Development of Thresholds for Outlier Pools in
1995 Alternative Payment Demonstration

Introduction

The Health Care Financing Administration (HCFA) has sponsored an Alternative Payment Demonstration for Medicare risk contractors in selected geographic areas. The demonstration started in 1994 and was open to HMOs that were risk contractors in geographic areas with low Adjusted Average Per Capita Costs (AAPCCs). For 1994 the participating plans are filing cost reports, and Medicare will pay actual costs up to 100% of the AAPCC (average payment rate). In addition, Medicare will share 50% of the risk for HMO costs that are in the range of 100-105% of the AAPCC. Thus, participating plans will be paid a maximum of 102.5% of the AAPCC if actual HMO costs equal or exceed 105% of the AAPCC.

The current plans for the 1995 Alternative Payment Demonstration are described in a discussion paper "Proposed Mandatory Outlier Pool Demonstration" (July 1994). The final provisions for the 1995 demonstration must be approved by OMB. In addition, discussions are underway with HMOs that have expressed interest in participating in the 1995 demonstration, which would be limited to the market areas defined as eligible for the 1994 Alternative Payment Demonstration (Seattle, WA; Portland, OR; Minneapolis/St. Paul, MN; and Rochester, NY). An additional criteria is that the market area must have at least three participating plans with risk contracts (or that could convert to risk contracts by January 1995). The market areas that meet these criteria are Seattle,

Portland and Minneapolis/St. Paul (Minneapolis/St. Paul currently has two risk contractors, but a third plan has applied for a risk contract).

The discussion paper outlines the following operational parameters for the 1995 Alternative Payment Demonstration:

1. The demonstration would run for three years.
2. Pool Participants: Outlier pools would be organized by market area. Ideally, each pool would include all Medicare risk HMOs in a market area. The pool would not include plans from other areas. The minimum pool size would be three plans.
3. AAPCC Payment Limit: Payments would be increased to 97% of the AAPCC for participating plans.
4. Pool Contributions: HCFA, together with the participating HMOs in a market area, would determine the percentage of payments to be placed in the outlier pool. This percentage should be as large as possible, since it will allow for a more effective test of the concept by covering a greater proportion of outliers. Ideally, the percentage should be approximately 10% of each plan's AAPCC payment, with plans receiving 87% of the AAPCC, drawing out additional payments for cases that exceed the outlier thresholds.
5. Outlier Threshold: The threshold for determining outlier payments would depend on the percentage of payments that are placed in the pool.
6. Plan Contributions to High Cost Cases: In order to maintain incentives for the plans to constrain costs for high-cost cases, plans would be required to pay coinsurance on cases that exceed the threshold amount. For example, the pool payment for cases exceeding the outlier threshold may only be 40-60% of the actual cost of the case, with the plan paying the remainder. The actual percentage of coinsurance would be determined by the group of participating plans in each market area.
7. Uniform Costing System: A uniform costing system must be agreed upon. Medicare prospective payment and fee schedule would be appropriate for inpatient care and physician services, but a methodology for determining hospital outpatient, home health, and other Medicare costs would need to be developed.
8. Surpluses and Shortfalls: It is unlikely that the pool resources would correspond perfectly to the claims made. A system must be developed to account for potential pool surpluses and shortfalls at the end of the demonstration. Annual surpluses and shortfalls in the pool from a given year would be handled by readjusting the threshold for the following year

and applying the shortages or surpluses from the previous year to the current year.

Source: "Proposed Mandatory Outlier Pool Demonstration," HCFA, July 1994.

Currently, the above provisions are being discussed with the HMOs that have expressed interest in participating in the demonstration.

The purpose of this paper is to present the results of computer tabulations and analysis conducted by ARC on various thresholds for the outlier pools to be used in the demonstration. As discussed in more detail later, there are several factors that need to be considered for selection of appropriate thresholds. The results described in the next section illustrate the impact of selecting thresholds based on different assumptions.

Results

The 1995 demonstration incorporates an outlier pool for high-cost cases. The size of the outlier pool will be determined as a percentage of the AAPCC paid to the participating HMOs. The level of HMO expenditures subject to the outlier pool is dependent upon several factors including: (1) the threshold used to identify high-cost cases that are eligible for reimbursement from the pool, (2) the level of coinsurance (percent of costs above the threshold) that must be paid by participating plans, (3) the method used to measure costs incurred by plans, and (4) other operational features of the outlier pool that could affect the level of expenditures.

Methods

The results of the outlier pool analysis reflect the number and distribution of high-cost cases. Thus, the results are very sensitive to the type of data used to conduct the analysis. To evaluate the degree of sensitivity to different data sources and assumptions, three sets of data have been used to estimate the level of expenditures based on the characteristics of the outlier pool: (1) a 1% national sample from the Continuous Medicare History Sample (CMHS) for 1985-1992, (2) local fee-for-service data for the three market areas (Minneapolis/St. Paul, Seattle, and Portland) based on a 5% sample from the CMHS for 1985-1992, and (3) data from an HMO with a Medicare risk contract for 1990-1992.

Continuance tables are the basic technique used in the analysis. A continuance table estimates the percentage of total expenditures that exceed specified thresholds by analyzing the distribution of health expenditures for all persons enrolled in the health plan in a year. Person-level expenditure data are used in the analysis to construct the continuance tables.

The continuance tables are developed from historical data. To apply the continuance table results to the first year of the demonstration (calendar year 1995), it is necessary to project the distribution of high-cost cases affected by the outlier pool from the historical period to 1995. This is accomplished by scaling the expenditure distribution using the relative per capita costs in the two periods.

Distribution of Medicare High-cost Cases

Table 1 summarizes the distribution of expenditures for high-cost

cases in the Medicare population from 1985 to 1992. For each year, the national 1% sample was used to determine the dollar threshold for which specified percentages of total expenditures exceeded the threshold. For example, in 1985 10% of total expenditures exceeded a threshold of \$19,000 (i.e., if per person expenditures were truncated at \$19,000, the aggregate of all costs exceeding \$19,000 would correspond to 10% of total Medicare expenditures in 1985). By 1992, the threshold for the top 10% of expenditures had increased to \$32,000.

