Image contribution prompted by nearby notification

USER STORY

When I'm near a place where an article is missing an image, I want to be notified so that I have an opportunity contribute a photograph for that article.

CORE INTERACTION FLOW

Pre-requisites: User has turned on location detection, and notification settings for the app, and allows access to their camera and storage

1. Opted-in user receives a system notification when in proximity to an article geotagged nearby that is missing an image.
2. Notification opened to view details about the location in question in app
3. User goes to the location and takes the photo
4. Preview of image which may be edited (align, crop, potentially other filters on the device).
5. Confirm image will be added (prompt to login/join Commons in order to add image)
6. Upload success message, pending confirmation via an image moderator.
7. Notification when the image has been accepted or rejected.
