and along the rib beneath. Petiole very short; rachis bristly. Stipules in pairs, entire, acuminate. Racemes axillary, from three to six flowered. Peduncle longer than the petiole, filiform. Pedicels shorter than the calyx. Corolla yellow.—Native of the East Indies.

SMITHING, *s.* An art manual, by which an irregular lump, or several lumps of iron is wrought into an intended shape. *Moxon*. *Unused*.

SMITHLAND, a post township of the United States, in Livingston county, Kentucky, on the Ohio; 3 miles below the mouth of the Cumberland. Population 99.

SMITHSBOROUGH, a post village of the United States, in Oswego, New York.

SMITHSBY, a parish of England, in Derbyshire; 2½ miles north-north-west of Ashby-de-la-Zouch

SMITHTOWN, a post township of the United States, in Suffolk county, New York, on the north side of Long Island; 53 miles east of New York. Population 1592.

SMITHVILLE, a township of the United States, in Chenango county, New York. Population 995.

SMITHVILLE, a post township of the United States, in Brunswick county, North Carolina, near the mouth of Cape Fear river. Lat. 33. 54. N. long. 78. 13. W.

SMITHWICK, a village of England, in Staffordshire; 4 miles west-by north of Birmingham. Population 1328.

SMITHTHY, *s.* [ʃmɪððe, Saxon.] The shop of a smith.

His blaxing locks sent forth a crackling sound,
And hiss'd, like red hot iron, within the *smithy* drown'd.

Dryden.

SMITING-LINE, in a Ship, is a small rope fastened to the mizen-yard-arm. Its use is to loose the mizen-sail, without striking down the yard.

SMITT, *s.* The finest of the clayey ore, made up into balls; they use it for marking of sheep, and call it *smitt*. *Woodward*.

SMITTEN. The participle passive of *smite*. Struck; killed; affected with passion.—By the advantages of a good person and a pleasing conversation, he made such an impression in her heart as could not be effaced: and he was himself no less *smitten* with Constantia. *Addison*.

To **SMITTLE**, *v. a.* [ʃmɪttan, Sax.: *smetten*, Teut. to spot; ʃmɪtta, smut; *smette*, a spot.] To infect. *Used in the north of England*.

SMITTLE, or **SMITTLISH**, *adj.* Infectious. *Used in the north of England*.

SMOAKY BAY, a large bay on the west coast of the entrance into Cook's River, between Cape Douglas and Point Banks.

SMOAKY CAPE, a cape on the east coast of New Holland. Lat. 30. 55. S. long., according to Captain Flinders, 153. 4. E.

SMOCK, *s.* [ʃmoc, Sax.] The under garment of a woman; a shift.

Reads

Reads Malbranche, Boyle, and Locke:
Yet in some things, methinks, she fails,
'Twere well, if she would pare her nails,
And wear a cleaner *smock*.

Smock is used in a ludicrous kind of composition for any thing relating to women.

Plague on his *smock*-loyalty!
I hate to see a brave bold fellow sotted,
Made sour and senseless, turn'd to whey by love. *Dryden*.

SMOCKFA'CED, *adj.* Palefaced; maidenly; effeminate.

Old chiefs reflecting on their former deeds,
Disdain to rust with batter'd invalids;
But active in the foremost ranks appear,
And leave young *smock-fac'd* beaux to guard the rear. *Fenton*.

SMOCKFRO'CK, *s.* A gaberdine.
SMO'CKLESS, *adj.* Wanting a smock.
I hope it be not your entent,
That I *smokles* out of your paleis went. *Chaucer*.

SMOCKSHOP INDIANS, a tribe of North America, on the Columbia, about 800 in number.

SMOCKVILLE, a post township of the United States, in Jefferson county, Indiana.

SMOKE, *s.* [ɹmoe, ɹmic, ɹmec, Saxon; *smoek*, Su. Goth.; from ɹmican and *smoeka*, *fumare*, *fumigare*.] The visible effluvium, or sooty exhalation from any thing burning.

As *smoke* that rises from the kindling fires,
Is seen this moment, and the next expires. *Prior*.

Smoke, Sir Isaac Newton observes, ascends in the chimney by the impulse of the air it floats in: for that air, being rarefied by the fire underneath, has its specific gravity diminished; and thus, being determined to ascend itself, it carries up the smoke along with it.

In the Philosophical Transactions, Abr. v. 192., we have the description of an engine, invented by Monsieur Dalesme, which consumes the smoke of all sorts of wood, and that so totally, that the most curious eye cannot discover it in the room, nor the nicest nose smell it, though the fire be made in the middle of the room.

To SMOKE, *v. n.* [ɹmæcan, ɹmican, Sax.] To emit a dark exhalation by heat.—When the sun went down, a *smoking* furnace and a burning lamp passed between those pieces. *Gen*.

For Venus, Cytherea was invok'd,
Altars for Pallas to Athena *smok'd*. *Granville*.

To burn; to be kindled. *A scriptural term*.—The anger of the Lord shall *smoke* against that man. *Deut*.—To move with such swiftness as to kindle; to move very fast so as to raise dust like smoke.

Aventinus drives his chariot round;
Proud of his steeds he *smokes* along the field;
His father's hydra fills the ample shield. *Dryden*.

To smell, or hunt out.—I began to *smoke* that they were a parcel of mummies. *Addison*.—To use tobacco. To suffer; to be punished.

Maugre all the world will I keep safe,
Or some of you shall *smoke* for it in Rome. *Shakspeare*.

To SMOKE, *v. a.* To scent by smoke; to medicate by smoke, or dry in smoke.—A gambon of bacon *smokcd*. *Huloet*.—To expel by smoke.—This king, upon that outrage against his person, *smoked* the Jesuits out of his nest. *Sir E. Sandys*.—To smell out; to find out.—He was first *smoked* by the old lord; when his disguise and he is parted, what a sprat you shall find him? *Shakspeare*.—To sneer; to ridicule to the face. [σμωχο, Gr. *convicior*.]—Thou'rt very smart, my dear: but see, *smoke* the doctor! *Addison*.

To SMOKE-DRY, *v. a.* To dry by smoke.—*Smoke-dry* the fruit, but not if you plant them. *Mortimer*.

SMOKEHILL, a river of the United States, in Louisiana, which runs into the Kansas.

SMO'KER, *s.* One that dries or perfumes by smoke. One that uses tobacco.

SMO'KELESS, *adj.* Having no smoke.
Tenants with sighs the *smokeless* tow'rs survey,
And turn th' unwilling steed another way. *Pope*.

SMO'KILY, *adv.* So as to be full of smoke. *Sherwood*.
SMO'KY, *adj.* Emitting smoke; fumid.

Victorious to the top aspires,
Involving all the wood in *smoky* fires. *Dryden*.

Having the appearance or nature of smoke.
If blast septentrional with brushing wings
Sweep up the *smoky* mists, and vapours damp,
Then woe to mortals. *Philips*.

Noisome with smoke.
O he's as tedious
As a tir'd horse, or as a railing wife,
Worse than a *smoky* house. *Shakspeare*.

Dark; obscure. *Unused*.

SMOLENSKO, a government or province of the Russian empire, to the west of the government of Moscow, between 53. 30. and 56. 25. of N. latitude, and 30. 50. and 35. 30. of E. longitude. Its territorial extent is 21,400 square miles; its inhabitants, calculated at 1,050,000, are mostly Russians, with some Poles, Germans, and Jews; the majority are members of the church. The surface is generally level; for though it contains some heights, these are not of great size or extent. The principal rivers are the Duna, Dnieper, the Desna, the Sosha, the Kasplia, the Uga, and the Viasma. The lakes are also numerous, being reckoned at more than 100, great and small. The climate is cold, but healthy. The soil consists of a mixture of clay or sand, with black mould, and is on the whole tolerably fertile. Corn, hemp, and flax, are cultivated extensively. Horses, black cattle, and sheep, are numerous, and of good breeds. A great part of the uncultivated land is covered by forests. The rivers supplying the means of conveyance, the exportation of the various agricultural products of this fertile province gives rise to an active traffic. The manufactures, on the other hand, are quite insignificant, and the distilling of spirituous liquors is the only one carried on on a large scale. This government corresponds to White Russia, properly so called. It was ceded by Poland in 1667, and the cession confirmed in 1686.

SMOLENSKO, a considerable town of European Russia, and the capital of the above government. It is built partly on two hills, and partly in a valley between them, which is watered by the Dnieper, here a navigable stream flowing from east to west. The part to the south of that river is surrounded with a massy wall 30 feet in height, 15 thick, and a mile and three quarters in circuit. The lower part of this wall is of stone, the upper of brick, and at each angle is a large tower. The whole is surrounded with a ditch and a sort of covered way; and some modern redoubts have been erected as outworks. Smolensko is thus a place of some strength, and standing on the great road to Moscow, the Russians made here their first serious opposition to the advance of the French, in the campaign of 1812. An obstinate conflict took place on the 16th and 17th of August, in which the town was bombarded and set on fire. The Russians were compelled to fall back, and the French extinguished the flames; but on quitting it in their disastrous retreat in November following, they blew up part of the works; and as most of the houses were of wood, about the half of them were destroyed on these two occasions.

Smolensko is thinly inhabited, containing within its circumference several large gardens; the houses are generally of one story, and the population is supposed not to exceed 12,600. One large street divides it into two, and is paved with stone; but the others are paved, or rather floored, with planks. The part rebuilt since 1812 is of a good construction, and the number of public edifices is considerable. Here are

nearly 20 churches and chapels, besides two cathedrals, and places of worship for Lutherans and Catholics. Smolensko is a bishop's see, has a seminary for priests, and a gymnasium or high school. It has also a military and trade's school, a foundling-hospital, and a consistory. The manufactures are linen, leather, soap, and hats; and there is a pretty active trade in corn and hemp; also wood, honey, wax, and furs, with Riga, and, to a smaller extent, with Dantzic and the Ukraine. Prince Potemkin, the favourite and general of Catherine II. was a native of this town; 225 miles west-south-west of Moscow, and 350 south-by-east of St. Petersburg. Lat. 54. 50. N. long. 31. 56. 36. E.

SMOLLET (Tobias), a writer of considerable reputation, was born, in 1720, at Dalquhurn, in Dumbartonshire. After a common education, he was put apprentice to a surgeon in Glasgow, and at the same time he availed himself of the opportunity of attending medical lectures at the university. At this early period he composed a tragedy. In his nineteenth year he quitted Scotland for London, where he quickly obtained the situation of surgeon's mate in the navy. He sailed in the expedition fitted out against Carthage, under Admiral Vernon and General Wentworth; and during the voyage he displayed his powers of observation, as well as his satirical turn, by the account he drew up of that ill-conducted and unsuccessful enterprize. He was soon disgusted with the service in which he had engaged, and quitted it in the West Indies. It had, however, been of great service, by introducing him to that acquaintance with the manners and language of sailors, of which he made the most amusing exhibitions in his novels. The savage cruelties used by the king's troops after the battle of Culloden called forth Smollet's warmest feelings, and occasioned his poem entitled, "The Tears of Scotland," which placed the author high in the rank of minor poets. It was followed by two satires, a species of composition to which the natural irritability of his temper gave him a propensity. He married in 1747, a lady, with whom he expected a good fortune, of which, however, he received very little, and the expensive style in which he set out in life brought him very soon into serious difficulties. In this emergency he had recourse to his pen, and in 1748 he produced his first novel, entitled, "Roderick Random," which had no doubt strong allusions to his own history, and became extremely popular. A Trip to Paris, in 1750, enlarged his knowledge of the world, and gave rise to his "Adventures of Peregrine Pickle," in which he exerted all the powers of humorous invention and delineation, though often at the expense of delicacy and morality. He now determined to pursue his profession, and commenced physician at Bath, but he met with so little success that he soon abandoned it, and resumed writing as a profession. His next publication was "Adventures of Ferdinand Count Fathom," which was followed by a new translation of Don Quixote. In 1756, he undertook the management of a new Review, under the title of the "Critical," which, after undergoing a number of changes, existed till very lately. His satirical and acrimonious spirit soon broke out in this journal, and involved him in a quarrel with Admiral Knowles, on whose conduct in the expedition to Rochefort he had spoken with great severity. Smollet was prosecuted and convicted of a libel, and suffered the punishment of the law, viz., fine and imprisonment.

After this he wrote for the theatre an after-piece, entitled, "The Reprisal, or the Tars of Old England;" this was acted at Drury-lane in 1757; and in the following year he published a hastily written "History of England, from the Descent of Julius Cæsar to the Treaty of Aix-la-Chapelle," in two vols. 4to. About the same period he published a novel, entitled, "The Adventures of Sir Launcelot Greaves," and he is supposed to have written the histories of France, Italy and Germany, in the modern part of the Universal History. In 1761, he began to publish his "Continuation of the History of England," taken up at the Revolution, where Hume left it, and brought down to the year 1765.

At the beginning of the present reign, Dr. Smollet was

an advocate in defence of the measures adopted by the administration, at the head of which was Lord Bute, and in connection with others he published a weekly paper, called "The Briton," which was encountered by the more famous one entitled, "The North Briton," set on foot by the well-known John Wilkes. The rancour displayed on both sides dissolved the friendship which had long subsisted between these two political champions. Smollet, from some domestic afflictions, determined to visit the continent, whither he went in 1763, and he spent two years in a tour through France and Italy. After his return, he published, in 1766, his "Travels" in these countries, in a series of letters, in two vols. 8vo., which contained many lively and sensible remarks, but which were deeply tinged with the gloomy temper of mind, which rendered him dissatisfied and out of humour with almost every thing he saw. In 1769 he published a sort of political romance, entitled, "The Adventures of an Atom," intended to ridicule different administrations, but especially that of the Earl of Chatham.

Increasing ill-health induced him, in the year 1770, to pay another visit to Italy, accompanied by his wife, and during his last voyage he wrote his last novel, "The Expedition of Humphry Clinker," which some critics regard as the best of all his novels. He died in the neighbourhood of Leghorn, in October, 1771, in the fifty-first year of his age. "Dr. Smollet," says the author of the article in the General Biography, "was undoubtedly a man of talents and great variety of powers, though he did not attain the highest rank in any thing. He is best known as a novelist, and they who read those compositions for amusement only, without much nicety of taste, seldom fail of being entertained by him. Yet his portraits are often caricatures, his scenes of humour coarse and extravagant, and his jests borrowed. As an historian, he has attained more credit for the elegance and animation of his style, than for the higher qualities of judgment, accuracy and impartiality; and though his continuation is annexed to Hume's History, the two writers will bear no comparison." His poetic powers were considerable. His "Tears of Scotland," "Ode to Leven Water," and some other short pieces, are polished, tender, and picturesque. His "Ode to Independence" is a loftier flight, and has perhaps few superiors in the lyric strain." His satires are vigorous, but violent and disgusting.

To SMOOR, or SMORE, *v. a.* [smopan, Sax., *smooren*, Teut.] To suffocate; to smother. Used in Lancashire and Westmoreland.—Thou fast bound ball of *smoring* darkness. *More.*

SMOOTH, *adj.* [smæð, smœð, Saxon; *mwyth*, Welsh.] Even on the surface; not rough; level; having no asperities.

Nor box nor limes, without their use,
Smooth-grain'd, and proper for the turner's trade:
Which curious hands may carve, and steel with ease invade.

Dryden.

Evenly spread; glossy.
He for the promis'd journey bids prepare
The smooth-hair'd horses, and the rapid car.

Pope.

Equal in pace; without starts or obstruction.
The fair-hair'd queen of love
Descends smooth-gliding from the courts above.

Pope.

Gently flowing.
Smooth Adonis from his rock
Ran purple to the sea.

Milton.

Voluble; not harsh; soft.
When sage Minerva rose,
From her sweet lips smooth elocution flows.

Gay.

Bland; mild; adulatory.
The subtle fiend,
Though inly stung with anger and disdain,
Dissembled, and this answer smooth return'd.

Milton.

SMOOTH, *s.* That which is smooth.—The smooth of his neck. *Gen.*

To SMOOTH, *v. a.* [jmeðian, Sax.] To level; to make even on the surface.

Smiling she seem'd, and full of pleasing thought,
From ocean as she first began to rise,
And *smooth'd* the ruffled seas, and clear'd the skies.

Dryden.

To work into a soft uniform mass.—It brings up again into the mouth that which it had swallowed, and chewing it, grinds and *smooths* it, and afterwards swallows it into another stomach. *Ray.*—To make easy; to rid from obstructions.

Thou, Abelard! the last sad office pay,
And *smooth* my passage to the realms of day.

Pope.

To make flowing; to free from harshness.

In their motions harmony divine
So *smooths* her charming tones.

Milton.

To palliate; to soften.

Had it been a stranger, not my child,
To *smooth* his fault, I would have been more mild.

Shakspeare.

To calm; to mollify.

Now breathe we, lords: good fortune bids us pause,
And *smooth* the frowns of war with peaceful looks.

Shakspeare.

To ease.

Restor'd it soon will be; the means prepar'd,
The difficulty *smooth'd*, the danger shar'd:
Be but yourself.

Dryden.

To flatter; to soften with blandishments.

Because I cannot flatter, and look fair,
Smile in men's faces, *smooth*, deceive, and cog,
Duck with French nods, and apish courtesy,
I must be held a rancorous enemy.

Shakspeare.

He *smooths* us up in the good opinion of our own gracious disposition. *Bp. Hall.*

SMOOTH ISLAND, an island on the east coast of Van Diemen's Land, in Norfolk Bay, about three quarters of a mile long.

To SMO'OTHEN, *v. a.* [jmeðian, Saxon.] To make even and smooth.—With edged grooving tools they cut down and *smoothen* the extuberances left. *Moxon.*

SMO'OTHER, *s.* One who smooths, or frees from harshness.—They were distinguished by the name of scalds, a word which denotes *smoother*s and polishers of language. *Bp. Percy.*

SMO'OTHFACED, *adj.* Mild looking; having a soft air.

Let their heirs

Enrich their time to come with *smoothfac'd* peace,
With smiling plenty, and fair prosp'rous days.

Shakspeare.

SMO'OTHLY, *adv.* Not roughly; evenly.

Beneath the shade of flowing jet
The ivory forehead *smoothly* set.

Guardian.

With even glide.

The music of that murmuring spring
Is not so mournful as the strains you sing;
Nor rivers winding through the vales below
So sweetly warble, or so *smoothly* flow.

Pope.

Without obstruction; easily; readily.—Had Joshua been mindful, the fraud of the Gibeonites could not so *smoothly* have past unespied, till there was no help. *Hooker.*—With soft and bland language. Mildly; innocently.—Some look'd full *smoothly*, and had a false quart. *Skelton.*—Looking so *smoothly* and innocently on it, and so deceiving them. *Moore.*

SMO'OTHNESS, *s.* Evenness on the surface; freedom from asperity.—A countryman feeding his flock by the sea-side, it was so delicate a fine day, that the *smoothness* of the water tempted him to set up for a merchant. *L'Estrange.*—Softness or mildness on the palate.

Fallacious drink! ye honest men beware,
Nor trust its *smoothness*; the third circling glass
Suffices virtue.

Philips.

Sweetness and softness of numbers.—Virgil, though smooth, where *smoothness* is required, is so far from affecting it, that he rather disdains it; frequently using *synalephas*, and concluding his sense in the middle of his verse. *Dryden.*—Blandness and gentleness of speech.

She is too subtle far; and her *smoothness*,
Her very silence, and her patience,
Speak to the people, and they pity her.

Shakspeare.

SMORZATO, a musical term, now superseded by *diminuendo*.

SMOTE. The pret. of *smite*.—Death—with a trident *smote*. *Milton.*

To SMO'THER, *v. a.* [jmoþan, Saxon.] To suffocate with smoke, or by exclusion of the air.

The helpless traveller, with wild surprise,
Sees the dry desert all around him rise,
And *smother'd* in the dusty whirlwind dies.

Addison.

To suppress.—She was warmed with the graceful appearance of the hero: she *smothered* those sparkles out of decency, but conversation blew them up into a flame. *Dryden.*

To SMO'THER, *v. n.* To smoke without vent.—Hay and straw have a very low degree of heat; but yet close and *smothering*, and which drieth not. *Bacon.*—To be suppressed or kept close.—The advantage of conversation is such, that, for want of company, a man had better talk to a post than let his thoughts lie smoking and *smothering*. *Collier.*

SMO'THER, *s.* A state of suppression. *Not in use.*—A man were better relate himself to a statue, than suffer his thoughts to pass in *smother*. *Bacon.*—Smoke; thick dusk.

Thus must I from the smoke into the *smother*,

From tyrant duke unto a tyrant brother.

Shakspeare.

SMOTHER-FLY, a provincial term applied to the bean aphid.

To SMOUCH, *v. a.* To salute: answering to our *buss*. *North.*—What bussing, what *smouching* and slabbering one of another. *Stubbes.*

To SMO'ULDER, *v. a.* To burn slowly without flame. SMO'ULDERING, or SMO'ULDRY, *adj.* [jmoʒan, Sax., to smother; *smoel*, Dutch, hot.] Burning and smoking without vent.

None can breathe, nor see, nor hear at will,

Through *smouldry* cloud of duskish stinking smoke,

That the only breath him daunts who hath escap'd the stroke.

Spenser.

In some close pent room it crept along,
And, *smouldering* as it went, in silence fed;
Till the infant monster, with devouring strong,
Walk'd boldly upright with exalted head.

Dryden.

SMUG, *adj.* [the past participle of the Sax. jmeagan, jmeagan, *deliberare, studere, considerare*. Applied to the person, or to dress, it means *studied*. It appears to have been a common word in the northern languages.] Nice; spruce; dressed with affectation of niceness, but without elegance.—There I have a bankrupt for a prodigal, who dares scarce shew his head on the Rialto; a beggar that used to come so *smug* upon the mart. *Shakspeare.*

To SMUG, *v. a.* To adorn; to spruce.

My men,

In Circe's house, were all, in severall baine
Studiously sweetn'd, *smugg'd* with oile, and deekt
With in and outweeds.

Chapman.

To SMU'GGLE, *v. a.* [*smokkelen*, Dutch, which Serenius refers to the Su. Goth., *smygga, smeiga*, furtim raptare.] To import or export goods without paying the customs.—To manage or convey secretly.

SMU'GLER, *s.* One who imports or exports goods without payment of the customs, or such as are forbidden.

Here,

Here, in cabal, a disputatious crew,
Each evening meet; the sot, the cheat, the shrew:
Snarers and *smugglers* here their gains divide,
Ensnaring females here their victims hide.

Crabb.

SMU'GGLING, *s.* *Smuggling*, or the offence of importing goods without paying the duties imposed by the laws of the customs and excise, is restrained by a great variety of statutes. *Blackstone.*

SMU'GLY, *adv.* Neatly; sprucely.

Lillies and roses will quickly appear,
And her face will look wond'rous *smugly*.

Gay.

SMU'GNESS, *s.* Spruceness; neatness without elegance.

SMU'LY, *adj.* [A corruption of *smoothly*.] Looking smoothly; demure. *Used in Cumberland.*

SMUT, *s.* [ʃmɪtʃə, Sax.; *smette*, Dutch.] A spot made with soot or coal.—Must or blackness gathered on corn; mildew.—Farmers have suffered by smutty wheat, when such will not sell for above five shillings a bushel; whereas that which is free from *smut* will sell for ten. *Mortimer*.—Obscene conversation.

To SMUT, *v. a.* [ʃmɪtʃən, Saxon.] To stain; to mark with soot or coal.—I am wonderfully pleased to see my tenants play their innocent tricks, and *smutting* one another. *Addison*.—To taint with mildew.—Mildew falleth upon corn, and *smutteth* it. *Bacon*. See **SMITTLE**.

To SMUT, *v. n.* To gather must.—White red-eared wheat is good for clays, and bears a very good crop, and seldom *smuts*. *Mortimer*.

To SMUTCH, *v. a.* [for *smut*. This word is further corrupted, in the north of England, into *smudge*; where it is used for a suffocating smoke.] To black with smoke; to mark with soot or coal.—What, hast *smutch'd* thy nose? *Shakspeare*.

Have you seen but a bright lily grow,
Before rude hands have touch'd it?

Ha' you mark'd but the fall o' the snow,
Before the soil hath *smutch'd* it!

B. Jonson.

SMUTTILY, *adv.* Blackly; smokily; obscenely.—It is the same poverty which makes men speak or write *smuttily*, that forces them to talk vexingly. *Tatler*.

SMUTTINESS, *s.* Soil from smoke.—My vines and peaches, upon my best south walls, were apt to a soot or *smuttiness* upon their leaves and upon their fruits, which were good for nothing. *Temple*—Obsceneness.

SMUTTY, *adj.* Black with smoke or coal.—I leave the *smutty* air of London, and come hither to breathe sweeter. *Howell*.—Tainted with mildew.—*Smutty* corn will sell dearer at one time than the clean at another. *Locke*.—Obscene; not modest.—I must forbear blurring out a witty saying, if it be *smutty* or abusive. *Hornch*.

SMYRNA, a large and commercial city of Asia Minor, situated at the head of a long and winding gulf of the Grecian Archipelago. Smyrna is one of the most celebrated of the ancient cities of Asia, and claims, on pretty strong grounds, to be the birth-place of Homer. It is said originally to have been a colony from Ephesus, and soon attained to such a degree of prosperity, that it was received as the thirteenth city of Ionia. This original city, however, was destroyed by the Lydians; and the population continued dispersed in the neighbouring villages, till Antigonus and Lysimachus rebuilt it, though on a somewhat different spot. Its new splendour seems to have even surpassed what it formerly displayed: the streets were beautifully laid out, well-paved, and adorned with porticos; the city contained also a gymnasium, a library, and a structure called the Homeium, consisting of a temple and portico dedicated to Homer, with a statue of that poet. Smyrna has ever since continued a flourishing city, and in modern times has been particularly distinguished for its trade, which is so extensive as to make it be considered the emporium of the Levant. The present town is about four miles in circuit, and extends about a mile along the water, in approaching from which it makes a very beautiful appearance. The bay is so com-

pletely land-locked, that nothing is seen from the town but the projecting points that inclose it. The interior, as usual in Asiatic cities, does not correspond to the splendour of its approach. The streets are narrow, dirty and ill paved. The bazaars, though well provided with goods, are by no means splendid in their structure. There are two very fine caravanseras inclosing square courts, and which being covered with cupolas, make a very handsome appearance. The besesteins, or shops, also are arched over, and very fine. Although the external appearance of the houses be gloomy, the situation of those built along the water is very delightful, as they have all gardens attached to them, at the foot of which are summer-houses overlooking the sea. At the east end of the city is a large hill, about three quarters of a mile in circumference, on which the castle was built. This edifice appears to have been constructed by the Genoese, and to have been by no means distinguished by any extraordinary magnificence. Along its circuit, however, may still be traced the remains of a very thick and strong wall, apparently that of the ancient castle, and corresponding in its dimensions with another, which appears to have surrounded the whole city. Of the sumptuous edifices which rendered Smyrna one of the brightest ornaments of the Lesser Asia, scarcely any remains can now be traced. The reason seems justly pointed out by Pococke, in the circumstance of so great a new city being built on the site of the old; whence all the ancient structures have been demolished, to serve as materials for the modern ones. Only the foundations can be seen of the splendid theatre, on the slope of the hill, and the site of which is now covered with houses. On a gateway belonging to the castle is a colossal statue of very fine workmanship, though much mutilated, which has been supposed to be that of the Amazon Smyrna, from whom the city is reported to have derived its name. Marks of a very extensive aqueduct may also be traced, though a late traveller doubts if it be of very high antiquity. Behind the city is an extensive and most luxuriant plain, highly cultivated, and covered with numberless olive trees. It is watered by the river Meles, which is here from 50 to 100 yards broad, but contains little water, unless when artificially confined. The chief inconvenience in the situation of Smyrna is its being extremely liable to earthquakes, which from time to time cause some injury and great alarm to the inhabitants. A heavier calamity, common to it with all the oriental cities, is the plague. In 1814 this disease produced such ravages, that its victims were estimated at from 50,000 to 60,000. The inhabitants of Smyrna are usually reckoned at 100,000, of whom Mr. Turner supposes the Turks to amount to between 50,000 and 60,000; the Greeks to 30,000, the Armenians to 8000, and the Franks or Europeans to 2000 or 3000. The latter form a more numerous and agreeable society than in any other Turkish town. The export trade of Smyrna consists of very rich commodities; raw silk, Turkey carpets, unwrought cotton, and the beautiful goats' hair or mohair of Angora, which is used in several of our finer manufactures. It sends out also a considerable quantity of raisins, a little muscadine wine, and a variety of drugs, as rhubarb, amber, musk, lapis lazuli, and gums. A certain number of pearls, diamonds, and other precious stones, are also exported. The imports are chiefly woollen cloths, lead, tin, glass, and wrought silks. Lat. 38. 29. N. long. 27. 4. 45. E.

SMYRNA, a post township of the United States, in Chenango county, New York; 105 miles west of Albany. Population 1334.

SMYRNA, formerly **DUCK CREEK** or **SALISBURY**, a post township of the United States, in Kent county, Delaware, on Duck Creek, about 10 miles above its mouth. Population 600.

SMYRNIUM [Σμυρνιον of Dioscorides, from the city of Smyrna; or, from *σμυρνα* the same with *μυρρα*, the root yielding a gum like myrrh], in Botany, a genus of the class pentandria, order digynia, natural order of umbellatæ or umbelliferæ.—Generic Character. Calyx: umbel universal, unequal, becoming daily bigger. Partial erect. Involucre universal,

universal none. Partial none. Perianth proper, scarcely apparent. Corolla universal, uniform. Floscules of the disk abortive. Proper of five lanceolate petals, slightly bent in, keeled. Stamina: filaments five, simple, length of the corolla. Anthers simple. Pistil: germ inferior. Styles two, simple. Stigmas two, simple. Pericarp none. Fruit oblong, striated, bipartite. Seeds two, lunulate, on one side convex, marked with three angles, flat on the other.—*Essential Character.* Petals acuminate, keeled. Fruit oblong, striated.

1. *Smyrniium perfoliatum*, or perfoliate Alexanders.—The lower leaves are superdecoumpounded, and the leaflets are in threes, ovate and indented. Stem smooth, hollow, three feet high, dividing towards the top into two or three branches. At each joint is placed one large orbicular leaf, the base of which is embracing; these are of a yellow colour, and their edges are entire. The branches are terminated by small umbels of yellowish flowers, on pedicels of unequal lengths.—Native of Candia and Italy.

2. *Smyrniium Ægyptiacum*, or Egyptian Alexanders.—Floral leaves two, simple; cordate quite entire.—Native of Egypt.

3. *Smyrniium laterale*, or side-flowering Alexanders.—Stem-leaves ternate, gashed, serrate; umbels lateral, sessile.—Native of the Cape of Good Hope.

4. *Smyrniium olusatrum*, or common Alexanders.—Stem-leaves ternate, petioled serrate. Root biennial, fleshy, branched.—Native of France, Spain, Italy, Belgium and Britain.

5. *Smyrniium apiifolium*, or smallage-leaved Alexanders.—Stem-leaves wedge-shaped, obtuse, trifid, toothed. The stalk rises higher, and grows more erect.—Native of Crete or Candia.

6. *Smyrniium aureum*, or golden Alexanders.—Leaves pinnate, serrate; hinder ternate: all the flowers fertile. Root perennial, black, and thick with clustered fibres.—Native of North America.

7. *Smyrniium integerrimum*, or entire-leaved Alexanders.—Stem-leaves doubly-ternate, quite entire. Root perennial. Stem a foot and a half high, even, little branched.—Native of Virginia.

Propagation and Culture.—All these plants may be propagated by sowing their seeds upon an open spot of ground in August, as soon as they are ripe; for if they are preserved till spring, they often miscarry; or at least do not come up until the second year; whereas those sown in autumn rarely fail of coming up in the spring, and will make much stronger plants than the other.

The common sort, when cultivated for the table, should be treated in the following manner:—

In the spring the plants should be hoed out, so as to leave them ten inches or a foot apart each way; and during the following summer, they must be constantly cleared from weeds, which, if permitted to grow among them, will draw them up slender, and render them good for little. In February following the plants will shoot up again vigorously, at which time the earth must be drawn up to each plant, to blanch them, and in three weeks after they will be fit for use, when they may be dug up, and the white part preserved, which may be stewed and eaten as celery.

SMYRUS, in Ichthyology, a name sometimes given by Pliny to the fish called the *Muræna myrus* by Linnæus.

SMYTHAM, in Mineralogy, lead-ore stamped and pounded down, like powder or sand, to cleanse the stones and earth from the ore.

SNABEDSK, a village of European Russia, in the government of Niznei-Novgorod, with large iron works.

SNACK, *s.* [from *snatch.*] A share; a part taken by compact.

For four times talking, if one piece thou take,
That must be cantled, and the judge go *snack.* *Dryden.*

All my demurs but double his attacks;
At last he whispers, "Do, and we go *snacks.*" *Pope.*

A slight, hasty repast. *Used in several parts of England.*

VOL. XXIII. No. 1572.

SNACKET, or SNE'CKET, *s.* The hasp of a casement. *Sherwood.*

SNA'COT, *s.* [*acus*, Lat.] A fish. *Ainsworth.*

SNEFELL JOKLE, a lofty mountain of Iceland, on the north-west coast. It is 6800 feet in height, and more than the half of it is covered with perpetual snow.

SNA'FFLE, *s.* [*snavel*, Dutch, the nose.] A bridle which formerly crossed the nose; it is now used for a loose bit, differing from the curb bit.

The third o' th' world is your's, which with a *snaffle*
You may pace easy; but not such a wife. *Shakspeare.*

To SNA'FFLE, *v. a.* To bridle; to hold in a bridle; to hold to manage.

See him *snaffled!*
See him laugh'd at! see him baffled! *Fanshaw.*

SNAG, *s.* A jag, or sharp protuberance. *Unknown.*

The coat of arms,
Now on a naked *snag* in triumph born,
Was hung on high. *Dryden.*

A tooth left by itself, or standing beyond the rest; a tooth in contempt.

In China none hold women sweet,
Except their *snags* are black as jet:
King Chihu put nine queens to death,
Convict on statute, iv'ry teeth. *Prior.*

SNA'GGED, or SNA'GGY, *adj.* Full of snags; full of sharp protuberances; shooting into sharp points.

His stalking steps are stay'd
Upon a *snaggy* oak, which he had torn
Out of his mother's bowels, and it made
His mortal mace, wherewith his foemen he dismay'd. *Spenser.*

Snaggy is a northern word for testy, peevish.

SNAIL, *s.* [*rnæxl*, Saxon; *snegel*, Dutch.] A slimy animal which creeps on plants, some with shells on their backs; the emblem of slowness.—I can tell why a *snail* has a house.—Why?—Why, to put's head in; not to give it away to his daughters, and leave his horns without a case. *Shakspeare.*—A name given to a drone, from the slow motion of a snail.

Why prat'st thou to thyself, and answer'st not?
Dromio, thou drone, thou *snail*, thou slug, thou sot!
Shakspeare.

SNAIL, in Ichthyology. See LIPARIS NOSTRAS.

SNA'IL-CLAVEŔ, or SNA'IL-TREFOIL, *s.* [*trifolium*, Lat.] An herb.

SNAIL-LIKE, *adv.* In a way resembling the slowness of a snail.

A pox upon referring to commissions
I had rather hear that it were past the seals,
You courtiers move so *snail-like* in your business. *B. Jonson.*

SNAILWELL, a parish of England, in Cambridgeshire; 3½ miles north-north-west of Newmarket.

SNAINTON, a township of England, North Riding of Yorkshire; 9½ miles south-west of Scarborough. Population 525.

SNAITH, a market town and parish of England, in the West Riding of Yorkshire. It stands on a gentle eminence, which rises from the southern bank of the river Aire. The church is an ancient building in the pointed style, remarkable only as the burial place of the ancestors of Lord Viscount Down. The parish includes 11 townships, which united, contain 1133 houses, and 5095 inhabitants, of whom about 745 reside in the town. Market on Thursday, and three annual fairs for horned cattle, sheep, woollen cloth, linen, and cheese; 22 miles south-by-east of York, and 174 north-by-west of London.

SNAKE, *s.* [*rnaca*, Sax.; *snake*, Dutch; from the verb *rnacan*, to creep. *Serenius.*] A serpent of the oviparous kind, distinguished from a viper. The snake's bite is harmless. *Snake* in poetry is a general name for a serpent.

Glo'ster's shew beguiles him ;
As the *snake* roll'd in a flowery bank,
With shining checker'd slough, doth sting a child,
That for the beauty thinks it excellent. *Shakspeare.*

SNAKE CREEK, a river of the United States, in Louisiana, which runs into the Missouri, 246 miles from the Mississippi.

SNAKE INDIANS, a tribe of savages in North America, on the south-west side of the Missouri. Lat. 47. N. long. 107. W. They are described under the title of **SHOSHONEES**, which see.

SNAKE ISLANDS, a cluster of small islands in the Indian sea, near the eastern coast Africa. Lat. 5. 20. S.

SNAKE-ROOT, *s.* A species of birthwort growing in Virginia and Carolina.

SNAKESHEAD *Iris, s.* [*hermodactylus*, Latin.] A plant.

SNAKE-WEED, or **BISTORT**, *s.* [*bistorta*, Latin.] A plant.

SNAKE-WOOD, *s.* A tree.

SNAKY, *adj.* Serpentine; belonging to a snake; resembling a snake.

Venomous tongue, tipt with vile adder's sting,
Of that self kind with which the furies fell
Their *snaky* heads do comb. *Spenser.*

The crooked arms Meander bow'd with his so *snaky* flood,
Resign'd for conduct the choice youth of all their mortal
brood. *Chapman.*

So to the coast of Jordan he directs
His easy steps, girded with *snaky* wiles. *Milton.*

Having serpents.
What was that *snaky*-headed gorgon shield
That wise Minerva wore, unconquer'd virgin,
Wherewith she freez'd her foes to congeal'd stone? *Milton.*

TO SNAP, *v. a.* [*snappa*, Su. Goth., *schnappen*, Germ.]
to snatch.—To break at once; to break short.—Light is
broken like a body, as when 'tis *snapped* in pieces by a
tougher body. *Digby.*—To strike with a knocking noise,
or sharp sound.

The bowzy sire
First shook from out his pipe the seeds of fire,
Then *snapt* his box. *Pope.*

To bite.—A gentleman passing by a coach, one of the
horses *snapt* off the end of his finger. *Wiseman.*—To
catch suddenly and unexpectedly.

Some with a noise and greasy light
Are *snapt*, as men catch larks at night. *Butler.*

[*Sucipa*, Icel. contumeliò afficere.] To treat with sharp
language.

A surly ill-bred lord
That chides and *snaps* her up at every word. *Granville.*

TO SNAP, *v. n.* To break short; to fall asunder; to
break without bending.

Note the ship's sicknesses, the mast
Shak'd with an ague, and the hold and waist
With a salt dropsy clogg'd; and our tacklings
Snapping, like to too high stretch'd treble strings. *Donne.*

To make an effort to bite with eagerness.—If the young
dace be a bate for the old pike, I see no reason but I may
snap at him. *Shakspeare.*—To express sharp language.

SNAP, *s.* The act of breaking with a quick motion.—
A greedy fellow.—He had no sooner said out his say, but up
rises a cunning *snap*, then at the board. *L'Estrange.*—A
quick eager bite.—With their bills, thwarted crosswise at the
end, they would cut an apple in two at one *snap*. *Carew.*
—A catch; a theft.

SNA'PDRAGON, or **CALF'S SNOOUT**, *s.* A plant. [*an-
tirrhinum*, Latin.]—A kind of play, in which the brandy is
set on fire, and raisins thrown into it, which those who are
unused to the sport are afraid to take out; but which may be

safely snatched by a quick motion, and put blazing into the
mouth, which being closed, the fire is at once extinguished.
—The thing eaten at *snapdragon*.—He bore a strange kind
of appetite to *snapdragon*. *Swift.*

SNAPE, a parish of England, in Suffolk; 2½ miles south-
east of Saxmundham. Population 456.

SNAPE, a township of England, North Riding of York-
shire; 4¼ miles south of Bedale. Population 646.

SNA'PHANCE, *s.* [*schnapham*, Germ., *clavus bom-
bardæ*; *snaphaam*, Belg. *ipsa*, *bombarda portatilis*.
Wachter.] A kind of firelock. *Not now in use.*—There
arrived four horsemen,—very well appointed, having *snaph-
ances* hanging at the pomel of their saddles. *Shelton.*

SNA'PPER, *s.* One who snaps.—My father named me
Autolicus, being litter'd under Mercury; who, as I am, was
likewise a *snapper* up of unconsider'd trifles. *Shakspeare.*

SNA'PPISH, *adv.* Eager to bite.
The *snappish* cur, the passenger's annoy,
Close at my heel with yelping treble fits. *Swift.*

Peevish; sharp in reply.—I spoke to my lord chief justice
about lord Forbes's bail: the lord chief justice was very
snappish, and said, he would take none, whom Mr. Smith did
not approve of. *Earl of Clarendon.*

SNA'PPISHLY, *adv.* Peevishly; tartly.

SNA'PPISHNESS, *s.* Peevishness; tartness.

SNA'PSACK, *s.* [*snappsack*, Swedish.] A soldier's bag:
more usually *knapsack*, Dr. Johnson says.—We should
look upon him as a strange soldier, that when he is upon
his march, and to go upon service, instead of his sword
should take his *snapsack*. *South.*

TO SNAR, *v. n.* [*snarren*, Teut.] To snarl.

Tygers that did seeme to grin,
And *snar* at all that ever passed by. *Spenser.*

SNARE, *s.* [*snara*, Swedish and Icelandic; *snare*,
Danish; *snoor*, Dutch.] Any thing set to catch an animal;
a gin; a net; a noose.

O poor hapless nightingale, thought I,
How sweet thou sing'st, how near the deadly *snare*. *Milton.*

Any thing by which one is intrapped or intangled.—This
I speak for your own profit, not that I may cast a *snare* upon
you. 1 *Cor.*

Beauty, wealth, and wit,
And prowess, to the power of love submit;
The spreading *snare* for all mankind is laid,
And lovers all betray, or are betray'd. *Dryden.*

TO SNARE, *v. a.* To entrap; to entangle; to catch in
a noose.

Glo'ster's shew
Beguiles him, as the mournful crocodile
With sorrow *snares* relenting passengers. *Shakspeare.*

SNARER, *s.* One who lays snares.
Never prate on't; nor, like a cunning *snarer*,
Make thy clipp'd name the bird to call in others. *Middleton.*

SNARES, a cluster of seven craggy islands in the South
Pacific Ocean, discovered by Capt. Vancouver, on the 24th
Nov. 1791. They appeared destitute of verdure; and it is
more than probable they never produced any. The largest,
which is the north-easternmost, Capt. Vancouver supposed to
be in extent equal to all the rest: it is about 9 miles in cir-
cuit, sufficiently elevated to be seen in clear weather eight or
nine leagues off; and is situated lat. 48. 3. S. long. 166.
20. E. On the 23d of the same month, these islands had
been discovered by Mr. Broughton, who passed through
them, and gave to the largest the name of Knight's Island.
For Mr. Broughton's account, see **KNIGHT'S ISLAND**.

SNARESTON, or **SNARKESTON**, a hamlet of England,
in Leicestershire; 6 miles north-west of Market Bosworth.

SNARFORD, a parish of England, in Lincolnshire; 5½
miles south-west of Market Raisin.

SNARGATE, a parish of England, in Kent; 6½ miles
north-west of New Romney.

To SNARL, *v. n.* [*snarren*, Teut.] To growl as an angry animal.

What! were you *snarling* all before I came,
Ready to catch each other by the throat,
And turn you all your hatred now on me? *Shakspeare.*

An angry cur
Snarls while he feeds. *Dryden and Lee.*

To speak roughly; to talk in rude terms.—'Tis malicious and unmannerly to *sarl* at the little lapses of a pen, from which Virgil himself stands not exempted. *Dryden.*

To SNARL, *v. a.* To entangle, to embarrass. *Unused.*
From her back her garments she did teare,
And from her head oft rent her *sarled* heare. *Spenser.*

Confused *sarled* consciences render it difficult to pull out thread by thread. *Dec. of Chr. Piety.*

SNARLER, *s.* One who snarls; a growling, surly, quarrelsome, insulting fellow.

SNARY, *adj.* Entangling; insidious.—Spiders in the vault their *sary* webs have spread. *Dryden.*

SNAST, *s.* The snuff of a candle. *Unused.*—It first burned fair, till some part of the candle was consumed, and the sawdust gathering about the *snasts*; but then it made the *snast* big and long, and burn duskishly, and the candle wasted in half the time of the wax pure. *Bacon.*

To SNATCH, *v. a.* [*snaeken*, Teut.] To seize any thing hastily.

Life's stream hurries all too fast:
In vain sedate reflections we would make,
When half our knowledge we must *snatch*, not take. *Pope.*

To transport or carry suddenly.—He had scarce performed any part of the office of a bishop in the diocese of London, when he was *snatched* from thence, and promoted to Canterbury. *Clarendon.*

Oh nature!
Inrich me with the knowledge of thy works,
Snatch me to heaven. *Thompson.*

To SNATCH, *v. n.* To bite, or catch eagerly at something.—Lords will not let me: if I had a monopoly of fools, they would have part on't; nay, the ladies too will be *snatching*. *Shakspeare.*

SNATCH, *s.* A hasty catch. A short fit of vigorous action.

After a shower to weeding a *snatch*;
More easily weed with the root to dispatch. *Tusser.*

A small part of any thing; a broken part.
She chaunted *snatches* of old tunes,
As one incapable of her own distress. *Shakspeare.*

A broken or interrupted action; a short fit.
The *snatches* in his voice,
And burst of speaking, were as his. *Shakspeare.*

A quip; a shuffling answer.—Come, leave your *snatches*,
yield me a direct answer. *Shakspeare.*

SNA'TCHER, *s.* One that snatches, or takes any thing in haste.

They of those marches
Shall be a wall sufficient to defend
Our inland from the pilfering borderers.
—We do not mean the coursing *snatchers* only,
But fear the main intendment of the Scot. *Shakspeare.*

SNATCHINGLY, *adv.* Hastily; with interruption.

To SNATHE; *v. a.* To prune; to lop. *Unused.*

SNATTOCK, *s.* A chip; a slice; a cutting.

SNAVE, a parish of England, in Kent; 4½ miles north-west of New Romney.

SNAYERS (Peter), a painter of very considerable merit in almost every branch, but particularly in battles, huntings and landscapes. He was born at Antwerp in 1593, and was a disciple of Henry van Balen. He was held in great estimation by the archduke Albert, who patronized him, appointed him his painter, and sent several of his pictures into

Spain. Besides this superior encouragement, he was employed for many of the churches in the Netherlands, and his battle-pieces are to be found in all the most choice collections of that country. Reubens and Vandyck honoured them with their approbation; and the latter painted the portrait of Snayers among the eminent artists of the day. He died in 1670, aged 77.

SNEADE, a township of England, in Worcestershire; 5½ miles south-west of Bewdley.

To SNEAK, *v. n.* [*snican*, to creep, Sax.] To creep slyly; to come or go as if afraid to be seen.

Once the eagle, England, being in prey,
To her unguarded nest the weazel went,
Comes *sneaking*, and sucks her princely eggs. *Shakspeare.*

To behave with meanness and servility; to crouch; to truckle.

When int'rest calls off all her *sneaking* train,
When all the oblig'd desert, and all the vain,
She waits, or to the scaffold, or the cell,
When the last lingering friend has bid farewell. *Pope.*

To SNEAK, *v. a.* To hide; to conceal.—Some sins dare the world in open defiance, yet this [slander] lurks, and *sneaks* its head. *Wake.*

SNEAK, *s.* A sneaking fellow.

SNEAK-CUP. See SNEAKUP.

SNEAKER, *s.* A small vessel of drink. A *sneaker* of punch is a term still used in several places for a small bowl.—I have just left the right worshipful and his myrmidons about a *sneaker* of five gallons! *Spectator.*

SNE'AKING, *part. adj.* Servile; mean; low.

When the smart dialogue grows rich,
With *sneaking* dog, and ugly bitch. *Rowe.*

Covetous; niggardly; meanly parsimonious.

SNE'AKINGLY, *adj.* Meanly; servilely.

Do all things like a man, not *sneakingly*:
Think the king sees thee still. *Herbert.*

In a covetous manner.

SNE'AKINGNESS, *s.* Niggardliness. Meanness; pitifulness.—A *sneakingness* which so implies a guilt. *Boyle.*

SNE'AKSBY, *s.* A paltry fellow; a cowardly, sneaking fellow.—A demure *sneaksby*, a clownish singularist. *Barrow.*

SNE'AKUP, *s.* A cowardly, creeping, insidious scoundrel. *Obsolete.*—*Sneak-up* is the word as given by the modern editors of Shakspeare, with the explanation of "one who takes his glass in a sneaking manner." Notes on Twelfth Night.—The prince is a jack, a *sneakup*; and if he were here, I would cudgel him like a dog, if he would say so. *Shakspeare.*

To SNEAP, *v. a.* [from the Icel. *sneipa*, contumeliâ afficere.] To reprimand; to check.

Life that's here,
When into it the soul doth closely wind,
Is often *sneap'd* by anguish and by fear. *orc.*

To nip.

What may
Breed upon our absence, may there blow
No *sneaping* winds at home. *Shakspeare.*

SNEAP, *s.* A reprimand; a check.—My lord, I will not undergo this *sneap* without reply: you call honourable boldness impudent sauciness: if a man will make courtesy and say nothing, he is virtuous. *Shakspeare.*

SNEATH, or SEETH, provincially, a term applied to the shaft of a scythe in some places.

SNEATON, a village in the North Riding of Yorkshire; 2½ miles south-by-west of Whitby.

To SNEB, *v. a.* To check; to chide; to reprimand.

Which made this foolish brere wexe so bold,
That on a time he cast him to scold
And *snebbe* the good oak, for he was old. *Spenser.*

SNECK, *s.* [of uncertain etymology.] The latch or bolt of

of a door. *Prompt Parv.* Retained in the north; where, to *sneek* the door also, is to latch it.

To *SNED*. See *To SNATHE*.

SNEECK, or *SNITS*, a fortified town of the Netherlands, in the province of Friesland, situated in a low marshy district, on a lake of the same name. It is well built, and contains 5000 inhabitants. It has a considerable trade in beer, and some manufactures of linen; 13 miles south of Leeuwarden.

SNEED, *s.* [ʃnæð; Sax.] The handle of a sithe.—This is fixed on a long *sneed*, or strait handle. *Evelyn*.

SNEEHATTA, the highest of all the mountains of Norway, is situated in the Doffrefield chain, about Lat. 62. 18. N. Its elevation above the sea is not more than 8000 feet; but in this latitude, above 4000 of these are above the line of perpetual congelation.

To *SNEER*, *v. n.* [etymology unknown.] To show contempt by looks. To insinuate contempt by covert expressions.—I could be content to be a little *sneered* at in a line, for the sake of the pleasure I should have in reading the rest. *Pope*.—To utter with grimace.—I have not been *sneering* fulsome lies, and nauseous flattery, at a little tawdry whore. *Congreve*.—To show awkward mirth.—I had no power over one muscle in their faces, though they *sneered* at every word spoken by each other. *Tatler*.

SNEER, *s.* A look of contemptuous ridicule.

Did not the *sneer* of more impartial men
At sense and virtue, balance all agen?

Pope.

An expression of ludicrous scorn.—Socrates or Cæsar might have a fool's coat clapt upon them, and in this disguise neither the wisdom of the one nor the majesty of the other, could secure them from a *sneer*. *Watts*.

SNEERER, *s.* One that sneers or shows contempt.—The buffoon and *sneerer* are still on the wrong side of the charter. *Warburton*.

SNEERONGLY, *adv.* With a look or with expression of ludicrous scorn.

SNEERFUL, *adj.* Given to sneering. *A bad word.*

The *sneerful* maid

Will not fatigue her hand.

Shenstone.

To *SNEEZE*, *v. n.* [nrejan, Saxon; *niesen*, Dutch; *sneysa*, Icel. from *naeje*, Sax.; *nasus*, Lat., the nose. See *Ihre* and *Serenius*.] To emit wind audibly by the nose.—An officer put the sharp end of his half-pike a good way up into my nostril, which tickled my nose like a straw, and made me *sneeze* violently. *Swift*.

SNEEZE, *s.* Emission of wind audibly by the nose.

I heard the rack

As earth and sky would mingle; but

These flaws, though mortals fear them

As dangerous to the pillar'd frame of heaven,

Are to the main as wholesome as a *sneeze*

To man's less universe, and soon are gone.

Milton.

SNEEZING, *s.* Act of sneezing; sternutation. Medicine to promote sneezing.—*Sneezings*, masticatories, and nasals are generally received. Montaltus gives several receipts of all three. *Burton*.

SNEEZEWORD, *s.* [*ptarmica*, Lat.] A plant.

SNEIRNE, a village of Irak, in Persia; 57 miles west-north-west of Hamadan.

SNELL, *adj.* [ʃnel, Saxon.] Nimble; active; lively. *Obsolete.* *Lyc.*

SNELL (Willebrord), an excellent mathematician, was born at Leyden in the year 1591, where he succeeded his father in the professorial chair in 1613, and where he died in 1626, at the premature age of 35 years. He was the author of several valuable works and discoveries. To him we owe the first discovery of the true law of the refraction of the rays of light; and this discovery was made, as Huygens assures us, before it was announced by Des Cartes. Snellius undertook also to measure the earth; and this operation he effected by observing the interval between Alcaer and Bergen-op-Zoom, corresponding to a difference of Latitude of 1° 11' 30". He

also determined the distance between Alcaer and Leyden; and from a mean of these measurements, he made a degree to consist of 55,021 French toises or fathoms. These measures were afterwards repeated and corrected by Muschenbroeck, who then found the degree to contain 57,033 toises. His works were numerous, and the principal of them are enumerated in Hutton's Dictionary.

SNELLAND, a parish of England, in Lincolnshire; 4 miles west-north-west of Wragby.

SNELLINCKS (John), was born at Mechlin in 1544. He painted in history and still-life; but he derives his principal renown from his skill in representing battles, particularly attacks of cavalry, which were regarded as pre-eminent among works of that kind. He was honoured by the patronage of the archduke and duchess, and most of the nobility of the Netherlands, and enjoyed all the gratifications which employment and applause are calculated to afford. His taste in grouping is judicious, and he knew how to take advantage of the circumstances of a battle to display his knowledge of chiaro-scuro with great effect. Vandyck appears to have honoured him with his approbation, and has painted his portrait among the distinguished artists of his day, and also etched a plate of it. He died in 1638, aged 94.

SNELLSTON, a hamlet of England, in Cheshire; 5 miles south-east of Nether Knutsford.

SNELSTON, a parish of England, in Derbyshire; 3 miles south-west of Ashborne. Population 449.

SNENTON, a village of England; three quarters of a mile from the town of Nottingham. Population 953.

SNET, *s.* [among hunters.] The fat of a deer.

SNETTERTON, a parish of England, in Norfolk; 3 miles north of East Harling.

SNETTISHAM, a parish of England, in Norfolk; 6½ miles north-by-east of Castle Rising. Population 880.

SNETTISHAM PORT, a harbour on the west coast of North America, in Stephens's Passage, which extends a league from its entrance in a north-east direction, where on each side the shores form an extensive cove, terminated by a sandy beach, with a fine stream of fresh water. The shores are high and steep, and produce very few trees. Lat. 57. 53. N. long. of its north-west point, 226. 22. E.

SNEUWBERG, or *SNOW MOUNTAIN*, an extensive range, stretching through the district of Graaf Reynet, in the eastern part of the territory of the Cape of Good Hope. It forms one of the divisions into which this district is divided. The pasture is excellent, and the abundance of cattle very great, though the settlers cannot without difficulty defend their property against the attacks of the wild Bosjesmans. This track, however, may be considered as the grand repository both of sheep and horned cattle in the colony, many families possessing 4000 or 5000 head.

SNEW. The old pret. of *To snow*.—It *snowed* in his hous, &c. *Chaucer*.

SNEYDERS, or *SNYDERS* (Francis). This ingenious painter was born at Antwerp in 1579, and was a disciple of Henry van Balen. At the beginning of his practice he confined himself to fruits, flowers and other objects of still-life; but he soon advanced to the imitation of animated nature, and in the representation of animals in all the vigour of life and action, in scenes of huntings and fightings, if he has had any rival, he has not been surpassed for freedom, truth and energy.

Though Rubens was excellent in subjects of this nature himself, yet he frequently employed Sneyders to introduce animals into his pictures; and such was his excellence in colouring and execution, that in this dread competition he rose to a level with his great compeer; and produced an union of spirit and effect, which has rarely occurred where two artists have been engaged upon one canvas. Sometimes Rubens, and Joardaens also, returned the compliment, and painted figures in Sneyders' assemblages of beasts, dead game, fish, vegetables, &c. Of these combined labours, we have many excellent examples in this country; and as Sneyders lived to the age of 78, and was an industrious man, they are not thinly scattered on the continent. It is impossible

impossible not to be struck with the astonishing facility with which his works are completed; or with the delicacies of drawing, the correctness and fulness of expression, he has given to his animals, their ferocity or their alarm, even their affection for their young or their benefactor. Vandyck painted an excellent portrait of Sneyders, which was in the Orlean's collection, and is engraved in the set of his heads. He himself handled the point, and has left several etchings of various animals. They are now become scarce. He died in 1657.

SNEYDSBOROUGH, or **SNERDSBOROUGH**, a post township of the United States, in Richmond county, North Carolina, on the Yadkin.

SNIATYN, a town of Austrian Galicia, near the Pruth. It is surrounded by marshes, and contains 4000 inhabitants, of whom about 500 are Armenians. There are here considerable tanneries; 120 miles south-east of Lemberg, and 28 west of Czernowitz. Lat. 48. 39. N. long. 22. 48. E.

To SNIB, *v. a.* [Su. Goth. *snyfba*, verbis increpare.] To check; to nip; to reprimand.—Him wolde he *snybben* sharply for the nones. *Chaucer.*

Asked for their pass by every squib,
That list at will them to revile or *snib*. *Spenser.*

SNIBSTON, a hamlet of England, county of Leicester; 5 miles south-east of Ashby de la Zouch.

SNICK, *s.* A small cut or mark. A latch. See **SNECK**.
SNICK AND SNEE, *s.* [*snee*, Dutch, a cut, a gash. *Sevel.*—Perhaps *snick* is a cant expression for a knife.] A combat with knives.—Among the Dunkirkers, where *snick and snee* was in fashion, a boatswain with some of our men drinking together, became quarrelsome: one of our men beat him down; then kneeling upon his breast, he drew out a knife, sticking in his sash, and cut him from the ear towards the mouth. *Wiseman.*

To SNICKER, or **SNIGGER**, *v. n.* [*etymology unknown.*] To laugh slyly, wantonly, or contemptuously; to laugh in one's sleeve.

SNICKER'S GAP, a post village of the United States, in Loudoun county, Virginia.

SNIESCNICZA, a mountain in Austrian Dalmatia, in the Ragusan territory, called from its height "the Snowy Mountain," and still containing the ruins of a temple dedicated to Æsculapius.

To SNIFF, *v. n.* [*snyfsta*, Su. Goth. See **To SNUFF**.] To draw breath audibly up the nose.

So then you look'd scornful, and *snift* at the dean,
As, who should say, now I am skinny and lean? *Swift.*

To SNIFF, *v. a.* To draw in with the breath.

SNIFF, *s.* Perception by the nose.

O, could I but have had one single sup,
One single *sniff*, at Charlotte's caudle-cup! *Warton.*

To SNIFF, *v. n.* To snort: "to *snift* in contempt."
See **To SNUFF**.—Resentment expressed by *snifsting*. *Johnson.*

SNIG, *s.* A kind of eel.

To SNI'GGLE, *v. n.* To fish for eels.—*Sniggl*ing is thus performed: in a warm day, when the water is lowest, take a strong small hook, tied to a string about a yard long; and then into one of the holes, where an eel may hide herself, with the help of a short stick put in your bait leisurely, and as far as you may, conveniently: if within the sight of it, the eel will bite instantly, and as certainly gorge it: pull him out by degrees. *Walton.*

To SNI'GGLE, *v. a.* To catch; to snare.

Have you remembered what we thought of?
—Yes, sir, I have *sniggl*ed him. *Beaum. and Fl.*

To SNIP, *v. a.* [*snippen*, Teut.] To cut at once with scissars.—Putting one blade of the scissars up the gut, and the other up the wound, *snip* the whole length of the fistula. *Sharp.*

SNIP, *s.* A single cut with scissars.—The ulcer would

not cure farther than it was laid open; therefore with one *snip* more I laid it open to the very end. *Wiseman.*—A small shred.—Those we keep within compass by small *snips* of emplast, hoping to defend the parts about; but, in spite of all, they will spread farther. *Wiseman.*—A share; a snack. *A low word.*—He found his friend upon the mending hand, which he was glad to hear, because of the *snip* that he himself expected upon the dividend. *L'Estrange.*

SNIFE, *s.* [*schneppe*, Germ., *snip*, Dutch; from *schnebbe*, the beak. Wachter, Serenius, and Lye. The Saxon word is *snice*; the Welsh *ysnit*; and we have also *snite*, which is of similar origin, viz., the *snout*; Swed. *snyte*, Teut. *snygte*, the same.]—A small fen fowl with a long bill. See **SCOLOPAX**.—A fool; a blockhead.

Thus do I ever make my fool my purse;
For I mine own gain'd knowledge should profane,
If I should time expend with such a *snipe*,
But for my sport and profit. *Shakespeare.*

SNIPPER, *s.* One that snips.

SNIPPET, *s.* A small part; a share.

Witches simpling, and on gibbets
Cutting from malefactors *snippets*;
Or from the pill'ry tips of ears. *Hudibras.*

SNIPSNAP, *s.* [A cant word formed by reduplication of *snap*.] Tart dialogue; with quick replies.

Dennis and dissonance, and captious art,
And *snipsnap* short, and interruption smart. *Pope.*

SNITE, *s.* [*snita*, Saxon.] A snipe. This is perhaps the true name; but *snipe* prevails.—Of tame birds Cornwall hath doves, geese, and ducks: of wild, quail, rail, *snite*, and wood-dove. *Carew.*

To SNITE, *v. a.* [*snycan*, Saxon; *snyuten*, Teut., from *snyute*, the nose.] To blow the nose. This word is used in Scotland, not only in relation to the nose, as in England; but also as to a candle; "*snite* the candle, *snuff* it." It is also English: "To *snytyn* a nose of candell." Prompt. Parv. And in Wodroephe's Fr. Gramm. 1623, p. 307. "*Snut* that candle; where be the *snutters*?"—Nor would any one be able to *snite* his nose, or to sneeze; in both which the passage of the breath through the mouth, being intercepted by the tongue, is forced to go through the nose. *Grew.*

SNITHE, or **SNIT'HY**, *adj.* [*snidan*, Sax., *to cut*.] Sharp; piercing; cutting: applied to the wind, in some of the northern parts of England.

SNITTER, a hamlet of England, in Northumberland; 13½ miles south-west of Alnwick.

SNITTERBY, a parish of England, in Lincolnshire; 9 miles north-west of Market Raisin.

SNITTERFIELD, a parish of England, in Warwickshire; 4 miles north-by-east of Stratford-upon-Avon. Population 605.

SNITTERTON, a hamlet of England, in Derbyshire; 2 miles west-by-north of Matlock.

SNIVEL, *s.* [*snýpluz*, *snopel*, Sax., *mucus*.] Snot; the running of the nose.

To SNIVEL, *v. n.* To run at the nose.—To cry as children.—Funeral tears are hired out as mourning cloaks; and whether we go to our graves *snivelling* or singing, 'tis all mere form. *L'Estrange.*

SNIVELLER, *s.* A weeper; a weak lamenter.

He'd more lament when I was dead,
Thanall the *snivellers* round my bed. *Swift.*

SNIVELLY, *adj.* Running at the nose.—Pitiful; whining.

SNIZORT, a parish of Scotland, in the isle of Skye, about 18 miles long and 9 broad, of an irregular figure. Population 2750.

SNOD, *s.* [*snob*, Sax., *vitta*.] A fillet; a riband. One of our western words, as *snod*; but in the north, *snood*, or *snude*. See also Cowel.

SNOD, *adj.* [perhaps from *snidan*, Sax., *to cut*.] Trimmed; smooth: applied, in some parts of the north, both to persons and to grass; in the former meaning well dressed, in the latter even. It is also pronounced *snog*. See **SNUG**.

SNODLAND, a parish of England, in Kent; 2 miles north-west of Aylesford.

To SNOOK, *v. n.* [*snoka*, Swed. insidioso scrutari. Serenius.] To lurk; to lie in ambush. *Unused*.

To SNORE, *v. n.* [*snorcken*, Teut., *snarchen*, Germ., *snarka*, Suec.] To breathe hard through the nose, as men in sleep.

Is not yonder Proteus' cave?
It is; and in it lies the god asleep;
And *snoring* by
We may descry
The monsters of the deep.

Dryden.

SNORE, *s.* [σνορη, Saxon.] Audible respiration of sleepers through the nose.

The surfeited grooms
Do mock their charge with *snores*: I've drugg'd their
possets. *Shakspeare.*

SNOREHAM, a hamlet of England, in Essex; 5½ miles south-south-east of Maldon.

SNO'RRER, *s.* On who snores. *Prompt. Parv.*

SNORING, GREAT, a parish of England, in Norfolk; 2 miles south-south-east of Little Walsingham.

SNORING, LITTLE, a hamlet in the foregoing parish; 3 miles north-east of Fakenham.

To SNORT, *v. n.* [*snorcken*, Teut.] To breathe hard through the nose, as men in sleep.—He found a country fellow dead-drunk, *snorting* on a bulk. *Burton*.—No more able to direct thy course, than a pilot who *snorts*, when a ship is tossed in the midst of the sea. *Patrick*.—To blow through the nose as a high-mettled horse.

The fiery war-horse paws the ground,
And *snorts* and trembles at the trumpet's sound. *Addison.*

To SNORT, *v. a.* To turn up in anger, scorn, or derision: applied to the nose.

Yfrowned foulc was hir visage,
And grinning for dispiteous rage;
Her nose *ysnorted* up for tene.

Chaucer.

SNO'RTER, *s.* A snorer; one who snorts. *Sherwood.*

SNOR'TING, *s.* Act of snoring.—Act of blowing through the nose as a high-mettled horse.—The *snorting* of his horses was heard. *Jer.*

SNOT, *s.* [snote, Saxon; *snot*, Teut., from *snȳtan* and *snuyten*. See **To SNITE**.] The mucus of the nose.

Thus, when a greedy sloven once has thrown
His *snot* into the mess, 'tis all his own. *Swift.*

To SNOT, *v. a.* [snȳtan, Sax.] To snite or blow the nose. *Sherwood.*

To SNOT'TER, *v. n.* To snivel; to sob or cry. *North.*

SNO'TTY, *adj.* Full of snot.—This squire South my husband took in a dirty *snotty*-nosed boy. *Arbuthnot.*

SNOW, a small town of Russian Lithuania, in the government of Wilna.

SNOUT, *s.* [*snuyt*, Teut. *snute*, Sax. inf. *schnautze*, Germ. *snute*, Swed. *nasus*, et *rostrum animalium*. See *Wachter* and *Serenius*.—The nose of a beast.—His nose in the air, his *snout* in the skies. *Tusser.*

In shape a beagle's whelp throughout,
With broader forehead, and a sharper *snout*. *Dryden.*

The nose of a man, in contempt
Her subtle *snout*
Did quickly wind his meaning out. *Hudibras.*
But when the date of Nock was out,
Off dropt the sympathetic *snout*. *Hudibras.*

The nosel or end of any hollow pipe.

To SNOUT, *v. a.* To furnish with a nosel or point.—Their shoes and pattens are *snouted* and piked more than a finger long. *Camden.*

SNO'UTED, *adj.* Having a snout.—Their dogs *snouted* like foxes, but deprived of that property which the logicians call *proprium quarto modo*, for they could not bark. *Heylin.*

SNO'UTY, *adj.* Resembling a beast's snout.

The nose was ugly, long, and big,
Broad and *snouty* like a pig.

Otway.

SNOW, *s.* [*snaiws*, M. Goth. *sneeuw*, Teut., *snap*, Sax., *snior*, Icel., *snio*, Swed., *snee*, Germ.]—The small particles of water frozen before they unite into drops. *Locke.*

He gives the Winter's *snow* her airy birth,
And bids her virgin fleeces clothe the earth. *Sandys.*

A ship with two masts: generally the largest of all two-masted vessels employed by Europeans. *Falconer.*

To SNOW, *v. n.* [snapan, Saxon; *sneeuwen*, Dutch.]—To fall in snow.—The hills being high about them, it *snows* at the tops of them oftener than it rains. *Brown.*

To SNOW, *v. a.* To scatter like snow.

If thou be'st born to see strange sights,
Ride ten thousand days and nights,
Till age *snow* white hairs on thee. *Donne.*

SNOW BIRD LAKE, a lake of North America, west of Hudson's bay.

SNOW RIVER, a river of North America, which runs into the Missouri; 35 miles below the Great Falls.

SNO'WBALL, *s.* A round lump of congelated snow.—They passed to the east-riding of Yorkshire, their company daily increasing, like a *snowball* in rolling. *Hayward.*

SNO'WBROTH, *s.* Very cold liquor.

Angelo, a man whose blood
Is very *snowbroth*, one who never feels
The wanton stings and motions of the sense. *Shakspeare.*

SNO'WCROWNED, *adj.* Having the top covered with snow.—From *snow-crown'd* Skiddow's lofty cliffs. *Drayton.*

SNO'WDEEP, *s.* [*viola bulbosa*, Lat.] An herb.

SNOWDON MOUNTAIN, a mountain of Wales, in the county of Caernarvon, the highest mountain of Wales, and the most remarkable for the extent of the great ridge of hills with which it is connected and forms the summit. These mountains, which take the general name of Snowdon, are situated to the south-east of the county, and extend to the confines of Merionethshire. They are called by the Welsh the mountains of Eryri, and according to an ancient proverb mentioned by Giraldus, were considered to be so extensive and productive, as to be capable of yielding sufficient pasture for all the herds in Wales, if collected together. *Camden* remarks of these mountains, that "they may be properly termed the British Alps; for besides their great height, they are also no less inaccessible, by reason of the steepness of their rocks, than the Alps themselves; and they all encompass one hill, which, far exceeding the rest in height, does so tower its head aloft, that it seems, I shall not say to threaten the sky, but to thrust its summit into it. It harbours snow continually, being throughout the year covered with it, or rather with a hardened crust of snow; and hence the British name of *Craig Eryri*, and the English one of *Snowdon*." The highest peak of Snowdon is elevated, according to the Trigonometrical Survey of England, 3571 feet above the level of the sea. But this is still nearly 2000 feet below the line of perpetual snow in that latitude; so that *Camden* is mistaken when he says that snow lies here all the year. The snow, however, begins to fall in November, and is seldom melted till the middle of June. Snowdon, though the highest mountain in Wales, is far from being the most picturesque in its form. *Cader Iris*, *Molwyn*, and *Arran*, in North Wales, and *Cader Arthur*, near Brecknock, present a much bolder outline. The usual mode of ascent to Snowdon

is by Llyn Cawellyn, about midway between Beddgelert and Caernarvon. The view from the summit is beyond measure grand and extensive; and in a clear day, and when the mountain is free of clouds, which, however, is but seldom the case, the eye can trace the hills of Scotland, with part of the coast, the high mountains of Westmoreland and Cumberland, and some of the hills of Lancashire; even the county of Wicklow is on some occasions partly visible, and the whole of the Isle of Man. All the intermediate country appears as if in a map; and even the adjacent mountains, which are of great height, seem directly under the eye. The mountain of Snowdon was held sacred by the ancient Britons, in the same manner as Parnassus was by the Greeks, and Ida by the Cretans.

SNOWDROP, *s.* [*narcissoleucoium*, Lat.] An early flower.

The little shape, by magic power,
Grew less and less, contracted to a flower;
A flower, that first in this sweet garden smil'd,
To virgins sacred, and the *snowdrop* styl'd.

Tickell.

SNOWHILL, a post town and port of entry of the United States, and capital of Worcester county, Maryland, on the Pocomoke, 25 miles from its mouth. It is pleasantly situated, and contains a court-house, a jail, an academy, a bank, three houses of public worship, one for Presbyterians, one for Episcopalians, and one for Methodists, and about 1000 inhabitants, and has considerable trade. The shipping belonging to this port, in 1816, amounted to 8458 tons; 125 miles south of Philadelphia. Lat. 38. 10. N. long. 75. 30. W.

SNOWHILL, a post village of the United States, in Greene county, North Carolina.

SNO'WLIKE, *adj.* [*ʃnəp-lic*, Saxon.] Resembling snow.

SNOWSHILL, a parish of England, in Gloucestershire; 5 miles north-east of Winchcombe.

SNOW-WHITE, *adj.* [*ʃnəp hpiʃe*, Saxon.] White as snow.

Let fair humanity abhor the deed,
That spots and stains love's modest *snow-white* weed.

Shakspeare.

SNO'WY, *adj.* White like snow.

Now I see thy jolly train:
Snowy headed Winter leads;
Spring and Summer next succeeds;
Yellow Autumn brings the rear;
Thou art father of the year.

Rowe.

Abounding with snow.

These first in Crete

And Ida known; thence on the *snowy* top
Of cold Olympus rul'd the middle air.

Milton.

Pure; white; unblemished.

There did he lose his *snowy* innocence,
His undepraved will.

J. Hall.

SNUB, *s.* [from *snebbe*, Dutch, a nose, or *knubel*, a joint of the finger.] A jag; a snag; a knot in wood.

Lifting up his dreadful club on high,
All arm'd with ragged *snubs* and knotty grain,
Him thought at first encounter to have slain.

Spenser.

To **SNUB**, *v. a.* [Swedish *snubba*, to huff, to check; Icel. the same, or rather to correct sharply or roughly.] To check; to reprimand.—We frequently see the child, in spite of being neglected, *snubbed*, and thwarted at home, acquire a behaviour which makes him agreeable to all the rest of the world. *Tatler*.—To nip.—Near the sea-shores the heads and boughs of trees run out far to landward; but toward the sea are so *snubbed* by the winds, as if their boughs had been pared or shaven off. *Ray*.

To **SNUB**, *v. n.* [*schnauben*, Germ.] To sob with convulsion.

SNU'NOSED, *adj.* Having a flat or short nose: a

corruption of *snut-nosed*, which is in the old dictionaries, and which is from *snout*.

To **SNUDGE**, *v. n.* [*sniger*, Danish; *ʃnican*, Sax.; *snaghim*, Gael. See To **SNEAK**.] To lie idle, close, or snug.

Now he will fight it out, and to the wars;
Now eat his bread in peace,
And *snudge* in quiet; now he scorns increase;
Now all day spares.

Herbert.

SNUDGE, *s.* A miser; a curmudgeon; a niggardly or sneaking fellow.

SNUFF, *s.* [*snuffen*, Teut. *naribus spirare*; *snufsta*, Su. Goth.; *snufwa*, Swed.; all from the ancient word *nef*, the nose.] Smell.—The Immortal, the Eternal, wants not the *snuff* of mortal incense for his, but for our sakes. *Stukely*.—The useless excrescence of a candle.

My *snuff* and loathed part of nature should
Burn itself out.

Shakspeare.

But dearest heart, and dearer image, stay!
Alas! true joys at best are dreams enough:

Though you stay here, you pass too fast away;
For even at first life's taper is a *snuff*.

Donne.

A candle almost burnt out.

Lamentable!

To hide me from the radiant sun, and solace
I' the dungeon by a *snuff*.

Shakspeare.

The fired wick of a candle remaining after the flame.—A torch, *snuff* and all, goes out in a moment, when dipped into the vapour. *Addison*.—Resentment expressed by snifing; perverse resentment. This is a word borrowed from the Sax. *ʃnoʃra*, *nausea*. It is thus learnedly illustrated by Bishop Andrews: "The Pharisees derided Christ; which is elegant in the original, *ἐξημυκλιγοῦσιν, naso suspendebant*, they took it in **SNUFF**; and, expressing their derision by drawing together the nose, they made noses at him."

What hath been seen

Either in *snuffs* or packings of the duke's,
Or the hard rein which both of them have borne
Against the old kind king.

Shakspeare.

Jupiter took *snuff* at the contempt, and punished him: he sent him home again. *L'Estrange*.—Powdered tobacco taken by the nose. [Our old word was *snush*; as in Kersey's Dict. "*Snush* or *sneezing-powder*." This carries us to *sneeze*, as the origin of that expression; and *snus*, Swedish, is also *snuff*. *Snuff* probably was made soon after the introduction of tobacco into this country.]

He administer'd a dose
Of *snuff* mundungus to his nose.

Hudibras.

Just where the breath of life his nostrils drew,
A charge of *snuff* the wily virgin threw;
The gnomes direct to every atom just
The pungent grains of titillating dust.

Pope.

To **SNUFF**, *v. a.* [*snuffen*, Teut.] To draw in with the breath.

With delight he *snuff'd* the smell
Of mortal change on earth.

Milton.

He *snuffs* the wind, his heels the sand excite;
But when he stands collected in his might,
He roars and promises a more successful fight.

Dryden.

To scent.

O'er all the blood-hound boasts superior skill,
To scent, to view, to turn, and boldly kill!
His fellows vain alarms rejects with scorn,
True to the master's voice, and learned horn:
His nostrils oft, if ancient fame sing true,
Trace the sly felon through the tainted dew:
Once *snuff'd*, he follows with unalter'd aim.
Nor odours lure him from the chosen game;
Deep-mouth'd he thunders, and inflam'd he views,
Springs on relentless, and to death pursues.

Tickell.

To

To crop the candle.
The late queen's gentlewoman!
To be her mistress' mistress!
This candle burns not clear: 'tis I must *snuff* it,
And out it goes. *Shakespeare.*

To SNUFF, *v. n.* To snort; to draw breath by the nose.
The fury fires the pack, they *snuff*, they vent,
And feed their hungry nostrils with the scent. *Dryden.*

To snift in contempt.—Do the enemies of the church rage
and *snuff*, and breathe nothing but threats and death?
Bp. Hall.

SNUFFBOX, *s.* The box in which snuff is carried.
Sir Plume, of amber *snuffbox* justly vain,
And the nice conduct of a clouded cane. *Pope.*

SNUFFER, *s.* One that snuffs.
SNUFFERS, *s.* The instrument with which the candle
is clipped.—When you have snuffed the candle, leave the
snuffers open. *Swift.*

To SNUFFLE, *v. n.* [*snuffelen*, Teut.] To speak
through the nose; to breathe hard through the nose.
Bagpipes of the loudest drones,
With *snuffling* broken-winded tones,
Whose blasts of air in pockets shut,
Sound filthier than from the gut. *Hudibras.*

SNUFFLER, *s.* One that speaks through the nose.
SNUFFTAKER, *s.* One who takes snuff.—The whetter
is obliged to refresh himself every moment with a liquor, as
the *snuff-taker* with a powder. *Tatler.*

SNUFFY, *adj.* Grimed with snuff.
To SNUG, *v. a.* [*sniger*, Dan. See *To SNUDGE.*] To
lie close; to snudge.—As the loving couple lay *snugging*
together, Venus, to try if the cat had changed her manners
with her shape, turned a mouse loose into the chamber.
L'Estrange.

SNUG, *adj.* Close; free from any inconvenience, yet
not splendid.

They spy'd a country farm,
Where all was *snug*, and clean, and warm;
For woods before, and hills behind,
Secur'd it both from rain and wind. *Prior.*

Close; out of notice.
At Will's
Lie *snug*, and hear what criticks say. *Swift.*

Slyly or insidiously close.
Did I not see you, rascal, did I not!
When you lay *snug* to snap young Damon's goat? *Dryden.*

SNUG BAY, a bay in the straits of Magellan, north-north-
west of Cape Froward.

SNUG BAY POINT, a cape in the straits of Magellan; 8
miles north-north-west of Cape Froward.

SNUG COVE, a harbour on the east coast of New
Holland, in Two-fold bay. Lat. 37. 4. S. long. 150.
3. W.

SNUG CORNER COVE, a bay on the west coast of
North America, in Prince William Sound, which takes first a
direction south-by-east four miles, and then east about four
miles further. Its west point is situated in Lat. 60. 45. N.
long. 213. 48. E.

To SNUGGLE, *v. n.* To lie close; to lie warm.

SNUGLY, *adv.* Safely; closely. *Bullokar.*

SNU'GNESS, *s.* Retiredness.
O'er me soft *snugness* spreads her wings;
And innocence reflects her ray
To gild my calm sequester'd way. *Warton.*

SNYDALL, or SNIDALE, a hamlet of England, West
Riding of Yorkshire; 4 miles west-by-south of Pontefract.

SNYING, in Ship-Building, a term applied to those
planks, whose edges curve or round upwards. The great
 sny occasioned in full bows or buttocks is only to be pre-
vented by introducing steelers.

SNYTE, a small river of England, which rises in Leices-

tershire, and passing through Nottinghamshire, runs into th^e
Dean at Shilton.

SO, *adv.* [*ῥῶπα*, Sax.; *soo*, Dutch; *so*, Germ.] In like
manner. It answers to *as* either preceding or following.
Noting comparison.

As whom the fables feign of monstrous size,
Titanian or earthborn that warr'd on Jove,
So stretched out huge in length the arch-fiend lay. *Milton.*

Thick *as* autumnal leaves that strew the brooks,
In Valombrosa, where the Etrurian shades
High over-arch'd embower, *so* thick bestrewn
Abject and lost lay these. *Milton.*

To such a degree.—Why is his chariot *so* long in coming?
Judg.

Can nothing great, and at the height,
Remain *so* long, but its own weight
Will ruin it? Or is't blind chance
That still desires new states t' advance? *B. Jonson.*

In such a manner.
There's no such thing, as that we beauty call,
It is meer cosenage all;
For though some long ago
Lik'd certain colours mingled *so* and *so*,
That doth not tie me now from chusing new. *Suckling.*

I shall minutely tell him the steps by which I was brought
into this way, that he may judge whether I proceeded
rationally, if *so* be any thing in my example is worth his
notice. *Locke.*—It is regularly answered by *as* or *that*, but
they are sometimes omitted.

So frowned the mighty combatants, *that* hell
Grew darker at their frown. *Milton.*

In the same manner.
Of such examples add me to the roll;
Me easily indeed mine may neglect,
But God's propos'd deliverance not *so*. *Milton.*

Thus; in this manner.
Not far from thence the mournful fields appear,
So call'd from lovers that inhabit there. *Dryden.*

Does this deserve to be rewarded *so*?
Did you come here a stranger or a foe? *Dryden.*

Therefore; for this reason; in consequence of this.
The god, though loth, yet was constrain'd t' obey;
For longer time than that, no living wight,
Below the earth, might suffer'd be to stay:
So back again him brought to living light. *Spenser.*
On these terms; noting a conditional petition: answered
by *as*.

O goddess! tell what I would say,
Thou know'st it, and I feel too much to pray,
So grant my suit, *as* I enforce my might,
In love to be thy champion. *Dryden.*

Provided that; on condition that; *modo*.
Be not sad:
Even into the mind of God or man
May come and go *so* unprov'd, and leave
No spot or blame behind. *Milton.*

In like manner; noting concession of one proposition and
assumption of another, answering to *as*. *As* a war should
be undertaken upon a just motive, *so* a prince ought to con-
sider the condition he is in when he enters on it. *Swift.*—
So sometimes returns the sense of a word or sentence going
before, and is used to avoid repetition; *as*, the two brothers
were valiant, but the eldest was more *so*; that is, more
valiant. The French article *le* is often used in the same
manner. This mode of expression is not to be used but in
familiar language, nor even in that to be commended.

However soft within themselves they are,
To you they will be valiant by despair;
For having once been guilty, well they know
To a revenged prince they still are *so*. *Dryden.*

Thus

Thus it is ; this is the state.

How sorrow shakes him !

So, now the tempest tears him up by the roots,
And on the ground extends the noble ruin.

Dryden.

At this point ; at this time.

When

With wild wood-leaves and weeds I ha' strew'd his grave
And on it said a century of prayers,
Such as I can, twice o'er, I'll weep and sigh ;
And, leaving so his service, follow you.

Shakspeare.

It notes a kind of abrupt beginning. Well.

O, so, and had you a council
Of ladies too ? Who was your speaker,
Madam ?

B. Jonson.

It sometimes is little more than an expletive, though it implies some latent or surd comparison. In French *si*.—An astringent is not quite *so* proper, where relaxing the urinary passages is necessary. *Arbuthnot*.—A word of assumption ; thus be it.—I will never bear a base mind : if it be my destiny, *so* ; if it be not, *so*. No man is too good to serve his prince. *Shakspeare*.—A form of petition.

Ready are the appellant and defendant,
The armourer and his man, to enter the lists,
So please your highness to behold the fight.

Shakspeare.

So *forth*. Denoting more of the like kind.—Is not birth, beauty, good shape, discourse, manhood, learning, and so *forth*, the spice and salt that season a man ? *Shakspeare*.—So *much as*. However much. This is, I think, an irregular expression.—*So much as* you admire the beauty of his verse, his prose is full as good. *Pope*.—So *so*. An exclamation after something done or known. Corrupted, I think, from *cesser*.

I would not have thee linger in thy pain :

So *so*.

Shakspeare.

So *so*. [*cosi, cosi*, Italian.] Indifferently ; not much amiss nor well.

He's not very tall ; yet for his years he's tall ;
His leg is but *so, so* : and yet 'tis well.

Shakspeare.

So *then*. Thus then it is that ; therefore.

So *then* the Volscians stand but as at first
Ready, when time shall prompt them, to make road
Upon's again.

Shakspeare.

SOA, a small island of the Hebrides, above a mile in circumference, lying near the remote island of St. Kilda.

SOA, a settlement in the island of Cuba ; 60 miles north of St. Jago.

SOAGHUN, a town of Hindostan, province of Malwah, belonging to the Mahrattas. Lat. 23. 12. N. long. 74. 50. E.

To SOAK, *v. a.* [*rocian*, Saxon.] To macerate in any moisture ; to steep ; to keep wet till moisture is imbibed ; to drench.

Many of our princes

Lie drown'd and *soak'd* in mercenary blood :
So do our vulgar drench their peasant limbs
In blood of princes.

Shakspeare.

To drain ; to exhaust. This seems to be a cant term, perhaps used erroneously for *suck*.—Plants that draw much nourishment from the earth, and *soak* and exhaust it, hurt all things that grow by them. *Bacon*.

To SOAK, *v. n.* To lie steeped in moisture.

For thy conceit in *soaking* will draw in
More than the common blocks.

Shakspeare.

To enter by degrees into pores.—Lay a heap of earth in great frosts upon a hollow vessel, putting a canvas between, and pour water upon it so as to *soak* through : it will make harder ice in the vessel, and less apt to dissolve than ordinarily. *Bacon*.—To drink gluttonously and intemperately. *This is a low term*.—Let a drunkard see that his health
Vet. XXIII. No. 1573.

decays, his estate wastes, yet the habitual thirst after his cups drives him to the tavern, though he has in his view the loss of health and plenty ; the least of which he confesses is far greater than the tickling of his palate with a glass of wine, or the idle chat of a *soaking* club. *Locke*.

SO'AKER, *s.* One that macerates in any moisture ; a great drinker. *In low language*.—A good fellow ! a painful, able, and laborious *soaker* ; — who owes all his good-nature to the pot and the pipe. *South*.

SOAL, *s.* See SOLE.

SOAL, or SOLE, in Ichthyology, called by the generality of authors the *buglossus* ; the *Pleuronectes Solea* of Linnæus.

SOANE, a river of Hindostan, which has its source in the vicinity of the famous temple of Omercuntuc, in the province of Gundwaneh. It first runs in a northerly direction through part of the province of Allahabad ; after which, turning to the eastward, it pursues its course towards the Ganges, and joins that river 29 miles above the city of Patna, in Bahar, after having performed a winding course of about 500 miles. It is said formerly to have produced gold, and to have received its name from that circumstance. At present it produces a variety of pebbles, particularly a black stone called *salagram*, held in great veneration by Hindoos. It is only navigable by large boats during the rainy season ; and during the other part of the year it is fordable everywhere but near the mouth, but is full of quicksands. Some persons are of opinion that the Palibothra of the Greeks stood at the junction of this river with the Ganges ; but at that period it was several miles lower down than at present.

SOANGUR, a town of Hindostan, province of Gujerat, district of Surat. It is situated on the south bank of the Taptee river, and formerly possessed a strong fort. It now belongs to the British. Lat. 21. 10. N. long. 73. 33. E.

SOANK, a river of Hindostan, which rises in the province of Bahar, and bending its course to the southward, falls into the bay of Bengal, a little above point Palmiras.

SOAP, *s.* [*sape*, Saxon ; *sapo*, Lat.] A substance used in washing, made of a lixivium of vegetable alkaline ashes and any unctuous substance.—*Soap* is a mixture of a fixed alkaline salt and oil ; its virtues are cleansing, penetrating, attenuating, and resolving ; and any mixture of any oily substance with salt may be called a *soap*. *Arbuthnot*.

SO'AP-BOILER, *s.* One whose trade is to make soap.—A *soap-boiler* condoles with me on the duties on castile-soap. *Addison*.

SO'AP-WORT, *s.* [*japonaria*, Lat.] A species of campan. *Miller*.

SO'APY, *adj.* Resembling soap ; having the quality of soap.—Tar-water, — as a *soapy* medicine, dissolves the grumous concretions of the fibrous part. *Bp. Berkeley*.

To SOAR, *v. n.* [*sorare*, Italian.] To fly aloft ; to tower ; to mount ; properly to fly without any visible action of the wings. Milton uses it actively.

'Tis but a base ignoble mind

That mounts no higher than a bird can *soar*. *Shakspeare*.

To mount intellectually ; to tower with the mind.—How high a pitch his resolution *soars*. *Shakspeare*.

To rise high.

Who aspires must down as low

As high he *soar'd*.

Milton.

SOAR, *s.* Towering flight.

Within *soar*

Of towering eagles, to all the fowls he seems
A phoenix.

Milton.

SOAR, *adj.* See SORE.

SOAR, or SOUR, anciently called *Leire*, a river of England, which rises about 5 miles from Lutterworth, passes by Leicester, &c., and runs into the Trent on the borders of Nottinghamshire, about 3 miles north-north-east of Kegworth.

SO'ARING, *s.* The act of mounting aloft ; the act of elevating

elevating the mind.—Proverbs were ambitiously seized by the lyric and by the epic in their most rapid career, and their sublimest *soarings*. *Parr.*

SOAVE, a town of Austrian Italy, in the Veronese. Population 1600; 10 miles east of Verona.

SOAY, a small island of Scotland, on the south-west coast of the isle of Skye.

SOAY, two small islands of Scotland, on the west coast of Harris.

SOAY, a small pasture island of Scotland, on the coast of Sutherlandshire, near the entrance of Loch Inver harbour, in the parish of Assint.

To SOB, *v. n.* [reobzeno, complaining, Saxon. It is from the verb *reopian*, to grieve, to lament. See *Lye and Serenius*.] To heave audibly with convulsive sorrow; to sigh with convulsion.

When thy warlike father, like a child,
Told the sad story of my father's death,
He twenty times made pause to *sob* and weep. *Shakspeare.*

SOB, *s.* A convulsive sigh; a convulsive act of respiration obstructed by sorrow.

Break heart, or choak with *sobs* my hated breath;
Do thy own work, admit no foreign death. *Dryden.*

To SOB, *v. a.* To soak. *A cant word.*—The tree being *sobbed* and wet, swells. *Mortimer.*

SOBBING, *s.* Act of lamenting.—The hoarse *sobbings* of the widow'd dove. *Drummond.*

SOBER, *adj.* [*sobrius*, Lat., *sobre*, Fr.] Temperate, particularly in liquors; not drunken.—Live a *sober*, righteous and godly life. *Common Prayer.*—The vines give wine to the drunkard as well as to the *sober* man. *Bp. Taylor.*—No *sober* temperate person, whatsoever other sins he may be guilty of, can look with complacency upon the drunkenness and sottishness of his neighbour. *South.*—Not overpowered by drink.—A law there is among the Grecians, whereof Pittacus is author; that he which being overcome with drink did then strike any man, should suffer punishment double, as much as if he had done the same being *sober*. *Hooker.*—Not mad; right in the understanding.—Another, who had a great genius for tragedy, following the fury of his natural temper, made every man and woman in his plays stark raging mad: there was not a *sober* person to be had; all was tempestuous and blustering. *Dryden.*—No *sober* man would put himself into danger, for the applause of escaping without breaking his neck. *Dryden.*—Regular; calm; free from inordinate passion.—This same young *sober*-blooded boy a man cannot make him laugh. *Shakspeare.*—Cieca travelled all over Peru, and is a grave and *sober* writer. *Abbot.*—Young men likewise exhort to be *sober* minded. *Tit.*—The governor of Scotland being of great courage and *sober* judgment, amply performed his duty both before the battle and in the field. *Hayward.*—These confusions disposed men of any *sober* understanding to wish for peace. *Clarendon.*—Among them some *sober* men confessed, that as his Majesty's affairs then stood, he could not grant it. *Clarendon.*

To these, that *sober* race of men, whose lives
Religious, titled them the sons of God,
Shall yield up all their virtue, all their fame
Ignobly to the trains and to the smiles
Of these fair atheists.

Milton.

Be your designs ever so good, your intentions ever so
sober, and your searches directed in the fear of God. *Waterland.*—Serious; solemn; grave.

Petruchio
Shall offer me, disguis'd in *sober* robes,
To old Baptista as a schoolmaster. *Shakspeare.*

Come, civil night,
Thou *sober*-suited matron, all in black. *Shakspeare.*

Twilight grey
Had in her *sober* livery all things clad. *Milton.*

What parts great France from *sober* Spain,
A little rising rocky chain:

Of men born south or north the hill,
Those seldom move; these ne'er stand still. *Prior.*

For Swift and him despis'd the farce of state,
The *sober* follies of the wise and great. *Pope.*

See her *sober* over a sampler, or gay over a jointed baby.
Pope.

To SO'BER, *v. a.* To make sober; to cure of intoxication. *Dr. Johnson.*—This is a very old English verb: it occurs in the Prompt. Parvulorum.

A little learning is a dangerous thing;
Drink deep, or taste not the Pierian spring;

There shallow draughts intoxicate the brain,
And drinking largely *sobers* us again. *Pope.*

SOBERLY, *adv.* Without intemperance; without madness; temperately; moderately.—Let any prince think *soberly* of his forces, except his militia of natives be valiant soldiers. *Bacon.*—Coolly; calmly.—Whenever children are chastised, let it be done without passion, and *soberly*, laying on the blows slowly. *Locke.*

SOBERMINDEDNESS, *s.* [from *sober-minded*; which see in the fourth sense of SOBER.] Calmness; regularity; freedom from inordinate passion.—To induce habits of modesty, humility, temperance, frugality, obedience; in one word *sober-mindedness*. *Bp. Porteus.*

SOBERNESS, *s.* Temperance, especially in drink.—Keep my body in temperance, *soberness* and chastity. *Common Prayer.*—Calmness; freedom from enthusiasm; coolness.—I am not mad, most noble Festus, but speak forth the words of *soberness* and truth. *Acts.*—A person noted for his *soberness* and skill in spagyrical preparations, made Helmont's experiment succeed very well. *Boyle.*—The *soberness* of Virgil might have shewn the difference. *Dryden.*

SOBERNHEIM, a town of the Prussian province of the Lower Rhine, on the river Nahe. Population 1400.

SOBERTON, or SUBERTON, a parish of England, in Southamptonshire; 3½ miles east of Bishop's Waltham. Population 760.

SOBIESLAU, a town in the interior of Bohemia; 58 miles south-south-east of Prague. Population 2200.

SOBOTKA, a town of Bohemia; 42 miles east-north east of Prague. Population 1400.

SOBRIETY, *s.* [from *sobriete*, Fr., *sobrius*, Lat. Not frequent in the plural number; nor has Dr. Johnson furnished an example of that kind. Bishop Taylor and South use it. See the fifth meaning.] Temperance in drink; soberness.—Drunkenness is more uncharitable to the soul, and in Scripture is more declaimed against than gluttony; and *sobriety* hath obtained to signify temperance in drinking. *Bp. Taylor.*—Present freedom from the power of strong liquor; general temperance.—In setting down the form of common prayer, there was no need that the book should mention either the learning of a fit, or the unfitnes of an ignorant minister, more than that he which describeth the manner how to pitch a field, should speak of moderation and *sobriety* in diet. *Hooker.*—Freedom from inordinate passion.—The libertine could not prevail on men of virtue and *sobriety* to give up their religion. *Rogers.*—Calmness; coolness.—Enquire with all *sobriety* and severity, whether there be in the footsteps of nature, any such transmission of immaterial virtues and what the force of imagination is. *Bacon.*—The *sobrieties* of a holy life. *Bp. Taylor.*—The *sobrieties* of virtue. *South.*—*Sobriety* in our riper years is the effect of a well concocted warmth; but where the principles are only phlegm, what can be expected but an insipid manhood, and old infancy. *Dryden.*—If sometimes Ovid appears too gay, there is a secret gracefulness of youth, which accompanies his writings, though the stayedness and *sobriety* of age be wanting. *Dryden.*—Seriousness; gravity.—A report without truth; and I had almost said, without any *sobriety* or modesty. *Waterland.*

Mirth

Mirth makes them not mad;
Nor *sobriety* sad.

Denham.

SOC, *s.* [roc, Sax. In hoc differebant inter se *sac* et *soc*; quòd istud, nempè *sac*, privilegium erat, sive potestas, cognoscendi causas et lites dirimendi; hæc autem, nempè *soc*, territorium, sive præinctus, in quo *saca* et cætera privilegia exercebantur: *Soc*, curia: *Sac*, causarum in ipsa curia cognitio. *Hickes.*]—Jurisdiction; circuit or place where a lord has the power or liberty of holding a court of his tenants, and administering justice.—The said Robert le Fitz-Walter—hath a *soke* [*soc*] in the City of London:—if any thief shall be taken in his *soke*, he ought to have his stocks and imprisonment in his *soke*. *Blount.*—Liberty or privilege of tenants excused from customary burthens. *Cowel.*—An exclusive privilege claimed by millers of grinding all the corn which is used within the manor or township, wherein their mill stands. Some trials at law relative to this ancient privilege have lately taken place; but the millers have generally been cast. Marshall's Yorkshire. *Grose.*

SOC, SOK, or *Soka*, in Law, denotes jurisdiction; or a power or privilege to administer justice, and execute laws.

The word is also used for the shire, circuit or territory, in which such power is exercised by him endued with such jurisdiction.

Hence, also, the law Latin *soca*, used for a seignory or lordship franchised by the king with liberty of holding a court of his *soc-men* or *socagers*, that is, his tenants; whose tenure is hence called *socage*.

SOCAGE, or SOCCAGE, in its most extensive signification, seems to denote a tenure by any certain and determinate service. And thus, our ancient writers constantly put it in opposition to chivalry or knight-service, where the render was uncertain.

Thus Bracton, if a man holds by a rent in money, without any escuage or serjeanty, *id tenementum dici potest socagium*. Littleton also defines it to be, where the tenant holds his tenement of the lord by any certain service in lieu of all other services, so that they be not services of chivalry or knight-service: therefore, he tells us, that whatsoever is not tenure of chivalry is tenure in socage. The service must therefore be certain, in order to denominate it socage; as to hold by fealty and 20s. rent; or by homage, fealty and 20s. rent; or by homage and fealty, without rent; or by fealty and certain corporal services, as ploughing the lord's land for three days; or by fealty only, without any other service; for all these are tenures in socage. See SOCCAGE.

SOCALBAMBA, a lake of Peru, in the province of Canta, whence rises the river Carabaillo.

SOCANDAGA, or SAGENDAGA, the west branch of Hudson's river, which runs a south and south-east course, and about 15 miles from its mouth takes a north-east direction, and joins that river about 13 or 14 miles west-by-north of Fort Edward.

SOCCAGE, *s.* [*soc*, French, a ploughshare; *socagium*, barbarous Latin.] In law, is a tenure of lands for certain inferior or husbandly services to be performed to the lord of the fee. All services due to land being knight's service, or *socage*; so that whatever is not knight's service, is *socage*. This *socage* is of three kinds; a *socage* of free tenure, where a man holdeth by free service of twelve pence a year for all manner of services. *Socage* of ancient tenure is of land of ancient demesne, where no writ original shall be sued, but the writ *secundum consuetudinem maneri*. *Socage* of base tenure is where those that hold it may have none other writ but the *monstraverunt*; and such socmen hold not by certain service. *Cowel.*—The lands are not holden at all of her Majesty, or not holden in chief, but by a mean tenure in *socage*, or by knight's service. *Bacon.*

SOCCAGER, *s.* A tenant by socage.

SOCCAVO, a small town in the neighbourhood of Naples, with 1300 inhabitants.

SOCCELLI, among the Romans, were swaths or bands, which covered the leg down to the soccus.

SOCCUS, or SOCK, a kind of high shoe, reaching above the ankle, worn by the actors in the ancient drama, in the representation of comic characters.

The soccus was much lower than the cothurnus, and was the distinguishing wear of the comedians; as the cothurnus was of the tragedians; hence soccus is frequently used for comedy itself.

SOCHA, a settlement of New Granada, in the province of Tunja. Population 100 house-keepers, and 70 Indians; 36 miles north-east of Tunja.

SOCIABILITY, *s.* Sociableness.—He introduceth the system of human *sociability*, by showing it to be the dictate of the Creator. *Warburton.*

SO'CIABLE, *adj.* [*sociable*, Fr., *sociabilis*, Lat.] Fit to be conjoined.—Another law toucheth them as they are *sociable* parts united into one body; a law which bindeth them each to serve unto other's good, and all to prefer the good of the whole before whatsoever their own particular. *Hooker.*—Ready to unite in a general interest.

To make man wild, and *sociable* to man;
To cultivate the wild licentious savage
With wisdom, discipline.

Addison.

Friendly; familiar; conversible.

Them thus employ'd, beheld
With pity heav'n's high King, and to him call'd
Raphael, the *sociable* spirit, that deign'd
To travel with Tobias.

Milton.

Inclined to company.—In children much solitude and silence I like not, nor any thing born before his time, as this must needs be in that *sociable* and exposed age. *Wotton.*

SO'CIABLE, *s.* A kind of less exalted phaeton, with two seats facing each other, and a box for the driver. *Mason.*

SO'CIABLENESS, *s.* Inclination to company and converse.

Such as would call her friendship love, and feign
To *sociableness* a name profane.

Donne.

The two main properties of man are contemplation and *sociableness*, or love of converse. *More.*—Freedom of conversation; good fellowship.—He always used courtesy and modesty, disliked of none; sometimes *sociableness* and fellowship well lik'd by many. *Hayward.*

SO'CIABLY, *adv.* Conversibly; as a companion.

Yet not terrible,
That I should fear; nor *sociably* mild,
As Raphael, that I should much confide;
But solemn and sublime.

Milton.

SO'CIAL, *adj.* [*socialis*, Lat.] Relating to a general or public interest; relating to society.—To love our neighbour as ourselves is such a fundamental truth for regulating human society, that by that alone one might determine all the cases in *social* morality. *Locke.*—True self-love and *social* are the same. *Pope.*—Easy to mix in friendly gaiety; companionable.

Withers, adieu! yet not with thee remove
Thy martial spirit or thy *social* love.

Pope.

Consisting in union or converse with another.

Thou in thy secrecy although alone,
Best with thyself accompany'd, seek'st not
Social communication.

Milton.

SOCIA'LITY, *s.* Socialness.—The progress of *sociality*. *Sterne.*—A scene of perfectly easy *sociality*. *Boswell.*

SO'CIALLY, *adv.* In a social way.

SO'CIALNESS, *s.* The quality of being social.

SOCIETY, *s.* [*société*, Fr., *societas*, Lat.] Union of many in one general interest.—If the power of one *society* extend likewise to the making of laws for another *society*, as if the church could make laws for the state in temporals; or the state make laws binding the church, relating to spirituals, then is that *society* entirely subject to the other. *Leslie.*—Numbers united in one interest; community.—As

the

the practice of piety and virtue is agreeable to our reason, so is it for the interest of private persons and public *societies*. *Tillotson*.—Company; converse.

To make *society*
The sweeter welcome, we will keep ourself
Till supper-time alone. *Shakspeare*.

Whilst I was big in clamour, came there a man,
Who having seen me in my worsor state,
Shunn'd my abhorr'd *society*. *Shakspeare*.

Solitude sometimes is best *society*,
And short retirement urges sweet return. *Milton*.

Partnership; union on equal terms.—Among unequals
what *society* can sort? *Milton*.

Heaven's greatness no *society* can bear;
Servants he made, and those thou wan'st not here. *Dryden*.

SOCIETY HILL, a post village of the United States, in
Iredell county, North Carolina.

SOCIETY ISLANDS, a cluster of islands in the South
Pacific Ocean, so named by Captain Cook, in the year 1769.
They are Ulietea, Otaha, Bolabola, Huaheine, Tubai, and
Maurua; the two last are very small. Captain Cook says
he called them thus because they lay contiguous to each
other, but did not think it proper to distinguish them sepa-
rately by any other names than those by which they were
known to the natives. They are situated between the lati-
tude of 16. 10. and 16. 55. S. and between the longitude of
150. 57. and 152. W. from the meridian of Greenwich.
Ulietea and Otaha lie within about two miles of each other,
and are both inclosed within one reef of coral rocks, so that
there is no passage for shipping between them. This reef
forms several excellent harbours; the entrances into them,
indeed, are but narrow, yet when a ship is once in, nothing
can hurt her. The inhabitants, climate and produce are sim-
ilar, in many respects, to those of Otaheite, from which
island they are not above fifty leagues distant towards the
north-west. Huaheine seems to be a month forwarder in its
productions than Otaheite. Of the cocoa-nuts the inhabi-
tants make a food which they call *poe*, by mixing them with
yams; they scrape both fine, and having incorporated the
powder, they put it into a wooden trough, with a number
of hot stones, by which an oily kind of hasty-pudding is
made, that the English seamen relished very well, especially
when it was fried.

The inhabitants of these islands are generally considered
taller and more robust than those of Otaheite, and the wo-
men more handsome. They are similar in their manners,
being addicted to the same superstitions and customs; and
being also under a similar climate, their mode of living is
generally the same. The islands are fruitful, and the inhabi-
tants trust to the spontaneous produce of the earth rather
than to their own labours; but when this fails, they are in
the greatest straits. These islands so much resemble Ota-
heite in their climate and productions, and in the manners
of the inhabitants, that any farther account of these would
only be to repeat what has been already stated in our account
of that island.

In the account of Otaheite, the persevering and success-
ful labours of the missionaries to civilize and convert the
natives from their superstitions, were noticed. Though long
disappointed, and though their lives were also frequently en-
dangered by the contests and revolutions which agitated
those islands, the missionaries would not relinquish their
task, and their efforts have been at length so far crowned
with success, that the sovereigns of many of these islands,
together with a large proportion of the inhabitants, have re-
linquished the superstitions of their forefathers, and pro-
fessed their belief in the truths of Christianity. This change
has extended to several of the Society Islands, viz., Hua-
heine, Raiatea or Ulietea, Taha or Otaha, and Borabora or
Bolabola. The principal chief of these islands had relin-
quished his old and idolatrous creed, and had embraced the
new faith. At the two latter islands, two of the chiefs had
distinguished themselves by their zeal in destroying all ido-

latrous places of worship, and erecting a Christian church
in their place. In Raiatea, Tapa, one of the chiefs, was
proceeding to destroy the ancient idols which he had been
accustomed to worship, when the idolaters rose upon him.
They were in the end, however, completely subdued, and
though they still continued to plot new schemes for the re-
storation of the old religion, there was no probability that
they would accomplish their object. The missionaries will
therefore proceed with fresh vigour in their task of instruct-
ing these ignorant natives, and of reclaiming them from their
barbarous superstitions and customs. They had made tours
round Huaheine, Raiatea, Taha, and had visited Borabora,
and they calculated that in these islands there were nearly
4000 converts to Christianity. They were, however, with-
out instruction, except from books, with which they were
supplied by the missionaries.

SOCI'NIAN, *adj.* Of or belonging to Socinianism.

SOCI'NIANISM, *s.* The tenets of Socinus.

SOCI'NIANS, a sect of Antitrinitarians, who are said to
have derived this denomination from the illustrious family of
the Sozzini, which flourished a long time at Sienna, in
Tuscany, and produced several great and eminent men;
and, among others, Lælius and Faustus Socinus, who are
commonly supposed to have been the founders of this sect.
Lælius was the son of Marianus, a famous lawyer, and dis-
tinguished by his genius and learning, as well as by the lustre
of an unblemished and virtuous conduct. Having conceiv-
ed a disgust against popery, and disapproving many
doctrines of the church, he left his country in 1547; and
having passed four years in visiting France, England, Hol-
land, Germany, and Poland, he at last fixed his residence at
Zurich, in Switzerland, where he died in 1562, in the
thirty-seventh year of his age. Although he adopted the
Helvetic confession of faith, and professed himself a member
of the church of Switzerland, he entertained doubts with
respect to certain doctrines of religion, which he communi-
cated to some learned men, whose judgment he respected,
and in whose friendship he could confide. However, his
sentiments were propagated in a more public manner, after
his death; as Faustus, his nephew and his heir, is supposed
to have drawn from the papers he left behind him, that reli-
gious system, upon which the sect of the Socinians was
founded. This Faustus Socinus was born at Sienna in 1539;
and having continued many years in his own country, twelve
of which he spent in the court of the grand duke of Tuscany,
he determined, in the year 1574, and the thirty-fifth of his
age, to withdraw from Italy into Germany. During this
period he had laboured under many disadvantages in the pur-
suit of knowledge, and his studies had been chiefly confined
to the rudiments of logic and jurisprudence; but at Basil,
where he first resided after his voluntary exile, he devoted
himself for three years to the study of theology, under the
direction and assistance of the writings of his uncle Lælius;
and in 1577 he began to propagate his religious opinions
without reserve or disguise. In 1578 he was invited by
Blandrata, a person of eminence in Transylvania, to compose
the commotions which were occasioned by a party under the
lead of Francis David, in the Antitrinitarian churches of that
country. But failing of success, he removed to Poland in
1579, zealously wishing to join himself to the Unitarian
churches; but here he suffered many vexations, and much
opposition, from a considerable number of persons, who
looked upon some of his tenets as highly erroneous. At length,
however, he vanquished the animosity of his enemies by his
gentleness and firmness, by his address and eloquence, and
the favours and protection of the nobility, with which he was
honoured, and lived to form the Unitarians into one com-
munity, under his own superintendency and direction.
Having retired to a village about nine miles from Cracow,
he there closed his life, in the year 1604; and the following
epitaph was inscribed on his tomb:

“Tota licet Babylon destruxit tecta Lutherus,
Muros Calvinus, sed fundamenta Socinus:”

i. e. Luther destroyed the houses of Babylon, Calvin the
walls,

walls, but Socinus, subverted the foundations. The sentiments of Socinus, with regard to the principal theological subjects controverted among Christians, will appear in the following abstract of them from his own writings; some of which were published during his own life, and some after his death; and the collection of them, in two volumes, folio, forms part of the "Bibliotheca Fratrum Polonorum." With regard to the nature and character of Christ, Socinus maintained, that he was a man, conceived and formed in the womb of the Virgin, without the intervention of a man, by the power of the divine spirit.

Socinus does also expressly deny the distinct personality of the Holy Ghost, understanding by the Holy Spirit a divine energy or influence.

Socinus denied the perpetuity of baptism, and thought, that, in order to the right administration of baptism, it is previously necessary that the baptized person should be a believer, and he, therefore, reckoned the practice of infant baptism unscriptural and erroneous.

The chief school of the Socinians was at Racow, where they obtained the grant of a settlement, and there all their first books were published. But in the year 1633, in consequence of the intemperate zeal of some students of the Unitarian academy in this city against Popery, a law was enacted at Warsaw, by which it was decreed, that the academy of Racow should be destroyed, its professors banished, the printing-house of the Socinians destroyed, and their churches shut up.

SOCK, *s.* [*soccus*, Latin; *pocc*, Saxon; *socke*, Teut. *sockr*, Icel. vox plurimis linguis communis, antiquissima et Phrygica. See *Wachter and Serenius*.] Something put between the foot and shoe.—Ere I lead this life long, I'll sow nether *socks*, and mend them, and foot them too, *Shakspeare*.—The shoe of the ancient comic actors, taken in poems for comedy, and opposed to buskin or tragedy.

Then to the well trod stage anon,
If Jonson's learned *sock* be on,
Or sweetest *Shakspeare*, Fancy's child,
Warble his native wood-notes wild.

Milton.

A ploughshare, or plough-sock. [*soc d'une charrue*, Fr. the coulter or share of a plough, *Cotgrave*; perhaps from the Lat. *seco*, to cut.] A northern word. See *Ray and Grose*.

SOCKACZOW, or **SOCKACZEW**, a town of Poland, on the river Bura. Population 3000, Christians and Jews.

SOCKBRIDGE, a hamlet of England, in Westmoreland, situated on the Elmot; 3 miles south-south-west of Penrith.

SOCKBURN, a village of England, in Durham, situated on the Tees; 7 miles south-east of Darlington.

SOCKET, *s.* [*souchette*, Fr.] Any hollow pipe; generally the hollow of a candlestick.

The stars amaz'd ran backward from the sight,
And, shrunk within their *sockets*, lost their light. *Dryden.*

The receptacle of the eye.

His eye-balls in their hollow *sockets* sink;
Bereft of sleep he loths his meat and drink;
He withers at his heart, and looks as wan
As the pale spectre of a murder'd man.

Dryden.

Any hollow that receives something inserted.

On either side the head produce an ear,
And sink a *socket* for the shining share.

Dryden.

SOCKETCHISEL, *s.* A stronger sort of chisels.—Carpenters, for their rougher work, use a stronger sort of chisels, and distinguish them by the name of *socketchisels*; their shank made with a hollow *socket* a-top, to receive a strong wooden sprig made to fit into the *socket*. *Moxon.*

SOCKIA, a small town of Hedjäs, in Arabia; 75 miles south of Medina.

SOCKLESS, *adj.* Wanting socks or shoes.—You shall behold one pair of legs, the feet of which were in times past *sockless*, but are now, through the change of time that alters all things, very strangely become the legs of a knight and courtier. *Beaum. and Fl.*

Vol. XXIII. No. 1573.

SOCKNA, a town in the northern part of Fezzan, in Africa, situated on an immense plain of gravel, bounded on the south by the Soudeck mountains. It is surrounded by a wall with seven gates, only one of which can admit a loaded camel. The streets are very narrow, and the houses built of mud and small stones intermixed. They have no windows, the light being admitted only by the doors. The town is surrounded by most extensive plantations of dates, which are of excellent quality; but there is no food for camels at less than five miles distance. The population is estimated by Captain Lyon at 2000. He makes heavy complaints of the inhabitants, for their impudence and beggary.

SO'CLE, *s.* [With architects.] A flat square member, under the bases of pedestals of statues and vases: it serves as a foot or stand. *Bailey.*

SO'CMAN, or **SO'CCAGER**, *s.* [*jocajman*, Sax.] A sort of tenant that holds lands and tenements by soccage tenure, of which there are three kinds. See **SOCAGE**. *Cowel.*

SO'CMANRY, *s.* [from *socman*; low Lat. *sokemanria*.] Free tenure by soccage. *Cowel.*—It shall be lawful for the *sokenan* of the *sokemanry* of the said Robert le Fitz Walter to demand the court of the said Robert. *Blount.*

SOCNA, a privilege, liberty, or franchise. The word is Saxon.

SOCO, in Ornithology, the name of a Brazilian bird of the heron-kind, the *ardea Brasiliensis* of Linnæus, remarkable, beyond all the rest of that genus, for the length of its neck. It is very common in the Brazils; it is smaller than the common heron; its beak is strong, straight, and sharp; its tail short; its head and neck brown, and variegated with black; and its body is of the same colours in different variegations, but its wings have a mixture of whiteness. See **ARDEA**.

SO'COME, *s.* [In the old law.] A custom of tenants to grind corn at their lord's mill.—There is bond-*socome*, where tenants are bound to grind at the lord's mill; and love-*socome*, where they do it freely out of love to their lord. *Cowel.*

SOCONUSCO, a province of Guatimala, in North America, bounded on the north by Vera Paz, Chiapa, Guaxaca and Honduras, on the south by the Pacific, on the east by Nicaragua, and on the west by Guaxaca and the Pacific Ocean. Guatimala or St. Jago de Guatimala is its capital, as well as that of the whole audience. It is subdivided into the following districts, from the north to the south, along the coast of the Pacific:—Soconusco, Suchitepec, Sansonate, St. Salvador, St. Miguel, Tiguessgalpa, and Choluteca or Xeres. It is 35 leagues long from north to south, and as many more from east to west. The air in this district is exceeding hot, and the general state of the climate either rainy or sultry: the rains last from April till September, and violent storms are very frequent. Soconusco is neither a healthy nor a pleasant country, and the soil is not so fertile as in some other parts of Guatimala, the corn and maize not growing so abundantly; but to compensate this, it produces pimento, indigo and cacao in great quantities, and with these articles it carries on a great trade with the other North American colonies of Spain. The Spaniards are not numerous in Soconusco, it being chiefly inhabited by Indians, but the few Spaniards who reside there are very rich.

SOCONUSCO, the capital of the above province, situated on a small river which runs into the Pacific Ocean. Lat. 18. 30. N. long. 120. 40. W.; 460 miles south-east of Mexico.

SOCORRO, one of the Revillagigedo islands, in the North Pacific Ocean, about 200 miles from the west coast of Mexico. It is uninhabited and barren, and is about 15 or 20 miles broad, and as many long. It is the largest of the group to which it belongs, and is about 3657 feet above the level of the sea. Lat. 18. 48. N. long. 110. 9. W. It was visited in 1793 by Captain Collnett. It is also the name of several inconsiderable missionary settlements in Spanish America.

SOCORRO, a small town of New Granada, in the province

vince of Santa Fe, near the banks of Sarabita or the Suarez. Population 3500; 123 miles north-north-east of Santa Fe, and 76 north of Tunja.

SOCOSTA, a small island in the Atlantic, near the western coast of Africa. Lat. 29. 45. S.

SOCOTA, a considerable town of Abyssinia, capital of the province of Lasta.

SOCOTARA, an island of the Indian Ocean, about forty leagues to the eastward of Cape Guardafui. It is 27 leagues long, and 7 broad, generally high and mountainous, with a bold shore, which affords, however, excellent harbours. The population is said to be pretty considerable, and it is governed by a king, who generally pays tribute to Arabia. The chief commodity for which the island is resorted to, consists of aloes, which are here considered to be of superior quality to those produced in any other part of the world, insomuch that the duty laid upon them is considerably higher. Dragon's blood may also be met with in small quantity. Bullocks, goats, fish, and dates, are to be procured at reasonable prices; and the inhabitants are in general civil to strangers. The most eligible place to touch at for refreshment is the Bay of Tamarida, the residence of the king, on the north-eastern side of the island. The anchorage is in 10 to 12 fathoms, the body of the town bearing south about a mile off shore. The town makes a handsome appearance, the houses being built of stone and lime, with several mosques. There is another anchoring place on the south-western side of the island, called Delisa, but it is seldom visited. The king's residence is in long. 53. 33. E. lat. 12. 39. N.

SOCRATES, an ancient moral philosopher, eminently distinguished by his principles and conduct, and proverbially recognized as one of the wisest and best men, whose name and character history has recorded. He was born at Alopece, a village near Athens, in the fourth year of the 77th Olympiad, B. C. 469. His parentage was obscure; and at an early age he is said to have executed statues of the habited Graces. Reduced to the necessity of supporting himself by manual labour, in the exercise of his profession as a statuary, he could only command occasional intervals, which he devoted to the study of philosophy. He soon, however, obtained the patronage of Crito, a wealthy Athenian, who engaged him in the office of instructing his children; and in this situation he availed himself of the opportunities, which were thus afforded him, of attending the public lectures of the most eminent philosophers. He also derived considerable assistance in his education from Aspasia, a woman highly celebrated for her intellectual as well as personal accomplishments, to whose house persons of the most distinguished character resorted. Socrates by the improvement of these advantages, attracted some attention at Athens. His military valour was no less conspicuous than his other qualities; nor did he decline any service, however hazardous or difficult, which private friendship or the public interest demanded. On one occasion he preserved the life and arms of Alcibiades, when he fell wounded in an engagement, in which they were jointly concerned. On another occasion, he hazarded his own life, in order to rescue Xenophon, who was wounded on the field of battle.

Socrates, declining military expeditions, settled at Athens; and he was upwards of 60 years, before he undertook to serve his country in any civil office. Accordingly he was chosen to represent his own district in the senate of 500; and though he was first treated contemptuously by his colleagues, on account of his inexperience, he soon convinced them that in wisdom and integrity he was much their superior. No consideration could ever induce him to give a vote, or sanction a measure, that appeared to him to be contrary to justice and the laws; and in opposition to the thirty tyrants, he exposed even his life to danger. These proofs of public virtue, both in a military and civil capacity, says one of his biographers, are sufficient to entitle the name of Socrates to a distinguished place in the catalogue of good citizens. But his highest honour and praise are those which belong to him as a philosopher and moral preceptor. Ob-

serving with regret how the Athenian youth were misled, and even corrupted in their principles and taste, by the mode of teaching that prevailed among speculative philosophers and sophists, he determined to institute a new and more useful method of instruction. He justly conceived the true end of philosophy to be, not to make an ostentatious display of superior learning and ability in subtle disputations or ingenious conjectures, but to free mankind from the dominion of pernicious prejudices; to correct their vices; to inspire them with the love of virtue, and thus conduct them in the path of wisdom to true felicity. He, therefore, assumed the character of a moral philosopher; and, looking upon the whole city of Athens as his school, and all who were disposed to lend him their attention as his pupils, he seized every occasion of communicating moral wisdom to his fellow-citizens. He passed his time chiefly in public. It was his custom, in the morning, to visit the places made use of for walking and public exercises; at noon, to appear among the crowds in the markets or courts; and to spend the rest of the day in those parts of the city which were most frequented. Sometimes he collected an audience about him in the Lyceum (a pleasant meadow on the border of the river Ilyssus), where he delivered a discourse from the chair, whilst his auditors were seated on benches around him. At other times he conversed, in a less formal way, with any of his fellow-citizens in places of common resort, or with his friends at meals, or in their hours of amusement; thus making every place to which he came a school of virtue. Not only did young men of rank and fortune attend upon his lectures, but he sought for disciples even among mechanics and labourers.

The method of instruction, which Socrates chiefly made use of, was, to propose a series of questions to the person with whom he conversed, in order to lead him to some unforeseen conclusion. He first gained the consent of his respondent to some obvious truths, and then obliged him to admit others, from their relation, or resemblance, to those to which they had already assented. He commonly conducted these conferences with such address, as to conceal his design, till the respondent had advanced too far to recede. He never assumed the air of a morose and rigid preceptor, but communicated useful instruction with all the ease and pleasantries of polite conversation.

The modesty of Socrates was no less distinguished than his wisdom. He professed "to know only this, that he knew nothing;" meaning by this declaration, which he often repeated, that he had no other intention than to convince his hearers of the narrow limits of the human understanding. Far from encouraging universal scepticism, he always spoke confidently and decidedly on moral subjects; but at the same time he wished to expose to contempt the arrogance of those pretenders to science, who would not acknowledge themselves to be ignorant of any thing. He preferred moral to speculative wisdom; and therefore condemned those whose whole attention and time were occupied about abstruse researches into nature, and who took no pains to render themselves useful to mankind. His favourite maxim was, "whatever is above us, doth not concern us." He estimated the value of knowledge by its utility, and recommended the study of geometry, astronomy, and other sciences, only so far as they admit of a practical application to the purposes of human life. His great object, in all his conferences and discourses, was to lead men into an acquaintance with themselves; to convince them of their follies and vices; to inspire them with the love of virtue; and to furnish them with useful moral instructions. Cicero might, therefore, very justly say of Socrates, that he was the first who called down philosophy from heaven to earth, and introduced her into the public walks and domestic retirements of men, that she might instruct them concerning life and manners.

The moral lessons which Socrates taught, he himself diligently practised; whence he excelled other philosophers in personal merit, no less than in his method of instruction. His conduct was uniformly such as became a teacher of moral

moral wisdom. His mind, through the whole of his life, was superior to the attractions of wealth and power. His instructions were gratuitous, and he refused rich presents, that were offered to him by Alcibiades and others, though his wife earnestly importuned him to accept them. He wanted little for his own personal accommodation. In his clothing and food, he consulted only the demands of nature. Although his fare was simple, he was hospitable; and sometimes invited men of superior rank to partake of his meals. On one of these occasions, his wife complained of the incompetency of their provision for their guests; but to these complaints he replied, that if his guests were wise men, they would be satisfied with the provisions which his table afforded; if otherwise, they were unworthy of notice. "Whilst others," says he, "live to eat, wise men eat to live."

In his domestic connection he was unfortunate, yet he converted this into an occasion of exercising his virtue. Xantippe, of whom many tales, that are mere fabrications, are related, was without doubt a woman of a high and unmanageable spirit. Socrates himself, however, allows that she possessed many domestic virtues; and towards the close of his life, and during his imprisonment, she expressed great affection for her husband; it would have been strange, if it had been otherwise. On all occasions, however, he maintained his equanimity of temper; always exercising that self-command, which is founded on reflection. In this respect he was the more praise-worthy, as he himself acknowledges, that he was, in his natural disposition, prone to vice, but that he had subdued his inclinations by the power of reason and philosophy.

It was one of the maxims of Socrates, "that a wise man will worship the gods according to the institutions of the state to which he belongs." He taught, however, a doctrine concerning religion much more pure and rational, than that which was delivered to the people by the priests, and he reprobated the popular fables concerning the gods.

Socrates, notwithstanding the superiority of his talents, the excellence of his character, and the number of his followers, who venerated and esteemed him, had many enemies. They were chiefly the interested Sophists, whose influence and whose emoluments were diminished in consequence of the prevalence of his doctrines and precepts. In order to degrade him in the estimation of the Athenian youth, and to restrain his popularity, they engaged Aristophanes, the first buffoon of the age, to write a comedy, in which Socrates should be the principal character. Aristophanes, pleased with so promising an occasion of displaying his low and malignant wit, undertook the task, and produced the comedy of "The Clouds," still extant in his works. In this piece Socrates is introduced hanging in a basket in the air, and thence pouring forth absurdity and profaneness. The philosopher, though he seldom visited the theatre, except when the tragedies of Euripides were performed, attended the representation of this play, at a time when the house was crowded with strangers, who happened to be at Athens during the celebration of a Bacchanian festival. When the performer, who represented Socrates, appeared upon the stage, a general whisper passed along the benches on which the strangers sat, to inquire who the person was whom the poet meant to satirize. Socrates, who had taken his station in one of the most public parts of the theatre, observed this circumstance; and immediately, with great coolness, rose up, to gratify the curiosity of the audience, and continued standing during the remainder of the representation. One of the spectators, astonished at the magnanimity which this action discovered, asked him, whether he did not feel himself much chagrined, to be thus held up to public derision? "By no means," replied Socrates, "I am only a host at a public festival, where I provide a large company with entertainment."

These efforts of envy were not of long duration. When Aristophanes attempted, the year following, to renew the piece with alterations and additions, the representation was so much discouraged, that he was obliged to discontinue it.

From this time, Socrates continued, for many years, to prosecute his laudable design of instructing and reforming his fellow-citizens. But as he persevered in opposing every kind of political corruption and oppression, both under the democracy and oligarchy, the number of his enemies increased, and a conspiracy, which had been long concerted against his life, was resumed. The minds of the people being sufficiently inflamed, a direct accusation was preferred against Socrates before the supreme court of judicature. This accusation was delivered to the senate in these words: "Melitus, son of Melitus, of the tribe of Pythos, accuseth Socrates, son of Sophroniscus, of the tribe of Alopec. Socrates violates the laws, in not acknowledging the gods which the state acknowledges, and by introducing new divinities. He also violates the laws by corrupting the youth. Be his punishment death."

This charge was delivered upon oath to the senate, and Crito, a friend of Socrates, became surety for his appearance on the day of trial. Anitus, soon afterwards, sent a private message to Socrates, assuring him, that if he would desist from censuring his conduct, he would withdraw his accusation. But Socrates refused to comply with so degrading a condition, and, with his usual spirit, replied, "Whilst I live I will never disguise the truth, nor speak otherwise than my duty requires." The interval between the accusation and the trial he spent in philosophical conversations with his friends, chusing to discourse upon any other subject, rather than his own situation. Hermogenes, one of his friends, was much struck with this circumstance, and asked him, why he did not employ his time in preparing his defence: "Because," replied Socrates, "I have never in my life done any thing unjust." The eminent orator Lysias composed an apology, in the name of his master, which he requested him to adopt; but Socrates excused himself by saying, that though it was eloquently written, it would not suit his character.

When the day of trial arrived, his accusers appeared in the senate, and attempted to support their charge in three distinct speeches, which strongly marked their respective characters. Plato, who was a young man, and a zealous follower of Socrates, then rose up to address the judges in defence of his master: but whilst he was attempting to apologise for his youth, he was abruptly commanded by the court to sit down. Socrates, however, needed no advocate. Ascending the chair with all the serenity of conscious innocence, and with all the dignity of superior merit, he delivered, in a firm and manly tone, an unpremeditated defence of himself, which silenced his opponents, and ought to have convinced his judges. After tracing the progress of the conspiracy which had been raised against him to its source, the jealousy and resentment of men whose ignorance he had exposed, and whose vices he had ridiculed and reformed, he distinctly replied to the several charges brought against him by Melitus. To prove that he had not been guilty of impiety towards the gods of his country, he appealed to his frequent practice of attending the public religious festivals. The crime of introducing new divinities, with which he was charged, chiefly, as it seems, on the ground of the admonitions which he professed to have received from an invisible power, he disclaimed, by pleading that it was no new thing for men to consult the gods, and receive instructions from them. To refute the charge of his having been a corrupter of youth, he urged the example which he had uniformly exhibited of justice, moderation, and temperance, the moral spirit and tendency of his discourses, and the effect which had actually been produced; and disdaining to solicit the mercy of his judges, he called upon them for that justice, which their office and their oath obliged them to administer.

The judges, whose prejudices would not suffer them to pay due attention to this apology, or to examine with impartiality the merits of the cause, immediately declared him guilty of the crimes of which he stood accused. Socrates, in this stage of the trial, had a right to enter his plea against the punishment which the accusers demanded, and instead

of the sentence of death, to propose some pecuniary amercement. But he, at first, peremptorily refused to make any proposal of this kind, imagining that it might be construed into an acknowledgment of guilt; and asserted, that his conduct merited, from the state, reward rather than punishment. At length, however, he was prevailed upon by his friends to offer, upon their credit, a fine of thirty *mine*. The judges, notwithstanding, still remained inexorable: they proceeded, without farther delay, to pronounce sentence upon him; and he was condemned to be put to death by the poison of hemlock. Socrates received the sentence with perfect composure, and by a smile testified his contempt both for his accusers and his judges. Then, turning to his friends he expressed his entire satisfaction in the recollection of his past life, and declared himself firmly persuaded, that posterity would do so much justice to his memory as to believe, that he had never injured or corrupted any one, but had spent his days in serving his fellow-citizens, by communicating to them without reward, the precepts of wisdom. Conversing in this manner, he was conducted from the court to the prison, which he entered with a serene countenance and a lofty mind, amidst the lamentations of his friends.

On the day of the condemnation, it happened that the ship which was employed to carry a customary annual offering to the island of Delos, set sail. It was contrary to the law of Athens, that, during this voyage, any capital punishment should be inflicted within the city. This circumstance delayed the execution of the sentence against Socrates for thirty days. So long an interval of painful expectation, however, only served to afford farther scope for the display of his constancy. When his friends were with him, he conversed with his usual cheerfulness. In their absence, he amused himself with writing verses. His friends urged him to attempt his escape, or at least to permit them to convey him away; and Crito went so far, as to assure him that, by his interest with the gaoler, it might be easily accomplished, and to offer him a retreat in Thessaly; but Socrates rejected the proposal, as a criminal violation of the laws; and asked them, whether there was any place out of Attica which death could not reach.

News being, at length, brought of the return of the ship from Delos, the officers, to whose care he was committed, delivered to Socrates, early in the morning, the final order for his execution, and immediately, according to the law, set him at liberty from his bonds. His friends, who came thus early to the prison that they might have an opportunity of conversing with their master through the day, found his wife sitting by him with a child in her arms. As soon as Xantippe saw them she burst into tears, and said, "O, Socrates, this is the last time your friends will ever speak to you, or you to them." Socrates, that the tranquillity of his last moments might not be disturbed by her unavailing lamentations, requested that she might be conducted home. With the most frantic expressions of grief, she left the prison. An interesting conversation then passed between Socrates and his friends, which chiefly turned upon the immortality of the soul. In the course of this conversation, Socrates expressed his disapprobation of the practice of suicide, and assured his friends, that his chief support in his present situation was an expectation, though not unmixed with doubts, of a happy existence after death. "It would be inexcusable in me," said he, "to despise death, if I were not persuaded that it will conduct me into the presence of the gods, who are the most righteous governors, and into the society of just and good men: but I derive confidence from the hope, that something of man remains after death, and that the condition of good men will then be much better than that of the bad." Crito, afterwards asking him in what manner he wished to be buried, Socrates replied, with a smile, "As you please, provided I do not escape out of your hands." Then, turning to the rest of his friends, he said, "Is it not strange, after all that I have said to convince you that I am going to the society of the happy, that Crito still

thinks this body, which will soon be a lifeless corpse, to be Socrates? Let him dispose of my body as he pleases, but let him not, at its interment, mourn over it, as if it were Socrates."

Towards the close of the day, Socrates retired into an adjoining apartment to bathe; his friends, in the mean time, expressing to one another their grief at the prospect of losing so excellent a friend. After a short interval, during which he gave some necessary instructions to his domestics, and took his last leave of his children, the attendant of the prison informed him, that the time for drinking the poison was come. The executioner, though accustomed to such scenes, shed tears, as he presented the fatal cup. Socrates received it without change of countenance, or the least appearance of perturbation: then, offering up a prayer to the gods, that they would grant him a prosperous passage into the invisible world, with perfect composure he swallowed the poisonous draught. His friends around him burst into tears. Socrates alone remained unmoved. He upbraided their pusillanimity, and entreated them to exercise a manly constancy, worthy of the friends of virtue. He continued walking, till the chilling operation of the hemlock obliged him to lie down upon his bed. After remaining, for a short time, silent, he requested Crito (probably in order to refute a calumny which might prove injurious to his friends after his decease), not to neglect the offering of a cock, which he had vowed to Esculapius. Then covering himself with his cloak, he expired. Such was the fate of the virtuous Socrates! a story, says Cicero, which I never read without tears.

The friends and disciples of this illustrious teacher of wisdom were deeply afflicted by his death, and attended his funeral with every expression of grief. Apprehensive, however, for their own safety, they, soon afterwards, privately withdrew from the city, and took up their residence in distant places. Several of them visited the philosopher Euclid, of Megara, by whom they were kindly received.

No sooner was the unjust condemnation of Socrates known through Greece, than a general indignation was kindled in the minds of good men, who universally regretted that so distinguished an advocate for virtue should have fallen a sacrifice to jealousy and envy. The Athenians themselves, so remarkable for their caprice, who never knew the value of their great men till after their death, soon became sensible of the folly, as well as criminality, of putting to death the man who had been the chief ornament of their city, and of the age, and turned their indignation against his accusers. Melitus was condemned to death, and Anytus, to escape a similar fate, went into voluntary exile. To give a farther proof of the sincerity of their regret, the Athenians, for a while, interrupted public business; decreed a general mourning; recalled the exiled friends of Socrates; and erected a statue to his memory in one of the most frequented parts of the city. His death happened in the first year of the ninety-sixth Olympiad, and in the 70th year of his age. *Brucker's Hist. Phil. by Enfield.*

As Socrates left nothing in writing, we are indebted to his illustrious pupils, Xenophon and Plato, for what is known both of his opinions and manner of teaching; and more especially to the former, whose memoirs of Socrates contain more accurate information than the dialogues of Plato, because the latter mixes his own conceptions and diction with the ideas and language of his master. Accordingly it is related, that when Socrates heard Plato make his Lysis, he said, "How much does this young man make me say, which I never conceived!" The distinguishing character of Socrates was that of a moral philosopher; and to this purpose Xenophon denies that he ever taught natural philosophy, or any mathematical science, and charges with misrepresentation and falsehood those who had ascribed to him dissertations of this kind, probably in this charge referring to Plato, in whose works Socrates is introduced as discoursing on these subjects.

The doctrine of Socrates concerning God and religion is rather

rather practical than speculative. He taught, that the Supreme Being, though invisible, is clearly seen in his works, which at once demonstrate his existence, and his wise and benevolent providence. "Reflect," says he, "that your own mind directs your body by its volitions, and you must be convinced that the intelligencer of the universe disposes all things according to his pleasure.—Can you imagine, that your eye is capable of discerning distant objects, and that the eye of God cannot, at the same instant, see all things; or that, whilst your mind contemplates the affairs of different countries, the understanding of God cannot attend, at once, to all the affairs of the universe? Such is the nature of the Divinity, that he sees all things, hears all things, is every where present, and constantly superintends all events." Again: "He who disposes and directs the universe, who is the source of all that is fair and good, who, amidst successive changes, preserves the course of nature unimpaired, and to whose laws all beings are subject, this Supreme Deity, though himself invisible, is manifestly seen in his magnificent operations. Learn, then, from the things which are produced, to infer the existence of an invisible power, and to reverence the Divinity."

Besides the one Supreme Deity, Socrates admitted the existence of beings who possess a middle station between God and man, to whose immediate agency he ascribed the ordinary phenomena of nature, and whom he supposed to be particularly concerned in the management of human affairs. Hence, he spoke of thunder, wind, and other agents in nature, as servants of God.

Concerning the human soul, the opinion of Socrates, according to Xenophon, was, that it is allied to the divine being, not by a participation of essence, but by a similarity of nature; that man excels all other animals in the faculty of reason; and that the existence of good men will be continued after death, in a state in which they will receive the reward of their virtue. The doctrine which Cicero ascribes to Socrates, on this head, is, that the human soul is a divine principle, which, when it passes out of the body, returns to heaven; and that this passage is most easy to those who have, in this life, made the greatest progress in virtue.

The system of morality which Socrates made it the business of his life to teach, was raised upon the firm basis of religion. The first principles of virtuous conduct, which are common to all mankind, are, according to this excellent moralist, laws of God: and the conclusive argument by which he supports this opinion is, that no man departs from these principles with impunity. "It is frequently possible," says he, "for men to screen themselves from the penalty of human laws, but no man can be unjust, or ungrateful, without suffering for his crime: hence, I conclude, that these laws must have proceeded from a more excellent legislator than man." Socrates taught, that true felicity is not to be derived from external possessions, but from wisdom, which consists in the knowledge and practice of virtue; that the cultivation of virtuous manners is necessarily attended with pleasure, as well as profit; that the honest man alone is happy; and that it is absurd to attempt to separate things, which are in nature so closely united as virtue and interest.

But it is impossible, in detached sentences, to give the reader any clear idea of the moral doctrines of Socrates. We must therefore refer him, on this head, to that valuable treasure of ancient wisdom, the "Memorabilia" of Socrates; a work in which he will find his original conversations on many interesting topics, related with beautiful simplicity, by Xenophon.

The followers of Socrates were Alcibiades and Critias; the poets Eumenes and Euripides, the orators Lysias and Isocrates; Aristippus, the founder of the Cyrenaic sect; Phædo, of the Eliac; Euclid, of the Megaric; Plato, of the Academic; and Antisthenes, of the Cynic, Xenophon, Æschines, Simon, and Cebes.

SOCRATES, an ecclesiastical historian, was born and educated at Constantinople: and having studied under the grammarians Helladius and Ammonius, he commenced his career at the bar. But after some time he relinquished the

profession of a law-pleader, and engaged in writing his ecclesiastical history, which comprehends, in seven books, the interval of about 133 years, from the year 306, when Constantine was declared emperor, to the seventeenth consulship of Theodosius, A.D. 439. Socrates, Sozomen, and Theodoret, may be considered as continuators of Eusebius of Cæsarea; and these three writers, who lived in the time of Theodosius the younger, whose reign extended from the year 408 to 450, published their respective histories, which are valuable monuments of antiquity, about the same time, near the end of this reign. Socrates seems to have been distinguished by his moderation and candour, which we may infer from the freedom with which he censures the squabbles and contentions that subsisted amongst the Christian clergy, and he condemns the persecution that occurred in the reign of Julian. He is also judicious in his observations upon men and things, and generally accurate in his chronology. The best editions of his works are those of Valesius, fol. Paris, 1668, and of Reading, fol. Cant. 1720.

SOCRATIC, or SOCRATIC, *adj.* After the manner or doctrine of the philosopher *Socrates*.—He winked at that with a *socratical* and philosophical patience. *Sir J. Harrington.*

SOCRATICALLY, *adv.* With the socratical mode of disputation.—Is it such a pleasure to be non-plus'd in mood and figure, that you had rather be snapped in the mousetrap of a syllogism, than treated *socratically* and genteely? *Goodman.*

SOCRATISM, *s.* The philosophy of Socrates.

SOCRATIST, *s.* A disciple of Socrates.—There arose a great question between Pythagoras' disciples and the scholars of Socrates, for that the *socratists* said it was better and more commodious that all things should be in common. *Martin.*

SOD, *s.* [*soed*, Dutch.] A turf; a clod.

Here fame shall dress a sweeter *sod*,
Than fancy's feet have ever trod.

Collins.

SOD, *adj.* Made of turf.

Her casement sweet woodbines crept wantonly round,
And deck'd the *sod* seats at her door.

Cunningham.

SOD. The preterite of *seethe*.

Never caldron *sod*

With so much fervour, fed with all the store
That could enrage it.

Chapman.

The participle passive.—Wine and water, in which are *sod* southernwood, melilot, &c. *Burton.*

SO'DA, *s.* A fixed alkali; sometimes found native, but most generally obtained by burning maritime plants.

SODA Water. A medicated drink, prepared by dissolving salt of soda in certain proportions of water.

SODALITE, in Mineralogy, a stone which derives its name from the large portion of mineral alkali that enters into its composition. See MINERALOGY.

SODALITIUM, among the Anglo-Saxons, was the name of a voluntary association, the object of which was the personal security of those who joined in it, and which the feebleness of government at the time rendered necessary. Among other regulations, which are contained in one of these still extant, the following deserves notice:—If any associate shall either eat or drink with a person who has killed any member of the sodalium, unless in the presence of the king, the bishop, or the count, and unless he can prove that he did not know the person, let him pay a great fine. *Hickes Diss. Epist. apud Thes. Ling. Septentr. vol. 1. p. 21.*

SODA'LITY, *s.* [*sodalité*, old French; *sodalitas*, Lat.] A fellowship; a fraternity.—A new confraternity was instituted in Spain, of the slaves of the Blessed Virgin, and this *sodality* established with large indulgences. *Stillingfleet.*

SODBURY, CHIPPING. See CHIPPING SODBURY.

SODBURY, LITTLE, a parish of England, in Gloucestershire; $2\frac{1}{2}$ miles east-south-east of Chipping Sodbury.

SODBURY, OLD, a parish in the above county; $2\frac{1}{2}$ east of Chipping Sodbury. Population 765.

SO'DDEN. [from *seethe*; *sieden*, Germ. See *TO SEETHE*. It is written *sodyn* or *sothyn* in the *Promp. Parv.*] Used in the past tense active; boiled.—The hands of the pitiful women have *sodden* their own children; they were their meat in the destruction of the daughter of my people *Lament*.—The participle passive of *seethe*; boiled; seethed.—Thou *sodden*-witted lord; thou hast no more brain than I have in my elbows. *Shakespeare*.

SODDOMA (II), the cognomen of Giovanni Antonio Razzi, a native of Urcelli, in Piedmont, born about the year 1479. He was instructed in painting by Giacomo dalle Fonte; but his chief object of study was the style of L. da Vinci. He was employed by Julius II. to paint the chambers of the Vatican; but the charms of Raphael's first productions in that palace were the signal for the obliteration of all other works there: among them Il Soddoma's. Other pictures, which he painted for Agostino Ghigi in the Farnesina, were more fortunate, and yet remain. Their subjects are taken from the history of Alexander the Great, and though inferior to the works of Lionardo, yet they exhibit very considerable talent, many beauties of perspective, and much playful imagery.

After he left Rome, he had considerable employment at Sienna, and there his best productions are to be found, in which he has combined the excellent qualities of the best artists of his day. He died in 1554.

SO'DDY, *adj.* Turfy; full of sods. *Cotgrave and Sherwood*.

SODEN, a town of Bavarian Franconia. Population 1000.

SODEN, a small town of the west of Germany, in the duchy of Nassau, with manufactures of salt; 20 miles north-west of Frankfort-on-the-Maine.

To SODER, *v. a.* [*souder*, French; *souderen*, Dutch. It is generally written *solder*, from *soldare*, Ital. *solidare*, Latin; and sometimes, improperly, *sodder*.] *To cement with some metallic matter.*—Let him bethink—how he will *sodder* up the shifting flaws of his ungirt permissions. *Milton*.

SODER, *s.* Metallic cement.—Still the difficulty returns, how these hooks were made: what is it that fastens this *soder*, and links these first principles of bodies into a chain? *Collier*.

SODER, a village of Germany, in Hanover, remarkable for its castle.

SODERAH, a town of Hindostan, province of Lahore, situated on the eastern side of the Chinaub river. It belongs to the Seiks. Lat. 32. 27. N. long. 73. 30. E.

SODERFORS, a small town or Middle Sweden, in Sudermania, government of Upsal. Here is a forge for anchors, one of the finest establishments of the kind in Europe, in which are employed about 600 workmen.

SODERHAM, a town of Sweden, on the gulf of Bothnia. It has manufactures of linen and iron; also an export trade in timber and flax. Population 2000; 20 miles north of Gefle. Lat. 61. 17. 47. N. long. 17. 0. 30. E.

SODERTELGE, a small town of Middle Sweden, in the province of Sudermania; 16 miles west-south-west of Stockholm. It stands on a point of land surrounded by hills, between the Baltic and the Malar lake, which are here joined by a canal. Population 1000. Lat. 59. 12. 30. N. long. 17. 39. E.

SODIUM. See *MINERALOGY*.

SODUS, a post township of the United States, in Ontario county, New York, on Great Sodus bay, and south side of Lake Ontario. Population 1557; 212 miles west of Albany.

SODUS BAY, GREAT, a bay on the south side of Lake Ontario; 4 miles across, and 2 deep. The entrance to it is narrow, being formed by two projecting points; that on the westward is high, and near to it is the deepest water. A sandy bar stretches across the mouth of the bay, on which there is generally six feet water, but under the western point seven and eight; within it there are several

fathoms. On the eastern side there is a small island. This place forms a very good station for building vessels, and is accounted the best harbour on the side of the lake; 16 miles west of Oswego. Little Sodus bay is 12 miles east of Great Sodus.

SOE, *s.* [written also *so* and *soa*; Scottish, *sae*; Su. Goth. *saa*; old Fr. *seau*, a bucket or water-pail.] A large wooden vessel with hoops for holding water; a cowl.—A pump grown dry will yield no water; but pouring a little into it at first, for one bason full you may fetch up as many *soe*-fulls. *More*.

SOEST, or **ZOEST** (Gerard), was a native of Westphalia, born about the year 1637. He acquired the art of painting in his own country, but practised principally in this, whither he came rather before the period of the restoration. His portraits have a considerable portion of truth and animation, wrought in a finished manner, and with great warmth and glow of colour; so much so as to class him among the better rivals of Sir Peter Lely. He was most successful in his portraits of men, among whom he had a very considerable share of employment; but the more graceful and engaging pencil of Sir Peter secured the charms of the softer sex to himself. Soest died at the early age of 44.

SOEST, a town of Prussian Westphalia, in the government of Arensburg; 33 miles south-east of Munster. It was formerly a Hanse town, and retained the privileges of an imperial town, down to the middle of last century. It is surrounded with a wall, contains 5400 inhabitants, eight Protestant and three Catholic churches, a central school, and several convents and monasteries. Its manufactures are still considerable, consisting chiefly of woollens, stockings, hats, and leather. Lat. 51. 34. 51. N. long. 8. 5. 20. E.

SOEVER, *adv.* A word properly joined with a pronoun or adverb, as, *whosoever*; *whatsoever*; *howsoever*.

What love *soever* by an heir is shown,
Or you could ne'er suspect my loyal love.

Dryden.

SO'FA, *s.* [An eastern word.] A splendid seat covered with carpets.—The king leaped off from the *sofi* on which he sat, and cried out, 'Tis my Abdallah! *Guardian*.

The **SOFA**, in the East, is a kind of alcove raised half a foot above the floor of a chamber, or other apartment; and used as a place of state, where visitors of distinction are received.

Among the Turks, the whole floor of their state-room is covered with a kind of tapestry, and on the window-side is raised a sofa or sopha, laid with a kind of mattress, covered with a carpet much richer than the other. On this carpet the Turks are seated, both men and women, like the tailors in England, cross-legged, leaning against the wall, which is bolstered with velvet, satin, or other stuff, suitable to the season. Here they eat their meals; only laying a skin over the carpet, to serve as a table-cloth, and a round wooden board over all, covered with plates, &c.

SOFALA, a country and city of Eastern Africa, situated at the mouth of a considerable river of the same name. At the time of the first arrival of the Portuguese, it was a place of great commercial importance, being the emporium of the gold and ivory brought in large quantities from the interior, down the great river Cuama or Zambeze. Since Mosambique became the capital of the Portuguese settlements, the fort of Quilimane has been the channel by which this trade is conducted, and Sofala has sunk into comparative unimportance. The town is said to be no better than a village, composed chiefly of huts. The Portuguese, however, still maintain here a fort, which holds the supremacy over those of Inhambane and Corrientes, the most southerly possessed by this nation on the eastern coast of Africa. An annual vessel comes from Mosambique, bringing coarse cottons and other articles suited to the taste of the natives, and exporting gold ivory, and slaves. The river empties itself into a bay, the navigation of which is very dangerous, in consequence of the numerous shoals with which it is filled. They appear to have perceptibly increased, since this coast was first visited

visited by Europeans, and resemble the sands at the mouth of the Ganges, being, like them, probably liable to shift their position. The great bank of Sofala extends for two days' sail, and appears to have been thrown up by the violence of the south-easterly winds, which generally prevail, blowing in direct opposition to the currents of many rapid rivers, which here flow into the sea. Ships, however, by carefully tracing their course, may find a channel of 12 fathoms, and should never go into a smaller depth. The Portuguese, in order to avoid these banks, carry on their whole trade by smaller coasting vessels. Whales are found here in vast multitudes, often 20 or 30 at a time. The town is situated up a river, navigable only for small vessels, and having a bar at its entrance only 12 or 14 feet deep at low water. It lies on the northern bank; and the fort is situated on a point of land insulated at high water. The anchorage is about four miles from the fort; but ships ought not to enter without a pilot. Opposite to the mouth of the river is a small island, called also Sofala. The surrounding country is wild, and thinly inhabited, traversed by vast herds of elephants, the ivory from which affords a staple article of commerce. The people, in their stature, colour, habits, and language, appear nearly allied to the Kaffres, and perfectly distinct from either the Hottentot or negro race. They are well armed, brave, and apparently quite independent. The villages consist of huts, interspersed with large trees like the India fig, huilt in regular order. On the upper part of the river Sofala, is Zimboas, capital of the dominions of the Quiteue. According to Vossius, Vincent, and other learned inquirers, Sofala is the *Ophir* of Solomon, whither the fleets of that monarch made regular voyages in search of gold; and notwithstanding the very opposite hypothesis of Gosselin, much probability seems still to attach to the supposition. The town is in Lat. 20. 15. S. long. 34. 35. E.

SOFFIETA, in Ichthyology, the bellows-fish, a name by which some have called the scolopax; a small sea-fish, common in the markets of Rome and Venice.

SOFFITA, **SOFFIT**, or **SOFIT**, in Architecture, any timber ceiling, formed of cross-beams, or flying corniches.

SOFFITA is also used for the under side or face of an architrave.

SOFIA, or **SOPHIA**, a city in the north of European Turkey, the capital of Bulgaria, pleasantly situated in a plain at the foot of the mountains of Argentaro, on the river Bogana. It is large and populous, being said to contain no less than 50,000 inhabitants, and carrying on, though an inland place, a very extensive trade, which is for the most part in the hands of Greeks and Armenians. The Turks form a comparatively small part of the population. Sofia contains a number of handsome baths and mosques, but the streets are narrow, uneven, and dirty, the houses meanly built, and the air unhealthy. It was built by the emperor Justinian, on the ruins of the ancient Sardica. It is the see of a Greek metropolitan and of a Catholic bishop. It stands in the high road leading from Constantinople to Belgrade; 280 miles west-north-west of Constantinople, and 160 west-north-west of Adrianople. Lat. 42. 56. N. long. 23. 14. E.

SOFIA, a town of Naples, in Calabria Citra, with 1200 inhabitants.

SOFIT, or **SOFFIT**. See **SOFFITA**.

SOFLINGEN, a town of Germany, in Wirtemberg; 2 miles west of Ulm. Population 1400.

SOFR, a village of Hedsjas, in Arabia; 70 miles south-east of Mecca.

SOFRA, a village of Nedsjed, in Arabia; 50 miles north-east of Kariatein.

SOFROI, a small town of Fez, which carries on some trade in oil; 12 miles east of Fez.

SOFT, *adj.* [ʃɒft, Saxon; *soft*, Teut. which Junius refers to *saft*, Su. Goth. succus; and *Serenius* to the Icel. *sefa*, sedare.] Not hard.—Hard and *soft* are names we give things, only in relation to the constitutions of our own bodies; that being called hard, which will put us to pain sooner than change figure, by the pressure of any part of

our bodies: and that *soft*, which changes the situation of its parts upon an easy touch. *Locke*.—Not rugged; not rough.—What went ye out for to see? a man clothed in *soft* raiment? behold, they that wear *soft* raiment are in king's houses. *St. Matthew*.—Ductile; not unchangeable of form.

Spirits can either sex assume; so *soft*
And uncompounded is their essence pure. *Milton*.

Facile; flexible; not resolute; yielding.—A few divines of so *soft* and servile tempers as disposed them to so sudden acting and compliance. *King Charles*.—Tender; timorous.

Curst be the verse, how well soe'er it flow,
That tends to make one worthy man my foe;
Give virtue scandal, innocence a fear,
Or from the *soft*-ey'd virgin steal a tear. *Pope*.

Mild; gentle; kind: not severe.
Would my heart were flint like Edward's;
Or Edward's *soft* and pitiful like mine. *Shakspeare*.

Meek; civil; complaisant.
Thou art their soldier, and being bred in broils,
Has not the *soft* way, which thou dost confess
Were fit for thee to use, as they to claim
In asking their good loves. *Shakspeare*.

Placid; still; easy.
On her *soft* axle while she paces even,
She bears thee *soft*, with the smooth air along. *Milton*.

Effeminate; viciously nice.—An idle and *soft* course of life is the source of criminal pleasures. *Broome*.—Delicate; elegantly tender.—Her form more *soft* and feminine. *Milton*.—Weak; simple.—The deceiver soon found this *soft* place of Adam's, and innocence itself did not secure him: *Glanville*.—Gentle; not loud; not rough.

Her voice was ever *soft*,
Gentle and low, an excellent thing in women. *Shakspeare*.

Smooth; flowing; not vehement; not rapid.—The solemn nightingale tun'd her *soft* lays. *Milton*.—Not forcible; not violent.—Sleep falls with *soft* slumberous weight. *Milton*.—Mild; not glaring.—The sun shining upon the upper part of the clouds, made them appear like fine down or wool, and made the *softest* sweetest lights imaginable. *Brown*.

SOFT, *adv.* Softly; gently; quietly.
There *soft* extended, to the murmuring sound
Of the high porch, Ulysses sleeps profound. *Pope*.

SOFT, *interj.* Hold; stop; not so fast.
But *soft*, I pray you; did king Richard then
Proclaim my brother? *Shakspeare*.

To **SOFTEN**, *v. a.* To make soft; to make less hard.—Bodies, into which the water will enter, long seething will rather *soften* than indurate. *Bacon*.

Their arrow's point they *soften* in the flame,
And sounding hammers break its barbed frame. *Gay*.

To intenerate; to make less fierce or obstinate; to mollify.—I will *soften* stony hearts. *Milton*.—To make easy; to compose; to make placid; to mitigate; to palliate; to alleviate.

Call round her tomb each object of desire,
Bid her be all that cheers or *softens* life,
The tender sister, daughter, friend and wife. *Pope*.

To make less harsh; less vehement; less violent.
He bore his great commission in his look,
But sweetly temper'd awe, and *soften'd* all he spoke. *Dryden*.

To make less glaring. To make tender; to enervate.
To **SOFTEN**, *v. n.* To grow less hard.—Many bodies that will hardly melt, will *soften*; as iron in the forge. *Bacon*.—To grow less obstinate, cruel or obstinate.

He may *soften* at the sight of the child ;
The silence often of pure innocence
Persuades, when speaking fails.

Shakspeare.

SOFTENER. See **SOFTNER.**

SOFTENING, *s.* The act of making less hard, less vehement, or less violent.—I allow that elevations and *softenings* of the voice, judiciously managed, are both ornamental and useful; but those sudden starts and explosions are most ungraceful and unbecoming the gravity of the pulpit. *Abp. Hort.*

SOFTHEARTED, *adj.* Kind-hearted; gentle; meek.—A right reasonable, innocent, and *soft-hearted* petition. *Milton.*

SOFTLING, *s.* An effeminate or viciously nice person.—We receive fashions of our companions: the drunkard leadeth his guests into drunkenness. Effeminate men and *softlings* cause the stoute man to waxe tender. *Woolton.*

SOFTLY, *adv.* Without hardness. Not violently; not forcibly.—Small bodies, if very *softly* percussed, give no sound; as when a man treadeth very *softly* upon boards. *Bacon.*—Not loudly.

In this dark silence *softly* leave the town,
And to the general's tent direct your steps.

Dryden.

Gently; placidly.

She with a wreath of myrtle crowns his head,
And *softly* lays him on a flowery bed.

Dryden.

Mildly; tenderly.

The king must die ;
Though pity *softly* plead within my soul,
Yet he must die, that I may make you great.

Dryden.

SOFTNER, *s.* That which makes soft. One who palliates.—Those *softners*, and expedient-mongers, shake their heads so strongly, that we can hear their pockets jingle. *Swift.*

SOFTNESS, *s.* [σοφύτης, Sax.] The quality of being soft; quality contrary to hardness.—*Softness* cometh by the greater quantity of spirits, which ever induce yielding and cession; and by the more equal spreading of the tangible parts, which thereby are more sliding and following; as in gold. *Bacon.*—Their hearts are enlarged, they know how to gather the down and *softnesses* from the sharpest thistles. *Bp. Taylor.*—Mildness; kindness.—A wise man, when there is a necessity of expressing any evil actions, should do it by a word that has a secondary idea of kindness or *softness*; or a word that carries in it rebuke and severity. *Watts.*—Civility; gentleness.—Improve these virtues, with a *softness* of manners, and a sweetness of conversation. *Dryden.*—Effeminacy; vicious delicacy.—He was not delighted with the *softnesses* of the court. *Clarendon.*—Timorousness; pusillanimity.—This virtue could not proceed out of fear or *softness*; for he was valiant and active. *Bacon.*—Saving a man's self, or suffering, if with reason, is virtue: if without it is *softness*, or obstinacy. *Grew.*—Quality contrary to harshness.—*Softness* of sounds is distinct from the exility of sounds. *Bacon.*—Facility; gentleness; candour; easiness to be effected.—Such was the ancient simplicity and *softness* of spirit, which sometimes prevailed in the world, that they whose words were even as oracles amongst men, seemed evermore loth to give sentence against any thing publicly received in the church of God. *Hooker.*—Contrariety to energetic vehemence.

Who but thyself the mind and ear can please,
With strength and *softness*, energy and ease ?

Hartc.

Mildness; meekness.

For contemplation he and valour form'd,
For *softness* she and sweet attractive grace.

Milton.

Weakness; simplicity.

SOGAMOSO, the capital of a district of the same name, in New Granada, and province of Bogota. Population 500 housekeepers, and 200 Indians; 28 miles north-east of Tunja.

SOGAMOSO. See **CHICHAMOCHO.**

SOGERVI, a village of Nubia, on the Nile; 20 miles west of Ibrim.

SO'GGY, *adj.* [*soggr*, Icel. moist; *soegen*, Welsh, wet, soaked.] Moist; damp; steaming with damp. A recent editor of Ben Jonson's Works observes, that "he has heard the word applied (with what propriety he knows not) to hay that has been cut too early, and sweats as it lies in heaps." The propriety of the usage will now from the etymology, be obvious.—The warping condition of this green and *soggy* multitude. *B. Jonson.*

SOGLAH, a village of Caramania, in Asiatic Turkey; 42 miles south of Konieh.

SOGNO. See **SONHO.**

SOGONI, a village of Nubia on the Nile; 115 miles south of Syene.

SOHAIG, a village of Upper Egypt, on the western bank of the Nile; 14 miles north of Girge.

SOHAJEPORE, a district of Hindostan, province of Gundwaneh, situated between the 23d and 24th degrees of northern latitude. It is a mountainous and unfruitful country. It is governed by a Hindoo chief, who is tributary to the rajah of Nagpore.

SOHAJEPORE, the capital of the abovementioned district, and residence of the chief. The poverty of these countries has prevented their being wholly subjugated, either by the Mahometans or the Mahrattas. Lat. 23. 29. N. long. 81. 45. E.

SOHAM, EARL'S. See **EARL'S SOHAM.**

SOHAM, or **MONK'S SOHAM,** a market town of England, in the county of Cambridge, situated on the borders of Suffolk, on the east side of the river Cam. The town is large and irregularly built. During the Anglo-Saxon dynasty, it appears to have been a place of some consequence, and according to Leland was the seat of the East Anglian bishops. The bishop's palace and the church were destroyed by the Danes in 870. Some remains of ancient buildings are now visible. The present church is a spacious building, in the form of a cross, having a tower at the west end, the upper part of which is ornamented with a tessellated work, composed of flints. Here is a large charity school, at which the children of the poor inhabitants are educated under two masters. Three alms-houses were founded here in 1502, by Richard Bond; and in 1581, nine others for widows were founded by Thomas Pechey. The chief produce of the place is from the dairies; and cheese of an excellent quality, and very similar both in taste and flavour to the Stilton, is made here. In 1811, Soham contained 551 houses, and 2386 inhabitants. Market on Saturday; 5 miles south-east of Ely, and 7 north of Newmarket.

SOHAM, MONK'S, a parish of England, in Suffolk; 5 miles west-by-north of Framlingham. Population 325.

SOHAR, an ancient and celebrated city of Ommon, in Eastern Arabia, situated on a river, which, when swelled by rain, reaches the sea, but in the dry season loses itself in the sands. It is now much declined, the trade and importance of this part of Arabia centering chiefly in Maskat. Lat. 24. 17. N.

SOHAUL, a town of Hindostan, province of Allahabad, and district of Bundelcund, now subject to the British. Lat. 24. 40. N. long. 80. 52. E.

SOHL, or **ZOLYOM VARMEGYE,** a palatinate in the north-west of Hungary, lying on both sides of the Gran, to the north of the counties of Honth and Neograd. Its superficial extent is 1060 square miles; its population above 76,000, who are partly of German, partly of Slavonic origin. It lies among the Carpathians, and is consequently hilly, fitter for pasture than tillage, and containing a number of mines. The chief town is New Sohl. The highest mountain is called Sturetz.

SOHL. See **ALTSOHL** and **NEUSOHL.**

SOHLAND, a village of Saxony, in Upper Lusatia; 40 miles east of Dresden. Population 1100.

SOHNPOOR, a town of Hindostan, province of Gundwaneh,

waneh, situated on the south side of the Mahanuddy river. Lat. 20. 47. N. long. 83. 45. E.

SOHO, *interj.* A form of calling from a distant place; a sportsman's halloo.

Laun. So-ho! so-ho!

Prot. What seest thou?

Laun. Him we go to find.

Shakspeare.

SOHO, the name of the celebrated and extensive manufactory in England, of Messrs. Boulton and Watt, near Birmingham.

SOIGNIES, an inland town of the Netherlands, in the province of Hainault, on the small river Senne. It has 4700 inhabitants, and in the neighbourhood is a small forest (distinct from that of Soigne), to which it gives name; 7 miles north-east of Mons, and 25 south-west of Brussels.

TO SOIL, *v. a.* [*Jñlan*, Sax.; *sulen*, Germ.; *souiller*, Fr.; *saufjan*, *bisauljan*, Goth.] To foul; to dirt; to pollute; to stain; to sully.

I would not soil these pure ambrosial weeds,
With the rank vapours of this sin-worn mould.

Milton.

To dung; to manure.—Men now present, just as they soil their ground, not that they love the dirt, but that they expect a crop. *South.*—To soil a horse; to purge him by giving him grass in the spring. [Dr. Johnson refers this meaning to the Fr. *saouler*, to glut.]—The soiled horse.

SOIL, *s.* Dirt; spot; pollution; foulness.

Vexed I am with passions,
Which give some soil perhaps to my behaviour.

Shakspeare.

[*Sol*, Fr.; *solum*, Lat.] Ground; earth, considered with relation to its vegetative qualities.

Her spots thou see'st
As clouds, and clouds may rain, and rain produce
Fruits in her soften'd soil.

Milton.

Land; country.

O unexpected stroke, worse than of death!
Must I thus leave thee, paradise! thus leave
Thee, native soil! these happy walks and shades,
Fit haunts of gods.

Milton.

Dung; compost.—The haven has been stopped up by the great heaps of dirt that the sea has thrown into it; for all the soil on that side of Ravenna has been left there insensibly by the sea. *Addison.*

To take SOIL. To run into the water, as a deer when closely pursued.—O sir, have you ta'en soil here? It's well a man may reach you after three hours running yet. *B. Jonson.*

SOYLINESS, *s.* Stain; foulness.—Make proof of the incorporation of silver and tin, whether it yield no soylineess more than silver. *Bacon.*

SOILDRO, a settlement of the island of Cuba; 75 miles east-south-east of Havannah.

SOILURE, *s.* Stain; pollution.

He merits well to have her,
Not making any scruple of her soilure.

Shakspeare.

To SOJOURN, *v. n.* [*sejourner*, French; *seggionare*, Italian.] To dwell any where for a time; to live as not at home; to inhabit as not in a settled situation. *Almost out of use.*

If, till the expiration of your month,
You will return and sojourn with my sister,
Dismissing half your train, come then to me.

Shakspeare.

SOJOURN, *s.* [*sejour*, French.] A temporary residence; a casual and not settled habitation. This word was anciently accented on the last syllable: Milton accents it indifferently.

The princes, France and Burgundy,
Long in our court have made their am'rous sojourn.

Shakspeare.

SOJOURNER, *s.* A temporary dweller.

Waves o'erthrew

Busiris, and his Memphian chivalry,
While with perfidious hatred they pursu'd
The sojourners of Goshen.

Milton.

SOJOURNING, *s.* The act of dwelling any where but for a time.—The sojourn of Israel, who dwelt in Egypt, was four hundred and thirty years. *Exod.*

SOISSONS, a town of France, department of the Aisne, situated in a pleasant valley, watered by the river Aisne. Its population is about 7500, but it is ill built, and has few objects entitled to particular attention. The cathedral is an extensive edifice, with a library and manuscripts. The other remarkable objects are the church of Notre Dame, the academy established in 1674, the lyceum, the theatre, and a pleasant walk on the banks of the Aisne. The trade of Soissons consists chiefly in corn, and its manufactures are of coarse linen, stockings, thread, leather and ropes. This town lays claim to great antiquity: it was a place of note in the time of Julius Cæsar; and the successors of Clovis made it the seat of their empire. It was the scene of some serious fighting between the French and allies, in February and March 1814; 65 miles south-east of Amiens, and 70 north-east of Paris. Lat. 49. 22. 52. N. long. 3. 19. 37.

SOIT, *fait comme il desire*, be it done as it is desired; a form used when the King gives the royal assent to a private bill preferred in Parliament.

SOKE, a river in the east of European Russia, which falls into the Wolga, in the government of Simbirsk.

SOKE, an ancient term, used to signify the privilege of mills, &c. By it the lord, in certain cases, was enabled to raise a considerable rent.

SOKE-MILL, that kind of mill which belongs to the lord or superior of the manor, and at which all the tenants, and sometimes the whole parish, are bound to grind their grain. Mills of this nature were once very common, and they exist still in a few places.

SOKE-REEVE, in our old Writers, the lord's rent gatherer in the soke.

SOKEL, a small town of Galicia; 40 miles north-north-east of Lemberg.

SOKHIO, a name used by some authors for a peculiar species, if it may be so called, of the lignum aloes.

SOKO, the name sometimes given to a fertile district of the Gold coast of Africa, situated at the mouth of the river Volta.

SOKOLKA, a town of Russian Lithuania, with 1100 inhabitants, situated near a lake; 21 miles north-north-east of Bialystok.

SOKOLOW, a town of Poland; 56 miles east-by-north of Warsaw, with 1200 inhabitants.

SOKOLOWKA, a small town of Austrian Poland; 53 miles south-by-east of Lemberg.

SOKOR ZOK, a town of Armenia, situated about midway between Bellis and Diarbekir. It is governed by a powerful, independent, and hereditary prince, who has under his orders many different tribes of Kurds and Turcomans, of a martial and barbarous disposition, and who, it is said, can bring 20,000 men into the field. The district is extensive, and covered with villages; but the population of the town does not exceed 6000.

SOKUL, a town of European Russia, in the government of Volhynia, on the river Styr; 27 miles north of Sluck.

SOKULK INDIANS, Indians of North America, on the Columbia, below Clerk's river. Number 2400.

SOL, *s.* The name of one of the musical notes in *sol-fa*ng. See **To SOL-FA**.

To SOL-FA, *v. n.* To pronounce the several notes of a song by the terms of the gamut, *ut, re, mi, fa, sol*; and in learning to sing.—I'll try how you can *sol-fa*.

Shakspeare.

SOLA, a small island in the Caribbean sea; 30 miles east of Margarita.

SOLA, a small island among the Philippines, near the south

south coast of the island of Lucon. Lat. 13. 22. N. long. 12. 46. E.

SOLA, LA. See PYLSTART.

To SO'LACE, *v. a.* [*solasier*, old French; *solazzare*, Italian; *solatium*, Latin.] To comfort; to cheer; to amuse.

The birds with song
Solac'd the woods.

Milton.

To SO'LACE, *v. n.* To take comfort; to be recreated.
Obsolete.

One poor and loving child,
But one thing to rejoice and *solace* in,
And cruel death hath catch'd it from my sight. *Shakspeare.*

SO'LACE, *s.* [*solas*, old Fr.] Comfort; pleasure; alleviation; that which gives comfort or pleasure; recreation; amusement.

Therein sat a lady fresh and fair,
Making sweet *solace* to herself alone;
Sometimes she sung as loud as lark in air,
Sometimes she laugh'd, that nigh her breath was gone.

Spenser.

SOLA'CIOUS, *adj.* [*solacieux*, old Fr.] Affording comfort, recreation, or amusement. This is an old English word, which Cotgrave and Sherwood also have noticed.—*Solacynose* pastymes, ydelnesse, and crueltie. *Bale.*

SOLAN, a county of Central Africa, on the northern bank of the Niger, between Tombuctoo and Cassina. It was described to Horneman, as one of those composing the extensive country of Haoussa or Houssa; but no particulars are known respecting it.

SO'LAND-GOOSE. See SOLUND-GOOSE.

SOLA'NDER, *s.* [*souldandres*, French.] A disease in horses.

SOLANDER'S ISLAND, an island in the Pacific Ocean, near the south coast of New Zealand, discovered by Captain Cook in the year 1770. It is nothing but a barren rock, about a mile in circuit, remarkably high, and lies full five leagues distant from the main. This island he named after Dr. Solander. The shore of the main lies nearest east-by-south and west-by-north, and forms a large open bay, in which there is no appearance of any harbour, or shelter for shipping against south-west and southerly winds. The surface of the country is broken into craggy hills, of a great height, on the summits of which are some patches of snow. It is not, however, wholly barren, for wood was seen not only in the valleys, but upon the highest ground, yet no appearance of its being inhabited. Lat. 46. 31. S. long. 192. 49. W.

SOLANDRA [so named by the younger Linnæus, in honour of Daniel Charles Solander, a Swede], in Botany, a genus of the class pentandria, order monogynia.—Generic Character. Calyx: perianth one-leafed, large, angular, permanent, three-cleft or five-cleft: segments lanceolate, erect. Corolla one petalled, funnel-form, very large: tube bell-shaped, ventricose, a little shorter than the calyx: border five-cleft; segments roundish, waved, patulous. Stamina: filaments five, filiform, length of the tube, ascending at the top. Anthers oblong, versatile. Pistil: germ superior, oval. Style filiform, longer than the stamens, bent in. Stigma obtuse, bifid; segments ovate. Pericarp: berry oval, conical at top, smooth, four-celled. Seeds very numerous, oblong, nestling.—*Essential Character.* Calyx bursting. Corolla clavate-funnel-form, very large. Berry four-celled, many-seeded.

Solandra grandiflora, or great-flowered Solandra.—This is a small tree from twelve to twenty feet high, with a branching trunk, and a cloven ash-coloured bark, green within. The wood is spongy. The branches are loose, bent down, divaricating, very long. The leaves are in clusters towards the ends of the branchlets, obovate-oblong, acute, entire, smooth, thickish, from three to seven inches in length, on round smooth petioles, five times shorter than the leaves. Flowers terminating, subsessile, subsolitary, very large. Pe-

duncles very short, thick, round, smooth, one-flowered. Calyx from one to three inches long, subquinquefid, as the fruit ripens bursting to the base into three or five segments. Seeds black. The very handsome sweet flowers appear in the months of January and February. The fruit ripens in August, and is of a sweet subacid flavour.—Native of Jamaica.

SOLANEÆ, the 41st natural order in Jussieu's system, the 8th of his 8th class. It is thus named from the Nightshade, which is one of the tribe, and the order is nearly equivalent to the Linnæan LURIDÆ: see that article.

SOLANO, a small town of Spain, in La Mancha, on the river Azuer. Population 1300; 103 miles south-by-east of Madrid.

SOLANO, a small island near the coast of Peru. Lat. 12. 20. S.

SOLANO, a river of Guatemala, in the province of Costa Rica, which runs west, and enters the Pacific Ocean.

SOLANOS, in Meteorology, a name given to monsoon winds, in the vicinity of the Persian Gulf, and in the interior of Africa.

SOLANTO, a small sea-port of Sicily, in the district called the Val di Mazzara.

SOLANUM [of Pliny], in Botany, a genus of the class pentandria, order monogynia, natural order of luridæ, solaneæ (*Juss.*).—Generic Character. Calyx: perianth one-leafed, half five-cleft, erect, acute, permanent. Corolla one-petalled, wheel-shaped: tube very short: border large, half-five-cleft, from reflex flat, plaited. Stamina: filaments five, awl-shaped, very small. Anthers oblong, converging, subcoalescent, opening at the top by two pores. Pistil: germ roundish. Style filiform, longer than the stamens. Stigma blunt. Pericarp: berry roundish, smooth, dotted at the top, two-celled, with a convex fleshy receptacle on each side. Seeds very many, roundish, nestling.—*Essential Character.* Corolla wheel-shaped. Anthers subcoalescent, opening at top. Berry two-celled.

I.—Unarmed.

1. *Solanum laurifolium*, or bay-leaved nightshade.—This is an unarmed tree. Leaves a span long, quite entire, brown. Panicle solitary, dichotomous, composed of one-ranked racemes. Berries black.—Native of South America, in large woods.

2. *Solanum verbascifolium*, or mullein-leaved nightshade.—Stem shrubby; leaves ovate, tomentose, entire; corymbs bifid, terminating. Flowers white, inodorous.—Native of America.

3. *Solanum auriculatum*, or ear-leaved nightshade.—Shrubby; leaves ovate, acuminate, tomentose, entire; stipules cordate; corymbs bifid, terminating. This is very like the preceding.—Native of the islands of Madagascar, Mauritius and Bourbon.

4. *Solanum pubescens*, or pubescent nightshade.—Stem shrubby; leaves ovate, decreasing at the base, quite entire, pubescent; racemes subumbelled, axillary.—Native of the East Indies.

5. *Solanum Bombense*, or Tierra Bomba nightshade.—Stem frutescent; leaves oval, attenuated at both ends, quite entire; racemes cymed.—Found in the island of Tierra Bomba, near Carthage, in America.

6. *Solanum pseudo-capsicum*. Shrubby nightshade, or winter cherry.—Stem shrubby; leaves lanceolate, repand; umbels sessile.—It is a native of the island of Madeira.

7. *Solanum microcarpum*, or small-fruited nightshade.—Stem shrubby; leaves ovate-lanceolate; umbels lateral, peduncled.—Native of Egypt.

8. *Solanum terminale*, or end-flowering nightshade.—Frutescent; leaves lanceolate-ovate, mostly entire, hairy; umbels terminating.—Native of Arabia Felix.

9. *Solanum pauciflorum*, or few-flowered nightshade.—Leaves ovate, quite entire; branches and calyxes ten-toothed, tomentose; peduncles axillary, in pairs, one-flowered.—Native of the island of Martinique.

10. *Solanum diphylum*, or two-leaved nightshade.—Stem shrubby;

shrubby; leaves in pairs, one smaller than the other; flowers in cymes.—Native of the West Indies.

11. *Solanum fugax*, or fugacious nightshade. — Stem shrubby, dichotomous, divaricating; leaves lanceolate, quite entire, smooth; peduncles solitary, axillary, one-flowered; calyx ten-toothed.—Native of the Caraccas.

12. *Solanum geminatum*, or two-flowered nightshade.—Leaves ovate, entire; calyxes ten-toothed, smooth; peduncles axillary, in pairs, one-flowered; stem scandent.—Native of Cayenne, where it was found by Von Rohr.

13. *Solanum retrofractum*, or broken nightshade.—Leaves ovate, smooth; branches axillary, retrofracted; umbels axillary and terminating, sessile; calyxes truncate.—Native of South America.

14. *Solanum stellatum*, or starry nightshade. — Stem shrubby, scandent, flexuose; leaves ovate, smooth, acuminate; peduncles subgeminat, one-flowered, axillary; calyxes unequally toothed.

15. *Solanum dulcamara*. Woody nightshade, or bitter-sweet.—Stem frutescent, flexuose; upper leaves hastate; racemes cymed. Root perennial, woody.—Native of Europe, Africa and Siberia, in moist hedges, shady places and the sides of ditches: flowering in June and July. The berries are ripe in September and October.