As shown in Table 1, the thresholds for high-cost cases are very sensitive to the growth in health care costs over time. From 1985 to 1992, the per capita annual Medicare expenditures rose 63% from \$1,994 to \$3,255, based on the CMHS 1% national sample. However, the threshold for the top 1% of Medicare expenditures rose from \$44,000 in 1985 to \$92,000 in 1992, an increase of 109%.

In general, with the exception of 1989, there was a consistent pattern of increases in the thresholds for the selected percentages of total expenditures in Table 1. The Medicare Catastrophic Coverage Act (MCCA) was effective for calendar year 1989 and was probably at least partially responsible for the aberrant cost behavior in that year. If the 1989 experience is excluded, then there appears to be a relatively smooth pattern in the thresholds from 1985 to 1992.

Expected Outlier Pool Expenditures in Selected Sites

For the 1995 Alternative Payment Demonstration, the continuance table results using the three sets of historical data (national CMHS 1% sample,

local market area CMHS 5% sample, and HMO data) were projected to 1995 for each of the three potential demonstration sites of Minneapolis/St. Paul, Portland, and Seattle. As discussed in the methods section above, a scaling technique was used to translate the continuance table for the historical period to calendar year 1995 for each demonstration site. A ratio of the relative per capita costs in the historical period to 1995 was used to scale the cost distributions. The 1995 per capita for each demonstration site was estimated using: (1) the 1994 AAPCC payment rates inflated by the projected AAPCC increases for 1995, and (2) the distribution of HMO enrollees by county and demographic characteristics. Due to the relatively small sample sizes from the CMHS 5% sample for the local market areas (4,000-14,000 persons per year per market area), four years of historical data, 1989-1992, were combined to construct the local area continuance tables for Minneapolis/St. Paul, Portland, and Seattle.

Table 2 presents expected outlier pool expenditures in the three 1995 demonstration sites, assuming no HMO coinsurance (the impact of plan coinsurance is examined later). For each site, the results from the continuance tables are summarized for each of the different data sources. The first column of Table 2 identifies the thresholds. The next three columns are for Minneapolis/St. Paul and show the percentage of total expenditures that exceed the thresholds for each of the three different data sources. The last six columns of Table 2 present similar information for the Portland and Seattle sites. More detailed information for each site is presented in Appendix 1.

As can be seen in Table 2, the results within each site are fairly similar, but there are differences both across sites and within sites. For example, for a threshold of \$50,000 at the Minneapolis/St. Paul site in 1995, the results for the national 1% sample data and the local fee-for-service (5% sample) data are similar. The national and local data predict that 5.99% and 5.97% of total HMO expenditures in 1995 would exceed the threshold whereas the HMO data predicts that only 4.77% of total expenditures would exceed a \$50,000 threshold.

For a \$50,000 threshold at the Portland site in 1995, the local data predict the highest outlier pool expenditures (6.43%), followed by the national data (6.09%) and the HMO data (4.85%). For Seattle in 1995, the national data are highest with 6.28% predicted outlier pool expenditures, followed by HMO data with 5.02% and the local 5% sample data with 4.22%.

Table 3 illustrates the type of detailed information that is contained in Appendix 1. In addition to thresholds and percent of total expenditures exceeding the thresholds, Table 3 identifies: (1) the percentage of persons who have claims exceeding each threshold, and (2) the expected outlier pool claims based on varying levels of coinsurance paid by the participating HMOs. For example, Table 3 indicates that outlier pool payments for Minneapolis/St. Paul in 1995 would represent approximately 5.50% of total expenditures based on the following assumptions: (1) national 1% sample historical data, (2) a threshold of \$40,000, (3) average AAPCC payment rate of \$327.93 per month, and (4) an HMO coinsurance rate of 40% (i.e., the plan is responsible for 40% of

expenditures above the threshold level of \$50,000, and receives reimbursement for 60% of expenditures above the threshold from the outlier pool). Tables similar to Table 3 are contained in Appendix 1 for the different market areas and the different data sources.

Data Considerations

It should be noted that the continuance tables for the national 1% sample were projected from 1990 data because the 1991 and 1992 data files understated Part B expenditures. We have communicated the problems to the HCFA Data Center and requested revised tapes. However, we do not believe that there will be significant differences in the revised continuance tables because the 1992 data will also be projected to 1995 and the basic form of the distribution, after scaling, should not change.

As noted above, the continuance tables from the local area 5% sample were constructed using four years of data (1989-1992) due to the relatively small sample sizes for the local areas. In addition, persons enrolled in HMOs in the local areas in 1989 were eliminated from the continuance table calculations for 1989 and later years.

Persons with dual Medicare and Medicaid entitlement accounted for 9.4% of total eligibles who were not enrolled in HMOs and approximately 3% of eligibles enrolled in HMOs. Because of the significantly higher overall rate and the higher expected rates of institutionalization in the non-HMO population with dual entitlement, Medicaid eligibles were excluded from the national and local area fee-for-service data files. However, Medicaid eligibles were included in the HMO data files to reflect the

actual composition of HMO enrollment that would be eligible for the outlier pools.

It should also be noted that all of the above tables exclude End Stage Renal Disease (ESRD) eligibles. These eligibles represent less than 1% of total Medicare eligibles, and they have a separate AAPCC which reflects their much higher use of medical services and per capita costs. We have assumed that separate provisions will be made for ESRD eligibles in the demonstration. Alternatively, if ESRD eligibles are going to be treated as other eligibles regarding the outlier pools, the ESRD eligibles could easily be included in the data used to construct the continuance tables. The difference in the continuance tables should be minor, but including ESRD eligibles could have a significant impact on some of the participating plans if there are differential patterns of enrollment and health services utilization of ESRD eligibles among plans.

Discussion

There are a number of issues that need to be considered in designing the outlier pools and selecting thresholds that are appropriate for the proposed demonstration. This section discusses some of these issues, which have been grouped into three categories: (1) conceptual issues, (2) technical issues, and (3) operational issues.

Conceptual Issues

The development of thresholds for an outlier pool, as described in the provisions for the 1995 Alternative Payment Demonstration, is

dependent upon appropriate data and methods of analysis. Several conceptual issues are identified and discussed below.

1. Appropriate historical data to use as basis for threshold - The threshold will identify the claims eligible for reimbursement from the outlier pool and determine the amount to be paid to the participating plan (after consideration of coinsurance and adjustments for definition of allowable costs, etc.). An accurate threshold is necessary so that the aggregate claims paid in each market area will be approximately equal to the percentage of AAPCC allocated to the outlier pool. There are at least four potential sources of historical data that can be used as the basis to determine the threshold: (1) cost data from participating HMOs in the market area, (2) HMO data from other areas, (3) Medicare data for the market area, and (4) national Medicare data. Each data source has advantages and limitations. The national Medicare CMHS data is internally consistent, a large sample is available for analysis, and it can be calibrated to each local area. However, the national data may not reflect local conditions, especially differences in utilization and costs due to local HMO practice patterns. Medicare data for the local market area would be expected to better reflect local factors affecting health costs, but sample sizes from the CMHS may be smaller than desirable for construction of continuance tables, and the local CMHS data may not reflect HMO utilization and cost patterns. HMO cost and utilization data, especially for the plans participating in the demonstration, would probably be the best data source. However, there may be problems in

consistency of data definitions, methods of recording costs, or other differences among plans that could pose problems in estimating outlier pool expenditures.

2. Measurement of costs - In order for the outlier pool to operate in a fair and equitable manner, it is necessary that costs be defined in a comparable way between the participating HMOs in each market area. For hospital and physician services, the Medicare prospective payment system and physician fee schedule (RBRVS) are examples of systems that could serve as mechanisms to define costs in a comparable manner between different HMOs.

3. Risk-sharing between HCFA and participating HMOs - One key issue for the demonstration is the amount that will be placed at risk in the outlier pool. From the HCFA perspective, it is desirable to have as large a percentage of AAPCC as practical in the outlier pool because it would allow for an effective test of the concept by covering a greater proportion of outliers. Since many HMO provider contracts are based on fixed payments, HMO concerns focus on the adequacy of the minimum guaranteed payment level and the total amount of reimbursement that is at risk.

4. Impact of coinsurance - Given a fixed amount of funding in the outlier pool, the threshold decreases as the level of coinsurance increases. Since outlier payments involve high-cost cases and the tail of the expenditure distribution, the coinsurance percentage can have a major impact on the threshold. Higher levels of coinsurance should increase

incentives for participating plans to constrain costs for high-cost cases.

5. Impact of Medicare program changes - Since the demonstration period will be from 1995 to 1997, it is necessary to consider proposed changes in the Medicare program that might affect the costs for the demonstration.

6. Impact of changes in AAPCC methodology - One of the proposed provisions in the demonstration is for fixed AAPCC payment rates for 1995, 1996 and 1997. Thus, the impact of recent and proposed changes in the methodology to determine the AAPCC payment rates should be taken into account in calculating the rates for 1996 and 1997.

Technical Issues

As discussed above, there are a variety of technical issues that are involved with development of appropriate thresholds for the outlier pool. Some of these issues are discussed below.

1. Basic method to determine threshold - The results presented in the previous section used a standard actuarial technique based on continuance tables. Other methods of tabulating claims data can result in different thresholds. Demonstration participants need to understand and agree on the best data and methods to be used in calculating appropriate thresholds.

2. Method for projection of threshold from base period to demonstration period - Different methods were demonstrated in the previous section for projecting thresholds from a base period to a future period. The percentage of claims exceeding a specified threshold is very sensitive to the projection technique and also to the accuracy of the assumptions

regarding inflation and health care cost increases in future years.

3. Demographic and geographic adjustments - It is also necessary to take into account differences in demographic or geographic factors between the baseline data and the participating HMOs in each market area.
4. Other potential adjustments required - Other factors that might require adjustments in determining thresholds include: coinsurance effects, Medicare program changes, AAPCC changes, etc.
5. Accounting for statistical variations - Differences between actual and expected outlier pool payments will vary depending on the number of HMO enrollees at each demonstration site, among other factors. Unless a site has a very large base of enrollment (100,000 persons or more), statistical variations alone can cause significant outlier pool surpluses or shortfalls from year to year.

Operational Issues

The third set of issues relate to the actual operation of the outlier pools and potential problems that might occur.

1. Definition of covered services and eligibility categories - For each demonstration site, HCFA and the participating HMOs need to define the set of medical services that will be approved for the outlier pool (i.e., specify any additions or differences from the standard Medicare benefit package such as prescription drugs, etc.) and also define categories of eligibility for the outlier pool (aged, disabled, ESRD, etc.).
2. Procedures for making payments to plans - The different types of payments to participating HMOs could include: (1) interim capitation

payments (the portion of the AAPCC payment not allocated to the outlier pool), (2) interim outlier payments/draw from pool (based on actual claims incurred by each plan for high-cost cases), and (3) annual reconciliation (including the final bills for high-cost cases that occurred during the year).