16. *Solanum tuberosum*. Tubercous-rooted nightshade, or common potatoe.—Stem herbaceous; leaves pinnate, quite entire; peduncles subdivided. The potatoe is well known for its tuberous root. Stem from two to three feet in height, succulent, somewhat angular, striated, slightly hairy, frequently spotted with red, branched; the branches long and weak. Leaves interruptedly pinnate, having three or four pairs of leaflets, with smaller ones between, and one at the end larger than the rest; the leaflets are somewhat hairy, and dark green on the upper surface. The flowers are either white or tinged with purple; or, as old Gerard describes them, of a light purple, striped down the middle of every fold or welt with a light show of yellowness. The fruit is a round berry, the size of a small plum, green at first, but black when ripe, and containing many small flat roundish white seeds. Native of Quito.

17. *Solanum lycopersicum*. Love-apple, or tomato.—Stem herbaceous; leaves pinnate, gashed; racemes two-parted, leafless; fruits smooth. The one commonly cultivated in the south of Europe to put into soups and sauces, to which it imparts an agreeable acid flavour. The fruit in this is very large, compressed both at top and bottom, and deeply furrowed all over the sides, red or yellow.—Native of South America.

18. *Solanum pseudo-lycopersicum*, or false tomato.—Stem herbaceous; leaves pinnate, gashed; racemes simple; fruits subvillose.

19. *Solanum nigrum*. Common, or garden nightshade.—Branches round; leaves quite entire, hirsute. Stem herbaceous; leaves ovate; tooth angular; racemes distich, nodding. Root annual, much branched. This species is common in Europe, Africa and America, both in cultivated and waste ground, especially on dunghills: flowering from June to September.—There are eight varieties of this species.

20. *Solanum melongena*. Large-fruited nightshade, or egg plant.—Stem herbaceous; leaves ovate, tomentose; peduncles pendulous, incrassated; calyxes unarmed. The egg plant is a native of Asia, Africa and America, where the climate is warm enough.—There are three varieties.—The remains of this section are, *Solanum triquetrum*, scandens, lyratum, Tegore, quercifolium, laciniatum, radicans, havanense, triste, racemosum, corymbosum, quadrangulare, repandum, bonariense, macrocarpon, pimpinellifolium, Peruvianum, montanum, nidiflorum, Æthiopicum, subierme, longiflorum and muricatum.

II.—Prickly.

21. *Solanum insanum*, or round-fruited prickly nightshade.—Stem herbaceous; leaves ovate, tomentose; peduncles pendulous, incrassated; calyxes prickly. Annual.

22. *Solanum torvum*.—Stem shrubby; prickles crooked; leaves subcordate, ovate, sinuate, tomentose; rachis prickly; calyxes unarmed.—Native of Jamaica, Hispaniola and the Bermuda islands, in hedges.

23. *Solanum volubile*, or twining nightshade. — Stem shrubby, scandent; leaves angular; petiole; rachis and calyx prickly.—Found in the woods of Hispaniola and in the West Indies.

24. *Solanum ferox*, or Malabar nightshade. — Stem prickly, herbaceous; leaves cordate, angular, tomentose, prickly; berries rough-haired, covered with the calyx.—Native of Malabar.

25. *Solanum Campechiense*, or yellow-spined nightshade.—Stem prickly, rough-haired; leaves cordate-oblong, five-lobed, toothed; calyxes very prickly.—Native of La Vera Cruz, in New Spain.—There remains of this section *Solanum fuscatum*, mammosum, hirtum, paniculatum, aculeatissimum, Virginianum, Jacquini, Xanthocarpum, coajulans, Jamaicaense, Indicum, Carolinense; sinuatum, sodomeum, Capense, marginatum, stramonifolium, Vespertilio, sanctum, hybridum, tomentosum, polygamum, obscurum, Bahamense, giganteum, flexuosum, lancefolium, lanceolatum, eleagnifolium, polyacanthos, igneum, Milleri, trilobatum, lycioides, biflorum, album, dichotomum, procumbens, angustifolium, quercifolium, scandens, Houstoni, umbellata and racemosum.

Propagation and Culture.—All the species from the Cape of Good, and other warm climates, require an open airy glass case or warm greenhouse in winter, but in summer may be placed abroad in a sheltered situation. All the annuals are of course propagated by seeds; the shrubby plants by layings or cuttings.

The potatoe is highly valuable for its tuberous esculent root. These roots may be obtained for use plentifully almost the year-round: the early sorts, being planted forward in the spring, often afford tolerable crops fit to take up in the beginning of June and in July following, especially in rich warm grounds; but the main crops are permitted to continue growing till autumn, as about the latter end of October or beginning of November, when the stalks or haulm begin to decay, at which time the roots will be arrived to full maturity; and being then taken out of the ground, and housed in some close dry apartment, keep in good perfection for eating all winter and spring, until the arrival of the new crops in the following summer.

With regard to the properties of the different sorts or varieties of this root, so far as they relate to their usefulness as food, or their nourishing qualities, there is probably no very material difference; but insomuch as their agreeableness for the purpose of eating by man is concerned, there is considerable diversity; some sorts being naturally farinaceous and mealy, while other kinds are heavy and clayey, or waxy, the former of which are, for the most part, highly desirable and greatly relished, while the latter are disagreeable to and disrelished by many. The red sorts were formerly held in great esteem, and supposed the best; and though they are most probably in no respect inferior to those of the white kinds, these have of late, in general, been much preferred, especially the round, the oblong white or whitish red, and the kidney sorts, as being more productive, more saleable in the markets, and the most desirable for eating.

The best and most useful varieties, in each kind, should be cultivated in sufficient and suitable proportions. The early sorts are, however, the most proper and suitable for being cultivated in gardens in most cases.

It is of importance in the garden, as well as the field, to have good sized potatoes for sets, or for taking the sets from, whatever the sort may be, as the very small potatoes or chats, as they are called, never answer well in this intention. And it is equally important to have a frequent change of the seed or sets which are employed for raising the crops, as every two or three years, new, or such potatoes as are fresh from other grounds, being found highly useful in preventing degeneracy and promoting the goodness and abundance of the

the crops, as well as in obviating their tendency to the curl, which is so greatly injurious to them.

The plants are increased by the root, either whole or cut in pieces, each cutting forming a proper set or plant. This is their general method of cultivation; but they may likewise be raised from seed to gain new varieties.

In most places the general season for planting this root is from about the middle or the latter end of February to the middle of April; the early sorts, for forward crops, being planted in the latter end of February or early in March; but for the general crops, March, and the first fortnight in April, is the most proper planting season, especially in moist land; as, if planted earlier, and much wet should succeed, it would rot the sets, more particularly if cuttings; though in cases of necessity, where the ground is not ready before, they may be planted any time in April, or even in May, and yield tolerable crops by October. And the ground for this purpose should always be dug over for the reception of the plants to one full spade deep.

But as to the planting, it may be performed by means of a dibble, by holeing in with a spade, or drilling in with a hoe, bedding in, &c., in rows or two feet asunder, eight, twelve or fifteen inches distant in each row, and not more than four or five inches deep at the most.

Dibble-planting is performed with a common large garden dibble, blunted at the bottom, making holes four or five inches deep, at the distance before mentioned, dropping one set into each hole as you go on, and striking the earth in over them, or raking it afterwards, which is a better method.

The surface of the ground should, some time afterwards, be further raked, and left perfectly even and level.

In *drill-planting* the drill may be formed either with a large hoe, two feet asunder, and four or five inches deep, in which drop the sets a foot asunder, and cover them in with the earth equally the depth of the drill; or the drills may be made with a spade, and the sets covered in by means of a rake.

Furrow-planting is performed by putting in the dung, and then dropping the sets in the furrow immediately upon it, and with the next furrow of course cover them.

Lazy-bed planting is sometimes done in low wettish land, for the sake of raising the beds, and sinking the alleys deep enough to drain off the too copious moisture, and is thus performed:—the ground is divided into four, five or six feet wide beds, with alleys two or three feet wide between bed and bed; and the beds being dug, the potatoe-sets are placed upon a little fresh dung on the surface in rows lengthwise; and then the alleys dug out a spade deep, casting the earth over the sets about three or four inches thick; or the alleys may be first dug out to raise the beds, and the sets then planted with a dibble in the common method: thus, by either of these methods, in wet ground, the alleys being sunk, and the beds raised, the alleys drain off the redundant moisture, which might rot the sets before they begin to sprout out and grow.

And this method of planting is sometimes performed on grass or sward-land, marking out beds as above with alleys between of proportionable width; then, without digging the beds, the potatoe-sets are placed immediately upon the sward at proper distances; the alleys being then dug and the spits turned grass-side downward upon the beds over the sets, covering them the proper depth as above, in which, if any additional depth is wanted, it may be supplied from the under earth of the alleys; and thus the sets being between two swards, grow, and often are productive of very good crops, if permitted to have full growth. This is a sort of lazy-bed mode of planting, that is not to be much practised in gardens.

In the after-management of the crops, where the weeds begin to over-run the ground, two or three hoeings should be given to kill them and loosen the surface of the soil; and when the plants have some growth, some hoe up a ridge of earth close to each side of every row of plants in the first

or second hoeing, to strengthen their growth more effectually, and render them more prolific, as the bottom of the stalks so landed up generally emits roots in the earth that become productive of potatoes the same as the principal roots.

Before the potatoes are begun to be dug up, whether in the early or late crops, the haulm should be cut close to the ground and cleared away, in the former only to the extent of what is to be taken up at the time, but in the latter for the whole space which is to be dug up in the day, or other length of time, or for the quantity there may be. It is to be turned off in heaps on to the dug land, that the surface of the ground to be dug for potatoes may be rendered perfectly clear and convenient for the work. This is usually done as the workman proceeds. In forking the crop up, the labour then goes on, by first opening a trench along one end of the ground to the depth and width of a good spit, proceeding in the same way with the rest, throwing the whole of the potatoes, as they are dug up, into large baskets placed for the purpose, carefully digging over all the land in a regular manner spit by spit, turning each clean upside down into the previous open trench. In this manner the whole is to be completed. Potatoes are very valuable as food for cattle.

SOL'AR, or **SO'LARY**, *adj.* [*solaire*, Fr., *solaris*, Lat.] Being of the sun.

Instead of golden fruits,
By genial show'rs and *solar* heat supply'd,
Unsuferable Winter hath defac'd
Earth's blooming charms, and made a barren waste.

Blackmore.

Belonging to the sun.—They denominate some herbs *solar*, and some lunar. *Bacon*.—Born under or in the predominate influence of the sun.

The cock was pleas'd to hear him speak so fair,
And proud beside, as *solar* people are.

Dryden.

Measured by the sun.—The rule to find the moon's age, on any day of any *solar* month, cannot shew precisely an exact account of the moon, because of the inequality of the motions of the sun and moon, and the number of days of the *solar* months. *Holder.*

SOL'AR, *s.* See **SOLLAR**.

SOLARI (Andrea), a native of Milan, called also del Gobbo. Vasari says he flourished in the time of Coreggio; and praises him as a pleasing colourist, and a graceful designer. He is one of those artists whose figures of the Virgin, &c., are constantly sold as Lionardo da Vinci's productions. He died about 1530.

SOLAROLO, a small town of Italy, in the province of Ferrara.

SOLAROSSA, a small town of the island of Sardinia, in the Capo di Cagliari, with 2000 inhabitants.

SOLARS, three small islands in the Eastern seas, under the power of the Dutch, with provisions of every kind; and the middlemost is said to have a good harbour for shipping, situated to the east of Ende island.

SOLBE, a small river of England, in the Isle of Man, which falls into the Irish sea.

SOLCI, a small town of Sardinia, with a good harbour, and the see of a bishop.

SOLD. The preterite and participle passive of *sell*.

SOLD, *s.* [*sould*, old Fr. *Trevoux*.] Military pay; warlike entertainment.

But were your will her *sold* to entertain,
And number'd be amongst knights of maidenhead,
Great guerdon, well I wot, should you remain,
And in her favour high be reckoned.

Spenser.

SOLDAN, *s.* [*solidano*, Ital., *souldan*, old Fr. from the Arab. "Sultan, sultan, souldan, and with the article *as* is the name of supreme honour amongst the Arabians, and seemeth to be as much as *imperator* was amongst

amongst the Romans." See the Arabian Trudgman in Bedwell's Mohamm. Impost. 1615. p. 103. See also SULTAN,] The emperor of the Turks.—They at the *soldan's* chair defy'd the best. *Milton*.

SOLDANEL, *s.* [*soldanella*, Latin.] A plant. *Miller*.
SOLDANELLA [a *soldo*, nummo. So named from the roundness of the leaves, like a piece of money], in Botany, a genus of the class pentandria, order monogynia, natural order of *precia*, *lysimachia* (*Juss.*)—Generic Character. Calyx: perianth five-parted, straight, permanent; segments lanceolate. Corolla one-petalled, bell-shaped, widening gradually, straight: mouth torn into many clefts, acute. Stamina: filaments-five, awl-shaped: anthers simple, sagittate. Pistil: germ roundish. Style filiform, length of the corolla, permanent. Stigma simple. Pericarp: capsule oblong, round obliquely striated, one-celled, opening by a many-toothed top. Seeds numerous, acuminate, very small. Receptacle columnar, free.—*Essential Character*. Corolla bell-shaped, lacero-multifid. Capsule one-celled many-toothed at the top.

Soldanella Alpina, or *Alpine soldanella*.—Root perennial, fibrous. Leaves almost kidney-shaped, about three quarters of an inch over each way, of a dark green colour, on long foot stalks. Among these arises a naked flower-stalk or scape, about four inches long, sustaining at the top two small open bell-shaped flowers, with the brim cut into many fine segments like a fringe: the most frequent colour is blue, but it is sometimes snow white. It flowers in April, and the seeds ripen in July.—Native of the Alps of Switzerland, Austria, Bohemia, Dauphiné and Piedmont.

Propagation and Culture.—Part the roots in September. If removed in spring, the plants never flower strong; and if the season should prove dry, they will decay, unless they are constantly supplied with water. The seeds seldom grow unless they are sowed soon after they are ripe; for which reason those sent from abroad seldom succeed.

This plant thrives best in a strong cool loam, and must have a shady situation.

SOLDAU, or **DZIALDOWO**, a town of East Prussia, on a river of the same name; 100 miles south-by-west of Königsberg. Population 1700. Lat. 53. 13. N. long. 20. 11. E.

To SOLDER, *v. a.* [*souder*, Fr., *soldare*, Ital. *solidare*, Lat. See **SODER**.] To unite or fasten with any kind of metallic cement.—A concave sphere of gold, filled with water, and *soldered* up, has, upon pressing the sphere with great force, let the water squeeze through it, and stand all over its outside in multitudes of small drops like dew, without bursting or craking the body of the gold. *Newton*.—To mend; to unite any thing broken.

Thou visible god,
That *solderest* close impossibilities,
And mak'st them kiss!

Shakspeare.

SOLDER, *s.* Metallic cement. A metallic body that will melt with less heat than the body to be soldered.

Goldsmiths say, the coarsest stuff
Will serve for *solder* well enough.

Swift.

SOLDERER, *s.* One that solders or mends.

SOLDIER, *s.* [*soldat*, Fr., from *solidarius*, low Latin; of *solidus*, a piece of money, the pay of a soldier, as Dr. Johnson has observed; but our word seems to be immediately from the old Fr. *soldoier*, *soudoyer*, *sodier*. See Lacombe. *Soudyovre* is also our old word in the Prompt. Parv. and rendered "stipendiarius;" and we retain it in the vulgar pronunciation, *sojer*. We had formerly another term for *soldier* from the Ital. *soldato*, viz. *soldado*:

"Those, that are *soldadoes* in thy state,
Do beare the badge of base, effeminate,
"Ev'n on their plumie crests."

Marston.

So the German *soldat*, (as well as the French,) from *sold*, pay; *solden*, to make payment of wages; *solidare*, low Lat. the same.] A fighting man; a warrior. Originally one who served for pay.—Your sister is the better *soldier*.

VOL. XXIII. No. 1574.

Shakspeare.—It is generally used of the common men, as distinct from the commanders.—It were meet that any one, before he came to be a captain, should have been a *soldier*.
Spenser.

SOLDIER'S GUT, a cove on the north-east coast of the island of St. Christopher.

SOLDIER'S RIVER, a river of North America, which flows into the Missouri; 689 miles above the Mississippi. It is about 40 yards wide at its mouth.

SOLDIERESS, *s.* A female warrior.

Honour'd Hippolita,
Most dreaded Amazonian;—*Soldieress*,
That equally canst poise sternness with pity.

Beaum. and Fl.

SOLDIERLIKE, or **SOLDIERLY**, *adj.* Martial; warlike; military; becoming a soldier.—Although at the first they had fought with beastly fury rather than any *soldierly* discipline, practice had now made them comparable to the best. *Sidney*.

SOLDIERSHIP, *s.* Military character; martial qualities; behaviour becoming a soldier; martial skill.

By sea you throw away
The absolute *soldiership* you have by land,
Distract your army, which doth most consist
Of war-mark'd footmen.

Shakspeare.

SOLDIERY, *s.* Body of military men; soldiers collectively.

The Memphian *soldiery*,
That swell'd the Erythrean wave, when wall'd,
The unfroze waters marvellously stood.

Philips.

Soldiership; military service.—Offering him, if he would exercise his courage in *soldiery*, he would commit some charge unto him under his lieutenant Philanax. *Sidney*.

SOLDIN, a town of the Prussian states, formerly the capital or the New Mark of Brandenburg. It stands in a low flat district, surrounded by a number of small lakes, is fortified, contains 3200 inhabitants, and has manufactures of woollens, leather, and some small articles; 70 miles east-north-east of Berlin.

SOLDINA, a river of the New Kingdom of Granada, in the province of Panches, which enters the river Magdalena.

SOLDURII, a kind of military clients, or retainers to the great men in Gaul, particularly in Aquitania, mentioned by Cæsar.

SOLE, *s.* [*solum*, Lat.] The bottom of the foot.—I will only be bold with Benedict for his company; for from the crown of his head to the *sole* of his foot he is all mirth. *Shakspeare*.—The foot.

To redeem thy woeful parent's head
From tyrant's rage and ever-dying dread,
Hast wander'd through the world now long a day,
Yet ceasest not thy weary *soles* to lead.

Spenser.

[*Solca*, Lat. *sol*, Sax. *sulja*, Goth.] The bottom of the shoe.

Nay, gentle Romeo, we must have you dance.
—Not I, believe me: you have dancing shoes,
With nimble *soles*.

Shakspeare.

The part of any thing that touches the ground.—The strike-block is a plane shorter than the jointer, having its *sole* made exactly flat and straight, and is used for the shooting of a short joint. *Moxon*.—A kind of sea-fish. [sometimes written *soal*, by way of distinction, which, as Mr. Bagshaw and Mr. Nares also observe, is improper; the fish being originally called *solca* from its shape, resembling the *sole* of a shoe or sandal.]—Of flat fish, rays, thornbacks, *soles*, and flowks. *Carew*.

SOLE, in Ship-Building, a sort of lining, to prevent wearing or tearing away the main part to which it may be attached; as to the rudder, bilgeways, &c.

SOLE is also a name sometimes given to the lower side of a gun-port, which, however, is more properly called the port-sill.

SOLE of a Horse, that plate of horn which, encompassing the fleshy sole, covers the whole bottom of the foot.

To SOLE, *v. a.* To furnish with soles: as, to sole a pair of shoes.—His feet were soled with a treble tuft of a close short tawney down. *Grew.*

SOLE, *adj.* [*sol*, old French; *solus*, Latin.] Single; only.

To me shall be the glory sole among
The infernal powers.

Milton.

[In Law.] Not married.—Some others are such as a man cannot make his wife, though he himself be sole and unmarried. *Ayliffe.*

SOLE, a small river of the Ecclesiastical states, in the duchy of Spoleto. It falls into the Tiber.

SOLEÆ, among the Romans, were a kind of sandals or slippers, which covered only the sole of the feet.

SOLEBURY, a township of the United States, in Berks county, Pennsylvania, on the Delaware, opposite Amwell, New Jersey Population 1669.

SOLEC, a town of Poland, on the Vistula; 35 miles north of Sandomir. Population 1300.

SOLECISM, *s.* [*σολοικισμος*, Gr. from *Σολοικοι*, Soloeci, coloni Attici, qui *Solis*, Ciliciae urbe, habitantes. (*σολοικισμος*) any thing incorrect or out of order; Fr. *solecism*.] Unfitness of one word to another; impropriety in language. A barbarism may be in one word, a solecism must be of more.—There is scarce a *solecism* in writing which the best author is not guilty of, if we be at liberty to read him in the words of some manuscript.—Any unfitness or impropriety.

To have one fair gentlewoman thus be made
The unkind instrument to wrong another,
And one she knows not, ay, and to persevere,
In my poor judgement is not warranted
From being a *solecism* in our sex,
If not in manners.

B. Jonson.

SOLEICIST, *s.* [*σολοικιστης*, Gr.] One who is guilty of impropriety in language.—Shall a noble writer, and an inspired noble writer, be called a *solecist*, and barbarian, for giving a new turn to a word so agreeable to the analogy and genius of the Greek tongue? *Blackwall.*

SOLEICISTICAL, *adj.* Not correct; barbarous.—He thought it made the language *solecistical* and absurd. *Blackwall.*

SOLEICISTICALLY, *adv.* In an incorrect way.—Which I had formerly for my own use set down, some of them briefly, and almost *solecistically*. *Wollaston.*

To SOLEICIZE, *v. n.* [*σολοικίζω*, Gr.] To be guilty of impropriety in language.—This being too loose a principle — to fancy the holy writers to *soleicize* in their language, when we do not like the sense. *More.*

SOLEICZNIK, a small town of Russian Lithuania, in the government of Wilna.

SOLEDA, a settlement of the island of Cuba; 56 miles south-south-east of Havannah.

SOLEDAD, the name of several inconsiderable settlements in different parts of Spanish America.

SOLEIL de Mer, a name given by the French writers, and by Rondeletius, to the star-fish.

SOLEISSEL (James de), a celebrated master of horsemanship, was born in 1617. He published a work, entitled "Le Parfait Marechal," which became very popular, and was translated into several languages.

SOLELELY, *adv.* Singly; only.

You knew my father well, and in him me,
Left solely heir to all his lands.

Shakspcare.

This night's great business
Shall to all our nights and days to come
Give solcly sovereign sway and masterdom. *Shakspcare.*

SOLEMN, *adj.* [*solemnel*, Fr.; *solemnis*, Lat.] Anniversary; observed once a year with religious ceremonies.—The worship of this image was advanced, with a *solemn* supplication observed every year. *Stillingfleet.*—Religiously grave; awful.—His holy rites and *solemn* feasts pro-

fan'd. *Milton.*—Formal; ritual; religiously regular.—The necessary business of a man's calling, with some, will not afford much time for set and *solemn* prayer. *Wh. Duty of Man.*—Striking with seriousness; sober; serious.

Then gan he loudly through the house to call,
But no one cared to answer to his cry;
There reigned a *solemn* silence over all.

Spenser.

To swage with *solemn* touches troubled thoughts. *Milton.*—Grave; affectedly serious.—When Steele reflects upon the many *solemn* strong barriers to our succession of laws and oaths, he thinks all fear vanisheth: so do I, provided the epithet *solemn* goes for nothing; because though I have heard of a *solemn* day, and a *solemn* coxcomb, yet I can conceive no idea of a *solemn* barrier. *Swift.*

SOLEMNNESS, or SOLEMNITY, *s.* [*solemnité*, French, from *solemn*.] Ceremony or rite annually performed.

Great was the cause; our old *solemnities*
From no blind zeal or fond tradition rise;
But, saved from death, our Argives yearly pay
These grateful honours to the god of day.

Pope.

Religious ceremony.—Honest men's words are Stygian oaths, and promises inviolable. These are not the men for whom the fetters of law were first forged; they needed not the *solemnness* of oaths; by keeping their faith they swear, and evacuate such confirmations. *Brown*—Awful ceremony or procession.

The Lady Constance,
Some speedy messenger bid repair
To our *solemnity*.

Shakspcare.

Manner of acting awfully serious.—With much more skilful cruelty, and horrible *solemnity*, he caused each thing to be prepared for his triumph of tyranny. *Sidney.*—Gravity; steady seriousness.—The stateliness and gravity of the Spaniards shews itself in the *solemnity* of their language. *Addison.*—Awful grandeur; grave stateliness; sober dignity.—A diligent decency was in Polycletus, above others; to whom though the highest praise be attributed by the most, yet some think he wanted *solemnness*. *Wotton.*—Affected gravity.—Pr'ythe, Virgilia, turn thy *solemnness* out o' door, and go along with us. *Shakspcare.*

SOLEMNIZA'TION, *s.* The act of solemnizing; celebration.—Soon followed the *solemnization* of the marriage between Charles and Anne dutchess of Bretagne, with whom he received the dutchy of Bretagne. *Bacon.*

To SOLEMNIZE, *v. a.* [*solemniser*, French.] To dignify by particular formalities; to celebrate.—Dorilaus in a great battle was deprived of life: his obsequies being no more *solemnized* by the tears of his partakers than the blood of his enemies. *Sidney.*—The multitude of the celestial host were heard to *solemnize* his miraculous birth. *Boyle.*—To perform religiously once a year.—What commandment the Jews had to celebrate their feast of dedication, is never spoken of in the law, yet *solemnized* even by our Saviour self. *Hooker.*

SOLEMNLY, *adv.* With annual religious ceremonies; with formal gravity and stateliness; with affected gravity.

The ministers of state, who gave us law,
In corners, with selected friends, withdraw;
There in deaf murmurs *solemnly* are wise,
Whisp'ring like winds, ere hurricanes arise.

Dryden.

With formal state.

Let him land,
And *solemnly* see him set on to London. *Shakspcare.*

With religious seriousness.—To demonstrate how much men are blinded by their own partiality, I do *solemnly* assure the reader, that he is the only person from whom I ever heard that objection. *Swift.*

SOLEN, the RAZOR-SHEATH, or SPOUT-FISH, in Natural History, a genus of the Vermes Testacea class and order, of which the Generic Character is as follows:—The animal is

an ascidia; its shield is bivalve, oblong and open at both ends; the hinge has a subulate reflected tooth; it is often double, and not inserted in the opposite valve. It had its name, *solen*, from the Greek, in which language that word expresses a pipe or tube: this fish, when the shells are closed, very aptly resembling a tube. The Latin writers have called it *unguis*, from its resemblance in colour and consistence to the human nail. The common people in many parts of France call it *coutelier*, and in Italy it is commonly called *cannolichio*. There are twenty-three species enumerated by Gmelin, which are as follow:—

1. *Solen vagina*.—The Specific Character of this is, that the shell is linear, straight, roundish, one end emarginated; the hinge is marked with a single opposite tooth in each valve. There is a variety that inhabits the European and Indian seas: it is six or seven inches broad, and only one inch long. The shell is yellowish, divided diagonally, into two triangles, one of which is striate longitudinally, the other transversely, and marked with curved bands. This species, and all the others that are found in this genus belonging to this country, are figured by Barbut, Lister, Donovan, and other naturalists.

2. *Solen siliqua*.—The shell of this species is linear, and straight; it has one hinge, which is two-toothed. There is a variety with rosy lunules. The former is found in most European seas, and on our own coasts. The latter is to be met with in the Indian seas. It is seven or eight inches broad and not more than one and a half inch long. The shell is equally broad and compressed, with a double tooth at the hinge, receiving another opposite, and on one side there is another sharp tooth directed downwards: the colour is of an olive-brown, with a limpid ash-coloured mark dividing the shells diagonally: one part is striate longitudinally, the other transversely.

3. *Solen ensis*.—Shell linear, a little bowed, like a scymitar: it has one hinge, which is two-toothed.—It inhabits European seas. The shell is coloured, and marked like that of the siliqua; it is rounded at both ends; the two teeth of one valve are inserted into a triangular hollow of the other.

4. *Solen pellucidus*.—Shell sub-arched, sub-oval, pellucid; one hinge two-toothed.—This is found on the shores of Anglesea; the shell is thin and pellucid, about an inch broad, with a double sharp tooth in one valve, receiving a single one from the opposite, with a process in each shell pointing towards the cartilage of the hinge.

5. *Solen legumen*.—Shell linear, oval, straight; hinges placed in the middle, and two-toothed; one of them bifid. It is found in the European and the Atlantic seas; is two inches and a half broad. The shell is sub-pellucid, radiate, from the hinge to the margin; it is rounded at both ends.

6. *Solen cultellus*.—The shell of this species is shaped something like a kidney, with a single tooth in one valve and two in the other.—It inhabits European and Indian seas, and is more than two inches broad. The shell is fragile, covered with a rough cuticle, under which it is dirty-white, with tawny marks; both ends are rounded.

7. *Solen radiatus*.—Shell oval, straight and smooth, with a transverse depressed rib growing on one side. This is found in India, and is very thin and brittle. The shell is of a violet colour, with four transverse white rays, growing larger towards the thinner margin; the depressed rib running nearly the length of the shell; the hinge is callous on each side; both valves are two-toothed.

8. *Solen strigilatus*.—Shell oval, obliquely striate. There is a variety which inhabits the Mediterranean, Atlantic, and Indian seas. The shell is rosy, with two white rays, strong and ventricose; the hinge is a little prominent at the margin, with a thin reflected tooth.

9. *Solen anatinus*.—The shell of this is ovate, membranaceous, and hairy, with a falcate rib at the hinge.—It inhabits the Indian ocean, on a sandy bottom. The shell is pellucid, white, thin, like paper; one end rounded and closed; the other gaping, like the beak of a bird: there is a tooth in each valve resembling an ear-picker.

10. *Solen macha*.—Shell oval, oblong, truncate before; one hinge is two-toothed.—It is found in the Pacific Ocean. It is about six or seven inches long; in colour it is brown varied with blue; it produces pearl.

11. *Solen bullatus*.—Shell roundish, inflated, sub-striate; the fore-part is gaping, in consequence of its crenatures.—This is found in the American and Indian seas; brittle, white spotted or clouded with purple, longitudinally striate, sub-pellucid; hinge with a single tooth, marginal ones remote, compressed, and inserted in a hollow of the other valve.

12. *Solen minutus*.—Shell oval, angles of the valves serrate.—It is found in the northern parts of Europe, among zoophytes; is the size of a cucumber-seed; longitudinally striate, truncate at the top, with acute serrate ridges, diverging from the hinge towards the top.

13. *Solen virens*.—The shell of this is ovate-oblong, with tumid bosses.—It inhabits Java; is very brittle, diaphanous, white, outwardly greenish, valves unequal, resembling in its shape the *Mya pictorum*; the tip and base hardly closed, with two approximate teeth in one hinge, and none in the opposite.

14. *Solen diphos*.—Shell oval, straight, smooth, with prominent membranes.—It inhabits the Indian Ocean, and resembles the *Solen radiatus*. It is two inches and a half long, and five broad; covered with a greenish cuticle, under which it is violet, with numerous rays; two of these are more distinct. The hinge has two teeth in one valve, and one in another.

15. *Solen minimus*.—Shell linear-oval, straight; the hinges are lateral and two-toothed; one of them is bifid.—It inhabits Tranquebar; resembles the *Solen legumen*, but is much less; the cuticle is yellowish, under which it is clear white; the inner rib runs down the whole shell.

16. *Solen maximus*.—Shell linear, oval, straight, with arched striæ; hinges lateral, two-toothed.—It inhabits the shores of Nicobar; it is a very rare species. The shell is thin and pellucid, white, covered with a yellowish cuticle; it is four inches broad, one and a half long, gaping at both ends; the teeth of the hinge not receiving one another.

17. *Solen coarctatus*.—The shell of this is transversely wrinkled, contracted in the middle, rounded at both ends; hinge in the middle, with sometimes one and sometimes two teeth in either valve.—This is found on the shores of Nicobar, is about three-fourths of an inch long, and two and a half broad. The shell is of a dirty white, and gaping at both ends.

18. *Solen roseus*.—Shell rosy, equivalve; the tooth of the hinge is sub-bifid, and inserted in a hollow of the opposite valve.—It inhabits the Red Sea, resembles the *Telina radiata*, but is open at both ends.

19. *Solen sanguinolentus*.—Shell oval, quite smooth; the hinge is callous, and two-toothed.—It inhabits Jamaica; the beaks are rosy without and within.

20. *Solen striatus*.—Shell equivalve, transversely striate; hinge with a single tooth.—It is also found near the shores of Nicobar, and is middle-sized. The shell is thin, rosy, with white rays.

21. *Solen occidens*.—The shell of this species is transversely striate, smooth at the protuberant parts, radiate with white and reddish; both the hinges are two-toothed, with a hollow in the middle.—Its residence is not known. The shell is marked with white and reddish spots scattered about; is more than four inches broad, and two long; both ends are gaping; the hinge is lateral.

22. *Solen crispus*.—The shell, in this species, is partly smooth, partly rough with undulate crimped lines; the hinge has a long narrow tooth.—It is found in the river Tees, and resembles the *Solen anatinus*, though it is thought by some naturalists not to be a distinct species.

23. *Solen spengleri*.—Protuberances or beaks of the shell two-parted; primary tooth of the hinge rounded, accessory ones long and narrow; one of them is curved. The shell is hardly an inch long, but two and a half broad; it is rounded at both ends.

Rondeletius observes, that there are, among the solens of the

the same species, males and females, which are easily distinguishable from one another; and that the females are larger, have no variegations on the shells, and are much better tasted than the males. Rumphius has described a very remarkable species of solen, which always remains buried in sand, and which is not properly a bivalve, consisting only of one piece, though of the shape of the solen; he calls this *solen arenarius*. Lister has called the crooked species *solenus curvi*, and some call them the *scymitar* solens.

We have several species of the straight solens, though but few of the crooked ones.

Of the crooked solens, two are the only known species.

1. The *scymitar* solen. 2. The *solen arenarius*, always found in sand.

The shell of this fish is composed of two pieces, which are the two halves of a hollowed cylinder, with an elliptic base, divided in a longitudinal direction. These two pieces are fastened together near one end by a ligament, like that which joins the shells of the muscle or the oyster. From the place where this ligament is fixed, quite to the other end of the shell, there is a membrane fastened to each edge of the shell, from the place of its origin; so that, viewed externally, it forms a sort of isosceles triangle, the base of which was about two lines in breadth. The colour and consistence of this membrane give it very much the appearance of a piece of parchment; it has a considerable spring in it, and serves on occasion to open, or draw together, the two-sides of the shell.

There is another membrane, of the same kind with this, fastened to the other side of the fish, there adhering to each shell, but this is of an equal breadth all the way down: this serves also to shut or open the edges of the shell. When the solen shuts its shell, it folds itself into several longitudinal wrinkles, which open again when the sides of the shells separate.

Hence it is to be observed, that though this shell has a power of opening and shutting, yet the body of the fish is always secured, and is no more exposed to sight at one time than at another, and there is no part where the fish can be seen but at the ends.

This fish lives in the sand on the sea-shore, where it buries itself often a foot and a half, or two feet deep; the length of the shell is, at this time, nearly in a vertical position, and the fish has a power of raising itself at pleasure up to the surface, and sinking down again, while the shell remains all the time buried in its place. Almost all other animals have a horizontal motion, and the shell-fish of the sea crawl along upon its bottom under water, as the common land animals do on dry ground; but this creature's progressive motion is only vertical, and that confined to a very small compass; all that it is able to do for itself being only to raise itself higher or lower, and sink deeper or rise higher in the sand, within the narrow compass of about two feet at the utmost, as the going beyond that must occasion its destruction. Where these shell-fish are buried in the sand, there is a hole reaching from every one of them to the surface, by means of which they have a free communication with the water: these holes generally are placed in great numbers near one another, and are easily distinguished at a time when the tide has left the shore uncovered. They are not round, but oblong, and somewhat resemble the key-hole of a lock, but that they have a roundness at each end, whereas that usually is rounded only at one.

When it has occasion to ascend out of its hole, nothing more is required than the putting out the end of the leg, swelling it, and thus thrusting itself up to the length of that leg; then retracting it into the shell again, and thrusting out and inflating its end for second movement of the same kind. These motions may be all perceived in the creature when out of the sand, particularly that by which it buries itself; for if held up in the fingers, it thrusts out the leg, and performs all the motions as if in the sand, making a fruitless attempt to save itself in its old way. *Mém. Acad. Par.* 1712.

Klein, and some others, have given the name Solen to the several species of *tubuli marini*.

SOLENA, in Botany, so called by Willdenow, from *σωληνη*, a *tube*, or *pipe*, in allusion to the long tube of the flower. For the same reason, Schreber had named this same genus *Cyrtanthus*, but the latter appellation is now bestowed on a very different one. See *CYRTANTHUS*.

SOLENESS, or SOLSHIP, *s.* State of being not connected or implicated with others; single state.—France has an advantage, over and above its abilities in the cabinet and the skill of its negotiators; which is (if I may use the expression) its *soleness*, contiguity of riches and power within itself, and the nature of its government. *Ld. Chesterfield*.

SELERO, a town of the Sardinian states, in the province of Alessandria, with 2900 inhabitants.

SOLESMES, a town of France, department of the North, with 3200 inhabitants; 9 miles east-north-east of Cambrai.

SOLEURE, a canton in the north-west of Switzerland, lying chiefly between the river Aar and the Jura mountains. Its shape is very irregular; its extent about 275 square miles; its population nearly 50,000. The Jura mountains, occupying a part of this canton, rise to the height of 3000 or 4000 feet above the level of the sea, but of not more than 2000 above the adjacent plains. The rest of the canton is level and fertile. The ground is thus partly arable, partly adapted to pastures. The inhabitants understand the art of irrigating and of laying out their fields in meadows: their cattle are reckoned the best in Switzerland. Their manufactures though on a small scale, embrace the spinning and weaving of woollen, linen, and cotton; but the only places deserving the name of towns are Soleure and Olten. In religion this canton is Catholic, the Protestants being comparatively few. The constitution is aristocratic; the criminal code is nearly the same as in France, but great part of the judicial decisions are regulated by unwritten laws founded on local usages.

SOLEURE, or SOLOTHURN, a town in the north of Switzerland, and the capital of the above canton. It stands at the foot of Mount Jura, on the Aar, which divides it into two parts. It is fortified with walls and bastions, and though irregular, and generally built in a bad taste, has several good edifices, such as the *hotel de ville*, the mint, the public library, the Jesuits' church, and that of St. Urse, a modern building, considered one of the best churches in Switzerland. Several Roman antiquities have been found at Soleure. There are here three churches and five convents, the Catholic being the established religion. The population being only 4200, the trade of the place is very limited: it consists partly in the manufacture of cotton and stuffs, partly in the transit business between Bale and Italy. The environs are pleasant and picturesque; 18 miles north-by-east of Bern, and 26 south of Bale.

SOLEUS, in Anatomy, a muscle of the calf of the leg. See *ANATOMY*.

SOLEUTINAN, a small island in the lake of Nicaragua, near the south coast, with a town. Lat. 11. 25. N. long. 85. 36. W.

SOL-FA-ING, in Music, the naming and pronouncing of the several notes of a song, by the syllables *sol, fa, la*, &c., in learning to sing it.

SOLFARINO, a town of Austrian Italy; 17 miles north-west of Mantua. Population 1500.

SOLFATARA, or LAGO DI BAGNI, a lake of Italy, in the Campagne di Roma, near Tivoli, formerly called Lacus Albulus. It is small, but remarkable for containing several floating islets, formed of matted sedge and herbage, with a soil of dust and sand blown from the adjacent country, and cemented by the bitumen and sulphur with which the water of the lake is impregnated. Some of these islets are 15 yards long, and will bear five or six people, who, by means of a pole, may move to different parts of the lake. From the lake issues a whitish stream, which emits a sulphureous vapour, until reaching the small river Teverone. The water of this rivulet has a petrifying quality, which increases in strength the farther it has flowed from the lake. Fish are found in the Teverone, till it receives the waters of this lake; after

after which, during the rest of its course to the Tiber, there are none.

SOLFATARA, a mountain of Naples, in the Terra di Lavoro, surrounded with other mountains extending in the form of a crescent. It has a kind of cavity, about a mile in diameter, the crater, doubtless, of a volcano now extinct. The soil is warm and white, and if opened to some depth, is insupportable from the heat and exhalations. The ground being in many parts hollow, it is supposed that there may be a subterraneous communication with Mount Vesuvius. It furnishes the materials for manufactures of sulphur, vitriol, and alum.

SOLFEGGIAMENTO, in the Italian Music, compositions, of which the syllables, *ut*, or *do*, *re*, *mi*, *fa*, &c., are the subject.

SOLFEGGIARE, [Ital., *Solfer*, Fr.] is what the vulgar in England call *sol-fa-ing*. All these expressions imply the same thing,—naming the intervals in the first lessons of singing; for which, among regular bred musicians, the proper term in English is *solmisation*.

SOLGALIZKAJA, a town of European Russia, in the government of Kostroma, with 2300 inhabitants, and large salt-works; 103 miles north-north-west of Macariev.

SOLLANOI, a fortress of Asiatic Turkey, in the government of Kolivan, on the Irtysh. Lat. 54. 20. E. long. 75. 14. E.

SOLLANOI, a village of Asiatic Russia, in the government of Irkoutsk; 20 miles north-north-west of Selenginsk.

SOLLANSKOI STANITZ, a village of Asiatic Russia, in the government of Irkoutsk, on the Lena; 16 miles north-east of Olexminsk.

To **SOLICIT**, *v. a.* [*solicito*, Lat.; *soliciter*, Fr.] To importune; to intreat.

If you bethink yourself of any crime,
Unreconcil'd as yet to heaven and grace,
Solicit for it straight.

Shakspeare.

To call to action; to summon; to awake; to excite.

Solicit Henry with her wondrous praise!
Bethink thee on her virtues that surmount
Her natural graces, that extinguish art.

Shakspeare.

To implore; to ask.—With that she wept again, till he again *soliciting* the conclusion of her story, "Then must you," said she, "know the story of Amphialus?" *Sidney*.—To attempt; to try to obtain.

I do not long

To go a-foot yet, and *solicit* causes.

Beaum. and Fl.

I have been detained all this morning *soliciting* some business between the Treasury and our office.

Sir R. Steele.

I view my crime, but kindle at the view,
Repent old pleasures, and *solicit* new.

Pope.

To disturb; to disquiet.

A Latinism.

I find your love, and would reward it too;
But anxious fears *solicit* my weak breast.

Dryden.

SOLICITATION, *s.* [*solicitation*, Fr. *Cotgrave.*] Importunity; act of importuning.

I can produce a man
Of female seed, far abler to resist
All his *solicitations*, and at length,
All his vast force, and drive him back to hell.

Milton.

Invitation; excitement.—Children are surrounded with new things, which, by a constant *solicitation* of their senses, draw the mind constantly to them.

Locke.

SOLICITOR, *s.* [*soliciteur*, Fr. *Cotgrave.*] One who importunes or entreats.—He became, of a *solicitor* to corrupt her, a most devout exhorter, and a most earnest persuader, that she should all her life-daies persiste in her most godlye profession of perpetuall virginitie.

Martin.—One who petitions for another.

Be merry, Cassio;
For thy *solicitor* shall rather die,
Than give thy cause away.

Shakspeare.

VOL. XXIII. No. 1574.

One who does in Chancery the business which is done by attorneys in other courts.—For the king's attorney and *solicitor* general, their continual use for the king's service requires men every way fit.

SOLICITOR, or **SOLLICITOR**, *Solicitor*, a person employed to follow, and take care of, other persons' suits. This term was formerly allowed only to nobility, whose menial servants they were; but now regularly admitted to practice in the Court of Chancery.

The king has a Solicitor-general, who holds his office by patent, during the king's pleasure. The Attorney-general and he had anciently a right to their writs of summons, to sit in the lords' house on special occasions, till the 13 Car. II., since which time, they have almost constantly been chosen members of the House of Commons.

The Solicitor-general has the care and concern of managing the king's affairs, and hath fees for pleading, besides other fees arising by patents, &c. He hath his attendance on the privy-council; and the Attorney-general and he were anciently reckoned among the officers of the Exchequer: they have audience, and come within the bar in all other courts.

To the queen's household there belongs also an officer with this appellation.

SOLICITOUS, *adj.* [*solicitus*, Lat.] Anxious; careful; concerned. It has commonly *about* before that which causes anxiety; sometimes *for* or *of*. *For* is proper before something to be obtained.—Our hearts are pure, when we are not *solicitous* of the opinion and censures of men, but only that we do our duty. *Bp. Taylor.*—Enjoy the present, whatsoever it be, and be not *solicitous* for the future. *Bp. Taylor.*—No man is *solicitous* about the event of that which he has in his power to dispose of. *South.*

The tender dame, *solicitous* to know

Whether her child should reach old age or no,

Consults the sage Tiresias.

Addison.

SOLICITOUSLY, *adv.* Anxiously; carefully.—The medical art being conversant about the health and life of man, doctrinal errors in it are to be *solicitously* avoided.

Boyle.

SOLICITUDE, *s.* [*solicitude*, Fr.; *Cotgrave*; *solicitudo*, Lat.] Anxiety; carefulness.—If they would but provide for eternity with the same *solicitude*, and real care, as they do for this life, they could not fail of heaven. *Tillotson.*

SOLICITRESS, *s.* A woman who petitions for another.—I had the most earnest *solicitress*, as well as the fairest; and nothing could be refused to my lady Hyde.

Dryden.

SOLID, *adj.* [*solidus*, Lat.; *solide*, Fr.] Not liquid; not fluid.

Land that ever burn'd

With *solid*, as the lake with liquid fire.

Milton.

Not hollow; full of matter; compact; dense.

Thin airy things extend themselves in place,
Things *solid* take up little space.

Cowley.

I hear his thundering voice resound,

And trampling feet that shake the *solid* ground.

Dryden.

Having all the geometrical dimensions.—In a *solid* foot are 1728 *solid* inches, weighing 76 pounds of rain water. *Arbutnot.*—Strong; firm.—The duke's new palace is a noble pile built after this manner, which makes it look very *solid* and majestic. *Addison.*—Sound; not weakly.—If persons devote themselves to science, they should be well assured of a *solid* and strong constitution of body, to bear the fatigue. *Watts.*—Real; not empty; true; not fallacious.

The earth may of *solid* good contain

More plenty than the sun.

Milton.

Not light; not superficial; grave; profound.—These, wanting wit, affect gravity, and go by the name of *solid* men; and a *solid* man is, in plain English, a *solid* solemn fool. *Dryden.*

SOLID, *s.* The solid parts of the body.—The first and

most simple *solids* of our body are perhaps merely terrestrial, and incapable of change or disease. *Arbutnot.*

SOLIDAGO [from *solidare*, or *solidando vulnera*, from its supposed efficacy in healing wounds], in Botany, a genus of the class syngenesia, order polygama superflua, natural order of compositæ discoideæ, corymbifera (*Juss.*)—Generic Character. Calyx: common oblong, imbricate; scales oblong, narrow, acuminate, straight, converging. Corolla: compound radiate. Corollets hermaphrodite tubular, very many, in the disk: female ligulate, fewer than ten (commonly five) in the ray. Proper of the hermaphrodite funnel-form, with a five-cleft, patulous border: female ligulate, lanceolate, three-toothed. Stamina in the hermaphrodites: filaments five, capillary, very short. Anthers cylindrical, tubular. Pistil, in the hermaphrodites: germ oblong. Style filiform, length of the stamens. Stigma bifid, spreading. In the females: germ oblong. Style filiform, length of the hermaphrodite. Stigmas two, revolute. Pericarp none. Calyx scarcely changed. Seeds in the hermaphrodites solitary, obovate-oblong. Seed-down capillary; in the females very like the others. Receptacle flattish, naked.—*Essential Character.* Calyx: scale imbricate, closed. Corollets of the ray about five. Seed-down simple. Receptacle naked.

I.—With racemes directed one way.

1. *Solidago Canadensis*, or Canadian golden-rod.—Stem villose, erect; leaves lanceolate, serrate, triple-nerved, rugged; racemes paniced, recurved; ligules abbreviated.—The golden-rods are natives of North America, except two species which are found in Europe, and two others which were discovered by Houstoun in New Spain.

2. *Solidago procera*, or great golden-rod.—Stem villose, upright; leaves lanceolate, serrate, triple-nerved, rugged, villose underneath; racemes spike-shaped, erect, before they open nodding; ligules abbreviated.

3. *Solidago serotina*, or upright smooth golden-rod.—Stem upright, round, even; leaves linear-lanceolate, smooth, rough at the edge, serrate, triple-nerved; racemes paniced, directed one way.

4. *Solidago gigantea*, or gigantic golden-rod.—Stem upright, smooth; leaves lanceolate, smooth, serrate, rugged at the edge; racemes paniced; peduncles rough-haired; ligules abbreviated.

5. *Solidago altissima*, or tall golden rod.—Stem upright, rough-haired; leaves lanceolate, very rugged, wrinkled, serrate, nerveless, panicles directed one way.—There are besides in this section *Solidago reflexor*, *lateriflora*, *aspera*, *memoralis*, *arguta*, *juncea*, *elliptica*, *sempervirens*, and *odora*. Mr. Miller has made five species out of this. *Solidago altissima*, *pilosa*, *recurvata*, *Virginiana*, *rugosa*.

II.—With upright racemes.

6. *Solidago lanceolata*, or gross leaved golden-rod.—Stem smooth, very much branched; leaves linear-lanceolate, quite entire, three-nerved, smooth; corymbs terminating; ligules the height of the disk.

7. *Solidago lævigata*, or fleshy-leaved golden-rod.—Stem upright, even; leaves lanceolate, fleshy, quite entire, even all over; racemes paniced, upright; peduncles scaly, villose; ligules elongated.

8. *Solidago Mexicana*, or Mexican golden-rod.—Stem oblique, smooth; leaves lanceolate, somewhat fleshy, quite entire, even all over; racemes paniced, upright; peduncles scaly, smooth; ligules elongated.

9. *Solidago viminea*, or twiggly golden-rod.—Stem upright, subpubescent; leaves linear-lanceolate, membranaceous, attenuated at the base, smooth, except at the edge, which is rugged, the lowest subserrate; racemes upright; ligules elongated.

10. *Solidago virgaurea*, or common golden-rod.—Root perennial, of long simple fibres.—Native of Europe, Siberia and Japan, in woods, coppices, hedges and heaths. It has many varieties.—The others of this section are, *Solidago stricta*, *petiolaris*, *bicolor*, *rigida*, *cæsia*, *flexicaulis*, *ambigua*, *multiradiata*, *minuta*, *urticifolia*, and *fruticosa*.

Propagation and Culture.—These plants are all hardy (except the two sorts last mentioned), and therefore will thrive in the open air in England. Many of them having spacious panicles of flowers, are great ornaments to the English gardens at the end of the summer, when there is a scarcity of other flowers, which renders them more valuable. When they are once obtained, they may be propagated in plenty by parting their roots; the best time for doing it is in autumn, as soon as their flowers are past.

To SO'LIDATE, *v. a.* [*solido*, Lat.] To make firm or solid.

This shining piece of ice,
Which melts so soon away
With the sun's ray,
Thy verse does *solidate* and crystallize.

Cowley.

SOLIDITY, *s.* [*solidité*, Fr.; *soliditas*, Lat.] Fullness of matter; not hollowness. Firmness; hardness; compactness; density; not fluidity.—That which hinders the approach of two bodies, when they are moving one towards another, I call *solidity*. *Locke.*—Truth; not fallaciousness; intellectual strength; certainty.—The most known rules are placed in so beautiful a light, that they have all the graces of novelty; and make the reader, who was before acquainted with them, still more convinced of their truth and *solidity*. *Addison.*

SOLIDLY, *adv.* Firmly; densely; compactly. Truly; on good grounds.—A complete brave man ought to know *solidly* the main end he is in the world for. *Digby.*

SOLIDNESS, *s.* Solidity; firmness; density.—It is built with that unusual *solidness*, that it seems he intended to make a sacrifice to perpetuity, and to contest with the iron teeth of time. *Howell.*

SOLIDUNGULOUS, *adj.* [*solidus* and *ungula*, Lat.] Whole-hoofed.—It is set down by Aristotle and Pliny, that an horse and all *solidungulous* or whole-hoofed animals have no gall, which we find repugnant unto reason. *Brown.*

SOLIDUS, in Ancient Coinage. According to Pliny's account, gold was coined at Rome sixty-two years after silver, i. e. 547 U. C. or B. C. 204; and then the scruple passed, as he informs us, for 20 sesterces. It was afterwards thought proper to coin 40 pieces out of the pound of gold; and, as he says, our princes have, by degrees, diminished their weight to 45 in the pound. The pieces that now remain confirm Pliny's account. In the first coinage, the auri were 48 in the pound; afterwards, as Pliny says, there were 40 in the pound, and the aureus was raised from 106 grains, the weight of the didrachm of this coinage, to 126 grains. From Pliny and the coins it appears, that in the first coinage, the scruple of gold passed for 20 sesterces; the drachm of three scruples was 60 sestertii, or 15 silver denarii; and the didrachm, or aureus, the common Roman gold coin, was worth 30 silver denarii, equal to 1*l.* sterling; gold being to silver as 17½ to 1. The aureus seems to have continued at 30 silver denarii till Sylla's time; but about the year of Rome 675, B. C. 77, the aureus fell to the rate of 40 in the pound, as Pliny informs us, and being reduced near the scale of the Greek χρυσος, passed for 20 denarii, as the latter for 20 drachmas, being in currency 13*s.* 4*d.* English. This is the more probable, because we know from Suetonius, that the great Cæsar brought so much gold from Gaul, that it sold at 3000 nummi a pound, that is, nine times its weight in silver; but the Gallic gold was of a very base sort. However, in the reign of Claudius, the aureus passed for 100 sestertii, or 25 silver denarii; at which rate it remained. This was 16*s.* 8*d.* in English currency; but valuing gold at 4*l.* an ounce, the intrinsic value of the aureus is about 1*l.* The aureus fell by degrees, as Pliny says, to 45 in the pound. From the coins it is clear, that it was in the time of the civil wars of Otho and Vitellius, that the aureus fell from 40 in the pound, or about 125 troy grains at a medium, to 45 in the pound, or about 110 grains of medial weight each. It continued of this standard till the time of Heliogabalus, when it fell to about 92 grains at an average, or near 55 in the pound. That the aureus passed for
25 silver

25 silver denarii down to Alexander Severus, is clear; and supposing that standard to remain, as we have no authority for a change till the time of Constantine I., the double aureus will have borne 50 silver denarii, and the aureus 25. The "triens" must have had eight silver denarii, and two denarii aurei; and the double triens, 16 silver denarii or argentei, and four denarii aurei. The denarius was not then worth above 14*s.* English. The only change Aurelian made in the money, was probably restricted to the gold; for it is certain that under him, and his successor Probus, the common gold piece, or aureus, is of 100 grains, a size confined to these two emperors. There are also halves of about 50 grains; and double aurei, commonly of very fine workmanship, of upward of 200 grains. Down to Constantine I., the aureus stands at between 80 and 70 grains. This prince, who seems not to have altered the size of the coin, instead of the "aureus," gave the "solidus" of six in the ounce of gold, and caused it to pass for 14 of his new silver coins, called "Milliarenses," and 25 denarii, as before; gold being to silver as about 14 to 1. The solidus, or chief gold coin, continued of the same standard to the very close of the Byzantine empire; for gold was common in Constantinople, while silver became more and more scarce. The solidus was worth 12*s.* sterling. In the days of the first emperors the aureus was worth 25 denarii, and gold to silver about 13½ to 1. The medial aureus was 110 grains, the denarius 60. That standard remained the same till the time of Alexander Severus, after which we have no data; but it is probable that Constantine took the value as he found it, and that from Alexander Severus to Constantine, if we except the short interval of the end of Aurelian's reign, and beginning of that of Probus, gold was rising in value till it exceeded 14 to 1. The gold coins, called "Bezants" in Europe, because they were sent from Byzantium, or Constantinople, were solidi of the old scale, six to the ounce. In Byzantine writers, the solidus is also called "Nomisma," or the coin; "Crysinos," because of gold; "Hyperperos," from its being refined with fire, or from its being of bright gold flaming like fire. The solidi also, like the aurei formerly, received names from the princes whose portraits they bore; as "Michelati," "Manuelati." Solidus is a term used for the aureus by Apuleius (*Met. lib. 10.*) who lived in the time of Antoninus the philosopher; nay, so early as in the Prætorian edicts of the time of Trajan; being thus distinguished from the semissis or half. In the time of Valerian, when aurei of different sizes had been introduced, it became necessary to distinguish the particular aurei that were meant.

In the first gold coinage at Rome, the aureus was divided into four inferior parts: the semissis, or half, of 60 sestertii; the tremissis, or third, of 40; the fourth, the name of which is not known, of 30; and the sixth, or scrupulum, of 20. But soon afterwards all these were dropped, except the semissis or half, which occurs in the times of the consuls, and of some emperors, but is extremely scarce, so that few must have been struck. This gold semissis, or half aureus, is termed "quinarius" by medallists with great propriety, and is very uncommon in all the consular and imperial times; but continued the only division of the aureus till the time of Alexander Severus. This prince, as Lampridius informs us, coined semisses and tremisses of gold; but none have yet been found. It is likely they were all recoined by his immediate successors, who again raised the tributes. He also proposed to issue quartarii, but did not live to accomplish his purpose. Trientes, or tremisses, of gold are, however, mentioned in rescripts of Valerian I., and actually exist, both of him and of his son Gallienus, weighing about 30 grains. The gold tremissis was the pattern of the early French and Spanish gold coins; as the silver denarius, in its diminished state, was that of the Gothic and Saxon penny. Pinkerton's *Medals*, vol. i.

SOLIEK ELSEID, a village of Upper Egypt, on the left bank of the Nile; 10 miles south of Girge.

SOLIFI'DIAN, *s.* [*solus* and *fides*, Lat.] One who supposes only faith, not works, necessary to justification.—It may be justly feared, that the title of fundamentals, being ordinarily confined to the doctrines of faith, hath occasioned that great scandal in the church of God, at which so many myriads of *solifidians* have stumbled, and fallen irreversibly, by conceiving heaven a reward of true opinions. *Hammond*.

SOLIFI'DIAN, *adj.* Professing the tenets of a solifidian.

SOLIFI'DIANISM, *s.* The tenets of solifidians.

SOLIGNAC, a town in the south of France, department of the Upper Loire, with 900 inhabitants; 5 miles south of Le Puy.

SOLIGNY, a town in the north of France, department of the Orne, on the small river Cosne. Population nearly 900.

SOLIHULL, a parish, and formerly a market town of England; 7 miles south-east of Birmingham. Population 2581.

SOLIKAMSK, an old town of European Russia, in the government of Perm, with several salt springs and copper mines in the neighbourhood. Population 3800; 130 miles north of Perm.

To SOLILOQUIZE, *v. n.* To utter a soliloquy.

SOLILOQUY, *s.* [*soliloque*, Fr., *solus* and *loquor*, Lat.]

A discourse made by one in solitude to himself.—The whole poem is a *soliloquy*: Soloman is the person that speaks: he he is at once the hero and the author; but he tells us very often what others say to him. *Prior*.

SOLIMAGUE, a small island near the west coast of Lucon. Lat. 18. 3. N. long. 120. 36. E.

SOLIMAN, a seaport on the south-eastern coast of the bay of Tunis. The inhabitants consist of the Moors who were driven out of Spain, and still preserve their manners and language unaltered. They are accounted also more honest than the natives of Africa; 20 miles east-south-east of Tunis.

SOLIMANA, a high and mountainous district of interior Africa, in, or bordering on which, are the sources both of the Gambia and Senegal. It has Jallonkadoo on the north, and Foota Jallo on the west and south, but the interior is not at all known.

SOLIMENE (Francesco, called also L'Abate Ciccio), was born at Nocera de Pagani, near Naples, in 1637. He was the son of a painter, Angelo Solimene, who at first educated him in literary pursuits, in which he was exceedingly assiduous, and made considerable progress; whilst at the same time he indulged himself in cultivating an inherent taste for design. By the advice of Cardinal Orsini, Francesco was permitted by his father to change the object of his principal pursuit, and, instead of the law, to adopt the pencil, as the ground-work of his future fame. He became the disciple of Francesco Maria, and afterwards of Giacomo del Po; but soon left Naples, to go to Rome, where the freedom and brilliancy of Pietro da Cortona's execution and design attracted his admiration, and fixed his attention. To what he acquired of Cortona, he attempted to add the sweetness of Guido Rhani; and thus framed for himself a style remarkable for its ease and suavity, more than for its grace or truth. A very beautiful production of his is at Hampton Court, the Pool of Bethesda; but his most celebrated works are the sacristy of S. Paulo Maggiore, and the Last Supper, in the refectory of the conventuali at Assisi. Solimene possessed a vivid invention, and consequently a ready pencil; so much so, that his execution is always spirited and masterly, equally adapted to almost all kinds of subjects; and his colouring unites brilliancy and force. He died at Naples in 1747, aged 90.

SOLINGEN, a town of Prussian Westphalia, in the county of Berg, on the river Wipper. It has 4100 inhabitants, who are of mixed religion, Lutherans, Calvinists, Catholics, and Jews. Coal and iron ore being both found in the vicinity, the chief employment is the manufacturing of swords, knives, and, in time of war, of bayonets and other military equipments: the swords in particular, have long been in repute.

The

The quantity of steel manufactured yearly is about 13,000 cwt.; 16 miles east-south-east of Dusseldorf, and 20 east-north-east of Cologne.

SOLINUS (Caius Julius), a Latin grammarian, but of what particular period is not known, though he is generally referred to the third century. He appears to have resided chiefly at Rome, but is known only as the author of a work, which he first entitled "Collectanea Rerum Memorabilium," afterwards "Polyhistor." This is a collection of the remarkable things in different countries, partly transcribed, without acknowledgment, from Pliny's Natural History; whence the author has been called the ape of Pliny. The work however, of Solinus, contain some things not to be found in Pliny, and it contains likewise an elucidation of some difficulties in the original; and on these accounts it has been deemed worthy of the notice of the critics. The best modern editions are said to be the octavo of Salmasius, 2 vols., 1689; and Gesner's, printed at Leipsic, in 1777.

SOLIPACA, a town of Naples, in the Terra di Lavori. Population 3200

SOLIPEDE, *s.* [*solus* and *pedes*, Lat.] An animal whose feet are not cloven.—*Solipedes*, or firm footed animals, as horses, asses, and mules, are in mighty number. *Brown.*

SOLIS (Antonio de), a celebrated Spanish historian and poet, was born at Alcala de Henares. While he was very young, and a student, he wrote a comedy, which was extremely well received. It was followed by others, as well as by poems on different subjects, by which he raised a very high reputation. He was employed in the Secretary of State's Office, and the king, Philip IV., made him his own private secretary. In 1661 the queen nominated him historiographer for the Indies; and it was in this quality, that he composed his "History of the Conquest of Mexico," a work which placed him among the most approved of the Spanish prose writers, and was greatly applauded both at home and abroad. De Solis took priests' orders when he was in the 57th year of his age, after which he renounced all connection with the theatre, and adopted a regularity of life conformable to his character as a priest. He died in the year 1686. The comedies of De Solis, which were printed collectively in 4to., Madrid, in 1661, are said by critics to be perplexed in their story, and rather romantic than comic; but they have afforded the foundation of many French plays. His poems are said to display more imagination than correct taste. His history is written with spirit and elegance, but there are occasional displays of the bombast and false taste, and frequently are to be met with great deviations from the truth. The object of De Solis is to make a perfect hero of Cortes, and on this account the history terminates with the conquest of Mexico, and does not touch upon subsequent cruelties. It has been translated into the French and English languages.

SOLIS, or **AQUÆ**, in Ancient Geography, a town of Albion, in the 14th route of Antonina's Itinerary, between Isca or Caerleon and Calleva or Silchester. Aquæ Solis was unquestionably Bath, which was much frequented by the Romans for its warm and medicinal springs.

SOLIS, a river of South America, in the province of Buenos Ayres, which runs from north to south, and empties itself into the Plata, at its entrance between the islands of Flores and Maldonado.—There is another river of the same name in the same province, with the surname of Chico, to distinguish it, which terminates to the south-west of the former.

SOLITAIRE, *s.* [*solitaire*, Fr.] A recluse; a hermit.—Often have I been going to take possession of tranquillity, when your conversation has spoiled me for a *solitaire*. *Pope.*—An ornament for the neck.

Before a *solitaire*, behind
A twisted ribbon.

Shenstone.

She sees him now in sash and *solitaire*
March in review with Milo's strut and stare.

Neville.

SOLITAIRE ISLAND, a small island in the Southern

Pacific ocean; 25 miles south of Kerguelen's Land. Lat. 49. 49. S. long. 68. 6. E.

SOLITARIAN, *s.* A hermit; a solitary.—This man gathered together all the dispersed monks and other *solitarians* of Italy, so that in a short time he had no less than twelve monasteries about him. *Sir R. Twisden.*

SOLITARILY, *adv.* In solitude; with loneliness; without company.—How should that subst *solitarily* by itself, which hath no substance, but individually the very same whereby others subsist with it? *Hooker.*

SOLITARINESS, *s.* Solitude; forbearance of company; habitual retirement.—You subject yourself to *solitariness*, the sly enemy that doth most separate a man from well doing. *Sidney.*

SOLITARY, *adv.* [*solitaire*, Fr.; *solitarius*, Lat.] Living alone; not having company.—Those rare and *solitary*, these in flocks. *Milton.*—Retired; remote from company: done or passed without company.

Him fair Lavinia

Shall breed in groves to lead a *solitary* life. *Dryden*

Gloomy; dismal.—Let that night be *solitary*, let no joyful voice come therein. *Job.*—Single.—Relations alternately relieve each other, their mutual concurrences supporting their *solitary* instability. *Brown.*

SOLITARY, *s.* One that lives alone; a hermit.—You describe so well your hermitical state of life, that none of the ancient anchorites could go beyond you, for a cave, with a spring, or any of the accommodations that befit a *solitude*. *Pope.*

SOLITARY ISLAND, an island in the South Pacific ocean, discovered by Mendana in the year 1595. This island is low, round, and planted with trees; the coast surrounded with rocks. Lat. 10. 4. S. long. 178. 20. W.

SOLITARY ISLANDS, a cluster of small islands near the coast of New Holland. Lat. 30. 8. S.

SOLITUDE, *s.* [*solitude*, Fr.; *solitudo*, Lat.] Lonely life; state of being alone.—It had been hard to have put more truth and untruth together, in few words, than in that speech; whosoever is delighted with *solitude*, is either a wild beast or a god. *Bacon.*—Loneliness; remoteness from company.—The *solitude* of his little parish is become matter of great comfort to him, because he hopes that God has placed him and his flock there, to make it their way to heaven. *Law.*—A lonely place; a desert.

In these deep *solitudes* and awful cells,

Where heav'nly-pensive contemplation dwells. *Pope.*

SOLIVAGANT, *adv.* [*solivagus*, Lat.] Wandering about alone. *Unused.*—A description of the impure drudge; that is to say, a *solivagant* or solitary vagrant. *Granger.*

SOLI-VINOKOU, a river of Chili, in the province of Copiapo, which runs south, and enters the Biobio.

SOLLAR, *s.* [*soliarum*, low Latin; *sollier*, old Fr.] An upper room; a loft; a garret. Formerly also an open gallery, at the top of the house. See Tyrwhitt, Gloss. Chauc. in V. SOLER-HALL. It is a Cornish term for a ground-room, an entry, a gallery, a stage of boards in a mine.

Some skilfully drieth their hops on a kel,

And some on a *sollar*, oft turning them wel.

Tusser.

Stone steps that led to the *solar* or chamber. *A. Wood.*

SOLLER, a town of Spain, in the island of Majorca; 14 miles north of Palma. It stands in a delightful valley, full of orange, lemon, and other fruit trees, and surrounded by hills covered with clumps of fig, olive, and carob trees. Several small brooks run down from these hills, irrigate the valley, and unite near the town. The latter contains 5700 inhabitants, has a harbour defended by two forts, and derives its chief business from the sale of its oranges, most of which are sent to Barcelona, and afterwards to England.

SOLLEROE, a small island of Sweden, in the lake of Siljan. Population 1200.

SOLLERSHOPE, a parish of England, in Herefordshire; 7 miles from Ross.

SOLLIES-

SOLLIES-LE-PONT, a town of France, department of the Var, on the Latay. Population 2800; 9 miles north-east of Toulon.

SOLMISATION, *s.* [from the musical term *sol, mi.*] A kind of solfaing. See *To SOL-FA.*—Shakspeare shows by the context, that he was well acquainted with the property of these syllables [fa, sol, la mi,] in *solmisation*, which imply a series of sounds so unnatural, that ancient musicians prohibited their use. *Burney.*

SOLMS, a district in the west of Germany, in Wetteravia, formerly a principality of the empire, but deprived of that rank in 1806, and subject at present in part to Hesse-Darmstadt, in part to Prussia. The products of this district are wheat, barley, oats, and flax. In the hilly tracks are mines of iron. The chief manufacture is linen. Population 36,000.

SOLNA, **SILEIN**, or **ZILINA**, a small town of Hungary, on the Waag; 120 miles north-by-west of Buda.

SOLNITZ, a town of Bohemia; 80 miles east of Prague, Population 1100.

SOLO, *s.* [Italian.] A tune played by a single instrument; an air sung by a single voice.—There is not a labourer or handicraftman that, in the cool of the evening, does not relieve himself with *solos* and *sonatas!* *Tatler.*

SOLO, in Italian Music, used substantively, implies a composition for a single instrument, with a quiet and subdued accompaniment, to display the talents of a great performer; as a solo for a violin, German flute, or violoncello. In full pieces, *concertate*, each part is informed when it becomes principal, by the word *solo*; and when subordinate, by *tutti*, which implies the chorus, or full band.

SOLO, or **SAURA-CORTA**, an inland town of Java, the capital of a district and residence of an emperor; this is a very large and populous town, intersected with broad and shaded avenues or streets, running at right angles. The Crattan, where the emperor resides with his court, is very spacious, and comprises several palaces in its area. The other chiefs and nobility live in villas, surrounded by high walls, interspersed through the town and neighbourhood. The European town and fort are very neat; the latter, which is not above 800 yards from the Crattan, contained a British garrison, when the island of Java was in possession of this country. Close to the fort is the resident's house, which is a large and very handsome building. The emperor has not a very shewy or populous court: his troops, though numerous are mostly of a motley description: he has but one regiment of mounted carabineers in his service which make any tolerable appearance. A fine river which flows near this town, and passing through the dominions of the sultan and emperor, falls into the harbour of Gressie, affords in the rainy season a ready conveyance for the various productions of a large track of country, in exchange for commodities which are sent up in boats from the coast.

SOLOFRA, a town of Naples, in the Principato Ultra, with 6100 inhabitants. It has several manufactures on a small scale; among others, leather, parchment, and gold and silver plate.

SOLOLA, province of Guatemala, in Spanish America, in the interior of the country. It is mostly inhabited by Indians, living in missions and villages. It is bounded on the north by the provinces of Quesaltenango and Totonicapan, south by the sea, west by the province of Suchitepeque, and east by the valley of Guatemala. It is of limited extent, but fertile in excellent wheat. The capital is of the same name. It is large, and contains, according to Alcedo, 4700 Indians.

SOLOMBO, GREAT, a small island in the Eastern seas. Lat. 5. 36. S. long. 114. 45. E. It is of a moderate height.

SOLOMBO, LITTLE, a small island a little to the north-east of Great Solombo.

SOLOMIAC, a town in the south of France, in the department of the Gers, on the river Gimone, with 800 inhabitants.

SOLOMON'S FORK, a branch of the river Kanzas, which falls into the Missouri.

Vol. XXIII. No. 1574.

SOLOMON'S ISLANDS, a group in the South Pacific ocean, situated chiefly between Lat. 5. and 12. S. long. 155. and 160. E. but neither their precise site nor number seem completely ascertained. The largest are Ysabel, Guadalcanar, San Cristoval, and an island called New Georgia by lieutenant Shorland. Probably Bougainville's islands on the west, belong to this group. The Spaniards affirm that Ysabel and Guadalcanar are very large islands: the extent of the former is uncertain; that of the latter is probably near 70 miles; Georgia is still larger; and San Cristoval is not less than 60. Great variety of vegetables grow on these islands; and the wild boar is common in the woods. Prodigious numbers of birds are also seen, as loories, cockatoes, and aquatic fowl of all kinds. Snakes are among the animals of the Solomon islands: ants of great size, and many uncommon insects. The inhabitants are apparently of different races, some being perfectly black, others copper coloured. The former have woolly hair, very soft to the touch: the nose is not so flat, nor are the lips so thick as in negroes. Those who are copper coloured have black hair; and most of them cut their hair short around the crown, powdering both it and their eye-brows with lime. The men tattoo their bodies, or paint a white line over the eye brows, from one temple to the other, and it appears that this latter ornament is used by the women also. The ears are pierced; and the hole, in which rings of different kinds are inserted, is dilated to a great size; and an ornament is likewise wore in the septum of the nose, and others about different parts of the body. Both sexes go entirely naked, except a scanty girdle around the waist. Their arms are the bow and arrow, spears and clubs; and in defence they use shields of wicker-work. From the mode in which the arrows are pointed with a fish bone, they are rendered exceedingly dangerous. Their canoes are skilfully and neatly constructed of pieces joined together, unlike those of most savage nations: the head and stern are very high, and in general ornamented with pieces of mother of pearl. One of the larger measured 56 feet long, by 3½ feet broad. It is affirmed that voyages of 10 or 12 days' duration are made in these vessels. These people are said to be in a state of constant warfare, which is not improbable, considering the vicinity of other islands; but nothing is known with certainty of their government, religion, or customs. They have conducted themselves treacherously towards European navigators, and seem to be averse to visits by them in their territories, and view them with much distrust. It appears that Alvaro de Mendina discovered these islands in 1567, at which time it is affirmed the natives were cannibals. The islands were computed at eighteen in number, and some of them of large size. Scarcely any remembrance of them was preserved, until M. de Surville's voyage in 1767, who had an unfortunate encounter with them, which terminated in his entrapping a young islander into his possession, and carrying him off. They were called by him the Land of Arsacides. They have been recognized, but not completely surveyed, by later navigators.

SOLOMON'S LOAF, *s.* A plant.

SOLOMON'S SEAL, *s.* [*polygonatum*. Lat.] A plant.

SOLOMON'S TOWN, an Indian settlement of the United States, in Ohio, near the head of the great Miami; 17 miles south of Fort M'Arthur.

SOLON, the Grecian lawgiver. See GREECE.

SOLON, a township of the United States, in Somerset county, Maine, on the Kennebeck. Population 312.—2d. Of Courtland county, New York; 132 miles west of Albany. Population 12k0.

SOLOON, a small island in the Eastern seas, 25 miles from the island of Samar. Lat. 10. 55. N. long. 125. 42. E.

SOLOR, an island in the Eastern seas, situated to the south of the island of Celebes, about 70 miles in circumference, separated from the east coast of the island of Flores, by a narrow channel called the Straits of Flores. Lat. 1. 33. S. long. 123. 17. E.

SOLOS, [Σολος, Gr.] in Antiquity, an instrument with which the exercise of the quoit was performed.

SOLOTSCHEV, a town of European Russia, in the government of Slobodsk Ukrain, on the river Uda, with two churches. Population 4800.

SLOTWINA, a small town of Austrian Poland, circle of Stanislawow, on the Bistriza.

SLOVETZKOI, an island in the White Sea, belonging to the government of Archangel, in European Russia. It has a very large monastery, to which the superstitious Russians are in the habit of making pilgrimages. Lat. 64. 55. N. long. 30. 14. E.

SOLPORT, a township of England, in Cumberland; 8 miles from Carlisle.

SOLRE LE CHATEAU, a town in French Flanders, with 1600 inhabitants. It has manufactures of lace and leather; also some traffic in linen; 7 miles south-east of Maubeuge.

SOLSOGAN BAY, a bay on the south coast of the island of Lucon. Lat. 13. 12. N. long. 123. 50. E.

SOLSONA, or **SALSONA**, a town of the east of Spain, in Catalonia. It is fortified, is a bishop's see, has 3000 inhabitants, and some hardware manufactures; but it is ill built; 51 miles north-north-west of Barcelona.

SOLSTICE, *s.* [*solstice*, Fr., *solstitium*, Lat.] The point beyond which the sun does not go; the tropical point; the point at which the day is longest in Summer, or shortest in Winter.—It is taken of itself commonly for the Summer solstice.

Let the plowmen's prayer
Be for moist *solstices*, and Winter's fair.

May.

SOLSTITIAL, *adj.* [*solsticial*, Fr., from *solstice*.] Belonging to the solstice.—Observing the dog-days ten days before and after the equinoctial and *solstitial* points, by this observation alone, are exempted a hundred days. *Brown*.—Happening at the solstice, or at Midsummer.

From the North to call
Decrepit Winter; from the south to bring
Solstitial Summer's heat.

Milton.

SOLTA, a small island in the Adriatic, on the coast of Austrian Dalmatia.

SOLTAU, a town of Germany, in Hanover, duchy of Luenbng. Population 900; 26 miles north-north-west of Zell.

SOLTCAMP, a town and fort of the Netherlands in the province of Groningen; 13 miles north-west of Groningen.

SOLTH, a small town of Hungary; 47 miles south of Pest, inhabited by Hungarians of the Calvinist faith.

SOLTHOLM, a small island of Denmark, in the Sound, between Zealand and Schonen, near Amak.

SOLVABLE, *adj.* [*solvable*, Fr. Cotgrave.] Possible to be cleared by inquiry or reason; capable of being paid. The latter is the French meaning. *Solvable* seems a more correct spelling than *solvable*, so *resolvable*.—For *solvable* and colourable we might say solvent and apparent. *Tooke*.

SOLVATH, a small harbour or cove in Pembrokeshire, Wales, near St. David's.

SOLUBLE, *adj.* [*solubilis*, Lat.] Capable of dissolution or separation of parts.—Sugar is a *sal oleosum*, being *soluble* in water and fusible in fire. *Arbuthnot*.—Producing laxity; relaxing.

SOLUBILITY, *s.* Susceptiveness of separation of parts.—This cannot account for the indissoluble coherence of some bodies, and the fragility and *solubility* of others. *Glanville*.

SOLUE, a small sea-port of Barca, in Northern Africa; 10 miles south-west of Curen.

To **SOLVE**, *v. a.* [*solvo*, Latin.] To clear; to explain; to untie an intellectual knot.

He would *solve* high dispute
With conjugal caresses.

Milton.

SOLVENCY, *s.* Ability to pay.—They see the debtor prescribing at the point of the bayonet the medium of his *solvency* to the creditor. *Burke*.

SOLVENT, *adj.* [*solvens*, Lat.] Having the power to cause dissolution.—When dissolved in water, it is not by the eye distinguishable from the *solvent* body, and appears as fluid. *Boyle*.—Able to pay debts contracted.

SOLVER, *s.* Whoever or whatever explains or clears.

SOLVIBLE, *adj.* Possible to be cleared by reason or inquiry.—Intellective memory I call an act of the intellective faculty, because it is wrought by it, though I do not inquire how or where, because it is not *solvable*. *Hale*.

SOL'UND-GOOSE, **SOLAND-GOOSE**, *s.* [Scotch.] A fowl.—A *solund-goose* is in bigness and feather very like a tame goose, but his bill longer, and somewhat pointed; his wings also much longer, being two yards over. *Grew*.

SOLUTION, *s.* [*solution*, Fr. *solutio*, Lat.] Disruption; breach; disjunction; separation.—In all bodies there is an appetite of union, and evitiation of *solution* of continuity. *Bacon*.—Matter dissolved; that which contains any thing dissolved.—Aretæus, to procure sleep, recommends a *solution* of opium in water to foment the forehead. *Arbuthnot*.—Resolution of a doubt; removal of an intellectual difficulty.

Something yet of doubt remains,
Which only thy *solution* can resolve.

Milton.

This will instruct you to give a plainer *solution* of any difficulties that may attend the theme, and refute objections. *Watts*.—Release: deliverance; discharge.—A deliverance out of any state or power is called *solution*. *Barrow*.

SOL'UTIVE, *adj.* [*solutif*, Fr. Cotgrave; from *solvo*, Lat.] Laxative; causing relaxation.—Though it would not be so abstersive, opening, and *solutive* as mead, yet it will be more lenitive in sharp diseases. *Bacon*.

SOLVYTSCHEGODSK, a town of European Russia, on the Dwina. Population 2000; 250 miles east-by north of Voloda.

SOLWAY FRITH, or **BOONESS WATH**, a navigable arm of the sea, which extends eastward from the Irish sea, forming the boundary between England and Scotland for upwards of 50 miles. The shore, particularly on the Scottish coast, is flat and sandy, with a few sunk rocks; but almost every part affords safe landing-places for small vessels. The frith is navigable for vessels of 100 tons burden within six miles of its extremity; but the sea is gradually retiring from the land, so that many places are now covered with verdure, over which, even in the memory of those alive, the tide was wont to flow. Spring tides rise 20 feet, and ordinary tides about 10 or 12. A number of rivers pour into this arm of the sea on the Scottish side, where it receives the Dee, the Urr, the Nith, the Annan, and the Kirtle; while the Sark, the Esk, and the Liddel, united, form its eastern extremity. It contains various kinds of fish, especially salmon, which are here caught in great numbers by various methods. Great quantities of herrings are taken and cured in some seasons. The navigation of the Solway frith is, however, greatly impeded of late years by the number of sand-banks, which have greatly increased on the Scottish side, so that at Boulness, 10 miles from its eastern extremity, it is fordable at low water, and not more than two miles over at high water. However, it has two channels, one for the Eden, and another for the Esk, in which vessels navigate to Sandsfield, Sarkfoot, &c.

SOLWAY MOSS, an extensive morass in Scotland, near the river Esk, at the head of the Solway frith, which, when the rivers were swollen with rain, burst out on the 13th November 1771, and covered a great extent of the neighbouring country. Near this the Scots were defeated by a small party of the English in 1542.

SOLYMANIA, called also **SHEHR ZOUR**, a town of the territory of Kurdistan, but included within the nominal limits of the pachalic of Bagdad. It is the residence of Solyman, pacha of Kerdistan, a distinguished warrior, who in 1810, at the instigation of the Porte, took arms against his master, the pacha of Bagdad, whom he defeated and put to death. He rebuilt Shehr Zour, which had fallen into decay, and gave it his own name. It is situated in a delightful country, close

to

to the foot of Mount Zagros, and contains about 6000 inhabitants; 54 miles east of Kerkook.

SOMA, a small river of the Caraccas, in the province of Cumana, which enters the Cuyuni by the north side.

SOMALPET, a town of Hindostan, province of Berar, district of Nandere, belonging to the Nizam. Lat. 19. 49. N. long. 78. E.

SOMASCA, a small town of Austrian Italy; 9 miles north-west of Bergamo.

SOMA'TICAL, or SOMA'TIC, *adj.* [*σωματικός*, Gr.] Corporeal; belonging to the body. *Scott.*

SOMATIST, *s.* [from *σωμα*, Gr. the body.] One who denies all spiritual substances. *Unused.*

SOMATOLOGY, *s.* [*σωμα* and *λογία*, Gr.] The doctrine of bodies.

SOMAULIES, or SAMAULIES, a people of Africa, inhabiting the territory that extends westwards from Cape Guardiafui, opposite to the southern coast of Arabia. By Mr. Bruce and others they have been represented as a savage race, with whom it would be dangerous to have any connection; but Lord Valentia and Mr. Salt found them a peacable and inoffensive, as well as industrious and commercial race. This last quality is proved by the extent of their inland trade, their great fairs, and extensive export trade carried on in their own vessels. They have a kind of navigation act, by which they exclude the Arab vessels from their ports, and bring the produce of their country either to Aden or Mocha, in small vessels called dows. These commodities are of considerable value, as their country is the most productive in the world in gums, myrrh, and frankincense; and the fame of Arabia for these valuable aromatics is derived entirely from its being the channel by which they are conveyed to other parts of the world. In their persons, the Somaulies are neither negroes nor Arabs. Their noses are not flat, though their hair is woolly, drawn out into points in every direction. They are finely limbed, with a very dark skin, and beautifully white teeth. The expression of their countenance is neither fierce nor unpleasing. The principal place in their country is Berbera, which is the seat of a great annual fair, and from whence their caravans penetrate deep into the interior of Africa.

SOMBAR, a village of Irak, in Persia; 114 miles south-west of Hamadan.

SOMBERNON, a town of France, in Burgundy. In the neighbourhood are mines of coal. Population 800; 16 miles west of Dijon.

SOMBORNE, KING'S, a parish of England, in Southamptonshire; 3 miles south-by-west of Stockbridge. Population 849.

SOMBORNE, LITTLE, a hamlet in the above county, about a mile distant from King's Somborne.

SOM'BRE, or SOMBROUS, *adj.* [*sombre*, Fr.] Dark; gloomy.

In Hagley you were seen
With bloodshed eyes and *sombre* mien.

Grainger.

A *sombrous* rankness of expression. *Warburton.*

SOMBREF, a village of the Netherlands, in the province of Namur, with 1000 inhabitants; 10 miles north-west of Namur.

SOMBRERE CHANNEL, a channel between the Nicobar islands. Lat. 7. 32. to 7. 50. N. long. 94. E.

SOMBRERETE, a small town of Mexico, in the intendancy of Zacatecas, and about 80 miles north-west of Zacatecas. It is in the centre of the mining district, and was formerly one of the richest stations in the whole province.

SOMBRERO, a river of Benin, in Western Africa, which falls into the sea, about 20 miles to the westward of the river of New Calabar. Lat. 4. 40. N. long. 5. 52. E.

SOMBRERO, a rock in the sea of Mindoro. Lat. 10. 45. N. long. 121. 27. E.

SOMBRERO, a small island in the West Indies, about 3 miles long, and as many broad, entirely desert. It was on this island that the unfortunate seaman Jeffery was so inhu-

manly left by order of his captain, for the offence of having tapped a barrel of beer when the water of his Britannic majesty's brig ran short, and the crew were put on allowance. After eight days suffering from thirst and hunger, supporting life by a few limpets that he picked up on the shore, and a little rain water he found in the crevices of the rocks, he was providentially delivered from his distressing situation by the schooner Adam, of Marble Head, John Dennis, which touched at the isle, took him off, and landed him in the county of Essex. Sombrero is in lat. 18. 37. 40. N. long. 63. 28. 30. W.

SOMBRERO, a settlement of the Caraccas, in the province of Venezuela. Population 2182 Spaniards, Indians, mulattoes, &c.—There is another settlement of the same name in the same province, and on the shore of the river Guarico.

SOMBRERO, a river of South America, in the province Buenos Ayres, which runs west, and enters the Plata near the city of Corrientes.

SOME. A termination of many adjectives, which denote quality or property of any thing. It is generally joined with a substantive: as *gamesome*. [*saam*, Dutch.]

SOME, *adj.* [from *sum*, Saxon; *sums*, Gothic; *sum*, Germ. *som*, Danish; *som*, *sommig*, Dutch.] More or less, noting an indeterminate quantity.—We landed some hundred men, where we found *some* fresh water. *Raleigh.*—More or fewer, noting an indeterminate number.—First go with me *some* few of you, and see the place and how it may be made convenient for you; and then send for your sick. *Bacon.*—Certain persons. *Some* is often used absolutely for some people; part.

Some to the shores do fly,

Some to the woods, or whither fear advis'd;
But running from, all to destruction hie.

Daniel.

Some is opposed to *some*, or to *others*.—It may be that the queen's treasure, in so great occasions of disbursements, is not always so ready; but being paid as it is, now *some*, and then *some*, it is no great impoverishment to her coffers. *Spenser.*—It is added to a number, to show that the number is uncertain and conjectural.—Being encountered with a strong storm *some* eight leagues to the westward of Sicily, I held it the office of a commander to make a port. *Raleigh.*—One; any without determining which.—The pilot of *some* small nightfounder'd skiff. *Milton.*

SOMEBODY, *s.* One; not nobody; a person indiscriminate and undetermined.—Jesus said, *Somebody* hath touched me; for I perceive that virtue is gone out of me. *St. Luke.*—O that Sir John were come, he would make this a bloody day to *somebody*. *Shakspeare.*—A person of consideration.—Theudas rose up, boasting himself to be *somebody*. *Acts.*

SOMEBODY KNOWS WHAT, a name given to the extremity of the arm of Dusky bay, which Captain Cook called Nobody Knows What. This name was given by Captain Vancouver, who examined and found two inlets, or at least a large branch, divided by a ridge of land in its whole length.

SOMEDEAL, *adv.* [*sumdeal*, Saxon.] In some degree. *Obsolete.*

Silker now I see thou speak'st of spite.

All for thou lackest *some* their delight.

Spenser.

SOMEGILL, a small river of Wales, in Radnorshire, which runs into the Lug, a little below Presteign.

SOMEHOW, *adv.* One way or other; I know not how.—The vesicular cells may be for receiving the arterial and nervous juices, that by their action upon one another they may be swelled *somehow*, so as to shorten the length of every fibril. *Cheyne.*

SOMERBY, a parish of England, in Leicestershire; 6 miles south-by-east of Melton Mowbray.

SOMERBY, a parish of England, in Lincolnshire; 4½ miles south-east of Grantham.—Also a parish in the same county, 4 miles east of Glandford Bridge.

SOMERCOATS, NORTH and SOUTH, two adjoining parishes

parishes of England, in Lincolnshire; about 10 miles north-east of Louth. Population of the first 623, of the latter 290.

SOMEREN, an inland town of the Netherlands, in North Brabant, with 2500 inhabitants; 12 miles east-south-east of Eindhoven.

SOMERFORD, a village of England, in Staffordshire, situated on the Penk.

SOMERFORD, GREAT and LITTLE, two adjoining parishes of England, in Wiltshire, about 4 miles south-east of Malmesbury.

SOMERFORD BOOTH, a hamlet of England in Cheshire, near Congleton.

SOMERFORD KEYNES, a parish of England, in Wiltshire; $5\frac{1}{2}$ miles west-by-north of Crickdale.

SOMERIDER, a cape on the north-west part of the island of Minorca, in the Mediterranean.

SOMERLEYTON, a parish of England, in Suffolk; $4\frac{1}{2}$ miles north-west of Lowestoft.

SOMERS (John, Lord), a distinguished lawyer and statesman, born at Worcester, in 1652, was the son of a respectable attorney of that city. He received his early education at the public school of his native city; and, at a proper age, he was entered a gentleman-commoner of Trinity College, Oxford. He quitted the university without a degree, but he had attained a good taste for polite literature, and being destined by his father for the legal profession, he spent some time as a clerk to Sir Francis Winnington, an eminent lawyer, after which he removed to the Middle Temple. When called to the bar, he displayed those talents which ensured his arriving at professional distinction; at the same time, though extremely diligent in his legal studies, he did not abandon his classical pursuits, but translated the history of the life of Alcibiades, and Ovid's Epistle of Ariadne to Theseus.

He was an ardent friend of liberty, and in the latter part of the reign of Charles II., he wrote some political tracts; which, though they appeared without his name, were ascertained to be from his pen.

A piece entitled "The Security of Englishmen's Lives; or the Trust, Power and Duty of the Grand Juries of England, explained according to the Fundamentals of the English Government," was attributed to him by Mr. Walpole, and is thought to be the same with one alluded to by Bishop Burnet, written in consequence of the grand juries' return of *ignoramus* to the bill against Lord Shaftesbury. He was moreover the reputed author of "A brief History of the Succession of the Crown of England, collected out of the Records," the object of which was to prove the right of parliament to regulate the descent of the crown, with the view of supporting the intended exclusion of the Duke of York, on account of his religion. In 1681 he took part in publishing "A just and modest Vindication of the Proceedings of the two last Parliaments," originally written by Algernon Sidney, but new-modelled by him. He was counsel, in 1683, for the Sheriffs of London, and for other persons who were prosecuted for a riot in the city at the Election of Sheriffs. After the accession of James II., he continued the firm opposer of the arbitrary measures of the court, and obtained great credit as one of the counsel for the seven bishops. He most heartily concurred in the event of the revolution; and was one of the confidential advisers of the measure for bringing over the Prince of Orange. He sat as representative of his native city in the convention-parliament, and was appointed one of the managers for the House of Commons, in the conference held with the Lords concerning the word *abdicate*, and his acute and sensible observations on the subject were greatly admired. In 1689 he was knighted, and made Solicitor-General, and while he held that high post, delivered a spirited and reasonable speech in favour of the act of convention for recognizing William and Mary, the legality of which had been called in question by a member of the House of Commons. In 1692, the office of Attorney-General was conferred upon him, and in the following year that of Lord-Keeper of the great Seal.

When advanced to the bench, his behaviour was that of an able and upright Magistrate, whose love of justice was tempered with singular mildness and condescension. At the same time he was in the highest credit with the sovereign, and he made use of his influence to serve persons of merit. He was a patron to Mr. Addison, and obtained for him an allowance to enable him to make that tour in Italy, of which he has printed an account. In 1695 he was advanced to the Lord Chancellorship of England, and was raised to the peerage by the title of Lord Somers, Baron Evesham. At the same time he obtained certain grants from the crown, a circumstance which has drawn upon him some censure; though, without this addition, his advancement to the peerage would have been a punishment instead of reward, inasmuch as it would have been impossible for him to have maintained his rank in the peerage.

Lord Somers was now regarded as the head of the Whigs, and it was his aim to moderate the heat and jealousy of that party, and conciliate to it both the king and nation; hence it has been averred that he was too compliant in some points to the royal pleasure; which, however, did not prevent his being made a sacrifice when the Tories came into power. His acquiescence in the first partition treaty in 1699, with other ministerial measures, produced great complaints against him in parliament, and an address was moved in the House of Commons, praying the king that Lord Somers might for ever be removed from his Majesty's presence and council. This motion was, however, defeated by a large majority; but the king, soon after, to quiet the discontents, desired him voluntarily to resign his seals. This he refused; and he was accordingly dismissed from his office. In 1701 the House of Commons sent up to the Lords an impeachment of Lord Somers, which, however, was dismissed by the peers, and the prosecution was not resumed. Very shortly after this the king died, and the new reign not being favourable to the principles of Lord Somers, he spent his time in literary retirement, and during this period of leisure he was elected president of the Royal Society. He was not, however, inattentive to public concerns, and vigorously opposed the bill brought into parliament by the high church party, to prevent occasional conformity. In 1706 he drew up a plan for effecting an union between England and Scotland, which was so much approved, that Queen Anne nominated him one of the managers for carrying that measure into execution. He is also said to have had a considerable share in the bill of regency, by which the Protestant succession to the crown was extended and secured. Upon a change of ministry in 1708, Lord Somers was nominated to the post of president of the council, from which he was dismissed in 1710; and though he continued for some time to take an active part in the business of the House of Peers, it was not very long before a decline in the state of his health and faculties rendered him unfit for public business. He died in 1716, at the age of 64. The memory of Lord Somers is still held in high veneration by the friends of constitutional liberty; to the establishment of which, by means of the revolution and Protestant succession, no individual contributed more than he. His abilities were very considerable, his manners highly ingratiating, and, notwithstanding the opposition which he had occasionally to encounter, few statesmen have passed through life with a purer character. He made a large collection of scarce and curious pamphlets, of which there has been published a selection in four parts, each consisting of four volumes 4to. His collection of original papers and letters was unfortunately destroyed by a fire, which happened in the chambers of the Hon. Charles Yorke, on the 27th of Jan. 1752. *Biog. Brit.*

SOMERSAULT, or SOMERSET, *s.* [*somerset* is the corruption: *soprasalto*, *sopra* and *salto*, Ital.] A leap by which a jumper throws himself from a height, and turns over his head.

He could doe
The vaulter's sombersalts.

Donne.

As when some boy, trying the *somersault*,
Stands on his head and feet, as he did lie
To kick against earth's spangled canopy.

Browne.

I will only make him break his neck in doing a *sommer-*
set. Beaum. and Fl.

SOMERSBY, a parish of England, in Lincolnshire; 6 miles north-west of Spilsby.

SOMERSET, a maritime county of England, bounded on the north-west by the Bristol channel; on the north by Gloucestershire and the county and city of Bristol; on the east and south-east by Wiltshire and Dorsetshire; and on the south and west by Devonshire. Its figure is irregular, somewhat resembling a crescent, with its concavity towards the Bristol channel, and its northern horn cut off by the county of Gloucester. It may also be viewed as an oblong, stretching from Bristol south-westwards to Devonshire, with a smaller additional portion or narrow neck projecting westwards along the Bristol channel, and terminating in the Exmoor forest. From Bristol to the north-western border, beyond Taunton, the length is 40 miles, and the average breadth 30 miles; from Taunton to Exmoor the length is 30 miles, and the average breadth 10 miles; and from Exmoor to Bath, the extreme length of the county is 70 miles. The sea-coast along the channel is very irregular, projecting in some places into rocky promontories, and in others forming fine bays, with flat and level shores. From Start point northwards, the coast is flat, and composed of vast sandbanks, which serve to keep off the inundations of the sea. Somersetshire lies within the parallels of 50. 49. and 51. 30. N. lat. and between the meridians of 2. 15. and 3. 50. W. long. It contains 1549 square miles, or 990,000 acres, with 200 inhabitants to each square mile. It is divided into 43 hundreds, 7 liberties, and 482 parishes; and contains two cities, Bath and Wells, and part also of Bristol; five boroughs, Bridgewater, Ilchester, Milborne Port, Minehead, and Taunton; and 27 other market towns, viz., Axbridge, Bruton, Milverton, Castle Cary, Chard, Crewkerne, Dulverton, Dunster, Frome Selwood, Glastonbury, Ilminster, Keynsham, Langport, North Cary, Pensford, South Pether-ton, Porlock, Stogumber, Shepton Mallet, Somerton, Stowey, Watchet, Wellington, Wincanton, Wiveliscomb, Wrington, and Yeovil. It sends 16 members to Parliament, two for each of the cities and boroughs.

Few districts of the kingdom present greater diversities of surface than Somersetshire. It possesses every gradation from the lofty mountain and barren moor, to the rich and highly cultivated vale, and thence descending to the unimproved and unimprovable marsh and fen. From Taunton in the south-western part of the county, to the coast, extends northwards a range of high hills, called the Quantock hills, which slope on the east very gently towards Bridgewater and the river Parret, but descend rapidly on the west, into a cultivated vale of some extent. Westwards of this vale, and only terminating in the wild district of Exmoor forest, the county is entirely mountainous and hilly. It is divided into various ranges, running from east to west, and from which numerous lateral branches are detached. Between these occur steep valleys called here Combes, which form, when richly wooded, some of the most striking features of the beautiful scenery for which this coast is celebrated. The most conspicuous of these ranges of hills are Dunkery Beacon, Brendon hill, Croydon hill, Grubbist hill, and North hill. From the town of Frome, again, on the north-east, another remarkable chain of hills, called the Mendip hills, stretch westwards to Axbridge and the coast; and between the Quantock and the Mendip hills lies a vast tract of low vale, and in many parts marsh land, extending from the coast

VOL. XXIII. No. 1575.

nearly to the south-western borders of the county, and terminating in a range of high ground, which runs from Frome south-westwards, and with a bending line by Bruton, Yeovil, and Crewkerne, to Chard, and from Chard northwards to Taunton. Along the slope and skirts of the hills, this low land is dry and well cultivated, but from thence towards the coast it forms a vast and wide spreading district of water flooded lands, known by the name of the Marshes; in the middle of which, and separating them into two great divisions, rises boldly to view a range of high ground, called the Polden hills and Ham hill, which stretch from Langport and Somerton westwards, to the mouth of the Parret. From the Mendip hills, near the city of Wells, a track of high ground runs north-eastwards towards Bath, and on the east of this the land is again comparatively low level, except on the south of Bristol, where a range of downs extends southwards towards Wrington, and of which Broadfield Down and Dundry Down are the chief. The following heights have been measured in the trigonometrical survey:—Dunkery Beacon, in Exmoor, and the highest land in the county, or almost in the west of England, 1668 feet; Bradley Knoll, 973 feet; Lansdown hill, near Bath, 813 feet; Dundry Beacon, 700 feet; Ash Beacon, 655 feet; Dundun Beacon, 360 feet. The highest point of Quantock hills is elevated 1270 feet, and Grubbist hill 906 feet. The names of several other more detached hills are Leigh Down, near Bristol; White Down, near Chard; and black Down, on the borders of Devonshire. The rivers of Somersetshire rise chiefly in these high grounds within the county, and are none of them of any great magnitude except the Avon, which rises in Wiltshire, and divides the county from Gloucestershire. The principal others are the Parret, the Brue, and the Ax. Somersetshire, as might be expected from so favourable a climate and soil, stands high in reputation for its agricultural and rural produce. The plains are remarkable for their luxuriant herbage, which furnishes not only a sufficiency for its own consumption, but also a considerable surplus for other markets. London, Bristol, Salisbury, and other parts of the kingdom, are annually supplied with fat oxen, sheep, and hogs, together with many other articles in great abundance. Nor are the hills by any means deficient in their arable productions. But grazing and the dairy form the great objects of the husbandry of this district; grain not being raised to such an extent as to supply its own consumption, so that vast quantities are imported from the adjacent counties of Wilts and Dorset. The oxen of this county are scarcely inferior in size to those of Lincolnshire; and the grain of the flesh is thought finer. The best goose feathers for beds come from the marshes here. Much cheese is made in the lower parts of the county; and that of the Cheddar district is said to exceed any in the kingdom. According to Mr. Billingsley, the extent of the various descriptions of land in the county is—

	Acres.
Towns, roads, and rivers	20,500
Woods and plantations	20,000
Meadows and pasture land inclosed	584,500
Marsh and fen land uninclosed	30,000
Arable and convertible land inclosed	260,000
Common fields	20,000
Uncultivated wastes	65,000

Since the above account, however, was drawn up, no less than 30,000 or 40,000 acres of marsh and fen land, and of common fields, have been divided, drained and inclosed.

In the district of the county north of the Mendip hills grass land greatly preponderates over arable, and if not chilled by too much moisture, it may boast almost a perpetual verdure. On the rich marsh land here, along the Bristol channel, the grazing system entirely prevails: in the vicinity of Bristol and Bath, the scythe is in constant use; at a greater distance, nothing almost is seen but the milking pail; and to whichever of these purposes it is devoted, the land yields abundantly. Towards the coast, however, and along the

4 T

river

river Yeo, vast tracks are exposed to the inundations of the sea, and the injurious effects of land floods and stagnant waters; an evil which might be greatly remedied by the judicious application of drains and sluices. The high lands in this district are either devoted to sheep pasture, or inclosed and cultivated. Wood is raised of excellent quality near Keynsham; much garden produce is raised for the supply of Bristol and Bath; and the whole district abounds with orchards. Besides the ordinary stock, hogs are fattened in vast numbers. Farms are not large, seldom exceeding 200*l.* a-year of rent: there are many proprietors having from 2000*l.* to 6000*l.* a-year; but most of the land is possessed by the middling class, holding from 50*l.* to 500*l.* per annum. The district is but partially wooded, and systematic plantation is little studied. On the northern side of the Mendip hills are some good coppices, which have a very romantic and picturesque appearance. In the eastern part of the district are also some large and productive woods, which form a great ornament to the county, as well as a source of profit to the proprietors, from the demands of the coal-works. The ancient forest of Selwood, on the verge of which stands the town of Frome, appears to have comprised a woody vale of 20,000 acres, most of which are now arable and pasture land. The middle district of the county between the Mendip and Quantock hills, comprises an extent of between 300,000 and 400,000 acres. The lands here on the borders of Wilts and Dorset are high, and partake of the soil and management of these counties; sheep walks and corn constituting the principal branches of husbandry. The farms are large, and the corn produced is of good quality, and finds a ready sale at Wincanton, Bruton, and other markets. Lower down the county, about Alepton, Bruton, Castle Cary, Ilchester, Somerton, Langport, Petherton, and Ilminster, the land is exceedingly fertile, both in corn and pasture, abounds with good orchards and fine luxuriant meadows, and is altogether as well cultivated and as productive as most parts of the kingdom. The vale of Ilchester, for extent and richness combined, is scarcely to be equalled in the island. In some parts flax and hemp are produced in great abundance, which, together with wool, furnish the raw materials for extensive manufactures. Westward of this track, and still descending towards the coasts, lies the great range of marsh lands, which the Polden and Ham hills, stretching westwards to the coast, separate into two great divisions, viz. Brent marsh on the north, and Bridgewater, South marsh, or Parret marshes, on the south. Polden and Ham hills are mostly disposed in common fields, and under this system scarcely admit of much improvement. Brent marsh extends from Polden hill, northwards to Mendip hills, and from Wells and Glastonbury, westwards to the coast. Vast improvements have been made in this marsh, by draining and embanking; so that many thousand acres formerly overflowed for months together, are now become fine grazing and dairy lands. The South or Parret marshes, which comprise no less than 100 square miles, or 64,000 acres, lie between the Polden hills and the foot of the Quantock hills on the one hand, and between Ham hill and Taunton, and the coast, on the other. Great improvements have been also effected here by extensive drainages, more especially in the track called King Sedge Moor, where an immense cut, 15 feet deep, 10 feet wide at the bottom, and 55 feet at the top, was carried a distance of 2½ miles. Great tracks of marsh land, however, on the rivers Tone and Yeo, remain unimproved, to the amount perhaps of 10,000 acres, independent of many thousand acres of low flooded inclosed lands. The low lands in this middle district are badly wooded, and planting much neglected. In the western division of the county, westward of the Quantock hills, the finest and most cultivated district is the vale of Taunton Dean, through which flows the river Tone. Here the climate is peculiarly mild and serene, and the soil highly fertile and productive. The eye is relieved by a judicious mixture of arable land with the pasture. Excepting the intervening valleys, which have a good soil, and are well

cultivated, the other part of this division of the county, consisting of hills and forests, are mostly in a state of nature, and used for the pasture of sheep. The great forest of Exmoor, which extends 8 miles from north to south, and 10 or 12 from east to west, contains now scarcely a tree or bush, except a small track in the centre, which has been inclosed as an estate. The minerals of Somersetshire constitute an important article of its produce. The great mining district is the Mendip hills, which afford lead, calamine, and coal, the latter of which is also found in great abundance, and in various parts to the north of these hills. The lead is said to be of a harder quality than that of other countries, and is mostly exported for making bullets and shot. The calamine is carried in great quantities to Bristol and other places, to be used in the making of brass. Copper, manganese, bole, and red ochre, are also found in these hills. The most considerable collieries are in the northern part of the district, in the parishes of High Littleton, Timsbury, Paulton, Radstock, &c. The coal field here includes 19 seams, varying in thickness from 10 inches to upwards of 3 feet, and dipping 9 inches in the yard. The workings are now in many places upwards of 80 fathoms deep, and by the aid of machinery, may be carried still deeper. The coal is of excellent quality, pure and durable in burning, firm, large, and of a strong grain. The principal market is Bath, the western parts of Wiltshire, and the adjacent parts of the county itself. The quantity raised is from 1500 to 2000 tons weekly. A canal has been formed to connect these collieries with the rivers Kennet and Avon. The southern collieries, next the Mendip hills, are on a more limited scale; from 800 to 1000 tons are raised weekly; and a canal has also been formed to the Avon. Besides these minerals, limestone, of which there are extensive quarries in the Quantock hills, paving stone, tiling stone, freestone, marl, and fuller's earth, are found in different parts of the county. The whole of the mountainous county west of the Quantock hills, is composed of a series of rocks, differing in mineralogical characters, but passing insensibly into each other, and connecting, on the whole, into one common formation of what has been termed greywacke. A great proportion of them have the structure of sandstone of different grains. They have all an internal stratified structure, which varies and becomes more sensible with the fineness of the grain, and at last assumes the appearance of clay slate. In many places great beds of limestone full of madreporas, are contained in the slate, and in these, copper in the state of sulphuret and of malachite, and veins of hematite, are frequently found, and nests of copper ore, of considerable magnitude, have been sometimes found. The manufactures of Somersetshire, which are considerable, consist chiefly in articles of clothing. At Frome and Shepton Mallet there are some manufactures of woollen cloth and knit stockings, and of narrow cloth at Ilminster, Chard, Crewkerne, &c. In the middle district of the county are many manufactures of coarse linen, such as dowlas, tick, &c.; also gloves, girtweb, &c. The woollen manufactures are also carried on at Taunton and Wellington. The trade of Somersetshire consists in the exportation of its various kinds of produce, and the importation of commodities for its domestic consumption. Several canals have been formed to facilitate its intercourse with the adjacent districts. The Dorset and Somerset canal, commencing near Nettlebridge, extends to Frome, and thence to Dorsetshire. The Ilchester canal joins Ilchester with the Parret, and the Grand Western canal opens a direct communication with the English channel, proceeding from Taunton and by Wellington, through Devonshire, to Exmouth.

Among the Britons, Somersetshire was inhabited by the Belgæ; the Romans annexed it to the province of Britannia Prima, and during the Saxon Heptarchy, it belonged to the kingdom of the West Saxons. During the civil wars of Charles I., various skirmishes were fought here between the royal and parliamentary armies, and a general engagement at Lansdown; and this was the principal theatre of the duke of

of Monmouth's rebellion, and of the cruelties subsequently committed by Jeffries and others. Population returns:—

Houses.....	54,787
Inhabitants.....	303,180

Other families.....	11,739

SOMERSET, a county of the United States, in Maine, bounded east by Penobscot county, south by Kennebeck county, and west by Oxford. Population 12,910. Chief town, Norridgewock.

SOMERSET, a county of the United States, in New Jersey, bounded north by Morris county, east by Essex and Middlesex counties, south-east by Middlesex county, and west by Hunterdon county. Population 14,728. Chief towns, Boundbrook and Somerset.

SOMERSET, a county of the United States, on the south side of Pennsylvania, bounded north by Cambria county, east by Bedford county, south by Maryland and west by Fayette and Westmoreland counties. Population 11,284.

SOMERSET, a county of the United States, in Maryland, bounded north by Delaware, east by Worcester county, south by Pocomoke-bay, west by the Chesapeake, and north-west by Dorchester county. Population 17,195, including 6975 slaves. Chief town, Princess Anne.

SOMERSET, a borough and post town of the United States, and capital of Somerset county, Pennsylvania. It is remarkable as being the most eastern town of any consequence in West Pennsylvania, and, except Hamilton, in the Ohio valley. It is the seat of justice for Somerset county, and stands near the head streams of both the Youghiogheny and Conemaugh rivers, but upon those of the latter. This town stands upon the south road from Pittsburg to Bedford and contains about 100 dwelling-houses, many of them elegant, and about 500 inhabitants. The mountain valley in which this town is situated, is the abode of health, and pure, though often keen air. Population of the township, 1548; 35 miles west of Bedford, and 61 east-south-east of Pittsburg.

SOMERSET, a township of the United States, in Windham county, Vermont, Population 199.—2d. Of Bristol county, Massachusetts; 42 miles south of Boston. Population 1192.—3d. Of Somerset county, New Jersey, on the Millstone; 72 miles north-east of Philadelphia.—4th. A township of Washington county, Pennsylvania. Population 1500.

SOMERSET, a post town of the United States, and capital of Perry county, Ohio. It has an elevated situation, and contained in 1817, about 70 houses.

SOMERSET, a township of Lower Canada, in the county of Buckingham.

SOMERSET, a post town of the United States, and capital of Pulaski county, Kentucky. It is situated in a fertile country, and contained in 1817 about 70 houses.

SOMERSET, a river of the United States, in Maine, which joins the Kennebeck at Alna.

SOMERSET FORGE, a post town of the United States, in Somerset county, Pennsylvania.

SOMERSHAM, a parish of England, in Southamptonshire, where there is a fine medicinal spring; 5½ miles north-east of St. Ives.

SOMERSHAM, a parish of England, in Suffolk; 6 miles north-west of Ipswich.

SOMERSWORTH, a township of the United States, in Strafford county, New Hampshire; 15 miles north-north-west of Portsmouth. Population 878.

SOMERTON, a market town and borough of England, in the county of Somerset. It is situated in the centre of the county, on a rising ground on a branch of the river Parret. It is a place of great antiquity, and is said to have originally given name to the county. The town now consists principally of five streets, containing nearly 300 houses. The church is an ancient building, consisting of a nave, chancel and side aisles. At the south end of it is an octangular em-

battled tower 63 feet high. Near the church is an excellent free school, and a well endowed alms-house for eight poor women. In the centre of the town is a hall for holding the petty sessions; and here is also one of the county jails, the other being at Ilchester. Somerton is governed by a bailiff and constables, chosen annually by the inhabitants. It is supposed to have been a Roman citadel, but there is no authentic account of it previous to the heptarchy, when it appears to have been a town of considerable extent, and strongly fortified. It was at one time a royal residence, Ina, and several other West Saxon kings, holding their courts here. In the year 877 it was plundered and laid waste by the Danes under Inguar and Ubba. John, king of France, was confined in the castle here, after his removal from that of Hertford; and other prisoners of high rank and consideration were committed to it. In the time of Leland, this castle was converted into a prison. The town was walled round by the West Saxons, and part of the walls and a round tower still remain. Population of the parish in 1811, 1478, and 338 houses. Market on Tuesday; 13 miles south-by-west of Wells, and 123 west-by-south of London. Lat. 51. 4. N. long. 2. 42.

SOMERTON, a parish of England, in Oxfordshire; 3½ miles south-east of Deddington.

SOMERTON, a parish of England, in Suffolk; 5 miles north-east of Clare.

SOMERTON, WEST, a parish of England, in Norfolk; 6 miles north-north west of Caistor.

SOMERTON, EAST, a hamlet in the above county; 6 miles north-by-west of Caistor.

SOMERVILLE (William), son of Robert Somerville, was born at his father's house, at Edston, in Warwickshire. He was educated at Winchester school, from which he was elected to New College, Oxford. Here he made a good proficiency in classical literature, and cultivated a talent for poetry. His first piece, as far as is known to the public, was an ode to the duke of Marlborough, on his dismissal from his posts in 1710. He was strongly attached to the Whig party; and when Addison purchased an estate in Warwickshire, Somerville addressed a poem to him.

Mr. Somerville inherited a considerable paternal estate, on which he chiefly lived, acting as a magistrate, and pursuing with vigour the amusements of a sportsman, varied by the studies of a man of letters. He was courteous and hospitable, but too much addicted to conviviality, and careless of economy. His mode of living threw him into embarrassments, which so preyed on his mind, that for the sake of relief, he fell into habits that shortened his life.

Somerville is chiefly known, as a poet, by his piece entitled "The Chace," which is written in blank verse, and which maintains a high rank in the didactic and descriptive class. It has the advantage of being composed by one who was perfectly acquainted with the sports which are its subject, and who entered into them with all the enthusiasm which they are calculated to inspire; hence his pictures, in exactness and animation, greatly excel the draughts of the same kind, attempted by poets by profession. Its language is free and nervous, and its versification generally denotes a nice and practised ear.

SOMERVILLE, a post township of the United States, in Fauquier county, Virginia.

SOMETHING, *s.* [jumðing, Saxon.] A thing existing, though it appears not what; a thing or matter indeterminate.

When fierce Bavar

Did from afar the British chief behold,
Betwixt despair and rage, and hope and pain,
Something within his warring bosom roll'd.

Prior.

More or less; not nothing. *Something* yet of doubt remains. *Milton*.—A thing wanting a fixed denomination. *Something* between a cottage and a cell—
Yet virtue here could sleep, and peace could dwell. *Hart.*

Part.—*Something* of it arises from our infant state. *Watts*.—Distance not great.—I will acquaint you with the perfect spy o' the time: for't must be done to-night, and *something* from the palace. *Shakspeare*.

SOMETHING,

SOMETHING, *adv.* In some degree.—The pain went away upon it; but he was *something* discouraged by a new pain falling some days after upon his elbow, on the other side. *Temple.*

SOMETIME, *adv.* Once; formerly.

What art thou that usurp'st this time of night,
Together with that fair and warlike form,
In which the majesty of buried Denmark
Did *sometime* march? *Shakspeare.*

At one time or other hereafter.

SOMETIMES, *adv.* Not never; now and then; at one time or other.—It is good that we *sometimes* be contradicted, and that we always bear it well; for perfect peace cannot be had in this world. *Bp. Taylor.*—At one time: opposed to *sometimes*, or to *another time.*—He writes not always of a piece, but *sometimes* mixes trivial things with those of greater moment: *sometimes* also, though not often, he runs riot, and knows not when he has said enough. *Dryden.*

SOMEWHAT, *s.* Something; not nothing, though it be uncertain what.

Upon the sea *somewhat* methought did rise,
Like blueish mists. *Dryden.*

More or less.—These salts have *somewhat* of a nitrous taste, but mixt with a smatch of vitriolic. *Grew.*—Part greater or less.—*Somewhat* of his good sense will suffer in this transfusion, and much of the beauty of his thoughts will be lost. *Dryden.*

SOMEWHAT, *adv.* In some degree.—Holding of the breath doth help *somewhat* to cease the hiccough. *Bacon.*

SOMEWHERE, *adv.* In one place or other; not nowhere.—Compressing two prisms hard together, that their sides, which by chance were a very little convex, might *somewhere* touch one another, I found the place in which they touched to become absolutely transparent, as if they had there been one continued piece of glass. *Newton.*

SOMEWHILE, *s.* [Sax. *rom-hpyle.*] Once; for a time. *Out of use.*

Though under colour of the shepherds *somewhile*,
There crept in wolves full of fraud and guile,
That often devoured their own sheep,
And after the shepherd that did 'em keep. *Spenser.*

SOMINO, a village of Bambarra, in Central Africa, situated on the Niger; 80 miles north-west of Yamina.

SOMLYO, a small town of Transylvania, and the chief place of the county of Kraszna; 42 miles north-west of Clausenburg.

SOMMA, a small town of Austrian Italy, in the Milanese, near where the Ticino issues from the Lago Maggiore; 25 miles north-west of Milan.

SOMMA, a town of Italy, situated at the foot of Vesuvius. It has a castle, and contains 6800 inhabitants. Wine of good quality is made in the neighbourhood; 12 miles east of Naples.

SOMMA, MONTE, a mountain of Italy, in the Ecclesiastical State, two miles from Spoleto. The mountain, which is about 5000 feet in height, is fertile, and shaded with olives and forest trees.

SOMMARIVA DEL BOSCO, a town of Italy, in Piedmont, province of Alba, near the Naviglio. Population 5100; 5 miles south east of Carmagnola.

SOMMARIVA DI PERNO, a small town of Piedmont, near Sommariva del Bosco.

SOMME, a river of France, which rises in the department of the Aisne; 6 miles north-east of St. Quentin. It has a westward course of about 120 miles in length, and falls into the English channel between Crotoy and St. Vallery. It is navigable to Bray; 10 miles above Amiens, and passes both that town and Abbeville.

SOMME, a department in the north of France, comprising the western part of Picardy, and bounded on the west by the English channel, on the north by the department of the Pas de Calais. Its area is about 2380 square miles; its population 495,000, of whom a small proportion

are Protestants. This is, on the whole, one of the best of the French departments. The coast is low and sandy, but the interior consists of a fertile loam, generally level, except towards the east, where the prolongation of a part of the Ardennes produces considerable elevations, and the corn culture gives place to plantations and pasture. Throughout the rest, tillage and the breeding of cattle are followed up on the plan adopted in Flanders; and stall feeding, which is little known, even in Normandy, is practised on a large scale. The raising of green crops is also favoured by the climate, which is as moist, and as subject to sudden variations as in Britain. Besides corn, pasturage, fruit and vegetables, a large quantity of coleseed and oleaginous grains, are raised, as well as flax and hemp. The manufactures are numerous, comprising woollens, coarse and fine linens, lawns, cambrics, soap, leather and hardware. This department is divided into the five arrondissements of Amiens (the capital), Abbeville, Douvens, Peronne and Montdidier.

SOMMEANY, the principal sea-port of Lus, in the eastern part of the Persian province of Mekran. It is situated on an elevated bank at the mouth of the river Pooralee, which forms a bar about a mile from the town, of three fathoms deep at low water, and boats can anchor close to the shore. The place is inconsiderable, and the inhabitants, with the exception of a few Hindoo merchants, live chiefly by fishing. Fresh water is procured by digging in the sand; and it is necessary that the well be immediately filled up; for if suffered to remain open, the water becomes salt.

SOMMEE, a town of Hindostan, province of Gujerat, district of Werrear, belonging to the nabob of Radumpore. It is large, and inclosed with a wall, situated on an extensive plain, abounding with antelopes, but in the rainy season is frequently under water. Latitude not ascertained.

SOMMELSDYK, a town of the Netherlands, in South Holland, on the island of Overflakee, with 1600 inhabitants: 20 miles south-east of Rotterdam.

SOMERDA, a town of Prussian Saxony, in the government of Erfurt, near the Unstrut, with 1900 inhabitants; 15 miles north-north-west of Weimar.

SOMMEREIN, or **SZAMARJA**, a town of Hungary, in the isle of Schutt. Population 2700; 11 miles south-east of Presburg. Lat. 48. 1. 30. N. long. 17. 17. 15. E.

SOMMERFELD, a town of the Prussian states, in Lower Lusatia, on the Leipa. Population 1800; 84 miles south-east of Berlin.

SOMMERGEM, or **SOMERGHEN**, a town of the Netherlands, in the province of East Flanders. Population 6400. It has manufactures of lace; 8 miles north-west of Ghent.

SOMMERHAUSEN, a town of Germany, in Bavarian Franconia. Population 1000; 4 miles south of Wurzburg. **SOMMERING**, a lofty mountain of Germany, which separates Styria from Lower Austria. Height 5000 feet.

SOMMEVOIR, a town of France, department of the Upper Marne, on the river Lavivoir, with 1200 inhabitants; 9 miles south-west of Vassy.

SOMMIERES, a town of France, in the department of the Gard, on the Vidourle. Population 3400. It has some woollen manufactures; 22 miles south of Potiers.

SOMNAMBULISM, in Medicine, from *somnus*, sleep, and *ambulo*, I walk; sometimes also called *noctambulism*, or *night-walking*. See **PATHOLOGY**.

SOMNAMBULIST, *s.* [*somnus* and *ambulo*, Lat.] One who walks in his sleep.—The *somnambulist* directs himself with unerring certainty through the most intricate windings and over the most dangerous precipices; and, without any apparent assistance from the organs of sense, has been known to read, write and compose. *Bp. Porteus.*

SOMNER, *s.* [See **SUMMONER**.] One who cites or summons.—We are desirous to redress such abuses and aggressions as are said to grow by *somners* or apparitors. *Const. and Canon's Eccles.*

SOMNER (William), an able antiquary, was born at Canterbury, in the year 1606. He received a good com-

non education, after which he was taken as clerk by his father, who was registrar of the court of Canterbury. He was afterwards promoted by archbishop Laud to an office in the ecclesiastical court of that diocese, which naturally engaged him in the study of national antiquities. To pursue this to advantage, he applied with great diligence to the Saxon tongue, and having made himself master of that language, he drew up copious notes, and a glossary, to Sir Roger Twisden's publication of the laws of Henry I. The antiquities of his own county engaged his particular attention, and he composed "A Treatise of the Roman Posts and Forts in Kent," left by himself in MS. but which was printed at Oxford in 1693; and "A Treatise on Gavel-kind," completed in 1647, and published in 1660. He also wrote "A Discourse of Portus Iccius," which was afterwards translated into Latin by bishop Gibson, and published with some other tracts. Having studied all the kindred dialects to the Saxon, he wrote observations on some old German words, collected by Lipsius, which were published by Meric Casaubon, and he drew up the Glossary annexed to the ten writers of English history, published by Twisden. This glossary being a key to reclude and antiquated words, improved whatever of this nature had been done before. It is, indeed, a work of that extent as may serve as a key to all other historians, and to all records: "nevertheless," says the writer of the life in the Biographia Britannica, "it might be greatly improved from our author's subsequent collections, which remain in the archives of Canterbury; from Junius's "Etymologicum Anglicanum;" and from Dr. Wilkin's Glossary, at the end of his edition of the Saxon laws. Mr. Somner assisted Dugdale in compiling the "Monasticon." In 1659 he published a Saxon dictionary, in folio, which has been styled the true and lasting monument of his praise; a work of incredible labour to himself, and of singular benefit to the world. The previous assistance of the like kind which came into Mr. Somner's hands, were—1. Ælfric's Glossary, transcribed by Fr. Junius, from a very ancient copy in the library of Sir Peter Paul Rubens, of Brussels; 2. The two ancient glossaries in the Cotton library; 3. Nowell's Saxon Vocabulary; 4. Joceline's Collections. From these and some other Saxon books then extant, Mr. Somner made immense collections, in two large volumes, for the compiling his dictionary. When it was finished, he sent it to Oxford, where it was printed, and it came out in the year already mentioned. During the composition of this dictionary, he was chiefly supported by the salary settled on the Saxon lecture, founded by Sir Henry Spelman. Somner being a zealous royalist, he was arrested and imprisoned on account of the Kentish petition for a free parliament, in the same year that his dictionary was published; but was liberated on the restoration, and promoted to the mastership of St. John's Hospital, in Canterbury. He died in 1669, and his books and manuscripts were purchased by the dean and chapter of Canterbury, and deposited in the cathedral library. *Biog. Brit.*

SOMNIFEROUS, *adj.* [*somnifere*, Fr., *somnifer*, Lat.] Causing sleep; procuring sleep; soporiferous; dormitive.—They ascribe all this redundant melancholy to *somniferous* potions. *Burton.*

SOMNIFIC, *adj.* [*somnus* and *facio*, Lat.] Causing sleep.

SOMNOLENCE, or **SOMNOLENCY**, *s.* [*somnolentia*, Lat.] Sleepiness; inclination to sleep. *Cockeram.*—I no *somnolence* have used. *Gower.*

SOMNOLENT, *adj.* [*somnolentus*, Lat.] Sleepy; drowsy. *Bullokar* and *Cockeram.*

SOMONDOCO, a settlement of South America, in New Granada, and in the province of Tunja. Population 200 housekeepers and 100 Indians; 29 miles south-east of Tunja, and 61 north-east of Santa Fe.

SOMORROSTRO, a small town of Spain, in the province of Biscay. In the neighbourhood is an iron mine, one of the oldest and most productive in the world: 40,000 tons of iron are annually shipped here for the surrounding provinces, besides what is used in the iron works in the

neighbourhood. Arms, great and small, are made at these works, and among others, cannon for export; 13 miles north-west of Bilboa.

SOMOS, or **DRINOW**, a small town in the north-east of Hungary, on the river Torissa; 9 miles south of Eperies.

SOMOSIERRA, a small town of Spain, on the borders of New and Old Castile. An action took place here between the French and Spaniards, in 1808, in which the latter were defeated, and the road was thus laid open to the capital; 52 miles north of Madrid.

SOMPRES, a town of Hindostan, province of Cashmere, situated on the Jhyllum river. Lat. 34. 17. N. long. 73. 35. E.

SOMPTING, a parish of England, in Sussex; 1½ mile north-by-east of Worthing. Population 441.

SON, *s.* [*sunus*, Gothic; *juna*, Sax.; *sohn*, German; *son*, Swedish; *soone*, Dutch; *syn*, Sclavonian. A male born of one or begotten by one; correlative to father or mother.—She had a *son* for her cradle, ere she had a husband for her bed. *Shakspeare.*—Descendant, however distant; as the *sons* of Adam.—I am the *son* of the wise, the *son* of ancient kings. *Isa.*—Compellation of an old to a young man, or of a confessor to his penitent.

Be plain good *son*, and homely in thy drift;
Riddling confession finds but riddling shrift. *Shakspeare.*

Native of a country.

Britain then

Sees arts her savage *sons* controul.

Pope.

The second person of the Trinity.—If thou be the *Son* of God, come down. *St. Matt.*—Product of any thing.

Earth's tall *sons*, the cedar, oak and pine,
Their parents undecaying strength declare. *Blackmore.*

In scripture, *sons* of pride and *sons* of light, denoting some quality. 'Tis a Hebraism.

This new favourite

Of heaven, this mass of clay, *son* of despite. *Milton.*

SON-IN-LAW, *s.* One married to one's daughter.

A foreign *son-in-law* shall come from far,
Whose race shall bear aloft the Latin name. *Dryden.*

SONATA, *s.* [Ital.] A tune.—He whistled a Scotch tune, and an Italian *sonata*. *Addison.*

Could Pedro, think you, make no trial

Of a *sonata* on his viol,

Unless he had the total gut,

Whence every string at first was cut? *Prior.*

SONATA [Ital. from *suonare*, to sound, or play on an instrument.] Its use at present, in Music, is confined to solos for a single instrument: as Corelli's solos for the violin, Martini's solos for the German flute.

SONCHUS [*Σογγος* of Theophrastus and Dioscorides], in Botany, a genus of the class syngenesia, order polygamia, æqualis, natural order of compositæ, semiflosculosæ, cichoraceæ (*Juss.*)—Generic Character. Calyx: common imbricate, ventricose: scales very many, linear, unequal. Corolla: compound imbricate, uniform. Corollets hermaphrodite, numerous, equal. Proper one petalled, ligulate, linear, truncate, five-toothed. Stamina: filaments five, capillary, very short. Anther cylindrical, tubular. Pistil: germ subovate. Style filiform, length of the stamens. Stigmas two, reflexed. Pericarp none. Calyx converging into a depressed acuminate globe. Seeds solitary, oblong. Down capillary, sessile. Receptacle naked.—*Essential Character.* Calyx imbricate, ventricose. Down hairy. Receptacle naked.

1. *Sonchus maritimus*, or sea sow thistle.—Peduncle naked; leaves lanceolate, embracing, undivided, sharply toothed, backwards. Sometimes the stem has only one or two flowers.—Native of the South of Europe, and of Barbary, in sandy wet places.

2. *Sonchus cæruleus*, or blue sow thistle.—Peduncles and calyxes hispid and racemed; leaves sublyrate, terminating

lobe deltoid and very large. Root perennial, fleshy, branched in tufts. Stems upright, three feet high, simple, leafy. Raceme terminating, solitary upright, hispid with red glandular viscid hairs. Bractes linear. Calyx hispid, red. Corolla blue-purple, twice as long as the calyx. Anthers red. Seeds compressed. Seed-down rugged, not feathered.—Native of Canada and the European Alps. Found on the borders of corn fields about Willington and Howden-Pans in Northumberland.

3. *Sonchus palustris*, or marsh sow-thistle.—Peduncles and calyxes hispid, subumbelled; leaves runcinate, sagittate at the base, rugged at the edge.—Native of Germany, Flanders, France, Italy, Hungary, Denmark and England.

4. *Sonchus arvensis*, or corn sow-thistle.—Peduncles and calyxes hispid, subumbelled; leaves runcinate, toothletted, cordate at the base, root creeping.

5. *Sonchus oleraceus*, or common sow-thistle.—Peduncles tomentose; calyxes even; leaves runcinate, toothed.—This has six varieties. Root annual, fusiform, whitish, milky. There are also in this genus, *Sonchus agrestis*, *tenerrimus*, *plumieri*, *alpinus*, *fruticosus*, *pinnatus*, *radicatus*, *floridanus*, *sibiricus*, *tataricus*, *tuberosus*, *quercifolius*, *angustifolius* and *chondrilloides*.

Propagation and Culture.—Many of these are weeds and therefore not to be planted in gardens, but extirpated continually, not only in the garden itself, but in all the parts near it; their winged seeds being wafted to a considerable distance.

The foreign sorts may be propagated by seeds; and those which are shrubby, by cuttings also.

SONCINO, a town of Austrian Italy, in the duchy of Milan, in the Cremonese, on the Oglio, containing 3900 inhabitants. In 1705, it was taken by prince Eugene, but retaken soon after by the Duke de Vendome; 20 miles north of Cremona.

SONDERBORG, a town of Denmark, in the island of Alsen, on the coast of Sleswick. It has a good harbour, with a brisk trade. Population 2700; 21 miles west-south-west of Faaborg.

SONDERSHAUSEN, a town of Upper Saxony, and the chief place of the principality of Schwarzburg-Sondershausen. It stands on the Wipper, and contains 3100 inhabitants. It has a castle, with a collection of natural curiosities, in which is a bronze image of the Vandal deity Pustich. On an eminence outside of the town, is the prince's palace, with its magnificent gardens; about half a mile thence is a sulphureous spring, called the Gunthersbad; 27 miles north of Erfurt. Lat. 51. 22. 33. N. long. 10. 45. 21. E.

SONDOR, an Indian settlement of Peru, in the province of Piura, on the north shore of the river Huancabamba. Lat. 5. S.

SONDRE GRUNC, or BOTTOMLESS, an island in the South Pacific Ocean, discovered by La Maire and Schouten in 1616, about 20 leagues in circumference, long, but not broad. It appeared covered with trees, among which were palmetoes and cocoa-nut trees. No anchoring ground could be met with. The inhabitants were naked, except a piece of mat round the middle, of a yellowish or reddish brown colour, and black hair; their skin marked with many figures. They were thieves, and exceedingly covetous of iron. Lat. 15. S. long. 148. W.

SONDRIO, a town of Austrian Italy, the capital of a province of the same name, consisting of the *ci-devant* Valteline, and containing a population of 81,000. The town stands on the small river Muller. Population 3500; 16 miles south-east of Chiavenna.

SONEGUERO, a town of Spanish America, in the province of Honduras; 32 miles north of St. Jorge de Olancho. Lat. 15. 5. N. long. 86. 5. W.

SONEHUT, a town of Hindostan, province of Gundwannah, and capital of the Corair rajah, one of the numerous mountain chiefs who are tributary to the Nagpore Mahrattas. It is an extensive place, and has a strong mud fort or citadel. Lat. 23. 33. N. long. 82. 33. E.

SONEPOUR, a town of Hindostan, province of Orissa,

situated on the west bank of the Mahanuddy, at its junction with the Taile river. It belongs to the rajah of Nagpore. Lat. 20. 47. N. long. 83. 30. E.

SONG, *s.* [ʒɒŋ, re-jun-ŋen, Sax.] Any thing modulated in the utterance.—Noise other than the sound of dance and *song*. *Milton*.

He first thinks fit no sonnetter advance

His censure farther than the *song* or dance.

Dryden.

A poem to be modulated by the voice; a ballad.

Pardon, goddess of the night,

Those that slew thy virgin knight;

For the which, with *songs* of woe,

Round about this tomb they go!

Shakspeare.

A poem; lay; strain.

The bard that first adorn'd our native tongue,

Tun'd to his British lyre this ancient *song*.

Dryden.

Poetry; poesy.—This subject for heroic *song* pleas'd me. *Milton*.

Names memorable long,

If there be force in virtue or in *song*.

Pope.

Notes of birds.

The lark, the messenger of day,

Saluted in her *song* the morning grey.

Dryden.

An old *SONG*. A trifle.—I do not intend to be thus put off with an *old song*. *More*.

SONG, a small village of Bambarra, in Central Africa, on the Niger; 65 miles west of Sego.

SONG, a town of China, of the third rank, in Honan.

SONGARI, a river of Chinese Tartary, which falls into the Amour or Saghalien, with a town of the same name upon it.

SONGEONS, a town of France, department of the Oise, on the river Therain. Here are manufactured mirrors, lenses, and other optical glasses. Population 1000; 12 miles north-west of Beauvais.

SONGHUR, a town of Hindostan, province of Gujerat, district of Wankaneer. It is situated in a very wild and uncultivated country, but has in its vicinity a very ancient temple, dedicated to the sun, and ornamented with a variety of Hindoo sculptures. There are also two other temples, one of which contains the figure of Bhovane standing on a tortoise. The whole is called Suraje Dewul, but there is no record by whom the temples were built. Latitude not ascertained.

SONGI, a small river which falls into the Chinese sea, on the eastern coast of Malacca. Lat. 2. 10. N.

SONGI TANJANG, a town on the west coast of the island of Sumatra. Lat. 2. 35. N. long. 97. 10. E.

SONGISH, *adj.* Containing songs; consisting of songs. A *low word*.—The *songish* part must abound in the softness and variety of numbers, its intention being to please the hearing. *Dryden*.

SONGKI, a town of China, of the third rank, in Fokien.

SONGKIANG, a city of China, of the first rank, in the province of Kiangnan, situated on the great canal. The stream is here intersected by other rivers and canals, by means of which barks approach it in every direction. It is thus enabled to carry on a considerable trade, particularly in calicoes and other cotton cloths, which they dye with peculiar skill. It has four large cities under its jurisdiction; 560 miles south of Peking. Lat. 31. N. long. 120. 44. E.

SONG-MEN-CHAN, a small island near the coast of China, in the province of Tchekiang. Lat. 31. N. long. 121. 21. E.

SONGOA, an island in the straits of Malacca, about 50 miles in circumference. Lat. 2. 18. N. long. 100. 30. E.

SONGOO, a small island in the Indian sea, near the eastern coast of Africa. Lat. 7. 20. S.

SONG SONG, a small island in the Indian sea, near the eastern coast of Africa. Lat. 8. 12. S.

SONGSTER, *s.* A singer. Used of human singers, it is a word

a word of slight contempt.—The pretty *songsters* of the Spring with their various notes did seem to welcome him as he passed. *Howell*.

SONGSTRESS, *s.* A female singer.

Through the soft silence of the listening night,
The sober-suited *songstress* trills her lay. *Thomson*.

SONG-TCHOUI, a town of China, of the third rank, in Houquang.

SONG-TSI, a town of China, of the third rank, in Houquang.

SONG-YANG, a town of China, of the third rank, in Tchekiang.

SONHO, the name given by the Portuguese to the province of Congo, in Africa, situated on the southern bank of the Zayre, bounded on the west by the Atlantic, and reaching southward to the river Ambriz. It is described by them as governed by a count or earl, subject to the general sovereignty of Congo, and represented as populous and well cultivated. The chief town is said to be on a creek, on the south side of the Zayre, and to contain 400 houses. The late English expedition appears to have heard nothing of this name, and found the country almost uncultivated, with only a few scattered villages.

SON-HOIT, a port of Chinese Tartary, in the country of the Mongols. Lat. 42. 48. N. long. 114. 27. E.

SONIFEROUS, *adj.* [*sonus*, and *fero*, Lat.] Giving or bringing sound.—This will appear, let the subject matter of sounds be what it will; either the atmosphere, or the ethereal part thereof, or *soniferous* particles of bodies. *Derham*.

SONNA, a book, or collection of the Mahometan traditions, or of the sayings and actions of their prophet, which all the orthodox Mussulmen are required to believe. This is a kind of supplement to the Koran, directing the observance of several things omitted in that book, and in sense, as well as design, corresponding to the Mishna of the Jews.

The word signifies, in Arabic, the same with *mishna* in the Hebrew, that is, *second law*; or, as the Jews call it, *oral law*.

The adherents to the Sonna are called *Sonnites*, or *Traditionaries*; and as, among the Jews, there is a sect of Caraites, who reject the traditions as fables invented by the rabbins; there are also sectaries among the Mahometans, called *Schiites*, [see that article] who reject the traditions of the Somnites, as being founded on the authority of an apocryphal book, and not derived to them from their legislator.

There is the same enmity between the Somnites and Schiites, as between the rabbinist Jews and the Caraites. The Schiites reproach the Somnites with obtruding the dreams of their doctors for the word of God; and the Somnites, in their turn treat the Schiites as heretics, who refuse to admit the divine precepts, and who have corrupted the Koran, &c.

SONNEBURG, a town of the Prussian states, in the New Mark of Brandenburg; 11 miles east-south-east of Custrin. Population 1700.

SONNENBERG, a town of Germany, in the principality of Saxe-Meinungen. It contains 1900 inhabitants, who manufacture a number of miscellaneous articles, such as mirror frames, wooden wares, whet stones, slates for writing, &c.; 12 miles north-north-east of Coburg, and 40 south of Weimar.

SONNENBERG, a small town of the west of Germany, in the duchy of Nassau; 2 miles north-east of Wisbaden.

SONNENBERG, a town in the west of Bohemia; 58 miles west-north-west of Prague. Population 900.

SONNERATIA [so named by the younger Linnæus, in memory of Mons Sonnerat, who travelled into New Guinea, the East Indies and China, and communicated many new plants to the botanists in Europe], in Botany, a genus of the class icosandria, order monogynia, natural order of hesperideæ, myrti (*Juss.*)—Generic Character. Calyx: perianth one-leafed, bell-shaped, flat, six-cleft, permanent: segments ovate. Corolla: petals six, awl-shaped, spreading, inserted into the base of the calyx, and scarcely longer than

it. Stamina: filaments very many, filiform, inserted into the base of the calyx, long. Anthers globular. Pistil: germ superior, globular. Style filiform. Stigma simple. Pericarp: berry placed upon the permanent patulous calyx, subglobular, acuminate, smooth, with a bladdery pulp, many-celled. Seeds, some in each cell.—*Essential Character.* Calyx six-cleft. Petals six, lanceolate. Berry many-celled, with several seeds in each cell.

Sonneratia acida.—This is a tree. The leaves are opposite, subsessile, oblong, quite entire, like those of Hypericum. Flowers terminating, solitary, large. Petals red. Fruit resembling that of Mesembryanthemum, with an acid bladdery juice.—Native of the Molucca islands, and the bogs of New Guinea; also of Cochiu-china, on the banks of rivers.

SON'NET, *s.* [*sonnet*, Fr.; *sonnetto*, Ital.] A short poem consisting of fourteen lines, of which the rhymes are adjusted by a particular rule. The sonnet owes its origin to the poets of Italy.—A small poem.

Let us into the city presently,
To sort some gentlemen well skill'd in music;
I have a *sonnet* that will serve the turn. *Shakspeare*.

To SON'NET, *v. n.* To compose sonnets. *Not in use*.

Nor lady's wanton love, nor wandering knight,
Legend I out in rhimes all richly dight;—
Nor list I *sonnet* of my mistress' face,
To paint some blowesse with a borrowed grace. *Bp. Hall*.

SONNETTE'ER, SO'NNETER, SO'NNETIST, or SO'NNETWRITER, *s.* [*sonnetier*, Fr.] A small poet in contempt.—Assist me, some extemporal god of rhyme; for I am sure I shall turn *sonneter*. *Shakspeare*.

The prophet of the heavenly lyre,
Great Solomon sings in the heavenly quire,
And is become a new-found *sonnetist*! *Bp. Hall*.

There are as many kinds of gardening as of poetry: your makers of parterres and flower-gardens are epigrammatists and *sonnetteers* in his art. *Spectator*.—A suite of tales was published by George Whetstone, a *sonnet-writer* of some rank, and one of the most passionate among us to bewail the perplexities of love. *Warton*.

SONNEWALD, a town of the Prussian states, province of Brandenburg. Population 800; 42 miles north of Dved.

SONNING, or SUNNING-UPON-THAMES, a parish of England, in Berkshire; 3½ miles north-east of Reading. Population 1534.

SONNINO, a small town of Italy, in the States of the Church, in the Campagua di Roma; 6 miles north of Terracina.

SONNO, a town of Niphon, in Japan; 18 miles north-east of Iwatata.

SONO, a river of Brazil, which runs north-north-west, and enters the Paratinga, just before it joins the Toccantides.

SONOKI, a village of Mingrelia; 45 miles south-east of Anarghia.

SONORA, an intendancy or province of Mexico, which is very thinly peopled, and extends along the gulf of California, for more than 280 leagues from the great bay of Bayona, or the Rio del Rosaria, to the mouth of the Rio Colorado. The breadth of the intendancy is by no means uniform. From the tropic of Cancer to the 27th degree, the breadth scarcely extends 50 leagues; but farther north, towards the Rio Gila, it increases so considerably, that on the parallel of Arispe, it is more than 128 leagues.

The intendancy of Sonora comprehends an extent of hilly country, of greater surface than the half of France; but its absolute population is not equal to the fourth of the worst peopled department of that empire. The intendant, who resides in the town of Arispe, has the charge of several provinces, which have retained the particular names they had before their union. The intendancy of Sonora comprehends the three provinces of Cinaloa, Ostimury, and Sonora proper. The first extends from the Rio del Rosaria to the Rio del Fuerto; the second from the Rio del Fuerto to the Rio del Mayo;

Mayo; and the province of Sonora includes all the northern extremity of the intendency.

The intendency of Sonora is bounded on the west by the sea, on the south by the intendency of Guadalupe, and on the east by a very uncultivated part of New Biscay. Its northern limits are very uncertain. The villages de la Pimeria Alta are separated from the banks of the Rio Gila, by a region inhabited by independent Indians, of which neither the soldiers stationed on the military fort in that quarter, nor the monks of the neighbouring missions, have been hitherto able to make any conquest.

The three most considerable rivers of Sonora are Culiacan Mayo, and Yaqui or Sonora. The most northern part of the intendency bears the name of Pimeria, from a numerous tribe of Pimas Indians who inhabit it; and in all the ravines, and even the plains of the hilly country; the precious metals are found. Pieces of pure gold, of the weight from 5 to 8 lbs. have sometimes been discovered. They are however, by no means diligently sought after on account of the frequent incursions of the independent Indians, and especially on account of the high price of provisions, which must be brought from a great distance, in this uncultivated country. Farther north, on the Rio de la Ascension, live a very warlike race of Indians.

No permanent communication has hitherto been established between Sonora, New Mexico, and New California, although the court of Madrid has frequently given orders for the formation of military posts and missions between the Rio Gila and the Rio Colorado. Two courageous and enterprising monks, however, were able to go across the continent by land, through the countries inhabited by independent Indians, from the missions of Le Pimeria Alta to Monterey, and even to the Port of San Francisco. After a journey of eleven days, they arrived at a vast and beautiful plain, one league's distance from the southern bank of the Rio Gila. They then discovered the ruins of an ancient Mexican city, in the midst of which is the singular edifice called La Casa Grande. These ruins occupy a space of ground of more than a square league. Casa Grande is exactly laid down according to the four cardinal points, having from north to south 445 feet in length, and from east to west, 276 feet in breadth. It is constructed of clay. The walls are three feet eleven inches in thickness; and it is plain that the edifice had three stories and a terrace. The stair was on the outside, and probably of wood. There were five apartments, of which each is about 27 by 10 feet, and in height 11½ feet. A wall, surmounted by large towers, surrounds the principal edifice, and appears to have defended it. The vestiges of an artificial canal, which brought the water of the Rio Gila to the town, were also visible; and the whole surrounding plain is also covered with broken earthen pitchers and pots, prettily painted in white, red, and blue.

The Indians who live in the plains adjoining the Casa Grande of the Rio Gila, have never had the smallest communication with the inhabitants of Sonora, although they are by no means their inferiors in civilization. In point of social habits, they form a singular contrast with the savages who wander along the banks of the Missouri, and other parts of Canada. The two missionary fathers already mentioned, when they penetrated to the south of Rio Gila, found the Indians there assembled to the number of 2000 or 3000, in villages, where they peaceably cultivate the soil.

In the province of Sonora there are reckoned one city, Arispe; two towns, Sonora and Hostemuri; 46 villages, 15 parishes, 43 missions' 20 farms, and 25 cottages. In 1793, the number of tributary Indians in the province of Sonora, amounted only to 251, while in the province of Cinaloa, they amounted to 1851. This last province was more anciently peopled than the former. In the intendency of Sonora there are 121,000 inhabitants. The extent of its surface is 19,143 square leagues; and there are six inhabitants to each.

SONORA, a town of Mexico, in the intendency of Sonora; 35 miles south of Arispe. Its population amounts to 6400. It trades with New Mexico and New Biscay, for the productions of those provinces; and with Old Mexico,

both by land and sea, through the gulph of California. It is celebrated for cheese, horses, and sheep.

SONORIFIC, *adj.* [*sonorus* and *facio*, Lat.] Producing sound.—If he should ask me why a clock strikes, and points to the hour; and I should say, it is by an indicating form and *sonorific* quality, this would be unsatisfactory. *Watts.*

SONOROUS, *adj.* [*sonoreux*, Fr., *sonorus*, Lat.] Loud sounding; giving loud or shrill sound. Bodies are distinguished as *sonorous* or *unsonorous*.

All the while

Sonorous metal blowing martial sounds;
At which the universal host up-sent
A shout that tore hell's concave.

Milton.

High sounding; magnificent of sound.—The Italian opera amidst all the meanness and familiarity of the thoughts, has something beautiful and *sonorous* in the expression. *Addison.*

SONOROUSLY, *adv.* With high sound; with magnificence of sound.

SONOROUSNESS, *s.* The quality of giving sound.—Enquiring of a maker of viols and lutes of what age he thought lutes ought to be, to attain their full and best seasoning for *sonorousness*, he replied, that in some twenty years would be requisite, and in others forty. *Boyle.*—Magnificence of sound.

SONSBECK, a town of the Prussian province of Cleves and Berg, situated near the river Wesel. Population 1500.

SONSFELD, a small town in the duchy of Cleves. Population 1200.

SONSHIP, *s.* Filiation; the character of a son.—The Apostle to the Hebrews makes afflictions not only incident but necessary to Christianity, the badge and cognizance of *sonship*. *Dec. of Chr. Piety.*

SONSONATE, or TRINIDAD, the capital of a district of the same name, in Guatemala, situated near a bay on the coast of the Pacific Ocean. It contains 450 families of Spaniards, exclusive of mulattoes, Indians, and people of colour, who may amount to 1900. Lat. 13. 46. N. long. 89. 45. W.

SONTHEIM, a town of Germany, in Wirtemberg. Population 800.

SONTHOFEN, a town of Bavaria, on the Iller; 4 miles east-south-east of Immenstadt. Population 2500.

SONTRA, a town of Germany, in Hesse-Cassel, on the Gunter; 24 miles south-east of Cassel. Population 1400.

SOOBOO, a Foulah village of Bambarra, in Central Africa; 10 miles west of Segou.

SOBRUDOOKI, a town of Bondou, in Central Africa; 20 miles south-west of Fatteconda.

SOOHA, a village of Bambarra, in Central Africa, situated at a little distance from the Niger; 70 miles north-east of Pammakoo.

SOOLA, a village of Kasson, in Central Africa, situated in a country so populous, that the king can raise 4000 men by beat of drum.

SOOLOO ISLES, a chain of islands, about 60 in number, deriving their name from Sooloo, the principal island in the group. They extend in a north-east and south-west direction, from the north-eastern extremity of Borneo, to the western extremity of Magindano, and are comprehended between the 4th and 7th degrees of north lat. There are several good harbours among these islands, particularly at Bewabewa, Tavitate, Tappool, Secassee, between Boobooan and Tappantana, south of Basselan. The harbour before Bewan, the Sooloo capital, is not good, except during the south-west monsoon. The island of Sooloo is situated in lat. 6. N. and long. 119. E. from Greenwich. It is 30 miles long, 12 broad, and may contain 60,000 inhabitants. This island, lying about midway between the islands of Borneo and Magindano, is well cultivated, affording a fine prospect from the sea, on every side, far superior to that of Malay countries in general. Sooloo being an island not very large, and the hills on it not being very high, nor consequently the clouds stopt by them, it has no certain rainy season, as have the large Malay islands. It enjoys a perpetual summer. Up the country it is always cool especially under the shade of the teak trees, which are numerous,

merous, as on Java. There is no such difference in the wetness of the seasons or monsoons, as on continents or very large islands; but the south-west monsoon brings most rain. Much falls at the change of the monsoons, especially of the autumnal. The capital of the island Bewan, or, as others call it, Sooloo or Soong, is situated on the sea coast, on the north-west part of the island. It is of considerable size: the houses are built after the manner of the Malays, elevated about four feet from the ground with bamboos, of which the floors are also made. It contains about 6000 inhabitants. A hill near the town is pretty high, and at night generally capt with a cloud. Other hills, of inferior height, are sometimes also covered in the evening. These clouds feed the rivulets which run from the hills; the land wind here is faint, and reaches not far: the island being rather small for its number of inhabitants, they study agriculture more than do those of the adjacent islands, already mentioned, where land may be deemed of no value. The Sooloos plant rice; but the crop cannot be depended on, as they are not surc of rain. They therefore cultivate many roots, the Spanish or sweet potatoe, the clody or St. Hillano yam, the China yam, both red and white; sending to Mindano for what rice they consume. They have great variety of fine tropical fruits; their oranges are full as good as those of China. They have also a variety of the fruit called jack or nanka, durians, a kind of large custard apple named madang, mangoes, mangustines, rambustines, and a fruit they call bolona, like a large plum or mangoe, white inside. In great abundance do they enjoy a very innocent and delicious fruit, by Malays called lancey. The trees in the woods are loaded with this fruit, which is large, and ripens well: this it does not on the island of Sumatra, where perhaps it finds too much moisture. The Sooloos having great connection with China, and many Chinese being settled amongst them, they have learned the art of ingrafting and improving their fruits, while the fruits at Magindano have remained indifferent. The Sooloos have a very good breed of horses, which they train to trot fast, seldom suffering them to gallop. At Sooloo are none of those beautiful birds called loories; but there is abundance of diminutive cocatoes and small green parrots. There is no spice tree but the cinnamon. Here are wild elephants, the offspring, doubtless, of those sent in former days from the continent of India, as presents to the kings of Sooloo. Those animals avoid meeting with horned cattle; though they are not shy of horses. Sooloo has spotted deer, abundance of goats and black cattle; but the people seldom milk their cows. They have no sheep, except a very few from Samboangan. The wild hogs are numerous, and do much mischief, by breaking down fences. After harvest, the Sooloos hunt the elephants and wild hogs, endeavouring to destroy them.

In former times, a very extensive trade centered in this island. It was frequented by ships from Japan, which brought silver, amber, silks, chests, cabinets, and other curiosities, made of fragrant woods, besides great quantities of silks and porcelain from China. Sooloo was also visited by vessels from Java, Sumatra, Ceylon, and the coast of Coromandel, with valuable cargoes. At present two Chinese junks arrive annually from Amoy. Their cargoes consist of the following articles, namely, brass salvers, iron, sugar candy, raw silk, black nankeen, white linen of a strong fabric, kangans, quallis, a thin iron pan three feet in diameter, china-ware, flowered silks, besides tea, cutlery and other hardware, brass wire, gongs, beads of all colours, little swan shot, fireworks, &c. &c. In return they bring back to China biche de mer, black and white wax, pearl oyster-shells, bird-nests, and tortoiseshell; also agal, a sea weed used as gum or glue, and many other articles, such as Carooang oil, clove bark, black wood, ratans, sago, various barks for dyeing, cassia, pepper, native camphire, sandal-wood, curious shells for grottos, pearls, and spices. The Portuguese formerly traded to a considerable extent with those islands: but from the dangers attending it, they abandoned it to the Chinese. Country ships from India occasionally visit these islands, notwithstanding the risk they run of being cut off. They import the

following articles, which find a ready sale to a small extent: —Brasery, cutlery, cloth, gupowder, glass ware, guns of various sizes, hardware, iron in bars, ironmongery, looking-glasses, opium, piece-goods, saltpetre, shot of all sorts, swords, tin-ware, tobacco, sugar, vermilion, and watches. From the north-east coast of Borneo, the inhabitants of Sooloo also import sago, biche de mer, cowries, and tortoiseshell. From Magindano they receive rice, for which they usually pay with Chinese goods. The Buggesses also trade with these islands, and chiefly bring cotton manufactures from Celebes.

At Sooloo and the neighbouring islands, is a famous pearl fishery, which is a source both of wealth and of maritime power, being a nursery for seamen, with which they can man their prows on any emergency. The dredges for the pearl oyster are generally made of bamboo, very slight, and sunk with a stone. The large pearls are the property of the nobility on whose estates they are found; they also extend their claim to the pearls found on the banks, as well as on the dry land. The Chinese merchants, however, contrive, by their underhand dealing with the fishermen, to purchase from them pearls of great value.

The sovereignty of the island is hereditary in the eldest son of the sultan; but the government is partly monarchical, and partly aristocratical. The legislative power resides in an assembly composed of 15 dateos or nobles, and of the sultan, who has two votes. The heir apparent has also two votes, if he sides with the sultan; but if he takes part against him, he has only one. There are two representatives of the people, called Manteries, like the military tribunes of the Romans. The common people, it is said, owing to these institutions, enjoy great freedom; but the vassals are often used in a tyrannical manner by their chiefs. The manners of the nobles are remarkably dissolute, for which they have ample opportunity, as the women here have as much liberty as in Europe. The Sooloos seldom go in their vessels to foreign parts, except on predatory excursions to make slaves among the Philippines. They are not much accustomed to the use of fire-arms, but depend on the lance, sword, and dagger, at the use of which they are very dexterous; and being of a martial disposition, at an early period they had subdued not only all the adjacent small isles, but a great part of the coast of Borneo. They have the character of being sanguinary and treacherous, on which account their alliance has frequently proved much more dangerous than their open hostility. They are said to be fond of music; and captain Forrest relates that in 1773, he saw the sultan dance a minuett with his neice, and the nobles go through a country dance; but according to his account, the nobles performed ill, owing to their heavy slippers. The men generally go dressed in white waistcoats buttoned down to the waist, and white breeches. The ladies wear a fine white waistcoat fitted close, and a petticoat over drawers which reach down to the knee. The early history of the Sooloos is involved in obscurity. They assert on the authority of tradition, that their island once formed part of an ancient Bornean empire, founded by the Chinese. The inhabitants of the island of Magindano assert, on the other hand, that the Sooloos were formerly subject to them. The Sooloos have been accustomed to carry on an unceasing warfare with the Spanish colonies planted in the Philippines, and generally with advantage. Prior to the year 1746, the Spaniards attacked them with a fleet of 30 ships, and obtained possession of Bewan, the capital. In 1775, they attacked a settlement belonging to the East India Company on the island of Balambangan, and drove the settlers on board their vessels. They are in the practice of attacking the vessels which visit them, and of plundering them if they are successful.

SOOMA, a town of Niphon, in Japan; 45 miles east of Jedo.

SOOMOO, a village of Kasson, in Central Africa, near the frontier of Kaarta.

SOON, *adv.* [*suns*, Gothic; *rona*, Sax.; *saen*, Dutch.] Before long time be past; shortly after any time assigned or supposed.

Nor did they not perceive their evil plight,
Yet to their general's voice—they *soon* obey'd. *Milton.*

Early; before any time supposed: opposed to *late*.

O boy! thy father gave thee life too *soon*,
And hath bereft thee of thy life too late. *Shakspeare.*

Readily; willingly.—I would as *soon* see a river winding through woods and meadows, as when it is tossed up in so many whimsical figures at Versailles. *Addison.*—It has the signification of an adjective: speedy, quick.—He hath preserved Argalus alive, under pretence of having him publicly executed after these wars, of which they hope for a *soon* and prosperous issue. *Sidney.*

SOON as. Immediately; at the very time

Nor was his virtue poison'd, *soon as* born,
With the too early thoughts of being king. *Dryden.*

SOONAM, a town of Hindostan, province of Delhi, belonging to one of the British tributaries. Lat. 29. 57. N. long. 75. 31. E.

SOONAMOOKY, a town of Bengal, district of Bissunpore. The East India Company have here a factory for white cotton cloths. Lat. 23. 18. N. long. 87. 33. E.

SOONDA, a district of Hindostan, province of North Canara, situated between the 14th and 15th degrees of northern latitude. Formerly the country was well cultivated, and produced fine timber and pepper; but it was laid waste by Hyder Aly in 1763, and its rajah compelled to flee for protection to Goa; on which occasion he made over to the Portuguese all the country between the sea and the mountains, for a stipulated pension. In 1799, the Soonda district became the property of the British.

SOONDA, the capital of the above-mentioned district. It was formerly an extensive and populous town, and was defended by three lines of fortifications, but was taken by Hyder Aly in the year 1763, the fortifications levelled, and the town nearly destroyed. It will probably now recover its population under the British protection. Lat. 14. 34. N. long. 74. 58. E.

SOONDLIA, a town of Hindostan, province of Sinde. It is a flourishing place, and is situated on the eastern side of the Indus, on the route from Tattah to Hyderabad. Lat. 24. 53. N. long. not ascertained.

SOONERGONG, or **SUNERGONG**, a town of Bengal, situated between the Luckia and one of the branches of the Brahmapootra river. It is the capital of a district of the same name. At a period when Dacca was scarcely, if at all known, Soonerong was a large and flourishing city, famous for its manufactures of muslin and other fine cottons. In the commencement of the 13th century, the Afghan emperor of Delhi, Alla, jealous of the governors of Bengal, divided that province into two portions. The westward one, denominated Lucknowty, he allowed to remain under the control of the former governor, Nassir Addeen, but appointed a chief named Behadur Khan, to govern the eastern division, and fixed his residence at Soonerong, which place having a direct communication with the strong fortress of Ekdala, and being itself protected by rivers on all sides, seems to have been judiciously selected for a new capital. In the year 1317, this person rebelled, and having assumed the white umbrella, the symbol of sovereignty, took the title of Behadur Shah; and the court of Delhi being then too much occupied with other affairs, allowed him to retain his usurped authority for seven years. At length the emperor Tughlik marched with a numerous army to Bengal, and the usurper finding himself unable to contend, submitted to the clemency of his master, and was pardoned, on condition of giving up all his treasure, arms, and elephants, and attending the imperial stirrup to Delhi. In the year 1325, Bhiram Khan took charge of the government of Soonerong, and died there in the year 1338. It was on this occasion that Fakher Addeen, the armour-bearer of the deceased, having brought over the army to support him, not only usurped the government, but declaring himself independent of the court of Delhi, assumed the lofty

title of sultan Sekunder. He fixed his own residence at Soonerong, and sent an army to take possession of the western division; but in this scheme he was foiled; for Aly Mubarick, the governor of Lucknowty, not only defeated the invader, but having advanced in the year 1342 towards Soonerong, fought with the sultan, and having taken him prisoner, put him to death, after which event he assumed the royal title of Ala Addeen, but fixed his residence at Gour. It therefore follows, by the above extract from the history of Bengal, that the time in which Soonerong was at the height of its prosperity was during the first 42 years of the 13th century, and that the numerous mosques and other buildings of which the ruins are still remaining, were constructed during that period. The city of Dacca having risen on the downfall of Soonerong, the latter is now reduced to a mere village, principally inhabited by weavers, and scarcely known to the Europeans who reside in the former city. Lat. 23. 39. N. long. 90. 43. E.

SOONGEY PESANG BAY, a bay on the west coast of Sumatra. Lat. 0. 57. S. long. 99. 50. E.

SOONGHUR, a town of Hindostan, province of Gujerat, district of Surat. Lat. 21. 8. N. long. 73. 33. E.

SOONLY, *adv.* Quickly; speedily. This word I remember in no other place; but if *soon* be, as it seems once to have been, an adjective, *soonly* is proper.—A mason meets with a stone that wants no cutting, and *soonly* approving of it, places it in his work. *More.*

SOONPUT, a town of Hindostan, province of Delhi. The country adjacent to this town formerly derived great benefit from the canal dug by Aly Merdan Khan; and as orders have been recently given by the British government, to repair the canals, it is hoped it will soon recover from the hapless state in which it has been for many years past. To the north of the town is a handsome mausoleum of Khizer Khan, an Afghan nobleman of the family of Shere Shah. This place formerly possessed a very magnificent Hindoo temple, which was destroyed by sultan Musaoud of Ghizne, in the year 1034. Lat. 29. N. long. 76. 53. E.

SOOFUL, a town of Hindostan, province of Malwah, belonging to the Mahrattas. It is a place of considerable extent, and regularly built. Lat. 24. 21. N. long. 76. 5. E.

SOO'PBERRY, *s.* [*sapindus*, Lat.] A plant. *Miller.*
SOOPOOR, a town of Hindostan, province of Ajmeer. It is the capital of a small district of the same name, and belongs to a relation of the rajah of Jyenagur. Lat. 25. 43. N. long. 76. 45. E.—There are other places in Hindostan of this name, but none of consequence.

SOORANGUR, a town of Hindostan, province of Orissa, situated near the Mahanuddy river, principally known by its containing a monument erected by the government of Bengal to Mr. Elliot, a civil servant, who died there in the year 1778 on an embassy to the Nagpore rajah. Lat. not ascertained.

SOORJEW RIVER. See **GOGRAH.**

SOOROOTOO, a small island in the Eastern seas, situated off the west coast of Borneo, and west-south-west from Carimata. It is separated from this latter island by a narrow strait through which a ship might run, if compelled by necessity. Wood and water are to be had in great plenty on the west side of this island; and there is also plenty of fowls, buffaloes, &c. It is about 15 miles in circumference. Lat. 1. 45. S. long. 108. 40. E.

SOOROPPOOR, a town of Hindostan, province of Bejapore belonging to the Nizam, situated on the north side of the Krishna, or Kistnah rivcr. Lat. 16. 15. N. long. 77. E.

SOORY, a town of Bengal, district of Birbhoom. It is also called Hyderabad. Lat. 23. 54. N. long. 87. 32. E.

SOOSETA, a small village of Jallonkadoo, in the district of Kullo, being the first at which the traveller arrives after passing through the Jallonka wilderness.

SOOSNEER, a town of Hindostan, province of Malwah, belonging to the Mahrattas. It is of considerable extent, and a flourishing place. Lat. 23. 55. N. long. 76. 10. E.

SOOSOO,

SOOSOO, a small town of Sumatra, on the west coast, situated at the bottom of a bay, of which Cape Felix forms the western extremity. The anchorage is about 3 miles from the town, in 18 or 20 fathoms, Cape Felix being west-by-north, and the town north-east-by-east. There is much foul ground, with a rocky bottom in the bay. The inhabitants exchange pepper for gold dust. Lat. 3. 45. N. long. 97. 10. E.

SOOSOOHOONAN, a district of Java, on the south side of the island, formerly extending to the north coast, and including the territories of Cheribon, and the greatest part of the island, under the title of the empire of Java; but it is much fallen from its ancient grandeur, and in the last century was divided into two parts. Embarrassed by the rebellion of Manko Boeni, a prince of the blood, the emperor made a cession of his dominions to the Dutch, who, in return, granted him half back again as their vassal, under the title of sultan; and the other half, including the city of Mataram, and its district, to Manko Boeni, on the same terms. Prior to 1740, this sovereign was still proprietor of all the territory to the east of Cheribon; but he lost part of his dominions in another contest with the Dutch. The dynasty, however, still continues; and in December 1813, Soerakarta, his capital, was visited by Mr. Raffles, the British governor of Java, who was graciously received; and his account of the entertainment which took place, indicates a degree of civilization greater than could have been expected in the centre of Java.

SOOT, *s.* [ʃot, root, Saxon; soot, Icelandic; soet, Dutch.] Condensed or embodied smoke.—*Soot*, though thin spread in a field, is a very good compost. *Bacon.*

SOOTA, a town of Japan, on the northern coast of the island of Sado.

SOOTE, or SOTE, *adj.* Sweet. *Obsolete.* See SWEET. SOO'TED, *adj.* Smear'd, manur'd, or covered with soot.—The land was sooted before. *Mortimer.*

SOO'TERKIN, *s.* A kind of false birth fabled to be produced by the Dutch women from sitting over their stoves.

When Jove was, from his teeming head,
Of wit's fair goddess brought to bed,
There follow'd at his lying-in,
For after-birth a sooterkin.

Swift.

SOOTH, *s.* [ʃoð, Sax.] Truth; reality. *Obsolete.*

Sir, understand you this of me in sooth,
The youngest daughter, whom you hearken for,
Her father keeps from all access of suitors,
Until the elder sister first be wed.

Shakspeare.

Prognostication.

Tried time yet taught me greater things;
The sodain rising of the raging seas,
The sooth of byrdes by beating of their winges.

Spenser.

Sweetness; kindness. This seems to be the meaning here.
That 'ere this tongue of mine,
That laid the sentence of dread banishment
On you proud man, should take it off again
With words of sooth.

Shakspeare.

SOOTH, *adj.* [ʃoð, Sax.] True; faithful; that may be relied on.

If thou speak'st false,
Upon the next tree shalt thou hang alive,
Till famine cling thee: if thy speech be sooth,
I care not if thou dost for me as much.

Shakspeare.

To SOOTHE, *v. a.* [ʒe-ʃoðian, Sax.] This word is better written with the final *e*, to distinguish it from *sooth*.
To flatter; to please with blandishments.

In soothing them, we nourish 'gainst our senate
The cockle of rebellion, insolence, sedition.

Shakspeare.

Can I soothe tyranny!
Seem pleas'd to see my royal master murder'd,
His crown usurp'd, a distaff in the throne?

Dryden.

To calm; to soften; to mollify.

The beldame

Soothes her with blandishments, and frights with threats.

Dryden.

To gratify; to please.

This calm'd his cars; *sooth'd* with his future fame,
And pleas'd to hear his propagated name.

Dryden.

SOO'THER, *s.* A flatterer; one who gains by blandishments.

I cannot flatter: I defy

The tongues of soothers.

Shakspeare.

SOOTHILL, or SOUTHILL, a township of England, West Riding of Yorkshire; 6 miles north-west of Wakefield. Population 2609.

SOO'THINGLY, *adv.* With blandishments; with flattery.—Herewithal Anselmo rested the most *soothingly* and contentedly deceived—that could be found in the world.

Shelton.

SOO'THLY, *adv.* [ʃoðlice, Sax. Spenser uses the Saxon form, *soothlich*.] In truth; really.—He was fain to use his wits, and *soothly* to tell them, I have seen your face.

Hales.
To SOO'THSAY, *v. n.* To predict; to foretell.—A damsel, possessed with a spirit of divination, met us, which brought her masters much gain by *soothsaying*.

Acts.
SOO'THSAY, or SOO'THSAYING, *s.* [ʃoð-ʃaʒa, Saxon. Spenser sometimes writes it *southsay*; which see.] True saying; veracity: the Saxon meaning.

Thou must discover all thy working,
How thou servest, and of what thing,
Though that thou shouldest for thy soth-saw
Ben all to betin.

Chaucer.

Prediction.

Well seen in every science that mote be,
And every secret worke of nature's wayes,
In wittie riddles, and in wise soothsayes.

Spenser.

SOO'THSAYER, *s.* A foreteller; a predictor; a prognosticator.

SOO'TINESS, *s.* The quality of being sooty; fuliginousness.

SOO'TY, *adj.* [Sax. ʃoʦiʒ.] Breeding soot.

By fire of sooty coal the alchymist turns
Metals to gold.

Milton.

Consisting of soot; fuliginous.—There may be some chymical way so to defecate this oil, that it shall not spend into a sooty matter. *Wilkins.*—Black; dark; dusky.—All hell run out, and sooty flags display. *P. Fletcher.*

To SOO'TY, *v. a.* To make black with soot.

Then (for his own weeds) shirt and coat all rent,
Tann'd and all sootied with noisome smoke,
She put him on and over all her cloke.

Chapman.

SOOTY, a town of Bengal, situated near the head of the Bhagarutty or Cossimbazar river. The nabob Seraje Addowlah caused, in the year 1757, piles to be driven into the river, to prevent the British flotilla from passing up that way, which has of course much injured the navigation. Here an action was fought in the year 1763, between the British and the troops of Cossim Aly Khan, in which the latter were defeated. Lat. 24. 26. N. long. 88. 2. E.—There are several other towns of this name in Hindostan, but none of consequence.

SOP, *s.* [ʃop, Sax.; *soppe*, Teut.; *suppe*, Germ. from ʃypan, *soppen*, *supen*, macerare, humectare, intingere panem in jus. See Wachter, and Kilian.] Any thing steeped in liquor, commonly to be eaten.—*Sops* in wine, quantity for quantity, inebriate more than wine of itself. *Bacon.*—Any thing given to pacify, from the *sop* given to Cerberus.

The prudent sibyl had before prepar'd
A sop, in honey steep'd, to charm the guard,
Which mix'd with powerful drugs, she cast before
His greedy grinning jaws, just op'd to roar.

Dryden.

To SOP, *v. a.* To steep in liquor.

SOP-

SOP-*in-wine*, *s.* A kind of pink.

Bring in coronations, and *sops-in-wine*,
Worn of paramours.

Spenser.

Sops-in-wine, a flower in colour much like a carnation, but differing in smell and quantitie. *Notes on the Shep. Cal.*

SOPE, *s.* See SOAP.

SOPH, *s.* [from *sophista*, Lat.] A young man who has been two years at the university.

Three Cambridge *sophs*, and three pert templars came,
The same their talents, and their tastes the same;
Each prompt to query, answer and debate,
And smit with love of poesy and prate.

Pope.

SOPHI, or SOFI, a title of quality, given to the emperor of Persia; importing as much as wise, sage or philosopher.

The title is by some said to have taken its rise from a young shepherd thus named, who attained to the crown of Persia in 1370; others derive it from the *sophoi*, or sages, anciently called *magi*. Vossius gives a different account of the word: *sophi*, in Arabic, he observes, signifies *wool*; and he adds, that it was applied by the Turks out of derision to the kings of Persia, ever since Ishmael's time; because, according to their scheme of religion, he is to wear no other covering on his head, but an ordinary, red, woollen stuff; whence the Persians are also called *hazlebasches*, *q. d.* *red-heads*. But Bochart assures us, that *sophi*, in the original Persian language, signifies one that is *pure in his religion*, and who prefers the service of God in all things: and derives it from an order of religious called by the same name.

SOPHIA, a town of Russia; 15 miles south of St. Petersburg. It has a magnificent church, built on the plan of the church of St. Sophia at Constantinople. Population 600.

SOPHIA POINT, the north-east point of entrance into Port Frederick, on the north shore of King George's archipelago. Lat. 53. 12. N. long. 224. 42. E.

SOPHIANA, a village of Aderbijan, in Persia; 24 miles north-west of Tauris.

SOPHICAL, *adj.* [from *σοφία*, Gr.; wisdom.] Teaching wisdom.—All those books which are called *sophical*, such as the wisdom of Sirach, &c., tend to teach the Jews the true spiritual meaning of God's economy. *Harris.*

SOPHIS, or SOFEES, denote a kind of order of religious among the Mahometans in Persia, answering to what are otherwise called *dervises*; and among the Arabs and Indians, *faquirs*.

SOPHIS, is the denomination of a sect of modern philosophers among the Persians, whose name is derived either from the Greek word for a sage, or from the mantle which they used to wear in some provinces of Persia. Their fundamental tenets are, that nothing exists absolutely but God: that the human soul is an emanation from his essence; and, though separated for a time from its heavenly source, will be finally reunited with it: that the highest possible happiness will arise from its reunion; and that the chief good of mankind, in this transitory world, consists in as perfect an union with the eternal Spirit, as the incumbrances of a mortal frame will allow: that, for this purpose, they should break all connection with extrinsic objects, and pass through life without attachments, as a swimmer in the ocean strikes freely without the impediment of clothes: that they should be straight and free as the cypress; whose fruit is hardly perceptible; and not sink under a load, like fruit-trees attached to a trellis: that, if mere earthly charms have power to influence the soul, the idea of celestial beauty must overwhelm it in extatic delight: that, for want of apt words to express the divine perfections with the ardour of devotion, we must borrow such expressions as approach the nearest to our ideas, and speak of *beauty* and *love* in a transcendent and mystical sense: that, like a reed torn from its native bank, like *war* separated from its delicious honey, the soul of

man bewails its disunion with *melancholy music*, and sheds burning tears like the lighted taper, waiting passionately for the moment of its extinction, as a disengagement from earthly trammels, and the means of returning to its only beloved.

SO'PHISM, *s.* [*sophisme*, Fr.; *sophisma*, Lat.] A fallacious argument; an unsound subtilty; a fallacy.—When a false argument puts on the appearance of a true one, then it is properly called a *sophism* or fallacy. *Watts.*

SO'PHIST, *s.* [*sophiste*, Fr.; *sophista*, Lat.] A professor of philosophy.—The court of Croesus is said to have been much resorted to by the *sophists* of Greece in the happy beginning of his reign. *Temple.*

The term *sophist*, which is now reproachful, was anciently honourable, and carried a very innocent idea. St. Augustine observes, it signifies a rhetor, or professor of eloquence: such as were Lucian, Athenæus, Libanus, &c. Suidas, and after him Olar. Celsius, in an express dissertation on the Greek *sophists*, tells us, that the appellation was applied indifferently to all who excelled in any art or science: whether divines, lawyers, physicians, poets, orators or musicians.

Solon is the first who appears to have ever borne the appellation of *sophist*, which is given him by Isocrates; afterwards, it was scarcely ever given, except to philosophers and declaimers.

In the time of Socrates, there was in Athens a large body of professional preceptors of eloquence, distinguished by the appellation of *sophists*. By the mere pomp of words, these men made a magnificent display of wisdom, upon a slight foundation of real knowledge; and they taught an artificial structure of language, and a false method of reasoning; by means of which they were able, in argument, to make the worse appear the better cause. Whilst they arrogated to themselves the merit of every kind of learning, they publicly practised the art of disputing with plausibility on either side of any question, and professed to teach this art to the Athenian youth. By these imposing pretensions, they collected, in their schools, a numerous train of young men, who followed them in hope of acquiring those talents, which would give them influence and authority in popular assemblies. In such high repute were these *sophists*, that they were literally supported, not only by contributions from their pupils, but by a regular salary from the state; and were in many instances distinguished by public honours, and employed in offices of magistracy. Of their enmity to Socrates, we have given an account under his biographical article.

The title *sophista* was in great credit among the Latins in the twelfth century, and in the time of St. Bernard; but it began to lose ground in Greece as early as Plato's time; on account of Protagoras and Gorgias, who made a sordid traffic of it, by selling eloquence for money. Hence Seneca calls the *sophists* quacks, or empirics.

Cicero says, that the title *sophisti* was in his time given to such as professed philosophy with too much ostentation, in order to make a trade of it, by running from town to town, to retail their deceitful science. A *sophist*, therefore, was then, as now, a rhetor, or logician, who makes it his business to ensnare and perplex people, by frivolous distinctions; vain reasonings, and captious discourses.

SOPHISTER, *s.* [*sophiste*, Fr.; *sophista*, Lat.] A disputant fallaciously subtle; an artful but insidious logician.—Not all the subtle objections of *sophisters* and rabbies, against the gospel, so much prejudiced the reception of it, as the reproach of those crimes with which they aspersed the assemblies of christians. *Rogers.*—A professor of philosophy; a *sophist*. *This sense is antiquated.*—Alcidimus the *sophister* hath arguments to prove, that voluntary and extemporal far excelleth premeditated speech. *Hooker.*

To SOPHISTER, *v. a.* To maintain by a fallacious argument. *Obsolete.*—It is well *sophistered* of you both; preposterous are your judgments evermore: ye judge evil good, and good evil. *Ld. Cobham in 1413.*

SOPHISTICAL, or SOPHISTIC, *adj.* [*sophistique*, Fr., from

from *sophist*.] Fallaciously subtle; logically deceitful.—The subtil persuaſions and *sophistical* cavillations of the papistes. *Cränmer*.—That may seem a demonstration for the present, which to posterity will appear a mere *sophistical* knot. *More*.

SOPHISTICALLY, *adv.* With fallacious subtilty.—Bollingbroke argues most *sophistically*. *Swift*.

SOPHISTICATE, *v. a.* [*sophistiquer*, French; from *sophist*.] To adulterate; to corrupt with something spurious.—If the passions of the mind be strong, they easily *sophisticate* the understanding; they make it apt to believe upon every slender warrant, and to imagine infallible truth, where scarce any probable shew appeareth. *Hooker*.

SOPHISTICATE, *part. adj.* Adulterate; not genuine.

Wine sparkles brighter far than she,
'Tis pure and right without deceit,
And such no woman e'er will be;
No, they are all *sophisticate*.

Cowley.

SOPHISTICATION, *s.* [*sophistication*, Fr.] Adulteration; not genuineness.—Besides easy submissions to *sophistications* of sense, we have inability to prevent the mis-carriages of our junior reasons. *Glanville*.—The drugs and simples sold in shops, generally are adulterated by the fraudulent avarice of the sellers, especially if the preciousness may make their *sophistication* very beneficial. *Boyle*.

SOPHISTICATOR, *s.* Adulterator; one that makes things not genuine.—I cordially commend, that the *sophisticators* of wine may suffer punishment above any ordinary thief. *Whitaker*.

SOPHISTRY, *s.* Fallacious ratiocination.—His *sophistry* prevailed; his father believed. *Sidney*.—Logical exercise.—The more youthful exercises of *sophistry*, themes, and declamations. *Pelton*.

SOPHOCLES, a famous tragic poet, was born at Athens about B. C. 497. He was of a condition that allowed of his being educated in the accomplishments most valued at that time; and it is related, that being a youth when the monuments of the victory over Xerxes were fixed up at Salamis, he appeared at the head of a chorus of noble birth, whose song of triumph he led by the strains of his lyre. He first applied himself to lyric poetry; but the fame acquired by Æschylus, the celebrated reformer or author of Grecian tragedy, induced him to try his powers in that species of composition, and in his 28th year he ventured to contend with that veteran for the theatrical prize. The result was, a victory on his part, which was followed by the retreat of his rival, and left him undisputed master of the tragic stage. The improvements he introduced into the drama were so considerable that he may be regarded almost as the father of regular tragedy. He brought a third interlocutor to the two who before alone appeared on the scene at once; he interested the chorus in the subject of the piece; he reduced the turgid and unnatural diction of Æschylus to the proper standard of heroic dignity; and invented that artful construction of fablé and development of incidents which contributes so much to the interest of a dramatic performance. In these points he was superior to his younger competitor Euripides; and upon the whole, he appears to have stood at the head of his class in the judgment both of the Greek and Roman critics. Cicero terms him "a divine poet;" and in a line of Virgil the "Sophoclean buskin" is made an appellation for tragedy in general. Dionysius of Halicarnassus commends him particularly for preserving the dignity of his characters, and dwelling rather on the more noble and generous affections, than on the mean and debasing passions. These praises show that his works were regarded as the most perfect example of tragedy in the highest sense of the word. As at Athens the theatre was an important public concern, we need not wonder to find a tragedian so eminent as Sophocles entrusted with civil and military employments, and joined with Pericles in a commission against the revolted Samians. He retained his faculties, and continued to write tragedies, to an advanced age; and when his sons, on account

VOL. XXIII. No. 1575.

of neglect of his domestic affairs, applied to the magistrates to put him under their guardianship, as having outlived his understanding; he appeared in court, and reciting his Ædipus at Colonus, which he had just finished, asked, if that were the work of a dotard? The judges, convinced by such an appeal, pronounced in his favour, and the audience conducted him home in triumph. The benignity of his character acquired him a number of friends, his attachment to whom, and his moderate wishes, caused him to decline the invitations of the kings who were desirous of drawing him to their courts. It is related to his honour, that at the death of his great rival Euripides, instead of displaying satisfaction, he put on mourning, and would not suffer the actors in a new piece of his to wear crowns. Sophocles is said to have passed his 90th year, and to have died of joy on obtaining the prize for his last tragedy. Above a hundred pieces have been attributed to him by some ancient writers, of which only seven have reached our times.

SOPHORA [Linnæus's derivation of the name of this genus will be best given in his own words.—"Sophora vel Sophera est verbum antiquum plantæ, huic proximæ, impositum, quo utor ad designandum hocce genus quod Sophorum est sive sapientiam et admonitionem fert staminum filamenta in papilionaceis, si separata inter se sint, vix classe naturali conjungendas esse plantas, si unquam limites classis reperiundi sint." Hort. Cliff. p. 156.], in Botany, a genus of the class decandria, order monogynia, natural order of papilionacæ or leguminosæ.—Generic Character. Calyx: perianth one-leaved, short, bell-shaped, gibbous at the base above; mouth five-toothed, oblique, obtuse. Corolla: papilionaceous, five-petalled. Standard oblong, gradually wider, straight, reflexed at the sides. Wings two, oblong-appendicled at the base, length of the standard. Keel two, petalled, with the petals conformable to the wings, the lower margins approximating and boat-shaped. Stamina: filaments ten, distinct, parallel, awl-shaped, length of the corolla within the keel. Anthers very small, rising. Pistil: germ oblong, cylindrical. Style, size and situation of the stamens. Stigma obtuse. Pericarp: legume very long, slender, one-celled, knobbed at the seeds. Seeds very many, roundish. It agrees in every thing with the plants of the class diadelphia, except in having all the filaments separate.—*Essential Character*. Calyx five-toothed, gibbous above. Corolla papilionaceous, with the wings of the same length with the standard. Legume.

1. *Sophora tetraptera*, or wing-podded sophora.—Leaves pinnate, leaflets numerous, lanceolate-oblong; somewhat villose; legumes quadrangular-membranaceous; stem arborescent.—This magnificent tree is a native of New Zealand. It displays its pendulous branches of large golden flowers in May and June.

2. *Sophora microphylla*, or small-leaved shrubby sophora.—Leaves pinnate; leaflets very numerous, obovate, somewhat villose; legumes quadrangular-membranaceous. This is a smooth tree. Flowers large and yellow.—Native of New Zealand.

3. *Sophora flavescens*, or Siberian sophora.—This resembles the next species, but is smooth all over.—Native of Siberia.

4. *Sophora alopecuroides*, or fox-tail sophora.—Leaves pinnate; leaflets numerous, oblong-villose; stem herbaceous. Root perennial. Flowers pale blue and small, in long axillary spikes standing erect close to the stalk.—Native of the Levant.

5. *Sophora tomentosa*, or downy sophora.—Leaves pinnate; leaflets numerous, roundish, tomentose. Stem downy, six or seven feet high.—Native of Ceylon.

6. *Sophora occidentalis*, or occidental sophora.—Leaves pinnate; leaflets numerous, roundish, hoary, subtomentose. This is a shrub, with a round, hoary-pubescent stem; and round, spreading, subtomentose branches.—Native of the West Indies.

7. *Sophora monosperma*, or one-seeded sophora.—Leaves unequally pinnate, pinnae five-paired, legumes one-seeded. This is a small tree, ten feet high, with a whitish bark, and

a hard wood: branches ferruginous, tomentose.—Native of Jamaica and other islands of the West Indies.

8. *Sophora Japonica*, or shining-leaved sophora.—Leaves pinnate; leaflets many, ovate, smooth; stem arboreous. Branches round, even, purplish.—Native of Japan.

9. *Sophora heptaphylla*, or seven-leaved sophora.—Leaves pinnate; leaflets seven, smooth.—Native of the East Indies.

Podalirias.

10. *Sophora Capensis*, or vetch-leaved sophora.—Leaves pinnate; leaflets numerous, lanceolate, hoary beneath, pointed; legumes tomentose; stem shrubby.—Native of the Cape of Good Hope.

11. *Sophora aurea*, or golden-flowered sophora.—Leaves pinnate; leaflets numerous, elliptic, sharpish, very smooth above, almost naked beneath; legumes smooth; stem shrubby. This is a shrub, the height of a man.—Native of Africa.

12. *Sophora argentea*, or silvery-leaved sophora.—Petioles two-leaved, spinescent; leaflets silky-tomentose, oblong, acute at both ends.—Native of Siberia, on sandy hills, in the Songarian desert, by the river Bekun.

13. *Sophora genistoides*, or broom-leaved sophora.—Leaves ternate, sessile; leaflets linear, mucronate, revolute at the edge.—Native of the Cape of Good Hope.

14. *Sophora ternata*, or ternate-leaved sophora.—Leaves sessile; leaflets lanceolate, silky.—Native of the Cape of Good Hope.

15. *Sophora australis*, or blue sophora.—Leaves ternate, petioled; leaflets obovate-lanceolate, obtuse; stipules lanceolate, acute, twice as long as the petiole.—Native of Carolina.

16. *Sophora tinctoria*, or Dyer's sophora.—Leaves ternate, petioled; leaflets roundish-obovate, obtuse, mucronate; stipules obsolete, oblong, acute, many times shorter than the petiole.—Native of Barbadoes and Virginia.

17. *Sophora alba*, or white sophora.—Leaves ternate, petioled; leaflets oblong, obtuse; stipules filiform, shorter than the petiole.—Native of Virginia and Carolina.

18. *Sophora lupinoides*, or lupin leaved sophora.—Leaves ternate, petioled; leaflets elliptic-lanceolate, obtuse, pubescent; stipules lanceolate, longer than the petiole.—Native of Kamtschatka.

19. *Sophora trifoliata*, or three-leaved sophora.—Leaves ternate, petioled; leaflets ovate, silky.—This and all that follow are found at the Cape of Good Hope.

20. *Sophora calyptata*, or veiled sophora.—Leaves simple, elliptic, somewhat rugged above, beneath villous and netted-veined; peduncles one-flowered; calyxes villose, having a deciduous veil at the base.

21. *Sophora biflora*, or two flowered sophora.—Leaves simple, ovate, subtomentose; peduncles two-flowered; calyxes thrust in at the base, tomentose, coloured.

22. *Sophora myrtillifolia*, or round-leaved sophora.—Leaves simple, elliptic-obovate, obtuse, cusped, silky on both sides; peduncles one-flowered.

23. *Sophora hirsuta*, or hairy sophora.—Leaves simple, hirsute, the upper ones ovate, the lower roundish; branches round; segments of the calyx lanceolate, and length of the wings.

24. *Sophora buxifolia*, or box-leaved sophora.—Leaves simple, oval, smooth above, silky beneath; peduncles one-flowered; calyxes thrust in at the base, tomentose, coloured.

25. *Sophora cordata*, or heart-leaved sophora.—Leaves simple, ovate, hirsute.

Propagation and Culture.—The two first species may be raised from seeds, which sometimes ripen in this country. They may also be increased by cuttings and layers. They will bear our climate, if planted against a wall, where they may be covered with mats, to protect them from severe frost.

The 4th increases fast enough by its creeping root.

The 5th, 6th and 7th must have the protection of a stove; and may be propagated by seeds, when they can be procured from the countries where they grow naturally.

The 15th, 16th and 17th may be propagated by seeds

sown on a warm border, at the beginning of April, in shallow drills. All the others are dry stove plants.

SOPHRONISTÆ, [*Σοφρονισται*, Gr.] among the Athenians, were ten officers, appointed to take care that the young men behaved themselves with sobriety and moderation.

SOPHRONISTERIUM, [*Σοφρονιστηριον*, Gr.] among the Athenians, a house of correction, like our Bridewell.

SOPING, a district or principality of the island of Celebes, and anciently one of the most powerful in the country. It extends partly along the western shore of the bays of Boni and Tolo. To the north it is bounded by a great lake, and on the south it borders on Lamoeroe, and is partly mountainous. Its chief production is rice. The natives are very warlike, and were always set on to dissensions by the crooked policy of the Dutch. In 1775, Soping was governed by its own king.

SOPLEY, a parish of England, in Southamptonshire; $2\frac{1}{2}$ miles north-by-west of Christ Church. Population 589.

To **SOPORATE**, *v. n.* [*soporo*, Lat.] To lay asleep.

SOPORIFEROUS, *adj.* [*soporifere*, Fr. Cotgrave; *soporifer*, Lat. from *sopor* and *fero*.] Productive of sleep; causing sleep; narcotic; opiate; dormitive; somniferous; anodyne; sleepy.—The particular ingredients of those magical ointments are opiate and *soporiferous*: for anointing of the forehead, neck, feet, and back-bone, procures dead sleeps. *Bacon*.

SOPORIFEROUSNESS, *s.* The quality of causing sleep.

SOPORIFIC, *adj.* Causing sleep; opiate; narcotic.—The colour and taste of opium are, as well as its *soporifick* or anodyne virtues, mere powers depending on its primary qualities. *Locke*.

SOPOROUS, *adj.* [*soporus*, Lat.] Sleepy; causing sleep.—In small synopses it may perhaps rouse the spirits a little, but in *soporous* diseases it is commonly an uncertain and ineffectual remedy. *Greenhill*.

SOPPER, *s.* One that steeps any thing in liquor.

SOPRA, a river of Hindostan, which rises in the province of Malwah, and falls into the Chumbul.

SOPWORTH, a parish of England, in Wiltshire; $7\frac{1}{2}$ miles west-by-south of Malmesbury.

SORA, a town of Naples, in the Terra di Lavoro, on the Gorigliano, with 7200 inhabitants. It is the see of a bishop; 60 miles north-west of Naples. Lat. 41. 47. N. long. 13. 36. E.

SORACA, a river of South America, in New Granada, and province of Tunja. There is a settlement of the same name on its shores.

SORAGNA, a small town of Italy, in the duchy of Parma, on the river Strone; 13 miles north-north-west of Parma.

SORALA, a small town of Sweden, in Helsingland, on the river Luisna.

SORANUS, one of the most able of the physicians of the *methodic* sect, according to the opinion of Cælius Aurelianus, and the one who put the finishing hand to that system, was a native of Ephesus. His father's name was Menander, and that of his mother Phœbe. He studied medicine, and afterwards practised it at Alexandria, but at length he settled at Rome, and was in considerable repute in that metropolis in the reigns of Trajan and Adrian. His character, indeed, seems to have been highly estimated; for he was in favour with all parties. Even Galen, who was violent in his opposition to the *Methodists*, and abused Thessalus with some acrimony, speaks favourably of the knowledge of Soranus; and bears his testimony, from experience, to the efficacy of some of his remedies. Soranus composed several works, none of which have come down to us in their proper form; but as Cælius Aurelianus, in his treatise "De Morbis Acutis et Chronicis," every where acknowledges himself to be a translator from the Greek of Soranus, that work may be considered as in substance the production of the latter.

Some confusion prevails among medical writers, who mistake

take Soranus the Methodist for two other physicians of the same name. The first of these was also a native of Ephesus, but posterior to the Methodist. He was the author of a good treatise on the diseases and organs of generation of women, which was printed at Paris in 1556, under the title of "De Utero et Muliebri pudendo libellus," together with some pieces of Rufus, the Ephesian. This fragment is so accurate in point of anatomical description, as to leave a regret that the other writings of this physician are lost. The third of these physicians of the name of Soranus, was surnamed *Melotas*, from the town in Cilicia, where he was born. There is, however, no very authentic record of him extant; and the only work ascribed to him, which is entitled "Isagoge saluberrima in Artem medendi," and was printed at Basle, 1528, and Venice, 1547, is maintained by Vossius to be the work of a posterior Latin writer, and not of any of the three persons named Soranus. See *Le Clerc, Hist. de la Med. Eloy Dict. Hist.*

SORAU, or **ZAROWE**, a neat town of the Prussian States, in Lower Lusatia; 49 miles south-south east of Frankfort on the Oder. It contains a palace, four Protestant churches, an orphan house, with a free school, two hospitals, and 3800 inhabitants. They carry on a variety of petty manufactures.

SORAU, or **ZVORY**, a town of Prussian Silesia; 20 miles east of Ratibor, and 54 south-south-east of Oppeln. Population 1700.

SORB, *s.* [*sorbum*, Lat.] The service-tree.—The timber of the *sorb* is useful to the joiner. *Evelyn*.—The berry of the tree.

SORBAIT (Paul de), a physician of eminence, was a native of Hainault, in the Low Countries. Having finished his courses of classical and philosophical studies, he commenced that of medicine, which he appears to have concluded by taking the degree of doctor in that faculty at Vienna, where he ultimately settled. He obtained a high reputation for medical skill and erudition; and, in 1655, was appointed to the principal professorship of medicine in the university of that metropolis, the duties of which he executed with considerable celebrity, until the year 1679. While he was engaged in his course of this year, he was honoured with the appointment of physician to the dowager empress Eleanor, and at the conclusion of it, relinquished altogether his academical avocations. His merits were still farther rewarded by the office of counsellor and superintendant of the public health, and by his elevation to the dignity of a knight of the kingdom of Hungary. He died in April 1691, at an advanced age. He left several works, namely, a-body of medical practise, first published at Nuremberg, in 1672, folio, with the title of "Universa Medicina, tam Theorica quam Practica, nempe Isagoge Institutionum Medicarum et Anatomicarum, &c." This work was republished at Vienna in 1680, and again after his death, in 1701, with the new title of "Praxeos Medicæ auctæ, et a plurimis typi mendis ab ipso Auctore castigatæ Tractatus VII. &c." "Nova et aucta Institutionum Medicarum Isagoge," 1678, 4to. "Commentaria et Controuersiæ in omnes Libros Aphorismorum Hippocratis," 1680. In the preceding year he published an account of the plague, which had committed dreadful ravages in Vienna, having destroyed, he affirms, not less than 76,921 persons. Its title was "Consilium Medicum, sive Dialogus Loimicus de Peste Viennensi," 1697; and he published the same work, in German, in 1680. He was author also of "A Treatise on Midwifery," in the German language. *Eloy Dict. Hist. de la Med.*

SORBIE, a parish of Scotland, in Wigtonshire, lying on the coast of the bay of Wigton. It is nearly 6 miles in length, and the same in breadth. Population 1265.

SORBIERE (Samuel), was born in 1615, at St. Ambroix, in the diocese of Usex. He was educated by his maternal uncle, an eminent Calvinist minister at Nismes. He came to Paris in 1639, and being disgusted, for some reasons not now known, with the study of the theology, he took up that of medicine. In 1642 he went to Holland, where, besides pursuing his medical studies, he materially assisted in the transla-

tion of Camden's *Britannia*, and also More's *Utopia*. He married, in Holland, the daughter of one of his townsmen, and went to Leyden, with the intention of settling in his profession. In 1648 he published, under his own name, a French version of a treatise of Gassendi, entitling it "Discours sceptique sur le Passage du Chyle, et le Mouvement du Cœur." Returning to France in 1650, he was made principal of the college of Orange, and there printed a Discourse on the true cause of the troubles of England, and a letter on the designs of Cromwell. He conformed to the Catholic religion in 1653, after which his life was chiefly spent as an author, with a view, it is said, of attempting to obtain pensions, in which he was very successful, having laid under contribution Cardinal Mazarin, Lewis XIV., and the popes Alexander VII. and Clement IX. He visited England in 1664, and on his return he published an account of what he had observed, which was so free in its strictures, that he was for a time exiled by a *lettre de cachet*. Sorbriere was likewise author of a work entitled "Lettres et Discours sur divers Matières curieuses," which contributed to his temporary reputation. He died in 1670, and a *Sorberiana* was published after his death, containing sentiments supposed to have dropt from him in conversation. His writings exhibit a caustic and satirical spirit, and the learning which they display is neither original nor solid. He was intimately connected with Hobbes and Gassendi, on whom he imposed himself as a profound thinker.

SORBILE, *adj.* [from *sorbeo*, Lat.] That may be drunk or sipped.

SORBITION, *s.* [*sorbitio*, Fr. Cotgrave; *sorbitio*, Lat.] The act of drinking or sipping.

SORBO'NICAL, *adj.* Of or belonging to a Sorbonist. See **SORBONIST**.

SOR'BONIST, *s.* A doctor of theological house of *Sorbon*, or *Sorbonne*, in the university of Paris: the *Sorbonne* was also a term used in general for the whole faculty of the theology there.

In school-divinity as able
As he that hight Irrefragable:—
Profound in all the nominal
And real ways beyond them all;
For he a rope of sand could twist
As tough as learned *Sorbonist*.

Hudibras.

SORBONNE (Robert de), founder of the famous theological college which bears his name, was born in 1201, of an obscure family at Sorbon, in the diocese of Rhims. Being educated at Paris, and having taken his degree of doctor, he devoted himself to preaching, in which he became so celebrated, that the king made him his chaplain and confessor. Having become a canon of Cambray in 1251, the recollection of the difficulties which he had experienced in the course of his own studies, suggested to him a plan for facilitating to poor scholars the means of proceeding to graduation. This was to form a society of secular ecclesiastics, who, living in common, and provided with a regular maintenance, should read lectures gratuitously. With the assistance of his friends, he founded the college called the Sorbonne, which was particularly consecrated to the study of theology, and its constitution has served as a model for that of all colleges since erected in that country. Sorbonne afterwards added to this foundation a college for the languages and philosophy, under the name of the College of Calvi, or the Little Sorbonne. He was made canon of Paris in 1258, and rose to such a height of reputation, that princes looked to him on many important occasions as the arbitrator of their disputes. He died in 1274, at the age of 73, and left considerable property to his college. He was author of several works on theological subjects, which are preserved in MS. in the library of the great college of which he was the liberal founder.

SORBONNE, or **SORBON**, the house or college of the faculty of theology, established in the university of Paris.

It was founded in 1256, by St. Louis, or rather by Robert de Sorbonne, his confessor and almoner; first canon of Cambray, and afterwards of the church of Paris; who gave his

his own name to it, which he himself took from the village of Sorbon, or Serbon, in the department of the Ardennes, near Sens, six miles north of Rethel, where he was born.

The foundation was laid in 1250, afterwards the king gave him all the houses he had in the same place, in exchange for some others in another.

The college has been since magnificently rebuilt by the Cardinal de Richelieu. The design of its institution was for the use of poor students in divinity.

There were lodgings in it for thirty-six doctors and bachelors of the house; who were said to be of the *society of the Sorbonne*. Those admitted into it without being doctors were said to be of the *hospitality of the Sorbonne*. Six regent doctors held lectures every day, for an hour and half each, three in the morning, and three in the afternoon.

Sorbonne has been also used in the general for the whole faculty of theology at Paris, because the assemblies of the whole body were held in the house of the Sorbonne: and because the bachelors of the other houses of the faculty, as the house of Navarre, &c., came thither to hold their *forbonnique*, or act, for being admitted doctors of divinity.

SORBUS [of Pliny, &c., a *sorbendo*, *quia caro matura sorbetur*: the pulp being supped or sucked in], in Botany, a genus of the class icosandria, order trigynia, natural order of pomaceæ; rosaceæ (*Juss.*)—Generic Character. Calyx: perianth one-leaved, concave-spreading, five-cleft, permanent. Corolla: petals five, roundish, concave, inserted into the calyx. Stamina: filaments twenty, awl-shaped, inserted into the calyx. Anthers roundish. Pistil: germ inferior. Styles three, filiform, erect. Stigmas headed. Pericarp: Berry soft, globular, umbilicate. Seeds three, somewhat oblong, distinct, cartilaginous.—*Essential Character*. Calyx five-cleft. Petals five. Berry inferior, three-seeded.

1. *Sorbus aucuparia*, mountain service, mountain ash, quicken tree, or roan tree.—Leaves pinnate, smooth on both sides. The mountain ash is an elegant tree, of slow growth; the wood tough and close-grained; not very hard; the bark smooth and gray; the young branches purplish, brown. Leaves unequally pinnate; leaflets (five, six, seven or eight pairs,) serrate, except at the base.—Native of the colder parts of Europe, Mount Libanus, Siberia, &c. Woods and hedges on mountainous and boggy situations in the north of England, in Wales, Scotland and Ireland: flowering in May.

2. *Sorbus hybrida*, bastard service or mountain ash.—Leaves semipinnate, tomentose beneath. This is a middle-sized tree. Leaves lobed in front, pinnate at the base, serrate, without any stipules, smooth above, white-tomentose beneath. Corymbs terminating, tomentose, many-flowered. Flowers white. Styles three, or sometimes two only. Fruit as in the preceding, but a little larger.—Native of Europe.

3. *Sorbus domestica*, true service or sorb.—Leaves pinnate, villose underneath. The true service is a tree of middle size, not unlike the mountain ash, of very slow growth, not flowering till it arrives at a great age; the wood is very hard.—The true service is a native of the warmer parts of Europe, where it becomes a large and lofty tree.

Propagation and Culture.—All these sorts may be propagated by sowing their seeds in pots soon after the fruit is ripe, sheltering them under a common frame in winter, and plunging the pots into a moderate hot-bed in the spring, which will soon bring up the plants.

SORCERER, *s.* [*sorcier*, Fr., *sortarius*]; low Latin; from *sortes*, Lat. lots; implying a diviner by lots.] A conjurer; an enchanter; magician.

He saw a sable *sorcerer* arise,
All sudden gorgons hiss, and dragons glare,
And ten-hord'd fiends.

Pope.

SORCERESS, *s.* A female magician; an enchantress.

The snaky *sorceress* that sat
Just by hell-gate, and kept the fatal key.

Milton.

SORCEROUS, *adj.* Not used.

Th'art ent'ring Circe's house,
Where by her med'cines, black and *sorcerous*,
Thy souldiers all are shut in well arm'd sties,
And turn'd to swine.

Chapman.

The wine being consecrated, it is carried home, that therewith they may sprinkle their houses, to preserve them from witchcraft and *sorcerous* incantations. *L. Addison.*

SORCERY, *s.* Magic; enchantment; conjuration; witchcraft; charms.

This witch Sycorax,
For mischiefs manifold, and *sorceries* terrible,
Was banish'd

Shakspeare.

SORCERY, the crime of witchcraft, or divination, by the assistance of evil spirits. See **MAGIC** and **MAGICIAN**.

SORCY, a town in the north-east of France, department of the Meuse, with 1800 inhabitants. It has manufactures of leather; 4 miles south-east of Commercy.

SORD, *s.* Turf; grassy ground.

This is the prettiest low-born lass that ever
Ran on the green *sord*.

Shakspeare.

SORDE, a town in the south-west of France, department of the Landes, near the river called Gave d'Oleron, with 1300 inhabitants; 11 miles south of Dax.

SORDES, *s.* [Latin.] Foulness; dregs.—The sea washes off the soil and *sordes* wherein mineral masses were involved and concealed, and thereby renders them more conspicuous. *Woodward.*

SORDET; or **SORLINE**, *s.* [*sourdine*, Fr. *sordina*, Italian.] A small pipe put into the mouth of a trumpet to make it sound lower or shriller. *Bailey.*

SORDI, a small island of Greece, in the Mediterranean, about 6 miles west of Candia.

SORRID, *adj.* [*sordide*, Fr. in all its senses; *sordidus*, Lat.] Foul; gross; filthy; dirty.

There Charon stands
A *sordid* god, down from his hoary chin
A length of beard descends, uncomb'd, unclean.

Dryden.

Intellectually dirty; mean; vile; base.
Thou can'st not those exceptions make,
Which vulgar *sordid* mortals take.

Cowley.

Covetous; niggardly.

He may be old,
And yet not *sordid*, who refuses gold.

Denham.

SORRIDLY, *adv.* Meanly; poorly; covetously.
SORRIDNESS, *s.* Meanness; baseness.—I omit the madnesses of Caligula's delights, and the execrable *sordidness* of those of Tiberius. *Cowley.*—Nastiness; not neatness.—Providence deters people from sluttishness and *sordidness*, and provokes them to cleanliness. *Ray.*

SORDUN, a town of France, department of the Seine and Marne. Population 800.

SORE, *s.* [*jar*, Saxon; *saur*, Danish.] A place tender and painful; a place excoriated; an ulcer. It is not used of a wound, but of a breach of continuity, either long continued or from internal cause: to be a *sore*, there must be an excoriation; a tumour or bruise is not called a *sore* before some disruption happen.

Let us hence provide
A salve for any *sore* that may betide.

Shakspeare.

By these all festring *sores* her councils heal,
Which time or has disclos'd, or shall reveal.

Dryden.

SORE, *adj.* [*jar*, Sax. *gravis*, *molestus*; *sar*, Goth. *tener*. *Serenius.*] Tender to the touch. It has sometimes of before the causal noun.—It was a right answer of the physician to his patient, that had *sore* eyes, If you have more pleasure in the taste of wine than in the use of your sight, wine is good; but if the pleasure of seeing be greater to you than that of drinking, wine is naught. *Locke.*—Tender in the mind; easily vexed.—Malice and hatred are very fretting and vexatious, and apt to make our minds *sore* and uneasy; but he that can moderate these affections will ease in his mind. *Tillotson.*

—Violent

—Violent with pain; afflictively vehement. See SORE, adverb.

Threescore and ten I can remember well,
Within the volume of which time I've seen
Hours dreadful, and things strange; but this *sore* night
Hath trifled former knowings. *Shakespeare.*

Criminal. *Out of use.*

To lapse in fulness
Is *sorer* than to lie for need; and falsehood
Is worse in kings than beggars. *Shakespeare.*

SORE, *adv.* [This the etymologists derive from *seer*, Teut. Germ. *ser* or *sehr*.] Intensely; in a great degree.

This worthy Jason *sore* alongeth
To see the strange regions. *Gower.*

Good men delight *sore* when they hear of virtuous men.
Thorpe.—With painful or dangerous vehemence; a very painful degree; with afflictive violence or pertinacity. *It is now little Used.*

The knight, then lightly leaping to the prey,
With mortal steel him smote again so *sore*,
That headless his unwieldy body lay. *Spenser.*

To SORE, *v. a.* To wound; to make sore. The following is the reading of Spenser's first edition in 1590, and no doubt the true one. Others read *bor'd*.

The wyde wound—
Was closed up, as it had not been *sor'd*. *Spenser.*

SORE, *s.* [*sor-falcon*, Fr. a *soare*-hawk, Cotgrave; from *saur*, brown.] A hawk of the first year.—The distinction of eyes and ramage hawks, of *sores* and enter-mewers. *Sir T. Brown.*—A buck of the fourth year [from *saur*, Fr.]—A buck is the first year a fawn; the second year, a pricket, the third year, a sorrell; and the fourth year, a *soare*. *Return from Parnassus.*

SORE, a town of France, department of the Landes. Population 1500.

SORECABA, a river of Brazil, which empties itself, in Lat. 23. 31. S. into the Tiete, which carries its waters to the great river Parana. There is a town of the same name on its banks; and in the neighbourhood are several mountains, abounding in rich oxide of iron, which, on smelting, has been found of good quality.

SO'REHON, or SO'RN, *s.* [Irish and Scottish.] A kind of arbitrary exaction or servile tenure, formerly in Scotland, as likewise in Ireland. Whenever a chieftain had a mind to revel, he come down among the tenants with his followers, by way of contempt called in the lowlands *giliwitfitts*, and lived on free quarters; so that ever since, when a person obtrudes himself upon another, stays at his house, and hangs upon him for bed and board, he is said to *sorn*, or be a *sorner*. *Macbean.*—They exact upon them all kinds of services; yea, and the very wild exactions, coignie, livery, and *sorehon*; by which they poll and utterly undo the poor tenants and freeholders under them. *Spenser.*

SO'REL, or SO'RREL, *adj.* [*saur*, Fr.] Reddish; inclining to a red colour: as a *sorrel* horse.—To redden herrings, lay them on hurdles in a close room, and there smoke them with the dried leaves of elm or oak, or with tanner's bark, until they have gotten their *sorrel* hue. *Cotgrave.*

SO'REL, or SO'RREL, *s.* [dimin. of *sore*, from *saur*, Fr.] A buck of the third year. See SORE.—I am but a mere *sorell*, my head's not hardened yet. *A Christian turned Turk.*

SOREL, a seigniori of Lower Canada, in the south side of the St. Lawrence, in the county of Richlieu and Surry.

SOREL, or WILLIAM HENRY, a town of Lower Canada, pleasantly situated at the confluence of the Richlieu, Chambly, or Sorel river, with the St. Lawrence. It stands on the site of a fort, built in the year 1665, by order of M. de Tracy, similar to those erected in the neighbourhood of Montreal, &c., as a defence against the incursions of the Indians, and which received its name from Sorel, a captain

of engineers, who superintended its construction. The plan of it covers about 120 acres of ground, although at present the number of houses does not much exceed 150, exclusive of stores, barracks, and government buildings. It is laid out with regularity, the streets intersecting each other at right angles, and having in the centre a square 170 yards on each side. The dwelling-houses are of wood, substantially and well constructed, but the Protestant and the Catholic churches are both stone buildings. There are eight principal streets, that, like the town itself, are named after different branches of the royal family. The whole population is about 1500. Before the town, the bank of the Richlieu is from ten to twelve feet high, having near the point two small wharfs or landing places. The river is here two hundred and fifty yards broad, with from two and a half to five and a half fathoms of water. On the opposite shore there are convenient places for building vessels, and where some of large tonnage have been constructed; but latterly, this branch of trade has not been so much attended to here as it used to be. A small distance from a little rivulet, to the southward of the place, is a blockhouse and an hospital; and a little further on, a good wooden building, with out-houses, gardens, &c., called the government-house, serving as a residence for the commanding officer of the troops stationed here, usually one or two companies of infantry. The present town of Sorel was begun about the year 1785, when some loyalists and disbanded soldiers settled at it; and it still continues to be the residence of many old military servants of the crown, who exist upon pensions allowed them by government. Some trade is carried on here; but not so much as it might be supposed its situation at the junction of two navigable rivers would command. Lat. 46. 5. N. long. 72. 55. W.

SOREL RIVER. See RICHLIEU.

SO'RELY, *adv.* With a great degree of pain or distress.—Here's the smell of the blood still; all the perfumes of Arabia will not sweeten this little hand. Oh! oh! oh!—What a sigh is there? the heart is *sorely* overcharged. *Shakespeare.*—With vehemence dangerous or afflictive.

I have done ill,
Of which I do accuse myself so *sorely*,
That I will enjoy no more. *Shakespeare.*

SO'RENESS, *s.* [ʃæpnýʃe, Sax.] Tenderness of a hurt.—My foot began to swell, and the pain asswaged, though it left such a *soreness*, that I could hardly suffer the clothes of my bed. *Temple.*

SOREX, or SHREW, in Natural History, a genus of the Mammalia Feræ class and order, of which the following is the Generic Character: there are two upper fore-teeth, which are long and bifid; the lower fore-teeth are from two to four, the intermediate ones are shorter; there are several tusks on each side; the grinders cuspidate. Seventeen species are enumerated in Gmelin's last edition of the Linnæan genera, which are as follow:—

1. *Sorex cristatus*, or crested shrew.—The nostrils in this species are carunculate: the tail is short.—It inhabits North America.—The whole animal is four inches long, and the tail an inch and a quarter: it feeds on roots, and resembles the mole in its face and snout.

2. *Sorex minutus*, or minute shrew.—The snout of this species is very long, and it has no tail.—It inhabits Siberia, in moist woods, under the roots of trees; it makes its nest of lichen, collects seeds, runs and burrows quickly; it bites, has the voice of a bat, and weighs about a drachm.

3. *Sorex aquaticus*, or aquatic shrew.—In this species, the hind-feet are palmate; fore feet are white; the tail is short and white.—It is an inhabitant of North America, and is the size of a mole.

4. *Sorex moschatus*. Feet palmate, tail flattened, thickest in the middle.—This is called the musky shrew; it inhabits about the lakes of Volga and Tanais; burrows under the banks, with an entrance into the water; feeds on flags and fish; the body of the animal is seven inches long, and the tail is eight.

5. *Sorex bicolor*, or water shrew. The tail of this species is of the mean length; it is naked; the body is blackish, beneath it is cinereous; the toes are fringed.—It inhabits Europe and Siberia, near swamps and rivers; swims easily, often under water; the female has ten teats, and brings forth nine young at a time; it makes a noise like the chirp of a grasshopper; the body of the animal is four inches long, and the tail two.

6. *Sorex murinus*, or murine shrew. The tail is of a middle length; the body is brown, feet and tail cinereous.—It inhabits Java, and is the size of a mouse.

7. *Sorex araneus*, or fetid shrew.—The tail of this species is of the middle length; the body beneath is whitish.—It inhabits almost every part of Europe, and in the northern climates of Asia; it lives in old walls, stables, yards, granaries, out-houses, swamps, and pools; it feeds on corn and insects; it smells of musk; is killed, but not eaten, by cats; the voice is shrill; it runs much slower than a mouse; brings five or six young ones in spring and summer; it is seldom so long as three inches. There are two varieties: 1. Head, and upper parts, dusky; sides brownish rusty.—This is found in Hudson's Bay and Labrador. 2. The upper parts are of a dusky grey, and underneath the animal is of a yellowish white.

8. *Sorex Surinamensis*, or Surinam shrew.—The tail of this species is half as long as the body; the body above is chestnut, beneath white and yellowish grey.—It is found, as its specific name denotes, at Surinam.

9. *Sorex pusillus*, or timid shrew.—Ears rounded; tail short, a little fringed at the sides. It inhabits the northern parts of Persia, in holes which it burrows, it is three inches and a half long; the body is of a dark grey above, and the belly is paler.

10. *Sorex Brasiliensis*.—The body of this species is brown, the back is black, with three stripes.—It inhabits Brasil, is about five inches long, with a tail of two inches in length.

11. *Sorex exilis*.—The tail of this is very thick in the middle, tapering to each end.—It inhabits Siberia; it is the smallest of quadrupeds, scarcely weighing half a drachm; it is like, though of a darker colour, the *sorex araneus*.

12. *Sorex cæruleus*, or blue shrew.—The tail is of a mean length; the upper parts are of a pale blue; the belly is lighter; the legs and feet are white.—It inhabits Java, and the other East Indian islands, feeds on rice, smells strongly of musk, is eight inches long; with a tail about half that length.

13. *Sorex Mexicanus*, or Mexican shrew.—The tail is short; the fore-feet are three-toed; the hind-feet have four toes.—It is found in New Spain; burrows in vast numbers, feeds on roots and seeds; the flesh is good; it is about nine inches long.

14. *Sorex albipes*, or white-footed shrew.—Tail slender, hairy; upper parts dusky-ash; feet, belly, and teeth, white.

15. *Sorex quadri-caudatus*, or square-tailed shrew. The tail, as its specific name denotes, is squarish; the head and upper parts are of a dusky-ash; the belly is paler; the fore-teeth are brown.

16. *Sorex luri-caudatus*, or carinate shrew.—The tail is taper, keeled underneath; head and upper parts dusky-ash, belly whitish; fore-teeth brown, a white spot behind each eye.

17. *Sorex unicolor*.—The tail is compressed at the base; the body is of an uniform dusky ash.—It is observed by Gmelin, that the last four, described as distinct species, are probably only varieties of the *sorex araneus*.—They are all found near Strasburg.

SOREZE, a town of France, department of the Tarn. Population 2700. It has a large provincial school, with about 500 pupils; 33 miles south of Albi.

SOREZE, a town of France, department of the Tarn; 14 miles south-west of Castres, with a public school. Population 2700.

SORGHUM, a name of oriental or barbarous origin. See HOLCUS.

SORGUES, a large river of France, in Provence, which

issues from the well known *Fontaine de Vaucluse*, becomes navigable at 300 paces from its source, and falls into the Rhone near Avignon.

SORGUES, a town of France, department of the Vaucluse, situated at the junction of the Sorgues and the Louveze. Population 1400; 6 miles north-east of Avignon.

SORIA, a province in the interior of Spain, in Old Castile, lying to the west of Navarre and Arragon. Its area is 4300 square miles; its population about 200,000. It is hilly almost throughout, being intersected by the Sierras or chains called respectively *Ministra*, *Moncayo*, and *Paredes*. Even its plains are elevated, narrow, and by no means fertile, with the exception of a track along the Ebro, called *Rioja*. The climate is mild in the valleys, but bleak on the hills. The products are of considerable variety; but the elevation of the surface, together with the neglect of tillage, render the breeding of sheep the most profitable employment, and the sale of the wool and lambs the principal object of traffic. A good deal of wine and fruit is raised in this province, and a small quantity of hemp and flax. There are a few manufactures of woollen, linen, paper, and leather, all confined to home consumption. The Ebro flows through the north-east corner, and the Douro has its source in this high district, in which it is joined by the *Tajuna* and *Ucero*. The other rivers of the province are the *Jalon*, the *Cidacos*, and the *Alamo*. It has several small lakes.

SORIA, the chief town of the above district, is situated on the Douro, not far from its source. It contains 6000 inhabitants, has fifteen churches and chapels, eleven monasteries, and four hospitals. It has also a few manufactures of silk stockings, leather, soap, and woollens, with some trade in wool. It is, however, a dull and gloomy place. Near this was the site of the ancient *Numantia*; 110 miles north-east of Madrid, and 49 west-north-west of *Calatayud*.

SORIANG, a river on the west coast of the island of Celebes, which runs into the sea. Lat. 3. 9. S. long. 119. 48. E.

SORIANO, a town of Naples, in Calabria Ultra, with 3600 inhabitants; 6 miles east-south-east of *Mileto*.

SORIASCO, a town of the Sardinian states, in the Milanese, with 1200 inhabitants.

SORIGO, a small town of Austrian Italy, on the west bank of the lake of Como.

SORITES, *s.* [σωρητης.] Properly an heap. An argument where one proposition is accumulated on another.—*Chrysippus* the Stoick invented a kind of argument, consisting of more than three propositions, which is called *sortes* or a heap *Dryden*.—More properly *Sortes* is defined a kind of argument, in which several middle terms are chosen to connect one another successively in several propositions, till the last proposition connects its predicate with the first subject. Whence *Cicero* calls it *sylogismus acervatus*, an accumulative syllogism.

Such was that merry argument of *Themistocles*, to prove, that his little son, under ten years old, governed the whole world. Thus: "My son governs his mother; his mother me; I the Athenians; the Athenians the Greeks; Greece commands Europe; Europe the whole world: therefore my son commands the whole world."

This method of disputing prevailed much among the Stoics; especially with *Zeno* and *Chrysippus*.

SORLIN, St., a town of France, department of the Ain, near the Rhone. Population 1000.

SORN, a parish of Scotland, in Ayrshire, of nearly a square form, and about 6½ miles long on each side. Population 3348.

SORNAC, a town of France, department of the Correze, near the river *Diegc*. Population 1500; 36 miles north-east of *Tulle*.

SORO, a river of Estremadura, which runs into the *Tagus*, near *Salvaterra*.

SOROCEPHALUS, in Botany, so named by *Mr. Brown*, from *σωρος*, a heap, and *κεφαλη*, the head, alluding to the aggregate, or crowded, heads of flowers. See *PROTEA*.

SOROE,

SOREX, TALPA, TAPIR.

1. *S. minutus*. 2. *T. asiaticus*. 3. *T. longicaudata*. 4. *T. europaea*. 5. *T. americana*.

SOROE, a town of Denmark, in the island of Zealand, situated on a lake. Population 500; 35 miles south-west of Copenhagen.

SORO'RICIDE, *s.* [*soror* and *cædo*.] The murder of a sister.

SORR, a village of Bohemia, in the circle of Konigingratz.

SOR'RAGE, *s.* The blades of green wheat or barley.

SO'R'RANCES, *s.* [In Farriery.] Any disease or sore in horses. *Dict.*

SORRAYA, a river of Portugal, in Alentejo, which falls into the Tagus,

SOR'REL, *s.* [*rube*, Saxon; *sorel*, French; *oxalis*, Lat.] This plant agrees with the dock in all its characters, and only differs in having an acid taste. *Miller*.—Of all roots of herbs the root of *sorrel* goeth the farthest into the earth. It is a cold and acid herb that loveth the earth, and is not much drawn by the sun. *Bacon*.

SO'REL, *adj.* See SOREL.

SORRENTO, a town of Italy, built on a peninsula, on the south side of the gulf of Naples, between the mountains of Vico and Massa, which shelter it from the west and south winds. Its situation is delightful, being surrounded with gardens. It contains only 4200 inhabitants, although the number of ancient marbles, and of the ruins of edifices, shew it to have been formerly much more extensive. Of its temples those of Juno, Diana, and Hercules, were the most magnificent. Its wines were in former ages accounted little inferior to the most renowned of Italy. At present, though not in so high repute, they are raised in large quantities; also olives, oranges, silk, all in the adjacent plain, which is beautiful and well cultivated. Part of the silk is manufactured in the town. Sorrento is the see of an archbishop, and gave birth to Tasso, the celebrated poet; 15 miles south-south-east of Naples.

SO'RRIPLY, *adv.* Meanly; poorly; despicably; wretchedly; pitifully.—How does this hero in buskins perform; so wretchedly and *sorriply*, so exactly to the same tune and his wonted pitch, that he has not struck one right stroke. *Bentley*.

SO'R'RINESS *s.* Meanness; wretchedness; pitiableness; despicableness.

SORROKA, a small town of European Russia, in Moldavia, on the Dniester.

To SO'RROW, *v. n.* [*saurgan*, Gothic; *rorzian*, Sax.] To grieve; to be sad; to be dejected.

The miserable change, now at my end,
Lament, nor *sorrow* at. *Shakspeare*.

S'O'RROW, *s.* [*rorz*, Saxon, from *rorzran*; *saurgan*, M. Goth. *sorga*, Su. Goth. to grieve. *Serenius*.] Grief; pain for something past; sadness; mourning. Sorrow is not commonly understood as the effect of present evil, but of lost good.

Sorrow on thee, and all the pack of you;
That triumph thus upon my misery! *Shakspeare*.

SO'RROWED, *adj.* Accompanied with sorrow. *Out of use*.

Now the public body, which doth seldom
Play the recanter, feeling in itself
A lack of Timon's aid, hath sense withal
Of its own fall, restraining aid to Timon:
And sends forth us to make their *sorrowed* tender. *Shakspeare*.

SO'RROWFUL, *adj.* [Sax. *rorzfull*.] Sad for something past; mournful; grieving.—Blessed are they which have been *sorrowful* for all thy scourges; for they shall rejoice for thee, when they have seen all the glory. *Tob*.—Deeply serious. *Not in use*.—Hannah said, No, my lord, I am a woman of a *sorrowful* spirit: I have poured out my soul before the Lord. *1 Sam*.—Expressing grief; accompanied with grief.—The things that my soul refuseth to touch are as my *sorrowful* meat. *Job*.

S'ORROWFULLY, *adv.* In a sorrowful manner. *Barret*.—The matter he hath *sorrowfully* lamented. *Ld. Herbert*.

SO'RROWFULNESS, *s.* [Sax. *rorzfulneſſe*.] State of being sorrowful.

SO'RROWING, *s.* [*rorzgunz*, Sax. lamentatio.] Expression of sorrow.

Marina, hearing sighs, to him drew near;
And did entreat his cause of grief to hear;

————— Her beauty was the sting,
That caused all this instant *sorrowing*. *Browne*.

SORROWLESS, *adj.* [Sax. *rorzleaf*.] Without sorrow. *Huloet*.—If their repentance be *sorrowless*, it will prove but a sorry one. *Hewyt. Serm*.

SO'R'RY, *adj.* [*rapuz 'raru, ræru* Sax.] Grieved for something past. It is generally used of slight or casual mis-carriages or vexations, but sometimes of greater things. It does not imply any long continuance of grief.—I'm *sorry* for thee, friend; 'tis the duke's pleasure. *Shakspeare*.—Melancholy; dismal.

They espied

A *sorie* sight as ever seen with eye;
A heedless ladie lying him beside,
In her own blood all swallow'd woefully. *Spenser*.

[From *saur*, filth, Icelandic. Dr. Johnson.—Hence our word was at first *sowry*, in this sense. "Sowry or defiled." Prompt. Parv. in *V. Soure*, or *Filth*.] Vile; worthless; vexatious.

How now, why do you keep alone?
Of *sorricst* fancies your companions making,
Using those thoughts which should, indeed, have died
With them they think on. *Shakspeare*.

SORT, *s.* [*sorte*, French.] A kind; a species.—To Adam in what *sort* shall I appear? *Milton*.—A degree of any quality.—I shall not be wholly without praise, if in some *sort* I have copied his style. *Dryden*.—A class, or order of persons.

I have bought

Golden opinions from all *sorts* of people. *Shakspeare*.

A company; a knot of people.
Mine eyes are full of tears: I cannot see;
And yet salt water blinds them not so much,
But they can see a *sort* of traitors here. *Shakspeare*.

Rank; condition above the vulgar.—Is signior Montanto returned from the wars?—I know none of that name, lady; there was none such in the army of any *sort*. *Shakspeare*.
[*Sortes*, Lat.] A lot. *Out of use*.

Make a lott'ry,
And by decree, let blockish Ajax
Draw the *sort* to fight with Hector. *Shakspeare*.

A pair; a set; a suit.
To SORT, *v. a.* [*sortiri*, Lat.] To separate into distinct and proper classes.

I come to thee for charitable licence,
To *sort* our nobles from our common men. *Shakspeare*.

To reduce to order from a state of confusion,

Let me not be light;
For a light wife doth make a heavy husband;
And never be Bassanio so from me;
But God *sort* all! *Shakspeare*.

To conjoin; to put together in distribution.
The swain perceiving by her words ill *sorted*,
That she was wholly from herself transported. *Brown*.

To cull; to choose; to select.

Send his mother to his father's house,
That he may *sort* her out a worthy spouse. *Chapman*.

To SORT, *v. n.* To be joined with others of the same species.—Nor do metals only *sort* and herd with metals in the

the earth, and minerals with minerals; but both in common together. *Woodward*.—To consort; to join.—The illiberality of parents towards their children, makes them base, and *sort* with any company. *Bacon*.—To suit; to fit.

The Creator calling forth by name
His mighty angels, gave them several charge,
As *sorted* best with present things.

Milton.

[*Sortir*, to issue, French.] To determine; to issue.—It *sorted* not to any fight, but to a retreat. *Bacon*.—Princes cannot gather this fruit, except they raise some persons to be companions; which many times *sorteth* to inconvenience. *Bacon*.—To have success; to terminate in the effect desired.—The slips of their vines have been brought into Spain, but they have not *sorted* to the same purpose as in their native country. *Abbot*.—To fall out. [from *sort*, a lot. French.]

And so far am I glad it did so *sort*,
As this their jangling I esteem a sport.

Shakespeare.

SORT, a seaport town of Tripoli, in Africa, situated in the gulf of Sidra or Syrtis. Lat. 30. 28. N. long. 16. 55. E.

SORTABLE, *adj.* [sortable, Fr.] Suitable; befitting; *Cotgrave* and *Sherwood*.—The flourishing state of learning, *sortable* to so excellent a princess. *Bacon*.

SORTABLY, *adv.* Suitably; fitly. *Cotgrave* and *Sherwood*.

SORTAL, *adj.* A word formed by Locke, but not yet received.—As things are ranked under names, into sorts or species only as they agree to certain abstract ideas, the essence of each sort comes to be nothing but that idea which the *sortal*, if I may so call it from *sort*, as I do general from *genus*, name stands for. *Locke*.

SORTANCE, *s.* Suitableness; agreement.
Here doth he wish his person, with such power
As might hold *sortance* with his quality,
The which he could not levy

Shakespeare.

SORTASCH, a village of European Russia, in the Crimea, near Bachiserai.

SORTES, Lots, in Antiquity, a method of deciding dubious cases, where there appeared no ground for a preference; by referring the decision to chance; as in casting of dice, drawing of tickets, &c.

SORTILEGE, *s.* [sortilegium, Lat.] The act or practice of drawing lots.

SORTILEGIUS, *adj.* Relating to sortilege.—Horace makes the blood of frogs an ingredient in *sortilegious* charms. *Daubuz*.

SORTINO, a town of Sicily in the quarter called Val di Noto. Population 6000. It is an inland place, of little commercial intercourse, and seldom visited by travellers.

SORTINSKOI, a village of Tobolsk, in Asiatic Russia; 72 miles south-south-west of Beresof.

SORTITION, *s.* [sortitio, Lat.] Selection or appointment by lot. *Cockeram*.—The soldiers have parted thy garments, and cast lots upon thy seamless coat: those poor spoils cannot so much enrich them as glorify thee, whose Scriptures are fulfilled by their barbarous *sortitions*. *Bp. Hall*.

SORTMENT, *s.* The act of sorting; distribution.—A parcel sorted or distributed.

SORUT, a district of Hindostan, province of Gujerat, the proper name of which is *Cottiar*.

SOS, a town of Spain, in Arragon, with 2400 inhabitants; 4 miles south-south-east of Sanguesa.

SOSA, a large village of Germany, in Saxony, where there is a considerable manufacture and export of tin; 25 miles south-south-west of Chemnitz.

SOSHA, a large river of European Russia, in the government of Orel. It falls into the Wolga.

SOSIGENES, a Peripatetic philosopher, and skilful astronomer, was brought from Egypt by Julius Cæsar, with the view expressly of assisting him in reforming the calendar. The philosopher, by tolerably accurate observations, disco-

vered that the year was 365 days and 6 hours; and to make allowance for the odd hours, he invented the intercalation of one day in four years; and the duplication of the sixth day before the calends of March was the intercalary day; and hence the year in which this took place was called *Bissextile*. This was called the Julian year, the reckoning by which commenced in the 45th year B. C. and continued till it gave place to something more accurate, and a still farther reformation under Pope Gregory XIII. Sosigenes was author of a commentary upon Aristotle's book "De Cælo."

SOSNITZA, a small town of European Russia, in the government of Czernigov; 50 miles east-by-north of Czernigov.

SOSNOVOI, an island in the river Angara, in Asiatic Russia; 96 miles north-north-west of Ilmsk.

SOSNOUSKOL, a village of Asiatic Russia, in the government of Kolivan. Lat. 55. 50. N. long. 85. 44. E.

SOSPELLO, a domain or district of the Sardinian states, formed of part of the county of Nice, and containing nearly 40,000 inhabitants.

SOSPELLO, a town of the Sardinian states, in Piedmont, on the river Bevara. Population 3200; 10 miles north-east of Nice.

TO SOSS, *v. n.* [A cant word. *Dr. Johnson*.—Perhaps a corruption of *To souse*, from the Fr. *sous*, down.] To sit lazily on a chair; to fall at once into a chair.

The winter sky began to frown,
Poor Stella must pack off to town;
From wholesome exercise and air,
To *soassing* in an easy chair.

Swift.

SOSS, *s.* A lazy fellow; a lusk. *Cotgrave* and *Sherwood*.

SOSTE, a navigable river of Westphalia, which rises in the principality of Osnabruck, flows through Lower Munster and East Friesland, and falls into the Ems near Leer.

SOSTRATUS, the most eminent architect of his time, was a native of Gnidos, in Lesser Asia, and flourished in the third century before the Christian era. The patronage which he met with, caused him to be denominated the friend of kings; and he was particularly in favour with Ptolemy Philadelphus, sovereign of Egypt. He is celebrated in history likewise for the *terraces*, supported on arcades, which adorned his native city; and the famous *Pharos*, the light-house of Alexandria, which was reckoned one of the wonders of the world. He transmitted his name to posterity by an inscription on this light-house, in the Greek language, of which the translation is, "Sostratus of Gnidos, the son of Dexiphanes, dedicates this to the gods, the protectors of navigators."

SOSVA, the name of two considerable rivers of the government of Tobolsk, in Asiatic Russia. The first rises in the Urals, about the 65th degree of north lat., and running almost due east, falls into the Obi, near Beresof, after a course of about 160 miles. It receives a smaller river of the same name, called the Little Sosva. The other river rises in the same chain of mountains, but somewhat farther to the south; and after running southwards about 200 miles, joins the Sosva, when the united streams take the name of Tauda.

SOT, *s.* [ȝot, Norm. Sax. ȝot-ȝeipe, a state of folly; *sot*, Fr. *sot*, Teut. The word is old in our language: "as it were a *sote*, I stood astonished." Chaucer, Flower and Leaf. Serenius refers the word to the Icel. *saud*, pecus, bestia.] A blockhead; a dull ignorant stupid fellow; a dolt.

Of the loyal service of his son,
When I inform'd him, then he call'd me *sot*;
And told me I had turn'd the wrong side out.

Shakespeare.

A wretch stupified by drinking.
To **SOT**, *v. a.* To stupify; to besot; to infatuate.—The *soted* priest, who was gladder than he? *Chaucer*.

I am *sotted*,
Utterly lost; my virgin's faith has fled me.

Beaum. and Fl.
To **SOT**, *v. n.* To tittle to stupidity.

SOTA

SOTA DE PALANA, a town of the island of Cuba; 100 miles south-west of Havannah.

SOTBY, a parish of England, in Lincolnshire; 5 miles east of Wragby.

SOTCHEOU, a city of China, of the second rank, in Chan-si, bordering immediately on Chinese Tartary. Lat. 39. 38. N. long. 98. 44. E.

SOTCHEOU, a town of Corea; 403 miles east of Peking.

SOTER, a small town in Sweden, in the province of Dalecarlia. Near it is an old and productive iron mine.

SOTERIA, [formed from σωτηρ, Saviour,] in Antiquity, sacrifices offered to the gods, in gratitude for their having delivered a person from danger.

The term is also applied to poetical pieces composed for the same end.

SOTHERTON, a parish of England, in Suffolk; 4 miles east-north-east of Halesworth.

SOTRAN, a village of Yemen, in Arabia; 44 miles south-south-west of Saada.

SOTTEGHEM, an inland town of the Netherlands, in East Flanders, with 1700 inhabitants; 9 miles east of Audenarde.

SOTTERLY, a parish of England, in Suffolk; 5 miles south-south-east of Beccles.

SOTTISH, *adj.* Dull; stupid; senseless; infatuate; doltish.

All's but nought:
Patience is *sottish*, and impatience does
Become a dog that's mad.

Shakspeare.

Dull with intemperance.

SOTTISHLY, *adv.* Stupidly; dully; senselessly. — Northumberland, *sottishly* mad with over-great fortune, procured the king, by his letters patent under the great seal, to appoint the lady Jane to succeed him in the inheritance of the crown. *Hayward.*

SOTTISHNESS, *s.* Dullness; stupidity; insensibility. — Few consider what a degree of *sottishness* and confirmed ignorance men may sin themselves into. *South.* — Drunken stupidity. — No sober temperate person can look with any complacency upon the drunkenness and *sottishness* of his neighbour. *South.*

SOTWELL, or SATWELL, a parish of England, in Berkshire; 2 miles west-north-west of Wallingford.

SOUADY, a small island in the Indian sea, near the coast of Ommon, in Arabia. Lat. 24. 14. N.

SOUKIN. See SUAKIN.

SOUALLY, a village of Upper Egypt, on the eastern coast of the Nile; 23 miles south of Abu-Girge.

SOVANA, SUANA, or SOANA, a small town of Italy, in the grand duchy of Tuscany. Its atmosphere is unhealthy. It is the see of a bishop; 43 miles north-north-west of Rome.

SOVAR. See SALZBURG.

SOUBANDIE, a small town of Asia Minor, situated on a small lake near the river Sikaria; 25 miles south-east of Is Nikmid.

SOUCE, *s.* See SOUSE.

SOUCEYRAC, a town of France, department of the Lot, with 1600 inhabitants.

SOUCHONG, *s.* A kind of tea.

SOUDAH, a rocky desert track on the route from Tripoli to Fezzan, requiring four days to cross. It yields no water; and produces no vegetable of any use.

SUDAN, the name given by the Moors of Northern Africa to a vast track of territory in the interior of that continent. The term signifies properly the Country of the Negroes, but is in great measure restricted to part of it situated on the banks of the Niger, being that chiefly with which the Moors maintain a commercial intercourse. Their caravans, crossing the vast desert which intervenes, carry into Soudan the manufactures of Europe and of the East Indies, and bring in return gold, ivory, and slaves. The tracks comprehended under the

name of Soudan are among the most imperfectly known of any in Africa, or indeed in the globe, and the efforts made by Europeans to explore them have been attended hitherto with very little success. As the name, however, is not native, and is vaguely applied to an indefinite extent of country, the measure of information possessed by us respecting Soudan will be best given under the general head of Africa, and under those of Tombuctoo, Houssa, Cassina, and other regions into which it is divided.

SODANG, a village of the island of Celebes, at the south end of it, situated at the foot of a mountain bordering on Maros river. Saltpetre is procured at this village.

SOUE SOUA, a small village of the peninsula of Caboceiro, near Mosambique, in Eastern Africa.

SOUEIB, a village of Irak Arabi, in the Euphrates; 20 miles north-west of Bassora.

SOUEICH, a town of France, department of the Upper Garonne. Population 1100.

SOUEKI, a town of China, of the third rank, in Quang-tong.

SOVEL, a small island in the Chinese sea, near the coast of Tonquin.

SOVENANCE, *s.* [See SOUVENANCE.] Remembrance — To dwell in darkness without *sovenance*. *Spenser.*

SOVEREIGN, *adj.* [soverain, French: *sovrano*, Italian, according to which form Milton wrote this word, *sovrán*.] — Supreme in power; having no superior.

You, my *sovereign* lady,
Causeless have laid disgraces on my head. *Shakspeare.*

None of us who now thy grace implore,
But held the rank of *sovereign* queen before,
Till giddy chance, whose malice never bears
That mortal bliss should last for length of years,
Cast us down headlong from our high estate. *Dryden.*

Supremely efficacious; predominant over diseases.

Love wounded Protheus,
My bosom, as a bed,
Shall lodge thee, till thy wound be throughly heal'd,
And thus I search it with a *sovereign* kiss. *Shakspeare.*

SOVEREIGN, *s.* Supreme lord.

O, let my *sovereign* turn away his face,
And bid his ears a little while be deaf. *Shakspeare.*

SOVEREIGN, a gold coin of 20s. value, equal to the double ryal, which was coined by order of Henry VII. in the year 1485; and this was accompanied by the double sovereign of 40s. Henry VIII., in 1527, added to the gold denominations sovereigns of 22s. 6d., and ryals of 11s. 3d., angels of 7s. 6d., and nobles at their old value of 6s. 8d. In 1546 the same prince, after raising the value of silver, and making it to gold as 1 to 5, struck sovereigns of the former value of 20s., and half-sovereigns in proportion. Upon the union of the crowns, James I. of England gave the sovereign the name of unite, it being then of 20s. value. The sovereign, which had been commonly termed the "broad-piece," under the Commonwealth assumed the univindious name of the twenty-shilling piece, which it retained till supplanted by that of the guinea, which was proclaimed in 1663, and to pass for 20s. But it never went for less than 21s. by tacit and universal consent. *Pinkerton's Ess. on Medals.*

This coin has been resumed in the present reign, and passes, as we presume all our readers know, for 20s.

To SOVEREIGNIZE, *v. n.* To exercise supreme power. — Her royalties were spacious, as *sovereignizing* over many towns and provinces. *Sir T. Herbert.*

SOVEREIGNLY, *adv.* Supremely; in the highest degree. He was *sovereignly* lovely in himself. *Boyle.*

SOVEREIGNTY, *s.* [soveraineté, French.] Supremacy; highest place; supreme power; highest degree of excellence.

Give me pardon,
That I, your vassal, have employed and pain'd
Your unknown *sovereignty*. *Shakspeare.*

SOUERICK, a town of Armenia, in the pachalic of Ourfa, and on the road from Ourfa to Diarbekir. It contains about 500 inhabitants, with three mosques and a strong castle; 60 miles north-east of Ourfa.

SOUFFLOT (James-Germain), an eminent architect, was born in 1714 at Irancy, near Auxerre. It being resolved that several public buildings should be erected at Lyons, he was recommended to undertake a part of the work, by the director of the French academy at Rome; and the construction especially of the exchange and the hospital was committed to him. The noble simplicity of the hospital, together with its excellent adaptation to the object for which it was intended, were universally admired, and raised him to high reputation as an artist. He was, after this, employed to build the concert-room and theatre of the same city. In 1757 he laid the foundation of the church of St. Genevieve, of which he was able only to finish the portal, the nave, and the towers. In this business he subjected himself to some severe criticism, especially with respect to the possibility of erecting the intended dome upon the bases designed to bear it; though some exact calculations justified his plan. The criticisms and unfriendly remarks of his rivals were more than his temper, naturally irritable, could bear; and he died, partly of chagrin in the year 1780, at the age of 67. Besides the public works already mentioned, he executed many others, which display the powers of a great artist; and after his death, M. Dumont, professor of architecture, published a book of Designs, which he had left behind him, under the title of "Elevations et Coupes de quelques Edifices de France et d'Italie, designées par feu M. Soufflot, Architecte du Roi, et gravées par ses Ordres."

SOUFFRIER MOUNTAIN, the most northerly of the lofty chain running through the centre of the island St. Vincent, and the highest of the whole, as computed by the most accurate survey that has yet been taken. For some time previous to the 30th April, 1812, this memorable mountain had indicated much disquietude; and from the extraordinary frequency and violence of earthquakes (which are calculated to have exceeded 200 within the preceding year), had portended some great movement or eruption. A century had elapsed since the last convulsion of this mountain; it seemed to have settled into permanent tranquillity, and the luxuriant vegetation and growth of the forest which covered its sides, from the base nearly to the summit, appeared even to discountenance the fact that it had once been a volcano. The crater of the volcano was, however, still to be seen.

On Monday 27th April, 1812, an abrupt and dreadful crash from the mountain, with a severe concussion of the earth, and tremulous noise in the air, alarmed all around it. The resurrection of this fiery furnace was proclaimed in a moment by a vast column of thick, black, ropy smoke, like hat of an immense glass-house, bursting forth at once, and mounting to the sky; showering down sand, with gritty alced particles of earth and favilla mixed, on all below. This driven before the wind towards Wallibon and Morne Ronde, darkened the air like a cataract of rain, and covered the ridges, woods, and cane-pieces, with light grey coloured ashes, resembling snow when slightly covered by dust. As the eruption increased, this continual shower expanded destroying every appearance of vegetation. At night a very considerable degree of ignition was observed on the lips of the crater; but it is not asserted that there was as yet any visible ascension of flame. The same awful scene presented itself on Tuesday; the fall of favilla and calcined pebbles still increasing, and the compact pitchy column from the crater rising perpendicularly to an immense height, with a noise, at intervals, like the muttering of distant thunder. On Wednesday the 29th, all these menacing symptoms of horror and combustion became more thick and terrific. The prodigious column shot up with quicker motion, dilata-

ting as it rose like a balloon. The sun appeared in total eclipse, and shed a meridian twilight over the island, that aggravated the gloom of the scene, now completely powdered over with falling particles. It was evident that the crisis was yet to come; that the burning fluid was struggling for a vent, and labouring to throw off the superincumbent strata and obstructions, which suppressed the ignivomous torrent. At night, it was manifest that it had greatly disengaged itself from its burden, by the appearance of fire flashing now and then, flaking above the mouth of the crater. On Thursday 30th April, the noise from the mountain had increased, and at times was incessant. About four o'clock it became still more alarming, and just before sunset, the clouds reflected a bright copper colour, suffused with fire. Scarcely had the day closed, when the flame burst at length pyramidically from the crater, through the mass of smoke; the rolling of the thunder became more awful and deafening; electric flashes quickly succeeded, attended with loud claps. Shortly after seven P. M. the mighty cauldron was seen to simmer, and the ebullition of lava to break out on the north-west side. This, immediately after boiling over the orifice, and flowing a short way, was opposed by the acclivity of a higher point of land, over which it was impelled by the immense tide of liquified fire that drove it on, forming the figure V in grand illumination. Sometimes, when the ebullition slackened, or was insufficient to urge it over the obstructing hill, it recoiled back, like a reflux billow from the rock, and then again rushed forward, impelled by fresh supplies, and scaling every obstacle, carrying rocks and woods together in its course down the slope of the mountain, until it precipitated itself down some vast ravine, concealed from the view by the intervening ridges of Morne Ronde. Vast globular bodies of fire were seen projected from the fiery furnace, and bursting, fell back into it, or over it, on the surrounding bushes, which were instantly set in flames. About four hours from the lava boiling over the crater, it reached the sea, as could be observed from the reflection of the fire and the electric flashes attending it. About half-past one, another stream of lava was seen descending to the east, towards Rabacca. At this time the first earthquake was felt: this was followed by showers of cinders, that fell with the hissing noise of hail during two hours. At three o'clock, a rolling on the roofs of the houses indicated a fall of stones, which soon thickened, and at length descended in a rain of intermingled fire, that threatened at once the fate of Pompeii or Herculaneum. The crackling and coruscations from the crater at this period exceeded all that had yet passed. The eyes were struck with momentary blindness, and the ears stunned with the glomeration of sounds. People sought shelter in cellars, under rocks, or anywhere, for everywhere was nearly the same; and the miserable negroes, flying from their huts, were knocked down or wounded, and many killed in the open air. Several houses were set on fire. The estates situate in the immediate vicinity seemed doomed to destruction. Had the stones that fell been heavy in proportion to their size, not a living creature could have escaped. This dreadful rain of stones and fire lasted upwards of an hour, and was again succeeded by cinders from three till six o'clock in the morning. Earthquake followed earthquake almost momentarily, or rather the whole of this part of the island was in a state of continued oscillation.

At break of day, if such it could be called, darkness enveloped the mountain, and an impenetrable haze hung over the sea, with black sluggish clouds of a sulphureous cast. The whole island was covered with favilla, cinders, scoria, and broken masses of volcanic matter. It was not until the afternoon that the muttering noise of the mountain sunk gradually into silence.

SOUFFRIERE BAY, a bay on the east coast of the island of Dominica. Lat. 15. 31. N. long. 61. 17. W.

SOUGH, *s.* [from *sous*, French.] A subterraneous drain. — Yet could not such mines, without great pains and charges, if

if at all, be wrought; the delis would be so flown with waters it being impossible to make any addits or *soughs* to drain them, that no gins or machines could suffice to lay and keep them dry. *Ray*.

SOUGHT. The pret. and participle pass. of *seek*.—I am *sought* of them that asketh not for me: I am found of them that *sought* me not. *Isa*.

SOUHAGE, a large village of Upper Egypt; 7 leagues south of Tahta.

SOUILLAC, a town of France, department of the Lot, on the Dordogne, with 1300 inhabitants. It has some manufactures of linen, and a considerable trade in leather and salt. Lat. 44. 53. N. long. 1. 34. E.

SOULLY, a town of France, department of the Meuse, with 800 inhabitants: 7 miles south-south-west of Verdun.

SOUL-TCHEOU, a city of China, of the first rank, situated at the confluence of the rivers Yan and Kincha. The country round is fertile, though mountainous, and the place carries on a considerable trade. Lat. 28. 40. N. long. 104. 23. E.

SOU-TE, a city of China, of the second rank, in the province of Chan-si. Lat. 37. 38. N. long. 109. 34. E.

SOUKENE, a small sea-port of Tripoli, in Africa; 130 miles south of Tripoli.

SOUL, *s.* [jaul, Saxon; *saal*, Icel. *seele*, Germ. *saiwala*, Goth. consent. *aliis ling. et dialect. bene multis*. Serenius. The old form of our word was *saul*. "By Christe's *saule*." Chaucer.]—The immaterial and immortal spirit of man.

Perhaps for want of food the *soul* may pine;
But that were strange, since all things bad and good;
Since all God's creatures, mortal and divine;
Since God himself is her eternal food. *Davies*.

Intellectual principle.—Eloquence the *soul*, song charms the sense. *Milton*.—Vital principle.

Thou almost mak'st me waver in my faith;
To hold opinion with Pythagoras,
That *souls* of animals infuse themselves
Into the trunks of men. *Shakspeare*.

Spirit; essence; quintessence; principal part.—He has the very *soul* of bounty. *Shakspeare*.—Interior power.

There is some *soul* of goodness in things evil,
Would men observingly distil it out. *Shakspeare*.

A familiar appellation expressing the qualities of the mind.

Three wenchs where I stood cry'd
"Alas, good *soul*!" *Shakspeare*.

Human being.
My state of health none care to learn;
My life is here no *soul's* concern. *Swift*.

Active power.

Earth, air and seas, through empty space would rowl,
And heaven would fly before the driving *soul*. *Dryden*.

Spirit; fire; grandeur of mind.

That he wants caution, he must needs confess;
But not a *soul* to give our arms success. *Young*.

Intelligent being in general.—Every *soul* in heaven shall bend the knee. *Milton*.

To **SOUL**, *v. a.* To endure with a soul: an old verb. We still use *souled*; as, narrow-*souled*, largely-*souled*, and the like.

That Padre's Sonne which alle thinges wrought;
And all that wrought is with a skilful thought,
The Gost, that from the Fader gan procede,
Hath *souled* them withouten any drede. *Chaucer*.

To **SOUL**, or **SOWL**, *v. n.* [jupl, Saxon, obsonium. Northumb. Gloss. at the end of Ray, in V. *SOOL*. *Sool* or *sowle*, any thing eaten with bread. North. *Grosc*.] To afford suitable sustenance.

I have, sweet wench, a piece of cheese, as good as tooth may chawe,
And bread and wildings *souling* well. *Warner*.

SOUL-BELL, *s.* The passing-bell. *Obsolete*: See

PASSING-BELL.—We call them *soul-bells*, for that they signify the departure of the soul, not for that they help the passage of the soul. *Bp. Hall*.

SOUL-DISEASED, *adj.* Diseased in mind; soul-sick.
[He] had great insight
In that disease of grieved conscience,
And well could cure the same; his name was Patience:
Who, coming to that *soul-diseased* knight,
Could hardly him intereat to tell his grief. *Spenser*.

SOULAINES, a town of France, in Burgundy, in the department of the Aube. Population 800; 27 miles east of Troyes.

SOULANGE, a seignior of Lower Canada, which stretches four leagues on the north bank of the St. Lawrence.

SOULBURY, a parish of England, in Buckinghamshire; 4½ miles south of Fenny Stratford. Population 515.

SOULBY, a township of England, in Westmoreland; 2½ miles north-west of Kirkby Stephen.

SOULDERN, a parish of England, in Oxfordshire. Population 449.

SO'ULDIER. See **SOLDIER**.
SOULDROP, a parish of England, in Bedfordshire; 10½ miles north-north-west of Bedford.

SO'ULED, *adj.* Furnished with mind.
Gripping, and still tenacious of thy hold,
Wou'd'st thou the Grecian chiefs, though largely *soul'd*,
Shou'd give the prizes they had gain'd before. *Dryden*.

SOULI. See **SULI**.
SOULIERS, a small town of France, department of the Var; 9 miles from Toulon.

SO'ULLESS, *adj.* [jaul-lear, Saxon.] Without soul, without life.—Their holiness is the very outward work itself, being a brainless head and *soulless* body. *Sir E. Sandys*. Mean; low; spiritless.—Slave, *soulless* villain, dog, O rarely base! *Shakspeare*.

SOUL-SHOT, *s.* Something paid for a soul's requiem among the Romanists.—In the Saxon times there was a funeral duty to be paid, called *pecunia sepulchralis et symbolum anime*, and in Saxon *soul-shot*. *Ayliffe*.

SOUL-SICK, *adj.* Diseased in mind: a forcible expression.—Mankind is mortally *soul-sick*. *Bp. Hall*.

I am *soul-sick*,
And wither with the fear of one condemn'd,
Till I have got your pardon. *Beaum. and Fl*.

SOULTZ, or **SULZ**, a town of France, in Alsace, with 1300 inhabitants.

SOULTZMATT, a village of France, department of the Upper Rhine, on the Ombach, with 2100 inhabitants. Near it are salt and mineral springs; 9 miles south of Colmar.

SOUSENSAC, a town of France, department of the Lot and Garonne. Population 1500; 16 miles north-east of Marmande.

SOUND, *adj.* [jumb, Sax.] Healthy; hearty; not morbid; not diseased; not hurt.

I am fall'n out with my more headier will;
To take the indispos'd and sickly fit
For the *sound* man. *Shakspeare*.

Right; not erroneous; orthodox.—Whom although to know be life, and joy to make mention of his name; yet our *soundest* knowledge is to know that we know him not as indeed he is, neither can know him: and our safest eloquence concerning him is silence. *Hooker*.—Stout; strong; lusty.—The men are very strong and able of body; and therefore either give *sound* strokes with their clubs wherewith they fight, or else shoot strong shots with their bows. *Abbot*.—Valid; not failing.—They reserved their titles, tenures and signiories whole and *sound* to themselves. *Spenser*.—Fast; hearty. It is applied to sleep.

New wak'd from *soundest* sleep,
Soft on the flow'ry herb I found me laid
In balmy sweat. *Milton*.

SOUND, *adv.* Soundly; heartily; completely fast.—
The

The messenger approaching to him spake,
But his waste words return'd to him in vain;
So *sound* he slept that nought might him awake. *Spenser.*

SOUND, *s.* [*sund*, high Dutch, from the ancient Saxon *runð*, as Killian hath noted: *sond* or *sund*, saith he, Vet. Sax. fretum. Gregory, Posthum. *Sund*, Su. Goth. fretum, vadum angustius, ut transnatarum queat, ab Icel. *synda*, natere. *Serenius*. Wachter is of the same opinion. Gloss. Germ. in V. **SUND**.] A shallow sea, such as may be sounded.

Wake,
Behold I come, sent from the Stygian *sound*,
As a dire vapour that had cleft the ground,
To ingender with the night, and blast the day. *B. Jonson.*

Him young Thoosa bore, the bright increase
Of Phorcys, dreaded in the *sounds* and seas. *Pope.*

SOUND, *s.* [*sonde*, Fr.] A probe, an instrument used by chirurgeons to feel what is out of reach of the fingers.—The patient being laid on a table, pass the *sound* till it meet with some resistance. *Sharp.*

To **SOUND**, *v. a.* [Alem. *sondan*, maris profunditatem explorare, à *sund*. V. **SOUND**. *Serenius*.] To search with a plummet; to try depth.

You are, Hastings, much too shallow
To *sound* the bottom of the after-times. *Shakspeare.*

To try; to examine.

To **SOUND**, *v. n.* To try with the sounding line.—Beyond this we have no more a positive distinct notion of infinite space than a mariner has of the depth of the sea, where having let down a large portion of his *sounding*-line, he reaches no bottom. *Locke.*

SOUND, *s.* [*sepia*, Lat.] The cuttle-fish. *Ainsworth.*

SOUND, *s.* [*sonus*, Lat.] Any thing audible; a noise; that which is perceived by the ear.

Come, sisters, cheer we up his sprights,
And shew the best of our delights;
I'll charm the air to give a *sound*,
While you perform your antick round. *Shakspeare.*

Mere empty noise opposed to meaning.—He contented himself with doubtful and general terms, which might make no ill *sound* in men's ears. *Locke.*—Let us consider this proposition as to its meaning; for it is the sense and not the *sound* that must be the principle. *Locke.*

O lavish land! for *sound* at such expence?
But then, she saves it in her bills for sense. *Young.*

To **SOUND**, *v. n.* To make a noise; to emit a noise.—Trumpet once more to *sound* at general doom. *Milton.*—To exhibit by *sound*, or likeness of *sound*.

Why do you start and seem to fear
Things that do *sound* so fair? *Shakspeare.*

To be conveyed in *sound*.—From you *sounded* out the word of the Lord. 1 *Thess.*

To **SOUND**, *v. a.* To cause to make a noise; to play on.

Michael bid *sound*
The archangel trumpet. *Milton.*

To be token or direct by a *sound*.
Once Jove from Ida did both hosts survey,
And, when he pleas'd to thunder, part the fray;
Here heav'n in vain that kind retreat should *sound*,
The louder cannon had the thunder drown'd. *Waller.*

To celebrate by *sound*.—Sun, *sound* his praise. *Milton.*

SOUND is the effect produced on our ear by the vibrations of matter. It is usually said that this phenomenon results from the motion of elastic bodies; but all bodies are elastic, and moreover those which have the greatest elasticity, as wool, feathers and the like, emit no sounds; so that we may fairly leave elasticity out of the calculation. To understand the theory of vibrations, it is necessary to observe that all bodies in nature are capable of undergoing two movements,

one whereby its situation is permanently changed, another in which its parts appear to yield, and then suddenly retaliate on the moving force, or, in other words, rebound. This is called vibration, and it is guessed that it arises from the motion of the atoms, or minute particles of the matter upon each other. It is suspected that the impressing force alters the sphere of attraction of these particles respectively for one another, and that on the removal of this they return to their natural state. Always observing that in this return the approach or recession of the particles is carried at first too far, and that a succession of rebounds takes place until the equilibrium is re-established. Now, since bodies vary in their density, or, in other words, in the contiguity or remoteness of their atoms, it follows that the vibrations they are subject to must also vary.

Though these vibrations are only perceptible to the ear when they are so minute as to be imperceptible to the other senses, it is obvious that they must be of the same nature as the slow undulations and reflexions of a wave, or the courses and recourses of a pendulum, and thus for clearness sake, and in consonance with the usual practice, we shall here consider them. Now the courses of the pendulum can only undergo these conditions—it may move faster or slower; it may take a short or a long swing; ergo, a vibratory body can either undergo large or little vibrations, or slow or quick ones, and all other variations are impossible.

The matter in which we always hear the vibrations is air; but fishes have a fine sense of hearing in water, and we perceive the vibration of a body held between our teeth, in which case the *sound* travels through bone.

The ear distinguishes in sounds, first, its *tone*, i. e. gravity or acuteness is approach to the treble or the bass:—2dly. Its *loudness*. The ear also takes note of the *source* and the *distance* of sounds.

As to *tone* it is easily observable, that to grave sounds belong very large and distinct vibrations. We may actually see the vibration of the larger strings of the harp or piano-forte, feel that which arises from the great bass pipes of an organ, and hear the alternate movements of rest and action in the fading *sound* of a large bell. Here the vibrations are obviously slow; but the question to be decided is, whether the bulk or the slowness of these vibrations causes the gravity of the *tone*. Now, if it were its slowness, how would it happen, that a string when first twanged should give a grave *sound*, and that it should afterwards ascend three successive notes in the scale; the vibratory motion must (according to this theory) be more rapid in proportion as the moving powers are expended; whereas it is a known law of a pendulum, that it is as long performing its smaller as its larger swings; ergo, the string which is a double pendulum, should in its latter swings or vibrations get graver, if gravity depended on slowness of vibrations, which is contrary to experience.

If, on the other hand, *tone* be produced by the largeness or smallness of vibrations, every thing is explained.

The string at first gives a large vibration a grave *tone*, and, as its vibratory motion diminishes, acuter *tones*. Now, be it observed, that however forcibly you strike a bell or twang a string, you cannot alter the *tone*, because no force so applied would enable the bell to expand itself beyond the natural limit of its elasticity, whereas it is easy to conclude that velocity of motion should result from excessive force, and accordingly the harder the blow, the louder the *sound*.

This view explains also why bass notes are louder, other things being equal, than treble strings, for the former having the largest space to travel in a given time, must move the most rapidly; according to that law of the pendulum before laid down, it is louder than the treble.

It has been erroneously supposed, that the velocity of every mass of *sound* depends on the velocity of its vibrations. If this were the case, it would overturn the preceding theory, but it is not consequential. It is obviously one thing to impress on a particle of air an impulse which its resistance suddenly repels, and to impress on the general mass such an impulse as may be swiftest communicated to its extremities. Were these motions identical, we should be unable to account for

for the production of different tones by any hypothesis; it being clear that if the velocity of vibration was the cause of particular tones; and if velocity of vibration was synonymous with velocity of transmission, treble sounds should travel farther in a given time than bass, which is contrary to experiment.

It cannot be asserted that sound is propagated in different bodies with a velocity proportionate to their density, but it is certain that this propagation is more rapid through solids than fluids. Nor can it be shewn that in all instances the loudness of a sound is exactly in a direct ratio to the density of its medium. But Priestley's experiments shew, that as far as regards gaseous bodies, the lighter the medium the feebler the sound, and that the denser this medium (whether from its original constitution or from mechanical pressure) the louder the sound emitted. In inflammable air the sound of the bell he used was hardly to be distinguished from the same in a pretty good vacuum; and this air is ten times rarer than common air. In fixed air the sound was much louder than in common air, so as to be heard about half as far again; and this air is in about the same proportion, denser than common air. In dephlogisticated air the sound was also sensibly louder than in common air.—*Experiments and Observations, &c.*, vol. v. p. 296, &c.

According to the experiments of Dr. Derham, it does not appear that the temperature, luminousness or other state of composition in the atmosphere alters the velocity of the transmission of sound: that the direction of the sounding body (as whether the muzzle or butt of a discharged gun be turned towards the hearer) has no such influence. That in cases where the earth forms the medium of vibration, no difference is apparent whether its surface be acclivous or declivous: the loudness of the sound has no influence in the rapidity of its transmission, nor does the composition of the sounding body whether metal or wood or what not, make any difference. The blowing of the wind only was found to retard the velocity of the sound slightly.

As to the direction whence sounds arrive, it is obvious that if the particular vibration began first to excite the hinder part of an auditory nerve, and afterwards to be propagated to its anterior, or *vice versa*, that to apprehend the *direction* of a sound, would be easy without any reference either to its tone or loudness. The tympanum is, however, so small a part, that one can scarcely believe any nerve could exist with so fine a sense as to ascertain whether this membrane was impinged from behind forwards or from before backwards, from above downwards, &c. It would, we say, be next to impossible to believe such minute impressions capable of being perceived. Hence it would be far more rational to suppose, (and there are numerous circumstances rendering it probable) that the portio dura stretched over the face and side of the head, performs the office of acknowledging the direction of a sound. At all events it is manifest that the only way in which a nerve can ascertain the direction of an impinging sound, is by considering whether it first impinged on this side or the other.

There is much difficulty in explaining how we calculate the distance whence a sound is transmitted to us. As in the eye, so in the ear, we are no doubt helped in this respect by the other senses. Still it is impossible to overlook the fact that we can to a degree distinguish a remote from a near sound, even without reference to their loudness. It would seem that vibrations become less frequent by distance (consequently the loudness of a peculiar sound is declared), and that along with this their vibrations become clearer. Thus we find, that in the organ the stops pulled out to produce the illusion of distant music, cause two effects. They lower the loudness of the sound, and they also render it extremely clear and melodious. On this point, however, there is room for reflexion and experiment.

With regard to the properties of sound, these facts are established.—The gravity of a string is in direct proportion to its length. 2d. A string sounded near several others will cause in those others or parts of them, a sound identical, as to tone,

VOL. XXIII. No. 1576.

with itself, or else one bearing a mathematical ratio to it, and this effect is produced without any regard to the usual sound of the strings in question. 3d. As the sound of a string or other body dies away, it is heard to make ascents, each of which bear the same ratio to the primitive sounds. They run into octave 12th and 17th. These very curious circumstances can be accounted for with difficulty.

The last circumstance is, especially, difficult of explanation, since it cannot be shewn why the intermediate or discordant vibrations are not heard equally with those which are in tune with the primitive sound. Otherwise a string double the length of another, is twice as grave, because its vibrations must be twice as large; and as to the second point, a vibrating string may naturally be supposed to excite its *own* vibration only in other bodies the same as we know it does in the air.

The apparatus of the ear is very complicated: we shall not insist on anatomical details, but confine ourselves to such a description as is necessary for understanding the use of the different parts which constitute this organ. The external ear is composed of a cartilaginous conch, which is usually supposed to collect and reflect inwards the waves of sound. Its removal does not, however, impair hearing, until some days after the operation. An opening of an elliptical form, lined with hairs, at first gradually contracting, and about its middle beginning to dilate again, passes into the head from this conch, until it is stopped by a membrane called the tympanum, which completely closes it. This canal is of course for the transmission of sound.

The middle ear comprehends the cavity of the tympanum, the little auditory bones, the mastoid cells and Eustachian tube. The cavity of the tympanum has opening into it internally the foramen rotundum closed by a membrane; the foramen ovale also closed by a membrane; posteriorly the mastoid cells (irregular cavities filled with air); anteriorly the Eustachian tube communicating with the pharynx. The cavity of the tympanum is occupied by four small bones connected with the membrane of the tympanum on the one hand, and the membrane of the fenestra ovalis on the other, so as to form a bony chain between the two. These bones are capable of being pulled in various directions by small muscles, so as to stretch or relax the membranes.

The internal ear, or labyrinth, is composed of the cochlea, the semicircular canals and the vestibule. The cochlea is a bony canal lined with a membrane of a spiral form; it is divided into two turns of the spiral by an osseo-cartilaginous partition. The outer spiral communicates with the tympanum by the closed fenestra rotundum; the inner with the vestibule.

The semicircular canals are three cylindric cavities, curved in a half circle, of which two are divided horizontally, while the third is vertical: these canals terminate at their extremities in the vestibule; they contain bodies of a grey colour which terminate at their extremities by enlargements. The vestibule is a central cavity, the point of union of the other cavities. It communicates with the drum through the fenestra ovale; with the internal spiral of the cochlea, with the semicircular canals, and with the internal auditory passage, by a great number of small holes. All the cavities of the internal ear are contained in the petrous portion of the temporal bone, and are lined with a membrane extremely thin, and filled with a limpid liquid, called the liquid of Cotunnus, of which a little flows by two passages, known by the name of aqueducts of the cochlea and vestibule; moreover the ear contains the auditory nerves. The auditory nerves arise from the fourth ventricle; they enter into the labyrinth by the foramen, which is seen at the bottom of the internal auditory canal; arriving at the vestibule, they divide into many branches, one of which remains in the vestibule, another in the cochlea, and two are destined for the semicircular canals.

In *cray-fish*, and the *sepia*, the organ is most simple, consisting of a small cavity or vestibule and a single mem-

branous tube, and in the latter genus the sac includes a small solid body or lapillus: in the interior of this receptacle the auditory nerve is expanded. The *spinous fishes*; in addition to the hollow of the vestibule and membranous bag containing the lapilli, are provided with semicircular canals. The *cartilaginous fishes* have the vestibule, the sacculus for the lapilli, semicircular canals, and a fenestra ovalis, defended by an operculum composed of a membrane and the skin, whilst in the osseous fishes the whole organ is enclosed by bone. To the labyrinth of the *serpent* tribe, which is very similar to the internal ear of the cartilaginous fishes, there is added an ossiculum closing the fenestra ovalis. In one of this order, the genus *cæcilia*, and in almost the whole of the four-footed *reptiles*, a membrana tympani is connected with this ossiculum. In the other classes of *birds* and *mammalia*, we find an external passage leading to the membrane, and in the last of these an external cartilaginous auricle is annexed.

The obvious inference drawn from this view will be, that the whole of the apparatus, external to the labyrinth, is not absolutely necessary to the perceiving of sounds, because many creatures we know are susceptible of the impression, who are entirely destitute of these parts of the organ.

As to the uses therefore, of the different parts of the ear, we may conjecture that the portio dura, or facial nerve, is a nerve of touch, which perceives the *violence* of vibrations without having the power of distinguishing accurately, variations of tone. That from its extensive expansion of the face, it also takes cognizance of the direction of sound. 3dly. That it excites the muscles of the little bones of the labyrinth, so as to relax the membrana tympanum. It is clear that the effect of this must be to deaden the intensity of the impression on the auditory nerve. This is most important and necessary; a sudden and violent sound, such as we know is extremely painful to our nerves takes place; the portio dura relaxes the tympanum, and thus deadens its force, and saves the portio mollis from injury.

The nervous expansions in the semicircular canals, cochlea, &c., have been supposed to take cognizance of the differences of tones. This opinion has been objected to, because these parts are found in the inferior animals, who cannot be supposed to require any such power. This objection appears to us of no force, because it is clear that the power of distinguishing one noise from another, involves more than a mere perception of loudness. The fish could only distinguish the noise produced by its enemy, from that produced by its prey, by an ear uniting perception of loudness and tone. The same is equally clear of reptiles, and still more of the mammalia. The power of distinguishing the geometrical proportions of sounds, and of deriving pleasure from the perception, constitutes another, the musical sense which requires organs more delicate, perhaps, but not of a different nature. This sense is enjoyed by man, and a few animals only.

SOUND, a hamlet of England, in Cheshire; 3 miles from Nantwich.

SOUND, or ORESOUND, the strait or narrow sea between the island of Zealand, in Denmark, and the continent of Sweden, through which vessels pass from the North sea into the Baltic. It is about four miles across, and the Danes exact a toll on all ships that pass through the strait. The English, Dutch, French, and Swedes, pay one per cent.; all other nations one and a quarter. Out of this toll the king of Denmark maintains all the light-houses on the coast, from Copenhagen to the extremity of North Jutland.

SO'UNDBOARD, *s.* Board which propagates the sound in organs.—Try it without any *soundboard* along, only harpwise at one end of the string. *Bacon.*

As in an organ, from one blast of wind,
To many a row of pipes the *soundboard* breathes. *Milton.*

SO'UNDING, *adj.* Sonorous; having a magnificent sound.—Obsolete words may then be revived, when more

sounding or more significant than those in practice. *Dryden.*

SO'UNDING, *s.* [from *To sound*, to try depth.] Act of trying the depth of the water with a plummet. [from *sound*, a noise.] Act of emitting a sound; the sound emitted.—The *sounding* again of the mountains, [in the margin, the echo.] *Ezek.*

SO'UNDLESS, *adj.* Too deep to be reached by the plummet; not to be fathomed.

Your shallowest help will hold me up afloat,
While he upon your *soundless* deep doth ride. *Shakspeare.*
Without sound.

They rob the Hybla bees,
And leave them honeyless.—Not stingless too?—
O yes, and *soundless* too;
For you have stol'n their buzzing. *Shakspeare.*

SO'UNDLY, *adv.* Healthily; heartily; lustily; stoutly; strongly.

When Duncan is asleep,
Whereto the rather shall this hard day's journey
Soundly invite him. *Shakspeare.*

Truly; rightly.—The wisest are always the readiest to acknowledge, that *soundly* to judge the law is the weightiest thing which any man can take upon him. *Hooker.*—Fast; closely: it is used of sleeping.

Now when that idle dream was to him brought,
Unto that elien knight he bad him fly,
Where he slept *soundly*, void of evil thought. *Spenser.*

SO'UNDNESS, *s.* Health; heartiness.

I would I had that corporal *soundness* now,
As when thy father and myself in friendship
First tried our soldiership. *Shakspeare.*

Truth: rectitude; incorrupt state.—In the end very few excepted, all became subject to the sway of time; other odds there was none amongst them, saving only that some fell sooner away, and some later from the *soundness* of belief. *Hooker.*—Strength; solidity.—This presupposed, it may stand then very well with strength and *soundness* of reason, even thus to answer. *Hooker.*

To SOUP, *v. a.* [rupan, Sax. sorbere; *supa*, Su. Goth. the same.] To sup; to swallow.—Death is *sopun* up in victorie. *Wicliffe.*—To breathe out; to draw out. [rpeopan, Sax. exhaurire.]—We pronounce, by the confession of strangers, as sweetly, smoothly, and moderately, as any of the northern nations of the world, who are noted to *soupe* their words out of the throat with fat and full spirits. *Camden.*

To SOUP, *v. n.* [rpeopan, Sax. verrere.] To sweep; to pass with pomp.

He vaunts his voice upon an hired stage,
With high-set steps and princely carriage,
Now *souping* in side robes of royalty. *Bp. Hall.*

Methinks I hear swart Martius cry,
Souping along in war's fein'd maskerie,
By *Lais* starrie front he'll forthwith die! *Marston.*

SOUP, *s.* [from rupan, Sax. to soup. See *To SOUP.*] Strong decoction of flesh for the table.

Spongy morells in strong ragousts are found,
And in the *soup* the slimy snail is drown'd. *Gay.*

SOUR, *adj.* [rup, rupun, Sax.; *sur*, Welsh.] Acid; austere; pungent on the palate with astringency, as vinegar, or unripe fruit.—All *sour* things, as vinegar, provoke appetite. *Bacon.*—Harsh of temper; crabbed; peevish; morose; severe.

He was a scholar,
Lofty and *sour* to them that lov'd him not. *Shakspeare.*

Afflictive; painful.
Let me embrace these *sour* adversities;
For wise men say it is the wisest course. *Shakspeare.*
Expressing

Expressing discontent.

Sullen and *sour*, with discontented mien
Jocasta frown'd.

Pope.

SOUR, *s.* Acid substance.

A thousand *sours* to temper with one sweet,
To make it seem more dear and dainty.

Spenser.

To SOUR, *v. a.* To make acid.

Thus kneaded up with milk, the new made man,
His kingdom o'er his kindred world began;
Till knowledge misapplied, misunderstood,
And pride of empire, *sour'd* his balmy blood.

Dryden.

To make harsh, or unkindly.—Tufts of grass *sour* land.
Mortimer.—To make uneasy; to make less pleasing.

Hail, great king!

To *sour* your happiness, I must report
The queen is dead.

Shakspeare.

To make discontented.

Not my own disgrace

Hath ever made me *sour* my patient cheek,
Or bend one wrinkle on my sovereign's face.

Shakspeare.

To SOUR, *v. n.* To become acid.—Asses milk, when it
sours in the stomach, and whey, turned sour, will purge
strongly. *Arbutnot*.—To grow peevish or crabbed.—They
keep out melancholy from the virtuous, and hinder the
hatred of vice from *souring* into severity. *Addison*.

SOURA, a village of Irak Arabi, on the Euphrates; 153
miles north-west of Bassora.

SOURABAYA, a large and flourishing town of Java, on
the north-eastern coast, and capital of a district of the same
name, situated at the mouth of a navigable river, $1\frac{1}{2}$ mile
from the sea shore. The river once emptied itself into a
marsh close to the town; but of late years, a bank nearly a
mile in length, on which is a path-way for tracking boats,
confines its course, and greatly adds to its depth and current.
The river separates the European part of the town from that
of the Chinese and the native quarter. A fine bridge, with
draw-chains to raise it up for the passage of vessels, connects
the European town with that of the natives. The houses are
very good, and some are elegant, particularly the newly
erected country seats of private individuals. The house at
Simpang, where the British resident dwells, is a fine large
building, close to the river; and near to it the general hospi-
tal is an attracting object. This structure is about two
miles from the town, situated on the banks of the river; and
for elegance, extent, and commodiousness, has scarcely its
equal. In proportion as the neighbouring town of Gressie
has fallen into decay, the new town of Sourabaya has risen
rapidly in population and prosperity; and the improvement
which it has experienced within these few years is astonish-
ing. A fine arsenal, and other extensive works, calculated
for equipments on a very large scale, were formed by General
Daendels at this place. Here guns are cast, and carriages of
all descriptions constructed. Vessels also, with their various
appointments, are built and equipped at Sourabaya, in the
neighbourhood of which are considerable forests, from
whence plenty of timber is easily procured, which is floated
down the river Calimas, that takes its rise, as it is said, from
a large inland lake encircled with high mountains. A mint
is likewise at work here, on a new silver and copper coinage.
The new government house at Sourabaya, begun by Daendels,
was designed to be a splendid edifice, and, like that of Wel-
tervreden, was to have contained the various public offices
collectively, instead of being scattered, as hitherto, all over a
sickly town; but the foundation of the front range having
sunk, and endangered the building, it has been abandoned,
and that part which continues firm has been converted into
store-rooms.

Sourabaya is situated within that narrow strait which is
formed by the islands of Java and Madura, approaching each
other to within a very short distance, in some places not

above 83 fathoms, for a space of about 10 or 15 miles.
The channel of this strait is not of easy navigation, and is
marked with buoys; and it is besides defended by batteries.
The mouth of the river on which Sourabaya is situated, is
defended by Fort Calimas, a circular battery mounting 40
guns, placed on a rising spot, on the east side of the river.
This battery has a commanding sweep across the strait of
Madura, which is narrowest here, being opposite to the
south-west end of the island of that name. It was intended,
under the Dutch government, to have erected Sourabaya into
a port of consequence, for their trade to the eastward of Java;
and with this view General Daendels expended large sums
in the construction of works for the defence of the harbour.
The eastern entrance into the straits of Madura being im-
passable for very large ships, the batteries there are still
incomplete; but the north-western entrance is defended by
Fort Ludowyk, standing at the extremity of an island or
mud bank projecting into the channel, about 1400 yards
from the island of Manarie; but the bank is not visible, even
at low water. Fort Ludowyk is distant from Gressie about
six, and from Point Panka five miles, and is situated im-
mediately on the narrow winding channel, by which alone
large ships can enter. It presents, low on the water, a very
formidable battery, a hundred pieces of the finest ordnance,
mounted on traversing carriages, besides some heavy mortars.
The foundation for the fort was formed by sinking rocks,
and raised to its present elevation by means of stones and
earth brought from the neighbouring land, and kept in by
large piles of wood driven round. The approach is defended
by rows of strong piles driven into the bottom of the sea,
at the distance of 60 or 70 feet from the ramparts, and form-
ing a close palisade all round, which prevents the passage
of boats, and effectually guards against a *coup-de-main*, or
escalade. The barracks, which are built of bamboo, plas-
tered over and white-washed, may lodge 800 men. The
ordnance stores, however, are greatly exposed, having no
bomb-proof magazines; and the water required for the gar-
rison is brought from Sourabaya, nearly 20 miles distant, by
means of floating tanks, which, being often delayed by
contrary winds in the western monsoon, the garrison is
sometimes put to great distress. General Daendels intended
to have connected Fort Ludowyk with the island of Manarie
by a causeway, which was to have been erected on the inter-
mediate ocean. The principal depôt for the garrison was to
have been established on Manarie; and difficult as the
undertaking might have been, the marshal felt the importance
of this post so much, as affording an effectual security against
the attacks of the British navy, especially after the destruction
of the Dutch shipping in the harbour of Gressie, by Sir
Edward Pellew, in 1806, that he resolved to spare no efforts
in rendering this passage impenetrable by an enemy, and
thus making the straits of Madura the grand port and naval
depôt of his nation in the east. The anchorage for large
ships is off the town of Gressie, till within one mile to the
north-west of the mouth of the Calimas river, which runs
through Sourabaya; but vessels going to that place require
pilots to carry them through the straits.

The roads and avenues round Sourabaya are delightful.
The ground is rather low, being chiefly cultivated with rice,
interspersed with cocoa-nut and other fruit trees. The
country about Sourabaya is considered much healthier than
most other parts of the sea coast; and the district through-
out is exceedingly populous, and highly productive. The
land rental of the district of Sourabaya, while it was in the
possession of the British, amounted to about 97,558*l.* ster-
ling. The ships destined for the Philippine islands and
China usually touch at Sourabaya, where every refreshment
except good vegetables is to be procured in abundance.
Lat. 7. 14*l.* S. long. 112. 55. E.

SOURAN, a village of Korassan, in Persia; 255 miles
north of Herat.

SOURATAN HOUTCHIN, a town of Chinese Tartary,
in the country of the Mongols. Lat. 43. 54. N. long. 114.
34. E.

SOURCE, *s.* [*source*, Fr.] Spring; fountain; head.—
King

Kings that rule
Behind the hidden *sources* of the Nile.

Original; first cause.

Of himself is none;
But that eternal Infinite, and One,
Who never did begin, who ne'er can end,
On Him all beings, as their *source*, depend.

First producer.

Famous Greece,
That *source* of art and cultivated thought,
Which they to Rome, and Romans hither brought. *Waller.*

SO'URDET, *s.* [from *sourd*, Fr.] The little pipe of a trumpet.

SOURDON, the local name of a bivalve shell-fish found on the coast of Poitou.

SOURDEVAL DE LA BARRE, a town of France, department of La Manche, with 4000 inhabitants. It has some manufactures of paper; 6 miles north of Mortain.

SOURE, a town of Estremadura; 12 miles south-west of Coimbra. Population 3200.

SOURERA, a town of Hindostan, province of the Circars, and district of Ganjam. Lat. 19. 53. N. long. 84. 37. E.

SOURGOUTE, a small town of Asiatic Russia, situated on the northern bank of the Obi. The climate is so severe that no grain can be raised in the neighbourhood; but the river abounds in fish, and the territory in fur-bearing animals, particularly white and black foxes. The place is surrounded with palisades, and contains 2 churches and 168 houses. It is the residence of a commissary, who has the collecting of the annual tribute of furs paid by the Ostiaks, the sole inhabitants of this country. Opposite to this town a small branch separates and then unites with the Obi, called by the Russians Sourgoutka.

SOURGOUTE, a river of Tobolsk, in Asiatic Russia, which falls into the Obi, close to the town of the same name, after a course of upwards of 100 miles.

SOUR GUSLAN, a village in the interior of Algiers, near the foot of mount Jurgura.

SOURI, a village of Laristan, in Persia, on the Persian gulf; 38 miles south-west of Ormus.

SO'URISH, *adj.* Somewhat sour.—By distillation we obtain a *sourish* spirit, which will dissolve coral. *Boyle.*

SO'URLY, *adv.* With acidity. With acrimony.

To this reply'd the stern Athenian prince,
And *sourly* smil'd.

Dryden.

Painfully; discontentedly.—As bad dispositions run into worse habits, the evening doth not crown but *sourly* conclude the day. *Brown.*

SO'URNNESS, *s.* Acidity; austereness of taste.—Has life no *sourness*, drawn so near its end? *Pope.*—Asperity; harshness of temper.—Pelagius carped at the curious neatness of men's apparel in those days, and, through the *sourness* of his disposition, spoke somewhat too hardly thereof. *Hooker.*

SOURNIA, a town of France, department of the Eastern Pyrenees. Population 800; 21 miles west of Perpignan.

SO'URSOP, *s.* [*guanabanus*, Lat.] Custard-apple.—It grows in several parts of the Spanish West Indies, where it is cultivated for its fruits. *Miller.*

SOURTON, a hamlet of England, in Devonshire; 4½ miles south-west of Oakhampton. Population 484.

SOUS, *s.* [*sol*, Fr.] A French penny.

SOSA, a town of Portugal, in the province of Beira; 16 miles west of Oporto. Population 4000.

SOUSE, *s.* [*soute*, salt, Dutch.] Pickle made of salt. Any thing kept parboiled in salt-pickle.

I am sent to lay
An imposition upon *souse* and puddings,
Pasties and penny custards!

Beaum. and Fl.

The ear; most properly that of a hog, from its being frequently pickled or *soused*.

Addison. To SOUSE, *v. a.* To parboil, or steep in pickle.—If I be not ashamed of my soldiers, I am a *soused* gurnet! *Shakspeare.*—To throw into water. *A ludicrous sense.*—They *soused* me into the Thames with as little remorse as they drown blind puppies. *Shakspeare.*

To SOUSE, *v. n.* [from *sous*, or *dessous*, down, Fr.] To fall as a bird on its prey; to fall with violence.

Jove's bird will *souse* upon the timorous hare,
And tender kids with his sharp talons tear. *Dryden, jun.*

To SOUSE, *v. a.* To strike with sudden violence, as a bird strikes his prey.

The gallant monarch is in arms;
And like an eagle o'er his airy tow'r's,
To *souse* annoyance that comes near his nest. *Shakspeare.*

SOUSE, *s.* Violent attack, as of a bird striking his prey.

With that his murd'rous mace he up did reare,
That seemed nought the *souse* thereof could beare,
And therewith smote at him with all his might. *Spenser.*

SOUSE, *adv.* With sudden violence. *A low word.*

Such make a private study of the street,
And looking full at every man they meet,
Run *souse* against his chaps, who stands amaz'd,
To find they did not see, but only gaz'd. *Young.*

SOUSOU, a village of Anatolia, in Asiatic Turkey; 24 miles north of Satalia.

SOUSOUGHERIC, a village of Anatolia, in Asiatic Turkey; 20 miles south-east of Balikesri.

SOUSSA-KEVI, a small town of Greece, on the isthmus of Corinth, corresponding to the ancient Sidus.

SOUSTON, a town of France, in the department of the Landes, on a lake of the same name, with 2600 inhabitants; 14 miles north-west of Dax.

SOUSTONS, ETANG DE, a saltwater bay nearly inclosed by the land, in the south-west of France, near the Atlantic, department of the Landes. Lat. 43. 56. N. long. 1. 16. W.

SOUTCHEOUFOU, a large city of China, capital of the eastern part of the province of Kiangnan. It is situated on the great canal, not far from its southern termination at Hangtcheoufou. Its site is so intersected by rivers and canals, that Europeans compare it to Venice. It is one of the most beautiful and delightful cities of the empire, and the surrounding country is almost unequalled in point of fertility. In this happy situation the inhabitants seem to have devoted themselves almost entirely to the enjoyment of life. All the arts which minister to pleasure are carried here to the highest perfection. From Soutcheoufou the rest of China is supplied with the best actors, rope dancers, and jugglers. It is particularly famed for the beauty of its females, and for the care with which their charms are embellished. In consequence of these attractions, it has become the residence of great numbers of the rich and voluptuous Chinese. It is a common saying in the empire, that paradise is in heaven, and Soutcheoufou is on earth. The walls are more than four leagues in compass, and the suburbs extend a great way along the canal, which is everywhere covered with large barks, like floating houses, affording a permanent abode to numerous inhabitants. There is an extensive manufacture here of brocade and embroidery. The continual motion of its immense number of inhabitants, and the crowd of strangers passing and repassing, gives the impression as if the trade of all the provinces centred in this city. Lat. 31. 22. N. long. 120. E.

SOUT EL TELL, a mountain in the western part of Algiers; 30 miles north-east of Tlemsan.

SO'UTER, *s.* [ꝛutepe, Sax.; *sutor*, Lat.] A shoemaker; a cobbler.

I should be at least a senator.—A *sowter*,
For that's a place more fitted to thy nature. *Beaum. and Fl.*

A conqueror! a cobbler; hang him, *sowter*. *Beaum. and Fl.*

SO'UTERLY, *adj.* Like a cobbler; low; vulgar.—
You

You *sowterly* knaves, shew ye all your manners at once? Like well to Like.—The burden-bearing porter, *sowterly* cobbler, and toilful labourer. *Florio.*

SOUTERRAIN, *s.* [*souterrain*, Fr.] A grotto or cavern in the ground. *Not English.*—Defences against extremities of heat, as shade, grottoes, or *souterrains*, are necessary preservatives of health. *Arbuthnot.*

SOUTERRAINE, a town of France, department of La Creuse, with 2900 inhabitants. It has some manufactures of linen and hemp; 19 miles north-west of Gueret.

SOUTH, *s.* [juð, Saxon; *suyd*, Dutch; *sud*, Fr.] The part where the sun is to us at noon: opposed to *north*.—East and west have no certain points of heaven, but north and *south* are fixed; and seldom the far southern people have invaded the northern, but contrariwise. *Bacon.*—The southern regions of the globe.

From the north to call
Decrepit winter, from the *south* to bring
Solstitial summer's heat.

Milton.

The wind that blows from the south.

All the contagion of the *south* light on you,
You shames of Rome, you.

Shakspeare.

SOUTH, *adj.* Southern; meridional.

Meanwhile the *south* wind rose, and with black wings
Wide hovering, all the clouds together drove.

Milton.

SOUTH, *adv.* Towards the south.

His regiment lies half a mile
South from the mighty power of the king.

Shakspeare.

From the south.—Such fruits as you appoint for long keeping, gather in a fair and dry day, and when the wind bloweth not *south*. *Bacon.*

SOUTH (Robert), a divine of the church of England, eminent for learning, talents, and wit, was the son of a London merchant, and was born at Hackney in 1633. He was educated at Westminster School by the celebrated Busby from whence he was elected to Christchurch, Oxford. Here he was soon distinguished for his classical attainments, of which one of the products was an elegant Latin poem addressed to Oliver Cromwell, on the conclusion of the Dutch war. Another poem of his, which was much read and applauded, was entitled "Musica Incantans," which was afterwards printed separately, at Dr. Fell's request. In 1657 he commenced M. A., and in the following year he received holy orders from one of the deprived bishops, and being soon after chosen to preach the assize sermon before the judges, he made a violent attack upon the Independents, which ingratiated him with the Presbyterians. Soon after the Restoration, he was chosen public orator of the university. In this office he acquitted himself so much to the satisfaction of Lord Clarendon, when complimenting him at his investiture as chancellor of the university, that he was taken under the protection of that eminent man, and appointed his domestic chaplain. He was promoted to a prebend of Westminster in 1663, and was in the same year admitted to the degree of D. D. He soon succeeded to a canonry of Christchurch, and in 1673, he attended as chaplain to the younger son of the Earl of Clarendon, in an embassy to Poland. On his return he was presented to the rectory of Islip, in Oxfordshire, and became greatly distinguished by his turn for humorous sarcasm, in which he indulged even in the pulpit. During the reign of Charles II., Dr. South was a strenuous asserter of the royal prerogative, as he was also during the following reign, though he was fully sensible of the dangers to which the established religion was exposed under James II. He nevertheless refused to join in an invitation to the Prince of Orange to come to its rescue; and after the arrival of that prince, he declined subscription to the association for his support which was signed by the vice-chancellor, and several heads of colleges in Oxford. When William was seated on the throne he did not scruple taking the oath of allegiance to the new government, but he is said to have rejected the offer of some persons in power to place

him in one of the sees vacated by the nonjuring bishops. His political conduct continued the same: he was a violent enemy to toleration, and to any concessions for conciliating the separatists. In 1693, he engaged in the controversy respecting the doctrine of the Trinity with Dr. Sherlock, and is said to have displayed as great a want of Christian charity, as abundance of learning and orthodox zeal. He now began to decline in health; and though his mind was active, yet his bodily powers failed him, and he passed the greater part of Queen Anne's reign in a state of inaction; but on Sacheverel's trial, he exerted himself vigorously to procure a lenient sentence from the judges. When his friends came into power towards the close of that reign, he was solicited to accept the bishopric of Rochester and deanery of Westminster, but he replied, such a chair would be too uneasy for an old infirm man to sit in. The queen's decease was considered by him as a signal of his own approaching dissolution, "since," he said, "that all that was good and gracious, and the very breath of his nostrils, had made its departure to the regions of bliss and eternal happiness." He died in July, 1716, at the age of 83, and was interred with much solemnity in Westminster Abbey.

Dr. South cannot be regarded as a proper pattern of a Christian minister, the follower of the meek and holy Jesus; though his sincerity as a true believer of the doctrines of revealed religion has never been doubted. His temper was harsh and unamiable, irascible and unforgiving, and his talents for wit and humour led him too frequently to indulge in ill-natured sarcasm. His talents were considerable, and he is usually reckoned among the good writers of the time, though he frequently manifested a want of taste in not adapting his wit to subjects suited to it. He is author of Sermons, in six volumes, which have passed through many editions. After his decease there appeared his "Opera Posthuma Latina," and his English posthumous works, which consisted of three additional sermons; Travels into Poland, and Memoirs of his Life, in 2 vols. 8vo. *Biog. Brit.*

SOUTH AMERICA, is a vast continent of an irregularly oblong form, which divides the Pacific and Atlantic Oceans. It is united with North America by the Isthmus of Darien. The mountains of the Andes run about north and south through the whole of its extent, and they are, consequently, nearly parallel to the two shores of the Pacific and the Atlantic Oceans, dividing the country between into two equal parts, each bounded by an ocean and by the Cordillera. It would, at first, be expected, that these twin countries, separated only by a range of mountains, should bear a great resemblance to each other: but variety is the attribute of Omnipotence, and nature has granted to these two countries a difference of climate and geological construction, which is very remarkable.

From the tops of the Andes, she supplies both of them with water; by the gradual melting of the snow, they are both irrigated exactly in proportion to their wants; and vegetation, instead of being exhausted by the burning sun of summer, is thus nourished and supported by the heat which threatened to destroy it. The water, however, which flows from Chili towards the Pacific, is confined in its whole course, and forces its way through a country as mountainous as the highlands of Scotland or Switzerland.

At present, South America is divided into the republics of Columbia, Chili, Peru, the united provinces of Buenos Ayres, the empire of Brazil, and the province of Paraguay, besides some other parts, of which the exact destination is not settled.

Under the words Quito, Peru, Venezuela, Brazil, &c., the general situation and natural features of South America, as well as its history, have been fully dwelt upon. It remains, therefore, in this place, only to give a brief but connected account of the recent events that have occurred, and introduce such remarks of an interesting nature as modern travellers have left.

The causes that led to the revolution of South America, are tolerably well known. The tyranny and oppression of the court of Spain has been so much experienced, even in

Europe, that it seemed a matter of certainty that a distant province, peopled by degraded and despised Indians, should be miserably and cruelly governed. Recently, this supposition has been converted into the fullest certainty. The report of some Spanish gentlemen sent over by the court of Spain, to examine into the state of the country, though secreted at the time, has recently been brought to light and published; and the scenes it exhibits of barbarity and licentiousness on the part of the Spaniards is, perhaps, without parallel in ancient or modern history. The sale of justice by the viceroy and the judges, who did not even keep faith with those they had taken bribes from—the levying of taxes by inferior officers in the most arbitrary manner—the raising imposts several times over, by asserting they had not been received—priests living in open concubinage with several women of the same family, and their whole lives occupied with drunkenness and debauchery, and not a few instances of the most systematic seduction achieved by the united labours of these reverend brethren.—These are the matters disclosed by the chosen servants of the crown, who had every opportunity for knowing the truth, and whose natural inclination must rather have been to palliate than exaggerate the crimes of their fellow-countrymen. After long and wretched endurance of this galling slavery, Venezuela set the example to the other provinces, by forming a supreme junta in Caracas, the capital, which assumed the reins of government. A similar proceeding took place at Buenos Ayres, and at the several capitals of Santa Fé de Bogota, Carthagena, and Quito. So soon as intelligence of these proceedings reached the regency at Cadiz, a proclamation was issued by them, declaring the provinces in a state of insurrection. Irritated by these severe measures, the provinces resolved to renounce at once their allegiance to the mother country; and in this also, Venezuela took the lead, having issued a declaration of independence in July, 1811, after having arranged its future government somewhat after the fashion of the United States of America. Declarations of a similar nature were issued in Mexico, among all the states which constituted the federation of New Granada, and, shortly after, by the congress which met at Buenos Ayres.

The congress of Venezuela met with some opposition to their views; but the malcontents were not formidable, and in general the new government, after having issued the declaration of independence in 1811, may be said to have prospered in all its undertakings; when unforeseen events happened, which involved those ill-fated countries in new troubles. As the first act of the Venezuelan revolution had occurred on Holy Thursday in 1811, the whole inhabitants were engaged in 1812 in celebrating this festival with peculiar solemnities, when the country was shaken by a terrible earthquake, which destroyed five of the chief cities of the confederacy; and among these, Caracas itself, the capital, was nearly ruined, and an immense number of soldiers and inhabitants lost their lives. The superstitious people immediately considered this as a signal of the displeasure of Providence with the revolution, which sentiment was zealously enforced by the priests, who were the decided enemies of independence. In the mean time, the Spanish commander Monte Verde, who was in the interior with a military force, seized the opportunity to advance to Caracas; and though he was forced ultimately to retreat, he got possession of Porto Cabello, and thus secured to the Spaniards a communication with the sea. The Venezuelans were so dispirited by this misfortune, and the general aspect of their affairs, that they concluded a treaty with Monte Verde, the Spanish general, by which the sovereign authority of the Cortes was once more established throughout Venezuela. This treaty was, however, broken by the Spanish commander, and in violation of it, several of the independent leaders were apprehended and thrown into prison. These events took place before the end of the year 1812.

About 18 months after this, the Caracas were again delivered from the tyranny of the Spanish governor, by the renowned Bolivar, who, having retired to the state of New Granada, after the successes of Monte Verde, and now

thinking the opportunity favourable for his enterprise, landed with a small force, which was soon increased by numerous recruits, and with which he made his triumphal entry into the Caracas.

The violence of the two parties had now proceeded to the atrocious extreme of giving no quarter; and the royalists, reduced to the last extremity, resolved to arm the slaves in their favour. After ravaging the country with a degree of ferocity hitherto unparalleled, this force was encountered by Bolivar at Calaboso, the 28th May, 1814, and totally defeated. The Spaniards retreated into the interior, whither Bolivar dispatched a force to disperse them. Having by this means, however, too much divided his strength, he was himself attacked and defeated, and finally obliged to quit the country. He retired with a few tried companions to Carthagena. He returned at the end of 1815, and having entered into an agreement with one Brion, who undertook to defray the expences of a maritime expedition, they landed at the island of Margaritta, which they soon reduced; after which Bolivar landed on the continent 6th June, 1816, and immediately issued a proclamation offering freedom to the slaves, and announcing his resolution in future to spare all prisoners of war. He marched in the direction of the city of Caracas, his vanguard under the command of a Scots adventurer, Gregor M'Gregor, who had served during the Spanish war in the British army, and who was valuable to Bolivar from his experience of war. The main body of Bolivar's army was in the meantime defeated by the royalist general Morales, and he was compelled hastily to re-embark, M'Gregor not being able to effect his retreat, was compelled to fight two battles with Morales, in the last of which he was completely triumphant, and immediately after made his entrance into Barcelona, where he was joined by Bolivar, with reinforcements, in December.

From this period, the contest seems to have been maintained with greater equality on both sides, and many bloody and indecisive battles appear to have been fought, of which it would be useless to enter into the details, which are imperfect and contradictory, both parties claiming the victory in most of the actions which have been fought. The royalists had been materially aided by reinforcements brought by Morillo from Granada; but the independents had so far prevailed, that on the 8th May, 1817, they revived their former constitution. General Bolivar and Don Fernando Toro were placed at the head of the executive power. Judges and other functionaries were also chosen, and generals Bolivar and Marino were reinstated in the command of the armies. A decree was at the same time issued, confirming Brion as admiral in chief of the Venezuelan squadron. The independent troops had received reinforcements of disbanded officers and soldiers from Europe, where they had agents to recruit for them. By their successes in 1817, the Spaniards under Morillo were chiefly confined to the towns of Barcelona and Cumana, on the coast; while on the side of the Caracas they held possession of the level country to the northward of the immense plains which stretch into the interior. The fortresses of Angostura and Guyana surrendered to the patriot forces, which were thus enabled to occupy all the country watered by the Orinoco. Their commanders were at this time Bolivar, Piar, Arismendi, Bermudes, and Cedeno. In addition to this force, Marino was at Cumanacoa with 2000 men, and Roxas at Maturin; Monagas and Zaraza, with their cavalry, were in the plains of Barcelona; while Paez, the Santa Fé chieftain, occupied all the country from Varinas to Calaboso. In the course of this year, Morillo was repulsed in his attempts on the island of Margaritta, which had been previously occupied by the patriots. Early in the year 1818, several severe engagements appear to have been fought between Bolivar and Morillo, in the neighbourhood of Calaboso, in which they both claim the victory, and which appear therefore to have been indecisive; and in August, we find both parties again preparing for a renewal of the bloody struggle. Our subsequent accounts of the operations which took place are extremely imperfect; but in 1819, we find that Bolivar had proceeded

on an expedition to deliver New Granada from the Spanish yoke. In this he had completely succeeded, the Creoles having everywhere seconded his exertions, by rising on the Spanish authorities. He fought several battles, in which he was victorious, and finally made his triumphal entry into Santa Fé de Bogota, where he found a large treasure belonging to the government.

In the course of the year 1820, the oppressions of Ferdinand gave rise to a revolution in the mother country; and from this period, the war in the colonies seems to have languished; and in November 1820, it was happily terminated by an armistice for six months, signed by Bolivar and Morillo.

In the viceroyalty of New Granada a declaration of independence was in like manner issued; but the different provinces never seem to have concurred with each other in any general plan for the conduct of their affairs. The city of Santa Fé refused to join the general congress of New Granada, and the province of Cartagena preferred to conduct its affairs separately from the other members of the confederation. For a long time complete success attended the independent cause. But general Morillo arriving from Spain with a force of 12,000 men, of which he left 2000 at Porto Cabello, to aid the Spanish commanders in Venezuela, succeeded in taking the town of Cartagena after a long siege, and in finally establishing the authority of Ferdinand over the whole territory of the confederation. The successes of the independent troops in Venezuela had enabled them subsequently to march a body of troops into New Granada, who were received in many places as deliverers, and finally succeeded in taking Santa Fé de Bogota, and in re-establishing the independent cause through great part of the country.

In the viceroyalty of La Plata, the revolution triumphed over all resistance, after a long struggle with the royalist troops under Liniers, the ex-viceroy, in the course of which the infant republic was exposed to many perilous vicissitudes. Domestic factions have since arisen, and the city and territory of Monte Video is governed by a junta of its own, in strict alliance with the government of Buenos Ayres. The Portuguese under general Lecor entered the Spanish territory in 1817, with a pompous proclamation that they came as deliverers. Their movements were, however, watched by Artigas, the general of Monte Video, who checked every attempt they made to extend their dominion in the neighbourhood.

In Chili, the ancient Spanish authority was peaceably superseded by the aristocracy of the country in 1810, and a new government was established in its stead. But the royalists from Peru having invaded Chili in great force, the authority of Ferdinand was fairly re-established throughout the whole of this extensive country. When the Buenos Ayres government, however, had completely prevailed over all opposition, they naturally bethought themselves of sending assistance to those who, like themselves, were struggling for independence. In pursuance of these views, a considerable force was dispatched towards Chili, under the command of General San Martin, who having encountered the royalist troops in the course of his march, totally defeated them in several battles; and following up his successes, liberated the whole of Chili from the royal authority. The Chilian government, now made great exertions for the cause of independence, and fitted out a naval force, the command of which was given to Lord Cochrane, renowned for his brilliant exploits in the British service. With this force the Spanish trade in that quarter was greatly harassed; and Callao, the port of Lima, placed under blockade. See the article PERU, wherein the exploits of this hero, and, indeed, a portion of the general history of South America, is brought up to the year 1822. From this period, the events that have occurred will be most conveniently entered into in the following separate accounts of the main divisions of the country.

In the article BRAZIL, the early history of the country so named, has been given; and in the article PORTUGAL, its

separation from Portugal and the establishment of its government under the emperor, related. It was there stated, that after having acceded to a constitution in 1822, this potentate had peremptorily abrogated and dismissed the House of Assembly. However, on the 25th of March 1824, the emperor, together with his empress and ministers, solemnly accepted and swore to observe a constitution, of which the following is a sketch:—

The monarchy is hereditary; but, in another place, it is said, that the business of the general assembly is to elect the regent or regency, and mark the limits of its authority.

All Brazilian citizens (that is nearly every body born abroad of Brazilian parents, or of foreign parents on Brazilian land), vote for their representatives.

In the first place, the citizens meet in *parochial* assemblies, and choose *provincial* deputies. These again meet and elect the national representatives or general assembly. They appear, also, to have some magisterial powers in their peculiar provinces, being termed “ Councils General of the Provinces.”

Of the General Assembly, some are called *senators*; of these, thrice the necessary number are proposed by the provincial deputies, and the emperor selects from them one-third. They are chosen for life—must be upwards of 40, and have an income of 800 milreas. The deputies chosen every four years, must have 400 milreas income. The provincial deputies, 200.

From the Parochial Assemblies, monks, soldiers of all grades, servants and paupers, are excluded.

All religions are tolerated, but none must have an external form of temple, save the Catholics.

On most other points, the framers of this constitution have copied closely the English. Thus, pardoning, declaring peace or war, the nomination of judges, ministers and magistrates, rest with the sovereign: thus they have jurors to try the fact, and judges to expound and apply the law; and they hold the king's ministers *personally* responsible. They have much improved upon our system, by making their representative real, by fixing, at a moderate income, the qualification of their deputies, by paying them their expenses for their time; and lastly, by fixing what is to be done in the event of the imbecility, abdication, &c., of the sovereign.

The few events that have taken place since the article above referred to was published, may properly come in here.

The very general prevalence of republican principles which has taken place over the whole of South America, rendered the government, by an emperor, no very easy task; but no great or general movement of the people against the imperial power, has yet taken place. In the early part of 1825, the government felt itself sufficiently strong, in the public estimation, to promulgate a Royal Decree, granting an amnesty to all Portuguese banished or imprisoned for political crimes. This was a very bold, just and sensible measure, and could not fail of tranquillizing the country and restoring, in some degree, its capital.

The boundary of the Brazilian territory not having been very amicably settled, some disputes arose between this government and the United Provinces, which led to a very disastrous war in the beginning of last year. At first, the advantage seemed entirely on the side of the republicans, whom the natives joined and assumed the title of Patriots. Soon after, however, we find the Buenos Ayreans in a most desperate condition; their fleet destroyed, and the Brazilian vessels blockading the entrance of the river Plata, and all the roads and rivers in their hands, and thereby so completely cutting off supplies and commerce that the inhabitants were reduced to extreme privations.

Recently, the attention of the emperor of the Brazils has been called to Portugal, and he has dispatched commissioners to announce to the Portuguese, that his abdication was only conditional; and that if the conditions were not fulfilled on the part of the Queen Regent, he should resume the government: and he further appointed these commissioners members of the Queen Regent's council. The government have not,

not, however, admitted these councillors, nor published Don Pedro's manifesto.

To return to Brazil.—The clergy of this country are paid by the government which collects the tithes on all articles exposed to sale, and disburses such salaries as may be deemed proper. No priest has less than 200*l.* per annum, except the conventual clergy, who, being maintained by old grants of land, are some very poor, others (as the Benedictines) very rich.

The chief sources of revenue are the customs, inward and outward; the fifth on gold; duties on negroes, on importation, paid by the seller, and another duty on farther sale paid by the purchaser. The amounts of English imports in 1821 was about 2,300,000*l.*, which would pay fifteen per cent. From the other European powers to the extent of a million sterling, at twenty-four per cent. From the United States, under 350,000*l.* From the River Plate and Pacific, and from Portugal, India and China, it would amount together to a sum of 800,000*l.* To this must be added the one-fifth on gold, which, taken on 600,000*l.* gives 120,000*l.* Duty on 40,000 slaves imported, at a doblon each, 120,000*l.* The produce of the diamond mines, after deducting 50,000*l.* expenses, will scarcely amount to as much more. The duty on exports to all quarters, 260,000*l.*; to this must be added duty on goods brought from the interior, tobacco and whale farms, taxes on the mintage, and other taxes, as equal to 1,200,000*l.* more; forming a grand sum total of 2,500,000*l.* of annual revenue. This is, however, merely an approximation.

A regiment of foreigners, a battalion of artillery, formed of free blacks, 600 cavalry from the province of Minas Geraes, and about 1000 native infantry, the whole amounting to above 2,500 effective men, constitute all the standing army of Brazil. But as every citizen who votes is liable to be called on for the defence of his country, a very formidable militia will soon be framed.

The navy (under the dominion of the Portuguese, in so enviable a condition), amounted in 1823 only to one line-of-battle ship, three frigates, three corvettes and some brigs and schooners. The government were, however, at that time engaged in constructing six frigates and otherwise improving their navy.

With regard to the society at Brazil there is of course nothing worth the name except at Rio de Janeiro; and here the old Portuguese and the Brazilians seem to be on very cold terms of acquaintance. The former wishing to retain a superiority from their old hereditary habits, and the latter, as well educated and richer, not being at all inclined to cede it. Literature is at a low ebb, but enough exists to keep up a taste for it, and some feeble attempts are made from time to time to interest the people in the study of botany, natural history and the sciences in general. The whole population of the empire no one is accurately informed about. Caldwell, a very intelligent writer, reckons it at three millions thus divided:—blacks 1,800,000; whites 600,000; Indians 600,000.

Land is, about the metropolis, valuable, but further in the country may be had for clearing, which is an operation of very little trouble. The trees are felled and their boughs set on fire; soon after the coarsest Indian corn is sown in the ashes.

So universally is gold disseminated over the central parts of the Brazils, that even in the streets of Rio, children may be seen, after heavy rains, picking up pieces of this metal. In the mountains gold is found in a red heavy loam, in beds of clay-slate, quartz mica-slate or in veins of quartz and red ironstone. It usually assumes its most beautiful form in the large foliated iron mica-slate; it is also found in arsenical iron pyrites. All the numerous streams that trickle down the sides of the mountains, but more especially those at their feet which assume a slow and muddy character, are auriferous, not only in their beds but their banks also. Nor is gold the only treasure that the Minas Geraes possesses. We are assured by Von Spix and Martius, that almost every kind of metal is to be found here, with the exception of silver; iron-

stone, which may be considered to form the chief component part of the long chain, is so rich as to produce ninety per cent. of metal; lead is found beyond the Rio de S. Francisco; copper in S. Domingos; manganese in Paraopeba; platina in several of the mountain streams; quick-silver, arsenic, bismuth, antimony and red-lead ore, about Villa Rica; diamonds in Tejuco and Abaité; yellow, blue and white topazes, grass and bluish green aqua-marines, red and green tourmalins, chrysoberyls, garnets and amethysts; in Minas Novas. To which may be added that which is, or ought to be, the greatest of all treasures, yet the most neglected, a very fertile soil covered with a luxuriant vegetation, capable of producing every luxury and necessary of life, under a climate which, from the elevation of the surface, is temperate and agreeable. But here, as elsewhere, the *auri sacra fames* has exerted a baleful influence over the infatuated inhabitants. Neglecting agricultural pursuits, their whole attention has till very lately been drawn to the mines; a lottery in which the great prize generally remains in the wheel. It is a curious circumstance, stated by the Bavarian travellers, that at the first place they entered in the gold district, the only currency was a depreciated paper-money, with a large number of forged notes.

The English have long enjoyed a monopoly, first established by the Portuguese government, in supplying Brazil with cotton manufactures. The restriction that first gave us this monopoly will shortly expire, but it is said that without it we shall still be enabled to undersell other competitors. In 1820 the extents of British manufactures amounted to 1,860,000*l.*; in 1821 to 2,230,000*l.* The imports of 1820, were 950,000*l.*; in 1821, 1,300,000*l.* Thus, then, the trade with England is very great. Every thing is supplied to Brazil from this country except wine from Portugal, a few articles of dress and fashions from France, a little iron from Sweden, and flour and fish from the United States. Nearly the only trade kept in the hands of the Brazilians is that of Slaves. This is carried on with the usual horrid sacrifice of life. For example—see the following table:

An Account of the Number of Slaves imported into Rio de Janeiro in the Year 1823.

In fifty-two vessels	20,610	landed.
Died at sea	1,437	

22,047 shipped.

In 1824, to the 6th March.

In seventeen vessels	5,626	landed.
Died at sea	840	

6,466 shipped.

Though much has been done for Brazil by its emperor, and though her finances, long distressed by the expenses of war, are fast recovering, and her trade of mining in a state of improvement, this country cannot be considered either flourishing or tranquil. The contiguity and example of the republican states, tends to excite in the minds of the people an impatience of the sovereign rule by no means favourable to the present state of things, and it is to be feared that from the immense distance between the cities and the difficulty of communication, the self consequence that all insulated bodies of men are prone to feel, will cause a multitude of independent states to spring up. The existence of this feeling in the governed must necessarily excite asperity in the governors; but the clergy, a class likely to aid these dissensions by exciting, as they have generally done, the ruling powers to despotic measures, are fortunately so vicious and debased, that they are utterly contemned by all ranks of people.

The climate of Brazil is fine, and the formidable diseases found in parallel latitudes are nearly unknown. The situation of the capital is peculiarly healthy. Of vegetable productions Brazil has to boast the *banana* or *plantain*, which grows almost every where with little cultivation and bears a fruit extremely nutritious and wholesome; the finest oranges in the world; abundance of pine apples (though unfortunately

nately they are not allowed to ripen perfectly on account of the ants); the *maracuja*, or fruit of the popiflora, estimated by the Spaniards the finest of fruits, the mango, the guava, the tamarind, &c. Cocoa, coffee, and sugar are also plentifully produced. The tea tree grows, but from some unknown circumstances the article is not good. Every kind of wood necessary for ship-building, dyeing, or carpentry is found, and multitudes of the most gorgeous flowers: these, however, want the rich odour that attends the blossoms of more temperate climes. The horses in the colder parts of Brazil are strong, but lose so much of their strength and vivacity in warmer parts, that mules are chiefly used. Large oxen are occasionally found for draught; but the breed that is kept for eating, is peculiarly lean and small. A multitude of wild dogs infest the streets of the capital; but hydrophobia is unknown. The tapir, the sloth, the jaquar, huge bats that suck the blood of the cattle, many venomous serpents, enormous toads, scorpions and spiders; voracious ants so large that, when fried, they are eaten; mosquitoes, *jaggers* who get under one's toe nails, and ticks who burrow into one's flesh, fill up the catalogue of animated nature. Much honey would be raised from bees, if the ants did not destroy the cells. The silk-worm does not exist, but its place is partly supplied by another insect. Rio de Janeiro is well supplied with fish: sharks and small crocodiles are met with in its bay.

To the west of Brazil lies the comparatively small state of PARAGUAY. This so long and prosperously managed by the Portuguese Jesuits, was early revolutionized, and at present is under the absolute dominion of a despot. When first it threw off the yoke of the mother country, the king's governor, Velasco, for some time joined in the administration of affairs with the revolutionary chief Francia, a native of Paraguay; and who, having taken a degree at Cordova, was better known by the name of Doctor Francia. This administration lasted but a short time; Francia getting rid of his colleague, declaring himself dictator of Paraguay, and making two nephews his secretaries.

In 1810, an expedition, under the command of Belgrano, left Buenos Ayres to attack Francia; and, having advanced for some days through the thick woods of Paraguay without seeing an enemy, concluded that they should reach the capital Asumpcion without any obstacle. But the following night, soon after their encampment, they discovered fires on all sides of them, and a trumpet arrived with a notification from Francia, that he had no wish to shed blood, and would therefore grant a free retreat to the Buenos Ayreans; but that, if they advanced, they must take all the consequences of such an indiscretion. On this, Belgrano, after some hesitation, seeing that his resources were cut off, and being ignorant of the number of the enemy, he thought it prudent to retire. Every night, while he remained on the territory of Francia, he found himself surrounded in a similar way, and was glad to escape from the danger with which he was menaced.

From 1810, when Velasco was deposed, until 1816, the yerba, or tea tree, came down in the usual large quantities. According to M. Bonpland, it is produced by a new species of ilex. In 1814, no less a quantity than twenty thousand bales reached Buenos Ayres; but since 1816, the dictator has scarcely permitted any to leave the country, excepting now and then in exchange for gunpowder, arms, and in one or two instances, philosophical instruments. The tea brought from Paraguay is said to be as superior to that manufactured by the Brazilians as possible; a difference solely to be attributed to the process used in the manufacture. For this species of ilex, being the growth of a warmer climate, is more likely to vegetate well in Brazil than in Paraguay; in the north of which it only flourishes. Owing to the prohibition on the part of Francia, the Brazilians have found a great source of wealth in the preparation of this article. They supply the Buenos Ayrean states and Chili; for the last they furnish a stronger description of yerba, as it is supposed that the great cold of the Cordillera destroys the

flavour of the common kind. The Brazilians consume little themselves.

From these circumstances the price of the tea is high, about twelve reals, or 6s. 6d. the pound; but such is the predilection for it that it must be procured at any price. Foreigners, as well as the natives, get accustomed to the flavour, and as readily subscribe to its good effects.

The Dictator has certain political views of his own, the bias of which it is not so easy to discover. He carefully abstains from participating in the disputes of the other provinces, although invited to do so, but strictly preserves an armed neutrality. Some maintain that he is one of the old Jesuits, others that he is holding the country for the king of Spain, but all vilify him for not allowing the tea to leave the country. Whether he is determined that the lives of none of his subjects shall be lost while collecting the leaves, which, from the swampy nature of the places where the trees abound, is a most unhealthy pursuit, or whether he fears that trade will introduce foreigners and new ideas, is not at all certain, but he persists in his plan.

Under such circumstances little is with certainty known of the interior of Paraguay. It is said, however, that the people are satisfied with the order of things, and that the population is increasing and wealthy. It is computed at 200,000 whites, exclusive of Indians. The Dictator is perfectly despotic, never punishes with death, but with perpetual prison.

A few years ago the Dictator settled some disputes in the country in a novel way. He decreed that the government of the country should be of the most popular nature; that there should be a congress of a thousand members, chosen from all classes of the people, to arrange the affairs of the country, &c., and settle a new form of government. The members were accordingly chosen from all parts, and obliged to assemble at Asumpcion, where, after an address from the dictator, they were set to business. At the end of three days, passed without pay or allowances, and with the certainty of the ruin of their farms and families, they came in a body to the Dictator, and, replacing the sovereign power in his hands, declared that they were perfectly satisfied with his plan of government, and concluded by begging permission to retire to their homes. His excellency, disguising his satisfaction at the success of the plan, replied, that he should reserve to himself the power of calling them together again; and if he heard of any more complaints or murmurs, he should avail himself of it, and in that case the deputies must make up their minds to a session of at least six months' duration.

By means of the philosophical instruments, Francia has been able to strengthen his power considerably over the people. Every night he sallies out from his dictatorial palace, attended by a crowd of persons, and, examining the stars, he makes his calculations, and then retires amidst the admiration of the multitude.

M. Bonpland, who accompanied Humboldt over the equinoctial parts of the New World, and who, by his botanical researches, added so considerably to the value of the travels of the great Prussian, had subsequently settled at Buenos Ayres. In 1820, he received an invitation from Francia, who affects to encourage science, to follow his favourite pursuit in Paraguay. The offer of facilities in examining botanically a country scarcely known in this particular, but from the descriptions of Azara, was too tempting not to be accepted, although the friends of M. Bonpland made him fully comprehend the risk that he incurred by putting himself in the power of Francia: for previously to this, several Europeans, among whom were a Dr. Powlett, a physician, and a master shipwright, British subjects, had gone to Asumpcion, and had never been permitted to leave the country.

In spite of these sad instances of a want of faith on the part of Francia, Bonpland left Buenos Ayres, and proceeded, in the first instance, to the Entre Rios, the province to the south-south-east of Paraguay, and between the Parana and

Uruguay. It is said that he here received orders from the Dictator not to advance, as he had heard that, Frenchman-like, he had dabbled in the politics of Buenos Ayres: he then proceeded into the country of the missions, to the west of Corrientes, where he made large collections in every branch of natural history. He subsequently returned to the Entre Rios, and there, finding the tea tree, he, in conjunction with a Scotchman, entered into the manufacture of this commodity, and at once set up an opposition to the Dictator of Paraguay.

This manufacture did not go on long before Francia sent a party down the river to seize the offenders; the more wary Scotchman escaped, but unfortunately M. Boaplant was taken. Whether the details of the capture are quite correct, is not with accuracy known; but it is certain that the botanist was taken, and is still a prisoner at large, and permitted to make researches in the country.

To the south of and around Paraguay, are situated the UNITED PROVINCES of La Plata, and according to some authors the United Provinces include Paraguay; but we depart from this arrangement, because it is obvious that the Director holds no strong federation with the republicans. If we include Paraguay in these parts, the United Provinces stretch from 12° and 45° south latitude, and 51° 10' and 69° 55' west longitude. They are bounded on the north by Peru and Brazil, east by Brazil, south by the straits of Magellan, and the Atlantic Ocean, and west by Chili, the Pacific Ocean and Peru. Their area includes about 1,440,000 square miles.

The province of Buenos Ayres is bounded on the east by the river Parana, and its continuation the Rio de la Plata; on the north the small stream of Arroyo de en Medio divides it from the province of Santa Fé; and on the south and west, the Salado, which empties itself into the bay of Somborombon, may be considered as its limit in that direction. Latterly, however, some attempts have been made to extend the boundaries farther to the southward, and in fact, at different periods, the grazing grounds of the Europeans have stretched as far as 37° south latitude.

Nothing can exceed the fineness of the climate; the general range of the thermometer during the summer is from 75° to 84° of Faht. On the 21st February, 1821, the mercury stood for many hours at 91° in the shade. The mean temperature of the three summer months of 1822, was 71° 9'.

The Spaniards have at all times considered this country to be healthy in a singular degree, and the various instances of longevity given in the monthly obituary afford excellent proof of the general correctness of the remark. The more usual diseases are consumption, produced, it is imagined, by the sudden chills before spoken of, and bowel complaints, caused by drinking the water of the Rio de la Plata. It must be understood that these remarks are confined to the city and its immediate neighbourhood; for at a short distance, the *Gauchos*, or country people, seem perfectly free from disease of any kind.

The upper soil round Buenos Ayres is chiefly of a light nature, approaching to marl, and covering a stiff clay subsoil, called by the inhabitants, *tosca*. As far as modern observations go, this appearance does not extend many miles from the city.

The birds of this district are in proportion more numerous than the quadrupeds. The swan of the Rio de la Plata is a most elegant bird; the body is perfectly white, and the head and a portion of the neck black.

The South American ostrich (*nandu*) is met with in considerable numbers in the Pampas. It is about half the size of the African species, and the plumage is of little use. It is said that several females lay eggs of a yellowish colour in one nest, and that they are hatched by the male. There are two kinds of partridges in the Pampas; the one small, and similar to the quail of Europe, and the other considerably larger. On the banks of the rivers great variety of water-fowl subsist on the fish, which are most abundant.

The mosquito is common in the city, but not so troublesome as at Rio de Janeiro. Fleas abound; and they appear to live in the grass, for on lying down in some places, the body becomes covered with them. Reptiles are by no means common.

The only dependancy that Buenos Ayres can be said to possess, is that of Patagonia. See PATAGONIA.

The grain which flourishes best is wheat; and enough is raised, not only to supply the country, but to send considerable quantities to Brazil and up the Parana; formerly it derived a large portion from Chili. The wheat is small grained, bearded, and contains much flour.

The large farms are almost entirely taken up with the breeding of cattle. The numbers of horned cattle, and the consequent cheapness of meat, is an object of astonishment to all travellers. It is scarcely possible to say what a pound of meat is worth, when the whole ox, with the skin, tallow and horns, the only valuable parts, may be purchased for five or six dollars, and that considered a high price.

There are no manufactures of moment carried on in Buenos Ayres. The Indians bring in a few trifling articles, made from hides and ostrich feathers; and a few manufactured goods, such as ponchos and coarse woollen cloths, are brought in from the interior. It is not unlikely, that, in a few years, an English manufacture will supersede the use of the poncho; although, up to this time, we have not been able to fabricate any thing equal to it.

The trade between England and Buenos Ayres has become of much importance to both countries. In the year ending the 5th January, 1827, we shipped to Buenos Ayres, goods to the value of 388,487*l.*; while in the year ending 5th January, 1823, their value was 1,164,745*l.*, shewing an unprecedented increase. During the year 1822, one hundred and sixty-seven English vessels sailed from various ports for Buenos Ayres, carrying thither every description of manufactured goods, beer, &c.

The chief exports are hides, tallow, horns, hair, jerked beef, wool, Vicuna wool, (used for hat making), Chinchilli and Neutre skins, brought from the upper provinces. Of horse and cow hides, the number of 957,600 arrived in England in the year 1822; and when those which have gone direct to Antwerp and other continental ports are added to the account, some idea may be formed of the immense quantity produced in this part of the world.

In the year 1821, three hundred and twenty-two vessels were cleared outwards at Buenos Ayres, of which one hundred and fourteen were British; and in 1822, three hundred and four vessels, of which one hundred and sixty-seven were British.

This trade is chiefly carried on by an exchange of productions, very little coin having been sent of late years from the Rio de la Plata, perhaps not 100,000 dollars during the last five years. The other foreign trade carried on, appears of small amount after that of the British. The North Americans participate in it, as well as the Brazilians, who bring their sugars and spirits to exchange them for corn and jerked beef. Some trade is carried on with France, chiefly in oil made from horses and mules. A few mules are exported to the Isle of France.

The inhabitants are very much attached to social happiness. The theatre is a favourite resort; and latterly a new one has been built, to which particular privileges have been granted.

The bull fights were for some time totally abolished; but it would appear that the government has now reserved to itself the right of permitting them; but an express license must be procured for every exhibition, and the bull must be previously deprived of its horns. It seems rather an anomaly that this should be the case, when it is seen in what way these animals are usually treated by the country-people.

Every family of respectability has its *terulia*, or evening party, which includes a certain number of persons in the habit

habit of frequenting the house, and at which strangers are received with the greatest kindness and cordiality. The female part of the family is alone seen, or sometimes the gentleman of the house, but generally both the fathers and brothers are either forming part of another *tertulia*, or talking politics in the coffee-house. The general amusements are Spanish country-dances, of a superior kind to those known by the name in England; waltzing, minuets, and a dance accompanied with words, in which the lady first advances, and sings, "Cielito, mi Cielito," thence termed Cielito, or little heaven. Music also forms a part of the entertainment, and many of the ladies are no despicable performers. Refreshments are abundant, and about 11 o'clock the party breaks up. This takes place night after night. Nothing can exceed the politeness and elegance of the ladies: and a stranger generally would conclude that it was produced by the most finished education instead of proceeding from innate goodness of disposition.

Since the separation of the provinces, in February, 1820, the style of the Chief became necessarily altered: that of General Rodriguez, who was appointed on the 6th October, 1820, for three years is, Governor and Captain General of the Province of Buenos Ayres. There is little to be said respecting this officer, excepting that he possesses in an eminent degree the greatest of all virtues for a commander—firmness; and to this must be attributed the great ameliorations which have taken place in the province since the commencement of his rule. His conduct through life has always been marked with great patriotism, and he was one of the first who declared for the freedom of the country and the downfall of the Spanish yoke. He was one of the sixteen who planned the revolution in 1810, and who named the first junta of government to supersede that of the Viceroy Cisneros. His known character for firmness has had a strong tendency to keep the people quiet. When he took charge of the government, after the rising of the *Civicos*, many lives were lost in the streets of Buenos Ayres. Alluding to that event, he told the people on one occasion, when there was the probability of a tumult, that by blood he entered, and by blood he should go out. Perhaps no disposition could have been found better suited for the times and the people; and it appears the general wish that, on the expiration of the period of his command, it should be renewed for another term. The prerogatives in the republic are very limited; the governor has the power of promoting officers to the rank of *Coronel Maior*, and of rewarding them with grants of land; but there is no order of nobility or knighthood in his gift.

After the Director Pueyrredon went out of power, towards the end of 1819, and the separation of the provinces took place, the legislative power was very irregularly conducted. Sometimes it vested in the *cabildo* or municipal authorities, sometimes it was perfectly dormant, and the various changes in the executive annihilated for the time its exercise.—After the defeat of the *Civicos*, the Junta de Representantes again exercised its rights, and after a lapse of some months was regularly organized. The election is indirect. Each of the primary or parochial assemblies votes for twelve representatives, and of the whole number those who have most votes are chosen. For the parishes and villages in the province eleven are chosen in a similar way. Scrutineers are named to examine the votes, which are verbally given. At the commencement of August, 1821, the Chamber of Representatives was declared extraordinary and constituent, and various regulations were made. First, it was decreed that the number of representatives for the city and the country should be doubled, and that one should be added for Patagonia, thus making the number forty-seven, which, taking the amount of population into account, is sufficiently popular. Secondly, That at the commencement of each session, half of the members should go out, and fresh elections take place. Thirdly, That no members should receive pay from government. And lastly, That a president and vice-president should be chosen in turn annually. At first the

distinction of deputy was not an honour much sought for by the people: it was elevating them to what appeared a dangerous height, from which they might be precipitated, they knew not how soon; for little confidence could then be put in the stability of the government. At the last election this feeling had very properly worn away, and the electors and candidates seemed aware of that distinction which, in all countries, where a proper feeling exists, is viewed with eager eyes. The sessions of the chamber commence about May or June, and last until December, when it is prorogued on account of the summer heats.

The very improved state of the country in every branch, but particularly in the finances and police, must be attributed to the appointment of D. Bernadino Rivadavia to the secretaryship of state. This nomination took place in July, 1821, when the country, from intestine disturbances and misrule, was reduced to the lowest ebb. From that period, every thing has put on a renovated appearance; confidence has been restored, and old and dangerous prejudices combated and eradicated. Rivadavia had been for some time the agent of Buenos Ayres in London, and while there, he watched all our admirable institutions, and, in his mind, saw what could with advantage be transplanted to his native country, and what was as yet too refined, or not adapted to its sphere. He appears to have used, whenever it was possible, England as his model; and his public spirit has certainly been well seconded by the most thinking part of the community.

Garcia, the secretary of the treasury, was long the agent in Rio de Janeiro; and his appointment also reflects great credit on the governor.

One subject, which appears to have received much of Rivadavia's attention, is the state of the church and its discipline. It is well known that, while the Spanish power existed in South America, the quantity of property held by ecclesiastics and monastic institutions was immense. The king was the head of the church; that power having, at the conquest, been delegated to him, with the sovereignty of the country, by the Pope. In right of this, the tithes of the country fell into the royal treasury, as well as the first fruits, and other ecclesiastical resources; to which, in the mother country, he could lay no claim. In all the cities, the number of convents for monks and nuns was numerous; and, excepting the Jesuits, and since their extinction, the Franciscans, who were charged with the care of public instruction, these were all so many drones and useless members of a rising state.

At the commencement of the revolution, the country was deprived of the services of the bishop of Buenos Ayres, who was a suffragan of the see of Lima. The government then made itself the head of the church, after much curious reasoning on the part of the ecclesiastics, to whom the question was proposed. Whether any scruples were, after all, entertained of the correctness of this decision, does not appear; but, in 1815, the Pope was solicited to arrange the affairs of the church, an office which his holiness declined: he could not indeed act otherwise.

The first thing which occurred to Dr. Bernadino Rivadavia, on his coming into power, was to clip the wings and every way curtail the influence of the cloistered clergy. He considered that all his plans would be frustrated by this body, which have been in all catholic countries famous for their powers of intrigue and illiberal principles. He first put a stop to the importation, by expressly forbidding any to enter the province without an order from government; and by degrees passed through the chambers a variety of decrees, by which he accomplished his purposes; and at the same time, by excellent articles in the periodical papers, he prepared the minds of the people for the change, and even contrived to cast an odium on the reputation of the cloister. On the other hand, every thing was done to raise the secular clergy in the eyes of the people. A board was named to take possession of the rents of all the convents, and to examine the number of the inmates, their ages and dispositions. Shortly

after

after this, the titles were abolished, and the regulation for the church published; the dignitaries of which were to be composed of a dean, with a salary of two thousand dollars, and four presbyters, with sixteen hundred dollars of salary. Every difficulty was thrown in the way of seclusion: no one was to be permitted to take the vows until twenty-five years of age; and even then an express license from government was required. Towards the end of the year 1822, Rivadavia proposed to the Chamber that no convent which contained more than thirty, or less than sixteen inmates, should be permitted to remain; this proposition was received and several convents fell by it. It was ordered that the members of the suppressed houses should receive two hundred and fifty dollars annually, if under forty-five, and three hundred dollars, if more, with the permission of proceeding wherever they might think fit. The chapels of the suppressed houses were converted into parish churches, which were served with a splendour hitherto unseen. The only monasteries now left belong to the Franciscans, Mercedarios and Predicadores; and the only convents, that of Santa Catalina, limited to thirty, and that of the Capucins. The names of those persons who secularized were published, with every encomium, in the gazette. Many were literally reasoned out of their convents; and this measure, which, taking into account the state of the country and the strength of the party to be humbled, was one of the boldest ever undertaken, has been carried into effect with little disturbance; and the example has been followed by almost all the other states. In March, 1824, an attempt was made to overturn the government, and from the cries of *Viva le Religion, Mueren los Hereses!* with which the rebels galloped into the town, it might be supposed that it proceeded from a party who had viewed this measure with discontent; but the disturbance was soon put down.

Rivadavia has remodelled, in a great measure, the various courts of justice. Leaving the law as it stood in the time of the Spaniards, he has raised the salaries of the judges, to render them less open to temptation; and has caused them to furnish monthly lists of all the cases, criminal and civil, which have been decided, or are in progress. By these means, justice is much expedited. The establishment at present consists of four Counsellors of Justice, at a salary of 2,500 dollars, and five judges of the high court, at a salary of 2,000 dollars. The Consulado takes cognizance of questions purely commercial, and of the enforcement of debts. The Cabildo, or municipal body, has a certain charge over the city; and one of the Alcaldes of it is termed the defender of the poor. Juries have not yet been introduced, and perhaps it would not be easy to find a sufficiency of persons fit for the office. In all cases, parties pay their own costs. The only crimes that are punished with death are high treason, murder and robbery; and of late, the military have been rendered amenable to civil law, like the rest of the community.

From the year 1776, when the provinces of the Rio de la Plata were first formed into a distinct viceroyalty, until the attempt made by the English in 1806, the revenue derived by Spain seldom exceeded 700,000 dollars. The amount in 1821, was little more than 1,000,000 = £343,743 15s. 1822, it increased to 2,519,094 = £566,793 3s. 1823, 3,000,000 = £675,000 0s.

By a decree which proceeded from the late Spanish Cortes in June, 1822, the government was authorized to send out commissioners to the various colonies of South America, to endeavour to settle matters and arrange the disputes in the best manner under the existing circumstances of each. When the accounts of this reviving liberality on the part of the mother country arrived in Buenos Ayres, the Chamber of Representatives authorised the executive to enter into a negotiation for the cessation of the war in Peru, and made a grant of 30,000 dollars to carry the plan into effect. The other provinces were invited to become parties to this measure.

The subsequent events that have occurred in Spain, and the entire annihilation of the body which felt liberally inclined

towards the Americans, have however set the question at rest for ever.

In March, 1820, Ramirez, the chief of the Entre Rios, with Lopez, the governor of Santa Fé, marched against Buenos Ayres; and D. Manuel de Sarratea became governor. From that moment, the changes in the head of the province were almost weekly. On the 6th October, however, D. Martin Rodriguez was finally confirmed governor, and remains in power at present.

CHILE.—Modern Chile comprises that portion of country on the west of the Andes, which, bounded on the north by the desert of Atacama, extends to the banks of the river Biobio on the south. It lies, therefore, between 26 and 37 degrees of south latitude. Its breadth, from the great Cordillera to the Pacific Ocean, varies considerably; but its average may be considered about two degrees, lying between 69 and 71½ degrees of west longitude. Its extent may be taken at a superficies of 23,000 square leagues, a calculation, however, from which large deductions must be taken from the mountainous and rugged nature of the country.

The district to the south of the Biobio, and which is laid down in the old charts as forming a part of Chile and belonging to the Spaniards, is left out of this calculation, and should bear, in fact, a different name. It is inhabited by that brave nation, the Araucanos, who, of all those forming the New World, have alone resisted the arms and blandishments of Europeans.

The climate of Chile has been described in the most favourable terms by all those who have visited or written on the country. The temperature is moderate, the heat of summer being lessened by the cool breezes of the Cordillera, or the refreshing ones of the Pacific. The summer commences in the month of December, and a shower seldom falls during its continuance. The dews are extremely heavy and supply the deficiency of rain.

In examining the surface, it must be kept in view that Chile is a small tract of ground between the Great Cordillera and the sea, and that three small ranges extend in parallel lines between these two boundaries. A variety of streams have poured down in torrents from the Andes, torn up the country into many ravines, and have now ceased to flow; many others pursue their short course to the ocean and partake of the character of mountain streams: none of them are navigable, and vessels can scarcely lie in their estuaries. This is generally the face of the country, and the same features extend to Peru, and in both countries the agriculture is mostly carried on in ravines. The soil is a stiff clay, abounding in waterworn pebbles, and is of little depth, but of singular fertility.

A great natural advantage to the country is the extent of sea coast. The riches of the whole line of the Andes and of the intermediate hills, are with ease carried down to the coast, where a number of excellent harbours are ready to shelter vessels for their reception. The trade wind constantly blows down the coast to the equator, and for one half of the voyage at least renders the passage certain.

The rivers are of little import; the shortness of their course and the rapidity of the torrent during the season when the snow melts in the Cordillera, and at the other period, the shallowness of the water, prevent their being of any utility to commerce.

The inhabitants of Chile are chiefly taken up with agriculture and mining. The manufactures are of trifling importance, and they possess neither sufficient capital nor enterprise to enter into commercial speculations.

The agriculture in this happy climate requires little attention. The smaller trees (chiefly mimosas) are cut low, and the plough, of simple construction, passes once between them. The sowing time is in June, and the corn is cut in December.

The wheat is small grained but excellent, and worth two and a half dollars per fanega (two and a half English bushels). Hemp is an object of care; it appears of very excellent quality, but hitherto it has not been raised in any quantity.

The grape has been always cultivated with success, but the wine is generally of indifferent quality. That kind which is made near Concepcion, and called *vino de penco*, is considered the best; it approaches more nearly to Malaga than to any other wine known in Europe. The fig and the olive are of superior flavour and most abundant; peaches, melons, water-melons, and strawberries, are among the variety of fruits which abound.

By far the largest proportion of the gold found in Chile, where it is much more abundant than silver, is procured by means of washing the beds of rivers. It is of a very pure quality, in large flattened grains of a peculiarly bright colour. Some of these beds have produced extraordinary quantities of metal; and if agriculture were more extended, they would be met with more frequently.

The silver mines of the Chilian Cordillera are almost entirely worked in veins running through a clay-slate, very similar to that in which the celebrated mine of Potosi exists. Those mines, which are situate near the Pacific, such as Huasco and some others, are worked through a mountain lime-stone. Huasco produces extraordinary rich specimens of native silver, with the muriate and carbonate of lime. The two metals, lead and silver, do not appear so much united in this country as in others.

It is a well known fact that none of the South American mines produce, at the present day, that vast quantity of metal which they used to do in former times. When first discovered, the metal was in great abundance, and within a few feet of, and in some instance on, the surface of the earth. All this has been removed, and the great excavations subsequently made have become full of water, from which the proprietors have not a sufficiency of capital to clear them. From this cause many of the mines which yielded a large proportion of silver have become entirely unproductive and closed up. Molina states that the value of the gold and silver raised in his time (1780) was not under four millions, exclusive of what was smuggled. In 1821, the produce of the mines, including an allowance for contraband, according to D. Manuel de Salas, did not exceed a million and a half of dollars.

The taxes paid to government on the precious metals being moderate, about 8 per cent., it is supposed that little contraband is carried on.

It is from the mines of Coquimbo and Copiapo that the large quantities of Chilian copper are imported. The tax paid upon copper is five per cent.

The trade of Chile, considering the size and limited population, is of an extended nature, and its produce is sent to very different and remote corners of the globe. To begin with the ancient commerce of Chile. From the circumstance of this country extending so far to the southward, and producing corn and other articles of food in greater abundance than to the north, it has at all times furnished provisions in large quantities to Peru, of which, in fact, it has always been the granary. Since the expeditions have left Valparaiso to expel the viceroy, severe prohibitions have been laid on the exportation; and the natural trade of the country has become very much disordered. When, however, affairs are settled, it must resume its old form. In return for hemp, wheat, salted provisions, and other articles of subsistence, it takes from Peru, sugar, cocoa, and coffee.

The traffic across the Cordillera is of a very varying nature, although goods of some description or other are always passing. When the Paraguay tea was to be obtained, Chile sent 400,000 dollars annually to purchase it; but as that traffic has been of late years confined to the Portuguese manufacture, and not sent from Paraguay by the way of Tucuman, as it used formerly, it has been generally shipped at Montevideo and landed at Valparaiso.

The direct commerce between England and Chile, consists of cargoes of every description of manufactured goods; and in return gold, silver, copper, tallow and hides, are the usual remittances. The value of exports to Valparaiso in the year ending January 5, 1818, was 32,000*l.*; and

that of the year ending January, 1823, was 162,850*l.*, showing an immense increase. But it must be understood that a proportion of this sum was only exported and not consumed there, but remained until circumstances might open other ports. The direct British trade has a competitor of no small weight in the Indian trade carried on across the Pacific. Although, hitherto, this trade has not put on a regular form, which may be chiefly owing to the novelty of it, yet large quantities of Indian cottons, nankeens, and Chinese goods are met with in Valparaiso. Rice and sugar are also brought from the East Indies, and sold at a lower rate than the Peruvian. In return, the precious metals and copper are very acceptable articles in the eastern markets; and should any appearance of a scarcity present itself in India or New South Wales, Chile can always afford an abundance of corn to supply their wants. It is not easy to see what the trade will consist of when the affairs of Peru are settled, and the amount which Chile can produce of staple articles better ascertained. The consumption of the country must increase as the home manufactures disappear; which, purchased at a high price, are made to last a considerable time. The number of ships under the Chilian flag is very limited; and foreigners have all the coasting trade in their hands. Every article of English produce is retailed at a most inordinate profit by the shopkeepers, who proceed on the same prices they obtained twenty years ago, when the ports were closed and the value of money very different. There are no native merchants, and the foreigners sell only wholesale; otherwise the shopkeepers would be ruined. The duties on manufactured goods were for some time so high, that it was scarcely possible to sell any large quantity; but in 1822, they were lowered to 26½ per cent. *ad valorem*, which is not made too high by the importers. Gold and silver in coin are permitted to be exported, on payment of five per cent. duty; but as the authorities have not yet been able to view these articles as common merchandise, the exportation in the rough (pina, or pasta,) is still prohibited. There is no duty on the exportation of corn, but there is a small demand on exported provisions.

From this statement it will be seen, that no great wealth has been accumulated by the Creoles. The mining part of the community here, as in all countries, is generally the poorest, from that disposition to lavish which it always possesses: and although many, more particularly the old Spaniards, have large territories in various parts of the country, yet they are not of any great value. Even near the town, the value of a quadra, equal to nearly four English acres, did not exceed 100 dollars; and at a distance from it, the price was comparatively less.

Torn as this country has been by wars and factions for the last ten years, the individual happiness of the people has been as much abridged as the fineness of the climate and their few wants would permit. The huts of the lower classes are formed of wood and reeds; and those of a better description, of large unburnt bricks (adobe). The doors are frequently formed of hides. The furniture varies little. It is generally comprised in one bed, two stools and an old table. The bed, which is scarcely deserving the name, is occupied by the oldest of the family, and may be called the dying place of whole family; for, in turn, all occupy it.

The language of the Chilians is far superior in pronunciation and elegance to the Spanish spoken on the eastern shore.

The only public library is that in the institute, under the immediate care of Don Manuel de Salas, a man of much information, which he liberally communicates to others. It consists of several thousand volumes, a proportion of which belongs to the College of the Jesuits, and some MSS.; many of which, relating to the early history of the country, are of a curious and interesting nature.

In the month of May, 1818, the late Supreme Director, D. Bernardo O'Higgins, appointed a committee of the best informed and most patriotic men, to form a Provisional Constitution for the State. Two months afterwards, a project was submitted for his approbation, and subsequently

sent to all the districts of the State, where books were opened to receive the assents and dissents of the whole population. It was generally well received.

The rights of the citizens occupy the first seventeen articles; and man, in a social state, takes up five more. The Roman Catholic religion is declared that of the State, and any other, contrary to the doctrines of Christianity, illegal. The next subject is the legislative power. It commences with stating, that the Chilians have the right to choose their own government, and to enact the laws by which they will be ruled, which can only be accomplished by deputies assembled in Congress; but such election being likely to occupy much time, and as the business was pressing, a Senate would make such provisional regulations as the urgency of the matters would require. It then provides, that five senators are to be named by the Director, one of whom in turn is to be President for the space of four months. Five other senators are also named in like manner by the Director, who are to act in the place of the former, if from illness, or any other cause, they should be forced to absent themselves. The senators are to enjoy salaries of 2000 dollars each, and have the style of Excellency. They are to have the privilege of appointing the officers of their chamber; their persons to be inviolate; and a Commission, named by themselves, is to examine any cause of complaint which may be made against them. The duration of the sessions is to be regulated by the President. The qualifications of the senators are to be, the attainment of thirty years of age, and a character distinguished for talents, patriotism, and integrity.

The Proyecto next recapitulates the attributes of the Senate. It is specially to watch over the Constitution, and the notice of any infraction of it is to be laid before the Supreme Director, who is responsible for attending to it. In every city or town, there is to be a Censor appointed to see that the Constitution is properly attended to. Without the consent of the Senate, no great affairs can be undertaken; no imposts can be laid, loans contracted, or war declared; no treaties of peace, alliance, or commerce; no ministers, agents, or consuls, can be sent to foreign powers; no levies of troops can be ordered, or, when raised, permitted to leave the country; and no public works can be undertaken, or new authorities or employments created.

The Senate is empowered to limit, add to, and amend the Constitution, as circumstances shall appear to warrant. All new laws made by the Senate, all abolition of laws which may be found to militate against the independence of the country, all reforms in the various departments of state, and all additions or corrections of existing laws, must be submitted, before their publication, to the Supreme Director, who, in the space of eight days, must assent or object to their promulgation; and in case of dissent, he must state the reasons of his opposition. In case of his assent, the law is to be published under a certain form. Should he refuse his assent to the law, and it be brought a third time for his approval, it will be published, and enforced, but in a different form. In any cases of laws badly understood, or in any case of doubt or flaw, the Director may, *de proprio motu*, explain them. The Senate has the privilege of calling together, at proper time, a National Congress, to be elected in such way as they shall direct. In case of the death, resignation, or crime of any of the senators, his successor is to be named by the Senate.

The executive power exists in the Supreme Director, who is to continue to receive the salary he actually enjoys, but which the Senate may increase or diminish at their pleasure. He is to enjoy no other emoluments. His style is to be Excellency, and his military honour that of Captain-General of the army. The command and regulation of the armies, the fleet and militia, the public tranquillity, the collection, distribution, and management of the public funds, are under the charge of the Director. He is to have the nomination of the various ministers, consuls, or agents to foreign states, and may through them open discussions relating to treaties of peace and preliminary negotiations; but nothing can be concluded without the consent of the Senate. He is to main-

tain the strictest alliance with the provinces of the Rio de la Plata, and to watch over the increase of population, agriculture, industry, commerce, and the mines. The care of the roads and posts is also entrusted to him. It is his peculiar privilege to name the secretaries of state; and he is responsible for them, as they are for their respective employes. The Director is to take especial care to extinguish those intestine divisions which ruin states, and to endeavour to render the union as firm as possible. He is to uphold public credit, and, as far as it may be possible, pay off the existing debts of the state. He is to make a monthly report to the Senate of the state of the treasury. He has the power of confirming or annulling the proceedings of courts-martial, and may at his pleasure remit the punishment of capital crimes. And the Proyecto farther provides, that in case of resignation or death, the new Director is to be named by the Senate.

The limitations to the executive power are as follow:—The Director cannot interfere in any civil or criminal process, nor in any way alter the system of the administration of justice. In case of the arrest of any one, he must be brought, within the space of twenty-four hours, before a magistrate. No high ecclesiastical offices are to be filled up by any persons who have not been rectors of parishes for six years. He is to employ no foreigners in any department of state. And lastly, he is to allow the correspondence of citizens to pass unopened.

The three Ministers or Secretaries of State are to conduct their respective departments with that fidelity, intelligence, and prudence, which the good of the state requires. They are to issue no orders, or make communications of any kind, without the express concurrence of the Director; and any orders or decrees made by them contrary to the Constitution, will subject them to responsibility. The appointments of these officers of state to rest entirely with the Director.

With respect to the provincial governors and lieutenants, the Constitution provides, first, that Chile is divided into three provinces, the Capital, Concepcion, and Coquimbo; secondly, that each governor-intendant is charged with the jurisdiction of the district, and is a judge in ordinary cases. All matters relating to the police and revenue are to be under their immediate care. The military governors of Valparaiso, Talcahuano, and Valdivia, are to be chosen by the Director, and continue in office for three years.

Such are the heads of the Constitution. The Supreme Director, being well aware that the country was not sufficiently advanced in constitutional views, or enough enlightened, to admit of a very popular form of government, when elections by ballot or otherwise should take place throughout the state, freed himself from this difficulty by naming a senate himself, of a few men devoted, as he thought, to his interests and those of the nation.

The senate, on the other side, discovering their power, and finding that they could not be displaced without a trial before a tribunal of their own nomination, soon disagreed with the Director on measures which he brought forward for the interest of the country. Forming a junction with the secretaries of the departments, the senate bid defiance to the Director, and carried on their own contracted plan of government, without attending to the more enlightened views of O'Higgins. Heavy duties were laid on foreign merchandize, and the senators were alike regardless of the proper administration of justice, and of the various other complaints which the people were inclined to vent latterly on the publications of the day. Could the Director have quitted this government, his power would have remained with his popularity undiminished; for his patriotic feelings were never impugned. But thinking that he could not turn round on the constitution which he had sanctioned, or that, perhaps, by doing so, a civil war would be the result, he chose to remain to the last, and endeavour, as much as it was possible, to correct the badness of the system.

The finances of the state were so much reduced that the troops left in the country, and those filling public employes, were many months in arrear of pay. Under these circumstances it became necessary to raise a loan in Europe, which

was

was accomplished in May, 1822, to the amount of a million sterling. It does not appear that the proceeds of this transaction were dedicated to the payment of the troops. The discontent among them was strongly excited, and an event which happened soon afterwards produced an open rupture between them and the government of St. Jago. An English merchant, who had resided many years in various parts of South America under difficult circumstances, and was well known for his talents and enterprize, proceeded by sea to Concepcion. On his arrival there he naturally fell into the company of General Freire, who was previously acquainted with him, and on hearing his grievances, and the distressed state of his army for want of their pay and allowances, the merchant suggested to the chief the grant of a license from him to load a cargo of wheat; a measure strictly forbidden by the government, in order to harass the Spanish force under La Serna, at that moment greatly suffering in Peru for want of provisions. The general was pleased with the idea, and unwilling that his troops should undergo farther sufferings while he had the means of relieving them. Accordingly, he gave the necessary license to embark a large cargo, upon which of course a handsome profit was realized. This transaction, as might be supposed, excited the greatest indignation in the government, and Freire was accused of assisting the enemy; in reply, he declared that the state of the army was such that he could not avoid the expedient of paying them; and on some farther correspondence of a warmer nature, O'Higgins on the 10th of December put some troops in march towards the southward. Two days after, General Freire issued a proclamation complaining of the proceedings of the secretaries of state, who, he declared, intended to starve the army; he made no complaint against the Director, with whom, it is said, he was in correspondence. He instantly commenced his march against the capital, and demanded judgment on the secretaries, the deposition of the government, and the installation of a sovereign congress. On the 19th January, 1823, while O'Higgins assembled what forces were near the capital, General Freire obtained possession of the country between the Biobio and the Maule, and the provinces of Concepcion and Coquimbo declared for the new order of things. After these events it was unlikely that the remaining province would hold out, or that the Director could longer stifle the murmurs of discontent which prevailed in the city. On the 28th January, the people assembled in groups in the Consulado, and loudly called for the appearance of the Director, who refused to present himself, and to whom they subsequently sent deputies; these he threatened with the force of his power, which was nearly reduced to a name, and afterwards harangued the few troops he had collected with much warmth and eloquence; finding, however, the troops lukewarm in his cause, and the people anxious for a change, at ten o'clock at night he resigned the command. As soon as this event was notified, a junta of governors was formed, to which the ex-director gave his sanction; General Freire, a few days after, entered the capital, and being declared commander-in-chief, took upon himself the government.

The last revolutionary movement of which we have an account, took place in September, 1823, when the royal standard was hoisted near Concepcion, but it was soon put down. Under whose command or by what force this attempt was made is unknown; but it is more than probable that the governor of the island of Chiloe was concerned in the plot. The time for making such attempts has long since passed by, and nothing short of independence will ever satisfy the inhabitants of this country.

Between Buenos Ayres and Chili, stretches the boundless plain of the Pampas—the habitation of the *Gauchos*, or wild Spaniards, and of the still wilder Indians. These races, fed by their vast herds of cattle, and provided with swift horses, lead a life half hunters, half graziers, and present all the vices and virtues of savage life—independence and hospitality, with ferocity and pride. We have already described this region under the article PAMPAS; but Heade's descrip-

tion is so characteristic, that we must insert it here. He says, that this plain varies with the four seasons of the year, in a most extraordinary manner. "In winter, the leaves of the thistles are large and luxuriant; and the whole surface of the country has the rough appearance of a turnip-field. The clover, in this season, is extremely rich and strong; and the sight of the wild cattle, grazing in full liberty on such pasture, is beautiful. In spring, the clover has vanished, the leaves of the thistles have extended along the ground, and the country still looks like a rough crop of turnips. In less than a month, the change is most extraordinary; the whole region becomes a luxuriant wood of enormous thistles, which have suddenly shot up to a height of 10 or 11 feet, and are all in full bloom. The road or path is hemmed in on both sides; the view is completely obstructed; not an animal is to be seen; and the stems of the thistles are so close to each other, and so strong that, independent of the prickles with which they are armed, they form an impenetrable barrier. The sudden growth of these plants is quite astonishing; and though it would be an unusual misfortune in military history, yet it is really possible, that an invading army, unacquainted with this country, might be imprisoned by these thistles before they had time to escape from them. The summer is not over before the season undergoes another rapid change: the thistles suddenly lose their sap and verdure, their heads droop, the leaves shrink and fade, the stems become black and dead, and they remain rattling with the breeze one against another, until the violence of the pampero, or hurricane, levels them to the ground, where they rapidly decompose and disappear—the clover rushes up, and the scene is again verdant."

Columbia is perhaps the most firmly established of all the South American States. It is bounded on the north by the Caribbean sea; on the north-east by the Atlantic; east by Guiana; south by Brazil and Peru; west by the Pacific. Its area is about 350,000 square miles, and it is situated between 5° 50' south, and 12° 30' north lat. and 58° and 82° west long.

The Andes, continued from Peru, divide in Columbia into three vast chains. Of these the eastern, called Venezuela; the second, Santa Martha, and the third, the western range. This country abounds in rivers, of which the Orinoco, the Amazon, the Magdalena, the Couca, the Atrato, the Guayquil and Guarapiche are the principal. It is also indented by numerous gulfs and bays, and altogether presents the appearance of a country highly advantageous for maritime purposes, as well as excellently calculated for internal navigation.

Columbia is somewhat thinly peopled, including all classes whether Spaniards, Creoles, Indians, negroes or foreigners; we can enumerate but 3,000,000 souls.

The commerce of this fine country, so long oppressed and cramped by the absurd legislation of the Spaniards, is now assuming considerable importance: cocoa, coffee, indigo, sugar, hides, Brazil and other wood, and most beautiful pearls, are the chief articles exported. The value of these exports in 1823 was upwards of 16 millions of dollars.

It is only since 1819 that this country has received the title of the Colombian Republic, previous to which it was known as the Viceroyalty of Granada and Captain-Generalship of the Caracas. After its establishment, of which a short notice has already been given, it remained tolerably free from internal dissensions until recently, when the inhabitants began to make objections to some part of the Colombian enactments. In consequence, General Paez put himself at the head of the army, and refused obedience to the Colombian Congress. Recent advices inform us, however, that he has been quieted by Bolivar, who is now, *pro tempore*, Dictator, and that the latter now proposes to resign the Dictatorship.

In 1824, Colombia entered into a treaty with Great Britain, which secured to the two nations mutual freedom of trade to the same extent as their respective governments allowed it to other nations.

The stream of our national wealth has of late been so
much

much directed towards South America, by mining speculations, that our readers will naturally expect from us some account of the situation and mode of working of most of the mines, as well as the probability of gain to be derived from them. Into these points, however, we shall only so far enter, as to lay before our readers the general result of Captain Head's travels, which were undertaken for the express purpose of ascertaining the points in question. It is true his observations refer only to some particular mines, but it is obvious that they must apply more or less to every mine in South America. His ultimate conclusion is, the working of South American mines by English capitalists, is a most unprofitable attempt. The degree of loss which particular companies may sustain, and the profits they may get, must of course be regulated by a variety of circumstances; but it might easily have been predicted, and is now partly proved by experience, that taken in the mass, these mining companies are mere bubbles.

Captain Heade's reasons for this failure are as follow:—1. The English miners are not capable in that hot climate of undergoing the same or nearly the same quantity of labour as the native miners; and the former cannot exist on the same spare diet. 2. The latter class, so numerous under the compulsive system of the old Spanish government, are fast declining in number. No longer slaves, the more enlightened amongst them attach themselves to the free and independent habits of hunting or agriculture; and though long habit may retain many at their unwholesome avocation in which they have been brought up, no new miners arise, and hence it follows that no new ones will come forward until the price of their labour is materially increased. 3. It is only by manual labour that these mines can be worked, since want of roads and the dangerous and narrow passes of the mountains forbid the importation of an effective machinery.

SOUTH ANNA, a branch of North Anna river, in Virginia, which together, form Pamunky river.

SOUTH BAY, a bay in Hudson's straits on the north coast of Labrador, west of Cape Chidley.

SOUTH BAY, an arm of Lake Champlain, extending west-erly from the south extremity.

SOUTH BAY, a bay of the United States, on the coast of Long Island, extending from Hampstead to Southampton.

SOUTH CAPE, a cape at the southern extremity of New Holland. Lat. 43. 42. S. long. 146. 56. E. according to Captain Cook; 43. 47. S. by Captain Flinders.

SOUTH CREEK, a river of North Carolina, which runs into Pamlico Sound. Lat. 44. 54. N. long. 76. 48. W.

SOUTH FRIARS BAY, a bay on the south coast of the island of St. Christopher; 3 miles east-south-east of Basseterre.

SOUTH-HAMS, several small villages of England, in Devonshire, near Torbay, noted for the production of a strong rough cyder, resembling wine in taste. The soil is here of a reddish sand, and produces excellent carrots, and the best cabbages in England.

SOUTH HEAD, a cape on the north-east coast of New Holland. Lat. 24. 2. S. long. 108. 17. W.

SOUTH HERO, a post township of the United States, in Grand Isle county, Vermont, on an island in Lake Champlain. Population 826.