3. Annual surpluses and shortfalls - For each demonstration site, HCFA and the participating plans would have to agree on the methods to handle annual surpluses and shortfalls that would occur in the outlier pool. For example, the surplus or shortfall could be carried over to the next year, and the threshold and plan coinsurance percentage for the next year could be adjusted accordingly. Also, a method could be established for allocation of the surplus or shortfall among the participating plans at the end of each year as part of the annual reconciliation (each plan could assume a pro-rata share of the surplus/shortfall based on outlier pool claims, relative contributions to the pool, etc.). A third method could involve withholds on the interim payments. A portion of the interim payments from the risk pool (10-30%) could be withheld until the end of the year. If total claims on the risk pool were less than the total funds allocated to the risk pool, the withhold amounts would be paid along with any end-of-year settlements. If total claims exceeded risk pool funds and the amount of the withholds was more than the shortfall, then a portion of the amount withheld would be used to pay the shortfall and the remainder distributed to the participating plans. If the amount of the withhold was less than the shortfall, then the difference between the shortfall and the

amount withheld would have to be made up by the plans or carried over to the next year.

3. Adjustments required for 1996 and 1997 - As discussed above, an outlier pool depends on the frequency and size of high-cost cases in a given year and, thus, is sensitive to the actual incidence of high-cost cases and the distribution of expenditures exceeding the outlier pool threshold. It is likely that adjustments to the procedures for operating the outlier pool will be required for the second and third years of the demonstration. Adjustments may be required in threshold levels, coinsurance percentages, interim payment provisions, annual reconciliation and final payment provisions, and other operational features of the outlier pool.

Re: Analysis of the Cost of Reinsurance Options for the Medicare Choices Demonstration

The purpose of this memorandum is to analyze the cost of reinsurance options for health plans that are participating in the Medicare Choices Demonstration. National Medicare data have been used to prepare a set of reinsurance tabulations for use in the Medicare Choices Demonstration by HCFA. The reinsurance coverage will provide individual stop-loss protection for high-cost patients based on medical costs incurred during a calendar year. In order to maintain incentives for plans to constrain costs for high-cost cases, plans will be required to pay coinsurance on cases that exceed the reinsurance threshold amount. The reinsurance will be provided by HCFA and will be based on a percentage reduction in the Adjusted Average Per Capita Cost (AAPCC).

This memorandum summarizes the methods, data and results of the reinsurance analysis. The last section describes how the tables contained in Appendix A should be used to determine the parameters for reinsurance coverage in the Medicare Choices Demonstration.

Methods and Data

Continuance tables are the basic techniques used in the analysis. In the context of health insurance, a continuance table estimates the percentage of total expenditures that exceed specified thresholds by analyzing the distribution of health expenditures for all persons enrolled in the health plan in a year. Person-level expenditure data are used in the analysis to construct the continuance tables.

The continuance tables are developed from historical data for calendar year 1992. To apply the continuance table results to the first year of the demonstration (calendar year 1996), it is necessary to project the distribution of high-cost cases affected by the reinsurance program from the historical period to 1996. This is accomplished by scaling the expenditure distribution using the relative per capita costs in the two periods.

The objective is to set a reinsurance level based on: (1) the level of the AAPCC, (2) the percentage of the total Medicare expenditures that exceed the reinsurance threshold, and (3) a specified plan coinsurance rate. As discussed below, the level of the AAPCC corresponds to the average monthly payment rate for a health plan that is participating in the Medicare Choices Demonstration.

The tables for the reinsurance tabulations in Appendix A were derived from a one percent national sample from the Continuous Medicare History Sample (CMHS). In the memorandum of June 30, 1995, we examined continuance tables based on 1992 and 1993 CMHS data. Our concern was that, although the 1993 data are more recent, it is possible that the 1993 data were not based on complete claims data which could have an impact on the reinsurance estimates, especially for high-cost cases. From an examination of the continuance tables using 1992 and 1993 data scaled to the 1995 U.S. per capita cost, the results were similar. However, the 1992 data were recommended because the continuance tables using 1992 data had a smoother pattern that was possibly due to incomplete 1993 data. Thus, the tabulations in this memorandum were prepared using the 1992 CMHS one percent sample data.

A separate tabulation was made for each of the projected 1996 AAPCC levels (\$200, \$225, . . . , \$700). The 1992 Medicare expenditure data were adjusted to each specific 1996 AAPCC level by scaling the 1992 expenditure distribution according to the ratio of the 1996 AAPCC level to the mean of the 1992 expenditures. For example, the average 1992 cost was \$280.25 per member per month. For the projected 1996 AAPCC level of \$400, the scaling ratio was 1.4273 (\$400/280.25). Each person's Medicare cost in the 1992 CMHS file was multiplied by 1.4273, and a continuance table was calculated based on the resulting adjusted expenditures.

In order to test the robustness of the results, we also used data from the five percent CMHS database for a sample of rural counties with low AAPCCs. The continuance table results using the five percent CMHS data are contained in Appendix B for low AAPCC values of \$200 per month to \$400 per month.

Results

For a plan participating in the Medicare Choices Demonstration, it is desired to set a reinsurance level based on: (1) the level of the AAPCC, (2) the percentage of the total Medicare expenditures that exceed the reinsurance threshold, and (3) a specified plan coinsurance rate. The level of the 1995 AAPCC for individual counties varies widely from under \$250 per month to over \$600 per month. The U.S. per capita cost for aged Medicare eligibles was \$400.52 per month in 1995. Table 1 shows the value of the AAPCCs for the 40 counties that accounted for over 80% of the total enrollment in Medicare risk contracts in 1994. As shown in Table 1, Kings County, New York had the highest 1995 AAPCC of \$646.88 per month. To illustrate the range in AAPCC values, Table 2 lists the 1995 AAPCCs for a sample of mostly rural counties with low AAPCCs.

To account for the wide variation in AAPCC levels and the corresponding impact on reinsurance provided by Medicare, continuance tables were prepared for a range in AAPCC values from \$200 per month to \$700 per month (\$200, \$225, \$250, \$275, \$300, . . . , \$700). These tables are contained in Appendix A. In addition to the percentage of persons and percentage of dollars exceeding specified thresholds, the tables also show the impact of different plan coinsurance rates of 30%, 40%, 50%, 60%, and 70%.