SOUTH HILL, a post village of the United States, in Mecklenburgh county, Virginia.

SOUTH OF INDIA, a division of Hindostan, which has the figure of a triangle, the base of which is formed by the Krishna river, and by its apex Cape Comorin. It is in length about 600 miles, and nearly 550 in its broadest part. This region was never completely conquered by the Mahometans, on which account it contains a greater proportion of Hindoos than most other parts of India. It was divided into several Hindoo principalities, the sovereigns of which expended large sums of money in the erection of temples, reservoirs, embankments, &c. Many of these princes were of the Jain and Boodhist sects; and although they all paid a nominal obedience to the Maha rajah of Vijeynagar, were despotic

in their own territories. These subdivisions were, Adoni, Baramahal, Bednore, Carnatic Upper and Lower, Cochin, Coimbetoor, Cuddapah, Dindigul, Guntoor, Harponelly, Madura, Malabar, Mysore, Rachore, Shanoor or Savanoor, Tanjore, Tinncvelly, and Travancore. A further description of each will be found under their respective heads. The whole of this territory is now occupied either by the British or their tributaries.

SOUTH ISLAND, a small island in the North Pacific Ocean. It is of a round form, $1\frac{1}{2}$ mile in diameter; a bare rock, with a peak in the centre, about 3000 feet high.

SOUTH ISLAND, a small island of the East Indian Ocean, in Gaspar's strait.

SOUTH ISLAND, a small island in the strait of Saleyer, near the south coast of the island of Celebes. Lat. 5. 45. S. long. 120. 51. E.

SOUTH ISLAND, a small island in the Eastern seas, near the south-west coast of the island of Boutton. Lat. 5. 42. S. long. 122. 50. E.

SOUTH ISLAND, a small island in the Indian sea, near the eastern coast of Madagascar. Lat. 17. S. long. 50. 20. E.

SOUTH KEY, a small island in the Spanish Main. Lat. 15. 40. N. long. 82. 35. W.

SOUTH MALLING, a parish of England, in Sussex, near Lcwes. Population 443.

SOUTH MOULTON, a market town of England, in Devonshire, pleasantly situated on an eminence near the west side of the river Moule. It is so called, to distinguish it from the village of North Moulton. It contains many well built houses. The church is a spacious and handsome building, containing several good monuments, and a large organ. The guild-hall is a commodious building; and the market-place, from which various streets branch out, is extensive and well built. Here is a respectable free school, founded in 1614; and also a charity school. In the former, the late judge Buller received the rudiments of his education. The inhabitants of the town are chiefly employed in the manufacture of serges, felts, and shalloons. South Moulton is an ancient town, and previous to the conquest formed part of the demesnes of Edward the Confessor. It is governed by a mayor, assisted by 18 capital burgesses, a recorder, town clerk, &c. The town was represented in Parliament in the 30th Edward I., but no return has been made since that period. Market on Saturday, well supplied and frequented; $12\frac{1}{2}$ miles west of Barnstaple, and 176 west of London.

SOUTH MOUNTAIN, a mountain of the United States, in Pennsylvania, on the west side of Adams' county.

SOUTH MOUNTAIN CREEK, a small river which falls into the Missouri. It is 40 yards wide, and it discharges a handsome stream of water. Its bed is rocky, with gravel and sand, and the banks are high. From its direction, it seemed to Captain Clarke to rise in a range of unknown mountains, about 50 or 60 miles to the south-west of its entrance.

SOUTH PETHERTON. See PETHERTON.

SOUTH POINT, a cape on the south coast of the island of Anticosti. Lat. 49. 5. N. long. 62. 35. W.

SOUTH POINT, a cape at the southern extremity of the island of Barbadoes. Lat. 13. N. long. 58. 23. W.

SOUTH POINT, a cape on the south-west coast of Sir Henry Martin's island. Lat. 8. 58. S. long. 220. 15. E.

SOUTH POINT, a cape on the south-west coast of the island of Fortaventura. Lat. 28. 1. N. long. 14. 1. W.

SOUTH QUAY, a post village of the United States, in Nansemond county, Virginia.

SOUTH REPPS, or REPPIS, a parish of England, in Norfolk; 4 miles from North Walsham. Population 617.

SOUTH RIVER, a river of the United States, in Maryland, which runs into the Chesapeake; 6 miles south of Annapolis.

SOUTH RIVER, a river of Maryland, which runs into the Chesapeake. Lat. 38. 58. N. long. 76. 41. W.

SOUTH

SOUTH RIVER, a river of Canada, which runs into the St. Lawrence. Lat. 46. 56. N. long. 70. 26. W.

SOUTH RIVER, a river of Antigua, which runs into the sea, a little to the north of Young Point.

SOUTH SEA, a name formerly given to the Pacific Ocean.

SOUTH-TOWN, or **LITTLE YARMOUTH**, a hamlet of England, in Suffolk; $1\frac{1}{2}$ mile south of Great Yarmouth.

SOUTHACRE, a parish of England, in Norfolk; $3\frac{1}{2}$ miles north-by-west of Swaffham.

SOUTHAKER LEDGE, a reef of rocks, near the south coast of Labrador. Lat. 50. 5. N. long. 60. W.

SOUTHALL, a hamlet of England, in Middlesex; $9\frac{1}{2}$ miles from London.

SOUTHAM, a market town of England, in the county of Warwick. In Domesday Survey, the name is written Sucham, and is said to contain four hides, with two mills, and a wood of one mile in length, and half a mile in breadth, all which belonged to the king. Henry III. granted it a weekly market and an annual fair. Little business, however, is done in the town, which is chiefly supported by the thoroughfare on the roads from Coventry to Banbury, and from Warwick to London. The town is indifferently built. The church is a handsome building, with a spire rising from a square tower at the west end. In 1811, the parish contained 165 houses, and 1007 inhabitants. Market on Monday; 82 miles north-west of London.

SOUTHAM, a hamlet of England, in Gloucestershire; $2\frac{1}{2}$ miles north-east of Cheltenham.

SOUTHAMPTON, a considerable town of England, in the county of Hants or Southampton, is a county of itself, and is styled the Town and County of the Town of Southampton. It is situated on the large estuary called Southampton Water, on a tongue of land which is bounded by that water on the south and west, and by the river Itchin on the east. The ground in this peninsula rises towards the centre, forming a very moderately elevated ridge, on which the town is built. The streets have hence a gentle slope; and as the soil is at the same time of a gravelly nature, they are thus kept dry and clean. The situation is on the whole very healthy and agreeable; it is noted for the beauty of the surrounding scenery; and the town itself presents a picturesque appearance from different points of view. The approach from the London road is peculiarly fine, from the noble view of Southampton bay, the Isle of Wight, and the scenery of the New Forest. The town is well paved and lighted, and regularly patrolled by watchmen, and conduits of water are disposed at proper distances. The High-street runs from the quay northwards: it is upwards of half a mile in length, and is particularly handsome and spacious, somewhat resembling the High-street of Oxford. The entrance to this street from the land side is by the Bar-gate, a venerable piece of antiquity, the approach to which is striking, being continued through an extensive and well built suburb. Within the last fifty years the town has more than doubled its buildings and its population; the latter probably amounting to between 10,000 and 12,000. Of the public buildings, there are five parish churches—St. Michael's All Saints, Holy Rood, St. Lawrence, and St. Mary. There was formerly another church, that of St. John; but in the reign of Charles II. the parishes of St. John and St. Lawrence were united, and the church of the former was taken down; a burying ground now occupies the spot on which it stood: St. Michael's church is the most ancient in the town; it forms the eastern side of the square of the same name. It consists of a nave, chancel, and side aisles, with a low tower rising from the centre, and terminating in a fine slender octagonal spire, which forms a very conspicuous object, and was erected as a mark or guide to ships entering the port. On the north side of the chancel is a handsome monument to the memory of the lord chancellor Wriothesley; and in the opposite aisle, on the south, is a curious antique font. In this church the mayor is always sworn into office. All Saints' church is an elegant modern building, in the Grecian style: it was erected from the designs of Mr. Revely, a

pupil of Athenian Stuart, and is a fine specimen of what might have been expected from the talents of a very promising artist, had his life been prolonged. The remains of captain Carteret the circumnavigator, and of Bryan Edwards, the historian of the West Indies, are deposited here. Holy Rood church is a large building, with a tower at the south-west angle, and a colonnade in front, commonly called the Proclamation, where the hustings is erected, and the poll taken at elections. Within the church is a fine organ and several handsome monuments, one of which, by Rysbrack, to the memory of Miss Stanley, has an inscription from the pen of Thomson. St. Mary's and St. Lawrence churches contain nothing remarkable. The dissenters of the Independent denomination have lately erected a neat and spacious place of worship. There is also a remarkably neat new chapel of the Baptist denomination, with a very pretty Gothic front. The other public buildings are the assembly-rooms, situated near the west quay, and a commodious theatre. Near the town, on the north, is a military asylum for the orphans of soldiers, on the same plan as the well known institution at Chelsea. It contains about 380 boys, and is under admirable regulations. A free grammar school was established in Southampton by Edward VI. in an old building in Winkle-street. It was thence removed many years afterwards to an ancient mansion, known by the name of West Hall, which has lately been taken down, and a new house has been erected for the master, out of the old materials. Here are also Sunday schools, and schools on the plans of Bell and Lancaster; and near the entrance of the town, on the right, is a neat range of alms-houses for 18 poor widows, who are allowed two shillings each weekly, from a bequest by Robert Horner, Esq. There are various buildings of considerable antiquity in different parts of the town. The Bar-gate already mentioned, is a curious ancient fortified gate house. It consists of a central arched passage, about eighteen yards in length, and four wide; on both sides of which are two lateral passages, or postern doorways. It was mostly built in the reign of Edward III. On the north front are two gigantic figures, one on each side of the gateway, said to have been intended to represent, the one Ascupart, a giant; and the other Sir Bevois of Southampton, who slew him in combat. Over the arches of the gate is the town-hall. Near the quay is part of the front of a spacious mansion, supposed to have been a palace, occasionally inhabited by the Saxon and Danish kings. The Domus Dei is an hospital, founded, according to Leland, in the reign of Henry III. by two merchants, brothers. It was given by Edward III. to Queen's College, Oxford, to which it still belongs. The establishment consists at present of a warden, four aged men, and as many women. A house of Grey Friars was founded here in 1240, but no remains of it are now standing. Part of its site is occupied by Gloucester-square, and another part by a very large building originally erected for refining sugar, but now used as a warehouse. Southampton castle was situated on the west side of the town. Its area was nearly semicircular, in the southern part of which stood the keep, on a high artificial mount. The keep was circular. This spot commands a delightful view of the town and of the adjacent county. The site of the keep was purchased by the late Marquis of Lansdowne, who erected a very irregular and costly building, which, after his death, was sold as building materials, and is now demolished. Southampton is, by its situation, well adapted for commerce, and it carries on a considerable trade in wine, corn, timber, &c. Hemp, iron, and tallow, are imported from Russia, and tar and pitch from Sweden. English iron is brought coastways from Wales, and coals, lead, and glass are brought by colliers from Newcastle. From Portugal the importations are chiefly wine and fruit. To Jersey and Guernsey are exported about 6000 tons annually of unwrought wool, great part of which is returned in the shape of coarse knit hose. During the last war large quantities of Spanish wool were landed here. The manufactures of Southampton are not of much importance. A silk throwing manufactory employs a few of the poor. Ship-building is

arried on at different docks near the town. During the last war, contracts for biscuits for the navy, and bread and clothing for the army, were executed to a considerable extent. Near the west quay, and farther towards the channel, are convenient baths; and several bathing machines have been set up at the crosshouse near Itchin ferry. A chalybeate spring, which rises about 100 yards to the westwards of Bargate, is in some repute for its medicinal qualities. Besides the amusements of the theatre and assemblies, here are annual races, an annual sailing match, circulating libraries, and a public garden. According to its last charter of incorporation, granted by Charles I., Southampton is governed by a mayor, a recorder, 9 justices, a sheriff, 2 bailiffs, 24 common councilmen, and as many burgesses. All who have passed the chair are aldermen. The town, which was made a borough by Henry II., is also a county within itself, and as such is independent of the lord lieutenant and sheriff of Hampshire. The mayor is admiral of the liberties from Southsea castle to Hurst castle, and half-sea over from Calshot to the Isle of Wight. Southampton sends two members to parliament. The first return was made in the 23d of Edward I. The number of voters is about 700, consisting of the burgesses, and such of the inhabitants as pay scot and lot. Several royal burgesses have been enrolled in this corporation, among whom are the late king and his present Majesty. The origin and name of Southampton have occasioned much discussion. The name is written Hanton or Hantune in the Doomsday book, and is supposed to be derived from the river Ant or Anton. The Romans had a settlement at Bittern, about a mile and a half from Southampton, named Clausenham. The present town arose after that was abandoned. Hampton must have been a place of consequence under the Anglo-Saxons, as it gave a name to the whole county. From the year 873, Hanton was subject to frequent ravages by the Danes, until the accession of king Canute, who put an end to these invasions. This monarch appears to have occasionally resided at Southampton; and it was here that the incident happened which is recorded of him, when he ordered his chair to be set on the sea shore, and attempted to control the waves. During the thirteenth century a considerable trade was carried on between this port and France, and this continued till the rupture with France in 1338. In 1345, the army which afterwards fought at the battle of Cressy, was embarked here, as was also the army which, in 1415, fought under Henry V. at Agincourt. The trade of the town appears again to have flourished in the reign of Henry VI. Camden, who wrote in the reign of Elizabeth, says, that in his time the town was famous for the number and beauty of its buildings, its affluent inhabitants, and the resort of numerous merchants. After this, however, it appears to have declined, as Gibson, in the year 1695, in his edition of Camden, describes it as going fast to decay. Since that time, however, trade has again revived, and the town has gradually risen to its present consideration. Population of the county 282,203. Markets on Tuesday, Thursday, and Saturday, well supplied with excellent fish and other provisions. There are two annual fairs, the principal of which is Trinity; 12 miles south-south-west of Winchester, and 75 west-south west of London. Lat. 50. 54. N. long. 1. 24. W.

SOUTHAMPTON, a township of the United States, in Rockingham county, New Hampshire. Population 427.

SOUTHAMPTON, a township of the United States, in Hampshire county, Massachusetts, which contains a lead mine; 93 miles west of Boston.

SOUTHAMPTON, a post township of the United States in Suffolk county, New York, on the south side of Long Island; 100 miles east of New York. Population 3899.

SOUTHAMPTON, a township of the United States, in Cumberland county, Pennsylvania. Population 700.

SOUTHAMPTON, a township of the United States, in Franklin county, Pennsylvania. Population 1060.

SOUTHAMPTON, a township of the United States, in Bedford county, Pennsylvania. Population 932.

SOUTHAMPTON, a township of the United States, in Somerset county, Pennsylvania. Population 455.

SOUTHAMPTON, a township of the United States, in Bucks county, Pennsylvania. Population 739.

SOUTHAMPTON, a county of the United States, in the south-east part of Virginia, bounded north-west by Sussex and Surrey counties, east by Isle of Wight and Nansemond counties, south by North Carolina, and south-west by Greedsville county. Population 13,497, including 6406 slaves. Jerusalem is the chief town.

SOUTHBOROUGH, a hamlet of England, in Kent; $2\frac{1}{2}$ miles south-by-west of Tunbridge.

SOUTHBOROUGH, a post township of the United States in Worcester county, Massachusetts; 28 miles west of Boston. Population 946.

SOUTHBURY, a post township of the United States, in Worcester county, Massachusetts; 28 miles west of Boston. Population 946.

SOUTHBURY, a post township of the United States, in New Haven county, Connecticut; 22 miles north-west of New Haven. Population 1413.

SOUTHCHURCH, a parish of England, in Essex, half a mile from Southend.

SOUTHCOATS, a township of England, East Riding of Yorkshire; $1\frac{1}{2}$ mile north-east of Kingston-upon-Hull.

SOUTHDEAN, a parish of Scotland, in Roxburghshire; 12 miles long and 7 broad, on the bank of the Jed. Population 804.

SOUTHEASE, a parish of England, in Sussex; $3\frac{1}{2}$ miles south-by-east of Lewes.

SOUTHEAST, *s.* The point between the east and south; the point of winter sunrise.—The planting of trees warm upon a wall against the south, or *southeast* sun, doth hasten their ripening. *Bacon.*

SOUTH-EAST, a post township of the United States, in Putnam county, New York. Population 1887.

SOUTH-EAST-BAY, a bay of the south-east extremity of Tavai Poenamoo. Lat. 46. 45. S long. 191. 20. W.

SOUTH-EAST ISLANDS, a group forming part of Recherche archipelago, on the south coast of New Holland. Lat. 33. 53. S.

SOUTHELMHAM, the name of six parishes in England, in the county of Suffolk, lying between Halesworth and Bungay, about 106 miles from London. Their names and population are, St. James's Southeilmham, 264; St. Margaret's, 191; St. Cross, 214; St. Nicholas, 97; St. Peter's, 131; and St. Michael's, 112.

SOUTHEND, a parish of Scotland, in Argyshire, about 10 miles long, by 5 broad. Population 1869.

SOUTHEND, a hamlet of England, in the county of Essex, situated at the mouth of the Thames, nearly opposite Sheerness. Until within the last 20 years, this village was but little known; but since that time it has obtained considerable repute for sea-bathing. Some respectable and elegant lodging-houses have been erected for the accommodation of the visitors, and also an assembly-room, a theatre, and library. The water is accounted sufficiently salt; and besides bathing-machines, there are two warm baths. The view of the Thames, and of the continual passing and repassing of vessels, forms an agreeable prospect from the town. At a small distance from Southend, a stone is placed, to mark the boundary of the jurisdiction of the corporation of London over the river Thames on the east. Southend is in the parish of Prittlewell with which its population is returned. The village of Prittlewell stands on the declivity of a hill, on the top of which is the parish church, a large and respectable building, the tower of which serves as a landmark to vessels entering the Thames.

SOUTHEND, **ELTHAM** and **LEWISHAM**, two small villages of England in Kent, situated on the river Ravensbourne; 10 miles south-east of London.

SOUTHEND, a hamlet of England, in Gloucestershire; 2 miles from Chipping Sodbury.

SOUTHERAY, a parish of England, in Norfolk; $6\frac{1}{2}$ miles from Market Downham. Population 536.

SOUTHERLY, *adj.* Belonging to any of the points denominated from the south; not absolutely southern.—
Lying

Lying towards the south.—Unto such as live under the Pole that is only north which is above them, that is only *southerly* which is below them. *Brown*.—Coming from about the south.

I am but mad north northwest: when the wind is *southerly*, I know a hawk from a handsaw. *Shakspeare*.

SO'UTHERN, *adj.* [ʊðəpne, Sax.] Belonging to the south; meridional.

Frowning Auster seeks the *southern* sphere,
And rots with endless rain th' unwholesome year. *Dryden*.

Lying towards the south.

Why mourn I not for thee,

And with the *southern* clouds contend in tears? *Shakspeare*.

Coming from the south.—Men's bodies are heavier when *southern* winds blow than when northern. *Bacon*.

SOUTHERN (Thomas), a dramatic writer, is said to have been born at Stratford-on-Avon, about the year 1662; though others assume that he was a native of Dublin, and educated at the university there till his eighteenth year, when he came to England. He was entered of Pembroke college, Oxford, in 1680, and soon after composed a tragedy, entitled, "The Persian Prince, or Loyal Brother," which was acted in 1682. He took up his residence at the Middle Temple in 1683, and in the following year another play composed by him was acted and published. When James II. came to the crown, he rewarded Southern for his loyalty in defending his cause, when his exclusion from the throne was warmly, or indeed violently agitated, by giving him a captain's commission in the troops intended to oppose the landing of the prince of Orange. When his military services became of no account, he returned to his dramatic career, and wrote several pieces, both in tragedy and comedy, from which he drew a liberal subsistence. Though Southern does not rank with the highest of our dramatic geniuses, yet he was capable of deeply interesting the passions. His best pieces were "Isabella," and "Oroonoko;" the latter, formed upon one of Mrs. Benn's novels, was said to have been taken from a real story. Southern was apt to mix scenes of low and indecent comedy with his tragic scenes; but they are so managed that they may be easily separated, and leave pieces which are occasionally viewed with applause. He lived to a great age, and bore a very respectable character. He died in 1746, at the age of 84. His plays were published collectively by T. Evans, in 3 vols. 12mo. *Biog. Brit.*

SOUTHERNBY, a hamlet of England, in Cumberland; 16½ miles north-west of Perith.

SO'UTHERNLY, *adv.* Toward the south.—The sun cannot go more *southernly* from us, nor come more northernly towards us, in this than in former ages. *Hakewill*.

SO'UTHERNMOST, *adj.* Furthest towards the south.—Shenstone had resolution enough to take a journey of near seventy miles across the country, to visit his friend in the *southernmost* part of Oxfordshire. *Graves*.

SO'UTHERNWOOD, *s.* [ʊðəpnwude, Sax.; *abrotanum*, Lat.] This plant agrees in most parts with the wormwood, from which it is not easy to separate it. *Miller*.—Wine and water, in which are sod *southernwood*, melilot, &c. *Burton*.

SOUTHFIELD, a township of the United States, in Berkshire county, Massachusetts; 112 miles west-south-west of Boston. Population 147.

SOUTHFIELD, a town of the United States, and capital of Richmond county, on the south side of Staten island; 12 miles south of New York. Population 1007.

SOUTHFLEET, a parish of England, in the county of Kent. In ploughing up some adjacent fields here, some stone coffins were lately found, supposed to have been deposited by the Romans; also two leaden coffins, urns, &c. Before the conquest, the manor of Southfleet belonged to the bishop of Rochester, and the court had the power of trying and executing felons within its jurisdiction. Population 584; 5 miles east of Dartford, and 20 east of London.

SOUTHGATE, a hamlet of England, in Middlesex, situated on the skirts of Enfield Chase; 9 miles north-by-west of St. Paul's Cathedral, London.

SOUTHILL, a parish of England, in the county of Bedford. In ancient records it is called South Yewel. Sir George Byng, a naval officer of eminence in the reign of Queen Anne and George I., purchased an estate and settled here; and his unfortunate son, Admiral Byng, who was shot by a sentence of a court-martial in 1757, was born and interred here. Southill house, belonging to Mr. Whitbread, is a very elegant mansion. In 1811, Southill contained 185 houses, and 1024 inhabitants; 4 miles from Biggleswade, and 43 north of London.

SOUTHILL, a parish of England, in Cornwall; 3½ miles north-west of Callington. Population 466.

SO'UTHING, *adj.* Going towards the south.

I will conduct thee on thy way,
When next the *southing* sun inflames the day. *Dryden*.

SO'UTHING, *s.* Tendency to the south.

Not far from hence, if I observ'd aright,
The *southing* of the stars and polar light,
Sicilia lies. *Dryden*.

SOUTHING, in Navigation, the difference of latitude a ship makes in sailing to the southward.

SOUTHINGTON, a post township of the United States, in Hartford county, Connecticut. Population 1807.

SOUTHMEAD, a hamlet of England, in Gloucestershire, south of Gloucester.

SOUTHMINSTER, a parish of England, in Essex, between the rivers Crouch and Blackwater; 10 miles from Maldon. Population 1289.

SO'UTHMOST, *adj.* Furthest toward the south.

Next Chemos, the obscene dread of Moab's sons,
From Aroar to Nebo, and the wild
Of *southmost* Abarim. *Milton*.

SOUTHOE, a parish of England, in Huntingdonshire; 3 miles north-by-west of St. Neot's.

SOUTHOLD, a post township of the United States, in Suffolk county, New York, on the north-east part of Long Island. Population 2613.

SOUTHOLT, a parish of England, in Suffolk; 5 miles south-east of Eye.

SOUTHORPE, a hamlet of England, in Lincolnshire; 6 miles north-east of Gainsborough.

SOUTHORPE, a hamlet of England, in Northamptonshire; 2½ miles north-by-east of Wandsford.

SOUTHOVER, a parish of England, in Sussex, south of Lewes.

SOUTHROP, a hamlet of England, in Gloucestershire, situated on the river Leck; 2 miles north of Lecklade.

SOUTHSAY, *s.* [Properly *soothsay*; which see.] Prediction.—Glaucus, that wise *southsays* understood. *Spenser*.
To SO'UTHSAY, *v. n.* [See To SOOTHSAÿ.] To predict.—Young men, hovering between hope and fear, might easily be carried into the superstition of *southsaying* by names. *Cæmden*.

SO'UTHSAYER, *s.* [Properly *soothsayer*. See SOOTH-SAYER.] A predictor.

SOUTHSTOKE, a parish of England, in Oxfordshire; 12 miles west-by-north of Henley-upon-Thames. Population 645.

SOUTHSTOKE, a parish of England, in Sussex; 2½ miles north-north-east of Arundel.

SO'UTHWARD, *s.* The southern regions.—Countries are more fruitful to the *southward* than in the northern parts. *Raleigh*.

SO'UTHWARD, *adv.* Towards the south.

Every life, from the dreary months,
Flies conscious *southward*. *Thomson*.

SOUTHWARK, a town of England, in the county of Surrey, the chief town of the county, and which forms also a suburb of the city of London. It is commonly called the Borough,

Borough, and, together with the adjacent parishes, with which it is united by a continued range of buildings, constitutes that great division of the metropolis which lies to the south of the Thames. The borough extends about $1\frac{1}{2}$ mile from east to west, and about 1 mile from north to south, the whole of the included area being now covered with houses, public buildings, and streets; while the bank of the river is occupied with warehouses, timber and coal-yards, glass-houses, manufactories, &c. On the east it is bounded by the parish of Rotherhithe, on the south by Newington Butts, and on the west by Lambeth. Southwark contains many good streets. The principal, called the Borough High-street, extends from London Bridge southwards, and is prolonged into Blackman-street, &c.; and from this, numerous others branch off to the east and west, such as Tooley-street, St. Olave's, &c. The principal public buildings are the churches, hospitals, prisons, &c.; these, and other objects worthy of attention, will be noticed in the order of the parishes, which are five in number, viz., St. Olave, part of which is in the city of London; St. John, Horselydown; St. Saviour, commonly called St. Mary Overy's; St. Thomas; and Christ Church. St. Olave's church is situated in Tooley-street, near the south end of London Bridge. The original building is mentioned so early as the year 1281; but the date of its erection is unknown. Part of this church having fallen down in 1736, the present structure was raised in its stead, and finished in 1740. It is a plain building; the interior is neat, and in the west gallery is a handsome organ. On the north side of Tooley-street, next to the Thames, is a building termed the Bridge-house, which seems to be coeval with London Bridge, having been used as a store-house, for stone, timber, and other materials used in its repair. At this house was also the public granary for times of scarcity, the city brew-house, and ovens to bake bread for the poor. It is still under the superintendance of officers called Bridge-masters, who are appointed by the city. Below the Bridge-house, on the banks of the Thames, stood the inn of the abbot of Battle, the site of which is still called Battle Bridge. In front of this mansion were the gardens belonging to it, which, from their intricate embellishments, were called the Maze, a name the place still retains. By a charter of Queen Elizabeth, a free grammar school was founded in this parish, which purchased lands and revenues for its endowment. It is now under the management of 16 trustees or governors, incorporated for the purpose; and the scholars, of whom there are 250 on the foundation, receive a liberal education from a head master and three assistants. Here is also a charity school. Eastward of St. Olave's is the Parish of St. John, Horselydown, having been originally a grazing ground for horses. The church is one of the 50 ordered by act of parliament to be built in the metropolis. It was finished in 1732, when this district was separated from St. Olave's, and constituted a distinct parish. St. Thomas's church stands on the south side of the street of the same name. It was annexed to St. Thomas's Hospital, and included with that foundation in the grant made by Edward VI. to the city of London. Being old and ruinous, this church was taken down, and rebuilt in 1702, when it was made parochial, and a chapel erected within the hospital, for the use of the patients.—St. Thomas's Hospital is a noble charity, appropriated to the reception of indigent persons labouring under sickness or accidental injuries. It is situated on the east side of the Borough High-street, not far from London Bridge. The building consists of four quadrangles, into the first of which, facing the street, is the entrance by large iron gates, which occupy one side of the square. The other three sides are encompassed with a colonade. The building on the north was erected by Thomas Frederick, Esq; and that on the south at the expense of Thomas Guy, Esq. in 1737; both of whom were governors of the institution. The centre of the principal front is of stone, and looks towards the street. A spacious passage leads down a flight of steps into the second court, which is by far the most elegant. The north side is occupied by the chapel, adorned with lofty Corinthian pilasters; and the other three

sides are surrounded by a colonade, above which the fronts of the wards are ornamented with Ionic pilasters. In the centre is a good brass statue of Edward VI. by Scheemakers. The buildings of the third court are older than the others, and are entirely encompassed with a piazza, above which rise slender Ionic pilasters, with very small capitals. In the centre is a stone statue of Sir Robert Clayton, Lord Mayor, and a benefactor of the hospital. The fourth quadrangle is partly occupied with hot and cold baths, a surgery, theatre, apothecary's shop, brewhouse, and other offices. The whole establishment contains 19 wards, and 474 beds; and since its foundation, this excellent institution has afforded relief to an immense number of patients. The annual number of patients may be estimated at 9000, and the expenditure at 10,000*l.*; and though no estates appear to have been originally annexed to it, the bounty of the corporation, and other benefactions, have contributed such a fund as to ensure the permanence of the establishment. The original foundation of this hospital was owing to the destruction, by fire, of the priory of St. Mary Overy, in 1207, on which the monks erected a temporary habitation, which, on their removal to the new convent, was pulled down in 1215, by Peter de Rupibus, bishop of Winchester, who founded in its stead an hospital dedicated to St. Thomas, which being an appurtenance of the manor of Southwark, purchased in 1551, of king Edward VI. by the corporation of the city of London, was immediately repaired and enlarged by the city, at an expense of 1100*l.*, and appropriated to the reception of poor, sick, and maimed persons. In 1553, the king incorporated a society for its government, in common with St. Bartholomew's, Bridewell, Bethlem, and Christ Church-Hospitals. The revenues of the establishment sustained great injury by the fire of London in 1666, and by three subsequent fires in Southwark in 1676, 1681, and 1689. The building itself having also become old and ruinous, a subscription was set on foot in 1699, by the governors, for rebuilding it on a more extensive and commodious plan. From this source funds were soon obtained for erecting the new hospital, which consisted of three quadrangles; and the fourth was added in 1723, at the expense of the institution itself. Near St. Thomas's is the kindred institution of Guy's Hospital, a great and singular monument of private munificence. It is named after its founder, Thomas Guy, a citizen and bookseller of London, who, by industry and frugality, amassed a very large fortune, which he determined, when he arrived at his 76th year, to apply to this benevolent purpose. He accordingly took from the governors of St. Thomas's Hospital, a lease of a piece of land opposite to that edifice, for 999 years, at 30*l.* per annum. This spot was covered with small houses, which were removed in the following spring; and before the death of the founder, in December, 1724, the building was roofed in. The expense of erecting and furnishing the hospital, amounted to 1873*l.*; and Mr. Guy, by his will, endowed it with the unappropriated residue of his estate, which amounted to 219,499*l.* After his decease, his executors obtained an act of parliament, investing the management of the charity in a corporation of 60 governors. Being situated in a narrow street, the building cannot be seen to advantage. The entrance is by an iron gate opening into a square, in the middle of which is a brass statue of the founder in his livery gown, by Scheemakers. The buildings consist of a centre and two wings; the latter of which were erected after the decease of the founder, in an additional piece of ground, obtained on lease from St. Thomas's hospital. The former is for the reception of patients; and behind it is a small neat building for lunatics. In the centre of one wing is a spacious hall and rooms for public business, and in the other a neat chapel, in which is a finely executed statue of the founder, by Bacon. The wings contain the houses of the principal officers; besides which there is a theatre for medical lectures, a library well furnished with professional books, and a collection of anatomical preparations. The whole comprehends 13 wards, and 411 beds. The out patients of this institution are also very numerous.—St. Saviour's church, commonly

commonly called St. Mary Overy, originally belonged to a nunnery, founded by a female, at the time of the Norman conquest, and endowed by her with the profits of the ferry across the river at this place, prior to the erection of London Bridge. This house was afterwards converted into a college for priests, by whom the first bridge over the Thames was built of wood, and kept in repair, till they were enabled, by the munificence of benefactors, to supply its place by another of stone. In 1106, the college was converted into a priory of canons; on the suppression of which, in 1539, the inhabitants of Southwark purchased the church belonging to it, which was by charter appropriated to the joint use of the parishioners of St. Mary Magdalen and St. Margaret, by the name of St. Saviour's. This church is built on the plan of a cathedral, though of small dimensions. A part only of the original architecture remains; and this is in the interior of the west front of the church, all the rest of the building exhibiting the styles in use between the 13th and 16th centuries. The tower in the centre rises in three stories, the walls finishing with battlements, and being adorned at the angles with turrets and pinnacles. It was from this tower that Haller took his famous views of London, both before and after the great fire in 1666. This church has three chapels, viz., Our Lady's, or the new chapel, at the east end of which is run out a small monumental chapel, which was let by the wardens, after the church became parochial, as a bake-house; St. John's, now the vestry on the north side of the choir; and St. Mary Magdalen's on the south side. In Our Lady's chapel is a grave stone, which is supposed to cover the remains of the celebrated William of Wykeham, bishop of Lincoln, and afterwards of Winchester, who died in 1395. There are also several other monuments and antiquities deserving of attention. In St. Saviour's church-yard is a free grammar school, founded by the parish in 1562, under the authority of Queen Elizabeth; and adjoining to it is a free English school. Contiguous to the priory of St. Mary Overy, formerly stood Winchester house, the town residence of the prelates of that see. It was erected about the year 1107, by bishop Gifford, and was one of the most magnificent structures in the city or suburbs of London. It continued to be the abode of his successor, till the beginning of the 17th century, when it was forsaken for the more agreeable residence at Chelsea. During the civil wars in the reign of Charles I. it was for some time a prison for royalists, and among the rest, for the celebrated Sir Kenelm Digby. In 1649, it was sold by the parliament, to Thomas Walker, of Camberwell, for 4380*l*. Reverting at the Restoration to the rightful owner, the house was mostly demolished; and its site, as well as the park, leased out to different persons, to the great emolument of the see of Winchester. From its present remains, which form parts of the various warehouses now occupying the site, no adequate idea can be formed of the former extent and arrangement of this magnificent palace. In the south front are many curious doorways and windows, in various styles of architecture, but greatly mutilated. At the west end of this range, is a large circular window, which for delicacy of form and beauty of workmanship, is surpassed by few. Its style shews it to be of the time of Edward III. What is now called Bankside was formerly a range of dwellings, licensed by the bishop of Winchester, "for the repair of incontinent men to the like women," and denominated the Bordello, or Stew Houses, which were subject to various laws and regulations enacted by parliament. These privileged houses were suppressed by Henry VIII. in 1546. On the Bankside was a gaol called the Clink, which still exists, and has been represented as a filthy noisome dungeon. The bishop of Winchester's steward tries pleas of debt, damages, or trespass, within the Clink liberty, for any sum. On the Bankside was also situated the principal theatre of its time, called the Globe, where the plays of Shakspeare were first represented, and the memory of which is still retained in the name of the Globe

Alley. Near this was the Bear Garden, wherein, says Stowe, "were kept bears, bulls, and other beasts to be baited." Bear baiting was in that age an amusement of persons of the highest rank.—In this district of the Borough several improvements have been lately planned and executed, which add greatly both to the appearance and beauty of the place. Of these are the very elegant bridge over the Thames, called Southwark Bridge, which crosses the river from Bankside to Queen-street, and a handsome street from this to St. Margaret's Hill. A road is in contemplation to extend from the bridge to the Mansion House. Not far from St. Saviour's church is the Borough Market, surrounded with stalls and other conveniences for the sale of provisions. In Deadman's place, on the west side of this market, is an hospital or college, founded in the reign of Elizabeth, by Thomas Cure. At the end of the High-street is St. Margaret's Hill, the site of the ancient church of the same name, which being forsaken on the union of the parish with St. Saviour's, was converted into a Sessions-house and prison, since removed to Mill-lane, and denominated the Borough Compter. The whole has lately been rebuilt. In the front, facing Blackman-street, the hustings for the election of representatives for the Borough are usually erected. On the opposite side of the street was the Tabard-inn, which was the residence of the abbots of Hyde, in Hampshire, when called to the metropolis on business. This house is celebrated by Chaucer as the place of rendezvous for pilgrims repairing to Becket's shrine, at Canterbury. On the east side of Blackman-street is the Marshalsea, a court of law and a prison, originally intended for the determination of differences between the king's menial servants, and under the control of the knight marshal of the royal household. It had particular cognizance of murders and other offences committed within the king's court. Persons guilty of piracies and other offences on the high seas are now committed here, though the offenders are tried at the Old Bailey. The jurisdiction of the Marshalsea extends to the distance of 12 miles round Whitehall, excepting the City of London, for actions of debt, damages, &c. When the subject of litigation exceeds the value of 5*l*., the suit is removeable to a higher tribunal. The prison contains about 60 rooms; it is too small, and much out of repair. Southward of the Marshalsea, and on the same side of the street, is the Church of St. George the Martyr. The original building was a very ancient foundation, and belonged to the abbey of Bermondsey, to which it was given in 1112, by Thomas Arderne. The present structure was erected in 1736, in consequence of an act of parliament obtained by the parishioners, to pull down the old church, which had fallen into a ruinous condition. The principal entrance is at the west end, which faces the street. Above the door is a circular pediment, supported by Ionic columns; and on the east side the front is adorned with a balustrade and vases. From this part rises the tower, which is strengthened with rustic coars. The base of the spire rests on a series of Ionic columns raised on the tower. In the old church was interred Edward Cocker, the celebrated arithmetician, and also the noted Bishop Bonner, who died miserably in the Marshalsea, in 1569. Opposite St. George's church formerly stood Suffolk-place, a magnificent mansion, erected in the reign of Henry VIII., by Charles Brandon, Duke of Suffolk. Its name was afterwards altered to Southwark-place, and it was used as a royal mint. After this the mansion was pulled down, and the site was converted into streets, which still retain the name of the Mint. The inhabitants assumed a privilege of protection from arrests, and the place became, for many years, the retreat of bankrupts and fraudulent debtors, until the privilege was abolished in the reign of George I. In Union-street, northward of the Mint, is the public office of Union Hall, a handsome building; and at the south-east end of Blackman-street, in Horsemonger-lane, is the County Gaol and House of Correction for Surrey. This spacious building was erected on the suggestion of the benevolent Howard, and contains a good court-

hall, a chapel, offices and other accommodations. On the top of the platform where executions are performed, Colonel Despard and six of his associates, convicted of high treason, suffered in 1802. The King's Bench prison is situated at the south-west corner of Blackman-street. This is a place of confinement for debtors, and for all other persons under sentence of imprisonment by that court. It consists of one large pile of brick buildings, comprehending 224 rooms. It is surrounded by a brick wall, about 30 feet high, and defended, by *chevaux-de-frise*. Without this the Marshal or keeper of the prison has very handsome apartments. The liberties, or rules of the prison, as they are termed, extend about three miles round the buildings, and the right of residing in any part of these may be purchased by debtors, at the rate of 10 guineas for the first 100%, and about half as much for each succeeding 100%, of the sums for which they are confined. Prisoners in any other gaol may remove hither by Habeas Corpus. Of the parishes adjacent to Southwark, Christ Church was taken out of that of St. Saviour's, and was originally part of the district called the liberty of Paris Garden. The first church was erected at the expense of Mr. John Marshal, of Southwark, and finished in 1671, when he endowed it with an estate of 60*l.* per annum, for the support of a minister. But this building soon decaying, from the insufficiency of the foundations, Mr. Marshal's trustees applied to parliament in 1737, for an act to rebuild it with the sum of 2,500*l.*, which had accumulated in their hands, and the present structure was accordingly erected. It stands on the west side of the road leading from Blackfriars Bridge. It is a plain brick building, with a square tower, surmounted by a cupola. Its appearance has been much improved by the removal of several old houses, which nearly blocked up the view in front, and by the substitution of a handsome iron railing. In this parish is a charity school, a workhouse, and a neat alms-house. At the foot of Blackfriars Bridge is a range of buildings, which formerly constituted part of the noted Albion Mills, destroyed by fire in 1791. On the opposite side of Albion place, is the house belonging to the British plate-glass manufactory. On the west-side of Blackfriars road, very near the bridge, is the building formerly occupied by the extensive museum collected by Sir Ashton Lever, and which afterwards formed the premises of the Surrey Institution. The Surrey chapel on the east side of Blackfriars road, is a large octagonal building erected for the use of the Methodists, by the friends of Rowland Hill. This chapel is capable of holding nearly 5000 persons. Farther to the south, and on the west side of the street, stands the Magdalen Hospital, for the reception, maintenance and employment of unfortunate females. The present building was erected in 1769. It is calculated for the accommodation of about 80 persons at a time. The females are treated with great attention and kindness; and since the establishment was begun in 1756, upwards of 4000 penitents have been reclaimed from their unfortunate condition. In the central point, where the great south road from London, and the roads from Westminster, Southwark, Newington and Lambeth, unite, stands the Obelisk, a plain structure of freestone, erected in 1771, during the mayorality, and in honour of Brass Crosby, Esq., who had been confined in the Tower with Alderman Oliver, for the conscientious discharge of his duty as a magistrate. At the end of Blackfriars road, on the west side, near the Obelisk, is a place of amusement, formerly denominated the Royal Circus. Having been destroyed by fire in 1805, it was rebuilt in a tasteful manner. It is now called the Surrey Theatre, and has been much resorted to by the lovers of ranting melo-drame. Between the Obelisk and the King's Bench prison, is the school where Lancaster first practised his system of education. St. George's Fields, so frequently noticed in English history, and which about half a century ago were little better than a continued swamp, have since the erection of Westminster and Blackfriars Bridges, been almost covered with streets and buildings, from the ditch at the end of

Great Surrey-street, to the Fishmongers' alms-house on the one hand, and from the Marshalsea prison to the late Dog and Duck on the other. The Dog and Duck, so denominated from its sign, was formerly a house of public entertainment, which took its rise from a mineral spring that was discovered here, and was much resorted to from its vicinity to the metropolis. In consequence, however, of the violations of order and decorum committed here, the premises were shut up by the magistrates, and were latterly occupied as a school for the indigent blind. The last mentioned institution was begun in 1799, and a neat, new school has been since erected for its use. Near this school is the house of the Philanthropic Society. On the site of the Dog and Duck, the corporation of the City of London have obtained a plot of ground of 12 acres, on part of which is erected a most noble Hospital for Lunatics, instead of the old building in Moorfields. Of the parishes adjacent to Southwark, Newington Butts lies contiguous to the parish of St. George, at the distance of about a mile from London Bridge. It is of small extent, but extremely populous. Bermondsey parish is bounded on the west by St. John's, St. George's and St. Olave's, and by those of Deptford and Rotherhithe on the east. In 1082, a priory for Cluniac monks was founded here by Aylwin Child, a citizen of London; and William Rufus gave his manor of Bermondsey to this convent. The site of the abbey was granted by Henry VIII. to Sir Thomas Pope, who pulled down the church, and built a large house on the spot. The church at this place, mentioned in Domesday Survey, was the conventual church then newly built. It was not till long afterwards that the monks founded a parochial church, dedicated to St. Mary Magdalen. The present structure was erected in 1680.

Southwark was anciently a distinct corporation, governed by its own bailiffs. In 1327, owing to the inconveniences attending the escape of malefactors from the metropolis, it was granted by Edward III. to the corporation of London, on payment of 10*l.* annually. The place was then called the village of Southwark; it was afterwards made a bailiwick—the mayor and commonly of London appointing the bailiff; and a still more intimate connection with the metropolis being deemed necessary, it was, in the reign of Edward VI. at the earnest request of the citizens, united to the City of London by charter. It was formed into the 26th ward, by the style of "Bridge Ward Without," and was subjected to the Lord Mayor, who appoints the steward and bailiff. This, however, is only understood of the Borough liberty, which consists of three of the parishes belonging to the town. From the city division, the Lord Mayor, by his steward, holds a court of record every Monday, at the sessions-house on St. Margaret's Hill, for all debts and trespasses within his jurisdiction. To the ward of Bridge Without, which is not represented in the common council, the senior alderman, or father of the city, as he is called, is always removed as to an honourable sinecure, being exempt from the fatigues incurred in the other 25 wards. The other division of Southwark is called the Clink, or the Manor of Southwark, and is subdivided into the great liberty, the guild-hall and the king's manor, for each of which subdivisions a court-leet is held. This division is in the jurisdiction of the bishop of Winchester, who, besides a court-leet, keeps here a court of record, on the Bankside, near St. Saviour's church, by his steward or bailiff. Court-leets are also kept at Lambeth, Bermondsey and Rotherhithe, three districts adjoining to the borough. Though so long a ward of the city, Southwark still retains the privilege of sending members to parliament, and has done so since the 23d of Edward I. The right of election is in the inhabitants paying scot and lot, the number of voters amounting to about 3200. In 1811, Southwark contained 12,217 houses, and 72,119 inhabitants, viz. 33,611 males, and 38,501 females, of whom 116 families were employed in Agriculture, and 10,510 in trade and manufactures.

manufactures. At present there are scarcely any families employed in agriculture; and the population is nearly doubled. For farther information regarding Southwark, see LONDON.

SOUTHWELD, a village and parish of England, in Essex, situated on an eminence which commands an extensive prospect. Population 1010; 4 miles from Rumford, and 16 east-north-east of London.

SOUTHWELL, a market town of England, in the county of Nottingham, situated on a gentle eminence, on the banks of the little river Greet, which is much celebrated for its red trout. It stands on a fertile soil, and in a well wooded country, inclosed by an amphitheatre of swelling hills. The town was formerly much more extensive than at present, and the foundations of a whole street are said to have been, at different times, observed in the immediate vicinity. As the hamlets of East and West Thorpe, which are contiguous to the town, appear to form part of it, and go under the same name, it has still the appearance of a pretty large but scattered country place. It is divided into two parts, civil and ecclesiastical. The former, called the Burgage or Burridge, comprehends all the space between the market-place and the river Greet; and the latter, called the Prebendage, includes the collegiate church and its property. This church forms the most interesting object in the town, and has been long celebrated for its antiquity, and for the beauty and variety of its architecture. It consists of a nave, with two aisles, two towers at the west end, a transept, a choir with aisles, and a chapter house. The extreme length from east to west is 306 feet, the width of the transept from north to south is 121 feet, and the breadth of the nave 59 feet. The foundation of the church is generally ascribed to Paulinus, archbishop of York, who was sent by pope Gregory, by the advice of St. Augustine, to establish Christianity in Britain, in the year 627. During a succession of ages it was patronized and liberally endowed by monarchs and nobles, and protected by the decrees of popes, and the regulations of various prelates, until it shared the fate of other collegiate establishments, in the reign of Henry VIII. It was notwithstanding, in the same reign, declared by act of parliament, the mother church of Nottinghamshire. In Edward's reign the chapter was dissolved and granted to the duke of Northumberland, but was restored by queen Mary to the archbishop and chapter. It suffered much in the civil wars, and has not yet recovered the damage done by Cromwell's troops, who converted it into a stable for horses. The architecture of this church is Saxon, and, generally speaking, the great mass of the building has sustained little alteration except in some of the windows, whose Saxon arches have given place to the Gothic pointed style of the 14th century. There is still a tradition that the oldest part, which is pure Saxon, and where the pillars are large, plain and singularly massive, was built in the short reign of Harold; and, on the whole, there is little doubt that, excepting St. Augustine's at Canterbury, this is the oldest building now in existence in the kingdom. The entrance is by a Gothic gateway, from which there is a direct view of the west front, with the chapter-house on the left, and some round monastic buildings on the right. At the entrance by the western door, the appearance of the interior very much resembles Rochester cathedral; but in the screen at the entrance of the choir, the plainness of the Saxon architecture gives place to the richness and elegance of the Gothic of the 14th century. The chapter-house is a very beautiful structure. The exterior does not boast much profusion of ornament, but the interior is much superior, and the arch of entrance forms a most striking object, and is not perhaps equalled by any thing of the kind in the kingdom. Of the tombs in this church is a large one of alabaster, to archbishop Sandys. In the church-yard was a college for the chantry priests, of which there are some remains. The square building called the chantry has lately been taken down, and an excellent house and school erected on the same ground. The whole establishment of the college now consists of 16

prebendaries, 6 vicars-choral, 1 organist, and other officers. Two fellowships and two scholarships, in St. John's College, Cambridge, are the presentation of Southwell college. They were founded by Dr. Reton, canon of Salisbury, in the time of Henry VIII. The Archbishop of York had formerly a palace here, situated on the south side of the church-yard, and which was once a large and elegant building; the ruins of it are still extensive, and being overshadowed with ivy, and embosomed among trees, they form a great ornament to the place. The archiepiscopal parks were once four in number, but these have been divided and inclosed since the destruction of the palace in the civil wars of Charles I., during which the king was often here, and the town frequently experienced the fate of war. On the north side of the church-yard is a very convenient public walk, made in 1784, and well shaded from the weather on every side. Another building in the town deserving of notice is the county bridewell, which is used as a prison for the various manors belonging to the archbishopric within the county. It was built in 1656, and in 1787 many additions were made to it, together with the walls that surround it. It stands on the slope of a gentle hill, close to the burgage green, in an airy and healthful situation. This prison, now called the Nottinghamshire house of correction, received considerable additions to its size during the years 1820-22, and is capable of containing more than 100 prisoners, and generally is nearly filled, being a house of correction for the whole county. It is under the immediate direction of county magistrates, who are appointed visiting justices, a resident governor, a surgeon, chaplain and turnkeys. The admirable adaptation of the structure, and the excellent regulations and discipline of the whole establishment, are highly and warmly spoken of by those who are competent judges. Southwell possesses no trade of any consequence. The civil government of the town is divided between the clergy and the laity; the former ruling over the Prebendage, and the latter over the Burgage. Its civil jurisdiction extends over 20 towns or villages; its ecclesiastical over 28. The civil administration is held at Southwell and Scrooby, by the justices, who are nominated by the archbishop, but act under a commission from the crown. The chapter, in the person of their vicar-general, exercise all the episcopal functions except ordination and confirmation. Southwell is a place of great antiquity, and is thought to have been a Roman station. Market on Saturday, and an annual fair on Whit-Monday; 14 miles north-east of Nottingham, and 132 north-north-west of London. Lat. 53. 5. N. long. 0. 58. W.

SOUTH-WEST, *s.* Point between the south and west; winter sun-set.—The planting of trees warm upon a wall against the south, or south-east sun, doth hasten their coming on and ripening; and the south-east is found to be better than the *south-west*, though the *south-west* be the hotter coast. *Bacon.*

SOUTH-WEST BAY, a bay on the south-west coast of Tavai Poenamoo, between Cape South and Cape West.

SOUTH-WEST CAPE, a cape on the south coast of New Holland, in the South Pacific Ocean, north-west of South Cape. Lat. 43. 32. S. long. 146. 7. E.

SOUTH-WEST ISLES, seven small islands, of which Kissier is the chief, dependant on the Banda islands, lying to the south-west of them all. They are low, and surrounded by shoals and rocks. The natives have been represented as a ferocious, savage and perfidious people, resembling those of New Guinea, and being an intermediate race between the Papuas or aborigines of that country, and the Caffres of Africa. Their number in 1796 is said to have amounted to 36,266, of whom 2322 had been converted to Christianity. The Dutch had an establishment for commercial purposes on these islands, which produce sandal-wood, and afford some venison and slaves.

SOUTH-WEST POINT, a cape on the south-west coast of the island of Anticosti. Lat. 49. 25. N. long. 63. 4. W.

SOUTH-WEST POINT. See KINGSTON.

SOUTHWICH,

SOUTHWICH, a hamlet of England, adjoining to the city of Gloucester.

SOUTHWICH, a village and parish of England, in Southamptonshire; 5 miles north of Portsmouth. It commands an extensive view of the Isle of Wight, and the adjacent scenery. Population 714.

SOUTHWICH, a township of England, in Durham; 2 miles north-west of Sunderland. Population 641.

SOUTHWICH, a parish of England, in Northamptonshire; 3 miles north-north-west of Oundle.

SOUTHWICH, a parish of England, in Sussex, near the sea-shore; 2 miles east of New Shoreham.

SOUTHWICK, a small river of Scotland, in the stewardry of Kirkcudbright, which falls into the Solway frith two miles from the estuary of the river Err. It is navigable for vessels of small burden, two miles from its mouth.

SOUTHWICK, a post township of the United States, in Hampden county, Massachusetts; 92 miles west-south-west of Boston.

SOUTHWOLD, a market town of England, in the county of Suffolk, pleasantly situated on an eminence overhanging the German Ocean, and nearly surrounded on every side by the river Blyth, which here discharges itself into the sea. It contains many good houses, but no building worthy of particular notice, except the church and the guildhall. The church is a very fine building, 143 feet in length, and 56 wide. It has two aisles, which are separated from the nave by seven arches and six pillars, of elegant workmanship. The tower steeple, about 100 feet in height, is a fine piece of architecture, ornamented with freestone and intermixed flints. The interior of the church still indicates its having been at one time more highly ornamented than even the outside. A chapel was first built here in the reign of king John. It was destroyed by fire about 220 years afterwards; and the present edifice, dedicated to St. Edmund, is supposed to have been begun soon after, and the exterior seems to have been finished about 1460. In 1751, it was made parochial, and endowed with 400*l.* by the governors of Queen Anne's bounty. Southwold was incorporated in 1489 by Henry VII., and is governed by two bailiffs, a recorder, and 12 aldermen. It is a member of the port of Yarmouth, and its creek extends to Dunwick and Walderswick. It has a considerable trade in the herring and sprat fishery, and also in salt and old beer. The trade of Southwold was greatly encouraged by Henry VII. and Henry VIII.; and in their reigns it exceeded all the neighbouring towns in shipping and commerce. An act of Parliament having been obtained for repairing the harbour, a pier was erected in 1749, and another in 1752. Of late years the town has derived some benefit from the resort of visitors for the sea bathing. It has been observed, that at this town in particular, as at all the places on this coast, the swallows first land on their arrival in England, and here also take their departure to warmer climates. Southwold bay, or Sole bay, is noted in history as the scene of a sanguinary naval engagement, which took place in 1672, between the combined fleet of England and France on the one side, and that of the Dutch on the other; the former consisting of 101 men of war, and the latter of 91. The issue of the day was rather uncertain: the English lost four ships, and the Dutch three. In 1666 also, a famous sea fight took place here, between the English fleet of 114 men-of-war and frigates, and the Dutch fleet of 103 men-of-war, when the latter were defeated, with the loss of 70 ships. In 1811, Southwold contained 1369 inhabitants. Market on Thursday, well attended; and two annual fairs; 20 miles south of Yarmouth, and 104 north-east of London. Lat. 52. 20. N. long. 1. 39. E.

SOUTHWOOD, a parish of England, in Norfolk; 4½ miles south-by-west of Acle.

SOUTHWORTH, a township of England, in Lancashire; 3 miles east-south-east of Newton, in Makerfield. Population 1016.

SOUTRA HILL, the westernmost hill of the Lammer-

muir ridge, in Scotland, elevated 1000 feet above the level of the sea. On it are the ruins of an hospital, founded in 1164 by Malcolm IV. of Scotland.

SO'UVENANCE, *s.* [Fr.] Remembrance; memory. *A French word, now disused.*

If thou wilt renounce thy miscreance,
Life will I grant thee for thy valiance,
And all thy wrongs will wipe out of my *souvenance*.

Spenser.

Gave wond'rous great countenance to the knight,
That of his way he bad no *souvenance*,
Nor care of vow'd revenge.

Spenser.

SOUVERABO, a small sea-port on the Grain coast of Africa.

SOUVIGNY, a town near the central part of France, in the department of the Allier, on the river Quesnes. It contains 2700 inhabitants, and has extensive glass manufactures; 6 miles west of Moulins.

SOUVIGNY, a town in the interior of France, department of the Allier. It has 2700 inhabitants, and large glass-houses; 9 miles south-west of Moulins.

SOUZA (Louis de), a Portuguese writer, born at Santarem, was son of a man of rank, governor of the castle of St. George de la Mina. He was educated to the profession of arms, and served first in the order of Malta, when he was taken prisoner by the Turks. After recovering his liberty, he served with the troops in America and the East Indies. After this he married, but the loss of a child and other afflicting circumstances impressed both him and his wife with a spirit of devotion, and they took the religious habit in the Dominican order; De Souza changing his baptismal name of Manuel for that of Louis. He had already acquired a good share of literature, and had written an elegant preface to the Latin poems of Falcone. He was, therefore, chosen to write the history of his order in Portugal in the vernacular tongue, of which he printed the first volume, folio, in 1623. From his papers two other volumes were printed after his death. He was author also of the "Life of Dom. Bartholomew, one of the Martyrs," printed in 1619, and of which a French translation has been given; and "A History of John III. King of Portugal," which has not been published. De Souza is accounted one of the best writers of his country.

SOUZA, a river of Portugal, in the province of Entre Minho e Douro, which joins the Douro about 9 miles from its mouth.

SOUZEL, a town of Portugal, in the province of Alentejo; 6 miles north-north-west of Estremos. Population 2000.

SOW, *s.* [ruza, Sax.; *sugga*, Su. Goth.; from *so*. Ihre.] A female pig; the female of a boar.

A *sow* beneath an oak shall lie along,

All white herself, and white her thirty young. *Dryden.*

Perhaps from *sow* came *sowen*, *swen*, *swine*.—An oblong mass of lead. *Sherwood.*

With clothes upon her head,

That they weigh a *sow* of lead.

Skelton.

[*Millepeda*, Lat.] An insect; a millepede. *Ainsworth.*

To **SOW**, *v. n.* [*saiian*, M. Goth.; *saa*, Su. Goth.; *rapan*, Sax.] To scatter seed in order to a harvest.—He that *soweth* to his flesh, shall reap corruption; but he that *soweth* to the spirit, shall reap life everlasting. *Gal.*

To **SOW**, *v. a.* part. pass. *sown*. To scatter in the ground in order to growth; to propagate by seed.

Like was not to be found,

Save in that soil where all good things did grow

And freely sprung out of the fruitful ground

As incorrupted nature did them *sow*.

Spenser.

When to turn

The fruitful soil, and when to *sow* the corn,

I sing, *Mecænas*.

Dryden.

To spread; to propagate.—To *sow* a jangling noise of words unknown. *Milton,*

Born

Born to afflict my Marcia's family,
And sow dissension in the hearts of brothers. *Addison.*

To impregnate or stock with seed.—The intellectual faculty is a goodly field, capable of great improvement; and it is the worst husbandry in the world to sow it with trifles or impertinencies. *Hale.*—To besprinkle.—All *sow'd* with glistering stars, more thick than grass. *Spenser.*—He *sow'd* with stars the heaven thick as a field. *Milton.*

Now morn her rosy steps in th' eastern clime,
Advancing, *sow'd* the earth with orient pearl. *Milton.*

To SOW, *v. a.* For *sew*. To join by needlework.
Some tree, whose broad smooth leaves together *sow'd*,
And girded on, may cover round. *Milton.*

SOW, in Ancient Military Language, a kind of covered shed, fixed on wheels, under which the besiegers filled up and passed the ditch, sapped or mined the wall, and sometimes worked a kind of ram.

SOW, a river of England, in Staffordshire, which runs into the Trent at Tixall; 3 miles east of Stafford.—Also a river in Warwickshire, which falls into the Avon, near Stoneleigh Abbey; 4 miles north of Warwick.

SOW AND PIGS, a number of large rocks lying off the south-west end of Catahunk island, one of the Elizabeth islands, on the coast of Massachusetts.

SO'WBREAD, *s.* [*eyclamea*, Lat.] A plant.
The *sowbread* does afford rich food for swine,
Physic for man, and garland for the shrine. *Tate.*

To SOWCE, *v. a.* To throw into the water. See *To*
SOUSE.—He *sowed* me up to the middle in the pond.
L'Estrange.

SOWE, a parish of England, in Warwickshire, on the river Sow, north-west of Comb-Abbey. Population 937.

SO'WER, *s.* [*japepe*, Sax.] He that sprinkles the seed.—A *sower* went forth to sow. *St. Matt.*—It is thrown round, as grain by a skilful *sower*. *Derham.*—A scatterer—Terming Paul and his doctrine a *sower* of words, a very babbler or trifler. *Hakewill.*—A breeder; a promoter.—They are *sowers* of suits, which make the court swell, and the country pine. *Bacon.*

SOWERBY, a hamlet of England, in Lancashire, near Garstang.

SOWERBY, a township of England, in Westmoreland, north-east of Kirby Steven.

SOWERBY, a township of England, North Riding of Yorkshire, near Thirsk. Population 685.

SOWERBY, or SOWERBY BRIDGE, a township of England, West Riding of Yorkshire; 4 miles west-south-west of Halifax. It is called Sowerby Bridge, from its stately stone bridge of several arches, over the river Calder, which is navigable from hence to Wakefield. Population 5177.

SOWERBY CASTLE, a township of England, in Cumberland; 12 miles west-north-west of Penrith.

SO'WINS, *s.* Flummery, made of oatmeal somewhat sour'd.—These *sowins*, that is, flummery, being blended together, produce good yeast. *Mortimer.*—See where Norah with the *sowins* comes. *Swift.*

To SOWLE, *v. a.* [from *sow*, as hogs are pulled by dogs, *Skinner*; from *solea*, a strap, a rein, *Kennet.*] To pull by the ears. The word is still used for *pull*, or *lug*, in several counties.—He'll go, he says, and *sowle* the porter of Rome gates by the ears. *Shakspeare.*

SOWN. The participle of *sow*. It is used barbarously by Swift for *sowed*.—A goodly country, naturally beautified with roses, *sown* with pease. *Heylin.*—An hundred and fifty of their beds, *sown* together, made up the breadth and length. *Swift.*

SOWNE, a term used in the exchequer; seeming to be a corruption from the French *souvenu*, remembered.

Such estreats and casualties as the sheriff by his industry cannot get or levy, are said to be estreats that *sowne* not, that is, are not to be remembered, or are not in demand. On the contrary, estreats that *sowne*, are such as he may gather.

VOL. XXIII. No. 1578.

SO'WTHISTLE, *s.* [*sonchus*, Lat.] A weed.—*Sow-thistles* though sheep coney eat, yet sheep and cattle will not touch; the milk of which rubbed on warts weareth them away, which sheweth it is corrosive. *Bacon.*

SOWTON, a parish of England, in Devonshire; 3½ miles east of Exeter.

SOXINI, or SOCCINI (Mariano), denominated the elder, an eminent canonist, was born at Siena in 1401. He studied first at his native place, and then in Padua, in which last university, after he had taken his degree, he was for some years professor of the canon law. He then returned to Siena, where he taught as a professor during the remainder of his life. He was very intimate with Eneas Sylvius, afterwards pope Pius II., who has written a panegyric upon him in one of his letters in the most magnificent terms, assigning to him almost universal proficiency in science and the arts, with the greatest excellence of moral character. Soxini was sent by the state to compliment Sylvius when he ascended the papal throne, on which occasion he was nominated consistorial advocate. He died in 1467, leaving behind him a considerable reputation for learning and integrity. His works, consisting of "Consultations," "Commentaries on the Books of Canon Law," and tracts upon "Legal Subjects," have been frequently reprinted.

SOXINI, or SOCCINI (Bartolomeo), a celebrated civilian, son of the preceding, was born at Siena in 1436. He studied the law under different masters at Siena and Bologna, and after he had been admitted to a doctor's degree he became professor of the civil and canon law in his native city. He was, in 1473, invited to Pisa, where he taught both branches of law, and in this city he resided twenty years, with some occasional absences. He took an active part in the civil dissensions of Siena, and was, at one time, in the list of the banished citizens. He was employed in embassies from the Sieneese to the Florentines, and it is said he engaged in a military attempt to change the constitution of Siena. At Pisa the famous Jason del Maino was his rival, and they held frequent public disputations, at one of which Lorenzo de Medici was an auditor. Jason being hard pressed by the arguments of his antagonist, quoted, in his own favour, a text which he had invented for the occasion. Soxini, with equal readiness, invented another to oppose it, and being asked by Jason where he had found it, "Next to that which you have just now quoted," he replied. The fame which he had acquired caused him to be invited to Padua in 1489, with the offer of a large salary, which he determined to accept, but his intentions being known he was detained. For some time he was professor at Padua. He died in 1507, having been three years deprived of the use of his speech. His works as an author were "Consultations," "Comments on the Code and Digest," the "Rule of Right," and other pieces of a similar kind. He was not estimable as a practical moralist. He was addicted to gambling, and would sometimes leave his scholars without a lesson, and pass whole nights at the gaming table, the consequence of which most destructive habit was, that he did not leave money enough behind him to pay the expenses of his funeral. He was extremely greedy of money, charged very high for his opinion, which he would sometimes give to both parties in a suit. He was free of speech, sarcastic and jocular. His faults were borne with on account of his high professional character. Angelo Politiano, speaking of his intended correction of the Pandects, says "I must have recourse to the assistance and advice of that singularly excellent doctor of Siena, Bartolomeo Soxini, whom I may boldly denominate the Papinian of our age."

SOXINI (Mariano), denominated the younger, grandson of the first Mariano, was born at Siena in 1482: he studied the law under his uncle Bartolomeo, and after taking his degree, taught alternately the civil and canon law at his native city, till he removed to Paris. He was author of many works, which were once in considerable estimation, though they are now forgotten.

SOY, *s.* A kind of sauce: a considerable article of commerce in Japan.—*Soy-sauce*—is prepared from *soy-beans* (dolichos

(*dolichos soja*), and salt, mixed with barley or wheat. *Thunberg*.—Some provinces [of Japan] furnish better *soja* than others; but, exclusively of this, it grows better and clearer through age. Its colour is invariably brown, and its chief excellence consists in the agreeable salt taste which it possesses. *Transl. of Thunberg's Travels*.

SOYENNOM INDIANS, Indians of North America, on Lewis' river, west of the Rocky Mountains. Number 400.

SOZOMEN (Hermias), an ecclesiastical historian, contemporary with *Socrates* (see his article), was born of respectable parents, as some say at Salamis, in the isle of Cyprus, but according to others, at Gaza or Bethelia, in Palestine. Having studied the law at Berytus, he practised as an advocate at Constantinople, devoting his leisure hours to the composition of his ecclesiastical history. This work contains in nine books, an account of the affairs of the church, from the third consulship of Crispus and Constantine Cæsars, to the 17th consulship of Theodosius the emperor, in whose time he wrote, and to whom he dedicated his performance; that is, from the year 324 to the year 439, or during a period of 115 years. His history is chargeable with several notorious errors in the relation of facts. He is supposed to have died about the year 420. Sozomen's history is printed with that of *Socrates*, and the other Greek ecclesiastical historians.

SPA, a town of the Netherlands, province of Liege. It is situated on the banks of a rivulet, at the end of a deep valley, with meadows and cultivated fields in its immediate vicinity, but with high and steep mountains at a short distance, so that the country around forms a wild and romantic landscape. The town is small, having little more than 3000 inhabitants; and a number of its houses are of wood. Its streets, however, four in number, and built in the form of a cross, are wide and regular. The adjacent country being rugged and unproductive, Spa can boast of little else than its far famed medicinal springs and baths. Of the springs, to the number in all of six or seven, the principal are called respectively the Pouhon, Geronstere, Sauvenière and Tonnelet. The Pouhon rises from the hill to the north of Spa, but is made to issue from a fountain in the middle of the town; the others are at a distance of from one to two miles. The season commences with the warm weather, and the number of visitors soon produces a change in the sequestered spot. It lasts commonly during four months. The accommodations, whether at private lodgings or at hotels, are in general good. The habit of early rising, and of riding every morning to the more distant springs, is favourable to health. The rest of the day is passed either at a public breakfast in the new Vauxhall, one of the finest buildings of the kind on the continent; on the public walks, or in the chace; for the adjacent country, poor in the more useful products, is abundant in game. Spa contains a theatre and commodious ball-rooms. The public walks are pleasant, although limited in extent. The company, composed in a great measure of men of rank and property from Germany, France, the Netherlands or England, is superior to the common description of visitors at watering places, although mixed occasionally with adventurers, who endeavour to reap a harvest from the gaming resorted to, to kill time in this vacant and somewhat mountainous place. These waters were known to the Romans, and are mentioned by *Pliny*. They all spring from the adjacent hills, which are formed of calcareous earth, mixed with siliceous substances. They are all chalybeates, and the Pouhon being impregnated with the largest proportion of iron, is the spring from which the Spa waters are bottled for exportation. The effect of these waters is diuretic and exhilarating. They are more cooling, and allay thirst more effectually, than common water. They are recommended chiefly in cases of relaxation; also in obstructions of the liver, and various other disorders. They are of course accounted most effectual when drunk on the spot. The inhabitants of this small place adapt, like those of Tunbridge, their manufacturing industry to the taste of their visitors, and employ themselves in making boxes of painted and

varnished wood, with a variety of ornaments and fanciful articles. In 1807, the town was visited by a calamitous fire, the effects of which it was long in recovering; 20 miles south-east of Liege, and 210 north-east of Paris.

SPAAD, *s.* [*stella terra*, Lat.] A kind of mineral.—English talc, of which the coarser sort is called plaster; the finer, *spaad*, earth-flax, or salamander's hair. *Woodward*.

SPACE, *s.* [*spatium*, Lat.] Room; local extension.—*Space* is the relation of distance between any two bodies or points. *Locke*.—Oh, undistinguish'd *space* of woman's wit! *Shakspeare*.—This which yields or fills all *space*. *Milton*.—Pure *space* is capable neither of resistance nor motion. *Locke*.—*Space* and motion can never be actually infinite: they have a power only and a capacity of being increased without end; so that no *space* can be assigned so vast, but still a larger may be imagined; no motion so swift or languid, but a greater velocity or slowness may still be conceived. *Bentley*.—Any quantity of place.

I would not be the villain that thou think'st

For the whole *space* that's in the tyrant's grasp,
And the rich East to boot.

Shakspeare.

There was but two ways to escape; the one through the woods about ten miles *space* to Walpo. *Knolles*.—In such a great ruin, where the fragments are great and hard, it is not possible they should be so adjusted in their fall, but that they would lie hollow, and many unfilled *spaces* would be intercepted amongst them. *Burnet*.

Measuring first with careful eyes

The *space* his spear could reach, aloud he cries. *Dryden*.

Quantity of time.—There is a competent time allowed every man, and as it is certain death is the conclusion of it, 'tis possible some *space* before death. *Hammond*.

Nine times the *space* that measures day and night

To mortal men, he with his horrid crew

Lay vanquish'd, rolling in the fiery gulf,

Confounded, though immortal.

Milton.

In a lever, the motion can be continued only for so short a *space*, as may be answerable to that little distance betwixt the fulcrum and the weight. *Wilkins*.—God may defer his judgments for a time, and give a people a longer *space* of repentance: he may stay till the iniquities of a nation be full; but sooner or later they have reason to expect his vengeance. *Tillotson*.—The lives of great men cannot be writ with any tolerable degree of elegance or exactness, within a short *space* after their decease. *Addison*.—A small time; a while.

Sith for me ye fight, to me this grace

Both yield, to stay your deadly strife a *space*. *Spenser*.

Compassion quell'd

His best of man, and gave him up to tears

A *space*, till firmer thoughts restrain'd excess.

Milton.

To SPACE, *v. n.* [*spatior*, Lat.] To rove; to spatiat.

But she, as Feyes are wont, in privie place

Did spend her dayes, and lov'd in forest wyld to *space*.

Spenser.

SPA/CEFUL, *adj.* Extensive; wide. *Not in use*.

The ship, in those profound

And *spacefull* seas, so stuck as on drie ground. *Sandys*.

SPACHENDORE, a town of Austrian Silesia; 18 miles south-west of Troppau, and 29 south-by-east of Olmutz. Population 1400.

SPA/CIOUS, *adj.* [*spacieux*, French; *spatiosus*, Latin.] Wide; extensive; roomy; not narrow.—The former buildings, which were but mean, contented them not: *spacious* and ample churches they erected throughout every city. *Hooker*.

Convey your pleasures in a *spacious* plenty;

And yet seem cold.

Shakspeare.

Merab with *spacious* beauty fills the sight,

But too much awe chastis'd the bold delight.

Cowley.

Like

Like an English general will I die,
And all the ocean makè my spacious grave:
Women and cowards on the land may lie:
The sea's a tomb that's proper for the brave.

Dryden.

SPA'CIOUSLY, *adv.* Extensively.

SPA'CIOUSNESS, *s.* Roominess; wide extension.—The *spaciousness* of the house was such, that it had three galleries, each of them a mile long. *Hakewill on Prov.*—Here is visible an elegant taste of architecture, painting, and gardening, but more remarkable for the *spaciousness* of its prospect. *Ashmole.*

SPADA (Lionello), was born at Bologna in 1576, in a very low condition of life; and when a boy he became the servant of the Caracci, and ground and prepared their colours. The constant opportunity he possessed, whilst with these great men, of seeing pictures, and hearing discussions on the principles of the art, roused a latent disposition to study and design, which his masters saw and encouraged; and at length they admitted him into their academy, where they had the gratification of seeing him become one of their most eminent disciples; though he never arrived at any very great degree of grandeur or purity of invention. His style is a compound of the Caracci and Caravaggio's manners, and is wrought with great boldness. His principal productions are, The Miraculous Draught of Fishes, in the refectory of S. Procolo at Bologna, and St. Dominic burning the forbidden Books, for the church of that saint, in the same city. This last is considered as his very greatest work. He died in the 46th year of his age, in 1622.

SPADA, a cape of the island of Candia; 24 miles north-west of Canea.

SPA'DDLE, *s.* [Diminutive of *spade.*] A little spade.—Others destroy moles with a *spaddle*, waiting in the mornings and evenings for them. *Mortimer.*

SPADE, *s.* [ʃpɑd, Saxon; *spade*, Icelandic and Dutch.] The instrument of digging.—Take the air of the earth new turned up, by digging with the *spade*, or standing by him that diggeth. *Bacon.*—Many learned men affirm, that some isthmes have been eat through by the sea, and others cut by the *spade.* *Brown.*

His next advance was to the soldier's trade,
Where if he did not nimbly ply the *spade*,
His surly officer ne'er fail'd to crack
His knotty cudgel on his tougher back.

Dryden.

Here nature never difference made
Between the sceptre and the *spade.*

Swift.

A deer three years old. *Ainsworth.*—A suit of cards.

SPA'DEBONE, *s.* [named from the form.] The shoulder blade.

By th' shoulder of a ram from off the right side par'd,
Which usually they boil, the *spade-bone* being par'd.

Drayton.

SPADICEOUS, *adj.* [*spadiceus*, Lat.] Of a light red colour.—Of those five Scaliger beheld, though one was *spadiceous*, or of a light red, and two inclining to red, yet was there not any of this complexion among them. *Brown.*

SPADICEOUS, or SPATHAGEOUS PLANTS, those the flowers of which are protruded or produced from a sort of scabbard, or sheath, which is burst open. There is a great number of flowers, which are of this sort, as the narcissus or daffodil and jonquil, the lily daffodil, the Guernsey lily, the asphodel lily, the sea daffodil, the different varieties of crocus, the meadow saffron, the common snow-drop, the leucocium, or greater snow-drop, the onion, the leek, the garlic, and some others.

SPADILLE, *s.* [*spadille*, or *espadille*, Fr.] The ace of spades at the game of quadrille.

SPADIX, in Botany, a flower stalk, whether simple or branched, included within a *Spatha*, or Sheath.

SPADO, among the Romans, differed from an eunuch only in this, that the latter was deprived both of the penis and testes, but the spado of the testes only.

SPAFFORD, a township of the United States, in Onondago county, New York, on the east side of Skeneateles lake.

SPAFFORD'S LAKE, a lake of the United States, in Chesterfield, New Hampshire; 2 miles long.

SPAGGOT, a river of the United States, which rises in New Hampshire, and runs into the Merrimack, in Methuen.

SPAGNOLETTO (II), the cognomen of a Spanish painter, a native of Xativa, in Valencia, whose real name was Josef Ribera. See RIBERA.

SPAGYRIC, *s.* A chymist.

SPAGYRICAL, *adj.* [*spagyricus*, Lat.; *spagirique*, Fr., from the Gr. *σπας*, to extract, and *αγειρω*, to collect: not from *spaher*, Teut., a searcher, as Dr. Johnson would have it to be under the adjective *spagyric*, which he has noticed; where he says, Paracelsus coined the word, viz. *spagyricus*.] Chymical.—Paracelsus — brought to light in these parts of the world the use of hermetical, *spagyric*, or chymical phisic, as they term it. *Hakewill.*

SPAGYRIST, *s.* A chymist.

SPA'HEE, or SPA'HI, *s.* [*espahee*, a horseman, Pers.] One of the Turkish cavalry.—He said, there were certain books in their language pawned to a great *spaher* of that city, [Damascus:] The *spaher* would not part with them under 200 dollars. *Letters to Abp. Usher.*

SPAICHINGEN, a town of Germany, in Wirtemberg; 8 miles south-east of Rothwell, and 51 south-south-west of Stutgard. Population 2000.

S P A I N.

SPAIN is a kingdom of Europe, situated between the 36th and 44th degrees of north latitude, and having its western extremity about 9° west longitude from London. Its greatest length from west to east is about 600 miles. The precise western boundary is formed by the river Bidassoa, near the mouth of which is the isle of Pheasants. The last town in Spain is Irum, near the Bidassoa. The superficial contents of Spain have been estimated at about 148,000 square miles. It lies between the fifth climate on the south, and half-way between the sixth and seventh on the north; the longest days are, therefore, 14½ hours in the southern part, and 15½ in the northern.

The first known division of Spain, into Hispania Citerior and Ulterior, took place under the Romans; but these were soon denominated Lusitania, Boetica, and Tarraconensis. Lusitania comprehended the eastern part, and extended as far

as the Atlantic Ocean: its limits were marked on the north by the Duero, on the south by the Guadiana, and from one to the other by a straight line drawn from Simancas to Puente de l'Arzobispo, and from thence as far as the country of the people called Oretani, in which the town of Almagro at present stands. It included in its extent the towns of Avila, Salamanca, Coria, the territory of Plasencia, Truxill, Merida and Portugal, the kingdom of Leon, and part of Estremadura.

Boetica was almost surrounded on two of its sides by the Guadiana, bounded on the south by the Mediterranean and the ocean, and terminated on the east by a line drawn from Murgis or Muxacra, a village near the ancient promontory of Charidemus, now called the Cape de Gatte, to the territory of Castulo, (which was nearly in the same situation as the modern Cazlona,) and to the country of the Oretania. It

It formed what is called Andalusia, containing the kingdoms of Seville, Jaen, Cordova, and Granada; it also included a part of modern Estremadura, and extended as far as Badajoz, which was within its boundaries.

Hispania Tarraconensis comprehended all the other parts of Spain, and was the same with that called Citerior Spain.

The division of Spain, now stated, underwent some alterations under the last Roman emperors, and was totally changed after the invasion of the northern nations. The Aborigines of Spain were doubtless a Celtic tribe, which probably passed into this peninsula from the adjoining continent of Gaul, though at a very early period they appear to have been mixed with a colony of Mauritanians, or Moors from the coast of Africa. The Celtic inhabitants, or Celtiberians, seem to have possessed the north-east of the peninsula, while the Mauritanians occupied the southern and south-western districts.

Nothing certain is known respecting the early state of Spain till the commencement of the first Punic war between the Romans and the Carthaginians, in the middle of the third century before Christ. Not long before this date, probably at the beginning of the century, the latter people had possessed themselves of Catalonia, when their general Hamilcar Barca is said to have founded the city of Barceno, the modern Barcelona. The Carthaginian colony, however, seems to have been rather a mercantile than a warlike settlement, and the Celtiberians were more the allies than the subjects of their African neighbours. Of the contest carried on between the Carthaginians and the Romans, till the final subjugation of the former, and the consequent occupation of all their territories by the Roman republic, we have given an account under the articles *CARTHAGE* and *ROME*. We shall here briefly consider the state of Spain at the time of its occupation by the Romans, and relate the events to which that occupation gave rise, and which are less connected with the more immediate transactions of the Punic wars.

At the time of the Roman conquest, Spain, though prodigious quantities of silver had been carried out of it by the Carthaginians and Tyrians, was yet a very rich country. In the most ancient times, indeed, its riches are said to have exceeded what is related of the most wealthy country in America: Aristotle assures us, that when the Phenicians first arrived in Spain, they exchanged their naval commodities for such immense quantities of silver, that their ships could neither contain nor sustain its load, though they used it for ballast, and made their anchors and other implements of silver. When the Carthaginians first came to Spain, they found the quantity of silver nothing lessened, since the inhabitants at that time made all their utensils, and even mangers, of that precious metal. In the time of the Romans this amazing plenty was very much diminished; however, their gleanings were by no means despicable, since in the space of nine years they carried off 111,542 pounds of silver, and 4095 of gold, besides an immense quantity of coin and other things of value. The Spaniards were always remarkable for their bravery, and some of Hannibal's best troops were brought from thence; but as the Romans penetrated farther into the country than the Carthaginians had done, they met with nations whose love of liberty was equal to their valour, and whom the whole strength of their empire was scarcely able to subdue. Of these the most formidable were the Numantines, Cantabrians, and Asturians.

In the time of the third Punic war, one Viriathus, a celebrated hunter, and afterwards the captain of a gang of banditti, took upon him the command of some nations who had been in alliance with Carthage, and ventured to oppose the Roman power in that part of Spain called *Lusitania*, now Portugal. The prætor, named *Vetilius*, who commanded in those parts, marched against him with 10,000 men; but was defeated and killed, with the loss of 4000 of his troops. The Romans immediately dispatched another prætor with 10,000 foot and 1300 horse: but Viriathus having first cut off a detachment of 4000 of them, engaged the rest in a pitched battle; and having entirely defeated

them, reduced great part of the country. Another prætor, who was sent with a new army, met with the same fate; so that, after the destruction of Carthage, the Romans thought proper to send a consul named *Quintus Fabius*, who defeated the Lusitanians in several battles, and regained two important places which had long been in the hands of the rebels. After the expiration of Fabius's consulate, Viriathus continued the war with his usual success, till the senate thought proper to send against him the consul *Q. Cæcilius Metellus*, an officer of great valour and experience. With him Viriathus did not choose to venture a pitched battle, but contented himself with acting on the defensive; in consequence of which the Romans recovered a great many cities, and the whole of Tarraconian Spain was obliged to submit to their yoke. The other consul, named *Servilianus*, did not meet with the same success; his army was defeated in the field, and his camp was nearly taken by Viriathus. Notwithstanding the good fortune of Metellus, however, he could not withstand the intrigues of his countrymen against him, and he was not allowed to finish the war he had begun with so much success. In resentment for this he took all imaginable pains to weaken the army under his command: he disbanded the flower of his troops, exhausted the magazines, let the elephants die, broke in pieces the arrows which had been provided for the Cretan archers, and threw them into a river. Yet, after all, the army which he gave up to his successor *Q. Pompeius*, consisting of 30,000 foot and 2000 horse, was sufficient to have crushed Viriathus, if the general had known how to use it. But, instead of opposing Viriathus with success, the imprudent consul procured much more formidable enemies. The Termantians and Numantines, who had hitherto kept themselves independent, offered very advantageous terms of peace and alliance with Rome; but Pompeius insisted on their delivering up their arms. Upon this war was immediately commenced. The consul with great confidence invested Numantia; but being repulsed with considerable loss, he sat down before Termantia, where he was attended with still worse success. The very first day, the Termantines killed 700 of his legionaries; took a great convoy which was coming to the Roman camp; and having defeated a considerable body of their horse, pushed them from post to post till they came to the edge of a precipice, where they all tumbled down, and were dashed to pieces. In the mean time Servilius who had been continued in his command with the title of *proconsul*, managed matters so ill, that Viriathus surrounded him on all sides, and obliged him to sue for peace. The terms offered to the Romans were very moderate; being only that Viriathus should keep the country he at that time possessed, and the Romans remain masters of all the rest. This peace the proconsul was very glad to sign, and afterwards procured its ratification by the senate and people of Rome.

The next year *Q. Pompeius* was continued in his command against the Numantines in Farther Spain, while *Q. Servilius Cæpio*, the new consul, had for his province Hither Spain, where Viriathus had established his new state. Pompeius undertook to reduce Numantia by turning aside the stream of the *Durius*, now the Douro, by which it was supplied with water; but, in attempting this, such numbers of his men were cut off, that, finding himself unable to contend with the enemy, he was glad to make peace with them on much worse terms than they had offered of their own accord. The peace, however, was ratified at Rome; but in the mean time Cæpio, desirous of showing his prowess against the renowned Viriathus, prevailed on the Romans to declare war against him without any provocation. As Cæpio commanded an army greatly superior to the Lusitanians, Viriathus thought proper to sue for peace; but finding that Cæpio would be satisfied with nothing less than a surrender at discretion, he resolved to stand his ground. In the mean time, the latter having bribed some of the intimate companions of Viriathus to murder him in his sleep, he by that infamous method put an end to a war which had lasted 14 years, very little to the honour of the republic.

After

After the death of Viriathus, the Romans ordered their new consul Popilius to break the treaty with the Numantines. His infamous conduct met with the reward it deserved; the Numantines sallying out, put the whole Roman army to flight with such slaughter, that they were in no condition to act during the whole campaign. Mancinus, who succeeded Popilius, met with still worse success; his great army, consisting of 30,000 men, was utterly defeated by 4000 Numantines, and 20,000 of them killed in the pursuit. The remaining 10,000, with their general, were pent up by the Numantines in such a manner that they could neither advance nor retreat, and would certainly have been all put to the sword or made prisoners, had not the Numantines, with a generosity which their enemies never possessed, offered to let them depart upon condition that a treaty should be concluded with them upon very moderate terms. This the consul very willingly promised, but found himself unable to perform. On the contrary, the people, not satisfied with declaring his treaty null and void, ordered him to be delivered up to the Numantines. The latter refused to accept him, unless he had along with him the 10,000 men whom they had relieved as before related. At last, after the consul had remained a whole day before the city, his successor Furius, thinking this a sufficient recompense to the Numantines for breaking the treaty, ordered him to be received again into the camp. However, Furius did not chuse to engage with such a desperate and resolute enemy as the Numantines had showed themselves; and the war with them was discontinued till the year 133 B. C. when Scipio Æmilianus, the destroyer of Carthage, was sent against them. Against this renowned commander the Numantines with all their valour were not able to contend. Scipio, having with the utmost care introduced strict discipline among his troops, and reformed the abuses which his predecessors had suffered in their armies, by degrees brought the Romans to face their enemies, which at his arrival they had absolutely refused to do. Having then ravaged all the country round the town, it was soon blocked up on all sides, and the inhabitants began to feel the want of provisions. At last they resolved to make one desperate attempt for their liberty, and either to break through their enemies, or perish in the attempt. With this view they marched out in good order by two gates, and fell upon the works of the Romans with the utmost fury. The Romans, unable to stand this desperate shock, were on the point of yielding, when Scipio, hastening to the places attacked, with no fewer than 20,000 men, the unhappy Numantines were at last driven into the city, where they sustained for a little longer the miseries of famine. Finding at last, however, that it was altogether impossible to hold out, it was resolved by the majority to submit to the pleasure of the Roman commander. But this resolution was not universally approved. Many shut themselves up in their houses, and died of hunger, while even those who had agreed to surrender repented their offer, and setting fire to their houses, perished in the flames with their wives and children, so that not a single Numantine was left alive to grace the triumph of the conqueror of Carthage.

After the destruction of Numantia the whole of Spain submitted to the Roman yoke; and nothing remarkable happened till the times of the Cimbri, when a prætorian army was cut off in Spain by the Lusitanians. From this time nothing remarkable occurs in the history of Spain till the civil war between Marius and Sylla. The latter having crushed the Marian faction, as related under the article ROME, proscribed all those that had sided against him whom he could not immediately destroy. Among these was Sertorius, a man of consummate valour and experience in war. He had been appointed prætor of Spain by Marius; and upon the overthrow of Marius, retired to that province. Sylla no sooner heard of his arrival in that country, than he sent thither one Caius Annius with a powerful army to drive him out. As Sertorius had but few troops along with him, he dispatched one Julius Salinator with a body of 6000 men to guard the passes of the Pyrenees, and to prevent Annius from entering the country. But Salinator having been

treacherously murdered by assassins hired by Annius for that purpose, he no longer met with any obstacle; and Sertorius was obliged to embark for the coast of Africa with 3000 men, being all he had now remaining. With these he landed in Mauritania; but as his men were straggling carelessly about, great numbers of them were cut off by the Barbarians. This new misfortune obliged Sertorius to re-embark for Spain; but finding the whole coast lined with the troops of Annius, he put to sea again, not knowing what course to steer. In this new voyage he met with a small fleet of Cilician pirates; and having prevailed with them to join him, he made a descent on the coast of Iviça, overpowered the garrison left there by Annius, and gained a considerable booty. On the news of this victory Annius set sail for Iviça, with a considerable squadron, having 5000 land forces on board. Sertorius prepared to give them battle. But a violent storm arising, most of the ships were driven on shore and dashed to pieces, Sertorius himself with great difficulty escaping with the small remains of his fleet. He then passed the straits of Gades, now Gibraltar, and landed near the mouth of the river Bætis. Here he met with some seamen newly arrived from the Atlantic or Fortunate islands; and was so charmed with the account which they gave him of those happy regions, that he resolved to retire thither to spend the rest of his life in quiet and happiness. But having communicated this design to the Cilician pirates, they immediately abandoned him, and set sail for Africa, with an intention to assist one of the barbarous kings against his subjects who had rebelled. Upon this Sertorius sailed thither also, but took the opposite side; and having defeated the king named *Ascalis*, obliged him to shut himself up in the city of Tingis, now Tangier, which he closely besieged. But in the mean time Pacianus, who had been sent by Sylla to assist the king, advanced with a considerable army against Sertorius. Upon this the latter, leaving part of his forces before the city, marched with the rest to meet Pacianus, whose army, though greatly superior to his own in number, he entirely defeated; killed the general, and took all his forces prisoners.—The fame of this victory soon reached Spain; and the Lusitanians, being threatened with a new war from Annius, invited Sertorius to head their armies. With this request he very readily complied, and soon became very formidable to the Romans. Titus Didius, governor of that part of Spain called *Bætica*, first entered the lists with him; but he being defeated, Sylla next dispatched Metellus, reckoned one of the best commanders in Rome, to stop the progress of this new enemy. But Metellus, notwithstanding all his experience, knew not how to act against Sertorius, who was continually changing his station, putting his army into new forms, and contriving new stratagems. On his first arrival, he sent for L. Domitius, then prætor of Hither Spain, to his assistance; but Sertorius being informed of his march, detached Hirtuleius, or Herculeius, his quæstor, against him, who gave him a total overthrow. Metellus then dispatched Lucius Lollius prætor of Narbonne Gaul against Hirtuleius; but he met with no better success, being utterly defeated, and his lieutenant-general killed.

The fame of these victories brought to the camp of Sertorius such a number of illustrious Roman citizens of the Marian faction, that he formed a design of erecting Lusitania into a republic in opposition to that of Rome. Sylla was continually sending fresh supplies to Metellus; but Sertorius, with a handful of men, so harassed the Roman army, that Metellus himself began to be quite discouraged. At last, Sertorius hearing that Metellus had spoken disrespectfully of his courage, challenged his antagonist to end the war by single combat; but Metellus very prudently declined the combat, as being advanced in years; yet this refusal brought upon him the contempt of the unthinking multitude, upon which Metellus resolved to retrieve his reputation by some signal exploit, and therefore laid siege to Iacobriga, a considerable city in those parts. This he hoped to reduce in two days, as there was but one well in the place; but Sertorius having previously removed all those who could be of no service during the siege, and conveyed 6000 skins full of water into

the city, Metellus continued a long time before it without making any impression. At last, his provisions being almost spent, he sent out Aquinus at the head of 6000 men to procure a new supply; but Sertorius falling unexpectedly upon them, cut in pieces or took the whole detachment; the commander himself being the only man who escaped to carry the news of the disaster; upon which Metellus was obliged to raise the siege with disgrace.

Sertorius, having gained some intervals of ease in consequence of the many advantages he had obtained over the Romans, began to civilize his new subjects. Their savage and furious manner of fighting he changed for the regular order and discipline of a well-formed army; he bestowed liberally upon them gold and silver to adorn their arms, and by conversing familiarly with them, prevailed with them to lay aside their own dress for the Roman *toga*. He sent for all the children of the principal people, and placed them in the great city of Osca, now Huesca, in the kingdom of Arragon, where he appointed them masters to instruct them in the Roman and Greek learning, that they might, as he pretended, be capable of sharing with him the government of the republic. Thus he made them really hostages for the good behaviour of their parents; however, the latter were greatly pleased with the care he took of their children, and all Lusitania were in the highest degree attached to their new sovereign. This attachment he took care to heighten by the power of superstition; for having procured a young hind of a milk-white colour, he made it so tame that it followed him wherever he went; and Sertorius gave out to the ignorant multitude, that this hind was inspired by Diana, and revealed to him the designs of his enemies, of which he always took care to be well informed by the great numbers of spies whom he employed.

While Sertorius was thus employed in establishing his authority, the republic of Rome, alarmed at his success, resolved to crush him at all events. Sylla was now dead, and all the eminent generals in Rome solicited this honourable though dangerous employment. After much debate, a decree was passed in favour of Pompey the Great, but without recalling Metellus. In the mean time, the troops of one Perpenna, or Perperna, had abandoned him, and taken the oath of allegiance to Sertorius. This was a most signal advantage to Sertorius; for Perpenna commanded an army of 33,000 men, and had come into Spain with a design to settle there as Sertorius had done; but as he was descended from one of the first families of Rome, he thought it below his dignity to serve under any general, however eminent he might be. However, the troops of Perpenna were of a different opinion; and therefore declaring that they would serve none but a general who could defend himself, they, to a man, joined Sertorius; upon which, Perpenna consented to serve also as a subaltern.

On the arrival of Pompey in Spain, several of the cities which had hitherto continued faithful to Sertorius began to waver; upon which the latter resolved, by some signal exploit, to convince them that Pompey could no more screen them from his resentment than Metellus. With this view he laid siege to Lauron, now Lirias, a place of considerable strength. Pompey, not doubting but he should be able to raise the siege, marched quite up to the enemy's lines, and found means to inform the garrison that those who besieged them were themselves besieged, and would soon be obliged to retire with loss and disgrace. On hearing this message, "I will teach Sylla's disciple (said Sertorius), that it is the duty of a general to look behind as well as before him." Having thus spoken, he sent orders to a detachment of 6000 men, who lay concealed among the mountains, to come down and fall upon his rear if he should offer to force the lines. Pompey, surprised at their sudden appearance, durst not stir out of his camp; and in the mean time the besieged, despairing of relief, surrendered at discretion; upon which Sertorius granted them their lives and liberty, but reduced their city to ashes.

While Sertorius was thus successfully contending with

Pompey, his questor Hiirtuleius was entirely defeated by Metellus, with the loss of 40,000 men; upon which Sertorius advanced with the utmost expedition to the banks of the Suero in Tarraconian Spain, with a design to attack Pompey before he could be joined by Metellus. Pompey, on his part, did not decline the combat; but fearing that Metellus might share the glory of the victory, advanced with the greatest expedition. Sertorius put off the battle till towards the evening; Pompey, though he knew that the night would prove disadvantageous to him, whether vanquished or victorious, because his troops were unacquainted with the country, resolved to venture an engagement, especially as he feared that Metellus might arrive in the mean time, and rob him of part of the glory of conquering so great a commander. Pompey, who commanded his own right wing, soon obliged Perperna, who commanded Sertorius's left, to give way. Hereupon Sertorius himself, taking upon him the command of that wing, brought back the fugitives to the charge, and obliged Pompey to fly in his turn. In his flight he was overtaken by a gigantic African, who had already lifted up his hand to discharge a blow at him with his broad sword, but Pompey prevented him by cutting off his right hand at one blow. As he still continued his flight, he was wounded and thrown from his horse; so that he certainly would have been taken prisoner, had not the Africans who pursued him quarrelled about the rich furniture of his horse. This gave an opportunity to the general to make his escape; so that at length he reached his camp with much difficulty. But in the mean time Afranius, who commanded the left wing of the Roman army, had entirely defeated the wing which Sertorius had left, and even pursued them so close that he entered the camp along with them. Sertorius, returning suddenly, found the Romans busy in plundering the tents; when taking advantage of their situation, he drove them out with great slaughter, and retook their camp. Next day he offered battle a second time to Pompey; but Metellus then coming up with all his forces, he thought proper to decline an engagement with both commanders. In a few days, however, Pompey and Metellus agreed to attack the camp of Sertorius. The event was similar to that of the former battle; Metellus defeated Perperna, and Sertorius routed Pompey. Being then informed of Perperna's misfortune, he hastened to his relief; rallied the fugitives, and repulsed Metellus in his turn, wounded him with his lance, and would certainly have killed him, had not the Romans, ashamed to leave their general in distress, hastened to his assistance, and renewed the fight with great fury. At last Sertorius was obliged to quit the field, and retire to the mountains. Pompey and Metellus hastened to besiege him; but while they were forming their camp, Sertorius broke through their lines, and escaped in Lusitania. Here he soon raised such a powerful army, that the Roman generals, with their united forces, did not think proper to venture an engagement with him. They could not, however, resist the perpetual attacks of Sertorius, who now drove them from place to place, till he obliged them to separate; the one went into Gaul, and the other to the foot of the Pyrenees.

Thus did this celebrated commander triumph over all the power of the Romans; and there is little doubt but he would have continued to make head against all the other generals whom the republic could have sent, had he not been assassinated at an entertainment by the infamous treachery of Perperna, in 73 B. C. after he had made head against the Roman forces for almost 10 years. Pompey was no sooner informed of his death, than, without waiting for any new succours, he marched against the traitor, whom he easily defeated and took prisoner; and having caused him to be executed, thus put an end, with very little glory, to a most dangerous war.

Many of the Spanish nations, however, still continued to bear the Roman yoke with great impatience; and as the civil wars which took place first between Julius Cæsar and Pompey, and afterwards between Octavianus and Antony, diverted the attention of the republic from Spain, by the time

time that Augustus had become sole master of the Roman empire, they were again in a condition to assert their liberty. The Cantabrians and Asturians were the most powerful and valiant nations at that time in Spain; but they were almost exterminated by Agrippa.

When incorporated with the Roman empire, Spain partook of its tranquillity, and received in exchange for her liberty, at least wise laws and a mild government. If she could not prevent herself from falling under the dominion of the masters of the world, she was at least the most powerful, the richest, and the happiest province of their empire. Columella has left us an interesting account of her agriculture under the first emperors. The tradition of her ancient population is probably exaggerated, but the ruins of several towns prove it to have been considerable. It was increased by a great many Roman families after the conquest; several legions were established in Spain; 25 colonies were distributed in the most fertile parts of the country, and intermarried with the inhabitants. After a while the Spaniards, seeing in their masters only countrymen, were the first to solicit the rights of Roman citizens, by which they were completely consolidated. Some municipal towns went so far as to desire permission to take the title of colonies, though in the change they lost their independence, nearly in the same manner as certain proprietors of lands under the feudal system converted their domains into fiefs, in order to enjoy the honours attached to them. The government was, in general, milder in Spain than in the other Roman provinces. The administration was carried on in the towns by magistrates named by themselves, and the different provinces were under the superintendance of prætors, proconsuls, and legates, or deputies, according to the different eras of the Roman empire; those in their respective departments took care of all the works of public utility, the aqueducts, baths, circuses, and highways, whose magnificent ruins are still existing; but they were principally employed in collecting the revenues of the state, which arose from dues, fines, or alienations of property, and the produce of the mines. Spain at that time drew from her own mines the same riches she afterwards derived from the new world, and they were distributed in nearly the same manner. One part belonged to the state, and the other to the inhabitants of the country, who paid a certain duty on the metals which they procured from the mines. Their returns went on increasing, and depended entirely on the number of hands which could be devoted to work in the mines. An employment, so laborious, however, which required a numerous population, tended to diminish that population by the excessive fatigues which it occasioned. Agriculture also suffered by the accumulation of estates in the hands of a few wealthy landholders. By the little attention paid to it by the proprietors, and by the defects inseparable from the system of cultivation by means of slaves, commerce and industry languished; and Spain, after having shared in the splendour of the Roman empire, was beginning to participate in its decline, when a new calamity, by completing her ruin, prepared her regeneration.

This calamity was the irruption of the northern hordes, which soon involved Spain in the general attack. This province was invaded first by the Franks, who in the third century had entered Gaul with a formidable force.

The Rhine, though dignified by the title of Safeguard of the Provinces, was an imperfect barrier against the daring spirit of enterprize with which the Franks were actuated. Their rapid devastations stretched from the river to the foot of the Pyrenees; nor were they stopped by those mountains. Spain, which had never dreaded, was unable to resist the inroads of the Germans. During 12 years, the greatest part of the reign of Gallienus, that opulent country was the theatre of unequal and destructive hostilities. Tarragona, the flourishing capital of a peaceful province, was sacked and almost destroyed; and so late as the days of Orosius, who wrote in the fifth century, wretched cottages, scattered amidst the ruins of magnificent cities, still recorded the rage of the barbarians. When the exhausted country no longer

supplied a variety of plunder, the Franks seized on some vessels, and retreated to Mauritania.

The situation of Spain, separated, on all sides, from the enemies of Rome, by the sea, by the mountains, and by intermediate provinces, had secured the long tranquillity of that remote and sequestered country; and we may observe, as a sure symptom of domestic happiness, that in a period of 400 years, Spain furnished very few materials to the history of the Roman empire. The footsteps of the Barbarians, who, in the reign of Gallienus, had penetrated beyond the Pyrenees, were soon obliterated by the return of peace; and in the 4th century of the Christian era, the cities of Emerita or Merida, of Corduba, Seville, Bracara, and Tarragona, were numbered with the most illustrious of the Roman world.

The various plenty of the animal, the vegetable, and the mineral kingdoms, was improved and manufactured by the skill of an industrious people; and the peculiar advantages of naval stores contributed to support an extensive and profitable trade. The arts and sciences flourished under the protection of the emperors; and if the character of the Spaniards was enfeebled by peace and servitude, the hostile approach of the Germans seemed to rekindle some sparks of military ardour. As long as the defence of the mountains was intrusted to the hardy and faithful militia of the country, they successfully repelled the frequent attempts of the Barbarians. But no sooner had the national troops been compelled to resign their post to the Honorian bands, in the service of Constantine, than the gates of Spain were treacherously betrayed to the public enemy, about ten months before the sack of Rome by the Goths. The consciousness of guilt, and the thirst of rapine, prompted the mercenary guards of the Pyrenees to desert their station; to invite the arms of the Suevi, the Vandals, and the Alani; and to swell the torrent which was poured with irresistible violence from the frontiers of Gaul to the sea of Africa. The misfortunes of Spain may be described in the language of its most eloquent historian, who has concisely expressed the passionate and perhaps exaggerated declamations of contemporary writers. "The irruption of these nations was followed by the most dreadful calamities; as the Barbarians exercised their indiscriminate cruelty on the fortunes of the Romans and the Spaniards; and ravaged with equal fury the cities and the open country. The progress of famine reduced the miserable inhabitants to feed on the flesh of their fellow creatures; and even the wild beasts, who multiplied, without controul, in the desert, were exasperated, by the taste of blood and the impatience of hunger, boldly to attack and devour their human prey. Pestilence soon appeared, the inseparable companion of famine; a large proportion of the people was swept away; and the groans of the dying excited only the envy of their surviving friends. At length the Barbarians, satiated with carnage and rapine, and afflicted by the contagious evil which they themselves had introduced, fixed their permanent seats in the depopulated country. The ancient Gallicia, whose limits included the kingdom of Old Castile, was divided between the Suevi and the Vandals, the Alani were scattered over the provinces of Carthagenia and Lusitania, and from the Mediterranean to the Atlantic Ocean; and the fruitful territory of Bœtica was allotted to the Silingi, another branch of the Vandalic nation. After regulating this partition, the conquerors contracted with their new subjects some reciprocal engagements of protection and obedience; the lands were again cultivated; and the towns and villages were again occupied by a captive people. The greatest part of the Spaniards was even disposed to prefer this new condition of poverty and barbarism, to the severe oppressions of the Roman government; yet there were many who still asserted their native freedom, and who refused, more especially in the mountains of Gallicia, to submit to the barbarian yoke."

The important present of the heads of Jovinus and Sebastian, had approved the friendship of Adolphus, and restored Gaul to the obedience of his brother Honorius. Peace was incompatible with the situation and temper of the king of the Goths,

Goths. He readily accepted the proposal of turning his victorious arms against the barbarians of Spain; the troops of Constantius intercepted his communication with the seaports of Gaul, and gently pressed his march towards the Pyrenees. He passed the mountains, and surprised, in the name of the emperor, the city of Barcelona. The fondness of Adolphus for his Roman bride, Placidia, was not abated by time or possession; and the birth of a son, surnamed, from his illustrious grandsire, Theodosius, appeared to fix him for ever in the interest of the republic. The loss of that infant, whose remains were deposited in a silver coffin in one of the churches near Barcelona, afflicted his parents; but the grief of the Gothic king was suspended by the labours of the field, and the course of his victories was soon interrupted by domestic treason. He had imprudently received into his service one of the followers of Sarus, a barbarian of a daring spirit, but of a diminutive stature; whose secret desire of revenging the death of his beloved patron, was continually irritated by the sarcasms of his insolent master. Adolphus was assassinated in the palace of Barcelona; the laws of the succession were violated by a tumultuous faction; and a stranger to the royal race, Singeric, the brother of Sarus himself, was seated on the Gothic throne. The first act of his reign was the inhuman murder of the six children of Adolphus, the issue of a former marriage, whom he tore, without pity, from the feeble arms of a venerable bishop. The unfortunate Placidia, instead of the respectful compassion, which she might have excited in the most savage breasts, was treated with cruel and wanton insult. The daughter of the emperor Theodosius, confounded among a crowd of vulgar captives, was compelled to march on foot above 12 miles, before the horse of a barbarian, the assassin of a husband whom Placidia loved and lamented.

But Placidia soon obtained the pleasure of revenge; and the view of her ignominious sufferings roused an indignant people against the tyrant, who was assassinated on the seventh day of his usurpation. After the death of Singeric, the free choice of the nation bestowed the Gothic sceptre on Wallia, whose warlike and ambitious temper appeared, in the beginning of his reign, extremely hostile to the republic. He marched, in arms, from Barcelona to the shores of the Atlantic Ocean, which the ancients revered and dreaded as the boundary of the world. But when he reached the southern promontory of Spain, and, from the rock now covered by the fortress of Gibraltar, contemplated the neighbouring and fertile coasts of Africa, Wallia resumed the designs of conquest, which had been interrupted by the death of Alaric. The winds and waves disappointed the enterprises of the Goths; and the minds of a superstitious people were deeply affected by the repeated disasters of storms and shipwrecks. In this disposition, the successor of Adolphus no longer refused to listen to a Roman ambassador, whose proposals were enforced by the real, or supposed, approach of a numerous army, under the conduct of the brave Constantius. A solemn treaty was stipulated and observed: Placidia was honourably restored to her brother; 600,000 measures of wheat were delivered to the hungry Goths; and Wallia engaged to draw his sword in the service of the empire. A bloody war was instantly excited among the barbarians of Spain; and the contending princes are said to have addressed their letters, their ambassadors, and their hostages, to the throne of the western emperor, exhorting him to remain a tranquil spectator of their contest; the events of which must be favourable to the Romans, by the mutual slaughter of their common enemies. The Spanish war was obstinately supported, during three campaigns, with desperate valour, and various success; and the martial achievements of Wallia diffused through the empire the superior renown of the Gothic hero. He exterminated the Silingi, who had irretrievably ruined the elegant plenty of the province of Bœtica. He slew in battle the king of the Alani; and the remains of those Scythian wanderers, who escaped from the field, instead of choosing a new leader, humbly sought a refuge under the standards of the Vandals, with whom they were ever afterwards confounded. The Vandals themselves, and the Suevi, yielded

to the efforts of the invincible Goths. The promiscuous multitude of barbarians, whose retreat had been intercepted, were driven into the mountains of Galicia, where they still continued, in a narrow compass, and on a barren soil, to exercise their domestic and implacable hostilities. In the pride of victory, Wallia was faithful to his engagements; he restored his Spanish conquests to the obedience of Honorius; and the tyranny of the imperial officers soon reduced an oppressed people to regret the time of their barbarian servitude. While the event of the war was still doubtful, the first advantages obtained by the arms of Wallia, had encouraged the court of Ravenna to decree the honours of a triumph to their feeble sovereign. He entered Rome like the ancient conquerors of nations; and if the monuments of servile corruption had not long since met with the fate which they deserved, we should probably find that a crowd of poets, and orators, of magistrates and bishops, applauded the fortune, the wisdom, and the invincible courage, of the emperor Honorius.

After the retreat of the Goths, the authority of Honorius had obtained a precarious establishment in Spain; except only in the province of Galicia, where the Suevi and the Vandals had fortified their camps. The Vandals prevailed, and their adversaries were besieged in the Nervescan hills, between Leon and Oviedo, till the approach of Count Asterius provoked the victorious barbarians to remove the scene of the war to the plains of Bœtica. The rapid progress of the Vandals soon required a more effective opposition; and the master-general Costinus marched against them with a numerous army of Romans and Goths. Vanquished in battle by an inferior enemy, Costinus fled with dishonour to Tarragona; and this memorable defeat was most probably the effect of his rash presumption. Seville and Carthage became the prey of the ferocious conquerors; and the vessels which they found in the harbour of Carthage, might easily transport them to the isles of Majorca and Minorca, where the Spanish fugitives had vainly concealed their families and their fortunes. The experience of navigation, and perhaps the prospect of Africa, encouraged the vandals to accept the invitation which they received from Count Boniface; and the death of Gonderic served only to forward and animate the bold enterprise. In the room of this prince, they acquired his bastard brother, the terrible Genseric; a name which has deserved an equal rank with the names of Alaric and Attila. Almost in the moment of his departure he was informed, that Hermanric, king of the Suevi, had presumed to ravage the Spanish territories, which he was resolved to abandon. Impatient of the insult, Genseric pursued the hasty retreat of the Suevi as far as Merida; precipitated the king and his army into the river Anas, and calmly returned to the sea shore; to embark his victorious troops. The vessels which transported the Vandals over the modern straits of Gibraltar, were furnished by the Spaniards, and by the African general, who had implored their formidable assistance.

When Theodoric, king of the Visigoths, encouraged Avitus to assume the purple, he offered his person and his forces, as a faithful soldier of the republic. The exploits of Theodoric soon convinced the world, that he had not degenerated from the warlike virtues of his ancestors. After the establishment of the Goths in Aquitain, and the passage of the Vandals into Africa, the Suevi, who had fixed their kingdom into Galicia, aspired to the conquest of Spain, and threatened to extinguish the feeble remains of the Roman dominion. The provinces of Carthage and Tarragona, afflicted by an hostile invasion, represented their injuries and their apprehensions. Count Fronto was dispatched, in the name of the emperor Avitus, with advantageous offers of peace; but Theodoric interposed his weighty mediation, to declare that, unless his brother-in-law, the king of the Suevi, immediately retired, he should be obliged to arm in the cause of justice and of Rome. "Tell him," replied the haughty Recniarius, "that I despise his friendship and his arms; but that I shall soon try, whether he will dare to expect my arrival under the walls of Thoulouse." Such a challenge urged Theodoric to prevent the bold designs of his enemy. He passed the Pyrenees at

at the head of the Visigoths; the Franks and Burgundians served under his standard; and he privately stipulated, for himself and his successors, the absolute possession of his Spanish conquests. The two nations encountered each other on the banks of the river Urbicus, about 12 miles from Astorga; and the decisive victory of the Goths appeared for a while to have extirpated the name and kingdom of the Suevi. From the field of battle Theodoric advanced to Braga, their metropolis. His entrance was not polluted with blood, and the Goths respected the chastity of their female captives, more especially of the consecrated virgins; but the greatest part of the clergy and people were made slaves, and even the churches and altars were confounded in the universal pillage. The unfortunate king of the Suevi, was delivered to his implacable rival; and Rechiarius, who neither desired nor expected mercy, received, with manly constancy, the death which he would probably have inflicted. After this bloody sacrifice to policy or resentment, Theodoric carried his victorious arms as far as Merida, the principal town of Lusitania, without meeting any resistance; but he was stopped in the full career of success, and recalled from Spain before he could provide for the security of his conquests. In his retreat towards the Pyrenees, by the sack of Pallentia and Astorga, he shewed himself a faithless ally, as well as a cruel enemy.

Recared was the first Catholic king of Spain. He had imbibed the faith of his unfortunate brother, and he supported it with more prudence and success. Instead of revolting against his father, Recared patiently expected the hour of his death. Instead of condemning his memory, he piously supposed, that the dying monarch had abjured the errors of Arianism; and recommended to his son the conversion of the Gothic nation. To accomplish that salutary end, Recared convened an assembly of the Arian clergy and nobles, declared himself a Catholic, and exhorted them to imitate the example of their prince. The laborious interpretation of doubtful texts, or the the curious pursuit of metaphysical arguments, would have excited endless controversy; and the monarch discreetly proposed to his illiterate audience, two substantial and visible arguments, the testimony of Earth and of Heaven. The Earth had submitted to the Nicene synod: the Romans, the Barbarians, and the inhabitants of Spain, unanimously professed the same orthodox creed; and the Visigoths resisted, almost alone, the consent of the Christian world. A superstitious age was prepared to reverence, as the testimony of Heaven, the preternatural cures which were performed by the skill or virtue of the Catholic clergy; the baptismal fountains of Osset in Bœtica, which were spontaneously replenished each year, on the vigil of Easter; and the miraculous shrine of St. Martin of Tours, which had already converted the Suevic prince and people of Galicia. The Catholic king encountered some difficulties on this important change of the national religion. A conspiracy, secretly fomented by the queen-dowager, was formed against his life; and two counts excited a dangerous revolt in the Narbonnese Gaul. But Recared disarmed the conspirators, defeated the rebels, and executed severe justice. Eight bishops, abjured their errors; and all the books of Arian theology were reduced to ashes, with the house in which they had been purposely collected. The whole body of the Visigoths and Suevi were allured or driven into the pale of the Catholic communion; the faith, at least, of the rising generation, was fervent and sincere; and the devout liberality of the Barbarians enriched the churches and monasteries of Spain. Seventy bishops assembled in the council of Toledo, received the submission of their conquerors; and the zeal of the Spaniards improved the Nicene creed, by declaring the procession of the Holy Ghost from the Son, as well as from the Father—a weighty point of doctrine, which produced, long afterwards, the schism of the Greek and Latin churches. The royal proselyte immediately saluted and consulted Pope Gregory, surnamed the Great, a learned and holy prelate, whose reign was distinguished by the conversion of heretics and infidels. The ambassadors of Recared respectfully offered on the

threshold of the Vatican his rich presents of gold and gems: they accepted, as a lucrative exchange, the hairs of St. John the Baptist; a cross, which inclosed a small piece of the true wood; and a key, that contained some particles of iron which had been scraped from the chains of St. Peter.

After their conversion from idolatry or heresy, the Franks and the Visigoths were disposed to embrace, with equal submission, the inherent evils, and the accidental benefits of superstition. But the prelates of France, long before the extinction of the Merovingian race, had degenerated into fighting and hunting barbarians. They disdained the use of synods; forgot the laws of temperance and chastity, and preferred the indulgence of private ambition and luxury, to the greatest interest of the sacerdotal profession. The bishops of Spain respected themselves, and were respected by the public: their indissoluble union disguised their vices, and confirmed their authority; and the regular discipline of the church introduced peace, order, and stability into the government of the state. From the reign of Recared, the first Catholic king, to that of Witiza, the immediate predecessor of the unfortunate Roderic, sixteen national councils were successively convened. The six metropolitans, Toledo, Seville, Merida, Braga, Tarragona and Narbonne, presided according to their respective seniority; the assembly was composed of their suffragan bishops, who appeared in person, or by their proxies; and a place was assigned to the most holy, or opulent, of the Spanish abbots. During the first three days of the convocation, as long as they agitated the ecclesiastical questions of doctrine and discipline, the profane laity was excluded from their debates; which were conducted, however, with decent solemnity. But, on the morning of the fourth day, the doors were thrown open for the entrance of the great officers of the palace, the dukes and counts of the provinces, the judges of the cities, and the Gothic nobles; and the decrees of Heaven were ratified by the consent of the people. The same rules were observed in the provincial assemblies, the annual synods, which were empowered to hear complaints, and to redress grievances; and a legal government was supported by the prevailing influence of the Spanish clergy. The bishops who, in each revolution, were prepared to flatter the victorious, and to insult the prostrate, laboured, with diligence and success, to kindle the flames of persecution, and to exalt the mitre above the crown. Yet the national councils of Toledo, in which the free spirit of the Barbarians was tempered, and guided by episcopal policy, have established some prudent laws for the benefit of the king and people. The vacancy of the throne was supplied by the choice of the bishops and palatines; and after the failure of the line of Alaric, the regal dignity was still limited to the pure and noble blood of the Goths. The clergy, who anointed their lawful prince, always recommended, and sometimes practised, the duty of allegiance; and the spiritual censures were denounced on the heads of the impious subjects, who should resist his authority, conspire against his life, or violate, by an indecent union, the chastity even of his widow. But the monarch himself, when he ascended the throne, was bound by a reciprocal oath to God and his people, that he would faithfully execute his important trust. The real or imaginary faults of his administration were subject to the controul of a powerful aristocracy; and the bishops and palatines were guarded by a fundamental privilege that they should not be degraded, imprisoned, tortured, nor punished with death, exile, or confiscation, unless by the free and public judgment of their peers.

One of these legislative councils of Toledo, examined and ratified the code of laws which had been compiled by a succession of Gothic kings, from the fierce Eurice, to the devout Egica. As long as the Visigoths themselves were satisfied with the rude customs of their ancestors, they indulged their subjects of Aquitaine and Spain in the enjoyment of the Roman law. Their gradual improvement in arts, in policy, and at length in religion, encouraged them to imitate, and to supersede, these foreign institutions, and to compose a code of civil and criminal jurisprudence, for

the use of a great and united people. The same obligations, and the same privileges, were communicated to the nations of the Spanish monarchy; and the conquerors, insensibly renouncing the Teutonic idiom, submitted to the restraints of freedom. The merit of this impartial policy was enhanced by the situation of Spain, under the reign of the Visigoths. The provincials were long separated from their Arian masters, by the irreconcilable difference of religion. After the conversion of Recared had removed the prejudices of the Catholics, the coasts, both of the ocean and Mediterranean, were still possessed by the Eastern emperors, who secretly excited a discontented people to reject the yoke of the barbarians, and to assert the name and dignity of Roman citizens.

The Gothic princes continued to reign over a considerable part of Spain till the beginning of the 8th century, when their empire was overthrown by the Saracens. During this period, they had entirely expelled the eastern emperors from what they possessed in Spain, and even made considerable conquests in Barbary; but towards the end of the 7th century the Saracens overran all that part of the world; and having soon possessed themselves of the Gothic dominions in Barbary, they made a descent upon Spain about the year 711 or 712. The king of the Goths at that time was called Roderic, who by his bad conduct had occasioned great disaffection among his subjects. He therefore determined to put all to the issue of a battle. The two armies met in a plain near Xeres in Andalusia. The Goths were defeated with excessive slaughter, and their king himself was supposed to have perished in the battle.

By this battle the Moors in a short time rendered themselves masters of almost all Spain. The poor remains of the Goths were obliged to retire into the mountainous parts of Asturias, Burgos, and Biscay: the inhabitants of Arragon, Catalonia, and Navarre, chose for the most part to withdraw into France. In 718, however, the power of the Goths began again to revive under Don Pelagius or Pelayo, a prince of the royal blood, who headed those that had retired to the mountains after the fatal battle of Xeres. The place where he first laid the foundation of his government was in the Asturias, in the province of Liebana, about nine leagues in length and four in breadth. This is the most inland part of the country, full of mountains enormously high, and so much fortified by nature, that its inhabitants are capable of resisting almost any number of invaders. Alakor the Saracen governor was no sooner informed of this revival of the Gothic kingdom, than he sent a powerful army, under the command of one Alchaman, to crush Don Pelagius before he had time to establish his power. The king did not think proper to venture a general engagement in the open field; but taking post with part of his troops in a cavern in a very high mountain, he concealed the rest among precipices, giving orders to them to fall upon the enemy as soon as they should perceive him attacked by them. These orders were punctually executed, though indeed Don Pelagius himself had repulsed his enemies, but not without a miracle, as the Spanish historians pretend. The slaughter was dreadful; for the troops who lay in ambuscade joining the rest, and rolling down huge stones from the mountains upon the Moors (the name by which the Saracens were known in Spain), no fewer than 124,000 of these unhappy people perished in one day. The remainder fled till they were stopped by a river, and beginning to coast it, part of a mountain suddenly fell down, stopped up the channel of the river, and either crushed or drowned, by the sudden rising of the water, almost every one of that vast army.

The Moors made a second attempt against Don Pelagius. In consequence of which, they lost all the Asturias, and never dared to enter the lists with Pelagius afterwards. They then directed their force against France, where they hoped for more plunder. Into this country they poured in prodigious multitudes; but were utterly defeated, in 732, by Charles Martel, with the loss of 300,000 men, as the historians of those times relate.

Don Pelagius died in 737; and soon after his death such

intestine divisions broke out among the Moors, as greatly favoured the increase of the Christian power. In 745, Don Alphonso the Catholic, son-in-law to Pelagius, in conjunction with his brother Froila, passed the mountains, and fell upon the northern part of Galicia; and meeting with little resistance, recovered almost the whole of that province in a single campaign. Next year he invaded the plains of Leon and Castile; and reduced Astorgas, Leon, Saldagna, Montes de Oca, Amaya, Alava, and all the country at the foot of the mountains. The year following he pushed his conquests as far as the borders of Portugal, and in the next campaign he ravaged the country as far as Castile. Finding he was unable to defend the flat country which he had conquered, he laid the whole of it waste, obliged the Christians to retire to the mountains, and carried off all the Moors for slaves. Thus secured by a desert frontier, he met with no interruption for some years; during which time, he allowed his subjects gradually to occupy part of the flat country, and to rebuild Leon and Astorgas, which he had demolished. He died in 758, and was succeeded by his son Don Froila. In his time Abdoulrahman, the khaliff's viceroy in Spain, threw off the yoke, and rendered himself independent, fixing the seat of his government at Cordova. Froila encountered the Moors with such success, that 54,000 of them were killed on the spot, and their general taken prisoner. Soon after he built the city of Oviedo, which he made the capital of his dominions, in order to be in a better condition to defend the flat country.

In the year 850 the power of the Saracens received another blow by the rise of the kingdom of Navarre. This kingdom, we are told, took its origin from an accidental meeting of gentlemen, to the number of 600, at the tomb of an hermit named John, who had died among the Pyrenees. At this place, where they had met on account of the supposed sanctity of the deceased, they took occasion to converse on the cruelty of the Moors, the miseries to which the country was exposed, and the glory that would result from throwing off their yoke; which, they supposed, might easily be done, by reason of the strength of their country. On mature deliberation, the project was approved; one Don Garcias Ximenes was appointed king, as being of illustrious birth, and looked upon as a person of great abilities. He recovered Ainsa, one of the principal towns of the country, out of the hands of the infidels, and his successor Don Garcias Inigas extended his territories as far as Biscay; however, the Moors still possessed Portugal, Murcia, Andalusia, Valencia, Granada, Tortosa, with the interior part of the country as far as the mountains of Castile and Zaragoza. Their internal dissensions, which revived after the death of Abdoulrahman, contributed greatly to reduce the power of the infidels in general. In 778, Charles the Great being invited by some discontented Moorish governors, entered Spain with two great armies; one passing through Catalonia, and the other through Navarre, where he pushed his conquests as far as the Ebro. On his return he was attacked and defeated by the Moors; though this did not hinder him from keeping possession of all those places he had already reduced. At this time he seems to have been master of Navarre: however, in 831, Count Azner, revolting from Pepin, son to the emperor Louis, asserted the independency of Navarre; but the sovereigns did not assume the title of kings till the time of Don Garcias, who began to reign in 857.

In the mean time, the kingdom founded by Don Pelagius, now called the kingdom of Leon and Oviedo, continued to increase rapidly in strength. In 921, however, they gained a great victory over the united forces of Navarre and Leon, by which the whole force of the Christians in Spain must have been entirely broken, had not the victors conducted their affairs so wretchedly, that they suffered themselves to be almost entirely cut in pieces by the remains of the Christian army. In short, the Christians became at length so terrible to the Moors, that it is probable they could not long have kept their footing in Spain, had not a great general, named Mohammed Ebn Amr Almanzor, appeared, in 979, to support their sinking cause. This man was visir to the

the king of Cordova, and being exceedingly provoked against the Christians on account of what his countrymen had suffered from them, made war with the most implacable fury. He took the city of Leon, murdered the inhabitants, and reduced the houses to ashes. Barcelona shared the same fate: Castile was reduced to a desert; Galicia and Portugal ravaged; and he is said to have overcome the Christians in fifty different engagements. At last, having taken and demolished the city of Compostella, and carried off in triumph the gates of the church of St. James, a flux happened to break out among his troops, which the superstitious Christians supposed to be a divine judgment on account of his sacrilege. Taking it for granted, therefore, that the Moors were now entirely destitute of all heavenly aid, they fell upon them with such fury in the next engagement, that all the valour and conduct of Almanzor could not prevent a defeat. Overcome with shame and despair at this misfortune, he desired his followers to shift for themselves, while he himself retired to Medina Coeli, and put an end to his life by abstinence in the year 998.

During this period a new Christian principality appeared in Spain, namely, that of Castile, which is now divided into Old and New Castile. The Old Castile was recovered long before that called the New. It was separated from the kingdom of Leon on one side by some little rivers; on the other, it was bounded by the Austrias, Biscay, and the province of Rioja. On the south it had the mountains of Segovia and Avila; thus lying in the middle between the Christian kingdom Leon and Oviedo, and the Moorish kingdom of Cordova. Hence this district soon became an object of contention between the kings of Leon and those of Cordova; and as the former were generally victorious, some of the principal Castilian nobility retained their independence under the protection of the Christian kings, even when the power of the Moors was at its greatest height. In 834 we first hear of Don Rodriguez, assuming the title of Count of Castile, though it does not appear that either his territory or title were given him by the king of Leon. Nevertheless, this monarch having taken upon him to punish some of the Castilian lords as rebels, the inhabitants made a formal renunciation of their allegiance, and set up a new kind of government. The supreme power was now vested in two persons of quality, styled judges; however, this method did not long continue to give satisfaction, and the sovereignty was once more vested in a single person. By degrees, Castile fell entirely under the power of the kings of Leon and Oviedo; and, in 1037, Don Sancho bestowed it on his eldest son Don Ferdinand, with the title of king; and thus the territories of Castile were first firmly united to those of Leon and Oviedo, and the sovereigns were thenceforth styled kings of Leon and Castile.

Besides all these, another Christian kingdom was set up in Spain about the beginning of the 11th century. This was the kingdom of Arragon. The inhabitants were very brave, and lovers of liberty, so that it is probable they had in some degree maintained their independence, even when the power of the Moors was greatest. The history of Arragon, however, during its infancy, is much less known than that of any of the others hitherto mentioned. We are only assured, that about the year 1035, Don Sancho, surnamed the Great, king of Navarre, erected Arragon into a kingdom in favour of his son Don Ramiro, and afterwards it became very powerful. At this time, then, we may imagine the continent of Spain divided into two unequal parts by a straight line drawn from east to west, from the coasts of Valencia to a little below the mouth of the Douro. The country north of this belonged to the Christians, who, as yet, had the smallest and least valuable state, and all the rest to the Moors. In point of wealth and real power, both by land and sea, the Moors were much superior, but their continual dissensions greatly weakened them, and every day facilitated the progress of the Christians. Indeed, had either of the parties been united, the other must soon have yielded; for though the Christians did not make war upon each other constantly as the Moors did, their mutual feuds

were yet sufficient to have ruined them, had their adversaries made the proper use of the advantages thus afforded them. But among the Moors almost every city was a kingdom; and as these petty sovereignties supported one another very indifferently, they fell a prey one after another to their enemies. In 1080, the king of Toledo was engaged in a war with the king of Seville, another Moorish potentate; which being observed by Alphonso, king of Castile, he also invaded his territories; and in four years made himself master of the city of Toledo, with all the places of importance in its neighbourhood; from thenceforth making Toledo the capital of his dominions. In a short time the whole province of New Castile submitted; and Madrid, the present capital of Spain, fell into the hands of the Christians, being at that time a small place.

The Moors were so much alarmed at these conquests, that they not only entered into a general confederacy against the Christians, but invited to their assistance Mahomet Ben Joseph, the sovereign of Barbary. He accordingly came, attended by an incredible multitude; but was utterly defeated by the Christians in the defiles of the Black Mountain, or Sierra Morena, on the borders of Andalusia. The victory happened on the 16th of July, 1212, and the anniversary is still celebrated at Toledo. This victory was not improved; the Christian army immediately dispersed themselves, while the Moors of Andalusia were strengthened by the remains of the African army; yet, instead of being taught, by their past misfortunes, to unite among themselves, their dissensions became worse than ever, and the conquests of the Christians became daily more rapid. In 1236, Don Ferdinand of Castile and Leon took the celebrated city of Cordova, the residence of the first Moorish kings; at the same time that James I. of Arragon dispossessed them of the island of Majorca, and drove them out of Valencia. Two years after, Ferdinand made himself master of Murcia, and took the city of Seville; and in 1303, Ferdinand IV. reduced Gibraltar.

In the time of Edward III., we find England, for the first time, interfering in the affairs of Spain, on the following occasion. In the year 1284 the kingdom of Navarre had been united to that of France by the marriage of Donna Joanna Queen of Navarre with Philip the Fair of France. In 1328, however, the kingdoms were again separated, though the sovereigns of Navarre were still related to those of France. In 1350, Charles, surnamed the Wicked, ascended the throne of Navarre, and married the daughter of John King of France. Notwithstanding this alliance, and that he himself was related to the royal family of France, he secretly entered into a negotiation with England against the French monarch, and even drew into his schemes the dauphin Charles, afterwards surnamed the Wise. The young prince, however, was soon after made fully sensible of the danger and folly of the connections into which he had entered; and by way of atonement, promised to sacrifice his associates. Accordingly he invited the king of Navarre, and some of the principal nobility of the same party, to a feast at Rouen, where he betrayed them to his father. The most obnoxious were executed, and the king of Navarre was thrown into prison. In this extremity, the party of the king of Navarre had recourse to England. The prince of Wales, surnamed the Black Prince, invaded France, defeated King John at Poitiers, and took him prisoner; which unfortunate event produced the most violent disturbances in that kingdom. The dauphin, now about 19 years of age, naturally assumed the royal power during his father's captivity; but possessed neither experience nor authority sufficient to remedy the prevailing evils. In order to obtain supplies, he assembled the states of the kingdom: but that assembly, instead of supporting his administration, laid hold of the present opportunity to demand limitations of the prince's power, the punishment of past malversations, and the liberty of the king of Navarre. Marcel, provost of the merchants of Paris, and first magistrate of that city, put himself at the head of the unruly populace, and pushed them to commit the most criminal outrages against the royal authority. They detained the dauphin in a kind of captivity; murdered

murdered in his presence Robert de Clermont and John de Conflans, marshals of France; threatened all the other ministers with the like fate; and when Charles, who had been obliged to temporize and dissemble, made his escape from their hands, they levied war against him, and openly rebelled. The other cities of the kingdom, in imitation of the capital, shook off the dauphin's authority, took the government into their own hands, and spread the contagion in every province.

Amidst these disorders, the king of Navarre made his escape from prison, and presented a dangerous leader to the furious malcontents. He revived his pretensions to the crown of France: but in all his operations he acted more like a leader of banditti than one who aspired to be the head of a regular government, and who was engaged by his station to endeavour the re-establishment of order in the community. All the French, therefore, who wished to restore peace to their country, turned their eyes towards the dauphin; who, though not remarkable for his military talents, daily gained by his prudence and vigilance the ascendancy over his enemies. Marcel, the seditious provost of Paris, was slain in attempting to deliver that city to the king of Navarre. The capital immediately returned to its duty; the most considerable bodies of the mutinous peasants were dispersed or put to the sword; some bands of military robbers underwent the same fate; and France began once more to assume the appearance of civil government.

John was succeeded in the throne of France by his son Charles V., a prince educated in the school of adversity, and well qualified, by his prudence and experience, to repair the losses which the kingdom had sustained from the errors of his predecessors. Contrary to the practice of all the great princes of those times, who held nothing in estimation but military courage, he seems to have laid it down as a maxim, never to appear at the head of his armies; and he was the first European monarch that showed the advantage of policy and foresight over a rash and precipitate valour.

Before Charles could think of counterbalancing so great a power as England, it was necessary for him to remedy the many disorders to which his own kingdom was exposed. He accordingly turned his arms against the king of Navarre, the great disturber of France during that age; and he defeated that prince, and reduced him to terms, by the valour and conduct of Bertrand du Guesclin, one of the most accomplished captains of those times, whom Charles had the discernment to choose as the instrument of his victories. He also settled the affairs of Brittany, by acknowledging the title of Mountfort, and receiving homage for his dominions. But much was yet to be done. On the conclusion of the peace of Bretigni, the many military adventurers who had followed the fortunes of Edward, being dispersed into the several provinces, and possessed of strong holds, refused to lay down their arms, or relinquish a course of life to which they were now accustomed, and by which alone they could earn a subsistence. They associated themselves with the banditti, who were already inured to the habits of rapine and violence; and, under the name of companies and companions, became a terror to all the peaceable inhabitants. Some English and Gascon gentlemen of character were not ashamed to take the command of these ruffians, whose number amounted to near 40,000, and who bore the appearance of regular armies rather than bands of robbers. As Charles was not able by power to redress so enormous a grievance, he was led by necessity, as well as by the turn of his character, to correct it by policy; to discover some method of discharging into foreign countries this dangerous and intestine evil; and an occasion now offered.

Alphonso XI. king of Castile, who took the city of Algezira from the Moors, after a famous siege of two years, during which artillery are said first to have been used by the besieged, had been succeeded, by his son Pedro I. surnamed the Cruel; a prince equally perfidious, debauched, and bloody. He began his reign with the murder of his father's mistress, Leonora de Gusman: his nobles fell every day the victims of his severity: he put to death his cousin

and one of his natural brothers, from groundless jealousy; and he caused his queen Blanche de Bourbon, of the blood of France, to be thrown into prison, and afterwards poisoned, that he might enjoy in quiet the embraces of Mary de Padella, with whom he was violently enamoured.

Henry count of Trastamara, the king's natural brother, alarmed at the fate of his family, and dreading his own, took arms against the tyrant; but having failed in the attempt, he fled to France, where he found the minds of men much inflamed against Pedro, on account of the murder of the French princess. He asked permission of Charles to enlist the companies in his service, and to lead them into Castile against his brother. The French king, charmed with the project, employed du Guesclin in negotiating with the leaders of these banditti. The treaty was soon concluded; and du Guesclin having completed his levies, led the army first to Avignon, where the pope then resided, and demanded, sword in hand, absolution for his ruffian soldiers, who had been excommunicated, and the sum of 200,000 livres for their subsistence. The first was readily promised him, but some difficulty being made with regard to the second, du Guesclin replied, "My fellows, I believe, may make a shift to do without your absolution, but the money is absolutely necessary." His holiness then extorted from the inhabitants of the city and its neighbourhood the sum of 100,000 livres, and offered it to du Guesclin. "It is not my purpose (cried that generous warrior) to oppress the innocent people. The pope and his cardinals can spare me double the sum from their own pockets. I therefore insist, that this money be restored to the owners; and if I hear they are defrauded of it, I will myself return from the other side of the Pyrenees, and oblige you to make them restitution." The pope found the necessity of submitting, and paid from his own treasury the sum demanded.

A body of experienced and hardy soldiers, conducted by so able a general, easily prevailed over the king of Castile, whose subjects were ready to join the enemy against their oppressor. Pedro fled from his dominions, took shelter in Guienne, and craved the protection of the prince of Wales, whom his father had invested with the sovereignty of the ceded provinces, under the title of the *principality of Aquitaine*. The prince promised his assistance to the dethroned monarch; and having obtained his father's consent, he levied an army, and set out on his enterprise.

The first loss which Henry of Trastamara suffered from the interposition of the prince of Wales, was the recalling of the companies from his service; and so much reverence did they pay to the name of Edward, that great numbers of them immediately withdrew from Spain, and enlisted under his standard. Henry, however, beloved by his new subjects and supported by the king of Arragon, was able to meet the enemy with an army of 100,000 men, three times the number of those commanded by the Black Prince: yet du Guesclin, and all his experienced officers, advised him to delay a decisive action; so high was their opinion of the valour and conduct of the English hero! But Henry, trusting to his numbers, ventured to give Edward battle on the banks of the Ebro, between Najara and Navarrette; where the French and Spaniards were defeated, with the loss of above 20,000 men, and du Guesclin and other officers of distinction taken prisoners. All Castile submitted to the victor; Pedro was restored to the throne, and Edward returned to Guienne with his usual glory; having not only overcome the greatest general of his age, but restrained the most bloodthirsty tyrant from executing vengeance on his prisoners.

This gallant warrior had soon reason to repent of his connection with Spain and Pedro. The monster refused the stipulated pay to the English forces. Edward abandoned him: he treated his subjects with the utmost barbarity; their animosity was roused against him; and du Guesclin having obtained his ransom, returned to Castile with the count of Trastamara, and some forces levied anew in France. They were joined by the Spanish malcontents; and they gained a complete victory over Pedro in the neighbourhood of Toledo. The tyrant now took refuge in a castle, where he was soon after

after besieged by the victors, and taken prisoner in endeavouring to make his escape. He was conducted to his brother Henry; against whom he is said to have rushed in a transport of rage, disarmed as he was. Henry slew him with his own hand, in resentment of his cruelties; and, though a bastard, was placed on the throne of Castile, which he transmitted to his posterity.

After the death of Pedro, nothing remarkable happened in Spain for almost a whole century; but the debaucheries of Henry IV. of Castile roused the resentment of his nobles, and produced a most singular insurrection, which led to the aggrandizement of the Spanish monarchy.

This prince, surnamed the Impotent though continually surrounded with women, began his unhappy reign in 1450. He was totally enervated by his pleasures; and every thing in his court conspired to set the Castilians an example of the most abject flattery and most abandoned licentiousness. The queen, a daughter of Portugal, lived as openly with her parasites and her gallants as the king did with his minions and his mistresses. Pleasure was the only object, and effeminacy the only recommendation to favour; the affairs of the state went every day into disorder; till the nobility, with the archbishop of Toledo at their head, combining against the weak and flagitious administration of Henry, arrogated to themselves, as one of the privileges of their order, the right of trying and passing sentence on their sovereign, which they executed in a curious manner.

The malcontent nobility were summoned to meet at Avila: a spacious theatre was erected in a plain without the walls of the town: an image, representing the king, was seated on a throne, clad in royal robes, with a crown on its head, a sceptre in its hand, and the sword of justice by its side. The accusation against Henry was read, and the sentence of deposition pronounced, in presence of a numerous assembly. At the close of the first article of the charge, the archbishop of Toledo advanced, and tore the crown from the head of the image; at the close of the second, the Conde de Placentia snatched the sword of justice from its side; at the close of the third, the Conde de Benavente wrested the sceptre from its hand; and at the close of the last, Don Diego Lopez de Stuniga tumbled it headlong from the throne. At the same instant, Don Alphonso, Henry's brother, a boy of about twelve years of age, was proclaimed King of Castile and Leon in his stead.

This extraordinary proceeding was followed by a civil war, which did not cease till some time after the death of the young prince, on whom the nobles had bestowed the kingdom. The archbishop and his party then continued to carry on war in the name of Isabella, the king's sister, to whom they gave the title of *Infanta*; and the king of Arragon married her.

Henry disinherited his sister, and established the rights of his daughter. A furious civil war desolated the kingdom. The names of Joan and Isabella resounded from every quarter, and were everywhere the summons to arms. But peace was at length brought about. Henry was reconciled to his sister and Ferdinand; Joan retired into a convent; and the death of Ferdinand's father added the kingdoms of Arragon and Sicily to those of Leon and Castile.

Ferdinand and Isabella were persons of great prudence. They did not live like man and wife, having all things in common under the direction of the husband; but like two princes in close alliance; they neither loved nor hated each other; were seldom in company together; had each a separate council; and were frequently jealous of one another in the administration. But they were inseparably united in their common interests; always acting upon the same principles, and forwarding the same ends. Their first object was the regulation of their government, which the civil wars had thrown into the greatest disorder. Rapine, outrage, and murder, were become so common, as not only to interrupt commerce, but in a great measure to suspend all intercourse between one place and another. These evils the joint sovereigns suppressed by their wise policy, at the same time that they extended the royal prerogative.

VOL. XXIII. No. 1579.

About the middle of the 13th century, the cities in the kingdom of Arragon, and after their example those in Castile, had formed themselves into an association, distinguished by the name of the Holy Brotherhood. They exacted a certain contribution from each of the associated towns; they levied a considerable body of troops, in order to protect travellers and pursue criminals; and they appointed judges, who opened courts in various parts of the kingdom. Whoever was guilty of murder, robbery, or any act that violated the public peace, and was seized by the troops of the Brotherhood, was carried before their judges; who, without paying any regard to the exclusive jurisdiction which the lord of the place might claim, who was generally the author or abettor of the injustice, tried, and condemned the criminals. The nobles often murmured against the salutary institution; they complained of it as an encroachment on one of their most valuable privileges, and endeavoured to get it abolished. But Ferdinand and Isabella, sensible of the beneficial effects of the Brotherhood, not only in regard to the police of their kingdom, but in its tendency to abridge, and by degrees annihilate, the territorial jurisdiction of the nobility, countenanced the institution upon every occasion, and supported it with the whole force of royal authority; by which means the prompt and impartial administration of justice was restored, and with it tranquillity and order returned.

But at the same time, an intemperate zeal led them to establish an ecclesiastical tribunal, equally contrary to the natural rights of humanity and the mild spirit of the gospel. This was the court of inquisition; wherein six thousand persons were burnt, within four years after the appointment of Torquemada, the first Inquisitor-general.

The kingdom of Granada now alone remained of all the Mahometan possessions in Spain. Princes equally zealous and ambitious were naturally disposed to turn their eyes to that fertile territory; and to think of increasing their hereditary dominions, by expelling the enemies of Christianity, and extending its doctrines. Every thing conspired to favour their project: the Moorish kingdom was a prey to civil wars; when Ferdinand, having obtained the bull of Sixtus IV. authorizing a crusade, put himself at the head of his troops, and entered Granada. He continued the war with rapid success; Isabella attended him in several expeditions; and they were both in great danger at the siege of Malaga; an important city, which was defended with great courage, and taken in 1487. Baza was reduced in 1489, after the loss of 20,000 men. Gaudix and Almeria were delivered up to them by the Moorish king Alzagal, who had first dethroned his brother Alboacen, and afterwards been chased from his capital by his nephew Abdali. That prince engaged in the service of Ferdinand and Isabella; who, after reducing every other place of eminence, undertook the siege of Granada. Abdali made a gallant defence; but all communication with the country being cut off, and all hopes of relief at an end, he capitulated, after a siege of eight months, on condition that he should enjoy the revenue of certain places in the fertile mountains of Alpujarras; that the inhabitants should retain the undisturbed possession of their houses, goods, and inheritances; the use of their laws, and the free exercise of their religion. Thus ended the empire of the Arabs in Spain, after it had continued about 800 years. They introduced the arts and sciences into Europe at a time when it was lost in darkness; they possessed many of the luxuries of life, when they were not even known among the neighbouring nations; and they seem to have given birth to that romantic gallantry which so eminently prevailed in the ages of chivalry, and which, blending itself with the veneration of the northern nations for the softer sex, still particularly distinguishes ancient from modern manners. But the Moors, notwithstanding these advantages, and the eulogies bestowed upon them by some writers, appear always to have been destitute of the essential qualities of a polished people, humanity, generosity, and mutual sympathy.

The overthrow of the last Moorish kingdom was soon followed by the expulsion of the Saracens from Spain. This expulsion

expulsion did not entirely take place till the 17th century. Vast numbers of the Moors, indeed, oppressed by their conquerors, abandoned a country where they could not reside with comfort and with freedom. From the reign of Ferdinand of Castile, to that of Philip III. of Spain, more than 3,000,000 of those people quitted Spain, and carried with them, not only a great part of their acquired wealth, but that industry and love of labour which are the foundation of national prosperity.

The state of Spain has never been so flourishing at any period of its civilization, as during the period when it was chiefly possessed by the Moors. The first Saracen invaders, and the twenty successive lieutenants of the caliphs of Damascus, were attended by a numerous train of civil and military followers, who preferred a distant fortune to narrow circumstances at home; private and public interest was promoted by the establishment of faithful colonies, and the cities of Spain were proud to commemorate the tribe or the country of their eastern progenitors. Ten years after the conquest, a map of the province was presented to the caliph, shewing the seas, the rivers, and the harbours, the inhabitants and cities, the climate, the soil, and the mineral productions of the earth. In the space of two centuries, the gifts of nature were improved by agriculture, the manufactures, and the commerce of an industrious people; though the effects of their diligence have been magnified by the idleness of their fancy. The first of the Omniades who reigned in Spain, solicited the support of the Christians; and in his edict of peace and protection, he contents himself with a modest imposition of 10,000 ounces of gold, 10,000 pounds of silver, 10,000 horses, as many mules, 1000 cuirasses; with an equal number of helmets and lances. The most powerful of his successors derived from the same kingdom the annual tribute of 12,045,000 dinars or pieces of gold, about 6,000,000*l.* of sterling money; a sum which, in the 10th century, most probably surpassed the united revenues of the Christian monarchs. His royal seat of Cordova contained 600 mosques, 900 baths, and 200,000 houses; he gave laws to 80 cities of the first, to 300 of the second and third order; and the fertile banks of the Guadalquivir were adorned with 12,000 villages and hamlets. The Arabs might exaggerate the truth; but they created and they describe the most prosperous era of the riches, the cultivation, and the populousness of Spain.

The conquest of Granada was followed by the expulsion, or rather the pillage and banishment, of the Jews, who had engrossed all the wealth and commerce of Spain. The inquisition exhausted its rage against these unhappy people, many of whom pretended to embrace Christianity, in order to preserve their property. About the same time their Catholic majesties concluded an alliance with the emperor Maximilian, and a treaty of marriage for their daughter Joan with his son Philip, archduke of Austria and sovereign of the Netherlands. About this time also the contract was concluded with Christopher Columbus for the discovery of new countries; and the counties of Rousillon and Cerdagne were agreed to be restored by Charles VIII. of France, before his expedition into Italy. The discovery of America was soon followed by extensive conquests in that quarter, as is related under the articles MEXICO, PERU, &c., which tended to raise the Spanish monarchy above any other in Europe.

On the death of Isabella, which happened in 1506, Philip archduke of Austria came to Castile in order to take possession of that kingdom, as heir to his mother-in-law; but he dying in a short time after, his son Charles V., afterwards emperor of Germany, became heir to the crown of Spain. His father at his death left the king of France governor to the young prince, and Ferdinand at his death left Cardinal Ximenes sole regent of Castile, till the arrival of his grandson. This man, whose character is no less singular than illustrious, who united the abilities of a great statesman with the abject devotion of a superstitious monk, and the magnificence of a prime minister with the severity of a mendicant, maintained order and tranquillity in Spain, not-

withstanding the discontents of a turbulent and high-spirited nobility.

Three years after his accession, Charles was elected emperor of Germany, and the first act of his administration was to appoint a diet of the empire, to be held at Worms, in order to concert with the princes proper measures for checking the progress of "those new and dangerous opinions which threatened to disturb the peace of Germany, and to overturn the religion of their ancestors."

The Spaniards, dissatisfied with the departure of their sovereign, whose election to the empire they foresaw would interfere with the administration of his own kingdom, and incensed at the avarice of the Flemings, to whom the direction of public affairs had been committed since the death of Cardinal Ximenes, several grandees, in order to shake off this oppression, entered into an association, to which they gave the name of the *Sancta Juncta*; and the sword was appealed to as the means of redress. This seemed to Francis of France a favourable juncture for reinstating the family of John d'Alberty in the kingdom of Navarre. Charles was at a distance from that part of his dominions, and the troops usually stationed there had been called away to quell the commotions in Spain. A French army, under Andrew de Foix, speedily conquered Navarre; but that young and inexperienced nobleman, pushed on by military ardour, ventured to enter Castile. The Spaniards, though divided among themselves, united against a foreign enemy, routed his forces, took him prisoner, and recovered Navarre in a shorter time than he had spent in subduing it.

Hostilities thus begun in one quarter, between the rival monarchs, soon spread to another. The king of France encouraged the duke of Bouillon to make war against the emperor, and to invade Luxembourg. Charles, after humbling the duke, attempted to enter France; but was repelled and worsted before Mezieres by the famous Chevalier Bayard, distinguished among his cotemporaries by the appellation of *The Knight without fear and without reproach*; and who united the talents of a great general to the punctilious honour and romantic gallantry of the heroes of chivalry. Francis broke into the Low Countries, where, by an excess of caution, an error not natural to him, he lost an opportunity of cutting off the whole imperial army; and, what was of still more consequence, he disgusted the constable Bourbon, by giving the command of the van to the duke of Alençon.

During these operations in the field, an unsuccessful congress was held at Calais, under the mediation of Henry VIII. It served only to exasperate the parties which it was intended to reconcile. A league was soon after concluded, by the intrigues of Wolsey, between the pope, Henry, and Charles, against France. Leo had already entered into a separate league with the emperor, and the French were fast losing ground in Italy.

The insolence and exactions of Marechal de Lautrec, governor of Milan, had totally alienated the affections of the Milanese from France. They resolved to expel the troops of that nation, and put themselves under the government of Francis Sforza, brother to Maximilian their late duke. In this resolution, they were encouraged by the pope, who excommunicated Lautrec, and took into his pay a considerable body of Swiss. The papal army, commanded by Prosper Colonna, an experienced general, was joined by supplies from Germany and Naples; while Lautrec, neglected by his court and deserted by the Swiss in its pay, was unable to make head against the enemy. The city of Milan was betrayed by the inhabitants to the confederates; Parma and Placentia were united to the ecclesiastical state; and of their conquests in Lombardy, only the town of Cremona, the castle of Milan, and a few inconsiderable forts, remained in the hands of the French.

Leo X. received the accounts of this rapid success with such transports of joy, as are said to have brought on a fever, which occasioned his death.

And now much discord prevailed in the conclave. By an unexpected turn of fortune, Cardinal Adrian of Utrécht; Charles's

Charles's preceptor, who at that time governed Spain in the emperor's name, was unanimously raised to the papacy, to the astonishment of all Europe and the great disgust of the Italians.

Francis, roused by the rising consequence of his rival, resolved to exert himself with fresh vigour, in order to wrest from him his late conquests in Lombardy. Lautrec received a supply of money, and a reinforcement of 10,000 Swiss. With this reinforcement he was enabled once more to act offensively, and even to advance within a few miles of the city of Milan; when money again failing him, and the Swiss growing mutinous, he was obliged to attack the imperialists in their camp at Bicocca, where he was repulsed with great slaughter, having lost his bravest officers and best troops. Such of the Swiss as survived set out immediately for their own country; and Lautrec, despairing of being able to keep the field, retired into France. Genoa, which still remained subject to Francis, and made it easy to execute any scheme for the recovery of Milan, was soon after taken by Colonna: the authority of the emperor and his faction was everywhere established in Italy. The citadel of Cremona was the sole fortress which remained in the hands of the French.

The distress of Francis was augmented by the unexpected arrival of an English herald, who in the name of his sovereign, declared war against France. The courage of this prince, however, did not forsake him: though his treasury was exhausted, he assembled a considerable army, and put his kingdom in a posture of defence.

Meanwhile Charles, willing to draw as much advantage as possible from so powerful an ally, paid a second visit to the court of England in his way to Spain, where his presence was become necessary. His success exceeded his most sanguine expectations. In consequence of these negotiations, an English army invaded France, under the command of the Earl of Surrey; who, at the end of the campaign, was obliged to retire, with his forces greatly reduced, without being able to make himself master of one place within the French frontier. Charles was more fortunate in Spain: he soon quelled the tumults which had there arisen in his absence.

While the Christian princes were thus wasting each other's strength, Solyman the Magnificent entered Hungary, and made himself master of Belgrade, reckoned the chief barrier of that kingdom against the Turkish power. Encouraged by this success, he turned his victorious arms against the island of Rhodes, at that time the seat of the knights of St. John of Jerusalem. Lisle Adam, the grand master, made a gallant defence; but, after incredible efforts of courage, patience and military conduct, during a siege of six months, he was obliged to surrender the place. Charles and Francis were equally ashamed of having occasioned such a loss to Christendom by their contests; and the emperor, by way of reparation, granted to the knights of St. John, the small island of Malta, where they fixed their residence.

Adrian VI. though the creature of the emperor, and devoted to his interest, endeavoured to assume the impartiality which became the common father of Christendom, and laboured to reconcile the contending princes, that they might unite in a league against Solyman, whose conquest of Rhodes rendered him more formidable than ever to Europe. The Italian states were no less desirous of peace than the pope: and so much regard was paid by the hostile powers to the exhortations of his holiness, and to a bull which he issued, requiring all Christian princes to consent to a truce for three years, that the imperial, the French and the English ambassadors at Rome, were empowered to treat of that matter; but while they wasted their time in fruitless negotiations, their masters were continuing their preparations for war; and the confederacy against France became more formidable than ever.

The Venetians, who had hitherto adhered to the French interest, formed engagements with the emperor for securing Francis Sforza in the possession of the duchy of Milan; and the pope, from a persuasion that the ambition of the French monarch was the only obstacle to peace, acceded to the same alliance. The Florentines, the dukes of Ferrara and Mantua,

and all the Italian powers, followed this example. Francis was left, without a single ally, to resist the efforts of a multitude of enemies, whose armies everywhere threatened, and whose territories encompassed his dominions. The emperor in person menaced France with an invasion on the side of Guienne; the forces of England and the Netherlands hovered over Picardy, and a numerous body of Germans was preparing to ravage Burgundy.

The dread of so many and such powerful adversaries, it was thought, would have obliged Francis to keep wholly on the defensive, or at least have prevented him from entertaining any thoughts of marching into Italy. But before his enemies were able to strike a blow, Francis had assembled a great army, with which he hoped to disconcert all the emperor's schemes, by marching it in person into Italy; and this bold measure, the more formidable because unexpected, could scarcely have failed of the desired effect, had it been immediately carried into execution. But the discovery of a conspiracy headed by Charles, duke of Bourbon, lord high constable, which threatened the destruction of his kingdom, obliged Francis to stop at Lyons.

After a short time, however, not being sufficiently convinced of the constable's guilt, he suffered so dangerous a foe to escape; and Bourbon, entering into the emperor's service, employed all the force of his enterprising genius, and his great talents for war, to the prejudice of his prince and his native country.

In consequence of the discovery of this plot, and the escape of the powerful conspirator, Francis relinquished his intention of leading his army in person into Italy. He was ignorant how far the infection had spread among his subjects, and afraid that his absence might encourage them to make some desperate attempt in favour of a man so much beloved. He did not, however, abandon his design on the Milanese, but sent forward an army of 30,000 men, under the command of Admiral Bonnivet. Colonna, who was entrusted with the defence of that duchy, was in no condition to resist such a force; and the city of Milan, on which the whole territory depends, must have fallen into the hands of the French, had not Bonnivet, who possessed none of the talents of a general, wasted his time in frivolous enterprises, till the inhabitants recovered from their consternation. The imperial army was reinforced. Colonna died; and Lannoy, viceroy of Naples, succeeded him in the command; but the chief direction of military operations was committed to Bourbon and the marquis de Pescara, the greatest generals of their age. Bonnivet, destitute of troops to oppose this new army, and still more of the talents which could render him a match for its leaders, after various movements and encounters, was reduced to the necessity of attempting a retreat into France. He was followed by the imperial generals, and routed at Biagrassa, where the famous Chevalier Bayard was killed.

The emperor and his allies were less successful in their attempts upon France. They were baffled in every quarter; and Francis, though stripped of his Italian dominions, might still have enjoyed in safety the glory of having defended his native kingdom against one half of Europe, and have bid defiance to all his enemies; but understanding that the king of England, discouraged by his former fruitless enterprises, and disgusted with the emperor, was making no preparations for any attempt on Picardy, his ancient ardour seized him for the conquest of Milan, and he determined, notwithstanding the advanced season, to march into Italy.

The French army no sooner appeared in Piedmont, than the whole Milanese was thrown into consternation. The capital opened its gates. The forces of the emperor and Sforza retired to Lodi; and had Francis been so fortunate as to pursue them, they must have abandoned that post, and been totally dispersed; but his evil genius led him to besiege Pavia, a town of considerable strength, well garrisoned, and defended by Antonio de Leyva, one of the bravest officers in the Spanish service; before which place he was defeated and taken prisoner on the twenty-fourth day of February, 1524.

The captivity of Francis filled all Europe with alarm. Almost the whole French army was cut off; Milan was immediately abandoned; and in a few weeks not a Frenchman was left in Italy.

Henry VIII., though he had not entered into the war against France from any concerted political views, had always retained some imperfect idea of that balance of power which it was necessary to maintain between Charles and Francis; and the preservation of which he boasted to be his peculiar office. Influenced by this motive, together with the glory of raising a fallen enemy, he listened to the flattering submissions of Louisa; entered into a defensive alliance with her as regent of France, and engaged to use his best offices in order to procure the deliverance of her son from a state of captivity.

A treaty was, soon after, concluded at Madrid, in consequence of which Francis obtained his liberty. The chief article in this treaty was, that Burgundy should be restored to Charles as the rightful inheritance of his ancestors, and that Francis's two eldest sons should be immediately delivered up as hostages for the performance of the conditions stipulated. The exchange of the captive monarch for his children was made on the borders between France and Spain. The moment that Francis entered his own dominions, he mounted a Turkish horse, and putting it to its speed, waved his hand, and cried aloud several times, "I am yet a king! I am yet a king!"

Francis never meant to execute the treaty of Madrid; he had even left a protest in the hands of notaries before he signed it, that his consent should be considered as an involuntary deed, and be deemed null and void. Accordingly, as soon as he arrived in France, he assembled the states of Burgundy, who protested against the article relative to their province; and Francis coldly replied to the imperial ambassadors, who urged the immediate execution of the treaty, that he would religiously perform the articles relative to himself, but in those affecting the French monarchy, he must be directed by the sense of the nation. He made the highest acknowledgements to the king of England for his friendly interposition, and offered to be entirely guided by his counsels. Charles and his ministers saw that they were overreached in those very arts of negotiation in which they so much excelled, while the Italian states observed with pleasure, that Francis was resolved not to execute a treaty which they considered as dangerous to the liberties of Europe. Clement absolved him from the oath which he had taken at Madrid; and the kings of France and England, the pope, the Swiss, the Venetians, the Florentines and the duke of Milan, entered into an alliance, to which they gave the name of the *Holy League*, because his Holiness was at the head of it, in order to oblige the emperor to deliver up Francis's two sons on the payment of a reasonable ransom, and to re-establish Sforza in the quiet possession of the Milanese.

In consequence of this league, the confederate army took the field, and Italy once more became the scene of war. But Francis, who it was thought would have infused spirit and vigour into the whole body, had gone through such a scene of distress, that he was become diffident of himself, distrustful of his fortune, and desirous of tranquillity. He flattered himself, that the dread alone of such a confederacy would induce Charles to listen to what was equitable, and therefore neglected to send due reinforcements to his allies in Italy. Meantime the duke of Bourbon, who commanded the Imperialists, had made himself master of the whole Milanese, of which the emperor had promised him the investiture; and his troops beginning to mutiny for want of pay, he led them to Rome, and promised to enrich them with the spoils of that city. He was as good as his word: for though he himself was slain in planting a scaling ladder against the walls, his soldiers, rather enraged than discouraged by his death, mounted to the assault with the utmost ardour, and, entering the city sword in hand, plundered it for several days; and never did Rome in any age suffer so many calamities, not even from the Barbarians, by whom she was often sub-

dued, the Huns, Vandals or Goths, as now from the subjects of a Christian and Catholic monarch.

Henry and Francis, alarmed at the progress of the imperial arms, changed, by a new treaty, the scene of the projected war from the Netherlands to Italy, and resolved to take the most vigorous measures for restoring the pope to liberty. Henry, however, contributed only money. A French army entered Italy, under the command of Marshal Lautrec; Clement obtained his freedom; and war was for a time carried on by the confederates with success; but the death of Lautrec, and the revolt of Andrew Doria, a Genoese admiral in the service of France, entirely changed the face of affairs. The French army was utterly ruined; and Francis, discouraged and almost exhausted by so many unsuccessful enterprises, began to think of peace, and of obtaining the release of his sons by concessions, not by the terror of his arms.

At the same time Charles, notwithstanding the advantages he had gained, had many reasons to wish for an accommodation. Sultan Solymán having overrun Hungary, was ready to break in upon the Austrian territories with the whole force of the East; and the progress of the Reformation in Germany threatened the tranquillity of the empire. In consequence of this situation of affairs, Francis agreed to pay two millions of crowns as the ransom of his two sons, to resign the sovereignty of Flanders and Artois, and to forego all his Italian claims; and Charles ceased to demand the restitution of Burgundy.

All the steps of this negotiation had been communicated to the king of England; and Henry was, on that occasion, so generous to his friend and ally Francis, that he sent him an acquittal of near six hundred thousand crowns, in order to enable him to fulfil his agreement with Charles.

After having received the imperial crown from the hands of the pope at Bologna, Charles proceeded on his journey to Germany, where his presence was become highly necessary; for although the conduct and valour of his brother Ferdinand, on whom he had conferred the hereditary dominions of the house of Austria, and who had been elected king of Hungary, had obliged Solymán to retire with infamy and loss, his return was to be feared, and the disorders of religion were daily increasing.

Charles having exerted himself as much as he could against the reformers, undertook his first expedition against the piratical states of Africa. Barbary, or that part of the African continent lying along the coast of the Mediterranean sea, was then nearly in the same condition which it is at present. Morocco, Algiers, and Tunis, were its principal states; and the two last were nests of pirates. Barbarossa, a famous corsair, had succeeded his brother in the kingdom of Algiers, which he had formerly assisted him to usurp. He regulated with much prudence the interior police of his kingdom, carried on his piracies with great vigour, and extended his conquests on the continent of Africa; but perceiving that the natives submitted to his government with impatience, and fearing that his continual depredations would one day draw upon him a general combination of the Christian powers, he put his dominions under the protection of the grand seignior. Solymán, flattered by such an act of submission, and charmed with the boldness of the man, offered him the command of the Turkish fleet. Proud of this distinction, Barbarossa repaired to Constantinople, and made use of his influence with the sultan to extend his own dominion. Partly by force, partly by treachery, he usurped the kingdom of Tunis; and being now possessed of greater power, he carried on his depredations against the Christian states with more destructive violence than ever.

Daily complaints of the piracies and ravages committed by the galleys of Barbarossa, were brought to the emperor by his subjects, both in Spain and Italy; and all Christendom seemed to look up to him, as its greatest and most fortunate prince, for relief from this new and odious species of oppression. At the same time Muley-Hassan, the exiled king of Tunis, finding none of the African princes able or willing to support him in recovering his throne, applied to Charles for assistance against the usurper. Equally desirous

of delivering his dominions from the dangerous neighbourhood of Barbarossa, of appearing as the protector of an unfortunate prince, and of acquiring the glory annexed in that age to every expedition against the Mahometans, the emperor readily concluded a treaty with Muley Hassan, and set sail for Tunis with a formidable armament. The Goletta, a sea-port town, fortified with 300 pieces of cannon, was taken, together with all Barbarossa's fleet: he was defeated in a pitched battle, and 10,000 Christian slaves, having knocked off their fetters, and made themselves masters of the citadel, Tunis was preparing to surrender. But while Charles was deliberating on the conditions, his troops fearing that they would be deprived of the booty which they had expected, broke suddenly into the town, and pillaged and massacred without distinction. Thirty thousand persons perished by the sword, and 10,000 were made prisoners. The sceptre was restored to Muley Hassan, on condition that he should acknowledge himself a vassal of the crown of Spain, put into the emperor's hands all the fortified sea-ports in the kingdom of Tunis, and pay annually 12,000 crowns for the subsistence of the Spanish garrison in the Goletta. These points being settled, and 20,000 Christian slaves freed from bondage either by arms or by treaty, Charles returned to Europe, where his presence was become necessary; while Barbarossa, who had retired to Bona, recovered new strength, and again became the tyrant of the ocean.

The king of France took advantage of the emperor's absence to revive his pretensions in Italy. The treaty of Cambray had repressed but not extinguished the flames of discord. Francis in particular, who waited only for a favourable opportunity of recovering the territories and reputation which he had lost, continued to negotiate against his rival with different courts. But all his negotiations were disconcerted by unforeseen accidents. The death of Clement VII. (whom he had gained by marrying his son the duke of Orleans, afterwards Henry II., to Catharine of Medici, the niece of that pontiff), deprived him of all the support which he hoped to receive from the court of Rome. The king of England, occupied with domestic cares and projects, declined engaging in the affairs of the continent; and the Protestant princes, associated by the league of Smalkalde, to whom Francis had also applied, and who seemed disposed at first to listen to him, filled with indignation and resentment at the cruelty with which some of their reformed brethren had been treated in France, refused to have any connection with the enemy of their religion.

Francis, though unsupported by any ally, commanded his army to advance towards the frontiers of Italy, under pretence of chastising the duke of Milan for a breach of the law of nations, in putting to death his ambassador. The operations of war, however, soon took a new direction. Instead of marching directly to the Milanese, Francis commenced hostilities against the duke of Savoy, with whom he had cause to be dissatisfied, and on whom he had some claims; and before the end of the campaign, this feeble prince saw himself stripped of all his dominions, except the province of Piedmont. To complete his misfortunes, the city of Geneva, the sovereignty of which he claimed, and where the reformed opinions had already got footing, threw off his yoke; and its revolt drew along with it the loss of the adjacent territory.

In this extremity, the duke of Savoy saw no resource but in the emperor's protection; and as his misfortunes were chiefly occasioned by his attachment to the imperial interest, he had a title to immediate assistance. But Charles, who was just returned from his African expedition, was not able to lend him the necessary support. His treasury was entirely drained, and he was obliged to disband his army till he could raise new supplies. Meantime, the death of Sforza, duke of Milan, entirely changed the nature of the war, and afforded the emperor full leisure to prepare for action. The French monarch's pretext for taking up arms was at once cut off; but as the duke died without issue, all Francis's rights to the duchy of Milan, which he had yielded only to Sforza and his descendants, returned to him in full force.

VOL. XXIII. No. 1579.

He instantly renewed his claim to it; and if he had ordered his army immediately to advance, he might have made himself master of it. But he unfortunately wasted his time in fruitless negotiations, while his more politic rival took possession of the duchy as a vacant fief of the empire; and though Charles seemed still to admit the equity of Francis's claim, he delayed granting the investiture under various pretences, and was secretly taking every possible measure to prevent him from regaining footing in Italy.

But if misfortunes had rendered Francis too diffident, success had made Charles too sanguine. He presumed on nothing less than the subversion of the French monarchy; nay, he considered it as a certain event. Having chased the forces of his rival out of Piedmont and Savoy, he pushed forward at the head of 50,000 men, contrary to the advice of his most experienced ministers and generals, to invade the southern provinces of France; while two other armies were ordered to enter it, the one on the side of Picardy, the other on the side of Champagne. He thought it impossible that Francis could resist so many unexpected attacks on such different quarters; but he found himself mistaken.

The French monarch fixed on the most effectual plan for defeating the invasion of a powerful enemy; and he prudently persevered in following it, though contrary to his own natural temper and to the genius of his people. He determined to remain altogether upon the defensive, and to deprive the enemy of subsistence, by laying waste the country before them. The execution of this plan was committed to the mareschal Montmorency, its author, a man happily fitted for such a trust by the inflexible severity of his disposition. He made choice of a strong camp, under the walls of Avignon, at the confluence of the Rhone and Durance, where he assembled a considerable army; while the king, with another body of troops, encamped at Valence, higher up the Rhone. Marseilles and Arles were the only towns he thought it necessary to defend; and each of these he furnished with a numerous garrison of his best troops. The inhabitants of the other towns were compelled to abandon their habitations: the fortifications of such places as might have afforded shelter to the enemy were thrown down; corn, forage, and provisions of every kind, were carried off or destroyed; the mills and ovens were ruined, and the wells filled up or rendered useless.

After unsuccessfully investing Marseilles and Arles, after attempting in vain to draw Montmorency from his camp at Avignon, and not daring to attack it, Charles having spent two inglorious months in Provence, and lost one-half of his troops by disease or by famine, was under the necessity of ordering a retreat; and though he was some time in motion before the enemy suspected his intention, it was conducted with so much precipitation and disorder, as to deserve the name of a flight, since the light troops of France turned it into a perfect rout. The invasion of Picardy was not more successful: the imperial forces were obliged to retire without effecting any conquest of importance.

Charles had no sooner conducted the shattered remains of his army to the frontiers of Milan, than he set out for Genoa; and unwilling to expose himself to the scorn of the Italians after such a reverse of fortune, he embarked directly for Spain.

Meanwhile Francis gave himself up to that vain resentment which had formerly disgraced the prosperity of his rival.

The parliament gave judgment, that Charles of Austria had forfeited, by rebellion and contumacy, the counties of Flanders and Artois, and declared these fiefs re-united to the crown of France, and Francis marched into the Low Countries to execute the sentence pronounced by his parliament; but a suspension of arms took place, through the interposition of the queens of France and Hungary, before any thing of consequence was effected: and this cessation of hostilities was followed by a truce, concluded at Nice, through the mediation of the reigning pontiff Paul III., of the family of Farnese, a man of a venerable character and pacific disposition.

Charles had soon farther cause to be sensible of his obligations

gations to the holy father for bringing about the treaty of Nice. His troops everywhere mutinied for want of pay, and the ability of his generals only could have prevented a total revolt. He had depended, as his chief resource for discharging the arrears due to his soldiers, upon the subsidies which he expected from his Castilian subjects. For this purpose he assembled the Cortes of Castile at Toledo; and having represented to them the great expense of his military operations, he proposed to levy such supplies as the present exigency of affairs demanded, by a general excise on commodities; but the Spaniards, who already felt themselves oppressed by a load of taxes unknown to their ancestors, and who had often complained that their country was drained of its wealth and inhabitants, in order to prosecute quarrels in which they had no interest, determined not to add voluntarily to their own burdens. The nobles, in particular, inveighed with great vehemence against the imposition proposed, as an encroachment on the valuable and distinguishing privilege of their order, that of being exempted from the payment of any tax. After employing arguments and promises in vain, Charles dismissed the assembly with indignation; and from that period neither the nobles nor the prelates have been called to the Cortes, on pretence that such as pay no part of the public taxes should not claim a vote in laying them on. These assemblies have until 1812, consisted merely of the procurators or representatives of 18 cities, two from each; in all 36 members, who were absolutely at the devotion of the crown.

The citizens of Ghent, still more bold, broke out not long after into open rebellion against the emperor's government, on account of a tax which they judged contrary to their ancient privileges, and a decision of the council of Mechlin in favour of the imperial authority. Enraged at an unjust imposition, and rendered desperate on seeing their rights betrayed by that very court which was bound to protect them, they flew to arms, seized several of the emperor's officers, and drove such of the nobility as resided among them out of the city. Sensible, however, of their inability to support what their zeal had prompted them to undertake, and desirous of securing a protector against the formidable forces with which they might expect soon to be attacked, they offered to acknowledge the king of France as their sovereign, and to put him into immediate possession of their city, and to assist him in recovering those provinces in the Netherlands which had anciently belonged to his crown. True policy should have made Francis comply with this proposal. The counties of Flanders and Artois were more valuable than the duchy of Milan, for which he had so long contended; and their situation in regard to France made it more easy to conquer or defend them. But Francis overrated the Milanese. He had lived in friendship with the emperor ever since the interview at Aigues-mortes, and Charles had promised him the investiture of that duchy. Forgetting, therefore, all his past injuries, and the deceitful promises by which he had been so often duped, the credulous, generous Francis not only rejected the propositions of the citizens of Ghent, but communicated to the emperor his whole negotiation with the malcontents.

The emperor, well acquainted with the weakness of his rival, flattered him in the hope of the investiture of Milan. The citizens of Ghent, alarmed at the approach of the emperor, who was joined by three armies, sent ambassadors to implore his mercy, and offered to throw open their gates. Charles only condescended to reply, "That he would appear among them as a sovereign and a judge, with the sceptre and the sword." He accordingly entered the place of his nativity on the anniversary of his birth; and instead of that lenity which might have been expected, exhibited an awful example of his severity. Twenty-six of the principal citizens were put to death: a greater number was banished: the city was declared to have forfeited his privileges; a new system of laws and political administration was prescribed; and a large fine was imposed on the inhabitants, in order to defray the expense of erecting a citadel, together with an annual tax for the support of a garrison. They were not

only despoiled of their ancient immunities, but made to pay, like conquered people, for the means of perpetuating their own slavery.

Having thus re-established his authority in the Low Countries, Charles began gradually to throw aside the veil under which he had concealed his intentions with respect to the Milanese, and at last peremptorily refused to give up a territory of such value.

This transaction exposed the king of France to as much scorn as it did the emperor to censure. The former remonstrated, however, and exclaimed with such resentment as made it obvious that he would seize on the first opportunity of revenge, and that a new war would soon desolate the European continent.

Meanwhile Charles was obliged to turn his attention towards the affairs of Germany. The Protestants having in vain demanded a general council, pressed him earnestly to appoint a conference between a select number of divines of each party, in order to examine the points in dispute. For this purpose, a diet was assembled at Ratisbon, which came, however, to no important decision, and it gave great offence to the pope; the allowing a diet, composed chiefly of laymen, to pass judgment in regard to articles of faith, appearing to him no less criminal and profane than the worst of heresies. The Protestants also were dissatisfied with the resolution of the diet, as it considerably abridged the liberty which they at that time enjoyed. They murmured loudly against it; and Charles, unwilling to leave any seeds of discontent in the empire, granted them a private declaration, exempting them from whatever they thought injurious or oppressive in the resolution, and confirming to them the possession of their former privileges.

The situation of the emperor's affairs at this juncture made these extraordinary concessions necessary. He foresaw a rupture with France to be unavoidable, and he was alarmed at the rapid progress of the Turks in Hungary.

Happily for the Protestants, Charles received intelligence of this revolution soon after the diet at Ratisbon; by the concessions in question, he obtained such liberal supplies, both of men and money, as left him under little anxiety about the security of Germany. He therefore hastened to join his fleet and army in Italy, in order to carry into execution a great and favourite enterprise which he had concerted against Algiers.

The loss which the emperor suffered in this calamitous expedition encouraged the king of France to begin hostilities, on which he had been for some time resolved; and an action dishonourable to civil society furnished him with too good a pretext for taking arms. The marquis del Guasto, governor of the Milanese, having got intelligence of the motions and destination of two ambassadors, Rincon and Fergoso, whom Francis had dispatched, the one to the Ottoman Porte, the other to the republic of Venice; knowing how much his master wished to discover the intentions of the French monarch, and of what consequence it was to retard the execution of his measures, he employed some soldiers belonging to the garrison of Pavia to lie in wait for these ambassadors as they sailed down the Po. The latter were murdered with most of their attendants, and their papers seized. Francis immediately demanded reparation for this barbarous outrage; and as Charles endeavoured to put him off with an evasive answer, he appealed to all the courts of Europe, setting forth the heinousness of the injury, the iniquity of the emperor in disregarding his just request, and the necessity of vengeance. But Charles, who was a more profound negotiator, defeated in a great measure the effects of these representations: he secured the fidelity of the Protestant princes in Germany, by granting them new concessions; and he engaged the king of England to espouse his cause, under pretence of defending Europe against the Infidels; while Francis was only able to form an alliance with the kings of Denmark and Sweden (who for the first time interested themselves in the quarrels of the more potent monarchs of the south), and to renew his treaty with Solymán.

But the activity of Francis supplied all the defects of his negotiation. Five armies were soon ready to take the field, under

under different generals, and with different destinations. Nor was Charles wanting in his preparations. He and Henry a second time made an ideal division of the kingdom of France. But as the hostilities which followed terminated in nothing decisive, and were distinguished by no remarkable event except the battle of Cerisoles (gained by count d'Enghuén over the imperialists, and in which 10,000 of the emperor's best troops fell), at last Francis and Charles, mutually tired of harassing each other, concluded at Crespy a treaty of peace, in which the king of England was not mentioned; and from being implacable enemies, became once more, to appearance, cordial friends, and even allies by the ties of blood.

The chief articles of this treaty were, that all the conquests which either party had made since the truce of Nice should be restored; that the emperor should give in marriage to the duke of Orleans, either his own eldest daughter, with the Low Countries, or the second daughter of his brother Ferdinand, with the investiture of the Milanese; that Francis should renounce all pretensions to the kingdom of Naples, as well as to the sovereignty of Flanders and Artois, and Charles give up his claim to the duchy of Burgundy; and that both should unite in making war against the Turks.

The emperor was chiefly induced to grant conditions so advantageous to France, by a desire of humbling the Protestant princes in Germany. With the papal jurisdiction, he foresaw they would endeavour to throw off the imperial authority; and he determined to make his zeal for the former a pretence for enforcing and extending the latter. However, the death of the duke of Orleans before the consummation of marriage, disentangled the emperor from the most troublesome stipulation in the treaty of Crespy; and the French monarch, being still engaged in hostilities with England, was unable to obtain any reparation for the loss which he suffered by this unforeseen event. These hostilities, like those between Charles and Francis, terminated in nothing decisive. Equally tired of a struggle attended with no glory or advantage to either, the contending princes concluded, at Campe, near Ardies, a treaty of peace; in which it was stipulated, that France should pay the arrears due by former treaties to England. But these arrears did not exceed one-third of the sums expended by Henry on his military operations; and Francis being in no condition to discharge them, Boulogne (a chargeable pledge) was left in the hands of the English, as a security for the debt.

In consequence of the emperor's resolution to humble the Protestant princes, he concluded a dishonourable peace with the Porte, stipulating that his brother Ferdinand should pay tribute for that part of Hungary which he still possessed; while the sultan enjoyed the imperial and undisturbed possession of all the rest. At the same time he entered into a league with pope Paul III., for the extirpation of heresy; but in reality with a view to oppress the liberties of Germany. Here, however, his ambition met with a severe check; for though he was successful at first, he was obliged in 1552 to conclude a peace with the Protestants on their own terms.

By the peace concluded on this occasion the emperor lost Metz, Toul, and Verdun, which had formed the barrier of the empire on that quarter; and therefore soon after put himself at the head of an army, in order to recover these three bishoprics. In order to conceal the destination of his army, he gave out, that he intended to lead it into Hungary, to second Maurice in his operations against the Infidels; and as that pretext failed him, when he began to advance towards the Rhiue, he propagated a report that he was marching first to chastise Albert of Brandenburg, who had refused to be included in the treaty of Passau, and whose cruel exactions in that part of Germany called loudly for redress.

The French, however, were not deceived by these arts. Henry immediately guessed the true object of Charles's armament, and resolved to defend his conquests with vigour. The defence of Metz, against which it was foreseen the whole weight of war would be turned, was committed to Francis of Lorraine, duke of Guise, who possessed in an emi-

nent degree all the qualities that render men great in military command. He repaired with joy to the dangerous station; and many of the French nobility, and princes of the blood, eager to distinguish themselves under such a leader, entered Metz as volunteers. The city was of great extent, ill fortified, and the suburbs large. For all these defects the duke endeavoured to provide a remedy. He repaired the old fortifications with all possible expedition, labouring with his own hands; the officers imitated his example; and the soldiers, thus encouraged, cheerfully submitted to the most severe toils; he erected new works, and he levelled the suburbs with the ground. At the same time he filled the magazines with provisions and military stores, and compelled all useless persons to leave the place, and laid waste the neighbouring country; yet such were his popular talents, as well as his arts of acquiring an ascendancy over the minds of men, that the citizens not only refrained from murmuring, but seconded him with no less ardour than the soldiers in all his operations—in the ruin of their estates, and in the havoc of their public and private buildings.

Meanwhile the emperor continued his march towards Lorraine, at the head of 60,000 men. On his approach Albert of Brandenburg, whose army did exceed 20,000 withdrew into that principality, as if he intended to join the French king; and Charles, notwithstanding the advanced season, it being towards the end of October, laid siege to Metz, contrary to the advice of his most experienced officers.

The attention of both the besiegers and the besieged was turned for some time towards the motions of Albert, who still hovered in the neighbourhood, undetermined which side to take, though resolved to sell his service. Charles at last came up to his price, and he joined the imperial army. The emperor now flattered himself that nothing could resist his force; but he found himself deceived. After a siege of almost sixty days, during which he had attempted all that was thought possible for art or valour to effect, and had lost upwards of 30,000 men by the inclemency of the weather, diseases, or the sword of the enemy, he was obliged to abandon the enterprise.

When the French sallied out to attack the enemy's rear, the imperial camp was filled with the sick and wounded, with the dead and the dying. All the roads by which the army retired were strewn with the same miserable objects; who, having made an effort beyond their strength to escape, and not being able to proceed, were left to perish without assistance. Happily that, and all the kind offices which their friends had not the power to perform, they received from their enemies. The duke of Guise ordered them all to be taken care of, and supplied with every necessary; he appointed physicians to attend, and direct what treatment was proper for the sick and wounded, and what refreshments for the feeble; and such as recovered he sent home, under an escort of soldiers, and with money to bear their charges. By these acts of humanity, uncommon in that age, the duke of Guise completed that heroic character which he had justly acquired by his brave and successful defence of Metz.

The emperor's misfortunes were not confined to Germany. During his residence at Villach, he had been obliged to borrow 200,000 crowns of Cosmo de Medici; and so low was his credit, that he was obliged to put Cosmo in possession of the principality of Piombino as a security for that inconsiderable sum; by which means he lost the footing he had hitherto maintained in Tuscany. Much about the same time he lost Sienna. The citizens, who had long enjoyed a republican government, rose against the Spanish garrison, which they had admitted as a check upon the tyranny of the nobility, but which they found was meant to enslave them; forgetting their domestic animosities, they recalled the exiled nobles; they demolished the citadel, and put themselves under the protection of France.

To these unfortunate events one still more fatal had almost succeeded. The severe administration of the viceroy of Naples had filled that kingdom with murmuring and dissatisfaction. The prince of Salerno, the head of the malcontents, fled to the court of France. The French monarch, after

after the example of his father, applied to the grand signior and Solyman, at that time highly incensed against the house of Austria, on account of the proceedings in Hungary, sent a powerful fleet into the Mediterranean, under the command of corsair Dragut, an officer trained up under Barbarossa, and scarcely inferior to his master in courage, talents, or in good fortune. Dragut appeared on the coast of Calabria at the time appointed; but not being joined by the French fleet according to concert, he returned to Constantinople, after plundering and burning several places, and filling Naples with consternation.

Highly mortified by so many disasters, Charles retired into the Low Countries, breathing vengeance against France; and here the war was carried on with considerable vigour. Impatient to efface the stain which his military reputation had received before Metz, Charles laid siege to Terouane; and the fortifications being in disrepair, that important place was carried by assault. Hesdin also was invested, and carried in the same manner. The king of France was too late in assembling his forces to afford relief to either of these places: and the emperor afterwards cautiously avoided an engagement.

The imperial arms were less successful in Italy. The viceroy of Naples failed in an attempt to recover Sienna; and the French not only established themselves more firmly in Tuscany, but conquered part of the island of Corsica. Nor did the affairs of the house of Austria go on better in Hungary during the course of this year. Isabella and her son appeared once more in Transylvania, at a time when the people were ready for revolt, in order to revenge the death of Martinuzzi, whose loss they had severely felt. Some noblemen of eminence declared in favour of the young king; and the bashaw of Belgrade, by Solyman's order, espousing his cause, in opposition to Ferdinand, Castaldo, the Austrian general, was obliged to abandon Transylvania to Isabella and the Turks.

In order to counterbalance these and other losses, the emperor, in 1554, concerted a marriage between his son Philip and Mary of England, in hopes of adding that kingdom to his other dominions. Meanwhile the war between Henry and Charles was carried on with various success in the Low Countries, and in Italy much to the disadvantage of France. The French, under the command of Strozzi, were defeated in the battle of Merciano; Sienna was reduced by Medicino, the Florentine general, after a siege of ten months; and the gallant Siennese were subjected to the Spanish yoke. Much about the same time a plot was formed by the Franciscans, but happily discovered before it could be carried into execution, to betray Metz to the Imperialists. The father guardian, and twenty other monks, received sentence of death on account of this conspiracy; but the guardian, before the time appointed for his execution, was murdered by his incensed accomplices, whom he had seduced; and six of the youngest were pardoned.

While war thus raged in Italy and the Low Countries, Germany enjoyed such profound tranquillity, as afforded the diet full leisure to confirm and perfect the plan of religious pacification agreed upon at Passau, and referred to the consideration of the next meeting of the Germanic body. During the negotiation of this treaty, an event happened which astonished all Europe, and confounded the reasonings of the wisest politicians. The emperor Charles V., though no more than 56, an age when objects of ambition operate in full force on the mind, and are generally pursued with the greatest ardour, had for some time formed the resolution of resigning his hereditary dominions to his son Philip. He now determined to put it in execution. Various have been the opinions of historians concerning a resolution so singular and unexpected; but the most probable seem to be, the disappointments which Charles had met with in his ambitious hopes, and the daily decline of his health.

In consequence of this resolution, Charles assembled the states of the Low Countries at Brussels; and seating himself for the last time in the chair of state, he explained to his subjects the reasons of his resignation, and solemnly de-

veloped his authority upon Philip. He recounted with dignity, but without ostentation, all the great things which he had undertaken and performed since the commencement of his administration. "I have dedicated (observed he), from the 17th year of my age, all my thoughts and attention to public objects, reserving no portion of my time for the indulgence of ease, and very little for the enjoyment of private pleasure. Either in a pacific or hostile manner, I have visited Germany nine times, Spain six times, France four times, Italy seven times, the Low Countries ten times, England twice, Africa as often; and while my health permitted me to discharge the duty of a sovereign, and the vigour of my constitution was equal in any degree to the arduous office of governing such extensive dominions, I never shunned labour, nor repined under fatigue; but now, when my health is broken, and my vigour exhausted by the rage of an incurable distemper, my growing infirmities admonish me to retire; nor am I so fond of reigning, as to retain the sceptre in an impotent hand, which is no longer able to protect my subjects. Instead of a sovereign worn out with diseases (continued he), and scarce half alive, I give you one in the prime of life, already accustomed to govern, and who adds to the vigour of youth all the attention and sagacity of maturer years." A few weeks after he resigned to Philip the sovereignty of Spain and America; reserving nothing to himself out of all these vast possessions but an annual pension of 100,000 crowns.

Charles was now impatient to embark for Spain, where he had fixed on a place of retreat; but by the advice of his physicians, he put off his voyage for some months, on account of the severity of the season; and, by yielding to their judgment, he had the satisfaction before he left the Low Countries of taking a considerable step towards a peace with France. This he ardently longed for; not only on his son's account, whose administration he wished to commence in quietness, but that he might have the glory, when quitting the world, of restoring to Europe that tranquillity which his ambition had banished out of it almost from the time that he assumed the reins of government.

The great bar to such a pacification, on the part of France, was the treaty which Henry had concluded with the pope; and the emperor's claims were too numerous to hope for adjusting them suddenly. A truce of five years was therefore proposed by Charles; during which term, without discussing their respective pretensions, each should retain what was in his possession; and Henry, through the persuasion of the constable Montmorency, who represented the imprudence of sacrificing the true interests of his kingdom to the rash engagements that he had made with Paul, authorised his ambassadors to sign at Vaucelles a treaty, which would insure to him for so considerable a period the important conquest which he had made on the German frontier, together with the greater part of the duke of Savoy's dominions.

The Pope, when informed of this transaction, was no less filled with terror and astonishment than rage and indignation. But he took equal care to conceal his fear and his anger. He affected to approve highly of the truce; and he offered his mediation, as the common father of Christendom, in order to bring about a definitive peace. Under this pretext, he appointed Cardinal Rebibo his nuncio to the court of Brussels, and his nephew Cardinal Caraffa to that of Paris. The public instructions of both were the same; but Caraffa, besides these, received a private commission, to spare neither entreaties, promises, nor bribes, in order to induce the French monarch to renounce the truce and renew his engagements with the holy see. He flattered Henry with the conquest of Naples; he gained by his address the Guises, the queen, and even the famous Diana of Poitiers, duchess of Valentinois, the king's mistress; and they easily swayed the king himself, who already leaned to that side towards which they wished to incline him. All Montmorency's prudent remonstrances were disregarded; the nuncio (by powers from Rome) absolved Henry from his oath of truce; and that weak prince signed a new treaty with the Pope; which rekindled with fresh

fresh violence the flames of war, both in Italy and the Low Countries.

No sooner was Paul made acquainted with the success of this negotiation, than he proceeded to the most indecent extremities against Philip. He ordered the Spanish ambassador to be imprisoned; he excommunicated the Colonnas, because of their attachment to the imperial house; and he considered Philip as guilty of high treason, and to have forfeited his right to the kingdom of Naples, which he was supposed to hold of the holy see, for afterwards affording them a retreat in his dominions.

Alarmed at a quarrel with the Pope, whom he had been taught to regard with the most superstitious veneration, as the vicegerent of Christ and the common father of Christendom, Philip tried every gentle method before he made use of force. He even consulted some Spanish divines on the lawfulness of taking arms against a person so sacred. They decided in his favour; and Paul continuing inexorable, the duke of Alva, to whom the negotiations as well as the war had been committed, entered the ecclesiastical state at the head of 10,000 veterans, and carried terror to the gates of Rome.

The haughty pontiff, though still inflexible and undaunted himself, was forced to give way to the fears of the cardinals, and a truce was concluded for forty days. Meantime the duke of Guise arriving with a supply of 20,000 French troops, Paul became more arrogant than ever, and banished all thoughts from his mind but those of war and revenge. The duke of Guise, however, who had precipitated his country into this war, chiefly from a desire of gaining a field where he might display his own talents, was able to perform nothing in Italy worthy of his former fame. He was obliged to abandon the siege of Civetella; he could not bring the duke of Alva to a general engagement; his army perished by diseases; and the Pope neglected to furnish the necessary reinforcements. He begged to be recalled; and France stood in need of his abilities.

Philip, though willing to have avoided a rupture, was no sooner informed that Henry had violated the truce of Vaucelles, than he determined to act with such vigour, as should convince Europe that his father had not erred in resigning to him the reins of government. He immediately assembled in the Low Countries a body of 50,000 men, and obtained a supply of 10,000 from England, which he had engaged in his quarrel; and as he was not ambitious of military fame, he gave the command of his army to Emanuel Philibert duke of Savoy, one of the greatest generals of that warlike age.

The duke of Savoy kept the enemy for some time in suspense with regard to his destination; at last he seemed to threaten Champagne; towards which the French drew all their troops; then turning suddenly to the right, he advanced by rapid marches into Picardy, and laid siege to St. Quintin. It was deemed in those times a town of considerable strength; but the fortifications had been much neglected, and the garrison did not amount to a fifth part of the number requisite for its defence: it must therefore have surrendered in a few days, if the admiral de Coligny had not taken the gallant resolution of throwing himself into it with such a body of men as could be collected on a sudden. This he effected in spite of the enemy, breaking through their main body. The place, however, was closely invested; and the constable Montmorency, anxious to extricate his nephew out of that perilous situation, in which his zeal for the public had engaged him, as well as to save a town of such importance, rashly advanced to its relief with forces one half inferior to those of the enemy. His army was cut in pieces, and he himself made prisoner.

The cautious temper of Philip on this occasion saved France from devastation, if not ruin. The duke of Savoy proposed to overlook all inferior objects, and march speedily to Paris, which, in its present consternation, he could not have failed to make himself master of; but Philip, afraid of the consequences of such a bold enterprise, desired him to continue the siege of St. Quintin, in order to secure a safe

retreat in case of any disastrous event. The town, long and gallantly defended by Coligny, was at last taken by storm; but not till France was in a state of defence.

Philip was now sensible that he had lost an opportunity which could never be recalled, of distressing his enemy, and contented himself with reducing Horn and Catelet; which petty towns, together with St. Quintin, were the sole fruits of one of the most decisive victories gained in the 16th century. The Catholic king, however, continued in high exultation on account of his success; and as all his passions were tinged with superstition, he vowed to build a church, a monastery, and a palace, in honour of St. Lawrence, on the day sacred to whose memory the battle of St. Quintin had been fought. He accordingly laid the foundation of an edifice, in which all these were included, and which he continued to forward at vast expense, for twenty-two years. The same principle which dictated the vow directed the building. It was so formed as to resemble a gridiron—on which culinary instrument, according to the legendary tale, St. Lawrence had suffered martyrdom. Such is the origin of the famous Escorial near Madrid, the royal residence of the kings of Spain.

The first account of that fatal blow which France had received at St. Quintin, was carried to Rome by the courier whom Henry had sent to recal the duke of Guise. Paul remonstrated warmly against the departure of the French army; but Guise's orders were peremptory. The arrogant pontiff therefore found it necessary to accommodate his conduct to the exigency of his affairs, and to employ the mediation of the Venetians, and of Cosmo de Medici, in order to obtain peace. The first overtures of this nature were eagerly listened to by the Catholic king, who still doubted the justice of this cause, and considered it as his greatest misfortune to be obliged to contend with the Pope. Paul agreed to renounce his league with France; and Philip stipulated on his part, that the duke of Alva should repair in person to Rome, and after asking pardon of the holy father in his own name and in that of his master, for having invaded the patrimony of the church, should receive absolution from that crime. Thus Paul, through the superstitious timidity of Philip, finished an unpropitious war not only without any detriment to the apostolic see, but saw his conqueror humbled at his feet: and so excessive was the veneration of the Spaniards in that age for the papal character, that the duke of Alva, the proudest man perhaps of his time, and accustomed from his infancy to converse with princes, acknowledged, that when he approached Paul, he was so much overawed, that his voice failed, and his presence of mind forsook him.

But though this war, which at its commencement threatened mighty revolutions, was terminated without occasioning any alteration in those states which were its immediate objects, it produced effects of considerable consequence in other parts of Italy. In order to detach Octavio Farnese, duke of Parma, from the French interest, Philip restored to him the city of Placentia and its territory, which had been seized by Charles V., and he granted to Cosmo de Medici the investiture of Sienna, as an equivalent for the sums due to him. By these treaties, the balance of power among the Italian states was poised with more equality, and rendered less variable than it had been since it received the first violent shock from the invasion of Charles VIII., and Italy henceforth ceased to be the theatre on which the monarchs of Spain, France, and Germany, contended for fame and dominion. Their hostilities, excited by new objects, stained other regions of Europe with blood, and made other states feel, in their turn, the miseries of war.

The duke of Guise, who left Rome the same day that his adversary the duke of Alva made his humiliating submission to the Pope, was received in France as the guardian angel of the kingdom. He was appointed lieutenant-general in chief, with a jurisdiction almost unlimited; and, eager to justify the extraordinary confidence which the king had reposed in him, as well as to perform something suitable to the high expectations of his countrymen, he undertook in

winter the siege of Calais. Having taken that place, he next invested Thionville, in the duchy of Luxembourg, one of the strongest towns on the frontiers of the Netherlands; and forced it to capitulate after a siege of three weeks. But the advantages on this quarter were more than balanced by an event which happened in another part of the Low Countries. The Mareschal de Termes, governor of Calais, who had penetrated into Flanders, and taken Dunkirk, was totally routed near Gravelines, and taken prisoner by Count Egmont. This disaster obliged the duke of Guise to relinquish all his other schemes, and hasten towards the frontiers of Picardy, that he might there oppose the progress of the enemy.

The eyes of all France were now turned towards the duke of Guise, as the only general on whose arms victory always attended, and in whose conduct as well as good fortune they could confide in every danger. His strength was nearly equal to the duke of Savoy's, each commanding about 40,000 men. They encamped at the distance of a few leagues from one another; and the French and Spanish monarchs having joined their respective armies, it was expected that, after the vicissitudes of war, a decisive battle would at last determine which of the rivals should take the ascendancy for the future in the affairs of Europe. But both monarchs, as if by agreement, stood on the defensive; neither of them discovering any inclination, though each had it in his power, to rest the decision of a point of such importance on the issue of a single battle.

During this state of inaction, peace began to be mentioned in each camp, and both Henry and Philip discovered an equal disposition to listen to any overture that tended to re-establish it. The private inclinations of both kings concurred with their political interests and the wishes of their people. Philip languished to return to Spain, the place of his nativity, and peace only could enable him, either with decency or safety, to quit the Low Countries. Henry was now desirous of being freed from the avocations of war, that he might have leisure to turn the whole force of his government towards suppressing the opinions of the reformers, which were spreading with such rapidity in Paris and the other great towns, that they began to grow formidable to the established church. Court-intrigues conspired with these public and avowed motives to hasten the negotiation, and the abbey of Cercamp was fixed on as the place of congress.

While Philip and Henry were making these advances towards a treaty which restored tranquillity to Europe, Charles V., whose ambition had so long disturbed it, but who had been some time dead to the world, ended his days in the monastery of St. Justus, in Estremadura, which he had chosen as the place of his retreat.

After the death of Charles, the kingdom of Spain soon lost great part of its consequence. Though Charles had used all his interest to get his son Philip elected emperor of Germany, he had been totally disappointed; and thus the grandeur of Philip II. never equalled that of his father. His dominions were also considerably abridged by his tyrannical behaviour in the Netherlands. In consequence of this, the United Provinces revolted; and after a long and bloody war, obtained their liberty. In this quarrel Elizabeth of England took part against Philip, which brought on a war with Spain. The great losses he sustained in these wars exhausted the kingdom both of men and money, notwithstanding the great sums imported from America. Indeed the discovery of that country has much impoverished, instead of enriching Spain; for thus the inhabitants have been rendered lazy and averse to every kind of manufacture or traffic, which only can be a durable source of riches and strength to any nation. The ruin of the kingdom in this respect, however, was completed by Philip III., who, at the instigation of the inquisition, and by the advice of his prime minister the duke of Lerma, expelled from the kingdom all the Morescoes or Moors, descendants of the ancient conquerors of Spain. Thirty days only were allowed them to prepare for their departure, and it was death to remain

beyond that time. The reason for this barbarous decree was, that these people were still Mahometans in their hearts, though they conformed externally to the rites of Christianity, and thus might corrupt the true faith. The Morescoes, however, chose themselves a king, and attempted to oppose the royal mandate; but, being almost entirely unprovided with arms, they were soon obliged to submit, and were all banished the kingdom. By this violent and impolitic measure, Spain lost almost a million of industrious inhabitants; and as the kingdom was already depopulated by bloody wars, by repeated emigrations to America, and enervated by luxury, it now sank into a state of languor, from which it has never recovered.

The reign of Philip IV., the successor of Philip III., commenced in 1621. He had not been long seated on the throne, before the expiration of the 12 years' truce which Philip III. had concluded with the United Provinces, again involved Spain in the calamities of war. The renewed contest was carried on with vigour by both the contending powers, till in the year 1648, the Spanish monarch was compelled to sign the treaty with Munster, by which the United Provinces were declared free and independent. From this period the power of the Spanish monarchy began to decline, as it had already been severely shaken by the loss of Portugal.

This event took place in 1640, when the Portuguese finally threw off the Spanish yoke, and that country remained an independent kingdom, till the power of Buonaparte compelled its lawful monarch to abandon his European territories. Philip IV. also prosecuted an unsuccessful war with France. This war was terminated in 1659, and Philip died about six years after.

The new monarch, Charles II., was only four years old when he succeeded to the throne. He was of a feeble constitution, and a weak capacity. The war which had been occasioned by the revolt of Portugal, continued till the year 1668, when a peace was concluded, and the independence of that kingdom was acknowledged. Hostilities had been renewed with France, but greatly to the disadvantage of the Spaniards, who lost some of the richest and best fortified towns which they still possessed in Flanders. The peace of Nimeguen between France and Spain was signed in the year 1678. Charles II. died in 1700, and with him ended the male line of the house of Austria; a dynasty to which Spain owes less than to any other race of its monarchs.

Historians have been fond of representing the dominion of the Austrian princes in Spain as productive of the greatest glory and advantage to that kingdom. The reign of Charles V. may indeed be said to have been a glorious reign; but little of its glory belonged to Spain, and the emperor certainly neglected her interests in advancing those of his more favoured territories. The picture given by the Spanish historians of the state of Spain at the accession and during the reign of Philip II., fully evinces how little that kingdom had profited by the change in the line of its succession. Agriculture was neglected; commerce was fettered by enormous duties, and the people were held in the chains of ignorance and superstition.

Charles II. was succeeded by Philip V., duke of Anjou, and grandson to Louis XIV. of France, who had been nominated heir to the Spanish throne by the late monarch. The treaty of Utrecht, which terminated the differences between the principal contending powers, was signed in 1713, and in 1715 a permanent peace was concluded between Spain and Portugal. Hostilities, however, still continued with Savoy and Sardinia, and in 1715 the island of Sardinia was taken by a Spanish fleet, and the year following another fleet belonging to the same nation invaded Sicily, but was defeated by the British Admiral Byng. By a new treaty in 1720, Sardinia was given to the Duke of Savoy, and Sicily to the emperor; and by the treaty of Seville, concluded in 1729, the duchies of Tuscany, Parma and Placentia, were ceded to Spain. In 1731, the Spanish king invaded Naples, took possession of that kingdom, and conferred it on his son Don Carlos, in consequence of which war

war was declared between Spain and the empire in 1733. At the end of that year the palace of Madrid was consumed by fire, and all the archives relating to the Indies perished in the flames.

In 1739, hostilities were renewed between Spain and Britain, but the only successes acquired by the latter power were the capture of Porto Bello by Admiral Vernon, and that of the Maquilla Galeon by Commodore Anson. After a long and turbulent reign, Philip V. died in 1746.

Ferdinand VI., a mild, prudent and beneficent prince, reformed abuses in the administration of justice, and management of the finances. He revived commerce, established manufactures, and promoted the prosperity of his kingdom. In April A.D. 1755, Quito, in South America was destroyed by an earthquake.

Charles III. succeeded Ferdinand in 1759. The famous family compact was concluded at Versailles, A. D. 1761, among the four kings of the house of Bourbon. The English, alarmed by the naval preparations of Spain, declared war in 1762, and took Havannah, in the island of Cuba, and Manilla in the East Indies. Notwithstanding this success, peace was hastily concluded at Fontainbleau, in November, by which the Havannah was restored. In 1767 the Jesuits were expelled from Spain. An unsuccessful expedition was concerted against Algiers, A. D. 1775, the particulars of which are related in M. Swinburne's Travels, Letter V. In the war between Great Britain and her American colonies, Spain, by the intrigues of the French court, was prevailed on to take up arms in support of the latter. At the conclusion of that calamitous war, Great Britain in a treaty with Spain, ceded to this power, East and West Florida, and the island of Minorca. Charles died in 1788, and was succeeded by his second son Charles Anthony, prince of Asturias, the eldest having been declared incapable of inheriting the crown.

Charles IV. had not long been seated on the throne before the portentous revolution in France involved Europe in a general scene of political and military contest. The king of Spain joined the general confederacy against the new republic, and in consequence was numbered among the objects of its resentment, by a declaration of war in 1793. The military operations of Spain, however, were extremely languid; and after two campaigns, in which she might be said to carry on rather a defensive than offensive war, against the republican armies, she was compelled to conclude a treaty of peace, which was signed at Basil on the 22d of July, 1795. By this treaty the French republic restored to the king of Spain all the conquests which she had made from him since the commencement of hostilities, and received in exchange all right and property in the Spanish part of St. Domingo.

This treaty was soon followed by a rupture with Great Britain. On the 5th of October, 1796, the court of Spain published a manifesto against this country, to which the court of London made a spirited reply; and about the same time was published a treaty of offensive and defensive alliance, which had been concluded about two months before, between the king of Spain and the French republic. In the war which followed between Spain and Great Britain, his Catholic majesty could boast of but little honour or success; and the French republic gained little from its new ally, but the contributions of money, which she from time to time compelled him to advance. On the 14th of February, 1797, a Spanish fleet of 27 sail of the line was defeated by Sir John Jervis, off Cape St. Vincent; and four of the Spanish line-of-battle ships were left in the hands of the victors. From this time till the temporary termination of hostilities by the peace of Amiens in 1802, there is nothing remarkable in the transactions of Spain.

On the renewal of the war in 1803, Spain was again compelled, by the overbearing power of France, to take an active part against Great Britain, and fitted out a formidable fleet, which was united to a considerable naval force of the new made emperor of the French. The Spanish declaration of

war against Britain is dated at Madrid on the 12th of December, 1804; and on the 21st of October, 1805, the combined fleets of France and Spain were nearly annihilated by Lord Nelson's decisive victory off Cape Trafalgar.

After this terrible blow to the naval power of Spain, nothing of importance took place till 1808, when the designs of Buonaparte against the independence of Spain, which had been long suspected, were openly avowed, in consequence of a domestic dispute, probably fomented by the emissaries of France, which took place between Charles IV. and the prince of Asturias. During the winter of 1807-8, the public mind in Spain had been greatly agitated. Some accused the prince of the Peace, Don Manuel Godoy (who had long held the helm of state, and was the richest and most powerful subject in the kingdom), of having concerted with the queen to destroy the prince of Asturias. Others accused the prince of Asturias of being at the head of a party to dethrone his father. Solemn councils and long proceedings, followed up by exiles and violent acts, far from calming opinions, served to agitate them still more.

In March, 1808, several disturbances happened at Aranjuez. These disturbances were excited by a report that the royal family were about to quit Spain and emigrate to America. In consequence of this report, the populace of the neighbouring villages repaired in crowds to Aranjuez, where they found the attendants of the court packing up the baggage of the royal household; and understood that relays of horses were stationed on the road to Seville, and that every thing was prepared for the departure of the royal fugitives, who were to take shipping at that port. It was suspected that Don Manuel Godoy, or, as he has commonly been called, the prince of the Peace, was the chief instigator of this unpopular measure; and the fury of the people was directed chiefly against that nobleman, whose palace they attacked on the 18th of March. He, however, found means to escape for the present, but was afterwards arrested in a garret of his own house. In the mean time the king issued two decrees with a view to allay the popular ferment; but as this still continued, he on the 19th took the extraordinary resolution of abdicating the throne in favour of the prince of Asturias. This resolution was made known by a royal decree, in which Charles declared that, as his natural infirmities no longer permitted him to support the weight of government, and the re-establishment of his health required a change of climate, he had after the most mature deliberation resolved to abdicate his crown in favour of his heir the prince of Asturias and; this resolution he declared to be the result of his own free will.

The new sovereign was accordingly proclaimed by the title of Ferdinand VII., and issued an edict confiscating the effects of Don Manuel Godoy, and announcing the appointment of the duke of Infantado, a nobleman extremely popular, to the presidency of Castile and the command of the royal guards.

These disturbances have commonly been attributed to the machinations of the French emperor, who had gained a complete ascendancy over the weak Charles; and had rendered the prince of the Peace entirely subservient to the views which he had formed on the independence and the liberties of Spain. Murat now caused it to be intimated to Ferdinand, that the emperor of the French was on his journey to Spain, and advised him to meet his master on the road. In the mean time he was tampering with the self-deposed monarch, whom he assured of the assistance of Buonaparte in reinstating him on the throne. Charles accordingly addressed a letter to Buonaparte, in which he contradicts the assertion of his decree on the 19th; and declares that his abdication was a measure of compulsion; and throws himself on the protection of that great monarch, his friend and ally, from whom alone he and his subjects can hope to derive tranquillity and happiness.

It appears to have been the design of Murat to draw out of Spain the whole of the royal family, and in this design he completely succeeded. Ferdinand set out to meet Buonaparte, accompanied by the French general Savary, and had advanced

advanced as far as Vittoria, when he was left by Savary, and he found himself surrounded by French troops. He was compelled to remain at Vittoria, until Savary, who had proceeded to Bayonne, where Buonaparte then was, should return and intimate to him the pleasure of his master. When the general returned, he brought with him a letter from Napoleon to Ferdinand. In this letter, which is addressed to Ferdinand as prince of Asturias, and not as king of Spain, Buonaparte assured the prince, that the sole object of his journey into Spain was to make such reforms in that kingdom as would be agreeable to the public feelings. Without pretending to judge respecting the late revolution, he cautions Ferdinand against the danger to be apprehended from sovereigns permitting their subjects to take justice into their own hands. After insinuating his own power over the royal family of Spain, and adverting to the tumults that had taken place, in which some of his troops had fallen, he makes use of the following expression, "A few of my soldiers may be murdered; but the subjugation of Spain shall be the consequence of it."

Ferdinand confounded at the conduct of the French emperor, and alarmed for his own personal safety, was compelled to proceed on his journey. When he arrived at Bayonne he was received by the prince of Neufchatel and Duroc, and was conducted to a place by no means suited to his rank or his character as ally of Buonaparte. He however dined with the emperor; but after he had retired, General Savary brought a message from his master, intimating his determination that the present royal family of Spain should give up to him all right and title to the crown of that kingdom, and that they should be succeeded by a branch of his own family. Astonished at this intimation, Ferdinand sent his prime minister Cevallos, to canvas the matter with M. Champagny, the confidential secretary of Napoleon. The conference was held in an apartment adjoining the cabinet of the emperor, and, as it appeared, within his hearing: for when Cevallos was arguing with great warmth and strength of reasoning on the injustice and even impolicy of the proposed measures, both he and Champagny were ordered into the emperor's presence; and the former was reviled in the grossest terms, branded with the appellation of a traitor, accused of having maintained that the recognition of Buonaparte was not necessary to the validity of his master's title to the throne of Spain, and of having affirmed that if the French dared to attack the independence of the Spanish monarchy, three hundred thousand men would rise to defend it and repel the invaders. After Napoleon had thus indulged the violence of his temper, he entered in a harsh and arrogant style on a discussion of the points in dispute between his secretary and Cevallos: and finding that he could neither convince nor silence the Spanish minister, he abruptly concluded with the following peremptory declaration: "I have a system of policy of my own; you ought to adopt more liberal ideas, to be less susceptible on the point of honour, and not sacrifice the prosperity of Spain to the interest of the House of Bourbon." From this time the destiny of the Spanish royal family was fixed. Ferdinand, the monarch of the people's choice, was already a captive, and not many days elapsed before the rest of the royal family was in the same situation. On the first of May, Ferdinand had made a conditional renunciation of his crown in favour of his father, and on the fifth of the same month, Buonaparte had a long conversation with Charles the Fourth and his queen. Ferdinand was called in by his father, to hear, in the presence of him and the queen, the disgusting and humiliating expressions which were uttered by the French emperor; expressions of such a nature, that Cevallos says he dares not record them. All the parties were seated except Ferdinand; he was ordered by his father to make an absolute renunciation of the crown, on pain of being treated as an usurper and a conspirator against the right of his parents. With this requisition Ferdinand complied, and thus completed the abdication of his family; for it appeared that on the preceding day, Charles had executed the deed of resignation, which transferred to the emperor of the French his title to the crown of Spain, on

consideration of receiving during his life an annuity of eighty millions of reals, of a dowry to his queen of two millions of reals, and to the infantas of Spain the annual sum of four hundred thousand livres.

Thus had Buonaparte effected the transference of the Spanish nation from the Bourbon dynasty to his own family, so far at least as that transference could be effected by the formal renunciation in his favour of the royal family, and by a strong but suspicious recommendation from them to the Spanish nation to receive their new sovereign, whoever he should be, with submission and obedience.

It was soon understood that Napoleon designed the crown of Spain for his brother Joseph, who had some time before been placed on the throne of Naples. In an address to the Spanish nation, which Buonaparte published immediately after the abdication of Charles and Ferdinand, he informed them that he did not mean to reign over them in person, but that he would give them a sovereign every way resembling himself. In the beginning of June, Joseph Buonaparte arrived in the neighbourhood of Bayonne, where he was received by a deputation of the grandes of Spain and from the council of Castile, and presented with a congratulatory address, written in the usual fulsome style of adulation.

But though the nomination of Joseph Buonaparte was easily effected, it was not so easy to place him on the throne in opposition to the almost unanimous will of the Spanish nation. Ferdinand the Seventh was the darling of the people, and his accession to the crown had been hailed by them, both as placing them under the dominion of a beloved monarch, and as releasing them from the tyranny of Godoy, who was an object of almost universal detestation. They had hitherto submitted with patience to the influence and power of France, hopeless of rescuing themselves while Charles possessed the throne, and while the prince of the Peace directed his councils; but the accession of Ferdinand, and the consequent disgrace of the favourite, had led them to hope that they should now find a sovereign willing to direct and assist their efforts to regain their independence. Under these expectations, a great part of the nation had come forward to offer their assistance in supporting the claims of the new monarch. The province of Catalonia, the most industrious and the most warlike of the Spanish nation, particularly distinguished itself by the promptitude and extent of its offers. Soon after Ferdinand had ascended the throne, the captain-general of Catalonia, relying on the well known resources and dispositions of the inhabitants, had come forward with an offer of a military force of above a hundred thousand men; and other provinces would have followed this example, but Ferdinand had discouraged these military preparations, and appeared willing to submit quietly to French bondage.

The spirit which had animated the Spaniards thus boldly to support their sovereign, was not of a nature to be chilled by his timidity or repressed by his example. The renunciation of the royal family in favour of Buonaparte was no sooner known in Spain, than the northern provinces burst into open insurrection. Asturias and Galicia set the example; and it was soon followed by almost every part of Spain, not immediately occupied or overawed by the armies of France.

One of the first steps taken by the leaders of the insurrection was, to assemble the juntas or general assemblies of the provinces. When these were organized, they issued proclamations, calling on the Spaniards to rise in defence of their sovereign, and in the assertion of their own independence. Besides these proclamations from the provincial juntas, addresses were published in almost every province by the leaders of the popular cause; in particular, the province of Arragon was addressed by Palafox, a name celebrated in the annals of the Spanish revolution, in a bold and spirited manifesto. The junta of Seville, which assembled on the 27th of May, formed itself into a supreme junta of government, caused Ferdinand to be proclaimed king of Spain, took possession of the military stores, and issued an order for all males from 16 to 45, who had not children, to enroll themselves in the national armies.

It was natural that, when entering on so determined an opposition to the measures of Buonaparte, the Spaniards should turn their eyes towards that nation, by whom alone the ambitious views of that potentate had been successfully combated. A peace and alliance with Britain was evidently not only a measure of policy, but would afford them the most effectual assistance in the formidable struggle in which they were about to engage. Accordingly, deputies were dispatched to Great Britain from several of the provinces, to solicit the aid and friendship of that country, and to concert measures with the British ministry for executing the plans which had been contrived for freeing the kingdom from the French yoke. The junta of Seville issued a declaration of war with France, and declared the Spanish nation on terms of peace and amity with Britain. The Spanish deputies were empowered to solicit supplies of arms, ammunition, clothing and money; but it was thought that a supply of British troops would be unnecessary, the Spanish patriots considering themselves as fully equal to the defence of their country. The cause of the Spanish patriots was eagerly embraced by the court of London, and by the British nation at large, and the most active measures were quickly taken to send them effectual aid.

While these preparations were making on the part of the Spaniards, the French forces were collecting in great numbers, both on the frontiers, and in the neighbourhood of the capital. Above 25,000 men, under the command of Bessieres and Lassoles, threatened the provinces of Asturias and Biscay, or occupied the plains of Castile. Ten thousand men were shut up in the citadel of Barcelona; and to relieve them, a strong body of French troops had marched from the frontiers, and laid siege to Zaragoza. A considerable body under General Moncey attacked the city of Valencia; while the grand duke of Berg, after having detached General Dupont at the head of 20,000 men, to quiet the insurrection of the southern provinces, held Madrid with about 15,000 troops. Junot, with about 25,000 men, had entered Portugal, and taken possession of the capital. The whole French force at this time in Spain cannot be computed at less than 100,000 men. These were opposed by a very numerous, but undisciplined force, commanded by generals of acknowledged bravery, but differing widely from each other in experience and military prudence. General Palafox commanded in Arragon; General Castanos in the southern provinces; and General Blake in the north.

The first exertions of the Spanish patriots were eminently successful, though they have been greatly exaggerated in the newspapers published under authority of the juntas. The harbour of Cadiz, which contained a numerous and well-appointed fleet, was under the command of the Marquis de Solano, a man notoriously attached to the French interest; and here lay a French fleet, consisting of five ships of the line and a frigate. One of the first efforts of the patriots was, to obtain possession both of Cadiz and the French fleet, and in this they completely succeeded. Solano was arrested and put to death, and Don Morla was appointed in his room. In the beginning of June, the French fleet was summoned to surrender, and on the admiral's refusal, was furiously attacked by the batteries on shore, and obliged to capitulate. The force detached by Murat, under Dupont, was attacked near Baylen, on the 22d July, by Major-general Reding, second in command under Castanos, and after having been defeated, was compelled to surrender at discretion. The French force besieging Zaragoza, was repeatedly attacked by General Palafox, and suffered considerable losses, while that city held out with the most heroic bravery. Perhaps there are few instances in the annals of modern warfare, in which such persevering and successful courage has been displayed, as by the defenders of Zaragoza. All the means of attack which were in possession of the French, directed by the skill with which their long experience and success had supplied them, were made use of. The inhabitants were obliged continually to be upon their guard, and to be prepared to resist the most unexpected and secret, as well as the most open and violent assaults. The city was frequently bombarded in the middle

of the night, at the same time that the gates were attempted to be forced, under cover of the shells. More than once the French got into some parts of the town; but they were received with so much coolness and bravery, that they were never able to preserve what they had with so much difficulty and loss acquired. The women vied with their husbands, sons, and brothers, in the display of patriotism and contempt of danger: regardless of the fire of the enemy, they rushed into the very middle of the battle, administering support and refreshment to the exhausted and wounded, and animating, by their exhortations and example, all ranks to such a display of firmness and bravery as long secured this important city. When it is recollected, that the attacks of the French were numerous and varied, that they were constantly repeated with fresh, and generally with increasing forces, and that the sole defence of the city rested with its spirited inhabitants and the army of Palafox; some idea may be formed of the difficulties they must have undergone and surmounted, and of the glory to which they are so justly entitled. The patriots had gained possession of most of the sea-ports in the bay of Biscay, and headed by the bishop of St. Andero, repulsed the French in several attacks. The French force under General Moncey was also repulsed before Valencia, and the patriots were equally successful in several other quarters; so that by the end of July there did not remain above 40,000 French forces within the Spanish territory.

In the meantime preparations were making at Madrid for the reception of the new sovereign Joseph; and Murat, quitted the capital, to give way to the brother of Napoleon. Joseph arrived at Madrid in the latter end of July, with a guard of 10,000 men; but soon after his arrival, the news of the defeat and capitulation of Dupont reached Madrid, and threw the new court into the utmost consternation. They understood that the victorious army of Castanos was on its march towards the capital; and if he did not speedily retire from so dangerous a position, King Joseph dreaded either falling into the hands of the conqueror of Dupont, or of being intercepted in his retreat by the army of General Blake. In this situation he found himself under the necessity of quitting the capital which he had so lately entered, and before the end of the month he had reached Burgos in his precipitate flight towards the frontiers. Thus, within the space of two months, did the people of Spain behold their country almost entirely freed from the presence of the French; and this happy issue had been brought about by their own intrepidity. At a time when their situation was the most dispiriting and forlorn; when their king had been compelled to forsake them, and to make over his right to the throne to a foreign potentate; when they beheld scarcely any troops surrounding them on all sides, but those of their enemy they rose in arms, and opposed themselves, unskilled as they were in war, and totally unprepared for it, to a man before whom the mightiest empires in Europe had fallen.

The successes of the Spanish arms, though brilliant and important, were but transient. The leaders of the insurrection appear to have been but ill calculated to oppose the system of tactics which had been so often practised with success by the conqueror of Marengo, of Jena, and of Austerlitz. In a series of about 30 bulletins, published from the French army of Spain, comprehending from the beginning of November, 1808, to the middle of January, 1809, we read of nothing but the rapid movements and successes of the French, and the defeat and annihilation of the best appointed armies of the insurgents. In Galicia, General Blake, after having withstood Marshal Ney, in several encounters, was at length defeated, and his army dispersed. A division of the army of Estremadura, under Count Belvider, which had marched from Madrid to support the city of Burgos, was attacked and defeated by a division of the French army under the Dukes of Istria and Dalmatia; while the army of General Castanos was in a great measure dispersed, after a severe conflict on the heights of Tudela.

In the meantime Buonaparte had entered Spain, and taken the command of the French army. He advanced by rapid marches

marches towards Madrid, and at the end of November his advanced guard reached the important pass of Somosierra. This pass was defended by a body of 13,000 Spaniards, with sixteen pieces of cannon. They were attacked by the French under the Duke of Belluno, and after making a considerable stand, were entirely defeated. On the 2d of December Buonaparte arrived in the neighbourhood of Madrid, and on the 5th, he was master of that capital.

While the Spanish patriots were thus pursuing their plan of opposition to French tyranny with various success, the British cabinet were fitting out formidable expeditions to the coasts of Spain and Portugal. The British army under the command of Lieutenant-General Sir John Moore, proceeded on their march to the frontiers of Spain. And about the middle of the same month, a body of 13,000 British troops, under the command of Sir David Baird, arrived at Corunna, and proceeded through the interior of the country, intending to join Sir John Moore in the neighbourhood of Madrid.

A brigade of 10,000 men under General Hope, reached that capital, and established themselves at the Escorial; but on the approach of Buonaparte, were under the necessity of retiring.

Experience has shown that in their military campaigns on the continent, British forces have to contend with numerous difficulties, surmountable only by the utmost prudence and vigilance on the part of the commanding officers, and by a considerable degree of skill and foresight on that of the projectors of such undertakings. Never perhaps were these difficulties more severely felt than in the march of Sir John Moore from Portugal to the centre of the Spanish territory. It was found that in whatever direction he might prosecute his march, he would encounter either bad roads or scanty supplies of provisions. In particular, the difficulty of transporting the artillery over the Portuguese mountains was extreme; and the Portuguese at Lisbon were either egregiously ignorant of the state of the roads which led through their own country to the Spanish frontiers, or were unwilling to communicate the information which they really possessed. Under these circumstances it was found necessary to divide the British army; and it was determined to send forward one division consisting of 6000 men under the command of Lieutenant-General Hope, which was directed to march by Elvas, to enter Spain by Badajos, and to proceed along the Madrid road by way of Espinar. Another division, consisting of two brigades under General Paget, was detached by way of Elvas and Alcantara, where it was to pass the Tagus. Two brigades under General Beresford moved through Portugal by way of Coimbra and Almeida towards Salamanca, while three Brigades under General Fraser marched towards the frontiers of Spain by Abrantes and Almeida.

Burgos had been recommended by the Spanish government as the point of union for the British troops, and Madrid and Valladolid were appointed for magazines. The British had been led to expect that they would find between 60,000 and 70,000 Spaniards assembled under General Blake and the Marquis de la Romana in the provinces of Asturias and Galicia, and that a much greater number was ready to co-operate with them under the command of Castanos on the front and left of the principal French position. The Spaniards had been represented as unanimous in their enthusiasm for the cause of liberty, and as ready to treat the British troops as the saviours of their country. How far this information was correct, will be seen presently.

In marching through the Portuguese territory, the troops first encountered difficulties which they were not prepared to expect. The contractor at Lisbon, who had agreed to supply the divisions with rations on the march, failed in his contract, and excessive inconvenienc was experienced from the want of money. The divisions under Generals Fraser and Beresford were obliged to halt, and it was some time before they could again set forward. The proceedings of the central junta, on which all the movements both of the British and Spanish armies chiefly depended, were languid, tardy, and irresolute; and before the British troops could assemble in

any force in Spain, the principal armies of the patriots had been defeated and dispersed in almost every quarter. On the 8th of November Sir John Moore reached Almeida. The weather was at this time extremely unfavourable, and the troops were exposed to almost incessant rain. They entered Spain on the 11th of November, and on the 13th Sir John arrived with his advanced guard at Salamanca, where he halted, intending to assemble there all the troops which were on their march through Portugal. While he remained at Salamanca, he was informed that a considerable French force had advanced and taken possession of Valladolid, at the distance of only twenty leagues, by which one of the places that had been intended for magazines was lost. At this time Sir John had with him only three brigades of infantry without artillery, and it would be at least ten days before the whole of the divisions could come up. He was thus exposed to almost an immediate attack by the French without any effectual support from the Spaniards.

The situation of affairs in Spain had now become extremely critical; and every account sent to Sir John Moore by men of sound judgment, was filled with convincing proofs that the Spanish government had concealed from their ally the very desperate state of their affairs. General Hope, by a long and tiresome march, had reached the neighbourhood of Madrid, whence he wrote a letter to Sir John, stating that every branch was affected by the disjointed and inefficient construction of the government. On the 28th of November, Sir John was advertised of the late defeat and dispersion of Castanos, and of the little probability there was of his being able to march forward, so as to effect any thing of advantage. He therefore determined to fall back, though this determination was evidently in opposition to the wishes and advice of his officers. Fresh dispatches, however, from the seat of government, diminishing the losses which had been sustained by the patriots, and exaggerating the ardour with which the people were actuated, induced him to delay his retreat, especially as he had now a complete, though small corps, with cavalry and artillery, and could, by a movement to the left, easily effect a junction with Sir David Baird, while the division under General Hope had, by rapid marches, arrived in the neighbourhood of Salamanca.

In addition to the misrepresentations by which the commander of the British forces, and the British envoy at Aranjuez, had been deceived, they had now to contend with two designing men, who, it soon appeared, were in the French interest. These were Don Morla, the late governor of Cadiz, and a M. Charmilly. By the machinations of these men, Mr. Frere was led to advise, and Sir John Moore strongly incited to undertake, bringing the whole of the British force to the neighbourhood of Madrid, where they would soon have been completely within the power of the enemy. Though by these arts Sir John was effectually misled, he did not suffer himself to be drawn into so dangerous a snare. He, however, advanced beyond Salamanca, and sent forward the reserve and General Beresford's brigade towards Toro, on the Douro, where they were to unite with the cavalry under Lord Paget, who had advanced thither from Astorga. On December 12th, Lord Paget, with the principal part of the cavalry, marched from Toro to Tordesillas, while the brigade under General Stewart moved from Arivolo. In the vicinity of Tordesillas, near the village of Rueda, the British forces were first opposed by the French, a small party of whom were attacked and defeated.

While Sir John Moore was at Toro, he received intelligence that the Duke of Dalmatia was at Saldana with a considerable body of French troops, that Junot, Duke of Abrantes, was marching with another towards Burgos, and that a third, under the Duke of Treviso, was destined for Zaragoza. He was very desirous that the first of these generals should advance to meet him, and with this view he had come forward to Toro, which he reached on the 16th of December. He had hoped for effectual assistance from the corps commanded by the Marquis de la Romana, but he soon found that this general could render him no support. He had now resolved to threaten the communication between
France

France and Madrid; and, if a favourable opportunity offered, to attack the Duke of Dalmatia's corps, or any of the covering divisions that should present themselves. He foresaw that this would necessarily draw upon him a large French force, and of course would prove an important diversion in favour of the Spaniards; who would by this means have the opportunity of collecting in the south, and restoring their affairs. The army was now near the French position. The cavalry under Lord Paget were pushed so forward, that their patrols reached as far as Valladolid, and had frequent successful skirmishes with the enemy. Colonel Otway met a detachment of French cavalry, charged them, and made the whole prisoners.

On the 18th of December, Sir John's head-quarters were at Castro Nuevo, and Sir David Baird's at Benevente, on the road to join him. On the 20th, Sir John reached Majorca, where he was joined by Sir David Baird. The united British army now amounted to rather fewer than 26,000 men, of whom about 2000 were cavalry. The weather was extremely cold, and the ground covered with deep snow. Still the exertions of the troops were indefatigable, and the cavalry in particular attacked and defeated a considerable body of French horse. On the 21st, the army reached Sahagun, where Sir John established his head-quarters, and determined to halt for some time, to refresh his troops, after the fatigues which they had undergone.

Sir John had now arrived within a very short distance from Saldana, where the Duke of Dalmatia was posted, with the flower of the French army; and preparations were made for an attack, which was waited for with all the ardour and impatience which distinguish British troops. In the mean time, however, repeated couriers arrived at head-quarters, the bearers of unpleasant intelligence. Certain information was received, that a strong French reinforcement had arrived at Carrion, a little to the right of Sahagun, that the French corps, which was marching to the south, had halted at Talavera, and that the enemy were advancing from Madrid in considerable force. Sir John now saw that his motions had been watched by Buonaparte, and that all the arts of this experienced general had been preparing to entrap him. To advance was madness; to retreat, almost in the face of the enemy, was a measure of the utmost danger—but it was the only alternative.

On the 24th of December, Sir John began silently and secretly to prepare for his retreat, and to provide, as far as possible, for the defence of those parts of the country which were still held by the patriots. With this latter view, he directed Sir David Baird to take the route towards Valencia de Don Juan, while the rest of the army was to proceed by Castro Gonzalo. By this division, the magazines and stores which had been deposited at Benevente and Zamora, were also effectually secured.

According to the arrangement made, General Fraser, followed by General Hope, marched with their divisions on the 24th of December to Valderos and Majorca, and Sir David Baird proceeded with his to Valencia. To conceal this movement, Lord Paget was ordered to push on strong patrols of cavalry close to the advanced posts of the enemy. The reserve, with two light corps, did not retire from Sahagun till the morning of the 25th, following General Hope. Lord Paget was ordered to remain with the cavalry until evening, and then follow the reserve. These last were accompanied by Sir John. The retreat commenced in this deliberate manner. On the 26th of December, Sir David Baird reached the Eslar, and passed the ferry with less difficulty than was expected. He took post, according to his orders, at Valencia, and wrote to the Marquis of Romana, urging him to blow up the bridge of Mansilla. The other divisions of infantry proceeded unmolested to Castro Gonzalo. On the 24th, the advanced guard of Buonaparte's army marched from Tordesillas, 120 miles from Madrid, and strong detachments of cavalry had been pushed forward to Villalpando and Majorca. On the 26th, Lord Paget fell in with one of those detachments at the latter place. His Lord-

ship immediately ordered Colonel Leigh, with two squadrons of the 10th hussars, to attack this corps, which had halted on the summit of a steep hill. One of Colonel Leigh's squadrons was kept in reserve; the other rode briskly up the hill; on approaching the top, where the ground was rugged, the colonel judiciously reined-in to refresh the horses, though exposed to a severe fire from the enemy. When he had nearly gained the summit, and the horses had recovered their breath, he charged boldly and overthrew the enemy; many of whom were killed and wounded, and above 100 surrendered prisoners. Nothing could exceed the coolness and gallantry displayed by the British cavalry on this occasion. The 18th dragoons had signaled themselves in several former skirmishes; they were successful in six different attacks. Captain Jones, when at Placencia, had even ventured to charge 100 French dragoons with only 30 British; 14 of the enemy were killed, and six taken prisoners. The cavalry, the horse-artillery, and a light corps, remained on the night of the 26th, at Castro Gonzalo; and the divisions under Generals Hope and Fraser, marched to Benevente. On the 27th, the rear guard crossed the Eslar, and followed the same route, after completely blowing up the bridge.

We shall not attempt any farther detail of this dangerous and calamitous retreat, in which our army suffered extremely, from the fatigues of constant marching, from the badness of the weather, and even from the brutality of the Spaniards, in whose cause they had embarked. Before they reached Astorga, it was found necessary to divide the army. A body of 3000 men, under Brigadier-general Crawford, was detached on the road to Orense towards Vigo, while the main body, under the command of Sir John Moore, marched by Astorga and Lugo, on the road to Corunna. They left Astorga on the 30th of December, and on the 11th of January came in sight of Corunna. The army had now reached the sea-port from which they were to embark, but adverse winds had detained the transports, or the whole of the troops would have been speedily and safely on board. Only a few ships lay in the harbour, and in these some sick men and a few stragglers, under pretence of sickness, had immediately embarked.

During the whole march from Sahagun to Corunna, the British army was closely followed by the French, under Buonaparte and the Duke of Dalmatia; and the two armies were often so near each other, that the French patrols fell in, during the night, with the cavalry piquets of the British. The Duke of Dalmatia had joined Buonaparte at Astorga, and had increased his force to nearly 70,000 men, while the whole force of the British did not exceed 26,000. When Sir John's army reached Lugo, it was found that three divisions of the French were arranged in front, and it was thought advisable, on the 8th of January, to offer the enemy battle. This offer, however, the French thought proper to decline, and the Duke of Dalmatia stirred not from his post. When the army reached Corunna, the French were far in the rear, and it was hoped that the transports might arrive before the enemy could come up.

The retreat of the British, considering the circumstances under which it was effected, was a brilliant and successful achievement. Two hundred and fifty miles of country had been traversed in 11 days, during the worst season of the year, through bad roads, over mountains, defiles and rivers, and in almost daily contact with an enemy nearly three times their numbers. Though often engaged, the rear guard of the British had never been beaten, nor even thrown into confusion. Many losses had indeed been sustained, in baggage, artillery and horses, and many stragglers had fallen into the hands of the enemy; but neither Napoleon, nor the Duke of Dalmatia, could boast of a single military trophy taken from the retreating army. The greatest danger was still to be incurred; the position of Corunna was found to be extremely unfavourable; the transports had not arrived, and the enemy began to appear upon the heights. The situation of the army was by most of the officers thought so desperate, that they advised the general to propose terms to
the

the Duke of Dalmatia, that they might be suffered to embark unmolested; but this advice Sir John, without hesitation, rejected.

On the 12th of January, the French were seen moving in considerable force on the opposite side of the river Mero. They took up a position near the village of Perillo, on the left flank of the British, and occupied the houses along the river. In the mean time, Sir John was incessantly occupied in preparing for the defence of his post, and in making every arrangement for the embarkation of the troops.

On the 13th, Sir David Baird marched out of Corunna with his division, and took post on a rising ground, where he determined to remain all night. A division under General Hope was sent to occupy a hill on the left, which commanded the road to Betanzos, forming a semicircle with Sir David Baird's division on the right. General Frazer's division was drawn up near the road to Vigo, about half a mile from Corunna, and communicated with that under Sir David Baird, by means of the rifle corps attached to the latter, which formed a chain across the valley. The reserve under Major-general Paget occupied a village on the Betanzos road, about half a mile from the rear of General Hope. The higher grounds on the rear and flanks of the British were possessed by the French, a situation which gave the latter a considerable advantage.

In the evening the transports from Vigo hove in sight; but the enemy was now so near, and had, during this day, shown so much disposition to molest the British, that a general action was become inevitable. On the 15th, the enemy had advanced to a height where, the day before, a magazine, containing nearly 4000 barrels of gunpowder, had been blown up, and which was immediately opposite to the position of the British. On this day some skirmishes took place.

On the 16th, every thing was prepared for a general action. Most of the artillery had been embarked, as it was found that, from the nature of the ground, much artillery could not be employed with advantage. During the 13th and 14th, the sick, the dismounted cavalry and horses, were also nearly all embarked. On the morning of the 16th, the French on the hills were apparently quiet, and it was hoped that the embarkation might be effected in the course of that night; but about noon the enemy, who had in the morning received reinforcements, and had placed some guns in front of the right and left of his line, was observed to be getting under arms, to be moving troops towards his left flank, and forming various columns of attack at that extremity of the strong and commanding position which he had taken on the 15th, in front of the British line. This indication of his intention was immediately succeeded by a rapid and determined attack on the division under Sir David Baird, which formed the right wing, and was the weakest part of the line. The first effort of the enemy was met by Sir John Moore and Sir David Baird at the head of the 42d regiment, and the brigade under Lord William Bentinck. The village on the right became an object of obstinate contest. While leading on his division to support this position, Sir David had his arm shattered with a grape shot.

Not long after, while Sir John Moore was riding from post to post, everywhere encouraging his troops, and pointing out the most advantageous opportunities for attack or defence, his conspicuous situation had exposed him to the fire of the enemy. A cannon-ball struck his left shoulder, and beat him to the ground. He raised himself, and sat up with an unaltered countenance, looking intently at the Highlanders, who were warmly engaged. Captain Hardinge threw himself from his horse, and took him by the hand; then observing his anxiety, he told him the 42d were advancing, upon which his countenance immediately brightened. His friend Colonel Graham now dismounted to assist him: and, from the composure of his features, entertained hopes that he was not even wounded; but observing the horrid laceration and effusion of blood, he rode off for surgeons. The general was carried from the field on a blanket, by a serjeant of the

42d, and some soldiers. On the way, he ordered Captain Hardinge to report his wound to general Hope, who assumed the command. Many of the soldiers knew that their two chiefs were carried off: yet they continued to fight with undiminished courage; and, by the most determined bravery, not only repelled every attempt of the enemy to gain ground, but actually forced him to retire, though he had brought up fresh troops in support of those originally engaged.

The enemy finding himself foiled in every attempt to force the right of the position, endeavoured by numbers to turn it. A judicious and well-timed movement, which was made by Major-general Paget, with the reserve, which corps had moved out of its cantonments to support the right of the army, by a vigorous attack, defeated this intention. The major-general having pushed forward the 95th (rifle corps) and 1st battalion 52d regiment, drove the enemy before him; and, in his rapid and judicious advance, threatened the left of the enemy's position. This circumstance, with the position of Lieutenant-general Fraser's division (calculated to give still farther security to the right of the line) induced the enemy to relax his efforts in that quarter. They were, however, more forcibly directed towards the centre, where they were again successfully resisted by the brigade under major-general Manningham, forming the left of Sir David Baird's division, and a part of that under Major-general Leith, forming the right of the division under General Hope. Upon the left the enemy at first contented himself with an attack upon our picquets, which, however, in general, maintained their ground. Finding, however, his efforts unavailing on the right and centre, he seemed determined to render the attack on the left more serious, and had succeeded in obtaining possession of the village through which the great road to Madrid passes, and which was situated in front of that part of the line. From this point, however, he was soon expelled with considerable loss, by a gallant attack of some companies of the 2d battalion of the 14th regiment, under Lieutenant-colonel Nicholls. Before five in the evening, the British had not only successfully repelled every attack made upon the position, but had gained ground in almost all points, and occupied a more forward line than at the commencement of the action, whilst the enemy confined his operations to a cannonade, and the fire of his light troops, with a view to draw off his other corps. At six the firing ceased. The different brigades were reassembled on the ground which they occupied in the morning, and the picquets and advanced posts resumed their original stations.

Notwithstanding the decided and marked superiority which at this moment the gallantry of the troops had given them over an enemy, who, from his numbers and the commanding advantages of his position, no doubt expected an easy victory, General Hope did not, on reviewing all circumstances, conceive that he should be warranted in departing from what he knew was the previous and fixed determination of the late commander of the forces, to withdraw the army on the evening of the 16th, for the purpose of embarkation, the previous arrangements for which had already been made.

In this action the British troops had come off with glory; and there can be no doubt, from the repulse of the French forces, and their subsequent inactivity, that the honour of the victory belonged to the British. The victory had indeed cost them dear. They had lost one of their best generals; and probably nearly 1000 men had been killed or wounded during the action. It had been achieved at the termination of a long and harassing service. The superior numbers, and advantageous position of the enemy, not less than the actual situation of the British army, did not admit of any advantage being reaped from success. The lustre of the British arms had, however, been maintained under the most disadvantageous circumstances. The army which had entered Spain amidst the fairest prospects, had no sooner completed its junction, than, owing to the multiplied disasters that dispersed the native armies around it, it was left to its own resources. The advance of the British troops from the

the Douro afforded the best hope, that the south of Spain might be relieved; but this also afforded the enemy the opportunity of directing his numerous troops, and concentrating all his principal resources. These circumstances had produced the necessity of rapid and harassing marches; and the very shameful inattention of our ministry and the commissariat to the wants of the army, had diminished the numbers, exhausted the strength and impaired the equipment of the army.

Notwithstanding the ill success which had thus attended the expedition under Sir John Moore, the spirit of patriotism which appeared still to actuate the southern provinces of Spain, and the hope that the common cause might there be supported to greater advantage, induced the British ministry to send another military force to the western peninsula of Europe, to co-operate with the patriots who still continued in arms. Accordingly, a body of about 15,000 forces, under the command of Sir Arthur Wellesley, whose bravery and good conduct in the battle of Vimiera, had recommended him, in a particular manner, both to the ministry and the nation, was dispatched towards the coast of Portugal, where Marshal Beresford still maintained a British force; while General Hill, with about 5000 infantry, and 400 cavalry, sailed from Ireland with the same destination. General Hill arrived at Lisbon on the 4th of April, and soon after Sir Arthur landed with the main body. On the 7th of April the army moved forward towards the Douro, and crossed that river during the night of the 11th, a little above Oporto. Here they fell in with a French detachment from the army of the Duke of Dalmatia, which they routed and put to flight, after a short but well contested action.

After this action the Duke of Dalmatia found it necessary to retreat. He passed through the defiles of Salamonde; and thus gained considerably on the British army, though he was obliged to leave behind him part of his artillery. On the 19th of May he was at Allaritz, and on the 20th he continued his retreat across the Minho, which he passed at Orense, thus leaving Portugal once more in possession of the British forces.

Sir Arthur Wellesley, after having remained for some time in the Portuguese territory, to refresh his men after the fatigues which they had undergone, advanced into Spain, and effected a junction with general Cuesta, who then commanded a considerable part of the remains of the patriotic army. In the latter end of July, the allied army, had advanced to Talavera de la Reyna, in the neighbourhood of which they were encountered by a formidable French force, consisting of a corps commanded by Marshal Victor, another under General Sebastiani, the guards of Joseph Buonaparte, amounting to 8000 men, and the garrison of Madrid. This large force was commanded by Joseph Buonaparte in person, assisted by Marshals Jourdan and Victor and General Sebastiani.

On the 27th of July, an attack was made by the French army on that of the allies, who had taken up their position at Talavera. The attack was vigorous, but was repelled with great spirit and success, though not without considerable loss on the part of the British.

The defeat of this attempt was followed about noon of the 28th by a general attack of the enemy's whole force, on the whole of that part of the position which was occupied by the British army. The general attack began by the march of several columns of infantry into the valley, with a view to attack the height occupied by Major-general Hill. These columns were immediately charged by the 1st German light dragoons and 23d dragoons, under the command of General Anson, and supported by General Fane's brigade of heavy artillery; and although the 23d dragoons suffered considerable loss, the charge had the effect of preventing the execution of that part of the enemy's plan. At the same time an attack was directed upon Brigadier-general Alexander Campbell's position in the centre of the combined armies, and on the right of the British. This attack was most successfully repulsed by Brigadier-general Campbell, supported by the king's regiment of Spanish cavalry, and

two battalions of Spanish infantry; and the allies were left in possession of the enemy's cannon.

An attack was also made at the same time on Lieutenant-general Sherbrooke's division, which was on the left and centre of the first line of the British army. This attack was most gallantly repulsed by a charge with bayonets, by the whole division.

Shortly after the repulse of this general attack, in which apparently all the enemy's troops were employed, he commenced his retreat across the Alberche, which was conducted in the most regular manner, and effected during the night, leaving in the hands of the British 20 pieces of cannon, ammunition, tumbrils, and some prisoners.

Though the French were defeated in this engagement, and, according to Sir Arthur Wellesley's account, must have lost at least 10,000 men, the loss of the British was very great. By the official returns it is stated to exceed 5000. And the action, though brilliant, does not appear to have been attended with much advantage to the allies, as, from the reinforcements which the French army was daily receiving, Sir Arthur Wellesley was soon compelled to fall back towards the frontiers of Portugal, leaving behind him much of his baggage and the whole of his sick and wounded. It must be recorded to the honour of the French commander, into whose hands these unfortunate men had fallen, that he treated them with the utmost humanity, and afforded them every accommodation which the nature of their situation admitted.

The British army now crossed the Tagus, and held a south-west course till reaching Badajos, where it remained during the rest of the year, in a position which covered that fortress.

In the early part of 1811 the south-west of Spain, was the scene of very active operations. A body of Spaniards and British, marching northward from Gibraltar, approached the south-west extremity of the line occupied by the French troops engaged in the blockade of Cadiz. General Graham commanded the British, and on 5th March, at noon, was drawing near to the close of a long march, when he received intelligence of the advance of a French force. Knowing the height of Barrosa, which he had just left, to be the key of the position, he immediately countermanded his corps, and had proceeded but a short way, when he found himself unexpectedly near to the enemy, whose left division was seen ascending the hill of Barrosa, while their right stood on the plain within cannon shot. To retreat was wholly unadvisable; an immediate attack was determined on, though unsupported by the Spaniards, and inferior to the enemy. A battery opened against the right division of the French, and caused them considerable loss, but they continued to advance until a charge with the bayonet drove them back with great slaughter. With the other division on the ascent of the hill, there took place a similar conflict with a similar issue; both sides fought with courage, and both sustained a heavy loss; that of the British was above 1200; that of the enemy nearly double. The action lasted an hour and a half: our success was owing partly to the effect of our guns, but still more to the firmness of the infantry.

About the same time, but at a distance of 200 miles to the north of Cadiz, the important fortress of Badajos fell into the hands of the French. This painful intelligence reached Lord Wellington when following up the retreat of Massena; and no time was lost in detaching a body of troops to the south of Portugal to enable Marshal Beresford to advance and form the siege of Badajos. This called from the south the army of Soult, 20,000 strong; on their approach, Marshal Beresford raised the siege of Badajos, and marched to meet the French near the river Albuera, or Albuera, with a force numerically superior, but among which there was only 8000 British. Our army awaited the attack in a position as good as a country, in general level, afforded; but our general, in an evil hour, entrusted to the Spaniards a rising ground which formed the key of that position. The French columns succeeded in driving them from it, and were about to rake with their field-pieces all the allied line. A British division marching to attack the enemy with the bayonet, were

unfortunately turned by a body of lancers, who, amidst the smoke from the firing, had approached unperceived. Our loss was very great here, and there remained only one fresh division, which advancing gallantly to the charge, and, being supported by the other corps, drove the French with great slaughter from the field. The battle lasted five hours, and so great was the loss, that of the British force engaged, nearly one half were killed or wounded: the French had fought with equal bravery, and their loss also was very great. Lord Wellington reached the army some time after, and determined to renew the siege of Badajos; breaches were made in the walls, and two attempts at assault were hazarded (6th and 9th June), but in vain; the advance of the French army; from the north, in concert with that of the south, necessitated the raising of the siege. Here ended the active operations of the year; our army remained some time encamped in the central part of Portugal, after which Lord Wellington marched northward and threatened Ciudad Rodrigo, but retreated before a superior force collected by the French.

The campaign of 1812 commenced very early, Lord Wellington investing Ciudad Rodrigo on 8th January. The siege was pressed with activity, and a breach being made, the town was carried by storm on 19th January, though with a great loss, particularly in officers, among whom was General Mackinnon. So prompt had been our operations, that the French army approaching to the relief of the place, would not at first believe its capture. Soon after Lord Wellington turned his forces to the south and invested Badajos, already the scene of such obstinate contests. Here, also, the operations were pressed with great rapidity, that they might be brought to an issue before the arrival of the French army from Cadiz. On the night of 6th April, Badajos was attacked on several points by escalade; but we were repulsed in every direction except at the castle, which was fortunately carried and, commanding all the works, the consequence was the surrender of the town next day, after a siege which, short as it had been, cost us very nearly 5000 men. Secure on the south, Lord Wellington now marched towards the north, and detached Sir Rowland Hill to make a sudden attack on the French station at Almaraz, where the bridge over the Tagus served as the chief military communication between the northern and southern army. The expedition was successful, the entrenchments being stormed and destroyed. Lord Wellington now (May 19,) marched against the French army in the north, commanded by Marmont, and reached Salamanca on 16th June. The forts in that town being taken after some sharp fighting, the French retreated to the Douro, but being soon reinforced resumed the offensive, and obliged our army to retreat in turn. These movements continued several weeks; Lord Wellington being obliged to yield ground to his opponent, but ready to attack him on the commission of any material fault. Such an opportunity at last occurred on 22d July, near Salamanca, when the French, rendered confident by the enemy's continued retreat, extended their left, and presented an opening, which was instantly seized by their vigilant adversary. Columns were sent forward against the enemy's left and centre; the former succeeded completely, the latter met with much opposition. Great gallantry was shown and heavy loss sustained, on both sides; at last the French centre and right were both driven from the field. The darkness prevented the British making prisoners; but a body of cavalry joining in the night, the hostile rear-guard was attacked next morning, and obliged to surrender. The loss was about 3000 British and 2000 Portuguese; of the enemy in killed and wounded at least equal, with the loss of between 6000 and 7000 prisoners. The British force in the field was 22,000.

The consequences of the victory of Salamanca were the pursuit of the French army; the occupation of Madrid on 12th August by the allies; the abandonment by the French of the works constructed with vast expence against Cadiz: the evacuation of Andalusia, Granada, and all the south of Spain. But as this loss of territory was not attended by a

loss of troops, it became incumbent on Lord Wellington to prepare against a vigorous attack from forces that were rapidly concentrating. He made repeated attempts to take the castle of Burgos and the military stores collected there, but this fort, defended by a strong garrison and a vigilant commander (General Dubreton), baffled all our efforts, and proved the cause of a considerable sacrifice of lives. Meantime, the approach of Soult from the south, and of the army that had fought at Salamanca from the east, obliged Lord Wellington to adopt the alternative of retreat. He began on 20th October, and proceeded westward, in a line nearly parallel to the Douro, taking above three weeks to recross the country to the scene of his victory at Salamanca. There, united with General Hill, and at the head of 50,000 men, he remained on ground lately so propitious; hoping that an opportunity might offer to attack the enemy, though now increased, by the junction of their two armies, to the number of 70,000. But Soult's positions were found too strong for attack, and the interval afforded him by Lord Wellington was diligently employed in pushing forward detachments to cut off our communications with Portugal. Retreat now became indispensable; and here, amidst hasty marches, and a scarcity of five days, there occurred scenes of insubordination which recalled all the disorders of our march to Corunna, and drew from Lord Wellington a most severe censure in general orders. Fortunately, similar privations on the side of the French prevented them from making many prisoners, and, on 20th November, on the frontier of Portugal, was closed this eventful campaign.

The campaign of 1813 opened in the east of Spain, by an attack on the allied army under Sir John Murray, stationed not far from Alicante; the ground it occupied was strong, but the length of the position, two miles and a half, made Suchet, who commanded the French, conceive the hope of penetrating it at one or other point. In this, however, he was foiled with a loss of from 2000 to 3000 men; the only check of importance received by that commander in all his campaigns in Spain. Soon after this success, our army was engaged in the bold plan of proceeding by sea to Catalonia and besieging Tarragona. The wind proved favourable; the main body was landed near Tarragona, and a detachment succeeded, by great exertion, in taking Fort St. Philip on the mountain called the *Cold e Balaguer*, which blocked the nearest road for the arrival of the French from the south. Suchet, however, lost no time in marching northwards; our general, Sir John Murray, considered his force (which was chiefly Spanish) unable to withstand the French; he therefore embarked and returned to Alicante, a measure which incurred censure, but appears fully justified by circumstances, and still more by the conduct of his successors in the command.

Suchet, though successful on this occasion, soon found himself unable to retain his extensive line of occupation. The battle of Vittoria brought a new enemy on his rear, and obliged him to withdraw first from Valencia, and subsequently as far as Barcelona. Our army now advanced by land, and resumed the siege of Tarragona, with the power of retreating, not as before by sea, but on the country behind; an alternative to which a second advance by Suchet soon compelled our new commander, Lord William Bentinck. The French, however, unable to occupy an extended position, blew up the works of Tarragona and retired. Our army advanced anew, but was again checked and obliged to draw back, exhibiting a striking proof of the impracticability of opposing an active enemy with a mixed force, of which the Spaniards formed a large proportion.

We now turn to the western part of the peninsula, the field of the commander-in-chief, and of the far larger portion of our force. Lord Wellington, averse to open the campaign till every part of his troops was ready to co-operate with efficiency, did not move from quarters till after the middle of May. He knew that he would have much ground to traverse, retreat being evidently the policy of the French, weakened as they were by the recall of 25,000 veterans,

veterans, who had been feebly replaced by a body of conscripts. Lord Wellington was now, for the first time, at the head of a superior force, which he wielded with consummate skill. The strength of the enemy lay in the line of the Douro, which they expected to defend with advantage, so far at least as to make us purchase dearly its acquisition; but all this was prevented by Lord Wellington making his left division cross the river on the Portuguese territory, and advance along its northern bank; while he and Sir Rowland Hill, at the head of separate corps, marched, after several feints, in a diagonal direction, so as to support this movement, and effect a junction in an advanced position. The French, threatened with being taken in the rear, evacuated one town after another, and, even at Burgos, declined to fight on ground where late recollections would have been so animating; they continued to retreat, increasing from time to time their numbers by the garrisons of the evacuated towns, until, at last, they took a position at Vittoria, a town in Biscay, near the north-east frontier of Spain.

The position of the French extended from north to south, and was of great length. Their left rested on heights; part of their centre was also on heights, and their right was near the town of Vittoria. The Zadora, a stream of considerable size, but crossed by several bridges, ran nearly parallel to their front. Both armies were numerous, particularly that of the allies. It was the first time that nearly 40,000 British had fought together in Spain. Lord Wellington acted on the offensive throughout, and began the operations by taking possession of the heights near the extreme left of the enemy. This was easily effected; but their importance being soon perceived by the French, an attack was made to recover them. An obstinate contest took place, but the British on the heights repelled every assault. Under cover of these heights, our right wing advanced, and took a village (Sabijana) in front of the enemy's centre. It was in vain the French attempted to retake this village. The centre of the allies crossed the river near it, and the centre of the French withdrew from their position, retreating to the town of Vittoria. At first this retreat took place in good order, but an alarming account was soon received from the French right. That part of their position had been defended by the river and two *têtes-de-pont*, but the troops of our left wing had taken, first the heights commanding these forts, and soon after the forts themselves, baffling every effort of the enemy to retake them. The great road leading to the north was thus in possession of the allies; hence a general alarm and confusion throughout the French army. Their reserve was hastily withdrawn from its position, and pressed, with the whole army, along the only remaining road to the eastward; abandoning all their artillery, their ammunition, and their baggage. The loss of the battle was imputed by the French to Jourdan, whom Buonaparte, in a luckless hour, had allowed his brother to substitute to Soult; and who here, as at Talavera, was too late in discovering the importance of commanding positions. The loss in men was not particularly severe; that of the allies in killed and wounded was under 4000, and that of the French probably not much greater. The temptation afforded by the plunder of the baggage prevented our troops from making many prisoners; but the spirit of the enemy was shaken, and the loss of their artillery and stores obliged them to retreat across the Pyrenees.

The next operation of consequence was the siege of San Sebastian, a frontier fortress of great importance, which the French made the most vigorous efforts to relieve. Their army, provided anew with ammunition and cannon, advanced under the command of Soult, and drove back, after some sharp actions, the British corps posted in the passes of the Pyrenees. Our troops retreated to the vicinity of Pamplona, where, on the 27th, and still more on the 28th, they sustained a succession of impetuous attacks from the enemy. On the 29th Lord Wellington resumed the offensive, drove the French from their position, strong as it was, and obliged them to retrace their steps through the Pyrenees.

Our loss in these actions was about 6000 men in killed and wounded; that of the enemy was still greater, exclusive of 4000 prisoners.

At San Sebastian we had been repulsed in an assault on 25th July; the siege was continued, and a final assault on 31st August led to the capture of the place, though with the loss of 2500 men. The farther operations were the entrance of our army on the French territory on 7th October; the capitulation of Pamplona on the 26th, and a general attack on the position of the French near St. Jean de Luz on 10th November, after which they retreated across the Nivelle. But this mountainous country afforded a number of positions, and our next task was to drive the enemy from behind the Nive, a large river flowing northward from the Pyrenees. This was partly accomplished on 9th December; but on several succeeding days the French commanded by Soult, made impetuous attacks on the allied army, all anticipated by Lord Wellington, and all repulsed with heavy loss. Still the rains of the season, and the size of the mountain streams, retarded our operations. In January (1814) our army made some farther progress, and on 25th February, attacked the French in a position near Orthes, behind the Gave de Pau, another large river flowing from the Pyrenees. This attack was successful; and the retreat of the French was followed by the desertion of a number of their new levies. Soult's army now drew back, not in a northerly but easterly direction, to join detachments from the army of Suchet in Catalonia. At Tarbes, on 20th March, the fighting was of short duration, but a sanguinary battle took place at Toulouse, on 10th April;—a battle attended with a loss to the allies of nearly 5000 men, which, as well as a great sacrifice of lives on the part of the French, might have been prevented, had earlier intelligence arrived of the overthrow of Buonaparte, and the change of government at Paris.

We shall now retrace our steps to give some account of the civil history of Spain, during the period we have just described. In the year 1811, the new constitution was established, of which the following is an abstract:—

The sovereignty is declared to reside essentially in the nation which, being free and independent, neither is, nor can be, the patrimony of any person or family.—All Spaniards, without distinction, are subject to taxation.—“The religion of the Spanish nation is, and shall be for ever, the Catholic, Apostolic, and Roman, which is the only true religion.”—“The nation,” it is added, “protects it by wise and just laws, and forbids the exercise of any other whatever.”—The government of the Spanish nation is stated to be “a limited hereditary monarchy.”—The power of making laws is vested “in the Cortes, jointly with the King.”—In describing the class of Spaniards who enjoy the privileges of citizenship, persons “reputed of African origin, either by the father or the mother's side,” are excluded. A similar exclusion is given to Spaniards who obtain naturalization in another country, or who, without leave, absent themselves five years from Spain. The only basis for the number of representatives in the Cortes is Population, to be taken from the census of 1797, till one more correct can be made. For every seventy thousand souls there is to be one deputy in the Cortes. The returns of the members are made by three successive elections. Every parish appoints electors for the district to which it belongs. These repair to the chief town of the district to choose another set of electors, who, lastly, meeting in the capital of the province, make the final appointment to the Cortes. The Cortes is triennial. No member can be elected for two successive representations. No debate can be carried on in the presence of the king; his ministers may attend and speak, but are not allowed to vote. There is a permanent deputation, or committee of the Cortes, composed of seven members, appointed by the whole body, before a prorogation or dissolution, whose duty is to watch over the executive, and report any infringement of the constitution to the next Cortes. It also belongs to them to convoke an extraordinary Cortes in the cases prescribed by the constitution.

The powers of the Cortes are chiefly these: 1st. To move and pass the laws; and to interpret and alter them when necessary. 2d. To administer the constitutional oaths to the King, the Prince of Asturias, &c. 3d. To determine any doubt or fact relative to the succession. 4th. To elect a regency, and define its powers. 5th. To make the public recognition of the Prince of Asturias. 6th. To appoint guardians to the king while a minor. 7th. To approve or reject treaties previous to ratification. 8th. To allow or refuse the admission of foreign troops into the kingdom. 9th. To decree the creation or suppression of offices in the tribunals established by the constitution, as well as of places of public trust. 10th. To fix, every year, by the king's proposal, the land and sea forces. 11th. To regulate the military code in all its branches. 12th. To fix the expenses of the government. 13th. To impose taxes, contract loans, and direct every thing relating to the revenue. 14th. To establish a plan of public instruction, and direct the education of the Prince of Asturias. 15th. To protect the political liberty of the press. 16th. To enforce the responsibility of the secretaries of state, and other persons in office.

Laws may be proposed, in writing, by any one of the deputies. Two days after the motion, the bill is to be read a second time. It is then determined whether the subject is to be debated, or to be referred to a committee. Four days after the bill has been voted worthy of discussion, it is read a third time, and a day is appointed for the debate. A majority of votes decides the fate of the bill: the members present on these occasions must exceed the half of their total number by one.

The powers of the king are, 1st. To suspend the passing of a law by withholding his sanction. He can exercise this power against any decree of the Cortes, for two consecutive sessions; but is compelled to give his assent if the same law is passed by three Cortes successively. 2d. The executive power resides exclusively in the king, and extends to whatever relates to the preservation of public order in the interior, and to the external security of the state, according to the constitution and the laws. The privileges and duties of the executive are thus detailed in the constitution: the king may issue decrees, regulations, and instructions, for the more effectually enforcing of the laws;—it is his duty to watch over the administration of justice;—he declares war, and makes peace, under the control of the Cortes;—he appoints judges to all the civil and criminal courts, on the presentation of the council of state;—all civil and military employments are of the king's appointment;—he presents to all bishopricks, ecclesiastical dignities and benefices which may be in the gift of the crown; all by the advice of the council of state;—the king is the fountain of honour; the army and the navy are at his command, and he has the appointment of generals and admirals;—he has the right of coinage, and the privilege of impressing his bust on the metallic currency of the realm;—the king can propose new laws, or amendments to those in existence.—It belongs also to him to circulate or withhold the Pope's rescripts and bulls;—he can choose and dismiss his own ministers.

The following checks are laid on the king's authority by the constitution:—

1st. The king cannot prevent the meeting of the Cortes at the periods fixed by the constitution; neither can he dissolve them or disturb their sittings. His advisers and abettors in such attempts are guilty of treason. 2d. If the king should quit the kingdom without the consent of the Cortes, he is understood to have abdicated the crown. 3d. The king cannot alienate any part of the Spanish territory. 4th. He cannot abdicate the crown in favour of his successor without the consent of the Cortes. 5th. He cannot enter into any political alliance, or make commercial treaties without the consent of the Cortes. 6th. He cannot grant privileges or monopolies. 7th. The king cannot disturb any individual in the enjoyment of his property, nor deprive him of his personal liberty. If the interest of the state should require the arrest of any individual by virtue of a royal order, the prisoner must be delivered over to a competent tribunal

within eight-and-forty hours. 8th. The king cannot marry without the consent of the Cortes; he is supposed to abdicate the crown by taking a wife against their will.

The Council of State is composed of forty individuals, viz. two bishops, two priests, and four grandees; the other thirty-two must not belong to any of these classes. The members of the Council of State shall be chosen by the king out of a triple list presented to him by the Cortes. The Councillors of State cannot be removed without a trial before the Supreme Court of Justice. Their salary is fixed by the Cortes. The functions of this Council of State are to advise the king on all important matters of government, and especially upon giving or refusing his sanction to the laws, declaring war, or making treaties. The king, besides, cannot bestow any ecclesiastical benefice, or appoint any judge, but at the proposal of the Council of State, who, upon every vacancy, are to confine his choice to one out of three individuals, whose names they are to lay before his majesty.

The laws for the security of personal liberty are these, 1st. No Spaniard can be imprisoned without a summary process, wherein he is credibly charged with the infraction of some law which subjects the offender to corporal punishment; 2d. The arrest cannot take place without the warrant of a competent judge; 3d. Prisoners are not to be examined upon oath; 4th. The gaoler shall keep a register of the prisoners, expressing the warrant, and the alleged cause of confinement.

Such are the main articles of the Spanish Constitution; a production which, considering the circumstances of its appearance, highly deserves the attention of the politician and the philosopher. Spain had been for ages under the most effectual restraints which can be laid on the human mind, to prevent its dwelling upon subjects connected with the authority of civil and ecclesiastical rules. Few Spaniards, out of the learned professions, devoted any part of their time to reading. The knowledge of the clergy was generally limited to scholastic divinity, as that of the lawyers to the forms of the civil courts. A small proportion of both classes had privately ventured to look beyond the bounds which church and government had set to their speculations, and, books being smuggled from France, an inconsiderable number were become initiated in the principles of the French Philosophical School. The seeds of doubt and dissent, in matters of religion and policy, had greatly spread for the last forty years; but the bulk of the nation was still without a thought on these subjects, and blindly followed the impulse which time and habit had given them. The events which dethroned Charles IV. had no farther broken these habits than merely to show the people how effectually they could oppose their own will to the constituted authorities. But their loyalty was not impaired by their successful efforts. The name of Ferdinand VII. was the great bond of union which preserved the Spaniards from anarchy. To defend the authority of the crown was the only object of their general insurrection; and, having deposited its unbounded powers in the hands of a few, the people retired to their homes, setting no limits to their obedience.

Had not the progress of the French armies dispersed the *Central Junta*, and concentrated the fugitive patriots at Cadiz, it is more than probable that the Cortes would have been assembled according to the ancient forms, and that the privileged classes, supported by the majority of the nation, would have defeated any attempt to alter the old constitution. But Cadiz offered to that party, which has been since known by the name of *Liberal*, the most favourable opportunity of striking a deadly blow at the very root of the monarchical power, under which they had so long groaned.

From its maritime position, its commercial interests, and the foreign extraction of many of its inhabitants, Cadiz has, at all times, exhibited a scene of life so different from that which strikes the observer in the interior, that, upon entering its walls, he might imagine himself suddenly transported out of the kingdom. There, instead of the national prejudices in favour of birth, he might perceive the pride of wealth, and an ill disguised impatience of all other claims to respect

respect and influence. But if the rich merchants decked themselves with the marks of distinction so eagerly coveted by Spaniards, they still wore them without ease or satisfaction. Apparently raised by these externals to the ranks of the old titled gentry, the new marquis or knight still found himself but little removed above those of his former condition. He could not meet with the hereditary deference which the *Caballero* of the interior found in the labouring classes. Cadiz, in its days of prosperity had no poor; for, while a stream of wealth was poured in from the American colonies, the sea forbade its population to spread beyond the limits of comfortable subsistence. The line of distinction between the higher and the lower classes was, therefore, less marked than in other large towns of the peninsula; and, when the season of mercantile prosperity was over, as the depression was general, it left the various classes at the same proportionable distance. Cadiz cherished, thus, a republican spirit. The line which divided her rich and her poor, her workmen and their employers, was almost imperceptible when compared with the gulf of prejudice and pride which separated the merchant from the grandee. Thus, undivided by jealousies of rank, and feeling in common that impatience of political superiority which is inherent to the human heart, the people of Cadiz were ready to greet any prospect of change in the monarchical and aristocratical system of the country.

All that was wanting to bring these dispositions into action, and give them a definite aim, was driven into Cadiz by the advance of the French armies within sight of its walls. Madrid had, for a long time, been the resort of the most enlightened Spaniards; the only spot where persons, who had embraced *liberal* principles, could feel the oppressive yoke of religious tyranny somewhat eased on their necks. As they generally belonged to that numerous class of the Spanish gentry who look up to the patronage of government for the means of subsistence, the court drew them together from the provinces. On the prospect of the political changes which the captivity of Ferdinand opened to the country, these men attached themselves to the Central Junta, and finally followed its members in their flight from Seville to Cadiz. Thither, too, flocked all the stragglers of the philosophical party; and, on the dissolution of that dull, dilatory knot of ill-assorted men, who, under the veil of dignified gravity, had for a time concealed their unfitnes to direct the nation, the Spanish speculatists found themselves in the midst of a population highly disposed to listen to their doctrines, to embrace their views, and constitute them the organs of the new laws which were to remodel the kingdom.

The majority of the first Cortes being composed of the class of men whom, by anticipation, we have called *Liberales*, the project of a Constitution was immediately set on foot, and a committee of the ablest members appointed to draw up the fundamental code of the monarchy. Such a task, at all times arduous, was, in the present circumstances of the country, beset with peculiar difficulties. The legislators, confined within the walls of a town where innovations could not fail to be popular, went through their task under a strong delusion, mistaking their own wishes and the applause of the surrounding multitude for the sense of the nation. Encouraged by the absence of the king, placed beyond any check from the privileged classes, and the weight of the landed property of the country, it is surprising that the framers of the new constitution were not more rash than they appear in the code, of which we have laid an abstract before our readers.

We strongly suspect, however, that the authors of the Spanish constitution were less disposed to consider the real sense of the nation, than to prepare, in their code, the most effectual means of working a radical change in the public mind.

On one subject alone the authors of the Constitution yielded to national prejudice without reserve or modification. The article on religion is, unfortunately, an accurate expression of the opinions which the mass of the Spanish nation hold upon that point. But the *Liberales* meant more than they dared to express—the bigots gained all they wanted.

Thus, while victory was apparently on the side of the former, the latter held, in the religious intolerance of the country, now raised into a constitutional law, the strongest pledge of a future and more permanent triumph. The events which followed the return of Ferdinand must convince every impartial judge, that the great mass of the Spaniards were not disposed to second the views of the *Liberales*; and that, if the constitution has, at a later period, had influence enough to arm one part of the kingdom in its defence, it owes this support to the injustice and misconduct of the court faction after the restoration, and not to an original attachment on the part of the people.

The rapid series of misfortunes which had shaken the imperial throne of France to its foundations, opened the way for the return of the captive Ferdinand to Madrid. But an absence of six years, employed by the friends of constitutional liberty in disseminating the principles of political reform, and fomenting a spirit of jealousy against the crown, had now created an active party, who dreaded the appearance of a monarch, born and bred a despot, among a people whose habits were those of implicit obedience.

By a decree of the Cortes, the king was suspended from the exercise of all power till he should take the oath which the new constitution prescribed. A route was made out for his journey from the frontiers to Madrid, and an escort directed to watch over him in his progress. The Cardinal, president of the Regency, was to meet his royal relative on the road, under strict injunctions not to perform the usual ceremony of kissing the king's hand. General Copons, the military commander of Catalonia, was made the bearer of copies of the constitution, and of the decree which suspended the royal authority. These he was to deliver into the hands of Ferdinand on the frontiers of the kingdom.

The king entered the Spanish territory on the 24th of March, 1814, and followed the route prescribed by the Cortes, till the vicinity of Zaragoza afforded him a pretext for visiting that renowned scene of Spanish patriotism. He soon perceived a general indifference to the constitution among the lower classes; a jealousy of the new men who had risen into importance by means of the late changes; and a revival of those feelings of passive loyalty which the unbounded power of the Spanish monarchs, during so many centuries, had blended with the national character. From Zaragoza, Ferdinand repaired to Valencia, a city well affected to the crown, where Elio, a royalist general, had the command of a considerable body of troops. Thither flocked many grandees and dignitaries of the church, anxious to inform the king of the turn of public opinion in favour of an absolute monarchy.

Elio, in the name of his military division, presented a memorial to the king, in which he was entreated to govern in the manner of his ancestors. A petition, signed by sixty-nine members of the sitting Cortes, reached the king, about this time, describing that body as a mere tool in the hands of a republican party, without freedom of debate, and acting under the controul of a mob.

On the 4th of May, 1814, a decree was solemnly promulgated, in which the Cortes were declared illegal, and all their laws consequently rescinded. The spirit of the worst times of the Spanish monarchy seemed to have dictated this first act of the restored Ferdinand—that king for whom Spaniards of all classes, opinions, and denominations, had been lavish of their blood. Having thus announced his intention to wipe off the memory of constitutional freedom, he set off for the capital, preceded by a division of Elio's army, under the command of General Eguía. These troops found no resistance either on their way to Madrid, or upon entering that town. The people, on the contrary, seemed generally disposed to greet the approach of the absolute king. The Cortes, thus despised and neglected by the majority of the Spaniards, and internally cankered by the presence of a strong party, who had constantly aimed at the destruction of the system which they had sworn to support, were instantly dispersed by the soldiers. The arrest of the two inferior agents, Agá and Ciscar, and of the president and

secretary of the Cortes, which took place on the nights of the 10th and 11th, seem to have been considered as preparatory steps to the re-appearance of Ferdinand in the capital.

The news of these events had scarcely reached the chief towns in the provinces, when the mob, headed by their usual leaders, the priests, broke out into fierce demonstrations of joy, calling for the instant restoration of the Inquisition, and hastening to demolish the lapidary inscriptions, which the Cortes, from the vanity of displaying their triumph over their opponents, had caused to be erected in every town and village. It is fortunate, indeed, that no bloody scenes followed this reaction of a long suppressed popular feeling; though a desperate attempt was made at Corunna against the most active members of the Liberal party in that town, who had been previously committed to prison.

Had Ferdinand and his advisers allowed their judgment to prevail over their resentment, they would have readily perceived that their future security was not consistent with the habits of insubordination which the Spanish mob was so rapidly acquiring; and that leniency and forgiveness were the most effectual means of thinning the ranks of their enemies. The court party, however, showed a fixed determination of allowing full sway to their revengeful spirit. The arrest of between thirty and forty deputies of the late Cortes, attended with seizure of papers and sequestration of property, was decreed by the king, who appointed a commission of three judges, two of whom had been fellow-deputies of the prisoners, to collect evidence against them. By another order, the members who had subscribed the above-mentioned petition for the repeal of the constitution, were invited to criminate the Liberal deputies for their conduct and opinions during the last session.

In the course of this persecution, not one was spared who had, directly or indirectly, contributed to the establishment of the constitutional system. The number of state prisoners was increased in the month of June, by the arrest of forty-five individuals, formerly members of the Cadiz Cortes, and literary men of eminent talents, who had assisted the popular government with their pen. The trial of the prisoners, if such a name can be given to judicial proceedings which precluded all chance of acquittal, was conducted with more than Spanish dilatoriness. Three sets of judges were successively appointed and removed; till the king, impatient of further delays, ordered a list of the prisoners to be laid before him; and in a decree of the 15th of December, 1815, each of the names (about seventy in number) appeared before the public, bearing the sentence which Ferdinand, in his own writing, had affixed them. We shall give the following by way of specimens. Count Toréno, Mina, and Florez de Estrada, who had evaded pursuit, and fled the country, were condemned to death. Arguelles, who may be considered the author of the constitution, was sentenced to eight years' exile at Ceuta, on the coast of Africa. Canga Arguelles was confined to the fortress of Peníscola, in Catalonia, for an equal period. The same length of confinement was assigned to Martínez de la Rosa, and to Calatráva, two distinguished members of the Cortes. The four ecclesiastics, Villanueva, Muñoz-Torrero, Olivéros, and Cepéro, were sentenced to six years' imprisonment in different convents, and to the loss of their benefices. Alvarez-Guerra and García-Herreros, who were ministers to the Regency on Ferdinand's return, and Generals Valdés, O'Donoghue, and Villacampa, who had evinced a firm attachment to the new system, were to be imprisoned for periods of eight, six, and four years. Quintana, one of the first ornaments of modern Spanish literature, who, probably from his great moderation, and love of studious retirement, had never been elected a member of the Cortes, was sentenced to be imprisoned six years in the fortress of Pamplona. Strict orders were issued to deprive the prisoners of all communication, and not to allow them pen and ink. The persons contained in the list, who had not escaped, were seized in the night of the 17th December, and subsequently removed to their destinations.

The court party having gratified their spite, wished now to

secure the support of the clergy, whom the Liberals had offended. By a royal order of the 20th of May, 1814, all purchasers of church property were compelled to restore it, without receiving compensation. The Inquisition was regularly re-installed, and urged to exert its powers against all persons suspected of Liberal opinions. A bull was obtained from the Pope for the restoration of the Jesuits in Spain. Monks and bigots were the sole directors of the king's conscience. Conceiving that the times when Spanish monarchs could trample down their subjects, without being disturbed by a single murmur, had returned, Ferdinand publicly declared himself, "not accountable to any, except God and his confessor," and thus proclaimed his will to be the law.

But though this conduct was in accordance with the opinions of the most bigoted Spaniards, it soon created partial symptoms of disgust. The court had found the treasury doubly drained, from the effects of former extravagance, and the demands of the late war. Bribery and venality were soon seen to prevail round the throne. The army, who had been hitherto amused with promises of regular pay and promotion, began to groan under want and neglect. Officers of high rank appeared about the streets in the night, imploring the charity of their fellow countrymen. The armed bands, or *Guerillas*, who had assisted in the defeat of the French, having now nothing to expect from Ferdinand, and being unfit to resume habits of industrious labour, became regular and organized banditti, who set the helpless magistrates at defiance, and committed all sorts of atrocities.

A government so incapable of affording protection to the people, could not employ restrictive measures without hastening its own destruction; many of the Spanish officers who were prisoners in France, had become Free-masons in that country, and numerous lodges were established in Spain, during the occupation by Napoleon's armies. Masonry had at all times been held in the utmost abhorrence by the church and government. A sentence of excommunication was obtained from the Pope against Free-masons. The Inquisition traced out, in every province, the officers who had been initiated in France, as well as the members of the Spanish lodges. Fortunately, they were too numerous to be punished with all the rigour of the law. But the imprisonment of some, and the fears of all, were sufficient to prevent the Spanish masons from acting collectively.

It was however, about this time, that another kind of secret societies, exclusively political, were formed in Spain. The members assumed the name of *Comuneros*, to denote that they met in the spirit of Padilla and his followers, who, under the same appellation, rose against the encroaching despotism of Charles V. An extensive correspondence was established between the associates in the different provinces, who, acting in concert, and according to a fixed plan, were ready to seize the first opportunity of restoring the constitution.

Their efforts were seconded by Ferdinand's counsellors, who took the course which was most apt to raise the new code in the estimation of the country. As many copies as could be obtained at Madrid were heaped on a cart, together with the journals of the Cortes. The guilty volumes were thus conducted, with ludicrous solemnity, to one of the public squares, and there committed to the flames by the hands of the hangman.

The effect of prohibitions against books is well known; it gives them reputation in all countries; how much more in a country, where the notion that the merit of a work should be judged by the anathemas it lay under, was making a rapid progress.

The effects of the new Constitution, considered as a political pamphlet, could only be checked by the dignified and judicious conduct of a court supported by the most respectable classes. But Ferdinand was surrounded by a medley of cowed courtiers, intriguing priests, and old placemen, all poor, and all ambitious. The king himself had much to ask for, and but little to give, save empty titles. The army, who had now learnt their irresistible weight in political changes, became

became dissatisfied and restless under a state of things which doomed them to neglect and poverty. The inferior gentry, of which a great portion depend on court favour for places, saw, with dismay, that while the late reform had swept away many of the situations under government, such as remained were reserved for those only who had never wavered in their allegiance to monarchical despotism. The young men, lastly, of the middle classes, who, during the existence of the Cortes, had had a taste of the agreeable excitement of a popular system, could not brook the death-like apathy which followed the restoration.

The malcontents, though numerous, and constantly augmenting, would have found it difficult to communicate with each other, to calculate their strength, and direct it with skill, if the secret societies had not created among them something like the union and activity which, in free states, are the effects of a well regulated party. In spite of the Inquisition and its emissaries, the *Comuneros* held meetings in most of the head towns, and kept up an active correspondence among their lodges. Cadiz, whose political temper had been described already, was, it seems, the head-quarters of the conspirators. They could not have fixed upon a more advantageous position; for, besides the opportunities which its numerous and changing garrison constantly afforded of tampering with the officers, some wealthy merchants of that place had devoted their fortunes to the restoration of liberty.

Cadiz and its neighbourhood had been made the rendezvous of the troops which, under the command of General Morillo, were ordered by Ferdinand's government against the revolted provinces of South America. It being now agreed among the Liberals that the intended revolution should be effected by the army, the presence of a strong military division reluctantly engaging in a dangerous service beyond the seas, must have greatly raised their hopes and increased their activity. Morillo's loyalty was tried, and he seemed for a time to waver between the obvious duties of his station and the suspicious call of revolutionary patriotism; but ultimately embarked with his troops while the secret societies continued their labours.

Gallicia was one of the provinces to which the Cadiz patriots had extended their secret influence. Don Juan Diez Porlier, an officer who had distinguished himself against the French, was at this time confined, under suspicion of disaffection, to the castle of San Antón, near Corunna. His health being impaired after a year's imprisonment, he obtained leave to proceed under an escort to a watering-place in the neighbourhood. The officer, to whom the prisoner was given in charge, was a member of the secret societies, in correspondence with the head lodge at Cadiz. He soon put Porlier in possession of the plans for a military insurrection which were then under discussion among the patriots, and earnestly urged him to strike the first blow in the province of Gallicia. Many officers in garrison at Corunna and Ferrol offered also their services to Porlier, who, miscalculating his means, and judging of public feeling from that which prevailed among his friends, was not long in accepting the dangerous command to which he was invited. Attended by the officer, whose duty it was to prevent his escape, and the twelve soldiers commanded by that officer, Porlier entered the city of Corunna, about midnight of the 18th of September, 1815, and was soon joined by most of the troops in that town. Supported by his associates, he arrested the governor and the principal supporters of the servile party. The imprisoned Liberals were set free, and such proclamations as are usual on these occasions were posted about the town. The oath of the constitution of 1812 was repeated, and a detachment of 800 men was ordered to march on Ferrol, where the garrison, it was said, only awaited the presence of Porlier to declare in favour of the constitutional system. But the royalist party had been actively employed in that town since the arrival of the news from Corunna. Emissaries were sent to mix with Porlier's troops on their march. They found him with his detachment at the village of O'rdenes, where the troops were to pass the night. The

non-commissioned officers were soon gained over, and the men yielded to the first suggestion of making their peace with the king's government by the seizure of their leader. Porlier and some of his officers were at supper when the soldiers surrounded the house. The officers, it should seem, were able to escape; but the General, being obliged to surrender, was executed at Corunna, on the 3d of October. Porlier met his fate with the dignity and composure of a man who feels conscious of the justice of his cause and the purity of his intentions. Had that unhappy officer possessed means to keep his ground till Cadiz, Barcelona, Valencia and Zaragoza, had declared themselves, the revolution would have been complete, as it happened at a subsequent period.

Our limits do not permit us to mention the numerous conspiracies which were discovered and quelled after the death of Porlier. But we cannot omit a brief account of the unfortunate attempt made by General Lacy, in Catalonia, where, during the latter part of the war against France, he had commanded the Spanish army against the invaders. As a reward for his services, Lacy had been appointed Captain-General of Gallicia; but being suspected by Ferdinand's government, he was removed to Catalonia, and confined within the limits of a certain district. In the spring of 1817, Lacy obtained leave to visit the mineral waters of Caldetes, near Barcelona. He there met with several discontented officers, with whom he planned an insurrection. It was expected, that all the garrisons of Catalonia would mutiny on the 5th of April, a day on which Lacy was to raise the standard of rebellion by the assistance of the regiment of Tarragona, which was stationed at a short distance. Two companies had been gained over by the lieutenant-colonel, when the whole plan was disclosed to the colonel by two subalterns in Lacy's confidence. The colonel appealed to the loyalty of the yet undebauched part of the regiment, and he was answered by a display of zeal in the royal cause. The two revolted companies joined Lacy, who, perceiving no other movements in his favour, began a march to Mataró, proposing to raise the peasantry, or to escape into France if he failed of support. The peasants appearing everywhere either hostile or indifferent, the soldiers were disheartened, and fell off to a man. Lacy took shelter in a cottage; but was soon betrayed and taken. It was not deemed safe by the government to execute the sentence of death which a court-martial pronounced against him, within the walls of Barcelona, where a strong feeling of compassion had shown itself towards the unfortunate general. It was, therefore, reported, that the king had commuted the sentence into that of imprisonment for life in the fortress of Majorca. Lacy's removal took place under that impression. He was cruelly deceived, on his arrival, and desired to prepare for death within a few hours. Lacy was shot in the ditch of the castle at five o'clock in the morning of the 4th of July, 1817.

From the character of these attempts, and the temper manifested by the bulk of the people, a dispassionate observer will readily adopt the conclusion, that the endeavours of the patriots depended for success on some happy combination of circumstances, which, by once disconcerting the weak government of Ferdinand, and making him yield even for a moment, would give an impulse to that impassive mass who had hitherto beheld the contest unwilling, to share its dangers. For it is clear, that a great majority of the nation, though determined not to make or modify a government for themselves, would readily submit to any political system which might happen to obtain the ascendancy. The chances were, therefore, in favour of the active party, who, though so often defeated, had still sufficient courage and perseverance to renew their attacks on a dull enemy, who adhered, from ignorance and weakness, to a plan of defensive warfare.

It was not long before the erroneous policy of the court of Madrid, in regard to the revolted colonies, presented to its enemies at home the means of re-establishing the constitution, and making their party paramount in the state. Instead of paying the arrears or the army, the only body of men which could effect a revolution, the blind obstinacy of Ferdinand and his advisers employed all the money they had been able

to collect, in fitting up a second expedition, which was to reinforce the royalists at Venezuela. The troops which were to embark in the autumn of 1819, had been collecting in Andalusia, then governed by Henry O'Donnell, Count of Abisbal, whose assistance in the restoration of arbitrary power had been rewarded with the military command of that province. The expeditionary army was, consequently, under his command till it should sail from Cadiz, and the various corps had been quartered at no great distance from the residence of the Captain-General.

It will be readily admitted, that a more favourable opportunity could hardly offer itself to the patriots than the presence of a military division, whose officers were favourably inclined to their cause, and where a general dislike of the service, for which it was intended, was prevalent. The prospect appeared the more favourable as it was credibly reported that O'Donnell, wishing to atone for the mischief he had done by an excess of loyalty, had volunteered to be the leader of the insurrection. The report was, indeed, well-founded. The Captain-General himself had fixed a day for proclaiming the constitution, and meetings had been held at his residence for the organization of a temporary government. Some offence, it seems, had been given him at one of these conferences, by the determination of separating the civil from the military command, when the revolutionary government should be established. He had continued, nevertheless, at the head of the conspiracy, and even urged the necessity of anticipating discovery by striking the blow on the 8th, instead of the 15th of July. On the 7th, O'Donnell repaired to Port St. Mary's, where all the infantry had been collected by his orders. Sarsfield, his second in command, was to join them, the next morning, in the plain of Palmár, with the cavalry which was quartered at Xerez.

Soon after sunrise, on the 8th, the infantry was drawn up in the place of their rendezvous. The officers who were in the secret could hardly refrain from breaking it to the troops under their command; yet waited with impatience the arrival of the cavalry, and the presence of their general. Both were at length seen at a distance, and approaching in opposite directions. O'Donnell, with his staff, and Sarsfield at the head of the horse, came up at the same moment. But, instead of the expected signal, the cries of *Viva el Rey*, which were raised by the cavalry as they galloped along the line, were instantly re-echoed by the infantry. The deluded conspirators were immediately called in front of the troops, and Abisbal himself gave the necessary orders for their removal under an escort, to some of the neighbouring fortresses.

The duplicity of Abisbal had rendered such an effectual service to the cause of despotism, and the repeated defeats of the Liberal party had so clearly shown the difficulty of giving an impulse to the lower classes in its favour, that it is quite surprising to find a complete revolution effected within a few months of the event we have related. But the court party were not stupid enough to mistake Abisbal's conduct for pure unalloyed devotion to the crown; nor yet sufficiently politic to secure his services to the king by such rewards as might satisfy his ambition, and make him seal, by his subsequent conduct, the well-merited distrust and hatred to which he was exposed among the patriots. He was removed from the command of the expeditionary troops, and a man scarcely known by his title of Count Calderon, and much less by any talents displayed in the service, appointed to succeed him.

The reappearance of the yellow-fever at Cadiz, soon after the imprisonment of the patriot officers at Palmár, obliged the government to remove the troops to more healthy spots, at some distance. Arcos was made the head-quarters; the rest of the army was divided between Las Cabezas de San Juan, to the north of that town, and Alcalá de los Gazúles, in the opposite direction. This was considered a favourable opportunity for carrying into execution the same plan which had failed through the treachery of O'Donnell. The members of the secret societies, at Cadiz, engaged to procure the escape of the prisoners, one of whom, Quiroga, had been appointed to be the commander-in-chief of the revolted

army. Riego was, in the mean time, to be placed at the head of the insurrection.

The 1st of January, 1820, being fixed upon, the soldiers were gradually gained over by means of the gold with which the officers were supplied from Cadiz. On the morning of that day, Riego drew out the battalion of Asturias, of which he had a temporary command, and having proclaimed the constitution, began his march towards Arcos, where, by the assistance of part of the officers in that town, he intended to seize the general-in-chief. Quiroga, who, it was expected, would be at liberty, by that time, was to march with the forces stationed at Alcalá, to the Isla, and from thence to the gates of Cadiz, which, if he could reach before the news of the insurrection, would be thrown open by some officers of the garrison, now enrolled in the bands of the insurgents. Riego, though arriving at Arcos much later than he had expected, effected the arrest of Calderon, with scarcely any difficulty. Quiroga, being much longer detained in his march, could only take possession of La Isla. Riego advanced to Xerez, thence to Port St. Mary's, and finally joined Quiroga. The strength of the patriots was about 5000 men, unsupported by either artillery or cavalry.

The period which followed this junction is one which throws considerable light on the state of the public mind in Spain, and shows the difficulty, which we have pointed out already, of giving an impulse to the great mass, who, influenced by inveterate habits, will take no side in these political struggles.

Five and twenty days had elapsed since the proclamation of the constitution at Las Cabezas, without the revolution making any visible progress. A paper warfare was carried on by the leaders at the Isla, and the authorities at Cadiz; but the patriots were left to their own resources within a very limited spot, while troops were collecting about them, and the activity of the loyalists at Cadiz precluded all hope of assistance from the revolutionists who were within the walls. To rouse the spirit of the country, and spread the flame of the insurrection, Riego proposed to lead a flying column of 1500 men, in such direction as circumstances would allow. Followed by a division of the royalists, who seemed more determined to harass him than to fight, he successfully proclaimed the constitution at Chiclána, Conil, Vejér, and Algeciras. Though ordered by Quiroga to march back to the Isla, Riego found it necessary to proceed in the only direction which the royalists had left him. In this situation, however, he spent three days at Vejér, in public balls and banquets, where officers and privates mixed indiscriminately with the town's people. From thence, the flying column advanced to Malaga, closely pursued by the enemy. Meeting with no support from the inhabitants, Riego proceeded to Antequera. Harassed by incessant marches, and having sometimes to fight their way through detachments of the enemy's forces, Riego took the determination to push, with the remnant of his force, now reduced, by desertion, to about 300 men, into the fastnesses of Sierra Morena, where they eluded further pursuit by dispersion.

The patriots of the Isla had seen three long months elapse without any prospect of support from their countrymen, and trusting merely on the efforts of the secret societies, which had hitherto appeared unavailing. Mina had, however, entered the valley of Bastán, in Navarre, on the 25th of February. He had been, long before, obliged to fly into France, in consequence of a fruitless attempt to overturn the government of Ferdinand, and now he hastened to lend his assistance to the patriots. He found a numerous band ready to follow his standard.

The garrison of Corunna, headed by Don Carlos Espinosa, a colonel of artillery, had risen, about the same time, against the Captain-General of Galicia, and proclaimed the constitution throughout the whole province. Similar movements took place on the first days of March, at Zaragoza, Carthágena, Valencia, Murcia, and Granada.

These insurrections, though partial, could not but appeal to the weak, ignorant, and unpopular party, which surrounded the throne. Had Ferdinand been able to depend on the loyalty

loyalty of an able general, he still would have found fidelity among the soldiers, and a great part of the officers.

Abisbal was still at Madrid; and his late important service gave hopes that he would be faithful to the king, for whose sake he had sacrificed the honour he had pledged to the patriots. It was considered improbable that he would change a fourth time in his politics; and he was, accordingly, invested with the command of the army of La Mancha. But, before he quitted Madrid, on the 3d of March, he had plotted with the colonels and superior officers of the garrison, engaging to declare for the constitution as soon as he should reach Ocana, where one of his brothers commanded a battalion of infantry. True to this last engagement, Abisbal proclaimed the constitutional system, the day after he had quitted the court. He established a communication with the patriots of La Isla, and left the final completion of the revolution to his reconciled friends, the liberals of Madrid.

The account of the military insurrection at Ocana did not fail to produce the effect which had been prepared by the constitutionalists of the capital. An immense crowd surrounded the royal palace, who called on Ferdinand to accept the constitution. Things had now come to a point where there was no room for deliberation. The king appeared at the balcony, holding a copy of the constitution in his hand, as a pledge of his readiness to swear observance to its laws. As, according to that code, the monarch cannot exercise his portion of authority till he has taken the oath therein prescribed, a committee of government was installed, who should convoke the Cortes, in whose presence alone the king can perform those acts which put him in full possession of his constitutional rights.

The instant dispersion of that abominable tribunal, the Inquisition, and the liberation of the state prisoners, whom Ferdinand allowed to linger in confinement, were the first acts of the Spanish Liberals.

As it has been our study so to perform this rapid sketch, as to put the reader in possession of such facts as may enable him to understand the principles and temper of the two great parties which contend for political power in Spain, we cannot omit the bloody and disgraceful scene which took place at Cadiz on the 10th of March, the day which had been appointed to proclaim the Constitution.

The Captain-General Freyre, on the receipt of dispatches announcing the king's acceptance of the Constitution, repaired to Cadiz from Port St. Mary's, in the afternoon of the 9th of March. The impatience of the triumphant party to have the Constitution proclaimed, scarcely allowed him to postpone that ceremony till the next morning. But a desire that the chiefs of the patriotic army, whom he had invited, should be present, was a sufficient reason to check the eagerness of the people. Quiroga, the patriot general, was, however, too well acquainted with the temper and dispositions of his enemies, to acquiesce in the demand that he should disband his troops, and allow the unarmed soldiers to mix with the citizens, at the ensuing solemnity. Four officers alone, preceded by a flag of truce, were sent to witness the proclamation. Being admitted to the presence of the Captain-General, the evident uneasiness under which they perceived him labouring, and some expressions indicating a degree of anxiety for their safety, had just begun to raise their fears, when the report of musquetry, mixed with the cries of the suffering, or affrighted multitude, suddenly changed suspicion into the most appalling certainty. Freyre hastened out of the house, without providing for the safety of the deputies, who were yet so fortunate as to find the means of escaping the fury of their enemies.

In the mean time, the most atrocious massacre was taking place in the streets, and in the principal square of Cadiz, where the people had assembled to witness the proclamation. The instruments of this barbarous deed were the privates and non-commissioned officers of two battalions of infantry, called the *Guides*, and the *Loyalists of Ferdinand the Seventh*. Instigated, as it is believed, by the governor of the town, and the chiefs of the royalist party, the soldiers

had engaged to disperse the multitude, and prevent the intended ceremony. Large quantities of wine and spirits had been sent to the barracks, so that the men were in a state bordering upon intoxication, when they broke out with their arms. From the moment these monsters were loosed, they continued firing, indiscriminately, upon the people, till their ammunition was exhausted. About five hundred persons, men, women, and children, were seen in the streets of Cadiz, dead, dying, or wounded, before the authorities of the place had taken any measure to stop the massacre. Some officers of the Andalusian militia, not on duty, ran, of their own accord, to their barracks, and, drawing up in great haste part of the men, sallied forth into the streets, where they exercised themselves, with the utmost zeal, in protecting the lives of the defenceless citizens, and giving help to the wounded. The deputies from the patriotic army, coming forward from their places of concealment, surrendered themselves into the hands of the Captain-General, who, still hoping some favourable turn in the affairs of the royalists, confined them within the Castle of Saint Sebastian. Indeed, so blindly confident were the leaders of that party that the insurrection would yet be quelled, as to have ventured on giving public thanks to the assassins. But the next dispatches from Madrid put an end to their hopes. The deputies were set at liberty.

The Constitutional System being now completely restored, and in action, the Cortes assembled at Madrid in June, 1820, and the king took his solemn oath, before them, on the 9th of the following month.

The Cortes Extraordinary, which were convened on the restoration of the constitution, contained most of the patriots who had suffered during the arbitrary reign of Ferdinand—the original contrivers and supporters of the constitution. This was a measure which the military reformers of the Isla could not, and, probably, were not disposed, at that time, to oppose. But the seeds of jealousy between the two parties, the contending claims of the liberators, and those they had set free, could not remain dormant and inactive. The *Isla Patriots* naturally aspired to the first places and influence in the state: the Old Liberals soon felt their own dependence and inferiority. The Secret Societies were now more active than ever, and a rivalry between the Free-masons and the Comunos grew out of the different principles adopted by each of these parties, who, in their character and views, might be compared to the Old Whigs and the Radical Reformers in England: The Free-masons, however, soon found themselves defeated; and those who had been forced upon Ferdinand, as his ministers, were displaced to make room for the friends of the revolutionary army.

The Cortes, though elected under the influence of the triumphant party, and acting under the direction of the popular leaders and their emissaries, who were regularly stationed in the galleries of the House, exhibited a degree of moderation which does honour to the national character. The measures of retaliation were limited, and infinitely less severe than those in which the king's friends had indulged. Even the most violent democrats, those who had placed themselves at the head of the populace, were satisfied, for a time, with the awe into which the Revolution had thrown their opponents. Still it has not been in the power of the new government to establish themselves without encroaching upon the rights of the church, and, thereby, confirming the suspicions of infidelity, under which all denominations of Liberals have long lain among the Spaniards.

To steer clear of this rock exceeded the powers of human wisdom. The Cortes Extraordinary, as well as the Ordinary, which succeeded them, contained a large proportion of the talent, though scarcely any of the rank and property of the country. Most of the clergymen, and perhaps all the lawyers, who had obtained seats, belonging to that class of Spaniards, who, free from religious prejudices, but having no system of their own to support upon these points, would shrink from an open contest with the zealots, without, however, letting pass an opportunity of showing their spite,

by a side blow. The pecuniary wants of the government; the desire of gaining partisans to the constitutional system by the transfer of property, exclusively under its sanction; together with the opportunity which the existing circumstances presented, of indulging the secret, though strong, feelings of aversion to the national system of religion, which rankle in the bosom of every liberal Spaniard, betrayed the Cortes into measures which could not fail to drive the bigots into an open and desperate resistance.

Whatever might be the caution and timidity of the middle classes of Spain, especially those that were possessed of some wealth, or exercised any lucrative branch of industry, it was impossible that the more violent and daring of the sincere Catholics should remain perfectly inactive under a state of things so discordant with the truly national sentiments and habits. The rabble of the large towns, which is numerous and quite worthy of that name, had, since the revolution of 1820, been gained over to the constitutionalists; but the peasantry, who, to this day, have shown a general dislike of the new system would afford a considerable number of active and determined partisans to any who should be ready and able to marshal them under the standard of the Faith,—a word by which the Spaniards denote the Catholic religion, such as it was established in their country. Few months, indeed, had elapsed, when conspiracies were detected in various parts of the country; and Guerilla parties, in support of Religion and the King, were found ranging over the provinces. The seeds of a civil war had thus been brought into activity, and in the opinion of all who are well acquainted with the dilatoriness and obstinacy of the Spaniards, the character and circumstances of the contending parties were, alone, enough to threaten the destruction of every source of power, wealth, and happiness, in that devoted kingdom.

It was not long, however, before a determination was observed, on the part of France, to encourage and support the Spaniards, who were actually in arms, or ready to take them up, against the new system of government. Emigrants were protected on the French side of the frontiers, and enabled to organize themselves into military divisions. The yellow-fever, which attacked Catalonia, in the summer of 1822, afforded a pretext for establishing a Cordon Sanitaire, which might act as an army of observation. French money was employed in raising fresh disturbances in the kingdom; and, it is more than probable, French influence fomented the conspiracy of the Guards, which, on the 7th July of the same year, would have placed the king out of the hands of the Cortes, if he had had either the will or the courage to join the troops, who awaited his presence at a short distance from the palace.

A congress of the powers which compose what is known by the name of the Holy Alliance, was, at this time, about to be assembled at Verona. From the character of the governments of Austria, Prussia, and Russia, and their habitual fears of the spirit of political reform, which for the last thirty years has shaken the foundations of all absolute monarchies, it could hardly be imagined that Spain should pass unnoticed at this meeting. Nor was it long before the disclosure of their views and principles, joined to the open avowal of hostile intentions against Spain, on the part of France, evinced a settled and systematic plan for restoring absolute monarchy in the former kingdom, and opposing, throughout Europe, every curtailment of monarchical power however exorbitant and oppressive, and every attempt to establish the liberties of the subject, upon permanent and definite grounds. The French king, on the 28th of January, 1823, announced to the Chambers, that he had one hundred thousand troops ready to march into Spain, unless Ferdinand VII. were allowed "to give to his people institutions which they cannot hold but from him."

On the 9th of January, 1823, the Minister of Foreign Affairs, San Miguel, appeared in the Cortes, and informed them that the king's government had received the abovementioned official communications from the cabinets of France, Russia,

Austria and Prussia, and that the king had returned an answer expressive of surprise at the unfounded representations they contained, remonstrating strongly against the principle of foreign interference, and indignantly refusing the least compliance with the wishes of the allied powers. The reading of this document was followed by the loudest applause from the hall and from the galleries, mingled with tumultuous cries of "The sovereignty of the people for ever! Death to tyrants!"

M. Galliano proposed, That the King should be assured that the Cortes were resolved to make every possible sacrifice for maintaining in its full integrity the Constitution of 1812, as well as the splendour of the Constitutional throne; that the Cortes would furnish to the government every assistance necessary for repelling every hostile attempt on the part of the Powers whose notes had been read; and that all Spaniards would contribute with pleasure to an enterprize which had for its object to defend the national liberty and independence.

The deputies were unanimous in favour of the motion of M. Galliano, and the congress adjourned till the 11th, when an address to the king was unanimously voted, declaring the surprise and indignation which the congress felt at the strange doctrines, the manifest falsehoods, the calumnious imputations contained in the notes of the four foreign powers; they expressed the satisfaction with which they had heard the frank, honourable and energetic answer, which had been given to these notes, and they approved the noble disdain with which the government, without descending to refute assertions notoriously false, had confined itself to a statement of the principles by which it is guided.

"The Cortes are further bound to assure your Majesty, and they do assure your Majesty, that to attain so sacred an object, they are ready to decree every species of sacrifice, certain that the Spanish people will bear them with joy—with enthusiasm; and that they will resign themselves to all possible evils, rather than enter into terms with those who would pretend to taint their honour, or to attack their liberties."

While the Spanish government was thus breaking off all relations with the rest of the continent, it had not forgotten to take measures for conciliating the good will of England. A decree was passed (Jan. 8th) by the Cortes, authorizing the executive to arrange all the existing differences between the two cabinets. On the 12th of March, a convention, founded upon this decree, was agreed upon between Sir W. A'Court and the Spanish Minister for foreign affairs.

It might readily have been foreseen, that the critical circumstances under which the Spanish government was at this moment placed, would afford fresh encouragement to the royalist insurgents in the different provinces. The several divisions of the Army of the Faith, had, however, been so completely beaten and dispersed at the conclusion of the last year, that they had not yet been able to reassemble their bands in any considerable degree. Of all the fortresses of Catalonia, they possessed Urgel and Mequinenza only; of these, the former soon after (February 3d.) fell into the hands of Mina, and had it not been for the hopes entertained of the approaching assistance of a French army, the cause of royalism would have appeared to be in a state not much short of desperation. A bold attempt had been made by a couple of royalist partisans, Bessieres and Ullman, to make a dash at Madrid, and carry off the royal family; and in the prosecution of this daring enterprize, they arrived at Guadalaxara, within fifteen leagues of the capital. The government, however, took instant measures to repel the attack; the garrison and militia were immediately put in motion against them, under the Count del Abisbal, who drove the enemy (Jan. 24) from the position they had taken up near Alcala de Henares, and compelled them to fall back upon Sacedon, the heights of which they occupied with a force of about four thousand infantry, two hundred cavalry and three pieces of cannon. On the 29th, Abisbal again came up with them, and attacked their position, which was defended with much firmness. In the result, however, the insurgents were

were driven from their position with considerable loss, and retreated in the direction of Cuenca.

The speech pronounced by the King of France to his Chambers, being justly considered as tantamount to a declaration of hostilities, the ministers now took measures for placing the army on a footing of war; and on the 5th of February they proposed, that the Cortes should decree an additional levy of thirty thousand men. This was done on the following day; at the same time the active militia, calculated to amount to 58,000 men, was rendered disposable, and 200 gun-boats were ordered to be fitted out and manned for the defence of the coasts and harbours.

Upon the same occasion, the minister of finance proposed, that the government should be authorized to receive the contributions, in corn, if necessary; a proposition that strikingly marks the difficulties under which the public treasury must have been labouring.

As the close of the session of the extraordinary Cortes was approaching, it was thought right to provide for the removal of the government from Madrid, if circumstances should occur to render it necessary. This was opposed by several deputies as premature, and only calculated to alarm; it was, however, strongly supported by Arguelles, and finally adopted, (Feb. 15) by 84 voices to 63.

On the 19th, the close of the session took place. The king declined to appear in person on this occasion; and the ministers sent to the congress a speech in his name, in which his Majesty, after shortly running over the late succession of events, ended by assuring them of his unalterable determination to support the rights of the nation. But no one supposed that the ministers in this spoke the real sentiments of the king; and when he was requested to transfer the seat of government to some other part of the kingdom, he betrayed an invincible repugnance to comply, accused the ministers of having acted contrary to his commands in making the proposition which had received the legislative sanction, and immediately dismissed them from office. As soon as these events became public, great agitation took place. A crowd collected around the palace, vociferating menaces against the person of the king, calling out for a regency, and testifying, in every way, their indignation at the dismissal of the ministers. The ministers were therefore replaced in their respective situations, and the public tranquillity was restored. On the following day (the 20th), a multitude met in the Place Major, and signed a petition demanding a regency. During this scene of turbulence, which created little alarm, and was attended with no excesses, the great body of the citizens remained calm and orderly.

The opening of the ordinary Cortes took place on the 1st of March. It was again stated, that the health of the king did not permit him to be present in person on this occasion; and accordingly his speech was read to the assembly by the president. The tenor of it was similar to that of the former communications of which this weak prince had so often been made the channel. After indignantly adverting to the principles avowed by the allied powers, and to the threats conveyed in the speech of the King of France, Ferdinand was made to go on thus:—

“For my part, I once more offer to the National Congress the co-operation of all my efforts to realize hopes which the friends of liberal institutions place in Spain, by carrying into execution all the measures within the compass of my authority to repel force by force. The seasonable removal of my person and the Cortes to a point less subject to the influence of military operations will paralyze the enemy's plans, and prevent any suspension in the impulse of the Government, the action of which ought to be felt in every point of the monarchy.”

Ferdinand did indeed avail himself of the only means which remained to him of publishing his disavowal of the speech which he had been made to sign. On the very same day he dismissed the whole body of his ministers; but as the newly-nominated ministry signified reluctance to take office, under the present circumstances, the former ministers re-

mained provisionally in the direction of their several departments.

On the 2d, a discussion took place in the Cortes, in which the necessity of removing the king was violently insisted upon. One of the deputies, Senor Rico, openly declared that the time was come for pronouncing the physical incapacity of the king; which was, in other words, his deposition; and this proposition was received with a thunder of applause from the galleries. The Cortes, however, contented itself with unanimously adopting a proposition of Senor Canga, as amended, by Senor Arguelles, in the following terms:—“That the Government shall to-morrow inform the Cortes of the place which his Majesty has been pleased to point out for the removal of the Government and the Cortes; and also of the measures which have already been adopted for carrying the removal into effect.”

To this short and peremptory intimation of the will and pleasure of the Cortes, the king did not think it prudent to offer any resistance; accordingly, on the following day, the secretary of state for the interior handed to the president a communication, which stated that his Majesty, being informed of the resolution of the Cortes, respecting the removal of the government, had been pleased to appoint the city of Seville, as the place to which the transfer should be effected. The ministers now pressed the immediate departure of the king, but Ferdinand still urged the state of his health, and his physicians declared that they could not be answerable for the safety with which his Majesty could undertake the journey at present.

The Cortes, somewhat incredulous as to the serious nature of a malady that seemed to occur so conveniently for what were known to be his Majesty's real wishes, appointed a commission of nine members, (six of whom were physicians) to inquire into the case. They reported—they were of opinion that his Majesty was under no impossibility of commencing his journey, while all the cares which were necessary to the convenience of his royal person might be lavished upon him; and that it was not credible that a journey undertaken under such auspices was impracticable, or likely to lead to any unpleasant results.

They proposed, therefore, that a deputation be sent to the king to announce to his Majesty that the Cortes hope that he would deign to arrange his departure before the 18th of the month, and to fix, at present, the precise day and hour which he might deem fit to take to begin his journey.

A deputation was immediately sent from the Cortes to the king, and on their return to the hall, they announced that his Majesty would be ready to set out on the 17th; but that he wished that the journey should be put off to the 20th, if the Cortes saw no inconvenience in the alteration; and, after a short discussion, the Cortes decreed that this farther delay should be accorded.

On the 20th, accordingly, at eight in the morning, the king, with his family, left Madrid, on the road to Toledo, escorted by a detachment of cavalry and infantry, which was subsequently reinforced to the amount of above 5000 men. Two days after, he was followed by the diplomatic body, now reduced to the ministers of England, the Netherlands, Sweden, Portugal and the United States.

In the meanwhile, the Duke of Angouleme had already left Paris, March 15th, in order to take the command of the invading army. He proceeded, in the first instance, to Toulouse, and from thence to Bayonne, where he arrived on the 30th. Here the French army was assembled in five bodies; the first corps under the Marshal Duke of Reggio, was destined to move on Madrid; supported on its left flank by the second corps under Count Molitor, and on its right and rear by the third, under Prince Hohenlohe; the fourth corps, commanded by Count Bourdesoulle, was to act as a reserve; besides this, a fifth corps, under the command of Marshal Moncey, Duke of Cornegliano, was destined to occupy Catalonia. The whole army was computed to amount to about 92,000 men, including the Spanish royalist division under Espana and Quesada.

On the 2d of April, the Duke Generalissimo published from Bayonne a proclamation announcing the motives from which he was about to cross their frontiers. On the following day, a general order was issued to the army, explaining the objects of the war, and enjoining to the troops that the strictest regard should be paid to the religion, laws, and property of the Spanish people.

While the French army yet lay encamped on the right of the Bidassoa, an attempt was made by a party of French military refugees on the opposite bank, to shake their allegiance by raising the tri-coloured flag, and the cry of "The Emperor for ever!" The French troops, however, replied only by a discharge of grape. The next day, the whole army crossed the river, and the Duke d'Angouleme entered Irun the same evening, amid the congratulations, it is said, of the clergy, and the acclamations of the populace. This reception was hailed as of favourable promise for the disposition of the nation in general; nor, in truth, were the expectations thus created disappointed by the event.

We have no very precise accounts of the amount of the Spanish army at the commencement of the war, but it has been roughly estimated as follows:—the army of the North, under Ballasteros; that of Catalonia, under Mina; and that of the centre, under Abisbal, are computed to have consisted of about 20,000 men each. The armies of Galicia and Asturias, under Morillo, might amount to 10,000 men, and about 50,000 might be dispersed in the several garrisons. It was upon these last that the Spanish Government chiefly relied. As soon as the French had crossed the Bidassoa, Ballasteros immediately fell back behind the Ebro, leaving strong garrisons in the fortresses of Saint Sebastian and Pampeluna. Having in vain summoned these places to surrender, it was found necessary to blockade them; and the third corps of the French army was left behind, charged with that duty.

On the 17th, the head-quarters were established at Vittoria, and remained there for some short time. Here they learnt that Bilbao had surrendered to Gen. Canuel, and Pancorbo to the Duke of Reggio, who had crossed the Ebro, and moved upon Burgos. The population in general, seemed to evince the same friendly disposition towards their invaders, as had been manifested upon their first entrance into Navarre. The strictest discipline was observed in the French army, and immediate payment was regularly made for all that they consumed.

Ballasteros, in the meanwhile, retired down the course of the Ebro, followed by the second corps under Molitor. He did not attempt to defend Saragossa, which was evacuated by the garrison and the militia on the approach of the French; but continued his retreat in the direction of Valencia, with the purpose of attacking the castle of Murviedro, which had, early in the year, been surprised and taken by a corps of royalists. Molitor followed, but more slowly, and with precaution, leaving a corps of the royalist force before the fortresses of Monzon and Lerida.

The fourth corps, under Moncey, had not entered Spain until the 18th of April. Mina fell back to a strong position upon the right bank of the Fluvia, between Castel-follit and Bezalu; the French general immediately took measures to attack him; but his movements were delayed by the swelling of the river; and before they could be brought to bear upon his enemy, Mina thought proper to abandon his position, and retreat by the way of Olot, upon Vich. Moncey then moved upon Gerona, May 2d, which spontaneously opened its gates at his approach, as did most of the neighbouring towns in Upper Catalonia.

In the meanwhile, the necessary measures having been taken for effecting the blockade of the fortresses of Pampeluna, St. Sebastian, Santona, and Santander, the first corps with the reserve moved upon Burgos, which they entered on the 9th of May, and thence proceeded towards Madrid in two columns; the one under the Duke of Reggio, marching by Valladolid; the other, under the Commander-in-chief in person, by Aranda and Buitrago. It was at this last place,

where he arrived on the 17th, that the Duke d'Angouleme received a flag of truce from the Count del Abisbal and the municipality of Madrid, proposing that a part of the garrison should be allowed to remain in the capital until the arrival of the French army; with the view of preventing the disorders which might arise among the various parties which divide the populace, if they were left to themselves. Accordingly, a convention was agreed upon, by which it was arranged that a corps, under the command of General Zayas, should remain at Madrid until the 24th, on which day the French were expected to enter the city.

Circumstances however occurred to prevent the execution of this arrangement. Ever since the departure of the king and the Cortes, the capital had been the prey of violent agitation. As in all periods of public misfortune, the populace began to attribute their reverses to the treachery of their chiefs. The Count del Abisbal was reproached with having made no dispositions to arrest the progress of the enemy at the passes of Guadarrama and Somo-Sierra; and it was rumoured that he had entered into negotiations with several individuals of the opposite party, with the view of bringing about a change of the Constitution. Two letters, which appeared in the public papers at this time, sufficiently indicated what were the grounds of these suspicions. The one dated May 11, was addressed by the Count de Montijo to Abisbal. In this, the Count described the desperate state of the constitutional government, and the evident disaffection of the public mind, contrasting, in that respect, the circumstances under which the country now stood, with those in which she was placed at the period of the French invasion of 1808. He therefore called upon Abisbal to come to a decision which alone could save the country.

Abisbal's answer to this appeal was dated the 15th. He observed, that it was his duty as a soldier to obey the king's government, whatever might be his persuasion of incapacity of the present ministry. And this duty he was resolved to observe; but he added, that, as a Spanish citizen, he was of opinion, that the majority of the nation was unfavourable to the Constitution; and he stated the means which he thought might be employed to re-establish peace and union.

Abisbal appears to have sent copies of these letters to Mina, Morillo, and Ballasteros, and also to have communicated them to several of the superior officers of his army; meeting, however, with an evident manifestation of dissent on the part of these last, he endeavoured to counteract the bad impression he had made, by publishing in the papers a disavowal of the interpretation which had been put upon the expressions of his letter, and a declaration of his unqualified adherence to the Constitution of 1812. His officers, however, had by this time lost all confidence in their chief; and on the morning of the 18th, they waited upon him in a body, and reproached him for the treachery of his procedure. A violent altercation ensued, the result of which was, that the Count resigned his command, and shortly after left Madrid and retired to France.

Upon the departure of Abisbal, the Marquis of Castellaros took the command; and immediately adopted measures for evacuating the capital, leaving behind Zayas, with a corps of reserve, according to the arrangements that had been agreed upon. The 24th was, as we have said, the day fixed for the arrival of the French. On the 20th, however, the celebrated partisan Bessieres, unexpectedly made his appearance at the gate of Alcalá, at the head of a column of about 1200 cavalry and infantry; having succeeded by forced marches in pushing on considerably in advance of the French. Zayas, immediately proceeded to the gate and entered upon a parley with the royalist chief; informing him of the convention which had been entered upon with the Duke d'Angouleme, and stating his determination not to deliver up the city, except according to the terms of that convention. He therefore desired Bessieres to withdraw his forces; but meeting with a positive refusal on his part, and finding there was a disposition on the part of some of the populace to favour the entrance of the royalist troops, Zayas gave

gave orders to the garrison to advance; a fire of grape-shot soon dispersed the populace; and a charge of cavalry was equally effectual in driving back the column of Bessieres, who was obliged to fly, leaving two or three hundred prisoners behind him. In consequence of this event, the French advanced-guard entered Madrid on the 23d, a day sooner than had been originally determined upon; and Zayas was suffered to effect his retreat uninterruptedly, in the direction of Talavera de la Reyna.

On the following day the Duke of Angouleme made his entrance into the capital, amidst the unequivocal demonstrations, as we are assured, of popular delight and enthusiasm. He convoked the ancient Supreme Council of Castile, and the Supreme Council of the Indies, and intrusted to these bodies, the care of selecting the members of a Regency.

Accordingly the two Councils met. But not considering themselves authorized by the laws of the kingdom to erect a Regency, they merely recommended to the duke, a list of the persons whom they held to be the best fitted for the office. The persons thus named, were the Duke of Infantado, president of the council of Castile; the Duke of Montemar, president of the council of the Indies; the Bishop of Osmá, the Baron d'Erolles, and Don Antonio Gomez Calderon; and they were on the 25th formally recognized by the Duke d'Angouleme as forming the Regency of Spain, during the captivity of the king.

One of the first acts of the new Regency was to form a ministry; and with the view, it should seem, of restoring every thing, as much as possible, to its former situation, they reinstated in their offices, the individuals who had composed the king's cabinet at the period of the revolution in 1820, with the exception of the minister of foreign affairs, Vargas, in whose absence the department was intrusted to Don Victor Saez, the king's confessor. The General Eguia was nominated commander-in-chief of the Spanish forces. At the same time a decree was issued, annulling all the acts of the constitutional government, declaring all persons who had accepted office under that system, incapable of exercising any functions under the king; enjoining an immediate suspension of the sale of the property, whether of the Crown or the Church, which had been assigned for the payment of the public debt, and restoring all the rights and tithes of the regular or secular clergy.

In the mean time the French followed up the pursuit of the corps, which had lately formed the garrison of Madrid. A detachment under General Vallin, was dispatched in pursuit of Zayas, and came up with him at a short distance from Talavera. A skirmish ensued, which ended in the Spaniards withdrawing beyond the Tagus, by the bridge of Alberche, leaving a part of their baggage in the hands of the enemy. Count Bourdesoulle, with a column of seven thousand men, moved upon Seville by Aranjuez; another commanded by Count Bourmont marched by Truxillo, in the direction of Estremadura, in connection with the corps under Vallin. Neither of these columns experienced any serious opposition in their advance. That of Bourmont, supported by the royalist bands under Merino, occupied Truxillo, on the 11th, and San Lucas la Mayor on the 19th, where it came up with the rear guard of the force under Lopez Banos, and took a considerable number of prisoners, with a part of his baggage. The other column after routing a division of about 1500 Spaniards under General Plasencia, at Santa-Cruz, continued uninterruptedly its march upon Cordova.

It is now necessary to revert to the proceedings of the constitutional government. The king arrived at Seville on the 10th of April; but it was not until the 23d that a sufficient number of the Cortes had reached that city, to enable them to enter upon their deliberation. Upon reopening their sessions, the President, Florez Calderon, congratulated the members of the assembly, upon the general and lively manifestations of public confidence and attachment, on the part of all ranks of the people which had greeted them on their journey, and found in those demon-

strations of popular feeling new grounds of assurance as to the ultimate triumph of their cause.

On the same day the government issued a formal declaration of war against France. Orders were at the same time sent to all the ports to issue letters of marque and reprisal against the vessels employed in French commerce. It had been expected that the French would have suffered much from this kind of hostility; very few Spanish privateers, however, appeared on the seas; and the trade of France did not undergo any material damage or interruption.

On the 24th, the minister of foreign affairs presented a memorial of the state of the diplomatic relations of Spain, including an account of the conduct of the government in the late negotiations with France and England. The Cortes approved of that conduct, and a manifesto was drawn up and published in the name of the king, setting forth the principles upon which the government had been guided throughout the whole transaction.

In the meanwhile the Cortes busied itself in the promulgation of a variety of decrees, of the nature of those commonly issued in cases of great public emergency. Some of them, indeed, were marked with a degree of severity sufficiently characteristic of the spirit of revolutionary administration.

A new ministry was at length formed (May 15th), composed of the following persons:—Senor Pando, for foreign affairs; Calatrava, for grace and justice; Don Garcia Herreros, for the interior; Zarco del Valle, for war; Capaz, for the marine; Vadillo, for the colonies; and Yandiola, for finance. Zarco del Valle being absent with the armies, his post was provisionally occupied by Don Sanchez Salvador. These persons were for the most part of what is called the moderate party; but they had scarcely any time allowed for the exemplification of the character which was given them. On the 9th of June the news arrived of the defeat of Plasencia, and the march of the French upon Cordova. The ministers immediately declared that it was necessary that the government should be transferred to Cadiz. The king referred the matter to his council of state, which was immediately convoked. The Prince of Anglona proposed that a negotiation should be opened with the Duke d'Angouleme. The council rejected the proposition, and continued in deliberation until late that night, but without coming to any definitive conclusion. On the following day (June 10th) they met again, and at length, about nine at night, they reported to the government their entire concurrence with ministers, respecting the absolute necessity of removing the king and the Cortes; differing solely with regard to the point to which the seat of government should be transferred, for which purpose the council preferred Algeiras to Cadiz. This result was immediately notified to the king, who, however, very unequivocally declared his resolution not to submit to this second transfer of his person.

On the 11th the Cortes met; and ministers, being called upon, stated to the assembly what they had been able to learn of the number and station of the French troops in Spain; and further detailed what had been the result of the deliberations of the council of state on the preceding day. With respect to the intentions of the king, they said that they could say no more; but that at the time of their coming to the hall, his Majesty had not taken a definitive resolution upon the proposition that had been made to him.

Upon this, several questions were put to the ministers, tending to elicit their opinion whether they thought that the Constitution could be maintained, if the removal was not effected.

The Secretary for grace and justice replied, that the ministers were firmly convinced that the safety of the country depended upon the removal of the government and of the Cortes to a place of greater security.

The Deputy, Galiano, then moved that a deputation should wait on his Majesty, and state to him the necessity for his removal.

This motion was agreed to without discussion.

Arguelles proposed that the Isle of León should be fixed

on for the place of removal, and that the time of departure should, at the latest, be to-morrow at noon.

After some discussion this motion was also agreed to.

A message from one of the ministers intimated that his Majesty had appointed five o'clock that evening for receiving the deputation. Soon after the deputation went forth.

On its return from the palace, the following statement was made by the President, Don Cavetano Valdes:—"The deputation of the Cortes having waited on his Majesty, represented to him that the Cortes had resolved on their removal to-morrow, as, according to the accounts which had been received, if the enemy made a few forced marches, the removal could not be accomplished, and that it was therefore fit that his Majesty and the Cortes should proceed to the Isle of Cadiz.

"His Majesty answered, that his conscience and the interests of his subjects did not permit him to leave this city; that as a private individual, he did not think his removal inconvenient; but that as a King, his conscience did not permit him to accede to it.

"The deputation represented to his Majesty that his conscience was safe, since, though as a man he might err, as a constitutional King he was subject to no responsibility; that he should hearken to the advice of his counsellors, and the representatives of the people, on whom lay the burthen of the responsibility for the salvation of the country.

"His Majesty signified that he had given his answer.

"The mission of the deputation being completed, they now stated to the Cortes, that his Majesty did not think the removal convenient."

Senor Galiano, after a short speech, submitted the following proposition:—"I pray the Cortes, that in consideration of the refusal of his Majesty to place his Royal person and family in safety from the invasion of the enemy, it be declared that the provisional case has occurred for regarding his Majesty in the situation of moral impediment, contemplated by article 187 of the Constitution; and that a provisional Regency be appointed, which, solely for the case of the removal, shall possess the faculties of executive power."

The motion was opposed by Senores Vega-Infanzon and Romero; and supported by Arguelles and Oliver. It was finally adopted.

On the motion of Senor Infante, a commission was appointed to nominate the individuals who should compose the Regency. This commission consisted of Senores Arguelles, Gomez, Becerra, Cuadra, Alava, Escovedo, Infante, Isturiz, Salvato, and Fores Calderon.

This commission reported that the Regency should consist of three members, and recommended for that purpose the following persons, viz.:—Don Cavetano Valdes, deputy of the Cortes, to be the president, Don Gabriel de Ciscar, councillor of state; Don Gaspar de Vigodet, councillor of state.

This recommendation was adopted, and the above individuals were formally installed and sworn as regents.

On the following day all was confusion and agitation at Seville. The king was no longer able to resist the removal, but it was not till late in the evening that the preparations for his departure could be completed; he set out about seven o'clock, and slept that night at Utrera. None of the foreign ministers either accompanied or followed him, with the exception of the Saxon envoy, who felt it necessary to watch over the safety of the queen. Sir William A'Court sent a note to the government stating, that he was accredited to the king and not to a Regency, and that he could not therefore proceed to Cadiz, without further instructions. The ministers answered by a declaration, that his Majesty would be under restraint during his journey only, and that he would resume his functions in Cadiz. Sir William, however, repeated his former resolution, and proceeded to Gibraltar, where he proposed to await the arrival of an answer from England.

The king left Seville with an escort of six or seven thou-

sand men, under the command of General Zayas. No sooner had the troops evacuated the city, than it became a prey to the most violent disorders. Bands of the populace scoured the street, amid cries of "*the King for ever*," "*the Inquisition for ever*," and the confusion hourly increased, till it became difficult for the members of the Cortes and of the Council to make their way out of the place; all the emblems of constitutional authority were directly destroyed, a new municipality was formed, and a deputation sent, conveying their homage to the Regency at Madrid, together with a message to the French generals, begging them to hasten their march upon Seville. The triumph of royalism, however, received a serious check, by the sudden arrival (June 16) of a constitutional division, under the command of Lopez Banos, who forced his way into the city in spite of the resistance of the populace, re-established the constitutional authorities, and levied a considerable contribution on the inhabitants. After a stay of about eight-and-forty hours, Lopez left the place, retreating in the direction of Portugal, and the French force, under Count Bourmont, arrived three days after.

When the news of what had taken place at Seville reached Madrid, the Regency expressed its indignation by issuing a decree (June 23), which ordered, that a criminal prosecution should be instituted against all the members of the Cortes who had taken part in the proceedings of the 11th, as having incurred the penalties of the crime of high treason. This was not, however, the worst consequence of these transactions. Morillo, who commanded in Galicia and Asturias, had for some time past been an object of suspicion and distrust to the more zealous portion of his officers and troops. The event at Seville gave him, in some degree, a pretext for avowing his defection. At Lugo, on the 26th of June, he issued a proclamation, in which he declared he had come to a resolution, in concert with the chiefs and officers of the second and third divisions and with all the civil, military, and ecclesiastical authorities of the place, not to recognize the Regency which had been appointed by the Cortes, without the case foreseen by the Constitution having arrived.

A provisional Junta was constituted by him, *ad interim*, and a suspension of hostilities agreed to with the French. Quiroga, however, who commanded in Galicia, openly protested against these proceedings; and invited Morillo's troops to hasten to range themselves under a standard that was yet faithful to the cause of liberty; an invitation that appears to have influenced a considerable defection of the soldiery under Morillo. Quiroga threw himself into Corunna, which was garrisoned by about five hundred regular troops, and fifteen hundred militia and volunteers. Among these last may be mentioned Sir Robert Wilson, who had arrived from England, in the month of May.

Soon after the French army came in sight of Corunna, they immediately attacked the advanced posts of the Spaniards, upon the heights which command the town; a hot conflict ensued, which lasted five hours, and in the course of which Sir Robert Wilson was severely wounded in the thigh. The Spaniards afterwards retired within the works, when they were summoned by the French general, with the offer of terms of honourable capitulation. Quiroga, however, indignantly rejected the proposition, and after arranging the means for the defence of the place, he proceeded himself to Cadiz.

In Catalonia, the progress made by the French was slow and painful. The gallant Mina employed to resist them all the resources of genius and activity. After a month of marching and counter-marching, Monecy still found himself at his head-quarters at Gerona; but of the details of the operations on either side, we find it difficult to give any clear or precise account. It would seem, that upon quitting his position on the Fluvia, Mina had divided his force into two parts; the first of which, under Milans, fell back upon Hostalrich, with the view of covering Barcelona, while he himself marched with the other into Upper Catalonia. D'Erolles, with the royalist's force, pursued him up the

Ter towards Campredon and the French frontier, while the French strove to intercept him on the left; a combination which it was expected that Mina would not be able to escape. The next news they heard of him, however, was, that he had already got beyond their reach at Berga, from whence he could descend the Llobregat to Barcelona. In order to cut him off from this outlet, General Donnadieu was ordered to march upon Manresa. At Casteltorsol, Donnadieu fell in with a body of 3000 troops, under Milans, and an engagement took place, the result of which was, that the Spaniards were compelled to fall back upon Barcelona.

In the meanwhile, Mina was between Cardona and Manresa, and while his enemies were engaged in intercepting his route to Barcelona, he suddenly marched by Sasserias upon Vich, where he arrived in the morning of the 26th. After an ineffectual attempt to carry this place by escalade, he pursued his march across the mountains to Urgel (May 3). Here he reinforced the garrison, and having placed his wounded, his ammunition, and the contributions he had levied, in a place of safety, set out on an inroad on the French frontier, at a moment when the enemy were expecting him in the direction of Cardona. He crossed the Pyrenees, entered France, and threw the whole country, as far as Andorre, into alarm and confusion; but, contenting himself with this demonstration, he soon after re-entered Catalonia by the road of Campredon, and notwithstanding all the combinations that had been made to intercept him on his return, he succeeded in making his way to Urgel (June 15), after some arduous marches, in course of which his column suffered considerably from the repeated attacks of their pursuers. Four days after, he again left this town with a body of 1200 men, and descended the course of the Segre. It was supposed that his object was to throw himself into Lerida, but, in fact, he marched by Pons and Cervera upon Tarragona, where he arrived sick and wounded, and exhausted by the effect of his late exertions. On the 26th of June, he established his headquarters at Sans, about a mile from Barcelona, having succeeded in completely baffling all the combinations and calculations of his enemies, who had repeatedly so surrounded him by their various divisions, that his escape had been announced as impossible.

Soon after (May 8), the 5th and 10th French divisions were ordered to form the investment of Barcelona. The corps of Milans and Llobera fell back, as the enemy advanced, upon Molins del Rey and Martorell, and finally took up a position at Igualada, on the road to Lerida. Marshal Moncey found it necessary to secure his flanks by driving them from this post; and after some skirmishing, Milans retreated by Jorba and Cervera, and encamped in the neighbourhood of Tarragona. A much more decided character of success was seen to mark the operations of the second French corps under Count Molitor. After raising, as we have already described, the siege of Mequinenza, and establishing his communications with the army of Catalonia, Molitor entered Arragon about the beginning of June, in pursuit of Ballasteros. That general was vigorously pressing the siege of the fortress of Murviedro, when the approach of the French (June 11) compelled him to break up and retire upon Valencia; which, however, he almost immediately evacuated, and took up a position at Alcira and Cargante. Here his rear-guard suffered considerably from an attack of the enemy, and a considerable desertion took place among the newly levied regiments of his army. He continued his retreat somewhat precipitately by Murcia, Lorca, and Grenada, and at length (July 27) encamped in a strong position on the mountains of Campillo de Arenas. Molitor first occupied Grenada, which the general commandant, Zayas, evacuated at his approach. He then proceeded to attack Ballasteros (July 28), who, after an obstinate resistance, was driven from his position with the loss, says the French bulletin, of four or five hundred killed and wounded, and three hundred prisoners. The event of this day had a most discouraging effect upon the Spanish army, of which it is calculated above fifteen hundred deserted in the course of the two following nights.

On the 4th of August, a convention was agreed upon between Ballasteros and Molitor, by which the Spanish army was made in some sort to recognize the authority of the Regency; and a guarantee was given, that the generals and officers should retain their rank and their pay, and that no individual of it should be prosecuted or molested on account of his acts or opinions previous to this convention. Hostilities then ceased on both sides, and Ballasteros sent orders to the Governors of Alicante, Carthagena, and other places included within his command, to recognize the authority of the Regency of Madrid; his orders to this effect, however, were in very few instances obeyed.

These conventions, infinitely more than any military successes which had been achieved by the French arms, were of decisive import as to the result of the war. It was clear that the constitutional cause was falling to pieces by the successive defections of the Generals, on which it most depended for its support; and the most difficult part of the task which now remained to the French, was that of protecting the vanquished against the insolence of victory and the rage of party re-action, on the part of their own allies. The Regency of Madrid, and the provincial Junta, formed under their authority, evinced every disposition to go all lengths in the expression of their triumph and the gratification of their political antipathies. At Saragossa it was with the utmost difficulty that the fanatical populace were prevented by the French garrison from indulging in the most horrible outrages upon the opposite party. A similar spirit prevailed at Madrid, although considerably checked and awed by the decided discountenance of the Duke d'Angouleme. The Regency, on its part, continued to issue the most violent decrees against the partisans or adherents of the late government. That of the 23d of July, may be cited as a sample of the spirit which predominated in the drawing up of these ordinances. By this instrument, all persons, and especially those employed under government, who, since the 20th of March, 1820, should have presented themselves to serve in the volunteer militia, and all those who should have belonged to secret societies, were, by that act alone, deprived of the pay of any civil or military employment which they might have obtained, and of all honours or decorations which might have been accorded to them, until the liberation of the king.

In the meanwhile, the Duke of Angouleme proceeded to leave Madrid in order to put an end to the campaign by the reduction of the Isle of Leon.

He made a short stay at Andujar, from whence, August the 8th, he published an ordinance which created a considerable sensation throughout the Peninsula. By this the Spanish authorities were strictly forbidden to make any arrests, without the sanction of a French commanding officer of the district, and these last were enjoined to set at liberty all individuals who had been arbitrarily arrested on political grounds, and more particularly the disbanded militia men. By the same ordinance the journals were placed under the care and inspection of the French commandants.

The immediate object of this measure was no doubt to give confidence to such of the constitutional troops as were disposed to capitulate, and whom the violence of the royalist party might otherwise deter from venturing upon any engagement of that nature. But it excited, as might have been expected, the utmost irritation among those whose excesses it was in fact directly intended to restrain.

Conferences upon the subject were opened between the Regency and the French commanders; but in the meanwhile these last so far obeyed the rescript of the Prince Generalissimo as to proceed to set at liberty some twenty individuals confined in the prisons of the city. The Regency formally protested, August the 13th, against this act as a manifest outrage upon their authority; a compromise of the matter, however took place, and on the following day a decree appeared, by which the Regency of its own authority, ordered that all the persons detained should be discharged, with the exception of those who had been guilty of excesses for the purpose of overturning the fundamental constitution

constitution of the kingdom—a somewhat vague principle of exception, and which seemed susceptible of a very comprehensive latitude of interpretation.

A still more undissembled repugnance to the ordinance was manifested in the provinces, and did in fact prevent its taking effect. At Vittoria, the Trappist at once told the French commander, that he would not co-operate in the execution of such a measure; and the royalist force engaged in the blockade of Pampeluna sent an address to the Regency, in which they said that they could not see with indifference, the supreme authority of the government overturned, the laws violated, and the nation outraged by those who had only come to protect it.

The Duke d'Angouleme perceived that he had somewhat imprudently shocked the national pride by his Andujar ordinance; and accordingly a second was issued, (August the 26th,) explaining, and in some measure modifying the former; the application of which was restricted to the individuals comprehended in the capitulations; and the superintendence of the Spanish journals was stated to mean nothing more, than to prevent the insertion of articles calculated to irritate the public mind, or to embarrass the measures adopted by the prince for the pacification of Spain and the liberation of the king.

About this time the war in Galicia was brought to an end by the capitulations, which under the mediation of Morillo, the garrison of Corunna (August 13) and Vigo (August 27) were induced to accept from the French general. By these it was stipulated, that no inhabitant or militia-man should be in any way molested, for any thing he had done or said previous to the period of the capitulation.

The king arrived at Cadiz on the evening of the 15th of June; on the next day, a portion of the deputies to the cortes assembled in an extraordinary sitting in the church of San Felipe-Neri, where the Cortes of 1812 had held their sittings; and the provisional Regency which had been created by the decree of the 11th, then declared that their functions had ceased, inasmuch as the king had arrived at Cadiz, and that the Cortes were in numbers sufficient for deliberation. Accordingly, the assembly resumed its ordinary sitting on the 18th. A shocking event occurred on the morning of that day. The minister of war, Don Sanchez Salvador, put a period to his existence by cutting his throat with a razor. He left behind him a paper, stating that life had become insupportable to him, but that he died with a clear and unrepining conscience.

The executive, in concert with the Cortes, then proceeded to take measures for the defence of the town and the island. The French corps of Bordesoulle arrived at Port St. Mary on the 24th of June, and was shortly after reinforced by the division of Count Bourmont. Nothing was attempted in the way of active operation by either party, until on the 16th of July, when the garrison made a demonstration of attack upon different points of the French line from Puerto Real to Chiclana, and some skirmishing ensued, in which both sides attribute to themselves the honour of success.

But during this suspension of military conflict, the Cortes was not idle. It is not necessary to recapitulate the decrees which it issued for the military organization of provinces which were for the most part no longer under its authority—one of these acts, however, deserves mention, as marking the uncompromising spirit which still animated the assembly. The Duke d'Angouleme had been greeted (May 18) by an address of congratulation and acknowledgment on the part of the grandees of Spain, and signed by the names of thirty-one noblemen. The Cortes now declared the individuals who had signed that paper, unworthy of the Spanish name, and traitors to their country and their king; and they decreed that they should be deprived of their titles, honours, rank and employments; and that their property of every kind should be sequestered to the use of the public treasury during their lives.

This decree, like every other, was signed by the king, who had, in fact, for some time past abandoned all notion of objecting to or resisting the promulgation of the will of the

Cortes. On the 5th of August, that assembly closed its ordinary session for this year.

The Duke of Angouleme soon after arrived at Port San Mary. On the morning following his arrival, August the 17th, he sent one of his aides-de-camp, with a flag of truce to the Spanish lines, charged with a letter to the King of Spain, which he was ordered to deliver to his Majesty in person. After some difficulties on the part of the Spanish authorities, the messenger was admitted to an audience of the king, to whom, in the presence of the members of the government, he presented the prince's letter. In this his Royal Highness expressed, in the name of the King of France, his desire that his Catholic Majesty be restored to his liberty and to his just authority; should accord a general amnesty for the past; and should give to his people, by the convocation of the ancient Cortes of the kingdom, the best guarantees of order, justice, and good government; and the duke offered to engage for the concurrence of all Europe in the consolidation of this act of wisdom. It was added, however, that if within five days a satisfactory answer was not given and the king set at liberty, recourse would necessarily be had to force, and that they who consulted their passions rather than the interests of their country, would be answerable for the consequences.

To this, the king was made to reply that he was in fact free; that the old Cortes which had been alluded to were no longer compatible with the Spanish nation, and the like.

The French now proceeded to take measures for the attack of the island. With this view, the possession of the Trocadero was the first object to be effected; and the works were pushed with such activity, that before the end of the month, five batteries were erected within the reach of the position. On the 30th, a warm cannonade was opened and continued for some time, without producing any other effect than that of fatiguing the garrison. But at two o'clock on the following morning, August the 31st, the French line was put under arms; a strong column of attack advanced in silence and unperceived till within forty paces of the ditch; into which it threw itself, and gained the opposite bank in spite of a hot fire of grape and musquetry from the garrison. They then carried the entrenchments at the point of the bayonet, and soon after the Fort St. Louis; so that, by nine o'clock, the whole of the isthmus was in their hands.

The effect of this reverse upon the city was manifested the same day by the dispatch of General Alava with a flag of truce to the French head-quarters, bearing a letter from the king to the Duke of Angouleme, which contained a proposition for an armistice. The Duke, however, answered that he could listen to no proposal of the sort, until the king was free and under the protection of the French army; and the Spanish ministers then determined to lighten the responsibility which the crisis imposed upon them, by convoking an extraordinary meeting of the Cortes.

They must, indeed, by this time have felt that their cause was utterly desperate. The successive defections of Abisbal, Morillo and Ballasteros, had as it were delivered it, bound hand and foot, to the French. An expedition had been undertaken by Riego, with the purpose of attempting to bring back the troops of Ballasteros to their duty to the Constitution, but although the enterprize was marked with all the courage and decision that have distinguished the military career of that celebrated partisan, it eventually failed of success. On the 17th of August, Riego, having evaded the blockading squadron before Cadiz, disembarked at Malaga, where he superseded Zayas in the command of the 2000 men who composed the garrison; and proceeded to raise, by the most violent means, a contribution of money in the shape of a forced loan, on the inhabitants. He left Malaga with a force of about 2500 men on the 3d of September, and in order to avoid the French divisions of Bonnemains and Loverdo, took the resolution of throwing himself into the chain of the Alpujarras, the passage of which he effected by a route never before attempted, and after a march of three days, found himself (Sept. 8) in the plains of Grenada. On the 10th, he came up with the advanced posts of the cantonments of Ballasteros

lasteros at Priego. Ballasteros, advised of his approach, immediately ordered his troops to fire; but just at the moment, when the infantry was putting itself in line for a general action, Riego's soldiers lowered their arms, and waving their caps in the air, advanced amid cries of "Long live Riego and Ballasteros! The Constitution for ever!" The sympathy instantly caught the other party; they joined in the cry, and both sides met in each other's embrace. Riego then entreated Ballasteros to join with him against the common enemy, offering to serve under his command in any capacity he might choose to assign. Ballasteros, in order to gain time, said he would confer with his officers on the subject, and the two chiefs dined together; in the meanwhile, Ballasteros dreading the danger of further contact with the constitutional force, gave orders to his division to retire in the direction of Lucena and Cabra, reserving merely a piquet for his own guard. Riego was soon made aware of this movement, and perceiving the object of it, he, in the first instance, arrested Ballasteros at his head-quarters. The officers of this last, however, remonstrated so strongly against the indignity thus offered to their general, that Riego found it necessary to liberate his prisoner; and finding that nothing more could be done in this part, he moved in the direction of Alcantete and Martos. A considerable portion of the regiments of Numantium and Espagna now abandoned him, and all hope of effecting the original object of his enterprise being lost, he turned towards the Sierra Morena with the view of crossing that range, and of making the best of his way for Catalonia. But he was surrounded on all sides by French divisions; that of General Bonnemains came up with him on the 13th, near Jaen; after a long and obstinate conflict, Riego was compelled to abandon his position with great loss, and to retreat in the direction of Jodar. Here, however, he fell in with another French detachment (Sept. 14); and the Spaniards, now thoroughly disheartened by their repeated reverses, dispersed on every side without a waiting the onset; Riego himself was compelled to seek safety in flight, accompanied only by three of his officers. They endeavoured to gain the mountains of the Sierra Morena; but were recognised on their way at a farm house near Carolina d'Arguillos, and information being given to the neighbouring authorities, they were arrested and sent to Andujar. A dispute arose between the French staff and the Spanish authorities as to whose jurisdiction Riego properly belonged. The latter claimed him as having been captured by Spanish peasants; the former, because he was taken in his flight after a rencontre, in which the French troops exclusively were engaged. The question was decided in favour of the Spaniards; to whom Riego was delivered over, and soon after conducted a prisoner to Madrid.

The capture of Riego seemed to decide the fate of the war in the south, where two places only, Alicante and Carthage, still acknowledged the Constitution. In Navarre, Pampeluna and St. Sebastian yet held out, but the investment of the former place had been pushed with additional vigour, since Marshal Lauriston arrived to assume the direction of the operations before it; and on the 16th of September, a capitulation was agreed upon, by which the garrison became prisoners of war, and the French general engaged to employ his utmost influence to prevent individuals from being subjected to molestation on account of their preceding political conduct. St. Sebastian capitulated upon the same terms on the 27th, which had already been granted (11th) to the garrison of Santona.

In Catalonia, however, the constitutional cause still maintained its ground, and, indeed, the French seemed to have made little or no essential progress in this quarter since the beginning of the campaign. The fortresses of Figueras, Urgel, Hostalrich, and Lerida, continued to hold out; and the forces employed in the blockade or siege of these places, were kept in continual alarm by the sorties, made from time to time by the garrisons of Barcelona and Tarragona. One of these expeditions deserves particular commemoration. On the 10th of September, at the moment when the blockading force at Barcelona was occupied by an attack upon their

whole line on the part of the garrison, a body of about two thousand four hundred men, under the command of Brigadier Gen. Fernandez, embarked from the fort, and landed the same evening a few leagues to the north, between Mongat and Masnou. They marched rapidly upon Hostalrich, and after revictualing that place, proceeded by San Seloni, in the direction of Urgel, as though with the purpose of throwing similar succours into that fortress; but on reaching Olot, they turned suddenly to the right towards Figueras. In the meanwhile, however, the enemy had taken the alarm; and the Spaniards found the several roads strongly occupied by his troops. Fernandez in vain endeavoured to cut his way through them, on the 15th at Llado, and again on the following day at the defiles of Tarrades. In these combats he lost above five hundred men killed and wounded, and finding himself surrounded on all sides by superior numbers, was compelled to accept an honourable capitulation from the French commander, the Baron du Damas. Nearly two thousand men became prisoners of war. Among them were the remains, about 120, of the battalion composed of French refugees, who were not included in the capitulation, but were induced to surrender upon a promise of their lives from the French general. Figueras capitulated a few days after.

The remaining history of the Spanish revolution is a tale soon told. The fall of the Trocadero had thrown the garrison and the citizens into the utmost discouragement; and on the 4th of September, the king was made to write a letter to the Duke d'Angouleme, proposing a suspension of hostilities, in order that the two governments might treat together for an honourable peace. The prince answered, that he could only treat with the king himself being at liberty.

A second messenger was then despatched from the city, to beg the prince to state what it was necessary should be done, in order that the king should be considered free; and also in what manner it was intended to treat with him. To this the duke d'Angouleme answered by a memorandum, in which he desired that the king and the royal family should be allowed to proceed either to Chiclana or Port St Mary, and repeated that he would then exert all his influence with the king, to induce him both to forget what was past, and to give such a constitution to the nation as he might think to consist with its peace and happiness. Orders would be given to the admiral to allow all those who wished to leave Spain, to embark, and go whither they pleased; and a French division would enter Cadiz to maintain order, and prevent reaction.

It was now endeavoured to induce the English minister, who still remained at Gibraltar, to proceed to Cadiz, and interpose the mediation of his government for the arrangement of a general pacification. Sir William A'Court evaded the proposition, on the pretext of the French blockade; he sent, however, his secretary of legation to the French headquarters, with the view of ascertaining the disposition of the Duke d'Angouleme; but the prince was too well aware of the straits to which his adversaries were reduced, to be inclined to relax from his original demand.

In the meanwhile, the Cortes assembled, for the last time, (Sept. 6) in an extraordinary session, which was opened, as usual, by a speech read in the name of the king, in which his Majesty, after adverting to the dangers which menaced the vessel of the state, observed, that their enemies refused to treat with him unless he were free, and had declared that they would not consider him as free, until he was in the midst of their bayonets; a kind of liberty which his Majesty designated as inconceivable and ignominious.

On the following day, a report was read from the committee charged to inquire into the state of the kingdom. The committee stated, that the documents which had been submitted to them by the executive, exhibited the deplorable state of the nation; but added, that the propositions made by the enemy were so dishonourable and humiliating, that they concurred with his Majesty's government in the determination it had expressed, to perish rather than accede to them.

The report was sanctioned by the Cortes; additional and almost unlimited powers were given to the government, and to the junta, which was specially charged with the arrangement and enforcement of the measures judged necessary for the defence of the town. It is difficult, however, to believe that either the minister or the Cortes could seriously entertain any hope of being able to hold out much longer; and the loss of the fort Santi Petri (Sept. 20), which formed the key of the right of their position in the island, seemed to render their situation nearly hopeless. On the 23d, the French fleet opened a bombardment on the town, which was set on fire in several places; and the despair of the citizens now became almost universal; a disposition to revolt was manifested by the regular troops, and was only kept down by the militia of Madrid, which alone seemed to retain something of determination and courage amid the despair which depressed all around them.

In the meanwhile, the besieging army were hastening on every side their preparations for a general assault; and neither the naval or military commanders, when required by the minister to state their opinions as to the means of defence possessed by the place, attempted to dissemble the inadequacy of them. The report of their opinions were laid before the Cortes on the 28th; and the members could no longer resist the conviction, that all farther resistance was unavailable. Accordingly, a resolution was passed, by a majority of sixty votes to thirty, declaring that the king was restored to his former authority, and that a deputation should be sent to him, begging his Majesty to proceed to the French head-quarters, there to stipulate such conditions as should be most favourable to the welfare of his afflicted people. The deputation proceeded immediately to the custom-house, where the king had resided since his arrival at Cadiz, and were admitted to an audience. Ferdinand is said to have expressed his satisfaction at the decree of the Cortes, and to have promised his pardon and protection to all persons concerned in the late events.

At eleven o'clock on the 1st of October, Ferdinand, accompanied by his family, embarked on board a sloop, and in half an hour reached the port, where he was received on his landing by the Duke d'Angouleme, surrounded by his staff, and backed by an immense multitude of people.

The first exertion of Ferdinand's recovered authority, gave but an unfavourable augury of what was to follow. On the same day of his arrival at Port St. Mary, he issued a decree which pronounced all the acts of the government called Constitutional (of whatever kind and description they may be), from the 7th of March, 1820, until the 1st of October, 1823, null and void, declaring, that during the whole of that period he had been deprived of his liberty, obliged to sanction laws and authorize orders, decrees, and regulations, which the said government framed and executed against his will.

The king then ordered that Cadiz and the Isle of Leon should be delivered up to the occupation of the French troops. A considerable emigration had already taken place from the city; between four and five hundred individuals, including most of the members of the Cortes and the late constitutional government, together with the principal officers of the army, embarked in the port, and sought refuge, for the most part, at Gibraltar, from whence they afterwards proceeded either to England or America.

On the 3d, the principal posts were given up to the French. On the same day the king left Port St. Mary for Seville. The news of the events which had taken place at Cadiz, soon spread throughout the Peninsula, and of course, all purpose of further resistance was abandoned by the constitutionalists. Lerida surrendered on the 18th of October—Seo d'Urgel three days later. The remaining fortresses of Catalonia were given up to the French, by a convention signed the 1st of November, by which the local militia agreed to lay down their arms, and return to their several homes; but the troops of the line and the militia were to be sent to cantonments.

A considerable number of individuals concerned in the late events, thought it prudent to leave the country. Mina

himself embarked for England. The campaign was now brought to a close, and the Duke d'Angouleme set out on his return to France.

On the fourth day after his leaving Port St. Mary, the king published from Xeres a second decree, ordaining that on his journey to the capital, no individual who, during the existence of the system styled Constitutional, had been a deputy to the Cortes in the two last legislative sittings, should present himself, or be within five leagues of the route to Madrid.

At Seville, his Majesty published (Oct. 11) a third decree, constituting a junta of censure, under the presidency of Don Victor Saez, which was ordered to examine all works, and determine upon those which they conceived would be proper for instilling into the people sentiments likely to render them the proper supports of the altar, the throne, and of their country. At Seville, too, the king received the congratulations of Sir William A'Court, upon his restoration to his authority. Our court, however, mixed little in this matter, and prudently kept aloof. The regency of Urgel addressed the King of England twice, and Angouleme's regency once; but to the former no reply was sent by our ministry, and Mr. Canning flatly refused to present the letter of the second to his king, and returned it.

Riego was no sooner sent to Seville, than the regency immediately decreed that he should be tried by the second tribunal of the Alcades of the household, for having, as a deputy to the Cortes, taken part in the deliberation of the 11th of June, which declared the suspension of the king. Riego denied the competence of the tribunal, but he was found guilty, and condemned to be hanged, and his goods confiscated. The sentence was executed on the 7th of November. The widow of Riego went to England, where she excited much sympathy.

The King and Queen of Spain made their solemn entry into Madrid on the 13th of November, and their return was made the subject of popular festivity for some days after. The amnesty, however, so necessary to quiet the public mind, did not appear. On the 27th, a decree was published, ordering all possible reductions to be made in the number of persons employed in all the branches of administration, and likewise that the salaries should be reduced to the *minimum* necessary to a functionary to preserve the decorum of his place; and this was followed, on the next day, with another, directing the disbandment of the royal volunteers.

A change of ministers took place a few days after, and the Madrid Gazette of the 4th of September contained four decrees.

By the first, his Majesty appointed as first minister of state, the Marquis of Casa Irujo; as minister of grace and justice for Spain and the Indies, Don Narciso de Heredia; as minister of war, Major-General Don Josef de la Cruz; and as minister of finance, Don Luis Lopez Ballasteros. The minister of marine remained.

By the second decree, his Majesty appointed as president of his council, Don Ignacio Martinez de Vilella. This place was still vacant; the Duke del Infantado having refused to accept it.

By the third decree, Saez, the king's former prime minister and confessor, was nominated to the bishopric of Tortosa, vacant by the death of Don Manuel Ros y Medrano. At the same time that he ceased to be minister, he ceased to be confessor to the king.

By the fourth decree, his Majesty, "seeing the absolute necessity for the good government of his vast monarchy, of establishing a council of state which might unite the knowledge and the experience requisite to guide the resolutions of his sovereign authority," nominated ten individuals, composed of persons selected from the old council of state, existing on the 7th of March, 1820, and others, to be a council of state. His Majesty reserved the power of adding to their number. The counsellors named were—Eguia, the Duke of San Carlos, Don Juan Perez Villamil, Don Antonio Vargas Laguna, Don Antonio Gomez Calderon, Don Juan Bautista

tista de Erro, Don Josef Garcia de la Torre, and Don Juan Antonio Rojas.

These nominations were attributed chiefly to the suggestions and representations of the foreign ministers; particularly those of France and Russia; M. Pozzo de Borgo, the Russian ambassador at Paris, having been charged by his master to proceed to Madrid, for the special purpose of congratulating Ferdinand on his restoration to his capital and to his crown. The individuals composing the new ministry were men for the most part of known liberal principles. Casa-Irujo occupied the place of Ambassador from the Cortes at the court of France, before the attempted counter-revolution of the 7th of July, 1822; but he was supposed to have had understanding with the French government in the machination of that plot; and had in consequence been superseded in his embassy by the Duke of San Lorenzo. The minister of grace and justice, Heredia, had ever been stigmatized as an *Afrancesado* or *Josephino*. It might have been expected that the dismissal of Saez, and the nomination of such a ministry to succeed him, would not be popular with the violent royalist faction by which Ferdinand was surrounded. And it is said that the remonstrances of this party on the subject, were so strong, that Ferdinand was upon the point of turning out his new cabinet within four-and-twenty hours after the nomination of it. He was saved, however, from this step by the renewed interposition of the ministers of those allies, to whose exertions he owed his throne; and of whose representations it would have been neither prudent nor decent so soon to have manifested his disregard.

In the year 1824, treaties were concluded, in the month of January, with the court of France, for the mutual restoration of vessels taken in the late war; for the assignment of the amount of debt due by Spain to France, and for the further occupation, for six months, of the Spanish territory, by a French corps of 45,000 men. Soon after a circular dispatch was sent by the court of Madrid to the allied powers, proposing to establish a conference at Paris, for the arrangement of the affairs of the revolted provinces of America. Mr. Canning, on the part of the British government, positively refused to take part in such congress, and intimated, in no very equivocal terms, that any attempt on the part of foreign powers to mediate by force, in the pending quarrel between Spain and her colonies, would be met by Great Britain with an immediate and unqualified acknowledgment of the independence of those colonies. This declaration had its intended effect in at once precluding any further entertainment of such a project. A second invitation, indeed, to the same effect, was made to the British government in the course of the year; but met with no better success.

On the 9th of February, the king issued a decree opening the ports of his American possessions to the subjects of European powers, his friends or allies. As the mother country had long since lost all effective authority over the regions in question, the instrument was ridiculous enough.

The new administration, though for the most men of safe principles and moderate views, were but little able to restrain the violence of the party which late events had made triumphant. The Marquis de Casa-Irujo, indeed, was soon released from the embarrassment of such a service by his death, which took place on the 11th of January. He was succeeded in the direction of affairs by the Count Ofalia. Senor Calomarde, the secretary of the council of Castile, then became minister of grace and justice; an appointment which was considered as unfavourable to the hopes of the moderate party, as Calomarde was known to be one of the leading members of the ultra faction, which went by the name of the apostolic junta. The man who at this time was supposed to enjoy the most personal favour with the king, was M. Ugarte, who did not, however, occupy any ministerial function, but assisted at the council in the ostensible capacity only of secretary of the board.

Enjoying, as they seemed to do, little of the confidence of the king, and deprived by the penury and general disorgan-

ization of the state of all means of active operation against the disturbers of the public peace, the ministers were able to effect little for carrying into effect the good intentions for which they had the credit. The royal volunteers who had been ordered to disband, still remained in arms in many provinces, and continued to indulge in every act of violence against all whom they chose to suspect of abetting the constitutional system. In this state of things, it must be admitted that the voice of French influence was uniformly heard in favour of measures of mildness and mercy; it was, however, too often disregarded; and the Marquis de Talaru, the French ambassador, is supposed to have at length sought a respite from the continual rebuffs and disgusts which he experienced in his residence at Madrid, by an indefinite leave of absence.

We do not know any better mode of illustrating the spirit of government at this period, than by giving two or three of the decrees which it issued from time to time, and the enumeration of which, indeed, composes nearly the whole history of Spain for the present year. A circular was issued from the war department, in which, after complaining of the existence of the armed bands which infested the high roads, and of the obstinacy of the enemies of the monarchy, who continued to pour forth invectives against the sacred rights of the throne and eulogies of the abolished constitution, directions were given for instituting certain paramount military commissioners, who were to take summary cognizance of the proceedings, among others, of the following persons:—Those who, since the 1st of October, of the last year, had declared, or should declare, themselves, by taking arms, or any other overt act, the enemies of the legitimate throne, or the partisans of the constitution:—those who, since the same period, had written, or should write, pamphlets of a similar tendency:—those who, in public places, should speak against the sovereignty of the king, or in favour of the said unhappy constitution:—finally, those who endeavour to seduce their fellow-citizens, with the design of forming a party.

Shortly after, a decree was issued for the suppression of all political journals, except the official gazette and the *Diario* of Madrid. This measure, however sweeping and arbitrary, was probably conceived in the interest of the moderate party, as the journals of the *exaltado's* were of course silenced with the rest. At the same time, more vigorous measures were taken for enforcing the disbandment of the volunteers, and the Baron d'Eroles, who had refused to dissolve his army, was recalled from Catalonia and replaced by the Marquis of Campo Sagrado.