Table 3 summarizes the results contained in Appendix A. As shown in the table, for a reinsurance threshold of \$50,000, the percentage of total expenditures that exceed the threshold increases from 1.70% for plans with an average AAPCC value of \$200 per month to 19.50% for plans with an average AAPCC value of \$700 per month.

As discussed above, the technique that was used to scale the medical cost distribution of the 1992 CMHS data to the projected 1996 AAPCC levels results in estimates of reinsurance coverage based on the percentage of the AAPCC level. Since the same distribution is used for all of the continuance tables, the effects of the scaling technique can be seen in Table 3. For example, for an AAPCC monthly payment of \$200 and a reinsurance threshold of \$20,000, the estimated percentage of expenditures that exceed the threshold is 11.81%. If we consider an AAPCC level of \$250 and a threshold of \$25,000, both of these values are 25% higher than the above values of \$200 and \$20,000, respectively. Thus, due to the scaling technique, we obtain essentially the same estimated percentage of expenditures exceeding the threshold (11.82%).

We were concerned that scaling the national data may be inappropriate for rural counties with low AAPCCs because of different practice patterns, less access to hospitals or tertiary care facilities, fewer catastrophic or high-cost cases, and other factors. Therefore, we investigated the robustness of the scaling technique and the continuance table results using data for a sample of rural counties with low AAPCCs (less than 80% of the U.S. per capita cost) from the five percent CMHS database. The continuance table results are contained in Appendix B for AAPCC values of \$200, \$250, \$300, \$350 and \$400. Although there are some differences in the results using the different data sets, it appears that the differences are relatively minor. Therefore, we recommend that the tables in Appendix A be used for all AAPCC values from \$200 to \$700 per month.

How to Apply the Reinsurance Tables

The first step in applying the reinsurance tables is to determine the "average payment rate." The average payment rate is the amount per person per month that is paid by HCFA to the participating health plan. For Medicare risk contractors, the average payment rate reflects: (1) the AAPCCs in the counties served by the HMO/CMP, (2) the distribution of eligibles across the counties, and (3) the demographic mix of enrollees according to the AAPCC underwriting factors. For a health plan participating in the Medicare Choices Demonstration, the average payment rate is the final negotiated rate, on a per member per month basis, to be paid by HCFA to the health plan for Medicare eligibles.

The second step is to specify the parameters for reinsurance that have been determined by HCFA (or jointly by HCFA and the participating health plan). Relevant reinsurance parameters include the plan coinsurance rate and the percentage of AAPCC to be provided as reinsurance coverage.

The third step is to determine the reinsurance threshold (i.e., the claims level at which the reinsurance begins to cover a portion of the expenses that exceed the threshold). The tables contained in Appendix A are

used as look-up tables to identify reinsurance thresholds. The first column in each table is the threshold amount that corresponds to the deductible for the individual stop-loss reinsurance coverage. It is assumed that, once an enrolled person's medical expenses exceed the threshold during a calendar year, a participating plan will be reimbursed a specified percentage of allowable expenses exceeding the threshold/deductible.

The second column is the proportion of persons that have expenses that exceed the threshold. The third column is the proportion of total expenses that exceed the threshold. For example, in Table 1 on page A-1 (AAPCC equals \$200 per month), 13.0% of all persons have expenses that exceed \$5,000 per year, and 49.2% of all expenses exceed the \$5,000 threshold.

The fourth to eighth columns correspond to the proportion of total expenditures that exceed the threshold, given the specified levels of plan coinsurance. For example, with a \$50,000 threshold and 30% plan coinsurance, Table 1 indicates that Medicare payments would equal 1.2% of total expenditures (Medicare would pay 70% of expenses that exceed the \$50,000 threshold).

For reference to the appropriate table in Appendix A, the average payment rate should be rounded to the closest \$25. For example, if the average payment rate is \$292.87, then Table 5 in Appendix A corresponding to \$300 per month should be used. The next step involves the plan coinsurance rate (i.e., the proportion of expenses above the reinsurance threshold that is the responsibility of the health plan). Assume that the plan coinsurance rate equals 30%, and that HCFA desires to provide reinsurance coverage equal to 2% of the AAPCC. As seen in Table 5 of Appendix A, the proportion of expenses that exceed a \$60,000 threshold with 30% coinsurance is approximately 2.07%. Similarly, the proportion of expenses that exceed a \$61,000 threshold with 30% coinsurance is 1.99%. If the average payment rate was rounded up (as in the example), then the lower threshold should be used (the higher threshold should be used if the average payment rate was rounded down). Therefore, in this example, a reinsurance threshold of \$60,000 should be established to provide reinsurance coverage of 2% of the AAPCC.

As a second example, for a plan coinsurance rate of 50%, reinsurance coverage of 4% (of total expenditures), and an average payment rate of \$328.52 per month, the reinsurance threshold should be \$41,000 (see Table 6 in Appendix A). For thresholds above \$70,000, the values in the tables in Appendix A can be interpolated.

Please contact us if you have any questions or if you would like to see the results of some additional tabulations.

October 27, 1995

Memorandum

To: Cynthia Tudor, Ph.D.
Office of Research and Demonstrations, HCFA

From: Bill Wrightson
Actuarial Research Corporation

Re: Medicare Choices Demonstration - Reinsurance calculations for hospital services only

Attached are a set of reinsurance tabulations for hospital services only for the Medicare Choices Demonstration. There is a separate table for each monthly payment rate (\$200, \$225, \$250, ... , \$700). The plan coinsurance amounts in the tables are 10%, 20%, 30%, 40% and 50%.

The percentages shown in the table for each coinsurance amount and threshold correspond to the percentage reduction in the AAPCC that would be necessary to provide individual stop-loss reinsurance coverage for hospital expenses that exceed the specified threshold in a calendar year. For example, in Table 1 (AAPCC equals \$200 per month), for a \$25,000 threshold and plan coinsurance of 20 percent, the payment rate would have to be reduced by 2.77% in order for HCFA to provide reinsurance for hospital costs exceeding the \$25,000 threshold.

The procedures for using these tables to estimate the percentage reduction in payment rates for offering reinsurance coverage are the same as the procedures described in the memorandum of September 12, 1995. Please contact us if you have any questions.

Appendix Table: 1

Year: 1995-1996

Type of data: National (1992) - Hospital Only

Population: All eligibles

Projection assumptions: AAPCC = \$200 per month

Projection Factor: 0.7136

APPENDIX C

Experience-Rated Questionnaire for 1996 Rates

Note: Options are Rated as Separate Plans and Require Separate Questionnaires

1. Attach a copy of the summary statement of your 12/31/94 accounting statement.
2. Reconcile your 1993 and 1994 premium income to your 1993 and 1994 enrollment by adjusting enrollment to agree with premium income actually received. For 1993 and 1994 premium income use accounting summary figures for Semi-Monthly Premiums received by your LOC account adjusted by beginning and ending accrued values. It is advisable to perform a similar reconciliation for 1995 using the fact that most second monthly payments consist of one monthly annuitant premium and one biweekly premium and most first monthly payments consist of one biweekly premium.

	<u>Biweekly Net-to- Carrier Rates</u>	<u>Initial Estimated Enroll- ment</u>		<u>Calcu- lated Income</u>	<u>Actual Premium Income</u>	<u>Adjusted* Average Enroll- ment</u>
<u>1993</u>						
Self	_____ x	_____	x 26 =	_____	_____	_____
Family	_____ x	_____	x 26 =	_____	_____	_____
Total		_____		_____	_____	_____
<u>1994</u>						
Self	_____ x	_____	x 26 =	_____	_____	_____
Family	_____ x	_____	x 26 =	_____	_____	_____
Total		_____		_____	_____	_____
<u>1995</u>						
Self	_____ x	_____	x 26 =	_____	_____	_____
Family	_____ x	_____	x 26 =	_____	_____	_____
Total		_____		_____	_____	_____
<u>1996 (Projected)</u>						
Self	_____ x	_____	x 26 =	_____		
Family	_____ x	_____	x 26 =	_____		
Total		_____		_____		

*Adjusted Enrollment = Initial Estimated Enrollment x (Actual Premium Income/Calculated Income)

3. (a) As of 12/31/94 what were the total claims paid to date for services incurred in

1992 _____

1993 _____

1994 _____

- (b) As of 4/30/95 what were the claims paid in 1995 for services incurred in

1992 _____

1993 _____

1994 _____

1995 _____

The sum of these values should equal the claims paid in the first 4 months of 1995

- (c) What is your estimate of the ultimate claims and what portion of these claims have been paid as of 12/31/94 and as of 4/30/95.

<u>Ultimate Claims</u>	<u>Portion Paid as of 12/31/94 (a)/(c)</u>	<u>Portion Paid as of 4/30/95 [(a)+(b)]/(c)</u>
1992 _____	P1= _____	_____
1993 _____	P2= _____	_____
1994 _____	P3= _____	_____

The portion paid as of 12/31/94 and as of 4/30/95 should be representative of past experience. If they are not, explain why. Ultimate claims and the portion paid as of 12/31/94 (P1,P2,P3) will be used in item 11.

Explanation if Necessary:

The product of the prior year's claims and the factors in items 4, 5, 6, 7, and 8 below should equal the present year's claims and for 1993 and 1994 should agree with the ultimate claims stated in item 3. Item 9 contains a summary of items 4, 5, 6, 7 and 8.

4. What was the change in enrollment factor for:

1993 to 1994 _____

1994 to 1995 _____

What is your estimated factor for:

1995 to 1996 _____

You should weight the aggregate enrollment factor for both self and family contracts by either premiums or claims.

We prefer that you obtain the enrollment factor by using a weighted average of claims costs broken down by active, Medicare and non-Medicare annuitants enrollees and by self and family contracts. Please provide your best estimate of claims cost by type of claimant and category of enrollment. If you do not have claims data available, we suggest you use the following weights:

	Self	Family
Active	46	121
Medicare Annuitants	56	105
Non-Medicare Annuitants	106	194

The formula you would use would appear as follows:

$$EF(yr) = \frac{[46*ASE(yr)] + [56*MSE(yr)] + [106*NMSE(yr)] + [121*AFE(yr)] + [105*MFE(yr)] + [194*NMFE(yr)]}{[46*ASE(yr-1)] + [56*MSE(yr-1)] + [106*NMSE(yr-1)] + [126*AFE(yr-1)] + [105*MFE(yr-1)] + [194*NMFE(yr-1)]}$$

where

EF = Enrollment Factor
 ASE = Active Self Enrollment
 MSE = Medicare Self Enrollment
 NMSE = Non-Medicare Self Enrollment
 AFE = Active Family Enrollment
 MFE = Medicare Family Enrollment
 NMFE = Non-Medicare Family Enrollment

To obtain the factor weighted by premiums use the following formula:

$$EF(yr) = \frac{[SE(yr) \times SP(yr-1)] + [FE(yr) \times FP(yr-1)]}{[SE(yr-1) \times SP(yr-1)] + [FE(yr-1) \times FP(yr-1)]}$$

where EF = Enrollment Factor
 SE = Self Enrollment
 FE = Family Enrollment
 SP = Self Premium
 FP = Family Premium

Explanation if Necessary:

5. What was the change in benefits factor for:

1993 to 1994 _____

1994 to 1995 _____

What is your estimated factor for:

1995 to 1996 _____

You should weight the aggregate benefit factor for both self and family contracts by premiums and enrollment. You should base all benefit changes on premium rate changes that were agreed upon during prior rating unless better data is available, i.e.,

$$BF(yr) = \frac{[SE(yr) \times (SP(yr-1) + SBC(yr))] + [FE(yr) \times (FP(yr-1) + FBC(yr))]}{[SE(yr) \times SP(yr-1)] + [FE(yr) \times FP(yr-1)]}$$

where BF = Benefit Factor
 SE = Self Enrollment SBC = Self Benefit Change
 SP = Self Premium FBC = Family Benefit Change
 FE = Family Enrollment
 FP = Family Premium