The finances of Spain had, by this time, reached the last term of penury and discredit; and all the efforts of the ministers could effect little for their re-establishment. Their propositions for a loan were at once indignantly rejected, on the exchanges of London and Paris; no capitalists could be found to make advances to the government, which refused to acknowledge the engagements contracted by the Cortes; and to such an extremity of disorganization was the country reduced, that the ordinary resources of taxation afforded little or nothing to the state. The old system of indirect impost was now resorted to; at the same time, the *frutos civiles*, a sort of land-tax, amounting to about 5 per cent. on the net income, was re-established, and levied with rigour throughout the kingdom; the clergy themselves not being exempted from its operation. A singular resource employed by the government for the restoration of the finances, was the establishment of a sinking fund. The king's decree ordained, that an annual sum of 80 millions of reals should be assigned to the sinking fund. This fund was to answer for the payment of the new obligations, which the treasury might contract, in order to meet the current wants of the government.

On the 27th of March, the king and royal family set out on a visit to Aranjuez,—a journey, to pay the expenses of which, the court had been under the necessity of raising a sum of 30,000*l.*, upon a particular pledge. The departure

of the king from Madrid, seemed to be the signal for the ultra-royalists and fanatic party to indulge in fresh violences against their fellow subjects, and it required all the firmness of the French commandant, Count Bourmont, to repress their outrages. Incendiary placards were affixed in the streets, some calling upon the Spaniards to deliver their monarch, who was declared to be in a state of imprisonment at Aranjuez; others pointing out, in no equivocal terms, the Infant Don Carlos, as more worthy of the throne than his brother. In the meantime, the public was in anxious expectation of the act of amnesty for past offences, which it was known that the allied powers had from the beginning urged the king to issue, as the only mode of calming the public mind, and with the drawing up of which the cabinet, it was understood, had been for sometime engaged. At length, on the 1st of May, this instrument made its appearance; a pardon was issued for past political offences, but this act of grace was loaded with so many and important exceptions as completely to reverse its character:—It excepted

“ 1. The principal authors of the military revolt of Las Cabezas, the Isle of Leon, Corunna, Saragossa, Oviedo, and Barcelona, where the constitution of Cadiz was proclaimed before the royal decree of the 7th of March.

“ 2. The principal authors of the conspiracy at Madrid, at the beginning of March, 1820, for the purpose of wresting from the king the abovementioned decrees.

“ 3. The military chiefs who took part in the revolt of Ocagua, and particularly lieutenant-general Henry O'Donnell, Count of Abisbal.

“ 4. The principal authors of the measure which compelled his Majesty to establish the provisional junta mentioned in the decree of the 9th of March, and the individuals who composed it.

“ 5. Those who made propositions in secret societies, or who still adhere to these unions since the abolition of the revolutionary regime.

“ 6. Those who, during the constitutional regime, signed or authorized the dethronement of the king, the suspension of his authority, or the nomination of a regency, or that his Majesty and the princes of his family should be brought in judgment before the Cortes, or any other tribunal; and finally, the judges who dictated decrees for that object.

“ 7. The writers who have attacked the Catholic religion.

“ 8. The judges who condemned general Elio and lieutenant Giorffieu.

“ 9. The assassins of the canon Vinuesa and the bishop of Vich, and of the prisoners at Granada and Corunna.

“ 10. The chiefs of the Guerillas who have taken arms since the entry of the French Army.

“ 11. The European Spaniards who signed the convention concluded at Mexico between the Viceroy O'Donoju and Augustin Iturbide.

“ 12. The deputies of the Cortes, who on the 12th of June, 1823, voted the dethronement of the king.”

At the same time further measures of security were adopted to prevent the importation of foreign works, and journals of a dangerous character.

The ultra party seemed every day to assume a more menacing attitude; the French army of occupation, which indeed was the means by which the government could oppose any effectual restraint to their outrages, became the object of their peculiar hatred. The apostolic junta, encouraged by the success which in the first instance had attended the movement of Don Miguel at Lisbon, redoubled its intrigues, and it is believed was actually contemplating to take measures for placing what they believed to be a more fitting instrument of their passions on the throne, in the person of the infant Don Carlos. A body of royalist volunteers, under the lead of one Capape Royo, formerly a blacksmith, actually took the field in the neighbourhood of Teruel, with the device inscribed on his colours of “ War against the French.” He was however, in a short time overtaken, routed, and made prisoner by a French detachment; and the government, apparently alarmed by the audacity of the enterprise, thought it

necessary to mark, in a still stronger manner, its discountenance of the faction by exiling Saez, Eroles, and other of its supposed leaders from the capital; at the same time an order was issued commanding all persons who had not resided six years in the city to leave Madrid—an extraordinary measure of policy, and which it is difficult to suppose it had ever been intended to be put into strict execution. Soon after it was found necessary to induce the French government to consent to a prolongation of the loan of its army of occupation; and on the 30th of June, a convention was concluded, providing for the continuance in Spain of the French force till the 1st of January following.

The contradictory and inconsistent course pursued by the government, sufficiently indicated the divisions which prevailed in the councils of the king, whose measures seemed from day to day to alternate between the suggestions of one and the other party. On the 5th of July, the royal family left the capital for Sacedon; on which occasion, the king was accompanied by one only of his ministers, Senor Calomarde; and on the 11th following, Count O'alia resigned his office, which was confided to M. Zea Bermudez, who had formerly been minister plenipotentiary in Russia, and at present filled that post in London. M. Salazar was charged with the portfolio of foreign affairs *ad interim* until the arrival of the new minister. It would appear that this ministerial resolution was the effect of the triumph of the more violent party: at least it was immediately followed by a series of measures which we think clearly showed the ascendancy of that faction in their origination. The liberation of the individuals under the act of amnesty was postponed, and the execution of some of the more decisive decrees issued against the royalist volunteers was suspended.

At the same time the rancour entertained by the fanatic populace and soldiery against the French, broke out into acts of open violence. A quarrel took place between a party of French chasseurs and some soldiers of the Spanish garrison, in a tavern at Madrid; both parties had recourse to arms, and each receiving reinforcement from their friends, the affair began to assume a most alarming character, when it was put an end to by the interference of the French and Spanish commanding officers. Five or six Frenchmen were killed in the scuffle, and about a dozen wounded.

During the stay of the king at Sacedon, various decrees were issued. One of these had for its object the adoption of additional measures for the suppression of secret associations, particularly of free-masons. All persons who had belonged to such were called upon to come forward and point out the lodge or society to which they had belonged, and to deliver up all diplomas, symbols, or papers connected with it; and those who should continue to frequent such meetings were declared liable to the penalties attached to high treason. Moreover, all persons of whatever class or condition employed under government, were summoned to declare *under oath*, that they neither did belong nor had belonged to any such association; and further, that they *did not acknowledge* “the absurd principle that the people is competent to change the established form of government.”

On the return of the king from Sacedon, August 19th, another decree was issued, subjecting all military officers, whether on active service or half-pay, to the test of *purification* before commissioners consisting of military officers who had already undergone the same purification. The parties to be thus tried were compelled to give in written answers to interrogatories on the following points:—1st. What were their employments on the 1st of January, 1820. 2ndly. Where were they at that period, and to what corps they belonged? 3dly. The day and place where they swore fidelity to the constitution, and after what orders? 4th. What ranks, commands, or commissions they had obtained up to Dec. 31st, 1823; the time they had served in each employment; the places they had inhabited during the three years, and how long in each place? 5thly. Whether they had been members of any secret society? 6thly. Whether they had been national volunteers, journalists, or orators of any patriotic society; and whether

whether they had served against the royalist troops, in what corps, and in what province? 7thly, if they had been members of any court martial sitting upon royalists; what had been the sentence of such court, and who were the other members of the court martial? finally, the period at which they returned to their obedience to lawful authority, and under what manner? The commissioners were authorized to take secret informations for the purpose of authenticating the answers which might be given to these questions, or of otherwise guiding their decision upon each particular case. The only officers excepted from the necessity of undergoing this purification, were those who had uniformly served in the royalists corps, or those who had always remained near the persons of the king and of the royal family.

Impatient and irritated as the constitutional party must be supposed to have felt, under the multiplied vexatious and oppressions to which they were subjected throughout Spain, there was little doubt but that they would avail themselves of the first opportunity of rising against the yoke. At present, however, such an occasion seemed far distant; the great mass of the population was evidently disposed to take part with the royalists; and imbecile and impotent as was the government in its own resources, it possessed, in the French army of occupation, the means of opposing an immediate and effective resistance to any thing of a counter-revolutionary movement on the part of the liberals. Nothing, therefore, could be more ill-judged, and, indeed, desperate, than some attempts which were ventured on by the constitutional officers, who had sought shelter at Gibraltar, for raising the standard of revolt in the provinces of Andalusia and Granada. These refugees had found means to equip some small vessels under Colombian colours, with which they determined to make a descent on the neighbouring coast, in the hope of being joined by the bands of smugglers, which swarmed in that part of the country, and by other malcontents, the number of whom, it was inferred, was daily increasing under the disgusts given by the present system of government. A first attempt was made at Marbella, but it would seem that the citizens of Malaga had been warned in time, and appeared in arms to oppose the landing, which was therefore desisted from. A second enterprise, directed against Tarifa, was more successful. A body of nearly 300 men landed on the island in the night, and at day-break, on the 3d of August, they surprised the place at the moment that the garrison was opening the gates. The garrison was very weak; but it is not known whether any part of it had an understanding with the enemy; the commandant himself was absent at the time at Algeiras. Valdez immediately took measures for strengthening the works of the place; and having re-inforced his little troop by a part of the garrison and a levy of the inhabitants of the town, he hastened to publish his success in the "first bulletin of the liberating army," in which he announced, that the friends of the constitution were flying to arms on every point; that other divisions of the army of liberty were disembarking on other parts of the coast; and that measures were every where taken for a general rising against the present system.

Upon receiving intelligence of this enterprise, General O'Donnell, who commanded a small force at the camp of San Roche, ordered a detachment of infantry and cavalry to march on Tarifa, and blockade the place by land: on the evening of the 6th, a French frigate arrived from Cadiz, with troops of all arms; and at the same time three French ships of war, with a Spanish schooner, and some gun-boats from Algeiras, cut off all communication with the sea. An attack was made on the 7th, but repulsed by the garrison. Two days after it was repeated, but with no better success. The besiegers now found it necessary to send for battering artillery and in the mean time Valdez, flushed with his success, published a second bulletin, in which he spoke with an absurd confidence of his future operations. On the 14th, a party of about thirty men landed near Almeria, and were joined by some bands of smugglers; the royalists in the town, however, assisted by the inhabitants of the neighbouring villages, collected to attack them. The smugglers fled and dispersed

at the first fire; the rest made an obstinate resistance; but, in the result, were all either killed or made prisoners. These last were immediately shot.

The ordnance having arrived from Cadiz on the 16th, a battery was opened on Tarifa; on the 19th, the breach being practicable, an assault was given, and the place carried after a stubborn resistance against very superior force, of more than two hours on the part of the garrison. A part of them escaped, during the confusion, in boats; the rest took refuge in the small island in front of the fort; and which was defended by twenty pieces of cannon. On the following morning the insurgents were attacked in this position; a considerable number of them were killed, about 160 taken prisoners, and the rest, with Valdez himself, contrived to escape in boats. Of the prisoners the greater part were, a few days after, tried by a military commission, and condemned to be shot. This sentence had already been put into execution when a decree was received from Madrid, declaring that every individual, whether Spaniard or foreigner, who should land on the coast of Spain, and either by force of arms, or the diffusion of seditious writings, should seek to re-establish what was called the constitutional system, should be shot immediately after being taken prisoner; and that all persons joining the rebels after their landing, should be liable to the same summary method of punishment.

The expedition against Tarifa had the only effect which might have been expected from it, that of inflaming the rage and aggravating the severities exercised by the royalists. The minister of war, Don Josef de la Cruz, who, on account of his moderation, had long been an object of aversion with that party, was now obliged to give in his resignation, and shortly after was put under arrest, and his papers seized. He was succeeded in his department by Don Juan Aymerich, who signalized his accession to office by issuing various orders in favour of the royalist volunteers, and recommending the captains-general of the several provinces to augment, by every means, the number, and enforce the discipline of these bands, which he designated as the best safe-guards of the throne.

On the 15th of September, M. Zea Bermudez arrived to take the direction of the department of foreign affairs. Some hope was entertained, that his influence would contribute to moderate the violence of the ascendant party in the government; but such was not the immediate effect, at least, of his accession to the council. Some of the royal decrees issued at this time bore a character more violent, if possible, than that of any which had preceded them. An individual, of the name of Salvador Lloveno was tried at Almeria, for having called out, "Death to the king." Some doubts, which were entertained by the commission, as to the punishment to be awarded against this offence, occasioned the publication of a royal decree, which contained the following regulations: "All those who, since October 1, 1823, have declared or proved themselves, *by any acts whatever*, to be enemies to the legitimate rights of the throne, or partizans of the self-called constitution of Cadiz, shall be considered guilty of high treason, and, as such, subject to the punishment of death. All those who shall *write* pamphlets or journals, with the same object in view, shall be comprehended in the preceding article, and subject to the same penalty. Those who, in public places, shall *speak* against the sovereignty of his majesty, or in favour of the abolished constitution, in cases where the speeches produce no overt act, shall be punished with from four to ten years' confinement. Those who shall attempt to seduce their fellow citizens to form parties, and to procure for themselves the means of acting offensively, such as money, arms, horses, and munitions of war, shall be considered guilty of high treason, and punished with death. Those who shall excite insurrections, for the purpose of constraining the king to perform any act contrary to his will, shall be likewise considered guilty of high treason; but where the object of the insurrection is not of so culpable a nature, the punishment shall be only from two to four years' confinement. The cry of "Death to the king!" is considered to be high treason. The freemasons, comuneros, and sectarians,

tarians, being necessarily regarded as enemies of the throne, are subject to the punishment of death, and confiscation of all their goods, excepting those who are comprehended in the amnesty.

Towards the end of October, another decree was published, which deprived the freemen of the various cities and corporations of their ancient and accustomed right of electing their respective mayors and other municipal officers; and the reason specifically assigned for this measure in the preamble of the decree is curious; it was in order to erase from the Spanish soil even the remotest idea that the sovereignty resides elsewhere than in the person of the king; and to make it known to the people that his majesty would never consent to the slightest alteration of the fundamental laws of the monarchy.

As this year drew towards its close, the period assigned for the departure of the French army was approaching. That epoch, indeed, was looked forward to with impatience by a large party in the country; and there were not wanting persons about the king, to assure him that he might now safely dispense with the presence of the allied force.

The cooler part of the cabinet, and, it is to be believed, the king himself, saw the real state of things in a different point of view. Accordingly, fresh negotiations were opened with the French government, which was induced to sanction an arrangement, (signed at the Escorial, Dec. 10th,) by which a French corps of 22,000 men were to be left in Spain, and stationed in the fortresses of Cadiz, Barcelona, St. Sebastian, Pampeluna, Urgel, Jaca, and Figueras; besides two Swiss regiments, which should remain at Madrid or any other of the royal residences, to do service near the person of the king and royal family, jointly with Spanish troops.

Whether it was a condition exacted by France, in making this arrangement, or whether we are to attribute it to the influence of the queen's father, prince Maximilian of Saxony, who arrived on a visit to the royal family, at the Escorial, on the 3d of December, does not appear; but it is certain that the proceedings and language of the government were marked by a character of greater moderation towards the close of the year; on the last day of which, M. Zea Bermudez was named president of the council.

This appointment was said to have been almost forced upon Ferdinand by the influence of France, and by the extreme difficulties in which the court found itself placed. Zea was conceived to be a man of ability, and of moderation in politics; and hopes were entertained that he would follow a more enlightened policy than that of his predecessors in office. But he had not sufficient strength to effect any good. As he refused to go all the lengths of the fanatical party, he was from the commencement of his ministry obnoxious to the church and the leading courtiers; and as, from the very nature of his situation, he could not obtain the support of public opinion in a country where there was no public, he was obliged, in order to maintain himself in office, to oppose intrigue to intrigue; to make a compromise with wrong, when he could not carry what he thought right; and to render ineffectual the measure of one day, by the promulgation of a modifying or counteracting decree on the morrow. His almost total want of personal influence, of family connections, or of party support, made it necessary for him to consult the caprices of those whose erroneous views and mischievous passions he should have been able to control, and thus rendered it impossible for him to observe any consistent line of conduct in attempting to restore public credit or to suppress dangerous disturbances. The consequence was, that the fanatical party, imagining that they had now something to apprehend, and at the same time freed from the check of the French army, became more violent than before: and most of the principal towns in Spain exhibited scenes of anarchy and tumult. The disorders were increased by the poverty of the government, who were without either money or credit.

Many negotiations were set on foot for the purpose of raising a loan, but without effect. In March, Ugarte, whose private influence had long been great, was dismissed from

his office of secretary of the Council of State, for having, without the king's authority, introduced a clause into the draught of a contract for a loan, fixing a rate at which the bonds of the Cortes should be received.

A report on the state of the finances, made to the minister of that department by the treasurer general, gave the following lamentable picture of the wants of the country, but suggested no mode of remedying the evil.

"The general treasury has to provide for the arming, maintenance, and other expenses which the formation of a respectable army requires; to attend to the navy, at present in a most deplorable state, by taking care at least of the outfit of the vessels, and the subsistence of the officers and crews; to give attention to the serious representations of France for indemnification; to pay the anticipated interest on Guebhard's loan; and, finally, to cover the ordinary demands, which are greatly increased by particular circumstances.

"On the other hand, the resources have diminished and are daily diminishing; the great sums which used to be received from America, and which in tranquil times amounted annually to more than 160 millions of reals, have ceased to be paid: besides, the customs, the tobacco duties, the salt duties, and other branches of the revenue, have sustained a defalcation, amounting by estimate to about another hundred millions, which it has been found impossible to stop, as unfortunately the measures adopted for that purpose have not been followed by the expected results; so that it is not too much to assert, that scarcely enough is received to cover the half of the expenditure. Public credit, also, is ruined by the enormous weight of the debt, and by the impolicy of making promises which could not be fulfilled."

In a subsequent part of the report, a complaint is made of "the arbitrary practices which are exercised by some authorities and corporations of the provinces, who, in the most shameful manner, impose and exact duties on articles of consumption." It concluded with stating, that, "The Treasurer-General was exposed to continual insults from the impossibility of satisfying all demands amidst the great wants which surrounded him, and that, in the existing state of the treasury, it was impossible for him to support a charge so superior to his strength."

The appointment of Zea had encouraged a notion, that an attempt might be made to mitigate the caprice of despotism, and to introduce into the country something which might approach to a regular government. Ferdinand, however, was anxious to convince the world, that all projects of reform were far from his thoughts.

"I have learned with the most lively grief," said he, in a decree dated the 19th of April, "that for some time alarming reports have been insidiously spread, that it is intended to oblige or to counsel me to make reforms and innovations in the regime and government of my kingdoms, by altering its ancient and respectable fundamental laws, and limiting my royal authority. It is a duty, and at the same time a satisfaction to me, to contradict a fiction as malicious as it is criminal. I declare, in consequence, not only that I am resolved to preserve entire, and in all their plenitude, the legitimate rights of my sovereignty, without giving up now, or at any other time, the slightest particle of them, and without permitting the establishment of chambers or of other institutions of whatever denomination, which may be contrary to our laws and usages; but that, on the contrary, I have the most solemn and the most positive assurance that all my august allies, who have given me so many proofs of their sincere affection, and their efficacious co-operation in the welfare of my kingdom, will continue to support, on all occasions, the legitimate and sovereign authority of my crown; without advising or proposing to me directly or indirectly, any innovation in the form of my government.

"I also declare, that I have taken the firm and immoveable resolution to cause the laws to be kept and respected, without tolerating abuses of any kind, without permitting violence and intrigue to take the place of justice,

justice, and without consenting that, under the pretext or appearance of attachment to my royal person, and to my authority, those who shall seek by those means to cover their disobedience and insubordination shall escape just punishment. Strict observance of the laws, the prompt execution of my decrees and ordinances, and respect for the authorities, are the solid foundations of order and prosperity; those which every Spaniard who is truly a royalist, and devoted to the sovereign, ought to make the rule of his conduct; and those which, notwithstanding the acts and attempts of malevolence, will secure the peace of my kingdoms, and the happiness of my beloved subjects, which are the objects dearest to my heart."

In accordance with the principles of this decree was an ordinance, issued by the intendant-general of police on the 26th of May, which, after a long preamble on the necessity of repressing the plots still carried on by the revolutionists and by the enemies to the king and to order, contained seven enacting clauses:—"1. No person whatever shall attack in an insulting manner the measures of his majesty's government: and every person taken in the act, or convicted of so doing shall be immediately arrested and delivered to the competent tribunal.—2. He who, by words or by writing, shall insult the agent of the civil, military, or ecclesiastical authority, shall be treated in the manner prescribed by the first article.—3. Keepers of hotels, coffee-houses, taverns, and other public establishments of all kinds, shall hinder political discussions in their houses, and the quarrels to which these discussions might lead, and shall denounce to the inspector of the quarter the censures passed on the government, and the plans formed against the safety of the inhabitants, against our holy religion, against the authorities, and against good morals. All who offend against this article shall be punished the first time by a fine of 100 ducats, and of 200 for the second; for the third, their establishments shall be closed.—4. Every person who shall spread reports against the sovereign authority of his majesty, and against his government, shall be arrested and punished according to the laws.—5. Every person who shall receive by the post, or otherwise, pamphlets on political subjects, shall immediately deliver them to the police, to do with them as it shall think proper; and no copy shall be taken, on pain of a fine of 100 ducats. The same penalty shall be inflicted on those who shall have read or known of such pamphlets, without giving information of them.—6. The same penalty shall be inflicted on those who shall receive, copy, and read pamphlets or letters signed, which treat on such subjects in a revolutionary manner, without immediately giving notice to the police.—7. Those who shall hold public or private meetings, in which the measures of the government shall be criticized, or in which attempts shall be made directly or indirectly to decry it, shall be prosecuted; and, besides the penalties which shall be inflicted on them by the laws, each member shall pay a fine of 100 ducats."

The *ultra* party, however, were far from being satisfied; and complained loudly of the government as too liberal. The monks were especially active in exciting the spirit of fanaticism; and at last M. de Zea Bermudez, suspected by all and aided by none, yielded to the intrigues of the adverse courtiers, and in the beginning of August tendered his resignation. Ferdinand refused to accept it, and Zea continued in his post. The discontent became more general, and a project was now entertained of setting up the Infant Carlos as king. There was scarcely a town in Spain, in which great numbers of persons were not thrown into prison. At Seville, nearly two hundred persons were placed in confinement on the 5th, 6th, and 7th of August: and as all the prisons were filled, orders were given to the superiors of convents, to place at the disposal of the civil authorities, all such parts of their respective houses, as they had no immediate necessity to use.

The arrests were exceedingly numerous in all the towns of upper Andalusia, and particularly at Cordova, Carmona, and Eciija. In the capital, many monks were sent to prison.

A Junta of public safety was created, and the Duke de l'Infantado was appointed its president.

In spite of all these precautions, the zeal of the fanatical party did not abate, and they openly avowed their purposes. On the 13th of August, a monk haranguing in the public square a very numerous collection of people, said that all was lost in Spain, as it appeared beyond doubt that the king was a freemason; and that in such a state of things the object of all Spaniards, who were the friends of their country and of religion, should be, to place on the throne the Infant don Carlos, whose good principles and whose Catholicism were well known. "Ah!" said he, "if we could, with the assistance of God, effect so important a change, the state of unhappy Spain would not yet be quite desperate." It was asserted that upwards of 200,000 reals had been expended by conspirators in corrupting the guards.

At length, on the 16th of August, a decisive step was taken by the factious. Upon the morning of that day, at sun-rise, the cry of "to horse" was heard at Getafa, a village about a league distant from Madrid; and a few minutes afterwards, three companies of the regiment of Santiago, who were quartered there, were discovered arrayed upon the public square, their officers at their head, and with accoutrements and baggage ready for their march. They were soon in motion, and took the road towards Alcala, saying, that "they were going to deliver the king, whom his ministers detained a prisoner." The moment that the colonel of the regiment, the different companies of which were quartered in the three several villages of Getafa, Leganez, and Carabachel, became apprised of this movement, he immediately reported the circumstance to the minister at war, by whom it was in turn communicated to the Junta of public safety.

On the preceding evening, Bessieres had left the capital; and had pursued the high road to Alcala, until he arrived at Torrejon Dardo, which is about three leagues from Madrid. There, having had a conversation with the Alcalde, and having received from him a large sum of money, he returned on the 18th by a cross-road to Torrija, where the rebels had stationed themselves, and on the same day assumed the command of them. He was joined by considerable numbers, and published a list of persons who were to be proscribed and put to death. The first name on the list was that of Zea Bermudez.

In the mean time, the count d'Espagne had been despatched with a considerable force in pursuit of the rebels. On the 25th of August he overtook and arrested Bessieres and his accomplices, one league from Molina d'Arragon. On the following day, Bessieres, notwithstanding his former services, was shot with seven of his associates. They all met death with the greatest fortitude. They made no disclosures.

The revolt of Bessieres was not a solitary unconnected event. It was followed, or rather accompanied, by an insurrection in Valencia, headed by general Chambo, and one in La Mancha excited by general Locho. Ortiuela in the province of Burgos, and another chief in the province of Grenada, followed the example of Locho, and proclaimed the Infant don Carlos. But the parties which joined the standard of these leaders, were very insignificant; and they were soon dispersed. At Tortosa, the chief of the conspiracy was a Catalonian, named Wach, the commander of a battalion in garrison in that city. His plan was, by an insurrection of the inhabitants of the country, and part of the population of Tortosa, to depose the governor, to seize the citadel, to fall upon the constitutionalists, and to pillage their houses. But the captain, who commanded the fort, having caused the bridge to be drawn up, instead of favouring the projects of the conspirators, their accomplices in the city did not venture to make any hostile attempt, and the country people, who were already arriving at the gates, thought it prudent to retire. Wach, with two officers, immediately fled; and in the evening two battalions sent by the marquis de Campo Sagrado, in consequence of previous information, entered Tortosa, and secured the tranquillity of the place. In Biscay, in Alava, in Galicia, throughout Arragon, and indeed

indeed in every quarter of Spain, symptoms of revolt displayed themselves; and it was said, that it had been ascertained from the papers of a monk, who had acted as treasurer to the faction, that the chapters of all the metropolitan churches of Spain, and many rich convents of the orders of Carthusians, and of St. Bernard, St. Jerome, St. Augustin and St. Basil, had taxed themselves to raise 14,000,000 of reals for the support of the conspiracy. Though the open progress of revolt was checked, it can scarcely be said, that order was restored. In every province disturbances either occurred or were apprehended; and no man's person or property was safe, either from the fanatical zeal of the people, or from the suspicions of the king. The royalist volunteers of Salamanca voted an address to Ferdinand, soliciting from him the re-establishment of the holy office, as the surest method of securing the public tranquillity. In September, various plots for placing the crown on the head of don Carlos, were formed and detected in Valencia, Grenada, and divers other places. In these plots, as well as in the previous commotions, the name of don Carlos was used, it was believed, without any approbation or concurrence on the part of that prince.

To cure the miseries of Spain, Ferdinand and his advisers could devise no better expedient, than to create a Consultative Junta of government, who were to aid the council of ministers. This new body was formally installed on the 26th of September. Among other arduous duties imposed on them, they were to discover "What were the means calculated for conciliating the colonies, and bringing them back to their former obedience to the mother country? and what means should be adopted to facilitate the negotiation of a loan, and to render its conditions less onerous?" The Junta promised to do their utmost for their suffering country; but in spite of their good intentions, they were unable to do any service; and even the advice which they presumed to give, was not followed. They recommended the publication of an amnesty, and the cessation of political prosecutions, as one means of restoring order; but the council of Castile opposed this recommendation, and the ministry joined the fanatical party. In this spirit, one of the ministers, having adopted or pretended to adopt the notion that Freemasons were the great cause of national anarchy and public misery, demanded a more severe set of enactments against masonic aprons and symbols. A body of persons, calling themselves "defenders of the faith and of the king," had been lately detected at Grenada in possession of secret symbols: for this offence, they were ordered to be tried and executed as Freemasons. Sufficient evidence was sent to Madrid to prove that the place where they met was not a lodge, that the badges which they were were not masonic, and that the objects which they had in view had nothing in common with the subjects generally discussed in the conclaves of the craft; but the order was peremptory, and the "defenders of the faith" suffered as masons. Zea being himself suspected of *liberalism*, could not venture to put down the rebellion of fanatics, without at the same time proving that he was ready to support the faction, whose furious excesses had alarmed the fears, and endangered the throne of his master.

But even these sacrifices to the bigotry and alarms of his master, and to the fanaticism of the courtiers and of the people, were insufficient to secure his power. In October, Zea and the whole cabinet, of which he was the head, suddenly received their dismissal; and the ecclesiastical and fanatical faction came into full possession of power. The Duke de l'Infantado, who was high in credit with that party, and was supposed to be on bad terms with the French cabinet, now became the chief of a new ministry. Notwithstanding the bigotry of his character, the general opinion was, that his administration would be more steady than that of his predecessor: for, though he might be willing, in general, to be the prompt instrument of the priesthood, and might thus longer oppose salutary reforms; yet as the church could place reliance on his zeal, they would more readily

listen to his counsels, and he would possess more power to execute moderate measures, if so inclined, than a man like Zea, and if any portion of the property of the church was to be mortgaged for the relief of the nation, the proposition was more likely to be heard with favour from him than from any other person.

During the year 1826, little change took place in the measures of the king of Spain, or in the feelings of the nation. Several bands of Guerillas appeared in the remote provinces, and the miserable people of Madrid, threatened with famine, created a tumult, which the French troops and Ferdinand's promises quelled. But the general mass still seemed favourable to the royal and sacerdotal party; and executions, too numerous to detail, took place on those who were accused, unjustly or not, of liberal opinions. In the early part of the year, the Dey of Algiers declared war against Spain, and added some blows to those already inflicted by the South American cruisers, on the commerce of this unfortunate country. Bands of smugglers, often too powerful for the militia, swarmed on the coasts. The professions of robbery and priesthood seemed alone to flourish amidst a general decay of agriculture, manufacture, and commerce. These evils were still further aggravated by the withdrawing a part of the French troops.

A French merchant, writing from Paris, in September, draws the following picture of the country:—

"The wretchedness of this people exceeds all limits—it is frightful. Two-thirds of the population at Tolosa, Vittoria, Burgos, Aranda, and Buytrago, are literally without trowsers, shirts, stockings, shoes, and hats. A dirty cloak, consisting of a thousand filthy rags, coarsely patched together, covers their squalid skeletons of bodies; rendered more gaunt-looking by a long beard, a haggard countenance, and a ferocious eye. At Irene, the soldiers, priests, public officers, all asked alms. At Briviesca, a comical figure, holding in one hand a plate, and a little holy sacrament in copper in the other, asked charity for God. At Burgos, I saw a horrible sight;—the distribution of the dinner fragments of a convent, situated on the road leading out of the city; two hundred ragged wretches, rushing promiscuously into the middle of the convent court-yard, and commenced fighting with each other for bones, bread, and chick peas. The women were drawn back by the old men, and they again by the young men. The horrible cries, mixed with acclamations, "For God's sake!" and the "Holy Father!" rendered this scene a spectacle, of which the distributions of sausages during the fêtes at Paris, can give but a slight idea. On the other hand, to compensate for this, I saw, in the cathedral at Burgos, six candlesticks of massive silver, five feet high, which must be worth a hundred thousand crowns; six lamps, of the same metal, all new like the candlesticks, were burning night and day, while the poor have not a rushlight in their hovels. At Aranda, Buytrago, and Somo Sierra, was the same frightful misery;—the shops are enough to make one shudder,—filthy, empty, deserted—nothing in them but trash, and that at the highest prices. At Madrid, no person is admitted into the city, unless he is the bearer of a passport, or a letter of security; and it is even necessary to furnish one's self with the protection of a passport, if you intend to go any distance more than six leagues. If a person wishes to leave the city, he must present himself to the Commissary, who marks it in his book, called *El Papaete*, the gate at which you are authorized to pass out. There is not a peasant, a workman, a traveller, on foot, on horseback, or on a carriage, but must submit his papers to a police office outside the gate. I have seen farmers and gardeners of the liberties, obliged to go home because they had forgot their *carta de segusidad*, or passport. Foreign travellers, provided with passports from their government, have been forced to wait five hours between two police-men at the city gate, until it should please the Intendant to write at the bottom of their passports, "permit him to enter;" merely because, going to Spain had been written instead of going to Madrid. At length, having arrived, every one of them is obliged to make his purpose known

known to the Police Commissary of the district, in which he lives. At each station on the road, stupid and staring police officers demand the passports, and inspect them to such a degree of minuteness, that the entire back of the paper is covered over with their signatures; and it becomes necessary to join it to three or four more leaves, which are soon written over in the same manner.

"They tell you, the government suspects every man moving from one place to another, to be a public enemy.

"Popery proceeds in Spain with a firm step to recover all her ancient terrible authority. At Valencia, where a school-master was lately hanged for heresy, a Jew has been since burnt for Judaism. A letter from Madrid says, "the human sacrifices which Rome abolished in her treaty with Carthage, have been revived at Valencia."

The secret prisons of the Apostoliques are filled with heretics, consisting of witches and magicians, accused of being connected with the devil. In short, the priesthood have the satisfaction to light up again the funeral pile. To the present time, they were contented with forcing the Jews to frequent their churches, and to assist in their Catholic ceremonies, which was in itself an absurdity, they being strangers to that religion; and now in this enlightened age, they have condemned one of them to be burnt to death. "For a long time past," says the before-mentioned writer, "they had been informed at Madrid, that an auto-da-fé would soon take place: the brotherhood of St. Hennadad took the road to Valencia, followed by numbers of associates to sacrifice an unfortunate Hebrew. All the thieves and assassins surrounded the pile, carrying the banners of the Inquisition and St. Dominique, preceded by monks, singing the psalms of David. Between them was placed their unfortunate victim, who was clad in a round frock, upon which was painted various devils, having on his head a pasteboard cap, decorated with flames of fire. He was escorted by two Dominican friars, who complimented him on his being about to be burned for the salvation of his soul, and, previous to his ascending the faggots, they embraced him. The wretched man having been gagged and tied down, the torch was applied, and the torturers surrounded the pile, singing hymns to drown his cries!"

But not this distress of his people, nor the successes of the Dey of Algiers, nor the loss of South America, nor the penurious state of his treasury, could restrain Ferdinand from engaging in further broils to uphold the despotism of the sceptre and of the mitre. The constitution established in Portugal (see PORTUGAL), was naturally viewed with a jealous eye from the first moment of its establishment; but when its quiet and salutary operation began to be felt in the country and observed abroad, Ferdinand determined to overturn, by any stratagems, a government which held up so seductive an example to his subjects. Some Portuguese nobles revolted, and organized several bands of peasants, and attacked the newly constituted authority. Beaten, however, and repulsed, they retired into Spain, where they received reinforcements of men, and supplies of arms and provisions. They advanced again, and though again repulsed, they returned after each defeat stronger than before. This went on so long, that the Portuguese government found itself obliged to solicit the assistance of its old ally, England, against the aggressions of Spain. The Court of St. James's waited but till the aggressions of Spain were clearly proved, and then sent 10,000 chosen troops to Lisbon. In the mean time, the English ambassador at Madrid, was instructed to demand, firmly but peremptorily, of Ferdinand, that he should no longer harbour the Portuguese troops. This he agreed to; denying, however, that they had ever received any countenance by his desire: and he promised to take steps to prevent his subjects from affording the rebels any assistance. These promises continually repeated, are as often broken. The English troops remain in Portugal, and the rebel force is by no means destroyed, though often defeated. On the other hand, the constitutionalists of Spain are again raising their heads in the provinces.

STATISTICS.—Spain may be considered as composed of a

series of mountain terraces, which, projecting successively their rugged edges towards the south, present a flight of gigantic steps from the Pyrenees to the Mediterranean.

The chains of mountains which terminate and divide the great plains of the peninsula, are branches of the immense ridge that, from the most elevated part of Tartary, runs across Asia and Europe, penetrates into the south of France, by Switzerland, and, entering Spain in the direction of the valleys of Roncal and Bastan, separates Navarre from Guipuscoa; Biscay from Alava; the highlands of Burgos from the plains of Old Castile; and Asturias from the kingdom of Leon; it then crosses Galicia, and dips into the ocean at the Capes Ortegal and Finisterre.

The Pyrenees are lateral ramifications of this great trunk, which run east and west, on the eastern side of Spain, and take a south-west and north-west direction on the confines of Arragon and Navarre. The accumulated mass of these mountains presents, towards the peninsula, the convex side of a spherical segment, which, like a shield with its boss to the south, rounds its edges near the Atlantic and the Mediterranean, and rears the highest part of its curve on the Spanish territory, between the springs of the rivers Cinca and Ara. This eminence, called Mont Perdu by the French, is known, in Arragon, by the appellation of Tres Sorores, alluding to its three peaks, distinctly seen from Zaragoza, of which the highest, according to the French naturalist, Ramond, who examined it in 1802, rises 4114 Spanish yards above the level of the sea.

In the minor branches which strike off from the Pyrenees in a south direction, without forming a part of the great secondary chains, there are some mountains too remarkable to be left unnoticed. Such are the Monsein, on the coast of Catalonia, near the town of Arens, and the well-known Monserrat, which rises, on the same coast, to the height of 1479 yards above the sea:—such the Sierras of Ribagoza, Barbastro, Huesca, and Jaca, which take their names from the principal cities in their neighbourhood:—such, finally, those numerous spurs of the great ridge which run into Navarre, whose various appellations would only tend to confuse the reader. The most remarkable object, among these hills, is the Higa de Monreál, probably so called from the fancied resemblance of its highest rock to a fig.

Of the main ridges which run across the peninsula, that which rises to the west of the source of the Ebro was called *Idubeda* by the Romans, and formed the limits of the ancient *Celtiberia*. In its course towards the Mediterranean, the natives, according to a general custom, distinguish the various portions, or great links of the chain, by the appellation of *Sierras*, adding the name of some town or notable height in their vicinity. Such are the Sierra de Oca, of Urbión (the *Distertia* of the middle ages), of Moncayo (*Mons Caunus*), of Molina, Albarracin, and Cuenca.

It is this chain, which Antillon calls the *Iberian*, that, by its direction from its origin to the heights of Moncayo, drives the Ebro to the east, and feeds the Duero towards the west. The Duero proceeds, however, to the south till it comes to Almazán, where the great ridge, forming an elbow to the south-south-west, forces the stream into its westerly bed. Farther south, near the sources of the small rivers Xalón and Tajuna, the Iberian ridge, bearing the name of Sierra Ministra, divides the waters between the Tagus and the Ebro.

The first point where this great ridge splits into the minor chains which lose themselves in the Mediterranean, is to the north of Albarracin, in Arragon. Of these branches the most remarkable is that which, entering the province of Valencia, is again subdivided into the smaller ridges which terminate at Peniscola and Cape Oropesa. The waters that descend from these heights, to the north, mix finally with the Ebro, while the Turia and the Mijares are swelled by those which flow from the southern declivities. On the branch stretching towards Peniscola, and in the limits of Arragon, rises the Muela de Ares, a conical mountain, deprived of its apex; whose top is an extensive plain covered with luxuriant pasture,

and surrounded by fearful precipices, at the elevation of 1562 Spanish yards above the sea. This is one of the highest spots in the peninsula; the Tagus, the Xucar, and the Cabriel, take their rise among these mountains, and divide the waters which flow from their sides, between the Atlantic and the Mediterranean. Numerous flocks of sheep, both itinerant and stationary, find, in the valleys formed by this chain, the most abundant summer pastures.

From Albarracin, this chain strikes into the territory of Cuença in a direction nearly north and south. It then sends off a branch to the east-south-east, on which the Collado de la Plata, or Silver Hill, rises 1598 yards above the sea. It contains a quicksilver mine, which was worked a few years ago, at the distance of four leagues west of Teruel. From the neighbourhood of this town the Sierra de Espadano runs, like an unbroken bulwark, to the sea near Murviedro, in a direction between south-east and north-west. The ruggedness of the hills, the terrific depth of the precipices, and the intricacy of the mountain passes, overhung with perpendicular rocks of black marble, are described in glowing colours by the great Spanish botanist, Cavanilles, whose account of a scientific tour in these highlands of his native province, Valencia, is quoted by Antillon. The Pico, which is considered the most elevated point in these mountains, rises 1303 yards above the sea. Its latitude has been determined by accurate observations to be $39^{\circ} 31' 38''$. Its longitude $3^{\circ} 0' 36''$ east of the meridian of Madrid.

Near the source of the Tagus, the Iberian ridge sends off another branch which, stretching in almost a southern direction, separates La Mancha from the province of Murcia, to the west of the town of Albacete, and rises into the lofty mountains of Alcaez and Segura (the ancient *Orospeida*), dividing the waters between the Guadalquivir and the Segurra, the two main streams which severally and finally convey them to the ocean and the Mediterranean. One of the two great limbs which terminate the Iberian ridge runs into the sea at the Cape Cervera; the other, bending to the south, skirts the kingdom of Granada, and disappears at the Cape Gata. To the latter belongs the mountain called Cabezo de Maria, between Carthagena and Cape Gata, one league west of the town of Vera on the coast of Valencia. It rises 2287 yards above the sea, and has its summit covered with snow during one-half of the year.

Smaller branches of this chain project between the Turia and the Cabriel, which loses itself in the Xucar at Cofrentes. A ridge runs between the last-mentioned river and Alcoy, another stream, which flows into the sea near Gandia. A minor chain separates the Alcoy and the mouth of the Segura. The province of Valencia is, in fact, divided by mountains into most fertile stripes, watered by numerous streams, and enjoying every blessing which nature grants to the most favoured climates. The mountains on the right of the Xucar, from Cofrentes to the sea, bear the two appellations of Cortes de Pallas and Millares, each applying to a different portion of the ridge. To the left of the same river, the mountains are known by the names of Torres and Dos Aguas, which they change for that of Monte Caballon when they penetrate into Valencia from the province of Cuença. The rock on which the castle of Monserrate stands, near the sea-shore, five leagues west of the lake Albufera, may be considered as belonging to this ridge. The castle is 313 yards above the sea. From the mountains of Millares to the right of the Xucar, another ramification projects between the provinces of Murcia and Valencia. Before reaching Villena it bends towards the sea, on the left of the Alcoy, where it is known by the name of Sierra de Mariola. The number, purity, and copiousness of the streams, which are fed by these hills, render them the main source of wealth and comfort to the neighbouring country. The highest summit of this ridge is called Moncabrer. Another arm stretches from Villena, in which we find the Sierra de Viar, the rock of Xixona, the mountain of Aytana, and the pyramidal mountain of Mongo, near the Capes San Antonio and Martin. The longer duration of snow on its top makes Cavanilles believe that it surpasses Moncabrer in height, especially as

the latter is at a greater distance from the sea. The southernmost part of the chain, which strikes off at Villena, sends out its waters to swell the stream of the Segura.

A great ridge divides the waters between the Duero and the Tagus. It grows out of the Iberian chain, not far from the sources of the Xalon and the Tajuna, to the south of the city of Soria, and the site of the ancient Numantia.

We have next to notice the ridge which divides the waters between the Tagus and the Guadiana. The rise of this branch out of the Iberian chain would hardly be perceptible, but for the separation of the waters, which begins in the vicinity of Huete, south of Cuença. The gradual elevation of the ground from Tarancon to Tembleque, in the province of Toledo, raises the latter town 740 yards above the sea. Bolder hills appear at Madrilejos; and the town of Consuegra has an elevation of 769 yards. Proceeding a short distance to the south-west, the Sierra de Yevenes clearly shows the direction of the ridge, which is soon after known by the name of Guadalupe (Montes Carpetani); it then runs between Truxillo and Merida, under the name of Sierra de Marchal, penetrates into Portugal by Castel de Vide and Portoalegre, is seen to the west of Elvas and Estremoz, and descends to Cape Espichel, having Beja and Setubal to the south, E'vora and the mouth of the Tagus to the north.

The third great branch of the Iberian ridge is the Sierra Morena (*Montes Mariani*), which divides the waters between the Guadiana and the Guadalquivir. It begins in the vicinity of Alcaez, near the eastern limits of the provinces of La Mancha, issuing from that spur of the Iberian chain which terminates in Cape Palos, and, stretching in a direction north-east and south-west, with La Mancha, Spanish Estremadura, to the north, and Jaen, Cordoba, Seville and Algarve (Portugal), to the south, ends in the ocean at Cape St. Vincent.

Rivers.—In describing the principal chains of the Spanish mountains, we have already mentioned the five great streams which water the intermediate plains, the Mino, the Ebro, the Duero, the Tagus, the Guadiana, and the Guadalquivir.

The Mino, or Minho (*Minius* or *Banis*), rises in Galicia, in the district of Lugo, from a beautiful spring called Fuente Mina. This river is navigable only to Salvatierra, two leagues above Tuy.

The Ebro rises near Reynosa, out of so copious a spring, that it works a corn-mill a few steps from its source. After a course of 110 leagues, it flows into the Mediterranean at Alfaques. From the boundaries of Navarre to the sea, the Ebro makes a progress of $1^{\circ} 12' 42''$ towards the south. The chief towns on this stream are Logrono and Calahorra, in the province of Rioja; Tudela, in Navarre; Zaragoza, in Arragon; and Tortosa, in Catalonia. It is a misfortune for Spain that this great river presents strong obstacles to navigation, both in its course and where it joins the sea.

The Duero, or Douro, has its source to the north of the city of Osma, in a deep lake, at the summit of that portion of the neighbouring chain of mountains which has been mentioned by the name of Sierras de Urbion. Its course is at first towards the south, passing by Garay and Soria, where it turns to the west, continuing in that direction till it reaches Miranda. From this town to Moncorvo the river falls again into a south direction. It lastly takes a decided course to the ocean, where it ends near Oporto, having traversed a distance of 150 leagues. The Duero advances $10'$ to the south from Aranda to Tordesillas; from hence to Miranda it inclines $40'$ to the north. Its mouth lies $33' 45''$ south of Miranda. This river is navigable up to the tower of Moncorvo, a space of thirty leagues.

An inconsiderable spring, denominated Pie Izquierdo, is the source of the majestic Tagus. In its course through the province of Cuença it is considerably augmented by the contributions of several streams. Before its waters reach Aranjuez, they surmount the rocky edge of its native mountain, and, dashing upon the plain beneath, sink into a pool of great depth, called Olla de Borlaque. The Tagus, now running placidly through the plains of Zorita and the royal gardens of Aranjuez, at the elevation of 621 yards above the

sea, directs its course to Toledo, passes by Talavera, Alcantara, Abrantes, and Santarem, losing itself finally in the sea, near Lisbon.

The sources of the Guadiana are found north of Alcaraz, in La Mancha, at the pools of Ruidera, well known to the admirers of *Don Quixote*. The course of the river is first to the north-west, for eight leagues. It is then absorbed by the soil, and disappears for seven leagues. The first gathering of its waters, after their subterraneous dispersion, takes place near Daymiel. The spot is called Ojos (Eyes) de Guadiana. The stream now proceeds to Ciudad Real, the head town of the province of La Mancha, to Merida, Badajoz, Mertola, in Portugal, and, re-entering the Spanish territory, terminates in the ocean at Ayamonte. In its course to this point, the Guadiana passes over a space of more than one hundred leagues.

The stream of Guadiana, near Villarta, is only at the height of 710 yards above the sea. It is not navigable higher than Mertola, in Portugal.

The Guadalquivir occupies the centre of the plain which lies between the Sierra Morena and the chain of Granada, where it takes its source to the north-east of Jaen. The chief towns on its banks are Andujar, Cordoba, Seville, and San Lucar (*Templum Luciferi*). At the ferry near Mengibar, on the road from Madrid to Granada, the Guadalquivir is 203 yards above the sea. The Guadalquivir is navigable for large vessels up to Seville; but its bed being constantly raised and obstructed by growing shallows, the navigation is extremely tedious.

On the subject of *population*, the data are greatly deficient in accuracy. We subjoin, however, the Table published by Antillon from documents in the possession of the Commissioners for the Encouragement of Trade in 1803.

PROVINCES.	Total of Inhabitants.	Surface in square leagues, 20 to a degree.	Inhabitants to square league.
Province of Madrid	228,520	110	2,078
Guadalaxara	121,115	163	743
Cuenca	294,290	945	311
Toledo	370,641	734	505

Kingdom of Galicia	1,142,630	1,330	859
	10,351,075	15,005 $\frac{1}{2}$	690

The water carriage in Spain is reduced to the inconsiderable portions which have been constructed of the intended canals of Arragon and Castille, to the slow and laborious navigation of the Ebro from Zaragoza to Tortosa, performed almost exclusively, for the conveyance of wheat, and to the floating of timber down that river, the Tagus, the Xucar, the Segura, and the Guadalquivir. This last river, on which a steam-boat, built and worked under the direction of a British engineer, affords of late, an easy and speedy communication between Seville and San Lucar, is the only one from which Spain derives any considerable advantage in point of trade.

It may be reckoned among the unfortunate combination of circumstances which have hitherto checked the internal prosperity of Spain, that the navigable part of its finest rivers belongs to another kingdom. The Tagus and the Douro may be said to exist for the exclusive advantage of Portugal.

During the short and ill-fated union of the two peninsular crowns, the engineer Antonelli undertook to open the navigation of the Tagus as far as Toledo, and completed that useful work in 1558. After the separation of Portugal from Spain, several plans have been presented to the Spanish government for removing the obstacles which obstruct the bed of that river from Alcantara to Toledo, and even from the latter town to Aranjuez, which, by means of canals, was to be joined with Alcala. Surveys were made by order of the government, from which, as Antillon observes, no benefit accrued to the country except an accession of topographical knowledge, and the fruitless conviction that the communication of La Mancha with the ocean was opposed, chiefly by moral and political obstacles.

The Ebro, under the Roman dominion, is said to have been navigable up to Logrono, a distance of 65 leagues inland. In the 12th century, the emperor Don Alonzo ordered gallies to be sunk near Zaragoza, as a defence against the Moorish navy. Zurita relates, that, in the fifteenth century, King Don Juan sailed down the Ebro from Navarre into Arragon. We find, however, the Cortes of the latter kingdom, under Charles II. of Spain, towards the end of the seventeenth century, deliberating upon plans for expediting the navigation of the Ebro near the sea. A survey was made for the same purpose in 1738, but with no practical result. The grand canal of Arragon was at length begun under Charles III., the grandfather of the present king; and were it completed, it would stand a splendid monument of the spirit of the nation. It is, however, much against the practical utility of the public works undertaken in Spain, that by a natural disposition of the people, they are all begun upon a scale which would require the wealth and power of imperial Rome for their completion. The little that exists of the canal of Arragon might, if we believe Antillon, compete with the works of that period; but, instead of reaching the sea through the Ebro, and terminating in an artificial harbour, as was intended, it has been carried on for the space of eighteen leagues only, and contributes but little to the internal navigation of the country. Whether it is more favourable to agriculture, by the copious irrigation which it affords in its course, is, we find, a point in dispute among the Spaniards. Jovellanos, in his excellent *Informe sobre la Ley Agraria*, mentions the farmers' complaints against the canals for irrigation. It is hard, indeed, upon all land owners within a certain distance to be forced to pay a tax for irrigation, whether they have or not the means, the skill, or the inclination, to avail themselves of the proffered benefit. The farms, for instance, near the canal of Arragon, from Zaragoza to Sastago, pay one-fifth of their corn, and one-seventh of all other produce, for irrigation. Lands newly brought into tillage, pay only one-sixth of the corn, and one-eighth of the other produce.

Such complaints, it seems, were louder in the vicinity of the canal of Castille, where the Spanish practice of allowing the fields to lie fallow every other year was still adhered to, notwithstanding the abundance of water. This canal begins at Alar del Rey, in the province of Burgos. It is fed by the

Pisuerga,

Pisuerga, whose right bank it follows till it joins that stream on the limits of the kingdom of Leon. It then runs to the south and south-west, crossing the river Cierza, and proceeds on its right bank till, passing through the Carrion, it turns to the west of Palencia, and terminates in the same river. The small canal of Campos, running more to the west, joins that of Castille to the north of Palencia.

According to one of these gigantic plans with which the Spanish government have often amused their vanity, providing, as it were, in the magnitude of the enterprise, a ready excuse for their inactivity, the canal of Castille was to reach the sea at Santander, through the river Camesa, through the Ebro, near Reynosa, and finally through the Besaya and the Pas. From its present termination near Palencia, it was, on the other side, to reach Valladolid, to strike off from the Duero, in order to join the Adaja, and then to follow the Eresma as far as Segovia. From thence it was to be directed to the canal of Arragon, and thus to unite the ocean with the Mediterranean, across the kingdom. Don Ramon de Pignatelli, the engineer who superintended the works of the canal of Arragon, laid the plans of this immense work before Charles III. whose sanction they received. We must, however, remind the reader, that the only traces which exist of this mighty dream, attract but faintly the notice of the traveller near Burgos, and in the vicinity of Madrid, where the head of one of the intended branches extends for four or five miles almost undisturbed by barge or boat.

"Such," says B. White, "are the effects of a despotic government, even in its kindest moods, and when it, fairly and honestly, means to promote the good of its subjects. Unwilling to consult, and unable to ascertain the real opinion of those immediately concerned in the result of its measures, it moves with ponderous haste towards the object which dazzles its eyes, often crushing in its way those it meant to relieve. Complaints are heard at length; which, joined to the exhaustion attending all unnatural exertions, never fail to put the despot in a passion with his subjects, and make him repent that he ever was so good and gracious as to try to improve their condition."

Other great obstacles oppose the agricultural wealth of Spain. The want of rural population, and the great distance of the farmers' dwellings from their farms. Independently of the loss of time and strength arising from a walk of four or six miles before the day's work is begun, there are long periods in the year when the fields are scarcely visited by the owners, generally gentlemen farmers, and but seldom by the rustic, who acts as steward. Field work, in fact, is not continued throughout the year, but hastily and slovenly performed, at the sowing and the reaping seasons, by large parties of labourers, for whose accommodation, in farms at considerable distance from any town, there is a building not unlike a large barn, which affords a promiscuous shelter to man and beast. Bands of ploughmen, with thirty or forty team of oxen, are seen at the beginning of winter, slightly turning up the sods in the fields which have lain fallow the preceding year. The sowers walk slowly behind them, scattering the seed by handfuls, of which, part is picked up by the large flocks of birds which hover over those extensive solitudes, and part prevented from taking root by being improperly lodged in the earth.

It was once proposed to the Spanish government to distribute the uncultivated land, amounting to a large proportion of the whole country, among such of the natives as were disposed to bring their lots into tillage. This measure, it was hoped by Jovellanos, would tend to a wider and more equal distribution of the Spanish population, now crowded in towns at great distances from each other. But it is hardly less difficult to alter the original and confirmed constitution of the body politic than of the animal frame.

Nor is it in the power of man suddenly to convert the idle and degraded inhabitants of large cities into sober and industrious farmers. Whenever, says the excellent author before quoted, the Spanish government shall have opened an easy communication between the central provinces and the coast, and joined every important town in the peninsula by

cross roads—when the means of internal traffic shall have opened a market for the produce of the soil—when the laws which fetter the industry of the Spaniards shall have been repealed long enough to allow them to perceive their real interests, and to exert themselves with the steadiness and confidence of habitual freedom, then, and not before, will the productive power of their land be called into action.

The rights of property in land, wherever the feudal system has existed in full vigour, are so exclusive and peremptory, that it must surprise an Englishman to learn, that there are but very few spots in Spain which the landlord can call his own, from the moment he has housed the harvest. The right of driving cattle into the stubble-fields is claimed and maintained with great obstinacy.

From the mountains of Leon to the farthest limits of Estremadura, the members of the *Mesta*, an association composed of the wealthiest Grandees, gentlemen, and religious bodies, have a right to graze their sheep on a broad belt of land called Canada, gradually and slowly changing their stations, as the mild winters of the south clothe the earth with grass, or the heat of summer thaws the snows of the Leonese mountains. The privileges of this body are defended and enforced by a court of judges created for that purpose, and in the appointment and pay of the *Mesta*, who, with a numerous host of dependants, are the terror of the agriculturist wherever their jurisdiction extends. Lands upon this pastoral road are scarcely the property of any but these formidable shepherds, who fix the price of pasture, obtain it by compulsion wherever it is found, and look upon farmers and their labours as the natural rivals and impediments to their gains.

Of the domestic animals of Spain, the cattle are less numerous than the wants of the country require, or the extent of pasture in the higher grounds would afford the means of rearing. Mules are in general use for travelling; and as to horses, the famed breed of Andalusia is considered as degenerating.

Manufactures and Trade.—In a country abounding with the finest wool, and not deficient in provisions, flourishing manufactures of that article might be expected; but such are the pernicious effects of multiplied holidays and an unenlightened government, that Spain is obliged to import part of her broad cloth, her flannel, and her serges, from England and France. In like manner, notwithstanding the productive iron mines of Biscay, she imports great part of her hardware; so that if we except Catalonia, where both silk and cottons are made in large quantities, the only manufactures conducted with spirit in Spain are the twisting of silk, the tanning of leather, and the working of Sparto or Esparto grass (Spanish broom) into mats, baskets, shoes, and other articles. Bad roads, monopolies on the part of government, the enforcement of restrictive laws that ought long since to have been abrogated, are among the principal causes of the backward state of the productive industry of Spain.

In the middle ages the trade of Spain with foreign countries was confined to a few towns of importance, as Venice, Genoa, Ghent, and Bruges. The discovery of America opened a prospect which would have been eagerly embraced by an active people: in the hands the Spaniards, this trade was miserably cramped by the spirit of monopoly. Confined at first to Seville, transferred after 1720 to Cadiz, and relieved from part of its absurd restrictions in 1739 and 1764, it was at last thrown open, after 1778, to a number of the chief seaports of the kingdom. This measure was productive of the best effects, and the mercantile shipping of Spain received a very considerable increase; but the trade in question never acquired an importance to be compared to that of England with the United States.

The Spaniards have long been described as actuated in their transactions, both political and commercial by a high sense of honour; an encomium which probably resolves itself into little more than the characteristic simplicity of a people of few wants; and, in the larger towns, into the habit of straight forward dealing, common to the merchants of Cadiz, as to those of Amsterdam, London, or other cities where commerce

is conducted on ascertained rules, and to the exclusion of petty artifice.

The universities of Spain, formerly 24 in number, have been progressively reduced to 11, and of these, few are either well conducted or much frequented. The antiquated system of logic, and other parts of scholastic philosophy, continued to be taught until the middle of the 18th century, when the government, roused by ridicule at home, and the example of improvement abroad, at last prescribed alterations, which, however, still leave the Spanish universities greatly behind those of France, Germany, or Great Britain. In most of the monasteries are schools instituted for the education of the monks, but open to youth generally. The instruction given there is replete with superstitions and antiquated notions.

Madrid has a public library of fully 100,000 volumes; and there are collections on a smaller scale in other cities.

The Spanish language is founded on the Latin, with a mixture of Celtic, and, in the southern provinces, of Arabic. It is sonorous and harmonious; is pronounced almost literally as it is written, and is a fine language, when exhibited without that tendency to amplification, or rather to bombast, so common among Spanish writers. Of the fine arts, the Spaniards have been most successful in painting and architecture.

In Spain, as in Germany, there prevails a great deal of aristocratic pride, and a scrupulous distinction of classes. The nobility bear, as in Britain, the titles of duke, marquis, or count, and are styled collectively, *Titulador*. The gentry are called *Hidalgos*, a term applied to all who are of genteel birth, or whose designations, such as doctor in law, or doctor in medicine, distinguish them from the mass of agriculturists, merchants, and manufacturers. But these points of etiquette differ materially in different provinces. In Estremadura they are little attended to, while in Biscay and the Asturias, almost all the inhabitants lay claim to rank. Ceremonial is also an object of great attention with the Spaniards: the right of standing covered in the presence of the king, enjoyed formerly by all who were above the common class, was confined, after the accession of Charles V. to the imperial crown, to the *Titulados*. A more substantial privilege, that of entailing their estates, is possessed by all persons of good family. It was abolished by the revolution (1821), but is now restored, being one of the chief causes of the backward state of the country.

National Character, in respect to Spain, exhibits great variety, having been peopled from very different quarters, and the difficult communication between different districts has prevented that approach to uniformity, that blending of provincial peculiarities, which active intercourse introduces into a society like that of Holland or England. The different provinces of Spain have as little connection, and almost as little similarity of character, as those of the Austrian empire, as Bohemia, Hungary, and Carinthia. The characteristics most general among the Spaniards, are a degree of stateliness or gravity, and the more important quality of sobriety. Their backwardness in military affairs arises from want, not of courage, but of activity and a tardiness in adopting improvement. Indolence is the vice of the inland and southern provinces; it may in fact be termed the vice of the nation, though striking exceptions are afforded by the inhabitants of the provinces of Biscay, Galicia, Valencia, and above all, of Catalonia. Towards strangers the Spaniards are in general reserved; in society they are much otherwise. Their dress, formerly national and peculiar, is now similar to the fashions of France and England: the men, however, still occasionally wear the cloak and slouched hat; the women dress frequently in black with white veils. The mode of entertaining is not by dinners, but by evening parties, where the refreshments presented to guests are very slight. The higher ranks keep a number of domestics, who having little to do, are almost entirely lost to productive labour. In their dwellings the great object of the Spaniard is to exclude the heat; and as few precautions are taken against cold, winter, though comparatively short, by no means passes with impunity. Religious processions

in the true Catholic style, are still common in Spain, and are the object of devout attention from a great part of the people. The well known national amusement of bull fighting was discouraged by government in the end of the 18th century, but has since been revived: the national dances the Bolero and Fandango, are still performed as in former ages.

SPAITLEA, a town of Tunis, the ancient *Suffetula*, distinguished in an almost unequalled degree by its magnificent remains of ancient architecture. There are three temples, two of the Corinthian, and one of the Composite order. The roofs, porticos, and façades, are indeed broken down; but the rest of the fabrics, with the columns, pediments, and entablatures, remain perfect and entire. There is a Composite capital, which appeared to Mr. Bruce to be the most perfect of its kind now in existence. There is also a sumptuous triumphal arch of the Corinthian order, with a smaller one on each side of it. From this, all along to the city, there is a pavement of black stone, with a parapet wall raised breast high on each side, which was destined perhaps to hinder the populace from incommoding the emperor in his triumphant entrance into the city. Near the end of this pavement is a beautiful portico, built in the same style with the triumphal arch. The town is agreeably situated on a rising ground, and surrounded by large plantations of juniper; 110 miles south-west of Tunis. Lat. 35. 10. N. long. 9. 10. E.

SPAKE. The old preterite of *speak*.—So *spake* the archangel Michael, then paused. *Milton*.

SPALATRO, a sea-port of Austrian Dalmatia, on the gulf of Venice, and the see of an archbishop, who is metropolitan of this province and Croatia. It stands on a peninsula, in the form of a semicircle, connected with the mainland by a narrow isthmus, and has a harbour spacious and deep, though not protected from all winds. The town is fortified both on the sea and land side, but being commanded by several eminences, is not capable of sustaining a regular siege, and its security depends in a great measure on the strong pass of Clissa among the mountains. The population, about 7500 in number, carry on manufactures of woollens, silk, and leather. The fishery on the Adriatic is considerable, as well as the shipping business. The Turkish caravans from Bosnia and Servia to Venice, usually deposit their goods in the Lazaretto in this place. Spalatro contains several Roman edifices. Dioclesian, on abdicating the imperial crown, retired to Illyria, built a palace in the neighbourhood of Salona; and two-thirds of the present city of Spalatro stand within the walls which surrounded this retreat. They form a regular quadrangle, with a gate on each side. The whole of this part of the city is full of ancient arches and ruins. A temple belonging to the palace, is still in preservation. It is richly ornamented with colonades, figures in relief, and other antique decorations; though considerable changes have been made in the internal arrangements, in order to fit it for its present purpose, a cathedral; 110 miles north-west of Ragusa, and 30 south-east of Sebenico.

SPALDFORD, a hamlet of England, in Nottinghamshire; 7 miles east-by-south of Tuxford.

SPALDING, an ancient and considerable market town of England, in the county of Lincoln. It is situated on the river Welland, in the midst of the great fenny district which extends over this part of the county. The river runs through the town; and having numerous drains in its vicinity, it has much the appearance, and has with propriety been compared to a Dutch town. The houses are neat, and the streets very clean. The church is a large and ancient building, with a handsome spire, having crockets at the angles. Since the Welland has been made navigable to the town, Spalding has acquired a considerable traffic in coals and corn. Sloops from 40 to 60 tons burden come up to the centre of the town; and by these a regular coasting trade is carried on to London, Hull, Lynn, &c. There are two quays for landing goods, and spacious store-houses for their reception. Vessels of greater burden come only to Boston scalp, nine miles distant. Spalding has no manufactures, though attempts

have been made to introduce them. The town derives its chief support from agriculture and the extensive grazing carried on in the neighbourhood. Wool forms on this account a principal article of its trade, and some of the manufacturing towns of Yorkshire are supplied from hence. A literary or antiquarian society, of which Sir Isaac Newton was a member, was established here by Mr. Maurice Johnson, an eminent native of the town; but since his death it has dwindled into insignificance, and is now merely a social club. For many centuries Spalding has been the principal seat of Jurisdiction for the division of Holland. In the Saxon times the courts of law were held here by the earls; and subsequent to the Norman conquest, the priors were invested with the judicial authority. Since the dissolution of religious houses, a court of sessions has been held here. Spalding is a place of great antiquity. Its priory, which, in succeeding times, became a monastery of great consequence, was founded and endowed in 1051, by Thorold de Bukenhale. Market on Tuesday, for cattle and corn. There are five fairs in the year; 8 miles west of Holbeach, 20 from Peterborough, 20 from Stamford, 16 from Boston, and 100 north of London. Lat. 52. 47. N. long. 0. 8. W.

SPALDINGTON, a township of England, East Riding of Yorkshire; 4 miles north-by-east of Howden. Population 331.

SPALDWICH, a parish of England, county of Huntingdon; 3½ miles north-east of Kimbolton.

SPALL, *s.* [ancient French, *spaule*; modern, *espaule*.] Shoulder. *Out of use.*

Their mighty strokes their habergeons dismayed,
And naked made each other's manly *spalles*. *Spenser.*

SPALL, or SPALE, *s.* [*spiaell*, Su. Goth. segmentum.] A chip. This is a very old word in our language, and is retained in the Exmore and northern dialects.

SPALMADORI, a small island near the coast of Asia Minor, situated between the continent and the island of Scio. Lat. 38. 36. N. long. 26. 7. E.

SPALMARA, a small town and harbour of the Ionian island of Cefalonia.

SPALT, or SPELT, *s.* A white, scaly, shining stone, frequently used to promote the fusion of metals. *Bailey.*

SPALT, a town of Germany, in Bavarian Franconia, on the Retzat; 20 miles east-south-east of Anspach, and 48 west-by-north of Ratisbon. Population 1200.

SPAN, *s.* [pan, ponne, Saxon; *spanna*, Ital.; *span*, Dut.] The space from the end of the thumb to the end of the little finger extended; nine inches.—A foot, the length of it, is a sixth part of the fathom; a *span*, one eighth; a palm, or hand's breadth, one twenty-fourth; a thumb's breadth, or inch, one seventy-second; and a forefinger's breadth one ninety-sixth. *Holder on Time.*

Will you with counters sum
The vast proportion of his infinite?
And buckle in a waste most fathomless,
With *spans* and inches so diminutive
As fears and reasons? *Shakspeare.*

Any short duration.

You have scarce time
To steal from spiritual leisure a brief *span*,
To keep your earthly audit. *Shakspeare.*

To SPAN, *v. a.* [pannan, Sax.; *spanna*, Su. Goth.] To measure by the hand extended.—My right hand hath *spanned* the heavens. *Isaiah.*—To measure.—Our thoughts — not only bestride all the sea and land, but *span* the sun and firmament at once. *Donne.*

SPAN. The preterite of *spin*.
Together furiously they ran,
That to the ground came horse and man;
The blood out of their helmets *span*,
So sharp were their encounters. *Drayton.*

SPANANTHE, in Botany. See HYDROCOTYLE.
SPANBERG, a town of Austria; 19 miles north-north-east of Vienna, with 900 inhabitants.

SPANCEL, *s.* A rope to tie a cow's hinder legs. *North.*
To SPANCEL, *v. a.* To tie the fore or hinder legs of a horse or cow with a rope. *Common in the north of England and in Ireland.*

SPA'N-COUNTER, or SPA'NFARTHING, *s.* A play at which money is thrown within a span or mark.—Tell the king, that for his father's sake, Henry V., in whose time boys went to *span-counter* for French crowns, I am content he shall reign. *Shakspeare.*

Boys shall not play
At *span-counter* or blow-point, but shall pay
Toll to some courtier. *Donne.*

His chief solace is to steal down, and play at *span-farting* with the page. *Swift.*

SPANDAU, a fortified town of Prussia, in the Middle Mark of Brandenburg, at the confluence of the Havel and the Spree. It has nearly 5000 inhabitants, mostly Protestants. The manufactures and the agriculture of the neighbourhood are inconsiderable, but the town contains a large workhouse and a manufactory for government account, of arms, which are subsequently finished at Potsdam. The citadel stands outside of the town, and is a regular square, with four ramparts forty feet high, and good casemates. It is chiefly used as a state prison. It was taken by the Swedes in the year 1631, but restored in 1634. In 1806 it was taken by the French; 11 miles north-north-east of Potsdam, and 8 west of Berlin. Lat. 52. 33. N. long. 13. 11. E.

SPANDONCEA, in Botany. See CADIA.
SPANDRIL, in Architecture, the open space between the outward moulding of an arch, from its impost to the horizontal member or line which surmounts it.

SPANFARTHING. See SPANCOUNTER.
SPANGENBERG, a town of the west of Germany, in Hesse-Cassel; 17 miles south-east of Cassel, and 17 east of Fritzlar. It contains 1600 inhabitants, with a fortified castle, which is used as a state prison, and for keeping the archives of the house of Hesse.

SPANHEIM (Frederic), an eminent theological professor, was born in 1600, at Amberg, in the Upper Palatinate, where his father held an office in the electoral court. He passed a very laborious life, and died in the 50th year of his age, and was supposed to have shortened his days by the greatness of his labours. His works were very numerous, and on divers subjects: some were political, as "Le Soldat Suedois," composed at the request of the Swedish ambassador; "Mercure Suisse;" "Commentaire historique de la Vie et de la Mort de Christophe, Vicomte de Dhona;" "Memoires sur la Princesse Louise Juliane, Electrice Palatine." These were all published without his name: of his theological works, the principal is one on "Universal Grace;" "Dubia Evangelica;" "Epistola ad Buchananum de controversiis Ecclesiae Anglicanae;" "De Autore Epistolae ad Hebraeos."

SPANHEIM (Frederic), second son of the preceding, was born at Geneva, in 1632, was likewise a professor of theology of high reputation. Among his works, the most esteemed is a summary of ecclesiastical history of the 16th century.

SPANHEIM (Ezekiel), an eminent scholar and statesman, eldest son of Frederic, was born at Geneva, in 1629. He accompanied his father to Leyden, in 1642, when he was already far advanced in the knowledge of the learned languages, and he soon acquired the esteem both of Saumaise and Helvetius, who, at this period, were residents in that university. In 1651, he was nominated professor of the Belles Lettres at Geneva, and in the following year was admitted into the great council. His high reputation caused him soon after to be invited by the emperor to superintend the education of his only son, and in this situation he applied himself to gain a thorough knowledge of the public law of Germany. Having obtained leave to travel into Italy, he was charged by his master to watch over the political intrigues of the Catholic electors at Rome; and at the same time he made himself acquainted with the science of medals and classical antiquity. While out on this tour, he

was introduced to the celebrated Christiana, then residing at Rome, who favoured him with a gracious reception, and also to the still more illustrious lady Sophia, electress of Hanover, who brought him back with her to Heidelberg, in 1665. The elector-palatine, then engaged in various other projects, permitted Spanheim to enter into the service of the elector of Brandenburg, for whom he resided nine years in the quality of envoy-extraordinary. On his return to Berlin, he was made one of the ministers of the state; and at the peace of Ryswick, he was deputed again to France. The elector, being now acknowledged king of Prussia, conferred upon M. Spanheim the title of baron, and sent him in the character of extraordinary minister to queen Anne, of England. He was received at her court with all the respect and honour due to his merit, and was, on account of his talents, elected fellow of the Royal Society. He died in this country, at the age of 81. It is said of this author, that he filled his diplomatic character as if he were entirely detached from letters, and his literary character as if he had no concern with politics. His erudition was solid and extensive, of which he gave various proofs in his writings. The earliest of these were either theological or juridical; but he is best known as an antiquarian and critic. "His work," says his biographer, "entitled 'De Usu et Prestantia Numismatum Antiquorum,' in 2 vols. folio, is accounted one of the best treatises that ever appeared on the medallic science." His translation into French of the "Cæsars," of the emperor Julian, with illustrations; his edition of the same work, with a preface and notes; and his observations on Callimachus and other authors, with some dissertations on subjects of antiquity in the collection of Grævius, are reckoned extremely valuable contributions to critical literature.

SPANIARD'S BAY, on the east coast of Cape Breton island, is round the point of the south entrance into Port Dauphin, to the southward of which is Cape Charbon. Its mouth is narrow, but it is wider within, till it branches into two arms, both of which are navigable three leagues, and afford secure harbouring. Lat. 46. 20. N. long 58. 29. W.

SPAN-LONG, *adj.* Of the length only of a span. There, in the stocks or trees, white fays do dwell,
And *span-long* elves that dance about a pool,
With each a little changeling in their arms. *B. Jonson.*

SPAN-NEW, *adj.* [See the etymou under SPICK and SPAN.] Quite new.—The tale was aie *span-newe*. *Chaucer.*

Am I not totally a *span-new* gallant,
Fit for the choicest eyes? *Beaum. and Fl.*

To SPANE, *v. a.* "To *spanyn* or *wanym* children, ablacto." *Prompt. Parv.* From the German *spenen*, from *span*, uber, *rpana*, Sax. *ubera*.] To wean a child.

SPANG, *s.* [*spange*, Germ.; *spanghe*, Teut.] A thin piece of gold, or silver, or other shining material; a spangled ornament.

A vesture — sprinkled here and there
With glittering *spangs* that did like stars appear. *Spenser.*

The colours that shew best by candlelight are white, carnation, and a kind of sea-water green; and oes or *spangs*, as they are of no great cost, so they are of most glory. *Bacon.*

SPANGLE, *s.* [*spange*, German, a buckle, a locket; whence *oher spangen*, ear-rings.] A small plate or boss of shining metal.—Ear-rings and *spangles*. *Numbers.*—Any thing sparkling and shining.

As hoary frost with *spangles* doth attire
The mossy branches of an oak half dead. *Spenser.*

Thus in a starry night fond children cry
For the rich *spangles* that adorn the sky. *Waller.*

That now the dew with *spangles* deck'd the ground,
A sweeter spot of earth was never found. *Dryden.*

To SPANGLE, *v. a.* To besprinkle with spangles or shining bodies.

They never met in grove or green,
By fountain clear, or *spangled* starlight sheen. *Shakspeare.*

Then appear'd
Spangling the hemisphere, then first adorn'd
With the bright luminaries, that set and rose. *Milton.*

SPA'NIEL, *s.* [*hispaniolus*, Lat.; *espagneul*, Fr., from *Hispaniola*, where the best breed of this species of dog was. See *Hyde*, Not. on Peristol. Itin. Mundi.—A dog used for sports in the field, remarkable for sagacity and obedience.—There are arts to reclaim the wildest men, as there are to make *spaniels* fetch and carry: chide 'em often, and feed 'em seldom. *Dryden.*—A low, mean, sneaking fellow.

I am your *spaniel*; and, Demetrius,
The more you beat me I will fawn on you. *Shakspeare.*

SPA'NIEL, *adj.* Like a spaniel.
I mean sweet words,
Low crooked courtesies, and base *spaniel* fawning. *Shakspeare.*

To SPA'NIEL, *v. n.* To fawn; to play the spaniel.
To SPA'NIEL, *v. a.* To follow like a spaniel.—The hearts that *spaniell'd* me at heels, is so happy a conjecture [in place of *pannell'd*] that I think we ought to acquiesce in it. *Tollet, Note on Shakspeare.*

SPANISH, *s.* The language of Spain.—The *Spanish* is nought else but mere Latin, take a few Morisco words away, which are easily distinguished by the guttural pronunciation. *Howell.*

SPANISH BAY, a bay on the north coast of the island of Cape Breton. Lat. 46. 15. N. long. 60. 10. W.

SPANISH BROOM, *s.* A plant so called, as being a native of Spain. *Miller.* See SPARTIUM.

SPANISH COVE, a creek of Ireland, on the south coast of the county of Cork, a little to the north-east of Browhead.

SPANISH CREEK, a river of Florida, which runs into the river St. Mary.

SPANISH FLY, *s.* [*cantharis*, Lat.] A venomous fly that shines like gold, and breeds in the tops of ashes, olives, &c. It is used to raise blisters.

SPANISH GROVE, a post village of the United States, in Mecklenburg county, Virginia.

SPANISH LAKE, a lake of North America, in Louisiana, connected with Red river, with which it rises and falls. It is 50 miles in circumference; 18 miles above Natchitoches.

SPANISH MAIN, that part of the Atlantic ocean which washes the north part of South America, from the Leeward islands to the isthmus of Darien. The term is also applied to the coast.

SPANISH NUT, *s.* [*sisyrinchium*, Lat.] A plant. *Miller.*

SPANISH POINT, a cape on the north-east coast of the island of St. Vincent. Lat. 13. 24. N. long. 61. 12. W.

SPANISH RIVER, a river and settlement on the island of Cape Breton.

SPANISH TOWN, or ST. JAGO DE LA VEGA, a sea-port of Jamaica, capital of the island, and residence of a governor or commander in chief; the seat of the legislative assembly, the court of chancery, and supreme court of judicature. It is situated on the river Cobre, about six miles from the sea, and contains about 550 houses, and 5000 inhabitants. Lat. 18. 1. N. long. 76. 44. W.

SPAN'KER, *s.* A small coin.—Your cure too costs you but a *spanker*. *Denham.*—A person that takes long steps with agility: used in some parts of the north. It is also applied to a stout or tall person.

SPAN'NER, *s.* The lock of a fusee or carbine. *Bailey.*—My prince's court is now full of nothing but buff-coats, *spanners*, and musket-rests. *Howell.*—In the following example it seems to be the fusee or carbine itself.—This day, as his majesty sate at dinner, there came a tall man with his *spanner* and scarf; whereby every man in the presence supposed him some officer in the army. *Sir J. Bowring.*

SPANTIKOW,

SPANTIKOW, a village of Prussia, in Pomerania circle of Anclam.

SPANTON, a hamlet of England, North Riding of Yorkshire, near Kirby Moorside.

SPAR, *s.* *Spar* is a mixed body, consisting of crystal incorporated sometimes with various mineral, stony, earthy or metallic matter. *Woodward*.—Some stones, as *spar* of lead, dissolved in proper menstrua, become salts. *Newton*.

To SPAR, *v. a.* [ɹpɑːjɪən, Sax, *sperren*, German; formerly *sper*; "To *speryn* or shut." *Prompt. Parv.*]—To shut; to close; to bar.—He it *sparred* with a keie. *Chaucer*. The other, which was entered, labour'd fast
To *sperre* the gate. *Spenser*.

Calk your windows, *spar* up all your doors. *B. Jonson*.
SPAR, *s.* [*sparre*, Teut. See To SPAR.] A small beam; the bar of a gate.—Trees sprout not cross like dry and sapless beams, nor do *spar*s and tiles spring with a natural uniformity into a roof. *Pearson*.

To SPAR, *v. n.* [perhaps from *sperren*, German, in the sense of to oppose.] To fight with perulsive strokes.

Now ladies shine from phaetons afar,
And very soon perhaps may learn to *spar*!

Prol. to the Dramatist.

SPA'RABLES, *s. pl.* [ɹpɑːjɪən, Sax., to *fasten*.] Small nails.

SPA'RADRAP, *s.* In old pharmacy, a cerecloth.—With application of the common *sparadrapp* for issues, this ulcer was by a fontenel kept open. *Wiseman*.

It is prepared by melting a sufficient quantity of some plaster or unguent, and dipping a linen-cloth therein, till such time as it hath imbibed its fill. It is then taken out, cooled, and polished on a marble.

SPA'RAGE, or SPA'RAGS, *s.* Asparagus: which see.—An argument that like Jonas's gourd, or *sparagus*, is in season only at some times. *Bp. Taylor*.

SPARANISI, a town in the north-west of the kingdom of Naples, in the Terra di Lavoro, with 1500 inhabitants.

SPARAXIS. See IXIA.

To SPARE, *v. a.* [ɹpɑːjɪən, Saxon; *spaeren*, Dutch; *espargne*, French.] To use frugally; not to waste; not to consume.—Thou thy father's thunder didst not *sparc*. *Milton*.—To have unemployed; to save from any particular use.—He had no bread to *sparc*. *J. Strange*.—To do without; to lose willingly.—I could have better *spar'd* a better man. *Shakspeare*.—To omit; to forbear.

Be pleas'd your politics to *sparc*;
I'm old enough, and can myself take care.

Dryden.

To use tenderly: to forbear; to treat with pity; not to afflict; not to destroy; to use with mercy.

Does not each look a flash of lightning feel!
Which *sparcs* the body's sheath, but melts the steel.

Cleveland.

Dim sadness did not *sparc*
Celestial visages.

Milton.

To grant; to allow; to indulge.

Set me in the remotest place,
That Neptune's frozen arms embrace;
Where angry Jove did never *sparc*
One breath of kind and temperate air.

Roscommon.

To forbear; to inflict or impose.

Sparc my remembrance; 'twas a guilty day:
And still the blush hangs here.

Dryden.

To SPARE, *v. n.* To live frugally; to be parsimonious; to be not liberal.—God has not been so *sparing* to men to make them barely two-legged creatures, and left it to Aristotle to make them rational. *Locke*.—To forbear; to be scrupulous.—To pluck and eat my fill I *spar'd* not. *Milton*.—To use mercy; to forgive; to be tender.—Their king, out of a princely feeling, was *sparing* and compassionate towards his subjects. *Bacon*.

SPARE, *adj.* [ɹpɑːjɪən, Sax., *parcus*.] Scanty; not abun-

dant; parsimonious; frugal.—Men ought to beware, that they use not exercise and a *sparc* diet both. *Bacon*.—Superfluous; unwanted.—Learning seems more adapted to the female world than to the male, because they have more *sparc* time upon their hands, and lead a more sedentary life. *Addison*.—Lean; wanting flesh; macilent.

If my name were liable to fear,
I do not know the man I should avoid
So soon as that *sparc* Cassius.

Shakspeare.

Slow. *West of England. Grose*.

SPARE, *s.* Parsimony; frugal use; husbandry. *Not in use*.—Our victuals failed us, though we made good *sparc* of them. *Bacon*.

SPA'RELY, *adv.* Sparingly.

Ye vallies low, where the mild whispers use
Of shades, and wanton winds, and gushing brooks,
On whose fresh lap the swart star *sparcely* looks!

Milton.

SPA'RENESS, *s.* [Saxon, ɹpɑːrɪne] State of being spare; leanness.—A *sparcness* and slenderness of stature. *Hannond*.

SPARER, *s.* One who avoids expense.—By nature far from profusion, and yet a greater *sparer* than a saver; for though he had such means to accumulate, yet his forts, garisons, and his feastings, wherein he was only sumptuous, could not but soak his exchequer. *Wotton*.

SPA'RE-RIB, *s.* Ribs cut away from the body, and having on them spare or little flesh: as, a *sparc-rib* of pork.—Brandish no swords but swards of bacon; trail no spears but *sparc-ribs* of pork! *Brewer*.

SPARGANIUM [Σπαργάνιον of Dioscorides], in Botany, a genus of the class monoecia, order triandria, natural order of calamariæ, typhæ (*Juss.*)—Generic Character. Males numerous collected into a head. Calyx: ament, common, roundish, very closely imbricate on all sides, consisting of proper perianths that are three-leaved, linear, deciduous. Corolla none. Stamina: filaments three, capillary, longer than the calyx; anthers oblong. Females, below the males. Calyx, as in the male. Receptacle, common, roundish. Corolla none. Pistil: germ ovate, ending in a short awl-shaped style. Stigmas one or two, acute, channelled, permanent. Pericarp: drupe, juiceless, turbinate with a point, angular below. Seed: nut, bony, oblong-ovate, angular.—Male and female; ament roundish. Calyx three-leaved. Corolla none. Female: stigma bifid. Drupe juiceless, one-seeded.

1. Sparganium ramosum, or branched bur-reed.—Leaves triangular, at the base; their sides concave; common flower-stalk, branched; stigma linear. Root perennial, creeping. Stem upright, about three feet high; round.—Common in ditches and along the banks of the rivers; flowering in July and August.

2. Sparganium simplex, or unbranched bur-reed.—Leaves triangular, at the base; their sides flat; common flower-stalk simple; stigma linear.—This was considered by Linnaeus as a variety of the preceding.

3. Sparganium natans, or floating bur-reed.—Leaves drooping, flat; heads of flowers in a simple spike, most of them accompanied by leaves; style not longer than the germ. Root perennial, creeping; with long fibres, running deep into the muddy bottoms of ditches or slow streams. Stems ascending; round; leafy.—The natans occurs in Cambridgeshire near Sawston moor, on Wilbraham moor, and Burwell fen; near Norwich; in Yorkshire and Westmoreland; Scotland and Wales; flowering in July. It seems to prefer a muddy or clay soil.

SPARGANOPHORUS, from σπαργάνον, a fillet, and φέρω, to bear, because the seed is crowned with a membranous band or border. See ETHULIA.

SPARGANOSIS, from σπαργάνω, to swell, in Surgery, an abscess of the breast; a milk abscess.

SPARGEFACTIION, *s.* [*spargo*, Latin.] The act of sprinkling.—The operation was performed by *sparc*efactiion, in a proper time of the moon.—*Swift*.

SPARGUS,

SPARGUS, in Ichthyology, a name given by Gaza to the common sparus. See SPARUS.

SPARHAM, a parish of England, in Norfolk; 3 miles south-west of Reepham.

SPA'R-HAWK. See SPARROWHAWK.

SPA'RING, *adj.* Scarce; little.—Of this there is with you *sparing* memory or none; but we have large knowledge thereof. *Bacon*.—Scanty; not plentiful.—Good air, solitary groves, and *sparing* diet, sufficient to make you fancy yourself one of the fathers of the desert. *Pope*.—Parsimonious; not liberal.—Virgil being so very *sparing* of his words, and leaving so much to be imagined by the reader, can never be translated as he ought in any modern tongue. *Dryden*.

SPA'RINGLY, *adv.* Not abundantly.—The borders whereon you plant fruit-trees should be large, and set with fine flowers; but thin and *sparingly*, lest they deceive the trees. *Bacon*.—Frugally; parsimoniously; not lavishly.

Commend but *sparingly* whom thou dost love:
But less condemn whom thou dost not approve. *Denham*.

With abstinence.—Christians are obliged to taste even the innocent pleasures of life but *sparingly*. *Atterbury*.—Not with great frequency.—The morality of a grave sentence, affected by Lucan, is more *sparingly* used by Virgil. *Dryden*.—Cautiously; tenderly.—Speech of touch towards each other should be *sparingly* used; for discourse ought to be as a field, without coming home to any man. *Bacon*.

SPA'RINGNESS, *s.* Parsimony; want of liberality.—The same folly it will be in us, if, by the *sparingness* of our alms, we make ourselves a lank harvest hereafter. *Wh. Duty of Man*.—Caution.—This opinion Mr. Hobbes mentions as possible; but he does it with hesitancy, diffidence, and *sparingness*. *Clarke*.

SPARK, *s.* [spearc, Saxon; sparke, Dutch.] A small particle of fire, or kindled matter.—If any marvel how a thing, in itself so weak, could import any great danger, they must consider not so much how small the *spark* is that fieth up, as how apt things about it are to take fire. *Hooker*.—Any thing shining.—We have, here and there, a little clear light, some *sparks* of bright knowledge. *Locke*.—Any thing vivid or active.

If any *spark* of life be yet remaining,
Down, down to hell, and say, I sent thee thither.

Shakspeare.

A lively, showy gay man. *It is commonly used in contempt.*

A *spark* like thee, of the man-killing trade
Fell sick.

Dryden.

The finest *sparks* and cleanest beaux
Drip from the shoulders to the toes.

Prior.

A lover.

To SPARK, *v. n.* To emit particles of fire; to sparkle.
Not now in use.

Fair is my love,

When the rose in her cheek appears,
Or in her eyes the fire of love doth *spark*.

Spenser.

SPARKFORD, a parish of England, in Somersetshire; 4 miles south-west of Castle Cary.

SPARK'S ISLAND, a small island in the bay of Honduras, at the mouth of the river Roman. Lat. 15. 54 N. long. 86. 5 W.

SPA'RKFUL, *adj.* Lively; brisk; airy. *Not used*.—Hitherto will our *sparkful* youth laugh at their great grandfathers' English, who had more care to do well than to speak minion-like. *Camden*.

SPA'RKISH, *adj.* Airy; gay. *A low word.* It is commonly applied to men rather than women.—Is any thing more *sparkish* and better-humoured than Venus' accosting her son in the deserts of Libya? *Walsh*.—Showy; well-dressed; fine.—A daw, to be *sparkish*, trick'd himself up with all the gay feathers he could muster. *L'Estrange*.

VOL. XXIII. No. 1583.

SPA'RKLE, *s.* A spark; a small particle of fire.

He, with repeated strokes

Of clashing flints, their hidden fires provokes;
Short flame succeeds, a bed of wither'd leaves
The dying *sparkles* in their fall receives:
Caught into life, in fiery fumes they rise,
And, fed with stronger food, invade the skies. *Dryden*.

When reason's lamp, which, like the sun in sky,
Throughout man's little world her beams did spread,
Is now become a *sparkle*, which doth lie
Under the ashes, half extinct and dead. *Davies*.

Lustre.

I hold my beauty,
Wash but these sorrows from it, of a *sparkle*
As right and rich as hers. *Beaum.*

To SPA'RKLE, *v. n.* To emit sparks. To issue in sparks.

The bold design
Pleas'd highly those infernal states, and joy
Sparkled in all their eyes. *Milton.*

To shine; to glitter.—A hair seen in a microscope loses its former colour, and is in a great measure pellucid, with a mixture of some bright *sparkling* colours, such as appear from the refraction of diamonds. *Locke*.—To emit little bubbles, as liquor in a glass.

To SPA'RKLE, *v. a.* [*spargo*, Lat.] To disperse; to scatter; to throw about.

Cassandra yet there saw I how they hal'd
From Pallas' house, with *sperced* tress undone. *Sackville.*

What's become

Of my lieutenant?—Beaten, and 't please your grace,
And all his forces *sparkled*. *Beaum. and Fl.*

SPA'RKLER, *s.* One whose eyes sparkle.—What would you say, should you see a *sparkler* shaking her elbow for a whole night together, and thumping the table with a dicebox? *Addison*.

SPA'RKLET, *s.* A small spark.

Night, spread o'er earth thy sable veil,
Heaven's twinkling *sparklets* to conceal. *Cotton.*

SPA'RKLINESS, *s.* Vivacity. *Not in use*.—Sir John [Suckling] threw his repartees about the table with much *sparkliness*, and gentleness of witt, to the admiration of them all. *Aubrey*.

SPA'RKLINGLY, *adv.* With vivid and twinkling lustre.—Diamonds sometimes would look more *sparklingly* than they were wont, and sometimes far more dull than ordinary. *Boyle*.

SPA'RKLINGNESS, *s.* Vivid and twinkling lustre.—I have observed a manifestly greater clearness and *sparklingness* at some times than at others, though I could not refer it to the superficial clearness or foulness of the stone. *Boyle*.

SPA'RRLING, *s.* [*esperlant*, Fr. a smelt. Cotgrave.] A name for the smelt in the north of England, and in Wales.

SPARLING FOWL, in Ornithology, a name given in some places, by the country people, to the female merganser, called more usually the *dundiver*.

SPARONE, a town of the Sardinian states, in the Piedmontese province of Ivrea, with 2250 inhabitants,

SPARRE (Eric), Chancellor of Sweden, was born in 1550, but from this time we have no account of him till 1578, when he was appointed supreme judge of Westmanland and Dalecarlia; and in 1582 he became a senator, governor of these provinces, and vice-chancellor of the kingdom. In 1583 he was knighted by king James VI. of Scotland; and in 1587 he went as envoy to Poland, respecting the elevation of Sigismund to the Polish throne. Within about two years from this time he fell in disgrace, was deprived of his employments, and thrown into prison. He was likewise accused of high crimes against the sovereign, John III. On this occasion his letter of knighthood was taken from him by the king,

king, and torn to pieces before his face. He was, however, pardoned, on the intercession of king Sigismund; but was again arraigned, in 1592, before a court at which the king himself presided, on a charge of having promised the cession of Esthonia, in direct contradiction to the instructions which he had received, when envoy of Poland. He defended himself with great boldness against all his accusers; which so incensed the sovereign, that he drew his sword, exclaiming, that it was given him by God to punish traitors and breakers of their oath. Duke Charles brought forth other accusations against him; but the court broke up, after coming to this conclusion, that Sparre, and the other senators who had been accused with him, were neither condemned nor acquitted. Sparre fell again under the duke's displeasure, on account of a celebrated book which he wrote, entitled "Pro Lege, Rege. et Grege;" which seemed to be directed against the authority exercised by that prince. Having, however, taken an oath of fidelity to the duke, and made a solemn promise of obedience in writing, he was restored to his employments; and, as chancellor of the kingdom, subscribed, in 1593, the reconciliation between him and Sigismund. Notwithstanding this, he was afterwards delivered up to the duke, and suffered under the hands of the executioner, during the bloody scenes that took place at Linköping, in 1600; but he maintained his innocence to the last, and read a protest against those who had doomed him to punishment. He was author of many books, besides the one already referred to "Pro Lege," &c. among which are the following: "Account of the Coronation of king Sigismund at Upsal, February 19, 1594;" "Sententia Ordinum Regni Sueciæ in quosdam de Collegio Senatorum," &c.; "Adversus Insimulationes et Protestationes a Regis Sigismundi legato Polono, Oratione prolata, Defensio." *Gen. Biog.*

SPARRING, among Cock-fighters, is the fighting a cock with another to breathe him. In sparring, they put botts on their spurs, that they may not hurt one another. Also to box with stuffed gloves on the hands.

SPARRMANNIA [So named in memory of Anders or Andrew Sparrman, a Swede, fellow of the academy of sciences at Stockholm], in Botany, a genus of the class polyandria, order monogynia, natural order of columniferæ, tiliacæ, (*Juss.*)—Generic Character. Calyx: perianth four-leaved; leaflets lanceolate, entire, reflexed, villose. Corolla: petals four, equal, wedged-shaped, entire, flat, twice as long as the calyx. Nectaries proper, difform, filiform, torulose; shorter than the stamens: swellings inflated, turbinate. Stamina: filaments very many; inserted into the germ; filiform: outer like the nectaries, but longer, shorter however than the corolla. Anthers ovate-cordate, placed on the top of the filaments. Pistil: germ subglobular, five-cornered, hispid, superior. Style filiform, straight, hanging down among, and much longer than the stamens. Stigma truncate, terminated by elongated papillæ. Pericarp: capsule five-cornered, five-celled, echinate with straight, rigid, hairy bristles, terminated by a pellucid, straight, pungent spine, larger and more pungent at the corners. Seeds two, oblong, smooth, keeled on one side.—*Essential Character.* Calyx four-leaved. Corolla of four reflexed petals. Nectaries several, torulose. Capsule angular, five-celled, echinate.

1. Sparrmannia Africana.—This beautiful shrub grows to the height of six feet or more, and is thickly divided into alternate branches, finely clothed with large cordate and lobed pendulous leaves upon erect footstalks, making a very handsome appearance even in foliage, in which state it much resembles a Sida; its fine umbels of flowers are produced plentifully along the young branches, opposite to the leaves, in the same manner as in the common species of Pelargonium, which it resembles much in its inflorescence; the flowers nodding before they are expanded, and becoming erect as they approach maturity.—This shrub is a native of Africa, near the Cape of Good Hope.

Propagation and Culture.—It may be readily increased by cuttings, if treated in the same manner as some of the more tender Pelargoniums.

SPA'RRROW, *s.* [*sparwa*, Goth., *греарра*, *греаря*, Sax.] A small bird.

Dismay'd not this
Macbeth and Banquo? Yes,
As sparrows, eagles; or the hare, the lion. *Shakspeare.*

SPARROW, PASSER, in Ornithology, the name of a large order of birds. See PASSER.

SPARROW, Common or House, the *Fringilla domestica* of Linnæus; which see.—SPARROW, Hedge, the *Motacilla modularis* of Linnæus; which see.—SPARROW, Reed, the *Emberiza schoeniclus* of Linnæus: see EMBERIZA.—SPARROW, Lesser Reed, Willow Lark, or Sedge-bird, *Passer arundinaceus minor*, the *Motacilla salicaria* of Linnæus: see MOTACILLA.—SPARROW, Solitary: see PASSER SOLITARIUS.—SPARROW, Tree, the *Fringilla montana* of Linnæus: see FRINGILLA.

SPA'RRROWGRASS, *s.* [*asparagus*.] This is usually considered as a vulgarism, but Dr. Parr always contended for its correctness.

Your infant pease to sparrowgrass prefer,
Which to the supper you may best defer. *King.*

SPA'RRROWHAWK, or SPARHAWK, *s.* [*греарфавок*, Sax.] A small kind of hawk.—He loketh as a sparrowhawk with his eye. *Chaucer.*

SPA'RRY, *adj.* Consisting of spar.—In which manner spar is usually found herein, and other minerals; or such as are of some observable figure; of which sort are the sparry strata, or icicles called stalactita. *Woodward.*

To SPARSE, *v. a.* [*sparsus*, Lat.] To disperse; Sometimes written *sperse*. *Obsolete.*—Making way through *spersed* ayre. *Spenser.*—The *spersed* aire. *Fairfax.*

SPA'RSEDLY, *adv.* Scatteringly; dispersedly. *Coles.*—There are doubtless many such soils *sparsedly* throughout this nation. *Evelyn.*

SPARSHOLT, a parish of England in Berkshire; 3 miles west of Wantage. Population 422.

SPARSHOLT, a parish of England, in Southamptonshire; 3½ miles north-west of Winchester. Population 317.

SPARTA, in ancient Geography, a celebrated city of Greece, in the Peloponnesus, and the capital of Laconia. It was situated at the foot of mount Thornax, on the banks of the Eurotas, and to the west of it.

According to Strabo, this city was founded by Patrocles; but the most common opinion attributes its origin to Lesles, in the year 1516 before Christ. Some maintain that it originated at Lacedæmon in the year 400 before Christ. However this may be, it was known also by this name. However, the appellation of Spartans is applied to the inhabitants of Sparta and its territory, and that of Lacedæmonians to the inhabitants of the whole country of Laconia (see LACEDÆMONIA.) This country was not equal in extent to Athens, containing only 48 stadia; but it was adorned in a very eminent degree. At first it had no walls, the Spartans confiding in their own valour for its defence. In process of time, however, they constructed walls about it, when the ambition of Cassander, and the violent assaults of some tyrants, had worn out and almost exhausted their fortitude. Pausanias says, that it was fortified on occasion of the wars of Demetrius and Pyrrhus, and he mentions in terms of high commendation some pieces of sculpture, for which this city was distinguished. Sparta was famous for a variety of public institutions, among which were the senate of the aged, the senate of the conservators of the laws, the senate of the ephori, and that of the magistrates, denominated Bidæans. The first of these was the sovereign tribunal of the Lacedæmonians which regulated the affairs of the state; the other senators were, properly speaking, archons; the ephori were five, and the Bidæans of the same number, whose province it was to direct and superintend the exercises of the youth. The public edifices, temples, statutes, and monuments of Sparta, were so numerous and various, that we should far exceed our limits in recounting them. It is not certain at what time this celebrated place was destroyed; but

SPARTIUM, STATICE, STRATIOLIS.

Spartium. Statice. Stratiolis.

it was succeeded by the modern town of Misitra, which is situated about four miles from ancient Sparta. See GREECE.

SPARTA, a post township of the United States, in Ontario county, New York; 25 miles south-west of Canandaigua. Population 1397.

SPARTA, a post township of the United States, in Sussex county, New Jersey.

SPARTA, a post township of the United States, and capital of Hancock county, Georgia. Population 314.

SPARTACUS, one of the scourges of Roman tyranny and cruelty, a native of Thrace, was born of very low parents, entered the army, then became a deserter, and a robber. Being taken, he was confined as a gladiator in a receptacle at Capua for those unfortunate men whose lives were devoted to the pleasure of the Roman people. He escaped the horrid den, and placing himself at the head of a body of gladiators and fugitive slaves, he took a fortified place in the year before Christ, 72, whence he made predatory excursions throughout Campania. His force daily increased, and he defeated several commanders who were sent against him. He marched into Cisalpine Gaul, in order to give the slaves in his army, who were mostly Thracians and Gauls, an opportunity of returning home. Part of them, however, greedy of pillage, separated themselves from their commander, and were cut to pieces. The consul Lentulus, upon this success, which was extremely partial, pursued Spartacus, who turned about and gave him a total defeat; and then, in his turn, becoming the aggressor, he marched against the consul, Gellius, drove him from the field, and obliged him to take shelter in the walled towns. He retaliated the cruelty of the Romans towards the gladiators by obliging a number of his captives to fight with each other round the funeral pyre of one of his commanders. He was now at the head of 120,000 men, and with these he ravaged most of the provinces of Italia, and struck such a terror at Rome, that Crassus, at that time the man of the greatest consequence in the city, was sent against him. He soon confined Spartacus in Lucania, and cut off some of his detachments, so that he would gladly have crossed over to Sicily, but being prevented, he took post in a peninsula near Rhegium, where Crassus enclosed him by a rampart drawn from sea to sea. Spartacus, however, found means to break through this barrier, and gain the open country, but he was here deserted by a large body of his followers, who became the victims of Crassus. Spartacus now retreated towards the mountains, and repulsed with loss some of his pursuers. This success was, however, his ruin, for his men insisted upon his return to give battle to Crassus in the open field. Before the commencement of the engagement, Spartacus stabbed his horse, exclaiming, "If I am victorious, I can easily get another; if vanquished, I shall not want any." After a long contest, the Roman discipline prevailed. Spartacus, during extraordinary exertions of valour, was surrounded, and fell pierced with a multitude of wounds. He was unquestionably a brave man, and something more than a courageous barbarian. He had, says Plutarch, not only strength and elevation of mind, but a discernment and civility much superior to his fortune. It is said that his wife accompanied him into the field, pretended to the gift of prophecy, and probably inspired him with a fanatical confidence in victory.

SPARTANBURG, a district of the United States, in the north part of South Carolina. Population 14,259, including 2391 slaves.

SPARTANBURG, a post township and capital of the United States, in Spartanburg district, South Carolina.

SPARTEL, CAPE, a promontory of Northern Africa, being the point which divides the straits of Gibraltar from the Atlantic. It is about 5 miles to the west of Tangier.

SPARTIANUS (Ælius), a Latin historian, flourished in the time of Diocletian, to whom he dedicated the lives of Adrian, Ælius, Verus, Didius Julianus, Severus, and Pescennius Niger, which, as well as his lives of Caracalla and Geta, are come down to our times. He is one of the writers of the "Historiæ Augustæ Scriptores," but his merits are not very great.

SPARTIVENTO, CAPE, anciently called *Herculis Promontorium*, the most southern promontory of Italy, on the eastern extremity of Calabria Ultra. Lat. 37. 50. N. long. 16. 28. E.

SPARTIUM [*Σπαργίον* of Dioscorides: frutex ex cujus ramulis spartei funes contextuntur], in Botany, a genus of the class diadelphia, order decandria, natural order of papilionaceæ, or leguminosæ.—Generic Character. Calyx: perianth one-leaved, cordate-tubular: at the upper edge very short; below towards the tip marked with five toothlets, coloured, small. Corolla papilionaceous; five-celled. Standard obcordate, the whole reflexed, very large. Wings ovate, oblong; shorter than the standard; annexed to the filaments. Keel two-petalled, lanceolate, oblong; longer than the wings; (the carinal margin connected by hairs), inserted into the filaments. Stamina: filaments ten, connate; adhering to the germ, unequal, gradually longer: the uppermost very short: the lower nine-cleft. Anthers oblongish. Pistil: germ oblong, hirsute. Style awl-shaped, rising. Stigma growing to the upper side of the top, oblong, villose. Pericarp: legume cylindrical, long, obtuse, one-celled, two-valved. Seeds many; globe-kidney form.—*Essential Character.* Calyx produced downwards. Filaments adhering to the germ. Stigma longitudinal; villose above.

1. *Spartium contaminatum*, or narrow-leaved broom.—Branches round; leaves alternate, filiform; stained at the base. Stem shrubby, rod-like; branched at the base, round, even.—Native of the Cape of Good Hope, in the sands.

2. *Spartium sepiarium*, or hedge broom.—Branches rugged; upper leaves clustered filiform. Branches rugged with the fallen leaves. Racemes terminating. Flowers yellow.—Native of the Cape of Good Hope.

3. *Spartium junceum*, or Spanish broom.—Branches opposite round; flowering at the top; leaves lanceolate.—Spanish Broom is native of all the southern countries of Europe. There is a variety of it with double flowers, which is very unusual in his natural order.

4. *Spartium monospermum*, or white-flowered, single-seeded broom.—Branches round; striated, racemes few-flowered; flowers subaggregate; leaves lanceolate, silky.—Native of Spain and Portugal.

5. *Spartium sphaerocarpum*, or yellow-flowered, single-seeded broom.—Branches round, striated; racemes many-flowered; flowers remote; leaves lanceolate, sessile, pubescent beneath.—Native of the South of Europe; and of Barbary, near Mayane.

6. *Spartium purgans*, or purging broom.—Branches round, striated; leaves lanceolate, subsessile, pubescent.—Native of the South of France, the county of Nice, Arragon, and Japan.

7. *Spartium aphyllum*, or leafless broom.—Branches round, striated, smooth rod-like; leaves very short; linear propped.—Found by Pallas, in the driving sand of the Wolga desert.

8. *Spartium virgatum*, or twiggy broom.—Branches round, striated; leaves lanceolate-oblong, silky; calyxes, funnel-form, two-lipped, rough-haired, standard and keel pubescent.—Native of the island of Madeira.

9. *Spartium decumbens*, or trailing broom.—Stem decumbent, branched; leaves solitary, ovate; flowers on long peduncles.—Found in Burgundy, and in part of Switzerland.

10. *Spartium scorpius*, or scorpion broom.—Branches spiny, spreading; leaves ovate.—Native of the South of Europe, and of Barbary.

11. *Spartium aspaletoides*.—Branchlets bowed, smooth, tubercled, flower-bearing; leaves linear-lanceolate; flowers axillary, pedicelled; calyx three-parted; corollas silky.—Native of Barbary, on the hills near La Calle.

12. *Spartium multiflorum*, or Portugal white broom.—Leaves ternate and simple silky, shoots strict, striated; flowering on every side.—Native of the island of Madeira.

13. *Spartium angulatum*, or angular-branched broom.—Leaves ternate and solitary; branches hexangular; flowering at the end.—Native of the Levant.

14. *Spartium*

14. *Spartium scoparium*, or common broom.—Leaves ternate and solitary; branches unarmed, angular; flowers axillary, solitary; legumes ciliate. The common broom grows from three to six feet high or more, very much branched; the branches upright, rushy, evergreen, angular, flexible, leafy, smooth except the very young ones which are downy. Leaves ternate, small, ovate, acute, downy and edged with soft hairs bending inwards; the leaf-stalks are also slightly hairy, and flattened. Flowers axillary, solitary or two together, rarely three, nodding, on round smooth peduncles, furnished on each side with a very minute stipule.—Native of Europe, in dry sandy soils: flowering in May and June.—The remaining species are *Spartium umbellatum*, *ferox*, *horridum*, *patens*, *arborescens*, *biflorum*, *linifolium*, *sericeum*, *cytisoides*, *nubigenum*, *radiatum*, *spinosum*, and *villosum*.

Propagation and Culture.—They may all be propagated by sowing the seed; those from the warm climates require the protection of a green-house.

SPARUS, in Ichthyology, a genus of fishes of the order Thoracici, of which the Generic Character is—teeth generally strong; the grinders somewhat obtuse and crowded; the lips are doubled; gill-membrane five-rayed; the cover scaly; the body compressed; the lateral line curved on the hind part; the pectoral fins are rounded.

The name Sparus is of Greek origin, being derived from the verb *σπαρῆναι*, to palpitate or tremble; and was given to this fish from its remarkable quality of trembling or palpitating all over the body, as soon as taken out of the water.

There are, according to Gmelin, about forty species, separated into divisions, and classed according to their colours; but Dr. Shaw has enumerated nearly four times that number.

I.—Marked with a black spot.

1. *Sparus auratus*, or lunated gilt-head.—The Specific Character of this is,—that between the eyes there is a semilunar spot. The general length of the fish is about fifteen inches; but occasionally it is found of a larger size: the body is broad and thin: the back rising into a carina. Dr. Shaw gives the Specific Character as silvery-blueish, with gold-coloured brows, and a purple spot beyond each side the head; but sometimes, he says, with the addition of several brownish longitudinal stripes.—It is a native of the Mediterranean, Atlantic and Indian seas, and held in considerable estimation as food. It was much admired by the ancient Greeks and Romans; by the former it was consecrated to Venus. It feeds on shell-fish, which it grinds with its strong teeth before it swallows. It is sometimes found of the weight of eight or even ten pounds.

2. *Sparus annularis*.—Yellowish, with a black ocellate spot near the tail.—This is found chiefly in the Adriatic. The colour of this species resembles that of the common perch: at a certain distance from the base of the tail a round black spot is situated at the bottom of the last dusky bar of the body; the pectoral fins and tail are red, the rest blackish.—Native of the Mediterranean. Not at all in esteem for the table.

3. *Sparus sargus*.—The body of this is marked with black bands, and a black ocellate spot near the tail.—It inhabits the southern coasts of Europe. The body is oval, broad; the teeth are equal, obtuse; and the tail forked. It is nearly of the size of the auratus, and the shape very like that, but deeper in proportion. It is much esteemed as food.

4. *Sparus melanurus*.—Body with longitudinal lines and a black ocellate spot near the tail.—This species is found in the southern European seas. It is described by Shaw as silvery, with a blue back; the sides have a stripe, spotted longitudinally with brown, and a black spot at the base of the tail.

5. *Sparus maris*.—A black ocellate spot on each side; pectoral fins and tail red.—It inhabits the Mediterranean.

6. *Sparus mcena*.—Body variegated; a blackish spot on each side.—This is found in the Mediterranean.

7. *Sparus saxatilis*.—Body whitish; a black ocellate spot at the base of the tail.—This is found on the coasts of Surinam. The snout is depressed; and the tail rounded.

8. *Sparus orphus*.—A black ocellate spot at the tail; the head is reddish; the tail is entire.

9. *Sparus punctata*.—Mouth cuspidate; the tail entire: in colour it is partly black.—It inhabits the shores of Sardinia. In size and colour it is nearly allied to the *Sparus sargus*.

10. *Sparus argentatus*.—This has a black spot behind the gills.—It is found on the coasts of Japan; is six inches long; the body is covered with silvery scales; before the eyes are two nostrils.

11. *Sparus notatus*.—Dorsal fin divided; the gill-covers and tail spotted with black.—It is found at Japan. The head is coated with silvery scales, nearly as long as the fingers.

II.—Body mostly red.

12. *Sparus erythrinus*.—The tail of this fish is nearly entire; the body red.—It inhabits the European, American, and Japan seas. It is often eaten, but is not held in any great estimation; and it has sometimes proved poisonous: the iris is silvery.

13. *Sparus insidiator*.—Body red, yellowish at the sides; tail a little forked.—It inhabits the Indian ocean; is about ten inches long; catches aquatic insects, like the *Chaetodon rostratus*, with its snout, which it can lengthen out into a tube; the body is rather broad, flat, coated with large scales of a metallic-green colour at the edge; when dead it becomes brown; the flesh is eatable. It is described as having a compressed head, and scaly; the eyes are lateral; jaws divided, each with two large straight conic teeth in the middle; gill-covers very entire; first lateral line nearer the back, beginning at the end of the dorsal fin, the other straight; the vent is nearly in the middle; the fins are yellowish; the dorsal and anal fins are marked with green bands; the last ray but one of this anal is very long.

14. *Sparus formosus*.—Red; longitudinal marks on the body and tip of the tail blue. This fish is figured in Dr. Shaw's *Naturalist's Miscellany*, and he suspected that it was a British fish. The fore part of the dorsal, and edge of the anal fins, are blue.

15. *Sparus pagrus*, or the red gilt-head.—This is reddish; the skin, at the end of the dorsal and anal fins, gathered up, and hiding the last rays.—It is found in the European seas. In shape, teeth and size, it resembles *Sparus auratus*. The iris is silvery; insides of the gill-covers, mouth and tongue, are of a fine red; at the base of the pectoral fins is a ferruginous spot; the scales are large; and the tail is forked.

16. *Sparus spinifer*.—Dorsal spines recumbent; the five middle ones filiform and longer.—This inhabits the muddy deeps of the Red sea; is about a span and a half long. The body is silvery, but with a reddish hue; the back is marked with darker lines; the scales are broad, very entire, obscurely streaked, and the flesh is reckoned excellent.

17. *Sparus palpebratus*.—This is of a chesnut-red; the eyes are of a pale yellow, covered with a loose yellowish membrane.—This is found on the coasts of Amboina. It resembles a perch; but the head is more obtuse.

III.—Body marked with lines.

18. *Sparus boops*.—Longitudinal lines dusky; the four lower ones are gold and silvery.—It inhabits the sea round Japan.

19. *Sparus cantharus*.—The tail is without spots; the body is marked with longitudinal lines.—It inhabits the coast of Tuscany. The iris is silvery.

20. *Sparus chromis*.—The tail is bifid; the second ray of the ventral fin is setaceous.—It inhabits southern Europe.

21. *Sparus salpa*.—Tail bifid; the body is marked with eleven tawny longitudinal lines.—It is found in the Mediterranean.

22. *Sparus sarba*.—This is of an oblong oval shape, silvery, with numerous obsolete stripes; the ventral fins are yellow,

SPARUS AND SQUALUS.

J. Bus sc.

1 *Sp. miena*. 2 *Sp. annularis*. 3 *Sp. fasciatus*. 4 *Sp. surinamensis*. 5 *Sp. fasciatus*. 6 *Squalus pristis*.

yellow, with a golden line on each side near them.—It inhabits the Mediterranean, and along the coasts of Arabia. The body is broad, and covered with broad entire scales; there are seventeen longitudinal brownish stripes on each side; the flesh is reckoned pleasant.

23. *Sparus synagris*.—The tail is bifid, red; the body is purplish, with seven gold lines on each side.—It inhabits South America.

24. *Sparus rhomboides*.—The tail is entire; the back is caniculate; the body with yellow lines.—It inhabits America, and is there called the salt-water bream. The teeth are obtuse; between the roots of the pectoral and dorsal fins a black spot; the ventral, anal, and caudal fins are tawny.

25. *Sparus latus*.—Yellowish; the head is silvery; the scales longitudinally imbricate.—It inhabits about the coasts of Japan; is three inches long, and one and a half broad.

26. *Sparus virgatus*.—The tail is forked; the body is depressed, oblong, striped with scales.—This is found on the coast of Japan.

27. *Sparus haffara*.—Silvery, with fourteen obsolete yellowish-brown lines on each side; the tail is bifid.—It inhabits the muddy shores of Arabia; is about a span long; and the flesh is reckoned good.

28. *Sparus berda*.—Whitish-ash; lateral scales with each a transverse brown band in the middle; the dorsal spines are recumbent.—It is found in the Red Sea. The body is oval; the back is gibbous, with obsolete bands; beneath it is white; the scales are broad, round and entire.

29. *Sparus Chilensis*.—The tail is bifid; the body is marked with transverse brown lines on each side.—It inhabits, as its specific name denotes, Chili, in South America. It grows to full six feet long; in shape it is oval, depressed, coated with large rhomboidal margaritaceous scales, spotted with white; the flesh is good.

IV.—Various.

30. *Sparus chrysops*.—The tail is semi-lunar; the back is grooved; the iris is golden.—It inhabits Carolina. The body is blueish.

31. *Sparus argyrops*.—Tail semi-lunar; the back is grooved; iris is silvery.—It inhabits Jamaica and Carolina. It resembles the last. The three first rays of the dorsal fin end in a long bristle.

32. *Sparus dentex*.—The tail is bifid; the body is variegated; four of the teeth are larger.—It inhabits many parts of Europe, and the Cape of Good Hope.

33. *Sparus spinus*.—Tail bifid; dorsal spine recumbent.—It inhabits South America and India. The body is apparently painted with blue recurved blotches.

34. *Sparus radiatus*, or pudding-fish.—The tail is entire; lateral line composed of linear scales, divided into three bifid branches.—This is found on the coast of Carolina. Above it is a green purple at the sides; beneath rufous; head varied with blue, yellow and green streaks.

35. *Sparus Virginicus*.—The tail is bifid; the body with two black transverse bands, and numerous longitudinal lines.—It inhabits North America.

36. *Sparus mormyrus*.—The tail of this species is bifid; body with numerous silvery and black bands.—It inhabits Tuscany.

37. *Saprus Capistratus*.—The tail of this is entire; the body is reticulate with white.—It inhabits America. Body oblong; scales loosely imbricate, with a white band bent into a right angle before the edge.

38. *Sparus Galilæus*.—The tail entire; body above is greenish, beneath white.—It inhabits the lake Genezareth, in Galilee.

39. *Sparus fuscens*.—Brownish; scales golden; near the pectoral fins a black spot.—It inhabits Japan, and is about four inches long.

40. *Sparus niger*, or toothed gilt-head.—The back is black; the sides brighter; belly silvery.—This is found on the coasts of Yorkshire. It is described in Pennant's British Zoology. The body is twenty-six inches long, and ten

broad; eyes large; teeth in the lower jaw slender, sharp, and on each side a slender canine tooth, in the upper jaw a single row; the first seven rays of the dorsal fin high, the rest low; this fin and the anal covered with imbricate scales.

SPARUS, among the Romans, a kind of rustic weapon, bent backwards like the foot. It was likewise used for a small dart, or missive weapon.

SPARVER, or SPARNER, *s.* A bed.—To dame Jane Clynton one *sparver* of silk, with curtains of the same.—Sir Edward Poyning's will, 1520, *Testamenta Vetusta*.

SPASK, a small town of the interior of European Russia, in the government of Riazan, on the Oka; 46 miles east-south-east of Riazan.

SPASK, a town of the central part of European Russia, in the government of Tamboy, on the river Studenez; 105 miles north-north-east of Tamboy. Population 3000.

SPASK, a small town of the east of European Russia, in the government of Kasan, near the Wolga; 60 miles south of Kasan.

SPASKOI, a small village of Kolivan, in Asiatic Russia. Lat. 55. 38. N. long. 86. 14. E.

SPASKOI, a small village of Tobolsk, in Asiatic Russia; 36 miles north of Tomsk.

SPASKOY, a village of the interior of European Russia, in the government of Kaluga, circle of Medyn. It has 2500 inhabitants, employed partly in the manufacture of canvas and paper; 126 miles south-east of Smolensko.

SPASM, *s.* [*spasme*, Fr., *σπασμα*, Gr.] Convulsion; violent and involuntary contraction of any part.

All the maladies

Of ghastly *spasm*, or racking torture, qualms
Of heart-sick agony.

Milton.

SPASMO'DIC, *adj.* [*spasmodique*, Fr.] Convulsive.

SPAT. The pret. of *spit*.—He had *spat* on the ground. *St. John*.

SPAT, *s.* [Su. Goth. humor.] The spawn of shell-fish.—A reticulated film found upon sea-shells, and usually supposed to be the remains of the vesicles of the *spat* of some sort of shell-fish. *Woodward*.

SPATA, CAPE, the north-west point of the island of Candia, in the Mediterranean.

SPATALLA, in Botany. See PROTEA.

SPATAREI, a small town in the island of Samos; 5 miles south-south-west of Cora.

SPATHA, is a word used by different authors in various senses: some express by it a rib; others, the instrument called by surgeons, a spatula, and used for spreading ointments and plaisters; and Celsus calls a sort of incision-knife by this name. It is also used for the external covering of the fruit of the palm-tree, and by others for a sword.

SPATHELIA [altered by Linnæus from the *spathe* of Brown], in Botany, a genus of the class pentandria, order trigynia, natural order of bicornes, terebintaceæ (*Juss.*)—Generic Character. Calyx: perianth five-leaved: leaflets oblong, coloured. Corolla: petals five, oblong, equal. Stamina: filaments five, awl-shaped, ascending, marked with a tooth at the base. Anthers ovate. Pistil: germ ovate, shorter than the stamens. Styles three. Stigmas simple. Pericarp: capsule oblong, three-cornered, three-winged, three-celled: cells accompanied by a lateral resiniferous canal. Seeds solitary, oblong, three-sided.—*Essential Character*. Calyx five-leaved. Petals five. Capsule three-cornered, three-celled. Seeds solitary.

Spathelia simplex, or rhus-leaved *spathelia*.—This tree rises by a single slender stem, like the palms, and bears all its oval leaves in a pinnated order, on moderate ribs, disposed closely together about the top, from the centre of which the flower-spike rises; this is very spreading, and generally shoots so as to appear a large blooming pyramid many feet above the foliage. This is a most beautiful flowering shrub; it seldom rises above fourteen or sixteen feet, and its flowering top is generally from four to six feet in height.—Native of Jamaica.

SPATHESTER, an old chirurgical instrument, used to draw the prepuce over the glans.

SPATHIUM [so denominated by Loureiro, from the Gr. *σπαθιον*, a little sheath; alluding to the form of its calyx], in Botany, a genus of the class hexandria, order trigynia, natural order of inundato, Naides (*Juss.*)—Generic Character. Calyx: sheath stalked, of one leaf, roundish, spreading, single-flowered. Corolla none. Stamina: filaments six, short, inserted into the receptacle. Anthers roundish, of two-cells. Pistil: germen (superior) roundish, with four horns. Style none. Stigmas four, oblong, reflexed. Pericarp: berries four, ovate, pointed, single-seeded. Seeds roundish.—*Essential Character.* Sheath roundish, stalked, single-flowered. Corolla none. Berries four, with single seeds.

Spathium Chinense, or thong pin ngau of the Chinese.—The stem is erect, three feet high, herbaceous, with spreading, flaccid, furrowed branches. Leaves heart-shaped, lanceolate, five-ribbed, smooth, scattered, with clasping foot-stalks. Spikes linear, nearly terminal. Such is the description of Loureiro, who conceives the above plant to be somewhat akin to the Linnæan aponegeton, and also to potamogeton.—Native of marshy places, near Canton in China.

SPATHOSE, in Mineralogy, having a crystalline structure.

SPATHULARIA [from the spatulate shape of its head, consisting of only one species], in Botany, a genus of the class fungi, order cryptogamia natural order of fungi.—*Essential Character.* Club-shaped. Head compressed, membranous, decurrent at each side.

Spathularia flavida, or yellow spathularia.—The stalk is about a finger's length, half an inch in diameter, hollow, rather uneven, whitish. Head vertical, obtuse, hollow, somewhat obovate, or inversely heart-shaped, pale buff, or yellowish, discharging innumerable minute seeds, in the form of smoke, from marginal pores.—Mr. Crowe first discovered it at Cossey, near Norwich, very abundant, growing erect, in tufts.

SPATI CAPE, the north point of the island of Cerigo. Lat. 36. 34. N. long. 22. 49. E.

To SPA'TIATE, *v. n.* [*spatiar*, Lat.] To rove; to range; to ramble at large.—Confined to a narrow chamber, he could *spatiate* at large through the whole universe. *Bentley.*

To SPA'TTER, *v. a.* [*spatz*, *spit*, Sax.] To sprinkle with dirt, or any thing offensive.

The pavement swam in blood, the walls around
Were *spatter'd* o'er with brains. *Addison.*

To throw out any thing offensive.—His forward voice now is to speak well of his friend; his backward voice is to *spatter* foul speeches, and to detract. *Shakspeare.*—To asperse; to defame.

To SPA'TTER, *v. n.* To spit; to sputter as at any thing nauseous taken into the mouth.

They, fondly thinking to allay
Their appetite with gust, instead of fruit
Chew'd bitter ashes, which the offended taste
With *spattering* noise rejected. *Milton.*

SPA'TTERDASHES, *s.* Coverings for the legs by which the wet is kept off.

SPA'TTLE, *s.* [*spatz*, Sax.] Spittle. *Obsolete.*—The *spattle* of their tongues. *Bale.*

SPA'TTLING POPPY, *s.* The *papaver spumeum*.
SPA'TULA, *s.* [*spatha*, *spathula*, Lat.] A spatule or slice.—*Spatula* is an instrument used by apothecaries and surgeons in spreading plaisters. *Quincy.*—In raising up the hairy scalp smooth with my *spatula*, I could discover no fault in the bone. *Wiseman.*

SPA'VIN, *s.* [*espavent*, Fr., *spavano*, Italian.] This disease in horses is a bony excrescence or crust as hard as a bone, that grows on the inside of the hough, not far from

the elbow, and is generated of the same matter by which the bones or ligaments are nourished: it is at first like a tender gristle, but by degrees comes to hardness. *Farrier's Dict.* See FARRIERY.

They've all new legs and lame ones; one would take it,
That never saw them pace before, the *spavin*,
And springhalt reign'd among them. *Shakspeare.*

SPA'VINED, *adj.* Diseased with spavin.—A fifth wondered what a plague I could do at the fair with a blind, *spavined*, galled hack, that was only fit to be cut up for a dog-kennel. *Goldsmith.*

SPAUNTON, a township of England, North Riding of Yorkshire; 7 miles north-west of Pickering.

SPAW, *s.* [from *Spaw* in Germany, a place famous for mineral waters.] A mineral water.

To SPAWL, *v. n.* [*spæchlan*, to spit, Saxon.] To throw moisture out of the mouth.

What mischief can the dean have done him,
That Traulus calls for vengeance on him?
Why must he sputter, *spawl*, and slaver it,
In vain against the people's favourite. *Swift.*

SPAWL, *s.* [*spatz*, Saxon.] Spittle; moisture ejected from the mouth.

Of spittle she lustration makes;
Then in the *spawl* her middle finger dips,
Anoints the temple, forehead, and the lips. *Dryden.*

SPA'WLING, *s.* Moisture thrown out of the mouth.—His marble floors with drunken *spawlings* shine. *Congreve.*

SPAWN, *s.* [*spene*, *spenne*, Teut., *spane*, Old Eng.] Rarely used in the plural.—The eggs of fish, or of frogs.

Masters of the people,
Your multiplying *spawn* how can he flatter
That's thousand to one good one? *Shakspeare.*

When the *spawns* on stones do lie. *Fletcher.*—Any product or offspring. In contempt.

'Twas not the *spawn* of such as these
That dy'd with Punick blood the conquer'd seas,
And quasht the stern Æacides. *Roscommon.*

To SPAWN, *v. a.* To produce as fishes do eggs.—Some report a sea-maid *spawn'd* him. *Shakspeare.*—To generate; to bring forth. In contempt.—What practices such principles as these may *spawn*, when they are laid out to the sun, you may determine. *Swift.*

To SPAWN, *v. n.* To produce eggs as fish.—The fish having *spawned* before, the fry that goes down hath had about three months growth under ground, when they are brought up again. *Brown.*—To issue; to proceed. In contempt.—It is so ill a quality, and the mother of so many ill ones that *spawn* from it, that a child should be brought up in the greatest abhorrence of it. *Locke.*

SPA'WNER, *s.* The female fish.—The barbel, for the preservation of their seed, both the *spawner* and the melter, cover their *spawn* with sand. *Walton.*

SPAXTON, a parish of England, in Somersetshire; 4½ miles west of Bridgewater.

To SPAY, *v. a.* [*spado*, Latin.] To castrate female animals.—The males must be gelt, and the sows *spay'd*; the *spay'd* they esteem as the most profitable, because of the great quantity of fat upon the inwards. *Mortimer.*

To SPEAK, *v. n.* pret. *spake* or *spoke*; part. pass. *spoken.* [*spæcan*, Saxon; *spreken*, Teut.]—To utter articulate sounds; to express thoughts by words.—*Speaking* is nothing else than a sensible expression of the notions of the mind, by several discriminations of utterance of voice, used as signs, having by consent several determinate significancies. *Holder.*—To harangue; to make a speech.—Many of the nobility made themselves popular by *speaking* in parliament, against those things which were most grateful

to his majesty, and which still passed notwithstanding their contradiction. *Clarendon*.—To talk for or against; to dispute.—A knave should have some countenance at his friend's request. An honest man, sir, is able to *speak* for himself when a knave is not. *Shakspeare*.

When he had no power,
He was your enemy; still *spake* against
Your liberties and charters. *Shakspeare*.

To discourse; to make mention.
Were such things here as we do *speak* about?
Or have we eaten of the insane root,
That takes the reason prisoner? *Shakspeare*.

To give sound.
Make all your trumpets *speak*, give them all breath,
Those clam'rous harbingers of blood and death. *Shakspeare*.

To *SPEAK with*. To address; to converse with.
Thou can'st not fear us, Pompey, with thy sails,
We'll *speak with* thee at sea. *Shakspeare*.

I *speak with* one that came from thence,
That freely render'd me these news for true. *Shakspeare*.
To *SPEAK, v. a.* To utter with the mouth; to pronounce.

You, from my youth,
Have known and try'd me, *speak* I more than truth?
Sandys.

To proclaim; to celebrate.
It is my father's music
To *speak* your deeds, not little of his care
To have them recompens'd. *Shakspeare*.

To address; to accost.—If he have need of thee, he will deceive thee, smile upon thee, put thee in hope, *speak* thee fair, and say, What wantest thou? *Eccelus*.—To exhibit; to make known.

Let heaven's wide circuit *speak*
The Maker's high magnificence. *Milton*.

SPEAK, or SPEKE, a village of England, in Lancashire, situated on the Mersey, south-east of Liverpool. Population 409.

SPEAKABLE, adj. Possible to be spoken.—Having the power of speech.

Say,
How can'st thou *speakable* of mute? *Milton*.

SPEAKER, s. One that speaks.—Common *speakers* have only one set of ideas, and one set of words to clothe them in; and these are always ready at the mouth. *Swift*.—One that speaks in any particular manner.

Horace's phrase is *torret jecur*;
And happy was that curious *speaker*. *Prior*.

One that celebrates, proclaims, or mentions.
After my death, I wish no other herald,
No other *speaker* of my living actions,
To keep mine honour from corruption. *Shakspeare*.

SPEAKER OF THE HOUSE OF COMMONS, a member of the house, elected by a majority of the votes, to act as chairman, or president, in putting questions, reading briefs or bills, keeping order, reprimanding the refractory, adjourning the house, &c.

The first thing done by the commons upon the first meeting of a parliament, is to choose a speaker, who is to be approved of by the king; and who, upon his admission, begs his majesty, that the commons, during their sitting, may have free access to his majesty, freedom of speech in their own house, and security from arrests.

SPEAKING, s. Discourse; act of expressing in words.—Laying aside all malice, and all guile, and hypocrisies, and envies, and evil *speaking*s.

SPEAKING TRUMPET, s. A stentorophonic instrument; a trumpet by which the voice may be propagated to a great distance.

That with one blast through the whole house does bound,
And first taught *speaking-trumpet* how to sound. *Dryden*.

SPEAR, s. [*ysper*, Arm. and Welsh; deduced from *ber*, veru, or *par*, lancea; *ppeape*, Saxon; *spere*, Teut. *spear*, old Fr., *sparum*, low Lat.]—A long weapon with a sharp point, used in thrusting or throwing; a lance.

Those brandishers of *speares*,
From many cities drawn, are they that are our hinderers. *Chapman*.

Nor wanted in his grasp
What seem'd both shield and *spear*. *Milton*.

A lance generally with prongs, to kill fish.
To *SPEAR, v. a.* To kill or pierce with a spear.

To *SPEAR, v. n.* To shoot or sprout. This is commonly written *spire*.—Let them not lie lest they should *spear*, and the air dry and spoil the shoot. *Mortimer*.

SPEAR, CAPE, a cape on the east coast of Newfoundland. Lat. 47. 34. N. long. 52. 13. W.

SPEARGRASS, s. Long stiff grass.—Tickle our noses with *speargrass* to make them bleed; and then beslobber our garments with it. *Shakspeare*.

SPEARMAN, s. One who uses a lance in fight; one who carries a spear: formerly *spearer*.—A pensioner [is] a gentleman about his prince, alwaic redie with his *speare*; a *spearer*. *Barret*.

The *spearman's* arm by thee, great God, directed,
Sends forth a certain wound. *Prior*.

SPEARMINT, in Botany. See *MENTHA*.
SPEARWORT, the English name of the ranunculus flammæus.

SPECCHIA DI-PRETI, a town of the south-east part of the kingdom of Naples, in the Terra d'Otranto, with a population of 1500.

SPECCIA. See *SPEZZIA*.
SPECHT, or SPEIGHT, s. [*specht*, Teut.] A woodpecker. *Sherwood*.

SPE'CIAL, adj. [*special*, Fr., *specialis*, Lat.] Noting a sort or species.—A *special* idea is called by the schools a species. *Watts*.—Particular; peculiar.—Appropriate; designed for a particular purpose.—O'Neal, upon his marriage with a daughter of Kildare, was made denizen by a *special* act of parliament. *Davies*.—Extraordinary; uncommon.

He bore
A paunch of the same bulk before;
Which still he had a *special* care
To keep well cramm'd with thrifty fare. *Hudibras*.

Chief in excellence.
The king hath drawn
The *special* head of all the land together. *Shakspeare*.

SPE'CIAL, s. A particular. *Unused*.—Promises of long life annexed to some *specials* of his service. *Hammond*.

SPECIALITY, or SPE'CIALTY, s. [*specialité*, French.] Particularity.—On these two general heads all other *specialties* are dependent. *Hooker*.—*Speciality* of rule hath been neglected. *Shakspeare*.

To *SPE'CIALIZE, v. a.* To particularize; to mention specially.—Our Saviour *specialising* and nominating the places. *Sheldon*.

SPE'CIALLY, adv. Particularly above others.—Not in a common way; peculiarly.—If there be matter of law that carries any difficulty, the jury may, to deliver themselves from an attain, find it *specially*. *Hale*.

SPE'CIES, s. [*species*, Latin.] A sort; a subdivision of a general term.—A *special* idea is called by the schools a *species*; it is one common nature that agrees to several singular individual beings: so horse is a *special* idea or *species* as it agrees to Bucephalus, Trot, and Snowball. *Watts*.—Class of nature; single order of beings.—He intendeth the care of *species* or common natures, but let-
teth

teth loose the guard of individuals or single existencies. *Brown.*

For we are animals no less,
Although of different *species*.

Hudibras.

Appearance to the senses; any visible or sensible representation.—An apparent diversity between the *species* visible and audible is, that the visible doth not mingle in the medium, but the audible doth. *Bacon.*—Representation to the mind.—Wit in the poet, or wit-writing, is no other than the faculty of imagination in the writer, which searches over all the memory for the *species* or ideas of those things which it designs to represent. *Dryden.*—Show; visible exhibition. *Not in use*; and perhaps, in the following quotation, misprinted for *spectacles*.—Shews and *species* serve best with the people. *Bacon.*—Circulating money.—As there was in the splendour of the Roman empire a less quantity of current *species* in Europe than there is now, Rome possessed a much greater proportion of the circulating *species* of its time than any European city. *Arbutnot.*—Simplex that have place in a compound medicine.

SPECIFIC, or SPECIFIC, *adj.* [*specifique*, French; *species* and *facio*, Lat.] That makes a thing of the species of which it is.

That thou to truth the perfect way may'st know,
To thee all her *specific* forms I'll show.

Denham.

Specific gravity is the appropriate and peculiar gravity or weight which any species of natural bodies have, and by which they are plainly distinguishable from all other bodies of different kinds. *Quincy.*—Appropriated to the cure of some particular distemper. It is usually applied to the *arcana*, or medicines that work by occult qualities.—The operation of purging medicines have been referred to a hidden property, a *specific* virtue, and the like shifts of ignorance. *Bacon.*

SPECIFIC, *s.* A specific medicine.—If she would drink a good decoction of sarsa, with the usual *specifics*, she might enjoy a good health. *Wiseman.*

SPECIFICALLY, *adv.* In such a manner as to constitute a species; according to the nature of the species.—He must allow that bodies were endowed with the same affections then as ever since; and that, if an axehead be supposed to float upon water which is *specifically* lighter, it had been supernatural. *Bentley.*

To SPECIFICATE, *v. a.* [*facio*, Lat.] To mark by notation of distinguishing particularities.—Man, by the instituted law of his creation, and the common influence of the divine goodness, is enabled to act as a reasonable creature, without any particular, *specificating*, concurrent, new imparate act of the divine special providence. *Hale.*

SPECIFICATION, *s.* Distinct notation; determination by a peculiar mark.—This *specification* or limitation of the question hinders the disputes from wandering away from the precise point of enquiry. *Watts.*—Particular mention.—The constitution here speaks generally without the *specification* of any place. *Ayliffe.*

To SPECIFY, *v. a.* [*specifier*, Fr.] To mention; to show by some particular marks of distinction.—As the change of such laws as have been *specified* is necessary, so the evidence that they are such must be great. *Hooker.*

SPECILLUM, a probe.

SPECIMEN, *s.* [*specimen*, Lat.] A sample; a part of any thing exhibited, that the rest may be known.—Several persons have exhibited *specimens* of this art before multitudes of beholders. *Addison.*

SPECIOUS, *adj.* [*specieus*, Fr., *speciosus*, Lat.] Shewy; pleasing to the view.—Divers sorts are of them, [shewy:] some *specious* and beautiful to the eye. *Bp. Richardson.*—Plausible; superficially, not solidly right; striking at first view.—This is the only *specious* objection which our Romish adversaries urge against the doctrine of this church in the point of celibacy. *Atterbury.*

SPECIOUSLY, *adv.* With fair appearance.—Piety is opposed to hypocrisy and insincerity; especially to that personated devotion under which any kind of impiety is

went to be disguised, and put off more *speciously*. *Hammond.*

SPECIOUSNESS, *s.* The state or quality of being specious. *Ash.*

SPECK, *s.* [rpecca, Sax.] A small discoloration; a spot.—Every *speck* does not blind a man. *Gov. of the Tongue.*

To SPECK, *v. a.* To spot; to stain in drops.

Each flower—

Carnation, purple, azure or *speck'd* with gold. *Milton.*

SPECKHAVEN, a harbour on the west coast of West Greenland. Lat. 64. N. long. 49. 40. W.

SPECKLE, *s.* Small speck; little spot.

To SPECKLE, *v. a.* To mark with small spots.

So dreadfully towards him did pass,
Fore lifting up aloft his *speckled* breast,
And often bounding on the bruised grass,
As for great joy of his new comen guest.

Spenscr.

Speckled vanity

Will sicken soon and die,

And leprous sin will melt from earthly mould.

Milton.

SPECKLEDNESS, *s.* State or quality of being speckled. *Ash.*

SPECKT, or SPREIGHT, *s.* A woodpecker. See SPECHT.

SPECTABILES, among the Romans, a title of honour given to the second rank, or degree of nobility, under the Roman emperors.

SPECTACLE, *s.* [*spectacle*, Fr., *spectaculum*, Lat.] A show; a gazing stock; any thing exhibited to the view as eminently remarkable.

In open place produc'd they me,

To be a public *spectacle* to all.

Shakspeare.

We are made a *spectacle* unto angels and men. 1 *Cor.*

—Any thing perceived by the sight.

Forth riding underneath the castle wall,

A dunghill of dead carcasses he spy'd,

The dreadful *spectacle* of that sad house of pride. *Spenser.*

Glasses to assist the sight.

The sixth age shifts

Into the lean and slipper'd pantaloon,

With *spectacles* on nose and pouch on side. *Shakspeare.*

SPECTACLED, *adj.* Furnished with spectacles.

All tongues speak of him, and the bleared sights

Are *spectacled* to see him.

Shakspeare.

SPECTACULAR, *adj.* Relating to spectacles or shows.

—The *spectacular* sports were concluded. *Dr. Hicckes.*

SPECTATION, *s.* [*spectatio*, Lat.] Regard; respect.

—This simple *spectation* of the lungs is differenced from that which concomitates a pleurisy. *Harvey.*

SPECTATOR, *s.* [*spectateur*, Fr., *spectator*, Lat.] A looker-on; a beholder.

More

Than history can pattern, though devis'd

And play'd, to take *spectators*.

Shakspeare.

SPECTATORSHIP, *s.* Act of beholding.—Thou stand'st i' th' state of hanging, or of some death more long in *spectatorship*, and crueller in suffering. *Shakspeare.*—Office or quality of a spectator.—Your first rudimental essays in *spectatorship* were made in my shop, where you often practised for hours. *Spectator.*

SPECTATRESS, or SPECTATRIX, *s.* [*specatrix*, Lat.] This form in English is given by Cotgrave under the French term *spectatrice*.] A female looker-on or beholder.

Amid the general wreck see where she stands,
Like Helen, in the night when Troy was sack'd,
Spectatress of the mischief which she made.

Rowe.

SPECTRE, *s.* [*spectrum*, Lat., *spectre*, Fr., "an image or figure, seen either truly or but in conceit; thence a spirit, ghost, vision, apparition, fantasm." *Cotgrave*.] Apparition; appearance of persons dead.

The ghosts of traitors from the bridge descend,
With bold fanatic *spectres* to rejoice.

Dryden.

Something made preternaturally visible.

SPE/CTRUM, *s.* [Lat.] An image; a visible form.—This prism had some veins running along within the glass, from the one end to the other, which scattered some of the sun's light irregularly, but had no sensible effect in increasing the length of the coloured *spectrum*. *Newton.*

SPE/CULAR, *adj.* [*specularis*, Lat.] Having the qualities of a mirror or looking-glass.

It were but madness now t' impart
The skill of *specular* stone.

Donne.

Assisting sight. *Speculaire*, "clear, transparent; also, helping the sight." *Cotgrave.*

The hidden way

Of nature would'st thou know, how first she frames
All things in miniature? thy *specular* orb
Apply to well-dissected kernels; lo!
In each observe the slender threads
Of first-beginning trees.

Philips.

Affording view. See the first sense of SPECULATION.
—Look once more, ere we leave this *specular* mount.
Milton.

SPECULARIA, among the Romans, a kind of window casements, which were used before glass was introduced for this purpose. They consisted of transparent stones, called *lapides speculares*.

To SPE/CULATE, *v. n.* [*speculer*, Fr., *specular*, Lat.] To meditate; to contemplate; to take a view of any thing with the mind.—Consider the quantity, and not *speculate* upon an intrinsical relation. *Digby.*

To SPE/CULATE, *v. a.* To consider attentively; to look through with the mind.—Man was not meant to gape, or look upward, but to have his thoughts sublime; and not only behold, but *speculate* their nature with the eye of the understanding. *Brown.*

SPECULATION, *s.* [*speculation*, Fr., *specula*, Lat., a watch-tower.] Examination by the eye; view.—Here, as from a turret of *speculation*, you may look down upon the vulgar. *Codrington.*—Mental view; intellectual examination; contemplation.

Thenceforth to *speculations* high or deep,
I turned my thoughts; and with capacious mind
Consider'd all things visible.

Milton.

A train of thoughts formed by meditation.—From him Socrates derived the principles of morality, and most part of his natural *speculations*. *Temple.*—Mental scheme not reduced to practice.—This terrestrial globe, which before was only round in *speculation*, has since been surrounded by the fortune and boldness of many navigators. *Temple.*—Power of sight. *Not in use.*

Thy bones are marrowless; thy blood is cold;
Thou hast no *speculation* in those eyes
Thou star'st with.

Shakspeare:

SPE/CULATIST, *s.* A speculator. *Speculatist* is perhaps the older word.—Let the profoundest *speculatist*, or curious practitioner, turn the edge of his wit which way he will to find some new thing; yet sure it is, the same things have been. *Granger.*

SPE/CULATIVE, *adj.* [*speculatif*, Fr.] Given to speculation; contemplative.—If all other uses were utterly taken away, yet the mind of man being by nature *speculative*, and delighted with contemplation in itself, they were to be known even for mere knowledge sake. *Hooker.*—Theoretical: notional; ideal; not practical.—Some take it for a *speculative* platform, that reason and nature would that the best should govern, but no wise to create a right. *Bacon.*—Belonging to view.—My *speculative* instruments. *Shakspeare.*—*Speculative* glasses. *Hooke.*—Prying.—Counsellors should not be too *speculative* into their sovereign's person. *Bacon.*

VOL. XXIII. No. 1583.

SPE/CULATIVELY, *adv.* Ideally; notionally; theoretically; not practically.—It is possible that a man may, *speculatively*, prefer the constitution of another country, or an Utopian of his own, before that of the nation where he is born and lives. *Swift.*

SPE/CULATIVENESS, *s.* The state of being speculative. *Scott.*

SPE/CULATOR, *s.* One who forms theories.—He is dexterous in puzzling others, if they be not thorough-paced *speculators* in those great theories. *More.*—[*Speculateur*, Fr.] An observer; a contemplator.—Although lapidaries and questuary enquirers affirm it, yet the writers of minerals, and natural *speculators*, conceive the stones which bear this name to be a mineral concretion. *Brown.*—A spy; a watcher.—All the boats had one *speculator*, to give notice when the fish approached. *Broome.*

SPE/CULATORY, *adj.* Exercising speculation; calculated for spying or viewing.—Both these were nothing more than *speculatory* out-posts to the Akeman-street. *Warton.*

SPE/CULUM, *s.* [Lat.] A mirror; a looking-glass; that in which representations are formed by reflection.—A rough and coloured object may serve for a *speculum*, to reflect the artificial rainbow. *Boyle.*—An instrument in Surgery, used for inspection, as a *speculum ani*, *vaginae*, &c.

SPE/D. The preterite and part. passive of *specd*.—Barbarossa, *sped* of that he desired, staid not long at Constantinople, but shaped his course towards Italy. *Knolles.*

SPEECH, *s.* [ʃpɛc, Sax., from *To speak*] The power of articulate utterance; the power of expressing thoughts by vocal words.—Though our ideas are first acquired by various sensations and reflections, yet we convey them to each other by the means of certain sounds, or written marks, which we call words; and a great part of our knowledge is both obtained and communicated by these means, which are called *speech*. *Watts.*—Language; words considered as expressing thoughts.—In *speech* be eight parts. *Accidence.*

The acts of God to human ears

Cannot without process of *speech* be told.

Milton.

Particular language as distinct from others.—There is neither *speech* nor language but their voices are heard among them. *Ps. Comm. Pr.*—Any thing spoken.

A plague upon your epileptic visage!

Smile you my *speeches* as I were a fool.

Shakspeare.

Talk; mention.

The duke did of me demand

What was the *speech* among the Londoners,
Concerning the French journey.

Shakspeare.

Speech of a man's self ought to be seldom. *Bacon.*—Oration; harangue.—The constant design of these orators, in all their *speeches*, was to drive some one particular point. *Swift.*—Declaration of thoughts.—I with leave of *speech* implor'd, reply'd. *Milton.*

To SPEECH, *v. n.* To harangue; to make a speech.—And were you supposed to have the tongues of angels and archangels to *speech* it in your behalf, their words would have no weight! *Pyle.*

SPE/ECHLESS, *adj.* Deprived of the power of speaking; made mute or dumb.—*Speechless* with wonder, and half dead with fear. *Addison.*—Mute; dumb.

From her eyes

I did receive fair *speechless* messages.

Shakspeare.

SPE/ECHLESSNESS, *s.* State of being speechless.—Immediate preceding signs of death are great quietness—the memory confused, *speechlessness*, cold sweats. *Bacon.*

To SPEED, *v. n.* pret. and part. pass. *sped* and *spedded*. [*spoeden*, Teut. *spuden*, Germ. to hasten; ʃpɛð, Sax., celerity, haste. Wachter derives the word from the Gr. σπευδα, (*speudo*,) to hasten; Serenius from the Goth. *spo*, the same.] To make haste; to move with celerity.

So well they *sped* that they become at length
Unto the place whereas the Paynim lay,

Devoid of outward sense and native strength,
Covered with charmed cloud from view of day. *Spenser.*

[*ſpēbian, to grow rich, Sax.*] To have good success.

Timon is shrunk, indeed ;
And he, that's once deny'd, will hardly *speed*. *Shakspeare.*
Now if this suit lay in Bianca's pow'r,
How quickly should you *speed*. *Shakspeare.*

To succeed well or ill.

Make me not sighted like the basilisk :
I've looked on thousands, who have *sped* the better
By my regard, but kill'd none so. *Shakspeare.*

To have any condition good or bad.

Ships heretofore in seas like fishes *sped*,
The mightiest still upon the smallest fed. *Waller.*

To *SPEED*, *v. a.* To dispatch in haste ; to send away
quickly.

The tyrant's self, a thing unused, began
To feel his heart relent with mere compassion ;
But not dispos'd to truth or mercy then,
To *sped* him thence home to his habitation. *Fairfax.*

To hasten ; to put into quick motion.

Satan, tow'rd the coast of earth beneath,
Down from the ecliptic *sped* with hop'd success,
Throws his steep flight in many an airy wheel. *Milton.*

To furnish in haste ; to dispatch ; to destroy ; to kill ; to
mischief ; to ruin.

A dire dilemma ! either way I'm *sped* ;
If foes, they write ; if friends, they read me dead. *Pope.*

To execute ; to dispatch.—Judicial acts are all those writ-
ings and matters which relate to judicial proceedings, and
are *sped* in open court at the instance of one or both of the
parties. *Ayliffe.*—To assist ; to help forward.

Speed the soft intercourse from soul to soul,
And waft a sigh from Indus to the Pole. *Pope.*

To make prosperous ; to make to succeed.—He was chosen,
though he stood low upon the roll, but by a very unusual
concurrence of providential events, happened to be *sped*. *Fell.*

SPEED, *s.* [*ſpēð, Sax.*] Quickness ; celerity.—We
observe the horse's patient service at the plough, his *speed*
upon the highway, his docibleness and desire of glory.
More.—Haste ; hurry ; dispatch.—When they strain
to their utmost *speed*, there is still the wonted distance between
them and their aims : all their eager pursuits bring them no
acquiescence. *Dec. of Chr. Picty.*—The course or pace of a
horse.—He that rides at high *speed*, and with a pistol, kills
a sparrow flying. *Shakspeare.*—Success ; event of any
action or incident.

The prince your son, with mere conceit and fear
Of the queen's *speed* is gone. *Shakspeare.*

SPEED (John), a considerable elucidator of the geo-
graphy and history of Great Britain, was born in 1552, at
Farrington, in Cheshire. He was brought up to the trade of
a tailor, and was, by apprenticeship, a freeman of the com-
pany of Merchant Tailors in London, when that patron of
learning, Sir Fulk Greville, discovering his attachment to the
antiquities of his country, gave him an allowance to enable
him to quit his employment, and devote himself to study.
His first publication was entitled "The Theatre of the Em-
pire of Great Britain, presenting an exact Geography of the
Kingdoms of England, Scotland, and Ireland, and the ad-
jacent Isles." This work consisted of a set of maps of all the
countries, with the ichnography of the principal towns, and
brief descriptions, mostly copied from Camden's Britannia.
His greatest work, the labour of fourteen years, entitled
"The History of Great Britain," appeared in the year 1614.
It is chiefly a compilation from preceding authors and ma-

nuscript records, comprising all the events in British history,
from the invasion of Julius Cæsar to the reign of king
James I. ; and though rude in style, yet it contained more
valuable matter, and is better arranged, than the preceding
chronicles. *Speed*, it is said, was the first English writer
who, slighting Geoffrey's tales, fell upon more solid matter.
He was assisted by Sir Robert Cotton, who revised and cor-
rected the whole. Mr. *Speed* was author of a work, entitled
"A Cloud of Witnesses, or Genealogies of Scripture."

SPEEDFUL, *adj.* [*Sax. ſpēdig, lucky, prosperous.*] Serviceable ; useful. *Not in use.*—All things been lefful
to me, but not alle thingis ben *spedeful*. *Wicliffe.*
SPEEDILY, *adv.* With haste ; quickly.

Post *speedily* to your husband,
Shew him this letter. *Shakspeare.*

SPEEDINESS, *s.* The quality of being speedy.
SPEEDSVILLE, a post village of the United States, in
Tioga county, New York.

SPEEDWELL, *s.* *Fluellin*. A plant. See *VERONICA*.
SPEEDWELL MILLS, a post village of the United States
in Barnwell district, South Carolina.

SPEEDY, *adj.* [*ſpudig, Germ. The Sax. ſpēdig, is
prosperous.*] Quick ; swift ; nimble ; quick of dispatch.

How near's the other army ?
—Near, and on *speedy* foot : the main descry
Stands on the hourly thought. *Shakspeare.*

Let it be enough what thou hast done,
When spotted deaths ran arm'd through every street,
With poison'd darts, which not the good could shun,
The *speedy* could outfly, or valiant meet. *Dryden.*

SPEEN, *WOOD*, a township of England, in Berkshire ;
2 miles north-west of Speenhamland.

SPEENE, or *SPEENHAMLAND*, a village and parish of
England, in the county of Berks, anciently a considerable
town, the *Spinae* of the Romans. The present mansion, called
Donnington castle, was erected out of the ruins of its ancient
castrum. It was once the residence of the poet Chaucer.

To *SPEET*, *v. a.* [*ſpeten, Teut., to pierce or bore*] To
stab.—If he came [he] bad me not sticke to *speet* hym.
Com. of Gamm. Gurton's Needle.

SPEETON, a township of England, East Riding of York-
shire ; 5 miles north-north-west of Bridlington.

SPEGEL (Haquin), a Swedish archbishop, distinguished
for great learning, was born in 1645. In 1685, he was
made bishop of Skara, was translated thence to Linköping
in 1691, and, in 1711, was raised to the archiepiscopal
chair. After the fire which took place at Linköping in 1700,
he contributed, by his active exertions, towards rebuilding
the Gymnasium, a service of so much importance, that the
remembrance of it is still preserved by an inscription on the
front of the building. He augmented the library with a
great number of excellent books, and on the death of his
son, presented to it a collection of medals and coins. He
died at Upsal, in 1714. His works are chiefly on divinity.

SPEIGHT, *s.* A woodpecker. See *SPECHT*.

SPEIGHT'S TOWN, a sea-port of the island of Barbadoes,
situated on the west coast, near the northern part of the island,
formerly much frequented by the Bristol traders, and thence
called Little Bristol. It is a handsome town, containing
about 350 well built houses, disposed into four regular and
spacious streets, of which the longest is called Jew's-street,
and, with the other three, leads down to the water side. The
planters in that part of Barbadoes called Scotland, used to
ship off their goods here for England, which occasioned
the building of storehouses, and a concourse of people, to the
great advantage of the town ; but most of the trade is now
removed to Bridge Town. It has a spacious church, dedi-
cated to St. Peter, which gave name to its precinct, and is
the place where the monthly sessions are held. The town
is defended by two forts, besides another in Heathcote's bay
some distance south of the town. One of the above forts
stands in the middle of the town, and is mounted with 14
guns.

guns; the other, which has 32, stands at the north end of it: but there are, besides these, several platforms on the sea shore. Lat. 13. 15. N. long. 58. 31. W.

SPEIGLETOWN, a village of the United States, in Rensselaer county, New York.

SPEISSE, in Mineralogy, a name given by the Germans, and other workers on cobalt, to a sort of impure regulus of bismuth, sometimes occurring in their processes.

SPELDHURST, a parish of England, in Kent; 3 miles north-west of Tunbridge Wells. The ancient church of this parish was destroyed by lightning in 1791. Over its porch, cut in stone, are the arms of the duke of Orleans, who was taken prisoner at the battle of Agincourt, by Richard Waller, of Gromebridge, at whose house he was kept nearly 25 years, and was a great benefactor to the church of Speldhurst. Population 1909.

SPELK, *s.* [ʃpel, Sax., fascia, a kind of splint applied to fractured limbs. See **LYE**.] A splinter; a small stick to fix on thatch with. *A northern word.*

SPELL, *s.* [ʃpel, Sax., a word.] A charm consisting of some words of occult power.—Thus Horace uses words: *Sunt verba et voces quibus hunc lenire dolorem, Possis.*

Thou durst not thus disparage glorious arms,
Had not *spells*
And black enchantments, some magician's art,
Arm'd thee or charm'd thee strong.

Milton.

A turn of work; a vicissitude of labour. [From the Sax. *ʃpelhan*, *vices alicujs obire*. *Lyc.*] Their toil is so extreme as they cannot endure it above four hours in a day, but are succeeded by *spells*: the residue of the time they wear out at coytes and kayles. *Carew*.—[ʃpel, Sax. *historia, narratio*.] A tale. *Obsolete.*

Now—hearken to my *spell*:
Of bataille, and of chevalrie,
Anon I will you tell.

Chaucer.

To **SPELL**, *v. a.* pret. and part. pass. *spelled* or *spelt*. [*spellen*, Teut., *spellen*, Germ., which Wachter derives from *spalten*, to split, to divide.] To write with the proper letters.—In the criticism of *spelling*, the word *satire* ought to be with *i*, and not with *y*; and if this be so, then it is false *spelled* throughout. *Dryden*.—To read by naming letters singly.

I never yet saw man,
How wise, how noble, young, how rarely featur'd,
But she would *spell* him backward: if fair fac'd,
She'd swear the gentleman should be her sister. *Shakspeare.*

To read minutely; to discover by petty characters or marks.—In this manner to sit *spelling* and observing divine justice upon every accident, and slight disturbance, that may happen humanly to the affairs of men, is but another fragment of his broken revenge. *Milton*.—To charm.

I have you fast:
Unchain your spirits now with *spelling* charms,
And try if they can gain your liberty. *Shakspeare.*

[*ʃpelhan*, Sax.] To relate; to teach.
Might I that holy legend find,
By fairies *spelt* in mystic rhymes,
To teach enquiring later times,
What open force, or secret guile,
Dash'd into dust the solemn pile.

Warton.

To **SPELL**, *v. n.* To form words of letters.
What small knowledge was, in them did dwell;
And he a god, who could but read or *spell*. *Dryden.*

To read.
When gowns, not arms, repell'd
The fierce Epirote, and the African bold,
Whether to settle peace, or to unfold
The drift of hollow states, hard to be *spell'd*. *Milton.*

To read unskilfully.—As to his understanding, they bring

him in void of all notion, a rude unwritten blank, sent into the world only to read and *spell* out a God in the works of creation. *South.*

SPELL, in Sea Language, the period in which a sailor, or gang of sailors, is employed in a particular exercise, from which they are relieved as soon as the limited time expires. Such are the spells to the hand-lead in sounding, to the pump, to look out on the mast-head, &c., and to steer the ship, which last is generally called the *trick*.

SPELLO, a decayed town of Italy, in the Popedom. It corresponds to the *Hispellum* of the ancients, and was sacked by the troops of the emperor Charles V., in 1529; 10 miles south-west of Nocera.

SPELMAN (Sir Henry), an eminent antiquary, was born in 1562, and having received a common education, he was sent at an early age to Trinity College, Cambridge; and he was afterwards entered of Lincoln's-Inn, in order that he might study the common law, but his inclination was not favourable to legal pursuits: he seems to have given a decided preference to polite literature and antiquities, but these pursuits were cut short by an early marriage, which induced him to settle upon his estate, and take the management of it in his own hands. He did not, however, abandon his antiquarian pursuits, and while he was yet a very young man, he drew up a treatise in the Latin language, entitled "Aspilogia," relative to armorial bearings, and made transcripts of several charters of monasteries in Norfolk and Suffolk. He was also associated to the original society of antiquarians, and became the intimate friend of Cotton, Camden, and other favourers of that class of studies. In 1604 he was elected high sheriff of the county, and about the same time communicated to Speed a description of Norfolk, for his work entitled, "The Theatre of Great Britain." In 1607 he was nominated by the king one of the commissioners for settling the titles to lands and manors in certain counties of Ireland, and on this occasion he went thrice to that country. Farming, in time, became irksome, because he probably found it unprofitable: he sold off his stock, let his estates, and came with his family to London, and he chose as the particular object of his studies, the antiquities of English law, as deducible from English records; but he was diverted from his object by an incidental subject. During his residence on his estate, he had purchased the lands of two suppressed monasteries, and being involved in a troublesome law-suit in order to defend his title, he began to entertain scruples concerning the secularization of property once belonging to the church. He now, 1613, drew up a work with the title "De non temerandis Ecclesiis; Churches not to be violated; a Tract of the Rights and Respects due to Churches, &c." He practised what he pleaded for in theory, and being possessed of an impropriation in Norfolk, he devoted the profits of it to the augmentation of the vicarage.

By king James he was knighted, and on the revival of the society of antiquarians in 1614, he attended as one of the old members; on which occasion he wrote "A Discourse concerning the Original of the four Law Terms of the Year." He also wrote a tract in answer to an apology for archbishop Abbot, who had accidentally killed his game-keeper, in which he maintained that the prelate by that act had ceased from his office. Having in the mean time continued his enquiries into legal antiquities, he found that the knowledge of the Saxon language was absolutely necessary to his purpose, which he accordingly set about obtaining, and in 1621 he printed a specimen of his proposed work, which was so much approved, that several eminent scholars urged him to its completion. In 1626 he published the first part, under the title of "Archeologus, in modum Glossarii ad rem antiquam posteriorem." Notwithstanding the applause of the learned, the author was not encouraged by the sale of his work to publish the second part during his life, which he had fully prepared for the press. It was, however, given to the world after his decease, and the whole was entitled "Glossarium Archaologicorum." The object of this work is the explanation of obsolete words occurring in our

our laws; and it is not a mere glossary, but contains various entire dissertations. He next employed himself in a collection of English laws and statutes, from the Conquest to the ninth year of Henry III., which was printed in 1617. Having been appointed, on the recommendation of archbishop Laud, one of the commissioners for enquiring into the exaction of fees in the courts and offices throughout England, he published, in 1628, a tract "De Sepultura," or concerning "Burial Fees." Before our author had finished his glossary, he engaged in another considerable work, which was "A History of the English Councils." Of this he published in 1639 the first part, which included the period from the first introduction of the Christian religion into England to the Norman Conquest. A second part, only a small portion of which was of his own composition, was printed several years after his death. In the same year he instituted a Saxon lecture in the university of Cambridge, which he intended to have rendered perpetual, but his design was defeated. In 1639 also he published a treatise on "The original Growth, Propagation, and Condition of Tenures by Knights' Service in England," in which he displayed an extent of learning that proved his faculties to be perfect, notwithstanding his advanced age. He lived to complete his 80th year, and died at London in 1641. By the king's order, he was interred in Westminster Abbey. After his decease, two posthumous works of his were published, viz. "A Treatise concerning Tytlies," printed in 1647; and "A History of Sacrilege," which was destroyed at the printer's by the great fire of London, and a plan of it only preserved.

SPELMAN (Edward), great-grandson of the preceding, resided at High-House, near Rougham, Norfolk, where he died in 1767. He had devoted himself to literature, and made himself known by several publications of considerable worth. The first of these was a translation of Xenophon's "Cyropedia," in two volumes, 8vo. A more elaborate work was entitled "The Roman Antiquities of Dionysius Halicarnassensis," translated into English, with notes and dissertations, in four volumes, quarto, a work which stands high among our translations from the Greek language. One of these dissertations was a version of a fragment of Polybius on government, particularly that of Rome, to which the translator prefixed a preface, applying the system of Polybius to the English government. This was printed without his name in 1743. He also printed for the use of his friends, and for private distribution only, "A Dissertation on the Presence of the Patricians in the Tributa Comititia;" and after his death the Rev. Mr. Lemon published in 1775, a posthumous work of this writer, entitled "Additional Observations on the Greek Accents." *Gen. Biog.*

SPELONCATO, a town in the island of Corsica, towards its northern extremity. Population only 800.

SPELSBURY, a parish of England, in Oxfordshire; $4\frac{1}{2}$ miles south-east of Chipping Norton. Population 554.

To **SPELT**, *v. n.* [Germ., *spalten*, to divide.] To split; to break.—Feed geese with oats, *spelled* beans, barley meal, or ground malt mixed with beer. *Mortimer.*

SPELT, *s.* [jpelc, Saxon; *spelte*, Teut.] A kind of corn.—Lentiles, and millet, and fitches, [in the margin *spell.*] *Ezek.*

SPE'LTR, *s.* A kind of semi-metal.—Metals in fusion do not flame for want of a copious fume, except *speltier*, which fumes copiously, and thereby flames. *Newton.*

SPENCE, *s.* [*despence*, old Fr.] A buttery; a larder; a store-room; a place where any provisions are kept. "*Spence*, cellarium, promptuarium." Prompt. Parv. See also Cotgrave, and Sherwood. This is the old sense of the word, and is still so used in many places. *Spens*, Cornish. In some parts of the north, it is used for a kind of little parlour or inner room of a country-house. *Todd.*—As hotel in the *spence*. *Chaucer.*

SPENCE (Joseph), was educated at New College, Oxford, of which he afterwards became a fellow. He took the degree of M.A. in 1727, and in that same year made himself

known by "An Essay on Pope's Translation of the Odyssey." In 1747, he brought to the press his principal work, entitled "Polymetis, or an Enquiry concerning the Agreement between the Works of the Roman Poets and the Remains of ancient Artists, being an Attempt to illustrate them mutually by each other." This was a folio work, with plates. The performance was extremely well received by the public, and still stands high in the literary world. His last publication was an edition of "Holdsworth's Remarks on Virgil," with notes, and additional observations of his own. In the month of August, 1758, he was found drowned in a piece of water in his own garden at Byfleet. He was studious to draw obscure merit into notice, of which he gave evident proofs by his printed account of Stephen Duck; Robert Hill, the learned tailor; and Mr. Blacklock, the blind poet. He had collected some MS. volumes of anecdotes of eminent writers, communicated by Pope and others, which are still in the possession of the duke of Newcastle's family, and from which Dr. Johnson was permitted to make extracts for his lives of the Poets. *Gen. Biog.*

SPE'NCER, *s.* A butler; one who has the care of the spence: *cellarius*, Lat. *Obsoete.*

SPENCER, a post township of the United States, in Worcester county, Massachusetts; 51 miles west-south-west of Boston. Population 1453.

SPENCER, a post township of the United States, and capital of Tioga county, New York; 190 miles west-south-west of Albany. Population 3128. The village, containing the county buildings, is pleasantly situated on Catetant creek.

SPENCER, CAPE, a pointed rocky cape, the east point of entrance into Spencer's gulf, on the south shore of New Holland. Lat. 35. 18. S. long. 136. 55. E.

SPENCER, CAPE, a very conspicuous high bluff promontory on the west coast of North America, so called by Vancouver, in honour of Earl Spencer. It is the west point of entrance into Cross sound. Lat. 58. 13. N. long. 223. 36. E.

SPENCER'S GULF, a large gulf on the south coast of New Holland, which extends 185 miles into the interior of the country, in a direction north-north-east. The entrance of the gulf from Cape Catastrophe on the west, and Cape Spencer on the east, is 48 miles wide. It was explored to within seven or eight leagues of its termination by Captain Flinders, who then saw land at a distance before him. Cape Spencer lies in Lat. 35. 18. S. long. 136. 55. E.

SPENCER MOUNTAINS, mountains of the United States, in Maine; 10 miles east of Moosehead lake.

SPENCERTOWN a post village of the United States, in Columbia county, New York.

To **SPEND**, *v. a.* [pendan, Saxon; *spendere*, Ital.] To consume; to exhaust; to waste.

Our cannons' malice vainly shall be *spent*
Against the invulnerable clouds. *Shakspeare.*

Money is brought into England by nothing but *spending* here less of foreign commodities than what we carry to market can pay for. *Locke.*—To bestow as expense; to expend as cost.—Wherefore do ye *spend* money for that which is not bread? *Isa.*—To bestow for any purpose: often with *upon*.

When we can intreat an hour to serve,
Would *spend* it some words *upon* that business,
If you would grant the time. *Shakspeare.*

To effuse.

Coward dogs
Most *spend* their mouths, when what they seem to threaten
Runs far before them. *Shakspeare.*

To squander; to lavish.—The whole of our reflections terminate in this, what course we are to take to pass our time; some to get, and others to *spend* their estates. *Wake.*—To pass; to suffer to pass away.—He *spends* his life with his wife, and remembereth neither father nor mother. *1 Esdr.*—To waste; to wear out; to exhaust of force.

They

They bend their bows, they whirl their slings around;
Heaps of *spent* arrows fall and strew the ground. *Dryden.*

To fatigue; to harass.

Some *spent* with toil, some with despair oppress'd,
Leap'd headlong from the heights, the flames consum'd the
rest. *Dryden.*

TO SPEND, v. n. To make expense.—He *spends* as a person who knows that he must come to a reckoning. *South.*—To prove in the use.—Butter *spent* as if it came from the richer soil. *Temple.*—To be lost or wasted.—The sound *spendeth* and is dissipated in the open air; but in such concaves it is conserved and contracted. *Bacon.*—To be employed to any use.—There have been cups and an image of Jupiter made of wild vines; for the vines that they use for wine are so often cut, that their sap *spendeth* into the grapes. *Bacon.*

SPENDER, s. One who spends.—Let not your recreations be lavish *spenders* of your time; but healthful, short, and apt to refresh you. *Bishop Taylor.*—A prodigal; a lavisher.—Bishop Morton told the commissioners, who were to levy the benevolence, if they met with any that were sparing, to tell them that they must needs have, because they laid up; and if they were *spenders*, they must needs have, because it was seen in their port and manner of living. *Bacon.*

SPENDING, s. [ˈspɛndɪŋ, Sax.] Act of consuming, expending, or bestowing for any purpose.—The great mogul's wealth and revenues, treasure, or *spendings*. *Whitlock.*

SPENDTHRIFT, s. A prodigal; a lavisher.—Most men, like *spendthrift* heirs, judge a little in hand better than a great deal to come. *Locke.*

SPENNITHORNE, a parish of England, North Riding of Yorkshire; 1½ mile north-east of Middleham.

SPENSER (Edmund), one of the most distinguished English poets, was born in London about the year 1553. His parents were in humble life, though in his works he claims kindred with the noble family of the Spensers of Northamptonshire. Of his early education nothing is known, but it appears that he was, in 1569, a sizer in Pembroke College, Cambridge. He, in proper time, took his degrees, and in 1576 he was candidate for a fellowship, but was not successful. This disappointment was probably the cause of his quitting the university, which he left for a residence among his relations in the north of England. Here, it appears, he fell in love, and the object of his affection, whom he has commemorated under the name of Rosalindo, after leading him through the usual vicissitudes of a love adventure, finally deserted him. This circumstance is said to have given him a turn to pastoral poetry, since his "Shepherd's Complaint," which is devoted to amorous complaining, was his first publication. It was published in 1579, and dedicated, under the signature of Immerito, to Mr. afterwards Sir Philip Sidney. He was introduced to the acquaintance of this celebrated person by his friend, Mr. Gabriel Harvey, previously to his publishing his "Shepherd's Calendar," which sufficiently refutes a tale concerning his being first made known to Sir Philip Sidney by a passage in the Faery Queen, and the munificent reward which he received on the occasion. He was, however, patronized by Sir Philip, who introduced him to his uncle, the favourite Leicester, who engaged him as an agent for his service in foreign countries, but it is uncertain whether he ever actually travelled abroad; at any rate he could not have been long in that employ, since, in 1580, he was attending Lord Grey of Wilton, appointed Lord-deputy of Ireland, as his secretary. In this situation he displayed those talents for business, which are usually, though often very unjustly, represented as incompatible with a poetic genius. He returned with Lord Grey in 1582, and was probably some years an attendant at court, and in 1586 he had a grant from the crown of upwards of 3000 acres of land in the county of Cork, out of the vast forfeited property of the earl of Desmond. In 1587 Spenser went over

to take possession of this estate; his residence was the castle of Kilcolman, near Doneraile, where, in the style of pastoral poetry, he describes himself as keeping his sheep "under the Mole, that mountain hore," and frequenting the coolly shade of the green alders by the Mulla's shore. Here it appears he received a visit in 1589 from Sir Walter Raleigh, who had been a commander in Ireland under Lord Grey, and had obtained a large grant of land from the crown. Spenser celebrates him in a poem under the title of the "Shepherd of the Ocean," and highly extols his courtesy and elegant accomplishments. At this period Spenser was engaged in the composition of his "Faery Queen," of which he had written the three first books; and accompanying Raleigh the next year to England they were published, with a dedication to queen Elizabeth, and an introductory letter addressed to Raleigh, explaining the plan of the whole projected work. Elizabeth rewarded his poetry and dedication by a pension of 50*l.* per annum, granted in 1591, and he has been termed her laureat, though the title was not formally conferred upon him. Spenser returned to Ireland in 1591, and married a country lass of low degree; but the disturbances in that country forced him to return to England in 1595. Here he printed some poems, and drew up a plan for the entire reduction of that island in the space of two winters, which work he completed in the next year, giving it the title of "A View of the State of Ireland." This piece remained in MS. till it was printed in 1633 by Sir James Ware, who bestows much applause on the information and judgment displayed in it, though he intimates, that it was deficient in moderation: and it is generally admitted, that in what he says concerning the history and antiquities of the country there are many errors, and the fanciful turn of a poet is more conspicuous than the sobriety of a judicious enquirer. In 1596 he published a new edition of his "Faery Queen," with additional books, which only completed half his original design. It was currently reported, that the remaining six books were lost by a servant, who was entrusted to carry them to England, which certainly would be one of the greatest disasters that a poet could possibly suffer, and might greatly contribute to break his spirits: the fact, however, is very questionable, and certainly does not stand on good authority: it is most probable that they were never finished. He returned to Kilcolman in 1597, but Tyrone having in the next year broken out in rebellion, and overrun the county of Cork, Spenser was obliged to take refuge with his wife in England, leaving all his property to the spoil and ravages of the insurgents. His house was burnt, and with it, it is said, an infant who had not been removed. Reduced to a state of indigence, he sunk under his misfortunes in the same year, or in the beginning of the next. He was interred in Westminster Abbey, at the expense of the earl of Essex, several of his brother poets attending, and throwing into his grave copies of panegyrical verses. A monument was afterwards erected to his memory by Anne, the celebrated countess of Dorset. Of his family and posterity nothing is known, except that one of his descendants was restored in the reign of Charles II. to so much of the estate in Ireland, as he could prove had belonged to his ancestor; and that another, or perhaps the same, came to England in the reign of William with a similar claim, which was allowed. The works of Spenser are animated with a fervent spirit of piety, and a pure and exalted morality; and though he certainly paid an assiduous court to the great, he was not guilty of that meanness of adulation which was too much practised even by some eminent persons of that age. The homage paid to the queen was great, but it was deemed impossible to carry this too far.

The poetical reputation of Spenser is chiefly supported by his great work the "Faery Queen," for his pastorals will scarcely please a correct taste; and though critics admit that there is much occasional beauty of sentiment and harmony of versification in his sonnets, hymns, and other miscellaneous pieces, yet on the whole they are scarcely distinguished from the effusions of tedious pedantry common in that age. But the "Faery Queen" is justly regarded as one of the

great compositions in English poetry, and has lost none of its value by antiquity. "If its plan is singularly involved, its allegories often defective and obscure, and its adventures extravagant, it is, however, absolutely unrivalled for the fertility of its conceptions, and the vividness of its painting.

SPENT, at Sea. The seamen say a ship hath spent any mast or yard, when it is broken down by foul weather.

SPE'RABLE, *adj.* [*sperabilis*, Lat.] Such as may be hoped. *Not in use.*—We may cast it away, if it be found but a bladder, and discharge it of so much as is vain and not *sperable*. *Bacon*.

SPE'RATE, *adj.* [*speratus*, Lat.] Hoped to be not irrecoverable. *Unused but good.*—We have spent much time in distinguishing between the *sperate* and desperate debts of the clergy. *Repr. to 2. Anne, in Ecton's St. of 2. Anne's Bounty, (1721).*

To SPERE, *v. a.* [γρησαν, Sax.] To ask; to enquire. Still a northern word, and in some parts pronounced *sper*.

SPERGULA [Dimin. a *spargendo*; from its throwing the seed about], in Botany, a genus of the class decandria, order pentagynia, natural order of caryophyllei.—Generic Character. Calyx: perianth five-leaved: leaflets ovate, obtuse, concave, spreading, permanent. Corolla: petals five, ovate, concave, spreading, bigger than the calyx, undivided. Stamina: filaments ten, awl-shaped, shorter than the corolla. Anthers roundish. Pistil: germ ovate. Styles five, from erect-reflex, filiform. Stigmas thickish. Pericarp: capsule ovate, straight, one-celled, five-valved. Seeds very many, depressed-globular, girt with an emarginate rim. It is distinguished from *cerastium* by its entire petals. *Spergula pentandra* has only five stamens.—*Essential Character.* Calyx five-leaved. Petals five, entire. Capsule ovate, one celled, five-valved.

1. *Spergula arvensis*, or corn-spurrey.—Root annual, small, fibrous. Stems numerous, a foot in length, nearly upright, round, clammy and paniced on the upper part, leafy, jointed; joints swelling, globular. Stipules in pairs at the joints. Leaves in whorls, forming two bundles, about eight in each, the inner ones gradually smaller, linear; having a deep furrow on the back, blunt, and yellow at the tip. Panicle dichotomous, divaricating, many-flowered. Peduncles one-flowered, pubescent. Seeds kidney-shaped.—Native of Europe, in sandy soils; also of Barbary and Siberia. It flowers here from July to September.

2. *Spergula pentandra*, or little corn-spurrey.—Leaves whorled; flowers five-stamened; seeds depressed, winged.—Native of Germany, France, Spain, and Ireland.

3. *Spergula nodosa*, or knotted spurrey.—Leaves opposite, awl-shaped, even; the upper ones in bundles: calyx nerveless. Root perennial, fibrous. Stems several, four inches or more in length. This elegant little plant recommends itself to our notice by the beauty of its verdure, and the delicacy of its flowers; the largeness and pure whiteness of which, joined to its place of growth, serve to distinguish it from those plants which have some resemblance to it in the foliage.—It is found in the greatest part of Europe, in moist situations, frequently among herbage, and sometimes out of walls, rocks or stones. It flowers in July and August.

4. *Spergula larcina*, or larch-leaved spurrey.—Leaves opposite, awl-shaped, ciliate, in bundles. Root perennial. Stem decumbent, branched, leafy, round.—Native of Siberia.

5. *Spergula saginoides*, or smooth awl-shaped spurrey.—Leaves opposite, awl-shaped, awnless, naked; peduncles solitary, very long, smooth. Stem procumbent, two inches high.—Native of Sweden, Switzerland, France, Siberia, and Scotland, on mountains.

6. *Spergula subulata*, or ciliated awl-shaped spurrey.—Leaves opposite, awl-shaped, awned, ciliate; peduncles solitary, very long, somewhat hairy. Root perennial, fibrous. Stems several, an inch or two in length, procumbent and rooting, then upright.—Native of Denmark, Sweden, Germany, and Britain; on sandy commons, and dry gravelly pastures.