Explanation if Necessary:

6. What was the trend factor for:

	<u>Trend</u> <u>Factor</u>	=	<u>Inflation</u> <u>Factor</u>	x	<u>Utilization</u> <u>Factor</u>
1993 to 1994	_____	=	_____	x	_____

What trend factor is projected for:

1994 to 1995 _____ = _____ x _____

1995 to 1996 _____ = _____ x _____

Explanation if Necessary:

7. Selection as a result of movement between plans in the FEHBP is common. You can quantify this factor for a given year using the following:

$$SEL = \frac{1 + [(EI-1) \times RUI] + [(ED-1) \times RUD]}{EI + ED - 1}$$

where SEL = Selection Factor
 EI = Enrollment Increase Factor
 ED = Enrollment Decrease Factor
 RUI = Relative utilization of Enrollment Increases
 RUD = Relative utilization of Enrollment Decreases

As an illustration, suppose that in 1993 your plan consisted of 100 enrollments who cost \$1000 each. In 1994 your plan gained 30 enrollments and lost 40 enrollments. The enrollments the plan gained would have cost \$1400 in 1993 and the enrollments the plan lost cost \$800 in 1993. The selection factor for 1994 is

$$1.222 = \frac{1 + [(1.30-1.) \times 1.4] + [(.60-1.) \times .8]}{1.30 + .60 - 1.}$$

What were these factors if any for:

	Selection	EI	ED	RUI	RUD
1993 to 1994	_____	_____	_____	_____	_____

What factors if any are projected for:

1994 to 1995	_____	_____	_____	_____	_____
1995 to 1996	_____	_____	_____	_____	_____

Explanation if Necessary:

8. What other factors such as the institution or expansion of a PPO have had an effect upon incurred claims:

Total of
other
Factors

1993 to 1994 _____ = _____ x _____ x _____

What other factors if any will have an effect upon incurred claims:

1994 to 1995 _____ = _____ x _____ x _____

1995 to 1996 _____ = _____ x _____ x _____

Explanation if Necessary:

9. Summary of Incurred Claims Development

Year	Enrollment Factor	Benefit Factor	Trend Factor	Selection Factor	Other Factors	Present Year Claims
1993						_____
1994	x _____	x _____	x _____	x _____	x _____	= _____
1995	x _____	x _____	x _____	x _____	x _____	= _____
1996	x _____	x _____	x _____	x _____	x _____	= _____

10. December 31, 1994 Special Reserve
- (a) 1992, 1993 and 1994 claims paid through _____
12/31/94
- (b) 1992, 1993 and 1994 estimated incurred _____
claims
- (c) (b) - (a) _____
- (d) 12/31/94 accounting statement accrued _____
reserve
- (e) 12/31/94 accounting statement special _____
reserve
- (f) [(e) + (d) - (c)] _____
- (a) is from item 3 (a)
 (b) is from item 3 (c)
 (c) is your most recent estimate of the 12/31/94
 accrued reserve
 (f) is your most recent estimate of the 12/31/94
 special reserve

11. Accrued Reserves
- (a) 12/31/94 accrued reserve [from 10(c)] _____
- (b) 12/31/95 estimated accrued reserve _____
 = 1993 ultimate claims x (1-P1)
 + 1994 ultimate claims x (1-P2)
 + 1995 estimated claims x (1-P3)
- (c) 12/31/96 estimated accrued reserve _____
 = 1994 ultimate claims x (1-P1)
 + 1995 ultimate claims x (1-P2)
 + 1996 estimated claims x (1-P3) .
 [claims from 3 (c) and 9]
 [P1, P2 and P3 are from 3 (c)]

12. Expenses

<u>Year</u>	<u>Total Amount</u>	<u>Service Charge</u>	-
1994			
1995			
1996			

(Service charge is negotiated with the Office of Insurance Programs.)

Describe your reinsurance arrangements if any.

13. 1995 Contingency Payment, Interest and Investment Income, and Reserve Calculations

(a) Contingency Reserve

- | | | |
|-----|---|-------|
| (1) | Contingency Reserve Balance 12/31/94
(from OPM's Office of Actuaries) | _____ |
| (2) | Claims Paid During Last 6 Months of
1994 | _____ |
| (3) | Administrative Expenses for 1994 | _____ |
| (4) | Three and One-Half Months of Total
Outgo $[(7/12) \times (2)] + [(7/24) \times (3)]$ | _____ |
| (5) | Preferred Minimum Balance of 1-1/2
Month of Total Outgo $[(3/7) \times (4)]$ | _____ |
| (6) | Accrued Reserve + Special Reserve
12/31/94 $[10(c) + 10(f)]$ | _____ |

- (3) 1995 Contingency Reserve Payment _____
 13(a) (7) (c) - 13(a) (7) (d)
- (4) 1995 Total Premium Income _____
- (5) 1995 Incurred Claims _____
- (6) 1995 Expenses _____
- (7) 1995 Average Investment Balance: _____
 (1) - (2) + { (1/2) x [(3) + (4) - (5) - (6)] }
- (8) 1995 Interest Plus Investment Income: _____
 .0525 x (7)

(c) Financial Summary and Special Reserve - 1995

- (1) Income
- (a) Premium Income _____
- (b) Contingency Reserve Payment _____
 [13(a) (7) (c)] - [13(a) (7) (d)]
- (c) Interest Plus Investment Income _____
- (d) Total _____
- (2) Outgo
- (a) Incurred Claims [9] _____
- (b) Expenses [12] _____
- (c) Total _____
- (3) Gain (Loss) [1(d) - 2(c)] _____
- (4) Reserves
- (a) Beginning Special [10(f)] _____
- (b) Ending Special [3 + 4(a)] _____
- (c) Ending Contingency [13(a) (10)] _____
- (5) Reserve Goal (in number of months) · _____
 { 12 x [4(b) + 4(c)] } / 2(c)