7. *Spergula glabra*, or smooth spurrey.—Leaves opposite,

bundled, filiform, smooth; flowers ten-stamened; petals bigger than the calyx. Stems procumbent, round, knotted.—Native of Piedmont, in Alpine pastures.

Propagation and Culture.—The usual time for sowing the seed of Spurrey for feeding cattle, is in July or August, that the plants may acquire strength before winter. As Spurrey will grow on the poorest sand, it may be cultivated in many places to good advantage, where no grass will thrive well; and by feeding it off the ground, the dung of the cattle or sheep will improve the land.

For saving the seeds, they should be sown in April, that they may ripen in August. The crop must be cut before the heads are quite brown, otherwise the seeds will soon scatter.

About twelve pounds of seed is sufficient to sow an acre. Harrow the ground well before the seeds are sown. In the Low countries, this plant succeeds a crop of corn. The second sort is now much cultivated in Flanders; for though it is a much lower plant, they esteem it to be superior to the other.

SPERLINGA, a small town of the north-east of Sicily, in the Val di Demona, remarkable for having afforded an asylum to some French refugees during the dreadful massacre in 1282, called the Sicilian Vespers. The town has a strong fortress situated on an eminence, and is 3 miles west of Nicosia, and ten south of Mistretta.

SPERLING (Otto), son of a person of the same name, was born at Christiana, in Norway, in 1634. He received the early part of his education at Copenhagen; he afterwards studied at the gymnasium of Bordsesholm, and then at the academy of Helmstadt. He became a member of the Royal Society of London, in 1700, and died in 1715. He was author of a great many works, among which were the following: "Monumentum Hamburgense Benedictinum;" "De Danicæ Linguæ ac Nominis antiqua Gloria et Prærogativa inter Septentrionales," &c. *Gen. Biog.*

SPERLONGA, a town of the north-west of the kingdom of Naples, in the Terra di Lavoro. Population 1200; 10 miles north-west of Gaeta.

SPERM, *s.* [*sperme*, French; *sperma*, Lat.] Seed; that by which the species is continued.—There is required to the preparation of the *sperm* of animals a great apparatus of vessels, many secretations, concoctions, reflections, and circulations. *Ray.*

SPERMACE'TI, *s.* [Lat.] Corruptly pronounced *parmasitty*.—A particular sort of whale affords the oil whence this is made; and that is very improperly called *sperma*, because it is only the oil which comes from the head of which it can be made. It is changed from what it is naturally, the oil itself being very brown and rank. The peculiar property of it is to shoot into flakes, not much unlike the chrySTALLIZATION of salts; but in this state 'tis yellow, and has a certain rankness, from which it is freed by squeezing it between warm metalline plates: at length it becomes perfectly pure, inodorous, flaky, smooth, white, and, in some measure, transparent. *Quincey.*—Spermaceti was much used in medicine, but is quite inefficacious. It makes good candles.

SPERMACE'CE [so named by Dillenius, from *σπερμα*, a seed; and *ακικη*, a sharp point: these plants having prickly seeds], in Botany, a genus of the class tetrandria, order monogynia, natural order of stellatæ, rubiaceæ (*Juss.*)—Generic Character. Calyx: perianth small, four-toothed, superior, permanent. Corolla one-petalled, funnel shaped: tube cylindric, slender, longer than the calyx: border four-parted, from spreading reflexed, obtuse. Stamina: filaments four, awl-shaped, shorter than the corolla, or standing out. Anthers simple. Pistil: germ roundish, compressed, inferior. Style simple, but cloven above. Stigmas obtuse. Pericarp: capsules two, connate, oblong, gibbous on one side, flat on the other; obtuse, each two-horned. Seeds solitary, roundish. *Spermacoce hispida* has a turbinatè-campanulate, erect corolla. R. It is manifestly one capsuled and two-celled; not two capsuled. M. Gartner describes *Spermacoce tenuior* as one capsuled. The fruit is always two-celled, bipartite when ripe, naked or covered with a thin crust,

crust, like a capsule, and therefore nearest to *Diodia*. *Swartz.*
—*Essential Character.* Corolla one-petalled, funnel-shaped. Seeds two, two-toothed.

1. *Spermaceo tenuior*, or slender button-weed.—Smooth; leaves lanceolate; stamens included; flowers whorled; seeds rough-haired. This plant grows to the height of two feet and a half. It is an annual plant.—Native of Carolina and the West Indies, where it is very common.

2. *Spermaceo latifolia*, or broad-leaved button-weed.—Smooth; leaves ovate; stamens standing out; flowers in whorls; stipules ciliate. This is an herbaceous plant, rising with several tetragonal knotty branching stems the length of two or three feet.—Native of Cayenne, growing by pathways and in open plains.

3. *Spermaceo cærulescens*, or blue-flowered button-weed.—Leaves ovate, acute, somewhat hairy, even; stipules equalling the whorled flowers; stamens standing out. This differs from the preceding in having the stems lower.—Native of Cayenne and Guiana by way sides.

4. *Spermaceo alata*, or winged-staked button-weed.—Smooth; leaves ovate, the uppermost sessile; flowers terminating in heads; stem four-cornered, winged, creeping.—Native of Cayenne and Guiana on the banks of rivers.

5. *Spermaceo hexagona*, or hexagon-stalked button-weed.—Smooth; leaves ovate, petioled; flowers terminating; stem prostrate, six-cornered.—Native of Guiana, on the banks of rivers.

6. *Spermaceo prostrata*, or prostrate button-weed.—Smooth; leaves subsessile, elliptic, acute; flowers in whorls; stem prostrate.—There are besides in this genus *Spermaceo radicans*, *longifolia*, *verticillata*, *sumatrensis*, *aspera*, *hirta*, *villosa*, *hispida*, *scabra*, *articularis*, *stricta*, *linifolia*, *procumbens* and *spinosa*.

Propagation and Culture.—Sow the seeds on a hot-bed, and when the plants come up transplant them on to a fresh hot-bed to bring them forward, and afterwards treat them in the same way with other tender plants from the East and West Indies. If they are placed in a stove, they will live through the winter, and produce good seeds the following year.

SPERMA'TIC, or **SPERMA'TICAL**, *adj.* [*spermatique*, Fr.] Seminal; consisting of seed.—The primordials of the world are not mechanical, but *spermatical* or vital. *More.*—Metals and sundry meteors rude shapes have no need of any particular principle of life, or *spermatical* form, distinct from the rest or motion of the particles of the matter. *More.*—Belonging to the sperm; containing sperm.—Two different sexes must concur to their generation: there is in both a great apparatus of *spermatie* vessels, wherein the more spiritous part of the blood is, by many digestions and circulations, exalted into sperm. *Ray.*

To SPERMATIZE, *v. n.* To yield seed. *Unused.*—Aristotle affirming that women do not *spermatize*, and confer a receptacle rather than essential principles of generation, deductively includes both sexes in mankind. *Brown.*

SPERMOLOGIST, *s.* [*σπερμολογος*, Gr.] One who gathers or treats of seeds. *Unused.*

SPERNAL, a parish of England, in Warwickshire; 3 miles north of Alcester.

SPERONI, or **SPERONE**, a distinguished Italian writer of the 16th century, was the son of Bernardino Speroni, a noble of Padua, in which city he was born in the year 1500. He studied under the famous Pomponazzo, in Bologna. He took his degrees in medicine and philosophy, and was appointed, at an early age, reader in logic and professor of philosophy, in the university; but being greatly attached to his former preceptor Pomponazzo, he returned to Bologna, which he did not quit till the death of that eminent man. When residing as an envoy at Venice, his speeches before the senate were so much admired, that it has been affirmed, that the judges and advocates belonging to other courts would leave their own places to hear his pleadings. He died at the great age of 88, and was interred with every kind of funeral honour. As a writer, his style is spoken of with singular approbation. One of his most celebrated compositions was a tra-

gedy, entitled "Canace and Macareus," which is regarded as one of the best productions of that class which the age exhibited.

To SPERSE, *v. a.* [*sparsus*, Lat.] To disperse; to scatter. *Not now in use.* See *To SPARSE*.

The wrathful wind,
Which blows cold storms, burst out of Scythian mew
That *spers'd* those clouds. *Spenser.*

SPESSART, a great forest of the west of Germany, partly in Franconia, partly in the circle of the Upper Rhine. It extends over a lofty mountain ridge, comprising 200,000 acres, and consists chiefly of oak, beech and similar trees. It now belongs to Bavaria.

To SPET, *v. a.* [*spætan*, Sax.] To eject from the mouth; to throw out. This is the old form of *spit*.

Mysterious dame,
That ne'er art call'd, but when the dragon womb,
Of Stygian darkness *spets* her thickest gloom,
And makes one blot of all the air. *Milton.*

SPET, *s.* Spittle; matter ejected from the mouth. *Obsolete.*

The speckled toad—
Defies his foe with a fell *spet*. *Lovelace.*

SPETCHLEY, a parish of England, in Worcestershire; 3 miles east-south-east of Worcester.

SPETISBURY, a parish of England, in Dorsetshire; 3 miles south-east of Blandford Forum.

SPEUSIPPUS, an Athenian philosopher, son of Eurymedon, by a sister of Plato, succeeded his uncle in his school, over which he presided during eight years, commencing from the death of that illustrious philosopher, in the year B. C. 348. He placed the statues of the Graces in the school built by Plato in the academy, and closely adhered to the doctrines of his master. His manners, however, were not conformable to his philosophy: he was vindictive, and a lover of pleasure. He was likewise avaricious, and, contrary to the practice of Plato, exacted a gratuity from his disciples. He was admitted to the friendship of Dion while he resided at Athens; and it was by his instigation that Dion, invited by the malcontents of Syracuse, undertook his expedition against Dionysius (see Dion. in Vit. Corn. Nep.) Becoming paralytic in his limbs, he was conveyed to and from the academy in a carriage of some kind. Upon one of these occasions, he met Diogenes, and saluted him; but the cynic, instead of returning the civility, upbraided him for enduring to live under such an infirmity. To which Speusippus replied, "that he did not live in his limbs, but in his mind." At length, overcome by his maladies, and wearied of life, he took poison, and put an end to his existence, having first constituted Xenocrates his successor in the academy. He was author of several philosophical treatises, which have perished; though it is said that they were held in such estimation by Aristotle, that he gave three talents for them.

To SPEW, *v. a.* [*speiwan*, Goth., *spīyan*, Saxon, *spewen*, Germ., *spouwen*, Teut.] To vomit; to eject from the stomach.

A swordfish small him from the rest did sunder,
That in his throat him pricking softly under
His wide abyss, him forced forth to *spew*,
That all the sea did roar like heaven's thunder,
And all the waves were stain'd with filthy hue. *Spenser.*

To eject; to cast forth.
When earth with slime and mud is cover'd o'er,
Or hollow places *spew* their watery store. *Dryden.*

To eject with loathing.—Contentious suits ought to be *spewed* out, as the surfeit of courts. *Bacon.*

To SPEW, *v. n.* To vomit; to ease the stomach.
He could have haul'd in
The drunkards, and the noises of the inn;
But better 'twas that they should sleep or *spew*,
Than in the scene to offend or him or you. *B. Jonson.*

SPE'WER, *s.* [*spīwepe*, Saxon.] One who spews.
SPEW'ING,

SPE'WING, *s.* [ʃpiːmɪʒ, Saxon.] Act of vomiting.— Shameful *spewing* shall be upon thy glory. *Hab.*

SPE'WY, *adj.* Wet; foggy. A provincial word.—The lower vallies in wet Winters are so *spewy*, that they know not how to feed them. *Mortimer.*

SPEXHALL, a parish of England, in Suffolk; 2½ miles north-by-west of Halesworth.

SPEY, a large and rapid river of Scotland, in Invernesshire, which has its rise from Loch Spey, in Badenoch, about 16 miles south from Fort Augustus, and after a course pretty steadily, from south-west to north-east, of about 96 miles in all its windings, it falls into the sea, about 8 miles east off Elgin, carrying with it the waters of a track of country of about 1300 square miles. Its waters, a few miles from its source, spread out into a small lake of the same name; from which, resuming the form of a river, it proceeds with great rapidity towards the east, and is joined by the Truim water at Ballidbeg, and by the Trommie water, where the river expands into a loch of about two miles long and one broad, called the Inch loch. It is then joined by the Feshie, at Inverishe, by the Liunie water at Rothienurchus, by the Nethy near Abernethy, by the Dulnain from the north, opposite Abernethy, by the Avon at Inveravon, by the Dullan water between Aberlour and Rothes, and by a great number of lesser streams through the whole of its course. This has been often said to be the largest river in Scotland, but can be reckoned only the third, as the Tay and the Tweed collect their waters from a greater extent of country. It is, however, liable to sudden and great inundations, and at such times may contain more water than perhaps any other river in Scotland under similar circumstances. It runs in general through the best wooded country in Scotland. The great cause of its inundations and apparent magnitude is, that it runs remarkably slow for 30 miles of its course. Its fall from the Boat of Bog, near Gordon castle, to the sea, a distance of only three miles, is 60 feet. The vast forest of Abernethy, Glenmore, and Kingussie, are upon its banks, or on its tributary streams; and extend, in succession, 30 or 40 miles together, and in which is some of the finest timber in Scotland. To prevent the trees from being shivered in passing the great cataracts of the river, small canals have been cut out in the banks, with a gentle slope, down which the wood is directed. It gives name to the district of Strathspey, famous for its soldiers and music. The Spey abounds with trout and salmon, the fishery for which is very valuable.

SPEYMOUTH, a parish of Scotland, in Morayshire, which derives its name from its local situation at the estuary of the Spey. Population 1124.

SPEZIA, GULF OF, the ancient *Portus Lunæ*, a bay of the Mediterranean, in the eastern part of the Genoese territory. It is large and secure; its length from Porto Venere to the town of Spezia, being about 5 miles, and its breadth at the mouth nearly the same. It is defended from the agitation of the sea by several small islands, while on the land side it is sheltered by mountains. It might thus be rendered a naval station of importance. To the naturalist, it presents a very curious phenomenon. In the middle of the bay there rises from the depth of 38 feet, a spring of fresh water, which having a strong current, occupies at the surface a space several yards square, before mixing with the surrounding salt water.

SPEZIA, or SPECCIA, a town of the Sardinian states, in the Genoese territory, delightfully situated on an eminence at the bottom of the gulf of Spezia. Since the advantages of its maritime situation have been duly appreciated, this town has been rapidly increasing in population, and contains at present upwards of 4000 inhabitants. It is tolerably regular, and not ill built. The number of villas with plantations of olives and fruit trees, joined to its naturally picturesque situation, render the environs delightful; 8 miles west-north-west of Sarzana, and 40 south-east of Genoa. Lat. 44. 4. 10 N. long. 9. 52. 0. E.

SPEZZIA, a small island of Greece, in the gulf of Napoli, about 20 miles from Napoli di Romania. It is only six

miles long and two broad; the channel separating it from the continent is only a mile and a half in width. The town called also Spezzia, contains about 3000 inhabitants; and there belong to the island between 50 and 60 barks or petty vessels. The surface of the island is rugged, and its soil unproductive. Its ancient name was *Taparenius*; the inhabitants now call it Petza.

SPEZZIA-PAULO, an islet to the south of Spezzia, known to the inhabitants under the name of Aristera.

To SPHA'CELATE, *v. a.* To affect with gangrene. *Unused.*—The long retention of matter *sphacelates* the brain. *Sharp.*

To SPHA'CELATE, *v. n.* To mortify; to suffer the gangrene.—The skin, by the great distension, having been rendered very thin, will, if not taken away, *sphacelate*, and the rest degenerate into a cancerous ulcer. *Sharp.*

SPHA'CELUS, *s.* [σφακελος, Gr.] A gangrene; a mortification.—It is the ground of inflammation, gangrene, *sphacelus.* *Wiseman.*

SPHACHIA, a mountainous district of the island of Candia, which is covered with snow during a great part of the year. It is inhabited by a tribe called Sphachiotes, said to be descended from the ancient Cretans, and who, like the Mainotes, have been all along independent of the Turks. Like the Mainotes, they are an active and spirited race, deriving their chief subsistence from their herds and flocks, but engaging occasionally in piratical excursions. Their government is a kind of republic, and their magistrates are elected from their own body. They have a small town called Sphachia or Sfachia.

SPHACTERIA, SPHAGIA, or SPAGIA, a small island on the west coast of the Morea, celebrated as the refuge of 800 Spartans, after the loss of a sea fight in the beginning of the Peloponnesian war. It is in the neighbourhood of Navurin, about 12 miles north of Modon.

SPHÆRANTHUS [from σφαῖρα, a sphere; ἀνθος, a flower. Globe-flower], in Botany, a genus of the class syn-genesia, order polygamia segregata, natural order of compositæ capitatæ, cinarocephalæ (*Juss.*)—Generic Character. Calyx, common globular, imbricate: scales acuminate, permanent, clothing the universal receptacle all round. Perianth, partial, many-flowered, five-leaved, within each scale of the common calyx solitary, composed of linear, equal, erect leaflets. Corolla: partial corollets hermaphrodite few (three) in the disk: females in the ray commonly five. Proper of the hermaphrodite one petalled, funnel-shaped, with a five-cleft patulous border.—Female awl-shaped, tubular, with a very small trifold closed mouth. Stamina in the hermaphrodites; filaments five, capillary, very short. Antlier cylindrical, tubular, longer than the corolla. Pistil in the hermaphrodites: germ wasting. Style longer, thicker. Stigma quite simple. In the females: germ oblong. Style bristle-shaped, length of the stamens. Stigma two-parted. Pericarp none. Calyx unchanged. Seeds in the hermaphrodites none: in the females solitary, oblong, naked. Receptacle: common scaly: partial naked.—*Essential Character.* Calyx eight-flowered. Corolla tubular hermaphrodite and indistinct female. Receptacle scaly. Down none.

1. Sphæranthus Indicus, or Indian sphæranthus.—Stem herbaceous, about a foot high, which rarely branches out. Leaves about three inches long, and an inch broad in the middle, of a deep green, alternate. The peduncles come out from the side of the stalk, opposite to the leaf, about two inches long, and sustain one globular head of flowers at the top, of a purplish red colour. Seeds oblong, situated on the margin.—Native of the East Indies.

2. Sphæranthus Africanus, or African sphæranthus.—Leaves decurrent, ovate, serrate; peduncles round. This differs from the preceding chiefly in having the peduncles round, without any decurrent wings.—It grows naturally at Madras, and also at La Vera Cruz, in New Spain.

3. Sphæranthus Chinensis.—Leaves sessile, pinnatifid. This is a much smaller plant than the first, with pinnate-sinuate leaves. Peduncles curled with the decurrent wings.—Native of India.

4. Sphæranthus

* 4. *Sphæranthus Cochinchinensis*.—Leaves decurrent, oblong, quite entire; heads cordate-ovate; subsessile; terminating. Stem herbaceous.—Native of China and Cochinchina, among the corn, and in gardens.

Propagation and Culture.—Sow the seeds in a hot-bed in the spring, and keep the plants in a stove or glass-case, giving them as much air as possible in warm weather.

SPHÆRIA, in Botany, a genus of plants of the class cryptogamia, order fungi, natural order fungi, angiocarpi (*Juss.*)—*Essential Character*. Capsules roundish, immersed, filled with jelly, which becomes a mass of minute, volatile seeds.

Persoon enumerates 184 species, distributed in eight sections, of each of which we shall exhibit examples.

I.—Causelcent, elongated or club-shaped; their substance either fleshy or corky. Ten species.

1. *Sphæria militaris*, or scarlet club-shaped sphæria.—Tawny red, or scarlet, fleshy, club-shaped. Head granulated with the prominent seed-vessels.—Persoon mentions this as found in autumn, after great rains, in wet grassy places, always growing out of some dead caterpillar or chrysalis. Withering appears to confound various distinct species under the above name.

2. *Sphæria hypoxylon*, or horned black sphæria.—Clustered, branched, compressed; black and hairy below; whitish and dilated at the summits. Its usual height is three or four inches. The hairiness is most copious and coarse on young plants. In winter, the summits of the branches are plentifully covered with white powder, but destitute of the spherical seed-vessels.—Common on rotten stumps or posts, in woods and gardens, making a conspicuous appearance.

3. *Sphæria digitata*, or finger-shaped black sphæria.—Clustered, club-shaped, obtuse, tumid, coal-black.—Frequent on old rotten stumps in beech woods, as well as on old posts of different kinds, into which its long perennial roots deeply insinuate themselves; the fungus springing up every autumn, in the shape of numerous, simple or divided, hard, black, rough, finger-like bodies; whitish at the summit while young, and tapering below into very slender stalks.

II.—Roundish or diffuse, without a stem. Thirteen species.

4. *Sphæria concentrica*, or concentric black sphæria.—Roundish, tumid, firm, smooth, with numerous concentric internal layers. Usually coal-black, somewhat shining, in globular masses, the size of a chestnut, or larger, and of the substance and lightness of charcoal.—Frequent on the decayed stumps of ash, willow, and other trees.

5. *Sphæria fragiformis*, or orange sphæria.—Clustered, somewhat confluent, of a rusty red; black and shining within. Seed-vessels minutely papillary, in the deciduous coat. Each plant is the size of a pea, more or less, bright red when young. In an advanced state they become confluent, of a brick colour, and the coat, in which the minute seed-vessels are lodged, scales off, leaving a black central mass, mistaken by Mr. Sowerby for the seed.—Frequent on rotten branches and stumps in damp woods.

III.—Shape roundish, but various and indeterminate. Capsules scattered horizontally, with prominent orifices, often spinous. Twenty-three species.

6. *Sphæria deusta*, or large spreading sphæria.—Broad, indeterminate, thick, wavy and tumid; at first grey and powdery; finally black and rigid. Capsules sunk.—Not uncommon on old rotten stumps, over which it spreads, to the extent of two or three inches, in thick, diffuse, unequal masses.

7. *Sphæria ceratosperma*, or horn-seeded sphæria.—Roundish, convex, scattered, black. Capsules with long prominent beaks.—Found by Micheli, in woods near Florence, chiefly on dead branches of hazel, in the winter.

Vol. XXIII. No. 1584.

IV.—Shape indeterminate. Capsules horizontal; at first marginal, and separate; afterwards confluent. Twenty-four species.

8. *Sphæria graminis*, or grass sphæria.—Linear-oblong, forming shining black spots upon leaves. Capsules globose, without prominent beaks.—Observed by Persoon on the leaves of *elymus europæus* and *lolium perenne*, in the shape of oblong, black, slightly prominent spots, various in length, which, when cut vertically, display a series of sunk globular capsules, not projecting above the surface.

The rest of this section are similarly parasitical on the leaves or stalks of various plants.

V.—Capsules crowded into an elevated tuft, or a common crustaceous receptacle; their beaks converging. Fifteen species.

9. *Sphæria ferruginea*, or rusty-crust sphæria.—Capsules black, with taper straight beaks; their bases surrounded with rusty powder.—Gathered by Persoon, on dry branches of hazel.

VI.—Capsules ranged circularly, mostly decumbent, without a crust, lodged under the cuticle of plants, their orifices generally crowded together. Fourteen species.

10. *Sphæria convergens*, or converging sphæria.—Aggregate, slightly prominent. Capsules black, ovate, with straight beaks, all meeting in a point.

VII.—Capsules distinct, forming a roundish tuft, on a common receptacle, and bursting through the cuticle of plants. Eleven species.

11. *Sphæria coccinea*, or scarlet sphæria.—Tufted, pale red. Capsules ovate, smooth. The capsules are minute, half sunk in the tumid receptacle, each with a short beak.—Said to be not unfrequent on dead branches of beech; consisting of scattered oval tufts, half the size of a pea, bordered by the reflexed torn cuticle of the branch. There is a larger and brighter-coloured variety, found by Dr. Roth on the elder.

VIII.—Capsules solitary, distinct, destitute of a receptacle. Eighty-three species.

12. *Sphæria pileata*, or cap sphæria.—Simple, globose; its mouth inversely conical, flat at the top, with a linear orifice.—Found sunk in the bark of dead branches of trees, in the early spring.

13. *Sphæria rostrata*, or needle-beaked sphæria.—Simple, naked, globose, granulated, with a very long taper-pointed beak.—Found more or less immersed in rotten beech wood.

14. *Sphæria herbarum*, or flat common sphæria.—Simple, scattered, orbicular, more or less depressed, smooth, brown, with a nipple-shaped mouth.—Copious on the dried stalks of various herbaceous plants.

15. *Sphæria moriformis*, or mulberry-shaped sphæria.—Simple, scattered, elliptical or roundish, closed, tuberculated, black. This, like the following, belongs to a tribe of species destitute of a beak, or any perceptible orifice. Its size is about equal to a mustard seed. The whole surface is tuberculated. The shape elliptical, or globular.—Said to be not unfrequent on dead branches, especially of firs.

16. *Sphæria cylindrica*, or cylindrical ball-bearing sphæria.—Simple, scattered, cylindrical, black, bearing a globe of white seeds.—Found by Tode on rotten willows, protruding from the wood in the form of minute, scattered, black points, hardly visible to a casual observer, each crowned by a little white ball of seeds.

SPHÆRISTERIUM [*σφαιριστεριον*, Gr.], in Antiquity, the seventh part of the ancient gymnasium; being that in which the youth practised tennis-playing.

SPHÆROBOLUS, [in Botany, so named by Tode, from the Gr. *σφαιρα*, a globe, and *βολος*, a cast, or throw; because the seeds are forcibly ejected, in the form of a little round ball.] See LYCOPERDON.

SPHÆROCARPUS [having a globular fruit], in Botany, a genus of cryptogamia hepatica.—*Generic Character*. Calyx ventricose, undivided. Seeds numerous, collected into a globe.

SPHÆROLOBIUM [so named by Sir J. E. Smith, from the Gr. *σφαῖρα*, a globe, and *λοβιον*, the diminutive of *λοβος*, a pod, to express the roundish form of its very small legume], in Botany, a genus of the class decandria, order monogynia, natural order of papilionaceæ, leguminosæ (*Juss.*)—Generic Character. Calyx: perianth inferior, of one-leaf, permanent, bell-shaped, two-lipped. Corolla: papilionaceous, of five petals. Stamina: filaments ten, linear, awl-shaped. Pistil: germen stalked, roundish; style linear; stigma smooth. Pericarp on a stalk half its own length, obliquely orbicular, turgid, pointed, of one cell and two coriaceous valves. Seeds one or two, kidney-shaped.

1. *Sphærolobium vimineum*, or yellow-flowered sphærolobium.—Tube of the calyx rather shorter than the lips. Style curved from the very base, included in the keel.—Native of New Holland and Van Diemen's island.

2. *Sphærolobium medium*, or small red-flowered sphærolobium.—Tube of the calyx half the length of the lips. Corolla red.—Native of New Holland.

SPHÆROMACHIA [*σφαιρομαχία*, Gr.], in Antiquity, a particular kind of boxing, in which the combatants had balls of stone or lead in their hands, which were called *σφαῖραι*.

SPHÆROPHORON [from the Gr. *σφαῖρα*, a globe, and *φέρω*, to bear, because of the globular fructification], in Botany, a genus of plants formed of the species lichen globiferus, and lichen fragilis, &c. See **LICHEN**.

SPHAGNUM [from *Σφαγγον*, the ancient name for a kind of moss], in Botany, a genus of cryptogamia musci.—Generic Character. Male flower club shaped: anthers flat. Capsule on the same plant, sessile, covered with a lid, without any entire veil: mouth smooth.

SPHENOZYNE. See **ARCTOTIS**.

SPHENOID BONE, a bone of the cranium. See **ANATOMY**.

SPHERE, *s.* [*sphere*, Fr., *sphæra*, Lat.] A globe; an orbicular body; a body of which the centre is at the same distance from every point of the circumference.—First the sun, a mighty sphere, he fram'd. *Milton*.—Any globe of the mundane system.

What if within the moon's fair shining sphere,
What if in every other star unseen,
Of other worlds he happily should hear? *Spenser*.

A globe representing the earth or sky.
Two figures on the sides emboss'd appear;
Conon, and what's his name who made the sphere,
And shew'd the seasons of the sliding year? *Dryden*.

Orb; circuit of motion.
Half unsung, but narrower bound
Within the visible diurnal sphere. *Milton*.

Province; compass of knowledge or action; employment.
[From the sphere of activity ascribed to the power emanating from bodies.]—To be call'd into a huge sphere, and not to be seen to move in't. *Shakspeare*.

To **SPHERE**, *v. a.* To place in a sphere.
The glorious planet Sol,
In noble eminence enthron'd and *spher'd*
Amidst the rest, whose med'cinable eye
Corrects the ill aspects of planets evil. *Shakspeare*.

To form into roundness.
Light from her native east
To journey through the airy gloom began,
Spher'd in a radiant cloud; for yet the sun
Was not. *Milton*.

SPHERIC, or **SPHERICAL**, *adj.* [*spherique*, Fr. Round; orbicular; globular.—Though sounds spread round, so that there is an orb or spherical area of the sound, yet they go farthest in the forelines from the first local impulsion of the air. *Bacon*.—Planetary; relating to orbs of the planets.—We make guilty of our disasters the sun, the moon, and stars, as if we were villains by spherical predominance. *Shakspeare*.

SPHERICALLY, *adv.* In form of a sphere.—Birds build their nests *spherically*. *Wotton*.

SPHERICALNESS, or **SPHERICITY**, *s.* Roundness; rotundity; globosity.—Water consists of small, smooth, spherical particles: their smoothness makes 'em slip easily upon one another; the *sphericity* keeps 'em from touching one another in more points than one. *Cheyne*.

SPHERICKS, *s.* The doctrine of the sphere.
SPHEROID, *s.* [*σφαῖρα* and *ειδος*, Gr.; *spheroide*, Fr.] A body oblong or oblate, approaching to the form of a sphere.—They are not solid particles, by the necessity they are under to change their figures into oblong *spheroids*, in the capillary vessels. *Cheyne*.

SPHEROIDICAL, or **SPHEROIDAL**, *adj.* Having the form of a spheroid.—If the surface of the earth was covered with water, it would put on a *spheroidal*, or egg-like figure. *Adams*.

SPHEROIDITY, *s.* Deviation from a sphere. *Mason*.—The orbit of the earth has an eccentricity more than double in proportion to the *spheroidity* of its globe. *Adams*.

SPHERULE, *s.* [*sphærule*, Lat.] A little globe.—Mercury is a collection of exceeding small, vastly heavy *spherules*. *Cheyne*.

SPHERY, *adj.* Spherical; round.
What wicked and dissembling glass of mine
Made me compare with Hermia's *sphery* eyne? *Shakspeare*.

Belonging to the spheres.
Mortals, that would follow me,
Love Virtue; she alone is free:
She can teach ye how to clime
Higher than the *sphery* chime. *Milton*.

SPHÆX, in Entomology, a genus of insects of the order hymenoptera, of which the Generic Character is as follows:—the mouth is formed with an entire jaw; the mandibles are horny, incurved and toothed; the lip is horny and membranaceous at the tip; it has four feelers; the antennæ have about ten articulations; the wings in each sex are plane, incumbent, and not folded; the sting is pungent, and concealed within the abdomen. The insects of this genus are said to be the most savage and rapacious of this class of beings: they attack whatever comes in their way, and by means of a poisonous sting, overcome and devour others far beyond their own size. Those of division II. are found chiefly on umbellate plants; the larvæ are without feet, soft, and inhabit the body of some insect, on whose juices they exist; the pupa has rudiments of wings.

“As the insects,” says Dr. Shaw, “of the genus *Ichneumon* deposit their eggs in the bodies of other living insects, so those of the genus *Sphæx* deposit their's in dead ones, in order that the young larvæ, when hatched, may find their proper food.” There are more than a hundred species of the genus *Sphæx*, which are separated into divisions.

- I. Antennæ setaceous; lip entire; and no tongue.
 1. *Sphæx appendigaster*.—This species is black; the abdomen is spotted, very short, and placed behind the thorax; the hind legs are very long.—This is found in divers parts of Europe, Africa and New Holland.
 2. *Sphæx maculata*.—Thorax spotted; first segment of the abdomen with a white dot on each side; the second is edged with white.—It is an English insect.
 3. *Sphæx fasciata*.—Black; abdomen with two white bands, the first interrupted; and the tail is white.—It is found in different parts of Italy. The thorax is black, covered with silvery down on the fore-part; the fore margin is marked with a white line; the wings are white, but tipped with brown.
 4. *Sphæx sessilis*, so named on account of its short, cylindrical, sessile abdomen. The insect is black.—It inhabits France; is very like the *Sphæx appendigaster*.
 5. *Sphæx punctum*.—This is black; but the tail is marked with a white dot.—It is an Italian insect.
6. *Sphæx*.

6. *Sphex nigritia*.—This also is black; the upper wings are marked with a brown band.

II. *Antennæ filiform*; lip emarginate; with a bristle on each side; the tongue is infected and trifid.

Of this section there are two subdivisions; the one has a petiolate abdomen, that of the other is sessile.

a.—Abdomen petiolate.

7. *Sphex Thomæ*.—Black; abdomen rufous; the petiole and spot on the back, black.—It inhabits St. Thomas's island.

8. *Sphex cyanipennis*.—Villous blue; fore-part of the thorax and abdomen grey; the wings are blue.—It inhabits Cayenne, and is large. This is a very beautiful insect; the head is blue; the mandibles and antennæ are black; the abdomen blueish-grey; the petiole black; legs black; the joints yellowish.

9. *Sphex argentea*.—Glossy-black; front villous, silvery; the wings are white, but tipped with brown.—It inhabits Coromandel, and is a large insect.

10. *Sphex rufipennis*.—Black; wings ferruginous, tipped with brown.—It inhabits Tranquebar, and is large.

11. *Sphex Pennsylvanica*.—This is of a blackish hue; the abdomen is of a full black; but the wings are inclining to a violet.—It inhabits America and New Holland.

12. *Sphex violacea*.—Blue; wings white, tipped with brown; the antennæ are black.—It is found at the Cape of Good Hope.

13. *Sphex tomentosa*.—The head and thorax of the insects of this species are covered with a gold down; the abdomen is black; the base and legs are rufous. It inhabits Sierra Leone.

14. *Sphex femorata*.—This is blue; the abdomen is black; the hind-thighs are rufous.—It inhabits Italy.

15. *Sphex flavipes*.—Villous, black, with a yellow dot before the wings; the legs are yellow; the thighs black.—It inhabits America.

16. *Sphex atra*.—This is quite black, excepting the lip, which is silvery villous; wings as long as the abdomen.—It inhabits Italy.

17. *Sphex figulus*.—Smooth, black; segments of the abdomen at the edges and lip lucid.—It inhabits Upsal, in the holes and crevices of wooden partitions, abandoned by all other insects. According to Dr. Shaw, this insect, when it has found a convenient cavity for the purpose, seizes on a spider, which it kills, and deposits it at the bottom; then laying her egg in it, she closes up the orifice of the cavity with clay; the larva, which resembles the maggot of a bee, having devoured the spider, spins itself up a dusky silken web, and changes into a chrysalis, out of which, within a certain number of days, proceeds a complete insect, which is black, with a slightly foot-stalked abdomen, the edges of the several segments being of a brighter appearance than the rest of the body. The female of this species prepares several separate holes or nets, in each of which she places a dead insect and an egg; each cell costing her the labour of about two days.

18. *Sphex lunata*.—The abdomen of this insect is black; the first segment is marked with a yellow lunule.—It inhabits America.

19. *Sphex spirifex*.—Black; thorax hairy and immaculate; petiole of one joint, yellow; as long as the abdomen. There is a variety, of which the petiole and joints of the legs are half yellow.—It is found in this country, in divers parts of Europe, and also in Africa, particularly in Egypt, in cylindrical cavities wrought within like a honeycomb, on the sides of cliffs, and in the mud walls of cottages.

20. *Sphex ichneumonea*.—Fulvous; abdomen black, with a ferruginous base.—It is found in divers parts of America.

21. *Sphex hirtipes*.—Hairy, dusky; abdomen shining black; wings testaceous.—It inhabits Guinea.

22. *Sphex albifrons*.—Glabrous, black; front covered with a silvery brown; wings white, with a black base.—This also is found in Guinea.

23. *Sphex maxillosa*.—Black, with silvery down; abdomen ferruginous at the base; the mandibles are projected, curved and toothed. It is a large insect, and is found in Barbary.

24. *Sphex unicolor*.—Dusky-brown, with cinereous down.—It is found in Spain, on umbellate flowers.

25. *Sphex Indostanee*.—Black; wings blueish-black, with a hyaline thinner margin.—Found in Europe and India.

26. *Sphex clavipes*.—Black; petiole ferruginous, clavate, of one joint; legs clavate. This is a small insect, and is found in several parts of Europe.

27. *Sphex Austriaca*.—Black; base of the abdomen with a sulphur-coloured band and two dots; the legs are varied with sulphur; the hind thighs are thickened.—It inhabits, as its name donotes, Austria.

28. *Sphex bidens*.—Black; head and antennæ ferruginous; the abdomen is marked with four yellow spots; the thorax is two-spined.—It inhabits Mauritania, and is a large insect.

29. *Sphex insubrica*.—Black; front, mouth, scutel, and two bands on the abdomen, of a pale yellow.—It inhabits Padua; breeds in chimneys and windows, in the same nest with the *Ichneumon seductor*.

b.—Abdomen sessile.

30. *Sphex fusca*.—Black, glabrous; base of the abdomen ferruginous.—This inhabits gravelly places in Europe: after having destroyed the larva of a moth, it deposits its eggs in its carcase, and then digs a hole and buries it.

31. *Sphex viatica*.—Black, downy; fore-part of the abdomen ferruginous, with black belts; wings brown.

32. *Sphex ursus*.—Black, hairy; second segment of the abdomen ferruginous; wings black.

33. *Sphex anethystina*.—Blue; antennæ and legs black.—It inhabits Santa Cruz.

34. *Sphex cingulata*.—Black; front streak on the fore-part of the thorax, and edges of the abdominal segments, cinereous.—It inhabits New Holland.

35. *Sphex nigra*.—Black; segments of the abdomen with lucid margins.

36. *Sphex sanguinolenta*.—Black; thorax rufous before and behind; segments of the abdomen lucid at the margin. This is a very small insect, and is found in several parts of Germany.

37. *Sphex sex-punctata*.—Black, with two white dots under the scutel, and four on the abdomen; wings tipped with brown.

38. *Sphex bi-fasciata*.—Black, immaculate; wings with two black bands.—This is an inhabitant of Paris.

39. *Sphex gibba*.—Black; abdomen ferruginous, tipped with brown; upper wings brown at the tip.—This is found in divers parts of Europe.

40. *Sphex fugax*.—Thorax covered with gold down; abdomen ferruginous; wings yellowish, with a brown band.

41. *Sphex aurata*.—Head and thorax with gold down; abdomen black, the edges of the segments cinereous.—This is found in the East Indies.

42. *Sphex rufipes*.—Black; the segments of the abdomen are marked with a white dot on each side; the wings are tipped with brown.—Found in England, and on divers parts of the European continent.

43. *Sphex tricolorata*.—Black; abdomen with silver lunules on each side, the base is rufous, the tip black.—This is a Barbary insect.

44. *Sphex guttata*.—Black, glabrous; thorax spotted with white; abdomen rufous, with transverse dots, and black before the tip.—This is very like the *Sphex maculata*, and is found in Italy.

45. *Sphex abdominalis*.—Black; thorax with a cinereous band before; abdomen rufous; wings tipped with brown.—It inhabits Brasil.

46. *Sphex*

46. *Sphex turcica*.—Black; thorax with a cinereous band before; abdomen rufous; wings black.—It is an inhabitant of Brasil.

47. *Sphex flava*.—Black; head, thorax, and tail, ferruginous; wings yellow, tip with brown.—It is found in the East Indies.

48. *Sphex bicolorata*.—Black; head, tip of the abdomen and wings, yellow, the latter tip with brown.—This is a New Holland insect.

49. *Sphex speciosa*.—Deep black; wings rufous, tip with white.

50. *Sphex fulvipennis*.—Black; head, fore-part of the thorax, tail and legs, rufous; wings fulvous, tip with blue.—This is an inhabitant of India.

51. *Sphex nobilis*.—This species is varied with silver and black; wings white, with two black bands.—It inhabits Cayenne.

52. *Sphex ocellata*.—Black; legs testaceous; wings black with an ocellar ferruginous spot on the upper pair.—Found in Africa.

53. *Sphex cærulea*.—Blue; wings ferruginous, upper pair whitish at the tip.—It inhabits South America, as does the next.

54. *Sphex variegata*.—Entirely black; wings spotted with white.—Seen in divers parts of Europe.

55. *Sphex stigma*.—Wings angular, grey-brown and reddish beneath, with white spots.—It is an inhabitant of the Cape.

56. *Sphex Indica*.—Black; antennæ and legs ferruginous; wings bluish-black.—It is found in South America.

57. *Sphex colon*.—Black; antennæ and legs rufous; thorax green; wings with two black spots.—It inhabits Sweden.

58. *Sphex Mauritanica*.—Black; head, antennæ, and legs, ferruginous, with a black border.—It inhabits Mauritania, and is reckoned among the large insects of this genus.

59. *Sphex xanthocephalus*.—Black; front yellow; abdomen and legs spotted with yellow.—It inhabits England.

60. *Sphex spinosa*.—Black; thorax with a spine on each side behind; the lip and breast are silvery.—It inhabits England.

61. *Sphex albomaculata*.—Black; abdomen ferruginous at the base; wings brown, with a white spot at the tip.

62. *Sphex tricolor*.—Black; segments of the abdomen very varied in number, some of them are testaceous, and others dotted with white.

63. *Sphex boops*.—Black; three segments of the abdomen and tarsi setaceous.—It is an Austrian insect.

64. *Sphex tomentosa*.—Black, downy; antennæ thick at the base; the three first segments of the abdomen are ferruginous; the base and tip are black.

SPHINCTER, *s.* [*sphincter*, Latin.] One of the circular and constrictor muscles of the human body, as the *sphincter ani*, *vagina*, &c.

SPHINX, [*σφιγξ*, Gr.] in Sculpture, &c., a figure or representation of a monster of that name, famed among the ancients, now mostly used as an ornament in gardens, terraces, &c.

It is represented with the head and breasts of a woman, the wings of a bird, the claws of a lion, and the rest of the body like a dog or lion.

SPHINX, the *hawk-moth*, in Entomology, a genus of insects of the order Lepidoptera, of which the Generic Character is as follows:—Antennæ somewhat prismatic, tapering at each end; the tongue is exerted; feelers two, reflected; the wings are deflected.

The insects of this genus, of which there are nearly two hundred species, fly abroad only in the morning and evening; they are very slow on the wing, and often make a humming kind of noise: they extract the nectar of flowers with the tongue. The generic name, sphinx, is applied on account of the posture assumed by the larvæ of several of the larger species, which are often seen in an attitude much

resembling that of the Egyptian sphinx, viz., with the fore-parts elevated, and the rest of the body applied flat to the surface.

The larva has sixteen feet, and is pretty active; that of the *Zygæna*, a division of this genus, is thick and flat, and covered with short hairs; that of the *Sesia* is generally naked, unarmed, and thinner towards the head; the others have a sharp, erect, stiff horn behind; the pupa is quiescent: that of the *zygæna* folliculate, and a little tapering forwards, the rest naked and smooth; that of the *sesia* pointed at each end, of the others very obtuse behind.

There are three divisions of this genus; viz., I. of which the antennæ are scaly; feelers hairy; tongue spiral; II. in which the antennæ are cylindrical; the tongue is exerted, truncate, and the wings entire; and III. in which the antennæ are thicker in the middle; tongue exerted, setaceous. Of the principal species of these divisions we shall proceed to give a brief account.

I.—Antennæ scaly; feelers hairy; tongue spiral.

1. *Sphinx ocellata*.—Wings angular, lower ones rufous, with a blue eye. This is reckoned a very beautiful insect; its upper wings and body are brown, the former finely clouded with different shades, while the lower wings are of a bright rose-colour, each marked with a large ocellated black spot, with a blue interior circle and a black centre. This insect proceeds from a green caterpillar of a rough or shagreen-like surface, marked on each side by seven oblique yellowish-white streaks, and furnished, like the preceding, with a horn at the tail.—It is chiefly found on the willow; retires under ground, in order to undergo its change into the chrysalis state, in the month of August or September, and in the following June appears the complete insect.

2. *Sphinx quercus*.—Wings angular, indented, cinereous, with dark streaks; lower ones ferruginous, white at the angle of the tail.—This inhabits Germany. The larva is solitary and of a green colour, with oblique lateral stripes and rufous stigmata; pupa chestnut, with rufous margin.

3. *Sphinx populi*.—Wings indented, reversed, grey; upper pair with a white central spot; lower ones ferruginous at the base.—This is found in England and many parts of Europe. It is figured by Donovan, and other writers on natural history. The larva is solitary, rough, green, with oblique white stripes on the sides; the pupa is of a dull brown, but ferruginous behind.

4. *Sphinx tilia*.—Wings angular, with greenish clouds and darker bands; lower ones beneath yellow, testaceous.—The larva is solitary, rough, green, with oblique red and yellow stripes on the sides; the pupa is brown.

5. *Sphinx pylas*.—Wings scalloped, indented, variegated; lower ones fulvous, yellow at the base, and black at the tip.—It inhabits Surinam. Lower wings with a marginal black band, and contiguous smaller one; the edge itself is yellowish.

6. *Sphinx cacus*.—Wings indented, black, with three approximate pale streaks; lower ones are yellow, striate with black. The abdomen is marked with cinereous and black belts.

7. *Sphinx dentata*.—Wings indented; lower ones brown, with a white streak; the abdomen is annulate with white.—It is an Indian insect. The head and thorax are blueish, speckled with brown; the upper wings are blueish, with brown specks and bands.

8. *Sphinx alope*.—Wings indented, brown; lower ones yellow, tip with black; abdomen black, with interrupted pale belts.

9. *Sphinx jatropha*.—Wings slightly indented; lower one black, with a rufous base and hyaline band; the head is two-horned. The larva is green, with a moniliform tail; the pupa is brown, with an inflected cylindrical tail.

10. *Sphinx atropos*.—The wings of the insects of this species are entire; the lower ones are yellow, with two brown bands; the abdomen is yellow, with belts. This is said to

SPHYNX AND STAPHYLINUS.

J. Pass sc

1. 2. 3. Specimens of *Sphinx*. 4. 5. 6. of *Sphinx sesia*. 7. *Staphylinus hirtus*.

be the largest and most remarkable, if not the most beautiful European insect of this genus. It is thus described by Dr. Shaw: the upper wings are of a fine dark grey colour, with a few slight variations of dull orange and white; the under wings are of a bright orange colour, marked by a pair of transverse black bands; the body is also orange-coloured, with the sides marked by black bars, while along the top of the back, from the thorax to the tail, runs a broad blue-grey stripe; on the top of the thorax is a very large patch of a most singular appearance, exactly representing the usual figure of a skull, or death's head, and is of a pale grey, varied with dull ochre and black. When in the least disturbed or irritated, this insect emits a stridulous sound, something like the squeaking of a mouse; and from this circumstance, as well as from the mark above-mentioned on the thorax, it is held in much dread by the vulgar in several parts of Europe; its appearance being regarded as a kind of ill omen or harbinger of approaching fate. Reaumur mentions, that the members of a female convent in France were thrown into great consternation at the appearance of one of these insects, which happened to fly in during the evening at one of the windows of the dormitory. The caterpillar from which this curious sphinx proceeds, is in the highest degree beautiful, and far surpasses in size every other European insect of the kind, measuring sometimes nearly five inches in length, and being of a proportional thickness; its colour is a bright yellow; the sides are marked with a row of seven most elegant broad stripes or bands, of a mixed violet and sky-blue colour; and the tops of these bands meet on the back in so many angles, and are varied on that part with jet black specks; on the last joint of the body is a horn or process, not in an erect position, but hanging or curving over the joint in the manner of a tail, having a rough surface and a yellow colour.—This caterpillar is principally found on the potatoe and the jessamine, which are its favourite food. It changes into a chrysalis in the month of September, retiring for that purpose deep in the earth; the perfect insect emerging in the following June or July. Individuals have been observed to change into the chrysalis in July or August, and then produce the complete insect in November, so that there appear to be two broods or races in a year.

The Sphinx atropos is generally considered as a rare insect, and as the caterpillar feeds chiefly by night, concealing itself during the day under leaves, &c., it is not often detected; yet from some singular circumstances favourable to its breed, there are seasons in which it is even plentiful, as was the case in the autumn of 1804, in which the caterpillar was so common in some counties, as to be prejudicial to the potatoe-plants, particularly in some parts of Cornwall and Surrey.

“The alteration of form which the whole of the papilionaceous tribe undergo, and in a particular manner the changes of the sphinx genus, afford a subject of the most pleasing contemplation to the mind of the naturalist, and though a deeply philosophical survey demonstrates that there is no real change produced in the identity of the creature itself, or that it is in reality no other than the gradual and progressive evolution of parts before concealed, and which lay masked under the form of an insect of a widely different appearance, yet it is justly viewed with the highest admiration, and even generally acknowledged as in the most lively manner typical of the last eventful changes.”

11. *Sphinx chionanthi*.—Wings variegated, with a white dot in the middle; abdomen with three pair of fulvous eyes.—This is an American insect. The antennæ are hooked, ferruginous, with a white shaft; lower wings blackish, spotted with white. Larva tailed, with yellow and black bands; the head and tail are red; the pupa is brown.

12. *Sphinx pinastri*.—Wings entire, grey, with three short black lines in the middle of the upper pair; the abdomen is white, with black bands.—The larva is tailed, and greenish, with a ferruginous dorsal line, a lateral yellow one, and ferruginous subocellar stigmata: the pupa is reddish-brown, with white eyes.

VOL. XXIII. No. 1584.

13. *Sphinx euphorbiæ*.—Wings entire, with two dark olive bands; lower ones with a black base, and marginal streak; the antennæ are snowy.—It is found in this country, and divers parts of Europe. Donovan has given a figure of it. The larva is black, dotted with white; it has a red line down the back, and lateral yellow spots; the pupa is brown, with black stigmata.

14. *Sphinx lineata*.—Wings greenish-olive, with a white band, crossed with white streaks; the lower ones are black, with a red band. It is generally described as having a greenish head, with a lateral white line; the thorax is marked with three double white streaks; abdomen with a white line down the middle, and lateral black and white dots; the hind margin of the upper wings is of a purple colour. Beneath it is cinereous, speckled with green.

15. *Sphinx ligustri*, or privet hawk-moth.—Wings entire; lower ones rufous, with three black bands; the abdomen is red, with black belts. The larva is tailed; in colour it is green, with oblique lateral streaks, which are of a flesh-colour before, and white behind; the pupa is brown; the tail is four-toothed.

16. *Sphinx crantor*.—Wings entire, brown, spotted with black; lower ones red, edged with black.—It inhabits India. The upper wings are marked with a pale spot at the base; the lower wings are spotted with black at the angle of the tail.

II.—Antennæ cylindrical; tongue exerted, truncate; wings entire. This division is named Sesia.

17. *Sphinx tantalus*.—Abdomen bearded, the third segment snowy.—It inhabits Europe and India. The abdomen is marked with a white and rufous streak; upper wings variegated with three white dots.

18. *Sphinx hylas*.—Wings semi-transparent; abdomen bearded, green, with a purple belt.—It inhabits China. The tail is marked with a white dot at the base; the sides of the base are black.

19. *Sphinx stellatarum*.—Abdomen bearded, the sides are varied with black and white; the lower wings are ferruginous. The larva is pale rosy, dotted with white; the tail blue, ferruginous at the tip; the pupa is pale, with a brown tip.

20. *Sphinx bombylifomis*.—Abdomen bearded, greenish, fulvous, with a black band; the wings are transparent, with a fine black edge.

21. *Sphinx zonata*.—Wings transparent, with a black band and margin; the abdomen is bearded, black, with a single belt. It is found in divers parts of Europe, as well as in this country. The head is marked with a thin red margin; on the thorax are two oblique lateral red lines.

22. *Sphinx vespiformis*.—Wings transparent, with a black margin and band; abdomen bearded, black, the second and last segments edged with yellow.—It is found in this country, and many parts of Europe.

23. *Sphinx chrysothorax*.—Wings transparent, with a black margin and band; abdomen black, with four yellow belts; the beard is yellow, with a black line in the middle.—This is an English insect, and is figured by Donovan.

III.—Antennæ thicker in the middle; tongue exerted, setaceous. *Zygæna*.

24. *Sphinx filipendulæ*.—Upper wings blue-green, with six red spots in pairs; the lower ones are red, with a greenish border.—It is found in England, and other parts of Europe. The larva is flat, tailed, sulphur-coloured, with four lines of black dots; the pupa is brown, but in the middle it is of a sulphur-colour.

25. *Sphinx sedi*.—Blue; upper wings with three connected red spots; the lower ones are entirely red.—It inhabits southern Russia.—The spots on the wings are surrounded with a yellow ring, and the lower wings with a fine black edge.

26. *Sphinx phegea*.—Green-black; the upper wings are marked with six transparent dots, the lower ones with two; the abdomen with a yellow belt.—It is found in

many parts of Germany. The larva is brown; the head and legs are reddish; the back is marked with fasciculate white plumes.

27. *Sphinx Caffra*.—Black; wings brown, with five red dots; the lower ones are red, edged with brown.—It is found in many parts of Africa. The head is black; feelers and orbits red; thorax black, with two red dots on each side; dots on the wings surrounded with a black ring.

28. *Sphinx cassandra*.—Brown; abdomen with five blue spots on each side; tail, mouth, base of the thighs, and abdomen, scarlet.

29. *Sphinx tibialis*.—Upper wings brown, lower ones hyaline; hind-legs long and very hairy.—It inhabits Africa.

30. *Sphinx capus*.—Black; upper wings tipped with white.—Inhabits Surinam.

SPHONDYLOCOCCUS, so called, by Mitchell, from the whorled appearance of the berries, is the Linnæan **CALICARPA**. See that article.

SPHONDYLUS, in Ichthyology, a name given by Pliny, and others of the old authors, to a peculiar species of the *syngnathus*.

SPHRAGIDE, or Lemnian Earth, in Mineralogy, a name given by Werner to a substance nearly resembling fullers' earth, found in the island of Lemnos. See **MINERALOGY**.

SPHRAGIS, the seal-stone, a name given by some authors to the single joints of the asteriæ, when found loose, not joined into a column.

SPHRAGIS is also used by some of the old Greek naturalists to express the spots on the back and sides of a panther.

The skin of this creature is of a pale colour, and these spots are all dark and round, and look like so many regular impressions of a seal, whence the name *sphragis*.

SPHYGMICA, an old term for that part of the judgment of a physician, which regards the differences of the *σφυγμος*, or pulse.

SPHYRÆNA, in Ichthyology, a name by which some authors have called the *sudis*, the sea-pike.

SPHPRÆNA ALTERA, a name given by Appian, and some other of the old Greek writers, to the *esor*, or common pike.

SPIAL, *s.* [*espial*, Fr.] A spy; a scout; a watcher. *Obsolete*.

For he by faithful *spial* was assured
That Egypt's king was forward on his way. *Fairfax*.

Their trust towards them hath rather been as to good
spials and good whisperers, than good magistrates and
officers. *Bacon*.

SPIAN, a river of Scotland, in Inverness-shire which rises from the western extremity of Loch Laggan, and after a rapid and precipitous course of 20 miles, joins the Lochy.

SPICA, in Botany, a spike, is a mode of inflorescence, very general in the natural order of *Orchideæ*, and frequent among many others tribes of plants. See **BOTANY**.

SPICA BANDAGE, in Surgery, is a kind of bandage thus called from its intersections, which are supposed to resemble an ear of corn.

SPICE, *s.* [*espices*, Fr.] A vegetable production, fragrant to the smell and pungent to the palate; an aromatic substance used in sauces.—Is not manhood, learning, gentleness, and virtue, the *spice* and salt that seasons a man? *Shakspeare*.—Garlick, the northern *spice*, is in mighty request among the Indians. *Temple*.—A small quantity, as of *spice* to the thing seasoned.—It containeth singular relations, not without some *spice* or sprinkling of all learning. *Brown*.

To **SPICE**, *v. a.* To season with *spice*; to mix with aromatic bodies.

His mother was a votress of my order,
And in the *spiced* Indian air by night
Full often she hath gossip'd by my side. *Shakspeare*.

To render nice; to season with scruples.
Come near my spouse,—
Ye shulden be al patient and meke,
And han a swete *spiced* conscience. *Chaucer*.

You have such a *spic'd* consideration,
Such qualms upon your worship's conscience!

Beaum. and Fl.

SPICE-WOOD, in Botany, a species of **LAURUS**; which see.

SPI'CKER, *s.* One who deals in *spice*.—Names have been derived from occupations, as *Salter* and *Spicer*, *Camden*.

SPI'CCERY, *s.* [*espiceries*, Fr.] The commodity of *spices*.

She in whose body
The western treasure, eastern *spicery*,
Europe and Africk, and the unknown rest,
Were easily found. *Donne*.

A repository of *spices*.—The *spicery*, the cellar, and its furniture, are too well known to be here insisted upon. *Addison*.

SPI'CK AND SPAN. *Span-new* is originally used of cloth newly extended or dressed at the clothiers, and *spick* and *span* is newly extended on the spikes or tenters: it is however a low word. *Johnson*.

While the honour thou hast got,
Is *spick and span* new, piping hot,
Strike her up bravely. *Butler*.

I keep no antiquated stuff;
But *spick and span* I have enough. *Swift*.

SPI'CKNEL, *s.* [*meum*, Lat.] The herb maldmony or bearwort.

SPI'CCOSITY, *s.* [*spica*, Lat.] The quality of being spiked like ears of corn; fulness of ears. *Obsolete*.

To **SPI'CCULATE**, *v. a.* [*spiculo*, Lat.] To make sharp at the point.

Plant thy thick row of thorns, and, to defend
Their infant shoots, beneath, on oaken stakes,
Extend a rail of elm, securely arm'd
With *spiculated* paling, in such sort
As, round some citadel, the engineer
Directs his sharp stoccade. *Mason*.

SPI'CCULUM, in Roman Antiquity, a kind of weapon which some will have to be the same with the *hasta*, or *sparus*.

SPI'CCY, *adj.* Producing *spice*; abounding with aromatics.

Off at sea north-east winds blow
Sabæan odour, from the *spicy* shore
Of Araby the blest: with such delay
Well pleas'd they slack their course, and many a league
Chear'd with the grateful smell old ocean smiles. *Milton*.

Aromatic; having the qualities of *spice*.

Under southern skies exalt their sails,
Led by new stars, and borne by *spicy* gales! *Pope*.

SPI'DER, *s.* [Skinner thinks this word softened from *spinder* or *spinner*, from *spin*; Junius from *σπίζειν*, Gr. to extend; for the spider extends his web. *Dóp*, *δομα*, Sax., is a *bee*, or properly an *humble bee*, or *stingless bee*. May not *spider* be *spy dor*, the insect that watches the *dor*? *Dr. Johnson*.] The animal that spins a web for flies.

The *spider's* web to watch we'll stand,
And when it takes the bee,
We'll help out of the tyrant's hand
The innocent to free. *Drayton*.

SPI'DERCATCHER, *s.* A bird. See **PICUS**.

SPI'DERLIKE, *adj.* Resembling a spider in shape or quality.

Spider-like,
Out of his self-drawing web, he gives us note. *Shakspeare*.
I can bend my body no farther than it is bent by nature.
For this reason, when ladies drop a fan or glove, I am not
the

the first to take them up: and often restrain my inclination to perform those little services, rather than expose my *spider-like* shape. *Hay.*

SPI'DERWORT, *s.* A plant with a lilyflower, composed of six petals; the **PHALANGIUM**.

SPIEGELBERG, a small district, with the title of county in Hanover, principality of Calenberg, which belongs as a fief to the king of the Netherlands. It has about 2200 inhabitants.

SPIELMANNIA [so named in honour of James Reinbold Spielmann, professor of medicine and botany at Strasburg], in Botany, a genus of the class didynamia, order angiosperma, natural order of personata, vitiæ (*Juss.*)—Generic Character. Calyx: perianth one-leafed, erect, short, permanent: segments linear-subulate, acute, almost equal. Corolla, one-petalled, salver-shaped: tube cylindric, incurved, globular at the base, villose within; the mouth closed with hairs: border five-cleft, almost equal: segments oblong, truncate, flat, spreading very much. Stamina: filaments four, very short, in the tube of the corolla, two a little higher than the others. Anthers oval. Pistil: germ roundish. Style short, permanent. Stigma hooked. Pericarp: drupe globular, one-celled, succulent. Seed: nut globular-depressed, wrinkled, striated and tubercled longitudinally, two celled. Kernels solitary, oblong, more gibbous towards the outside, tubercle-striated longitudinally, each fastened to a fleshy aril, gibbous on one side, hollowed on the other, adhering to the partition.—*Essential Character.* Calyx five-cleft. Corolla bearded at the throat, with a five-cleft almost equal border. Drupe, with a two-celled, two-seeded nut.

Spielmannia Africana. Ilex-leaved *Spielmannia*, or *Lantana*.—This rises with a shrubby stalk five or six feet high, sending out many irregular branches, closely garnished with thin oval leaves ending in points, serrate and embracing. From the bosom of each leaf comes out one solitary white flower, which is cut at the top into five parts, and at first sight has the appearance of a jasmine flower; but when closer viewed, the tube will be found curved, in the same manner with ringent flowers.—Native of the Cape of Good Hope.

Propagation and Culture.—Flowers are not succeeded by seeds in England, but the plants are easily propagated by cuttings, which if planted upon an old hot-bed any time in July, and covered with a bell or hand-glass, and shaded from the sun, will put out roots in a month or five weeks. It should then be treated the same as other green-house plants.

SPIERINGS (N.), was born at Antwerp, in 1633, and was a painter of landscape, who formed his style on the study of Salvator Rosa, and particularly remarkable as one of those who produced a portion of the numberless pictures sold as his all over Europe.

SPIETZ, a small town of Switzerland, in the canton of Bern, on the west coast of the lake of Thun; 21 miles south-south-east of Bern.

SPIGELIA [so named by Linnæus, in memory of Adrian Spigelius, professor of anatomy and surgery at Padua], in Botany, a genus of the class pentandria, order monogynia, natural order of stellata, gentianæ (*Juss.*)—Generic Character. Calyx: perianth one-leafed, five-parted, acuminate, small, permanent. Corolla one-petalled, funnel-shaped: tube much longer than the calyx, narrowed below; border spreading, five-cleft: segments wide, acuminate. Stamina: filaments five, simple. Anthers simple. Pistil: germ composed of two globes, superior. Style one, awl-shaped, length of the tube. Stigma simple. Pericarp: capsule twin, two-celled, four-valved. Seeds numerous, very small.—*Essential Character.* Corolla funnel-shaped. Capsule twin, two-celled, many-seeded.

1. *Spigelia anthelmia*, or annual worm-grass.—This is an annual plant with a fibrous root. Stem simple. Terminating leaves lanceolate, four; the rest on the stem opposite in pairs. From each axil of the stem-leaves a single branch, very like the stem, terminated, as in that, by four leaves placed crosswise.—Native of the West Indies.

2. *Spigelia Marilandica*, or perennial worm-grass.—Stem four-cornered; all the leaves opposite.—Native of North America, in the warmer parts, as Virginia, Maryland and Carolina, where it is called Indian pink.

Propagation and Culture.—Sow the seeds in pots filled with soft loamy earth, in the autumn, and plunge them into the bark-bed, where they should remain till the spring, when they must be plunged into a fresh hot-bed. Afterwards plant them in separate pots, shading them till they have taken root; and then treat them in the same way as other tender annual plants from the same countries, keeping them constantly in the hot-bed under cover to perfect the seeds.

SPIGELIUS, or **VANDEN SPIEGHEL** (Adrian), an eminent physician, was born at Brussels in 1578. He studied philosophy and medicine first at Louvain, and afterwards at Padua, where he received the degree of M. D. He became thoroughly skilled in every branch of his profession, and particularly in anatomy and surgery; and after travelling for some time to the different schools of Germany, he settled in Moravia, where he was soon appointed physician to the states of the province. He had there attained to the highest reputation, when he was invited, in 1616, by the senate of Venice, to occupy the principal professorship of anatomy and surgery in the university of Padua, which had become vacant by the death of Casserius. He accepted the appointment, and acquitted himself with so much success, that he contributed to render the schools of Padua more flourishing than they had ever been. He was cut off at the age of 47, in April 1625, in consequence of a puncture of his finger by a piece of glass. The first work which he published was entitled "Isagoges in Rem Herbarium Libri duo," printed at Padua in 1606. This work, though not very systematic, contains some interesting matter. It treats copiously on the virtues of plants, respecting which he is said to have learned much from the Italian peasantry, in a tour which he made in the dress of a rustic. He published also "De Lumbrico lato Liber, cum notis et ejusdem Lumbrici iconæ," to which was subjoined a letter "De incerto tempore Partus," 1618. "De Semitertianâ Libri quatuor," Franc. 1624. But the most valuable of his writings are those which he composed on anatomical subjects, and which were published after his death by his son-in-law, Crema. These were entitled "De Humani Corporis Fabrica Libri X. cum Tabulis 98 ære incisæ," 1625, folio; and "De formato Fœtu Liber singularis, æneis figuris ornatus," to which was annexed "Tractatus de Arthritide," 1626. See *Eloy. Dict. Hist. de la Méd. Gen. Biog.*

SPIGNET, in Botany: see **ATHAMANTA**.—**SPIGNET**, *Meu*: see **ÆTHUSA**.—**SPIGNET**, *Wild*: see **SESELI**.

SPIGNO, an inland town of the continental Sardinian states, in the duchy of Montserrat, province of Acqui. It stands near the river Bormida, in a picturesque situation on a steep rock, and contains 2200 inhabitants; 8 miles west-north-west of Novi, and 9 north-north-east of Acqui.

SPIGNO, a town in the north-west part of the kingdom of Naples in the Terra di Lavoro, containing 1200 inhabitants; 25 miles east of Terracina.

SPIGOLA, in Ichthyology, a name given by Paulus Jovius, and some others, to that species of perch which is generally called the *lupus marinus*.

SPIGOT, *s.* [*spijker*, Dutch.] A pin or peg put into the faucet to keep in the liquor.—Take out the *spigot*, and clap the point in your mouth. *Swift.*

SPIKE, *s.* [*spica*, Lat.] An ear of corn.

Drawn up in ranks and files, the bearded *spikes*
Guard it from birds as with a stand of pikes. *Denham.*

A long nail of iron or wood; a long rod of iron sharpened; so called from its similitude to an ear of corn.] *spik*, *Su. Goth.*—For the body of the ships, no nation equals England for the oaken timber; and we need not borrow of any other iron for *spikes*, or nails to fasten them. *Bacon.*

SPIKE, *s.* A smaller species of lavender.

To SPIKE, *v. a.* To fasten with long nails.—Lay long planks upon them, pinned or *spiked* down to the pieces of oak

oak on which they lie. *Moxon*.—To set with spikes.—A youth, leaping over the *spiked* pales, was suddenly frightened down, and in his falling he was caught by those spikes. *Wiseman*.—To make sharp at the end.

SPIKE, or OIL OF SPIKE, a name given by our druggists to an essential oil, much used by the varnish-makers and the painters in enamel; and of some use in medicine.

This oil, when genuine, is brought from Provence, and some other parts of France, and is there made of lavender. This plant is called in Provence *aspic*, and thence came the name *oil of aspic*, which afterwards degenerated into *oil of spike*.

SPIKE ROLLER, a very useful implement of the roller kind, first introduced by Mr. Randall, of York, to the notice of the farmer. It has been found of much advantage in bringing stiff cloddy lands into a state of suitable pulverization and fineness of mould for being sown.

SPIKE ISLAND, a small island of Ireland, in Cork harbour; 10 miles below Cork.

SPIKED, *adj.* Having ears, or those parts which contain seeds.

The clover white

That in a *spiked* ball collects its sweets.

Mason.

SPIKENARD, *s.* A plant, and the oil or balsam produced from the plant.—It grows plentifully in Java. It has been known to the medical writers of all ages. *Hill*.—A woman having an alabaster box of ointment of *spikenard*, brake and poured it on his head. *St. Mark*.

SPIKENARD, Bastard French: see NARDUS.—SPIKENARD, Celtic: a species of Valerian; which see.—SPIKENARD, False: see LAVANDULA.—SPIKENARD, Ploughman's: see BACCHARIS.—SPIKENARD, Ploughman's, is also the name of a species of flea-bane, or CONYZA; which see.

SPIKER-OOG, a small sandy island of Hanover, on the coast of East Friesland. It is about 4 miles long, contains a church, a school, and only 200 inhabitants. Lat. 53. 46. 1. N. long. 7. 42. 14. E.

SPIKY, *adj.* Having a sharp point.

Leicestrian fleeces, which the sinewy arm

Combs through the *spiky* steel in lengthen'd flakes. *Dyer.*

SPILAMBERTO, a small town of Italy, in the duchy of Modena, on the river Panaro; 8 miles south-east of Modena.

SPILANTHUS [from *σπίλος*, *macula*, a spot or dot; and *ανθος*, a flower; the corolla being dotted with black, from the shedding of the pollen], in Botany, a genus of the class syngenesia, order polygama æqualis, natural order of compositæ oppositifolia, corymbifera (*Juss.*)—Generic Character. Calyx: common sub-hemispherical, imbricate; scales lanceolate-linear, compact, in a double row. Corolla: compound uniform, tubular, conico-convex; corollets hermaphrodite, numerous, equal; proper, one-petalled, funnel-shaped; border four or five-cleft, reflexed. Stamina: filaments four or five, capillary, very short. Anthers cylindrical, tubular. Pistil: germ oblong, compressed. Style filiform, length of the stamens. Stigmas two, recurved. Pericarp: none. Calyx unchanged. Seeds solitary, oblong, compressed-flat, membranaceous margined, two-awned at the tip, one awn often smaller than the other. Receptacle, chaffy, conical: chaffs compressed, deciduous.—*Essential Character.* Calyx, almost equal. Down two toothed. Receptacle, conical, chaffy.

1. *Spilanthus urens*, or biting *spilanthus*.—Leaves lanceolate, quite entire; stem prostrate. This new genus is made up chiefly of those species of bidens and verbena which do not properly belong to those genera. Root perennial.—Native of America, about Carthagena, in sandy fields: flowering from May to October.

2. *Spilanthus pseudo-acmella*, or spear-leaved *spilanthus*.—Leaves lanceolate, serrate; stem erect.—Native of Ceylon.

3. *Spilanthus albus*, or white flowered *spilanthus*.—Leaves ovate, almost entire: lower alternate; upper opposite; stem panicled. Root annual.—Native of Peru.

4. *Spilanthus acmella*, or balm-leaved *spilanthus*.—Leaves

ovate, serrate; stem erect; flowers radiate. This is so like the second species as scarcely to be distinguished from it.—Native of Ceylon.

5. *Spilanthus tinctorius*, or dyer's *spilanthus*.—Leaves lanceolate, serrate, smooth; peduncles many flowered, terminating; stem diffusid. Stem herbaceous, three feet high.—It is cultivated for dyeing both in China and Cochinchina.

6. *Spilanthus uliginosus*, or boggy *spilanthus*.—Leaves ovate-lanceolate, crenate; stem erect, dichotomous; peduncles terminating; flowers radiate. This is an annual plant.—Native of Jamaica.

7. *Spilanthus atriplicifolius*, or orach-leaved *spilanthus*.—Leaves alternate, deltoid, toothed, petioled stipuled; stem panicled.—Native of South America.

8. *Spilanthus inspidus*.—Leaves obovate, somewhat toothed, sessile.—Native of America.

9. *Spilanthus oleraceus*, or esculent *spilanthus*.—Leaves subcordate, serrulate petioled. Stems procumbent, a foot long, round, somewhat rugged.—Native of the East Indies.

Propagation and Culture.—Sow the seeds upon a moderate hot-bed in the spring, and when the plants are fit to remove, transplant them on to a fresh hot-bed, shading them till they have taken new root, and then treating them as other tender annual plants, being careful not to draw them up too weak. In June take them up with balls of earth, and plant them in a warm border, shading and watering them: they may be kept through the winter in a stove.

SPILE, in Ship-Building, a plug made of fir to fill up holes, where nails have been driven, to prevent leaking, &c.

SPILE, in Rural Economy, a piece of wood sharpened at the point, and drove down into the ground, on the sides of rivers, or other places, for the purpose of protecting their banks, or other parts, against the violence of the waters.

SPIILIMBERGO, a small town of Austrian Italy, situated on the Tagliamento, in a district beautifully diversified with hills and valleys; 14 miles west of Udina.

SPLINGS, in Ship-Building, the dimensions taken from a rule-staff, a mould's edge, or straight line, to trim or fay one piece to another.

SPILL, *s.* [*spijlen*, Dutch.] A small shiver of wood; or thin bar of iron.—The oyster catchers, besides gathering by hand, have a peculiar dredge, which is a thick strong net, fastened to three *spills* of iron, and drawn at the boat's stern.

Carew.—Have near the bung-hole a little vent-hole, stopped with a *spill*. *Mortimer.*—A small quantity of money.—The bishops, who consecrated this ground, were wont to have a *spill* or sportule from the credulous laity. *Ayliffe.*

To SPILL, *v. a.* [*spjllan*, Sax., *spillen*, Dutch; *spilla*, Icelandic.] To shed; to lose by shedding.

Medea must not draw her murth'ring knife,
And *spill* her children's blood upon the stage. *Roscommon.*

To destroy; to mischief. *Unused.*

Why are you so fierce and cruel?

Is it because your eyes have power to kill?

Then know that mercy is the Mighty's jewel,

And greater glory think to save than *spill*.

Spenser.

Thou all-shaking thunder,

Crack nature's mould, all germins *spill* at once

That make ingratull man.

Shakspeare.

To throw away.

This sight shall damp the raging ruffian's breast,

The poison *spill*, and half drawn sword arrest.

Tickell.

To SPILL, *v. n.* To waste; to be lavish.—Thy father bids thee spare, and chides for *spilling*. *Sidney.*—To be shed; to be lost by being shed.—He was so topfull of himself, that he let it *spill* on all the company: he spoke well indeed, but he spoke too long. *Watts.*

SPYLLER, *s.* [Etymology unknown.] A kind of fishing line.—In harbour they are taken by *spillers* made of a cord, to which divers shorter are tied at a little distance, and to each of these a hook is fastened with a bait: this *spiller* they sink in the sea where those fishes have their accustomed haunt. *Carew.*

SPILOMA,

SPILOMA [so called by Acharius, from the Gr. *σπιλωμα*, a stain, or spot, in allusion to the appearance of the fructification], in Botany, a minute and obscure genus of the lichens. See LICHEN.

SPILSBY, a market town of England, in the county of Lincoln, situated on an eminence overlooking to the south the extensive level of marsh and fen land which is bounded by Boston Deepes and the German ocean. It is the chief town in the southern part of Lindsey division, and consists mostly of four streets, uniting at the market-place. This forms a spacious square, intersected in the centre by a row of houses, with the market cross at the east end, and the town-hall at the west. The cross consists of a plain octagonal shaft, with a quadrangular base, the whole elevated on five steps. The town-hall was built in 1764. It is a plain brick building, standing on arches on the site of the old hall, which was pulled down. The general quarter sessions of the peace for the southern division of the ports of Lindsey, have been holden here for upwards of 100 years. The parish church, situated in the west end of the town, is an irregular building, consisting of north and south aisles, the latter being much larger than the rest of the building. Here is a chapel, in which are some ancient monuments belonging to the families of Beke, Willoughby, and Bertie. At the west end of the church is an embattled tower, of more modern date than the rest of the church. Spilsby contains a small free school, and a Sunday school. Market on Monday, and three annual fairs; 31 miles east of Lincoln, and 134 north of London.

SPILSBY, a small island on the south coast of New Holland, in Spencer's gulf.

SPILT, *part. adj.* [perhaps intended for *spelt*, i. e. divided. See *To SPELT*.] Variegated.

Though all the pillars of the one were guilt,
And all the other's pavement were with ivory *spilt*.

Spenser.

SPILT, *s.* Any thing poured out or wasted.—Our vaults have wept with drunken *spilth* of wine. *Shakspeare.*

To SPIN, *v. a.* preter. *spun* or *span*; part. *spun*. [*spinan*, Goth., *ppinnan*, Sax., *spinnen*, Germ. and Dutch; *spina*, Icel., from *spenna*, to extend, to draw out. *Serenius*.] To draw out into threads.—The women *spun* goats' hair. *Ex.*—To form threads by drawing out and twisting any filamentous matter.—You would be another Penelope; yet all the yarn she *spun*, in Ulysses's absence, did but fill Ithaca full of moths. *Shakspeare.*—To protract; to draw out.

Why should Rome fall a moment before her time?

No, let us draw her term of freedom out

In its full length, and *spin* it to the last.

Addison.

To form by degrees; to draw out tediously.—Men of large thoughts and quick apprehensions are not to expect any thing here, but what, being *spun* out of my own coarse thoughts, is fitted to men of my own size. *Locke.*—To put into a turning motion, as a boy's top.

To SPIN, *v. n.* To exercise the art of spinning or drawing threads.

Ten thousand stalks their various blossoms spread;
Peaceful and lowly in their native soil,
They neither know to *spin*, nor care to toil.

Prior.

[*Spingare*, Ital.] To stream out in a thread or small current.

Together furiously they ran,
That to the ground came horse and man;
The blood out of their helmets *span*,
So sharp were their encounters.

Drayton.

To move round as a middle.

Whether the sun, predominant in heaven,
Rise on the earth, or earth rise on the sun,
He from the east his flaming road begin,
Or she from west her silent course advance
With inoffensive pace, that *spinning* sleeps

VOL. XXIII. No. 1585.

On her soft axle, while she paces even
And bears thee soft with the smooth air along,
Solicit not thy thoughts.

Milton.

SPIN HAY, *To*, in Military Language, is to twist it up in very hard ropes, for an expedition; so that it may be the less bulky for the cavalry to carry behind them.

SPINA, in Botany and Vegetable Physiology, a thorn originating from the substance of the wood itself. Linnæus remarks, that a thorn is liable to disappear by culture, or richness of soil: whereas prickles, *aculei*, seated in the bark, are not affected by similar causes.

SPINA BIFIDA, or **CLOVEN SPINE**, in Surgery, frequently named also *Hydrorachitis*. See **SURGERY**.

SPINACH, or **SPINAGE**, *s.* A plant.—*Spinage* is an excellent herb crude or boiled. *Mortimer.*—See **SPINACIA**.

SPINACH, **STRAWBERRY**. See **BLITUM**.

SPINACIA [in Arabic, it is Hispanic; some derive it from Spina, the seeds being spiny in its wild state], in Botany, a genus of the class dioecia, order pentandria, natural order of Holoraceæ, atripliçes (*Juss*)—Generic Character. Male—Calyx: perianth five-parted: segments concave, oblong, obtuse. Corolla none. Stamina: filaments five, capillary, longer than the calyx. Anthers oblong, twin. Female—Calyx: perianth one-leafed, four-cleft, acute, with two opposite segments very small, permanent. Corolla none. Pistil: germ round-compressed. Styles four, capillary. Stigmas simple. Pericarp none. Calyx unites and hardens. Seed one, roundish, covered by the calyx. Fruit round, or two-horned, or four-horned.—*Essential Character*. Male—Calyx, five parted. Corolla none. Female—Calyx four-cleft. Corolla none. Styles four. Seed one, within the hardened calyx.

1. *Spinacia oleracea*, or garden spinach.—Fruit sessile. Root annual. Leaves sagittate. Stem hollow-branching, herbaceous, about two feet high. The male flowers are herbaceous, in long spikes; they abound in pollen, which, when ripe, flies out when the plants are shaken, and spreads all round; after which the plants soon decay. The female flowers, which are on a separate plant, sit in clusters close to the stalks at every joint; they are small, herbaceous, and are succeeded by roundish seeds.

There are two or three varieties of this, which differ in the size and shape of the leaves; and the more or less prickliness of the seeds, in one variety, the seed is quite smooth.

The native place of growth is unknown.

The etymology of this well-known pot-herb is involved in much obscurity. Latin names ending in *aca*, as *Verbena*, *Portulaca*; or in *acia*, as *Spinacia*; are deduced from something to which they bear a resemblance, as *Verbena*, *portula*, *spina*; hence our English names *smallach*, *spinach*, now commonly spelt *smallage*, *spinage*.

2. *Spinacia fera*, or wild spinach.—Fruits peduncled.—Stem higher, smooth and even. Leaves deltoid-ovate, sometimes sinuate, obtuse, petioled. Fruits axillary, three or more, each on its peduncle, the length of its fruit, ovate or obovate, obtuse, somewhat keeled on each side, even, very blunt.—Native of Siberia.

Propagation and Culture.—Prickly spinach was formerly more cultivated in the English gardens than at present, because it is much hardier, so not in much danger from cold; therefore was generally cultivated for use in winter.

The seeds should be sown upon an open spot of ground the beginning of August, observing if possible to do it when there is an appearance of rain.

In October the spinach will be fit for use, when you should only crop off the largest outer leaves, leaving those in the centre of the plants to grow bigger; and thus you may continue cropping it all the winter and spring, until the young spinach sowed in the spring is large enough for use, which is commonly in April; at which time the spring advancing, the winter spinach will run up to seed; so that it should be all cut up, leaving only a small parcel to produce seeds if wanted.

SPINAL, *adj.* [*spina*, Lat.] Belonging to the back bone.

Descending careless from his couch, the fall
Lux'd his joint neck and *spinal* marrow bruised. *Philips*.

SPINALONGA, a small sea-port and citadel on the north-east coast of the island of Candia. It was formerly a bishop's see; 30 miles east of Candia.

SPINARZA, or CHERVESTA PICCOLO a small town of Albania, on the river Spinarza, which falls into the Adriatic.

SPINDLE, *s.* [spinbl, p̄mbel, Sax.] The pin by which the thread is formed, and on which it is conglomerated.—Bodies fibrous by moisture incorporate with other thread, especially if there be a little wreathing; as appeareth by the twisting of thread and twirling about of *spindles*. *Bacon*.

Do you take me for a Roman matron,
Bred tamely to the *spindle* and the loom? *A. Philips*.

A long slender stalk.—The *spindles* must be tied up, and, as they grow in height, rods set by them, lest by their bending they should break. *Mortimer*.—Any thing slender.—Repose yourself, if those *spindle* legs of yours will carry you to the next chair. *Dryden*.

To SPINDLE, *v. n.* To shoot into a long small stalk.—Another ill accident in drought is the *spindling* of the corn, which with us is rare, but in hotter countries common; inso-much as the word calamity was first derived from calamus, when the corn could not get out of the stalk. *Bacon*.

SPINDLELEGGED, or SPINDLESHANKED, *adj.* Having small legs.—Many great families are insensibly fallen off from the athletic constitution of their progenitors, and are dwindled away into a pale, sickly, *spindle-legged* generation of valetudinarians. *Tatler*.

SPINDLESTONE, a township of England, in Northumberland; 2½ miles east-by-south of Belford.

SPINDLETREE, *s.* Prickwood, a plant.—There is a shrub called the *spindle-tree*, commonly growing in our hedges, which bears a very hard wood. *Evelyn*.

SPINE, *s.* [spina. Lat.] The back bones.

There are who think the marrow of a man,
Which in the *spine*, while he was a living ran;
When dead, the pith corrupted, will become
A snake, and hiss within the hollow tomb.

Dryden.

SPINE, *s.* [espine, Fr., spina, Lat.] A thorn.—Roses, their sharp *spines* being gone. *Beaum. and Fl.*

SPINEDA, a small town of Austrian Italy, in the Milanese, district of Cremona.

SPINEL, *s.* A sort of mineral.—*Spinel* ruby is of a bright rosy red; it is softer than the rock of balass ruby. *Woodward*.

SPINET. *s.* [espinette, Fr.] A small harpsichord with single wires.

When miss delights in her *spinet*,
A fiddler may his fortune get.

Swift.

SPINET, *s.* [spinetum, Lat.] A small wood; a place where briars and bushes grow. In this sense *spincy* is still used in some of our midland counties.—The invention was to have a satyr lodged in a little *spinet*, who advanced his head above the top of the wood, &c. *B. Jonson*.

SPINIFEROUS, *adj.* [spina and fero, Lat.] Bearing thorns.

SPINFIFEX [from *spina* and *facio*: so named from the leaves becoming thorny], in Botany, a genus of the class polygamia, order dioecia, natural order of gramina, gramineæ (*Juss.*)—Generic Character. Hermaphrodite flowers—Calyx: head terminating, composed of several bundles, involucred. Bundles partial approximating, involucred; in each a rachis solitary, awl-shaped, excavated a little above the base, flower-bearing, the rest naked, and others similar, without flower. Involucre common, two leaved: leaflets lanceolate, channelled, subulate-mucronate, unequal: proper four-leaved, similar. Glume one-flowered, two-valved: valves lanceolate, awl-shaped at the tip, unequal; outer longer, inner concealed within an excavation of the rachis. Corolla: glume two valved; valves lanceolate, convoluted; inner involving the genitals. Stamina: filaments three, filiform. Anthers linear, long, cloven at both ends, probably

barren. Pistil: germ oblong. Style filiform, longer than the glumes. Stigmas two, villose, standing out. Pericarp none. Corolla unchanged, growing to the seed. Seed one, oblong, smooth. Male flowers—Calyx: head as in the hermaphrodite. Bundles involucred, with glumes longer dagger-pointed, pungent. Rachis each subtrigonal, flowering almost from top to bottom: flowers from five to seven, sessile, alternate, bifarious, parallel, ovate-oblong, awnless. Glume two-flowered, two-valved: valves oblong, obtuse, striated, channelled, shorter than the corolla, unequal; outer shorter: one floscule hermaphrodite, barren. Corolla: glume two valved: valves lanceolate, channelled, convolute: inner narrower. Nectary of two valves, linear, membranaceous, loose, diaphanous, short. Stamina: filaments three, filiform. Anthers linear, long, cloven at both ends, standing out. Pistil: (in one floscule) germ oblong. Style bifid. Stigmas none. Spinfifex differs from Lolium in having two valves to the calyx, from Triticum in their not being tranverse.—*Essential Character*. Hermaphrodite—Calyx, glume two-valved, two-flowered: valves parallel to the rachis. Corolla two-valved, awnless. Stamina three. Styles two. Male—Calyx common with the hermaphrodite. Corolla and stamina similar.

Spinfifex squarrosus.—Culms very large, as thick as the finger, glaucous, as is the whole plant, jointed, with heaps of leaves at every joint, even, not hollow but full. Leaves grassy, convolute; recurved-spreading, rigid, spiny at the ends: sheaths widened, striated, with a woolly ligule.—Native of the East Indies, China and Cochinchina, on sandy coasts.

SPINK, *s.* A finch; a bird.

Want sharpens poesy, and grief adorns;
The *spink* chaunts sweetness in a hedge of thorns. *Hartc.*

SPINNER, *s.* One skilled in spinning.—A practised *spinner* shall spin a pound of wool worth two shillings for sixpence. *Graunt*.—A garden spider with long jointed legs.

Weaving spiders come not here;
Hence you long-legg'd *spinners*, hence. *Shakspeare*.

The common spider that spins webs for flies.—Where the bee gathereth honey, even there the *spinner* gathereth venome. *Latimer*.

SPINNING WHEEL, *s.* The wheel by which, since the disuse of the rock, the thread is drawn.

My *spinning wheel* and rake,
Let Susan keep for her dear sister's sake. *Gay*.

SPINNY, *adj.* Small, slender.—The Italian's proportion it [beauty,] big and plump; the Spaniards, *spynic* and lanke; and amongst us, one would have her white, another brown. *Florio*.—They plow it early in the ear, and then there will come some *spinny* grass that will keep it from scalding. *Mortimer*.

SPINO, a small town of Austrian Italy, in the Milanese, district of Cremona.

SPINOSITY, *s.* [spinous, Lat.] Crabbedness; thorny or briary perplexity.—The *spinosity* of harsh and dry opinions. *More*.—Philosophy consisted of nought but dry *spinosity*, lean notions, and endless altercations about things of nothing. *Glanville*.

SPINOUS, *adj.* [spinous, Lat.] Thorny; full of thorns.—Our senses are pricked and wounded with this *spinous* or thorny matter. *W. Mountague*.

SPINOZA (Benedict de), noted as the author of a modern system of atheistic philosophy, was born in 1692, at Amsterdam, where his father, a Portuguese jew, was occupied in commerce. Being of an enquiring turn of mind, he early engaged in the study of theology and philosophy, by which he was led into doubts concerning the authority of the Jewish religion. These, the rabbins to whom he applied, were unable to solve to his satisfaction; and as he was incapable of disguise; he made no secret of his state of mind. It is asserted that his brethren offered to tolerate him, provided he would comply externally with their ritual; and that, through regard for his character and abilities, they even promised him a pension, for he was in low circumstances; but that he could

not

not resolve to act the part of a hypocrite. He did not however, altogether desert the synagogue, till after he had received a stab from a Jew (probably actuated by bigoted zeal) as he was coming from a play. His open defection caused a sentence of excommunication to be pronounced against him; upon which he attached himself to some Christians of his acquaintance, and frequented the churches of the Arminians and Mennonites. He was assisted by them in the prosecution of his studies, among which was that of the Cartesian philosophy; and either for the purpose of living more free from interruption, or, as some say, in consequence of an accusation of impiety before the magistrates, which occasioned his banishment, he withdrew from Amsterdam, and took up his residence at Rhensburgh. He published in 1664 a treatise, entitled "The principles of the Cartesian philosophy demonstrated geometrically," adding an appendix, in which he advanced metaphysical opinions wholly at variance with those of Descartes. In 1670 he published his most famous work, entitled "Tractatus Theologo-Politicus," which made him extensively known, and brought upon him a number of attacks. His final residence was in the neighbourhood of the Hague, where he died of a decline in 1677, at the age of 45. It is agreed that his private character was unexceptionable; sober, decent, friendly, and disinterested. He died in the full persuasion of the truth of his system, which was more fully developed in his Posthumous Works, and had some resemblance to that maintained by several of the ancient Greek philosophers, especially Strabo of Lampsacus, who held the notion of the soul of the world, and an universal whole, though it was more essentially atheistical. The sum of his doctrine is thus stated by Brucker:—The essence of substance is, to exist. There is in nature only one substance, with two modifications, thought and extension. This substance is infinitely diversified, having within its own essence the necessary causes of the changes through which it passes. No substance can be supposed to produce, or create, another: therefore, besides the substance of the universe, there can be no other; but all things are comprehended in it, and are modes of this substance, either thinking or extended. To this one universal substance, Spinoza, as a cover to his atheism, gives the appellation of God, and assigns to it divine attributes. He asserts that God is the *immanent*, not the *transitive*, cause of all things. His doctrine therefore differs from that of the philosophers who held God to be *the universal whole*, since, according to them, the visible and intellectual worlds are produced by *emanation* from the eternal fount of divinity; that is, by an expanding or unfolding of the divine nature; the effect of intelligence and design; whereas in Spinoza's system, all things are *immanent*, and necessary modifications of one universal substance; which manifestly excludes all idea of creative design.

SPINOZISM, s. The doctrine of Spinoza.

SPINSTER, s. A woman that spins.

The *spinsters* and the knitters in the sun,
And the free maids that weave their thread with bones,
Do use to chant it. *Shakspeare.*

[In Law.] The general term for a girl or maiden woman.—If a gentlewoman be termed *spinster*, she may abate the writ. *Sir E. Coke.*

SPINSTRY, s. The work of spinning.—What new decency can then be added to this by your *spinstry*? *Milton.*

SPINTRIÆ [from the Gr. *σπινθηρ*, *annulus*.] It is said by Suetonius, that there were a set of men thus named in the reign of Caligula, who invented new obscenities or debaucheries.

SPINUS, a bird. See FRINGILLA SPINUS.

SPINY, adj. [*spina*, Lat.] Thorny; briary; perplexed; difficult; troublesome.—The first attempts are always imperfect; much more in so difficult and *spiny* an affair as so nice a subject. *Digby.*

SPIO, a genus of the class vermes, and order mollusca. The Generic Character is as follows:—Body projecting from a tube, jointed, and furnished with dorsal fibres; peduncles

or feet rough with bristles, and placed towards the back; two feelers, which are long and simple; it has two oblong eyes.

1. *Spio scticornis*.—Feelers thin and striate. This species inhabits the ocean, principally where there is a clayey bottom; it is about three inches long; the tube is composed of agglutinated particles of earth, thin, erect, and thrice as long as the body. From this the animal projects its capillary white feelers in search of food, which consists of small marine worms; the body is whitish, with a tinge of green, with a red line down the middle of the back; the hind-part is of a sea-green; the fore-part is blackish-grey, with transverse white striæ; the head is pale.

2. *Spio filicornis*.—Feelers thick and annulate. Body oblong, yellowish or reddish, with a cinereous line in the middle, and at each end; the tube is fragile, erect, and greenish, from which it projects its feelers in search of *planaria*, and other small marine worms.—It inhabits the sea-shores about Greenland, and is an inch long.

SPI'RACLE, s. [*spiraeculum*, Lat.] A breathing hole; a vent; a small aperture.—Most of these *spiraecles* perpetually send forth fire, more or less. *Woodward.*

SPIRACULA, are little holes or pores placed singly on each side of every segment of the abdomen of insects, through which they breathe; and if oil be applied so as to stop these up, it proves fatal.

SPIRÆA [Spireon of Pliny. *Σπειραία* of Theophrastus. From *σπειρα*, a rope], in Botany, a genus of the class icosaendria, order pentagynia, natural order of pomaceæ, rosaceæ (*Juss.*)—Generic Character. Calyx: perianth one-leaved, five-cleft, flat at the base, with acute segments; permanent. Corolla: petals five, inserted into the calyx, oblong-rounded. Stamina: filaments more than twenty, filiform, shorter than the corolla, inserted into the calyx. Anthers roundish. Pistil: germs five or more. Styles as many, filiform, length of the stamens. Stigmas headed. Pericarp: capsules oblong, acuminate, compressed, two-valved. Seeds few, acuminate, small, fastened to the internal suture.—*Essential Character.* Calyx five-cleft. Petals five. Capsules many-seeded.

I.—Shrubby.

1. *Spiræa lævigata*, or smooth-leaved spiræa.—Leaves lanceolate, quite entire, sessile; racemes compound; flowers white. Shrubby, with round branches.—Native of Siberia, in valleys at the foot of the loftier Altaic mountains, which are covered with snow.

2. *Spiræa salicifolia*, or willow-leaved spiræa.—Leaves oblong, serrate, smooth; racemes decomposed. There are five varieties. This shrub is about four feet high, with rod-like stems, smooth; the branches yellow. Racemes terminating, solitary, erect, decomposed, obtuse, many-flowered; with linear, solitary bractes. Corollas of a rose-red, paler when expanded.—Native of North America.

3. *Spiræa callosa*, or callous spiræa.—Leaves lanceolate, acute, serrate, subvillose; panicle decomposed, subfastigiata.—Native of Japan, in the island Nipon: flowering in June.

4. *Spiræa tomentosa*, or scarlet spiræa.—Leaves lanceolate, unequally serrate, tomentose beneath; flowers doubly racemed.—Native of Pennsylvania.

5. *Spiræa argentea*, or silvery-leaved spiræa.—Leaves silky, wedge-shaped, marked with lines; serrate at the tip, and somewhat plaited; racemes compound.—Native of New Granada.

6. *Spiræa Alpina*, or Siberian Alpine spiræa.—Leaves linear, lanceolate, toothletted, very smooth; corymbs lateral.—Native of eastern Siberia, especially beyond the Lake Baikal, and about the lake itself: flowering in June.

7. *Spiræa hypericifolia*, or hypericum-leaved spiræa.—Leaves obovate, quite entire; umbels sessile.—It came from the north-west parts of America.

8. *Spiræa chamædrifolia*, or Germander-leaved spiræa.—Leaves obovate, gash-toothed at the tip; corymbs peduncled.

—Native

—Native of Siberia, Hungary, Japan, and China, about Canton. There are, also, the following shrubby spirææ: *Spiræa ulmifolia*, *crenata*, *triloba*, *thalictroides*, *opulifolia*, and *sorbifolia*.

II.—Herbaceous.

9. *Spiræa aruncus*, or goat's-beard spirææ.—Leaves superdecompound. Root perennial. Stem annual, from three to four feet high. Three or four pairs of oblong leaflets terminated by an odd one: they are two inches long, and almost an inch broad, serrate, and ending in acute points. Flowers disposed in long slender spikes, formed into loose terminating panicles; they are small, white, and of two sexes in the same spike.—Native of Germany, Austria, Carniola, Dauphiné, Switzerland, Piedmont, Siberia, Japan, and Virginia.

10. *Spiræa filipendula*, or common dropwort.—Leaves interruptedly pinnate; leaflets uniform, serrate, smooth; stem herbaceous; flowers cymed, many-styled. Root perennial, consisting of oval tubers or solid lumps, hanging from the main body by threads, which has given occasion to its common names of *filipendula* and *dropwort*: these tubers enable the herb to resist drought, and render it very difficult to be eradicated. It is an elegant plant, very common in high pastures, on a calcareous soil, where it is sometimes very small. In gardens it grows very luxuriant, and has often double flowers. It flowers early in July.

11. *Spiræa ulmaria*, or meadow-sweet.—Leaves interruptedly pinnate, tomentose beneath; the end-leaflet larger, lobed; flowers cymed, many-styled. Root perennial, fibrous. Stems erect, three or four feet high, angular and furrowed, tinged with red, leafy, branched in the upper part. Flowers white, in a very large compound cyme, the side branches of which rise much above the central one. Meadow-sweet, or queen of the meadows, abounds in moist meadows, about the banks of rivers, brooks and ditches, perfuming the air with the sweet hawthorn-like scent of its plentiful blossoms from June to August. The following remain in this section: *Spiræa digitata*, *lobata*, *camtschatica*, *palmata*, and *trifoliata*.

Propagation and Culture.—The shrubby sorts may be propagated from suckers, which are sent forth in plenty from the stems of the old plant, in some of them; or by laying down the tender branches, which, when rooted, should be transplanted.

These shrubs require no other pruning, but to cut out all the dead branches and such as grow irregularly; and to take off the suckers every year. If these be permitted to grow, they will starve the old plants. The ground between them should be dug every spring, to encourage their roots, and every third year a little rotten dung should be buried in it, to make them flower sooner.

The herbaceous sorts may be propagated by seeds, or by parting the roots in autumn.

SPIRAL, *adj.* [*spiral*, Fr. from *spira*, Lat.] Curve; winding; circularly involved, like a screw.—The process of the fibres in the ventricles, running in *spiral* lines from the tip to the base of the heart, shews that the systole of the heart is a muscular constriction, as a purse is shut by drawing the strings contrary ways. *Ray*.

SPIRALLY, *adv.* In a spiral form.—The sides are composed of two orders of fibres running circularly or *spirally* from base to tip. *Ray*.

SPIRATION, *s.* [*spiratio*, Lat.] Breathing.—To other substances, void of corporeal bulk and concretion, the name of spirit is assigned to imply the manner of their origin, because God did, by a kind of *spiration*, produce them. *Barrow*.

SPIRDING, a large lake of East Prussia, in the government of Gumbinnen; 75 miles south-east of Königsberg. It is about 60 miles in circumference, contains four small islands, and abounds in lampreys, and such other fish as are found in shallow and muddy water.

SPIRE, *s.* [*spire*, old Fr., *spira*, Ital. and Lat.] A curve line; any thing wreathed or contorted, every wreath being in a different plane; a curl; a twist; a wreath.

His head

Crested aloft, and carbuncle his eyes;
With burnish'd neck of verdant gold, erect
Amidst his circling *spires*, that on the grass
Floated redundant.

Milton.

A dragon's fiery form belied the god,
Sublime on radiant *spires* he rode.

Dryden.

Any thing growing up taper; a round pyramid, so called perhaps because a line drawn round and round in less and less circles, would be a spire; a steeple.—With glistering *spires* and pinnacles adorn'd. *Milton*.—The top or uppermost point.

'Twere no less than a traducement,
To hide your doings, and to silence that,
Which, to the *spire* and top of praises vouch'd,
Would seem but modest.

Shakspeare.

To SPIRE, *v. n.* To shoot up pyramidically.—The *spiring* turrets glitter through the skies. *Shenstone*.—[*Spiro*, Lat.] To breathe. *Not in use*.

To SPIRE, *v. a.* To shoot forth. *Not in use*.

In gentle ladie's breste, and bounteous race
Of woman-kind, it fayrest flowre doth *spyre*,
And beareth fruit of honour and all chaste desyre.

Spenser.

SPIRE, or **SPEYER**, an ancient though not large town of the west of Germany, situated at the confluence of the Spirebach and the Rhine; 14 miles south of Manheim, and 16 north-east of Landau. Its population, formerly about 5000, does not at present exceed 4000: they are partly Catholics, partly Protestants. It long gave name to a bishopric; and the only interesting building in the place is the old cathedral, now falling into decay, the choir being the only entire part of the edifice. Spire was frequently the seat of the German diet. From 1795 to 1814, it belonged to the French; at present it is the capital of the Bavarian province of the Rhine, and has a lyceum or great school established by government. The bishopric of Spire was not of great extent. It contained 55,000 inhabitants, and yielded a revenue of 30,000*l.* sterling. It was secularised in 1802, and at present belongs partly to Bavaria, partly to Baden. The episcopal residence was not Spire, but Bruchsal.

SPIREBACH, a small river of the Bavarian circle of the Rhine, near Spire, near which the allies were defeated by the French under marshal Tallard, in 1703, when they attempted to raise the siege of Landau.

SPIRED, *adj.* Having a steeple or spire.—Or pinnacled, or *spired*. *Mason*.

SPIRIT, *s.* [*spiritus*, Lat.] Breath; wind.—The balmy *spirit* of the western breeze. *Anon*.—An immaterial substance; an intellectual being.—*Spirit* is a substance wherein thinking, knowing, doubting, and a power of moving do subsist. *Locke*.

She is a *spirit*; yet not like air, or wind;
Nor like the spirits about the heart or brain;
Nor like those spirits which alchemists do find,
When they in every thing seek gold in vain;
For she all natures under heav'n doth pass,
Being like those *spirits* which God's bright face do see,
Or like himself whose image once she was,
Though now, alas! she scarce his shadow be;
For of all forms she holds the first degree,
That are to gross material bodies knit;
Yet she herself is bodyless and free;
And though confin'd is almost infinite.

Davies.

The Soul of man.—The *spirit* shall return unto God that gave it. *Eccl.*—An apparition.—Perhaps you might see the image and not the glass; the former appearing like a *spirit* in the air. *Bacon*.—Temper; habitual disposition of mind.

He sets

Upon their tongues a various *spirit*, to raise
Quite out their native language.

Milton.

Arduour; courage; elevation; vehemence of mind.

'Tis

'Tis well blown lads;
This morning, like the *spirit* of a youth
That means to be of note, begins betimes. *Shakspeare.*

Genius; vigour of mind.
More ample *spirit* than hitherto was wont,
Here needs me, whiles the famous ancestors
Of my most dreaded sovereign I recount,
By which all earthly princes she doth far surmount. *Spenser.*

Turn of mind; power of mind moral or intellectual.
You were us'd
To say extremity was the trier of *spirits*,
That common chances common men could bear. *Shakspeare.*

Intellectual powers distinct from the body.
In *spirit* perhaps he also saw
Rich Mexico, the seat of Montezume. *Milton.*

Sentiment; perception.
You are too great to be by me gainsaid:
Your *spirit* is too true, your fears too certain. *Shakspeare.*

Eagerness; desire.—God has changed men's tempers with
the times, and made a *spirit* of building succeed a *spirit* of
pulling down. *South.*—Man of activity; man of life, fire
and enterprise.

The wat'ry kingdom is no bar
To stop the foreign *spirits*, but they come. *Shakspeare.*

Persons distinguished by qualities of the mind.—A French
word, *growing obsolete.*

Of pitying God did well-form'd *spirits* raise,
Fit for the toilsome business of their days,
To free the groaning nation, and to give
Peace first, and then the rules in peace to live. *Cowley.*

That which gives vigour or cheerfulness to the mind; the
purest part of the body bordering, says Sydenham, on im-
materiality. In this meaning it is commonly written with
the plural termination.

In some fair body thus the secret soul
With *spirits* feeds, with vigour fills the whole;
Each motion guides, and ev'ry nerve sustains,
Itself unseen, but in the effects remains. *Pope.*

Characteristical likeness; essential qualities.—Italian pieces
will appear best in a room where the windows are high, be-
cause they are commonly made to a descending light, which
of all other doth set off men's faces in their truest *spirit*.
Wotton.—Any thing eminently pure and refined.

Nor doth the eye itself,
That most pure *spirit* of sense, behold itself. *Shakspeare.*

That which hath power of energy.—There is in wine a
mighty *spirit*, that will not be congealed. *South.*—An in-
flammable liquor raised by distillation; as brandy, rum.—
All *spirits*, by frequent use, destroy, and at last extinguish
the natural heat of the stomach. *Temple.*—Mark to denote
an aspirated pronunciation.—That the press should have
stripped these broken ends of verses [Homer's] of the unne-
cessary and troublesome luggage of *spirits* and accents, is
neither the composer's nor the corrector's fault. *Dalgarno.*
—It may be observed, that in the poets *spirit* was a mono-
syllable, and therefore was often written *sprite*, or, less pro-
perly, *spright*.

The charge thereof unto a courteous *spright*
Commanded was. *Spenser.*

To SPIRIT, *v. a.* To animate or actuate as a spirit.
[*spiritato*, Ital., from *spirare*, possessed with an evil spirit.]
So talk'd the *spirited* sly snake. *Milton.*

To excite; to animate; to encourage; to invigorate to
action.—Many officers and private men *spirit* up and assist
those obstinate people to continue in their rebellion. *Swift.*
—To draw; to entice.—The ministry had him *spirited*
away, and carried abroad as a dangerous person. *Arbutnot.*

VOL. XXIII. No. 1585.

SPIRITALLY, *adv.* [*spiritus*, Lat.] By means of the
breath.—Conceive one of each pronounced *spiritally*, the
other vocally. *Holder.*

SPIRITED, *adj.* Lively; vivacious; full of fire.—Dry-
den's translation of Virgil is noble and *spirited*. *Pope.*

SPIRITEDLY, *adv.* In a lively or strong manner.
SPIRITEDNESS, *s.* Disposition or make of mind.—
He showed the narrow *spiritedness*, pride, and ignorance of
pedants. *Addison.*

SPIRITFUL, *adj.* Lively; full of spirit.
SPIRITFULLY, *adv.* In a sprightly or lively manner.
SPIRITFULNESS, *s.* Sprightliness; liveliness.—A cock's
crowing is, a tone that corresponds to singing, attesting his
mirth and *sprightfulness*. *Harvey.*

SPIRITLESS, *adj.* Dejected; low; deprived of vigour;
wanting courage; depressed.

A man so faint, so *spiritless*,
So dull, so dead in look, so woe begone,
Drew Priam's curtain. *Shakspeare.*

Having no breath; extinct.—The very condition of human
nature admonishes us, that the *spiritless* body should be
restored to the earth from whence it was derived. *Green-
hill.*

SPIRITLESSLY, *adv.* Without spirit; without exertion.
—The same [external profession] will this church of Lao-
dicea hold on *spiritlessly* and lazily, with little life or zeal.
More.

SPIRITLESSNESS, *s.* State of being spiritless.
SPIRITOUS, *adj.* Refined; defecated; advanced near
to spirit.

More refin'd, more *spiritous* and pure,
As near to him is plac'd, or nearer tending. *Milton.*

Fine; ardent; active.—The *spiritous* and benign matter
most apt for generation. *Smith.*

SPIRITOUSNESS, *s.* Fineness and activity of parts.—
They, notwithstanding the great thinness and *spiritousness*
of the liquor, did lift up the upper surface, and for a mo-
ment form a thin film like a small hemisphere. *Boyle.*

SPIRITU SANTO, a town on the south side of the
island of Cuba, opposite to the north-west part of the cluster
of isles and rocks called Jardin de la Reyna, and about 45
miles north-westerly of la Trinidad.

SPIRITU SANTO, or TAMPAY BAY, called also
HILLSBOROUGH BAY, lies on the west coast of the penin-
sula of East Florida, has a number of shoals and keys at its
mouth, and is 9 leagues north-north-west of Charlotte har-
bour, and 56 south-east-by south of the bay of Apalache.
Lat. 27. 36. N. long. 82. 54. W.

SPIRITU SANTO, a town of Brazil, in South America.
It is situated on the sea coast, in a very fertile country, and
has a small castle and harbour. Lat. 20. 10. S. long. 41.
W.

SPIRITU SANTO, a lake towards the extremity of the
peninsula of East Florida, southward from the chain of
lakes which communicate with St. John's river.

SPIRITU SANTO, a river of Mexico, which runs into
the Pacific Ocean. Lat. 23. N. long. 106. 40. W.

SPIRITU SANTO, a river of Brazil, which runs into the
Atlantic. Lat. 20. 10. S.

SPIRITU SANTO ISLANDS, or ANDROS, a chain of
islands, situated to the south-west of the Bahamas; the
largest about 40 miles in length, and 8 in breadth. Lat. 24.
to 25. 12. N. long. 77. to 78. 15. W.

SPIRITUAL, *adj.* [*spirituel*, Fr.] Distinct from matter;
immaterial; incorporeal.—Echo is a great argument of the
spiritual essence of sounds; for if it were corporeal, the re-
percussion should be created by like instruments with the
original sound. *Bacon.*—Mental; intellectual.

Spiritual armour, able to resist
Satan's assaults. *Milton.*

Not gross; refined from external things; relative only to
the mind.—Some who pretend to be of more *spiritual* and
refined religion, spend their time in contemplation, and

talk much of communion with God. *Calamy*.—Not temporal; relating to the things of heaven; ecclesiastical.

Thou art reverend,
Touching thy *spiritual* function; not thy life. *Shakspeare*.

SPIRITUALIST, s. One who professes regard to spiritual things only; one whose employment is spiritual.—May not he that lives in a small thatched house—preach as loud, and to as much purpose, as one of those high and mighty *spiritualists*? *Echard*.

SPIRITUALITY, s. Incorporeity; immateriality; essence distinct from matter.—If this light be not spiritual, yet it approacheth nearest unto *spirituality*; and if it have any corporality, then of all other the most subtle and pure. *Raleigh*.—Intellectual nature.—A pleasure made for the soul, suitable to its *spirituality*, and equal to all its capacities. *South*.—Acts independent of the body; pure acts of the soul; mental refinement.—Many secret indispositions and aversions to duty, will steal upon the soul, and it will require both time and close application of mind, to recover it to such a frame, as shall dispose it for the *spiritualities* of religion. *South*.—That which belongs to any one as an ecclesiastic.—Of common right, the dean and chapter are guardians of the *spiritualities*, during the vacancy of a bishopric. *Ayliffe*.

SPIRITUALITY, s. Ecclesiastical body. *Not in use*.
We of the *spirituality*
Will raise your highness such a mighty sum,
As never did the clergy at one time. *Shakspeare*.

SPIRITUALIZATION, s. The act of spiritualizing.—[In old Chemistry.] The action of extracting spirits from natural bodies. *Chambers*.

To **SPIRITUALIZE, v. a.** [*spiritualiser*, Fr.] To refine the intellect; to purify from the feculencies of the world.—We begin our survey from the lowest dregs of sense, and so ascend to our more *spiritualized* selves. *Glanville*.—To extract spirits from natural bodies.—Spirits of wine is sometimes *spiritualized* to that degree, that upon throwing a quantity into the air, not a drop shall fall down, but the whole evaporate, and be lost. *Chambers*.

SPIRITUALLY, adv. Without corporeal grossness; with attention to things purely intellectual.—In the same degree that virgins live more *spiritually* than other persons, in the same degree is their virginity a more excellent state. *Bishop Taylor*.

SPIRITUOUS, adj. [*spiriteux*, Fr.] Having the quality of spirit, tenuity and activity of parts.—The most *spirituous* and most fragrant part of the plant exhales by the action of the sun. *Arbuthnot*.—Lively; gay; vivid; airy: applied both to persons and things.—It may appear airy and *spirituous*, and fit for the welcome of cheerful guests. *Wotton*.—Ardent; inflammable; as *spirituous* liquors.

SPIRITUOSITY, or SPIRITUOUSNESS, s. The quality of being spirituous; tenuity and activity.

To **SPIRT, v. n.** [*Sprout* is the past participle of the Sax. *spytan*, to shoot out, to cast forth: *spurt* is the same word by a customary metathesis. *H. Tooke*.] To spring out in a sudden stream; to stream out by intervals.—Bottling of beer, while new and full of spirit, so that it *spirteth* when the stopple is taken forth, maketh the drink more quick and windy. *Bacon*.

To **SPIRT, v. a.** To throw out in a jet.
When weary Proteus
Retir'd for shelter to his wonted caves,
His finny flocks about their shepherd play,
And howling round him, *spirt* the bitter sea. *Dryden*.

SPIRT, s. Sudden ejection; sudden and short effort; a fit.

What, old hoorson, art thou a chiding?
I will play a *spyrte*, why should I not?
What hast thou to do, and if I lose my cote?
I will trill the bones while I have one grote.
Old Morality of Lusty Juventus.

To **SPIRTLE, v. a.** To shoot scatteringly.—The terraqueous globe would, by the centrifugal force of that motion, be soon dissipated and *spirtled* into the circumambient space, was is not kept together by this noble contrivance of the Creator. *Derham*.

SPIRY, adj. Pyramidal.
In these lone walls their days eternal bound,
These moss-grown domes with *spiry* turrets crown'd,
Where awful arches make a noon-day night,
And the dim windows shed a solemn light;
Thy eyes diffus'd a reconciling ray,
And gleams of glory brighten'd all the day. *Pope*.

Wreath'd; curled.
Hid in the *spiry* volumes of the snake,
I lurk'd within the covert of a brake. *Dryden*.

SPISS, adj. [*spissus*, Lat.] Close; firm; thick. *Not in use*.—From his modest and humble charity, virtues which rarely cohabit with the swelling windiness of much knowledge, issued this *spiss* and dense, yet polish'd; this copious, yet concise treatise of the variety of languages. *Brerewood*.

SPISSITUDE, s. [from *spissus*, Lat.] Grossness; thickness.—*Spissitude* is subdued by acrid things, and acrimony by inspissating. *Arbuthnot*.

SPLIT, s. [ꝑꝛɪʊ, Sax.; *spit*, Dutch; *spedo*, Ital.] A long prong on which meat is driven to be turned before the fire.

A goodly city is this Antium;
'Tis I that made thy widows: then know me not,
Lest that thy wives with *spits*, and boys with stones,
In puny battle slay me. *Shakspeare*.

Such a depth of earth as is pierced by one action of the spade.—Where the earth is washed from the quick, face it with the first *spit* of earth dug out of the ditch. *Mortimer*.

To **SPLIT, v. a.** preterite *spat*; participle pass. *spit*, or *spitted*. [*speten*, Teut. to pierce.] To put upon a spit.

I see my cousin's ghost,
Seeking out Romeo, that did *spit* his body
Upon a rapier's point. *Shakspeare*.

To thrust through.—I *spitted* frogs, I crush'd a heap of emnets. *Dryden*.

To **SPLIT, v. a.** [ꝑꝛætan, ꝑꝛittan, Saxon; *spyta*, Icel. *spytter*, Danish.] To eject from the mouth.

The sea thrusts up her waves,
One after other, thicke and high, upon the groaning shores.
First in herself loud, but oppos'd with banks and rocks she roars,
And all her backe in bristles set, *spits* every way her fume. *Chapman*.

To **SPLIT, v. n.** To throw out spittle or moisture of the mouth.—*Spit* on your finger and thumb, and pinch the snuff till the candle goes out. *Swift*.

SPLIT, s. What is thrown from the mouth.
SPLIT, THE, a shoal of the Atlantic, near the coast of South Carolina; 15 miles south of Cape Fear. Lat. 33. 34. N. long. 78. 10. W.

SPLITAL, s. A charitable foundation. See **SPIITTLE**.
SPLITAL, a small town of Austrian Illyria, in Upper Carinthia, on the Liser, about a mile from the Drave. In 1797, the greatest part of this town was burnt by the French, but it has since been rebuilt; 6 miles east of Saxenburg, and 20 north-west of Villach.

To **SPLITCHCOCK, v. a.** To split an eel in two, longwise, and having laid on it the yolk of an egg with crumbs of bread, spice, sweet herbs, and parsley, to broil it.

No man lards salt pork with orange peel,
Or garnishes his lamb with *spitcheockt* eel. *King*.

SPLITCHCOCK, s. An eel spitcheocked.—Will you have some crayfish and a *spitcheocke*? *Decker*.

SPIITE, s. [*spijt*, Dutch; *despit*, French.] Malice; rancour; hate; malignity; malevolence.—This breeding rather *spite* than shame in her, or, if it were a shame, a shame not

of the fault, but of the repulse, she did thirst for a revenge.
Sidney.

Begone, ye critics, and restrain your *spite*,
Codrus writes on, and will for ever write. *Pope.*

SPITE of, or *In SPITE of*. Notwithstanding; in defiance
of. It is often used without any malignity of meaning.

I'll guard thee free,
And save thee in her *spite*. *Chapman.*

In *spite of* me I love, and see too late
My mother's pride must find my mother's fate. *Dryden.*

To *SPITE*, *v. a.* To mischief; to treat maliciously; to
vex; to thwart malignantly.

I'll sacrifice the lamb that I do love,
To *spite* a raven's heart within a dove. *Shakspeare.*

To fill with *spite*; to offend.—Darius *spited* at the magi,
endeavoured to abolish not only their learning but their
language. *Temple.*

SPITEFUL, *adj.* Malicious; malignant.—Contempt is
a thing made up of an undervaluing of a man, upon a belief
of his utter uselessness, and a *spiteful* endeavour to engage
the rest of the world in the same slight esteem of him.
South.

SPITEFULLY, *adv.* Maliciously; malignantly.
At last she *spitefully* was bent
To try their wisdom's full extent. *Swift.*

SPITEFULNESS, *s.* Malice; malignity; desire of vex-
ing.—It looks more like *spitefulness* and ill-nature, than a
diligent search after truth. *Keil.*

SPITHEAD, a noted roadstead for shipping in the
English Channel, situated between Portsmouth and the Isle
of Wight, directly facing Portsmouth harbour. It is about
20 miles in extent, and is said to be capable of holding
1000 vessels in great security. It is the usual rendezvous
of the British navy in time of war. The depth of water at low
tide is from 10 to 16 fathoms. It was here that took place
the unfortunate shipwreck of the Royal George, which
suddenly went to the bottom, with 600 persons on board,
including the Admiral Kempenfelt.

SPITHEAD CREEK, a river of the western territory of
America, which runs into the Ohio. Lat. 39. 56. N. long.
80. 46. W.

SPITTED, *adj.* Shot out into length.—Whether the
head of a deer, that by age is more *spitted*, may be brought
again to be more branched. *Bacon.*

SPITTER, *s.* One who puts meat on a spit; one who
spits with his mouth. *Huloet.*—A young deer. *Barret.*

SPITTLE, *s.* [corrupted from *hospital*, says Johnson.—
Mr. Gifford denies that *spittle* means generally an hospital
or almshouse; and says that, with our ancestors, it had an
appropriate signification, viz.: a lazar-house, a receptacle for
wretches in the leprosy, and other loathsome diseases, the
consequences of debauchery and vice.] It is still retained in
Scotland.

To the *spittle* go,
And from the powdering-tub of infamy
Fetch forth the lazar kite of Cressid's kind. *Shakspeare.*

SPITTLE, *s.* [ppact, Saxon.] Moisture of the mouth.
The saliva or *spittle* is an humour of eminent use. *Ray.*—
The *spittle* is an active liquor, immediately derived from the
arterial blood: it is saponaceous. *Arbuthnot.*

SPITTLE, a hamlet of England, in Cheshire; 5 miles
north-east of Great Neston.

SPITTELEGATE, a hamlet of England, in Lincolnshire,
adjacent to Grantham. Population 533.

SPITTLY, *adj.* Slimy; full of spittle. *Unused.*

SPITVENOM, *s.* Poison ejected from the mouth.—The
spitvenom of their poisoned hearts breaketh out to the annoy-
ance of others. *Hooker.*

SPITZ, a small town of Austria, on the Danube; 10
miles above Krems. It is built round a hill, the top of
which is planted with vines. Population 900.

SPITZBERGEN, or *EAST GREENLAND*, a group of
islands in the Northern Ocean, formerly supposed to make
part of the continent, and distinguished by the name of
East Greenland. They are situated between 76. 46. and
80. 30. N. lat. and between 9. and 20. E. long. This land
was discovered by Sir Hugh Willoughby, in the year 1553,
who called it Greenland; supposing it to be a part of the
western continent. In 1595, it was again visited by Wil-
liam Barentz and John Cornelius, two Dutchmen, who
pretended to be the original discoverers, and called the
country Spitzbergen, or Sharp Mountains, from the many
sharp pointed and rocky mountains with which it abounds.
They alleged that the coast discovered by Sir Hugh Wil-
loughby was some other country; which accordingly the
Hollanders delineated on their maps and charts by the name
of Willoughby Land; whereas in fact no such land ever
existed; and long before the voyage of these Dutchmen,
Stephen Barrows, an English shipmaster, had coasted along
a desolate country from Lat. 78. to 80. 11. N. which was
undoubtedly Spitzbergen. The sea in the neighbourhood
of Spitzbergen abounding in whales, this country has been
long the common resort of the whale fishing ships from
different countries. But, till the voyage of Captain Phipps
in 1773, the situation of the country was erroneously laid
down. It was imagined that the land stretched to the north-
ward as far as Lat. 82. N.; but Captain Phipps found the
most northerly point of land, called Seven Islands, not to
exceed 80. 30. N. lat. Towards the east he saw other lands
lying at a distance, so that Spitzbergen plainly appeared to
be surrounded by water on that side, and not joined to the
continent of Asia, as former navigators had supposed. The
north and west coasts also he explored, but was prevented
by the ice from sailing so far to the northward as he wished.
The coast appeared neither habitable nor accessible. It is
formed of high, barren, black rocks, without the least marks
of vegetation; in many places bare and pointed; in others
covered with snow, appearing even above the clouds. The
valleys between the high cliffs were filled with snow and ice.
“This prospect,” says Captain Phipps, “would have sug-
gested the idea of perpetual winter, had not the mildness of
the weather, the smooth water, bright sunshine, and constant
daylight, given a cheerfulness and novelty to the whole of
this romantic scene.” The current ran along this coast half
a knot an hour north. There is good anchorage in Schmee-
renburgh harbour, lying in Lat. 74. 44. N. Long. 9. 50.
45. E. in 13 fathoms, sandy bottom, not far from the shore,
and well sheltered from all winds. Close to this harbour is
an island called Amsterdam island, where the Dutch used
formerly to boil their whale-oil; and the remains of some
conveniency erected by them for that purpose are still visible.
The Dutch ships, excepting in time of war, still resort to
this place for the later season of the whale fishery. The
rocks about this place are chiefly a kind of marble or lime-
stone. No appearances of metals were observed, nor any
signs of ancient or modern volcanoes. No insects, or any
species of reptiles, were seen, not even the common earth-
worm. There were no springs or rivers; but great plenty
of water was produced from the snow which melted on the
mountains. In the valleys are found some plants, and some
curious birds. The foxes are like those of Greenland; the
bears are of a different species. On the coasts are found
whales, sea-dogs, sea-cows, and sea-lions, with other marine
and amphibious animals. These islands are totally uninhab-
ited, though it doth not appear but that human creatures
could subsist on them, notwithstanding their vicinity to the
pole. Eight English sailors, who were accidentally left
here by a whale-fishing ship, survived the winter, and were
brought home next season. The Dutch next attempted to
settle a colony on Amsterdam island above-mentioned; but
this attempt proved unsuccessful; all the people who were
settled in this desolate region having perished.

SPIXWORTH, a parish of England, in Norfolk; 4½
miles north-by-east of Norwich.

SPIZLIBERG, a very high mountain of the Alps, in the
Swiss

Swiss canton of Uri, the perpendicular height of which is 11,373 feet above the level of the sea.

SPLANCHNO'LOGY, [*splanchnologie*, Fr.; *σπλαγγα* and *λογος*, Gr.] A treatise on the viscera.

SPLACHNUM [from the Gr. *σπλαγγον*, *viscus*], in Botany, a genus of the class cryptogamia, order musci.—Generic Character. Capsule cylindrical, veil and receptacle very large; fringe with eight teeth. Male, a bud on a different plant; circular, terminating.

In the systema vegetabilium six species only are enumerated; in Dr. Withering's arrangement twelve, chiefly from Hedwig. Two species are figured by Withering:—*ampullaceum*, in English Botany, flora danica, Dillenius, Vaillant, Morison and Buxbaum:—*tenuis*, by Dickson. Formerly these were not distinguished from the bryums.

To SPLASH, *v. a.* [*plaska*, Swedish.] To daub with dirt in great quantities.

Then answer'd squire Morley, pray get a calash,
That in summer may burn, and in winter may splash.
Prior.

SPLASH, *s.* Wet or dirt thrown up from a puddle, or the like.

SPLASHY, *adj.* Full of dirty water; apt to daub.

To SPLAY, *v. a.* To dislocate or break a horse's shoulder bone. *Unused.*

To SPLAY, *v. a.* For *display*.

Each bush a bar, each spray a banner *splayed*,
Each house a fort, our passage to have stayed.
Mir. for Mag.

SPLAY, *adj.* Displayed; spread; turned outward.—Her face and her *splay* foot have made her accused for a witch. *Sidney.*

SPLA'FOOT, or SPLA'YFOOTED, *adj.* Having the foot turned outward.—Sure I met no *splea-footed* baker. *Machin.*

SPLA'YMOUTH, *s.* Mouth widened by design. *Unused.*

All authors to their own defects are blind:
Hadst thou but Janus-like a face behind,
To see the people when *splaymouths* they make,
To mark their fingers pointed at thy back,
Their tongues lol'd out a foot. *Dryden.*

SPLEEN, *s.* The milt; one of the viscera.

All envy'd; but the Thestyan brethren show'd
The least respect; and thus they vent their spleen aloud:
Lay down those honour'd spoils. *Dryden.*

A fit of anger.

Charge not in your spleen a noble person,
And spoil your nobler soul. *Shakspeare.*

Inconstancy; caprice.—A mad-brain rudesby, full of spleen. *Shakspeare.*—A sudden motion; a fit.

Brief as the lightning in the collied night,
That, in a spleen, unfolds both heaven and earth;
And, ere a man hath power to say, Behold!
The jaws of darkness do devour it up. *Shakspeare.*

Melancholy; hypochondriacal vapours.

The spleen with sullen vapours clouds the brain,
And binds the spirits in its heavy chain,
How'er the cause fantastic may appear,
Th' effect is real, and the pain sincere. *Blackmore.*

Spleen, vapours, and small-pox above them all. *Pope.*—Bodies chang'd to recent forms by spleen. *Pope.*—Whether idleness be the mother or the daughter of spleen? *Bp. Berkeley.*

SPLE'ENED, *adj.* Deprived of the spleen.—Animals *spleened* grow salacious. *Arbutnot.*

SPLE'ENFUL, *adj.* Angry; peevish; fretful; melancholy.

The commons, like an angry hive of bees
That want their leader, scatter up and down;
Myself have calm'd their spleenful mutiny. *Shakspeare.*
The cheerful soldiers, with new stores supply'd,
Now long to execute their spleenful will. *Dryden.*

If you drink tea upon a promontory that overhangs the sea, the whistling of the wind is better music to contented minds than the opera to the spleenful. *Pope.*

SPLE'ENISH. See SPLENISH.

SPLE'ENLESS, *adj.* Kind; gentle; mild. *Obsoletc.*
Mean time flew our ships, and streight we fetcht
The syren's isle; a spleenless wind so stretcht
Her wings to waft us, and so urg'd our keel. *Chapman.*

SPLE'ENWORT, *s.* Miltwaste. A plant. [*asplenion*, Lat.]—The leaves and fruit are like those of the fern; but the pinnulæ are eared at their basis. *Miller.*

Safe pass'd the gnome through this fantastick band,
A branch of healing spleenwort in his hand. *Pope.*

SPLE'ENY, *adj.* Angry; peevish;
The heart, and harbour'd thoughts of ill, make traitors,
Not spleeny speeches. *Beaumont and Fl.*

SPLE'NDENT, *adj.* [*splendens*, Lat.] Shining; glossy; having lustre.—Metallic substances may, by reason of their great density, reflect all the light incident upon them, and so be as opake and *splendent* as it is possible for any body to be. *Newton.*—Eminently conspicuous.

SPLE'NDID, *adj.* [*splendide*, Fr., *splendidus*, Lat.] Showy; magnificent; sumptuous; pompous.

Deep in a rich alcove the prince was laid,
And slept beneath the pompous colonnade:
Fast by his side Pisistratus lay spread,
In age his equal, on a splendid bed. *Pope.*

SPLE'NDIDLY, *adv.* Magnificently; sumptuously; pompously.

How he lives and eats,
How largely gives, how splendidly he treats. *Dryden.*

SPLE'NDOUR, *s.* [*splendor*, Latin.]—Lustre; power of shining.—*Splendour* hath a degree of whiteness, especially if there be a little repercussion; for a looking-glass, with the steel behind, looketh whiter than glass simple. *Bacon.*—Magnificence; pomp.

'Tis use alone that sanctifies expence,
And splendour borrows all her rays from sense. *Pope.*

SPLE'NDROUS, *adj.* Having splendour. *Not in use.*—Whose *splendrous* arms shone like a mighty flame. *Drayton.*

SPLENE'TICAL, or SPLE'NETIC, *adj.* [*splenetique*, French.] Troubled with the spleen; fretful; peevish.—I have received much benefit touching my *splenetical* infirmity. *Wotton.*—Horace purged himself from these *splenetic* reflections in odes and epodes, before he undertook his satyrs. *Dryden.*

SPLE'NETIC, *s.* A splenetic person.—This daughter silently lours; the other steals a kind look at you; a third is exactly well behaved; and a fourth a *splenetic*. *Tatler.*

SPLE'NICK, *adj.* [*splenique*, Fr., *splea*, Lat.] Belonging to the spleen.—The *splenick* vein hath divers cells opening into it near its extremities in human bodies; but in quadrupeds the cells open into the trunks of the *splenick* veins. *Ray.*

SPLE'NISH, *adj.* Fretful; peevish.—Luxury, pride, ambition, rebellion, murder, the common and known fruits of fiery and *spleenish* tempers. *Archd. Arnway.*

SPLE'NITIVE, *adj.* Hot; fiery; passionate. *Not in use.*

Take thy fingers from my throat;
For though I am not *splenetic* and rash,
Yet I have in me something dangerous. *Shakspeare.*

SPLENT,

SPLINT, *s.* [*spinella*, Ital.] A callous hard substance, or an insensible swelling, which breeds on or adheres to the shank-bone of a horse. *Farrier's Dict.*—A splint or splinter. See **SPLINT**.

To **SPLICE**, *v. a.* [*splissen*, Dutch; *plico*, Lat.] To join the two ends of a rope without a knot.

SPLINT, *s.* [*splinter*, Teut., and also *splenter*, and *spletter*, the same; from *spljten*, to split, to cleave. An old form of our word is *splent*.] A fragment of wood in general.—A thin piece of wood or other matter used by surgeons to hold the bone newly set in its place.—The ancients, after the seventh day, used *splints*, which not only kept the members steady, but straight; and of these some are made of tin, others of scabbard and wood, sowed up in linen cloths. *Wiseman*.

To **SPLINT**, *v. a.* To shiver; to tear asunder; to break into fragments. *Florio*.—To secure by splints.

The broken rancour of your high swoln hearts,
But lately *splinted*, knit, and join'd together,
Must gently be preserv'd, cherish'd, and kept. *Shakspeare*.

SPLINTER, *s.* [*splinter*, Teut.] A fragment of any thing broken with violence.—He was slain upon a course at tilt, one of the *splinters* of Montgomery's staff going in at his beaver. *Bacon*.—A thin piece of wood.—A plain Indian fan, used by the meaner sort, made of the small stringy parts of roots, spread out in a round flat form, and so bound together with a *splinter* hoop, and strengthened with small bars on both sides. *Grew*.

To **SPLINTER**, *v. a.* To shiver; to break into fragments.—To secure by splints; to support.—This broken joint entreat her to *splinter*, and this crack of your love shall grow stronger than it was before. *Shakspeare*.

To **SPLINTER**, *v. n.* To be broken into fragments; to be shivered.

To **SPLIT**, *v. a.* pret. and part. pass. *split*. [*splijten*, *splitten*, Teut., from the Icel. *splita*, to tear.] To cleave; to rive; to divide longitudinally in two.

Do't, and thou hast the one half of my heart
Do't not, thou *splitst* thine own. *Shakspeare*.

To divide; to part.—Their logic has appeared the mere art of wrangling, and their metaphysics the skill of *splitting* an hair, of distinguishing without a difference. *Watts*.—To dash and break on a rock.—God's desertion, as a full and violent wind, drives him in an instant, not to the harbour, but on the rock where he will be irrecoverably *split*. *Dec. of Chr. Picty*.—To divide; to break into discord.—In states notoriously irreligious, a secret and irresistible power *splits* their counsels, and smites their most refined policies with frustration and a curse. *South*.

To **SPLIT**, *v. n.* To burst in sunder; to crack; to suffer disruption.—A huge vessel of exceeding hard marble *split* asunder by congealed water. *Boyle*.—To burst with laughter.

Each had a gravity would make you *split*,
And shook his head at M—y as a wit. *Pope*.

To be broken against rocks.
After our ship did *split*,
When you, and the poor number sav'd with you,
Hung on our driving boat. *Shakspeare*.

SPLIT ROCK CREEK, a river of the United States, in Louisiana, which runs into the Missouri; 170 miles west of Mississippi.

SPLITTER, *s.* One who splits.
How should we rejoice, if, like Judas the first,
Those *splitters* of parsons in sunder should burst! *Swift*.

SPLUGEN, a petty village in the east of Switzerland, in the canton of the Grisons, remarkable as forming a station or pass on the usual road from the Grisons to Como, in Italy; 16 miles north-west of Chiavenna.

SPLUTTER, *s.* [perhaps a corruption of *sputter*.] Bustle; tumult. *A low word*.

VOL. XXIII. No. 1585.

To **SPLUTTER**, *v. n.* To speak hastily and confusedly.—A Dutchman came into the secretary's office, *spluttering* and making a great noise. *Carleton*.

SPODDEN, a small river of England, in Lancashire.
SPOFFORTH, a parish of England, West Riding of Yorkshire; 3 miles north-west of Wetherby. Population 2857.

To **SPOIL**, *v. a.* [*spolio*, Lat., *spolier*, Fr.] To seize by robbery; to take away by force.—Ye took joyfully the *spoiling* of your goods, knowing in yourselves that ye have in heaven an enduring substance. *Heb*.

This mount
With all his verdure *spoild*, and trees adrift. *Milton*.

To plunder; to strip of goods: with *of* before the thing taken.—Yielding themselves upon the Turk's faith, for the safety-guard of their liberty and goods, they were most injuriously *spoiled of* all that they had. *Knolles*.—To corrupt; to mar; to make useless. [This is properly *spill*, *pillan*, Sax.] Beware lest any man *spoil* you, through philosophy and vain deceit. *Col*.

To **SPOIL**, *v. n.* To practise robbery or plunder.—England was infested with robbers and outlaws, which, lurking in woods, used to break forth to rob and *spoil*. *Spenser*.—To grow useless; to be corrupted.—He that gathered a hundred bushels of acorns, or apples, had thereby a property in them: he was only to look that he used them before they *spoiled*, else he robbed others. *Locke*.

SPOIL, *s.* [*spolium*, Lat.] That which is taken by violence; that which is taken from any enemy; plunder; pilage; booty.

The cry of Talbot serves me for a sword;
For I have loaden me with many *spoils*,
Using no other weapon but his name. *Shakspeare*.

That which is gained by strength or effort.
But grant our heroes hopes long toil
And comprehensive genius crown,
Each science and each art his *spoil*,
Yet what reward, or what renown? *Bentley*.

That which is taken from another.
Gentle gales,
Fanning their odoriferous wings, dispense
Native perfumes, and whisper whence they stole
These balmy *spoils*. *Milton*.

The act of robbery; robbery; waste.
Go and speed!
Havock, and *spoil*, and ruin, are my gain. *Milton*.

Corruption; cause of corruption.—Company, villainous company, hath been the *spoil* of me. *Shakspeare*.—The slough; the cast-off skin of a serpent.—Snakes, the rather for the casting of their *spoil*, live till they be old. *Bacon*.

SPOILER, *s.* A robber; a plunderer; a pillager.
Such ruin of her manners Rome
Doth suffer now, as she's become
Both her own *spoiler* and own prey. *B. Jonson*.

One who mars or corrupts any thing.
SPOILFUL, *adj.* Wasteful; rapacious.
Having oft in battles vanquished
Those *spoilful* Picts, and swarming Easterlings,
Long time in peace his realm established. *Spenser*.

SPOKE, *s.* [ʃpac, ʃpaca, Sax.; *speiche*, Germ.; *spacche*, Teut.] The bar of a wheel that passes from the nave to the felly.

All you gods,
In general synod take away her power;
Break all the *spokes* and fellies of her wheel,
And bowl the round nave down the hill of heaven.
Shakspeare.

The spar of a ladder.—The *spooks* by which they scal'd
so high. *Lovelace*.

SPOKE. The preterite of *speak*.—They *spoke* best in the glory of their conquest. *Sprat.*

SPO'KEN. Participle passive of *speak*.—Would'st thou be *spoken* for to the king? *2 Kings.*

SPOKESMAN, s. One who speaks for another.—He shall be thy *spokesman* unto the people. *Exod.*

SPOLETO, a duchy in the central part of Italy, in the Ecclesiastical States, comprising the greatest part of the ancient Umbria, and containing 100,000 inhabitants.

SPOLETO, a town of the Ecclesiastical States, the capital of a duchy of the same name, situated on the side and summit of a hill, near the small river Mareggia. It is large, but far from proportionally populous, containing only between 6000 and 7000 inhabitants. The streets, from the uneven nature of the ground, are extremely steep, and, though the houses are in general well built, there is no edifice either public or private that has any claim to distinction. The buildings commonly noticed by travellers, are the cathedral and the castle: the former, occupying a commanding situation, presents a front of five Gothic arches, supported by Grecian pillars; the decorations of the interior display little taste; but from the terrace is enjoyed an extensive and beautiful view. The castle, situated on a high hill which overlooks the town, is a vast stone building, surrounded with a rampart. It is connected with the town by a bridge and aqueduct, thrown over a deep dell, and supported by arches of surprising height: the boldness of their construction has made them be attributed to the Romans, but they bear evident marks of a more recent erection. Spoleto is a place of great antiquity, and was in vain attacked by the Carthaginians, after their victory at the lake Thrasymene. Its chief antiquities are two of the town gates, the ruins of a theatre, and those of a temple. The only manufacture of this place is of hats; 15 miles south-south-east of Foligno, and 55 north-north-east of Rome. Lat. 42. 44. 50. N. long. 12. 35. 46. E.

To SPO'LIATE, v. a. [*spolio*, Lat.] To rob; to plunder.

SPOLIATION, s. [*spoliation*, Fr.; *spoliatio*, Lat.] The act of robbery or privation.—An ecclesiastical benefice is sometimes void *de jure et facto*, and sometimes *de facto*, and not *de jure*; as when a man suffers a *spoliation* by his own act. *Ayliffe.*

SPOLOUK, a village on the south coast of Java, near to which are a beautiful grotto, and hot mineral springs raising Fahrenheit's thermometer to 122° close by the side of the sea. The sultan of Mataram has several summer houses for bathing quarters, on the beach; 104 miles south of Samarang.

SPONDA'IC, or SPONDA'ICAL, adj. Belonging to a spondee; like a spondee.—Pythagoras caused the musician to change the tones; and so by a heavy, grave, *spondaical* music he presently appeased their fury. *Ferrand.*—The measure of time in pronouncing may be varied, so as very strongly to represent not only the modes of external action, but the quick or slow succession of ideas, and consequently the passions of the mind. This at least was the power of the *spondaick* and dactylic harmony. *Johnson.*

SPO'NDEE, s. [*spondée*, Fr.; *spondeus*, Lat.] A foot of two long syllables.—We see in the choice of the words the weight of the stone, and the striving to heave it up the mountain: Homer clogs the verse with *spondees*, and leaves the vowels open. *Broome.*

SPONDIAS [from the Gr. *σπονδα*, *libo*, comes *σπονδη*, *libatio*, *σπονδειον*, the vessel for libation, and *σπονδειον*, the material of libation, as wine, honey, milk, &c.], in Botany, a genus of the class decandria, order pentagynia, natural order of terebintaceæ (*Juss.*)—Generic Character. Calyx: perianth one-leafed, subcampanulate, small, five-cleft, coloured, deciduous. Corolla: petals five, oblong, flat, spreading. Stamina: filaments ten, awl-shaped, erect, shorter than the corolla, alternately longer. Anthers oblong. Pistil: germ ovate. Styles five, short, distant, erect. Stigmas obtuse. Pericarp: drupe oblong, large, marked with

five dots from the falling of the styles; ten-valved. Seed: nut ovate, woody, fibrous, five-cornered, five-celled; covered with a fleshy elastic aril.—*Essential Character.* Calyx five-toothed. Corolla five-petalled. Drupe with a five-celled nut.

1. *Spondias mombin*, purple hog-plum, or Spanish plum.—Leaves with the common petiole, compressed. The usual height of this tree is ten or twelve feet, and the stem is as large as a man's leg, sending out branches towards the top, covered with a gray bark; these are destitute of leaves for some months, and in the spring, before the leaves appear, many purple flowers come out from the side of the branches; these are succeeded by fruit like plums, having a luscious thin pulp, covering a large fibrous stone. The leaves which come out afterwards are unequally pinnate, with four or five pairs of leaflets, about an inch long, and half an inch broad.—Native of South America.

2. *Spondias myrobalanus*, yellow hog-plum, or Jamaica plum.—Petioles round, leaflets shining, acuminate. This rises to the height of thirty feet or more, sending out many crooked irregular branches, which are destitute of leaves for some months: the branches have a light-coloured bark, and unequally pinnate leaves, with four or six pairs of leaflets near two inches long, and an inch broad, having deep longitudinal veins. The flowers come out before the leaves appear; and are succeeded by yellow plums an inch or more in length, growing in a sort of raceme: they have large fibrous stones with a thin covering of flesh.—Native of all the Caribbee islands, and the neighbouring continent.

3. *Spondias mangifera*, or mango hog-plum.—Leaflets oblong, quite entire; panicle racemed.—Found in the East Indies.

4. *Spondias dulcis*, or sweet hog-plum.—Petioles round, six-paired; leaflets serrate, ribbed. This is a tall shady tree, with a handsome spreading head. Trunk thicker than a man's body, upright, fifty feet high, flowering before the time of leafing in September. Cultivated in the Society and Friendly Islands of the South Sea, especially in Otaheite. The golden fruit hangs in little nodding bunches, and is esteemed one of the most tasteful and wholesome; it has almost the same flavour with the ananas, and not only assuages thirst, but is given to the sick without distinction.

Propagation and Culture.—These plants grow easily from cuttings planted in pots filled with rich light earth, and plunged into a moderate hot-bed, covering them down either with bell or hand glasses, to exclude the external air, and shading them from the sun. The best time for this is in the spring, before the plants put out their leaves. They may also be propagated by the stones, if they are brought over fresh.

SPONDON, a parish of England, in Derbyshire; 3 miles east-by-south of Derby. Population 943.

SPONDYLE, s. [*σπονδυλος*, Gr.; *spondile*, Fr.; *spondylus*, Lat.] A vertebra; a joint of the spine.—It hath for the spine or back-bone a cartilaginous substance, without any *spondyles*, processes, or protuberances. *Brown.*

SPONDYLI [*σπονδυλοι*, Gr.], in Antiquity, pellets of brass used in giving sentence, before the *κναμοι*, or beans, came into use.

SPONDYLOLITHOS, a name given by authors to a stone found in the country of Tyrol, and elsewhere, resembling the vertebrae of an animal. It is in reality no other than the vertebrae of some sea-fish petrified, as is common with us.

SPONDYLUS [*σπονδυλος*, Gr.], a term anciently used for a vertebra of the spina dorsa.

SPONDYLUS, in Natural History, a genus of the class and order vermes testacea, of which the Generic Character is:—Animal a tethys; shell hard, solid, with unequal valves; one of the valves is convex, the other rather flat; hinge with two recurved teeth, separated by a small hollow. There are four.

1. *Spondylus gædaropus*.—The shell of this species is slightly eared and spinous.—It inhabits the Mediterranean, the

the Indian, and other seas, and is found in almost infinite varieties, as to size, thickness and colours; sometimes entirely purple, orange, white or bloom-colour; sometimes marked with various streaks, spots, dots or bands.

2. *Spondylus regius*.—Shell without ears, and spinous. There are four varieties.—One inhabits India, and one is found near Malta, which is very rare. The shell is subglobular; within it is white; without purplish, scarlet, flame-coloured, orange or white; the spines are usually two inches long; it is sometimes cylindrical, with a crenate margin.

3. *Spondylus plicatus*.—Shell without ears or spines, plaited.—It is found in India, some parts of America, and in the Mediterranean. The shell is white, with yellowish reddish, brownish, or violet lines and veins.

4. *Spondylus citreus*.—Shell oblong, plaited, spinous. The shell is imbricate, about two inches long, and nearly as broad; it is of a citron-colour, or red, with an orange inner margin.

SPONGE, *s.* [pongea, Sax.] A soft porous substance, supposed by some the nidus of animals. It is remarkable for sucking up water. It is often written *spunge*. See SPONGIA.—Great officers are like *sponges*: they suck till they are full, and, when they come once to be squeezed, their very heart's blood come away. *L'Estrange*.

To SPONGE, *v. a.* To blot; to wipe away as with a sponge.—Except between the words of translation and the mind of Scripture itself there be contradiction, very little difference should not seem an intolerable blemish necessarily to be *spunged* out. *Hooker*.—To cleanse with a sponge: applied to the act of cleansing cannon.—To drain; to squeeze; to harass by extortion.—How came such multitudes of our nation, at the beginning of that monstrous rebellion in the year 1641, to be *spunged* of their plate and money? *South*.—To gain by mean arts.

Here wont the dean, when he's to seek,
To *spunge* a breakfast once a week.

Swift.

To SPONGE, *v. n.* To suck in as a sponge; to live by mean arts; to hang on others for maintenance.—The ant lives upon her own honesty; whereas the fly is an intruder, and a common smell-feast, that *spunges* upon other people's trenchers. *L'Estrange*.

SPONGER, *s.* One who hangs for a maintenance on others.—A generous rich man, that kept a splendid and open table, would try which were friends, and which only trencher-flies and *spongers*. *L'Estrange*.

SPONGIA, the Spunge, in Natural History, a genus of the class and order vermes zoophytes. The Generic Character is as follows:—Animal fixed, flexile, torpid, of various forms, composed either of reticulated fibres, or masses of small spines, interwoven together, and clothed with a gelatinous flesh, full of small mouths on its surface, by which it absorbs and rejects water. There are about fifty species, of which nine or ten belong to this country.

The sponges consist of a ramified mass of capillary tubes, that were formerly supposed to be the production of a species of worms, which are often found within these cavities; an idea, however, which is now generally exploded. Others have imagined them to be only vegetable productions: that they are, however, possessed of animality, appears evident, from the circumstance of their pores alternately contracting and dilating, and from their even shrinking, in some degree, from the touch, when examined in their native situations. Their structure enables them, it is thought, to absorb nourishment from the surrounding fluid. Sponges are the most torpid of all the zoophytes. The individuals differ very much from each other in form and structure. Some of them, as the *Spongia officinalis*, or common sponge, are of no determinate figure, but others are cup-shaped, tubular, &c.; irregularly formed, porous, rough, lobed, and woolly. These are very numerous. We give a few of the most remarkable.

1. *Spongia ventilabrum*.—Fan-shaped, regular, soft, with reticulate woody veins, covered with pores like those of a

honey-comb. It is found in the Norwegian and American seas; about six inches high, and five broad: it exactly resembles a small gorgonia flabellum in its shape and ramifications, except that the pores are angular, and the substance is spongy.

2. *Spongia flabelliformis*.—Fan-shaped, orbicular, cartilaginous, with square articulate fibres.—This species inhabits the Indian and Red seas. It is from six to eight inches in height, and four or five broad, and resembles the *ventilabrum*.

3. *Spongia infundibuliformis*.—This is funnel formed, flexile, with the surface more or less roughened.—It inhabits the Mediterranean and Indian seas, adhering to rocks, and is from six to eighteen inches in diameter; in colour it is a pale brown, and less tenacious than common sponge.

4. *Spongia fistularis*.—Tubular, simple, brittle, and growing gradually larger.—It inhabits the Indian Ocean, is from three to four feet long: when dry it is blackish fulvous.

5. *Spongia coronata*.—Minute, consisting of a single tube, and crowned at the tip with a ray of spines.—This is found in our own country, on the Sussex coast: its colour is of a pale yellow; the rays that compose the crown are of a bright pearl yellow, hollow, and open at the top; and when seen through a magnifier, it appears covered with little rising points.

6. *Spongia officinalis*.—This species is irregularly formed, porous, tough, lobed, woolly. It is elastic, and very full of holes; it grows into irregular lobes of a woolly consistence, and generally adheres, by a very broad base, to the rocks.—It is chiefly found about the islands in the Mediterranean, where it forms a considerable article of commerce. A variety of small marine animals pierce and gnaw into its irregular winding cavities. These appear on the outside, by large holes raised higher than the rest. When it is cut perpendicularly, the interior parts are seen to consist of small tubes, which are divided into branches as they appear on the surface. These tubes, which are composed of reticulated fibres, extend themselves every way, by this means increasing the surface of the sponge, and ending at the outside in an infinite number of small circular holes, which are the proper mouths of the animal. Each of these holes is surrounded by a few erect pointed fibres, that appear as if woven in the form of little spines. The tubes, with their ramifications, in the living state of the sponge, are clothed with a gelatinous substance, properly called the flesh of the animal. When the sponge is first taken, it has a strong fishy smell, and the fishermen take great care in making it perfectly clean, in order to prevent its growing putrid.

7. *Spongia oculata*.—Porous, soft, and very much branched, the branches a little compressed, erect, and often uniting together. This inhabits the British seas. It is from five to ten inches high, of a pale yellow colour; the branches end obtusely.

8. *Spongia palmata*.—This species is, as its name imports, palmate, with finger-like divisions round the surface; the pores are a little prominent, and irregularly disposed.—It inhabits the Sussex coast; it is of a reddish colour, inclining to yellow, with a soft woolly substance, like *spongia oculata*.

9. *Spongia prolifera*.—Flat, with numerous palmate branches, ending in finger-like divisions.—It is found in the North American seas; grows in large bunches, is about six inches high, very porous, reticulate within, and full of minute spines on the outside.

10. *Spongia botrycides*.—This is a very tender species, is branched, and covered with bunches of ovate tubercles, open at the top.—It inhabits the British coasts; is of a bright shining white colour; the bunches are made up of oblong, oval tubercles, like grapes, open at the end. The surface, when seen through magnifiers of considerable power, seems covered with masses of three-rayed spinous stars.

11. *Spongia panicea*.—Irregularly formed, whitish, soft, very tender, and full of minute pores.—It inhabits the seas between this country and Holland, intermixed with fuci, and other

other marine productions; and is thought, from the similarity which it bears to the spongia tomentosa, to be a variety of that species.

12. *Spongia fulva*.—This species is irregularly formed, but slightly branched, fulvous, and it is very rigid.—It inhabits the American ocean; is gelatinous, and brown between the fibres.

13. *Spongia tabularia*.—Compressed, sessile, a little rigid and yellowish, with small longitudinal tubes.—This also is an American species, generally seated on rocks, frequently blackish within.

14. *Spongia fibrillosa*.—This species is irregularly shaped, a little flattened and tender, with divergent, crowded, interwoven fibres, and scattered toothed pores.—It inhabits the Indian ocean, is grey, soft, fan-shaped, or divided, or caulescent.

15. *Spongia fasciculata*.—This is rigid, sub-globular, composed of fibrous, prismatic, branched, fastigate bunches.—This is found in the Mediterranean sea; is pale, fulvous, or yellowish-grey.

16. *Spongia coalita*.—This is very much branched, soft, tender, yellow; the branches are a little compressed.—It inhabits the North seas.

17. *Spongia lacustris*.—Creeping, brittle, with erect, round, obtuse branches.—It is found at the bottom of lakes in England and Sweden, covered with scattered pores, in which are sometimes found, during autumn, small blueish shining globules.

18. *Spongia pulviatilis*.—Green, erect, fragile, of many irregular branches.—It inhabits the fresh waters of this country, Prussia, and other parts of Europe. It is of a dull green, with hardly the appearance of animal life, of a fishy smell, and with the pores full of green, gelatinous granulations; it very much resembles the last.

SPO'NGINESS, *s.* Softness and fulness of cavities like a sponge.—The *sponginess* of it [wood] would suck up the blood. *Fuller*.

SPO'NGIOUS, *adj.* [*spongieux*, Fr.] Full of small cavities like a sponge.—All thick bones are hollow or *spongieous*, and contain an oleaginous substance in little vesicles, which, by the heat of the body, is exhaled through these bones to supply their fibres. *Cheyne*.

SPO'NGY, *adj.* Soft and full of small interstitial holes.—The lungs are the most *spongy* part of the body, and therefore ablest to contract and dilate itself. *Bacon*.—Wet; drenched; soaked; full like a sponge

When their drench'd natures lie as in a death,
What cannot you and I perform upon
Th' unguarded Duncan? What not put upon
His *spongy* officers who shall bear the guilt? *Shakspeare*.

Having the quality of imbibing.

SPONK, *s.* A word in Edinburgh which denotes a match, or any thing dipt in sulphur that takes fire: as, Any *sponks* will ye buy? *Touchwood*.

SPO'NSAL, *adj.* [*sponsalis*, Lat.] Relating to marriage.

SPO'NSION, *s.* [*sponsio*, Lat.] The act of becoming a surety.—This is a great and weighty *sponsion*. *Napleton*.

SPO'NSOR, *s.* [Latin.] A surety; one who makes a promise or gives security for another.

The rash hermit, who with impious pray'r
Had been the *sponsor* of another's care. *Harte*.

SPONTANEITY, *s.* [*spontaneitas*, school Lat.; *spontanéité*, Fr., from *spontaneous*.] Voluntariness; willingness; accord un-compelled.—Necessity and *spontaneity* may sometimes meet together, so may *spontaneity* and liberty; but real necessity and true liberty can never. *Bramhall* against *Hobbes*.

SPONTA'NEOUS, *adj.* [*spontanée*, Fr.; from *sponte*, Lat.] Voluntary; not compelled; acting without compulsion or restraint; acting of itself; acting of its own accord.—Many analogical motions in animals, though I cannot call them voluntary, yet I see them *spontaneous*: I have reason to conclude, that these are not simply mechanical. *Hale*.

SPONTA'NEOUSLY, *adv.* Voluntarily; of its own accord.—Whey turns *spontaneously* acid, and the curd into cheese as hard as a stone. *Arbuthnot*.

SPONTA'NEOUSNESS, *s.* Voluntariness; freedom of will; accord unforced.—The sagacities and instincts of brutes, the *spontaneousness* of many of their animal motions, are not explicable without supposing some active determinate power connexed to and inherent in their spirits, of a higher extraction than the bare natural modifications of matter. *Hale*.

SPONTO'ON, [*esponton*, French.] A military weapon, a kind of half pike, or halberd.—Says Johnson, in a tone of admiration, How the little fellow brandished his *spontoon*! There is nothing in it, replied Goldsmith, starting up with impatience; Give me a *spontoon*; I can do it as well myself. *Murphy*.

SPOOL, *s.* [*spule*, German; *spohl*, Dutch.] A small piece of cane or reed, with a knot at each end; or a piece of wood turned in that form to wind yarn upon; a quill.

To SPOOM, *v. n.* [Probably from *spume*, or *foam*, as a ship driven with violence spumes, or raises a foam.] To go on swiftly; a sea term.

When virtue *spooms* before a prosperous gale,
My heaving wishes help to fill the sail. *Dryden*.

SPOON, *s.* [*spaen*, Dutch; *spone*, Danish; *sponn*, Icelandic.] A concave vessel with a handle, used in eating liquids.

Or o'er cold coffee trifle with the *spoon*,
Count the slow clock, and dine exact at noon. *Pope*.

To SPOON, *v. n.* In sea language, is when a ship being under sail in a storm cannot bear it, but is obliged to put right before the wind. *Bailey*.

SPOON RIVER, a river of the United States, which, after a course of 100 miles, falls into the Illinois.

SPO'ONBILL, *s.* A bird. See **PLATEA**.—The shoveller, or *spoonbill*; the former name the more proper, the end of the bill being broad like a shovel; but not concave like a spoon, but perfectly flat. *Grew*. *Mus*.

SPO'ONFUL, *s.* As much as is generally taken at once in a spoon.—A medical spoonful is half an ounce.—Prescribe him, before he do use the receipt, that he take such a pill or a *spoonful* of liquor. *Bacon*.—Any small quantity of liquid.—Surely the choice and measure of the materials of which the whole body is composed, and what we take daily by pounds, is at least of as much importance as what we take seldom, and only by grains and *spoonfuls*. *Arbuthnot*.

SPO'ON-MEAT, *s.* Liquid food; nourishment taken with a spoon.—We prescribed a slender diet, allowing only *spoon-meats*. *Wiseman*.

Wretched

Are mortals born to sleep their lives away!
Go back to what thy infancy began,
Eat pap and *spoon-meat*; for thy gewgaws cry,
Be sullen, and refuse the lullaby. *Dryden*.

SPO'ON-WORT, *s.* Scurvy-grass.
Spoon-wort was there, scorbutic to supply,
And centaury to clear the jaundic'd eye. *Harte*.

SPORADES, in Astronomy, a name which the ancients gave to such stars as were not included in any constellation.

SPORADES, the name of one of the ancient divisions, of the islands of the Grecian archipelago, comprising those scattered irregularly along the shores of Europe and Asia, in contradistinction to the Cyclades, which were grouped circularly around Delos.

SPORA'DICAL, *adj.* [*σποραδικος*, Gr.; *sporadique*, Fr.] Opposed to epidemical; in medicine.—A *sporadical* disease is—what in a particular season affects but few people. *Arbuthnot*.

SPORLE, a parish of England, in Norfolk; 2½ miles north-east of Swaffham. Population 576.

SPORLING'S ISLAND, a small island near the coast of New Zealand, a little to the north-east of Gable End Foreland.

SPORLIVOI,

SPORLIVOLI, Nos, a cape on the south coast of Nova Zembla. Lat. 70. 30. N. long. 60. 34. E.

SPORT, *s.* [*spott*, a make-game, Icelandic.] Play; diversion; game; frolic and tumultuous merriment.

As flies to wanton boys, are we to the gods;
They kill us for their sport. *Shakspeare.*

As a mad man who casteth fire-brands, arrows and death; so is the man that deceiveth his neighbour, and saith, Am not I in sport? *Prov.*—The discourse of fools is irksome, and their sport is in the wantonness of sin. *Eccles.*—Mock; contemptuous mirth.—If I suspect without cause, why then make sport at me; then let me be your jest. *Shakspeare.*—That with which one plays.

Each on his rock transfix'd, the sport and prey
Of wracking whirlwinds. *Milton.*

Commit not thy prophetic mind
To flitting leaves, the sport of every wind,
Lest they disperse in air. *Dryden.*

Some grave their wrongs on marble, he more just
Stoop'd down serene, and wrote them on the dust,
Tro'd under foot, the sport of every wind
Swept from the earth, and blotted from his mind.
Their secret in the grave he bade them lie,
And griev'd they could not 'scape th' Almighty's eye.
Dr. Madden.

Play; idle gingle.—An author who should introduce such a sport of words upon our stage, would meet with small applause. *Broome.*—Diversion of the field, as of fowling, hunting, fishing.

Now for our mountain sport, up to yon hill,
Your legs are young. *Shakspeare.*

To SPORT, *v. a.* To divert; to make merry. It is used only with the reciprocal pronoun.—Against whom do ye sport yourselves? against whom make ye a wide mouth, and draw out the tongue? *Isa.*—What pretty stories these are for a man of his seriousness to sport himself withal! *Atterbury.*—To represent by any kind of play.

Now sporting on thy lyre the love of youth,
Now virtuous age and venerable truth;
Expressing justly Sappho's wanton art
Of odes, and Pindar's more majestic part. *Dryden.*

To SPORT, *v. n.* To play; to frolic; to game; to wanton.

They, sporting with quick glance,
Shew to the sun their wav'd coats dropt with gold. *Milton.*

To trifle.—If any man turn religion into raillery, by bold jests, he renders himself ridiculous, because he sports with his own life. *Tillotson.*

SPORTER, *s.* One who sports.

SPO'RTFUL, *adj.* Merry; frolic; wanton; acting in jest.

How with a sportful malice it was follow'd,
May rather pluck on laughter than revenge. *Shakspeare.*

Ludicrous; done in jest.
Behold your own Ascanius, while he said,
He drew his glittering helmet from his head,
In which the youth to sportful arms he led. *Dryden.*

SPO'RTFULLY, *adv.* Wantonly; merrily.—There is nothing more surprising in its own nature than to see or hear a serious thing sportfully represented. *Scott.*

SPO'RTFULNESS, *s.* Wantonness; play; merriment; frolic.—The otter got out of the river, and inweeded himself so, as the ladies lost the further marking of his sportfulness. *Sidney.*—When sadness dejects me, either I countermine it with another sadness, or I kindle squibs about me again, and fly into sportfulness and company. *Donne.*

SPO'RTINGLY, *adv.* In jest; in sport.—The question you there put, you do it I suppose but sportingly. *Hammond.*

SPORTIVE, *adj.* Gay; merry; frolic; wanton; playful; ludicrous.

VOL. XXIII. No. 1585.

I am not in a sportive humour now;
Tell me, and dally not, where is the money? *Shakspeare.*

SPO'RTIVENESS, *s.* Gaiety; play; wantonness.—Shall I conclude her to be simple, that has her time to begin, or refuse sportiveness as freely as I have? *Walton.*

SPO'RTLESS, *adj.* Joyless; sad.
Her weeping eyes in pearly dew she steeps,
Casting what sportless nights she ever led. *P. Fletcher.*

SPO'RTSMAN. One who pursues the recreations of the field.—Manilius lets us know the pagan hunters had Meleager for their patron, as the Christians have their St. Hubert: he speaks of the constellation which makes a good sportsman. *Addison.*

SPO'RTULA, or SPO'RTILLA, a dole, or largess, either of meat or money, given by princes, or great men, to the people or poor.

The sportula was properly the pannier or basket in which the meat was brought, or with which the poor went to beg it; thence the word was transferred to the meat itself, and thence to money sometimes given in lieu of it.

SPO'RTULARY, *adj.* [from *sportulare*, low Lat.] Subsisting on alms or charitable contributions.—These sportulary preachers are fain to soothe up their many masters, and are so engaged with the fear of a starving displeasure, that they dare not be free in the reprehension of the daring sins of their uncertain benefactors. *Bp. Hall.*

SPO'RTULE, *s.* [*sportule*, Fr.; *sportula*, Lat.] An alms; a dole.—The bishops, who consecrated the ground, had a spill or sportule from the credulous laity. *Ayliffe.*

SPOT, *s.* [*spette*, Danish; *spotte*, Flemish; *spiut*, Su. Goth. from *spotta*, spuer, to spit, according to Serenius; and so Mr. H. Tooke considers our spot as formed from the Sax. *ƿrittan*, to spit, but this is very obscure.] A blot; a mark made by discoloration.

This three years day, these eyes, though clear
To outward view of blemish or of spot,
Bereft of sight, their seeing have forgot. *Milton.*

A taint; a disgrace; a reproach; a fault.
Yet Chloe sure was form'd without a spot,
'Tis true, but something in her was forgot. *Pope.*

A small extent of place.—He could make two ears of corn grow upon a spot of ground where only one grew before, would deserve better of mankind than the whole race of politicians. *Swift.*—Any particular place.

I would be busy in the world, and learn,
Not like a coarse and useless dunghill weed,
Fix'd to one spot, and rot just as I grow. *Otway.*

A kind of pigeon.
Upon the SPOT. Immediately; without changing place. [*Sur le champ.*]—It was determined upon the spot, according as the oratory on either side prevailed. *Swift.*

To SPOT, *v. a.* To mark with discoloration; to maculate.

But serpents now more amity maintain;
From spotted skins the leopard does refrain;
No weaker lion's by a stronger slain. *Tate.*

To patch by way of ornament.—I counted the patches on both sides, and found the tory patches to be about twenty stronger than the whig; but next morning the whole puppet-show was filled with faces, spotted after the whiggish manner. *Addison.*—To corrupt; to disgrace; to taint.

This vow receive, this vow of God maintain,
My virgin life, no spotted thoughts shall stain. *Sidney.*

SPOTICO, a small island in the Grecian archipelago, of an irregular form, about four miles long, and from one to two broad; 6 miles west-south-west of Paros. Lat. 36. 59. N. long. 25. 12. E.

SPOTLAND, an extensive township of England, in Lancashire; 3 miles north-by-west of Rochdale. Population 10,968.

SPOTLESS, *adj.* Free from spots.—Free from reproach or impurity; immaculate; pure; untainted.

So much fairer,

And *spotless* shall mine innocence arise,
When the king knows my truth.

Shakspeare.

SPO'TLESSNESS, *s.* State or quality of being spotless.—Lord, if thou look for a *spotlessness*, whom wilt thou look upon. *Donne, Dev.*

SPOTSWOOD, a village of the United States, in Middlesex county, New Jersey. It contains an Episcopal church, and upwards of 30 houses; 9 miles south-east of Brunswick.

SPOTSYLVANIA, a county of the United States, in Virginia, bounded north by the Rappahannock, south-east by Caroline county, south-south-west by Hanover and Louisa counties, and north-west by Orange county. Population 13,296, including 7135 slaves.

SPOTT, a parish and village of Scotland, in East-Lothian, about 10 miles long and 5 broad. The village contains about 180 inhabitants, and is 5 miles from Dunbar. Population 561.

SPOTTED ISLAND, an island in the North Atlantic ocean, on the east coast of Labrador. Lat. 53. 30. N. long. 55. 20. W.

SPO'TTER, *s.* One that spots; one that maculates.

SPO'TTINESS, *s.* State or quality of being spotty. *Unused.*

SPOTTISWOODE (John), a prelate and ecclesiastical historian of Scotland, descended from an ancient family in that country, was born in 1565. His father, who was a minister of Calder, sent him to the university of Glasgow to be educated for the church; and his proficiency in his studies was such, that at the age of eighteen he was thought to be qualified to be his father's successor. When Lodowick, duke of Lenox, was sent, in 1601, on an embassy to France, for the purpose of confirming the ancient amity between the two countries, Spottiswoode, with the hope of conciliating the two nations, accompanied him as chaplain, and returned with him to England. His reputation was at that time so high, that, on the accession of king James to the crown of England in 1603, he was one of the persons appointed to attend his majesty to his newly acquired kingdom; and in the same year he was promoted to the archbishopric of Glasgow, and nominated a privy-counsellor for Scotland. It was the favourite object of James to assimilate as much as possible the church of Scotland to the model of that of England; and archbishop Spottiswoode was very eager in promoting this intention, and is said to have made fifty journies to London on that account. Having held the see of Glasgow eleven years, he was translated, in 1615, to that of St. Andrews, the metropolitan of Scotland; and he presided at various assemblies for the restoration of the episcopal form of government. He continued in high favour with king James during his whole reign; and Charles I., after his accession, was crowned by him in the abbey church of Holyrood House. In 1635 he was appointed chancellor of Scotland. When the civil commotions broke out in that country in 1639, the archbishop withdrew to England, where he died, and was interred in Westminster Abbey. He was author of "A History of the Church of Scotland," beginning with the year 203, and continued to the end of the reign of James VI., which was published in London in 1655. This work was undertaken at the command of king James, who, when Spottiswoode told him some passages might bear hard on the memory of his mother, said, "Write the truth, and spare not." Spottiswoode was also the author of "Refutatio Libelli de Regimine Ecclesiæ Scoticanæ," written in defence of the ecclesiastical establishment of Scotland.

SPO'TTY, *adj.* Full of spots: maculated.

The moon whose orb

Through optick glass the Tuscan artist views
At evening from the top of Fesole,
Or in Valdarno, to descry new lands,
Rivers or mountains on her *spotty* globe.

Milton.

SPOU'SAGE, *s.* Act of espousing.—In the old manual

for the use of Salisbury, before the minister proceeds to the marriage, he is directed to ask the woman's dowry, viz. the tokens of *spousage*. *Wheatley.*

SPOU'SAL, *adj.* Nuptial; matrimonial; conjugal; conubial; bridal.

Sleep'st thou, careless of the nuptial day?

Thy *spousal* ornament neglected lies;

Arise, prepare the bridal train, arise.

Pope.

SPOU'SAL, *s.* [*espousailles*, Fr., *sponsalia*, Lat.] Marriage nuptials.

The *spousals* of Hippolita the queen,

What tilts and tourneys at the feast were seen. *Dryden.*

SPOUSE, *s.* [*sponsa*, *sponsus*, Lat., *espouse*, Fr.] We had formerly like the Latins, the masculine and feminine distinction of this word; *spousess* being the wife, and *spouse* the husband. Wickliffe uses *spousess*, and it continued to be used in the seventeenth century: "Commanding her his *spousesse* to write to a certaine king." Sheldon, *Mir. of Antichr.* 1616, p. 304.] One joined in marriage; a husband or wife.

She is of good esteem;

Beside so qualified as may beseem

The *spouse* of any noble gentleman:

Shakspeare.

At once farewell, O faithful *spouse!* they said;

At once the encroaching rinds their closing lips invade.

Dryden.

To **SPOUSE**, *v. a.* To espouse; to wed; to join together as in matrimony.

The world the temple was, the priest a king,

The *spoused* pair two realms, the sea the ring. *B. Jonson.*

SPOU'SELESS, *adj.* Wanting a husband or wife.

To tempt the *spouseless* queen with am'rous wiles,

Resort the nobles from the neighb'ring isles. *Pope.*

SPOUT, *s.* [*spuyt*, Teut.] A pipe, or mouth of a pipe or vessel out of which any thing is poured.—In whales that breathe, lest the water should get unto the lungs, an ejection thereof is contrived by a fistula or *spout* at the head. *Brown.*—Water falling in a body; a cataract, such as is seen in the hot climates when clouds sometimes discharge all their water at once.

Not the dreaded *spout*

Which shipmen do the hurricano call,
Constring'd in mass by the almighty sun,
Shall dizzy with more clamour Neptune's ear
In his descent than shall my prompted sword
Falling on Diomedes.

Shakspeare.

To **SPOUT**, *v. a.* [*spuyten*, Teut.] To pour with violence, or in a collected body, as from a spout.

Next on his belly floats the mighty whale;

He twists his back, and rears his threatening tail;

He *spouts* the tide.

Creech.

To pour out words with affected grandeur; to mouth.—Pray, *spout* some French, son. *Beaum. and Fl.*

To **SPOUT**, *v. n.* To issue as from a spout.—They laid them down hard by the murmuring music of certain waters, which *spouted* out of the side of the hills. *Sidney.*

SPRACK. See **SPRAG**.

SPRAG, *adj.* Vigorous; spritely. *Obsolete.*—A good *sprag* memory. *Shakspeare.*

SPRAG, *s.* A young salmon. *North.*

To **SPRAIN**, *v. a.* [Referred by Serenius to the Swedish *spraenga*, to tear asunder: *spraenga* en haest; to over-ride a horse, to lame him by riding him beyond his strength; and hence, I suppose, our *springhalt*, the lameness of a horse.

Todd.]—To stretch the ligaments of a joint without dislocation of the bones.

Should the big last extend the shoe too wide,

The sudden turn may stretch the swelling vein,

Thy crackling joint unhinge, or ancle *sprain*.

Gay.

SPRAIN, *s.* Extension of ligaments without dislocation of

of the joint.—I was in pain, and thought it was with some *sprain* at tennis. *Temple*.

SPRAINTS, *s.* The dung of an otter. *Johnson*.

SPRANG, The preterite of *spring*.—Mankind *sprang* from one common original; whence this tradition would be universally diffused. *Tillotson*.

SPRANG, a village of the Netherlands, in South Holland, with 1100 inhabitants.

SPRANGER (Bartholomew), was the son of Joachim Spranger, a merchant of eminence at Antwerp, and was born there in 1546. As he exhibited an inclination for painting, he was placed as a disciple with John Madyn, a painter of some reputation at Haerlem, and afterwards with Francis Mostaert. He then went to Parma and studied, under Bernardino Gatti, who had been a disciple of Correggio. He thence went to Rome, where the cardinal Farnese favoured him with his patronage, and engaged him to paint, in the Villa Caprarola, several landscapes in fresco. By the cardinal he was introduced to the pope, Pius V., who appointed him his painter, and gave him apartments in the Palazzo Belvidere. His first work for his holiness was a picture of the Last Judgment, a composition of five hundred figures, painted upon a copper-plate six feet high. This picture is said to have taken him three years to complete, and to have been finished with great care; and in consequence of its being highly esteemed by the pope, it was placed upon his tomb, after his decease.

The renown of Spranger having reached the court of Vienna, to which he was invited there by the emperor Maximilian II. in 1575, and appointed his principal painter. On that emperor's death in the following year, his successor, Rodolphus II., continued to shew the same favour to Spranger, and engaged him in several works of importance both at Vienna and at Prague; respecting him highly, not only for his abilities as a painter, but also for his literary acquirements, and other accomplishments. In 1588 he was ennobled by his imperial majesty, who honoured him by placing round his neck, with his own hands, a chain of gold, with a medal attached to it. Spranger died at Prague, in 1623, aged 77.

The style of this painter is that which was built upon the defects of Michael Angelo, or rather in the perversion of his style, by a crude and indigested adoption of its most prominent character, without the judicious taste and feeling in which it originated. It was consequently extravagant and bombastic, presenting inflated muscles, and knobby excrescences for bones, redeemed only in some eyes by a lively fancy, an agreeable facility of execution, and a pleasing colour.

SPRAT, *s.* [*sprot*, Dutch.] A small sea-fish. See CLUPIA.

So oft in feasts with costly changes clad,
To crammed maws a *sprat* new stomach brings. *Sidney*.

SPRAT (Thomas), bishop of Rochester, a writer of considerable eminence in the 17th century, was born in 1636 at Tallaton, in Devonshire, where his father was a clergyman. He received his academical education at Wadham college, Oxford, of which Dr. Wilkins was then warden, under whom he acquired a proficiency in mathematical knowledge. In 1657 he was elected a fellow of his college; and on the death of Oliver Cromwell, he gave a specimen of his poetical talents in an "Ode to the happy Memory of the late Lord Protector," addressed to Dr. Wilkins. This ode was followed by one on the "Plague of Athens," which, as well as the former, afforded proof of a warmth and readiness of conception. At the Restoration, like many others, he atoned for his former delinquency by zealous loyalty, and was made chaplain to the duke of Buckingham, who was his zealous friend and patron. He was chosen a member of the Royal Society; and, in 1667, Sprat published the history of its foundation; and obtained a high reputation for the elegance of the style and sentiment exhibited in the work. He had published, two years previously to this, "Observations on Sorbier's Voyage to England," which were well received. He was successively made a prebendary of West-

minster, rector of St. Margaret's, canon of Windsor, dean of Westminster, and finally, in 1684, was raised to the episcopal bench as bishop of Rochester. This last preferment was considered as a reward for the service of drawing up, at the command of the king, an account of the Rye-house plot. This was first printed in 1685, and was reprinted in the following year, after James II. had succeeded to the throne. The manner in which he had executed this task rendered it expedient for him to publish an apology, after the Revolution. He had reflected on the characters of those, whose names have been long ranked among the martyrs to liberty. Of lord Russell, Sprat observes, "that he was carried away into this traitorous conspiracy from a vain air of popularity, and a wild suspicion of losing a large estate by an imaginary return of popery." His favour under the new reign was manifested by his appointment to the place of clerk of the closet to the king, and his nomination as one of the commissioners for ecclesiastical affairs. At the revolution he submitted to the new government, and was allowed to remain unmolested in his see. His principles, however, being well known, he was involved, in 1692, with others, in an information laid before the privy council, of a pretended conspiracy for restoring king James. He detected the infamy of the informers, and effectually cleared himself from the charge; but he was so much affected by the danger he had undergone, that he ever after commemorated his deliverance by an annual thanksgiving. He passed the rest of his life in the practice of professional duties and virtues, by which he engaged the esteem and affection of those with whom he was connected, and died in 1713, in the 79th year of his age. Besides the works already mentioned, he published A Relation of his examination before the privy council, Two Letters to Lord Dorset, and A Volume of Sermons. *Biog. Brit.*

SPRATTON, a parish of England, in Northamptonshire; 7 miles north-north-west of Northampton. Population 801.

To SPRAWL, *v. n.* [*spraddle*, Danish; *spartelen*, Dutch.—To tumble, or creep with much agitation and contortion of the limbs.

Telamon happ'd to meet
A rising root that held his fasten'd feet;
So down he fell, whom *sprawling* on the ground,
His brother from the wooden gyves unbound. *Dryden*.

SPRAY, *s.* [of the same race with *sprit*, *sprout*, or *spring*.]—The extremity of a branch.

At sight whereof each bird that sits on *spray*
And every beast that to his den was fled,
Come forth afresh out of their late dismay,
And to the light lift up their drooping head. *Spenser*.

The foam of the sea: sometimes written *spry*.—Winds raise some of the salt with the *spray*. *Arbutnot*.

To SPREAD, *v. a.* [ʃpɹædən, ʃpɹeɪdən, Sax., *spreyden*, Teut. *Spred* was, anciently, common]—To extend; to expand; to make to cover or fill a larger space than before.

Faire attendants then,
The sheets and bedding of the man of men,
Within a cabin of the hollow keele,
Spread and made soft. *Chapman*.

Silver *spread* into plates is brought from Tarshish. *Jer.*
—To cover by extension.

Her cheeks their freshness lose and wonted grace,
And an unusual paleness *spreads* her face. *Granville*.

To cover over.—The workman melteth a graven image, and the goldsmith *spreadeth* it over with gold. *Isa.*
—To stretch; to extend.—*Spread* o'er the silver waves thy golden hair. *Shakspeare*.—To publish; to divulge; to disseminate.—They, when departed, *spread* abroad his fame, in all that country. *St. Matthew*.—To emit as effluvia or emanations; to diffuse.

Their course through thickest constellations held,
They *spread* their bane. *Milton*.

To SPREAD, *v. n.* To extend or expand itself.—Plants, if they *spread* much, are seldom tall. *Bacon*.

SPREAD, *s.* Extent; compass.—I have got a fine *spread*

spread of improveable lands, and am already ploughing up some, fencing others. *Addison*.—Expansion of parts.—No flower hath *spread* that of the woodbind. *Bacon*.

SPREAD EAGLE, a post village of the United States, in Delaware county, Pennsylvania.