14. 1996 Contingency Payment, Investment Income, and Reserve Calculations

(a) Contingency Reserve

- (1) Contingency Reserve Balance 12/31/95 _____
 [from 13(a) (10)]

- (2) Claims Paid During Last 6 Months of 1995. Use the Product of 1994 Claims from 13(a)(2) and the Percentage Change from 1994 incurred Claims to 1995 incurred claims [item 9]. _____
- (3) Administrative Expenses for 1995 _____
- (4) Three and One-Half Months of Total Outgo $[(7/12) \times (2)] + [(7/24) \times (3)]$ _____
- (5) Preferred Minimum Balance of 1-1/2 Month of Total Outgo $[(3/7) \times (4)]$ _____
- (6) Accrued Reserve + Special Reserve 12/31/95 $[11(b) + 13(c)(4)(b)]$ _____
- (7) 1996 Contingency Reserve Payment (compute as follows)
- (a) $(4) - (6) =$ _____ (put 0 here if $(4) - (6)$ is negative)
- (b) $(1) - (5) =$ _____ (put 0 here if $(1) - (5)$ is negative)
- (c) Contingency Reserve Payment:
 Lesser of (a) and (b) = _____
- Return Of Excess to the Contingency Reserve Fund:
- (d) If $(4) - (6)$ is negative, that is if the accrued reserve plus special reserve exceeds three and one-half months of total outgo, the excess must be returned to the contingency reserve fund. What is it?
 $(6) - (4) =$ _____
- (8) Payments to Contingency Reserve Fund During 1996 (approximately 3.85% of premium income) _____

(9) Interest on Contingency Reserve Fund _____
During 1996

$$= IRx[BCR+1/2 (PCR)-1/2 (CRP)+SIF] -$$

$$= .0525x[(1)+1/2 (8)+1/2 [(7)(d)-7(c)]+(2.5/52xSI)]$$

where IR = Interest Rate
BCR = Beginning Contingency Reserve Balance
PCR = 1996 Payments to Contingency Reserve
CRP = 1996 Contingency Reserve Payment to Plan
SIF = Subscription Income Float
SI = 1996 Subscription Income

(10) Contingency Reserve Balance 12/31/96 _____
(1) + (8) + (9) + [(7)(d) - (7)(c)]

b. Interest plus Investment Income

- (1) Accrued Reserve+Special Reserve as of _____
12/31/95
- (2) Premium Income Accrued but Unpaid _____
as of 12/31/95. Use the Product of
b(2) for 1994 and the Percentage
Change in Premium Income Between 1994
and 1995 from Item 2.
- (3) 1996 Contingency Reserve Payment _____
14(a)(7)(c) - 14(a)(7)(d)
- (4) 1996 Total Premium Income _____
- (5) 1996 Incurred Claims _____
- (6) 1996 Expenses _____
- (7) 1996 Average Balance: _____
(1)-(2)+{1/2 x [(3)+(4)-(5)-(6)]}
- (8) 1996 Interest Plus Investment Income: _____
.0525 x (7)

(c) Financial Summary and Special Reserve - 1996

(1) Income	-
(a) Premium Income	_____
(b) Contingency Reserve Payment [14(a)(7)(c)] - [14(a)(7)(d)]	_____
(c) Interest plus Investment Income	_____
(d) Total	_____
(2) Outgo	
(a) Incurred Claims [9]	_____
(b) Expenses [12]	_____
(c) Total	_____
(3) Gain (Loss) [1(d) - 2(c)]	_____
(4) Reserves	
(a) Beginning Special [13(c)(4)(b)]	_____
(b) Ending Special [3 + 4(a)]	_____
(c) Ending Contingency [14(a)(10)]	_____
(5) Reserve Goal (in number of months) {12 x [4(b) + 4(c)] / 2(c)}	_____

Explanation of rates if Reserve goal does not equal 2 months outgo:

TABLE 1

Projection of Financial Results for _____
for 1994, 1995 and 1996

1994

- A. Income
1. Premium Income
 2. Contingency Reserve Payment
 3. Interest Plus Investment Income
 4. Total
- B. Outgo
1. Incurred Claims
 2. Expenses
 3. Total
- C. Gain (Loss)
- D. Reserves
1. Beginning Special
 2. Ending Special (D1+C)
 3. Ending Contingency
- E. Months of Reserves $(12x(D2+D3)/B3)$

1995

- A. Income
1. Premium Income
 2. Contingency Reserve Payment
 3. Interest Plus Investment Income
 4. Total
- B. Outgo
1. Incurred Claims
 2. Expenses
 3. Total
- C. Gain (Loss)
- D. Reserves
1. Beginning Special
 2. Ending Special (D1+C)
 3. Ending Contingency
- E. Months of Reserves $(12x(D2+D3)/B3)$

1996

- A. Income
1. Premium Income
 2. Contingency Reserve Payment
 3. Interest Plus Investment Income
 4. Total
- B. Outgo
1. Incurred Claims
 2. Expenses
 3. Total
- C. Gain (Loss)
- D. Reserves
1. Beginning Special
 2. Ending Special (D1+C)
 3. Ending Contingency
- E. Months of Reserves $(12x(D2+D3)/B3)$

TABLE 2

1995 and 1996 Biweekly Net-to-Carrier Rates for

Self - Family

- A. 1995 Rates
- B. 1996 Rates
 - 1. Experience Change
 - 2. Benefit Change
 - 3. Other Changes
 - 4. Total (A+B1+B2+B3)
- C. Percent Change from 1995 to 1996
 - 1. Experience Change
 - 2. Benefit Change
 - 3. Other Changes
 - 4. Total