SPRE'ADER, *s.* One that spreads.—By conforming ourselves we should be *spreaders* of a worse infection than any we are likely to draw from Papists by our conformity with them in ceremonies. *Hooker*.—Publisher; divulger; disseminator.—If it be a mistake, I desire I may not be accused for a *spreader* of false news. *Swift*.—One that expands or extends.—If their child be not such a speedy *spreader* and brancher, like the vine, yet perchance he may yield, though with a little longer expectation, as useful and more sober fruit than the other. *Wotton*.

SPREAD'ING, *s.* Act of extending or expanding.—Can any understand the *spreadings* of the clouds, or the noise of his tabernacle? *Job*.

SPREE, a navigable river of the Prussian states, which rises in Upper Lusatia, near Zittau and the frontiers of Bohemia, passes by Budissen, receives the Lobau, the Schweinitz, and the Schops, crosses the Spreewald, separates Coln from Berlin, and joins the Havel at Spaudau. Its course is very slow, with hardly any falls or rapids, so that it is very fit for navigation, and is joined to the Elbe and the Oder by canals.

SPREMBERG, a town of the Prussian states, in Lower Lusatia, on an island in the Spree. Population 1700; 28 miles south-south-west of Guben, and 45 north-east of Dresden.

SPREMBERG, a village of Saxony, on the Spree, about 30 miles east of Dresden. Population 1500.

SPRENDLINGEN, a town of Germany, in Hesse-Darmstadt, west of the Rhine; 8 miles east of Creutznach, and 16 west-south-west of Mentz. Population 1100.

SPRENGELIA. See POIRETIA.

SPRENT, *part.* [from *sprene*, to sprinkle; *sprenzan*, *ppnenan*, Sax.; *sprengen*, Dutch.] Sprinkled. *Obsolete*.—O lips, that kiss'd that hand with my tears *sprent*. *Sidney*.

SPREY, *adj.* Spruce. Exm. dial. See SPRUCE.

SPREYTON, a parish of England, in Devonshire; 7½ miles east-by-north of Oakhampton.

SPRIDLINGTON, a parish of England, in Lincolnshire; 7½ miles west-south-west of Market Raisen.

SPRIG, *s.* [*brig*, Welsh, a twig, shoot, or sprig, of a tree: the English *sprig* seems to be hence derived, q. d. *ys brig*. Davies, and Richards. Nevertheless, Dr. Johnson considers it of the same race with *sprung*; and Serenius, not however overpassing the Welsh word, refers it also to the Swedish *spricka*: as, loefven *spricka ut*, the leaves come out. *Todd*.]—A small branch; a spray.

Our chilling climate hardly bears

A *sprig* of bays in fifty years;

While ev'ry fool his claim alledges,

As if it grew in common hedges.

Swift.

A brad or nail without a head.

To SPRIG, *v. a.* To mark with small branches; to work in sprigs. *Ash*.

SPRIG CRYSTAL, *s.* In perpendicular fissures, crystal is found in form of an hexangular column, adhering at one end to the stone, and near the other lessening gradually, till it terminates in a point: this is called by lapidaries *sprig* or rock *chrystal*. *Woodward*.

SPRIGG, a township of the United States, in Adams county, Ohio. Population 1664.

SPRIGGY, *adj.* Full of small branches.

SPRIGT, *s.* [contraction of *spirit*, *spiritus*, Lat.; it was anciently written *sprete*, or *spryte*; and *spirit*, as now written, was long considered in verse as a monosyllable.] Spirit; shade; soul; incorporeal agent.

Forth he called out of deep darkness dread,

Legions of *sprights*, the which like little flies,

Fluttering about his ever damned head,

Await whereto their service he applies.

Spenser.

Walking spirit; apparition.—The ideas of goblins and *sprights* have no more to do with darkness than light; yet let but a foolish maid inculcate these often on the mind of a child, possibly he shall never be able to separate them again. *Locke*.—Power which gives cheerfulness or courage.

O chastity, the chief of heavenly lights,
Which mak'st us most immortal shap to wear,

Hold thou my heart, establish thou my *sprights*:

To only thee my constant course I bear,

Till spotless soul unto thy bosom fly,

Such life to lead, such death I vow to die.

Sidney.

An arrow. *Not in use*.—We had in use for sea fight short arrows called *sprights*, without any other heads save wood sharpened; which were discharged out of muskets, and would pierce through the sides of ships where a bullet would not. *Bacon*.

To SPRIGHT, *v. a.* To haunt as a spright. *A ludicrous use*.—I am *sprighted* with a fool. *Shakspeare*.

SPRIGHTFUL, *adj.* Lively; brisk; gay; vigorous.—

Spoke like a *sprightful* noble gentleman. *Shakspeare*.

SPRIGHTFULLY, *adv.* Briskly; vigorously.

Norfolk, *sprightfully* and bold,

Stays but the summons of the appellants trumpet. *Shakspeare*.

SPRIGHTFULNESS, *s.* Sprightliness; gaiety; vivacity.

—Sharpness of apprehension is a *sprightfulness* of the mind, and is there liveliest where there be most spirits. *Hammond*.

SPRIGHTLESS, *adj.* Dull; enervated; sluggish.

Are you grown

Benumb'd with fear, or virtue's *sprightless* cold? *Cowley*.

SPRIGHTLINESS, *s.* Liveliness; briskness; vigour; gaiety; vivacity.—The soul is clogged when she acts in conjunction with a companion so heavy; but in dreams, observe with what a *sprightliness* and alacrity does she exert herself. *Addison*.

SPRIGHTLY, *adj.* Gay; brisk; lively; vigorous; airy; vivacious.

When now the *sprightly* trumpet from afar,

Had giv'n the signal of approaching war.

Dryden.

To SPRING, *v. n.* pret. *sprung* or *sprang*, anciently *sprung*; part. *sprung*. [*ppunzan*, Sax.; *sprungen*, Dutch.] To arise out of the ground and grow by vegetative power.

To his musick, plants and flowers

Ever *sprung*, as sun and showers

There had made a lasting spring.

Shakspeare.

To begin to grow.—That the nipples should be made with such perforations as to admit passage to the milk, when drawn, otherwise to retain it; and the teeth of the young not *sprung*, are effects of Providence. *Ray*.—To proceed as from seed.—Ye shall eat this year such things as grow of themselves; and in the second year that which *springeth* of the same. 2 *Kings*.—To come into existence; to issue forth:

Had'st thou sway'd as kings should do,

Giving no ground unto the house of York,

They never then had *sprung* like summer flies. *Shakspeare*.

To arise; to appear; to begin to appear or to exist.—To them which sat in the region and shadow of death, light is *sprung* up. *Matt*.—To issue with effect or force.

Swift fly the years, and rise the expected morn;

Oh *sprung* to light: auspicious babe he born.

Pope.

To proceed as from ancestors, or a country.—Our Lord *sprung* out of Judea. *Heb*.

All these

Shall, like the brethren *sprung* of dragons' teeth,

Ruin each other, and he fall amongst 'em. *B. Jonson*.

To proceed as from a ground, cause, or reason.

They found new hope to *sprung*

Out of despair.

Milton.

To grow; to thrive.

What

What makes all this but Jupiter the king,
At whose command we perish and we *spring* :
Then 'tis our best, since thus ordain'd to die,
To make a virtue of necessity.

Dryden.

To bound ; to leap ; to jump ; to rush hastily ; to appear suddenly.—I *sprang* not more in joy at first hearing he was a man child, than now in first seeing he had proved himself a man. *Shakspeare.*

The mountain stag, that *springs*
From height to height, and bounds along the plains,
Nor has a master to restrain his course ;
That mountain stag would Vanoe rather be,
Than be a slave.

Philips.

To fly with elastic power ; to start.—A link of horsehair, that will easily slip, fasten to the end of the stick that *springs*. *Mortimer.*—To rise from a covert.

My doors are hateful to my eyes,
Fill'd and damn'd up with gaping creditors,
Watchful as fowlers when their game will *spring*.

Otway.

To issue from a fountain.

Let the wide world his praises sing,
Where Tagus and Euphrates *spring* ;
And from the Danube's frosty banks to those
Where from an unknown head great Nilus flows.

Roscommon.

To proceed as from a source.

'Tis true from force the noblest title *springs*,
I therefore hold from that which first made kings.

Dryden.

To shoot ; to issue with speed and violence.

Then shook the sacred shrine, and sudden light
Sprung through the vaulted roof, and made the temple bright:
The power, behold ! the pow'r in glory shone,
By her bent bow and her keen arrows known.

Dryden.

To *SPRING*, *v. a.* To start ; to rouse game.—Here I use a great deal of diligence before I can *spring* any thing ; whereas in town, whilst I am following one character, I am crossed by another, that they puzzle the chase. *Addison.*—To produce quickly or unexpectedly.

The nurse, surpriz'd with fright,
Starts up, and leaves her bed, and *springs* a light.

Dryden.

To make by starting, applied to a ship.—People discharge themselves of burdensome reflections, as of the cargo of a ship that has *sprung* a leak. *L'Estrange.*—To discharge, applied to a mine.—Our miners discovered several of the enemies' mines, who have *sprung* divers others which did little execution. *Tatler.*—To contrive on a sudden ; to produce hastily ; to offer unexpectedly.—The friends to the cause *sprang* a new project, and it was advertized that the crisis could not appear till the ladies had shown their zeal against the pretender. *Swift.*—To pass by leaping.

Un'cseeming skill

To *spring* the fence, to rein the prancing steed.

Thomson.

SPRING, *s.* [ʃpɪŋɡ, Sax.] The season in which plants rise and vegetate ; the vernal season.

Come, gentle *spring*, ethereal mildness come,
And from the bosom of yon dropping cloud
Upon our plains descend.

Thomson.

An elastic body ; a body which when distorted has the power of restoring itself to its former state.—He that was sharp-sighted enough to see the configuration of the minute particles of the *spring* of a clock, and upon what peculiar impulse its elastic motion depends, would no doubt discover something very admirable. *Locke.*—Elastic force.

Heav'n's, what a *spring* was in his arm, to throw !
How high he held his shield, and rose at ev'ry blow !

Dryden.

Any active power.—Our author shuns by vulgar *springs* to move. *Pope.*—A leap ; a bound ; a jump ; a violent effort ; a sudden struggle.

V-L. XXIII. No. 1536.

The pris'ner with a *spring* from prison broke :
Then stretch'd his feather'd fans with all his might,
And to the neighbouring maple wing'd his flight.

Dryden.

A leak ; a start of plank.

Each petty hand

Can steer a ship becalm'd ; but he that will
Govern, and carry her to her ends, must know
His tides, his currents : how to shift his sails,
Where her *springs* are, her leaks, and how to stop 'em.

B. Jonson.

A fountain ; an issue of water from the earth.
Now stop thy *springs* ; my sea shall suck them dry,
And swell so much the higher by their ebb.

Shakspeare.

A source ; that by which any thing is supplied.—He has a secret *spring* of spiritual joy, and the continual feast of a good conscience within, that forbids him to be miserable. *Bentley.*—Rise ; beginning.—About the *spring* of the day Samuel called Saul to the top of the house. *1 Sam.*—Cause ; original.—The first *springs* of great events, like those of great rivers, are often mean and little. *Swift.*—A plant ; a shoot ; a young tree ; a coppice.

The nightingale, among the thick-leav'd *springs*
That sits alone in sorrow.

Fletcher.

A youth. See *SPRINGAL*.

She pictur'd winged Love,
With his young brother Sport :—
The one his bow and shafts, the other *spring*
A burning tead about his head did move.

Spenser.

A hand or shoulder of pork.—These *springs* of pork.
Beaum and Fl.

SPRING, a township of the United States, in Centre county, Pennsylvania. Population 1550.

SPRING BAY, a bay on the north-east coast of the island of Barbadoes.

SPRINGAL, *s.* [from the Sax. ʃpɪŋɡan, *germinare*, and was also written *spring*. It may be added, that the old French word *espringaller* meant to leap, to bound.] A youth ; an active, nimble, young man.—Yonge *springs* in the flower of their youth. *Martin.*

I do not rail against the hopeful *springal*,
That builds up monuments in brass.

Beaum. and Fl.

SPRINGE, *s.* A gin ; a noose, which, fastened to any elastic body, catches by a spring or jerk.

With hairy *springs* we the birds betray,
Slight lines of hair surprize the finny prey.

Pope.

To *SPRINGE*, *v. a.* To ensnare ; to catch in a trap.—
We *springe* ourselves, we sink in our own bogs.

Beaum. and Fl.

SPRINGE, a town of Hanover ; 14 miles south-west of Hanover, and 10 north-east of Hameln. Population 1400.

SPRINGEN, a town of the west of Germany in Wirtemberg, on the Brenz, near Aalen. Population 1000.

SPRINGGER, *s.* One who rouses game ; a young plant.—The young men and maidens go out into the woods and coppices, cut down and spoil young *springs* to dress up their May-booths. *Beelyn.*

SPRINGFIELD, a village of Scotland, in Dumfries-shire, in the parish of Graitney, begun in 1791, on the estate of Sir William Maxwell of Springkell. It is regularly built, with fine broad streets, and brick houses covered with blue slate. It is situated on a dry healthy soil, on the banks of the river Sark, on building leases of 99 years. In 1793 it consisted of 40 houses ; and since that time it has greatly increased, owing to the many advantages which it possesses with respect to its situation. Both coal and lime are plentiful at a small distance. The river Sark is well adapted for the erection of machinery ; and the sea-port town of Sarkfoot is not above a mile distant. Add to these, the two great roads from England to the west of Scotland pass through it.

SPRINGFIELD, a parish of England, in Essex ; 1 mile north-east of Chelmsford. Population 1201.

6 K

SPRINGFIELD,

SPRINGFIELD, a town of the United States, in Washington county, of which it is the capital, in Kentucky; 30 miles north-west of Danville. Population 249.

SPRINGFIELD, a township of the United States, in Windsor county, Vermont, on the Connecticut, opposite Charleston. Population 2556.

SPRINGFIELD, a township of the United States, in Cheshire county, New Hampshire. Population 814.

SPRINGFIELD, a post township of the United States, and capital of Hampden county, Massachusetts, on the east side of the Connecticut. It is a pleasant and flourishing township, and contains a court-house, a jail, a bank, a woolen manufactory, a rope walk, a furnace, two paper mills, two Congregational churches, two public libraries, which together contain about 1000 volumes, and a printing office, from which is issued a weekly newspaper. Here is a large, pleasant, and handsome village, which has considerable trade and contains a number of elegant houses. An excellent covered bridge connecting this town with West Springfield, was carried away by the rise of the river in 1818. There is in this town, belonging to the United States, a very extensive establishment for the manufacture of arms. The arsenal is delightfully situated on an elevated plain, about half a mile east of the village. The buildings are finely arranged around a level square of 20 acres, and make an elegant appearance. There are 250 workmen employed in this establishment, who complete about 45 muskets daily. Population 2767; 88 miles west-by-south of Boston, and 48 west-south-west of Worcester. Lat. 42. 6. N. long. 72. 36. W.

SPRINGFIELD, WEST, a post township of the United States, in Hampden county Massachusetts, on the west-side of the Connecticut, opposite Springfield. Population 3109.

SPRINGFIELD, the names of several townships of the United States.—1. In Otsego county, New York; 58 miles west of Albany.—2. In Essex county; 15 miles south-west of New York.—3. In Burlington county, New Jersey.—4. In Montgomery county, Pennsylvania.—5. In Bucks county, Pennsylvania. Population 1287.—6. In Huntingdon county, Pennsylvania. Population 813.—7. In Mercer county, Pennsylvania. Population 751.—8. In Delaware county, Pennsylvania. Population 541.—9. In Hamilton county, Ohio, 12 miles north of Cincinnati. Population 2036.—10. In Clark county, Ohio, of which it is the seat of justice. It is situated on the east fork of Mud river. Population 861.—11. In Columbiana county, Ohio. Population 601.—12. In Jefferson county, Ohio. Population 746.—13. In Ross county, Ohio. Population 972.—14. In Portage county, Ohio. Population 510.—15. In Loudoun county, Virginia.—16. In Hampshire county, Virginia, on the south branch of the Potomac; 10 miles north-east of Romney.—17. Capital of Robertson county, Tennessee, on Sulphur Fork. Population 200.—18. In Louisiana, in the parish of St. Helena, about 30 miles west-north-west of Maddisonville.—19. In York district, South Carolina.—20. In Susquehanna county, Pennsylvania.

SPRINGFIELD. See PUTNAM.

SPRING HILL, a post village of the United States, in Chesterfield county, Virginia.

SPRING HILL, a post village of the United States, in Lenoir county, North Carolina.

SPRING HILL, a post village of the United States, in Jefferson county, Georgia.

SPRING HILL, a township of the United States, in Fayette county, on the east side of the Monongahela. Population 1837.

SPRING HILL, a township of the United States, in Clark county, Indiana. Population 1114.

SPRING HILL, a post village of the United States, in Farquier county, Virginia.

SPRING ISLAND, a small island near the coast of South Carolina. Lat. 32. 22. N. long. 80. 57. W.

SPRING PLACE, a Moravian missionary station of the United States, among the Cherokees. About 50 Cherokee children have been educated at this place; 35 miles south-east of Brainerd, and 120 north-west of Athens.

SPRING RIVER, a river of Louisiana, taking its rise from a number of springs which form a river 250 yards wide, and fall into White river, 200 miles west of Cape Girardeau.

SPRINGHALT, *s.* [perhaps from *spraenga*, Swed., to sprain a horse's legs by riding him beyond his strength; and *halt*, the consequence of it. *Todd.*—See *To SPRAIN.*] A lameness by which the horse twitches up his legs.

They've all new legs, and lame ones; one would take it, They never saw them pace before, the sparvin, A *springhalt* reign'd among them. *Shakspeare.*

SPRINGHEAD, *s.* Fountain; source.—Now this *springhead* of science is purely fantastical. *Bolingbroke.*

SPRINGINESS, *s.* Elasticity; the power of restoring itself.—The air is a thin fluid body, endowed with elasticity and *springiness*, capable of condensation and rarefaction. *Bentley.*

SPRINGING, *s.* Growth; increase.—Thou makest it soft with showers; thou blissett the *springing* thereof. *Ps.*—In architecture, the side of an arch contiguous to the part whereon it rests.

SPRINGLE, *s.* A spring; an elastic noose.—Woodcocks arrive first on the north coast, where every splash-shoot serveth for *springles* to take them. *Carew.*

SPRINGTHORPE, a parish of England, in Lincolnshire; 4 miles east-by-south of Gainsborough.

SPRINGTIDE, *s.* Tide at the new and full moon; high tide.

Love, like *springtides*, full and high, Swells in every youthful vein. *Dryden.*

SPRINGTOWN, a post township of the United States, in Montgomery county, Pennsylvania.

SPRINGVILLE, a post township of the United States, in Montgomery county, North Carolina.

SPRINGVILLE, a township of the United States, in Clark county, Indiana. Population 1222.

SPRINGY, *adj.* Elastic; having the power of restoring itself.

Had not the Maker wrought the *springy* frame, Such as it is to fan the vital flame, The blood, defrauded of its nitrous food, Had cool'd and languish'd in the arterial road; While the tir'd heart had strove, with fruitless pain, To push the lazy tide along the vein. *Blackmore.*

Full of springs and fountains. *Not used.*—Where the sandy or gravelly lands are *springy* or wet, rather marl them for grass than corn. *Mortimer.*

To SPRINKLE, *v. a.* [*sprinkelen*, *spreckelen*, Teut. *spreken*, Germ. *pprenzen*, Sax.] To scatter; to disperse in small masses.—Take handfuls of ashes of the furnace, and let Moses *sprinkle* it towards the heaven. *Ex.*—To scatter in drops.—*Sprinkle* water of purifying upon them. *Num.*—To besprinkle; to wash, wet, or dust by scattering in small particles.—Let us draw near with a true heart, in full assurance of faith, having our hearts *sprinkled* from an evil conscience. *Heb.*

To SPRINKLE, *v. n.* To perform the act of scattering in small drops.—The priest shall *sprinkle* of the oil with his finger. *Lev.*

SPRINKLE, *s.* A small quantity scattered; an aspergoire; an utensil to sprinkle with.

She always smyl'd, and in her hand did hold An holy water *sprinkle* dipt in dewe,

With which she sprinkled favours manifold. On whom she list. *Spenser.*

SPRINKLER, *s.* One that sprinkles.

SPRINKLING, *s.* The act of scattering in small drops.—Your clerical shavings, your crossings, *sprinklings*, your cozening miracles. *Bp. Hall.*—A small quantity scattered.

To SPRIT, *v. a.* [See *To SPRIT*, and *To SPROUT.*] To throw out; to eject with force.—Toads sometimes exclude or *sprit* out a dark and liquid matter behind, and a venomous condition there may be perhaps therein; but it cannot be called their urine. *Brown.*

To SPRIT, *v. n.* [ʃpɹɪtən, Sax.; *spruyten*, Dutch.] To shoot; to germinate; to sprout. Used of barley wetted for malt.

SPRIT, *s.* [ʃpɹɪt, Sax., *serculus*.] Shoot; sprout.—The barley, after it has been couched four days, will sweat a little, and shew the chit or *sprit* at the root-end of the corn. *Mortimer*.—[ʃpɹeot, Sax., *contus*.] A pole: hence our word *bow-sprit*.

SPRIT-SAIL, *s.* The sail which belongs to the bow-sprit mast. *Dict.*—Our men quitted themselves of the fire-ship, by cutting the *sprit-sail* tackle off with their short hatchets. *Wiseman*.

SPRITE, *s.* A spirit; an incorporeal agent. See SPRIGHT. The *sprites* of fiery termagants in flame Mount up, and take a salamander's name. *Pope*.
Of these am I who thy protection claim,
A watchful *sprite*, and Ariel is my name. *Pope*.

SPRITEFUL, *adj.* Gay; lively; cheerful.
A *spriteful* gait that leaves no print,
And makes a feather of a flint. *Stroud*.

SPRITEFULLY, *adv.* Vigorously; with life and ardour. The Grecians *spritefully* drew from the darts the corse,
And hearest it, bearing it to fleet. *Chapman*.

SPRITELESS, *adj.* See SPRIGHTLESS.
SPRITELINESS, *s.* See SPRIGHTLINESS.—Wit and *spriteliness* of conversation. *Warton*.
SPRITELY, *adj.* See SPRIGHTLY.
SPRITELY, *adv.* Gayly.

You have not scene young heiffers, hihly kept;
Fill'd full of daisies at the field and driven
Home to their hovels; all so *spritely* given,
That no roome can contain them. *Chapman*.

SPROATLEY, a parish of England, East Riding of Yorkshire; 7 miles north-east of Kingston-upon-Hull.
SPROD, *s.* A salmon while in its second year's growth: so called by fishermen in many parts of England. *Chambers*.

SPROE, or SPROGØE, a small island of Denmark, situated in the Great Belt, between Funen and Zealand; 8 miles north-west of Corsoer. Lat. 55. 22. N. long. 10. 59. E.

SPRONG. The old preterite of *spring*.—Not mistrusting, till these new curiosities *sprong* up, that ever any man would think our labour herein mispent, or the time wastefully consumed. *Hooker*.

SPROSTON, a township of England, in Cheshire; 2 miles east of Middlewich.

SPROTBOROUGH, a township of England, West Riding of Yorkshire; 3 miles west-south-west of Doncaster.

SPROTTA, a small river of Silesia, which rises in the principality of Liegnitz, and falls into the Bober near the town of Sprottau.

SPROTTAU, a town of Prussian Silesia, at the confluence of the Sprotta and the Bober. Population 2500; 71 miles west-north-west of Breslau, and 21 west-south-west of Gross Glogau.

SPROUGHTON, a parish of England, in Suffolk; 3 miles west-by-north of Ipswich.

SPROUSTON, a parish and village of Scotland, in Roxburghshire, about 6 miles long and 4 broad. Population 1199, 200 of whom reside in the village.

To SPROUT, *v. n.* [ʃpɹɪtən, Sax.; *spruyten*, Dutch.] *Sprout*, *sprit*, and by a very frequent transposition *spirt* or *spurt*, are all the same word.] To shoot by vegetation; to germinate.

The *sprouting* leaves that saw you here,
And call'd their fellows to the sight. *Cowley*.

To shoot into ramifications.—Vitriol is apt to *sprout* with moisture. *Bacon*.—To grow.

Th' enlivening dust its head begins to rear,
And on the ashes *sprouting* plumes appear. *Tickell*.

SPROUT, *s.* [ʃpɹɪt, ʃpɹaʊtə, Sax.] A shoot of a

vegetable.—Stumps of trees, lying out of the ground, will put forth *sprouts* for a time. *Bacon*.

Early ere the odorous breath of morn
Awakes the slumbering leaves, or tassel'd horn
Shakes the high thicket, haste I all about,
Number my ranks, and visit every *sprout*. *Milton*.

To this kid, taken out of the womb, were brought in the tender *sprouts* of shrubs; and, after it had tasted, began to eat of such as are the usual food of goats. *Ray*.

SPROUTS, *s. pl.* Young coleworts.
SPROWSTON, a parish of England, in Norfolk; 3 miles north-east of Norwich.

SPROXTON, a parish of England, in Leicestershire; 8 miles north-east of Melton Mowbray.

SPROXTON, a parish of England, North Riding of Yorkshire; 2 miles south of Helmesley.

SPRUCE, *adj.* [Serenius refers the word to the Swed. *shraeg*, formosus; *spraekt et spracg*, clarus et splendens (de pannis). With this our provincial word *sprey*, or *spry*, in great measure, accords; which in some places is used for *smart*, *elegant*.—Barret describes *Prussian* leather under the simple name of *spruce*; and thus, in reference to fine habits, a *sprusado* likewise became a term to denote one who payed great attention to dress: "They put me in mind of the answer of that *sprusado* to a judge in this kingdom, a rigid censor of men's habits; who, seeing a neat finical divine come before him in a cloak lined through with plush, encountered him." *Comment on Chaucer*, 1665.] Nice; trim; neat without elegance. It was anciently used of things with a serious meaning: it is now used only of persons, and with levity.

The tree
That wraps that crystal in a wooden tomb,
Shall be took up *spruce*, fill'd with diamond. *Donne*.

Thou wilt not leave me in the middle street,
Tho' some more *spruce* companion thou do'st meet. *Donne*.

Along the crisped shades and bowers
Revels the *spruce* and jocund spring;
The graces, and the rosy-bosom'd hours,
Thither all their bounties bring. *Milton*.

To SPRUCE, *v. n.* To dress with affected neatness. *Unused*.

To SPRUCE, *v. a.* To trim; to dress.—*Sprucing* up the hairy cheeks. *Ainsworth*.

SPRUCE, *s.* A species of fir.—Those from Prussia (which we call *spruce*) and Norway are the best. The hemlock-tree as they call it in New England) is a kind of *spruce*. *Evelyn*.

SPRUCE-BEER, *s.* Beer tinged with branches of fir.—In ulcers of the kidneys *spruce-beer* is a good balsamick. *Arbuthnot*.

SPRUCE-LEATHER, *s.* Corrupted for *Prussian leather*.—The *leather* was of *Pruce*. *Dryden*.

SPRU'CELY, *adv.* In a nice manner.
Under that fayre ruffe so *sprucely* set
Appears a fall, a falling band forsooth! *Marston*.

SPRU'CENESS, *s.* Neatness without elegance; trimness; quaintness; delicacy; fineness.—Now, in the time of *spruceness*, our plays follow the niceness of our garments. *Midleton*.

SPRUNG. The preterite and participle passivè of *spring*.
Tall Norway fir, their masts in battle spent,
And English oaks, *sprung* leaks, and planks, restore. *Dryden*.

To SPRUNT, *v. n.* [*sprengen*, Teut.; ʃpɹʊŋz, Sax.] To spring up; to germinate. This is an ancient verb: "To *spruntone* or *buttone*, pullulo." *Prompt. Parv.*—To spring forward.

See this sweet simpering babe,
Dear image of thyself; see! how it *sprunts*
With joy at thy approach. *Somerville*.

SPRUNT,

SPRUNT, *s.* Any thing that is short, and will not easily bend. *Johnson. Unused.*—A leap, or a spring in leaping.

SPRUNT, *part. adj.* Vigorous; active. *Kersey.*

SPRUNTLY, *adv.* Gaily; dashingly.

How do I look to-day, am I not drest
Spruntly?

B. Jonson.

SPRY HARBOUR, a bay on the south-east coast of Nova Scotia. Lat. 44. 42. N. long. 62. 40. W.

SPUD, *s.* A short knife; an instrument for cutting up thistles; any short thick thing, in contempt.

My love to Sheelah is more firmly fixt,
Than strongest weeds that grow these stones betwixt:
My *spud* these nettles from the stones can part,
No knife so keen to weed thee from my heart.

Swift.

SPUME, *s.* [*spuma* Lat.] Foam; froth.

She—lette it [the medicine] boyle in such a plite,
Till that she sigh the *spume* white.

Gower.

To **SPUME**, *v. n.* [*spumo*, Lat.] To foam; to froth.

SPUMOUS, or **SPUMY**, *adj.* [*spumeus*, Lat.] Frothy; foamy.—The *spumous* and florid state of the blood, in passing through the lungs, arises from its own elasticity, and its violent motion, the aerial particles expanding themselves. *Arbuthnot.*

SPUN. The pret. and part. pass of *spin*.

The nymph nor *spun*, nor dress'd with artful pride;
Her vest was gather'd up, her hair was ty'd.

Addison.

SPUNGE, *s.* [*spongia*, Lat.] A sponge. See **SPONGE**.—When he needs what you have glean'd it is but squeezing you, and *spunge*, you shall be dry again. *Shakspeare.*

To **SPUNGE**, *v. n.* To hang on others for maintenance.—This will maintain you, with the perquisite of *spunging* while you are young. *Swift.*

SPUNGINESS, *s.* Sponginess: which see. *Cotgrave.*

SPUNGINGHOUSE, *s.* A house to which debtors are taken before commitment to prison, where the bailiffs sponge upon them.

SPUNGY, *adj.* Full of small holes, and soft like a sponge.

Some English wool, vex'd in a Belgian loom,
And into cloth of *spungy* softness made.

Dryden.

Having the quality of imbibing.

There is no lady of more softer bowels,
More *spungy* to suck in the sense of fear.

Shakspeare.

SPUNK, *s.* See **SPONK**. Touchwood; rotten wood.—To make white powder, the best way is by the powder of rotten willows; *spunk*, or touchwood prepared, might perhaps make it russet. *Brown.*—Vivacity; spirit; activity. *A low and contemptible expression.*

SPUR, *s.* [*ȝpup*, Sax.] A sharp point fixed in the rider's heel, with which he pricks his horse to drive him forward.

Whether the body politick be

A horse whereon the governour doth ride,
Who, newly in the seat, that it may know
He can command it, lets it straight feel the *spur*.

Shakspeare.

Incitement; instigation. It is used with *to* before the effect.—The chief, if not only *spur* to human industry and action, is uneasiness. *Locke.*—The longest and largest leading root of a tree: hence probably the *spur* of a post, the short wooden buttress affixed to it, to keep it firm in the ground. *Malone.*

The strong bas'd promontory

Have I made shake, and by the *spurs*
Pluck'd up the pine and cedar.

Shakspeare:

The sharp points on the legs of a cock with which he fights.—Animals have natural weapons to defend and offend; some talons, some claws, some *spurs* and beaks. *Ray.*—A sea-swallow. The sea-swallows they there [in Caldey isle] call *spurs*. *Ray.*

To **SPUR**, *v. a.* To prick with the spur; to drive with the spur.—My friend, who always takes care to cure his horse

of starting fits, *spurred* him up to the very side of the coach. *Addison.*—To instigate; to incite; to urge forward.

Lovers break not hours,

Unless it be to come before their time:

So much they *spur* their expedition.

Shakspeare.

To drive by force.—Love will not be *spurr'd* to what it loaths. *Shakspeare.*—To fix a spur to.

Castor the flame of fiery steed,

With well *spurr'd* boot, took down;

As men, with leathern buckets, do

Quench fire in country town.

Old Ballad of St. George for England.

To **SPUR**, *v. n.* To travel with great expedition.

With backward bows the Parthians shall be there,

And, *spurring* from the fight, confess their fear:

A double wreath shall crown our Cæsar's brows. *Dryden.*

To press forward.

Ascanius took th' alarm, while yet he led,

And, *spurring* on, his equals soon o'erpass'd.

Dryden.

To **SPURGALL**, *v. a.* To wound or hurt with the *spur*.

I was not made a horse,

And yet I bear a burthen like an ass,

Spurgall'd, and tir'd, by jaunting Bolingbroke.

Shakspeare.

SPURGALL, *s.* A hurt occasioned by the too frequent use of the spur.

SPURGE, *s.* [*espurge*, Fr.; *spurgie*, Dutch, from *purgo*, Lat.] A plant violently purgative.

SPURGE FLAX, *s.* A plant. See **THYMELÆA**.

SPURGE LAUREL, *s.* A plant. See **MEZEREON**.

SPURGE OLIVE, *s.* A shrub. See **CHAMÆLEA**.

SPURGE WORT, *s.* A plant. See **XIPHION**.

SPURGING, *s.* Act of purging; discharge. *Obsolete.*

I have been gathering wolves' hairs.

The mad dog's foam, and the adder's ears;

The *spurging* of a dead man's eyes;

And all since the evening star did rise.

B. Jonson.

SPURIOUS, *adj.* [*spurius*, Lat.] Not genuine; counterfeit; adulterine.—Reformed churches reject not all traditions, but such as are *spurious*, superstitious, and not consonant to the prime rule of faith. *White.*—Not legitimate; bastard.

Your Scipios, Cæsars, Pompeys, and your Catos,

These gods on earth, are all the *spurious* brood

Of violated maids.

Addison.

SPURIOUSLY, *adv.* Counterfeitly; falsely.—The deposition, confessing that the child had been *spuriously* passed upon Virginie for his own. *Webster, Træg. of Appius and Virginia.*

SPURIOUSNESS, *s.* Adulterateness; state of being counterfeit.—You proceed to Hippolytus, and speak of his *spuriousness* with as much confidence as if you were able to prove it. *Waterland.*

SPURLING, *s.* [*esperlun*, Fr.] A small sea-fish.

All saints, do lay for porke and sowse,

For sprats and *spurlings* for your house.

Tusser.

To **SPURN**, *v. a.* [*ȝpoppnan*, *ȝpupnan*, Sax., to kick; and so in our old lexicography: "To *spurnyn* or *wyncyn*, calcitro." Prompt. Parv. And Barret: "I will *sporne* or strike thee with my foote."] To kick; to strike or drive with the foot.

They suppos'd I could rend bars of steel,

And *spurn* in pieces posts of adamant.

Shakspeare.

You that did void your rheum upon my beard,

And foot me as you *spurn* a stranger cur

Over your threshold.

Shakspeare.

He in the surging smoke

Uplifted *spurn'd* the ground.

Milton.

To reject; to scorn; to put away with contempt; to disdain.

In wisdom I should ask your name ;
But since thy outside looks so fair and warlike,
What safe and nicely I might well delay,
By rule of knighthood, I disdain and spurn. *Shakspeare.*

To treat with contempt.—Domestics will pay a more cheerful service, when they find themselves not spurned, because fortune has laid them at their master's feet. *Locke.*

To SPURN, *v. n.* To make contemptuous opposition; to make insolent resistance.

A son to blunt the sword
That guards the peace and safety of your person ;
Nay more, to spurn at your most royal image. *Shakspeare.*

SPURN, *s.* Kick; insolent and contemptuous treatment.

The insolence of office, and the spurns
That patient merit of the unworthy takes. *Shakspeare.*

SPURNER, *s.* One who spurns. *Unused.*
SPURNNESS, the south cape of Sanday, one of the Orkney islands. Lat. 59. 3. N. long. 2. 35. W.

SPURNEY, *s.* A plant.
SPURRED, *adj.* Wearing spurs: as, he was booted and spurred.

SPURRER, *s.* One who uses spurs.
SPURRIER, *s.* One who makes spurs.
Gramercy, Lether-leg; get me the spurrier,
An' thou hast fitted me. *B. Jonson.*

SPUR-ROYAL, *s.* A gold coin, first coined in Edward the Fourth's time: it was of fifteen shillings value in James the First's time. It is sometimes written *spur-rial* or *ryal*.—Twenty *spur-royals* for that word. *Beaum. and Fl.*—I have a paper with a *spur-ryal* in't. *B. Jonson.*

SPURRY, *s.* [*spurré*, old Fr.] A plant
SPURSTOW, a township of England, in Cheshire; 4 miles south-by-east of Tarporley.

To SPURT, *v. n.* To fly out with a quick stream.—If from a puncture of a lancet, the manner of the *spurting* out of the blood will shew it. *Wiseman.*

SPURWAY, *s.* A horseway; a bridle-road; distinct from a road for carriages.

SPUTATION, *s.* [*sputum*, Lat.] The act of spitting.—A moist consumption receives its nomenclature from a moist *sputum*, or expectoration: a dry one is known by its dry cough. *Harvey.*

SPUTATIVE, *adj.* [*sputum*, Lat.] Spitting much; inclined to spit.—I made a short retirement, with intention to have visited the city of Bath, and to see whether among all kind of affected persons, confluent thither, I could pick out any counsel to allay that *sputative* symptom, which yet remaineth upon me from my obstructions of the spleen. *Wotton.*

To SPUTTTER, *v. n.* [*sputo*, Lat.] To emit moisture in small flying drops.

If a manly drop or two fall down,
It scalds along my cheeks, like the green wood,
That, *sputtering* in the flame, works outwards into tears. *Dryden.*

To fly out in small particles with some noise.
The nightly-virgin, while her wheel she plies,
Foresees the storms impending in the skies,
When sparkling lamps their *sputtering* light advance,
And in the sockets oily bubbles dance. *Dryden.*

To speak hastily and obscurely, as with the mouth full; to throw out the spittle by hastily speech.

Though he *sputter* through a session,
It never makes the least impression;
Whate'er he speaks for madness goes. *Swift.*

To SPUTTTER, *v. a.* To throw out with noise and hesitation.

Thou dost with lies the throne invade,
Obtending heav'n for whate'er ills befall;
And *sputtering* under specious names thy gall. *Dryden.*
VOL. XXIII. No. 1586.

SPUTTER, *s.* Moisture thrown out in small drops.

SPUTTTERER, *s.* One that sputters.

SPY, *s.* [*yspio*, Welsh; *espion*, Fr.; *spie*, Dutch; *speculator*, Lat.] It is observed by a German, that *spy* has been in all ages a word by which the eye, or office of the eye, has been expressed: thus the *Arimaspians* of old, fabled to have but one eye, were so called from *ari*, which, among the nations of *Caucasus*, still signifies *one*, and *spi*, which has been received from the old Asiatic languages for an eye, *sight*, or one that sees. *Todd.* One sent to watch the conduct or motions of others; one sent to gain intelligence in an enemy's camp or country.

Spies of the Volscians
Held me in chace, that I was forc'd to wheel
Three or four miles about. *Shakspeare.*

To SPY, *v. a.* To see with painstaking: as, when a thing is distant or requires a close examination.

My brother Guyomar, methinks, I spy:
Haste in his steps, and wonder in his eye. *Dryden.*

Let a lawyer tell he has *spy'd* some defect in an entail,
how solicitous are they to repair that error? *Dec. of Chr. Piety.*

To SPY, *v. n.* To search narrowly.

It is my nature's plague
To *spy* into abuse; and oft my jealousy
Shapes faults that are not. *Shakspeare.*

SPY'BOAT, *s.* A boat sent out for intelligence.

SPYDEBERG, a small town in the south of Norway, near Frederickshall.

SPYNIE, or NEW SPYNIE, a parish of Scotland, in Morayshire, about 4 miles long and 2 broad, stretching along the banks of the Lossie. Population 816.

SPYNIE, LOCH, a lake in the above parish, three miles long, and one broad, which appears to have been formerly a frith of the sea.

SQUAB, *adj.* [*Squab*, Sueth. *corpus molle et pingue. Serenius.*] Fat; thick and stout; awkwardly bulky.

The nappy ale goes round,
Nor the *squab* daughter nor the wife were nice,
Each health the youths began, Sim pledg'd it twice. *Betterton.*

SQUAB, *s.* A kind of sofa or couch; a stuffed cushion.
On her large *squab* you find her spread,
Like a fat corpse upon a bed. *Pope.*

SQUAB, *adv.* With a heavy sudden fall; plump and flat. *A low word.*—The eagle took the tortoise up into the air, and dropt him down, *squab*, upon a rock, that dashed him to pieces. *L'Estrange.*

To SQUAB, *v. n.* To fall down plump or flat.

SQUA'BBISH, *adj.* Flabbily; fleshy.—Diet renders them of a *squabbish* or lardy habit of body. *Harvey.*

To SQUA'BBLE, *v. n.* [*kæbla*, Swedish.] To quarrel; to debate peevishly; to wrangle; to fight. *A low word.*—Drunk? and speak parrot? and *squabble?* swagger? oh, thou invincible spirit of wine! *Shakspeare.*

SQUA'BBLE, *s.* A low brawl; a petty quarrel.—In popular factions, pragmatic fools commonly begin the *squabble*, and crafty knaves reap the benefit. *L'Estrange.*

SQUA'BBLER, *s.* A quarrelsome fellow; a brawler.

SQUABPIE, *s.* A pie made of many ingredients.
Cornwal *squab-pie*, and Devon whitepot brings,
And Leicester beans and bacon, food of kings. *King.*

SQUAD, *s.* [*escouade*, Fr.] A company of armed men: usually applied to those who are learning the military exercise.

SQUA'DRON, *s.* [*escadron*, Fr.; *squadrone*, Ital.; from *quadratus*, Lat.] A body of men drawn up square.

Those half-rounding guards
Just met, and closing stood in *squadron* joined. *Milton.*

A part of an army; a troop. 6 L

Eurimidon then rein'd his horse, that trotted neighing by;
The king a foot-man, and so scowres the *squadrons* orderly.
Chapman.

Part of a fleet; a certain number of ships.—Rome could not maintain its dominion over so many provinces, without *squadrons* ready equipt. *Arbuthnot.*

SQUA'DRONED, *adj.* Formed into squadrons.

They gladly thither haste, and by a choir
Of *squadron'd* angels, hear his carol sung. *Milton.*

SQUA'LID, *adj.* [*squalidus*, Lat.] Foul; nasty; filthy.
Uncomb'd his locks, and *squalid* his attire,
Unlike the trim of love and gay desire. *Dryden.*

SQUALIDITY, or SQUA'LIDNESS, *s.* The state or quality of being squalid.

To SQUALL, *v. n.* [*sqwacla*, Su. Goth. Formed, no doubt, by imitation of a child's cry.] To scream out as a child or woman frightened.—Cornelius sunk back on a chair; the guests stood astonished; the infant *squawled*. *Arbuthnot and Pope.*

SQUALL, *s.* Loud scream.
There oft are heard the notes of infant woe,
The short thick sob, loud scream, and shriller *squall*. *Pope.*

Sudden gust of wind. [Perhaps from an imitation of the howl of the wind.]

SQUALLER, *s.* Screamer; one that screams
SQUA'LOR, *s.* [Lat.] Coarseness; nastiness; want of cleanliness and neatness.—What can filthy poverty give else but beggary, fulsome nastiness, *squalor*, ugliness, hunger, and thirst? *Burton.*

SQUALLY, *adj.* Windy; gusty.—Captain Crowe remarked that it was *squally* weather. *Smollet.*

SQUALUS [*Pliny*, from *Squalor*, the fish delighting in muddy and impure places], the SHARK, in Ichthyology, a genus of fishes of the chondropterigous, or cartilaginous order: the Generic Character is as follows:—The mouth is situated beneath the anterior part of the head, with numerous teeth disposed in rows. On each side of the neck, in most of the species, there are five spiracles of a semilunar shape. The body is oblong, and somewhat cylindrical.

The animals of this genus are altogether marine: they are viviparous, and are observed to produce more young at a time than the rays; but each is included, as is the case with those fishes, in a quadrangular capsule or involucre, each extremity of which is extended into a long, contorted, cartilaginous thread of great length. Many of the sharks are said to emit a phosphoric light during the darkness of night: they are chiefly of a solitary nature, and, in general, devour, with the most indiscriminating voracity, almost every animal substance, whether living or dead. A few species are said to feed chiefly on fuci, and other marine vegetables. There are about thirty-four species enumerated by Gmelin, which are separated into different sections.

I.—With temporal orifice and anal fin.

1. *Squalus Isabella*.—The first dorsal fin is opposite the abdominal. It is thirty inches long; in colour it is yellowish; the teeth are compressed, short, triangular, furnished on each side the base with a smaller lobe, and disposed in six rows; the tongue is very short and thick; the dorsal fin is subquadrangular; the second placed opposite the anal fin; the pectoral fins are very large; the ventral are separate, and pointed behind.—It inhabits the southern Pacific ocean, and has been observed about the coasts of New Zealand.

2. *Squalus canicular*, or spotted dog-fish.—Nostrils surrounded with a lobe and vermiform appendage; the ventral fins are distinct. The head is small; snout short; eyes oblong; pupil sea-green, iris white; the mouth is wide and oblong, with three rows of teeth; the tongue is cartilaginous, and with the palate rough; the vent is before the middle of the body; the first dorsal fin behind the ventral, the second less, and nearly opposite the anal; the tail is narrow, ending below in a sharp angle.—This inhabits most seas, is about four or five feet long, is very voracious, and feeds chiefly on

fish; the body is of a reddish brown, with large distinct spots, which are black above, but white beneath, a little compressed at each end: the skin when dried is used for various purposes.

3. *Squalus catulus*, or lesser spotted dog-fish.—This species is specifically described as having nostrils covered with a lobe and vermiform appendage; the ventral fins are connected. Its habit is rather slender; in length it is from two to three feet; the head is large; snout prominent, and slightly pointed; the skin is rough; the body cylindrical; the colour pale brick-red, marked with very numerous, small, rounded, blackish or dusky spots; the abdomen is whitish; both the dorsal fins are placed much nearer to the tail than the head; the ventral fins are connate, large, and of a slightly pointed form; the anal fin is small; the tail is long, bilobate, with the lower lobe continued to a considerable distance beneath. It is a most voracious fish. According to Mr. Pennant, it breeds from nine to thirteen young at a time; it is numerous on our own coasts, and very injurious to the fisheries. The liver, when taken or tasted as food, is highly noxious, causing a long continued stupor, succeeded by an universal itching, with a total peeling off of the cuticle.—It inhabits the Northern, Mediterranean, and Indian seas.

4. *Squalus stellaris*.—Lobes of the nostrils double. The dorsal fins are equal; the first a little beyond the middle of the body, the second a little behind the anal. This is found in the European ocean, and is from two to six feet long; it feeds chiefly on crustaceous animals, molluscae and lesser fish; the body is reddish, with unequal blackish spots; beneath it is of a dirty ash, and resembles the *squalus canicular*, but the spots are larger and fewer; the snout is a little longer, the tail somewhat shorter, and the nostrils nearly closed; it brings forth about twenty at a time.

5. *Squalus galeus*, or tope.—Teeth nearly triangular, serrate on the inner edge. This species is of considerable size, often measuring several feet in length; though the specimens usually seen about the British coasts scarcely exceed the length of about five feet. In its habits it resembles the white shark, being a very bold and rapacious fish, attacking such as happen to be accidentally exposed to it with great violence and rapidity; its shape is rather slender; its colour pale cinereous above, and whitish beneath; the nose is long, flat and pointed; the nostrils are situated near the mouth, and behind each eye is a small orifice; the teeth are numerous, disposed in three rows, small, very sharp, triangular, and serrate on their inner edge. The first dorsal fin is placed about the middle of the back, and is rather large; the second is small, and situated near the tail, which is small, and terminates in two unequal lobes, of which the lower is the broadest. It has been asserted by able and well-informed naturalists, that this fish is so bold as to pursue its prey to the very edge of the shore, and even to attack those who are walking near the water's edge. It is supposed to be the fish mentioned by the name of *canicula*, which is described as highly dangerous to those employed in diving for corals, sponges, &c.

6. *Squalus mustelus*, or smooth hound.—The teeth of this species are very small and obtuse; it has short pectoral fins. The fish of this species are of a slender habit; their snouts are slightly sharpened and lengthened; the first dorsal fin is large, and placed nearly in the middle of the back; the second nearly opposite the anal fin; the tail is shaped as in most others of this tribe, or slightly bilobate; the lower lobe is continued to some distance beneath; the teeth are very numerous, small, slightly convex, and set as in the rays. The general colour of the animal is of a greyish brown, paler or whiter beneath; it sometimes varies in being marked above by numerous white spots. The stomach in this fish is furnished with several appendices, situated near the pylorus; it is found on our own coasts, and in other European seas, and also in the Indian sea, and when full grown it is about two feet long.

7. *Squalus cirratus*.—The nostrils have a worm-shaped appendage.—The head is depressed; the snout is short, obtuse; the eyes and temporal orifice small; lips thick at the

the sides; teeth numerous, sharp, long, dilated at the base; the two hindmost spiracles are approximate; the vent is in the middle; the first dorsal fin is opposite the ventral; the anal is small; the tail is about a quarter as long as the body.—This species inhabits the American and Pacific seas, and is from one to five feet long; the body is coated with large flat shining scales; when young it is spotted with black.

8. *Squalus barbatus*.—The gape of the mouth is bearded with vermiform appendages. The head is large, depressed, and short; the teeth are lanceolate, in many rows; cirri unequal, about an inch and a half long, and branched before. The temporal orifice is large; vent in the middle; first dorsal opposite the vent; the tail subdivided.—It is found about the coasts of New Holland, and is from three to four feet long; the body is covered with small, hard, smooth, shining scales, and marked with black spots, round and angular, surrounded with a white circle.

9. *Squalus tigrinus*.—Tail elongated; the two hindmost spiracles are confluent. The head of this species is broad, flat, and sloping on the fore-part; the mouth transverse, with two cirri; the upper lip is thick and prominent; the teeth are minute, those on the upper jaw are moveable, and rough like a rasp; the tongue is thick, short; the eyes are small, oblong, and the pupil is blue; the iris is black; belly broad; pectoral fins short, broad; first dorsal opposite the ventral; the second is opposite the anal; the tail is compressed on each side, thin like a leaf at the end; the fin is long, and notched at the tip. It inhabits the Indian ocean, and grows to the length of fifteen feet; the body is thick, oblong, black, with irregular white spots and bands; feeds on testaceous animals and crabs.

10. *Squalus Africanus*.—Body with several parallel, longitudinal blackish bands above. This, as its specific name imports, is found in the African ocean, and is about two feet and a half long: the body is covered with minute subquadrate scales; above it is glaucous, beneath whitish.

11. *Squalus ocellatus*. On each side of the neck is a large, round, black blotch, surrounded with white. It inhabits the Pacific ocean and New Holland, is two feet and a half long; the body is long, cinereous, dotted; beneath it is of a greenish-ash colour.

12. *Squalus zygaena*.—Head very broad, hammer-shaped.—It inhabits the Mediterranean, American, and Indian seas; grows to six feet long, and to the weight of five hundred pounds; it is the most voracious of all its tribe.

13. *Squalus tiburio*.—The head is very broad, heart-shaped. It very much resembles the last, except that the head, instead of being widened on each side into a long process, is rather sub-triangular, and rounded off in front; the fins are glaucous.—It inhabits the South American seas.

14. *Squalus griseus*.—Spiracles six on each side.—It inhabits the Mediterranean; is two feet and a half long; the body is of a mouse colour, a little rough; in the dried skin there is the appearance of small scales, with an elevated line in the middle.

15. *Squalus vulpes*, sea-fox, or long-tailed shark.—This species inhabits the Mediterranean sea, and often wanders on the British coast; is seven feet long; the body above is of a blueish-ash colour; beneath it is paler. The scales are very minute. This is a very voracious fish. It is distinguished by its plump, short, subovate body, and very long tapering tail; the head is small and pointed; the first dorsal fin is triangular, and placed on the middle of the back; the second is set above the beginning of the tail, which gradually tapers to the tip, and is furnished with a shallow fin or process beneath, running from the base to the tip, which is sharp and slightly bilobate; the pectoral fins are of considerable size; the eyes are large; the mouth small; the teeth triangular, small, and disposed in three rows. The colour of the fish is dusky ash above, and whitish beneath. It grows to the length of thirteen or fourteen feet; the tail measures more than half the length of the whole animal. This is considered as a very voracious and artful fish; but the name of sea-fox is

applied to it rather from the length of its tail than from its supposed sagacity.

16. *Squalus longicaudus*.—Upper jaw with two cirri; the tail is long, as its specific name denotes; the head is obtuse; the nostrils near the mouth; there are four spiracles.

17. *Squalus appendiculatus*, or Botany Bay shark.—Upper jaw with two jagged, cartilaginous appendages, and four others on each side between the first and the spiracles.—It is an extremely fierce animal. The head is broad, but angular; the mouth is placed near the end of the head; it has nine teeth in front, which are sharp, crooked, and in three rows, with a great number of small ones on each side; the eyes are projecting; dorsal fins placed far back; the pectoral near the spiracles; ventral near the middle of the body; the anal more than half way between the last and the tail, with a fin-like projection behind it to the end of the tail.—This inhabits New South Wales; is nineteen inches long; the body is brown, with three rows of large pale spots, dark within, rounded and nearly equal for half its length, and then growing suddenly very small.

II.—With the anal fin, but no temporal orifice.

18. *Squalus glaucus*, or blue shark.—The sides of the tail are smooth; the lower part of the back with a triangular dent.—This is found in our own and almost all other seas. See SHARK.

19. *Squalus pristis vel pectinatus*.—A fish with a long snout, armed on each side with narrow teeth. It grows about seven feet long, and lives chiefly on the weaker fishes.—It is very frequent in the Indian seas.

20. *Squalus cornubicus*, or probeagle shark.—The snout of this species is projecting, sharp; body round, depressed and angulate near the tail. This species is slightly described by Pennant, from an engraving which he found in Borlase's History of Cornwall, which was copied by Mr. Jago, who was esteemed a very observant and skilful ichthyologist. A specimen observed in 1793, on the coast of Hastings, is described in the third volume of the Linnæan Transactions. Its length from the tip of the snout to the extremity of the tail, was three feet ten inches; the colour of the body was a deep blue on the back, and white or silvery beneath; the shape was round, except for about six inches from the tail, where it was depressed; at about an inch from the tail was a semilunar or lunar impression, the points of which were towards the tail; where the body was depressed, the sides were raised into a sharp angle or elevated line, of about eight inches in length, running to the middle of the tail, or a little beyond; the nose was prominent and sharp; and on either side, from the nose to the eyes, were numerous perforations or minute pores; the tail was of a lunar form, the upper lobe nearly a third longer than the lower.—It inhabits the British coasts; is from three to four feet long; the body above is of a deep blue, beneath it is silvery; round, except near the tail, where it is depressed.

21. *Squalus cambricus*, or beaumaris shark.—Snout short, blunt; body cylindrical, angulate near the tail.—This is chiefly found on the British coasts; is seven feet long; very much resembles the last, except that it does not taper so much towards each end; the body is of a lead-colour, and smoothish.

22. *Squalus cinereus*.—Seven spiracles on each side.—It inhabits the Mediterranean; is three feet long; the body is glaucous, and a little rough.

23. *Squalus maximus*, or basking shark.—Teeth conic, not serrate.

24. *Squalus carcharias*, or white shark.—In this species the teeth are triangular. This is the most dreadful and voracious of all animals.

III.—With temporal orifice, but no anal fin.

25. *Squalus spinosus*.—Body covered over with large mucronate tubercles. This is about four feet in length; the colour is grey-brown above, whitish beneath; the body is roughened with scattered unequal tubercles, consisting of a broad round base, and curved, sharp pointed tip; in some they are bifid; eyes large; snout prominent and conic; its gape

gape is moderate; the teeth of a squarish shape, compressed, comered at the margins, and placed in several rows; dorsal fins placed near the tail, the first opposite the ventral, which are set at an unusual distance from the head, and are almost as large as the pectoral; the tail is angular.

26. *Squalus acanthias*, or piked dog-fish.—Dorsal fins spinous; the body is roundish; a variety has an ocellate body.—This species inhabits most seas: it is about three feet and a half long; the body above is blackish, dotted sparingly with white; the sides are white, inclining to violet, with a few angulate transverse furrows, beneath white; the flesh is often salted and eaten.

27. *Squalus Jacksonii*.—Eyes with a prominence over them on each side; before each of the dorsal fins is a strong spine.—It is not more than two feet long; the body is tapering, skin rough, above brown, beneath paler; the head is somewhat convex; teeth numerous, in many rows, larger as they are placed backwards, forming a bony plate. This inhabits Port Jackson, New Holland.

28. *Squalus spinax*.—Body beneath blackish.—It is found in the Indian ocean; and, in its spinous back fins, it very much resembles the last.

29. *Squalus squamosus*.—Body coated with small oblong scales. The body of this is three feet long, thick, round, resembling the next, except in having a longitudinal elevated line of scales down the middle.

30. *Squalus centrina*.—Body nearly triangular. It is from three to four feet in length; the body above is brown, carinate, beneath whitish, broad; skin covered with hard, erect tubercles; the flesh is very hard.

31. *Squalus Indicus*.—Black, variegated, unarmed; teeth acute.—It inhabits the Indian ocean.

32. *Squalus Americanus*.—Dorsal fins unarmed, the hinder one larger, ventral large near the tail.—It is found in the South American seas; is three feet long; body round; scales small, angular.

33. *Squalus squatina*, or angel fish.—Pectoral fins very large, and notched on the fore-part. The body above is cinereous, rough, with small recurved prickles; beneath it is smooth, white. In its shape it approaches very nearly to the Ray genus.—This species inhabits the Northern seas, and is from six to eight feet long; it feeds on lesser fish, and brings forth thirteen young at a time.

IV.—Without teeth.

34. *Squalus massasa*.—Pectoral fins long.—An inhabitant of the Red sea.

35. *Squalus kumal*.—Pectoral fins short; the mouth with four cirri.—It inhabits the Red sea.

SQUALUS is also a name given by Varro, Columella, Salvian and others, to a species of cyprinus.

SQUAM, a lake of the United States, in New Hampshire, partly in Grafton, partly in Strafford county, six miles long, and four broad.

SQUAM, a river of the United States, in New Hampshire, which runs from Squam lake, south-west, in the Merrimack.

SQUAM, a mountain of the United States, in New Hampshire, north-west of Squam lake.

SQUAM HARBOUR, a port of the United States, on the coast of Massachusetts, on the north-east side of Cape Ann. Lat. 42. 42. N. long. 70. 40. W.

SQUA'MOUS, *adj.* [*squamæus*, Lat.] Scaly; covered with scales.—The sea was replenished with fish, of the cartilaginous and *squamosæ*, as of the testaceous and crustaceous kinds. *Woodward*.

TO SQUA'NDER, *v. a.* [*schwenden*, Germ. perdere, in nihilum redigere.] To scatter lavishly; to spend profusely; to throw away in idle prodigality.—They often *squandered*, but they never gave. *Savage*.

Then, in plain prose, were made two sorts of men,
To *squander* some, and some to hide agen.

Pope.

To scatter; to dissipate; to disperse.
The troops we *squander'd* first again appear
From several quarters, and enclose the rear.

Dryden.

SQUA'NDER, *s.* The act of squandering.—The waste of our resources, and the *squander* of our opportunities. *Inq. into the State of the Nation*.

SQUA'NDERER, *s.* A spendthrift; a prodigal; a waster; a lavisher.—Plenty in their own keeping teaches them from the beginning to be *squanderers* and wasters. *Locke*.

SQUANICOOK, a river of the United States, in Massachusetts, which runs south east into the Nashua, east of Shirley.

SQUANNAROOS INDIANS, Indians of North America, on Cataract river, north of the Columbia. Number 120.

SQUARCIONE (Francesco), a painter, born at Padua in 1394, more and better known as the founder of a school of art, than for any particular works of his own production. The school he maintained was furnished with designs and vestiges of antiquity, which he had acquired not only in Italy, but also in Greece, whither he travelled for the purpose; and it was at one time attended by upwards of 130 students, so that he acquired from it the respectable title of the father of the young painters. One picture of his is more particularly noticed by Lanzi, which was formerly in the church of the Carmelites at Padua, and afterwards in the private possession of the Conte de Lazara, representing St. Jerome surrounded by three saints; and he speaks of it in terms of praise for so early a production. It was painted, according to an inscription upon it, for the noble family of Lazara, in 1452, and is signed Francesco Squarcione. He died in 1474, at the age of 80.

SQUARE, *adj.* [*ysgwâr*, Welsh.] Cornered; having right angles.—All the doors and posts were *square* with the windows. *1 Kings*.—Forming a right angle.—This instrument is for striking lines *square* to other lines or straight sides, and try the squareness of their work. *Moxon*.—Cornered; having angles of whatever content: as three *square*, five *square*.—The clavicle is a crooked bone, in the figure of an S, one end of which being thicker, and almost three *square*, is inserted into the first bone of the sternon. *Wiseman*.—Parallel; exactly suitable.—She's a most triumphant lady, if report be *square* to her. *Shakspeare*.—Strong; stout; well set; as, a *square* man; equal; exact; honest; fair: as *square* dealing.

All have not offended;

For those that were, it is not *square* to take

On those that are, revenge; crimes, like to lands,

Are not inherited.

Shakspeare.

Square root of any number is that which multiplied by itself, produces the *square*, as 4 is the *square* root of 16; because $4 \times 4 = 16$; and likewise 6 is the *square* root of 36, as $6 \times 6 = 36$. See **ALGEBRA**.

SQUARE, *s.* A figure with right angles and equal sides.

Rais'd of grassy turf their table was;

And on her ample *square* from side to side

All Autumn pil'd.

Milton.

An area of four sides, with houses on each side; content of an angle.—In rectangle triangles, the square which is made of the side that subtendeth the right angle, is equal to the *squares* which are made of the sides, containing the right angle. *Brown*.—A rule or instrument by which workmen measure or form their angles.

Forth to the solemn oak you bring the *square*,

And span the massy trunk before you cry, 'tis fair.

Shenstone.

Rule; regularity; exact proportion; justness of workmanship or conduct. *Not much used*.—In St. Paul's time, the integrity of Rome was famous: Corinth many ways reprov'd; they of Galatia much more out of *square*. *Hooker*.—Squadron; troops formed square. *Not now in use*.

He alone

Dealt on lieutenantry, and no practice had

In the brave *squares* of war.

Shakspeare.

A *square* number is when another called its root can be exactly

exactly found, which, multiplied by itself, produces the square.—Level; equality.

We live not on the *square* with such as these,
Such are our betters who can better please. *Dryden.*

Quartile; the astrological situation of planets, distant ninety degrees from each other.

To the other five
Their planetary motions, and aspects,
In sextile, *square*, and trine and opposite
Of noxious efficacy. *Milton.*

Rule; conformity. *A proverbial use.*—I shall break no *squares* whether it be so or not. *L'Estrange.*

SQUARES go. The game proceeds. Chessboards being full of squares.—One frog looked about him to see how *squares went* with their new king. *L'Estrange.*

To *SQUARE, v. a.* To form with right angles; to reduce to a square.

Circles to *square*, and cubes to double,
Would give a man excessive trouble. *Prior.*

To measure; to reduce to a measure.
Stubborn critics, apt, without a theme—
For deprivation, to *square* all the sex
By Cressid's rule. *Shakspeare.*

To adjust; to regulate; to mould; to shape.—How frantically I *square* my talk! *Shakspeare.*

Thou'rt said to have a stubborn soul,
That apprehends no further than this world,
And *squar'st* thy life accordingly. *Shakspeare.*

To accommodate; to fit.
Eye me, blest providence, and *square* my trial
To my proportion'd strength. *Milton.*

To respect in quartile.
O'er libra's sign a crowd of foes prevails,
The icy goat and crab that *square* the scales. *Creech.*

To *SQUARE, v. n.* To suit with; to fit with.
I set them by the rule, and, as they *square*,
Or deviate from undoubted doctrine, fare. *Dryden.*

To quarrel; to go to opposite sides. *Obsolete.* The French word *contrecarrer* has the same import. The French *quarrer* has also been referred to: *sequarrer*, "to strut or *square* it; to look big; to carry the arms a-kembo, braggadochio-like." *Cotgrave.*

Are you such fools
To *square* for this? would it offend you then
That both should speed? *Titus Andronicus.*

SQUARE HANDKERCHIEF, a cluster of islets and rocks in the Atlantic, formerly called *Bazos de Babuca*, extending above 100 miles in circumference. Lat. 21. N. long. 69. W.

SQUARE ISLAND, a small island in the north part of Lake Superior. Lat. 48. 40. N. long. 87. 22. W.

SQUARE ISLAND, an island near the east coast of Labrador. Lat. 52. 54. N. long. 55. 32. W.

SQUA'RENESS, s. The state of being square.—This instrument is for striking lines square to other lines or straight lines, and try the *squareness* of their work. *Moxon.*

To *SQUASH, v. a.* [*schiacciare, Ital.*] To crush into pulp; to batter or make as flat as a cake.

SQUASH, s. Any thing soft and easily crushed.—Not yet old enough for a man, nor young enough for a boy, as a *squash* is before it is a peascod, or a coddling, when it is almost an apple. *Shakspeare.*—A plant.—*Squash* is an Indian kind of pumpkin that grows apace. *Boyle.*—Any thing unripe; any thing soft. *In contempt.*

How like I then was to this kernel,
This *squash*, this gentleman. *Shakspeare.*

A sudden fall.—Since they will overload my shoulders, I shall throw down the burden with a *squash* among them. *Vol. XXIII. No. 1586.*

Arbutnot.—A shock of soft bodies.—My fall was stopped by a terrible *squash* that sounded louder than the cataract of Niagara. *Swift.*

To *SQUAT, v. n.* [*quattare, Ital.*] To sit cowering; to sit close to the ground.

To *SQUAT, v. a.* To bruise or make flat by letting fall. Grose notices this as a provincial word. Barret thus gives it, under the verb *throw*; "To *squatte* or throwe any thing against the ground." *Alv. 1580.*

SQUAT, adj. Cowering; close to the ground.
Him there they found,
Squat like a toad, close at the ear of Eve. *Milton.*

Short and thick; having one part close to another, as those of an animal contracted and cowering.

Alma in verse, in prose, the mind,
Throughout the body *squat* or tall,
Is *bonâ fide* all in all. *Prior.*

SQUAT, s. The posture of cowering or lying close.
A stitch-fall'n cheek that hangs below the jaw;
Such wrinkles as a skillful hand would draw
For an old grandam ape, when with a grace
She sits at *squat*, and scrubs her leathern face. *Dryden.*

A sudden fall.—Bruises, *squats* and falls, which often kills others, can bring little hurt to those that are temperate. *Herbert.*

SQUAT, s. A sort of mineral.—The *squat* consists of iron and spar incorporated. *Woodward.*

To *SQUAWL.* See To *SQUALL.*
To *SQUEAK, v. n.* [*sqwaeka, Swed.*] To set up a sudden dolorous cry; to cry out with pain; to cry with a shrill acute tone.

The sheeted dead
Did *squeak* and gibber in the Roman streets. *Shakspeare.*

In florid impotence he speaks,
And as the prompter breathes, the puppet *squeaks.* *Prior.*

To break silence or secrecy for fear or pain.
SQUEAK, s. A cry of pain.

Ran cow and calf, and family of hogs,
In panic horror of pursuing dogs:
With many a deadly grunt and doleful *squeak*,
Poor swine! as if their pretty hearts wou'd break. *Dryden.*

A shrill quick cry, not of pain.—The coquette—with a great many skittish notes, affected *squeaks*, and studied inconsistencies, distinguished herself from the rest of the company. *Tatler.*

SQUEAKER, s. One who cries with a shrill acute tone.

To *SQUEAL, v. n.* [*sqwacla, Su. Goth.* See To *SQUALL.*] To cry with a shrill sharp voice; to cry with pain. *Squeak* seems a short sudden cry, and *squeal* a cry continued.—She pinched me, and called me a *squealing* chit. *Tatler.*

SQUEA'MISH, adj. [for *quawmish* or *qualmish*, from *qualm.* *Johnson.* And thus formerly our word was *squamish*: "To be *squamish* or nice." *Barret.*] Nice; fastidious; easily disgusted; having the stomach easily turned; being apt to take offence without much reason. It is used always in dislike either real or ironical.—Yet, for countenance sake, he seemed very *squcamish* in respect of the charge he had of the Princess Pamela. *Sidney.*

Quoth he, that honour's very *squeamish*,
That takes a basting for a blemish;
For what's more honourable than scars,
Or skin to tatters rent in wars? *Hudibras.*

His music is rustic, and perhaps too plain,
The men of *squeamish* taste to entertain. *Southern.*

It is rare to see a man at once *squeamish* and voracious. *South.*—There is no occasion to oppose the ancients and the moderns, or to be *squeamish* on either side. He that wisely conducts his mind in the pursuit of knowledge, will gather what lights he can from either. *Locke.*

SQUEA'MISHLY, *adv.* In a fastidious manner.—Too palpable therefore is the modern delicacy of the writer of the Battle of Hastings, who thus *squeamishly* introduces this tale of Saxon perfidy: "I, tho' a Saxon, yet the truth will telle." *Warton.*

SQUEA'MISHNESS, *s.* Niceness; delicacy; fastidiousness.—The thorough-paced politician must laugh at the *squeamishness* of his conscience, and read it another lecture. *South.*—Upon their principles they may revive the worship of the host of heaven; it is but conquering a little *squeamishness* of stomach.—*Stillingfleet.*—To administer this dose, fifty thousand operators, considering the *squeamishness* of some stomachs, and the peevishness of young children, is but reasonable. *Swift.*

SQUEA'SINESS, *s.* Nausea; queasiness; fastidiousness.—A *squeasiness* and rising up of the heart against any mean, vulgar, or mechanical condition of men. *Hammond.*

SQUEA'SY, *adj.* Quceasy; nice; squeamish; fastidious; scrupulous.—He is as *squeazy* of his commendations as his courtesie. *Bp. Earle.*—In *squeazy* stomachs honey turns to gall. *Dryden.*

To SQUEEZE, *v. a.* [*cpijan*, Sax.; *gwasgu*, Welsh, *to squeeze*, *to press*. So in Almorick. From *ys gwasgu* comes the English word. See Davies and Richards. But the Sax. *cpijan*, *to quash*, is the preferable origin; according to which form our word was once written: "*To squise* or thrust together, *presso*." *Barret.*—To press; to crush between two bodies.—It is applied to the *squeezing* or pressing of things downwards, as in the presses for printing. *Wilkins.*—The sinking of the earth would make a convulsion of the air, and that crack must so shake or *squeeze* the atmosphere, as to bring down all the remaining vapours. *Burnet.*

He reap'd the product of his labour'd ground,
And *squeez'd* the combs with golden liquor crown'd.

Dryden.

None acted mournings forc'd to show,
Or *squeeze* his eyes to make the torrent flow.

Dryden.

When Florio speaks, what virgin could withstand,
If gentle Damon did not *squeeze* her hand?

Pope.

To oppress; to crush; to harass by extortion.—In a civil war people must expect to be crushed and *squeezed* toward the burden. *L'Estrange.*—To force between close bodies.

To SQUEEZE, *v. n.* To act or pass, in consequence of compression.—A concave sphere of gold filled with water and soldered up, upon pressing the sphere with great force, let the water *squeeze* through it, and stand all over its outside in multitudes of small drops, like dew, without bursting or cracking the body of the gold. *Newton.*—To force way through close bodies.—Many a public minister comes empty in; but when he has crammed his guts, he is fain to *squeeze* hard before he can get off. *L'Estrange.*

SQUEEZE, *s.* Compression; pressure.
A subtle artist stands with wond'rous bag,
That bears imprison'd winds of gentler sort
Than those that erst Laertes' son enclous'd:
Peaceful thy sleep; but let the tuneful *squeeze*
Of labouring elbow rouse them, out they fly
Melodious, and with spritely accents charm.

Philips.

SQUEEZING, *s.* Act of squeezing.
What crowds of these, impenitently bold,
In sounds and jingling syllables grown old,
Still run on poets, in a raging vein,
Ev'n to the dregs and *squeezings* of the brain.

Pope.

To SQUELCH, or **SQUELISH**, *v. a.* [a corruption perhaps of *squash*.] To crush. *A low word.*

He has almost trod my guts out:—
O, 'twas your luck and mine to be *squelch'd*.

Beaum. and Fl.

SQUELCH, *s.* A flat fall on one side.
He tore the earth which he had sav'd
From *squelch* of knight, and storm'd and rav'd.

Hudibras.

SQUIB, *s.* *This etymology unknown.*—A small pipe of paper filled with combustibles.

Critics on verse, as *squibs* on triumphs wait
Proclaim the glory, and augment the state.

Young.

Any sudden flash.—Dead clouds of sadness, or light *squibs* of mirth. *Donne.*—A lampoon; a frequent colloquial expression; any petty fellow. *Not now in use.*

Asked for their pass by every *squib*,
That list at will them to revile or snib.

Spenser.

SQUILACE, a small town of Italy, in the south of the kingdom of Naples, in Calabria Ultra, situated on the Favone, near the bay of Squilace. It is the see of a bishop, but was much injured by the earthquake of 1783. Lead is found in the neighbouring territory; 35 miles south-west of St. Severino. Lat. 39. 3. N. long. 16. 40. E.

SQUILL, *s.* A plant. See **SCILLA**.—A fish; an insect.

SQUINANCY, *s.* [*squinance*, *squinancie*, Fr.; *squinantia*, Ital.] An inflammation in the throat; a quinsy. *Unused.*—In a *squinancy* there is danger of suffocation. *Wiseman.*

SQUINT, *adj.* [*squinte*, Dutch, *oblique*, *transverse*.] Looking obliquely; looking not directly; looking suspiciously.—Her look is *squint*, with which wishly beholding one, she fixedly looketh upon another. *Transl. of Boccacini.*

SQUINT, *s.* An oblique look.

To SQUINT, *v. n.* To look obliquely; to look not in a direct line of vision.—Some can *squint* when they will; and children set upon a table with a candle behind them, both eyes will move outwards, to see the light, and so induce *squinting*. *Bacon.*

To SQUINT, *v. a.* To form the eye to oblique vision.—This is the foul Flibertigibbet; he gives the web and the pin, *squints* the eye, and makes the harelip. *Shakspeare.*—To turn the eye obliquely.—Perkin began already to *squint* one eye upon the crown, and another upon the sanctuary. *Bacon.*

SQUINTEYED, *adj.* Having the sight directed oblique.—He was so *squint-eyed*, that he seemed spitefully to look upon them whom he beheld. *Knolles.*—Indirect; oblique; malignant.

This is such a false and *squinteyed* praise,
Which seeming to look upwards on his glories,
Looks down upon my fears.

Denham.

SQUINTIFE'GO, *adj.* Squinting. *A cant word.*

The timbrel and the *squintifego* maid
Of Isis awe thee; lest the gods for sin,
Should, with a swelling dropsy, stuff thy skin.

Dryden.

SQUINTINGLY, *adv.* With an oblique look. *Sherwood.*

To SQUINNY, *v. n.* To look asquint. *A cant word.*—I remember thine eyes well enough: Do'st thou *squiny* at me? *Shakspeare.*

SQUIRE, *s.* [contraction of *esquire*.] A gentleman next in rank to a knight.

The rest are priuces, barons, knights, *squires*,
And gentlemen of blood.

Shakspeare.

An attendant on a noble warrior.—Knights, *squires*, and steeds must enter on the stage. *Pope.*—An attendant at court.

Return with her—
I could as well be brought
To knee his throne; and, *squire-like*, pension beg,
To keep base life a-foot.

Shakspeare.

To SQUIRE, *v. a.* To attend as a squire. This is an ancient as well as a modern gallant word. *Todd.*—He *squireth* me both up and down. *Chaucer.*—He [a Frenchman] *squires* her to every place she visits, either on pleasure or business. *Guthrie.*

SQUIREHOOD, or **SQUIRESHIP**, *s.* Rank and state of an esquire.—What profit hast thou reaped by this thy *squireship*? *Shelton.*—If this should be the test of *squireship*.

hood.

hood, it will go hard with a great number of my fraternity, as well as myself, who must all be unsquired, because a greyhound will not be allowed to keep us company. *Swift.*

SQUIRELY, *adj.* Becoming a squire.—One very fit for this *squirely* function. *Shelton.*

SQUIRREL, *s.* [*escurieu*, old Fr.; *ecureuil*, modern; from the Gr. *σκυρος*, of *σκια*, *shade*, and *ουρα*, *tail*; the tail being a sort of covering for the animal. *Scorol* is our old word; which is in the *Prompt. Parv.*] A small animal that lives in woods, remarkable for leaping from tree to tree.

One chanc'd to find a nut,
In the end of which a hole was cut,
Which lay upon a hazel-root,
There scatter'd by a *squirrel*;
Which out the kernel gotten had;
When quoth this fay, dear queen be glad,
Let Oberon be ne'er so mad,
I'll set you safe from peril.

Drayton.

TO SQUIRT, *v. a.* [of uncertain etymology. *Dr. Johnson.*—Serenius refers it to the Su. Goth. *squaetta*, which has a similar meaning: and so *squaetta*, to scatter.] To throw out in a quick stream.—Sir Roger she mortally hated, and used to hire fellows to *squirt* kennel water upon him as he passed along. *Arbutnot.*

TO SQUIRT, *v. n.* To prate; to let fly. *Low cant.*—You are so given to *squirting* up and down, and chattering, that the world would say, I had chosen a jack-pudding for a prime minister. *L'Estrange.*

SQUIRT, *s.* An instrument by which a quick stream is ejected.

He with his *squirt*-fire cou'd disperse
Whole troops.

Hudibras.

His weapons are a pin to scratch, and a *squirt* to bespatter. *Pope.*—A small quick stream.—Water those with *squirts* of an infusion of the medicine in dunged water. *Bacon.*

SQUIRTER, *s.* One that plies a squirt.—The *squirters* were at it with their kennel water, for they were mad for the loss of their bubble. *Arbutnot.*

SRAVANA BELGULA; a town of the south of India, province of Mysore. This place is celebrated as being the principal seat of the Jain worship, once so prevalent over great part of Hindostan, but which has been nearly extirpated by the influence of the Brahmins. Near to the town are two hills, on one of which is situated the temple; the other is cut into the form of a colossal statue 70 feet in height. The town is wholly inhabited by Jains. In Hindostan proper, they are generally called *Syaurus*; and are divided into laity and clergy, named *Yatis* and *Sravacas*. Lat. 12. 45. N. long. 76. 43. E.

SRI MUTTRA, a town of Hindostan, province of Agra. It is a place of considerable extent; situated on a naked rock of red granite, of which material all the houses are constructed. It is the residence of a Hindoo chief, who pays tribute to the rajah of Dholpoor. Lat. 26. 41. N. long. 77. 20. E.

SRI PERMATURA, a town of the south of India, province of the Carnatic, celebrated for being the birth-place of Ram Anuja Achary, who was born about the year 1016. He was a Brahmin, and preached successfully against the doctrines of the Jains and Boodhists. Lat. 12. 59. N. long. 80. 2. E.

SRINY, a mountain range of Croatia, forming part of the Julian Alps.

SSIDA, a town of Nippon, in Japan; 18 miles south of Fitaqua.

SSUUS, a town of Nippon, in Japan; 20 miles south-east of Noto.

STAAB, a small town in the west of Bohemia, on the Rabbusa; 11 miles south-south-west of Pilsen, and 61 west-south-west of Prague.

STAAL (*Madame de*), an ingenious French writer, first known by the name of *Mademoiselle de Launay*, was

daughter of a painter at Paris. Her father being obliged to quit the kingdom, she was left in a state of poverty. She had enjoyed the advantages of a good education at a priory in Rouen; but her patroness dying, she was under the necessity of engaging herself as bed-chamber woman to the duchess of Maine; who soon discovering the talents of her servant, employed her in all the theatrical entertainments which she gave at her scat of Sceaux. For some of these *De Launay* wrote verses, and for others she formed the plans, and thus obtained the perfect and unlimited confidence of her mistress, and the friendship of all the men of wit and letters who frequented that court. Following the fortunes of her mistress, she was involved in the disgrace incurred by the duchess during the regency of the duke of Orleans, and was two years a prisoner in the Bastille. After her liberation, the duchess, as a reward for her fidelity, married her to M. de Staal, lieutenant, and afterwards captain, in the Swiss guards. From her own description, she appears to have possessed few personal attractions, yet her gallantries were a great source of the vexations with which her life was disquieted. She sometimes loved without a return, and she sometimes attracted attentions to which she paid no regard. She died in 1750, and after her death were printed, in 3 vols. 12mo. "Memoirs of her Life," written by herself. These are agreeably written, and in a pure and elegant style. There has been added a fourth volume, containing two comedies acted at Sceaux, entitled "L'Engoument," and "La Mode," the chief merit of which is said to consist in the sprightliness of the dialogue. Her memoirs have been translated into the English language.

STAATSBURG, a post village of the United States, in Clinton county, New York; 10 miles north of Poughkeepsie.

STAATEN LAND. See **NEW ZEALAND**.

STAATS, a town of Lower Austria; 35 miles north of Vienna, and 5 west-south-west of Falkenstein. Population 1500.

STAAVIA, in Botany, a genus of plants. See **BRUNIA**.

TO STAB, *v. a.* [*staven*, old Dutch.] To pierce with a pointed weapon.

Hear the lamentations of poor Anne,
Wife to thy Edward, to thy slaughter'd son:
Stab'd by the self-same hand that made these wounds.

Shakspeare.

To wound mortally or mischievously.

What tears will then be shed!
Then, to compleat her woes, will I espouse
Hermione:—'twill *stab* her to the heart!

A. Philips.

TO STAB, *v. n.* To give a wound with a pointed weapon.

None shall dare
With shorten'd sword to *stab* in closer war;
But in fair combat fight.

Dryden.

To offer a stab.

Thou hid'st a thousand daggers in thy thoughts,
Which thou hast whetted on thy stony heart,
To *stab* at my frail life.

Shakspeare.

To give a mortal wound.—He speaks poniards, and every word *stabs*. *Shakspeare.*

STAB, *s.* A wound with a sharp pointed weapon.

The elements
Of whom your swords are temper'd, may as well
Wound the loud winds, or with bemockt at *stabs*
Kill the still closing waters.

Shakspeare.

A dark injury; a sly mischief.—A stroke; a blow.—He had a scripture ready to repel them all; every pertinent text urged home being a direct *stab* to a temptation. *South.*

STABBER, *s.* One who stabs; a privy murderer.

STABILIMENT, *s.* [from *stabilis*, Lat.] Support; firmness; act of making firm.—They serve for *stabiliment*, propagation and shade. *Derham.*

TO STABILITATE, *v. a.* To make stable; to establish.

- The

The soul about itself circumgyrates
Her various forms, and what she most doth love
She oft before herself *stabilitates*.

More.

STABILITY, *s.* [*stabilité*, Fr.; from *stabilitas*, Lat.]
Stableness; steadiness; strength to stand.

These mighty girders which the fabrick bind,
These ribs robust and vast in order join'd,
Such strength and such *stability* impart,
That storms above, and earthquakes under ground
Break not the pillars.

Blackmore.

Fixedness; not fluidity.—Since fluidness and *stability* are
contrary qualities, we may conceive that the firmness or
stability of a body consists in this, that the particles which
compose it do so rest, or are intangled, that there is among
them a mutual cohesion. *Boyle*.—Firmness of resolu-
tion.

STA'BLE, *adj.* [*stabilis*, Lat.] Fixed; able to stand.—
Steady; constant; fixed in resolution or conduct.

If man would be unvariable,
He must be like a rock or stone, or tree;
For ev'n the perfect angels were not *stable*,
But had a fall more desperate than we.

Davies.

Strong; fixed in state or condition; durable.—This region
of chance and vanity, where nothing is *stable*, nothing equal;
nothing could be offered to-day but what to-morrow might
deprive us of. *Rogers*.

To STA'BLE, *v. a.* To make stable; to fix; to establish.
Obsolete.—Articles devised by the king's highness to *stable*
Christian quietness and unity among the people. *Strype*.

STA'BLE, *s.* [*stabulum*, Lat.] A house for beasts.

Slothful disorder fill'd his *stable*,
And sluttish plenty deck'd her table.

Prior.

To STA'BLE, *v. n.* [*stabulo*, Lat.] To kennel; to dwell
as beasts.

In their palaces,
Where luxury late reign'd, sea monsters whelp'd
And *stabled*.

Milton.

To STA'BLE, *v. a.* [*stabulo*, Lat.] To put into a stable.
Phœbus, wearie of his yearly taske,
Ystabled hath his steeds in lowly lay.

Spenser.

STA'BLEBOY, or STA'BLEMAN, *s.* One who attends
in the stable.—If the gentleman hath lain a night, get the
stableman and the scullion to stand in his way. *Swift*.

STABLENESS, *s.* Power to stand.—Behold the spaces,
and the *stablesse*, and the swyft course of heaven. *Chaucer*.
—Steadiness; constancy; stability.

The king becoming graces
As justice, verity, temperance, *stablesness*,
Bounty, persev'rance, I have no relish of them. *Shakspeare*.

STA'BLESTAND, *s.* [In law.] Is one of the four evi-
dences or presumptions, whereby a man is convinced to in-
tend the stealing of the king's deer in the forest: and this is
when a man is found at his standing in the forest with a cross-
bow bent, ready to shoot at any deer; or with a long bow,
or else standing close by a tree with greyhounds in a leash
ready to slip. *Cowel*.—I'll keep my *stablestand* where I
lodge my wife, I'll go in couples with her. *Shakspeare*.

STA'BLING, *s.* House or room for beasts.

Her terror once, on Afric's tawny shore,
Now smok'd in dust, a *stabling* now for wolves! *Thomson*.

To STA'BLISH, *v. a.* [*stabilio*, Lat.] To establish; to
fix; to settle.

Stop effusion of our Christian blood,
And *stablish* quietness on every side. *Shakspeare*:

His covenant sworn
To David, *stablish'd* as the days of Heaven. *Milton*.

STABLO, a town of the Netherlands, in the province of
Liege, situated in the bottom of a deep valley on the Warge.
Population 2800. It takes its name from a celebrated Bene-

dictine abbey, founded by Sigebert so far back as 667. It
has a manufacture of leather, and a considerable trade in
cloth and other stuffs; 12 miles south of Limburg. Lat. 50.
27. N. long. 5. 55. E.

STA'BLY, *adv.* Firmly; steadily: so that it may stand
or endure.

STABROEK, a town of the Netherlands, in the province
of Antwerp, with 1600 inhabitants; 7 miles north-north-
west of Antwerp.

STABROEK, a town of Dutch Guiana, situated on the
Demerara river, about a mile from the sea. This town is
simply two long rows of houses, built very distant from each
other, according to Mr. Pinckard; but in Bolingbroke's ac-
count of Guiana, it is said to consist of wooden houses, with
colonaded porticoes and balconies, shaded by a projecting
roof "orderly arranged between spacious intervals, in three
parallel lines." They are seldom above two stories high, and
stand on low brick foundations, roofed with a sort of red
wood. Venetian blinds, in place of glass, close every win-
dow; and the rooms project in all directions to catch the
luxury of a thorough draught of air; so that the ground plan
of a dwelling is mostly in the form of a cross. Casks and
bales lie about, as if every road was a wharf, and numerous
warehouses are intermingled with the dwellings. Even the
public buildings are of wood. The town has an oblong form
being about one-fourth of a mile broad and one mile long.
The principal streets are quite straight, with carriage roads.
The middle street, leading from the king's stelling, (wharf)
is paved with bricks, and has lamps on each side: another
public stelling, (besides several that are private,) is kept
purposely in order for landing and shipping goods. A navi-
gable canal on each side of the town, which fills and empties
with the tide, affords the same convenience to those houses
which are not situated near the water-side. But these canals
which have been cut at the backs of the houses, are perhaps
the worst neighbours the inhabitants could have near them;
for, being the receptacles of mud, and all the filthy drainings
of the town, and only partially emptied by the reflux of the
tide, they become highly offensive, and tend to generate
disease. There is a market-place, where the negroes assemble
to sell their fruit, vegetables, fowls, eggs, and where the
hucksters expose for sale articles of European manufacture
(much in the same manner as the pedlars do in England,) in
addition to salt beef, pork, and fish, bread, cheese, pipes,
tobacco, and other articles, in small quantities, to enable the
negroes to supply themselves. Hucksters are free women of
colour, who purchase their commodities of merchants at two
or three months' credit, and retail them out in the manner
described. Many of them are indeed wealthy, and possess
ten, fifteen, and twenty negroes, all of whom they employ in
this traffic. It is by no means an uncommon thing for
negroes in this line to be travelling about the country for
several weeks together, sometimes with an attendant, having
trunks of goods to a considerable amount. Adjoining the
market-place are the butchers' shambles. The butchers are
mostly free men of colour, who have purchased their eman-
cipation, and have acquired a little capital and credit. The
market is copiously supplied with butchers' meat, but at a
most extravagant rate: mutton, 3s.; veal, 2s. 6d.; beef,
2s. 1d.; pork, 10d. per pound. With fish the town is not
so well provided as the country: no fish-monger has ever yet
engaged in the business upon a scale sufficiently extensive to
supply the population. At the king's stelling, ferry boats
are always in waiting to carry passengers, horses, and chaises,
to the other side of the river, where there are two high roads,
one leading up the river, the other across to the Essequibo.
The public buildings in the town are the governor's house,
and a range of offices for conducting public business. The
secretary's office is so large as to comprise the courts of police
and justice, and a place of worship, in which the Dutch
service is first performed, on a Sunday, by an ecclesiastic of
that country, after which the garrison chaplain reads the
prayers appointed by the church of England. Next comes
the receiver-general's office for the king's colonial duties; the
commissary's or king's stores; the town guard-house; and the

the *exploiteur* or marshal's office; after which the public jail, for the confinement of criminals, debtors, and runaway or arrested negroes. In the adjoining town, to the south-east, is the burial-ground, comprising ten acres of land. In the new town, or Cumingsburgh, is the fiscal's office, custom-house, post-office, and a colonial hospital, for the reception of those who are unable to defray medical expences, or being reduced by illness, are out of employ. Good houses, well situated for mercantile concerns, either in Stabroek or the new town, let with avidity for three, four, and five hundred pounds yearly. The population in Stabroek consists of about 1500 whites, 200 free people of colour, and 5000 negroes.

STABULATION, *s.* [*stabulatio*, Lat.] Act of housing beasts. *Not in use.* *Cockeram.*

STACHYS [of Pliny, *Σταχυς*; of Dioscorides. So named from the flowers being in a spike], in Botany, a genus of the class didynamia, order gymnospermia, natural order of verticillatæ or labiatæ.—Generic Character. Calyx: perianth one-leafed, tubular, angular, half-five-cleft, acuminate, permanent: toothlets acuminate, awl-shaped, a little unequal. Corolla one-petalled, ringent: tube very short: opening oblong, at the base gibbous downwards: upper lip erect, subovate, arched, often emarginate: lower lip larger, reflexed on the sides, trifid; the middle segment very large, emarginate, folded back. Stamina: filaments four, two of them shorter, awl-shaped, when the anthers have shed their pollen curved back to the sides of the opening. Anthers simple. Pistil: germ four-parted. Style filiform. Stigma bifid, acute. Pericarp none. Calyx scarcely changed. Seeds four, ovate, angular.—*Essential Character.* Corolla, upper lip arched; lower reflexed at the sides; the middle segment larger, emarginate. Stamina finally reflexed towards the sides.

1. *Stachys sylvatica.* Hedge woundwort, or hedge nettle.—Whorls six-flowered; leaves cordate, petioled. Root perennial, creeping, but not very extensively. Stems from one to three feet high, upright, little branched, square, hairy, leafy. Sheep and goats eat it; horses, cows and swine refuse it. The herb will dye yellow. Frequent in hedges and other shady places: flowering in July and August.

2. *Stachys circinata*, or blunt-leaved stachys.—Whorls six-flowered; leaves cordate-rounded, crenate. Root perennial.—Found in the mountains Zouwans of Tunis.

3. *Stachys palustris.* Marsh woundwort, or clown's all-heal.—Whorls six-flowered; leaves linear-lanceolate, half-embracing. Root perennial, creeping to a great extent; the extremities at the close of summer becoming tuberous. Stems two feet high, upright, hollow, four-cornered, the sides flattish, the corners rough with hairs pointing downwards; the joints also are hairy and purple.—Native of Europe, in marshes, on the banks of rivers, in watery places, by road sides and in corn fields, especially in moist situations: flowering in July and August.

4. *Stachys Alpina*, or Alpine Stachys.—Whorls many-flowered; serratures of the leaves cartilaginous at the tip; corollas with a flat lip. Root perennial. Colour of the plant dusky.—Native of Germany, Switzerland, Carniola, Italy, and the South of France.

5. *Stachys Germanica.* Downy stachys, or woundwort.—Root perennial. The whole herb remarkably invested with a white soft silky pubescence, in which respect it is only inferior to the garden stachys lanata, a species that differs from it besides in having blunter leaves, with stems procumbent at the base and taking root at that part. Leaves ovate, rather pointed, sharply crenate, reticulated with veins, silky above, most woolly beneath, the radical ones on long petioles, the rest smaller and nearly sessile: they feel very thick and soft like woollen cloth. Whorls axillary, numerous, many-flowered; the upper ones crowded. Corollas purple within, streaked about the mouth with white; their outside whitish and very downy, especially the upper lip. Stamens hairy. Seeds roundish, black. It varies with a white flower, and with narrower leaves.—Native of Denmark, Germany, Switzerland, France, England, Austria, Carniola, Piedmont and Siberia.

6. *Stachys intermedia*, or oblong-leaved stachys.—Whorls many-flowered; calyxes subpungent; leaves oblong, subcordate, crenate; stem somewhat woolly.—Native of Carolina.

7. *Stachys lanata*, or woolly stachys.—Whorls many-flowered; leaves woolly; stems procumbent and rooting at the base. Root perennial.—It is a native of Siberia.

8. *Stachys Cretico*, or Cretan stachys.—Whorls thirty-flowered; calyxes pungent; stem rough-haired.—Native of the island of Crete or Candia.

9. *Stachys patens*, or spreading stachys.—Very much branched; branches filiform; spreading; leaves lanceolate, serrate, smooth; flowers subverticillate.—Native of Hispaniola.

10. *Stachys glutinosa*, or clammy stachys.—Branches very much branched; leaves lanceolate, smooth. This is a little shrub, a foot high, very much branched, wholly smooth: branches opposite, dichotomous at top, four-cornered; the last branchlets end in a spine.—Found in Candia.

11. *Stachys spinosa*, or thorny stachys.—Branchlets terminated by a spine.—Native of Candia, in the western part of the island, in very dry places, among thyme.

12. *Stachys orientalis*, or Levant stachys.—Leaves tomentose, ovate-lanceolate; floral-leaves shorter than the whorl.—Native of the Levant.

13. *Stachys Palæstina*, or Palestine stachys.—Flowers subspiked; leaves lanceolate, sessile, tomentose, wrinkled, quite entire; calyxes awnless.—Native of Palestine.

14. *Stachys maritima.* Yellow or sea stachys.—Leaves cordate, obtuse, tomentose, crenate; bractes oblong, quite entire.—Native of the South of Europe, on the coast.

15. *Stachys Æthiopica*, or Cape stachys.—Whorls two-flowered.—Native of the Cape of Good Hope.

16. *Stachys hirta*, or procumbent stachys.—Whorls six-flowered; stems prostrate; upper lip of the corolla bifid, divaricate, reflexed.—Native of Spain, Italy, the Levant, and Barbary, about Tunis.

17. *Stachys Canariensis*, or Canary stachys.—Whorls six-flowered; leaves cordate, villose, crenate; stems almost erect; fruiting calyxes of a very spreading bell shape.—Native of the Canary islands.

18. *Stachys lavandulifolia*, or lavender-leaved stachys.—Whorls six-flowered, very hirsute; leaves lanceolate, quite entire, marked with lines.—Native of the Levant.

19. *Stachys recta*, or upright stachys.—Whorls subspiked; leaves cordate-elliptic, crenate, rugged; stems ascending.—Native of the South of Europe.

20. *Stachys arenaria*, or sand stachys.—Whorls subspiked, six-flowered, villose; leaves lanceolate, obtuse, serrate; stems procumbent at the base.

21. *Stachys annua*, or white annual stachys.—Whorls six-flowered; leaves ovate lanceolate, three-nerved, even, petioled; stem erect.—Native of Germany, Austria, Carniola, Switzerland, Piedmont and France.

22. *Stachys rugosa*, or rough stachys.—Whorls six-flowered; leaves lanceolate, attenuated at the base, tomentose, wrinkled, serrate; calyxes awnless.—Native of the Cape of Good Hope.

23. *Stachys arvensis.* Corn stachys, or woundwort.—Whorls six-flowered; leaves cordate, obtuse, crenate, somewhat hairy; stem weak. Root small, annual. Stem from a span to a foot in height, among corn upright, but alone weak or procumbent, branched, somewhat hairy; branches brachiate. Leaves three-nerved at the base, widely crenate, somewhat hairy on both sides, petioled, except the uppermost. Flowers all in whorls. Calyx hairy, with the teeth ciliate. Corolla small, scarcely exceeding the calyx, pale purple or flesh-coloured; upper lip short, blunt and entire. Filaments white below and purple above; anthers blackish; pollen yellow. Seeds greenish, dotted with black.—Native of Europe, in corn fields, in a gravelly or calcareous soil: flowering from June to August.

24. *Stachys latifolia*, or broad-leaved stachys.—Whorls many-flowered, subspiked; upper lip bifid, with the little segments acute; leaves broad, cordate, wrinkled, hairy.

Propagation and Culture.—Most of the sorts are hardy, and may be propagated by seeds sown in March upon a bed of light fresh earth: when the plants come up, set them out into beds six inches asunder, watering them till they have taken root, and keeping them clear from weeds.

Stachys sylvatica, palustris and Germanica are wild creeping plants, and spread very much where they have liberty.

Annua and arvensis are annual; the rest are perennial.

Glutinosa, Æthiopica and rugosa require to be sheltered in winter in a glass case or dry stove.

STACK, *s.* [*stacca*, Ital. *Dr. Johnson.*—Mr. H. Tooke deduces it from the Sax. *ƿeigan*, to ascend; making it the past participle, with the pronunciation of *k* for *g*. Div. of Purl. ii. 276. 283. The word, however, appears to be a northern substantive, viz. *stack*, Icel. *stack-gardur*, an enclosure in which corn or hay stacks are erected. See Dr. Jamieson in V. Stackyard.] A large quantity of hay, corn, or wood, heaped up regularly together.

While the cock

To the *stack* or the barn-door,
Stoutly struts, his dame before.

Milton.

A number of chimneys or funnels standing together.—A mason making a *stack* of chimneys, the foundation of the house sunk. *Wiseman.*

To **STACK**, *v. a.* To pile up regularly in ricks.

So likewise a hovel will serve for a room,

To *stack* on the pease.

Tusser.

STACKHOUSE, a village of England, West Riding of Yorkshire; $1\frac{1}{2}$ mile north-west of Settle.

STACKS OF BURGH, rocks near the east part of Scotland; 1 mile west of Duncansby Head. Lat. 58. 23. N. long. 2. 57. W.

STACKS OF DUNCANSBY, rocks in the North Sea, near the east coast of Scotland; $1\frac{1}{2}$ mile south from the Wick river. Lat. 58. 36. N. long. 2. 57. W.

STACKS OF HEMPRIGGS, rocks in the North Sea, near the east coast of Scotland; 2 miles south from the mouth of Wick river. Lat. 58. 21. N. long. 2. 57. W.

STACTE, *s.* [*στακτη*, Gr., *stacte*, Lat., *ƿactce*, Sax.] An aromatic; the gum that distills from the tree which produces myrrh.—Take sweet spices, *stacte*, and galbanum. *Er.*

STAD, a village in the north of Switzerland, in the canton of St. Gall, with a small harbour for shipping, and a fishery on the south bank of the lake of Constance; 20 miles east-south-east of Constance.

STADE, *s.* [*stadium*, Lat.] A furlong.—The greatness of the town, by that we could judge, stretcheth in circuit some forty *stades*. *Downe.*

STADE, a town in the north of Germany, in Hanover, situated on the Schwinge, a navigable river, which falls into the Elbe at the distance of four miles from the town. Stade was formerly well fortified, but the works were blown up towards the end of the 18th century. It has several good buildings, such as the council-house, merchants'-hall, and gymnasium. It has two churches, in which are several elegant monuments; an orphan-house, and 4800 inhabitants, with manufactures of lace, flannel, stockings, and hats; also of beer and spirituous liquors. Stade is the seat of the different public offices for the provinces of Bremen and Verden. The foreign trade, once considerable, is now confined chiefly to the transit business; and a vessel goes daily from this town to Hamburg. At the confluence of the Schwinge and the Elbe, is a fort called Schwingerschanze, where an armed vessel is stationed for collecting the dues imposed by the Hanoverian government, on all vessels sailing up or down the Elbe; 22 miles west-by-north of Hamburg, and 85 north of Hanover. Lat. 55. 36. 5. N. long. 9. 23. 30. E.

STADELKIRCHEN, a fortress of Upper Austria, in the circle of Traun, on the Ens. Near it is the small town of Stadel, inhabited chiefly by boatmen.

STADEN, or **STAADEN**, a small town of Germany, in

Hesse Darmstadt, on the Nidda; 18 miles north-north-east of Frankfort-on-the-Maine, and 11 north of Haunau. Population 1000.

STADEN, or **STAADEN**, a small inland town of the Netherlands, in the province of West Flanders, with 3200 inhabitants; 7 miles south-east of Dixmuyde, and 10 north-north-east of Ypres.

STADHAMPTON, a parish of England, in Oxfordshire; 8 miles south-east of Oxford.

STADIUS (John), a German astronomer, was born in 1527, and studied at the university of Louvain, where he applied himself with so much diligence to mathematical pursuits, that he was very soon qualified to become a professor; he resided some time at Liege, and was allowed a salary by the bishop, for whom he annually calculated an ephemeris, adapted to the meridian of Antwerp, beginning from the year 1554. The ephemerides of Stadius were much used by the celebrated Dutch mathematician Stevin, though they were afterwards proved to be, in many respects, inaccurate. From Louvain, Stadius went to Savoy, with a commission as mathematician to the king of Spain, and he removed thence to Bruges, in Flanders, where he composed his "Fasti Romanorum," which were published by Hubert Goltzius, whose daughter was married to his son; after this he was invited to France as professor royal of mathematics, and lived there in high respect and honour till he became enthusiastically attached to judicial astrology, and on the faith of that pretended art he began to predict future events. He died in the year 1579, in the fifty-second year of his age. He is author of some astrological treatises, and translated a work of Hermes Trismegistus, entitled "Jatro-mathematicæ, ad Amonem Ægyptium conscripta."

STADLE, *s.* [*ƿadell*, Sax., a foundation.] Any thing which serves for support to another.—A staff; a crutch. *Obsolete.*

He cometh out,—his weak steps governing

And aged limbs of cypress *stadle* stout.

And with an ivy twine his waist is girt about. *Spenser.*

Coppice-woods, if you leave in them *staddles* too thick, will run to bushes and briars, and have little clean underwood. *Bacon.*

To **STADLE**, *v. a.* To leave sufficient staddles when a wood is cut.

First see it well fenced, ere hewers begin;

Then see it well *staddled* without and within.

Tusser.

STADT AM HOF, or **BAYERISCHER HOF**, a small town of Bavaria, on the left bank of the Danube, opposite to Ratisbon, to which it is now united. It contains 1800 inhabitants, and has a well endowed hospital. During the retreat of the Austrians in April 1809, after the battle of Abensberg, it was laid in ashes; but has been rebuilt in an improved manner.

STADTBERG, a small town of Prussian Westphalia, on the Dymel. Part of the town called Marsberg, stands on a hill where was the ancient Saxon temple of Ehresberg, converted by Charlemagne into an imperial residence. A church and priory was also built here by that emperor. Population 2300; 13 miles east-north-east of Briton, and 19 south of Paderborn. Lat. 51. 27. 39. N. long. 8. 49. 33. E.

STADTELDORF, a small town of Lower Austria, with 1300 inhabitants; 20 miles north-north-west of Vienna.

STADTHAGEN, a small town of Westphalia, and the chief place of the county of Schaumburg-Lippe, stands on the Dymel, 9 miles east of Minden. It is situated in a pleasant valley, is surrounded by an old wall and ditch, and has about 1500 inhabitants.

STATDHOULDER, **STADTHOLDER**, or **STADHOLDER**, a governor or lieutenant of a province, in the United Netherlands, particularly that of Holland, where the word (now indeed almost obsolete) has been most used, by reason of the superior importance of the government of that province.

The

The stadtholder, of Holland, was the first member of the republic: he was chief of all the courts of justice, and might preside therein when he pleased. All sentences, judgments, &c., were dispatched in his name. When an office became vacant in any of the courts, the state proposed three persons to the stadtholder, who chose one of them. He even pardoned criminals, which is sovereign prerogative: and he had the choice of scabines, or chief magistrates, in each city; to which end the council of the city always presented him two persons, one of whom he appointed.

In several cities he had the same right of nominating the burgo-masters and counsellors; as at Rotterdam, Dort, &c. He had also a power to cashier the magistrates, and put others in their room, when he found it necessary for the public good, upon giving a reason for the same.

By article VI. of the union of Utrecht, the States constituted him arbiter of all the differences that might arise between the states of the several provinces, or between the cities and the members of the states.

To the dignity of stadtholder was inseparably annexed that of captain and admiral-general of the province; in which quality he named all the officers, and disposed of all military posts. He took care of the execution of the ordinances of the states; and his authority gave him a right to receive and give audience to ambassadors from foreign princes, and even to send ambassadors on his own private affairs.

The office of stadtholder was very ancient: the counts, not being able to reside in Holland, appointed stadtholders to command in their absence in the several provinces; besides a governor-general of all the seventeen provinces of the Netherlands.

William I. prince of Orange, was made stadtholder of Holland and Zealand in 1576, and soon after of the provinces of Guelders, Utrecht, and Overysse, at the time when the Dutch shook off the Spanish yoke; which enabled him to contribute greatly to that happy event.

In 1584, when William I. was assassinated, the same dignity was conferred, by the same provinces, on his son prince Maurice, who was succeeded by his brother Frederic-Henry in 1625. Upon his death, in 1647, his son, William II., became stadtholder, and he possessed this dignity till his death in 1650. The ambitious views of this prince having given offence to the provinces of the republic, they took measures to reduce the authority of the stadtholder; and the province of Holland formed a design of excluding his son William III. prince of Orange afterwards king of England, from the dignity possessed by his ancestors. However, in 1672, Holland, alarmed at the progress of Lewis XIV., declared William stadtholder, and captain-general of the forces of the republic, with the same power which his predecessors had enjoyed. Their example was followed by four other provinces; and, in 1674, on account of his signal services to the states of Holland, they declared him hereditary stadtholder, and determined that his dignity should descend to his male heirs. He was succeeded by his appointed heir, the prince of Nassau-Dietz, hereditary stadtholder of the provinces of Friesland and Groningen, from whom the dignity descended to his son, William-Charles-Henry-Frison. In 1722 he was named stadtholder by the province of Guelderland.

In 1747, the stadtholdership was extended to all the seven united provinces, and made hereditary in the male and female representatives of the family of Orange. The title has since been changed to that of King.

STADT-ILM. See ILMSTADT.

STADT-OLDENDORF. See OLDENDORF.

STÆHELINA [so named from John Henry Stæhelin, and his son Benedict, Swiss physicians], in Botany, a genus of the class syngenesia, order polygamia æqualis, natural order of compositæ discoideæ, cinarocephalæ (*Juss.*).—Generic Character. Calyx: common oblong, cylindric, imbricate: scales lanceolate, erect, terminated by a shorter coloured scalelet. Corolla: compound uniform, tubular.

Corollets hermaphrodite, equal. Proper, one-petalled, funnel-form: border five-cleft, equal, acute, bell-shaped. Stamina: filaments to each five, capillary. Anthers connate, tailed. Pistil: germ very short. Style filiform. Stigma double, oblong, obtuse, erect. Pericarp none. Calyx unchanged. Seeds solitary, oblong, very short, four-cornered. Down branched or cloven, longer than the calyx. Receptacle chaffy, flat. Chaffs very short, permanent.—*Essential Character.* Anthers tailed. Down branched. Receptacle with very short chaffs.

1. *Stæhelina gnaphaloides*.—Leaves filiform, tomentose; scales of the calyx lanceolate, membranaceous at the tip, and reflexed. This rises with a shrubby stalk about three feet high, and divides into several branches. Flowers terminating in single heads, which are pretty large.—Native of the Cape of Good Hope.

2. *Stæhelina dubia*.—Leaves linear, toothletted; scales of the calyx lanceolate; seed-down twice as long as the calyxes. This is a biennial plant, with the stalks rarely above a foot high.—Native of Spain the South of France and Italy.

3. *Stæhelina arborescens*.—Leaves oval; stem arborescent.—Native of the South of France, and the island of Candia.

4. *Stæhelina fruticosa*.—Leaves lanceolate, obtuse; stem shrubby.—Native of the Levant.

5. *Stæhelina spinosa*.—Leaves awl-shaped, spinescent: with a spinule at the base on each side; stem shrubby.—Native of Egypt.

6. *Stæhelina hastata*.—Leaves hastate, hoary; stem shrubby.—Native of Egypt.

7. *Stæhelina ilicifolia*.—Leaves opposite, on very short petioles, cordate, toothed, shining above, tomentose beneath; stem arborescent. This is a tree or shrub, with ever-green shining leaves, and round, pubescent, closely leaved branchlets, flowering at the top.—Native of New Granada.

8. *Stæhelina corymbosa*.—Leaves wedge-shaped, præmorse; flowers corymbed.—Native of the Cape of Good Hope.

9. *Stæhelina chamæpeuce*.—Leaves linear, clustered, very long, revolute.—Native of the island of Crete or Candia.

10. *Stæhelina imbricata*.—Leaves awl-shaped, erect, tomentose.—Native of the Cape of Good Hope.

Propagation and Culture.—Plant cuttings in any of the summer months, covering them closely with a bell or hand-glass. When they have made good roots, take them up carefully, and plant them in pots, filled with fresh light earth, not over rich, and place them in the shade until they have taken new root; then remove them to a sheltered situation, and in autumn place them in the house. This sort does not always ripen its seed in England. Several of the other species may have the same treatment, whenever they shall be introduced. Others are raised from seed.

STÆL-HOLSTEIN (Anne-Louise De), was the daughter of the famous NECKER (see his article), and of Susan, his wife, a woman of considerable attainments, and who wrote some short but meritorious essays. The birth of Anne Louise took place in the year 1766, and her infancy and childhood passed at Paris under the superintendance of her enlightened parents, and in frequent intercourse with all the learned, but perhaps dangerous *philosophers* who visited her mother. When she was little more than 14 years of age, the resignation of her father's official situation took place, and the family retired to Copet, a barony in Switzerland; and six years elapsed before Necker re-appeared, permanently, on the public stage at Paris. In 1787 we find him in that capital attacking Calonne; and the years 1788 and 1789 constitute the æra which so intimately connected his history with the destinies of France, and the annals of Europe.

It was during one of the occasional visits of the Necker family to Paris, prior to 1787, that Eric Magnus Baron de Stael, by birth a Swede, was introduced to their acquaintance by Count de Creutz, the Swedish ambassador. He was young and handsome, and succeeded in pleasing Made-moiselle Necker, who consented to become his wife. Count de Creutz was shortly after recalled to Stockholm, to be placed at the head of the Foreign Department, and Baroni

de Stael was appointed his successor. Thus dignified, and with the further recommendation of being a Protestant, his marriage was not delayed; and the rich heiress, to the chagrin of many French suitors, became Baroness de Stael Holstein. We believe, however, that this union did not prove to be one of the most felicitous. The lady was wealthy, young, and though not handsome, agreeable and attractive; she was rather under the middle size, yet graceful in her deportment and manners; her eyes were brilliant and expressive, and the whole character of her countenance betokened acuteness of intellect, and talent beyond the common order. But she inherited to the utmost particle from her father his restless passion for distinction; and derived from the society in which she had lived not a little of that pedantry and philosophical jargon which was their foible and bane. The Baron de Stael was a man, on the contrary, of remarkable simplicity of habit and singleness of heart. The opposite nature of their dispositions could not fail soon to affect connubial harmony; and though four children were the issue of this marriage, and what are called public appearances were maintained till the death of the Baron, it is generally understood that there was little of communication between him and his lady beyond the legal ties of their state.

In August 1787, Madame de Stael was delivered of her first daughter, and immediately after accompanied her father in his exile, which was of short duration. Her other children were two sons and a daughter. Two only survived her. One of her sons lost his life in a duel.

The year 1789 is designated as the epoch at which Madame de Stael embarked upon the stormy sea of Literature, by the publication of her "Letters on the Writings and Character of J. J. Rousseau." But previous to this period, she was well known to the Parisian world by the composition of several slight dramatic pieces, which were performed by private amateurs; by three short novels published afterwards, 1795, at Lausanne; and by a tragedy founded on the story of Lady Jane Grey, which obtained considerable circulation among her friends and admirers. Her reputation was therefore no secret when her first public appeal was made. The letters on Rousseau met with great success; and the budding fame of the writer was attended with all the eclat usual among our continental neighbours. This triumph was, however, abridged and embittered by the critical and rapid advance of the Revolution. On the 11th of July, M. Necker was involved more desperately in its vortex. While seated at dinner with a party of friends, the Secretary of State for the Naval Department waited upon him to intimate his banishment from the territory of France. Madame de Stael, whose whole life has been erratic, accompanied her parents in their hurried exile. A new political turn recalled them by the time they reached Frankfort, and Necker was once more reinstated in the administration, in which he remained fifteen months, and was then driven from office for ever to the retirement of Copet, where he died on the 9th of April, 1804.

Madame de Stael, who had gone to Copet in 1790, returned in the following year to Paris, and took an active part in the intrigues of that eventful period. At this time she formed or matured intimacies with Talleyrand, Sieyès, La Fayette, Narbonne, the Lameths, Barnave, Vergniaud, and other characters distinguished for the parts they played in the Constituent, Legislative and other bodies. As the wife of an ambassador, she was protected from the first violent shocks of revolution; but the bloody ascendancy of Robespierre rendered all protection vain, and in 1793, the Baron and Baroness de Stael found it expedient to fly together to Copet. The duke of Sudermania, Regent of Sweden, having acknowledged the republic, Mons. de Stael was appointed ambassador, and in 1795 returned with his lady to Paris. About this date, she published her "Thoughts on Peace, addressed to Mr. Pitt;" and is believed to have exercised a powerful influence over the manœuvres which distracted the governments of several ensuing years, especially those connected with the Directory. Legendre, the

butcher, who, on the 22d of June, 1795, began to declaim against the "spirit of moderation" which he said was gaining ground, more than once denounced Madame de Stael and her party, as directing the political intrigues of that time.

A domestic calamity varied the public tenor of her existence. She was summoned to attend the death-bed of her mother, to soothe whose affliction, it is stated, she was playing on a musical instrument a few moments only before she expired. On this melancholy occasion, Madame de Stael flew to her pen for consolation; a resource to which she appears always to have applied when pressed by care or grief, or smarting under the charges which party did not fail to heap upon her, or soured by the animadversions of critics, to which she was uncommonly sensitive. At Lausanne, she composed the first part of the Essay "On the Influence of the Passions upon the Happiness of Individuals and Nations," which was published at Paris, in 1796, and the second part in 1797.—This production is reckoned one of her best, and was translated in 1798 into English; a language in which the writer was well versed; as, indeed, she was in English literature generally.

Madame de Stael was with her father when the French troops invaded Switzerland; and though he had been placed on the Emigrant list by Robespierre, and consequently exposed to death wherever the troops came, his daughter's influence with the Directory was sufficient to secure him, not only safety, but respect, and the erasure of his name from this sanguinary roll. She then returned to Paris and to her husband; but in a few months, either tired by the persecutions to which she was exposed, or prompted by some other motive, hastened back to the repose of Copet. In 1798, the dangerous illness of the Baron de Stael recalled her to Paris, where she received his last sigh, and soon left the metropolis for Switzerland. After this period, she published an essay "On the Influence of Literature upon Society," which may be considered as a continuation of the two last-mentioned works. In 1800, Buonaparte, in passing through Geneva, had the curiosity to visit M. Necker; and, according to rumour, Madame de Stael took this opportunity to read him a long dissertation on the course he ought to pursue for the prosperity of France. The First Consul, who did not relish the political plans of ladies, listened to her very impatiently.

The well-known novel of "Delphine," written during this retirement, was printed at Geneva, in 1802, and excited great attention in England, France, and Germany, where it has been translated, attacked, criticised, and praised, according to the humour of the parties. The author published a defence of her work.

In 1803 she revisited Paris, and formed that connexion with M. Benjamin Constant, a Swiss of considerable literary attainments, which lasted to the day of her death. Whether for past or present offences is not easy to tell, but Napoleon was not slow in banishing her to the distance of 40 leagues from the capital. In company with her daughter, and her protector, M. Constant, she journeyed to Frankfort, and thence to Prussia, where she applied herself to the cultivation of German literature. From Berlin, in 1804, she hastened to Copet, on receiving intelligence of her father's danger. At Geneva, in the year 1805, issued the "Manuscripts of M. Necker, published by his daughter."

Still further to divert her mind, she next travelled into Italy, and collected materials for her celebrated work, "Corinna, or Italy," which has been translated into many languages. Having returned to Geneva, Madame de Stael amused herself with appearing upon the stage in 1806, and performed in tragedy with considerable skill. There is a drama from her pen called "Secret Sentiment." Madame de Stael also wrote a famous work, entitled "Germany," which is replete with profound reflections, and betrays an extensive acquaintance with the literature of that country, and a power of abstruse cogitation quite without a parallel in the annals of woman. "Letters and Reflections of the Prince de Ligne," an "Essay on Suicide," and a posthumous.

mous publication on the French revolution, complete the list of her productions.

Madame de Stael, on the 15th of July, 1817, sank into a calm sleep, while in a chair, enjoying the calm air of her garden, and awoke no more. She had had so strong a presentiment that her death would take place thus, that, for some months she went to sleep with dread. Previous to her death, she acknowledged a marriage with M. ROCCA; so that is properly the name she should bear in biography.

Mad. de Stael twice visited England; formerly during the revolutionary conflict, when she resided in a small Gothic house at Richmond, which is visible from the river above the bridge; and again, about 1814. During her stay in London, she was much courted by persons of the highest rank, and of all parties. She is universally described as very pleasant and sprightly in conversation, and perfectly amiable. Her opinion of English society is more favourable than foreigners in general are apt to form.

There is, in the Edinburgh Review, No 60, a very good criticism on the general merits of De Stael. The reviewers are of opinion that she is "the most powerful writer that her country has produced since the time of Voltaire and Rousseau—and the greatest writer, of a woman, that any time or any country has produced. Her taste, perhaps, is not quite pure; and her style is too irregular and ambitious. These faults may even go deeper. Her passion for *effect*, and the tone of exaggeration which it naturally produces, have probably interfered occasionally with the soundness of her judgment, and given a suspicious colouring to some of her representations of fact. At all events, they have rendered her impatient of the humbler task of completing her explanatory details, or stating in their order all the premises of her reasonings. She gives her history in abstracts, and her theories in aphorisms:—and the greater part of her works, instead of presenting that systematic unity from which the highest degrees of strength and beauty and clearness must ever be derived, may be fairly described as a collection of striking fragments—in which a great deal of repetition does by no means diminish the effect of a good deal of inconsistency. In these same works, however, whether we consider them as fragments or as systems, we do not hesitate to say that there are more original and profound observations—more new images—greater sagacity combined with higher imagination—and more of the true philosophy of the passions, the politics, and the literature of her contemporaries—than in any other author we can now remember. She has great eloquence on all subjects; and a singular pathos in representing those bitterest agonies of the spirit in which wretchedness is aggravated by remorse, or by regrets that partake of its character. Though it is difficult to resist her when she is in earnest, we cannot say that we agree in all her opinions, or approve of all her sentiments. She overrates the importance of Literature, either in determining the character or affecting the happiness of mankind; and she theorizes too confidently on its past and its future history. On subjects like this, we have not yet facts enough for so much philosophy; and must be contented, we fear, for a long time to come, to call many things accidental, which it would be more satisfactory to refer to determinate causes. In her estimate of the happiness, and her notions of the wisdom of private life, we think her both unfortunate and erroneous. She makes passion and high sensibilities a great deal too indispensable; and varnishes over all her pictures too uniformly with the glare of an extravagant or affected enthusiasm. She represents men, in short, as a great deal more unhappy, more depraved and more energetic, than they are—and seems to respect them the more for it.—In her politics she is far more unexceptionable. She is everywhere the warm friend and animated advocate of liberty—and of liberal, practical, and philanthropic principles. On these subjects we cannot blame her enthusiasm, which has nothing in it vindictive or provoking; and are far more inclined to envy than to reprove that sanguine and buoyant temper of mind which, after all she has seen and suffered, still leads

her to overrate, in her apprehensions, both the merit of past attempts at political amelioration, and the chances of their success hereafter. * * * * If Mad. de Stael, however, predicts with too much confidence, it must be admitted that her labours have a powerful tendency to realize her predictions. Her writings are all full of the most animating views of the improvement of our social condition, and the means by which it may be effected—the most striking refutations of prevailing errors on these great subjects—and the most persuasive expostulations with those who may think their interest or their honour concerned in maintaining them. Even they who are the least inclined to agree with her, must admit, that there is much to be learned from her writings; and we can give them no higher praise than to say that their tendency is not only to promote the interests of philanthropy and independence, but to soften, rather than exasperate, the prejudices to which they are opposed.

STAFF, *s.* plur. *staves*, [ʃtaɪf, ʃtaɪf, Sax.; *staff*, Danish; *staf*, Dutch.]—A stick with which a man supports himself in walking.

It much would please him,
That of his fortunes you would make a *staff*
To lean upon. *Shakspeare.*

A prop; a support.—The boy was the very *staff* of my age, my very prop. *Shakspeare.*—A stick used as a weapon; a club; the handle of an edged or pointed weapon. A *club* properly includes the notion of weight, and the *staff* of length.

I cannot strike at wretched kernes, whose arms
Are hir'd to bear their *staves*. *Shakspeare.*

Any long piece of wood.

He forthwith from the glittering *staff* unfurl'd
The imperial ensign. *Milton.*

Round or step of a ladder.—Descending and ascending by ladders, I ascended at one of six hundred and thirty-nine *staves*, or eighty-nine fathoms. *Brown.*—An ensign of an office; a badge of authority.

Methought this *staff*, mine office-badge in court,
Was broke in twain. *Shakspeare.*

All his officers brake their *staves*; but at their return new *staves* were delivered unto them. *Hayward.*—An establishment of officers, in various departments, attached to generals and armies. [*Stef*, Icelandic.] A stanza; a series of verses regularly disposed, so as that, when the series concluded, the same order begins again.—Cowley found out that no kind of *staff* is proper for an heroic poem, as being all too lyrical; yet though he wrote in couplets, where rhyme is freer from constraint, he affects half verses. *Dryden.*

STAFFA, a small island of the Hebrides, celebrated for its basaltic pillars, and for its remarkable natural caverns. It lies about 5 leagues west of the island of Mull, and 3 leagues from Icolm-kill. It is of an irregularly oval shape, and about a mile and a half in circumference, presenting an uneven table land, terminating nearly all round in cliffs of variable height. The greatest elevation lies towards the south-west, and appears by barometrical measurement, to be 144 feet. The surface is covered with a rich soil and luxuriant grass. Staffa is pastured by a herd of black cattle, but there has long ceased to be a house on it; the change in the system of Highland farms having materially altered the distribution of the population over most parts of this country. The want of some shelter from an occasional storm has frequently proved a cause of inconvenience to the visitors who in summer time crowd to this far-famed spot. It would become a serious evil, should a boat be detained for a night or more; a circumstance not unlikely to occur during the gales of wind which in autumn rise so suddenly on this coast. Great difficulties are generally supposed to attend a landing on this island. But, according to Mr. Maculloch, who has published a description of the western islands, a landing may almost always be effected with safety, in any weather in which a boat of the class usually employed in visiting it, would

would keep the sea. The landing being once made, the great cave is accessible at all states of the tide except that of extreme high water with a heavy sea rolling into it; a circumstance which rarely happens to the tourist, since a boat will seldom be out in that sea which would render access to it impossible. But it cannot be thoroughly seen unless entered in a boat, except by expert climbers; nor can the two caves situated at the south-west side be visited in any other manner, since they admit of no access from above. The visit to these two caves is, like that to the former, made an object of terror by the native boatmen; partly from a desire to avoid trouble, and partly from want of skill and knowledge of the ground. The boat cave indeed cannot, on account of its very small size, be entered at all, except in calm weather and at high water, as its mouth is obstructed by rocks. In entering any of these caves it is necessary that the boatmen on each side should be provided with boat-hooks or short poles; as, for want of room, the oars cannot be used in guarding against the surge which washes into them. These hints will not be misplaced if they save those who are desirous of a complete knowledge of Staffa, from the disappointment they must otherwise experience in consequence of the laziness and fraud of the boatmen who ply in the port of Ulva.

A considerable portion of the precipitous face of Staffa presents a columnar disposition. The highest point of this face lies between the Great cave and the Boat cave, and is, by the plummet, 112 feet from the high-water mark. It becomes lower in proceeding towards the west, the height near Mackinnon's cave being only 84 feet. From this it extends with some variation to the north, where it subsides into a flat rocky shore, elevated but a few feet above the sea. Here it again rises, and after continuing precipitous for a short space, declines into that irregular rocky shore on which the small beaches forming the landing place are situated; whence it once more gradually rises, till, becoming again vertical beyond the crooked cave, it returns to the point from which we commenced this description.

The cave of Fingal, which fronts the south-west, is celebrated by all travellers who have visited it, in terms of unbounded admiration. "The mind can hardly form an idea (says Sir Joseph Banks) more magnificent than such a space, supported on each side by ranges of columns, and roofed by the bottoms of those which have been broken off to form it; between the angles of which, a yellow stalagmitic matter has been exuded, which serves to define the angles precisely, and at the same time with a great deal of elegance; and to render it still more agreeable, the whole is lighted from without, and the air is perfectly free from the damp and noxious vapours with which natural caverns in general abound." The outline of the aperture of this cave, when viewed in such a light as to shew it distinctly, is perpendicular at the sides, and terminates above in a species of Gothic arch. The height from the top of the cliff to the top of the arch is 30, and from the latter to the surface of the water at mean tide, 66 feet. On the western side the pillars which bound it are 36 feet high, while at the eastern they are only 18, although their upper ends are nearly in the same horizontal line. This difference arises from the height of the broken columns which form the causeway on the eastern side, and which cover and conceal the lower parts of those belonging to the front. The breadth at the entrance is 42 feet, as nearly as it is possible to ascertain it; since the gradual variation of the surfaces, as the curve retires on each hand, prevents the adoption of a very precise point of measurement. The height of the cave within diminishes very soon to a mean measure, varying from 50 to 44 feet; which latter, in the same state of the tide, is also the altitude at the extremity. The mean breadth is equal to that of the aperture, till near the innermost part; but at the extremity it diminishes to 22 feet; preserving, as will be seen by these measures, a considerable degree of regularity throughout. The length is 227 feet. The sides of this cave are, like the front, columnar, and in a general sense perpendicular; though, when accurately viewed, they are, in the same way,

far from possessing that geometric regularity which accompanies all the views of it hitherto published. The columns are frequently broken and irregularly grouped, so as to catch a variety of direct and reflected tints, mixed with unexpected shadows, that produce a picturesque effect which no regularity could have given. The ceiling is various in different parts of the cave. It is deeply channelled in the middle by a fissure parallel to the sides, and prolonged from the point of the exterior arch to the end. That portion which lies on each side of this fissure toward the outer part of the cave, is similar to the upper incumbent bed, being formed of a minutely fractured rock. In the middle it is composed of the broken ends of columns, which produce an ornamental and somewhat architectural effect; while at the end, a portion of each kind of rock enters into its formation. From attending only to one or other of these portions, different observers have described the ceiling in a different manner; and each party has accused the other of misrepresentation. The surfaces of the columns above, are sometimes distinguished from each other by the infiltration of carbonate of lime into their interstices. As the sea never ebbs entirely out, it forms the only floor to this cave; but the broken range of columns which produces the exterior causeway, is continued on each side within it. This range is most perfect at the eastern side, and admits of access over the broken summits to the further end, provided the water be not too high; but on the western, they terminate at some distance from the extremity. The lower portions of the last columns lose at length their regularity of form, and coalesce into a rude mass of rock. "It would be no less presumptuous than useless," says Mr. Maculloch, "to attempt a description of the picturesque effect of that to which the pencil itself is inadequate. But if this cave were even destitute of that order and symmetry, that richness arising from multiplicity of parts combined with greatness of dimension and simplicity of style, which it possesses; still, the prolonged length, the twilight gloom half concealing the playful and varying effects of reflected light, the echo of the measured surge as it rises and falls, the transparent green of the water, and the profound and fairy solitude of the whole scene, could not fail strongly to impress a mind gifted with any sense of beauty in art or in nature."

There are other caves, namely, Mackinnon's, or the Scart or Cormorant's cave, and the Boat cave. The height of Mackinnon's cave from the water, at a quarter ebb, is 50 feet, and its breadth 48, so that it presents a large square opening, which, from its depth, catching dark shadows, produces a powerful effect, equal perhaps to that of the Great cave, although neither attended by the same symmetry nor elegance of design. The length is 224 feet, and the interior dimensions throughout are nearly equal to the aperture; excepting at the extremity, where the roof and walls approach a little, and a beach of pebbles is thrown up. The next cave is situated more to the eastward, and is known by the name of the Boat cave, apparently because it is accessible only by sea. However insignificant in dimensions, it is far from being so in picturesque effect, since the symmetry of the columnar range in that part of the face under which it lies is even greater than near the cave of Fingal. Its height is from 14 to 16 feet above the high-water, the undulation of the sea preventing greater precision in the measurement, and its breadth is 12 feet. The roof and sides are smooth, and the whole interior presents a long parallel opening like the gallery of a mine, without interest or beauty. The length is estimated to be 150 feet.

STAFFARDA, a small town in Piedmont, near which the French, under marshal Catinat, defeated the duke of Savoy in 1690; 3 miles north of Saluzzo.

STAFFELSEE, a small lake of Bavaria, near Murnau. It is about 2 miles square, and has in the middle a small island, with a church.

STAFFELSTEIN, a small town of Bavarian Franconia, on the Maine, with 1200 inhabitants; 19 miles east of Culmbach, and 27 north of Nuremberg.

STAFFIELD,

STAFFIELD, a township of England, in Cumberland; $9\frac{1}{2}$ miles north-by-east of Penrith.

STAFFISH, *adj.* Stiff; harsh. *Obsolete.*—A wit in youth not over dull, heavy, knotty, and lumpish, but hard, tough, and though somewhat *staffish*, both for learning and whole course of living, proveth always best. *Ascham.*

STAFFORA, a river of Austrian Italy, which passes by Voghera, and joins the Po; 8 miles west-south-west of Pavia.

STAFFORD, a market town and borough of England, in the county of Stafford, of which it is the county town. It is situated on the north bank of the river Sow, about three miles from its junction with the Trent. Though low, the situation is extremely pleasant. The town is of an irregular oval figure, extending from south-east to north-west. The streets are well paved, and the houses are mostly built of brick, in a regular and compact manner. Though consisting properly only of one parish, the town contains two churches, St. Mary's and St. Chad's. The former is a spacious building, in the form of a cross. It consists of a nave, two side aisles, a transept, and a chancel of three aisles, with an octagonal tower in the centre, which contains a peal of eight musical bells. This church appears to have been founded at a very early period; the precise date is unknown. It has since been almost entirely rebuilt, and only a few remains of the more ancient structure are now visible. The general style of architecture is the early pointed: the altar-piece within the church is an elegant piece of workmanship; the organ is reckoned one of the finest in the kingdom. The font presents a singular piece of antiquity: it is very large, and of a heavy construction: the bottom part is a square of two feet diameter, and is ornamented on three sides with human figures lying flat on their faces: on the fourth side is the figure of a ram. Within the church is a number of ancient and modern monuments, some of which are deserving of attention. St. Mary's church, prior to the reformation, was a collegiate. King Stephen bestowed it on the bishop and chapter of Lichfield and Coventry; and at the dissolution, a dean and 13 prebendaries were attached to it. St. Chad's church is a very ancient building; early in the last century it was cased with brick, except the tower, which remains in its original state, which was formed after the most ancient Saxon plan. Besides the churches, Stafford contains places of worship for Independents, Presbyterians, Methodists, and Quakers. The other public buildings in the town are various, and well deserving of notice. The county-hall stands near the centre of the town, and is a spacious and neat modern building; it extends 100 feet in front, and contains a number of elegant apartments, appropriated to different purposes: the assembly room, which reaches nearly the whole length of the front, leads to the court-rooms which are placed on each side. In the centre is a stair-case, at the top of which is the grand jury room, and several other offices. Behind the county-hall, is an elegant and convenient market-place. The county infirmary stands in the Foregate, on the north road, and is a plain respectable building; it is supported by voluntary contributions. The county-gaol is situated nearly opposite the infirmary, and is an extensive modern building, containing about 150 separate cells; its regulations and internal economy are excellent. A county lunatic asylum on a very extensive scale, has been lately erected near to the gaol, and is considered one of the most complete and commodious buildings of the kind in the kingdom. The free-school has been taken down and rebuilt: it was originally founded and endowed (according to an inscription in St. Mary's church), by king Edward VI. in the year 1550. Previous to the dissolution, Stafford contained a variety of monastic institutions: at the north end of the walls stood a house of Franciscans, or Grey Friars, founded by Sir James Stafford of Soudan; a priory of Black Friars was founded about the year 1180, by Richard Reece, bishop of Lichfield, or by Gerard Stafford; and on the green, at the south end of the town, Ralph Lord Stafford, bestowed a portion of ground on the Austin Friars, on which

they founded an establishment in 1344. About a mile and a half south-west of the town, on the summit of a hill, stood the castle of the barons of Stafford, upon the site of which two towers and a banqueting room, on the plan of the original building, have been lately erected by the Jer-ningham family, who now possess the estates, and have laid claim to the ancient barony of Stafford. South of the castle stood the mansion house, the usual residence of the family of Stafford. Stafford had anciently four gates, and was defended, except on the side next the Sow, by a wall and a ditch, supplied with water from the river. When taken by the republican army in 1643, the wall was razed and the ditch filled up, so that no remains of it can now be discovered. The chief trade of Stafford consists in the manufacture of boots and shoes; there is also a considerable business carried on in tanning, both for home consumption and exportation. The canal to the Trent has been of great advantage to the trade of the place. By the charter of Edward VI. Stafford is governed by a mayor, recorder, 10 aldermen, 10 common councilmen, a town-clerk, and two sergeants-at-mace. The borough sends two members to parliament, and has done so since the 23d of Edward I. The right of election is in the resident burgesses not receiving parochial relief, and the mayor is the returning officer: the number of voters is estimated at upwards of 600. The earliest authentic mention of Stafford is in the Saxon Chronicle, A. D. 913, when Ethelfleda, countess of Mercia, sister of Edward the Elder, built a castle here, of which no vestige now remains. Stafford appears to have been a town of considerable importance prior to the Norman conquest. Early in the tenth century it was considered the chief town of the district; in Domesday Survey, it is termed a city, and was governed by two bailiffs. The earliest charter of incorporation now extant was granted by king John in the 7th year of his reign. This charter was confirmed by Edward VI. and many new privileges added to the town. Queen Elizabeth established the assizes and sessions here, by act of parliament. The ancient custom of borough English, by which the youngest son succeeds to property, in preference to the elder children still prevails here. The town of Stafford gave the title of baron, viscount, and earl, from the time of William the Conqueror till the beginning of the last century, when it became extinct. It was again renewed in 1786, by the elevation of earl Gower to the title of marquis of Stafford. Market on Saturday, and seven annual fairs; 16 miles north-west of Lichfield, and 135 north-west of London. Lat. 52. 48. N. long. 2. 7. W.

STAFFORD, WEST, a parish of England, in Dorsetshire; $2\frac{1}{2}$ miles south-east of Dorchester.

STAFFORD, a post township of the United States, in Tolland county, Connecticut. It contains a famous medicinal spring, with good accommodations for visitors. The waters are chalybeate. Population 2235; 73 miles west-south-west of Boston.

STAFFORD, a township of the United States, in Monmouth county, New Jersey. Population 1239.

STAFFORD, a county of the United States, in the north-east part of Virginia, bounded north by Prince William county, north-east by the Potomac and Prince George county, south by the Rappahannock, and west by Culpeper and Fauquier counties. Population 9830, including 4195 slaves. Chief town, Falmouth.

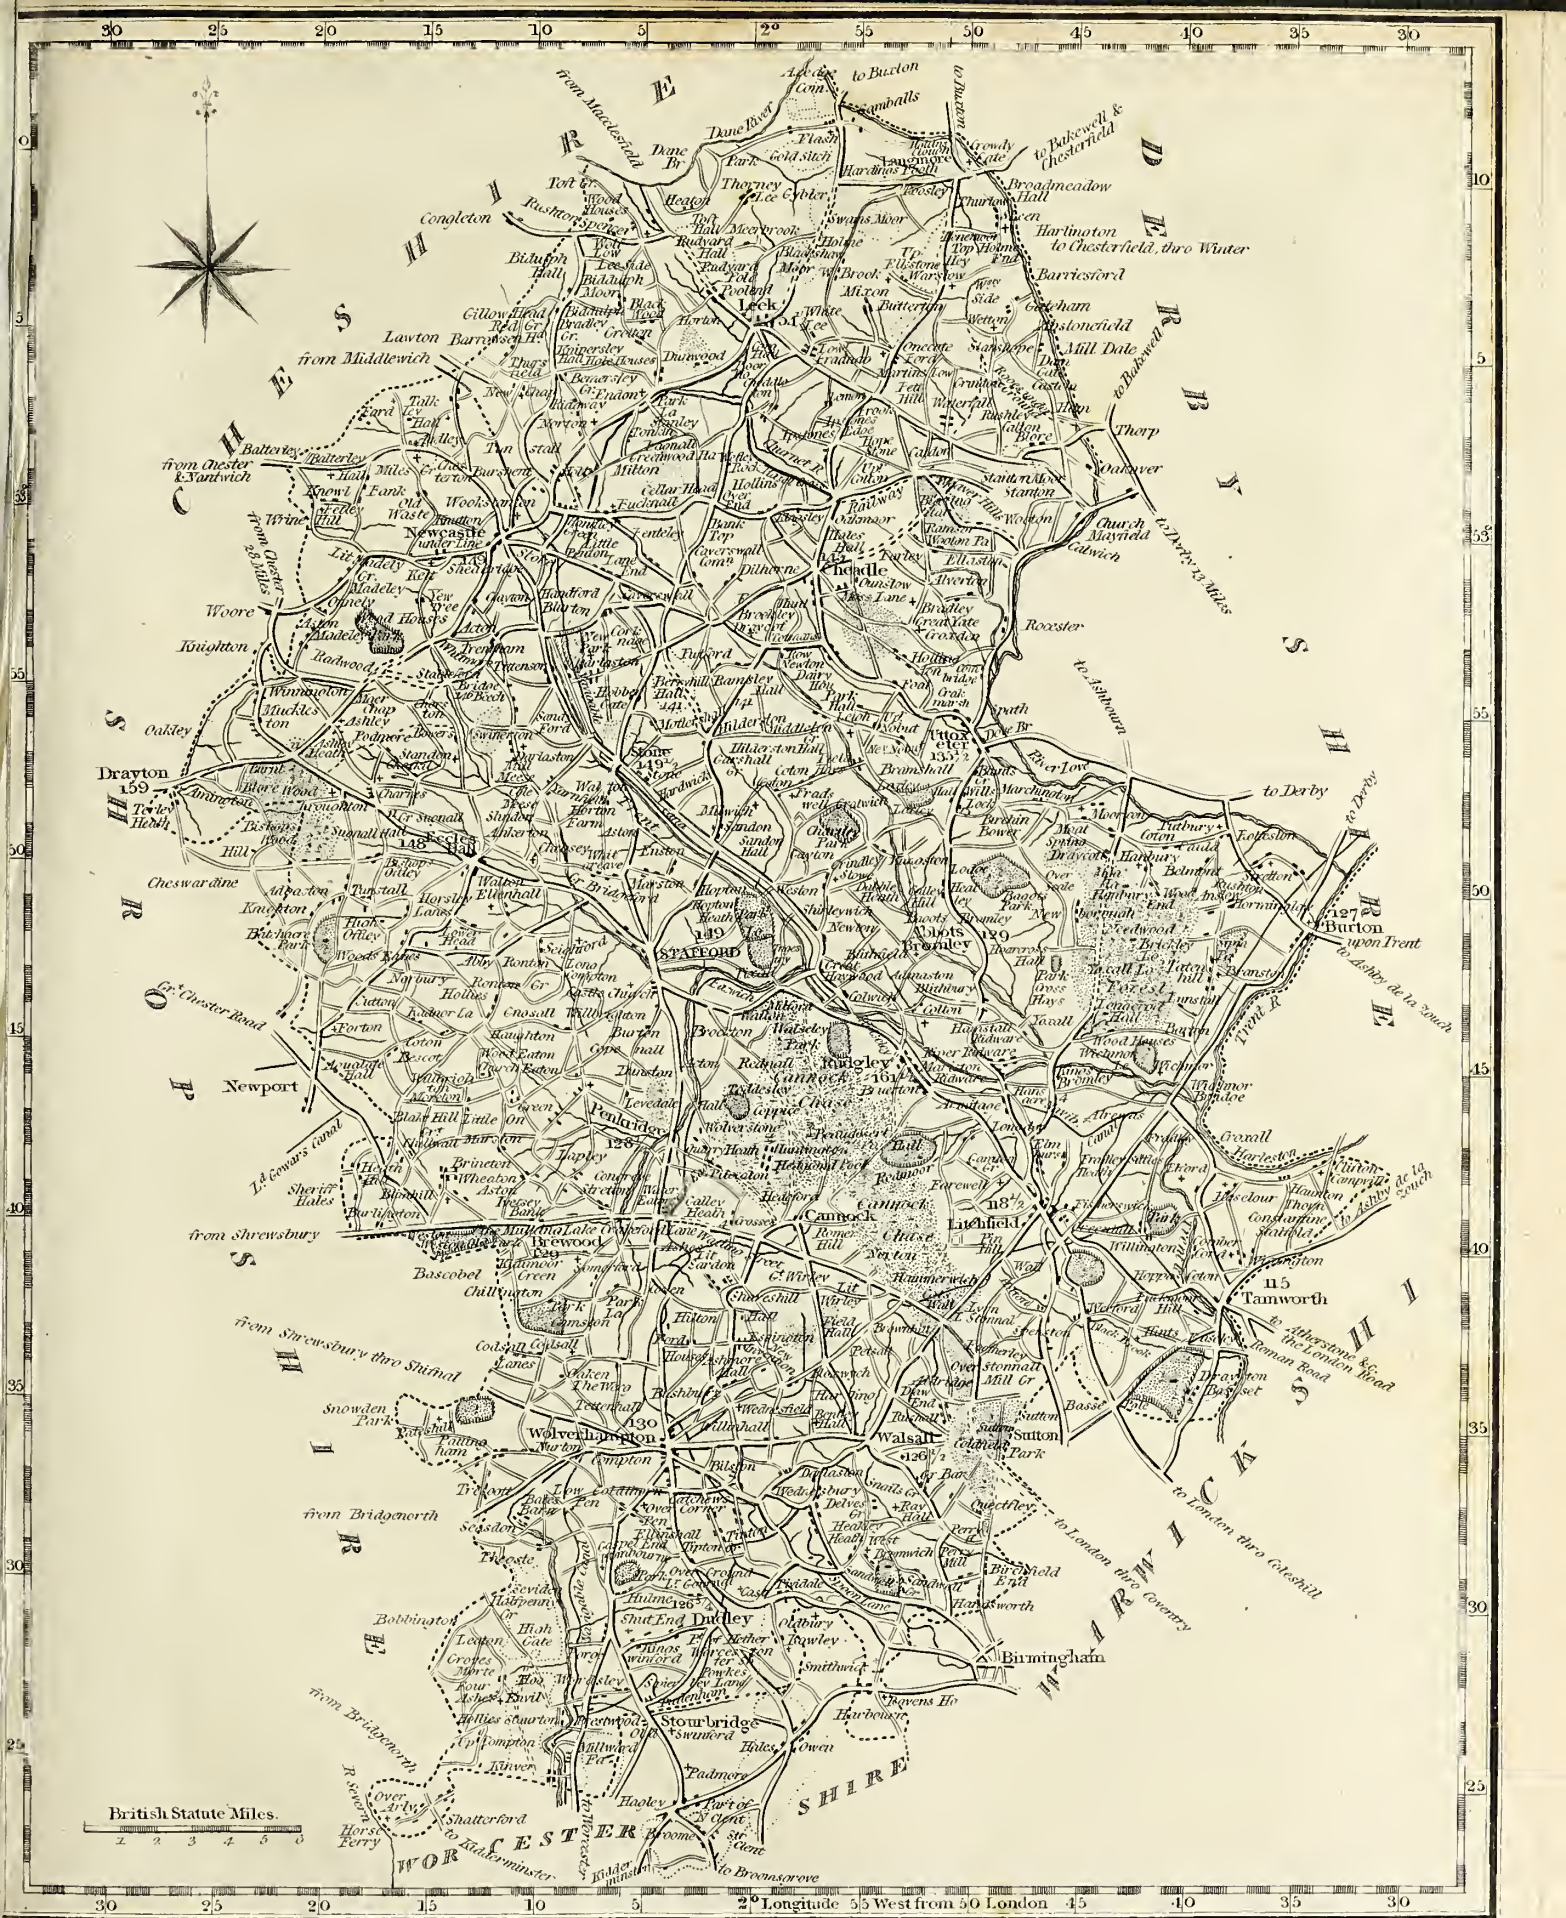

STAFFORD, a post village of the United States, in Stafford county, Virginia. Lat. 38. 24. W. long. 77. 26. N.

STAFFORDSHIRE, an inland county of England, nearly in the centre of the kingdom, bounded on the north by Cheshire and part of Derbyshire, on the east by Derbyshire and Warwickshire, and between these for a short way also by Leicestershire; on the south by Worcestershire, and on the west by Shropshire and Cheshire. It is divided from Derbyshire by the rivers Dove, Trent, and Meese; the other boundaries are chiefly artificial, and in the south-west the county is much indented by detached projections from Worcestershire and Shropshire. Its figure is an oblong or oval

oval, much elongated, and stretching from north to south. Its extreme length is 60 miles, the greatest breadth from east to west 38 miles, and the average breadth from 15 to 20. It lies within the parallels of 52. 23. and 53. 13. N. lat. and between 1. 36. and 2. 27. W. long. It contains 1196 square miles, or 765,000 acres, with 254 inhabitants to each mile. It is divided into five hundreds, viz., Cuttlestone, Offlow, Pyrehill, Seisdon, and Totmanslow; and 183 parishes, in which are one city, Lichfield; three boroughs, Stafford, Newcastle, and Tamworth; and 17 other market towns, viz., Abbot's Bromley, Brewood, Burton, Burslem, Cheadle, Eccleshall, Hanley, Lane-End, Leek, Longnor, Penkridge, Rugeley, Stone, Uttoxeter, Walsall, Wednesbury, and Wolverhampton. It sends ten members to parliament, two for the county, two for Lichfield, and two for each of the three boroughs.

The aspect of Staffordshire is various; a range of hills runs along the north-western border, spreading out towards the north, over the whole breadth of the county. These hills are termed the Moorlands; they form the beginning of that chain of hills which extend northwards through Yorkshire to the borders of Scotland. To this bleak and hilly district in the north and north-west, the other parts of the county in the south, middle, and east, present a striking contrast, being generally level, or only interspersed with gentle eminences. A few detached hills, however, rise to a greater height, such as the limestone hills of Bowley, the hills of Clent and Barr-Beacon, and various others of less elevation, as the high grounds on Cannock heath, the hills of Bushbury and Essington, Kinver-Edge, Tcttenhall-Wood, and some places near Enville. Cannock heath, which was anciently covered with a great forest of oak, presents now the appearance of a naked and barren waste, and scarcely a tree remains to enliven the scene. According to the trigonometrical survey, Weaver hill, one of the highest peaks of the Moorlands, is elevated 1154 feet above the level of the sea; Ashley heath, 803; and Castle Ring, 715. According to Pitt's survey, Bushbury hill is elevated 650 feet; Barr-Beacon, 750; the highest peak of Rowley hills, 900 feet. The rivers of Staffordshire rise mostly in these high grounds within the county, and are none of them of any great magnitude, but are, notwithstanding, of vast benefit to the county, by supplying the water for its extensive system of artificial navigation. The Trent is the principal river, and to which most of the other streams are tributary. It rises in the northern extremity of the county, among the Moorlands, near Biddulph, and traverses the whole county from north-west to south-east, running in a winding course through the middle of it, first southwards by the potteries and Stone, then eastwards to its junction with the Tame on the east of Lichfield; and lastly, north-eastwards to Burton, where it enters Derbyshire, after a course of upwards of 50 miles. In its course it receives, either directly or through other channels, the following waters, which mostly rise also in the Moorlands:—the Dove, the Manyfold, and the Hamps or Hanse; the two latter of which run under ground a considerable way, near Ilam; the Churnet, the Blythe, the Teyn, the Sow, and the Penk. The Tame rises in the south of the county, and passing by Tamworth, joins the Trent near Wichnor. The Stour and Smestall run southwards into the Severn, which itself runs through the county for a mile or two on the south-west. Some lakes occur in this county, but they are not numerous, nor of much importance; the principal is that of Aqualate, 1848 yards long, and 672 broad. The climate of this county varies considerably with the elevation of the ground; but even in the low lands, the air is sensibly colder than in many of the more southern counties. The Moorland is a dreary and cold track; the snow lying long. The west wind here usually brings rain, but the east and south winds fair weather, unless the wind changes to the south from the west, in which case the rain continues. The climate, on the whole rather inclines to wet; and upwards of 36 inches of rain are supposed to fall annually. The hay harvest is from the middle of June to the end of July. Corn harvest is in Au-

gust and September; but in some early seasons, pease, oats, and barley, have been harvested about the end of July. The strong clayed soil prevails mostly in two very considerable tracks: the one lies between the Trent and the Dove, extending from Burton westwards, nearly to Stowe; the other extends from Stowe southwards to Brewood, and from Stafford to the western border of the county. A small track also occurs at the south-western point of the county, near the Severn. The light soil occurs in a district which stretches from the Trent southwards along the Tame and the eastern border of the county, nearly to Birmingham; and from the Tame westwards beyond Lichfield, in another district on the south-west, extending on each side of the river Stour, from Pattingham southwards to Worcestershire; and in a third smaller district, westward of Brewood. The calcareous district is of considerable extent, and situated chiefly between the Dove and the town of Ipstones on the west; and between Farley on the south, and Warslow on the north; two other tracks of smaller extent occur at Dudley and Walsall. The mixed soil comprehends all the rest of the county. The meadow and pasture land extends along the banks of the principal rivers and canals, traversing, along with them, all the other districts indiscriminately. They usually partake of the nature of the arable soils in their neighbourhood, with the addition of the sediment of water, when within reach of the streams. In some particular spots, peat earth forms the soil in the meadow ground, and when properly drained and meliorated, becomes valuable pasture and meadow land. Of this arable there are 200,000 acres of clay loam, or friable mixed loam; 200,000 acres of gravelly and sandy loams or other mixed, including calcareous soils; and 100,000 acres of light, sandy, gravelly, or other soils, tolerably adapted for turnip. Of the uncultivated lands, to the amount of 180,000 acres, there are 39,040 of roads, rivers, canals, &c. and 141,760 of waste lands, forests, woods, &c., of which 100,000 acres may be set down as irreclaimable. Staffordshire is not very remarkable for its agriculture; the industry and resources of the county being more directed to mines and manufactures. Of late years much has been done to introduce every established improvement. A general county agricultural society, upon an enlarged and liberal plan, and one near Newcastle, have been founded. They have done much to encourage the best modes of cultivation; but hitherto their exertions have not been attended with all the good effects which could be wished. Underground draining to a very great extent, has been lately executed in this county, though in many instances not very substantially. The value of estates varies from 10,000/ a-year, to that of the smallest freeholder. The farms are of all sizes, from 20 acres to 500; but the smaller ones are much less numerous than formerly. Leases are often granted for 21 years. The cultivated lands of the county are nearly all inclosed, not more than 1000 acres now remaining open. The fences are generally bad, being a mixture of the black and white thorn, hazel, alder, maple, bramble, and briars. They are ill kept, occupy much land, and are full of gaps. The field produce commonly cultivated, is whea rye, barley, oats, beans, peas, vetches, buck-wheat, hemp, flax, turnips, potatoes, cabbages, rape; to these may be added clovers, refoils, and two or three of the real grasses. That of turnip has been much extended of late; but the defective course almost generally pursued is fallow, wheat, oats, seeds. Lime is now used in considerable quantities, in place of a bad clay marl; and a large portion of the arable land is laying down rapidly to grass. Turnip cabbage has been also tried, as well as sainfoin, lucerne, burnet, and other artificial grasses. The practice of drilling has made considerable progress, but much of the sowing is still performed in the old broadcast way. Kitchen garden stuffs are sufficiently abundant, but fruits fall much short of the consumption of the county. The grass lands of this county are of very considerable extent, comprehending all the low land along the courses of the several rivers. These are in many parts fertilized by the floods of the rivers, and yield a very rich pasturage. On the banks of the Dove in particular, the land

STAFFORDSHIRE.

Engraved for the Topographical Ordnance Survey.

is remarkable for fertility, and is covered with perpetual verdure, the inundations of the river adding greatly to the natural productiveness of the soil. Irrigation has been much extended, with the most beneficial effects. The water meadows at Trentham, belonging to Lord Stafford, and at Betteley belonging to Mr Tollet, are upon a great scale. Staffordshire can scarcely be reckoned a breeding district, yet many gentlemen and farmers breed a considerable number of cattle and sheep. Calves and hogs are kept on most farms. More cattle and sheep are reared within the county, than supplies its own consumption; and great numbers are sold to dealers for the markets of the metropolis. The cattle of this county are generally of the long horned breed, the stock of which has been gradually improving for many years. The sheep are of various breeds, viz., the grey faced without horns; the black faced horned; the white faced without horns, &c. The old and new Leicester are particularly common on the pasture grounds, on different districts. Notwithstanding a vast quantity of trees have been cut down within the last 30 or 40 years, this county is still well stocked with wood of every description. The estate of Lord Bagot, in the neighbourhood of Abbot's Bromley, contains several hundred acres of the finest and richest oaks perhaps in the kingdom. Next to this, for the value of its woods, is the estate of Chillington; and a variety of other plantations of valuable timber are scattered throughout the county. Of the wastes and unimproved lands of the county, the most extensive is in the southern part, Cannock heath. In the north are Morredge, Wetley moor, Stanton moor, and Holington heath. Needwood forest, a track of 10,000 acres which abounds with beautiful and romantic scenery, and was at no long period a complete waste; has lately been in great part inclosed and cultivated.

The strata of coal may be fairly termed inexhaustible, as they have been ascertained to exist over a space of 50,000 acres in extent; and in the southern part of the county the seams are in many places of the extraordinary thickness of 8 10 and even 12 yards. The quantity already consumed since the earliest times, does not exceed a tenth part of the whole. The coal is in general of excellent quality. The coal district extends in the southern part of the county, from Cannock heath, including a part of it, to near Stourbridge in length, and from Wolverhampton to Walsall in breadth. In the north of the county, coal occurs in several detached places; chiefly in the neighbourhood of Newcastle and the potteries, and in the neighbourhood of Cheadle and Dilhorn. A singular species, called the peacock coal, from the prismatic colours it exhibits, is dug up in many places. It is to be regretted that there exists in this county the same want of economy in working this most necessary mineral, as in the other coal districts of England. The strata of iron ore are also very extensive, and they usually lie under, and alternate with the coal. They are particularly abundant, and of excellent quality, in the neighbourhood of Wednesbury, Tipton, Bilston, and Sedgely; also west from Newcastle. Besides iron, both copper and lead ores exist in this country. The most important copper mine is that of Ecton hill, near Warslow, on the estate of the Duke of Devonshire; another is wrought at Mixon, in the neighbourhood of Leek. In Ecton hill there is also a considerable vein of lead, and another occurs not far from Stanton moor. The limestone of this county occurs in very great abundance. The hills of Sedgely and Dudley Castle on the south, afford an inexhaustible supply; it is also found at Rushall and Hayhead, but above all on the north-east Moorlands, and along the banks of the upper parts of the Dove, where the greatest consumption could not lessen the quantity in any sensible degree. The lime-works on Caldon Low, and in the neighbourhood of the Weaver hills, are particularly extensive. Several of the tunnels of the canals pass through the limestone hills, and here vast caverns have been hollowed out, without removing the surface soil. Besides supplying the county, the lime is sent to various other places for mortar. It is also used extensively as a manure. In some places the limestone approaches to, and

passes into, marble, and in others it is chiefly composed of petrified marine animal remains. The marble is of various kinds. That species known by the name of ronce marble, is very abundant in Yelpersley Tor and the adjoining hills. It consists of a white and shining grit, streaked with red, and takes so good a polish, that it has frequently been used for chimney pieces and monuments. Grey marble is found in considerable plenty at Stansop and at Poke hill: not far from Bentley hill there is a good supply of a jet black colour, but so hard as not to be easily worked. When burnt it makes fine emery. Alabaster, which is a sulphate of lime, occurs in great abundance, particularly on the banks of the river Dove. It was formerly raised to a considerable extent, but at present few of the quarries are wrought. In some places it is so solid and compact of texture, as to be applied to the paving of churches, and to form tables, chimney-pieces, and grave stones. The coarser kind, when heated, becomes soft and brittle, and being pounded, forms a kind of stucco. Freestone of very good quality occurs in this county, and there are extensive quarries of it in different places. Bilstone affords a freestone of very fine grit, fit either for mouldings or building; and excellently adapted for grindstones of the finer sort. Gornal near Sedgely has also plentiful quarries of a coarser and cheaper freestone, used for the same purposes as that of Bilstone. Tixall produces an excellent and durable building freestone, which is easily raised in blocks of almost any dimension; and the same material is again found at Wrottesley, Brewood Park, Pendeford, and a great many other places. Clays of every description are abundant in this county, and form the principal material of its potteries. Pottery clay of several sorts is found, particularly in the neighbourhood of Newcastle, in which district the potteries are chiefly carried on. At Amblecot is a clay of a dark bluish colour, of which are made the best glass-house pots of any in England. Great quantities of it have been sent to different parts of the kingdom, and glass-houses have even on this account been erected in the neighbourhood. A blue clay at Darlaston, near Wednesbury, is sold to glovers to make an ash colour; and yellow and red ochre, for colouring and painting, are found here. In the beds of grey marble in Langley Close, a black chalk occurs, and also a fine reddish earth under a rock near Himley Hall, which is little inferior to the red chalk of Frome. The manufactures of Staffordshire are various and extensive. Besides the iron foundries, blast furnaces, and slitting mills, and other branches of the iron trade, which, especially in the southern districts, employ great numbers of people, they consist chiefly of potters' ware, glass, hardware articles, nails, toys, and japanned goods. The potteries of Staffordshire have acquired no small share of celebrity, from their vast extent, but more particularly from their perfection, and from the great improvements which were introduced into the manufacture, by the inventive genius and indefatigable labours of Mr. Wedgwood. It occupies an extent of about 10 square miles, and contains a number of populous towns, in which the works are carried on, chiefly in the parishes of Burslem and Stoke. In this district the soil contains, in almost every part, a great variety of clays, covering strata of coal, rich, productive, and easily worked. Between them are other strata of clays, most of which form excellent fire bricks; for the construction of kilns and furnaces; and in particular there is a species of clay called Sagger clay, which is almost peculiar to this district, and is invaluable to the earthen-ware manufactory, as it has the property of bearing an intense degree of heat; and is therefore made into vessels, called Sagers, in which the ware is placed in the ovens, in order to be hardened. From these natural advantages, the pottery business was early begun here; and the existence of some kind of earthen-ware manufactory can be traced at least two centuries back. This was of the very coarsest kind; but in 1690, a material improvement was introduced by two ingenious foreigners of the name of Elers. This was a new species of glaze, formed by throwing into the kiln a quantity of common salt; and the inhabitants of Burslem and the

adjacent villages are said to have flocked with astonishment to see the immense volumes of smoke which, on casting in the salt, arose from what they termed the "Dutchmen's ovens." A capital improvement was afterwards made by Mr. Astbury, in the body of the ware itself, by using pounded flint along with the clay. But the salt glaze being still very imperfect, and the ware itself unskilfully executed, it was beginning about the year 1760, to be supplanted by an importation of a finer manufacture from Frome, when Mr. Wedgwood began his famous improvements. His first great production was a very superior kind of earthen-ware for the table, now known by the name of queen's ware, which, from its neatness and elegance of execution, and excellent qualities, soon came into general estimation and use. Continuing his experiments, Mr. Wedgwood invented five other distinct species of earthen-wares, varying in their qualities, but all admirably adapted for the different uses, and possessing properties which the art was thought hitherto incapable of producing. These different kinds of ware are now in universal demand; and being fashioned by the industry and ingenuity of the manufacturers, into an infinite variety of forms, both for ornament and use, constitute nearly the whole of the present fine English earthen-wares and porcelain, which are become the source of a most extensive trade, and may, without doubt, be ranked among the most important manufactures of the united kingdom. According to the evidence of the late Mr. Wedgwood before the two houses of parliament, in 1785, the manufacturing part alone of the pottery business in Staffordshire, then gave bread to 15,000 or 20,000 people; but this according to him, was a small object, when compared with the immense quantity of employment which it created for other classes of workmen in different parts of the kingdom. After the year 1785, the pottery trade increased to a still greater extent, but received a severe check, and greatly declined during the late war, more especially by the interruption of our trade with America, to which much of our earthen-ware was annually exported. The manufacture of glass is most considerable in the vicinity of Stourbridge, where a variety of very lofty and spacious glass-houses have been erected. Wolverhampton, and the many populous villages in its neighbourhood, are distinguished for their manufacture of locks, which are esteemed equal to any in England: buckles, steel toys, and particularly watch chains, are also among the noted productions of this town. The staple manufacture of Walsall and its neighbourhood, consists chiefly of shoe buckles and clasps, to which may be added, saddlers' ironmongery. Vast quantities of nails are made in many of the country parishes in this neighbourhood, women and children being employed in it, as well as men. Wolverhampton and Bilston produce a variety of plated, lacquered, japanned, and also some enamelled goods. At Darlaston and Willenhall, and the adjoining country, tobacco and snuff boxes are finished in various ways. At Stafford, the manufacture of shoes, both for home consumption and exportation, is very considerable. The hat manufacture is carried on at Newcastle and Burton, and in some other towns in the county, on a large scale. Tin and brass are among the productions in Staffordshire; and there are several smelting and brass works near the copper mines, particularly at Stone and Whiston, Oak-Moor, and near Cheadle. The cotton manufactures at Rocester, Fazeley, Tamworth, Burton, and Tutbury, are very considerable. At Shirley Wich, between Stone and Heywood, there is a manufacture of salt, obtained by boiling brine, which is pumped from wells. At Leek, the silk trade is carried on to a considerable extent, and the tape manufacture at Cheadle and Teyn. Most of the raw wool grown in this county is sent to the stocking and clothing districts; and the woollen manufactures here are hence comparatively trifling; and the making of linen is mostly confined to private families for domestic use. The trade of Staffordshire consists in the exportation of its rude and manufactured produce, and the importation of the raw materials, and of various articles of domestic consumption. Both its trade and manufactures

have been greatly advanced by the extensive system of inland navigation, which at once connects this county not only with the metropolis, but with the Severn, the Mersey, and the Humber, and the three corresponding ports of Bristol, Liverpool, and Hull. The Grand Trunk canal, after crossing Cheshire, enters this county near Lawton, near which is the Harecastle tunnel. It thence proceeds by the Potteries, Stone, and Weston, through many other intermediate towns and villages, following nearly the course of the Trent, and at last entering it at Wilden in Derbyshire. From the Grand Trunk several branches strike off different ways, and from thence again proceed a number of smaller canals, intersecting the county in all directions. The Staffordshire and Worcestershire canal strikes off at Heywood, and running by Penkridge and Wolverhampton, joins the Severn near Bewdley. The Coventry and Oxford canal leaves the Grand Trunk at Fradley heath; and from this the Fazeley canal branches off to Birmingham. The Wirley and Essington canal leaves the Grand Trunk to the east of Lichfield, and joins the Birmingham canal on the one hand, and the Staffordshire and Worcestershire on the other. The public roads in Staffordshire are in general good, but the private ones are very indifferent. The bridges, tunnels, and other buildings of the kind, are numerous, and many of them of great merit as works of art. A county gaol and bridewell, a shire hall, and lunatic asylum, have been erected within a few years, in the county town, Stafford, upon a magnificent scale. Staffordshire, among the Britons, belonged to the Cornavii; among the Romans, to the province of Flavia Caesariensis; and during the Saxon heptarchy, formed part of the kingdom of Mercia. The two Roman military ways, Watling-street and Ikenild-street, pass through the county. The Roman stations in it that are known, are Pennocrucium near Stretton, and Etocetum at Wall, near Lichfield. In the civil wars of Charles I. Staffordshire was considerably engaged; and in this county Charles II. lay concealed after the battle of Worcester.

Population returns in 1811:—

Houses.....	57,040
Inhabitants	295,153
Families employed in trade and manufactures	34,011
— in agriculture	18,361
Other families	10,165

In 1821, the population amounted to 171,668 males, 169,362 females.

STAFFSIO, a village of Sweden, in Sudermania, near Nykioping, with large iron-works, where cannon are made for export.

STAFFTREE, *s.* A sort of ever green privet.

STAFISBERG, a large and neat village of the Swiss canton of Berne; 14 miles south-south-east of Berne.

STAG, *s.* [H. Tooke pronounces it the past participle of the Sax. *stagan*, to ascend; a name well applied, he says; the raised and lofty head of the animal being the most striking circumstance at the first sight of him.] The male red deer; the male of the hind.

To the place a poor sequestered stag,
That from the hunter's aim had ta'en a hurt,
Did come to languish.

Shakspeare.

A colt or filly; also a romping girl. *North. Grose.* STAGBACH, a township of England, in Herefordshire; 2 miles west-south-west of Leominster.

STAGE, *s.* [*estage*, Fr., *stagie*, Teut. from *stijen*, elevate. *Kilian.*] A floor raised to view on which any show is exhibited; a raised floor of temporary use.—I have seen the whole front of a mountebank's *stage*, from one end to the other, faced with patents, certificates, medals, and great seals, by which the several princes of Europe have testified their esteem for the doctor! *Tatler.*—The theatre; the place of scenic entertainments.—One Livius Andronicus was the first *stage* player in Rome. *Dryden.*—Knights, squires, and steeds must enter on the *stage*. *Pope.*—Any place where any thing is publicly transacted or performed.

When we are born, we cry that we are come
To this great *stage* of fools.

Shakspeare.

A place

A place in which rest is taken on a journey; as much of a journey as is performed without intermission. [Perhaps from the Goth. *staiga*, a way, a road; *staige*, Sax. the same.] Our next *stage* brought us to the mouth of the Tiber. *Addison*.—A single step of gradual process.—The changes and vicissitudes in wars are many; but chiefly in the seats or *stages* of the war, the weapons, and the manner of the conduct. *Bacon*.

To *STAGE*, *v. a.* To exhibit publicly. *Out of use*.

I love the people;

But do not like to *stage* me to their eyes;

Though it do well, I do not relish well

Their loud applause.

Shakspeare.

STAGE ISLAND, a small island near the coast of Maine, not far from Casco bay, remarkable for being the first land inhabited by Europeans in New England. It is very small, and now uninhabited.

STAGECOACH, *s.* A coach that keeps its stages; a coach that passes and repasses on certain days for the accommodation of passengers.—The story was told me by a priest, as we travelled in a *stagecoach*. *Addison*.

STAGEGELY, *adj.* Belonging to the stage; befitting the stage.—Nor may this be called an histrionic *parada*, or *stagely* visard and hypocrisy, while women seek to appear advantaged in stature, or in beauty. *Bp. Taylor*.

STAGEPLAY, *s.* Theatrical entertainment.—This rough-cast unheun poetry was instead of *stageplays* for one hundred and twenty years. *Dryden*.

STAGEPLAYER, *s.* One who publicly represents actions on the stage.—Among slaves, who exercised the polite arts, none sold so dear as *stageplayers* or actors. *Arbutnot*.

STAGER, *s.* A player.

You safe in your stage clothes,

Dare quit, upon your oaths,

The *stagers* and the stage-wrights too.

B. Jonson.

One who has long acted on the stage of life; a practitioner; a person of cunning.

I've heard old cunning *stagers*

Say, fools for argument use wagers.

Hudibras.

One cries out, these *stagers*

Come in good time to make more work for wagers. *Dryden*.

STAGERY, *s.* Scenic exhibition; show on the stage.—Likening those grave controversies to a piece of *stagery*, or scene-work. *Milton*.

STAGEVIL, *s.* A disease in horses. *Diet.*

STAGGARD, *s.* A four year old stag. *Ainsworth*.

To *STAGGER*, *v. n.* [*staggeren*, Dutch.] To reel; not to stand or walk steadily.

He struck with all his might

Full on the helmet of th' unwary knight:

Deep was the wound; he *stagger'd* with the blow. *Dryden*.

To faint; to begin to give way.—The enemy *staggers*: if you follow your blow, he falls at your feet; but if you allow him respite, he will recover his strength. *Addison*.—To hesitate; to fall into doubt; to become less confident or determined.—A man may, if he were fearful, *stagger* in this attempt. *Shakspeare*.

To *STAGGER*, *v. a.* To make to stagger; to make to reel.

That hand shall burn in never-quenching fire,

That *staggers* thus my person.

Shakspeare.

To shock; to alarm; to make less steady or confident.

The question did at first so *stagger* me,

Bearing a state of mighty moment in't.

Shakspeare.

STAGGERING, *s.* Act of reeling.—The immediate forerunners of an apoplexy are a vertigo, *staggering*, and loss of memory. *Arbutnot*.—Cause of staggering or making to stagger.—This shall be no grief unto thee, [in the margin, no *staggering*, or stumbling.] 1 *Samuel*.

STAGGERINGLY, *adv.* In a reeling manner. *Hulock*.—Drunkards go *staggeringly* when they are top-heavy.

Granger.—With hesitation.—While we are but *staggeringly* evil, we are not left without parentheses of consideration; thoughtful rebukes, and merciful interventions, to recall us to ourselves. *Brown*.

STAGGERS, *s.* A kind of horse apoplexy.—His horse past cure of the fives, stark spoiled with the *staggers*. *Shakspeare*.—Madness; wild conduct; irregular behaviour. *Out of use*.

I will throw thee from my care for ever

Into the *staggers*, and the careless lapse

Of youth and ignorance.

Shakspeare.

STAGHIGLIHOLE, a small town of the Sardinian states, in the Milanese, in the province of Bobbio, on the river Coppa. Population 1000.

STAGIRA, a small town of European Turkey, in Macedonia, remarkable only as the birthplace of Aristotle, whence he is called the Stagirite. It is situated on the gulf of Contessa; 16 miles west-north-west of that town, and 46 east-south-east of Salonica.

STAGNANCY, *s.* The state of being without motion or ventilation.

Though the country people are so wise

To call these rivers, they're but *stagnancies*,

Left by the flood.

Cotton.

STAGNANT, *adj.* [*stagnans*, Lat.] Motionless; still; not agitated; not flowing; not running.

Immur'd and buried in perpetual sloth,

That gloomy slumber of the *stagnant* soul.

Irene.

To *STAGNATE*, *v. n.* [*stagnare*, Lat.] To lie motionless; to have no course or stream.

Where creeping waters ooze,

Where marshes *stagnate*.

Thomson.

STAGNATION, *s.* Stop of course; cessation of motion. It is often applied figuratively to moral or civil images.—As the Alps surround Geneva on all sides, they form a vast bason, where there would be a constant *stagnation* of vapours, did not the north wind scatter them from time to time. *Addison*.

STAGNO, a small town of the Austrian states in Dalmatia, on the isthmus which joins the peninsula of Sabioncello with the continent. It is a bishop's see; and about a mile from the town is a fortress called Stagno Piccolo, or Little Stagno. It has considerable fisheries, and a good harbour, but is unhealthy; 30 miles north-west of Ragusa.

STAGNOVICH, a village in the west of European Turkey, in Romania, the residence of the bishop of Montenegro.

STAGOUS, an inland town of European Turkey, in Albania, not far from Trikala. It contains about 4000 inhabitants, and in the environs are several of the monasteries called Meteora, situated on steep rocks.

STAGS, rocks on the south coast of Ireland, at the entrance into Cork harbour. Lat. 51. 48. N. long. 8. 15. W.

STAGS, or *BROADHAVEN*, rocks in the Atlantic, near the west coast of Ireland. Lat. 55. 22. N. long. 9. 36. W.

STAGS, of *CASTLEHAVEN*, rocks on the southern coast of Ireland; 7 miles south of Castlehaven. Lat. 51. 26. N. long. 9. 7. W.

STAGSDEN, a parish of England, in Bedfordshire; 5 miles west-by-south of Bedford. Population 517.

STAGSHAW, or *STAGSHAWBANK*, a small hamlet of England, in Northumberland, where there are considerable fairs for horses annually on Whitsun Eve, and 4th July.

STAGVILLE, a post village of the United States, in Orange county, North Carolina.

STAHL (George Ernest), a celebrated physician and chemist, was born at Anspach, in Franconia, in October, 1660. He studied medicine at the university of Jena, and laid the foundation of his fame, immediately after his graduation in 1684, by commencing a course of private lectures among the students of that place. His advancing reputation procured for him the appointment of physician in ordinary to the Duke of Saxe-Weimar in 1687. On the establishment

ment of the university at Halle, in 1694, Frederic Hoffmann, with his accustomed liberality, solicited the appointment of a medical professorship for Stahl, who accepted the office, and became the rival of that distinguished physician as a teacher of medical systems, but not in the exercise of candour and liberality towards his colleagues. Stahl was conscious of possessing considerable mental powers, and paid little respect to the opinions of others; and he became the leader of a sect or school of physicians, in opposition to the mechanical theorists, in which he was followed by many eminent persons, not only in Germany, but in other countries, as by Perault in France, Gaubius in Holland, Porterfield and Simpson in Scotland, and by Nichols and Mead in England, notwithstanding the very fanciful nature of the hypothesis on which his system was founded. The "Conspetus Medicinæ," of Juncker was published to illustrate his doctrines in Germany; and a succinct account of the system was given by Dr. Nichols, in his work "De Animâ Medicâ," in this country.

Physicians had always remarked a certain power in the animal body of resisting injuries and correcting some of its disorders, which they had called *nature*, and *vis medicatrix naturæ*, and Van Helmont had already ascribed some degree of intelligence to this power. But it remained for Stahl to refer this power entirely to the *rational soul*, which, he affirmed, not only originally formed the body, but is the sole cause of its motions, in the constant excitement of which life consists. For he maintained that the soul abhors the dissolution of its body, and therefore excites and directs all its motions, the vital and involuntary as well as the voluntary motions, to prevent that dissolution, by obviating putrefaction, and expelling the corrupted humours by various appropriate organs or excretories; in a word, that all the functions of the body are entirely directed by the mind, which intelligently perceives the tendency of all impressions, external and internal, made upon the body, and excites such motions as may favour the beneficial, and obviate the injurious influence of all causes acting upon it. Whence he farther contended, that diseases, such as fevers and spasmodic affections, were in fact the motions voluntarily excited by the rational soul, for the purpose of opening emunctories, and expelling some offending cause. Generally speaking, therefore, it was maintained, that diseases were salutary efforts of the presiding soul, and were to be assisted, and not interrupted, by the interference of art: yet it was somehow admitted, that the mind, from surprise, fear, or despair, occasioned by too sudden or vehement impressions made upon it, occasionally excited adverse motions, which it was right to moderate. Independently of the visionary character of this hypothesis, it was justly deprecated as leading physicians to neglect the use of remedies, or to use only the most inert and frivolous ones; and also to set little value upon the collateral studies of medical science, even upon anatomical researches, which Stahl maintained had little or no reference to the art of healing. And, in fact, both he and his followers, trusting principally to the attention and wisdom of nature, adopted that inactive mode of *curing by expectation*, la *médecine expectante*, as the French have called it; they zealously opposed the use of some of the most efficacious remedies, such as opium, cinchona, and mercury; and were extremely reserved, even in the use of general evacuations, such as bleeding, vomiting, &c., although their system led them to refer almost all the disturbances of the motions of the system to a plethora, or too great abundance of the blood. This hypothesis was maintained by Stahl in several publications, with much ability and ingenuity; and it continued to influence a great number of intelligent physicians for a long time. His principal medical work, in which his system is displayed in its most matured form, is entitled "Theoria Medica vera, Physiologiam et Pathologiam sistens," printed at Halle in 1708.

The merits of Stahl as a chemical philosopher are of a much higher character; and the school which he founded in this science, after extending its influence long and universally among those who pursued the same inquiries, has only been

superseded of late by farther discoveries. He was the inventor of the celebrated theory of *phlogiston*, which appeared to explain the phenomena of combustion and inflammability, and was received every where with high applause, and which, in fact, occasioned Germany to become the great school of chemistry. It cannot be denied, indeed, although later experiments have subverted the groundwork, that this hypothesis tended greatly to simplify the ideas, and perfect the operations of chemists, and entitled its author to a high rank amongst the improvers of science. His principal chemical work was entitled, "Fundamenta Chymicæ dogmaticæ et experimentalis," first printed in 1729, and several times reprinted; but before that period he had published several other works on this subject, such as "Dissertationes de Metallurgiæ et Docimasticæ Fundamentis," 1697; and, in the same year, "Experimenta et Observationes 300 Chymicæ et Physicæ," in which work he principally advanced his doctrine of phlogiston. He also published in the German language some essays on "Sulphur," and "On Salts."

Stahl was elected a member of the Academy Naturæ Curiosorum in 1700. He was called to visit Frederic William, King of Prussia, at Berlin, in 1716; and afterwards returned several times to that capital, where his reputation was very high, and where at length he was attacked with a fatal disease, in 1734, in the seventy-fourth year of his age. See *Eloy Dict. Hist. de la Médecine. Gen. Biog.*

STALID, *participle adjective*. Sober; grave; regular; composed; not wild; not volatile.

Put thyself

Into a 'haviour of less fear, ere wildness
Vanquish my staid^r senses.

Shakspeare.

To our weaker view,

O'erlaid with black, staid wisdom's hue.

Milton.

STALIDNESS, *s.* Sobriety; gravity; regularity; contrariety to wildness.—If sometimes he appears too gay, yet a secret gracefulness of youth accompanies his writings, though the *staidness* and sobriety of age be wanting.

To STAIN, *v. a.* [*ystaenio*, Welsh, from *ys* and *taenu*.

"Rhag Gwyar or Gnawd,

"Afar *ystaenawd*." Taliessyn, an old British poet. Dr.

Johnson.—Serenius notices the Welsh word, and adds *stein*, Goth. color; *steina*, pingere, bitumine obducere.] To blot; to spot; to maculate.

Lend me a looking-glass:

If that her breath will mist or *stain* the stone,
